Gideon was from Manasseh, although his combat with the Midianites took place in Jezreel (Jgs. 6:33-35). Abimelech's attempt to become king was centered at Shechem (Jgs. 9). The ark of the covenant rested in the territory which later belonged to the northern kingdom from the time it was brought over Jordan (Josh. 3) until it was taken into battle against the Philistines at Aphek (1 S. 4:1-4). However, the details of its location are not clear. The reference to Bochim (Jgs. 2:1-5) may suggest that this place was the first location — but Bochim has not been identified, and some scholars follow the LXX, which reads Bethel instead of Bochim. Some confirmation may be found in 20:18, which states that the people of Israel went to Bethel to inquire of God, from which it might be inferred that the high priest was there. On the other hand, Jgs. 18:31 records that the house of God was at Shiloh, and certainly the ark was in Shiloh when Eli was priest (1 S. 4:4; cf. 1:9; 2:13f.; 3:3; note reference to "the temple of the Lord").

After the conquest of the land (partial, it must be remembered; cf. Josh. 23:4; Jgs. 1 *passim*) a division between the northern and southern tribes developed, which some would attribute in part to Joshua's failure to settle the problem of the Gibeonites (Josh. 9:3-27). When Rehoboam succeeded Solomon (931 B.C.), he went to Shechem to be crowned king (1 K. 12:1), but the people of the northern tribes rejected him (12:16) and seceded, forming the northern kingdom, later to be known as "Israel," "Ephraim," and "Samaria." Jeroboam, an Ephraimite (1 K. 11:26), was crowned king and made Shechem his capital (12:20, 25); later he moved to Penuel and still later to Tirzah (cf. 14:17). He erected two shrines, one at Bethel at the southern end of Samaria, the other at Dan in the north of Galilee (12:30), then part of the northern kingdom. Baasha (909-886 B.C.) reigned at Tirzah, as

did his successors until Omri. At that time there was a struggle for power with rival kings (16:21). Omri prevailed and after he had reigned from Tirzah for six years he built a new capital which he called "Samaria" (*ca.* 879 B.C.; 16:23f.).

Samaria was the scene of some of Elijah's ministry, notably in the time of Ahab (874-853) and his wife Jezebel (1 K. 18). The most dramatic was his conflict with the prophets of Baal on Mt. Carmel (1 K. 18:17-49). Elisha lived at Abel-meholah in eastern Samaria (19:16) and he became Elijah's disciple from there (v. 21). In his days, Ben-hadad the king of Syria besieged Samaria (20:1) but was defeated by Ahab (v. 21). The Transjordan region, which had been part of the tribal allotment of Manasseh, was occupied by the Syrians until Ahab of Israel and Jehoshaphat of Judah united to retake Ramoth-gilead (22:3-40). At the time of Ahab's death (853 B.C.) Mesha king of Moab rebelled (2 K. 3:5). In the days of Jehu (841-814) "the Lord began to cut off parts of Israel" (10:32), including Gilead and Bashan. Jehu survived, most likely because he paid tribute to Shalmaneser III (859-824; cf. *ARAB,* I, § 672; *ANET,* p. 280). In the days of Pekah king of Israel (*ca.* 752-732) Tiglath-pileser III of Assyria (747-727) captured parts of Gilead and Galilee (15:29), thus reducing Samaria approximately to the area now commonly known as Samaria, i.e., the region between Galilee and Judah. He deposed Pekah (732 B.C.) and placed Hoshea on the throne as a puppet (*ARAB,* I, § 816).

Amos, a prophet from Tekoa in Judah (Am. 1:1; 7:10-15), was sent to proclaim God's message to the northern kingdom in the days of Jeroboam II (793-753), probably between 760 and 755 B.C. His message gives us numerous insights concerning the luxury and the injustice of the day. Isaiah of Jerusalem likewise proclaimed part of his prophecy in the days of Rezin of Syria (750-732) and Pekah of Israel (752-732), against the background of the Syro-Ephramite coalition. It is possible that Isaiah (in 9:1), naming "the way of the sea, the land beyond the Jordan, Galilee of the nations," referred to the Assyrian provinces of Dor, Gilead, and Megiddo, respectively (*Macmillan Bible Atlas* [rev. ed. 1977], p. 95, Map 148). Hosea was probably a northerner, to judge from his intimate knowledge of the country, and his prophecy is to be dated (if Hos. 1:1 is to be accepted) between 767 and 722 B.C. From 1:4 we may judge that part, at least, was delivered before the death of Jeroboam II (743 B.C.). The prophesied judgment of God on the northern kingdom occurred in the siege and fall of Samaria (2 K. 17:5) and the carrying into captivity of a large portion of the inhabitants (*see* SHALMANESER 3; SARGON III). Samaria was populated with exiles from other places which Assyria conquered (v. 24ff.).

B. Between the Testaments. After the return from exile, Judah and Benjamin were opposed in their efforts to rebuild the temple by those who had been previously resettled in Samaria (Ezr. 4:1, 10). At that time Samaria was part of the Persian province of Beyond the River (Akk. *eber nâri*), of which Tattenai was governor (5:3). The breach between Jews and Samaritans probably became permanent with the building of a temple on Mt. Gerizim. According to Josephus this took place in the reign of Darius III Codomannus (335-330) (*Ant.* xi.8.4 [322]; cf. H. H. Rowley, "Sanballat and the Samaritan Temple," *BJRL,* 38 [1955-56], 166-198, repr. in *Men of God* [1963], pp. 246-276; Rowley has a good discussion of the time of the breach). The problem of confusion of the Sanballat of Ezra and that of Josephus seems now to be settled by the discoveries in Wâdī Daliyeh; cf. W. S. LaSor, *et al., OT Survey* (1982), p. 652; and F. M. Cross, "Papyri from the Fourth Century B.C. from Daliyeh," in D. N. Freedman and J. C. Greenfield, eds., *New Directions in Biblical Archaeology* (1969), pp. 41-62.

Samaria came under control of Alexander (*ca.* 332 B.C.). In an uprising, his prefect Andromachus was burned to death, and Alexander took vengeance by destroying Samaria and settling a Macedonian colony in its place. Skeletons of about two hundred people were found in the cave in Wâdī Daliyeh, and from the papyri found there it can be ascertained that these were of Samaria's leading families. Several centers of Hellenism were located in or on the edge of Samaria: Samaria (Sebaste), Scythopolis (Beth-shean), Acco (Acre), and Philadelphia (Amman).

The Maccabean revolt (167 B.C.) erupted in Modein, a location between Lydda and Beth-horon (*Macmillan Bible Atlas,* Map 185; 1 Macc. 2:1). The author of Maccabees recorded that Judas was opposed by Apollonius, who had gathered together a force composed of Gentiles and a large number from Samaria (3:10), indicating that Samaria was a stronghold of Hellenistic Jews. According to 2 Macc. 6:2, the temple on Mt. Gerizim had been dedicated to Zeus the Friend of Strangers. Josephus tells us that the Samaritans, claiming that they were colonists from the Medes and Persians, requested this change (*Ant.* xii.5.5 [257-261]). In the days of Jonathan (*ca.* 152-142), a portion of southwestern Samaria, as well as Perea, was added to Judea (1 Macc. 11:33-34; *Ant.* xiii.4.9 [125], 2.3 [50], see n. *c* to § 50 in *LCL*). John Hyrcanus proceeded to take more of Samaria, until he had it all (*ca.* 126-104). He completely destroyed the city of Samaria (*Ant.* xiii.10.3 [281]), which was confirmed by the excavations of 1909-1910 under Reisner, Fisher, and Lyon. He also captured the Samaritan temple on Gerizim (*Ant.* xiii.9.1 [255]).

The Romans, under Pompey, took over Judea in 63 B.C. He proceeded to "liberate" the hellenized regions, thus Samaria was once again free from Judea (*Ant.* xiv.4.4 [74-76]). The Jews kept eastern Idumea, Judea, Perea, and Galilee. The last three were considered Jewish provinces, even after Herod the Great (40-4B.C.) became king of the entire area (cf. Mish. *Baba Bathra* iii.2; Mt. 4:25). *See* PEREA. A new city (Neapolis, modern Nâblus) was built W of Shechem. Samaria was greatly enlarged by Herod the Great and named Sebaste ("August") in honor of the emperor.

C. NT. In accordance with Jewish custom, Samaria was considered a non-Jewish country in the Gospels, and is rarely mentioned in the NT (11 times, 4 in the Gospels, 7 in Acts). When traveling from Galilee to Jerusalem, Jews usually went along the border between Samaria and the Decapolis (cf. Lk. 17:11) and crossed the Jordan at a ford S of Beth-shean, then southward along the eastern side of the Jordan, recrossing near Jericho, and thence to Jerusalem. (However, Josephus [*Ant.* xx.6.1 (118ff.)] stated that it was the custom of Galileans to "pass through" Samaria at the time of a festival on their way to the Holy City.) The visit of Jesus and His disciples to Samaria (Jn. 4) was quite unusual, as the reaction of the woman at Jacob's well indicates (4:9). When Jesus sent out the Twelve, he charged them to "enter no town of the Samaritans" (Mt. 10:5). On another occasion, when He sent messengers ahead to a village of the Samaritans "to make ready for Him," they refused to accept Him (Lk. 9:52). In the light of the Jewish attitude toward Samaria, it would be specious to argue that Jesus and the disciples continued on to Jerusalem through Samaria after that rebuff.

After the resurrection of Jesus, the attitude began to change. At the Ascension, the disciples were commanded to be His witnesses "in Jerusalem and in all Judea and

Samaria and to the end of the earth" (Acts 1:8). Following the persecution in Jerusalem, the believers (except the apostles) were scattered "throughout the region of Judea and Samaria" (8:1). Philip (the Deacon, not the Apostle, in the light of v. 1) went to a city of Samaria, probably Sebaste, where he preached and did mighty works (8:5-7) and confronted Simon "Magus" (vv. 9f.). When the apostles at Jerusalem heard "that Samaria had received the word of God" (v. 14), they sent Peter and John who prayed that the Samaritans also might receive the Holy Spirit; subsequently they preached the gospel to many villages of the Samaritans (v. 25). The church in Samaria is mentioned together with Judea and Galilee (9:31).

Peter healed Aeneas at Lydda (v. 32), and "all the residents of Lydda and Sharon saw him, and they turned to the Lord" (v. 35). Peter raised Tabitha (Dorcas) from the dead at Joppa (9:36-42). While there, he received his vision and at Cornelius's request went to Caesarea, where the first Gentiles received Christ (ch. 10; cf. 11:16).

Paul landed at Caesarea, returning from his third mission (21:8), and stayed at the house of Philip, one of the seven (cf. 6:5). When Paul was returned to Caesarea for trial before the Roman procurator, after his arrest in Jerusalem, he traveled by the road through Antipatris (OT Aphek). After a period of imprisonment in Caesarea, Paul was sent from there to Rome (25:6, 13; 27:1).

D. To the Destruction of Jerusalem. After the death of Herod the Great (4 B.C.) Archelaus (4 B.C. - A.D. 6) was named ethnarch of Judea, Idumea, and Samaria (*BJ* ii.6.3 [96]). He was banished in A.D. 6 and his ethnarchy was placed under a Roman procurator. His brother Antipas (4 B.C. - A.D. 39), the "Herod" of the Gospels, was tetrarch of Galilee and Perea, but was able to obtain the dynastic title of Herod (*Ant.* xvii.13.1 [342-344]). Agrippa I (A.D. 37-44), by a series of events (or manipulations), finally gained dominion over Judea and Samaria, and his kingdom was as great in extent as that of Herod the Great (*Ant.* xix.4.1-6 [236-273], 5.1 [274]).

Mention might be made here of Jamnia (Jabneh), which was on the Judean side of the border with Samaria. Just before the fall of Jerusalem, Vespasian granted to Johanan ben Zakkai permission to establish an academy (Yeshiva) at Jamnia (*Aboth de Rabbi Nathan* iv.11b-12a). After the fall of Jerusalem, the Beth-Din, successor to the Sanhedrin, was established in that location (G. F. Moore, *Judaism,* I [1927], 83-87). According to one school of interpretation, Jamnia was the location of a council that established the canon of Scriptures (*ca.* A.D. 90). After the destruction of Jerusalem by Hadrian, the center of Jewish learning shifted to Galilee, first to Usha, then to Sepphoris, and finally to Tiberias (cf. T.B. *Rosh ha-Shanah* 31a-b).

SAMARITANS sə-mâr'i-tənz [Heb. *šōmrōnîm;* Gk. *Samarítēs*] (2 K. 17:29; Mt. 10:5; Lk. 9:52; 10:33; 17:16; Jn. 4:9, 39f.; 8:48; Acts 8:25). The people who dwelt in Samaria; subsequently the religious sect unique to that area.

I. Origins
II. History
III. Beliefs and Practices
IV. Affinities with Other Groups

I. Origins.–The Samaritans claim descendancy from the northern Israelite tribes of Ephraim and Manasseh following the destruction of the northern kingdom of Israel by the Assyrians in 722 B.C. Since Assyrian documents record deporting a relatively small proportion of the Israelites (27,290), it is quite possible that a sizable population remained that could identify themselves as Israelites, the term that the Samaritans prefer for themselves, indicating their status as remnants of the northern kingdom. They accept the designation of "Samaritan," which they translate as "keeper" (of the faith) in contrast to the "schismatic Jews" who did not keep the faith and led by Eli moved the sanctuary from Shechem at the foot of Mt. Gerizim to Shiloh in the 11th cent. B.C. The Samaritans say further that Ezra falsified the Pentateuch (e.g., changing "Gerizim" to "Ebal" in Dt. 27:4 and introducing a new script for the Hebrew characters).

By contrast, Jewish sources (notably 2 K. 17 and Josephus) report that the Samaritans are descendants of colonists that the Assyrians brought into the region of Samaria from other lands that they had conquered. The Assyrians did practice the relocation of peoples to lessen the likelihood of insurrections. The biblical story adds the information that after being harassed by lions, the new colonists in Samaria were instructed in the proper worship of the area by an Israelite priest whom the Assyrian king sent back for that purpose. The colonists failed to live up to the code that the priest prescribed, and this accounted for both their designation as immoral foreigners and the religious practices they held in common with the Jews.

According to Ezr. 4, the clear separation between Samaritan and Jew was established shortly after the Persians allowed the Jews to return from the Babylonian captivity in 538 B.C. The "residents of Samaria" were rebuffed by the Jews when they asked to help rebuild the temple. Angered by this rejection, the northerners wrote to the Persian king, Artaxerxes, informing him of the Jews' intentions, and successfully thwarted the rebuilding of the city walls. The silence of Haggai and Zechariah concerning any Samaritan interference and the stated dating in the Persian period suggest that only the city wall was at issue and that the earliest breach between the two communities was expressed in political rather than religious terms.

II. History.–Little is recorded about the Samaritans (or anything happening in Judah) during the Persian period. When Sanballat, the Horonite, harassed the Jews rebuilding the walls of Jerusalem under the leadership of Nehemiah, he was supported by his companions and the "garrison in Samaria" (Neh. 4:2). This is either a continuation or a retelling of the account of harassment in Ezra.

It seems clear that relations between Samaritans and Jews worsened throughout the Persian period, a fact that benefited the Persians by weakening the Palestinian potential to mount any rebellion against the government. The next century provided an empirical demonstration of that fact. A few scholars believe that the Samaritan temple was built in 388 B.C., which would place it in the Persian period, but most scholars prefer the scenario outlined below.

Separation between Samaritans and Jews was again dramatized as the Greeks under Alexander the Great overpowered the Persians in 332 B.C., stormed Palestine, and routed the Samaritans from their capital of Samaria. The Samaritans sought refuge in ancient Shechem at the base of the mount that became their chief religious center. The city they rebuilt at Shechem survived for two hundred years until it was destroyed by the Jewish king John Hyrcanus in 107 B.C. Initially the Samaritans seem to have given support to Alexander. A certain Sanballat volunteered eight thousand Samaritan troops to Alexander for his Egyptian campaign, perhaps in return for permission to build a temple on Mt. Gerizim. While Alexander was in Egypt, the Samaritans in Samaria revolted and killed the

newly appointed governor, Andromachus. In retaliation Alexander destroyed the city of Samaria and established a garrison of six hundred troops there. Many of the Samaritans fled to the foot of Mt. Gerizim and, with Alexander's permission, built a temple to rival the Jewish temple at Jerusalem. Remains of that temple, a large structure of unhewn stones, have been excavated beneath the ruins of the later Zeus temple. No earlier remains have been found on the mount. From those remains we learn little about its origins or its form. Samaritan and Jew were now focused on different holy places, and their separate cults were considerably less interdependent, although common feasts, laws, apocalyptic visions, and scriptural recensions show likely continued mutual influence.

During the reign of the Seleucid tyrant Antiochus IV (175-164 B.C.), the Samaritan temple was renamed either Zeus Hellenios (willingly by the Samaritans according to Josephus) or, more likely, Zeus Xenios (unwillingly in accord with 2 Macc. 6:2). The Samaritans did adopt a pro-Syrian policy during the time of Antiochus IV (2 Macc. 6:1f.), earning further animosity from the more rebellious Jews.

John Hyrcanus, a Jewish governor and high priest, destroyed Shechem and leveled the Samaritan temple in 128 B.C., establishing the basis for a new bitterness in Jewish-Samaritan relations. Within ten years Shechem was decimated and most of the Samaritans returned to Samaria, leaving behind only a residual community at the foot of Mt. Gerizim in the towns of Sychar and Neapolis (Nâblus).

In NT times Samaritans shared practices and beliefs with both heterodox and orthodox sects of Judaism. For example, with the Qumrân sectarians they shared a renunciation of the Jerusalem temple, emphasis on the significance of Moses, a messianic interpretation of Dt. 18:18, and the usage of the image "sons of light," while accepting the orthodox feasts and other features prescribed in the Torah. At the same time they struggled with their own schisms. Simon Magus (Acts 8:9ff.) was likely the leader of the Dositheans, an unorthodox, possibly gnostic-influenced, Samaritan group that continued to play a role in Samaritan history, particularly visible in the 4th and 14th cents. A.D.

Some NT books, particularly John, appear consciously to address a Samaritan audience. Scholars have cited as evidence the attention to the Samaritan woman in ch. 4, the reference to "other sheep" in 10:16, and the use of important Samaritan imagery like "light" and "word." Some argue that the speech in Acts 7:22ff. reveals Stephen's Samaritan origin since he, like the Samaritans, challenges the Jerusalem temple and priesthood, refers to the key Samaritan biblical verse, Dt. 18:18, and when he quotes from the Hebrew Scriptures he cites a recension akin to the Samaritan text. Because it presents a strong argument for the superiority of Jesus over Moses some believe that Hebrews may have been addressed to Samaritan Christians. A key evidence is the Samaritans' preference to call themselves Hebrews. Further, the discussion of sacrifice in Hebrews is focused on the tabernacle, which is described and sanctioned by the Pentateuch, rather than the Jerusalem temple abhorred by the Samaritans. The long list of the faithful described in He. 11 before the summary paragraph (11:32-40) is exclusively from the Pentateuch and Joshua, biblical books acceptable to Samaritans (although the Samaritan book of Joshua is considerably different from the Jewish book), and the same heroes are listed in other Samaritan sources.

The Samaritans frequently play an important role in the NT drama. Some references clearly indicate the separation if not hostility between Jew and Samaritan (e.g., Jesus' charge not to enter the Samaritan villages, Mt. 10:5; the charge against Jesus that He was a Samaritan and had a demon, Jn. 8:48; and the editorial comment in Jn. 4:9 that Jews have no dealings with Samaritans). In other cases Jesus uses that very antipathy to shame or confront His hearers, e.g., the case of the good Samaritan (Lk. 10:29-37), and the Samaritan who alone among ten healed lepers returned to give thanks for his healing (Lk. 17:11-19). Jn. 4 relates an extended story of Jesus' encounter with a Samaritan woman. At one point she exclaims, "Our fathers worshiped on the mountain," and as their eyes were most likely drawn to the nearby Mt. Gerizim, it is not improbable that the century-old ruins were fully visible. According to Acts 8, Samaria was one of the first missionary fields for the disciples.

Within a generation of Jesus' conversation at the well, Samaritans fleeing Roman oppression gathered by the thousands at Mt. Gerizim and held the Romans at bay for a month before their water ran out. The Jewish historian Josephus (1st cent. A.D.) told that tale (*BJ* iii.7.32 [307-315]), and it is confirmed by an early Samaritan inscription. In each account the Roman emperor Vespasian dispatched a general (Cerealis according to Josephus, Trajan in the Samaritan inscription) who laid siege to the mount and ultimately slaughtered 11,600 men (10,000 according to the Samaritans).

The Roman emperor Hadrian (A.D. 117-138) preempted the rebuilding of the Samaritan temple by constructing a huge temple to Zeus Hypsistos directly over the ruins of the Samaritan temple. It is said that the metal doors he used in his new temple were taken from the ruined Jerusalem temple. Centuries later they were to adorn two Samaritan synagogues before being taken off by the Ottoman Turks.

Two major factors anchored the Samaritan community to Nâblus, the town at the foot of Mt. Gerizim, even into the Byzantine period. The first was the rather continuous presence of the temple at Gerizim until A.D. 484. The second factor was the apparent readiness of the Samaritans to become Christians as they moved out into the Mediterranean world. Nevertheless there was a Samaritan diaspora (dispersion) with communities in such key centers as Rome, Constantinople, and Thessalonica (remains of Samaritan synagogues have been found in the last two cities).

Early in the Christian era, the flowering of Samaritan theology was epitomized in the third- or fourth-century work of Marqah, Baba, and the hymn writer Amram Darrah. The Memar Marqah, "Teachings of Marqah," a very important Samaritan work, is a unique commentary on the Pentateuch. It became the basis for much subsequent theological and liturgical work and also reflects the first concrete assimilation of Christian concepts into Samaritan thinking. Marqah's son Nana and Amram Darrah also contributed richly to the growing liturgical tradition. Several synagogues were built during the 4th cent., and under the leadership of Baba the apparently Dositheaninfluenced laity party gained in power over against the priests, perhaps as a compromise to strengthen the Samaritan community in the face of adversity.

Marble remnants of Samaritan synagogues, preserving the few surviving Samaritan inscriptions, suggest reasonable prosperity within the community until the time of the emperor Justinian. In his time, in A.D. 529, the Samaritans tried unsuccessfully to rebel and were so severely suppressed that they never fully recovered.

Our glimpses of the Samaritan community during the next several centuries are primarily through colophons

A Samaritan inscription from Ex. 20 on marble, reading "Yahweh is a hero [ ] who is like thee among the god[s] Majestic in holiness terrifying [ ]." This was possibly a lintel above a synagogue door, 3rd to 6th cent. A.D. (courtesy of Michigan State University, University Archives and Historical Collections)

(notes added in margins or flyleaves or included in the text by use of vertically arranged acrostics) in their MSS. We are aware of the dispersal of communities to Aleppo, Tyre, Caesarea, Ascalon, Gaza, and particularly Damascus and Cairo. In 636 they came under Moslem rule; in 1099 the Crusaders entered; and in 1244 the Moslems returned. During the early period of the Moslem rule the Samaritans were not badly treated. When the Crusaders came in they converted the Samaritan synagogue at Nâblus into a church, the tower of which still survives. When the Moslems returned they made the building into a mosque, and in subsequent centuries the Samaritans have had varying degrees of access to their central city. In consequence the future was increasingly with the diaspora.

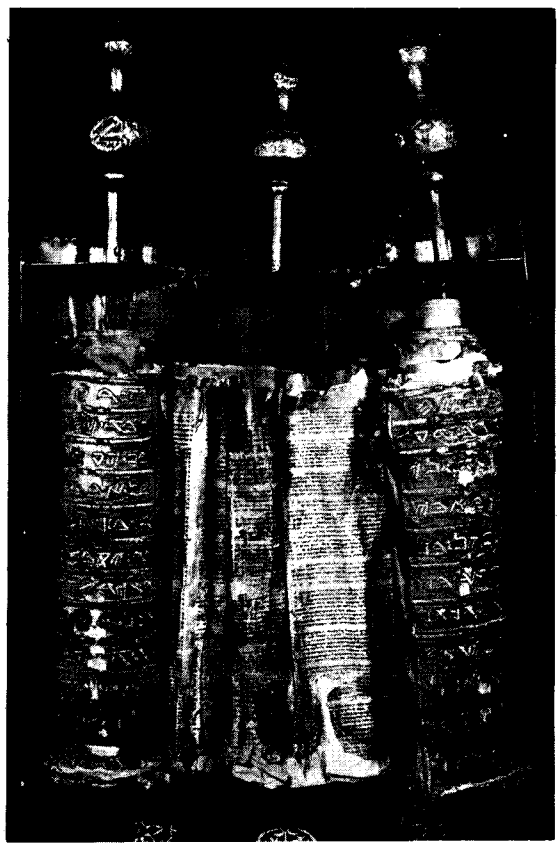
During the 14th cent. ecumenical forces were at work in Nâblus that would integrate various Samaritan factions, primarily the priestly centered orthodoxy and the more lay oriented Dositheans. The newly forged agreements found expression in a number of literary works commissioned throughout the century.

One of these texts was probably the Abisha scroll, the revered copy of the Pentateuch that was discovered on the feast day Simhat Torah in 1355. Much of the MS dates from prior centuries, but it is also likely that some portions were written in the 14th cent. to restore and link ancient fragments. In the same year, Abul Fath completed a history of the Samaritans that the high priest Phineas had commissioned a few years before. It is the earliest and most successful Samaritan attempt at a history that we have. Written in colloquial Arabic, it draws from several previous sources and provides important historical and literary information. Another work, Joshua, a historical commentary of uneven material including some parallels with the biblical book, was also completed in this century. From this accumulated base of authority, the priests maintained their old powers but were more open to heterodoxy.

The following century also witnessed an upsurge in the visibility of Samaritan MS activity in spite of, or perhaps because of, a series of hardships. The century began with the invasion of Tamarlane and the Mongols and ended with the struggles between Mamluks and Ottoman Turks for control of the Islamic world. In addition there were frequent earthquakes, droughts, and plagues. In response the Samaritans migrated to the major cities of the diaspora and copied and exchanged a substantial number of Pentateuchs, reaching a peak, as evidenced by surviving MSS, in the years 1474-1485. The end of the century also witnessed some building restoration in Nâblus. In 1497 the Synagogue Evil Yakov was repaired by Ab Zehuta ben Zedekah of Damascus and Yakov ben Avraham of Egypt, diaspora Samaritans from each of the major centers, and the following year a *mazba*, a special niche, was built in the synagogue at Nâblus for the Abisha scroll.

Relationships among Jews, Christians, and Samaritans were quite congenial at this time, perhaps because of their

Fragments of the Samaritan Pentateuch ("Abisha Scroll") from Nablûs, the oldest being from the 11th cent. A.D. (D. Harris)



SAMARITANS

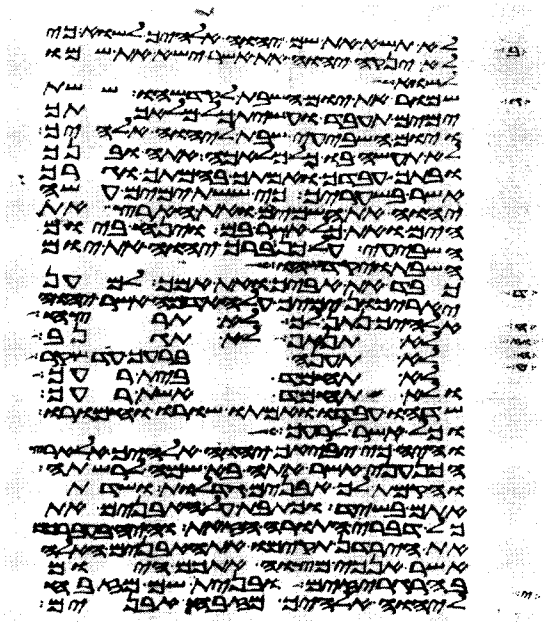
common status as harassed minorities. Jews and Samaritans accepted each other's authority in local communities: Samaritans in Cairo accepted the authority of the Jewish rabbi, and Jews in the region of Nâblus accepted the authority of the Samaritan high priest. In 1497 the sale of a Pentateuch (catalogued "A" in A. F. von Gall, *Der Hebräische Pentateuch der Samaritaner* [1918, repr. 1966]) was witnessed by two Christians, an indication of reasonably amicable relations between these two communities.

The 16th cent. had hardly begun before the Mamluk reign was eclipsed by the Ottoman Turks, oppression of the Samaritans reached a new intensity, and the diaspora Samaritans began to drift back to Nâblus. Some of this oppression is reflected in the depreciation of Samaritan Pentateuchs, as recorded in bills of sale within the MSS themselves, and underscored by the fickle treatment of the various communities. Early in the century the high priest at Nâblus was exiled to Damascus. In 1538 he was allowed to return. The exile may have been fortunate because it brought the Samaritan leadership into contact with the Jewish community in Damascus (there were essentially no Jews in Nâblus), thus providing another occasion for the two communities to nourish one another. The Jewish community in Damascus had been enriched in the beginning of the 16th cent. by refugee Jewish scholars from Spain. The Samaritan scholar Abraham ha-Qabasi wrote a book, *Sayr al Qalb,* containing a second list of the 613 precepts (the number of commandments thought to be in the Pentateuch on the basis of the numerical value attributed to the word *Torah*), undoubtedly influenced by Jewish scholarship. This was one of the treasures brought back to Nâblus in 1538 when the author returned with the high priest. Within a century the Samaritan community at Damascus had disappeared, and the demise of the Egyptian community was not far behind.

With that return the diaspora and the Samaritan community began to wither dramatically. A sixteenth-century traveler wrote that in 1544 Nâblus was the city of the Samaritans and that they were located nowhere else in the world. Persecution of non-Moslems continued throughout the century.

It was also in the 16th cent. that European scholars became aware of the Samaritans and their literature. Most notable was Joseph Scaliger, a self-taught Semitist who entered into correspondence with the communities at Nâblus and Egypt in an attempt to secure a copy of their Pentateuch. In 1584 he did receive some materials, including a copy of the Samaritan Joshua that had been written in 1362-63 by Abd-el Ghani. He also received letters, some of which arrived after his death, but no copy of the Pentateuch was delivered to Europe in the 16th cent., apparently out of a reluctance on the part of Samaritans to entrust their sacred text to outsiders.

The opportunity for Westerners to study the Samaritan Pentateuch had to await the early 17th cent., when Pietro della Valle, unsuccessful in acquiring MSS in Egypt and Nâblus, did find a Pentateuch (von Gall's codex B, dated A.D. 1345-46) available in Damascus. In the next few years it made its way to Paris, where it was studied and published by Jean Morin. Morin remained at the center of all discussion of the Samaritan Pentateuch for three decades, from the arrival of the della Valle codex through its publication in the Paris polyglot of 1645 to the rather incomplete catalog of Samaritan texts that he published in 1657. There followed a flurry of interest in the Samaritan Pentateuch that sent emissaries to the Middle East in search of copies and inspired an extensive polemical literature between Roman Catholics and Protestants, since the



A Samaritan MS copied in A.D. 1474, the end of the Ten Commandments with a Samaritan addition; the commandments are "numbered" in the right margin, beg nning with *beth* [ב] (courtesy of Michigan State University, University Archives and Historical Collections)

Samaritan text seemed to support the LXX version of the OT, which the Roman Catholics favored, over against the MT, which the Protestants and Jews favored as the "original" text.

The Samaritans for their part became confused about the European interest and were led to believe that some of their number were in Europe, particularly in England, a belief that some Englishmen encouraged in the hopes of facilitating a greater influx of Samaritan writings. The Samaritan interest became critical after 1623-24 when the priestly line of Aaron came to an end. On two occasions they wrote their "brethren" in England hoping to reinstitute the line. In practice the priesthood resorted to the Levitical family. Presumably at least one Samaritan was living in Paris by the end of the 17th cent., since some MSS copied by a Samaritan and dating late in the 17th cent., whose model text is a MS previously brought to Paris, have survived.

This confusion contributed to the theories about the lost ten tribes of Israel that developed in various places. Some of the Israelites deported by the Assyrians, it was said, had migrated through Armenia and then westward across Europe. The Anglo-Israelite theory both contributed to anti-Semitism by claiming that the true Israelites were in England and, ironically, facilitated the resettlement of Jews in England during the 17th century.

During the 19th cent. the Samaritans were denied access to their sacred mount; their literary efforts had long since dwindled and, in the early 20th cent. their total population was less than 200. By the late 20th cent. that number had more than doubled. with the community equally divided between Nâblus and a suburb of Tel Aviv called Holon.

In 1985, the Societé Études Samaritaines was created by an international group of scholars meeting in Paris with a special interest in encouraging and facilitating Samaritan studies.

III. Beliefs and Practices.–The Samaritan creed, part of a personal prayer said before the altars on Mt. Gerizim, succinctly outlines the basic beliefs: "We say: My faith is in Thee, YHWH; and in Moses son of Amram, Thy servant, and in the Holy Law; and in Mount Gerizim, Bethel, and in the Day of Vengeance and Recompense."

A clear monotheism, parallel to the rigorous affirmation of Judaism or Islam and borrowing the Moslem slogan "There is no God but God," is central to the Samaritan faith. The Samaritans most commonly refer to God as El or Ela (akin to Islamic Allah), but the tetragrammaton, *YHWH* (Anglicized as "Yahweh," incorrectly as "Jehovah"), is also in regular use. Samaritans, like Jews, avoid the use of images, but unlike Jews they show less anxiety about using the divine name, and a pronunciation still survives. God reveals Himself through the creation and the Torah.

Torah, God's Law, is the second affirmation of the Samaritan community. It defined the location of the temple and the services that were performed there and subsequently elsewhere as well. Its interpretation gave special status to the priesthood. It is read and revered in all services. Verses from it are carved in stone to decorate synagogues (*see* picture in PENTATEUCH, SAMARITAN) and carefully copied by hand on parchment or good paper. Wealthy families owned beautifully hand-printed copies that were passed down through many generations and now reside in the collections of such institutions as the Bibliothèque Nationale, the British Museum, the John Rylands Library at the University of Manchester, and Michigan State University.

Moses mediated God's Law and deserves adoration as the third focus of the Samaritan faith. Many blessings are offered "in the name of Moses the faithful," the first and most exalted of the prophets. Letters often invoke God at the beginning and Moses at the end. The restorer who will come as the agent of God will be one like Moses. The "Song of Moses" in Ex. 15 (particularly vv. 3-11) was a reservoir for Samaritan inscriptions that found their way onto lintels and other parts of synagogues. Parallels between Samaritan adoration of Moses and Christian adoration of Jesus are close and perhaps intentional.

Mount Gerizim is uniquely connected with God. In the Samaritan version of Dt. 27:4 Moses commands the building of an altar on Mt. Gerizim, whereas the Jewish version (MT) has Mt. Ebal. Each group accuses the other of altering the text, but since the beginning of the 20th cent., at least, most scholars are inclined to favor the Samaritan version. On the other hand it is generally held that the Samaritans did add to the Decalogue a commandment to build an altar and to sacrifice on Mt. Gerizim. It is, in their view, the navel of the world where Abel built the first altar and Abraham was willing to sacrifice Isaac. Again, in Samaritan tradition it is the highest mountain in the world, and its peak survived the flood in the time of Noah. Here the Samaritans built their temple in the time of Alexander the Great to rival the temple at Jerusalem. Although the temple was destroyed in 128 B.C. and the remains of that or any subsequent buildings have long been lost, the Samaritans continue to celebrate their festivals on the site to the present day. The mutually exclusive claims of Gerizim and Jerusalem as the most sacred place in the world constitute the most distinctive difference between Jew and Samaritan.

The *Taheb*, "the restorer" foretold in Dt. 18:18 (clearly outside the context of the Davidic messiah), is not explicitly mentioned in the ancient creed and may have been resisted by orthodox Samaritanism. The role is downplayed in the work of the orthodox theologian Marqah. As the Samaritans developed a concept of resurrection, the *Taheb* was generally understood to be the herald of the day of vengeance and reward, an eschatological day that takes its name from Dt. 32:34f. The temple on Gerizim will be restored, the sacrifices reinstated, and the heathen converted. At the judgment, the worthy will enter the Garden of Eden while the wicked will be delivered to flames.

While partisans for lay authority (the various Dositheon sects) have enjoyed some influence during brief periods of Samaritan history, the community has been essentially focused on and controlled by the priesthood that officiates at the many rituals rooted in the Pentateuch, of which circumcision and celebration of the Sabbath are the most common. Reading of the Law is the central element in each of the services. Sabbath is strictly observed with services in the synagogue. The main festival of the synagogue is the Day of Atonement, when the Law is read and the Abisha scroll is exhibited for adoration.

The remaining services are held on Mt. Gerizim. They include Passover, the coincidental but distinct Festival of Unleavened Bread, and Pentecost, celebrated the fiftieth day after the first Passover sabbath. Passover is the holiest of Samaritan celebrations, and during its course lambs are sacrificed, the last vestige of explicit animal sacrifice among the religions of the West. The priests receive their due on the Day of Simmuth, sixty days before Passover, when each member of the community pays a half-shekel and receives the calendar in which the priest has calculated the festivals for the next six months. The calendar is of great significance since ritual is invalidated if performed at the wrong time according to their understanding of Lev. 23:2. Modifications of these practices have been made at different times by various sects of the Samaritans, sometimes on the basis of different beliefs and sometimes on the basis of exigency. For example, the Feast of Booths had to be kept secretly during certain periods of harassment by Christians and Moslems, and the secrecy developed into orthodox practice.

IV. Affinities with Other Groups.–Over the centuries Samaritanism has shared beliefs and practices with several groups: Rabbinic Judaism, the Qumrân sect, Gnosticism, Christianity, Islam, and the Karaites. For example, the Samaritans share with Rabbinic Judaism part of a common history, the traditions of the Pentateuch, and the festivals authorized in the Pentateuch as described above. They do not celebrate Purim or Hanukkah or the four minor fasts that are rooted elsewhere in Jewish tradition. Samaritans were legally considered a form of Jew during much of the history of occupation in Palestine, and often Samaritan and Jew recognized each other's authorities. Yet Samaritans do not consider themselves Jews and have some reluctance about intermarriage with Jews, although Samaritan men may marry Jewish women. For their part Jews still have reservations about Samaritans and will not allow Samaritans to be buried in the Jewish cemetery at Tel Aviv.

Like the Jewish monastic sect at Qumrân, the Samaritans were exclusive, seeing themselves as "sons of light" and all others as ultimately condemned. Both groups understood Dt. 18:18 as messianic and were opposed to the temple at Jerusalem. Each group had a Nazirite movement and a purification ritual using the ashes of a red heifer. Each used a complex calendar combining both solar and lunar designations perhaps going back to Zadokite reckoning. Neither celebrated Purim or Hanukkah. The Qumrân sect shared a recension of the Torah, specifically in Exodus, with the Samaritans, but the scholarly consensus is that this recension is unique to

neither, although it does reflect an affinity between these two sects not shared by the Jewish communities that produced the MT.

It is quite likely that the Samaritan presence was instrumental in the shaping of some of the NT documents, particularly John and possibly Hebrews. In turn there is evidence that the Samaritans adopted concepts from NT descriptions of Jesus and applied them to Moses (e.g., Moses at his baptism is referred to as the one "in whom God delighted," echoing the ascription to Jesus in Mk. 1:11).

Samaritans were also in interreligious dialogue with Islam. Several depictions of the day of judgment that appear in the work of the Samaritan theologian Marqah reappear in the Koran at a later date. Conversely, the Samaritans adapt several Moslem usages, e.g., the first half of the short creed "There is no God but God" and the introductory phrase "In the name of God . . . ," followed by a listing of divine characteristics.

Late in the 1st millennium A.D., an anti-rabbinical sect of Judaism emerged that spread to Damascus and Cairo, the two major cities of the Samaritan diaspora. The sect, known as the Karaites, rigorously proselytized other Jewish groups (missionary work among Moslems was forbidden), probably including Samaritans. Both groups used complex calendars that required specialists to establish the feast days for a particular year, and even the formula for some feasts, like Pentecost, differed from orthodox Judaism. Many of their mutual practices can be traced back to Zadokite traditions at Qumrân and may help establish the family tree of a particular style of Judaism.

SAMEKH sam'ek [ס]. The fifteenth letter of the Hebrew alphabet, transliterated as *s*. It stands at the head of the fifteenth section of Ps. 119 (AV). It also came to be used for the number sixty. *See* WRITING.

SAMEIUS sə-mē'əs (1 Esd. 9:21, AV). *See* SHEMAIAH **20.**

SAMGAR-NEBO sam-gär-nē'bō [Heb. *samgar nᵉḇô*; Gk. *Samagoth, Eissamogath,* etc.]; NEB OF SIMMAGIR, NEBU(SARSEKIM). Originally understood as the personal name of an official of Nebuchadrezzar of Babylon at the fall of Jerusalem in 586 B.C. (Jer. 39:3). Such a name has not yet been identified among an extensive Babylonian prosopography, however. Therefore, since the first name in the text, Nergal-sharezar (Akk. *Nergal-šarra-uṣur*), is cited in Babylonian documents as the governor of Sin-magir, a district near Opis N of Babylon, a new hypothesis takes part of this name as descriptive of him, i.e., "Nergal-sharezer the Sin-magir (official)." This hypothesis would require that the theocratic element Nebo (Akk. *Nabû*) be read with SARSECHIM as the personal name of the Rabsaris. D. J. WISEMAN

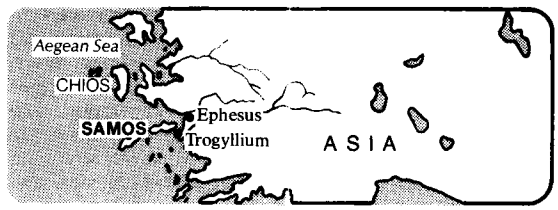
SAMLAH sam' lə [Heb. *śamlá*]. One of the ancient Edomite kings who reigned before Israel had kings (Gen. 36:36f.; 1 Ch. 1:47f.). He came from the city of Masrekah.

SAMMUS sam'əs (1 Esd. 9:43, AV, NEB). *See* SHEMA **4.**

SAMOS sā'mos [Gk. *Samos*–'height, mountain'; see Strabo viii.3.19 (346), x.2.17 (457)] (1 Macc. 15:23; Acts 20:15). One of the most famous of the Ionian islands, third in size among the group that includes Chios, Cos, and Lesbos. It measures about 43 km. (27 mi.) from E to W and about 24 km. (15 mi.) at its greatest width. It lies at the mouth of the bay of Ephesus, separated from the shore of Ionia by the narrow Strait of Mycale (about 1.6 km. or 1 mi. across), where the Greeks conquered the Persian fleet in 479 B.C. (Herodotus ix.100ff.). As the name suggests, the island's surface is very mountainous, Mt. Kerki rising to a height of 1436 m. (4,710 ft.).



