Josephus portrayed Pilate as a governor who was determined to maintain Roman supremacy and to secure its recognition. Although given to unwise initiatives and quick to act against manifest dissidence, Pilate was ready to investigate and to yield to the unfamiliar prejudices of his subjects. Josephus's portrait accords with the view of Pilate in the Gospel accounts of the trial of Christ. Both in the Synoptic Gospels and in John, Pilate carefully questioned the prisoner about His political role. But he eventually yielded to the strong pressure of the Jewish clergy to convict Jesus. The Jews' explicit threat against Pilate, "If you release this man, you are not Caesar's friend" (Jn. 19:12), hints at an investigation on a charge of *maiestas minuta* — neglect of the security of the state. Such investigations were frequent in Rome in this period; Pilate escaped one for the trial of Christ, but a later action caused him to be sent to Rome for imperial interrogation.

Christ and Barabbas before Pilate. From Codex Rossanensis (6th cent.) (B. M. Metzger)

The Gospel narratives stress the responsibility of the Jewish clergy for Christ's death and diminish that of Pilate. Many have argued that their tone gives a false picture of the clergy's role and that the whole responsibility was Pilate's. The governor in some modern interpretations merely sentenced one agitator who had been involved in local riots, i.e., the cleansing of the temple, and pardoned another, Barabbas (Mk. 15:7-15; Lk. 23:18-25). But the outline of Roman procedure in the Gospels is correct. The governor would have taken the initiative only in circumstances of open riot, as in the Samaritan affair, when direct action replaced criminal procedure. The judicial prosecution of a malefactor for past actions required the formal initiative of a third party (*delatio*), as in the various trials of Paul (e.g., Acts 24:1-9; 25:1-27). Hence extreme interpretations of the trial that underplay the role of the clergy are not well founded. For the difficult question whether the high priest possessed the power of capital jurisdiction, which would have removed the necessity to work through the governor's court, *see* PROCURATOR.

See also JESUS CHRIST, ARREST AND TRIAL OF.

IV. Death of Pilate.–Pilate, sent to Rome by the governor of Syria to explain his slaughter of the Samaritans, reached the city after the death of Tiberius. The Christian tradition of Eusebius (*HE* ii.7) credibly records that "calamities forced him to an unavoidable suicide" in the reign of Gaius (37-41). As was common in this period, Pilate probably killed himself after his trial and condemnation, perhaps when in exile at Vienna-on-Rhone, with which later tradition connects his death.

V. Later Reputation.–Apart from the accounts of Christ's trial the NT mentions Pilate only to place certain events chronologically. Acts 3:13 briefly summarizes the Gospel version of Pilate's unwillingness to convict Christ, although in 4:27 the author conjoins Pilate, Herod, and the clergy in complicity. Luke alone reports the massacre of the Galileans (Lk. 13:1) but regards it as a natural calamity, a manifestation of God's wrath for which Pilate should not be blamed. Luke also mentions the disagreement and reconciliation of Pilate and Herod, which is not recorded in Josephus. An incidental reference to Pilate occurs in 1 Tim. 6:13.

The NT writers' lack of hostility toward Pilate is reflected in the later Apologists. Tertullian called him "a Christian by conscience" (*Apol.* 21.24) and attributed to him a letter commending the faith. Origen described Pilate's wife as a convert, and the Coptic church ultimately canonized Pilate himself. Eusebius, who cited in part Josephus's account of Pilate, attributed the governor's suicide to divine justice but did not comment directly on his responsibility for the crucifixion. Later tradition produced the fictitious Acts of Pilate (*see* APOCRYPHAL GOSPELS III.B) and colorful accounts of his death.

A. N. SHERWIN-WHITE

PILDASH pil'dash [Heb. *pildāš*] (Gen. 22:22). A son of Abraham's brother Nahor and Milcah. The etymology of the name is uncertain. Some scholars (e.g., R. de Vaux, *Early History of Israel* [Eng. tr. 1978], pp. 212, 240) have regarded Nahor's sons as the ancestors of the Aramean tribes.

PILE [Heb. (verbs) niphal of *'āram* (Ex. 15:8), piel of *yāsaḏ*–'found' (2 Ch. 31:7), hiphil of *kûn*–'prepare' (Job 27:16f.), *sālal*–'heap up' (Jer. 50:26), *dûr* (Ezk. 24:5), (noun) *mᵉḏûrâ* (Ezk. 24:9)]; AV also "be gathered together" (Ex. 15:8), "lay the foundation" (2 Ch. 31:7), "prepare" (Job 27:16f.), CAST (Jer. 50:26), "burn" (Ezk. 24:5); NEB also "stand . . . like a bank" (Ex. 15:8), "deposit" (2 Ch. 31:7), GET PILES (Job 27:16), "get" (Job 27:17), "pack" (Ezk. 24:5), "fire-pit" (Ezk. 24:9).

The root *'rm* (I) occurs only in Ex. 15:8, but its meaning is clear from both the context and the rabbinical Hebrew and Syriac cognates ("heap up, dam up"). The uses of *yāsaḏ, kûn,* and *sālal* are fairly common, but *dûr* and *mᵉḏûrâ* are rare words. Both come from the root *dwr,* "circle," and are related to *dôr,* "generation" (life cycle). In Ezk. 24:5 W. Zimmerli's translation, "pack round," illustrates well the sense of *dûr* (*Ezekiel 1* [Eng. tr., *Hermeneia,* 1979], p. 493). The AV follows the LXX *hypokaíō,* "burn," perhaps because the context clearly indicates a fire. A similar instance of contextual inference is apparent in the NEB's translation of *mᵉḏûrâ* in v. 9; the only other occurrence of *mᵉḏûrâ* is Isa. 30:33 (RSV "pyre"), and in both contexts it clearly refers to a pile of wood.

G. A. L.

PILEHA pil'ə-hä (Neh. 10:24, AV). *See* PILHA.

PILFER [Gk. *nosphízō*] (Tit. 2:10); AV PURLOIN. Paul here advises Titus to instruct Christians who are slaves not to steal from their masters. As is clear from its use in the LXX and other Greek literature (see Bauer, rev., pp. 543f.), *nosphízō* means to misappropriate something for oneself that should or does belong to someone else. Cf. Acts 5:2f., where Ananias and Sapphira "kept back" (Gk. *nosphízō*) some of the money from a sale of property but claimed that they were giving it all. Cf. also Josh. 7:1, 19-21; in v. 1 the LXX uses *nosphízō* to describe Achan's retention of some of the spoils that were all to be devoted to the Lord.

G. A. L.

PILGRIMAGE [Heb. *māgôr* < *gûr*–'sojourn'] (Ps. 119:54). According to most commentators *māgôr* is used as a metaphor for one's earthly, transient existence (cf. v. 19, where "sojourner" translates the related Heb. *gēr*; cf. esp. Gen. 47:9, where "sojourning" renders *māgôr*; cf. E. A. Speiser, *Genesis* [*AB,* 1964], p. 351, who said that such an explanation is "unduly sophisticated"). The NEB "wherever I make my home" and the NIV "wherever I lodge" reflect some of the uncertainty inherent in the root *gwr* (see G. von Rad, *Genesis* [Eng. tr., *OTL,* 1972], pp. 407f.). These interpretations are more plausible than the JB and NAB "exile," which reflects the supposed exilic background of the Psalm but are inappropriate to the sense of *māgôr.*

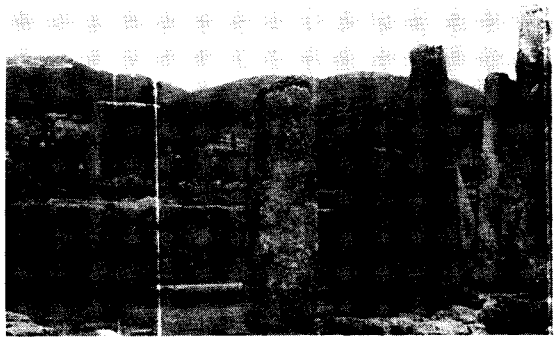
G. A. L.

PILHA pil'hä [Heb. *pilḥā'*–'millstone'] (Neh. 10:24 [MT 25]); AV PILEHA. A man who signed Nehemiah's covenant.

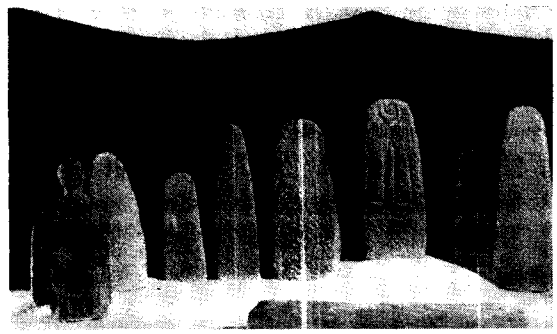
PILL. A verb used in English dialect, meaning to strip off or PEEL. The term occurs in the AV of Gen. 30:37f.

PILLAR [Heb. *maṣṣēḇâ*] (Gen. 28:18, 22; 31:13, 45, 51f.; 35:14, 20; Ex. 23:24; 24:4; 34:13; Dt. 7:5; 12:3; 16:22; etc); AV also IMAGE, GARRISON (Ezk. 26:11); NEB also SACRED PILLAR; [*'ammûḏ*] (Ex. 13:21f.; 14:19, 24; 26:32, 37; 27:10ff.; 33:9f.; 35:11, 17; 36:36, 38; 38:10ff.; Nu. 3:36f.; etc.); NEB also POST, BEAM; [*nᵉṣîḇ*] (Gen. 19:26); [hophal of *nāṣaḇ*–'be set up'] (Jgs. 9:6); NEB "propped-up"; [*māṣûq*] (1 S. 2:8); NEB FOUNDATION; [*šāṯ*] (Isa. 19:10); AV "purpose"; NEB "spinner"; [Gk. *stýlos*] (Gal. 2:9; 1 Tim. 3:15; Rev. 3:12; 10:1).

Pillars had a number of uses among the ancient Hebrews. The tradition of setting up memorial or sacred pillars (com-



monly designated by Heb. *maṣṣēḇâ*) dates from the patriarchal period. The unworked memorial that was raised over Rachel's burial place (Gen. 35:20) was so well known that its location was still remembered as late as the time of Saul (1 S. 10:2), being described as on the border of Benjamin at Zelzah. The pillar set up by the childless Absalom to perpetuate his name (2 S. 18:18) was less memorable, however, and has been incorrectly identified with the "Tomb of Absalom" (1st cent. B.C.) in the Kidron Valley of Jerusalem. To commemorate visibly the covenants between Jacob and Laban and also between God and Israel (Gen. 31:45-54; Ex. 24:4; Josh. 24:26f.) suitable monuments were erected.



Pillars frequently constituted sacred objects. In Gen. 35:14, e.g., Jacob set up a stone structure that commemorated God's presence and was designated "House of God" (Bethel). Moses erected twelve pillars and an altar at the foot of Mt. Sinai to symbolize the spiritual unity of the twelve Hebrew tribes when the covenant was ratified (Ex. 24:4). Joshua erected twelve stones at Gilgal, on the east side of Jericho, to mark the safe crossing of the Jordan and to serve as a witness to God's mighty power (Josh. 4:20-24). The origin of the pillar at Shechem (Jgs. 9:6) is uncertain, but may go back to the patriarchal period (*see* OAK OF THE PILLAR). A messianic prophecy in Isa. 19:19 states that a *maṣṣēḇâ* will be erected to the Lord on the Egyptian border to demonstrate God's control of foreign peoples. In the following century Jeremiah predicted the destruction of the sacred pillars (RSV "obelisks," Jer. 43:13) of Re at Heliopolis.

Canaanite shrines invariably contained one or more pillars, which were so closely identified with the idea of deity, especially male gods, that they themselves were often venerated as objects of worship. The pillars were normally associated with other pagan cultic objects, one of which was the *ʾăšērâ*. This was apparently a wooden pole or stele thought to symbolize the goddess of fertility, and thus mentioned in conjunction with the *maṣṣēḇâ* (Ex. 23:24; Lev. 26:1; Dt. 7:5; 12:2; Hos. 3:4; etc.). Many upright stones, described archeologically by the term menhir, have been found in the Levant, notable Palestinian examples occurring at Gezer, Byblos, and Râs Shamrah (Ugarit). The menhir was normally left in a rough form, although occasionally it appeared to have been partly shaped. At Hazor a damaged upright pillar was recovered from the entrance to an important building in the fortified Canaanite city, while excavations at a lower level (13th cent. B.C.) revealed a number of miniature stone slabs in a shrine. The invading Israelites may well have been responsible for the damage inflicted at this particular level.

The Heb. *ʿammûd* is often rendered "pillar" in the sense of a structural member supporting a roof, i.e., a column. Excavations at Gezer and elsewhere suggest that the pillars

Pillars near an altar (of Baal? Molech?) at Byblos (ca. 2500 B.C.) (D. H. Condit)

Collection of stelae from the Canaanite orthostat temple at Hazor (1500-1200 B.C.) (Israel Department of Antiquities and Museums)

that Samson pulled down at the time of his death (Jgs. 16:29f.) were made of wood and set on bases of stone. Several buildings with rows of pillars incorporated into their structure have been recovered from the period of the Israelite monarchy. The Solomonic palace-temple complex included a building described as the "house of the forest of Lebanon" (1 K. 7:2), perhaps an armory, that was supported on cedar pillars. This building was then linked by a pillared hall to the throne-room. Quite clearly the wooden pillars were being used as structural components, and therefore cannot be likened to the row of standing basalt stones recovered from the Canaanite shrine at Hazor (13th cent. B.C.). These artifacts had rounded tops, and one of them bore a rough engraving suggesting worship.

Solomon's temple had two large freestanding bronze pillars at the entrance (1 K. 7:15-22), but their significance is uncertain. Perhaps they were analogous to a freestanding column about 2.5 m. (8 ft.) high that was also recovered from Hazor. They may have been cressets or fire-altars, and evidently played some part in preexilic cultic worship in Israel (cf. 2 K. 11:14; 23:3). *See* JACHIN AND BOAZ. The remains of ten pillars at Gezer, apparently erected when the city was refortified under Solomon, have been dissociated from the high place and are regarded instead as a row of markers attesting to the unity of the refounding clans (see Graesser). From the early Israelite period at Tell Arad came a rectangular shrine with a high place and a *maṣṣēḇâ* (see *EAEHL*, I, 85f.), indicating that the pillar exercised some function in the worship at the shrine before it was removed in the 7th cent. B.C.

At Megiddo stone pillars were used in a building formerly described as "Solomon's stables," which is now dated to the time of Omri (885-874 B.C.) and Ahab (874-852 B.C.). The structure itself may not even have been a stable, but was perhaps an armory or a storehouse (cf. Y. Yadin, *BA*, 23 [1960], 62-68). The rectangular pillars in the royal palace at Samaria had carved proto-Aeolic or Ionic capitals, perhaps reflecting Phoenician concepts of design. There is no doubt that the Greeks assigned great importance to the use of pillars in the construction of temples, public buildings, and private residences of the wealthy, a feature that was also prominent in the palaces of the Persian rulers at Susa (cf. Est. 1:6) and Persepolis. The ruined temples at Baalbek and Gerasa testify to the abundant use of pillars in shrines and other buildings of Hellenistic origin.

A figurative use of *ʿammûḏ* occurs in Prov. 9:1, where the house of wisdom was said to have seven pillars. Perhaps the author employed this imagery to enhance the glory and beauty of the wisdom that he was commending, and to show its perfection by using the number seven, which for the Hebrews signified what was consummate and complete. Another figurative use occurs in Job 26:11, which mentions

the "pillars of heaven," i.e., the mountains (cf. the comms., many of which assume that this passage reflects a primitive world-view). Cf. also Ps. 75:3 (MT 4). *See* WORLD I.A.

In the NT "pillar" occurs only occasionally and in a figurative sense. James, Cephas, and John were reputedly "pillars" of the Jerusalem church (Gal. 2:9), i.e., foundational figures, while 1 Tim. 3:15 describes the Christian Church as "the pillar and bulwark of the truth." The imagery of basic structural components describes accurately people of spiritual substance, reliability, and dependability. The one who is victorious in the Christian life is to become a pillar in God's temple (Rev. 3:12). A powerful angel is described in Rev. 10:1 as having legs "like pillars of fire."

See also PILLAR OF CLOUD AND PILLAR OF FIRE.

PILLAR, OAK OF THE. *See* OAK OF THE PILLAR.

PILLAR OF CLOUD AND PILLAR OF FIRE. The visible manifestation of the divine presence during the Exodus. The Lord went before the Israelites "by day in a pillar of cloud [Heb. *'ammûḏ 'ānān*] to lead them along the way, and by night in a pillar of fire [*'ammûḏ 'ēš*] to give them light . . . the pillar of cloud by day and the pillar of fire by night did not depart from before the people" (Ex. 13:21f.; cf. 14:19, 24; Nu. 14:14). When the congregation was at rest, the cloud stayed over the tabernacle (Ex. 40:36; Nu. 9:17; 14:14). When the Lord wished to communicate His will to Moses, the pillar descended to the door of the tent of meeting (Ex. 33:9-11; Nu. 12:5; Dt. 31:15).

Scholars have offered various rationalistic explanations of these pillars. M. Noth (*Exodus* [Eng. tr., *OTL*, 1962], p. 109) supposed that the pillar of cloud and the pillar of fire reflected the volcanic activity of the Sinai area. U. Cassuto (*Comm. on the Book of Exodus* [Eng. tr. 1967], p. 158) saw a parallel with the ancient practice of carrying smoke and fire signals at the head of caravans as a guide.

Two other theories draw parallels from the ancient Near East. T. Mann (*JBL*, 90 [1971], 15-30; see also *Divine Presence and Guidance in Israelite Traditions* [1977], pp. 132f., 256f.) pointed out the weaknesses of the above theories and offered an alternative explanation on the basis of Ugar. *'nn*, which is usually translated "messenger" or "servant." Mann suggested that *'nn* is better translated "cloud" or perhaps "cloud-messenger"; in Ugaritic mythology the storm-god Baal has messengers (usually in pairs) who take the form of clouds. According to Mann this mythology provides the background for the Israelite traditions. G. Mendenhall (*Tenth Generation* [1973], pp. 32-66, 209-213) also appealed to Ugar. *'nn* but identified it more closely with the deity. He suggested that the term is the semantic equivalent of Akk. *melammu*, the "aureole . . . surrounding that which is divine" (p. 52). Thus he called Heb. *'ānān* the mask of Yahweh, i.e., a manifestation of His presence. The *'ānān* was later identified with the divine messenger or angel (Heb. *mal'āḵ*, Ex. 14:18; cf. 33:9-11). R. Good ("Cloud Messengers?" *Ugarit-Forschungen*, 10 [1978], 436f.), however, has criticized such interpretations of Ugar. *'nn*. He pointed out that Ugaritic has two different words *'nn*, one meaning "servant" (< *'nw/y*, "submit") and the other meaning "cloud"; in the texts that Mann and Mendenhall cited, Ugar. *'nn* clearly means "servant." Thus neither of these explanations is satisfactory.

G. A. L.

PILLAR OF SALT. *See* LOT II.B.

PILLAR, PLAIN OF THE. *See* OAK OF THE PILLAR.

PILLARS OF THE EARTH; PILLARS OF HEAVEN. *See* WORLD I.A.

PILLOW [Heb. *kāḇîr*] (1 S. 19:13, 16); NEB RUG. A support for the head of a reclining person. Heb. *kāḇîr* occurs only in this passage and, as noted in the RSV mg., its meaning is uncertain. The context and cognates (e.g., *kᵉḇārâ*, "sieve," Am. 9:9) suggest something "woven" from goats' hair. It was placed "at its [the image's] head" (*mᵉra'ªšōṯāyw*), apparently to serve as a wig (cf. Cant. 4:1, where a woman's hair is compared to a flock of goats). See P. K. McCarter, *I Samuel* (*AB*, 1980), p. 326.

The AV uses "pillow" in five additional places. In Gen. 28:11, 18 it renders *mᵉra'ªšōṯāyw* (see above) "for his pillows" (cf. RSV "under his head"; NEB "a pillow for his head," "on which he had laid his head"; cf. the same term in 1 S. 26:7, 11f., 16). In Ezk. 13:18, 20, AV, "pillows" represents Heb. *kᵉsāṯôṯ* (RSV, NEB, "magic bands"; *see* MAGIC II.A [7]). On Mk. 4:38, *see* CUSHION. N. J. O.

PILOT [Heb. *ḥōḇēl* (Ezk. 27:8, 27-29); Gk. part. of *euthýnō* (Jas. 3:4)]; AV also GOVERNOR (Jas. 3:4); NEB HELMSMAN. A person who steers a boat.

The Heb. *ḥōḇēl*, which occurs only in Ezk. 27 and Jonah 1:6, no doubt refers to the one who manipulates the sail lines (cf. *ḥeḇel*, "rope"; see *TDOT*, IV, 178; *see also* SHIPS). The use of *raḇ ḥaḥōḇēl* in Jonah 1:6 suggests that the RSV, AV, and NEB translations of *ḥōḇēl* in Ezk. 27 may be too exalted (see also LXX *kybernḗtēs*); i.e., it is perhaps better to follow JB, BDB (p. 287), and *CHAL* (p. 94) and translate "sailor" (see W. Zimmerli, *Ezekiel*, II [Eng. tr., *Hermeneia*, 1983], 59; cf. E. M. Good, *Semitics*, 1 [1970], 84 n. 15).

James uses two images to illustrate that just as relatively small objects can influence much larger ones, so the tongue can influence the whole person. His examples, a horse's bit and a ship's rudder, were often used for illustrations. See M. Dibelius and H. Greeven, *James* (Eng. tr., *Hermeneia*, 1976), pp. 185-190, for a full discussion of this imagery. G. A. L.

PILTAI pil'tī [Heb. *pilṭāy*–'(Yahweh is) my deliverer'] (Neh. 12:17). One of the priests in the days of the high priest Joiakim. Piltai was the head of the father's house of Moadiah (i.e., Moadiah's family; see N. Gottwald, *Tribes of Yahweh* [1979], pp. 285-292, for a definition of a "father's house"). Similar names occur in Punic (*plṭb'l*, "Baal is my deliverer"), Ugaritic, and Akkadian (see F. Benz, *Personal Names in the Phoenician and Punic Inscriptions* [1972], pp. 390f.). G. A. L.

PIM pim. *See* WEIGHTS AND MEASURES.

PIN [Heb. (noun) *yāṯēḏ* (Jgs. 16:13f.), (verb) hiphil of *nāḳâ*–'strike' (1 S. 18:11; 19:10; 26:8)]; AV also SMITE (1 S. 18:11; 19:10; 26:8); NEB also BEATER (Jgs. 16:13f.). The pin in Jgs. 16:13f. is a cylindrical piece of wood or metal used in WEAVING to beat up (hence the NEB) the woof, i.e., tighten the weave, in the loom. The MT in vv. 13b and 14a is apparently corrupt (see the comms., esp. G. F. Moore [*ICC*, 1895], pp. 353-55; cf. KD, *in loc.*); the RSV is based on the LXX, but the AV follows the MT.

The three occurrences of the verb in 1 Samuel all concern David and Saul. In his jealous rage Saul tried to impale David with his spear, but David escaped harm (18:11; 19:10). In 26:8 Abishai, one of David's faithful men, wanted to strike down the sleeping Saul, but David stayed his hand. See P. K. McCarter, *I Samuel* (*AB*, 1980), pp. 305f., 325, 405, 407f., for literary and text criticism and socio-political background. G. A. L.

PINE AWAY [Heb. *dûḇ* (Lev. 26:16), *zûḇ* (Lam. 4:9), *māqaq* (Lev. 26:39; Ezk. 24:23), *rāzî* (Isa. 24:16)]; AV also "sorrow" (of heart) (Lev. 26:16), "leanness" (Isa. 24:16); NEB also "fail" (appetite, Lev. 26:16), "villainy" (Isa. 24:16), "waste away" (Lam. 4:9); the AV and NEB have "pine away" in Ezk. 33:10 (Heb. *māqaq*; RSV "waste away"), and the AV uses the phrase to render Gk. *xēraínō* in Mk. 9:18 (RSV "become rigid"; NEB "go rigid").

In these passages Heb. *māqaq* means "decay, rot away" because of sin. Heb. *dûḇ* in Lev. 26:16, with its object *nepeš*, is "sorrow of heart" in the AV, "pining away of life" in the RSV, and "failure of appetite" in the NEB. Cf. Dt. 28:65, where the RV has "pining of soul."

In Isa. 24:16 the MT has Heb. *rāzî-lî*, which the AV translates "my leanness" and the RSV "I pine away." *BH* suggests *rᵉzî*, and some versions render "my secret" (cf. LXX mg.; Aram. *rāz*, "secret," Dnl. 2:18ff.; 4:9). Most commentators derive *rāzî* from Heb. *rāzâ*, "be lean" (cf. E. J. Young, *Book of Isaiah*, II [*NICOT*, 1969], 170-74); but the form is difficult to explain (thus KoB, p. 883, simply says "unexplained").

For the starving persons of Lam. 4:9 Heb. *zûḇ* is used, meaning "dry up," "wear away," or "be exhausted by morbid discharges."

The "pining sickness" (Heb. *dallâ*) of Isa. 38:12, AV, is a wrong translation. The AV and RV margins correctly read "from the thrum," and the RSV rendering is "from the loom." God removes Hezekiah's life from the earth just as readily as the weaver takes fabric from the loom.

On Mk. 9:18 *see* EPILEPSY; MEDICINE. R. K. H.

PINE (TREE) [Heb. *tᵉ'aššûr*] (Isa. 41:19; 60:13; Ezk. 27:6); AV BOX TREE, "Ashurites" (Ezk. 27:6); NEB BOX, BOXWOOD; [Heb. *bᵉrôṯ*] (Cant. 1:17); AV, NEB, FIR. Hebrew *tᵉ'aššûr* (Ugar. *tšrm*) should normally be regarded as the designation of the slender cypress *Cupressus sempervirens* L. If it can be demonstrated that boxwood is actually meant, the only species that grew in Palestine was the *Buxus longifolia* Boiss., an attractively grained wood that the Romans used for cabinetwork and ivory inlays. In Ezk. 27:6 the MT has *baṯ-'aššurîm* (lit. "daughter of Ashurites"; see AV), but the RSV follows the generally accepted repointing *biṯ'asssurîm* (lit. "with pines").

Hebrew *bᵉrôṯ* in Cant. 1:17 most probably refers to a species of juniper, evidently the Phoenician juniper, and not to the Aleppo pine (*Pinus halepensis* Mill.), as some botanists have thought, even though the latter is native to the Mediterranean area.

See also CYPRESS; FIR TREE; OLEASTER; PLANE TREE. R. K. H.

PINING SICKNESS (Isa. 38:12, AV). *See* PINE AWAY.

PINION pin'yən [Heb. *'ēḇer*, *'ēḇrâ*] (Dt. 32:11; Job 39:13; Ps. 68:13 [MT 14]; 91:4; Ezk. 17:3); AV WING, FEATHERS; NEB also WING.

Pinions form the terminal sections of a bird's wings. Poetically the term may refer to the wings themselves (thus the RSV translates *'ēḇer* "wing" in Ps. 55:6 [MT 7]; Isa. 40:13; cf. also the parallelism with "wing" in Dt. 32:11; Ps. 91:4), especially when the birds are in flight. Pinions, therefore, become the symbol of both strength and protection (Dt. 32:11; Isa. 40:31). G. WYPER

PINNACLE. The highest point; in architecture, a small turret or spire. The term rendered "pinnacles" in Isa. 54:12 (AV "windows"; NEB "battlements") is the plural of Heb. *šemeš* ("sun"), which suggests those parts of the buildings in restored Jerusalem that will reflect the sun. In Mt. 4:5 par. Lk. 4:9, Gk. *pterýgion* (lit. "little wing," but elsewhere "tower," "rampart," "pinnacle"; cf. Vulg. *pinnaculum*, "little wing") designates a part of the TEMPLE. It has traditionally been identified with the southeast corner of the outer court, which overlooked the Kidron valley and was so high that "if anyone looked down from the rooftop, combining the two elevations, he would become dizzy . . ." (Josephus *Ant.* xv.11.5 [412]). Another suggestion is the lintel of a gate of the temple, which may have been in the form of a balcony. (See comms.)

N. J. O.

PINON pī'nən [Heb. *pînōn*] (Gen. 36:41; 1 Ch. 1:52). One of the chiefs of Edom. Some (e.g., KD) connect Pinon with the place PUNON, one of Israel's camps in the wilderness (Nu. 33:42f.).

PIONEER [Gk. *archēgós*] (He. 2:10; 12:2); AV CAPTAIN, AUTHOR; NEB LEADER, "on whom (faith) depends from start (to finish)." In these passages and in its other two NT occurrences (Acts 3:15; 5:31) Gk. *archēgós* refers to Christ. It has two main senses that often merge: (1) "leader," "chief"; (2) "founder," thus "initiator," or in a bad sense "instigator." Both senses are well attested in pagan literature and in the papyri. Christ is *archēgós* of "salvation" (He. 2:10) and of "faith" (12:2); in each case the nuance "founder" seems apposite (cf. Vulg. *auctor*, "originator"). For the thought in Hebrews cf. 5:9, where Christ is called "source [*aítios*] of eternal salvation"; 6:20, where He is a "forerunner [*pródromos*] on our behalf." He is the "pathfinder" who has blazed the trail as His people's representative and forerunner; He has run the race to its triumphant finish (12:1f.).

PIPE [Heb. *ṣantᵉrôṯ*] (Zec. 4:12). In Zechariah's vision of a lampstand he saw, next to the lampstand, two olive trees with branches beside which were two golden pipes. These pipes apparently supplied oil to the lamp from the olive trees.

This text has several problems. (1) Since Heb. *ṣantᵉrôṯ* is a hapax legomenon, its meaning is not clear. Most scholars relate it to *ṣinnôr*, "channel, shaft" hence "spout" (see, e.g., KD; BDB, p. 857; cf. Targumic Aram. *ṣantᵉrîn*, "spouts, tubes"). North suggested "funnel" (p. 187). (2) The MT states that these pipes poured out "gold"; most scholars take this to be a reference to golden oil (so Baldwin, pp. 123f.; Kimchi, p. 45). (3) The meaning of the vision is somewhat debated, but the two olive trees apparently represent Zerubbabel and Joshua, the civil and religious leaders; the lampstand represents Israel; and the oil the Spirit of God. See the comms. for further discussion.

For musical pipes, *see* MUSIC II.C.

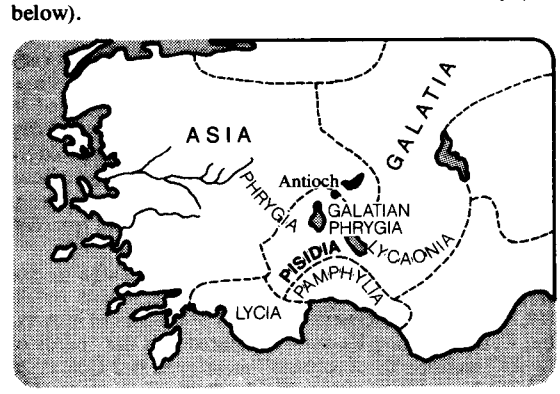
PIRAM pī'rəm [Heb. *pir'ām*—'wild ass' or 'zebra'(?)] (Josh. 10:3). King of Jarmuth, who along with Adoni-zedek of Jerusalem and three other Amorite kings (v. 5) attacked Gibeon because the Gibeonites had made peace with Israel (v. 1). Gibeon turned to Joshua for help (v. 6), and he responded with an all-night march from Gilgal. His army then routed the Amorite forces (on the miracle here, *see*

BETH-HORON, BATTLE OF). The kings escaped to a cave near Makkedah (v. 16) but there were trapped and killed (vv. 18-27). G. A. L.

PIRATHON pir'ə-thon; **PIRATHONITE** pir'ə-thon-īt [Heb. *pir'āṯon, pir'āṯônî*; Gk. B *Pharathōm*, A *Phraathōm, Pharathyneitēs*]. The home of Abdon son of Hillel, a judge (Jgs. 12:13, 15), as well as the home of Benaiah, one of David's chief captains (2 S. 23:30; 1 Ch. 11:31; 27:14). It was "in the land of Ephraim, in the hill country of the Amalekites" (Jgs. 12:15). It is probably to be identified with Far'âtâ, about 9.5 km. (6 mi.) SW of Shechem. Some have located the site in Benjamin on the basis of the geographical references to Abdon as a Benjaminite in 1 Ch. 8:23, 30; 9:36, but these references are to different persons named ABDON. It is doubtful that Pirathon is the Pharathon fortified by Bacchides (1 Macc. 9:50; Josephus *Ant.* xiii.1.3 [14-16]), since this town is in Judea; there is also a textual problem: some MSS read Timnath-Pharathon (so NEB), a compound name, rather than two separate names (see J. A. Goldstein, *I Maccabees* [*AB*, 1976], p. 386). R. P. DUGAN, JR.

PISGAH piz'gə [Heb. *happisgâ*, always with the definite article and always in combination (see discussion below); Gk. *Phasga*, although the LXX does not always render the term as a proper noun but sometimes uses *hē laxeutē* or *tó lelaxeuménon*]. A mountain (range or peak) in Moab opposite Jericho, identical with or closely joined to Mt. Nebo (Dt. 34:1).

Four times the word occurs in the expression *rō'š happisgâ*, "the top (head) of the Pisgah": Nu. 21:20; 23:14; Dt. 3:27; 34:1. In the last two passages the term refers to the place where Moses went to view the Promised Land. Four times the word is found in the expression *'ašdōṯ happisgâ*, "the slopes of Pisgah" (RSV; AV reads Ashdoth-pisgah, except in Dt. 4:49 where it reads "the springs of Pisgah"): Dt. 3:17; 4:49; Josh. 12:3; 13:20. Each of these passages uses the compound form as a term of geographical significance. The LXX rendering of *pisgâ* by forms of *laxeúō*, "hew, dress stone" (Nu. 21:20; 23:14; Dt. 3:27; 4:49), may be significant. This rendering is not limited to either of the compound terms, for three times it is used where the Hebrew has *rō'š happisgâ*, and once where the Hebrew reads *'ašdōṯ happisgâ*. Jerome (*Onom. s.v. Asedoth*) translates *Fasge* by Lat. *abscisum*, "steep," "broken off," thus deriving Pisgah from the verb *pāsag*, "split, cut off." This translation suggests that *happisgâ* was read "the cutting off, the cleft" (cf. Gk. *tó lelaxeuménon*).



Viewed from the east, the edge of the Transjordan plateau overlooking the Dead Sea certainly gives this appearance.

It is impossible to determine whether "the Pisgah" was the name of the entire range (now the Abarim Mountains) or of a single peak. If a peak, the identification with Râs es-Siâghah (or Jebel Siâghah) commends itself, for this peak, slightly lower than Mt. Nebo and to the northwest, is joined to Nebo by a saddle.

See also NEBO, MOUNT. W. S. L. S.

PISHON pī'shon [Heb. *pîšôn*; Gk. *Ph(e)isōn*; AV PISON]. One of the four rivers of Eden, mentioned only in Gen. 2:11. It is said to have flowed around the whole land of Havilah. Conjectures about the identification of Pishon are numerous and no conclusion is generally accepted (see the comms.). The mention of HAVILAH is of little help, since its location is unclear. It appears to be associated with northeastern Arabia in Gen. 25:18 but with southwestern Arabia in Gen. 10:28. D. E. WARING

PISIDIA pə-sid'i-ə (Gk. *Pisidia*). A highland area of south central Asia Minor (Acts 13:14; 14:24). In Acts 13:14 ℵ A B C $\mathfrak{p}^{45}$ read Gk. *Antiocheian tēn Pisidian*, "the Pisidian Antioch"; most other MSS read *Antiocheian tēs Pisidias*, "Antioch of Pisidia." The former, followed by the NEB, is most likely original and correctly describes geographical facts of the time when Paul traveled in the country (see below).

Pisidia as a strict geographical term was the name given to a huge block of mountain country (190 km. [120 mi.] E-W and 80 km. [50 mi.] N-S) stretching northward from the Taurus and bordered by Pamphylia on the south, Lycia on the southwest, Phrygia on the north and west, and Isauria on the east, though the frontier on that side was never strictly drawn. The name is so used by Xenophon, who recorded that the Pisidians were independent of the Persian king at the end of the 5th cent. B.C. (*Anabasis* i.1.11).

Alexander the Great had difficulty in reducing Pisidia, and throughout ancient history the area is described as the home of a turbulent and warlike people given to robbery. The task of subjugating them was entrusted by the Romans to the Galatian King Amyntas, and at his death in 25 B.C. Pisidia was included in the Roman province of Galatia organized from his former territories.

Augustus undertook seriously the pacification of the Pisidian and Isaurian mountains. He established a chain of military colonies at Cremna, Comana, Olbasa, Parlais, and Lystra and connected them by military roads with the main garrison city of Antioch. This had been founded by the Seleucids and lay in Galatian Phrygia, near the northern border of Pisidia. Augustus established the Roman *colonia* there in *ca.* 25 B.C. (accepting Ramsay's dating) and the city was thenceforth passionately loyal to him. As

the military organization of Pisidia centered upon this city on its border, Antioch derived the title "the Pisidian," which served to distinguish it from other cities named Antioch.

An inscription shows that P. Sulpicius Quirinus, who is mentioned in Lk. 2:2 as governor of Syria in the year of Christ's birth, was an honorary magistrate of the colony of Antioch: his connection with Antioch dated from his campaign *ca.* 8 B.C. against the Homonades, who had resisted and killed Amyntas.

Pisidia remained part of the province of Galatia until A.D. 74, when the greater (southern) part of it was assigned to the new double province of Lycia-Pamphylia and the cities in this portion of Pisidia then ranked as Pamphylian. The northern part continued to belong to Galatia until the close of the 3rd cent., when Diocletian formed a new province of Pisidia, with Antioch as capital, that included the southern part of the old province of Galatia and the districts of Lycaonia and Asia. Antioch was for the first time correctly described as "of Pisidia," although there is reason to believe that the term "Pisidia" had already been extended northward in popular usage to include at least part of the Phrygian region of Galatia. This usage perhaps explains the reading "Antioch of Pisidia" in Codex Bezae, whose readings usually reflect conditions of the 2nd cent. A.D. in Asia Minor. The use of the term in this way was political and administrative; ethnically Antioch remained Phrygian and retained its Phrygian identity into the 3rd cent. A.D. (see W. M. Calder, *Journal of Roman Studies*, 2 [1912], 84). During NT times Antioch was very much a Roman outpost. It was governed by *duumviri* and a municipal council whose membership was restricted to the Roman colonists. The quarters into which the city was divided bore Latin names; the city was dominated by the temple in honor of Augustus. Latin was the official language and many inscriptions of this period are in Latin. The *incolae*, Greek or Phrygian inhabitants, were regarded as separate and inferior to the "coloni."

Paul crossed Pisidia on the journey from Perga to Antioch mentioned in Acts 13:14 and again on his return (14:24). Of those journeys no details are recorded in Acts, but Conybeare and Howson suggested that the "perils of rivers" and "perils of robbers" mentioned in 2 Cor. 11:26 refer to his journeys across Pisidia. Ramsay pointed out in confirmation of this view that many Pisidian inscriptions refer to the armed policemen and soldiers who kept peace in the region, while others refer to conflict with robbers and to an escape from drowning in a river (*CRE*, pp. 23f.; cf. *Journal of Roman Studies*, 2 [1912], 82f.). The Turks call the site of Adada, a city on Paul's probable route from Perga to Antioch, Kara Bavlo; "Bavlo" is the Turkish pronunciation of "Paulos," and the name is probably reminiscent of an early tradition connecting the city with Paul.

Rural Pisidia remained unaffected by Hellenic civilization and apart from Antioch itself Jewish communities appear to have been few. The Roman occupation of the time was purely military. It is therefore unlikely that Paul preached extensively during his progress through the country. Pisidia differs from Phrygia in that none of its Christian inscriptions, except at the extreme northwest, dates from before the legal recognition of Christianity under Constantine. In the brief but savage repression of Christianity under Maximin Daia (311-312) the inscription on the sarcophagus of Bishop Eugenius of Laodicea Combusta (Ladik) shows that Valerius Diogenes, *Praeses* of Pisidia, carried out persecuting measures against Christian officials under him (W. M. Calder, ed., *Monumenta Asiae minoris antiqua*, I [1928], no. 170; and H. Dessau, ed., *Inscriptiones Latinae selectae* [3 vols., 1892-1916], no. 9480).

W. H. C. FREND

PISON pī'son (Gen. 2:11, AV). *See* PISHON.

PISPA pis'pə [Heb. *pispâ*–'cut off, separate'(?)] (1 Ch. 7:38); AV, NEB, PISPAH. A son of Jether from the tribe of Asher.

PIT [Heb. *bôr, bᵉ'ēr, gûmmāṣ* (Eccl. 10:8), *paḥaṭ, šaḥaṭ, šûḥâ, šîḥâ* (Ps. 57:6 [MT 7]), *šᵉḥût, šᵉḥîṭ* (Lam. 4:20), *mahᵃmôrôṭ* (Ps. 140:10 [MT 11]), *mikreh* (Zeph. 2:9); Gk. *bóthynos, phréar, ábyssos, hypolênion* (RSV "pit for winepress," AV "place for winevat," NEB "winepress")]; AV also DUNGEON (Lam. 3:53, 55), CORRUPTION, DESTRUCTION, DITCH, GRAVE; NEB also DUNGEON (Isa. 24:22; Zec. 9:11), MUD (Job 9:31), GRAVE, "pit of death" (Ps. 103:4), ABYSS (e.g., Ps. 69:15), etc. In Prov. 28:18 the RSV follows Syr. and emends MT *'eḥāṭ* to *šaḥaṭ* (see *BHS*); AV and NEB follow MT. Hos. 5:2 is textually corrupt: the RSV emends to "pit of Shittim" (see *BHS* and comms.); the AV follows MT *šāḥaṭ*, "make slaughter," and the NEB paraphrases. In 2 Pet. 2:4, the RSV and NEB follow ℵ A B C etc., *seiroís*, "pits"; AV "chains" follows K L P p^{72} etc., *seiraís*; see R. J. Bauckam, *Jude, 2 Peter* (*Word Biblical Comm.*, 1983), pp. 244, 249.

In the OT "pit" translates two major families of words. One (*bôr*/*bᵉ'ēr*) denotes the literal sense in narrative and legal sections, while used as part of the vocabulary for discussing death in prophetic and poetic material. The second (*šaḥaṭ*, and cognates of *šû[a]ḥ*; cf. BDB, p. 1001) connects "pit" exclusively with the realm of death, being found only in the prophets, Psalms, Job, and Proverbs. The NT follows the same distinction between narrative and prophetic usages.

A pit may be any cavity in the ground, though *bᵉ'ēr* especially refers to a cistern, hewn to collect winter rains. Large enough to hide a person (e.g., Joseph, Gen. 37:22ff.; David, 2 S. 17:9), they were a potential danger for livestock (Ex. 21:33ff.; Mt. 12:11) as well as for people. Such a cistern could trap a lion (2 S. 23:20), or be a convenient and dishonorable grave (for Absalom, 2 S. 18:17; for the princes of Ahaziah, 2 K. 10:14; for the king of Babylon, Isa. 14:19). *See also* CISTERN.

The danger of an open, unguarded pit is a traditional metaphor for wicked or foolish schemers (Prov. 26:27; 28:10, 18; Eccl. 10:8), the unwary before the harlot (Prov. 22:14; 23:27), and the spiritually blind (Mt. 15:14; Lk. 6:39). The pit becomes their own trap (Ps. 7:15 [MT 16]; cf. Rom. 3:20), resulting in destruction (e.g., Jer. 18:22; Ezk. 19:8; Ps. 35:7; 57:6 [MT 7]).

Most importantly, "pit" forms part of the Hebrew vocabulary of death and seems to be a synonym for SHEOL (hence the RSV often capitalizes it). The common participial phrase, *yôrᵉḏê bôr*, "those who go down to the pit" (e.g., Ps. 28:1; Prov. 1:12; Isa. 38:18; Ezk. 26:20) is part of a larger literary formula: one goes down to Sheol (Ps. 55:15 [MT 16]), to the dust (Job 17:16), *šaḥaṭ* — the realm of death (Ps. 30:9 [MT 10]) and the nether world (Ezk. 32:24ff.). The formula follows Ugar. *yrdm 'rṣ*, "going

down to the (nether) world" (see Tromp). The pit is dark and deep (Ps. 88:6 [MT 7]), desolate (Ps. 40:2 [MT 3]), where one cannot praise (Ps. 30:9 [MT 10]), filled with filth (Job 9:31), a dreadful end (Ezk. 26:21), beneath even the deep (Jonah 2:6 [MT 7]; Ps. 69:15 [MT 16]). *See also* DEATH.

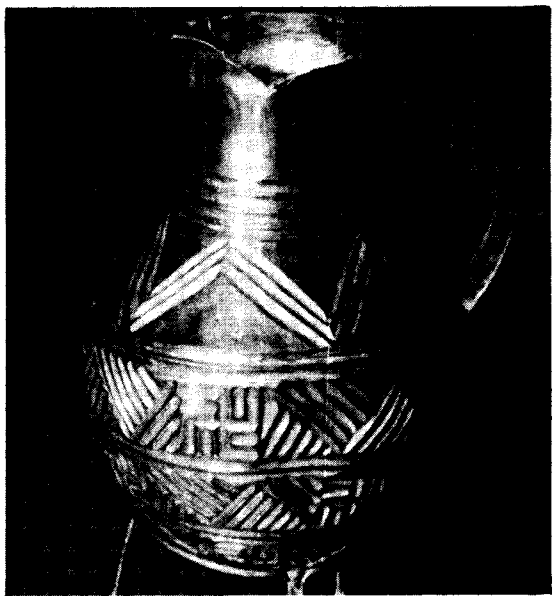
The pit (*šaḥaṭ*) is the realm of death (Ps. 49:9 [MT 10]) metaphorically as well as physically. To Yahweh belongs redemption from its despair or from an untimely end (Job 33:22ff.; Ps. 16:10 [MT 11]; 103:4; Isa. 51:14ff.). To Yahweh also belongs judgment. The pit is prepared for the wicked (Ps. 94:13) and for Israel's enemies (Ezk. 32:18ff.).

In the NT the pit is the home for the fallen angels (2 Pet. 2:4), the eschatological abode of the beast (Rev. 11:7) and of Satan (Rev. 9:11). God nonetheless holds the key to this bottomless pit (Rev. 9:1; 20:1, 3). *See also* ABYSS.

Bibliography.–M. Pope, *JBL*, 83 (1964), 269-278; N. J. Tromp, *Primitive Conceptions of Death and the Nether World in the OT* (1969), pp. 66-71; *TDOT*, I, *s.v.* "bᵉʾēr" (Heintz).

W. R. HARRIS

PITCH [Heb. *kōper*] (Gen. 6:14); [*zepeṭ*] (Ex. 2:3; Isa. 34:9); NEB also TAR (Ex. 2:3). A viscous, sticky, flammable, hydrocarbon substance distilled from petroleum or coal tar and used for water-proofing, pavements, roofing and, in ancient Mesopotamia, mortar.



In Gen. 6:14 the term *kōper* clearly refers to the caulking material for Noah's ark. It is a loanword from Akk. *kupru*, which was used by Utnapishtim, the Babylonian Noah, in caulking his "ark." It probably should not be equated with the common Hebrew root, *kpr*, meaning "to cover," although its consonantal structure is identical. That the word indicates "pitch" comes primarily from the LXX which translates it with *ásphaltos*.

The second term, *zepeṭ*, is also used as a caulking material in Ex. 2:3 along with BITUMEN (Heb. *ḥēmār*). The distinction between "bitumen" and "pitch" in this context is unclear. In Isa. 34:9 it flows and burns like brimstone. Because the context places this action in Edom, it may refer to the bitumen fields S of the Dead Sea still visible today.

See also MORTAR.

L. G. HERR

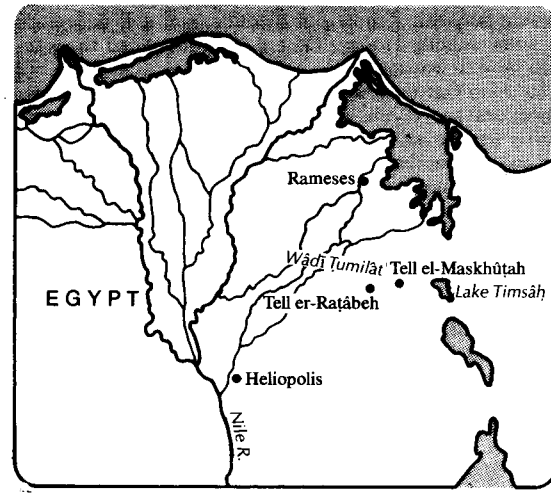
Proto-Hittite gold pitcher from Alaça Hüyük (Turkey), 23rd cent. B.C. (Hittite Museum, Ankara; picture W. S. LaSor)

PITCHER [Heb. *kaḏ*] (Eccl. 12:6); [*gāḇîʿ*] (Jer. 35:5); AV POT; NEB BOWL.

The Heb. *kaḏ* is translated "pitcher" by the AV in most of its thirteen occurrences. Nine of those occurrences are in Gen. 24, the story of Rebekah at the well, and clearly refer to water jars, not pitchers as we know them today. Even in Eccl. 12:6 the context is that of fountain activity, making "water jar" a better translation. In daily use it would probably have been considered a woman's vessel, because it was the woman who normally drew water. Many such water jars are found at the bottom of excavated cisterns. The term was used in the Gideon story (Jgs. 7) to indicate the vessel covering the torches.

The Heb. *gāḇîʿ* usually refers to a cup (e.g., Gen. 44:2, 12, etc.), but the context in Jer. 35:5 seems to call for a larger vessel. According to J. Kelso (*Ceramic Vocabulary of the OT* [*BASOR Supp. Studies*, 5/6, 1948], p. 17), both cup and pitcher may have had a calyx shape (cf. Ex. 25:31-34).

L. G. HERR



PITFALL [Heb. *śᵉḇāḵâ*] (Job 18:8); AV SNARE; NEB PIT; [*śîḥâ*] (Ps. 119:85); AV PITS; NEB "(spread) tales"; [*paḥaṭ*] (Lam. 3:47); AV SNARE; NEB PIT; [Gk. *skándalon*] (Rom. 11:9); AV, NEB, STUMBLING BLOCK. "Pitfall" is a figurative rendering of terms that the AV translates literally. In Job 18:8 *śᵉḇāḵâ* is parallel to *rešeṭ*, "net," and probably refers to a grid or network laid over a pit. *Śᵉḇāḵâ* elsewhere is used only of a lattice work or grating ("net," 1 K. 7:17; "network," 7:20, 41f.; 2 Ch. 4:12f.; Jer. 52:22f.) in the temple; as J. Gray (*I & II Kings* [*OTL*, 2nd ed. 1970], p. 185) noted, a similar semantic variance occurs in the Arabic cognates *šabaka*, "net," and *šubbak*, "window" (both < *šabaka*, "interjoin, interweave"). *Śîḥâ* refers to a PIT dug in the ground for catching wild animals. The Gk. *skándalon* literally means a trap but is used figuratively of anything that might lead one to fall into error, sin, or destruction. Note that Rom. 11:9 is a quote from the LXX (Ps. 68:23 = 69:22 [MT 23]), which often uses *skándalon* to translate Heb. *móqēš*, "trap."

See also STUMBLING BLOCK.

G. A. L.

PITHOM piʾthəm [Heb. *piṯōm*]. One of the two store-cities built by the Hebrews during their bondage in Egypt. Pithom occurs only in Ex. 1:11, but RAMESES, the other store-city, is mentioned four times (Ex. 1:11; 12:37; Nu. 33:3, 5).

Pithom is the Hebrew rendering of the Egyp. *pr ỉtm* or

Pr-Tm (*Per Tum*). *Per,* meaning "house," was used to denote nonfunerary temples dedicated to a god. Uphill has argued that the term had a much wider administrative context and was used to designate a town containing a temple dedicated to a major god. Thus Thebes, sacred to Amun, could be termed "Per-Ammun." *ỉtm* certainly refers to the great god Atum, a god who personified the sun, whose chief cult center was Heliopolis (biblical On, also Beth-shemesh, Jer. 43:13; Egyp. Iunu). Today the site is in the northeast suburbs of modern Cairo. Circumstantial evidence links Pithom with a city bearing the Greek name *Hērōōnpolis*. In Gen. 46:28 the LXX reads "*Hērōōn polis* in the land of Ramses" for the MT "Goshen." Interestingly, the Bohairic Coptic version reads "Pithom in the land of Ramses," thus substituting Pithom for the LXX *Hērōōn polis*. Both Naville and Gardiner argued that the god Ero (Latin Hero) was linked with Atum and consequently Pithom and Heroonpolis should be equated. Such an equation is accepted by many scholars.

The location of Pithom continues to be a matter of debate. Most of the discussion has centered on two sites, Tell er-Reṭâbeh and Tell el-Maskhûṭah, both of which are located in the eastern end of the Wâdī Ṭumilât. The latter is a fertile finger of land extending to Lake Timsâḥ from the Nile Valley. Historically the Wâdī Ṭumilât served as an important conduit into Egypt from the east; Asiatics frequently used this route coming from Palestine and Edom. Most discussions of the location of Pithom are predicated on the assumptions that Ramses, the point from which the Exodus began (Ex. 12:37), is located in the Wâdī Ṭumilât and that Pithom must be located nearby. A third assumption in much of the discussion is that the Exodus occurred in the 13th cent. B.C. Therefore, building remains from the time of the late fourteenth- or early thirteenth-century pharaohs, e.g., Ramses I, Seti I, or Ramses II, should be adduced. Three major options have been proposed.

In 1883 Naville excavated Tell el-Maskhûṭah, located 15 km. (9 mi.) W of Ismailia, and subsequently identified the site with Pithom on the basis of several lines of evidence. Inscriptional material from the site mentions Per-Atum along with the more frequent *Ṯkw(t)*. The former term occurs only in late inscriptions. Monuments from the times of Ramses II (1290-1224 B.C.) found at the site established that Atum was worshiped there. Two Roman inscriptions linked the site to Ero or Heroonpolis and thus Pithom. Naville also found architectural features which he interpreted as "store chambers." He noted that the facilities were built, in part, of bricks produced without straw. These factors led Naville to identify Tell el-Maskhûṭah with Pithom, an identification still accepted by some scholars today. Others have identified the site with biblical Succoth.

Sir Alan Gardiner was one of the first to raise serious objections to Naville's thesis. He noted that the term *Ṯkw(t)* was the more frequent designation of the site. Uphill has pointed out that although *Ṯkw(t)* is certainly the capital of the eighth nome of Egypt, it does not follow necessarily that *Ṯkw(t)* was known as Pithom. It must be admitted, however, that *Ṯkw(t)* appears in some cases to have a regional connotation; thus Pithom could be in *Ṯkw(t)*. Peet noted that Naville's "store-chambers" were more likely the typical foundations of Egyptian fortresses. Further, bricks produced without straw are not unique to Tell el-Maskhûṭah.

Gardiner located Pithom at Tell er-Reṭâbeh, a site excavated in 1906 and located 14 km. (9 mi.) W of Tell el-Maskhûṭah. He postulated this identification largely on the basis of his reading of a Roman milestone found at Tell el-Maskhûṭah by Naville that mentioned Ero. The inscription, Gardiner noted, did not indicate that Tell el-Maskhûṭah was Ero, rather that Tell el-Maskhûṭah was located about 14 km. (9 mi.) on the road from Ero to Clysma (Suez). Ero, and therefore Pithom, must be located W of Tell el-Maskhûṭah. Gardiner believed that Tell er-Reṭâbeh was ideally situated.

Petrie's excavation at Tell er-Reṭâbeh demonstrated that the site was built prior to the New Kingdom. Ramses II and Ramses III were responsible respectively for a temple, probably dedicated to Atum, and an enclosure wall. One scene from the temple shows Ramses II smiting an Asiatic by the strength of Atum. Little else is known of the site, but W. F. Albright and several of his pupils have accepted Gardiner's proposal that the site be identified with Pithom.

Uphill has proposed a third possibility and would equate Pithom with Heliopolis, the Egyptian Iunu, near Cairo. He maintained that Per-Atum would be understood by an Egyptian as a reference to the chief cult center of Atum and the surrounding district sacred to that god. Petrie excavated the site and found a large temenos, possibly built by Ramses II. It must be noted, however, that the great temple of Heliopolis was sacred to Rē -Harakhti, another solar deity, and that a "house" (Per) of Atum at the site is only conjectured.

Thus the location of Pithom remains uncertain. Of the three proposals, that of Uphill has not won wide acceptance. Current scholarship remains divided over Tell er-Reṭâbeh and Tell el-Maskhûṭah, with perhaps an edge given to the former. Further excavation seems the only hope of clarification.

T. V. BRISCO

PITHON pī'thon [Heb. *pîṯôn*] (1 Ch. 8:35; 9:41). A great-grandson of Saul through Merib-baal (Mephibosheth) and Micah. The meaning of the name is uncertain; Noth (*IP*, p. 254) suggested that it is related to the postbiblical Heb./Aram. *piṯnā'*, "adder," but this seems tenuous.

PITIFUL. A term used by the AV three times in the archaic sense of "full of pity," "compassionate": Lam. 4:10 (RSV "compassionate"); Jas. 5:11 (RSV "compassionate"); 1 Pet. 3:8 (RSV "tender heart"). *See* COMPASSION; HEART VI.

PITY [Heb. *ḥāmal* (Ex. 2:6; 2 S. 12:6; Job 27:22; Zec. 11:5f.; etc.), *ḥûs* (Dt. 7:16; 19:13; Ps. 72:13; etc.), *nûḏ* (Ps. 69:20 [MT 21]), piel or pual of *rāḥam* (Ps. 102:13 [MT 14]; 103:13; Isa. 49:10; Hos. 1:6-8; 2:1, 4, 23 [MT 3, 6, 25]; etc.), *raḥᵃmîm* (Ps. 106:46; Am. 1:11), niphal of *nāḥam* (Jgs. 2:18; Ps. 90:13; Jer. 20:16; etc.), *ḥānan* (Job 19:21; Ps. 86:16; 102:14 [MT 15]; 109:12), *ḥemlâ* (Isa. 63:9); Gk. *splanchnízomai* (Mt. 18:27; 20:34; Mk. 1:41; 9:22), *eleeinós* ("most to be pitied," 1 Cor. 15:19)]; AV also COMPASSION, REPENT, LO-RUHAMAH (Hos. 1:6, etc.), MERCY, FAVOR, etc.; NEB also LO-RUHAMAH (Hos. 1:6, etc.), SHOW FAVOR, RELENT, WARM INDIGNATION, etc.; **PITIABLE** [Gk. *eleeinós*] (Rev. 3:17); AV MISERABLE; NEB PITIFUL.

I. Biblical Terms.–The Hebrews did not distinguish between emotions and the actions stimulated by those emotions; thus the Hebrew terms represented by "pity"

mean not merely to feel sympathy for one who is suffering or helpless but also to come to the aid of that person. Heb. *ḥûs* ("have pity, compassion") and *ḥāmal* ("spare," "be sorry for") occur frequently in juridical contexts where they denote pity resulting in the mitigation or suspension of punishment. The niphal of *nāḥam* (AV usually "repent") occurs frequently of Yahweh's relenting from judgment and showing mercy to His people. *Ḥānan* (lit. "be gracious"; cf. *ḥēn*, "grace, favor") frequently means to show kindness to the poor and needy. The verb *rāḥam* is related to the noun *reḥem*, "womb." The Hebrews regarded the abdominal region as the seat of tender emotions (see *ILC*, I-II, 309, 525). The verb *rāḥam* and the cognate noun *raḥ^{a}mîm* generally denote the natural feelings of love and tenderness that are aroused in the strong (e.g., parents) by the helplessness and dependence of the weak, especially within the family. The Greek verb *splanchnízomai* is derived from the noun *splánchna* ("inward parts, entrails," then "seat of the emotions"; cf. Eng. "heart"). Although *splánchna* occurs rarely in the LXX, in later intertestamental Jewish writings it came to be used as a translation of Heb. *raḥ^{a}mîm* (*TDNT*, VII, 550-53). *Eleeinós*, "pitiable" (cognate of *éleos*, "mercy," and *eleéō*, "show mercy"), is used to describe the miserable condition of two groups of "Christians" whose attention is fixed too much on this life rather than on the resurrection hope (1 Cor. 15:19; Rev. 3:17).

II. In the OT.–The showing of pity is, above all, a characteristic of God. God's pity is an expression of His STEADFAST LOVE (Heb. *ḥeseḏ*, e.g., Ex. 20:6; 34:6f.) toward His covenant people. On the basis of the covenant, the Israelites could appeal to God's compassion (Ps. 86:15f.; 90:13; cf. 106:44-46). They knew Him as a God who pities the weak and needy (Ps. 72:12-14; cf. 103:13f.). When His people were afflicted or oppressed, God promised salvation (Jgs. 2:18; Isa. 63:7-9; cf. Ps. 102:13f. [MT 14f.]). To a repentant people in a devastated land He promised forgiveness as well as grain, oil, and wine (Joel 2:18f.). To His people in exile He promised a return to Palestine and the provision of food and water on the journey through the desert (Isa. 49:9f.). While God was especially compassionate toward His covenant people, He showed pity also toward those outside the covenant — especially children — and even to animals! (Jonah 4:11).

God could also be motivated to withhold His pity from His covenant people because of their unfaithfulness (e.g., Lam. 2:17; 3:43; Zec. 11:6). By naming his child "Not pitied" (Hos. 1:6, 8; cf. 2:4; *see also* LO-RUHAMAH), Hosea signified that God was withdrawing His fatherly protection from Israel. Yet he also prophesied that on a day of eschatological renewal the Lord would again show compassion toward His people (2:1, 23 [MT 3, 25]). The formula (or a variant), "my eye will not spare [*ḥûs*], nor will I have pity [*ḥāmal*]," occurs frequently in Ezekiel (5:11; 7:4, 9; 8:18; 9:5, 10; cf. 20:17, where *ḥûs* ["spare"] is used in a positive sense; cf. also Jer. 13:14; 21:7), always with reference to God's judgment against His unfaithful covenant people. The formula, which indicates that a punishment is to be carried out without mitigation, may have originated in the procedures of sentencing and execution. Deuteronomy uses a similar expression in prescribing the death penalty for various crimes: "Your eye shall not pity [*ḥûs*] . . ." (Dt. 7:16; 13:8 [MT 9]; 19:13, 21; 25:12).

Humans, as well as God, can show pity. It was expected that one would be compassionate toward members of one's own family; thus Edom's (Esau's) "casting off all pity" toward its brother Israel (Jacob) was an action deserving of judgment (Am. 1:11). Anyone in a helpless or dependent condition merited pity, e.g., children (cf. Isa. 13:18; Ezk. 16:4f.), especially orphans (Ps. 109:12), also captives (Ps. 106:46), the poor (2 S. 12:6). Pharaoh's daughter took pity on the infant Moses and acted to deliver and provide for him (Ex. 2:6-10). Struck down by tragedy and intense physical suffering, Job pleaded for compassion from his "friends," but he found none (Job 19:21; cf. Ps. 69:20 [MT 21]; 17:10).

III. In the NT.–In the NT it is primarily Jesus who demonstrates pity through His parables (e.g., Mt. 18:27; cf. "have compassion" [*splanchnízomai*], Lk. 10:33; 15:20) and through His miracles of healing and exorcism. Moved with pity, Jesus healed the blind men by the road to Jericho (Mt. 20:34), a leper (Mk. 1:41), and a child possessed by a demon (9:22-27). By His parables and healing acts Jesus displayed the compassion of God, thus revealing His messianic character as the one in whom the divine mercy was present (see *TDNT*, VII, 553-55).

PLACE. The translation of a great many Hebrew and Greek terms, but most often of Heb. *māqôm* in the OT and Gk. *tópos* (the usual LXX translation of *māqôm*) in the NT. According to H. Köster the terms have slightly different emphases (*TDNT*, VIII, 193f.). Heb. *māqôm* always represents the "site" of a thing or event; i.e., it is defined in relation to something that is there or belongs there or takes place there. Frequently it denotes the dwelling place of a person or people (cf. Gen. 18:33; Ex. 16:29; Nu. 24:11, 25; 1 S. 14:46; 26:25); as such it can refer to a country (e.g., Ex. 3:8; 2 S. 7:10) or to a town (e.g., Gen. 18:24; 19:12-14). It can also designate a person's bed (e.g., 1 S. 3:2, 9), seat (e.g., 20:25, 27), or standing-place (cf. 5:3). In a broader sense it can denote any site (e.g., Gen. 28:11 [three times], 16f.; Ex. 3:5; Nu. 22:26; cf. 1 S. 21:2 [MT 3]).

Although its use in the Apocrypha and NT is heavily influenced by its LXX usage, Gk. *tópos* originally lacks the strong sense of possession generally present with Heb. *māqôm*. Instead it primarily denotes a geographical space. It can designate any area: "a lonely place" (Mt. 14:13, 15; etc.), "waterless places" (Mt. 12:43 par. Lk. 11:24), "various places" (e.g., Mt. 24:7 par.), etc. (cf. simply "the place," Lk. 10:32; 19:5; 22:40; 23:33). Sometimes it refers to a town or district (e.g., Act 16:3; cf. Lk. 10:1).

The use of *tópos* in Revelation reflects OT influence. Created things such as the earth and sky (20:11), mountains and islands (6:14), have their divinely assigned places (cf. Job 6:17; 8:18; 9:6; 14:18; etc.); but they are only transitory: at the end of the age they will dissolve to be replaced by the new heaven and new earth (cf. Rev. 21:1). The threatened removal of the lampstand from a disobedient church denotes the end of its existence as a part of the Church of Christ (2:5). God's promise to sustain the Church is depicted by His provision of a place of refuge for the woman during persecution (12:6, 14). Satan and his angels, however, must forfeit forever their allotted place in heaven (v. 8); cf. Acts 1:25: Judas forfeited his place among the apostles to go to "his own place" (a euphemism for hell; see comms.).

PLACE, BROAD. *See* BROAD PLACE.

PLACE, HIGH. *See* HIGH PLACE.

PLAGUE [Heb. (vb.) *nāgap*, (nouns) *nega'*, *negep*, *makkâ*, *maggēpâ*, *deḇer*; Gk. *mástix*, *plēgḗ*]; AV also PESTILENCE, MURRAIN, SORE; NEB BLOW, CALAMITY, DISEASE, PESTILENCE, SICKNESS. The word "plague" occurs more than fifty times in the RSV and over a hundred times in the AV.

While the term can be used of any disease resulting in high mortality, it is most commonly associated today with bubonic infection, an affliction that was widespread in the ancient world. Its incidence was generally sudden and devastating, the infecting organism, *Pasteurella pestis*, being conveyed to people by the rat-flea. Plague is characterized by high fever, glandular swellings, extreme prostration, and a high mortality rate, often exceeding eighty percent. The enlarged inguinal lymph buboes have given the disease its characteristic designation. Bubonic plague spreads quickly along lines of communication and is fostered by filth and unsanitary conditions.

The tenth Egyptian plague (Ex. 11:4ff.) has been regarded as a bubonic outbreak, but this seems improbable because of the selective nature of the pathogenic agency. *See also* PLAGUES OF EGYPT. Though the same term (Heb. *nega'*) was used by the Philistines for the Egyptian plagues (1 S. 4:8), it obviously here refers to affliction in general. The affliction of Kibroth-hattaavah (Nu. 11:33) was most probably food poisoning rather than bubonic plague, even though animals other than rats can disseminate plague. The diseases that overtook the spies (Nu. 14:37) and destroyed Korah's sympathizers (16:47) are too obscure to identify. The plague of 25:8ff. (cf. 26:1; 31:16; Job 22:17; Ps. 106:29f.) was probably bubonic rather than venereal in nature, despite the licentious character of Moabite religious devotion. The affliction that decimated the Philistines (1 S. 5:6) and that suddenly destroyed Sennacherib's army (2 K. 19:35; Isa. 37:36) was probably bubonic. It is noteworthy that Herodotus (ii.141) spoke of rodent activity in connection with the destruction of Sennacherib's army. Plague, however, was not endemic in ancient Palestine, despite its prevalence in the southeast.

The term plague is used in various instances of an affliction other than bubonic or pneumonic plague. The prophets and psalmists spoke of various punitive incidents in that manner, while Hosea (13:14) described death as a human plague, a sentiment enlarged upon and modified by Paul (1 Cor. 15:55). In Rev. 16:21; 18:4; 21:9; 22:18, *plēgḗ* was used metaphorically in the sense of calamity.

PLAGUES OF EGYPT.

I. Introduction
II. The Ten Plagues
III. Interpretation

I. Introduction.–A series of ten signs or wondrous judgments from God performed upon Pharaoh and Egypt through the agency of Moses and Aaron (Ex. 7–12). The central task laid on Moses through God's call (Ex. 3:1–4:17) was to go to Pharaoh and bring the people of Israel out of Egypt (3:10). In the course of this call God warned Moses that Pharaoh would not let Israel go "unless compelled by a mighty hand. So," He said, "I will stretch out my hand and smite Egypt with all the wonders which I will do in it" (Ex. 3:19f.). After Pharaoh refused Moses' initial demand (Ex. 5:1f.) and subsequently retaliated with an increase in the Israelites' work load (5:5-18), God again charged Moses to demand that Pharaoh let Israel go (7:1f.). He then added, "but I will harden Pharaoh's heart, and though I multiply my signs and wonders in the land of Egypt, Pharaoh will not listen to you; then I will lay my hand upon Egypt . . ." (7:3f.). What followed was a dramatic and classic confrontation between the power and authority of God and the stubborn will and hard heart of Pharaoh. After the initial sign of the rod that became a serpent and swallowed up the rods of the Egyptian sorcerers, to which Pharaoh paid no heed (7:8-13), God's power and authority were made known through a series of ten catastrophes, termed "plagues" in Ex. 9:14, whence the traditional name. Through these plagues both Israel (6:7) and Pharaoh (7:5) were to learn who the Lord is. After each of the first nine catastrophes God "hardened Pharaoh's heart" (7:3) and he refused to let Israel go. With the tenth, the death of all the Egyptian first-born throughout all the land, however, Pharaoh finally relented (12:29-32) and allowed Israel to depart (12:33-37).

II. The Ten Plagues.–The ten plagues are as follows:

(1) The water in Egypt was turned to blood (7:14-25). This happened when Aaron struck the water of the Nile with his rod in the sight of Pharaoh and his servants. It extended to the tributaries of the Nile, the canals, ponds, pools, and even the water standing in pots (vv. 19f.). All the fish died and the water became foul and undrinkable (v. 21). The magicians of Egypt then did the same (v. 22). Some of the complexity of the text is indicated by the fact that v. 17 implies that it was Moses who used the rod rather than Aaron.

The Heb. *dām* is the ordinary word for human and animal blood, but it is possible that it is used metaphorically. It is interesting and perhaps significant to note that no reversal of this condition is related. The text simply states that seven days passed after this event (v. 25).

(2) Frogs covered the land (8:1-15 [MT 7:26–8:11]), entering houses, climbing into beds and kitchen utensils and even into ovens (v. 3). This plague also occurred when Aaron stretched out his hand with the rod over the waters of Egypt (vv. 5f.), and the Egyptian magicians repeated the feat (v. 7). Pharaoh then requested that the plague be removed and stated that he would let the people go (v. 8). Moses interceded and the frogs died; then they were gathered in heaps and polluted the land (vv. 12-14), whereupon Pharaoh changed his mind (v. 15). Although the Hebrew word for "frogs," *ṣᵉpardē(a)'*, occurs only in the plague passages and in Ps. 78:45 and 105:30, there is no question about its meaning.

(3) Gnats or mosquitoes plagued man and beast (8:16-19 [MT 12-15]). Like the first two, this plague came without warning and occurred when Aaron struck the dust of the ground with his rod (vv. 16f.). The text specifically states that all the dust of the earth became gnats. The Egyptian magicians attempted to reproduce this feat also, but could not and so confessed to Pharaoh that it was the work of God (vv. 18f.). The exact meaning of the Hebrew word translated "gnats" (*kinnîm*) is difficult to determine, but some form of stinging insect is indicated. Some scholars prefer the translation "lice."

(4) Swarms of flies covered the land (8:20-32 [MT 16-26]). As in the first plague, Moses met Pharaoh at the river and warned him. A new element then appeared: the Israelites in the land of Goshen were spared the plague of flies (vv. 22f.). Moses and Pharaoh entered into negotiations. Pharaoh offered a concession: Israel may go to sacrifice but must stay within the land (v. 25). To this Moses objected that the Egyptians would find the Israelite sacrifices so offensive as to create trouble between them (vv. 26f.). Pharaoh then assented to the original demand, ending lamely, "you shall not go very far away" (v. 28). When the flies were removed, he again reneged (v. 32). The precise meaning of the Hebrew term for "flies" (*'ārōḇ*) here is also uncertain. The etymology, however, suggests insects that come in swarms.

(5) A severe plague fell upon all the Egyptian animals

(9:1-7). This plague began like the second, with God's command to Moses to go in to Pharaoh and warn him (vv. 1-3). Similar to the last plague, the animals of the Israelites were spared (v. 4). The exact nature of the disease is quite unspecified since the word used (*deḇer*) is the general Hebrew term for any plague or pestilence.

(6) Boils (or inflammations) breaking out in sores came upon people and animals (9:8-12). Like the third plague this came without warning. It was caused by the action of Moses, who was commanded to throw the soot or ashes of a furnace (or kiln) into the air, so that the resulting dust created the skin lesions. Again the exact nature of the disease is uncertain, for the word translated "boils" (*šᵉḥîn*) means something like "inflammations" and is connected with a number of different diseases (Isa. 38:21; Lev. 13:18f.; Job 2:7), while the second word "sores" (*ʾᵃḇaʿbuʿōṯ*) occurs only here.

(7) Very heavy hail struck down people and animals and destroyed the vegetation (9:13-35). The pattern of the first and fourth plagues is here repeated: Moses was commanded to appear before Pharaoh and warn him of the impending catastrophe. Here the purpose of the plagues is clearly enunciated: to show God's power and to declare His name throughout all the earth (v. 16). In addition a means of escaping the catastrophe was offered to those Egyptians who had come to fear the word of the Lord: they were commanded to find shelter for their animals (vv. 19-21). Once again this plague did not fall on the Israelites in Goshen (v. 26). A development also occurred with Pharaoh. He admitted his sin and affirmed that the Lord was in the right and he and his people in the wrong (v. 27). But when the hail stopped he once again hardened his heart.

(8) Locusts devoured the land (10:1-20). Parallel to the second and fifth plagues Moses was commanded to go in to Pharaoh and warn him (10:1). In this plague Pharaoh's servants interceded with him (v. 7) and prevailed upon him to relent partially: he now negotiated over who would go and offered to let the men alone depart (vv. 9-11). Once again the plague was brought on by Moses stretching forth his rod over Egypt (v. 13). Pharaoh again admitted his sin, but now prayed that "only this once" the plague would be removed (vv. 16f.). Clearly the conclusion was drawing near, but once again the Lord hardened Pharaoh's heart.

(9) A deep darkness that "could be felt" spread over the land (10:21-29). Similar to the third and sixth plagues, the darkness came without warning (vv. 21-23). It was brought on by Moses stretching out his hand toward heaven (v. 22). This plague also did not affect the Israelites (v. 23). Pharaoh now offered to let adults and children leave, but demanded that the cattle stay (v. 24). Moses refused (vv. 25f.) and the negotiations broke off completely, with Pharaoh warning Moses that, if he ever saw him again, he (Moses) would die (v. 28). Moses agreed they would not meet again, obviously implying that he would be gone (v. 29). The narrative abruptly breaks off, not even recounting the removal of the darkness. All was thus ready for the final and decisive climax — the last plague.

(10) The death of the first-born (11:1–12:50). The form of the announcement of the last plague (11:1-10) does not fit any of the three patterns, each thrice repeated, of the previous nine plagues. Some of the complexities of the text are again evident here. After God informs Moses that He will bring one more plague and gives instructions for the despoiling of the Egyptians (vv. 1f.), there follows a speech in which Moses is clearly addressing Pharaoh (cf. the second-person address in vv. 8f.). Yet no new indications of time or place have been given. It must be understood that the arrangement here is topical rather than chronological and that this speech follows 10:29 at the end of the confrontation over the ninth plague. The first nine plagues are viewed as signs and wonders that God brought on Egypt to reveal His power and authority (7:3 and esp. 9:15f.), but the tenth, the death of the first-born, is regarded as God's judgment on Pharaoh and Egypt (7:3f.; 12:12). It is described in a passage that also narrates and gives regulations for the Passover (12:1-50).

III. Interpretation.–The complexities in the text, two of which were briefly referred to above, have led to the hypothesis that at least two, and probably three or more, different sources lie behind the present text. Proponents of this view are in general agreement about the separation of a Yahwist (or J) source, containing seven plagues, and a Priestly (or P) source, containing five (see, e.g., Childs). Considerable difference of opinion exists, however, as to whether the remaining material constitutes a separate source, usually identified as that of the Elohist (or E), or individual additions from another source or sources. (For a representative presentation, see Childs, pp. 130-151.) In opposition to this approach, however, some recent treatments have stressed elements that show a structure and balance that cut across the supposed sources. These synthetic elements suggest a greater unity than the theory of sources allows or can explain. Thus the first nine plagues are structured by a literary device that groups them into three sets of three plagues each (cf. the observations in the description of the plagues above). In the first plague in each set Moses is commanded to appear before Pharaoh at the river; in the second he is to "come before Pharaoh" (possibly meaning an audience at the palace); and in the third he is simply to make a gesture that brings the plague without any warning to Pharaoh. This can be diagrammed as shown below.

Another study has taken a completely different approach. G. Hort has posited that these plagues fit the natural phenomena of Egypt rather exactly, forming a sequence of unusually severe natural events that exhibit a cause-and-effect relationship between them (except for the hail) in precisely the order in which they are related in the biblical text. The sequence of phenomena in brief is as follows: The plagues begin with an abnormally high inun-

	Plague No.	Plague	Plague No.	Plague	Plague No.	Plague	Structure
First Set	1	blood	4	flies	7	hail	Moses appears before Pharaoh in the morning at the river
Second Set	2	frogs	5	animal pestilence	8	locusts	Moses "comes before" Pharaoh
Third Set	3	gnats	6	boils	9	darkness	Moses does not appear but uses only a symbolic gesture

dation of the Nile due to excessive rains on the Abyssinian plateau, which forms the headwater region of the Blue Nile, the principal source of the water of the Nile at flood stage. These extremely high waters would have washed down large quantities of the characteristic bright red earth of the Abyssinian and Ethiopian plateau plus reddish-colored microorganisms called flagellates. The combined effect would be to turn the Nile bloodred and create conditions that would kill the fish (the first plague). The decomposing fish would cause the frogs to desert the river banks (the second plague), after having infected them with the disease organism *Bacillus anthracis,* which would thrive in the swampy soil and the decaying fish and cause the sudden death of the frogs. The third and fourth plagues would be mosquitoes and a fly, *Stomoxys calcitrans,* both of which would breed freely in the ideal conditions created by the stagnant waters of the retreating Nile flood. The cattle disease of the fifth plague would be anthrax, caused by the dead frogs infested with *Bacillus anthracis* spores; and the "boils that break out into sores" on people and cattle (the sixth plague) would be skin anthrax, a disease principally transmitted by the bite of the *Stomoxys* fly of the fourth plague. Hail and thunderstorms (the seventh plague) coming in the time of the year that the above sequence of events requires would destroy flax and barley but leave the wheat and spelt (9:31) for the locusts (the eighth plague), whose immense numbers ("as neither your fathers nor your grandfathers have seen," 10:6) would be favored by the same Abyssinian rains that had caused the initial, abnormally high flood. Finally, the "darkness so thick that it can be felt" (10:21, the ninth plague) is an apt description of an unusually strong Khamsin, or desert sandstorm, which strikes Egypt from the south in late February or early March, usually lasting two to three days. In this case the effect would have been especially severe due to the thick layer of fine red Abyssinian dust left over the whole land by the retreating waters of the exceptionally high Nile flood.

In this interpretation it must be recognized that the miraculous consists in the fact that the events are unusually severe and that Moses has foreknowledge of each and can time his demands upon Pharaoh to fit. The events themselves are fully explainable given the climatological, geographical, and microbiological facts of the Egyptian area. Apart from the hail, they would have continued in an inexorable chain once set in motion by the abnormally severe rainfall in the Abyssinian plateau and the consequent unusually high Nile flood.

It is very hard, however, to make such an inexorable, naturally-conditioned chain of events fit the facts of the biblical account. The biblical narrative clearly and unequivocally depicts most of these scourges as happening at the express command of Moses and Aaron and in a number of cases brought on virtually instantaneously by a gesture: thus water turns to blood "in the sight of Pharaoh," 7:20; frogs cover the land, 8:6; the dust on the ground turns to gnats, 8:17; the ashes thrown in the air "before Pharaoh" become boils on man and beast, 9:10; etc. It is also very difficult to accommodate this naturalistic explanation with the fact that the Egyptian magicians duplicate the feat of the first two plagues of blood and frogs. On the other hand, both historical evidence for the occurrence of similar plagues down through Egyptian history and this empirically based hypothesis for a sequence of severe natural events show that the plagues do indeed fit precisely the natural phenomena of Egypt. It would appear that one must, on the one hand, posit that this naturalistic explanation is an unwarranted rationalization and the plagues were a series of miraculous events performed by God through Moses and Aaron, which, however, were deliberately made to fit the known physical conditions and biological realities of Egypt. Or one must, on the other hand, posit that some such sequence of natural events forms the basis for the plague narratives, and that these events were interpreted as signs of God's power in such a way that Pharaoh was constrained to allow Israel to depart; but these accounts, transmitted over many generations, were embellished by the folk traditions of the community in order to heighten the direct and miraculous action of God as a testimony to the great victory He obtained over Egypt in delivering His people from Pharaoh's bondage and power.

The first alternative seems preferable given that the last plague, the death of the first-born, is one that has no "natural" explanation. It is God's judgment on Pharaoh and Egypt and Egypt's gods (12:12) and finally convinces Pharaoh to let Israel go (12:30-32).

PLAIN; PLAINLY [Heb. pual of *pāraš*–'explain' ("make plain," Nu. 15:34), piel of *bā'ar*–'make clear' (Dt. 27:8; Hab. 2:2); Aram. pass. part. of *p'raš* (Ezr. 4:18); Gk. *phaneróō*–'reveal, make known' ("make plain," 2 Cor. 11:6; pass., "be plain," 1 Jn. 2:19), *phanerós*–'visible' (Rom. 1:19; Gal. 5:19), *délos*–'evident' (1 Cor. 15:27), *ékdēlos*–'quite evident' (2 Tim 3:9), *orthós*–'rightly' (Mk. 7:35), *parrhēsía*–'openness,' 'outspokenness' (Mk. 8:32; Jn. 10:24; 11:14; 16:25, 29)]; AV also MANIFEST, OPENLY, etc.; NEB also CLEAR, CLEARLY, MAKE KNOWN, etc.; the RSV also employs "plainly" to render the infinitive absolute (used for emphasis) of several Hebrew verbs: *rā'â,* "see" (Gen. 26:28), *'āmar,* "say" (Ex. 21:5), and the hiphil of *nāgaḏ,* "tell" (1 S. 10:16). An adjective and adverb used to indicate clarity of speech, writing, knowledge, or actions.

In Dt. 27:8 and Hab. 2:2 the piel of *bā'ar* indicates that the words of Yahweh are to be engraved on tablets in such a way that they are easily legible. Whitewash was used on the tablets to make the writing clearly visible (Dt. 27:2, 4).

Most often, however, these words are used of clear, understandable speech. Clarity was especially important in legal contexts, e.g., Yahweh's instructions concerning the manner of capital punishment for sabbath-breaking (Nu. 15:34) and a slave's decision to remain a slave for life (Ex. 21:5). In Ezr. 4:18 Aram. *m'pāraš* is the pass. part. of *p'raš,* "separate, distinguish" (KoB, p. 1114); it could mean either that the letter was read "distinctly," with a pause after each word, or that it was read with a Persian translation after each section (cf. Heb. *m'pōrāš,* Neh. 8:8; RSV "clearly," mg. "with interpretation"). Mk. 7:35 employs Gk. *orthós* to indicate that a man had been healed of a speech impediment and could now speak normally.

Greek *parrhēsía* occurs in the dative nine times in the Gospel of John. In five instances it describes speech or actions done in public (RSV "openly," e.g., 7:4, 13; 11:54). Jesus taught not secretly but "openly" in the temple and synagogues (7:26; 18:20; cf. Acts 28:31). But the term can also describe speech that is unambiguous and nonfigurative. Most of Jesus' public teaching was in parables or figurative speech that could be understood only by faith (Jn. 10:24; cf. Mk. 4:2, 10-13, 33f. par.), but He sometimes spoke to His disciples "plainly" (Jn. 11:14;

Mk. 8:32). Even they, however, could not understand His teaching fully until they had received the "Spirit of truth" (Jn. 16:25, 29–32; cf. vv. 12-15; also 14:25f.; see R. E. Brown, *Gospel According to John,* II [*AB,* 1970], 734-36; *TDNT,* V, 880f.). *See also* BOLD; CONFIDENCE.

Elsewhere in the NT "plain" and "plainly" mean "clearly known" or "manifest." On the meaning of *phaneróō* and *phanerós, see also* MANIFEST.

Bibliography.–*DNTT,* II, 734-37; *TDNT,* V, *s.v.* παρρησία (H. Schlier). N. J. O.

PLAIN (noun) [Heb. *ʿărāḇâ*–'desert' (Nu. 22:1; 26:3, 63; etc.)]; NEB LOWLAND, ARABAH (Zec. 14:10); [Heb. *biqʿâ*–'valley' (Gen. 11:2; 2 Ch. 35:22; Neh. 6:2; etc.)]; AV also VALLEY; NEB also VALE; [Heb. *kikkar*–'circle,' 'region' (Dt. 34:3; 2 S. 18:23; 1 K. 7:46; etc.)]; NEB also NEIGHBORHOOD (Neh. 3:22); [Heb. *mîšôr*–'level place' (1 K. 20:23, 25; 2 Ch. 26:10; etc.)]; NEB also TABLELAND (Jer. 48:8); [Heb. *ʿēmeq*–'valley' (Jgs. 1:19, 34)]; AV VALLEY; NEB VALE; [Heb. *ʾereṣ hāʿēmeq*–'land of the valley' (Josh. 17:16)]; AV LAND OF THE VALLEY; NEB VALE; [Aram. *biqʿâ* (Dnl. 3:1)].

Most of the plains mentioned in the OT are identifiable. First there is the broad expanse of Mesopotamia where the first human beings lived (Gen. 11:2). Later Ezekiel had visions on a plain where the river Chebar flowed (Ezk. 3:22f.; 8:4). Dnl. 3:1 mentions the plain of Dura, which was probably near Babylon.

The flat areas on both sides of the Jordan Valley are called plains. 1 K. 7:46 (par. 2 Ch. 4:17) probably refers to the west bank while 2 S. 18:23 refers to the east. The plain of Jericho clearly is that lower and broader part of the valley in which Jericho is situated (Dt. 34:3; Josh. 4:13; 5:10; 2 K. 25:5; Jer. 39:5; 52:8). The plains of Moab are on the opposite or east side (Dt. 34:1, 8; Josh. 13:32; etc.).

Between Mt. Carmel and Beth-shean a valley runs from northwest to southeast. It is called the plain of Megiddo in 2 Ch. 35:22 and Zec. 12:11 and the Valley of Jezreel in Josh. 17:16. The war between Israel and Syria (1 K. 20:23-25) probably took place here.

The coastal plain, especially that part S of Joppa, is yet another major geographical feature of Palestine. Clearly Jgs. 1:19, 34 refer to this area. Neh. 6:2 mentions the plain of Ono, a localized part of the coastal plain a few miles SE of Joppa. The reference in 2 Ch. 26:10 is general but may indicate the coast as well.

In Neh. 3:22 the "plain" was apparently a region in Jerusalem (see NEB; *see also* JERUSALEM III.D.5.d-e). Likewise, the "plain" in Jer. 21:13 was probably a specific area of Jerusalem; in the context it appears to be the location of the king (note "house of David," v. 12; "rock," v. 13), possibly the high, level area adjacent to the temple mount.

Two texts use the image of topographical changes to illustrate the overcoming of obstacles. Isa. 40:3f. declares that the rough places shall become a plain preparatory to the coming of the Lord (cf. Lk. 3:4f.), i.e., all obstacles to His coming will be removed. In Zec. 4:7 the angel of Yahweh promises that the "mountain" of obstacles confronting Zerubbabel in his efforts to rebuild the temple will be removed.

PLAIN, CITIES OF THE. *See* CITIES OF THE VALLEY.

PLAIN OF THE PILLAR (Jgs. 9:6, AV). *See* OAK OF THE PILLAR.

PLAIN OF THE VINEYARDS (Jgs. 11:33, AV). *See* ABEL-KERAMIM.

PLAINS OF MOAB [Heb. *ʿarʿḇôṯ môʾāḇ*]. The waste region immediately N of the Dead Sea and E of the Jordan River that served as the staging area for the Israelite invasion of Canaan (Nu. 22:1; 36:13). It was here that Moses delivered to Israel his final series of sermons, which are recorded in Deuteronomy (1:1; 34:1, 8). *See* Vol. I, Map II; *see also* ARABAH; MOAB. G. H. WILSON

PLAISTER. *See* PLASTER.

PLAITING [Gk. *plékō*]; AV PLATTED. Interweaving or braiding of strands. The term is used to describe how the CROWN OF THORNS was made by the Roman soldiers who mocked Jesus (Mt. 27:29 par. Mk. 15:17; Jn. 19:2). The AV uses "plaiting" in a reference to the elaborate hairstyles worn by women in Greco-Roman society (1 Pet. 3:3; RSV, NEB, "braiding"; Gk. *emplokḗ*).

PLAN (verb) [Heb. *ḥāšaḇ*–'think, account' (2 S. 14:13; Ps. 140:2, 4 [MT 3, 5]; Prov. 16:30; Jer. 48:2; piel, Prov. 16:9; 24:8), *yāʿaṣ*–'advise, counsel' (Ps. 62:4 [MT 5]; Prov. 12:20; Isa. 14:24; niphal, 2 Ch. 32:3), *yāṣar*–'shape' (Isa. 22:11; 37:26 par. 2 K. 19:25), piel of *dāmâ*–'imagine, think, devise' (2 S. 21:15), *zāmam*–'think, plan' (Jer. 51:12), *ḥāraš*–'cut in, engrave,' 'plough' (Prov. 3:29), *nāṭâ*–'stretch out, extend' (Ps. 21:11 [MT 12]), *śûm*–'set, station' (Jer. 9:8 [MT 7]); Aram. peal of *ʿăšiṭ*–'think, plan' (Dnl. 6:3 [MT 4]); Gk. *bouleúō*–'resolve, decide' (Jn. 12:10; Acts 27:39; 2 Cor. 1:17, "make plans"), *poiéō*–'do, make' (Acts 25:3)]; AV DEVISE, THINK, PURPOSE, CONSULT, FORM, etc.; NEB also PLOT, CONSULT, AIM, DESIGN, etc.; (noun) [Heb. *maḥăšāḇâ/maḥăšeḇeṯ*–'thought, device' (Ps. 33:10; Prov. 20:18; Jer. 18:11f.; 29:11; Dnl. 11:24; etc.), *yēṣer*–'form' (1 Ch. 28:9), *ʿēṣâ*–'advice, counsel' (Neh. 4:15 [MT 9]; Ps. 14:6; 20:4 [MT 5]; Isa. 19:3; 25:1; Jer. 19:7; 49:20, 30; 50:45; Mic. 4:12), *taḇnîṯ*–'construction,' 'pattern,' 'figure' (1 Ch. 28:11f., 18f.), *dāḇār*–'speech, word' (2 Ch. 30:4), *zimmâ*–'intention' (Job 17:11)), *maʿărāḵ*–'arrangement' (Prov. 16:1), *mišpāṭ*–'judgment' (Ex. 26:30), *sôḏ*–'counsel' (Ps. 83:3 [MT 4]), *ʿeštōneṯ*–'thought, plan' (Ps. 146:4); Gk. *boulḗ*–'resolution decision' (Acts 2:23; 4:28; 5:38, 27:42), *oikonomía*–'management,' 'arrangement' (Eph. 1:10; 3:9)]. An infinitive that shows purpose (cf. GKC, §§114f.) accounts for the rendering "planning to kill" (from Heb. *hārag,* "kill") in Gen. 27:42. In 2 Ch. 7:11 the RSV and NEB use "plan" to render Heb. *bāʾ ʿal-lēḇ* (lit. "came into the heart"; so AV). In Ps. 55:9 (MT 10) "their plans" (*ʿăṣātām*) is absent in the MT but supplied by the Targum. Also, the RSV "plan" in Ezk. 43:10 derives from the LXX rather than the MT (cf. W. Zimmerli, *Ezekiel,* II [Eng. tr. 1983], 410 n. 10c). Various Hebrew and Greek terms rendered "plan" refer to divine purposes, human purposes (both good and evil), architectural designs, and preparations for warfare.

In Ps. 20:4 the writer acknowledges God as the fulfiller of human plans. He is also able to overrule human intentions (Ps. 33:10), and ultimately His purposes will prevail (Prov. 19:21).

The Lord is also sovereign in regard to the nations. For example, it was His purpose for Assyria to be an instrument of judgment upon Israel (Isa. 37:26 par. 2 K. 19:25; cf. Isa. 10:5). Not only did the Lord intend for Babylon to be an instrument for judgment upon Israel (Mic. 4:15), but He also purposed to judge Babylon for its cruelties and injustices toward Israel (Jer. 50:45).

Using the Medes God planned to overthrow Babylon (Jer. 51:12). God's purposes for unrepentant Israel included not only their judgment (Jer. 18:11) but also their restoration (Jer. 29:11).

According to Prov. 15:22 human plans need careful consideration and the guidance of others (cf. 20:18). Also, it is better to be careful in planning than to be hasty (21:55). But human plans also include another aspect, for they are effectual only when they coincide with the Lord's plans (12:20). Nevertheless, a person's plans sometimes seem shattered when the end of life appears imminent (Job 17:11). And the psalmist affirms that people's intentions die with them (Ps. 146:4).

That people often intend evil towards others is a fact repeatedly confirmed in the Scriptures (Prov. 3:39; cf. Prov. 6:14, 18; 12:20; 14:22). The enemies of God devise evil plots (Ps. 83:3 [MT 4]). The psalmist recognizes that evil often is the object of human planning (Ps. 21:11 [MT 12]). In response to this the psalmist asks for divine protection from those who both plot against him and seek his downfall (140:2, 4 [MT 3, 5]). Prov. 6:18 clearly states that the Lord hates those who devise evil plots (*see* PLOT).

Several OT passages use "plan" in the sense of a mechanical drawing or blueprint. For example, David gave Solomon the "plans" for the temple that he received from the Lord (1 Ch. 28:11f., 18f.). An unusual use of Heb. *mišpāṭ* occurs in Ex. 26:30, where it refers to a pattern for the tabernacle structure (cf. 1 K. 6:38; Jer. 30:18).

Another use of "plan" occurs in passages that pertain to military maneuvers. For example, Saul intended to wage a battle against the Gibeonites (2 S. 21:5). Jer. 48:2 describes the orchestration of an attack against Heshbon. Dnl. 11:24 mentions military plans for war, while "plans" in Prov. 20:18 seems to have the same military sense.

In the NT Gk. *boulḗ* refers to both human and divine plans. In reference to the ministry of the apostles Gamaliel advises the Sanhedrin that human plans may eventually lapse, whereas divine plans cannot be overthrown (Acts 5:38). In Acts 2:23 Peter proclaimed that Jesus' death happened according to the "definite plan" of God, for it was in His plan that Messiah should suffer (cf. Lk. 24:25, 46; Acts 17:3; 26:22f.).

The translation of Gk. *oikonomía* in Eph. 1:10 and 3:9 by "plan" is debatable. Some scholars understand this term as a reference to God's plan of salvation, i.e., His arrangements for redeeming humankind (e.g., Bauer, rev., p. 559; cf. Ign. Eph. 18:2; 20:1). Others suggest that the term refers to "the manner in which God's purpose is worked out in human history" (F. F. Bruce, comm. on Ephesians [*NICNT*, 1984], p. 262; cf. M. Barth, *Ephesians* [*AB*, 1974], I, 86-88). G. L. K.

PLANE TREE [Heb. *'armôn*; Gk. *plátonos, elátē*] (Gen. 30:37; Ezk. 31:8); AV CHESTNUT; [Heb. *tiḏhār*] (Isa. 41:19; 60:13); AV PINE; NEB FIR. Heb. *'armôn* is probably the massive oriental plane tree (*Platanus orientalis* L.), which stands over 18 m. (60 ft.) and has a trunk girth of about 4 m. (14 ft.). The Hebrew root *'rm*, "be bare," may refer to the annual peeling of the tree's bark.

Hebrew *tiḏhār* is from a root meaning "revolve," which may allude to the somewhat whorled nature of pine and fir branches. The word is rare in Hebrew, and its identification is therefore rather difficult. Perhaps one of the juniper species is indicated. *See also* FIR TREE.

The common chestnut, *Castenea sativa* Mill., is not indigenous to Palestine, though it is found elsewhere in the Near East; the AV translation probably reflects a simple misunderstanding of the Hebrew term.

In Gen. 30:37 Jacob used the incompletely peeled rods from several kinds of trees, including the plane tree, to produce selective breeding among goats. Distinctively marked animals were thought to be harbingers of good fortune, and were esteemed accordingly. Jacob appeared to be influenced by the widespread folk-belief in maternal impressions, i.e., that some startling experience occurring at or shortly after conception would influence the appearance of the fetus. This belief has now been disproved by modern studies, in the realization that fetal abnormalities very frequently have a genetic basis. The sheep did not need to see the partly peeled rods, but only the dark goats, to breed the required color of animal. Crossbreeding of sheep and goats was attempted frequently in ancient Mesopotamia, and the offspring that resulted were valued highly.

R. K. H.

PLANES [Heb. *maqṣu'ôṯ*] (Isa. 44:13). Carpenter's tools for scraping, planing, or removing wood, mentioned only here, in connection with the fashioning of an idol. (The NEB renders this noun verbally, "he planes the wood.") The verbal root (*qṣ'*, "scrape") is used at least once, in Lev. 14:41, where any contaminated plaster on the inside of a leper's house was scraped off in a cleansing ceremony. Many such tools of stone and various metals are known from the ancient Near East, but these planes have not been specifically identified.

Bibliography.—C. Singer, *et al.*, eds., *History of Technology*, I (1954), 618-621, 687-690; II (1956), 228-231.

D. M. HOWARD, JR.

PLANETS. The AV and NEB translation of Heb. *mazzālôṯ* in 2 K. 23:5. The term probably denotes "constellations" (so RSV). *See* ASTRONOMY II.B, C; ASTROLOGY.

PLANK [Heb. *ṣ'ḏērâ* (1 K. 6:9), *lû(a)ḥ* (Ezk. 27:5); Gk. *sanís* (Acts 27:44)]; AV BOARD; NEB also COFFERING (1 K. 6:9), TIMBER (Ezk. 27:5); **BOARD** [Heb. *lû(a)ḥ* (Ex. 27:8; 38:7), *ṣēla'* (1 K. 6:15f.)]; AV also PLANK (1 K. 6:15b); NEB also PLANK (Cant. 8:9), "shell" (Ex. 27:8; 38:7). The meanings of the various Hebrew words are all determined by their contexts; in other contexts they mean quite different things. Thus *lû(a)ḥ* usually means "tablet," of stone, wood, or metal. *Ṣēla'* usually means "side." *Ṣ'ḏērâ* can mean the orderly arrangement of rank (of soldiers; cf. *sēḏer*, "order, arrangement"). In Ezk. 27:5 the MT has the dual *luḥōṯayim*, which makes no sense and is usually emended to *luḥōṯayiḵ*, "your planks," on the basis of the Targum (see *BHS*). The Gk. *sanís* is a hapax legomenon in the NT, but its meaning is clear from its use in other Greek literature (see Bauer, rev., p. 742).

G. A. L.

PLANT (vb.) [Heb. *nāṭa'*]; [*šāṯal*–'transplant'] (Ps. 1:3; 92:13 [MT 14]; Jer. 17:8); [*śûm*–'set, place'] (Ezk. 4:2); AV SET; NEB BRING; [*nāṯan*–'put, set'] (Ezk. 17:5); [Gk. *phyteúō*]; (noun) [Heb. *'ēśeḇ*–'herb']; AV HERB; NEB also WILD PLANT (Gen. 3:18), GROWING THING (Ex. 9:22, 25), VEGETATION (10:12, 15), GREEN THING (Ps. 104:14); [*ḥāṣîr*–'green grass, herbage'] (Job 28:12); AV HERB; NEB GREEN PLANT; [*neṭa'*–'planting, plantation']; NEB also GARDEN (Isa. 17:10), "towers" (Ps. 144:12); [*maṭṭā'*–'planting'] (Ezk. 17:7; 34:29); AV, NEB, also PLANTATION; [*qîqāyôn*]; AV, NEB, GOURD; [*yónēq*–'sapling'] ("young plant," Isa. 53:2); AV TENDER PLANT; [*ṣe'ĕlîm*] (Job 40:21); AV SHADY TREE; NEB THORNY LOTUS; [*śî(a)ḥ*] (Gen. 2:5); NEB SHRUB; [*ṣemaḥ*] (Ezk. 16:7); AV BUD; NEB "something growing"; [Gk. *phyteía*] (Mt. 15:13); [*chórtos*] (Mt. 13:26); AV BLADE; NEB CORN; **PLANTER** [Heb. part. of *nāṭa'*] (Jer. 31:5).

The frequent use of agricultural imagery reflects the nature of Palestinian society. The agrarian orientation dates from as early as 7500 B.C., as the excavations at Jericho indicate (*see* AGRICULTURE I).

The nearly seventy occurrences of the root *nāṭaʿ* may be divided between literal and figurative uses. When employed in the literal sense "plant" includes references to people planting trees (Gen. 21:33; Lev. 19:23; Eccl. 2:5), gardens (Jer. 29:5, 28), and vineyards (Gen. 9:20; Dt. 20:6; Prov. 31:16; Eccl. 2:4).

In anthropomorphic language the Lord is depicted as planting a garden (Gen. 2:8). In this instance the emphasis is not the creation of vegetation but God's provision for His created beings (cf. C. Westermann, *Genesis 1–11* [Eng. tr., 1984], p. 208).

Figurative usage accounts for about thirty occurrences of Heb. *nāṭaʿ*. In Jer. 12:1-6 the prophet Jeremiah, like Job, wrestles with the perplexing question, "Why do the wicked prosper?" That the wicked who now flourish were "planted" by the Lord (v. 2) further aggravates the problem for Jeremiah. Though righteous, he himself suffers, while the wicked "grow and bring forth fruit" (v. 2). Jeremiah's lament and plea provide classic expression to the problem of evil.

The common metaphor of Israel as a plant often demonstrates Yahweh's sovereign action for His people. For example, the psalmist depicts Israel as a vine brought by the Lord from Egypt and planted in the land of conquest (Ps. 80:8 [MT 9]; cf. Isa. 5:1-7). Similarly, the Lord promised David that He would provide a permanent place for His people (2 S. 7:10 par. 1 Ch. 17:9). Jeremiah also affirms that the Lord of hosts "planted" Israel (Jer. 11:17). The Lord's planting is a sovereign act, which He will undo if a nation is disobedient (18:9f.). In 24:6 the images of planting and building parallel each other. Here the Lord promises not to "tear down" or "uproot" the exiles of Judah, but rather to "build them up" and "plant them." And in Am. 9:14f. the Lord promises ultimate restoration of His people: "I will plant them upon their land, and they shall never again be plucked up out of the land which I have given them."

Also Heb. *šāṯal* depicts Israel (Ezk. 17:22f.) and the righteous (Ps. 1:3; 92:13 [MT 14]; Jer. 17:8) as planted trees. Ps. 92:12f. portrays the righteous as a flourishing palm and a strong cedar that are planted in the house of the Lord (i.e., the temple). Even in old age they experience fruitfulness and strength (A. Weiser, *Psalms* [Eng. tr., *OTL*, 1962], p. 616; cf. Ps. 1:3; Jer. 17:8; 1QH 8:4-11). Clearly, the "planting" done by the Lord was a common OT metaphor. The various OT authors pressed it into service to illustrate the care and control of Yahweh over His creation.

Nearly half of the thirty-three occurrences of Heb. *ʿēśeḇ* are in the Pentateuch, where it figures in the Creation account (Gen. 1:11f., 29f.; 3:18) and in the account of the plagues upon Egypt (Ex. 9:22, 25; 10:12, 15). This word designates food for people (Gen. 9:3) as well as food for the cattle (Dt. 11:15; Ps. 106:20). Heb. *ḥāṣîr* in Job 8:12 is a type of grass that flourishes after the seasonal rains but quickly wilts in the dryness of summer, thereby exemplifying the transitory state of human life (cf. Ps. 37:2; 129:6; Isa. 40:6-8). (*See also* GRASS.)

Suggestions for the identity of *qîqāyôn* in Jonah 4:6f., 9f. include ivy (Jerome), squash, and pumpkin; however, it most likely represents the foliant castor-oil plant, *Ricinus communis* (see NEB mg.; cf. *MPB*, pp. 203f.; *see also* GOURD 1). Heb. *seʾelîm*, which the RSV renders "lotus plant" in Job 40:21 but "lotus tree" in 40:22, is somewhat obscure, but it probably represents *Zizyphus Lotus*, a thorny tree common in Syria and Africa (cf. H. H. Rowley *Job* [*NCBC*, rev. ed. repr. 1980], p. 257).

Greek *phyteúō*, the common NT verb rendered "plant," often refers to cultivated vineyards (Mt. 21:33 par.; Lk. 13:6; 1 Cor. 9:7). In 1 Cor. 3:5-9 Paul employs agricultural metaphors to present several essential facets of establishing churches. Paul plants, Apollos waters, but God alone effects growth (v. 6). G. L. KNAPP

PLANTATION [Heb. *maṭṭāʿ*] (Ezk. 34:29); AV PLANT. A place of planting is indicated (*maṭṭāʿ* < *nāṭaʿ*, "to plant"), but not in the technical U. S. or West Indian sense of a large estate farmed by resident laborers. Cf. the translations "place of planting" for *maṭṭāʿ* in Mic. 1:6, and "planting" in Isa. 61:3.

PLASTER (noun) [Heb. *ʾāpār*] (Lev. 14:41f., 45); AV DUST, MORTER; NEB DAUB; [*śîḏ*] (Dt. 27:2, 4); AV PLAISTER; [Aram. *gîr*] (Dnl. 5:5); AV PLAISTER; (verb) [Heb. *ṭûḥ(a)ḥ*] (Lev. 14:42f., 48); AV PLAISTER; NEB REPLASTER; REDAUB; [*śîḏ*] (Dt. 27:2, 4); AV PLAISTER; NEB also COVER OVER. The noun is a white substance usually made from a lime and water mixture which hardens as the water evaporates; used for coating wall and floor surfaces. The verb refers to the process of applying plaster.

The Heb. *śîḏ* normally means "to boil." Its use to indicate plaster refers to the slaking of lime in boiling water. It appears as both a verb and a noun in Dt. 27:2, 4. Here it is used to cover a stone for purposes of writing, a practice which was common in ancient Palestine (note the Chalcolithic paintings done in plaster at Ghassul and the Iron Age inscriptions from Kuntillet ʿAjrūd).

The basic meaning of the verb *ṭûḥ(a)ḥ* is "overlay" or "coat." It is translated "plaster" in Lev. 14:42 because the context indicates coating with a mud plaster; the niphal is used in vv. 43, 48.

The noun *ʾāpār* normally means "dust" in Hebrew, and in the context probably indicates some form of mud plaster frequently used by the lower classes.

The Aram. *gîr* is used in the context of Belshazzar's feast where writing activity takes place on the plaster. Excavations in Babylon have shown that Nebuchadrezzar's (and thus probably Belshazzar's) throne room was covered with a fine, white plaster.

Plaster has been in use from Neolithic times (the plastered heads of Jericho and the plaster floors and statues found at ʿAin Ghazal in Jordan) to the present. Its use, however, proliferated from the beginning of the Iron Age (*ca.* 1200 B.C.) in cisterns, which enabled the settling Israelites to construct towns in the mountains of Palestine where there were no springs. Only the richest houses were coated with fine-grade plaster. Most floors were unplastered.

In Isa. 38:21 the AV translates Heb. *māraḥ* as "lay it for a plaister" (RSV, NEB, "apply"). Although *māraḥ* appears only here in the OT, the context and the use of *māraḥ* in rabbinical Hebrew indicate that it means "rub."

PLATE [Heb. *qeʿārâ*] (Ex. 25:29; 37:16; Nu. 4:7; 7:13, etc.); AV DISH, CHARGER; NEB DISH; [*śîś*] (Ex. 28:36; 39:30; Lev. 8:9); NEB ROSETTE; [*maḥᵃḇaṯ*] (Ezk. 4:3); AV PAN; NEB GRIDDLE; [*paḥ*] (Nu. 16:38 [MT 17:3]); [Gk. *paropsís*] (Mt. 23:25f.); AV PLATTER; NEB DISH. A flat household utensil used for holding food; a flat, hammered piece of metal used for decorative purposes.

None of the above Hebrew terms is equivalent to our modern household plate. Ceramic plates are rare in the archeological record; people seemed to have eaten out of shallow bowls, because their food consisted mostly of sauces or stews into which they dipped bread. The silver *qᵉʿārâ* listed fourteen times in Nu. 7 weighed 130 shekels, or 1.48 kg. (3.25 lbs.). We should probably visualize a large, bowllike vessel, perhaps a krater.

The *mahᵃḇaṯ* of Ezk. 4:3 was an iron baking pan. In Lev. 7:9 (RSV GRIDDLE) it is used for baking cereal offerings.

The *paropsís* was a shallow bowl or plate used for eating in the Roman period. Many examples of such a utensil made of finely burnished red ware have been found in Roman Palestine.

The normal RSV translation for *ṣîṣ* is "flower," indicating that the "plate" involved in Ex. 28:36 and Lev. 8:9 was a rosette made out of plate metal. It was used to decorate the turban of the high priest.

The *paḥ* of Nu. 16:38 should be understood as gold leaf. See Ex. 39:3 where the RSV has translated LEAF.

L. G. HERR

PLATFORM [Heb. *kîyôr*] (2 Ch. 6:13); AV SCAFFOLD; [*gōḇah* < *gāḇah*–'be high'] ("raised platform," Ezk. 41:8); AV HEIGHT; NEB RAISED PAVEMENT; [hophal part. of *nû(a)ḥ*] ("part of the platform which was left free," Ezk. 41:9, 11); AV "that (which) was left"; NEB "unoccupied area"; [*bêṯ ṣᵉlāʿôṯ*] ("between the platform," Ezk. 41:9); AV "place of the side chambers"; NEB "beside the terrace." A structure from which Solomon prayed before the assembly of Israel during the dedication of the temple. Albright related *kîyôr* to Sum. ki-ùr, literally "foundation of the earth," which signifies a foundation platform or the entrance to the underworld (*ARI*, pp. 152-54). That derivation has been disputed by R. Clifford (*Cosmic Mountain in Canaan and the OT* [1972], p. 180 n. 109), who preferred to see the cognate as Akk. *kiuru*, "metal basin." Elsewhere in the OT Heb. *kîyôr* refers to the bronze lavers used in the tabernacle and temple.

The MT of Ezk. 41:8-11 is corrupt. Ezekiel's ideal temple was built on a platform (*gōḇah*). *Munnaḥ*, the hophal participle of *nû(a)ḥ*, "let alone," denotes open space. The RSV apparently emends v. 9b to read *bên haggōḇah*, "between the platform."

G. WYPER

PLATTER [Gk. *pínax*] (Mt. 14:8, 11 par. Mk. 6:25, 28); AV CHARGER; NEB DISH. A large, shallow dish normally used for serving food.

All four instances of this word occur in the context of John the Baptist's beheading when his head is served up to Salome on a platter; no doubt this horrible irony was suggested by the banquet setting. There is no hint as to whether the vessel was metal or earthenware. Apparently it was large enough to hold a severed head. The finely slipped and burnished red ware of the Roman period called *terra sigilata* was at times made into large plates that could fit this description. Fragments of such platters are found at most early Roman sites where well-to-do individuals lived. Because it was used primarily by the rich and would have been in the palace of Herod, it may have been such a vessel that was used by John the Baptist's executioners.

In Luke 11:39 the RSV translates the same Greek term as DISH, because the context seems to indicate the ordinary eating utensil of the day.

L. G. HERR

PLAY. *See* GAMES; HARLOT; MUSIC.

PLEA; PLEAD [Heb. *rîḇ* (e.g., 1 S. 24:15; Ps. 74:22; Prov. 22:23; 23:11; Isa. 51:22; Jer. 18:19; 50:34; 51:36; Mic. 7:9), niphal of *šāpaṭ*–'go to court' (1 S. 12:7; Jer. 12:1), *tᵉḥinnâ*–'supplication' (Jer. 37:20; 38:26), *taḥᵃnûnîm*–'supplication' (Jer. 3:21), *tōhû*–'nothingness' ("empty plea," Isa. 29:21; 59:4), piel inf. of *dāḇar*–'speak' (Isa. 32:7), hiphil of *pāgaʿ*–'make entreaty' (Jer. 15:11), *qôl*–'voice' (Lam. 3:56); Gk. *peíthō* (Acts 19:8), *entynchánō*–'appeal, petition' (Rom. 11:2)]; AV also CONTEND, SUPPLICATION, VOICE, ENTREAT, PERSUADING, MAKE INTERCESSION, etc.; NEB also PETITION, CRY, MAINTAIN ONE'S CAUSE, PERSUASION, etc.

Although "plea" and "plead" can simply denote an earnest entreaty (e.g., Jer. 3:21), in the RSV OT they are almost always used, either literally or metaphorically, in a context of legal proceedings. The most important term, the verb *rîḇ*, is occasionally used of a legal dispute between human beings. Thus Isa. 1:17 urges pleading on behalf of widows as an example of "doing good," and Prov. 25:8f. advises, "do not hastily bring into court [*rîḇ*]. . . . Argue your case [*rîḇᵉḵā rîḇ*] with your neighbor himself . . ." (cf. 1 S. 12:7, where Samuel contends [niphal of *šāpaṭ*] with the Israelites after they had sinned by asking for a king).

Most often, however, the legal dispute occurs between God and His covenant people. Much has been written on the use of *rîḇ* in the prophetic literature to denote a LAWSUIT brought by Yahweh against His people for their violation of the covenant (e.g., B. Gemser, "The *rib*- or controversy pattern in Hebrew mentality," in M. Noth and D. Winton Thomas, eds., *Wisdom in Israel and in the Ancient Near East* [*SVT*, 3; 1955], pp. 120-137). In Mic. 6:1f. Yahweh summons Israel to answer charges and calls upon the mountains to act as witnesses: "Arise, plead your case [*rîḇ*] before the mountains. . . . Hear, you mountains, the controversy [*rîḇ* as noun] of the Lord . . . for the Lord has a controversy [*rîḇ*] with his people . . ." (cf. Hos. 4:1). Hos. 2:2 (MT 4) allegorically portrays Yahweh in the role of plaintiff — a husband who takes legal proceedings against his adulterous wife (Israel) and summons her children (individual Israelites) to bring complaints against her also: "Plead with [*rîḇ bᵉ*, better translated "accuse, complain against"] your mother, plead — for she is not my wife" (i.e., she has broken the marriage/covenant; see J. L. Mays, *Hosea* [*OTL*, 1969], pp. 35-38). On the other hand, Jeremiah files a legal complaint (*rîḇ*, RSV "complain") against Yahweh for allowing injustice to flourish (Jer. 12:1; see W. L. Holladay, *Jeremiah: Spokesman Out of Time* [1974], pp. 92f.). Similarly, Job uses the language of the law court in his complaints against God's apparent injustice (Job 13:6; cf. v. 3; ch. 9) and sarcastically accuses his friends of patronizing God by pleading God's case dishonestly: "Will you show partiality toward him, will you plead the case [*rîḇ*] for God?" (13:8).

Often the OT portrays God as an advocate or judge who defends His people against their persecutors (e.g., Isa. 51:22; Jer. 50:34; 51:36). Those who are oppressed and helpless — e.g., the poor and the fatherless (Prov. 22:23; 23:10f.) and victims of dishonest lawsuits (cf. Isa. 29:21; 59:4) — look to God to plead their cause (e.g., 1 S. 24:15; Ps. 119:154; Jer. 18:19). Speaking on behalf of Israel, Micah acknowledges God's just judgment upon the nation's sin but also anticipates that God's judgment will reach its ultimate purpose in salvation: "I will bear with the indignation of the Lord because I have sinned against him, until he pleads my cause and executes judgment for me" (Mic. 7:9). Thus legal language is employed "to interpret the history of judgment as a process in which the judge marvellously becomes advocate and defender" (J. L. Mays, *Micah* [*OTL*, 1976], p. 159).

In Acts 19:8 Gk. *peíthō* (RSV "plead"; cf. AV "persuade") describes Paul's attempts to "convince" (see

Bauer, rev., p. 639) the Ephesians "about the kingdom of God." In Rom. 11:2, however, "plead" is used in the juridical sense as in the OT, referring to Elijah's accusation against Israel in 1 K. 19:10, 14.

D. K. MCKIM N. J. O.

PLEASANT PLANTS [Heb. *niṭ'ê na'ᵃmānîm*–'plants of the pleasant ones'] (Isa. 17:10); NEB "gardens in honour of Adonis." Most scholars have concurred with the NEB rendering (see also JB), which interprets *na'ᵃmānîm* as a descriptive title of the god ADONIS (the Greek form of Heb. *'ăḏôn*). Adonis's numerous manifestations in the fertility cult may account for the plural form *na'ᵃmānîm*.

Although such an interpretation fits the context well, it has some problems. First, little is known about the "gardens of Adonis," which are treated briefly in only a few Greek texts (see Pauly-Wissowa, I/1, 385f., 387f.; VII/1, 807f.). Second, the LXX translates the Hebrew text *phýteuma ápistis,* not *Adōnidos kēpoi,* the regular Greek expression for the gardens of Adonis. Finally, the appeal to Ugar. *n'm* (see L. A. Snijders, *Oudtestamentische Studien,* 10 [1954], 45-47) as an epithet for a deity akin to Adonis has little value, since *n'm* is not applied to Baal, the Ugaritic counterpart of Adonis. Thus it seems best to follow the RSV rendering and interpret the reference as to some vegetation cult, perhaps a forerunner of the Adonis cult (J. Pedersen, *ILC,* III-IV, 473, suggested the Tammuz cult).

G. A. L.

PLEASE; BE PLEASED [Heb. *ṭôḇ* 'good' (*beᶜênê*–'in the eyes of,' *'al*–'with respect to,' or *lipnê*–'before'), *yāṭaḇ (beᶜênê)*–'go well (in the eyes of),' *yāšar beᶜênê*–'be right in the eyes of,' *rāᶜâ beᶜênê*–'evil in the eyes of' ("not please," Gen. 28:8; Ex. 21:8), *māṣā' ḥēn beᶜênê*–'find favor in the eyes of' (Gen. 47:25), *rāṣâ*–'be pleased with, favorable to,' *rāṣôn*–'favor, liking' (Est. 9:5; Dnl. 8:4), hiphil of *yā'al*–'agree to,' *ḥāpēṣ*–'desire,' 'delight in,' *'āraḇ* (Hos. 9:4), hithpael of *pā'ar*–'prove oneself glorious' ("be pleased to command," Ex. 8:9 [MT 5]), *nā'* (particle of urgency; Jgs. 16:6, 10), *maḥmāḏ*–'something desirable' (1 K. 20:6); Aram. *šᵉpar*–'seem good,' 'please' (Dnl. 6:1 [MT 2]); Gk. *aréskō, arestós*–'pleasing' (Acts 12:3; 1 Jn. 3:22), *euarestéō* (He. 11:5f.), *euárestos* (2 Cor. 5:9; Col. 3:20), *kalós*–'well' (Jas. 2:3), *thélō*–'wish' (Mt. 17:12; Mk. 9:13), *eudokéō*–'be well pleased,' *eudokía*–'good will' (Lk. 2:14)]; AV also "be good in (one's) eyes," SEEM GOOD, BE CONTENT (hiphil of *yā'al*), FAVOUR, APPROVE, DELIGHT, GOOD WILL, etc.; NEB also WILL, LIKE, FAVOUR, WISH, BE SATISFIED, RESOLVE, SUIT, BE CONTENT, etc.; **PLEASING** [Heb. *nîḥô(a)ḥ*–'soothing,' *ṭôḇ* (1 K. 14:13; Est. 8:5), *'āraḇ, nō'am*–'kindness' (Prov. 15:26), *ḥēpeṣ*–'joy, pleasure' (Eccl. 12:10); Gk. *euárestos, euarestéō* (He. 13:16), *arestós* (Jn. 8:29), *areskeía*–'satisfaction' (Col. 1:10)]; AV also SWEET (*nîḥô[a]ḥ*), GOOD, PLEASANT, ACCEPTABLE, etc.; NEB also SOOTHING (*nîḥô[a]ḥ*), GOOD, FAVOUR, DELIGHT, ACCEPTABLE, etc.; **PLEASANT; PLEASANTNESS** [Heb. niphal part. of *ḥāmaḏ*–'desirable' (Gen. 2:9), *ḥemdâ*–'something desirable,' *ḥemeḏ*–'charm, beauty,' *maḥmāḏ* ("pleasant place," Isa. 64:11 [MT 10]), *nā'am*–'be pleasant, agreeable,' *nā'îm*–'agreeable, pleasant,' *nō'am* (Prov. 3:17; 16:24), *na'ᵃmānîm* (Isa. 17:10), *ṭôḇ, māṭēq*–'sweetness' (Prov. 16:21), *ša'ᵃšû'îm*–'delight' (Isa. 5:7), *'āraḇ* (Jer. 31:26), *'ōneg*–'enjoyment' (Isa. 13:22), *ta'ᵃnúg*–'enjoyment' (Mic. 2:9); Gk. *chará*–'joy' (He. 12:11)]; AV also GOOD, SWEET(NESS), "red wine" (reading *ḥemer* in place of *ḥemeḏ* at Isa. 27:2), JOYFUL; NEB also DELIGHT(FUL), GOOD, COMFORT, KIND, WINNING, "in honor of Adonis" (*na'ᵃmānîm,* Isa. 17:10), GORGEOUS, etc.; **PLEASURE** [Heb. *ḥāpēṣ, ḥēpeṣ, rāṣâ, rāṣôn, ṭôḇ, śāmē(a)ḥ*–'rejoice' (Eccl. 2:10), *šimḥâ*–'joy' (Prov. 21:17; Eccl. 2:1f., 10), *'eḏnâ*–'(sexual) pleasure' (Gen. 18:12), *nepeš*–'desire,' 'will' (Ps. 105:22), *'āraḇ* (Ezk. 16:37), *nā'îm* (Ps. 16:11), *'āḏîn*–'voluptuousness' (Isa. 47:8); Aram. *rᵉ'û*–'will, decision' (Ezr. 5:17); Gk. *hēdonḗ*–'pleasure,' 'enjoyment,' *philḗdonos* ("lover of pleasure," 2 Tim. 3:4), *eudokéō, dokéō*–'think' (He. 12:10), *eudokía* ("good pleasure," Phil. 2:13), *spataláō* ("live in pleasure," Jas. 5:5), *apólausis*–'pleasure' (He. 11:25), *chará* (2 Cor. 1:15)]; AV also DELIGHT, LIKE, MIRTH, GOOD, BENEFIT, etc.; NEB also WANT, FAVOUR, WISH, ASSET, WILL, BENEFIT, etc.

The terms "please," "pleasant," and "pleasure" are all related etymologically (<French *plaisir* <Lat. *placēre*) and are used to translate many of the same biblical terms (see above). The verb "please" means to "give pleasure (i.e., delight, enjoyment, gratification)," the adjective "pleasing" (usually occurring in the phrase "pleasing odor"; *see* ODOR) describes something that gives pleasure, and the adjective "pleasant" indicates qualities that tend to give pleasure. For a discussion of some of the more important biblical terms, see *DNTT,* II, 814-820; *TDNT,* I, *s.v.* ἀρέσκω (W. Foerster); II, *s.v.* εὐδοκέω (G. Schrenk), ἡδονή (G. Stählin); *TDOT,* V, *s.v.* "ḥapeṣ" (G. Botterweck), "ṭôḇ" (I. Höver-Johag).

Hebrew idiom often indicates that something is pleasing by referring to the gratification that it gives to the eyes (cf. the expression *ṭôḇ beᶜênê, yāṭaḇ beᶜênê,* etc.). That which is right in one's sight (*yāšar beᶜênê*) is pleasing because it is seen to be fitting, acceptable, and edifying.

One who pleases another finds favor with that person (e.g., 2 S. 3:36; cf. Prov. 16:7). A man who finds a young woman pleasing desires to marry her (Jgs. 14:3, 7; Est. 2:4, 9). Similarly, one acts favorably on advice or counsel that one finds pleasing (2 S. 17:4; Est. 1:21; 2:4; etc.; Jth. 7:16; 11:20; 1 Macc 1:12; 8:21; Acts 12:3). In positive relationships one person seeks to please another, e.g., one's parents (Gen. 28:8f.; Col. 3:20), one's master (cf. Ex. 21:8; Jth. 12:14), the king (Neh. 2:5, 7; Est. 1:19; 3:9), and God (Prov. 16:7). Those who please God find His favor and intimate fellowship with Him (He. 11:5; Sir. 35:16). They also escape the snares of evil (cf. Eccl. 7:26). "When a man's ways please the Lord, he makes even his enemies to be at peace with him" (Prov. 16:7).

Whatever is beautiful, enjoyable, productive, or edifying can be described as "pleasant," e.g., houses (Ezk. 26:12), vineyards (Isa. 5:7; Am. 5:11), sleep (Jer. 31:26; 3 Macc. 5:12), speech (Prov. 16:21, 24; 23:8), knowledge (Prov. 2:10; 22:18), aromas (Sir. 24:15), voices and melodies (Sir. 6:5; 40:21), a maiden (Cant. 7:6 [MT 7]), a life of obedience (Job 36:11), and brothers living in harmony (Ps. 133:1). A city located in a beautiful, secure setting is said to have a pleasant situation (2 K. 2:19). Palestine as the promised land was frequently called a pleasant land (Ps. 106:24) because it was a beautiful, fertile land that could support God's people well. But the prophets proclaimed that, because the people had disobeyed God, He would turn the pleasant land into a desolation (Jer. 12:10; 23:10; cf. Zec. 7:14). On the translation of Heb. *na'ᵃmānîm* in Isa. 17:10, *see* PLEASANT PLANTS.

Several OT passages discuss the pursuit of sensuous pleasure. The writer of Ecclesiastes decided to experiment with pleasure in order to test its value (Eccl. 2:1). He stated: "I kept my heart from no pleasure" (v. 10). Although he found a degree of satisfaction in his work (2:10, 3:13), in the end he concluded that the pursuit of pleasure is futile (2:11). His conclusion, "What use is it?" (2:2),

implies the answer, "of no use." Prov. 21:17 warns, "He who loves pleasure will be a poor man." Sexual pleasure is referred to in Ezk. 16:37 and probably also in Gen. 18:12 (cf. Wisd. 7:22).

The NT repeatedly warns against pursuing the sensuous pleasures of this world (cf. also Sir. 18:31). In Jesus' parable of the Sower, the pursuit of the "cares and riches and pleasures of life" chokes out the word of God (Lk. 8:14). Those who "have lived on the earth in luxury and in pleasure" have "fattened [their] hearts in a day of slaughter" (Jas. 5:5). Pleasure in unrighteousness enslaves a person (Tit. 3:3) and leads to condemnation (2 Thess. 2:12). The author of Hebrews recalls that Moses became a great example of faith by choosing to endure hardship with God's people rather "than to enjoy the fleeting pleasure of sin" (He. 11:25). *See also* PASSION.

In many passages "pleasure" bears the connotations of "will" (e.g., 2 S. 19:18 [MT 19]; Neh. 9:37). This is particularly true when the reference is to God. God's pleasure and His will are one; there is no gap between His pleasure and His deeds (cf. Sir. 41:4). God "does whatever he pleases" anywhere in the universe (Ps. 115:3; cf. 135:6). God states, "I will accomplish all my purpose" (AV "pleasure," Isa. 46:10b). This positive, dynamic concept underscores the principle that God's will is to seek continually what is good and pleasurable for all of His creation. Because the Servant of God suffered a cruel, unjust death according to God's pleasure (AV Isa. 53:10; RSV "will"), many are justified by the merits of His vicarious death. Truly God's foremost pleasure is to bless His people (Nu. 24:1), especially those who live uprightly (1 Ch. 29:17). He is pleased to give them victory over all who oppress them (Ps. 149:4; cf. 40:13 [MT 14]).

God's pleasure is often an expression of His sovereign grace. Yahweh's choice of David as king of Israel, e.g., is based solely on the fact that He takes pleasure in David (1 Ch. 28:4). Thus, people experience God's pleasure not because of any talent they possess but because they have faith in God and hope in His loyal love (Ps. 147:10f.). Nevertheless, God directs His concern to all. In Ezk. 33:11 God says, "I have no pleasure in the death of the wicked" (cf. 18:32). In the NT Jesus assures His disciples that it is God's "good pleasure" to give the Kingdom to everyone who follows Him (Lk. 12:32).

At Jesus' baptism (Mt. 3:17 par.) and at His transfiguration (Mt. 17:5 par.) God the Father acknowledged that His Son was well-pleasing to Him, i.e., God accepted His Son's obedience and set His approval on Jesus' work. Col. 1:19 gives profound theological expression to Jesus' incarnation with the words, "in Him all the fullness of God was pleased to dwell." During Jesus' earthly ministry and especially during His passion, He did not seek to please Himself (Rom. 15:3). Rather, His purpose was always to do what was pleasing to God (Jn. 8:29).

The NT exhorts each believer, like Christ, to do what is pleasing to God by bearing the fruit of good works and growing in the knowledge of God (Col. 1:10; cf. Eph. 5:8-10). The sacrifices that are "a pleasing aroma" to God under the new covenant are good works and the sharing of what one has (He. 13:16; cf. Rom. 15:26f.; Phil. 4:18). Frequently Christians must set aside the search for self-pleasure in order to edify their neighbors (Rom. 15:1-3). It is in this spirit that Paul writes, "I try to please all men in everything I do, not seeking my own advantage, but that of many, that they may be saved" (1 Cor. 10:33). Nevertheless, believers must sometimes choose between satisfying the desires of human beings and those of God. In such cases they must always seek to please God, no matter what the cost (1 Thess. 2:4; cf. Gal. 1:10).

Whatever is done to please God must be done in faith, "for without faith it is impossible to please him" (He. 11:6). Moreover, Christians can live the life of faith solely because God is at work in them, willing and working His good pleasure (Phil. 2:13). One who does what is pleasing to God and keeps His commandments has great power in prayer (1 Jn. 3:22).

PLEDGE [Heb. *'āsar 'issār*–'bind a binding' ("bind by a pledge," Nu. 30:2-5, 7, 10f. [MT 3-6, 8, 11f.]), *'issār* (Nu. 30:12 [MT 13]), *'ĕsār* (Nu. 30:14 [MT 15]), *ḥāḇal* ("take in [for a] pledge," Dt. 24:6, 17; Job 24:3, 9; "taken in pledge," qal pass. part., Am. 2:8; "exact a pledge," Job 22:6; "hold in pledge," Prov. 20:16b; 27:13b), *ḥāḇal ḥ^{a}ḇōl* ("take in pledge," Ex. 22:26 [MT 25]), *ḥ^{a}ḇōl* (Ezk. 18:12, 16; 33:15), *ḥ^{a}ḇōlâ* (Ezk. 18:7), *^{a}ḇaṭ ^{a}ḇôṭ* ("fetch a pledge," Dt. 24:10), *^{a}ḇôṭ* (Dt. 24:11-13), *'aḇṭîṭ* (Hab. 2:6), *'ĕrāḇôn* (Gen. 38:17f., 20; perhaps Job 17:3a), *nāṯan yāḏ*–'give a hand' (Ezr. 10:19; "pledge allegiance," 1 Ch. 29:24), *tāqa' kap*–'strike a palm (of a hand)' ("give a pledge," Prov. 6:1b; 17:18a; 22:26a); Gk. *pístis*–'faith' (1 Tim. 5:12)]; AV also BOND, SUBMIT, "strike the hand," etc.; NEB also (GIVE A) GUARANTEE, (BINDING) OBLIGATION, etc.; **SECURITY** [Heb. *t^{e}śûmeṯ yāḏ* (Lev. 6:2 [MT 5:21]); Gk. *hikanós* (Acts 17:9)]; AV also "fellowship" (Lev. 6:2); NEB CONTRACT, BOUND; **SURETY** [Heb. *'āraḇ* ("be/become/give surety," Gen. 43:9; 44:32; Ps. 119:122; Prov. 6:1a; 11:15; 17:18b; 20:16a; 22:26b; 27:13a); Gk. *éngyos* (He. 7:22)]; AV also "strike the hand," (TAKE A) PLEDGE; NEB also PLEDGE, GUARANTOR; **SURETYSHIP** [Heb. *tōq^{e}'îm*] (Prov. 11:15); AV SURETISHIP; NEB STAND SURETY. *See also* SECURITY and SURETY for other senses of these words.

Taking or giving a pledge has two main foci in the OT: (1) security, and (2) personal obligation. Security was presented to guarantee the fulfillment of a transaction; e.g., Judah gave Tamar his signet, cord, and staff for security until he could pay her a kid from the flock in return for her sexual favors (Gen. 38:12-20). The OT has strict legislation to protect the poor in matters of security. A poor man's outer garment, which was often his only covering for the night, was never to be kept after sundown (Ex. 22:26f.; Dt. 24:12f.; cf. Mt. 5:40; Lk. 6:29). A widow's garment could not be taken even for a few hours (Dt. 24:17). The creditor could not secure anything that related to the earning of a debtor's livelihood, e.g., a millstone (Dt. 24:6). Neither could a lender enter a house to find a pledge; the pledge remained under the control of the debtor until he brought it out (Dt. 24:10f.). The wisdom literature discourages the astute youth from giving or becoming a pledge for another, especially a stranger (Prov. 6:1-5; 22:26f.). But the one having business with a person who has become security for a foreigner needs to keep that person's garment as a pledge (Prov. 20:16; 27:13). See W. McKane, *Proverbs* (*OTL*, 1970), pp. 542f.

Humankind has a strong tendency to find a loophole in the law. Some used the laws regulating security to enhance their own wealth by outdoing the poor and the simple (Hab. 2:6; cf. Job 22:6). Others blatantly violated the law against keeping pledged garments (Am. 2:8). Particularly perverse were those who took a poor man's child in pledge (Job 24:9). Thus it becomes evident why restoring a pledge was a sign that a person truly repented of his evil ways and was seeking God (Ezk. 33:14-16; 18:5-17).

Pledging also involved personal obligation; a person bound himself, often by a ceremonial gesture, to follow a certain course of action. Heb. *nāṯan yāḏ* (lit. "give a

hand"; e.g., 1 Ch. 29:24; Ezr. 10:19) and *tāqaʿ kap* (lit. "strike a hand"; e.g., Prov. 22:26) denote the sealing of an obligation; hence each phrase is translated "pledge," or "be a surety." The leaders and the sons of David obligated themselves publicly to support King Solomon (1 Ch. 29:24). Under the inspiration of the teaching of Ezra the priests who had entered into mixed marriages pledged to put aside their foreign wives (Ezr. 10:19).

An adult male was free to obligate himself to a course of action by making a vow to God. But only a widowed or divorced woman had the same freedom. An unmarried woman's pledge was negated if her father expressed disapproval on the same day that he heard of it, and a husband could veto his wife's pledges in the same way (Nu. 30).

The concept of pledge also appears in regard to one's faith in God. In a strong affirmation of faith Job pled with God to give surety so that he could be released from his suffering while he waited for his vindication (Job 17:3).

When Jason and his friends were brought before the local authorities of Thessalonica for harboring Paul, a suspected troublemaker, they had to give security before they were released (Acts 17:1-9). This security was either an oath or some other kind of guarantee, perhaps a deposit of money. Most likely they promised to send Paul away from the city and not to entertain him again in one of their homes.

In 1 Tim. 5:11f. Paul instructed Timothy not to enroll younger widows, those under sixty, on an official list of widows. Those who were entered on this list received support from the church and bound themselves by an oath or pledge to serve Christ through good works and not to remarry. Paul discouraged a younger widow from being admitted to this order, lest after a time she, yielding to desire, remarry and come under condemnation for breaking her earlier pledge (Gk. *pístis*). In this case *pístis* means an agreement; no doubt it was sealed by vows taken before the local assembly of believers.

PLEIADES plē'ə-dēz [Heb. *kîmâ*] (Job 9:9; 38:31; Am. 5:8); AV also "seven stars" (Am. 5:8). An open cluster of stars, part of the zodiacal constellation of Taurus the Bull. In Greek mythology the Pleiades were the seven daughters of Atlas who were pursued by Orion and changed into stars just as Orion was about to catch them. The three OT passages mention the constellation to contrast mankind's weakness and the Lord's creative might.

Although the meaning and etymology of Heb. *kîmâ* are obscure, the versions generally support the translation "Pleiades." See the comms., esp. E. Dhorme on Job (Eng. tr. 1967), p. 132; H. W. Wolff on Amos (Eng. tr., *Hermeneia*, 1977), p. 241; see also G. Schiaparelli, *Astronomy in the OT* (1905), p. 62.

PLENTY; PLENTEOUS; PLENTIFUL; PLENTIFULLY [Heb. *śāḇāʿ*–'satiety'] (Gen. 41:29-31, 34, 47, 53; Prov. 3:10); NEB also "corn," "good years"; [qal of *śāḇēʿ(a)*–'be sated, satisfied'] (Prov. 12:11; 20:13; 28:19; Jer. 44:17); AV also "be satisfied with"; NEB also ENOUGH, "lead to," "your fill"; [*rōḇ*–'greatness, abundance'] (Gen. 27:28; 1 K. 10:27; 2 Ch. 1:15; 9:27; 31:10; Job 26:3); NEB also "to spare," "foolish"; [hiphil of *rāḇâ*–'multiply'] (Ps. 130:7); NEB "great"; [*śāmēn*–'fat'] (Isa. 30:23); [*karmel*–'orchard'] (Jer. 2:7); NEB FRUITFUL; [qal of *ʾāḵal*–'eat'] (Joel 2:26); NEB "your fill"; [*day*–'enough'] (Est. 1:18); AV "too much"; NEB ENDLESS; [Gk. *polýs*–'many, much'] (Mt. 9:37 par. Lk. 10:2); AV also "great"; NEB "heavy"; [*euphoréō*–'be fruitful'] (Lk. 12:16); NEB "heavy"; [*perisseúō*–'abound, be rich in'] (Phil. 4:12).

The Heb. *śāḇāʿ* occurs six times in Gen. 41, where the RSV translates it "plenty" and "plenteous" with reference to the famous seven years of plenty in the Joseph narrative. Prov. 3:10 teaches that a consequence of honoring the Lord with one's substance and first fruits will be barns filled with "plenty" and vats "bursting with wine" (cf. Heb. *śāḇāʿ wᵉṯîrôš*, lit. "plenty and new wine"); i.e., the full life will come to those whose lives are properly disposed toward stewardship and respect of God. Here the NEB translates *śāḇāʿ* as "corn" in the light of the LXX *plēsmonḗs sítǭ*, "filled with grain"; cf. the Phoenician inscription of Azitawadda, line A.III.9, where the same pairing, *śbʿ wtrš*, occurs with the meaning "grain and new wine" (*KAI*, I, 6; II, 38; *ANET*, p. 654; cf. M. Dahood, *Proverbs and Northwest Semitic Philology* [1963], p. 9).

In five instances the RSV renders the cognate Hebrew verb *śāḇēʿ(a)* as "have plenty." Prov. 12:11 contrasts the industrious farmer who, though finding life a struggle, at least has "plenty" to eat, with the thoughtless dreamer who "spends his time chasing rainbows" (R. B. Y. Scott, *Proverbs* [*AB*, 1965], p. 89). (See also Prov. 28:19; cf. Prov. 20:13 and "The Instruction of Amen-em-opet," ch. 6, in *ANET*, p. 422).

The common Hebrew substantive *rōḇ* is twice translated by the RSV as "plenty" — in Gen. 28:27, referring to an abundance of grain, and in 2 Ch. 31:10, concerning food left over. It is also rendered "plentiful" in 1 K. 10:27 (par. 2 Ch. 1:15; 9:27) in reference to the cedars made abundant by Solomon. In Job 26:3 *wᵉṯûšîyâ lārōḇ hôḏāʿtā* is translated by the RSV "and plentifully declared sound knowledge" (cf. NEB, "what sound advice to the foolish?"; see comms.).

The words of Yahweh in Jer. 2:7 picture the entry into Canaan thus: "And I brought you into a plentiful land" (Heb. *ʾereṣ hakkarmel*; only here is Heb. *karmel* translated "plentiful" in the RSV). In the phrase *waʾᵃḵaltem ʾāḵôl wᵉśāḇôʿ(a)*, "You shall eat in plenty and be satisfied" (Joel 2:26), the infinitive absolute immediately follows the cognate finite verb, a common Hebrew syntactical device for adding a durative nuance to the verbal action. Thus here it literally means "you shall continually eat," or the like, hence the RSV "eat in plenty."

In the NT "plenty" occurs only in Phil. 4:12, where it renders Gk. *perisseúō*, "abound, be rich in, be more than enough." Here *perisseúō* is paired antithetically with *tapeinóō*, "lower, humble, lack" (itself more commonly paired with *hypsóō*, "lift up, exalt"): "I know how to be abased, and I know how to abound."

The Gk. *polýs* is translated "plentiful" in Mt. 9:37 par. Lk. 10:2 with regard to the full readiness of the eschatological harvest. Jesus' charge, "The harvest is plentiful, but the laborers are few," addressed to the Seventy in Luke, in Matthew is given to the disciples just prior to the mission of the Twelve.

The Gk. *euphoréō*, a hapax legomenon in the NT, appears in the parable of the barn-building fool (Lk. 12:16) in reference to the yield of abundant crops from his lands (cf. NEB "heavy"). D. G. BURKE

PLEROMA plā'rō-mə [Gk. *plḗrōma*]. A Greek word, used seventeen times in the NT, that has at least three possible meanings: "that which is filled"; "that which fills or fills up," i.e., "completes"; and "that which is brought to fulness or completion."

The first meaning does not seem to occur in the Scriptures, but the other two meanings play an important role in certain key biblical texts. Examples of the second meaning

include the citation of Ps. 24:1 (LXX) in 1 Cor. 10:26; Mt. 9:16 where *plḗrōma* refers to a "patch" that fills up the hole in a torn garment; Mk. 6:43; 8:20.

Under the third meaning should be placed Rom. 11:25, the "full number, totality" (of the Gentiles), and 15:29, the "full measure" (of Christ's blessing). Rom. 13:10 describes love as the *plḗrōma* of the law. This has been construed as "the sum total of the law's prescriptions and demands"; but it is possible that the correct meaning here is "fulfillment," i.e., that love, like the Lord Jesus, is the "end" of the law (Rom. 10:4; cf. Gal. 5:14; 6:2) in that love brings the law to its full realization and perfect completion (cf. Mt. 5:17; 26:56; Mk. 1:15). This nuance leads to those verses in Colossians and Ephesians in which the precise meaning of *plḗrōma* is disputed.

Colossians 1:19 and 2:9 are best taken together. The meaning of *plḗrōma* in 2:9 is clear from its modification by *tḗs theotḗtos*; it undoubtedly means "the fulness of deity," i.e., the totality of the Godhead that dwells in Christ; and this meaning may be decisive in correctly interpreting *pán tó plḗroma* in 1:19. One way to interpret 1:19 is to take *plḗrōma* as a quasi-technical term of early gnostic speculation, which used it to denote the region inhabited by the "full number" of intermediary beings that were thought to exist between the Creator God and the created world. (Cf. Ernst, pp. 41-50, for the background of *plḗroma* in gnostic thought. The more important texts, drawn from the Valentinians, are cited and discussed by Lohse, pp. 57f.) The alternative is to take *plḗrōma* as meaning "God in His fulness," "the entirety of God's attributes, His full divinity," which was pleased to dwell in Christ (so RSV, supplying "of God").

According to the first view, Paul is combating speculative teachers at Colossae who reduced Christ to a member of the celestial hierarchy. The apostle responds to this teaching by asserting that Christ is the fulness of these intermediary beings. They are subsumed in Him, for He is the *plḗrōma* of them all. (See R. P. Martin, *Colossians and Philemon* [*NCBC*, repr. 1981], pp. 59f., 79f. for further comment.) This view, which assumes that Paul and the Colossian heretics used a common term, has been supported by many scholars, e.g., Lightfoot, Scott, R. Bultmann (*Theology of the NT*, II [Eng. tr., 1955], 149ff.), and (with modification) Lohse.

Opposition to this view has taken several forms. The older arguments focused on the lack of convincing evidence for an early gnostic creed in the 1st century. While this position is still viable, the data of the Nag Hammadi finds give some indication that incipient "gnosticism" (or, better, gnostic religion) arose apart from second-century Christianity and developed alongside the Pauline gospel in Hellenistic society contemporaneous with the apostolic communities. More convincingly, P. D. Overfield (*NTS*, 25 [1978/79], 384-96) has insisted that Paul in Colossians is not indebted to gnostic ideas for his understanding of *plḗrōma*. He argued that God Himself is called *plḗrōma* in the text; *plḗrōma* does not refer to the vast space separating God from the world. Moreover, there is no descent of the Redeemer from the *plḗrōma* in Pauline incarnational Christology (see E. Schweizer, "Paul's Christology and Gnosticism," in M. D. Hooker and S. G. Wilson, eds., *Paul and Paulinism: Essays in Honour of C. K. Barrett* [1982], pp. 115-123).

Another group of interpreters (e.g., Kehl, p. 119; O'Brien, p. 52) have perceptively observed that the tautologous expression "all the *plḗrōma*" appears to have been chosen for polemical purposes. This full expression was evidently meant to deny what some were asserting at Colossae, namely, that Christ was only one emanation of deity and not the fulness of divine life and power. Thus Paul may well be reacting to a Colossian term and redefining it. Recognizing that the use of *plḗrōma* in Stoic thought and the Hermetic writings is not a real parallel, a considerable body of recent scholarship (e.g., Masson; Moule, pp. 164-69; Kehl, pp. 116-125; J. G. Gibbs, *Creation and Redemption* [1971], pp. 107f.; O'Brien, p. 52) has argued that one need not look beyond the OT for the source of Paul's use of *plḗrōma*. This group interprets *plḗrōma* as the Greek equivalent of Heb. *mᵉlô'* (for the LXX usage see Ernst, pp. 22-30; the most important texts are Ps. 24:1; Jer. 8:16; 47:2; Ezk. 12:19; 19:7; 30:12). God Himself, moreover, fills the universe (Jer. 23:24; Ps. 72:19) with His glory (Isa. 6:3; Ezk. 43:5; 44:4, where the cognate *plḗrēs*, "full," occurs). This view sees Paul's use of *plḗrōma* as parallel with the logos Christology of Jn. 1:1-18, conveying the christological thought of God's essence now embodied in Christ: in Christ the total of divine attributes dwells and is revealed and communicated to humankind.

In Ephesians *plḗrōma* is understood by some commentators as applying to the Church as well as to Christ. This would confirm the view that Paul does not use *plḗrōma* in any technical "gnostic" sense. In Eph. 1:10 (cf. "fulfil," Mt. 5:17 and Mk. 1:15; "fully," Gal. 4:4) the thought is that God's foreordained plan, at the climax of salvation history ("the fulness of time"), has been consummated in that the entire universe is placed under the cosmic Christ.

Ephesians 1:22f. may be interpreted in a number of ways, which have been listed with admirable clarity by R. Yates (*Expos.T.*, 83 [1972], 146-151). The real question is whether *plḗrōma* ("fulness," v. 23) refers to the Church (so AV, RV, RSV), which is then to be taken actively as that which completes Christ who is filling all things (corresponding to Eph. 4:10; so J. Dupont, *Gnosis: la connaissance religieuse dans les épîtres de Saint Paul* [1949], p. 424 n. 1) or passively as that which is filled by Christ; or whether *plḗrōma* should be treated as in apposition to "him" in v. 22 and so taken to apply to the Lord Himself as the one who has been designated by God the Father as the fulness of the Godhead who fills all in all (as in 1 Cor. 15:28). This latter interpretation has the advantage of harmonizing with the rest of the Epistle (4:10) and with the teaching of *plḗrōma* in Colossians noted above. See Moule for a defense of this view; Synge also takes *plḗrōma* as a reference to Christ.

Ephesians 3:19 confirms the understanding of *plḗrōma* as a christological title. This verse is another expression of the hope that "Christ may dwell in your hearts by faith" (3:17); 4:12f. envisions the whole body of believers coming into such an experience.

Another interpretation pays close attention to the voice of the verb (passive or middle) in Eph. 1:23. Christ is being fulfilled or is filling Himself; but by or with whom? One answer is that He is fulfilled by the Christians who, as members of His body, "complement" the head and together form the "whole Christ" (so J. A. Robinson [*Ephesians* (1903), pp. 42-45, 152, 255-59]; F. W. Beare, *IB*, X, 636). On the other hand, W. L. Knox (*St. Paul and the Church of the Gentiles* [1939], pp. 186f.), L. S. Thornton (*Common Life in the Body of Christ* [1941], ch. 10), and J. A. T. Robinson propose the translation "that which is filled by him who is always being filled (by God)," i.e., the Church is constantly receiving from Christ its head the complete fulness that Christ receives from the Father (see J. A. T. Robinson, p. 65 n. 3).

PLOT (vb.) [Heb. *ḥāšaḇ*–'think, account'] (Est. 9:24; Ps. 36:4 [MT 5]; 52:2 [MT 4]; Jer. 18:18; Nah. 1:9 [piel], 11); AV IMAGINE, DEVISE; NEB MAKE PLOTS, DECIDE, etc.; [*zāmam*–'think, plan'] (Ps. 31:13 [MT 14]; 37:12), AV also DEVISE; [*hāgâ*–'devise, plan'] (Ps. 2:1); AV IMAGINE; [*kārâ*–'dig'] (Prov. 16:27); AV DIGGETH UP; NEB REPEATS; [*ʿāṣâ*] (Isa. 32:6); AV WORK; NEB HATCH; [*qāšar*–'bind, league together'] (Neh. 4:8 [MT 2]); AV CONSPIRE; NEB BAND; [hiphil part. of *ḥāraš*–'cut in, engrave,' 'plough,' 'devise'] (1 S. 23:9); AV SECRETLY PRACTISE; NEB PLAN; [niphal of *dāḇar*–'speak'] (Ps. 119:23); AV SPEAK; NEB SCHEMING TOGETHER; [Gk. *symbouleúō*–'consult, plot'] (Acts 9:23); (noun) [Heb. *maḥᵃšāḇâ*–'thought, device']; AV DEVICE; NEB also "what to do" (Jer. 18:18); [*ḥēpeś*–'(shrewd) device, plot'] (Ps. 64:6 [MT 7]); AV SEARCH; NEB etc.; [*zāmām*–'plan, device'] ("evil plot," Ps. 140:8 [MT 9]); AV WICKED DEVICE; NEB "designs against me"; [*rōḵes*–'league, band'] (Ps. 31:20 [MT 21]); AV PRIDE; NEB "in league together"; [*sôḏ*–'council,' 'counsel'] (Ps. 64:2 [MT 3]); AV COUNSEL; NEB FACTIONS; [ʿ*ēṣâ*–'counsel, advice'] (Jer. 18:23); AV COUNSEL; [Gk. *epiboulḗ*–'plot, conspiracy']; AV "lying in wait"; NEB also PLANS (Acts 9:24), MACHINATIONS (20:19); [*systrophḗ*–'plot, conspiracy'] (Acts 23:12); AV, NEB, "(a) banding together." The Hebrew and Greek terms primarily refer to the activity of planning and the plan itself, usually with the negative connotation of scheming.

The verb most frequently translated "plot" by the RSV is Heb. *ḥāšaḇ*. Basically the root means "plan, devise," and refers to the cognitive activity of people as well as God. It also reflects such nuances as "meditate" (e.g., Mal. 3:16), "invent" (e.g., Ex. 31:4), "impute" (e.g., Gen. 15:6), and "esteem" (e.g., Isa. 53:4). But when the context indicates that the planning has evil intent it is translated "plot."

Similarly, though Heb. *zāmam* may have a good sense (e.g., the virtuous woman who "considers" a field in Prov. 31:16), it often refers to the evil intentions of wicked persons (e.g., Gen. 11:6; Dt. 19:19; Prov. 30:32). Often Heb. *kārâ* figuratively expresses plotting against others (e.g., Ps. 7:15 [MT 16]; 57:6 [MT 7]; 119:85; Prov. 26:27; Jer. 18:20, 22). Similarly, the qal of Heb. *ḥāraš* occasionally means "devise" in a bad sense (e.g., Job 4:8; Prov. 3:29; 6:14, 18; 12:20). In Ps. 119:23 "plotting against" translates the niphal of Heb. *dāḇar* with the preposition *bᵉ*. This construction approximates *bᵉ* with the piel of Heb. *dāḇar*, which the RSV translates "speak against" (e.g., Nu. 12:1, 8; 21:5, 7; Ps. 50:20; 78:19).

The Hebrew noun *maḥᵃšāḇâ* (<*ḥāšaḇ*, "think, account") has several meanings. When translated "plot" in the RSV it connotes "schemings" (Est. 8:3; 9:25; Jer. 18:18; Dnl. 11:25). But it also may simply mean "thoughts," e.g., the Lord's thoughts (Jer. 29:11), the thoughts of the wicked (Gen. 6:5), or the thoughts of the righteous (Prov. 12:5). Also, Ex. 31:4 and 35:32, the "artistic designs" (Heb. *maḥᵃšāḇōt*) of the tabernacle created by the divinely enabled craftsmen (cf. Ex. 35:33, 35).

Usually the word "plot" in the RSV reflects the idea of scheming. Plotting is associated with the wicked. The godless premeditate their evil actions before effecting them (Ps. 36:4 [MT 5]). Their plans are secretive (64:2) and intended for destruction (52:2 [MT 4]) and evil (Prov. 16:27). According to Isa. 32:6 the fool is the one who machinates evil.

Several individuals and groups in the OT figure as victims of evil plans. David was the object of Saul's schemings (1 S. 23:9). During the Exile, Jeremiah suffered from conspiracies against him (e.g., Jer. 18:18, 20, 22f.). Likewise the Jews endured schemes during the postexilic period (e.g., Est. 8:3; 9:24, 25). While rebuilding the wall around Jerusalem, Nehemiah and his workers faced plannned opposition from the Samaritans (Neh. 4:7-23 [MT 1-17]). The psalmist lamented that some plotted to take his life (Ps. 31:13 [MT 14]).

But the psalmist reminds the righteous to expect the wiles of the wicked and not to react with alarm (37:12). He commits himself to God's statutes (119:23f.), and invokes God to shelter him from the secret plans of the wicked (64:2 [MT 3]; cf. 83:3 [MT 4]) and to frustrate their schemes (140:8 [MT 9]). Elsewhere (31:20 [MT 21]) he thanks God for His benevolence toward the righteous and for His protection of the righteous from schemers (see the comms. for the proposed revocalizations of *zāmām* in 140:8 and the disputed meaning of *rōḵes* in 31:20).

The psalmist realizes that the plans of the wicked are futile and useless (Ps. 2:1). Though plotting against others (Prov. 16:27), the wicked may eventually fall into the pits dug by their own hands (Ps. 7:15f. [MT 16f.]; 57:6 [MT 7]; cf. Prov. 26:27). Nevertheless, God in His goodness is able to protect the righteous from conspirators (Ps. 31:20 [MT 21]). Ultimately the wicked will receive just recompense for their craftiness (37:2, 9f., 13-15, 20, 38).

In the NT Paul was the object of various plots. After Paul's conversion the Jews planned to kill him (Acts 9:23), but Paul learned of their plan (Gk. *epiboulḗ*) and escaped. Acts 20:3 records a similar incident while Paul was in Greece. Later at Miletus Paul recalls his previous experiences of persecution by the Jews (20:19). He senses that a dubious future awaits him as he prepares for a return to Jerusalem (20:22f.). Because of a conspiracy by the Jews against his life, Paul was escorted by Roman soldiers to Caesarea (Acts 23:12-35), where he appeared before Felix (ch. 24).

Interestingly, the actions of the Jewish religious leaders who persecuted Paul resemble the maneuvers of the chief priests and elders who sought to arrest and kill Jesus (cf. Gk. *symbouleúō* in Mt. 26:4 and Acts 9:23).

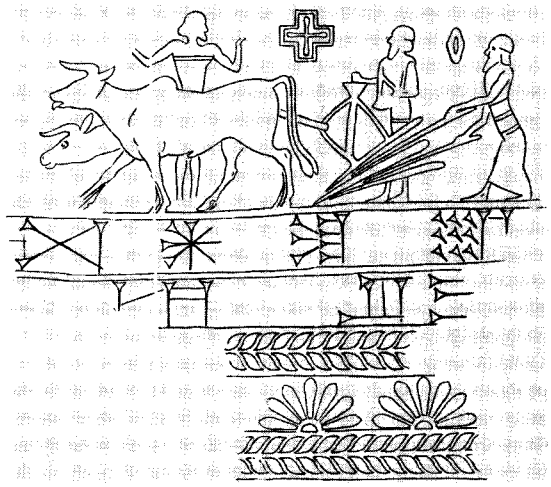
See CONSPIRACY; PLAN. G. L. KNAPP

PLOT [Heb. *ḥelqâ*–'portion of ground'] (2 S. 23:11f.; 2 K. 9:25f.; 1 Ch. 11:13f.); AV PIECE, GROUND, PORTION, PLAT, PARCEL; NEB also FIELD; in Ezk. 45:2 the RSV and NEB supply "plot." A piece of land.

The Heb. *ḥelqâ*, related to *ḥālaq*, "divide, apportion," is often used with *śāḏeh*, "field," and translated "plot of ground." *See also* PORTION.

In Ezk. 45:2 the RSV and NEB supply "plot" for a smooth translation; the MT *mᵉrubbāʿ sāḇîḇ* (lit. "square all around"; cf. AV) appears redundant, since a square area is by definition the same all around; but Ezekiel had a penchant for using *sāḇîḇ*, often for emphasis.

PLOW [Heb. (vb.) *ḥāraš* (Dt. 22:10; 1 S. 8:12; Job 4:8; etc.), *ʿāḇaḏ* (Dt. 21:4); Gk. (noun) *árotron* (Lk. 9:62), (vb.) *arotriáō* (Lk. 17:7; 1 Cor. 9:10)]; AV also EAR (Gen. 45:6; Ex. 34:21; 1 S. 8:12); NEB also TILL (Dt. 21:4),



"drive" (Ps. 129:3); **PLOWER** [Heb. *ḥāraš* (part.)] (Ps. 129:3); NEB PLOUGHMAN; **PLOWMAN** [Heb. *'ikkar* (Isa. 61:5), *yāgaḇ* (2 K. 25:12; Jer. 52:16), *ḥāraš* (part.) (Am. 9:13)]; AV also HUSBANDMAN (2 K. 25:12; Jer. 52:16); NEB also LABOURER (2 K. 25:12; Jer. 52:16), "till the land" (Isa. 61:5); [Gk. *arotriáō* (part.) (1 Cor. 9:10)]; **PLOWSHARE** [Heb. *'ēṯ* (Isa. 2:4; Joel 3:10 [MT 4:10]; Mic. 4:3), *maḥ[a]rešeṯ* (1 S. 13:20f.)]; AV also SHARE (1 S. 13:20), MATTOCK (1 S. 13:21); NEB also MATTOCK (Isa. 2:4; Joel 3:10; Mic. 4:3). The plow must have been invented soon after draft animals were domesticated (before 3000 B.C.), but the hoe or digging stick continued in use for many years. The plow was developed from the hoe by lengthening the hoe shaft so that the beasts could be harnessed and by adding a handle for guidance. The blade or share was of hard wood or metal and was easily worn or damaged in stony country (cf. 1 S. 13:20). Iron plowshares began to be widely used in Palestine early in the 1st millennium B.C. (*see* picture in IRON). An example was found at Gibeah (Tell el-Fûl) in ruins identified with Saul's fortress (see *AASOR*, 34-35 [1960], pl. 19A).

The simple plow was made from a young tree of oak or from another hardwood tree with a diameter of 7.5-10 cm. (3-4 in.). The tree was severed just below a good-sized branch and again 40-50 cm. (15-20 in.) above. The upper end of the severed trunk was pointed to form the share or the attachment for a metal share. Between this end and the side branch was fitted a brace. The branch, trimmed 3-3.5 m. (10-12 ft.) from the trunk, became the pole. A lighter stick, about 1 m. (3 ft.) long, projected upward from the share to form the handle. In a slightly different type of plow the handle and share are one continuous piece, cut so that there is a slight bend at the middle; the pole is of two pieces joined end to end and the thicker end is notched to attach it firmly to the share. The whole is so light that it can easily be carried on a man's shoulder. These plows literally scratched the soil, as implied by Heb. *ḥāraš*. The plowman guided his plow with one hand, and with the other he could goad the oxen or with the chisel end of his goad break away the lumps of earth that impeded the plow.