In early times the island was an important naval power and a center of Ionian luxury. Samos reached the apex of its prosperity under the famous tyrant Polycrates (6th cent. B.C.), who made himself ruler of the Aegean Sea (cf. Herodotus iii.39ff.). Many Jews were living in Samos in the 2nd cent. B.C., and 1 Macc. 15:23 mentions Samos as one of the places to which Lucius the Roman consul wrote to ask their good will toward the Jews.

The island was joined to the province of Asia in 84 B.C. and became a free state in 17 B.C. through the favor of Augustus. The people of Samos worshiped Juno or Hera, and her temple possessed some of the finest works of art know to Greece (statues by Polycletus, Praxiteles, and Myron). The island's chief manufacture, pottery of a fine smooth clay of deep red color, was renowned throughout the civilized world.

When Paul "touched" here after passing Chios on returning from his third missionary journey (Acts 20:15), Samos was a "free city" in the province of Asia. In v. 15 the TR adds the phrase, "and having remained in Trogyllium" (cf. AV), but the oldest MSS have no trace of these words. The phrase may well be a gloss to explain Gk. *parabállō*, which technically means "touch land" but not necessarily "make a landing" (cf. Josephus *Ant.* 6.4 [161]). Trogyllium lay on the mainland opposite Samos; possibly some annotator, knowing the locality, suggested this as the night's halting-place.

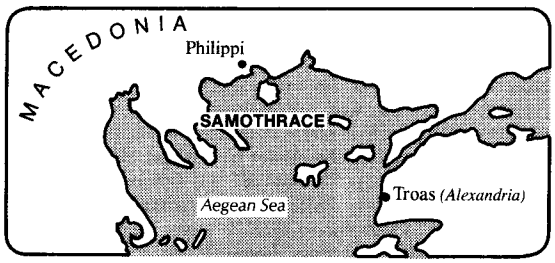
W. H. GARCÍA

SAMOTHRACE sam'ə-thrās [Gk. *Samothrákē*] (Acts 16:11); AV SAMOTHRACIA sam-ə-thrā'shə. A small island (only 176 sq. km., or 68 sq. mi.) in the northeast Aegean Sea. As the name indicates (*see* SAMOS), the island is mountainous, its highest peak rising to 1800 m. (5900 ft.),the highest point on any of the Aegean islands.



On his second missionary journey, after receiving the vision of the man from Macedonia (Acts 16:9f.), Paul left Troas and made straight for Europe across the north Aegean Sea. The journey took almost two days, and the boat dropped anchor the first night off the island of Samothrace (v. 11). The island had no harbor — only an unsafe anchorage on its north side — but the hazards of sailing by night generally forced mariners to anchor somewhere if possible. Evidently Paul and his company did not go ashore on this occasion. But later, as he traveled from Philippi to Troas at the end of his third missionary journey, he may have done so. On that occasion he spent five days making the two-day voyage (20:6). (See Maps XIX and XX in Vol.I.)

Samothrace's great significance in antiquity came from the mystery religion celebrated there, second only to the mystery at Eleusis. The Samothracian mystery involved veneration of the Cabeiri, a group of fertility deities, probably of Phrygian origin, that were worshiped in much of Asia Minor. The Greeks identified them with gods of their own pantheon. The cult also involved an initiation ceremony into the intimacy and favor of the gods in this life and the next. Thus the devotees hoped for immortality as well as general safeguard against misfortune in the present life. The festivals of the Cabeiri were celebrated annually at the end of July or beginning of August.

The sanctuary enjoyed great prosperity during the Hellenistic period, when kings of both Macedonia and Egypt were benefactors. Philip and Olympias, parents of Alexander the Great, were initiated there. The popularity of the cult continued under the Romans, but finally it was proscribed by Theodosius I at the end of the 4th cent. A.D. The places of worship were later destroyed by earthquakes.

French excavators began work at Samothrace in 1856 and in 1863 found the famous statue of *Victory*, now in the Louvre. Austrian teams excavated there in 1873, 1875, and 1891. But the definitive work was conducted in 1939; it has been continued since 1948 by K. Lehmann and his successors from New York University. The *Victory* is now known to have been sculpted by a Rhodian and dedicated by Rhodes in honor of a victory *ca.* 190 B.C. over Antiochus III of Syria. It was erected at a fountain by the sanctuary. From the 6th cent. B.C. the excavators also found the Hieron or shrine of the Samothracian gods and a building for display of votive gifts, as well as a Hall of the Mysteries from the 5th cent. B.C. (a circular temple to the Great Gods, over 20 m. [66 ft.] in diameter and thus the largest round classical building before Hadrian's Pantheon in Rome), and a theater from the 3rd cent. B.C. The sanctuary reached its greatest influence *ca.* 250 B.C.

SAMPSAMES sam'sə-mēz [Gk. *Sampsamēs*, A *Sampsakēs*]; NEB SAMPSAKES. One of the places addressed by Lucius in his letter on behalf of the Jews (1 Macc. 15:23); probably the Black Sea port of Amisus in Pontus, the modern Samsun. The Latin translators erred in identifying it with Lampsacus.

W. W. GASQUE

SAMSON sam'sən [Heb. *šimšôn*; Gk. *Sampsōn* (He. 11:32)]. The last of the judges of Israel (Jgs. 13–16), Samuel excepted. His name is probably derived from Heb. *šemeš*, "sun." Most likely he was named by his parents in anticipation of his sun-like strength (cf. Jgs. 5:31; Ps. 19:4c-5 [MT 5c-6]).

I. Background.–Samson's hometown was Zorah, about 23 km. (14 mi.) W of Jerusalem, up the eastern end of the valley of Sorek. Six km. (4 mi.) distant, down in the valley, was Timnah, the Philistine town where Samson found his bride. Thus Samson lived on the border of Dan (his own tribe), with the Philistine pentapolis to the southwest and Judah to the southeast.

His twenty-year judgeship (Jgs. 15:20; 16:31) began *ca.* 1070 B.C., probably after Philistine and Amorite pressure had forced the migration northward of most of the Danites (1:34; ch. 18), and sometime before the disaster at Aphek when the Philistines captured the ark (1 S. 4; eventually it was returned to Beth-shemesh, 3 km. [2 mi.] across the valley from Samson's home). The Israelites seem to have accepted Philistine domination — which had been established more by infiltration through trade and intermarriage than by force — with docility (Jgs. 15:11f.), believing that nothing could be done to change the situation. This peaceful coexistence was a great menace to the future of Israel as the people of God.

II. Purpose and Form of the Story.–God raised up Samson to make coexistence with the Philistines less comfortable (Jgs. 14:4). He was to "begin to deliver Israel from the hand of the Philistines" (13:5), i.e., from being dominated and absorbed by them (cf. Ex. 19:5f.; Lev. 20:26). According to the OT, that was his life's purpose.

The narrative also draws attention to the motif of answered prayer. The Samson story has three parts: first the birth account (Jgs. 13), and then two cycles (chs. 14–15 and ch. 16), each of which ends with the statement that Samson judged Israel twenty years. The first part focuses largely on Manoah's request that the heavenly visitor should return to teach him and his wife how to rear the child. The other two parts end with a petition by Samson to which God graciously responds.

Because of Samson's name, his proximity to Beth-shemesh ("house of the sun-god"), and parallels between Samson's activities and events in the lives of Gilgamesh and Hercules, some scholars have suggested that the Samson story is actually a solar myth. Although the story may contain some solar features, most scholars have abandoned the view that Samson was a solar hero (see Crenshaw, pp. 15-22). The specifics of his birth and death, indeed the general aptness of the story to its locale and time, argue that the story has a historical basis. Moreover, the poetic fragments in the story appear to be very archaic.

III. Samson's Birth (Jgs. 13).–This section, the birth announcement, forms a prelude to Samson's exploits. The chapter is framed by promise (the angel's promise of a son to Manoah's wife, vv. 2-7) and fulfillment (Samson's birth, vv. 24f.); in between is Samson's father's prayer that the angel would return (v. 8). "God listened to the voice of Manoah" (v. 9), and His angel returned and reiterated the earlier announcement to Manoah's wife, although he did not add to the information. The promise was that although she had been barren, she was to have a son (cf. Sarah, Rebekah, Rachel, Hannah, Elizabeth). He was to be a Nazirite to God from birth, and he would begin to bring deliverance from the Philistines. Curiously, restrictions that normally applied to the Nazirite were in this case imposed upon the mother, namely, not eating anything from grapes or any unclean thing (vv. 4, 14; cf. Nu. 6:1-8). And Samson's hair was never to be cut

(Jgs. 13:5; cf. Nu. 6:5). The normal Nazirite vow was temporary, but Samson's was to be for his entire lifetime — beginning from conception!

When Manoah, who was at first somewhat skeptical (Jgs. 13:8, 15-18), eventually realized that he had seen the angel of the Lord, he feared for his life. But his wife showed greater spiritual perception: God had just shown them favor, so why need they fear? (v. 23). The seeds of Samson's faith (cf. He. 11:32) were certainly to be found in his home. The section closes with a transitional comment about God's blessing and the beginnings of Samson's superhuman strength (Jgs. 13:24f.).

IV. His Marriage and Subsequent Events (Chs. 14–15).– The cycle begins with Samson's infatuation with a Philistine woman in the neighboring town. This understandably disappointed his parents (14:3). But they "did not know that it was from the Lord," who was "seeking an occasion against the Philistines" (v. 4). Curiously, Samson's nonconformance to his godly upbringing provided the spark for the chain of events that eventually undermined Philistine dominance.

The story about Samson killing the lion and later eating the honey he found in its carcass (vv. 5-9) illustrates both his heroic strength and his disregard of the Nazirite prohibition against contact with dead bodies (cf. Nu. 6:6). He violated his vows again by having a wedding "feast" at which there was heavy drinking (Heb. *mišteh*, lit. "drinking party," Jgs. 14:10). The narrative states that this was held at the bride's home, "for so the young men used to do." Some scholars have suggested that Samson arranged a *ṣadiqâ* marriage, in which the bride continued to live with her parents and the groom lived with her there or visited her periodically (see comms.; Crenshaw, pp. 82f.).

A carved orthostat (ca. 9th cent. B.C.) depicting a warrior fighting a lion that has a hold on his arm. From Tell Ḥalâf (Gozan) (Staatliche Museen zu Berlin, DDR, Vorderasiatisches Museum 8839)

At the wedding feast Samson challenged the thirty Philistine "companions" provided by his wife's family with a RIDDLE that could not possibly be solved without knowledge of his slaying of the lion and discovery of the honey (14:11-14). But his wife, threatened by the thirty companions with death if she did not tell them the answer, enticed him to reveal the secret to her and then betrayed his trust (vv. 15-18). To pay off the bet on his riddle, Samson killed thirty Philistines at Ashkelon and gave their clothes to the thirty; then in anger he left his wife and returned to his parents' home (v. 19).

When Samson attempted to return to his wife he learned that her father, assuming that Samson had wanted a divorce (cf. Dt. 24:1-4; see also A. van Selms, *JNES*, 9 [1950], 65-75), had given her in marriage to his best man — the one who was supposed to have protected Samson's interests (Jgs. 14:20–15:2). Badly hurt and very angry, Samson sought vengeance, and one wrong begot another as the violence escalated. He retaliated for his wife's remarriage by catching three hundred jackals, tying them together in pairs with torches between their tails, and setting them loose to destroy the Philistines' fields of ripened wheat (15:3-5). The Philistines responded by burning his wife and her father (v. 6). To avenge himself, Samson "smote them hip and thigh with great slaughter" (vv. 7f.).

Sometime thereafter, the Philistines encamped in Judah in order to capture Samson (15:9f.). The men of Judah, fearful of antagonizing the Philistines, sought to hand him over to them. Samson showed considerable control with his countrymen, allowing them to deliver him bound over to the enemy (vv. 11-13). But as the Philistines came shouting to meet him, the Spirit of the Lord came mightily upon him (v. 14), and with the jawbone of an ass he killed a thousand men (vv. 15f.).

There follows an account of Samson's naming of two places. The first he called Ramath-lehi ("hill of the jawbone") to commemorate his victory (v. 17). The other he named En-hakkore ("spring of the one who called") as a remembrance of answered prayer (vv. 18f.). For the cycle ends with Samson crying to God for water, acknowledging his dependence on God for the victory, and God rewarding his faith with a miraculous supply of water.

V. His Downfall (Ch. 16).–The second cycle describes Samson's affairs with two other foreign women. Deprived of his wife, he turned to relationships with prostitutes. The first and briefer affair (vv. 1-3) was a warning of his potential undoing. The Philistines at Gaza heard that he was in the city and set a trap for him. But about midnight he made his escape, carrying off the city gates — posts, bar, and all — and depositing them atop a hill in the direction of Hebron (about 60 km. [37 mi.] away), then defying the Gazites to come and retrieve the symbol of their city's strength.

Samson's weakness for women eventually led him to Delilah. Unlike his wife and the prostitute of Gaza, she is mentioned by name, and it is said that he "loved" her (16:4). Like his wife, however, Delilah was persuaded by the Philistines (this time with a large bribe) to betray him. After putting her off three times, he finally divulged the secret of his strength: the Nazirite vow prohibiting the cutting of his hair. While he was sleeping his hair was shorn, and "his strength left him . . . . And he did not know that the Lord had left him" (vv. 19f.). The Philistines seized him, gouged out his eyes, and forced him to perform the humiliating task of grinding in the prison MILL (vv. 21f.).

The last scene depicts Samson's return to the Lord's favor (16:23-30). The Philistines held a feast to celebrate

their god Dagon's victory over Samson, and the defeated Israelite was brought in to "make sport" for them. The humiliated Samson called once again upon the Lord for assistance, and his vengeful motives again aligned with God's purpose of discomfiting the Philistines. In a grim heroic climax, Samson slipped the two main supporting pillars of the temple portico off their pedestals and brought the house down, killing about three thousand people — including himself. The God of Israel had shown Himself more powerful than Dagon. Ironically, Samson killed more Philistines at his death than during the rest of his life.

VI. His Character.–Samson's character as a judge is difficult to evaluate. A giant in physical strength but weak-willed with women, he did serve God's purpose by beginning to deliver Israel from the Philistines. The OT states clearly that the Spirit of the Lord was active in him, enabling him to perform heroic feats (Jgs. 13:25; 14:6, 19; 15:14, 19; cf. 16:19, 28, 30).

But does the presence of God's Spirit imply anything about his moral character? Samson was tempted in the area of his weakness, and he sometimes used his power without much thought for righteousness or justice (e.g., 14:19; 15:3-8; 16:3). He was a man of his times — times when "every man did what was right in his own eyes" (17:6; 21:25). But there were also occasions when Samson did call upon God (15:18; 16:28), and God's response implies that Samson was sincere in his entreaty. In this Samson differed from his contemporaries, and for this the NT includes his name among the heroes of faith (He. 11:32).

SAMUEL sam'ū-əl [Heb. *šᵉmû'ēl*; Gk. *Samouēl*]. The last leader of Israel in the premonarchical period, who anointed both Saul and David. He functioned as a priest-prophet at Shiloh, as a seer at Ramah, and as the last of the great judges in early Israel.

Neither the date of Samuel's birth nor that of his death is known, but his life is to be placed in (the last two-thirds of) the 11th cent. B.C. Samuel's parents were Elkanah, an Ephraimite (1 S. 1:1), and the previously barren Hannah, who prayed for the gift of a child at Shiloh and promised to dedicate her son to lifelong service to Yahweh. Hannah later bore three other sons and two daughters (2:21). The name Samuel, which meant something like "His divine name is 'El," is explained in 1:20, 28 by a series of puns on the verb *šā'al* ("request," "dedicate"), which also happens to be the root behind the name Saul. These puns suggest that the real leader of Israel is not Saul, the anointed king, but rather the prophet-anointer who had been asked ("Sauled") of God and who had been dedicated ("Sauled") back to God. Some have argued from the puns that the birth story in 1 S. 1 once described the birth of Saul himself. According to the LXX and 4QSam^{a} versions of 1 S. 1:11, 22, Samuel was to abstain from alcoholic beverages and was not to cut his hair because he was a Nazirite (cf. the Hebrew fragments of Sir. 46:13). In 1 Ch. 6:28 (MT 13), Samuel is identified as a Levite. Albright (p. 161) suggested that Samuel was from the tribe of Ephraim by birth, but was attached to the tabernacle as a Nazirite and was therefore drawn by Levitical tradition into family attachment to the tribe of Levi.

In a dream theophany Yahweh revealed to the boy Samuel at Shiloh that the priestly house of Eli would come to an end because of the wickedness of Eli's two sons, Hophni and Phinehas (1 S. 3:11-14; cf. 2:12-17) — a fate announced earlier by an anonymous man of God (2:27-36). The sons were killed in a battle with the Philistines at Ebenezer (4:11), and Eli died when he heard the news of the loss of the ark of God (4:18). Because Yahweh appeared repeatedly to Samuel at Shiloh and revealed Himself to him, all Israel knew that Samuel was established as a prophet for Yahweh (3:20f.).

Samuel does not play a role in the ark narrative (1 S. 4–6). His next recorded appearance was at Mizpah, where he led the people to repent and prayed for them while offering up a whole burnt offering, and where Yahweh gave Israel a decisive victory over the Philistines, commemorated by the erection of a stone called Ebenezer (7:3-12). Samuel's duties as judge took him on a yearly circuit of the towns of Bethel, Gilgal, and Mizpah (7:15-17). Despite the small territory encompassed by these towns, the text designates him as a judge of all Israel. As a judge he may have served as a court of appeal, as a handler of difficult cases, or as a proclaimer of the law in the community assembly. He also judged Israel in his hometown of Ramah, where he had built an altar.

Samuel's own sons, Joel and Abijah, served as judges at Beer-sheba (1 S. 8:1-3). When they proved to be corrupt, the elders of Israel requested Samuel to appoint a king for them. Though this displeased Samuel, he was told by Yahweh to grant them their request but to warn them of the taxes and forced conscription for work projects and military service that kingship would bring (8:11-17).

Samuel is connected with three ceremonies in the accounts of Saul's rise to kingship. According to 1 S. 9:1–10:16, he secretly anointed Saul as prince (*nāgîḏ*, 9:16; 10:1; but cf. *meleḵ*, "king," in 15:1), apparently in the prophet's hometown of Ramah. Saul had been searching in vain for his father's lost asses and was persuaded by his servant to ask for assistance from a local man of God. This led to his encounter with Samuel and his anointing. Samuel gave Saul three signs to certify his anointing as prince (10:1). Samuel is identified in this account as a "man of God" and a "seer," both of which are titles for prophets elsewhere in the Bible.

After repeating his theological objections to kingship, Samuel also presided at Mizpah over a lot-casting ceremony that pointed to Saul as Yahweh's choice (1 S. 10:17-27). Samuel deposited the law of the kingdom (cf. Dt. 17:14-20) in the sanctuary at the end of this ceremony. After Saul's victory over the Ammonites, Samuel suggested that the people go to Gilgal, where they proclaimed Saul king (1 S. 11:12-15). The notice that they "renewed" the kingship at Gilgal (v. 14) is often viewed as an attempt to harmonize the several accounts of Saul's rise to power.

In his farewell sermon (1 S. 12), Samuel demonstrated his own innocence and Yahweh's righteousness. He warned the people that the king they had inappropriately demanded would be acceptable and would succeed only if they were obedient, and that both they and their king would be swept away if they acted wickedly. Samuel promised to pray for the people and teach them the way they should live.

Samuel rejected any dynastic succession for Saul because of an incident in which the king offered a sacrifice himself instead of waiting for the prophet to come to Gilgal to preside over the sacrifice (1 S. 13:8-14). Saul's action seems to have violated a compromise initiated during the controversial rise of the monarchy (note the positive and negative reactions to kingship in chs. 7–11). According to this compromise, the king would carry out the charismatic military activities of the judges or "saviors" from premonarchic times, while the prophet would communicate to the king Yahweh's authorization for war. Since the

sacrifice itself was probably the means by which Yahweh's authorization was determined, Saul's impatient performance of the sacrifice may have represented an attempt to manipulate the divine decision to his own advantage. Because of the basic role changes associated with this compromise, Samuel is usually considered Israel's first prophet in the strict sense of the term.

Samuel functioned as such a prophet when he authorized Saul to attack Amalek (1 S. 15:1-3), but he sharply rebuked the king for sparing the Amalekite king Agag and the best of his livestock in violation of the laws (vv. 13-23; cf. vv. 8f.). As a result of this disobedience, Samuel announced that Yahweh had rejected Saul as king (vv. 23, 26). When Saul tore Samuel's robe as he was trying to leave, the prophet informed him that Yahweh had torn the kingdom of Israel from Saul and given it to a "neighbor of yours, who is better than you" (vv. 27f.; cf. 28:17). Samuel himself executed Agag, who had mistakenly expected a reprieve (15:32f.). Samuel did not see Saul again until the day of the latter's death (v. 35; cf. ch. 28 and 19:18-24). Samuel mourned for Saul, and Yahweh was "sorry" that He had ever made Saul king (15:35).

On Yahweh's instructions, Samuel traveled to a private sacrifice at Bethlehem, at which he anointed David, the youngest of Jesse's sons (1 S. 16:1-13; cf. 2 S. 2:4; 5:3). While David was blessed with the gift of the Spirit as a result of this anointing (1 S. 16:13), the Spirit of Yahweh departed from Saul (v. 14; cf. 10:6, 10; 11:6). In the course of his struggles with Saul, David fled to Samuel, who was in the company of a group of ecstatic prophets at Ramah, only 3 km. (2 mi.) N of Saul's own town of Gibeah. Saul's messengers and, finally, the king himself participated in this ecstatic behavior, with the king stripping off his clothes and prophesying before Samuel (19:18-24). In this context the proverb "Is Saul also among the prophets?" apparently has a negative connotation (cf. 10:10-12, where the proverb occurs in a positive context). Saul's wild behavior in Samuel's presence seems only to have confirmed the latter's negative judgment of him. Samuel's assistance to David in his flight from Saul added prestige to the future king.

A seventh-century Byzantine plate showing Samuel anointing David as king in the presence of David's family. Sacrificial animals are shown below near an altar (The Metropolitan Museum of Art, Gift of J. Pierpont Morgan, 1917)

On Samuel's death he was buried in Ramah and mourned by all Israel (1 S. 25:1; 28:3). As Saul prepared for his final battle at Gilboa, he decided to visit a necromancer at Endor, since Yahweh no longer communicated to him through dreams, Urim, or prophets (28:4-7); by contrast, David gained ready response to his multiple divine inquiries (22:10, 13, 15; 23:2, 4; 30:8; 2 S. 2:1; 5:19, 23). The female necromancer brought up from Sheol the figure of Samuel. When Samuel came up from the underworld wrapped in a prophetic mantle, his standard garb (2:19; 15:27), the necromancer thought it was a divine visitation, but Saul recognized Samuel and prostrated himself before him (28:13f.). Samuel complained about being disturbed and announced that Yahweh would now fulfil His previous threat to deprive Saul of kingship (vv. 15-19; cf. ch. 15). Saul and his sons would fall on the next day, and the Israelites would be defeated by the Philistines. Samuel also confirmed the kingship of David.

Later biblical tradition highlights Samuel's role as intercessor (Jer. 15:1; Ps. 99:6) and associates him with David in the establishment of the office of gatekeepers (1 Ch. 9:22). The reference in 1 Ch. 29:29 to extrabiblical sources for details of David's reign apparently led to the tradition that Samuel was the author of 1 Samuel. According to 2 Ch. 35:18 the Passover of Josiah was the first of its kind since the days of Samuel. The NT twice refers to Samuel as the first prophet (Acts 3:24; 13:20), and his prophetic career is summarized in the apocryphal book of Sirach (46:13-20). The author of Hebrews includes Samuel among the great heroes of faith (He. 11:32).

SAMUEL, BOOKS OF. The OT books dealing with Samuel and with the first two kings of Israel, Saul and David. While normally classified as historical books, they are also notable for their theological evaluation of kingship in general and of dynastic kingship and David in particular.

I. Place in the Canon
II. Contents
III. Text
IV. Sources
V. Redactional History
VI. Purpose and Theology

I. Place in the Canon.—In the Hebrew Bible the books of Samuel belong to the part of the canon called the Prophets, which consists of the Former Prophets (Joshua, Judges, 1 and 2 Samuel, 1 and 2 Kings) and the Latter Prophets (Isaiah, Jeremiah, Ezekiel, and the twelve Minor Prophets). Apparently because of the great length of Samuel, the LXX divided it into two books, called *Basileiōn* A and B (1 and 2 Kingdoms or 1 and 2 Reigns); this division

was introduced into the Hebrew Bible with the First Rabbinic Bible of 1517.

The division of the books after 1 S. 31 makes some sense, since this chapter reports the death of Saul. Yet this division also splits in two the story of David's rise to power, which begins in 1 S. 16 and reaches its climax in 2 S. 5. While 1 Samuel begins with the birth of Samuel, who plays a prominent role in the book up to ch. 25 (cf. ch. 28), Samuel himself resembles in a number of ways the judges of the book of Judges; thus in some ways the division between Judges and 1 Samuel might better have been placed between the end of the era of the judges (after 1 S. 7) and before the rise of the monarchy (1 S. 8–15).

The name Samuel is not altogether appropriate for the books of Samuel, since the prophet dies in 1 S. 25 and is not mentioned at all after 1 S. 28:20. Samuel's prominent role in the early chapters of 1 Samuel may have led to the association of his name with the books. At least as early as the Talmud, however, Samuel was also considered the author of those chapters preceding his death. Subsequent chapters were attributed to the prophets Nathan and Gad. This theory of authorship seems to be based on the mention in 1 Ch. 29:29 of "the Chronicles of Samuel the seer, and the Chronicles of Nathan the prophet, and the Chronicles of Gad the seer."

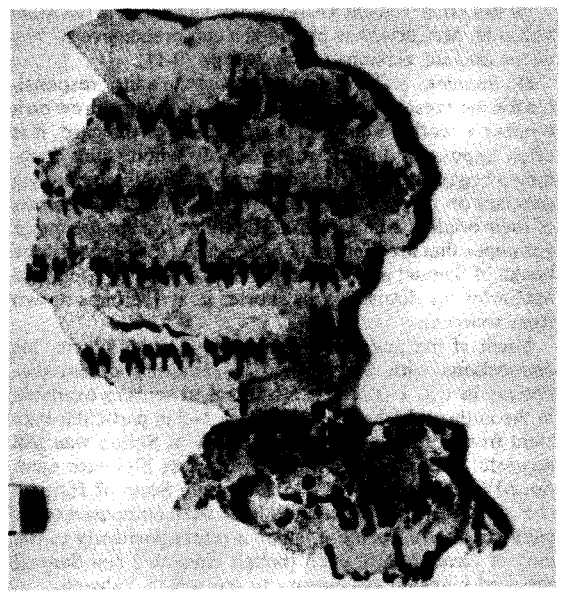
II. Contents.–The contents of Samuel may be outlined as follows (note that the divisions listed here do not necessarily correspond to divisions in the underlying sources):

I. Samuel at Shiloh (1 S. 1:1–3:21)
  A. Samuel's Birth (ch. 1)
  B. Song of Hannah (2:1-10)
  C. Corruption of Eli's Sons (2:11-36)
  D. Call of Samuel (ch. 3)
II. The Ark Narrative (1 S. 4:1–7:1)
  A. Ark's Exile among the Philistines (ch. 4)
  B. Victorious Hand of Yahweh (ch. 5)
  C. Ark's Return to Israel (6:1–7:1)
III. Emergence and Early Days of Kingship (7:2–15:35)
  A. Samuel's Defeat of the Philistines and Judging of Israel (7:2-17)
  B. Samuel's Warning: Rights of the King (ch. 8)
  C. Samuel's Anointing of Saul (9:1–10:16)
  D. Saul's Choice by Lot (10:17-27a)
  E. People's Proclamation of Saul's Kingship (10:27b–11:15)
  F. Samuel's Farewell Discourse (ch. 12)
  G. Saul's War Against the Philistines (chs. 13–14)
  H. Saul's Rejection as King (ch. 15)
IV. History of David's Rise (1 S. 16:1–2 S. 5:25)
  A. Samuel's Anointing of David (1 S. 16:1-13)
  B. David's Introduction to Saul and Defeat of Goliath (16:14–18:5)
  C. Several Escapes of David from Saul (18:6–9:24)
  D. David and Jonathan's Mutual Loyalty (ch. 20)
  E. Ahimelech's Generosity to David (21:1-9 [MT 2-10])
  F. David as Madman (21:10-15 [MT 11-16])
  G. Saul's Slaying of Ahimelech, and Abiathar's Escape (ch. 22)
  H. David's Escape from Saul at Keilah (ch. 23)
  I. David's Refusal to Kill Saul, Yahweh's Anointed (ch. 24)
  J. David and Abigail (ch. 25)
  K. Reprise: David's Refusal to Kill Saul, Yahweh's Anointed (ch. 26)
  L. David as Double Agent (27:1–28:2)
  M. The Witch of Endor (28:3-25)
  N. David's Dismissal by Achish (ch. 29)
  O. David's Campaigns in the South (ch. 30)
  P. Death and Burial of Saul (ch. 31)
  Q. David's Grief over Saul and Jonathan (2 S. 1)
  R. David's Anointing as King of Judah (2:1-11)
  S. Wars with Abner and Ishbaal (2:12–4:12)
  T. David's Anointing as King of Israel (5:1-5)
  U. Capture of Jerusalem and Defeat of the Philistines (5:6-25)
V. Movement of the Ark to Jerusalem (ch. 6)
VI. Nathan's Oracle (ch. 7)
VII. David's Wars and Officials (ch. 8)
VIII. Succession to David's Throne (2 S. 9:1–20:26; cf. 1 K. 1:1–2:26)
  A. David's Loyalty to Mephibosheth (2 S. 9)
  B. War with the Arameans (ch. 10)
  C. Affair with Bathsheba and its Consequences (11:1–12:25)
  D. Defeat of Rabbah of the Ammonites (12:26-31)
  E. Amnon's Rape of Tamar and Execution by Absalom (13:1-37)
  F. Absalom's Revolt and Its Suppression (13:38–20:3)
  G. Revolt of Sheba (20:4-26)
IX. Miscellanies from David's Reign of (21:1–24:25)
  A. Gibeonites' Revenge; Reburial of Saul and Jonathan (21:1-14)
  B. Exploits of David's Men (21:15-22)
  C. A Psalm of David (ch. 22)
  D. David's Last Words (23:1-7)
  E. David's Warriors (23:8-39)
  F. David's Census and the Ensuing Plague (ch. 24)

III. Text.–The MT of 1 and 2 Samuel has suffered from extensive textual corruption, particularly in the omission of words or phrases due to homoioteleuton. A superior text can often be reconstructed with data drawn from the DSS or LXX.

Thenius was the first modern scholar to make extensive use of the LXX for textual criticism, but pride of place in textual studies of the books of Samuel belongs to J. Wellhausen and S. R. Driver. Modern editions of the Hebrew Bible take note of the textual difficulties and list many of the divergences between the MT and LXX. (For the

A fragment of 1 S. 23:9-13 from Qumrân Cave 4 (4QSam^b), ca. 200 B.C. (courtesy, Israel Department of Antiquities and Museums)



books of Samuel the apparatus in *BH* is sometimes more complete and more accurate than that of *BHS*.)

The alternate and often superior text-type lying behind the LXX has been identified also in the DSS. 4QSam^{a} (50-25 B.C.), 4QSam^{b} (mid-3rd cent. B.C.), and 4QSam^{c} (early 1st cent. B.C.) frequently support the LXX; some of the Qumrân readings correspond even more closely to the Lucianic family of LXX MSS and to readings in Josephus than to the original LXX.

F. M. Cross (*Qumran*, pp. 177-195) classified the original Greek translation, made in Egypt in the 2nd cent. B.C., as the Old Greek. About a century later, he theorized, this translation was revised to agree with the Hebrew text that was currently predominant in Palestine (witnesses to this Palestinian text tradition include citations in the books of Chronicles and in Josephus, in addition to the DSS). This Greek revision is now imperfectly preserved as part of the Lucianic recension of the LXX, completed *ca.* A.D. 300. Lucian seems to have used for this recension a copy of the Palestinian revision of the Old Greek made in the 1st cent. B.C.; for this reason the Palestinian revision of the Old Greek text-type is called proto-Lucian.

The MT forms a third text-type. Cross theorized that this text had a Babylonian provenance. While this identification of the MT's geographical origin is far from certain, it is surely possible in many cases to reconstruct three distinct text-types for the books of Samuel.

Although the Qumrân MSS have not yet been fully published, the works of Ulrich and McCarter (who had access through Cross to the unpublished MSS of Samuel and included their variant readings in their comms.) have enabled students to make substantial use of this evidence. Extensive evaluations of the Qumrân and LXX evidence on individual readings are found in the comms. of McCarter and Klein.

In 2 Samuel the character of the Greek text of LXX B changes beginning with 2 S. 10:1. Before this point Vaticanus contains the Old Greek; after this point Vaticanus includes a different Greek recension, the *kaige*, a version of the LXX produced about the turn of the era in an attempt to make it agree with a proto-MT. The value of the LXX is somewhat diminished in 2 S. 10:1–24:25, therefore, although Lucianic readings offer indirect but extremely valuable access to the Old Greek.

Of the other ancient versions, the Old Latin is the most valuable. McCarter has provided a comprehensive survey of the ancient versions (*I Samuel*, pp. 9-11).

IV. Sources.—It is widely agreed that the editor responsible for the present shape of the books of Samuel drew on a number of earlier sources. In the nature of the case, it is often impossible to determine exactly where such documents began and ended, and there is no unanimity among scholars on this matter or on the date and circumstances of their original composition. The following are the major pericopes that are thought to have served the author of the books of Samuel as sources (see the comms. of Klein and McCarter for discussion of shorter items perhaps drawn from sources).

Much of the material dealing with Samuel's birth, his connections with Shiloh, and his auditory dream theophany in 1 S. 1–3 can be attributed to sources available to the author of 1 Samuel. Chapters 1–2 in particular may stem from a time when the sanctuary at Shiloh was still powerful (the prophet Ahijah is the last Shilonite mentioned in the Bible, 1 K. 15:29f.). The Song of Hannah (1 S. 2:1-10) seems to many to have been composed originally for another context, since it refers positively to the king of Israel (v. 10) even though Hannah's son Samuel opposed kingship as contrary to the will of Yahweh.

The ark narrative (1 S. 4:1b–7:1; 2 S. 6) does not mention Samuel and seems to have a different literary history from that of 1 S. 1–3 and 7. The original beginning and ending of this narrative are in dispute. L. Rost and A. F. Campbell have argued that the account of the ark's transference to Jerusalem (2 S. 6) was part of this original narrative, which they have dated to the 10th cent. B.C. According to Campbell the precanonical source document also reported the rejection of Shiloh and the house of Eli in favor of the sanctuary at Jerusalem. Miller and Roberts, on the other hand, have denied that 2 S. 6 was part of the precanonical narrative and have hypothesized that the original narrative began with the anti-Elide portions of ch. 2 (vv. 12-17, 22-25, 27-36) as an explanation of why the ark was lost in battle. According to this theory the narrative reaffirms Yahweh's power at a time of apparent defeat and is to be dated to a time before David's defeat of the Philistines.

Whatever its original beginning or end, the ark narrative maintains that God cannot be subjugated even when His people are overwhelmed and His sacred ark falls into enemy hands (Gordon, p. 36). Gordon proposed that the ark narrative would have had special meaning at the time of Israel's exile (cf. 1 S. 4:21f.). Exiles may have concluded that Yahweh could return from the Babylonian exile (cf. Ezk. 43:1-5; 44:4) just as He had once returned from exile among the Philistines.

The positive accounts of Saul's rise to kingship are also thought to be old sources available to the editor of Samuel. In 1 S. 9:1–10:16 we find a folkloristic story of how Saul, a handsome young man from an outstanding family,

A stone orthostat showing a man with a sling probably of the type David would have used against the Philistines. From the palace of Kapara at Tell Ḥalâf, 10th cent. B.C. (courtesy of the Trustees of the British Museum)

searched for his father's lost asses. During this search he encountered a man of God (Samuel), who indicated to him his future greatness. This story may have been combined with a separate account, influenced by the "call form" associated with Moses, Gideon, and several prophets, which reported that Samuel anointed Saul to be prince.

Saul's choice by lot (1 S. 10:17-27a) seems to be another old and independent tradition about the origin of his kingship. Those who argue for its independence note that the lot-casting carried out by Samuel would be an unnecessary procedure if Samuel had already anointed Saul. Some have argued that still another tradition is preserved in vv. 21b-24, in which Saul is identified as the one chosen by Yahweh because of his great height.

Saul's accession to the kingship in 1 S. 10:27b–11:15, another old account, is attributed to his leadership in a war against the Ammonites. Here Saul seems to be a private citizen living in Gibeah, not the person who had been designated and acclaimed king in 10:17-27a. The public proclamation of his kingship at the Gilgal sanctuary (11:15) seems redundant after the similar ceremony in Mizpah (10:17, 24).

All of the positive stories about Saul's rise to kingship give Samuel a prominent role. While it is not possible, at this stage of our knowledge, to harmonize the various ceremonies and locales in these accounts, the stories do represent a very strong and ancient tradition that saw Saul's rise as part of the will of Yahweh.

Among the traditions critical of the monarchy, Samuel's unflattering portrait of kingship in 1 S. 8:11-18 is identified as an early source by several scholars. Mendelsohn proposed that Samuel was drawing on his knowledge of Canaanite kingship when he identified the ways in which the king would tax his subjects and turn them into slaves. Crüsemann drew an analogy between this critique of kingship and the grievances that fed the revolts of Absalom and Sheba.

While 1 S. 12 has been identified by many scholars as basically a Deuteronomistic composition (for the theological importance of this speech, see below), it is often said to contain archaic material, largely because the historical details it reports differ from data reported elsewhere in the Bible. In v. 9, e.g., the sequence of enemies — Sisera, the Philistines, and Moab — is contrary to the chronological order of enemies in the book of Judges. The second deliverer cited in v. 11 is either Barak or Bedan (the text is uncertain); if the correct reading is Barak he comes in the wrong chronological sequence, and if it is Bedan the text refers to a deliverer completely unknown elsewhere in the Bible. While ch. 11 reports that the Ammonite crisis was the occasion for Yahweh to raise up Saul as a charismatic deliverer, 12:12 reports that the same crisis resulted in the sinful demand for a king. However this conflict is resolved, chs. 11 and 12 were probably not written by the same person.

The history of David's rise (HDR) seems to be another old document that was incorporated into the books of Samuel. Again, scholars have not achieved unanimity on where this document began or ended. Grønbaek and Mettinger proposed that it began at 1 S. 15:1, the report of Saul's rejection as king. Weiser argued that 16:1-13, the anointing of David by Samuel, would be an appropriate beginning. Since HDR makes no further mention of this anointing ceremony, others would see 16:14 as the beginning of the precanonical document. Most have identified 2 S. 5:10 as the final verse of HDR, in which case it would conclude with David's anointing by both Judah (2 S. 2:4) and Israel (5:3).

The time of composition and the purpose of the HDR source are equally in doubt. Ward suggested that it was prepared by a member of Solomon's court who was trying to justify the king to the Saulides (cf. Crüsemann). Mettinger believed that it should be dated after Solomon, arguing that it supports the Jerusalem king's right to rule over all Israel, as David had done, and not just over the southern kingdom. While Grønbaek and Conrad placed it in the 9th cent., McCarter dated it within the reign of David, comparing it to apologetic literature and especially to the Apology of Ḥattusilis III, a thirteenth-century Hittite king (cf. Whitelam). According to this view the HDR source was originally meant to counteract those who were suspicious of the new king. The document exonerates David from any complicity in the deaths of Saul (2 S. 1:14-16), Abner (3:27, 31-39), and Ishbaal (Ishbosheth, 4:2-12), and it underscores David's generosity to Meribbaal (Mephibosheth), Jonathan's surviving son (ch. 9; 19:24-30). It shows that David did not take advantage of easy opportunities to assassinate his predecessor (1 S. 24, 26), nor, despite his alliance with the Philistines, did he participate in their fatal battle against Saul on Mt. Gilboa (1 S. 31). David's association with the Philistines, a source of potential embarrassment to the king and his supporters, is shown to have been forced upon him by Saul's harassment (27:1).

According to HDR, David also enjoyed the support — or at least the implicit recognition — of Jonathan, Saul's heir apparent and the first of the royal house to acknowledge David (1 S. 18:1-5; 19:1; 20:5-8; 23:6-18), of king Saul's daughter Michal (18:20-29; 19:11-17), of Samuel (19:18-24; 28:17), and of Saul himself (24:20). Abigail, the wife of a wealthy Calebite, joined the chorus of those prophesying David's kingship (25:30). All Israel and Judah are said to have loved him (18:16), and the women sang, "Saul has struck down his thousands, but David his ten thousands" (18:7). It is also repeatedly affirmed that

A Cairo Genizah fragment, 7th-9th cent. A.D. of 1 Samuel 26:10-27:5 telling of David's decision not to kill Saul (courtesy of the Oriental Institute of the University of Chicago)

Yahweh was with David (16:18; 17:37; 18:14, 28; 2 S. 5:10). Even Abner, the general of Saul and later of Saul's son Ishbaal, made efforts to swing the remnant of Saul's kingdom behind David, although Joab assassinated Abner to satisfy a private grievance before the latter's plans were fully carried out (2 S. 3:6-27). Saul is portrayed throughout HDR as beset with paranoid fear and as abandoned by the spirit of Yahweh. Although Saul had failed to carry out the ban on Amalek (1 S. 15), he ruthlessly destroyed all the priests of Yahweh suspected of Davidic sympathies (22:16-19).

The succession narrative (roughly 2 S. 9–20; 1 K. 1–2) is another document widely believed to predate the present books of Samuel, but again there is no agreement on its beginning, end, date, or purpose. Rost, whose monograph forms the starting point for all subsequent research, saw its beginning in 2 S. 6:16, 20-23 and in fragments of the oracle of Nathan (7:11b, 16). More recently, Gunn added much of 2 S. 2–4 to the beginning of the succession narrative. While Rost saw in the narrative "eyewitness history," others have emphasized its wisdom characteristics (Whybray) or even its role as story (Gunn).

Gordon argued that "succession" is not the theme of this narrative, especially if Gunn's identification of its beginning is correct. In Gordon's view the theme must involve David himself. Delekat even proposed that the document was opposed to David and Solomon (note the king's bad behavior in the whole Bathsheba incident). Würthwein found anti-Solomonic tendencies in 1 K. 1–2 and anti-Davidic ideas in 2 S. 10–12. Although many scholars have dated this narrative to the reign of Solomon, Gordon apparently favored a time after the division of the united monarchy (pp. 90f.). Van Seters (p. 290) even dated it to the postexilic period, after the composition of the Deuteronomistic History; but his is decidedly a minority viewpoint.

According to McCarter the succession narrative in the strict sense is limited to 1 K. 1–2, although that document's author knew and drew on materials from 2 S. 9–20. 1 K. 1–2 offers an apology for the coronation of Solomon instead of his older brother Adonijah. The writer noted that David himself had decreed from his deathbed that Solomon was the son destined to be king, and that Solomon enjoyed the support of Nathan the prophet, Zadok the priest, and David's wife Bathsheba. The violent deaths of Adonijah and his supporter Joab and the banishment of the priest Abiathar, who was also involved in Adonijah's abortive coronation, are justified by appeals to David's wishes (Joab), to a foolish and perhaps revolutionary request for David's concubine Abishag (Adonijah), and to the fulfillment of a curse announced in 1 S. 2:30-33 against the Shilonite priesthood (Abiathar). The executions of Adonijah, Joab, and Shimei (the latter had cursed David) were carried out by Benaiah, Solomon's general, not by the new king himself.

The writer of the Solomonic succession narrative (1 K. 1–2) drew on the HDR source (Joab's execution of Abner in 2 S. 3 is presupposed by 1 K. 2:5, 31-33), on the account of Absalom's revolt in 2 S. 13–20, and on the two related stories of the Gibeonites' revenge for a sacrilege committed by Saul (21:1-14) and David's patronage of Mephibosheth (9:1-13; note that when David executed seven descendants of Saul he was not trying to secure his own position but only to stop the famine that had been precipitated by Saul's actions; note also that David provided burial for these slain Saulides as well as for Saul and Jonathan). All of these documents drawn upon by the Solomonic succession narrative are apologetic for David and appear to stem from the period of David's reign. The apparent purpose of the Solomonic writer's allusion to these documents is to explain why Solomon rather than any of his three older brothers — Amnon, Absalom, or Adonijah — succeeded to the throne of David. All three of the older brothers recapitulated their father's sin in the area of sexual behavior: Amnon raped his sister Tamar; Absalom publicly slept with the king's concubines, whom David had left behind in Jerusalem; and Adonijah greedily sought to acquire another of his father's concubines, Abishag. All three also met violent deaths: Amnon was killed by Absalom; Absalom was killed by Joab despite David's explicit prohibition against harming him; and Adonijah, who incited Solomon's understandable wrath by asking for a woman who might give him some claim to the throne, was executed by Benaiah.

Several scholars have suggested that the succession narrative was originally hostile to David and Solomon, with the present pro-Solomonic bias coming from a later redactor (Delekat, Langamet, Veijola, and Würthwein). The tensions these scholars have detected within the document, however, are better ascribed to its apologetic character. The original writer had to refer to serious charges made against David and/or Solomon in order to write in his/their defense. Thus the negative views about David or Solomon are not the result of an earlier edition of the succession narrative, but reflect the usual tensions inherent in an apology.

V. Redactional History.–One's reconstruction of the path by which the above-mentioned sources and other materials were brought together determines to a large extent what one sees as the meaning of the books of Samuel; or it makes possible the isolation of a series of meanings that the work had as it passed through several editions. Some studies have virtually ignored such endeavors and focused more on the literary qualities of the present text of Samuel (e.g., Conroy, Eslinger, Humphreys, Gunn, and Jobling). While the holistic approach of these scholars is often quite illuminating and can benefit any reading of the text, most scholars still believe there is profit in trying to reconstruct the editorial stages through which the work has passed.

Several scholars have proposed that there was a prophetic edition of many of the materials in Samuel prior to the 7th cent. B.C. This edition purportedly accepted the monarchy with a great deal of caution, as an unwelcome but inevitable reality. It affirmed that a king could be head of the government but maintained that he should be subject to the instruction of the prophet and that he could even be rejected by the prophet in the name of Yahweh. Because of its critical attitude toward kingship, this prophetic edition is usually thought to have a northern origin. At the same time, however, it is said to have acknowledged David's right to be king. McCarter, who has provided the most extensive treatment of this edition, summarized its author's intent as follows: "His background was northern, and he drew the fundamental principles upon which he based his interpretation of history from the teachings of the prophetic circles of the north; but his orientation was to the south, to which he looked for hope and in which he knew the future of Israel to be" (*I Samuel*, p. 22). For this reason the prophetic edition is dated to the end of the 8th cent., after the fall of the northern kingdom. The existence of this edition, however, is open to some question. Some of its prophetic tendencies may be part of the Deuteronomistic redactional process. The supposed double — and almost contradictory — orientation (northern criticism of the monarchy and a pro-Davidic, southern bias) contributes to the skepticism concerning the isolation of this redaction.

SAMUEL, BOOKS OF

In any case, the vast majority of all more recent studies of Samuel has concluded that the present shape of the canonical work has resulted from its being part of the Deuteronomistic History. In 1943 M. Noth suggested that a single exilic writer, living in Palestine, wrote a history of Israel based on the theology of Deuteronomy. This history consisted of an expanded book of Deuteronomy (the original book of Deuteronomy was supplied with a new introduction that was more a prologue to the Deuteronomistic History than to Deuteronomy itself), plus the books we now call Joshua, Judges, 1 and 2 Samuel, and 1 and 2 Kings (for Noth's work in English, see *Deuteronomistic History*).

Four questions about Noth's hypothesis continue to provoke much discussion. First, Noth interpreted the history as primarily a theodicy written to provide the theological rationale for the fall of the northern kingdom, Jerusalem, and Judah. Even if one grants that theodicy was a major part of the historian's intention, it is important to note that theodicy is rarely an end in itself; rather, a theodicy is written to move the reader to accept God's role in history and to continue to worship and serve Him or to change one's relationship to Him. Recent scholars, therefore, have found a number of positive messages in the history and a more hopeful assessment of the future (see Klein, *Israel in Exile*, pp. 38-43).

A second area of controversy is Noth's hypothesis about the Palestinian provenance of the history. Although a majority of scholars still favor a provenance in Palestine, some have argued cogently for Babylonia as the place of composition (see esp. Nicholson, pp. 116-122; Soggin, p. 164).

Noth's idea of a single historian responsible for the entire work has been all but given up. Some scholars have spoken generally of a Deuteronomistic school that was active over a considerable period of time, while others have claimed to detect distinct editions or redactions (Cross, Dietrich, McCarter, Nelson, Smend, Veijola).

Perhaps the most important area of discussion, still unresolved, centers on the date of these redactions. Cross (*Canaanite Myth*, pp. 274-289; cf. McCarter, Nelson) proposed that the first edition of the Deuteronomistic History was composed after the discovery of Deuteronomy in the temple (2 K. 22:8-10) but prior to the death of Josiah. Cross considered it a propaganda document for the Josianic reform, with a date somewhere between 621 and 609 B.C. A second edition of the history was completed in mid-exile (*ca.* 550 B.C.). It brought the history up to date and attributed the fall of Jerusalem to Manasseh's wickedness, which canceled out whatever virtues Josiah had shown in his reform.

Smend, Dietrich, and Veijola (the Göttingen school) have also detected multiple editions but have dated none of them prior to the destruction of Jerusalem in 587. Their first edition, called DtrG (G for *Geschichte* or *Geschichtswerk*), provided an explanation for the fall of Jerusalem; it criticized Israel for worshiping other gods and patronizing sanctuaries other than the temple in Jerusalem. A second edition, called DtrP (P for Prophetic), added accounts about prophetic figures and highlighted the notions of prophecy-and-fulfillment and the reliability of the word of Yahweh. (Some of the material attributed to DtrP in this hypothesis is assigned by McCarter and others to the prophetic, pre-Deuteronomistic edition discussed above). The Göttingen school's third redaction, DtrN (N for Nomistic), faults Israel for violating details of the law and for mixing with the surrounding nations.

The Göttingen school has been far more persuasive in its arguments that the Deuteronomistic History is an exclusively exilic work, without a preexilic Josianic predecessor, than in its assignment of specific verses to one of the three supposed exilic editions. At this stage of research it may be advisable to speak more generally of the Deuteronomistic interpretation of history during the Exile and to acknowledge that this interpretation may have resulted from two or more editors, without claiming to be able to identify precisely where the work of one leaves off and the work of the next begins. The effect of such a Deuteronomistic reading can be sampled in two key chapters, 1 S. 12 and 2 S. 7.

1 Samuel 12, the farewell speech of Samuel, is the final Deuteronomistic reflection on the rise of kingship in Israel as reported in chs. 7–11. In those chapters the historian had incorporated several older compositions, the majority of which treated Saul and kingship in a most positive manner. In 9:1–10:16 Saul had been anointed by the prophet Samuel and had displayed a kind of prophetic ecstasy that showed that the Spirit of Yahweh rested on him. In 10:17-27a, on the other hand, Saul was singled out by lot and by a prophetic oracle, while in 11:1-15 the spirit of Yahweh had rushed upon him and helped him deliver the city of Jabesh-gilead from Ammonite attack. In the aftermath of this victory, the people spontaneously acclaimed him as king at Gilgal. These passages in their present form give a prominent role to Samuel and clearly consider Saul's kingship to be the will of Yahweh.

The Deuteronomistic historian also included in chs. 7–11 other texts that he had either written or redacted, which frequently contain explicitly or implicitly negative comments on kingship. Since Samuel had been a more than adequate channel for God's victory over the Philistines according to ch. 7, the author seems to imply that the Israelites had no need for a king to lead them in battle. Samuel had also warned of the social inequities and self-aggrandizement that would come with kingship, and he twice criticized kingship as a rejection of Yahweh as king and savior (8:7; 10:19). The negative opinions about kingship in these three Deuteronomistic pericopes (7:2-17; 8:1-22; 10:18b-19) are balanced by Yahweh's command to make a king in 8:7, 22 and by the fact that these pericopes are interspersed with the positive ones discussed above (9:1–10:16; 10:17-27a; 11:1-15). Crüsemann (pp. 61f.) may well have been correct in isolating 8:1-3, 11-17, and 12:3-5 as pre-Deuteronomistic material that is unsympathetic to the monarchy. The criticism of kingship in these sources employed by the Deuteronomistic historian is economic and social rather than theological. Its original setting may have been among wealthy landowners about the time of Solomon (cf. Mendelsohn).

1 Samuel 12, then, produces a synthesis at the conclusion of all these varied accounts of the rise of kingship. The people first declare Samuel completely innocent in his public life, and both Samuel and the people agree that Yahweh is a witness to this (vv. 1-5). Yahweh is also shown to have been without fault in His saving actions for Israel (vv. 6f.). The people had erred, however, in demanding a king during the recent crisis with Nahash instead of turning to Yahweh for help (vv. 8-12). Nevertheless, the king of their own choosing is also Yahweh's gift, and Samuel presents the conditions under which kingship might be a blessing rather than a curse (vv. 13-15). A rain during wheat harvest, which comes in answer to Samuel's prayer, persuades the people to confess their sin in requesting a king and to ask Samuel to intercede for them (vv. 16-19). Samuel promises to pray for them and urges them not to turn to other gods. Total destruction of the people and their king will result if they turn to wicked behavior (vv. 20-25).

This Deuteronomistic summary indicates that Israel's life under a king will be blessed if the people are obedient (v. 14), but that it will be cursed if the people disobey (v. 15). The final, conditional curse in v. 25 threatens the people and their king with exile if they persist in acting wickedly. This threat had become a reality in the destruction of Jerusalem and the exiling of Israel's leadership by the time this chapter reached its final form. But these events of national catastrophe are not evidence for Yahweh's weakness, unfaithfulness, or caprice. Rather, in the light of the entire chapter, they are completely harmonizable with Yahweh's record of fidelity with His people, i.e., with His righteousness (v. 7).

2 Samuel 7 has been the object of a spirited search for older and more original elements beneath its present Deuteronomistic surface (see the surveys in Gordon, pp. 71-80; McCarter, *II Samuel*, pp. 9-16). McCarter's own reconstruction demonstrates both the potential value and the precariousness of such literary critical endeavors. He found the oldest document behind this chapter in vv. 1a, 2f., 11b-12, and 13b-15a, and he assigned it to the period of Solomon. David's promise to build a temple for Yahweh lends authority to Solomon's actual construction of this sanctuary, and David's promise is answered by Yahweh's promise to build a house or dynasty for David.

According to McCarter, the northern prophetic redaction, which he discovered especially in 1 S. 1–15, added 2 S. 7:4-9a and 15b to the earlier document. This addition was critical of David's presumption in offering to build Yahweh a house. The temple is contrasted in this redaction with Yahweh's former sanctuary or tent, and David is informed that a temple is unnecessary and unwanted. The dynastic promise at this stage is understood as an uninduced gift, not as a response to David's pledge to build the temple.

The Deuteronomistic additions in the strict sense are vv. 1b, 9b-11a, 13a, and 16. They pick up familiar themes: a great name for David, a permanent sacred site, and the achievement of rest (freedom from war) for Israel. The latter two ideas are already linked in Dt. 12:10-12. The Deuteronomistic historian linked the long-awaited central sanctuary to the monarchy. The divine prohibition of temple construction was only temporary because the time was not yet right. Elsewhere in the Deuteronomistic History, David's failure to build the temple is traced to the fact that his was an age of war, while rest came only with the advent of Solomon (cf. 1 K. 5:3-5; 8:17-19).

By these additions, of course, the historian incorporated all of 2 S. 7 into his massive history. The chapter as a whole integrates themes from the judges (vv. 7, 11), the rejection of Saul (v. 15), the rise of David (vv. 8f.), the accession of Solomon (v. 12), and the erection of the temple (v. 13). David's rapid rise was possible because he was divinely destined for kingship, because he was to be the progenitor of the chosen dynasty (a secure house), and because he was a savior whose victories would make possible the promised rest for Israel (McCarthy, "II Samuel 7," pp. 131f.). Since one of David's major achievements was the initiation of "rest," his military victories are catalogued by the Deuteronomistic History in ch. 8.

Deuteronomistic elements also play a role in David's prayer in response to Nathan's oracle (7:18-29). Verse 22 stresses Yahweh's uniqueness, and vv. 23f. report His incomparable benefactions for the Israelites, especially His making them a people through the exodus from Egypt. David's reign was a time of promise and preparation, looking forward to the establishment of the dynasty and the building of the temple. David received the promises, prayed for their fulfillment (vv. 25f.), and even prepared for their fulfillment by winning rest for the people (ch. 8 in its present position).

It is widely held that 2 S. 21–24 is a supplement to the Deuteronomistic History and that typical Deuteronomistic terminology is absent from these chapters. Often dismissed as miscellany, they actually show a clear and meaningful structure. For example, Gordon (pp. 95-97) found a concentric arrangement, in which items 1 and 6, 2 and 5, and 3 and 4 are parallel:

(1) 21:1-14 A famine story
  (2) 21:15-22 Warrior exploits
    (3) 22:2-51 A psalm (= Ps. 18)
    (4) 23:1-7 A divine oracle about the Davidic covenant (cf. Pss. 89; 132; 2 S. 7)
  (5) 23:8-39 Warrior exploits and a list of warriors
(6) 24:1-25 A plague story.

David, according to the psalm, was righteous in carrying out his duties (2 S. 22:22-25) and yet dependent on Yahweh his lamp (v. 29). David also rejoiced in the covenant that God had made with him and his house (23:3-5). It is an obedient and blessed David that appears at the center of this final section of Samuel, but he is surrounded by the David of history, who turned over the descendants of Saul to the vengeance of the Gibeonites (ch. 21) and who erred in taking a census of the people (ch. 24). David ends his life, like Moses, with a hymn of vindication (ch. 22; cf. Dt. 32:1-43) and a testimony (2 S. 23:1-7; cf. Dt. 33).

VI. Purpose and Theology.—The prophet-judge Samuel, born in answer to his mother's fervent prayer, offers a contrast to the corrupt priesthood at Shiloh, whose behavior guaranteed the end of the Shiloh epoch in Israelite history (1 S. 1–2). The focus of 1 and 2 Samuel on David, God's chosen king and anointed one, is adumbrated in the Song of Hannah (1 S. 2:10; cf. Childs, pp. 272f.). Since Yahweh was with Samuel and since all Israel acknowledged him as prophet (1 S. 3:19f.), he was fully qualified for the task of inaugurating kingship in Israel (chs. 7-12) and for transferring the office of king to David (ch. 16).

The loss of the ark to the Philistines (1 S. 4) led the wife of Phinehas to cry out, "The glory has gone into exile from Israel since the ark of God has been taken" (v. 22); but it also provided an opportunity for Yahweh to manifest His superiority over Israel's enemies (ch. 5) and to demonstrate that Israel had no need for a king in order to be victorious over the Philistines. The loss of the ark and its subsequent glorious return (ch. 6) may suggest what the audience to which Samuel was addressed expected in its own day about the return of Yahweh to the land.

Samuel's victory over the Philistines at Ebenezer followed a ceremony of repentance (1 S. 7). If such repentance and putting away of foreign gods had been followed consistently, the defeats of the northern and southern kingdoms in 721 and 587 B.C., respectively, would not have been necessary. While the request for a king was sinful because it manifested a failure to look to Yahweh for help in time of need, kingship was also a gift of Yahweh, as is asserted throughout chs. 8–11. Samuel made it clear that kingship would be a blessing if Israel's conduct was obedient, but it would be a curse if the people disobeyed and rebelled (ch. 12). Israel chose the latter course, as is demonstrated throughout the Deuteronomistic History, and this led to the sweeping away of both king and people (cf. v. 25; for discussion of chs. 7–12, see V above).

Saul lost the opportunity to establish a dynasty (1 S. 13) and to continue as king himself (ch. 15) because of his disobedience on two occasions: he erred in performing a sacrifice in the place of Samuel (13:8-14) and in not carrying out the ban in the war against Amalek (ch. 15).

Samuel, who delivered Yahweh's verdict to Saul, also anointed David, the youngest son of Jesse, to succeed Saul as king of Israel (ch. 16). The anointing signified Yahweh's obligation to David and, by implication, His covenant with him. While the account of David's anointing relates how he became king *de jure*, the following chapters (1 S. 16:14–2 S. 5) tell how he became king *de facto*. All the deeds of politics, of guerrilla action and intrigue, of marriages of convenience, and of questionable service with the Philistines are trumped by a prior fact: already at the start Yahweh had anointed David to be Saul's successor. After Saul's death first Judah (2 S. 4) and then Israel (5:3) seconded Yahweh's choice by anointing David to be king. David himself acknowledged that Yahweh had chosen him to be king (5:12; 6:21). For the numerous references to David as the one destined to be king, see the discussion of the history of David's rise (HDR) in IV above.

David's transfer of the ark to Jerusalem gave great prestige and honor to the Jerusalemite monarchy and, later, the Jerusalem temple (2 S. 6). It prepared the way for the divine oracle granting David a dynasty and his son the right to build a temple for Yahweh (ch. 7). Six times in ch. 7 it is stated that David's kingship, his house, or his throne will last forever. The unconditional character of this promise is modified later in the Deuteronomistic History (1 K. 2:3f.; 6:12f.; 8:25; 9:4f.), but the reliability of the promise also offered some hope as the historian turned toward the future.

Throughout the entire Deuteronomistic History, Judah's life is extended because of Yahweh's choice of David and Jerusalem (1 K. 11:34-36). Because of the promises to David and of David's perfect obedience (2 S. 22:22-25), Yahweh postponed the punishment merited by later kings, or He did not carry it out fully. The division of the kingdom, e.g., did not take place during the lifetime of Solomon because of Yahweh's commitment to David (1 K. 11:12, 32); and this promise also secured the loyalty of at least one tribe to the Davidic dynasty after the division of the kingdom (vv. 13, 32). The promise to David forestalled total destruction during the reign of wicked Jehoram (2 K. 8:19), and the choice of David and Jerusalem led to Yahweh's defense of the city during the days of Hezekiah (19:39; 20:6). The release of Jehoiachin at the end of the Deuteronomistic History (25:27-30) may mark the beginning of a new era of blessing; at least it shows that the promise to David continued to have positive effects.

The historian later portrays David as wholly true to Yahweh (1 K. 15:3) and as a man who did what was right and did not turn from anything that Yahweh had commanded him all the days of his life (1 K. 15:5). Despite his adultery and murder in the affair with Bathsheba (2 S. 11–12), and despite his failure to act decisively with respect to Amnon's rape of Tamar and Absalom's subsequent rebellion (chs. 13–20), David is one of only three persons designated as Yahweh's servant in the Deuteronomistic History (the others are Moses and Joshua). David stands out because he captured Jerusalem (2 S. 5), brought the ark to the holy city (ch. 6), and demonstrated his loyalty and piety in his prayers (7:18-29; 1 K. 1:47f.). David administered justice and equity to all the people (2 S. 8:15), walked before Yahweh in uprightness of heart (1 K. 3:6), and kept Yahweh's statutes and commandments (3:14).

David, according to a psalm ascribed to him and placed near the end of 2 Samuel, was righteous in carrying out his duties (22:22-25) and yet dependent on Yahweh his lamp (v. 29). David also rejoiced in the covenant God had made with him and his house (23:3-5) and foresaw a glorious future for his dynasty with God's help. 2 S. 21:1-14 shows that the reason for the destruction of Saul's descendants lay in the bloodguilt of Saul himself. David's weakness in his final battle with the Philistines (21:15-22) prepares the reader for the psalm in ch. 22, which attributes all of David's victories to Yahweh's power. Although David sinned in conducting a census, he repented of this sin, and the incident provided an opportunity for emphasizing Yahweh's mercy toward him and toward Israel (Childs, pp. 274f.).

SANBALLAT san-bal'ət [Heb. *sanᵉballaṭ* < Akk. *Sin-uballiṭ* 'may Sin give him life'; Gk. and Lat. *Sanaballat;* Syr. (Pesh.) *Sanballaṭ*]. A Horonite who led the Samaritan opposition to the rebuilding of Jerusalem walls in the days of Nehemiah (Neh. 2:10, 19; 4:1f.; 6:1f.), governor of Syria in the Aramaic papyri from Elephantine (Cowley No. 30, *ANET* p. 492), and more recently in the Samaria papyri discovered in 1962 (F. M. Cross, Jr., "The Discovery of the Samaria Papyri," in E. F. Campbell Jr. and D. N. Freedman, eds., *The Biblical Archaeologist Reader 3* [1970], pp. 227-239). Also the name of a governor of Syria mentioned in Josephus (*Ant.* xi.7.2, §302; 8.2f., §309ff.)

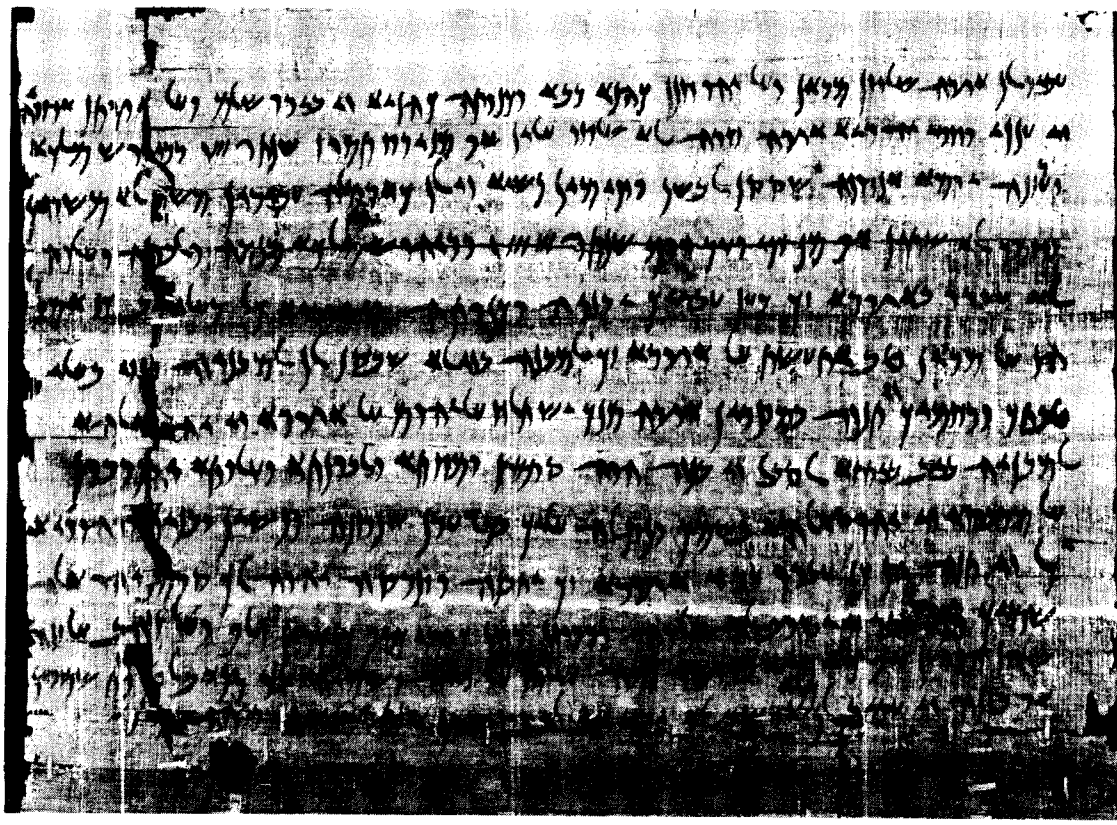
"Sanballat the Horonite" (Neh. 6:10, 19; 13:28) is introduced at the time of Nehemiah's first visit to Jerusalem, Nisan of Year 20 of Artaxerxes I (445). Whether the gentilic "Horonite" refers to Beth-Horon or to Horonaim (a city of Moab) is uncertain. Since Sanballat is named together with Tobiah the Ammonite and Geshem the Arab (2:19, cf. 4:7), it is quite possible that he was a Moabite. (Note also the juxtaposition of "Moabite" in 13:1 and "Sanballat the Horonite" in 13:28.) His significance in the book of Nehemiah was his opposition to the repairing of the walls of Jerusalem (4:1, 7), and indeed he was involved in a plot apparently designed to put Nehemiah to death (6:1-13). The last reference to Sanballat in Nehemiah informs us that one of Jehoiada's sons was the son-in-law of Sanballat the Horonite (13:28). Jehoiada was the son of Eliashib the high priest.

Attempts to correlate these data with Josephus, requiring redating of Nehemiah, are no longer valid, due to the discovery of the Samaria Papyri at Wâdī ed-Dâliyeh. Samaria Papyri Nos. 3, 14, and 8 (the last dated 4 March 354) indicate that the custom was to name a male child for his grandfather (popponymy). That there were three Sanballats and similar multiples of names can now be determined.

Sanballat I was contemporary with Nehemiah, *ca.* 444, and was succeeded by his son Delaiah (Elephantine Papyri Nos. 30, 32). The son of Jehoiada married Sanballat's daughter (Neh. 13:28). Bagohi succeeded Nehemiah as governor of Judah prior to 407.

Sanballat II, son of Delaiah, was succeeded by his sons Yeshua and Hananiah; the latter was governor by 354

A papyrus letter from the Elephantine Jews requesting permission to rebuild the temple. They mention that a letter was also sent to the sons of "Sanballat the governor of Samaria" (second line from the bottom, far left) (Staatliche Museen zu Berlin, DDR, Ägyptisches Museum/Papyrussammlung 13495)



(*Samaria Papyri* 5, 8). Sanballat II therefore held the office between Delaiah (407) and Hananiah (354).

Sanballat III, son of Hananiah, was appointed by Darius III (335-330). He gave his daughter Nikaso to Manasseh, who was a brother of Jaddua the high priest (Josephus, *Ant.* xi.7.2, §303).

W. S. LASOR

SANCTIFICATION. The concept of sanctification is a crucial element of the biblical doctrine concerning human life before God. At the very beginning of the history of God's people, the divine word to Abraham is "I am God Almighty; walk before me, and be blameless" (Gen. 17:1). God demands human holiness and righteousness as essential in any right relationship with Him; therefore, some way of approach, some path of sanctifying or making us holy before a holy God ultimately becomes necessary if full fellowship with God is to be achieved. Yet this idea of sanctification, of human progress toward and final achievement of holiness and righteousness, was not fully developed in the OT. Instead the concept of human sanctification arose fully only in the ethical teaching of the NT and in the Church's subsequent meditation on the NT view of the Christian life. We must make a distinction, therefore between the OT language of the holiness of God and of the sanctity or hallowed character of places, times, and persons set aside for God, and the NT language of sanctification; in the latter, the OT view is not discarded but rather personal holiness in a redemptive as well as an ethical sense receives an increased emphasis. In the later meditations of the Church the concern is to manifest the relation of this personal holiness to other aspects of the work of salvation.

  C. The Ethical Dimension of Holiness
II. In the NT
  A. Terms
  B. The Ethical Emphasis of the Gospel
  C. The Language of Progress in Sanctity
III. History of the Doctrine
  A. Patristic Teaching
  B. Medieval and Roman Catholic Doctrine
  C. Reformation and Modern Protestant Views

I. In the OT.–A. Terms. The language of the OT includes a multitude of references to the holy or the sacred, to acts of consecration or hallowing, and to holy places or "sanctuaries," all of which represent attempts to translate the Hebrew noun *qōḏeš*, "holiness," the adjectival form, *qāḏôš*, "holy," and other derivatives of the root *qdš*. But no Hebrew form is capable of translation as "sanctification" or "consecration"; thus no OT term is identical in significance to the Greek NT word *hagiasmós*, "sanctification." In addition to *qāḏôš* the OT will occasionally use *nāzîr*, "consecrated one" (cf. Nu. 6:2; 13, 18-21; Jgs. 13:5, 7; 16:17; cf. also RSV "Nazirite"), or *ḥāsîḏ*, "holy one," and *ḥ^{a}sîḏîm*, "holy ones" or "saints" (cf. 2 Ch. 6:41; Ps. 16:10; 30:4 [MT 5]; 31:23 [MT 24]), with reference to persons consecrated or set aside to God.

B. The Basic Concept of Holiness. The religious or theological significance of all these terms and, ultimately, of the later language of santification, rests upon the underlying Scriptural assumption that no creature or created thing is holy in itself. God alone is holy: He is the "Holy One of Israel" (e.g., 2 K. 19:22; Ps. 71:22; 78:41; 89:18; Isa. 1:4; 5:19; 12:6; 43:3; 45:11; etc.), or simply the "Holy One" (e.g., Isa. 10:17; Hos. 11:9; Hab. 1:12; 3:3). God's name is holy and must not be profaned (Lev. 20:3; 22:2, 32; 1 Ch. 16:10, 35; Ps. 105:3) but rather acknowledged with awe (Ps. 99:3). Thus, although Israel is called upon to rejoice and to glory in this holy God (Ps. 105:3; 106:47; 145:21; Isa. 29:19), and although these and other texts clearly identify the divine holiness as the characteristic of a personal God, the divine holiness indicates a certain distance and separation from anything and everything that is profane (cf. Isa. 6:3-5). Some scholars go so far as to argue that the idea of a sacred character separated from the profane is basic to the OT conception of holiness (see Snaith, pp. 24-26), and it is certainly true that the Lord is "high and lifted up" (Isa. 6:1; cf. 55:8f.).

Nonetheless, the denomination of God as "Holy One," either with the singular usage typical of Isaiah (*qāḏôš*) or in the plural usage (*q^{e}ḏōšîm*; cf. Prov. 9:10), indicates more than the simple notion of the separation of God from all profane things. "Holy One" has become a name indicative of deity or divinity, of God generally considered. The fact that only God is truly holy agrees with this usage, as do the references to the "holy name" of God (e.g., Lev. 20:3; 22:2, 32; Ps. 103:1; 145:21; Ezk. 36:20-22). The "holy name," like the "Holy One," is surely a denomination of God or a term expressing the being or Godhead of Yahweh rather than a particular attribute or relation as distinct from another (cf. *HDB*, II, 396). In some cases, especially in Isaiah's expression "Holy One of Israel," the covenant relation between God and His chosen people comes into view, but God is holy apart from that specific relationship. Indeed, if a single attribute most fully describes God Himself in His fulness, that attribute is holiness. Created things can be holy only in a derivative sense.

In this context the divine holiness can be characterized, in the terms offered by Rudolf Otto, as *mysterium tremendum et fascinans*, a fearful and captivating mystery: there is both dread and attraction, a sense of encounter with an overwhelming presence that cannot and may not be approached in a profane manner, but that nonetheless demands and expects approach. Thus as Moses approached the divine presence indicated in the burning bush, he removed his shoes in acknowledgement of the holiness of God and the sacredness of the place of God (Ex. 3:4f.). Similarly the prophet Isaiah experienced in his vision of God in the temple a sense of distance and separation from the holy, together with a profound dread (Isa. 6:3-5). Nonetheless the separation and the dread were both overcome — not by the desacralizing of the divine but by the purification and santification of the human. In both these instances, in contrast to some of the implications of Otto's history-of-religions approach, the One encountered is not an impersonal power but a personal divine being.

There is good reason, therefore, to look beyond the root idea of separation for the theological significance of *qāḏôš*. God, after all, is not absolutely or ultimately separate in His holiness but rather seeks out fellowship with humanity. In fact, the greater number of references to God as the "Holy One of Israel," concentrated as they are in Isaiah's preaching of repentance and redemption, are words of hope in the Lord's presence given to the righteous: they "will lean upon the Lord, the Holy One of Israel, in truth" (Isa. 10:20); they will "shout and sing for joy" in the redeemed Zion because the Holy One will be in their midst (12:6); the "poor among men shall exult" in Him (29:19); the Holy One is the Savior who draws near to

His people (cf. 30:15; 41:14, 16, 20; 43:3, 14; etc.). Only evildoers and those who trust in powers other than God need fear the Holy One of Israel (1:4; 5:24; 31:1). Beyond the initial experience of the fearful and captivating mystery is blessing in the presence and fellowship of the holy God.

This blessing can be further described in terms of its religious and its ethical dimensions, specifically, in terms of the consecration or sanctifying of things, places, and persons. In these instances the connotation of separation remains but is modified by the fact that separation between the divine and the creaturely is overcome even as the creaturely, whether thing, place, or person, is set aside and given over from the profane to the sacred. Separation remains, but now between the hallowed thing, place, or person and the profane world. The underlying issue is not separation per se but rather the antinomy between the holy and the unholy, the unclean, the sinful. Thus the divine holiness can indicate unapproachable greatness, utter purity, and ethical rightness or righteousness, By way of illustration, the divine holiness as praised in the Psalms (cf. 22:3 [MT 4]; 99:3, 5, 9) can be understood as greatness or majesty, while the Levitical language of divine holiness (cf. Lev. 11:44; 19:2; 20:25f.) most certainly rests on concepts of ritual purity and consecration, although it transcends those concepts in the direction of the ethical (cf. Lev. 11:45; 20:7). The prophetic view of divine holiness, particularly as witnessed by Isaiah, manifests the ethical dimension of the idea and its connection with righteousness (cf. Isa. 1:4; 5:16; etc.).

The consecration of things and places in the OT does not rest upon any intrinsic or natural holiness in the created order or upon the intrinsic power of ritual. No evidence indicates that the theophany at the burning bush (Ex. 3:3-6) or the theophany before Jericho, when Joshua was confronted by "the commander of the Lord's army" (Josh. 5:13-15), took place at religiously significant locations or that the locations were identified as significant afterward — but in both instances the recipient of the revelation is commanded to put off his shoes because he stands on holy ground. Clearly the divine presence imparts holiness. Similarly, things that are "near to God" because of their use in religious or cultic activities are declared holy — such as the "holy crown" or signet bound to the turban of the Aaronic priest (Ex. 28:36; 29:6), the "holy vessels" associated with the ark of the covenant and later with the temple (1 K. 8:4; 1 Ch. 22:19; Ezr. 8:28), and the ark of the covenant itself (2 Ch. 35:3), together with the place where such holy things are located (1 K. 8:6). Also, times set aside to God are holy, such as the sabbath (Ex. 20:8, 11), or days of religious festival (Neh. 8:9-12; cf. Isa. 30:29). Tithes are also holy in that they are set aside for the Lord (Lev. 27:30).

Just as things can be set aside for sacred use, persons too can be ritually cleansed or sanctified and given or dedicated to the Lord. Thus the term *nāzîr,* "holy one," indicates a person consecrated to God, bound to a vow of ritual purity, and separated from impurity or uncleanness. The vow, as described in Nu. 6:1-21, could be taken by a man or a woman and entailed "separation to the Lord" (v. 2) from all forms of the fruit of the vine — whether fresh or dried grapes, unfermented or fermented juice. Further, during the time of the vow the Nazirite could not shave or cut his or her hair or approach any dead body. Any exposure to the uncleanness of death must be atoned for by sacrifices and burnt offerings. Also, the conclusion of the period of separation stipulated by the vow must be marked by sacrifice, including a ritual shaving of the head of the Nazirite (Nu. 6:9-20). In the case of Samson the vow began at birth and concluded at death (cf. Jgs. 13:7), but this appears to be an exception. Ritual consecration generally served a limited purpose such as purification for participation in sacrifice (cf. 1 S. 16:5). *See also* NAZIRITE.

C. The Ethical Dimension of Holiness. Such formal or ritual consecration should be viewed as a religious or "pre-ethical" stage in the development of the concept of personal human holiness or sanctification (cf. *DNTT,* II, 224). The sense of distinction between the sacred and the profane and the need for formal separation from the profane in order to serve the holy God precede and ultimately provide the foundation for an ethical understanding of separation from the world or worldliness to divine service. Thus those who worship in the holy place must be more than pure in a ceremonial or ritual sense: they must have "a pure heart" as well as "clean hands," and they must be free of falsehood and deceit (Ps. 24:3-6). Holiness, then, is associated with righteousness both in God and in human beings. Dedication to the law of God, viewed as the setting apart of Israel from the pagan world, is both an approach to God and a means by which God sanctifies His people to Himself: "Consecrate yourselves therefore, and be holy; for I am the Lord your God. Keep my statutes, and do them; I am the Lord who sanctify you" (Lev. 20:7).

The divine holiness is thus the ground of human holiness. For Israel to be and remain the people of God it must be holy, not merely in the ritual sense but also in the ethical sense. The Levitical precepts in particular press this point. The basic command, "You shall be holy; for I the Lord your God am holy" (Lev. 19:2), leads directly to the commands to honor one's father and mother, to keep the sabbaths (v. 3), to refrain from theft and falsehood (v. 11), to deal rightly with neighbors and servants (v. 13), and to be kind to the blind and deaf (v. 14). After each command follows the refrain, "I am the Lord," which suggests the original premise, the holiness of God. Even so, Israel's holiness is identified as obedience to the divine law (Nu. 15:40), not merely the ritual but also, of course, the ethical commands.

The ethical implications of sanctity are fully developed by the prophets. In the prophetic writings consistent polemic against the external and formal character of the cult leads to a view of religion as inward and ethical in character. For the prophets the immediacy of the relationship to God's holiness indicated by ritual sanctification or demanded by sacrificial observance would necessarily have as its primary result a transformation of the person. Thus the "unclean lips" of the prophet Isaiah are purified by a coal from the heavenly altar, his "guilt is taken away," and his "sin forgiven" (Isa. 6:5-7). Amos argues that the divine holiness demands the ethical reconstruction of society. Cultic celebration, feasts, and assemblies (Am. 4:4f.; 5:21-24) are worthless apart from justice and right causes. God has sworn by His holiness to avenge the poor, the afflicted, and the oppressed (2:6f.; 4:1f.; 5:10-15). For Habakkuk the corollary of the divine holiness is anger against evil, faithlessness, and wrongdoing, and vindication of the righteous who live by faith (cf. Hab. 1:12f.; 2:4).

II. In the NT.–A. Terms. In the NT the concept of holiness is presented primarily by the adjective Gk. *hágios,* "holy"; by the three related nouns indicating holiness, *hagiasmós, hagiótēs,* and *hagiōsýnē*; and by the verb, *hagiázō,* "make holy or sanctify." Of the three nouns only *hagiasmós* can be rendered as indicating the process of making holy, i.e., sanctification or consecration. *Hagiótēs* indicates personal holiness whereas *hagiōsýnē* is a term for holiness generally or abstractly considered. The mean-

ing of these words for "holy" is clarified somewhat by noting the other Greek adjectives used in the NT that can have the implication of "holy": *hierós, hósios,* and *hagnós*. *Hierós* indicates something sacred but usually only in the outward sense of a rite. *Hósios,* "reverent" or "pious," does not connote a purity so separated from the world as to belong only to God and to those who are His — and thus is not closely associated with the divine as is *hágios*. *Hagnós,* "pure," "chaste," or "undefiled," stands in close etymological relationship to *hágios,* and is occasionally used in the NT to indicate the moral purity that is characteristic of God (1 Jn. 3:3) and of believers (cf. Tit. 2:5). *Hagnós* lacks the breadth of meaning of *hágios* and does not have a related noun indicative of the process of sanctification, but only the rarely used noun *hagnótēs,* meaning "purity" or "sincerity."

Thus *hágios* is the adjective applied to God, to the Spirit, and to Christ. In His intercessory prayer Jesus Christ called God "Holy Father" (Jn. 17:11), and in Rev. 4:8 is called thrice holy. Throughout the NT, *hágios* is the adjective in the name "Holy Spirit," and Christ Himself is called "the Holy One of God" (Mk. 1:24; Lk. 4:34). Persons who have been chosen by God for Himself and thereby set apart from the world are also holy. Christ is called God's "holy servant" (Acts 4:30) and believers are elect or called "saints" (*hágioi,* 1 Cor. 1:2). Because of their divine origin and purpose, Christian calling (2 Tim. 1:9) and the OT Scriptures (Rom. 1:2) are called holy.

B. The Ethical Emphasis of the Gospels. Although all of the above uses of *hágios* draw in some measure on the originally religious concept found at the root of OT usage, i.e., the concept of separation from the profane and of being set apart for the divine, the NT emphasis is clearly upon the ethical dimension of the holy. The nouns indicating holiness, particularly *hagiasmós,* "sanctification," make this apparent. Sanctification is the result of God making someone holy (2 Thess. 2:13; 1 Pet. 1:2) and is viewed ethically in relation to faith and love (1 Tim. 2:15). Similarly, throughout the Pauline epistles, sanctity is contrasted not with the profane or the worldly in general but with lust and moral impurity (Rom. 6:19-22; 1 Thess. 3:13; 4:3–5, 7), and is paired with "righteousness" (Rom. 6:19; Eph. 4:24). *Hagiótēs,* personal holiness, likewise indicates purity or ethical uprightness and, indeed, the divine purity to which believers will ultimately be conformed (He. 12:10).

Thus Jesus' preaching issues a clear call to a decision for God, for the kingdom and against the world, that marks the basic fact of the separation of all those who belong to God from the profane, the sinful, and the demonic. The rich young man (Mt. 19:16-22 par.) is told to sell all he has and to follow Christ; the disciples are admonished that those who give up house, family, and lands for His sake will be rewarded in heaven (Mt. 19:29). To belong both to the kingdom and to the world is an impossibility, for no one can serve God and mammon (Mt. 6:24; Lk. 16:13). The character of those so separated from the world is godliness and perfection like that of the heavenly Father (Mt. 5:43-48). Thus the separation of Christians from the world is identified primarily in terms of righteousness attained through repentance and divine forgiveness, i.e., it is an ethical separation, a sanctification in the fullest sense.