Fertility-god sits on a throne and holds a plow. Cylinder seal impression from ca. 2360-2180 B.C. (Staatliche Museen zu Berlin, DDR)

Drawing of men plowing (with a seed plow) and sowing. From a Babylonian seal impression, 14th cent. B.C. (University Museum, University of Pennsylvania)

In Mesopotamia the seed plow was in common use. A funnel behind the share directed the seed from a container into the furrow as soon as it was opened (see *ANEP*, nos. 86-88). To produce a straight and even furrow the plowman had to fix his gaze forward and not for one instant glance aside. This necessity gave rise to the simile for the Christian (Lk. 9:62; cf. Phil. 3:13).

One special law is mentioned in connection with plowing, namely, that an ox and an ass should not be yoked together (Dt. 22:10). Oxen were principally used for plowing (Job 1:14); often several yokes of oxen followed each other, making parallel furrows across the field (cf. 1 K. 19:19). The land cannot be plowed before the rains (cf. Jer. 14:4). Since plowing was a hard and routine task, it was often given to slaves (cf. Prov. 20:4); the Hebrew verb *'ābaḏ*, "work," could also mean "plow" (Dt. 21:4; cf. Lk. 17:7; Hos. 10:11; Isa. 61:5).

Many metaphors and similes are taken from this common action. The famous sign of God's peace, making plowshares (Heb. *'ēṯ*) from swords (Isa. 2:4; Mic. 4:3), and the warlike converse (Joel 3:10), find their explanation in 1 S. 13:19-21, where the oppressed Israelites were forbidden the smiths who might manufacture either implement or effect the simple transformation. The expression "the plowers plowed upon my back" indicates deep affliction (Ps. 129:3; cf. 141:7, NIV, NAB, NASB). The agricultural image of plowing iniquity and reaping trouble or injustice (Job 4:8; Hos. 10:13 [cf. the comms.]; 1 Cor. 9:10) is still popular today. When the opponents of Samson used his wife to discover the answer to his riddle he said, "If you had not plowed with my heifer . . ." (Jgs. 14:18). The destruction foretold for Zion was to be so complete that the site could be plowed as a field (Jer. 26:18). In a time of prosperity the soil would be so fertile that the plowman would overtake the reaper (Am. 9:13). In a parable Isaiah uses the variety in agriculture to point up the various ways God deals with His people (Isa. 28:23-29). Among the improbabilities of Am. 6:12 should probably be read, "Will one plow the sea with oxen?" following a very slight alteration of the MT (see the comms., esp. H. W. Wolff [Eng. tr., *Hermeneia*, 1977], pp. 284f.).

PLUCKING OUT HAIR. *See* HAIR VII; PUNISHMENTS IV.L.

PLUMB LINE; PLUMMET. *See* MEASURING LINE.

PLUNDER [Heb. *bāzaz*] (Gen. 34:27; 2 K. 7:16; Ps. 109:11; Isa. 11:14; Jer. 20:5; 50:37; Ezk. 39:10; Am. 3:11; Zeph. 2:9); AV SPOIL, ROB; NEB also SPOIL, SEIZE, THROWN DOWN; [*baz*] (Ezk. 29:19; 36:5; 38:12f.); AV PREY; NEB also SEIZED; [*bizzâ*] (2 Ch. 14:14; Ezr. 9:7; Neh. 4:4; Est. 9:10, 15f.; Dnl. 11:24, 33); AV SPOIL, PREY; NEB also SPOIL, REPROACH; [*šāsaʾ*] (Jgs. 2:14; 1 S. 17:53; Isa. 13:16; Zec. 14:2); AV SPOIL, RIFLED; NEB also

RIFLED; [*šāsâ*] (Jgs. 2:16; 1 S. 14:48; Isa. 10:13; 17:14; Jer. 50:11); AV SPOIL, ROBBED, DESTROYERS; NEB also MARAUDING BANDS, HOSTILE RAIDS, RAVAGED; [*mᵉšissâ*] (Isa. 42:22; Zeph. 1:13); AV SPOIL, BOOTY; NEB also SPOIL; [*šālāl*] (Est. 3:13; 8:11; Isa. 10:6; Jer. 50:10; Hab. 2:8; Zec. 2:8f. [MT 12f.]); AV SPOIL; [*ḥālaṣ*] (Ps. 7:4 [MT 5]); AV DELIVERED; NEB SET FREE; [*šāḏaḏ*] (Isa. 21:2; Ob. 5); AV, NEB, SPOIL, ROBBERS; [*bāqaq*] (Nah. 2:2, 9 [MT 3, 10]); AV EMPTIERS, SPOIL; NEB PLUNDERING HORDES, SPOIL; [*terep*] (Nah. 3:1); AV, NEB, PREY; [Gk. *harpázō*] (Mt. 12:29); AV SPOIL; [*diarpázō*] (Mt. 12:29; Mk. 3:27); AV SPOIL; NEB also "making off with," RANSACKING; [*harpagḗ*] (He. 10:34); AV SPOIL; NEB SEIZURE; **PILLAGE** [niphal of Heb. *ḥāpaś*] (Ob. 6); AV "searched out"; NEB RANSACKED.

Plunder is used as a verb for robbing or looting as an act of war and also as a noun denoting gains from such actions. Heb. *ḥālaṣ* can mean "set free" or "deliver," but the piel form in this context seems to require the meaning of "strip by violence" or "plunder."

Soldiers of the victorious armies in the ancient Near East gained their "wages" through plundering the dead on the battlefield, the remains of abandoned enemy camps, and the towns conquered in their attack. All valuables, including flocks and herds, women and children, were theirs for the taking (Gen. 34:27-29; Jgs. 5:30); *see* picture in CART. Under the direction of God, such taking of spoil could be an indication of His judgment brought upon His own people (Isa. 10:5f.) or upon foreign powers (Jer. 50:10).

Not only organized armies but also bands of raiders exacted their toll on the settlements vulnerable to attack. The Sabeans and Chaldeans plundered Job's possessions (Job. 1:14-17). The Amalekites stormed and plundered David's city of Ziklag, but David pursued and defeated them and divided the spoil (1 S. 30:1-3, 18-31).

By analogy with armies and marauders, the leaders and the wealthy class in Israel are said to loot widows and orphans through their oppression and injustice (Isa. 10:1f.).

Christ's parable concerning Satan's dominion in Mt. 12:22-32 par. Mk. 3:22-30 refers to still another type of looting, namely, burglary. When a thief enters the house of the strong man, only after binding the owner can he carry out his criminal intent. G. WYPER

POCHERETH-HAZZEBAIM pō-ker'əth-haz-ə-bā'əm [Heb. *pōḵereṯ haṣṣᵉḇāyîm*–'binder (fem.) of the gazelles'] (Ezr. 2:57; Neh. 7:59; 1 Esd. 5:34); AV POCHERETH OF ZEBAIM, PHACARETH . . . SABI (1 Esd. 5:34); NEB also PHACERETH . . . SABIE (1 Esd. 5:34). One of the sons of Solomon's servants who was head of a postexilic family. The fem. part. *pōḵereṯ* may denote an office (cf. *qōheleṯ*, "preacher"; see GKC, § 122r).

PODS [Gk. *kerátia*–'little horns'] (Lk. 15:16); AV HUSKS. The pods of the carob tree or locust tree (*Ceratonia siliqua* L.), a leguminous evergreen tree common in Palestine, Syria, and Egypt that attains a height of 9 m. (30 ft.). Abundant in April and May, the pods are flat and horn-shaped, containing numerous beanlike seeds in a mucilaginous pulp. When ripe the sweet pods were eaten by the poor and were also used as cattle and pig fodder. K. Bailey (*Poet and Peasant* [1976], pp. 171-73) distinguishes between the wild (thorny) carob, used mainly for firewood, and the sweet (Syrian) variety that can be eaten.

The tradition that the "locusts" of Mt. 3:4; Mk. 1:6 were carob pods has been preserved in the popular name for carob bread, "St. John's bread," but is uncertain. R. K. H.

POET. The translation of Gk. *poiētḗs* in Acts 17:28, where Paul cites Greek poets in an apologetical speech to Epicurean and Stoic philosophers at the Areopagus in Athens. From the Greek text it is not clear whether "as even some of our poets have said" refers to the preceding line ("In him we live and move and have our being," v. 28a), to the following line ("For we are indeed his offspring," v. 28b), or to both. The first line may be a quotation from Epimenides the Cretan (cf. RSV mg.), the same poet who is quoted in Tit. 1:12 (see Bruce, *Acts*; but cf. also other comms.). The second line is a quotation from the Stoic poet ARATUS (*Phaenomena* 5, part of an introductory dedication to ZEUS, the Supreme Being of Greek philosophy). A similar expression occurs in Cleanthes *Hymn to Zeus* 4. Paul rejects the pantheistic sense intended by the Stoic poets but quotes them to corroborate his teaching about the proper worship owed to the Creator God by all His creatures. *See also* STOICS.

POETRY, HEBREW.

I. Introduction
II. Meter
III. Parallelism
IV. Repetition
V. Other Devices
VI. Construction from Formal, Material, and Liturgical Units
VII. General Characterization
VIII. More Recent Studies

I. Introduction.–More than one-third of the OT was written in poetic form, including some of the best-loved passages in all of Scripture. The Hebrew text itself was not placed in poetic lines, but the Masoretes did employ a special poetic accentuation in the books of Job, Proverbs, and Psalms, whose first letters (in Hebrew) were combined to form the acronym *'emeṯ*, "truth." None of the ancient versions translated the Bible into poetic form, but the first-century Jewish historian Josephus did acknowledge that Moses and David made use of poetic verse (*Ant.* ii.16.4 [346]; iv.7.44 [303]; vii.12.3 [305]). In 1952 the RSV became the first English translation to utilize indented lines in order to identify clearly the poetic material. Since then, many other modern versions have followed this practice.

Other poetical books are Ecclesiastes, Canticles, and Lamentations, along with large parts of the prophetical books. Isaiah contains some of the most powerful poetic passages found anywhere and is almost entirely written in poetic form. Jeremiah is equally divided between prose and poetry. It seems that the Spirit of God often used poetry as He lifted the prophets to the highest of spiritual experiences. In the historical books we find occasional sections of poetry; see, e.g., Gen. 4:23f.; ch. 49; Ex. 15; Nu. 21:14f., 27-30; chs. 23–24 (oracles of Balaam); Dt. 32–33; Josh. 10:12-14; Jgs. 5; 9:8-15; 1 S. 2:1-10; 2 S. 1:19-27; 3:33f.; ch. 22; 23:1-7.

What is the difference between Hebrew prose and Hebrew poetry? Certainly what holds for literature in other languages holds also for Hebrew literature: it is not easy to specify the features distinguishing prose from poetry (see Kugel).

We must look further at the questions that arise here. In so doing we shall limit ourselves generally to formal considerations, though it is true, of course, that in these formal differences between prose and poetry we meet with

differences of other sorts. Thus, e.g., it is often true that what fills the heart reveals itself more directly and more intensely in poetry than in prose.

The characteristics of Hebrew poetry are nowhere more clearly set forth than in the Psalms. The Psalms, therefore, along with Isaiah, the most poetic of the prophets, will receive particular attention in this article.

In the study of Hebrew poetry the book by Bishop Robert Lowth, *De sacra poësi Hebraeorum* (1753; Eng. tr. *Lectures on the Sacred Poetry of the Hebrews,* 1815), is particularly important. More or less disjointed reflections on the characteristics of Hebrew poetry were made already in earlier centuries, but Lowth laid the foundations for more systematic studies. He was convinced that Hebrew poetry had a real meter, but that our ignorance of the manner in which Classical Hebrew was spoken has made it impossible for us to reconstruct the meter. Hence Lowth concentrated on another feature: the *parallelismus membrorum,* "parallelism of members." Here he distinguished three types of parallelism: synonymous, antithetic, and synthetic — a division that is still used in its main lines (but cf. Kugel).

II. Meter.–At the end of the 19th cent. several German scholars made studies of the meter in Hebrew poetry. Since that time a tremendous amount of work has been done to determine this meter, but no universally accepted conclusions have been reached.

In two respects there is virtual unanimity: (1) Hebrew poetry has an accentual meter, not a quantitative meter like that of Greek and Latin poetry (i.e., the question of whether a syllable is long or short is of far less importance in Hebrew poetry than in Greek or Latin). (2) A serious obstacle for ascertaining the meter is our continuing ignorance of the original Hebrew pronunciation. In this respect, it is significant that recent investigations (e.g., the study of the Qumrân Scrolls) have increased our knowledge of pre-Masoretic pronunciation of the Hebrew language.

In scanning Hebrew poetry three main systems have been employed. It is not possible to give here an adequate description of these, and the following comments are designed only to offer an impression. Some authors, following J. Ley and E. Sievers, are of the opinion that the anapest foot (˘ ˘ –) is basic to Hebrew meter. Room must be made, however, for many irregularities. Thus the number of syllables receiving no accent is in principle two; in fact, however, this may fluctuate between none and four. Building on the work of G. W. H. Bickell and G. Hölscher, S. Mowinckel suggested that the Hebrew meter is in principle iambic (˘ –). According to Mowinckel there is an alternation system — an interchange of stressed and unstressed syllables. Between two stressed syllables comes only one unstressed, but in many cases this unstressed syllable may be missed (syncope). In contrast, the system of Sievers can be called the accentuation system; the metrical accent coincides with the natural word-stress. Against this view, Mowinckel argued that the rhythmical accent can fall on the naturally unstressed syllables as well. As a result of this difference, the accents characterizing Hebrew poetic lines are heavier in the system of Sievers than in that of Mowinckel.

A third approach to meter is the syllable-counting system developed by F. M. Cross and D. N. Freedman and followed by M. Dahood, D. Stuart, and S. Geller. According to Cross and Freedman parallel lines tend to have the same number of syllables even when the number of accented syllables is not the same. Hence, there is no regular pattern of unstressed syllables corresponding to stressed syllables, but the total number of syllables in parallel lines does tend to be equal. Lines which have eight to thirteen syllables are considered "long" and those with three to five syllables are "short." Stuart noted that a scansion based on a syllable count is very accurate and makes it easier to identify regular and irregular meter and balanced and unbalanced couplets. A verse such as Nu. 23:24 turns out to be nicely balanced when one looks at the syllables in each line rather than the semantic equivalents.

A word of caution should be given to alert the reader about a serious problem in terminology with reference to poetic lines and verses. A verse is composed of two or three parts or limbs called lines, stichs, or cola. A two-line verse is referred to as a couplet, a distich, or a bicolon, and a three-line verse is a triplet, tristich, or tricolon. In the printed editions of the Hebrew Bible a whole verse is usually printed on one line, with a gap called a "caesura" between the parallel parts. For this reason some scholars refer to the whole verse as a poetic line (or "period" or "stich"), and the parts are called hemistichs or cola.

The discovery of the Râs Shamrah (ancient Ugarit) tablets in 1929 was welcome, for a number of these texts were poetical. Like Hebrew, Ugaritic poetry is largely composed of lines that have two or three stresses. But G. D. Young and W. S. LaSor have supported C. H. Gordon's contention that there do not seem to be any regular patterns of rhythm or meter in the Ugaritic or Hebrew materials. Stuart has pointed out that Hebrew lines tend to be a syllable or two shorter than Ugaritic lines.

Since the time of K. Budde (1882) attention has been given especially to the meter of the dirge, the *qînâ* meter; see, e.g., Am. 5:2 and Lam. 3:25-27. According to Sievers the formula of this is 3 + 2 (counting "accents" or "stresses"); according to Mowinckel it is 4 + 3. Stuart agrees that *qînâ* meter is certainly an unbalanced one, but on occasion the shorter line can precede the longer one. According to Cross, the *qînâ* meter does not appear in the earliest Israelite poetry.

Most Hebrew verses reflect a 3 + 3 or 2 + 2 pattern but many other variations occur. According to Sievers, Hebrew verse has many combinations: 2 + 2, 3 + 3, 4 + 4, 4 + 3, 3 + 4, 3 + 2, 2 + 3, 2 + 2 + 2. Mowinckel referred to the *mashal*-meter as a 4 + 4 pattern, which he said was used in all wisdom literature.

III. Parallelism.–A feature that appears continually in Hebrew poetry, and has been regarded as its most prominent characteristic, is *parallelismus membrorum,* or parallelism. A poetic line consists usually of two members or parts that in one way or another run parallel to each other and correspond with each other. In those instances where one or more terms in a line are obscure, the repetition inherent in parallelism often allows the interpreter an opportunity to understand the words correctly.

Continued repetition brings with it the peril of a certain monotony, but the Hebrew poets knew how to escape this danger by using parallelism with great freedom and variation. Such variation is sometimes achieved by giving the poetic lines varying lengths (see, e.g., Ps. 3:7a, b, and 8 [MT 8a, b, 9]). It is possible to distinguish various kinds of parallelism by using either material or formal criteria. That is, one can ask how both members of a poetic verse relate themselves to each other when examined in terms of their content or in terms of their form. If material criteria are used, however, every distinction may be defective because there are so many variables; one must, therefore, proceed with caution. In making use of *material* criteria one can distinguish the following types.

In *synonymous parallelism* the expression of the first member is repeated by the second in different words.

Cf. Ps. 2:3:

"Let us-burst their bonds asunder *a b c*
and-cast their-cords from-us." *a' b' c'*

Sometimes one or more terms from the first line have no corresponding term in the second line, and this is referred to as incomplete synonymous parallelism. Usually if one term is omitted, another will be lengthened to "compensate" and help balance the line (hence the term "ballast variant"). In Ps. 103:7 the term "people of Israel" (represented by C') compensates for the omission of the verb in the second line:

"He-made-known his-ways to-Moses *a b c*
his-acts to-the-people-of-Israel." *b' C'*

The same form is found in Ps. 105:10, which ends with the ballast variant "everlasting covenant":

"which-he-confirmed to-Jacob as-a-statute, *a b c*
to-Israel as-an-everlasting-covenant." *b' C'*

Emblematic parallelism is a specific kind of synonymous parallelism in which one line contains a simile or metaphor. Cf. Ps. 103:13:

"As a father pities his children,
so the Lord pities those who fear him."

Most verses which are parallel on a material (semantic) level are also parallel on a grammatical (formal) level; i.e., the person, gender, and number of the verb tend to be the same and the nouns may have the same suffix. Geller and Collins have pointed out, however, that sometimes we find grammatical parallelism without semantic parallelism. In Ex. 15:7, e.g., the statement "thou overthrowest thy adversaries" is parallel to "thou sendest forth thy fury." The verbs are both second person singular and the objects each have the same suffix, but the corresponding terms do not have the same meaning.

In *climactic parallelism* (also known as "repetitive," "staircase," or "step" parallelism) one or more elements from the first line are repeated in the second line, and the main emphasis or "climax" comes at the end of the verse. Often the first line contains a term in the vocative case (e.g., Ps. 29:1):

"Ascribe to-the-Lord, O-heavenly-beings, *a b c*
ascribe to-the-Lord glory-and-strength." *a b d*

Psalm 94 has three examples of climactic parallelism in vv. 1, 3, and 23. V. 23 is different from the others in that the final line is clipped with its repetition of "will wipe them out." This abrupt ending is appropriate for the final verse of the psalm.

Climactic parallelism is also characteristic of Ugaritic poetry, as the following example (*UT* 68:8f.) shows:

"Lo, thy-enemies, Baal, *a b c*
lo, thy-enemies thou-shalt-slay." *a b d*

In the famous song of Deborah in Jgs. 5:27 we find perhaps the most dramatic instance of this form in the description of the death of Sisera at the hands of Jael:

"He sank, he fell,
he lay still at her feet;
at her feet he sank, he fell;
where he sank, there he fell dead."

The threefold repetition of "sank" and "fell" in this quatrain allows the full emphasis to fall on the final word, "dead."

Ugaritic poetry also illustrates the use of parallel words that tend to occur in the same order. H. L. Ginsberg and U. Cassuto identified a number of word-pairs found in both Ugaritic and Hebrew, terms such as "head" (*rō'š*) and "crown" (*qoḏqōḏ*) (Ps. 68:21 [MT 22]), "enemy" (*'ōyēḇ*) and "foe" (*ṣār*) (Ps. 81:14 [MT 15]), and "thousand" (*'elep*) and "ten thousand" (*rᵉḇāḇâ*) (Ps. 91:7). Other scholars have demonstrated that many such word-pairs exist in Hebrew poetry (see Gevirtz and esp. Dahood).

When the lines of a verse express a contrast, the relationship is called *antithetic parallelism*, and the second line is usually introduced with "but." Often the second member emphasizes the reverse side of the thought set forth in the first. In some parts of Proverbs this sort of parallelism is particularly common. Cf. Prov. 10–15; 28–29; e.g., 10:1:

"A wise son makes a glad father,
but a foolish son is a sorrow to his mother."

Most of the verses in Prov. 10–15 illustrate antithetical parallelism, and there are a number of examples in the Psalms. Ps. 1:1 and 2 have an antithetical relationship, and v. 6 is likewise cast in this form.

A modification of synonymous parallelism is the so-called *synthetic parallelism*, in which the second line develops or completes the thought in a way that could not be determined from the first line. The parallelism is looser and the corresponding terms do not line up as neatly. For example, the second line of Ps. 1:2 ("and on his law he meditates day and night") advances the thought of the first line ("but his delight is in the law of the Lord"). In Ps. 51:13 (MT 15) the line "and sinners will return to thee" is the result of "Then I will teach transgressors thy ways." Ps. 1:1 shows a progression from "walks" to "stands" to "sits." Some scholars, such as Geller, use the word "list" to describe this relationship, citing Ps. 148:9:

"Mountains and all hills,
fruit trees and all cedars!"

"List" could also apply to Pss. 24:4 and 15:2f. LaSor refers to the progressive destruction due to locusts in Joel 1:4 as a kind of synthetic parallelism called "the chain figure."

G. B. Gray preferred the term *formal* to *synthetic* because of the lack of genuine parallelism in some instances. Actually, *formal parallelism* could be a separate category altogether since the two lines are really one run-on line (enjambment):

"For the stars of the heavens and their constellations
will not give their light" (Isa. 13:10).

The same is true of Ps. 2:6:

"I have set my king
on Zion, my holy hill."

Such "nonparallelism" can sometimes pinpoint verses which the poet wishes to emphasize. Ps. 110, a short but difficult poem and the Psalm most quoted in the NT, has several verses with only formal parallelism (cf. vv. 1, 3, 4, 7).

In all that has been said about parallelism we have had in mind the sort of parallelism that can be ascertained in successive lines. This is *internal parallelism*. But often two successive couplets (distichs) are parallel to each other. This is *external parallelism*. Cf. Ps. 27:1:

"The Lord is my light and my salvation; *a*
whom shall I fear? *b*
The Lord is the stronghold of my life; *c*
of whom shall I be afraid?" *d*

We can say that between lines a and b, and between c and d, there is a (synthetic) parallelism; but actually it makes more sense to point out that there is a (synonymous) parallelism between a and c, and between b and d. (To enliven the style the parallelism between a and c is imperfect, with a ballast variant.) Cf. Ps. 127:1; Isa. 1:10.

All sorts of variations are possible with external parallelism. Thus we find in Prov. 23:15f., e.g., external parallelism in a chiastic arrangement:

"My son, if your heart is wise,
my heart too will be glad.
My soul will rejoice,
when your lips speak what is right."

In Lam. 1:1 the poet does the same thing in more elaborate fashion. Lines 1, 3, and 6 are parallel, as are lines 2, 4, and 5. The inversion of lines 5 and 6 produces a climactic ending.

In making use of parallelism the Hebrew poets not only availed themselves of considerable variation; they also allowed themselves a large amount of freedom. There are, in other words, a good many irregularities. Sometimes there are not two but three parallel members in a poetic verse, producing a tristich (tricolon). Cf. Ps. 1:1:

"... who walks not in the counsel of the wicked,
nor stands in the way of sinners,
nor sits in the seat of scoffers."

Moreover, it happens with some frequency that in an unexpected manner the parallel member is lacking. Many regard this as a corruption of the text, but this is an unwarranted conclusion. Ps. 6 consists entirely of statements that are parallel two by two; but this pattern is broken in v. 6a (MT 7a), where the parallel member is omitted. In this way the poet attains a certain "effect": he is too fatigued, we might say, to repeat the same thing over again. See also, e.g., Ps. 29:7; 37:20. Especially at the beginning and end of a Psalm — or of a part of a Psalm — this phenomenon can be observed repeatedly. See, e.g., the end of Ps. 2, the "initial strokes" in Ps. 31:1, 7, 9, 11, 15a, 21 (MT 2, 8, 10, 12, 16a, 22), and the "concluding stroke" in Ps. 20:5c (MT 6c). Cf. also Ps. 22:11a, 15c, 16c, 26c, 29c (MT 12a, 16c, 17c, 27c, 30c). A line, word, or phrase that stands apart from the parallelism is said to be in *anacrusis*. Examples of anacrusis cited by Collins are the introductory "What do you mean" in Isa. 3:15 and "saying" in 46:10.

A further point is to be noted. In Ps. 1:3 the phrases "that yields its fruit in its season" and "its leaf does not wither" are clearly parallel. But in regard to "He is like a tree planted by streams of water," the question arises: Must a caesura or pause be made after "tree" or "planted"? If not, there is no parallelism here. If a caesura is made then it becomes a case of synthetic or formal parallelism; it is clear that this is parallelism only in a very much weakened sense ("purely formal parallelism"). In any event, "In all that he does, he prospers" has no parallelism.

Such cases are numerous. This freedom, this irregularity in the use of parallelism in no way detracts from the beauty of the poem. It would be better to say that in this way the poets display greater beauty by combating monotony.

IV. Repetition.—This, too, has a very important function in Hebrew poetry. One might say that the use of parallelism also implies repetition, but it will become evident that the latter term refers to another phenomenon. This does not mean, of course, that these two devices are not related.

In general one avoids as much as possible using a word or an expression more than once in the same immediate context. But in certain circumstances such repetition of a word, or words, or even of an entire sentence, can have an aesthetically pleasing effect.

Notice first two forms of this phenomenon that are found in Hebrew poetry and that appear often elsewhere; the *refrain* and the *inclusio*, or correspondence of beginning and end. For the refrain see Ps. 8:1, 9 (MT 2, 10); 24:7-10; 39:5, 11 (MT 6, 12); 42:5,11 (MT 6, 12); 43:5; 46:7, 11 (MT 8, 12); 62:1f., 5f. (MT 2f., 6f.); 67:3, 5 (MT 4, 6); 80:3, 7, 19 (MT 4, 8, 20); 99:5, 9; 107:8, 15, 21, 31; cf. also, e.g., Isa. 9:11, 16, 20 (MT 12, 17, 21); 10:4; Am. 1:3, 6, 9, 13; 2:1, 4, 6; 4:6, 8-11.

According to Liebreich, the beginnings of seventy-four Psalms correspond with their ends, forming a kind of inclusio. (This figure may be too high but the number of cases is certainly great.) Besides simple instances found in, e.g., Pss. 20, 21, 30, 103, and 139, see, e.g., Ps. 17:1f., 15; 25:1-3, 19-21. It should be remembered that there can be correspondence between the beginning and end not only of a Psalm as a whole but also of a section of a Psalm; cf., e.g., the opening words of Ps. 22:1 (MT 2) with the concluding words of v.10 (MT 11).

We must also take into account other forms of this device. Consideration must be given, first, to the phenomenon of "stairlike" parallelism: an expression is used in one line or part of a line, and used again in a later line or part of a line. In ancient times this pattern had a very important function in a part of Semitic poetry, as is evident from Ugaritic poetry and also from the Song of Deborah (Jgs. 5, which many regard as one of the oldest examples of Israelite poetry; see, e.g., vv. 19-21, 23f.; cf. G. Gerleman, *VT*, 1 [1951], 168-180). In regard to the Psalms, this pattern is particularly characteristic of the pilgrimage Psalms, Pss. 120–134. See further Jgs. 9:8-15; Ex. 14:12-23; Pss. 29; 93.

M. Buber and F. Rosenzweig pointed out that generally in the OT, and particularly in the Psalms, the phenomenon of "key words" has an important function. A vigorous statement on this is found in Buber's *Good and Evil* (Eng. tr. 1953), p. 52: "The recurrence of the key-words is a basic law of composition in the Psalms. This law has a poetic significance, rhythmical correspondence of sound values, as well as a hermeneutical one: the Psalm provides its own interpretation, by repetition of what is essential to its understanding. This is why it often refuses to vary the expression of a certain subject." Thus one may note as key words, e.g., "righteous" in Ps. 11, "be far" in Ps. 22 (used at the beginning of the three sections into which vv. 1-21 [MT 2-22] may be divided, viz., vv. 1, 11, and 19), and "ways," "paths," "teach" in Ps. 25.

We have thus given four forms in which the device of repetition appears. The distinctions among these are often not clear and the forms sometimes overlap. More important is that many examples of this device cannot be subsumed under any one of these four forms. How are we to explain these?

In most poems certain words are used more than once. This is inevitable, and in very many cases no special significance should be attached to such a practice. But since the device of repetition has, most assuredly, an important function in the Psalms, it must also be assumed that in many cases repeated usage of words is intentional. The Hebrew poet liked to play with a word, to set it in more than one context, in order to expose its various shades of meaning.

We may take a few random examples. Ps. 33:10-12 shows a peculiar structure in that each of the words "counsel," "devices," "nation," and "people," is used twice. Concerning Ps. 25 — and various other Psalms — we can say that the "stairlike" parallelism, though it is not characteristic, has nevertheless left its mark: note the "be ashamed" in vv. 2f. and the "remember" of vv. 6f. It would seem, at the same time, that the wordplay in these verses is more deliberately thought out than, e.g., in Jgs. 5. In Ps. 11 not only is the word "righteous" a key word (see above), but also there is a definite intent, e.g., in the double usage of the word "behold." The eyes of the Lord "behold" the children of men to try or to test (v. 4); and whoever in this divine testing is found righteous receives the privilege that he might "behold" (v. 7) the face of the Lord (here the ASV and RSV are more accurate than the AV). Because "test" is found both in vv. 4 and 5 we have

a case of "stairlike" parallelism. Similarly, in Ps. 133 the word *yōrēḏ* occurs three times in succession, twice with reference to the oil "running down" upon Aaron's beard and robes (v. 2) and once with reference to the dew of Mt. Hermon "falling" on Zion (v. 3). Cf. the repetition of "beard" in v. 2.

Repetition plays an important role also in many of the ACROSTIC psalms. Often the lines subsumed under the first letter state the poem's basic theme, which is subsequently looked at from many different angles. In Ps. 119 the emphasis upon obeying the law of the Lord found in the first stanza (*aleph*, vv. 1-8) is carried on throughout the entire poem — nearly every verse contains some reference to the word of God. Ps. 34 repeatedly speaks of the Lord as One who hears prayer (vv. 4, 6, 15, 17 [MT 5, 7, 16, 18]) and who delivers His people (vv. 4, 7, 11, 19 [MT 5, 8, 12, 20]). In Ps. 37 the poet warns the righteous not to fret over the prosperity of the wicked (vv. 1, 7, 8), for evil men will soon fade away and vanish from the scene (vv. 2, 10, 20, 36). The godly are urged to trust in the Lord (vv. 3, 5), because the wicked will be "cut off" (vv. 22, 28, 38). No less than five times the righteous are assured that they will "possess the land" (vv. 9, 11, 22, 29, 34). Ps. 145 emphasizes the attributes of God as the psalmist reflects upon God's power and mighty deeds (vv. 4, 6, 11f.; cf. Ps. 111:2, 6f.). Since a number of the alphabetic psalms deal with "wisdom" themes, it is fitting that the book of Proverbs ends with an acrostic poem eulogizing the ideal wife (31:10-31).

V. Other Devices.–Several other stylistic devices appear more commonly in Hebrew poetry than in Hebrew prose. Among the more important are chiasm and climax.

Chiasm refers to an inverted arrangement so that the parallel terms are in reverse order: e.g., "the father is wise" followed by "strong is the son" (not "the son is strong"). Chiasm is particularly common in Hebrew poetry and is another of the means the poets used to escape the peril of monotony in parallelism. Note the following instances as found in the first book of Psalms alone. (In this connection one must remember that most translations take very little — indeed, too little — account of this device.) See 1:1b, c, 6; 2:1f., 5, 8; 3:4, 7 (MT 5, 8); 5:1, 6, 9 (MT 2, 7, 10); 6:6, 9 (MT 7, 10); 7:5, 13, 15f. (MT 6, 14, 16f.); 8:5f. (MT 6f.); 9:5, 15, 18 (MT 6, 16, 19); 13:5 (MT 6); 15:3f.; 17:1, 8; 18:4-8, 13, 33f. 39f., 42, 47-49 (MT 5-9, 14, 34f., 40f., 43, 48-50); 19:1 (MT 2); esp. 20:2-5 (MT 3-6); 21:8 (MT 9); 22:12, 15f., 18, 22, 24 (MT 13, 16f.,19, 23, 25); 25:3, 6f.; 26:3-5, 12; 28:4; 29:5f., 8, 10f.; 31:2-4 (MT 3-5); 32:5, 10; 33:1f., 4f., 8, 10f.,16f.; 34:18 (MT 19); 35:17-19; 36:5, 8, 11 (MT 6, 9, 12); 37:6, 14, 17, 19, 21; 38:2, 7, 9f., 12, 18f., 21 (MT 3, 8, 10f., 13, 19f., 22); 40:11, 17 (MT 12, 18); 41:6 (MT 7).

The book of Isaiah also contains several examples of chiasm. In 6:10 the words "heart," "ears," and "eyes" occur in three successive lines followed by three more lines that refer to the "eyes," "ears," and "heart." This pattern can be represented as a b c c' b' a'. A similar arrangement is found in Isa. 40:12:

> "Who has measured in the hollow of his hand
> the waters,
> and the heavens with a span has marked off."

Each line has a verb, a prepositional phrase, and an object, but the order is reversed in the second line. When Isaac blessed Jacob and Esau in Gen. 27:29 and 39 he used chiasm, though the chiastic elements are separated by ten verses. Both verses have the phrases "the dew of heaven" and "the fatness of the earth," but in reverse order.

Chiastic construction is also found repeatedly in larger units. Thus, e.g., in Ps. 17, vv. 1-8 refer to the poet, vv. 9-12 to his enemies, vv. 13f. to his enemies, and v. 15 to the poet; in Ps. 36, v. 10 (MT 11) refers back to vv. 5-9 (MT 6-10), v. 11 (MT 12) to vv. 1-4 (MT 2-5); in Ps. 37, vv. 5f. are an elaboration of vv. 3f., while v. 7 develops vv. 1f. See further, e.g., H. H. Walker and N. W. Lund, *JBL*, 53 (1934), 355-370.

The use of parallelism led easily to the rise of the *climax* as a poetic device. The climax is sometimes formed by one poetic verse (see, e.g., Ps. 1:1; 7:5 [MT 6]; 9:3, 5 [MT 4, 6]; 31:2 [MT 3]. It can also be formed by a larger unit (see, e.g., Ps. 5:4-6 [MT 5-7]; 8:7f. [MT 8f.]; 11:4-6; 31:7f. [MT 8f.]; 35:1-10, 13f.; 40:1-3, 14f. [MT 2-4, 15f.]).

Related to the climax is "the style of successive *ramification*" (Alonso-Schökel). As an example we take Ps. 16. In vv. 1f. we have, so to speak, the "bud"; in what follows we see the "petals" unfolding themselves. In detail, v. 5a unfolds in 5b, 6; vv. 5f. as a whole unfold in vv. 7-11, etc.

Rhyme has no essential function in Hebrew poetry, although now and then one gets the impression that the poet purposely used it: see Ps. 146:6-9, where we find first a triple *-ām*, then seven times *-îm*, finally twice *-ēḏ* (*-ēṯ*). One can also point to the theefold use of *-î* in Gen. 49:3, to "Heshbon" and "Sihon" in Nu. 21:27, and to the five uses of the *-ênû* ending in Jgs. 16:24.

Of greater importance is the use of *assonance*, which occurs repeatedly in poetic contexts. Isa. 24:17 contains *paḥaḏ, paḥaṯ,* and *paḥ* for the "terror, and the pit, and the snare" that await earth's inhabitants. Another threefold combination that also employs *alliteration* is the *mᵉhûmâ, mᵉḇûsâ,* and *mᵉḇûḵâ* of Isa. 22:5, the "tumult and trampling and confusion" associated with the day of the Lord. Other examples of assonance or alliteration are found in Isa. 21:2; 33:1; Joel 1:10; Nah. 2:11 (MT 12); Ps. 1:1; 6:10 (MT 11); 18:7, 12 (MT 8, 13); 32:7; 33:7; 34:2 (MT 3); 37:20.

An illustration of *onomatapoeia* is contained in the galloping of the horses, the *dahᵃrôṯ dahᵃrôṯ* of Jgs. 5:22. In Isa. 17:12 the prophet uses a number of "m" and "n" sounds and especially the words *hᵃmôn* and *šᵉ'ôn* to compare the uproar of the nations to the raging of the sea.

The prophets were also fond of wordplay or *paronomasia*. Amos was shown a basket of summer fruit (*qayiṣ*) as a sign that the end (*qēṣ*) had come upon Israel (8:1f.), and Jeremiah saw an almond branch (*šāqēḏ*) that indicated that God was watching (*šōqēḏ*) to see that His word of judgment was fulfilled (1:11f.). When Isaiah sang his song of the vineyard (Isa. 5), he ended with a strong denunciation of Israel (v. 7): God "looked for justice [*mišpāṭ*], but behold, bloodshed (*miśpāḥ*); for righteousness [*ṣᵉḏāqâ*], but behold, a cry [*ṣᵉ'āqâ*]!" The words sounded so similar but their meaning was so different! Also compare the reference to "destruction from the Almighty" (*šôḏ miššadday*) in Isa. 13:6.

Hyperbole is a poetic device using exaggeration for effect, so one must guard against an overly literal interpretation. When David was oppressed by Saul he described his plight as being encompassed with the cords of death, entangled with the cords of Sheol (Ps. 18:4f. [MT 5f.]). One could easily infer that David had died and gone to the grave, but most likely he was overstating his plight in graphic terms. When Jonah found himself drowning in the Mediterranean Sea, the same terminology was closer to reality (Jonah 2:5f.). For the Hebrew, anyone whose life was threatened, discomfited, or constricted by sickness, distress, or enemies was in the sphere and power of death.

In Isaiah the king of Assyria uses hyperbole when he boasts that "I dried up with the sole of my foot all the streams of Egypt" (37:25). He means that he was able to

cross those streams and continue his invasion of Egypt. Similarly, highly figurative language may be involved in the description of the new Jerusalem in Isa. 54:11f. with its foundations of sapphires, gates of jewels, and walls made of precious stones.

Since the Israelites made less distinction between animate and inanimate nature than we are accustomed to do, it is not surprising that the Scriptures sometimes employ *personification*. Isaiah was particularly fond of this device. He spoke of the mountains and trees breaking out in song when the Lord redeems Jacob (44:23; 49:13), "and all the trees of the field shall clap their hands" (55:12). The sun and moon will be ashamed when the Lord reigns on Mt. Zion (24:23). Cities and countries are referred to as "daughters" (even "virgin daughters"; cf. 23:12; 37:22; 47:1) or "widows" (47:8; 54:4), depending on whether they have been destroyed. Even the abstract qualities of "justice" and "truth" are personified in Isa. 59:14f., and "wisdom" and "folly" are two women seeking to influence the naive in Prov. 8 and 9. In Ps. 23:6 "goodness and mercy shall follow me all the days of my life." The gates of Jerusalem lament and mourn over the collapse of Jerusalem (Isa. 3:26), but the cedars of Lebanon rejoice when Babylon falls (Isa. 14:8).

A special effect called *apostrophe* is attained when that which is personified is furthermore made an imaginary object of address; see Ps. 24:7ff.; 68:16 (MT 17); 114:5f.; etc. For other examples of apostrophe, see Josh. 10:12; 2 S. 1:24, 26; Nah. 2:9 (MT 10); Ps. 52:1ff. (MT 3ff.); 94:8ff.; etc. (cf. also König, pp. 230, 243).

VI. Construction from Formal, Material, and Liturgical Units.—Is there in Hebrew poetry a composition of poems from strophes? If one does not take this word "strophe" in too strict a sense, one can only answer affirmatively.

In Ps. 119 the first eight verses begin with the first letter of the Hebrew alphabet, the next eight with the second letter, etc. Clearly, then, Ps. 119 is composed of strophes, each of eight verses. For the same or similar reasons it may be said Pss. 9 and 37 and Lam. 4 consist of strophes each of two verses; and that Lam. 1, 2, and 3 are composed of strophes each of which has three poetic verses. Since these acrostic poems all follow the Hebrew alphabet they should each have twenty-two strophes. In the case of Ps. 37 this is not reflected very well in the English versification, because vv. 7, 20, and 34 each contain two Hebrew verses (distichs) and another strophe begins in the middle of v. 28. As a result there are only forty verses instead of the expected forty-four. Lam. 2–4 reverses the normal order of the *ayin* and the *pe* (an extrabiblical example of this variant order has been found on an abecedary from 'Izbet Ṣarṭah; see E. Würthwein, *Text of the OT* [Eng. tr., 4th ed. 1979], pp. 218f.).

Sometimes a refrain will divide a lyrical unit into strophes. Pss. 42 and 43, which may once have constituted one psalm, have a lengthy refrain starting with "Why are you cast down, O my soul." The whole five lines are repeated in 42:5, 11, and 43:5. Cf. also Pss. 46, 80, 107; Isa. 9:7–10:4. Unfortunately the word SELAH, which is probably some kind of musical notation, cannot be used safely to divide psalms into strophes. Several other psalms can be divided into strophes owing to their symmetrical structure. Ps. 2 is apparently made up of four sections, each with three verses, with a shift of speakers in each section. In Ps. 139 the four units, each six verses long, explore the attributes of God. Ps. 132 is divided into two equal units celebrating the choice of Jerusalem and the Davidic dynasty. Cf. esp. vv. 1 and 10, 2 and 11, 9 and 16.

There is need for caution, however, when one speaks of strophes in connection with Hebrew poetry. One can only regard a pericope as a real strophe if it forms a unit not only from a material point of view but also in some sense from a formal point of view. But Hebrew poems can rarely be divided into formal units.

They often consist of material units. Close examination of Hebrew poems, esp. the Psalms, shows time and again that the separate sentences do not stand arbitrarily next to each other, such as might sometimes seem to be the case at a first glance. They arrange themselves in units. There is a progression in thought. The best general analogy to the Psalms is not the common one of a string of pearls in which one is strung next to the other, but that of a building in which each part rests on another.

A few examples will illustrate this progression (*see also* PSALMS V.C). A simple but remarkable case is Ps. 3. This begins with a bitter complaint, vv. 1f. Verses 3-6 can be called "expressions of confidence." Only then comes the real prayer (v. 7a, b), very brief, consisting of two short cries for help. In v. 7c, d the poet sees deliverance already before him. Verse 8 was possibly spoken by a ministrant of the sanctuary.

Especially remarkable is the place of the prayer, which is introduced by complaint and expressions of confidence. Such a preparation for the real entreaty is encountered quite frequently. It is common for the poet to begin a Psalm of urgent need with a song of thanksgiving or praise. See, e.g., Ps. 40 and esp. Ps. 89; the poet, so to speak, does not plunge immediately into the matter but first lays a foundation on which he then stands to offer his petition.

In this connection it might be well to look at Ps. 44. Already for reasons of content this Psalm must be divided into vv. 1-8 (hymn), 9-16 (complaint), 17-22 (evidence of righteousness), and 23-26 (the real prayer). But from a formal vantage point we are confronted by the striking fact that the subsections consist, consecutively, of ten, eight, six, and four verses. This can hardly have occurred by chance. The Psalm rises up like a ziggurat, a Mesopotamian temple tower, built in stages; and only when the poet has come to the topmost flight does he raise up his prayer to God.

Psalm 17 is built up in a different way. The first part (a prayer for justice, vv. 1-5) clears the way for the second (a prayer for preservation from enemies, vv. 6-12); the first and second parts together support the prayer in the third part (vv. 13-15).

The construction of Ps. 22 is particularly ingenious. Of the many comments that could be made on this Psalm, we will limit ourselves to the lament of vv. 1-21. The introduction (in vv. 1-10) comprises a complaint (vv. 1f.) and a song of praise (vv. 3-5), then again a complaint (vv. 6-8) and a song of praise (vv. 9f.). The songs of praise function as motifs; the first one takes its point of reference in the first complaint, the second in the second complaint; moreover, the two complaints complement each other, as do the two songs of praise. The second part of the Psalm (vv. 11-18) contains the first direct petition, which is very short (v. 11a), and a long complaint made up of a short introduction (v. 11b) and two separate sections (vv. 12-15 and 16-18). The masterful whole formed by vv. 1-18 serves as foundation for the real prayer that comes only in vv. 19-21. Notice in passing the use of "to be far" in vv. 1, 11, and 19.

Psalm 33 has three sections: vv. 1-3, 4-19, 20-22. Purely material considerations suggest a division of vv. 4-19 into 4f., 6-12, 13-19. It then appears that vv. 6-12 and 13-19

each consists of seven poetic verses — which, it would seem, may be regarded as an *a posteriori* vindication for the rightness of the division suggested.

Various Psalms are composed of liturgical units. Thus it may be assumed that vv. 1-5 of Ps. 20 were uttered by a ministrant of the sanctuary who spoke on behalf of the congregation, v. 6 by another who related a divine revelation, vv. 7f. by the first ministrant, and v. 9 by the entire congregation. See further Pss. 2, 12, 28, etc.

VII. General Characterization.–Many of the foregoing remarks can be true only if Israel had *trained poets*. But why should this not have been the case? True, we know little or nothing of the schooling these poets received, but we do know that special training was given among surrounding peoples. It was given already in ancient Sumer (cf. S. N. Kramer, *From the Tablets of Sumer* [1956], p. 4).It has been observed that Sumerian poetry is characterized by a precisely worked out rhetoric. It is, therefore, improbable that the Israelite poets, whose verse shows similarity to that of surrounding nations, produced their poetry without some prior schooling.

Israelite poets also apparently acquired a sort of "rhetoric." This manner of writing verse became part of their very life. It is natural, therefore, that without any particular exertion on their part they more or less intentionally incorporated into their poetry a variety of poetic phenomena and skills that we rediscover today only at the cost, perhaps, of considerable effort.

No one will deny that Hebrew poetry gives expression to deeply rooted emotions. But Israel's poets gave vent to these emotions not in an unruly, uncontrolled way. They let themselves be guided by a definite manner of writing verse, by a particular style. It may perhaps be said that this mode of making poetry bore to some extent an *intellectual character*. To verify this claim one need only reflect on the ingenious construction of these poems, on the stylistic devices of repetition and chiasm, on the acrostic poems, etc. The formulation of these poems — here, too, one thinks especially of the Psalms — was under the control of a formulating intellect. See here further the generalized statement of M. Buber and F. Rosenzweig, *Die Schrift und ihre Verdeutschung* (1936), p. 238: "All genuinely poetic art is in this sense rational — in that by a formative law of reason [*Gestaltgesetz der Vernunft*] it constructs and forms what is rudimentary."

The adage is sometimes heard: art is the most individual expression of the most individual emotion. If such be the ideal, the Israelite poets never strove after it. They never intended to expound highly individual emotions, and they never sought for highly individual expressions. Rather, they let themselves be *led by tradition*. Certainly one can speak of the originality of Israel's poets not only in content but also in form; but to determine this one must use different criteria from those usually applied today. The peculiarity of a poet, to the Hebrew mind, consisted in his giving new variations to traditional forms, in his setting a traditional image or figure in a new context, etc.

A single example will suffice. Ps. 23 has unmistakably its own peculiar ring. But one can hardly say that the image of the shepherd is original. In the ancient Near East it was common for a king to be called "shepherd" (see, e.g., 2 S. 5:2). The most important reason for this traditional character of Israel's poetry is certainly that in Israel's spiritual life the individual occupied a far less prominent place than in Western culture.

H. M. WOLF

VIII. More Recent Studies.–Several studies have appeared since 1980 that depart radically from, or add new dimensions to, the traditional approaches to Hebrew poetry.

The massive, complex tome of M. O'Connor (*Hebrew Verse Structure* [1980]) applies modern linguistics and comparative poetics to Hebrew poetry in an attempt to move the study of Hebrew poetry away from its focus on parallelism and meter to a focus on syntax. He points out the weaknesses in the traditional approaches (e.g., the well-known problem of meter, including the problems with syllable counting) and offers a whole new type of analysis in an effort to be more "scientific." Naturally, accompanying his new approach is new terminology. For example, since he rejects the presence of meter in Hebrew poetry he talks about "syntactic constraints" that shape Hebrew poetry (e.g., p. 65). Instead of the vague category "parallelism," he talks about "tropes," "a group of phenomena which occur regularly and serve as part of the verse structure" (e.g., p. 87). His basic poetical unit is the "line," but his concept of a line is difficult to define. More importantly, one wonders whether O'Connor has lost sight of the poetry in his attempt to analyze it scientifically; by ignoring or downplaying the semantic aspect of poetry he seems to have missed something essential.

J. Kugel also offers a major study of Hebrew poetry that reexamines the traditional approach, specifically parallelism (*The Idea of Biblical Poetry: Parallelism and Its History* [1981]). Like O'Connor he denies that Hebrew poetry has meter and he rejects syllable counting. But more importantly he challenges the notion of synonymous, antithetic, and synthetic parallelism. Although the category of synthetic parallelism has long been problematic (see S. Geller, *Parallelism in Early Biblical Poetry* [1979], pp. 375-385), while synonymous and antithetic parallelism have been widely accepted, Kugel turns the whole discussion on its head by rejecting the synonymous and antithetic classifications, instead asserting that all Hebrew poetry is actually synthetic (pp. 57f.): "it consists of A, a pause, and A's continuation B"; that is, the character of Hebrew poetry is "seconding." It involves a pausal sequence and is characterized by binary sentences, terseness, and a high degree of semantic parallelism. Kugel also provides a history of the study of parallelism, beginning with the church fathers and rabbis and concluding with the modern discussion (with an appendix on O'Connor's book).

Two studies by W. LaSor look at other dimensions of Hebrew poetry: the Masoretic accentual system ("An Approach to Hebrew Poetry through the Masoretic Accents," in A. Katsch and L. Nemoy, eds., *Essays on the Occasion of the Seventieth Anniversary of the Dropsie University (1909-1979)* [1980], pp. 327-353) and an analysis of other early Semitic poetry ("Samples of Early Semitic Poetry," in G. Rendsburg, *et al.*, eds., *The Bible World: Essays in Honor of Cyrus H. Gordon* [1980], pp. 99-121).

In the former article LaSor examined the divisions of the Masoretes in OT passages that were generally recognized as poetry. Though these were considerably later than the original compositions, two facts must be admitted: (1) The Masoretes attempted to preserve the division of the passages as they were traditionally recited, and liturgical compositions retain their original forms even generations after words have undergone semantic alteration or accent shift. (2) The MT that we have is at least somewhat more objective than the textual emendation or reconstruction to a text that we do not have. The evidence is clear that "parallelism" exists in the MT, as marked by the accents. However, there are not only distichs (bicola, a statement divided into two parts), but even tristichs and

tetrastichs (statements in three or four parts), which Kugel mentions only briefly (pp. 26f.). Furthermore, there is no evidence of metrical regularity in any extended passage. One noteworthy observation resulted from the study of a portion of Lamentations, namely, that the *qînâ* meter, which is widely accepted as consisting of 3 + 2 stressed syllables, rarely occurs in the book after which it is named (*qînâ*, "lamentation"). In fact, the opposite 2 + 3 is more common, but certainly not regular (p. 332).

In the latter article LaSor analyzed the structure of poetic portions of materials from Akkadian (Babylonian and Assyrian), Ugaritic, Aramaic, Qumrân Hebrew, Sumerian, and Arabic. It is apparent that some kind of parallelism occurs regularly, in patterns remarkably similar to those that are generally identified in Hebrew poetry. Acrostic structures are found early in the Babylonian period (using the same cuneiform symbol for the beginning of each stich or line). Tristichs and tetrastichs are present in the poetic structure. Again, there is no evidence of regular meter or line length.

One may conclude that parallelism of thought — by whatever term it is called — is found in Hebrew poetry. Meter, whether defined in classical forms or by some method of syllable counting, is not found. The concept of "poetry" is due to recognition of an elevated style which does not conform to classical or western ideas of poetry, and it is therefore possible for an author to move from the more mundane ("prose") to the loftier style ("poetry"), or even somewhere in between, in the same composition.

W. S. L. S.

Bibliography.–Discussions of Hebrew poetry can be found in the introductions to the OT (e.g., O. Eissfeldt, *The OT: An Introduction* [Eng. tr. 1965]) and in the comms. on the OT poetical books. See esp. M. Dahood, *Psalms*, I-III (*AB*, 1966-70), and C. H. Bullock, *Intro. to the OT Poetic Books* (1979).

Various aspects of Hebrew poetry are illuminated in E. König, *Stilistik, Rhetorik, Poetik in Bezug auf die biblische Literatur* (1900); T. H. Robinson, *Poetry of the OT* (1947); "Hebrew Poetic Form," *SVT*, 1 (1953), 128-149 (including references to a wide field of literature, also covering the meter); F. Horst, *TR*, 21 (1953), 97-121; L. Alonso-Schökel, "Die stilistische Analyse bei den Propheten," in *SVT*, 7 (1960), 154-164; *Estudios de poética hebrea* (1963); S. Gevirtz, *Patterns in the Early Poetry of Israel* (1964); F. M. Cross and D. N. Freedman, *Studies in Ancient Yahwistic Poetry* (1975); W. S. LaSor, D. A. Hubbard, and F. W. Bush, *OT Survey* (1982), pp. 307-318; W. Watson, *Classical Hebrew Poetry: A Guide to Its Techniques* (1984); A. Berlin, *Dynamics of Biblical Parallelism* (1985). In addition, the annual *Ugarit Forschungen* offers many studies discussing various aspects of Hebrew and Ugaritic poetry.

Meter: E. Sievers, *Metrische Studien*, I-III (1901-1907); S. Mowinckel, *Psalms in Israel's Worship* (Eng. tr. 1962), II, 159-175; *Real and Apparent Tricola in Hebrew Psalm Poetry* (1957); also G. D. Young, *JNES*, 9 (1950), 124-133; S. Segert, "Problems in Hebrew Prosody," in *SVT*, 7 (1960), 283-291; R. C. Culley, "Metrical Analysis of Classical Hebrew Poetry," in J. Wevers and D. Redford, eds., *Essays on the Ancient Semitic World* (1970), pp. 12-28; D. K. Stuart, *Studies in Early Hebrew Meter* (1976).

Parallelism: G. B. Gray, *Forms of Hebrew Poetry* (repr. 1972, with Prolegomena by D. N. Freedman); M. Dahood, "Ugaritic-Hebrew Parallel Pairs," in L. Fisher, ed., *Ras Shamra Parallels*, I (1972), 71-382; II (1975), 3-39; T. Collins, *Line-forms in Hebrew Poetry* (1978); S. A. Geller, *Parallelism in Early Biblical Poetry* (1979); J. L. Kugel, *The Idea of Biblical Poetry: Parallelism and Its History* (1981); M. O'Connor, *Hebrew Verse Structure* (1980).

Style of repetition: chiasm: M. Buber and F. Rosenzweig, *Die Schrift und ihre Verdeutschung* (1936); J. Muilenburg, "A Study in Hebrew Rhetoric," in *SVT*, 1 (1953), 97-111; L. J. Liebreich, *HUCA*, 27 (1956), 181-192; H. W. Lund, *AJSL*, 49 (1933), 281-312.

H. M. WOLF

POETRY IN THE NT.

I. Poetry Drawn from OT Models.–Since Hebrew poetry is based not on quantitative meter but on the stress required by the grammatical forms in the lines, it is not to be expected that these phenomena (e.g., assonance, paranomasia, acrostic) should carry over into the Greek of the NT. We should rather look for stylistic features in the Hebrew Bible that exert their force when a NT writer seeks consciously to compose in the style of the OT or includes a piece of "translation Greek" in dependence on an OT text or paradigm.

A good example of this type of writing is seen where the NT takes over some of the most common stylistic forms of the OT, e.g., parallelism (the complementary or antithetical juxtaposition of poetical lines). Ps. 104 uses parallelism, mainly synonymous, to produce a powerful effect. The influence of this style is traceable in Luke's opening chapters (Lk. 1–2), which preserve some early canticles doubtless treasured in the Jewish-Christian community. In the opening stichos of the Magnificat Mary says:

> My soul magnifies the Lord,
> and my spirit rejoices in God my Savior. (1:46f.)

Later in the same song is an example of antithetical parallelism:

> He has put down the mighty from their thrones,
> and exalted those of low degree. (v. 52)

Lk. 2:14 shows not only antithetical parallelism but also a rudimentary form of a Greek rhetorical device, chiasmus:

> Glory to God in the highest
> and on earth peace among men with whom he is pleased!

The antitheses "in the highest" and "on earth" fall at opposite ends of their respective lines and thus form an X (Greek letter *chi*; hence chiasmus).

II. Greek Rhetorical Forms in the NT.–The NT uses antithesis to good effect, especially in the short, creedlike statements that express the two stages of Christ's existence. These are denoted by the terms flesh and spirit. See Rom. 1:3f. for an example drawn presumably from pre-Pauline Christianity. 2 Cor. 5:16 shows its influence on Paul's thinking. More sophisticated uses of this formula are 1 Tim. 3:16; 1 Pet. 1:20; 3:18.

1 Timothy 3:16 contains a number of other rhetorical forms, which were first studied by E. Norden, *Agnostos Theos* (2nd ed. 1923). The authority for these terms is the Roman rhetorician Quintilian in his *Institutio Oratoria*. The repetition of the verb at the beginning of each line and in the same grammatical form produces a species of rhythm known as *parison* and *homoeoptoton* (ix.3.76, 78). In the first couplet the verbs have the same syllabic length (5 beats), and this leads to *isocolon* (ix.3.80). Moreover, the phrases that close the lines of the couplet, *en sarkí* (in the flesh)/*en pneúmati* (in the spirit), have similar-sounding endings; this device is known as *homoeoteleuton* (ix.3.77). These poetic forms make the short verse one of the most precious instances of a literary piece in the entire NT. Commentators have not been slow to recognize this, since it is often referred to as possessing "un rythme hiératique" (J. Schmitt, *Jésus ressuscité dans la prédication apostolique* [1949], p. 100) and a lyrical quality that defies translation into English. As B. S. Easton commented (*The Pastoral Epistles* [1948], p. 136), "The Greek assonances cannot be reproduced and the crisp allusiveness is lost on modern ears."

Philippians 2:6-11 yields to the same literary analysis. Since Lohmeyer's innovative study in 1928 (*Kyrios Jesus*)

this passage has long been recognized as hymnic in form and capable of division into strophes (Lohmeyer postulated six such stanzas). Later attempts to improve on this produced a three-strophe hymn in which the device of *parallelismus membrorum* (i.e., arrangement into couplets, sometimes triplets, or even quatrains) was utilized, and a tacit acceptance was made of Aristotle's judgment that a perfect literary composition requires "a beginning, a middle and an end" (*Poet.* 1450 b 26; see L. Cooper, *Aristotle on the Art of Poetry* [1913], p. 28). This is held to correspond to the three states of Christ: preexistence, incarnation, enthronement (so J. Jeremias, "Zur Gedankenführung in den paulinischen Briefen," in J. N. Sevenster and W. C. van Unnik, eds., *Studia Paulina* [1953], pp. 152-54). The permanent contribution of Jeremias is his discovery that the entire hymn is built up in couplets, though his analysis suffers from some weaknesses (noted and discussed by R. P. Martin, *Carmen Christi* [1967], pp. 32-35). Yet another proposal is to discard the entire notion of a hymn set in stanzas and see the passage as structured in the form of a set of couplets (so Martin, pp. 36ff.). When this is done, the several literary devices observed in 1 Tim. 3:16 are also seen here (details in *Carmen Christi,* pp. 36-38 and later discussion of the literary form of Phil. 2:6-11 in R. P. Martin, *Philippians* [*NCBC,* repr. 1980], pp. 109-112).

One further section of the Pauline corpus that has been inspected with a view to discovering literary traces of a poetic character is Col. 1:15-20. The most elaborate analysis is that offered by C. Masson (*Comm. du NT,* 10 [1950]), who pressed into service the element of metrical quantity and syllabic length. He found a pattern of meter caused by the regular sequence of syllabic length, and in his hands this christological hymn offered to the cosmic Christ becomes the nearest specimen in the NT to a Greek poem, with both rhythm and rhyme.

Ephesians 5:14 is another good example of Greek poetic structure. The text divides into three lines (a feature ignored by the RSV), and there is a swinging trochaic rhythm that cannot be reproduced exactly in English. The nearest we get to it is offered in the paraphrase,

Awake, O Sleeper,
From the grave arise.
The light of Christ upon you shines.

But even that rendering fails to capture the assonance of the final syllables of lines 1 and 2, *katheúdōn/tôn nekrôn,* which employs the device of *homoeoteleuton.* It is interesting that it was precisely this triplet form that was used in the initiation chants of the Hellenistic mystery cults (see the data of the Attis formula in H. Schlier, comm., *in loc.*). F. F. Bruce noted, "It has been suggested that Christians took over the rhythm for use in the act of Christian initiation, and that we have here a primitive baptismal hymn" (*Epistle to the Ephesians* [1961], p. 108).

Other sections of the NT that contain poetical forms are 1 Cor. 13:1-13; 15:54-57 (with many instances of antithetical parallelism; see J. Weiss, *History of Primitive Christianity* [Eng. tr. 1937], for a full study of Paul's literary usages, esp. in this passage) and Phil. 3:3-10. (Cf. the more recent study of 1 Cor. 13 by O. Wischmeyer, *Der höchste Weg: das 13. Kapital des 1 Korintherbriefes* [1981], esp. pp. 175-223.)

III. Poetry in the Language of Jesus.–Falling into a special category is the *ipsissima vox* of Jesus. By this term is meant the traits of language and idiom that may be recovered by recasting into their presumed original Aramaic form the Greek portions of the Gospels that contain the words of Jesus. In a series of fruitful studies from G. Dalman (*The Words of Jesus* [Eng. tr. 1902]) to M. Black (*An Aramaic Approach to the Gospels and Acts* [3rd ed. 1967]), this line of inquiry has been pursued with measurable success. The gains are harvested by J. Jeremias (*NT Theology* [Eng. tr. 1971], I), who stressed that Jesus' spoken mother tongue shows many signs of poetic quality, both in structure (assonance, alliteration, and rhythm) and content (use of the riddle [*māšal*] or gnomic saying, parallelism, and poetic anticlimax, as in Mt. 7:24-27). Many of these studies, including the well-known book by C. F. Burney, *The Poetry of Our Lord* (1925), are technical works that can be evaluated only by those acquainted with Aramaic; however, the popular treatments of W. A. Curtis, *Jesus Christ the Teacher* (1943), and R. H. Stein, *The Method and Message of Jesus' Teachings* (1978), may be generally recommended for an insight into Jesus' poetic manner of speech.

IV. Poetic Quotations in the NT.–From the world of contemporary literature the NT writers occasionally draw allusions. In Acts 17:28 Paul's statement "For we are also his offspring" derives from his fellow Cilician Aratus (*Phainomena* 5), and the earlier part of that Pauline statement, "For in him we live and move and have our being," is apparently indebted to a poem of Epimenides the Cretan. The same Cretan poet wrote the hexameter castigating the character of the Cretans that appears in Tit. 1:12. Cleanthes' famed *Hymn to Zeus* also contains a reminiscence of the Aratus quotation as part of the Stoic philosophy. The moral tag "Bad friends ruin the noblest people" (JB) in 1 Cor. 15:33 comes from *Thais* by the Athenian comic playwright Menander (4th cent. B.C.).

R. P. MARTIN

POINTS, IN ALL. An expression occurring twice in the AV. In Eccl. 5:16 (MT 15) ("In all points as he came, so shall he go") it renders Heb. *kol-'ummâ* (RSV "just as"; NEB "exactly as"). Human beings leave the world in all regards as helpless as they entered it, no matter what they may have gained or accomplished during their lives.

In He. 4:15, AV, it renders Gk. *katá pánta* (RSV "in every respect"; NEB "every way") in the phrase, "[Jesus] was in all points tempted like as we are, yet without sin." Jesus successfully resisted temptation at all points of his nature, in body, soul, and spirit (cf. 2:14, 17f.). *See* TEMPTATION OF CHRIST.

M. O. EVANS

POISON; VENOM [Heb. *ḥēmâ, rō'š*; Gk. *thymós, iós*]; AV also GALL, HEMLOCK; NEB also GALL. Although poisons were commonly encountered in ancient Palestine in various forms, they were seldom employed for destructive purposes. The suicide of Ptolemy Macron (2 Macc. 10:13) was a notable exception. Some authorities have conjectured that the "water of bitterness" (Nu. 5:16-28) was a poisonous drink, but if it consisted merely of dust from the tabernacle floor mixed with water it was not likely poisonous. More probably the priest was relying upon a developed ritual of psychological suggestion to achieve the desired effect. The administration of poisons in trial by ordeal seems to be indicated in Mk. 16:18, although most modern commentators favor a less dramatic interpretation. It should be remembered that the Hebrews regarded any bitter-tasting substance as poisonous.

Very few of the poisonous Palestinian plants such as henbane, belladonna, and the opium poppy are mentioned in Scripture. Exceptions are the "poisonous weeds" (AV, RV, "hemlock") of Hos. 10:4 (*Artemisia judaica* L., or a related species), used in a simile for the judgment that falls on Israel, and the poisonous gourd of 2 K. 4:39 (*Citrullus colocynthis* L.). The former is a rather woody plant with a strong aromatic odor and bitter taste, related to the common mugwort. The latter is a trailing vine whose pulpy fruit is intensely bitter and has drastic

cathartic qualities. The "vine of Sodom" with its "grapes of poison" (Dt. 32:32) appears to be the same plant, used metaphorically.

OT poisons were normally of animal, reptile, or insect origin (Dt. 32:24, 33; Job 20:16; Ps. 140:3) and were irritants, producing a fever and usually resulting in death. Some thirty varieties of serpents have been reported from Palestine, many of them poisonous; the eight different Hebrew terms employed to describe the *Ophidae* reflect the range of species. The reference in Ps. 140:3 preserves the popular belief that the forked tongue of the snake carried the poison (cf. Jas. 3:7f.), whereas it is actually contained in the fang, a fact known to Pliny the Elder (*Nat. hist.* xi.62).

See also GALL; WORMWOOD. R. K. H.

POLE [Heb. *bᵉrî(a)ḥ*–'bar' (Ex. 40:18), *môṭ* (Nu. 13:23), *môṭâ* (1 Ch. 15:15), *nēs*–'standard' (Nu. 21:8f.), pl. of *baḏ*]; AV also STAFF (Nu. 13:23; usually pl. STAVES), BAR (Ex. 40:18); NEB also CROSSBAR (Ex. 40:18), STANDARD (Nu. 21:8f.). The plural of Heb. *baḏ* usually refers to poles used to carry sacred objects, including the ark, which because of its holiness was not to be touched (2 S. 6:7); only the Levitical sons of Kohath were to carry it (Nu. 4:1-13; 1 Ch. 15:15). These poles were made of acacia wood, which was very durable, and were overlaid with gold (Ex. 25:13; 37:4f.). Similar poles were made to carry the table used in the tabernacle for the bread of the Presence (5:28; 37:14f.), the altar of incense (30:4f.; 37:28), and the altar of burnt offering, although those for the latter altar were overlaid with bronze, not gold, to match the bronze altar (27:6f.; 38:5-7). The lengths of the various poles are not known, but those for the ark are said to have been so long that in Solomon's time their ends could be seen "from the holy place before the inner sanctuary" (1 K. 8:8 par. 2 Ch. 5:9). These poles were never to be removed from the ark (Ex. 25:15; 1 K. 8:8), but the use of *môṭâ* rather than *baḏ* in 1 Ch. 15:15 may indicate that the original poles had worn out and had been replaced by new ones (see below on *môṭ*).

Hebrew *nēs* is a banner or standard and is thus appropriately used for the pole with the bronze serpent that Moses held up for the people during the fiery-serpent episode (Nu. 21:8f.). The *bᵉrî(a)ḥ* of the tabernacle (Ex. 40:18) probably refers to part of the framework for the tabernacle; the same word is used in the description of that framework ("bar," Ex. 26:26-29; 36:31-34). Thus the AV and NEB are more consistent in their translations than the RSV. Heb. *môṭ* (< *mûṭ*, "waver, shake") may imply that the pole laden with grapes was wobbly (Nu. 13:23), although G. B. Gray's suggestion (comm. on Numbers [*ICC*, 1903], p. 37) that it means a board with a large, flat surface upon which objects could be set has some merit (cf. "carrying frame" in Nu. 4:10). G. A. L.

POLICE [pl. of Gk. *rhabdoúchos*–'one who carries a rod' (Acts 16:35, 38)]; AV SERJEANTS; NEB OFFICERS. The Gk. *rhabdoúchoi* refers to Roman lictors (cf. Bauer, rev., p. 733; Diodorus v.40.1), who carried the *fasces*, a bundle of twelve birch rods bound with a red thong, as a sign of their authority.

Paul met these officers in the forum at Philippi (Acts 16:19ff.). Before the *stratēgoí* (*see* MAGISTRATE) and their attendant lictors, he was accused of disturbing the peace; then he was stripped, beaten (with the rods of the lictors; cf. 2 Cor. 11:25), and imprisoned. The next day the magistrates sent their lictors to release Paul. Only then were Paul's protests of Roman citizenship finally heard.

This account accords well with our knowledge of Philippi and the role of lictors generally. As a Roman colony under *ius italicum*, the city enjoyed the full range of civic and religious offices. So the city's twin magistrates, the *duumviri* (or *duoviri*), as holders of imperial authority, were each attended by two lictors (a consul had twelve lictors, and after Domitian, the emperor had twenty-four).

Although an office common to the ancient world (e.g., Polybius v.26.10), lictors proper held a distinctive office within the imperial apparatus. Their role was to speak for the magistrate, to clear his way, and to effect his right of arrest, summons, and punishment.

Modern life lacks a clear parallel to this office. The AV "serjeant" is accurate, if taken in the obsolete sense of one who carries out the orders of a court or of another authority. The RSV "police" suggests the appropriate function, but implies a greater autonomy than lictors enjoyed, as well as missing their ceremonial aspects. Our closest parallel may be that of a marshal or an officer of the court.

Bibliography.–*BC*, IV, 200; A. N. Sherwin-White, *Roman Society and Roman Law in the NT* (1963), pp. 71-82; *Dictionnaire d'Archéologie Chrétienne* (1939), XIV/1, *s.v.* "Philippes" (P. Collart).

W. R. HARRIS

POLICY [Heb. *śeḵel* (Dnl. 8:25); Gk. *panoúrgos* (Jth. 11:8), *boulḗ* (1 Macc. 8:4), *stratḗgēma* (2 Macc. 14:29), *stratēgéō* (2 Macc. 14:31)]. The AV uses this term in an obsolete way for "cunning" (Dnl. 8:25), "strategy" (Jth. 11:8), "planning" (1 Macc. 8:4), "stratagem" (2 Macc. 14:29), and "outwit" (2 Macc. 14:31).

POLL. Both the noun and verb have obsolete usages in the AV. The noun translates Heb. *gulgōleṯ* (lit. "skull"), which the RSV renders "census" (Nu. 1:2), "head by head" (vv. 18, 20, 22), "apiece" (3:47), and "individual" (1 Ch. 23:24). The verb "poll" means to cut or trim hair (2 S. 14:26; Ezk. 44:20; Mic. 1:16).

POLLUTION [Heb. *ṭum'â* (Ezr. 6:21), *niddâ*–'something detestable' (9:11)]; AV FILTHINESS; NEB also UNCLEANNESS; [Gk. *alísgēma*] (Acts 15:20); NEB "polluted by contact with"; **POLLUTE; POLLUTED** [Heb. qal and hiphil of *ḥānēp* (Nu. 35:33; Ps. 106:38; Isa. 24:5; Jer. 3:1f., 9), piel of *ḥālal*–'profane' (1 Ch. 5:1; Jer. 16:18), qal, niphal, and piel of *ṭāmē'* (2 Ch. 36:14; Ezk. 20:43; 23:17, 30), hophal of *šāḥaṭ* (Prov. 25:26), piel and pual of *gā'al* (Mal. 1:7, 12), *'iddâ*–'menstruation' (Isa. 64:6 [MT 5])]; AV also DEFILE(D), CORRUPT, FILTHY (Isa. 64:6 [MT 5]); NEB also DEFILE(D), "commit incest" (1 Ch. 5:1), DESECRATED, TAINTED, FILTHY; [Gk. *bdelýssomai*] (Rev. 21:8); AV ABOMINABLE; NEB VILE. To make something ritually or morally impure. Most of the terms are discussed under CLEAN AND UNCLEAN; DEFILE; and PROFANE. Heb. *ḥānēp* generally occurs in connection with the defilement of the land (*see* CLEAN AND UNCLEAN II.E).

The "pollutions of the peoples of the land" from which the participants in the Passover had to separate themselves (Ezr. 6:21) were the idolatrous practices of foreign peoples who had entered Judah during the Exile. The quotation in 9:11f. is a composite drawn from passages such as Ex. 34:12-16; Lev. 18:24-30; Dt. 7:1-4. (*See also* FILTH.) In Mal. 1:7, 12 "polluted" simply means "blemished," i.e., food of inferior quality. The "pollutions of idols" from which the gentile Christians were asked to abstain (Acts 15:20) refers to meat that has previously been sacrificed to idols. The "polluted" who are condemned in Rev. 21:8, however, are those who have participated in the abominable practice of emperor worship.

POLYGAMY pə-lig'ə-mē [< Gk. *polloí*—'many' plus *gaméō*–'marry']. While the term literally implies multiple marriage by one member of either sex, in general usage it describes a man who has numerous wives concurrently in the same family group. This situation is more correctly described as *polygyny*, which signifies a man who has numerous wives. The converse of this is *polyandry*, denoting a woman with several concurrent husbands.

Polygyny became subsumed under polygamy early in Hebrew history, despite the marital ideal laid down in Gen. 2:24. Contrary to conventional liberal scholarship, this admonition seems to be very early rather than late, since it reflects prepatriarchal social configurations such as the matriarchate, whereby men, not women, left home at marriage. In any event, the Genesis dictum established monogamy as a working principle for mankind, and originally it was meant to signify the union of a male and a female who were counterparts to each other. The wife was in no way regarded as inferior to her husband, being considered in the first instance as specifically the "essence of his essence" (Gen. 2:23). Whether such a relationship was to be regarded as prescriptive or descriptive depends upon the retention or omission of the "shall" or "will" in v. 24. The former emphasis was espoused by the KJV, the NIV, and the New King James Version, while the RSV and the NEB retained a present, descriptive tense.

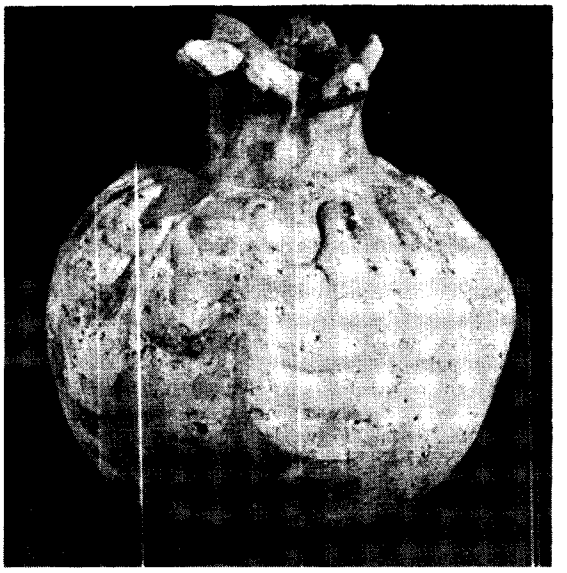
Once the fall occurred, however, a difference in the marital relationship took place, with the male becoming the dominant partner in the union (3:16). The wife was placed in a subordinate position, and immediately was vulnerable to exploitation, one form of which was polygyny. This type of marital relationship occurred under a variety of circumstances. Women captured in battles between city-states or larger countries (cf. Dt. 21:10-14) became part of the victors' spoils. While some women were taken as wives, others were reduced to brutal concubinage, ministering to the captors' lusts while their legal wives bore the legitimate family offspring. In the ancient Near East, women who found themselves serving as slaves for other reasons frequently became the object of sexual exploitation in households by men who regarded them as inferior "wives." In the OT, the earliest example of polygyny/polygamy was the marriage of Lamech to Adah and Zillah (Gen. 4:19). Lamech's boastful "sword-song" seems to have perpetuated the spirit of his ancestor Cain, and this apparently extended to polygamy also. In ancient Mesopotamia, marriage contracts frequently specified that a wife who proved infertile should give her handmaid to her husband in order to produce children for the household. This situation underlies the procedure whereby Sarah's handmaid Hagar was given by her to Abraham as a wife (Gen. 16:3) for purposes of procreation. In accepting this polygamous relationship Abraham was acceding to local custom rather than obeying the divine decree or trusting God's promise to him concerning descendants.

From a very early period of human history there seems to have been a preponderance of females in society, and this was apparently presenting certain problems by the patriarchal period. Esau in mid-life married two Hittite women (who may either have been of indigenous Hatti stock, or a migrant group from some area of the subsequent Hittite empire), and spitefully augmented the family disturbance that they caused (Gen. 26:25) by marrying into the family of Ishmael (28:9). Jacob, by contrast, became polygamous by default initially, falling victim to Laban's marital scheme for his unattractive daughter Leah (29:16-30). He became openly polygamous subsequently when he took Bilhah, Rachel's maid, as a concubine (30:3), an event that was followed by Leah's giving her maid, Zilpah, to Jacob as a wife to produce children for the family (30:9-13) in addition to the seven that she herself had produced.

By the Mosaic period polygamy was being legislated for as though it was a current social institution. Dt. 21:15-18 prescribed that a man had to treat the offspring of a disfavored wife equally with the son of a loved wife, indicating some of the tensions arising within a polygamous marriage (cf. Gen. 29:20-31). King David was unashamedly polygamous (2 S. 5:13-16), even stooping to murder to satisfy his lust (2 S. 11:15, 27), while Solomon's huge harem (1 K. 11:3) included foreign wives that were the result of political alliances. Marriage of this kind had been prohibited in the Torah (cf. Ex. 34:16) because of the dangers of idolatry being introduced into Israel from such sources. These sexual extravagances ultimately brought grave economic problems to Israel, and at Solomon's death the kingdom divided, never to unite again in this age (1 K. 11:12).

One form of polygamy, however, was provided for in the Law. This was the marriage institution known as the levirate (from *levir*, "a husband's brother") and was apparently sanctioned in the interests of endogamous marriage and the continuation of the family line. Levirate MARRIAGE (Dt. 25:5-10) provided that a deceased man's brother should take the widow as his wife and raise a family to perpetuate his brother's name and keep inherited land in the family. Social ostracism was the penalty incurred if a surviving brother was unwilling to enter into such a marriage for whatever reason.

One form of the levirate involved Judah and Tamar (Gen. 38), while a more celebrated one was that between Boaz and Ruth (Ruth 4), even though the procedure differed somewhat from the Deuteronomic formulation. Levirate marriage appears to contravene the legislation prohibiting marriage with one's brother's wife (Lev. 18:16; 20:21), but in other respects was actually a humane way of dealing with what was frequently the desperate plight of widows by keeping them within the family and tribe, without which they would almost certainly have starved or been callously exploited.



There are thus numerous reasons for the rise of polygamy/polygyny, which apart from sensuous considerations included the need to maintain endogamous marriages, the desire to increase the Israelite population, the necessity for providing for destitute widows in order to avoid slavery, prostitution and the like, and the maintaining of the nation's working force. These factors notwithstanding, the ideal Hebrew marriage continued to be monogamous, despite the examples set to the contrary by royalty. The admonitions of Proverbs, thought by some to be teaching given to the sons of the wealthy, furnish no hint of polygamy (cf. 12:4; 19:13), while at the same time condemning prostitution openly (7:6-23). By the 5th cent. B.C. the ideal of fidelity to the original spouse was still being promoted as a paradigm of the relationship that ought to exist between Israel and her God (Mal. 2:13-16).

The NT teachings on marriage presupposed monogamy, and while Christ conceded that Moses had allowed divorce "because of the hardness of your hearts" (Mt. 19:8), He emphasized that such was not the original intent of marriage. In point of fact, divorce would have been rare in Christ's time because the cost to the husband of returning his wife's dowry and arranging for financial support for her and any children of the marriage would have been prohibitive under normal conditions (*see* DIVORCE). While

polygamy was tolerated among the rich and powerful, it was recognized as a violation of that covenantal fidelity that God demanded of Israel His bride at the highest level (cf. Hos. 2:2), and that Christ also demanded of the Church (cf. 2 Cor. 11:2). This latter consideration is of fundamental importance, since God has spoken His final word in His Son, and now demands repentance, obedience, and unswerving fidelity from His people.

POMEGRANATE [Heb. *rimmôn*; Akk. *armannu*; Gk. *rhóa, kódōn*]. The many references are to one of the most characteristic Near Eastern trees, the *Punica granatum* L.

Core-formed vase in the shape of a pomegranate. Actual height: 7.6 cm. (3 in.). From Cyprus, 1440-1350 B.C. (Corning Museum of Glass)

Tripod with pomegranate decorations. From Ugarit, 15th-14th cent. B.C. (Louvre)

Native to Persia and India, it was grown in Palestine at an early period. *See* Plate 58.

Moses told the Israelites that pomegranates, along with wheat, barley, vines, and figs, were to be found in the Promised Land (Dt. 8:8; cf. Hag. 2:19), and Israelite spies indeed brought some from Eshcol (Nu. 13:23). When in the Sinai the Israelites longed for the grain, vines, figs, and pomegranates of Egypt (Nu. 20:5). In Joel 1:11f. the withering pomegranate is an object of lamentation.

The tree is shrublike but may occasionally attain 9 m. (30 ft.) in height. It bears bright-green oblong leaves and brilliant scarlet blossoms (cf. the metaphorical use in Cant. 4:13; 7:12 [MT 11]). The ripe globular fruit contains an acid pulp in which red seeds are embedded. In antiquity the expressed juice was made into a sweet wine (8:2). Pomegranate rind is rich in tannic acid, and in ancient Egypt it was burned in temples and houses as a fumigant.

Pomegranate flowers formed a popular decorative motif, appearing on Aaron's garments (Ex. 28:33f.; 39:24f.; cf. Sir. 45:9) and in the brass work of the Solomonic temple (1 K. 7:18-20, 42; 2 K. 25:17; 2 Ch. 3:16; 4:13). The pomegranate tree of Migron (1 S. 14:2) may have been a place, Rimmon. Other localities that were doubtless named after pomegranate trees included Gath-rimmon (Josh. 19:45), Rimmon-perez (Nu. 33:19f.), En-rimmon, and Rimmon (Josh. 19:7, 13).

In Greek mythology, a single pomegranate seed eaten by the hungry Persephone (Korê) while she was a prisoner of Hades (Pluto) in the underworld proved to be her undoing. Although she was released, she was condemned to return there each winter for three months until the spring flowers emerged. The rituals of Demeter (Earth-Mother) and the Maiden (Persephone) were the oldest of the Eleusinian Mysteries, and were being enacted annually in Greece long before the Hebrew exile. They attracted a large following, mainly of women, but there is no reference to the rituals in the NT. R. K. H.

POMMEL [Gk. *hypōpiázō*–'strike under the eye,' 'give a black eye'] (1 Cor. 9:27). A term that continues the boxing metaphor of v. 26, here used figuratively of self-control.

For the noun "pommel" in 2 Ch. 4:12f., AV, *see* BOWL.

POMP [Heb. *y^{e}qār*] (Est. 1:4; Ps. 49:12, 20 [MT 13, 21]); AV HONOUR; NEB also "like oxen" (Ps. 49:12, 20); [*gā'ôn*] (Isa. 14:11); NEB PRIDE; [Gk. *phantasía*] (Acts 25:23); NEB "full state." Heb. *y^{e}qār* literally means "preciousness" and thus probably indicates ostentatious luxury. Cf. M. Dahood, *Psalms I* (*AB*, 1965), p. 299, who suggests that *y^{e}qār* in Ps. 49:12, 20 is a term for the nether world; though such a meaning fits the context well, it is based on very tenuous evidence and should not be accepted. Similarly, the NEB's emendation of MT *bîqār* ("in pomp") to *kabbāqār* ("like oxen") has little to commend it. The idea expressed here and in Isa. 14:11 is that pomp and wealth without the knowledge of God are empty; death removes them.

The Gk. *phantasía*, used only in Acts 25:23 in the NT, may refer to the whole procession rather than just the ostentation of Agrippa and Bernice (see the comms.).

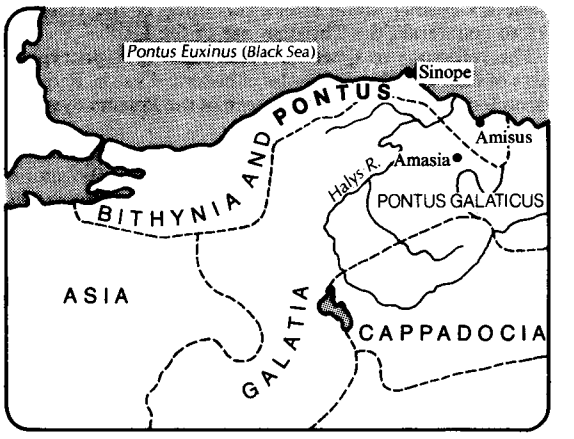
POND. *See* POOL.

PONDER [Heb. hiphil of *śāḵal*–'understand'] (Ps. 64:9 [MT 10]); AV WISELY CONSIDER; NEB LEARN (THEIR) LESSON; [hithpolel of *bîn*–'understand'] (Isa. 14:16); AV CONSIDER; [*hāgâ*–'consider,' 'mutter'] (Prov. 15:28); AV STUDY; NEB THINK; [Gk. *symbállō*] (Lk. 2:19); [*dienthyméomai*] (Acts 10:19); AV, NEB, THINK. To

consider carefully or weigh in one's mind. The AV uses "ponder" also to render the piel of Heb. *pālas* in Prov. 4:26; 5:6, 21 (RSV "take heed to," "watch"; NEB "look out for," "watch for") and *tāḳan* in 21:2; 24:12 (RSV "weigh"; NEB "fix a standard").

PONTIUS PILATE. *See* PILATE, PONTIUS.

PONTUS pon'təs [Gk. *Pontos*]. An important territory in northeast Asia Minor, lying along the south shore of the Black Sea. The name was not ethnical but geographical, designating the part of Cappadocia that bordered on the Pontus (Euxine), as the Black Sea was then termed. Pontus proper extended from the Halys River (Kızıl Irmak) on the west to the borders of Colchis on the east, its inland boundaries meeting those of Galatia, Cappadocia, and Armenia. The chief rivers besides the Halys were the Iris, Lycus, and Thermodon. The fertile land of their valleys and of the narrow coastal margin was separated from the interior by mountains, once heavily forested, which have always impeded communication with the plateau. Important products included fruit, corn, olives, and timber.



The earliest history of Pontus is obscure. There are traces of Assyrian culture from the 3rd millennium B.C.; Hittite occupation may be seen in the surviving tumuli and rock tombs. The home of the legendary Amazons, originally Hittite warrior-priestesses, was located by the river Thermodon. About the 7th cent. B.C. Greeks from Miletus colonized the strategic site of Sinope (Sinop), strictly in Paphlagonia, and from there Amisus (Samsun) and Trapezus (Trabzon, Trebizond), where Xenophon's Ten Thousand reached the sea. The interior was meanwhile occupied by diverse native tribes, of whom the Chalybes were traditionally the first workers in iron; the Moschi and Tibareni, mentioned by Herodotus, have sometimes been identified with Meshech and Tubal (Gen. 10:2). The principal settlements were then around temples, notably that of Mâ at Comana Pontica, near modern Tokat.

When the Persians established supremacy in Asia Minor with the overthrow of Lydia in 546 B.C., Pontus was loosely joined to the great empire and was ruled by Persian satraps. In the 4th cent. B.C. Ariobarzanes and Mithridates laid the foundation of an independent kingdom, whose capital was first at Amasia (Amasya) in the Iris Valley, later famous as the birthplace of the geographer Strabo in the 1st cent. B.C. Greek culture, however, was slow to penetrate the interior.

Pontus reached its zenith under its most famous king, Mithridates VI Eupator (120-63 B.C.). In 88 he overthrew Roman authority in Asia Minor and ordered the massacre of eighty thousand Romans. Sulla restored Roman fortunes in the first war (88-84); in a third war (74-65) Mithridates was successively opposed by Lucullus and Pompey. After his defeat by Pompey his dominions were incorporated in the territories of the Roman republic. The aged king died in exile in the Crimea. The Mithridatic dynasty was finally destroyed after Caesar's lightning victory over Pharnaces at Zela (Zile) in 47 B.C.

Most of Pontus was then administratively united with the Roman province of BITHYNIA (forming Bithynia-Pontus); the eastern part, however, became a separate kingdom (termed Pontus Polemoniacus) under Polemo of Laodicea and his house (36 B.C.–A.D. 63), and the southwest was incorporated into the province of Galatia (Pontus Galaticus). Bithynia-Pontus was constituted a senatorial province under a proconsul in 27 B.C.

Allusions to Pontus in the NT probably refer to this provincial area. Philo attested to the widespread settlement of Jews there (*De Legatione ad Gaium* 36). Some

of them were present in Jerusalem at Pentecost (Acts 2:9) and may have been the earliest evangelists in the province. Paul was prevented from entering Bithynia (16:7); possibly others were already working there. Paul's associate Aquila was a Jew of Pontus (18:2). It is not clear whether he and his wife Priscilla were already Christians at their meeting with Paul at Corinth.

The inclusion of the sojourners of the Dispersion in Pontus, with those of four other provinces in Asia Minor, in the address of 1 Pet. 1:1 again points to a rapid early expansion of Christianity there. The faith must have been established quickly in the Greek coastal cities, arriving either by the sea route or overland by the trade artery from Caesarea Mazaca in Cappadocia. F. J. A. Hort argued that the sequence of names in 1 Peter represents Silvanus's route around the churches, beginning from Sinope in Pontus (*First Epistle of St. Peter I.1–II.17* [1898], pp. 157-184). The hinterland of Sinope is, however, mountainous and difficult, and it seems more likely that the starting point was further east at Amisus. Amisus commanded the best route to the interior through Amasia, chief city of Pontus Galaticus, where it crossed the principal longitudinal road of inland Pontus. From there, after traversing the eastern end of provincial Galatia, Silvanus would have reached Caesarea in Cappadocia (Hemer, pp. 239-243). The recent sociological approach to 1 Peter by J. H. Elliott (*A Home for the Homeless* [1982]) posits a readership of non-citizen aliens in a largely rural setting at a somewhat later date. This seems contrary to the probabilities of early Christian expansion, which was along the coasts and principal roads, whereas the country people seem to have resisted the new religion. The names of provinces also suit the period before Vespasian reorganized the eastern frontiers, combining an enlarged Galatia with Cappadocia in A.D. 72. The difficulties of using this kind of evidence, in either direction, must be recognized, of course. While he was special imperial commissioner in Bithynia-Pontus (A.D. 111-113) Pliny found Christians under his authority in such numbers that pagan temples had become deserted. Ramsay argued that Pliny's famous letter to the emperor Trajan seeking guidance in the matter (x.96), while broadly relevant to the whole double province, was primarily occasioned by conditions in Amisus (*CRE*, pp. 224f.; *see also* PERSECUTE IV).

Some light is thrown on the second-century religious situation in Pontus by Lucian's account of the charlatan Alexander of Abonuteichus, who considered Christians among his principal opponents. The heretic Marcion was a native of Sinope. Aquila, a Jewish proselyte of Pontus,

made a slavishly literal Greek rendering of the Hebrew OT to counteract the Christian use of the LXX.

The reference to Queen Tryphaena in the apocryphal Acts of Paul and Thecla may be of historical value. Ramsay identified her with the Pontic queen of the Polemo dynasty (*CRE*, pp. 382-391).

Pontus was partitioned in the provincial reorganization of Diocletian. The area remained part of the Byzantine empire until the foundation of the empire of Trebizond in 1204. It fell under Ottoman rule in 1461.

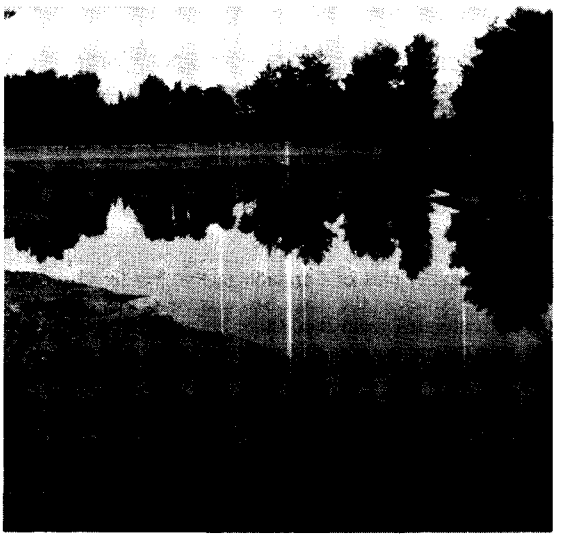
C. J. HEMER



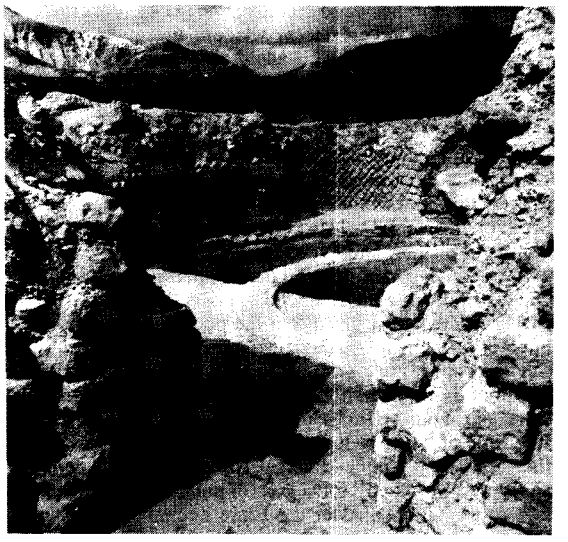
POOL; POND [Heb. *bᵉrēḵâ, bᵉrāḵâ*; Arab. *birkat*] (2 S. 2:13; 1 K. 22:38; Isa. 7:3; 36:2; Nah. 2:8 [MT 7]; etc.); [Heb. *ʾᵃgam*–'marsh'] (Isa. 14:23; etc.); [Heb. *mayim*] (Jer. 41:12); AV WATERS; [Heb. *mayim ʾᵃgam*] (Ps. 107:35; 114:8); AV STANDING WATER; [Heb. *miqweh*–'gathering'] (Ex. 7:19; cf. Gen. 1:10); [Heb. *gēḇ*] (2 K. 3:16); AV DITCH; [Gk. *kolymbēthra*–'place of diving'] (LXX; Jn. 5:2, 4, 7; 9:7).

Lakes or ponds are very rare in Palestine. The word for a natural pond or marsh (Heb. *ʾᵃgam*) refers to pools of the Nile (Ex. 7:19; 8:5) or to the transformation of the desert into a place of springs, rivers, and pools (Ps. 107:35; 114:8; Isa. 35:7; 41:18; 42:15) rather than to actual pools within Palestine. Pools in Palestine (Heb. *bᵉrēḵâ*) were typically man-made (cf. 2 K. 20:20; Neh. 3:16; Eccl. 2:6), built to collect the scant or irregular rain or spring water for both irrigation and drinking. Pools, in contrast to cisterns, were usually open, large, public or government installations, and, from Roman times at least, rectangular and wider than they were deep.

In Jerusalem, channels brought water from Gihon, the biblical name for the main spring east of the city (Isa. 7:3; 36:2). It was to avoid this exposed route outside the city wall that Hezekiah cut the Siloam tunnel through solid rock to a new pool at the southern edge of Ophel (2 K. 20:20; 2 Ch. 32:30; cf. the NT reference to the Roman-period pool of Siloam in Jn. 9:7). The "upper pool" (2 K. 18:17; Isa. 7:3; 36:2), the "lower pool" (Isa. 22:9), the "old pool" (22:11), the "King's Pool" (Neh. 2:14), and the "Pool of Shelah [AV Siloah] of the king's garden" (Neh. 3:15) all seem to be connected with water from Gihon and its channels. (*See* JERUSALEM II.C; III.D.2.e-g, 5.j, t; III.F.2.e-h.)

Part of the Jerusalem Model showing the pool of Siloam at the lower end of David's City (W. S. LaSor)

One of the Pools of Solomon near Bethlehem (W. S. LaSor)



The pool of Beth-zatha (Bethesda) has been identified at the north of the city in what are now the grounds of the Church of St. Anne (cf. Jn. 5:2). The three great "Pools of Solomon" near Bethlehem, the largest almost 180 m. (600 ft.) long and 15 m. (50 ft.) deep, also supplied water to Jerusalem by aqueduct, at least from the Roman period (Josephus *Ant.* xviii.3.2 [60-62]). The OT also refers to pools at Gibeon (2 S. 2:13), Hebron (4:12), and Samaria (1 K. 22:38).

Pools and water-holding systems were also made by damming watercourses in which water flowed after rain showers. Examples of these are found at Dhībân and Medeba in Moab, in the Judeah Buqê'ah west of Qumrân, and frequently in the Negeb (cf. *BASOR*, 142 [1956]; 155 [1959]).

Some pools had purposes other than drinking, washing, and irrigation. At Qumrân there were several types of water containers. From a main reservoir distribution channels (some with sedimentation basins) led to pools, some of which were for baptizing. "Waters of washing" are mentioned (1QS 5:13f.) and "waters of impurity" (3:9), but their precise significance is not clear. Early commentators on the Dead Seas Scrolls tended to use the word "baptism," leading those not familiar with Judaism to think of the rite as initiatory (i.e., required for admission to the sect). The texts, however, rather limit the use of the waters to those who were already members, possibly in connection with an annual examination (cf. W. S. LaSor, *Dead Sea Scrolls and the NT* [1972], pp. 72f.).

When Masada was excavated, first one and then another MIKVAH was uncovered. Y. Yadin, the archeologist, told of the concern of the rabbis that these mikvot complied with rabbinic measurements (*Masada* [1966], pp. 166f.). Excavations at the south wall of the Temple Mount in Jerusalem have uncovered a number of mikvot. According to one interpreter, persons who wished to go into the temple enclosure were required to purify themselves at these mikvot. Another has suggested that these mikvot were where the three thousand were baptized on the day of Pentecost. Both suggestions need further confirmation.

A sect called Therapeutae ("healers") used pools as a

Pool at Herod's later palace at Jericho (site excavated by E. Netzer for the Hebrew University of Jerusalem; picture Z. Radovan)

means of healing, and hot springs at Tiberius were (and still are) considered to have healing value.

There were also swimming pools (Herod had one in his palace at Masada and another at Jericho) and fishing pools in ancient Palestine.

In figurative use, the eyes of the beloved are likened to pools of Heshbon (Cant. 7:4 [MT 3]), and the doomed city of Nineveh resembles a pool going dry (Nah. 2:8).

POOLS OF SOLOMON. *See* POOL.

POOR. A term referring primarily to persons of low social and economic status, but sometimes designating God's righteous people, the humble and meek who call upon God for deliverance.

I. In the OT
  A. Terms
  B. Teaching
    1. Rights of the Poor
    2. Righteousness and the Poor
    3. The Poor as the Oppressed
    4. Hope of the Poor
    5. The Poor as the People of God
II. In the NT
  A. Terms
  B. Teaching
    1. Hope Realized: Gospel for the Poor
    2. Righteousness and the Poor
    3. The Poor as the Oppressed
    4. The Poor as the People of God

I. In the OT.–A. Terms. God's concern for the poor looms large on the pages of Scripture because poverty results primarily from unrighteous conduct by either the poor individuals or the larger community. While a variety of Hebrew terms is used to designate the poor, little emphasis falls on the distinctive nuances of each term. Often they are used synonymously (cf. Ps. 82:3f.). The major Hebrew terms are:

(1) *'Ānî, 'ānāw*, "oppressed," "poor," "humble" (e.g., Lev. 19:10; Dt. 15:11; Job 29:12; Ps. 10:9; 74:19; Isa. 3:14f.). These terms are used to designate one who suffers not from a deserved, self-inflicted poverty but from a poverty caused by wrongful impoverishment or dispossession. God is the helper and deliverer of such poor (the *'ānāwîm*). *See* HUMBLE I. B.

(2) *'Eḇyôn*, "in want, needy, poor" (e.g., Dt. 15:4-11; Job 31:19; Ps. 132:15; Prov. 14:21; Jer. 2:34). This term originally referred to a beggar seeking alms but was later used more generally for the very poor and homeless. In some of the Psalms it is linked with *'ānî* ("poor [*'ānî*] and needy [*'eḇyôn*]") to designate all the righteous who petition God as their deliverer from need of any kind (Ps. 37:14; 40:17 [MT 18]; 70:5 [MT 6]; 74:21; etc).

(3) *Dal*, "weak," "thin," "low," "poor" (e.g., Ex. 23:3; 1 S. 2:8; Job 5:16; Ps. 113:7; Prov. 19:17; Am. 8:6). This term can refer to physical weakness (e.g., Gen. 41:19), but more often it refers to those who are powerless due to low social status, e.g., the poorest class of peasants left behind during the Babylonian captivity (*dallâ*, 2 K. 25:12; Jer. 40:7; 52:15f.).

(4) *Rāš*, "poor, needy." This term (part. of *rûš*, "be poor") is used in a purely social or economic sense, especially in wisdom literature (2 S. 12:1, 3f.; Prov. 13:8; 14:20; 18:23; 22:7; etc.).

(5) *Miskēn*, "dependent, socially inferior." This term (cf. Akk. *muškênu*, "beggar") is related to the self-designation still used by Arab beggars. It occurs only in Ecclesiastes; interestingly, in each occurrence the *miskēn* is wise (Eccl. 4:13; 9:15f.).

B. Teaching. The OT teaches that God is scandalized by poverty and wills its abolition: "There will be no poor among you . . ." (Dt. 15:4). But although God's will is unequivocal, its fulfillment depends upon God's blessing, which is conditional upon the obedience of His people: ". . . if only you will obey the voice of the Lord your God . . ." (v. 5). Sadly, because Israel does not obey, "the poor will never cease out of the land" (v. 11). Therefore, Israel was commanded to respond to the poor at all times with open hand and heart and was warned that to do anything less than this was sin (vv. 7-11). The year of release was the institutionalized expression of God's will that poverty be abolished, for in this year all debts were to be cancelled (vv. 1f.; *see* SABBATICAL YEAR). God's expressed will for the poor was never fully actualized in history, but it became the basis for the prayers of the poor and for the hope that it would become a reality in the future (cf. Ps. 9:18 [MT 19]; 132:15). Consequently, God's will that there be no poor in the land continues to be mandated for the "new Israel" as the obedience required by the Kingdom that has been and will be given (Lk. 12:32f.).

1. Rights of the Poor. The Mosaic legal code established that the poor had certain rights (cf. Isa. 10:2). While anyone in Israel could eat from a neighbor's vineyard or field to satisfy hunger (Dt. 23:24f.), the poor were given additional rights. Each year the gleanings of field, orchard, and vineyard belonged to the poor, including the border of the field, the sheaf forgotten in the field, and whatever grew spontaneously in the Sabbatical Year (Lev. 19:10; 23:22; Dt. 24:19; Ex. 23:11). No interest was to be exacted on loans to the poor (Ex. 22:25; Lev. 25:36), nor was the cloak given in pledge to be kept overnight (Dt. 24:12), nor was food to be sold for a profit to the poor who could not maintain themselves (Lev. 35:37). If because of poverty an Israelite sold himself, he was not to be treated harshly as a slave, but was to be treated as a hired servant who would gain his freedom in the year of release (Dt. 15:12-18) or in the Year of Jubilee (Lev. 25:39-43). Poor hired servants were to be paid their wages on the day they

earned them (Dt. 24:14f.). The poor who sold their property or themselves retained the right of redemption either by another, by themselves, or by release in the Year of Jubilee (Lev. 25:25-28, 47-55). These stipulations sought to provide the poor with an economic base necessary to guarantee a livelihood and personal liberty. While the court was not to be partial to the poor (Ex. 23:3), it was to see that the justice due the poor was not perverted (Ex. 23:6; Lev. 19:15). Finally, because the poor had equal rights with the rich to appear before God (the price of atonement was the same, Ex. 30:15), they were allowed to present less costly sacrifices (Lev. 14:21f.; 27:8).

These rights were an integral part of God's covenant with Israel rooted in the Exodus. The refrain, "they are my servants whom I brought forth out of the land of Egypt," or "you shall remember that you were a slave in the land of Egypt," grounds both the rights of the poor and Israel's obligation to maintain those rights in God's redemptive act (Lev. 25:38, 42, 55; Dt. 25:18, 22). As the servants of the Lord redeemed from slavery in Egypt, the poor were entitled to share in Israel's inheritance, which included the land, its produce, and freedom. The law of release intended to guarantee that each possessed what was essential for the maintenance of human life and liberty, that no one for reasons of wealth oppressed another, and that each stood in a relationship of liberty and brotherhood to his or her neighbor (cf. Jer. 34:13-17).

The covenant code was rooted also in the creational order (even Sodom was condemned by the prophet because it "did not aid the poor and needy," Ezk. 16:49). The rights of the poor were grounded not only in the Exodus event but also in the goodness and justice that could be discerned in the order of creation. This perspective is evident especially in the wisdom literature. Both rich and poor are equal before God because "the Lord is the maker of them all" (Prov. 22:2; cf. 14:31; 17:5; Job 34:19). The righteous person is one who discerns this creational order and acts in accordance with it; such a person "knows the rights of the poor" and always seeks to vindicate those rights (Prov. 29:7; cf. 31:9). Thus the rights of the poor are established by both the creational and the redemptive acts of God.

2. Righteousness and the Poor. The obligation to defend the rights of the poor is an essential part of the biblical way of righteousness for individuals and governments. The righteous individual and the righteous king are expected to know these rights and defend them (Prov. 29:7; 31:9). The king who judges the poor with equity is promised that his throne will be established forever (29:14); likewise, the righteousness of the individual who has distributed freely and given to the poor will endure forever (Ps. 112:9; cf. Dt. 24:13). The king (Messiah) who embodies the righteousness of God will be found on the side of the poor, defending them, judging their cause with justice, crushing their oppressor, and delivering "the needy . . . , the poor and him who has no helper" (Ps. 72:2, 4, 12; cf. 83:3f. [MT 4f.]). Thus "a just and well-regulated government will be distinguished for maintaining the rights of the poor and afflicted" (J. Calvin, comm. on Ps. 82:3). The mere performance of religious ritual and cult does not fulfil the way of righteousness, for the fast that God approves is the removal of oppression: "to share your bread with the hungry, and bring the homeless poor into your house" (Isa. 58:6f.). Knowing the Lord is equated with caring for the poor: "He [Josiah] judged the cause of the poor and needy; then it was well. Is not this to know me? says the Lord" (Jer. 22:16). Blessing is promised to those who walk this way of righteousness, for "he who is kind to the poor lends to the Lord, and he will repay him for his deed" (Prov. 19:17; cf. 14:21; 22:9; 28:27; 31:20). Nevertheless, wisdom literature presents also the case of Job, who acted righteously toward the poor and yet experienced affliction (Job 29:12, 16; 30:25; 31:16, 19).

3. The Poor as the Oppressed. Although wisdom literature warns that poverty may be self-inflicted (Prov. 6:6-11; 21:17: 23:21), in the OT it is primarily the wicked who deprive the poor of their rights. The poor hide themselves because the wicked thrust them off the road, take their infants in pledge, and even seek to kill them (Job 24:4, 9, 14). Although sometimes the poor oppress the poor (Prov. 28:3), usually it is the rich who oppress them (22:7, 16, 22; 28:15). "The fallow ground of the poor yields much food, but it is swept away through injustice" (13:23).

The prophets condemned Israel because "the spoil of the poor is in your houses" (Isa. 3:14f.) and "on your skirts is found the lifeblood of guiltless poor" (Jer. 2:34). In a time of rising prosperity and increasing class distinctions, Amos denounced Israel for buying "the poor for silver and the needy for a pair of sandals" (Am. 8:6; cf. 2:7; 4:1; 5:11; 8:4). After the Exile Zechariah prophesied that the Lord "scattered them with a whirlwind among all the nations which they had not known" (Zec. 7:14) because they had been neither kind nor just but had oppressed the poor (vv. 8-13). Thus the prophets announced the judgment of exile not only because fertility cults had corrupted Israel's worship but also because Israel had not maintained the rights of the poor.

4. Hope of the Poor. Because the hopes of the poor were not realized and injustice continued to reign, the poor placed their hope in the promises of God: "'Because the poor are despoiled, because the needy groan, I will now arise,' says the Lord. 'I will place him in the safety for which he longs'"(Ps. 12:5 [MT 6]; cf. 9:18 [MT 19]). The Lord is called the "refuge" or "stronghold" of the poor (Ps. 14:6; Isa. 25:4), their "helper" and "deliverer" (Ps. 40:17 [MT 18]; 70:5 [MT 6]), the one who saves them out of all their trouble (34:6 [MT 7]); for the Lord "raises the poor from the dust and lifts the needy from the ash heap" (113:7; 1 S. 2:8). Nonetheless, the complete realization of the hope of the poor is promised only for the messianic age, when the Servant-King "shall judge the poor with righteousness and decide with equity for the meek of the earth" (Isa. 11:4; cf. 29:19; 41:17; Ps. 132:15).

5. The Poor as the People of God. The helpless poor, who depended on God as judge to defend their rights and to vindicate them when they were oppressed, came to be viewed as synonymous with the righteous people of God (cf. Ps. 14:5f.; Isa. 3:15; 14:32). Similarly, the oppressed people of God identified themselves as the "poor" who depended upon God for their vindication (cf. Ps. 37:14; 74:19; Hab. 3:13f.). In fact, the phrase "poor and needy" became a designation of the people of God who trusted in Him to deliver them out of all their troubles (Ps. 40:17 [MT 18]; 70:5 [MT 6]; 74:21; 86:1).

II. In the NT.–A. Terms. In classical Greek two terms designate the poor: *pénēs* denotes the working poor who own little or no property, and *ptōchós* signifies the beggar, one who is totally dependent on others for help. Although the LXX uses both terms to translate the various Hebrew terms, the NT uses *ptōchós* almost exclusively, the two exceptions being *pénēs* in a quotation of Ps. 112:9 (2 Cor. 9:9) and *penichrós* in a description of the poor widow (Lk. 21:2). The NT use of *ptōchós* is not restricted to its classical Greek meaning but is shaped by OT use.

B. Teaching. Because the NT declares that the kingdom of God is already present, it proclaims God's concern for the poor with even greater vigor than the OT (cf. Lk.

12:32f.). Although the Christian Church has always recognized the biblical concern for the poor, it has tended to spiritualize the concept "poor" in certain key passsages (e.g., Lk. 4:18; 6:20; 7:22), so that it becomes a synonym for "sinner." More recently, certain Liberation theologies have materialized or politicized the concept of "poor" so that it becomes synonymous with the abject poor, the paupers who are dispossessed because of political or economic oppression. While both "sinner" and "pauper" are aspects of "poor" in the biblical concept, to make either the *exclusive* meaning is to obscure the biblical teaching.

1. Hope Realized: Gospel For The Poor. The NT proclaims that the hope of the poor is realized in Jesus' inauguration of the eschatological Year of Jubilee. Luke's Gospel especially, based on Isaiah's prophecy (Isa. 61:1f.) of the anointed servant who will proclaim Jubilee's promise of release and forgiveness ("the acceptable year of the Lord"), recounts Jesus' ministry according to the themes of Jubilee. Jesus is anointed by the Spirit "to preach good news to the poor" (Lk. 4:18), who are also the "captives," the "blind," and the "oppressed" (cf. 7:22; Mt. 11:5). While originally a description of Israel's condition awaiting release from exile, this prophecy became an eschatological symbol of God's oppressed people awaiting release in the final Year of Jubilee in the end-time (cf. 11QMelch in the Qumrân Scrolls). The good news proclaimed to the poor is the gospel of the kingdom of God (Lk. 4:43), the announcement of that realm in which the great reversal of all injustice and oppression would become a reality. Because the prophecy of Isa. 61:1f. (cf. 58:6) is shaped by the language of the Jubilee (Lev. 25; Dt. 15), Luke's emphasis falls on release from actual social, economic, and political oppression. The biblical promise of release is always, however, connected with forgiveness of sins. The OT Year of Jubilee was proclaimed on the Day of Atonement; therefore its release was predicated upon God's release (forgiveness) of Israel from its sins. Similarly, Isaiah's promise and Luke's announcement of the eschatological Jubilee is predicated upon the forgiveness of sins (cf. Lk. 24:47). God's word of forgiveness creates the basis for reversal of injustice and the deliverance of the poor.

The same Jubilee perspective shapes the Lukan beatitudes: "Blessed are you poor, for yours is the kingdom of God" (Lk. 6:20). Here also the poor are defined further by the subsequent beatitudes addressed to those who hunger, weep, and are oppressed (vv. 21f.). Whereas Luke emphasizes the reversal of the social and economic condition of the poor, Matthew's emphasis falls more upon the spiritual and ethical condition of the poor; the "poor in spirit" are the meek, those who hunger for righteousness, the merciful, the pure in heart, the persecuted (Mt. 5:3-11). Both Matthew and Luke, however, have the same persons in view, for the poor are the disciples of Jesus who, like the *ʿᵃnāwîm* of the OT, know real poverty and oppression, but who as the humble and meek look to the Lord for their salvation. Thus interpretations of the "poor" that understand Matthew in exclusively spiritual categories or Luke in exclusively material categories overlook the *ʿᵃnāwîm* piety and status that is the background for both.

Although God's forgiveness of sins in Jesus' name has been granted (Lk. 24:27) and Jesus has inaugurated the eschatological Year of Jubilee (4:21; 6:20), the kingdom of God has not yet fully arrived. The complete reversal of the condition of the poor awaits the future, but already under the symbol of a joyful banquet the promise is given that the "poor and maimed and blind and lame" will have a place in the Kingdom (14:21). Since this is so, those who give banquets on earth should invite "the poor, the maimed, the lame, the blind" (v.13), because those who hope to attend the eschatological banquet must reveal that the Jubilee reversal promised in the future Kingdom has already begun.

2. Righteousness and the Poor. The forgiveness of sins that inaugurates the Kingdom entails the obligation to begin the Jubilee reversal of poverty. Jesus instructed His disciples in response to the gift of the Kingdom to sell their possessions and give alms (Lk. 12:33), and the church in Jerusalem did precisely that in order to care for the poor and needy (Acts 2:44f.; 4:34f.; cf. Dt. 15:4). In response to the salvation brought by Jesus, Zacchaeus declared as a sign of repentance that he would give (present tense as a future expressing resolve) half of his goods to the poor (Lk. 19:8) — far more than the 20 percent encouraged by the rabbis. Jesus once accepted an extravagant act of devotion seemingly in disregard of the poor (Mt. 26:6-13 par. Mk. 14:3-9; Jn. 12:1-8), but this did not compromise His concern for the poor. He called the anointing a beautiful act because it was done in preparation for His burial. Such extravagance was appropriate as an exceptional act, whereas giving to the poor should occur continuously. In fact, the exception proves the rule that devotion to Jesus is expressed through caring for the poor.

Throughout His ministry Jesus maintained the OT teaching that the way of righteousness includes caring for the poor, and the disciples assumed that this was so (cf. Mk. 14:15; Jn. 13:29). In the parable of the rich man and Lazarus (Lk. 16:19-31), Jesus taught that someone who ignored the OT teaching about sharing with the poor was so morally blind that he would not be convinced of its necessity even by one raised from the dead. On another occasion Jesus instructed a rich young man to sell his possessions and "give to the poor"; for although he claimed to have kept the commandments, his wealth interfered with true love for the neighbor and thus prevented his becoming a disciple of Jesus (Mt. 19:16-22 par. Mk. 10:17-22; Lk. 18:18-23). In the sequel Jesus promised that those who followed Him, leaving behind family and property (which in context may imply giving one's wealth to the poor), would share in the great reversal that has already begun and will be completed in the age to come (Mt. 19:23-30 par. Mk. 10:23-31; Lk. 18:24-30). Thus the NT way of righteousness as caring for the poor fulfils that of the OT, for in the presence of the Kingdom Jesus' disciples are called to manifest in their relationship to the poor the grand reversal that God has promised.

See also ETHICS: THE ETHIC OF JESUS III.C; ETHICS: NT ETHICS II.C.1.

3. The Poor as the Oppressed. Although Jesus' parable about the rich man and Lazarus depicts the miserable condition of the helpless poor (Lk 16:20f.), it is especially James who condemns the rich for having gained their wealth at the expense of the poor (Jas. 5:1-6). James warns the rich within the Church (1:9-11; cf. 2:1-4); but he also identifies the poor as those chosen by God to inherit the Kingdom and the rich as unbelievers who oppress the believers and blaspheme the name of Jesus (2:5-7). The poor are oppressed both because of their economic poverty and because they, like the OT *ʿᵃnāwîm*, are the ones rich in faith; cf. the Beatitudes (Mt. 5:3-12; Lk. 6:20-23), which also identify the oppressed poor with the persecuted disciples of Christ.

4. The Poor as the People of God. While "poor" can be used simply to denote an economic condition (cf. the merismus "rich and poor," which is used to describe the

totality of humankind; e.g., Rev. 13:16; Ps. 49:2 [MT 3]; cf. Ruth 3:10), "poor" is often used as a synonym for "people of God." The poor widow who gave two copper coins is a notable example of the piety that depends totally on God (Lk. 21:1-4). Strikingly, the name Lazarus, the poor man in Jesus' parable (Lk. 16:19-31), means "he whom God helps." The "poor" to whom Jesus promises the Kingdom are disciples (Lk. 6:20; Mt. 5:3; cf. Jas. 2:5). Thus the people of God can be identified as the "poor" for various reasons: social and economic deprivation, voluntary poverty (cf. Mt. 19:23-30 par.), persecution, and total dependence upon God for deliverance from every need (including deliverance from spiritual poverty; cf. Rev. 3:17). Jesus is Himself the ground and model for the people of God both in their identification as the poor and in their caring for the poor. For He had "nowhere to lay his head" but depended on God and others for support (Lk. 9:58); He became poor so that others might become rich (2 Cor. 8:9); and He is present in the poor brethren who are the hungry, the thirsty, and the naked (Mt. 25:35-40). Jesus was Himself one of the *ʿănāwîm* (cf. "humble," Heb. *ʿănî*, Zec. 9:9). In imitation of Christ, the apostles were "poor, yet making many rich" (2 Cor. 6:10).

Some scholars (e.g., see Fitzmyer, p. 10) have proposed that "the Poor" (Rom. 15:16; Gal. 2:10) was a self-designation of the Jerusalem congregation. This thesis, however, cannot be substantiated; the circumstantial evidence is inadequate. While it is true that a Jewish Christian sect of the 2nd cent. called itself "the Poor" (EBIONITES) and claimed to trace its origin to the Jerusalem church, Irenaeus (*Adv. haer.* i.26.2), the first writer to mention them by name, classified them as heretics. Likewise, while the Qumrân community viewed itself as the poor people of God and in one instance called itself "the Congregation of the Poor" (4QpPs37), it did so, not because of its insistence on community of goods, but primarily because in its oppressed condition it readily identified with the "poor and needy" in the Psalms (esp. Ps. 37). Consequently, the existence of community of goods in the Jerusalem church does not in itself imply that its members called themselves "the Poor." In addition, neither of the two texts used to substantiate this thesis is conclusive. Paul was asked by the Jerusalem church "to remember the poor" (Gal. 2:10), and later he journeyed to deliver the "contribution for the poor among the saints at Jerusalem" (Rom. 15:26). Since in Rom. 15:25 Paul speaks of "going to Jerusalem with aid for the saints," some have argued that v. 26 should be read as "the poor, who are the saints." The more likely reading, however, is that there were many poor among the saints in Jerusalem. Because God Himself was righteous in giving to the poor (cf. 2 Cor. 9:9), Paul was also eager to do this (Gal. 2:10), and he encouraged others to give cheerfully (2 Cor. 9:6-15). Thus Paul's collection, gathered from the gentile churches for the poor in Jerusalem, was an act of charity rendered in obedience to the command and example of Christ — an act that expressed also the hope of reconciling the Jewish and gentile branches of the Church.

HOLWERDA

POPLAR pop'lər [Heb. *liḇneh*–'whiteness'; LXX *styrákinos*, i.e., "storax" (Gen. 30:37), *leukē*–'white' (Hos. 4:13)]. A Palestinian tree that was highly prized for its shade. It flourished under the same topographical conditions as oaks and terebinths (Hos. 4:13), and was one of the trees planted in the groves where pagan Canaanite worship occurred.

The tree may possibly have been the Storax (*Styrax officinalis* L.), a common shrub in ancient Palestine that occasionally grew as high as 6 m. (20 ft.). The undersurfaces of its oval green leaves were covered with whitish hairs, which might have accounted for the Hebrew name. This light color was also characteristic of the pure white flowers, similar to orange blossoms, which covered the tree in spring.

While some botanists prefer to identify the poplar with the Storax, many biblical scholars think of it in terms of the white poplar (*Populus alba* L.), which also bears shiny green leaves that have a white coloration on the underside. This tree flourished throughout Palestine in antiquity, often towering to a height of 18 m. (60 ft.) and producing a heavily shaded area. The buds and flowers exhibit a delightful fragrance each spring, which would add to the attractiveness of the poplar as a shade tree. Jacob used the peeled, creamy white poplar branches along with branches from other trees to produce supposed prenatal impressions upon ewes in a program of selective breeding (Gen. 30:37).

In Hos. 14:5 (MT 6) the RSV and NEB emend MT *leḇānôn*, "Lebanon" (so AV) to *liḇneh*, "poplar," apparently to provide a better parallel to "lily" and a more sensible complement to "strike root." But the reference to Lebanon could simply be an instance of synecdoche, since the forests of Lebanon were so well known (cf., e.g., 1 K. 5:6 [MT 20]; 7:2; Isa. 10:34). Cf. also Hos. 14:6 (MT 7), which refers to Lebanon in a similar fashion.

See *MBP*, pp. 181-83. R. K. H.

PORATHA pō-ra'thə [Heb. *pôrāṯā'*] (Est. 9:8). One of Haman's ten sons killed by the Jews on orders from Mordecai, who had been authorized by King Ahasuerus to issue such orders as a means of protecting the Jews (cf. 8:11; 9:2-10, 16). The name Poratha is apparently Persian; according to H. S. Gehman (*JBL*, 43 [1924], 327) it is from Old Pers. *pauru*, "much," + *dā*, "giving," i.e., "liberal one"; cf. L. B. Paton, comm. on Esther (*ICC*, 1908), p. 70, for other possible Persian derivations.

G. A. L.

PORCH. A term used by the RSV only in 1 K. 7:6; Ezk. 8:16 to render Heb. *'ûlām* (but used frequently by the AV for this term; RSV usually "vestibule") and in Mt. 26:71 for Gk. *pylōn*. "Porch" is also an AV translation of Heb. *misdᵉrôn* in Jgs. 3:23 (RSV "vestibule"), Gk. *proaúlion* in Mk. 14:68 (RSV "gateway"), and *stoá* in Jn. 5:2; etc. (RSV "portico"). *See* GATEWAY; TEMPLE; VESTIBULE. On "Solomon's porch" (RSV "Solomon's Portico"), *see* JERUSALEM III.H.22.

PORCIUS FESTUS. *See* FESTUS, PORCIUS.

PORCUPINE [Heb. *qippōḏ*] (Isa. 34:11); AV BITTERN; NEB BUSTARD. If the Hebrew is related to the Arab. *qunfuḏ*, "hedgehog" (the RSV rendering of *qippōḏ* in Isa. 14:23; Zeph. 2:14), the reference would be to the insect-eating mammal *Erinaceus europeus*. A small mammal about 25 cm. (10 in.) long, it is covered with short spines and rolls itself into a ball when disturbed or attacked. The porcupine (*Hystrix cristata*), also known by the Arabic term *qunfuḏ* in some areas, is an herbivorous rodent that is more than twice the length of the hedgehog, and has long spines. In Isa. 34:11 "porcupine" is probably a correct rendering of the *qippōḏ* that was to scavenge in desolated Edom.

See also HEDGEHOG. R. K. H.

PORPHYRY pôr'fi-rē [Heb. *bahaṭ*] (Est. 1:6); AV RED (MARBLE); NEB MALACHITE. The term porphyry is from Ionic Gk. *porphýra/ē*, meaning purple. The term refers historically to a specific kind of maroon- or purple-colored rock. In modern petrographic use porphyry is an igneous rock in which a texture of conspicuously large crystals exists in a fine-grained matrix, regardless of color (cf. LXX *smaragdítēs*, a green lithic or gemstone). The Esther passage implies an architectural flooring analogous to the later Roman *opus sectile*, a geometric cut-rock surface pattern. R. G. BULLARD

PORPOISE [Heb. *taḥaš*]; RSV GOAT(-SKINS); AV BADGER. The term is usually found with Heb. *ʿôr*, "skin (of)," and refers to a fine-quality leather used in the coverings of the tabernacle (Ex. 25:5; 26:14; 35:7, 23; 36:19; 39:34) and its sacred furniture (Nu. 4:6-25) as well as for the fabric of Jerusalem's symbolic shoes (Ezk. 16:10).

The precise meaning of *taḥaš* is not certain. It may have been a sea animal (cf. Arab. *tuḥas*, "dolphin" or "dugong"; also "sea-cow" as in NEB or "manatee") or a land animal (most likely a goat). The LXX, Josephus, and talmudic tradition do not agree on a definition.

See also LEATHER. D. STUART

PORT. A term used once by the AV in the obsolete sense of "gate" (Neh. 2:13; on the Dung Gate, *see* JERUSALEM III.F.2.c). The RSV uses "ports" once in the sense of "harbors" as a translation of the plural of Gk. *tópos* (lit. "[inhabited] place"; Acts 27:2; AV "coasts").

PORTENT [Heb. *môp̱ēṯ*] (Ps. 71:7; Joel 2:30 [MT 3:2]); AV WONDERS; NEB also SOLEMN WARNING; [*ʾôṯ*] (Isa. 8:18; 20:3); AV SIGN; [Gk. *sēmeíon*] (Rev. 12:1, 3; 15:1); AV WONDER, SIGN. In these passages "portent" denotes a person (Ps. 71:7; Isa. 8:18) or event (e.g., in the heavens) whose distinguishing features indicate that God is acting or is about to act. Isaiah served as a portent through his name ("Yahweh is salvation"), through the names of his children (cf. 7:3 mg.; 8:1 mg., 3f.), and through his actions (20:1-5). *See also* SIGN; WONDER.

PORTER. A term used by the AV in the older sense of GATEKEEPER.

PORTICO, SOLOMON'S. *See* JERUSALEM III.H.22; TEMPLE IV.C.2.

PORTION [Heb. *ḥēleq* (e.g., Gen. 31:14; Lev. 6:17 [MT 10]; Neh. 2:20; Isa. 61:7), *ḥelqâ* (Dt. 33:21; Josh. 24:32; Job 24:18; Jer. 12:10), piel of *ḥālaq* ("portion out," Isa. 34:17; "divide a portion," 53:12), hiphil of *ḥālaq* ("receive a portion," Jer. 37:12), *maḥᵃlōqeṯ* (Ezk. 48:29), *ḥeḇel*–'rope, line' (Josh. 17:5, 14; 19:9; 1 Ch. 16:18; Ps. 105:11; Ezk. 47:13), *mānâ* (e.g., 1 S. 1:4f.; 9:23; 2 Ch. 31:19; Neh. 8:10, 12; Est. 2:9; 9:19, 22; Ps. 16:5; Jer. 13:25), *mᵉnāṯ* (e.g., Ps. 11:6), *ʾazkārâ* ("memorial portion," Lev. 2:2, 9, 16; 5:12; 6:15; 24:7; Nu. 5:26), *maśʾēṯ*–'lifting up,' 'offering' (Gen. 43:34), *dāḇār*–'word,' 'thing,' 'affair' (Ex. 16:4; 2 K. 25:30; Dnl. 1:5), *tᵉrûmâ*–'contribution, offering' ("priests' portion," Ex. 29:27f.; "[holy] portion," Ezk. 45:1, 6; etc.), *tᵉrûmîyâ*–'contribution' ("special portion," 48:12), *peh*–'mouth' (Ps. 49:13 [MT 14]; "double portion," Dt. 21:17), *ʾeḥāḏ*–'one' ("one portion," Ezk. 48), *ḥōq* ("allotted portion," 16:27; "fixed portion," 45:14), *qōḏeš* –'holy' (e.g., "holy portion," Ezk. 45:4), *rēʾšîṯ*–'first' ("choice portion," 48:14), *ʾešpār* ("portion of meat," 2 S. 6:19 par. 1 Ch. 16:3), piel of *māḏaḏ* ("portion out," Ps. 60:6 [MT 8]; 108:7 [MT 8]); Gk. *merís* (Lk. 10:42), *sitométrion* ("portion of food," 12:42)]; AV also PART, LOT, RATE, HEAVE OFFERING, OBLATION, MESS, etc.; NEB also PART, SUPPLY, PERQUISITE, SHARE, HOLDING, RESERVE, etc.; in a few instances "portion" is supplied by the RSV for ease of translation (Gen. 4:4; Lev. 7:35; 2 Ch. 31:15). An individual's or group's SHARE in something; used most often in reference to the distribution of land (see below) or food (e.g., Gen. 43:34; 1 S. 1:4f., 9:23f.; Lk. 12:42).

The Hebrew root *ḥlq* means primarily "(give or receive) the share that is allotted to one." The verb *ḥālaq* is used of "dividing" or "distributing" various kinds of goods, such as land (e.g., Nu. 26:53), food (2 S. 6:19), and spoils of battle (Isa. 53:12). Likewise, the noun *ḥēleq* can denote various types of "portions," including battle spoils (Nu. 31:36), food (e.g., Dt. 18:8), and even one's destiny, apportioned by God (e.g., Job 20:29; 27:13; 31:2; Ps. 17:14; Eccl. 9:9; Isa. 17:14).

In its most specialized sense, however, *ḥēleq* denotes a share of land allotted to a tribe or family (e.g., Josh. 15:13). (*Ḥelqâ*, a fem. form of *ḥēleq*, always has this sense.) In this sense the "portion" has fundamental importance in a clan-based, agricultural society, because for each individual or small group it represents both the basic means of livelihood and also a sign of belonging to the people as a whole (see *TDOT*, IV, 448f.). Cf. the complaint: "We have no portion [*ḥēleq*] in David" (2 S. 20:1; cf. 1 K. 12:16) — i.e., no share in the common life and power of the royal house.

When Israel entered Palestine, each tribe except Levi was allotted a portion of land (Josh. 18:10; cf. chs. 13–19) as an inheritance from Yahweh, the original and true owner of all the LAND (Lev. 25:23; cf. Dt. 32:9; Jer. 12:10, where Israel is described as Yahweh's "portion"; cf. also the expression "have a portion in Yahweh [i.e., Yahweh's land]," Josh. 22:25, 27). G. von Rad (pp. 85f.) suggested that this belief in Yahweh's ownership of the land formed the background for the practice of apportioning it by casting LOTS — a "cultic" means of determining the divine will. The procedure, which also made use of the *ḥeḇel* (*see* MEASURING LINE), is described in Josh. 18:4-6; Isa. 34:17; Mic. 2:4f. (cf. Ps. 16:5f., which uses the metaphor of a person who rejoices to see that he has received a good portion, because "the lines have fallen for me in pleasant places"). By extension the terms *ḥeḇel* ("line") and *gôrāl* ("lot") came to be used synonymously with *ḥelqâ* and *ḥēleq* (often in parallelism with *naḥᵃlâ* ["inheritance, heritage"]; *see* INHERIT) to denote a piece of land that has been measured and allotted (*see also* ALLOTMENT).

The priestly tribe of Levi received no "portion" (*ḥēleq*) in Canaan, i.e., it was not entitled to own land (Nu. 18:20; Dt. 10:9; 12:12; 14:27, 29; 18:1; Josh. 14:4; 18:7). Instead, Yahweh was Levi's "portion" (Nu. 18:20; cf. Dt. 10:9). In a practical, economic sense this meant that the Levites

obtained their living through "portions" of sacrifices and offerings that were reserved for them (e.g., Lev. 6:17 [MT 10]; Nu. 18; *see also* FIRST FRUITS; TITHE; cf. also the terms *mānâ* [a portion (usually of food) assigned to someone; e.g., Ex. 29:26; Lev. 7:33; 8:29], *mᵉnāṯ* [e.g., 2 Ch. 31:4; Neh. 12:44, 47; 13:10], *tᵉrûmâ* [general term for an offering or contribution; e.g., Ex. 29:27f.; Nu. 18:8], and *qōḏeš* [lit. "holy"; cf. "holy portion," Lev. 24:9; "sacred portion," Dt. 26:13]). But the statement "I [Yahweh] am your portion" pointed to much more than the source of the Levite's material sustenance: it was the promise of a special, unbreakable relationship with Yahweh, the source and sustainer of all life.

The theme that Yahweh is the "portion" of the devout Israelite finds expression also in some of the Psalms (16:5; 73:26; 119:57; 142:5 [MT 6]) and in Lam. 3:24 (cf. also Jer. 51:19). Ps. 73:23-28 contains an especially beautiful elaboration of this confession. (See von Rad, pp. 260-66, for the idea that these Psalms originated in a community of spiritually alert Levites.) Jesus' statement that "Mary has chosen the good portion [Gk. *merís*]" (Lk. 10:42) should also be understood against this background. *Merís* is a common LXX translation of Heb. *ḥēleq, ḥelqâ, mānâ,* and *mᵉnāṯ* (*DNTT,* II, 303f.).

Ezekiel's vision of the restoration of Israel in the messianic age (chs. 40–48) includes a description of an idealized reallotment of the land of Palestine, "one portion" (Heb. *ʾeḥāḏ,* lit. "one") of equal size going to each tribe (48:1-7, 23-27; cf. *ḥēleq* [RSV "tribal portion"] in 45:7; 48:8, 21). Much detail is given regarding a sacred district that is to be set apart for Yahweh (*tᵉrûmâ*; AV, lit., "oblation"; RSV usually "holy portion"; NEB "[sacred] reserve"; cf. 45:1, 6; 48:8-12, 18-22), which will include the temple area and living quarters for the Levites and Zadokite priests (cf. 45:4f.).

The meaning of Heb. *ʾešpār* in 2 S. 6:19 par. 1 Ch. 16:3 is uncertain. Most scholars (e.g., *CHAL,* p. 30) translate it "cake of dates" (so NIV) rather than "portion (or piece) of meat" (so RSV, NEB, AV); see the comms. (though he concludes that its meaning is uncertain, S. R. Driver, comm. on Samuel [2nd ed. 1913], pp. 270f., offers the most thorough discussion).

N. J. OPPERWALL

PORTRAY [Heb. *ḥāqaq*] (Ezk. 4:1; 8:10; 23:14); NEB DRAW, CARVED; [*ṣûrâ*] (Ezk. 43:11); AV "shew . . . the form of"; NEB DESCRIBE; [Gk. *prográphō*] ("publicly portray," Gal. 3:1); AV "evidently set forth"; NEB OPENLY DISPLAY. Heb. *ḥāqaq* as used by Ezekiel means "engrave." In Ezk. 43:11 the AV, RSV, and NEB follow the LXX, which has Gk. *diagráphō*; Heb. *ṣûrâ* literally means "ground plan."

Scholars disagree about the precise meaning of *prográphō* in Gal. 3:1. Some commentators, e.g., Calvin, have held that it means "portray publicly," i.e., present a verbal picture (cf. NEB, NIV, NAB, NASB), while others, e.g., E. Burton (*ICC,* 1920), have denied that possibility and take it to mean "proclaim publicly" (cf. JB, Moff.; also G. Schrenk, *TDNT,* I, 771). See further H. D. Betz, *Galatians* [*Hermeneia,* 1979], p. 131; F. F. Bruce, *Epistle to the Galatians* [*NIGTC,* 1982], pp. 147f.

POSIDONIUS pos-i-dō'ni-əs [Gk. *Posidōnios*].

1. One of the three envoys sent by the Seleucid general Nicanor to arrange a truce with Judas Maccabeus and to give and receive pledges of friendship with the Jews (2 Macc. 14:19).

2. A distinguished Stoic philosopher and historian from Apamea (*ca.* 135-51 B.C.), named by Josephus (*CAp* ii.7 [79]) as an anti-Semitic writer. J. J. SCOTT, JR.

POSSESS; POSSESSION [Heb. *yāraš* (Gen. 15:7f.; 22:17; etc.; "strip of possessions," Zec. 9:4), *yᵉruššâ* (Dt. 2:5, 9, 19; etc.), *môrāš* (Isa. 14:23; Ob. 17), *môrāšâ* (Ex. 6:8; Dt. 33:4; Ezk. 11:15; etc.), niphal of *ʾāḥaz* (Josh. 22:9; "gain possession," Gen. 47:27; "have possession," Nu. 32:30; "take possession," Josh. 22:19), *ʾᵃḥuzzâ* (Gen. 23:9, 20; 47:11; 49:30; etc.), *miqnâ* (Gen. 23:18), *miqneh* (Gen. 26:14), *qinyān* (Gen. 31:18; Ps. 105:21; in Zec. 13:5 the RSV emends MT *hiqnanî,* the hiphil of *qānâ,* to *qinyānî*; see RSV mg.), *nāḥal*–'inherit' (hithpael, Isa. 14:2; hiphil, "cause to possess," Zec. 8:12), *naḥᵃlâ*–'inheritance' (Dt. 4:20), *rᵉḵûš* (Gen. 12:5; 13:6; 15:14; 36:7; 2 Ch. 21:14, 17; 31:3; 32:29; 35:7), *mᵉḵāsîm*–'riches, wealth' (Eccl. 5:19 [MT 18]; 6:2), *meged* ("valuable possessions," 2 Ch. 21:3), *yᵉḇûl* (Job 20:28), *mimšāq* ("a land possessed," Zeph. 2:9), *bᵉyāḏ* ("in possession," Ex. 21:16; 22:4 [MT 3]), *lᵉ* (alone or with *hāyâ* or *nāṯan*) (e.g., Job 22:8), hiphil of *ḥāzaq* ("get possession," Dnl. 11:6), *lāḇaš*–'clothe' ("take possession," 2 Ch. 24:20), *sᵉgullâ* (Ex. 19:5; Dt. 7:6; 14:2; 26:18; Ps. 135:4; "my special possession," Mal. 3:17); Aram. *ḥᵃsan* (Dnl. 7:18), *ḥᵃlāq*–'share' (Ezr. 4:16)]; AV also INHERIT, (GIVE) INHERITANCE, etc.; NEB also PATRIMONY, PROPERTY, TERRITORY, etc.; [Gk. *ktáomai, ktēma* (Mt. 19:22; Mk. 10:22; Acts 2:45), *hypárchō, hýparxis* (He. 10:34), *échō, katéchō* (2 Cor. 6:10), *peripoíēsis* (Eph. 1:14), *pneumatikós* (1 Cor. 2:13); contextual in 1 Cor. 8:7]; AV also HAVE, GOODS (Mt. 24:47), SUBSTANCE (He. 10:34), etc.; NEB also OWN, HAVE, WEALTH, PROPERTY, etc.; **POSSESSOR** [Heb. *baʿal* (Prov. 1:19); Gk. *ktētōr* (Acts 4:34)]; AV also OWNER; NEB THOSE WHO GET, HAVE; **DISPOSSESS** [Heb. *hāyâ yᵉrēšâ* (Nu. 24:18), *yāraš* (Nu. 21:32; Dt. 2:12, 21f.; 9:1; 11:23; 12:2, 29; 18:14; 19:1; 31:3; Jer. 49:1f.); hiphil of *yāraš* (Nu. 32:39; Dt. 7:17; Jgs. 11:23; 24b); *pûṣ* (Ezk. 46:18); Gk. *katáschesis* (Acts 7:45)]; AV also BE A POSSESSION, DRIVE OUT, SUCCEED, etc.; NEB also DRIVE OUT, OCCUPY, POSSESS, etc.

Possessions in biblical times consisted primarily of flocks and herds as well as parcels of land (Gen. 47:11). Abraham bought a "possession" for a burial place from the Hittites (Gen. 23:9, 20). The law is called a possession of the assembly of Jacob (Dt. 33:4).

Much of the language of possession in the OT is related to the covenant. An essential part of a covenant is an inheritance. The promises given to Abraham were that his descendants would become a great nation and that they would inherit the land. Before Israel could possess Canaan, however, they had to defeat and remove its occupants; thus *yāraš* is translated both "possess" and "dispossess." When Israel took possession of the land, other nations were defeated and lost their possession of the land. The procedure used is evident according to the verbs of Josh. 19:47: the Danites fought, captured, put to the sword, took possession, and settled the land. Once the land was divided among the tribes, it remained to each family in perpetuity (Lev. 25:34; Dt. 4:40; Josh. 14:9). Should anyone lose his land because of debt, carefully laid-out laws caused the land to revert to its original owners at the Jubilee Year. The tribe of Levi, however, did not inherit a unit of land, but certain cities; God Himself was considered their inheritance (Dt. 10:9). In regard to the king, a Psalm anticipated the time when the farthest parts of the earth were to be in his possession (Ps. 2:8).

Among the OT books, Deuteronomy in particular stipulates how the Israelites were to take possession of the land that God had promised them and then conduct them-

selves there. Although they had to be active on the battlefield, God would defeat the enemy (Dt. 7:1f.). There was a balance between God's gift and the people's response. God's gift was foundational, but the people had to put their lives on the line to receive it. To insure God's dynamic presence for success the people were exhorted to observe carefully the statutes and ordinances taught by Moses (4:1; 11:8); their continued occupation of the land was contingent upon their observance of the law (4:5). The people's faithfulness would move God to bless the land so that it would produce abundant crops to satisfy their desires (28:11-14). The right to inhabit the land thus depended on the people's moral and religious strength rather than on their military prowess.

Psalm 37 describes those who will possess the land as "those who wait for the Lord" (v. 9), "the meek" (v. 11), and "the righteous" (v. 29; cf. Isa. 60:21). The OT taught that when the people sinned, the land no longer supported them; they were subject to being dispossessed by another nation (cf. Lev. 18:24-30). But the people could realize their sin and seek God, and He would restore them to their inheritance (Dt. 30:1-11). Consequently the prophets comforted the people taken into captivity by declaring that they would return and again possess the land (Jer. 30:3; cf. Isa. 57:13). These principles no doubt provided the background for the Beatitude, "Blessed are the meek, for they shall inherit the earth" (Mt. 5:5). As stated in Dnl. 7:18, "the saints of the Most High shall receive the kingdom, and possess the kingdom for ever, for ever and ever."

Throughout the OT Israel is referred to as God's private possession (*s^egullâ*). They became unique by entering into covenant with him at Sinai (Ex. 19:5). They were chosen solely because of God's love (Dt. 7:6-8). As a special people they were to be holy unto Yahweh and to keep His commandments, with the result that He would bring them praise, fame, and honor (Dt. 26:18f.). 1 Pet. 2:9f. transfers this concept to the believers, who now are God's own possession. (*See also* PECULIAR.)

The NT emphasizes that true possessions are stored up in heaven (Mt. 6:19-21). Jesus said, "A man's life does not consist in the abundance of his possessions" (Lk. 12:15). Covetousness thereby is avoided. Consequently many members of the early Church sold their possessions to help each other and to spread the gospel (Acts 2:45; 4:34).

POSSESSION, DEMONICAL. *See* DEMONOLOGY; EXORCISM.

POST.

(1) [Heb. *m^ezûzâ*] (Jgs. 16:3; Ezk. 45:19; 46:2). The side post of a door or gate. *See* HOUSE III.C; GATE; FORTIFICATION II.

(2) [Heb. *'ammûḏ*] (Cant. 3:10); AV PILLAR; NEB POLE. The legs or canopy-supports (or both) of Solomon's palanquin.

(3) [Heb. *mišmereṯ*] (2 Ch. 7:6; Isa. 21:8); AV OFFICE, WARD; NEB also STATION; [*māqôm*–'place'] (1 K. 20:24); AV PLACE; NEB COMMAND; [*'ōmeḏ*] (2 Ch. 30:16); AV, NEB, PLACE. The station or duty to which a guard or officer is assigned (*see* GATEKEEPER; WATCHMAN). 1 K. 20:24 apparently refers to Ben-hadad's consolidation of the Syrian army under military commanders in place of tribal chiefs ("kings").

(4) A term used by the AV in the obsolete sense of "courier," translating Heb. *rāṣ* (lit. "runner"; part. of *rûṣ*). *See* COURIER; GUARD. N. J. O.

POSTURES; ATTITUDES. The postures or attitudes by which the Hebrews showed respect or worshiped reflected the cultures of the Fertile Crescent during biblical times. Although the Israelites' religion, which was a revealed religion, had many distinctive features, the postures they assumed in showing respect to persons in authority and in worshiping resembled those of their neighbors in many ways.

Various Hebrew and Greek terms describe the postures assumed by Israelites as well as by Gentiles to show respect or to worship. The context necessarily indicates whether worship is involved. Four physical postures that appear in the Bible include standing, bowing, kneeling, and "falling on the face" or prostrating oneself.

I. Standing.–Archeological evidence from Assyria, Babylonia, and Egypt indicates that standing erect, often with head bowed, was a common position assumed in the presence of a revered person. The Hammurabi stele shows this great king standing to receive the law code from the sun-god (*see* picture in HAMMURABI). Babylonian and Assyrian seals picture priests standing before the throne of Sin or Šamaš. Persons in the OT who stood before rulers include Joseph in Egypt (Gen. 41:46), the advisers in Israel (2 Ch. 10:6, 8), Esther in the Persian court (Est. 5:22; 8:4f.), and Daniel and others in the Babylonian court (Dnl. 1:19; 2:2).

Several passages in the OT mention various persons who were praying while they stood before the Lord. In 1 S. 1:26 Hannah told Eli that she was the one who was "standing" (Heb. niphal of *nāšaḇ*, "be stationed, stand") in his presence when she prayed to the Lord to give her a child (cf. 1 S. 1:1-20). During the dedication of the temple Solomon "stood" (< Heb. *'āmaḏ*, "stand") before the altar with his hands uplifted while he prayed to the Lord (1 K. 8:22; cf. vv. 23-53). The RSV "stood" also translates Heb. *'āmaḏ* in Neh. 9:2, where the assembly of Israelites "stood and confessed their sins. . . ."

In the NT "standing" as a posture of prayer appears several times. In Mt. 6:5 Jesus exhorts, "And when you pray you must not be like the hypocrites; for they love to stand and pray in the synagogues and at the street corners. . . ." Jesus' exhortation was not a restriction on one's posture during prayer, since Jews customarily stood during prayers (cf. SB, I, 401f.). For example, Jews stood during the recitation of the Eighteen Benedictions, i.e., the Shemoneh Esreh (Mish. *Berakoth* iii.5; v.1; *Taanith* ii.2). Also, the school of Shammai said that in the morning one should stand to recite the Shema, but in the evening one should recline (Mish. *Berakoth* i.3; for the prayer texts cf. *HJP*², II, 454-463). What Jesus did condemn was the ostentatious attitude of the hypocrites, since they prayed in order "that they might be seen by men" (Mt. 6:5). Also, the verbal tense of "stood" in Mt. 6:5 indicates an extended period of time during which the hypocrite hoped to be observed by others (R. A. Guelich, *Sermon on the Mount* [1982], p. 281). The parable of the publican and the Pharisee (Lk. 18:9-14) contrasts the prayer of a proud, pious Pharisee, who pompously "stood and prayed thus with himself" (v. 11), with that of a humble, despised tax collector, who, "standing far off" (v. 13), perhaps in the outer court of the temple (SB, II, 246), pleaded with God for mercy.

II. Bowing.–Bowing is often noted in the biblical records, though the exact posture is not always clearly indicated. When persons bowed they might touch their forehead or their breast with their hand, fold their arms, or place their hands on their knees. Reverence and submission are repeatedly associated with bowing. The RSV OT often translates three basic Hebrew terms by "bow" or "bow down." Heb. *qāḏaḏ*, "bow down, kneel down,"

occurs often where people "bow down" and worship the Lord (e.g., Gen. 24:26, 48; Ex. 4:31; 12:27; 34:8; 1 Ch. 29:20; Neh. 8:6). In 1 K. 1:16, 31 Bathsheba "bowed" and did obeisance to King David. Heb. *kāraʿ* also refers to "bowing down" before God (e.g., 2 Ch. 7:3; 29:24; Ps. 95:6), before human kings (Est. 3:2, 5), and before false gods (1 K. 19:18). The hishtaphel of Heb. *ḥāwâ* (see *TDOT*, IV, 249 on the origin of this form; it was formerly thought to be the hithpalel of *šāḥâ;* see KoB, p. 959; BDB, p. 1005) refers to "bowing" before other persons (Gen. 18:2; 23:7; 33:6f.; 1 S. 25:23, 41; 37:10; etc.), before angels (Gen. 19:1), before human kings (2 S. 24:20; 1 K. 1:23; cf. v. 53), and before idols (Ex. 20:5; 23:24; Lev. 26:1; Nu. 25:2; Dt. 5:9).

The RSV NT most frequently translates Gk. *kámptō* by "bow." In Rom. 11:4 (quoting 1 K. 19:18); 14:11 (quoting LXX, Isa. 45:23); Eph. 3:14; and Phil. 2:10, Gk. *kāmptó* combines with Gk. *góny*, "knee," to give "bow the knee." The phrase expresses "the adoration and veneration which is due to God alone and not to any idol (Rom. 11:4); the recognition of God as the supreme judge (Rom. 14:11) or the acknowledgment that Jesus, in his universal majesty and cosmic significance, is Lord of all (Phil. 2:10)" (*DNTT*, II, 859). Also, 1 Clem. 57:1 suggests that repentance is accompanied by "bending the knees [*kámpsantes tá gónata*] of your hearts."

Various Jewish prayers, e.g., the Amidah (< *ʿāmaḏ*, "stand") include a "slight symbolic bow" (Heinemann, p. 274 n. 44); however, the Amidah itself is said while one assumes a standing position (W. W. Simpson, *Jewish Prayer and Worship* [1965], p. 30). *See* GESTURE IV.

III. Kneeling.–This is often the posture of people engaged in prayer. In the OT Heb. *bāraḵ*, "kneel down," and Heb. *kāraʿ*, "bow down," are the words often used to portray this posture. For example, in 2 Ch. 6:13 Solomon "knelt upon his knees" (Heb. *wayyiḇraḵ ʿal-birkāyw*) until he finished his prayer of dedication (1 K. 8:54; Heb. *mikᵉrō[a]ʿ ʿal-birkāyw*, lit. "from kneeling on his knees"). In Ezr. 9:5 Ezra "fell upon [his] knees" (Heb. *wāʾeḵrᵉʿâ ʿal-birkay*) prior to prayer and confession (cf. 10:1). Daniel also "got down upon his knees" (lit. "kneeled upon his knees") three times a day and "prayed and gave thanks before his God" (Dnl. 6:10 [MT 11]).

In the NT Jesus assumes a kneeling position while praying in the garden of Gethsemane (Lk. 22:41). Matthew says that Jesus "fell on his face" (Mt. 26:39), while Mark states that he "fell on the ground" (Mk. 14:35). Possibly Jesus first fell to His knees and then bowed forward so that His face touched the ground. In Lk. 22:41 Gk. *theís tá gónata* (lit. "after he placed the knees"; cf. Acts 7:60; 9:40; 20:36; 21:5) "is Lucan, and the unusual attitude for prayer . . . stresses the urgency and humility of Jesus" (I. H. Marshall, *Gospel of Luke* [*NIGTC*, 1978], p. 830; cf. SB, II, 259-262).

IV. Prostrating Oneself.–Another intensive manner of showing deep reverence or of appealing to a superior was by prostrating oneself, i.e., lying flat on the ground, or kneeling with one's face and hands on the ground. (*See* picture in JEHU.) Abject subjection was frequently involved and could be based either on genuine respect or on a fear of judgment. It is uncertain whether each of the following instances was attended with prayer, but each example does occur in contexts of worshiping God or of submitting to human authorities. Heb. *nāpal*, "fall," is often used to show this action. For example, Abraham fell on his face before God, expressing submission and adoration (Gen. 17:3, 17). Moses and Aaron assumed this position during times of intercession (e.g., Nu. 16:45; 20:6). Joshua also assumed this position when he interceded before the Lord on behalf of the people (Josh. 7:6). Other persons who "fell on their faces" in submission and respect before people include David before Jonathan (1 S. 20:41), Abigail before David (25:23), and Esther before a Persian king (Est. 8:3). Also, Job worshiped God in a position of prostration (Job. 1:20). The prophets Ezekiel (Ezk. 1:28; 3:23; etc.) and Daniel (Dnl. 8:17) fell upon their faces after seeing certain visions.

In the NT Gk. *píptō* is often used for falling down or prostrating oneself before another in adoration. For example, the wise men "fell down" before Mary's child and worshiped Him (Mt. 2:11), Cornelius "fell down" at the feet of Peter (Acts 10:25), and various individuals in the book of Revelation "fall down" and worship (Rev. 4:10; 5:8, 14; 19:4).

For several Jewish prayers prostration was the usual posture. Worshipers in the temple assumed this posture during the rite of the daily whole-offering (Mish. *Tamid* vii.3; cf. Heinemann, pp. 125, 134, 145). Worshipers recited the Alenu prayer from a prostrate position (cf. Heinemann, pp. 271, 273, 274 n. 44). Also, the prayers offered in the temple "in thanksgiving for the deliverance of the Temple from the hands of gentiles" were called the thirteen prostrations (H. Danby, *Mishnah* [1933], p. 592 n. 2; cf. Mish. *Shekalim* vi.3; *Middoth* ii.3, 6). *See* ADORATION II.A; OBEISANCE.

S. J. SCHULTZ G. L. KNAPP

POT [Heb. *sîr*] (Ex. 27:3; 2 K. 4:38-41; etc.); AV also PAN, CALDRON; NEB also CAULDRON; [*pārûr*] (Nu. 11:8; Jgs. 6:19; 1 S. 2:14); AV also PAN; [*dûḏ*] (Job 41:20 [MT 12]); NEB CAULDRON; [*merqāḥâ*] (Job 41:31b [MT 23b]); NEB MIXING-BOWL; [*nēḇel*] (Lam. 4:2); AV, NEB, PITCHER; [*kîyôr*] (Zec. 12:6); AV HEARTH; NEB BRAZIER; [Gk. *xéstēs*] (Mk. 7:4); NEB JUG; [*keramikós*] (Rev. 2:27); AV VESSEL; NEB EARTHENWARE; **FIRE POT** [Heb. *tannûr*] (Gen. 15:17); AV FURNACE; NEB BRAZIER. A vessel usually used in cooking, but the term can also be used to indicate a variety of ceramic vessels.

The *sîr* was a typical cooking pot made of either metal (Ex. 27:3) or, in common domestic use, earthenware. Many references indicate its use for the boiling of meat, especially in ritual contexts. The *pārûr* was apparently similar in form and function and cannot be distinguished from the *sîr*. The term *dûḏ*, usually translated "basket" by the RSV, connotes a vessel for boiling in Job 41:20. The other occurrences of the word seem to indicate storage; the vessel may thus have been a very large cooking pot or krater. The *merqāḥâ* is a pot used for holding ointment. *Nēḇel* seems to be a term for a vessel in general with no specific form, function, or ware intended; elsewhere the RSV translates the word as "skin," "waterskin," "jar," "flagon," "vessel." The *kîyôr* usually refers to the temple LAVER but Zec. 12:6 seems to indicate any hot cooking vessel. The Heb. *tannûr* is a loanword from Akk. *tanūru*, "oven"; usually it refers to the portable oven used generally for cooking (e.g., Lev. 2:4). In the covenant ceremony in Gen. 15:17 apparently Abraham saw an object resembling this oven which looked like "a large inverted bowl without any bottom" (J. Kelso, *Ceramic Vocabulary of the OT* [*BASOR Supp. Studies*, 5/6, 1948], p. 31).

The *xéstēs* seems to have been a common cooking vessel kept clean by pious Jews. The term *keramikós* simply means "ceramic ware" and cannot be defined more specifically. Rev. 2:27 emphasizes its fragility. L. G. HERR

POTASH (Isa. 1:25, NEB). *See* LYE.

POTENTATE. One who wields great power. The term is used by the AV to render Gk. *dynástēs* (RSV, lit., "sovereign"; cf. NEB "holds sway") in 1 Tim. 6:15, referring to God: "the blessed and only Potentate, the King of kings and Lord of lords." *Dynástēs* is used of God also in the Apocrypha (e.g., Sir. 46:5 [RSV "Mighty One"]; 2 Macc. 15:3, 23 [RSV "Sovereign"]), of Zeus in Sophocles *Antigone* 608, and of men in Lk. 1:52 (pl.; AV, RSV, "the mighty"; NEB "monarchs") and Acts 8:27 (AV "of great authority"; RSV "minister"; NEB "high official"). *See also* SOVEREIGN.

POTIPHAR pot'ə-fər [Heb. *pôṭîpar*]. The Egyptian officer to whom the Midianites sold Joseph (Gen. 37:36; cf. 37:25, 27f.; 39:1; Jgs. 8:24) and in whose household Joseph rose to a position of authority (Gen. 39:1-6). The form of the name of Potiphar is Egyp. *p3-dî-p3-R'*, "he whom Re [the sun-god] has given," and is probably an abbreviated form of POTIPHERA with loss of the final *ayin* (Gen. 41:45, 50; 46:20).

Potiphar is described in Gen. 37:36 and 39:1 as a *sārîs*, "officer" (NEB "eunuch") and a *śar haṭṭabbāḥîm*, "captain of the guard" (NEB mg. "executioner"). These titles deserve comment. The "butler" and the "baker" of Gen. 40:2, 7 are also designated by Heb. *sārîs*, a term which elsewhere in the OT often means "eunuch" (2 K. 9:32; 20:18; Isa. 39:7; Jer. 29:2; 34:19). This meaning is problematic in this context, for Potiphar was married (Gen. 39:1), and eunuchs were not prominent in ancient Egypt (Vergote, pp. 40-42). Heb. *sārîs* has its origin in the Akkadian title *ša rēši* or *ša rēš šarri*, literally "the one of the (king's) head" or "(court) official." By the 1st millennium B.C. the term had come to mean "eunuch." It has been observed that the earlier meaning of "official" or "courtier" accords well with the Joseph contexts whereas the later, narrower meaning of *sārîs* is more appropriate in biblical contexts belonging to the 1st millennium B.C. *See* EUNUCH II. B.

The precise meaning of the title *śar haṭṭabbāḥîm* is uncertain, for Egyptian sources provide no exact equivalent. The RSV "captain of the guard" is perhaps correct and would accord with Potiphar's implied command of the prison (Gen. 39:20; 40:3ff.). A nearly identical title is applied to the Babylonian Nebuzaradan (*raḇ ṭabbāḥîm*, "captain of the guard") in 2 K. 25:8 and Jer. 52:14. This translation appears likely in this context (the NEB mg. "executioner" is unwarranted; see Vergote, pp. 31-35).

Joseph's success in Potiphar's house is credited throughout the narrative to the presence and blessing of the Lord. Even Potiphar observed "that the Lord was with him, and that the Lord caused all that he did to prosper in his hands" (Gen. 39:3). Joseph was later imprisoned by Potiphar as a result of the attempted seduction by Potiphar's unnamed wife (39:6-23). Similarities have long been observed between this story and the seduction scene preserved in the Egyptian myth of Bata and Anubis, the so-called Tale of Two Brothers (*ANET*, pp. 23-25; W. K. Simpson, ed., *Literature of Ancient Egypt* [1973], pp. 92-107). But this incident is the only point of contact between the two narratives. Even in the circumstances of Joseph's wrongful imprisonment, "the Lord was with Joseph and showed him steadfast love, and gave him favor in the sight of the keeper of the prison" (Gen. 39:21).

See J. Vergote, *Joseph en Égypt* (1959). G. PRATICO

POTIPHERA po-tif'ə-rə [Heb. *pôṭî pera'*]; AV POTIPHERAH. Joseph's father-in-law (Gen. 41:45, 50; 46:20). His daughter Asenath (perhaps "she belongs to Neit") Joseph received in marriage from Pharaoh. Manasseh and Ephraim were born of this union (41:50-52).

Potiphera is Egyp. *p3-dî-p3-R'*, "he whom Re has given." Re was the sun-god who was worshiped at On, a city later named Heliopolis by the Greeks. Potiphera's title, *kōhēn 'ōn* (priest of On), may indicate that he was high priest of this center of Egyptian sun-worship.

Although this form of name does not appear in Egypt until the 10th cent. B.C., one cannot rule out earlier use, since many inscriptions from the time of the Hyksos (approximately Joseph's time) were destroyed.

See also POTIPHAR. G. PRATICO

POTSHERD [Heb. *ḥereś* (Job 2:8; 41:30 [MT 22]; Ps. 22:15 [MT 16])]; AV also STONE (Job 41:30); NEB also PIECE OF A BROKEN POT (Job 2:8), SHERD (Job 41:30); **SHERD** [Heb. *ḥereś*] (Isa. 30:14); NEB SHARD. A piece of broken pottery. Its sharp edges could be used to scrape boils or pus (cf. the LXX) from the skin (Job 2:8), and the underbelly of Leviathan was so rough that it was like "sharp potsherds" (41:30). Somewhat larger pieces could be used for carrying hot coals or water (Isa. 30:14). The dry climate of the Near East made the potsherds dry as well (Ps. 22:15). Potsherds were also a common WRITING surface (*see also* OSTRACA); their greatest importance is in dating, for frequent changes in pottery style and the presence of sherds all over the ancient Near East allow archeologists to establish a relative chronology. *See* ARCHEOLOGY VI. G. A. L.