Jesus' call to repentance and to new, inward obedience in the kingdom is specifically linked by Paul to the identity of believers as "saints" or "holy ones" (*hágioi*) who are called to be ethically set apart to God (1 Cor. 1:2). Paul's conception of the life of those "called to be saints" rests on his theology of grace. The saints are called in the present life to be conformed to Christ by the work of the Spirit, and are, indeed, "predestined" by God "to be conformed to the image of his Son" (Rom. 8:29). On this foundation of grace and divine calling, Christians are exhorted to an active life of Christ-like conduct (cf. Gal. 5:6; Phil. 2:5; Col. 3:1-4; 1 Thess. 5:10). Nonetheless, in every aspect of their ethical holiness or newfound righteousness Christians are to recognize that not they themselves, certainly not their own work or their own will, but God working in them is the source of their holiness or righteousness (Phil. 2:13).

C. The Language of Progress in Sanctity. Paul also joins the NT language of sanctification to a concept of progress or perfection in holiness. The initial renewal or hallowing of the individual in Christ, by the Spirit, which takes place following forgiveness of sins and justification sets believers apart even though sin and the struggle with sin continue to be a part of their lives. Thus Paul exhorts the Philippians to work out their own salvation (Phil. 2:12), and to move forward in holiness, upon the ground established for them in the grace of Christ, toward the goal of being utterly refashioned according to Christ's image (Rom. 8:29). Paul seems to associate the passing away of imperfection with the final vision of God (1 Cor. 13:10-12) and to view the perfect conformity of believers to Christ as an eschatological event (15:42-50). In addition, when Paul speaks of becoming "perfect" (Gk. *téleios*), he most certainly does not mean an absolute perfection, like the divine perfection, but rather a maturity in faith (Phil. 3:15), which he himself has not yet attained (3:12). The word *téleios* itself indicates an orientation toward a goal. Christ's own mandate to perfection, "You, therefore, must be perfect, as your heavenly Father is perfect" (Mt. 5:48), echoes the future orientation of its OT analogues, Dt. 18:13 and Lev. 19:2.

Nonetheless, Paul did not intend by this language a progress of believers from unholiness to holiness. The imperfection of believers is an incompleteness of those who have already been set apart by grace through faith and who are regenerate. Their progress is, therefore, a progress *in* holiness: God has willed their sanctification and has "called" them "not . . . for uncleanness, but in holiness" (1 Thess. 4:3, 7). Indeed, God will sanctify them "wholly" and keep them "blameless at the coming of our Lord Jesus Christ" (5:23f.) by increasing their love to one another and to all mankind (3:12f.). Paul also described the process of attainment of this holiness as a work both of the Spirit and of the individual believer. Sanctification occurs "in the Spirit" and as "the fruit of the Spirit" (Gal. 5:22-25), but it is also a self-cleansing and a self-consecration (cf. Rom. 12:1f.; 2 Cor. 7:1). Thus sanctification rests both upon the grace of God that begins and continues to work the good in the hearts of believers, and upon human purpose, in the Spirit, to continued exhortation to holiness. The progress of this work of the Spirit and of the human response points directly toward the consummation of God's purpose in "the day of Christ" (Phil. 1:10f.).

Whereas the Pauline language of sanctity and perfection points away from earthly expectation of perfect holiness, the Johannine language seems to insist upon it. Believers are children of God, separated from the world and its lack of knowledge of God, destined to be like God in the eschaton. This hope is intimately related to the purification of believers who progress in this life toward the purity of the God in whom they hope (1 Jn. 3:2f.). The Son of God, in whom this redemption and purification is made possible, "appeared to take away sins" and is personally sinless (3:5). "No one," therefore, "who abides in him sins; no

one who sins has either seen him or known him" (3:6). The basis of this sinlessness is the new birth that overcomes the world (5:4f., 18). John makes it clear that this victory is not a human work, but a divine work. Human beings are deceived if they deny their own sinfulness — but if they confess their sinfulness they will be forgiven and cleansed by the blood of Christ (1:7-9).

A somewhat different perspective on sanctification can be drawn from 1 Peter and Hebrews. These writings emphasized the objective establishment of believers in holiness rather than the subjective form of the sanctified life. Peter views sanctification as a primary and immediate characteristic of the life into which Christians are drawn by the Spirit. This sanctity is profoundly related to the covenant sacrifice of Christ, specifically, the sprinkling of His blood (1 Pet. 1:2, 18f.). Believers are "sanctified by the Spirit for obedience to Jesus Christ and for sprinkling with his blood" (1:2). Thus Peter views sanctification as the basis upon which believers move forth in obedience and receive forgiveness through Christ's blood. Hebrews even more forcefully binds sanctification to the language of sacrifice and covenant. It presents sanctification as the objective consecration of believers effected in and through Christ's sacrifice: "we have been sanctified through the offering of the body of Jesus Christ once for all" (He. 10:10; cf. 9:13f.). Not only have believers been made holy by this sacrifice, they have also been "perfected for all time" (10:14).

The seeming tension between the ideas of progress in holiness and attainment of sinlessness found in Paul and John on the one side, and the teaching of an already accomplished sanctification found in 1 Peter and Hebrews on the other, finds theological resolution in the essentially gracious character of the work of salvation and in the eschatological character of the NT preaching. The objective fact of the separation of believers from the world on the basis of an inward, spiritual regeneration is the gracious gift of God in the work of salvation. In the "now" of the kingdom, the transformation of human nature has been accomplished from the divine side. Thus Paul can declare "you were washed, you were sanctified, you were justified in the name of the Lord Jesus Christ and in the Spirit of our God" (1 Cor. 6:11), placing sanctification in the same context of baptismal worship as regeneration and justification by faith. Here the meaning of sanctity is surely a combination of the original, religious or preethical concept and its ethical result, inasmuch as believers are both consecrated to God in the moment of regeneration and justification without being made perfectly righteous, and also inwardly transformed so that righteousness and holiness may be perfected in them (cf. Rom. 6:19). This fundamental sanctity of believers can be traced back to its foundation in the eternal plan of God (cf. 2 Thess. 2:13; 1 Pet. 1:2).

In the eschatological "not yet" of the kingdom, however, the fact of the consecration of believers now points, through progress in holiness, toward the consummation of their transformation in Christ. The same Corinthians that Paul called "sanctified" (1 Cor. 6:11) he also encouraged to cleanse themselves "from every defilement of body and spirit, and make holiness perfect in the fear of God" (2 Cor. 7:1). It is in this eschatological and teleological sense of sanctification as progress toward perfection that the ethical dimension of the concept is clearest. In one sense believers are consecrated to God and blameless before Him because of the work of Christ, but in another sense they must still be perfected in the day of Christ. Nonetheless the NT also has a strong sense of the eschatological character of the "now" of the kingdom, of the proleptic presence of the goal of history in the work of Christ on earth — with the result that the goal of our present exercise of holiness and righteousness must also somehow be fulfilled in us insofar as we are in Christ. This aspect of the "now" of the kingdom may account for John's pointed declaration of the sinlessness of believers in Christ.

III. History of the Doctrine.—The question of the relationship of sanctification to other aspects of the life of faith and to the actual attainment of perfect holiness and righteousness has occupied the mind and heart of the Church since earliest times. Surely the Scripture tells us "You, therefore, must be perfect, as your heavenly Father is perfect" (Mt. 5:48), but it also tells us that "we have all become like one who is unclean, and all our righteous deeds are like a polluted garment" (Isa. 64:6). The apostle Paul similarly points toward the coming of the perfect and the passing away of the imperfect (1 Cor. 13:10) and exhorts his readers to "sin no more" (15:34), but he then reveals that the imperishable, the spiritual, the immortal condition of humanity in which perfection is found belongs to the final resurrection and its fruits (15:42-53). Thus, on the one hand, a doctrine of entire sanctification in this life does not spring easily from the text, despite the frequent biblical exhortations to perfection, while, on the other hand, the demand for perfection in holiness and righteousness remains so clear, despite the qualifications and warnings also present in the text, that any denial of the need for sanctification and any diminution of the intensity of the demand must also constitute a denial of the biblical witness. Within the bounds of these scriptural considerations, the Church has developed and debated its various perspectives on the doctrine of sanctification.

A. Patristic Teaching. The earliest teachers of the Church, e.g., Clement of Rome and Ignatius of Antioch, emphasized the relationship of the exercise of Christian love to the attainment of perfection. Thus Ignatius writes, "None of these things [i.e., fear of God, praise, worship] are unknown to you if you possess perfect faith towards Jesus Christ, and love, which are the beginning and end of life; for the beginning is faith and the end is love" (Ign. Eph. 14:1). Polycarp also expressed the assumption that progress in the three Christian virtues — faith, hope, and love — could lead to personal fulfillment of "the law of righteousness" (Polyc. Phil. 3:2f.). Clement of Rome similarly spoke of godly perfection as attainable through the grace of God and exhorted the strife-ridden church of Corinth to attain in love and godliness to a blameless perfection characterized by a harmonious life and a freedom from all "human partialities" (1 Clem. 49–50). Although our reading of such statements must be tempered by their hortatory context and by the absence of formal dogmatic statement from the writing of the earliest Church, they clearly expect a striving toward perfection grounded in the grace of God and described in terms of the three greatest gifts of the Spirit.

With the growth and expansion of Christianity the standard of perfection became increasingly difficult for the community to achieve in all its members. Whereas a small, localized community could scrutinize closely the lives of its members and easily exclude those who fall short, the ever larger Church had to cope increasingly with problems of moral laxity, discipline of erring members, and the angry reaction of moral rigorists to such ethical problems. As a result the church had to formulate its views on personal sanctity in the context of moral and ascetic fanaticism. On the one hand, Gnosticism declared that its converts were perfect and set apart from the world and its fleshly laws, while, on the other hand, more doctrinally orthodox forms of Christian asceticism, like the

Montanist movement and the anchorites or hermit monks of Egypt, interpreted the demand for personal holiness as a demand for separation from the larger body of believers. In the case of the Montanists the result of their perfectionism was schism.

Against the heretical Gnostics, Clement of Alexandria argued the impossibility of an absolute perfection in this life while nevertheless clinging to the biblical demand for progress in faith, hope, and love. He countered the pridefulness of the Gnostics with the recognition that no human being except Jesus Christ, "Him who put on humanity for us," has been perfect in all things — in godliness, patience, chastity, knowledge and martyrdom — and that no Christian can hope in this life to be perfect as God is perfect. It is the will of God, said Clement, that Christians live according to the gospel in obedience and blamelessness, hoping for final perfection in the life to come (*Misc.* iv.21; vii.14). Traces of Platonism probably appear in the assumption of Clement and of Origen, his successor, that perfection is reached through a denial both of the world and of external, bodily needs, and through an inward, spiritual communion with God, but the biblical grounds upon which both Clement and Origen based their views prevented them from adopting an utterly dualistic approach. Instead, their teaching points toward an ascetic understanding.

These patristic perspectives on sanctification are echoed in the ascetic tradition of the early Church, in which the call of the gospel to a life of blameless obedience is interpreted in terms of individual discipline, personal conquest of the passions, and the attainment of merit in cooperation with divine grace. This ascetic spirituality could emphasize progress in sanctity toward perfection without ever departing from the typical patristic assumption that perfection is ultimately attained in the next life rather than in the present life. But such limitation of the quest for perfection did not lead the ascetics to look only for minimal results. Thus Macarius of Egypt (d. 391) defined the perfect love of God as a complete "cleansing from sin," a genuine "freedom from base passions," and the achievement of the highest peak of human virtue in "the sanctification of the heart" through the indwelling of the Holy Spirit (*Homily* ii.2). Similar definitions pointing to perfection in the Christian life made possible by grace appear in the *Institutes* and *Conferences* of John Cassian (d. 450), whose thought had a profound impact on early Western monasticism (cf. *Institutes* xii.15.16).

Neither Montanism nor early Christian asceticism can be credited with the further development of a doctrine of sanctification. Nevertheless, both of these movements established patterns of faith and behavior that have remained with the Church through the centuries, contributed to Christian views of the holy life, and kept alive the contention that perfection in holiness can be attained in the present life. Montanists based their ethical rigorism on the teachings of the prophet Montanus (late 2nd cent. A.D.), who claimed a new revelation of the Spirit and the dawn of a third dispensation of divine work brought about by the Paraclete. His followers believed that this outpouring of the Spirit, promised in the Gospel of John (14:16f., 26), had not occurred fully at Pentecost but would in their time draw the church onward to a higher righteousness. This hope for a perfected holiness brought about by a second gift of the Spirit has continued in the Church despite the demise of an increasingly rigoristic and sectarian Montanism in the 3rd century. Various enthusiastic groups in the Middle Ages, like the Cathars, assumed a special gift of spiritual perfection given only to their members, while the belief in a second gift of the Spirit has continued to be held by Pentecostal and "Holiness" groups down to the 20th century.

The problem raised for the early Church by the ethical rigorism of the Montanist and, somewhat later, in the 3rd cent. by the Novatianists, was solved by the Church on the basis of its own nonschismatic ascetic experience. Recognizing the relative character of sanctification in this life and the inability of all Christians to approach the goal of perfection, the fathers began to note different moral demands for those who chose the religious life. Thus Cyprian (*ca.* 210-258) and Ambrose (340-397) began to make the distinction, typical of medieval theology, beween the general commands of the law enjoined upon all and the counsels (or "counsels of perfection") that serve to define the religious or ascetic life of those specially called to service in the faith. Ambrose, e.g., distinguished between the "ordinary" duties of the Decalogue and the "perfect" duties of Christ's intensification of the law — loving one's enemies and praying for those who persecute us. The latter perfect duties are especially enjoined upon the clergy (*Duties of the Clergy,* i.11.36f.).

The problem of sanctification was drawn out in its full doctrinal scope in the context of the doctrines of grace and freewill in the early 5th cent. in the debate between Augustine and the Pelagians. Pelagius himself was a British monk who arrived in Rome *ca.* A.D. 384 and, appalled at the moral laxity of the population, preached a doctrine of the ethical reform of society in the name of Christ. His preaching assumed that the freedom of the human will to do the good was a necessary corollary to the divine demand of righteousness. According to Pelagius, God makes no impossible demands. Sin by definition is an avoidable offense for which a person is morally responsible: "if [an act] is necessary, it is not a sin; if it is voluntary, it can be avoided," wrote Pelagius (in Augustine *De perfectione justiciae hominis* 2). From these principles Pelagius concluded that Christian perfection was not only a possibility for all believers — it was also the expected result of moral effort. Pelagius thus brought the monastic goal into the public life of the Church. He was profoundly disturbed by Augustine's prayer "Give what Thou commandest, and command what Thou willest" (*Conf.* x.40; cf. *De dono Perseverantiae* 53) and its presupposition that left to our own devices we could only sin. Pelagius argued that such theology insulted God and His law (*Epistula and Demetriadem* 16f.).

After Pelagius and his disciple Celestius left Rome for Carthage (A.D. 409) and the Pelagian moralism began to gain adherents in North Africa, Augustine felt bound to attack what he viewed as a heretical soteriology. The Pelagian message of self-willed moral perfectibility not only countered Augustine's theology, it also assaulted his inmost religious sensibilities. At the heart of Augustine's personal spirituality was the experience of divine grace regenerating the will and rendering it capable of doing the good. Pelagius's perfectionism underestimated the burden of sin and devalued divine grace. Sin, argued Augustine, was not merely a discrete act or choice of the will — it was also and more profoundly the defective condition of the will itself. Against Pelagius's moralism Augustine posed a theology of grace, a grace as necessary as it was irresistible.

The Augustinian theory of grace does not, of course, argue against sanctification or even against the possibility of perfect sanctification in this life. Rather, the Augustinian theory places sanctification, together with justification, into the realm of God's gracious work among us and utterly denies that either justification or sanctification can be the result of human effort. Augustine distinguished between "the righteousness which is of faith" and that righ-

teousness which pertains to the final vision of God and eternal life in God, according to which a person will be cleansed of sin and its effects "in every respect" (*De spiritu et littera* c.66). Even the latter could be accomplished by God in some people in this life, since with God nothing is impossible. Thus perfection could result from "the infusion of the Spirit of grace," though certainly not from human effort. Having said this, however, Augustine also argued that such perfect people cannot be found and that only a relative perfection should be expected in this life.

Augustine's positive doctrine, which became the basic position of the medieval doctors, made a distinction between the genuine but limited righteousness of the pilgrim Church on earth and its members, and the perfected righteousness of the heavenly community of the blessed in its enjoyment of the vision of God. Righteousness in this life, though genuine in its orientation toward the "true good," consists in the "remission of sins." Righteousness in the life to come is an incorruptibility and immortality, a rule of the body by the soul and of the soul by God which consists in "the perfecting of virtue" that comes from the vision of the highest good, the *summum bonum,* which is God Himself. In this life, faith works by love toward righteousness and continually prays, "Forgive us our debts as we forgive our debtors" (*Civ. Dei.* xix.27).

B. Medieval and Roman Catholic Doctrine. The medieval language of sanctification, as implied in the preceding discussion, is found primarily in the doctrines of grace and justification and secondarily in the doctrine of final perfection, the doctrine of the beatific vision. In other words medieval theologians, though they meditated at length on Christian life and the problem of perfection in holiness and righteousness, did not develop a separate doctrine of sanctification. Rather they discussed either the infusion of sanctifying grace that follows upon the remission of sins or the way in which the love of God shown forth in Christ can transform human life. The resultant view of human progress toward perfection tended to conserve and to draw together the biblical materials as interpreted by the fathers and primarily by Augustine. In addition the medieval concept of sanctification represented a confluence of the doctrinal, mystical, and ascetic tendencies already noted in the theologians of the patristic era.

The Augustinian view of Christian perfection was joined in the theology of Bernard of Clairvaux (1090-1153) to the (equally Augustinian) conception of the reformation and progress of the individual toward God and drawn out in terms of a dynamic of divine and human loving. In addition Bernard developed a profoundly Christ-centered spirituality that enriched the medieval concept of personal holiness and contributed to the rise of medieval mysticism. We do not find in Bernard the carefully refined dogmatic language of the later scholastic teachers but rather a powerfully enunciated personal piety of the imitation of Christ and of the spiritual perfecting of the believer, based on the two great commandments, the commandments to love God and one's neighbor. The life, personal hardships, and final sufferings of Christ are, for Bernard, the "source of perfect righteousness" and the basis "of the fulness of knowledge" (*Song of Songs* 43.3-5). Christ not only blesses believers with "forgiveness of sins" but endows them with "the gift of holiness" (37.4). Knowledge of self leads the believer to a fear of God — and knowledge of the God who is feared leads to the love of God wherein the believer moves forward toward perfection. Bernard described the movement of human love from a sinful love of self for one's own sake to an equally sinful love of God for one's own benefit that arises naturally from self-love, then to the love of God for God's sake that arises from the grace of God, and finally to a reformed love of self for the sake of God. This final stage of love places human life, indeed, the entire creation, in the right perspective, under God and fully dedicated to God (cf. *Song of Songs* 37.6 with *On Loving God* 8.23–11.29).

Like Augustine, Bernard doubted the possibility of the attainment of such perfection in this life. The point at which a person overcomes all vanity and all individual independence, to the end that all the powers of heart, soul, and strength (cf. Mk. 12:30) are devoted to the love of God, cannot occur "as long as the care of this weak and wretched body keeps one busy" (*On Loving God* 10.29). Even the holy martyrs attain this love only partially in the midst of their sufferings. Thus Christian perfection is attained only in "a spiritual and immortal body" — indeed, not even in the state of the souls of the righteous between death and the final resurrection is perfection attained, inasmuch as the human being must be completely redeemed and blessed with the final vision of God in order for the perfection of holy love to be attained (cf. ibid., 10.30-33).

At the beginning of the high scholastic era, in the summary of doctrinal questions that was to become the theological textbook for the next three centuries, Peter Lombard (d. 1160) defined sanctifying grace as the indwelling of the Spirit in the souls of the righteous by and through which the love of God and neighbor becomes possible for the believer and genuine acts of love can be performed by the believer (*Sentences* i.17). This sanctifying grace is the entirely supernatural ground for the justification of believers. Like Augustine and Bernard, Lombard understood justification as encompassing both the forgiveness of sins and the infusion of grace and he too viewed the infusion of grace as an effective work of God that transforms the believer and makes forgiveness not just a setting aside of blame, but a genuine removal or eradication of sin beginning in the spiritual rebirth of the believer. Whereas Bernard and, subsequently, Duns Scotus identified sanctifying grace with divine love, Lombard spoke of the immediate infusion of the Spirit.

Thomas Aquinas (1224-1274) wrote on the subject of Christian holiness or perfection both in his *Summa theologica* and in a short treatise *On the Perfection of the Spiritual Life.* The former discussion takes up the issue of the remission of sins and infusion of grace in a doctrinal or dogmatic manner under the rubric of justification (*Summa Theol.* i/2, q. 113) and deals with the perfection of Christian love in a doctrinal discussion of the state of perfection (ii/2, q. 184), while the latter addresses the subject of Christian life and progress in holiness from the point of view of piety and of the clerical office with its requirements of holy living. Following Augustine and earlier medieval teachers like Peter Lombard, Aquinas made no strict distinction between justification and sanctification. Although sin is surely distinct from grace and the forgiveness of sins is therefore distinct from the infusion or gift of divine grace, there is but one act of God by which sins are forgiven and grace is bestowed (i/2, q. 113, a.6, ad.2). What is more, argued Thomas, "the infusion of grace is the cause of all the other things required for the justification of the unrighteous" inasmuch as grace is the cause of our free choice of God and free choice against sin and is, consequently, the ground of forgiveness (i/2, q. 113, a.8, resp.). Considered in this way, making a person righteous and counting a person righteous cannot be separated. Rather, in the forgiveness of sins grace brings about a right ordering of human conduct and a rightness of interior disposition (i/2, q. 113, a.1, resp.).

This gracious renewal of human choice that restores

justice or righteousness to its "place among the virtues" certainly can take place instantaneously and totally, but it is normally a progressive restoration, the beginning of a movement toward perfection (i/2, q. 113, a.9-10). Even so, the righteousness that arises from the infusion of grace is only a part of the perfection to which all Christians are called. The Christian perfection demanded under God's law and by the command of Christ to be perfect, even as the Father in heaven is perfect (Mt. 6:48), is not merely a complete righteousness but a total conversion of the individual to the life of obedience in Christian love, to the love of God with one's whole heart and the love of neighbor as oneself. This conformity to the two great commandments is perfect holiness or sanctification (*Summa Theol.* ii/2, q. 184, a.3; cf. *De perf.* ii).

Thomas noted three degrees of perfection in love: first, an absolute perfection proportionate to the ultimate divine object of love belongs only to God; second, a lesser perfection, according to which a rational creature loves God to the extent possible given its nature, occurs only in the state of final blessedness; and third, a perfection in love, according to which all words, all thoughts, all the affections of the soul, and the whole strength or power of the individual, are referred to God and willingly subjected to God can occur in this life. Indeed, this third degree of perfection is what God commands of all people — not in the sense that every aspect of life is absolutely turned toward God, but rather in the sense that God is acknowledged in all things as the source, guide, and goal of life's service (*De perf.* c.4f.). Thomas also recognized the difficulty of attaining even this degree of perfection in the present life, and therefore distinguished between the commands of God that must be obeyed and the counsels leading to perfection, such as chastity and the renunciation of earthly perfections, that are enjoined only on those who choose the religious life (*De perf.* c.6). The path to the highest degree of holiness accessible in this life, therefore, is the ascetic path of monks, bishops, and priests.

In the later Middle Ages, Scotist and nominalist theologians argued that the remission of sins and the infusion of sanctifying grace are connected not out of necessity but because of the divine decree. William of Ockham even stated hypothetically and in terms of the absolute will of God that God might either remit sins without also infusing grace and making a sinner righteous, or infuse grace and bring about righteousness without the remission of sins. This speculation with its emphasis on the divine will is of importance to the history of doctrine inasmuch as it represents a part of the preparation for the typically Protestant separation of justification and sanctification, just as the views of Lombard and Aquinas were the preeminent sources of the doctrines set forth at the Council of Trent.

The Council of Trent defined sanctifying grace as "God's justice (or righteousness), not by means of which He Himself is just, but by which he makes us just" (Denzinger, *Enchiridion*, 1529). This grace inheres in the soul through the office or work of Christ by the Holy Spirit as a new and permanent condition or attribute of the believer. The effect of this sanctifying grace is "the sanctification and renovation of the inward man" consisting in a new freedom from the grossest sin and a new attachment to and desire for God (ibid., 1528). Together with sanctifying grace the believer receives spiritual gifts, also by gracious infusion into the soul. These gifts are the three Christian virtues — faith, hope, and love — which, by Christ and through the Spirit, become dispositions or "habits" of soul. These doctrinal conclusions cohere with what has already been noted in the thought of the medieval doctors — that sanctification or holiness is a work of grace that enables the believer to move toward perfection. Since Trent defined faith, hope, and love as dispositions and not as "acts" or "actualizations," they are the basis for progress toward perfection and are not infused perfections. Thus works are presupposed: by acts of faith, hope, and love, grace and, indeed, personal righteousness or holiness can be increased (ibid., 1582).

C. Reformation and Modern Protestant Views. One of the results of the Reformation teaching of salvation by grace alone was a recognition that the association of the divine declaration of righteousness on grounds of faith (justification) with the gracious progress of believers in holiness and righteousness (sanctification) could easily lead to a theology of salvation by works. The radical exclusion of works from justification and the insistence against the medieval doctors, and eventually against Trent, that justification is a forensic act of God by grace through faith alone led later codifiers of Protestant doctrine to develop sanctification as a separate doctrinal *locus* and to view it, together with good works, as a result of the divine work of salvation rather than as a factor contributing to salvation. In conformity with their emphasis on ministry as an office and on the priesthood of all believers, the Reformers and their successors also refused to view sanctification, holiness, or perfection as the preserve of the few who are capable of monastic vows and the ascetic life.

In its broadest outlines the Reformers' doctrine of sanctification stands in general continuity with the thrust of medieval Augustinianism. It denies the possibility of sinlessness in this life and limits the attainment of holiness to a progress in the exercise of Christian virtues as made possible by grace. In discontinuity with the medieval view it separates this relative perfection from the foundation of salvation in justification by faith and insists on absence of merit even in the justified believer. Perfection, then, must be understood in the context of the existence of the believer as *simul iustus et peccator,* at once justified and a sinner. One of Luther's clearest statements of the issue occurs in his treatise *On Monastic Vows,* where he declares that "the state of perfection is to be filled with faith and to be a despiser of death, life, glory and the whole world, and in fervent love to be the servant of all," and that this state is better attained in the obedient life of laity than in monastic observances (*WA,* VIII, 584). Works, particularly the counsels of perfection enjoined upon monks, having nothing to do with personal holiness.

This line of argument is continued in the *Augsburg Confession* (1530). As in Luther's treatises, the early Protestant polemic of the confession does not indicate a positive development of a doctrine of sanctification as much as it indicates an insight, based on the doctrine of justification by faith, into the problem of the late medieval association of holiness with meritorious works. Thus the confession strives to separate the language of Christian perfections, and especially the language of vows and counsels, from the idea of justification: "For they also who attribute justification to their vows, attribute to their own works what properly belongs to the glory of Christ" (pt. II, art. VI). "Christian perfection is this, to fear God sincerely, and again, to conceive great faith, and to trust on account of Christ that we have a God who is appeased; to ask and certainly to look for help from God in all our doings, according to our calling; and outwardly to do good works diligently, and to be subject to our calling" (ibid.).

Melanchthon, far more than Luther, worried over the consequences of the doctrine of justification by faith for human responsibility under the law and, consequently, for personal holiness. In his *Apology* or defense of the *Augs-*

burg Confession, completed in 1531, Melanchthon argued that through faith in Christ and with the assistance of the Spirit, "the keeping of the law should begin in us and increase more and more" (*Apol.* 2.136). Melanchthon's insistence on this normative use of the law (the so-called *tertius usus legis*, i.e., third use of the law) represented an emphasis on personal righteousness and on human cooperation with God in attaining righteousness, quite different from Luther's own emphasis on justification and on the condition of the believer before God as *simul iustus et peccator*. This difference in emphasis led, in turn, to a debate among the followers and successors of Luther over the relationship of good works and the law to salvation. This debate was finally settled by the *Formula of Concord* (1577) in which the doctrine of justification was clearly separated from all concerns of law and works but the presence of freely performed good works was deemed a necessary result of regeneration (*Epitome*, 3 and 4, esp. 4.4-6). In Lutheran dogmatics this confessional position was reflected in the clear distinction between justification and sanctification and in the clear interpretation of all language concerning works, holiness, sanctity, or perfection in terms of the gracious divine gift of salvation rather than in terms of external righteousness.

A similar view of sanctification was characteristic of the Calvinist or Reformed side of the Reformation. Calvin argued that believers ought to evidence "a certain harmony of righteousness, lasting throughout life," while at the same time finding assurance of salvation in God's goodness alone. When believers come before the judgment seat of God they will be distinguishable from the wicked by their "sincerity, righteousness, simplicity and purity" but will nonetheless be unable to "boast of an innocence" or purity like unto God's (*Inst.* iii.17.14). The "partial and imperfect" uprightness of believers is "a step toward immortality" but not a perfection in holiness in this life: like Augustine and Bernard, Calvin argued a progress toward holiness and perfection that is completed in believers only when they "put off this sinful flesh" in final communion with God (iii.17.15). Very much like developing Lutheran theology, Calvin severed the link between the divine effecting of salvation and the human performance of works — the result being a strict distinction between justification and sanctification. Typical of Calvin is the harmonization of Paul and James which insists on the production of good works by the genuinely faithful and indicates that sanctification is a result of a graciously given salvation in Christ (cf. iii.17.11f.).

Later Calvinists maintained these perceptions concerning progress in righteousness and holiness by discussing sanctification as consisting in two parts — a continuing repentance and a consistent attempt at obedience or godliness. Typical of the Calvinist view of sanctification is the description of the life of godliness in terms of the ongoing warfare of flesh and spirit (cf. Gal. 5:17; Rom. 7:23). Thus sin remains in the regenerate believer, and the life of progress in holiness and righteousness must be characterized by a continuing repentance followed by "new obedience," the latter being defined by the exercise of good works. Late in the 17th cent. Johann Heidegger (1633-1698) could state that "sanctification involves continual praxis and action . . . doing things that belong to godliness and in receding from all evil and so by God's grace contracting the habit . . . of thinking, speaking and doing the things that are best, most glorious for God and most useful for their neighbor" (*Corpus theologiae* xxiii.18, as cited in Heppe, pp. 570f.). We note in this definition the presence of the traditional view of Christian perfection in terms of the two great commandments of the law. We may also view these teachings of Reformed orthodoxy as a final codification of Reformed doctrine and as the establishment of normative definition for the Reformed churches. It appeared more recently and with little variation in the traditionally conceived dogmatic systems of writers like Hodge, Dabney, Shedd, and Berkhof.

In the 17th cent. the Protestant doctrine of sanctification was hotly debated. On the continent the Lutheran church experienced a major battle over Christian life and the necessity (or lack thereof) of external signs of progress in grace. The Lutheran orthodox held to the doctrines set forth in the *Formula of Concord*. The Pietists, though never explicitly attacking the confessions of the church, pressed for a more moralistic standard in Christian living. In England the Puritans and their heirs, the Dissenters, debated the same issue as one aspect of the polemic between an antinomian, a more traditionally Reformed, and an increasingly nomistic form of English Protestantism. In the late 17th and early 18th cents. the Anglican tradition tended increasingly away from the Reformation emphasis on justification and salvation by grace alone and toward an emphasis on personal holiness in cooperation with grace.

The Pietists, beginning with Philipp Spener (1635-1705) and August Hermann Francke (1663-1727), protested against the equation of true religion with right doctrine, and in their debates with orthodox Lutheranism they stressed the experiential side of Christianity and the necessity both of conversion and of postconversion progress in sanctity. Although Pietism intended to maintain the outlines of orthodox Lutheran theology, its emphasis on personal experiences and the life of Christian devotion led it away from the typical orthodox Protestant view of the imperfections of the justified life and of the impossibility of attaining perfection in this world. Spener and Francke tended to emphasize regeneration and the experience of conversion rather than the purely forensic doctrine of justification held by the orthodox, and to argue that such regeneration ought to lead to the practice of holiness and to an intimate personal relationship with God. In turn this teaching strongly influenced the thought of Nikolaus von Zinzendorf (1700-1760), the founder of the Moravian Brethren, who emphasized the attainment by Christians, in and through the blood of Christ, of a perfection of faith, love, and personal holiness.

Against Pietistic tendencies Lutheran orthodoxy emphasized the incomplete sanctification of the believer and evidenced a preference for the term "renovation" rather than sanctification. Johannes Quenstedt (1617-1688) defined this renovation or sanctification as "those continuous acts [of the Holy Spirit] by which actual sanctity is effected in man, carried on, and preserved." This renovation, although "partial and imperfect" in this life, "ought continually to increase and grow" — indeed it is "increased by godly acts and frequent efforts" made possible, despite the presence of sin in the believer, by the grace of the Holy Spirit (cf. *Theologia Didactico-Polemica*, as cited in Schmid, p. 490). In order to preserve the doctrine of salvation by grace alone while also arguing progress in holiness, Quenstedt and his contemporaries argued that the first act of renovation or sanctification was an act of the Spirit, without human concurrence, by which the ability to do good works is bestowed on the believer. Subsequent acts of renovation are acts in which the human will cooperates, now dependent upon the grace of the Spirit (cf. ibid., p. 491). As noted in the case of the Reformed orthodox, this orthodox Lutheran theology remains normative for confessional or churchly teaching into the present, and is found virtually unchanged in the writings of traditional and confessional Lutheran theolo-

gians like Lindberg, Pieper, and Mueller, and in the somewhat less traditional contemporary dogmatics of Braaten and Jenson.

The difficulty of maintaining a strong emphasis on the progressive character of Christian obedience in the context of a profound emphasis on salvation by faith alone, as witnessed both in the Lutheran and the Calvinist perspectives on sanctification, is evident also in the debates over nomism and antinomianism in late seventeenth-century England. On the antinomian side, in the writings of John Saltmarsh (d. 1647) and Tobias Crisp (1600-1643), the radical nature of God's electing grace and the unworthiness of all human beings for so great a salvation led to a virtual denial not merely of the necessity but even of the presence of good works in the elect. Over against their view, English Reformed theologians like Richard Baxter (1615-1691) began to emphasize even more strongly than earlier generations of Puritans the relationship between progress in personal holiness and the practice of Christian piety. A similar emphasis on sanctity, bound to a generally Arminian soteriology, appears in the Anglican theology of the era. The theme of "holy living" is central to the thought of Jeremy Taylor (1613-1667) and to the theology of William Law (1686-1761), especially in his famous treatises, *Serious Call to the Devout Life* and *Practical Treatise on Christian Perfection.*

The emphasis upon Christian holiness found in the thought of Baxter, Taylor, and Law came to full fruit in the theology of John Wesley (1703-1791), who must be regarded as the father of virtually all modern teaching on personal holiness or sanctification and specifically of the teaching concerning "entire sanctification in this life" typical of the Wesleyan and Holiness movements. Wesley's doctrine was influenced not only by the English tradition of emphasis on personal sanctity, but also by Wesley's own experience of grace and conversion, by his encounter with the practical mysticism of the pietistic Lutheran Moravians, by his reading of Clement of Alexandria and Thomas à Kempis, and by his desire to propound a practical theology free of the dangers both of antinomianism and of a quietistic theology of inward experience. Wesley's chief discussion of his doctrine of sanctification is found in his *Plain Account of Christian Perfection* (*Works,* XI, 366-499).

Following the pattern of orthodox Protestantism, Wesley maintained a strict distinction between justification and sanctification. According to Wesley justification is an objective act of God by which human beings are forgiven their sins, delivered from guilt, and restored to favor with God. But sanctification is a subjective and inward change, a genuine renewal of an individual beginning in the new birth. The former, properly understood, is a work of God accomplished through His Son, the latter a work of God accomplished through His Spirit. Thus Wesley could argue that although justification and the beginning of sanctification "are joined together in point of time, yet they are of wholly distinct natures" (*Standard Sermons,* I, 299f.; cf. p. 119). Over against the strictly orthodox Protestant position and much like the Pietists, Wesley emphasized the experience of regeneration and conversion or new birth in which the love of God is so poured into the heart of the believer and the heart so turned to God in Christ that the believer will not voluntarily transgress the law of God (*Works,* XI, 394-96).

According to Wesley full or "entire" sanctification, perfect holiness, is possible in this life. No Christian who has experienced conversion and divine forgiveness can fail to desire perfection and strive for it. Wesley followed the tradition in defining perfection as "so entire a love to [God], that you may love nothing but for his sake . . . love the creature as it leads to the Creator" (*Works,* XI, 368). Such love implies keeping all of God's commandments and ceasing to sin. Wesley never went so far as to claim that Christians become so perfect as to cease to need Christ's merits for salvation, but he did claim that sin can be so "suspended or extinguished" that the Christian will not act "contrary to pure love" (*Works,* XII, 257). This transformation can occur after justification and regeneration and is defined by "a gradual mortification of sin" and "an entire renewal in the image of God" (*Works,* XI, 402).

Wesley did not intend to imply that human beings could become absolutely perfect in this life — but only to claim that a perfect love of God and neighbor is possible as a result of the sanctifying grace of God. This teaching needs to be understood, as Flew pointed out (pp. 326f.), in terms of a distinction between voluntary and involuntary transgressions. The perfect love of God and neighbor banishes only consciously willed sins — errors, mistakes, and tarnished actions arising out of human imperfection — involuntary sins will still occur. Lindström lucidly explains the concept of the entire sanctification of an imperfect individual in terms of a comparison between the Christian viewed absolutely and objectively and viewed relatively and subjectively (p. 154): from an "absolute and objective standpoint" the fully sanctified person remains imperfect, fails fully to oblige the law of God, and therefore remains sinful and guilty, in need of the work of Christ for salvation; from a "relative and subjective standpoint," however, the fully sanctified person so fully loves God and neighbor as to be totally freed from sin and guilt. The perfection of this relative and subjective standpoint cannot be understood apart from the relationship of the believers to Christ's work. Thus Wesley's concept of sanctification represents a powerful demand for the cultivation of Christian virtues, of the fruits of the Spirit, indeed for a complete subjective alteration of a person's outward and inward life.

Wesley's doctrine is clearly not a form of works righteousness or a theory of salvation on grounds of merit. Rather, Wesley argued a divinely given perfection, "wrought in the soul by a simple act of faith," that becomes the ground of a gradual dying to sin and growth in grace and finally leads to a time at which the believer is perfected in love by God. This growth toward perfection or perfect sanctification cannot take place without "vigorous, universal obedience, in a zealous keeping of the commandments . . . in denying ourselves and taking up the cross daily." But it also cannot take place apart from the prior fact of God's grace in and through the works of Christ (*Works,* XI, 386, 406, 428). When asked when this perfect sanctification could occur, Wesley refused to restrict the event to any particular time in the life of an individual, but noted that "generally" he held it to take place at the moment of death (*Works,* XI, 429).

In the 19th cent., the doctrine of Christian perfection found expression both in the theologies of Schleiermacher and Ritschl in Germany and in the evangelical and revivalistic theology of the Holiness movement, the Oberlin school, and the Keswick, the "Higher Life," and the "Victorious Life" movements. Nineteenth-century German views on sanctification, most clearly and eminently presented in the theologies of F. D. E. Schleiermacher (1768-1834) and Albrecht Ritschl (1822-1889), follow a pattern of development in modern theology entirely different from that represented by Oberlin and Keswick. Whereas Oberlin and Keswick pointed toward the evangelical and even fundamentalistic side of modern Christianity, Schleiermacher and Ritschl pointed the way toward mod-

ern liberalism. In addition Schleiermacher and Ritschl stand in the direct line, albeit in a somewhat negative way, of Kant's critique of rational supernaturalism. Kant had shown that the rationalistic theism of the 18th cent. was philosophically untenable and had attempted, in his *Critique of Practical Reason* (1788) and his *Religion Within the Bounds of Reason* (1793), to define holiness in terms of the agreement of will with the moral law, and thus to found religion upon the inward perception of moral imperatives. Kant assumed that the attainment of holiness, of the genuinely moral life, was impossible in this world and that the demand for holiness, therefore, led to the postulation of a life after death in which the goal of perfection is reached. The quest for holiness, and therefore religion itself, results from the inward and categorical moral imperative.

Schleiermacher in his early essay, *Religion. Speeches to its Cultured Despisers* (Eng. tr. 1893), and in his theological system, *Christian Faith* (Eng. tr. 1928), endeavoured to find religion at a more profound level in the human spirit than the level of ethical imperatives. He argued that religion arises out of the fundamental intuition or feeling of absolute dependence. Sanctification or the attainment of holiness could no longer be defined simply in terms of the agreement of the will with the ethical norms — but rather had to be defined as the victory of our feeling of absolute dependence over our striving for individual independence from the divine. This victory of the feeling of absolute dependence or God-consciousness is possible, according to Schleiermacher, only in and through the life of "the corporate community of blessedness," the Church, which in turn is constituted in its God-consciousness by the unique God-consciousness of Jesus Christ. In the Church the Spirit moves believers to a love of Christ and Christ increasingly becomes the norm for personal holiness or blessedness in and through the communicated sense of dependence upon God.

Ritschl's concept of sanctification, like the whole of his theology, represents an attempt to cast aside the philosophical moralism of Kant, the idealism of Hegel, and what Ritschl viewed as the excessive subjectivism and mysticism of Schleiermacher. Ritschl argued that the scriptural doctrine of reconciliation pointed toward the establishment on earth of the ethical kingdom of God's love. Christians are called, through their justification and reconciliation, to participation in this kingdom of righteousness and holiness. Although he disapproved of Schleiermacher's subjectivism, Ritschl also emphasized the corporate character of Christian holiness as an aspect of the life of the Church made possible by Christ's righteousness through the work of the Spirit. For Ritschl the resulting sanctification of Christian perfection was more a corporate than an individual attribute. The Spirit indwells the community, and the believer experiences righteousness and holiness by participation rather than by an examination of individual virtues. Perfection is a "disposition" to be patient, humble, and obedient to the moral law rather than an attainment of total personal victory over sin or absolute personal perfection (*Justification and Reconciliation* [Eng. tr. 1902], p. 605).

The Holiness movement arose out of the revivalistic climate of America in the 1840's and blossomed in the camp meetings and in the urban revival of the 1850's. The movement began within the Methodist Church as a call for renewed evangelistic efforts and renewed discipline together with an increased emphasis on Wesley's doctrine of entire sanctification. As tensions mounted between the denomination and the proponents of renewal, a series of ruptures took place in the Methodist Church leading to the establishment of new denominations, like the Wesleyan Methodists (1843) and the Free Methodists (1860). These and other Holiness groups formed in the last several decades of the 19th cent. are today represented by the Church of God, Anderson, Indiana (1880), the Pilgrim Holiness Church (1897), and the Church of the Nazarene (1908). (The Pilgrim Holiness and Wesleyan Methodist churches merged in 1968 as the Wesleyan Church.)

Characteristic of the Holiness movement and its twentieth-century offshoot, the Pentecostal Holiness movement, is the Wesleyan emphasis on two major experiences of salvation — the experience of conversion and justification and the subsequent event of entire sanctification, which is experienced as a "second blessing" of the Spirit. Unlike Wesley, who spoke of the possibility of entire sanctification but never argued that it would happen to all believers during their earthly life, the Holiness movement tends to view the experience of the second blessing as normative. Sanctification is achieved only through consistent moral effort to love God perfectly and, on the grounds of that love, to avoid voluntary or deliberate sin. The Pentecostal Holiness churches add to this teaching the view that the "second blessing" of entire sanctification is marked by the experience of speaking in tongues.

The Oberlin theology as formulated by Asa Mahan (1799-1889) and Charles Finney (1792-1875) rested its views of salvation and sanctification on the assumptions that human beings are free moral agents and that God, in His moral government of the universe, defines virtue and sin solely in terms of the attainment or nonattainment of those moral obligations of which the individual is capable. In other words all sins are voluntary failures to fulfil only those obligations that are within the reach of one's will. Failure to reach a standard beyond one's capability can hardly be called sin. If one grants those definitions, perfection becomes an attainable moral or ethical goal — as defined by Mahan it is the "full and perfect discharge of our entire duty, of all existing obligations to God and all other beings" (*Christian Perfection*, p. 7). In such theology, the power of grace and the work of the Spirit are minimized and sin is viewed, rather superficially and after the manner of Pelagius, as a problem of choice rather than, as Augustine recognized, a problem of will itself, inherent in human nature. Mahan did argue that a second blessing of the Holy Spirit would inaugurate the life of perfect sanctity, but he also maintained that this gift of perfection or consecration to God was an ability to do one's best in avoiding all voluntary offenses.

The Keswick, Higher Life, and Victorious Life movements all spring out of the Wesleyan revival of the 19th cent. and draw on the principles of the Oberlin theology. The three movements are united by their tendency to assume that entire sanctification or moral perfection is characteristic of genuine Christian existence. Following the basic Wesleyan paradigm, these movements stress the subjective sanctification of the individual by faith, the power of the individual to lay hold of God's sanctifying grace, and then, having been sanctified, to gain victory over conscious sinning, blessed with a conscience that is freed from all guilt. The beginning of this sinless life lies in the empowering of the Spirit. The progress of this sinless life is therefore a "higher" or "victorious" form of Christianity. The tendency of this theology is to produce two levels or grades of Christian, those who are merely justified and those who have attained sanctification by a new act of faith in Christ.

By way of conclusion, we note that there is no single Christian doctrine of sanctification. The main line of the Western tradition, embodied in Roman Catholicism and the great churches of the Reformation, has always as-

sumed that Christians are called toward perfection in holiness through daily struggle with sin, but that such total sanctification is impossible in this life. This position stands firmly grounded in the basic conception of sanctification as a setting apart of individuals to divine service, in the eschatological nature of the gospel message, and in the Pauline preaching of justification and sanctification. The Roman Catholic model has reserved a far greater place for ascetic practice and for the attainment of an incomplete sanctity in the present life than have either the Lutheran or Calvinist models. Over against this view, the early Church saw ethical rigorism in the Montanist movement, the churches of the Reformation saw the development of various forms of Pietism emphasizing the renewal of life in Christ, and the 18th cent. saw the development of a full-blown theory of entire sanctification by John Wesley and his followers. These last movements are all united by the hope of attaining a perfect holiness through Christ in this life. This view rests upon a series of biblical demands for perfection, blamelessness, holiness, and obedience together with the clear scriptural statement characteristic of 1 John, that Christ's work thoroughly removes the stain of sin. It is also clear that these two basic approaches to the question of sanctification differ in their definition of sin. The former views sin as a defect fundamental to fallen human nature; the latter can only define sin as known, conscious, or voluntary choice contrary to the law of God. Finally, the two approaches must differ in their views of Christian life and Christian piety. The former tends to view Christian existence as an ongoing struggle in search of a final rest with God in the next life, in the ultimate vision of God; the latter tends toward a piety of spiritual attainment that transcends earthly struggle and toward a fulfilled and even a "happy" life of "rest in Christ."

SANCTUARY [Heb. *qōḏeš*–'apartness,' 'holiness,' *miqdāš*–'sacred place,' 'sanctuary,' *dᵉḇîr* ("inner sanctuary," 1 K. 6:5, 16; etc.); Gk. *tó hágion* or *tá hágia*–'what is holy' (He. 8:2; 9:1, etc.), *naós*–'temple' (Mt. 23:35), *oíkos*–'house' (Lk. 11:51)]; AV also HOLY (PLACE), HOLINESS, CHAPEL, ORACLE, TEMPLE, etc.; NEB also SACRED, HOLY PLACE, INNER SHRINE, etc. A holy place where the deity is worshiped or entreated on the basis of a belief that he has once appeared, or is in some sense present or active, at that location.

Although in the OT "sanctuary" (*miqdāš*) is occasionally used for heathen places of worship (Isa. 16:12; Ezk. 28:18) or for a plurality of Israelite sanctuaries (Lev. 21:23; 26:31; Ezk. 21:2 [MT 7]; Am. 7:9; cf. Josh. 24:26, of Shechem; Am. 7:13, of Bethel), the term most frequently applies to the wilderness TABERNACLE or the Jerusalem TEMPLE. Noteworthy usages include the much debated Ex. 15:17 (does "sanctuary" look forward to the Jerusalem temple? or to a different sacred site, perhaps at Gilgal?) and Ezk. 11:16, where God Himself is said to be His people's "sanctuary" in exile (cf. also Isa. 8:14, where, however, some scholars suspect textual corruption).

Hebrew *qōḏeš* basically means "holiness," but the derived meaning "sanctuary" occurs frequently. Occasionally this ambiguity creates some uncertainty. Does God speak in His "holiness" (AV) or in His "sanctuary" (RSV, NEB, Ps. 60:6 [MT 8]; 108:7 [MT 8])? Does Lev. 4:6 refer to the "veil of the sanctuary" (RSV) or to the "veil of holiness," i.e., the "sacred veil" (NEB)? A similar ambiguity is reflected in the RSV and NEB renderings of Nu. 3:28, 31; 4:15; 18:3; 31:6; 1 Ch. 24:5; Isa. 62:9; Mal. 2:11); note that "shekel of the sanctuary" (RSV) becomes "sacred standard" in the NEB (e.g., Ex. 30:13).

The RSV renders Heb. *dᵉḇîr*, denoting the innermost compartment of the temple, by "inner sanctuary" in 1 K. 6:5, 16-23, 31; 7:49; 8:6, 8 (AV "oracle"; NEB "inner shrine"). *See* MOST HOLY PLACE.

In the NT "sanctuary" refers to the Jerusalem temple (Mt. 23:35; Lk. 11:51), the earthly tabernacle (He. 9:1; 13:11) and the heavenly "sanctuary," of which the earthly is a mere copy (He. 8:2). S. WESTERHOLM

SAND [Heb. *ḥôl*; Gk. *ámmos*]. A loose, granulated substance formed from the disintegration of rock.

Hebrew *ḥôl* is derived from the verb *ḥûl*, "whirl, dance," probably because sand is easily rolled before the wind. It is used in the Bible primarily as a symbol of great quantities, e.g., armies (Josh. 11:4), descendants (Gen. 22:17), the grain stored by Joseph (Gen. 41:49), the population of nations (1 K. 4:20), the thoughts of God (Ps. 139:18), the wisdom of Solomon (1 K. 4:29), and the gathering of captives (Hab. 1:9). It is also a symbol of heavy weight (Job 6:3). The sands of Egypt were used by Moses to bury the Egyptian he killed (Ex. 2:12); treasure might also be buried in sand (Dt. 33:19). Most likely *ḥôl* in Job 29:18 is related to Ugar. *ḥl*, which denotes the phoenix that arose from the fire (see NEB mg.; cf. L. Grabbe, *Comparative Philology and the Text of Job* [1977], pp. 98-101).

The NT likewise uses *ámmos* most often as a symbol of quantity (Rom. 9:27; He. 11:12; Rev. 20:8). A different use occurs in Christ's parable about the foolish man who builds his house upon the sand (Mt. 7:26). The grains of sand are naturally unstable and cannot support heavy construction.

Most of the sand in Palestine is to be found along the shore of the Mediterranean Sea from Sinai to modern Haifa, where the Carmel range meets the sea. Near Gaza large tracts of dunes are found. L. G. HERR

SAND FLIES (AV mg. Ex. 8:16 [MT 12]; Wisd. 19:10). *See* GNAT.

SAND LIZARD. *See* LIZARD.

SANDAL. *See* SHOE.

SANHEDRIN san-hē'drin [Gk. *synédrion* < *syn*–'with' + *hédra*–'sitting place,' hence "place of those who sit together"; cf. postbiblical Heb. *sanheḏrîn*]. The Jewish court in Jerusalem from the Persian through the Roman period; it had both religious and political powers and comprised the elite (both priestly and lay) of society.

I. Terminology
II. History
III. Composition

IV. Powers
V. Procedures
VI. In the NT

I. Terminology.–In addition to the name Sanhedrin (e.g., RSV "council," Mt. 5:22; Mish. *Sotah* ix.11; *Kiddushin* iv.5; *Sanhedrin* iv.3; Josephus *Ant.* xiv.9.3-5 [167-180]; etc.; or Great Sanhedrin, Mish. *Sanhedrin* i.6; *Middoth* v.4; or Sanhedrin of seventy-one, *Shebuoth* ii.2), a variety of other terms is used: *gerousía* (Acts 5:21 uses this term as well as *synédrion*), *presbýterion* (Lk. 22:66; Acts 22:5), *boulé* (Josephus *BJ* ii.15.6 [331]; ii.16.2 [336] — Joseph of Arimathea is called *bouleutés*, Mk. 15:43 par. Lk. 23:50), and *bēṯ dîn haggāḏōl* (Mish. *Sotah* i.4; ix.1; *Sanhedrin* xi.2; etc.). Some (e.g., A. Büchler) have attempted to distinguish as many as three bodies: the *synédrion* of the Greek sources was composed mostly of priests and dealt with the concerns of the temple as well as politics; the *boulé* was the governing body of the city of Jerusalem; and the other terms referred to a purely religious body occupied with temple matters and religious law. These attempts are not convincing, especially when they distinguish between the Greek and Hebrew words for Sanhedrin (which are in fact equivalent) or when they fail to distinguish between the descriptions of the Sanhedrin in the Mishnah and the Sanhedrin of the Second Temple Period. None of the Greek (NT, Josephus, Philo) or rabbinic sources gives clear evidence of more than one institution, though certainly the character of this body differed in various periods.

II. History.–Although according to Jewish tradition the Sanhedrin existed continually since the council of seventy elders in the time of Moses (Nu. 11:16), the earliest reference (Josephus *Ant.* xii.3.3 [138]) to the Jewish *gerousía* is to the time of Antiochus the Great (223-187 B.C.). The elders referred to in earlier times (1 K. 8:1; 20:7; 2 K. 23:1; Ezk. 14:1; 20:1) lack the organization of the later court. What evolved into the Sanhedrin of the NT period probably began in the Persian period when (as in the subsequent Greco-Roman period) the Jews enjoyed a measure of self-governance under the domination of the foreign power controlling the region. So it is that "elders" (Ezr. 5:5, 9; 6:7, 14; etc.) and nobles (Neh. 2:16; 4:8; etc.) emerged to give leadership to those returning from the Exile. Ezr. 2:2 (= Neh. 7:7) mentions twelve leaders, probably representing the twelve tribes, and Neh. 5:17 mentions 150 dignitaries but gives no indication of their structure. Probably this aristocratic council gained more significance when the appointed governor ceased at the end of the Persian period, since Hellenistic rulers characteristically gave their subject states a great deal more freedom in dealing with internal affairs. But, unlike the more or less democratic councils of Hellenistic cities, Judea had the aristocratic *gerousía* under the leadership of the hereditary high priest.

When the old high priestly dynasty was replaced by the Hasmoneans because of the Maccabean revolts, the *gerousía* continued (cf. 2 Macc. 1:10; 1 Macc. 12:6) but probably lost much of its Hellenistic membership and its power. The addition of more scribes (Pharisees; see Josephus *Ant.* xiii.16.2 [408f.]) must have transformed the *gerousía* and further have limited the power of the nobility (which was mostly sadducean priests and laity). Pompey brought an end to the monarchy, but the high priest still held a powerful position so that the *gerousía* was probably little changed until Gabinius, Roman governor in Syria (57-55 B.C.), divided Palestine into five *synédria*, three of which were in Judea (see *Ant.* xiv.5.4 [89-91]) thus leaving the Jerusalem council with control over probably no more than one third of its previous territory and probably with limitations of its power there as well. After Caesar appointed Hyrcanus II ethnarch in 47 B.C. the council of Jerusalem, with jurisdiction as far as Galilee (for the council called Herod to account for his actions in Galilee, *Ant.* xiv.9.3-5 [165–179]), is first called *synédrion*. The term designates the senate in Jerusalem as a court of law and distinguishes it from the Greek city councils, which were not called by this term.

Herod the Great executed most ("all" in *Ant.* xiv.9.4 [175] is not to be taken literally; cf. *Ant.* xv.1.2 [5], which says Herod killed forty-five supporters of Antigonus) members of the Sanhedrin in revenge for its attempt to try him. Those who remained were subservient to Herod and even brought Hyrcanus, now an old man, to trial. Herod's son Archelaus ruled only Judea and Samaria, limiting Sanhedrin control again to Judea alone. Under Roman governors the geographical limitations continued, but the Sanhedrin had increased powers over the country's internal affairs (*Ant.* xx.10.5 [251]).

The fall of Jerusalem in A.D. 70 brought an end to the Sanhedrin as it had previously existed. The Romans thereafter ruled directly, being unwilling to give autonomy to the Jews, who had revolted so violently. Under Johanan ben Zakkai the Jews created the court of Jamnia (Yavneh), which in some ways was a continuation of the Sanhedrin (see T. B. *Rosh ha-Shanah* 31a) but which lacked political power; its decisions were limited to academic matters. Though it gradually gained more power in governing Jewish affairs, the rabbis realized that the old Sanhedrin was gone (see Mish. *Sotah* ix.11).

III. Composition.–In number the Sanhedrin consisted of seventy members and the high priest as president (see Mish. *Sanhedrin* i.6). The number seventy is significant. Moses chose seventy elders to assist him (Nu. 11:6), and several other Jewish groups had this number: seventy chiefs led the Jewish colony at Batanea (*BJ* ii.18.6 [482]; *Life* 56); Josephus appointed a council of seventy in Galilee (*BJ* ii.20.5 [571f.]); the Zealots chose seventy judges in Jerusalem (*BJ* iv.5.4 [336]); and a council of seventy-one elders ruled in Alexandria (Tos. *Sukkah* 4:6). Supposedly the LXX had seventy (or seventy-two) translators (Aristeas 46-50), and Jesus sent out seventy disciples (Lk. 10:1).

Only the high priest could preside over the Sanhedrin (though later at Jamnia two scribes held the positions of president and assistant; see *TDNT*, VII, 863f. n. 22). Next in rank to the high priest were the chief priests, whose presence and power in the Sanhedrin were due to their office in the temple. They were uniformly members of the sadduccean aristocracy, which solidified them into a powerful party. Next came the elders, the term not being used in the original, broader sense of all members of the Sanhedrin, but in the later more narrow sense describing lay members (so *TDNT*, VII, 864; Safrai, pp. 384f.; cf. *HJP*^{2}, II, 213, which includes priests) of the Sanhedrin coming from the more influential families of Jerusalem, who like the chief priests were consistently Sadducees. The sadduccean monopoly of the Sanhedrin began to diminish under Queen Alexandra when the pharisaic scribes gained admission. Herod's hostility toward the nobility led to a substantial increase in the pharisaic influence in the Sanhedrin, to the point that in the Roman period the Pharisees' support was necessary for any decision to be made or carried out. The resultant change in the complexion of the Sanhedrin was nevertheless not from a council of nobles to a community of scholars, but rather from a body ruled solely by the aristocracy to one which was a mixture of sadducean nobility (priestly and lay) and pharisaic scholars. It is not known how these members were

selected, though ordination may have been a criterion (see Safrai, pp. 390f.).

The NT gives the three categories (chief priests, scribes, and elders) in various combinations (listed in *HJP*², II, 212 n. 43), the only pattern of which is that high priests are listed first (with rare exceptions).

Josephus (*Ant.* xx.8.11 [194]) gives some evidence of Hellenistic-Roman influence on the structure of the Sanhedrin when he uses the expression *prôtoi déka* (ten foremost) to describe a group sent in the company of the high priest and with the procurator Festus's agreement as envoys to Nero. This expression may designate an office like that found in such Greek cities as Gerasa and Tiberias. Further Greek influence may be seen in the name given the hall in the temple's outer courtyard where the high priest spent the last week before Yom Kippur, for the name has parallels at Palmyra (see Mish. *Yoma* i.1). In addition, Josephus describes the secretary of the Sanhedrin by the Greek expression *grammateús tês boulês* (*BJ* v.13.1 [532]).

IV. Powers.–The powers of the Sanhedrin were not limited merely to religious affairs while the Romans controlled civil matters. On the contrary, the Romans allowed the Jewish Sanhedrin the same large control of internal affairs that they granted other subject peoples. As a result the Sanhedrin exercised jurisdiction over all matters on which smaller Jewish courts (lesser Sanhedrins) could not reach a decision (but not as a court of appeal when a lesser court had ruled), except those matters that the Roman governor directly controlled. The court not only administered civil matters according to Jewish law but also dealt with criminal justice, keeping its own police force and making arrests. At the same time the geographical area under the Sanhedrin's direct control was limited to Judea, at least after the death of Herod the Great, when Galilee and Perea were separate districts. Nevertheless, in the moral and spiritual sense all Jews everywhere fell under the Sanhedrin's authority. This fact explains why Syrian Jews of Damascus could be issued the order to arrest Christians in their community (Acts 9:2; 22:5; 26:12).

But of course it was primarily in deciding matters of Jewish law that the Sanhedrin exercised its powers. The tradition recorded in the Mishnah (*Sanhedrin* i.5) gives the Sanhedrin jurisdiction over such issues as idolatry of a tribe, proclaiming a city apostate, deciding to enlarge the temple courts or the city of Jerusalem, waging a war of conquest. The high priest could be tried by the Sanhedrin but the king could not (Mish. *Sanhedrin* ii.1f.). Many of these stipulations are more ideal than actual proceedings of the Sanhedrin.

It is uncertain whether the Sanhedrin had the power to carry out capital punishment. Philo (*De legatione ad Gaium* 39) records a letter to Agrippa I indicating death with no appeal to any unauthorized person (even the high priest) who entered the holy of holies. A similar fate awaited a non-Jew (even a Roman citizen) who entered the inner court of the temple (Josephus *BJ* v.5.2 [194]). Specific cases also suggest the power of capital punishment (see Burkill, who argues that the Sanhedrin had capital powers): the trial and stoning of Stephen (Acts 7:54–8:2), and Paul's trial before the Sanhedrin (Acts 23:26). On the opposite side is the statement (though it has no parallels) in Jn. 18:31 that the members of the Sanhedrin said it was not lawful for them to kill anyone. The Synoptics and some rabbinic statements seem to concur in this (e.g., T. P. *Sanhedrin* 18a, 24b; cf. *HJP*², II, 221 n. 83). Stephen's stoning may have been popular justice (so *TDNT*, VII, 866) rather than a legal execution. It is possible that a Roman confirmation was required for any death sentence. And it was possible that the Romans could intervene or carry out judgment independently of the Jewish council (as they did with Paul, Acts 22:30; 23:15).

Both in Palestine and in the Diaspora the Roman authorities tolerated "little" Sanhedrins, which were set up on the model of the Great Sanhedrin of Jerusalem. The Torah itself (Nu. 35:29) was considered to have authorized these lesser courts. They had twenty-three members in every town that had 120 adult male Jews (Mish. *Sanhedrin* i.6; cf. Safrai, pp. 392, 397f.). The Essenes appear also to have had a court (twelve men and three priests) with their own penal code, even imposing capital sentence for blaspheming Moses.

V. Procedures.–The Sanhedrin never met on the Sabbath (so Mish. *Betzah* v. 2; Philo *De migratione Abrahami* 16; cf. CD 10:18) or on festival days, but whether the Great Sanhedrin met on the second and fifth days of the week (Monday and Thursday) as did the "little" Sanhedrins is not established (cf. Mish. *Ketuboth* i.1) Capital cases could not be tried on the eve of a sabbath or festival since sentence could not be pronounced until the day following the trial (Mish. *Sanhedrin* iv.1).

The place of meeting was most likely on the western boundary of the temple mount, E of the "Xystus" (i.e., "place of hewn stone") where a bridge (Wilson's Arch) connected the Upper City to the temple mount. Josephus's statement that the *bouleutérion* was destroyed by the Romans even before they conquered the Upper City indicates it was outside the upper city (*BJ* vi.6.3 [354]). The contrary statements of the Mishnah (*Middoth* v. 4; *Sanhedrin* xi.2; *HJP*², II, 224 n. 100), which place it within the inner forecourt of the temple, are probably not reliable, since a room in the inner forecourt would likely be used only for ritual purposes and the Mishnah's accounts of the topography of the temple mount are often untrustworthy. The Talmud says (*Shabbath* 15a; *Rosh ha-Shanah* 31a; *Sanhedrin* 41a) that the Sanhedrin had moved (or was expelled from) its meeting place to a bazaar (and also lost its power of capital punishment) forty years before the destruction of the temple, but the reliability of this tradition has been questioned (see *HJP*², II, 225).

The Gospel references to the night meeting of the Sanhedrin in the high priest's palace to try Jesus are problematic; trials could take place only during daylight hours (Mish. *Sanhedrin* iv.1), though a night meeting would explain why the meeting was in the high priest's palace, since the gates of the temple mount were closed at night (assuming the council chamber to have been on the mount, which is not certain). The meeting is only an investigation, however, not a trial, in Lk. 22:54ff. and Jn. 18:13ff.

Although no record exists of the procedure of the Great Sanhedrin, the detailed accounts of the procedures of the lesser Sanhedrins (councils of twenty-three), which also had capital authority, very probably apply for the most part to the procedures of the Great Sanhedrin as well (see Mish. *Sanhedrin*). Two clerks, one on the left and one on the right of the court, which was seated in a semicircle, took notes of the speeches, both those accusing and those defending the accused (Mish. *Sanhedrin* iv.3f.), who was expected to show due humility by wearing long hair and black clothes (Josephus *Ant.* xiv.9.4 [172]). Non-capital cases were judged by three (sometimes five) judges, whereas capital cases required twenty-three (Mish. *Sanhedrin* iv.1). In capital cases, the defense spoke first, then the prosecution (*ibid.*). Witnesses could speak first against the accused and then for him, but not the reverse (*ibid.*;

v.5). Acquittal was by simple majority, but condemnation required majority by at least two (iv.1).

VI. In the NT.–In all but two references to the Sanhedrin in the Gospels the context is the trial of Jesus. In Mt. 5:22 Jesus warns His followers that not only murder but also evil words spoken against a brother will bring one into judgment: here Jesus speaks of accountability to God in terms of the Jewish court (because "council" is singular Lohse took it to refer to the Great Sanhedrin [*TDNT*, VII, 867], but M. Weise [*ZNW*, 49 (1958), 119] thought it was the lesser community council). Alerting His disciples to expect persecution, Jesus speaks of their being brought into the local Jewish councils (at a time before Jewish Christians had broken from the Jewish community) and sentenced to scourging (Mt. 10:17; Mk. 13:9).

That animosity toward Jesus was driving the Jewish rulers to bring Him to trial before the Sanhedrin is clear in all the Gospels (e.g., Mk. 11:18 par.; 14:1f.) but made explicit in Jn. 11:45-53: Jesus' popularity, enhanced by the raising of Lazarus, threatens the high priests and the Pharisees to the point that they convene the Sanhedrin on the matter (v. 47), and the presiding high priest, Caiaphas, says it is better that one man die for the nation than that the whole people die (v. 50).

The Gospels' accounts of Jesus before the Sanhedrin involve several deviations from the pharisaic rabbinic Halakah as codified in the Mishnah. The time is wrong: it takes place at night, whereas capital trials were to be held only during the day (Mish. *Sanhedrin* iv.1), and it takes place on the eve of Passover, whereas no court was to take place on festival days or sabbath (*ibid.*). That the death sentence is immediately passed on Jesus violates the same mishnaic passage, which specifies that sentence of death could not be passed on the day of trial but only on the following day. The place is wrong, in that it is the palace of the high priest, not the court chamber. And the crime is wrong, in that Mish. *Sanhedrin* vii.5 specifies that blasphemy punishable by death is pronouncing the divine name, which Jesus did not do.

The Mishnah codifed pharisaic rabbinic Halakah rather than the Sanhedrin practice that predominated before A.D. 70, but too little is known about the latter to justify the conclusion of Blinzler that everything in the trial accounts is consistent with law current at the time. Lohse's conclusion is that, in view of the fact that Jesus was executed in the Roman manner (crucifixion) rather than the Jewish (stoning), it was according to Roman law and not Jewish that Jesus was tried and executed (*TDNT*, VII, 869). Rather than confirming a Jewish sentence and carrying it out, Pilate heard the Jews' complaint against Jesus, then tried and executed Him according to Roman law. Another approach (Rivkin) distinguishes between two Jewish courts — the Sanhedrin, which was the political body that examined Jesus and found in the title "King of the Jews" sufficient cause to turn Him over to the Romans for trial on a political basis, and the pharisaic *boulē* (Heb. *bēṯ dîn*), which was a judicial body. Later tradition confused those two bodies, which came to be thought of as one. Mantel took a similar approach in distinguishing two courts in Jerusalem but found the attempt to reconcile the Gospels (which are, according to him, historically inaccurate) to Mishnah impossible.

In Acts the apostles, like Jesus before them, are opposed by the Sanhedrin. First Peter and John (4:13ff.), then "the apostles" (5:18) are charged not to teach in Jesus' name. The popularity of the apostles, enhanced by their healing the sick, incited the jealousy of the high priest and the Sadduccees, who threw them into prison, from which an angel of the Lord delivered them (5:17-20). Once again they were brought to the council, where the Pharisee Gamaliel cautioned against any precipitous actions against them (5:26-40; E. Haenchen, *Acts of the Apostles* [Eng. tr. 1971] p. 255 believed this to be the author's motif, sadduccean opposition but pharisaic support of the apostles). When Stephen was called before the council on charges of blasphemy (6:11ff.), a riot ensued, issuing in a veritable lynching. Finally, Paul was arrested and the council convened to examine him (22:30). Paul shrewdly exploited the theological differences (on the resurrection and the existence of angels) between Sadduccees and Pharisees, the former opposing Paul while the latter supported him.

Some of the notions of structure and the procedure of the Sanhedrin may also be found in ideas of the heavenly tribunal (Mt. 19:28; Rev. 21). There appears to be a connection between the council or councils at Qumrân and these NT eschatological images, including the number of members as twelve (or twenty-four; the number is of course different for both the Great Sanhedrin and the lesser Sanhedrin); see 1QS 6:24–7:25; 8:1.

W. J. MOULDER

SANSANNAH san-san'ə [Heb. *sansannâ*–'first stalk of the date']. A town in the NEGEB of Judah (Josh. 15:31). Eusebius (*Onom.* 156.13) mentions the town but does not give any details that would help to locate it (merely "in the tribe of Judah"). Because the parallel list of the Simeonite towns has Hazar-susah (Josh. 19:5; Hazar-susim, 1 Ch. 4:31), scholars have often considered equating that town with Sansannah, but this equation is unlikely. Alt proposed to locate Sansannah at Khirbet esh-Shamsanīyât ("Ruin of the Samsonites"), about 16 km. (10 mi.) NNE of Beer-sheba at the foot of the Judean hills and therefore on the northern extremity of the Negeb plain. Just 3 km. (2 mi.) to the east is Khirbet Tatrît, now proposed by Kochavi as the site of Madmannah, the town mentioned just before Sansannah in Josh. 15:31. An echo of the name Madmannah has been noted in Umm Deimneh, 2.5 km. (1.5 mi.) N of Khirbet Tatrît; but this site is on the hills rather than the Negeb plain, and its surface pottery indicates a Roman-Byzantine settlement. If the locations of Sansannah and Madmannah at Khirbet Shamsanīyât and Khirbet Tatrît respectively are correct, then both were apparently in the "Negeb of Caleb" (cf. 1 S. 30:14), since Madmannah also occurs in the genealogy of Caleb (1 Ch. 2:49).

SAPPHIRA sə-fī'rə [Gk. *Sappheira*; Aram. *šappîrā'*–'beautiful'; cf. cognate Heb. *šiprâ* (*see* SHIPHRAH)] (Acts 5:1). A member of the early Christian community in Jerusalem. With her husband Ananias she conspired to deceive the community into believing that the two of them had turned over the entire proceeds of the sale of their property, when in fact they had kept back part of it (vv. 1f.). When confronted by Peter and given an opportunity to tell the truth, she — like her husband three hours earlier (vv. 3-6) — lied to the Holy Spirit (vv. 3, 9) and was immediately punished with death (vv. 7-10). *See* ANANIAS 1.

In 1923 the name was found in both Greek and Aramaic on an ossuary in Jerusalem (see F. F. Bruce, *Acts of the Apostles* [2nd ed. 1952], p. 132). N. J. O.

SARAH sâr'ə [Heb. *śārâ*, Gk. *Sarra*]; AV NT SARA; **SARAI** sâr'ī [Heb. *śāray*; Gk. *Sara*]. The name of Abraham's wife, Isaac's mother. In Gen. 17:15 she was given the name Sarah in place of the archaic form Sarai. Heb. *śārâ* means "princess" or "noblewoman" (Jgs. 5:29; 1 K. 11:3; Est. 1:18; Isa. 49:23; Lam. 1:1), a fitting title for the ancestress of kings (Gen. 17:16).

Sarai married Abram in Ur before their migration to Canaan (Gen. 11:29). At this point in the narrative she is identified only as the daughter-in-law of Terah, Abram's father (v. 31); later, however, Abraham claimed her as his half-sister, having the same father but a different mother (20:12).

On two occasions Abraham placed Sarah in an adulterous or potentially adulterous situation to save his own life (Gen. 12; 20; cf. the account of Rebekah and Isaac in 26:1-11). Abraham and Sarah migrated to Egypt to escape famine in Canaan, but Abraham believed himself to be in mortal danger there because of Sarah's exceptional beauty (12:10-12). He persuaded Sarah to identify herself as his sister rather than as his wife so that Pharaoh would not kill him when he took Sarah as his own wife (vv. 13-16). The Lord intervened, however, plaguing Pharaoh's household, so that Pharaoh discovered the deception and expelled Abraham and Sarah from Egypt (vv. 17-20). Ch. 20 recounts a similar incident involving Abimelech the king of Gerar; it reveals that Abraham and Sarah had made the half-truth that she was his sister a consistent strategy for survival wherever they traveled (v. 13). God intervened to protect Sarah so that no adultery actually occurred (vv. 6 and 16), and rescued her by warning Abimelech in a dream. On both occasions Abraham and Sarah used deception to save Abraham's life at the cost of destroying their family. Only God's action restored the family and preserved them for the promises of land, descendants, and blessing (12:1-3).

Sarah's barrenness (Gen. 11:30) was a deep personal tragedy (*see* BARREN). In the ancient Near East it was essential that women produce male offspring in order to perpetuate the family, and childlessness was the greatest misfortune that could befall a woman and her family (cf. 30:1) In Sarah's case this personal and family tragedy was also a theological dilemma. God had promised Abraham innumerable descendants who would possess the land of Canaan and be a blessing among the nations (12:1-3; 13:14-17; 15:1-6, 18-21; 17:1-21; 18:17-19). Sarah's barrenness prevented the fulfillment of these promises. Without a child God's election of Abraham would miscarry.

Acknowledging that God had kept her from conceiving, Sarah gave her personal servant Hagar to Abraham as a second wife (Gen. 16:1-6). According to a widespread ancient Near Eastern custom, any children born to Hagar and Abraham could be counted as Sarah's own offspring (cf. 30:1-13). But Hagar's subsequent pregnancy did not bring joy to Sarah. Proud of her fertility, Hagar behaved contemptuously toward her barren mistress (cf. Prov. 30:21-23), and Sarah brought the case to Abraham for judgment. Had Abraham chosen to declare Hagar under his own protection, she would have continued to stand between himself and Sarah; but Abraham confirmed Sarah's authority over her servant. Sarah exercised this power by oppressing Hagar so harshly that she fled. God commanded Hagar to return to her mistress and submit to her, but He also promised that Hagar's expected son would make Hagar herself the ancestress of a multitude (16:9f.). Sarah's plan to build a family by means of Haga had failed.

God's plan was to give Abraham a child through Sarah. In Gen. 17:16 God first specified Sarah as the mother of the promised son (cf. 18:10). To accomplish that God had to overcome the obstacle of her infertility at the age of ninety (17:17; 18:11). When Sarah overheard God's promise, she laughed at the prospect that one so old could have the pleasure of fulfilling her sexual role (18:12). When the Lord challenged her laughter, she attempted to deny it; God exposed her lie but did not punish her. According to Heb. 11:11 Sarah overcame her amazed doubt, and it was by faith that she was able to conceive a son. The next year she gave birth to Isaac, and the laughter of doubt (Gen. 17:17; 18:12) was replaced by the laughter of delight (21:1-7). God had enabled Sarah to complete the family circle by bearing a son for her husband.

Sarah's final obstacle was Hagar's son Ishmael. When Isaac had survived the perilous years of infancy and was weaned, Sarah took action to protect his and her own position in the family (*see* ISAAC II). She demanded that Abraham expel Ishmael and Hagar from the household so that Ishmael would pose no threat to Isaac's inheritance (Gen. 21:8-10). Once again Sarah's personal needs coincided with God's plan. In spite of Abraham's attachment to his older son, God commanded him to comply with Sarah's demand. God promised that Ishmael would become the ancestor of a nation, although it would be through Sarah's son that God would fulfil His promises and establish an everlasting covenant (17:18-21; 21:11:13). Thus Sarah and Abraham became the first ancestors of God's chosen people Israel (Isa. 51:2). Later Sarah died at Hebron, and Abraham purchased the cave of Machpelah for her tomb (Gen. 23).

The contrasts between Sarah and Hagar and between Isaac and Ishmael provided the apostle Paul with an analogy to illustrate God's election of the Church as the true descendants of Abraham and heirs of His covenant with Abraham (Rom. 9:6-9; Gal. 4:21-31). In this analogy the free woman's child — promised by God, expected in

faith, and born as a result of divine intervention — represents the Church. (*See* HAGAR.)

1 Peter 3:6 presents Sarah as an example of a holy woman who obeyed her husband (Gen. 12:13; 18:6; 20:13) and called him "lord" (Heb. *ʾᵃḏōnî*, lit. "my lord," Gen. 18:12; RSV "my husband").

SARAMEL sar'ə-mel (1 Macc. 14:28, AV). *See* ASARAMEL.

SARAPH sâr'əf [Heb. *śārāp*–'burning']. A descendant of Judah through Shelah (1 Ch. 4:22). The RSV phrase "who ruled in Moab and returned to Lehem" is based on the Vulgate. The MT is obscure (cf. AV "who had dominion in Moab, and Jashubi-lehem"), and various emendations have been proposed (cf. NEB "who fell in with Moab and came back to Bethlehem"). See comms., e.g., J. M. Myers (*AB*, 1965), pp. 24, 26f.; H. G. M. Williamson (*NCBC*, 1982), p. 61.

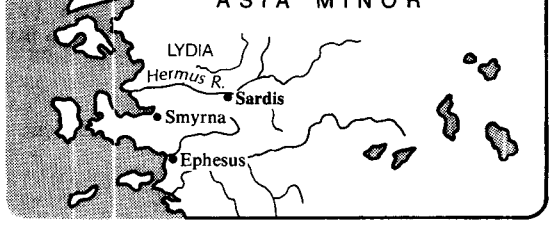
SARASADAI sar-ə-sad'ī [Gk. B *Sarasadai*, A *Salasadai*]; AV SALASADAI; NEB SARASADAE. An ancestor of Judith (Jth. 8:1). The Hebrew form of the name is ZURISHADDAI.

SARCHEDONUS sär-ked'ō-nəs [B ℵ *Sacherdonos*, A *Sacherdan*, but *Sacherdonosos* in Tob. 1:22]. An incorrect AV spelling for Sacherdonus in Tob. 1:21f.; another form of ESARHADDON.

SARDEUS sär-dē'əs (1 Esd. 9:28, AV). *See* ZERDAIAH.

SARDINE STONE (Rev. 4:3, AV). *See* STONES, PRECIOUS.

SARDIS sar'dis [Gk. *Sardeis* (Rev. 1:11; 3:1, 4)]. A city of Asia Minor located 80 km. (50 mi.) E of Smyrna; the capital of ancient LYDIA. It was conquered by Cyrus in 546 B.C. and made the western terminus of his imperial highway from Susa; from there Cyrus II set afoot the Anabasis (401 B.C.).



I. Site in Relation to Rev. 3.–In Rev. 3:1-6 Sardis is condemned more completely than any other city except Laodicea (vv. 14-19), and only these two of the seven churches were noted as still-uninhabited ruins by W. M. Ramsay (*LSC*, p. 132; see further his *Pauline and Other Studies* [2nd ed. 1908]; *CRE*). E. M. Blaiklock (*Cities of the NT* [1965], p. 115) called Sardis "the city that died" and ascribed its destruction to the crumbling of the rock ridge on which a part of the city was built (though most of it, as revealed by excavation, was down in the plain). Despite the negative warnings of vv. 1f., v. 4 admits that a few of its inhabitants are notably good and will shine in resplendent white robes at the judgment.

The site of Sardis is across the highway and railway line from the modern village of Sart, W of the larger Salihli between Manisa and Philadelphia (Alaşehir). Ruins of the ancient city spread from the acropolis, on a jagged crag of Mt. Tmolus/Boz, down its western slope to the Pactolus River, which further N flows into the Hermus/Gediz. Across the road and E of the acropolis are other striking ruins, including the synagogue (see III below).

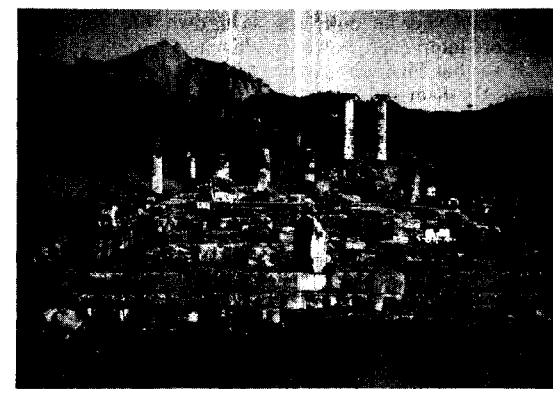
II. History.–The city was founded *ca.* 1200 B.C. It successfully resisted an invasion of Cimmerians, and its prosperity under the Mermnad Dynasty (650-550; J. Pedly, *Sardis in the Age of Croesus*, p. 4) marked the climax of Lydia's history. Gold, discovered in the sandy bed of the Pactolus (but no longer found in the time of Strabo [xiii.626]), was used for coinage — which was apparently invented here (*see* MONEY III.A). The wealthy King Croesus (560-546) became so powerful that he even attempted to determine the Assyrian succession at faraway Nineveh.

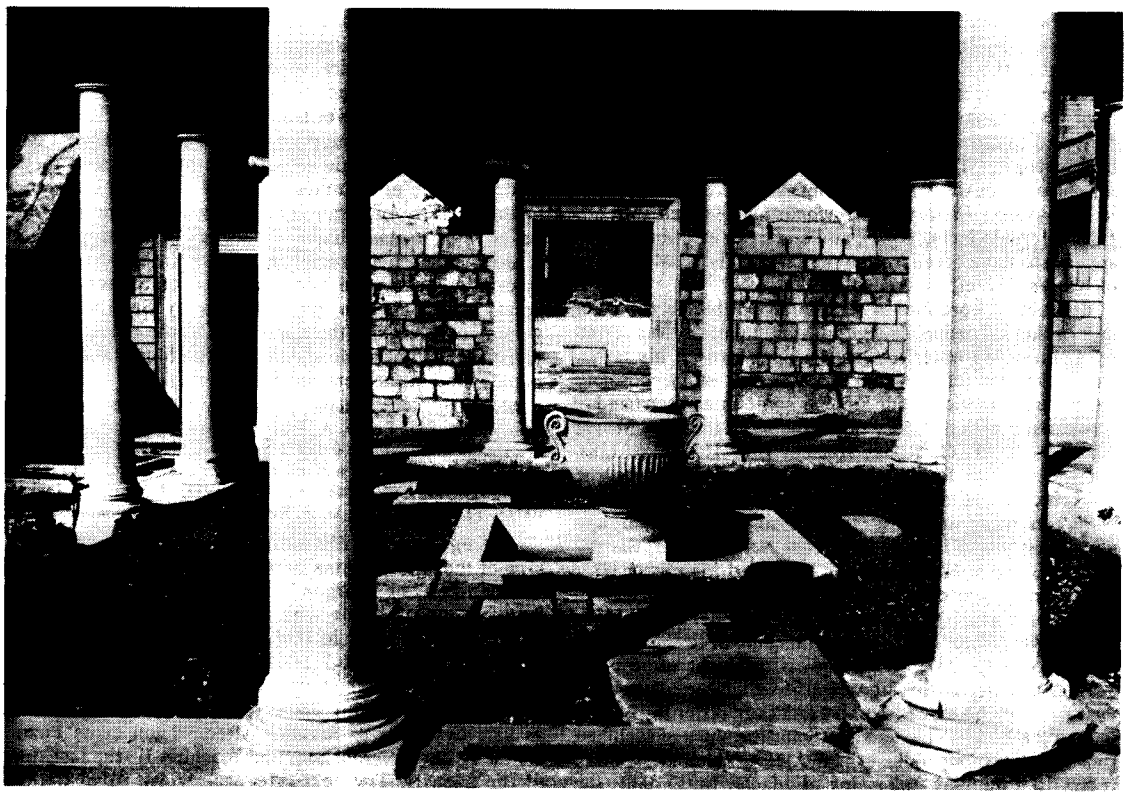
After Cyrus overcame Croesus in 546, the city was called Pers. *Sparda* (at Behistun; Bab. *Sa-par-du*); it was possibly the SEPHARAD where Ob. 20 locates some Judean exiles, although in later Hebrew "Sepharad" came to be used as the name for Spain and thence for Jews of Arabic culture (Sephardi) as distinct from the central European Ashkenazi. Persian satraps continued to make their capital at Sardis, even after Ionian neighbors burned the city in 499 (Herodotus v. 102).