POTSHERD GATE [Heb. *ša'ar haḥarsîṯ*–'gate of the earthenware pots'; Gk. *pýlēs tēs charsith* (B *tharseis*)] (Jer. 19:2); AV EAST GATE; NEB GATE OF THE POTSHERDS. A gate of Jerusalem leading to Topheth and the Potter's Field at the east end of the Valley of Hinnom, possibly the same as the Dung Gate. *See* JERUSALEM III.D.5.

POTTAGE [Heb. *nāzîḏ*–'boiled food'](Gen. 25:29, 34; 2 K. 4:38-40; Hag. 2:12); NEB BROTH, POT; in Gen. 25:30 the RSV renders "that red pottage" for Heb. *hā-'ăḏōm hā'ăḏōm hazzeh* (cf. *AB* "that red stuff"). Eng. "pottage" denotes a soup made of vegetables. *See* FOOD II, IV.

VII. Analytical Methods
VIII. Conclusion

I. Introduction.–The "Neolithic revolution," when the culture changed from a food-gathering society to a food-producing society, introduced a need for storage vessels of all sizes. Groups of potters provided the pots and pans of antiquity and containers for a vast array of needs. The working of clay and the making of pottery is among the oldest of the crafts and is the only technology that has changed very little from early times.

Potters built the first silos for silage to feed animals, and large ceramic vessels were made to contain various grains used in households for food. Potters formed the cups, plates, bowls, jugs, bottles, and cook pots used by all. Water bottles were made that actually kept the water cool. This was especially important in desert lands where the

POTTERY

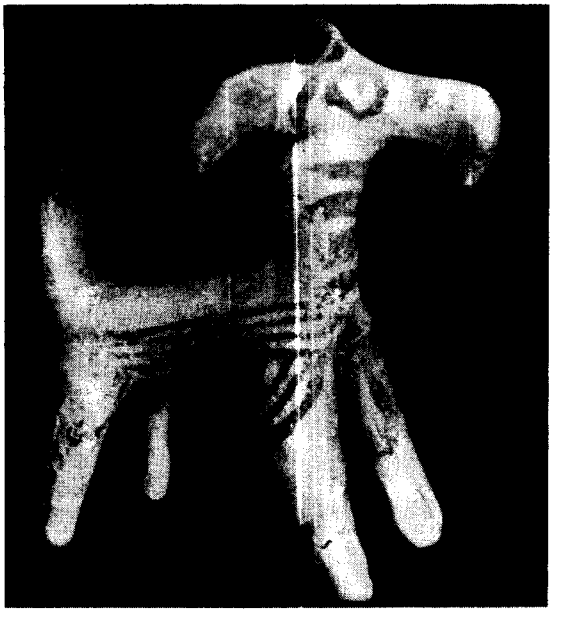
Model of a potter's shop from a tomb at Saqqârah (The Metropolitan Museum of Art)

heat was intense and oases were far apart. Clay was used to cover roofs and to build kilns. Clay was even used to make the wheel heads on which the ancient potter turned his clay. Clay containers contained the cosmetics that women used and, at times, stored out-of-season clothing. Ritual vessels were manufactured for religious purposes, and of course ceramic vessels played an important part in death rituals. The potter provided his skill to meet the daily human needs from birth to death. He was a prominent figure with importance to his community.

II. Materials.–The basic material used by potters is CLAY. Clays are basically alumino-silicates with many other minor but important components; among these, oxides. Chemically speaking, clay is a hydrated silicate of aluminum ($Al_2O_3*2SiO_2*2H_2O$) mixed with various impurities which may run as high as 50 percent. In a popular sense, clay is a fine-grained rock which becomes sticky when wet. A concise definition is offered by the American Ceramic society as follows: "Clay is a fine-grained rock which, when suitably crushed and pulverized, becomes plastic when wet, leather-hard when dried, and on firing is converted to a permanent rock-like mass."

The word "ceramics" is derived from Gk. *keramikós*, which simply means earth or earthen. The potter makes articles from naturally occurring earths. Clays come from weathered rocks that are broken down by the influences of air, water vapor, and other ingredients contained in the air; by the action of water as in rain, rivers, hail, lakes, or the sea; by the action of snow and ice; or by the action of plants and animals in their growth and decay.

Clays are moved from their point of origin by sedimentation along the course of a river; by large masses of ice, e.g., a glacier; or by air. (Anyone who has traveled in the Middle East or the Far East has encountered wind-blown deposits of clay called loess.) Clay could be deposited at the mouth of a river, in a freshwater lake, or in a sea or an ocean.



Clay is abundant all over the earth, and throughout the Middle East there are clays that can be used by the potter, the brickmaker, the roofmaker, or the image-maker. Many of the Middle Eastern clays have a high iron content along with concentrations of calcium, lime, and salts. The presence of irons in the clay produces a range of color from brown-black to salmon buff to dusty white depending on the firing variables of time, temperature, and atmosphere. In some areas potters mix and blend different clays together to form a clay body suitable for their needs. At times materials such as dung or straw were added to the clay to make it more porous or more workable (see III below). Most clays in the biblical region are thixotropic clays, i.e., clays that become more plastic and softer the more the potter works them but harden up quickly when allowed to stand. These properties are vital for potters who are building vessels by hand or on the wheel, especially if they are manufacturing large storage vessels.

Potters sought out deposits of clays that contained contrasting oxides, and after water-levigating the clays from one settling basin to another, finally produced a micrograined clay that could coat the exterior of a vessel or be applied with a crude brush into designs. This material is called "slip" in potters' terminology. Some Early Bronze Age and Iron Age pottery was decorated with slips (see below).

III. Techniques.–During the long period of Neolithic cultures in the Syro-Palestinian area (the Pre-pottery Neolithic B Period) the use of clay was well established in nonpottery functions. This was a developmental period that occurred prior to the 6th millennium B.C. During this Pre-Pottery Neolithic B Period fired clay was used as a fine-grained plaster on walls and floors of large rectangular rooms (e.g., at the "Jericho" settlement). These walls were often cream or pinkish in color and highly burnished.

Burnishing is a technique much used by early potters. Clay that has slightly hardened but not totally dried is in a state called "leather-hard." The clay is hard but feels cold. If clay in this state is rubbed briskly with a smooth stone or bone or a polished piece of wood it develops a sheen. This is caused by a fine microlayer of clay being brought to the surface and being polished. Burnishing can produce a high gloss on clay. At times it has been misread as a layer of clay slip or a glaze. In addition to using clay as a plaster, human skulls were built up and decorated by plastering clay over the skull itself and at times inserting stones as a form of mosaic. Clay figurines were also formed of unfired clay; in fact, clay anthropomorphic and zoomorphic images go far back into human development — as far back as 30,000 B.C. People have always formed images of their own likenesses, images of the world in which they lived, and images of their gods. They created

Zoomorphic clay figure from Cyprus (700-475 B.C.) (R. H. Johnston)

POTTERY

Zoomorphic vessel from Megiddo (Oriental Institute, University of Chicago)

these images for fertility rituals, magic rituals to explain and control their environment, and to develop a god/magic relationship — the beginnings of shamanism.

The making of clay vessels and the discovery that clay can be made hard by fire developed in some unknown manner. There are many theories. The closest ceramic tradition to the Syro-Palestinian tradition of clay would be from southwestern Anatolia. Particularly the sites of Hacılar and Çatal Hüyük have great parallels. The ceramic tradition at these sites goes back to 9000-7000 B.C. This is among the earliest uses of clay vessels and the steps toward fired clay. Early potters added tempering material (aplastic material) to their wares as well as straw. The use of threshing-floor straw is well documented in the OT when the Jews were in bondage in Egypt and employed as brickmakers (Ex. 1:14; 5:7-14). The addition of aplastics to a clay body can reduce the thermal shock to ceramic ware used as cooking pots. It also can reduce the expansion and contraction and breakage during firing in pit firings or in simple updraft kilns. Straw added to clay produces a more porous body — very important to assist in firing survival and in the making of water bottles. A porous body will allow the contained water to leach through the walls of the vessel. As it does, the water coming to the exterior of the vessel evaporates and thus by a natural process of refrigeration cools the water contained inside the vessel. The addition of dung and straw to the clay body also acts as a binder in the manufacturing process and helps hold a poor quality clay together as it is being formed. Some believe that bacteria added to clay in dung also help to make a clay body more plastic.

The preparation of clay for making of pottery is simple. The clay is dug and brought to the potter's work area. It is crushed by beating it with logs or rolling over it with a heavy roller. The large stones are removed. A pit is dug and lined with stones or plastered. The clay is dumped in and water added to produce a slurry. The heavy stones settle to the bottom and the clay can be skimmed off to get rid of excess water. The clay is allowed to stand in its plastic state for several days to age. It is then ready for use. The potter will have his assistant work the clay into small pugs that are the appropriate size for the vessel that is to be made. The potter or his helper de-airs, or wedges, the clay by slapping pieces of it together or by kneading the clay like bread dough. Failure to remove the air results in increased breakage in the firing process — the air becomes steam and expands during the temperature increase, eventually exploding the piece.

The earliest pottery from Pottery Neolithic and the Early Bronze I and II periods was handmade. The potter shaped the ware with his hands only; no wheel was used and the tournette had not yet been invented. The potter pinched and paddled the clay to form the shape he wanted. He could make large vessels by adding coils on top of coils of clay, smoothing each coil into the vessel form. Vessels 2 m. (6 ft.) and larger in height were made by this technique. The forms were smoothed with sticks and bones to a refined shape and then polished or burnished when the ware reached the leather-hard state. Decoration was incised or scratched into the vessels and, at times, punctate dots were pushed into the vessel with a round stick. Herringbone, zigzag lines, and bands of parallel incisions were also used.

Early in the making of pottery vessels the use of slip painting was discovered. Slip is a very fine-grained colored clay. A light colored slip could be painted over a rough dark clay or vice versa. Designs could be incised through the slip-covered vessel to expose the contrasting color underneath, or designs could be painted on with colored slip. The slip itself could be burnished. The only tools used were the potter's hands, some sharp sticks, polished stones or bones, and crude brushes sometimes made by chewing the ends of plant material and exposing the bristlelike fiber. Handles were added by using coils of clay, thus enabling better and safe handling of the vessel as well as allowing the vessel to be hung from a peg or a house beam. The bases of early vessels were rounded since they were placed in concave depressions in early households or placed in clay or woven tripods or ring holders. Since few surfaces were flat, flat-bottomed vessels were of little use.

Another decorative technique used by the earliest potters was combing. Both horizontal and vertical bands of combing were used as well as wavy combing. Combing was done by dragging a stick with teeth cut into it over the surface of a vessel. The combing could be used to help refine the shape of the pot. Perhaps the most common technique of early potters is the paddle-and-anvil technique. Anvils made of clay, wood, or stone could be used inside the pottery while a wooden or clay paddle could be used on the exterior to shape and thin the pottery sides. If designs have been carved into the paddle, the pottery can be decorated with an overall pattern as it is being shaped and formed. By using the paddle and anvil the potter could make pieces that were quite thin-walled and cylindrical.

Early firing was probably done by pit firing. A pit was dug and at times lined. Then pottery and fuel were stacked in the pit and fuel over the pit. Using brush, straw, or dung cakes for fuel, earthenware temperatures were easily reached. Later, simple updraft kilns were constructed with a firing chamber under a chamber for holding pieces to be fired. The floor of the pottery chamber was pierced with carefully placed holes to insure a more even temperature. Again, earthenware temperatures could easily be reached, but since the heat could be better controlled, there was less distortion in the fired pieces and less breakage.

The next step in the manufacturing process was the introduction of a tournette. The tournette allowed the pot-

POTTERY

Village potter in Cyprus working on a tournette (R. H. Johnston)

ter to rotate the piece as he worked, and with the help of an assistant the potter could make more pieces in a given workday. Tournettes were made of clay, wood, or stone. Several examples of tournettes have been found.

Sometime during the E.B. II period (2900-2650 B.C.) the true potter's wheel was invented. Pottery from this time shows that it was made on a centrifugal wheel (cf. Jer. 18:3f.). Wheels like this could be spun by an assistant or turned by the potter's feet. The potter could place a pug of clay on the wheel, center it while it was spinning, and open, draw up, form, and finish a vessel in a short period of time. No one is certain exactly when or where the potter's wheel was invented, but it appears in the Middle East at many places *ca.* 2750 B.C. Wheel-made pottery shows distinctive signs of the method of manufacture. The marks of the potter's hands are evident in the inside drawing rings left there when the potter formed the piece.

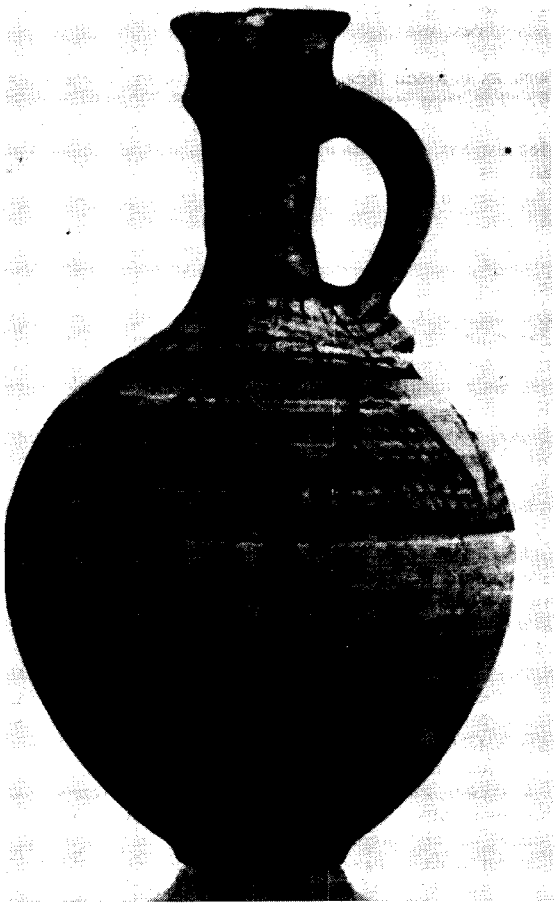
The technique of the ancient Palestinian potters when using a kick wheel can be described by the following steps or procedures: (1) The potter or his assistant wedges (deairs) the clay and forms it into a pug. The pug size varies depending on the size of the pot to be made. (2) The pug of clay is fastened to a "bat" made of wood or fired clay that is in turn fastened to the wheel head. (3) As the wheel is turned, the pug is centered. (4) The pug is opened by forcing the hand down into the pug while the wheel is spinning. (5) The opened form is raised up by exerting pressure inside against the outside with the potter's hands. The centrifugal force of the turning wheel thins the clay between the potter's hands and stretches the clay upward. (6) The potter opens or closes the form, making the desired shape. (7) Handles are added with coils or bands of clay. (8) Decorative elements are applied using combs, sticks, colored slip, or roulette. (9) The form can be refined by the paddle-and-anvil technique. (10) The finished piece is removed from the wheel and put aside to dry; later it will be trimmed to its final shape. (11) The piece is dried and prepared for the firing. The making of an averaged-size pitcher form can take 5 to 10 minutes. The wheel enables the potter to make many pieces very quickly.

The press mold was a technique often used to make figurines such as the Astarte of the Canaanites during the time of Joshua (*see* pictures in GODS; IDOLATRY). Parts of press-molded figures could be added to hand-formed parts. An example might be adding a press-molded head to a hand-formed figurine. Press molds were made of wood, clay, or stone. Wet clay is pressed into the mold to receive the negative cut-mold impressions. If a head is to be made, it is press molded in two halves that are joined together while the clay is plastic. Press molds were also used to make seal-like forms that could be added to a clay vessel as decorative elements. This technique is called sprigging. For example, animal or plant forms can be press molded and attached to a newly formed clay vessel. A mold or stamp can also be used to make seals. These seals were trademarks or signs of royal ownership.

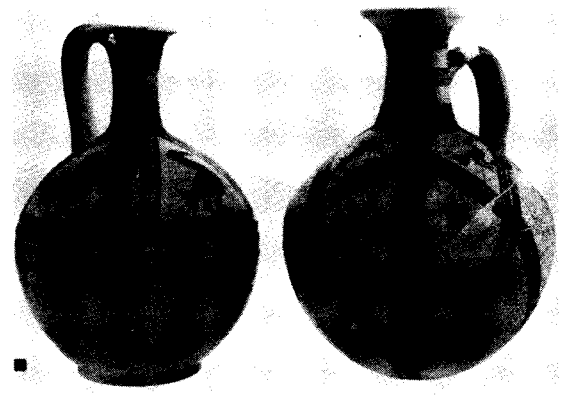
IV. Characteristics of Palestinian Pottery.–A. Neolithic (*ca.* 9000-4300 B.C.). The use of fired clay or pottery is found during this era. The vessels were handmade with relatively simple forms, often basket-like, bowl-shaped, and in small and large jar shapes. Much of the clay fabric is coarse with indications of straw temper. Incised decorations included chevron and herringbone with triangular elements; punctate decorations also appear. Handles are formed of crude coils of clay or of knob, ledge, or lug shapes. Some vessels have zoomorphic forms as handles. During Neolithic times there are also examples of finer ware made of a finer clay, with smoothed surfaces, at times coated with burnished slip. There are also examples of burnished designs. Bases were often flat.

B. Chalcolithic (*ca.* 4th millennium). The pottery from this period is represented by the Ghassulian and Beersheba cultures. The lines between the Neolithic and the Chalcolithic cultures are elusive at best. Wares are thinner and show evidence of a better knowledge of pyrotechnology, better kilns, and less added aplastic material. Forms are more refined and complex. There are u-shaped bowls, bowl-chalices, cornets, goblets, jars (medium necked and holemouth jars), incense burners, and large pithoi. Rope decorations appear and punctate decorations continue. Handles are ledge, knob, and coils of clay; some handles had a small hole through which rope could be passed. The use of redslip is widespread, as is burnishing. Incised designs persist. Churns appear as a more complex ceramic form.

C. Early Bronze (*ca.* 3100-2200 B.C.). This is a complex period in ceramic history and an era of change, development, and refinement. Forms appear to be handmade. Later in the Early Bronze era the tournette begins to be used, and later still the potter's wheel. The ledge handle starts as a plain handle, becomes thumb indented, then is pushed up, and later folded over (scalloped). Flat-bottomed jars with spouts appear, as do juglets of all sizes, bowls (some with an "omphalos" in the center), pedestaled bowls, teapots, platter amphoriskoi, twin bowls (some connected by a hidden channel), and incense burners (some bases are round). Decorative elements include typical E.B. I red-burnished slip, net painting, brown-burnished slip, painted slip decorations (bands, diagonal lines, crosshatch, vertical and horizontal bands), punctate decorations, and rope decorations. *See* Plates 68, 70. Current work being done at Bâb edh-Dhrâ', Numeira, Ṣâfi (Zoor), Feifa, and Khanazir will add new dimensions to the study of Bronze Age pottery.



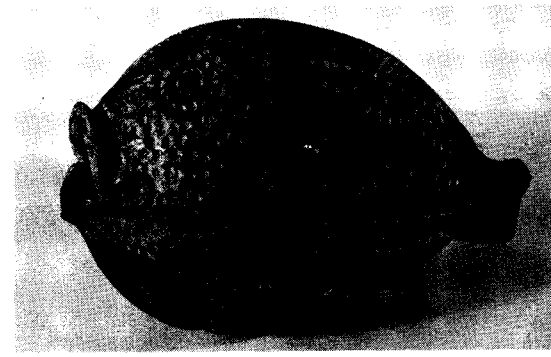
D. Middle Bronze (2000-1500 B.C.). Middle Bronze pottery is best studied from reports from Tell Beit Mirsim, Lachish, Megiddo, Jericho, and Tell el-Fâr'ah (Sharuhen). Vessels are spherical and barrel-shaped with less defined shoulders. Pottery has flat bases or no distinct base at all. There are less handles with the exception of some loop handles. Firing techniques and clay preparation appear to be more sophisticated. Evidence of the tournette is re-



POTTER

flected in vessels with handmade bodies and with wheel-turned necks. Vessel joins are easily detected, showing the making of separate parts of the vessel. Typical forms are the caliciform jar and bowl lamps with four pinched spouts, carinated bowls, some with a trumpet foot, button-based juglets, double-handled jugs, elongated dipper juglets, teapots, and lamps. The centrifugal wheel is apparent in M.B. II with a much greater refinement of form. These include open rounded bowls, goblets, high-footed goblet-chalices, kraters, storage jars, bottles, and juglets of all sizes and shapes. The forms are not only richer but more elaborate and graceful. *See* picture in ARCHEOLOGY OF PALESTINE AND SYRIA.

E. Late Bronze (1550-1200 B.C.). During the later stages of M.B. II and into the L.B. period there was an influx of pottery from Cyprus ("bilbils," "milk bowls") and from Mycenae (stirrup jars, pyxides, and piriform jugs). This is the period of bichrome ware and ware in the shape of and decorated with animal forms and geometric designs. The potter's centrifugal wheel is evident in the shape of vessels and in the band decorations of the vessels. Bowls (*see* picture in BOWL), goblets, chalices, kraters, storage jars, cooking vessels, pithoi, amphoriskos shapes (*see* Plate 70), mugs, amphora, and Astarte plaques are common. Decorative elements include banding, birds, fish, geometric forms, bulls, tree of life, goats, *et al.* The pilgrim flask appears to originate during this period and has become one of the most characteristic forms of this period.



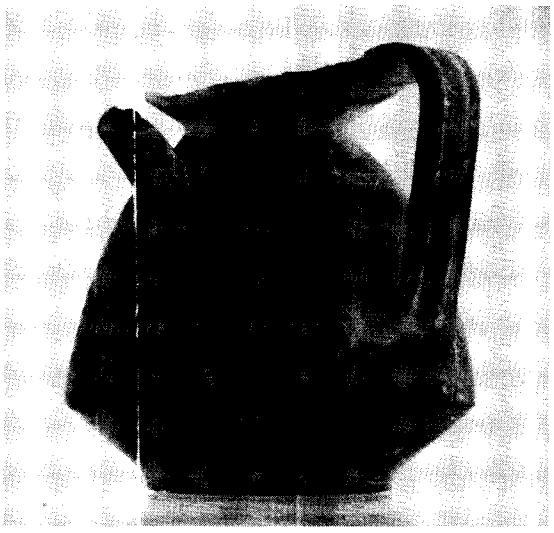
Painted jug with band decorations. From Râs el-'Ain (just E of Tel Aviv), M.B. II A. (Israel Department of Antiquities and Museums)

Two jugs from Tell el-'Ajjûl. This bichrome ware was a high point in pottery art (M. B. II.C-L.B. I) (Israel Department of Antiquities and Museums)

Handleless pottery vessel in the form of a fish. This style of pottery is called Tell el-Yehudiyeh ware, after the site in the Egyptian Delta where it was first identified (Israel Department of Antiquities and Museums)

Goblet decorated in chocolate-on-white style. Note the geometric designs and ibex (Israel Department of Antiquities and Museums)

POTTERY



A pilgrim flask (R. H. Johnston)

Duck-shaped vase from Cyprus (850-600 B.C.) (R. H. Johnston)

Hellenistic "teapot" from Mareshah (Israel Department of Antiquities and Museums)

F. Iron I (1200-1000 B.C.). Pottery types reflect the Bronze Age. This is the period of Philistine pottery. Typical are bichrome bowls with alternating red and black bands, trefoil-mouth jugs and juglets, black burnished vessels, chalices, geometric slip decoration, including burnished and slip-painted forms as well as natural forms and birds. Some imported wares or cultural influences are from Phoenicia, Cyprus, and the Aramean kingdom. In addition to red and black slip, we also find yellow and brown slip sometimes covering most of the vessel and at times highly burnished.

G. Iron II (1000-587 B.C.). The skills of the potters using the centrifugal potter's wheel are evident by mass production of vessel types. Wheel burnishing is apparent. Bowls are made with alternating red and black rings similar to the preceding period (*see* Plate XX). Some deep bowls have stump legs, some have coiled legs, and some have band handles. Some vessels are perforated like sieves. Burnishing continues as does slip painting, both by hand and on the wheel. One-handled cups appear. The bases of vessels clearly show the cutoff marks caused by cutting them loose from a turning wheel with a string. There are oil jugs, chalices, cups, pitchers, cook pots, wares, goblets, kraters, pithoi, decanters, spouted jugs, and figurines.

H. Exilic-Persian (*ca.* 587-332 B.C.). Black-polished ware appears, slip-coated, reduction-fired, and polished to a high sheen glossy black. Bottles, jars, bird-beaked vessels, tripod vessels with three legs, cluster pottery, zoomorphic vessels, lamps, figurines, basket handles, lug handles, and zoomorphic handles are characteristic. Decorative elements include geometric painted designs, animals and bird representations, plant forms, colored bands, wavy lines, and impressed elements done with stamps.

I. Hellenistic (*ca.* 332-63 B.C.). Imported black ware as well as imitated local copies are common. There were Rhodian type jars, inscribed (stamped) handles, wheel-thrown lamps, molded (piece molded) lamps with molded decorations, unguentania and bowls, plates, and bottles of all sizes.

J. Roman (63 B.C.-A.D. 324). This period saw an influx of terra sigillata, wheel-made and wheel-trimmed precise forms, polished, fine-grain, red-slipped clay. Clay was probably water-levigated to sort out fine clay particles. Forms have well-defined shoulders and base detail. Rims are carefully finished. There is much use of rouletting as decoration as well as use of stamped and sprigged decoration. Nabatean ware in Jordan is extremely thin and aesthetic with painted floral decorations. There were Herodian spouted lamps, ribbed ware, jugs, bottles, flasks, juglets, and figurines. Some decorative elements were either imported or copied from Italy. Perhaps Roman potters came to Palestine to work. Roman ware is a high point in pottery in the Syro-Palestine area in terms of technique and in the use of decorative elements.

K. Byzantine (A.D. 324-630). Incised lines and ribbing are common decorative elements. There are long-necked vessels with twisted handles — at times, perhaps, copies of metal vessels. Combed patterns are common, perhaps a reflection of Bronze Age techniques. There are pedestal lamps and button-based vessels. Pottery takes on a more Eastern flavor. Cooking vessels and jars use the ribbing technique mentioned earlier. Some bowls are pedestal bowls. Christian symbols are used on lamps, *et al.*

See also the chart in ARCHEOLOGY.

V. Potters, Pottery, and the Bible.–The OT differentiates between native clays (dry or wet) and clays specially sought out and prepared for the making of pottery. According to Kelso (whose *Ceramic Vocabulary* is the best discussion of the OT material) Job 10:9 is the best illustra-

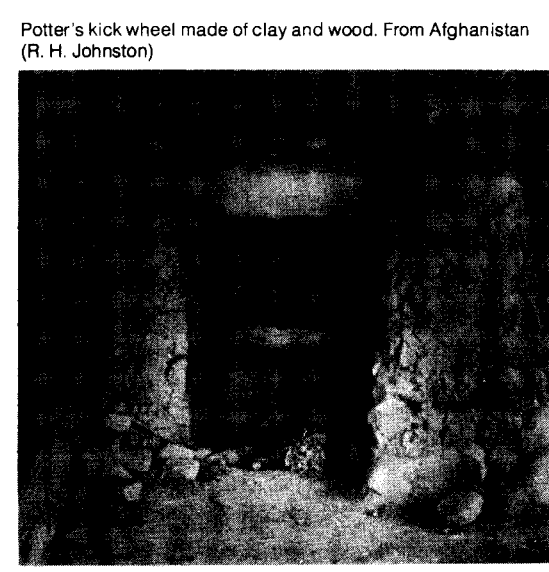
tion of the different words for clays: "Remember that thou has made me of clay [*ḥōmer*] and wilt thou turn me to dust [*'āpār*] again?" *Ḥōmer* is the Hebrew word for a worked clay or a potter's clay, or in some phrases, a wet refuse clay (cf. "mire" in Job 30:9; Isa. 10:6). It is also used for brick clay ("mortar," Ex. 1:4; Isa. 41:25; Nah. 3:14), and in Job 38:14 it may refer to the clay used for stoppers of wine jars or storage jars. (cf. E. Dhorme, *Comm. on the Book of Job* [Eng. tr. 1967; repr. 1984], pp. 581f., who identifies it with terra sigillata). A seal was often stamped in the wet clay to denote ownership. (Archeologists carefully study these seals and often are thereby able to establish a relative chronology.) In addition to its common meaning "dust," Heb. *'āpār* can also refer to potter's clay, the only kind of "dust" that can be used to fashion a figure or image (Kelso, p. 5); thus several texts use it in the imagery of God as potter (Isa. 29:16; 45:9; 64:8 [MT 7]; Jer. 18:1-4; cf. Gen. 2:7, 19).

The Hebrew word for wet clay is *ṭîṭ*, which seems to refer to a native wet clay with no preparation being done to make it into a workable potter's clay (see III above). Thus it is cast up by the sea ("dirt," Isa. 57:20) and may be found on river banks ("mire," Job 41:30 [MT 22]). It is also found in the bottom of a cistern ("mire," Jer. 38:6), and several texts refer to the "mire of the streets" (2 S. 22:43 par. Ps. 18:42 [MT 43]; cf. "mud," Zec. 9:3; 10:5), which Kelso (p. 5) called wet refuse clay, formed from crumbled bricks that had gotten wet. It is also used of a bog (Ps. 40:2 [MT 3]; 69:14 [MT 15]). Aram. *ṭîn* (cognate of Heb. *ṭîṭ*) is also used of clay in Daniel's interpretation of Nebuchadnezzar's vision of a great image, whose feet and toes were partly of potter's clay *(ḥ^{a}sap dî-p^{e}ḥār)* or miry clay *(ḥ^{a}sap ṭînā')* (Dnl. 2:41, 43).

Two other words for clay are *'ereṣ* and *'^{a}ḏāmâ*. Both words usually refer to the land or the earth or the ground in general, but a few texts may have more specific, concrete substances in view. Thus in Ps. 12:66 (MT 7) *'ereṣ* may refer to a fired clay (see M. Dahood, *Psalms*, I [*AB*, 1966], 74f.); cf. also Lam. 2:21 ("dust"). In Jgs. 6:37-40 *'ereṣ* ("ground") may refer to the marly clay used on a threshing floor (see Kelso, pp. 5, 42). Heb. *'^{a}ḏāmâ* may also have the meaning of a dry native clay; cf. Isa. 45:9, *ḥarśé '^{a}ḏāmâ*, "earthen vessel," and Gen. 2:19, where God forms all the creatures from the "ground" (Heb. *^{a}ḏāmâ;* cf. v.7).

Other words used to describe pottery are: Heb. *ḥereś*, which describes fired clay, pottery ("earthen vessel," Prov. 26:23; "vessel," Isa. 45:9), or a potsherd (Job 2:8; 41:30 [MT 22]; Ps. 22:15 [MT 16]; "sherd," Isa. 30:14); *k^{e}lî ḥereś*, pottery or a fired ware that has gone through the kiln to make it more durable ("earthen vessel," Lev. 6:28); *k^{e}lî yôṣēr* ("earthen vessel," 2 S. 17:28; "potter's vessel," Ps. 2:9); *niḇlê ḥereś* ("earthen pots," Lam. 4:2); *nēḇel yôṣēr* ("potter's vessel," Isa. 30:14); Aram. *ḥ^{a}sap*, which corresponds to Heb. *ḥereś* and thus denotes a fired clay or terra cotta. According to Kelso (p. 7) "clay" in Dnl. 2:33-35, 42, 45 refers to terra-cotta inlays that were built into the iron feet of the image (cf. *ḥ^{a}sap dî-p^{e}ḥār*, "potter's clay," and *ḥ^{a}sap ṭînā'*, "miry clay," in Dnl. 2:41, 43).

The potter is called a *yôṣēr* (< *yāṣar*, "to form, shape") in Hebrew (Isa. 29:16; 41:25; Jer. 18:2-4, 6; etc.) and *p^{e}ḥār* in Aramaic (Dnl. 2:41). *Yôṣēr* is one of several Hebrew terms for craftsmen who make objects of clay, wood, metal, or other materials. According to Kelso (p. 7) it is the potter to whom this term is most often applied. 1 Ch. 4:23 seems to refer to royal potters (see I. Mendelsohn, *BASOR*, 80 [Dec. 1940], 17-21), but their connection with the *lmlk* inscriptions is problematic (contra Kelso: cf. H. G. M. Williamson, *1 and 2 Chronicles* [*NCBC*, 1982], p. 61).



Other technical terms include *rāmas*, "to tread (clay)" (Isa. 41:25; Nah. 3:14; note that in both instances the term for clay is *ṭîṭ*); *qāraṣ*, "to pinch (off)," used only in Job 33:6 in this technical sense of pinching off a pug of clay from the large prepared batches of clay (cf. KoB, p. 857, which notes the cognate Akkadian expression, *qarāṣa ṭîṭa*, "shape clay"; see also the comms., many of which note that this Akkadian expression occurs in the Gilgamesh Epic when Aruru creates Enkidu from clay [*ANET*, p. 74]). The *bêṯ hayyôṣēr*, "potter's house," served both as dwelling and workshop (Jer. 18:2; Kelso, pp. 8f.).

The only specific reference to a potter's wheel is Jer. 18:3. Here the term is *'oḇnāyim*, a dual form that no doubt refers to the traditional kick wheel used at that time. The potter turns the wheel with his feet and works the clay on an attached smaller wheel located on the top of the wheel shaft. Pottery was also made by hand, e.g., by the paddle-and-anvil technique and by the tournette. Jer. 18:4 offers more about the craft of manufacturing pottery: "And the vessel he was making of clay was spoiled in the potter's hand, and he reworked it into another vessel, as it seemed good to the potter to do." When working on the potter's wheel the clay can become too wet and collapse or the object being made can get off center and fly off the wheel head. Air bubbles can ruin a piece, as can many other factors. The potter, like many other craftsmen, is careful not to waste his raw material, so he will reform the piece into a clay ball and make another object from the clay.

Terms for "kiln" include *tannûr*, which really means oven (Lev. 2:4; 26:26) but which could also be applied to the firing of pottery (cf. Kelso, p. 9, on Neh. 3:11; 12:38); *kiḇšān* (Ex. 9:8, 10; 19:18; "furnace," Gen. 19:18), which according to Kelso (pp. 40f.) is a smelting furnace; and Aram. *'attûn* (Dnl. 3), which Kelso (p. 38) said was probably a brick kiln. The early kilns were simple updraft kilns with a riddle floor separating the firing chamber for the pottery from the fire pit, where the kiln was stoked using straw, dung cakes, or wood as fuel. Kilns such as these can be found all over the Middle East today, still being used to fire pottery. *See also* FURNACE; OVEN.

The glazing of pottery did not occur in Syro-Palestine

Potter's kick wheel made of clay and wood. From Afghanistan (R. H. Johnston)

during biblical times. Pottery was decorated using colored clays, colored slips, or at times was entirely covered with colored slip and burnished to a relatively high gloss. This gloss is retained after the firing. The use of the term "glaze" in Prov. 26:23 ("Like the glaze covering an earthen vessel") is a conjecture; the MT reads *kesep sîgîm*, "silver dross." The conjecture is based on supposed Hittite *(zapaga[y]a)* and Ugaritic *(spsg)* evidence. Despite the appropriateness of the image for the context, further research has suggested that the Hittite and Ugaritic terms mean "bowl," not "glaze" (see H. Cohen, *Biblical Hapax Legomena in the Light of Akkadian and Ugaritic* [1978], pp. 122f. n. 40). There has been no evidence of the use of a lead or tin glaze in OT times. We do know that the bricks of the Lion Wall in Babylonia were glazed. These date to the time of King Nebuchadrezzar II (605-562 B.C.). Mention must also be made of Egyptian faience ware such as the famous turquoise hippopotamus that dates back to 2000-1700 B.C.

Some glazed tiles have been found from the Egyptian Predynastic period, prior to 3200 B.C. These glazes used an alkaline flux and were fired very low. Glazed ware was, however, not widely made in ancient Egypt. The Egyptian faience body was high in silica- and borax-type fluxes. As ware dried, the soluble fluxes were drawn to the surface, forming the glaze-like coating in the firing. Copper greens and turquoise were used in the early period, and by 2000 B.C. cobalt blue and manganese black were used. By 1500 B.C. other colors emerged, such as manganese purples, chrome yellows and orange, iron reds and opaque white from tin oxide. Again, the writer does not know of any of this techonology during OT times in Syro-Palestine ware. With the rise of Islam after A.D. 622, one begins to see the spread of a variety of Islamic glazes.

VI. Archeological Significance.–Of all the material excavated, the largest amount is ceramic. On a large excavation literally thousands of ceramic pieces are found. Clay is durable, resistant to change, and the key to the dating of any modern site. In 1890 Sir Flinders Petrie excavated the site of Tell el-Ḥesī. In his publication of a corpus of pottery he recognized the chronological value of ceramic material in a stratified excavation. He established a scale of dated sherds. Since that time the process of establishing chronologies through the stratified ceramic yield has been intensified and expanded. A trained ceramic archeologist can sift through sherds or fragments of ceramic objects and "date" a site. In many cases this dating will be more definite than carbon-14, potassium-argon, or thermoluminescent dating.

Pottery being excavated in a temple doorway at Tell Kittan (Israel Department of Antiquities and Museums)

As ancient civilizations grew, as needs changed, and as foreign influences moved in, the style of pottery changed. When an ancient city was conquered one of the prizes was the craftsmen of that city; this provided interchange between the conquerors and the conquered. Technology changed too and is an important aspect in studying ceramics. Trade among towns and cities, among countries, and among continents resulted in changes in identifiable ceramic forms. The ceramic yield can provide clues to diet, produce, animal husbandry, and, at times, clues to weapons, games, and cultural mores.

Much Syro-Palestinian pottery was earthenware pottery, which is quite porous. Some of the Hebrew dietary laws may have resulted from the type of vessels used. For example, milk stored in an earthenware bottle will soak into the pores of the clay, turning sour and allowing bacteria to build up. This would cause the vessel to be "unclean." Earthenware plates and cups would suffer from the same problems. We are dealing with ceramic material that not only provided the pots and pans but light, heat, shelter, *et al.* No wonder this is the most studied material on any excavation. Ceramic specialists are a part of every major excavation now in progress. They apply their knowledge and skill to the knowledge and skills of all the specialists that make up an excavation team. The ceramic study can go on for years after a site has been dug. New techniques have helped to glean even more information from clay objects.

VII. Analytical Methods.–In addition to the ecological approach combined with the study of the archeological present, an extensive array of scientific and mathematical techniques is being applied to the in-depth study of material being excavated. The computer allows one to do statistical studies and to develop three-dimensional models. The process of neutron activation can isolate and identify rare trace elements in clay bodies, assisting in the study of domestic vs. imported ware by relating or not relating trace elements to a specific geographic area or relating groups of clay vessels to each other. X-ray and xeroradiographic studies and analysis allow the scholar to look at the inner structure of vessels with a nondestructive technique. The petrographic microscope with polarized light allows one to examine microthin sections to determine specific and general mineral content, which helps in establishing the locale of the manufactured ancient pottery. In addition, thermoluminescence, atomic absorption study, gas chromatograph analysis, carbon-14 and tree-ring dating techniques, the application of the X-ray analyzer, soil sample studies, clay sample studies (including pyrotechnical studies of fired clay samples where the impact of time, temperature, and atmosphere variables are tested, noted, and compared to ancient fired material), ethnographic study, and the establishment of site typology through comparative study all aid the study of pottery. This listing of scientific and mathematical techniques is not at all complete but gives the reader some idea of the complexity and intensity of archeological ceramic research.

VIII. Conclusion.–An effort has been made to inform the reader of the spread of ceramic material found and studied on a Syro-Palestinian site. New material is constantly being found and new studies made. The study of Syro-Palestinian ceramic material and pottery is an ongoing study. Much of the knowledge that we have about biblical times and places is due to the study of excavated material, much of which is ceramic. New excavators emerge from academia each year armed with new techniques and fresh approaches. Added to the accumulated skills and knowl-

edge of the past, these will add new dimensions to our study of the Bible. The excavator of the future will have to have even more awareness and knowledge of science, mathematics, and technology than ever before. The excavator will have to be familiar with the uses and applications of computers. The advent of the mini- and microcomputers operating on battery power and being quite portable brings the computer right onto the excavation as a recording and note-taking device. Information recorded in the field can be sent electronically to a mainframe computer for more sophisticated use. The amount of information will increase and require the excavation director to sort out the specific data needed to answer specific questions. With the advent of new computers specifically designed for graphics, much of the laborious hand drawing will come to an end. The new technologies will ease the toil and labor required of all excavators and speed up the time needed to publish new mterial. The new technology will not replace the need for classic learning but add to it and offer new dimensions in biblical study.

R. H. JOHNSTON

POTTER'S FIELD [Gk. *agrós toú keraméōs* (Mt. 27:7, 10)]. A burial ground outside Jerusalem for foreigners. Before hanging himself, the repentant Judas threw down in the temple the thirty pieces of silver he had received for betraying Jesus. Since the silver was "blood money" (i.e. money paid for a man's life), it could not be put into the temple treasury; hence the purchase of the field. Matthew's reference to it as the "potter's field" probably means it was bought from a potter, though scholars have suggested that this was where the potters got their clay or dumped their refuse. Easy confusion of the Hebrew term for treasury *('ôṣār)* with the term for potter *(yôṣēr)* may account for the alternative uses of the money that the priests considered.

Matthew's reference to this event as the fulfillment of "the prophecy of Jeremiah" has provoked much discussion. Several OT allusions seem to be mixed here: Jeremiah's visit to the potter's house (Jer. 18:1-5; cf. 19:1-13), his purchase of a field from his cousin for seventeen silver pieces (32:9), and Zechariah's contribution to the treasury of his wages — thirty shekels — according to God's command (Zec. 11:12f.). See the discussions in Gundry, pp. 555-58; Moo, pp. 189-210.

According to Acts 1:18f. (which refers to this field as AKELDAMA) Judas had bought the field with the money received for turning Jesus over to the chief priest. The association with blood (Akeldama is the Greek transliteration of Aram. *ḥᵃqēl dᵉmā',* "field of blood") differs from that in Mt. 27:7: Judas fell into this field and "all his bowels gushed out" (Acts 1:18); hence the gruesome name. Scholars have advanced various theories to explain the differences in these accounts. Some have called them contradictory (see the comms. by F. Beare [1981], pp. 525f.; A. McNeile [repr. 1980], pp. 407-409; A. Plummer [repr. 1953], pp. 385f.), and others attempt to harmonize them (cf. D. Carson, pp. 561f.). Cf. Barth's attempt to maintain the tension between the two accounts (*CD,* II/2, 463-471).

The traditional site of this field since the 4th cent. has been the south slope at the east end of the Hinnom Valley. The pilgrim Antoninus Martyr (6th cent.) knew this as a burial place for foreigners, and pilgrims were buried here at least until the 17th century.

I. Biblical Terms.–Hebrew *rêš* and its cognates and Gk. *hystérēsis* and *hystérēma* describe a condition of economic lack or insufficiency, a condition of having "less than enough." In dealing with poverty, however, Scripture more commonly uses concrete, picturesque, and evocative language. It is not "poverty" that commands attention in the Bible as much as "the poor" (*see* POOR). The terminology for the poor pictures real people reduced to begging (Heb. *'ebyôn;* Gk. *ptōchós*; the noun *ptōcheía* means lit. "beggarliness"), humiliated and oppressed (Heb. *'ānî*), weak, frail, and drained of strength (Heb. *dal*). Such language does not merely describe; it evokes sympathy and summons protest. The prophets and evangelists were not indifferent to poverty. When they spoke of it, their terminology reflected their compassion for the poor and their condemnation of oppression and injustice. The less colorful and more neutral terminology — words that call attention to a condition rather than to people made wretched by the condition — is used almost exclusively in proverbs that regard poverty as a result of laziness (Prov. 6:11; 10:4; 20:13; 24:34), unrestrained desire for rich food and strong drink (23:21), frivolous

pleasure-seeking (28:19), or generally refusing the prudent instructions of the wise (13:18).

II. Sociology of Poverty in Scripture.–A. In the Seminomadic Economy. According to the biblical narratives the patriarchs first lived a seminomadic existence, wandering with flocks and herds and pitching their tents where water and pasture invited. Among seminomads the fundamental social unit was the family, three or four generations descended from a surviving male parent. The bonds of blood reached still further back: clans were groups of families who claimed common descent from a more remote ancestor, and tribes were related through a still more remote ancestor. Individuals owned no land. The flocks and herds belonged to the extended family for whom the patriarch held the animals in trust. Personal property was limited to items like weapons and ornaments. There were, in effect, no rich and no poor in the family or clan. Status in the clan was determined not by one's possessions but by one's position in the family. Even slaves were economically members of the clan — but without the status of blood kinship.

While there were no rich or poor within the clan, the clan itself could be rich or poor. The size of the family and of its flocks and herds were measures of its wealth. But even wealthy families lived a difficult and precarious existence, constantly contending against the threats of nature and marauders. Poor clans might be reduced to the status of ʿApiru, that class of landless people who survived by hiring themselves out in military service or by selling themselves as slaves; their life had neither place nor dignity. While the tribes of Israel cannot be simply identified with ʿApiru (*see* HABIRU), some of them surely had the status of ʿApiru in Egypt, doing slave labor at Pithom and Raamses (Ex. 1:11).

The Israelites never forgot their seminomadic origins. The Exodus account recalls that God saw the Israelites' poverty in Egypt — their "affliction" (Ex. 3:7), their "oppression" (v. 9), their "bondage" (6:6) — and He rescued them and kept His promise to give them a land for their own possession. God's redemption of the Israelites from poverty (from the status of ʿApiru) remained a paradigm for their own treatment of the poor (cf., e.g., Dt. 15:12-15). The memory of a society within which there were no rich or poor provided a standard for later economies and an image of renewal, a nomadic ideal. Indeed, the nomadic way of life persisted into the late monarchy in the life of countercultural clans like the Rechabites, who pledged not to own vineyards, till the soil, or build houses (Jer. 35).

B. In the Agricultural Economy. The settlement in Canaan caused profound changes in the Israelite economy. Settled agricultural life required the cultivation of field crops, orchards, and vineyards. The arts of cultivation, at least as the Canaanites practiced them, required proper reverence for the *bᵉʿālîm*, the fertility-gods whose favor assured the crops. Heb. *baʿal* meant "owner," and associated with reverence for the *bᵉʿālîm* was a system of ownership and an attitude toward possessions that differed radically from the nomadic economy. In the new economy the land was privately owned. Its produce yielded prosperity for some, while the less fortunate began to merge with the conquered and dispossessed classes, creating distinctions between rich and poor within Israelite society. Moreover, an emphasis on localities gradually supplemented or challenged the ties of kinship, and the villages became a new focus for loyalty in addition to the clan.

The religious struggle between Yahweh and the *bᵉʿālîm* involved an understanding of agriculture and the economy and also a response to the emergence of poverty within society. Israel understood the land as God's gift and saw the economic growth and security it provided as God's blessing. Nevertheless, faithfulness to God and to His covenant required not only rejecting the *bᵉʿālîm* but also protecting the poor in the land from oppression and exploitation. The Covenant Code (Ex. 20:22–23:33) already contains a number of provisions to prevent or at least alleviate poverty. The fundamental conviction that the land was God's (e.g., Lev. 25:23) was based on the fundamental principle that it was inalienable from the families to whom God had apportioned it. Among the procedures that reflected and protected that principle (and the importance of kinship) were JUBILEE and the option of redemption by a kinsman (*see* REDEEMER). In these ways Israel established an agricultural way of life that presumed a fundamental equality to be God's design and that regulated and limited the economic process in the interest of protecting the poor.

C. During the Monarchy. Another social and economic revolution occurred with the transition to monarchy. David's reign marked the beginning of an urban and commercial way of life that opened a huge gap between the rich and the poor. With the conquest and assimilation of the remaining Canaanite cities and the establishment of a capital city in Jerusalem, the culture and the economy became increasingly urban. The royal court and the standing army were innovations that needed to be supported by taxation and conscription (see 1 S. 8:11-17). International commerce and industrial developments brought about a remarkable prosperity, a "golden age," but it was not shared equally. The king, his court favorites, the urban merchants, and businessmen all profited, but the small peasant farmer did not. The poor became poorer. They suffered under a heavy burden of taxation, conscription, inflation, and powerlessness. So, while some lived in great luxury, many more fell into poverty, first mortgaging their lands and then losing them and becoming landless tenants or slaves.

In principle the king was subject to the laws of the covenant that he publicly vowed to uphold. In practice, however, royal despotism often displaced the covenant as the basis of social obligation. Ideally, then, the king was the defender of the poor (e.g., Ps. 72), but in reality he was often among their oppressors. The story of Naboth and his vineyard (1 K. 21) is paradigmatic of the conflict between royal despotism and covenant law. Elijah's condemnation of Ahab for rejecting the covenant law's protections for the poor is a paradigm of the prophetic social criticism. With vivid realism the prophets described the violation of the covenant, the oppression and injustice of the social order. They condemned the kings and other authorities who failed to protect the poor (Jer. 22:13-17; Hos. 5:1f., 10); they protested against the professional prophets, priests, and sages who said what their clients wanted to hear instead of what the justice of God required (Jer. 8:8-10; Hos. 4:4-6; Am. 7:10-17; Mic. 3:5-7); they ridiculed the vain women who lived in luxury careless of the cries of the poor (Isa. 3:16-26; Am. 4:1-3); they sentenced dishonest and avaricious merchants (Am. 8:4-6), selfish and heartless creditors (5:11), covetous landowners (Isa. 5:8; Mic. 2:1-4), and venal judges (Isa. 1:23; 3:13-15; Am. 5:7, 10, 12) to the judgment of God. They announced that God was on the side of the poor, that He was their ally, that they were His people (Isa. 3:15), and that His covenant law stood as an alternative to and judgment upon a social order that simultaneously generated brutalizing poverty and unrestrained luxury. The prophetic social criticism climaxed in the identification of the poor with the righteous remnant

that will survive God's judgment (see Zeph. 3:12), in making "the humble" and "the poor" equivalent (*see* HUMBLE).

The social criticism of the prophets was not joined to a practical political program, but it was not without political effect. The reforms of Hezekiah and Josiah were, in part at least, responses to the prophets' message. The prophetic social criticism also left its mark on Israelite cultic life; in the Psalms the righteous frequently refer to themselves as the "poor" (e.g., Ps. 40:17 [MT 18]; 70:5 [MT 6]; 86:1; 109:22) whom God has sworn to protect. Even the wisdom tradition was affected. It is true that the sages appealed to experience rather than the covenant law and frequently traced poverty to the indolence and folly of the poor rather than to injustice and the oppression of the rich (e.g., Prov. 6:11; 10:4; 13:18; 20:13; etc.); nevertheless, their advice often reflected the concerns of covenant law (e.g., Prov. 22:28; 23:10 [cf. Dt. 19:14]; Prov. 11:1 [cf. Dt. 25:13-16]). They recognized God's advocacy of the cause of the poor (Prov. 22:22f.) and saw benevolence to the poor as a critical test of the piety of the rich (Job. 29:12, 16; Ps. 112:9). The sage desired "neither poverty nor riches" but what is necessary and sufficient (Prov. 30:8).

D. From the Exile to Roman Colonialism. When Jerusalem fell to the Babylonians, its political, economic, and intellectual leaders were exiled to Babylon. There they had, of course, the social status of conquered aliens, but they seem not to have suffered severe economic hardship. In Judah the remaining population lived in desolating poverty (Lam. 5:1-18). The era of resettlement under Persian dominion evidently saw renewed tensions between the wealthy landowners and the peasant farmers and landless tenants. A succession of poor harvests made the situation still more desperate for the poor, who mortgaged their fields to pay the taxes due Persia or even to buy grain for themselves. Many lost their land; others fell into slavery for their indebtedness. Nehemiah instituted a social reform according to the familiar pattern of the covenant, prohibiting interest on loans to the poor, liberating the slaves, and returning their land to them (Neh. 5:1-13).

The conquests of Alexander looted the treasures of the Persian empire and established colonial policies throughout the captive territories. Greek was enforced as the language of commerce, and Hellenistic merchants and businessmen capitalized on their advantage. The constant warfare that followed Alexander's death ruined the prosperity of Greek and Asian cities and taxed the resources of the countryside. Slave trade increased, and competition with slave labor drove down the wages of the free.

The brief period of Jewish independence began with great promise. The rule of Simon was celebrated for its compassion for the poor and needy, a veritable fulfillment of God's promise (1 Macc. 14:8-15; cf. Mic. 4:4). Under subsequent Hasmonean rulers, however, Israel saw a return of the old conflicts between covenant law and royal despotism with its concentration of wealth in a Jerusalem aristocracy.

Roman rule only deepened the divide between the rich and the poor. Jerusalem was a city of both great extravagance and great poverty. Herod's court, the priestly aristocracy, and wealthy merchants and landowners lavishly displayed their wealth, e.g., by giving alms to the many mendicants who lived in Jerusalem. In the countryside absentee landlords held great estates that were managed by administrators. The peasant farmers were once again reduced to the status of slaves and day laborers. Pliny (*Nat. hist.* xviii.35) said that the great estates were the ruin of Italy (*latifundia perdidere Italiam*); they did their damage in the provinces of the empire as well.

E. Responses to Poverty in First-century Palestine. The rabbis responded to poverty by repeating and interpreting the teachings of the Torah. They encouraged private generosity and kindness toward the poor, almsgiving and the "works of love." They denounced noncompliance with the rights of the poor during harvest (Mish. *Aboth* v. 9) and even broadened the regulations that protected the poor (*Baraitha Baba Kamma* 80b-81a). Hillel's *prozbul* (Mish. *Shebiith* x.4) provided a legal mechanism for evading the remission of debts in the Sabbatical Year, but some of the other rabbis denounced this along with other evasions. The rabbis began a system of public assistance for the poor. The tithe for the poor (Dt. 14:28f.; 26:12) provided the basis in Halakah for a welfare system administered by special officers of the synagogue. A "poor basket," to which weekly gifts were made, supported a community chest from which the needs of the poor were met (Mish. *Peah* vii.2-9; viii.7). The rabbinic response did much, it seems, to alleviate the hardships of poverty. Since the rabbis were not paid for their instruction, they themselves depended on the tithe and on the generosity of their students and others; sometimes they supported themselves by engagement in a trade or as day laborers. Some of the rabbis became prosperous — especially after the defeats of rebellions in A.D. 73 and 135, when religious and social leadership and status fell to them.

The rebellions themselves were, in part at least, responses to the social tensions in Palestine. In the 1st cent. the Zealot movement reflected and capitalized on the resentment of the poor toward Rome and the priestly and lay nobility. When they took Jerusalem in A.D. 66, the Zealots destroyed the city archives with their records of land transactions and indebtedness. In 68 the rebels declared the emancipation of Jewish slaves. The Zealot position grew out of the ancient convenantal claim that the land belonged to God and was inalienable from the families to whom God has entrusted it. The movement found support among the Galilean and Judean peasants; it was opposed by the priestly aristocracy and the wealthy. The poverty of the times also gave rise to a less political (and less religious) violence: robbers presented a serious problem in the 1st cent.

The community at Qumrân had its own response to the social tensions of the times. Their zeal for the law did not lead them into rebellion but into withdrawal. On the shores of the Dead Sea they established a congregation of God's elect, a "congregation of the poor" (4QpPs37 1:5, 10), whose common life stood as judgment on the priestly aristocracy in Jerusalem for amassing wealth at the expense of the poor (1QpHab 12:3, 6, 10); it also stood as a promise of God's eschatological renewal of social life by overcoming the division between rich and poor through community of goods (1QS 1:11; 6:19, 22, 25; 4QpPs37 1:10).

The social tensions of the Hellenistic and Roman periods nurtured an apocalyptic expectation of the abolition of poverty and an expectation of judgment against the rich oppressors (e.g., T. Jud. 25:4; Jub. 23:18-23). These expectations sustained sometimes a countercultural common life (e.g., the community at Qumrân), sometimes an uncalculating revolutionary zeal (e.g., the Zealots), but most often deeds of love and almsgiving until the end (e.g., some of the rabbis). (Later rabbis, less commonly poor and more restrained in their eschatology, did not share such expectations; cf. T. B. *Berakoth* 34b.)

F. Jesus and Poverty. 1. Jesus' Social Standing. Jesus was not from the poorest of the poor in Galilee. His father was a craftsman, not a day laborer or a slave. But the family was poor. The sacrifice made for purification was "a pair of turtledoves or two young pigeons," the offering

prescribed for those too poor to offer a lamb (Lk. 2:24; cf. Lev. 12:2–8). Jesus probably apprenticed in carpentry; but when He entered upon His public ministry, like the rabbis He depended upon the generosity of others (Mt. 8:20 par. Lk. 9:58). The accounts of Jesus' dependency upon the hospitality of the "righteous" (e.g., Lk. 7:36; 11:37) and upon the gifts of notable women (8:1-3) represent a reliable memory of His career. The same dependency was true of the disciples (Mk. 6:7-13 par.). There was nothing ascetic about Jesus' poverty as the contrast with John the Baptist (Mt. 11:18-19 par.) makes clear. Jesus did not glorify poverty; rather, He lifted up the poor.

2. Jesus and the Poor. Jesus announced the kingdom of God in the midst of considerable social tension. The announcement of the coming reign of God brought news of a great reversal: the humble would be exalted and the poor would be blessed. The great reversal was "good news to the poor" (Lk. 4:18; cf. 7:22 par. Mt. 11:5). Already that coming reign of God made its power felt in Jesus, and to receive Him, to welcome God's kingdom, meant to share what one had with the poor. Jesus' vision of a great reversal surely contributed to His initial popularity among the common people and to His eventual rejection by the wealthy priestly aristocracy.

Jesus' word, "You always have the poor with you" (Mk. 14:7 par. Mt. 26:11; Jn. 12:8), does not compromise His announcement of good news for the poor. His saying quotes Dt. 15:11, where it is clear that "the poor will never cease out of the land" only because of the community's refusal to keep the covenantal stipulations for alleviating poverty (Dt. 15:1-11; cf. Lk. 16:29-31). Jesus rebukes the woman's accusers, to be sure, but not for being concerned about the poor. He rebukes them for presumptuously singling out this one woman, for self-righteously judging her when the very presence of the poor judges the whole community. The woman's carefree disposition toward her possessions was her way of welcoming the coming reign of God; in Jesus' absence the same freedom from the tyranny of possessions will be turned toward generosity to the poor.

See also ETHICS: THE ETHIC OF JESUS III. C; POOR IV.

G. The Early Church and Poverty. 1. Social Standing of the Early Christians. Early in this century the socialist historian K. Kautsky (*Foundations of Christianity* [Eng. tr. 1953]) claimed that early Christianity was essentially a proletarian movement. The first converts, drawn from the ranks of the poor, were moved by economic and social distress. A. Deissmann's response (Deiss. *LAE*) acknowledged that the early Christians were poor but provided a romantic, rather than proletarian, portrait of their poverty. Only recently has a "new consensus" (see Malherbe) emerged that the early Christians came from a broad spectrum of social levels and that the early Church was more nearly a cross section of society than either Kautsky or Deissmann had thought. Within the context of Roman society — which was marked by what R. MacMullen (p. 99) called "verticality," an oppressive and pervasive sense of "high" and "low" social standing based primarily on wealth — the social integration found in the early Church was remarkable; sometimes it was a cause of conflict within congregations (see Theissen).

The fellowship (Gk. *koinōnía*) of the early Church joined rich and poor together in table fellowship and in the sharing of possessions. Paul rebukes the Corinthians for allowing social distinctions to disrupt and distort their table fellowship, i.e., their participation (Gk. *koinōnía*) in the body and blood of Christ (1 Cor. 10:16; 11:17-34). In the Jerusalem church possessions were sold to meet the needs of the poor (Acts 2:44f.; 4:34-37). In contrast to the community of goods practiced at Qumrân, the Jerusalem church's sharing was not defined by statutes and protected by sanctions fixed by community regulations; rather, it was voluntary and spontaneous. The *koinōnía* was the decisive thing, not organization.

It was a fellowship that transcended and broke down the hierarchical, "vertical" patterns of Roman society and constituted a new Israel, a new covenanted community in which "there was not a needy person among them" (Acts 4:34; cf. Dt. 15:4, 11). The voluntary and spontaneous sharing moved toward institutionalized forms of concern for the poor as the Church grew and needs persisted. E.g., when the needs of the widows among the Hellenists were not being met, the Church appointed seven men to the duty of caring for them (Acts 6:1-6; 1 Tim. 5:3-16 makes an effort to limit the number of widows supported by the Church).

2. Paul and Poverty. Paul worked with his hands, as he more than once reminded his churches (in self-defense [1 Cor. 9] and in an object lesson [2 Thess. 3:7-12]). He had known "want" (Gk. *hystérēsis,* Phil. 4:11) and he gratefully accepted the generous gifts of congregations (4:15-18). His general attitude to both plenty and poverty was "contentment" (vv. 11f., Gk. *autárkeia;* cf. 1 Tim. 6:6-9).

Paul warns his congregations against "covetousness" (Gk. *pleonexía,* e.g., Eph. 5:3; Col. 3:5) but not against wealth itself. His epistles contain no mention of an apocalyptic reversal of social status. His teachings seem much closer to the middle-class respectability of Stoic morality than to the teachings of Jesus. Paul's principle seems to be the Gk. *autárkeia* (self-sufficiency, autonomy, contentment) so highly valued by Cynics and Stoics. He exhorts the Thessalonians to work diligently in order to provide for themselves and to "be dependent on nobody" (1 Thess. 4:11f.). All individuals, in order to maintain their independence, must have enough to care for their own needs and to be "content" with what they have. Paul's contentment stands, however, in a different moral context from the contentment of the Stoics. In Stoic philosophy one achieved contentment by willing whatever happened; in that way one participated in the great reason (Gk. *lógos*) at work in the world. Paul's contentment, however, was rooted in God's eschatological act in Jesus Christ. The Christian participates in the cross and Resurrection — not in cosmic reason — and thereby in the eschatological cause of God. So Paul discerns the relative insignificance of plenty and of poverty (cf. Phil. 4:5f., where "have no anxiety about anything" follows directly upon "the Lord is at hand"), but he rejects the enthusiastic disowning of financial responsibilities practiced by idlers at Thessalonica (1 Thess. 4:11f.; 5:14; 2 Thess. 3:6-12).

God's cause includes the fellowship of rich and poor. Paul never says that "in Christ there is neither rich nor poor," nor does he call for a community of goods. But he does evidently expect the wealthy Christians in freedom and in fellowship to contribute to the needs of the poor within the congregations, to practice hospitality (Rom. 12:13; cf. 16:23), to use their gifts as members of one body in Christ (Rom. 12:4-8). As mentioned above, Paul rebukes the wealthy in the Corinthian community for forming groups along social class lines at the common meal; by this practice they "despise the church of God and humiliate those who have nothing" (1 Cor. 11:22).

Paul's commitment to a fellowship that transcended and broke down the verticality of Roman society as well as the division between Jew and Gentile can perhaps be seen most clearly in his appeals for the collection. This offering for "the poor" in Jerusalem was a part of Paul's mission among the Gentiles from the time of the Jerusalem Council (Gal. 2:10). In exhorting the Corinthians to give gener-

ously to the collection, Paul reminds them of the "the grace of our Lord Jesus Christ, that though he was rich, yet for your sake he became poor, so that by his poverty you might become rich" (2 Cor. 8:9). Paul does not infer from this pattern that the Corinthians are to give everything away so that "others should be eased and you burdened" (v. 13); rather, he moves toward "equality" (Gk. *isótēs*), to a community of voluntary fellowship where the needs of those in poverty (Gk. *hystérēsis*) are met out of the abundance of others (v.14). He corroborates his argument by appealing to God's provision of manna for the Israelites (2 Cor. 8:15; cf. Ex. 16:18), i.e., to an economic order in which hoarding was futile, daily needs were met, and God had to be trusted to provide. As manna was a familiar eschatological symbol, such a "manna economy" would be a mark of the churches' participation in a new age that would transcend the verticality of Roman society and the division between Jews and Gentiles.

3. Poverty and Persecution. Under Domitian (A.D. 81-96) the imperial cult was rigorously enforced, and the Christian movement endured the hardships of petty persecution — including evidently, economic harassment (cf. Rev. 13:17). The experience of alienation and oppression gave rise — as it had before — to apocalyptic literature, specifically to the book of Revelation. In Revelation's protest against oppressors and consolation for the oppressed, judgment falls on "the kings of the earth and the great men and the generals and the rich and the strong" (6:15).

Not every church in Asia Minor was driven into poverty in this period; Revelation recognizes Smyrna's poverty (2:9) but warns Laodicea against the security provided by wealth (3:17f.) — wealth that may have been gained at the cost of compromising with the imperial cult. The "patient endurance" (Gk. *hypomonē*; 1:9; 2:2f. 19: 3:10; 13:10; 14:12) to which the churches are called is not a freedom to accommodate the claims of Domitian and so to live comfortably (as the false teachers probably held); it is rather a freedom from conventional standards of prosperity and power, a freedom to accept poverty and powerlessness in faithful loyalty to Jesus Christ and in expectation of His final triumph and blessing.

Revelation describes several visions that depict Roman oppression and the judgment on Rome: the vision of the third horseman with the images of an inflation that robs the poor of sustenance (6:5f.); the vision of the beast's use of economic power to exploit and oppress (13:16f.), and, at the climactic vision of Babylon's (i.e., Rome's) fall (17:1–18:24). Babylon's splendor, at which even the seer "marveled" (17:6), provided no protection. The fall of Babylon is lamented by those who are powerful and wealthy according to her standards and with her aid ("the kings of the earth" [18:9f.], "the merchants" [vv. 11-17a, esp. the slave-traders] and "the shipmasters" [18:17b-19]); but God's people celebrate it as the apocalyptic announcement of God's reign and of the great reversal that reign brings.

H. Conclusion. The Scriptures never merely describe poverty. The terminology, the images, and the messages evoke sympathy for the poor and summon protest against oppression. The treatment of poverty is not romantic or ascetic, neither is it impartial or "objective." The biblical writers did not simply expound atemporal ideas and doctrines; rather, they responded to historical and communal developments in protest, in advocacy, in hope for God's unchallenged rule and promised blessing.

III. Liberation Theology.–If Scripture is not impartial and "objective" about poverty, then can it be genuinely heard and obeyed if the contemporary churches and their theologians adopt — for the sake of either "spiritual transcendence" or "scholarly objectivity" — an attitude of neutrality on the issues of oppression and poverty? That is the question being raised anew by theologies of liberation.

Liberation theologies claim that the churches and their theologians have always been working either for or against the oppressed, wittingly or unwittingly. If that is so, then any attempts to achieve spiritual neutrality and scholarly objectivity concerning exploitative sociological structures are self-deceptive. Liberation theologies candidly adopt as their methodological starting point a "partial" perspective, a bias: they begin with the stance of advocating the cause of the poor and oppressed, a posture of protest against the arbitrary power of dominant groups. They accept alliances with admittedly partial ideologies (e.g., the socioeconomic theories of Karl Marx) as a historical and social necessity for serving the cause of the poor.

Liberation theologies come in a great variety. Among the causes championed are those of the poor, of Blacks in South Africa and North America, and of women. These theologies have all reminded the churches of their past failures, namely, their collusion with oppressive power and structures (even if unwittingly in the name of spiritual transcendence or scholarly objectivity); they have all called upon the churches to disown the gnostic, "spiritualized" version of the real freedom intended by the God who liberated the Israelites from bondage in Egypt and raised Jesus from death; and they have all challenged the churches to read and use Scripture in the light of Scripture's own advocacy of the poor and oppressed. These contributions of liberation theology have been important.

Theologies of liberation have also had their critics, however. The fundamental criticism concerns the issue of theological control. Some reviewers charge that liberation theologies too uncritically give up control over the theological enterprise and the praxis of the Church to the ideological perspective with which the theology is allied. These critics have observed that it is one thing to call attention to the ideological presuppositions of any interpretation of Scripture; it is quite another to yield control unreservedly to any set of ideological presuppositions. To give up biblical and theological control over the use of any social perspective is to give up the possibility of critical reconstruction and transformation of the culture. And yielding biblical and theological control over the praxis of the churches means that ideological considerations, rather than integrity with the identity of the people of God, will govern the means that the churches use to achieve their scriptually sanctioned goals.

The question of control is important, but if it is raised with respect to liberation theologies, then it must also be raised with respect to the theologies of the rich and powerful. To criticize liberation theologies for their lack of self-criticism regarding ideological alignments is somewhat like pointing out the sliver in their eye while ignoring the beam in the eye of conventional first-world theologies. The fundamental question put by liberation theology to the churches remains to be answered: if Scripture itself is not impartial about poverty and does not simply trade in atemporal doctrines but in protest, in advocacy, and in hope for God's unchallenged rule and blessing, then can the people who learn their identity and calling from Scripture be faithful in any way other than in advocacy, protest, and hope for the poor?

A. D. VERHEY

POWDERS [Heb. *'abqat*–'fragrant powder(s)' (of the merchant)]; NEB POWDERED SPICES. The word, a fem. sing. noun used collectively, occurs only at Cant. 3:6, where Solomon's litter is pictured coming out of the desert carrying his intended bride (see the parallel to v. 6a at 8:5 and Pope, pp. 423-431). She is perfumed with myrrh, frankincense, and the rest of the merchant's complement of aromatic powders, and is ceremoniously escorted by a band of sixty warriors.

The masc. form of the noun (*'abaq*) occurs six times and is best translated as "fine dust." It has the texture of soot (Ex. 9:9; cf. Ezk. 26:10), is finer than the common dust of the ground (*'apar*) (Dt. 28:24; cf. Nah. 1:3), and scatters like chaff in the wind (Isa. 29:5; cf. 5:24). In each case, it is flying or swirling dust, and the use of *'abqat* is similar: the bride is enveloped in the fragrance of these powders.

D. M. HOWARD, JR.

POWER; MIGHT. These words are used by the RSV virtually interchangeably to translate a broad range of Hebrew and Greek terms. This article also discusses the adjectives "powerful" (used by the RSV only ten times) and "mighty," which is used more than four hundred times to describe deeds, persons, or other entities that demonstrate great strength.

    2. Other Spiritual Beings and Forces
    3. Jesus Christ
    4. Human Beings
  C. Power and Weakness

I. In the OT.–A. Hebrew Terms. Many Hebrew terms are rendered "power," "might," and their adjectives. The most common are *kō(a)ḥ* (e.g., Ex. 9:16), *'ōz* (e.g., Lev. 26:19), *ḥayil* (e.g., Ps. 59:11 [MT 12]; see *TDOT*, IV, 349-355), *ḥāzāq* (e.g., Ex. 3:19; see *TDOT*, IV, 305), *gᵉḇûrâ* (e.g., 1 Ch. 29:11), and cognates of these terms. *Gᵉḇûrâ* in plural form refers in ten of eleven instances to the "mighty deeds" ("mighty acts," etc.) of God (e.g., Dt. 3:24; see *TDOT*, II, 372f.). *Gibbôr* ("hero") is often rendered "mighty one" or "mighty man" (e.g., Gen. 6:4). The substantive *'ābîr*, "Mighty One" of Jacob/Israel, occurs six times and is applied only to God (e.g., Gen. 49:24). Both *yād*, "hand" (e.g., Dt. 32:36), and *zᵉrô(a)*, "arm" (e.g., Ps. 79:11; see *TDOT*, IV, 133-140), may represent the power of human beings or of God.

B. Bearers of Power. 1. Nonpersonal Entities. For the most part the OT has a very concrete conception of power. Occasionally power is accorded to abstract entities such as transgression (Job 8:4; Heb. *yād*) and Sheol (e.g., Ps. 49:15 [MT 16]; Hos. 13:14), but usually it is accorded to concrete beings or objects that have the capacity to perform specific deeds. This may include instruments of power (e.g., "the power [*yād*] of the sword," Job 5:20; Jer. 18:21) and even by analogy the sun who "rises in his might" (*gᵉḇûrâ*, Jgs. 5:31). Might or power is ascribed to animals such as the horse (*ḥayil*, Ps. 33:17) and the lion (*yād*, Dnl. 6:27 [MT 28]) and to natural forces such as the waters of the sea (e.g., *'addîr*, Ex. 15:10; Ps. 93:4 [twice]).

2. Human Beings. Human beings are said to possess might or power in a variety of senses. First, "might" can simply mean human vitality concentrated on a particular task. Thus Israel was commanded to love the Lord their God with all their heart, soul, and might (*mᵉ'ōḏ*, Dt. 6:5), and David "danced before the Lord with all his might" (*'ōz*, 2 S. 6:14). Second, "power" can represent the ability to carry out an action toward someone else, whether for good (*'ēl*, Prov. 3:27) or ill (*'ēl*, Gen. 31:29). Third, both terms are often used in a military sense to designate collective forces (*kō[a]ḥ*, Josh. 17:17) and individual warriors. Prominent fighters or heroes (*gibbôrîm*) are often called "mighty men" (e.g., 2 S. 10:7), "the mighty" (e.g., 2 S. 1:19-27), etc., in the RSV and AV. The term was especially applied to "the mighty men of David" (*see* MIGHTY MEN). Fourth, since political and military power are closely associated, "power" sometimes includes the idea of political force and authority. Thus it is the king who exercises "royal power" (*mamlāḵâ*, 2 K. 14:5; AV, lit., "kingdom"). The books of Kings employ a formula that summarizes a king's reign in terms of his "acts," his "might" (*gᵉḇûrâ*), and "all that he did" (or some of his deeds; e.g., 2 K. 10:34; 13:8, 12). Feats of warfare are sometimes highlighted (e.g., 1 K. 22:45), but so is the building of cities (15:23).

3. God. In the OT power and might are ascribed above all to God (e.g., *'ōz*, Ps. 62:11 [MT 12]). God's power is shown both in the fact that He created the world (e.g., *kō[a]ḥ*, Jer. 10:12) and remains more powerful than all the forces within it (e.g., *'addîr*, Ps. 93:4) and also in His mighty acts of salvation (e.g., *gᵉḇûrōṯ*, Ps. 150:2). Some of the names of God point to His power (*see* GOD, NAMES OF). Above all, it is by showing His power that God reveals Himself as Yahweh (*gᵉḇûrâ*, Jer. 16:21). In the Exodus Yahweh shows His "power" (*kō[a]ḥ*) not only over Pharaoh (Ex. 9:16) and the forces of nature, but over all the gods of Egypt (cf. 12:12). Because of such acts of redemption, God can be called "the Mighty One [*'ābîr*] of Jacob (or Israel)" (e.g., Gen. 49:24; Ps. 132:2, 5; Isa. 1:24; 49:26).

Through His power as Creator, Redeemer, and Judge, God is seen to exercise His rule, not only over Israel, but over all nations (*'ōz*, Ps. 77:14 [MT 15]) and over heaven as well (*kō[a]ḥ*, *gᵉḇûrâ*, 2 Ch. 20:6). it is He who fights for Israel as a warrior (Ps. 24:8; Isa. 42:13), performs marvelous acts of salvation (Ps. 74:13; 78:4), and in judgment causes Israel to be defeated by its enemies (2 Ch. 36:15f.); who imparts riches, honor, and strength (1 Ch. 29:12); who empowers judges (Jgs. 2:16), kings (1 S. 2:10; Ps. 20:6 [MT 7]; Dnl. 2:37), and prophets (Mic. 3:8), at times giving them the power to do miracles (Ex. 4:21;

cf. Dt. 34:10-12). One of the titles given to the messianic king prophesied by Isaiah is "Mighty God" (*'ēl gibbôr,* Isa. 9:6 [MT 5]). *See also* OMNIPOTENCE.

4. Other Spiritual Beings. Some OT passages seem to imply the existence of other gods, but Yahweh is clearly seen as above them all (e.g., Ps. 95:3). Other passages, however, especially in the Prophets, show that idols are nothing precisely because they are powerless while Yahweh is all-powerful (cf. Dt. 32:15-18, 36-39; Isa. 40:18-20, 25f.; 41:21-24; etc.; *see* IDOLATRY II.D). The OT refers also to other spiritual beings such as angels (called Heb. *gibbōrê ḵō[a]ḥ* [lit. "warriors of strength"; RSV "mighty ones"] in Ps. 103:20) and demons. While they sometimes engage in very significant actions, such beings are not worshiped or greatly feared, because they have no independent power but rather act only under the authority of God. This applies even to SATAN, who is seldom mentioned in the OT (cf. *yāḏ,* Job 1:12; 2:6).

C. Attitude Toward Power. 1. Divine Power. While the power of God is cause for humans to FEAR Him, ultimately only the wicked need fear in the negative sense. God's might is not simply raw power but is "saving power" (*yᵉšûʿâ,* Ps. 67:2 [MT 3]) directed by His love. Therefore God's power is the basis for both the celebration (Ps. 147:5) and the petition (80:2 [MT 3]) of His people. Times of anguish because of God's harsh judgments (e.g., Lamentations), seeming indifference (Ps. 74), or even apparent cruelty (Job 30:21), give way to the hope that God will employ His power for the redemption of His people. This faith inspires the great doxologies such as that of David: "Thine, O Lord, is the greatness, and the power [*gᵉḇûrâ*], and the victory, and the majesty . . ." (1 Ch. 29:11f.).

2. Human Power. Many OT passages express admiration for human power (e.g., *gibbôr,* Gen. 6:4) and particularly celebrate the "mighty power" (*kō[a]ḥ ḥayil*) of warriors (2 Ch. 26:13) and rulers (e.g., *gibbôr,* Ps. 89:19) who further God's purposes. Human power is also criticized, however, from three perspectives. First, it can obscure reliance on God's power. Individuals (e.g., 2 Ch. 26:15f.) and nations as a whole (e.g., Dt. 8:17f.; Ezk. 7:24; 30:6, 18) may become proud and attribute their success to their own power rather than to God, without whom they are powerless (e.g., Lev. 26:18-20; 2 Ch. 25:8). Second, human might may be used for evil purposes such as the oppression of the POOR (e.g., Job 35:9; Ps. 10:10; Eccl. 4:1; *see also* OPPRESS). In response the OT proclaims that God protects the poor and weak and punishes the mighty (e.g., 1 S. 2:4, 9f.; Job 5:15). Third, the OT — especially wisdom literature — warns that might must not overshadow other virtues, for "wisdom is better than might" (*gᵉḇûrâ,* Eccl. 9:16; cf. Ps. 147:10f.; Prov. 16:32; Jer. 9:23f. [MT 22f.]). Thus the OT always views human power in the light of God's sovereignty. Its message is summarized in Zec. 4:6: "Not by might (*ḥayil*), nor by power (*kō[a]ḥ*), but by my Spirit, says the Lord of hosts."

II. In the NT.–A. Greek Terms. In the RSV NT "power" is predominantly the translation of Gk. *dýnamis,* which is derived from *dýnamai* ("be able") and is used frequently by the LXX to render Heb. *ḥayil* and other terms. *Dýnamis* most often denotes the ability to carry out an action, but it can also refer to an act expressing power (RSV "mighty work" or "miracle") or to a supernatural being with great power (often pl., RSV "powers"). The adjective *dynatós* can be rendered "mighty" (Lk. 1:49; 24:19; Acts 7:22), "powerful" (1 Cor. 1:26), "have power" (Rom. 11:23; 2 Cor. 10:4), or (as a substantive) "power" (Rom. 9:22). The noun *dynástēs* (pl.) is rendered "the mighty" in Lk. 1:52.

Another term frequently rendered "power" by the RSV NT is *exousía* (most often rendered "authority"). Whereas *dýnamis* denotes the ability to act (often based on inherent strength or capability), *exousía* stresses authorization to act, i.e., the right, freedom, and power to act by virtue of a position of authority. *Dýnamis* is often linked with anointing by the Holy Spirit (cf. Lk. 1:35; 4:14; 24:49; Acts 1:8; 10:38; Rom. 15:13, 19; 1 Cor. 2:4; etc.), while *exousía* presupposes a commissioning by God, who alone possesses absolute authority and power (cf. Lk. 12:5; Jn. 1:12; 10:18; 17:2; 19:10f.; Rev. 2:26; 6:8; etc.). *Exousía* can also be used to designate one who has authority, i.e., a ruler in either the human or spiritual realm. *See also* AUTHORITY I, II.

In the RSV "might" is seldom used to translate *dýnamis* and is never used for *exousía.* It usually represents *ischýs* (lit. "strength"; e.g., 2 Thess. 1:9) or *krátos* (lit. "power, rule"; e.g., Rev. 5:13). "Power" (*dýnamis*) and "might" (*ischýs* or *krátos*) are used in combination in several passages (Eph. 1:19; Col. 1:11; 2 Pet. 2:11; Rev. 5:12; 7:12). Apart from the use of "mighty work" to render *dýnamis,* "mighty" and "mightier" usually represent the adjective *ischýros* (Mt. 3:11 par.; He. 11:34; Rev. 10:1; 18:2, 8, 10; etc.).

B. Bearers of Power. 1. God. In regard to power the basic affirmation of both the OT and NT is the same: God is the source of all *dýnamis* and *exousía* (cf. Jesus' reference to God as "the Power" [*hē dýnamis,* Mt. 26:64 par.], a rabbinic metonym for the Deity), and He employs His supreme power for the salvation of His people (cf. Rev. 12:10; 19:1). While the NT affirms the power of God as shown in creation (e.g., Rom. 1:20; cf. Rev. 6:8; 16:9), this fact is overshadowed by God's new acts of redemption, which are centered in Jesus Christ; e.g., Mary refers to God as *ho dynatós* because of the manifestation of His saving power in the Incarnation (Lk. 1:49). In the NT it is impossible to separate the power of the Father, Son, and Holy Spirit, since God the Father empowers Jesus at every point (cf. *dýnatai,* Jn. 3:2; 5:19, 30), the Son by nature shares the power of God (He. 1:3), and the Holy Spirit is closely identified with the Father and the Son (e.g., Acts 10:38; Rom. 1:4). It is not surprising, then, that the power displayed in the followers of Christ may alternately be attributed to God, Christ, and the Holy Spirit (cf. Rom. 15:13, 19; 1 Cor. 5:4; 2 Cor. 12:9; 13:4; 2 Tim. 1:7f.). The following paragraphs will serve as a discussion of the power of God as displayed through and in relationship to spiritual beings, Jesus Christ, and human beings.

2. Other Spiritual Beings and Forces. The NT references to good and evil angelic beings reflect postexilic developments in Jewish angelology (*see* ANGEL; DEMONOLOGY). As in the OT, angels play a significant role as instruments of God's will (cf. 2 Pet. 2:11, where they are described as "greater in might and power" than human beings; cf. also Rev. 10:1; 14:18; 18:21); but demonic beings who oppose God and His people have a larger role in the NT than in the OT. Although the terms for "power" are seldom applied specifically to Satan and the demons (e.g., *dýnamis,* Lk. 10:19; *exousía,* Acts 26:18; *krátos,* He. 2:14), these beings are clearly depicted as powerful (cf. Lk. 22:53; Rev. 13:2; 18:10). At Jesus' temptation Satan claims without contradiction to have received authority (*exousía*) over all the kingdoms of the world (Lk. 4:6 par. Mt. 4:9). Some of the Epistles — especially those of Paul — refer also to "powers" (along with "principalities," "angels," "authorities," etc.) that oppose the rule of God. These "powers" (*dynámeis,* Rom. 8:38; 1 Pet. 3:22; *exousíai,* Eph. 3:10; 6:12; Col. 2:15) include not only angelic beings (e.g., Satan and the demons) but also human authorities, human traditions, the "elemental spirits of the universe" (Gal. 4:3), etc. (*see* PRINCIPALITIES AND POWERS).

The spiritual struggle between the forces of God and those that oppose Him forms a central theme in the NT. The mission of Jesus — and that of His disciples (Lk.

10:17-20) and Paul (Acts 26:18) — is to liberate people from Satan's power. Through His earthly ministry, death, resurrection, and ascension, Christ has subjected these opposing spiritual powers to Himself (e.g., cf. Lk. 4:36; Col. 2:15; 1 Pet. 3:22); and although Christians continue to do battle against these forces (Eph. 6:12; cf. Rom. 8:38), they do so in the assurance that in the end Christ's victory will be complete, and all His enemies will be destroyed (cf. 1 Cor. 15:24f.). Because the NT, compared with the concreteness of the OT, tends to spiritualize and broaden the concept of power, it sometimes attributes "power" to abstract or symbolic entities on both sides of the conflict, e.g., death (Gk. *pýlai hậdou*, lit. "gates of Hades," Mt. 16:18), sin (1 Cor. 15:56), the gospel (Rom. 1:16), the cross of Christ (1 Cor. 1:17, contextual translation), two symbolic witnesses (Rev. 11:3, 6), locusts (9:3, 10), horses (v. 19), the dragon (13:2), etc.

3. Jesus Christ. From the perspective of the OT and Judaism, the biggest surprise about the NT view of power is the type of power exhibited by the Messiah. Under the domination of Rome, the covenant people looked for an heir of David who would deliver them through a display of military and political might (cf. Lk. 1:33, 71). But Jesus marshalled no troops and attained no recognized political office (cf. Jn. 6:15; 18:36). This does not mean that Jesus was apolitical, but that He transformed politics (for one perspective, see J. H. Yoder, *Politics of Jesus* [1972]). The full, public manifestation of Jesus' power awaits His second coming.

Nonetheless, the NT sees power (both *exousía* and *dýnamis*) revealed in all aspects of Jesus' life and ministry. Jesus' conception and birth are described as a miracle of incarnation through the power of the Holy Spirit, uniquely qualifying Him to be called the "Son of God" (Lk. 1:35). His public ministry begins when He returns to Galilee "in the power [*dýnamis*] of the Spirit" (4:14). Jesus is recognized as "a prophet mighty [*dynatós*] in deed and word" (24:19; cf. Acts 7:22). He exhibits divine power and authority by performing "mighty works" (*dynámeis*) such as healing the sick (e.g., Lk. 5:17; cf. 6:19; 8:46 par. Mk. 5:30, where the power to heal is described as an almost tangible force residing in Jesus) and casting out unclean spirits (e.g., Lk. 4:36; *see also* EXORCISM V). These "mighty works" (e.g., Mt. 11:20-23) parallel the "mighty deeds" of God in the OT and thus confirm that Jesus is of God (Acts 2:22). *See* MIRACLE.

Above all, the power of God in Jesus is demonstrated in the Resurrection (cf. *exousía*, Jn. 10:18). After Jesus had voluntarily submitted Himself to the weakness and humiliation of the cross (2 Cor. 13:4; cf. Phil. 2:5-8), God showed His great "might" (*krátos*) by raising Him from the dead and placing Him above every other power (Eph. 1:19-23; cf. Rev. 5:12f.; see also II.B.2 above). Likewise, Jesus has received from His Father "*exousía* over all flesh, to give eternal life to all whom thou hast given him" (Jn. 17:2). At the end of the age Jesus Christ will return "with power and great glory" (Mt. 24:30 par.; cf. 26:64 par.). At that time of final judgment the enemies of God will be destroyed (cf. 1 Cor. 15:24f.; Rev. 18:8, 10), and Christ will enter upon His eternal reign with a great display of power (Rev. 11:15-17; 12:10). In terms reminiscent of the OT, the great doxology will resound: "Hallelujah! Salvation and glory and power belong to our God . . ." (19:1).

See also KINGDOM OF GOD V.

4. Human Beings. In contrast to the OT, the NT rarely speaks of military might (cf. "mighty in war," He. 11:34, referring to OT heroes). It is more concerned with the spiritual power needed by those who are joined to Jesus Christ and share in His mission. During Jesus' earthly ministry He authorized His disciples to heal and cast out demons (*dýnamis*, Lk. 9:1). Beginning at Pentecost, the Spirit empowered the disciples and other believers to testify boldly about Jesus (Acts 1:8; 4:33) and to perform miracles (cf. 3:12; 4:7; 6:8). In 2 Cor. 12:12 Paul points to his power to perform "mighty works" as one of the signs of his apostleship (see also Rom. 15:19; cf. Acts 2:43); but elsewhere he refers to this power as one of the gifts of the Spirit that are present in the Christian community and therefore not limited to the apostles (1 Cor. 12:10; cf. Gal. 3:5; He. 2:4). *See also* SPIRITUAL GIFTS.

Bold witnessing and miraculous deeds are not the only signs of God's power. According to Paul religion without power is false (2 Tim. 3:5), for the kingdom of God consists not in pretentious talk but in the power of the Spirit (1 Cor. 2:4f.; 4:19f.). Although apostles are equipped by God's power in special ways (e.g., 1 Cor. 5:4; 2 Cor. 6:7; Eph. 3:7; 1 Thess. 1:5), this power is at work in all believers (Eph. 1:19; 3:20), producing inward strengthening (3:16), knowledge and experience of the love of Christ (vv. 17-19), "endurance and patience with joy" (Col. 1:11), willingness to suffer for the gospel (2 Tim. 1:8), good works (2 Thess. 1:11), godliness (2 Pet. 1:3), and hope (Rom. 15:13). Eph. 6:10-17 admonishes believers to "be strong" (*endýnamai*) in the "strength" (*krátos*) of God's "might" (*ischýs*) by putting on "the whole armor of God." Here the military warfare sometimes celebrated in the OT is fully transformed into spiritual warfare; the weapons used by Christians have "divine power" (cf. 2 Cor. 10:4). Since Jesus' first coming inaugurated the eschatological era, His followers already experience "the powers [*dynámeis*, i.e., mighty works] of the age to come" (He. 6:5). When that age is fulfilled, by God's power they will be raised from the dead (1 Cor. 6:14; cf. 15:42f.) and experience total salvation (1 Pet. 1:5).

In the NT power is not confined to true followers of Christ. Simon Magus performed magic (Acts 8:10f.). The eschatological "lawless one" will come with power (2 Thess. 2:8; cf. Rev. 13:2; 17:13). Even some who call Jesus "Lord" and perform "mighty works" in His name will come under judgment because they have not done God's will (Mt. 7:21–23). In the NT as well as the OT, human power is viewed positively only when it is exercised in obedience to God.

C. Power and Weakness. Although the Gospels never call Jesus "weak," He. 4:15 and 5:2 state that He is able to sympathize with human weaknesses because "he himself is beset with weakness." It is especially Paul, however, who explores the relationship between weakness and power in his letters to the Corinthian Christians, who were neither wise nor powerful by worldly standards (1 Cor. 1:26). In 1 Cor. 1:17–2:16 he contrasts the power of the gospel with the power of worldly wisdom. Compared with the miraculous signs demanded by the Jews and the wisdom sought by the Greeks, a crucified Christ seems to be weakness and folly (1:22f.); but "the weakness of God is stronger than men" (v. 25). Likewise, Paul is not ashamed to conduct his apostleship in the same kind of "weakness" as the crucified — but now risen — Christ; i.e., he comes not with the power of human wisdom but with the power of the Spirit of God (2:1-4; cf. 4:10; 2 Cor. 11:29f.; 13:3f.), for the transcendent power of God is "made perfect" in human weakness (2 Cor. 12:9f.). In these passages Paul proclaims the heart of the Christian gospel: that Jesus the Christ (1 Cor. 1:24), the cross of Christ (v. 17), and the word of the cross (v. 18) are the very power of God.

POWER OF THE KEYS. *See* KEYS, POWER OF THE.

PRAETORIUM prē-tôr'ē-əm, prī-tôr'ē-əm; **PRAETORIAN GUARD** prē-tôr'ē-ən, prī-tôr'ē-ən [Gk. *praitōrion*, Lat. *praetorium*]; AV also COMMON HALL (Mt. 27:27), HALL OF JUDGMENT (Jn. 18:28), JUDGMENT HALL (Jn. 18:28, 33; 19:9; Acts 23:35), PALACE (Phil. 1:13); NEB (GOVERNOR'S) HEADQUARTERS. The term praetorium (a Latin loanword in Greek) originally designated the commander's (praetor's) tent in camp and later was applied to the official residence of the Roman governors in various cities in the provinces. Such a residence could also have barracks for soldiers and guardrooms for the keeping of prisoners. In Acts 23:35 the term refers to Herod's residence in Caesarea, where Felix placed Paul under custody following his removal from Jerusalem by Claudius Lysias.

The references in the Gospels relate to the trial of Jesus before Pilate. Following the judgment by the Sanhedrin, Jesus was taken to the praetorium (Jn. 18:28a), but for fear of defilement the Jews did not enter the place (v. 28b). Hence, the ensuing conversations between Pilate and the Jews were outside the praetorium, while Pilate's discussions with Jesus were inside the building. Mt. 27:27 and Mk. 15:16 indicate that the soldiers' mocking of Jesus took place in the praetorium shortly before the crucifixion. Mark uses the term *aulḗ* ("hall, palace") to identify the praetorium. Jn. 19:13 states that outside the praetorium proper was an area known as The Pavement (Gk. *lithóstrōton*) and in Aramaic GABBATHA. In this area was located the JUDGMENT SEAT (Gk. *bēma*) where Pilate was seated when he conversed with the Jews.

Two locations have been proposed for the praetorium in Jerusalem. One is the Fortress or Tower Antonia, located just NW of the temple area on the prominent elevation along the southern slope of Mt. Bezetha. In honor of Mark Antony, Herod the Great erected the fortress upon an enlarged platform originally built by the Hasmoneans (Josephus *Ant.* xv.11.4 [403-409]). This structure was a feat of engineering excellence and architectural magnificence, with unusual and elaborate appointments. Functionally, it was an effective military stronghold, with impregnable walls and high towers allowing surveillance over the city, and especially over the temple, by the Roman legion permanently stationed there (Josephus *BJ* v.5.8. [238-247]).

The other suggested location for the praetorium of the Gospels is the palace of Herod near the Jaffa Gate at the westernmost part of the old city of Jerusalem. Among those making this identification are P. Benoit (*RB*, 59 [1952], 531-550; *HTR*, 64 [1971], 137-167; "Archaeological Reconstruction of the Antonia Fortress," in Y. Yadin, ed., *Jerusalem Revealed* [1976]), J. Blinzler (*Trial of Jesus* [1959], pp. 173-76), and P. Maier (*Pontius Pilate* [1968], pp. 215-240). Support for this view includes the use of Gk. *aulḗ* in Mk. 15:16, because Josephus uses this term frequently for the palace of Herod but never for the Antonia (cf. R. E. Brown, comm. on John, II [*AB*, 1970], 845). The palace, surrounded by three magnificent towers, was one of the most elaborate and beautiful structures in Jerusalem, according to Josephus (*BJ* v.4.3. [156-171]). The Roman procurators, e.g., Florus, frequently used this building for their residence and administrative office while in Jerusalem (*BJ* ii.15.5 [325-29]). If this is the praetorium of the Gospels the traditional "way of the cross" will have to be relocated.

Archeological excavations at the apparent site of the Antonia were carried on intermittently from the early 1930's to the middle 1950's. This work, under the direction of L.-H. Vincent and personnel of the Convent of the Dames de Sion, indicates that the fortress was at least 140 m. (450 ft.) long and about 100 m. (325 ft.) wide. Its courtyard, dating from the Roman period, was over 1500 sq. m. (16,000 sq. ft.) in size and was paved with large stone blocks in which striations and drainage gutters are still visible (*see* PAVEMENT, THE). Architectural remains evince the beauty of the fortress (cf. Aline de Sion, *La Forteresse Antonia* [1955], pp. 39-172). The Franciscans of the Convent of the Flagellation have also uncovered evidence of the fortress on their property. That the fortress had a commanding view of the temple area is clearly implied in Acts 21:31-36. A large double pool under and integrated with the pavement provided an adequate water supply for the fortress. A careful study of the archeological remains leaves little doubt that this is Fortress Antonia.

Scholars who have identified the Antonia with the praetorium of the Gospels have suggested that "The Pavement" of Jn. 19:13 is the stone pavement uncovered in the courtyard of the fortress and that this pavement would be where Pilate conducted the public trial of Jesus. Defenders of this identification include de Sion, L. -H. Vincent (*RB*, 59 [1952], 513-530), W. F. Albright (*AP*, p. 245), and J. Finegan *Archeology of the NT* [1969], pp. 156-161).

Early pilgrims to Jerusalem generally identified the praetorium with the Fortress Antonia (summary in Finegan, pp. 157f.). Moreover, the traditional Via Dolorosa begins at this location. These factors, along with the archeological evidence (*pace* Benoit, who dated the Antonia ruins in the 2nd cent. A.D.) and the tense situation requiring Pilate to be near the temple, the center of activity at the time of Passover, favor locating Pilate at the Fortress Antonia for his trial of Jesus. *See also* JERUSALEM III.H.10.

In Phil. 1:13 the use of "and to all the rest" after *praitōrion* implies that *praitōrion* here refers to persons associated with a praetorium and not to a place itself. The meaning depends partly on the city from which Paul was writing. If he wrote from Rome it is possible, though very unlikely, that he applied this term (incorrectly) to the imperial residence. Used in Rome itself, the term would normally apply to the praetorian guards, a group of elite soldiers stationed near the city. This meaning is attested in other literature (e.g., Tacitus *Hist.* iv.46; Suetonius *Tiberius* 37; *Hero* 9). If Paul was writing from Ephesus or Caesarea it is much more probable that this term refers to (persons at) the residence of the Roman administrator; but it could also refer to the group of soldiers associated with the provincial capital. *See* PHILIPPIANS, EPISTLE TO THE. B. VANELDEREN

PRAISE. A word derived from Lat. *pretium*, "price" or "value"; thus it may be defined generally as an ascription of value or worth. It is typified by the doxologies to God and to the Lamb in Rev. 4:11; 5:9f., 12, which are inspired by a sense of their worthiness to be adored. Praise of God is a prominent theme throughout the Scriptures, for it is the appropriate response of God's creatures to His majesty and His saving deeds.

I. Terms.–The RSV uses "praise" to render a variety

of Hebrew and Greek terms, including both verbs and nouns. In the OT the verb most often represents the piel of Heb. *hālal* (also pual [e.g., Ps. 18:3 (MT 4)] and hithpael [e.g., Prov. 31:30]). The hiphil of *yādâ* (lit. "praise," "confess," "give thanks"; cf. noun *tôdâ*, "thanksgiving") and the piel of *zāmar* (lit. "sing praise [accompanied by stringed instruments]"; e.g., Ps. 7:17 [MT 18]) are also frequently rendered "praise." Other verbs include the piel of *šābaḥ* (lit. "praise, glorify"; e.g., Ps. 63:3 [MT 4]; 117:1; 147:12; cf. Aram. *šᵉbaḥ*, Dnl. 2:23; etc.) and the piel of *rānan* (lit. "shout with joy"; e.g., "joyously praise," Ps. 89:12 [MT 13]). The noun "praise" most often represents *tᵉhillâ* ("praise," "song of praise"), which is derived from *hālal* (cf. also *hillûlîm*, Lev. 19:24); *zāmîr* ("song of praise"; e.g., Ps. 95:2) is derived from *zāmar*.

In the NT "praise" translates the Greek verbs *ainéō* (lit. "extol, glorify"; e.g., Lk. 2:13, 20; 19:37; Acts 2:47; 3:8f.; Rom. 15:11), *doxázō* (lit. "extol, honor"; Mt. 6:2; Lk. 13:13; 17:15; 23:47; Acts 4:21), *epainéō* (lit. "approve, praise"; Rom. 15:11), *exomologéomai* (lit. "confess, praise"; Rom. 14:11; 15:9), *hymnéō* (lit. "sing hymns of praise"; He. 2:12), and *psállō* (lit. "play a stringed instrument," "sing to a harp"; RSV "sing praise," Jas. 5:13). It also renders the nouns *épainos* (lit. "approval, praise"; Rom. 2:29; Eph. 1:6, 12, 14; etc.), *dóxa* (lit. "glory"; Lk. 17:18; Jn. 9:24; 12:43), *aínos* (Mt. 21:16; Lk. 18:43), and *aínēsis* (He. 13:15).

II. With Human Beings as Object.–Although the Scriptures direct praise overwhelmingly toward God rather than mankind, there are occasional references to human beings as an object of praise. Such praise may be given either by God or by other persons. Praise that comes from God is inevitably just and is greatly to be desired (cf. Rom. 2:29; 1 Cor. 4:5; 1 Pet. 1:7). Human praise can be a blessing and a mark of divine favor (cf. Gen. 49:8; Dt. 26:19; 32:43; Zeph. 3:19f.). It has value only when it coincides with divine approval. Praise is appropriate when it is a natural response to beauty (e.g., Gen. 12:15; 2 S. 14:25; Cant. 6:9), to good deeds (e.g., Prov. 31:28f., 31), to fear of the Lord (v. 30), or to right action (1 Pet. 2:14; cf. Rom. 13:3). On the other hand, only lawbreakers praise the wicked (Prov. 28:4; cf. Ps. 73:10), and there is a praise that is itself a condemnation (cf. Prov. 27:21; Lk. 6:26). Jesus warned His followers against loving "the praise of men" more than "the praise of God" (Jn. 12:43; cf. Mt. 6:2; Gal. 1:10; 1 Thess. 2:4-6).

III. With God as Object.–The praise of God is a characteristic feature of biblical piety. Its importance in Hebrew worship is nowhere more evident than in the book of Psalms, a late Hebrew title of which is *tᵉhillîm*, "praises." The Hebrew term *mizmôr*, a derivative of *zāmar*, occurs in fifty-seven Psalm titles (LXX *psalmós*, lit. "song sung to the accompaniment of a stringed instrument"; RSV "psalm"); the expression *halᵉlû-yāh* (RSV "Praise the Lord!"; *see* HALLELUJAH) occurs twenty-four times in the Psalter as a call to praise. The NT, likewise, resounds with outbursts of praise, e.g., in the doxologies of the book of Revelation (cf. 4:8, 11; 5:9-14; 15:3f.; 19:1-8).

A. Those Who Render Praise. The Bible declares that the whole earth praises God (e.g., Ps. 48:10 [MT 11]; 89:12 [MT 13]; cf. 19:1-4 [MT 2-5]; Rev. 5:11-14), and it summons all creatures in heaven and earth to praise Him (cf. Ps. 69:34 [MT 35]; 89:5 [MT 6]), including the angels (e.g., 89:5 [MT 6]; 148:1f.; cf. 103:20), the animals (e.g., 148:10), and inanimate beings such as the heavenly bodies (vv. 3f.), the seas (v. 7), and the mountains and trees (v. 9). But the Scriptures are principally concerned with the praise rendered to God by human beings. They summon not only God's own people (cf. Ps. 22:22-25 [MT 23-26]; 30:4 [MT 5]; 113:1; 135:1f.; etc.; cf. Isa. 12:5f.; Rev. 19:5), but all peoples and nations (Ps. 66:1-4, 8; 67:3-5 [MT 4-6]; 117:1; etc.; cf. Isa. 42:10-12), to praise Him.

B. Grounds for Praise. The Scriptures declare God's greatness as manifested both in nature and in history. The OT praises God as the Creator, Sustainer, and Ruler of the world (e.g., 1 Ch. 16:25-34; Ps. 47:6f. [MT 7f.]; 95:1-5; 99:1-5; 104; 148). Above all, it praises Him for His faithfulness, righteousness, and steadfast love displayed in mighty acts of salvation on behalf of His people (e.g., 1 Ch. 16:9; Ps. 9:1f., 11, 14 [MT 2f., 12, 15]; 71:14-16; 106:1f.; Isa. 63:7; Jer. 31:7; Joel 2:26). God is praised because He is a Fortress and Savior to those in distress (Ps. 59:16f. [MT 17f.]; 71:7f., 23; Jer. 20:13), e.g., to the imprisoned (Ps. 102:18-20 [MT 19-21]; Isa. 61:1-3) and the poor (e.g., Ps. 113; Isa. 25:1, 4).

In the NT praise resounds at Jesus' birth (Lk. 2:13, 20), entrance into Jerusalem (19:37; Mt. 21:16), and death (Lk. 23:47). Many of those who experience healing through the mighty works of Jesus and His disciples burst into spontaneous praise of God (Lk. 13:13; 17:15-18; 18:43; Acts 3:8f.; 4:21; etc.). The authors of the Epistles likewise praise God for His salvation and, with the psalmists, summon believers and all peoples to praise God with their voices and lives (cf. Rom. 4:11; 15:9, 11; Eph. 1:6, 12, 14; Phil. 1:11; He. 2:12; 13:15; Jas. 5:13).

C. Modes of Praise. True praise of God, as distinguished from false praise (Isa. 29:13; cf. Mt. 15:8), is first of all an inward emotion of Joy (cf. 2 Ch. 29:30; Ps. 4:7 [MT 8]; 33:1f.; 63:5 [MT 6]; 67:3-5 [MT 4-6]; 71:23; 95:1f.; etc.), a gladness that no language can adequately express (Ps. 106:2; cf. 2 Cor. 9:15). But it is natural to give expression to such emotion and to call upon others — e.g., the whole congregation of worshipers — to join in praising God. Thus the mouth expresses the praise of the heart (cf. Ps. 51:15 [MT 17]; 71:8) by telling about the great things that God has done (Ps. 22:22-25 [MT 23-26]; 34:1-3; 107:32; Lk. 18:43; 19:37f.; etc.; cf. Ps. 40:9f. [MT 10f.]), by shouting for joy (cf. Ps. 81:1 [MT 2]; Isa. 42:11f.; 44:23; 48:20), and by singing joyful songs of praise (e.g., 2 S. 22:50; 1 Ch. 16:9; Ps. 7:17 [MT 18]; 9:2, 11 [MT 3, 12]; 18:49 [MT 50]; 30:4 [MT 5]; 40:3 [MT 4]; 147:1 [MT 2]; Jas. 5:13). New acts of salvation call for new songs of praise (Ps. 33:3; 96:1; 98:1; 144:9; 149:1; Rev. 14:3; cf. also Ex. 15:1-18, 21; Jgs. 5; Lk. 1:46-55; Rev. 5:9f.; etc.). Praise is also commonly expressed through dance and the playing of musical instruments (e.g., cf. Ex. 15:20; 2 S. 6:14; Ps. 33:28; 43:4; 71:22; 149:3; 150).

Although music and song always played an important role in Israel's worship, the Chronicler reports that it was King David who first appointed Levites and priests to "minister continually before the ark" with song and musical instruments (cf. 1 Ch. 16:4-42; 23:5, 30; 25:1-8). David also contributed to a fixed order of cultic praise through his considerable influence on the development of the Psalter (*see* PSALMS III.C). David's instructions were followed by Solomon after the completion of the temple (2 Ch. 5:11-13; 7:6; 8:14; cf. 20:19, 21f.), by Hezekiah's reform movement (29:27-30; 30:21; 31:2), and by the post-exilic community (Ezr. 3:10f.; Neh. 12:24, 45f.).

In the NT singing continued to be an important means of expressing praise (cf. Mt. 26:30; the "hymn" sung by Jesus and His disciples was probably from the HALLEL). The earliest Christians worshiped with their fellow Jews at the temple and synagogue (cf. Acts 2:46f.; 3:1; 13:14f.; etc.). Even after they were expelled by the Jews and forced to make their own provisions for worship, they continued to draw upon their Jewish inheritance — especially the Psalter — for forms of praise. But their new experience of

God's grace in Jesus Christ also required the composition of new songs of praise (cf. 1 Cor. 14:26; Eph. 5:19; Col. 3:16; Rev. 5:9f.; etc.), and the text of the NT contains several examples of hymns that were probably used in the formal worship of the early Church (*see* HYMNS IN THE NT).

PRAY [Heb. *nāʾ* (Gen. 19:2; 24:12, 14; etc.), *ʾānâ* (Jonah 4:2), *bî* (Jgs. 6:13, 15)]; AV also BESEECH, "oh," "now"; NEB also PLEASE, BEG, ASK, BESEECH, "indeed." A polite, somewhat archaic entreaty or exhortation.

The origin of this use of the Hebrew terms is uncertain (cf. BDB, pp. 58, 106, 609; A. M. Honeyman, *JAOS*, 64 [1944], 81f.; P. Joüon, *Grammaire de l'hébreu biblique* [1947], p. 287 n. 2). The terms seem to have different nuances. *Bî* is always followed by *ʾᵃḏōnāy* ("Lord") or *ʾᵃḏōnî* ("[my] lord"), in contexts that imply that one of inferior status is politely contradicting a superior (e.g., Jgs. 6:13, 15). Thus it is perhaps best translated "pardon me" (so R. Boling, *Judges* [*AB*, 1975], pp. 128, 131; cf. JB "forgive me"). *Nāʾ* and *ʾānâ* convey the more usual sense of "please" or "for mercy's sake." In Ps. 118:25 Heb. *hôšîʿâ(-n)nāʾ*, "save us, we beseech thee," was perhaps the origin of the NT expression HOSANNA. G. A. L.

PRAYER. Communion with God, usually comprising petition, adoration, praise, confession, and thanksgiving. The ultimate object of prayer in both OT and NT is not merely the good of the petitioner but the honor of God's name.

VI. Summary and Conclusion

I. Terminology.–*A. Hebrew.* The vocabulary of prayer is rich. *ʿĀṯar* specifically means "entreat." It does not have broader frames of reference than prayer, as do the other words below; it is also less common than many of the following terms (e.g., Gen. 25:21; Job 33:26; "make a prayer," Job 22:27; "entreat," Ex. 8:8f., 28-30 [MT 4f., 24-26]; Jgs. 13:8). The hithpael of *pālal* is translated simply "pray," and the related noun is *tᵉpillâ*, "prayer." Although the etymology is debated (*see* MEDIATE), the meaning is clear in context. Usually intercessory prayer is indicated.

Qārāʾ (+ *lᵉ*, *ʾel*, "to") is translated variously, e.g., "call," "call (upon)," "cry (unto)." Typical uses are in Ps. 89:26 (MT 27); 119:146; 130:1; 141:1. *Ṣāʿaq* means "cry out," usually for help (e.g., Ex. 17:4; Ps. 107:6, 28; Isa. 46:7; cf. the related noun *ṣᵉʿāqâ*, "cry," Ex. 3:7). *Zāʿaq* also means "cry out," but it is used less often than *ṣāʿaq* (e.g., "cry for help," Jgs. 6:6; "cry," v. 7; "call," Lam. 3:8). *Šāwaʿ* means cry out in an intense manner, e.g., "call," Ps. 72:12; "cry for help," Lam. 3:8; Hab. 1:2. The noun *rinnâ* describes a ringing cry, as in Ps. 17:1.

Two frequently-used verbs are usually translated "seek": *dāraš* (e.g., 1 Ch. 16:11a; 2 Ch. 15:2, 12f.; Ps. 105:4a; "search," Dt. 4:29b) and *bāqaš* (e.g., Dt. 4:29a; 1 Ch. 16:11b; Ps. 27:8; 105:3, 4b). *Dāraš* is often also translated "inquire." Another verb signifying inquiry is *šāʾal*, often translated "ask" (e.g., Ps. 105:40), sometimes "inquire" (e.g., 1 S. 23:2), and in Ps. 122:6 "pray." The verb *ḥānan*, "be gracious," "pity," is used in the hithpael to mean "beseech" or "implore" (e.g., Dt. 3:23).

Several verbs convey the idea of waiting on, or for, God: *ḥāḵâ* (e.g., Ps. 33:20; Isa. 8:17); *ḥîl* (e.g., Ps. 37:7); *yāḥal* (e.g., Mic. 7:7); *qāwâ* (e.g., Ps. 25:3, 5; 27:14; 37:9, 34; 40:1 [MT 2]; 130:5; Isa. 40:31; "hope," Ps. 69:6 [MT 7]); *śāḇar* (e.g., "hope," Ps. 119:166; Isa. 38:18).

B. Greek. Several terms are used with distinctive but overlapping meanings. The most general verb is *proseúchomai* (noun *proseuchḗ*), which in the LXX usually translates Heb. *pālal* (noun *tᵉpillâ*). This terminology occurs in such familiar passages as Mt. 6:5-7, 9 (the Lord's Prayer); Lk. 18:1; Acts 2:42; Eph. 6:18; Jas. 5:17. *Eúchomai* and *euchḗ*, from which the previous words are derived, occur much less frequently in the NT and not at all in the Gospels. The verb and noun appear in Jas. 5:15f., and the verb in Rom. 9:3; 3 Jn. 2.

Aitéō (noun *aítēma*) means "want," "ask for," and even "demand something." It translates Heb. *šāʾal* in the LXX when a specific request is in mind (e.g., 1 S. 1:17). Some of the NT occurrences of this verb and noun are Mt. 7:7-11 (cf. Lk. 11:9-13); Mt. 21:22 (cf. Mk. 11:24); Jn. 14:13f.; 15:7, 16; 16:23f., 26; Phil. 4:6; Jas. 1:5f.; 1 Jn. 3:22; 5:14-16. *Déomai* is less frequent, though the noun *déēsis* is more common than *aítēma*. *Déomai* and *déēsis* translate several Hebrew words whose idea is beseech, beg, or bring a need (one's own, or another's) to God. These two Greek terms are relatively frequent in Luke-Acts (e.g., Lk. 1:13; 5:12; 9:38, 40; Acts 8:22, 24). *Erōtáō* and *eperōtáō* (the noun *eperṓtēma* occurs only in 1 Pet. 3:21) also convey the idea of asking a question or making a request. The verb naturally translates Heb. *šāʾal*. It is often used without reference to prayer but does designate that activity in some passages, especially in the Johannine writings (e.g., Jn. 17:9, 15, 20; 1 Jn. 5:16).

The RSV also translates *epikaléō* "pray" in Acts 7:59. In the LXX this term often renders Heb. *qārāʾ*. In 1 Tim. 4:5 the RSV translates *énteuxis* "prayer"; in the only other NT occurrence (1 Tim. 2:1) the RSV has "intercession."

Some passages use more than one term for prayer (e.g., Mk. 11:24f.; Phil. 4:6). A broader vocabulary includes words such as *boáō* (Lk. 18:7) and *krázō* (Rom. 8:15), "cry," and *proskynéō*, "worship" (Acts 24:11).

See also ASK; CALL; ENTREAT; HOPE; INQUIRE; SEARCH, SEEK.

II. Prayer in the OT.–*A. Patriarchal Period.* Although Adam, Eve, and Cain converse with God in Gen. 3 and 4, the first apparent mention of prayer is in 4:26. After saying that Seth named his son Enosh, the writer concluded, "At that time men began to call upon the name of the Lord [*liqrōʾ bᵉšēm YHWH*]." The point seems to be that

at the same time people were being named, they learned and publicly invoked the true name of the Lord (Yahweh). But Gen. 4:26 probably goes beyond the mere act of praying to lay the foundation for all true prayer: acknowledgment of the divine name (see 12:8; 21:33; Ps. 80:18b [MT 19b]; 86:12; 145:1f.; Dnl. 9:19; cf. Mt. 6:9 par. Lk. 11:2).

Those who "call on" the name of the Lord in Genesis sometimes do so in connection with sacrifice, specifically at the erection of an altar or pillar (e.g., 12:8; 26:25; 28:20-22). But other prayers are simply personal petitions, much like those offered by pious individuals in subsequent ages. Thus Abraham prayed for his wife Sarah to have a child (15:1-4) and later for Abimelech's infertile wives and slaves to bear children (20:17). Isaac made the same request of God for his own wife (25:21). Abraham's prayer on behalf of righteous people in Sodom, while historically unique, provides a model of intercession (18:16-33). Hagar and her child cried in the desert, and God heard (21:16-18). Abraham's servant prayed for guidance in finding a wife for Isaac (24:12-14) and praised God when that guidance was given (vv. 26f.). Jacob prayed for protection from Esau (32:9-12).

Prayer in this period was far beyond any primitive magical petitioning of fearsome deities. It was personal and based on God's revelation of Himself. One major example, often overlooked, is that of Enoch, whose walk with God must be considered an ideal expansion of prayer into continuous communion with God (Gen. 5:22-24). The variety of prayers in Genesis and throughout the Pentateuch should be seen as characteristic of the rich and complex nature of prayer rather than as merely characteristic of diverse literary sources.

B. Preexilic Period. Exodus records the cry of the people when they were in bondage in Egypt (3:7) and when the Egyptians pursued them (14:10), Moses' dialogue with God over his call to lead the people (3:1–4:17), and his intercession for Pharaoh (8:28-32; 9:27-30; 10:16-18). Moses made an exasperated cry for guidance when the people grumbled in the desert (15:25; 17:4). Exodus also shows Moses interceding for Israel (32:11-13, 31-34; cf. 34:9; Dt. 9:18-21; 10:10; Nu. 11:2); in Israel's case God "repented" (NEB, NIV, "relented," Ex. 32:14).

The record of Moses' conversation with God in Ex. 33:12–34:28, while perhaps not a model of normal prayer because of the extraordinary revelation of God that Moses received, is nevertheless significant because it shows the essential elements of communion with God. These include God's "favor" (33:12f.), His "presence" (vv. 14f.), knowledge of the name Yahweh (33:19; 34:5), assurance that God knows us "by name" (33:12, 17), and the desire to see God's faithfulness to His own covenant (34:10, 27f.).

Leviticus does not specify any prayers for recitation when the various sacrifices are offered, nor is a prayer recorded at the ordination of Aaron and his sons. Although prayers may have been offered, the Levitical emphasis is on the sacrifices.

In Nu. 11:11-15 when the people were complaining, Moses again turned to God, this time in an outburst of frustration. He prayed for Miriam in 12:13. His prayer of intercession for the rebellious people in 14:13-19 appealed to God's reputation, which, he said, would be ruined if God destroyed them in the desert. He founded his plea on the loving, forgiving character of God.

This concern for God's reputation (elsewhere called God's "name") and the appeal to the gracious character of God are elements in petitions throughout Scripture. Moses prayed on the occasion of Korah's rebellion (16:15, 22). He prayed for the people who were dying from the bite of snakes sent in judgment (21:4-9), for wisdom to help people in need (27:5), and for a successor (27:15-17).

While Deuteronomy is primarily a book of legislation, it does have some prayers (e.g., 3:23-25; 9:18-20, 26-29; 10:10). The only liturgy provided is that for the offering of the first fruits and the tithe (26:1-15). It is notable that this last book of the Pentateuch closes with prayer: the Song of Moses, in praise of God's mighty deeds (Dt. 32), and his benedictory prayer for the tribes (ch. 33). Prayer in the Pentateuch arises mainly out of the people's physical needs and the recurring need for intercession because of their rebelliousness (e.g., ch. 33). The basis of prayer is a response to God's revealed character and a desire to uphold His reputation among the nations (e.g., ch. 32).

Three incidents in Joshua provide vivid teaching on prayer. After the defeat at Ai, Joshua prayed along lines that are now familiar: if Israel failed, God's reputation would be ruined (Josh. 7:6-9). In this case, God stopped Joshua's prayer, telling him that Israel had sinned and therefore action, not prayer, was necessary (vv. 10-15). Teaching by negative example is found in Josh. 9. When the people of Gibeon asked for a treaty, pretending to have come from a distance, the people of Israel "did not ask direction from the Lord" (v. 14). In contrast, a dramatic example of prayer occurs in 10:12-14. Joshua's command to the sun to stand still was actually said "to the Lord" (v. 12). Verse 14 says there was never such a time, before or since, when the Lord listened to a man.

Judges opens with a prayer for guidance (1:1). During times of oppression the people cried to the Lord for help (3:15; 4:3; 6:6-8; 10:10-16), and God raised up judges to deliver them. The Song of Deborah and Barak is a form of prayer (ch. 5). Gideon conversed with God about the fleece (6:36-40). Jephthah's vow in 11:30f. is actually a prayer. Samson's father sought guidance (13:8); Samson prayed for aid in 15:18; 16:28. Following the sordid incidents described in ch. 19, the Israelites prayed to God for guidance in their fight against the Benjaminites (20:18-28).

1 Samuel opens with Hannah's moving vow and prayer for a child (1:10f.). Her praise to God after her request was granted (2:1-10) provided a model for Mary's Magnificat (Lk. 1:46-55). During the transition to the monarchy, Samuel was the great intercessor. 1 S. 7:5-9 records two cycles of Samuel's intercession and the people's confession (cf. 12:6-25, esp. v. 23, where Samuel indicated that failure to intercede would be a sin against the Lord). Samuel prayed also in 8:6, 21; 12:18f. and with the tribes in 10:22. King Saul prayed in 14:37, 41. Several prayers of David are included in 1 and 2 Samuel (1 S. 23:2, 4; 30:8; 2 S. 2:1; 5:19, 23; 7:18-29 [David's magnificent prayer acknowledging God's sovereignty after God denied his wish to build the temple]; 21:1 [for guidance]; ch. 22 [cf. Ps. 18]; 24:17 [confession]).

Solomon's prayer for wisdom (1 K. 3:5-9) was probably recorded to serve not so much as a model prayer as a background for the subsequent narrative of his reign. The king's prayer of dedication for the temple, along with the opening blessing and the benediction (1 K. 8:12-61; 2 Ch. 6:1-42), provides a magnificent statement of the role of both temple and people.

The lives of Elijah and Elisha seem to have been particularly characterized by prayer (see esp. 1 K. 17:19-22, Elijah's prayer to bring a boy back to life; 18:20-40, the prayer contest with the prophets of Baal on Mt. Carmel; 19:2-18; cf. Jas. 5:17f.). Elisha, like Elijah, prayed for one who had died (2 K. 4:32-35). He surprised Naaman the leper by not offering public prayer (5:11).

Other prayers in Kings and Chronicles are 1 K. 13:6; 2 K. 13:4; 22:18f.; 1 Ch. 4:10; 5:18-20; 16:7-36 (cf. Ps. 105); 29:10-20; 2 Ch. 14:11; 15:3f.; 20:3-12; 33:10-13.

Hezekiah offered two prayers of great significance. First, he brought a written threat from the Assyrians before the

Lord along with a prayer that emphasized God's royal sovereignty over all nations and sought the defeat of Assyria so that all nations would acknowledge Yahweh as God (2 K. 19:15-19). Hezekiah's other recorded prayer was for the lengthening of his life, in spite of God's word that he would die (2 K. 20:1-7). The granting of his request had serious effects (see V.E.1 below).

The writing prophets frequently prayed (e.g., Am. 7:1-6; Hab. 1, 3; Jonah 2:1-9 [MT 2-10]; 4:1-3, 8-11). The most numerous references to prayer are in Jeremiah (e.g., 1:6; 4:10; 7:16; 11:5, 14; 12:1-17; 18:19-23; 20:7-18; 32:16-25; 33:3). These include Jeremiah's protestations at God's call, his intercession for Israel (and God's negative answers), his prayer for vindication of himself, as well as a complaint before God. At two points (7:16; 11:14) God told Jeremiah not to pray for the people, in strong contrast to His willingness to hear Moses' intercessions. The difference is clearly due to the accumulated years of rebellion. The inclusion of Jeremiah's outburst of frustration (20:7-18) in the canonical Scriptures is an encouragement to honesty with God. In contrast, his prayer of confidence as he purchased a field to symbolize the certainty of Israel's return to the land after captivity (32:16-25) and God's response in vv. 26f. (cf. 33:3) encourage faith in God's word.

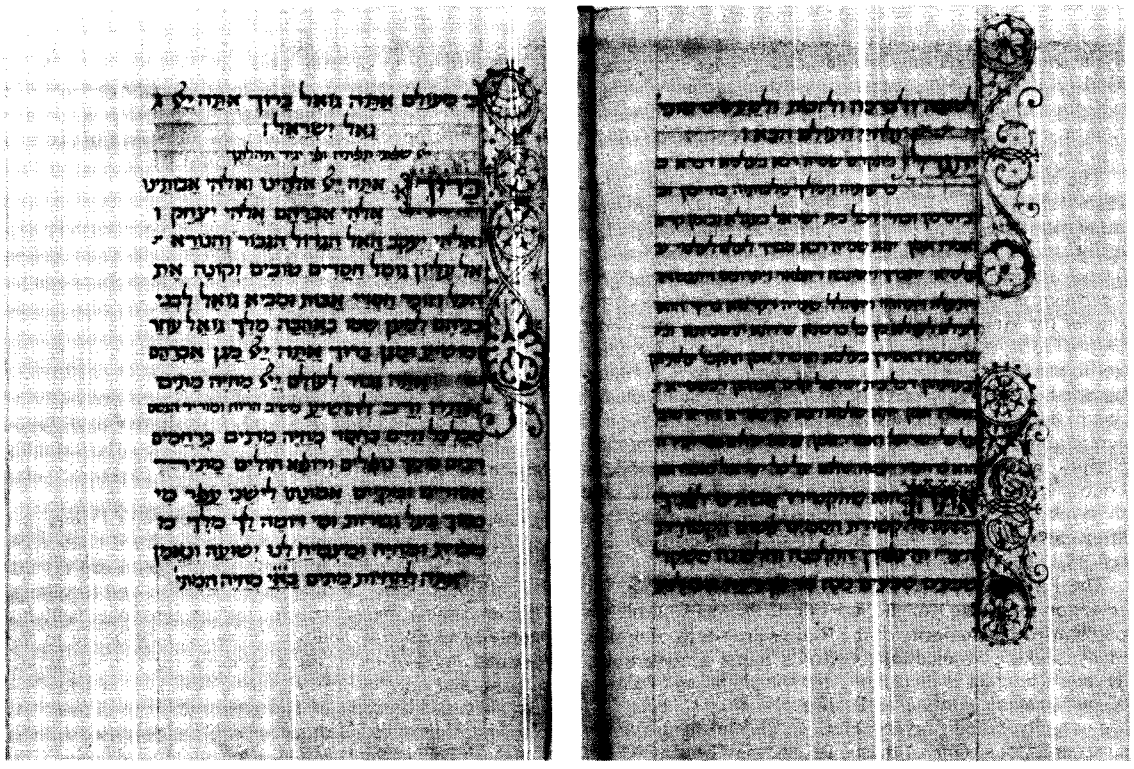
The Psalms were collected over a period of time, the selection including, for the most part, Psalms suitable for public use. The majority of the Psalms are songs of praise, many seeking vindication of God's name among unbelievers. This fact is instructive for the shape and balance of our prayers. Only five Psalms (17, 86, 90, 102, 142) are actually called prayers (Heb. *tᵉpillâ*) in the surviving superscriptions. One of these, Ps. 86, may be singled out as especially instructive in prayer because of its structure and emphasis. In the first strophe, vv. 1-4, four petitions alternate with four supporting clauses, each beginning with Heb. *kî* ("for"), that provide the reasons for David's confidence in prayer. Verses 5-10 then provide support by referring to the nature and attributes of God. Here *kî* ("for") occurs at the beginning (v. 5), middle (v. 7), and end (v. 10) of the section. Verses 11-13 are the heart of the prayer, David's request for guidance in order to give whole-hearted devotion to God and to glorify His name. It is only in the final strophe (vv. 14-17) that David articulates his problem, his godless enemies. It is significant that his petition occupies far less space than the preceding expressions of devotion to God (vv. 1-13). This appeal to God for help against one's enemies, introduced by a recollection of God's power among the nations (esp. vv. 8-10), is somewhat similar to the prayer of the apostles for boldness in Acts 4:24-30.

The Psalms contain petitions reflecting a wide variety of needs, including deliverance from enemies (Pss. 3, 7, 13, 17, 26, 37, 143, 144), deliverance from slander (4, 5), deliverance from sickness (102), and deliverance from sin (32, 51).

The book of Job (date unknown) provides the most extreme example of need. Job's experience is important in connection with prayer, which often contains an element of theodicy or of despair (as the petitioner wrestles with the problem of evil, in particular the prosperity of the wicked and the suffering of the righteous). The spirit of prayer pervades the book, even if only by inference or allusion ("O that I might have my request, and that God would grant my desire" [6:8]; "My eye pours out tears to God" [16:20b]). The dialogue between the Lord and Job (38:1–42:6), which forms the climax of the book, concludes with a new vision and awe of God — a desirable result of any prayer.

C. Exilic and Postexilic Periods. The Exile brought a great change in both circumstances and mood. The place where God had "put His name" was gone, the sacrifices and regular intercession of the priests had ended, and God's protecting hand had been withdrawn in judgment. It was difficult to sing the songs of the Lord in a foreign land (Ps. 137:4); there was little to do but sit overwhelmed (Ezk. 3:15) and pray repentantly. Eventually new institutions developed, such as the synagogue and the scribal office. The synagogue became primarily a place of study and prayer.

During the exile in Babylon, it was apparently the custom of the Jews to pray three times a day (Dnl. 6:10 [MT 11]; cf. Ps. 55:17 [MT 18]). The book of Daniel contains several outstanding prayers. After the meaning of Nebuchadnezzar's dream was revealed to him, Daniel offered a prayer praising God for His wisdom and sovereignty in history (2:20-23). Nebuchadnezzar, after his restoration, expressed the model confession that pious Jews wanted Gentiles to pray, acknowledging the true God and His kingdom (4:34f. [MT 31f.]; cf. v. 3 [MT 3:33]; cf. also the hope of Zeph. 3:9; Isa. 11:9b; 60:3; 62:2a; Mal. 1:11; etc.). After Daniel's rescue from the den of lions, Darius also prayed an ideal Gentile prayer (6:26f. [MT 27f.]).



The most exemplary prayer in the book of Daniel and one of the most significant in all Scripture is the confession in 9:4-19. Among the elements to be noted are (1) the description of God as righteous, merciful, and forgiving; (2) the contrasting description of the petitioner and his people as shamefully sinful; (3) their disobedience to the revealed laws of God; (4) a concern for the reputation of God (see esp. vv. 16-19, where God is asked for His own sake and because of His great mercy to deliver His people and holy city Jerusalem, which are called by His name). Prayer is thus seen as a means of vindicating God and bringing honor to His name.

After the return to Jerusalem, Ezra pursued his work in an atmosphere of prayer (Ezr. 7:27; 8:22f.; 9:6-15). Nehemiah began with prayer (Neh. 1:5-11) and continued in a prayerful attitude (2:4; 4:4f., 9 [MT 3:36f.; 4:3]). The confession of sin in 9:5-37 is actually a recitation of Jewish history. Nehemiah's prayers are a plea partly for divine recognition of his efforts and partly for retribution against the enemy (5:19; 6:14; 13:14, 22, 29, 31).

III. Intertestamental Period.–A. Judaism. Prayer is frequent in the Apocrypha. The passages with the greatest effect on subsequent theology are 2 Macc. 12:44f.; 15:12-14. The former passage refers to prayer for the dead, "that they might be delivered from their sin," and the latter passage shows the dead, specifically the high priest Onias and the prophet Jeremiah, interceding for the Jewish people. Other prayers include the Prayer of Manasseh, purportedly the confession of that evil king (*see* MANASSEH, PRAYER OF), the Prayer of Azariah and the Song of the Three Young Men, and the prayers of Mordecai and Esther in the Additions to the Book of Esther. The pious legends of Tobit and of Judith also contain prayers (e.g., Tob. 3:1-6; Jth. 9:1-14; 16:1-17).

Prayer was also significant at Qumrân, as the Dead Sea Scrolls testify. Many of the *Hôdāyôt* (Thanksgiving Hymns) express both the theology of the community and the piety of the individual. The community enjoined prayer twice during the daytime, in the morning and at evening (1QS 10:1-3a), and at other times on certain days (10:3b-8a). Specific prayers were to be offered during the eschatological battle and after victory (1QM, *passim*).

Some ideas from this period may be found later in the Talmud. T.B. *Berakoth* 16b-17b has prayers to be delivered from sin, to be occupied with the Torah, to have a long and good life, to have peace, and to be forgiven. Prayer, the "service of the heart," was highly regarded by the rabbis (e.g., T.B. *Taanith* 2a; T.B. *Berakoth* 6b, 32b). The Talmud shows that they debated whether prayer or the

Two pages from a prayer book: the first page of the Eighteen Benedictions (left), and a Kaddish. The Benedictions begin with Ps. 51:15 (MT 17) (in smaller letters) before the characteristic opening "Blessed art thou, O Lord our God," and continues with praises. The Kaddish begins "Magnified and sanctified be his greatness" and continues with praises and requests for peace (Royal Library, Copenhagen)

study of the Torah was more important; since the importance of the latter was widely acknowledged, this debate shows a high regard for prayer.

Liturgical prayer was developed for the synagogue, but the forms were also followed at home. The rabbis were aware of the problem of mere rote praying (T.P. *Berakoth* 4:3, 8a). Prayers were to be recited three times a day (Mish. *Berakoth* iv.1), beginning at the time of the morning sacrifice. If a person could not pray at the temple or the synagogue, he could still identify with the community by praying at the time of the morning and evening sacrifices and at the time that the temple gates were usually closed. The recitation of the Shema was to be accompanied by benedictions, two before and one following the morning recitation and four accompanying the evening recitation. The main prayer, the Tefillah (*t*^{e}*pillâ*), developed into the present Eighteen Benedictions, the Shemoneh Esreh. The Tefillah is also commonly known now as the Amidah, the standing prayer. It includes a broad range of petitions. Another prayer used over the centuries is the Kaddish, an expression of worship and a petition for messianic deliverance. The biblical Psalms were also used in synagogue worship in Jesus' day, particularly the Hallel (Pss. 113–118) at special times, such as Passover (*see also* HALLEL).

B. Hellenism. Since Greco-Roman religion was extremely varied, prayers ranged from simple pleas for help to the literary magnificence of Cleanthes' Hymn to Zeus. Earlier literary evidence includes the so-called Homeric Hymns, celebrating the gods, and the prayers found in Homer's *Iliad,* often for military victory and other material blessings. The prayers in the *Iliad* typically have three parts: (1) the invocation of the god, (2) the reasons why the petitioner thinks that he deserves to be heard, and (3) the petition itself. Ancient Greek literature is so permeated by religious thought that one can find many different expressions of prayer in it, especially in the dramas.

By the Hellenistic period belief in the Olympian gods had long since dissolved into skepticism, despair, and fatalism. Of the primitive superstitions, some had been forsaken, though others continued at least in custom. The mystery religions, which claimed to provide an intimate experience with the deity, were winning converts rapidly. Devotion was offered appropriate to the god or goddess, such as the popular Isis, although syncretism tended to merge deities together. The paganism faced by the early Christian missionaries should not be dismissed as mere secularism, for it contained many elements of piety. Whether out of religion or superstition (cf. Acts 17:22), people did pray.

IV. Prayer in the NT.–A. Teaching of Jesus. 1. Sermon on the Mount. Jesus' teaching against religious ostentation includes a model for prayer (Mt. 6:5-15). The effectiveness of prayer does not depend on human effort, e.g., on eloquence or length of prayer. The Father's foreknowledge of human needs, far from discouraging prayer, becomes an incentive for it. Prayer is not informing God of one's needs but expressing one's confidence in Him. The Lord's Prayer carries forward much of what the OT taught by example. The knowledge of God, now not only as Yahweh

but also as the heavenly Father, is basic. Concern for the honor of His name continues to be central in prayer, as is the extension of His kingdom in a pagan world. The petitions for personal needs are not introduced until a theological basis is established and the sovereignty and glory of God are acknowledged. These petitions include daily provision, forgiveness of sin, and protection against evil. (The prayer in Lk. 11:2-4, though it has some significant differences in detail, is essentially the same.) A series of exhortations about trusting the heavenly Father for material needs appropriately follows the Lord's Prayer in Mt. 6:19-34. Later in the Sermon on the Mount Jesus gives further assurances regarding answers to prayer (7:7-11).

2. Parables. In Lk. 11 the Lord's Prayer is followed by the parable of the friend at midnight (vv. 5-8) and then by assurances that parallel Mt. 7:7-11 (with the substitution in v. 13 of "give the Holy Spirit" for "give good things," which is appropriate to Luke's emphasis on the Spirit). The parable itself (vv. 5-8) has perplexed interpreters, because it seems to teach that one must persist in prayer to persuade God to answer. J. Jeremias (*Parables of Jesus* [Eng. tr., 2nd ed. 1972], p. 158) suggested that Gk. *anaídeia* (v. 8) means "avoidance of shame" rather than "importunity" or "persistence." This is linguistically acceptable and also fits ancient Near Eastern custom. The application then is that God will answer prayer if for no other reason than to guard His own reputation.

The parable in Lk. 18:1-8 is similar, in that it seems to teach that persistence is necessary to persuade God. Here Gk. *hypōpiázē me* can be paraphrased "give me a black eye" (i.e., disgrace me; see J. D. M. Derrett, *NTS*, 18 [1971/72], 189f.) rather than "wear me out." This was a possible meaning in Jesus' day and is significant in the context, showing that God will maintain His reputation for vindicating those who trust in Him. This parable follows the eschatological teaching of 17:20-37, so the problem of waiting for vindication is appropriate in the context.

3. Other Teachings. When Jesus cast out a demon that the disciples could not exorcise, He did not attribute His success to His own divine power but to the power of prayer, to which they also had access (Mt. 17:14-20 par. Mk. 9:16-29; cf. Lk. 17:6). The story of the cursing of the fig tree (Mk. 11:12-14, 20-24 par. Mt. 21:18-22) teaches the power of believing prayer.

Further instruction occurs in Jesus' farewell discourse (Jn. 14:13f.; 15:16; 16:23f.). Not even He is necessary as an intermediary, for the disciples can approach the Father directly. But they must approach Him in Jesus' name. This expression is generally understood as indicating dependence on, and submission to, Jesus' authority and emphasizing that only through Christ and His death on the cross does one have access to God. It should also be understood against the background of the frequent mention of God's name in OT prayers. It is essential to know who God is and to seek the honor of His name. Now the Son brings glory to the Father when He answers prayer offered in His name (14:13). Honor thus redounds to the name both of the Father and of the Son.

B. Life of Jesus. Jesus prayed at all the important events in His life — e.g., His baptism (Lk. 3:21), the Transfiguration (Lk. 9:29), and His vigil in the Garden of Gethsemane before the Crucifixion (Mt. 26:36-46 par. Mk. 14:32-42; Lk. 22:39-46). Submission to God's will is paramount in the last of these prayers. Before the selection of the twelve disciples Jesus spent the night in prayer (Lk. 6:12).

Some of His prayers are thanksgivings to God (Jn. 6:11; 11:41; Mt. 26:27 par., at the Last Supper). When some rejected the gospel, in contrast to those who accepted it, Jesus thanked the Father for His sovereignty in revelation (Mt. 11:25f. par. Lk. 10:21). Other prayers are intercessions. In the great intercessory prayer of Jn. 17, as in the Lord's Prayer and the OT prayers, are the ideas of glorification of God on earth, protection from evil, and the importance of God's name. Jesus prayed especially for Peter before His passion (Lk. 22:31f.). His prayer was answered; although Peter's faith faltered, it did not fail completely (vv. 54-62). Jesus also interceded for others when He was on the cross (23:34).

The Gospels tell not only why but how Jesus prayed. Sometimes He spoke with God early in the morning (e.g., Mk. 1:35-38; Lk. 4:42f.), at night (Lk. 6:12; Mt. 26:36-46 par.), or in private (e.g., Lk. 5:16). He almost always addressed God as "Abba," an intimate term for "Father." It is now generally recognized that before Jesus Jews did not use this term as a normal address to God (*see* ABBA). The sole exception to Jesus' use of Abba-Father is in the "cry of dereliction" on the cross: "My God, my God, why hast thou forsaken me?" (Mt. 27:46 par. Mk. 15:34).

C. Luke-Acts. It has long been recognized that Luke gives a special place to the Holy Spirit and prayer in his Gospel and Acts. Several of the instances of prayer in the life of Jesus listed in IV.B above occur only in Luke: the prayer at His baptism (Lk. 3:21); the prayer all night before choosing the twelve disciples (6:12); prayer alone with the disciples before Peter's confession of Him as the Messiah (9:18); His prayer on the Mount of Transfiguration, during which His appearance was changed (9:29); His prayer for Peter before Peter's denial (22:31f.); and on the cross the prayer for the forgiveness of His enemies (23:34) and the final committal (23:46). Also, whereas Matthew gives the Lord's Prayer in the context of the Sermon on the Mount, in Luke the prayer is Jesus' response to the request of the disciples, who have seen Him at prayer (11:1-4). Finally, one exhortation to pray occurs only in Luke (21:36).

This emphasis on prayer continues in the book of Acts. Prayers are offered in the upper room (1:14), for guidance in the selection of a successor to Judas (1:24f.), as a regular activity of the Church (2:42), in the temple at the time of prayer (3:1), and for boldness when the apostles were told not to speak in the name of Christ (4:23-31). Stephen prayed when he was martyred (7:59f.). Peter and John asked that the Holy Spirit come on the believing Samaritans (8:14-17). The pious Gentile Cornelius "prayed constantly" (10:2). Paul prayed after the Damascus-road experience (9:11), with Jewish people by the river outside Philippi (16:13, 16), and on behalf of the Ephesian elders (20:32, 36).

It has been suggested that Luke associated prayer and the Holy Spirit especially with the proclamation, coming, and spread of the kingdom of God. This is observable at a number of crisis points in both the Gospel and Acts. The association of prayer with the kingdom accords with the opening petitions of the Lord's Prayer and the emphasis of the OT prayers on glorifying God's name among the nations. Luke's narratives also tell about the correspondence between human prayer and God's giving of the Holy Spirit (cf. Lk. 11:13, the giving of the Holy Spirit in answer to prayer, with Mt. 7:11, the more general giving of "good things").

D. Pauline Epistles. The Epistles are characterized by an opening expression of thanksgiving (Rom. 1:8f.; 1 Cor. 1:4-9; 2 Cor. 1:3f.; Eph. 1:15f.; Phil. 1:3-10; Col. 1:3-14; 1 Thess. 1:2f.; 2 Thess. 1:3). Of the Pastorals only 2 Timothy follows this pattern (1:3). The thanksgiving, an expansion of a literary convention, allowed Paul to express his concept of what is good and therefore worthy of thanks in the growth of the Christian Church. Such thanksgiving is valuable theologically and provides a model for the prayer

of all Christians. Growing out of these thanksgivings often are implicit or explicit prayers for further progress (e.g., Phil. 1:9, "And it is my prayer that your love may abound more and more . . ."), which go far beyond literary convention.

Prayers, indirect prayers (e.g., "may God . . . ," with the third person used), and assurances of prayers ("I pray for you . . .") appear throughout Paul's letters. The prayers vary (thanksgivings, blessings, intercessions, etc.), with intercessions predominating.

A good deal about Paul's practice of prayer is known both from the Epistles and from Acts (Acts 9:11; 20:36; 21:5; 22:17-21; 28:8). Paul's exhortations to others (e.g., Eph. 6:18, "Pray at all times in the Spirit, with all prayer and supplication. . . . Keep alert with all perseverance, making supplication for all the saints . . .") reflect his own comprehensive praying (e.g., Phil. 1:3-5, "I thank my God in all my remembrance of you, always in every prayer . . . for you all making my prayer with joy, thankful . . .").

The following passages about prayer call for special attention.

1. Rom. 8:26f. Limited knowledge and wisdom need not hinder Christians from prayer, because the Holy Spirit will intercede. The words *stenagmoís alalētois* (lit. "sighs unexpressed"; RSV "sighs too deep for words") are difficult to understand (see E. Käsemann, *Comm. on Romans* [Eng. tr. 1980], pp. 239-242). They may refer to (1) what is expressed by the Holy Spirit (RSV, AV, NIV) or (2) one's own sighs or groans, which the Spirit then interprets on one's behalf (NEB). In the latter case the construction of the phrase can be understood as an instrumental dative (i.e., "through . . .") or even as a dative of reference (i.e., "with reference to . . .").

The next sentence (v. 27) is clear, teaching that God understands one's heart and also the mind of the Spirit, and that the Spirit interprets one's prayers in accordance with God's will. This teaching gives assurance to the believer, who may hesitate to pray without being sure of God's will. God Himself will receive such prayers and answer them appropriately. Thus one can assume that a properly motivated and well-intentioned prayer will not go astray simply because the one who prays does not specify the right things.

2. Eph. 1:15-23. This prayer is appropriate in its context — the purpose and plan of God. Verses 3-14 are replete with words such as "chose," "destined," "purpose," "will," "wisdom," and "insight." Verse 10 expresses the ultimate goal of uniting all things in heaven and on earth in Christ. The Christian's hope in this context is not merely to be saved but to bring glory to Christ and to share in His ultimate exaltation. The prayer of vv. 15-23 is therefore essentially a request for a deeper understanding of the meaning of this hope. God, who has raised Christ from the dead and exalted Him above all beings, is able to exercise the same power in mankind and to bring all things to completion. Verse 22 introduces the Church, which the Epistle subsequently emphasizes as the focal point of God's work in this age.

3. Eph. 3:14-21. This prayer is addressed to God as Father, before whom Paul kneels. Since kneeling was not the only and probably not the main posture for prayer (see V.E.4 below), this action may indicate strong emotion (*see also* KNEE, KNEEL). Paul has now revealed further God's purposes in bringing Jew and Gentile together in one body and in demonstrating (to whatever supernatural beings exist) His wisdom in so doing. The Church is the arena in which God displays His wisdom in this age. Paul will shortly speak of the importance of unity and mutual love in the Church, which demonstrate the reconciling work of Christ described earlier in ch. 2. Fittingly, the prayer in 3:14-21 is for inner strength and an appropriation of the love of Christ. It concludes with a doxology to the One who can accomplish all that has been promised in a way that surpasses what one expects. Significantly, glory redounds to God not only in Christ Jesus but also in the Church.

4. Col. 1:9-14. This Epistle emphasizes the supremacy of Christ over all beings. The Christian's prayer should therefore be to live a life worthy of this supreme Lord. While others are seeking religious fulfillment in the speculations that Paul goes on to refute, a Christian can be thankful for an inheritance in the kingdom of light and for rescue from the power of darkness through God's beloved Son and His redemption.

5. 1 Tim. 2:1-10. The first reference to prayer in this chapter is an exhortation to pray for all people but especially for kings and those in authority (vv. 1f.). There seem to be two strands of thought here. One is that prayer for all people accords with God's desire for all to be saved. The other is that prayer for those in authority will help rulers and the ruled to live together peacefully. Peace was important for Christians, who were likely to be held in suspicion by the pagan rulers. It had also been customary for Jewish people to pray for pagan rulers (e.g., Letter of Aristeas 45; Bar. 1:10-13; Mish. *Aboth* 3:2).

A further command (v. 8) is that the men pray with uplifted hands, a common practice. Women did not pray in the synagogue; perhaps Paul had only public leadership in mind, as elsewhere he assumed that women would pray and prophesy (1 Cor. 11:5). But the syntactical structure of v. 9 is unclear. The grammar seems to be straightforward: "I want men . . . to lift up holy hands in prayer" (v. 8, NIV) parallels "I also want women to dress modestly" (v. 9, NIV). It can be argued, however, that dressing modestly is an action not significant enough to be compared with praying. Hence the suggestion has been made that the phrase about praying in v. 8 should also be regarded as the object (though not repeated) of "I also want" in v. 9. In this construction women when they pray are to be characterized by a modest appearance, just as men are to pray "without anger or disputing" (v. 8). Both men and women pray, neither doing anything that nullifies the effect of their prayers. The word order (though not the grammar) supports this interpretation. But since it is difficult to determine here whether Paul let women pray, vv. 11-15 and related passages should be taken into consideration.

In addition to such major sections in the Epistles, Paul makes a number of significant individual statements about prayer. It is to be constant (1 Thess. 5:17); it is part of the spiritual battle (Rom. 15:30, "strive together . . . in your prayers"; cf. Col. 2:1 and 4:12, where the word for striving is often lost in translation; see V.E.11 below); it is important in the spiritual warfare, along with the Christian's armor and the Word of God (Eph. 6:13-18). Paul did not list prayer as one of the gifts of the Spirit, presumably because all Christians can and should pray, though he did mention faith, gifts of healing, and other powers (1 Cor. 12:7-11). In 14:14f., however, he spoke about prayer in connection with the exercise of the spiritual gifts, distinguishing between praying with the spirit (i.e., in tongues) and praying with the mind. Although not forbidding the former, he encouraged the latter. Praying *with* the spirit in this context is probably different from praying *in* the Spirit in Eph. 6:18. In the latter passage Paul spoke of "all prayer and supplication" (NIV "with all kinds of prayers and requests"), the reference probably being to specific petitions that must be expressed in a rational way. Ephesians has to do with the leading power, and intercession

of the Spirit; it does not imply praying in tongues as 1 Cor. 14 does.

E. Hebrews, James, and 1 Peter. The great contribution of Hebrews is its teaching on the earthly prayer life and heavenly intercession of Christ. Because of His sympathy as one who Himself was subject to the temptations of life, Christ is an effective high priest (He. 4:14-16). One can therefore pray with confidence. While He was on the earth, Jesus prayed with great emotion, and God was receptive to His prayers. Jesus' death, which occurred in spite of His praying to the One "able to save him from death," obviously does not negate the meaning of the passage, for the author certainly knew of Jesus' crucifixion. The present intercession of Christ at the right hand of God, to which Rom. 8:34 briefly alludes, receives a fuller treatment in He. 7:23-25. Prayer is involved when Christians together "draw near with a true heart and full assurance of faith" (10:19-25, esp. v. 22).

James 1:5-7 encourages prayer for wisdom, provided that one prays with confidence. 4:1-3 deals with unanswered prayer due to one's failing to ask or asking out of wrong motives. 5:13-18 is a major passage on prayer. A person who is sick can call the elders, who will pray over him. They will also anoint him with oil, which can be understood as a sacramental act or as a means of soothing or healing. Faith is essential. The passage does not say that this practice pertains only to a case where sin has been committed, but it does say that if the person has sinned he or she will be forgiven. It can be assumed from the following verse that confession of sin is made in such a case. The Roman Catholic Church has understood this passage sacramentally, as a biblical basis for the last rites ("extreme unction"). The passage goes on to emphasize the effectiveness of prayer by righteous persons, like Elijah.

1 Peter opens with a doxology (1:3-9). A sane and sober prayer life is encouraged in 4:7 because "the end of all things is at hand." A familiar exhortation, "Cast all your anxieties on him, for he cares about you," occurs in 5:7.

F. Epistles of John and Revelation. 1 Jn. 3:21f. encourages confidence in God when one prays as a believer who has a clear conscience and who is obedient to God. 5:14-17 is difficult to interpret. Assurance that prayer will be answered is possible for those who pray according to God's will (v. 14). Since the passage is intended to encourage prayer, not to inhibit it, one may assume that the Christian can determine what kind of petitions are most in accord with God's revealed character and purposes. Discernment is necessary in praying for someone who is sinning, because some sins are "mortal" (v. 16; AV "unto death"; NEB "deadly"), i.e., under God's judgment, perhaps obviously so. Except for such cases, which lead to death, the Epistle encourages intercession.

Revelation 4–5 describes prayerful worship of God and of the Lamb in heaven. The bowls of incense held by the four living creatures and the elders symbolize the "prayers of the saints" (5:8). Further thanksgiving is expressed in 11:16-18; 15:3f. (the songs of Moses and the Lamb); 16:5-7; 19:1-8. The book and Scripture itself conclude with a prayer, "Amen. Come, Lord Jesus!" (22:20), and with a benediction (v. 21).

V. Theology.–A. Basis and Purpose. The biblical texts surveyed above make it clear that prayer is based on the revelation of the nature and attributes of God. "And those who know thy name put their trust in thee" (Ps. 9:10 [MT 11]). The initiative in prayer does not lie with people but with God Himself. Prayer is a response to multiple explicit and implicit invitations of God. Confidence is possible because God desires prayer and because it is in the nature and character of God to answer prayer. Although there are certain qualifications or conditions for prayer, the effective power of prayer does not ultimately reside in prayer itself but in the One to whom prayer is made. In the same way, the purpose of prayer is not merely to bring good to people but to bring glory to God. Honoring God always brings blessings to mankind, because God desires the good of those whom He created and especially of those whom He redeemed. Jesus' words, "But seek first his kingdom and his righteousness, and all these things shall be yours as well" (Mt. 6:33), certainly can apply to prayer. This is clear from a survey of the great models of prayer in both the OT and the NT, including the Lord's Prayer. Priority is always given to praise and to the goal of honoring God through the extension of His kingdom and the realization of His will on earth (see esp. the comments above on Ps. 86; Dnl. 9; 2 K. 19:15-19; Acts 4:24-31; Mt. 6:5-15). God will hear a prayer that is offered on the correct basis and with a proper purpose.

If prayer is thus grounded in God Himself, it follows that to pray one must have a proper and vital relationship with God. One must, of course, believe that He exists but also that one's very coming to Him brings its own reward (He. 11:6). The greatest reward is not in the receiving of gifts but in a deeper experience of the Giver. This relationship must be intimate and continuing, a relationship described as "abiding" in Him in Jn. 15:7. One may be driven to prayer because of need, but one remains in prayer because of God Himself. The aspect of human relationship with God that is most important for prayer is that of a child to a father. The Lord's Prayer and the rest of Jesus' teaching make this point strongly. It is true that God hears the prayer of any person, whether Christian or not, simply because He is God. He also brings many blessings, such as rain and sunshine, on all people. But one who is not His child through faith in Christ cannot pray to God as Father. Jesus' apparent unwillingness to answer the request of the Syrophoenician woman (Mt. 15:21-28 par. Mk. 7:24-30) was actually a means of pointing out the importance of a proper relationship with God.

B. Aspects. While some, by definition, limit prayer to petition (considering worship, thanksgiving, etc., under other categories), this article considers prayer in a broader sense. Prayer is basically of two kinds: (1) an expression of homage to God, and (2) an expression of a need. Both types properly lead to the glory of God. One aspect of prayer always relates to both major types: thanksgiving. As petition is the expression of dependence upon God for provision of needs, thanksgiving is the expression of gratitude to God for provision (past, present, or future). Thanksgiving honors God (type one) by contemplating fulfilled needs (type two).

Confession relates similarly to the divine glory and human need. In first-century Judaism to confess (Heb. *yāḏâ*) was to "give glory to God." Confession relates to sin and need, but it is also a sacrifice to God (Ps. 51:17 [MT 19]).

Several distinct, though overlapping, aspects of prayer may be identified.

1. Worship. In worship one is occupied solely with God, ascribing to Him all the virtues of His attributes and giving Him "the glory of [or "due"] his name" (Ps. 29:2). This is the occupation of heaven (Rev. 4–5).

2. Praise. In worship one is occupied with what God is, and in praise one considers what He has done. "Sing to him, sing praises to him, tell of all his wonderful works!" (Ps. 105:2).

3. Thanksgiving. This is close to praise, but as noted above, it involves the recollection of what God has done

specifically for the one who gives thanks. Some of the offerings of the OT were thank offerings. During the revival under King Hezekiah long-neglected sacrifices were brought to God (2 Ch. 29:31-36). It is this aspect of prayer that is most closely connected with sacrifice (cf. Ps. 50:14, 23; 56:12 [MT 13]; 107:22; 116:17). In some cases it is difficult to tell whether prayer itself is considered a sacrifice. It is clearly so considered in Ps. 141:1f. (cf. He. 13:15f.; Rev. 5:8).

4. Adoration. This term is almost synonymous with worship. It introduces a more personal note, however, adding the element of love. "I love thee, O Lord, my strength" (Ps. 18:1 [MT 2]). "Whom have I in heaven but thee? And there is nothing upon earth that I desire besides thee" (Ps. 73:25).

5. Devotion. This is close to adoration but involves a sense of commitment or consecration. It is not prayer as such, but it issues in prayer or a vow (cf. 1 S. 1:11).

6. Communion. This word can describe the essence of prayer. It also can refer to the aspect of prayer that involves not only speaking to God but being aware of His presence and allowing Him through Scripture and by His Holy Spirit to impress the believer with His thoughts toward him. "When I thought, 'My foot slips,' thy steadfast love, O Lord, held me up. When the cares of my heart are many, thy consolations cheer my soul" (Ps. 94:18f.).

7. Confession. This can be either individual or corporate (1 S. 7:6; 2 Ch. 6:26-31; Ezr. 9:6-15; 10:1; Neh. 1:5-11; 9:1-37; Pss. 51; 130; Dnl. 9:3-19; Hos. 5:15; Mt. 6:12 par.). Confession is a prerequisite for approaching God in worship and prayer (cf. V.C.1 below).

8. Petition or Supplication. This is not to be considered less worthy than the other aspects of prayer mentioned above, for it is clearly encouraged in Scripture by invitation, commandment, and example. But petition should be accompanied by the above aspects and must always be offered for the glory of God. Many of the relevant passages have already been cited in this article. The most worthy petition is for the coming of God's kingdom and the spread of the gospel, that God's name may be honored throughout the earth.

9. Intercession. This is a petition or supplication on behalf of another person. A number of Scriptures have been cited in this regard also. Intercession is the present ministry of Christ at the right hand of God on mankind's behalf and is perhaps the greatest expression of love on the part of Christians for one another. It is also clear throughout Scripture that intercession should not be made only for those who are already believers (cf. V.E.9 below).

C. Conditions. A term other than "conditions" may be preferable, since the impression must not be given that prayer is efficacious only if certain things are done or, conversely, that if it is not efficacious one must only search for a breach of the conditions. A more biblical framing of the topic may involve listing the qualities that should mark the person who seeks God. The following are the characteristics, according to Scripture, of the "righteous" person whose prayer has "great power in its effects" (Jas. 5:16):

Moral purity (Ps. 66:18; Isa. 59:2b).

Sincerity; proper motives (Jas. 4:3).

Coming in the name of Christ (Jn. 16:23f.; cf. the comments on these verses in IV.A.3 above).

Faith, probably the most frequently mentioned condition of prayer. It is the petitioner's measure of confidence in God's ability and desire to answer prayer (Mt. 8:10 par. Lk. 7:9; Mt. 9:22 par. Mk. 5:34; Lk. 8:48; Mt. 9:29; 17:20 par. Lk. 17:5f.; cf. Mk. 9:29; Mt. 21:22 par. Mk. 11:24; Jas. 1:5-8; 5:15f.). God also honors faith on behalf of others (cf. Mt. 9:2-8 par. Mk. 2:2-12; Lk. 5:18-26).

Continuing intimate fellowship with Christ (Jn. 15:7; cf. v. 16).

Thanksgiving (Phil. 4:6).

In the Spirit (Eph. 6:18).

Obedience (1 Jn. 3:22; cf. Jn. 15:7).

Praying in God's will (1 Jn. 5:15; see IV.F above). In general, God's will can be known by studying the Scriptures, for they show what He has done and therefore what He is likely to desire in certain circumstances. The phrase that Jesus used in Gethsemane, "Not my will, but thine, be done" (Lk. 22:42 par.), should not, however, be wrongly employed to excuse one's lack of perception or of faith when one prays.

True knowledge of God and fidelity to His truth (Ps. 145:18; Jn. 4:24).

Good spiritual relationship between husband and wife (1 Pet. 3:7).

D. Unanswered Prayer. Believers of all ages have on occasion felt that God was not responding to their prayers; see Job 19:7; 30:20; Ps. 18:41 (MT 42); 44 (esp. vv. 17, 20, 23f. [MT 18, 21, 24f.]); 60:1-3 (MT 4-7); 79 (esp. vv. 1-5, 9f., 13); 80 (esp. vv. 4-6, 18 [MT 5-7, 19]); Isa. 40:27; Lam. 3:8. The very chapter in Hebrews that speaks of the triumphs of faith tells also of those who were tortured and killed and who "did not receive what was promised" (He. 11:35b-40). Paul's "thorn in the flesh" was not removed although he prayed for that three times (2 Cor. 12:7-9). Paul's experience is instructive. The answer to his request was not a mere No. God did answer by providing grace, and Paul learned that the "thorn" performed a necessary function, keeping him "from being too elated by the abundance of revelations" (v. 7).

Prayer is not mechanical or magical. It is an appeal to an infinitely wise, loving, and powerful heavenly Father. True prayer, i.e., that in accordance with the biblical teaching discussed in V.A-C above, is always heard by God. When no answer is apparent, it is probably appropriate to speak, not of unanswered prayer, but rather of an answer that is superior to the specific petition expressed, that is delayed by God for good reasons, or that takes a negative form because a positive answer would be inappropriate, second-best, or even harmful.

E. Other Issues. 1. What Happens If One Asks for the Wrong Thing? It can be assumed from Rom. 8:26f. that God will interpret prayer in accordance with the intent of the heart and His own infinitely superior knowledge. If one prays out of a wrong motive, however, or in opposition to the previously revealed will of God, God may grant the petition to one's own detriment (e.g., the extension of Hezekiah's life, in spite of God's word that he would die, during which time his evil son Manasseh was born, 2 K. 20:1-11; 21:1-9; cf. also Ps. 106:13-15).

2. Should One "Wait on God" for an Extended Time? Various Scriptures speak of waiting on God (e.g., Ps. 25:3, 5; 27:14; 33:20; 37:7, 9, 34; 40:1 [MT 2]; 62:1 [MT 2]; 69:6 [MT 7]; 104:27; 130:5f.; Isa. 40:31). Although "wait" can signify simple dependence on God, it is often used to describe the patient endurance of a person who is suffering or who is awaiting God's vindication and the bringing of justice in an evil world (cf. Lk. 18:1-8). It would be difficult to sustain the idea of a marathon of prayer, persisting until an answer comes, from these verses.

3. Are There Times When One Should not Pray? On occasion God has made His will known and should not be pressed in the matter. In addition to the Scriptures listed under V.E.1 above, see Ex. 14:15; Dt. 3:26; Josh. 7:10; Jer. 7:16.

4. Is There a Preferable Time or Posture for Prayer? Daniel prayed three times a day (Dnl. 6:10), a custom, as noted above, of Jewish people. Paul said that one should

pray constantly (1 Thess. 5:17), i.e., not only at certain times and not merely at whim. "Seven times" in Ps. 119:164 means "frequently," though monastic movements have taken it literally and, combining it with the "midnight" prayer, have developed the eight daily offices. Jesus began praying early in the morning (Mk. 1:35) and, in one instance at least, prayed all night (Lk. 6:12). The heart can always be lifted to God, but a special uninterrupted time of quiet daily is also important.