Alexander granted Sardis independence in 334, but Antigonus subjugated it again in 322, and from 301 it was again the capital of a Seleucid governor (Pauly-Wissowa, I/2, 2475). Its powerful acropolis was twice invaded by the stratagem of an infiltrator: a Mede in 549 (or 546) and a Cretan in 218; Rev. 3:3 ("I will come like a thief") may allude to these events. Sardis was ruled by Rome from 189 B.C., as a dependency of Pergamum until 133. The Christian diocese remained prominent even after the Muslim occupation (A.D. 716), which continued strong despite the ravages of Timur (Tamerlane) in 1403.

III. Excavations.–The magnificent crag that presumably served as an early acropolis has only a few ruins visible today, but at its foot are the more imposing ruins brought to light by H. C. Butler's American excavation in 1910-1914 (published 1922). In continuation of the ancient Asiatic fertility cult of Cybele or Demeter, there is a fourth-century Ionic temple of Artemis imitating that of Diana of the Ephesians; though never completed and damaged

The Ionic temple of Artemis at Sardis (at the foot of the ancient acropolis). Originally built in the 6th cent. B.C., it was destroyed in 499 and rebuilt in 334 by Alexander the Great (W. S. LaSor)





The entrance hall of the Jewish synagogue at Sardis (3rd-4th cent. A.D.). Jews held influential positions in the city, which was apparently a prominent center of the Diaspora (J. Finegan)

by an earthquake in A.D. 17 (Tacitus *Ann.* ii.47; Strabo xii.8.18), its columns and ground-plan survive more imposingly today than those of Ephesus (G. Gruben and P. Franke, *Mitteilungen des deutschen archäologischen Instituts, Athenische Abteilung*) 76 [1961], 155-208). In its southeast corner is a small fourth-century brick church. The reopening of this excavation by a Harvard-Cornell expedition under G. M. A. Hanfmann since 1958 quickly spread farther west and north to the "Lydian city" with brightly painted tiles (reports in *BASOR* and *American Journal of Archaeology*; Hanfmann, *Short Guide to the Excavations at Sardis* [1962]; *Letters from Sardis* [1972]; C. Greenewalt, *BASOR*, 211 [Oct. 1973], 14-34; 245 [Winter 1982], 1-34).

The excavation also gradually extended N of the modern highway, where a gymnasium was found that stood on an artificial earthwork. Its eastern section had a marble court, which has been rebuilt into a two-story monument visible from miles around. The most sensational discovery was a southern portion of this complex, originally a basilica, but apparently transformed into a synagogue from *ca.* A.D. 200 to 616, also vividly rebuilt. One of the stones was a large menorah (G. Hanfmann, *BASOR*, 187 [Oct. 1967], 25). Greek inscriptions seem to indicate that the Jewish community held a position of prestige and power (so also Josephus *Ant.* xiv.10.24 [259-261]). S. Johnson (H. Willoughby Festschrift [1961], p. 83) maintained that the Christians of Sardis were the "true" Jews as opposed to the unconverted ones called "synagogue of Satan" in Rev. 3:9; and he further surmised that the bishop of Sardis was unfriendly to Ignatius, who did not write to Sardis as he did to the neighboring sees. A sermon of Bishop Melito of Sardis was discovered among the Beatty Papyri (see F. G. Kenyon, ed., *Chester Beatty Biblical Papyri* [1941]).

About 13 km. (8 mi.) NW of the ruins, between the Hermus River and the Gyges/Marmara Lake, is the cemetery of "a thousand mounds" (Bin Tepe).

SARGON sär'gän [Heb. *sargôn* (Isa. 20:1); LXX *Arna*, Symm. *Sargon*; Akk. *šarrukîn*, "he (the god) has established the kingship"]. The name of at least three kings, Sargon ("the Great") of Akkad, Sargon (I) of Assyria, and Sargon II of Assyria. Only Sargon II is mentioned in the Scriptures, and he only once. Sargon of Akkad was formerly known as "Sargon I," but the discovery of records of another Sargon, now designated as Sargon I, has confused the nomenclature.

I. Sargon of Akkad (*ca.* 2350-2295 B.C.; others push

dates back about 25 years earlier; still others lower them by about a century; the dates in *ISBE*, I, 65 are revised in the light of the Ebla discoveries).–Records from Sargon's time are scant; most of what is known about him comes from inscriptions attributed to him but copied at a later date and found at Nippur and from omen texts (mostly hepatoscopic). There is some confirmation, however, in a stele of Manishtusu which was discovered at Susa (cf. R. W. Rogers, *History of Babylonia and Assyria* [6th ed. 1915], II, plate facing p. 51), and one large inscribed tablet appears to have come from a period shortly after the time of Naram-Sin (cf. *ANET*, p. 267).

His mother bore him in secret and put him in the river in a basket of rushes sealed with bitumen; he was found by a drawer-of-water and raised as a farmer; his father was unknown (cf. *ANET*, p. 119). This story, possibly based on a historical tradition, has sometimes been used in comparison with the story of the hiding of the baby Moses (Ex. 2:3-10; cf. G. Roux, *Ancient Iraq* [1964], p. 128), but the reasons for hiding the babies and the outcome in each case militate against such easy comparison.

Sargon was cup-bearer to Ur-Zababa, a king of the 4th Dynasty of Kish. By a process not yet clear, Sargon became king of Kish and then extended his power over neighboring territories until at last he could boast that "Enlil gave him [the region from] the Upper Sea [to] the Lower Sea," i.e., from the Mediterranean to the Persian Gulf (*ANET*, p. 267; cf. Barton, p. 105). At some point Sargon transferred his administrative center to the new capital which he named AGADE (Akkad). After thirty-four campaigns he was able to claim that "the ships of Meluḫḫa [possibly the Indus Valley; in later texts it almost certainly refers to Ethiopia], the ships of Magan [in Oman], the ships of Dilmun [Bahrain], at the quay in front of Agade he moored" (Barton, p. 109). If various claims are to be accepted at face value, his campaigns took him across the Taurus range into central Anatolia, as far as Diyarbakr on the upper Euphrates, into Elam, through the Persian Gulf, and even across the sea to Cyprus and Crete.

Certainly he was the first Semitic dynast, the conqueror of Sumerian rulers in lower Mesopotamia as well as other peoples further north. He claims to have conquered, among other places, Mari and Ibla (Ebla) (*ANET*, p. 268; Barton, p. 109). The first reference to Mari is found in a claim by Eannatum of Lagash (*ca.* 2450 B.C.) that he had conquered Mari. Our knowledge of Ebla has been greatly expanded by the discovery of the site at TELL MARDIKH in Syria, but unfortunately (at this writing) the publication of the texts has been delayed. According to one reconstruction, Ebrum, third king of the dynasty, was ruler of Ebla when Sargon was king of Akkad. There is some uncertainty, however, about the "claims" of Sargon (written, it must be recalled, at a later date), for similar claims are attributed to Naram-Sin. It is believed that Naram-Sin, rather than Sargon, was the one who conquered and burned Ebla (*ca.* 2250 B.C.). Similarly, claims attributed to Sargon about campaigns in the Persian Gulf area can also be found in inscriptions of Manishtusu (Barton, pp. 129ff.). And there is a curious similarity between the inscription of Sargon and that of Lugalzaggisi whom he defeated (cf. J. Finegan, *LAP*, [2nd ed., 1959], p. 44).

Sargon reigned fifty-six years and was succeeded by his sons Rimush and Manishtusu (in another inscription, Manishtusu is called the son of Rimush [Barton p. 343]) and Manishtusu's son Naram-Sin (to be carefully distinguished from Naram-Sin of Assyria, about four centuries later). Naram-Sin's son Šar-kali-šarri may not have been the last king of the dynasty, but in essence the end came when Naram-Sin died. Sargon, by establishing the dynasty of Agade, can be considered the creator of the first world empire. And for the first time, it would appear, Akkadian — a Semitic language — was put in writing, and that in cuneiform taken over from the Sumerians.

It is erroneous to suppose that Sargon's conquest over the Sumerians brought about an ethnic division in the land. Semites and Sumerians lived together both prior to the dynasty of Agade and afterward. Sumerian texts never refer to Akkadians as enemies or invaders. There is no indication of racial inferiority in the wording of inscriptions, and the continued use of Sumerian logograms and Sumerian divine names by Semitic peoples would suggest quite the opposite. On the other hand the division of southern Mesopotamia into "Sumer and Akkad" is indicated in the permanence of that term.

Bibliography.–Inscriptions, some in both Sumerian and Akkadian, can be found in G. A. Barton, *Royal Inscriptions of Sumer and Akkad* (1929), pp. 100-119. Significant selections can be found in *ANET*, pp. 267f. For a historical survey, cf. *CAH*, II/1 (3rd ed. 1971), 417-463; E. Weidner, *AFO*, 16 (1952), 1-24; E. A. Speiser, *JAOS*, 72 (1952), 97-101; M. A. Beek, *Atlas of Mesopotamia* (1962).

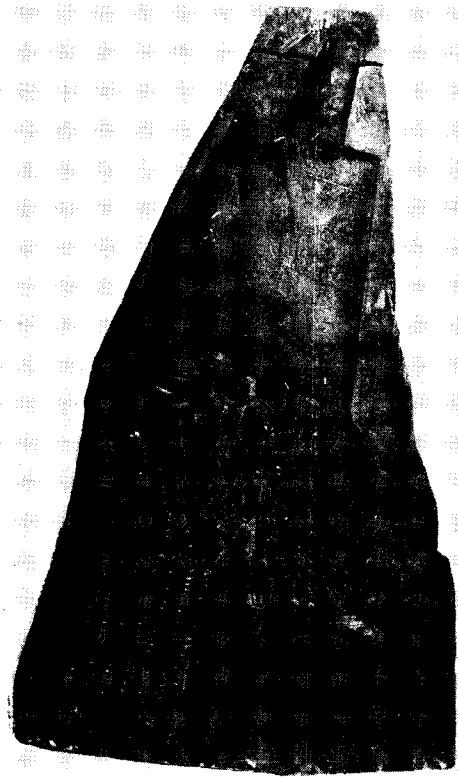
II. Sargon I (*ca.* 1850 B.C.).–Little is known about this king of the Old Assyrian period, who is sometimes called "Sharru-ken" or "Sargon I of Assyria" to distinguish him from Sargon of Agade who was also called "Sargon I." Extant records contain the names of nine rulers of this dynasty: Puzur-Ashur I (cf. *ARAB*, I, §28), Shallum-aḫum (cf. *ARAB*, I, §24), Ilushuma (cf. *ARAB*, I, §26), Erishum I (cf. *ARAB*, I, §§27-37), and Ikunum (cf. *ARAB*, I, §§39f.), as viceroys prior to Sargon. After Sargon came Puzur-Ashur II, then Naram-Sin, and Erishum II, the last ruler of the dynasty. The next ruler was Šamši-Adad I (1813-1781), of whom we have considerable information from the Mari Letters (cf. *ARM*, I).

See *CAH*, I/2 (3rd ed. 1971), 707-723, 752-762.

III. Sargon II (722-705 B.C.).–Occasionally referred to as Sargon III, this Assyrian king claimed to have captured Samaria (*ca.* 722 B.C.). 2 K. 17:5f. does not name that king, but "Shalmaneser king of Assyria" is named in v. 3, and references to "the king of Assyria" in v. 4 (3 times) seem to imply that the same king is intended in the following verses (see further below). Sargon is named but once in the OT (Isa. 20:1).

Sargon's right to the throne is disputed. Earlier scholars looked upon him as a usurper (cf. R. W. Rogers, *Cuneiform Parallels to the OT* [1912], p. 323), possibly responsible for the death of Shalmaneser; more recent scholars consider him to be the son of Tiglath-pileser III and brother of Shalmaneser (cf. D. J. Wiseman in *DOTT*, p. 58). He acceded to the throne on 12 Tebetu (December or January, probably 722/21 B.C.); his first regnal year began the following Nisanu, about two-and-a-half months later. On the walls of his palace at Dūr-Šarrukin (Khorsabad) were carved his annals, a year-by-year account of the first fifteen years of his reign and an account of the building of his palace. Other records from Khorsabad, Asshur, Calah, and Nineveh give us a fairly full account of the achievements which he considered worthy of recording (cf. *ARAB*, II, §§1-230; *ANET*, pp. 284-87). A very thorough account of his eighth campaign was recorded on a tablet found at Asshur. The campaign was against Urartu and its neighboring peoples who were a primary source of trouble in the numerous revolts against Assyria (cf. F. Thureau-Dangin, *Une relation de la Huitième Campagne de Sargon* [1912]; *ARAB*, II, §§ 139-178). The tablet is dated by the scribe "in the eponymy of Ishtar-duri," which is calculated to be 714 B.C. Much of this material

SARGON



A stylized portrait of Sargon II of Assyria (721-705 B.C.) with curled mustache, beard, and hair, wearing the royal headdress (Egyptian Museum, Turin)

is of relatively little value for biblical studies, except to give us a rounded picture of the king, some idea of the international situation of his day, and the extent of the Assyrian empire.

Sargon's reign can almost be summarized as a series of holding actions. The Assyrian empire was large — perhaps too large for its resources. The peoples on all sides of the empire were restive, and revolts were commonplace. From time to time they formed alliances; ultimately it was by such alliances that the empire was defeated.

To the northeast and north was the kingdom of Urartu, located in what is today eastern Turkey and northern Iran. The fully described eighth campaign (714 B.C.; cf. *ARAB*, II, §§139-178) dealt largely with Urartu and its allies. The Medes, the Manni, and other peoples were included in campaigns of the third, sixth, seventh, ninth, and tenth years, suggesting that there was a constant state of unrest in the area from Elam to Armenia. In the seventh year (715 B.C.), in addition to a campaign in the north, his account includes also actions against the Arabs and peoples of the desert (*ARAB*, II, §17), indicating that Sargon was faced with a two-front situation. He refers to his foes "from Yatnana [Cyprus] which is in the sea of the setting sun, as far as the border of Egypt and the land of Mushki [Phrygia in central Anatolia]," as well as Amurru and the Hittite-land, i.e., Syro-Palestine (*ARAB*, II, §54), but since this record is not dated, it probably includes several different campaigns.

To his south Sargon had trouble with Babylon and the Chaldean (Kaldi or Kasdi) peoples under Marduk-apal-iddina (Merodach-baladan), whose land, Bit-Yakin, extended to the borders of Dilmun (or Tilmun, the island of Bahrain). Allied with Merodach-baladan, probably loosely at first, were Arameans, Elamites, and people from Dilmun. Sargon marched on the area at the beginning of his reign (possibly 721 B.C.; cf. *ARAB*, II, §55, also §4), but the outcome was indecisive and Merodach-baladan was left on the throne. Finally in his twelfth year (710 B.C.; cf. *ARAB*, II, §§31, 38) Sargon carried out a major campaign against these enemies, and "took the hands of Marduk," thereby proclaiming himself ruler of Babylon. It is noteworthy, however, that whereas he names himself "king" of all other regions, he regularly calls himself "viceroy" (*šakkanaku*) of Babylon. The suggestion has been made that, owing to the problems on his borders, he was unwilling to obligate himself to make an annual trip on New Year's Day to Babylon to renew his allegiance to Marduk (cf. *CAH*, III, 50). Merodach-baladan, however, remained as a local ruler and supported Sargon to the end of his reign.

It is with the lands W of Assyria (Syria, Palestine, Egypt) that the biblical scholar is most interested. Israel under Hoshea (731-722) had revolted against Shalmaneser, and he had laid siege to Samaria for three years (724-22; cf. 2 K. 17:5). At the end of that time, Samaria fell and Israel was taken captive, its peoples dispersed (2 K. 17:6) and other captives relocated in Samaria (17:24; cf. *ARAB*, II, §§86, 118). Sargon claimed that this took place at the beginning of his reign (his accession year?), but that text comes from late in his reign and the opening part is broken (cf. *ARAB*, II, §4; *DOTT*, pp. 59f.; *ANET*, p. 284 [lines 10-17]). Therefore some scholars have returned to the older view that Sennacherib took Samaria (cf. A. T. Olmstead, *AJSL*, 21 [1904-1905], 179-182; E. R. Thiele, *MNHK* [2nd ed. 1965], pp. 121-154; J. Finegan, *LAP* [2nd ed. 1959], p. 208;; H. Tadmor, *JCS*, 12 [1958], 22-40, 77-100).

Late in his second year Sargon moved against a coalition that included Damascus, Hamath, Arpad, Samaria, and other petty kingdoms (*ARAB*, II, §5). Sib'u, sometimes identified as the Egyptian pharaoh So (Sewe; cf. 2 K. 17:4; see also J. Borger, *JNES*, 19 [1960], 49-53; S. Yeivin, *VT*, 2 [1952], 164-68), and Hanno of Gaza joined the rebels. It seems unlikely that Samaria had been completely carried into captivity in 722 B.C., for in this campaign Sargon claimed to have taken 27,270 (or 27,290) captives from Samaria. In an undated cylinder inscription Sargon recorded that he "who devastated the wide land of Bit-Ḫumria [the House of Omri, Israel]" also "settled in the midst of Bit-Ḫumria" peoples of other conquered lands (*ARAB*, II, §118). He also drove the Egyptians back to their land and destroyed the border town of Raphia. But this did not end the revolts, for in his eleventh year (711 B.C.) Sargon had to march against Ashdod and Gath once more (*ARAB*, II, §30). In a broken prism inscription he refers to Philistia, Judah, Edom, and Moab as "payers of tribute" (*ARAB*, II, §105; *DOTT*, p. 61; *ANET*, p. 287). Isa. 20 is to be placed in this period; Isaiah's message against trusting in Egypt was quite appropriate! It is possible that some of the undated inscriptions refer to the same event; it is also possible that the annals which were written late in Sargon's reign and found at Khorsabad suffered from lapse of memory or faulty records.

Sargon, who located his capital variously at Calah, Asshur, and Nineveh, began the building of Dūr-Šarrukin ("the fortress of Sargon") at a site N of Nineveh (the modern Khorsabad) in the month of Abu (July-August; cf. *ARAB*, II, §§84, 121), perhaps in his twelfth year (710 B.C.), for several times, following the account of

taking the hands of Marduk (at Babylon), he continues with "at that time I built a city" (cf. *ARAB*, II, §§70, 72, etc.). Several inscriptions describe the palace (*ARAB*, II, §§72-75, 84-94, 96-102, 108-118). The dedication took place in the month of Tishritu (Sept.-Oct.; cf. *ARAB*, II, §94) 706 B.C. His last inscription is dated in Eponymy of Nashir-Bel, i.e., 705 B.C. (*ARAB*, II, §221). He was killed in battle near Tabal (N of the Taurus mountains), where the Cimmerians were attempting an invasion, and was succeeded by his son Sennacherib who ascended to the throne on 12 Abu 705. The Cimmerian invasion was delayed for many years, and perhaps never regained its full force. Sennacherib moved the capital to Nineveh; Dūr-Šarrukin was never again occupied as a capital and soon became ruins.

SARID sâr'id [Heb. *śārîḏ*]; NEB SHADUD. A border town at the southeastern extremity of Zebulun's tribal inheritance (Josh. 19:10, 12). A few LXX MSS read *Sedoud*, and this has led to the identification with Tell Shadûd on the northern edge of the Valley of Jezreel, about 8 km. (5 mi.) SE of Nazareth and 10 km. (6 mi.) NNE of Megiddo. Surface surveys have produced evidence of occupation dating back to the Late Bronze period. If this identification is correct, the original name may have been Shadud (cf. NEB) rather than Sarid.

Bibliography.–W. F. Albright, *BASOR*, 19 (Oct. 1925), 9; *GP*, II, 449f.; *LBHG*, rev., 117, 257.

SARON sâr'ən (Acts 9:35, AV). *See* SHARON.

SAROTHIE sə-rō'thē [Gk. B *Sarōthei*, A *Sarōthie*]. Head of a family of "sons of Solomon's servants" who returned from the Exile with Zerubbabel (1 Esd. 5:34). The name is missing in the parallel lists in Ezr. 2:57; Neh. 7:59.

SARSECHIM sär'sə-kim [Heb. *śar-sᵉḵîm*]; NEB NEBU-SARSEKIM. The name of a Babylonian high official (the RABSARIS) who entered Jerusalem when the city fell to the Babylonians in 587 B.C. (Jer. 39:3). Unless it is another name or description of "Nebushazban the Rabsaris" (v. 13), the bearer remains unidentified. Some exegetes have suggested that the text be read "Nergal-sharezer the Sin-magir (official), Nebo-sarsechim the Rabsaris." But Nebo-sarsechim would represent an unknown Babylonian personal name that can hardly be equated with Nebushazban (Akk. *Nabû-šeziban(ni)* = *Nabû-shaz(i)bān*). *See* SAMGAR-NEBO. D. J. WISEMAN

SARUCH sâr'ək (Lk. 3:35, AV). *See* SERUG.

SASH [Heb. *qiššhurîm*] (Isa. 3:20); AV HEADBAND; NEB NECKLACE. An ornament of women's attire, apparently something that was tied or bound (cf. the verb *qāšar*, "bind"). Its exact identity is uncertain, but the English versions indicate the various possibilities. Cf. the use of the Hebrew term in Jer. 2:32 (AV, RSV, "attire"; NEB "ribbons").

SATAN sā'tən [Heb. *śāṭān*–'adversary' < *śāṭan*–'be/act as adversary'; Gk. *Satan, Satanas*]; NEB also ADVERSARY (Zec. 3:1f.), DEVIL (1 Tim. 5:15).

  C. Jesus' Triumph
  D. Satan's Objective
  E. The Christian's Counterstrategies

I. In The OT.–***A. Adversary.*** The Hebrew noun *śāṭān* signifies an "adversary" in several nontheological contexts; e.g., the Philistines sent David back from the front lines, "lest in the battle he become an adversary [*śāṭān*] to us" (1 S. 29:4); David said that the sons of Zeruiah were behaving as an "adversary" to him when they advised him to kill Shimei (2 S. 19:22); Solomon exulted that God had given him rest on every side and that there was "neither adversary nor misfortune" (1 K. 5:4); and "the Lord raised up an adversary against Solomon, Hadad the Edomite" (1 K. 11:23; cf. v. 25). The verb *śāṭan* also means "accuse" or "resist." The psalmist complained that those who rendered him evil for good were acting as "adversaries" to him (Ps. 38:20 [MT 21]; cf. 109:4).

B. Angelic Being. In four OT passages *śāṭān* appears as an angelic being. (*See* ANGEL.)

(1) Numbers 22 tells how an angel became a *śāṭān* or "adversary" to Balaam, a well-known diviner. Twice Balak king of Moab requested that Balaam curse the Israelites (vv. 1-20). The first time God forbade Balaam from doing this; but after Balak's second request the Lord told Balaam to go but to say only what God commanded him. As Balaam accompanied Balak's lieutenants, however, "God's anger was kindled because [Balaam] went; and the angel of the Lord took his stand in the way as his adversary [*śāṭān*]" (v. 22). Balaam did not see the angel with a drawn sword, but his ass saw the angel and tried three times to protect Balaam by turning away. Finally Balaam himself saw the angel, who said to him, "Why have you struck your ass these three times? Behold I have come forth to withstand [lit. "to be a *śāṭān* to"] you, because your way is perverse before me" (v. 32).

In the remaining three OT passages Satan functions as an adversary against God's people either by attempting to seduce them to do evil or by accusing them before God for their sins. But in each case Satan's power is limited and he acts only within God's permissive will.

(2) The Satan of Job 1–2 (who appears with the angelic "sons of God," 1:6) opposes God by challenging the genuineness of Job's righteousness, claiming that Job is upright not for the joy of fellowship with God but because God continues to bless him with great wealth (vv. 6-11). God then permits Satan to strip Job of his wealth and to kill his seven children. But Satan's challenge proves false, for when Job learns of all this loss, his reply is, "The Lord gave, and the Lord has taken away; [but] blessed be the name of the Lord" (v. 21). Satan then declares that Job's righteousness is still counterfeit, since Job would not remain loyal to God if he lost his health. God permits Satan to make Job deathly sick, but not to kill him. Again Satan's accusation proves false, for when Job is in so much pain that even his wife recommends that he renounce his love for God, Job replies, "Shall we receive [only] good at the hand of the Lord, and not [also] evil?" (2:10). Thus God's glory shines out all the more clearly in that Job

regards fellowship with Him as surpassing everything else in worth — even his own health.

(3) Satan's accusatory role is also seen in Zec. 3:1f. Here he is explicitly God's enemy in that he tries to disqualify Joshua, the postexilic high priest, by accusing him for his past sins. God rebukes Satan for this by declaring that He has forgiven all of Joshua's sins (v. 4). Here also Satan's accusations cause God's goodness and glory to stand out in sharper relief, in that God has forgiven Joshua all his sins despite the accusations of an angelic being.

From the last two passages it can be deduced that the OT views God, in His sovereignty, as permitting the existence of evil in a penultimate and limited way. He does not work evil as a final end, but only as a means for the ultimate and lasting achievement of the greatest good, namely, the more pronounced display of His goodness and glory.

(4) Perhaps such a theodicy lies behind the way 1 Ch. 21:1 interprets 2 S. 24:1. Both passages report that David sinned by having a census taken of Israel. In 2 Samuel God Himself, because of His own anger, incites David to commit this sin, and His glory shines forth as David, given the choice of being punished by men or by God, chooses punishment by God, "for his mercy is great" (2 S. 24:14). The Chronicler, however, apparently wanting just as much to maintain God's ultimate goodness and sovereignty but feeling the need to stress that God never decrees evil as a final end, removes this deed one step from God by denominating Satan as the one who incited David to sin.

Job 1–2; Zec. 3:1f.; and 1 Ch. 21:1 are the only OT passages that speak of Satan as a superhuman, evil angelic being (and, according to many scholars, only the last text uses "Satan" as a proper name; but cf. GKC, §§ 125f., 126e). The OT (which comprises about four-fifths of our Bible) has little to say about Satan in comparison with the NT, where he is mentioned with much greater frequency.

II. In Intertestamental Literature.—*A. Increased Interest in Satan.* The intertestamental literature (Apocrypha, DSS, and Pseudepigrapha) says considerably more about Satan than the OT does. In these writings Satan also goes under several other names: Azazel (e.g., 1 En. 13:1), Beelzeboul (e.g., Testament of Solomon 6), Belial (e.g., 1QS 2:19) or Beliar (e.g., Jub. 1:20), "the devil" (Wisd. 2:24), "the evil one" (Testament of Job 43:5), Mastema (e.g., Jub. 10:8), Sammael (e.g., Martyrdom of Isaiah 1:8), Satanail (e.g., 2 En. 18:3), and Semyaz (e.g., 1 En. 6:3). What was the cause of this greatly increased interest in Satan?

1. Persian Influence? A popular view (e.g., J. B. Russell, pp. 217ff.) has held that the increased interest in Satan during this period resulted from Israel's exposure to the dualism between the good Ahura-Mazda and the evil Angra Mainyu in Persian Zoroastrianism. Israel must have had some direct contact with this teaching, since it was under Persian rule from 539 to 330 B.C. But an examination of the way Satan (by this and other names) functions in this literature shows that the monistic thinking of the OT persists. In these writings Satan continues to have a limited power under God, but his power is never thought to be coordinate with that of another god. Furthermore, von Rad has pointed out that the Angra Mainyu of Zoroastrianism never plays the role of an accuser as Satan does in the OT, intertestamental literature, and NT (*TDNT*, II, 75).

There is, to be sure, one noteworthy passage in the Qumrân Community Rule (*ca.* 200 B.C.), 1QS 3:15–4:25, which has certain dualistic overtones. According to 3:19-23, "Those born of truth spring from a foundation of light, but those born of falsehood spring from a source of darkness. All the children of righteousness are ruled by the Prince of Light and walk in the ways of light, but all the children of falsehood are ruled by the Angel of Darkness [Beliar, i.e., Satan] and walk in the ways of darkness. The Angel of Darkness leads all the children of righteousness astray, and until his end, all their sin, iniquities, wickedness, and all their unlawful deeds are caused by his dominion in accordance with the mysteries of God." But even this passage makes the "undualistic" assertions that evil now has the ascendancy on earth on account of "the mysteries of God," and that the power of the Prince of Darkness will someday be terminated. The passage also declares that "the God of Israel . . . created the spirits of light and darkness" (3:24f.). According to 4:18-20, "God has ordained an end for falsehood, and at the time of his visitation, he will destroy it forever. Then truth, which has wallowed in the ways of wickedness during the dominion of falsehood until the appointed time of judgment, shall arise in the world forever." Such statements, which affirm God's sovereignty, tell against the hypothesis that the Jews became interested in Satan after learning from the Persians about the evil Angra Mainyu, who was coordinate with the good Ahura-Mazda.

2. Apocalyptical Thinking. The best explanation for the increased interest in Satan lies in Israel's response to the protracted period of time that it was forced to live under foreign rule, starting when its people were led off into captivity in Babylon in 587 B.C. Persia conquered Babylon in 539 B.C., and Cyrus II allowed many Jews to return to Judah and rebuild a small version of their former temple. To avert another such catastrophe, and in the hope of gaining complete freedom from foreign rule, the Jews now sought to obey their law with the greatest possible zeal. Nevertheless they continued under Persian rule. In 330 B.C. Alexander the Great conquered the Persian empire, but in the ensuing years, after his kingdom broke apart into several factions, Israel remained in subjugation to various rulers. Israel had a comparatively brief interval of independence beginning in 142 B.C. (after the Hasmonean revolt), but it was again subjugated by Rome in 63 B.C. Israel's subservience to Rome lasted until A.D. 70, when the Romans, in suppressing a Jewish revolt, destroyed the temple and banished almost all Jews from their homeland.

Israel's almost constant subjugation to foreign rule for over six centuries was bound to have a great effect upon its thinking. The longer this subjugation continued, the more urgent became Israel's need for a new understanding of why God did not give His people freedom. Consequently, in the literature written in the last three centuries of this subjugation (and even after the Jewish dispersion of A.D. 70), writers are asking the question, "How can the just and omnipotent God let His righteous people continue to be oppressed by foreign, evil rulers?" To answer this question, Jews began to look more closely at the OT Satan and to see him as immediately responsible for the evil present in the world since the fall of Gen. 3 (Life of Adam and Eve 1-17), or since the "sons of God" cohabited with the "daughters of men," producing offspring that caused so much violence on earth that God had to destroy most of it by the flood (1 En. 6–16; cf. Gen. 6).

B. Jewish Apocalypticism. This understanding of Satan as the explanation for the apparent supremacy of evil over righteousness was an essential part of the "apocalypticism" that loomed so large in Jewish thinking at the close of the intertestamental period. While certain minor differences can be found in the apocalyptic literature of the

later intertestamental period, apocalypticism generally displays three prevailing features: (1) for the time being God reigns *transcendently* above this evil world, where Satan is now allowed to exercise a rather substantial amount of authority; (2) Satan does not have complete control over the world, however, for God offers succor to the righteous to keep them from being overwhelmed by Satan's great power (1QS 3:24f.); and (3) the day is coming when the transcendent God will reassert His immediate control over the world, perhaps in a new heaven and earth (these features can be seen in 1QS 3:15–4:25; see II.A.1 above). Then righteousness will reign, and Satan and his angels will be separated from the new creation where righteousness rules, either to be tormented themselves in an eternal hell along with the wicked, or also to help mete out punishment to the wicked. "I look not for this generation, but for the one that is coming" (1 En. 1:2), stands as an appropriate expression of the mood of apocalyptical thinking.

C. Comparison with NT Usage. Although Jewish apocalypticism provides the natural explanation for the NT's greater interest in Satan (and the devil) than the OT's, not everything in Jewish apocalyptical views about Satan was carried over into the NT. For example, (1) whereas Mt. 25:41 indicates that the wicked will be punished in a hell apparently already prepared for the devil and his angels, CD 8:2 states that Satan himself will help in the punishment of the wicked: "[the apostates] shall be visited for destruction by the hand of Satan." Likewise, 1 En. 53:3 refers to the "angels of plague" preparing the "chains of Satan" for the punishment of all sinners. (2) Whereas the NT says nothing about Satan's motive in rebelling against God, Wisd. 2:23f. states, "God . . . made man in the image of his own eternity, but through the devil's envy [of man's having this image], death entered into the world." Life of Adam and Eve 12–16 elaborates on this motive and on Satan's role in the fall of humankind. When the angel Michael ordered the devil to worship the image of God in Adam and Eve, the devil answered, "I will not worship one inferior and subsequent to me" (14:3). Consequently God expelled the devil and his angels from heaven onto the earth. The devil explained to Adam, "And immediately we were made to grieve, since we had been deprived of so great glory. And we were pained to see you in such bliss of delights. So with deceit I assailed your wife and made you to be expelled through her from the joys of your bliss, as I have been expelled from my glory" (16:2f.).

But several elements of the NT's more developed picture of Satan appear already in the intertestamental literature. (1) According to Jub. 10:8 Satan rules over a kingdom of wicked angels (demons), as Jesus taught in Mt. 12:25f. (2) Satan's rule, always limited by God's sovereignty, extends to all the world. Martyrdom of Isaiah 2:4 says, "The angel of iniquity who rules the world is Beliar." This accords with Satan's claim (Mt. 4:8f.) that he has at least a derived authority over the kingdoms of the world. (3) Satan is a spiritual being according to Testament of Job 27:2, where he says to Job, "You are flesh, but I am a spirit." This accords with Eph. 2:2, which speaks of Satan as "the spirit that now works in the children of disobedience." Satan's working in people to energize them to do his will is found in Martyrdom of Isaiah 3:11, where Beliar is said to dwell in the heart of the evil king Manasseh and in the princes of Judah and Benjamin. Manasseh is also called a "follower of Beliar" (1:8), and this idea of certain people being under Satan's control also appears in Jn. 8:44 and 2 Tim. 2:26.

(4) As in Job 1–2 and Zec. 3:1, Beliar's role in Jub. 1:20 is one of accusing the righteous before God (cf. Martyrdom of Isaiah 5:2; 1 En. 40:7), and this idea is repeated in Rev. 12:10. (5) In intertestamental literature as well as the NT, Satan resorts to many wiles to lure people from God's ways. According to Apocalypse of Moses 17:1, when Satan first met Eve in the Garden of Eden he was masquerading as an angel singing God's praises. This idea recurs in 2 Cor. 11:14 (cf. vv. 13, 15), where Satan is said to appear as an angel of light. (6) Like 2 Cor. 11:3 and 1 Tim. 2:14, Life of Adam and Eve emphasizes Eve's role in the fall while also acknowledging Adam's guilt (8:2). In 33:1-3 Adam tells his sons that two angels had been appointed to guard Eve and himself in the garden. But when they left to worship God in heaven, "immediately the adversary, the devil, found opportunity while the angels were away and deceived your mother so that she ate of the illicit and forbidden tree. And she ate and gave to me."

(7) The intertestamental literature frequently affirms the final and lasting punishment of Satan. 1 En. 54:6, e.g., agrees with the statement in Mt. 25:41 that the devil and his angels will be punished in eternal fire: "Then Michael, Raphael, Gabriel, and Phanuel themselves shall seize [the armies of Azazel] on that great day of judgment and cast them into the furnace (of fire) that is burning that day, so that the Lord of Spirits may take vengeance on them on account of their oppressive deeds which (they performed) as messengers of Satan, leading astray those who dwell upon the earth."

III. In the NT.–A. Terminology. The name Satan is transliterated into the Greek of the NT thirty-four times. He is also called *diábolos* ("devil") thirty-six times in accordance with the practice of the LXX translators, who apparently chose this term because its root meaning is "accuse" (cf. Lk. 16:1, where *diabállō* denotes the accusation brought against the unjust steward). Other names for Satan in the NT include: "tempter" (Mt. 4:3; 1 Thess. 3:5), Beelzebul (e.g., Mt. 12:24), "the enemy" (Mt. 13:39), Belial (2 Cor. 6:15), "god of this world" (2 Cor. 4:4; cf. Jn. 12:31), "power of darkness" (Lk. 22:53), "prince of the power of the air" (Eph. 2:2) "adversary" (1 Pet. 5:8), "deceiver" (Rev. 12:9), "dragon" (e.g., 12:3), "the ancient serpent" (e.g., 20:2), "father of lies" and "murderer" (Jn. 8:44), "the accuser" (Rev. 12:10), Apollyon (9:11), and "the evil one" (e.g., 1 Jn. 2:13f.).

B. Satan's Kingdom. The NT enlarges upon the intertestamental literature's understanding of Satan as ruling over a kingdom of demons. Jesus pictures Satan as a heavily armed prince dwelling with his demonic subjects in a fortified palace (Mt. 12:25-29 par). Satan, along with his demons, exercises so much power over the nations that he is termed the "ruler of this world" (Jn. 12:31; 14:30; 16:11; cf. Rev. 12:9; 20:3, 7f.; also Lk. 4:5f.). It is striking that the terms in Rom. 13:1, 3 for the governmental rulers instituted by God for the good of society (Gk. *árchōn* and *exousía*) are used in Eph. 6:12 for the satanic powers against which the Christian must wage spiritual warfare. Gk. *árchōn* is also the word used in 1 Cor. 2:8 to represent the governmental powers responsible for Jesus' crucifixion. This may explain why Pergamum, whose government has persecuted the churches, is described as the place "where Satan dwells" (Rev. 2:12f.).

Satan rules in the hearts of all those who are not "born of God" (1 Jn. 3:8f.); they are called the "children of the devil" (v. 10; cf. Jn. 8:44). Prior to regeneration all were energized and motivated by the spirit of Satan (Eph. 2:2; cf. Acts 26:18). For the time being God has granted Satan a limited power over death, and Satan uses the fear of death to keep people in bondage to him (He. 2:14f.). He does this by contrasting the anxiety and despair associ-

ated with death with the immediate, albeit temporary, gratification that can be obtained by following his ways rather than God's.

C. Jesus' Triumph. By suffering and dying on the cross, Jesus assuaged God's great wrath against the sin of the human race. Consequently, those who submit to Jesus as Savior and Lord find themselves delivered from the satanic bondage under which they have lived because of the fear of death (He. 2:14f.). Jesus "disarmed the principalities and powers . . . triumphing over them in [His cross]" (Col. 2:15). Jesus' resurrection and ascension to God's right hand have placed Him and His people "far above all rule and authority and power and dominion, . . . and [God] has put all things under his feet" (Eph. 1:21f.). Jesus' complete triumph over Satan shows that death need no longer be feared as a prelude to misery and punishment for sin. By this triumph Jesus has effected a forgiveness of human sin and has laid the foundation stone for the gospel's unsurpassed good news, namely, that in Jesus God will fulfil all His "precious and very great promises" (2 Pet. 1:4; cf. 2 Cor. 1:20). Consequently, there is a vastly more powerful motivation for submitting one's future not to Satan but to Jesus. Jesus has guaranteed, e.g., God's great promise in Jer. 32:41 that He "will rejoice in doing [His people] good . . . with all [His] heart and with all [His] soul."

Thus Jesus, through His death and resurrection, has already won the decisive victory over Satan. But the battle still continues, for according to He. 1:13; 10:12f. Jesus, who is now seated at the Father's right hand, is waiting until His enemies shall be made His footstool. A total separation between good and evil will be made only at the close of redemptive history, when Satan and his demons will be cast into the lake of fire (Mt. 25:41; Rev. 20:10).

D. Satan's Objective. In the meantime Satan's goal is to keep or get people back under his rule. Satan employs all sorts of strategies (Eph. 6:11f.; 2 Cor. 2:10f.; 1 Tim. 3:6f.; 2 Tim. 2:26) to keep people out of Jesus' kingdom. He snatches the word of God's kingdom from the hearts of many before they grasp its excellence and submit to it (Mt. 13:19). He also blinds the minds of unbelievers to "the light of the gospel of the glory of Christ" (2 Cor. 4:4). Satan's attacks against God's people become increasingly intense as he realizes how quickly his time is running out (Rev. 12:12). Just before the establishment of Jesus' kingdom, Satan will stage his most concerted and universal attack upon God's people through the antichrist, who will command the worship of humanity by performing miracles and slaying all who refuse to worship him (Mt. 24:15-28 par.; 2 Thess. 2:3-12; Rev. 13). God's people will survive this time only because the antichrist's reign will be cut short by the second coming of Christ (Mt. 24:22; Rev. 19:20f.).

Before the appearance of the antichrist Satan works against God's people in a variety of ways. He causes persecution (Rev. 2:10). He places counterfeit Christians in the churches alongside the genuine people of God (Mt. 13:24-30), and these counterfeits provide occasions for God's people to stumble, for "even Satan disguises himself as an angel of light" (2 Cor. 11:14). Satan also roams among God's people seeking to destroy those who have become vulnerable through not watching and praying for protection from temptation (Mt. 26:41 par.; cf. 6:13; 1 Pet. 5:8).

E. The Christian's Counterstrategies. To prevent these satanic strategies from succeeding, Christians need to employ several counterstrategies. (1) They must keep themselves purposefully occupied, since idleness leads to sin and the devil's accusations (1 Tim. 5:13-15). To counter Satan's role as accuser of God's people, (2) church discipline must never be so harsh as to imply the impossibility of forgiveness (2 Cor. 2:6-11), and (3) only persons with a good reputation should be appointed to church office (1 Tim. 3:2f., 7). (4) To avoid temptation through lack of self-control, husbands and wives should not abstain too long from conjugal relations (1 Cor. 7:5). (5) New Christians, no matter how promising their gifts, should not be given responsible positions in the church, since Satan works to incite the inbred human tendency to self-exaltation (1 Tim. 3:6).

The essence of Satan's strategy, however, is to weaken a Christian's faith in such precious and great promises as, e.g., Rom. 8:28 ("in everything God works for good with those who love him"), by means of the lie that the tribulations and misfortunes that befall Christians can deprive them of any hope for a bright future (1 Thess. 3:2-5). Satan's game plan is to destroy the Christian's confidence that God's plans are "for welfare and not for evil, to give you a future and a hope" (Jer. 29:11). So to be victorious against Satan, Christians must understand the necessity of being armed with "the shield of faith" i.e., of having an arsenal of promises from God's word (cf. Rom. 10:17) ready for use as a shield to quench all the fiery darts of Satan (Eph. 6:16). According to 1 Pet. 5:9 Christians must resist the devil steadfastly in the *faith*. Since the promises of Scripture are the proper object of faith (Rom. 4:20), Christians must use, against each temptation to become discouraged, at least one of God's "many and very great promises" (2 Pet. 1:4). If tempted, e.g., to be covetous and despondent about not having enough of this world's goods to be financially secure, the Christian must "fight the good fight of the faith" (1 Tim. 6:12) by affirming that, since God will never leave us nor forsake us (He. 13:5f.), covetousness is totally contrary to childlike faith in God. By meditating on this and similar promises of "the faithful God" (Dt. 7:9; cf. He. 10:23; Tit. 1:2) until filled by "all joy and peace in believing" (Rom. 15:13), Christians perform the essential task of holding their "first confidence firm unto the end" (He. 3:14).

An evil heart of unbelief is the one thing that a Christian must fear above all else (He. 3:12). Through trust in Christ's blood and willingness to obey Him even unto death, Christians overcome the devil (Rev. 12:11) and he flees from them (Jas. 4:7).

The Christian also receives great comfort from knowing that, powerful though Satan is, he can do nothing apart from God's permission. As with Job, God sometimes permits Satan to work evil against His people so that they might learn to trust Him more fully. God allowed a messenger of Satan to buffet Paul so that Paul, in weakness rather than in proud self-sufficiency, would learn that Christ's power is made perfect in weakness (2 Cor. 12:7-10). According to Lk. 22:31-34 Peter's threefold denial of Jesus was instigated by Satan, who had requested to "sift [Peter] like wheat." Satan's request was granted, but Jesus prayed for Peter that his faith would not fail. After deep remorse, Peter was restored to full assurance of his standing with Christ; and, as Jesus foretold (Lk. 22:32), this example has strengthened Christians ever since, whenever Satan has tried by his accusations to convince them that their sins preclude any hope of restoration.

In short, to be victorious in fighting the good fight of the faith (1 Tim. 6:12; 2 Tim. 4:7) the Christian must take pains to combat any disquietude of heart that signals that unbelief is gaining the ascendancy (cf. Rom. 15:13); one quells such unbelief by claiming the appropriate promise from God. Not only out of concern for their own spiritual

welfare but also out of responsibility for others' souls, Christians must seek to strengthen one another's hand in God by recalling the "precious and very great promises of God" (2 Pet. 1:4).

D. P. FULLER

SATAN, DEPTHS OF (Rev. 2:24, AV); "deep secrets of Satan." *See* DEEP THINGS.

SATAN, SYNAGOGUE OF [Gk. *synagōgḗ toú sataná*] (Rev. 2:9; 3:9); NEB SATAN'S SYNAGOGUE. A hostile reference to Jewish persecutors of the churches in Smyrna and Philadelphia. Similar expressions occur in the LXX of Nu. 14:27, 35 ("evil congregation," Gk. *tḗn synagōgḗn tḗn ponērán*) and Ps. 22:16 (LXX 21:17; "congregation of evil doers," Gk. *synagōgḗ ponēreuoménōn*); 1QH 2:22 ("congregation of Belial," Heb. *ʿēḏâ bᵉlîyaʿal*); and Sir. 16:6 ("congregation of sinners," Gk. *synagōgḗ hamartōlôn*).

In the OT the Jews were called the "synagogue of the Lord" (RSV "assembly of the Lord," e.g., Nu. 16:3; 20:4); but because of their persecution of Christians in Asia Minor at both Smyrna and Philadelphia, as well as their refusal to own Jesus as their Messiah, John describes them as the synagogue of Satan rather than of the Lord. Cf. Paul's definition of a true Jew as one who is a Jew *inwardly* and not just outwardly (Rom. 2:28f.), and his belief that the Church has now become the true Israel by faith in Christ.

Revelation 2:9; 3:9 may have a play on the Hebrew term *śāṭān*, "accuser," "opponent," "adversary" — all of which characterized the Jewish opponents of the Christians. M. Polyc. 13:1 tells of a later instance of Jews persecuting Christians in Smyrna, but the problem is also mentioned frequently in the NT (e.g., Acts 13:50; 14:2, 5, 19; 17:5; 1 Thess. 2:14-16; cf. also Jn. 8:35-39).

In Rev. 3:9 John may be reversing an old promise that the Gentiles would pay homage to the Jews in the Kingdom of God (Isa. 49:23; 60:14). Here the Jews play the role of the heathen and bow to the Christians, who are now the true inheritors of God's promises and blessings. This passage does not refer, as some have supposed, to Jewish repentance of sins or conversion to Christianity, but rather to their judgment for persecuting Christians.

L. M. MCDONALD

SATHRABUZANES sath-rə-bū'zə-nēz [Gk. *Sathrabouzanēs*] (1 Esd. 6:3, 7, 27; 7:1). *See* SHETHAR-BOZENAI.

SATISFACTION [Gk. *makarismós*] (Gal. 4:15); AV BLESSSING; NEB HAPPY; [*euárestos eimí*] ("give satisfaction," Tit. 2:9); AV PLEASE WELL; NEB COMPLY WITH DEMANDS; **SATISFY**; **(BE) SATISFIED** [Heb. qal, niphal, and hiphil of *śāḇaʿ* (e.g., Lev. 26:26; Ps. 17:15; 22:26 [MT 27]; 104:13; Eccl. 5:10 [MT 9]), *śoḇʿâ* (Isa. 55:2; Ezk. 16:28), *śāḇē(a)ʿ* (e.g., Dt. 33:23), piel and niphal of *mālē'* (Job 38:39; Prov. 6:30; Eccl. 6:7), hiphil of *rāwâ* (Isa. 43:24; Jer. 31:25), hiphil of *nāḥam* (Ezk. 5:13), hiphil of *nû(a)ḥ* (Ezk. 16:42; 21:17 [MT 22]; 24:13; *rêq*–'be empty' ("not satisfied," Isa. 29:8); Gk. *peíthō* (Mt. 28:14; pass., Rom. 15:14), *tó hikanón poiéō*–'make satisfactory' (Mk. 15:15), *empímplēmi*–'fill full' (Acts 14:17), *aréskō* (2 Tim. 2:4), *arkéō* (Jn. 14:8), *chortázō* (Mt. 5:6; 14:20; 15:37; Mk. 6:42; 8:8; Lk. 6:21; 9:17)]; AV also SATIATE, FILL, SUFFICE, MAKE/CAUSE TO REST, etc.; NEB also GLUT, EMPTY, etc.

The biblical terms rendered "satisfy" or "be satisfied" usually have to do with eating. Gk. *chortázō*, e.g., occurs in Gospel accounts of the feeding of a multitude and in the promise of the Beatitudes that the hungry shall be filled (cf. Matthew's figurative reference to those who "hunger and thirst for righteousness"). Heb. *śāḇaʿ* (with cognates *śoḇʿâ* and *śāḇē[a]ʿ*) is the normal term for satisfying physical hunger, while *rāwâ* is the usual word for slaking thirst. Heb. *mālē'* and Gk. *empimpláō* simply mean to "fill" something.

The use of "satisfy" for the hiphil of *nû(a)ḥ* in Ezekiel is somewhat misleading. The Hebrew verb means "cause (something) to come to rest" (cf. AV). Used with "fury" only in Ezk. 5:13; 16:42; 21:17 (MT 22); 24:13, it appears from the context to mean that God intends both to fulfil and to exhaust (NEB usually "abate") His anger, so that it comes to an end. The context especially of 16:42 implies a strong sense of grace not conveyed by "satisfy," i.e., that the time for anger will pass (cf. also W. Zimmerli, *Ezekiel*, I [*Hermeneia*, 1979], pp. 152, 347). And in 5:13 the hiphil of *nāḥam* (RSV "satisfy"; AV "be accomplished"; NEB "be spent") occurs in the same verse with the *nû(a)ḥ* construction, which the RSV here translates "vent my fury" — an even worse translation. Certainly all of ch. 5 speaks of terrible acts of judgment that God will pour out on Judah, but *nāḥam* could as easily be translated "I will console myself" or "I will allow myself to be sorry." This verb is in fact missing from the LXX, and it may be a postexilic addition expressing the sense that, judgment being finished, God will now be kind. In any case these verses should not be understood to mean that God enjoys punishing His people.

The RSV translation of Gal. 4:15 is also rather strange. This verse really asks the question, "What happened to your blessing?" (cf. AV). Paul was appealing not to the Galatians' human self-satisfaction, but to the gifts and fruits of the Spirit that they had already experienced apart from the Torah.

Both Mt. 28:14 and Rom. 15:4 contain Gk. *peíthō*, which generally means "persuade" (so AV). In these verses the best translation might be "convince." The Jewish authorities promised to "convince" Pilate, so that the tomb guards would not be punished. And Paul was more than "satisfied" with the Galatians; he was "convinced" (cf. NEB "have no doubt") or "sure" (the usual translation for this verb in the passive; cf. Rom. 8:38) that they were filled with goodness and knowledge.

The constructions with Gk. *aréskō* (lit. "please"; 2 Tim. 2:4) and the related adjective *euárestos* (Tit. 2:9) have to do with "satisfying" one's superior or overlord by doing what is pleasing (cf. NEB "be wholly at the disposal of," "comply with the demands of"). The verb *arkéō* (Jn. 14:8) and the adjective *hikanós* (Mk. 15:15) imply objective sufficiency rather than subjective satisfaction.

SATRAP sā'trap [Heb. *'ahašdarpān* (Ezr. 8:36; Est. 3:12; 8:9; 9:3); Aram. *'ahašdarpan* (Dnl. 3:2f., 27; 6:1-4, 6f. [MT 2-5, 7f.]); Old Pers. *xšaśapāvā*; Akk. *aḫšadrapannu*]; AV LIEUTENANT, PRINCE. An official who ruled over a major division of the Persian empire.

Herodotus (iii.89-94) stated that Darius created twenty satrapies (the area ruled by a satrap), but he mentioned by name twenty-one, twenty-three, and twenty-nine at various times. Dnl. 6:1 (MT 2) speaks of 120 satraps, but this probably refers to governors of provinces (cf. Est. 1:1). The satrap, whose title means "protector of the kingdom," was usually chosen from the Persian nobility, often from the royal family. Xerxes served twelve years as satrap of Babylon before he became king of Persia. The satrap was virtually a king; he had his own court and absolute civil authority, and he answered directly to the "great king." To ensure the satrap's loyalty to the king, other officials who answered directly to the king were appointed to work alongside the satrap: a secretary (who handled all official correspondence), a chief financial officer (who collected taxes), and a commander of the armed forces. In addition, inspectors known as "the eyes and ears of the king" might appear at any time to check on conditions in the provinces. Judea, a part of Syro-Palestine, was in "Beyond the River," referred to as the "Fifth Satrapy" by Herodotus.

SATYR sā'tər, sat'ər [Heb. *śā'îr*] (Lev. 17:7; 2 Ch. 11:15; Isa. 13:21; 34:14); AV also DEVIL; NEB DEMON, HE-GOAT. A forest deity with goat-like characteristics in classical mythology.

The basic meaning of Heb. *śā'îr* is "hairy one" (cf. the description of Esau in Gen. 27:11), and it refers most frequently to the he-goat (e.g., Lev. 4:23f.; 9:3, 15; 2 Ch. 29:23; Ezk. 43:22, 25; 45:23). Nevertheless, the four passages in which the RSV has rendered it "satyr" are problematic, as shown by the variety of translations in the LXX (*tá mataía*, "vain things," in Lev. 17:7 and 2 Ch. 11:15; *daimónia*, "demons," in Isa. 13:21 and 34:14) and in the English versions (see AV, NEB; cf. also NIV "goat idols" in Lev. 17:7 and 2 Ch. 11:15, "wild goats" in Isa. 13:21 and 34:14).

It is apparent from the contexts of Lev. 17:7 and 2 Ch. 11:15 that these passages refer to goat-like cult objects, perhaps demons in the form of he-goats. Lev. 17 strictly prohibits sacrificing outside the tabernacle complex, where one could secretly sacrifice to these goat deities (v. 7). Instead the sacrifice was to be handed over to the priests at the tent of meeting, who would ensure that the rite was performed according to the law (vv. 1-6). The Chronicler used the term in the context of describing the migration of priests and Levites from the northern kingdom during the reign of Jeroboam (2 Ch. 11:13-17). Jeroboam is reported to have appointed priests not only for the high places and his calf-idols at Dan and Bethel, but also for the *śe'îrîm* (v. 15).

In Isa. 13:21; 34:14 the term is better understood simply as referring to the wild goat. Isa. 13:1-22 is a prophecy of destruction against Babylon. When "the day of the Lord" comes, Babylon will suffer cataclysmic annihilation. As a result, civilization will disappear from the site of Babylon, and only wild beasts like the jackal, the owl, and the hyena will dwell there (vv. 21f.). Among these animals the prophet mentions *śe'îrîm*, "wild goats." Similarly, 34:5-17 is a description of divine judgment on Edom. The prophet depicts the land's utter desolation by referring to its occupation by wild animals, including the *śā'îr*, "wild goat" (v. 14). Contrary to the LXX, there is little evidence for a reference to mythical figures in either of these contexts. (For another view, see O. Kaiser, *Isaiah 13–39* [Eng. tr., *OTL*, 1974], pp. 20f., 358f.; *see also* DEMONOLOGY II.) R. L. PRATT, JR.

SAUL sôl [Heb. *šā'ûl*; Gk. *Saoul*].

1. First king of Israel.

I. Early History
- A. Name
- B. Genealogy
- C. Home
- D. Situation Before His Accession
- E. Election as King

II. Reign
- A. Early Successes
- B. Pursuit of David
- C. Downfall

III. Assessment

I. Early History.–*A. Name.* The name Saul is usually explained as the passive participle of the verb "ask" and so as meaning "asked of Yahweh." But the gentilic adjective *šā'ûlî* (Nu. 16:13) may indicate an intensive connotation, "the one asking importunately," or perhaps "the one asking insistently," "the beggar" (cf. *IP*, p. 136).

B. Genealogy. Saul was the son of Kish, a Benjaminite. His genealogy is given in 1 S. 9:1f.; 1 Ch. 8:33; 9:39. In Samuel his grandfather is Abiel but in Chronicles it is Ner, who appears as his paternal uncle in 1 S. 14:50f. Perhaps the simplest solution to this difficulty is to suppose that the first mention of Kish in 1 Ch. 9:39 is a scribal error for Abner; the mistake was then incorporated into the earlier Chronicles passage. But *see* KISH 1.

C. Home. Saul's home was at GIBEAH 3 (1 S. 10:26), which is also called Gabath Saul or Gibeah of Saul (i.e., "Saul's hill"; 11:4), and Gibeah of Benjamin (13:2). It is probably to be distinguished from Gibeath-elohim, "hill of God" (10:5). It is usually identified with Tell el-Fûl, a small but conspicuous tell 5 km. (3 mi.) N of Jerusalem, excavated in 1922 by W. F. Albright. The simplicity of the finds is in harmony with the humble early life of Saul and justifies his self-depreciation upon being chosen king (1 S. 9:21).

D. Situation Before His Accession. During the days of the judges Israel had been a loosely knit confederacy of tribes that had never needed to unite against a common foe. Nomads like the Midianites had made occasional inroads, and Canaanite city-states had occasionally sought to subjugate their Israelite neighbors, but local figures, the "judges," had been able to deal with such crises.

The Philistines were a different problem, however. They had a monopoly over iron and hence superior weapons, and they were much more cohesive than the Canaanite states. Thus they could master the Negeb and the plain of Jezreel as well as the coastal plain, and they were virtually the overlords of the Israelites in the hill country too. A disastrous battle at Aphek (1 S. 4) left the Philistines in clear command; the Israelites lost even the ark of the covenant.

The only Israelite champion was Samuel, but he was elderly and no warrior, while his sons were corrupt and disliked. Israel badly needed a warrior leader who would unite the tribes against their powerful enemy. Saul's qualifications were several. He was exceptionally tall and hand-

some (9:2); like the judges he displayed "charismatic" qualities — i.e., the spirit of Yahweh took control of him from time to time (11:6f.); he also had occasional ecstatic religious experiences, like the roaming bands of prophets (10:10f.). It may be, too, that his being a Benjaminite allayed intertribal jealousies, since Benjamin was a small tribe. Ephraim would not readily have supported a leader from Judah, nor Judah an Ephraimite king.

E. Election as King. There are apparently three strands of narrative in the account of Saul's becoming king. Saul is first mentioned in 1 S. 9:1, and this strand (9:1–10:16) portrays Samuel as having anointed him king, apparently at Ramah (cf. 8:4), by divine command. Another strand (ch. 8; 10:17-27; ch. 12) states that Samuel was approached by the elders of Israel, who demanded a king without putting forward any candidate; Samuel objected strongly to such an idea, but capitulated, and presided over Saul's election at Mizpah. The third strand (interwoven with the first), in ch. 11, shows that Saul was made king by popular acclaim (though in Samuel's presence) at Gilgal, after his victory over the Ammonites in Transjordan.

It has often been claimed that the second strand — from a source clearly hostile to Saul and the monarchy — is late and unhistorical. But as Bright observed (*BHI*, 3rd ed., p. 187) the idea of having their own king was novel for Israel, and no doubt such a drastic change did not meet with immediate favor in every quarter. Samuel himself later regretted Saul's rule bitterly, so he may well have had misgivings from the beginning (cf. 8:4-22), viewing the establishment of a human monarchy as a breach with the theocratic concept of the Mosaic covenant. Cf. *CD*, II/2, 367-393.

The basic historicity of the three accounts need not be questioned. Some elders clamored for a king, and Samuel demurred on religious grounds. He realized, however (by divine revelation), that the situation demanded strong leadership, so he put aside his doubts and looked for a likely man. He selected Saul and anointed him privately before holding a public ceremony at Mizpah (David was similarly anointed both privately and then publicly). But Saul's only qualifications at that time seem to have been his physique and his ecstatic potentialities; hence some were cynical about his abilities (cf. 1 S. 10:27). Saul, however, at once took strong action in Transjordan and defeated the Ammonites; this victory brought him universal acclaim, and a further ceremony (of ratification) was held at Gilgal.

II. Reign.–A. Early Successes. Saul's first military exploit was the defeat of the Ammonites. They had taken advantage of Israel's weakness under Philistine domination and, led by Nahash, besieged JABESH-GILEAD in Transjordan. The citizens appealed for help, and Saul mustered a considerable army and brought speedy and effective aid. He then prepared to face the Philistines. He formed an army of three thousand men (1 S. 13:2) under the command of himself and his son JONATHAN. (Later in his reign his kinsman Abner became commander-in-chief [14:50f.].) The Philistines had the advantage of iron weapons; it was they, in fact, who had introduced iron into Palestine from Crete. The Israelites knew only bronze and had even been deprived of weapons of the softer metals. They seem to have armed themselves — with the exception of the king and his son — with mattocks and plowshares (13:19-22).

The first major encounter was the attack upon the Philistine post at Michmash (1 S. 13–14). The text of the narrative is uncertain, but the following outline is clear. On hearing that the Hebrews had revolted (13:3, LXX), the Philistines gathered in great force at Michmash. Saul's frightened troops deserted (13:6f.), leaving him with only six hundred men (14:2). In spite of this, Jonathan precipitated hostilities by a daring attack upon one of the outposts (14:6-14). It was so successful that the whole Philistine army panicked (v. 15); Saul's attack and the desertion of their Hebrew slaves (v. 21) completed their discomfiture. Saul followed up his victory with predatory excursions on every side (v. 47).

Saul's next expedition was against the Amalekites under Agag, who were likewise completely defeated. The friendly Kenites, who lived among the Amalekites, were warned to withdraw out of danger (15:6). Then every Amalekite was slaughtered, even the women and children (v. 8), for the whole people was put under *ḥērem*, a sacred oath to destroy them utterly (v. 3). Their chief alone was temporarily spared.

In these early events of his reign Saul twice offended the religious perspective voiced by Samuel. First, he took it upon himself to offer sacrifice (in Samuel's absence) before the battle of Michmash (1 S. 13:8-14). Samuel, who had not relished losing the political leadership, could not tolerate this usurpation of spiritual leadership. Second, Saul breached the *ḥērem* by sparing Agag and some choice booty taken from the Amalekites (15:2f., 8f.); Achan had perished for a similar deed (Josh. 7:10-26). Saul and his house were deposed, although he held the kingship until his death (15:22-31). Samuel pronounced sentence sternly and refused to have any further dealings with the king (v. 35).

B. Pursuit of David. Some time later Samuel designated David as Saul's successor, anointing him privately at Bethlehem (16:1-13). David was shortly afterward introduced to Saul and became a court minstrel (vv. 14-22). But according to ch. 17, which seems to be another account, it was David's encounter with Goliath that led to his introduction to Saul. The account in ch. 16, however, is undoubtedly correct; LXX B omits 17:55-58, thus removing the apparent inconsistency. (For a fuller discussion of these duplicate narratives, *see* DAVID I.E.)

Whether or not Saul discovered that David had been anointed by Samuel, he soon saw in David a rival and an inevitable successor, and — as was only human — he felt envious of David. His dislike of David had two motives. The first was jealousy, because the women preferred David's military genius to his own (1 S. 18:7f.). The second was his natural objection to seeing his son Jonathan supplanted in his rights to the throne, an objection that was aggravated by that son's devotion to his own rival (20:30f.).

Saul could not believe that David would remain loyal to him (1 S. 24:9); surely at the first opportunity David would hurl him from the throne and exterminate his whole house. In these circumstances Saul's primary interest was to rid himself of this threat. Chs. 18–27 tell of Saul's relentless efforts to kill David. He first attempted to do so (if one omits, with LXX 18:8b-11) by offering David his daughter Michal's hand in marriage if he would kill a hundred Philistines — hoping that the Philistines would kill David (18:20-29). Next he tried to have David assassinated by Jonathan or one of his servants (19:1). Later he threw his own spear at David (vv. 9f.). When David was compelled to flee, the personal hostility turned to civil war. Saul slaughtered those who sheltered the fugitive — even priests (22:16-19).

David fled to the wilderness of Judah and gathered about him a band of about four hundred fighting men (22:1f.). From one spot to another Saul hunted him, as David said, like a partridge (26:20). On two occasions David had opportunity to kill Saul but spared his life: at En-gedi (ch. 24) and in the wilderness of Ziph (ch. 26).

Some have maintained that these are duplicate accounts of the same event, but this is unlikely, since the two accounts have only minor points of resemblance.

Obviously Saul's divided energies could not hold out long. Obsessed with putting down the imaginary rebellion within Israel, he could not at the same time keep at bay the foreign foe. In one instance, he had no sooner trapped David than he was called away by a Philistine raid (23:26-28). But after David had twice spared his life and had finally taken refuge with Achish of Gath (ch. 27), Saul seemed to realize at last that the Philistines were the real enemy, and he threw his whole strength into a desperate effort to break their stranglehold.

C. Downfall. Saul himself saw that his situation was critical. Fearing the impending battle, he sought occult advice. Because he could no longer use the official means of divination (1 S. 28:6), he resorted to consulting a medium, one of a class that he had personally suppressed (v. 3). The result of the séance confirmed his worst fears and filled his soul with despair (vv. 7-19).

It says much for Saul's courage that, hopeless as he was, he nevertheless went out to battle the enemy. The Philistines had gathered in great force at Shunem (28:4), and Saul drew up his army on the opposing hill of Gilboa. The result was what had been foreseen: the Israelites were completely defeated, and Saul and three of his sons were slain. There are two differing accounts of Saul's death. According to 1 S. 31:4 Saul committed suicide, but in 2 S. 1:5-12 an Amalekite claims to have despatched the king. These accounts are not necessarily contradictory. The Amalekite undoubtedly hoped for a reward from David and may have fabricated his account of the incident.

The armour of Saul and his sons was placed in the temple of Ashtaroth and their bodies hung on the wall of Beth-shean, but Saul's head was set in the temple of Dagon (1 Ch. 10:10). The citizens of Jabesh-gilead, out of ancient gratitude, rescued the bodies and in un-Semitic fashion burned them and buried the bones (1 Ch. 10; cf. 1 S. 31). (*See* BETH-SHEAN II). Although three of Saul's sons, including Jonathan, perished in the battle (1 S. 31:2), his line did not die out immediately. One son, Eshbaal (also called Ishvi and ISH-BOSHETH),was David's rival for two years. Jonathan left a long line of descendants (1 Ch. 8:34-40), the best-known of which was his son Merib-baal (Mephibosheth).

III. Assessment.–Saul's life and character are treated in summary fashion by the Chronicler (1 Ch. 10:13f.): "So Saul died for his unfaithfulness; he was unfaithful to the Lord in that he did not keep the command of the Lord, and also consulted a medium, seeking guidance, and did not seek guidance from the Lord." This statement pinpoints Saul's lack of interest in the cultus. Once he had been renounced by Samuel his interest in religious matters was confined to outlawing mediums and necromancers (1 S. 28:3). The ark itself lay totally neglected until David's reign. Worse still, in his bitter hatred of David Saul wantonly exterminated the priests at Nob who had sheltered the fugitive (22:18f.). Small wonder, then, that the deeply religious writer of Chronicles totally disapproved of Saul. Cf. *CD,* IV/1, 437-445.

Saul's worst feature was undoubtedly his uncontrollable jealousy of David, which drove that capable soldier into the Philistines' camp. It was foolish for Saul thus to divide his own forces. But apparently he was not altogether rational in his later years; his early psychic potentialities for ecstatic prophecy and action turned into melancholia, if not paroxysmal mania (cf. 1 S. 16:14-16), which music alone could alleviate. (*See also* DISEASE III.D.)

On the other hand, Saul was undoubtedly an able and courageous soldier and an inspiring leader in battle. It is admirable that he fought on to the last, although openly disowned by Samuel (1 S. 15:28f.) and believing himself cast off by Yahweh. Moreover, that he retained not only his sons but also enough fighting men to engage a large army of Philistines shows that there must have been something in him to excite confidence and loyalty. David, the man who perhaps knew Saul best, eulogized his honorable and noble qualities, chief among them his prowess in war and generosity in peace. The verses of this elegy are among the most obviously authentic in the Bible (2 S. 1:19-27).

Little is recorded of Saul's administrative measures. He made no attempt to unite the tribes, except in battle. His only officer seems to have been Abner, his commander-in-chief. In this respect his reign is a complete contrast to that of David. He may be credited for completely foregoing the court luxury exhibited by his two immediate successors. His fortress at Gibeah remained his capital, and there he lived a life far removed from that of an oriental despot.

The only information about the length of Saul's reign occurs in 1 S. 13:1; unfortunately, two figures have fallen out, as the RSV makes clear. A later LXX text states that he was thirty years old at his accession. He may have reigned twenty-two or even thirty-two years. David succeeded him *ca.* 1000 B.C.

McKenzie; 1975), pp. 75-100; *CD,* II/2. 367-393; IV/1, 437-445; D. M. Gunn, *Fate of King Saul (JSOT Supp.,* 14, 1980); comms. on 1 Samuel by R. Klein (*Word,* 1983); P. K. McCarter (*AB,* 1980); H. Hertzberg (Eng. tr., *OTL,* 1964); *KD.*

2. Saul of Tarsus. *See* PAUL THE APOSTLE.

T. H. WEIR
D. F. PAYNE

SAVARAN sav'ə-ran (1 Macc. 6:43, AV). *See* AVARAN.

SAVE. *See* SALVATION.

SAVIAS sə-vī'əs [Gk. *Saouia*] (1 Esd. 8:2, AV). An ancestor of Ezra mentioned in LXX A. The name is omitted in the B text, which the RSV follows at this point.

SAVIOR. *See* SALVATION.

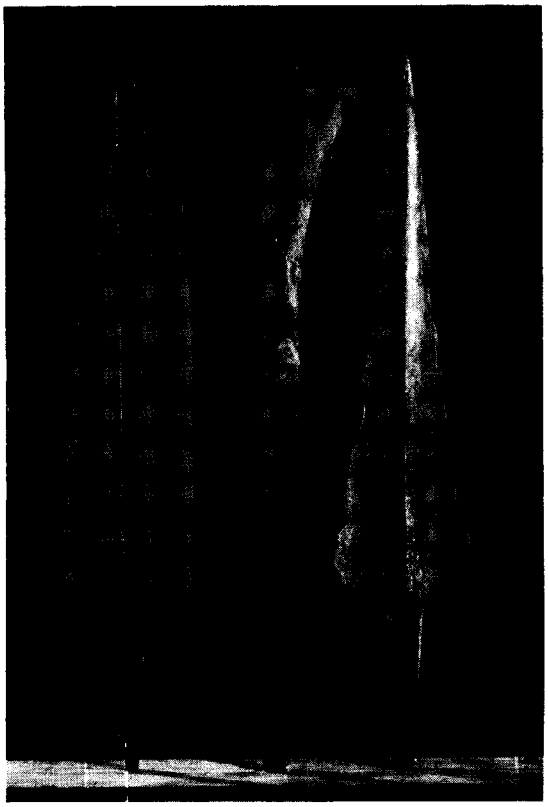
SAVOR; SAVORY. *See* ODOR:, FRAGRANCE; TASTE; SMELL.

SAW [Heb. polal part. of *gārar*] (1 K. 7:9); NEB TRIM; [*mᵉgērâ*] (2 S. 12:31; 1 K. 7:9; 1 Ch. 20:3); [*maśśôr*] (Isa. 10:15); [Gk. *prízō*] (He. 11:37). A long-toothed tool used for cutting.

The Hebrew verb *gārar* is translated in a variety of ways ("drag," Hab. 1:15; "chew," Lev. 11:7; "sweep," Prov. 21:7), but in 1 K. 7:9 it refers to the use of tools for cutting stone in the construction of Solomon's temple. The noun *mᵉgērâ* is formed from *gārar.* Freshly quarried limestone is soft enough to cut with saws; with exposure to the weather the stone hardens. A powder such as emery was probably used as an abrasive under the cutting edge of the saw. Whereas David had used slave laborers only from conquered peoples to perform this heavy work (2 S. 12:13 par. 1 Ch. 20:3), Solomon also forced Israelites to perform this work in the building of the temple (cf. 1 K. 5:13-17).

Saws were also used for cutting wood. Heb. *maśśôr* occurs only in Isa. 10:15. It is usually translated "saw," but the context simply indicates a tool of some kind.

Egyptian paintings show saws consisting of a metal



An ancient copper saw (left, with other tools) that originally fitted into a handle. At the bottom (below the crack) is an incised cow's head and a star in pointillé (Early Bronze Age I or II) (Collection Israel Dept. of Antiquities, photo Israel Museum/D. Harris)

blade (bronze in the early periods and iron later) attached to a wooden handle by thongs or by insertion. Flint saws have been found from the Iron Age.

On He. 11:37 *see* SAWING IN TWO. L. G. HERR

SAWING IN TWO [Gk. *prízō*]; AV SAW ASUNDER. Mentioned by the author of the Epistle to the Hebrews (11:37) as a method by which some heroes of the faith had been put to death. According to Jewish tradition (e.g., Asc. Isa. 5:1-14; mentioned also in the pseudepigraphal Lives of the Prophets) the prophet Isaiah was martyred by being sawn in two with a wooden saw during the reign of Manasseh.

SAYINGS, UNWRITTEN. *See* AGRAPHA.

SCAB [Heb. *yallepeṯ*; LXX *lichḗn*; Vulg. *impetigo*] (Lev. 21:20; 22:22); NEB ERUPTION; [piel of *śāpaḥ*] ("smite with a scab, ' Isa. 3:17); NEB BALD. An encrusted, protective patch that forms on raw flesh or on a sore when its secretion has ended. It may be local in nature, or more generalized in the case of an infection. This distinction is made in Lev. 13:2, 6-8, where the more virulent eruptions render the sufferer ceremonially unclean. The AV "scab" here and in 14:56 is better rendered "eruption" (so RSV).

The etymology of Heb. *yallepeṯ* is as obscure as the ailment itself. The reference is probably to some irritant, itching skin disease of the *tinea* group. Better known as ringworm, a parasitic fungous infection of the skin, the disease can attack various parts of the body, although it commonly occurs on the head and neck. *Tinea kerion* is an irritating, inflammatory ringworm of the head and beard accompanied by a pustular discharge, while *t. circinata* usually erupts on non-hairy parts of the body. *T. favosa*, or honeycombed ringworm, occurs in children as yellow encrustations around hair follicles. The obscure verb *śāpaḥ* ("become scabby") Isa. 3:17 probably alluded to *t. favosa*, although it could possibly have described a disease of the hair such as *alopecia areata*, which results in patches of baldness (cf. NEB). *See also* DISEASE III.I.

On the AV's use of "scab" in Dt. 28:27, *see* SCURVY.

R. K. H.

SCABBARD. *See* SHEATH; WEAPONS OF WAR.

SCAFFOLD. *See* PLATFORM.

SCALE. The verb, meaning to climb up a wall by means of a ladder, is used figuratively by the RSV in two passages (Prov. 21:22; Joel 2:7; AV also "climb"; NEB "climb," "mount") as a translation of Heb. *ʿālâ* (lit. "go up"). *See* SIEGE. For uses of the noun, *see* SCALES.

SCALE ARMOR [Heb. *dᵉḇāqîm* < *dāḇaq*–'cleave'] (1 K. 22:34; 2 Ch. 18:33); AV JOINTS; NEB PLATES OF THE ARMOUR. Part of King Ahab's battle attire in his fatal battle against the king of Syria. According to the RSV an arrow struck Ahab "between the scale armor and the breastplate" (NEB, similarly, "where the breastplate joins the plates of the armour"). The AV has "between the joints of the harness." Other OT uses of *dᵉḇāqîm*/*dāḇaq* can be found to support the translations of both the AV (cf. Isa. 41:7, RSV "soldering") and the RSV or NEB (cf. Job 41:17 [MT 9], which uses the verb *dāḇaq* to describe the scales of Leviathan). *See* WEAPONS OF WAR.

J. W. D. H.

SCALES. (1) [Heb. *qaśqeśeṯ*–'fish scales' (Lev. 11:9-12; Dt. 14:9f.; Ezk. 29:4); Gk. *lépis* (Acts 9:18), *thṓrax*–'breastplate,' 'chest' (Rev. 9:9)]; AV, NEB, also BREAST-PLATE (Rev. 9:9). Small, thin plates forming an external body covering. Overlapping scales and a dorsal fin were the distinguishing marks of the fish that could be eaten by the Israelites (Lev. 11:9-12; Dt. 14:9f.). In Ezk. 29:4 Pharaoh is depicted as a monster of the Nile whose "fish" (i.e., the Egyptian people) will stick to his "scales" when he is caught. The same Hebrew term, *qaśqeśeṯ*, is used figuratively for a "coat of mail" in 1 S. 17:5. The locusts depicted in Rev. 9:9 are protected by a scaly exterior as strong and hard as a coat of mail. In Job 41:15 (MT 7) the AV uses "scales" to render Heb. *ᵃ*ṗîqê māginnîm* (lit. "channels of shields"; RSV "rows of shields"; cf. NEB), a phrase describing the horny scales imbedded in the skin of Leviathan.

Greek *lépis* (lit. "fish scales"; used in LXX of Lev. 11:9-12; Dt. 14:9f.) is used figuratively in Acts 9:18 to describe Paul's recovery of sight (cf. Bauer, rev., pp. 472f.).

An Egyptian coat of mail made of scale armor with a high leather collar intended to protect the neck (facsimile, wall painting from the tomb of Kenamun at Thebes, 1436-1411 B.C.) (The Metropolitan Museum of Art)

The verb *lepízō* is used similarly in Tob. 3:17; 11:13 to describe the scaling away of white films from the eyes of Tobit.

See also SCALE ARMOR.

(2) [Heb. *peles* (Isa. 40:12), *mō'zᵉnayim* (40:15; Jer. 32:10; Mic. 6:11), *qāneh* (Isa. 46:6)]; AV, NEB, also BALANCE. An instrument used in weighing. *See* BALANCE; WEIGHTS AND MEASURES. N. J. O.

SCALL. *See* ITCH.

SCAPEGOAT. *See* AZAZEL.

SCARECROW [Heb. *tōmēr*] (Jer. 10:5); AV PALM TREE. Probably a carved wooden pillar set up in a field to scare away birds or possibly evil spirits. Although the AV rendering is probably correct in the literal sense (cf. *tāmār*, "palm tree," in Ex. 15:27; Ps. 92:12 [MT 13]; etc.), the RSV and NEB rendering makes more sense in the context and is supported by a parallel expression in Ep. Jer. 6:70 (LXX 69), which uses Gk. *probaskánion* ("safeguard against witchcraft," "scarecrow"; see LSJ, *s.v.* προβασκαίνω). Idols are being compared to scarecrows that need not be feared, since they have no power to speak or move (cf. Isa. 46:6f.). N. J. O.

SCARF [Heb. *reᶜᵉʿālâ*] (Isa. 3:19); AV MUFFLER; NEB CORONET. Hebrew *reᶜᵉʿālâ* appears to derive from an Arabic term denoting a type of veil. In v. 23 the NEB renders "scarves of gauze" for Heb. *gillāyôn* (AV "glasses"; RSV "garments of gauze"); *see* GAUZE, GARMENTS OF.

SCARLET. *See* COLOR V.H; DYE.

SCATTERED ABROAD. *See* BABEL, TOWER OF; DISPERSION.

SCENT [Heb. *rê(a)ḥ*]; AV also SMELL; NEB also FLAVOUR; **SCENTED WOOD** [Gk. *xýlon thýïnon*] (Rev. 18:12); AV THYINE.

The Hebrew noun *rê(a)ḥ* is translated "scent" five times in the RSV. Job 14:7-9 reflects the arboricultural practice of cutting a dying tree back to a stump so that in the new growing season fresh shoots will emerge from the stump. Such a radically reduced tree is a sign of the hope that can be placed in God; if that stump can get so much as the "scent of water" (*rê(a)ḥ mayim*) it will put forth new buds. *Rê(a)ḥ* also appears in the literal sense in Cant. 4:11, where the maiden's appreciative lover compares the scent of her garments to that of Lebanon (i.e., of cedar; cf. Ps. 45:8 [MT 9]), and in Cant. 7:8, where he compares her sweet-smelling breath to apricots (NEB; AV, RSV, "apples"). In Jer. 48:11 Moab is pictured as an undisturbed vintage whose bouquet (NEB "flavour") has not varied, but whose time of decanting or disturbance is at hand. *See also* FRAGRANCE; ODOR; SMELL.

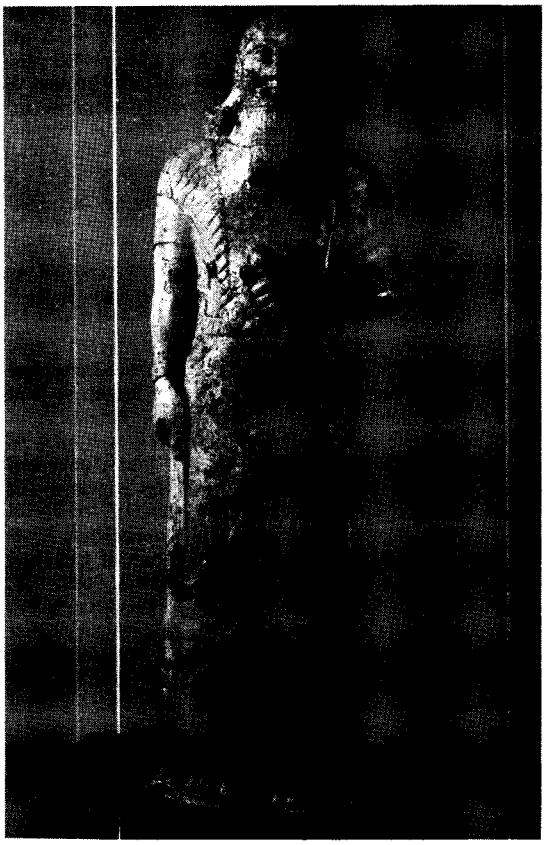
In Rev. 18:12 *xýlon thýïnon*, "scented wood," appears as an item in an exotic catalog of precious cargo goods (cf. the dirge over Tyre in Ezk. 27:12-24) whose profitable flow has now ceased with the demise of "Babylon the great." This highly aromatic citron wood, considered by Pliny (*Nat. hist.* xiii.95) to be a type of cypress (*thyia articulata*), was prized not only for its aroma but also for its fine veining (xiii.96). Thus it was often used in the manufacture of costly table tops, referred to by Martial as *mensa citrea* (*Epigrams* xiv.89). Their lovely veneer often resembled the eyes of the peacock tail (xiv.85) or the stripes of a tiger (*Nat. hist.* xiii.96). Pliny identified the source of the best *arbor citri* as Mauretania in Northwest Africa and remarked at length on the exorbitant prices people were willing to pay, under the influence of the current *mensarum insania* ("table-mania"), for a table top of this wood (*Nat. hist.*, xiii.91-102).

D. G. BURKE

SCEPTER [Heb. *maṭṭeh*] (Ps. 110:2; Jer. 48:17); AV ROD, STAFF; NEB also STAFF; [*mᵉḥōqēq*, poal part. of *ḥāqaq*] (Nu. 21:18; Ps. 60:7 [MT 9]; 108:8 [MT 9]); AV LAWGIVER; [*šēḇeṭ*] (Gen. 49:10; Ps. 45:6 [MT 7]; Isa. 14:5; etc.); AV also ROD; NEB also COMET; [*šarbîṭ*] (Est. 4:11; 5:2; 8:4); [Gk. *rhábdos*] (He. 1:8). A staff or rod used by kings to symbolize their authority and power.

In Ps. 110:2 Heb. *maṭṭeh* clearly represents a symbol both of royal rule and of punishment. In Jer. 48:17, however, it may be simply a weapon of oppression. In Ps. 89:44 (MT 45) the RSV emends the MT *miṭṭᵉhārô* (AV "his glory") to read *maṭṭeh miyyāḏô* ("scepter from his hand"; cf. NEB "his glorious rule"). The term *mᵉḥōqēq* is derived from a verb meaning "engrave" and, by extension, "engrave laws," "decree." Thus in Ps. 60:7 (MT 9) and 108:8 (MT 9) Judah itself is God's scepter, since it is through Judah that God's rule is practiced on earth.

Hebrew *šēḇeṭ* (elsewhere rendered "rod" or "staff") is



An alabaster statue of Ashurnasirpal II from Calah (883-859 B.C.) holding a mace-like scepter and crooked staff (courtesy of the Trustees of the British Museum)

translated "scepter" in royal contexts. It is sometimes used as a symbol of authority and kingship (Ps. 45:6 [MT 7]). In the hand of a ruthless ruler it can symbolize political and military oppression (Isa. 14:5). Sometimes the concepts of authority and oppression are both present (Nu. 24:17; Am. 1:5; Zec. 10:11). The term also frequently means "tribe." In Gen. 49:16, when Dan judges "his people as one of the 'tribes,' of Israel," the meaning "scepter" is probably also intended as a pun to suggest the method of punishment.