People often prayed while standing, sometimes while kneeling, and occasionally while prostrate. Some of the OT passages that seem to describe standing may mean just that the person was "stationed" before the Lord. 1 K. 8:22 says that Solomon "stood before the altar of the Lord . . . and spread his hands towards heaven," but v. 54 says that, after he concluded, ". . . he arose from before the altar of the Lord, where he had knelt with hands outstretched toward heaven" (cf. 1 S. 1:26; Mt. 6:5; Lk. 18:11, 13). For other postures see Ezr. 9:5; Dnl. 6:10; Eph. 3:14 (kneeling); Gen. 24:26; Neh. 8:6 (bowing head); Josh. 7:6; Rev. 1:17 (prostrate); 1 K. 8:22, 54; Ps. 28:2; 1 Tim. 2:8 (uplifting hands); 2 S. 7:18 (sitting); 1 K. 18:42 (bowing, with face between knees). *See also* POSTURES. The posture for prayer is therefore optional but should be reverent and appropriate to the mood of the prayer.

5. If God Is Sovereign and Has Foreknowledge, Why Should One Pray? The accumulated commands and instances of prayer in the Bible leave no alternative to assuming that God invites prayer and responds to it. Presumably God foreknows whether someone is going to pray. It is His sovereign will that He chooses to answer prayer; this in no way compromises His sovereignty. In Mt. 6:7f. Jesus bases His teaching on prayer on the Father's foreknowledge. The reason for prayer, then, is not to inform God of one's needs. Rather, in prayer one expresses confidence in Him as the Father who will not give a stone to the child who needs bread (Mt. 7:9-11). Scripture does not suggest (except for the special case of 1 Jn. 5:16; cf. V.F above) refraining from prayer lest one pray unwittingly for what is not God's will. By becoming better acquainted with God's "ways" (Ex. 33:13; Ps. 25:4), one can pray more wisely. Moreover, the Scriptures, which contain God's revealed will, can be appropriated in prayer (cf. Acts 4:24-28).

6. Does Prayer Change God, Circumstances, or Oneself? Calvin (*Inst.* iii.20.3) and others stressed the effect of prayer on the petitioner. One of the greatest benefits of prayer is being changed by the act, but there are other effects. God Himself is affected in that He welcomes and responds to one's prayers. This is consistent with His revealed sovereign purpose and does not entail any unanticipated or unwelcome change on His part. God's "relenting" as a result of people's intercession (e.g., Ex. 32:14) is clearly a gracious act consistent with God's primary desire to bless His people. Prayer also issues in a change of circumstances, as is evident throughout Scripture.

7. Does It Make a Difference If One Does Not Pray? If prayer is never efficacious, then all the biblical teaching on it is hollow. Jas. 4:2 says, "You do not have, because you do not ask." Of course, God in His providence may bestow unrequested blessings.

8. Is It Wrong to Repeat Petitions? Jesus warns against piling up empty phrases (Mt. 6:7), i.e., against mechanically repeating prayer phraseology. On occasion the repetition of a prayer may also reflect a lack of confidence in God or may express impatience. Each new day presents a new circumstance or opportunity for God to work in response to one's prayers. This is perhaps especially the case when one intercedes for others. Certainly God welcomes faithful continuing prayers.

9. Should One Pray for the Unconverted? Since God "desires all men to be saved and to come to the knowledge of the truth" (1 Tim. 2:4), "not wishing that any should perish" (2 Pet. 3:9), prayers for the unconverted are certainly in accordance with His will.

10. Is Any Subject Too Small to Bring to God in Prayer? According to Paul (Phil. 4:6), Christians should pray about everything. Some subjects, however, may occupy one's mind to the displacement of matters that are more important for the kingdom of God and the honor of His great name.

11. Should One "Wrestle with God?" Jacob's experience at Peniel (Gen. 32:24-32) was unique, was initiated by the divine figure, and is never used as a model of prayer. The vivid image of "struggling" (*agōnizómenos*) in prayer (RSV "remembering . . ."; AV "labouring fervently"; NEB "[pray] hard") in Col. 4:12 does not imply conflict with God; the struggle is against any forces opposed to God.

12. Is There an Advantage in Corporate Prayer? Matthew 18:19, ". . . if two of you agree . . . it will be done . . . ," is in the context of church discipline, so that probably the two who agree are the witnesses to the offense (v. 16). Even if the principle expressed has an application beyond that circumstance, there is certainly no guarantee of an automatic answer simply because "two agree." On the other hand, corporate prayer is taught by example in Acts 1:14; 2:42; 4:24; 12:12. There is mutual encouragement to faith in corporate prayer, and God honors faith in prayer. Praying aloud in the hearing of another implies certain belief that God will answer, a commitment that may not be made as decisively in private.

VI. Summary and Conclusion.–Prayer in the Bible includes many kinds of communication with God, both articulate and inarticulate, corporate and private. The nature of prayer derives from the nature of God, who is an omniscient, omnipotent, sovereign, and loving heavenly Father. Prayer should be directed toward the enhancement of the name and reputation of God. When good is recognized as having resulted from prayer, God receives the glory, not man. When prayer that is made in the name of Christ is heard and answered, Christ is honored, as is the Father. Any genuine need for guidance, strength, healing, daily bread, growth in grace, or whatever, can be brought to God. Such petitions are answered not in a magical or mechanical way but in response to the faith of a person whose life and motives honor God.

PRAYER, PLACE OF [Gk. *proseuchḗ* (Acts 16:13, 16)]. Every other use of Gk. *proseuchḗ* in the NT (thirty-five times, including seven in Acts) is translated "prayer." In Acts 16, however, where the text is debated (see below), most recent English versions render "place of prayer." The use of Gk. *proseuchḗ* for a place is first attested in Hellenistic Egypt and is regularly a Jewish term (*Papyrus de Magdola* 35.5 [3rd cent. B.C.]; *Tebtunis Papyrus* I, 86.18 [2nd cent. B.C.]; etc.). Later the word is often equivalent to "synagogue"; thus the synagogues in Rome were termed *proseuchaí* (J. B. Frey on *Corpus Inscriptionum Judaicarum*, no. 531 [p. 391]; cf. Juvenal *Satires* iii.296). In Acts, however, the term probably refers to an informal place or enclosure outside a city that lacked the ten Jewish men traditionally needed for a synagogue service. This lack may be implied by the reference to the assembled women. Not all *proseuchaí* were necessarily synagogues, and Luke may have used the word here to distinguish this meeting place from a regular synagogue, for which he always used Gk. *synagōgḗ*. (Cf. the temple as "house of *proseuchḗ* in Isa. 56:7, LXX, quoted in Mt. 21:13 par.; in rare instances the word is applied to a pagan shrine [*CIG*, 2079, of Olbia in Sarmatia], although Jewish influence has then been suspected.) (See M. Hengel, "Proseuche und Synagoge," in G. Jeremias, H.-W. Kuhn, and H. Stegemann, eds., *Tradition und Glaube* [*Festschrift* K. G. Kuhn, 1971], pp. 157-184.)

The "place of prayer" of Acts 16 was evidently beside the small river Gangites, which flows past the western edge of Philippi.

Although the essential meaning is little affected, the interpretation of Acts 16:13 is complicated by textual variations. The principal variants are: *enomízomen proseuchḗn* A corrector Ψ, cf. C (B *proseuchḗ*); *enomízeto proseuchḗ* E TR etc.; *enómizen proseuchḗn* ℵ (*p*^{74} *proseuchḗ*); *edókei proseuchḗ* D Vulg. All these variants probably derive from two archetypes: (1) the traditional *enomízeto proseuchḗ*, "prayer was wont (to be made)" and (2) *enomízomen proseuchḗn*, "we supposed (there was) a place of prayer." The reading of D evidently arose from misconstruing *enomízeto* as "was supposed," and in the second group the accusative ending *n* may have dropped through influence of other texts or simply by omission of the horizontal stroke that often represented *n*. The balance of evidence appears to favor the second possible archetype. Although it has limited support in extant MSS, several uncials seem to preserve corrupt forms of it. (See B. M. Metzger, *Textual Comm. on the Greek NT* [1971], p. 447.)

C. J. HEMER

PREACH [Heb. hiphil of *nāṭap*] (Ezk. 20:46 [MT 21:2]; 21:2 [MT 7]; Am. 7:16; Mic. 2:6, 11); AV "drop (word)," PROPHESY; NEB "pour out words," "go drivelling on," RANT; [Gk. *euangelízomai*–'bring good news,' *proeuangelízomai* ("preach the gospel beforehand," Gal. 3:8), *kērýssō*–'proclaim,' *prokērýssō* ("preach before," Acts 13:24), *légō*–'say' (Mt. 23:3), *laléō*–'speak' (Mk. 2:2), *parrhēsiázomai* ("preach boldly," Acts 9:27, 29), etc.]; AV also PUBLISH, SAY, etc.; NEB also PROCLAIM, SAY, ANNOUNCE, etc.; **PREACHER** [Heb. *qōheleṭ*] (Eccl. 1:1f., 12; 7:27; 12:8-10); NEB SPEAKER; [hiphil part. of *nāṭap*] (Mic. 2:11); AV PROPHET; NEB RANTING; [Gk. part. of *kērýssō* (Rom. 10:14); *kēryx* (1 Tim. 2:7; 2 Tim. 1:11), *katangeleús*–'one who proclaims' (Acts 17:18)]; AV also SETTER FORTH; NEB PROPAGANDIST, "someone to spread the news," HERALD; **PREACHING** [Gk. *kḗrygma* (Mt. 12:41 par.; Rom. 16:25; 1 Cor. 1:21; 15:14; Tit. 1:3), *lógos*–'word, speech' (Acts 18:5; 1 Tim. 5:17; "preach the word," Acts 6:2), *paráklēsis*–'encouragement, exhortation' (1 Tim. 4:13), *rhḗma*–'word, saying' (Rom. 10:17)]; AV also "spirit" (reading *pneúma* instead of *lógos*, Acts 18:5), WORD, EXHORTATION; NEB also PROCLAMATION, GOSPEL, etc. In some passages "preach" (Rom. 15:19; 2 Cor. 2:12) and "preaching" (Acts 6:2; 2 Cor. 8:18) represent no Greek term but are supplied contextually by the RSV. Public, authoritative proclamation.

I. In the OT
  A. The Root *ntp*
  B. *Qōheleṭ*
II. In the NT
  A. *Euangelízomai* and Minor Terms
  B. *Kērýssō* and Related Terms
    1. Current Approaches
    2. Extrabiblical Literature
    3. The Preacher
    4. The Message

I. In the OT.–The RSV OT uses "preach" or "preacher" only to render the hiphil of *nāṭap* (in Ezekiel, Amos, and Micah) and *qōheleṭ* (in Ecclesiastes). The AV occasionally uses "preach" to translate the piel of *bāśar* (RSV "tell the glad news," Ps. 40:9 [MT 10]; "bring good tidings," Isa. 61:1; *see also* GOOD NEWS) and *qārâ* (RSV "proclaim," Neh. 6:7; Jonah 3:2; cf. *qᵉrî'â*, Jonah 3:2; AV "preaching"; RSV "message").

A. The Root ntp. This root occurs in the OT nine times in the qal form, each time with the meaning "drip" (whether of rain, myrrh, wine, or honey; in Job 29:22 it is metaphorically applied to Job's words, which are compared to the welcome spring rains [v. 23]). The same root occurs nine times in the hiphil form. In Am. 9:13 it means simply "drip" or possibly "let drip," referring to wine (cf. qal, Joel 3:18 [MT 4:18]); but in the other eight occurrences it clearly refers to an act of speech, usually (apart from Mic. 2:11) in synonymous parallelism with "prophesy." Thus the RSV renders it "preach." The use of the verb root in Job 29:22 may suggest that here also it denotes a "dripping" of words. Equally plausible is H. W. Wolff's suggestion (p. 315) that the verb describes impassioned speech by a vivid reference to the accompanying spray of saliva from the speaker's mouth (cf. the English expression "spewing forth"). In any case, this use of *nāṭap* has a range in tone similar to that of Eng. "preach"; e.g., while in Ezk. 20:46; 21:2 (MT 21:2, 7) it refers to speech commanded by the Lord, the tone is just as clearly pejorative in Mic. 2:6, 11 (contra Allen, pp. 294f. n. 57; cf. NEB "rant," "ranting") and possibly in Am. 7:16 (NEB "drivelling on"; cf. Zimmerli, p. 422).

B. Qōheleṭ. This term occurs seven times in the OT, all in Ecclesiastes (1:1f., 12; 7:27; 12:8-10), and is traditionally, though somewhat doubtfully, translated "the Preacher" (NEB "the Speaker"). The term is a qal fem. part. of the common root *qhl* ("assemble") — which is curious both because it is feminine and because the verb is elsewhere unattested in the qal. Some have argued plausibly that *qōheleṭ* is the title of a functionary, perhaps best rendered "the Assembler" or "the Gatherer" (see Gordis, pp. 203f.; but Whitley [pp. 4-6] has suggested "the Sceptic"). Kidner (p. 13) has pointed out that, while *qōheleṭ* may refer to the "gathering" of a congregation of people (hence LXX *Ekklēsiastḗs*), the book's climactic passage (12:9-12) suggests that it may instead refer to the "gathering" of

wise sayings, so impressively exemplified in the book of Ecclesiastes.

II. In the NT.–Of the fourteen Greek terms translated "preach," "preacher," or "preaching" by the RSV, by far the most characteristic are the four members of the *kērýssō* word group (seventy-two times) and the two members of the *euangelízō* word group (forty-two times). The last fifty years have seen a growing scholarly consensus (acknowledged also in the more recent popular manuals; cf. J. E. Adams, *Preaching With Purpose* [1982], pp. 5f.) that "preach" is somewhat infelicitous as a rendering for these two word groups. "Preach" accurately conveys the typically public and authoritative character of the various speech acts intended by these Greek terms; but it is a misleading translation to the extent that common English parlance uses "preach" to refer to formal sermonizing directed to the faithful, while the NT uses both *kērýssō* and *euangelízomai* to refer primarily (though not exclusively) to evangelistic activity directed to non-Christians.

A. Euangelízomai *and Minor Terms.* The verb *euangelízomai* is derived from *ángelos* ("messenger") or *angéllō* ("announce"); the prefix *eu-* indicates that what is announced is *good* news that brings joy. The RSV renders it by a variety of words and phrases, including "preach" (e.g., Acts 5:42; 1 Cor. 9:18), "preach the gospel" (e.g., Lk. 9:6; Rom. 1:15), "preach the good news" (e.g., Acts 8:12; Rom. 10:15), and "bring good news" (e.g., Lk. 1:19; 2:10); *see* GOOD NEWS. *Euangelízomai* appears most frequently in the Lukan and Pauline writings. Although *euangelízomai* and *kerýssō* have somewhat different nuances (*euangelízomai* usually emphasizing that it is the good news of divine salvation that is being preached), the two terms are often used synonymously to describe the authoritative proclamation of the divine message (see II.B.4 below). For a more thorough study of *euangelízomai* (and the noun *euangélion,* "good news, gospel"), *see* GOSPEL; see also *DNTT,* II, 107-114; *TDNT,* II, 707-721.

The RSV occasionally uses "preach," "preacher," and "preaching" to render a variety of more general Greek terms for speech, presumably to convey the authoritative and public character of the speech acts in these passages. In most of these instances the RSV departs from the practice of the AV. For example, *légō* (usually "say") in Mt. 23:3 is rendered "preach" by the RSV but "say" by the AV and NEB. *Laléō* (usually "speak"), on the other hand, is rendered "preach" by both the AV and RSV of Mk. 2:2. In several passages the RSV uses "preaching" to translate the nouns *lógos* (cognate of *légō*) and *rhêma,* both of which are usually translated "word." *Katangeleús,* which occurs only in Acts 17:18 (RSV "preacher"; AV "setter forth"; NEB "propagandist"), is derived from the verb *katangéllō,* "proclaim." (See also heading.)

B. Kērýssō *and Related Terms.* The RSV characteristically translates the *kērýssō* word group by various appropriate forms of "preach," although it occasionally uses other terms. It usually renders *kērýssō* itself "preach" (forty-nine times; cf. also the one occurrence of *prokērýssō* in Acts 13:24), but it also uses "proclaim" (ten times; e.g., Mt. 10:27; Mk. 5:20; 7:36; Lk. 4:18f.) and "talk" (Mk. 1:45). It renders *kêryx* twice as "preacher" and once as "herald" (2 Pet. 2:5). For *kérygma* it uses "preaching" five times, "message" twice (1 Cor. 2:4; 2 Tim. 4:17), and "what one preaches" once (1 Cor. 1:21).

1. Current Approaches. a. Existentialist Interpretation. Analysis of the *kērýssō* word group, which is so determinative for the NT concept of preaching, has been complicated in modern times by the regrettable practice of using "kerygma" as a technical term of twentieth-century biblical theology. Certain existentialist theologians (esp. Bultmann and his school) have posited a radical dichotomy between the Jesus of actual history and the "kerygmatic Christ" who confronts people through the message (kerygma) of the early Church. This use of "kerygma" can give the unwary reader the misimpression that the anglicized Greek term preserves the original NT meaning, and hence that the preaching (*kérygma*) of the earliest Christians was not concerned with historical facts. For a critical analysis of this specialized usage of "kerygma," see *DNTT,* III, 57-60.

b. C. H. Dodd. The publication of C. H. Dodd's seminal work, *Apostolic Preaching and Its Developments* (1936), marked a turning point in the modern treatment of *kērýssō* and its cognates. With surprisingly modest argumentation Dodd seemed at first to win the day for two crucial propositions. For convenience these are treated here in reverse order.

Dodd's second thesis was that an analysis of the NT writings yielded a discernible pattern underlying the primitive apostolic proclamation to unbelievers (the "kerygma") — a pattern that followed a six-point outline: (1) The age of fulfillment has arrived. (2) This has occurred through the ministry, death, and resurrection of Christ. (3) In His resurrection Christ was exalted to the right hand of God as messianic head of the new Israel. (4) The Holy Spirit in the Church is the evidence of Christ's present power and glory. (5) The messianic age will be consummated shortly in the return of Christ. (6) The kerygma always closes with the message of repentance, forgiveness of sins, the promise of the Holy Spirit, and eternal life for those who enter the "elect community." (See Dodd, pp. 21-24.)

A half century of almost relentless analysis and criticism seems to have left Dodd's thesis in shambles. M. Green (pp. 60f.) cites a parade of modern scholars who have replaced Dodd's original six-point outline with outlines varying from three points to seven — each scholar equally convinced of having at last recovered the earliest kerygma. The cumulative effect of their varying outlines is to discredit the entire enterprise as overly optimistic. More recent scholars generally prefer to speak not of a primitive "kerygma" but rather of "kerygmata" — plural because of the now-established pluriformity and diversity of the early Church's message, though that message everywhere finds its center in Jesus Christ. (*See also* KERYGMA.)

Dodd's first thesis was that "the NT writers draw a distinction between preaching and teaching. . . . Teaching (*didaskein*) is in a large majority of cases ethical instruction. . . . Preaching, on the other hand, is the public proclamation of Christianity to the non-Christian world" (p. 7). Accordingly, Dodd distinguished preaching from teaching both by its content and by its audience, with the latter distinction ("preaching" being aimed at non-Christians) posing the sharpest possible contrast with modern day preaching — at least as perceived from the pew!

This thesis, too, has had its share of detractors. Numerous scholars have pointed out that Dodd's rigid distinction between preaching and teaching is simply not honored in the NT (nor in the LXX). R. Mounce (pp. 40ff.), e.g., cites various parallel passages in the Synoptic Gospels to demonstrate that what one Gospel terms "preaching" the others will at times term "teaching" (e.g., cf. Mt. 4:23 with Mk. 1:39; Lk. 4:44). Perhaps more compelling is the observation that even within a single Gospel the same activity can be referred to both as "teaching" (Mk. 1:21) and as "preaching" (v. 38).

This evidence can be accommodated, however, if Dodd's thesis is modified to allow for the well-established broad semantic range of *didáskō* in the NT (*see* TEACH). Thus in the NT "teaching" can include "preaching" without these terms being considered merely synonymous. In sup-

port of Dodd, it remains striking that in the vast majority of cases (though not every case, contra Dodd) "preaching" in the NT is, in fact, directed to unbelievers.

(See also *DNTT*, III, 60-67; McDonald.)

2. Extrabiblical Literature. G. Friedrich (*TDNT*, III, 683-694) has amassed an impressive sampling of evidence to help establish the classical and Hellenistic background for the *kērýssō* word group. The following selective arrangement of that evidence departs somewhat from Friedrich's by placing greater emphasis on *kērýssō*'s distinctly political usage as over against its cultic or philosophical usage. Although superficial parallels can be found between Christianity and the Hellenistic religions or Stoic philosophy, the organizing rubric for the NT's usage of these terms (esp. in the teaching of Jesus) lies clearly in the political sphere, i.e., "preaching the kingdom of God."

Two distinct uses of this word group are readily apparent from the classical and Hellenistic evidence: each of these is attested in biblical usage.

In its broadest and most general (though not the most common) use, *kērýssō* describes the making of a loud, attention-getting noise or of a public oral announcement; hence it can simply be translated "proclaim." A biblical example occurs in Zeph. 3:14, LXX, where Israel is enjoined to "shout aloud" (*kērýssō*) its joyful praise to the Lord (cf. also Ex. 32:5; Hos. 5:8; Joel 2:1; Zec. 9:9; Rev. 5:2).

Far more common is the narrower use of *kērýssō* to refer specifically to the proclaiming of a *kḗryx* ("herald" or "preacher"), i.e., one who speaks as a representative of another. The party represented might be a private individual, in which case the "preacher" was frequently the ancient equivalent of an auctioneer. Or the party represented might be an official of a court, a temple, the Areopagus, or even a deity, as in the case of the Stoic philosophers (cf. Epictetus *Dissertationes* iii.22.69). Interestingly, the noun *kḗryx* occurs in the NT much less frequently than the verb. M. Green (p. 292, n. 98) has suggested that, given the superficial similarities between the early Christians and these self-styled emissaries of the pagan gods who left home, possessions, and family (*Dissertationes* iii.22.46ff.) to bring a supposed divine revelation (iii.1.36ff.) offering a peace purported to surpass even the *pax Romana* (iii.13.9f.), it is not surprising that the NT authors show restraint in appropriating the noun *kḗryx*: presumably they wished to avoid these unwelcome associations.

Typically, however, the party represented was the king himself (esp. in the Homeric period) or, later, the state. While modern scholars have drawn attention to the great variety of menial tasks performed by these "preachers" as members of the royal court — e.g., mixing wine or preparing a bath (cf. *TDNT*, III, 684) — these activities were clearly peripheral to their "preaching."

Acting in his official capacity as an envoy of the king, and so bearing the official insignia of the king, the *kḗryx* was granted the inviolable status of the king he represented. To reject him was to reject the king who commissioned him; to harm him was to harm the king and, worse, to incur the wrath of the gods (cf. Demosthenes *Orationes* xii.4). In contrast to the ambassador (*présbys*), who had the authority to engage in negotiations without explicit instructions, the *kḗryx* was required simply to deliver any message exactly as it was given to him and to return at once (*TDNT*, III, 688).

The Bible offers numerous instances of this more narrow use of the *kērýssō* word group (cf., e.g., LXX Ex. 36:6; 2 K. 10:20; 2 Ch. 36:22; Dnl. 5:29). Yet (apart from Jonah) these occurrences are notably lacking where one would most expect to find them, namely, in descriptions of the prophets as spokesmen for their Lord. To explain this surprising absence, proper account must be given to a third usage of these terms attested in the extrabiblical sources.

The third use of the *kērýssō* word group is really just a special development of the second; but because it refers to the work that made the herald most vital to the state and lent his office its greatest dignity, this special use should not be uncritically lumped with the more general description treated above. Expressed most simply by the tenth-century A.D. Greek lexicographer Suidas, "a herald [*kḗryx*] is in time of war what an ambassador [*présbys*] is in peace." Suidas was referring to the Greek practice of sending a *kḗryx* into enemy territory ahead of an advancing army to warn the enemy of certain destruction unless they accepted the proffered terms for peace. In this situation the *kḗryx* was empowered either to accept surrender on behalf of his king or to declare war if those terms were rejected.

This practice, designed to avoid conflict, is attested throughout the ancient world; cf. Dt. 20:10: "When you draw near to a city to fight against it, offer terms of peace to it" (Josephus rendered the last phrase "send an embassy with heralds [*kḗrykes*]," *Ant.* iv.7.41 [296]; cf. also the *kḗryx* sent by Neco to warn Josiah in x.5.1 [75]). What was new with the Greeks was their practice of choosing for this obviously dangerous job people who were otherwise relative nobodies and were therefore considerably more dispensable than, e.g., the Tartan, the Rabsaris, the Rabshakeh sent by the Assyrians (2 K. 18:17)! Julius Pollux (*Onomasticum* vi.128) can therefore list heralds alongside brothel keepers and other wastrels. This by no means implies, however, that harm to such a *kḗryx* would be taken lightly by his king. The swift and fierce retribution incurred by such acts was more than sufficient to establish the seriousness with which the herald's diplomatic immunity was held and so to inspire almost unimaginable feats of courage among their ranks.

A striking example of this kind of outraged response to the murder of a *kḗryx* occurs in Plutarch *Pericles* 30, which describes how Pericles's *kḗryx* Anthemocritus was murdered by the rival city state of Megara, and how this atrocity resulted in an Athenian decree of irreconcilable and implacable enmity between the Athenians and the Megarians. (For another vivid example, see Herodotus vii.131ff.; cf. also Rengstorf, pp. 106-121.)

Examples of singular bravery among the "preachers" of Greece are plentiful. Thucydides i.29, e.g., relates an incident in which seventy-five Corinthian ships, boarding some two thousand hoplites, set sail to wage war against the Corcyraeans. Incredibly, when their fleet reached Actium "the Corcyraeans had sent out a *kḗryx* in a dinghy to forbid their advance"! When the *kḗryx* returned, having failed to secure peace, the Corcyraeans' amusing strategy had bought them sufficient time to prepare for their ultimately victorious counteroffensive.

3. The Preacher. a. Among the Prophets. Against this background, it is not surprising that the LXX (and NT; cf. Mt. 12:41) uses *kērýssō* for none of the OT prophets except Jonah; for of the prophets, Jonah alone was commissioned to bring the demand of unconditional surrender into non-Israelite territory ahead of his Lord's advancing armies. With similar import the NT describes Noah as a "herald" to the hostile world of his day as it awaited the approaching judgment of God (2 Pet. 2:5).

When the NT describes John the Baptist's ministry and later that of Jesus as "preaching [*kērýssō*] . . . 'Repent, for the kingdom of heaven is at hand'" (Mt. 3:1f.; 4:17), it depicts their preaching as a dire warning, marking a

drastic change from the OT period when Israel had not yet fully become "enemy territory" (as Nineveh was for Jonah). The "prophetic lawsuit" (*rîḇ*) had reached its dreaded final stage. This interpretation is supported by J. R. Michaels's observation (p. 23) that John's use of baptism — paralleling proselyte baptism — reduced even the most religious "son of Abraham" to the level of an outsider needing the ritual of initiation into Israel.

b. Authority. Like the Greek heralds or "preachers," Jesus' preachers possessed no special inherent stature in the eyes of the world (cf. 1 Cor. 1:20-29, esp. v. 26: "not many of you were wise according to worldly standards, not many were powerful, not many were of noble birth"). But when Jesus commissioned His disciples to preach the kingdom (Mt. 10), He invested them with His own authority and the inviolable status of the King of kings they would represent. Distinguishing them with the unmistakable insignia of their Lord — His servant attitude and miracle working power (vv. 8-10), Jesus sent them to proclaim the dire warning and promise, "the kingdom of heaven is at hand" (v. 7). Though He sent them as "sheep among wolves" with the warning that persecution awaited them (vv. 16-39), He comforted them with the promise that "he who receives you receives me" (v. 40), and that "it will be more bearable for Sodom and Gomorrah on the day of judgment than for [the town that rejects them]" (vv. 14f.; cf. also 2 Cor. 5:20).

c. The "Preacherhood" of All Believers. While it is true that preachers are not self-appointed ("how can they preach unless they are sent?" Rom. 10:15), it should be noted that Jesus commissioned not merely the Twelve but also the rank and file of His disciples to preach the kingdom of God (cf. the extensive parallels between Mt. 10 and Lk. 10, though the latter lacks the term *kērýssō*). Likewise, in Luke's account of the "Great Commission" (that "repentance and forgiveness of sins should be preached in his name to all nations," Lk. 24:47) Jesus' immediate audience included other disciples (e.g., Cleopas and his unnamed companion; cf. also v. 33) in addition to the apostles.

Acts 8:1-4 stresses that it was not the apostles (v. 1) but all the other believers in Jerusalem who "were scattered" and so "went about preaching the word" (v. 4). Since v. 3 specifically mentions that women were included among the believers who were persecuted, the text does not warrant an interpretation that excludes women from those who fled Jerusalem and "went about preaching the word." Here as elsewhere the NT upholds the principle of the "preacherhood of all believers."

It is therefore not surprising that "preachers" and "preaching" are conspicuously absent from the various lists of offices and gifts in the NT (Rom. 12:6-8; 1 Cor. 12:8-10, 28-30; Eph. 4:11; 1 Pet. 4:10f.). The call to preach is not reserved for some elite few among Jesus' followers or for those with special abilities in public speaking. It is the duty and privilege of every believer — for all who would not be ashamed of Jesus and His words (Mk. 8:38).

(For a discussion of the larger question of the role of women in the Church, *see* WOMAN.)

4. The Message. The pervasive NT practice of associating "preaching" specifically with the "kingdom of God/heaven" (e.g., Mt. 4:23; 10:7; Acts 20:25; 28:31) makes sense when preachers are understood as envoys sent into enemy territory ahead of their kingdom's approaching armies, bearing their Lord's terms for peace. Likewise, it is not surprising that the message is so often focused on the summons to "repent" (e.g., Mt. 3:1f. par.; 4:17 par.; Mk. 6:12), with the ultimatum to count the cost of discipleship (cf. Lk. 14:25-33; indeed, discipleship costs the surrender of all to Christ, but the alternative of judgment is unaffordable).

But because Jesus' coming means not merely a threat of well-deserved judgment but most of all a promise to set free those tyrannized by the guilt of sin, the message preached can also be characterized more fully as "the gospel of the kingdom" (cf. *kērýssō tó euangélion tḗs basileías*, Mt. 4:23; 9:35; 24:14). Accordingly, *kērýssō* often has merely *euangélion* ("good news" or "gospel") for its content (Mt. 26:13; Mk. 1:14; 13:10; 14:9; Lk. 8:1; Gal. 2:2; Col. 1:23; 1 Thess. 2:9); cf. the parallels between "preach [*kērýssō*] the word" and "do the work of an evangelist [*euangelistḗs*]" in 2 Tim. 4:2, 5, and between "do all for the sake of the gospel" and "preach" in 1 Cor. 9:23, 27. Reflecting the same emphasis on the good news that is preached, the NT frequently uses *euangelízomai* interchangeably with *kērýssō* in descriptions of the same speech acts (e.g., cf. Lk. 4:43 and 9:6 [*euangelízomai*] with parallels in Mk. 1:38 and 6:12 [*kērýssō*]). Other passages characterize the content of the preaching (*kērýssō* or *kḗrygma*) as "Jesus Christ" (2 Cor. 1:19; 11:4; Phil. 1:15; 1 Tim. 3:16) or Christ's death and resurrection (1 Cor. 1:23; 15:12, 14). It is through the preaching of the crucified and risen Christ that salvation is made available to all who believe the good news (cf. Acts 10:39-42; Rom. 10:14; etc.).

The AV of 1 Cor. 1:21 ("it pleased God by the foolishness of preaching to save them that believe") has at times been misconstrued to mean that Paul was denigrating the act of preaching as foolishness. Such an interpretation may seem to gain support from Paul's admission that his own preaching appeared unimpressive since he lacked eloquence and was with them "in weakness and in much fear and trembling" (2:1-5); but since the Greek word for "preaching" here is not the verb but the noun *kḗrygma* (cf. RSV "what we preach"), Paul's main point is that it is the message (not the method) that appears to be "foolishness" — "to those who are perishing" (v. 18).

G. P. HUGENBERGER

PRECEPT [Heb. *piqqûḏ, ṣaw* (Isa. 28:10, 13), *leqaḥ* (Prov. 4:2), *miṣwâ*–'command' (Jer. 35:8); Gk. *éntalma* (Mt. 15:9 par. Mk. 7:7; Col. 2:22), *dikaíōma* (Rom. 2:26)]; AV also STATUTE (Ps. 19:8 [MT 9]), COMMANDMENT (Ps. 111:7; Mt. 15:9; Mk. 7:7; Col. 2:22), DOCTRINE (Prov. 4:2), "righteousness" (Rom. 2:26); NEB also COMMANDMENT (Mt. 15:9; Mk. 7:7), INJUNCTION (Col. 2:22), INSTRUCTION (Jer. 35:8), "learning" (Prov. 4:2), "harsh cries and raucous shouts" (Isa. 28:10, 13). A command, usually a divine injunction setting forth human obligations.

Hebrew *piqqûḏ* (only in the pl.; < *pqd*, "visit," "appoint"; cf. Ugar. *pqd*, "give orders"; Akk. *paqādu*, "en-

trust," "supervise," "appoint") occurs most often in Ps. 119 (twenty-one times; vv. 4, 15, 27, etc.). This Psalm, a paean for the Torah, uses several similar terms that all relate to the law (see R. Girdlestone, *Synonyms of the OT* [2nd ed. 1897; repr. 1976], pp. 208-210; cf. *THAT*, II, *s.v.* פקד [W. Schottroff]). Heb. *leqaḥ* is from *lāqaḥ*, "take, receive," and thus means that which is received, i.e., instruction, in Prov. 4:2 (cf. W. McKane, *Proverbs* [*OTL*, 1970], pp. 265f., 303f., who defined it as the "appropriation of the tradition"). In Jer. 35:18 the common Hebrew word for commandment, *miṣwâ*, occurs twice and the related verb *ṣāwâ* once. Many of the modern versions fail to convey this repetition so characteristic of Semitic languages and translate *miṣwâ* "precept" as well as "commandment," perhaps for variety's sake (cf. NAB and NASB).

Isaiah 28:10, 13 are difficult verses; the repetition of *ṣaw* and *qaw* has been variously interpreted. By translating *ṣaw* "precept" the RSV and AV indicate a relation to *ṣāwâ* and *miṣwâ*, but this is doubtful. More likely is the NEB's "harsh cries and raucous shouts," a paraphrase based on the assumption that Isaiah is trying to convey the incoherent sounds of a drunken man (cf. vv. 7f.; see F. I. Andersen and D. N. Freedman, *Hosea* [*AB*, 1980], pp. 409f., who derived *ṣaw* from *ṣw'*, a root meaning "stink," hence "filth [of drunkenness]," i.e., vomit). Another interpretation with some merit has been advocated by, e.g., O. Kaiser (*Isaiah 13–39* [Eng. tr., *OTL*, 1974], pp. 245f.), J. Lindblom (*Prophecy in Ancient Israel* [repr. 1973], p. 201), and R. Clements (*Isaiah 1–39* [*NCBC*, 1980], p. 228), who have seen here Isaiah's enemies mocking his preaching by comparing it to a teacher's "prattling" to little children, perhaps a recital of the alphabet (but cf. the criticisms in G. R. Driver, "'Another Little Drink' — Isaiah 28:1-23," in P. R. Ackroyd and B. Lindars, eds., *Words and Meanings* [*Festschrift* for D. W. Thomas, 1968], pp. 53-56; Driver argued for the sense of the NEB).

In the NT Gk. *éntalma* occurs only three times, always meaning human precepts. Mt. 15:9 par. Mk. 7:7 is a slightly modified quotation of Isa. 29:13, LXX, which Jesus used to denounce the hypocritical Pharisees and scribes. Several commentators have pointed out that Col. 2:22 also alludes to Isa. 29:13 (T. Abbott [*ICC*, 1905], p. 275; E. Lohse [Eng. tr., *Hermeneia*, 1971], p. 124; R. Martin [*NCBC*, 1973; repr. 1981], p. 97). According to C. K. Barrett *Epistle to the Romans* [*HNTC*, 1957], p. 58) Gk. *dikaíōma* (< *dikaióō*, "be righteous"; cf. AV) in Rom. 2:26 means "righteous requirements . . . that which the law requires if a man is to be righteous with God." E. Käsemann (*Comm. on Romans* [Eng. tr., 1980], p. 73) saw here a more general reference to the "whole Torah . . . defined by legal statements." G. A. L.

PRECINCT [Heb. *parwār*] (2 K. 23:11); AV SUBURB; NEB COLONNADE. The meaning of Heb. *parwār* is uncertain. Although scholars have suggested various Persian cognates (e.g., M. Ellenbogen, *Foreign Words in the OT* [1962], pp. 137f., suggested Old Pers. *paruva*, "before"), none is convincing. The NEB may rest its translation on the supposed Persian cognate *frabada*, "court, open pavilion," but this term can hardly be cognate with Heb. *parwār* (hence the conjecture, based on some MSS. of *parbāḏ*; cf. KoB, p. 776). *Parwār* is usually equated with the equally obscure *parbār* (1 Ch. 26:18; *see* PARBAR), which in a Lydian Aramaic inscription apparently means "vestibule" (cf. *KAI*, II, 306f.). Some scholars have attempted to link *parbār* (and thus *parwār*) to Sum. E-barbar, "shining house," used of the sun temple in ancient Mesopotamia and thus quite appropriate to the context of 2 K. 23 (cf. also LXX *pharourím*). Another possible cognate is Egyp. *pr wr*, "great house." Despite the links that these last two possibilities might have with *parwār*, neither seems to meet the sense required or to explain the later meanings of the word. *Parwār* is perhaps best understood as "court" or "courtyard," a meaning that both fits the context and corresponds to the later mishnaic and targumic sense.

See also J. Gray, *I & II Kings* (2nd ed., *OTL*, 1970).

G. A. L.

PRECIOUS [Heb. *yāqar* ("be precious," 1 S. 26:21; 2 K. 1:13f.; Ps. 72:14; 139:17; Isa. 43:4), *yāqār* (Job 28:16; Ps. 36:7 [MT 8]; 116:15; Prov. 1:13; 3:15; 12:27; 24:4; Isa. 28:16; Jer. 15:19; Lam. 4:2), *yᵉqār* (Prov. 20:15; "precious thing," Job 28:10; Ezk. 22:25), *ḥāmaḏ*–'to desire' (niphal, Prov. 21:20), *ḥemdâ* (2 Ch. 36:10; Dnl. 11:8; Nah. 2:9 [MT 10]; "precious thing," Hos. 13:15), *ḥᵃmûḏâ* (2 Ch. 20:25; Ezr. 8:27; "precious thing," Dnl. 11:43), *maḥmāḏ* (2 Ch. 36:19; "precious thing," Lam. 1:10; Hos. 9:6), *maḥmōḏ* (Lam. 1:7), *ṭôḇ*–'good' (Ps. 133:2; Eccl. 7:1; 2 K. 20:13 par. Isa. 39:2), *migdānâ* ("precious gifts," 2 Ch. 32:23), *tô'āpâ* (Job 22:25), *ṣāpûn* (Ezk. 7:22), *meḵer* (Prov. 31:10), *gāḏal*–'become great' ("be precious," 1 S. 26:24); Gk. *timḗ*–'honor' (1 Pet. 2:7), *tímios* (Acts 20:24; Jas. 5:7; 1 Pet. 1:19; 2 Pet. 1:4), *polýtimos* (1 Pet. 1:7), *polytelḗs* ("very precious," 1 Pet. 3:4), *éntimos* (1 Pet. 2:4, 6)]; AV also GOODLY, DEAR, "plenty," etc.; NEB also CHOICEST, HIGH VALUE, NOBLE, etc.

Two passages are problematic. In Prov. 12:27b the MT syntax is difficult (lit. "wealth of a man precious diligent"); thus *BHS* suggested rearranging the text to read "precious is the wealth of a diligent man" (cf. RSV, AV). In Hos. 9:6 the MT is obscure. The RSV offers perhaps the most sensible reading (cf. AV). The NEB emends the text substantially in an effort to make sense of it; unfortunately there is little support for the emendation. See the comms., esp. F. I. Andersen and D. N. Freedman (*AB*, 1980), p. 531.

Something is considered precious when it has either intrinsic value or is desirable and rare; some items combine the two ideas. The produce of the earth is counted precious because of its deliciousness and its life-giving value (Jas. 5:7; cf. AV, NEB, Dt. 33:13-16). Good oil is called "precious" (RSV) or "fragrant" (NEB) in 2 K. 20:13; Ps. 133:2; Isa. 39:2. The wisdom school finds wisdom (Prov. 3:15) and a good wife (31:10) "more precious than jewels." Jewels are frequently called precious stones; *see* STONES, PRECIOUS. The vessels of the temple were considered precious because of their metals, their uniqueness, and their holiness. Consequently a conquering king sought them first as his prize spoil (2 Ch. 36:10; Lam. 1:10).

Words are cheap, but if uttered correctly they become precious and health giving (Jer. 15:19). This is especially true of God's word. During the days of Eli the word of God was called precious (1 S. 3:1, AV; Heb. *yāqār*; RSV "rare") because there was no message from Him through a prophet. God's thoughts are viewed as precious because of their inexhaustible wonder (Ps. 139:17). Peter called His promises precious, for through them believers partake of the divine nature (2 Pet. 1:4).

Life is considered to be precious, no doubt because of its intrinsic value (Ps. 72:14). The value placed on the person makes his redemption from death very costly (Ps. 49:8); no man can pay it. David spared the life of his enemy Saul because he valued it, even though he had ample opportunity to kill him (1 S. 26:24). Yahweh watches His people, especially the poor, and their life is precious to Him (Isa. 43:4); also precious is the death of His "saints" (Ps. 116:15). The value of God's people resides in their obedience to and worship of Him; they are "worth their

weight in fine gold" (Lam. 4:2). But when they rebel against Him and are punished in captivity, their worth is compared to earthen pots (v. 2).

God's work of salvation is particularly regarded as precious. Jesus becomes the precious CORNERSTONE (Isa. 28:16; 1 Pet. 2:6). People have rejected Him, but God, seeing His value, has chosen Him and accepted His life of obedience (1 Pet. 2:4). Those who believe this also value Jesus Himself as precious, for He paid the costly price of their redemption by giving His precious blood (1:19). Precious, too, is the faith that produces such results (2 Pet. 1:1, AV); more precious than gold is faith that endures testing (1 Pet. 1:7). Those who let Christ work in their hidden heart are gaining a meek and quiet spirit, an "imperishable jewel" that is of great price to God (3:4). This inner quality enhances the value already placed on life and makes it very precious.

In conclusion, a statement in Job reveals that all value ultimately resides in God Himself: "and if the Almighty is your gold, and your precious silver; then you will delight yourself in the Almighty, and lift up your face to God" (Job 22:25f.).

PREDESTINATION.

I. Vocabulary
II. Biblical Doctrine
  A. In the OT
  B. In the NT
III. History of the Doctrine
  A. Early Church
  B. Medieval Church
  C. Reformation Church
  D. Modern Church

I. Vocabulary.–In the RSV "predestined" renders Gk. *proorízō* in Acts 4:28; Rom. 8:29f. (NEB "foreordained"). The same word in Eph. 1:5, 11f. is translated "destined." The AV has "predestinate," and in Acts 4:28 "determined before." These passages contain other words that are equally important to the idea of predestination: *boulḗ* (plan, counsel), *thélēma* (will), *eudokía* (purpose, "pleasure"), *próthesis* (purpose), *oikonomía* (plan), *proginṓskō* (foreknow), *eklégomai* (choose), *kaléō* (call). Cf. Rom. 9:11; 11:2; Eph. 3:11; 2 Tim. 1:9; 1 Pet. 1:2, 20; and also *títhēmi*, "destine," in 1 Thess. 5:9; 1 Pet. 2:8.

In the OT a number of words indicate the divine plan and purpose, e.g., Heb. *ʿēṣâ* (plan, AV "counsel," Jer. 49:20; 50:45; Mic. 4:12), *yāʿaṣ* (purpose, Isa. 14:24, 26f.; 19:12; 23:9), and the important word *bāḥar* (choose).

The Eng. "predestination" derives from Lat. *prae destinatio*, which in the Vulgate translates Gk. *proorízō*.

See also PLAN; PURPOSE; WILL OF GOD.

II. Biblical Doctrine.–The doctrine of predestination lies at the heart of all Reformed doctrine. Yet this teaching is not merely mysterious but also repulsive unless one goes behind it to the sovereignty of the triune God. The biblical revelation concerning God is that He possesses all power and authority in heaven and earth, and this means that He rules and reigns over all things (Gen. 1:1ff.; Job 38:1–41:34; Isa. 45:12f.; Eph. 1:11). If one believes that the triune God is sovereign, the doctrine of predestination presents no fundamental problem, and is full of comfort; whereas the opposite idea — ultimate chance — is problematic and frightening.

A. In the OT. From the earliest chapters of Genesis the concept of predestination takes an important place in the teaching of the Scriptures. The whole idea of creation implies a predetermined operation which God followed in His creative activity. Indeed, many have felt that Gen. 1 has as its primary purpose the setting forth of a rhythmical pattern by which man would understand that God's creative work followed a divinely determined plan (cf. N. H. Ridderbos, *Is There a Conflict Between Gen. 1 and Natural Science?* [Eng. tr. 1957]). Even more clearly predestination appears in the divine promises given to the patriarchs such as Noah and Abraham (Gen. 6:13ff.; 12:1ff.). Little value would attach to the promises of a god who had neither the power nor the wisdom to bring to pass that which he promised. Similarly, the Flood, the destruction of Sodom and Gomorrah, and the fortunes of Joseph are referred by the writer of Genesis to the foreordained purpose of God (Gen. 6:17; 7:1ff.; 18:1–19:26; 45:7ff.). As far back as one may go in the OT records, predestination undergirds the whole historical development.

The core of the OT doctrine of predestination, however, consists in God's choice of Israel to be a peculiar people devoted to Him, through whom He would speak unto men. Israel forms the elect people of the OT, a point that became perfectly clear in the Exodus which God had predestined (Gen. 15:13ff.; Ex. 3:7ff.; 12:41). Moreover, God's plan and purpose included not merely Israel but Egypt as well, for God hardened Pharaoh's heart so that he refused to allow Israel's departure, bringing destruction upon himself and his people (Ex. 3:19ff.; 7:13; 14:13ff.). Thus for the OT from the beginning of time history is the predestined plan of God for the redemption of His people.

As one follows the history of Israel down through the ages, one discovers that to the OT writers all that happened to the nation was the result of the sovereign foreordination and predestination of God. The whole concept of prophecy rests upon this foundation. If God did not foreordain whatever comes to pass, how could He give a predictive message to His representatives? The passages referring to this doctrine are too many to cite, but one may indicate in general some of the areas in which it appears. The historical books in particular teach that God predestines whatever comes to pass, and the prophetic books such as Isaiah, Daniel, Jonah, and the postexilic writers set forth the same point of view.

Yet in no sense do the Scriptures imply that Israel or any of the other nations were merely puppets or automatons in the hand of God. All nations as well as all individuals possess genuine responsibility, for when they act they do so according to their own wills and by their own decisions. When Israel turned away from God, such a turning was Israel's own act (Isa. 1:2ff.; 29:13ff.; Ezk. 18:2; 33:2ff.; Hos. 1:3ff.), just as the Assyrian attack upon Israel came out of the economic and moral condition of the people (Isa. 11:12; 36:1ff.). At the same time, behind all this stands the predestination of God, and yet never does the OT attempt to offer an explanation of the relationship between the two apparently contradictory views.

A large part of the OT deals with God's punishment of Israel's unfaithfulness, stressing that Israel's disobedience to God brought retribution even though that sinfulness and unfaithfulness had already been foretold. The punishment God inflicted upon the recalcitrant nation first brought division between the north and south, then captivity in Assyria and Babylon. Finally, out of this apparent disaster God brought forth redemption through the favor of the Medo-Persian kings such as Cyrus. In all of this one never finds the view that God had merely revealed what He had already foreseen, but rather He had foreordained, predestined, what would and did come to pass (e.g., Isa. 45). Thus the OT sees the whole of Israel's history bound up in God's plan with that of the other nations of the earth.

This divine plan and purpose were centered upon God's purpose of the salvation of sinners from every race, tribe, and tongue. The election of the remnant (Isa. 1:9; 6:13) which would remain faithful to God's law and promises formed part of this plan (*see* ELECTION), as did the divine dealings with Israel as a whole (Isa. 2; Hos. 1:9ff.). Thus in the fulness of time (Gal. 4:4) God sent forth from the believing Jewish remnant the central figure of history, Jesus Christ, to accomplish His redemptive purpose for all.

B. In the NT. The NT differs in no way from the OT in its doctrines of God's sovereignty and predestination. The coming of Christ, His life, death, resurrection, and ascension into heaven all fulfilled God's eternal plan and purpose to redeem His elect whom He had predestined unto eternal life (Eph. 1:4; 1 Pet. 1:20). Moreover, the spread of the gospel and the growth of the Church in all nations until the end, when Christ returns once again for His own, are all part of the plan and purpose of God which He hid as a mystery in OT times, but in the last days has, through Jesus Christ, made known to His own (Col. 1:26f.; Eph. 3:5ff.).

In the Synoptic Gospels predestination forms the continuous thread that connects everything, for God has prepared a kingdom, a new life, for those who are His "from the beginning" (Mt. 24:34; Mk. 2:17; Lk. 14:23). Moreover, God's predestination consists not in mere foresight, but in His foreordaining the effectual calling of those whom He has chosen (Mk. 4:11; 13:20; Mt. 20:1-16). Predestination is directed as a concentrated beam of light primarily on the salvation of the elect, though it includes also God's predestination of all things according to His sovereign will (cf. Mt. 6:25ff.; 10:29f.; 24), even man's free actions (Mt. 25).

In the corpus of apostolic teaching one finds the same point of view. According to Peter on the day of Pentecost, Christ's crucifixion was part of God's predestination; but at the same time it was the result of human lawlessness (Acts 2:23). Stephen and others also speak in these terms. 1 Pet. 1 depends upon the doctrine of predestination for its foundation, while the Gospel, Epistles, and Revelation of John either overtly or by implication state the doctrine repeatedly (Jn. 6:35ff.; 8:12ff.; 10:22ff.; ch. 17; 1 Jn. 5:1ff.; Rev. 1:10ff.; 4:1ff.).

Although the doctrine underlies all the apostle Paul's writings, particularly such passages as Phil. 2:5ff. and Col. 1:13ff., he sums up the whole matter, bringing together the teaching of the OT and of the other writers of the NT, in three great passages: Rom. 8:29f.; 9–11; Eph. 1:1-12. In these Paul states absolutely and clearly that God foreordains whatever comes to pass, even, as in the case of Pharaoh, sinful human acts. Central, however, to God's plan and purpose is the redemption of His elect people, chosen in Christ before the foundation of the world (Eph. 1:4), a redemption which has its origin solely in the sovereign determination of God (Rom. 9:11). Thus to the apostle everything exists and acts only in obedience to the will and purpose of God (Eph. 1:11), who has predestined all things according to the counsel of His own will.

Yet Paul's Epistles, like other parts of the Scriptures, express no mechanistic determinism. The apostle insists in all his writings that man is responsible for his acts, since it is he that performs them even though they are all part of God's plan, i.e., predestined by God. At the same time, he also emphasizes that man cannot understand the relationship between God's predestination and man's responsibility, for that relationship involves a joining of time and eternity that is incomprehensible to a being conditioned by space and time (Rom. 9:19–26). Here Paul leaves the mystery before which man must always stand in awe.

No one can explain the relationship of God's predestination to history, nor unravel how God works in and through history, except as God has revealed this in the Scriptures. Nor can the historian, on the basis of historical studies, declare the nature of God's plan in history. The ultimate explanation of all such matters must derive from the divine Word itself. Yet at the same time Christians walk with assurance and confidence, for they believe that God is sovereign and that He has foreordained all things in order that He may show forth His glory to endless ages.

W. S. REID

III. History of the Doctrine.–A. Early Church. In spite of the relevant statements in the NT, the earliest authors seem not to have devoted any particular attention to the doctrine of predestination or election. In fact, it is only for the most part in relation to free will that the topic arises at all. Justin Martyr, for example, argued strongly for freedom in *Apol.* i.10.41; the real opposite here, of course, is Stoic determinism. Tertullian, too, contended for freedom, though he saw a bias toward evil as a result of the fall (*Adv. Marc.* i.22; ii.5f.). Clement of Alexandria naturally upheld freedom (*Protrepticus* [*Exhortatio*] 6.68). In Origen it is indeed the real key to salvation through successive cycles of existence (*De prin.* iii.1.2-4). If all are ultimately to be saved, as Origen inclined to think, there is little room for election; the most one can say is that all are elect.

At a later stage Athanasius in his *De incarnatione Verbi* had a kind of supralapsarianism. Even when God made the world He foresaw its ruin and hence provided for the fulfillment of His basic plan in spite of sin. In the West Ambrose presented a fuller doctrine of original sin: "Adam perished, and in him all perished" (*Expositio evangelii secundum Lucam* vii.234). If he demanded human effort (ii.84), he also said that grace is simply by the will of the giver (*Exhortatio virginitatis* iv.3). Ambrosiaster, too, referred to Adam as him "in whom" all sinned (*In Rom.* 5.12). In his view the consequence is bondage rather than guilt; this causes us all to commit our own sins.

From this it is but a step to the Pelagian crisis, which produced the first developed doctrine of predestination in Augustine. Pelagius, the British monk with a zeal for moral improvement, saw an obstacle in Augustine's cry: "Give what thou commandest, and command what thou wilt" (*Conf.* x.40). This implied, he thought, that God may not choose to give, that if He does not His commands are impossible, that if so God is unjust to command and man is under no genuine responsibility to obey. In contrast, Pelagius argued that man, though weak and needing help, is able to do God's will. "God has not willed to command anything impossible, for he is righteous; and he will not condemn a man for what he could not help, for he is holy" (*Epistula ad Demetriadem* 16).

Fuller analysis shows why Pelagius did not think he denied the doctrine of grace. In any act he saw three things: *posse, velle,* and *esse. Posse* (ability), which is the presupposition of the other two, is given by God alone. Everyone has it at birth as Adam did. Hence "everything good or evil is done by us, not born with us" (*Pro libero arbitrio*). Any person is able to live without sin, even if few do. *Velle* (will) and *esse* (reality), however, are man's work. For them there is no need of special help beyond the ability given at creation. If, in fact, most people do need help, this is given by the gospel (*ibid.*).

If Pelagius had stopped there, or had candidly admitted that naural *posse* is no longer adequate, or had seen that a new *posse* is given with conversion, the controversy might well have been avoided. Unfortunately, with the more doctrinaire Celestius and Julian of Ectanum, he

became identified with some logical but hardly defensible inferences, e.g., that Adam injured himself alone, or that there were people without sin before Christ, or that infants are as Adam before the fall (Augustine *De gestis Pelagii* 23). Indeed, Julian boasted that "man is emancipated from God" (Augustine *Opus imperfectum contra Julian* i.78). The Pelagians also taught that predestination is simply according to the foreseen quality of a person's life (Augustine *In Rom.* 9.10).

Augustine was the chief opponent of this view. As regards fulfilling the law, he distinguished between external and internal fulfillment; the latter is possible only when the Holy Spirit is present in the heart (*De spiritu et littera* 5). The question of *posse* drove him to his famous distinctions. *Posse non peccare* (ability not to sin) is true of Adam; *non posse non peccare* (inability not to sin) is true of fallen man; *non posse peccare* (inability to sin) will be true of the children of God in their full and final freedom (*Civ. Dei* x.30). Implied is a distinction in freedom. Augustine did not deny freedom of choice, for he, too, rejected philosophical determinism. But this freedom, always limited, now stands under the moral limit of not being a freedom not to sin. There is now "a cruel necessity of sinning" (*De perfectione iusticiae hominis* 9). In this area freedom is simply choice within the general bondage. Even if there were freedom not to sin, this would still fall short of full and authentic freedom such as God Himself enjoys, the freedom of inability to sin. Theologically defined, freedom is freedom from sin. This is what fallen man completely lacks.

Since mankind is in bondage as a result of the fall, it can be described by Augustine as a "mass of sin" or "lump of perdition" (*Ad Simplicianum* i.2.16). From this mass there is no escape except by liberation. This is where grace comes in. Grace is of different kinds, but prevenient grace (grace as initiative) must obviously come first (*Ep.* 217). Then comes cooperating grace. Grace may be either sufficient (*sine quo*) or efficient (*quo*). The former is that without which one could not be free, while the latter is that by which one is free. This distinction is an important one for predestination, both in Augustine and later, for while grace is sufficient for all, it is efficacious only in the elect.

Augustine's doctrine of predestination springs from this need of grace to liberate man. Man has free choice, but his choices are always in some degree bad. Grace puts good choices for bad ones (*De gratia et libero arbitrio* 31). Now grace, although irresistible, is accommodated to us, so that we may accept or reject it (*De spiritu et littera* 60). Grace alone, however, can confer real freedom (*De gratia et libero arbitrio* 31). But since grace must precede, and mankind is a *massa damnata,* God determines (from eternity) who receives it or not (*De correptione et gratia* 12.16). The number of those chosen is limited; they are to fill the gaps left by the fallen angels (*Civ. Dei* xxii.12). Augustine did not see a general decree to save, nor did he think that the selection is based on foreseen merits. God foreknows, but predestination is "the foreknowledge and planning . . . by which they are most surely determined whoever are delivered" (*De dono perseverantiae* 35). The choice is according to "a secret and inscrutable justice" (*Ad Simplicianum* i.2.14-16). To the elect the final grace of perseverance is given, and this is irresistible; they cannot but persevere (*De correptia et gratia* 34ff.). Those to whom it is not granted to believe (even though they might have done so) are left in the "mass of ruin" like the men of Sodom or Tyre (*De dono perseverantiae* 35). This mass includes many Christians lacking the final grace of perseverance even though enjoying grace in other forms. For Augustine, grace is not constraint. It implies that people can and will. "Their will is so kindled by the Holy Spirit that they can, just because they will, and they will just because God works in them so to will" (*De correptione et gratia* 37).

The strong doctrine of election taught by Augustine met with resistance, especially in south Gaul. Here John Cassian argued that the beginnings may be traced in man's volition (*Ep.* xiii.12.2). Man's will is sick, not dead (iii.12.3-5). Grace restores and assists (xiii.13.1). God wills the salvation of all, so that predestination is based on prevision of those who will be saved. This view was close to that of the Eastern Church represented by Theodoret, for whom the vitiation due to the fall was a bias to sin (*In Ps.* 50.7). Theodoret, too, argued for the will's continuing freedom (*In Ps.* 38.6), though grace is needed for eternal life (*In Rom.* 11.15). "There is need of both our efforts and the divine succor. The grace of the Spirit is not vouchsafed to those who make no effort, and without that grace our efforts cannot collect the prize of virtue" (*In Phil.* 1.29f.). If in the long run effort is God's gift, this does not cancel out freedom. It simply implies the inability of freedom without grace.

The south Gaul reaction, in which Cassian was supported by Vincent of Lerins and Faustus of Rhegium, found conciliar expression at Arles in 473. This council condemned the theses that human obedience is not also needed, that the fall extinguished free choice, that Christ did not die for all, and that foreknowledge can impel to death. More positively, it stated "Man's effort . . . is to be united with God's grace; man's freedom of will is not extinct but alienated and weakened; he that is saved is in danger, and he that has perished could have been saved." Yet this was not the final word, for at Orange in 529 we find a new compromise with stronger Augustinian leanings. Anathemas are now passed on the views that the fall did not affect the whole man, that Adam's fall injured himself alone, that the beginning of faith is in us by nature, that there is mercy for those who believe, will, and desire apart from grace, and that by nature a man can think and choose the good. Prevenient grace is strongly affirmed along with the power and duty, after baptism, to perform all things that pertain to the soul's salvation. There is, however, a sharp condemnation of the idea "that some have been predestined to evil by the divine power."

B. Medieval Church. If the decisions at Orange became the established orthodoxy of the West, the Gottschalk incident shows that consistent Augustinianism was rejected no less than consistent Pelagianism. Gottschalk (9th cent.) tried to revive the concept of double predestination, i.e., to both life and death. He did, however, make a linguistic distinction, using *praedestinare* ("to predestine") only for the elect and *praescire* ("to know beforehand") for the reprobate. Both elect and reprobate are in God's plan, but He does not will and decree in the same way for the two groups. Election is direct and positive, reprobation permissive. Gottschalk was supported by Ratramn, but the more resolute opposition of Hincmar and Erigina led to his condemnation.

The related question of original sin occupied the lively and powerful mind of Anselm in the 11th century. Anselm pointed out that the word "original" here refers not to creation, but to participation in our common nature (*De origine peccati* 1). Original or natural sin is thus a condition; it is the violation of created nature and entails the guilt of our not being what we should be (ch. 2). It is necessary (even in infants) since Adam passes on fallen nature to us. Individuals are generically or seminally in Adam, and they derive from him the *non posse non peccare* rather

than the *posse non peccare*. As regards freedom, Anselm agreed with Augustine that the power of choice (between sinning and not sinning) is not real freedom. Far from being essential to freedom, this power weakens it. If Adam's sin was an act of weakness, it missed authentic freedom. His sin, though not a sin by compulsion, was really in spite of freedom. The position is still the same today, for the voluntary faculty remains; but by creation the will has only one choice in true freedom, the free self-election of the good. Man cannot originate goodness; he can only will to maintain it (in which is no merit). After the fall he still cannot originate it — hence the need of grace. Yet nothing compelled or compels man to sin. Whether he chooses good or bad, his will is voluntary, but only if he chooses good is it authentically free. Temptation does not force people to sin. Yielding to temptation is by decision, but it brings a moral and guilty necessity of sinning. Anselm distinguished here between faculty as instrument and act as use (of the instrument). Bondage arises in use; through wrong use we cannot turn to God. God does not cause a wrong use, for this would involve the illogicality of His willing that we will what He does not will. In relation to the fall His will is permissive; He does not stop the fall. Yet how can the will be both free and in bondage? The point is that the will is still the same as that which could have chosen righteousness but cannot originate righteousness. As regards the race, if not individuals, the whole process of sin is voluntary, but in neither race nor individuals can the will reverse the process. In this sense Anselm saw no salvation except by electing grace. Essentially he was thus a strong Augustinian, though he avoided the concept of predestination to evil. Man is responsible for his own sin and fall; God predestines to salvation.

Although Scholasticism is associated with semi-Pelagianism, Aquinas, like Anselm, is more Augustinian in his treatment of predestination (*Summa Theol.* i.23). Aquinas not only claimed that God predestines (as a special function within providence) but he was prepared to say that God rejects some men: "Providence permits some of them [men] to fail to attain the end [eternal life]" (art. 3). Rejection, which is more than foreknowledge of man's unbelief, is not contrary to God's love for people, for "he does not will the good of eternal life" for all, but "wills some good" for all (*loc. cit.*). Like Anselm, Aquinas thought that guilt is "due to the free will of him who is rejected" (*loc. cit.*). He also dismissed the idea that foreknowledge of merits might be a reason for predestination. The real reason is the divine goodness, which "God willed to show forth in men by mercifully sparing some of them, whom he predestines, and by justly punishing others, whom he rejects" (art. 5). Predestination is certain (art. 6), and the number of the predestined is certain, both formally in the sense of a general number, and also materially in the sense that the predestined are all known to God (art. 7). If there is a concession to semi-Pelagianism it is more in the analysis of grace as this accomplishes the work of predestination; but with his stress on prevenient grace and the rejection of any merit of condignity unless a work proceeds already from grace, Aquinas could in no sense be regarded as a semi-Pelagian.

The real movement of Scholasticism in a semi-Pelagian direction came with Duns Scotus, who laid such emphasis on the will as to call it "the sole cause of its own acts" (*Sent.* ii.25.2). Yet even this could cut two ways, for the freedom and sovereignty of God's will demanded that He be acknowledged as the ultimate cause of all things. It is not surprising, then, to find a vigorous Augustinianism in the later Middle Ages, e.g., in Thomas Bradwardine, who attacked Pelagianism, or John Wycliffe, who equated the true Church with the number of predestined rather than the members of the external institution (*De ecclesia* 1). Wycliffe in particular prepared the way for the Reformation at this point as at so many others.

C. Reformation Church. While the Council of Trent maintained traditional semi-Augustinianism, although with a slightly stronger Pelagian thrust in answer to Luther (Sess. VI on Justification, 4ff.), the Reformers put a new stress on grace that led them back to a full Augustinianism. Zwingli, it is true, had a weak doctrine of original sin as a condition and not sin, yet his concept of God's sovereignty was so strong that the possible Pelagian implications of this were completely lost. Luther even at Leipzig was comparing man to a saw in the worker's hand; and in *The Bondage of the Will*, written in answer to Erasmus, he advanced the full teaching that man has no power of his own to turn to God. God alone, then, can and does provide both the basis of justification in Christ's atoning work and also its means in justifying faith. Calvin, of course, gave the doctrine its most systematic presentation at this period. As he saw it, original sin is a "hereditary depravity and corruption of our nature" (*Inst.* ii.1). Though God is not the author of sin, His activity in the reprobate is more than mere permission. For if He leaves them in sin by withdrawing His Spirit, He also "directs their councils and excites their wills . . . through the agency of Satan, the minister of his wrath" (ii.4). As regards predestination, Calvin dismissed any equation with foreknowledge. Foreknowledge is God's general seeing of all things as present; predestination is His eternal decree "by which he has decided in his own mind what he wishes to happen in the case of each individual. For all men are not created on an equal footing, but for some eternal life is preordained, for others eternal damnation . . ." (iii.21).

That these were not just individual views may be seen from the Reformation confessions. That of Augsburg taught freedom only for civil righteousness, not spiritual (art. XVIII). The First Helvetic said that we can do bad of ourselves, but not good (ch. IX). The Heidelberg Catechism called man "wholly incapable of doing any good" (I, qq. 8-10). The Belgic Confession found God merciful in election, and "just in leaving others in the same fall and perdition wherein they have involved themselves" (art. XVI). The Gallican said of election that "God according to his eternal . . . and immutable counsel calleth all those whom he has chosen by his mercy and goodness alone in Jesus Christ . . . leaving the rest . . . to show in them his justice" (art. XII). The Scots linked the election firmly to the Mediator and the Incarnation and focused more on the election of grace than on reprobation (art. VIII). The Second Helvetic also turned attention to election in Christ, while the Anglican had a doctrine only of predestination to life, i.e., "the everlasting purpose of God . . . to deliver those whom he hath chosen in Christ" (ch. XVII). The English Lambeth Articles (1595) attempted a fuller statement, including reprobation in art. I, God's good pleasure as the efficient cause in II, and "a certain number of predestinate" in III. Though these were not passed, their influence may be seen in the Irish Articles (1615), which also asserted double predestination and a fixed number of elect (no. 12), and found the cause in "God's wise good-pleasure to manifest his glory in mercy and justice" (no. 13).

Already in these later statements one may detect a reply to Socinianism and Arminianism, and this is even more explicit in the teaching of Dort and Westminster and the dogmatics they embody. Dort plainly advocated total depravity, unconditional election, limited atonement (as regards efficacy), irresistible grace, and perseverance of

the elect. Westminster denied predestination's equation with prevision (III, 2), saw both predestination to life and foreordination to death (III, 3), taught a fixed number of elect (III, 4), and found God's mercy exalted in election and His justice in reprobation (III, 5, 7). Limited atonement was taught in VIII, 5, bondage of the will in IX, 3, effectual calling in ch. X, and perseverance in ch. XVII. Similar teaching is given in the Shorter Catechism, qq. 7ff.; cf. q. 20 on God's election of some to life "out of his mere good pleasure."

For elaboration, however, one must turn to the dogmatic treatises. Here special predestination (a branch of general providence) is the foreordination of some to life and others to death (Riissen, VI, 19). Its aim is to display God's glory in the exercise of His righteousness and mercy (Braun, *Doct. Foed.* I, 11, 9). God is the primary efficient cause; then His will or decree (Polanus, IV, 7). "In first intent the decree is absolute, in the ultimate it is ordinate or respective" (Wendelin, *Theol. syst. maius*, 298). It is also eternal and immutable (Bucanus, XXXVI, 12). The object in a supralapsarian view is man yet to be created and to fall, for "what is first in intention is last in execution"; in the infralapsarian view the object created and fallen man, for man yet to be created and to fall does not exist (*est non ens*, Riissen, VI, 19, 1) and hence cannot be either "eligible" or "reprobable." This dispute has no chronological reference, since predestination in any case belongs to God's eternity.

Election is positive predestination manifesting God's mercy. The cause is the triune God: "To the Father particularly belongs the election in and by itself, to the Son the *sponsio* [solemn promise], to the Holy Spirit the *obsignatio* [seal, witness]" (Heidegger, V, 28). The impulsive cause is the triune love and mutual glorifying (V, 29). Hence election is not arbitrary; it finds its moral ground in God's essentiality (Walaeus, 385). One is not to seek the ground in man's will, his use of the means of grace, or foreseen faith (Polanus, IV, 9). "A man is not elected because he is going to believe; he believes because he is elect" (Wollebius, 29). Christ's person is the foundation and in a sense the sole object, others being elect in him. As Mastricht said (III/3, 8f.): "The object of election is the whole mystical Christ, i.e., Christ with all his own." Walaeus (380f.) refuted the idea that "in Christ" means that "Christ is held to be elected only after our election." Rather, he said, "Christ as our head was first elected and then his members in him." In this sense, according to Heidegger, "Christ is the cause and the means of eternal election" (V, 31). If His merit is not the cause, "our election was not accomplished without regard to Christ's future merit" (Leiden, *Syn.*, XXIV, 29). In general, however, Christ's work ranks as the cause of salvation rather than election; election is to salvation and also to the means thereto (Heidegger, V, 48). The means are six, three as causes (Christ, effectual calling, and faith), and three as effects (justification, sanctification, and glorification) (Bucanus, XXXVI, 30). Since God wills as well as knows the elect, the number separated from the sin-corrupted mass is fixed (Heidegger, V, 43). God's special saving love differs from His general love. Hence there is no universal election (Riissen, VI, 18, 2). This was asserted in opposition to "the giddy Sam Huber," who replaced this "botched election" with a few elect nominally and all eligible participially, and also in opposition to the Lutherans, who, adopting a distinction in Aquinas, taught universal election by antecedent will and particular election by consequent will. Three final points are made: the elect cannot perish (Riissen, VI, 19, 4); though known only to God they display marks (Polanus, IV, 9: four benefits and four testimonies); and their assurance lies in looking to the gospel or to Christ.

Reprobation is the negative side: the decree "to leave fixed men . . . in the mass of corruption" (Heidegger, V, 54). "He who elects some passes over those whom he does not elect" (V, 55). In reprobation there are two elements, "the denial of grace not due, called *praeteritio*, and the appointment of due punishment, called *praedamnatio*" (Wollebius, 23). Negatively this means that God "did not resolve to pity the rest whom he did not elect," and positively that "he resolved to impose upon the same men, justly left in the lump of perdition . . . the punishment they had earned" (Leiden, *Syn.*, XXIV, 46). Unbelief is not the cause of reprobation, only of damnation (Wollebius, 23). Praeterition does not deprive of common grace (Leiden, *Syn.*, XXIV, 54f.). The reprobate, however, are predestined to continue in sin: "The action and penalty are ordained, not the sin" (Heidegger, V, 66). "The supreme end of reprobation is the glory of God reprobatory; the subordinate end is the righteous condemnation of the reprobated to death for their sins" (V, 64). Various means are discerned, e.g., unbelief, aversion from God (Bucanus, XXXVI, 39), and also various signs, e.g., denial of divine benefits and induration in evil (Polanus, IV, 10). The great sign is "sin against the Holy Spirit and final impenitence" (Cocceius, *Aphor. prol. Op.*, VI, 11, 21, 27). Yet one should not try to judge one's own reprobation or that of others before life ends (Heidegger, V, 67). As regards the whole doctrine, its difficulty is commonly admitted. A mean should thus be observed between silence and the inquisitive pride of those who "attach to God himself the concatenation of the divine decrees which they have designed in their own brains." "With all sobriety . . . it must be dealt with out of Holy Scripture" (Leiden, *Syn.*, XXIV, 61).

For a compilation of the views in III.C see Heppe, pp. 150-189.

D. Modern Church. The prevailing modern temper has been one of revolt against a stricter teaching of predestination. Thus in Roman Catholicism the Jansenist attempt (17th cent.) to revive pure Augustinianism met with official resistance, and, if Jesuit Pelagianism failed to carry the day against semi-Augustinian orthodoxy, it exercised a wide and powerful influence. In the Protestant world dissatisfaction with the Reformation statements manifested itself even before the end of the 16th cent., and in spite of the codification at Dort and Westminster it quickly gathered force.

In the Reformed Church Arminius played a leading part here. His position found crisp expression in the Remonstrant Articles (1610), which contained five basic propositions: (1) God predestines those who shall believe and persevere; (2) Jesus died for all; (3) man of himself does not have saving grace, nor can the energy of free will save him; (4) grace is not irresistible; and (5) there is no final assurance of salvation. The aim of these articles was to avoid the problems of strict predestinarianism, e.g., caprice in God, or the sham of general calling. But they obviously equated predestination with foreknowledge and suspended salvation ultimately on the liberated will. High Church Anglicanism, followed in the 18th cent. by John Wesley, espoused Arminianism, first in opposition to the Puritans and then to Anglican Evangelicals like Toplady.

The Lutheran world moved in a similar direction. Melanchthon in his *Loci* had already found three agents in election rather than the more common two, namely, the Word, the Spirit, and man's will accepting the Word. The latter was a feeble seeking and striving brought to perfection by the Word and Spirit. The tendency represented by Melanchthon vanquished the stricter teaching of Luther.

This may be seen in the Formula of Concord (1576), which allowed general foreknowledge (XI, 1) but limited predestination "to the good and beloved children of God" (XI, 4). We go to Christ to learn of it (XI, 6). God has a general will to save, and He issues a general call (XI, 6-9). The cause of damnation is refusal to hear and accept God's Word (XI, 9). God has decreed to save only in Christ (XI, 12). Negatively, the Reformed view that "some men are destined to destruction, not on account of their sins, but by the mere counsel, will and purpose of God," was repudiated (XI, 3). Even more specifically anti-Reformed were the Saxon Visitation Articles (1592). Art. IV said, "God created no man for condemnation." Among the false and thus condemned doctrines are "Christ did not die for all men. but only for the elect," and "God created the greater part of men for eternal damnation."

Perhaps the easiest way to trace the swing of Protestants to Arminianism, which was naturally favored by Liberalism, is through the various confessions of the modern period. The Quakers adopted this line already in propositions 4-6 of the 1675 Confession. Anglicanism did not revise the article on predestination but introduced under Charles I a statement prohibiting nonliteral (i.e., Puritan) interpretation. Wesley, of course, dropped this article from his version of the Anglican Articles in 1784, though he retained the article on the limitation of free will. The small Reformed Episcopal group in America took the different course of emphasizing "man's free agency and responsibility" and the free offer of salvation to all through Christ (1875).

The Baptist (Philadelphia) and Congregationalist churches at first stayed close to Westminster, but with the breakup of the older tradition in the early 19th cent. changes inevitably came in these denominations. The New Hampshire Baptist Confession (1833) found election "perfectly coexistent with the free agency of man" (art. IX), while the Free Will Baptists (1834) stated, "Salvation is rendered equally possible to all" (ch. VIII). Simultaneously the English Congregational Union (1833) reduced predestination to "God's design to redeem fallen man." In Congregationalism the confessional move came later in America, but by 1833 the American Congregational statement equated predestination with God's general will that all repent (art. IV). When the United Church of Canada came into being in 1925, an emphasis on the free offer of all-sufficient salvation became one of the distinguishing marks of the basic confession.

Resistance in the Reformed or Presbyterian world was more stubborn. In the period of Liberal insurgence in the early 19th cent. the Cumberland Confession (1829) included some loosening of Westminster (ch. III) and put in the explanatory statement: "We believe that both Calvinists and Arminians have egregiously erred on this point . . . . We think the intermediate plan on this subject is nearest the whole truth." The Auburn Declaration (1837), while refusing to ground election on foresight, and insisting on man's inability to comply with God's commands apart from the "reviving influence or almighty energy of the Holy Spirit," stated plainly that predestination is "to salvation alone."

By 1848 an Evangelical Free Church had been set up in Geneva with much less rigid articles on election (X, XI, XII), and the next decades saw further changes in British and American Presbyterianism. Thus the English Presbyterian Church in 1890 spoke of "God's high design," but only in such a way as to include in it human freedom and response (art. VI). Then in 1903 the American Presbyterian Church published a declaratory statement to the effect that God's eternal decree is consistent with His love to save all men and with a free offer of the gospel. Finally in 1925 the United Presbyterian Church of North America held out hope for all infants and for those beyond the outward means of grace (art. X). The relativizing of Westminster in 1967 was undoubtedly due in part to problems associated with the stern orthodox doctrine of election and (more particularly) reprobation.

The shift in the confessions naturally met with powerful opposition from orthodox groups, especially in the Presbyterian world. The Princetonian orthodoxy put up staunch, scholarly, and effective resistance in the United States, and this was maintained even to the point of small disruptions in the 20th century. Moreover, smaller Reformed churches have been much slower to abandon or modify their formularies; and the same applies to the Church of Scotland, where the confession is clearly a subsidiary standard, and the Church of England, where discontent has been allayed partly by cavalier treatment of all the articles and partly by the absence of a specific reference to reprobation.

Nevertheless, the movement has been decidedly against a more developed doctrine of predestination. Roman Catholicism was never wholeheartedly Augustinian. Lutheranism after Luther produced its own compromise. Arminianism began its work before the 16th cent. was out and grew in spite of Dort and Westminster. The early Anabaptists had a semi-Pelagian trend, and for all their Calvinist beginnings Baptists quickly found this more congenial to their distinctive teachings. Evangelistic Pietism also fitted easily into this structure. There were notable exceptions, like Edwards, Whitefield, and many Anglican and Scottish preachers. But the Wesleys were unabashedly Arminian; and Finney with his new measures and call for decision waged open war on the older doctrine and helped to make American Evangelicalism (in the main) as Pelagian in practice as almost any group in Christian history. Liberalism, of course, added its own powerful and persuasive voice to the modern chorus. Rationalism has little time for the idea of decree, humanitarianism recoils from the idea of rejection, while subjectivism contends for the autonomy of the thinking and willing ego. The only election that remains in Liberalism is either the election of all men to salvation or the election which man himself makes at the rational, moral, emotional, volitional, or existential level.

The Cumberland Confession of 1829 suggested, as we have seen, that an intermediate plan would be nearest the whole truth. With this many Christians would probably concur. They admit that the crass Pelagianism of much theology and practice fails to do justice to biblical teaching, and yet the serious, weighty, and consistent Calvinism of Protestant orthodoxy does not quite convince the majority, especially in relation to reprobation. Unfortunately the 1829 Confession omitted to tell us precisely what the "intermediate plan" is, and subsequent theology has proved far more adept at repeating old arguments than attempting or even desiring new answers.

The one valiant attempt to break the impasse that history will surely record was that of Karl Barth in his *Church Dogmatics*, II/2. Strictly Barth did not offer an intermediate plan. In his own mind he was Reformed, not Arminian. His aim was a reconstruction of the Reformed doctrine that would enable it to express new and more biblical insights and avoid the offensive features. Some of the critical and constructive points he made are thus worthy of brief analysis and appraisal.

While wishing to present a strong doctrine of election Barth argued that a modern statement cannot merely be a repetition of the older presentation, for this is open to criticism at many points. Thus it uses utility and experience as criteria in addition to Scripture. It also confuses predestination with providence. It replaces the living God

with His own fixed decree in such a way as to verge on deism. It tends to make Christ and His work mere instruments by which the decree is executed. Hence true justice is not done to Christ as Himself God. At this point the criticisms converge into the basic thesis that a biblical account of the doctrine will necessarily be christological.

Positively Barth believed that the doctrine is essentially that of the election of grace, not of a predestination that bifurcates into election and reprobation. As the election of grace it is the sum of the gospel. This means that both ontically and noetically it stands in the closest possible relation to Jesus Christ, who is the subject, theme, and center of the gospel. With this focus on Christ Barth picked up hints in Calvin and the Second Helvetic Confession. He also borrowed from the seventeenth-century theologians the two points (1) that the whole trinity is the cause of election, and (2) that Christ is the foundation and even the sole object of election, all others being elect in Him. This twofold line of thought led Barth to his own primary insight that Christ as Son of God is electing God and Christ as Son of man is also elect man.

From this two conclusions follow. First, election is part of the doctrine of God rather than primarily of man. It is thus dealt with in this field; and, since election is covenantal, the basis of ethics, i.e., the command accompanying the promise, also belongs here. Second, supralapsarianism is in principle right. The subject of election is not man already created and fallen. It is the eternal Son in whom man, yet to be created and to fall, is already elected. As Barth put it, the election is the beginning of all God's ways, words, and works. Man's restoration in Christ is simply the fulfillment of the original purpose of election served by creation and, in its own episodic way, the fall.

Barth saw, of course, that a place has to be found for reprobation. God's justice is displayed and enacted as well as His grace. Justice for the sinner means rejection. The point is, however, that as elected man Jesus Christ takes the place of the rejected. In one sense He is elected to rejection, i.e., to the vicarious rejection which is the ground of the inclusion of sinners in His (positive) election. Hence God's justice is worked out, not in the damnation of the wicked, but in the vicarious death of the One elect, which is also and at the same time the execution and expression of God's mercy.

Secondarily, the election is that of the Church, and thirdly that of the individual, as well as Christ. As regards the Church Barth suggested that the first, passing, prophetic form, Israel, corresponds in the first instance to the rejection of Christ, while the second, final, apostolic form, the Christian Church, corresponds to His election. As regards individuals there is a similar twofold "ordination," that of the elect and that of the rejected. The former see that they cannot be elected in themselves but find their election in Christ, their specific ordination being that of witness to Him. The latter resist this, but their ordination is also that of witnessing to Christ in their own negative way, just as Judas fulfilled his apostolic calling by "handing over" Jesus — the very thing the true apostle also does in preaching. Under God, therefore, all are caught up in the one election, both Israel and the Christian Church, both the elect and the rejected. If some men never come to fulfil their ordination in a positive mode, they will still have to do so in a negative mode. There is, however, no reason why they should have to do this in exhibition of the divine justice, since, with God's mercy, this has been enacted already in the one election and vicarious rejection of Christ Himself.

Thus far Barth seemed to offer a reconstruction that avoids the problem of double predestination while not relapsing into Arminianism. The focus on Christ and the interrelation with vicarious atonement (cf. *CD*, IV/1) are particularly valuable features. Nevertheless, certain problems remain. Thus universalism seems to be a logical inference from this view. If Christ is the elect of God, and if He has vicariously suffered the rejection of sinful man, all are elect in Him. Objectively Barth certainly taught this. One might say, then, that if some go to hell it is in spite of predestination rather than on account of it. The ordination of the rejected arises only in the context of the election of grace. But why then should there be any such rejection at all?

At this point Barth steadfastly resisted an Arminian solution, namely, that men are free to choose election in Christ or to reject it themselves and thus go to hell in spite of it. He referred rather to the sovereignty of the Spirit in calling. But if this is so, one seems to be moving back to the discarded teaching. God, even as electing and elect Christ, summons some to faith and leaves others in resistance and rejection according to His inscrutable freedom. Barth did insist, however, that the Spirit, like Christ, is not just the executor of a prior, fixed decree. He is the living God present and active in and with the ministry of calling. He is the God who changes even though He does not ultimately repent. Effectual calling is not the enforced fulfillment of a given fiat. It is personal interaction with the called. If a final mystery remains it is perhaps the paradox of unbelief. The man who elects God does so in the freedom conferred on him by God's election of him. The man who does not remains in bondage, which is all the more nonsensical because it is rejection of his election worked out in the vicarious rejection of Christ. The saint can praise God for his election, but the sinner cannot blame God for his reprobation. He can only bear witness to election in it.

A certain obscurity, undoubtedly, remains in this area. It is easy enough to see why, under the bondage of ignorance and sin, all might resist it. Not so easy to see is why some should respond and some should resist. The alternative explanations—that either God sovereignly ordains it thus or God leaves the choice at this point to men—brings us back either to Augustinianism or Arminianism. Perhaps the only final truth is that no solution is possible because sin itself, being irrational, involves irrationality. Thus both Augustinianism and Arminianism break down because they are too logical for an illogical subject, and there is no intermediate ground except to cling to the fact, contradictory though it may appear, that the saved are saved only by God's election, and the lost are lost only by their own fault in defiance of God's election and in inverse witness to it.

G. W. BROMILEY

PRE-EMINENCE [Heb. hiphil of *yāṯar*–'excel'] ("have pre-eminence," Gen. 49:4); AV, NEB, EXCEL; [*nō(a)h*] (Ezk. 7:11); AV "wailing"; NEB "restless ways"; **PRE-EMINENT** [Heb. *yeṯer*–'abundantly'] (Gen. 49:3); AV EXCELLENCY; NEB EXCELLING; [Gk. *prōteúō*–'be first'] ("be pre-eminent," Col. 1:18); AV HAVE PRE-EMINENCE; NEB BE SUPREME. Superiority in excellence, power, authority, or status.

These words, which in the Bible are used only of persons, mean in the simplest sense to be first, but in particular contexts they take on more specific meanings. In Gen. 49:3f. (Jacob's blessing of his sons) the words are ap-

plied to Reuben. Despite the advantage of being the "first-born," which enables him to be "pre-eminent in pride and pre-eminent in power," Reuben "shall not have pre-eminence." It is Judah instead who shall be first in status among the tribes of Israel (v. 10) and from whom shall come the messianic ruler. The preeminence in view here thus entails the fulfillment of Israel's destiny. The meaning of Heb. *nō(a)h* in Ezk. 7:11 is unknown. The text of the verse is corrupt, and the AV, RSV, and NEB reconstructions are conjectural.

The noun occurs also in the AV of Eccl. 3:19, where Qoheleth laments that, inasmuch as both are subject to death, a human being has no "preeminence" (Heb. *môṯār*; RSV, NEB, "advantage") over a beast. The AV of 3 Jn. 9 describes the otherwise unknown Diotrephes as one "who loveth to have preeminence" (Gk. *philoprōteúō*; cf. RSV "likes to put himself first"). Diotrephes' love for pre-eminence apparently involved an arrogant denial of the authority of "the elder" and a refusal to welcome "the brethren" (cf. v. 10).

Undoubtedly the most important occurrence of "pre-eminent" is in Col. 1:18, which describes Christ in phrases that were apparently once part of a hymn (vv. 15-20). Whereas vv. 15-17 describe Christ's priority (both in time and in rank: see *TDNT*, VI, 877-79) over the created order, which was made through Him and for Him, v. 18 describes Christ as the head of the new creation, the Church, by virtue of His resurrection as "first-born from the dead" (cf. v. 15). Having thus become the head of both creations, Christ fulfils God's will "that in everything he might be pre-eminent." This comprehensive preeminence of Christ is possible because "in him all the fulness of God was pleased to dwell" (v. 19; cf. 2:9). It is noteworthy that in Col. 1:18 (cf. v. 15) as well as in Gen. 49:3f. "pre-eminence" occurs together with "first-born." Both terms refer not only to temporal priority but also to priority in status or rank.

PREEXISTENCE OF SOULS. The concept that souls have existence before their union with or incarnation in a human body. Such preexistent souls are considered immortal: they are eternally existing entities, emanations from the divine, or entities created by God. The idea of the soul's preexistence is sometimes linked to various views of transmigration and reincarnation. (The preexistence of the divine nature of Jesus Christ as the second person of the TRINITY is an entirely different subject.)

The origin of the belief in the soul's preexistence is obscure, although it was widespread in the ancient world and is still common in non-Christian religions, particularly animistic types. Appearing early in Greek religion, the idea became an important part of Greek philosophy, especially through Plato's *Phaedo* and *Meno*. The belief is common in the religions of India, notably Hinduism. Outside of India it is also part of Buddhism but not of Islam. The idea entered postexilic Judaism through Persian and Greek influences, was prominent in Alexandrian Christianity through Origen, and reappeared in the pantheistic philosophical thought of Germany. It also occurred in some English literary writers (Vaughan, Wordsworth, Rossetti, Browning, Tennyson), is common among modern theosophists, and is an important dogma of the Mormon faith.

Scripture does not present a single clear reference to the idea of the preexistence of human souls. The whole person, "a living being," was created a unity by God's dual action (Gen. 2:7; cf. 1:26f.); no distinction is made here between body and soul and certainly no indication of a preexistent soul. Distinctions between body and soul occur only after the fall and are occasioned by death's disruption of the created unity, which occurred as punishment of human sin. In support of the soul's preexistence some have appealed to various OT passages, including Dt. 29:14f.; 1 S. 2:6; Job 1:21; Ps. 139:15. Only if one approaches Scripture with the presupposition of an initial dichotomy between soul and body do such passages seem to support the idea of the soul as a distinct preexistent entity. Such views did not arise among Jewish interpreters of the OT until after the Exile, under Greek and Persian influences.

Greek influence was especially strong at Alexandria; the preexistence of the soul was held by Philo (*De mutatione nominum* 39 [223]; *De opificio mundi* 51 [145f.]; *De cherubim* 32 [113f.]) and is taught in some apocryphal writings (esp. Wisd. 8:19f.; 15:3). Allusions to the doctrine are also found in the Jewish Talmud and Midrash. Josephus (*BJ* ii.8.11 [154-58]) refers to it as a teaching of the Essenes, but the accuracy of his claim is questioned.

The idea of the soul's preexistence also entered Christian theology from foreign sources. The only NT passage that has relevance for the question is Jn. 9:2, where the disciples ask Jesus: "Rabbi, who sinned, this man or his parents, that he was born blind?" Although belief in the soul's preexistence may have been assumed in this question, the passage does not endorse that idea. The main issue, as in the case of Job's friends (Job 4:7f.), is an implied direct correlation between some specific sin and suffering as its punishment. Jesus' reply rejects that assumption. (The claim that John the Baptist is the prophesied Elijah [Mt. 17:12f.; cf. Mal. 4:5 (MT 3:23)] is figurative, typological language and involves no belief in the soul's preexistence. Likewise, the suggestion that Jesus is a reappearance of John the Baptist, Elijah, or Jeremiah [Mt. 16:14] — which reflects the failure to recognize the Messiah — in no way implies preexistence of the soul.)

The doctrine of the soul's preexistence was held by some Christian sects, e.g., the first-century Palestinian Mandeans, the second-century Gnostics, and the third-century Manichaeans. Under Platonic and Neo-Platonic influence the view appeared in Justin Martyr (*Dial.* 4–5) and especially in Origen of Alexandria, who linked it to a pretemporal fall of the soul (*De prin.* i.7; ii.8; iv.1). Through Origen's influence the doctrine gained wider acceptance, including Rufinus, John of Jerusalem, and the Priscillianists, but it was opposed by Methodius and Gregory of Nyssa. Justinian condemned it in 543, as did a provincial council of Constantinople the same year (cf. H. J. D. Denzinger, *Enchiridion symbolorum* [30th ed. 1954; Eng. tr. *Sources of Catholic Dogma*, 1957], §§ 203-205; cf. 223, 235).

In subsequent history the idea of the preexistence of the soul had few Christian supporters. It never became part of a Christian creed or confession. It was supported in the 9th cent. by John Scotus Erigena (*De divisione naturae* ii) and in the 19th by F. Schleiermacher (cf. *Christian Faith* [Eng. tr. 1928], §§ 59-61) as well as the Lutheran J. Müller, who defended it in his major study, *The Christian Doctrine of Sin*. Variations of the idea are found in some pantheistically oriented philosophies, e.g., those of Spinoza, Leibniz, Kant, Hegel, Schopenhauer, and I. H. Fichte.

Most textbooks in systematic theology discuss preexistentism as one of three historical answers to the question of the origin of the human soul. Under the influence of Greek metaphysical dualism of spirit and matter, many theologians embraced dichotomy (body and soul) or tri-

chotomy (body, soul, and spirit) in explanation of the constitutional nature of man (*see* ANTHROPOLOGY III.E). Those positions then led to the question of the origin of the soul. Most chose either creationism (the theory that God creates a new soul at the conception or birth of each individual) or traducianism (the theory that the human soul is transmitted to the child by the parents) rather than preexistentism. Recent theology has reached a wide consensus on the wholeness and unity of the human person and hence regards as illegitimate the question of the soul's origin. Thus the idea of the preexistence of the soul finds little support in contemporary Christian theology.

PREFECT [Aram. *s^{e}han*] (Dnl. 2:48; 3:2f., 27; 6:7 [MT 8]); AV GOVERNOR. *S^{e}han* derives from Akk. *šaknu*, which designates the governor of a conquered city or province. Daniel was placed at the head of all the prefects over the wise men in Nebuchadrezzar's court.

For the Roman office of prefect *see* PROCURATOR.

PREFER. A term generally used today in the sense of "choose or esteem above another," but used by the AV in the archaic sense of "advance to a rank or position" in Est. 2:9 (Heb. piel of *šānâ*, "change, transfer"; RSV "advance"). The term is possibly used in this same sense by the AV in Jn. 1:15, 30 to translate Gk. *emprosthén mou gégonen* (AV "is preferred before me"; RSV "ranks before me" [cf. NEB]; see Bauer, rev., p. 257; B. F. Westcott, *Gospel According to St. John* [repr. 1971], p. 13; the phrase appears also in the AV of v. 27 but is omitted by the RSV and NEB, which follow a more ancient textual tradition). In Dnl. 6:3, AV, "was preferred" is an inaccurate translation of the Aram. hithpaal of *n^{e}ṣaḥ* ("distinguish onseself"; RSV "became distinguished"; NEB "outshone"). N. J. O.

PREPARATION, DAY OF. The Gk. *hē paraskeuḗ*, "the preparation," is a technical term for the day before the sabbath (Mt. 27:62; Mk. 15:42; Lk. 23:54; Jn. 19:14, 31, 42). Josephus used it in this manner (*Ant.* xvi.6.2 [163]), though Friday was also called *hē pró toú sabbátou* (Jth. 8:6; 2 Macc. 8:26; *Ant.* iii.10.7 [255]). It was a day of intense activity in anticipation of the sabbath observance. To avoid all risk of infraction, the hours from mid-afternoon to sunset were thought to have almost the sanctity of the sabbath itself, and to be unsuitable for normal activity (cf. the "ninth hour" of *Ant.* xvi.6.2 [163]).

All the Gospel passages where *paraskeuḗ* occurs identify the Jewish day of Preparation as the day of the crucifixion of Our Lord. But inasmuch as the sabbath mentioned in the narratives of the crucifixion is evidently the Passover sabbath of that year (Mk. 15:42; Lk. 23:54, 56: Jn. 19:31), and the Fourth Gospel expressly calls the preparation day in question "the Preparation of the Passover" (Jn. 19:14), the determination of the exact day for "the Preparation" during which Christ was crucified depends on the time when the Passover was celebrated that year. Passover takes place on the 14th of the Jewish lunar month Nisan (*Ant.* iii.10.5 [248]), and is the greatest of the "special sabbaths" in the Jewish year. It often coincided with the normal sabbath of the seventh day. But as a fixed date in a lunar month, its relation to the days of the week varied. We know that the correlation of lunar "high days" with the weekly cycle of seven days was a problem within Judaism, at least for sectarian or nonconformist Jews, who argued for a solar reckoning of the festivals (cf. Jub. 6:29-38; 1 En. 82:4-6). And the curious reference to "that sabbath" (Gk. *ekeínou toú sabbátou*) of Jn. 19:31 may have this problem and phenomenon in view. Thus, while Friday is the usual day of Preparation for the normal weekly sabbath, the precise dating of the preparation for the Passover sabbath mentioned in the Gospels depends on the dating of the Passover for that year. And this further depends on establishing the precise year in question.

Also of relevance to the time of the preparation mentioned in the Gospels, and the concomitant issue of the day of crucifixion, is the question of the dating of the Lord's Supper. The Gospels are clear that the Last Supper took place before the Passover (Jesus' death before the Jewish Passover makes this obvious), yet the Synoptics equate the Lord's Supper with the paschal supper of the first part (at night) of Passover (Mt. 26:17; Mk. 14:12; Lk. 22:7f.). Many consider this equation a secondary development. Others believe that the Last Supper was an anticipated Passover in view of the impossibility of Jesus' celebration with His disciples on the proper day. But with the discovery that the Qumrân community followed a solar calendar (1QS 10:1-8), the old theory of two ways of determining Passover has been revived. On the basis of a solar reckoning, 14 Nisan always fell on the Jewish day that corresponds to our Tuesday at sunset to Wednesday at sunset. We know of the existence of such a calendar, and we know that it was highly respected in some quarters (Jub. 6:29-38; 1 En. 82:4-6; 1QS 10:1-7). What we do not have is explicit evidence from the Gospels of Jesus' or the disciples' attitude toward it. Yet Jesus *could have* used this unofficial reckoning in this instance, and such a hypothesis would go far toward solving many apparent discrepancies in the narrative. Perhaps His reason for using it here, though not necessarily following it in His ministry, was His desire to observe the ancient ritual of Passover on a legal day (solar calendar) before accomplishing it by His death on the day of Preparation for the official Passover (lunar calendar).

Combining this hypothesis with the aforementioned issue of the date of the Passover sabbath, the chronology of Passion week may be as follows: (1) the Last Supper on our Tuesday evening, the nonconformist Passover as per a the solar reckoning being from Tuesday sunset to Wednesday sunset; (2) the official day of Preparation on a lunar calculation being from Wednesday sunset to Thursday sunset, with the crucifixion taking place during Thursday; (3) the special sabbath of the Passover occurring on the Jewish day of Thursday sunset to Friday sunset; (4) the sabbath of the seventh day from Friday sunset to Saturday sunset; and (5) the resurrection of Our Lord on Sunday. The difficulty with the above scheme is that it must posit a double set of references to Passover and sabbath in the Gospels. Thus Jesus' activity before the Last Supper is related temporally to the lunar Passover sabbath of official Judaism (Mt. 26:2; Mk. 14:1; Lk. 22:1; Jn. 12:1; 13:1, 29), while the Synoptics are seen as justifying the ascription of paschal significance to the Supper on the basis of veiled allusions to a sectarian solar calendar (Mt. 26:17; Mk. 14:12; Lk. 22:7f.); and the sabbath referred to in the resurrection narratives is the normal sabbath of the seventh day, which in this case followed the

special Passover sabbath (Mt. 28:1; Mk. 16:1, Lk 23:56). But such a complex of designations may be justified in view of the existence of two calendars at that time and Jesus' desire both to celebrate the Passover with His disciples and to be Himself the paschal offering.

PRESBYTER prez'bə-tər, pres'bə-tər, [Gk. *presbýteros*]. A leader in Jewish society or a church officer. The term "presbyter" has now been replaced by "elder" in the RSV and in most Presbyterian and Reformed churches. The masc. pl. *presbýteroi* is often used to denote elders acting in concert (e.g., the Jewish elders in Mt. 27:1; Acts 4:5, 8; etc.), and the Christian elders, either generally, as in Acts 15:2, 4, or locally, as in 14:23; 1 Tim. 5:17; etc. The related Greek word *presbytérion* (Eng. "presbytery") designates a group of such elders, as in Lk. 22:66, "assembly of the elders"; Acts 22:5, "council of elders"; 1 Tim. 4:14, "elders." Elders were clearly distinguished from the OT priests, although later sacerdotalism introduced confusion into the English word "priest," which is really a contraction of "presbyter" but has also been made to do duty for the OT priests and for Christ in His high-priestly office.

The development of the Christian eldership is much debated. In spite of differences and the testimony of Epiphanius it seems to have been patterned initially after the "elders" of the synagogue (Lk. 7:3). Thus there soon were elders in the church at Jerusalem (Acts 11:30), and the apostles set up elders in other cities to supervise the new Christian communities (14:23; Tit. 1:5). The mode of appointment is not known, although quite possibly the elders were elected as in the synagogue and then ordained or instituted, first by the apostles (Acts 14:23; 2 Tim. 1:6) and later by the apostles' helpers (Tit. 1:5). Teaching and ruling, the latter naturally including the ordering of worship, seem to have been their functions.

There is no clear evidence in the NT of a wider organization than that of the local church. Yet the forces of evangelism and multiplication make such organization a natural and legitimate development. The necessary formation of new congregations in one place did not break local unity but led to a wider exercise of the ministry of the one presbytery. Similarly, missionary work in surrounding areas might result either in further expansion of the presbytery or in the formation of new presbyteries, which naturally felt a kinship with the neighboring center and which thus met occasionally in a local council or synod for matters of common concern.

The relation of the elders to the bishops poses a peculiar problem. In the NT and later it is hard to see any true distinction between the uses of these terms. Yet the practice of a single bishop supported by elders was undoubtedly early. Various forces probably combined to produce the practice, e.g., the special authority vested in men like Timothy, the OT order of the high priest, priests, and Levites, and the need of a presiding elder who might easily become a permanent president. The attractive notion that the pastor is the bishop supported by ruling elders and deacons is a possible interpretation of second-century practice, but even this has no solid NT support. In sum, although the early literature gives no basis for a doctrinaire Episcopalianism that sees in bishops alone the successors of the apostolic ministry, it also gives no basis for a doctrinaire Presbyterianism that excludes, e.g., a presiding bishop as completely contrary to Scripture.

In Revelation the twenty-four elders have a conspicuous place in the Church (Rev. 4:4, 10; 5:5; etc.). They probably represent the combined patriarchs and apostles as the representative founders of Israel in the OT and the new Israel in the NT (cf. Mt. 19:28).

E. MACK G. W. BROMILEY

CLASSICAL ANGLICAN VIEW

As with its ministry generally, Anglicanism has inherited the threefold structure of bishops, priests, and deacons. Strictly, the priests are elders or presbyters, as shown by the underlying Latin term (*presbyter*) in the *Book of Common Prayer*. The doctrinal formularies indicate no dogmatic Episcopalianism, so that the distinction of bishops and presbyters is simply one of order. No specific ministry is conferred on the bishop at his consecration, the particular functions being only matters of order rather than of intrinsic prerogative. The ancient discussion whether the presbyter acts merely as the bishop's delegate or in virtue of his own office is settled along the lines of medieval teaching, which regarded bishops and presbyters as together constituting the final order of ministry. Thus presbyters are vested with the full rights and responsibilities of ministry and maintain their part in ordinations to the presbyterate, thus fulfilling the NT precedent of the laying on of hands by the presbytery. Indeed, in spite of the tendency to parochialism inseparable from too large dioceses, a minimal presbyterian structure is preserved in the rural deaneries or their equivalents.

A candidate for presbyter must be a deacon, at least twenty-four years old, and adequately prepared in learning and character. Although there is no popular election, opportunity is given both locally and in the final service to lodge serious objections, so that popular consent is maintained in a negative form. Searching questions are publicly addressed to the candidate concerning his inward call, acceptance of Scripture, devotion to his task, readiness to dispel error, consecration to theological study, zeal to set a good example, and peaceable and obedient spirit.

The duties of the presbyter are plainly stated during the 1662 ordination service in NT readings and also in the bishop's charge. The office is primarily pastoral, although it includes searching for Christ's sheep scattered abroad. In the ordination itself the saying in Jn. 20:23 is repeated, and the elder is enjoined to be a faithful dispenser of the Word of God and of His holy sacraments. A Bible is given, with the accompanying words "Take thou authority to preach the Word of God and to minister the holy sacraments in the congregation, where thou shalt be lawfully appointed thereunto."

Four final points may be made. First, there is no suggestion in the ordination service or other formularies that the elder has a sacerdotal function. On this ground, i.e., a supposed lack of full intention, Anglican orders must appear deficient to the Roman Catholic world. Second, ordination itself is not accepted as a sacrament of the gospel. Although 1 Tim. 4:14 is cited in the consecration of bishops, there is no doctrine of an automatically transmitted grace of orders essential to the exercise of a valid ministry. Third, the underlying doctrine of ministry, while it insists on regular calling of church office-bearers and defends Anglican practice as good, does not contend for a single mode of ordination, asking only that there should be calling by those who have public authority given to them in the congregation for this purpose. Fourth, the saying in Jn. 20:23 concerning the remission and retention of sin is divorced from the rejected sacrament of penance and is to be regarded as a proclamation of the gospel promises, as in the various penitential exercises of the *Book of Common Prayer*.

G. W. BROMILEY

REFORMED VIEW

According to John Calvin, presbyter, bishop, pastor, and minister are synonymous and interchangeable terms (*Inst.* iv.3.8). The presbyter is the bishop to whom has been committed the ministry of the word and sacraments, and leadership in pastoral care and discipline. The presbyters of the Church include also its teachers, or doctors, who are not put in charge of discipline or of administering the sacraments, but whose function is to keep doctrine whole and pure among believers and to watch over scriptural interpretation (*Inst.* iv.3.4.).

The pastor (presbyter-bishop) holds an office "not of human devising" (as was the case with the "bishops" of the Roman Church) but ordained by God Himself. A person must be called to such an office. He is normally called to the office in one particular place, from which it is a serious matter to wish to be removed. He is therefore bound to one particular parish, or church, though he can aid others (*Inst.* iv.3.7). His calling involved election by the people (or at least the consent of the people) and appointment by "his colleagues and the elders" as forming a "presbytery" (3.15). He is ordained by the laying on of hands, for which there is "no set precept" but which has been in continual use since the apostles, being an important sign "useful for the dignity of the ministry" and established within the Church by the Spirit of God (3.15).

According to one tradition in the Reformed Church the word presbyter can be used also to designate the "elder" appointed and ordained within the local congregation as a member of the church Session to rule the congregation and to be responsible for its pastoral care. It is argued that such eldership is "an office indistinguishable from the presbyterate except in function." Scriptural basis for this thesis is found in 1 Tim. 5:17, which seems to imply that there are two kinds of presbyter, the one a "teaching elder" and the other a "ruling elder." Calvin gave some encouragement to this view (*Inst.* iv.4.1).

But many have argued against regarding the lay elder as different from the minister-presbyter only in function. They have seen the elder in the Reformed Church more aptly analogous to the NT deacon than to the presbyter. The Westminister Confession of Faith recognized the eldership as a spiritual office to which laymen were called and set apart to help in the government and discipline of the Church, analogous to the "elder of the people" in OT (*see* ELDER IN THE OT).

Certain elders, however, are presbyters in that they are members of the local presbytery, which consists of all the ministers of a delimited area and an equal number of elders. This presbytery may appoint some members as its representatives to higher courts of the Church. In the Church of Scotland these elders do not take part in the laying on of hands in the ordination of ministers.

R. S. WALLACE

PRESENCE. In the OT usually the translation of Heb. *pānîm,* "face" (e.g., Gen. 3:8; Ex. 33:14f.; Lev. 22:3; Dt. 4:37; 1 S. 19:7; Neh. 2:1; Job 23:15; Ps. 16:11; 31:20 [MT 21]; 51:11 [MT 13]; 105:4; 139:7; Isa. 64:1-3 [MT 63:19–64:2]; Jonah 1:3 [AV also "face," "countenance," "sight," etc.]). Occasionally it is the translation of *'ayin,* "eye" (e.g., Gen. 23:11, 18; Ps. 101:7; Jer. 28:1, 5, 11; 32:12f.; Jonah 2:4 [MT 5] [AV also "sight," etc.]), *neged,* "before" (e.g., Gen. 31:32; 1 K. 8:22; Prov. 14:7 [AV also "before"]). Sometimes "presence" represents no particular term but is supplied to suit the context.

In the NT "presence" frequently renders Gk. *prósōpon,* "face," the usual LXX translation of Heb. *pānîm* (e.g., Lk. 2:31; Acts 2:28; 2 Cor. 2:10; 2 Thess. 1:9; He. 9:24; Rev. 20:11 [AV also "face"]). More often it translates *enōpion,* "before" (e.g., Lk. 1:19; 13:26; Jn. 2:30; Acts 27:35; 1 Tim. 5:20; 6:12f.; 2 Tim. 4:1; Rev. 13:12 [AV also "before"]). Other terms are *katenōpion,* "before" (Jude 24), *enantíon* (Lk. 20:26 [AV "before"]), *katénanti* (Rom. 4:17 [AV "before"]), *apénanti* (Acts 3:16), and *parousía,* "presence," "coming" (2 Cor. 10:10; Phil. 2:12; *see* PAROUSIA). In Jn. 17:5; 2 Cor. 4:14; Rev. 7:15 the RSV supplies "presence" contextually.

See FACE; COUNTENANCE; PRESENCE OF GOD.

N. J. O.

PRESENCE, BREAD OF THE [Heb. *leḥem happānîm*–'bread of the face'] (Ex. 25:30; 35:13; 39:36; 1 S. 21:6 [MT 7]; 1 K. 7:48; 2 Ch. 4:19); AV SHEWBREAD; [*šulḥan happānîm*–'table of the face'] ("table of the bread of the presence," Nu. 4:7); AV TABLE OF SHEWBREAD; NEB TABLE OF THE PRESENCE; [Gk. *ártoi tḗs prothéseōs*–'loaves to set before (God)'] (Mt. 12:4; Mk. 2:26; Lk. 6:4); AV SHEWBREAD; NEB SACRED BREAD; [*próthesis* (*tōn ártōn*)–'a setting forth of the loaves'] (1 Macc. 1:22; 2 Macc. 10:3; He. 9:2); AV SHEWBREAD; **CONTINUAL BREAD** [Heb. *leḥem hattāmîḏ*–'bread of continuity'] (Nu. 4:7); **SHOWBREAD** [Heb. *leḥem hamma'ᵃreḵeṯ*–'bread of the arrangement' 1 Ch. 9:32; 23:29; 2 Ch. 13:11; Neh. 10:33 [MT 34]), *ma'ᵃreḵeṯ*–'arrangement' (1 Ch. 28:16; 2 Ch. 2:4 [MT 3]); 29:18)]; AV SHEWBREAD; NEB BREAD OF THE PRESENCE.

I. Terms.–The seven Hebrew and Greek expressions listed above, although variously translated, all refer to the twelve loaves of consecrated bread placed on the golden table in the holy place. The older translation "shewbread" or "showbread" came into English through Tyndale's translation (A.D. 1530), which adopted Luther's German rendering *Schaubrot* (Ger. *Schau,* "show, sight, exhibition"). Most scholars accept "bread of the Presence" as an appropriate translation of Heb. *leḥem happānîm.* P. A. H. de Boer has argued that the phrase should be translated literally "bread of the face" or "facial bread," and that *pānîm* indicates that the loaves were "stamped with an image of the deity" (p. 35). But the prohibition of images of Yahweh (Ex. 20:4) makes this theory untenable (see *THAT,* II, 460).

One additional passage not listed in the heading, Lev. 24:5-9, uses none of these combinations but simply calls it the "bread" (Heb. *leḥem,* v. 7) or the twelve "cakes" (*ḥallôṯ,* v. 5). Some commentators link "memorial" (Heb. *'azkārā*) in v. 7 with the bread of Presence, but a careful examination of that text reveals that the "memorial" is the frankincense placed with the bread, not the bread itself.

II. Preparation and Arrangement.–Each sabbath the priests replaced the twelve loaves with freshly baked loaves; they themselves ate the week-old loaves in a "holy place" (Lev. 24:5-9). The loaves may have been unleavened (see Josephus *Ant.* iii.6.6 [142]), although this is not stated in Scripture. Frankincense was placed in small dishes with the bread (RSV Lev. 24:7; not sprinkled on the bread, as suggested by the AV and NEB; cf. Nu. 4:7; also *Ant.* iii.6.6 [143]). During the tabernacle period the preparation of the loaves was apparently the responsibility of Aaron and his sons (Lev. 24:5-9). In a later period this work devolved upon the Kohathites (1 Ch. 9:32; cf. 23:29; Nu. 4:7, 15).

The precise arrangement of the loaves on the table is

not certain. Most translators and commentators suggest that the loaves were placed in two "rows" (*maʿᵃrāḵôṯ*, Lev. 24:6) of six loaves each (cf. *Ant.* iii.6.6 [142]). But the verbal root *ʿrk* means simply "arrange" with no specific form of arrangement implied (cf. *leḥem hammaʿᵃreḵeṯ*, 1 Ch. 9:32; etc.). Moreover, the size of the loaves even if they were unleavened (each loaf was to contain "two-tenths of an ephah [about 4.4 liters or 18 cups] of fine flour," Lev. 24:5), makes this interpretation practically impossible. Twelves loaves of this size would require more surface area than that provided by the table (Ex. 25:23 indicates that the table's surface area was two cubits by one cubit [91 cm. by 46 cm., or 36 in. by 18 in.]). Most likely the bread was arranged in two "piles" of six loaves each. Such was, in fact, the arrangement in the later period, and the rabbinic tradition indicates that gold spacer-tubes were used to keep the loaves separated so that they would not mold (see Edersheim, pp. 184f.).

III. History.–The first mention of the bread of the Presence occurs in the instructions concerning the furniture for the TABERNACLE (II.C.2); the twelve loaves were to be exhibited continually on a golden table in the holy place (e.g., Ex. 25:30). The earliest reference to the practice in the historical books occurs in 1 S. 21:4-6, which tells of Ahimelech the priest giving "holy bread" to David and his men as they were fleeing from Saul. Ahimelech violated the law that only the priests were allowed to eat the bread (Lev. 24:9), but he was concerned that David's men at least be in a state of ritual purity before partaking of the bread. This incident was later cited by Jesus as an example of an excusable violation of a cultic regulation (Mt. 12:3f. par.).

The practice of exhibiting the loaves continued in Solomon's temple (1 K. 7:48). Some passages suggest that Solomon made ten tables for the bread of the Presence (cf. 1 Ch. 28:16; 2 Ch. 4:8, 19), but apparently only one table was used at a time. After the Exile the people of Israel again pledged themselves to provide for the "showbread" (Neh. 10:33). Antiochus IV Epiphanes removed the table of the bread of the Presence from the second temple (1 Macc. 1:22). When Judas Maccabeus cleansed the temple he brought in a new table and restored the bread (1 Macc. 4:49-51; 2 Macc. 10:3). It was probably this table that is portrayed in the Arch of Titus as one of the Jewish treasures carried to Rome after the destruction of Jerusalem in A.D. 70.

IV. Significance.–Very similar practices of presenting bread to the deity have been discovered in other ancient Near Eastern countries. In Babylon, e.g., part of the sacrificial rite included the laying of loaves, in a set of twelve or multiple of twelve, before the deity. Some OT passages allude to the practice of preparing food for other gods (e.g., Isa. 65:11; Jer. 7:18; 44:15-19; cf. also Bel and the Dragon). On the basis of these parallels, some scholars have concluded that the original intention of the bread of the Presence was to provide food for the deity (see *HDB*).

Such external similarities do not necessarily indicate common origin or purpose, however. In fact, the OT provides no evidence that the bread of the Presence was ever understood as a sacrifice (contra de Boer). Rather, the twelve loaves are presented as a pledge of the eternal covenant between God and the twelve tribes of Israel (Lev. 24:8; see de Vaux, p. 422). As a symbol of all that nourishes and sustains life, the bread was a constant reminder that Israel's life depended upon God's sustaining presence. The eating of the loaves by the priests (rather than by the deity) symbolized the communion between God and the people to whom He was continually present.

PRESENCE OF GOD. When referring to God, "presence" in the English versions most often represents Heb. *pānîm* ("face"; Ex. 33:14), Gk. *prósōpon* ("face"; e.g., He. 9:24), or *enṓpion* ("in the face of"; e.g., 1 Cor. 1:29).

I. In the OT.–According to Scripture, God's relationship with mankind began with creation (Gen. 2:15-17), but the immediacy of this relationship was soon affected by the disobedience of the human race (3:8, 24). Thereafter, contact was maintained through various means, most of which involved some veiling of the Deity. One such means was a vision leading to communication (e.g., Gen. 15:1). It is significant that Abraham became known as the friend of God (Isa. 41:8), attesting a close relationship. Another method involved the assumption of human form (Gen. 18:1f.; cf. 19:1). Jacob's night of wrestling disclosed such a visitation (Gen. 32:24-30; cf. Josh. 5:13-15; Dnl. 3:24f.). At times God used the dream as a means of self-disclosure (e.g., Gen. 28:12f.). This method was used also for making contact with those outside the covenant relationship (Dnl. 2:1ff.).

A burning bush in the desert arrested Moses' attention and led to his encounter with the angel of the Lord (Ex. 3:2); this in turn brought him into dialogue with the God of Abraham, Isaac, and Jacob. Moses' close relationship with God continued throughout his life, so that he was given the encomium that the Lord knew him "face to face" (Dt. 34:10). This rich fellowship enabled him to assure Israel just before his death that God would go with them and would never leave them nor forsake them (31:6).

The TABERNACLE was erected as the God-appointed means for Israel's worship. Its structure emphasized that the recognition of God's presence in the most holy place was the very essence and climax of the nation's worship. Its movable character underscored that the divine presence was not restricted to one location but continued with the people on their journey. The PILLAR OF CLOUD AND PILLAR OF FIRE symbolized that presence. When it rose from the tabernacle it signaled the beginning of the journey toward the Promised Land. Its stopping was the signal to make camp.

The presence of God was even more significantly symbolized by the ARK OF THE COVENANT, the chest containing the two stone tablets on which were inscribed the Ten Commandments, God's covenant law, which could also be called the "testimony." The ark, then, derived its sacredness from its contents. When the Israelites crossed the Jordan into Canaan, the ark led the way, symbolizing in a dramatic way the presence of the Lord whose aid was essential for the conquest (Josh. 3:1-4). Reverence for the ark as the token of God's presence diminished appreciably in some quarters until it became little more than a fetish. Israelites felt secure fighting the Philistines as long as the ark went with them into battle (1 S. 4:3). God rebuked this travesty by allowing the ark to be captured by the enemy. Restored to Israel, the ark was later given the same place in the temple that it had in the tabernacle — the most holy place, where it continued to represent the presence of God.

To be sure, the Almighty was always free to manifest

Himself in other places and in other ways. E.g., He entered the contest set up between Elijah and the prophets of Baal by sending fire to consume the sacrifice (1 K. 18). Perhaps this prophet came to associate the God of Israel too readily with fire and force; for shortly after the Baal contest, when Elijah was mired in despondency, God again granted him a fiery display, but He was not in the fire. Instead, God manifested Himself in a gentle whisper (1 K. 19:12). One of the most notable self-disclosures of God was granted to another prophet. Isaiah received a vision of the Lord, seated on a throne and exalted, with the surrounding seraphim proclaiming His holiness and glory (Isa. 6:1-3). This vision set the tone for his message to the nation.

The devout Israelite recognized that God's presence was not limited to the temple. God was with His people individually as well as in the congregation. In the throes of anguish over his great sin, David pleaded, "Cast me not away from thy presence, and take not thy holy Spirit from me" (Ps. 51:11 [MT 12]). The godly are assured of God's presence and aid (16:11).

Evidently some Israelites had a limited view of the extent of God's presence. After Yahweh had appeared to Jacob at Bethel, he awoke and exclaimed, "Surely the Lord is in this place; and I did not know it" (Gen. 28:16). When Yahweh directed Jonah to go to Nineveh and call it to repentance, he went in the opposite direction "from the presence of the Lord" (Jonah 1:3). His subsequent experience no doubt enlarged his conception of God.

II. In the NT.–In the OT and even more in Judaism God's transcendence so dominated the thinking of His people that they believed He must necessarily make His presence known through intermediate agents (cf. Stewart, p. 180). But the situation of the Christian community was greatly different, since God had now revealed Himself in the person of His Son (He. 1:1f.): in a new sense God now dwelt in the midst of His people. (*See* PERSON OF CHRIST.) Furthermore, the Spirit of God became much more active than under the old covenant, especially in applying the benefits of Christ's redemptive work to His people. Even so, the use of physical phenomena to represent the divine presence was not entirely superseded (Lk. 9:34; Acts 2:1-4).

As the Son of God, Jesus bore the title Immanuel, "God with us" (Mt. 1:23). He was also identified as the Word by whom God revealed Himself as He became flesh and dwelt among men (Jn. 1:14). He explained mighty works by the fact that God was working with Him (Jn. 5:17).

Christ's presence with His people did not end with His ascension. After returning to the Father, having completed His work of redemption (Jn. 20:17), Jesus continued to minister to His people by representing them before the Father (He. 9:24). He also appeared to Saul of Tarsus and set him apart as an apostle (Acts 26:13-18; Gal. 1:1) that through him the gospel might be widely proclaimed (Rom. 15:18f.). Thus Jesus fulfilled His promise that by means of the Holy Spirit He would continue to be with His disciples (Jn. 15:26f.). In John's apocalyptic vision Christ knocks at the door of the heart, promising that anyone who admits Him will enjoy blessed fellowship with Him (Rev. 3:20). Near the end of Paul's life, at his final trial before the Roman authorities, he confessed that "the Lord stood by me and gave me strength to proclaim the message fully . . ." (2 Tim. 4:17).

God's people wait in hope for the end of the present age, when Christ will reappear to gather the saints to glory and conform them fully to His own likeness (He. 9:28; 1 Jn. 3:2f.). In the day of the new heaven and new earth, God Himself will dwell with His people forever (Rev. 21, esp. v. 3). The new Jerusalem will have no temple, "for its temple is the Lord God the Almighty and the Lamb. And the city has no need of sun or moon to shine upon it, for the glory of God is its light, and its lamp is the Lamb" (vv. 22f.).

For further discussion of the concept of God's presence in the OT, NT, Targums, and rabbinic literature, *see* SHEKINAH.

PRESENT (vb.) [Heb. hiphil of *qāraḇ*–'bring near' (Lev. 1:5; 16:9, 11, 20, etc.), hiphil of *rûm*–'contribute, offer' (Nu. 15:19f.; 18:19, 24, 26: etc.), hithpael of *yāṣaḇ* (Dt. 31:14; Josh. 24:1; Job 1:6; 2:1, etc.), hiphil of *nāpal*–'cause to fall' (Jer. 42:9; Dnl. 9:18, 20), *bô'*–'come, come in, go, go in' (Jer. 41:15; Zec. 14:18), hiphil of *nāgaš*–'cause to approach, bring near' (Jgs. 6:19; Isa. 45:21), hiphil of *'ālâ*–'cause to ascend' (1 Ch. 21:26; Isa. 66:3), *'āmaḏ* (Hos. 13:13; hophal, Lev. 16:10), *'āśâ*–'do, make' (Lev. 22:23), niphal of *nāṣaḇ*–'take one's stand' (Ex. 34:2), hiphil of *yāṣag* (Gen. 47:2), *nāṯan*–'give, put, set,' niphal of *rā'â* (Gen. 46:29); Gk. *parístēmi* (Lk. 2:22; Acts 1:3; 9:41; Eph. 5:17; 2 Tim. 2:15; etc.), *hístēmi*–'put, place, set' (Jude 24), *paragínomai* (Acts 21:18), *prosphérō*–'bring, offer' (Acts 21:26), *laléō*–'speak' (Acts 17:19), *timáō*–'honor' (Acts 28:10)] AV also BRING (NEAR), SHOW, OFFER (UP), STANDING (Zec. 6:5), STAY LONG (Hos. 13:13); NEB also BRING (FORWARD), SHOW, HAND OVER, SET ASIDE, COME AND STAND (Dt. 31:14), TAKE, ENTER, URGE, STAND AND WAIT (Ex. 34:2), etc.; (noun) [Heb. *minḥâ*–'gift, tribute, offering,' *mōhar* (Gen. 34:12; Ex. 22:17 [MT 16]; 1 S. 18:25), *bᵉrāḵâ*–'blessing' (1 S. 25:27; 30:26; 2 K. 5:15), *šōḥaḏ, maś'ēṯ*–'portion' (2 S. 11:8; Jer. 40:5), *tᵉšûrâ*–'gift' (1 S. 9:7); Gk. *dôron* (Rev. 11:10)]; AV also DOWRY, BLESSING, REWARD, "mess of meat" (2 S. 11:8), GIFT; NEB also GIFT, BRIDE-PRICE, FAVOUR, TOKEN OF GRATITUDE, BRIBE (2 K. 16:8); **PRESENTABLE** [Gk. *euschḗmōn*–'proper, presentable'] (1 Cor. 12:24); AV COMELY; NEB SEEMLY. The act of giving something to someone or the object that is given.

I. In the OT.–A number of Hebrew terms when translated "present" by the RSV refer almost exclusively to the offering of sacrifices by the Israelites. Included are *bô'* (Jer. 41:5), *nāṯan* (Ezk. 20:28), *'āśâ* (Lev. 22:23), the hophal of *'āmaḏ* (Lev. 16:10), and the hiphil of *qāraḇ, rûm, nāgaš*, and *'ālâ*.

Hebrew *qāraḇ* appears in the contexts of the ritual offerings associated with the Day of Atonement (Lev. 16:9, 11, 20), the feasts of the Lord (ch. 23), the Nazirite laws (Nu. 6:16), and the purification of the Levites (8:9f.). The hiphil of *rûm* is used in regard to coarse grain offerings (15:19f.) and other miscellaneous offerings (18:19, 24, 26, 28f.). The offerings of Gideon (Jgs. 6:19) and David (1 Ch. 21:26) were given to the living God of Israel, while others blasphemed the Lord by their sacrifices to inanimate idols (e.g., Ezk. 20:28). Malachi states that the Lord will purify and refine the sons of Levi "till they present right offerings to the Lord" (Mal. 3:3; cf. the hiphil of *nāgaš* in 1:7f.; 2:12; and the hophal in 1:11).

The other significant Hebrew verbs are *nāpal* and *yāṣaḇ*. The hiphil of *nāpal* refers to the offering of suppli-

cations to the Lord (Jer. 42:9; Dnl. 9:18, 20). The same verb occurs in Jer. 38:26 with reference to special pleading before a king (RSV "make a plea," lit. "let a supplication fall"). "Presenting oneself" (hithpael of *yāṣaḇ*) before the Lord is often related to the concept of service. In Josh. 24:1, e.g., the people dispose themselves to serve the Lord. In Job 1:6 and 2:1 the sons of God come before the Lord ready for service. Similarly, Moses and Joshua take their places before the Lord for the commissioning of Joshua (Dt. 31:14).

The noun generally used for "gift" or "present" is Heb. *minḥâ* (Jgs. 6:18; 1 S. 10:27; 1 K. 10:25; etc.). This is the term used for Jacob's gifts to Esau (Gen. 32:13, 18, 20f. [MT 14, 19, 21f.]) and for those received by Joseph from his family (43:11, 15, 26). In some cases gifts were a courtesy offered in approaching a person of rank (cf. 1 S. 16:20; 17:18).

A special type of gift in the OT was the *mōhar* (RSV "marriage present"; AV "dowry"; NEB "bride price"). The term represents the sum of money paid to the bride's family, not as a purchase price but as compensation for the loss of a family member (*see* MARRIAGE IV.B.2). Related to this is Heb. *bᵉrāḵâ*, which is generally translated "blessing" but in Josh. 15:19 and Jgs. 1:15 is a technical term for a groom's gift to his bride (cf. F. I. Andersen and D. N. Freedman, *Hosea* [*AB*, 1980], pp. 272-75).

The NEB "bribe" correctly translates Heb. *šōḥaḏ*. Although bribes were prohibited by law (Ex. 23:8; Dt. 16:19) and were contrary to God's character (Dt. 10:17), they were accepted by Samuel's sons (1 S. 8:3) and were used by Kings Asa and Ahaz (1 K. 15:19; 2 K. 16:8).

The noun *maś'ēṯ* (< *nāśā'*, "lift, carry, take") refers to something that is carried to someone. Heb. *tᵉšûrâ* is a hapax legomenon related to Akk. *tāmartu* (< *amāru*, "see") and therefore is a "gift of greeting" given upon seeing someone (cf. P. K. McCarter, *1 Samuel* [*AB*, 1980], p. 176).

II. In the NT.– Greek *parístēmi* is used in several special senses in the NT. In Rom. 12:1, Paul's exhortation to "present your bodies as a living sacrifice . . . to God," *parístēmi* has its extrabiblical sense as a technical term for offering of sacrifices (C. E. B. Cranfield, *Romans*, II [*ICC*, 1979], 598). True worshipers will therefore offer up their entire selves to God. *Parístēmi* has a sacrificial sense also in Col. 1:22, which states that on the basis of Christ's sacrificial death believers may be accepted approvingly by God. A different sense of the word occurs in 2 Cor. 11:2, which refers to "the solemn presentation of a royal bride" to the groom, as in Ps. 45 (see *TDNT*, V, 840; *see also* BRIDE OF CHRIST).

The verb *prosphérō* in Acts 21:26 also reflects a sacrificial sense, referring to the giving of offerings associated with Nazirite vows (cf. Nu. 6:1-21; Mish. *Nazir* vi.6f.).

The only use of the noun "present" in the RSV NT is in Rev. 11:10, where Gk. *dōron* refers to the gifts exchanged among those celebrating the martyrdom of the two witnesses (cf. Est. 9:19, 22).

See also GIFT.

G. L. KNAPP

PRESENTLY. A term used by the AV in the original but now obsolete sense of "at once, immediately." The RSV has replaced it with "at once" (Prov. 12:16; Mt. 21:19; 26:53) and "as soon as" (Phil. 2:23).

PRESIDENT [Aram. *sārāḵ*] (Dnl. 6:2-4, 6f. [MT 3-5, 7f.]); NEB MINISTER, CHIEF MINISTER. The title of three high officials, one of whom was Daniel, appointed by Darius the Mede to oversee his empire; the one hundred twenty satraps were to "give account," especially of revenues, to these three. When Daniel distinguished himself in this office, Darius "planned to set him over the whole kingdom." His colleagues then became envious and plotted his downfall. Their plot resulted in the incident of the lions' den (vv. 3-28).

Aramaic *sārāḵ* is a loanword from Pers. *saraka* (Avestan *sāra*, "head") and several times in the Targums translates Heb. *šōṭēr*, "officer."

G. A. L.

PRESS. The AV translation of Gk. *óchlos* in Mk. 2:4; 5:27, 30; Lk. 8:19; 19:3 (RSV "crowd"; *see* CROWD; MULTITUDE). On "wine press," *see* VINE; WINE PRESS.

The verb occurs in the RSV with at least four different meanings: (1) to squeeze, push down on or against: e.g., Gen. 40:11 (Heb. *śāḥaṭ*); Ezk. 23:3 (pual of *mā'aḵ*); Mk. 5:31 (Gk. *synthlíbō*; AV "throng"); Lk. 8:45 (*apothlíbō*); (2) to constrain, exert influence on: e.g., Gen. 19:3, 9 (Heb. *pāṣar*, "urge strongly"); Jer. 17:16 (hiphil of *'ûṣ*, "urge"; AV "hasten"); (3) to harass, afflict, oppress: e.g., Jgs. 14:17; 16:16 (hiphil of *ṣûq*; AV also "lay sore upon"); Lk. 11:53 (Gk. *enéchō*, "be very hostile"; AV "urge"); cf. Phil. 1:23 (pass. of *synéchō*), where the torment is internal; (4) to pursue, follow through: e.g., Hos. 6:3 (Heb. *rāḏap*, "pursue"; AV "follow on"); Phil. 3:12, 14 (Gk. *diṓkō*, "pursue"; AV also "follow after").

N. J. O.

PRESSFAT. *See* WINE PRESS.

PRESUME; PRESUMPTION; PRESUMPTUOUS; PRESUMPTUOUSLY [Heb. hiphil of *zîḏ*–'act arrogantly or rebelliously' (Dt. 1:43; 17:13; 18:20; Neh. 9:16, 29), *zēḏ*–'arrogant' (Ps. 19:13 [MT 14]), *zāḏôn*–'arrogance' (Dt. 17:12; 18:22; 1 S. 17:28), hiphil of *'āpal*–'have the audacity (to)' (Nu. 14:44), *mālē' lēḇ*–'heart has filled,' 'have the audacity (to)' (Est. 7:5); Gk. *dokéō*–'think, suppose' (Mt. 3:9), *axióō heautón*–'think oneself worthy' (Lk. 7:7), *kataphronéō*–'look down upon' (Rom. 2:4), *tolmáō*–'dare' (Jude 9)]; AV also DEAL PROUDLY, PROUD, THINK, "think oneself worthy," DESPISE, DARE; NEB also BE ARROGANT, BE DEFIANT, GO RECKLESSLY, OF SELF-WILL, etc. To speak or act proudly or without warrant.

In the OT these terms refer to those who overstep their bounds or dare to act in a disobedient manner. Disaster befell the Israelites in the hill country because they were "reckless" or "headstrong" (Heb. hiphil of *'āpal*; Rashi: "insolent") in presuming they could gain a victory despite Moses' express command not to fight (Nu. 14:44). A similar calamitous fate awaits the prophet who "presumes to speak a word in my name which I have not commanded him to speak" (Dt. 18:20). Haman, too, met an unsavory end when Esther identified him as "he that would presume" to destroy her people (Est. 7:5).

In the NT, John the Baptist warned his audiences not to imagine they have the right to claim Abraham as their father and thus to escape God's coming judgment (Mt. 3:9). By contrast, the centurion who sought Jesus' healing for his slave did not consider himself worthy to meet Jesus (Lk. 7:7).

Paul sternly warned the Roman Christians not to think lightly about God's kindness, forbearance, and patience, for those who treat with contempt these riches of God's goodness are storing up wrath for themselves (Rom. 2:4). According to Jude, the archangel Michael had such respect for God and God's creatures that he dared not "presume to pronounce a reviling judgment" even against the devil (v. 9).

D. K. MCKIM

PREVENT. A verb used by the AV only in the archaic sense of "go before, precede," "meet in advance." In the OT it is the translation of the piel and hiphil of Heb. *qāḏam* ("be in front," "be beforehand"). The RSV replaces "prevent" with "meet" (Ps. 21:3 [MT 4]; 59:10 [MT 11]; Isa. 21:14; Am. 9:10), "come to meet" (Job 30:27; Ps. 79:8), "confront" (2 S. 22:6, 19; Ps. 18:5 [MT 6]), "come before" (88:13 [MT 14]), "rise before" (119:147), etc. In the AV NT "prevent" represents Gk. *phthánō* (1 Thess. 4:15; RSV "precede") and *prophthánō* (Mt. 17:25; RSV "speak first"). "Prevent" occurs in this same sense in the AV of Wisd. 6:13 (RSV "hasten"); 16:28 (RSV "rise before").

PREY [Heb. *ʾōḵel*–'food' (Job 9:26; 39:29; Ps. 104:21), *bāzaz*–'plunder' ("make [or become] prey," Gen. 34:29; Isa. 10:2; 42:22; Jer. 30:16), *ṭerep*–'prey (of wild animals)' (Gen. 49:9; Nu. 23:24; Job 4:11; 24:5; etc.), *baz*–'spoil' (Nu. 14:3, 31; Dt. 1:39; 2 K. 21:14; Isa. 33:23; etc.), *malqôaḥ*–'booty' (Isa. 49:24f.), *mᵉnaṯ*–'portion' (Ps. 63:10 [MT 11]), *mᵉṣûḏâ*–'hunter's bag' (Ezk. 13:21), *ʿaḏ* (Gen. 49:27), *ʿayiṭ*–'birds of prey' (Gen. 15:11; Job. 28:7; Isa. 18:6; 46:11; Jer. 12:9; Ezk. 39:4), *ṣayiḏ*–'food, prey' (Jobˢ38:41; Prov. 12:27), hithpael part. of *šālal*–'plundered' ("make oneself prey," Isa. 59:15), *šālāl*–'booty' (Ezk. 7:21); Gk. *katesthíō*–'devour' (2 Cor. 11:20), *sylagogéō*–'carry off as booty' ("make prey," Col. 2:8), *thērion*–'wild animal' ("beast of prey," Acts 11:6)]; AV also SPOIL, RAVENOUS FOWL, FOOD, PORTION, HUNTING, DEVOUR, etc.; NEB also KILL, SPOILS OF WAR, CARRION, FOOD, QUARRY, PILLAGE, PLUNDER, EXPLOIT, etc. In the literal sense, an animal seized and devoured by a predator, or (as a verb) the predator's seizing and devouring a weaker animal.

The imagery of ferocious animals or birds devouring their prey is used often in the OT, sometimes in a literal sense but more often in a figurative sense, e.g., to depict the ruthlessness of a powerful people and the helplessness of those whom they oppress. The lion is frequently portrayed as a predator (Gen. 49:9; Nah. 2:11, 13 [MT 12, 14]) that roars (Ps. 104:21; Isa. 5:29; Am. 3:4) and catches its prey (Ezk. 19:3, 6), then growls over it (Isa. 31:4), strangles it, and tears it (Ezk. 22:25; Nah. 2:12 [MT 13]) before devouring it (Nu. 23:24). Demonstrating the contrast between divine wisdom and power and human ignorance and frailty, God asks Job rhetorically, "Can you hunt the prey for the lion, or satisfy the appetite of the young lions?" (Job 38:39; cf. 4:11). Other powerful beasts portrayed as seeking prey to devour include wolves (Gen. 49:27; Ezk. 22:27), wild asses (Job 24:5), and jackals (Ps. 63:10 [MT 11]). Among BIRDS OF PREY are ravens (Job 38:41) and eagles (9:26; 39:29).

People, like animals, are sometimes described as taking prey. In Gen. 34:29 Simeon and Levi avenge the defilement of their sister Dinah by capturing a city and taking everything in it, including women and children, as their "prey" (lit. "plunder"). Traditional wisdom dictated that "a slothful man will not catch his prey, but the diligent man will get precious wealth" (Prov. 12:29). Job proclaims in 29:17, "I broke the fangs of the unrighteous, and made him drop his prey from his teeth."

People are also portrayed as becoming the prey of their enemies (2 K. 21:14; Ps. 124:6; Jer. 2:14). Defenseless "little ones" are particularly vulnerable (Nu. 14:3, 31; Dt. 1:39). Ezekiel prophesied that God's "sheep" had "become a prey" for all the wild beasts (Ezk. 34:8); yet God would save them so they would no longer be prey to the nations (vv. 22, 28; cf. 13:21). Isaiah also used this image to depict the helplessness of the Israelites, who had "become a prey with none to rescue" (Isa. 42:22). Similarly, Hosea referred to "Ephraim's sons" as those "destined for a prey" (Hos. 9:13). Isaiah prophesied woe to the powerful in Israel who made the utterly powerless, the "fatherless," their "prey" (Isa. 10:2); in the wicked nation those who departed from evil made themselves a "prey" (59:15). The prophets saw hope for deliverance only with God, who can rescue the prey of mighty tyrants (49:24f.) and "make a prey" of the oppressors (Jer. 30:16; cf. Ezk. 7:21). When God saves His people, "prey and spoil in abundance will be divided; even the lame will take the prey" (Isa. 33:23). Ezekiel prophesied that on that day the land of Israel, which had "become a prey and derision to the rest of the nations," would be vindicated (Ezk. 36:4).

In the NT "prey" is twice used figuratively. In 2 Cor. 11:20 Paul warns the Corinthians against the false apostles who "prey upon" (*katesthíō*, lit. "devour"; cf. NEB "exploit") them by living at their expense. Col. 2:8 warns the Christians at Colossae to beware that "no one makes a prey of you by philosophy and empty deceit. . . ." The rare verb *sylagōgéō*, which occurs only here in the NT, means "snare" or "capture and carry off booty." The term thus points not only to seduction but also to the evil intentions of those seeking to influence this Christian community (see E. Lohse, *Colossians and Philemon* [Eng. tr., *Hermeneia*, 1971], p. 94). D. K. MCKIM

PRICE [Heb. *mᵉḥîr* (2 S. 24:24; 1 K. 10:28; 2 Ch. 1:16; Job 28:15; Ps. 44:12 [MT 13]; Prov. 17:16; 27:26; Isa. 45:13; 55:1; Dnl. 11:39), *kesep*–'silver,' 'money' (Gen. 23:9, 13; Ex. 21:35; Lev. 25:50f.; 1 Ch. 21:22, 24), *miqnâ* (Lev. 25:16), *gᵉʾullâ* ("price for redemption," v. 51), pass. part. of *pāḏâ*–'redeem' ("redemption price," Nu. 18:16), *kōper*–'ransom' ("price of [his] life," Ps. 49:7 [MT 8]), *mešeḵ*–'pouch, bag' (Job 28:18), *yᵉqār*–'costliness' (Zec. 11:13); Gk. *timḗ* (Mt. 27:9; 1 Cor. 6:20; 7:23), *timáō* ("set a price," Mt. 27:9), *dōreán* ("without price," Rev. 21:6; 22:17)]; AV also MONEY, RANSOM, GAIN, FREELY (Rev. 22:17), etc.; NEB also SUM, PURCHASE, PARCEL (Job 28:18), MONEY, FREE GIFT (Rev. 22:17), etc. In Lev. 5:18; 6:6 (MT 5:25); 2 S. 3:14 the RSV supplies "at the price." In Jer. 17:3 the RSV emends the MT (*bāmōṯeyḵā*, lit. "your high places" [so AV]) to read Heb. *bimḥîr* ("as the price"), following the Syriac and Targums; the NEB reads *lōʾ bimḥîr* ("for no payment") from 15:13 (it considers 15:13f. an intrusion into the text and 17:3f. to be the proper place of these verses). On Nu. 18:16 see G. B. Gray, comm. on Numbers (*ICC*, 1903), pp. 31, 231.

The quotation in Mt. 27:9f. (referring to the sum that the Jewish leaders paid to Judas for his betrayal of Jesus) is not from Jeremiah but is rather a free paraphrase of Zec. 11:13 with slight allusions to Jer. 18:2f.; 32:6-15 (see comms.). In 1 Cor. 6:20; 7:23 Paul uses the metaphor of the redemption price to describe Christ's saving death and the believer's consequent obligation to serve Christ alone.

See BUYING; RANSOM; REDEEMER. N. J. O.

PRICK. The noun denotes a slender, pointed object such as a thorn. It occurs in its literal sense in Nu. 33:55, translating Heb. *śēḵ*, "thorn," "splinter" (NEB "barbed hook"). In the AV of Acts 9:5; 26:14 it represents Gk. *kéntron*, "sting," "goad," for urging on a balking animal (cf. RSV, NEB, "goad" in 26:14). The expression "to kick against the pricks" figuratively describes a person resisting the call of God. In 9:5 the RSV and NEB omit the clause, following the earliest MSS (*see* GOAD).

The verb, meaning to pierce with something pointed, occurs in its literal sense in Ezk. 28:24 ("a brier to prick"),

translating the hiphil part. of Heb. *mā'ar*, "hurtful." In Ps. 73:21 it renders the hithpolel of *šānan*, "feel sharply stabbed" (cf. NEB "feel the pangs"), figuratively describing the psalmist's intense emotional distress when he doubted the goodness of God. Sharp emotional pain of another sort (Gk. *katanýssomai*, "be stabbed") was experienced by those who heard Peter's Pentecost sermon and recognized their guilt for Jesus' crucifixion (Acts 2:37; AV "pricked in heart"; RSV, NEB, "cut to the heart").

N. J. O.

PRIDE; PROUD [Heb. *gē'â* (Prov. 8:13), *gē'eh*–'haughty,' *gē'* (Isa. 16:6), *ga'ᵃwâ, gā'ôn, gē'ût, ga'ᵃyôn* (*K* Ps. 123:4), *gēwâ, gāḇah*–'be high,' *gōḇah*–'height,' *gāḇō(a)h, dāšēn*–'fat' (Ps. 22:29 [MT 30]), *hôḏ*–'splendor, majesty' (Zec. 10:3), *zîḏ* ("proudly defy," Jer. 50:29), *zēḏ, zāḏôn, maḥmaḏ*–'desire' (Lam. 2:4), *mārôm* ("proudly," Ps. 56:2 [MT 3]), *'ālas* ("wave proudly," Job 39:13), *rāhāḇ*–'defiant' (Ps. 40:4 [MT 5]), *rûm, rāḥāḇ* (Prov. 21:4), *śᵉ'ēt*–'dignity' (Gen. 49:3), *šaḥaṣ* (Job 28:8; 41:34 [MT 26]); Aram. *gēwâ, zûḏ*]; AV also ARROGANCY, DIGNITY, EXCELLENCY, FAT (Ps. 22:29 [MT 30]), GOODLY (Zec. 10:3), HAUGHTINESS, HIGH, LIFTED UP, "O thou most High" (Ps. 56:2 [MT 3]), POMP, etc.; NEB also ARROGANCE, BOAST, BRUTAL, "buried" (Ps. 22:29 [MT 30]; based on an emendation), CONCEIT, INSOLENCE, LOFTINESS, PRESUMPTUOUS, ROYAL (Zec. 10:3), SURGING, etc.; [Gk. *alazoneía*–'pretension' (1 Jn. 2:16), *alazṓn* (2 Tim. 3:2), *dóxa*–'glory' (1 Cor. 11:15), *kaucháomai*–'boast,' *kaúchēma* (noun)–'boast,' *kaúchēsis*–'boasting,' *hyperēphanía* (Mk. 7:22), *hyperḗphanos, hypsēlá phronéō* (Rom. 11:20), *hýpsōma*–'height' (2 Cor. 10:5)]; AV also BOAST, BOASTER, GLORY, HIGH MINDED, HIGH THING (2 Cor. 10:5), REJOICING; NEB also ARROGANT, GLAMOUR (1 Jn. 2:16), GLORY, HIGH (He. 3:6).

Many of the Hebrew and Greek words, as well as the AV and NEB variant readings, point to the root of pride: being lifted up high, whether literally or figuratively (*see* EXALT). Pride can be attributed metaphorically to natural phenomena that are literally high. Thus the waves of the sea are said in the RSV and AV to be proud (Job 38:11, *gā'ôn*) because they are high and majestic. When attributed to human beings, this sense of exaltation may be either positive or negative, depending on the relative height attributed to God.

Paul insisted that there is a positive kind of pride among Christians. He was proud (*kaucháomai* and related nouns) of the churches he had founded and wanted them to be proud of him as well (Rom. 15:17; 1 Cor. 15:31; 2 Cor. 1:14; 5:12; 7:4, 14; Phil. 2:16); but he was careful to explain that his success was entirely due to God's gifts (e.g., cf. Rom. 15:15-19; 2 Cor. 1:12; 5:11-15). Thus his boasting "in Christ" was tantamount to thanking God (cf. 2 Th. 1:3f.). In a different context he warned against considering oneself so lofty (*hypsēlá*) that one fails to feel awe at the mystery of God's working (Rom. 11:20; cf. vv. 17f., 25-27, 33-36). Pride is legitimate only when it remembers to attribute all honor to God (this may also be inferred from Ps. 47:4 [MT 5] and Isa. 4:2; cf. also 1 Cor. 11:15). *See also* BOAST.

Elsewhere in Scripture, however, pride is almost uniformly censured, precisely because it refuses to thank God but instead cherishes an exalted opinion of the self (2 Ch. 26:16; 32:24f.; see esp. NEB). In relationship to God pride is lofty self-sufficiency; in relationship to other persons pride is haughty lack of concern for their well-being.

The prophets denounced the foreign nations for proudly supposing that they had achieved their military conquests or economic prosperity by their own strength (Isa. 10:12-15; 23:8f.; 25:11; Ezk. 28:2-10, 17). Their loftiness showed itself in arrogance, haughtiness, insolence, false boasts and deeds (Jer. 48:29f.), in defiance of Yahweh (50:29), and in scoffing and boasting against Yahweh's people (Zeph. 2:10). But the prophets also attacked Israel and Judah themselves for relying on their own military power rather than trusting in Yahweh's protection. In Am. 6:8 "the pride of Jacob" and "his strongholds" (a symbol of national self-confidence) are parallel objects of Yahweh's abhorrence and judgment (cf. Ezk. 24:21, where even the temple has become a symbol of human self-sufficiency). Pride is equated with rebelling against Yahweh (Zeph. 3:11). It refuses to listen when Yahweh speaks (Jer. 13:9f., 15-17 [NEB emends in v. 17 to "anguish"]; Lev. 26:18f.; cf. 2 Cor. 10:5) and is unwilling to learn from God's chastening (Isa. 9:8-10, 13). *See* ARROGANCE.

The Psalms and wisdom literature picked up these themes as well: pride tries to ignore God (Ps. 10:4) and prefers to trust in what is deceptive and empty (40:4 [MT 5]). But here the focus is more often on pride in relationship to other people. Pride is associated with wickedness and injustice (Ps. 94:2-7; Prov. 21:3f.; Job 40:11f.) and is antithetical to wisdom (Prov. 8:12f.), patience (Eccl. 7:8), and humility (Prov. 11:2; cf. Jas. 4:6; 1 Pet. 5:5). The proud tell contemptuous lies against the righteous (Ps. 31:18 [MT 19]; 59:12 [MT 13]). At ease in their riches (123:4), they represent the antithesis of the lowly poor (Job 22:29; Prov. 15:25; 16:19; 29:23; cf. Ezk. 16:49, which identifies the sin of Sodom as pride and a complacent prosperity that ignores the needy; cf. also Ps. 73:3-9).

As in the OT, so also in the NT, pride is associated with other vices. In Mk. 7:22 haughtiness (*hyperēphanía*) is listed with the sins of envy, slander, and foolishness; in 2 Tim. 3:2 bragging (*alazṓn*) is mentioned with love of self, love of money, arrogance, and abusiveness. 1 Jn. 2:16 links *alazoneía toú bíou* (which may refer to ostentatious pride in possessions or status, or to overconfidence inflated by possessions or status) with lust (cf. *bíos* [RSV "goods"] in 3:17; see R. E. Brown, *Epistles of John* [*AB*, 1982], pp. 311f.).

Thus the proud person offends against God by self-exaltation, against other people by self-preoccupation, and against the self by self-deception. The delusion increases until one fancies oneself so high as to be invulnerable (Ob. 3). "Though you soar aloft like the eagle, though your nest is set among the stars, thence I will bring you down, says the Lord" (v. 4; cf. Isa. 2:10-17).

PRIEST, CHRIST AS. *See* CHRIST, OFFICES OF III; PRIESTHOOD IN THE NT II.

PRIEST, HIGH [Heb. *hakkōhēn haggāḏōl*–'the great priest'; Gk. *archiereús*]; **CHIEF PRIEST** [Heb. *hakkōhēn hārō'š*–'the head priest'; Gk. *archiereús*].

I. Background
II. Dress
III. Origin and Importance
IV. Responsibilities
V. Postexilic Development
VI. Greco-Roman Period

I. Background.–Sacrificial temples were important religious institutions in the ancient world that usually accommodated the activities of a special group in the society — the priests. The larger temples and the centers with the sizable populations very often had priests of significant status who could be referred to as high priests. For centuries the high priest of Amon at Thebes stood next to the king in power and influence. In fact, in the ancient period the king and the chief priest appear to have had a close relationship. The temple service in Egypt was conducted by and for the king in order that he might have long life, health, and power. Since the high priest was appointed by the king, he emphasized the needs and desires of the king. In Mesopotamia the offices of king and high priest were often united in the same person (cf. Wright and Freedman, eds., *BA Reader,* I, 145-200). In the early Babylonian period the king appointed a high priest to administer a highly developed, extensive bureaucracy that would gather royal taxes and issue charters through the city temples. The Hittite temples, or more precisely "palaces," were the domain of the deity and the upper classes. The rites of worship were carried out by specially ordained priests, led by a chief priest, and they generally excluded involvement by the ordinary citizen. Ugaritic and Phoenician inscriptions refer to a chief priest at the top of a structured priesthood (cf. Cody, p. 21). Thus it seems that a chief priest heading a priestly hierarchy was a fairly common phenomenon in the ancient Near Eastern world, with close if not blurred lines between the king and the high priest.

Some have suggested that Moses' father-in-law was possibly the chief priest of Midian, and thus in the founding and establishing of an ecclesiastical system for ancient Israel it would have been natural and proper to institute a priestly system with a high priest at the head. The chronology of this division and the traditions that surround the high priest are difficult to determine in the early history of ancient Israel. The title "high priest" *(hakkōhēn haggāḏōl)* occurs only twice in the Pentateuch (Nu. 35:25, 28) and once in Joshua (20:6), although there are variant references to this position, such as "the priest who is chief among his brethren" (*hakkōhēn haggāḏôl,* Lev. 21:10) and the "anointed priest" (*hakkōhēn hammāšî[a]ḥ,* Lev. 4:3, 5, 16; 6:22 [MT 15]); cf. the later title "chief priest" (*kōhēn hārō'š,* 2 K. 25:18 par. Jer. 52:24; 2 Ch. 19:11; 24:11; 26:20; 31:10; Ezr. 7:5). Even though ordinary priests were anointed it would appear that the ritual was different for the high priest, since it designated his place at the head of the priestly caste. The anointing of the high priest had similarities to that of royalty, including the pouring of oil on the head of the priest (1 S. 10:1; 2 K. 9:6). Cody (p. 103) has commented that since the king was the highest authority in the sacrificial system of the early stages of ancient Judaism, the absence of the title "high priest" in authentic preexilic texts is not surprising.

II. Dress.–The high priest wore a mitre (Heb. *miṣnepeṭ*) or elaborate headdress that showed his special status (Ex. 28:36-39; 29:6; 39:30; Lev. 8:9). He also wore the robe of the ephod, the EPHOD, and the breastplate (Lev. 8:7-9). The robe of the ephod seems to have been a sleeveless tunic, made of blue material, fringed with alternate bells and pomegranates (Ex. 28:31-35; 39:22-26). The ephod was a variegated dress of the four colors of the sanctuary: blue, purple, scarlet, and fine linen interwoven with gold (Ex. 28:6-8; 39:2-5; *see* GARMENTS VIII). The breastplate must have contained a pocket of some kind inside, for in it were deposited the URIM AND THUMMIM, which seem to have been tangible objects (Ex. 28:15-30; 39:8-21). The mitre or headdress was of fine linen, the plate of the crown of pure gold, and inscribed upon it were the words "Holy to Yahweh" (Ex. 28:36-38; 39:30f.). When entering the holy of holies the high priest had to dress entirely in linen, but in his ordinary duties he wore the dress of the priests; only when acting as high priest must he wear his special robes.

III. Origin and Importance.–Aaron, the brother of Moses, had been traditionally called the first high priest (Lev. 21:10; Nu. 35:25, 28; Ezr. 7:1-5). Only those of the line of the eldest descendants of Aaron could serve as high priest, and a man's position in the hierarchy of holiness and cult was determined from birth. In Nu. 25:10-13 the descendants of Phinehas (Aaron's grandson) are promised a "covenant of eternal priesthood," which apparently refers to a right to the office of high prist.

The importance of the high priest's office was manifest from the first. The high priest Eleazar (Aaron's son) is named in the first rank with Joshua, the prince of the tribes and successor of Moses (Nu. 34:17f.; Josh. 14:1). With others he officiated in the distribution of the spoils of the Midianites (Nu. 31:21, 26). He acted with Moses in important matters (26:1; 31:29). The whole congregation had to go or come according to his word (27:20ff.). The high priest's death was a national event, for then the manslayer was free to leave the city of refuge (35:25, 28; *see* REFUGE, CITIES OF). Six cities had been designated as refuge places for those who had committed unpremeditated manslaughter (35:12f.; Dt. 19:9). The individual would be immune from persecution by the blood avenger and he was free to live a normal life under the restricted context of the city limits. The individual seeking such refuge had to remain there until the death of the officiating high priest. The later rabbis interpreted the death of the high priest as atonement for the injustice of manslaughter (T.B. *Makkoth* 11b). A murderer defiled the earth and caused the presence of God to be withdrawn, while the high priest caused the presence of God to abide with humanity. He was a mainstay of the community. His strength came from the fact that he was the person around whom a holy office gathered (i.e., the priesthood), and through the cultus he represented a strength for the people (cf. *ILC,* III-IV, 196f.).

Because of the diversity within the biblical sources the stipulation that only the firstborn son of the high priest could be high priest is a debated issue. Many scholars view the high priest as a late creation of the second temple period. The power and significance of the priesthood increased in the postexilic period, and it found its supreme expression in the position of the high priest. When the king did not materialize to establish a distinctive nation in the pattern of David's and Solomon's kingdoms, the high priest acquired more and more importance as the person who gave definition to the Israelite community (cf. Tcherikover, pp. 119-142).

Others hold that the hierarchy within the priesthood dates back to a very ancient period of Israel. Eli, in the temple of Shiloh (1 S. 1–3), may be an example of the high priest from the very early period. Deuteronomy offers little about the high priesthood (20:2 may be a reference). The traditional view that Deuteronomy was created under Mosaic authorship implies that the book is a unit and it assumes the division of priest and high priest. Some modern literary critics see different layers of tradition in the text that were brought together *ca.* the 7th cent. B.C. (see Nicholson, pp. 18-36, for a survey of views). Those who hold the latter view usually side with the proposal that the high priest is a somewhat later development in the priestly system. But the lack of reference to a high priest in Deuteronomy may be due to its subject matter; the text

does not deal with priestly matters in any detail and thus has no need to describe the office of high priest.

IV. Responsibilities.–The primary function of the high priest was to administer and direct the sacrificial system. He alone was allowed to go behind the veil of the holy of holies on the Day of Atonement (Lev. 16:2). He dealt with the sin offerings whose blood was brought into the sanctuary of the temple (Lev. 4:3-21). The high priest's responsibilities included all the sacrificial activities that took place inside the temple, either with his direct involvement or under his supervision.

The restrictions on the high priest were more pronounced than those applying to the ordinary priest. He was to take more care in issues of ritual purity and marriage. For example, in regard to marriage all the restrictions of the priests applied but with the further requirements that he was not to marry a widow and he was admonished only to "take to wife a virgin of his own people" (i.e., Israel, Lev. 21:13-15). He could not observe the external signs of mourning (i.e., letting hair grow, rending clothes) for any person, and he could not leave the sanctuary when news came of death even of a parent. He could not defile himself by contact with any dead body, including a parent (vv. 10-12). If he should bring guilt upon the people, he had to present a special offering (Lev. 4:3ff.). Sins affecting the priesthood in general had to be expiated by the other priests as well as himself (Nu. 18:1). He had to wash his feet and hands when he went to the tabernacle of the congregation and when he came near to the altar to minister (Ex. 30:19-21). He had to abstain from holy things during his uncleanness (Lev. 22:1-3) or if he should become leprous (vv. 4, 7). He was to eat the people's meat offering with the priests in the holy place (Lev. 6:16). He had to help to determine whether the leprosy was present in the human body and in garments (Lev. 13:2-59), and to adjudicate legal questions (Dt. 17:12).

V. Postexilic Development.–The profile of the high priest increased substantially in the second temple period, after the return from the Babylonian Exile. From this time on the high priest became more prominent. The monarchy was gone, the civil authority was in the hands of the Persians, the Jews were no longer independent, and hence the chief power tended to center in the high priesthood.

He was distinctly known as high priest *(hakkōhēn haggāḏōl).* He took a leading part in establishing the ecclesiastico-civil system, particularly the building of the temple. The office passed from father to son (Nu. 25:11-13), and if this was not possible a member of the family was appointed. The high priest served in the office until death (Nu. 35:25, 28; this custom ended during the period of Antiochus IV Epiphanes, 174-163 B.C.). He represented the people to the foreign powers that controlled the homeland, caring for the security of Jerusalem and its water supply, and he was responsible for the collection of taxes as well as the supervision of the temple service. Both spiritual and cultural responsibilities were placed on him, e.g., the high priest Simeon, son of Onias II, who traditionally has been referred to as Simeon the Just, exercised great influence upon the religious and spiritual development of Israel.

This exaltation of the high priest is very different from the state of affairs presented by Ezekiel. The high priest is generally regarded as a purely postexilic figure because there is no mention of such a figure in the book of Ezekiel. The "prince" seems to be the chief personage in the ecclesiastical system, and it is extremely difficult to equate this figure with that of the high priest. Since many scholars view Ezekiel as the shift to a special category within the Levites, with a separate category for the sons of Zadok as officials of the cultus, it has been argued that further "refinement" of the office of high priest was unknown to Ezekiel. Therefore the designation of a high priest in the religious system of Israel was a postexilic creation. The description of the high priestly functions, his installation, and his robes of office outlined in the so-called priestly document (P) are understood to be a later reading from a postexilic perspective.

But scholars are increasingly doubtful that the silence of Ezekiel on the high priesthood means that the position was not known. His silence on kingship does not imply that there was no king before his time. Rather, the writer was drawing freely on a familiar institution of the priesthood, and his modification (including the lack of specific references to an office such as high priest) has more to do with the system that he was proposing than a direct correspondence to offices and institutions that may not have existed in his society. Further, Ezekiel appears to be well acquainted with parts of the priestly code and especially the section in Lev. 17–26, which includes a discussion of the high priest (21:10-15).

The book of Chronicles reflects a period when the high priest was a well-established office in the priestly system. He is referred to as the "head" or "chief priest" (2 Ch. 19:11), the "great priest" (2 Ch. 34:9), and the "prince of the house of God" (1 Ch. 9:11). In the sketching of the history of Israel the Chronicler emphasizes the authority of the high priest and the considerable power vested in him. Azariah drove King Uzziah out of the temple for interfering with the priestly responsibilities (2 Ch. 26:16-20), and in Jerusalem during the reign of Jehoshaphat the high priest shared in administrative control with the governor of the house of Judah (2 Ch. 19:8-11; cf. chs. 23–24).

VI. Greco-Roman Period.–During the Hellenistic period the high priests varied in their allegiance to Jewish ideals and in their attractions to the Greek culture. Both Simeon II and Onias III continued the reforms of Ezra and Nehemiah while it is probable that Jason, one of the leaders of the Hellenist party, turned Jerusalem into a model of the Greek polis. During the Hasmonean period (165-75 B.C.) the high priest was a national leader, and eventually the positions of high priest and king of Israel were represented by the same person. This practice came to an abrupt end in the Roman period; under the regime of Herod the Great the high priest was an appointment of his choosing from among the priests. This loosened the link of the high priesthood with a particular family. The custom of a high priest holding the position for life was abolished, and although a high status was given to the office it was confined to the religious activities at the temple. After the death of Herod and the removal of Archelaus, the appointment of the high priest became the responsibility of the Roman governors.

In the 1st cent. A.D. the appointment came from the family of Herod (i.e., Agrippa I, Herod of Chalcis, and Agrippa II) and resulted in a group of well-placed, wealthy priestly families being given the office on a regular basis (i.e., the Boethus family, the Phiabi family, and the family of Anan). According to the Talmud (T. B. *Yoma* 18a; *Yebomoth* 61a) the high priest bought the office from the government and the position was changed every year. Since an ex-high priest kept his rights to the dignity of the office, a kind of oligarchy of high priesthood was established with many of the privileges being shared by members of his family. A distinguished and wealthy noble group of families emerged and took advantage of society in social, economic, and religious matters. Thus such groups as the Pharisees and the Dead Sea community severely criticized the high priesthood.

In NT times the high priest was the chief civil and ecclesiastical dignitary among the Jews. He was chairman of the Sanhedrin and head of the political relations with the Roman government. It is not clear just how far he participated in the ceremonies of the temple. No doubt he alone entered the holy of holies once a year on the Day of Atonement, and also offered the daily offerings during that week. What other part he took in the work was according to his pleasure. Josephus indicated that the high priest officiated at the Sabbath, the New Moon, and yearly festivals (Josephus *Ant.* iii. 10 [237-257]). The daily *minḥâ* (Lev. 6:12ff.) that he was required to offer was not always offered by the high priest in person, but he was required to defray the expense of it. This was a duty which, according to Ezekiel's vision, was to be performed by the "prince." The Jews had many contentions with the Romans as to who should keep the garments of the high priest. When Jerusalem fell into the hands of the Romans, the robe of state also fell into their hands.

The general dislike of the high priest was demonstrated during the war of A.D. 66-70 when the Zealots controlled Jerusalem. Many members of the family of the high priest were expelled from Jerusalem and some were killed before they could escape. A high priest was chosen from among the ordinary priests — Phinehas ben Samuel, a stonemason by profession and a relative by marriage to the family of Rabbi Hillel. He was the last high priest; the destruction of the temple at Jerusalem in A.D. 70 ended the necessity of such a figure.

On Christ as high priest, *see* CHRIST, OFFICES OF III; PRIESTHOOD IN THE NT II.

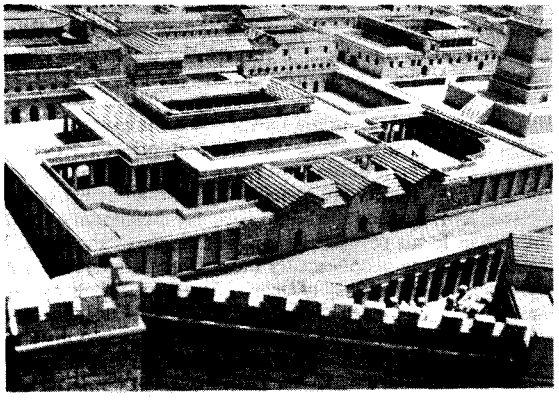
W. O. MCCREADY



PRIESTHOOD IN THE NT. Consideration of priesthood in the NT falls readily into three categories: (1) the Jewish priesthood in NT times, (2) the priesthood of Jesus Christ, and (3) the priesthood of believers.

I. The Jewish Priesthood in NT Times.–References to Jewish priests occur most frequently in the gospels, where priests are involved in the life, ministry, death, and resurrection of Jesus; in Acts, where they interact (usually negatively) with the apostles as they proclaim the gospel message; and finally in Hebrews, where the author discusses the priesthood of Jesus vis-à-vis the Jewish priesthood. A variety of titles appears in these texts, including Gk. *archiereús* ("high priest," "chief priest"), *hiereús* ("priest"), and *Levitēs* ("Levite"). (See Jeremias, pp. 147-221, for an excellent discussion of the priestly hierarchy.)

Since at the time of Jesus Israel was a theocracy (at least theoretically, for a discussion of the influence of a theocratic view on the author of Hebrews, see Horbury, pp. 44-49) without a king, the high priest was the most important official. The eminence of the high priest was due to his consecration for life to an office in which he might atone for the sins of the whole nation. His death was viewed as having special atoning value, bringing release to those who had fled to cities of refuge. His magnificent vestments were of such importance to the Jews that the Romans effectively contained Jewish rebellion by keeping these splendid garments in their custody. Strict laws governed the ritual purity that the high priest had to maintain for his office, especially on the Day of Atonement. These laws often led to the total isolation of the high priest for the days preceding an important cultic function so as to prevent contamination. Titles, authority, and cultic power were retained even after deposal or retirement (e.g., Annas, high priest A.D. 6-15, though retired, played a part in the trial of Jesus). The traditional prestige of the office, which extended even to the high-priestly families (*HJP*, II, 205), and its lifetime character were seriously weakened, however, by growing political influence on the office, influence that led eventually to substitution of investiture for the prescribed anointing and to frequent ignoring of other prescriptions for the office by the political authorities (the Herods) who appointed the high priest. Pharisaic influence was also replacing traditional Sadducean power (the high priests were Sadducees, Acts 5:17; cf. Denney, p. 98), and abuses by the high priests brought further reduction in the prestige of the office. The high priest remained the most important official in the nation, both because his position put him at the head of negotiations with the Romans and more importantly because, whatever the changing historical circumstances, he alone could atone for the nation's sins. John's observation of Caiaphas emphasizes the indelible nature of the role of this office (Jn. 11:49-53). Though of questionable character, Caiaphas spoke better than he knew when he urged the sacrifice of Jesus as expedient for the nation and thereby accomplished (paradoxically) God's redemptive purposes.

In rank an anointed high priest preceded one simply invested. The high priests were followed by ranks of chief priests and chief Levites: first, captain of the temple, then, in order, director of the weekly course, director of the daily course, temple overseer, treasurer, ordinary priest, and finally Levite. The captain of the temple (Acts 4:1; 5:24, 26) was of course permanently fixed in Jerusalem where he served as right-hand man to the high priest, customarily being chosen as deputy to the high priest on the Day of Atonement. Indeed, a qualification for the office of high priest was prior holding of the office of temple captain. The twenty-four directors of weekly courses and approximately 156 directors of daily courses were spread throughout Judea and Galilee except during their week of duty in Jerusalem and on the three pilgrim festivals. The seven temple overseers (including four chief Levites) supervised the temple and its functions. The

PRIESTHOOD IN THE NT

temple treasurer administered temple income (offerings in the form of money, objects, property, etc.). The NT, as well as Josephus, sometimes (64 times in the Gospels and Acts) calls this whole body of priests of various ranks Gk. *archiereús* (cf. Heb. *kōhēn gāḏôl*, the talmudic equivalent), which Jeremias (pp. 173-180) shows to mean not "high priest" or retired high priest or family of high priest (so Schürer) but rather "chief priest" — those priests who were in a position over other priests and who formed a definite body of priests permanently stationed at the temple and voting on the Sanhedrin.

The majority of priests, though descendants of Aaron and heirs of the priestly office, did not belong to the priestly aristocracy. Traditionally they were grouped into clans, twenty-one of them at the time of Nehemiah (Neh. 10:3-9), forming twenty-four weekly courses (doing service for 1 week twice a year; cf. Lk. 1:8) by the time of Jesus. Jeremias (pp. 200f.) estimates the number of priests in 100 B.C. to have been about eighteen thousand. From these more than fifty were chosen by lot to carry out the daily services at the temple, thus involving three hundred priests per week plus about four hundred Levites. Many more were needed to officiate on sabbaths and festivals and at private sacrifices, which were apparently offered in very great numbers. For all but the two weeks in the year when their cultic duties called them to Jerusalem they lived at their homes in Judea and Galilee. Here they seldom performed any priestly duty but rather worked mostly in manual trades such as carpentry and masonry (many were scribes) to supplement their priests' income. Thus in many ways these ordinary priests differed from their lordly seniors, including the fact that the rank and file were less prejudiced; thus it was mostly these ordinary priests who became "obedient to the faith" (Acts 6:7; cf. Denney, p. 98).

Last of all came the Levites, of whom there were about ten thousand. According to some scholars (e.g., Jeremias, pp. 207f.; cf. *HJP*², II, 250-54), the Levites were descendants of priests deposed by the Deuteronomic code. Their duties consisted primarily in making music at the temple and performing subordinate duties, such as helping the priests vest, preparing books for reading, cleaning and policing the temple. Like the laity, they were strictly forbidden by the law to enter the temple building.

In the NT priests of various ranks appear in a number of connections. Zechariah, father of John the Baptist, was apparently an ordinary priest who was in Jerusalem for his term at the weekly courses (Lk. 1:8) when an angel appeared to him announcing the end of Elizabeth's barrenness. Both an ordinary priest and a Levite passed by the robbery victim later helped by the good Samaritan (Lk. 10:31f.), though by virtue of their offices compassion might have been expected of them. Jesus sent those healed of diseases (esp. leprosy) that had made them ritually unclean to the priest to receive the prescribed ceremonial cleansing "as a proof to the people" (Mk. 1:44 par.).

The priest as seen in the Gospels is an important agent in bringing about Jesus' death. The high priest's servants were sent to arrest Jesus, and Peter struck one and cut off his ear (Mk. 14:47). At Jesus' trial the high priest questioned Him and condemned Him for blasphemy (Mk. 14:53-65). In his role as high priest Caiaphas "sacrificed" Jesus, speaking prophetically (not of his own accord but by virtue of his office) of Jesus' death on behalf of the nation and all children of God (Jn. 11:49-52). (The incident is reminiscent of rabbinic accounts reporting visions and heavenly voices experienced by the high priest on the day of atonement [*DNTT*, III, 39; T.B. *Sotah* 33a; *Yoma* 53b].) One of the disciples known by the priest was able to enter the court at Jesus' trial and arrange for Peter to be let in as well (Jn. 18:12-16).

As the priests stood against Jesus in the Gospels, so they stood against His disciples in Acts. The priests, captain of the temple, high priest, and the Sadducees opposed and imprisoned Peter and John for healing and preaching "in Jesus the resurrection of the dead" (Acts 4:1-22; 5:17-42), though Gamaliel, a Pharisee on the council and a priest, suggested a more tolerant course. The high priest questioned Stephen on the charges of speaking against the holy place and the law (Acts 6:13-14).The high priest commissioned Saul to find, arrest, and bring to Jerusalem "any belonging to the Way" (Acts 9:1; 22:5). When the tables had turned and Paul had become a persecuted Christian, he unknowingly (because of failing eyesight or a change of office or even because of the priestly behavior; *DNTT*, III, 40) reviled the high priest, who commanded that Paul be struck on the mouth (Acts 23:1-5). Subsequently the high priest presented the case against Paul before the governor (Acts 24:1), assisted later by the chief priests (25:2), who urged that Paul be sent to Jerusalem for trial so they might kill him en route.

See also PRIESTS AND LEVITES.

II. The Priesthood of Christ.—The conflict between the Jewish priests and Jesus and His followers was due in part to the threat posed to priestly institutions and privileges by Jesus' teaching ("something greater than the temple is here," Mt. 12:6; "destroy this temple and in three days I will raise it up," Jn. 2:19) and mission ("The Son of man came not to be served but to serve, and to give his life a ransom for many," Mk. 10:45). Nevertheless, only the letter to the Hebrews *develops* the motif of Jesus' priesthood.

In He. 2:17 the author's essentially sacerdotal Christology leads him to the conception that as a faithful and merciful high priest (cf. the Targumic description of Aaron in Tg. Pseudo-Jonathan on Dt. 33:8; Horbury, p. 61) He must be like His brethren (Vanhoye, p. 451). Because He was tempted like all men (4:15), He can be sympathetic. Indeed, He learned obedience through suffering so that being thereby perfected He might be a priest after the order of Melchizedek (5:6-10; see Horbury, pp. 59-66, on all these passages on priestly mercy).

The Melchizedek priesthood of Christ is shown to be superior to the Levitical priesthood in four ways: (1) it is forever, unbroken by genealogical beginning or end, 7:1-3 (on this analogy cf. Ladd, pp. 579f.; the author certainly knew Jesus had human parents; cf. 7:14); (2) Levi (in Abraham's loins offered sacrifice to Melchizedek, the lesser to the greater, 7:4-10 (see Horbury, pp. 52-59, on the difficulties of v. 5); (3) the promise (Ps. 110:4) of another order to supersede the Levitical makes clear its imperfection, 7:11-14; and (4) the Melchizedek priesthood was attained, not by "the law of a fleshly commandment" (7:16, lit. tr.), but by the power of an endless life, 7:15-19.

Jesus' better priesthood is also accompanied by an oath (something the old Levitical priests did not have), making Jesus the surety of a better covenant, 7:20-22. The former priests were many because of death, but His priesthood is uninterrupted because He lives forever, 7:23-25. Furthermore, He is a *blameless* high priest (7:26-28) who enters a better sanctuary to offer better sacrifices and perform better rites, 8:1-13 (vv. 8-12 cite Jer. 31:31-34 as scriptural evidence of the inadequacy of the old system).

In contrast to the imperfect sanctuary of the old covenant (9:1-5) and its repeated and imperfect rituals (9:6-10; cf. Young, p. 210, on the typology of the Levitical aspersions), Christ entered a more perfect tent, once for all to

offer the perfect sacrifice of himself (9:11-14). As a result Christ is mediator of a new and better covenant ratified by His blood (9:15-22). His once-for-all offering of himself has put away sin forever (9:23-28). The incompleteness of the old offerings, which needed continually to be offered and which could not perfect the offerers (10:1-4), is surpassed by Christ's perfect, obedient offering (10:5-10) made once for all (10:11-18).

Running throughout Hebrews is a duality of the heavenly and the earthly (Ladd, pp. 572f., 580; cf. Young, on *tá hágia*). There is also the paradox of Christ as both priest and offering (9:14, 26): "It was on the cross, in fact, that our Lord became a priest" (Scott, p. 402).

Besides Hebrews, the Johannine literature speaks of Christ's priesthood: this motif runs throughout the Fourth Gospel (cf. esp. chs. 6, 14–16, and the prayer of ch. 17), is pictured in the Apocalypse (chs. 5, 19, 21f.), and is taught in 1 Jn. 1–2.

These motifs are brought together in the words of the hymn:

Thou within the veil hast entered,
  Robed in flesh, our great High Priest;
Thou on earth both Priest and Victim
  In the eucharistic feast.

See also CHRIST, OFFICES OF.

III. The Priesthood of Believers.–The words of God to Israel in Ex. 19:6, "You shall be to me a kingdom of priests and a holy nation," are applied to the Church in the NT (1 Pet. 2:5, 9; Rev. 1:6; 5:10, 20:6; cf. Isa. 61:6). Best (p. 299) suggested that this universal priesthood can be traced back into Judaism and OT times when Levitical sacrifices were less important than spiritual sacrifices, which any Israelite could offer, though an ordinary Israelite could not be called a priest while the Levitical priesthood remained. In 1 Peter, believers as priests are to worship God, "to offer spiritual sacrifices acceptable to God through Jesus Christ", 2:5 (cf. "access" of Eph. 2:17 and Rom. 5:2; "draw near," He. 5:17; "bring us to God," 1 Pet. 3:18; Denney, p. 99) and to witness to His salvation ("that you may declare the wonderful deeds of him who called you out of darkness into his marvelous light," 2:9; according to G. Fee, *Zondervan's Pictorial Encyclopedia of the Bible,* IV [repr. 1978], 852, this is the only sense in which the NT speaks of a priesthood of believers).

The book of Revelation emphasizes the ruling aspect of this royal priesthood (cf. 1 Pet. 2:9): "they shall be priests and shall reign with him a thousand years," 20:6 (a present experience according to Congar).

It is more in a corporate than an individual sense that the Church exercises its priesthood; the NT does not mention a priestly office in the Church (but cf. Rom. 15:16 and Phil. 2:17; see Schlier, p. 164; Denney, p. 100). But Clement, writing in the last decade of the 1st cent., speaks of the Christian ministry as high priest, priest, and Levite (1 Clem. 40–44); the Didache (13:3) calls Christian prophets "your high priests" and refers to the Eucharist as a sacrifice, "the pure offering among the nations" of Mal. 1:11 (Shepherd, *IDB,* III, p. 890). About A.D. 200 Tertullian (*De baptismo* 17) and Hippolytus (Preface to *Refutatio omnium haeresium*) in the West called Christian ministers "priests" and "high priests," developments that grew out of theological presuppositions about the nature of the Church (Stylianopoulos, pp. 125f.).

PRIESTS AND LEVITES.

I. Background
II. Early Stages
III. Levites
IV. Family of Aaron and Levites
V. Priests and Levites
VI. Levitical Duties and Responsibilities
VII. Priestly Duties and Responsibilities
VIII. Postexilic Priesthood
IX. Modern Critical Analysis

I. Background.–One of the basic theological principles of ancient Israel was that the Hebrews were in a covenantal relationship with their God. Since their God was viewed as being holy, the people were also to be holy (Lev. 11:44f.). The corporate responsibility of maintaining the unique relationship with God was vested in prophet, priest, and king. The Israelite priesthood survived in this capacity for the whole of the biblical period, outlasting both prophet and king.

The Heb. *kōmer* is used of "idolatrous priests" in 2 K. 23:5; Hos. 10:5; Zeph. 1:4 (AV also Chermarim, Zeph. 1:4; NEB "heathen priest," "priestling"). But the usual Hebrew term for priest is *kōhēn,* which has cognates in Ugaritic, Phoenician-Punic, and Aramaic. *Kōhēn* was not limited to Hebrew priests only; the Hebrew Bible uses the same term to refer to Melchizedek, a Canaanite priest (Gen. 12:18), Egyptian priests (Gen. 41:45, 50; 46:20; 47:26), Philistine priests (1 S. 6:2), priests of Dagon (1 S. 5:5), priests of Baal (2 K. 10:19), priests of Chemosh (Jer. 48:7), and priests of Baalim and Asherim (2 Ch. 34:5). *Kōhēn* has no feminine form; the "daughter of a priest" (*baṯ-kōhēn*) refers to a woman of a priestly family (cf. Lev. 21:9; 22:12f.).

Some scholars see parallels between early Hebrew priests and the ancient Near Eastern custom of the *sadin,* the "guardian" of the temple (de Vaux, II, 348). The guardian looked after the sanctuary and the sacrifices, receiving the worshipers and assisting them with their offerings. Frequently the *sadin* became attached to the place of sacrifice; when his fellow clansmen moved on in their nomadic patterns the *sadin* would remain behind to serve in the sanctuary. The responsibility of the *sadin* would be passed on to his sons and a hereditary line would be established (cf. Jgs. 17–18; 1 S. 1–2).

The priest's involvement in the cultic or sacrificial system must be set within the context of the ancient world, where sacrifices were conceived as a service to the deity. The sacrificial activities were carried out in the temple that was the special abode of the deity. The sacrifice was a means of access to the deity; in the earliest records it may have been a means of appeasing the gods or gaining their attention. By the period of the early Hebrews, however, sacrifices were sophisticated symbols that commemorated past activities of God and anticipated further encounters with Him (cf. G. von Rad, *OT Theology,* I [Eng. tr. 1962], 242; Eichrodt, p. 433).

In the early period of the Hebrew religion the priest's main responsibility was to determine whether a sacrifice was appropriate, i.e., whether the offering itself was correct and whether the attitude of the offerer was proper (cf.

Limestone plaque of a nude priest pouring out a libation to a goddess. From Tello, *ca.* 2500 B.C. (Louvre)

Dt. 33:8-11, which assigns to Levi the three functions of discerning oracles [v. 8], teaching [v. 10a], and sacrificing [v. 10b]). Both these features reflect an assessment of the ethical and moral disposition of the person offering the sacrifice. The priest was recompensed for his services by taking a portion of the sacrifice (cf. de Vaux, II, 347, for such activities recorded at Mari during the period of Hammurabi). As guardian of the proper method of sacrifice the priest eventually became master of sacred knowledge and ultimately exercised that knowledge on the behalf of the community; thus the *kōhēn* was a force to be reckoned with in political, social, and religious areas.

II. Early Stages.–In the early patriarchal period the heads of the clans offered sacrifices (Gen. 22; 31:54; 46:1). There were multiple shrines (Gen. 12:7f.; 13:18; 28:18-22; 33:20; cf. Jgs. 8:24; 18:14), and later various families were located at important temple centers (e.g., the family of Eli at Shiloh, 1 S. 1–14; the family of Ahimelech at Nob, 1 S. 22:11-19; and at Jerusalem, David's sons, 2 S. 8:18; Ira of the family of Jair, 2 S. 20:26; and Zadok son of Ahitub, 2 S. 8:17).

It is worthwhile in the context of multiple shrines and priestly families to distinguish between altars (*see* ALTAR) and TEMPLES in the ancient world. Altars consisted of any type of structure (they were usually open structures) where the sacrifices could be made by anyone. Such sites are numerous from the ancient periods and they seem to have been centers of activity for priests and nonpriests. In contrast to altars, the temples were closed structures and they were understood to be the place of priestly sacrifices. Every temple had an adjoining altar but not every altar was attached to a temple. The crucial difference between the two institutions was reflected in the scope and nature of cultic activity: the place of the priests, in Israel as well as other nations, was confined to the temple and the cultic activity carried on there.

As one would expect from a nomadic community, during the early patriarchal period the Hebrews would appear not to have had temples. Thus the Hebrew Bible lacks reference to a priesthood in the early stages of the Hebrew religion (Genesis does not mention priests except in reference to foreign nations, e.g., Egyptian priests, 41:45; 47:42; and Melchizedek, the king-priest of Salem 14:18).

This lack of references does not necessarily exclude the presence of a priesthood, but the period of the temples in Israel began after the conquest of Canaan (*ca.* 1250 B.C.), and the profile of the Israelite priesthood emerged at the same time.

III. Levites.–The traditional reconstruction of the priesthood goes back to the Israelite wanderings in the desert under the leadership of Moses. From the earliest times the priesthood was tied to the tribe of Levi, and although some evidence points to priests from other families (e.g., Jgs. 17:5), it is clear that a priest who was a Levite was preferred (17:7-13). During the wilderness wanderings the Levites distinguished themselves as loyal followers of Moses in the episode of the golden calf. They supported Moses, and as a reward for their faithfulness to him and to God they were authorized to the priesthood (Ex. 32:26-29; cf.Dt. 10:8f.).

It is probably incorrect to conclude from the account in Ex. 32 that the office of priest is a new phenomenon. Rather, it is the imposition of the Levites as the exclusive members of the priesthood that is new. A great deal of the source material that presents the faithfulness of the Levites is probably from a later period when they had sustained a prominent position for a long time. Part of the basis for their exclusive claim to the priesthood was that their authority and right of privilege came through their practice of a sacrificial system that excluded foreign elements, particularly the Canaanite religious practices. Although the opposition by the Levites to foreign cult practices varied in different parts of Israel and at different times, eventually the biblical tradition presents them as the priestly dynasty that resisted foreign intrusions. The wilderness account serves to highlight this tradition, which gave a sense of authority to the priestly office and the priestly duties.

The Hebrew term for Levite *(lēwî)* denotes a descendant of LEVI, the third son of Jacob by Leah. Nu. 18:2, 4 seems to have a play on words suggesting that the tribe of Levi was to be "attached" or "joined" (Heb. *lāwâ)* to the family of Aaron. It is possible that the Levites were originally foreigners who joined the Israelites during the wilderness wanderings and helped support and define the emerging priestly order within the religion of ancient Israel. But this theory seems to conflict with early biblical references that Levi was one of the original tribes of Israel engaged in war long before it was given cultic responsibilities (Gen. 34:25-30; 49:5).

Levi was the smallest tribe in the clan confederation, and during the wilderness wanderings it was singled out for service of the tabernacle that included carrying the ark of the covenant and attending to the duties of the portable sanctuary (Nu. 8:24-26; Dt. 10:8). It was chosen for this service "instead of all the first-born among the people of Israel," since the number of firstborn was practically identical with that of the Levites (Nu. 3:40-43). As mentioned earlier, Levi stood out as a tribe that was committed to the leadership of Moses and Joshua, and it was apparently thought to have a close relationship to the tribe of Judah (cf. Dt. 33:7-9). At the settlement of Canaan the Levites were not given a fixed territory; as "ministers of God" it would appear that they wandered without possessing any permanent land of their own. At the time of the monarchy the Levites were at the gates of the cities; thus they still did not possess their own territory. The sources explain this lack of land possession as a sign of superior status — "the Lord is their portion" (Dt. 10:9; 18:2). But this special status may have been obvious to every one; many times the Levites are categorized with other disenfranchised groups — such as the stranger, the orphan, and

the widow — that needed the support of the community in order to survive (Dt. 14:29; 16:11, 14; 26:11-13). According to Nu. 35:1-8, the Israelites were commanded to set aside forty-eight towns from their territory for the Levites (cf. Josh. 21:4, 13-19). It would appear that these LEVITICAL CITIES were not exclusively inhabited by Levites, but were cities that contained Levitical families.

IV. Family of Aaron and Levites.–All biblical sources agree that the priesthood was originally given to the tribe of Levi. The sources disagree, however, as to how the priesthood was constituted within the tribe. One possibility is that the priesthood was made up exclusively of one family within the Levite tribe, the family of Aaron (Ex. 28:1; 30:26-30; 49:9-15). The rest of the tribe was subordinate to the Aaronic priests; only descendants of Aaron could become priests. Even if the rest of the Levite tribe were resident at the place of sacrifice they could not participate in any direct way in the cultic part of the religion. The sacrificial responsibility of ancient Israel was exclusively the right and privilege of the descendants of Aaron. The Levites as a group, however, were given a certain sanctity below the priestly group but distinct from other Israelites. Within the family of priests the firstborn was set apart and given the rank of high priest (*see* PRIEST, HIGH).

V. Priests and Levites.–Another view of the priests and Levites was that the entire Levitical tribe (not just the family of Aaron) was appointed to serve in the priesthood, or more precisely, those Levites were appointed who resided in the chosen city (usually identified with Jerusalem; eventually the Jews believed that Jerusalem was the only place where cultic service was permitted). Levites who did not attach themselves to the temple were devoid of any degree of sanctity and in this respect did not differ from ordinary Israelites. Those Levites who lived in provincial towns were not to participate in the sacrificial system. They were encouraged to join well-to-do families to take part in sacrificial meals (Dt. 12:12, 18f.; 16:11-4). This view maintained that every Levite had the right to go to the chosen city and serve God there (Dt. 18:6f.). The entire tribe of Levites would be better off if they went to the chosen place. This possibility was tempered with the reality that if all Levites went to the chosen place the sacrificial system would probably be overstaffed, and the chosen place could not economically support such a situation.

A notable shift in the importance of the priesthood occurred at the beginning of the monarchical period. The family of Eli lost its importance and its place was taken by the family of Zadok. This family served as the priesthood in the central temple in Jerusalem. A further change in the situation of the priests took place in the time of Josiah. After Josiah introduced the cultic reforms a substantial endorsement of the Jerusalem priesthood meant a major purging of idolatry that included the destroying of high places and altars outside the central Jerusalem temple. All the priests in the towns of Judah were brought to Jerusalem, and this probably indicates the beginning of the view that sacrifices were to be made only at the central temple of Jerusalem (2 K. 23:8).

Ezekiel shared the view that the priesthood was made up exclusively of one family within the Levitical tribe, but he substituted the sons of Zadok (a priest during David's reign whose descendants gained control of the priesthood of the Jerusalem temple) for the sons of Aaron (Ezk. 40:46; 43:19; 44:15f.; 48:11). He stipulated that the priests were obligated to refrain from touching ordinary people while officiating in the temple (Ezk. 42:13f.; 44:19; 46:2, 19f.). Although the Levites could never attain the office of priest they served as an important barrier between the priestly family and the congregation (Ezk. 44:13).

The Levites may have become state officials during the reigns of David and Solomon. Chronicles indicates that the Levites enjoyed a high status under David, even in the administration of the government (1 Ch. 23–27). It is possible that the Levites were among those who helped make the transfer of the monarchy to David at Hebron (1 Ch. 12:27), and their loyalty was rewarded when the cult itself was transformed into an instrument of the state at the establishment of Jerusalem as the political and religious center of David's empire. The Levitical loyalty to the kings of the dynasty of David continued until the destruction of the temple in 587 B.C. (2 Ch. 23:2-9, 18f.; 24:5-15). Some of the sources indicate that there was a migration of the Levites from the northern kingdom of Israel to Judah after the division of the old empire of David and Solomon (1 K. 12:31; 13:33; cf. 2 Ch. 11:13-17; 13:9-12). Once the temple was built at Jerusalem the Levites functioned as overseers in the house of the Lord (1 Ch. 23:4). They were choristers, musicians, gatekeepers, judges, craftsmen for the temple, supervisors of chambers and courts, overseers of the temple treasuries and officers in charge of the royal service (1 Ch. 9:22, 26f.; 23:2-4, 28). During the reign of Jehoshaphat the Levites were teachers of Torah and judges in the towns of Judah, including Jerusalem (2 Ch. 19:8, 11). It is possible that in the temple at Jerusalem the lines of demarcation between priests and Levites were not always clearly preserved; some passages indicate that the Levites ministered alongside the priests (1 Ch. 6:13; 23:27-32). Possibly the Levitical family had a ranking system at this time.

VI. Levitical Duties and Responsibilities.–The Levites had duties connected with the service in the tabernacle (Nu. 3–4). They were to assist the priests (Nu. 1:50; 3:6, 8; 16:9; 1 Ch. 23:28; Ezr. 3:8f.), prepare the cereal offerings (1 Ch. 23:28-32), and care for the courts and the chambers of the sanctuary. Later the Levites were apparently involved in interpreting the law and thus functioned as teachers (Neh. 8:7, 9; 2 Ch. 17:7-9; 35:3).

The Levites were explicitly permitted to go near the sacred furniture, and this special privilege distinguished them from ordinary Israelites (Nu. 8:19; 16:9f.; 18:22f.). By virtue of this responsibility they were charged with the "work" (*ʿabōdâ*) of the tent of meeting (the tabernacle) that included its dismantling, transportation, and reassembling at a new site (Nu. 1:48-54; 4:3-15; 18:6). This was a requirement of all Levites between the ages of twenty-five and fifty (Lev. 8:24-26). In regard to the accessibility to the sacred furniture, the Levites were allowed to approach the furniture only when it was covered (Nu. 18:3). A drastic and clearcut distinction was made between the sphere of the cult and the rest of the community. The realm of the sacred grew stronger as one proceeded through the inside of the tabernacle, until one reached the area that was taboo even for the priests themselves, the holy of holies. The holiness of the area of sacrifice was conceived as being tangible, a physical entity that could be sensorially perceived. The "realm of contact with God" (the sacrificial places) had limited access and demanded skilled entrance. Only one group of people was permitted, by the grace and appointment of God, to come into contact with the holy areas — the priests.

The Levites were inducted into their special role through a series of ceremonies that included lustrations, shaving the body, sacrifice, the laying on of hands, and a solemn presentation to God (Nu. 8:5-13). They were to be supported by the tithe of the people (Lev. 27:32f; Nu. 18:21, 24), but a tenth of this tithe was to be given to the priests (Nu. 18:26-28).

VII. Priestly Duties and Responsibilities.–The anointing of

PRIESTS AND LEVITES

Aaron and his sons with the same oil as the tabernacle furniture implied that the priesthood shared the holiness of the tabernacle (Ex. 30:22-29; 40:9-11; Lev. 8:10f.; Nu. 7:1). It follows that a nonpriest must not come into contact with a priest while he was anointed with holy oil or was officiating in sacrificial duties. The holiness of the priesthood was equated with the holiness of the house of God itself. Both were put on the same level of sanctity and this implied that the sacrifical activities of the priesthood were of the highest rank in the ancient Israelite forms of worship. The biblical sources frequently indicate that during the ordination ceremonies of the priests, and especially of the high priest, they were not to leave the entrance of the tent of meeting (Lev. 8:33) or go out of the *miqdaš*, "the sacred area" of the tabernacle, for fear of contaminating themselves (Lev. 21:10-12).

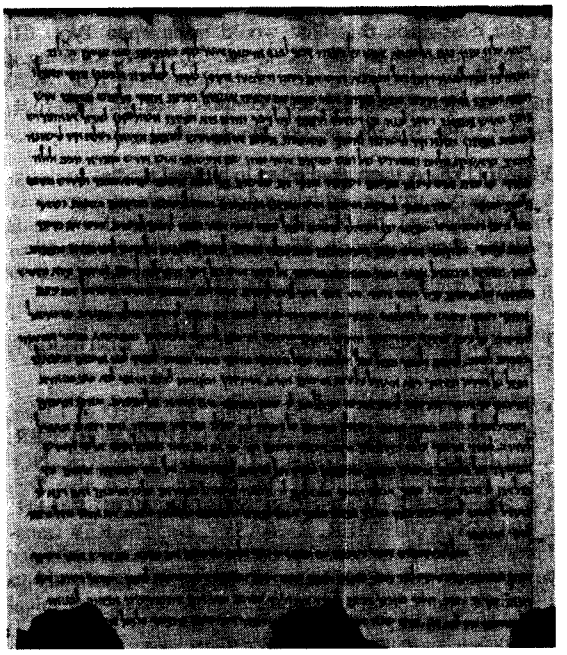
In order to maintain this holiness, especially during the cultic services, the priests were subject to special obligations and restrictions. A blemished priest could not approach the altar or enter the temple in order to serve in a sacrificial duty (Lev. 21:17-23). He must make special preparations to avoid contamination of either place or act (Lev. 10:9; 22:18-25; Ex. 30:18-21; Ezk. 44:21). This preparation included such stipulations as not defiling himself by contact with the dead, except in cases of the closest of family ties (Lev. 21:1-4; Ezk. 44:25), as well as restrictions of marriage (Lev. 21:7 prohibits a priest from marrying a harlot or a woman who had been defiled; it further stipulates that he could not marry a divorced woman).

The function of the priests was primarily concerned with offering sacrifices on the altar in the temples. This included the sprinkling of blood and burning portions of sacrifices (Lev. 1). Although this form of religious expression may be difficult for the modern person to comprehend, it should be recognized as an essential part of religious life in the ancient world. The priests also blessed the people in the name of God (Dt. 10:8; 21:5). Such responsibilities were an important part of the covenantal relationship between God and Israel. The blessing of God was a guarantee of reward and a validation of God's concern for Israel if they were faithful to the covenantal requirements. Prior to the settlement in Canaan the priests were also responsible for the unique function of carrying the ark of the covenant (Dt. 10:8; 31:9, 25), and during the Conquest the priests were part of the ark processional that led the people to victory (Josh. 3:3-17; 4:3, 9f.; 8:33).

The priests were involved in the treatment and assessment of impurity. In the ancient Near Eastern world disease was often viewed as an external and tangible embodiment of an impure spirit. The response to the presence of this impurity was both to wait until it left the body and to direct its departure through specific acts of purification. The priests dealt with impurities and diseases as a regular part of their profession, for the continued presence of impurity would eventually undermine their sacrificial system and the status of their holiness as representatives of the people. For example, Dt. 24:8 admonishes the people to follow carefully the instructions of the priests in the case of leprosy (cf. Ezk. 44:23). This kind of activity eventually grew into a highly sophisticated system of judging and anticipating impurities of animals and carcasses, bodily disorders, etc., as well as impurity of corpses (Lev. 11; 15; Nu. 19).

The priestly activities also included oracles given for a variety of purposes, from military advice to judging and instructing the people on matters of tribal customs and behavior (Jgs. 18:5; 1 S. 14:18, 41; 22:15; 23:16). The priests became experts on advising the people of God's will as expressed in Israelite customs *(mišpāṭ)* and eventually expressed in Torah. Very frequently the priestly oracle supplemented or interpreted Israelite custom and law (Dt. 17:11; 33:8, 10). Dt. 33:8-11 mentions the sacrificial ministry of the priesthood only after the responsibilities of teaching Israel the law (cf. Eichrodt, p. 396). One of the points of conflict that eventually arose between priest and prophet was that the latter accused the former of not teaching and practicing Torah (Hos. 4:4-10; cf. Mic. 3:11; Zeph. 3:4; Jer. 2:8; Ezk. 7:26). Both prophet and priest disliked any foreign intrusion into the life-style of Israel, and the priests were frequently involved as judges of acceptable beliefs and practices (Dt. 17:8-13; 24:8; Lev. 10:10; 13:1-59). Their function as oracle givers eventually gave way and was replaced by that of teacher and judge.

In the early stages of Hebrew history the priest probably functioned as the king's assistant in the sacrificial system, with the king taking a fairly active and predominant role (2 S. 6:14; 1 K. 8; 9:25; 2 K. 12:5, 9; 16:14; 2 Ch. 4:1; cf. *ILC*, III-IV, 163). As the temples multiplied and the king's concerns became more diversified the priests took over more of the responsibilities for the sanctuary. They managed the property of the temple and maintained the buildings and the necessary organization of the sanctuary system. In some cases they acquired considerable political power because of their close connections with the government and established such an order and character that despite the disappearance of the king in 587 B.C. the priests survived and continued to influence the life of Israel in a very concrete way for another seven hundred years.



VIII. Postexilic Priesthood.–After the Babylonian Exile a decisive action took place to rebuild the temple at Jerusalem as a sign of the reaffirmation of national and religious identity for ancient Judaism. This meant a rebirth of the supremacy of the priesthood, and it would appear that during this period it was clearly established that only those who were considered to be descendants of Aaron could serve in the priesthood. The Levites served beside them as a lower class in the priestly structure. The numbers of the priests increased, and in some cases the priests worked various parts of the land (Neh. 13:10f.; 10:35). This allowed for a decreased dependence on the priestly gifts. It is probably at this period that the priestly services and divisions became regulated (1 Ch. 24:3-19).

After the return from the Babylonian Exile the lines between the priests and Levites were firmly established. The Levites acquired an honored status (although the Bible does not refer to any particular robe of the office of the Levites, Josephus relates that Agrippa II granted the Levitical singers the privilege of wearing priestly linen robes, *Ant.* xx.9.6 [216-18]) and their small numbers in comparison to the priests added to their importance (Ezr. 2:40-42). In the period of Ezra and Nehemiah it was necessary to bring Levites from the rural areas of Palestine and from the Exile to have enough staff for the temple of Jerusalem.

During the Hellenistic period the priesthood was the class with the highest status among the people and the high priest functioned as the main representative of the Jews during the late Persian and the Greek regimes (*see* PRIEST, HIGH). It would appear that most of the people in administrative positions were also priests. The temple at Jerusalem overshadowed all other institutions in Judea.

The priesthood seems to have reached its zenith during the Hasmonean period (*ca.* 165-60 B.C.) when it could be legitimately categorized as a part of the Jewish aristocracy with far-reaching influence and position in society. In the late Maccabean era the priests were members in a number of the parties and sects within Judaism. It would

PRIESTS AND LEVITES

The Manual of Discipline from Qumrân (1QS), col. 6, which mentions the primacy of the priest in the community (J. C. Trever)

seem that the priests were a substantial part of the leadership of the Sadducees, and their membership in the Sanhedrin made them influential powers in both civic and religious matters. Priests also were part of the leadership in the separatist sect of the Essenes. Some of their writings (e.g., the Manual of Discipline) indicate that the priesthood was a vital part of the hierarchy.

With destruction of the Jerusalem temple in A.D. 70 the priesthood lost its main religious base in society; in their role as teachers the priests were replaced by the Pharisees and the rabbis in the synagogues.

In the modern period the prevailing opinion is that to claim to be an Aaronide, of priestly descent, is mainly presumptive because of the lack of reliable registers. In Orthodox Judaism the rights and privileges of the priest, as well as the prohibitions, are in full force. The privileges include the right to be called up first for the reading of the law and the invocation of the Priestly Blessing in the synagogue. Prohibitions are very often directed to avoiding impurities such as contact with the dead. Special arrangements are made in some hospitals to enable the priest to visit the sick without compromising his sanctity as priest. Marriage restrictions include the prohibition of marrying a divorcee. Reform Judaism disregards the laws applying to a priest.

IX. Modern Critical Analysis.–As indicated above, the characterization of the Hebrew priesthood based on the biblical sources is not an easy matter. The modern critical analysis of the Hebrew Bible led by Graf and Wellhausen (cf. Harrison, pp. 19-61) has demanded a reassessment of the history of the Hebrew priesthood. In the decades since the original proposals the view of the priesthood and its construction has frequently caused more disagreement than consensus. The critical reconstruction of the Levitical priesthood is closely linked with the Graf-Wellhausen literary analysis of the Pentateuch into four chronological documentary sources (J, E, D, P). Although this hypothesis has had great influence on the estimation of the Hebrew Bible, it is not without challenge; scholars have modified the basic four-source analysis. The greatest liability of the Wellhausen school is that it has oversimplified the religious life of Israel and assumed that belief and institutions were developmental, with simple and sometimes unrefined ideas being designated as early and more advanced concepts being late. Very frequently these presuppositions have shaped the interpretation of the Hebrew Bible, and ideas and institutions have been judged according to this evolutionary process.

The critical reconstruction of the priesthood is usually stated in the following manner. In the earliest period of Hebrew history the priesthood was not limited to the Levitical clan and sacrifices were not the exclusive prerogative of priests. In the period of the judges two official Levitical priestly families had emerged. The one resident at Dan had been established by Micah's Levite, Jonathan, the grandson of Moses (Jgs. 18:1-4, 14-20; 1 Ch. 23:24f), and the other was at Shiloh under Eli and his family (1 S. 1–4; 22:20; 2 S. 8:17). The house of Eli eventually was replaced by the house of Zadok, and the Zadokite priesthood continued in Jerusalem until the destruction of the city in 587 B.C. (2 S. 8:17; 15:24-29, 35; 19:11; 2 Ch. 6:8-11).

The sources are somewhat divided over whether the king should participate in the sacrificial system. 1 S. 13:8-13 and 2 Ch. 26:16-20 reflect opposition to the king's participation in priestly duties (Saul and Uzziah) while both David and Solomon sacrificed and blessed the people in the capacity of priest (2 S. 6:12-19; 1 K. 8:22-53; 9:25). By the end of the 7th cent. the priesthood had narrowed exclusively to the Levites. The reforms of Josiah (*ca.* 621 B.C.) had put an end to local sanctuaries in every town by centralizing worship at Jerusalem. The book of the law, generally regarded as an early edition of Deuteronomy, stipulated that sacrifices could only be offered at Jerusalem (Dt. 12:5-7, 11, 13f.) and all priests were referred to as "sons of Levi" (Dt. 10:8; 18:1; 21:5; 33:8).

By the 5th. cent. the "development" of the priesthood was such that a special group within the Levitical clan had emerged to hold the exclusive position of priest. Ezekiel is viewed as the link between the period when all priests were Levites (preexilic) and the subsequent phase (postexilic) when they were restricted to a particular section of the Levite clan. According to Ezk. 44:15f., the Zadokite priests were responsible for the actual sacrificial service because of their faithfulness when Israel went astray. The general clan of Levites had not proven faithful and as a consequence was given a lower status and confined mainly to menial tasks in the temple service (Ezk. 44:9-14). The critical assessment is that the more "refined" stage of the priesthood is being given theological and historical support (cf. Haran, pp. 103-111). The actual reorganization of the priesthood after the Exile indicates that the priesthood was not restricted to the Zadokite line (as proposed by Ezekiel), for an Aaronic heritage was the criterion for the priesthood (1 Ch. 15:4; 23:28-32; Ps. 115:10, 12; 118:3; 135:9, Sir. 45:6-24; 50:13, 16).

The Priestly Code (P, generally assigned to the 6th or 5th cent.) makes an absolute distinction between the priests and the Levites (Nu. 18:2-7; cf. Lev. 8) with the priests restricted to the house of Aaron (Ex. 28:1, 43; Nu. 3:10; 8:1, 7). If one follows the source hypothesis it is really the Priestly Code, not Ezekiel, that provides the pattern for the postexilic Jerusalem priesthood with its emphasis on the Aaronic hereditary line (cf. Ezr. 2:61-63 and Neh. 7:63-65 where all who claimed to belong to the priesthood were required to prove their descent from Aaron).

Chronicles has frequently been viewed as a supplement to the Priestly Code, and it does affirm the primacy of the Aaronic priesthood. At the same time it gives special prominence to the Levites' importance in the religious system (1 Ch. 15:2-15; 16:4; 2 Ch. 5:4; 35:3). The priesthood is set up into twenty-four "courses" or groups, each of which came up to the temple in turn for its appointed period (1 Ch. 24).

The reconstruction from the earliest Hebrew period depicts the development from a Levitical priesthood competing with heads of clans and other priestly dynasties to a phase where the priesthood is set within a segment of the tribe of Levi with a multiple and complex structure of "assistants" represented in the rest of the priestly family. One of the cardinal doctrines of the Wellhausen school is that the distinction between priests and Levites that is predominant in the Priestly Code was not known in the preexilic period. In the literature representing this earlier period all priests were Levites and all Levites were priests. Thus, Deuteronomy is read as not distinguishing between priest and Levite, a distinction that began with Ezekiel. Ezk. 40:45f.; 44:6-8; 48:13, however, suggest that the writer knew of various divisions in the Levitical family structure before his schema of reorganization. In Deuteronomy the distinction between priest and Levite is not as sharp as in the Priestly Code, but it should not be presupposed that such a distinction may not be detected (Dt. 18:3-8 seems to make allowance for priests ministering at the sanctuary in contrast to those unattached to a specific place; the latter may reflect the Levites). Further, the Priestly Code seems to relate to a later period than Deuteronomy, but it is possible that the priestly material does preserve much earlier material. In fact, it seems quite legitimate to use the Priestly Code, with care, as a substantial source for the preexilic period (i.e., traditions about the Day of Atonement).

The convenient division between "early" and "late" materials is far too simplistic, and it does disservice to the sources and the Hebrew religion. The literary sources of the Hebrew Bible are not as well identified as the earlier proposals may have suggested. The one major and common feature of all the sources is that the priesthood was not granted to common Israelites but only to certain families, that at some point the tribe of Levi emerged as the main base of priestly activity, and that the descendants of Aaron ultimately were in exclusive possession of the office by the postexilic period.

PRIMEVAL RUINS [Heb. *ḥ°rāḇôṯ mē'ôlām*] (Ezk. 26:20); AV "places desolate of old"; NEB "places long desolate." The AV and NEB translate literally this figurative detail of the desolation that God would bring upon Tyre. Cf. the use of *ḥorbâ* in Isa. 58:12; Jer. 25:9 (AV, RSV mg.); 49:13. For a good discussion of the thought of Ezk. 26:20 in its ancient Near Eastern context, see W. Eichrodt, *Ezekiel* (Eng. tr., *OTL*, 1970), pp. 373-78.

PRIMITIVE. A term used often in biblical studies to designate a very early period in the development of a group or institution, e.g., the Church. In such uses the term is merely chronological; it does not imply "uncivilized" or any other negative judgment on the quality of whatever it designates.

PRIMOGENITURE prī-mō-jen'ə-chər. *See* BIRTHRIGHT; HEIR; INHERIT.

PRINCE [Heb. *nāśî'*, *nāgîḏ*, *nāḏîḇ*, *śar*, part. of *rāzan*, *rāzôn*, *nāsîḵ*; Gk. *árchōn*]; AV also CAPTAIN, RULER, CHIEF RULER, LEADER, CHIEF GOVERNOR, NOBLE, CHIEF, PRINCIPAL MAN, etc.; NEB also OFFICER, CHIEF, WARRIOR, NOBLE, NOBLEMAN, CAPTAIN, COURTIER, EMBASSY, etc. The RSV translation of numerous terms indicating a position of authority or power to rule. The terms do not refer specifically to the direct male heir to the throne or to a king's physical male descendant.

Hebrew *nāśî'* (lit. "one lifted up") perhaps originally designated a tribal leader or representative elevated by his community to a position of power and importance. The Hittites of Hebron applied the term to Abraham (Gen. 23:6; cf. LXX *basileús*, "king"); it was also applied to leaders in Shechem (34:2) and Midian (Nu. 25:18). Ishmael is said to have become "the father of twelve princes" (Gen. 17:20; 25:16). The term is used of Israel's tribal leaders (1 Ch. 4:38; 7:40; cf. Ezk. 21:12 [MT 17]; 22:6; 45:8f.) as well as other "princes of the earth" (39:18) who have attained preeminence (e.g., 26:16; 27:21; cf. 7:27). In Ezekiel's time, with the decline in power of the kings of Israel and Judah, the term is used frequently (e.g., 38:2f.; 45:7). In his vision of Israel's future restoration and glory, Ezekiel gives special prominence to the role of the prince (esp. chs. 46 and 48), who as the civil leader supports the religious community by providing sanctuaries and upholding law and order (see 45:7–46:13 on the duties of the princes).

Royal and military overtones belong also to *nāgîḏ*. King Hezekiah is called "the prince of my people" (e.g., 2 K. 20:5), Abijah is called a "chief prince" (2 Ch. 11:22), the "Prince of Tyre" is referred to in Ezk. 28:2, and the "prince who is to come" (Antiochus Epiphanes) is mentioned in Dnl. 9:26 (cf. v. 25). Various military officers are also designated by this term (e.g., 1 Ch. 12:27 [MT 28]; 2 Ch. 32:31). In Hebrew poetry the term can indicate a person of wide, general influence (Job 31:37; Ps. 76:12 [MT 13]). The divinely appointed king of Israel is also called a *nāgîḏ* (e.g., in 1 S. 9:16; cf. 10:1; 13:14; 2 S. 6:21; 7:8; Solomon in 1 Ch. 29:22).

Nāḏîḇ is associated with nobility and honor, having at its root (cf. *nāḏaḇ*, "make willing, prompt") the notion of voluntary service. It is translated "princes" in 1 S. 2:8; Job. 12:21; Ps. 107:40; 113:8; 118:9; 146:3. In Ps. 47:9 (MT 10) the term designates the leaders of the world.

Hebrew *śar* (cf. Akk. *šarru*) can signify a leader or official in a variety of civil, military, and religious functions. Thus the term denotes various types of rulers and high officials in Egypt (Jer. 25:19; cf. Ex. 2:14), Moab (Nu. 22:8, 13-15; 23:6), Ammon (2 S. 10:3; Am. 1:15), Philistia (1 S. 18:30), Babylon (Jer. 38:17f., 22), and Persia (Est. 1:3, 11, 14, 16; 2:18; etc.). Tribal leaders in Israel are desig-

nated by this term (Jgs. 5:15; Nu. 21:18), as are other national leaders (2 K. 24:12; Isa. 1:23; Jer. 1:18; 2:26; 24:1, 8; 26:10-12, etc.; Ezk. 11:1; 17:12; Hos. 3:4; 5:10; 7:3, 5, 16; Mic. 7:3), ambassadors (Jer. 36:14), and priests (Isa. 43:28). In Dnl. 10:13, 20f.; 12:1 *śar* designates a patron-angel assigned to a particular nation (*see* ANGEL II.B; see also comms., e.g., *IB*, VI, 506f.); but the titles "Prince of the host" (8:11) and "Prince of princes" (v. 25) refer to God. Isa. 9:6 prophesies the birth of a messianic king who will be called "Prince of Peace." The title, which was later applied to Jesus, reflects the king's role in securing the peace and prosperity of his people.

Other Hebrew terms rendered by "prince" include the part. of *rāzan*, "dignitary" (Jgs. 5:3; Isa. 40:23; cf. *rāzôn*, Prov. 14:28), and *nāsîḳ*, "tribal leader"(Ps. 83:11 [MT 12]; Ezk. 32:30; Mic. 5:5 [MT 4]).

In the NT Gk. *árchōn* is a general term for RULER. The RSV renders it "prince" in five passages that refer to the ruler or commander of the supernatural forces of evil. In Mt. 9:34 Jesus' opponents claim that His power to cast out demons comes from the "prince of demons," who in 12:24-32 (par. Mk. 3:22-30; Lk. 11:15-23) is identified with BEELZEBUL and with SATAN. In response, Jesus points out the absurdity of imagining that the chief ruler of demons would take sides against his own subordinates; if he did so, his kingdom would collapse. The author of Ephesians refers to the same ruling evil being as "the prince of the power of the air, the spirit that is now at work in the sons of disobedience" (2:2; *see also* AIR; cf. 6:11-17, which refers to the "devil" and the "evil one"). Similarly, the Gospel of John refers to Satan as "the ruler [*árchōn*] of this world" (12:31; 14:30; 16:11) who is about to be thrown out and judged. (See *TDNT*, I, *s.v.* ἄρχω κτλ.: ἄρχων [G. Delling].)

See also CHIEF; COMMANDER; GOVERNMENT; LEADER; NOBLE; OFFICER. D. K. MCKIM

PRINCES, THE SEVEN. Seven princes named in Est. 1:14: Carshena, Shethar, Admatha, Tarshish, Meres, Marsena, and Memucan (cf. the LXX, which has only 3 names). Memucan is the spokesman for the group. These names seem to be Persian in origin, but they are difficult to identify and bear little resemblance to known Persian names (cf. comms. by C. A. Moore [*AB*, 1971], pp. XLII-XLIII, 9f.; L. B. Paton [*ICC*, 1908], pp. 68f.). Rawlinson has suggestd that Marsena may be Mardonius, and Admatha may be Artabanus, the uncle of Xerxes.

These seven are said to be advisers to the king, perhaps each of them the head of one of the leading families of Persia. They are next in line of succession to the king's family, and have special access to the king. Herodotus (iii.68-84) relates that Darius and the other six conspirators against Pseudo-Smerdis (Gaumata) agreed (before any one of them was chosen as king) to grant permission "for any of the seven to enter the palace unannounced, except when the king was in bed with a woman," and that "the king should not marry outside the families of the seven confederates." Herodotus gives the names of the seven: Darius, Otanes (Utana), Intaphrenes (Vindafarna), Gobryas (Gaubaruva), Hydarnes (Vidarna), Megabyzus (Bagabukhsha), and Aspathines (Aspachana). These agree with the list given by Darius on the BEHISTUN inscription, except for the last name, which Darius gives as Ardumanish. Aspathines appears on the Behistun inscription and on the tomb relief of Darius as the bearer of the battle-ax.

Seven advisers also are mentioned in Ezr. 7:14. The "seven advisers" could easily have their origin in the "seven conspirators," but R. Ghirshman (p. 128) suggested that the college of seven princes may date from the time of Cyrus. These seven formed the royal council of the Persians, and the king was the first among the seven.

PRINCESS. A word used four times by the RSV to render two different Hebrew terms or phrases. Heb. *baṯ meleḳ* (lit. "daughter of a king"; cf. AV, NEB, "king's daughter") occurs in Ps. 45:13 (MT 14) and Jer. 43:6. Ps. 45 describes a royal wedding of the king of Israel to a princess of Tyre (cf. v. 12). Following the Targums, which sometimes interpreted this Psalm as referring to the Messiah and Israel, the early Church understood the Psalm as depicting the relationship between Christ and the Church (see Anderson, pp. 346f.; Weiser, p. 365). Jer. 43:6 lists the king's daughters among the refugees from Judah who fled to Egypt under the leadership of Johanan son of Kareah.

Hebrew *śārâ*, the feminine equivalent of *śar* (*see* PRINCE), generally denotes a royal lady of the court (cf. RSV "lady" in Jgs. 5:29; Est. 1:18; "queen" in Isa. 49:23). In 1 K. 11:3 the term is applied to Solomon's seven hundred wives in distinction from the three hundred concubines who also made up part of his harem. In Lam. 1:1 *śārâ* (AV, RSV, "princess"; NEB "queen") figuratively depicts the prominence and glory of Jerusalem before it was devastated by the Babylonians.

D. K. MCKIM
N. J. O.

PRINCIPAL [Gk. *prôtos*–'first' (Lk. 19:47; Acts 25:2)]; AV CHIEF; NEB LEADING, LEADER. Both references are to leaders (cf. Acts 28:17; RSV "local leaders") of the Jews. In Lk. 19:47 they are linked with the chief priests and scribes; according to I. H. Marshall (*Gospel of Luke* [*NIGTC*, 1978], p. 722) they are the "lay elders of the people," part of the Sanhedrin. In Acts 25:2 "the principal men of the Jews" are again linked with chief priests.

The AV uses "principal" several times in quite misleading, inaccurate ways. In 1 K. 4:5 the AV translates Heb. *kōhēn* ("priest"; so RSV) as "principal officer" (the NEB, NAB, and JB omit, following LXX B and Lucian). In 2 K. 25:19 par. Jer. 52:25 the AV "principal scribe" (Heb. [*has*]*sōpēr śar*) seems better translated in the RSV ("secretary of the commander"; see KD *in loc.*; but cf. J. Gray, *I & II Kings* [2nd ed., *OTL*, 1970], p. 769). In 1 Ch. 24:31 the AV "principal fathers" gives a wrong sense; cf. the RSV "the head of each father's house."

G. A. L.

PRINCIPALITIES AND POWERS [Primarily the translation of Gk. *archaí* and *exousíai* in the AV and RSV]. The RSV translates *archaí* as either "principalities" (Rom. 8:38; Eph. 3:10; 6:12; Col. 1:16; 2:15) or "rulers" (Lk. 12:11; Tit. 3:1; cf. *pása archḗ*, "every/all rule," 1 Cor. 15:24; Eph. 1:21; Col. 2:10) and *exousíai* as either "powers" (Eph. 3:10; 6:12; Col. 2:15) or "authorities" (Lk. 12:11; Rom. 13:1; Col. 1:16; Tit. 3:1; 1 Pet. 3:22; cf. *pása exousía*, "every/all authority," 1 Cor. 15:24; Eph. 1:21; Col. 2:10). The RSV also uses "rulers" to translate *árchontes* (e.g., 1 Cor. 2:6, 8) and "powers" to translate *dynámeis* (e.g., Rom. 8:38; Eph. 1:21). There is no obvious explanation for the RSV's use of different translations for the same terms. Most modern versions employ a similar range of translations, although some (e.g., NEB and NIV) do not use "principalities." Consideration is here given to only those uses of *archḗ* and *exousía* that are plural (or the plural is implied through the generalizing *pása*) and refer to personal powers.

In some NT passages *archaí* and *exousíai* refer to

human political rulers (e.g., "rulers and authorities," Lk. 12:11; Tit 3:1), following the normal Greek usage. The sense of "superhuman powers" is not found in Hellenism or pagan Gnosticism (see *TDNT,* II, 571). Some scholars (e.g., Dibelius, pp. 189, 193ff.; Cullmann, pp. 55-70, 95-114) have contended that *exousíai hyperéchontes* (RSV "governing authorities") in Rom. 13:1 refers both to the state and to the angelic powers that in Judaism were held to stand behind the state. Support for this interpretation is sought in the use of the plural in Rom. 13:1 (which elsewhere in Paul's writings always refers to superhuman powers) and in the prevailing interpretation of *árchontes tou aiónos toútou* (RSV "rulers of this age") in 1 Cor. 2:6, 8. Many interpret "the rulers of this age" as referring either to the demonic forces or to the human and superhuman powers who crucified Jesus; but because of the emphasis on human wisdom in the context, the phrase probably refers to human rulers (cf. Carr, pp. 118-120). As to the first argument when *exousíai* means "superhuman rulers" elsewhere in Paul's writings, it is always accompanied by other terms that clearly indicate this meaning (e.g., *archaí, dynámeis*). In Rom. 13:1, therefore, *exousíai hyperéchontes* probably refers to civil authorities.

Most frequently, however, *archaí* and *exousíai* refer to personal, superhuman powers belonging to the angelic order. Angelology, with its divisions of angels into various classes, underwent extensive development in Judaism, and it is possible that *exousíai* was already being used to denote angelic beings, intermediary between God and mankind, in Dnl. 7:27 (LXX). Here the more immediate reference of *exousíai* (RSV "dominions") is to the kingdoms of this earth; but in ch. 10 it is clear that these kingdoms are associated with powers of the superterrestrial sphere (10:13, 20). In Rom. 8:38 and 1 Pet. 3:22 *archaí* ("principalities"), *exousíai* ("authorities"), and *dynámeis* ("powers") are specifically associated with angels. Some have contended that Paul does not think of these powers as "personal beings," since in Rom. 8:38 he associates them with such nonpersonal entities as "present and future" and "height and depth" (see Berkhof, pp. 17-20). But since these terms did refer to personal beings in Jewish apocalyptic, there is no reason to doubt that Paul also used them in this sense (cf. H. Kakes, pp. 145-47).

The NT writers do not distinguish between the *archaí, exousíai,* etc.; these seem to be different terms for much the same thing (see *TDNT,* II, 573). Nor do the NT writers speculate about these powers, but they always mention them in connection with Christ's work. Their role can best be elucidated, therefore, in connection with creation, redemption, the Church, and the final consummation.

(1) Creation. In Rom. 8:38 the "principalities" (*exousíai*) and "powers" (*dynámeis*), along with the "angels," belong to the created order. Paul indicates this when he adds to the list of personal beings and quasi-personal forces "or anything else in all creation." Angels, principalities, and powers thus stand with mankind on this side of the great divide that separates the Creator from the creature. More specifically the hymn in Col. 1:16 states that the "principalities and authorities" (*archaí* and *exousíai*), along with "thrones" (*thrónoi*), "dominions" (*kyriótētes*), and all things visible and invisible in heaven and on earth, were created "through" (*diá*) and "unto" (*eis*) Christ. Originally, therefore, they were a part of God's good creation.

(2) Redemption. Those principalities and powers created through and unto Christ (Col. 1:20) were among the "all things" reconciled to God through Christ's death on the cross (v.20). Through Christ's crucifixion, resurrection, and enthronement, all "angels, authorities, and powers" have become subject to Him (1 Pet. 3:22). Christ now sits enthroned above every *archḗ* and *exousía* and *dýnamis* and *kyriótētes* ("rule and authority and power and dominion," Eph. 1:21). He is the "head" of every *archḗ* and *exousía* ("rule and authority," Col. 2:10); He is the "head" over all things for the sake of the Church (Eph. 1:22).

Two passages in particular suggest that Christ's victory over the powers was juridical. Col. 2:14 refers to the "certificate of indebtedness" that God cancelled by nailing it to the cross. The image is perhaps taken from an anonymous Jewish apocalyptic work in which the "certificate of indebtedness" is a book of works held by an accusing angel (see Bandstra, pp. 158-162). By "putting off" (*apekdýomai,* lit. "strip off"; RSV "disarm") His body of flesh, Christ openly "exposed" (*deigmatízō*; RSV "make a public example") the principalities and powers, triumphing over them in the cross (for this interpretation of Col. 2:14f., see Bandstra, pp. 162-64; see also J. A. T. Robinson, *The Body* [*SBT,* 1/5, 1952], pp. 41f.). Drawing upon the imagery of Zec. 3:1-5 this passage apparently depicts the principalities and powers in the role of "accuser" (cf. Rev. 12:10-12); thus Christ's work on the cross "exposed" the nonvalidity of their case against believers.

A similar juridical context is present in Rom. 8:31-38, which raises the questions, "Who is against us?" "Who shall bring any charge against God's elect?" "It is God who justifies, who is to condemn?" The passage then declares that nothing can separate us from the love of God in Christ Jesus, neither "angels," nor "principalities," nor "powers." The "angels" here may refer to those angels who stand behind the law (cf. Acts 7:53; Gal. 3:19; He. 2:2). Even angels bent on the justice of the law cannot bring a valid charge against God's elect whom He has justified in Christ. The "principalities" and "powers" may refer, as in Col. 2:14f., to the more demonic accusers of God's people; they too are powerless to separate the justified believer in Christ from God and His love.

Are the principalities and powers good forces or evil forces? In the light of what has been said above, it would seem that they participate in both the positive and the negative aspects of the created world. On the one hand, they were created through and unto Christ; on the other, they have been "reconciled," "exposed," and "subjected" to Christ. Certainly in Eph. 6:12 they represent part of the demonic opposition to the community of believers. The distinctive feature of the NT statements is that the powers represent the tension of the created order: on the one side the carnal aspect of the fallen creation, and on the other the created structure as it comes from God through Christ (see *TDNT,* II, 573). Even though they are fallen, the powers can represent both the positive and negative sides of the creation, for God can use even the fallenness of creation for a positive end (cf. Kakes, pp. 147-150). Certainly the positive contributions of the powers in the creation order, e.g., their maintenance of law and order through fallen institutions, must not be overlooked (see Berkhof, pp. 45-54). On the other hand, when these powers assume a role beyond that intended by God, these become a threat to the well-being of the Church.

This depiction of the powers as both good and evil has been challenged by W. Carr (pp. 45-114), who has argued that in Paul, as in the Jewish sources of these terms, the "principalities" and "powers" are only good "angels" who give homage and worship to Christ the Lord. According to this view Col. 2:14f. should be read not as a victory by Christ over the powers but as a public declaration of Christ's lordship as witnessed to by the worship of His

hosts. It is conceded that Eph. 6:12 does not fit into this interpretation; thus it is argued that this verse is a second-century addition to the text. This challenge must be seriously considered, but it does not seem to fit the data. Eph. 6:12 must be allowed to stand as an authentic part of the text of the Ephesians. In Col. 2:15 *deigmatízō* does not mean simply "publicly parade" but has the more negative connotation of "publicly expose," as both Mt. 1:19 and Asc. Isa. 3:13 suggest. The hostile role of the angels, principalities, and powers in Rom. 8:38 cannot simply be dismissed as a "hyperbolic paradox" (Carr, p. 113) but must be seen as a real threat to the believer — a threat that has been overcome by Christ.

(3) The Church. Though Christ has exposed, triumphed over, and made the principalities and powers subject to Himself (Col. 2:15; 1 Pet. 3:22), the Church must continue to fight against these demonic powers by putting on the whole armor of God (Eph. 6:12f.). Because these powers stand behind threats to faith, they must be resisted in the name of Christ. Yet they cannot decisively affect the relationship between the Church and God, since neither angels, nor principalities, nor powers can separate the believing community from the love of God in Christ Jesus (Rom. 8:38). Furthermore, the Church is called to make known the manifold wisdom of God "to the principalities and powers in the heavenly places" (Eph. 3:10). Although the text does not state exactly how the Church is to fulfil this assignment, the context suggests that this will happen through the deeds of the Church (as itself the reconciled community of Greeks and Jews) and its words (as the proclamation in all creation of this mystery of Christ).

(4) The final consummation. At His first coming, by His death and resurrection Christ has publicly exposed and subjected the principalities and powers to Himself. But their power has not yet been completely destroyed. Christ must reign until every "rule" (*archē*) and "authority" (*exousía*) and "power" (*dýnamis*) has been completely annulled (1 Cor. 15:24). Then the end shall come.

A. J. BANDSTRA

PRINCIPLES. In He. 5:12 "the first principles of God's word" renders the unusual Greek construction *tá stoicheía tḗs archḗs tôn logíōn toú theoú* (AV "the first principles of the oracles of God"; NEB "the ABC of God's oracles"). In Greek literature *tá stoicheía* has a variety of meanings (*see* ELEMENT I); among these, it can refer to the rudimentary elements of musical or mathematical instruction or, by extension, to the rudiments of any field of knowledge. In He. 5:12 it refers to the elementary teachings of the Christian faith — teachings beyond which, the author laments, the readers have not progressed.

A parallel phrase occurs in 6:1, where the author continues this theme with an exhortation to "leave *ho tḗs archḗs toú Christoú lógos* and go on to maturity." The syntax of the Greek phrase (RSV "the elementary doctrines of Christ") strongly suggests that in 5:12 *tḗs archḗs tôn logíōn toú theoú* functions as a genitive of apposition defining *tá stoicheía* more explicitly as the elementary teachings of divine revelation (*see also* ELEMENTARY DOCTRINE OF CHRIST). A list of these elementary teachings appears in 6:1b-2: "repentance from dead works . . . faith toward God . . . ablutions, the laying on of hands, the resurrection of the dead, and eternal judgment." It is remarkable that none of these doctrines transcends the beliefs and practices of Judaism. This may lend support to the traditional view that the Epistle was addressed to a Jewish-Christian community, which, not fully appreciating the finality of the work of Christ, was tempted to avoid persecution by reverting to Judaism.

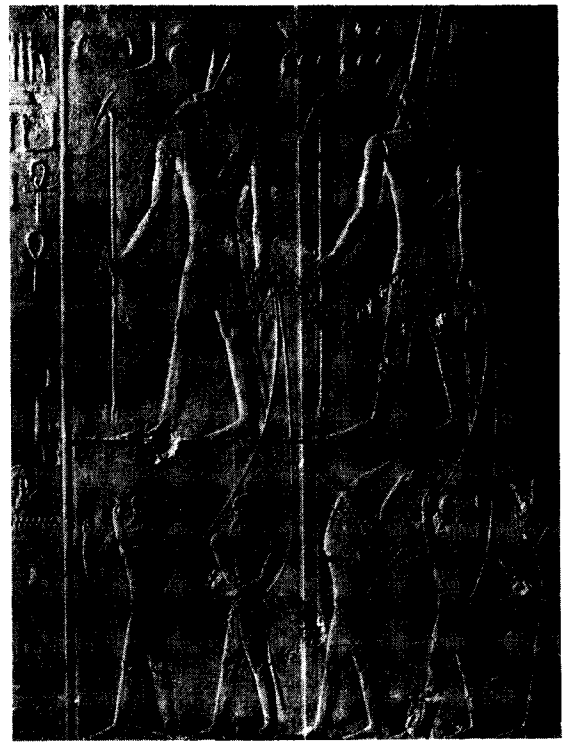
PRINTING. *See* WRITING.

PRISCA pris'kə [Gk. *Priska*], also the diminutive form **PRISCILLA** pri-sil'ə [Gk. *Priskilla*]. A Christian woman who with her husband AQUILA labored alongside Paul at Corinth. They came to Corinth after Claudius had expelled all the Jews from Rome (Acts 18:2). They were Paul's co-workers at Ephesus also, where they ministered effectively, especially to Apollos (Acts 18:18-26). Priscilla is named before her husband in the majority of passages, which may indicate her strength of character and/or her exceptional usefulness in Christian work (cf. Acts 18:26). After the death of Claudius the couple returned to Rome (Rom. 16:3).

B. R. and P. C. PATTEN

PRISON (noun) [Heb. *bêṯ (hak)kele'*–'house of confinement' (1 K. 22:27 par. 2 Ch. 18:26; 2 K. 17:4; 25:27; Isa. 42:7, 22; Jer. 37:4, 15, 18; 52:31), *bêṯ hassōhar*–'house of roundness' (Gen. 39:20-23; 40:3, 5), *masgēr*–'dungeon' (Ps. 142:7 [MT 8]; Isa. 24:22), *mišmār*–'jail, prison' (Gen. 42:17, 19), *bêṯ hā'ᵃsîrîm*–'house of the prisoners' (Jgs. 16:21, 25), *bêṯ hāsûrîm*–'house of the prisoners' (Eccl. 4:14), *bêṯ happᵉquddâ*–'house of custody' (Jer. 52:11), *bêṯ hammahpeḵeṯ*–'house of the stocks' (2 Ch. 16:10), *pᵉqaḥ-qôḳ(a)ḥ*–'opening (of eyes)' ("opening of the prison," Isa. 61:1); Gk. *phylakḗ*–'watch, guard' (Mt. 5:25; 25:36; Lk. 23:19; etc.), *desmōtḗrion*–'prison, jail' (Mt. 11:2; Acts 5:21, 23; 16:26), *tḗrēsis*–'custody, imprisonment,' 'prison' (Acts 5:18), *désmios*–'prisoner' (He. 13:3)]; AV also WARD, BONDS; NEB GAOL, DUNGEONS, ROUND TOWER, "release" (Isa. 61:1), etc.; (vb.) [Heb. niphal of *'āsar*–'be bound,' 'be imprisoned' (Gen. 42:16); Gk. *déō*–'bind, tie' (Mt. 15:7; Acts 24:27; Col. 4:3), *syndéō*–'bind together' (He. 13:3)]; AV also BOND, BOUND; NEB also CUSTODY, etc.; **PRISONER** (noun) [Heb. *'āsîr*–'bondman, prisoner' (Gen. 39:20, 22; Job 3:18; Ps. 68:6 [MT 7]; 79:11; 102:20 [MT 21]; 107:10; Isa. 14:17; Lam. 3:34; Zec. 9:12), *'āssîr*–'prisoner' (Isa. 10:4; 24:22; 42:7); Gk. *désmios*–'prisoner' (Acts 16:25; Philem. 1, 9; Eph. 4:1; etc.), *desmṓtēs*–'prisoner' (Acts 27:1, 42), *synaichmálōtos*–'fellow prisoner' (Rom. 16:7; Col. 4:10; Philem. 23)]; AV also IN BONDS, etc.; NEB also IN CUSTODY, COMRADES IN CAPTIVITY, etc.; (vb.) [Heb. part. of *'āsar*–'tie, bind,' 'imprison' (Ps. 146:7; Isa. 49:9), *lāqaḥ*–'take' ("took . . . prisoner," 2 K. 24:12)]; AV also TAKE; NEB also TAKE PRISONER; **PRISON GARMENTS** [Heb. *biḡḏê kil'ô*–'garments of imprisonment' (2 K. 25:29 par. Jer. 52:33)]; NEB PRISON CLOTHES; **DUNGEON** [Heb. *bôr*–'pit,' 'cistern, well' (Gen. 40:15; 41:14), *bêṯ habbôr*–'house of the pit' (Ex. 12:29; Jer. 37:16), *masgēr*–'dungeon' (Isa. 42:7)]; AV also PRISON; NEB also PRISON, etc.; **IMPRISON** [Heb. *kālā'*–'shut up,' 'restrain,' 'withhold' (Jer. 32:3), hiphil of

sāgar–'shut, close' (Job 11:10), *nāṯan bêṯ hā'ēsûr*–'put (in) a house of the bond' ("imprisoned," Jer. 37:15); Gk. *déō*–'bind, tie' (Acts 21:13), *phylakízō*–'imprison' (Acts 22:19)]; AV also SHUT UP, PUT IN PRISON, BOUND; NEB also BOUND, etc.; **IMPRISONMENT** [Aram. *'ᵉsûr*–'bond, fetter' (Ezr. 7:26); Gk. *desmós*–'bond, fetter' (Acts 20:23; 23:29; 26:31; Phil. 1:7, 13f., 17; Philem. 10, 13), *phylakḗ*–'watch, guard' (2 Cor. 6:5; 11:23; He. 11:36)]; AV also BOND; NEB also IMPRISONED, PRISON, etc.; **JAILER** [Gk. *basanistḗs*–'torturer,' 'jailer' (Mt. 18:34)]; AV TORMENTERS; NEB "to torture"; [*desmophýlax*–'keeper of the prison' (Acts 16:23, 27, 36)]; AV also KEEPER OF THE PRISON.



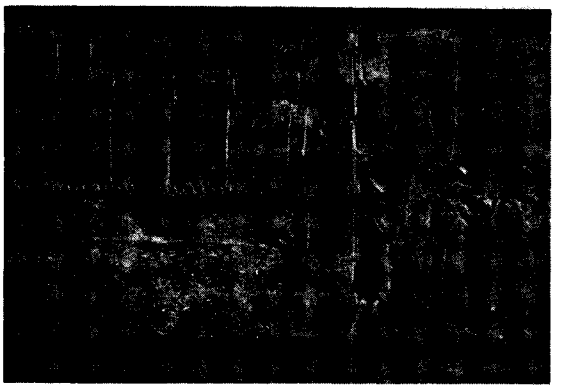
I. In the OT.–Various places are mentioned in the OT as used for confining prisoners. Only in Ezr. 7:26 does imprisonment function as a legal form of punishment, and in this case it is merely authorized by the Persian king Artaxerxes. Imprisonment functioned as a means to retain a person until the time of trial, sentencing, or execution of the sentence.

The two most common terms for prison are *bêṯ kele'* and *bêṯ hassōhar*. The latter term in Gen. 39 may refer to a fortified structure, which is suggested both by Heb. *sōhar* and by its LXX translation *ochýrōma* (lit. "stronghold, fortress"). The RSV "dungeon" translates three Hebrew terms. Heb. *bôr* indicates the place of Joseph's confinement (Gen. 40:15; 41:14), which may be synonymous with *bêṯ hassōhar* (Gen. 39:20-23; 40:3, 5). Heb. *bôr*, however, usually refers to a cistern (Gen. 37:24; 38:6; Jer. 38:6-11, 13; Zec. 9:11) rather than a special prison structure. In Jer. 37:16 "dungeon cells" translates Heb. *bêṯ habbôr wᵉhaḥᵃnuyôṯ*, lit. "the house of the pit and the cells." This probably refers to an underground prison that was subdivided into smaller individual cells. Jeremiah feared returning to these cells, thinking that he might ultimately die in them; consequently, he appealed to King Zedekiah for another place of confinement, and the appeal was granted (Jer. 37:16-21). In Isa. 42:7 Heb. *masgēr* (< Heb. *sāgar*, "shut, close"; cf. Isa. 24:22) is a place from which prisoners are released by the Servant of the Lord (v. 1). The NT interprets this passage as fulfilled by Messiah and the eschatological people of God (Mt. 11:5; Lk. 1:79; Acts 26:18).

The common OT terms for "prisoner" in the RSV are Heb. *'āsîr* (< *'āsar*, "tie, bind") and its cognate *'āssîr*. Joseph is called an *'āsîr* (Gen. 39:20, 22), a term often used for captives in a foreign land (Ps. 68:6 [MT 7]; 69:33 [MT 34]; etc.; cf. A. A. Anderson, *Psalms* [*NCBC*, repr. 1981], I, 486). In 2 K. 24:12 Heb. *lāqaḥ* has the sense of "carry off" or "take" as a prisoner, which is a sense found elsewhere (e.g., Gen. 14:12; 2 K. 18:32 par. Isa. 36:16; 2 K. 23:34 par. 2 Ch. 36:4).

In the OT several important persons were imprisoned. Among these is Joseph, who was incarcerated by Potiphar for alleged indiscretions with Potiphar's wife (Gen. 39). Providentially, Joseph received compassionate treatment from the keeper (Heb. *śar*, "chief") of the prison (vv. 21-23). King Zedekiah imprisoned Jeremiah for prophetic utterances that predicted Zedekiah's defeat and exile (Jer. 32:2-5). Suspected of treason, Jeremiah was placed in prison in the house of Jonathan the secretary (37:15; cf. vv. 4, 18). He was lowered into a deep, muddy cistern (38:6). Removed from there, he was allowed to stay near the palace in the "court of the guard" (38:28).

Other persons who were imprisoned include: Samson, who, bound in chains, performed menial labor in prison (Jgs. 16:21, 25); Micaiah the prophet, whom King Ahab put in prison with only bread and water (1 K. 22:27; 2 Ch. 18:26); King Hoshea, who was incarcerated by Shalmaneser king of Assyria after Hoshea attempted to form an alliance with So king of Egypt (2 K. 17:4); Ḥanani the seer, who was confined after he confronted King Asa (2 Ch. 16:1-10); King Jehoiakin of Judah, imprisoned by Nebuchadrezzar (2 K. 24:15) but later released by Evil-merodach (2 K. 25:27-30 par. Jer. 52:31-34); King Zedekiah, who, after an attempt to escape, was captured by the Chaldeans, sentenced by Nebuchadrezzar, and confined to prison for the rest of his life (2 K. 25:2-7; Jer. 39:1-7; 52:3-11).



Prisoners, including Libyans and Syrians, on an Egyptian relief from the temple of Sahu-Re at Abusir (*ca.* 2500 B.C.). The second and third men have ropes tied around their elbows, and all are attached by ropes to gods, who present them to Pharaoh (Staatliche Museen zu Berlin, DDR)

Several figurative expressions related to prison occur in Job. In Job. 3:18 "prisoners" are probably prisoners of war who have been enslaved (cf. vv. 18b, 19); but like all the dead in Sheol, they have found rest. The term for "imprison" in Job 11:10 probably means "arrest" (*CHAL*, p. 253). According to Zophar, this act of imprisonment precedes the call to judgment; neither imprisonment nor judgment may be hindered by man if initiated by God.

In Ps. 142:7 the writer appeals to Yahweh for release from a "dungeon," which refers either metaphorically to the distress of a persecuted person or literally to actual confinement (A. A. Anderson, *Psalms* [*NCBC*, repr. 1981], II, 922, 924f.). In Ps. 79:11 "prisoners" refers either to exiles in general or to prisoners of war (Anderson, p. 580; cf. Ps. 102:20; 107:10).

Isaiah describes the cosmic, eschatological judgment of the Lord as a day when the judged "will be gathered together as prisoners in a pit; they will be shut up in a prison" (Isa. 24:22). Isa. 42:7 describes the release of "prisoners" from the "dungeon" or "prison," which refers to release either from spiritual captivity or from the

Relief from Nimrûd showing captives, with their possessions in bags over their shoulders, from the town Astartu (biblical Ashtaroth?), which the Assyrians under Tiglath-pileser III had captured (Trustees of the British Museum)

Babylonian captivity (cf. 49:9; Ps. 146:7). Both the form and the meaning of the unique expression Heb. *p^{e}qaḥ-qô(a)ḥ* (< *pāqaḥ*, "open") in Isa. 61:1 present difficulties. This term's form may be due to dittography (GKC, §84^{b}n), and the term may represent a figurative expression for the opening of a prisoner's eyes after release from a dark prison.

II. In the NT.–During the period of Roman occupation in Palestine the public prison (Lat. *carcer, publica vincula*) functioned only for short durations of incarceration. It served as a place to detain both suspects awaiting trial and convicted criminals awaiting sentencing and punishment. Imprisonment itself was not considered a form of punishment under the Roman legal system (cf. *Oxford Classical Dictionary* [2nd ed. 1970], p. 879).

"Prison" most frequently renders Gk. *phylakḗ*. The Greek term may refer to the action of guarding, the person who guards, a period of time for guarding (i.e., guard duty), or the place of guarding (the primary NT use). Also translated as "prison" are Gk. *desmōtḗrion* and *tḗrēsis*. The former refers to a place of confinement, such as the places used for John the Baptist (Mt. 11:2), the apostles (Acts 5:21, 23), and Paul and Silas (16:26). The latter term (which is synonymous with *desmōtḗrion* in Acts 5:21, 23) occurs in Acts 5:18 in the phrase *en tḗrḗsei dēmosía*, which the RSV and AV render "in the common prison" (NEB "in official custody"). Gk. *dēmosía* may be either an adverb or an adjective; consequently, the apostles were either put in prison publicly or they were put into a public prison (i.e., a prison belonging to the government). In Col. 4:3 the AV "in bonds" for Gk. *déō* is perhaps more distinct and preferable to the RSV "in prison," since Paul in Col. 4:18 leaves no doubt that he is actually in chains (R. P. Martin, *Colossians and Philemon* [*NCBC*, repr. 1981], p. 126). The part. of *syndéō* in He. 13:3, rendered "in prison with them," implies a sharing in the sufferings of those in prison even if only by "exercising imaginative sympathy" (F. F. Bruce, *Epistle to the Hebrews* [*NICNT*, 1964], p. 392).

"Prisoner" most often translates Gk. *désmios*, which refers to persons either bound by chains or confined by walls. It applies to prisoners in general (e.g., Acts 16:25, 27; He. 10:34), to Paul in particular (Acts 23:18; 25:14, 27; 28:17), and also to Paul when he designates himself a prisoner of Jesus Christ (Eph. 3:1; Philem. 1, 9; cf. 2 Tim. 1:8; also M. Barth, *Ephesians* [*AB*, 1974], I, 359-362).

"Fellow prisoner" (Gk. *synaichmálōtos*), a term derived from military imagery, may at times reflect a nonliteral meaning (*TDNT*, I, 196f.); Philem. 23, however, in the light of Philem. 1, 9, and 10, probably refers to actual confinement. Thus Epaphras would have shared in Paul's prison experience (cf. Col. 4:12), as did Aristarchus (4:10). Andronicus and Junias are also referred to as Paul's fellow prisoners (Rom. 16:7), but this does not necessitate their being prisoners with Paul at the same time and place (C. E. B. Cranfield, *Romans*, II [*ICC*, 1979], 788f.).

Though the NT mentions groups who were imprisoned (e.g., the apostles in Acts 5:19, 22, 25), certain individuals appear to be more significant. Included here are John the Baptist, Peter, and Paul.

According to Mk. 6:17f. John the Baptist was imprisoned on account of his accusations regarding Herod's unlawful marriage to Herodias. Josephus suggests that John's imprisonment at Machaerus was also due to Herod's fear of John's political activism and its possible repercussions (*Ant.* xviii.5.2 [116-19]).

Acts 4:2f. records how the Sadducees, annoyed at the apostles' teachings, arrested and confined Peter and John (cf. 5:18). Acts 12:1-5 relates the events of Herod's violence toward the Church and subsequent imprisonment of Peter. Significantly, Acts 5:19-26 and 12:6-11 also describe the miraculous release of the apostles and Peter from prison.

In the NT Paul is probably the most renowned figure who experienced incarceration. As a servant of God, Paul endured, among other things, numerous imprisonments (2 Cor. 6:4f.; 11:23-28). The book of Acts records at least three, while early tradition attests to as many as seven confinements (1 Clem. 5:6). In Philippi both Paul and Silas were imprisoned under the care of a jailer (Gk. *desmophýlax*, Acts 16:23, 27, 36; cf. LXX Gen. 39:21; T. Jos. 2:3; *Ant.* ii.5.1 [61]) who subsequently converted to the faith (Acts 16:30-34). To avoid a Jewish ambush, Paul was escorted by a Roman tribune to Caesarea, where he was confined while awaiting his appearance before Felix the procurator of Judea (23:12-35). But in order to win favor with the Jews, Felix left Paul in prison (24:27). Later Paul's appeal to Caesar before Festus destined him for Rome (25:12). After arriving at Rome Paul was guarded by a soldier (28:16) and was bound by a light chain (v. 20; cf. *SPT*, p. 349). He remained in this condition for two years, but enjoyed relative freedom (v. 30). Paul's own prison experiences are ironic in view of his former activities as Saul, "persecutor of the church" (Phil. 3:6; cf. Acts 8:3; 21:1-21). G. L. KNAPP

PRISON, THE SPIRITS IN [Gk. *tá en phylakḗ pneúmata*]; NEB "the imprisoned spirits." Those to whom Christ preached after His death (1 Pet. 3:19).

Scholars consider 1 Pet. 3:18-22 either a traditional hymn (e.g., Windisch, p. 70; R. P. Martin, *NT Foundations*, II [1978], 260f., 264), a creedal summary (Martin, p. 274), or kerygmatic formulas (H. Koester, *Intro. to the NT* [Eng. tr. 1982], II, 294). These proposals are agreed, however, in emphasizing the redemptive work of Christ. In this context 1 Pet. 3:19 records Christ's proclamation to the spirits.

According to L. Goppelt (p. 246) the understanding of this difficult passage depends on the answers to two questions: (1) what is the referent of *en hṓ* in v.19, and (2) who are the spirits in prison? (See the comms. for questions on the time, place, and content of Christ's preachings; cf. also *TDNT*, III, 707f.)

Several options exist for clarifying the antecedent of *en hṓ*. Reicke suggested that *en hṓ* be understood as a temporal conjunction translated "on which occasion" and

identified that occasion as the death and resurrection of Christ mentioned in v.18 (cf. Reicke's comm., p. 138, n. 37; cf. also his *Disobedient Spirits and Christian Baptism* [1946], pp. 108-115). Selwyn took *en hō* as "in which state" or "in which circumstance," the "state" being the process of dying and being made alive in the spirit (p. 197). W. J. Dalton suggested that *en hō* means "in this sphere" or "under the influence" (i.e., of the Spirit; cf. *Christ's Proclamation to the Spirits* [*Analecta Biblica*, 23, 1965], pp. 137-143; cf. also Kelly, pp. 151f.). Thus the options pertain either to Christ's mode of existence when he preached or to the circumstance or occasion of His preaching.

Regarding the second question scholars generally identify the spirits as either deceased human beings or supernatural beings. Some find support for the former alternative in the NT (He. 12:23), the Pseudepigrapha (e.g., 1 En. 22:3f., 9; 41:8), the Apostolic Fathers (Shep. Herm. Vis. 1:1:8; Sim. 9:28:7), and patristic writers (cf. Kelly, p. 153). Elsewhere in the NT, however, when Gk. *pneúmata* occurs alone and unqualified, it never refers to human beings (cf. Goppelt, p. 247). Thus He. 12:23 affords little support for this view, since in this verse *pneúmata* is qualified and has an unequivocal human reference. Also, 1 Pet. 3:20 uses Gk. *psychḗ*, not *pneúma*, for human beings. The latter view finds extensive support in both the NT (e.g., Mk. 1:23, 26f.; 3:11; 5:2, 8; etc.) and intertestamental literature (e.g., Tob. 6:6; 2 Macc. 3:24; Jub. 10; 15:31; 1 En. 14:8; 19:1; 21:10; T. Naph. 3:3; T. Dan. 1:7; 5:5f.; etc.). Though often qualified by "evil" or "unclean," these "spirits" are nevertheless supernatural beings. The latter view appears to be more probable.

As an alternative, Reicke, following Windisch, identified the *pneúmata* as the beings mentioned in Gen. 6:1-4 but added to them the persons who perished in the flood, whom he identified as "the descendants of the fallen angels" (comm., p. 109; cf. Bigg, p. 162).

PRIVY priv'ē; **PRIVILY.** Obsolete terms used by the AV. The RSV equivalent is sometimes "secretly" (Ps. 101:5; Mt. 2:7; Acts 16:37; 2 Pet. 2:1), "stealthily" (2 S. 24:4), or "quietly" (Mt. 1:19). In some texts the RSV translation is quite different from the AV's. In Ps. 11:2 (MT 3) the RSV "in the dark" is more literal. In Jgs. 9:31 the RSV emends Heb. *tormâ* to *'ᵃrûmâ*, "Arumah" (cf. v. 41); but the AV (cf. NEB "he resorted to a ruse") is perhaps correct in understanding *tormâ* as referring to a secret action (an interpretation supported by Tg., LXX B, and Vulg.). According to S. Gevirtz (*JNES*, 17 [1958], 59f.) *tormâ* could be a *qutlat* form from *trm*, "remove, set apart" (cf. Heb. *tarmît*, "deceit"), hence "secret." He appealed to Akk. *turmum*, "treachery," for support (but cf. G. R. Driver, *Annual of the Leeds Oriental Society*, 4 [1962/63], 15). In Ezk. 21:14 (MT 19) the AV "which entereth their privy chamber" translates Heb. *haḥōḏereṯ*, the only OT occurrence of the verb *ḥdr*. The RSV relies on the established sense of the verb *ḥdr* in rabbinical Hebrew and Aramaic, "encircle." In Dt. 23:1 the AV translates Heb. *šōp̄kâ*, "penis," by "privy member" (RSV "male member"). G. A. L.

PRIZE. The translation of three Hebrew terms and one Greek term, with a variety of meanings.

(1) "Prize highly" in Prov. 4:8 (AV "exalt"; NEB "cherish") probably translates a form of Heb. *sālal*, "lift up" (cf. BDB), but the meaning of the unusual term is uncertain, as indicated by the RSV footnote. The idea that the form (*salsᵉlehā*) is from another root meaning "tendril" ("branch" in Jer. 6:9), here meaning "that which twines" and by extension "embrace," has some value but is not convincing (W. McKane, *Proverbs* [*OTL*, 1970], p. 306).

(2) "Prized belongings" in Jer. 20:5 (AV "precious things"; NEB "riches") translates Heb. *yᵉqār* (lit. "preciousness" < *yāqar*, "be precious").

(3) "Prize of war" in Jer. 21:9; 38:2; 39:18; 45:5 (AV "prey"; NEB "nothing more") translates Heb. *šālāl*, "booty," "spoil" (*see* SPOIL). The meaning in all four passages is that the persons addressed could expect no victors' spoil; life itself would be all they could keep (see NEB), and that only by obedient acceptance of God's mercy.

(4) "Prize" in 1 Cor. 9:24; Phil. 3:14 represents Gk. *brabeíon*, the reward received by a victorious athlete. The Greek term refers to that which is given by the athletic official (*brabeús*), so is related to *brabeúō*, "rule," "control," in Col. 3:15 and *katabrabeúō*, "decide against," "disqualify," in 2:18. The use of athletic terms would have been readily understood, for winners of the Olympic and other games became famous. According to 1 Cor. 9:24, however, even their great fame was inconsequential in comparison with what the Christian had to gain (*see also* WREATH). The emphasis in this passage is on striving or self-discipline, running in such a way as to receive the prize. (The mention of the single victor is not an appropriate prooftext for limited atonement, and the metaphor as a whole should not be taken as support for salvation by works.)

In Phil. 3:14 the striving for the prize (or the goal that results in the prize) is combined with the idea of leaving what is behind and pressing onward (Gk. *skopós*, "goal," is what is looked at or for). The "upward call" is probably to be understood as the divine calling that leads to the prize, not as an identification of the prize. E. W. S.

PROCESSION [Heb. *tahᵃluḵōṯ*] ("went in procession," Neh. 12:31); AV WENT; [*hᵃlîḵâ*] (Ps. 68:24 [MT 25]); AV GOINGS; [*dāḏâ*] ("led in procession," Ps. 42:4 [MT 5]); AV "went"; NEB "the great"; [*ḥāg*] ("festal procession," Ps. 118:27); AV SACRIFICE; NEB ORDERED LINE; [*nāhag*–'lead,' 'conduct'] ("led in procession," Isa. 60:11); AV BROUGHT; NEB "under escort."

The RSV interprets Heb. *tahᵃluḵōṯ*, a term that occurs only in Neh. 12:31, as referring to a ritual procession of thanksgiving. The formal organization (vv. 32-36; 40-42) and the direction taken by the two groups of people (vv. 31, 38f.) tend to bear out that conclusion. Some, e.g., *BH* and *BHS*, have suggested that this term is a corruption of *hā'aḥaṯ hôleḵeṯ*, "one went" (cf. v. 38). Ps. 68:24f. provides interesting details about such ceremonial processions entering the sanctuary. The AV and RSV interpret *'eddaddēm* in Ps. 42:4 to be a form of the verb *dāḏâ*, literally "lead slowly," as in a procession. The NEB emends to *'addirîm*, "people of rank" (cf. the comms.).

Psalm 118:27 is problematic. Is the *ḥag* to be bound with "branches" or with "cords"? Either is a possible meaning of *ʿᵃḇōṯîm*. Is the *ḥag* itself a festal procession, or the sacrificial animal bound to the altar? Taking his cue from the Mish. *Sukkah* iv.5, Mowinckel understood the Psalm to relate to the Feast of Tabernacles, so that the *ḥag* is a procession wending its way through the gates of righteousness (vv. 19f.) and encircling the altar in a festal dance (*Psalms in Israel's Worship* [Eng. tr. 1962] I, 120, 181). Cf. the RSV.

The RSV and NEB renderings of Isa. 60:11 reflect the

MT *nᵉhûgîm*; the kings are led in procession. But are they captives or willing servants of Israel? *BH* and *BHS* suggest an emendation to an active participle *nôhᵃgîm*, so that the verse reads "with their kings leading them." Cf. Rev. 21:24-27. G. WYPER

PROCHORUS prok'ə-rəs [Gk. *Prochoros*]. One of the Seven chosen by the Jerusalem community to supervise the daily distribution to the poor (Acts 6:5). The name is Greek, indicating that he was a Hellenistic Jew. According to tradition he was John the Evangelist's amanuensis, became bishop of Nicomedia, and died a martyr at Antioch. The fifth-century apocryphal Acts of John (not to be confused with the earlier Gnostic work of that name by Lucius) was written under his name.

See SEVEN, THE.

PROCLAIM; (MAKE) PROCLAMATION (vbs.) [Heb. *qārā'*–'call' (Ex. 32:5; 34:5f.; Dt. 15:2; Isa. 61:1f.; etc.), hiphil of *šāmaʿ*–'cause to hear' (1 K. 15:22; Isa. 43:12; Jer. 46:14; Nah. 1:15 [MT 2:11]; etc.), niphal of *šāmaʿ*–'be heard' (Est. 1:20; 2:8), hiphil of *nāgaḏ*–'make known, report, tell' (Ps. 19:1 [MT 2]; 71:17f.; 97:6; Isa. 48:20; etc.), *'āmar*–'say' (2 K. 9:13; Ps. 145:6), part. of *gālâ*–'uncover, reveal' (Est. 3:14; 8:13), hiphil of *mālaḵ*–'make or install as king' (2 K. 11:12 par. 2 Ch. 23:11), piel of *bāśar*–'bring news' (Isa. 60:6), hiphil of *zāḵar*–'mention,' 'make known' (Isa. 12:4), hiphil of *zāʿaq*–'have proclamation made' (Jonah 3:7), hiphil of *yāḏaʿ*–'make known' (Ps. 89:1 [MT 2]), piel of *qāwâ*–'collect' (Ps. 52:9 [MT 11]); Aram. haphel of *kᵉraz* (Dnl. 5:29), peal part. of *qᵉrā'*–'shout' (Dnl. 3:4); Gk. *katangéllō*–'proclaim' (Acts 3:24; Rom. 1:8; 1 Cor. 11:26; Phil. 1:17f.; etc.), *kērýssō*–'preach, proclaim' (Mt. 10:27; Mk. 5:20 par. Lk. 8:39; Acts 9:20; Rev. 5:2; etc.), *apangéllō* (Mt. 12:18; He. 2:12; 1 Jn. 1:2f.), *diangéllō* (Lk. 9:60; Rom. 9:17), *krázō*–'call, call out, cry' (Jn. 7:28, 37), *anangéllō*–'proclaim,' 'teach' (1 Jn. 1:15), *apodeíknymi* (2 Thess. 2:4), *euangelízō*–'bring or announce good news' (Rev. 14:6), *gínomai*–'come to be, become' (Acts 10:37), *gnōrízō*–'make known, reveal' (Eph. 6:19), *plērophoréō*–'fill (completely), fulfil' ("proclaim . . . fully," 2 Tim. 4:17)]; AV also FORETELL, PUBLISH, PREACH, SPEAK, DECLARE, CRY, etc.; NEB also PREDICT, DECLARE, ANNOUNCE, SHOUT, "spread the news" (Mk. 5:20), etc.; (nouns) [Heb. *qôl*–'voice' (2 Ch. 24:9), *tᵉrûʿâ*–'blowing alarm' ("proclaimed with blast of trumpets," Lev. 23:24)]; AV also "blowing of trumpets" (Lev. 23:24); NEB also ACCLAMATION (Lev. 23:24). Occasionally the RSV has "proclaim" (Ex. 36:6; Neh. 8:15) or "make (a) proclamation" (2 Ch. 30:5; 36:22; Ezr. 1:1; 10:7) for the construction of the hiphil of *ʿāḇar* with *qôl*, which together literally means "cause a voice to pass over." The RSV NT has "proclamation" only in a variant ending of Mark's Gospel.

I. In the OT.–The term most frequently translated "proclaim" is Heb. *qārā'*. Various items that are "proclaimed" include fasts (1 K. 21:9, 12; 2 Ch. 20:3; Ezr. 8:21; Jer. 36:9; Jonah 3:5), holy convocations (Lev. 23:2, 4, 21, 24, 37; cf. 2 K. 10:20), liberty (Lev. 25:10; Jer. 34:8, 15, 17; Isa. 61:1), the year of the Lord's favor (Isa. 61:2), and the name of the Lord (Ex. 33:19; 34:5f.; Dt. 32:3). When convocations (Heb. *miqrā'*, "convocation, sacred assembly," <*qārā'*) are "proclaimed" the sense of *qārā'* is "summon." When the name of the Lord is proclaimed (e.g., Ex. 33:19 and Dt. 32:3) a recitation of God's attributes and/or works follows. And in Ex. 34:5-7 it is the Lord Himself who "proclaims" His attributes (cf. B. Childs, *Book of Exodus* [*OTL*, 1974], p. 603). "Proclaim" also functions as a technical term for prophetic preaching in numerous passages (e.g., 2 K. 23:16; Jer. 2:2; 3:12; 7:2; 11:6; 19:2; Jonah 3:2; cf. *THAT*, II, 669). "Proclaim" may also have the sense of "announce," e.g., a call to battle (Joel 3:9 [MT 4:9]), or a herald who "proclaims" the approach of the royal chariot (Est. 6:9, 11).

Where the prophets function as divine harbingers in the books of Isaiah (41:26; 43:12; 62:11) and Jeremiah (4:5, 15; 5:20; 23:22; 31:7; 46:14; 50:2) the hiphil of *šāmaʿ* is associated with solemn prophetic preaching (*THAT*, II, 979; cf. also Am. 3:9; Nah. 1:15 [MT 2:11]). Est. 1:20 and 2:8 use the niphal of *šāmaʿ* for the public announcement of a royal edict.

The theological significance of the hiphil of *nāgaḏ* is evidenced in contexts of divine praise and worship. For those who worship the Lord the focus of praise centers upon, e.g., the Lord's creative work (Ps. 19:1 [MT 2]), redemptive work (22:31 [MT 32]; cf. Isa. 48:20), and other wonderful works and deeds that He performs on behalf of His people (Ps. 40:5 [MT 6]; cf. 9:11 [MT 12]; 71:17f.; also *THAT*, II, 36). Also Ps. 89:1 (MT 2) refers to the public praising (hiphil of *yāḏaʿ*, lit. "cause to make known"; cf. Ps. 105:1; 145:12; Isa. 12:4) of God for His faithfulness.

In 2 K. 11:12 (par. 2 Ch. 23:11) the RSV "proclaimed him king" suggests a verbal declaration; this nuance, however, is not inherent in the hiphil of *mālaḵ* (lit. "make king, cause to reign" <*mālaḵ*, "be king, reign"). Perhaps the AV rendering "make him king," which is the RSV translation elsewhere for the hiphil of *mālaḵ*, is more accurate.

Several other Hebrew terms also merit brief mention. According to Isa. 60:6 heathen nations will come to Zion to publish the praise of the Lord (cf. *TDOT*, II, 313-16). In Isa. 12:4 the redeemed community is exhorted to "proclaim" (lit. "cause to remember," from the hiphil of *zāḵar*) to others the person of the exalted Lord. Ps. 52:9 (MT 11) also refers to praising God's name (cf. M. Dahood, *Psalms I* [*AB*, repr. 1973], 121f., for the semantic relationships among Heb. *qôl*, "voice," *qāhal*, "to gather," and *qārā'*, "to call").

Distressful crying, which perhaps was intended to evoke "communal lament" (*TDOT*, IV, 120), appears to be the import of the hiphil of Heb. *zāʿaq* (<*zaʿaq*, "cry, cry out") in Jonah 3:7.

II. In the NT.–A number of Greek verbs rendered "proclaim" are compound forms of Gk. *angéllō*, which according to classical definition means "bear a message," "announce," or "report" (LSJ, p. 7). Although Gk. *angéllō* rarely occurs in the NT (only Jn. 20:28; 4:51 var.), compound verbs including Gk. *anangéllō*, *apangéllō*, *diangéllō*, *exangéllō*, *katangéllō*, and *parangéllō* occur more frequently. In classical usage several of these terms "often indicate the elevated, ceremonious style of proclamation" (*DNTT*, III, 45). In the NT this word-group usually refers to "proclamation in a special, technical sense: the making known of God's activity, his will to save" (*ibid.*, p. 46; cf. R. Brown, *Epistles of John* [*AB*, 1982], pp. 167f.).

"Proclaim" translates Gk. *katangéllō* (only in Acts and Paul) seventeen times in the NT. This term reflects the "language of mission" (*TDNT*, I, 71f.) and relates to the redemptive purposes of God. Individuals who announce the salvific message include Peter (Acts 3:24), John (4:2), Barnabas (13:5), and Paul ("Saul" in 13:5; cf. 13:38; Rom. 1:8; 1 Cor. 9:14; Phil. 1:17f.; etc.). The content of the proclamation varies, but includes the fulfillment of OT expectations in Jesus' ministry (Acts 3:24; 26:23), the resurrection of Jesus Christ (4:2; cf. v. 33), the Word of God (13:5; 17:13; cf. 15:36), the forgiveness of sins (13:38; cf. 10:43), the way of salvation (16:17), Jesus as Messiah

(17:3), the mystery of God (1 Cor. 2:1), the gospel (1 Cor. 9:14), the Lord's death (11:26), and Christ (Phil. 1:17; Col. 1:28). When Paul proclaimed the "mystery of God" (1 Cor. 2:1; some MSS have Gk. *martýrion*, "witness," a reading defended by H. Conzelmann, *1 Corinthians* [Eng. tr., *Hermeneia*, 1975], p. 53 n. 6; but cf. *TDNT*, IV, 819 n. 141) he announced the secret of God that was unknown to the world until Christ appeared, which was "the revelation of the justification of people by the crucifixion of Christ and the conquest of death by his ressurrection" (W. F. Orr and J. A. Walther, *1 Corinthians* [*AB*, 1976], p. 162). In 1 Cor. 11:26 Paul states that the Lord's death is proclaimed each time the Lord's Supper is celebrated. This probably refers to a verbal recapitulation of Christ's Passion similar to that found in the Passion narratives of the Gospels and patterned after the rehearsal of the Exodus in the Jewish Passover Haggadah (cf. C. K. Barrett, *Comm. on the First Epistle to the Corinthians* [*HNTC*, 1968], p. 270). Gk. *katangéllō* in Phil. 1:17 seems interchangeable with Gk. *kēryssō* in v. 15 (*TDNT*, I, 71), and according to J. -F. Collange the content of "preaching Christ" (v. 15) is His death and resurrection (*Epistle of Saint Paul to the Philippians* [Eng. tr. 1979], p. 56). The proclamation of Christ (Col. 1:28) was not a facile, shallow presentation of salvation, for it was effected by exhortation and instruction concerning Christ, who is "the sum and substance of Paul's message" (P. T. O'Brien, *Colossians, Philemon* [*Word Biblical Comm.*, 1982], p. 87).

The RSV NT renders Gk. *apangéllō* "proclaim" four times. According to Mt. 12:18-21 the actions of Jesus fulfil the prophecies of Isa. 42:1-4. The OT citation follows neither the MT nor the LXX, but is perhaps dependent upon a targumized text or a community understanding of the text that is consonant with "the evangelist's purpose and understanding of the prophecy" (K. Stendahl, *School of St. Matthew* [1954], p. 111; cf. p. 198). The Matthean passage draws attention to the Servant's salvific activity among Gentiles. The OT quotation of Ps. 22:22 (MT 23) used in He. 2:12 expresses Jesus' solidarity with the redeemed people of God (F. F. Bruce, *Hebrews* [*NICNT*, repr. 1977], pp. 45f.). In 1 Jn. 1:2f. the subject of the proclamation is the historical reality of Christ's incarnation, while the purpose of the declaration is to announce the availability of a qualitatively new existence, namely, fellowship with God.

A similar, and perhaps synonymous, term is Gk. *anangéllō*, found in 1 Jn. 1:5, which contains a statement regarding the nature of God, namely, "He is light." The purpose of this "message" (or "command"; < Gk. *angelía*, v. 5) was twofold: to correct heretical beliefs and to encourage ethical behavior.

The Gk. *diangéllō* occurs in Lk. 9:60 within a context dealing with discipleship, a familiar Lukan theme. The Kingdom and its proclamation must occupy a preeminent position in the lives of all true disciples, for the Kingdom is the central theme of Jesus' public proclamation (cf. J. Jeremias, *NT Theology* [Eng. tr. 1971], pp. 96f.). Gk. *diangéllō* also occurs in Rom. 9:17, which illustrates God's sovereign control even with respect of the means by which His redemptive purposes are realized.

In the RSV NT "proclaim" also translates Gk. *kēryssō* ten times. This Greek term and its cognate *kérygma* have been the subject of extensive scholarly discussion in recent decades (*see* PREACH II.B). An examination of related terms in the NT reveals that the main emphasis is not given to the person who proclaims (Gk. *kéryx*, 3 times in the NT), or to the content of the proclamation (Gk. *kérygma*, 9 times in the NT), but to the act or the event of proclamation (Gk. *kēryssō*, 61 times in the NT); this, however, is not to suggest that the act of proclamation is void of content.

The account of the healed Gerasene demoniac records not only the fact of proclamation, but its content, for the healed demoniac proclaimed throughout the Decapolis "how much Jesus had done for him" (Mk. 5:20 par. Lk. 8:39). Mk. 7:36 also relates how witnesses "zealously . . . proclaimed" Jesus' healing of a deaf-mute. Lk. 4:18f. states how Jesus' ministry as an anointed prophet fulfilled the prophecies recorded in Isa. 61:1f. The saying found in Mt. 10:27 exhorts the disciples to the fearless public proclamation of what they have been taught; however, this same saying, as adapted in Lk. 12:3, presents a promise of the public pronouncement of the hypocrisy of false religious leaders. A christological emphasis is apparent in Acts 8:5 when Philip announces the Messiah to the Samaritans, and in 9:20 when Paul announces in a Damascus synagogue that Jesus is the Son of God (cf. 13:33; Rom. 1:4; etc.).

In Jn. 7:28, 37 Gk. *krázō* reflects a specialized nuance of meaning. Bultmann's suggestion that it refers to "inspired speech" (*Gospel of John* [Eng. tr. 1971], p. 75 n. 1) is debatable, however. Equally debatable is C. H. Dodd's notion that John supplied Gk. *krázein* for the customary Gk. *kēryssein*, and with the same sense (*Interpretation of the Fourth Gospel* [repr. 1978], p. 382 n. 1). It is more likely that *krázō* in Johannine use (cf. 1:15; 12:44) indicates a solemn public pronouncement that is spoken despite open unbelief and opposition. It is also possible that John avoids using Gk. *kēryssō* since it does not correspond well with his particular eschatological perspective (cf. *DNTT*, III, 46f.).

The three terms Gk. *euangelízō* (Rev. 14:6), *gínomai* (Acts 10:37; cf. vv. 36, 38), and *gnōrízō* (Eph. 6:19) all refer to the proclamation of the gospel. In Rev. 14:6 an "eternal gospel" is announced (cf. *TDNT*, II, 735). The precise nature of this "gospel" is uncertain, but v. 7 indicates that it is a "a summons to fear, honor, and worship the Creator"(R. H. Mounce, *Book of Revelation* [*NICNT*, 1977], p. 273; cf. n. 19). In Eph. 6:19 Paul requests that he may freely "proclaim the mystery of the gospel, " in which case the "mystery" is the gospel (F. F. Bruce, comm. on Ephesians [*NICNT*, 1984], p. 412 n. 94).

PROCONSUL prō'kon-səl [Gk. *anthýpatos* (Acts 13:7f., 12; 18:12; 19:38)]; AV DEPUTY; NEB also GOVERNOR. A Roman governmental official. The Roman proconsuls were officers invested with consular power over a district outside Rome, e.g., Gaul or Syria, usually for one year. Originally they were retired consuls, but after Augustus the title was given to governors of senatorial provinces whether or not they had been consuls. The proconsul exercised judicial as well as military power in his province, and his authority was absolute, except that he might be held accountable at the expiration of his office. *See also* GOVERNOR; PROVINCES, ROMAN; PAULUS, SERGIUS.

W. A. HEIDEL

PROCURATOR prok'yə-rāt-ər. Probably the office referred to by Gk. *hēgemṓn* in Mt. 27:2, 11, 14f., 21, 27; 28:14; Lk. 20:20; Acts 23:24, 26, 33; 24:1, 10; 26:30, and by participles of the verb *hēgemoneúō* in Lk. 2:2; 3:1.

I. Terminology.—The term procurator, "agent," in ordinary Latin refers to a person, usually a free citizen, who managed the estates and business affairs of a wealthy

Roman. Procurators were not connected with public service until the emperor Augustus began to use men of equestrian status to manage the public finances of his own provinces and his extensive private estates throughout the empire. No distinction was made between ordinary procurators and these *procuratores Augusti*. They acted as private agents and had no official power to enforce their personal authority by judicial process, having to depend upon the tribunal of provincial governors, until the emperor Claudius in A.D. 50 secured for them the power of jurisdiction in disputes arising from their duties.

Augustus also employed equestrians in another role, as *praefecti provinciarum*. These were army officers whom Augustus "placed in charge" (*praefecit*) of difficult or isolated districts within his great military provinces,such as Syria or northern Gaul. They acted at first under the authority of the imperial governors (*legati Augusto*, "legates of Augustus") of their provinces but later became largely independent governors of their regions. When Claudius appointed equestrian governors for the new provinces of Mauretania and Thrace they received the title *procurator pro legato*, "procurator acting as legate." Henceforth *procurator* replaced *praefectus* in all the equestrian provinces except Egypt. So the early governors of western and southern Judea, after it became a Roman province in A.D. 6, were officially entitled *praefecti*. Later writers, however, usually referred to them anachronistically as *procuratores* or the Greek equivalent *epítropoi*, although Josephus sometimes used the correct Greek term *éparchos* (*Ant.* xviii.2.2 [33]).

II. Tenure.–Procurators of all types were men of equestrian standing who had held commissions as staff officers of Roman legions (*tribuni militum*, "army tribunes") and as commanders of provincial regiments (*praefectus cohortis*, "prefect of a cohort") and had also served as local magistrates. A number were men of humbler origin who had been promoted from the legionary centurionate to commissions in the praetorian guard. Hence all were men of mature years with some experience of practical administration. Their annual salaries, which ranged from fifteen to fifty thousand silver denarii according to the grade of their appointment, were remarkably large in comparison with the annual wage of a common soldier, 275 denarii. A procurator's tenure depended upon the emperor's will. Three or four years were normal, but under Tiberius (A.D. 14-37) much longer tenures were frequent.

Selection usually depended upon the recommendation of senior officials, to whom the procurator might continue to feel a political obligation. Able men could secure three or four procuratorships in succession, but lifelong careers were not possible until the number of posts increased, with the creation of ever more specialized functionaries. Only about twenty-five posts existed throughout the empire until the death of Tiberius, and fifty to sixty under Claudius and Nero (54-68). The NT writers mentioned only the equestrian governors of Judea, PILATE, FELIX (Acts 23:24-26; etc.), and FESTUS (24:27; 25:1-12).

III. Functions.–Procuratorial governors held power equivalent to the absolute imperium of a legate or proconsul (*see* PROVINCES, ROMAN). Hence Josephus rightly stated that the first prefect of Judea was given the power of life and death over his provincial subjects (*Ant.* xviii.1.1 [2]; *BJ* ii.8.1 [1]). Unlike the senatorial governors, they were responsible not only for civil administration and defense but also for the financial management of their provinces. Their armed forces were composed not of Roman legions (except in Egypt) but of provincial regiments of five hundred or a thousand men each.

In procuratorial provinces the forms of local self-government that the governor supervised did not differ from those of other regions except in Egypt and Judea. In Egypt instead of municipal autonomy there was a complex bureaucratic system of centralized administration, taken over by Augustus when he annexed Egypt in 30 B.C. In Judea, where city governments were rare, the largely rural townships were grouped for fiscal purposes into administrative districts (toparchies) managed by intermediary officials — zone commanders and village clerks — but were left to manage their internal affairs through traditional councils of elders. The high priest, appointed by the Roman governor, and the Sanhedrin were the local government of Jerusalem and could act as an advisory council on Jewish affairs if the procurator so wished. They exercised traditional jurisdiction in the sphere of the Mosaic law. But it is widely disputed to what extent they were allowed to inflict capital punishment according to Mosaic law, since the universal rule of the Roman empire limited this punishment strictly to the tribunal of the Roman governor. Judaic sources claimed the ancient privilege for the Jewish hierarchy, and probably high priests did exercise the capital power covertly in the absence of the procurators or with their occasional connivance. But the political risk of allowing local officials to eliminate other local leaders or pro-Roman partisans was too great to allow the high priests to usurp this function generally.

IV. Jurisdiction.–The procurator's primary responsibility was to maintain public order; otherwise he supervised rather than managed the government as an executive (*see* PROVINCES, ROMAN). In times of insurrection he restored order by direct action and summary punishment. In peaceful times civil order was maintained through the governor's regular jurisdiction (*cognitio*), which is amply illustrated by the accounts in Acts of Paul's trials before the proconsul of Achaia and before the procurators of Judea (18:12-17; 23:1–26:32). These accounts correspond precisely to what is known of Roman provincial jurisdiction from other sources. (The outlines of the same system can be discerned clearly in the Gospel stories of the trial of Jesus; *see* JESUS CHRIST, ARREST AND TRIAL OF; PILATE.) The governor, seated on his tribunal, heard the prosecution, which was conducted not by Roman officials but by provincial individuals who acted as private accusers (*delatores*). He was assisted by an informal body of advisors (*consilium*), whom he consulted before delivering his decision, though he was not bound to take their advice (Acts 25:12). He was free to propose any form of punishment at his own discretion — death by decapitation, fire, crucifixion, or exposure to wild beasts; a term of hard labor in state mines or quarries; or, for persons of high social rank, exile. If a provincial was also a Roman citizen he had a conditional right, if accused of a capital crime, to demand trial at Rome by the formula "I appeal to Caesar," which Paul eventually used (25:11f., 25). By this means he could secure a trial free from local pressure or prejudice.

A. N. SHERWIN-WHITE

PROFANE [Heb. *ḥālal*] (Ex. 20:25; 31:14; Lev. 18:21; 19:8, 12, 29; etc.); AV also POLLUTE, DEFILE, PROSTITUTE (Lev. 19:29), etc.; NEB also PROSTITUTE, DEFILE, etc.; [*nāḳar*] (Jer. 19:4); AV ESTRANGE; NEB "treat . . . as if it were not mine"; [*tāpaś*–'seize'] (Prov. 30:9); AV "take . . . in vain"; NEB BLACKEN; [*ḥānap*] (Mic. 4:11); AV BE DEFILED; NEB SUFFER OUTRAGE; [Gk. *bebēlóō*] (Mt. 12:5; Acts 24:6); NEB also

BREAK; [*hēgéomai koinón*] (He. 10:29); AV "count . . . an unholy thing." To defile or make common that which is holy.

To violate or ignore any of the laws governing holy things was regarded in Israel as profanation. In this sense "profane" is similar in meaning to "defile" or "pollute." To profane a holy thing is to make it "common" (used here as the opposite of "holy," but not necessarily meaning "ritually unclean"). The biblical references show a concern for avoiding the profaning of altars (Ex. 20:25), of the sabbath (Neh. 13:17f.; Mt. 12:5), of the sanctuary (Ezk. 23:39), of holy things (Ezk. 22:26), of the covenant (Mal. 2:10), of offerings (Mal. 1:12), and of the priests and their families (Lev. 21:4, 9).

The covenant people were commanded to live as a kingdom of priests and a holy nation (Ex. 19:6), a stipulation that required them to be in a unique relationship of holiness in the sight of God (Lev. 11:44). This holiness represented His supreme ethical and moral character as it was to be reflected in individual and communal life alike. Anything alien to divine holiness that was introduced into Israel's national life profaned the covenantal idea of holiness. Levitical law in particular was adamant that nothing should be allowed to pollute the sanctuary or in any other manner profane the divine name (Lev. 21:6, 12, 23; 22:2, 32, etc.).

The concept that God's name could also be profaned by improper use is found in the Decalogue in the admonition regarding taking the sacred name "in vain" (NEB "make wrong use of," Ex. 20:7). The emphasis is upon prohibiting that gross inversion of spiritual values whereby the name of the one and only true God can be used deliberately in an oath to affirm or substantiate what is patently untrue. Whatever dragged down the name, i.e., the essential being of God, to the level of corrupt ancient Near Eastern society profaned that holy name, and brought the danger alike of pollution and its punishment to the community.

For Israel to treat the holy as if it were common was ultimately to profane the holy name of God Himself (Lev. 18:21; 22:32; Isa. 48:11; Ezk. 36:20). The seriousness of such offenses is indicated by the threat of death in Nu. 18:32. Since Israel itself was God's holy people, any sinful act could be regarded as profaning God's name (Prov. 30:9), and God could judge Israel by profaning it, i.e., by treating it as common among the nations (Isa. 43:28; 47:6). Ezekiel proclaimed that God would recompense Judah's idolatrous behavior by allowing wicked foreigners to commit the unmentionable act of profaning His house (Ezk. 7:21-23). The covenant people had themselves profaned God's name and holy temple by indulging in idol worship and immediately afterward presenting themselves at the divine sanctuary to participate in the same sort of gross idolatrous and licentious observances (23:39-43). Because of their utter lack of spiritual discernment, they could expect nothing less than for God Himself to profane His own sanctuary (24:21) and cast out all that was unholy (28:16).

In the NT the concern for the profaning of sacred things was early applied to emerging Christian institutions (e.g., communion in 1 Cor. 11:27, where "profaning" is supplied by the RSV). Jesus taught His disciples the dangers inherent in treating some holy occasion as though it were of no significance by dismissing it casually (Mt. 22:1-7). In the same manner Peter was introduced to some of the new theological concepts of the age of grace by being warned not to regard as common something that God had cleansed (Acts 10:14f.).

B. C. BIRCH R. K. H.

PROFESS. To declare openly; often, specifically, to confess or declare one's faith. "Profess" occurs once in the AV OT as a translation of the hiphil of Heb. *nāgaḏ*, "announce, tell," in Dt. 26:3 (RSV, NEB, "declare"). Both the AV and RSV render "profess" for Gk. *epangéllomai*, "announce, proclaim," in 1 Tim. 2:10; 6:21 (NEB "claim") and for *homologéō*, "declare," "confess faith," in Tit. 1:16 (AV also in Mt. 7:23 and 1 Tim. 6:12; RSV "declare," "make [confession]"); NEB "tell to [their] face," "confess"). In Rom. 1:22, AV, "profess" represents *pháskō*, "assert, claim" (RSV "claim"; NEB "boast"). The AV uses the noun "profession" to translate *homología* in 1 Tim. 6:12; He. 3:1; 4:14; 10:23 (RSV "confession"; NEB "confess faith," "the religion we profess," "confession").

See also CONFESS.

N. J. O.

PROFIT [(noun) Heb. *beṣaʿ* (Gen. 37:26; Ps. 30:9 [MT 10], *marbîṯ*–'increase' (Lev. 25:37), part. of *šāwă*–'be equal, suitable' (Est. 3:8), *ḥayil*–'wealth, property' (Job 20:18), *tᵉḇûʾâ*–'yield, gain' (Prov. 3:14), *môṯār* (Prov. 14:23), hiphil inf. of *yāʿal* (Hab. 2:18); Gk. *óphelos* (Jas. 2:14, 16); (verb) hiphil of Heb. *yāʿal* ("get profit," 1 S. 12:21; Job 21:15; Prov. 10:2; 11:4; Isa. 30:5f.; 44:9; 48:17; Jer. 2:8, 11; 12:13; 16:19; 23:32), *sāḵan*–'be of use' (Job 34:9); Gk. *ōpheléō* (Mt. 16:26 par.)]; AV also GAIN, INCREASE, "substance," etc.; NEB also BENEFIT, GAIN, HELP, etc.; **(BE) PROFITABLE** [Heb. *sāḵan* (Job 22:2), *ṭôḇ*–'good' (Prov. 31:18), hiphil inf. of *yāʿal* (Isa. 44:10); Gk. *ōphélimos* (2 Tim. 3:16; Tit. 3:8), *symphérō* (Acts 20:20)]; AV also GOOD; NEB BENEFIT, "goes well," GOOD, etc.; **UNPROFITABLE** [Heb. *lō' yiskôn* (Job 15:3); Gk. *anōphelḗs* (Tit. 3:9)]. In Ezk. 13:18 the RSV supplies "profit" (cf. AV, NEB).

The Bible refers to profit of various kinds. In Prov. 31:18 economic profit is in view: a good wife works hard and produces profitable merchandise (cf. 14:23). Lev. 25:37 forbids profiting from the poor; rather, the Israelites should follow God's gracious and generous example (v. 38; cf. Job 20:18f.). Some passages warn against the spiritual risks entailed in seeking political and economic profit. In 1 S. 12:20-25 Samuel rebukes the people for wanting a king; he warns them not to "turn aside after vain things which cannot profit or save," but to follow the Lord (cf. also Isa. 30:5f.). Ezekiel denounced false prophetesses for their economic motives (13:18). Twice in Proverbs the clause "righteousness delivers from death" is contrasted with seeking economic gain (10:2; 11:4; see 3:13f., which contrasts the desire for wisdom with the desire for gold; cf. also Jer. 12:13). Jesus stated this idea most pointedly: "What will it profit a man, if he gains the whole world and forfeits his life?" (Mt. 16:26 par.; cf. Job 21:14-16; 34:9).

A number of texts warn against practices that are spiritually unprofitable. Thus idolatry is frequently denounced as being unprofitable (Isa. 44:9f.; Jer. 2:11; 16:19; Hab. 2:18; cf. Job 21:15), as is false prophecy (Jer. 2:8; 23:32). In Tit. 3:9 the author exhorts Titus to avoid various dissensions because they are unprofitable (cf. also 1 Tim. 1:4); apparently the churches on Crete were beset by controversies (see Tit. 1:10-14; cf. Job 15:2f.). On the other hand, spiritual profit could be gained from the Scriptures (2 Tim. 3:16), good deeds (Tit. 3:8; Jas. 2:14-16), and Paul's preaching and teaching (Acts 20:20). Ultimately, of course, God teaches us what is profitable (Isa. 48:17).

Many scholars interpret the psalmist's prayer for deliverance in Ps. 30:9f. (MT 10f.) as a reflection of the OT ignorance of afterlife (see, e.g., KD; A. A. Anderson, *Psalms*, I [*NCBC*, repr. 1981], 244), but such an interpretation demeans the psalmist into one who in his self-interest begs for life. It seems preferable to see the psalmist's motivation as the result of his recent experience of

restoration, i.e., he wants to go on living so he can testify to what the Lord has done (see A. Weiser, *Psalms* [Eng. tr., *OTL*, 1962], pp. 271f.; cf. Calvin *in loc.*).

Several texts in Job discuss whether it is profitable for a person to serve God; indeed, the entire book may be interpreted as a discussion of this issue (Job 1:19-11; 21:14-16; see *CD*, IV/3/1, 387f.; W. Vischer, *Interp.*, 15 [1961], 131-146). Thus in 34:9 Elihu summarizes Job's position: "It profits a man nothing that he should take delight in God" (see the comms. for the difficulties of the translation of this verse). As Job discovers, his faith does not ensure blessing (indeed, as we know from the prologue [Job 1–2], Job's tragedies occur because of his faith), nor does it rule out blessing (42:10-17). The issue of faith transcends such human circumstances — we do serve God for nought.

G. A. L.

PROGNOSTICATORS, MONTHLY. The AV translation of Heb. *môḏî'im* (part. of *yāḏa'*, "know") *leḥ^{o}ḏāšîm* (pl. of *ḥōḏeš*, "new moon") in Isa. 47:13 (RSV "who at the new moons predict"; NEB "who foretell your future month by month"). *See* ASTROLOGY IV.

PROMISE [Heb. *'āmar*–'say,' piel of *dāḇar*–'speak,' niphal of *šāḇa'*–'swear,' etc.; Gk. *epangéllomai, proepangéllomai, epangelía, epángelma, homologéō*–'confess' (Mt. 14:7)]; AV also PROFESS, MESSAGE, etc.; NEB also SWEAR, BE RESOLVED, WORD, etc.

I. General Considerations
II. In the OT
III. In the NT
  A. In Greek Literature
  B. Vocabulary
  C. In the Gospels
  D. In Luke-Acts
  E. In Paul
  F. In Hebrews
  G. In Other NT Writings

I. General Considerations.–The concept of promise is present throughout the canonical Scriptures. Although the OT essentially lacks technical terms for promise, the concept is nonetheless a decisive reality in it, and the NT writers consistently refer to the OT in terms of fulfilled promise (*see* FULFIL). The Scriptures depict God as the One who alone is true and powerful in effecting the fulfillment of promises. The NT points to Jesus Christ as the great fulfillment of God's promise: "For all the promises of God find their Yes in him" (2 Cor. 1:20).

So comprehensive is the theological category of promise that it can be understood fully only in relationship to a rich array of other terms in both Testaments (e.g., covenant, eternal life, faith, grace, hope, inheritance, kingdom, law, life, rest, righteousness, sonship). The very breadth of its meaning has made the concept difficult for biblical scholarship to define. Among the unresolved questions are the relationship of the OT to the NT and the place of Jesus Christ in the OT. Nonetheless, Scripture shows how God's people are to be sustained by His promises. As the word of promise, Scripture calls and recalls God's people to the God who makes and keeps great promises (2 Pet. 1:4).

II. In the OT.–The God of the OT is a God who speaks. He speaks and creation comes into being. He speaks, making covenant with His people and declaring how they may live before Him and prosper. He speaks through His servants the prophets. In all of this God is known and worshiped as the God of promise. Although the OT has no special term for promise, the idea is conveyed by a range of Hebrew terms, including those ordinarily translated by "speak," "speech," "say," "swear," etc. Because God is the faithful one, His words are hope-filled and move toward certain fulfillment.

The OT promises evolve from a number of nodal points. Standing near the beginning of the canonical Scriptures, two moments of promising are critical in the history of salvation: (1) what is known as the *protevangelium* (the promise that the seed of the woman will ultimately be victorious over the seed of the serpent) in Gen. 3:15; and (2) God's promise to Noah that He will never again curse the ground but will sustain the earth with its appointed times and seasons (Gen. 8:21–9:17). The promise of continued providential care provides a framework within which humankind may be sustained in hope as it lives toward the promised salvation.

Of all the OT promises, God's promise to Abraham is preeminent. God swore to Abraham that He would give him a son, that He would give him a land (Canaan), that his posterity would be blessed (Gen. 12:2f.; 13:14-17; 15:8; 17:4-8; 22:17f.; cf. 26:3-5; 28:13-15), and that all the nations of the earth would find blessing in him (Gen. 18:19; 21:1; 22:15-18; 26:1-5; Dt. 1:11; 1 Ch. 16:16). The rite of circumcision was established as a sign of God's promise to Abraham and his posterity (Gen. 17).

God's covenant with Israel at Sinai is the next great center of divine promise. By way of confirming His intent to create a great people out of Abraham, God called Moses to lead His people out of Egyptian bondage to the promised land of Canaan (Gen. 50:22-25; Ex. 3:17; 12:25; 32:13; Nu. 10:29; 14:16f.; Dt. 6:3-23; 9:3-5, 28; 15:6; 19:8; 26:3-18; 29:13; *see* LAND). Leading His people to deliverance, God made covenant with them at Sinai, promising that the people of Israel would be His own favored possession if they would but obey His voice and keep His covenant (Ex. 19:5). God's covenant promise and command at Sinai served as the benchmark for the utterances of God's later messengers, the prophets (Jer. 7:23; Ezk. 16:8; Am. 3:1f.). However disobedient Israel might be, God remained faithful in keeping His promises. His promises were as firm as God Himself.

God continued both to make and to keep promises in His dealings with David, the prototype of the Messiah who would deliver God's people from all their enemies (2 S. 7:12, 16; 23:5; Ps. 89:3f. [MT 4f.]; 132:11). With David God made an everlasting covenant, establishing his throne in perpetuity. Thus God's promises to David carried on the earlier promises to Abraham and also pointed forward to promises that would be given to future generations (1 K. 2:24; 5:12; 8:15-25; 9:5; 2 Ch. 1:9; 6:4-20). The Abrahamic and Davidic promises are connected in Jer. 23:5-8 and Ezk. 37:24-28.

Because God is the holy Promiser and His word is firm, holding fast to His promise is as imperative for Israel as is obedience to His law. Failure to trust in God's promise is one of Israel's cardinal sins (Ps. 106:24; Nu. 14:1-35), for trust in (the promise of) God is the pattern expected of the true servant of God. Ironically, in Matthew's crucifixion narrative, which presents Jesus as the fulfillment of the OT ideal of true righteousness, the accusation spoken against Him is: "He trusts in God" (Mt. 27:43). In the OT, as later in the NT, true fidelity to God is depicted as life lived out in hope in God's promise — despite His apparent absence and the present invisibility of His salvation.

The basic message of the OT is that God makes and keeps promises in spite of the failure and disobedience of His people. Thus, Jer. 31:31-34 promises a "new covenant" in which God will write His word on the heart of His erring people. Anticipating the gift of the Spirit in the NT (cf. esp. Rom. 8:9-13), human responsiveness to God's will is attributed to the efficacy of God's promise rather than to human achievement.

III. In the NT.–The NT writers understand their own time as the time of fulfillment and regularly use the language of "promise" and "fulfillment" to proclaim God's great work in Jesus Christ. The rich variety of emphases in the NT makes it profitable to examine both the specific emphases of individual documents and also the general message of the NT as a whole. Although the explication that follows will focus especially on the technical terms for promise, the concept is far richer than a simple word study of these terms can disclose.

A. In Greek Literature. The concept of promise was familiar enough in Greek literature, but in all stages of this literature it is human beings who make promises to gods, not gods to human beings. Schniewind and Friedrich report that there is only one known example of the promise of a god to a man (*TDNT,* II, 579). Hence the biblical pattern represents a radical departure, a new revelation of God's relation to creation.

B. Vocabulary. The two Greek terms in the NT most frequently represented by "promise" are the verb *epangéllomai* and the noun *epangelía. Epangéllomai* appears fifteen times in the NT. In eleven of these instances it refers to divine promises; interestingly, three of the four examples of human promising have negative connotations: the promise of money to Judas the betrayer (Mk. 14:11), the profession of false teaching (1 Tim. 6:21), and the false freedom promised by false prophets (2 Pet. 2:19). A cognate verb, *proepangéllomai* (lit. "announce beforehand"), is twice rendered "promise" (Rom. 1:2; 2 Cor. 9:5). The noun *epangelía* occurs fifty-two times in the NT (it has no direct OT counterpart and is lacking in the LXX of our canonical OT), primarily in the Pauline corpus and in Hebrews. It may refer either to the words of promise or to the thing promised. The noun *epángelma* is used twice in 2 Peter (1:4; 3:13) as a synonym of *epangelía.*

C. In the Gospels. Although the specific vocabulary of promise appears but rarely in the Gospels (only in Mk. 14:11; Lk. 24:49), the Gospels reflect explicitly or implicitly the realization of promise throughout the unfolding narrative. The appearance of Jesus is persistently described as the fulfillment of OT promises (*see* FULFIL). Jesus' own sense of mission arose from His awareness of being in a unique sense the fulfillment of God's great promise of salvation (see Lk. 4:16-21; cf. Isa. 61:1). It fell to Paul to underline the full reality of Christ as the Gospel event that fulfills all the promises of God.

D. In Luke-Acts. Luke-Acts makes an especially strong connection between God's promising and the Holy Spirit, as is suggested by the Lukan expression, "the promise of the Spirit" (Acts 2:33, 39; cf. 1:4; Lk. 24:49). The use of promissory language reveals a clear, formal pattern that parallels other NT material. God the Father makes and keeps promises (Lk. 24:49; Acts 1:4; 7:5, 17; 26:6). Objectively, God fulfills His promise to bring salvation; belief in Christ, the God-ordained mediator, is the means by which the promised salvation may be received (Acts 13:23; cf. v. 48). The apostolic proclamation of the *euangélion* ("good news") is declared as fulfillment of (the cognate) *epangelía* ("promise," Acts 13:32f.) — but also the vehicle by which the promise comes to fulfillment again and again. Those who experience salvation in Christ receive the eschatological gift of the Holy Spirit, promised for the last days (2:38f.; cf. 1:4f.; 2:16-21, 33-36), just as Jesus received the anointing of the Spirit in fulfillment of God's promise through Isaiah (Lk. 4:17-19, 21; cf. Isa. 61:1f.).

E. In Paul. The Pauline corpus provides the most prominent witness to the centrality of the concept of promise in earliest Christianity. In Rom. 4 (esp. vv. 13f., 16, 20f.) and 9 and Gal. 3 (esp. vv. 14, 16-22, 28) and 4, Paul reflects at length on the fulfillment of God's promise in Christ and the gospel. Essentially, God's offer of salvation in Christ is to be grasped by faith and not by works of the law (Rom. 4:13f., 16, 20f.). By definition, God's promise is a wholly gracious matter and precedes the law (Rom. 4:10-13; Gal. 3:16-19). Works of the law in themselves, rather than meriting the promise, obviate the very presupposition and intent of promise (Gal. 5:2). Abraham is the great prototype of faith in that he allowed his life and destiny to be determined totally by the promise of God (Rom. 4; Gal. 3–4).

The remaining occurrences of "promise" in Paul's writings extend and deepen the teaching of these chapters. In Rom. 1:1-6 Paul speaks of "the gospel of God which he promised beforehand through his prophets in the holy scriptures, the gospel concerning his Son. . . ." This passage presents an important conjunction of (1) the Promiser, (2) the promise (of the gospel), (3) the Promised One (Jesus Christ), and (4) the fulfillment of the promise as declared in the gospel. Before the gospel came to them Gentiles were "strangers to the covenants of the promise" (Eph. 2:12); but now they have become participants in the promise through the gospel (3:6). The gospel brings the promise of life in Christ (2 Tim. 1:1; Tit. 1:2). Those who believe in Christ are sealed with the promised Holy Spirit (Eph. 1:13). Paul calls on those who have received God's promises to cleanse themselves from all defilement and to strive after holiness (2 Cor. 7:1; cf. 6:16-18).

F. In Hebrews. Promise occupies a decisive place in the Epistle to the Hebrews. In the first main section the author warns against "drifting away from" (2:1) faith in God's supreme revelation in His Son (cf. ch. 1), for to "neglect such a great salvation" (2:3) would be far more serious than the Israelites' rejection of God's revelation through the law (2:2f.) and through Moses (ch. 3). The author summarizes the readers' situation: "Therefore, while the promise of entering his rest remains, let us fear lest any of you be judged to have failed to reach it. For good news came to us just as to them; but the message which they heard did not benefit them, because it did not meet with faith in the hearers" (4:1f.). The concepts found here — promise, rest, endurance, the gospel, and faith — represent major concerns of the epistle.

Chapter 11, with its gallery of saints, establishes living by faith in God's promise as the distinctive Christian life-style (11:9, 11, 13, 17, 39; cf. 6:12-17; 7:6; 10:36; 11:17). Although the Hebrew Christians had received the promise anticipated by the OT saints (11:39), the necessity of enduring suffering (see esp. 10:32-39; 12:3-11; cf. 2:9f., 14-18; 5:7f.; 11:24-26, 35-38) meant that their own lives had to be oriented anew to promise. Thus the author urges them to exercise mutual exhortation to living by God's promise (10:23-25). For encouragement, believers can look to the veritable "cloud of witnesses" (12:1; cf. ch. 11) who have now inherited the promises through patient endurance (6:12-15; 11:9, 13). They can look forward to entering the "rest" promised to those who went before them (4:1-11). The new covenant mediated by Christ is enacted on even greater promises than those of the old covenant (8:6) — including the promise of an "eternal inheritance" (9:15) and a "kingdom that cannot be shaken" (12:28). The one who promises speaks as the Righteous Judge (vv. 26-29). His oath is unbreakable (cf. 6:13), and His promises stand as the Day draws near (10:23-25).

G. In Other NT Writings. The specific vocabulary of promise occurs in only a few passages outside of Luke-Acts, the Pauline corpus, and Hebrews. These texts focus on the reward or inheritance of faith. James speaks of the crown (1:12) and the kingdom (2:5) that "God has promised

to those who love him." 2 Pet. 1:4 speaks of the "very great promises" through which Christians may "become partakers of the divine nature," while 1 Jn. 2:25 points to the promise of eternal life. 2 Peter addresses a situation in which scoffers call into question the promise of Christ's return (3:4). The author asserts that the faithful will continue to wait for the promise (v. 13), persuaded that "the Lord is not slow about his promise" (v. 9). This patient waiting for the realization of God's promise — a waiting that allows God to be God and to work out His salvation in His way and time — is one of the chief characteristics of biblical faith.

PROOF; PROVE. The noun "proof" is used by the RSV in two different senses. (1) It means "compelling evidence" in Isa. 41:21 (Heb. *ʿaṣṣumôṯ*, lit. "strong [words]"; AV "strong reasons"; NEB "case"); Mt. 8:4 par. (Gk. *martýrion*; AV "testimony"; NEB "certify"); Acts 1:3 (*tekmḗrion*); 2 Cor. 8:24 (*éndeixis*; NEB "clear expression"); 13:3 (*dokimḗ*). (2) It means "test" in the expression "put to the proof," the RSV translation of Heb. piel of *nāsâ* in contexts where the Israelites, showing a sinful lack of faith, TEST Yahweh's promise to provide for them by asking: "Is the Lord among us or not?" (Ex. 17:7; also v. 2; Nu. 14:22; Ps. 95:9; AV "tempt," "prove"; NEB "challenge"; *see also* MASSAH AND MERIBAH). In contexts where Yahweh tests Israel the RSV usually renders the same Hebrew form "prove" (see below) or "test."

The verb "prove" has three meanings in the RSV. (1) In the OT it several times means "establish by evidence," e.g., in Ezr. 2:59 par. Neh. 7:61 for the Heb. hiphil of *nāgaḏ* (lit. "report," "explain"; AV "show"; NEB "establish"); it has a similar meaning in the expressions "prove [one] perverse" (hiphil of *ʿāqaš*, lit. "declare crooked," Job 9:20), "prove [one] a liar" (hiphil of *kāzaḇ*, lit. "label [one] a liar," 24:25), and "be proved right" (*ṣāḏaq*, Isa. 43:26; AV "be justified"). NT terms rendered in this way are Gk. *parístēmi* (Acts 24:13; NEB "make good"), *apodeíknymi* (25:7), *éndeixis* (Rom. 3:26; AV "declare"; NEB "demonstrate"), *synístēmi* (2 Cor. 7:11; Gal. 2:18), *symbibázō* (Acts 9:22), and *paratíthēmi* (17:3; AV "allege"; NEB "apply to show").

(2) The verb means "test," "try," in passages where it translates Heb. *bāḥan* (Ps. 26:2; AV "examine"; NEB "test"; cf. AV Ps. 17:3; 66:10; 81:7 [MT 8]; Mal. 3:10), the piel of *nāsâ* (Ex. 15:25; 16:4; 20:20; NEB "put to the test"; cf. AV Dt. 8:2, 16, and fifteen additional passages), the pass. part. of *ṣārap* (lit. "refine"; RSV "prove true," 2 S. 22:31; Ps. 18:30 [MT 31]; Prov. 30:5; AV "is tried," "is pure"; NEB "has stood the test"); Gk. *peirasmós* (1 Pet. 4:12; AV "try"; NEB omits) and *dokimázō*, which is rendered "prove" frequently by the AV (e.g., Lk. 14:19; 2 Cor. 8:22; 13:5; Gal. 6:4; Eph. 5:10; 1 Thess. 5:21; 1 Tim. 3:10; He. 3:9; RSV usually "test") but only twice by the RSV (Rom. 12:2; 2 Cor. 8:8; NEB "discern," "put to the test"); in both passages "prove" means APPROVE (cf. RSV Rom. 2:18; 14:22; Phil. 1:10; 1 Thess. 2:4) or "accept as proved" (see Bauer, rev., p. 202). *See also* TEST.

(3) It means "turn out to be," "be shown to be," when it translates Heb. *hāyâ* (lit. "be," 1 K. 1:52; AV "show"); Gk. *gínomai* (lit. "be," "become," Mt. 13:22 par. Mk. 4:19; Lk. 10:36; Jn. 15:8; 2 Cor. 7:14; 1 Thess. 1:5), pass. of *heurískō* (lit. "be found," Rom. 7:10; AV "find"), pass. of *kenóō* (lit. "be emptied [of its justification]," 2 Cor. 9:3; RSV "prove vain"), and *pseúdomai* (lit. "lie," He. 6:18; RSV "prove false"). N. J. O.

PROPER [Heb. *dᵉḇar-yôm bᵉyômô*] ("proper day," Lev. 23:37); AV "its own day"; NEB "its day"; [*maṯkōneṯ*] ("proper condition," 2 Ch. 24:13); AV "its state"; NEB "its original design"; [*nismān*] ("proper place," Isa. 28:25); AV "appointed place"; NEB omits; [Gk. *ídios*] (Jude 1:6); AV "own"; [*prépon*] (1 Cor. 11:13); AV "seemly"; NEB "fitting"; **PROPER TIME** [Heb. *bᵉ* + *ʿēṯ*–'in time'] (Eccl. 10:17); AV "due season"; NEB "right time of day"; [Gk. *en kairṓ*] (Mt. 24:45; Lk. 12:42); AV "due season"; [*kairoís idíois*] (1 Tim. 2:6; 6:15; Tit. 1:3); AV "its own times," "his own seasons"; NEB "fitting time," "his own good time"; **PROPERLY** [Gk. *en métrō*] (Eph. 4:16); AV "in due measure"; NEB "due"; [Gk. *aschēmonéō*] ("not behaving properly," 1 Cor. 7:36); AV "behaveth unseemly."

I. Proper Place or Condition.–Isaiah 28:25 refers to sowing barley "in its proper place" (Heb. *nismān*). Although the precise meaning of *nismān* is uncertain, the context requires a meaning related to the agriculturally beneficial arrangement of the crop. Dill and cummin are scattered, wheat is carefully put in rows to prevent the crop from choking itself, and barley, a less favored crop, is put in the less fertile field, its "proper place," with spelt at its border. The standard for propriety here may be simply good husbandry, but those instincts, skills, and knowledge are themselves finally given by God (v. 26). The NEB omits this phrase, following many versions (see *BHS*), apparently taking it as a scribal error, a dittography based on spelt (Heb. *kussemeṯ*).

Jude 6 refers to the disobedient angels who left "their proper dwelling," Gk. *ídion oikētḗrion*. Gk. *ídios* very clearly parallels the previous *heautṓn* and is used in a possessive sense. The standard for propriety is simply proprietorship, but again God's assignments and gifts stand behind such a standard. The angels left "their own" (AV) dwelling because of disobedient lust (Jude 6; cf. Gen. 6:1-4; 1 En. 6–11) and were punished. Jude used that legend as an example and warning for his readers.

In 2 Ch. 24:13 the temple is repaired and restored to its "proper condition." Heb. *maṯkōneṯ* entails some standard (cf. Ezk. 45:11, the standards for the ephah and bath; Ex. 30:32, the standards for the composition of holy oil). In 2 Ch. 24:13 the standard is less obvious; the NEB presumes it to be the temple's "original design." Perhaps Ezk. 43:10 (Heb. *tāḵnîṯ*) refers to the sorts of standards used. This concern of the Chronicler for the "proper condition" of the temple does not occur in the par. 2 K. 12. The Chronicler was of course a good deal more interested in the cultic institutions of Jerusalem than the Deuteronomic historians. His special presentation of history gives legitimacy to the pure worship of God in Jerusalem in postexilic times; the reference to "proper condition" reinforces this concern for worship as prescribed.

II. Proper Time.–The appointed feasts are to be celebrated and the offerings made "each on its proper day," *dᵉḇar-yôm bᵉyômô* (Lev. 23:37). This Hebrew phrase in Ex. 5:13, 19 refers to the daily quota of bricks to be produced by the Hebrew slaves, a standard that had been set

rationally, according to the straw supply and time, but later was set arbitrarily by the pharaoh. In Ex. 16:4 the phrase indicates the daily quota of manna. In 1 K. 8:59 Solomon prays at the dedication of the temple that God will maintain the cause of His servant and people "as each day requires." Among other uses of the phrase (2 K. 25:30; Jer. 52:34; Neh. 11:23; 12:47; Dnl. 1:5) the most relevant seem to be Ezr. 3:4 and 1 Ch. 16:37, both of which refer to daily ministry at the altar. The standard for propriety at such ministry is the ordinance of God. Similarly, in Lev. 23:37 the standard is explicitly the appointment of God; this verse picks up the heading of v. 4. There are times fixed by God for His people to gather and to offer sacrifices. The propriety is not based on the rhythm of agricultural life, whatever the origin of some of the feasts, but is rather based on the command of God. The agricultural feasts are incorporated and subordinated into the historical focus of Israel's cult (cf. vv. 42f.).

Ecclesiastes 10:17 mentions the "proper time" for princely feasting. The text uses the word for "time," Heb. *'ēt*, with the preposition *b*^{e}; the construction is not unusual. The "proper time" for princes to feast stands in antithetical parallelism to the previous couplet's reference to princes' feasting "in the morning" (v. 16). At the "proper time" they feast "for strength, and not for drunkenness." The next proverb (v. 18) reinforces the judgment against sloth and indolence. The standard for propriety in this mirror for princes is the service to the people, and the standard for impropriety is sloth and gluttony.

In Mt. 24:45; Lk. 12:42 the steward's responsibility is to give the household their food "at the proper time." The Greek phrase *en kairôi* parallels Heb. *bā'ēt* or *b*^{e}*'ittô* (cf. Eccl. 10:17). This parable may also reflect the declaration in Ps. 104:27 that God gives all His creatures their food "in due season." The master has set the steward over the household, and the standard for propriety is the master's will and the vocation of caring for the household for him. Providing "food at the proper time" is a synecdoche for such care.

Three times in the Pastoral Epistles the Greek adjective *ídios* is joined to the noun *kairós* (1 Tim. 2:6; 6:15; Tit. 1:3). In each case the phrase is plural but translated as singular, "proper time" (but cf. the AV). O. Cullmann (*Christ and Time* [Eng. tr., 3rd ed., 1962], pp. 40f.) made these passages refer to the entire *Heilsgeschichte* and assumed that the standard for propriety is the plan of salvation. But such an interpretation seems unwarranted. The most straightforward reading of the cryptic phrase *tó martýrion kairoís idíois* in 1 Tim. 2:6 takes *martýrion* (RSV "testimony") as synonymous with *kérygma* or *euangélion, idioís* as a possessive without any particular contrast, and the phrase itself as in apposition to the preceeding confessional statements. Thus the confessional statements "There is one God, and there is one mediator between God and men, the man Christ Jesus, who gave himself as a ransom for all" (vv. 5-6a) are described as "the gospel for your own times." The standard of propriety, if it is accurate to speak of "proper" at all here, is simply proprietorship. Cullmann's assumption of a reference to eschatological events seems unnecessary and ill-fitting to the context. Such a reading of Gk. *kairoís idíois* fits Tit. 1:3 exactly, for it is through Paul's preaching that the Word is made manifest in "your own times."

1 Timothy 6:15, however, has indeed a future reference. The sovereign God will show (Gk. *deíchei*) the "appearing [*epiphaneía*] of our Lord Jesus Christ . . . at the proper time [*kairoís idíois*]." *Kairoís idíois* could be taken as a dative controlled by the verb; the meaning would then be that God will show the appearance to "your own times." But the author of the Pastorals seems more typically to minimize the imminence of the Parousia. (The use of *epiphaneía* rather than *parousía* itself demonstrates a subtle shift in eschatology.) The author emphasizes the sovereignty of God (note the beautiful doxology of vv. 15f.) rather than the imminence of the appearance. The appearance will surely occur, but the author does not want to overemphasize it. It will happen at "the proper time," i.e., in God's own times (NEB "in his own good time").

In all these Pastoral contexts, then, "proper" does not serve so much to make a judgment according to some standard provided by *Heilsgeschichte* as simply to identify the possessor, the one to whom the times belong, whether "our own times" or "God's own times."

III. Proper Behavior.—Proper behavior is mentioned in 1 Cor. 11:13, "Is it proper [Gk. *prépon estín*] for a woman to pray to God with her head uncovered?" *To prépon* has Stoic associations (M. Pohlenz, *Nachrichten der Gesellschaft der Wissenschaften in Göttingen*, 33 [1927], 53-92) and suggests not so much something lawful (cf. the preceding argument in vv. 2-12) as something seemly (cf. AV "comely") or "fitting" (NEB). Moreover, the Stoic associations suggest that the standard for propriety may well be provided by nature, so that the question in v. 13, "Is it proper?" is formally very similar to the question of v. 14, "Does not nature itself teach you. . . ?"

1 Corinthians 7:36 uses Gk. *aschēmonéō*, "not behaving properly." The word occurs once elsewhere in the NT, 13:5, where it is translated "is . . . rude." *Aschēmonéō* is the antonym of Gk. *euschēmonéō* and so might be translated "not to act like a gentleman." The standard here is convention and propriety. Love does not tread upon accepted manners and customs (v. 5). Love is not without a sense of propriety, but, it may be added, a sense of propriety without love is less than a "noisy gong." The forms and rules and institutions that order life are prized by love and by Paul. Thus in 7:36 Paul insisted against the Corinthians, who so highly prized self-control, that one may yet pursue the gentlemanly path and marry, as manners would dictate, "his betrothed."

In Eph. 4:16 the RSV renders Gk. *en métrōi* as "properly." The phrase means literally "in measure" (cf. the AV) and recalls vv. 7, 13. "Grace was given to each of us according to the measure of Christ's gift" (v. 7). Those many gifts are all to build up the Church so that "we all attain . . . to the measure of the stature of the fulness of Christ" (vv. 12f.). In v. 16 the repeated reference to "measure" may effectively be translated "properly," but the standard of Christ's gift and fulness may not be elided. The propriety is determined not so much by the congruence of bodily functions as by the gift and pattern of Jesus Christ, the Lord of the Church. The gifts may and must be used — they are the gifts of Christ, after all (v. 7) — but they must and may be used in the service of the Church, for Christ the giver is the pattern and measure, the standard for propriety, as well. PROPHECY, FALSE. The prophetic literature describes the existence of groups and individuals who delivered messages which were in conflict with the messages of the true prophets of Israel. These false prophets claimed that God or some other god has sent them, but their professions of orthodoxy were negated because their messages contradicted God's revelation. At times even the true prophets

were labeled false prophets because the Israelites did not accept the true message of God which they spoke.

I. Terms for False Prophecy.–The title "false prophet" was not a well-defined concept among the Hebrews; instead they preferred to talk about false prophecy. The LXX translators employed the term *pseudoprophētēs* ("false prophet") to describe the prophets who lied (Jer. 6:13), denied the words of the true prophets (Jer. 27:9 = LXX 34:9; Jer. 28:1 = LXX 35:1), tried to kill the true prophets (Jer. 26:7 = LXX 33:7), and deceived the people with their dreams (Jer. 29:8 = LXX 36:8). The Hebrew writers used several terms to define false prophecy. It was deceitful, a lie or falsehood (*šeqer*: Jer. 8:10; 14:14; 23:25, 32; 27:10, 14, 16; 28:15; 29:9, 21), contained words of peace when there was no peace (Jer. 6:14; 8:11; 14:3; 23:17; 28:2, 11; Ezk. 13:10; Mic. 3:5), was not based on the decisions of the council of Yahweh (Jer. 23:18), included visions out of the prophet's own heart (Jer. 14:14; 23:16; Ezk. 13:2f.; 22:28), was derived from Baal (Jer. 2:8; 23:13), and was sometimes caused by a deceptive spirit from God (1 K. 22:19-23). False prophets from other nations worshiped other gods (*see* PROPHECY II) and practiced divination, witchcraft, sorcery, magic, and necromancy. The Hebrew law demanded that any prophet who tried to persuade the people to follow another god must be killed (Dt. 13:1-5; 18:20). Divination, soothsaying, witchcraft, necromancy, and trust in mediums or the interpretation of omens were expressly forbidden (Lev. 19:26; Dt. 18:10f.). Balaam was a diviner (*qesem*) who worked for a fee (Nu. 22:7; Josh. 13:22), and some Israelite prophets were classified in the same category (Jer. 14:14; 27:9; 29:8; Ezk. 13:6-9; Mic. 3:6f.; Zec. 10:2) because they used magic (Ezk. 13:17-23) to deceive their listeners. Other false prophets called sorcerers (from the verbs *'ānan* or *kāšap*) were prominent in Egypt (Ex. 7:11), Babylon (Dnl. 2:2; Isa. 47:9, 12), and Israel (Isa. 2:6; 57:3; Mic. 5:12; Mal. 3:5; 2 Ch. 33:6).

II. The Interpretation of False Prophecy.–One method of identifying a false prophet was to find out if his prophecy remained unfulfilled. The destruction of Jerusalem proved that the prophets who predicted peace were false prophets (Jer. 6:14f.; 8:11f.; 14:13f.). The application of this yardstick presented two problems. First, the predicted event might not take place for several years, and second, the contingent nature of many prophecies caused the fulfillment of the message to depend on the response of the listeners. Jonah's prophecy of doom for Nineveh was never fulfilled because it was conditionally dependent on a negative response to the prophet's warnings, not because he was a false prophet.

J. Hempel maintained that all prophecy was contingent; therefore, it was impossible to use fulfillment or nonfulfillment to judge the authenticity of any prophecy. R. P. Carroll applied the psychological theory of cognitive dissonance to the prophetic traditions in order to demonstrate how the prophets transformed unfulfilled threats or promises to avoid the dissonance of unfulfilled predictions and the stigma of being labeled a false prophet. G. von Rad approached the issue of false prophecy from the perspective of its social location and its theological perspective and concluded that the false prophets were the cultic prophets who always predicted salvation. The false prophets in Jeremiah's time centered their hope on God's positive promises and the existence of the temple in Jerusalem. He maintained that even Deuteronomy, which based Israel's relationship on God's love for the nation, was strongly influenced by the false institutional prophets who were the heirs of the Mosaic office (Dt. 18:18). (*See* PROPHECY III.A.) Although von Rad was correct in observing that most false prophets preached messages of hope, so did many of the true prophets. This solution reduced a very complex issue down to a simple formula.

The truth of a prophet's message depended on the historical context of the people who received the message. T. W. Overholt concluded that if a true prophecy was applied at the wrong time and to the wrong audience, it passed over into the category of false prophecy. He believed that Jonah's rebellion before and after his faithful ministry at Nineveh brought him close to being a false prophet. The man of God from Judah (1 K. 13) faithfully pronounced the word of the Lord and then was deceived by a false prophet. Later the false prophet functioned as a true prophet when he faithfully delivered God's message of doom (1 K. 13:20-22) on the man of God who had disobeyed God's command. K. Harms surmised that all a genuine prophet of God had to do to become a false prophet was to misapply one prophecy. He believed that the true prophet received his message from the divine council and was exact in delivering that message to its intended recipients.

A complicating factor for this quite valid approach was the few known examples where God sent an enticing spirit to misdirect the prophets (1 K. 22:19-23; Ezk. 14:7-11). But most prophets were seduced into false prophecy by their own desires for recognition and acceptance by the masses, their political leanings which supported nationalistic interests, and their blind application of traditional teaching about the temple and the messianic age to the temporal problems of their day (E. Jacob). S. Blank saw that the only way for the public to discover if a prophet had spoken the truth was for them to listen to the positive affirmations of authenticity given by the prophet: his calling, the contrast between his message and popular thinking, his claim to divine words, his conformity with God's nature, and the fulfillment of his predictions. G. Quell studied the various criteria usually associated with distinguishing true from false prophecy and was forced to the position that only another divinely inspired prophet could determine who stood in the council of God. H. J. Kraus's examination of various crisis situations between prophets led him to propose that the true prophet had direct and immediate access to God and His council while the false prophets were dependent on various lesser modes of revelation. He also drew attention to the misuse of covenant promises by the false prophets and their refusal to expose the sinfulness of the nation (Mic. 3:8; Lam. 2:14). A. S. van der Woude's study of Micah discovered a focus within false prophecy on the Zion and Sinai covenants which promised God's defeat of those who would attack Yahweh's covenant people. His method of identifying quotations of false prophets in Micah was used by J. Crenshaw to create an overview of popular religious beliefs which the false prophets followed. Crenshaw's analysis of the criteria for identifying false prophecy caused him to deny that there was any valid means of separating the genuine from the fake message.

III. Tests of a False Prophet.–False prophets who worshiped or prophesied in the name of other gods were easy to distinguish (Jer. 2:8; 23:13; 26:27; 32:32-35), but Jer. 23:17, 25 recorded that these prophets actually used the name Yahweh in their prophecies. The moral character of the prophet himself (Jer. 23:14) provided another checkpoint, but it too had limitations, for none of the true prophets was perfectly sinless (except Jesus). Certainly the alert Israelite must have cast a questioning eye at Hosea's marriage to a prostitute, and Jeremiah (Jer. 38:14-28) and Elisha (2 K. 8:7-15) were not always completely truthful. The false prophets could fake a call experience, claim inspiration, and borrow approved covenant traditions to

support their prophecies. Many OT prophecies have still not been fulfilled, so the use of the fulfillment criteria was possible only when specific and immediate predictions were made. The main criterion used in evaluating false prophecy was the degree to which that prophecy was consistent with the message of other divinely inspired prophets who spoke about the same event. Even when the prophets themselves were inspired they were not always able to pick out false prophecy (1 K. 13).

IV. False Prophets in the NT.–The presence of the false prophets who denied the truth and deceived believers was a formidable danger for the NT Church. Jesus warned His disciples to expect persecution and beware when people speak only positively, for this was the way that people treated the false prophets in the OT (Lk. 6:26). 2 Pet. 2:1-22 gives an extended warning about the characteristics of false prophets and teachers. They secretly introduce destructive heresies, deny Christ as Master (2:1), follow sensual pleasures (vv. 2, 10-13, 18), are full of greed like the false prophet Balaam (vv. 3, 13f.), and full of arrogant and undisciplined talk and behavior (v. 18). Although not calling them false prophets, Jude seems to describe a similar group of ungodly persons who have secretly crept into the Church. They deny Christ (Jude 4), are licentious and grossly immoral (vv. 2, 7f., 17f.), follow the error of Balaam (v. 11), speak arrogantly and flatter people (v. 16), and cause division (v. 19). These, as well as those described by Jesus in Mt. 7:15-23, appear to be involved Christians who are actively working in the name of Christ. The reality is different, however, for they are "ravenous wolves" who do not know Christ. Some have suggested that these are Gnostics, Pharisees, Zealots, or charismatics, but a specific identification seems impossible (cf. Aune, p. 223).

1 Jn. 4:1-3 encourages believers to test persons who claim to have prophetic gifts to see if they will confess that Christ has come in the flesh from God. A similar test will identify those called "antichrists" (1 Jn. 2:18, 22f.), but these two warnings may not be directed against identical groups. Such exhortations were often given to insure the purity of teachings in the Church (1 Cor. 14:29; 1 Thess. 5:20-22). When Paul and Barnabas met the Jewish magician Bar-Jesus on the island of Paphos, Paul, being full of the Holy Spirit, discerned that he was a false prophet, full of deceit, a son of the devil, and an enemy of righteousness (Acts. 13:6-10). The prophetess Jezebel from the church of Thyatira was also in the line of false prophets (Rev. 2:20).

The danger of false prophets at the end of time is predicted by Jesus in His Mt. Olivet discourse (Mt. 24:1, 24; Mk. 13:22). These persons will perform miraculous signs and wonders to deceive people into following the beast (Rev. 16:13f., 19:20). The false prophet, the beast, and the devil will ultimately be destroyed by Christ when He comes in glory to set up His kingdom (Rev. 19:20; 20:10).

PROPHECY, GIFT OF. *See* SPIRITUAL GIFTS.

PROPHET; PROPHECY. A wide range of persons with diverse associations were called prophets because each in some way claimed to be communicating a divine message. The broad usage of the term explains why the patriarch Abram (Gen. 20:7), the priest Aaron (Ex. 7:1), and the singer Jeduthun (1 Ch. 25:3) were all called prophets even though the Scriptures contain no record of their call to a prophetic office. A narrower definition focuses on individuals such as Jeremiah, Isaiah, and Samuel, who received a call to be a prophet and spent their time conveying God's message in an oral, dramatic, or written form.

VI. Prophecy in the NT

I. Titles of the Hebrew Prophets.–The Hebrews used many descriptive terms to designate prophets. Some were considered the Lord's prophets (1 K. 18:13), while many were linked to the Canaanite god Baal (1 K. 18:19; Jer. 2:8). Others were associated with cities (e.g., Jerusalem or Samaria, Jer. 23:13f.) or a nation (e.g., Israel, Ezk. 13:2). But most designations reflected the character or function of the prophet. A careful look at the general terms and the specific titles applied to the prophets will provide some initial insights into the Hebrew concept of a prophet.

A. General Designations. Two of the most important general titles were "his (God's) servant" (Heb. *'ebeḏ*) and "man of God" (*'îš hā'ᵉlōhîm*). A servant was a humble subject whose goal was to accomplish the tasks assigned by his master. The possessive pronoun recognized the claim of God upon "his servant the prophet" (1 K. 14:18; 2 K. 17:23; 21:10; 24:2). When God warned the Israelites by reminding them of earlier messages given by "my servants the prophets" (2 K. 9:7; 17:13; Jer. 7:25; 29:19; Zec. 1:6), He confirmed the devotion and obedience of those who faithfully declared His word.

"Man of God" was a title of honor used in reference to only a few prophets who had an especially close relationship to God and exercised a particularly strong prophetic gift. Moses was called a "man of God" in contexts that refer to God speaking the law through him (Dt. 33:1; Josh. 14:6; 1 Ch. 23:14; 2 Ch. 30:16; Ezr. 3:2). The title is found primarily in 1 Samuel and 1 and 2 Kings. It was

applied to the prophet who announced God's message of judgment upon Eli and his sons (1 S. 2:27). Samuel was identified as a "seer" (1 S. 9:11, 18f.), a "prophet" (cf. v. 9; 19:20), and a "man of God" (9:6-10) who inquired of God and predicted what would happen. Shemaiah (1 K. 12:22; 2 Ch. 11:2), the unknown prophet (not Amos, as proposed by J. L. Crenshaw, *Prophetic Conflict* [1971], pp. 41f.) who went from Judah to Bethel (1 K. 13), and the prophet who warned Amaziah (2 Ch. 25:7-9), were all "men of God" who delivered God's word. The widow whose son was restored to life called Elijah a "man of God" because "the word of the Lord in your mouth is true" (1 K. 17:18, 24; cf. 2 K. 1:6-13). Elisha was called a "man of God" about thirty-five times (4:7-27; 5:8-20; 6:6-15; 7:17–8:11; 23:16f.) because of his miraculous deeds as well as his delivery of God's messages. An angel of the Lord was once confused with a man of God (Jgs. 13:6).

Other general designations applied to prophets include *mēlîṣ* (hiphil part. of *lîṣ*; RSV "mediator," Isa. 43:27), *ṣōpeh* (part. of *ṣāpâ*; RSV "watchman," Isa. 56:10; Jer. 6:17; Ezk. 3:17; 33:7f.), and *mal'āḵ* (RSV "messenger," 2 Ch. 36:15f.; Isa. 44:26; Hag. 1:13).

B. Specific Titles and Derived Terms. The concept of prophecy is connected with three Hebrew roots: *r'h, ḥzh,* and *nb'*. These three roots and their derivatives were sometimes used synonymously, but each had its own semantic field and history of application.

The verb *rā'â* has the basic meaning "see, perceive, understand." When it refers to a prophet, the participle *rō'eh* has traditionally been translated "seer." 1 S. 9:9 indicates that the *rō'eh* was a person who revealed secrets by inquiring of God for an answer. Some have concluded on the basis of etymology that the seer's revelation always came in visual form. But in the twelve places where *rō'eh* occurs (most referring to Samuel), there is little or no indication that the seer's answer came in the form of a dream or vision. The verb *rā'â* is used in numerous cases to describe the visual part of a theophany, dream, or vision (e.g., Gen. 16:13; 1 S. 28:13; 1 K. 22:17, 19; 1 Ch. 21:16, 20; Isa. 6:1, 5; Jer. 1:11-13; Ezk. 1:1, 27f.; Dnl. 8:2-7, 15, 20; Am. 7:8; 8:2; Zec. 1:8, 18), but these occurrences do not coincide with the use of the participle *rō'eh*. The derived nouns *mar'eh* and *mar'â*, appearing predominantly in the late books of Ezekiel and Daniel, describe the "visions" that these prophets saw. This evidence does not, however, support the view that the seer was primarily a visionary or a dreamer of dreams. The essence of the idea is that God allowed certain people to "see" (i.e., understand) — or receive a divine communication that contained insight into — past, present, or future events.

The participle *ḥōzeh,* "seer," is applied to three musicians (Heman, 1 Ch. 25:5; Asaph, 2 Ch. 29:30; Jeduthun, 35:15) who were appointed by King David to direct the singing, playing of instruments, and prophesying in the temple worship (cf. 1 Ch. 25:1-7). Elsewhere the title is applied to royal court "seers" during the reigns of David (Gad, 2 S. 24:11; 1 Ch. 21:9; 2 Ch. 29:25), Solomon and Rehoboam (Iddo, 2 Ch. 9:29; 12:15), Jehoshaphat (Hanani, 2 Ch. 19:2), and Manasseh (2 Ch. 33:18f.). These "seers" spoke God's words to the king and recorded them in their chronicles. In these contexts the *ḥōzeh* was the king's advisor who gave him insight into God's will.

The verb from this root, *ḥāzâ* ("see, perceive"), is used in the superscriptions to several books of prophecy (Isa. 1:1; 2:1; Am. 1:1; Mic. 1:1; Hab. 1:1) to indicate that the prophet "saw" or "perceived" the oracle by revelation from God. Ezekiel used the verb to describe what the false prophets "saw" (13:8f., 16, 23; 21:29 [MT 34]; 22:28) from their imaginations and false hopes. Balaam's oracles were derived from words he heard and a vision that he "saw" (Nu. 24:4, 16). But the strong connection of the verb with visionary experience occurs primarily in the Aramaic portions of Daniel. Here *ḥᵃzâ* refers to what Daniel "saw" in dreams and night visions (Dnl. 2, 4, 7).

The nouns derived from *ḥāzâ* (*ḥāzôn, ḥᵃzôṯ, ḥizzāyôn, maḥᵃzeh,* etc.) denote the revelation that is "seen." They frequently refer to a dream or night vision (esp. in Daniel); but the use of *ḥāzôn* in the superscriptions to Isaiah, Obadiah, and Nahum, as well as in titles to the written records of certain prophets (2 Ch. 9:29; 32:32), indicates that it could also refer to the total "revelation" that these prophets perceived through inspiration.

The main term used in the OT to refer to a prophet is *nāḇî'* (or fem. *nᵉḇî'â*). Various theories concerning its etymology have been proposed. Gesenius, Kuenen (p. 42), and von Orelli (pp. 11f.) connected it with *nāḇā'* ("bubble forth"), thus understanding the prophets as ecstatics who bubbled forth words with great fervor. Arnold (p. 93) and Pfeiffer (p. 83) regarded the term as a passive (niphal) participle from *bô'* ("enter"), describing one who was entered by a spirit. Cornill (pp. 9f.), Eiselen (p. 23), and König (p. 260) traced the term to an Arabic root meaning "announce"; thus the prophet was an announcer or spokesman of God's words. Meek (pp. 150f.), Johnson (pp. 24f.), Haldar (p. 109), and Scott (p. 45) favored an Akkadian etymology meaning "speaking or proclaiming." Albright (p. 303), Rowley (pp. 103-05), and Lindblom (p. 102) preferred a passive interpretation, "the one who is called by God." These differences of interpretation indicate the necessity of caution in using an etymological approach to determine the meaning of *nāḇî'*. The exact historical origin of the root may remain uncertain, but a careful study of the usage of its verbal and noun forms can reveal its semantic range.

The verb *nāḇā'*, "prophesy," appears in the niphal and hithpael forms about 115 times in the OT. It occurs in the Pentateuch in only one passage (Nu. 11:25-27). This early text refers to the ability to prophesy as a gift given to the seventy elders of Israel "when the spirit rested upon them." The text does not describe the content of their prophecy, but the context indicates that this new ability enabled the elders to share with Moses the burden of caring for the Israelites. In 1 Samuel the verb describes at least part of the activity of a band of prophets and of Saul (10:5-13; 19:21-24; cf. "rave," 18:10). The first mention of one of these early prophetic bands occurs when Saul meets one coming down from a place of worship, prophesying (probably "singing"; see M. Buber, p. 63; E. J. Young, p. 70) to the sound of musical instruments (10:5, 10). Saul's prophesying was brought on by the Spirit of the Lord and resulted in his being "turned into another man" (v. 6). The direct connection between prophesying and Saul's unusual behavior (cf. 10:6; 18:10; 19:24) is capable of diverse explanations (see III.D below). The choice of *nāḇā'* to describe the "ravings," "prophesying," or "singing" of the prophets of Baal (1 K. 18:29) supports the view that strange behavior sometimes accompanied the expression of the prophetic gift in the ancient Near East; but these prophets' behavior on this occasion cannot be used as a key to determine a normative description of Israelite prophetic behavior.

Nāḇā' is frequently associated with speaking a message. Micaiah explained the false message spoken to Ahab by four hundred prophets as having come from a "lying spirit in the mouth of all [Ahab's] prophets" (1 K. 22:22f.) — a clear indication that prophesying meant giving a message. Amos likewise identified prophesying with giving the word of the Lord (Am. 3:8), and this emphasis occurs in the

numerous uses of *nāḇā'* in Jeremiah and Ezekiel. Although "prophesying" could refer to the words of both true and false prophets, the false prophets were not sent by God, nor did He command them to speak (Jer. 14:14). Ezekiel repeatedly uses "prophesy" as a parallel to "say" (Ezk. 21:9, 28 [MT 14, 33]; 30:2; 36:3; 37:12; 38:14). In 1 Ch. 25 the verb is applied to the activity of the temple musicians who sang and played for the services in the temple. This use may be related to the "singing, prophesying" of the group of musicians met by Saul (1 S. 10:5). (Cf. also the association between prophesying and music making in Ex. 15:20f., which refers to Miriam as a *nᵉḇî'â*, "prophetess," and describes how she led the women in singing, music making, and dancing.) A. Jepsen (pp. 5-11) and R. Rendtorff (*TDNT*, VI, 797-99) held that the hithpael forms of *nāḇā'* (mostly in earlier texts, but also of false prophecy in Jer. 14:14; 23:13) expressed ecstatic behavior while the niphal denoted the prophet's speech. But these tendencies do not occur with enough consistency to permit such a generalization.

The noun *nāḇî'* is the most common designation of a male prophet. the feminine form *nᵉḇî'â* is sometimes used of a female prophet (e.g., Ex. 15:20; 2 K. 22:14; Neh. 6:14; Isa. 8:3; *see also* PROPHETESS). The plural *nᵉḇî'îm* is used to describe groups of prophets, true and false prophets, or male and female prophets operating individually. Deborah, the Israelite judge, diviner, charismatic leader, and singer, is called a *nᵉḇî'â* in Jgs. 4:4. The "sons of the prophets" (*bᵉnê-hannᵉḇî'îm*) were primarily associated with Elisha (except in 1 K. 20:35). These prophets considered themselves servants of Elisha (2 K. 2:16; 4:1; 6:1-3; 9:1-4), and although some were married and had children (cf. 4:1), they seem to have lived together as a group some of the time (4:38-44; 6:1). Elisha taught them (2 K. 4:38), and they delivered messages that God gave him (9:1-4). At least one received a prophecy directly from God (1 K. 20:35). The function of these prophets — and that of the "bands of prophets" that existed two hundred years earlier in Samuel's time — is not very clear. Because so little is known about these prophetic groups, much hypothetical reconstruction has developed concerning the nature of their prophetic gifts (see III.D below).

The role of the *nāḇî'* is clarified in the relationship between Moses and Aaron. Because Moses refused to speak to Pharaoh, Yahweh appointed Aaron to be his *nāḇî'* (Ex. 6:28–7:2). Moses himself is called a *nāḇî'* because God spoke through him (cf. Nu. 12:1f., 6-8). The prophets were persons who spoke the words that God put in their mouths (Dt. 18:18-22); they were messengers (see C. Westermann, pp. 98-128) who reported God's words, often saying, "Thus says the Lord, the God of Israel" (Jgs. 6:8; 1 K. 11:29-31; 2 Ch. 34:23), or "Thus says the Lord" (2 S. 24:11f.; 1 K. 20:13; 2 K. 20:1; 2 Ch. 12:5; 21:12). Other texts speak of the word of the Lord coming to a prophet (1 K. 16:7, 12; 2 K. 14:25; 2 K. 24:2; 2 Ch. 29:25). The prophetic books record the oracles that God revealed to some of the prophets.

Some prophets wrote books (1 Ch. 29:29; 2 Ch. 9:29; 12:15; 13:22; 26:22; 32:32; Jer. 36:1-6), while others were counselors to kings (1 S. 22:5; 2 S. 24:11; 1 K. 1:8; 22:5-9; 2 K. 22:12-20; 2 Ch. 25:15f.; 32:20; 34:22-28; Jer. 37:17). God is said to have spoken His word to most of the prophets, but to some He gave dreams and visions (cf. Nu. 12:6; Dt. 13:1-5 [MT 2-6]; Ezk. 1; Jer. 23:25; Dnl. 7:1f.). The prophets delivered both positive and negative messages, and some (e.g., Ezekiel) used drama to make their message understood.

C. Related Titles. The prophet was not the only messenger or spokesman with a supernatural message, so it is important to distinguish between the prophet and those involved in related but distinct professions. Balaam was considered a diviner or "soothsayer" (Heb. *qôsēm*, Josh. 13:22) and was offered money for his "divination" (*qesem*, Nu. 22:7), which was intended to bring a curse on Israel. Although Balaam in the end did function as a prophet by speaking the words that God put in his mouth (Nu. 22:35, 38; 23:5, 16, 26), this was a supernatural transformation of his usual methods. His methods were probably similar to those of the diviners who advised the Philistines about how to rid themselves of the plague that came upon them after they captured the ark (1 S. 6:2f.). The prophets sometimes classified the false prophets of Israel as "diviners" (Jer. 27:9; 29:8; Ezk. 13:6-9, 23; Mic. 3:6f.; Zec. 10:2). These diviners did not speak God's words but prophesied lies in God's name (Jer. 29:8f.). They offered the message that the inquirer wanted to hear (Jer. 28:9; Ezk. 13:9f.) and used magical methods to achieve their ends (13:17-23). It is clear that many Israelites listened to the diviners and considered them true prophets.

Other groups include the "astrologers" (Aram. part. of *gᵉzar*) who served as advisors to King Nebuchadrezzar (Dnl. 2:27; 4:7 [MT 4]; 5:7, 11), as well as the "soothsayers" who advised the Israelites (Heb. poel part. of *'ānan*, Isa. 2:6; Mic. 5:12 [MT 11]; "sorceress" in Isa. 57:3). "Sorcerers" (piel part. of *kašāp*) were condemned (Ex. 22:18 [MT 17]; Dt. 18:10), but they were common in Israel (2 Ch. 33:6; Mic. 5:12; Mal. 3:5) as well as in Egypt (Ex. 7:11) and Babylon (Dnl. 2:2; Isa. 47:9, 12). The biblical text does not describe in detail the methods used by these and other false prophets, but it does make clear that they continued to be a threat to the nation and to the true prophets who spoke only the words of God (see II below).

D. Distinctions and Relationships Among Titles. Most scholars make no distinction between the *ḥōzeh* and *rō'eh* (both "seer"), but the continuity or contrast between the "prophet" (*nāḇî'*) and the "seer" is still a matter of great debate. G. Fohrer (*Intro. to the OT* [Eng. tr. 1968], p. 345) associated the seer with Israel's nomadic heritage and the prophet with Israel's traditions during their settlement in the land. O. S. Rankin (*RTWB*, p. 180) understood "seer" to be a broad title given to almost anyone who could understand signs, explain dreams, have visions, or give oracles; the distinctively ecstatic behavior of the prophets marked them off as a separate group. G. Hölscher (p. 125) and many who followed him emphasized the ecstatic nature of all prophets, both the early groups and the major writing prophets. This resulted in a strong distinction between the ecstatic prophets and the nonecstatic seers, who received their insight through visions, dreams, omens, and spirits. This hypothesis has been strongly criticized by scholars such as H. H. Rowley (*Servant of the Lord*, pp. 98-106) and A. Heschel (pp. 344-350) on several grounds: its interpretation of the classical prophets as ecstatics, its overdependence on etymological theories for the meanings of the terms, its insensitivity to biblical evidence identifying various persons as both *nāḇî'* and *rō'eh* (1 S. 9:9) or *ḥōzeh* (e.g., 2 S. 24:11; Isa. 29:10), its assumption of continuity between the heathen Canaanite ecstatic prophets and the Israelite prophets, and its undue reliance on psychological analysis that is not really accessible from present records. The complexity and dynamic development of the prophetic movement argue against any clearcut distinction between the inspiration and central function of the *nāḇî'* and that of the *rō'eh* or *ḥōzeh*. *Rō'eh* was a more popular title during the early history of Israel while

nāḇî' became the preferred title at a later date (1 S. 9:9). "Seer" appears to be the usual title for certain court prophets (1 Ch. 21:9; 25:5; 29:29; 2 Ch. 9:29; 12:15; 19:2), but it is never used of the "sons of the prophets."

In the end, more insight into the prophetic movement is gained by examining the characteristics and functioning of the prophets than by analyzing their titles. The problem of interpreting the various titles is complicated by the later writers' (Kings, Chronicles) use of older, anachronistic texts as sources. Certain titles preserved through tradition remained firm (Nathan was a "prophet," not a "seer"; Samuel was a "seer") but at other times distinctions were blurred. Gad was called "the *nāḇî'* Gad, David's *ḥōzeh*" (2 S. 24:11; cf. 1 S. 22:5); Iddo usually had the title *ḥōzeh* (2 Ch. 9:29; 12:15), but *nāḇî'* is also used (13:22); and Jehu was described as both a *nāḇî'* (1 K. 16:7, 12) and a *ḥōzeh* (2 Ch. 19:2). During the early monarchy there may have been a distinction between a "prophet" and a "seer," but the nature of this difference is not clearly preserved in the canonical text.

II. Prophets in the Ancient Near East.–The biblical references to the "sorcerers" (*mᵉḵaššᵉpîm*) of Egypt (Ex. 7:11) and Babylon (Dnl. 2:2), the "prophets" (*nᵉḇî'îm*) of Baal (1 K. 18:19), the "soothsayers" (*'ōnᵉnîm*, Isa. 2:6) and "diviners" (*qōsᵉmîm*, 1 S. 6:2) of the Philistines, and the "medium" (*baʿᵃlaṯ-'ôḇ*) from Endor (1 S. 28:7-9) signal the existence of individuals who fulfilled functions similar to those of some of Israel's prophets. Since Israel conquered, traded with, and had political relationships with surrounding nations, it is not surprising that these foreign counterparts had a major influence on Israel's false prophets and exerted tremendous pressure on its true prophets. Some have concluded that there was a direct relationship between all of Israel's prophets and their Canaanite counterparts (see G. Hölscher, p. 140), but others have maintained that a broad gulf existed between the method and message of these two very different classes of prophets (A. Heschel, p. 472). A comparative study of the evidence from each of Israel's neighbors reveals both significant differences and important similarities. The similarities explain why the Israelites were so easily led astray by false prophets, while the differences point to the uniqueness and importance of the true prophets who faithfully delivered God's messages.

A. Egypt. Center stage in the Egyptian religion was filled primarily by the pharaoh and the priests who served in the nation's many temples. The Egyptians did not distinguish between prophets and priests, but Egyptologists have traditionally identified the activities of certain priests with prophetic functions. The classes of Egyptian priests included the *ue'b*, who were in charge of drink-offerings and the examination of animal sacrifices for purity; the *cherḥeb*, who recited magical liturgies at temple ceremonies; and the largest class, the *ḥemu neter* ("servants of the god"), who were in charge of the temples and who also gave oracles. The Greeks called the last class of priests "prophets"; although in most respects the term is inappropriate, its use continues in modern literature (see A. Erman, *Life in Ancient Egypt* [Eng. tr. 1894], p. 289).

The oracles given by the "servants of the god" were normally derived from the manipulation of objects or the interpretation of signs. For example, the nodding of the head of the statue of a god might indicate a positive answer to a request (*ANET*, p. 448). The interpretation of dreams was another important means of predicting the future. A dream including the observation of the moon meant that the gods would forgive the dreamer's sins (*ANET*, p. 495). Thutmose IV received a message in a dream that he was to clear the sand away from the sphinx (*ANET*, p. 449). Egyptian interest in dreams is reflected in the significance given to the dream of Pharaoh (Gen. 41) that the diviners (RSV "magician"; Heb. *ḥarṭôm*) could not interpret. These Egyptian divination practices and other magical arts described in the biblical text (Ex. 7:11f., 22; 8:7, 18f. [MT 3, 14f.]; cf. Gen. 44:5, 15) may have influenced the false prophets in Israel. Such practices were strictly forbidden by the Hebrew law and prophets (Lev. 19:26, 31; Dt. 18:10f.; 2 K. 17:17; 21:6; Jer. 27:9). (*See also* DIVINATION II, III.A.)

Only a few Egyptian literary texts come close to fitting the category of prophecy. In the story of "King Cheops and the Magician," the king's son tells his father about Dedi, an old man who seemed to have prophetic insight into the future. Dedi predicted the end of the king's dynasty, and at the end of the text this prediction is verified. This 12th-Dynasty text (Papyrus Westcar) is probably a legend to justify the increased power of the priesthood of Re at Heliopolis rather than a prophecy made in the 4th Dynasty (A. Erman, ed., *Ancient Egyptians* [Eng. tr. 1966], pp. 36-49).

A 20th-Dynasty copy (Leyden Papyrus) of the Middle Kingdom "Admonitions of Ipuwer" condemns Egyptian social conditions in terms reminiscent of the Hebrew prophets, e.g., "Robbery is everywhere. . . . many dead are buried in the river. . . . the desert is spread throughout the land" (*ANET*, p. 441). Ipuwer denounces the kings for permitting such lawlessness and looks forward to the reinstitution of justice and social order. This hope for the future has points of similarity with Hebrew prophetic expectations (justice, joy, an end to fighting, a ruler who cares for his people; see *LAP*, I, 89f.); but it differs in that the Hebrew prophets saw such social evils as rebellion against God and believed that their hope would be brought about through repentance and a divine intervention. There is no indication that Ipuwer's message was inspired by a god; most likely it was composed to praise a new king and criticize his predecessor.

The "Prophecy of Nefer-rohu" purports to tell how Pharaoh Snefru of the 4th Dynasty was entertained by a prophet who predicted that chaos would soon overtake Egypt, but that order and justice would be reestablished when Ameni of Nubia (a reference to Amen-em-hep I, the first king of the 12th Dynasty) became king (*ANET*, pp. 444-46). The so-called prophecy undoubtedly was written as political propaganda to support the rule of Amen-em-hep I (see W. K. Simpson, ed., *Literature of Ancient Egypt* [1973], pp. 234-240). The "Divine Nomination of an Ethiopian King" (*ANET*, pp. 447f.) and the "Prophecy of the Lamb" follow a similar pattern. One text predicts social upheaval followed by a time of peace and stability, and in the other a new king is appointed. Both texts probably functioned as propaganda to support a new king's rise to power (L. Kakosy, *Acta Orientalia*, 19 [1966], 334-356). The late Ptolemaic period produced the "Oracle of the Potter," the "Demotic Chronicle," and other texts that follow the same pattern (C. McCown, *HTR*, 18 [1925], 357-411). All these examples appear to have been created primarily to solidify the power of the pharaoh and to maintain traditional social values. Since only a few texts even claim to be messages from the gods, it appears that divination was the most popular means by which the Egyptians obtained knowledge of the future. These features stand in strong contrast to the Hebrew prophets' frequent condemnation of the contemporary king and their claim to direct revelation from God.

The biblical text (Gen. 41:25, 28, 32, 39) presents Pha-

raoh's dream as a revelation that God had spoken to him. When Pharaoh Neco marched to Carchemish, he claimed that God had ordered him to go to war (2 Ch. 35:20f.); and the Chronicler confirms that God was the source of the message (v. 22). In these instances God spoke directly to the pharaoh without using a prophet or priestly intermediary.

Although some scholars (e.g., H. Gressman, *JTS*, 27 [1925/26], 241-254) have observed parallels between Egyptian and Israelite prophecy, and J. H. Breasted (*Dawn of Conscience* [1933], p. 336) attempted to derive Hebrew messianic expectations from Egypt, there is little evidence for significant Egyptian influence on Israelite prophecy. Although the prophets accused the Israelites of playing the harlot with Egypt (Ezk. 16:26; 23:19), of defiling themselves with the idols of Egypt (20:7f.), and of depending on the military strength of Egypt (Hos. 7:11), there is no sign of prophetic interdependence unless it is in the divination methods used by the false prophets. Similarities of vocabulary in descriptions of chaotic times and of future times of peace are a testimony to the common hopes for security that all people share.

B. Canaan and Syria. Evidence for Canaanite prophetic activity comes from several archeological texts and from the biblical condemnations of Canaanite prophets.

The Egyptian story of "The Journey of Wen-Amon to Phoenicia" (*ANET*, pp. 26-29) contains one of the earliest (1100 B.C.) references to prophetic activity on Canaanite soil. During Wen-Amon's stay in Byblos, where he had journeyed to obtain lumber for the construction of a barge for the god Amon-Re, Zakar-Baal king of Byblos offered a sacrifice to his gods; but during the ceremony the Egyptian god Amon seized control of a young boy and spoke to the king through the boy. This story — an Egyptian story about a Canaanite boy seized by an Egyptian god at a Canaanite temple — may reveal very little about Canaanite prophecy; on the other hand, the frenzy that the boy experienced may in some way be related to the behavior of the prophets of Baal described in 1 K. 18.

An Aramaic inscription of Zakir king of Hamath from the 8th or 9th cent. B.C. (*ANET*, pp. 655f.) describes how the king prayed to Be'elshamayn and was answered through "seers" and "prophets." The message was that the god would save the king from attack by a Syrian coalition. The term for "seer," Aram. *ḥzyn*, comes from the same root as Heb. *ḥōzeh* ("seer"). The term translated "prophet" (Aram. *'ddn*) may mean "answer, give a message," or it may bear some relationship to the family line of Iddo the Israelite seer (2 Ch. 12:15; Zec. 1:1; see J. F. Ross, *HTR*, 63 [1970], 1-28).

The Deir 'allā inscription, although poorly preserved, can be reconstructed to refer to Balaam the son of Beor, a "seer" (Aram. *ḥzn*) of the gods (A. Coquot and A. Lemair, *Syria*, 54 [1977], 193-202). The general tenor of this text agrees with the biblical story of Balaam (Nu. 22–24), but the text's fragmentary nature does not allow for a complete understanding of this seer's functions.

In his inscription, Idrimi of Alalakh reports that during his exile in Emar he used divination through the interpretation of the flight of birds and the inspection of the entrails of lambs (*ANET*, pp. 557f.). Present evidence is insufficient to verify the existence of prophets at Ugarit (A. van Selms, *Ugarit-Forschungen*, 3 [1971], 235-248), but from Ebla comes evidence of *nabi'ūtum*, a class of prophets (G. Pettinato, *BA*, 39 [1976], 49).

The strongest Palestinian influence on Israelite prophecy was apparently the worship of Baal. The praying, dancing, and self-mutilation of the prophets of Baal and Asherah are well-known from the Mt. Carmel contest (1 K. 18), but the biblical text does not present a full explanation of their responsibilities and prophetic role. Jeremiah specifically refers to the prophets of Baal prophesying by Baal (Jer. 2:8; 23:13) but does not indicate the content of their prophecies. Severely injured in a fall, Ahaziah sent to Ekron to inquire of Baal-zebub concerning the possibility of his recovery; but it is not known whether he expected an answer through a prophet of Baal (2 K. 1:2-6, 16). When the Philistines suffered a plague after capturing the ark of God, they approached only the priests (of Dagon) and diviners for advice (1 S. 6:2).

The Balaam oracles in Nu 22–24 include a mixture of divination and true prophetic activity. Balaam was known to the Moabites and Israelites as a "soothsayer" (*qôsēm*, Josh. 13:22) who could pronounce curses for a fee. He used omens and the sacrifice of animals on a high place of Baal (Nu. 22:7f., 40–23:5, 23, 28–24:1), but in spite of these divination rituals God put His words in Balaam's mouth (22:20, 25; 23:5, 12, 16, 26; 24:13). His message was called an "oracle of him who hears the words of God, who sees the vision of the Almighty" (Nu. 24:4; cf. v. 16); thus his vocabulary and source of information were identical to those of the Hebrew prophets.

In contrast to the meager evidence for parallels between Israelite and Egyptian prophetic activity, the Canaanite and Syrian prophets present many similarities to Israelite prophets. Unlike their Egyptian counterparts (who were actually priests), the Canaanite and Syrian prophets are sometimes called *nᵉḇî'îm* in the OT, and corresponding titles are used in their own literature. They saw themselves as messengers of the gods, used vocabulary that is often identical to that of the Hebrew prophets, and sometimes deceived the Israelites by their messages. Many Israelite prophets were negatively influenced by Canaanite prophets; but the rejection of the religious practices of the surrounding nation by the Hebrew law and prophets prevented these practices from becoming a normative part of Hebrew prophetic tradition (Lev. 18:3, 24-30; 20:23; Dt. 12:30f.; 13:1-5 [MT 2-6]; 18:9-15; Ezk. 11:12).

G. Hölscher held that the ecstatic characteristics of Israelite prophecy (which he viewed as its essential ingredient) were borrowed from Canaanite neighbors in Syria and Asia Minor because he found no evidence of ecstatic experience in Assyria or Babylon. Following Hölscher, A. Jepsen proposed that a group of ecstatic prophets arose in Israel under Canaanite influence because the temple personnel had limited the oracular use of the ephod to themselves. T. J. Meek and H. Knight adopted similar positions. The discovery of the Mari Letters, however, has shown that Mesopotamian "prophets" had much in common with Israelite prophets, including ecstatic experience of a less uncontrolled type than that found in Canaan. Thus Hölscher's position that Israelite prophecy was borrowed from a Canaanite source is seriously undermined.

C. Mesopotamia. The Mesopotamian scribal practice of recording all types of omens and signs has enabled archeologists to recover a sizable quantity of tablets that explain how the Mesopotamian diviners and prophets from the Old Babylonian period (1894-1595 B.C.) made their predictions. Three groups of over a hundred tablets each, known as the *šumma ālu, šumma izbu*, and the *enūma Anu Enlil*, record omens explaining the significance of the actions of animals and humans and the meaning of malformed births (R. R. Wilson, pp. 91-97). The will of the gods could also be learned by interpreting the design of oil drops on water, the patterns of rising smoke from an incense burner, the arrangement of the entrails of animals, the movement and interrelationship of the stars (E. Reiner, *Babylonian Planetary Omens* [1975]), and dreams (A. L. Oppenheim, *Interpretation of Dreams in the Ancient Near*

East [1956]). These divination rituals, which were the common method of communicating with the divine powers in the world, were performed by the *bārû* priests. The *bārû* ("the one who sees") priest inquired of the gods and asked them to write their answer on the oil, the smoke, or the entrails of an animal so that the message could be understood and communicated by the priest. These diviners gave the king advice on the affairs of state and particularly on matters of military significance.

The excavation of Mari (Tell el-Ḥarîrī) resulted in the discovery of about twenty-eight "prophetic letters" in the palace of the Amorite dynasty (18th cent. B.C.). The early texts, published before 1967, are concerned primarily with the king's responsibility toward certain temples; but texts published later are concerned with the impending threat of defeat by Hammurabi king of Babylon (*ANET*, pp. 623-632). The "prophets" who speak in the Mari Letters include both men and women who claim to have received a divine message from Adad or Dagon; frequently they quote what the god said. In some instances their messages were public, but many appear to have been private communications. Professional "prophets," as well as laymen who had no cultic function, received divine messages instructing the king about what he should do, warning him of imminent doom, and promising blessing if he performed the will of the gods (H. B. Huffmon, "Prophecy in the Mari Letters," in E. F. Campbell and D. N. Freedman, eds., *Biblical Archaeologist Reader*, III [1970], 199-223).

Among the oracular speakers in the Mari Letters are the *āpilu* (or *āpiltu*), "the one who answers." While the etymology suggests that the *āpilu* gave answers to questions asked of the gods, there is no evidence that they functioned in this way. Some letters relate to a cultic context, but the *āpilu* do not appear to have been temple officials. Several came from outside Mari (Aleppo, Sippar), and their concern was primarily to obtain the king's support for their own local temples or to speak a judgment against a foe of the king. These oracles against foreign nations function as an assurance of salvation for the king of Mari in a setting somewhat similar to that found in the OT.

Three Mari texts refer to *assinnu*, temple personnel who danced, sang, and sometimes played the role of the opposite sex during festivals (it is unlikely that they were homosexuals or cult prostitutes). The Era Epic and texts much later than those from Mari connect the *assinnu* with the worship of Ishtar (Annunitum). Their oracles related to the security of the king of Mari.

A third group was the *muḫḫû* (*muḫḫūtu*), who are frequently interpreted to have been ecstatics. The coherent messages that the *muḫḫû* spoke in their trances cannot be reconciled with the view that they were some sort of delirious frenzied mantics (W. L. Moran, *Bibl.*, 50 [1969], 27). The *muḫḫû* were peripheral temple officials in the cult of Ishtar in Mari or were related to Dagon temples outside Mari. Their oracles dealt primarily with gaining the favor of the king.

Thirteen of the "prophetic letters" do not identify the speaker of the oracle. Many of these were private citizens (eight were women, others servants) who received visions or dreams concerned with a personal request for the king's blessing. A few of the letters relate to battle plans and the building of temples. To test and control spontaneous "prophetic" pronouncements, particularly those made in public, divination on the hair and the fringe of a garment was required of all except persons of established social status.

C. Westermann (pp. 115-128) called attention to the similarities between the messenger function of the Mari and Israelite prophets. F. Ellermeier (*Prophetie in Mari und Israel* [1968], pp. 190-93) criticized Westermann's messenger interpretation by pointing out that many Mari texts do not explicitly state that a god sent the prophet. Nevertheless, the prophets of Mari, like those of Israel (cf. Ex. 7:16; Isa. 6:8; Jer. 26:12), frequently claimed that a god had sent them and began their oracles with words such as "This is what Shamash said," or "Dagon spoke to me saying." In both settings the affairs of the king and state policy were a subject of oracles, and both nations had professional prophets, temple personnel, and private individuals who spoke the word of a god. M. Noth (*Laws in the Pentateuch* [1966], pp. 185-88) concluded that the Mari prophets were actually part of the prehistory of Israelite prophecy, and A. Haldar (pp. 108-126) identified the "seer" with the *bārû* and the prophet with the *muḫḫû*. According to this view, the primary difference between the prophets of the two nations lay in the content of their messages. The Israelite prophets' demands for ethical responsibility and theological purity were totally foreign to the prophetic messages in the Mari Letters. Westermann held that one distinction between these groups was that the Mari texts, unlike the Hebrew prophecies, had no unconditional statements of blessing or judgment. This conclusion must now be tempered by the absolute statement, "I shall put an end to his city" (*ANET*, p. 632), which has been found in a more recently translated text (see J. F. Craghan, *Biblical Theology Bulletin*, 5 [1975], 46).

During the Neo-Assyrian period of Esarhaddon (680-669 B.C.) and Ashurbanipal (668-633 B.C.), certain past forms of divination and "prophecy" continued while new prophetlike individuals were introduced (*ANET*, pp. 605-607). Inscriptions refer to the *maḫḫû* who gave omens, dreams, and positive oracles to both these kings. J. R. Kupper (*ARM*, III, 116) identified the *maḫḫû* with the earlier *muḫḫû*, but A. Malamat ("Prophetic Revelations in New Documents from Mari and the Bible," in *SVT*, 15 [1966], 210) distinguished between these groups. The *maḫḫû* of the Neo-Assyrian period appear to have been more influential both in the royal court and in the temple worship than were the *muḫḫû* at Mari.

New figures included the *raggintû*, women who delivered divine messages for the goddess Ishtar or Ninlil, the *šabrû* (probably closely related to the *bārû*-priest), who in a dream received a vision from Ishtar of Arbela instructing Ashurbanipal about military matters (A. Haldar, pp. 17-21; *ANET*, p. 606), and the *šēlūtu*, women who had a cultic function but also received oracles from Ishtar of Arbela giving assurances to Esarhaddon (*ANET*, p. 605).

The title "prophecies" has sometimes been applied to a group of Akkadian texts that were not given orally, including the Marduk, Shulgi, Uruk, and Dynastic apocalypses (W. W. Hallo, *IEJ*, 16 [1966], 231-242). These texts "predict" the appearance of a new king much like several of the Egyptian prophecies. They were likely produced "after the fact" as propaganda to support the political and religious policies of a new monarch (R. R. Wilson, pp. 119-123).

This survey has pointed out several parallels between the prophetic activity of Israel and that of its neighbors. These parallels have led some scholars to interpret Israelite prophecy as heavily dependent on the influence of Egyptian, Canaanite, or Mesopotamian prophecy. Both Israelite and non-Israelite prophets were messengers of the gods, spoke to political and social issues of their day, used many similar terms and concepts (see A. Malamat, "A Mari Prophecy and Nathan's Dynastic Oracle," in J. A. Emerton, ed., *Prophecy* [*Festschrift* G. Fohrer; *BZAW*, 150, 1980], pp. 68-82), and performed many comparable functions. But despite the general similarities, an investigation

into details makes apparent the vast gulf between Israelite and non-Israelite prophecy. In contrast to foreign prophecies, divination was not the approved method of prophetic communication in Israel, and the prophets' function was not focused on preserving or supporting cultic or royal institutions. Foreign prophecies did not use God's holiness and justice as their criteria for measuring society; nor was Israel's privileged covenant relationship with God paralleled in other nations.

III. The Prophet's Connection with Israel's Culture.– The Israelites who received and delivered the prophetic word of God functioned in a variety of social contexts. Some were priests as well as prophets; others appeared before the royal court and gave advice to the king but had no official responsibilities in the temple. A few wrote structured literary pieces in magnificent style, while others seemed to behave like madmen with no self-control. Even the messages of the prophets varied tremendously; one argued on the basis of the covenant and the law, while another ignored these and spoke in language much closer to wisdom literature. The variety of prophetic roles within Israel's culture has complicated attempts to fit the prophets into any category that would limit their activity to one institution, method, or message.

A. Temple Worship. In the late 19th and early 20th cents. it was commonly held that the prophets acted in direct opposition to the priests (see J. A. Bewer, *Literature of the OT in Its Historical Development* [1922], p. 267). J. Wellhausen (p. 423) used this basic antithesis between the moral teachings of the prophets and the ritual of the priests as a major key for interpreting the evolutionary development of Israel's religion. This view was widely accepted on the basis of several prophets' criticisms of Israelite temple worship (cf. Am. 5:21-25; Isa. 1:10-15; Hos. 6:6; Mic. 6:6-8; 1 S. 15:22; Jer. 6:20; 7:22f.). Nevertheless, this interpretation has undergone considerable criticism and modification. Various scholars have demonstrated that the prophets were not primarily against the sacrificial system or the priests; rather they opposed a false reliance on ritual that was devoid of any concern for moral or spiritual vitality (see C. F. Whitely, pp. 65-67; H. H. Rowley, *From Moses to Qumran* [1963], pp. 116f.). Isaiah condemned those who came to sacrifice with "their hands full of blood" (Isa. 1:15), and Jeremiah demanded that the worshipers at the temple "amend their ways" (Jer. 7:5). The prophets opposed the cult because it no longer represented the ethical nature of true worship required by God. Sacrificial ritual had replaced the fear of God; ignorant ceremonialism had obscured a true knowledge of Yahweh (see R. E. Clements, *Prophecy and Covenant*, pp. 93-102). The prophets did not call for the abolition of the temple worship, nor did they claim to be creating a new system of spiritual values. Instead they called their people back to the traditions upon which the cultic practices were based — traditions that God had instituted early in the nation's history.

Later studies of the relationship of the prophets to temple worship and personnel have reversed the earlier trends, and some scholars have attempted to tie the prophets directly to the temple staff. This movement was initiated by G. Hölscher, who concluded that the early bands of prophets (1 S. 10:5-12) were part of the cultic staff at the high places (p. 143). S. Mowinckel introduced the idea that the classical writing prophets were also part of the temple personnel (*Psalmenstudien III: Die Kultprophetie und prophetische Psalmen* [1923]). He based this conclusion on the theory that the first-person speeches by Yahweh in several Psalms (e.g., Pss. 82, 110) were divine answers — given by a cultic official who had the gift of prophecy — to requests made in the temple worship. Mowinckel's theory was derived in part from his comparative analysis of the role of the "prophets" in Mesopotamia and Greece. A. R. Johnson agreed with Mowinckel's position on the prophet's role as a spokesman for God within the temple. He constructed the following history of the temple prophets: first they were criticized by the writing prophets for misuse of sacrifices; later they were downgraded to temple singers because they had misled the people to believe that Jerusalem was secure from Babylonian attack (pp. 60-75).

The OT evidence that was marshalled to support this general view of the cultic prophets included the following events: Samuel received the word of Yahweh at the tabernacle at Shiloh (1 S. 3:1-14, 19-21); he officiated at a meal at a high place at Ramah (9:6-24); the company of prophets came from a high place of worship (10:5); Nathan was consulted about building the temple (2 S. 7:4-17); God advised David to build an altar at the threshing floor of Araunah (24:18-25); Elijah offered sacrifices on Mt. Carmel (1 K. 18:25-40); Amos prophesied at the altar at Bethel (Am. 7:10-17); and Jeremiah preached in the temple (Jer. 7; 26). Additional evidence was derived from passages that mention the prophets and priests together (2 K. 23:2; Isa. 28:7; Jer. 2:26; 5:31; 8:10; 13:13; 23:11; Lam. 2:20), that refer to the prophets as having rooms in the temple (Jer. 35:4), and that imply a custom of consulting a prophet on the sabbath (2 K. 4:23).

Supporting and building upon these conclusions, A. Haldar (p. 124) equated the Mesopotamian *bārû* diviner-priests with the Israelite seers, and the *muḥḥû* ecstatic oracular speakers with the Hebrew prophets. This extreme position was supported from biblical passages indicating that the prophets used divination (Mic. 3:11; Jer. 14:14; Ezk. 13:9). But other scholars have recognized that these texts deny rather than confirm Haldar's position, for they condemn the false prophets for the use of divination. Haldar's theory actually reduced all prophets to the status of diviners, and even Mowinckel rejected Haldar's attempt to force Israelite prophecy into the mold of Mesopotamian categories. A more common approach that avoided Haldar's excesses was to draw a sharp distinction between the classical writing prophets and the popular bands of prophets who were classified as cultic prophets (see A. Neher, p. 206). Unfortunately, this simple division was an oversimplification of the complex prophetic movement. Another solution was to connect the false prophets with the cultic prophets and to divorce the true prophets from the temple worship (see J. Jocz, *Spiritual History of Israel* [1961], p. 69). But if this were the criterion for defining false prophets, it is surprising that Deuteronomy, Kings, and Ezekiel never mention it as the key factor. Micaiah claimed that the false prophets were misled by a lying spirit sent from God (1 K. 22:19-23), and Jeremiah concluded that they spoke out of their own imagination (Jer. 23); neither points to an illegitimate connection to the cult (*see* PROPHECY, FALSE).

It is clear from the OT that some prophets were present at temple events, but this does not mean that they had responsibilities within the system of temple worship. Samuel exercised the priestly function of sacrificing because he was a priest as well as a prophet, but Amos's negative prophecy at Bethel does not imply that he was a temple official. Isaiah was called while he was at the temple (Isa. 6:1-6), and Jeremiah prophesied the destruction of the nation at the temple (Jer. 7; 26), but there is no evidence that either belonged to the temple staff. Josiah sent Hilkiah the priest to consult Huldah (2 K. 22:14-20), but as Lindblom (p. 210) noted, she was apparently independent of the temple. G. Reventlow's conclusions about

the cultic associations within Jeremiah seem to go far beyond the textual support (*Liturgie und prophetisches Ich bei Jeremia* [1963], pp. 24-77). Jeremiah's reference to the quarters for the prophets in the temple (Jer. 35:4) does not mean that they were cultic prophets, for similar quarters were provided for the princes, who clearly were not temple personnel.

Some scholars have concluded that there were no cultic prophets in Israel (B. D. Eerdmans, *Religion of Israel* [1947], p. 141; L. J. Wood, *Prophets of Israel* [1979], p. 78). This position ignores the fact that the temple singers were appointed by David to prophesy by singing (1 Ch. 25:1-5; 2 Ch. 35:15) and that Jahaziel, a Levite, prophesied at the temple in answer to Jehoshaphat's prayer (2 Ch. 20:14-17). Since the superscriptions to certain OT Psalms ascribe their composition to Asaph, Jeduthun, or Heman (cf. Pss. 50, 39, 62, 73–83, 88), it is difficult to deny some prophetic activity in the temple. Heman is called "the king's seer" (1 Ch. 25:5), and Jeduthun (or all three singers, if the plural of the LXX is accepted) is also called a "seer" (2 Ch. 35:15). The Chronicler also substituted "Levites" (34:30) for the "prophets" (2 K. 23:2) who participated in Josiah's reform. D. L. Petersen (pp. 55-87) demonstrated the importance of the Levitical prophets in Chronicles; he concluded that the Chronicler had depicted the Levitical singers of the monarchic period as prophets in order to enhance the position of the Levitical singers in the second temple period. H. H. Rowley suggested that the earlier temple prophets had been reduced in status to the rank of Levitical singers in the exilic era (*Worship in Ancient Israel* [1967], p. 174). But if the Chronicler's report that David instituted the Levitical singers (1 Ch. 15:1-22; 25:1-6; 2 Ch. 29:25-28) is historically accurate, then they could hardly be identical to a late group of demoted cultic prophets. It is probably best to understand cultic prophecy by temple officials as having been limited to the temple singers who functioned throughout the temple era. Since the band of prophets that came down from the high place (1 S. 10:5) were playing music and prophesying (probably singing praises to God), it is possible that these early prophets performed the duties of the Levitical singers before the time of David.

A related issue is the question of whether certain OT books were used as temple liturgies. Some scholars (Balla, Eaton, Hentschke, Humbert, Mowinckel, and Lindblom) have proposed that Habakkuk was used in temple ceremonies. Similar claims have been made for Joel (Engnell, Kapelrud, and Mowinckel), for Nahum (Eaton, Hentschke, Humbert, and Mowinckel); and for Zephaniah (Eaton and Gerlemann); see H. H. Rowley, *From Moses to Qumran* (1963), pp. 132-38. Others connect Obadiah, Isa. 24–27, Malachi, and other prophetic texts to temple ceremonies. The passages frequently show a close connection with the Psalms, and some may have been modeled after these earlier compositions. It is methodologically unsound, however, to conclude that all similar forms have identical cultic functions. It appears unlikely that many of these books were ever used as liturgies in the temple for enthronement festivals or other covenant renewal ceremonies.

B. The Monarchy. Although some prophets delivered their messages in the temple, others spent far more time delivering God's word to the kings of Israel. Traditionally, scholars have given the negative prophetic statements about kings a major role in defining the relationship between prophets and kings. Much significance has been attached to the "antimonarchial" texts that describe Samuel's opposition to Saul's kingship (cf. 1 S. 8; 10:17-27; 11:12-14). The conflict between the positive and negative attitudes displayed in the text has often been resolved either by assigning an early date to the positive texts and a late date to the negative texts (Wellhausen, p. 245), or by subsuming Samuel's grudging acceptance of the monarchy under his predominantly negative attitude. An antagonistic relationship between prophets and the monarchy is evident throughout the nation's history: the very request for a king displeased Samuel (1 S. 8:6); Nathan judged David for his sin against Uriah and Bathsheba (2 S. 12:1-14); Ahijah announced that the kingdom would be torn from Solomon (1 K. 11:29-39) and from Jeroboam (14:5-16); Jehu prophesied the fall of Baasha's reign (16:1-4); Jezebel killed the prophets of God (18:4; 19:2); Elijah predicted the end of Ahab's rule (21:17-24); Micaiah was hated by Ahab (22:8, 17f.); Amos foretold the approaching end of Jeroboam II (Am. 7:10-17); Hosea spoke out against kings (Hos. 1:4f.; 7:16; 8:4); Isaiah announced God's judgment on Ahaz (Isa. 7:10, 17), the king of Assyria (10:12), the king of Babylon (14:4-23), and Hezekiah (39:5-7); and Jeremiah predicted God's judgment on Zedekiah (Jer. 21:3-7; 27:12-15; 32:1-5; 34:1-5) and Jehoiakim (22:18-23; 36:10-23, 27-31). From this sampling it is clear that the prophets had much to do with kings, but that this association was often antagonistic. The royal court does not appear to have been the social location or the home of most of the prophets.

Comparative studies of the social setting of the prophets in other nations have led some scholars to reevaluate the prophets' relationship to the royal court. A. Haldar observed that in Mesopotamia the sacred king was the leader of an association of court prophets, and he hypothesized a similarly close relationship between the Israelite prophets and kings (pp. 51, 74, 137-140). Comparisons have also been made between Israelite prophecy and the Mari prophecies, which were addressed to kings. W. Holladay showed how the manner of speaking used by royal messengers in the king's court influenced both Israelite and non-Israelite prophets (*HTR*, 63 [1970], 31), while K. Baltzer argued that the Hebrew prophets' relationships to their kings was analogous to the relationship between the Egyptian vizier and the pharaoh (*HTR*, 61 [1968], 574). H. B. Huffmon theorized that the role of the judge in premonarchial Israel was redistributed into the roles of the prophet, the charismatic leader, and the king, the leader of the army ("The Origins of Prophecy," in F. M. Cross, *et al.*, eds., *Magnalia Dei: The Mighty Acts of God* [*Festschrift* G. E. Wright; 1976], p. 178); thus the roles of prophet and king were closely related from the beginning. D. L. Petersen (pp. 2f.) followed the views of F. M. Cross (*Journal for Theology and the Church*, 6 [1969], 157-165) and P. Hanson (pp. 17f.), who concluded that prophecy emerged as an office with the rise of the monarchy and ended with the final removal of the Davidic house from the throne. The locus of classical prophecy was thus tied directly to the political institution of the monarchy. Within this political-religious setting the prophets had a dual role: to be a messenger for God and a messenger for the king.

Biblical evidence that has been cited as support for placing Hebrew prophets within the royal court includes the following: the prophet Samuel anointed Saul (1 S. 10:1) and proclaimed him king (v. 24; 11:14f.); Elijah anointed Jehu and Hazael (1 K. 19:15f.); Nathan confirmed God's choice of the Davidic dynasty (2 S. 7:1-17) and anointed Solomon (1 K. 1:32-34); Gad and Heman were described as King David's seers (2 S. 24:11; 1 Ch. 21:9; 25:5; 2 Ch. 29:25), and Asaph prophesied "under the direction of the king" (1 Ch. 25:2). Some believe that the four hundred prophets of Ahab were court prophets (1 K. 22:6). Furthermore, the messianic prophecies of a future king from the line of David presuppose a positive attitude toward king-

ship (Jer. 23:5f.; 33:14-16; Ezk. 37:15-28). In fact, even the negative prophecies against evil kings demonstrate the close association between the prophets and the kings.

Although these more recent studies have drawn attention to one of the significant roles of the prophets, the proposed reconstruction of Israelite prophecy on the basis of comparative evidence is not totally acceptable. The Mari correspondence, e.g., does not show as close a relationship between prophets and kings as has been claimed, for only one text was written by a court prophet. Most of the Mari prophecies dealing with political-religious affairs came from individuals who were not members of the royal court.

The biblical evidence points to a more complex relationship between Israelite prophets and kings. The Israelite prophets primarily represented the sovereign rule of Yahweh rather than the authority of an earthly king (see G. Mendenhall, *Tenth Generation* [1973], pp. 70, 87). The establishment of a sovereign state with its earthly king threatened the concept of the kingship of Yahweh, the true judge, warrior, and ruler of the nation (G. V. Smith, *Trinity Journal*, 3 [1982], 18-38). The conflict within the pro- and antimonarchial texts in Samuel recall the divergent ideological streams within the nation at that time (T. Ishida, *Royal Dynasties in Ancient Israel* [1977], pp. 26-54). The recognition of Yahweh's rule — which was the interest of the prophets — limited the earthly king's power by requiring that he be chosen and anointed by God through a prophet, by granting dynastic appointment on the basis of obedience, and by regulating the king's military efforts through divine oracles.

When the earthly king operated within the divine will, the prophet functioned as an intercessor or as a messenger of God to the king. The Davidic prophets and record keepers, Nathan and Gad, fall into the category of true court prophets (1 Ch. 9:29); Iddo, Shemaiah (2 Ch. 12:15), Hanani (16:7), and Jehu (19:2) may have been of the same type. But direct textual evidence for a social setting in the royal court is lacking for most of the classical prophets. Isaiah went to the Upper Pool to speak to Ahaz (Isa. 7:3), Elijah and Elisha spent most of their time traveling all over the nation, and Josiah sent messengers to consult Huldah at her home (2 K. 22:12-14 par. 2 Ch. 34:20-22). Kings who desired to know God's will often went to visit the prophets (cf. 2 K. 3:11f.), summoned prophets to appear before them at the royal court (cf. 1 K. 22:6-9), or used messengers to carry messages between them and the prophets (cf. 2 K. 19:2, 20). Prophets frequently spoke at public meetings or to individuals without having any direct association with the king's court. W. Brueggemann (pp. 28-43) has demonstrated how radically the prophets reacted against the imperial economic and political oppression initiated by Solomon. The prophets pointed out the despair within the monarchial system and energized the people's imagination concerning God's message of hope and freedom for mankind. The message was primarily directed to the people of the nation, but it included strong criticism of the monarchy. The variety of settings in which the prophets functioned indicates the complexity of the prophets' relationship to the monarchy. Although David and a few other kings used court prophets to guide them in submission to God's kingship, most prophets cannot be classified as court prophets.

C. Wisdom. Prior to 1950 little significance was placed on the relationship between wisdom and the prophets. Some thematic continuity was recognized; but since wisdom literature was dated to the postexilic period, it was assumed that the teachings of the prophets were used by the wisdom writers (see W. O. E. Oesterley, *Book of Proverbs* [*WC*, 1929], p. lxi). Although O. S. Rankin (*Israel's Wisdom Literature* [1936]) had earlier maintained that wisdom influenced the prophets, the archeological discoveries of new wisdom texts and the pivotal study of J. Lindblom ("Wisdom in the OT Prophets," in M. Noth and D. W. Thomas, eds., *Wisdom in Israel and in the Ancient Near East* [*SVT*, 3; 1955], pp. 192-204) introduced a new understanding of the relationship between prophecy and wisdom.

The publication of Mesopotamian and Egyptian wisdom texts prompted a spate of comparative studies. The biblical text itself made the comparative judgment that Solomon's wisdom surpassed that of all the peoples in the East and all of Egypt (1 K. 4:30 [MT 5:10]; cf. 5:12 [MT 26]; 10:1-24). Scholars gave special attention to several parallels between Egyptian and Israelite wisdom literature: the similarity of Egyp. *ma'at* ("order, justice") to God's justice and order described in Proverbs, nearly identical wisdom metaphors about gods and human beings, similarities between the sayings of Amenemope and Prov. 22–24, and a multitude of less exact comparisons (see E. Würthwein, "Egyptian Wisdom and the OT," in J. Crenshaw, ed., *Studies in Israelite Wisdom* [1976], pp. 113-133). Since Solomon had friendly relations with the Egyptian royalty (cf. 1 K. 3:1), Egyptian educational and administrative practices were viewed as a likely source of wisdom contact with Israel. The sophisticated language of many Hebrew sayings, the positive statements about the monarchy, and the identification of some collections of proverbs with royal figures all supported the position that Hebrew wisdom literature was the product of a royal "Wisdom School" in Jerusalem that was designed to train scribes and officials to administer the empire.

Against this background, Lindblom proposed that Israel's prophets as well as its sages were aware of foreign wisdom writings. He found little evidence of wisdom in the prophets except in Jeremiah, which uses various literary forms (parable, proverbs, similes, metaphors) common in wisdom texts. J. Fichtner ("Isaiah Among the Wise," in J. Crenshaw, ed., *Studies in Israelite Wisdom*, pp. 429-438) observed that wisdom and prophecy shared the same positive admonitions for righteous living, had similar condemnations of disrespect for elders and the use of false weights, were both critical of the cult, and used similar literary styles of expression. Fichtner did not find wisdom material in pre-Isaiah books, but he pointed out numerous examples of proverbial wisdom in Habakkuk, Jeremiah, and particularly Isaiah. He pointed to Isaiah's use of metaphors (5:1; 28:23), proverbs (1:3; 7:22; 10:15), phrases like "wise in his own eyes" (5:21), and sayings about fools (28:8). He called attention to Isaiah's concern for the poor (11:4) and to the fact that Hezekiah's scribes (cf. Prov. 25–29) collected proverbs during Isaiah's lifetime. He also identified a strong conflict between the prophets and the secular wisdom of the political courtiers who claimed to be wise themselves (e.g., Isa. 5:21; 29:14) instead of recognizing God as the source of true wisdom (cf. 28:29; 31:2). J. W. Whedbee (*Isaiah and Wisdom* [1971]) expanded Fichtner's analysis of Isaiah's use of wisdom forms of speech, and S. Terrien ("Amos and Wisdom," in B. W. Anderson and W. Harrelson, eds., *Israel's Prophetic Heritage*, pp. 108-115) made a similar study of Amos's use of numerical sayings (1:3, 6, 9, 11, 13), rhetorical questions (5:25; 6:2, 12), cause-and-effect sequences (3:3-8), and vocabulary associated with wisdom literature.

Fichtner's insight into the conflict between secular wisdom and prophecy was developed by W. McKane, who drew a sharp distinction between the early wisdom of the royal court officials who were primarily concerned with political affairs and the ethical wisdom taught by the proph-

ets. He saw a fundamental conflict between the word of God that the prophets received and the secular anthropocentric insight of the nation's politicians. He argued that the prophets used wisdom vocabulary and style to denounce secular wisdom. R. E. Clements (*Prophecy and Tradition*, pp. 75f.), on the other hand, rejected McKane's denial of an ethical base to Israel's wisdom tradition and opposed his claim that wisdom and prophecy were necessarily conflicting institutions.

H. W. Wolff concluded from his study of wisdom in Amos and Micah (*Amos, the Prophet: the Man and His Background* [Eng. tr. 1973], p. 37; "Micah the Moreshite — The Prophet and His Background," in J. G. Gammie *et al.*, eds., *Israelite Wisdom* [*Festschrift* S. Terrien; 1978], pp. 77-84) that the roots of Israelite wisdom were to be found in the folk ethos that developed in tribal society well before a wisdom school was establshed in the royal court. This clan wisdom was largely ethical and derived from family life. Wolff pointed to Joab's use of a wise woman from Tekoa (2 S. 14:1f.) and references to Edom's reputation for wisdom (e.g., 1 K. 4:31 [MT 5:11]; Job 2:11; Jer. 49:7; Ob. 8) as evidence of wisdom traditions outside the royal court. He held that Amos's use of numerical sayings (Am. 1:3–2:6), logical reasoning (3:3-8), woe speeches (5:18; 6:1), and wisdom vocabulary indicate his contact with the clan wisdom at Tekoa. J. Crenshaw (*ZAW*, 79 [1967], 42-52) dismissed most of Wolff's evidence for clan wisdom in Amos, contending that almost all of it can be found in other, nonwisdom settings. Crenshaw suggested that the theophany motif in the doxologies (4:13; 5:7-9; 9:5f.) may represent a more significant sign of wisdom influence, but held that this motif likewise was not predominantly or exclusively related to wisdom literature.

One of the problems that have prevented a more exact understanding of the relationship between prophecy and wisdom is the lack of distinctive criteria for identifying wisdom traditions. R. B. Y. Scott's attempt to produce a list of wisdom vocabulary (*Way of Wisdom in the OT* [1971], pp. 121f.) proved unsuccessful because many of the words he listed appear outside the context of wisdom. The methodological criteria set forth by J. Crenshaw (*JBL*, 88 [1969], 129-142) were more realistic and suggested principles that could be applied to prophetic texts. Studies revealing the complexity of Israel's wisdom movement, including the growth of the varied traditions of clan wisdom, court wisdom, and scribal wisdom, have produced a more concrete understanding of the stylistic and ideological relationship between wisdom and prophecy, and these studies have resulted in a greater appreciation of the rich literary and cultural background upon which the prophets drew in order to communicate the word of God effectively to the various strata within Israelite society.

D. Ecstatic Behavior. Ecstasy has often been associated with the unusual behavior of the early bands of prophets and the abnormal experiences of the classical prophets (i.e., those from the 8th cent. B.C. onward, whose prophecies were written down). G. Hölscher's psychological analysis of prophetic consciousness concluded that all prophets experienced ecstasy. Following Hölscher's lead, many scholars supported and developed the theory that ecstasy was a fundamental part of prophetic experience. The attempt to define ecstasy, however, resulted in sharp differences of opinion concerning the origin of ecstatic experience, the extent to which all prophets experienced the same type of ecstasy, and the effect of ecstasy on the prophets.

The biblical evidence for ecstatic behavior includes the strange behavior of Saul: his being "turned into another man" (1 S. 10:6) when he "prophesied" (hithpael of *nāḇā'*) among the band of prophets (cf. vv. 9-13), his prophesying while lying naked on the ground (19:18-24), and his irrational attempt, while prophesying (RSV "rave," hithpael of *nāḇā'*), to kill David (18:10). The same Hebrew term is used to refer to the leaping, crying, and self-mutilating actions of the prophets of Baal on Mt. Carmel (AV "prophesy"; RSV "rave"; 1 K. 18:29). The evidence also includes Elisha's use of music as a setting for his prophesying (2 K. 3:15), references to prophets as madmen (*mᵉšûgāʿ*) or fools (2 K. 9:11; Jer. 29:26; Hos. 9:7), and the fact that the writing prophets saw visions and performed a variety of strange symbolic acts to communicate God's word.

The source of prophetic ecstatic experiences was usually traced to Canaanite influences, although some scholars believed the phenomenon was of Greek origin.The discovery of the *muḥḥû* prophets in Mari led Haldar to suggest that Israel's ecstatic prophets were related to the Mesopotamian *muḥḥû* ecstatics (see II.C above). J. Lindblom (pp. 1-46) surveyed both modern and ancient prophetic experiences of ecstasy and concluded that ecstasy has been a normative part of prophecy throughout the world for many centuries. The degree of similarity between various ecstatic experiences suggested a common origin for all prophetic activity; e.g., W. R. Smith (pp. 392) observed that the use of music to induce ecstasy was common among the Arabs as well as in Israel (cf. 2 K. 3:15). T. H. Robinson (pp. 40-45) concluded that the writing prophets were ecstatics like the early popular prophets, since both were called *nāḇî'*.

It is true that the writing prophets as well as the early prophets had visionary trances (Isa. 6; Am. 7–8; Ezk. 1:8-10; Jer. 1:11-14), and both types used ecstasy as a sign that they were possessed by the Spirit of God. But the prophetic movement is far too complex to reduce all prophetic experience to one single pattern. One prophet could experience varying degrees of ecstatic possession at different times (e.g., cf. 1 S. 10:6-11 and 19:20-23; Ezk. 1-3 and 20). The Hebrew prophets were individuals, each with a distinct psychological makeup; they were not carbon copies of Canaanite or Mesopotamian prophets or even of other Hebrew prophets. The title *nāḇî'* refers not to the ecstatic behavior that sometimes accompanied inspiration, but to the fact that one was a messenger of God's words (see I.B above). Many prophetic speeches contain no evidence of an ecstatic experience nor any claim that the prophet had received anything but the word of God. This is the objective criterion that identified the prophets, not some stylized behavior pattern. Very few prophets report convulsive seizures or trances; in fact, the phenomenon appears to have been equally rare among both the writing prophets and the early seers and bands of prophets.

S. Mowinckel drew a sharp distinction between the early ecstatic prophets who received the Spirit of God and the later nonecstatic writing prophets who received the word of God (*JBL*, 53 [1934],.199-227). This distinction is unacceptable, however, since Micah (3:8), Ezekiel (11:5), Isaiah (48:16), and Joel (2:28 [MT 3:1]) all recognized the importance of the Spirit's activity in inspiration. It is likewise inaccurate to classify the ecstatics as false prophets (H. Obbink, *HUCA*, 14 [1939], 23-28); for the canonical prophets never condemned the false prophets for their ecstasy but rather for preaching peace and prosperity from their own imagination instead of the repentance that God commanded (cf. Jer. 23).

Among the scholars who have distinguished sharply between the wild, involuntary speech and behavior of Saul and the artistic, clearly reasoned moral judgments of the writing prophets, some have held that the latter group of prophets achieved a much higher mystical union

with God (H. W. Hines, *AJSL*, 40 [1923/24], 37-71) — a union in which the prophet's consciousness was so absorbed into the divine that the two become one corporate personality (see A. R. Johnson, *The One and the Many in the Israelite Conception of God* [1942], pp. 36-38). In its attempt to account for the prophets' overpowering consciousness of being infused with the very thoughts of God Himself, this psychological interpretation has tended to extinguish the individual personalities of the prophets that are so clearly evident in their writings. J. Lindblom, on the other hand, contrasted absorption ecstasy (the "so-called *unio mystica*"), which eradicates the personality of the individual, with "concentration ecstasy," which maintains a distinction between the human and the divine (pp. 106, 299-311). The latter type of ecstasy seems closer to what the Hebrew prophets experienced.

Although the Hebrew prophets were described as "ecstatics" by Philo, some of the rabbis, and the early church fathers (see A. Heschel, pp. 324-350), the assumption that the ecstasy of the writing prophets was analogous to the irrational frenzied ecstasy of the foreign prophets is largely inadmissible. The closest example of comparable phenomena among the Hebrews is the peculiar behavior of Saul when he was among the band of prophets associated with Samuel (1 S. 10:1-13; 19:18-24). Since the semantic field of *nāḇā'* can mean "sing, praise," as well as "prophesy" (1 Ch. 25:1-6), it seems most natural to interpret the prophesying of Saul and the group of prophets as singing praises to God. The second instance of Saul's prophesying among the prophets with uncontrolled ecstatic behavior is left unexplained by the text (1 S. 19:24). According to 18:10f.; 19:9 an evil spirit controlled Saul. Thus it seems most likely that Saul was not one of the prophets (cf. 10:11f.; 19:24); rather he was a man possessed and driven mad by conflicting spiritual powers (J. Sturdy, *VT*, 20 [1970], 210f.).

The ecstasy of the true prophets did not usually display itself in peculiar behavior, for their ecstasy was basically a private experience of the conscious reality of God's presence. Ecstasy as a psychological state was concurrent with but distinct from the reception of God's message. Its importance lay in assuring the prophet that God had spoken. There is no indication, however, that all the prophets' messages resulted directly from ecstatic experiences. Once God's Spirit entered the prophets and filled them with His words, they became messengers of God. The prophets' profound spiritual experiences should not, therefore, be confused with mystical experience, nor with the frenzied and irrational behavior of heathen prophets.

See also ECSTASY.

E. Covenant Law. The authority of the prophets rested on the word of God that they received. God's message was revealed through unusual means in visions and dreams, but later prophets could also depend on earlier pronouncements, well-known wisdom sayings, hymnic material, and legal traditions. Scholars have raised the question whether the prophets were dependent on inherited ideas of covenant and law or were the originators of these concepts. J. Wellhausen and his followers claimed that the prophets were the first teachers of ethical monotheism. This picture of the prophets raised them out of the context of earlier Israelite tradition and set them up to be the creators of Israel's faith. They did not look back to a forgotten Moses who mediated the covenant laws to Israel at Sinai, but derived their knowledge of God from their own human understanding. Wellhausen (pp. 418-420) believed that the law and covenant ideas were not introduced until the reform of Josiah in 621 B.C. Since according to this view the early prophets before 621 B.C. had no knowledge of the law or covenant (see R. H. Pfeiffer, *JBL*, 70 [1951], 2), the classical prophets were the real pioneers of the nation's faith.

These conclusions have been opposed by other scholars (e.g., N. W. Porteous, "The Basis of the Ethical Teachings of the Prophets," in H. H. Rowley, ed., *Studies in OT Prophecy*, pp. 143-156), who have claimed that the prophets inherited their religious traditions rather than creating them. G. Mendenhall (*Law and Covenant in Israel and the Ancient Near East* [1955], p. 19) found little originality in the prophets and a great deal of dependence on an established covenant concept that contained the stipulations and laws of the nation. These scholars have argued that there is no indication that the prophets thought they were introducing a new doctrine of God or understanding of the covenant relationship between God and His people. Instead, the prophets claimed to be calling the nation to turn from its unrighteous acts, which were contrary to God's will. Had the laws that the prophets accused the people of breaking been unknown, their accusations would have been groundless. When the prophets accused the Israelites of failing to keep what was known to be God's will, they were reminding them of enacted stipulations, not creating innovative traditions.

In his earlier work, *Prophecy and Covenant* (pp. 15-17, 23), R. E. Clements concluded that the prophets built their messages on an inherited tradition of the nation's covenant relationship with Yahweh. But in a later study, *Prophecy and Tradition* (pp. 21-23, 41-49), he reversed his opinion and rejected the idea that Israel had a relatively uniform covenant theology, based on the pattern of the so-called suzerainty treaties, from the time of Moses. Instead, he and other scholars assigned to the so-called Deuteronomic movement an important role in developing Israel's covenant ideology. The covenantal themes in Amos and Hosea were assigned to a Deuteronomic redaction that took place some time after the books were originally written (cf. H. W. Wolff, *Joel and Amos* [Eng. tr., *Hermeneia*, 1977], pp. 106-113). The theory of a Deuteronomic redaction of Amos and Hosea has gained wide acceptance, but this conclusion leaves the early prophets without any standard on which to base their accusations. R. V. Bergren (*Prophets and the Law* [1974], pp. 62-67, 78) surveyed the prophetic accusations and demonstrated how Elijah's condemnation of Ahab (1 K. 21:13) presupposes Ex. 22:28 (MT 27), Amos's reproaches correspond to early apodictic and casuistic laws, and Micah's judgment speeches relate to the legal formulations of his day. The prophets believed that the law was authoritative and binding even on kings, priests, and the rich. This was so because it was ultimately God Himself who spoke through the prophets to enforce the laws that He had enacted. In the prophetic lawsuit God was the plaintiff (Isa. 3:13-15; Mic. 2:1-4), and His accusations were founded on the people's disregard for the laws that governed the covenant relationship between God and Israel.

F. Apocalyptic. The approach of Wellhausen and most early literary critics was to make a major division between the rich heritage of Israel's prophets and the impoverished legalism and apocalypticism of postexilic Judaism. The apocalyptic writers (*see* APOCALYPTIC LITERATURE) were considered poor imitators of the prophets. They were interested only in bizzare fantasies, having been influenced by the syncretistic tendencies of the Persian period and the persecution of the Maccabean age. In fact, apocalyptic was largely ignored, since it came out of a period of religious decay.

In opposition to these interpretations, H. H. Rowley (*Relevance of Apocalyptic* [2nd ed. 1952]) hypothesized

a fundamental unity between prophecy and apocalyptic thinking. Apocalyptic literature borrowed heavily from the language of the OT; its heroes were Enoch, Abraham, Baruch, and other Jews; its message came from God or one of His angels; and its traditions and stories were those of the OT. Many years earlier R. H. Charles had seen a connection between apocalyptic and Pharisaic thinking, and this conclusion was later confirmed by W. D. Davies (*Christian Origins and Judaism* [1962], pp. 25-29). A variation of this basic position was proposed by O. Plöger (*Theocracy and Eschatology* [Eng. tr. 1968], pp. 35-52), who found two major opposing groups within Judaism. One group was antieschatological (based on his interpretation of Chronicles), made up of the priestly elite, and believed that prophecy was already fulfilled in the established theocratic community of Jews. On the other side was a smaller, less influential group that looked forward to the fulfillment of prophecy in the future, maintained a high regard for eschatology, and accepted certain Iranian influences in the development of their apocalyptic hopes; their thinking can be found in the Isaiah apocalypse (chs. 24–27), the end of Zechariah (chs. 12–14), and Daniel. This highly hypothetical reconstruction drove a wedge between prophetic expectations that are mingled together without conflict in the OT. D. S. Russell (pp. 21-28) also saw two streams of tradition in the late Israelite community: the apocalyptic group was closely connected to the prophets, while the rabbinical group centered its attention on the law and the oral Torah. R. T. Herford (*Pharisees* [1924], p. 188) denied any relationship between normative Pharisaic Judaism and apocalyptic; instead he believed that apocalyptic was part of the Zealot movement.

Various sources have been proposed for the origin of apocalyptic. In addition to Jewish prophecy, H. D. Betz (*Journal for Theology and the Church,* 6 [1969], 134-154) proposed a heavy influence of Hellenistic syncretism. W. Schmithals (*Apocalyptic Movement* [Eng. tr. 1975], pp. 89-126) evaluated the evidence for a connection with Gnosticism as well as the frequently suggested (even by H. H. Rowley) influence of Iranian Zoroastrianism. Each of these sources had some degree of similarity with apocalyptic thinking, but none provided a solid basis for the origin of the movement. Taking a different track, H. G. Hamerton-Kelly (*VT,* 20 [1970], 1-15) derived apocalyptic ideas from a group of Jews who were very concerned about the temple worship but strongly critical of those responsible for its maintenance. G. von Rad boldly proposed that the roots of apocalyptic were to be found in Israel's wisdom literature, because both were pseudonymous, held a deterministic view of history, were influenced by non-Israelite universalistic and individualistic thinking, and used the same literary images (*Theology of the OT,* II [Eng. tr. 1965], 301-313). Von Rad objected strongly to deriving apocalyptic ideas from prophecy; but the presence of eschatological interests in prophecy rather than in wisdom made this hypothesis unconvincing (see P. von der Osten-Sacken, *Die Apocalyptik in ihrem Verhältnis zu Prophetie und Weisheit* [1969]). In spite of these many innovative suggestions, the preponderance of evidence supports the view that apocalyptic writings were most closely related to the eschatological thought patterns in prophetic literature.

Both apocalyptic and prophetic books claimed to be the result of revelation by dreams, visions, or direct speech; both used symbolism and had a pessimistic view of the world situation apart from God; both were universalistic in outlook and saw history as the outworking of God's determined plan; and both looked forward to the Day of Yahweh when God would miraculously redeem His people and judge the evil nations. According to P. Hanson (pp. 11f.) and many others, a distinguishing feature that sets apocalyptic apart from prophecy is the apocalyptic search for a solution to the world's problems through a divine intervention outside of history in another aeon. Nevertheless, Hanson saw a basic continuity between the eschatology in both prophecy and apocalyptic and spoke of these as an unbroken strand. W. Schmithals (*Apocalyptic Movement,* pp. 68-88, 135-150) reconstructed a break between prophecy and apocalyptic. In doing so he essentially claimed that postexilic biblical apocalyptic literature was not part of the stream of eschatological expectation flowing out of the preexilic prophets in the OT. The OT preexilic prophets — unlike the apocalyptic writers — dealt with creation as the beginning of history, with redemption as a part of present and future history, and eschatology as the final acts of history. Each of these events in its own way was an extrahistorical intervention by God into history; each presupposed mankind's limited ability to resolve problems within history; and each was an example of God's cosmic determination to bring about His transcendent purpose in history. There was no radical break into events outside of history.

Following F. Cross (*Canaanite Myth and Hebrew Epic* [1973]), P. Hanson concluded that the dawn of apocalyptic occurred when the later prophets (e.g., Third Isaiah, Zechariah), faced with a contradiction between glorious prophetic promises and the bitter realities of the postexilic period, gradually abdicated the prophetic responsibility of translating the cosmic vision into historical, this-worldly terms and instead used mythical imagery to express their hope for a fulfillment of promises in the cosmic realm (pp. 23-29). Similarly, W. R. Millar (*Isaiah 24–27 and the Origin of Apocalyptic* [1976]) used Canaanite myth to explain the rise of apocalyptic. These "myths," however, can hardly be considered extrahistorical or late inventions, since they are already present in the Psalms, in wisdom literature, and in Israel's record of its military history. The prophets integrated these themes into history; they did not make prophecy nonhistorical or apocalyptic.

When the features of prophetic eschatology are compared with so-called apocalyptic texts in the OT, the formal literary features and the deep theological themes are not appreciably different. As defined by OT texts, therefore, a line of continuity runs through prophecy, prophetic eschatology, and prophetic apocalyptic. On the other hand, Jewish apocryphal literature did contain some full-blown nonprophetic apocalyptic texts that were nonethical, nonhistorical, and largely nontheological (viewing God as having withdrawn from this evil world). Study of these late apocalyptic texts reveals major contrasts between these texts and the OT prophetic apocalyptic texts. These late apocalyptic texts have no bearing on the OT prophetic texts, although they may have influenced NT apocalyptic writings.

See also ESCHATOLOGY II, III.A.

IV. Message of the Prophets.–The significance of the Israelite prophets must be judged on the basis of what they said, not by the results of their efforts to transform various aspects of Israel's culture. Their consciousness of having met with God revolutionized their thoughts and gave them a burning message of truth for an audience in need of a divine revelation. Their messages included scathing denunciations as well as lofty promises. Sometimes they addressed their audiences orally, but at other times they acted out their message or wrote it on a scroll. Regardless of the medium of delivery, the prophet's responsibility was to apply God's message to the audience's situation. The theological underpinnings of the prophet's

message were Yahweh's character and His sovereign rule in history: Yahweh alone was God, and in divine justice and mercy He gave order and meaning to the experience of mankind.

A. Reception. The process by which the prophets received their messages has always been hidden in the mystery of divine revelation. The event was reported in words such as "the word of the Lord came. . . ," but this recorded only the source of the prophet's authority and the results of the revelatory event. Some prophets described their initial "call experience" with great vividness (e.g., Jer. 1:1-10), while others recorded no "call" and did not carry on a prolonged prophetic ministry. Kings, priests, and laymen sometimes performed the prophetic function of speaking God's words, but their role can be distinguished from those called to be prophets throughout their lifetime. God spoke to King David on a number of occasions, but He usually spoke to David through the prophets Nathan and Gad. David can be considered a prophet (cf. Acts 2:29f.), but he was called to be a king.

Ezekiel, on the other hand, received in exile an inaugural vision of the glories of God's presence (Ezk. 1). God commanded him to eat the scroll handed to him (2:8–3:4) and to deliver its contents to the rebellious Israelites in exile. God promised Ezekiel strength to face the task (3:7-9), sent His Spirit to empower him (2:2), and warned him that while the people might refuse to receive the message, it was important that they know they had been warned by a prophet (2:5; 3:18f.). The impact of this experience on Ezekiel was a clear sense of God's power and glory, a deep understanding of his prophetic responsibility, a stubborn determination to carry out the purpose of his rather contradictory role, and an inner spiritual awakening. The "call experience" was beyond description, but it was a pivotal point in every prophet's life. The staggering force of such an overwhelming divine encounter and the sense of union with the divine pathos (cf. A. Heschel, pp. 221-231) stretched the limits of rational language.

An essential ingredient of prophetic inspiration was the activity of God's Spirit. The OT describes God as giving His Spirit to His people (Neh. 9:20) and as pouring out His Spirit to enable men and women to prophesy (Joel 2:28 [MT 3:1]). Of most prophets it is said that the Spirit came upon them at the time that they prophesied (cf. 2 Ch. 15:1; 20:14; 24:20). Ezekiel reported that the Spirit entered him when God spoke to him (Ezk. 2:2); later he received a message when the Spirit transported him to Jerusalem in a vision (8:3). Micah declared to Israel its rebellious acts because he was filled with the Spirit of the Lord (Mic. 3:8), and Zechariah condemned the people for rejecting the word that the Lord had revealed to them through the former prophets by His Spirit (Zec. 7:12). David's last words included the claim that the Spirit of Yahweh had spoken through him (2 S. 23:2), and "Deutero-Isaiah" claimed to have been anointed by the Spirit of Yahweh to declare God's good news to the afflicted (Isa. 61:1). In Hos. 9:7 the prophet is called "the man of the spirit."

Through the Spirit's work the prophet received a communication from God in the form of words, a dream, or a vision. Dreamers and prophets were sometimes classified together (e.g., Dt. 13:1, 5; 1 S. 28:6), for God frequently revealed His will to Israelite prophets through dreams and visions (cf. Nu. 12:6; 1 K. 3:5; Dnl. 7:1; 8:2; 10:1). Jeremiah did not deny the possibility of God's revealing Himself through dreams (23:28); his criticism was of those who prophesied "lying dreams" out of their own imaginations (cf. vv. 25-27, 32). Whatever mode was used, the essential factor in revelation was the prophet's understanding of the divine will. The frequent use of the messenger formula may indicate a significant dependence on direct or indirect verbal communication within the prophet's mind.

Although the insight and truth of the prophet's message was based on the Spirit's inspiration, its production in human terms was molded by the framework of the human mind. Many factors, including past traditions, previous and present history, cultural patterns, individual background, and personal style of speech, influenced the shape of the prophet's message. It is unknown to what extent God revealed Himself to the prophets in terms of their finite ability to express themselves in cultural and historical forms. Did the prophets translate the impulses of the Spirit into conceptualized cultural equivalents that mirrored the mind of God, or did God Himself translate the message into human words? Neither solution entirely explains the individual character of each prophetic message; but the employment of the law and covenant traditions, temple hymns, wisdom sayings, and contemporary speech forms demonstrates an important degree of human involvement in formulating the divine message.

B. Delivery. Many prophets spoke their messages orally before individuals or groups. Isaiah spoke directly to Ahaz (Isa. 7:3) and Hezekiah (39:5-8), and Jeremiah preached to all the people of Judah in the temple (Jer. 7:2) as well as privately to King Zedekiah (34:1f.). On many occasions the specific audience is not identified. Ezekiel prophesied against the shepherds of Israel (Ezk. 34), against Mt. Seir, and to the mountains of Israel (ch. 35), but the people he addressed in exile are not identified. These oral messages included sharp rebukes (1 S. 2:27-36), words of encouragement (2 Ch. 15:1f.), mourning songs (Am. 5:1-3), riddles (Ezk. 18:2), and quotations from all types of literature. Rhetorical devices such as repetition, wordplays, contrasts, and questions were used in these oral communications. Many spoke in exalted poetic style using imaginative and bold figures of speech, while others used very literal and simple prose (1 K. 13:21f.). There is no evidence that the prophets' original sayings were limited to short, poetic statements, as some critics have held (see V below).

Several prophets illustrated their words with symbolic object lessons. Ahijah ripped his new garment in twelve pieces and gave Jeroboam ten to symbolize the division of the kingdom (1 K. 11:30f.). Jeremiah buried his linen waistcloth by the Euphrates (Jer. 13:1-11), went to the potter's house to observe an illustration of God's sovereignty over the nations (18:1-10), and broke a clay pot to depict God's destruction of Jerusalem (ch. 19). Ezekiel drew a picture of Jerusalem and carried out a mock siege of the city (Ezk. 4:1-3), cut off his hair to depict what would happen to Jerusalem's inhabitants (5:1-12), and packed his baggage and dug a hole through the wall to picture the people's journey into exile (12:1-16). Many of these symbolic acts were designed to capture the attention of a hardened audience that refused to listen to the prophets' words.

Some of the prophets' utterances were selected, arranged, and edited for publication in a written form; cf. the dialogue format of Malachi and the clusters of oracles against the foreign nations in Jeremiah (chs. 46–51), Isaiah (chs. 13–23), and Ezekiel (chs. 25–32). The books themselves do not record who edited and arranged the available literature, but some prophets stated that they had written their messages on tablets or books (Isa. 30:8), in letters (2 Ch. 21:12; Jer. 29:1, 29f.), or on scrolls (Jer. 30:2; 36:2, 32). Baruch wrote the words that Jeremiah dictated to him, and the disciples of other prophets probably did the same (cf. Isa. 8:16). This evidence suggests that the prophets had much to do with the preservation of their

words in written form. Disciples may have memorized and recorded the prophets' teachings and assisted in editing the divine messages, but the nature and extent of their role can only be hypothetically reconstructed. Introductory formulas, historical introductions, and explanatory transitions were apparently added to oracles to assist the reader. Some critics have attributed an undue amount of creativity to the process of oral transmission by later disciples. Although parallel passages (Isa. 2:2-4 and Mic. 4:1-4; Jer. 49:14-16 and Ob. 1-4) evidence some fluidity within the material ascribed to the various prophetic oracles, these parallels demonstrate a conservative respect for the original formulation as well as a freedom to recast the truth of God's revelation. (See V below.)

The prophets' messages were called the "word" (Heb. *dāḇār*) of God, an "oracle" or "utterance" (*nᵉʾum*) of Yahweh, or a "burden" (*maśśāʾ*) from God. God's word delivered by the prophets revealed the divine personality and will; it was creative and authoritative because of the sovereign wisdom and power of God. The phrase *wayᵉhî ḏᵉḇar-yhwh ʾēlay* ("the word of the Lord came to me") occurs over two hundred times in the OT as a technical formula for prophetic revelation. Events foretold by God's word happened according to that word (1 K. 6:12; 13:26); His word did not return without accomplishing its intended purpose (Isa. 55:11). It brought judgment like a fire to those who opposed God (Jer. 23:29), but it brought peace and hope to those who received God's steadfast love (Mic. 7:18-20).

Hebrew *nᵉʾum* (a noun patterned after the qal pass. part. of *nāʾam*, "speak," and used in formulas reporting divine speech) has been inconsistently translated in all the versions. Translators have sometimes rendered it as a verb ("say, declare") and sometimes as a noun ("utterance, oracle"). The term, which occurs 167 times in Jeremiah, eighty-three times in Ezekiel, and twenty-three times in Amos, often defines the limits of literary units (see F. S. North, *JBL*, 71 [1952], 10; F. Baumgartel, *ZAW*, 73 [1961], 277-290). It frequently functioned as a concluding formula, but it was also used to introduce prophetic messages. Imitating the true prophets, the false prophets repeated this formula to authenticate their message (Jer. 23:31). The use of *nᵉʾum yhwh* ("oracle of Yahweh"), sometimes in conjunction with a divine oath ("as I live," Ezk. 20:3, 31; see also Gen. 22:16), stressed the finality and authority of God's oracles.

Another term sometimes rendered "oracle" by the RSV is *maśśāʾ* (lit. "burden"; cf. Jer. 23:33-38), which occurs twenty-five times in prophetic sayings containing threats against foreign nations (Isa. 13:1; 14:28; 15:1; 17:1; 19:1; 21:1, 11, 13; 22:1; 23:1; Nah. 1:1; Hab. 1:1; Zec. 9:1) as well as against wicked people in Israel (2 K. 9:25; 2 Ch. 24:27; Zec. 12:1; Mal. 1:1). P. A. H. de Boer (*Inquiry into the Meaning of the Term Maśśāʾ* [1948]) concluded that *nᵉʾum* and *maśśāʾ* had no distinction in meaning; it does appear, however, that *maśśāʾ*, "burden," contained connotations not found in the rather neutral *nᵉʾum*, "oracle."

The Greek translators of the OT primarily translated these Hebrew terms for the message of God with *lógos* or *rhêma*, "word." The NT authors borrowed the same words when they described the words of Jesus, introduced quotations from the OT, or made general references to what God had said. There seems to be little distinction between the meaning of these two Greek terms. The RSV uses "oracle" to translate *lógion*, which occurs four times in the NT (approximately 50 times in the LXX). The oracle refers to the spoken words of God to Moses and other inspired authors, words that are authoritative for the believer (Acts 7:38; Rom. 3:2; cf. He. 5:12, AV). The preaching of the gospel by those having the special gift is compared to the power and authority of the very sayings ("oracles") of God (1 Pet. 4:11).

Thus the titles that the prophets gave to their messages called attention to the distinctive aspects that the prophets wished to emphasize. Each term or formula demanded respect for the authority behind the message, and each described the divine message as some form of verbal communication. The reception and delivery of God's prophetic word were powerful influences on the personality and morality of Israelite faith, because it was God who spoke, and because His divine will universally controlled the dynamic forces of history as well as each individual's destiny.

C. Content. Because the prophetic movement covered several centuries of diverse political, social, and religious circumstances, the messages of the prophets varied tremendously. A prophet's social location (the royal court, the temple singers, at a capital city in Israel or Judah, or among a group of prophets) limited his or her associations and area of influence within Israelite society. But in the last analysis, the revelation of God's word was the primary factor in determining the content of the prophet's message.

Among the individual prophets, Amos condemned the northern nation of Israel for the social injustice that the rich and powerful perpetrated on the weak and predicted the destruction of the nation. Using the figure of the marriage/covenant relationship, Hosea reminded the Israelites of God's hatred of Baalism; he foresaw that the absence of knowledge of God (Hos. 4:6) would soon lead to military defeat, but he also foresaw a later renewal of positive relationships on the basis of God's undying love. Obadiah condemned Edom for its pride and its sins against Judah, while Joel described the day of the Lord in terms of both its negative and positive effects for Israel. Each prophet was unique, and each had a specific message that applied the principles of God's rule to particular situations. Yet each prophet's message was based on a common understanding of God's character and relationship to mankind, each condemned apostasy and demanded a return to God and His covenant, and each believed in a future hope for the nation. A brief analysis of these three theological motifs will provide an overview of the content of the prophets' message.

The prophets knew about God's law and grace through the traditions that had been handed down over the centuries. They were neither the creators of monotheism nor the innovators of a new understanding of God (see III.E above). The fundamental elements of the nation's faith were established early in the nation's experience with God. Israel's election, its redemption from Egypt, and its establishment in an exclusive covenant with Yahweh were the foundation blocks that the prophets called the nation to remember. These traditions are unmistakably present behind the prophetic preaching concerning the social, cultic, and moral obligations of the people of God. The analogies of father and son (Hos. 11), potter and clay (Jer. 18; Isa. 64:8 [MT 7]), shepherd and sheep (Ezk. 34), and husband and wife (Hos. 1–3; Isa. 54:1-8; Jer. 2:2; 3:1-11; Ezk. 16:23) illustrated the prophets' conception of God's relationship to the people. The events that brought about the election, redemption, and covenant traditions established that Yahweh was God and that He was in sovereign control of all people and nations. The gods of the nations were worthless (Jer. 2:5); they could not speak, walk, or do anything (10:5). They were the product of human hands (Isa. 41:7; 44:9-17) and thus were a delusion, nothing but empty wind (41:29). Yahweh alone was God; there was no other God beside Him (44:8; 45:5, 18, 21;

47:8; cf. Ex 20:3). The prophets insisted that the nation must worship only Yahweh and reject idols (e.g., Isa. 45:5f., 21f.; Jer. 10:1-16; Ezk. 8:5-18; cf. Ex. 20:4f., 23; Lev. 19:4; etc.), for the blessings of the covenant were available only to those who loved, feared, honored, and served Yahweh according to the covenant stipulations (e.g., Dnl. 9:4-19). Because He was holy, they were required to be holy if they wanted Him to dwell in their midst (e.g., Ezk. 20:38-43; 43:7-9; cf. Lev. 11:44f.).

But the Israelites ignored these basic tenets of their faith. They rebelled against God's authority and His covenant, ceased to demonstrate a heart of love and fear, and followed other gods. Many prophetic messages castigated the Israelites for their sins, and some brought words of judgment against foreign nations that refused to honor God. The prophets declared God's hatred for the Israelites' worship of Baal and other gods (Jer. 2:23-28; Ezk. 8:5-18; Hos. 2:13 [MT 15]; 4:13; 1 K. 18:39f.), for their empty ritualistic worship in the temple (Am. 5:21-27; Isa. 1:10-17), for their social injustices against the poor and helpless (Am. 2:6-8; 4:1; 5:10-13; 8:4-6; Mic. 3:1-4, 9-11), and for their rejection of God's law and of the warnings of the true prophets (Am. 2:4; 2 K. 17:7-20). The prophets warned that Israel would receive the curse of the covenant (cf. Dt. 27:15-26; Lev. 26:14-39), instead of its blessing, as punishment for its rebellion; the nation would suffer military defeat and exile if it did not repent (Jer. 3:12-14). The prophets challenged the nation to avoid this judgment, to seek God and live (Am. 5:4, 6, 14). But the people trusted instead in the promises of peace given by the false prophets (Jer. 8:11; Ezk. 13:10), in the eternal promises to David (2 S. 7:12-16), and in the temple (Jer. 7:1-15). God demonstrated His justice by humbling the powerful who oppressed the poor (see J. Limburg, *Prophets and the Powerless* [1977]) and making the land a reproach and a warning to the nations round about (Ezk. 5:15).

The prophets did not preach only doom; they also acknowledged the compassion of God. They foretold the existence of a REMNANT (Isa. 6:13; 7:3; see also G. Hasel, *The Remnant* [1975]) who would return to the land from the nations where they had been scattered (Jer. 3:18; 23:8; Ezk. 11:17; Hos. 1:11 [MT 2:2]; Mic. 2:12; Zec. 10:6-10). They foresaw that God would strengthen His people and turn away His anger (Jer. 3:12; Isa. 54:7f.) because of His everlasting love (Jer. 31:3). For His own name's sake God would redeem His people (Isa. 48:11; Ezk. 36:22-25), make them His people again, and renew the covenant and its promises (Hos. 1:10 [MT 2:1]; Jer. 30–31; Joel 2:21-29 [MT 2:21–3:2]; Ezk. 34:25-31). Then the people would be glad and rejoice, the Spirit of God would be poured out on mankind, and God's people would multiply and rest securely. The righteous seed from David, the suffering servant bearing the sins of many (Isa. 53:1-12), would reign as king in Jerusalem (Isa. 2:1-4; 9:1-7 [MT 8:23–9:6]; Jer. 23:5-7; Ezk. 34:23-31; Hos. 2:18-23 [MT 2:20-25]; 3:5; Am. 9:11-15; Zec. 14:9). Then the nations would come to Jerusalem to hear the law of the Lord, and war would end forever (Mic. 4:1-8). The kingdom of God would be established and His dominion would be everlasting (Dnl. 2:44; 7:13f.). All nations and the earth itself would be laid waste (Isa. 24), and a new heaven and a new earth would be created (65:17; 66:22). Then the departed spirits would rise to life (Isa. 25:8; 26:19) — the wicked to everlasting contempt and the righteous to everlasting life (Dnl. 12:1f.).

V. Interpretation of Prophecy.–The various treatments of prophecy range from several so-called orthodox interpretations to sectarian and fanatical extremes. More objective criteria are needed to guide the interpretation of prophecy in order for the prophetic word to maintain the respect that it is due. This goal requires a careful analysis of the different methodological approaches that have been employed in the past as well as a critical evaluation of the hermeneutical principles that have served as the foundation for prophetic interpretation.

A. Methodological Approaches. The era when source criticism reigned as the leading method of biblical research was marked by a preoccupation with the initial composition and the subsequent redaction of the text. On the basis of repetitions, contradictions, distinctive vocabulary, and contrasting political and theological viewpoints discovered in the text, the critical scholar tried to identify different sources that had been joined by a later redactor. Since the earliest sources of the Pentateuch were judged to be products of the 8th and 7th cents. B.C., and the laws within them were thought not to precede the prophetic writings (see III.E above), many concluded that the combined redaction of "J" and "E" was a prophetic work (see H. F. Hahn, *OT in Modern Research* [rev. ed. 1966], p. 6). The prophetic point of view, which tied prosperity to righteousness and curses to sinfulness, was particularly prominent in "J," the Yahwistic document. (*See also* CRITICISM II.D.5.)

Applied to the book of Isaiah, this method produced the conclusion that Isa. 40–66 was not written by the same person who wrote most of chs. 1–39. Evidence included the references to the ruined city of Jerusalem that contradicted the perspective of the first half of Isaiah, differences in the literary style and vocabulary, and radically distinct theological ideas of God, the future of the nation, and the messianic king (S. R. Driver, *Intro. to the Literature of the OT* [repr. 1956], pp. 236-243). Similarly, source critics considered the promise in Mic. 2:12f. of a remnant returning to the land to be contradictory to the message of impending doom in the rest of the chapter; thus these verses were assigned to a later exilic or postexilic source. G. Hölscher (*Hesekiel* [1924]) limited Ezekiel's influence to the prophecies of doom that were in poetic style; prose predictions of disaster and the salvation oracles he dated to later generations of redactors. B. Duhm (*Das Buch Jeremia* [1907]) attributed only 280 poetic verses (plus the prose letter in Jer. 29) to Jeremiah, claiming that the biographical narratives were written by Baruch and the rest of the book by exilic and postexilic redactors who emphasized the theology of Deuteronomy.

Although this approach is still used in limited ways at the present time, it has been surpassed by other methods that have yielded more significant results. Few scholars now believe it is possible to limit a prophet's words to poetic utterances, or to deny that a prophet could speak both positive and negative messages. A change in Ezekiel's historical situation could easily have caused him to change his message of doom to a promise of hope (Ezk. 34 is positive after the fall of Jerusalem in 33:21). The results of source-critical research frequently contradicted one another and paid more and more attention to minor details of little importance. Thus the method ceased to be a constructive tool for exegeting the meaning of the text, and on the whole it was impotent to explain the significance of God's revelation to mankind.

Because of the inadequacy of source criticism, H. Gunkel introduced form criticism as a new method of studying prophetic texts. This method focused on the oral stage in the development of the text and sought to determine the specific situation in the life of the people (*Sitz im Leben*) that gave rise to a piece of literature. By analyzing comparative religious literature from other cultures and discovering their settings, and by classifying prophetic texts according to their literary form, Gunkel hoped to discover

the meaning of the various types of prophetic texts in their original setting. He believed that the prophets were orators, not authors of books. He saw them as preachers who first threatened the people with a word from God and later expanded on these short "threats" by adding the reason why God was sending judgment (the "reproach"). In addition, Gunkel found within the prophetic books exhortations, disputations, lawsuits, allegories, and historical reviews; poetic literature in the prophets included borrowed secular laments, hymns, songs, liturgies, and torah readings (H. Gunkel, "The Israelite Prophecy from the Time of Amos," in J. Pelikan, ed., *Twentieth Century in the Making* [Eng. tr. 1969], pp. 73f.).

According to Gunkel, the prophetic books developed in three stages. The initial stage was the proclamation of short sayings that were orally transmitted by the prophet's disciples. This corpus included the prophet's first-person accounts as well as third-person stories about the prophet that were added by disciples. In the second stage the sayings were arranged on the basis of subject matter (e.g., woes, oracles against foreign nations), catchwords, or some other similarity. An oracle of salvation was often placed at the end of a series of threats during this stage in order to soften the blow of these strong punishment oracles. The final stage involved the organization of smaller collections into full-length books, along with other redactional alterations and additions.

Gunkel's theory that the "reproach" was a second-stage addition to the original prophetic "threats" was abandoned in later form-critical studies. C. Westermann's comparison of prophetic speech forms with the Mari Letters demonstrated that the prophets used messenger speech patterns (Westermann, pp. 98-128). He proposed two basic speech forms: the judgment speech to individuals and the announcement of judgment against Israel. The second form he considered an expansion of the simple judgment speech to individuals, which was made up of a summons to hear, an accusation, an introduction to the announcement of judgment (which usually began with "therefore" and the messenger formula "thus says the Lord"), and finally the announcement of judgment. Westermann's work was based on good comparative and biblical examples and has done much to clarify some of the terminology used by form critics. K. Koch (*Growth of Biblical Tradition* [Eng. tr. 1969], p. 193) suggested that the title "prediction of disaster" be used in place of Westermann's "announcement of judgment," because the latter title implied that the prophets were declaring the results of a legal decision. Koch's observations have been helpful, but the *Sitz im Leben* of prophecy is still not a settled question.

R. Bach (*Die Aufforderungen zur Flucht und zum Kampf im alttestamentlichen Prophetenspruch* [1962]) concluded that the *Sitz im Leben* of prophetic pronouncements was to be found in the holy war traditions that the classical prophets had inherited from early charismatic leaders of the judges period, while H. G. Reventlow (*Das Amt des Propheten bei Amos* [1962], p. 265) proposed that the prophet was a covenant mediator who officiated at the cultic ritual of the covenant-renewal ceremonies. E. Würthwein (*Wort und Existenz* [1970], pp. 111-126) and Jörg Jeremias (*Kultprophetie und Gerichtsverkündigung in der späten Königszeit Israels* [1970]) also believed that prophecy had a cultic background. But H. J. Boecker (*EvTh*, 20 [1960], 398-412) and several scholars who studied the covenant lawsuit (e.g., H. B. Huffmon, *JBL*, 78 [1959], 285-295; J. Harvey, *Bibl.*, 43 [1962], 172-196) focused on the legal setting that seems to stand behind many prophecies. Other prophetic speech forms that have received considerable analysis include the oracles of salvation, proclamations of salvation, woe oracles, disputation speeches, call narratives, and vision reports (see W. E. March, pp. 141-177). The goal has been to define the structure, discover the *Sitz im Leben*, and trace the development of each form.

The form-critical method has contributed to a better understanding of the relationship between prophetic oracles the basic structure of the oracles, and the way that different types of oracles developed. The attempts to define the setting of prophetic oracles have been less fruitful and conclusive, particularly when they have depended heavily on ambiguous comparative material.

Gunkel's emphasis on oral tradition was developed further by a group of Scandinavian scholars using the traditio-historical method. The goal of this approach was to discover details about the oral development of the text as it was influenced by many different traditions and life situations within the nation's history. Both the scope and the method of tradition criticism remained imprecisely defined for years (see D. A. Knight, *Rediscovering the Traditions of Israel* [rev. ed. 1975], pp. 21-31), but the general focus has been on factors that influenced the transmission of tradition in the oral stage (e.g., reinterpretation, schools of tradition, geography, sociology, politics, and redactional techniques) and on the characteristics of traditional material itself (e.g., vocabulary, plot, theme, problem, motif, and notion). H. S. Nyberg, H. Birkeland, I. Engnell, E. Nielsen, and S. Mowinckel were among the influential tradition critics. Most concluded that it was futile to attempt to find the prophet's original words, since these words were repeatedly changed and refocused during oral transmission as later schools of disciples reinterpreted them in relationship to new events (W. E. Rast, *Tradition History and the OT* [1972], pp. 60f.).

The lack of objective criteria for traditio-historical research has resulted in a considerable amount of intuitive conjecturing by those who have followed this approach. A depreciation of historical studies and a tendency to hypothesize transmissional developments that go beyond objective data have limited the value of many conclusions. Nevertheless, some of the tradition studies that have located the kerygmatic thrust of traditional material have reached significant results (see W. Brueggemann and H. W. Wolff, *Vitality of OT Traditions* [1975]).

Well aware of the limitations of form criticism, J. Muilenburg proposed a new approach to prophetic literature called rhetorical criticism (*JBL*, 88 [1969], 1-18). Form criticism had stressed the typical way in which various forms were used but failed to emphasize the unique features of each individual prophet's use of that form. Rhetorical criticism filled this gap by investigating the structural patterns and particularly the literary devices that marked off units, indicated shifts in the development of compositions, and signified contrasts or emphases. Repetition, vocatives, questions, refrains, and key particles were found to be important signposts to the author's thought patterns (J. Muilenburg, *HUCA*, 32 [1961], 135-160; W. Brueggemann, *JBL*, 92 [1973], 358-374).

Rhetorical criticism has made several solid contributions to the study of the prophets Isaiah (J. Muilenburg, *IB*, V [1956]) and Jeremiah (J. R. Lundbom, *Jeremiah: A Study in Ancient Hebrew Rhetoric* [1975]), although some studies have focused almost entirely on noting rhetorical indicators without demonstrating how these reveal the author's persuasive intent. Nevertheless, this method is based on observable data in the text rather than on hypothetical reconstructions; therefore it has the potential of making a significant contribution to understanding the prophets' message.

Other methods of interpreting the prophets drew their stimulus from sociological or anthropological principles. Scholars such as M. Weber, A. Lods, S. Baron, and N. Gottwald studied the prophets' involvement in the sociological conflicts between the poor and the powerful, the tribal and monarchial forms of government, and the nomadic and urban ideals (see H. F. Hahn, *OT in Modern Research* [rev. ed. 1966], pp. 157-184). Anthropological studies have usually focused on subjects such as primitive mentality, mana and sacrifices, or myth and sacred kingship; more recent studies have analyzed the prophets using comparative anthropological field studies from other cultures (see Hahn, pp. 44-82; R. C. Culley and T. W. Overholt, eds., *Anthropological Perspective on OT Prophecy* [*Semeia* 21, 1982]). These studies are not designed to give a literary understanding of the text but rather to provide a comparative analysis of cultural patterns that influenced the development of the prophetic movement.

Each of these critical approaches has offered its own unique perspective on the prophets, and each has attempted to provide a tool that would open up a few new insights into the development of prophetic literature. No one approach was designed to be used to the exclusion of all others. Subjective reconstructions abound within each area of research, and contradictory results demonstrate that the methodology to interpret prophetic literature is still in the process of development. Careful attention must be given to refining definitions of goals, procedures, and principles of evaluation. Methods that prove less fruitful will necessarily be discarded or de-emphasized, but the interpretative task will continue to be built upon investigation into the historical, cultural, social, political, and religious context of each prophetic text, as well as on an understanding of the semantic, grammatical, syntactical, and literary clues within the text itself. Comparative studies from other cultures and disciplines must remain servants rather than masters of prophetic interpretation. Nevertheless, the result of all these studies, each offering the interpreter a fuller appreciation of prophecy, should be a firmer hermeneutical base for developing a biblical theology of the prophets.

B. Hermeneutical Principles. Sound hermeneutical guidelines are needed in order to limit undue speculation and to secure an understanding of prophecy consistent with the original intention of the author. In many cases these principles will coincide with the same exegetical rules that apply to most other narrative or poetic texts. The OT's understanding of its own prophecies and the NT's interpretation of fulfilled prophecies provide initial guidelines for principles of interpretation, but in spite of these examples considerable disagreement still exists over how to interpret prophecy. Many of the early church fathers used allegorical principles of interpretation in order to apply the OT to Christians, but this led to many spiritual senses that were obviously not the intention of the prophets themselves. Most scholars reject these principles today, but the rationalistic approach that denies the possibility of supernatural prediction by the prophets is hardly any closer to the truth.

As with every other type of literature, the interpretation of prophecy requires an understanding of the text's historical background, context, purpose, and language. Thus, e.g., the accounts of Baalism within the northern kingdom of Israel during the time of Jeroboam II and his successors (2 K. 14:24; 15:9, 18, etc.; 17:6-18) provide information concerning the background of Hosea's condemnation of the nation for Baal-worship. Before the meaning of Am. 6:2 can be defined, the interpreter must understand the historical situation at Calneh, Hamath the Great, and Gath of the Philistines. A knowledge of the geography of Petra/Sela makes the imagery of Ob. 3f. more understandable. The literary context of Jeremiah's lament in 15:10-21 (a rejection of his calling, placed just after the Lord's command that Jeremiah was not to pray for the people of Judah because He was utterly rejecting them [14:11f.; cf. v. 19; 15:1]) makes it understandable as a somewhat natural human response (see G. V. Smith, *VT*, 29 [1978], 229-231).

Ultimately, the meaning of an oracle cannot be determined solely by either historical or literary context, but by the purpose of the author. The purpose of a rebuke of a foreign nation may be to bring assurance of salvation to Israel (Isa. 46–47), to prick the conscience of God's people who have committed worse sins (Am. 1–2), or to bring that foreign nation to its knees (Jonah 3:4f.).

Prophetic pronouncements frequently employ figurative language; thus words and syntactical constructions must be analyzed to determine the correct meaning. A shepherd and a horn could symbolize kingship (e.g., 2 S. 5:2; Dnl. 7:24); illogical or hyperbolic statements were characteristic of irony (Am. 4:4f.); figurative expressions such as "cows of Bashan" were used for negative images (4:1); the personification of singing hills could express the total revitalization of joy within the land (Isa. 44:23); and to "go to one's wife" was sometimes a euphemism for sexual relations (8:3).

Many problems in the interpretation of prophecy are connected with the meanings of words and symbols, but prophecies that were fulfilled in the OT provide some clues as to how prophecies should be interpreted. Ahijah's symbolic action and direct prophecy to Jeroboam concerning the immediate division of the kingdom was straightforward (1 K. 11:29-32), and it was literally fulfilled (12:15, 20). When Elisha predicted cheap food in the midst of a severe siege of Samaria, he did not know the details as to how this would happen; but he did know precisely when it would occur, and it happened as he said (2 K. 7:1f., 16-20). Elijah's terrible prophecy about the death of Jezebel (1 K. 21:23) was fulfilled during the reign of Jehu when the dogs ate her body (2 K. 9:31-37); in this case no date nor details about the manner of her death were predicted. Isaiah's message to Hezekiah promised that God would save Jerusalem from Sennacherib (2 K. 19:20-34), but it included nothing about how or when this deliverance would happen (cf. 2 K. 19:35).

As can be seen from these examples, most prophecies did not predict the time when God would act but focused simply on the fact that His judgment or salvation was coming. Prophecy was given to persuade the listeners to act in ways that would avoid God's judgment and bring enjoyment of His blessings. The prophets revealed the character of the sovereign God to convince their listeners to bow before His majestic power and thus receive His lovingkindness and grace. Many prophetic oracles contained conditional elements based on the people's response to God (e.g., Jonah 3:4–4:2; Jer. 26:1-6; 36:1-7; cf. the background of covenantal blessings and curses, Lev. 26; Dt. 27–28). Other prophecies contained no conditional phraseology and included promises of everlasting significance (Nu. 25:12f.; Ps. 106:30f.; Jer. 33:20-22; Ezk. 37:24-28); nevertheless, a positive relationship with God was always a prerequisite for enjoying the blessings of God's everlasting prophecies. Prophecy was therefore not just information about future events, but God's method of changing human thinking and behavior through a deeper understanding of His mighty acts in the past, present, and future.

Particular difficulties surround the optimistic eschatological prophecies that looked forward to a new act of

salvation by God. These oracles described what would happen on the "day of the Lord" (cf. Am. 5:18-20; Zec. 14) or on "that day" (Isa. 2:11f.; Jer. 3:16-18) when the messianic kingdom would be established (see L. Černý, *The Day of Yahweh and Some Relevant Problems* [1948]). In various forms, this hope included the regathering of the remnant of Judah and Israel back to the land of Palestine, the renewal of prosperity, peace, and worship in Jerusalem, a spiritual revival and new covenant with God, and the appearance of the suffering servant, the righteous branch and the son of man (cf. Isa. 9, 11, 42, 49, 53; Jer. 23:3-6; 30–31; 33; Ezk. 34:25-31; 37; Hos. 2:14-25; Dnl. 7).

In interpreting these prophecies one must remember that God revealed more and more about this future hope in each successive period. If one accepts the hermeneutical principle that meanings must be based on the intentions of the original author, then interpretations of prophecy must be based on the analogy of earlier Scripture that the writer understood, not on clarifications that appear in later texts. This problem has led some (e.g., Marcion, Schleiermacher, Harnack) to reject the OT prophecies because the fuller revelation in the NT is far superior. Although few would accept this extreme position, some approaches use the allegorical and typological methods of interpretation, which usually make very little of the author's original intention and focus primarily on the NT or "spiritual" meaning. Other scholars, however, have endorsed a *sensus plenior* ("fuller sense") hermeneutical principle for prophecy that goes beyond what the prophets themselves understood. This "fuller sense" was intended by God in the OT but was not revealed until NT times; thus new meaning is read back into OT prophecy, even though one cannot discover this meaning from a grammatical-historical examination of the OT text (R. E. Brown, *The Sensus Plenior of Sacred Scripture* [1955]). Those who have used a double fulfillment or double reference method of interpretation have also rejected the principle of basing one's interpretation solely on the grammatical-historical intentions of the original author; each of these methods has in some way failed to distinguish between the original author's meaning and the new significance that could be drawn out of the text when it was applied to an analogous situation. On the other hand, the phenomenon of prophetic telescoping occurs throughout the prophetic books. Although the prophets sometimes knew the order of events (cf. Dnl. 2, 7–8), their time perspective was restricted because their orientation to future events was incomplete.

At least three reasons can be given for the existence of widely differing views on the interpretation of prophecy: (1) interpreters do not agree on how to interpret visions and other oracles that contain poetic and symbolic images; (2) there is a temptation to read back into earlier prophecies NT fulfillment or even present-day events; and (3) the philosophical or theological biases of present interpreters exert an influence on the way they understand the data. Formulations of more moderate positions that recognize these pitfalls have created a positive outlook for future studies (see K. L. Barker, *JETS*, 25 [1982], 3-16).

See also FULFIL.

VI. Prophecy in the NT.–During the intertestamental period the Jews recognized that prophecy had ceased, but they did look forward to a revival of prophecy during the future messianic age (cf. 1 Macc. 4:46; 9:27; 14:41). Josephus stated that the period of the prophets ended about the time of Artaxerxes king of Persia (*CAp* i.8 [40]); but he reported that John Hyrcanus had the gift of prophecy (*BJ* i.2.8 [68f.]) and that Theudas (*Ant.* xx.5.1 [97]) and a certain Egyptian (*Ant.* xx.8.6 [169f.]) falsely claimed to be prophets.

The Greek noun *prophētēs* (the LXX translation of Heb. *nāḇî'*) and its related verbal, adjectival, and nominal forms were used by the NT to describe the proclamation of God's word through the influence of the Holy Spirit (e.g., Lk. 1:67; 2 Pet. 1:20). The NT's use of *prophētēs* to refer to contemporary prophets as well as OT prophets demonstrates that the NT authors saw a continuity between these two eras of prophecy. The NT identified Isaiah as a prophet and quoted him twenty times (e.g., Mt. 1:22; 3:3; 4:14; 8:17; 12:17; 13:14; 15:7), named Samuel as one of the earliest prophets (Acts 3:24), and referred to David (1:16-19; 2:25-32), Elisha (Lk. 4:27), Jeremiah (Mt. 2:17), Daniel (24:15), Joel (Acts 2:16), and Jonah (Mt. 12:39) as prophets. Other prophetic books were quoted but not named: Hosea (Mt. 2:15), Amos (Acts 15:15), Micah (Mt. 2:5), and Habakkuk (Acts 13:40). The NT authors believed that the words of the prophets contained in the holy Scriptures (cf. Rom. 1:2) were the words of God (e.g., Mt. 1:22; 2:15; Acts 3:18, 21; He. 1:1). The NT understood OT prophecy to be filled with predictions about Christ: His virgin birth (Mt. 1:23) in Bethlehem (2:5), His ministry in Zebulun and Naphtali (4:12-16), His entry into Jerusalem (21:4), and His death and resurrection (26:56; Lk. 18:31; 24:25-27, 44; Acts 2:30; 3:18; 26:22). The NT authors frequently referred to the whole body of OT prophetic literature collectively as "the prophets" (e.g., Mt. 26:56; Jn. 6:45; Rom. 1:2), often together with the Law (Mt. 5:17; 7:12; 22:40; Lk. 16:16; 24:44; Jn. 1:45; Acts 13:15; 26:22).

The first instances of NT prophecy occur in the Lukan birth narratives. Filled with the Holy Spirit (cf. Lk. 1:15), Elizabeth prophesied concerning Mary and her unborn child (1:41-45), Zechariah prophesied at John the Baptist's naming (vv. 67-79), and Simeon prophesied at Jesus' purification (2:25-35); at the latter event Jesus was also recognized and proclaimed by Anna the prophetess (vv. 36-38). The Jews and Jesus Himself considered John the Baptist to be a prophet (Mt. 11:9-14; 14:5; 21:26; Mk. 11:32; Lk. 20:6; cf. 1:15); but John denied that he was "the prophet" (Jn. 1:21; cf. Dt. 18:15, 18).

The people of Palestine thought that Jesus was a prophet (Mt. 16:14; 21:46; Mk. 8:27), based on the miracles He performed, e.g., healing the blind man (Jn. 9:17), raising a man from the dead (Lk. 7:15f.), and telling the Samaritan woman about her past life of sin (Jn. 4:19). Some saw Him as "the prophet" (Jn. 6:14; 7:40), i.e., the fulfillment of the promise that God would raise up another great prophet like Moses (Dt. 18:15, 18). Jesus referred to Himself as a prophet at two different times (Mt. 13:57; Mk. 6:4; Lk. 4:24; 13:33). Both Peter and Stephen preached that Jesus was the fulfillment of Moses' promise in Dt. 18 (Acts 3:22; 7:37). When Jesus expounded the Scriptures He taught with authority and not like the scribes (Mt. 7:29 par.). That He spoke the word of God with power caused Him to be associated with the OT prophets (Jn. 7:40). Jesus related His own death to the persecution of the prophets (Lk. 13:33f.); His predictions about His later coming as the Son of man (e.g., Mt. 24:27-31) identified Him with the important eschatological events that the prophets announced (cf. Dnl. 7:13f.).

The early Church had its own prophets. The NT mentions several prophets from Antioch, including Agabus, who predicted a famine in Jerusalem through the inspiration of the Holy Spirit (Acts 11:27f.; 13:1; 21:10); Judas and Silas, who encouraged the congregation at Antioch (15:32); and the four daughters of Philip (21:9). As a result of Paul's ministry at Ephesus, the Holy Spirit came upon the believers, and they spoke in tongues and prophesied (19:6). At Pentecost the whole company of Jesus' disciples (about 120 persons; see 1:15) were filled with the Holy

Spirit and spoke in other tongues (2:4); this was interpreted as a fulfillment of Joel's prophecy that God would pour out His Spirit and sons and daughters would prophesy (Acts 2:17f.; cf. Joel 2:28f. [MT 3:1f.]). Because this prophesying was in recognizable languages (Acts 2:6-11), the author may have held to Paul's distinction between prophecy, which upbuilds, encourages, and edifies the Church, and speaking in tongues, which was for private edification unless there was an interpreter (1 Cor. 14:1-5, 39).

Prophets and apostles were the pillars of the early Church (Eph. 2:20), and the gift of prophecy was listed immediately after the gift of apostleship (1 Cor. 12:28; Eph. 3:5; 4:11). Paul never called himself a prophet, although he did claim to be an apostle. In the Pauline epistles a prophet was one who called mankind to repentance (1 Cor. 14:24). Prophecy was a gift through which God revealed mysteries and knowledge (13:2; cf. 14:30). It involved more than just teaching God's word (cf. 1 Tim. 1:18; 4:14), for the gifts of prophecy and teaching are often distinguished (Acts 13:1; 1 Cor. 12:28; Eph. 4:11). Prophets were not limited to known traditions and doctrines, for they received new revelations about the present and future as well as the past. The prophets were exhorted to examine one another's works to make sure that no false teaching would arise (1 Cor. 14:29; 1 Thess. 5:20-22; 1 Jn. 4:1). (*See also* SPIRITUAL GIFTS.)

PROPHET, CHRIST AS. *See* CHRIST, OFFICES OF II.

PROPHET, OLD. *See* OLD PROPHET.

PROPHETESS [Heb. *nᵉḇîʾâ*; Gk. *prophētis*]. A female prophet; in one instance possibly the wife of a prophet (Isa. 8:3).

In the OT the title is applied to five women: to Miriam the sister of Moses and Aaron (Ex. 15:20), to Deborah the charismatic judge (Jgs. 4:4), to the wife of Isaiah (Isa. 8:3), to Huldah, who was consulted by King Josiah (2 K. 22:14; 2 Ch. 34:22), and to No-adiah, a false prophetess who opposed Nehemiah (Neh. 6:14). Rabbinical tradition recognized seven prophetesses who prophesied to Israel: Sarah, Miriam, Deborah, Hannah, Abigail, Huldah, and Esther (T.B. *Megilloth* 14a).

In the NT the term appears only twice, referring to Anna, who recognized and proclaimed Jesus as the Messiah (Lk. 2:36-38), and to the temptress Jezebel, "who calls herself a prophetess" (Rev. 2:20). Other women who prophesied in the early Church are referred to in Acts 21:9 (the four daughters of Philip) and 1 Cor. 11:5. One of the signs of the messianic age is that men and women will prophesy (Acts 2:17f.).

PROPHETS, FALSE. *See* PROPHECY, FALSE.

PROPITIATE; PROPITIATION. The removal of wrath by the offering of a gift. This may be a crude process of appeasement or bribery, or it may denote something much more refined and spiritual.

In modern times there is a widespread disinclination to use this word of Christ's saving work. Two main points are to be taken into consideration. One is the meaning of the Greek verb *hiláskomai*, which with its cognates translates a number of OT words, notably Heb. *kipper*. In nonbiblical usage there is not the slightest doubt that *hiláskomai*, etc., means "propitiate." The terms are used frequently, always in the sense of averting anger.

Some scholars, such as C. H. Dodd, have argued that in the Bible the word-group means "expiation" rather than propitiation. Although rather complicated, the argument depends largely on translation from Hebrew to the Greek of the LXX. Dodd examined the words that *exiláskomai* renders and found that they do not have meanings like "appease." He also looked at other words used to translate *kipper*, with a like result. He concluded that in the Bible the words of the *hiláskomai* group do not mean "propitiate" but rather "expiate." The examination certainly shows that pagan ideas of bribing the deity are absent from the Bible, but it is doubtful that it shows more. Dodd did not examine the contexts of the passags he chose; the idea of wrath is plainly there, and the *hiláskomai* words clearly denote the removal of this wrath.

For example, the LXX translates Heb. *sālah*, "forgive," by *hiláskomai* in Lam. 3:42f. It might be assumed that *hiláskomai* here means no more than "forgive," but when read in its context the word plainly indicates a forgiveness that involves putting away wrath: "We have transgressed and rebelled, and thou hast not forgiven. Thou hast wrapped thyself with anger and pursued us . . . ." The putting away of wrath appears to be the

meaning of these words elsewhere in the Bible and in nonbiblical literature.

The other significant point is that both the OT and NT speak often of the wrath of God. This fact does not depend on the linguistics of *hiláskomai*. If God's wrath is exercised toward sinners, then it must be taken into account in the process whereby forgiveness is secured. Dodd and others have attempted to show that by "wrath" the Bible means nothing other than an impersonal process of cause and effect. A person sins, and disaster follows, which is described as God's wrath coming upon the person. It is hard to see, however, how anger could be more forthrightly expressed as personal than in Ps. 60:1-3 (MT 3-5); Isa. 30:27-31; Jer. 23:20; Ezk. 7:8f.; etc. The Bible writers repeatedly use the language of wrath to bring out the vigorous nature of God's opposition to evil.

It may be granted that words like propitiation and wrath are not ideal words to use of God's activities, but no better words seem to be available. In particular, "expiation," which is favored by most today (including the RSV) as a replacement for "propitiation," simply will not do (see *DNTT*, III, 151-160). It is an impersonal word (one expiates a thing, a sin or a crime), whereas a personal term is needed to describe what Christ has done for His people. Also, "expiation" does not bring out the settled opposition of God's holy nature to everything that is evil. Propitiation does not mean that God is bribed to be gracious; the removal of His wrath is due to Himself alone (cf. Lev. 17:11; Ps. 78:38). But it is really wrath that is removed.

There are four important NT passages. Rom. 3:25, RV, tells of Christ Jesus "whom God set forth to be a propitiation, through faith, in his blood, to show his righteousness because of the passing over of the sins done aforetime." According to He. 2:17, RV, "it behooved him [Christ] in all things to be made like unto his brethren, that he might become a merciful and faithful high priest in things pertaining to God, to make propitiation for the sins of the people." In 1 Jn. 2:22; 4:10, RV, Christ is called "the propitiation for our sins." Each of these passages puts forward the thought that God's opposition to sin is more than token. His wrath is exercised toward those who sin. But in that situation Christ is the answer; He provides the means of averting the divine wrath. It is this that the NT writers have in mind when they speak of propitiation. And this is an element in Christianity that we dare not surrender.

PROPORTION. A term used by the RSV to denote a "correspondence" with respect to quantity (of land, Nu. 35:8; Heb. *kᵉpî*, lit. "according to the mouth of"; cf. AV) or degree (of wrongdoing, Dt. 25:2; *kᵉḏê*, lit. "according to the sufficiency of," "corresponding to" [cf. NEB]; AV "according to"). It is employed in the latter sense by the AV, RSV, and NEB to render Gk. *analogía* in Rom. 12:6. The meaning of the phrase *katá tḗn analogían tḗs písteōs* (AV "according to the proportion of faith") has been hotly debated. The interpretation hinges on the meaning of *analogía* (used only here in the NT; in classical Greek it can denote "correspondence," "agreement" [cf. Eng. "analogy"], "right relationship," "standard," or "proportion" — even "mathematical proportion") and of *pístis* (*see* FAITH IV, V). Thus, while some scholars interpret the phrase to mean that the gift of prophecy must be exercised within the limits of one's own gift of faith (e.g., Kittel, Taylor, Barrett, Murray), others read it as instructing that the prophetic gift be exercised in conformity with "the faith" — i.e., the objective faith (or doctrine) they had been taught (e.g., Calvin, Hodge, Bultmann [p. 213], Käsemann).

In the AV "proportion" also translates Heb. *ma'ar* (lit. "nakedness," "empty space"; cf. RSV "space"; NEB "blank space") in 1 K. 7:36 and *ʿēreḵ* (lit. "arrangement"; RSV "frame") in Job 41:12 (MT 4).

VIII. Conclusion

I. The Term.–Our word "proselyte" derives from Gk. *prosḗlytos*. This term, not used in classical Greek, was first introduced in the Septuagint (LXX) in the 2nd cent. B.C. as a translation of Heb. *gēr*. In the OT *gēr* usually designated a "sojourner" or "immigrant" in the land, but by the time of the Mishnah (*ca.* A.D. 200) *gēr* always referred to a convert to Judaism. Similarly, in the NT *prosḗlytos* means "convert." Thus an examination of the word *prosḗlytos* casts light on the history of both Judaism and Christianity.

Other classical Greek words were available to express the same idea that *prosḗlytos* conveyed; *métoikos* for "resident alien"; *épēlys*, *epḗlytos*, and *epēlýtēs* for "convert" or "newcomer." J. A. Loader thought that *prosḗlytos* derived from the *qrb* ("come near") terminology of the OT, which refers to drawing near to the holy sphere. This terminology was used as "a technical term for the acceptance of proselytes in Israel." The Greek verb *proserchomai* ("come near"), the LXX translation of *qrb*, with its related stem *elyth-* was the origin of the Greek noun *prosḗlytos*. The evolution of *prosḗlytos* from OT terminology, according to Loader, explains why "proselyte" is found only in Jewish literature.

Two cautions need to be raised about Loader's view. First, *prosḗlytos* may not have meant "convert" originally since it was a translation of *gēr*. But if *prosḗlytos* did not mean "convert" from the beginning, then it is unlikely that its origin stems from OT terminology that refers to the acceptance of converts. Second, Loader relies heavily on rabbinic literature to prove his case, but this literature is obviously later and is not decisive for establishing the origin of *prosḗlytos*. Thus more evidence is needed from the OT to establish his thesis, though a line of development from the *qrb* terminology to *prosḗlytos* is possible.

II.* Gēr *in the OT.–The *gēr* in the OT was a sojourner or stranger who was not a native resident of a town or region, i.e., he was an immigrant or resident alien. Sometimes *gēr*

designated Israel's alien status in a foreign land. When Abraham wanted to buy a burial site in Canaan from the Hittites, he described himself as a *gēr* (Gen. 23:4). Moses lamented that he was a *gēr* in the land of Midian (Ex. 2:22; 18:3), and the Israelites are characterized as *gērîm* in the land of Egypt (Ex. 22:21; 23:9; Lev. 19:34; Dt. 10:19; cf. Dt. 23:7). In the OT *gēr* refers most often to the sojourner who resided in the land of Israel. For further discussion of the OT texts *see* SOJOURNER.

A number of texts, especially in the so-called priestly traditions, allow for a *gēr* to participate in the Israelite religious community. The *gēr,* in contrast to the "foreigner" (*nokrî*), may eat the Passover (Ex. 12:43, 48f.). But this eating is not automatic; the *gēr* must be circumcised to partake in the feast (Ex. 12:48f.; cf. Nu. 9:14; 2 Ch. 30:25). The acceptance of circumcision by a *gēr* implies that he has become a convert (cf. Gen. 17:9-14). So too a *gēr* must bring his burnt offering to the tent of meeting; otherwise, he "shall be cut off from his people" (Lev. 17:8f; cf. Lev. 22:17-19; Nu. 15:14-16). Clearly, a *gēr* must be united with the people of God before he can be cut off from them. The *gēr,* like the native Israelite, was expected to refrain from eating meat with blood or meat that was torn by animals (Lev. 17:10-15). Yahweh Himself would cut off any person who violated this injunction (Lev. 17:10). Curiously, Dt. 14:21 permits a *gēr* to eat animals that have died a natural death. Such permission does not necessarily contradict Lev. 17:10-15, for Dt. 14:21 probably refers to a *gēr* who was uncircumcised and thus not a part of the covenant community (cf. the parallelism of *gēr* with "foreigner" in Dt. 14:21, and the LXX use of *pároikos* rather than *prosḗlytos* to translate *gēr*). In Lev. 17, on the other hand, the *gēr* is assumed to be part of the covenant community.

The vital involvement of the *gērîm* with Israel is also indicated by their participation in the feasts that Israel celebrated (Dt. 16:11, 14; 26:11). Such participation was not merely theoretical. In 29:11 the *gērîm* are assembled with the rest of the people before Yahweh, and they are ready to enter into covenant with Him. In Josh. 8:33, 35 the *gērîm* were present when the covenant renewal ceremony was held on Mts. Ebal and Gerizim. Indeed, the *gērîm* were assumed to be present every seven years on the Feast of Booths when the Torah was read (Dt. 31:12).

Ezekiel also believed that the *gēr* was essentially a part of the nation of Israel. Any native Israelite or *gēr* who set up an idol in his heart would be punished by Yahweh (Ezk. 14:7). But any *gēr* who resided in the land was to be treated like a native. Indeed, he would even receive an inheritance of land from the tribe in which he chose to live (Ezk. 47:22f.).

To sum up, the *gēr* in Israel was a resident alien. Even if a *gēr* did not join the poeple of God he was to be treated justly and fairly. But if a *gēr* submitted to circumcision, at least in theory and sometimes in practice he was a recipient of the same covenant privileges as the native Israelite. Thus the OT used *gēr* of the sojourner in Israel in at least two distinct ways: sometimes *gēr* refers to the immigrant who chose to live in the land of Israel, and in other passages *gēr* is a convert.

III. **Prosḗlytos** *in the LXX.*–The LXX used *prosḗlytos* over seventy-five times to translate Heb. *gēr.* W. C. Allen argued that this translation designated a convert. Other scholars have argued that *prosḗlytos* does not denote "convert" until the 1st cent. A.D.

It is interesting that the LXX used *pároikos* ("sojourner") to designate Israel's alien status in a foreign land (Gen. 15:13; 23:4; Ex. 2:22; Dt. 23:7), and in a theological sense to indicate that God's people were sojourners and aliens on earth (Ps. 39:12 [MT 13]; 119:19; 1 Ch. 29:15). Indeed, *pároikos* is used of God Himself (Jer. 14:8). *Pároikos* seems to have been carefully selected by the LXX translators because it would obviously be inappropriate to call the patriarchs *prosḗlytos* in Egypt if the latter word meant "convert." The LXX translators apparently used *pároikos,* then, to express the ideas of one being a sojourner or a resident alien.

The study of *gēr* above has shown that even in the OT *gēr* is often used of Gentiles who had transferred their allegiance to Yahweh the God of Israel. Thus, *prosḗlytos* in the LXX would sometimes describe a convert to Judaism. As was pointed out above, W. C. Allen concluded that the LXX almost always used *prosḗlytos* to denote a convert. He said that the translators used *pároikos* where *gēr* could mean only "resident alien," and they used *prosḗlytos* where *gēr* could possibly mean "convert." Allen was probably right that the LXX translators usually intended *prosḗlytos* to be understood as "convert." But the idea that *prosḗlytos* always means "convert" in the LXX is hardly convincing. The Israelites are called *prosḗlytoi* during their sojourn in Egypt (Ex. 22:21; 23:9; Lev. 19:34; Dt. 10:19), and as K. Lake pointed out, in this context *prosḗlytoi* surely does not mean "convert." The translation "alien" or "sojourner" is more fitting. Indeed, even in the land of Israel the native Israelites are described as *prosḗlytoi* ("sojourners," Lev. 25:23) because the land belonged to Yahweh.

In addition, at least two passages in the LXX clearly use *prosḗlytos* to refer to Gentiles who were not converts but resident aliens in the land. In Dt. 28:43 the *prosḗlytos* will become superior to the native if Israel falls into sin and goes into captivity. In 1 Ch. 22:2 David's employment of *prosḗlytoi* for forced labor is best understood as the employment of resident aliens instead of converts to Yahwism (cf. 1 K. 9:20-22).

In conclusion, Allen's careful study demonstrated that the primary meaning of *prosḗlytos* in the LXX is "convert." Nevertheless, in some LXX passages *prosḗlytos* clearly does not mean "convert." The word was sometimes used to describe the resident alien, and in these passages it drew on the original meaning of *gēr.* Thus in the LXX the term *prosḗlytos* is in a process of evolution. Like *gēr, prosḗlytos* probably meant "immigrant" originally and gradually came to mean "convert."

IV. Extent of Jewish Proselytism.–A. OT Background. From the beginning the OT had a universal focus, at least in theory (cf. Gen. 12:3). We have already seen that the Israelites were receiving sojourners (see II-III above). The attitude of Israel toward foreigners was mixed, however. In Dt. 23:1-3 eunuchs, bastards, Ammonites, and Moabites were excluded forever from the asembly of Yahweh. Intermarriage with non-Israelites was frowned upon because such pluralism would lead Israel into idolatry (Dt. 7:1-5). This problem flared up again in the time of Ezra and Nehemiah, and the stern measure of putting away foreign wives was adopted (Ezr. 9:2; 10:1-43; Neh. 10:30; 13:23-27). The prohibition against Ammonites and Moabites was recalled in Nehemiah's time, and Tobiah the Ammonite was expelled from the chambers of the temple (Neh. 13:1-9; cf. Ezk. 44:7-9).

Other OT traditions reflect a positive attitude toward foreigners. The book of Ruth is the story of a Moabite woman who courageously chose to be part of the people of Yahweh. The universalistic emphasis of OT theology is particularly predominant in the Prophets. The book of Jonah is a notable example of Yahweh's love for all nations. Isa. 19:18-24 looks forward to the day when Egypt and Assyria will worship Yahweh together with Israel. Zeph. 3:9f. forecasts a day when all peoples will serve Yahweh (cf. Mal. 1:11). One of the more striking univer-

salistic passages is Isa. 56:3-8. Isaiah promises that the eunuch and foreigner who hold fast to Yahweh's covenant will not be excluded from the people of God. Yahweh's temple is not for Israel alone (cf. Dt. 23:1); it is "a house of prayer for all peoples" (Isa. 56:7). See also 1 K. 8:41-43; Ps. 86:8-10; Isa. 2:2-4; 11:9f.; 49:6; Jer. 3:17; 4:2; 12:14-17; Zec. 8:20-23; 14:16-19.

It is difficult to determine from the OT itself how many foreigners were converted to Yahweh, although the number was probably never large. 2 K. 17:24-34 relates that the Samaritans began to fear Yahweh after an attack of lions, but their religion was consciously syncretistic (cf. the conversion of Naaman, 2 K. 5:15-19a). Est. 8:17 indicates that many embraced Judaism because they were afraid of the Jews. These passages are hardly inspiring examples of success in proselytizing.

B. Impact of the Diaspora. Two low points in Hebrew history were the conquest of northern Israel by the Assyrians (722 B.C.) and the capture and destruction of Jerusalem by the Babylonians (586 B.C.). Both the Assyrians and the Babylonians transplanted some of the Jewish people so that a revolt would not arise in Palestine. Indeed, as the time passed, more and more Jews began to live outside Palestine.

The influence of the Jews in the Persian empire is apparent in both Daniel and Esther. Indeed, Est. 8–10 suggests that Jews were scattered throughout all the provinces of Ahasuerus (486-464 B.C.). Numerous OT passages speak of a regathering of dispersed Jews from all over the Mediterranean world (Isa. 11:12; 43:5f.; 56:8; Jer. 23:3; 29:14; 31:8; 32:37; Ezk. 11:17; 20:34, 41; 28:25; 34:13; 36:24; Zeph. 3:10; Zec. 10:10). Thus the OT offers considerable evidence that a large number of dispersed Jews was spread over a large geographical area.

Evidence from the intertestamental period also points to the increasing number of dispersed Jews. In the 5th cent. B.C. a colony of Jewish mercenaries built a temple to Yahweh at Elephantine in southern Egypt. When the Ptolemies and Seleucids fought over the land of Palestine, a large number of Jews decided to live in more peaceful foreign environments. Jews lived in Rome by at least the 2nd cent. B.C. In fact, the Romans were provoked to expel some Jews who were ardent missionaries for Judaism in 139 B.C. The number of Jews in Rome increased after 63 B.C. because Pompey brought many Jews to Rome after capturing Jerusalem.

Josephus quotes Strabo to indicate the extent of the Jewish dispersion: "It is not easy to find any place in the habitable world which has not received this nation and in which it has not made its power felt" (*Ant.* xiv.7.2 [115]). In his letter to Caligula, Agrippa I also noted that there were Jews worldwide: in Egypt, Syria, Phoenicia, Asia Minor, the Greek islands, Europe, and beyond the Euphrates (Philo *De legatione ad Gaium* 281f.). Indeed, Josephus says that in every city the sabbath and Jewish customs were widely observed (*CAp* ii.39 [282]).

The universal extent of Judaism is also acknowledged in the NT. In Acts 15:21 James says: "For from early generations Moses has had in every city those who preach him, for he is read every sabbath in the synagogues." That Paul entered synagogues at almost every stop on his missionary journey is further support for the idea that Jews lived in every part of the Roman empire. On the day of Pentecost Jews were present in Jerusalem from the regions of Mesopotamia, Asia Minor, northern Africa, Arabia, Crete, and Rome (Acts 2:9-11). It is clear from a variety of sources, therefore, that Judaism was well represented in the Roman empire and even outside it.

The significance of the Dispersion for Jewish proselytism should not be overlooked. Numerous Gentiles were exposed for the first time to the God of Israel. They were particularly attracted by the monotheism and high ethical ideals of the Jews. The origin of the SYNAGOGUE should also be sought in the Diaspora. It is difficult to date precisely when the synagogue originated, but that it was a significant force in the proselytizing of the Gentiles in the Diaspora cannot be denied (cf. Acts 15:21). The synagogue was a place where foreigners could hear God's word explained and applied. Such a place of worship may have particularly appealed to Greeks because such a mode of worship was similar in some ways to Greek philosophical schools.

C. Intertestamental Period. The success of Jewish proselytism in the intertestamental period was considerable. Even instances of questionable or forced conversions show the impact of Jewish religion. In a legendary account Antiochus Epiphanes promised to become a Jew on his deathbed (2 Macc. 9:17). Hasmonean nationalism was evident in several Jewish leaders. Josephus recounts that both John Hyrcanus (134-104 B.C.) and Aristobolus I (104-103 B.C.) extended the borders of Judaism by forcing circumcision and thus conversion on neighboring regions (Hyrcanus on the Idumeans and Aristobolus on the Ituraeans; *Ant.* xiii.9.1 [257f.]; 11.3 [318]). Alexander Janneus (103-76 B.C.) destroyed Pella because the inhabitants refused to submit to the Jewish law (*Ant.* xiii.15.4 [397]). Metilius, a Roman officer at the beginning of the Jewish revolt, saved his life by promising to become a Jew (*BJ* ii.17.10 [454]). Josephus made it clear that he did not believe in such compulsion (*Vita* 2.3 [113]). The rabbis also insisted that it was wrong to compel someone to be converted (T. B. *Yebamoth* 48b). Interestingly, Josephus never used the word *prosēlytos* to refer to a convert, probably because the word was not familiar to Greek readers.

The family of Herod, which was itself composed of Edomite converts, would not intermarry with anyone from other cultures if the other party would not convert to Judaism. Herod the Great would not give his sister Salome to Syllaeus of Arabia because the latter refused to be circumcised (*Ant.* xvi.7.6 [225]). Epiphanes of Commagene would not marry Drusilla, the daughter of Herod Agrippa, because he did not want to adopt the Jewish religion. Drusilla then married Azizus king of Emesa because he agreed to circumcision (*Ant.* xx.7.1 [139]). Berenice, Drusilla's sister, persuaded Polemo king of Cilicia to be circumcised and marry her, but upon divorce Polemo abandoned the Jewish religion (*Ant.* xx.7.3 [145f.]). The Herods probably required circumcision not because of their devotion to Judaism but because it was politically advantageous to insist on it.

Not all conversions to Judaism were for the sake of expedience. Judith's victory over Holofernes demonstrated the superiority of the Jewish people and the Jewish God to Achior the Ammonite (Jth. 14:10). The most notable example of a genuine conversion is Izates king of Adiabene (*Ant.* xx.2.4 [38-48]). Influenced by his mother Helena who had already been converted to Judaism, Izates was won over to Judaism by a Jew from the Diaspora named Ananias, who recommended that Izates bypass circumcision because such an act would be politically inflammatory. A short time later Eleazar, who held a stricter view on the observance of the law, persuaded Izates that he could not be a true Jew without being circumcised. Izates consented with enthusiasm and motivated his brother Monobazus and the latter's kinsmen to adopt the Jewish religion as well (*Ant.* xx.4.1 [75]).

The success of Jewish proselytism was evident in the ancient world. Apparently a considerable number of the Damascene women had adopted the Jewish religion (*BJ*

ii.20.2 [560]). Fulvia, a woman of high social standing and the wife of Senator Saturninus, converted to Judaism (*Ant.* xviii.3.5 [82f.]). Judaism was also popular in Syrian Antioch, for the Jews "were constantly attracting to their religious ceremonies multitudes of Greeks" (*BJ* vii.3.3 [45]). Josephus also claims with reference to the Greeks that "many of them have agreed to adopt our laws" (*CAp* ii.10 [123]). Indeed, Josephus asserts that the Jewish religion had a universal appeal, and that many were anxious to adopt the Jewish law (*CAp* ii.39 [280-84]). Clearly, women were more apt to become proselytes than men because men did not want to undergo the painful operation of circumcision.

Philo also testifies to the success of Jewish proselytism. His writings were aimed at a cultured Greek audience, and he attempted to show that Greek philosophy was consistent with, and even derived from, Judaism. Again and again Philo praised the nobility and beauty of the Jewish religion. Apparently a significant number were converted in Alexandria, for Philo lauds their courage and dedication to their new-found faith. Of course, other Jewish writings were particularly attractive to Greeks, e.g., the LXX, the Letter of Aristeas, the Sibylline Oracles, and the Wisdom of Solomon.

D. Roman Reaction. The hostile reaction that the Jews sometimes received from the ancient world testifies to the breadth of the Jewish dispersion and the success of Jewish proselytism. Cicero charged that the Jewish religion was a "barbaric superstition" (*Pro Flacco* 28 [67]). Tacitus was especially disturbed with proselytes because the Jews taught them to be antisocial. Proselytes ended up despising their old gods, abandoning their country, and scorning family members (*Hist.* v.4f.). Juvenal also complained about the Jewish religion. Like Tacitus, he charged that Jews were partial to fellow believers. He also condemned those who were attracted to Judaism. The father would begin by observing the sabbath and other Jewish customs, and the son would go a step further and submit to circumcision (*Satires* xiv.96-106).

Josephus wrote an apologetic work (*Contra Apion*) to counteract the calumnies of an Egyptian named Apion. Apion promulgated the rumor that every year the Jews captured a Greek, sacrificed him, ate his entrails, and promised always to despise Greeks. Josephus showed that the Jewish people had a long and honored antiquity, that their laws were humane and civilized, and that Moses had already anticipated the things of value in Greek culture.

There were other examples of discrimination against Jews in the ancient world. In A.D. 38 the local government in Alexandria propagated an attack on Jewish residents. Philo was sent to Caligula to lodge an official complaint against the perpetrators (Philo *In Flaccum*; *Ad Gaius*). The negative response engendered by Judaism in the Roman world demonstrates the significant impact of Jewish religion in NT times.

E. In the NT. The word "proselyte" is mentioned only four times in the NT. In every case it clearly refers to a convert to Judaism. Mt. 23 contains Jesus' blistering exposé of hypocrisy among the Jewish religious leaders: "Woe to you, scribes and Pharisees, hypocrites! for you traverse sea and land to make a single proselyte, and when he becomes a proselyte, you make him twice as much a child of hell as yourselves" (v. 15). Jesus implicitly acknowledged the intensity of Jewish missionary zeal; geographical obstacles did not stop the Jews from pursuing their goal. The verse must be carefully interpreted, for Jesus was not condemning the *fact* of proselytizing; He was criticizing the *result*. The convert becomes twice as bad as the person who converted him.

On the day of Pentecost a great number of Jews from the Diaspora were present for the festival (Act 2:9-11; cf. Dt. 16:11). In Acts 2:10 Luke notes that "both Jews and proselytes" were in the audience, i.e., both Jews and Gentile converts to Judaism were at the feast. In v.11 Luke also notes the presence of Cretans and Arabians. At least three views have been suggested on the placement of "Jews and proselytes" in the list. (1) Luke originally closed out the list with the terms "Jews and proselytes," and the inclusion of Cretans and Arabians was a later gloss. The way the text stands now the words "Jews and proselytes" interrupt the geographical character of Luke's list. But if the words "Cretans and Arabians" were a later gloss, then Luke placed "Jews and proselytes" at the end of his list, indicating that every geographical region had representatives from both classes. The problem with this interpretation is the lack of manuscript evidence for a gloss in v.11. (2) Luke simply inserted "Jews and proselytes" into the middle of the list to indicate that every geographical region listed had representatives from both groups. He added the regions of Crete and Arabia as an afterthought. This interpretation is also possible, but its weakness is that Luke's listing is fairly well organized geographically. Thus the idea that "Cretans and Arabians" is an afterthought is improbable. (3) It seems most likely that Luke included the phrase "both Jews and proselytes" after the phrase "visitors from Rome" for a specific reason. Luke was not saying that every region was represented by both ethnic Jews and proselytes (although such a diverse representation was possible); instead, he was making the specific point that both ethnic Jews and proselytes were represented from Rome. Perhaps he mentioned this because Rome was the ultimate destination of Paul's mission to the Gentiles in the book of Acts (chs. 21–28).

In Acts 6:1-6 the Seven are appointed by the church in Jerusalem to administer the food in such a way that the Hellenistic widows are not treated unfairly. One of the Seven, Nicolaus, is described as "a proselyte of Antioch" (v. 5). Such a description of Nicolaus implies that the other six appointees were ethnic Jews; only Nicolaus was a convert to Judaism.

To sum up, all three of the verses where "proselyte" is mentioned in the NT provide further evidence that the Jews made converts all over the Roman world. (For a discussion of "proselytes" in Acts 13:43, see VI below.)

F. Tannaitic Period. The number of proselytes probably declined in the tannaitic period due to several factors. (1) The rabbis had mixed feelings toward proselytes. Some, like Hillel, were disposed to welcome proselytes and were even inclined to relax the requirements a bit at the outset so that the newcomer could perceive the true spirit of Judaism (Mish. *Aboth* i.12; T.B. *Shabbath* 31a). On the other hand, Shammai viewed proselytes with some suspicion and demanded that they be thoroughly examined before admittance. In addition, some Jews feared that proselytes would return to the idolatry whence they came (T.B. *Abodah Zarah* 24a) and that they did not observe the ceremonial law properly (Mish. *Niddah* vii.3). Indeed, some rabbis argued that proselytes were like a scab that adhered to the Jewish people (T.B. *Yebamoth* 47b, 109b; *Kiddushin* 70b). Some scholars suggest, however, that the above description was meant only as a joke and should not be interpreted as a negative attitude toward proselytes. (2) The period around the time of the Bar Cochba revolt (A.D. 132-135) was a time of intense persecution of Judaism. Hadrian (A.D. 117-138) forbade the practice of castration, and circumcision was apparently viewed as an equivalent operation. The restriction against circumcision obviously

lessened the chances that any Gentile would turn to Judaism. Antoninus Pius (A.D. 138-161) relaxed the restrictions against circumcision, but conversion to Judaism was still forbidden. (3) Christianity was more attractive to Gentiles than Judaism. The Christian faith did not require circumcision, and it had a more universal appeal. Of course not all proselytizing activity ceased after A.D. 70, but the age of vigorous Jewish missionary effort had ended.

V. Entry Requirements.–The OT clearly states that circumcision is the only required initiation rite for entrance into the covenant community (Gen. 17:9-14; Ex. 12:48). From 200 B.C. on, however, two major issues became the focus of controversy. (1) Was circumcision considered unnecessary for conversion to Judaism by a significant number of Jews? (2) When was baptism added as a requirement for proselytes?

A. Circumcision. A number of scholars (McEleney, Kuhn, Borgen) maintain that a considerable portion of Judaism, especially in the Diaspora, did not require the circumcision of proselytes. McEleney claimed that Philo apparently did not think circumcision was crucial for a proselyte: "(Scripture) first makes it clearly apparent and demonstrable that in reality the sojourner [Gk. *prosēlytos*] is one who circumcises not his uncircumcision but his desires and sensual pleasures and the other passions of the soul" (*Quaestiones et Solutiones in Exodum* ii.2). This passage seems to indicate that Philo was not interested in the physical circumcision of proselytes; instead, he demanded that a proselyte be circumcised in heart. Philo proceeds in the same passage to define a proselyte as one who abandons polytheism and worships one God. Indeed, when Philo describes a proselyte he usually focuses on three things: forsaking the fables and ignorance of false gods, cleaving to the truth, and recognizing the validity of monotheism (*De Specialibus legibus* i.56f. [307-309]; iv.34 [177-178]; *De virtutibus* 20 [102-104], 39f. [219-221]).

The incident of King Izates is also used to show that circumcision was not always required of a proselyte (*Ant.* xx.2.4 [38-46]). After all, Ananias, who was a Jew from the Diaspora, did not require circumcision of Izates (*Ant.* xx.2.4 [41]). Izates submitted to circumcision only when Eleazar, a strict Jew from Palestine, convinced him of its necessity. Nevertheless, the view of Ananias, according to some scholars, shows that there was some laxity in requiring circumcision among Diaspora Jews.

McEleney said that rabbinic literature also indicated that circumcision was sometimes waived. The most famous example was the dispute between Rabbi Eliezer and Rabbi Joshua (A.D. 90-130) over whether both circumcision and ritual baptism were required for conversion to Judaism (T.B. *Yebamoth* 46a). Rabbi Eliezer argued that circumcision without baptism sufficed to make one a proselyte, but Rabbi Joshua said that baptism without circumcision was sufficient to be initiated into Judaism, arguing from the fact that women are baptized but not circumcised. The position of Rabbi Joshua seems to show that some circles in Judaism did not require circumcision as an initiation rite.

On the other hand, strong arguments support the idea that circumcision was almost always required of proselytes. J. Nolland maintained that McEleney and others misconstrued the nature of the evidence. Philo did say that a proselyte is not one who is physically circumcised but one who is spiritually circumcised. Yet such a statement from Philo need not imply that he discounted the necessity of circumcision. Elsewhere Philo criticized those who rejected the outward observance of circumcision, even though they were devoted to the spiritual significance of the rite (*Migratione de Abraham* 89-93). Philo thought one should be devoted to both the outward sign and the inward meaning of the rite. In the passage where Philo emphasized spiritual circumcision, he may have been criticizing the notion that physical circumcision alone classifies one as a proselyte. An emphasis on the spiritual significance of the rite fits with Philo's interest in the allegorical or spiritual meaning of outward observances. Nevertheless, Philo's insistance on the necessity of physical circumcision in *Migratione de Abraham* shows that he did not consider the outward rite optional.

The waiver of circumcision by Ananias in the case of King Izates should not be pressed too far. Ananias counseled against circumcision because he was afraid that the king would suffer harm, and also because Ananias was fearful that he himself would be punished. It seems fair to conclude that Ananias's conviction sprang more from expedience than from theological integrity. Moreover, even Ananias said that because of the present danger God would forgive the omission of circumcision. Such a statement makes it plain that Ananias believed that circumcision was necessary and right; otherwise, an assurance of divine forgiveness would be superfluous.

Rabbi Joshua's claim that circumcision should not be required seems to be clear evidence that the necessity of the rite was disputed. But one should be careful about drawing this conclusion too quickly. Often the other side is presented in a rabbinic debate simply for the sake of discussion, not because the issue was really being debated in practice. Furthermore, the heart of the debate between Rabbi Joshua and Rabbi Eleazar seems to have been on the necessity of baptism, rather than on the necessity of circumcision. The requirement of ritual ablutions is treated at length in the text, but the obligation to submit to circumcision is dropped. This lack of discussion on circumcision would be unthinkable if it were seriously being considered as an optional rite. But scant attention is paid to the circumcision issue probably because all Rabbi Joshua wanted to prove was that baptism was necessary. He made a dogmatic statement at the beginning about circumcision as a polemical point to further his argument, not because he was seriously thinking of dispensing with circumcision.

In a few cases circumcision may have been considered unnecessary for conversion, but most of the evidence links circumcision with conversion to Judaism. Even the evidence that is used to suggest that circumcision was unnecessary for conversion in the Diaspora is not very convincing. Indeed, some scholars who think circumcision was optional see a parallel to Paul's claim that circumcision was unnecessary for Gentiles. But the alleged parallel is illusory. For reasons of expedience some Jews may have argued that circumcision was unnecessary for proselytes (e.g., Ananias), but Paul argued for the dissolution of circumcision for Gentiles not for reasons of expedience, but from a theological conviction that the new age had dawned in Christ Jesus (Gal. 5:2-6; 6:12-14; Phil. 3:2-11).

B. Baptism. No documentary evidence for the initiation rite of baptism can be certainly dated before the 1st cent. A.D. (Epictetus *Discourses* ii.9.19-21; Sib. Or. 4:162-170). A controversy between the schools of Shammai and Hillel may reveal one of the oldest testimonies to proselyte baptism (Mish. *Pesahim* viii.8; cf. *Eduyoth* v.2), but the text may also refer to a required purification for uncleanness before one participated in the Passover meal. The saying of Rabbi Joshua (T.B. *Yebamoth* 46a) that was examined earlier is another reference to the rite in the 1st cent. A.D. The context of the discussion between Rabbi Joshua and

Rabbi Eliezer suggests that the real controversy was over the validity of baptism as an initiation rite. A controversy over the legitimacy of baptism may imply that baptism was not universally recognized as an appropriate initiation rite. If this is the case, the beginnings of proselyte baptism could have been relatively recent, and this would explain the intensity of the controversy between Rabbi Eliezer and Rabbi Joshua. Scholars who posit such a late date emphasize that Jewish sources reveal no trace of the rite before the 1st cent. A.D. Mostly the advocates of this position would place the origin of proselyte baptism after the destruction of the temple (A.D. 70).

On the other hand most scholars claim that proselyte baptism was much earlier. They suggest that the attestation of proselyte baptism in the 1st cent. A.D. indicates that the rite was practiced some time before it was mentioned in the sources. But the assumption that proselyte baptism was required from the beginning is insupportable (contra M. Pope, *IDB*, III, *s.v.*). After all, there were converts to Yahweh in the OT, and the OT clearly indicates that proselyte baptism was not a requirement for those entering the covenant community. The date of the start of such a practice must be deduced from the available evidence. Since the documentary evidence for the origin of proselyte baptism is not until late in the 1st cent. A.D., the date of the origin of the practice is uncertain. It is entirely possible that the rite started prior to the 1st cent. A.D. and that none of the extant Jewish sources mentions it. One should not, however, build a hypothesis on a hypothesis and claim that John's baptism of repentance was influenced by Jewish proselyte baptism, for this cannot be conclusively demonstrated from the evidence. By the time of the rabbinic period proselytes had to be circumcised, baptized, and present an offering (T.B. *Kerithoth* 9a).

VI. Proselytes and God-Fearers.–Many scholars see a parallel between the "God-fearers" in rabbinic literature and the "God-fearers" in the NT. In rabbinic literature the *gēr tôšāḇ* was a Gentile who observed the Noachian commandments but was not considered a convert to Judaism because he did not agree to circumcision. As Moore pointed out, some scholars have made the mistake of calling the *gēr tôšāḇ* a "proselyte" or "semiproselyte." But the *gēr tôšāḇ* was really a resident alien in Israel. He was not considered a convert to Judaism, for he was permitted to eat the meat of animals who were slaughtered incorrectly, and an Israelite could take usury from him. Such practices were forbidden in dealings with fellow Jews.

Some scholars have claimed that the term "those who fear God" (*yir'ê ʾĕlōhîm/šāmayim*) was used in rabbinic literature to denote Gentiles who were on the fringe of the synagogue. They were not converts to Judaism, although they were attracted to the Jewish religion and observed part of the law. But M. Wilcox argued that the terms "fearers of heaven" and "fearers of God" did not designate a Gentile fringe in the synagogues in rabbinic literature. If this is true one cannot depend on the rabbinic usage in positing a difference between "God fearers" and "proselytes" in Acts. In any case in the OT and other Jewish literature the phrase "those who fear Yahweh" (*yir'ê YHWH*) was a common designation for pious Israelites (Ps. 15:4; 22:23 [MT 24]; 25:12; 115:11, 13; 118:4; 135:20; Mal. 3:16; 4:2 [MT 3:20]; Sir. 2:7-17; 6:16f.; 34:13-15; Ps. Sol. 2:37; 3:16; 4:26; 1QSb 1:1; CD 10:2; 20:19f.), and thus the phrase was not a technical term to designate Gentiles who were adherents of the synagogue in the OT and the intertestamental period, although the status of the term in the rabbinic period is still open to question.

The precise status of "God-fearers" in the book of Acts is also disputed. It is generally agreed that Luke used *phoboúmenos/sebómenos tón theón* to express the same idea. But two different interpretations have been proposed to explain what that idea was. (Interestingly, the word *phobéomai* is used in the first part of Acts [10:2, 22; 13:16, 26, 43], and *sébomai* is used in the second part of the book [13:43, 50; 16:14; 17:4, 17; 18:7].)

The term "God-fearers" in Acts has traditionally been described as a technical term to designate Gentiles who attended the synagogue and were attracted by Jewish monotheism. They were not converts, however, because they did not submit to circumcision. Thus when Paul visited Jewish synagogues he found three groups of people: Jews, proselytes, and God-fearers. Paul was especially successful among God-fearers because the latter were reluctant to undergo the painful operation of circumcision, and they enthusiastically embraced Christianity because Paul contended that the rite was unnecessary.

Peter's encounter with Cornelius is used to defend the traditional view. Cornelius is described as one who fears God (Acts 10:2, 22), and he seems devoted to the Jewish religion (10:2). But it is clear that Cornelius was not a proselyte because he was considered unclean both by Peter (10:28) and by the Jews in Jerusalem (11:2f.). Thus Cornelius seems to belong in the category of Gentiles who were devoted adherents of the synagogue, although he was not a member of the Jewish religion (cf. Lk. 7:1-10).

The above distinction is also found in other places in Acts. At the beginning of his speech in the synagogue at Pisidian Antioch Paul says: "Men of Israel, and you that fear God, listen" (Acts 13:16). A clear distinction between Jews and God-fearers seems to be implied here, and since proselytes are considered part of Israel the term "God-fearers" in the speech must refer to Gentiles who were attracted to the Jewish religion but had not yet been converted. Paul's words later on in the speech are interpreted in the much same way. "Brethren, sons of the family of Abraham, and those among you that fear God" (13:26). Again native Israelites and God-fearers seem to be clearly distinguished. Acts 13:43, which describes the aftermath of Paul's speech at Pisidian Antioch, poses a problem for this interpretation. Luke says that when the meeting ended "many Jews and devout converts [*sebomén*ōn *prosēlýtōn*] to Judaism followed Paul and Barnabas." The word "devout" (*sebomén*ōn) describes God-fearers elsewhere, but here that word precedes the word "proselytes," and yet God-fearers and proselytes are supposed to refer to two distinct groups. This problem is solved by those who hold the traditional view in two ways: either the verse is textually corrupt, or Luke is using "proselyte" inaccurately.

The rest of the passages in Acts could also fit with the traditional explanation. In Thessalonica Paul's preaching was particularly effective among the God-fearers in the synagogue (Acts 17:4), and in Athens Paul argued in the synagogue with both Jews and God-fearers (v. 17). Paul departed from the synagogue in Corinth and began to teach in the house of Titius Justus, who was "a worshiper of God" (Acts 18:7). So too, Lydia, who was converted in Philippi, is described as "a worshiper of God" (16:14). In Pisidian Antioch the Jews aroused "the devout women of high standing," and Paul and Barnabas were ejected from the city (13:50).

This traditional interpretation has been the object of trenchant criticism, especially from K. Lake and M. Wilcox. They both claimed that "God-fearers" was not a technical term for Gentiles who attended the synagogue but never took the final step of becoming Jews. Such an interpretation does not necessarily imply that all Gentiles

in the synagogues were full converts. It simply means that the terms "God-fearers" and "worshipers of God" were not technical terms. These terms were used to denote the piety of the people being described, whether they were Jews, proselytes, or Gentiles who were attracted to Judaism.

When one looks at the use of the terms in Acts it seems unlikely that *phoboúmenos/sebómenos tón theón* are technical terms. As we have already seen, those who maintain a traditional interpretation of Acts 13:43 claim that "proselytes" in this verse is either a gloss or a Lukan inaccuracy. But it seems clear that such solutions are adopted because the combination "devout proselytes" (*seboménōn prosēlýtōn*) confounds the theory that God-fearers are distinct from proselytes. It is better to admit that "God-fearer" is not used technically in Acts. After all, there is no evidence that "proselytes" is a gloss in v. 43. Furthermore, Luke uses "proselyte" accurately elsewhere (Acts 2:10; 6:5). When Luke speaks of "devout proselytes" in Acts 13:43 he is merely saying that these proselytes were pious.

In addition, if Paul distinguished between Jews and proselytes in Acts 13:43, then it is possible that the distinction he draws between "Jews" and "God-fearers" in 13:16, 26 was a distinction between Jews and proselytes rather than between Jews and uncircumcised Gentiles in the synagogue. This interpretation would be consistent with v. 43, and vv. 16 and 26 refer to the same event in Pisidian Antioch.

The references to "devout women" (13:50) and Lydia "a worshiper of God" (16:14) may also suggest that the term *sébomai* is not used as a technical term for Gentile adherents to the synagogue. After all, women did not need to be circumcised to be initiated into Judaism. Thus most women who were attracted to Judaism probably became converts.

If it is true that "God-fearers" was not always a technical term, then one has to determine from context whether the term refers to a proselyte or a Gentile who attended the synagogue. Both Acts 17:17 and 18:7 do not give enough information to decide conclusively. The example of Cornelius shows clearly that some pious Gentiles were attracted to Judaism but had not consented to circumcision (cf. Juvenal *Satires* xiv.96-100). It is possible that the Gentiles described in Acts 17:17 and 18:7 fall into the same category as Cornelius.

Nevertheless, the notion that "God-fearer" was used as a technical term cannot be adequately supported by the evidence. The word simply relates that one is a pious person. Thus Jews, proselytes, and Gentiles who were attracted to Judaism were all described as "pious." The meaning of "God-fearer" in any particular passage must be determined from the context.

In conclusion, Paul may have won the greatest number of converts from the Gentile fringe in the synagogue, but there is simply not enough evidence in Acts to prove this traditional opinion. It cannot be doubted, however, that many of Paul's converts were uncircumcised Gentiles. Otherwise, the need for the Apostolic Council in Acts 15 would be inexplicable. But this still does not prove that a significant number of uncircumcised converts were on the fringes of the synagogues, although it is possible that this was the case.

VII. In Rabbinic Literature.–Different facets of the rabbinic view of proselytes have been explored thus far, but at this point it is necessary to examine briefly the rabbinic attitude toward proselytes and the status of proselytes. The rabbis recognized that some people became proselytes from unworthy motives and they were labeled "false proselytes." Those who converted out of fear were called "lion proselytes" (cf. 2 K. 17:25f.). Some turned to Judaism as a result of dreams and were called "dream proselytes." The rabbis also recognized that many became proselytes from deep religious conviction, and these were called "righteous proselytes" or "true proselytes."

In theory at least the status of a proselyte was such that the proselyte was considered a newborn child (T.B. *Yebamoth* 62a). Only children born after a proselyte's conversion could be counted as heirs. Since a woman proselyte was suspected of being a harlot in her Gentile days, she could not marry a priest. But the rabbis did allow a proselyte to enter the courtyard in the Jerusalem temple. This was quite different from the Qumrân community, for the latter forbade proselytes to enter the temple of the Lord. All the verses of the OT that refer to *gēr* were applied to the proselyte in rabbinic literature, so the rabbis strongly emphasized tender concern and care for the proselyte.

VIII. Conclusion.–The difference between Paul and Judaism on the requirements for proselytism was a major reason why Christianity and Judaism diverged. Paul claimed that since Jesus the Messiah died on the cross the rite of circumcision was irrelevant (Gal. 5:6; 6:12-14). Such a view was naturally unacceptable to those who held that Gen. 17:9-14 taught that the rite was indissoluble.

T. R. SCHREINER

PROSPER; PROSPEROUS [Heb. *bānâ*–'build' (Mal. 3:15, hiphil of *ṭôḇ*–'be good' (Jgs. 17:13; "make prosperous," Dt. 30:5), *māṣā' ṭôḇ*–'find good' (Prov. 16:20; 17:20; 19:8), *hāyâ ṭôḇ*–'be good' (Jer. 44:17), hiphil of *yāṯar* + *ṭôḇâ*–'good remains' ("make prosperous," Dt. 30:9), *kāšēr*–'succeed' (Eccl. 11:6), hiphil of *nāśag*–'afford' (Lev. 25:26), hiphil of *ṣālaḥ*–'succeed' (Gen. 24:21; Prov. 28:13; Isa. 48:15; etc.), hiphil of *ṣāmaḥ*–'sprout' (2 S. 23:5), *šālâ*–'have peace and quiet' (Ps. 122:6; Lam. 1:5), hiphil of *śāḵal*–'understand,' 'have success' (Dt. 29:9 [MT 8]; 1 K. 2:3; Isa. 52:13), *'āśâ ḥayil*–'make wealth' (Ruth 4:11), *šalwâ*–'ease' (Ezk. 16:49); Aram. *ra'ᵃnan*–'flourish' (Dnl. 4:4 [MT 1]), haphel of *ṣᵉlaḥ* (Ezr. 5:8; Dnl. 6:28 [MT 29]); Gk. *euodóō*–'gain' (1 Cor. 16:2), *ploutéō*–'be rich' (Rev. 3:17)]; **PROSPERITY** [Heb. *ṭôḇ* (1 K. 10:7; Job 21:13; 36:11; etc.), *ṭûḇ* (Job 20:21; 21:16; Ps. 128:5), *ṭôḇâ* (Dt. 23:6 [MT 7]; 28:11; Ezr. 9:12; etc.), *tôm*–'perfection' (Job 21:23), *šālôm*–'peace' (Job 15:21; Ps. 37:11; 72:3; etc.), *yᵉšû'â*–'salvation' (Job 30:15), *šālû*–'ease' (Ps. 30:6 [MT 7]), *šalwâ* (Jer. 22:21), *šālēw*–'be at ease' (Zec. 7:7), *kôšārâ* (Ps. 68:6 [MT 7]), *ṣᵉḏāqâ*–'righteousness' (Prov. 8:18)];

AV also PLENTEOUS, MULTIPLY, PEACE, etc.; NEB also SUCCESS, GOOD, LUXURY, etc. In Ps. 10:5 the RSV apparently emends *yāḥîlû* (< *ḥîl*, "be firm, strong") to *yaṣlî(a)ḥ* (hiphil of *ṣālaḥ*); see the comms.; *BH*; KoB, p. 295. In Ezk. 34:29 the RSV emends MT *lᵉšēm*, "for a name," to *šālôm* (see *BHS*). The expression *ʿaśê-ḥayil* in Ruth 4:11 is an idiom for gaining wealth (Dt. 8:18; cf. Gen. 34:29). In Job 30:15, *yᵉšûʿâ*, rendered "prosperity" in the RSV, is better translated "safety, deliverance" or "victory" (cf. JB, NEB, NIV). The RSV (and NIV) misunderstand *ṣᵉdāqâ* in Prov. 8:18. The larger context and the poetic structure of the verse demand a translation like "integrity, virtue" or "justice," instead of "prosperity" (i.e., "riches"/"honor," "wealth"/"integrity"; cf. JB, NEB).

Prosperity in the OT connotes the realization of goals (Gen. 24:21, 40, 42, 56), success in labor (Gen. 39:3, 23; 2 Ch. 32:30), living in peace and safety (Dt. 23:6; 1 Ch. 14:7; cf. Heb. *ṭôḇâ*, "happiness," in Lam. 3:17; AV, NEB, "prosperity"), enjoying the benefits of familial relationships (Ruth 4:11; cf. Job 1:1-5), as well as acquiring and possessing material goods (Dt. 28:11; 1 K. 10:7; 1 Ch. 29:23; Job 21:23f.).

More important to the Hebrews were the spiritual and ethical dimensions of prosperity. True prosperity was linked to the blessings of covenantal obedience before God (Dt. 28:29; 29:9; 1 K. 2:3; 1 Ch. 22:13; etc.). It is God who bestows prosperity on those who keep and do the words of the Mosaic (and subsequent) covenants (Dt. 29:9; 30:9; cf. 28:11; Neh. 2:20; Ps. 68:6 [MT 7]). The material and spiritual blessings tied to covenant-keeping are rewards for the righteous, those who fear the Lord (Ps. 1:3; 25:13; 37:11). In the same vein, prosperity is one of the rewards of godly wisdom, that is, the wise "receive effective instruction" (so McKane, p. 265) and practice righteousness, justice, and equity (Prov. 13:21; 19:8; cf. 1:3-5, 33; 2:8; 3:2-4). Those who refuse to acknowledge God in their prosperity (Jer. 10:21; 22:21) and to share their abundance with the poor and needy (Ezk. 16:49) forfeit the blessings associated with covenant-keeping; instead they are subject to the curses connected with covenant-breaking (Dt. 28:11, 29; 29:9; 30:9; etc.; cf. Prov. 3:9f.).

God's word also prospers and accomplishes His intended purposes (contextually, His word prospers among those who thirst, come, hearken, incline, and seek; cf. Isa. 55:1-11). Prosperity is one of the fruits of the revival and restoration prompted by the implementation of the new covenant in the eschaton (Ps. 106:5; Isa. 48:15; 66:12; Jer. 33:6, 9; 44:17; Zec. 1:17; 8:12). Isaiah prophesies that the Servant of God will prosper, be exalted, and prolong His days, and that the will of God shall prosper in His hand (Isa. 52:13; 53:10). Jewish scholars ascribe these oracles to a messiah yet to come, or find their fulfillment in the fortunes of the nation of Israel during the Exile and the period of postexilic restoration. Christian scholars see the fulfillment of Isaiah's prophecies in the life and ministry of Jesus of Nazareth, called the Christ. As the Servant-Messiah, Jesus prospers in that He always does the will of the Father (Jn. 6:35-40; 10:1-18, 31-39), He reconciled Israel and the gentile nations to God through His redemptive work (Rom. 11:11-32; cf. 5:1-11, 15-17; 2 Cor. 5:16-21), He has been exalted highly and now sits at the right hand of God (Phil. 2:9-11; He. 8:1-7), and He will come again with power and great glory (Mt. 24:29-31).

The Gk. *euodóō* means "be led down a good path," hence "prosper" or "succeed." Paul instructed the Corinthians to give to the Jerusalem church in proportion to their measure of prosperity (1 Cor. 16:2). Prosperity may prove to be a snare to spiritual development because it fosters an attitude of self-sufficiency (Rev. 3:17; cf. Mt. 6:24; 19:23-26; Lk. 12:13-21; 18:18-30; 1 Tim. 6:8-10).

PROVENDER [Heb. *mispō'* (Gen. 24:25, 32; 42:27; 43:24; Jgs. 19:19), *bᵉlîl* (Isa. 30:24), *bālal* ("give provender," Jgs. 19:21)]; NEB also FODDER; **FODDER** [Heb. *bᵉlîl*] (Job 6:5; 24:6); AV also CORN; NEB also "what is not theirs" (24:6; reading *bᵉlî lô* instead of MT *bᵉlîlô*; cf. LXX). Coarse food given to domestic animals. *Mispō'* seems to be related to an original root *sp'* ("feed"), while *bᵉlîl* is a cognate of *bālal* (usually "mix," but in Jgs. 19:21 "give provender") and may denote a mash that has been fermented by means of soaking (KoB, p. 129). The basic provender was probably the chopped straw or chaff still used today in Palestine. With this were often mixed grasses and grains (including esp. BARLEY, also millet and wheat). Isa. 30:24 prophesies of a time of such abundance that beasts of burden will be fed a seasoned mash made from winnowed grain.

PROVERB [Heb. *māšāl*, *māšal* ("use [as] a proverb," Ezk. 12:33; 16:44); Gk. *parabolḗ* (Lk. 4:23), *paroimía* (2 Pet. 2:22)]; AV also "like" (Job 13:12); NEB also BYWORD, SAYING, MAXIM, MORAL OF THE STORY, "dust." A saying, usually brief, stating observations from experience so arrestingly that it gains popularity. The purpose is to warn against dangerous conduct, while encouraging behavior that promotes personal and social well-being. The book of Proverbs contains the largest biblical collection, although proverbs also served psalmists, prophets, Jesus, and the apostles.

I. Meaning of Biblical Terms.–A. OT. Hebrew writers used *māšāl* to identify forms covering a wide range of English meanings: (1) "mocking saying, taunt" (Dt. 28:37; 1 S. 10:12; 1 K. 9:7; 2 Ch. 7:20; Isa. 14:4; Jer. 24:9; Mic. 2:4; Ps. 69:11 [MT 12]; Ezk. 14:8); frequently the biting force for *māšāl* is disclosed in its association with *śᵉnînâ*, "by-word," "taunt"; (2) "discourse" (Job 27:1; 29:1; Balaam's speeches, Nu. 23:7, 18; 24:3, 15, 20f., 23); (3) "instruction" (substantial lectures, Prov. 1:1-19; 2:1-22; 3:1-12; 3:21-35; 4:1-9, 10-19, 20-27; 5:1-23; 6:20-35; 7:1-27); (4) "wisdom speech" (Prov. 1:20-33; 8:1-36; 9:1-6); (5) "brief words of warning or instruction, based on experience" (1 K. 4:32 [MT 5:12]; Ezk. 12:22f.; 18:2f.; Prov. 1:1, 6; 10:1; 25:1; 26:7, 9; Eccl. 12:9) — the category closest to our understanding of "proverb." The debate on the root meaning of *māšāl* — "rule" or "compare" — has reached an impasse. If these uses have a common core, it has to do with teaching — even a taunt conveys a negative lesson. But context, not etymology, is the key to meaning: *māšāl*'s nuances must be discerned from its use. (See Crenshaw, "Wisdom"; Johnson; Landes.)

B. NT. The LXX regularly translates *māšāl* as *parabolḗ*, which, accordingly, means "proverb" in Lk. 4:23, where it is barbed like a taunt: "Physician, heal yourself." *Paroimía* (2 Pet. 2:22) is drawn from classical Greek and intertestamental literature (e.g., Sir. 6:35). In the Fourth Gospel (10:6; 16:25, 29) *paroimía* is a figure used to conceal meaning from all but the most perceptive (in Sir. 39:3 it parallels "riddle"), a role opposite to that of ordinary proverbs.

II. Forms.–The variety of shorter proverbial forms invites detailed analysis, not only to put them in categories but, more importantly, to discern their intent and use. (For the longer instructions and wisdom speeches in Prov. 1–9, *see* PROVERBS, BOOK OF I.A.)

A. Popular Sentences. These are usually one line without poetic parallelism. They often disclose their beginnings: Nimrod set the pace for later hunters — "Like Nimrod a mighty hunter before the Lord" (Gen. 10:9); Saul's venture into prophecy became a warning against dabbling in it — "Is Saul also among the prophets?" (1 S. 10:12; 19:24); the role of Abel of Beth-maacah in settling disputes made that city a proverb — "Let them ask counsel at Abel" (2 S. 20:18); David's banter with the Jebusites who claimed to defend Jerusalem with their lame and blind spawned the saying — "The blind and the lame shall not come into the house" (2 S. 5:8).

Elsewhere, common sense was the origin: "Out of the wicked comes forth wickedness" (1 S. 24:13); "Let not him that girds on his armor boast himself as he that puts it off" (1 K. 20:11); for other popular proverbs, see Jer. 13:12; 23:28; Hos. 4:11, 14e (cf. Fontaine). NT counterparts are: "Can anything good come out of Nazareth?" (Jn. 1:46); perhaps "Cretans are always liars, evil beasts, lazy gluttons" (Tit. 1:12); and "A prophet is not without honor . . ." (Mt. 13:57; Mk. 6:4; cf. Lk. 4:24).

B. Sayings. The typical saying has two lines of Hebrew parallelism, which, according to traditional analysis, takes three forms (for a critique of this traditional analysis, see J. Kugel, *Idea of Biblical Poetry* [1981]; *see also* POETRY, HEBREW). In *synonymous* parallelism the second line restates and underscores the first: "A fool's mouth is his ruin, and his lips are a snare to himself" (Prov. 18:6). (Cf. many other examples in chs. 18–19.)

Antithetic parallelism, dominant in Prov. 10-15 and frequent elsewhere in Proverbs, depicts the contrast between wise and foolish ways of life and their consequences: "He who guards his mouth preserves his life; he who opens wide his lips comes to ruin" (Prov. 13:3). This focus on opposites reflects the wisdom teaching of the two ways: the diametrical difference between obedience to God and rebellion against Him — the difference between a flourishing tree and scattered chaff (Ps. 1). These antithetical structures produce an apt union of form and content.

Synthetic parallelism uses the second line to advance and complete the thought of the first (e.g., "The words of a whisperer are like delicious morsels; they go down into the inner parts of the body," Prov. 18:8).

The saying's grammar is indicative, not imperative. It generalizes the wisdom of experience and expresses it compellingly. Its power rests not in the teacher's authority, respected though that may be (Prov. 1:8), but in the truth of experience that it retrieves and compresses. The variety of experiences made knowing when to apply which saying one mark of the wise (Prov. 25:11). Another mark was the poetic finesse that shaped the sounds, figures of speech, and variety of types. Israel's wise practiced their art with the care credited to Qoheleth (Eccl. 12:9f.; cf. Prov. 15:23).

1. Juxtaposition places elements or whole lines side by side without verbal sign of comparison: "Hope deferred — a sick heart; and a tree of life — desire fulfilled" (Prov. 13:12; cf. RSV, AV, NEB, etc., which supply verbs for smoother reading). The point is that certain things go hand in hand; each type of conduct carries its inevitable result. (Other examples of juxtaposition are Prov. 11:8; 12:1; 14:2, 11; 16:17; 17:19; 21:23; 25:3.)

2. Comparison may be conveyed in several ways. It is implied in two juxtaposed lines that compare a desired spiritual experience to a physical one: "[Like] cold water to a thirsty soul, [so is] good news from a far country" (Prov. 25:25). (See Prov. 25:12, 14, 28; 26:7, 9f., 14.) Similes that explicitly employ "like" are common: "Like one who binds the stone in the sling is he who gives honor to a fool" (Prov. 26:8). (See Prov. 26:1f., 11, 18; 27:8, 19.) The similes often focus on the absurd — a vivid technique to expose the utter inanity of a fool's behavior.

"Better" sayings show that wise conduct is infinitely more valuable, even in humble circumstances, than power or affluence without it: "Better is a dinner of herbs where love is than a fatted ox and hatred with it" (Prov. 15:17). Love is not just slightly preferable to hatred; it is so much better that it reverses the values of the things — the herbs and the fatted calf — that go with it (cf. 12:9; 15:16; 16:8, 19; 17:1; 19:1; 27:5, 10b). See G. S. Ogden, *JBL*, 96 (1977), 489-505; 98 (1979), 339-350.

3. Numerical sayings reflect the ancients' use of lists of comparable items to comprehend the universe's order. (For proverbs' role in finding and establishing order, *see* PROVERBS, BOOK OF IV.B.) Probably derived from games or riddles, these sayings follow an x, x + 1 pattern, i.e., the second number is one digit higher than the first: "Three things are too wonderful for me; four I do not understand . . ." (Prov. 30:18). (See 30:15b-16, 21-23, 24-28, 29-31.) The second number (x + 1) determines the list's length and serves to spotlight the final item listed — the proverb cited (30:18f.) is about the mysteries of human attraction, not eagles, serpents, or ships. This helps to interpret the x, x + 1 pattern of the seven deadly sins

(6:16-19): the focus is on the "man who sows discord" more than the first six sins. Amos, who seems to have been influenced by the wisdom traditions, uses the x, x + 1, pattern (1:3–2:6), as does Job 5:19. (Cf. H. W. Wolff, *Amos the Prophet: The Man and His Background* [Eng. tr. 1973], pp. 34-44; W. Roth, *Numerical Sayings in the OT* [*SVT*, 13; 1965].)

4. Admonitions. In contrast to the sayings, the admonitions teach good behavior by commands and prohibitions. The grammar is imperative or jussive. The *command* is positive: "Listen to advice and accept instruction, that you may gain wisdom for the future" (Prov. 19:20). (Cf. 14:7; 19:27; 20:16; 22:6, 10, 17; 23:1f., 19; and many in Prov. 1–9.) The *prohibition* is negative: "Do not rob the poor because he is poor, or crush the afflicted at the gate; for the Lord will plead their cause and despoil of life those who despoil them" (22:22f.). (Cf. 22:24f., 26f., 28f.; 23:3, 4f., 6-8, 9, 10f., 13f., 17f., 20f., and many in Prov. 1–9.)

Typically, admonitions conclude with a motivation for obeying them, usually introduced by "for" (Heb. *ki*). The imperative was reinforced by a sound reason stating the results. The admonitions resemble certain apodictic laws where the command is followed by its reason (e.g., Dt. 5:8-10, 11, 16). See Nel, Gerstenberger.

III. Use of Proverbs.–A. OT. 1. Wisdom literature teems with proverbs. Job's friends press home their call to repentance with them (e.g., Job 4:8; 5:2, 6f.; 11:12, 20; 15:34); Job uses them to counter this call (e.g., 6:14; 12:6, 11f.) and scorns his comforters' sayings (13:12). Job quotes a proverb to refute it, "How forceful are honest words! [proverb] But what does reproof from you reprove?" (6:25), and uses proverb to counter proverb (e.g., 12:12f.).

Ecclesiastes' use of proverbs is similar (e.g., 5:10 [MT 9], saying; 7:9; 11:1, admonitions; 4:6, 9, 13; 5:5 [MT 4]; 7:1-3, 5, 8; 9:17f., "better" sayings). Proverbs reinforce or summarize the Preacher's conclusions (e.g., Eccl. 1:15, 18; 4:5f., 9-12 — almost a numerical proverb), and they are clustered as words of advice (5:1-12 [MT 4:17–5:11]; 7:1–8:9; 9:13–12:8), supporting the counsel to make the best of life despite threats of futility. Like Job, Ecclesiastes cites conventional proverbs to correct them (e.g., 2:14f.; 4:5f.; he also coins "antiproverbs," couching in traditional proverbial form a message questioning the tradition (1:18; contrast with Prov. 2:10; 3:13; 8:34-36). (See Williams, pp. 47-63.)

2. Psalms. The Psalter includes entire wisdom psalms (e.g., 1, 32, 34, 37, 49, 73, 112, 127–128, 133) and psalms partly composed of wisdom themes and forms (e.g., 25:8-10, 12-14; 31:23f. [MT 24f.]; 39:4f. [MT 5f.]; 40:4f. [MT 5f.]; 62:8-10 [MT 9-11]; 92:6-8; 94:8-15. Proverbs are imbedded in most of these (e.g., 1:6; 32:8-10; 34:13-15), while others (e.g., 37, a collection of admonitions; 112, 127–128, collections of sayings and promises of happiness) are composed entirely of proverbs. The Psalter's proverbs indicate connections between the wise and the temple staffs; overlaps in activities among the offices of Israel — prophets, priests, singers, scribes, wise men; and links between instruction and prayer in Israel's worship, especially in thanksgiving songs (e.g., 32, 73, 78). (See L. G. Perdue, *Wisdom and Cult* [1977].)

3. Prophets. The prophets used wisdom sayings, often in judgment speeches (Isa. 1:3; 10:15; 28:27; Jer. 17:7f., 11; 23:28), to show that disobedience to God's will was a violation of common sense as well as a breach of covenant. Hosea's book concludes with a wisdom admonition (14:9). (Cf. J. W. Whedbee, *Isaiah and Wisdom* [1971]; Thompson, esp. pp. 96-110; for wisdom's relationship to other OT strands, see Morgan.)

B. Apocrypha. 1. Sirach. Though Sirach extended his lessons to cover topics more thoroughly than simple proverbs would do and though he reinterpreted Israel's history (chs. 44–50) as a catalog of heroes, he nevertheless used proverbial forms: sayings (e.g., 20:1, 5, 7f.), admonitions (e.g., chs. 7–9; 18:30, 32f.), numerical patterns (e.g., 23:16; 25:7-11; 26:5-8, 28), "better" sayings (e.g., 19:24; 30:14, 17), comparisons (e.g., 21:16; 26:12, 17f.), juxtaposition (e.g., 27:4).

2. Wisdom of Solomon virtually buried the proverbial style in the elaborate, closely argued essays. Yet traces of the admonition (e.g., 1:1f.; 6:1-3) and the saying (e.g., 6:6f., 12; 14:2) remain.

C. NT. 1. Sayings of Jesus. More than one hundred Synoptic sayings of Jesus reflect wisdom's influence (cf. Crossan); they occur in all four sources (Mark, Q, M, L), indicating how deeply imbedded in apostolic memory was Jesus' use of proverbs. Most of the conventional forms are found: antithetical parallelism (e.g., Mt. 7:13f., 17f., 24-27), admonitions (e.g., Mt. 6:34; 7:13), sayings (e.g., Mt. 6:21, 24; 10:24; 12:25, 33; 24:28), and "better" sayings (e.g., Mk. 9:43-47). While Jesus taught in forms and subjects akin to those in the curricula of other wise men, including classical and Hellenistic sources, He frequently used paradoxical antitheses (Mk. 2:27; 8:35; Mt. 25:29) to highlight the radical nature of the Kingdom (cf. Williams, pp. 60-63) in both its present and future expressions (cf. C. E. Carlston, *JBL*, 99 [1980], 87-105).

2. The Epistles employ proverbs—admonitions more than sayings—in passages urging believers to righteous living: (1) Rom. 12:9-21, a chain of admonitions; (2) the "house tables," rules for responsible behavior in Christian households, Eph. 5:21–6:9; Col. 3:18–4:1; cf. 1 Pet. 2:18–3:7; (3) closing exhortations like Gal. 6:7-11, with its prohibitions supported by motivations and illustrated by analogies from nature; cf. 1 Pet. 5:6-10 and He. 12:1-13; 13:1-7, 17f. James's use of Jesus' wisdom sayings and other proverbs marks him as an NT sage: note the admonition in 3:1, a prohibition with motivation (cf. also 4:7-10), but more common are sayings that summarize one section and, sometimes, provide a transition to the next (e.g., 2:13, 26; 3:18; 4:17; 5:20; cf. P. H. Davids, *Epistle of James* [*NIGTC*, 1982], p. 23).

IV. Sources of Proverbs.–Sapiential maxims are so ancient and widespread (Egyptian and Sumerian examples hark back to the beginnings of literature in the 3rd millennium B.C.) that their origins are virtually untraceable (see W. G. Lambert, *Babylonian Wisdom Literature* [1960]; E. Gordon, *Sumerian Proverbs* [1959]).

A. Clan. Many sayings seem to stem from the family and tribe. Training the young in clan mores and practices — ethics of work, respect for persons and property, bases for sound choices — called for learnable summaries of honorable behavior, especially in cultures stable and largely oral, e.g., Proverbs's emphasis on respect for parents' teaching (cf. 7:1-5; 31:26) and children's responsibility to hear (cf. 1:8; 2:1f.; 3:1f.; 4:1-9; see Gerstenberger).

B. Court. The association of OT proverbs with Solomon (1 K. 4:32 [MT 5:12]; Prov. 1:1; 10:1; 25:1) and Hezekiah (Prov. 25:1) suggests the royal court's hand in their cultivation. Solomon's contacts with Egypt acquainted him with Egyptian court practices, especially the role of scribes and other learned administrators. Wisdom materials may have served as guides for Israel's decisions as they did for Egypt's. For Isaiah (e.g., 29:13f.; 30:1-5) and Jeremiah (e.g., 8:3-12; 9:12; 18:18) such wise men were mixed blessings: they helped to preserve the sapiential traditions, but their wisdom also led to counsel contrary to God's plans. (See W. McKane, *Prophets and Wise Men* [*SBT*, 1/44, 1965], for political activities of the wise.)

C. School. There is no firm evidence of schools in Israel before Sirach's mention of "my house of learning" (51:23) *ca.* 180 B.C. (cf. R. N. Whybray, *Intellectual Tradition in the OT* [*BZAW,* 135, 1974], pp. 33-43). Yet how could life and learning have been carried on without them? Tribal schools were posited by W. Richter (*Recht und Ethos: Versuch einer Ortung des weisheitlichen Mahnspruches* [1966]). A stronger case has been made for court schools, patterned after the Egyptian, which trained nobility, administrators, and scribes (R. E. Murphy, *Wisdom Literature* [*FOTL,* 13, 1981], pp. 6-9). Probably all three entities contributed to shaping and transmitting the sayings, many of which were (1) born in the clan with its need to rear its young; (2) collected and polished in the court where the means of writing and preserving were available; (3) taught to the leaders in the school, in whatever form it existed (cf. Morgan, pp. 141f.).

PROVERBS, BOOK OF. The largest biblical compendium of wisdom sayings, Proverbs takes its English name from the Vulg. *Liber Proverbiorum* (on the Hebrew title *mišlê* and the LXX title *Paroimiai see* PROVERB I). In the Hebrew canon Proverbs usually follows Psalms and Job in the third section (Writings or Hagiographa); in some lists Proverbs is between Psalms and Job. English versions place Proverbs after Psalms and before Ecclesiastes in the "poetic" section. If Hebrew wisdom teaches the art of success, Proverbs is a handbook for successful living. If the laws of love (Lev. 19:18; Dt. 6:5) are pivotal OT themes, Proverbs is an extended commentary on them. If other parts of the OT center in Israel's covenant relationship, Proverbs spells indelibly and succinctly the impact of this relationship. All life is ordered by Yahweh, to be lived in dependence on His provision and in response to His demands, i.e., in the fear of Yahweh, which is the beginning of wisdom (Prov. 1:7, 29).

I. Contents
  A. Instructions to Seek Wisdom, 1:1–9:18
  B. Proverbs of Solomon, 10:1–22:16
  C. Words of the Wise, 22:17–24:22
  D. More Words of the Wise, 24:23–34
  E. More Proverbs of Solomon, 25:1–29:27
  F. Words of Agur, 30:1-33
  G. Words of Lemuel, 31:1-9
  H. Acrostic Description of a Virtuous Wife, 31:10-31
II. Date of Collection
III. Role in Israel's Life
  A. Cultural Background
  B. Canonical Character
IV. Theological Significance
  A. Experience as a Means of Revelation
  B. Creation as the Basis of Order
  C. Social Responsibility
  D. Covenant Loyalty
V. Proverbs and the NT
  A. Quotations
  B. Allusions
  C. Christology
    1. Synoptic Gospels
    2. Fourth Gospel and Epistles

I. Contents.–Proverbs is actually a collection of collections, whose various parts are distinguishable by separate headings (e.g., 10:1; 25:1; 30:1; 31:1) or by changes in form (e.g., the acrostic of 31:10-31).

A. Instructions to Seek Wisdom, 1:1–9:18. The title and purpose are combined in 1:1-6, which (1) links the collection to Solomon, patron of Israel's wisdom movement (1 K. 4:29-34 [MT 5:9-14]); (2) highlights wisdom's many facets by an array of synonyms (instruction, insight, wise dealing, prudence, knowledge, discretion, learning, understanding, skill); (3) pinpoints wisdom's moral character (e.g., righteousness, justice, equity; v. 3); (4) describes the breadth of its audience (simple, youth, wise man); (5) catalogs its techniques (proverb, figure, sayings of the wise, riddles; v. 6).

Two basic literary forms dominate chs. 1–9: *instructions* — extended admonitions, usually addressed to "my son," which either commend wisdom's virtues (2:1-22; 3:1-20; 4:1-9, 20-27; 9:7-12) or warn against folly's various forms (companionship with sinners, 1:8-19; 4:10-19; conflicts with neighbors, 3:28-35; crooked speech, 4:20-27; sexual immorality, 5:1-23; 6:20-35; 7:1-27; foolish pledges, 6:1-5; laziness, 6:6-11; deceit, 6:12-15; clan discord, 6:16-19); *wisdom speeches* — extended poems in which Wisdom issues her own call to discipleship (1:20-33; 8:1-36; 9:1-6). This is "poetic personification," not "hypostatization," since any view that Wisdom actually existed independently of Yahweh would be unthinkable to OT faith.

Folly is similarly personified in 9:13-18, bribing the foolish with "stolen water" and "bread eaten in secret." The description of Folly as a harlot can be read as a literal warning against fornication, but it may also have a religious connotation: Israel's idolatry was compared to harlotry, especially where idolatry entailed religious prostitution (cf. Hosea and Jeremiah). Wisdom, in her intimate contact with Yahweh, offers life that stems from the fear of Yahweh (8:35f.); Folly, with her worship of false gods, offers only death (9:18).

This section's longer speeches are graced with varied forms (they would otherwise be chains of admonitions): sayings (e.g., 1:17; 6:10f.); rhetorical or disputation questions (6:27f.); numerical sayings (6:16-19); accounts of personal observations (7:6-23); reflections on experiences (4:3-9); beatitudes (3:13f.); antithetical sayings (4:18f.); allegories or extended metaphors (5:15-23) with interpretation.

The closest parallels to chs. 1–9 are Egyptian instructions (*Sebayit*) with a similar mixture of admonitions, prohibitions, motivations, and rhetorical questions. Some scholars liken the wisdom speeches, which have no OT counterpart, to the descriptions of *Ma'at,* Egyptian deity of order or justice. Those who propose an Egyptian influence disagree about how that influence took place and how many instruction speeches are in Proverbs (see Murphy, *Wisdom Literature,* pp. 49-53, for a summary of the work of C. Kayatz, B. Lang, W. McKane, R. N. Whybray). W. F. Albright ("Some Canaanite-Phoenician Sources of Hebrew Wisdom," in M. Noth and D. W. Thomas, eds., *Wisdom in Israel and in the Ancient Near East* [*SVT,* 3; 1955], pp. 1-15) focused on the West Semitic background of chs. 8–9.

The profoundly religious tone, keen concern for social and moral conduct, and hortatory homiletical style of these chapters resemble the speeches in Deuteronomy.

M. Weinfeld (*JBL*, 80 [1961], 241-47; *Deuteronomy and the Deuteronomic School* [1972], pp. 244-370) suggested that Hezekiah's wise men and their successors helped to shape Deuteronomy.

These instructions and wisdom speeches are not necessarily to be dated later than their shorter proverbial counterparts, as though wisdom material developed gradually from shorter to longer forms (cf. von Rad, *Wisdom*, p. 27). Egyptian instructions of Ptahhotep (*ca.* 2450 B.C.) and Merikare (*ca.* 2100 B.C.) were ancient volumes by Solomon's time.

B. Proverbs of Solomon, 10:1–22:16. The title (10:1) salutes Solomon's reputation as patron of Israel's wisdom movement (cf. 1 K. 4:29-34 [MT 5:9-14]). Scholarship has tended to validate this tradition (and also the place of the Solomonic era in the development of history writing; cf. *NHI* [Eng. tr., 2nd ed. 1960], pp. 216-224) due to Solomon's relationships with Egypt, his wide-ranging mercantile contacts (e.g., the queen of Sheba's visit and Hiram of Tyre's transportation service, 1 K. 10:1-25), the need of a well-trained administrative bureaucracy, and the opportunity for religious, cultural, and intellectual pursuits that vast wealth and relief from war afforded. The editor may have coded the great king's name into this collection. The number of proverbs, 375, equals the numerical value of Solomon's name in Hebrew, just as the sayings attributed to Hezekiah's men in chs. 25–29 number about 130, the numerical value of Hezekiah's name.

This collection may have combined two earlier ones: 10:1–15:33 and 16:1–22:16. One clue is the poetic parallelism: almost 90 percent of the sayings in 10:1–15:33 are antithetic, the second line stating the opposite of the first: in 16:1–22:16 the synonymous forms slightly outnumber the antithetic, with the so-called synthetic running a close third. P. Skehan has argued that 14:26–16:15 is a bridge or a "suture" to tie together the two longer sections and to increase the total number of proverbs to 375; hence the cryptic clue to Solomon's name (see Murphy, *Wisdom Literature*, pp. 64f., for the details of this argument). The first verses of ch. 10 may be tailored to fit chs. 1–9: the references to "son" (10:1, 5) hark back to the "my son" of the introductory section; the contrast of "righteous" and "wicked" (10:2f., 6f.) continues an emphasis of chs. 1–9 (2:20-22; 3:32-34; 4:14-19; 5:21-23).

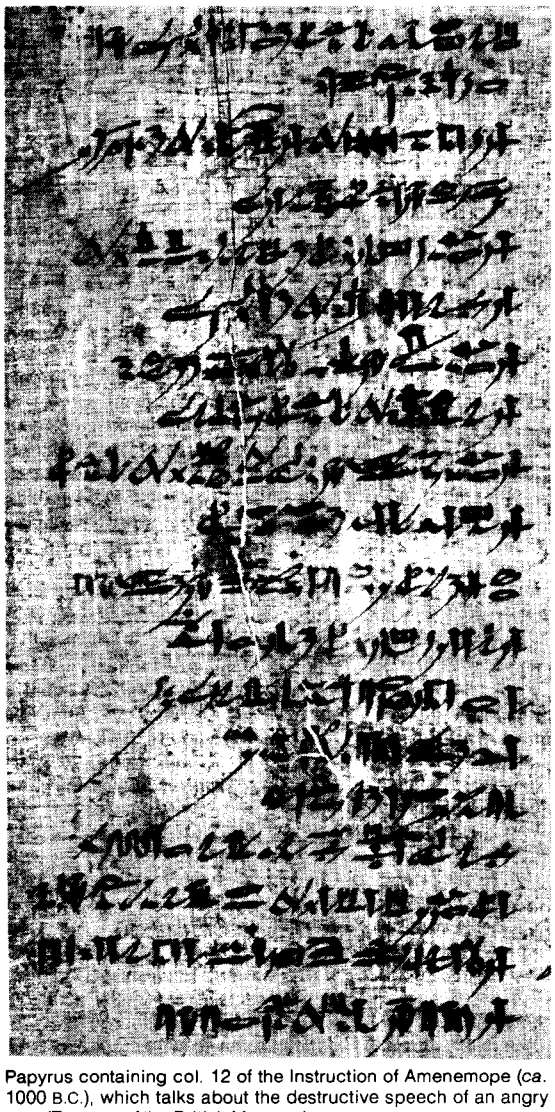
The collectors have given very few other clues as to arrangement. Each saying is an independent statement, two lines long (three in 19:7). Catchwords repeated from verse to verse or section to section may suggest a deliberate grouping (O. Plöger, "Zur Auslegung der Sentenzensammlungen des Proverbienbuches," in H. W. Wolff, ed., *Probleme biblischer Theologie* [*Festschrift* G. von Rad; 1971], pp. 402-416, has found topical or thematic clusters in 11:3-8, 9-14, 18-20, 30f.). Four consecutive verses begin with the letter *bēth* — are they so grouped as an aid to memory? Sayings in 15:13-17 are linked by the words "heart" and "good."

W. McKane (pp. 11, 415) attempted to catalog the individual sayings: old wisdom sayings aimed at personal education; old wisdom sayings, largely negative, describing the effect on the community of antisocial behavior; sayings which use God-language to express Yahwistic piety. But these distinctions are foreign to the outlook of Hebrew wisdom.

The proverbs in 10:1–22:16, therefore, are best studied as self-contained units, each designed for an appropriate context. True wisdom knew the right occasion for each saying.

A number of these sayings reflect explicitly Israel's trust in Yahweh and His governance (10:3, 22, 27, 29; 11:1, 20; 12:2, 22; 14:2, 9, 26, 27, 31; 15:3, 8f., 11, 16, 25f., 29, 33; 16:1-7, 9, 11, 20, 33; 17:3, 5, 15; 18:10, 22; 19:3, 14, 17, 21, 23; 20:10, 12, 22f., 27; 21:1-3, 30f.; 22:2, 4, 12). Such proverbs reminded Yahweh's people that they were accountable to Him and prospered most by following His ways. These sayings cast a religious light on other proverbs, even on those which make no note of Israel's faith. Experiences in the proverbs take place in a world ruled by Yahweh; His presence in judgment and blessing is assumed even where it is not mentioned.

Those who believe that one should fear God for who He is rather than to gain reward or avert punishment criticize Proverbs' emphasis on finding happiness ("eudaemonism"). It is shortsighted to fault Proverbs for this, when it occurs frequently throughout the Bible. The Gospels portray Jesus teaching a doctrine of rewards (e.g., Mt. 10:40-42; Mk. 10:29f.) at a time when doctrines of afterlife and final judgment had been disclosed. Why should not the scribes of Israel clarify the life-and-death issues of wisdom and folly by showing the benefits and drawback of the two ways of living?



The catalog of virtues extolled and vices condemned is extensive: respect for parents (e.g., 10:1); true not false witness (12:17; 14:25); honest business practices (11:1; 16:11); love not hatred (10:12); diligent work (10:5, 26; 19:15); valuing righteousness not wealth (11:4); generosity (11:24f.); discipline of children (13:24; 22:6); control of temper (14:17); kindness to the poor (14:31; 17:5; 19:17); restraint in speech (15:1, 4, 18); cheerful disposition (15:13); trusting plans to Yahweh (16:1, 3); humility (16:18f.); rejection of hedonism (21:17); avoiding seductive charms of foreign women (22:14). Many of these concerns parallel the Decalogue, while they range widely into issues that make for personal well-being and social stability. (For the forms and use of the proverbs, *see* PROVERB.)

C. Words of the Wise, 22:17–24:22. The title of this section is embedded in 22:17: "Incline your ear, and hear the words of the wise. . . ." The beginning boundaries are marked by the hidden title and the distinct change in form from the sayings (indicative mood) of 10:1–22:16 to the admonitions (imperative or jussive mood) of 22:17–24:23 (*see* PROVERB II.C for a detailed description); the terminal boundary is the title of the brief collection in 24:23-34, which begins: "These also are sayings of the wise."

The admonitions with their motivations result in longer, connected clusters of proverbs, rather than the detached two-line sentences of the previous section. Figures of speech mark it as poetry of grace and power: the fickleness of wealth "flying like an eagle toward heaven" (23:5); "a harlot is a deep pit" (23:27); a drunk as tipsy as a sailor in a storm (23:34).

The topics are varied: concern for the poor (22:22f.); avoidance of angry persons (22:24f.); caution in guaranteeing a payment for someone else (22:26f.); regard for property boundaries (22:28; 23:10f.); caution before kings (23:1-3; 24:21f.); avoidance of greed (23:4f.); danger of accepting generosity from the stingy (23:6-8); discipline of children (23:13f.); shunning of gluttony and drunkenness (23:19-21, 29-35); perils of harlotry (23:27); avoidance of envy (24:1f.); encouragement to wisdom (22:17-21, 29; 23:12, 15-19, 22-25; 24:3-7, 13f.). Are these the curriculum of a single teacher with a single pupil (23:15)?

The beginning of this section resembles the Egyptian instructions of Amenemope (see *ANET*, pp. 421-24), dating from 1000 B.C. or earlier. The debate continues as to which version influenced the other. Parallels noted are the admonitions against robbing the poor (Prov. 22:22f.; Amenemope ch. 2), removing boundary markers (Prov.

Papyrus containing col. 12 of the Instruction of Amenemope (*ca.* 1000 B.C.), which talks about the destructive speech of an angry man (Trustees of the British Museum)

23:10; Amenemope ch. 6), eating with a king (Prov. 23:1-3; Amenemope ch. 23), and banking on wealth (Prov. 23:5b; Amenemope ch. 8). The call to hear in 22:17f. resembles Amenemope ch. 1, and the MT *šilšôm* (22:20) may be repointed *šᵉlôšîm*, "thirty," to match the thirty chapters of Amenemope, although attempts to identify thirty separate sayings in 22:17–24:22 have not been uniformly accepted. Similarities are noted between 23:12-14 and the Instructions of Ahikar, preserved in Aramaic from the 5th or 4th cent. B.C. (cf. McKane, pp. 385f., for Ahikar; cf. G. E. Bryce, *Legacy of Wisdom* [1979], for Amenemope).

The connections between Proverbs and other ancient wisdom must not be overplayed: (1) the material in Proverbs has not been slavishly copied but has been artistically incorporated into its present contexts; (2) only 22:17–23:11 resemble Amenemope — about one-third of this section; (3) even these parallels are cast to reflect biblical faith, e.g., the injunction against robbing the poor has a Yahwistic reason in Proverbs: "for the Lord will plead their cause" (22:23a).

D. More Words of the Wise, 24:23-34. This section, an appendix to the previous (cf. the title, v. 23), is alive with social responsibility. Its contents include an expanded saying against judges who show partiality (vv. 23b-26), an admonition to preparedness (v. 27), a double admonition against using false witness to gain revenge (vv. 28f.), and a personal observation with a summarizing proverb decrying laziness (vv. 30-34; cf. 6:10f.).

E. More Proverbs of Solomon, 25:1–29:27. The heading (25:1) testifies to the role of Judah's kings from Solomon to Hezekiah in the garnering, editing, and preserving of wisdom literature. Jewish tradition (T.B. *Baba Bathra* 15), taking its cue here, attributes Proverbs' final authorship to Hezekiah. The Chronicler's description of his restoring of the Davidic patterns of worship, including the psalms of Asaph and David (2 Ch. 29:25-30), is parallel evidence of Hezekiah's literary activities. His scribes undoubtedly added their own sayings, in Solomon's name and spirit, to the earlier collections in their charge.

These proverbs are more varied in form and length (e.g., the instruction in 27:23-27) than the earlier Solomonic ones (10:1–22:16). Particularly prominent are the comparisons, with "like" (e.g., 25:11-14) or "better" (e.g., 25:24; 27:5; 28:6) or simply with lines juxtaposed (e.g., 26:20; 27:3, 20). In these comparisons, vivid poetic imagery abounds.

In form and content chs. 25–27 differ sufficiently from chs. 28–29 to suggest the possibility of two separate collections (so U. Skladny, *Die ältesten Spruchsammlungen in Israel* [1962], pp. 46-67). Chs. 25–27 are replete with comparisons and sprinkled with negative admonitions (prohibitions); chs. 28–29 are largely antithetical. Chs. 25–27 center in the creation, drawing illustrations from flora, fauna, weather, etc., as though designed for farmers and laborers; chs. 28–29 focus on the doctrine of the two ways with its summons to personal and social righteousness, including the obligation of rulers to judge with integrity and to care for the poor. Possibly chs. 25–27 are examples of *clan wisdom,* equipping the young to read wisdom's lessons in all that surrounds them, while chs. 28–29 are *court wisdom,* coaching the nobility and bureaucracy: clan wisdom teaches tact before royalty (e.g., 25:2f., 6f., 15); court wisdom instructs rulers in righteousness (e.g., 28:15f.; 29:2, 4, 12, 14).

The first section's tone is more pragmatic, stressing the common sense that separates wisdom from folly (e.g., 26:1, 4-12); the second section's thrust is more overtly religious: (1) the fear of Yahweh is lauded (28:14; 29:25); (2) Yahweh is the source of justice (29:26); (3) life's choices are righteousness and wickedness more than wisdom and folly; (4) the law (*tôrâ*) is prominent (28:4, 7, 9; 29:18), in contexts that point to the Mosaic instructions (e.g., with prayer in 28:9; with prophecy in 29:18) rather than wisdom teachings (cf. 1:8; 3:1; 4:2).

F. Words of Agur, 30:1-33. This section bristles with questions: Who is Agur? Where do his words end? How do we read the Hebrew text of v. 1? Are vv. 1-6 dialogue or soliloquy?

Agur is probably a desert chief or sage from the tribe of Massa in North Arabia (cf. Massa son of Ishmael, Gen. 25:14), an area celebrated for its wisom (1 K. 4:29-34 [MT 5:9-14]). An alternative identification translates Agur "I am a sojourner" (from Heb. *gûr*), referring to Jacob and therefore all Israel (see Gen. 47:9; cf. Ps. 39:12 [MT 13]). This interpretation links the ascending and descending of v. 4 with Jacob's ladder (Gen. 28:12f.) and reads Jakeh (v.1) as an abbreviation of *YHWH qāḏôš hû'*, "Yahweh is the holy one" (cf. Skehan, pp. 42f.).

The LXX did not consider ch. 30 a unity, since it placed 30:1-14 immediately after 22:17–24:22 and 30:1-15 after 24:23f. This means that Agur's words do not go beyond

v. 14, but they undoubtedly end earlier, at v. 4, v. 6, or v. 9, depending on whether we treat them as (1) a *riddle* (Skehan, p. 42) ending in v. 4 with the questions of "his name" and "his son's name" and answered in v. 1 in the names of Agur (Jacob) and Jakeh (Yahweh); (2) a *statement* by Agur closing at v. 4, expressing an unrelieved skepticism (McKane, pp. 646f.); (3) a *dialogue,* reaching to v. 6, in which a pious sage rebukes Agur for misinterpreting God's words (in v. 4) and using them to support Agur's conviction that human beings cannot have sure knowledge of God (vv. 5f.; R. B. Y. Scott, *Way of Wisdom in the OT* [1971], pp. 165-69); (4) a *dialogue* (as above) that closes with the sage's prayer that God guard his integrity and adequately, but not lavishly, supply his needs to shield him from twin temptations: stealing and self-sufficiency (vv. 7-9).

The interpretation of v. 1 hinges on the translation of *'îṯî'ēl* and *'ukāl.* Are they proper names (so JB, NASB, NIV, RSV) or Hebrew (perhaps Aramaic) terms connoting weariness (NEB) or despair (Scott, p. 175) in the quest for true knowledge of God? The second option suits the context better as preparation for vv. 2f., and removes the problem of identifying Ithiel and Ucal.

The passage, then, is a *debate,* with Agur's words ending at v. 4 in his ironic cluster of divine questions (cf. Job 38:2ff.) that explain his despair. Vv. 5f. are an opponent's rebuttal, which, in an integrity formula (cf. Rev. 22:18) comprising the language of Ps. 18:30 (MT 31) and Dt. 4:2, affirms God's trustworthiness and warns against adding to His words.

The prayer in vv. 7-9, beginning with the number two, seems not to be the climax of the Agur portion but a bridge to the numerical sayings (*see* PROVERB II.B.3) that dominate the rest of ch. 30, placed here because of the mention of falsehood (vv. 8; cf. v. 6) and the plea for rescue from the skepticism or blasphemy (v. 9) with which Agur's words flirt (vv. 1-4).

Whether vv. 11-14 were originally a numerical saying (so C. F. Kent and M. Burrows, *Proverbs and Didactic Poems* [1927], p. 109; W. M. W. Roth, *Numerical Sayings in the OT* [*SVT,* 13; 1965], pp. 38ff.) with an introductory rubric like "There are three kinds of men whom Yahweh hates, four that he loathes" is uncertain. They are probably a collection of instructions in social behavior chained together by the catchword *dôr,* "generation."

G. Words of Lemuel, 31:1-9. If Massa is the Arabian tribe (cf. 30:1; Gen. 25:14), this section is another foreign contribution (cf. the Aramaic words in vv. 2f.). Though royal instruction is well documented in Egypt (e.g., Instructions of Amenemhet and Merikare in *ANET,* pp. 414-19) and Babylonia (e.g., Advice to a Prince in W. Lambert, *Babylonian Wisdom Literature,* pp. 110f.), the biblical text uniquely makes the king's *mother* teach her son (v. 1; cf. 1:8) in a series of admonitions and instructions about sexual morality (v. 3), sobriety (vv. 4-7), and justice (vv. 8f.). This trio of kingly virtues, by its inclusion in Proverbs and its use long after the close of the monarchy, becomes an account of conduct commendable to all who would be wise (cf. Murphy, *Wisdom Literature,* p. 82).

H. Acrostic Description of a Virtuous Wife, 31:10-31. Each successive verse begins with the next letter of the Hebrew alphabet, *'aleph* through *taw,* clearly marking this as a separate poem, whose purposes are to advise women in seemly behavior and men in selecting a wife. The acrostic is an aid to memory, but especially it is an expression of completeness listing gracefully and systematically womanly virtues: diligence, generosity, perspicacity, loyalty, and piety. The poem fittingly closes a book that pictures wisdom as a grand woman enriching her followers (cf. 1:20-33; 8:1-36) and that depicts wise women nurturing their young and, consequently, stabilizing the whole society (cf. 1:8; 31:1).

II. Date of Collection.–The following conclusions about the collection may be drawn: (1) only the roughest approximations of dates are possible in Proverbs because of the absence of historical materials apart from references to Solomon (1:1; 10:1; 25:1) and Hezekiah (25:1); (2) the various sections could not have been finally assembled prior to Hezekiah's time (716-687 B.C.; Prov. 25:1); (3) they probably were firmly in place for centuries before Sirach was composed (*ca.* 180 B.C.) because Proverbs does not equate wisdom with Torah as does Sirach; (4) the bulk of assembling must have been completed before the Exile, possible exceptions being the acrostic of 31:10-31 and the words of Agur and Lemuel in 30:1–31:9; (5) the present order of the collection has been determined more by literary form and content than by date of composition; (6) no explanation based on theories of development can be accepted: shorter forms are not necessarily older than longer forms, and sayings with overt concern for religious matters are not necessarily younger than so-called secular ones.

An intriguing approach to Proverbs' structure comes from P. W. Skehan (pp. 27-45). Skehan compares the three major sections (1:1–9:18; 10:1–22:16; 22:17–31:31) to the three parts of a house — porch, nave or main chamber, and rear private room. Thus he credits the book to one editor who meticulously arranged the columns to depict the parts of the house and compiled the lines of each section to fix the total number at 930, a number equal to the letter values (Hebrew letters bore fixed numerical values) of the names in 1:1 — Solomon (375), David (14), Israel (541). The proportions of the three parts are said to resemble those of Solomon's temple, while at the same time constituting the house built by wisdom (9:1; cf. also Wisd. 9:8-11). As radical as Skehan's approach is, it is based in the structure of the text itself, not in the subjective judgments on the dates of the content that have characterized much discussion of Proverbs' composition.

III. Role in Israel's Life.–A. Cultural Background. Considerable evidence can be mustered to support the view that Proverbs (along with Job and Ecclesiastes) reflects the life of the land-owning upper classes: (1) the luxurious home of the seductive temptress (7:16-20); (2) precious stones as a ground of comparison to wise conduct (3:15; 8:11; 20:15; 31:10); (3) lavish diets with meat and wine (17:1; 23:1f., 20f., 29-35; 30:8-10); (4) access to royalty (14:35; 22:29; 23:1); (5) power to oppress the poor (22:22); (6) capability of lending and assuming other financial responsibility (11:15); (7) economic prosperity as a desired value (3:16; 10:15; 13:18); (8) the affluence in the portrait of the ideal woman (31:15f., 18, 22). R. Gordis (*HUCA,* 18 [1944], 77-118 [repr. in *Poets, Prophets, and Sages* (1971), pp. 160-197]) argues that the upper class "wisdom academies" that produced and used Proverbs contrast with the pharisaic schools for poor children and anticipate the learning centers of the Sadducees.

The social setting that underlies Proverbs reflects the stable "circumstances of the preexilic monarchical period" and "of an urban cultural milieu" (von Rad, *Wisdom,* p. 76). This picture of changelessness, unruffled by military threats or social upheavals that the prophets depict, mirrors both the sages' conservatism in their quest for order and the nature of a proverb whose task is to capture life's unchanging truths that are not altered by daily social problems.

Not much help is gained from Proverbs in understanding more precisely who Israel's wise men were. Did they hold official positions like scribes (Jer. 8:8-10) or even prophets and priests (Jer. 18:18), or political counselors (W. McKane,

Prophets and Wise Men [*SBT*, 1/44, 1965]), or teachers in wisdom academies (R. Gordis, *HUCA*, 18 [1944], 77-118)? Against those who view them as office holders, R. N. Whybray (*Intellectual Tradition in the OT* [*BZAW*, 135, 1974]) has argued that the OT wise were intellectuals from many walks of life, officers of neither court nor school. Indeed, Whybray has questioned the very existence of the wisdom schools to which much importance has been assigned by prevalent scholarly opinion (e.g., H. J. Hermisson, *Studien zur israelitischen Spruchweisheit* [*WMANT*, 28, 1968], pp. 113-136; B. Lang, *Frau Weisheit* [1975]). For discussion on sources of the proverbs, *see* PROVERB IV.

B. Canonical Character. Whatever the background of the various collections, it is clear that Proverbs, completed, views itself as a unified entity bearing the word of God to the people of God. Its link to Solomon, announced in the heading, is an important claim to antiquity as well as a reminder that it is a unique part of God's revelation parallel in age and validity to the Law and the Prophets. The refusal of Proverbs' editors to subsume wisdom to Torah or to link wisdom consciously with Israel's national history distinguishes Proverbs from Sirach and affirms its independent worth and its right to be considered canonical on its own merits. The ease with which passages from 2 S. 22:31 (cf. Ps. 18:30 [MT 31]) and Dt. 4:2 are incorporated into Prov. 30:5f. is further evidence that proverbs that sprang from human reflection have been received as Scripture by the believing community. For Proverbs' role as canonical literature, see B. S. Childs, *Intro. to the OT as Scripture* (1979), pp. 551-59.

IV. Theological Significance.–A. Experience as a Means of Revelation. The way in which the word of God is conveyed in Proverbs is very different from revelation through the law at Sinai, prophetic oracles, or apocalyptic visions. In the latter instances divine information breaks into human consciousness from beyond, usually bringing a command or an insight not obtainable any other way. In Proverbs the basis of the knowledge gained is personal and social experience — often painful experience: "In every proverb the stable door is only locked after the horse has been stolen" (G. von Rad, *OT Theology*, I, 421).

Such knowledge is considered to have divine authority and to be worthy of inclusion in Scripture because it is received within a world view that sees Yahweh at work in the whole of creation and human endeavor. Beyond that, the covenant faith that forms the context of Proverbs knows that every area of Israel's life is accountable to Yahweh, even those areas not specifically controlled by the Law.

Not that experience alone can lead to true knowledge of God. But when life is perceived as subject to the will of the Creator-Redeemer-King, experience can be an accurate teacher. But that perception of Yahweh's saving sovereignty is not obtainable from observation alone. His historical acts of redemption, interpreted by the prophets and apprehended through the Spirit, are necessary frameworks. Without this special revelation, the creation's more general revelation falls on blind eyes. Certainly anyone can learn from experience, but only those who see Yahweh at work in it fear Him and gain knowledge of the Holy One — requisites of true wisdom (Prov. 9:10).

B. Creation as the Basis of Order. Proverbs' silence on matters of salvation-history, public worship (though cf. 15:8), or divine covenant must not be interpreted as secularity. Chs. 1–9, abounding with references to Yahweh and His creation, set the tone for the entire book, which has a primary purpose to discern and display the order that holds all of life together. That order underlies a number of prominent features in Proverbs: (1) the use of analogies, comparisons, and numerical lists of similarities point to an overarching order in which seemingly dissimilar things are related to each other; (2) the cause-effect pattern of blessing and retribution is based on an order that when heeded brings weal; when violated, woe (10:16, 29; cf. R. L. Hubbard, *ZAW*, 94 [1982], 267-280); (3) the emphasis on speaking or doing the right thing at the proper time is built on the reality of order in the universe. (See von Rad, *Wisdom*, pp. 113-143.)

This order stems from a view of creation that is assumed but only rarely expressed (Prov. 8; Job 38ff.) in wisdom literature. Prov. 8:22-31 parades the fact that Wisdom's origins go back to the creation where she, a creature of Yahweh, delighted like a playful child in divine order (cf. 3:19f.). Wisdom, which has been described as "the primeval world order" or "the mystery behind the creation of the world" (von Rad, *Wisdom*, p. 161), is not pictured as an abstract ideal but as a personal entity calling people to submit to the created order that she expresses (8:1-4). Beyond that she declares her love for those who respond to the call and seek to live by the Creator's orders (8:17) — thus affirming that the creation both declares God's ways and calls the human family to be at home in His world (von Rad, *Wisdom*, pp. 166-176), searching for its intelligible principles of order, including the all-important principle of justice (J. L. Crenshaw, "Prolegomena," in *Studies in Ancient Israelite Wisdom* [1976], pp. 31-35).

The search for order needs always to reckon with the mysteries of Yahweh's sovereignty; it needs to leave room for His surprises. However intelligible is the Creator's work, human beings are still creatures who must yield to His divine plans (16:1-4, 9, 33; 19:21; 21:30f.).

C. Social Responsibility. The created order calls for a harmonious society where the rights of all, even the poor, are guarded. Since Yahweh is their maker, all are accountable to Him for their treatment of each other (17:5; 19:17; 21:13; 22:2). This accountability expresses itself in an array of demands that match those of the law and prophets: respect for parents (10:1), diligence in labor (10:4), love for others (10:12), just weights and measures (11:1), avoidance of gossip (11:13), kindness (11:17), generosity (11:25), truthfulness (12:19), openness to counsel (13:10), reliable witnessing in court (14:5), patience (14:17), control of temper (14:29), refusal of bribes (15:27), humility (16:18), rejection of violence (16:29), cheerfulness (17:22), just processes of law (17:26), discipline of children (19:18), loyalty (19:22), temperance (20:1), refusal of vengeance (20:22), confession of wrongs (28:13). This understanding of order carries the conviction that not just the individual but the larger society, whether the city or the nation, will pay the price for injustice among the citizenry (11:10f., 14).

D. Covenant Loyalty. Behind the call to responsible living lies the quiet influence of covenant obligations. Israel's life is misread wherever too sharp a distinction is made between the beliefs and ministries of prophets, priests, and wise men: (1) wisdom collections are found in the chief literature of the temple — the Psalms; (2) wisdom passages and Psalms have been imbedded in the prophetic oracles; (3) Psalmlike complaints and hymns dominated the speeches of the wise man Job; (4) wise men may have had links with the temple and court scribes. Whatever their differences in function, the various leaders shared a common faith in Yahweh as Creator, in Israel's special calling, and in the obligations of obedience that stemmed from that calling.

As displayed in Proverbs, wisdom is derived from neither prophecy nor law. The three traditions are related in interdependence — not dependence nor independence. There

were not three faiths in the covenant Lord but one. The wise men showed how Yahweh's created order reinforced and complemented the ethical commands of the other two traditions. The strong similarities between wisdom, Torah, and prophecy are remarkable evidence of the sages' conviction that Yahweh was indeed Lord of all and everything. For further discussion, see D. A. Hubbard, *Tyndale Bulletin*, 17 (1966), 3ff.; cf. J. Blenkinsopp, *Wisdom and Law in the OT: The Ordering of Life in Israel and Early Judaism* (1983).

V. Proverbs and the NT.–A. Quotations. The direct quotations (cf. *United Bible Societies' Greek NT* [3rd ed. 1975], p. 899) used in the NT argue for a view of Scripture's continuity, since the sayings and exhortations of Proverbs found in the apostolic writings are employed in virtually the same ways as in their original OT settings: admonition to accept discipline (3:11f. — He. 12:5f.); motivation to humility (3:34 — Jas. 4:6; 1 Pet. 5:5); argument for the necessity of judgment (11:31 — 1 Pet. 4:18); admonition against vengeance (25:21f. — Rom. 12:20); comparative saying against returning to folly (26:11 — 2 Pet. 2:22). The recognition of Proverbs' authority as Scripture is implied in the language used to introduce several of the quotations: "exhortation" (He. 12:5); "scripture" (Jas. 4:6); "it is written" (Rom. 12:19); "true proverb" (2 Pet. 2:22).

B. Allusions. In a number of instances the NT writers seize on the language of Proverbs and incorporate it in their sayings without the more formal process of full quotation: 2:4 — Col. 2:3; 3:1-4 — Lk. 2:52; 3:7a — Rom. 12:16; 4:26 — He. 12:13a; 10:12 — Jas. 5:20 and 1 Pet. 4:8; 12:7 — Mt. 7:24-27. These verbal echoes demonstrate how thoroughly the OT book had salted the speech of the apostles who, in turn, expected their hearers to catch the precise flavor of the phrases from Proverbs.

C. Christology. The NT portraits of Jesus take some of their colors from the palette of Proverbs, especially the personification of wisdom in Prov. 8 (cf. R. G. Hamerton-Kelly, *Pre-existence, Wisdom, and the Son of Man* [1973]).

1. Synoptic Gospels. Luke closely associates Jesus with wisdom: the summary statement on Jesus' growth centers on wisdom as the principal attribute (Lk. 2:52; cf. Prov. 3:1-4); in Jesus' words, wisdom is personified (cf. Prov. 1, 8) and described as having children (Lk. 7:35) or speaking a divine word (Lk. 11:49-51). While Luke views Jesus as wisdom's envoy in whom wisdom found a permanent home (cf. I. H. Marshall, *Gospel of Luke* [*NIGTC*, 1978], pp. 301-304, 502-506), Matthew seems to equate Jesus with the divine wisdom (Mt. 23:34; 12:42). The background of these Synoptic sayings is complex and may indicate the possible influence of Sirach, Wisdom of Solomon, and 1 Enoch, all of which have picked up the motif of personified wisdom from Proverbs and Job 28, and transmitted it with the additions and modifications appropriate to their purposes.

2. Fourth Gospel and Epistles. It is in the NT language used to express the preexistence of the Son that Proverbs' contribution to Christology becomes most apparent. The prologue to John's Gospel has drawn from many sources; alongside the doctrine of the creative word from Gen. 1 and Ps. 33, the prophetic word from Isaiah and Jeremiah, the use of *mêmrā'* in the Targums, and the *logos* teachings of Alexandrian Judaism, stands the wisdom emphasis of Proverbs and its apocryphal heirs: like wisdom the Word was with God in the beginning (Jn. 1:1f.; Prov. 8:22-31); like wisdom the Word was present at the creation, although wisdom's participation in that creation is far less clear (Jn. 1:3; Prov. 8:30f. — RSV "master workman," Heb. *'āmôn*, is probably better translated "playful child"); like wisdom the Word is the source of life (Jn. 1:4; Prov. 8:35; cf. L. Morris, *Gospel According to John* [*NICNT*, 1971], pp. 115-126).

Similarly the NT hymns that celebrate the unique role of the Son in creation, revelation, and redemption draw from the language of Proverbs: He. 1:1-3 does so indirectly, being more dependent on Wisdom of Solomon than on Proverbs for its actual wording; Col. 1:15-20 sounds the familiar notes of preexistence and presence at creation, applying them to the Son in terms that reflect also the idea of the Second Adam. This contribution of Proverbs to NT Christology must neither be overlooked nor overplayed. It is clear that the poems of Lady Wisdom from Proverbs furnished part of the language through which the early Christians expressed their understanding of Christ's uniqueness and preexistence, though that language was transmitted and adopted by Judaism, especially in its Hellenistic forms. It is equally clear that no single literary source, nor any assembly of sources, can entirely account for the lofty ascriptions of lordship to Jesus, which the Church knew to be the only appropriate response to His marvelous words and deeds (cf. P. T. O'Brien, *Colossians, Philemon* [*Word Biblical Comm.* 44, 1982], pp. 37-40).

PROVIDENCE.

I. Definition
II. Spheres
III. In the OT
IV. In the NT
V. The Doctrine

I. Definition.–The word "provide" (Lat. *providere*) means etymologically "to foresee." The corresponding Greek word is *prónoia*, meaning "forethought." The noun is used in the NT of human foresight (Acts 24:2; Rom. 13:14; cf. also the verb in Rom. 12:17; 2 Cor. 8:21; 1 Tim. 5:8). Foresight, however, implies more than seeing in advance. It also implies anticipation, so that steps are taken either to meet a need which is seen or to lead to a result which is envisaged or planned. It is in this sense that pre-vision becomes pro-vision. The provident person is the one who makes arrangements to deal with contingencies or to reach established goals. Applied to God, providence obviously includes the divine foreseeing, but in God foreseeing has an even fuller and broader reference in view of the divine overruling. Providence, then, is the preservation, superintendence, and teleological direction of all things by God. It is the divine governance whereby all possible events are woven into a coherent pattern and all possible developments are shaped to accomplish the divinely instituted goal.

II. Spheres.–Since providence is a comprehensive term, it is sometimes useful to subdivide it according to the different spheres of operation. Thus there is first the divine providence in nature. All creation, i.e., the whole cosmos, falls under the providential disposition of God. The patterns and movements of nature may all be subsumed under this

concept. Science itself is a tracing of the ways of providence (cf. the great passages in Job 38–41). It should be remembered, however, that this is not a separate area of providence, which might give rise to a form of natural theology. For one thing, the ways of God are not always easy to see in nature if nature is studied in abstraction. For another, nature does not constitute an autonomous sphere of providence. The cosmos is the setting of God's dealings with man. If there is any particular goal for nature as such, it is necessarily beyond our comprehension. What we do know is that the world is teleologically directed to serve the outworking of God's relationship with humanity.

This leads us to the second sphere of providence, namely, that of human history. However tangled the story of people and nations, it stands always under the moral judgment and the teleological direction of God. Man proposes, God disposes. God's purpose is fulfilled in and through man, and in spite of the confusion of man. Yet here again one can hardly speak of a general purpose, which may make of providence a locus of natural theology. Taken alone, the history of the race seems to stand only under the sign of futility. Even the vaunted hope of progress has little solid basis. The general overruling of history is designed to serve a more special purpose within history, the special history which is often called salvation-history.

This leads us to a further sphere of providence in which it stands in close proximity to the divine election and predestination. This is the sphere of the divine overruling of the special people whom God raises up in His own revealing and reconciling action. Providence here is the providential oversight by which God leads, preserves, controls, and overrules the patriarchs, the prophets, the nation Israel, individual Israelites, the incarnate Son, the Church, and individual Christians in pursuance of His special purpose of calling and salvation. The interweaving of salvation-history into general history, the shaping of general history to serve salvation-history, is providence par excellence. It is to be noted at this point that providence is not a general category of which predestination is a special instance (*contra* Thomas Aquinas). To say this is to reverse the relationship, for in fact providence serves the divine election. Yet it is certainly true that God's general providence in nature and history is to be seen in the light of this particular disclosure of providence in the biblical story and the ensuing story of the Church. For this reason providence, too, has a christological reference, for it is by and for and to Christ that all things consist, and it is toward the consummation of all things in Him that nature and history finally move.

A last sphere of providence, which is already included in what has gone before but which still calls for special mention, is providence in individual lives. As the whole sweep of history stands under the providential ordering of God, so the individual life within history is also brought under the divine overruling. In this sense it is quite right to speak of the singular providences of God, whether in terms of ordinary events or of outstanding circumstances. Here again the providence of God serves the fulfillment of His basic purpose, so that the actions of individuals (e.g., Abraham or Cyrus) serve also to advance the whole. But the purpose itself has an individual reference, namely, the calling of people to faith and their upbuilding in discipleship and service, so that providence may here again serve the end of election and edification. By the providential disposing of God, events in the lives of individuals are woven into the story of their individual relationship with God in Christ, and of the service that they then render in the further advancement of His word and work.

III. In the OT.–The divine superintendence of all aspects of the cosmos is plainly disclosed in the OT. The world as God created it gives evidence of purposeful planning, according to Gen. 1. An appropriate setting is provided for the story of God and man; and as herbs and fruits are divinely provided to sustain man, man himself is to exercise dominion over other creatures, not in selfish tyranny, but for the wise and orderly integration of the whole (Gen. 1:28f.). After the deluge, flesh, fish, and fowl are also provided for man's sustenance (Gen. 9:3), and the promise is given that "seedtime and harvest, cold and heat, summer and winter, day and night, shall not cease" (8:22). The order of the sun, moon, and stars is established and maintained by God (1:14ff.); not one can fail (Isa. 40:26). God has also separated the sea and the land, and He has set for the ocean boundaries which it cannot pass (Job 38:8). All the detailed ways of all the creatures, even the most mysterious and the most powerful, are known to Him (Job 38–41). He provides food and drink for animals and man according to the ordered course which He has established and which He maintains (Ps. 104:5ff.). The dependence of living creatures on God is plainly seen, for when He withdraws His hand death supervenes, and when God's breath goes forth again, life is renewed (Ps. 104:29f.). Man in particular is under the providential direction of God. God knows him in all his being. God also accompanies him on his way, compassing his path, besetting him behind and before (Ps. 139:5). This thought of the divine concursus is a particularly rich one. God is above time, and yet He is not just a transcendent traffic-director. He is with the creature in its course, with man in his temporal life. He is the past from which man comes and the future to which he goes. He is also the present in which he lives and moves. If sometimes the divine concursus can have a daunting aspect — even if he wished, the psalmist could not escape God's presence — it has also a supremely comforting aspect. For it means that man has a sustaining power on which to rely (Ps. 91), a higher direction to overrule even his mistakes and to keep him from ultimate evil (cf. Gen. 45:5), and a final teleology to make sense of what seems to be only confusion and futility (cf. the higher ways and thoughts of God in Isa. 55).

Mention of the divine concursus is a reminder that much more is included in the providence of God than the superintendence of the natural order and provision for the material preservation of people. God is Lord of history as well as of nature. He directs the movements of the nations. This is seen on a global scale in the early chapters of Genesis, particularly in the confusion of languages and scattering of the peoples after Babel. But the main illustration is in the nations around Israel, for after all the story of the Bible is primarily the story of salvation-history, of providence as it serves this particular history. God is behind the story of the Ethiopians, and the movements of the Philistines from Caphtor and the Syrians from Kir (Am. 9:7). God brings moral judgments upon Damascus, Gaza, Tyre, Edom, and Ammon (Am. 1). God raises up the Assyrians to punish Israel (Isa. 10:5), the Babylonians to overthrow Assyria, and Cyrus both to destroy Babylon and to redeem Judah (Isa. 45:1). Before God all nations are as a drop from a bucket (v. 15). God sends both evil and good (v. 7) as the situation demands. He knows the end as well as the beginning, so that everything serves His sovereign purpose (41:21ff.). The plans that even the most powerful nations form against God will be frustrated: "The kings of the earth set themselves, and the rulers take counsel together . . . [but] he who sits in the heavens laughs; the Lord has them in derision" (Ps. 2:2, 4). The gods of the nations are not rival powers; they are idols, things of nought, which are nothing in themselves

and can accomplish nothing (Ps. 96:5). "The Most High rules the kingdom of men, and gives it to whom he will" (Dnl. 4:25 [MT 22]). To His prophets God sometimes grants visions of the future, whether in general or in detail (cf. esp. Dnl. 4ff., but also Isa. 48:3). These visions take into account that there is conflict due to people's sin. People form their own plans which conflict with each other and with the divine purpose. But in and through all the conflict and the resultant affliction, God fulfils His own purpose and causes His rule to triumph. People do wrong things, but God works even these for good (Gen. 45:5ff.). Hence in the last resort it is always God who "changes times and seasons; he removes kings and sets up kings" (Dnl. 2:21). The ultimate goal is that every knee shall bow to Him and every tongue shall swear (Isa. 45:23). All nations and tongues will be gathered, and they shall come and see God's glory (Isa. 66:18).

The general providence of God in history clearly serves His special providence in salvation-history, for He has chosen that in and through Israel His special purpose shall be worked out, and nothing in heaven or earth is to thwart this. Hence within the historical providence of God there is a particular shaping of history to fulfil the goal of election and redemption. As noted, we have here an overlapping between election and providence, for the election and salvation of God are worked out in history, and the special history of God's people from Israel through Jesus Christ to the new Israel is interwoven into the general history of the race. This may be seen clearly throughout the OT narrative. Abraham's move from Ur to Canaan is in answer to a special call, but it also involves new historical relationships; so, too, does the promising of Canaan to the seed of Abraham. The stay in Egypt, which is brought about by internal division and external famine, serves a purpose of temporary preservation and also provides the occasion for the final mighty deliverance of the Exodus. The story of the judges and the early monarchy provides an illustration of moral judgment in the dealings with the nations and also an example of preservation and molding with a view to the future. Foreign relations continue right up to the time of Christ and on into the history of the Church, with its mission of preaching the reconciling Word; and there are also inner events within Israel, the disruption of the kingdoms, the fratricidal wars, the destruction of the kingdoms, the preservation of a remnant, the scattering among the nations. The story is often complicated and perplexing even as we now follow it under the guidance of the biblical interpretation. But the point is that the hand of God is upon it all, not only to preserve His people but also to shape their history to the accomplishment of the promised salvation for all peoples.

This is how the OT itself interprets the story for us. From first to last God is at work either indirectly or directly. He is behind the migration of Abraham, the going down to Egypt and the deliverance from it, the entry into the Promised Land. Although He punishes Israel, He also causes the stars in their courses to fight against Sisera (Jgs. 5:20). Ps. 105 especially traces out the particular providence of God in relation to Israel (cf. also Pss. 44, 66, 88, etc.). The general principle behind it all is that "the lot is cast into the lap, but the decision is wholly from the Lord" (Prov. 16:33; cf. also 16:9; 21:31). Applied to Israel, this means that the men of Israel may seem to be working out their own plans and following their own desires and seeking their own goals; but God finally controls the ongoing story of the nation, and it is what He does, not what man does, that counts. This is why the achievements of, e.g., Omri can be dismissed so summarily. Unlike the events of Ahab's reign, with its great conflict between Ahab and Elijah, they are of little significance in terms of the divine purpose.

From the standpoint of the NT, of course, the final goal of the OT story is Jesus Christ, the true Israelite, in whom the covenantal, prophetic, and messianic promises are fulfilled. All history, and particularly OT history, converges on Him, and then widens out again from Him to all nations.

In addition to providence in nature, in general history, and in the history of Israel, the OT also depicts the providential ordering of the lives of individuals. This overlaps, of course, with the providential story of the superintendence of the nations, especially of Israel, for the story of the race or nation is often pivotally the story of individuals, of Adam and Noah, of Abraham and Joseph, of Moses and David, of Naaman and Cyrus, of Jonah and Esther, and supremely of Jesus Christ. Yet the individual application is also brought out plainly, both in the narratives and in explicit statements, particularly in Psalms and Proverbs. Thus we read, "The steps of a good man are ordered by the Lord, and he delighteth in his way" (Ps. 37:23, AV). Or again, "in all thy ways acknowledge him, and he shall direct thy paths" (Prov. 3:6, AV). Or again, "The righteous and the wise and their deeds are in the hand of God" (Eccl. 9:1). In the first instance this means, no doubt, that God extends (or in the case of the wicked withholds) protection, and turns things to material advantage (or disadvantage), as in the case of Joseph on the one side or Saul on the other. But already in the OT it is recognized that the ultimate advantage will be spiritual in nature rather than material (cf. Ps. 16:11; 17:15; 73:26), and that in any case it will often come only through affliction.

In the world of sin, of opposition to the will of God, it is natural (albeit intrinsically most unnatural) that there should be suffering. As it falls on the wicked, this is a demonstration of the providence of God's moral judgment. The book of Job warns us, however, that while there is a general moral order in the universe, individual sufferings cannot be providentially related to individual sins. The righteous suffer as well as the wicked. It is true that they are only relatively righteous. Yet they often suffer, not because they are relatively wicked, but because they are righteous. Joseph comes to his glory in Egypt only through betrayal and imprisonment. David, too, attains to the crown only through banishment and harassment even to the point of feigning madness and making alliance with the Philistines. Job finds his supreme prosperity only after he is stripped of everything and reduced to abject misery. The prophets render their service only in face of determined opposition which leads them to flight, imprisonment, obloquy, and even death. In fact, it often seems as though God's providential care is not to be seen where one would most expect it, namely, in the lives of the choicest of His people.

Yet the final issue makes it plain that God's purpose is in fact being worked out even for them as individuals, so that what seems to be evil is really for good. It is good for three main reasons. First, it points indirectly to the moral judgment on the sin of the race, which cannot be suspended. Second, and more deeply, it serves the greater spiritual profit of those who thus suffer. Third, and most profoundly of all, it is for the wider benefit of others. For if the involvement of the righteous in a sinful world necessarily means their involvement in its judgment and affliction, the greatness of God's providential overruling is, not that He preserves them from this, but that He keeps them through it and turns it vicariously to their profit and to that of the wicked. This leads to the great statements of confidence and of faith which are so abundant in the OT. "I know, O Lord . . . that in faithfulness

thou hast afflicted me" (Ps. 119:75). "Though he [the good man] fall, he shall not be utterly cast down" (Ps. 37:24, AV). "Why art thou cast down, O my soul . . . ? I shall yet praise him, who is the health of my countenance, and my God" (Ps. 42:11, AV). And with a figurative as well as a literal application, He "turns the rock into a pool of water, the flint into a spring of water" (Ps. 114:8). Thus the doctrine of providence again moves toward that of the NT, in which the providence of God finds its culmination in the vicarious suffering of the one righteous Servant — a suffering which is itself the means of the divine triumph and which is crowned by the glorious victory of the resurrection and the awaited manifestation of glory at the Parousia.

IV. In the NT.–As in the OT, so also in the NT, the general providence of God is discerned (1) in nature. God causes His rain to fall and His sun to shine both on the just and on the unjust (Mt. 5:45). He feeds the fowls of the air and clothes the lilies of the field (Mt. 6:26ff.). Not one sparrow falls to the ground without the Father (Mt. 10:29). In particular, God is the one who in fatherly providence cares for man. He has always borne witness to Himself by doing good and giving us rain from heaven and fruitful seasons (Acts 14:17). "He giveth life to all, and breath, and all things. . . . for in him we live, and move, and have our being" (Acts 17:25, 27). As in the OT, God sustains the world He has created, maintaining its orderly course, upholding it as the setting for His special dealings with people.

God is also portrayed no less vividly in the NT (2) as Lord of history. This element is not perhaps quite so prominent in the general sense, but it is equally definite. As Paul says in Athens, the God who made of one blood all the nations of men "hath determined the times before appointed, and the bounds of their habitation" (Acts 17:26, AV). Similarly, the Lord just before His ascension speaks of the times and seasons which the Father has put in His own power (Acts 1:7). In His apocalyptic discourse Jesus also refers to the times of the Gentiles (Lk. 21:28), and a basis theme of this whole address is the divine direction of history to its appointed goal and consummation. The same is true in the book of Revelation. While history seems to pursue its own erratic course, it is in fact superintended by God, not merely in that His moral judgments are operative in it (cf. the collapse of Babylon), but also in that He works out His own purpose, so that all the plans and mistakes of men, all the complications of their acts, both individual and corporate, will finally serve the fulfillment of this purpose. An interesting emphasis in Paul is on the providential significance of law or government. Quite apart from the judgments of events, God has also instituted human law as an instrument of providence (Rom. 13). By means of it the violence of man is held in restraint, and human life is historically preserved against anarchy and self-destruction. (Is this the meaning of 2 Thess. 2:7?) Paul himself sees no reason why this providential instrument of law should not also serve the gospel and its proclamation. This is why he can appeal to his rights as a citizen at Philippi. This is why he can appeal to Caesar as a means of gaining access to imperial circles at Rome. Paul's actions display clearly his belief that law is providentially ordered both generally to make human life tolerable and specifically to create conditions for the more effective propagation of the Christian message and edification of the Christian community.

The specific aspect here leads us to the further point that in the NT general providence is again oriented to God's special providence. This may be seen above all in the providential ordering of history in relation (3) to the coming and the coming again of Christ. In the light of the NT even the history of Israel in the OT is shown to point to the coming of Christ. In the NT record itself the general events of history, which might have seemed to be so important in themselves, e.g., the reigns of Herods and Caesars, serve only as the background for the outworking of the event that is one of the two great foci of history, namely, the human life of the incarnate Son of God. And all that follows in the time of the Church, both in the NT record and beyond, is simply a setting for the mission of the Church and a movement toward the final focus of the human story, the coming again of the risen Lord. In other words, it is now apparent that the central concern of God's providence is that Jesus should come, and come again, to fulfil the divine work of revelation, reconciliation, and final restitution.

The providence of God is displayed in a special way (4) in the life of Jesus. His genealogy is prepared. He comes in the fulness of time (Gal. 4:4). His mother, and nominal father, are specially chosen and informed, and it is foreordained that He be of Davidic descent and be born in Bethlehem. He is revealed to the wise men and yet also protected against the jealous cruelty of Herod. He is brought up in comparative obscurity and yet in a place where He can first bring His light to the tribes of Isa. 9:1, in Galilee of the nations. His ministry moves on irresistibly through its various stages to the right time and place of its fulfillment in the apparent tragedy of the cross. Representatives of both the Jewish and the gentile world are assembled, along with the false apostle, to secure His condemnation and execution. But in this supreme suffering of the supreme Servant, God is supremely present. Jesus was delivered by the determinate counsel and foreknowledge of God (Acts 2:23). God fulfilled in Him the things He had foretold (Acts 3:18). The kings of the earth stood up against Jesus "to do whatever thy hand and thy plan had predestined to take place" (Acts 4:28). God did not lose control of history when this unmerited suffering fell on the Holy One. He was in total command. All nature and history moved to His hour of passion, death, and resurrection. The supreme power of God was here displayed in the shaping of history to bring about the vicarious death and the ensuing resurrection of the incarnate Son. And now all history flows from this event to bring about the calling out of the Church and the final consummation when the kingdoms of this world will be the kingdoms of Our Lord and of His Christ (Rev. 11:15). In this way the NT sheds a whole flood of light on the divine providence. It is providence with a view to salvation and new creation. It is providence that finds its center in Christ, for and to whom are all things, and in whom all nature and history find their meaning and goal.

Also evident in the NT is the providence of God (5) in the life of the Christian. Christ Himself told His disciples that the very hairs of their heads were numbered (Mt. 10:30). The early Church under threat committed itself confidently to God (Acts 4:29f.). The careers of the apostles were plainly guided and overruled by God (cf. Acts 21:11). Paul could affirm with complete certainty, "All things work together for good to them that love God" (Rom. 8:28, AV). Peter could repeat the OT assurance that "the eyes of the Lord are upon the righteous" (1 Pet. 3:12 = Ps. 34:15 [MT 16]). This does not mean in the least that Christians were or are assured of a life of tranquillity, prosperity, ease, or material security. It does not mean that the Church's story is to be one of unbroken success. The lesson of righteous suffering in the OT has been illuminated in a new way by the suffering of Christ. Through suffering, salvation has been wrought. Through suffering, obedience is learned (He. 5:8). By way of suffering, glory

comes (He. 12:2). The Christian, then, can expect to suffer under the fatherly providence of God (He. 12:5ff.). In the world he will have tribulation (Jn. 16:33). Afflictions have a constructive part to play both in cutting off the old man and in upbuilding the new in Christian life and character. They are also an integral part of the ministry of the servants of the Suffering Servant. Paul has sufferings which he must fill up on behalf of the Church (Col. 1:24), for under God's providence the vicissitudes of life serve the good of others as well as our own good, and the true boasting of the Christian is in God's strength, not in exemption from affliction but in deliverance and triumph through it (2 Cor. 11:23ff.). The final purpose of God for His children is one of joy and glory. Like Joseph and David, the people of God are to be brought through their suffering to this fulfillment of God's perfect plan for them. Like their Savior and Master, they are to come to Easter Day by way of Good Friday, identified with Christ in His death as well as His resurrection. Hence they are to view their life under the providence of God with the eyes of faith, as did the psalmist when he said: "Weeping may tarry for the night, but joy comes with the morning" (Ps. 30:5 [MT 6]), or the poet Cowper in "Light Shining out of Darkness":

Blind unbelief is sure to err
And scan his work in vain,
God is his own interpreter
And he will make it plain.

The dealings of God are not always evident on the surface, but there is always a purpose of grace which time or eternity will reveal:

Behind a frowning providence,
He hides a smiling face.

V. The Doctrine.–The essential elements in the doctrine of providence have naturally emerged already in the presentation of the biblical teaching. It remains only to draw out some of the implications in the face of contrary views and to answer the various questions that are raised about providence, and especially about what might seem to be conflicting data.

The doctrine of providence maintains that there is a purpose behind not merely the existence but also the course of the world. The world is not just a chance event. Its story both in nature and history is no meaningless muddle on which at best a meaning has to be imposed. Its happenings and developments do not simply occur, following no plan and leading to no goal. The world was from the very first planned for a purpose; and although the fall and sin of man have introduced a disruptive element, what takes place still serves this overruling purpose.

The doctrine of providence also makes it plain that this is not just an immanent purpose. The world is not an eternal entity which carries its own providence within itself. It is not itself God, so that the divine purpose is identical with the immanent. Indeed, the world is not just a divinely created mechanism which can now function apart from the One who made it, and which bears an immanent purpose given along with its creation. God Himself, the Creator and Lord of all things, imposes His own purpose on the world and overrules, accompanies, and preserves it on its course with a view to the fulfillment of this purpose. This does not mean, of course, that God is immanent in the world and its events in the sense of full identification. He is certainly immanent insofar as nothing takes place without Him. But He is also personal. God is Himself personally at work. The laws of nature are neither independent of Him nor identical with Him. The movement of history neither takes place without Him nor gives essential expression to Him. He is immanent, yet not in the sense of absorption. Providence is no mechanical or biological process. It is overruling in the strict sense, even though it be overruling in and through planned and orderly events. For the planned and orderly events of creation serve a purpose that is above creation, i.e., the purpose of the Creator. The plan that is worked out is an eternal and transcendent plan. Although its outworking is in time, its roots reach back to pretemporal eternity and its consummation will be in posttemporal eternity. Even in time it comes to its critical fulfillment in the intervention of the eternal God in time.

This leads us to the further point that the doctrine of providence teaches a christological interpretation of history. In the fallen world, no satisfactory philosophy of nature or of history can be read off from events. What is needed is a theology of nature and history, or, in terms of the NT revelation, a Christology. Arrogant though it may sound to non-Christians, all the movements of nature and all dramatic events of history find their center in Christ, for it is in Him that God in the dispensation of the fulness of time plans to gather all things in one (Eph. 1:10). Many aspects of providence are evident enough, but they can only degenerate into pious and rather empty platitudes when divorced from the true purpose of God in Jesus Christ. The incarnate Son is the unifying focus which gives content and meaning to all God's providential dealings, and hence to all the processes and events providentially ordered and controlled.

The Christian interpretation of history sheds a light on the most stubborn problems relating to providence, namely, the problems of choice, of evil, of suffering, of events even in the lives of the righteous that seem to show little sign of the beneficent power of God. It is to be noted that all these problems are fundamentally related, and that they are all to be brought under the christological understanding. If they are isolated from one another, they necessarily become more difficult to understand. If they are made into abstract philosophical problems, they inevitably become insoluble and can lead only to absurd notions or pathetic pleas. It is only in relation to the fundamental purpose of God, not to the detailed operations of providence, that these problems can find their true answer — an answer that, once perceived, is quickly seen again in the detailed operations.

The overruling purpose of God in Christ is man in fellowship with God and with fellow men. The supreme story of the world is the attainment of this purpose in spite of its original frustration. The task of providence is the shaping of natural and historical events in such a way that the purpose is fulfilled. Its fulfillment is in and by the special work of God, which reaches its culmination in the vicarious life and death and resurrection of Jesus Christ, in the application of this work in individual lives, and in the final establishment of His kingdom at the Parousia.

Fellowship, however, is more than automatic obedience. It carries with it the possibility of choice. Providence is not a fixing of the will in advance. Secondary causes are given full play. These include the individual choices of people. The divine providence directs all these in such a way that the purpose of God will still be fulfilled. Only a shallow view of providence can confuse it with determinism. The greatness of the divine providence is that it takes into account all the innumerable possibilities and yet weaves them all into the one predetermined pattern, not with a view to the obliteration of freedom, but with a view to its true establishment.

Evil arises out of the possibility of choice. The Bible seems to leave little doubt that had man chosen to obey God he could and would have controlled even natural evils, quite apart from prevention of all the monstrous

injustice and carnage of history. The awaited kingdom is to bring peace among animals as well as among people (Isa. 11:1ff.). The possibility of evil is thus one of the implications of choice, though once evil is present it also becomes a powerful factor in the influencing of choice. Evil could be stamped out altogether only by depriving man of choice, or by winding up history in judgment. The present task of providence is to overrule evil so that, far from frustrating the fulfillment of God's purpose, it will finally serve it. Thus even the wrath of man is turned to God's praise (Ps. 76:10 [MT 11]). A man can be blind that the works of God should be made manifest in him (Jn. 9:2f.). This is not just a shallow view of the best of all possible worlds which unfortunately has to include a little unavoidable evil. Far from being an essential ingredient in the best possible world, evil is an ugly and disruptive thing which will finally be destroyed. On the other hand, there is no room for the skepticism and unbelief of pessimism. God is not struggling against odds that are too much for Him. He is neither a malevolent despot nor a well-meaning blunderer. Evil is indeed a real thing. It is not to be taken lightly. It is not an essential instrument of good. Man's wrath does not on its own account work the righteousness of God (Jas. 1:20). Nevertheless, in the hands of God, for whom no problem is too hard, even this ugly thing can be and is woven into the pattern, so that even the weakness of Pilate, the treachery of Judas, the fickleness of the mob, and the misplaced zeal of the religious leaders can set in train the events by which God accomplishes the reconciliation of man.

Suffering is the consequence of evil. In the general sense, it is thus a true judgment on sin, and its place in the divine providence is easily discerned. It both judges sin and in the form of death helps to contain it. Yet already in the OT there is a recognition that suffering cannot be wholly explained in this way. If righteous children suffer, this may be in part due to their fathers' sins, but it can hardly be regarded as a punishment. Joseph's imprisonment in Egypt might be traced back to a whole series of faults including the deceptions of Jacob and Laban, the partiality of Jacob for the son of Rachel, the envy of the other brothers, and perhaps even some sense of self-importance in the young Joseph; but it is obviously out of all proportion if we try to see in it a direct punishment of Joseph for his own sin. So, too, the sufferings of Job and Jeremiah and the psalmist cannot be directly related to sins in the sense of immediate judgment. The following question thus arises: we may admit that suffering is a consequence of sin and that it bears in general the aspect of judgment; yet how is the often exorbitant suffering of the comparatively righteous to be reconciled with the wise, omnipotent, and righteous providence of God?

Raised in every age, this question has found in Scripture, and supremely in Jesus Christ the true theme of Scripture, its one convincing answer. This answer can be summarized as follows. First, God overrules suffering not merely as an instrument of judgment but also as a means of discipline and mortification (Ps. 119:67). Second, He shows that even suffering can be overruled to a greater and final blessing (Ps. 66:10ff.). Third, God uses suffering, the consequence of sin, as the very weapon by which to make atonement for sin (Isa. 53; 2 Cor. 5:14ff.). In the strict sense, this takes place only in Christ Himself, for He alone is perfectly righteous, and His passion alone avails for the remission of sin. Yet in Christ, in the power of His one perfect and all-sufficient sacrifice, believers may legitimately see a sacrificial value in their own sufferings in Christ's name, for His sake, and for His cause. The people of God are never more powerful in their ministry than when they suffer and even die in their work. Suffering, too, is incorporated into the great ministry of reconciliation.

Against this background the Christian can hardly expect that all events in his life will display God's providence in the sense of prosperity, calm, and security. Believers as well as others can be struck down by disease and accident, by poverty and bereavement, by disappointment and disaster. God does not deliberately send these, but He does not specifically withhold them. In some cases they may come as the result of the Christian's own mistakes. In others they may take the form of a corporate judgment in which Christians, too, are involved. In others they are just part of the ordinary nexus of life in this aeon. The great point is, however, that under the fatherly providence of God they can all finally be blessings, and can be seen as blessings, both to believers themselves and through them to others. But those who fail to see them thus will miss the blessing, just as those who fail to see the crucified Christ as the Savior of the world will never know the reconciliation of God, and will never be able to make any real sense of the world. The all-important thing is to set sufferings too in the light of God's supreme work in Jesus Christ (cf. esp. Rom. 5:3ff.; Jas. 1:12; 1 Pet. 3:14ff.; also Jn. 16:33; Acts 5:41).

This leads us to a final point of great importance. In the long run, providence has to be believed. There are many evident signs of providence in nature and history, but it cannot be finally demonstrated in such a way as to rule out all ignorance or opposition. If providence serves the fulfillment of reconciliation, it does so as a fact, not as an apologetic argument. In an unfallen world God's providence would, of course, be absolutely plain to see. In the new heaven and the new earth there will be no mistaking it. But in a fallen world, in which the fulfillment of God's providence takes the form of reconciliation, regeneration, and ultimate restitution, it can take some curious paths both in history at large and particularly in individual lives. Even believers will often be at a loss to explain individual events as they take place. Moreover, the general providences of God in nature and history, which might seem evident enough, can also be ascribed to immanent causes or questioned in the light of such natural disasters as earthquake or drought. To see God's providential hand with true certainty it is necessary first to know God Himself, to know Him in the outworking of His revealing and reconciling purpose in Jesus Christ, to know Him at the focus and center in the light of which His ways in providence may be discerned. The "smiling face" of God is in the first instance the face unveiled at the cross and the empty tomb, where the God who seems to have averted His face from the sin-bearing Savior is the very God who is well pleased with the Son (Mt. 3:17), who is well pleased with us in Him (Eph. 1:5f.), and who has here worked out, in spite of all appearances to the contrary, the good pleasure of His grace. This God is also the God who preserves and overrules all creation with a view to the fulfillment of His gracious purpose. Hence we may be confident that even if providence is frowning, behind it is the smiling face of God.

PROVINCE [Heb. *m^{e}dînâ*—'district of jurisdiction, administration satrapy'] (Ezr. 2:1; Neh. 1:3; Est. 1:1, 3, 16, 22; etc.); NEB also PROVINCIAL (Est. 1:3); [Aram. *m^{e}dînâ*] (Ezr. 4:15; 5:8, 6:2; 7:16; Dnl. 2:48f.; 3:1-3, 12,

30). [Gk. *eparcheía*] (Acts 23:34; 25:1); NEB also APPOINTMENT (Acts 25:1). In Ezra and Nehemiah the RSV supplies the word "province" nearly twenty times in the phrase "province Beyond the River" (e.g., Ezr. 4:10f., 16; 5:3, 6; 8:36; Neh. 2:7, 9; 3:7; AV "on this side the river," etc.).

The English word "province" derives from the Lat. *provincia,* which was "originally the sphere of action of a magistrate with *imperium,*" i.e., the highest administrative power, which involved "command in war and the interpretation and execution of law" (*Oxford Classical Dictionary,* pp. 542, 891). The traditional sense of the term, which indicated in an abstract sense the rule of the administrative official, gradually acquired the more concrete sense of a specific region entrusted to an official's care.

With few exceptions the RSV translates the noun *mᵉḏînâ* with "province." Heb. *mᵉḏînâ* (< Heb. *dîn,* "plead one's cause," "contend," or "execute judgment"; KoB, p. 208; cf. *TDOT,* III, *s.v.* "dîn" [Hamp, Botterweck]) "means literally a judicial district, i.e., a province," and "is used frequently in the book of Esther as a technical term for the Persian satrapies" (*ibid.,* p. 190). In other texts it acquires the more general meaning of "district" or "land" (Eccl. 2:8; 5:7 [MT 8]; Dnl. 11:24). It is also used in referring to Judah (Ezr. 2:1; Neh. 7:6) and to Elam (Dnl. 8:2). In the Aramaic texts of Ezra and Daniel *mᵉḏînâ* refers either to an administrative district that has a court of justice (Ezr. 4:15; 5:8;; 6:2; Dnl. 3:2f.) or to a town (Ezr. 7:16; Dnl. 2:48f.; 3:1, 12, 30; KoB, p. 1092); but this latter, narrower meaning has been challenged (*TDOT,* III, 190).

The RSV term "Beyond the River" (Heb. *ʿēḇer hannāhār*; Aram. *ʿaḇar nahᵃrâ*) must be understood from the perspective of persons dwelling in Persia or Babylon; the region "beyond the river," therefore, was a politico-geographical technical term that referred to the land W of the Euphrates River (*THAT,* II, 203).

In the NT "province" occurs twice in the RSV. In Acts 23:34 Felix asked Paul in what province (Vulg. *provincia*) he had originally resided. This procedural method of questioning the accused helped Felix to determine whether he would hear Paul's case. After learning that Paul was from Cilicia, Felix had a choice either to hear the case himself or to defer it to the legate of Syria (cf. A. N. Sherwin-White, *Roman Society and Roman Law in the NT* [1963], pp. 28-31, 55f.; also E. Haenchen, *Acts of the Apostles* [Eng. tr. 1971], p. 649 n. 1). Acts 25:1 records Festus's accession to administrative office (Gk. *epárcheios*; MSS p^{74}, ℵ*, B have *eparcheíǭ,* but cf. BDF, § 23, pp. 13f.) following the removal of Felix (Josephus *Ant.* xx.8.9 [182]). G. L. KNAPP

I. Imperial Control

I. Republican Period.–In the later 2nd cent. B.C., when the Romans first made contact with Judaism, there were no provinces — areas permanently controlled by Roman officials — east of the Aegean. The Attalid kingdom in western Turkey was annexed as the province of Asia in 133-128 B.C. and was extended to include Pisidia, Pamphylia, and Lycaonia in the south to the borders of Cappadocia by 100 B.C. After the first wars against Mithridates king of Pontus, this southern zone became a separate province known misleadingly as Cilicia. Bithynia in northwestern Turkey became a Roman province at the death of its last king in 74 B.C. It was extended to include most of Pontus in northeastern Turkey after the final conquest of King Mithridates by the proconsul Gnaeus Pompeius (Pompey) in 67 B.C. Pompey's annexation of Syria in 64-63 led to the submission of the Maccabean princes of Judea, which remained as a tributary principality, despite periodic rebellions, to the end of the Republican period. The generally peaceful provinces of Asia and, later, Bithynia-Pontus were managed by proconsuls who were ex-praetors. But Cilicia and Syria were held from 57 B.C. onward by ex-consuls with extensive military forces aimed against Parthia beyond the Euphrates frontier. Cappadocia, Galatia, and minor districts such as Armenia Minor and Commagene remained, like Judea, under their kings or dynasts. Great Armenia beyond the upper Euphrates yielded to Pompey in 67 B.C. and remained a dependent ally until the defeat of Mark Antony by the Parthians in 36 B.C.

II. Imperial Period.–From the principate of Augustus (27 B.C.–A.D. 14) onward, provinces were either "public," governed by proconsuls of either consular or praetorian standing under the immediate authority of the Senate, or imperial, managed by legates (*legati propraetore*) appointed by the emperor. In the earlier empire, beyond the Adriatic only Asia was consular, while the remainder — Macedonia, Achaia, Bithynia-Pontus, Crete, and Cyprus-with-Cyrenaica — were praetorian proconsulships; the northern districts in Europe to the Danube — Dalmatia, Pannonia, and Moesia — were under consular legates of the emperor. Of the imperial provinces in the east, Syria, which now included lowland Cilicia, was the senior command, held by a consular legate with an army of three legions. Galatia, together with Lycaonia (annexed in 23 B.C.) was managed, from about A.D. 14 onward, by a legate of praetorian rank. Cappadocia, annexed in A.D. 17, was left to an official of equestrian rank. But after A.D. 70 Galatia was combined with Cappadocia, eastern Pontus, and certain minor regions to form a great consular legateship with an army of two legions that guarded the Armenian frontier, while the legate of Syria was left in control of the middle Euphrates against Parthia. Judea after the collapse of the dynasty of Herod in A.D. 6 became a Roman province under an equestrian prefect, subordinate to the legate of Syria, but after the great rebellion of A.D. 66-72 it was transferred to an imperial legate as an independent province with a legionary garrison based in Caesarea.

A. Governors. The provinces were ruled by governors drawn from the Roman upper classes. There was a distinction between proconsuls of "public" provinces, who were nominally appointed by the senate and responsible to it as the Roman council of state, and the legates of the emperor (Lat. *legati Augusti propraetore*), who were appointed directly by him and governed the imperial provinces. The emperor, however, gradually secured direct control over the proconsuls also. Both types of governors were members of the senate. A third class of officials, known as procurators and prefects, was drawn from the second, or "equestrian," class of Roman society. Some of these were governors of minor provinces such as Judea; others were financial administrators within provinces (*see* PROCURATOR).

These technical differences among provincial officials

meant little to their subjects. All governors had unfettered administrative, military, and judicial power, called *imperium*. Although the emperor gave them general instructions, *mandata Caesaris*, at their appointment, and they could consult him by the imperial postal service (*vehiculatio, cursus publicus*), if some new situation arose for which they lacked the means or money, they were expected to manage their provinces by themselves. Their normal activities required neither previous sanction nor later ratification. They did not send regular reports about the details of their administration to Rome; military commanders, however, gave annual accounts of their campaigns. The management of public revenues and financial expenditure was left to the procurators, or in "public" provinces to the senatorial "quaestors," but the governors were formally responsible for the submission of accounts to the Roman treasury.

B. Military Forces. In the prosperous central provinces in which Christianity spread, Roman soldiers were extremely rare. The governors were given small contingents of troops, seldom exceeding a single battalion (*cohors*), for maintaining order in provinces the size of modern Portugal (Lusitania) or western Turkey (Asia). Thus Paul in Acts wanders through the provinces of modern Turkey and Greece without meeting a single Roman soldier. Far from these peaceful provinces, along the outer frontiers of the empire, were stationed the legionary armies under the most senior of the imperial legates. Northern Syria regularly held a strong force of three or four legions that guarded the Euphrates frontier against the great Parthian empire to the east, although an almost unbroken peace existed between the two powers until A.D. 113. In Judea, although it was not a frontier province, several battalions of provincial troops were stationed to control the unruly inhabitants.

C. Administration. Outside the military zones provincial government was supervisory rather than executive, detailed administration being in the hands of the municipal authorities. Hence Roman officials were few. The senatorial governors had two or three senatorial assistants (*legati*), and the financial procurators were no more numerous. Secretarial bureaus and archives, manned by a small staff of imperial slaves and freedmen or soldiers, were maintained only at the provincial capital. There the governors spent their time, except for an annual or biennial tour of selected cities where judicial courts (*conventus*) were held. Their courts were frequented by major criminals and tax defaulters or by magnates involved in great lawsuits. The mass of minor jurisdiction was left to the municipal magistrates. A basic rule reserved all capital crimes for the jurisdiction of the governor, who alone could inflict the death sentence, except in the rare "free cities" that had unlimited jurisdiction. In Roman law death was the penalty for a wide range of political and criminal offenses, but so long as the provincials did not seriously misbehave they and their communes were seldom subject to governmental interference.

D. Municipal Government. The executive management of the Roman empire depended upon local self-government through a varied pattern of urban and rural or tribal communities (*municipia, poleis, civitates, gentes*). The economy of the ancient world was primarily agricultural and pastoral. The land produced not only food and drink but also the raw materials for clothing, housing, and shipping, and many luxury goods. Products were processed and distributed through townships and cities, which were the seat of local government and the residential centers of the landowning aristocrats, who in the Mediterranean area seldom lived on their estates. Hence a complex system of town life evolved. In the civilized lands such as Syria and Asia, where Christianity developed, public and social life, including dramatic, musical, and athletic festivals, religious celebrations, and the activity of local government, was concentrated in the Hellenistic townships. Power was in the hands of annual officers or magistrates, elected by an assembly of the free inhabitants of the commune, and of a civic council composed either of ex-magistrates and aldermen, holding office for life, or else annually elected councilors. Only the wealthy could hold office, and the councils and magistrates were generally the only ones possessing effective power. In some Greek cities, however, the assemblies of the people retained a limited power of decision, but no popular demonstrations could carry much weight. The magistrates not only managed the secular life of the city and its local jurisdiction, but also held the local priesthoods and maintained the public worship of the civic gods, an integral part of city life.

In Judea the pattern was different. Hellenized cities were rare. Large villages or rural townships, managed informally by councils of elders — "the rulers of the synagogue" — were the basic units (cf. Mk. 13:9; Mt. 5:21f.; 10:17; Lk. 8:41; 11:43; 20:46). These were grouped into "toparchies" administered by commandants (Gk. *stragēgoí*) and village scribes for purposes of provincial government.

Civic life occupied the attention and controlled the activities of the vast majority of provincial inhabitants. The adventures of Paul in the cities of Greece and Asia Minor shows this in some detail. Paul was regularly arrested, imprisoned, put on trial, or expelled by city magistrates (Acts 14:4-6; 16:19-24; 17:6-9). When a riot occurred at Ephesus the chief magistrate reminded the enemies of Paul that they must proceed by due process of law, either before the city court or before the tribunal of the proconsul (19:29-41). The civic magistrates had authority over all the local inhabitants within the civic territory, but only native citizens possessed local political rights. Large immigrant groups, such as Jews, might be allowed a restricted form of communal organization among themselves, but there was no effective inter-city jurisdiction.

Political disputes within or between cities were settled by the intervention of the governor, who conducted relations with the cities through the city magistrates. The cities were, however, brought together in provincial "leagues" or "councils." These consisted of delegates from the provincial communes, two or three per city — known in Asia as "the Asiarchs" (Acts 19:31). Their original function was to celebrate the cult of the emperor as a deified ruler at certain great festivals. Later they acquired some functions of petition and complaint, but they never became provincial parliaments. The delegates elected their own presidents, who acted as high priests of the imperial cult: these posts ranked as the only dignities open to a wellborn and wealthy provincial outside his municipality.

E. Roman Citizenship. A provincial could not enter the public service of the Roman empire unless he was a Roman citizen. The upper classes of the eastern provinces increasingly acquired citizenship as individuals through influential connections with Roman officials. The working peasantry could also acquire it by enlistment in the provincial regiments of the Roman army (*cohortes, alae*), which, unlike the legions, were entirely recruited from provincial subjects. After twenty-five years of service the discharged soldier acquired Roman status for himself and for his sons, who were then qualified to enlist for the legionary service. This could open the door to promotion, ultimately to the procuratorial service. The able son of an

enlisted provincial might rise to govern a Roman province or to become the prefect of the praetorian guard at Rome. The tribune Claudius Lysias exemplified that process (Acts 22:27f.), but Paul derived his citizenship from his father.

F. Clubs. The common man who could not hold office found an outlet in a wide variety of private associations or "clubs" (*collegia*, "guilds," "societies"; Gk. *sýnodoi*, "assemblies," *hetairíai*, "select societies"). Some of these associations were based on crafts, trades, and professions (e.g., the guild of silversmiths in Ephesus that acted effectively against Paul [Acts 19:24-27]), while others centered on a religious cult; all were organized to provide social benefits in the form of regular festivities or dinners. They were managed democratically by the annual election of officers and by business meetings of their corporate members. The Roman government regarded the associations as a possible source of civic disturbances but generally tolerated them. Thus they provided a pattern for the development of early Christian congregations.

G. Cities and State Services. The cities not only managed their complex internal life, involving social services, public works, jurisdiction, and administration, but also provided the framework of provincial government. The Roman governors acted through the cities. Their criminal jurisdiction depended upon the arrest of major criminals by the civic police and their dispatch to the provincial courts by the municipal magistrates.

Imperial taxes were collected by a system of tax farming, but the publicans who leased the collection treated the local communes as units and struck bargains with the local authorities. In the later empire the city council members were made liable for collection and held responsible for any deficit. The imperial posting service for the transport of messengers and officials between the provinces and Rome depended entirely upon the communes along the highways; the local townships and villages provided the packhorses, carriages, and wagons at the request of the officials. There was a scale of charges, which the imperial treasury paid, but the duty was severe and was an uneven burden on provincial communities. The rates of direct taxation are not well known, but indirect taxes (sales duty, manumission tax, customs duties) were low, ranging from 2 to 5 percent. The impact of customs duties was not great because they were not collected at each provincial boundary. Instead the empire was divided into extensive zones comprising several provinces.

H. Law. The eastern provinces had various native systems of local law; principally the systems were Greek or, in Syria, either Greek or an Aramaic system. In Egypt, where the system is well known from papyri, the Roman governors continued to apply Hellenistic law, with modifications. Governors in other provinces also endeavored to apply the local codes of civil law in the suits of provincial subjects but tended to amend these codes by their knowledge of Roman law. In criminal cases they largely followed Roman usage, but also enforced local custom.

Governors were responsible for civil jurisdiction between Roman citizens in their provinces according to the Roman code. This code dealt with the rules of private property and contracts, inheritance, and the civic status of persons. It regulated the private transactions of Roman citizens in Italy and the provinces, but it did not apply to noncitizens. Hence it was not the law of the mass of the inhabitants of the empire until the *Constitutio Antoniniana* granted Roman citizenship to all provincials in A.D. 212. Roman criminal law was more restricted in scope. Certain statutes defined crimes and penalties in the sphere of murder, forgery, adultery and other sexual offenses, while others dealt with various political offenses, including treason and extortion. The governors applied these as they saw fit to Romans and non-Romans alike, giving judgment by a system of personal jurisdiction that allowed them great latitude (*see* PROCURATOR).

I. Imperial Control. The emperors seldom interfered with the activity of their governors unless the latter referred specific problems to them or provincial communes or individuals addressed a petition to them. Petitioning was not uncommon for the provincials, although it was expensive because they did not have access to the imperial postal service. After their term of office, governors could be prosecuted by their subjects for certain abuses of power before a senatorial court at Rome. Prosecutions for extortion were mostly initiated by the provincial councils (see D above). But the relevant "law of recovery" limited such prosecutions to the wrongful enrichment of Roman officials and to excessive cruelty in the execution of their duties. Governors could also be prosecuted by politicians at Rome for dereliction of duty under the so-called law of treason (*maiestas minuta*, neglect of the security of the state). But this procedure was not directly available to the provincial councils.

A. N. SHERWIN-WHITE

PROVOCATION; PROVOKE [Heb. hiphil of *kā'as*–'offend,' 'grieve' (e.g., 1 S. 1:7; 1 K. 16:2, 7, etc.), piel of *kā'as* (1 S. 1:6), *ka'as*–'vexation' (Dt. 32:19, 27; 2 K. 23:26; Prov. 27:3; Ezk. 20:28), hiphil of *qāṣap* ("provoke to wrath," Dt. 9:7f., 22; Zec. 8:14), hithpael of *gārâ*–'engage in strife' (2 K. 14:10; 2 Ch. 25:19), piel and hiphil of *qānā'*–'arouse jealousy' ("provoke to jealousy," 1 K. 14:22; Ezk. 8:33), hiphil of *rāgaz*–'agitate' (Job 12:6), hiphil of *māraṣ*–'irritate, provoke' (Job 16:3), hithpael of *'āḇar*–'become angry' ("provoke to anger," Prov. 20:2), hiphil of *tāwâ*–'trouble' (Ps. 78:41), hiphil inf. of *mārâ*–'behave obstinately' (Job 17:2); Gk. *erethízō*–'arouse to anger' (Col. 3:21), *paraxýnomai*–'become aroused' ("be provoked," Acts 17:16), *prokaléomai*–'call forth, provoke' (Gal. 5:26), *parorgízō*–'make angry' ("provoke to anger," Eph. 6:4), *parazōlóō*–'make jealous' ("provoke to jealousy," 1 Cor. 10:22), *apostomatízō*–'interrogate' ("provoke to speak," Lk. 11:53), *prosochthízō*–'be angry, offended' ("be provoked," He. 3:10, 17)]; AV also MEDDLE (2 K. 14:10; 2 Ch. 25:19), LIMIT (Ps. 78:41), BE GRIEVED, WRATH, etc.; NEB also TORMENT, HURT, ROUSE TO ANGER, EXASPERATE, BE INDIGNANT, etc. To incite to a (usually negative) feeling or action, e.g., anger, jealousy, grief, bitterness, "trouble" (e.g., 2 K. 14:10), or imprudent speech (Job 16:3; cf. Lk. 11:53).

In the OT the RSV uses "provoke" about forty-five times to render the causative form of Heb. *kā'as*. The primary idea expressed by this verb and the cognate noun *ka'as* is not anger but rather the kind of vexation that is caused by unmerited ill treatment (see Driver, p. 72). Occasionally this verb is used of human beings vexing one another (e.g., Peninnah vexing Hannah, 1 S. 1:6f.; cf. the noun in Prov. 27:3). Most often, however, it is used anthropomorphically to describe God's response to human

rebellion or unfaithfulness. The word resonates with divine pathos, for it describes God's deep pain when His people, upon whom He has graciously lavished His favor, desert Him to serve other gods. Because such unfaithfulness grievously offends against God's HOLINESS and jealous love (cf. piel of *qānā'*, 1 K. 14:22; *see* JEALOUS; on Ezk. 8:3, *see* IDOL I), it evokes not only His anguish but also His WRATH (cf. hiphil of *qāṣap*, Dt. 9:7f., 22; Zec. 8:14).

The hiphil of *kā'as* is used often by the Deuteronomic writers (and less often by other OT writers) to explain Yahweh's judgment upon His covenant people. When Aaron led the Israelites in worshiping a golden calf at Mt. Sinai, Yahweh was so deeply offended that He might have destroyed them all had Moses not interceded for them (Dt. 9:18). Moses warned the Israelites that if, after settling in the Promised Land, they provoked Yahweh by worshiping images, He would destroy them as a nation (4:25-27; cf. 31:29; 32:16, 19, 21). Despite the repeated warnings of Moses and the prophets, however, the Israelites persisted in grieving Yahweh by devoting themselves to idolatrous practices (e.g., Jgs. 2:12; 1 K. 15:30; 16:33; 21:22; 22:53; 2 K. 21:6; 22:17). Eventually the judgment of which they had been forewarned came upon both the northern and southern kingdoms (1 K. 14:15; 2 K. 17:11, 17f.; 21:14f.; 23:26f.; Jer. 7:18f.; 8:19; 11:17; 25:6f.; 32:28-32; 44:3, 8; cf. Ps. 78:56-59).

The NT refers to Israel's provocation of God as a warning to Christians. In 1 Cor. 10 Paul warns the Corinthian Christians against participating in idolatrous feasts as the Israelites did (e.g., v. 7; cf. Ex. 32:6), reminding them that it is sheer madness to provoke the Lord to jealousy (v. 22). He. 3:7-19 uses a quotation from Ps. 95:7b-11 to admonish readers against repeating the tragic folly of the Israelites in the wilderness. The Psalm refers to an event described in Ex. 17:1-7, when the Israelites provoked God by their hard-hearted rebelliousness at a place that Moses named Meribah (Heb. *mᵉrîḇâ*, lit. "contention") and Massah (*māssâ*, lit. "testing"). The LXX, quoted by He. 3, renders *mᵉrîḇâ* by Gk. *parapikrasmós* (lit. "embitterment"; RSV "rebellion"; AV "provocation," He. 3:8; cf. also v. 15) and *māssâ* by Gk. *peirasmós* (RSV "testing"; AV "temptation"; cf. also AV "provocation" and "temptation" in Ps. 95:8). The AV uses "provoke" also to translate the verb *parapikraínō* (lit. "embitter"; RSV "be rebellious") in He. 3:16, while the RSV uses "be provoked" to render *prosochthízō* in vv. 10, 17 (AV "be grieved"; cf. RSV "loathe" in Ps. 95:10, rendering Heb. *qûṭ*). The author of Hebrews warns that if Christians commit apostasy as the Israelites did, they too will fail to enter the promised rest (cf. He. 4:1).

Paul's Epistles contain several warnings against behavior that provokes other Christians. In Gal. 5:26 he urges the Galatian Christians to avoid challenging one another, and in Eph. 6:4 and Col. 3:21 he specifically instructs fathers not to abuse their parental authority in a way that irritates and exasperates their children.

The meaning of Gk. *apostomatízō* in Lk. 11:53 is uncertain. Its meaning in classical Greek, "teach by dictation" or "repeat from memory," does not fit the context. Ancient commentators usually rendered it "catch (Him) in something He says" (cf. v. 54); today it is usually translated "question closely" or "interrogate" (cf. NEB "ply him with a host of questions"). Perhaps the best translation is "watch (His) utterances closely" (see Bauer, rev., p. 100).

Bibliography.–F. F. Bruce, *Epistle to the Hebrews* (*NICNT*, 1964), pp. 62-69; S. R. Driver, comm. on Deuteronomy (*ICC*, repr. 1973); P. E. Hughes, *Comm. on the Epistle to the Hebrews* (1977), pp. 140-155; *TWOT*, I, 451. N. J. O.

PRUDENCE; PRUDENT. The RSV translation primarily of the Hebrew verb *'ārōm* (Prov. 15:5; 19:25), the cognate adjective *'ārûm* (12:16, 23; 13:16; 14:8, 15, 18; 22:3; 27:12), and the cognate noun *'ormâ* (1:4; 8:5, 12). This word-group sometimes has the negative connotations of CRAFTY or CUNNING (cf. Ex. 21:14; RSV "treacherously"). But in Proverbs, where these terms occur most frequently, they always denote the kind of intelligence that manifests itself in wise behavior (cf., e.g., 13:16). As such, prudence was considered one of the highest virtues by oriental wisdom literature, which frequently contrasted it with the senseless, destructive behavior of the FOOL. The hiphil part. of *śāḵal*, which occurs primarily in Psalms and Proverbs, describes those whose behavior is wise and circumspect (Prov. 10:5, 19 [AV "wise"]; 19:14; Am. 5:13). A common synonym, the part. of *bîn* (lit. "discerning, understanding"), is frequently coupled with *ḥāḵām* ("wise") or *ḥoḵmâ* ("wisdom"; cf. Jer. 49:7). The niphal part. of *bîn* (RSV "prudent") characterizes the speech of David (1 S. 16:18); cf. its use in the descriptions of Joseph (RSV "discreet," Gen. 41:33, 39) and Solomon (RSV "discerning," 1 K. 3:12). Similarly, "prudence" (Aram. *'ēṭā'*, lit. "counsel" [so AV]; NEB "cautiously") marks the character of Daniel's speech (Dnl. 2:14).

Earlier editions of the RSV render "prudence" for Gk. *poiéō phronímōs* in Jesus' parable of the dishonest steward (Lk. 16:8), but later editions replace it with "shrewdness" (cf. AV "do wisely"; NEB "act so astutely").

I. The Book.–*A. Name.* The word *psalm* in the English title of this book is an anglicized version of the Greek word (*psalmós*), which is used in the LXX to translate Heb. *mizmôr*, meaning either "song" or "instrumental music." The word *mizmôr* occurs in the titles of some fifty-seven Psalms and is thus a general description of the contents of the book. In the rabbinic literature the book is called *t*ehillîm*, "songs of praise," though this word is used only once in the Psalm titles (in Ps. 145). Both titles for the book indicate central aspects of its character. The title *Psalms* is a reminder that the book contains not merely poetry, but also the songs and hymns sung to musical setting in Israel's worship. The rabbinic title of the book is a reminder that the primary purpose of the book is the *praise* of God.

B. Origin. The exact process by which the book of Psalms came into being is not known; nevertheless, it is possible to detect some stages in the process. First, the individual Psalms were composed. Next, a number of relatively small collections of Psalms came into existence. Some Psalms were incorporated into more than one collection, the evidence of which has survived in duplications in the book of Psalms: compare Pss. 14 and 53, 40:13-17 (MT 14-18) and 70, 57:7-11 (MT 8-12) plus 60:5-12 (MT 7-14) and 108. Further evidence of early collections is to be found in Ps. 72:20, which appears to be a conclusion to a collection of David's prayers. Other collections can be identified by the use of particular expressions employed in the Psalm titles; thus there was a "Sons of Korah" collection (Pss. 42–49, 84, 85, 87, 88), an "Asaph" collection (Pss. 50, 73–83), and a collection of "Songs of Ascent" (Pss. 120–134).

The next stage in the development of the Psalter involved bringing together the smaller collections to form larger collections; from this stage in the development, only limited evidence has survived. The most clearly discernible collection of collections is the so-called Elohistic Psalter, Pss. 42–83; these Psalms are distinguished from other Psalms by the much more frequent use of *'Elohim* (God) and the rare usage of *Yahweh* (Lord). (In Pss. 1–41, *Yahweh* is used 272 times and *'Elohim* 15 times. In the so-called Elohistic Psalter, *Yahweh* is used 46 times, but *'Elohim* appears 204 times. Then, in Pss. 84–150, *Yahweh* occurs 362 times, but *'Elohim* only 13 times. The numbers are tentative, given the existence of text-critical problems.) This collection of collections contains a smaller collection of "Korah" Psalms (42–49), a collection of "Asaph" Psalms (50, 73–83), a Davidic collection (51–65 and 68–72), and other miscellaneous Psalms. The existence of this larger collection may also explain the duplications; thus Pss. 14 and 40:13-17, both external to the "Elohistic Psalter," are duplicated within it (Pss. 53 and 70 respectively).

Finally the book of Psalms came into its present form — a compilation of smaller collections, large collections such as the Elohistic Psalter, and various other Psalms added by the editor(s). The date at which the book of Psalms reached its present form is not known. It used to be held that the book was completed *ca.* 100 B.C. or even later, but such a view is most unlikely. Perhaps the most that can be affirmed is that the book of Psalms assumed its present form after the Exile, which in turn is reflected in certain Psalms (e.g., Pss. 102, 126, 137).

C. Division. In its present form, the book of Psalms is subdivided into five "books": (1) Pss. 1–41, (2) 42–72, (3) 73–89, (4) 90–106, (5) 107–150. This division of the whole is somewhat artificial and is based primarily on the existence of doxologies at the ends of Pss. 41, 72, 89, and 106. Whether these doxologies were inserted to mark the divisions in the Psalter, or simply occurred as integral parts of the Psalms in question but were interpreted as the conclusions of separate "books," cannot be known with certainty. Ps. 150 certainly serves, by editorial intention, as a doxology to the book of Psalms as a whole. The division of the Psalms into five separate "books" is probably not of great significance; at least with respect to unity of theme, there is nothing of great unifying significance within each of the divisions. It is probable that the whole was divided into five simply on the basis of the analogy with the five books of Moses (the Pentateuch). An old Jewish tradition states: "Moses gave to the Israelites the five books of the *Torah*, and coordinate therewith David gave them the five books of the Psalms" (Midr. *Ps.* 1:1).

D. Number of Psalms. The MT and the versions are in agreement that there are 150 Psalms; they differ, however, with respect to the numbering of various Psalms. Thus Pss. 9–10 in Hebrew are a single Psalm (9) in LXX, and Pss. 114–15 in Hebrew are a single Psalm (113) in LXX; but MT Ps. 116 is divided into two in the LXX (114–15), as is MT Ps. 147 (in LXX, 146–47). Thus the total of 150 would appear to be a round number that the editors sought to achieve. The LXX also has a Ps. 151, though it is explicitly identified in the text as being "outside the number." A Hebrew version of LXX's Ps. 151 has been found among the Dead Sea Scrolls at Qumrân in Cave 11 (see Sanders). In addition, several Psalms MSS and fragments have been found at Qumrân (esp. in Cave 4), establishing to a large extent the reliability of the medieval MSS of the book of Psalms on which modern English translations are based. A number of nonbiblical psalms were also found at Qumrân.

E. Arrangement. The sequence in which the Psalms have been arranged raises a number of difficulties, some of which may be insoluble. On the one hand, it is clear that the Psalms were not arranged haphazardly; on the other hand, the principles according to which they were arranged are not always clear. To some extent the arrangement is determined by the smaller collections within the Psalter as a whole; these collections may have been brought together for various reasons, e.g., common authorship, common usage in particular acts of worship, or perhaps common theme. Both within and outside the collections it is sometimes possible to detect a reason for the placing together of two or more Psalms. Thus Ps. 17 may follow Ps. 16 because the concluding verses of the two Psalms exhibit affinity. Pss. 34 and 35 may occur together because the "angel of the Lord" is mentioned only in these two Psalms in the Psalter. Pss. 1 and 2 were placed together because they form a proper introduction to the Psalter, describing the beauty of the law and the glory of Zion's king; indeed, in ancient Jewish tradition they were recognized as a single Psalm (T.B. *Berakoth* 9b). Again, Ps. 3 would appear to be a morning prayer, Ps. 4 an evening prayer, and Ps. 5 another morning prayer; their arrangement side by side can hardly be accidental. But for all the clues that have survived concerning the sequence of the Psalms in the Psalter, in many cases it is impossible to infer the significance of some Psalms from their immediate literary context.

II. Headings and Other Additions.–A. General Observations. Most Psalms have either long or short titles, or superscriptions, preceding the body of the Psalm as such. Of the 150 Psalms that constitute the Psalter, only 34 do not have a heading or title verse (the MT includes the heading in its versification, but the English versions do not). The majority of the headings probably do not originate with the author of the Psalm; thus a Psalm entitled "Song of Ascent" (e.g., Ps. 120) was probably given this heading when it was incorporated within the collection of such Psalms (Pss. 120–134). In other cases (e.g., Ps. 18) the heading may be integral to the original Psalm. A clay tablet discovered at ancient Ugarit contained not only the words of an ancient Hurrian psalm, but also information parallel to that contained in the headings to the biblical Psalms. Thus in studying the Psalm headings one must attempt to discern between that information which is original and peculiar to the Psalm, and that which pertains to the editorial process by which the Psalm became incorporated in the Psalter. The headings of the Psalms are important, even if they are not always easy to interpret; their substance is worthy of study, forming an integral part of the Hebrew text of the OT. It is thus regrettable that some modern translations of the Bible (e.g., NEB) do not include the substance of the headings in their translation of the text.

B. Ancient Versions. The headings in the MT of the Psalter were included in the earliest translations of the OT (e.g., the LXX, translated during the 3rd and 2nd cents. B.C.). In many places the translation in the early versions corresponds to the MT, though it is clear that the translators often had difficulty in knowing how to render some of the words in the headings. This lack of understanding, especially on the part of the translators of the LXX, may point to the antiquity of the Psalm headings, the passage of time having obscured the meaning of some of their words in the later period of the translators. In other cases, it is possible that the technical Hebrew terms in the headings had no equivalent in Greek, and hence apparent discrepancies arose in the versions. (A similar difficulty can be observed in English Bibles, where transliterated words appear in the headings of the Psalms: e.g., MUTH-LABBEN in Ps. 9.)

In many cases the headings in the LXX differ quite substantially from those in the Hebrew Psalter. The following are examples of such deviation. (1) The LXX contains the heading "of David" in Pss. 33, 43, 71, 91, 93-99, 104, and 137, even though the expression is not used in the MT. (2) The headings of Pss. 146–48 in the LXX contain the words "of Haggai and Zechariah," though these words do not appear in the MT. (3) Conversely, where the expression "of David" is used in the MT of Pss. 122 and 124, it is missing in the LXX in these texts. It is not always easy to determine the significance of discrepancies such as these, especially since in the majority of cases the MT and LXX essentially agree. It is probable that the Greek variations reflect different usage of the Psalms in worship, in the context of the Jewish community in Egypt (where the LXX was translated). The headings in the LXX may thus be of more value for studying the history of the Psalms individually, in Jewish worship, than they are in every case a witness to the earliest Hebrew text.

C. Technical Terms. The headings of the Psalms contain essentially five categories of information. Within these five categories various words are employed; some are clear and are technical terms, some are names, and some words are of uncertain meaning (they may be technical terms or simply names of tunes or musical arrangements).

(1) Many headings identify the Psalm with a person or groups of persons, either by name (e.g., David, Solomon, Asaph) or by title (e.g., the "choirmaster" [AV "chief musician"]).

(2) Some headings contain what purports to be historical information (e.g., Pss. 18, 34), in which technical terms are rarely employed.

(3) Some headings contain musical information, in which difficult technical terms are employed. Thus Ps. 5 indicates the Psalm was to be sung "to flute music," as the expression NEHILOTH appears to mean. Pss. 6 and 12 contain the expression SHEMINITH, which probably means "octave" and may refer to the manner in which the Psalm was to be sung. Pss. 8, 81, 84 were to be sung "according to the Gittith," which may be a reference to some type of musical instrument employed in accompaniment. This musical accompaniment is clearly indicated in Psalms that have the heading "with stringed instruments" (AV NEGINAH, NEGINOTH, e.g., Pss. 4, 61). The mysterious word SELAH (Heb. *selâ*) should probably also be understood in the context of the musical performance of the Psalms, although its meaning is uncertain: it may refer either to a pause in the singing or to an increase in volume. It is used more than seventy times in the Psalms and occurs also in Hab. 3 (three times). The meaning of many such musical terms in the headings continues to elude biblical scholars; they do serve as a useful reminder, however, that the book of Psalms is not merely a collection of poetry, but contains the hymns and songs employed in Israel's worship.

(4) The fourth category contains liturgical information, shedding light on the usage of the Psalms in particular parts of Israel's worship. Thus the expression "to bring to remembrance" (Pss. 38, 70) may indicate that the Psalms to which the heading was attached were employed in a liturgical activity associated with the memorial offering. Ps. 100 has a heading associating it with a liturgy of thank offering. Likewise, Ps. 30 may have been employed in some kind of dedication liturgy.

(5) The final category of information pertains to the literary *type* of the Psalm. The most common designation of types is the word *mizmôr*, "psalm" (used more than fifty times in the Psalter).

Numerous other expressions employed in the Psalm headings are difficult to classify simply because their meaning is uncertain; such words include SHIGGAION (Ps. 7), MASKIL (Pss. 32, 42, 44, etc.), LILIES (Pss. 45, 60, 69, 80; AV Shoshanim), ALAMOTH (Ps. 46), Do Not Destroy (Pss. 57–59, 75; AV AL-TASCHITH), Dove on Far-off Terebinths Ps. 56; AV JONATH-ELEM-RECHOKIM), Testimony (Ps. 80; AV EDUTH).

III. Authors and Dates.– There is considerable variety with respect to the dates at which the individual Psalms were composed. A few may date from the very early period of Israel's history, many come from the time of the monarchy, and some were composed during and after the Exile. For practical purposes the possibility of dating the Psalms, either generally or specifically, can only be determined in the context of a detailed study of the individual Psalms. Nevertheless, it is possible to make some general observations pertaining to the dating.

A. Reversal of Opinion. At the beginning of the 20th cent. one of the most commonly held opinions was that the majority of the Psalms were composed in the postexilic period. At the present time, however, that earlier consensus of opinion has changed for the most part; it is commonly recognized now that much of the OT literature, including the major part of the book of Psalms, may have been composed at an earlier date, principally during the time

of the monarchy or the Exile. While a few of the Psalms almost certainly come from the postexilic period, the majority reflect earlier periods in the history of Israel's religion.

There is a variety of reasons for this general reversal in scholarly opinion. In part the change is a consequence of the form-critical study of psalms in the context of Israel's cult (see IV below). In part it is a consequence of the fruits of archeological discovery; over the last century the poetry and psalmody of the Egyptians, Babylonians, Assyrians, and other Near Eastern peoples have been rediscovered, thus providing a wider basis for comparison with the Hebrew Psalms. And in part opinions have changed as a result of studying the Psalms in the light of Ugaritic studies (see IX below).

B. General Observations. In the attempt to date any particular Psalm one must take some general considerations into account. First, if a connection between a Psalm and the cult can be determined (see IV below), it may have general implications with respect to date. Thus a royal Psalm, e.g., Ps. 20, while it may be difficult to date with precision, can at least be set within the general historical framework of the Hebrew monarchy. Second, grammatical, lexical, and stylistic considerations may have implications with respect to date; thus the distinctive forms and style of Ps. 29 suggest that it comes from the earliest period of Israel's psalmody. Third, if an argument may be sustained in some cases for Davidic authorship, on the basis of the Psalm title, clearly that information is pertinent to the dating of the Psalm, though it leaves open the possibility of the internal modification of the Psalm for its use in later periods of worship. Sometimes the content may be relevant to the dating; thus Ps. 137, on the basis of content alone, would appear to be exilic or postexilic.

It is clear from these general observations that it is not easy to assign a specific date to the majority of the Psalms. Some may be dated to a general period in Israel's history; some cannot be dated with any confidence at all. Very few Psalms can be dated with precision, even after a close analysis of language, form, and content. But while recognizing the difficulty of dating the individual Psalms, one must also see the difficulty in perspective; for the most part the interpretation and appreciation of a particular Psalm does not presuppose its accurate dating. The Psalms have a certain timeless quality; their insight and expression of the praise of God are not restricted to, or by, the period of their composition. Thus, while the attempt to date each Psalm is a worthwhile enterprise, the failure to come to a firm conclusion in many cases need not be a setback in the process of interpretation.

C. Hebrew lᵉḏāwiḏ. In the attempt both to date and to interpret the Psalms, some attention must be given to the content of the Psalm titles (see further II above). The Hebrew expression *lᵉḏāwiḏ* ("to/for David") occurs in the titles of some seventy-three Psalms (Pss. 3–9, 11–32, 34–41, 51–65, 68–70, 86, 101, 103, 108–110, 122, 124, 131, 133, 138–145). In thirteen instances the title provides in addition some information pertaining to an incident in the life of David (Pss. 3, 7, 18, 34, 51, 52, 54, 56, 57, 59, 60, 63, 142; see also Ps. 30). The expression *lᵉḏāwiḏ* may in some cases be intended to designate David as author; this is especially probable in those titles providing additional information about in incident in David's life (e.g., Pss. 7 and 18, with which compare Isa. 38:9 and Hab. 3:1). Furthermore, this approach to the interpretation of the titles, with respect to authorship, is very ancient; compare Ps. 110 with Mt. 22:43-45; Ps. 41 with Acts 1:16; Pss. 16 and 110 with Acts 2:25-28; Ps. 32 with Rom. 4:6; Ps. 69 with Rom. 11:9; Ps. 21 with Acts 4:25; and Ps. 95 with He. 4:7. Nevertheless, the interpretation of the phrase *lᵉḏāwiḏ* is not without difficulty, and simply from the perspective of language and translation various possibilities remain open.

(1) As already stated, the preposition *lᵉ* may indicate authorship, so that the phrase means "by David" (as author). Such a translation and interpretation are probable with respect to several Psalms (see GKC, §129 a-c). (2) A natural translation of the phrase would be "to David" or "for David," perhaps implying "dedicated to David." (3) The phrase could be translated "concerning/about David." The difficulty in determining the meaning of the phrase *lᵉḏāwiḏ* does not lie simply in deciding which of the above possibilities is correct; each possibility must be weighed in each instance that the phrase is employed in a Psalm title. Thus, while sometimes it may mean "by David," in many cases (perhaps the majority) it may mean "for David" (viz., Davidic); that is, the phrase may indicate that the Psalm in question is a royal Psalm, belonging to an early collection of Davidic Psalms. And in a few cases *lᵉḏāwiḏ* may mean "about David"; the usage of the same preposition in Ugaritic, a language slightly older than Biblical Hebrew and closely related to it, suggests such a nuance. Thus *lbʿl* in the title of an Ugaritic text means "about/concerning Baal."

While Davidic authorship cannot always be assumed on the basis of the phrase *lᵉḏāwiḏ* in the title, it is nevertheless clear that David's influence was very considerable in the development of the tradition of Israel's psalmody. In addition to actually composing Psalms, David's influence is recognized in many parts of the OT. He is described as the "sweet psalmist of Israel" (2 S. 23:1). He was influential in the invention of musical instruments (Am. 6:5) and in the development of Israel's music and musicians (1 Ch. 15:16-24; 16:7, 31), and various historical writers associate him with particular compositions (e.g., 2 S. 1:19-27; 23:3-7). Thus uncertainty as to David's role in the composition of specific Psalms should not detract from the recognition of his central importance in the tradition that ultimately produced the book of Psalms.

There are difficulties associated with the interpretation of the NT references to David and the Psalms. Many would argue that a statement such as that contained in Rom. 4:6 is not intended to assert anything with respect to the authorship of the Psalm in question. On the other hand, the reference to Ps. 110 in Mt. 22:43-45 is more difficult to interpret; the argument of Jesus clearly seems to imply that the words of Ps. 110 were either written by David, or at least spoken by David. This observation opens the door to weighty theological issues that cannot be resolved in this context. Some would say that the reference in Mt. 22:43-45 settles the issue of authorship. Others would argue that with reference to His manner of speech, Jesus spoke out of the perspective of the thought world of His contemporaries. The contemporary perspective was reflected in Jesus' words, for in His time the entire book of Psalms was commonly referred to as "the Psalms of David" (thus including those Psalms with no titles and those with superscriptions indicating other persons, e.g., Ps. 90).

D. Sons of Korah, Asaph, etc. The Psalm titles mention other persons and groups of persons in addition to David. They include the following: (1) Solomon (Pss. 72, 127), (2) Moses (Ps. 90), (3) Asaph (twelve times), (4) Heman (Ps. 88), (5) Ethan (Ps. 89), (6) the musical director (more than fifty times; RSV "choirmaster"; AV "chief musician"), and (7) the "Sons of Korah" (eleven times). As with the expression *lᵉḏāwiḏ*, the references to persons are subject to difficulties of interpretation. In many cases, however, the references are to early collections of Psalms that pre-

ceded the compilation of the book of Psalms, e.g., a "Sons of Korah" collection (see I.B above). Authorship is not necessarily implied by all these references to persons and groups in the Psalm titles; some titles refer to more than one person (e.g., Ps. 88).

E. Conclusions. It is clear that it is rarely possible to come to firm conclusions with respect to the date and authorship of the individual Psalms. In a few cases it is possible to propose David as the author of a particular Psalm; in the majority of cases it is safest simply to recognize that the Psalms are, for practical purposes, anonymous, though they may be representative of the praise and worship of Israel as a whole. Many of the Psalms can be dated to general periods (e.g., the time of the monarchy, or the Exile), a few can be dated specifically, and others are essentially undatable (within the confines of the OT period). Nevertheless, the attempt to determine date and authorship should be an important part of the process of studying the individual Psalms.

IV. Psalms and Cultus.–A. Psalms in the Life of the People. In the modern Western world poetry has become essentially a literary phenomenon; for the most part it is not rooted in daily life. But in other societies, and especially in other historical periods, poetry has had a quite different role and significance; it is not simply an artistic form of literature, but is rooted in the daily events that constitute the life of a people. Poetry was spoken and recited in human life-settings; its recording in writing was principally for purposes of preservation. Thus poetry played a role in worship, in events such as marriages and funerals, and simply in entertainment (antedating the modern books and movies). In the 19th cent. it was the common practice for biblical scholars to study the Psalms purely as literature; while there was value in this approach, it failed to appreciate the vitality of the Psalms in Israel's daily life and worship. In the 20th cent. a new trend developed in the study of the Psalms, pioneered by Hermann Gunkel; he perceived that a full appreciation of the Psalms would never be gained unless an attempt was made to study them in their original life-settings (or *Sitze im Leben*). Gunkel's was a functional approach to the study of the Psalms; recognizing that the Psalms had been *used* in the life of Israel, he sought to determine not only the social situation in which they were used, but also their function within that setting.

B. Israel's Psalmody and the Cultus. Though a few Psalms might originally have functioned within a general social context (e.g., a wedding, see Ps. 45), the majority of Israel's Psalms would have been utilized within the cultus or the formal settings of worship within the temple (and later, perhaps, within the synagogue). The following points provide some general perspectives.

(1) From the earliest period of Israel's history music and song were integral to the activities of worship; in this, the practice of the Israelites was no different from practices known to have existed in such ancient societies as Egypt, Babylon, and Ugarit. Thus long before David's time music and song formed a central part of the worship in Israel's cult. What took place during David's reign, and then later in King Solomon's time, was simply a renewal and growth of the more ancient Israelite traditions of poetry and music; that renewal was to continue to be the practice in the subsequent history of worship.

(2) Many of the Psalms are characterized by a distinctive style that might be described as a "cultic style"; it is not a specifically literary style, for its characteristics appear to have been determined primarily by the influences of cultic usage. The style is such that the Psalms lack concrete and specific points of reference, but are thereby more easily used in various contexts of worship. Many Psalms and songs which were initially composed for a specific occasion are nevertheless written in such a style that they could continue in use beyond the confines of that original occasion. Thus when one reads such ancient songs as the "Song of the Sea" (Ex. 15:1-18), the "Song of Deborah" (Jgs. 5), or David's Lament (2 S. 1), one is struck by the stereotyped forms of expression and lack of specificity; this style probably originated within a circle of cultic singers, being suitable for use in varying ceremonies and forms of worship.

(3) Not only the style, but also the structure of many of the Psalms is very distinctive. For example, several Psalms have one or more changes in subject. In Ps. 2 it is clear that the speaker in vv. 7-9 is different from the speaker in the rest of the Psalm; probably the congregation declared the words of vv. 1-6 and 10-12, while the king may have responded with the words of vv. 7-9. A Psalm of this kind may have been recited in an act of worship in the temple, with different persons and groups of persons participating in the spoken part of the worship. In other examples, a change of subject may introduce a speaker who, in prophetic manner, declares the words of God (see esp. Ps. 12:5 [MT 6]; 20:6 [MT 7]; 28:5; 31:24 [MT 25]; *et al.*).

(4) It used to be a common practice in the study of the Psalms to conclude that many Psalms were composite works, drawn from two or more ancient sources; such a conclusion would be based upon the observation that different parts of a Psalm were characterized by a totally different mood and atmosphere. Fluctuation of this kind was noticed particularly in many of the Psalms of lament, which begin with mournful melancholy, but end with a jubilant expression of thanksgiving (e.g., Ps. 3:7 [MT 8]; 4:7ff. [MT 8ff.]; 5:11f. [MT 12f.]; 6:8-10 [MT 9-11]; 7:10-17 [MT 11-18]; 10:16-18). It is too simple, however, to explain this fluctuation and change as a consequence of antecedent sources. And while it may sometimes be explained psychologically, or in terms of the psalmist's spiritual progress, such explanations are not always satisfactory. In most instances the fluctuating and changing character of particular Psalms can be understood only in the context of the cultic rituals in which they were employed. Thus a person in trouble might come to the temple to take part in a cultic ritual, either private or public. He would begin by stating his case, the lament, which may have been accompanied by the offering of sacrifices. Then a priest or prophetic servant of the temple would declare a word to the supplicant from God; such divine words are sometimes stated in the Psalms explicitly and sometimes only implied. In response to the divine word the supplicant would then conclude his participation in the ritual (sometimes accompanied by fellow worshipers) with the declaration of praise and thanksgiving. Many Psalms of a very uneven character from a strictly literary perspective have a finely rounded wholeness when perceived from a cultic perspective in the setting of Israel's acts of worship.

(5) Other items of more isolated data point to the usage of many of the Psalms in Israel's cultic life. In some cases the psalmist explicitly states that he is present at the sanctuary (e.g., Ps. 5:3, 7 [MT 4, 8]; 9:14 [MT 15]; 22:22-31 [MT 23-32]; 23:5f.; 28:2). In other cases the psalmist makes reference to being absent from the sanctuary (e.g., Pss. 3, 42, 43, 61, 63); in these instances the act of worship is distinctive by virtue of not being in the sanctuary, though the Psalms in question were probably utilized later within the formal acts of worship (see Pss. 102 and 120).

In summary, while a few Psalms were no doubt straightforward literary compositions and can be studied as such, the majority had a more vital role to play in the living

context of Israel's worship. While one cannot always determine the specific cultic setting of each Psalm, given the lack of sufficient evidence, the attempt to study the Psalms in a cultic setting is an important step toward correct and illuminating interpretation.

C. Are the Psalms Genuine Songs of the Cultus? Gunkel's pioneering work on the relationship between the Psalms and the cult has found a large degree of acceptance in principle among biblical scholars. His views have been developed in a number of different directions, however, and the extent to which the book of Psalms as a whole can be tied to Israel's cultic life has been the source of considerable debate.

Two of the most distinguished scholars to develop Gunkel's initial insights are Sigmund Mowinckel and Artur Weiser. Mowinckel pursued more rigorously than had Gunkel the cult-historical investigation of the Psalms; in particular he closely identified a large number of the Psalms with a proposed Israelite New Year Festival, which he argued was a central act of worship celebrating God's kingship and creation. Weiser, on the other hand, tended to see the covenant festival as Israel's central act of worship, and this provided for him the cultic context in which the majority of the Psalms were to be interpreted. For all the splendid insights of these two scholars, they have probably gone too far in their cult-oriented interpretation of the book of Psalms. A more balanced perspective, still in the tradition of Gunkel, is to be found in the major two-volume commentary by H.-J. Kraus.

As the work of these distinguished scholars of the 20th cent. is assimilated and evaluated, it is becoming clear that many, indeed perhaps the majority, of the Psalms in the Psalter are the genuine songs of Israel's cultus, composed and used in the context of Israel's formal worship. Other Psalms, which may have started as private and literary compositions, came to be used over the passage of time in worship, thus becoming the songs of the cultus at a secondary stage in their development. Still other Psalms, notably the wisdom Psalms (see V below), may have had an initial life-setting in a context quite separate from the cult (e.g., a didactic or educational setting); whether their incorporation in the Psalter implies adaptation for use in worship cannot be known with certainty. And some Psalms may be not only literary compositions, but their survival may also have occurred on literary grounds; thus Ps. 1 appears to be a wisdom Psalm, placed at the head of the Psalter as an appropriate introduction to the literary collection, but probably not utilized in the cult as such. In summary, while it is an important principle in general interpretation to recognize the majority of the Psalms as cultic compositions, sufficient flexibility must be maintained by the interpreter to recognize also the presence of some noncultic material in the Psalter.

V. Types and Structure.—One of the significant aspects of the pioneering work of Gunkel was the development of a method of study called *Gattungsforschung*, or a close study of the *forms* in which the Psalms were structured (*Einl. in die Psalmen*). By examining the form of a particular Psalm Gunkel attempted to determine the literary species or genre to which that Psalm belonged. The examination of form and genre was closely related to the study of the life-setting of the Psalm (see IV above); thus the knowledge that the life-setting of a Psalm was in some activity in Israel's cult or formal worship was of assistance in determining the genre to which a Psalm belonged. A knowledge of the Psalm's function would help in the determination of form, and vice versa, though inevitably this whole process is in danger of circular reasoning.

A. General Observations. While the general value of studying the form of a Psalm and attempting to determine its genre is clear, certain limitations are inherent in this method of study that indicate the necessity of caution. Thus, to use an example from English, if one were to take a church hymnal and study the genre "hymn of praise," one could determine several common characteristics, but one would also be impressed by the variety and differences of detail within the genre as a whole. The same is true with respect to the Psalter; many Psalms can be classified as belonging to a particular species or genre; many examples of the genre will have a certain commonality of structure, but variety and difference will also be observed. And sometimes a similar form, or a part thereof, may be common to more than one genre. Thus in the final analysis it is not always possible to determine the purpose and meaning of a Psalm only on the basis of an examination of the characteristics of form; the evidence of content is just as significant as form.

A preliminary step in the approach to the examination of a Psalm's form is to observe the grammatical *person* and *number* employed in the Psalm. On this basis a division can be made between *communal Psalms* (employing, e.g., "we") and *individual Psalms* (employing "I"). The communal Psalms may reflect some kind of communal worship. The individual Psalms may reflect various backgrounds, from individual worship or meditation to the words of an (individual) king in a communal context of worship. It should also be noted that several Psalms fluctuate between individual and communal forms of expression, indicating perhaps a liturgical context with alternating speakers (see IV above).

B. Various Types. Gunkel specified various major types (viz., types to which a large number of Psalms belonged) and several minor types whose presence could be determined in the Psalter. The following summaries contain brief characterizations of some of the more important types. Although Gunkel's work remains foundational in the study of the Psalm types, there has been considerable progress and refinement since his time in both the description and classification of the types.

(1) *The Psalm of Praise, or Hymn* (e.g., Pss. 8, 29, 33, 104, 111, 113). The life-setting in which the hymn was employed was some occasion associated with the worship in the temple. Though the majority of hymns may have been for general usage in worship, a few may have been associated with particular festivals. With respect to structure a hymn would normally contain the following component parts: (a) An introduction, containing an invitation to praise. The invitation may be addressed to the congregation gathered in the sanctuary, to the choirs, or to some other person or group. Its object is to direct the praise of Israel toward the Lord, His word, His virtues, or His mighty acts. (b) A central portion, further elaborating the occasion of the praise. In general this section of the Psalm consists of short sentences expressing praise for the Lord's character or actions; dominant themes include God's acts of salvation on behalf of Israel and God's role in creation. (c) A formal conclusion, though the substance of the conclusions varies enormously.

(2) *The Individual Song of Thanksgiving* (e.g., Pss. 30, 34[?], 66, 116, 138). The majority of these individual songs of thanksgiving were probably related to some formal act of worship, though a few may be noncultic. When employed in a formal setting the Psalm would be used by a person who received some specific blessing from God and who had come to the sanctuary to offer thanks, probably in the company of relatives or friends. Principal elements in the structure of these Psalms include: (a) an introduction; (b) a narrative description of the background events leading

to the offering of thanksgiving; (c) other elements, such as a reference to an offering or sacrifice and an invitation to others present to participate in the thanksgiving.

(3) *The Individual Lament* (e.g., Pss. 6, 13, 31, 39). In general terms this genre has been said to be the most common in the Psalter; while the observation is generally correct, it should be noted that in the modern study of the Psalms the individual laments are frequently classified into more precise subcategories (e.g., Psalms of sickness, Ps. 6). The elements of form that may be present in the individual lament include: (a) an initial calling upon the Lord; (b) a complaint, specifying the occasion giving rise to the lament; (c) a prayer, requesting the Lord to hear and respond with respect to the source of the lament; (d) the expression of wishes or desires concerning the fate of friends and enemies; (e) the grounds upon which the appeal to God is based; (f) a concluding expression of confidence that the appeal will be heard, and responded to, by God.

(4) *The Communal Lament* (e.g., Pss. 12, 44, 74, 79). The communal laments were employed within some formal act of worship; they were occasioned normally by some external crisis threatening the health or survival of the nation of Israel. In general the elements of form are similar to those of the individual lament; they differ with respect to the nature of the crisis, in this context threatening the community as a whole, and the plural form of the people's address to God.

(5) *Royal Psalms* (e.g., Pss. 2, 18, 20, 35, 40, 45). The genre of royal Psalms is not so much distinctive in literary terms as it is in functional terms. The royal Psalms were employed within a variety of royal contexts, though in precisely literary terms they may overlap with the categories already described (e.g., some royal Psalms are, in effect, individual laments employed by a king). Thus the royal Psalms can be subclassified into various categories, sometimes on the basis of form, but more commonly on the basis of function. To provide some examples, (a) Ps. 2 is a coronation Psalm; (b) Ps. 18 is a royal (individual) Psalm of thanksgiving; (c) Ps. 20 is a royal liturgy (to be used, perhaps, in an act of worship employed prior to the king's departing for war); (d) Ps. 45 is a royal wedding Psalm. The determination of royal Psalms, given the variety of forms, is a delicate business; they are usually determined on the basis of distinctive terminology and general substance.

(6) *Wisdom Psalms* (e.g., Pss. 1, 32[?], 37, 49, 119). Of the various smaller categories of Psalms, the wisdom Psalms are of particular importance. They reflect the general characteristics of the biblical wisdom literature and probably served a didactic function in ancient Israel, prior to being drawn into the general resources of Israel's worship. Many Psalms reflect a mixed character, in which there is the appearance of a more ancient text being developed in the reflective mode of the wise men in ancient Israel. Thus Ps. 19 has many of the characteristics of a hymn (esp. vv. 1-6), but the Psalm as a whole has the character of a wisdom poem, in which the original hymn celebrating God's glory in creation has been developed in a meditation on the glory of God's law (vv. 7-14). Ps. 1, serving as an introduction to the Psalter as a whole, is a useful reminder of the importance of the tradition of wisdom, perhaps in the compilation of the book of Psalms and certainly in the substance of many of the individual Psalms.

C. Deliberate Structure of the Psalms. The study of the Psalms' structure requires sensitivity not only to the structure's literary significance, but also to its religious or functional significance. Two examples will illustrate this point. (1) "A man should always first set forth his praise of the Holy One, blessed be He, and then offer his prayer" (T.P. *Berakoth* 32a); this statement of principle from the Talmud of later Judaism is frequently exemplified in the Psalms. For example, Ps. 40 has been interpreted by many scholars as a composite Psalm, having two principal parts: (a) vv. 1-10 (individual thanksgiving), and (b) vv. 11-17 (individual lament). Such an analysis, however, fails to recognize the coherence of the Psalm as a whole, both with respect to the uniformity of its language and the deliberate nature of its structure. The Psalm deliberately begins by laying a foundation of thanksgiving; only then does it move on to lament and prayer (and the progress within the Psalm may in turn reflect the progress within the formal, liturgical act of worship within which it was employed). (2) A quite different example of deliberate structure may be observed in the collection of alphabetic ACROSTIC Psalms in the Psalter (Pss. 9–10, 25, 34, 37, 111, 112, 119, 145). In these Psalms the structure is based upon the sequence of the letters of the Hebrew alphabet. Although various reasons have been proposed for the acrostic structure, a principal reason may have been didactic; a student thus learned a Psalm "from A to Z," the deliberate structure being an aid to the learning process.

VI. Other Questions of Interpretation.–A. Enemies. Frequent reference is made in many of the Psalms to the enemies of the psalmist. In earlier scholarship on the Psalms (notably the works of Mowinckel) several attempts were made to elucidate the identity of these enemies. Mowinckel, e.g., noted the frequent association between sickness and enemies, and concluded that the enemies were sorcerers or magicians who had brought about the sickness and thus were prominent in the psalmist's words. Various scholars made other attempts to elaborate general hypotheses that would enable them to interpret the references to enemies in the Psalter as a whole. Contemporary scholars, however, increasingly recognize the importance of limiting the interpretation of enemies to the context of the particular Psalm under examination. In Psalms of sickness enemies are probably real persons who threaten the psalmist, precisely because they hope to benefit from his weakened physical condition; in other cases, they may be no more than the paranoid projections of the distressed mind of the sick person. In many royal Psalms the enemies are frequently the real enemies of the state (foreign nations) whose actions threaten the welfare and peace of the kingdom. In laments enemies are often unjust persons whose actions or accusations have undermined the stability and peace of mind of the accused person. In each case a knowledge of the function and life-setting of the Psalm will be of considerable assistance in determining the identity of the enemies.

B. Royal Psalms. The category of royal Psalms has been recognized since the time of Gunkel; especially since the 1950's, however, these Psalms have become the focus of detailed scrutiny. J. H. Eaton (*Kingship*) and other scholars have recognized that there may be considerably more Psalms in this category within the Psalter than was generally supposed in the past. This trend in contemporary scholarship is a very positive one, though it is beset by a number of difficulties. The principal difficulty concerns the definition of precise criteria by which royal Psalms can be identified. It is clear that such Psalms do not necessarily have a distinctive literary structure and may belong to several literary genres (see V above). The use of criteria such as content and language (e.g., formulaic expressions and royal allusions) is helpful, but frequently difficult, given the vagueness and ambiguity of much of the evidence. Thus, although it is becoming evident that

a large number of the Psalms were probably royal Psalms with respect to their initial function, the nature of the surviving evidence is such that the precise identity of all royal Psalms may be beyond recovery. And the difficulty is exacerbated by recognition that many royal Psalms probably continued to be used in worship long after the end of the monarchy; they may have been adapted slightly to this subsequent nonroyal usage, thus rendering still more difficult their identification as royal Psalms.

C. Psalms of Sickness. In the modern study of the Psalms, especially of the individual laments, the association between many such Psalms and the human experience of sickness has been recognized. As with the royal Psalms, the Psalms of sickness have a functional unity, but do not necessarily belong to a single literary type. Thus Pss. 22 and 41 may be classified as parts of liturgies for sick persons, reflecting the life-setting of an act of worship in the temple. Pss. 6 and 38, on the other hand, may more appropriately be classified as the prayers of sick persons; their usage may have been personal and private, rather than cultic and public. The language of the Psalms of sickness is for the most part general rather than specific; while such Psalms may in the first instance have reflected the particular sickness of an individual, their general language makes them suitable for use by any person who encounters sickness and disease. The detailed study of the Psalms of sickness, though much remains to be done in this area, illuminates one of several aspects of the perpetual relevance of the Psalms.

D. Power of the Word. Many of the Psalms contain frequent references to the words and speech of other persons, notably of the psalmist's enemies. The references to such speech are frequently negative in character; the psalmists refer to evil speech, flattery, false accusations, slander, cursing, and intrigue. It is clear from the many references to speech, especially evil speech, that its power was recognized in a particularly striking fashion in ancient Israel. The lament of Ps. 12 is precipitated by the pervasiveness of evil speech, but hope is to be found in the contrast between human speech in its vanity and the integrity of the divine speech. But while many of the Psalms contain general reflections on speech, care must be taken to note that many references to the speech of enemies may have legal and contractual overtones. Thus the lament in Ps. 7 reflects the experience of false accusation; it is probably not false accusation of a general kind, but an accusation or charge laid against the psalmist in the context of a contractual (or covenantal) relationship. And inasmuch as contractual arrangements between two persons or parties commonly involved the formal invocation of curses on a party of the contract if its stipulations were broken, the Psalms referring to the speech of enemies frequently also contain references to curses. These are not general references to curses, but quite specific references to treaty curses, which in turn threaten to come into effect on the basis of the laying of (false) accusations. Sensitivity to the possibility of a covenantal or contractual background to a Psalm is of considerable assistance in the interpretation of the references to curses in the Psalter as a whole.

E. Democratization. A number of scholars have noted that a process of "democratization" has taken place in the history of Israel's psalmody. It may have taken a variety of forms. For example, a Psalm that began its life as a private and poetic composition could later have been incorporated into Israel's hymnbook for public and general use. Or a Psalm that was in the first instance a royal Psalm, specifically for the king's use, could in later times have passed into general and public usage, especially in the period following the demise of Israel's monarchy. What is difficult to determine is whether this process of change with respect to usage and function took place with, or without, modification to the form and substance of the individual Psalms. It could certainly have taken place without any changes to the Psalms in question; thus many Psalms that can clearly be identified as royal Psalms continued to be used (apparently unchanged) long after there ceased to be a monarchy in Israel. Some scholars (particularly French scholars) have attempted to distinguish *relectures* (re-readings), i.e., the additions or modifications in the substance of a Psalm that indicate this changing context of usage. This approach to the Psalms is not without positive prospects, though the nature of the evidence is such that inevitably the process tends to be subjective. Sometimes the Psalm titles (in either the MT or the versions) may provide a clue to the process of change. Thus the Greek title of Ps. 29 explicitly associates the Psalm with the celebration of the Feast of Tabernacles; with respect to its original usage, however, the Psalm was probably a general hymn of victory employed within the worship of the temple.

F. The Collective Use of "I." Earlier in the 20th cent. one trend of OT scholarship stressed the "corporate" nature of Israel's thought and downplayed any notions of "individualism." One of the consequences of this approach to OT studies was to stress that apparently "individualistic" texts, e.g., the individual Psalms (employing "I," "me," etc.), were to be interpreted not in terms of an individual person, but rather in terms of a corporate community to which all individuals belonged. Thus it was supposed that the "I" of the Psalms was an expression of the corporate identity of the nation of Israel. But this line of research is no longer pursued in detail. It had a certain value in reminding us that many aspects of the notion of individualism are indeed modern phenomena, and that the psalmists (and those who employed the Psalms) were members of a larger community. It was, nevertheless, a line of research that tended to go too far in virtually denying the genuinely individual aspects of many of the Psalms. (Thus the Psalms of sickness are highly individual, though they are frequently set in a communal context.)

VII. Poetic Form of the Psalms.—The Psalms as a whole are written in poetry; for a general discussion, *see* POETRY, HEBREW. A number of aspects of the poetic form of the Psalms deserve particular attention here.

A. Poetry and Function. Though the Psalms are written in the form of Hebrew poetry, notably parallelism, they should not always be viewed as poems. While some Psalms are certainly poems, many reflect liturgy and the formalities of worship (see IV above). Thus, while the lines of a Psalm are poetic in form, the Psalm as a whole may not always be viewed as a literary piece of poetry. The approach to the Psalms in nineteenth-century scholarship was principally in the context of examining them as poetic compositions, and this was one of the greatest weaknesses of that approach. It resulted in very negative assessments of many Psalms (perceiving them, e.g., as composite structures), for it approached them from a wrong perspective. Many Psalms, viewed as a whole, are not fine poems, nor were they ever intended to be; rather, they are the poetic words that accompanied an act of worship in the temple, and only in that context may their wholeness and integrity be perceived. In the study of individual Psalms an attempt must be made to grasp the structure and function of the whole before proceeding to an evaluation of the Psalm as a work of art (poetry in the full sense, e.g., Ps. 19) or as a work of liturgy (e.g., Ps. 40, which is very uneven in literary terms, but perfectly balanced when perceived in its liturgical context).

B. Poetry and Meaning. The Psalms as a whole address the relationship between Israel (individually and collectively) and God. And yet by its very nature the relationship with God is not easily expressed within the limitations of human speech. Poetry (rather than prose) is used in the Psalms, for it is a form of human language that seeks to transcend the limitations inherent in prosaic speech and to give expression to that which is ultimately inexpressible. The student of the Psalms should be sensitive to the use of poetic language; it may be studied from a literary and scientific perspective, but ultimately it must be appreciated. And the appreciation of the poetry of the Psalms involves such familiarity with it that one may eventually go beyond the words to grasp the living Reality to which they point.

C. Poetry and Music. It is clear from various fragments of evidence, and especially the substance of some of the Psalm titles, that many of the Psalms are not only poetic in form, but were also to be sung or recited to musical accompaniment. MUSIC adds still further to the transcendent nature of language that may be conveyed by poetry, so that both the words and the manner of their articulation seek to break through the restrictions integral to all forms of human speech. Unfortunately, however, while a certain amount is known about the usage of choirs and orchestras in Israel's worship, nothing is known in detail about the tunes and musical settings to which certain Psalms were sung. It is nevertheless important to bear in mind the musical context of many Psalms in the progress toward interpretation and appreciation.

VIII. Message.–A. In General. Martin Luther's words are an appropriate introduction to the message of the Psalter: "In the Psalms one looks into the hearts of all the saints" (preface to the German Psalter, 1528). His words capture the essence of the book, for in its pages cogent expression is given to the diversity of the life of faith and of the response to the revelation of God. The Psalms reflect the faith not only of ordinary individuals, but also of the kings and of the nation of Israel as a whole. And the use of the Psalms down through the centuries of Israel's history was such that in reading their words, we are hearing what became the normative expression of Israel's faith and piety. And for all the diversity of expression in the book of Psalms, a deep underlying unity permeates the whole.

It may be misleading to view the Psalter as giving expression only to the dimensions of strictly personal faith. While many of the Psalms are profoundly personal and intimate in their expression of the relationship with God, they are concerned nevertheless with the common experiences of human life. What happens to an individual touches the community, frequently the entire nation; in some cases this fact is expressly stated, and in others it is implied by the communal context of worship. Thus even the most individualistic of the psalmists are in a sense the spokesmen of the community as a whole, giving expression in words to the variety of experiences shared by the community.

Some of the Psalms reflect the response of Israel to the revelation and experience of God; others are characterized by a "prophetic" element, in which the Lord's prophetic word may be heard, declared in the context of Israel's worship. Thus prophetic declarations, in which a servant of the temple proclaims the divine word, may be observed in such passages as Ps. 2:6-9; 12:5 (MT 6); and 32:8. In some cases the entire Psalm has a prophetic character; Ps. 50 appears to have served as a prophetic liturgy in the context of a ceremony of covenant renewal. This prophetic background to certain Psalms is given fuller expression outside the Psalter; e.g., the activity of the temple singers is described as prophesying (1 Ch. 25:2f.; see further 2 Ch. 29:30; 35:15; Ex. 15:20; Lk. 1:67). Conversely, certain passages in the prophetic books appear to have a degree of relationship and similarity to the Psalms (see Isa. 12; Hab. 3; *et al.*).

B. The Righteous and the Wicked. On reading the Psalms one quickly gains the impression (beginning with Ps. 1!) that all persons can be classified into two categories, the righteous and the wicked. The psalmists, together with their friends and supporters, are the righteous; all their enemies are the wicked. While the prosperity of the righteous is frequently affirmed, an untimely death and other calamities are anticipated for the wicked. When, on the other hand, the righteous suffer calamities, they search for the cause of their distress in past sins they have committed; their adversity is normally for a short time only, for in humbling themselves before God they seek a return to the state of prosperity. The psalmists give vent to expressions against their enemies that seem to be spiteful and vindictive; they desire their undoing. Such is the general impression that may emerge from a reading of many of the Psalms (especially the so-called imprecatory Psalms); it seems at first sight to be somewhat self-righteous and lacking in charity toward enemies. It is, however, too superficial a view to capture the essential meaning of the Psalms in question.

It is true that the Psalms distinguish people into just these two categories. The categories, however, do not designate primarily moral characteristics, in which clearly there would need to be greater variety of differentiation; rather, they separate persons into two groups with respect to their relationship with God. The righteous are those in relationship to God (who thereby experience God's mercy and forgiveness), whereas the wicked are those who, by their actions and speech, have separated themselves from the relationship to God. This differentiation can be seen in the activities of Israel's formal worship, in which the righteous may legitimately participate (see Pss. 15, 24).

The righteousness of which the psalmists speak is thus a religious quality, imputed as a consequence of faith in the Lord. While it undoubtedly has implications with respect to moral behavior, the term righteous does not signify sinless persons. Rather, it points to persons who have experienced mercy and forgiveness and who as a consequence have sought to lead a moral life. The protestations and affirmations of the righteous are thus not the proud exclamations of the self-righteous, but rather the faithful statements of those who have striven to maintain their lives within the merciful context of the covenant relationship with God. The statements concerning righteousness are balanced by the frequent statements in which sin is confessed and mercy and forgiveness are sought.

Nevertheless, while recognizing that the designation "righteous" does not imply self-righteousness and arrogance, the reader may still find many of the psalmists' statements concerning the wicked to be particularly harsh and vindictive. In part this is so because the Psalms contain the reflections of immediate human response to the experience of suffering and persecution. They are a window on the souls of those who suffer, and thus show not only faith and fear, but also anger and the desire for retribution to fall on those who persecute them. (The problem is treated with particular sensitivity in Lewis, *Reflections on the Psalms,* pp. 9-33). Yet there is more to the harsh language of the psalmists than at first appears on the surface; the background is to be found in the context of covenant or treaty.

Israel was bound to God in a relationship of covenant; the commitment to covenant relationship, on Israel's part, involved the recognition that obedience would result in

blessing, disobedience in cursing (Dt. 27–28). A similar structure is found in international treaties; the persons binding themselves in a treaty invite curses on their own heads if they should break the conditions of the treaty. And similar conditions applied to personal contracts: two persons bound themselves together in a contractual relationship and agreed upon the "divine curses" that should be invoked in the event that one or other party to the treaty should break its stipulations. It is this context of covenant (or personal contract or national treaty) that forms the background to much of the harsh language employed in the Psalms. In royal Psalms the expression of such harsh sentiments against an enemy is in effect the calling down of the curses of the treaty upon the enemy's head; if the enemy had broken the terms of the treaty, its harsh curses *should* befall him, for he had agreed to such conditions in the formation of the treaty in the first place. A clear example of the covenant context of the harsh language of the Psalms can be seen in Ps. 7, which has the general characteristics of an individual lament. The psalmist prays for his vindication and asks that wicked persons might die (v. 9); yet it is clear that the language of the Psalm as a whole is a reflection of the language of treaty or contract curses. Thus the psalmist invites the same curses to fall on him, *if* he has been guilty of breaking the terms of the treaty or contract (vv. 4f. [MT 5f.]; cf. J. H. Tigay, *JBL*, 89 [1970], 178-186). It becomes clear that the apparently vindictive and harsh nature of much of the language of the Psalms should be interpreted in a legal context, rather than being interpreted as an expression of personal hatred. The enemy of the psalmist has broken the stipulations of an agreement, but seeks to bring discredit on the psalmist, as if he were the guilty party. The psalmist, in turn, calls for the curses of the treaty to fall on the head of the enemy, in part to establish his own innocence of the charges laid against him, and in part because the enemy had agreed that he should suffer the curses if he broke the contractual stipulations. This general context of treaty curses provides not only a perspective for understanding harsh language against enemies, but also for interpreting statements concerning the death of enemies' children. Thus the desire expressed for the destruction of children in Ps. 17:10 must be seen in the context of a national treaty between nations; the Psalm is a royal liturgy, with a treaty background, and its language reflects not personal hatred, but the invocation of treaty curses (agreed to by the enemy) upon all the nation's foes (cf. F. C. Fensham, *ZAW*, 77 [1965], 195-202).

Finally, often in the Psalms the condition of the righteous and the wicked appears to be viewed with a degree of naiveté not matched to the realities of human existence. Thus the way of the righteous is thought to lead always to prosperity, while the way of the wicked culminates always in ruin. Such a perspective is particularly evident in many of the wisdom Psalms, e.g., Ps. 1. The difficulty with this perspective is its lack of nuance; e.g., it appears to be more akin to the theology of Job's friends than to the theology which Job himself eventually espoused.

The principal cause of this difficulty arises as a consequence of viewing the substance of individual Psalms in isolation from a larger context. Thus Ps. 1 sets down certain of the fundamental assumptions of the wisdom tradition with respect to righteous persons and wicked persons; its theology is akin to that of Proverbs, but it cannot encompass within the scope of a few verses the balancing factors (e.g., those of Job and Ecclesiastes), which are essential to a fully rounded wisdom theology. The balance can be achieved, however, by reading a Psalm such as Ps. 1 in the context of other Psalms. Ps. 1, while it may appear naive, is an expression of fundamental faith and confidence; the walk through life may be pursued in two basic ways. Ps. 39, which also has certain characteristics of the wisdom literature, presents a very different perspective; it is a meditation on the transitory nature of human life, marked not by idealism, but by the cold-eyed realism of one who, over a long life, has experienced many of the harsher realities of human existence. The reader of the Psalms should take care not to focus on the substance of a single Psalm in isolation from other Psalms; the Psalms as a whole reflect a fully rounded wisdom on the nature of human life in relation to God, whereas the individual Psalms may contain only a part of the larger picture.

C. The Messiah in the Psalms. From the perspective of the NT writers it is clear that many of the Psalms were interpreted within early Christianity as messianic Psalms; their words and verses are quoted with specific reference to Jesus the *Messiah* (or the *Christ*). Pss. 2 and 110 are among the most frequently quoted Psalms in the NT; and, not without good reason, Ps. 22 has been called "The Fifth Gospel" (S. Frost, *Canadian Journal of Theology*, 8 [1962], 102-115). From the perspective of interpretation, however, it is important to ask whether these Psalms are technically messianic Psalms (viz., whether they were considered as such within ancient Israel) or simply came to be considered as messianic Psalms in later Judaism and early Christianity.

Although the question of the messianic character of the Psalms is the subject of continuing debate, it may be best to take the view that none of the Psalms, in the first instance, was messianic; i.e., with respect to their initial usage and interpretation, they were not viewed within ancient Israel as referring, directly or indirectly, to the Messiah. The Psalms that were later viewed as messianic were, for the most part, royal Psalms in the first instance; they referred to the king, who was the Lord's "anointed" (or messiah, Ps. 2:2) and the Lord's "son" (Ps. 2:7). With the end of the monarchy in Israel and Judah (586 B.C.), the Psalms in question continued to be used in the context of worship, but clearly a transformation in their meaning must have begun. A Psalm such as Ps. 2, used initially in the coronation of a Davidic king, could not retain its original meaning in worship in a time when the monarchy no longer existed. The kingdom of Israel, with its human king, had ceased to exist; within Judaism new notions of the kingdom of God began to emerge, sometimes in association with the word messiah, which had originally referred to human kings. In the NT the message of Jesus concerned the "kingdom of God" (Mk. 1:13f.), and the faith of the early Church perceived Jesus to be the King (or Messiah) within that kingdom. Thus in the context of this newly emerging faith Christianity perceived a new, yet latent, meaning in the royal Psalms; they had spoken originally of the Davidic king, but their words applied equally to Jesus the Messiah. Thus the so-called messianic Psalms, though originally royal in character, reflect the development of faith from OT times to NT times, and the understanding that Jesus was the Messiah within the newly proclaimed kingdom of God.

Not all Psalms with a messianic character were royal Psalms, however; Psalms that reflected initially simply the dimensions of human experience were reinterpreted in a new and meaningful way with respect to Jesus. Thus Ps. 22, the "Fifth Gospel," was probably not a royal Psalm; it was rather a *liturgy for the dying*, reflecting a life-setting in a temple ritual. The frequent quotations from and allusions to Ps. 22, both in the words of Jesus

and in the narrative of the Evangelists, transform the sense of the original narrative in a remarkable fashion; the ancient liturgy for the dying becomes the framework within which the passion and dying of Jesus are given expression in the Gospels. In summary, the Psalms are not so much messianic in any anticipatory or predictive sense as they are ancient Psalms that have come to take on new and deeper meaning within the revelation of God in Jesus Christ.

D. The Religion of the Psalms. The message of the Psalter can be drawn in part from the religion of the Psalms, or more specifically from the larger religious context within which the Psalms were utilized. This religious context had both a theological perspective and a setting in religious practice (or the actual activities of worship). The religious context of the Psalms was not different from the religion of Israel as a whole; rather, it was one particular aspect of the larger whole, on which the substance of the Psalms sheds particular illumination.

The theological dimension of the religion of the Psalter has its primary focus on the centrality of *relationship.* The covenant, which provided the basis for all relationships in ancient Israel, indicates clearly that a person's first relationship is with God, which relationship in turn determines the character of all relationships with other people. While many parts of the OT literature illuminate the various aspects of the Israelite covenant, the Psalms lie close to the heart of the covenant; they are the vehicles through which the members of the covenant community express their relationship to God, and indeed the means by which they communicate with God, whether in public worship or private devotion.

The variety of Psalms, with respect to substance and purpose, illustrates the manifold character of the relationship with God. It may be a relation of joy, expressed in the hymns of praise and thanksgiving; it may be the experience of grief, fear, persecution, or some other trouble, which results in the psalmist's search for God. What is clear from the Psalter as a whole is that no aspect of life, no area of human experience, is excluded from the relationship with God.

Although some of the Psalms express private and individual devotion, the majority functioned within the context of Israel's cult; in public worship, special festivals, or in particular rituals (e.g., for the sick or dying), the concerns of the individual became the concerns of the community, and vice versa. And the formal context of most worship provided a check against the growth of too casual an attitude to worship and the relationship with God. Although God could be known personally and intimately, the approach to God must be undertaken with care and introspection, as is reflected so clearly in such Psalms as Pss. 15 and 26.

The setting of the relationship with God which is given expression in the Psalms is *this life* and *this world.* Some scholars claim that the psalmists' theology has an eschatological perspective, that they view the relationship with God as extending beyond the grave. This tendency is particularly evident in the writings of Mitchell Dahood, whose new translations of the Psalms appear to give some support to this view. In general, however, this trend in the study of the theology of the Psalms is probably not soundly based, resting on highly dubious translations of many parts of the Psalter (see IX below). The OT as a whole (with the exception of a few of the latest writings) does not contain a developed eschatology; the theology of the Psalms, for the most part, shares the noneschatological perspective of the remainder of the OT, focusing upon the relationship with God in the present life. It should be added, of course, that it is appropriate to "re-read" the Psalms from the perspective of NT eschatology and see new significance in their words. All that is stressed here is that the Psalms in their original sense are generally not eschatological in character.

The second dimension of the religious context of the Psalms is the cultic context in which they were, for the most part, employed. As has been noted above, we miss much of the significance of the Psalms if they are viewed solely as literature. They were employed in the cultus, in the formal activities of Israel's religion; they were part of a larger environment characterized by such features as ritual acts, the offering of sacrifices, the coming of pilgrims to the temple during great festivals, and the formal activities of the priests and other servants of the temple. The interpretation of the Psalms should attempt to take into account the ritual setting, for a knowledge of the context contributes to their proper interpretation.

IX. The Psalms and Ugaritic Studies. *–A. The Near Eastern Context.* The Hebrew Psalms, viewed as a whole, were not unique in the environment of ancient Near Eastern religions. Most of the known religions of the ancient world employed hymns and prayers of various kinds. The fruits of archeology have included, e.g., the texts of Assyrian, Babylonian, and Egyptian hymns of praise. As might be expected, these ancient hymns have general similarities to the Hebrew hymns, though they differ from them with respect to the details of theology and substance. Scholars who were studying the Psalms at the beginning of the century tended to be too quickly impressed by the similarities between Hebrew and Near Eastern psalms, without taking sufficient account of the considerable dissimilarities. Thus it was noted that there were remarkable parallels between the ancient Egyptian "Hymn to Aten" and Ps. 104. Observations of this kind led to various hypotheses of interrelationship; frequently it was claimed that the Hebrew Psalms had been borrowed or adapted from the resources of ancient Near Eastern psalmody. But as further discoveries were made, greater recognition was given not only to the commonality of Near Eastern psalmody, but also to the distinctive features which separated Hebrew Psalms from Egyptian psalms, Egyptian psalms from Assyrian psalms, and so on. Most of the hypotheses of direct interrelationship between Hebrew and Near Eastern psalms have now been abandoned. Nevertheless, the study of Near Eastern psalmody is of immense value in the study of the Psalter; it provides some of the data needed to reconstruct both the literary and cultic milieu within which the Hebrew Psalms must be studied.

B. Ugaritic Studies. Since the discovery of the ancient city of UGARIT (modern Râs Shamrah, Syria) in 1929, much new material has become available for the study of the Psalms. The archeological excavations at Râs Shamrah, still continuing in the 1980's, resulted in the recovery of many ancient texts from the site; the texts (written on clay tablets) are in the Ugaritic language, a close linguistic relative of Biblical Hebrew, and the majority date from the 14th to the early 12th cents. B.C. Many of the Ugaritic texts are poetic in form. These discoveries have had a number of implications for the study of the Psalms.

(1) The discovery of the Ugaritic language has added to the knowledge of Northwest Semitic languages in general. Thus, as a consequence of the study of the Ugaritic texts, more light has been brought to bear on the meaning of certain obscure terms and unusual grammatical forms in the Psalter; there is now greater potential for the accurate translation and interpretation of the Psalms than was available half a century ago.

(2) The study of Ugaritic poetic texts has provided an

improved awareness of the nature, forms, and language of Northwest Semitic poetry. The comparison of Hebrew and Ugaritic poetry has thus made possible more informed evaluations of the Psalms, recognizing what is common and what is distinctive in the poetry of particular Psalms. On the other hand, none of the poetry in the Ugaritic language appears actually in the form of a *psalm*, but is utilized in mythological and literary (narrative) texts; hence, no comparison is possible between the two bodies of poetry with respect to form and function.

(3) The mythological texts, in poetic form, from Ugarit have increased our knowledge of the religious literature available in Northwest Semitic languages. The Ugaritic resources contain extensive mythological texts dealing with gods 'El and Baal. The examination of these texts reveals how the Hebrew psalmists have utilized mythological imagery, especially that associated with Baal, in giving expression to their own faith in the God of Israel. For example, Ps. 29, while clearly Hebrew in its substance and theology, has drawn heavily on language and imagery which is striking in its similarity to the mythological language employed of the god Baal.

(4) One text, reconstructed from fragments found at Râs Shamrah, contained the words of a Hurrian hymn (Hurrian being one of several languages employed in Ugarit); on the same tablet as the hymn were the notations for the musical score to be utilized in the singing of the hymn. The tablet also contained a colophon, the substance of which was of essentially the same nature as that contained in the titles of the biblical Psalms. In addition to being the oldest known example of words and music on the same text, this Hurrian text may provide a parallel to the nature of some of the biblical Psalms prior to their incorporation within the Psalter. And the musical accompaniment for the hymn, though representing Hurrian culture, may perhaps illustrate the kind of musical setting to which many of the biblical Psalms were sung.

(5) For all the values and benefits of the Ugaritic texts, their information has in some cases been applied too radically and without due caution in the translation and interpretation of the Psalms. Perhaps the most important example of the excessive use of the Ugaritic resources in Psalms study is the three-volume commentary on the Psalms by Mitchell Dahood. His commentary contains many brilliant insights, but it is also characterized by a marked lack of methodological control in the application of Ugaritic data to the study of the Hebrew texts. Gradually a number of scholars are submitting to a critical and cautious evaluation the multitude of Dahood's Hebrew-Ugaritic proposals. Eventually it may be possible to distinguish between his lasting contributions to the study of the Psalms and the more fragile hypotheses constructed upon uncertain foundations; in the meantime Dahood's commentary should be employed with caution by those who are not specialists in Ugaritic.

PSEUDEPIGRAPHA sōō-də-pig'rə-fə.

I. Introduction
II. Letter of Aristeas
III. Third Maccabees
IV. Fourth Maccabees
V. Minor Pseudepigrapha
  A. Martyrdom of Isaiah
  B. Apocalypse of Abraham
  C. Testament of Abraham
  D. Third Baruch
  E. Joseph and Asenath
  F. Sibylline Oracles
  G. Lives of the Prophets
  H. Life of Adam and Eve
  I. Fifth Maccabees

I. Introduction.—The word "pseudepigrapha" literally means "false writings," i.e., writings attributed to someone who did not write them. J. H. Charlesworth states that "rather than being spurious the documents considered as belonging to the Pseudepigrapha are works written in honor of and inspired by Old Testament heroes" (*Pseudepigrapha and Modern Research* [1976], p. 25). The term is applied to a number of extant Jewish writings that are as important as the APOCRYPHA for understanding the history of first-century Judaism. Some of these are true pseudepigraphs in that they are written in the name of an ancient OT saint. Thus 1 Enoch, Jubilees, the Apocalypse of Baruch, and the Testament of the Twelve Patriarchs are true pseudepigraphs. It should be noted that several books of the Apocrypha are also pseudepigraphical: Wisdom of Solomon, 2 Esdras or 4 Ezra, Letter of Jeremiah. On the other hand, not all of the books usually included in the Pseudepigrapha are pseudepigraphs, notably 3 and 4 Maccabees. In the 17th cent., J. A. Fabricius made a complete collection of the Apocrypha and included two

volumes which bore the name *Codex Pseudepigraphicus Vetus Testamenti*. Thus it has become customary to designate the second collection as Pseudepigrapha. Many contemporary scholars, unhappy with both terms since they are artificial, suggest that we should call the entire body of literature the Jewish intertestamental literature.

Several of the books which are usually grouped with the Pseudepigrapha are discussed elsewhere under the heading Apocalyptic Literature: 1 and 2 Enoch, Jubilees, Testaments of the Twelve Patriarchs, Psalms of Solomon, the Apocalypse of Ezra (4 Ezra), and the Apocalypse of Baruch. R. H. Charles's great collection of the Pseudepigrapha includes the Pirkē Aboth, which is a tractate of the Mishnah, and the Zadokite Work, which appears to belong to the Qumrân literature. These will not be discussed here (for criteria used in determining pseudepigraphical books, cf. Charlesworth, *Pseudepigrapha and Modern Research*, pp. 17-25). In addition to the pseudepigraphical books included in Charles's work, we are including reference to other extant pseudepigraphical literature.

II. Letter of Aristeas.–This Greek writing is allegedly a letter written by Aristeas, who was a high official in the court of Ptolemy II in Alexandria. It was sent to Jerusalem in order to secure a copy of the Jewish Law together with a group of seventy-two scholars who would translate the Law from Hebrew to Greek. The recipient is Philocrates, about whom nothing is said except that he was a brother of Aristeas. The alleged purpose of the book is to tell the story of the translation of the SEPTUAGINT.

The book contains a delightful story. Demetrius of Phalerum, head of the great library in Alexandria, suggests to the king that a translation be made of the Hebrew Law. The king writes to the high priest Eleazar in Jerusalem requesting him to send seventy-two scribes to perform the work of translation. He sends rich gifts for the temple in Jerusalem. The story includes a description of the Holy City. Eleazar delivers an apologetic for the Law. When the translators come to Alexandria, they are feted in a series of royal banquets. The king plies the scribes with philosophical questions, and they answer with amazing wisdom. Then they are taken to the island of Pharos in the harbor of Alexandria where they set to work. Demetrius compares their work every day and writes down a consensus. They complete the work in seventy-two days. It is then read to the Jews, who laud it. When it is read to the king, he is greatly impressed and expresses wonder as to why it has not been mentioned in earlier Greek literature. Demetrius says that earlier authors were divinely restrained from mentioning it. Finally the translators are sent home bearing rich gifts.

It is obvious that this beautiful story is fictional, although it has a core of reliable information. Aristeas and Philocrates are not known in other historical literature. Furthermore, the Letter of Aristeas itself reflects a knowledge and usage of the LXX. The work also bears obvious unhistorical traits. For example, an Egyptian king would not attribute his throne to the Jewish God (37). The author, however, seems to be thoroughly familiar with the technical and official language of the court and of Alexandrian life and customs.

The purpose of the book is fairly obvious. It is a piece of Hellenistic Jewish apologetic writing designed to commend the Jewish religion and law to the Gentile world. The book emphasizes the honors showered on the seventy by the Greek king. High praise is accorded to Jewish wisdom by heathen philosophers. It explains the failure of Greek historians and poets to mention the Jewish law. The apology of Eleazar on the inner meaning of the law tries to interpret in meaningful categories the Jewish distinction between clean and unclean things. The Jews are said to worship the same god as the Greeks but under a different name. Zeus is really the same as God (16).

The book is really not a true letter but belongs to the genre that may be called belles lettres. It falls in the Greek literary and artistic traditions rather than in the Semitic pattern. This governs its purpose, which is not to impart sound historical information but to produce a general ethical effect. The book is therefore far more important as a reflection of Jewish life and culture in the 2nd cent. B.C. than as an account of the formation of the LXX. Thus very little attention is actually given to the work done on the LXX. We know that in the 2nd cent. B.C., before anti-Semitism had raised its head, a large colony of Jews lived in Alexandria, and the work reflects the fact that they were enthusiastically embracing Hellenistic culture, social usages, literary forms, and philosophical beliefs so far as they did not directly oppose their central religious tenets.

The date of the book is an almost insoluble problem. Scholars date it variously from 200 B.C. to 63 B.C. Perhaps an estimate of about 100 B.C. will suffice. While some scholars think that the LXX involved a protracted development, this letter may reflect the fact that at some time an official translation was made.

III. Third Maccabees.–This book has nothing in common with 1 and 2 Maccabees, except that it tells a story of Jewish persecution by a foreign king. The form of the book is that of a historical narrative relating a supposed episode in later Jewish history. In reality it is a palpable piece of fiction.

Ptolemy IV Philopator (221-204 B.C.) won a victory over Antiochus III the Great at Raphia (217 B.C.). On his way back to Egypt, passing through Jerusalem, he expressed an intention to enter the sanctuary of the temple; when he refused to be dissuaded by the Jews, they pleaded to God, and Ptolemy was struck to the ground, stunned.

Returning to Egypt, Ptolemy set out upon a course of revenge. He deprived all Alexandrian Jews of their civil rights. He ordered all Jews in Egypt to be bound and brought to Alexandria where they were confined in a racecourse. Clerks were set up to register all the Jews but they were so numerous that the clerks ceased work after forty days when they ran out of writing materials.

Thereupon Ptolemy ordered five hundred elephants to be made drunk and turned loose in the racecourse to trample the Jews. The execution of this order was delayed because on the first day the king slept too late. On the second day God made him forget. On the third day the king and his troops were approaching the racecourse when two angels appeared, paralyzing the troops with fear. Then the elephants turned and trampled the king's troops.

Finally the king released the Jews and entertained them for seven days. The Jews decided to make this a perpetual festival. The king issued a decree to the governors of the provinces protecting the Jews and permitting faithful Jews to kill their brethren who apostatized. This they did, and then returned home joyfully.

Although written in Greek, the book shows little trace of Hellenistic influence. The author belonged to the strict conservative side of Judaism, utterly devoted to the Law, and bitterly opposed to Hellenistic influences. He represented the uncompromising orthodoxy which had no sympathy with the Hellenistic influences at work in Diaspora Judaism.

The purpose of the book is clearly to exalt Judaism, to make Jews more steadfast in their obedience to the Law, and to warn all would-be persecutors that they risked the judgment of God. The Jews are represented as loyal citizens who have always supported the Egyptian government.

They are protected, however, by the divine providence of God (6:15), who is the eternal Savior of Israel (7:16).

There are no clear indications by which to date the book, and suggestions range from the 1st cent. B.C. to the 1st cent. A.D.

IV. Fourth Maccabees.–This book illustrates better than any other book of the Pseudepigrapha the fusion of Hebrew and Greek culture. The text is contained in two Greek manuscripts, Alexandrinus and Sinaiticus. Eusebius knew the book with the title "On the Sovereignty of Reason," but he says that some call it Maccabees (*HE* iii.10.6). It is so called because it relates in great detail the sufferings and martyrdom of Jewish heroes in the Maccabean times.

The form of the book is a synagogue sermon or a diatribe. In the opening words the author speaks of himself in the first person and of his hearers in the second person, and he resumes this idiom in the conclusion. In 18:1 he addresses his hearers in the vocative case, "Men of Israel."

The content of the book includes a narration of events leading up to the Maccabean rebellion, a detailed account of the martyrdom of Eleazar, and a recital of the heroism and sufferings of a mother and her seven sons (2 Macc. 6–7). Their tortures are pictured in lurid detail.

These martyrdoms are not written or spoken merely out of historical interest but to illustrate the purpose of the book that is stated in the opening words: "Thoroughly philosophical is the subject I purpose to discuss, namely, whether religious reason is sovereign over the emotions" (1:1; Hadas's translation). "Reason, then, is the intellect choosing with correct judgment the life of wisdom; and wisdom is knowledge of things human and divine and of their cause" (1:15). There are four types of wisdom: prudence, justice, courage, and temperance. These control the emotions or passions. In defining reason in these terms, the author reflects a knowledge of Stoic philosophy, for prudence, justice, courage, and temperance were the four cardinal Stoic virtues, and they were to be achieved by the rule of reason. Our author differs from the Stoics, however, in that Stoicism taught that right reason extirpates the passions, while Maccabees teaches that reason can control the passions. The author is Jewish in his idea that the emotions are divinely implanted in mankind (2:21) and therefore ineradicable (1:6; 3:2, 5), even though they are controllable.

Again, our author differs from Stoicism in his concept of right reason. Stoicism viewed it as intrinsically human, while Maccabees views it as given by God. It is not reason as such that controls the passions, but "religious reason" — i.e., reason given by God. "Such wisdom is education in the Law through which we learn things divine reverently and things human advantageously" (1:17). The divine wisdom given in the Law expresses itself in the Stoic virtues.

Here is expressed the author's real purpose: to show that the Jewish belief in the divinely given Law was not incompatible with Greek philosophy but was in fact the way the goals of philosophy could be realized. In fact, only Judaism embodied the true philosophy (5:22). Those who "take thought for religion with their whole heart... alone are able to dominate the passions of the flesh" (7:18).

The author is thoroughly Jewish in his attitude toward the law. "We do not eat unclean foods. We believe that God has established the Law, and we know that the Creator of the world, in giving us the Law, has conformed it to our nature. That which will be appropriate to our souls He has bidden us eat, and that food which is contrary He has prevented us from eating" (5:25f.).

In one very important point, Greek thought has colored the author's theology. There is no idea of resurrection as in 2 Maccabees. Instead, 4 Maccabees teaches the doctrine of the immortality of the spirit (14:5; 16:13). The righteous will receive "souls pure and deathless from God" (18:23). "Those who die for God will live with God, as do Abraham and Isaac and Jacob and all the patriarchs" (16:25). But this is not an innate possession of human nature, as in Plato; it is a gift of God. The martyrs "loved religion the better, which preserves to eternal life according to God's promise" (15:3). But the fate of the wicked will be eternal torments (9:9; 10:11, 15; 12:12; 13:15).

Fourth Maccabees is also of interest to students of the NT because of its idea of vicarious suffering. The death of the martyrs somehow is to have efficacious value. Dying, Eleazar prays, "Make my blood an expiation for them, and take my life as a ransom for theirs" (6:29). The death of the martyrs is said to have "become as it were for the sin of the nation. It was through the blood of these righteous ones, and through the expiation [Gk. *hilastērion*] of their death, that divine providence preserved Israel" (17:21f.).

It is impossible to give definitive answers as to the author, date, and provenance of the work. The author writes excellent Greek, and his familiarity with Greek philosophy clearly suggests a city in the Diaspora, of which Alexandria is most likely, although Antioch has also been suggested. The 1st cent. B.C. is a good estimate for its date, although some have dated it in the 1st or early 2nd cent. A.D. The book is designed to "eulogize those stalwarts who at this season died with their mother" (1:10). This suggests that it is, perhaps, a memorial day address honoring the Maccabean martyrs.

V. Minor Pseudepigrapha.–A. Martyrdom of Isaiah. This is a hypothetical work, postulated by R. H. Charles and R. Pfeiffer, which is found as chs. 1–5 in the Christian work, the Ascension of Isaiah (possibly 3rd cent. A.D.). C. C. Torrey denied that such a separate Jewish book ever existed. These chapters contain the legend of the death of Isaiah, who was sawn in two by a wood saw (*see* APOCRYPHAL APOCALYPSES II. A).

B. Apocalypse of Abraham. This book, preserved in a Slavonic version, was probably written in Hebrew some time after the fall of Jerusalem in A.D. 70. The first part tells of Abraham's conversion from idolatry. The second part is an apocalypse to Abraham of the future of his race. Abraham ascends to heaven, where God gives him a vision of the world, the fall of humanity, and the final division of people into Jews and heathens. Abraham is shown the troubles which will precede the messianic age, and the coming of Messiah, who is called the Elect One, to gather Israel into the Kingdom and to destroy the heathen with fire.

C. Testament of Abraham. The Testament of Abraham exists in Greek and was written probably in Hebrew in the 1st or 2nd cent. A.D. Scholars differ as to whether it is a Christian work or a Jewish work with some Christian interpolations. It tells a story of Michael's dispatch to announce to Abraham his approaching death. Abraham begs to be shown the world and all created things before he dies. Then Michael conducts him to heaven where he sees both Hell and Paradise, and the souls of men being judged to determine which way they will go. This is only a preliminary judgment conducted by Abel; at the last day God will judge men. There is no Messiah, no resurrection, and no messianic kingdom.

D. Third Baruch. This book has been preserved in Greek and is also called the Greek Baruch. There is also extant a version in Slavonic. It was probably written in the 2nd

cent. A.D. in Greek, but was later edited by a Christian writer. The apocalypse relates the journey of Baruch through the five heavens.

E. Joseph and Asenath. In the book of Genesis, Asenath is mentioned three times (41:45, 50; 46:20) as the daughter of Potiphera, the priest of On, who became Joseph's wife. This book is a piece of Hellenistic Jewish fiction, written in the early centuries of our era, about the romance between these two. References to the eucharist and confirmation show that it has been reworked by a Christian editor.

F. Sibylline Oracles. The Sibyl was a Greek prophetess, the pagan counterpart of the Hebrew prophets, to whom the Greeks and Romans resorted for oracles of guidance in affairs both private and public. There were several of them, having their residences in various places in Greece and Italy.

Written records came into existence that contained these supposed oracles. A collection was made and installed at Rome in 6 B.C. These oracles, in charge of the priests, were constantly studied and were consulted to find the will of the gods on special occasions.

The Jews took over this form of literature (Greek hexameter) to commend their religion to their pagan neighbors. Pfeiffer (p. 226) thought that a Hellenistic Jew composed our collection in Alexandria about 140 B.C. The example of this Jew was followed by both Jewish and Christian writers in later times — between the 2nd cent. B.C. and the 5th cent. A.D.

Our present collection contains pagan, Jewish, and Christian elements. It consisted of fifteen books, twelve of which are extant. Books 3-5 (printed by Charles in *APOT*) are generally regarded as Jewish (cf. Charlesworth, *OT Pseudepigrapha*, I, 317-472).

The Jewish writer makes the Greek Sibyl commend monotheism, the Mosaic ordinances, and important features of Hebrew history. By casting these prophecies in the form of pagan sibylline oracles, the Jews hoped to gain a sympathetic hearing for their religion.

G. Lives of the Prophets. This is a legendary work originally written in Hebrew in the 1st cent. A.D. and preserved in Greek and several other languages. It records legends about Isaiah, Jeremiah, Ezekiel, and Daniel, the twelve Minor Prophets, and, in addition, legends about Nathan, Ahijah, Joed, Azariah, Zechariah, Elijah, and Elisha.

H. Life of Adam and Eve. This is a hypothetical Jewish book reconstructed from the Latin *Vita Adae et Evae* and a Greek book closely parallel to it. It tells the story of the repentance of Adam and Eve for their sin, and some of their experiences after expulsion from the Garden. Adam, after eating the fruit of knowledge, beheld the vicissitudes of the Jews until the postexilic times and the Last Judgment. The book was probably written in Aramaic in the 1st cent. A.D.

PSYCHOLOGY.

I. Nature of Biblical Psychology
II. Theological and Scientific Psychology
III. Theological Psychology and Psychology of Religion
IV. Origin of the Soul
V. Constitution of Man
VI. Fall of Man
VII. Destiny of Man

The term "psychology" derives from Gk. *psychḗ* and *lógos*, and denotes the study of the soul or the psychical part of or aspect of man. While the word "psychology" is not found in the Bible, *psychḗ* occurs more than a hundred times in the NT. It is not used, however, in a precise sense, though one should remember that even today strict definition is still very difficult. Hence many Hebrew words have to be taken into account under the general heading of psychology.

I. Nature of Biblical Psychology.–It must be grasped at the outset that biblical psychology does not consist, and does not purport to consist, in a scientific investigation of the psychical aspect of man. Anthropology in the Bible is always theological, and this is no less true of psychology. Man is an object of presentation, not in and for himself as an isolated object, nor as one creaturely object among others, but in his relation to God. The purpose of biblical psychology is not to reveal supernaturally data that can then be rediscovered or confirmed by empirical research. The Bible sets forth data regarding God and His dealings with man and the cosmos. In the field of psychology as in all others the facts revealed in Holy Scripture have a primarily theological reference.

II. Theological and Scientific Psychology.–This means that a distinction is to be made between biblical and scientific psychology. Within its own terms of reference, scientific psychology is a justifiable pursuit. It can bring to light facts concerning the psyche and can make a valuable contribution in some areas of human activity, especially in the healing of mental disorders. Into the complexities of this ongoing investigation it is not here necessary to go. The main point is that intrinsically scientific psychology is valid and useful as one of the many investigations of creaturely phenomena considered in and for themselves.

In contrast, theological psychology introduces the fact that must always lie beyond the horizon of scientific investigation as such. This is the fact of the Creator Himself in His self-revelation. The bearing of this self-revelation on man is that it sets his origin, constitution, nature, and destiny in the light of his relation to the Creator and Lord of life. Psychology is not now presented for its own sake. It is not now studied within the limited context of creation. It is not approached from an anthropocentric or cosmocentric position. The subject is not just the psyche, or the psyche in relation to the body, to other psyches, or to the world. The subject is not even the psyche in relation to God. It is God in relation to the psyche.

The distinction between theological and scientific psychology is not absolute. The psyche itself is an obvious connecting point. Insofar as there is description of the psyche in both studies, even if from different angles and ultimately for different purposes, there is necessarily a degree of overlapping. Many aspects, e.g., of the constitution of man, will be seen in both studies; and the sinister

data regarding the psyche that recent analysis has brought to light, even if they are couched in an esoteric or idiosyncratic jargon and perhaps explained in a highly speculative manner, are no surprise to those acquainted with the biblical account of the fallen psyche. The difference here does not lie in the sphere of data; it is to be found in the terms of reference.

Again, the distinction is not in itself antithetical. Much scientific psychology has in fact taken an anti-Christian or non-Christian turn, largely under the influence of materialism, which explains the soul in terms of physiology and religion in terms of inventions of the soul. At this point we see the familiar circle of much scientific thought. For its own purpose science has to adopt the working principle that all things are to be studied only within the observable context of creation, and it is then in danger of exalting this working principle into a supposedly demonstrated philosophical conclusion. Selecting the object of study, it then claims that this is the only object. But scientific research does not have to make this arrogant, ill-grounded, and obscurantist claim. In terms of psychology, it can study and describe soul and body in their mutual relation and interaction without necessarily explaining one in terms of the other. It can be content simply to do its proper job, i.e., to present the data. It can even admit that the data include things that are not readily explicable in terms of a self-enclosed cosmos. It can be prepared to allow that there may be other data which introduce a completely new factor, the objective reality of God, and which thus throw a whole new light even on the data. It cannot of itself investigate these data, but it can at least be prepared to receive them from those who do. When this happens, there is no conflict between biblical and scientific psychology. Each respects the purpose, the terms of reference, the validity, and the findings of the other. Each uses the other insofar as the other is relevant. Each can see that, if the whole picture does in fact include the Creator and His self-revelation, then it is into this picture that the findings of scientific psychology must finally be fitted, though the scientist qua scientist cannot himself be responsible for this task.

III. Theological Psychology and Psychology of Religion.– From the human or creaturely standpoint religion is an activity of the psyche. This is no less true of the subjective or human aspects of Christianity. Faith, repentance, conversion, prayer, ideas, and practices — all these can be studied from the standpoint of scientific psychology. The problems of Christians, e.g., in the internal or external outworking of the Christian life, can be approached from a similar angle. Psychological explanations can be found for these difficulties, and psychological help given toward their solution. This may be done in a purely objective clinical manner by non-Christians, or more sympathetically, and on what is finally a sounder basis, by Christians trained in psychology. When studies or therapeutic practices of this kind are in the hands of Christians who also accept a theological or biblical psychology, no difficulty need arise at this point. In basic principle, however, the question must still be asked whether theological psychology is, or can be, the same thing as religious psychology, or the psychology of religion. To this question only a negative answer can be given.

It was the genius of the theologian Schleiermacher to subsume Christianity under religious psychology. In so doing he had an apologetic interest. Kantian metaphysics seemed to have destroyed all possibility of knowing true reality, rationalism was attacking the credibility of the historical data of Scripture, and empirical science was already threatening to explain the phenomenal world in terms of itself. In this apparent impasse Schleiermacher suggested that the phenomenal world itself contains a religious sphere, the sphere of religious inwardness or experience, whose reality cannot be denied but whose explanation in materialistic terms is at least hazardous. In this subjectivity of Christianity Schleiermacher believed that he had found a citadel which could shelter believers and at the same time could be a home for the cultured of his day who had hitherto been despisers. He was not entirely disappointed in this hope, but his success was dearly won. For one thing, he surrendered the primary objectivity of God. For another, he made man and his religion the true object of Christian faith and proclamation. He thus brought the Christian wholly within the sphere of religious psychology and all its various possibilities from William James to Jung and beyond. He also made possible the final, and to many people the decisive, onslaught on Christianity in terms of the materialistic conceptions of Freud and his successors.

The subjectivist experiment of Schleiermacher is particularly relevant here because it shows very plainly the danger of dissolving theological psychology into the psychology of religion. By its very nature a psychology of religion has to be a scientific psychology. As such it can be for the Christian a tool, but only a tool. The problem is, however, that religious psychology has a particularly strong tendency to usurp the place of theological psychology, to become bad theological psychology, theological psychology that denies itself by being anthropocentric rather than theocentric, in other words, pseudotheological psychology. There is no danger of this in the case of a pronounced opponent like Freud, for the only theology he affirms is a-theology, and hence the distinction between theological and religious psychology is plain to see. On the other hand, the danger is virtually inescapable in the case of the Christian psychologists of a Liberal Protestant background; for the fundamental principle here is that God is reached through valid religious experience, and therefore religious psychology, which helps to this end, is the same thing as theological psychology. The possibility of genuine theological psychology is thus cut at the very root. In practice, religious psychologists of an orthodox background are unfortunately very much exposed to the danger of a similar confusion, for it is only too easy to maintain a theoretical orthodoxy and yet to act as though the psychology of religion were in fact the same thing as theological psychology, to endorse therewith the aberration of Schleiermacher, and even perhaps to try to defend his thesis against the materialistic attack.

In fact, for all the points of overlapping, the two psychologies are not at all the same thing. The psychology of religion examines religious aspects of the psyche, which include the phenomena or manifestations of Christian faith and life. This is a valid and valuable study. In particular, it can help to check spurious, distorted, and unhealthy developments which are no real part of the work of the Holy Spirit but which fit into observable patterns of religious behavior. Along the same lines it can help in the solution of technical psychological problems, e.g., false guilt, which might be confused with other elements in the spiritual life. It can also throw its own light on the profundity of sin and the need of a corresponding profundity in the work of penitence and renewal, especially at the level of motivation. Yet the fact remains that it is not in itself theological psychology, nor is it a stepping-stone to it. Theological psychology begins with God, not with man. Its theme is God in relation to the psyche, God the Father, the Son, and the Holy Spirit. It develops basic themes of psychology, the origin, nature, and destiny of the psyche,

against the eternal background of the world and purpose of God. Its knowledge is derived not from clinical data but from the data of the divine self-revelation. Its terms of reference include a study of the Creator as well as the creature. It is based not on inexplicable longings or insecure interpretations, but on the unshakable and eternal truth of the divine self-declaration. It finds the goal of man not in self-realization or in the contribution that he may make to the evolution of the cosmos, but in the divine achievement of the divine purpose. It is read off not from scientific textbooks, but from the divinely given record of Holy Scripture.

IV. Origin of the Soul.–The Bible tells us plainly that the soul is from God. It was breathed into man by God (Heb. *wayyippaḥ*; LXX Gk. *enephýsēsen*; Vulg. *inspiravit*). The human being thus "inspired" is a living soul (Heb. *nepeṣ ḥayyâ*) because the breath of life (*nišmaṭ ḥayyîm*) is imparted (Gen. 2:7). It is the breath of the Almighty which gives man life (Job 33:4). The living soul (LXX Gk. *psychḗ zósa*) derives from the breath of life (*pnoḗ zoḗs*). The breath characterizes man; it is only seldom applied to animals. In man's nostrils is but a breath (Isa. 2:22). This breath is God's breath (Job 32:8). Paul in the NT has this in view when he says that the first man was made a living soul (1 Cor. 14:45). Possibly Jn. 6:33 also includes an allusion to the general life-giving function.

This teaching rules out all ideas of an emanation of the soul. It also excludes the concept of a preexistence of souls. Advanced by Plato and Vergil, this concept found its way into the Talmud and cabala and was also espoused by some of the early Christian fathers (Justin Martyr, Origen, Theodoret). It was condemned by the Synod of Constantinople in the 6th century. Finally, the biblical teaching is firmly opposed to materialism. The soul is not a development from the body, nor is it merely a psychological function of the body. That it has a close and necessary connection with the body is not to be denied. But like the body, and like the union of soul and body, it derives from God. The body is formed from the dust of the ground, but man becomes a living soul when God breathes into him the breath of life.

Does this mean that each soul is a new creation of God? Or is the soul derived from the parents? This has been a much debated issue in the Church; and both the first view, creationism, and the second, traducianism, have found staunch supporters. The Eastern theologians tended to creationism, and so, too, did Jerome, the Scholastics, the Reformers, and Roman Catholics in the West. Tertullian and Leo advocated traducianism, and Augustine inclined in this direction, though he would not commit himself: "I do not venture to affirm or deny that of which I am ignorant." (On this whole matter cf. W. Shedd, *History of Dogma*, II, 11ff.)

From the theological standpoint both views involve difficulties. Creationism does not accord easily with the doctrines of original sin and the solidarity of the race. Traducianism, however, verges on materialism and seems to leave little place for individuality and individual responsibility (cf. H. Bavinck, *Gereformeerde Dogmatiek* [1895-1901]). The *dictum* of Peter Lombard has often been quoted as a possible interpretation: *creando infundit eas Deus, et infundendo creat* ("in creating God infused the soul, and in infusing He creates"). But this does not seem to have any very clear bearing on the problem except insofar as it points to a twofold element in the divine work.

The basic difficulty is that, while Scripture leaves us in no doubt that both body and soul are divinely created at the first, it gives no precise information on the position with regard to individuals. Such Scriptures as are relevant seem to incline more in the direction of creationism. Thus we read that God "formed the spirit of man within him" (Zec. 12:1), or that He "fashions the hearts of them all" (Ps. 33:15), or that "the spirit returns to God who gave it" (Eccl. 12:7; cf. Nu. 16:22; He. 12:9), or that God is "the God of the spirits of all flesh" (Nu. 27:16). On the other hand, it is plain that children are procreated by their parents, and to this degree there is surely an element of truth in traducianism. The psyche undoubtedly has its origin in God even to the point that God is active in the formation of all psyches. But this does not rule out a genuine unity and continuity of parents and children both in body and also in soul. God acts, yet after the first creation He acts in and with secondary causes. There is solidarity, yet not to the exclusion of individuality; individuality, yet not to the exclusion of solidarity. In the larger sense one need not decide in favor of either view, for elements of truth are emphasized in both.

V. Constitution of Man.–It has been noted already that the soul, like the body, derives from God. This implies that man is composed of soul and body, and the Bible makes it plain that this is so. The soul and the body belong together, so that without either the one or the other there is no true man. Disembodied existence in Sheol is unreal. Paul does not seek a life outside the body, but wants to be clothed with a new and spiritual body (1 Cor. 15; 2 Cor. 5). Yet soul and body are also distinct in their unity, and in this distinction the soul takes precedence of the body as heaven takes precedence of earth. In his acute discussion in *CD*, III/2, K. Barth has suggested that the best way to speak of man is as an embodied soul, or a besouled body, or more particularly as the soul of his body. This brings out more precisely what is implied in the common biblical references to the soul and the body of man in their unity and distinction. The proper relationship of soul and body is essential to living a true human life. If the soul merely serves and expresses the body, order is disrupted and there can be no proper relationship with God, with others, with the self, or with the world. On the other hand, the soul is not to try to abstract itself from the body in an unreal world of domination. The proper relation is that the body should serve and express the soul. A formal preservation of this order is the necessary prerequisite of true humanity, though it cannot in itself guarantee it, since the soul may seek and decide what is wrong as well as the body.

This teaching of Scripture on man as soul and body in unity, distinction, and order excludes many erroneous conceptions of the constitution of man. It rules out from the very first all forms of monism. Man is not, as it were, a "doublefaced unity" (Bain). The soul and body are not just two aspects of the same reality. Neither the idealism which would subsume body under soul nor the materialism which would subsume soul under body is tenable. Nor is any place left for dualism. Soul and body are not separate entities which are able to work in concert by virtue of a preestablished harmony (Leibniz). Nor is the soul a pure entity which is imprisoned in, and awaits redemption from, an imperfect and evil body (Gnosticism). The Christian cannot be concerned only with the saving of the soul on the one side or the achieving of bodily well-being on the other. His concern is with the whole man, not as a self-contained and self-explicable entity, but as the creation of God, who has made man both soul and body in distinction and unity.

Is man spirit as well as soul? The Bible often uses the term "spirit" (also "heart") where it seems to be interchangeable, though not wholly synonymous, with "soul." Thus dying is the yielding up of the soul (Gen. 35:18;

Job 11:20), but also of the spirit (Ps. 31:5 [MT 6]; 146:4). The dead are called souls (Rev. 6:9; 20:4) and also spirits (He. 12:23; 1 Pet. 3:19). The living may be grieved in soul (Jgs. 10:16), or vexed (Jgs. 16:16), or discouraged (Nu. 21:4), or weary (Zec. 11:8), but also in anguish of spirit (Ex. 6:9), impatient in spirit (Job 21:4), or straitened in spirit (Mic. 2:7). The soul departs in death (Gen. 35:18), but so, too, does the spirit (Ps. 146:4). In the NT the soul of Jesus was "very sorrowful" (Mt. 26:38), but He was also "troubled in spirit" (Jn. 13:21). *See* SPIRIT; SOUL; HEART. From this it would appear that there is no fundamental distinction between soul and spirit. Man is a living soul because God breathes spirit into him, because he has breath or spirit from the Spirit of God. One cannot strictly say that man is spirit except insofar as spirit and soul are interchangeable. The truth is that he has spirit from the Spirit of God, and is thus soul. It is in this sense that the withdrawal of the spirit brings death (Ps. 104:29) and God is the "God of the spirits of all flesh" (Nu. 16:22; 27:16).

Against this attempts have been made to argue for a tripartite composition of man as body, soul, and spirit. This teaching was common in the early Church, but it came into some discredit when Apollinaris of Laodicea, under Platonic influence, seems to have suggested that in Christ only the body and soul were truly human, while the rational soul or spirit was replaced by the divine Logos. A consideration often advanced for trichotomy is that man shares the soul with the brutes (animal soul), and that only in terms of spirit can a distinction be made. In the battle against modern materialism, with its explanation of (animal) soul in terms of body, this has taken on a new importance. The Bible, however, seems to display little concern for distinctions of this kind. Though it may be wounding to human pride, the Bible is as frank as any scientist as to the elements of kinship between people and animals (cf. Eccl. 3:19f.). If the spirit of man goes upward and that of the beast downward, this is due to the content rather than the form. Certainly spirit is no more peculiar to man than soul, for the breath of life is given to animals, too (cf. Gen. 1:21; Ps. 104:29; Eccl. 3:19). A tripartite distinction does not seem, then, to be of great relevance in this connection. What matters is the kind of psyche, not the addition of a third element.

Some passages of Scripture do suggest a distinction between soul and spirit. In the OT the soul departs at death and returns if there is a restoration to life (1 K. 17:22), but "spirit" is used for the return of consciousness or power to one not dead (Gen. 45:27; Jgs. 15:19; 1 S. 30:12; 1 K. 10:5). In the NT Mary says that her soul magnifies the Lord and her spirit rejoices in God her Savior (Lk. 1:46f., or is this parallelism?). The Master is "very sorrowful" in soul (Mt. 26:38), but it is said of the disciples that the spirit is willing and the flesh is weak (Mt. 26:41). Passages of this kind, however, are rather too imprecise to serve as a basis for trichotomy.

More important are the many Pauline passages in which there is plain reference to spirit either along with soul or in a way that does not allow of explanation in terms of parallelism or interchangeability. Thus in 1 Thess. 5:23 Paul prays quite definitely that "spirit and soul and body be kept sound and blameless." Elsewhere he tells Christians to "stand fast in one spirit [Gk. *pneúma*], with one soul [*psychḗ*] striving together for the faith" (Phil. 1:27, AV). He also tells them to be of the same mind (*sýmpsychoi*, 2:2), and he hopes to be of good comfort (*eupsychṓ*, 2:19). Moreover, he distinguishes between the psychical man and the spiritual (pneumatic) man. The first Adam was a living soul (*psychḗ*); the second is a quickening spirit (*pneúma*). Does not this seem to suggest that in the last resort man has to be distinguished into body, soul, and spirit?

Three points are to be noted in this connection. First, there are other passages in the NT that continue the more common line of OT teaching. In addition to those already quoted, one might mention that Jesus gives His soul for the sheep in Jn. 10:11 but commends His spirit to the Father in Lk. 23:46. Indeed, the more common Pauline formula is simply body and soul rather than spirit and soul and body. If there is apparent distinction in Phil. 1:27, this passage is not speaking of the constitution of man but is an emphatic exhortation to unity, and the further distinction between "in" one spirit and "with" one soul is important.

Second, commentators are by no means agreed that the key passage 1 Thess. 5:23 is really designed to teach trichotomy. One suggestion is that Paul is here heaping up words to drive home the point of entirety. A. Kuyper (*Work of the Holy Spirit* [Eng. tr. 1900; repr. 1975], p. 491) points out that the reference is not to parts but to *télos* or aim. Calvin (comm., *in loc.*) thinks that spirit and soul are here used to denote different aspects of the one soul. F. W. Robertson (*Sermons*) accepts a distinction, but interprets it in terms not of man's natural constitution, but of the new life in the Spirit which is proper to Christians alone.

Third, it would seem that the NT uses spirit in a special sense which is not wholly strange to the OT (cf. Ps. 51:10 [MT 12]) but which is more strictly proper to the NT. For the Christian life is itself a new life, a new creation, in and by the Spirit. To be a Christian is to be born of the Spirit (Jn. 3:8). The Spirit comes to the disciples and dwells in them (Jn. 14:16f.). The spiritual man is the one who has received the Spirit which is of God (1 Cor. 2:10ff.). The spiritual body is that which is raised up by the spirit at the resurrection (1 Cor. 15:44). The Second Adam is a life-giving Spirit because He brings new life in the Spirit. If, then, the soul of the Christian can also be called the spirit, or if there can be reference to spirit in addition to soul, this is because the Christian is directed by the Holy Spirit, the Spirit of life, of God, of Christ, of Him that raised up Jesus, of indwelling, adoption, and witness (Rom. 8:1-16). In other words, as man is a living soul because He has spirit, the Christian is a pneumatic soul because he has spirit in the new sense of regenerate life in the Holy Spirit. The spirit of Christians is the Holy Spirit, or their new life in the Holy Spirit.

This means that spirit is not a part of man's constitution in the same way as body or what is generally denoted by soul. It cannot be isolated by scientific analysis or made the object of psychological presentation. The most that scientific psychology can do is to say that in terms of full human life the data leave a blank, an x, which cannot be wholly explained in terms of body, or of soul, or of both together. How this x is found will then depend on other factors. The theoretical empiricist might try to find it somewhere in the known data. The Christian will realize that he is in the sphere of theological psychology and that the x is not so much the spirit of man as the Spirit of God.

Even in the first creation it is God's Spirit that makes man a living soul. Hence the man who tries to live only in terms of body and soul is a defective man. Man must have spirit to be full man. It is true that every person must have spirit even to be able to live at all. But all try to live without spirit, and this is what condemns them both to deficient life and to ineluctable death. The Christian, however, is the person to whom and upon whom, in virtue of the saving power of Christ, the Spirit comes in a new act of regenerating power. He has the spirit of new life as well as that of the old. As there is an x in the life of every person, there is, as it were, an x^1 in the life of the Christian.

Only theology, however, can tell us what this x or x^1 is. For it is not a constituent factor in the empirically accessible constitution of man. It is the Holy Spirit, God.

VI. Fall of Man.–Reference to the twofold sense in which the Christian has spirit, i.e., both by creation and by new creation, is a reminder that man in his present state is fallen and sinful man. While it is objectively true that man cannot live without the Spirit, nevertheless the whole attempt of fallen man is to do so, to be self-sufficient, to exist simply as body and soul without spirit, to explain himself simply in terms of the creaturely world, to fill the resultant vacuum with his own ideas of God. It is because of this attempt that man is subject to death (Gen. 2:17). The Spirit is finally to be withdrawn. Body and soul, ceasing to be spiritual, are subject to corruption. It is also because of this attempt that man, if he is to be saved and to have eternal life and fellowship with God, must be the recipient of the Spirit in a new way, i.e., in regeneration and resurrection. In and by himself he is no longer spiritual man in the true sense. He is carnal or psychical man.

The evidences of the fall are patent in all psychological inquiry and practice. Indeed, the main practical application of scientific psychology is in the sphere of the therapy that owes its final necessity to the fall. Psychologists may attempt all kinds of other explanations of the data, whether in terms of psychological or psychosomatic sickness, of the imbalance of psychical, physical, or psychophysical factors, of heredity, environment, or educational and sociological influences, or even of evolution from the material to the psychical. But the data themselves are beyond dispute. Man is at odds with himself. He lives his life in neurotic fear and illusion. He is capable of the greatest nobility but also of the greatest depths of ignorance, viciousness, and cruelty. Even when surface standards are achieved, below are murky depths which it may be helpful to bring to light but which seem to defy all attempts at ultimate purification.

The data do not prove the fall. Indeed, they invite alternative explanations which may very well contain elements of truth. It is in biblical psychology, however, that they find the true explanation. The explanation of human nature as it is now is that man is fundamentally at odds with God. In an act of disobedient self-assertion he is the man who sets his own will and desires against those of God. The effects of this are incalculable, for man hereby entraps himself in a vicious circle. The man who is at odds with God is the man who is also at odds with his fellows, with himself, and with his world. The primary sin brings with it a complicated series of consequences affecting both body and soul, both from without and from within. It initiates a train of hereditary and environmental evils. It enmeshes man in a nexus of sociological, political, cultural, and intellectual disorders. It introduces the factor of death which finally seems to rob life of meaning and which hangs like a sword of Damocles over all human enterprise and achievement. The fall puts all the other data into perspective. The empirically disclosed disorder of man is primarily and fundamentally due to the wrong relation with God. Even perverted religious experiences and illusions bear witness to this. Even scientific psychology, when it steps out of its terms of reference and advances its self-sufficient hypotheses, or even when it fails to see the final inadequacy of its own techniques, bears the same witness.

VII. Destiny of Man.–The destiny of man without God is to die (Gen. 2:17). This does not imply only physical death. Indeed, it is at least arguable that apart from the fall man would still have died physically, although it is perhaps more fitting to suppose that he would have been translated from the present earth to God. Be that as it may, the death introduced by sin is also, and more radically, spiritual death. Even as they live, sinners are dead in trespasses and sin (Eph. 2:1). Their life stands under the sign of corruptibility (1 Cor. 15:50). They are liable to be destroyed both body and soul in hell (Mt. 10:28). Beyond the death of the body is the second death (Rev. 20), the Gehenna of Jesus, the place of weeping and wailing, the infinite paradox of life in self-separation from God (2 Thess. 1:9).

The factuality of death is beyond all question. Nor is it genuinely possible to conceive of the continuation or restoration of life apart from God. Yet death is still a mystery, a problem, a threat. It presents in the acutest possible form the self-contradiction of man. Human life cannot achieve its destiny in terms of this life. Man cannot be content to think that his memory may endure for a generation or two, that his influence will outlive him, that the race persists even if the individual perishes. Even the hope of an immortality of the soul apart from the body has a hollow ring, for without the body what is the soul but a ghost, a shade, a wraith? Acceptance of the finality of death brings little relief. For it means acceptance of the futility, not merely of the individual life, but of all human endeavor. In many cases, indeed, it will be achieved only at the price of the worst repressions, relieved at the last only in the empty sham of elaborate obsequies. When it comes to human destiny, to the destiny of fallen man, empirical research can only confirm the comfortless message that man has to die, that rationally or irrationally he does not feel that he should die, and that in a great number of cases he is afraid to die.

It is here that the final invalidity of science apart from God is displayed. This is the invalidity not of necessary error, but of necessary inadequacy. Neither the world nor man can in fact be studied in abstraction from God. Such abstracted study does have a limited validity. It can amass information and bring this information under a valid arrangement. It can also make practical application of its data. But when all the data are assembled, even if all possible data concerning all aspects of the cosmos are included, they are still like naughts with no digit, or figures enclosed by a great minus, or by an unknown and unknowable x. Hence they present only a final riddle to which neither the subject not the object of knowledge has the key. The closer this knowledge is to man personally, the more intolerable the riddle becomes, the more empty the data which cannot include the answer, the more powerful the temptation to leave the way of objectivity and to supply by speculation a possible digit, a plus sign, a figure for the x. Scientific psychology, to be true to its own terms of reference, has to leave out the true, objective, living God who alone has the key. And when it stands face to face with death, its final invalidity on this account is starkly revealed. It can present the data; the keys of hell and of death are in other hands (Rev. 1:18).

The Bible does not dispute the data. Indeed, it realistically demands that man should face up to his mortality and that he should not seek refuge in illusory immortalities. Yet the Bible can do more. Adding the unknown x, it can show why man has to die, and also why death is for man such an intolerable contradiction. In terms of the original plan and purpose of God the violent reaction of man against death is not baseless presumption. It is wholly justifiable in the sense that man was not destined for death but brought death upon himself by his own revolt against God. Death in its final sense is natural only to unnatural, i.e., fallen, man. In other words, it is not natural to man as God created him. The life-giving breath of God is intrinsic to him. Though he has incurred it himself, its

withdrawal is an intolerable paradox which involves life in death and death in life.

Yet this is not all that the Bible has to say. The Bible can also show how death can give way to life, not by pretending that the psyche is exempt from death, but by a new act of creation. For God has not abandoned His original will and purpose. He has sent the second man, the Lord from heaven, to die and to rise again both body and soul from the grave. Thus soteriological and eschatological data belong also to psychology. They are to be found in Jesus Christ, incarnate and exalted. By the life-giving Spirit a new life, a life in Christ, an eternal life, is breathed into man, and will come to its consummation in the new great act of the resurrection of man both body and soul from the dead. For those who are in Christ the psyche is already being fashioned into new fulfillment, and new harmony with the body, in the life that is a walk after the Spirit.

The achievement here and now, however, is only imperfect and provisional. Death must be worked out in terms of literal death as well as repentance and mortification. Life must be worked out in terms of resurrection as well as regeneration and renewal. Christians await the new house which will replace the present tent of mortality (2 Cor. 5:1), the fulness of the Spirit (and spirit) beyond the first installment. Then, in the life of the world to come, the renewed soul and body will enter into the fulness of life in the Spirit. Then, in the new heaven and the new earth, man will be physiologically and psychologically transformed into the likeness of the risen Lord. Then the psyche of man will know even as it is known, not in an empiricism apart from God, but in the empiricism of God Himself.

The vast literature of scientific psychology may be consulted for interest and reference, but it has only limited relevance for the purpose of biblical psychology.

G.W. BROMILEY

PTOLEMAIS tŏl-ə-mā'əs [Gk. *Ptolemais*] (1 Macc. 5:15, 22, 55; 10:1, 39, 56-58, 60; 11:22, 24; 12:45, 48; 13:12; 2 Macc. 13:24f.; Acts 21:7). A town on the northern coast of Palestine, also called Acco. Paul stopped there on his return from his third missionary journey (Acts 21:1-7).

PTOLEMY tol'ə-mi [Gk. *Ptolemaios*]. The dynastic name of the Hellenistic kings reigning in Egypt 323-30 B.C.; also a rather common name during that period.

1. Ptolemy I Soter (savior) (367-283 B.C.); son of the Macedonian nobleman Lagos; satrap of Egypt (323-305) and king (305-283). One of Alexander's most trusted generals, Ptolemy I fought with distinction in all of Alexander's campaigns, especially in the conquest of Asia. Upon Alexander's death (323 B.C.), Ptolemy I became the satrap or governor of Egypt. When Perdiccas (another general of Alexander who had become regent) was bringing the body of Alexander from Babylon to Macedonia, Ptolemy met the retinue in Syria and seized the body, taking it to Egypt for burial (Diodorus xviii.26-28; Strabo xvii.1.8). Consequently Perdiccas attacked Egypt, but was killed in 321 by his generals, among whom was Seleucus (Diodorus xviii.36-39). Antipater was now elected regent and the satrapies were redistributed, with Seleucus gaining Babylonia, Laomedon obtaining Syria, and Ptolemy retaining Egypt. In 320, feeling temporarily safe from Babylonian attack, Ptolemy claimed Syrian Palestine as a part of Egypt and deposed Laomedon (Diodorus xviii.43; Appian *Syr.* 52). When Antipater died (319), his general Antigonus tried to unite Alexander's empire by removing those who opposed him. Unable to defend himself against Antigonus, Seleucus fled to Ptolemy in 316 (Diodorus xix.55; Appian *Syr.* 53).

Ptolemy I offering a sacrifice to the god Horus. Painted limestone relief from a chapel of Ptolemy at Hermopolis, *ca.* 300 B.C. (Roemer-Pelizaeus Museum, Hildesheim, West Germany)

Seleucus's warning to Ptolemy of Antigonus's threat resulted in Ptolemy, Lysimachus, Cassander, and Seleucus forming an alliance against Antigonus. In 315 Antigonus invaded Syria and Palestine and occupied all the country down to Gaza (Diodorus xix.56-62; Appian *Syr.* 53; Polybius v.67). But soon Ptolemy and Seleucus attacked and defeated Demetrius son of Antigonus, who was in charge of Gaza. This decisive victory gave Seleucus rule of Babylonia, and Ptolemy seized Jerusalem with no resistance because it was the sabbath (Appian *Syr.* 54; Josephus *Ant.* xii.1.1 [4f.]; *CAp* 1.22 [186, 209f.]). After an indecisive battle, Antigonus and Ptolemy signed a peace treaty in 311 whereby Ptolemy lost control of Syria and Palestine (Diodorus xix.105). In 309, however, Ptolemy resumed hostilities by attacking the coasts of Lycia and Caria, and in 308 he extended his opposition to the mainland of Greece by seizing Corinth, Sicyon, and Megara, though later he had to abandon these territories. In 306 Demetrius attacked and captured Cyprus, a possession of Ptolemy since 313, in a decisive naval battle at Salamis. In their victory Antigonus and Demetrius assumed the title of kings, and Ptolemy, Seleucus, Cassander, and Lysimachus retaliated by also assuming the title, probably in 305. In the winter of 306-305 Antigonus invaded Egypt unsuccessfully. When Demetrius besieged the Rhodians in 305-304, Ptolemy came to their aid and forced the siege to be lifted; thus the Rhodians conferred on him the honorific title *Soter* ("savior") by which he later was commonly acknowledged.

In 303 Ptolemy, Seleucus, Lysimachus, and Cassander made a pact to overthrow Antigonus, and Ptolemy was

promised Coelesyria and Palestine. Ptolemy withdrew from battle when he heard the rumor that Antigonus had defeated Lysimachus. When Antigonus was killed in the decisive battle at Ipsus in Phrygia (301), the other members of the pact decided to give Palestine and Coelesyria to Seleucus since Ptolemy had deserted them. Ptolemy forestalled Seleucus and took possession of Lower Syria (south of Lebanon and of Damascus) and Palestine, and Phoenicia south of the river Eleutherus (Diodorus xx.113-xxi.5; Appian *Syr.*55). This action was the bone of contention between the Seleucidian and Ptolemaic houses for decades to come. The empire of Alexander was divided into four areas: Egypt and Palestine to Ptolemy, Phrygia (up to the Indus, including Syria) to Seleucus, Thrace and Bithynia to Lysimachus, and Macedonia to Cassander (Dnl. 11:4; cf. also 7:6; 8:8, 22).

In 285 Ptolemy virtually abdicated his throne to Ptolemy II Philadelphus, the son of his favorite wife Bernice. Two years later Ptolemy died (283). He had ruled his realm well. The legal and military organization of the Ptolemaic empire was his accomplishment. He founded the library and museum in his capital, Alexandria, and was the originator of the religious cult of the Greco-Egyptian god Serapis. While king he wrote a straightforward history of Alexander's campaigns, which although now lost, can be largely reconstructed because of the historian Arrian's extensive use of it.

2. Ptolemy II Philadelphus (brother-loving — a surname properly belonging to his sister-wife, Arsinoe II, but used to distinguish him) (308-246), son of Ptolemy I and Bernice I. *Ca.* 289-288 he married Arsinoe I, daughter of Lysimachus king of Thrace, and they had three children: Ptolemy III, Lysimachus, and Bernice. Ptolemy II was made joint ruler with his father in 285, and became sole king at the time of his father's death in 283. *Ca.* 278 Arsinoe was accused of conspiracy and was banished to Coptos in Upper Egypt. Soon after Ptolemy II married his sister Arsinoe II, who became very dominant in Egyptian affairs.

Ptolemy II fought wars with the Seleucid king Antiochus I (280-279 and 276-271) that left Egypt as the dominant naval power in the eastern Mediterranean. Antiochus II, who succeeded his father Antiochus I in 261, fought a war with Ptolemy, the Second Syrian War (260-255), and regained some territories. Nevertheless, this war ended somewhat inconclusively, except that Ptolemy II accomplished a diplomatic master stroke whereby Antiochus II agreed to get rid of his wife Laodice and marry Ptolemy II's daughter Bernice, with the understanding that the kingdom was to go to Bernice's son (Appian *Syr.* 65; Dnl. 11:6). This marriage was consummated in 252.

Ptolemy II devoted much time to the internal administration of Egypt. He continued the interests of his father in the museum and Alexandrian library and was a patron of the arts, sciences, and literature. According to tradition (Letter of Aristeas; see *APOT,* II, 83-122) his persuasion resulted in the Hebrew Scriptures being translated into Greek, though probably only the Pentateuch was translated during his reign. *See* SEPTUAGINT II. A.

3. Ptolemy III Euergetes (benefactor), son of Ptolemy II and Arsinoe I; king 246-221 B.C. The diplomatic masterstroke of his father mentioned above failed. Antiochus II returned to his first wife Laodice only to be poisoned by her. She then named her son, Seleucus II, king. Bernice asked her brother Ptolemy III to rescue her and support her son's claim to the throne, but Laodice murdered Bernice and her infant son, causing Ptolemy III to initiate the Third Syrian War or Laodicean War (246-241) by invading Syria, with little or no opposition from the residents (Dnl. 11:7f; 1 Macc. 11:8). In fact, Ptolemy III was very successful, for he overran not only Syria but also plundered Susa and Babylonia and went as far as the borders of India (cf. Appian *Syr.* 66). His fleets recovered territories in the Aegean and made new advances as far as Thrace. This marked the apex of the Ptolemaic power.

After Ptolemy III's return to Egypt, Seleucus II won control of Syria (Dnl. 11:9), but Ptolemy retained the naval prominence in the Aegean. A treaty in 241 established peace between the two houses for about two decades. But Ptolemy II continued with intrigues against Greece, trying to disrupt Macedonian power. He may have been murdered by his son Ptolemy IV (Justinus xxix.1), though more probably he died a natural death (Polybius ii.71).

4. Ptolemy IV Philopator (father-loving) (b. 238), son of Ptolemy III and Bernice II; husband of Arsinoe III; king 221-203 B.C. His debauched life of wine and women (Polybius v.87; xiv.12) marked the beginning of the Ptolemaic decline. The Fourth Syrian War (219-217) commenced when Antiochus III invaded Lebanon in an attempt to take Palestine from Ptolemy IV. In 219 Antiochus III captured Seleucia (near Antioch), in 218 he captured Tyre and Ptolemais (Acco) as well as the inland cities all the way from Philoteria to Philadelphia, and in 217 he pushed southward as far as Raphia (near Gaza), where he was utterly defeated, leaving Ptolemy IV in undisputed control of Coelesyria and Phoenicia (Polybius v.51-57; Dnl. 11:11f.; 3 Macc. 1:1-5). For this battle Ptolemy IV enlisted native Egyptians into the army, which had the effect of gaining Egyptian self-respect. Egyptians were not allowed independence, however, and were excluded from high executive positions (limited to Greeks). This resulted in resentment that led to revolts later in his reign and in the reigns of his successors. He crushed the revolt in Upper Egypt late in his reign.

5. Ptolemy V Epiphanes (the manifest god; illustrious) (b. 210), son of Ptolemy IV and his sister Arsinoe III; king 203-181 B.C. Because Ptolemy V was only seven years old when he began to rule, Antiochus III saw an opportunity to take Coelesyria from Egypt. In 202 Antiochus made a pact with Philip V of Macedon to divide Egypt between them (Livy xxxi.14.5). In 201 Antiochus invaded Palestine and after great difficulty captured Gaza. Having secured Palestine, Antiochus invaded the dominions of Attalus king of Pergamos (who was pro-Roman against Philip V), in the winter of 199/98. Scopas, an Egyptian general, hearing of Antiochus's absence, invaded Palestine and recovered the lost territories. Antiochus returned to oppose Scopas, and at Panias (NT Caesarea Philippi) Ptolemy V was decisively defeated in 198 (Josephus *Ant.* xii.3.3 [129-33]; Polybius xvi.18f.; 28.1; Dnl. 11:14-16). Seeing the new threat of Rome, in 193 Antiochus made a treaty with Ptolemy V in which Ptolemy married Antiochus's daughter Cleopatra, with the idea that her son/his grandson would become king (Polybius xxviii.20; Appian *Syr.* 5; Josephus *Ant.* xii.4.1 [154]; Dnl. 11:17).

The ROSETTA STONE comes from his reign.

6. Ptolemy VI Philometor (mother-loving) (b. 186 or 184/183), elder son of Ptolemy V and older brother of Ptolemy VIII. Ptolemy VI began his infancy rule in 181/180 under the regency of his mother Cleopatra I (daughter of Antiochus III). His mother died in 176 and he married his sister Cleopatra II in 175/174. In 170 the amateur regents Eulaeus and Lenaeus advised Ptolemy VI to avenge Panias and recover Coelesyria. But Antiochus IV heard of the plan, invaded Egypt with a large army in 170/169, defeated Ptolemy VI, and then made peace with him. In the midst of the confusion the Alexandrians made the

younger brother Ptolemy VIII their king, thus weakening the Ptolemaic threat toward Antiochus IV. When Antiochus IV withdrew from Egypt, the two brothers and their sister Cleopatra II (also Ptolemy IV's wife) ruled jointly until 164. This alliance displeased Antiochus IV, who marched against Alexandria; but when he was within 6 km. (4 mi.) of the city the Romans ordered him to evacuate Egypt at once (cf. Polybius xxix.2.1-4; 27.1-8; Livy xlv.12.1-6; Appian *Syr.* 66; Justinus xxiv.3; Dnl. 11:28-30). With the help of Rome, Ptolemy VI became sole ruler in 164/163, but the strife between the two brothers continued for another decade.

In 152 Ptolemy VI became involved with Syrian politics in the conflict between Alexander Balas and DEMETRIUS. First, in 150 he sided with Alexander Balas, and after Demetrius was slain in battle, Balas married Ptolemy VI's daughter Cleopatra III. In 47, upon learning of Balas's plot to kill him, Ptolemy retrieved his daughter and gave her to Demetrius's son, Demetrius II Nicator. Finally, in 145 Demetrius II defeated Balas; both Balas and Ptolemy VI were killed in the battle (1 Macc. 10:22-66; 11:1-10; Josephus *Ant.* xiii.2.3 [46-61]; 4.1f. [80-85]; Diodorus xxxii.27.9c; Livy *Epit.* lii). Ptolemy VI seems to have been friendly to the Jews, for when Onias IV, son of Onias III and high priest in Jerusalem, fled to Egypt, Ptolemy allowed him to build a Jewish temple modeled after the Jerusalem temple at Leontopolis in the Delta, *ca.* 154 (Josephus *Ant.* xiii.3.1-3 [62-73]; xx.10.3 [235f.]; *BJ* vii.10.2f. [420-432]).

7. Ptolemy VIII Euergetes II (benefactor) (182-116), younger son of Ptolemy V. He was joint ruler with Ptolemy VI and Cleopatra II in 170-164, sole ruler 164-163; the Romans made him king of the separate kingdom of Cyrene. In 145 he returned to Egypt and seized the throne; in 144 he killed his nephew Ptolemy VII and married his sister, the former wife of his brother, Cleopatra II. In 142 he married Cleopatra II's daughter, Cleopatra III, without being able to divorce Cleopatra II. In 132/131 Cleopatra II forced Ptolemy VIII to leave Alexandria and he took refuge in Cyprus. He returned to Alexandria in 127 after Cleopatra II fled to Syria (129/128) and finally made peace with her in 124. Upon his death he bequeathed Cyrene, as a separate kingdom, to his illegitimate son Ptolemy Apion (d. 96), while he gave Egypt and Cyprus to Cleopatra III and to whichever of his two sons by her, Ptolemy IX Soter II and Ptolemy X Alexander, she might choose as her co-regent (Justinus xxxix.3.1; 5.2). The exclusion from the will of Cleopatra II led to further domestic strife.

The reference in the prologue of Sirach to "the thirty-eighth year of Euergetes" is to 132 B.C., since Euergetes dated his reign from his joint rule with his brother and sister.

8. Ptolemy IX Soter II (savior) (141-80), eldest son of Ptolemy VIII and Cleopatra III; king 116-110, 109/108, 88-80 B.C. Before his father's death he was married to his sister Cleopatra IV. From 116 to 108 he reigned in Egypt with his mother, though there was much strife between them while her favorite son Ptolemy X ruled Cyprus. In 110 he was ousted from Egypt by his brother Ptolemy X. He was able to return for a short time in 109-108 until his mother called Ptolemy X to Egypt and together they expelled Ptolemy IX to Cyprus. In 89 the Egyptians revolted against Ptolemy X; Ptolemy IX returned to Egypt in 88 and was sole ruler of Egypt and Cyprus until his death. Later internal revolts resulted in the destruction of Thebes in 85.

9. Ptolemy XII Philopator Philadelphius Neos Dionysus, nicknamed Auletes (flute-player) (116[?]-51), illegitimate son of Ptolemy IX. He became ruler in 80 and married his sister, Cleopatra V Tryphaeana, in 80/79. His friendship with the Romans resulted in the Alexandrians expelling him in 58, but with the help of the Syrian proconsul Gabinius he was restored in 55. He killed Bernice; when he died in 51 he bequeathed his kingdom to his oldest son (who was 12), who was to marry his seventeen-year-old sister Cleopatra VII.

10. Cleopatra VII (69-30), daughter of Ptolemy XII and sister of Ptolemy XIII and XIV. She is probably the best known of the Ptolemies; she was an ambitious and clever politician. She ruled successively with her brothers Ptolemy XIII (51-47) and Ptolemy XIV (47-44) and with her son Ptolemy XV (44-30). Antony summoned her to Tarsus in 41 and subsequently he followed her to Alexandria. They met again in 37 and possibly married at that time. In 32 Octavian warred with Antony and Cleopatra, defeating them at Actium in September, 31. In August, 30 B.C., Cleopatra took her own life rather than be a spectacle in the Roman triumphal procession. Thus Egypt finally came under Roman domination.

Several other Ptolemies are mentioned in the Apocrypha:

11. Ptolemy Macron. *See* MACRON.

12. Ptolemy son of Abubus; son-in-law of Simon Maccabeus; a governor in Judea. His ambition led him to deceive, trap, and murder Simon and two of his sons at Dok near Jericho (1 Macc. 16:11-17).

13. Ptolemy son of Dositheus and father of Lysimachus. Ptolemy was a priest and a Levite who, with his father, brought to Egypt "the Letter of Purim" (perhaps the entire book of Esther), which Lysimachus had translated into Greek (Ad. Est. 11:1).

PUAH pū'ə.

1. [Heb. *pû'â*] (1 Ch. 7:1); NEB PUA. The second son of Issachar, called PUVAH in Gen. 46:13; Nu. 26:23.

2. [Heb. *pû'â*–'splendid one,' or possibly < Ugar. *pgt*–'girl'] (Ex. 1:15). One of the two Hebrew midwives commanded by the Egyptian pharaoh to kill all the male infants of the Hebrews (v.16). Puah and SHIPHRAH disobeyed this command, pretending that the Hebrew infants were born before they arrived (vv.17-19). Because of this daring action, the Israelites continued to multiply and God rewarded the midwives with families of their own (vv. 20f.). In later Jewish tradition Puah was identified with Miriam and Shiphrah with Jochebed (Midr. *Ex. Rabbah*). *See also* MIDWIFE.

3. [Heb. *pû'â*] (Jgs. 10:1); NEB PUA. A member of the tribe of Issachar; son of Dodo and father of Tola the judge.

PUBLICAN. The AV translation of Gk. *telōnēs* (RSV "tax collector"; NEB "tax gatherer"). *See* TAX COLLECTOR.

PUBLIUS pub'li-əs, pōōb'li-əs [Gk. *Poplios* < Lat. *Publius*–'popular']. The name might be derived from the Greek rendering of the Roman title Popilus since inscriptions

have been found near Malta using it to designate leading citizens of the island. Luke uses it as the name of the chief man of Malta who received Paul and gave him lodging for three days following a shipwreck (Acts 28:7f.). As the leading man of the island, a Roman official, he was responsible for the prisoners, but he extended hospitality to Paul and was richly rewarded by Paul's action in healing his father of a fever. Jerome says that Publius was martyred (*De vir. ill.* xix). B. R. AND P. C. PATTEN

PUDENS pōō'dənz [Gk. *Poudēs* <Lat. *Pudens*–'modest']. One of the Christians who sent greeting to Timothy in 2 Tim. 4:21. Some commentators have regarded the Latin name as evidence that the Epistle was written from Rome. Apart from this reference, the Bible tells nothing about Pudens, but tradition and speculation have filled the gap with many intriguing possibilities. The most generally accepted suggestion is that Pudens was a converted Roman senator, later martyred under Nero. He was the son of a certain Priscilla (not the one mentioned in Acts 18) and the father of Praxedis and Pudentiana. He gave his house, where Peter had lodged as his guest, for use as the church later known as the Pudentiana. Excavations under this church have unearthed the ruins of Roman houses, one of them near the Baths of Novatus over which the church was extended when rebuilt, probably in the time of Siricius (A.D. 384-399). Another theory is that the grandson of Pudens, another Pudens, gave the house for use as a church in the time of Pius I, A.D. 140-155.

Mention of Pudens along with Linus and Claudia in 2 Tim. 4:21 has led some scholars to develop a different hypothesis, that Pudens was the husband of Claudia and father of Linus, the first Roman bishop after Peter according to ancient listings. An attempt has also been made to identify this Pudens as the centurion friend of the poet Martial (*Epigrams* i.31), particularly since Martial in iv.13 referred to the wedding of "his own Pudens" to a Claudia Peregrina, thought to have been from Britain. Martial's mention of a Linus in i.76 has also been noted. Attractive though this suggestion is, it is not backed by solid evidence. The name Pudens was common (an inscription mentions even another Pudens and Claudia; cf. *CIL*, VI, 15066), and equating Martial's Pudens with the senatorial Pudens of tradition is virtually impossible. Hence commentators who have accepted the common tradition either have treated the names of 2 Tim. 4:21 as unrelated or, like A. Cousineau (*in loc.*), have regarded Linus as the son of Claudia but not of Pudens. Pudens the senator was canonized in the 6th cent. and is commemorated in the East on April 14 and in the West on May 19.

PUHITES pū'hīts (AV, NEB, 1 Ch. 2:53). *See* PUTHITES.

PUITE pū'īt (Nu. 26:23, NEB). *See* PUNITES.

PUL pool [Heb. *pûl*] (2 K. 15:19; 1 Ch. 5:26). Another name for the Assyrian king TIGLATH-PILESER III. This name is known from a Babylonian king list (see *ANET*, p. 272). Although some (e.g., A. T. Olmstead, *History of Assyria* [repr. 1964], p. 181) think that when he took over Babylon Tiglath-pileser apparently used Pul(u) as a throne-name, and others (e.g., H. W. F. Saggs, *The Greatness that was Babylon* [1962], pp. 114f.) say that Tiglath-pileser was the throne-name, J. A. Brinkman (*Political History of the Post-Kassite Babylonia* [1968], pp. 61f., 240-43) has pointed out that no contemporary references use the name Pul(u), and thus it is no doubt just a later name given to Tiglath-pileser III.

The AV also uses Pul for PUT in Isa. 66:19. G. A. L.

PULPIT [Heb. *migdāl*–'tower'] (Neh. 8:4); NEB PLATFORM. Although the use of *migdāl* in this sense is unique, it is not inappropriate to the basic sense of *migdāl*, that of an elevated structure (hence the LXX *bēma*; see Bauer, rev., p. 140). The context clearly indicates that a raised wooden platform (stairs led up to it, 9:4) was built for Ezra on this special occasion of the reading of the law. L. H. Brockington (*Ezra, Nehemiah and Esther* [*NCBC*, repr. 1977], p. 131) suggests a connection with the later synagogue situation. G. A. L.

PULSE. *See* VEGETABLE.

PUNISH [(verbs) Heb. *pāqaḏ*–'attend to,' 'visit,' 'appoint' (Lev. 18:25; Ps. 59:5 [MT 6]; Isa. 10:12; niphal, Isa. 24:22; hophal, Jer. 6:6; etc.), *nāṯan*–'give' (Ezk. 7:3f., 8f.), *nāqam*–'avenge, take vengeance' (niphal, Ex. 21:20; hophal, 21:21), *ḥāśaḵ*–'withhold, refrain' (Ezr. 9:13), *ʿānaš*–'fine, pay a penalty' (Prov. 21:11), *šāpaṭ*–'judge, govern' (1 S. 3:13); Gk. *timōréō* (Acts 22:5; 26:11), *dichotoméō*–'cut in two' (Mt. 24:51 par. Lk. 12:46), part. of *elénchō*–'punish, discipline' (He. 12:5), *ekdikéō*–'take vengeance' (2 Cor. 10:6), *kolázō* (Acts 4:21), part. of *paideúō*–'discipline' (2 Cor. 6:9); (nouns) Heb. *pᵉquddâ*–'vengeance,' 'visitation' (Jer. 8:12); Gk. *ekdíkēsis*–'vengeance,' 'punishment' (1 Pet. 2:14)]; AV also VISIT, RECOMPENSE, JUDGE, CUT ASUNDER, etc.; NEB also DEAL, "visit with punishment" (Zec. 10:3), MAKE SUFFER, "cut in pieces" (Mt. 25:41); **PUNISHMENT** [(nouns) Heb. *ʿāwōn*–'iniquity,' 'guilt,' 'punishment of iniquity' (Gen. 4:13; Ps. 69:27 [MT 28]; Ezk. 4:5; etc.), *pᵉquddâ*–'vengeance,' 'visitation' (Isa. 10:3; Jer. 10:15; Hos. 9:7; etc.), *ḥaṭṭāʾṯ*–'sin,' 'sin offering' (Lam. 4:6; Zec. 14:19), *ḥēṭ*'–'sin' (Lam. 3:39), *mûsār*–'correction, chastisement' (Jer. 30:14), *tôḵēḥâ*–'punishment, chastisement' (Hos. 5:9); Gk. *díkē*–'penalty, punishment' (2 Thess. 1:9; Jude 7), *kólasis* (Mt. 25:46; 1 Jn. 4:18), *ekdíkēsis*–'vengeance,' 'punishment' (2 Cor. 7:11), *epitimía* (2 Cor. 2:6), *timōría* (He. 10:29); (verbs) Heb. *pāqaḏ*–'attend to,' 'visit,' 'appoint' (Jer. 46:25; 50:18), hiphil of *šûḇ*–'reverse, revoke' (Am. 1:3, 6, 9, 11, 13; 2:1, 4, 6); Gk. *kolázō*–'punish' (2 Pet. 2:9)]; AV also INIQUITY, MISCHIEF, CHASTISEMENT, TORMENT, etc.; NEB also HARM, SIN, "called to account' (Isa. 10:3), RECKONING, PENALTY, etc.; **PUNISHABLE** [Heb. *mišpaṭ*–'judgment' (Dt. 21:22; cf. 22:26)]. In Nu. 12:11 the RSV gives "punish" for Heb. *śāṯ ḥaṭṭāʾṯ ʿal* (lit. "put the blame on"; *CHAL*, p. 368). In Job 31:11 the RSV "iniquity to be punished by the judges" renders Heb. *ʿāwōn pᵉlîlîm* (lit. "iniquity for the judges"; cf. 31:28 and M. H. Pope, *Job* [*AB*, 3rd ed. repr. 1983], p. 232 n. 116). Several MSS that read Heb. *mûsārōh* (< *mûsār*, "correction, punishment"), rather than the MT Heb. *mûsāḏâ* (lit. "foundation," "appointment"), support the RSV "punishment" in Isa. 30:32.

I. Terminology.–*A. OT.* "Punish" most frequently renders Heb. *pāqaḏ*. The OT prophets often use this term in reference to divine punishment (Hos. 1:4; 2:13 [MT 15]; 4:9; 12:2 [MT 3]; etc.), e.g., the Lord's punishment of nations (Ps. 59:5 [MT 6]; Jer. 9:25; 46:25; 49:7f.; 50:18, 31), transgressors (Ps. 89:32 [MT 33]; Lam. 4:22; Hos. 4:9; 9:9; 12:2 [MT 3]; Amos 3:2, 14), arrogant human kings (Isa. 10:14; Jer. 25:12; 36:31), faithless Jews (Jer. 44:13, 29), Jerusalem (Jer. 5:9; 6:15; 21:14), the Lord's people (Jer. 5:29; 14:10), and false prophets (Jer. 29:32). Divine punish-

ment also extends to a universal eschatological judgment (Isa. 24:21; cf. v. 22; 26:21). The cognate noun Heb. *pᵉqudda* also refers to the divine punishment of nations, e.g., Israel (Isa. 10:3; Hos. 9:7; Mic. 7:4), Judah (Jer. 8:12), Egypt (46:21), Moab (48:44), and Babylon (50:27; 51:18). Jer. 10:15 uses this term in reference to the punishment of idols.

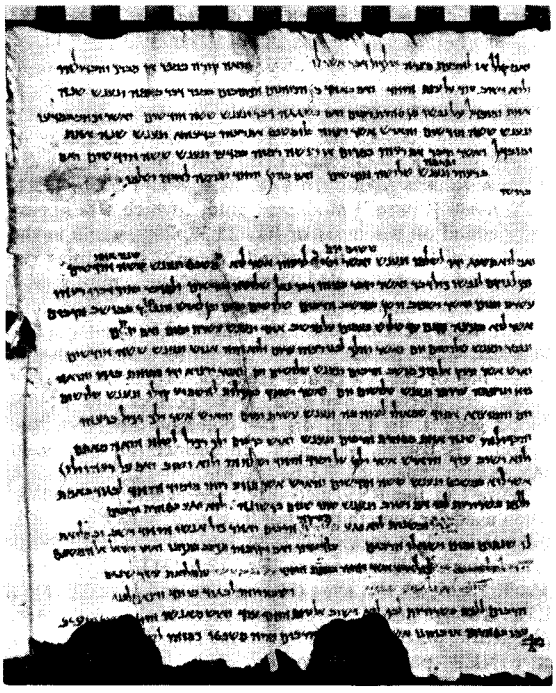
Several other OT terms also require discussion. In Ezk. 7 Heb. *nāṭan* has the nuance of requite, namely, for the abominations (vv. 3, 8) and ways (vv. 4, 9) of Israel (cf. Ezk. 23:49). According to Ex. 21:20f. a slave owner who beats his slave will be punished (Heb. *nāqōm yinnāqēm*, lit. "he shall surely be punished"; so AV) in the event of the immediate death of his slave. Though the nature of the punishment is uncertain, both Jewish interpreters and the reading of the Sam. Pent. (*môṯ yûmāṯ*, "he shall be put to death") affirm capital punishment (cf. B. S. Childs, *Book of Exodus* [*OTL*, 1974], p. 471); if, however, the slave should survive for several days, then the owner receives no punishment, which suggests that the loss of the slave was considered sufficient punishment (Ex. 21:21). Heb. *ḥāśaḵ* in Ezr. 9:13 refers to punishment that the Lord held back from Israel, though Ezra acknowledged that it was fully deserved. Heb. *šāpaṭ* in 1 S. 3:13 (used elsewhere of divine punishment; cf. Ezk. 11:10f.; 21:30 [MT 35]; 35:11; etc.) refers to judgment upon the house of Eli due in part for Eli's inadequate discipline of his sons (cf. 1 S. 2:22-25; 4:10f.).

The OT prophets repeatedly address the subject of punishment. The term most frequently rendered "punishment" is Heb. *ʿāwōn*. Often it refers to a consequence of sin; thus it is used of the destruction of Sodom (Gen. 19:15), possible chastisement for necromancy (1 S. 28:10), and Yahweh's judgment upon Babylon (Jer. 51:6), Israel (Ezk. 4:4-6, 17; 14:10; 21:25 [MT 30]), Ammon (21:29 [MT 34]), Edom (35:5), and the idolatrous Levites (44:10, 12). But the OT does not clearly separate the notion of sin as an act (cf. "punishment" for Heb. *ʿāwōn* in Ezk. 4:5; Job 19:29) from its consequences, which may consist of either personal inner guilt or actual physical punishment (cf. G. von Rad, *OT Theology*, I [Eng. tr. 1962], 262-68).

The cognate nouns Heb. *ḥaṭṭaʾṯ* and *ḥēṭʾ* are also significant. In Lam. 4:6 the former term may refer to the consequence of sin ("punishment"; so RSV, AV) or to the act of sin (so RSV mg., NEB mg.; cf. Zec. 14:19; also *TDOT*, IV, 312). In Lam. 3:39 the latter term refers to the consequence of the act of sin, i.e., "punishment of... sins" (RSV, AV). Related to this is the concept of "bearing one's sin," which results in the death of the offender (cf. Lev. 19:17; 20:20; 22:9; Ezk. 23:49; Isa. 53:12; etc.; also *TDOT*, IV, 315f.).

In Jer. 30:14 Heb. *mûsār* should possibly be revocalized as the absolute form of the noun, which would alter "the punishment of a merciless foe" (RSV) to "a cruel punishment" (J. A. Thompson, *Book of Jeremiah* [*NICOT*, 1980], p. 558 n. 2). That Heb. *tôḵēḥâ* in Hos. 5:9 is best understood as divine punishment is indicated by other occurrences of the term (e.g., 2 K. 19:3 par. Isa. 37:3; Ps. 149:7; "accusation" is a weakened translation given by F. I. Andersen and D. N. Freedman, *Hosea* [*AB*, 1983], p. 408). In Amos's oracles the hiphil of Heb. *šûḇ* (lit. "reverse, return") occurs in the phrase "I will not revoke the punishment ..." (Heb. *lō' ʾᵃšîḇennû*, Am. 1:3, 6, 9, 11, 13; 2:1, 4, 6). Here "punishment" is supplied by the context.

In the OT "punishable" occurs twice. In Dt. 21:22 the RSV has "a crime punishable by death" for Heb. *ḥēṭʾ mišpaṭ-māweṯ*, a "decision leading to capital punishment" (KoB, p. 579). Similarly, Dt. 22:26 has an "offense punishable by death" for Heb. *ḥēṭʾ māweṯ*, a "sin deserving death warrant" (KoB, p. 19).



B. NT. The RSV translates six verbs and one noun as "punish." Both Acts 22:5 and 26:11 refer to the punishment (Gk. *timōréō*) of Christians in the early Church (cf. Gk. *kolázō* in Acts 4:21). Haenchen suggested a punishment by whipping in 26:11 (*Acts of the Apostles* [Eng. tr. 1971], p. 684), which finds support in other sources (e.g., T. Jos. 13:9–14:1; Josephus *Ant.* iv.8.21 [238]; cf. Mish. *Makkoth* iii.10-15). In 2 Cor. 6:9 "punished" (part. of Gk. *paideúō*) may refer to corporeal punishment (contra Bauer, rev., p. 604; cf. Lk. 23:16, 22; He. 12:7, 10; cf. also 2 Cor. 6:5; 11:23-25). Gk. *elénchō* in He. 12:5 (Prov. 3:11, LXX) concerns divine discipline intended for corrective purposes, which corresponds to the well-intended discipline of a father for his son (vv. 7-11). Gk. *dichotoméō* literally means "cut in pieces" (e.g., 3 Bar. 16:3), but in Mt. 24:51 (par. Lk. 12:46) it may refer to excommunication (cf. D. Hill, *Gospel of Matthew* [*NCBC*, repr. 1981], p. 325; cf. also 1QS 2:16, which uses the terms Heb. *kāraṯ*, "cut off," and *bāḏal*, "separate, divide," to indicate expulsion). In 2 Cor. 10:6 Gk. *ekdikéō* relates to the discipline of persons who, perhaps in violation of an apostolic decision (Gal. 2:9), intruded into Paul's missionary work in Corinth (C. K. Barrett, *Second Epistle to the Corinthians* [*HNTC*, 1973], pp. 253f.). The cognate noun Gk. *ekdíkēsis* in 1 Pet. 2:14 (RSV "to punish") refers to the state's duty to maintain civil justice.

In the NT "punishment" generally refers to chastisement associated with eternal judgment. According to 2 Thess. 1:9 eternal destruction is the penalty that awaits those who persecuted the Thessalonian believers. In classical Greek "pay the penalty" (Gk. *díkēn tísousin*, 2 Thess. 1:9) indicated the punishment meted out as a result of a legal process (I. H. Marshall, *1 and 2 Thessalonians* [*NCBC*, 1983], p. 178). In Jude 7 "undergo punishment" (Gk. *díkēn hypéchein*) is also a technical legal expression. Here the penalty for the wicked persons of Sodom and Gomorrah is "eternal fire."

The NT hapax legomenon Gk. *timōría* in He. 10:29 concerns a punishment much worse than physical death (v. 28) that meets those who repudiate the Son of God. In Mt. 25:46 "eternal punishment" (Gk. *kólasin aiōnion*) refers to divine retribution meted out at the end of the age (cf. 2 Clem. 6:7; T. Reub. 5:5; T. Gad 7:5; M. Polyc. 11:2; some MSS 2:3). Gk. *kólasis* occurs elsewhere in the NT only in 1 Jn. 4:18, where, in view of the reference to the "day of judgment" in v. 17, it has an eschatological cast. R. E. Brown noted that "fear involves not only the absence of love but also the presence of the punishment it anticipates," namely, eternal punishment (*Epistles of John* [*AB*, 1982], p. 531). *See* ETERNAL; JUDGMENT, LAST.

In 2 Cor. 7:11 Gk. *ekdíkēsis* probably pertains to the disciplinary action taken by the Corinthian congregation toward one of its members (cf. Gk. *epitimía* in 2 Cor. 2:6).

II. Offenses Requiring Capital Punishment.–Capital offenses in the OT included: (1) striking or cursing a parent (Ex. 21:15, 17); (2) blasphemy (Lev. 24:14, 16, 23; 1 K. 21:13; Mt. 26:65f.); (3) sabbath breaking (Ex. 31:14f.; 35:2; Nu. 15:32-36); (4) witchcraft and false pretention to prophecy (Ex. 22:18; Lev. 20:27; Dt. 13:1-5; 18:20; 1 S. 28:3, 9); (5) adultery (Lev. 20:10-12; Dt. 22:22); (6) unchastity: (a) before marriage, but detected afterward (Dt. 22:20f. — penalty designated for the woman); (b) due to relations with someone other than one's betrothed (22:23 — penalty designated for the man and the betrothed woman); (c) of a priest's daughter (Lev. 21:9); (7) rape (Dt. 22:25 — penalty for the rapist and the woman if she did not cry for help); (8) incest, homosexuality, and bestiality (Ex. 22:19; Lev. 20:11-17); (9) abducting people for slavery (Ex. 21:16; Dt. 24:7); (10) idolatry (Lev. 20:1-5;

The Manual of Discipline from Qumrân, col. 7, listing fines (or penance) for various infractions as well as the penalty of expulsion for cursing God or apostasy (J. C. Trever)

Dt. 13:2-19; 17:2-7); (11) false witnessing in capital cases (Dt. 19:16, 19); and (12) intentional homicide (Ex. 21:12; Lev. 24:17; Nu. 35:16-21).

"Cutting off from the people" was the OT penalty for a number of offenses. The meaning of this expression has been debated; it may signify excommunication or death (cf. G. J. Wenham, *Book of Leviticus* [*NICOT*, 1979], pp. 241f.). It occurs in connection with the following offenses: (1) breach of morals such as wilful sin in general (Nu. 15:30f.) or incestuous relations (Lev. 18:6-23, 29); (2) breach of covenant effected by uncircumcision (Gen. 17:14), neglect of Passover (Nu. 9:13), sabbath breaking (Ex. 31:14), improper observance of the Day of Atonement (Lev. 23:26-30), the offering of children to Molech (20:3), witchcraft (20:6), anointment of an outsider with holy oil (Ex. 30:31-33); (3) breach of ritual, committed by eating leavened bread during Passover (Ex. 12:15, 19), eating the fat of sacrifices (Lev. 7:25), eating blood (7:27; 17:14), eating sacrifices when the eater is unclean (7:20f.; 22:3-6), eating a sacrifice late (19:5-8), generally neglecting purification (Nu. 19:13, 20), and other improper sacrificial procedures (Lev. 17:3f.; 17:8f.).

III. Methods of Capital Punishment.–The various methods of capital punishment included the following.

A. Stoning. This was the ordinary mode of execution (e.g., Ex. 19:13; Lev. 20:27; Dt. 22:24; Josh. 7:25; Lk. 20:3-6; Acts 7:58; Mish. *Sanhedrin* vii.4). At least two witnesses were required to substantiate a charge, and they had to cast the first stones (Dt. 17:6f.; cf. Jn. 8:7).

B. Burning. Burning was the punishment for unchastity (Gen. 38:24), for incest (Lev. 20:4), and for harlotry by a priest's daughter (Lev. 21:9; cf. Josephus *Ant.* iv.8.23 [249]; Mish. *Sanhedrin* vii.2; ix.1).

C. Sword. The sword was another tool of execution (Ex. 32:27; Dt. 13:15), along with the spear (Nu. 25:7f.) and the arrow (Ex. 19:13).

D. Beheading. This method was reserved especially for those who affronted royalty (2 S. 16:9; 2 K. 6:31f.). In later times beheading was one of four methods of capital punishment sanctioned by the Jewish court (Mish. *Sanhedrin* vii.1, 3). Accused murderers were executed by this means (Mish. *Sanhedrin* ix.1; cf. *Makkoth* ii.6).

IV. Secondary Methods of Punishment.–Other modes of punishment did not result in the death of the offender.

A. Flogging. Inflicted upon an offender's back, this common method of punishment usually numbered no more than thirty-nine strokes (Dt. 25:2f.; 2 Cor. 11:24f.). A rod or a switch was used (Prov. 10:13), or sometimes a "scorpion" (1 K. 12:11, 14; 2 Ch. 10:11, 14), which consisted of pointed and knotty rods or of whips embedded with sharp iron points (cf. Jgs. 8:7, 16; Prov. 26:3; *see* FLOG).

B. Fining. The modern practice of an offender's putting money into the community coffers is unknown in Scripture, unless Lev. 5:6-19 is an instance. Instead the injured party might receive an amount more than the value of the item in question (Ex. 21:22; Dt. 22:19; Prov. 17:26; Am. 2:8; *see* FINES).

C. Blinding or Gouging of Eyes. Blinding someone functioned as a punishment for various unrighteous deeds (cf. Gen. 19:11; 2 K. 6:18; Acts 13:11), while gouging, or putting out someone's eyes, served as a punishment of captives (cf. Jgs. 16:21; 2 K. 25:7).

D. Chaining. Manacles or fetters of copper or iron similar to modern handcuffs were sometimes fastened onto the wrists and ankles of a prisoner of war (Jgs. 16:21; 2 K. 25:7). Chaining was also a means of detaining prisoners awaiting trial and sentencing (Acts 12:6; 28:20).

E. Confiscating Property. Property was seized if it had fallen under the ban, i.e., had been singled out for destruction by special decrees of Yahweh (e.g., Nu. 21:2; Josh. 6:17), had been reserved for the army (Dt. 2:35; 20:14; Josh. 22:8), or had been given to the priesthood (Josh. 6:19).

F. Enslaving. See SLAVERY.

G. Flaying. The stripping off of a victim's skin was practiced in Assyria and Persia (*HDB*, I, 525). The OT mentions it figuratively in Mic. 3:2f., where it symbolizes the unjust treatment received by God's people from the corrupt leaders.

H. Scourging. See SCOURGE.

I. Imprisonment. The OT and NT references to imprisonment indicate that it was a common practice, though prisons functioned primarily for detention rather than punishment. *See* PRISON.

J. Inflicting Indignities. Captors, prison guards in charge of prisoners, and even bystanders sometimes humiliated a prisoner with vengeful or pain-inflicting acts (Mt. 26:67f. par. Mk. 14:65; Jn. 18:22; Acts 23:2).

K. Mutilating. The law forbade this treatment for any Israelite. It was a barbarous custom of the East (Jgs. 1:6f.; Ezk. 23:25; *see* EUNUCH; POLYGAMY), evidently regarded by the Hebrews as heinous (Dt. 23:1). The only act authorizing mutilation (except in retaliation; see below) is cited in Dt. 25:11f. (see A. D. H. Mayes, *Deuteronomy* [*NCBC*, repr. 1981], p. 330).

L. Plucking out Hair. In Neh. 13:25 this measure served as a punishent for those who had entered mixed marriages. According to Isa. 50:6 this method of punishment was particularly humiliating (cf. G. A. F. Knight, *Comm. on the Book of Isaiah 40–55* [*International Theological Comm.*, 1984], p. 145).

M. Making Restitution. Various OT laws governed making restitution for physical harm to a family member, a slave, an ox, etc. (cf. Ex. 22:1, 5f., 11-15; Lev. 5:16; Nu. 5:7f.).

N. Retaliation. Several passages in the Pentateuch record the so-called *lex talionis* (Ex. 21:23-25; Lev.

24:19-22; Dt. 19:21), which rendered punishment proportionate to the offense (cf. G. J. Wenham, *Book of Leviticus* [*NICOT*, 1979], p. 313).

J. K. GRIDER G. L. KNAPP

PUNITES pū'nīts [Heb. *pûnî*] (Nu. 26:23); NEB PUITE. The family (Heb. *mišpāḥâ*) of PUVAH, one of Issachar's sons (cf. Gen. 46:13).

PUNON pū'non, pōō'nōn [Heb. *pûnōn*]. A place of encampment for the Israelites, located between Zalmonah and Oboth, mentioned in the itinerary of Nu. 33. Punon, the Gr. *Phainōn*, has been identified with modern Feinân, a large copper-smelting site on the eastern edge of the Arabah. Punon was in ancient Edom; one of the tribal chieftains descended from Esau bore the name Pinon (Gen. 36:41; 1 Ch. 1:52), sometimes emended to Punon.

Punon was in an area noted historically for the mining and smelting of copper ore. Numerous smelting sites and mines have been located in surveys in and around Feinân. The available evidence indicates that the first substantial occupation at Feinân was during the last phase of the Early Bronze Age. Little evidence exists for any occupation during most of the Middle Bronze and Late Bronze Ages. From the beginning of the Iron Age (*ca.* 1200) to *ca.* 700, however, Feinân again functioned as an important center for mining and smelting. After a hiatus, activity began again during the Nabatean period and continued until the Arabic period. The favorable location in one of a series of wadis connecting the Arabah with the Edomite plateau (possibly at the junction of Wâdî el-Gheweir and Wâdî esh-Sheger) and the presence of a significant amount of water assured Feinân of regional importance.

Some traditions place the incident of Moses and the bronze serpent (Nu. 21:4-9) at or near Punon. The availability of ore and the fact that Oboth is mentioned as the place of encampment after the incident strengthen the tradition. Later Eusebius (*Onom.* 123.9; 299.85) reported that Christians and condemned criminals were sent by the Romans to work the mines and smelters of Punon.

T. V. BRISCO

PUR pōōr. *See* PURIM.

PURAH pū'rə [Heb. *purâ*] (Jgs. 7:10f.); AV PHURAH. Gideon's "servant" (Heb. *naʿar*) who accompanied him on his night visit to the Midianite camp. As the study of J. Macdonald (*JNES*, 35 [1976], 147-170, esp. pp. 157f.) has shown, *naʿar* can mean "squire" or "armor-bearer," and it probably does here. Thus it was natural for Gideon to take Purah with him. G. A. L.

PURCHASE [Heb. *miqnâ*–'acquisition (by purchase)' (Jer. 32:11f., 14, 16), *miqneh*–'property' (Gen. 49:32), *qānâ*–'acquire' (Gen. 25:10; Ex. 15:16; Jer. 32:7), *šāḇar*–'buy grain' ("purchase food," Dt. 2:6)]; AV also BUY; NEB also BUY, MAKE ONE'S OWN (Ex. 15:16). Apart from Ex. 15:16, the RSV uses "purchase" only in contexts referring to a payment of money for property or food. The verb *qānâ* does not necessarily imply payment of money, however, and in Ex. 15:16 it probably means simply to "acquire as one's own possession" (cf. NEB); cf. Ps. 74:2 (RSV "get"; AV "purchase"); 78:54 (RSV "win"; AV "purchase"). The AV also uses "purchase" to render two NT terms that have the general meaning of "obtain," "gain for oneself": Gk. *ktáomai* (Acts 1:18; 8:20) and *peripoéomai* (Acts 20:28; 1 Tim. 3:13).

See BUYING. N. J. O.

PURE; PURIFICATION; PURITY.

I. Terminology.—*A. OT.* More than half of the uses of "pure" in the RSV OT have to do with GOLD. Usually the Hebrew term is *ṭāhôr*. (In Lev. 24:4, 6 and 2 Ch. 13:11, RSV, *ṭāhôr* ["pure"] modifies "gold," which was apparently added on the basis of Ex. 25:31, 23f., while in the AV ["pure"] and NEB ["ritually clean"] it modifies the lampstand or table itself.) The noun *sāgûr*, "pure gold," is used in conjunction with *zāhāḇ*, "gold," in 1 K. 6:20f.; 7:49f.; 10:21; 2 Ch. 4:20, 22; 9:20 (NEB "red gold"). In 2 Ch. 4:21 "purest" is an attempt to make a smooth rendering of the awkward Hebrew expression *miḵlôṯ zāhāḇ*, lit. "perfection of gold" (AV "perfect gold"; NEB "solid gold"). In Lam. 4:1 the common adjective *ṭôḇ*, "good," is translated "pure" in connection with gold (AV, NEB, "fine"; cf. 2 Ch. 3:5, 8).

"Pure" in the RSV also often represents Heb. *ṭāhôr* when used for something other than gold: salt (Ex. 30:35), lampstand (31:8), incense (37:29), table (2 Ch. 13:11; NEB "ritually clean"), promises (Ps. 12:6 [MT 7]), persons (Prov. 15:26; 30:12), eyes (Hab. 1:13), and offering (Mal. 1:11). Twice "pure" represents a form of the verb *ṭāhēr*, "be clean, pure": Job 4:17 (man); Prov. 20:9 (person — pure [NEB "purged"] from sin).

Hebrew *zaḵ* is also common. In the Pentateuch it is used only for oil (Ex. 27:20; Lev. 24:2) or frankincense (Ex. 30:34; Lev. 24:7). In the Wisdom Literature it is applied to persons (Job 8:6; 33:9; AV, NEB, also "innocent," "blameless"), doctrine (11:4 [NEB "sound"]), prayer (16:17 [NEB "sincere"]), and conduct (Prov. 16:2 [AV "clean"]; 20:11 [NEB "innocent"]; 21:8). The related verbs *zāḵaḵ* and *zāḵâ* are used for a way (conduct) in Ps. 119:9 (AV "cleanse") and of a prince in Lam. 4:7.

Hebrew *bar*, "pure," appears in Ps. 19:8 (MT 9; NEB "shines clear"); 24:4; 73:1. Related forms are the verb *bārar*, used in 2 S. 22:27 par. Ps. 18:26 (MT 27) and the adjective *bārûr* in Zeph. 3:9.

Other Hebrew terms are: *ʾĕmeṯ*, "reliability," in the expression *zeraʿ ʾĕmeṯ*, lit. "seed of reliability" (Jer. 2:21; AV "right"; NEB "true"); *niqqāyōn*, "cleanness" (Hos. 8:5; AV "innocency"; NEB "innocent"); and the related Aram. *nᵉqēʾ* (Dnl. 7:9; NEB "cleanest").

The *ṭhr* root also predominates among Hebrew terms translated "purify" (piel and hithpael of *ṭāhēr*, "be clean, be pure": Gen. 35:2; Ezr. 6:20; Neh. 12:30; 13:22; Isa. 66:17; Ezk. 43:26; Mal. 3:3; AV also "be clean, cleanse oneself"; NEB also "pronounce ritually clean"), "purity" (*ṭāhôr*: Prov. 22:11), (the act of) "purifying" (*ṭōhar*: Lev. 12:4, 6), and (the state of) "purification" (*ṭohᵒrâ*: Lev. 12:4f.; Neh. 12:45). Other Hebrew terms translated "purify" are the niphal (Isa. 52:11; AV "be clean") and hithpael (Dnl. 12:10) of *bārar*; the piel (Lev. 8:15) and hithpael (Nu. 8:21; 31:19f., 23) of *ḥāṭāʾ*, "make free from (effect of) sin"; the pual of *zāqaq*, "filter, refine" (Ps. 12:6); and the hithpael of *qāḏaš*, "make oneself cultically pure" (2 S. 11:4). Cf. Mish. *Tohoroth*.

"Impurity" in the RSV OT always represents Heb. *niddâ*. Cf. Mish. *Niddah*.

B. NT. In the NT the most common words for "pure," etc. have the Greek root *kathar-*, "clean": *katharós* ("pure," used esp. of hearts [Mt. 5:8; 1 Tim. 1:5; 2 Tim. 2:22] and linen [Rev. 15:6; 19:8, 14; AV, NEB, "clean"]), *katharízō* ("purify" [Tit. 2:14; He. 9:14, 22f.]) and *ekkathaírō* ("purify" [2 Tim. 2:21; AV "purge"; NEB "cleanse"]), *katharótēs* ("purification" [He. 9:13]), and *katharismós* ("purification, purifying" [Lk. 2:22; Jn. 2:6;

3:25; He. 1:3; AV also "purged"; NEB also "purgation"]). This follows the common LXX use of *katharós* for Heb. *ṭāhôr, bar, zākaḳ,* and *ḥāṭā'*. Thus this word-group carries the ideas of innocence from sin, freedom from guilt, and cultic cleanness.

Seventeen uses of "pure" in the RSV NT represent the *hagn-* word-group: *hagnós* ("pure": 2 Cor. 11:2 [NEB "chaste"]; Phil. 4:8; 1 Tim. 5:22; Jas. 3:17; 1 Jn. 3:3), *hagnízō* ("purify"; Jn. 11:55; Acts 21:24, 26; 24:18; Jas. 4:8; 1 Pet. 1:22; 1 Jn. 3:3), *hagneía* ("purity": 1 Tim. 4:12; 5:22), *hagnótēs* ("purity": 2 Cor. 6:6 [NEB "innocence"]; 11:3), and *hagnismós* ("purification": Acts 21:26).

In Mk. 7:4 *rhantízō*, the reading of two of the best older MSS (ℵ and B), was accepted by the RSV translators. (The alternative reading *baptízō* has been accepted in the latest editions of the most common texts of the Greek NT.) The only other NT uses of *rhantízō* are in He. 9:19, 21; 10:22 ("sprinkle"). Since in these passages the sprinkling clearly has to do with a rite of purification, the derived sense "purify" is used in Mk. 7:4 (cf. AV, NEB, "wash").

In Phil. 1:10 the Greek term is *eilikrinḗs* (NEB "flawless"). This term and the noun *eilikríneia* generally mean "sincere," "sincerity" in the NT (cf. AV; also RSV in 1 Cor. 5:8; 2 Cor. 1:12; 2:17; 2 Pet. 3:1).

The basic meaning of Gk. *ádolos* in 1 Pet. 2:2 (AV "sincere") is "unadulterated."

The use of *pistikós*, only in Mk. 14:3 and Jn. 12:3 of the nard, is problematical. In later writings the word is used in the sense of "faithful," "trustworthy." This has led to interpretation of its NT use as "genuine," "unadulterated." More probably, however, *pistikós* refers to some kind of name, perhaps derived from Lat. *spicatum*, from the Greek word for the pistachio tree, or from the East-Indian name of a nard plant (cf. Bauer, rev., p. 662).

"Impure" and "impurity" in the RSV NT always represent Gk. *akatharsía* and *akáthartos*, except for *porneía* in Rev. 14:8; 18:3.

II. OT Meanings.—Although each of these word-groups has its own origins and nuances, in biblical uses almost all of them have the same range of meaning as English "pure": (1) compositional flawlessness or uniformity; (2) ritual or ceremonial purity; (3) moral or ethical purity. Sometimes more than one of these meanings is intended. Heb. *ṭhr* may have "gleaming" as its basic meaning. In the OT it is usually used of cultic purity. Heb. *zkh* has the nuance of "upright" and *brr* of "clean."

A. Compositional Flawlessness or Uniformity. This is surely the basic meaning of the references to pure gold. But since all of the OT references to pure gold except 1 K. 10:21 par. 2 Ch. 9:20; Job 28:19 have to do with furnishings and accessories of the tabernacle (and later the temple) and the garments of the priests, an element of cultic purity may also be present. In Job 28:19 pure gold is a metaphor for wisdom, with an emphasis on value. It is similar to Ps. 12:6, which compares God's pure (*ṭāhôr*) promises with silver that has been "purified" (Heb. *zāqaq*, the second word for "refine" in this verse). The image of refining is also used in Mal. 3:3: God as purifier (*mᵉṭahēr*) purifies (*ṭāhēr*) and refines (*zāqaq*) the sons of Levi. Lack of mixture, with overtones of cultic purity, is also the meaning of "pure" with reference to salt (Ex. 30:35), olive oil (27:20; Lev. 24:2), and frankincense (Ex. 30:34; Lev. 24:7) used in the tabernacle. The pure wool of Dnl. 7:9 is not simply unmixed with other materials but clean and therefore dazzlingly white. The context shows that physical appearance (probably "light-colored, fair") is intended in the expression "purer than snow" in Lam. 4:7.

B. Ceremonial Purity. The predominant meaning of "pure" in the OT is cultically or ceremonially pure. This is purity in the sense of being free from defect that would disqualify someone or something from holy uses or holy acts, i.e., from being in the presence or service of God. It is presumed that anything that is of God is pure: His promises (Ps. 12:6) are pure, like refined silver, and His commandment is pure (Ps. 19:8). In anthropomorphic language, Hab. 1:13 assumes that His eyes are too pure to look at evil. It follows that anyone or anything that is to come into His presence or service ought to be pure. The RSV translates most of the *ṭhr* words, and many of their synonyms (e.g., *brr, zkh*), with "clean," etc. *See* CLEAN AND UNCLEAN.

Thus the Levites had to purify themselves for service in the tabernacle (Nu. 8:12). (The practice was used in foreign cults, too; Isa. 66:17 refers to apostate Israelites purifying themselves for worship of a foreign god.) The altar of burnt offering was purified (Lev. 8:15; cf. Ex. 29:36), as would also be done for the altar of Ezekiel's vision (Ezk. 43:26). The objects of "pure gold" used in the tabernacle and temple were probably considered pure in this sense, too. The incense of Ex. 37:29, although a mixture, can thus be called "pure"; it is made according to a specific recipe because of its sacred use. Mal. 1:11 contrasts "pure" offerings to God by Gentiles with the unworthy offerings that His own people were bringing, thus making necessary a new purifying of the Levites (3:3).

Purification in the OT usually has to do not simply with dedication to holy use but with removal of ceremonial uncleanness (or ritual impurity), which occurred in several ways. One was association with foreign gods, especially idols (cf. Gen. 35:2). Therefore contact with foreign peoples, who worshiped the false gods, rendered God's people impure. Isa. 52:11 mentions purification in a passage that anticipates return from Exile. This need for purification, along with the usual purification for holy service, was probably in mind as the priests and Levites purified first themselves (Ezr. 6:20) and then the people and the rebuilt city gates (Neh. 12:30) after the Exile (cf. 12:45; 13:22).

Ceremonial impurity also occurred as a result of bodily emissions: semen, menstrual flow, and other discharges (Lev. 15). Purification in such cases came as a result of bathing, lapse of a prescribed time, and sometimes an offering. (The ceremonial aspect of this kind of "uncleanness," i.e., that it was not simply physical uncleanness, is shown by the fact that bathing alone did not remove it.) The rules regarding the menstrual period found in vv. 19-24 are referred to in 2 S. 11:4; Ezk. 18:6; 22:10; 36:17. Similar rules of purification applied to childbirth (Lev. 12; cf. Lk. 2:22-24), probably because of the discharge of blood that accompanied it.

Another source of ceremonial impurity was contact with a corpse. Nu. 19 describes the "red heifer ceremony," which included the "water for impurity" (vv. 9, 13, 20f.) as part of the purification process. Association with warfare also rendered unclean, so that the garments of soldiers, the captives, and the booty had to be purified in the same way (31:19f., 23).

C. Ethical Purity. Associated with the concept of ritual purity is the idea that thought and conduct appropriate for a people chosen by God may also be considered "pure," i.e., there is moral or ethical purity. Sometimes it is difficult to know whether cultic purity or ethical purity is meant in a particular text, and in fact both meanings are probably intended in some texts. Hos. 8:5 has to do with cultic impurity (worship of idols), but a strong moral element is probably involved, too.

This moral purity is expressed especially in the Psalms and Wisdom Literature. Persons themselves may be considered pure (Job 8:6; 33:9; Prov. 15:26; 30:12). Purity of

"heart" is mentioned in Ps. 24:4; 73:1; Prov. 22:11. Such purity of the inner life should result in conduct acceptable to the Lord, which can also be considered pure (Job 4:17; Ps. 119:9; Prov. 16:2; 20:9, 11; 21:8). God is seen as good by those who are good, just as He opposes those who do evil (2 S. 22:27 par. Ps. 18:26). Related to pure thought and intention are the pure doctrine of Job 11:41, the pure prayer of 16:17, and the pure speech of Zeph. 3:9.

The purifying of Dnl. 12:10 probably has several levels of meaning: being refined (perhaps through persecution) into a select kind of person, maintaining ceremonial purity (esp. with regard to food and worship of false gods), and ethical conduct.

III. NT Meanings.–Compositional flawlessness or uniformity may be the meaning of the purity of the nard in Mk. 14:3; Jn. 12:3 (see I above). In Revelation both the gold of the heavenly city (21:18, 21) and the linen garments of the angels (15:6; 19:8, 14) are pure in both this sense and the sense of religious purity. The same is true of the pure water of He. 10:22. In 1 Pet. 2:2 milk that is pure in this sense is used in a metaphor for what is religiously correct.

The Jewish sacrificial system, with its acts of ceremonial purification, is mentioned in the NT in Mk. 7:4; Lk. 2:22; Jn. 2:6; 3:25; 11:55; Acts 21:24, 26; 24:18.

The concept of purification through sacrifice is applied to Christ's death, which can be seen as a sacrifice that purifies on a higher level than the OT sacrifices (Tit. 2:14; He. 1:3; 9:13f., 22f.). Christ's act puts the believer in a state of purification, acceptable to God.

In 2 Tim. 2:21 the language of ceremonial purity is used in an ethical context. Often in the NT the concept of purity includes both acceptability to God and the ethical deeds that should result from the purified state. This is probably the case in Tit. 1:15 and the references to a pure heart (Mt. 5:8; 1 Tim. 1:5; 2 Tim. 2:22; Jas. 4:8) or soul (1 Pet. 1:22). Cf. the pure conscience of He. 9:14. The loving (Phil. 1:10) or hoping (1 Jn. 3:3) that Christian faith makes possible results in purity.

A definite emphasis on the ethical sense of purity also occurs (1 Tim. 5:2, 22; Jas. 1:27; 3:17), esp. when "pure" or "purity" is used in a list of virtues (2 Cor. 6:6; Phil. 4:8; 1 Tim. 4:12). All uses of "impure" or "impurity" in the RSV NT have this emphasis.

In the figure of the "pure [*hagnós*] bride" of 2 Cor. 11:2f. both ceremonial and ethical purity are involved, as well as the idea of exclusive relationship. The last aspect is expresed in v. 3 by translating Gk. *haplótēs* and *hagnótēs* (lit. "sincerity and purity") as "sincere and pure devotion."

R. F. YOUNGBLOOD E. W. S.

PURGE [Heb. piel of *bā'ar*] (Dt. 13:5 [MT 6]; 17:7, 12; etc.); AV PUT... AWAY; [piel of *ṭāhēr*–'cleanse'] (2 Ch. 34:3, 5, 8); NEB also PURIFY; [piel of *ḥāṭā'*] (Ps. 51:7 [MT 9]); NEB "sprinkle"; [*bārar*–'purify'] (Ezk. 20:38); NEB "rid." To eliminate, usually with the idea of cleansing or purifying. Many uses of "purge" in the AV have been displaced by "cleanse" or "purify," since the modern emphatic and medical senses of "purge" are not justified by the Hebrew and Greek originals.

The basic meaning of *bā'ar* is "burn," an intensive force in the piel. Thus the meaning of "purge" in Deuteronomy is probably "destroy completely." The RSV translation of *ṭāhēr* in 2 Ch. 34 probably follows the AV tradition; the RSV has "cleanse" for similar uses of *ṭāhēr* (e.g., 29:15f., 18; Neh. 13:9, 30). With either translation an underlying concept is the goal of purification (cf. NEB). In Ps. 51:7 the meaning of the Hebrew term is derived from the concept of making a sin offering, which results in purification from sin (cf. ASV "purify"). Purification with hyssop refers to the use of hyssop for sprinkling (cf. NEB) in the rites of purification described in Lev. 14 and Nu. 19. In Ezk. 20:38 the driving out of rebels is seen as establishing not only order but also purification.

PURIFICATION. *See* PURE.

PURIM pōōr'im, pū'rim [Heb. *pûrîm*–'lots' < Akk. *pūrû* (cf. KoB, p. 756a) (Est. 9:26, 28f., 31f.); Gk. *Phrourai, Phrourim* (Ad. Est. 11:1)]; AV Apoc. PHURIM; **PUR** pōōr [Heb. *pûr*–'lot'] (Est. 3:7; 9:24, 26). A Jewish festival celebrated one month before Passover on 14 and 15 Adar, the final month of the biblical year, usually corresponding to February/March.

I. Early References.–The institution of Purim and the events that led to it are recorded in Esther (esp. 3:7; 9:20-32); it was also mentioned in the apocryphal additions to that book (Ad. Est. 10:10-13). Purim was commemorated as early as the Maccabean period, the first day of the feast (14 Adar) being called "Mordecai's day" (2 Macc. 15:36), and was continuously and widely observed down to Josephus's time (*Ant.* xi.6.13 [284-296]). The NT never mentions Purim (although some scholars had suggested that the unnamed feast in Jn. 5:1 was Purim, this theory has generally been rejected; see the comms.); it was celebrated locally and is therefore not to be connected with any of the festal pilgrimages to Jerusalem.

II. Institution.–The book of Esther describes how Haman, who had been made the foremost prince of Persia by King Ahasuerus (probably Xerxes I, 485-465 B.C.), hated the Jews bitterly, some of whom, e.g., Mordecai, were rising to prominence. Haman had the lot (*pûr*) cast to find an opportune day to work his hate upon them. That day turned out to be the 13th of the 12th month (Adar), the last month tried (Est. 3:7-11). But the wisdom of Mordecai, the heroism of Esther the Jewish queen, and the Jews' fasting and praying foiled Haman's dastardly scheme to have all of them slain by royal decree. Haman was hanged on the gallows that he had prepared for Mordecai (7:10; 8:1f.), and Mordecai was honored. The Jews were allowed to defend themselves against their attackers (8:9-14; 9:11-15). Mordecai informed all the Jews in the king's provinces of their great deliverance and enjoined them to keep 14 and 15 Adar as an annual feast (9:20-22). *See also* ESTHER, BOOK OF.

III. Later Celebration.–As the Jews passed from one civilization or empire to another, so many causes arose to remind them of the persecutions of Haman that the festival of a triumph over such persecutions was attractive and most significant. The 13th day is observed by fasting in commemoration of Esther's prayer and fasting before she approached the king. In the evening, at the beginning of the 14th day, the book of Esther is read in the synagogues with interpretations; the listeners shout, shake rattles, stamp their feet when Haman's name is read. Other persecutors and foes also sometimes are execrated. The names of Mordecai and Esther receive blessings. On the morning of 14th synagogue services are again held and presents are given to the poor and to friends. The rest of the day and the 15th are spent feasting and rejoicing; even certain excesses are condoned in the exuberance of national spirit. See also Mish. *Megillah*.

IV. Theories about Its Origin.–Many attempts have been

made to trace the origin of Purim to pagan festivals or to events in Jewish history other than those described in Esther (for surveys see C. A. Moore, pp. xlvi-xlix; and esp. Paton, pp. 77-94). (1) It has been identified with the Assyrian New Year, when officials entered their term of service. (2) The Babylonian *puḫru*, New year festival, is another association; Mordecai then becomes Marduk, Esther is Ishtar, and Haman, Vashti, and Zeresh are Median gods (see Zimmern). (3) The most popular identifications are with Persian festivals; Pur is said to derive from *bahr*, "lot," from *purdighân*, "new year," or from *farwardighan*, the feast of departed souls (see Lewy, *HUCA*). (4) Origin has been sought also in a Greek bacchanalian occasion. (5) Others have linked it with Jewish experiences other than that recorded in Esther, such as a captivity in Edom, a persecution under the Ptolemies in Egypt, or the victory of Judas Maccabeus over Nicanor in 161 B.C. (1 Macc. 7:39-50; 2 Macc. 15:20-36). (6) Twentieth-century thought has tended to discount both mythological and historical experience for the explanation of Purim. R. H. Pfeiffer insisted that the whole book of Esther is fiction, that *pûrîm* has no sensible etymology, and that the feast as well as its name must have been simply invented by the author of the tale (*PIOT*, p. 745). None of these theories, however, squares with the teaching of Scripture or possesses sufficient probability even to have secured for itself general acceptance. Esther remains the most reasonable account; the term *pûrîm* is now well authenticated from Akkadian as meaning just what Scripture says it means, namely, "lots" (see Hallo). When excavating the royal city ("Shushan the palace") in 1884-86, M. Dieulafoy found among the debris of the "King's Gate" near the ruined apadana (throne room) a quadrangular prism or die engraved with the numbers 1, 2, 5, and 6, and with this "die" (*pūr*) the lots were cast (cf. M. Unger, *Archaeology and the OT* [1954], p. 309). The difficulties met in Esther are clearly not as great as those presented by other explanations.

E. MACK

PURITY. *See* PURE.

PURLOIN. To misappropriate or steal. The term is the AV translation of Gk. *nosphízomai*, "put aside for oneself, misappropriate" (Bauer, rev., pp. 543f.), in Tit. 2:10 (RSV, NEB, "pilfer"; cf. Acts 5:2f.; AV, RSV, NEB, "keep back"). Embezzlement of a master's property was a common temptation among slaves.

PURPLE [Heb. *'argāmān* (Ex. 25:4; etc.), *t^{e}ḵēleṯ*–'blue, blue-violet' (Ex. 23:6), *tôlā^{ʿ}*–'scarlet, crimson' (Lam. 4:15); Aram. *'arg^{e}wān* (Dnl. 5:7, 16, 29); Gk. *porphýra* (Mk. 15:17, 20; etc.), *porphyroús* (Jn. 19:2, 5; Rev. 18:16)]; AV also BLUE, SCARLET; NEB also BLUE; **SELLER OF PURPLE GOODS** [Gk. *porphyrópōlis*] (Acts 16:14); NEB "dealer in purple fabric." The most highly prized dye in the ancient world obtained from the secretions of four molluscs native to the eastern Mediterranean: *helix ianthina, murex brandaris, murex trunculus*, and *purpura lapillus*. Various shades could be produced by mixing secretions from different species, by adding salt or other substances, or by using procedures such as double dyeing. Purple-dyeing establishments were located, of course, along the seacoast. A number of references to purple-dyed cloth (*Ugargmn*), sold by weight, have been found in the Ugaritic texts (15th cent. B.C.). Tyre and Sidon were well known as sources of purple, as is attested also by heaps of discarded shells found there. Recent excavations at Ashdod Harbor (Tell Ḥēḏar) have exposed shell heaps as well as dye vats. (*See also* DYE.) Pliny the Elder describes the production of purple in *Nat. hist.* ix.61-64. The importance of this industry can be seen in the name Phoenicia, which derives from *phoinikoús*, "red-purple"; the theory that "Canaan" is derived from a word for purple dye in the Nuzi texts (*kinaḫḫu*) has been seriously questioned (*see* CANAAN I).

Since approximately eight thousand molluscs were required to produce one gram of purple dye, purple cloth was extremely expensive, and the Bible refers to it almost exclusively as used by kings or for cultic purposes. Heb. *'argāmān* (LXX *porphýra*) occurs repeatedly in the descriptions of the tabernacle curtains, veil, and screen (Ex. 26:1, 31, 36; 27:16; 35:5, 23, 25 35; 36:8; 38:18, 23), of the priestly vestments for Aaron and his sons (28:5, 8, 15, 33; 39:1f., 5, 8, 24, 29), and of the hangings of the Solomonic temple (2 Ch. 2:7 [*'arg^{e}wān*], 14; 3:14). It frequently occurs in a list with *t^{e}ḵēleṯ* (RSV usually "blue"), *tôlā^{ʿ}* (RSV usually "scarlet"), and other rich fabrics, embroidery, gold and silver, etc. It indicated the awe-inspiring luxury of King Solomon's palanquin (Cant. 3:10) and of the hangings in the palace of King Ahasuerus (Est. 1:6). Garments of purple could be a kingly reward (8:15; Aram. *'arg^{e}wān*, Dnl. 5:7, 16, 29); they could also be a sign of well-deserved prosperity (Prov. 31:22).

In other passages, however, reference to the unnecessary expense and luxury of purple carries overtones of the pride that goes before a fall. Purple is the clothing of idols doomed to perish (Jer. 10:9); it is the ship's awning in Ezekiel's oracle against Tyre (Ezk. 27:7); it is the dress of the frightening Assyrian warrior (23:6), who had already been overpowered by Babylon when Ezekiel's prophecy was written. Jesus uses it in this way in the story of the rich man dressed in purple (Gk. *porphýra*) who scorned Lazarus (Lk. 16:19). Likewise, Revelation speaks of the purple clothing of the personified wicked city Babylon (Rev. 17:4; 18:16) and also refers to purple as an article of the city's prosperous but doomed trade (18:12).

In Mk. 15:17, 20 *porphýra* denotes the "purple cloak" with which the soldiers dressed Jesus when they mocked Him; the parallel passage in Jn. 19:2, 5 uses *himátion porphyroún* ("purple robe").

Acts 16 reports that Lydia from Thyatira, who was converted by the apostle Paul when he visited a women's prayer meeting outside Philippi, after her baptism put her house at the disposal of the early Church (vv. 14f., 40). This represented a generous deed by a woman of substantial wealth, since she was a merchant of purple goods (*porphyrópōlis*).

D. IRVIN

PURPOSE (vbs.) [Heb. *yā^{ʿ}aṣ*–'advise, counsel' (Isa. 14:24, 26f.; 19:12, 17; etc.), *zāmam*–'consider, purpose, devise' (Jer. 4:28; Lam. 2:17; Zec. 1:6; 8:14f.), *yāṣar*–'form, fashion' (Isa. 46:11), *ḥāpēṣ*–'delight in' (Isa. 55:11),

'āmar–'utter, say' (1 K. 5:5 [MT 19]; 2 Ch. 2:1 [MT 1:18])]; AV also DETERMINE, TAKE COUNSEL, THINK, PLEASE; NEB also DESIGN, PREPARE, RESOLVE, PLAN, etc ; (nouns) [Heb. *'ēṣâ*–'counsel, advice' (Ezr. 4:5; Ps. 106:43; Prov. 19:21; 20:15; Isa. 5:19; etc.), *yēṣer*–'form, framing,' 'purpose' (Dt. 31:21; 1 Ch. 29:18), *ḥēpeṣ*–'delight, pleasure' (Isa. 44:28; 46:10; 48:14), *maḥ^{a}šāḇâ*/*maḥ^{a}šeḇet*–'thought, plan, device' (Jer. 49:20, 30; 50:45; 51:29), *zimmâ*–'plan, device,' 'wickedness' (Ps. 119:150), *m^{e}zimmâ*–'plan, plot' (Job 42:2; Jer. 51:11), *dāḇār*–'speech, word' (Neh. 8:4; Ps. 64:5 [MT 6]), *rā'â*–'evil,' 'misery, distress' ("evil purpose," Ex. 10:10), *ma'^{a}neh*–'answer, response' (Prov. 16:4), *ma'^{a}seh*–'deed, work' (Isa. 54:16); Gk. *próthesis*–'plan, purpose, resolve, will' (Acts 11:23; 27:13; Rom. 8:28; Eph. 1:11; 3:11; 2 Tim. 1:9), *boulḗ*–'counsel,' 'resolution, decision' (Lk. 7:30; 23:51; 1 Cor. 4:5; He. 6:17), *boúlēma*–'intention, purpose' (Acts 27:43), *gnṓmē*–'decision, declaration' (Rev. 17:17), *eudokía*–'favor, good pleasure' (Eph. 1:5, 9), *télos*–'end' (Jas. 5:11]; AV also COUNSEL, IMAGINATION, THOUGHT, PLEASURE, etc.; NEB also PLAN, THOUGHT, WILL, POLICY, PLEASURE, etc. In eight OT passages either contextual considerations or idiomatic expressions account for the RSV rendering "purpose" (Ex. 9:16; Lev. 11:32; 1 Ch. 12:33; Neh. 6:13; Job 10:13; Ps. 57:2 [MT 3]; 138:8; Jer. 6:20). In the NT the RSV "for this purpose" translates the demonstrative *hoútos* when it occurs with the prepositions *epí* (Lk. 4:43), *diá* (Jn. 12:27), or *eis* (Acts 9:21; 26:16). Similar is Gk. *eis autó toúto*, which is rendered "for the very purpose" (Rom. 9:17) and "for this very purpose" (Eph. 6:22; Col. 4:8). The RSV translates the articular infinitive Gk. *eis tó eínai* "the purpose was to make" (Rom. 4:11; AV "that . . . might be"; NEB "consequently"; cf. BDF, § 402 [2]). In Gal. 2:21 the RSV translates Gk. *dōreán* (lit. "freely," "as a gift") "to no purpose" (AV "in vain"; NEB "for nothing"). The RSV translates Gk. *ou kalós* "for no good purpose" (Gal. 4:17; AV "not well"; NEB "not with an honest envy"; NEB mg. "not with honest intentions"). In Gal. 4:18 it translates Gk. *en kalṓ* "for a good purpose" (AV "in a good thing").

In prophecies against Assyria (Isa. 14:24-27), Egypt (19:1-15), and Tyre (23:1-12) it is evident that judgment shall come according to that which Yahweh plans (Heb. *yā'aṣ*, Isa. 14:24, 26f.; 19:12, 17; 23:8f.). The cognate noun Heb. *'ēṣâ* reflects similar ideas. On occasion Yahweh's detractors may mock His plan (Isa. 5:19); but His plans supersede those of the most powerful nation (14:26f.). And in spite of what people may plan, only the plans of the Lord shall stand (Prov. 19:21).

Human agents also devise plans. For example Israel's enemies thwarted plans to rebuild the temple in Ezra's time (Ezr. 4:5). Also, Ps. 106 rehearses Israel's deliberate acts of rebellion and ingratitude in the wilderness. Accordingly "they were rebellious in their purposes" (v. 43) despite the Lord's repeated acts of deliverance; however, Heb. *'ēṣâ* has a more positive nuance in Prov. 20:5, where the "purpose" of a person, or profundity of thought, remains hidden and latent until it is elicited by another, namely, "a man of understanding" (cf. W. McKane, *Proverbs* [*OTL*, 1977], pp. 536f.).

When translated by "purpose" in the RSV Heb. *zāmam* most frequently refers to divine punishment (Jer. 4:28; Lam. 2:17; Zec. 1:6; 8:14), but it may also refer to divine blessing (Zec. 8:15). The cognate noun Heb. *m^{e}zimmâ* in Jer. 51:11 refers to the punishment of Babylon as Yahweh's plan (cf. 23:20; 30:24). This latter term occurs in Job 42:2 where Job affirms that no one is able to thwart God's plans. Elsewhere in the OT *m^{e}zimmâ* is used of human plans. Used almost exclusively with a negative sense is a second cognate noun Heb. *zimmâ* found in Ps. 119:150 where it connotes an evil plan or device (cf. Ps. 26:10; Prov. 24:9; Isa. 32:7; cf. also *TDOT*, IV, 87-90).

In several instances Heb. *yāṣar* means "form" or "fashion," e.g., as a potter who fashions clay (Isa. 29:16; Jer. 18:2, 4, 6); but when reference is made to God's previously determined plans, as in Isa. 46:11 (cf. 2 K. 19:25 par. Isa. 37:26; Ps. 139:16 [pual]; Isa. 22:11), it has a figurative sense of "frame" or "pre-ordain." The cognate noun Heb. *yēṣer* occurs in Dt. 31:21 and 1 Ch. 29:18. As a noun it pertains to the inclinations or intentions in a person's heart, which in Dt. 31:21 tend toward evil (cf. Gen. 6:5; 8:21).

According to Isa. 55:11 the Lord's word accomplishes that which He "purposes" or desires (Heb. *ḥāpēṣ*), i.e., "nothing can prevent its effective operation" (R. N. Whybray, *Isaiah* [*NCBC*, repr. 1981], II, 193). Heb. *ḥēpeṣ*, a cognate noun, also occurs in Isaiah and refers to the good pleasure or will of Yahweh (Isa. 44:28; 46:10; 48:14; cf. Jgs. 13:23).

In 1 K. 5:5 (MT 19) and 2 Ch. 2:1 (MT 1:18) Heb. *'āmar* with the preposition *l^e* and an infinitive has the sense of "intend," thus the RSV "purpose" (cf. Ex. 2:14; 2 S. 21:6; 2 Ch. 28:10, 13).

Also, Jeremiah's oracles against the nations (Jer. 46:1–51:64) include a plan (Heb. *maḥ^{a}šāḇâ* / *maḥ^{a}šeḇeṯ* [< *ḥāšaḇ*, "think, account"]) for judgment of Edom (49:20), of various Arab tribes (49:30), and of Babylon (50:45; 51:29).

In the NT Gk. *próthesis* pertains to human resolving, undertaking, or purposing when the RSV translates it by "purpose" (Acts 11:23; 27:13; *TDNT*, VIII, 166). Also, in Rom. 8:28 this term does not refer to a person's "free act of choice," but rather to "God's eternal purpose of mercy" (C. E. B. Cranfield, *Romans*, I [*ICC*, 1975], 492f.), which is integrally related to His effectual calling (cf. vv. 29f.; also 9:11). Likewise, the plan of reconciliation in Christ was according to God's "eternal purpose" (Eph. 3:11; cf. 1:11; also 2 Tim. 1:9).

When translated "purpose" Gk. *boulḗ* may be roughly divided into two categories: divine will (Lk. 7:30; He. 6:17) and human will (Lk. 23:51; 1 Cor. 4:5). Lk. 7:30 refers to the rejection of God's redemptive plan (Gk. *boulḗ*) by the Pharisees and the lawyers. In He. 6:17 this term pertains to the unchangable character of God's plan, namely, His plan of universal scope that He promised to realize in Abraham's seed (v. 14; cf. Gen. 22:16-18). 1 Cor. 4:5 uses this term in the sense of inner deliberations (*TDNT*, I, 635). Similar to this term is the cognate Gk. *boúlēma* found in Acts 27:43, which relates the plans or intentions of the soldiers to kill the shipwrecked prisoners (cf. Gk. *boulḗ*, v. 42).

In Eph. 1:5, 9 Gk. *eudokía* refers to God's free good pleasure, and specifically to "His resolution to save" (*TDNT*, II, 747; cf. M. Barth, *Ephesians* [*AB*, 1974], I, 105-109).

The precise nuance of Gk. *gnṓmē* in Rev. 17:17 is difficult to ascertain. It may refer to a royal decree similar to the edicts of the Persian kings (cf. J. M. Ford, *Revelation* [*AB*, repr. 1981], p. 292), or it may simply refer to the "decision" or "purpose" of God. Also, it should be noted that "purpose" and "mind" in 17:17 translate the same Greek term, which makes possible the rendering "God has put it into their hearts to carry out his mind by being of one mind . . ." (G. R. Beasley-Murray, *Revelation* [*NCBC*, repr. 1981], p. 260).

Though Gk. *télos* may mean "cessation" or "death" it does not, as is often assumed, have this sense in Jas. 5:11. Rather it has the sense of "outcome," i.e., the outcome of

Job's suffering (cf. M. Dibelius, *James* [*KEK*, rev. ed. 1964; Eng. tr., *Hermeneia*, 1975], pp. 246f.).

See also COUNSEL; PLAN; PREDESTINATION; WILL OF GOD.

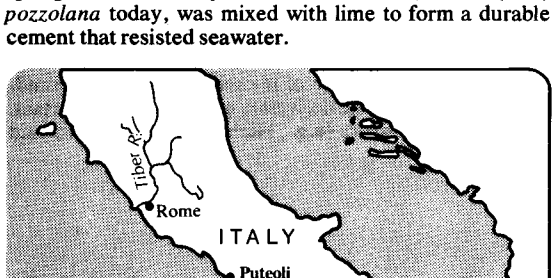
Bibliography.—*TDNT*, I, *s.v.* βούλομαι κτλ. (Schrenk); *s.v.* γινώσκω κτλ.: γνώμη (Bultmann); II, *s.v.* εὐδοκέω, εὐδοκία (Schrenk). G. L. KNAPP

PURSE [Heb. *kîs*] (Prov. 1:14; Isa. 46:6); AV, NEB, also BAG; [Gk. *ballántion*] (Lk. 10:4; 12:33; 22:35f.); AV also BAG. A small bag in which money is carried. The Heb. *kîs* (a term still used in modern Arabic) could also be used for carrying merchants' weights (*see* BAG). When Jesus sent out the seventy, He forbade them to take a bag of money such as travelers usually carried (Lk. 10:4; but cf. 22:35f.). In 12:33 "purses" figuratively represents receptacles for heavenly treasure; unlike ordinary money purses, such "purses" do not wear out and lose their contents.

PURSLANE pər'slən, pər'slān [Heb. *ḥallāmûṭ*] (Job 6:6); AV "white of an egg"; NEB MALLOWS. Exact identification of the term is not possible (see comms.). The RSV translation rests upon the Syriac Version, while the AV is based on the Targum. Purslane is an herb with thick, tasteless juice. Some scholars have suggested another herb, the MALLOW (cf. NEB). The figure concerns insipid foods.

PURVEY'S BIBLE. *See* ENGLISH VERSIONS II.D.

PUT pōōt [Heb. *pûṭ*; Gk. *Phoud, Phout, Phouth, Libyes*]; AV also PHUT (Gen. 10:6; Ezk. 27:10), LIBYA (Ezk. 30:5; 38:5), LIBYANS (Jer. 46:9), PUL (Isa. 66:19), PHUD (Jth. 2:23). A region in Africa, probably = Libya or a part of Libya, but see discussion below.



In Gen. 10:6 (= 1 Ch. 1:8) the sons of Ham are given: Cush, Misraim (Egypt), Put, and Canaan. For each of these, except Put, other descendants are named, which leaves us without a clear tradition concerning the identification of Put. As a result, two identifications have been offered: Punt (Somaliland) and Libya. The LXX supports the second, since it translates the Hebrew as *Phoud* only in the passages naming the sons of Ham; elsewhere it regularly translates Heb. *pûṭ* by Gk. *Libyes*, "Libyans" (Jer. 26:9 [MT 46:9]; Ezk. 27:10; 30:5; 38:5; Nah. 3:9). In Isa. 66:19 the MT reads *pûl wᵉlûḏ*, which the LXX translates as *Phoud kaí Loud*, suggesting that the Hebrew text should be emended to read *pûṭ* (so RSV, NEB, BHS). The combination *Phoud kaí Loud* occurs again in Jth. 2:23. This passage, however, details the march of Holofernes and his whole army in Asia Minor ("Upper Cilicia") and from there down the Euphrates to the sea (v. 24), so it is of little help in locating Put.

The identification of Put with Punt, which was formerly widely held, is set forth in detail by T. G. Pinches, "Put," *ISBE* (1929), IV, 2510. Etymologically Heb. *pûṭ* was taken to be equivalent to Egyp. *pwn.t*, "Punt," probably to be identified with Somaliland. The *n*, it was explained, would assimilate to the *t* and then simplify *tt* > *t*. But the *t* in the Egyptian word is probably the feminine ending, which would be *tau* in Hebrew and not *ṭêṭ*. Pinches held that Punt lay on both sides of the (Red) sea, and found support for this identification in a fragment of a tablet from the 37th year of Nebuchadrezzar, in which *pu-ṭu-ya-a-man* is taken to mean "Put of Yemen."

This identification is to be rejected. In addition to the fact that the LXX regularly represents Put as the Libyans (*see* LIBYA), other data must be considered. Egypt came under the control of foreign rulers *ca.* 945 B.C., and the 22nd Dynasty is often referred to as "Libyan." There is considerable confusion in the records, but the "chiefs of the Meshwesh," as the earliest rulers called themselves, have to be related to the Libyans who had been repelled by Merneptah and Ramses III (cf. A. Gardiner, *Egypt of the Pharaohs* [1961], p. 324). Their capital was in the north, either at Tanis or at Bubastis (both in the eastern Delta). The campaign of Nebuchadrezzar (568/67 B.C.) was against "[Ama]sis the king of Egypt" (570-526 B.C.), who had revolted, it appears, calling up his troops from "[ ]qu of the city of Puṭu-yawan . . . a distant land which is in the midst of the sea" (*CAH*, III [1925], 304, tr. S. Smith; cf. *ANET*, p. 308). Amasis had married a Cyrenian Greek (*see* CYRENE). Puṭu-yawan (reading *man* as orthographic for *wan*), "Ionian Put," has sometimes been identified with the island of Lesbos (cf. *CAH*, III, 304). But Cyrene could be similarly described. It is hardly likely that Amasis would have called up troops from "Put of Yemen," i.e., from southern Arabia or Somaliland, and since a portion of Libya had been settled by Greeks in the 7th cent. B.C. it could indeed have been identified as "Ionian Put." (For further discussion, cf. *CCK*, pp. 94f., Table XXI.) Furthermore, the Egyptian dynasties from the 22nd until the Persian (27th) were either Cushite ("Ethiopian," i.e., the region better known as Nubia) or Saïte (i.e., the western part of the Delta, probably Libyan), with considerable confusion in the records and probably some overlapping of the dynasties. It follows, then, that the association of "Cush" (Ethiopia) with "Lud" (Lydia) and "Put" in the biblical passages from that historical period certainly lends support to the identification of Put with all or part of Libya.

W. S. LASOR

PUTEOLI pōō-tē'ō-lē [Gk. *Potioloi*-'sulfur springs'] (Acts 28:13). A maritime city of Campania in Italy where Paul landed on his voyage to Rome; the modern name is Pozzuoli. It is on the northern shore of a recess in the Gulf of Naples, protected on the west by the peninsula of Baiae and Cape Misenum. The region was volcanically formed, and Puteoli owed its name to the odor of the sulphurous springs in the vicinity. The volcanic dust, called (Ital.) *pozzolana* today, was mixed with lime to form a durable cement that resisted seawater.

Puteoli was originally a colony, founded probably in the 6th cent. B.C., of the neighboring Greek city Cumae (Strabo *Geog.* v.4.5f.); it was called Dicaearchia. The earliest event in its history that can be dated definitely is a Roman garrison's repulse of Hannibal before its walls in 214 B.C. Carthage's effort to secure a seaport as a base of supplies and communication was thus thwarted (Livy xxiv.7.10-12; 12.1–13.7). Puteoli became the first Roman

port on the Gulf of Naples when a Roman colony was established there in 194 B.C. (Livy xxxiv.45.1-3; Strabo *Geog.* v.4.6; Velleius i.15.1-3).

The city's consequent commercial prosperity as the chief seaport of the capital was due to the harbor's safety and the inhospitable character of the coast nearer Rome. The harbor was doubly protected by a mole, known to have been at least 382 m. (418 yds.) long, consisting of massive piers connected by solid masonry arches (Strabo *Geog.* v.4.6). Extensive remains of this mole are still visible. The shoreline devoted to commerce (*emporium*) extended about 2 km. (1¼ mi.) west from the mole; the imports handled there consisted chiefly of Egyptian grain and oriental wares from Alexandria and other cities of the Levant (Suetonius *Augustus* 98.1-10; Strabo *Geog.* xvii.1.7; Seneca *Epistulae morales* 77.1f.). At the height of Puteoli's prosperity under Claudius and Nero its population, estimated at nearly 100,000, included many people from the Eastern part of the empire.

Puteoli declined in importance when Claudius built an artificial harbor at Portus Augusti and when Trajan made the mouth of the Tiber the principal converging point for the Mediterranean Sea trade, but Puteoli and Baiae remained the favorite resort area of the Roman nobility. The foundations of many ancient villas are still visible, although partly covered by the sea. Cicero had a villa in this region (Cicero *Ad Atticum* xiv.16.1; 20.1). In the bay between Puteoli and Baiae NERO tried to have his mother Agrippina drowned by means of a boat that came apart while carrying her toward her villa near the Lucrine Lake (Tacitus *Annals* xiv.5).

The Apostle Paul found Christians living in Puteoli and stayed with them seven days on his way to Rome (Acts 28:13f.). At that time the ordinary route to Rome, along the Via Appia from Capua, was 155 Roman miles (about 229 km., 142 mi.). Later Domitian reduced the distance by laying out the Via Domitia along the coast.

G. H. ALLEN
B. F. HARRIS

PUTHITES pōō'thīts [Heb. *pûṯî*]; AV PUHITES. One of the families of Kiriath-jearim, mentioned only in 1 Ch. 2:53.

PUTIEL pū'tē-əl [Heb. *pûṭî'el*] (Ex. 6:25). Father of Aaron's daughter-in-law, the wife of his son Eleazar, thus grandfather of Phinehas. The derivation of the name is uncertain. Most modern scholars (e.g., Noth in *IP*, p. 63) have said that it is of Egyptian origin, meaning "he whom God ['El] gives" (cf. Potiphar, "he whom Re gives"), while earlier scholars connected it with Syr. *pûṭ*, "scorn, deride," hence "scorned by God." Since *pûṭ*, "scorn," does not occur elsewhere in Hebrew, and since many of the names in the Exodus account do show Egyptian influence (as one would expect), the Egyptian derivation seems more likely than the Syriac. G. A. L.

PUVAH pū'və [Heb. *puwwâ, puwâ*]; AV PHUVAH, PUA; NEB PUA. Issachar's second son, who was among those who went down to Egypt with Jacob (Gen. 46:13); ancestor of the Punites, who were counted in the census taken by Moses and Eleazar (Nu. 26:23). He is called "Puah" in 1 Ch. 7:1.

PYGARG pī'gärg (Dt. 14:5, AV). *See* IBEX.

PYRAMID pir'ə-mid [Gk. *pyramís*].

The gigantic stone tombs in Egypt with square bases and four triangular sides meeting at a point were called by the Greeks *pyramís* (genitive *pyramídos*), perhaps after the shape of their wheat cake *pyramoús*.

The earliest pyramid was the step pyramid of Djoser (3rd Dynasty) built at Saqqârah *ca.* 2700 B.C. The most famous pyramids are those of Cheops and Chephren (4th Dynasty, *ca.* 2600 B.C.) at Gîzeh, the only one of the ancient Seven Wonders to survive. Though the ancient Hebrews in captivity in Egypt must have seen these monuments, the OT never refers to them.

According to 1 Macc. 13:28-30 Simon erected seven pyramids for his parents, four brothers, and himself at their hometown of Modein (el-Medieh E of Lydda). Josephus (*Ant.* xiii.6.6 [211f.]) commented on their size and beauty. These monuments were still visible at the time of Eusebius and Jerome. E. M. YAMAUCHI

PYRE [Heb. *m^eḏûrâ*] (Isa. 30:33); AV PILE; NEB FIRE-PIT. Heb. *m^eḏûrâ*, denoting a circular pile of wood intended for use in human sacrifice, also occurs in Ezk. 24:9 (AV, RSV, "pile"; NEB "fire-pit"); cf. Lev. 18:21; 20:2-5; Jer. 32:35; Ezk. 16:20f. *See also* MOLECH.

PYRRHUS pir'əs [Gk. *Pyrros*–'fiery red'; cf. *pýr*–'fire']. Father of Sopater, one of Paul's travelling companions (Acts 20:4). The AV omits the name, following a later textual tradition.