The term *šarbîṭ* is usually taken to be an expanded form of *šēḇeṭ*, perhaps influenced by the Akk. *šar*, "king," which would thus emphasize the royal nature of the object (*šēḇeṭ* itself does not have royal connotations). Others consider it a loanword, used as a proper noun. The term appears only in Esther, where it symbolizes the royal authority and pleasure of the Persian king. A relief from Persepolis, dating from just prior to Esther's time, depicts Darius I holding a scepter between his feet in the manner described in Gen. 49:10 (*see* picture in FOOTSTOOL). The scepter of Ahasuerus was probably very similar in appearance. The danger of approaching the Persian monarch without having been summoned, as recorded in Est. 4:11, is also mentioned by Herodotus (iii.118, 140).

In the NT Gk. *rhábdos* is translated "scepter" only in He. 1:8, a quotation of Ps. 45:6 (MT 7). When Jesus was mocked by the soldiers, he was given a reed to act as His scepter (Mt. 27:29).

Many depictions of royalty in ancient Egyptian, Assyrian, Persian, and Canaanite art include a scepter of some kind. Generally, two types are depicted: (1) a long royal staff like the one on the relief of Darius I; (2) a short form with its roots in the mace, a weapon of punishment and oppression. (*See* pictures of Sargon II, Merodach-baladan, and Tukulti-Ninurta in GESTURE.) Scepters of the second type decorated with gold and semi-precious stones, have been found in the tomb of Tutankhamen in Egypt and in the royal tombs of Ur. Mace heads from the Chalcolithic period have been found in a large cache of metal objects from the Nahal Mishmar near the Dead Sea.

SCEVA sē'və [Gk. *Skeuas*] A Jewish high priest whose seven sons were itinerant Jewish exorcists in Ephesus (Acts 19:14) when Paul was there during his third missionary tour (cf. vv. 11-20). Because of the great fame of Paul's miracles, Jewish exorcists had begun to employ the name of Jesus to work similar feats (cf. the similar corrupt interests of Simon the Magician 8:18-24). But when seven sons of Sceva attempted an exorcism in Jesus' name they failed utterly, since the demon challenged their authority and assailed them. As a result many Ephesians were filled with awe, and soon thereafter some who had once practiced magic renounced their trade by burning their books. The narrative underscores the unrivaled power of Paul: even demons recognized his authority (cf. Mk. 1:23-28). Moreover, it clarifies that Jesus' name should not be used as a magic formula. (The Paris Magical papyrus [no. 574] shows Jesus' name used thus; further, the rabbis denounced any who used Jesus's name in Jewish healings. See F. F. Bruce, comm. on Acts [*NICNT*, 1954] p. 390.)

The chief problem in the narrative is that there is no record of a Jewish high priest named Sceva (*HJP*^{2}, II, 229-232). Gk. *archiereús* in the singular is used by Luke to refer to the high priest and not to just one of the high priestly families. Codex Bezae thus amends the text, calling Sceva simply a "priest" (*hiereús*).

Various solutions have been proposed. (1) E. Haenchen suggested that the text may be unhistorical and serve Luke's polemic against the Jewish authorities (Acts of the Apostles [Eng. tr. 1971], pp. 563-66). (2) Others have viewed "Sceva" as the Latin name (*Scaeva*) — since Jews often carried both Hebrew and Latin names — of a high priest known in other sources only by his Hebrew name. (3) Others have derived the name from Heb. *šeḇaʿ*, but this also fails to solve the historical problem of the piresthood. (4) Some have suggested that Sceva was a Jew but "high priest" refers to a pagan office or to the imperial cult (B. E. Taylor, *Expos.T.*, 57 [1945-46], 222). B. A. Mastin has argued that he could locate the literary context of the Sceva story in the Greco-Roman mystery religions (*JTS*, 27 [1976], 405-412). (5) Another solution — probably the best — suggests that Acts 19 is reporting an inaccurate popular tradition. In the ancient world Jews were often thought to possess magical powers (pagan literature even tried to employ Hebrew names to this end). According to this view Luke simply reported Sceva's self-ascription (see F. F. Bruce, *Acts of the Apostles* [1951, repr. 1981], p. 358); the seven men had assumed the title of "sons of the high priest" to impress and delude the public.

Some discussion has also focused on a grammatical peculiarity in v. 16. While Sceva had seven sons (19:14), the spirit-possessed man assailed "*both* of them" (Gk. *amphóteroi*; RSV "all of them"). Strictly speaking, *amphóteroi* expresses only the dual number, which is at odds with the number seven in v. 14 (some MSS omit the refer-

ence to "seven" [*heptá*] in v. 14 to correct this). There is now abundant evidence, however, that *amphóteroi* expressed a true plural (= *pántes*) in later Koine and Byzantine Greek (see Bauer, rev., p. 47; F. F. Bruce, *Acts of the Apostles*, p. 359). G. M. BURGE

SCHISM. A division or separation within a body of people. The RSV does not use this word to translate any of the eight instances of Gk. *schísma* or eleven uses of the verb *schízō* in the NT. "Schism" appears in the AV only at 1 Cor. 12:25: "That there should be no schism in the body" (NEB "that there might be no sense of division in the body"; RSV "that there may be no discord in the body"). The reference is to "divisions" (11:18, RSV) within the Corinthian congregation, especially those based on loyalty to certain Christian leaders (cf. 1:10-13). Such "dissensions" (1:10, RSV) should not exist in the body of Christ, the Church.

Similar uses of *schísma* to denote a division within a larger group occur in Jn. 7:43 ("the people"); 9:16 ("the Pharisees"); and 10:19 ("the Jews"). All of these "divisions" (RSV) arose over Jesus — His identity, origin, and message. Jesus' presence, actions, and words caused people to take sides, to believe or not believe. The apostle Paul also caused a division, among both Gentiles and Jews, by preaching the gospel of Jesus and His resurrection (*schízō*, Acts 14:4; 23:7).

X. Summary

I. Nature of the Subject.—Interactions between science and Christianity are often mistakenly described under the heading "Science and the Bible." Little progress can be made, however, until one realizes that such a comparison results from a confusion of categories. Science is the result of human interpretation of God's original and continuing work in creation, i.e., the universe in which we live. The Bible is God's revelation given to human beings through the words of the biblical writers. Thus the category comparable to "science" is "theology," which is the result of human interpretation of God's Word. The category comparable to "the Bible" is "the universe," which is given to us by God's creative activity.

If conflicts appear to arise, they can arise of necessity only between the two kinds of interpretation, between science and theology. We may take as a guiding principle that authentic science, i.e., science faithfully carried out in accordance with its guiding principles of interpretation, cannot be in ultimate conflict with authentic theology, i.e., theology faithfully carried out in accordance with its guiding principles of interpretation. Any apparent conflict must therefore be the result of an incorrect scientific interpretation, an incorrect theological interpretation, or conceivably incorrect interpretations of both. Such apparent conflicts should therefore drive us back to reexamine the interpretations we have made and to be as sure as we can that we have followed the guidelines of authentic science and theology. Within theology these guidelines have been called hermeneutics, and they comprise a variety of principles that we should follow in determining the content of the biblical revelation. Failure to follow these principles results in faulty interpretations, heresy, and apostasy. Within science the corresponding guidelines have been called the scientific method, and they likewise comprise a variety of principles that we should follow in determining the scientific nature of reality. Failure to follow these principles results in faulty interpretations, eccentric ideas, and pseudoscience.

Failure to recognize these distinctions, with the resulting effort to call for a choice between science (seen as fallible human speculation) and the Bible (seen as God's infallible Word), has often caused confusion for Christians. Of course, no less confusing is the call often heard from non-Christians to choose between science (seen as the only rational approach to life) and the Bible (seen as the subjective speculations of an ancient people).

II. Limitations of Science.—A world view has developed that is sometimes called "scientism." It assumes that the scientific method is the only reliable guide to knowledge, that scientific truth is the only truth available. If accepted, such a world view would leave no room for a theological perspective on life. Several weaknesses in this world view prevent it from being effective.

(1) Scientism is based on the assumption that the scientific method is the only way to obtain knowledge or truth. But since this assumption cannot itself be derived scientifically, it cannot consistently be considered to be universally true. Philosophically this view cannot be internally consistent but must start with an act of faith.

(2) Scientism has an essentially impersonal orientation and hence is unable to deal with the intrinsically personal aspects of human life. If it attempts to deal with them on its own terms, it reduces them to impersonal mechanisms and thus deprives the human being of personhood.

(3) Scientism does not carry within itself the power to deliver human beings from their problems, but is at the mercy of the choices of those who must decide how to apply the findings of science. Even when the motives of scientists and appliers of science are relatively pure, the applications of technology in an imperfect and complex world generate new imperfections while removing others.

(4) Scientism is incapable of providing the basis for what *ought* to be done, but can only describe what *is*. Once again the motive for human living must be provided from a source outside science itself. Attempts to provide a scientific basis for ethics are always a case of unscientifically declaring *what is* to be the measure of *what ought to be*.

III. Importance of Science.—Reactions against the excesses of scientism often lead to a wholly relativistic, subjective, and sometimes even irrational view of life. If scientism reduces the human being to a machine, irrationalism reduces the human being to an animal. This pitfall can be avoided if, while recognizing the limitations of science, we are also aware of its importance.

(1) The pursuit of science is generally based on the acceptance of the existence of an objective reality that is not ultimately dependent on human beings. To perceive such an objective reality is to be able to speak of truth and

to be delivered from a wholly relativistic view of life and values. The Judeo-Christian world view sees this objective reality to be the created structure of the universe, extending not only throughout the physical realm but throughout the area of interpersonal relationships as well.

(2) The doing of science and the application of science are constant reminders of our need to conform our practice to the structure of the created universe. The truly creative imagination is not one that disregards the materials and principles of this world, but one that brings new insight, new life, and new understanding of reality through the materials and principles of this world.

(3) A scientific understanding also helps us to appreciate the meaning of true freedom. To be free does not mean to disregard with impunity any restrictions, but it means to live creatively and fully with due regard for the constraints and limitations given to us in the structure of the universe. All attempts to bring absolute freedom into practice result in self-destruction. Since irrationalism is a movement largely motivated by the desire for absolute freedom, it carries the seeds of its own failure.

IV. Correlations Between Scientific Descriptions and a Christian World View.–A scientific description and a theological description are not mutually exclusive alternatives, but necessary descriptions to be held, considered, and integrated at the same time. We view this assertion from five perspectives.

A. Purpose. Science may be defined as a way of knowing based on the human interpretation in natural categories of sense contacts with the universe that can be reproduced and publicly tested. The primary purpose of science is to describe the world in which we live. Various models (e.g., approximations, pictures, projections) describe the real world in a simpler kind of framework. Such models are successful when they describe to a sufficient accuracy what we observe in the natural world and when they allow us to predict new results beyond the original model.

Scientific descriptions are sought to enable us to understand the world and to act creatively within the world. The Christian position provides a foundation that other positions must somehow assume. That it is good to understand, to have a theoretical knowledge of the world, and to be able to control the world in such a way that we can act creatively must be based ultimately, if on anything at all, on the biblical doctrines of creation and providence.

But scientific description does not consist of every possible kind of description, nor does it exclude all other kinds of description. A scientific description is one particular kind of description, made in one particular way, following one particular set of guidelines. Other kinds of description also exist for the same event, process, or being, some of which cannot be tested by the scientific method because they are not susceptible to analysis by sense contacts with the world in the way that scientific descriptions must be.

Every event that happens can properly be considered in at least two ways. One way is to say, "What is the description of this event in terms of natural cause and effect categories? What is the scientific description?" But we must also ask, "What is the meaning of this event? What is the purpose of this event? How does this event relate to God, to His purposes, to the flow of history, to ultimate reality? What is the theological description?"

It is essential to realize the possibility of — indeed the necessity of — parallel descriptions, different kinds of descriptions that are not mutually exclusive but which reinforce each other although they are derived from asking different kinds of questions. If this were done consistently we would be able to overcome many of our own conflicts and those of the history of Christianity and science by leaving open the possibility that we need to look at things in more than one way in order to see them in their totality. Such problems as brain *v.* mind, body *v.* soul, physical *v.* spiritual, determinism *v.* free will, natural *v.* supernatural, Calvinism *v.* Arminianism, nonliving *v.* living, evolution *v.* creation -- all these supposed conflicts ought not to be thought to involve contradictory and exclusive descriptions so that either one or the other must be chosen. Rather they often represent situations in which one must ultimately choose both options, using them one at a time as one attempts to answer different kinds of questions.

B. Possibility. The question "Why is science possible?" cannot be simply glossed over. Those who assume a non-Christian position do not hesitate to ask Christians, "Does God exist?" Then this question is followed with the inevitable, "Prove it." But a ready response is to ask, "Is science possible?" The non-Christian would reply, "Oh yes, of course." Then must follow the request, "Prove it." Of course it cannot be proved except by the doing. It is the doing that gives evidence for its possibility, and the situation with respect to God's existence is quite similar. The evidence that God exists can be known only through relationship with Him. Just as one cannot possibly do science while believing it to be impossible, one cannot possibly know whether God exists while believing that He does not.

The possibility of science in the Christian perspective once again depends upon the biblical doctrines of creation and providence.

Because God has created it is possible for us to investigate and to continue the pursuit of science. That there should be a structure of reality suitable for scientific investigation must be either a fantastic result of pure chance, or it must be based on the Christian position of creation and providence.

Many scientists and philosophers have reflected about the finely tuned nature of the universe upon which the very possibility of human life critically depends. If any of several fundamental aspects of the universe were slightly different than they are, life would never have arisen. One may propose two possible answers: (1) There are and have been an effectively infinite number of universes with all of the possible variations of fundamental properties. Just by pure chance our universe happened to come into being as one of this infinite variety, and since the properties just happened to all fit together properly, human life developed. (2) The finely tuned nature of this universe's parameters testifies to the activity of One who called this particular universe into being for His own purposes (a modern form of the classical teleological argument for the existence of God).

C. Presuppositions. A Christian sees science as possible because it is reasonable to step out in faith on the basis of the biblical doctrines of creation and providence.

Some of the presuppositions of science that are needed in order to step out in faith include the following: (1) the world is understandable through rational processes of the human mind; (2) the human mind can conceive analogies and models that adequately describe the natural world; (3) natural phenomena are reproducible in some general and universal sense; and (4) discernible patterns of order exist.

Why should these presuppositions be accepted? The Christian answer is that they are reasonable because there is a given structure, there is an objective reality, and there is subject matter for the pursuit of science. Furthermore,

we are made in the image of God and thus have the possibility of understanding at least partially what this structure is like.

D. Posture. The posture of science is defined by the fact that a structure of reality has been given to us, to which we must be open. In doing science, the universe is normative, not the scientist. Scientists must subject themselves to the world, not subject the world to themselves. Of course modern science in particular reminds us that when we interact with the world, the results that we see are often a consequence of that total interaction and not just a passive world on which we operate. But it remains true that the scientists' endeavor is to find out not what should be, not what might be, nor what could be, but only what is; they must do their best to find out what *is* from the world, rather than trying to impose their ideas arbitrarily upon it.

If this posture is viable, the basis for it must once again be found in the biblical doctrines of creation and providence. A created structure is given to us; our pursuit of the knowledge of truth requires us not to fabricate or invent a structure but to determine to the best of our ability what that given structure is.

Once this posture of openness is adopted, we have freedom in our scientific activity, i.e., freedom from conflict between our preconceptions of what we must find in science and what we do find in science. If we attempt to force a scientific perspective upon theology, the effect is bad theology; if we attempt to force a theological or philosophical perspective upon science the effect is bad science. There is no need for either. Our scientific description cannot necessarily be expected to be identical to our theological description; if this were the case, we would not have the need for both. But we do need both kinds of description since they are complementary and not mutually exclusive.

Any attempts to dictate the results of scientific inquiry from convictions derived from philosophy, politics, metaphysics, religion, or any other ideology is a violation of the posture of science, which must be one of openness before the given structure of reality. Success in science demands this same posture of openness of both Christian and non-Christian alike.

E. Potential. Since science is a human endeavor, it has no more intrinsic claim to universal helpfulness than any other human endeavor. A scientific investigation does not prescribe its own applications. Thus science is not a competitor with Christian faith but a helper; it enables us to exercise our moral and ethical directives intelligently rather than foolishly.

The potential of science is to be one means of service to the world. It is not the only means of service, but it can inform and guide many types of service. Just as science can serve as an ally and help to the living out of the Christian faith, the realistic faith required to carry on science in spite of the ambivalence of its consequences requires trust in God's ultimate control over all things.

V. God-of-the-Gaps.–There are three basic ways of responding to the increase in human knowledge about the universe.

(1) The growth of human understanding has liberated human beings from superstitions and rituals. Human beings now no longer need the crutch of religion. In the future all things are possible for human beings as they take control of their own destiny.

(2) The growth of human knowledge is at least in part the consequence of the human desire to exalt oneself and to relive the drama of the tower of Babel. We are mistaken in attempting to answer as many questions as we can through science. It is inappropriate for us to continue with scientific investigation of some areas that are better left to God alone, and we should deliberately reject any responsibility for dealing with these areas. God took care of them in the past, and we should leave them alone rather than trying to "play God."

(3) It is certainly true that the increase in human ability to do things does outstrip human moral responsibility. But just as we cannot plunge ahead with technological pursuit in the belief that it will eventually deliver us, neither can we forsake the responsibility and choices that our current technology places upon us. Rather we must assess present choices and seek to inform future decisions with all of the moral and practical wisdom available to us. For the Christian the basis for this moral wisdom must come from a personal relationship with God, which is then shared with the community.

Each of these three positions has implications about God and our relationship with Him. The first supposes that God, if He ever existed, is no longer necessary; very likely the concept of "God" was born of fear and ignorance in primitive human beings as an explanation for the unknown and as a palliative for insecurity. The second supposes that God is constantly striving with human beings to prevent their increase in knowledge, but that human beings nevertheless do continue to learn more and more. This knowledge is seen as a threat against belief in God, which is ultimately based on the fact that we are and must remain ignorant in areas of our experience that are reserved for God's activity. Both the first and the second positions agree in an important perspective — they regard God as the explanation for unexplainable phenomena in the world. The first dispenses with God as these phenomena become explainable, while the second tries to prevent the explanation of these phenomena in natural terms so as to reserve some place for God.

The third position recognizes that all increase in human knowledge is obtained through either the active or the passive activity of God. God has brought us to our present technological stage, and God is able to bring us through our difficulties in making responsible choices in an increasingly complex world. Future choices must neither be rejected completely nor taken lightly without due consideraton of God's purpose in the world and of the nature of humanity made in the image of God. Only this third position recognizes that God is Lord of the natural and the supernatural, that a natural description of a natural event does not eliminate God as the sustainer of that event, and that God must be Lord in all of life, not just in small recesses of ignorance reserved for Him.

The attitude toward God illustrated in the first and second positions, i.e., that our evidence for the existence and activity of God is found primarily in those events for which human explanations are lacking, has been called the "God-of-the-gaps." It is one of the classical errors of Christian theology through the years in dealing with a scientific understanding of the universe. The argument states that we may now know much about physics, chemistry, biology, etc., but certain key physical, chemical, or biological mechanisms must forever elude us because such mechanisms do not in fact exist. These gaps in natural description are filled only by the recognition that God acts directly in these gaps above and beyond any physical, chemical, or biological mechanism. In this interpretation God remains the "Great Mechanician," and the possibility of a complete physical, chemical, or biological description — even in principle — is forever ruled out by the very existence and activity of God.

The continuous chain of evidence in the physical and

biological sciences is so compelling that most knowledgeable Christians today recognize the fallacy of the God-of-the-gaps approach. They see that such an advocacy results in the paradox of less and less evidence for the existence and activity of God resulting from more and more knowledge of His creation. They emphasize the importance of seeing God in all phenomena, the natural as much as the supernatural, and of recognizing that the very existence of the material universe depends continuously upon the sustaining activity of God. Today many Christians are willing to admit that a complete description in physical and biological categories may well be possible, at least in principle, without calling upon God as being the missing mechanism in these categories, but they do not conclude that this invalidates descriptions in other categories as well.

Many modes of common speech add to the confusion in this area. Well-meaning Christians speak of God as intervening in the natural order, overruling natural law, or using natural law to achieve His purposes. The inappropriateness of such phrases is made clear when we understand the biblical picture of God as the continuing source of the existence of the entire space-time universe, so that any event that takes place in that universe must be ultimately viewed as dependent upon the activity of God. What are often referred to as "natural laws" do not have some kind of independent existence of their own; indeed, scientific laws are human descriptions of God's normal mode of free activity. Thus scientific laws are descriptive, not prescriptive. Scientific laws do not cause things to happen; rather such laws describe the regular ways that we observe things happening. To speak of God as "intervening" into the natural order supposes that a natural order exists independent of God; but no such natural order exists since the only order there is depends moment by moment upon the continuing free activity of God for its very existence. Likewise God has no need to "overrule" natural law, since natural law is our human description of the way that God normally acts; nor can God "use" natural law as if it were a hammer or a shovel, since once again such laws are our descriptions of God's free activity. In this perspective an understanding of miracles follows directly: miracles are the result of God's free activity expressing itself according to His purpose in ways not normally observed by us. *See* MIRACLE.

VI. Meaning of "Human."—Nowhere is the issue of integration between science and Christian faith more critical than in those areas where scientific knowledge affects and influences human values. In each such case the Christian must recognize the data from science and the data from biblical theology and arrive at an integration that is faithful to both disciplines. The identity of the human being will come increasingly under challenge as scientific advances show more ways in which the attributes and personality of human beings can be influenced by chemical, psychological, and sociological influences. The push to deliver human beings from the effects of sin without recognizing the full relational dimensions of the reality of sin threatens to be successful, but only at the expense of the ultimate dehumanization of human beings.

One of the difficulties in speaking about such issues is the common lack of an in-depth understanding of what it means to be human. We frequently take this understanding for granted, but such an attitude is quickly shown to be superficial, and the gaining of this understanding represents a basic problem in the integration of Christian thought into the real world.

Careful consideration and integration of data from both scientific and biblical sources support the view that a human being is a pneumopsychosomatic unity, i.e., a human being is a whole person with attributes that can be described in a variety of more detailed ways, most common among which are bodily (Gk. *sōma*, "body"), soulful (*psychē*, "soul") and spiritual (*pneuma*, "breath" "spirit") descriptions. Human beings are bodily creatures because their existence as human beings in this world depends upon their biological structure and constitution. Human beings are soulful creatures because they are alive, self-conscious, and personal. Human beings are spiritual creatures because they have the ability and responsibility for personal relationship with one another and with God. These words express respectively the normal criteria for humanity: the biological criterion of genotype, the social criterion of behavior, and the spiritual criterion of relationship with God.

Again much traditional terminology in this area needs to be carefully rethought. In many cases traditional ways of speaking lead almost unconsciously to ways of thinking that cannot be supported by consideration of either biblical or scientific data. Most common is reference to "life," "soul," or "spirit" as *things* that we as human beings *have;* reflection indicates that a more consistent manner of speech leads us to refer to "being alive," "being soulful," and "being spiritual" as expressions of what human beings *are*.

The human being does not *have* life; the human being *is* alive. The human being does not *have* a body, a soul, a spirit; the human being *is* a body-soul-spirit, that unique living creature made in the image of God, redeemed by the blood of Christ, and destined in Christ (for those who receive Him in faith) to be raised again to living experience as a whole person.

Immortality as an intrinsic property of humanity is a heritage from Greek Platonism; in biblical thought immortality is a future gift of God to be bestowed upon those whom He will raise in Christ at the resurrection.

To be human is to be involved in a process. The possession of a human genotype assures that an individual is wholly human; but to become fully human in the sense of achieving the intention of creation requires the process of bodily development, social maturation, and divine sanctification. All life involving the human genotype is human life, but critical value decisions are still needed when one form of human life comes into conflict with other forms of human life.

See ANTHROPOLOGY.

VII. Creation and Evolution.—The biblical doctrine of creation is far more than an historical option; it is a fundamental necessity that drives a sharp wedge between competing world views and perspectives on the nature of the human being. It stands in unique opposition to naturalism's denial of meaning and purpose in the universe, to dualism's acceptance of other elements in the universe as coeternal with God, and to pantheism's denial of the metaphysical differences between God and the universe. Out of the many possible models for the human being, the biblical model presents one in which human beings are creatures like other creatures, and yet are creatures made in the image of God and hence unlike other creatures. It establishes both the transcendence and immanence of God, and reveals that evil is not intrinsic to the created universe but is a moral aberration upon that good creation.

Unfortunately, contemporary debates frequently obscure the issue by posing creation and evolution as two mutually exclusive options, as though one must choose between a biblically sound faith that supports creation and an atheistic, Bible-contradicting position that supports

SCIENCE AND CHRISTIANITY

evolution. Once again we encounter a fundamental case of category confusion. Two major world views are in possible conflict: Creation and Evolutionism; and two mechanisms of creation are in possible conflict: fiat creation and evolution. The world view of Evolutionism explicitly rejects God, meaning, and purpose in the universe, and certainly must be rejected by a Christian. There is, however, no a priori reason why a world view based on creation, as biblically described above, cannot be consistent with either the mechanism of instantaneous creation (usually called fiat creation), or of creation by process in time (usually called evolution), or of any other presently unknown phenomena that may express the actual activity of God in creation.

Ample scientific evidence suggests that living creatures undergo changes in physical and biological structures, particularly in response to changes in environmental conditions. This is the basic scientific foundation for evolutionary theory; it is supplemented by a growing body of understanding at the biochemical level as relationships between details of genetic expression are clarified. The general theory of evolution, which supposes that all living forms developed from less complex forms that in turn developed from nonliving matter, is a reasonable hypothesis that attempts to integrate the type of observable changes mentioned above with the fossil record and other evidences of age and change in earth's history. It remains true, however, that no complete quantitative theory of evolution has been formulated. Any attempt to calculate quantitatively the probability of evolutionary developments leading to the present state of affairs, on the basis of our present knowledge of evolutionary mechanisms, leads to the inevitable conclusion that something very improbable has happened.

Some Christians display their antipathy to evolution in the form of an attack on the scientific merits of the general theory. The motive for this attack has not primarily been scientific concern, however; two other issues are of more concern to these Christians. The first motive is the Christian opposition to philosophical systems based on the extrascientific supposition that evolution is a universal principle guiding all meaningful considerations and generally leading to some form of humanism or to aberrations with more destructive import — what we have called Evolutionism. Christian antievolutionists have properly opposed these philosophical extrapolations, but they have done so by attacking the scientific basis for the biological theory. If anti-Christian evolutionists have been mistaken in extrapolating from a biological theory to philosophical conclusions, Christian antievolutionists have been equally mistaken in attacking a scientific theory for philosophical reasons.

The second motive for the attack of Christian antievolutionists is perhaps even more basic. They have concluded that the general theory of evolution and the Genesis Creation account are mutually exclusive. They have seen advocacy of the general theory as a direct assault on the reliability, authority, and integrity of the Bible. Here they have uncritically accepted specific traditional interpretations of these biblical passages without thoroughly evaluating the revelational purpose behind their writing. They have been so concerned to demonstrate that evolution contradicts their interpretation of Genesis that they have not paid attention to the possibility that their interpretation of Genesis might contradict the biblical nature of this very revelation. If anti-Christian evolutionists have been at fault in concluding that acceptance of the general theory precludes acceptance of the biblical revelation, so also Christian antievolutionists have been at fault in concluding that acceptance of the biblical revelation precludes acceptance of the general theory.

Evolution is ultimately a scientific question on the biological level, and on this level the reliability of the general theory must be estabished. While maintaining the truth and the significance of the biblical teaching on creation, Christians can also remain open to a variety of possibilities in which God manifested His creative activity. We need not reconstruct our theology around evolution; neither must we reject evolution to protect our theology. Evolution can be considered without denying creation; creation can be accepted without excluding evolution. Since an evolutionary description need not be ruled out a priori by biblical considerations, the Christian has the freedom to pursue wherever biblical and scientific integrity lead in the future.

See CREATION; EVOLUTION.

VIII. Determinism and Free Will.–The choices in a scientific description are of only two types: in terms of exact mathematical relations with the possibility of exact prediction of the future from knowledge of the present (a deterministic description), or in terms of a probabilistic approach (often called "chance" in science), in which the future predictions of the description can deal only with the probability of events occurring, not with their certainty. To say that a scientific description is a chance description implies only that our present abilities lead us to describe it in a statistical rather than a deterministic manner. Many examples can be cited to show the danger in assigning ultimate philosophical or metaphysical meaning to the terms "determinism" and "chance" used in scientific descriptions. Determinism can be the instrument of design, but so can chance; the creativity expressed in the creation of the multiplicity of human beings is expressed scientifically through the chance assignment of genetic configurations.

The form of the paradox in which determinism is pitted against free will has both a secular and a theological content. In a secular sense the issue is whether human beings are so controlled by their genetic and environmental factors that their choices flow inevitably from these factors, with any indication of actual choice being nothing more than an internalized illusion, or whether human beings can indeed make responsible choices above and beyond the aspects of life that form their living context. In a theological sense the paradox is well-known as the historical Calvinist/Arminian controversy: whether a person's coming to saving faith is the inevitable consequence of God's determining election, or whether a person's coming to faith is an act of free human choice among equally possible alternatives. As usual some attention to the definition and meaning of these two terms is helpful. It is quickly realized that both determinism and free will taken in an absolute sense are idealizations rather than faithful descriptions of reality. On the one hand, no event can be said to be absolutely determined; on the other hand, no will can be said to be absolutely free. If it is true that the Christian responds to the paradox (not the contradiction) of God's sovereignty *v.* human responsibility by holding both facets in tension, recognizing that they address different questions in different contexts, then perhaps a clue can be obtained from the theological to guide a response to the secular dilemma.

Attempts to resolve the determinism *v.* free will controversy in terms of some neat dichotomy are an illusion. These two aspects of reality are interwoven so that they form more the two aspects of one reality than two competing absolute world views.

Attempts to relate the forms of scientific description to

the realities of personal life are equally nonproductive. A deterministic scientific description appears most compatible with a responsible human choice but is commonly believed to make such responsible choices impossible. Relief from determinism through an appeal to chance appears to make other options possible, but a responsible choice is not one of them, since it is hardly compatible with random noncaused activity.

People dealing with determinism and free will must abandon the search for a general answer and must ask instead: "To what extent am I determined, and at the same time to what extent am I free?" Appropriate areas and interactions for both exist within the context of a meaningful human life.

IX. Christian Responsibilities in Science and Engineering.–Great cultural patterns and convictions stand in the way of the responsible care of planet earth, patterns and convictions that commonly aspire to the status of religious categories in the lives of those who hold them. Materialism is usually accepted without reflection as the guiding principle for success in life, but materialism values things above all else and will sacrifice all for the possession of more things. Profit making as the sole motivating spirit of economics and production in a competitive system cannot afford to be consciously responsible if profits are threatened, and automatic responsibility as a natural consequence of the system appears to be a discredited illusion. All economic systems founder on the basic self-centeredness of the human heart, and Christian realism demands acknowledgement of this reality in any attempts to improve the system. Nationalism, racism, and ethnicism are all ways in which individual self-centeredness is generalized to a larger group and made a virtue rather than a vice.

A special responsibility falls upon Christians in charge of scientific research and technological development. They must be responsible both to use resources wisely in the pursuit of basic understanding and practical applications, and to choose projects that appear to maximize benefits for the human race. A scientist or engineer cannot simply sell his talents to any legal bidder without becoming responsible for the outcome of his investigations. Thus to be a practicing scientist or engineer in certain situations may indeed not be possible for a Christian.

A Christian view of human responsibility with respect to the environment is based on the biblical doctrine of Creation. The natural world has value in itself because it was made by God Himself. Human beings are not the owners of the natural world, nor is the only purpose of the natural world to serve them. God has provided the resources of the world for the benefit of people and has entrusted them with the responsibility of caring for these resources so that they may be used in the best way for all people. We must not forget that we are part of the natural world and hence are direct participants in the ecology, and that we are responsible for the natural world in a way assigned to no other creature. But such human awareness cannot be evoked by only an intellectual enumeration of the things that must be done in order to save the earth from further pollution and exploitation; a knowledge of what must be done must be coupled with a personal will to do it, a motivation that has no ultimate source except a personal relationship with God through Jesus Christ.

X. Summary.–Scientific and theological descriptions may be related in five fundamental patterns. The first two approaches are based on the assumption that there is only one primary method of description and that other descriptions must be derived from it. (1) In the *theology-first* approach a scientific description derived from a theological source takes precedence over a scientific description derived from scientific investigations. (2) In the symmetric *science-first* approach theological descriptions must be derived from scientific descriptions in order to be relevant and meaningful.

The other three approaches are based on the assumption that both scientific and theological descriptions can be constructed from activities within the two disciplines. (3) Scientific descriptions and theological descriptions give the same kind of information about the same kinds of categories. This leads to a *conflict* approach in which apparent disagreement between the two descriptions must be settled by determining which is right and which is wrong. (4) Scientific descriptions and theological descriptions give different kinds of information about different kinds of categories. This *compartmentalization* approach allows no interaction between the two types of description. (5) Scientific descriptions and theological descriptions give different kinds of information about the same kinds of categories. This *complementarity* approach allows one to integrate insights from the different scientific and theological disciplines.

When applied to the observed hierarchical structure of the scientific description of the universe, theology-first leads to a God-of-the-gaps, science-first leads to a scientific pseudo-theology, conflict leads to a rejection of either scientific or theological descriptions, and compartmentalization allows both types of descriptions to exist but removes their fundamental meaning and significance; only complementarity provides a framework within which one can arrive at an integration of scientific and theological elements to describe God's activity in creating and sustaining the universe.

SCOFF; SCOFFING; SCOFFER [Heb. *lîṣ*–'talk big' (Prov. 9:12; hithpolal, Isa. 28:22), *lāṣôn* (Prov. 1:22; 29:8; Isa. 28:14), *lēṣ* (Ps. 1:1; Prov. 1:22; 9:7f.; 13:1; 14:6; etc.), piel of *ḥārap* (Ps. 74:10, 18; Zeph. 2:10), *ḥerpâ*–'abuse' (Ps. 74:22), hiphil of *mûq* (Ps. 73:8), hithpael of *qālas* (Hab. 1:10), piel of *nāḇēl* (Dt. 32:15), hithpalpel of *tā'a'* (2 Ch. 36:16), *la'ag*–'derision' (Job 34:7), *sepeq*–'jeering' (Job 36:18), *mᵉlîṣâ*–'allusive saying' (Hab. 2:6); Gk. *ekmykterízō* (Lk. 16:14; 23:35), *empaigmoné*–'mockery' (2 Pet. 3:3), *empaíktēs*–'mocker' (2 Pet. 3:3; Jude 18), *kataphronētés*–'despiser' (Acts 13:41)]; AV also REPROACH, SCORN(ING), MOCK(ER), DERIDE(R), LIGHTLY ESTEEM, MISUSE, "taunting proverb" (Hab. 2:6), "be corrupt" (Ps. 73:8), etc.; NEB also TAUNT, BE HAUGHTY, DISHONOUR, ARROGANCE, JEER, etc.; **SCORN; SCORNER** [Heb. *lā'ag*–'ridicule' (2 K. 19:21; Job 22:19; Ps. 80:6 [MT 7]; 123:4; Isa. 37:22), *la'ag*–(Ps. 44:13), *lîṣ* ("be scornful," Prov. 3:34), hiphil of *lîṣ* (Job 16:20; Prov.

14:9; part., 3:34), *ḥerpâ* (Ps. 22:6 [MT 7]; 31:11 [MT 12]; 39:8 [MT 9]; etc.), *śāḥaq* (Job 39:7; hiphil, 1 Ch. 30:10), piel of *nā'aṣ*–'treat disrespectfully' (2 S. 12:14), *bûz*–'show contempt for' (Prov. 30:17; Cant. 8:7), piel of *nā'ar*–'reject' (Lam. 2:7), piel of *qālas* (Ezk. 16:31); Gk. *exouthenéō*–'treat with contempt' (Gal. 4:14)]; AV also REPROACH, LAUGH (TO SCORN), BLASPHEME, CONDEMN, etc.; NEB also "make game of," BUTT, CONTEMPT, MOCK, TAUNT, DISDAIN, SPURN, etc.

As a verb "scorn" signifies first of all an attitude of extreme contempt and disgust; it can also denote the expression of such an attitude. The noun denotes an object of extreme contempt. "Scoff" always signifies an outward expression of contempt through derisive words or acts (e.g., through the gesture of wagging one's head; *see* GESTURE V). The RSV correctly substitutes "scoffer" in most passages where the AV has "scorner." A sense of arrogant superiority generally underlies both a scornful attitude and scoffing behavior.

In wisdom literature the scoffer is the opposite of the righteous, God-fearing person (Ps. 1:1). Those who scoff refuse to learn the way of wisdom (Prov. 14:6) and do not respond to correction (9:7f.; 13:1; 15:12; 19:25). They reject the messengers of God who confront them with the truth (cf. 2 Ch. 30:10; 36:16). They despise morality and ignore religion because of their obstinate arrogance and foolishness (Prov. 14:6; 19:25, 29; 21:24; 24:9). Their malicious slander is the cause of strife (22:10; 29:8). The righteous particularly are the butt of scoffers' taunts, and the psalmists frequently complained to God that they had become an object of mockery and derision to their exultant enemies (31:11; 39:8; 44:13; Ps. 89:41, 50; etc.). In the DSS also the opponents of the righteous are called "scoffers" (CD 1:14; 4QpIsa 2:6).

Jesus' opponents revealed their deep-seated impiety when they scoffed at His teaching about wealth (Lk. 16:14) and jeered at Him on the cross (23:35). Jude 18 and 2 Pet. 3:3f. warn that scoffers who despise God's revelation will appear in the last days to deride the seemingly unfulfilled promise of Christ's return and the accompanying judgment. For such persons the only rule of faith is their own ungodly passions.

See also DERIDE; MOCK; REPROACH; REVILE.

D. E. GARLAND N. J. O.

SCORCH; SCORCHING. In the NT the RSV uses these words to translate Gk. *kaúma,* "heat" ("scorching heat," Rev. 7:16), or one of its cognates: *kaumatízō,* "scorch, burn" (Mt. 13:6; Mk. 4:6; Rev. 16:8f.), and *kaúsōn,* "burning heat" ("scorching heat," Mt. 20:12; Lk. 12:55; Jas. 1:11). In Lk. 12:55 the reference is to the dry heat of the south(east) wind (*see* PALESTINE V.C); but the other passages refer to the burning HEAT of the sun, which consumes human strength (cf. Ps. 32:4), causes intense thirst, and dries up vegetation (Jas. 1:11; cf. Jesus' parable of the sower, where this heat is a figure for "tribulation or persecution" [Mt. 13:6, 20f. par. Mk. 4:6, 16f.]). The scorching heat of the sun can thus be a metaphor for God's judgment. In Rev. 16:8f. the "fourth angel" pours out his bowl on the sun, intensifying its heat so that it "scorches" the followers of the beast; by contrast, in 7:16 it is said of the followers of the Lamb that "the sun shall not strike them, nor any scorching heat."

The OT uses of "scorch" and "scorching" are more problematic. The RSV uses "scorch" or "be scorched" for four rare Hebrew verbs: the niphal of *kāwâ* ("to burn, scorch, singe"; Prov. 6:28), *šāzap* (lit. "to look upon"; used figuratively of the sun's burning or tanning effects in Cant. 1:6), *ḥārar* ("to burn, glow with heat" [as in the smelting of metals; cf. Ezk. 24:11]; Isa. 24:6), and the niphal of *ṣāraḇ* (cf. Akk. *ṣarāpu,* "to burn, singe, scorch"; Ezk. 20:47 [MT 21:3]). With the exception of Isa. 24:6 (NEB "dwindle"), the NEB follows the RSV in rendering these words with "scorched"; the AV uses "burned" in all but one instance (Cant. 1:6: "the sun hath looked upon me").

"Scorching" is similarly used by the RSV to render several rare Hebrew expressions. The phrase "scorching wind" represents three unrelated terms. In Ps. 11:6 *rû(a)ḥ zil'āpôṯ* (probably denotes a "stormwind" or "whirlwind" (cf. AV "raging tempest") but does not seem to carry any sense of "burning" or "scorching." The meaning of *ba'yām rûḥô* in Isa. 11:15 is uncertain. The RSV and NEB translations are based upon a possible derivation of *'ayām* from Arab. *'āma*; the AV ["mighty wind"] follows the Syriac and Vulgate. Heb. *šārāḇ* in Isa. 49:10 is likewise of uncertain meaning; the RSV ("scorching wind"), AV ("heat"), and NEB ("scorching heat") readings are all based upon the versions (cf. Isa. 35:7, where the RSV renders the same term "burning sand"). The only certain use of "scorching" in the RSV occurs in Prov. 16:27 (*'ēš ṣārāḇeṯ*; RSV, NEB, "scorching fire"; AV "burning fire"); the noun *ṣāraḇ* is derived from the verb *ṣāraḇ,* "burn, singe, scorch" (cf. Ezk. 20:47 [MT 21:3]; see above).

As in the NT, most OT uses of "scorch" and "scorching" refer to natural phenomena such as a hot, dry wind or the intense heat of the sun; in a few instances these terms refer to the effects of actual fire (figuratively in Prov. 6:28; 16:27; Ezk. 20:47). Isa. 24:6 refers to Yahweh's coming judgment; this passage forms the prophetic backdrop for Rev. 16:8f., while Isa. 49:10 is echoed in Rev. 7:16.

D. G. SCHLEY

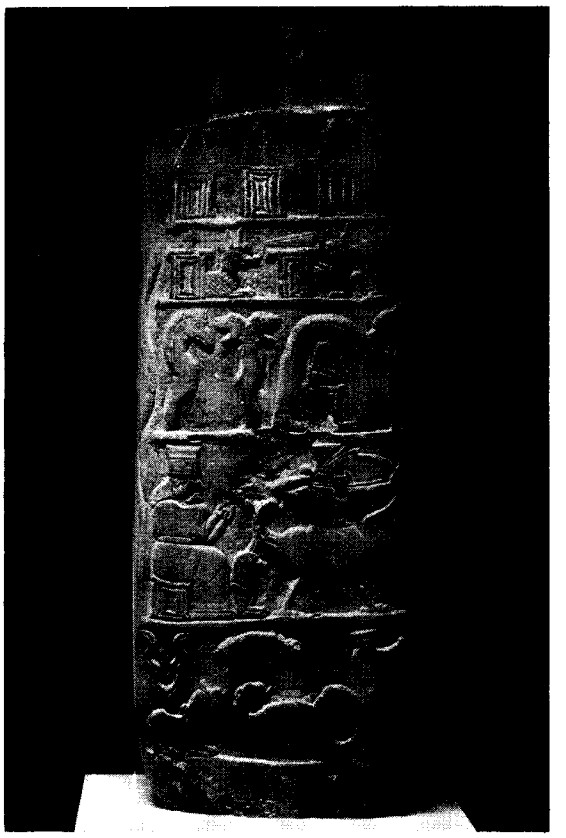
SCORN. *See* SCOFF.

SCORPION [Heb. *'aqrāḇ*] (Dt. 8:15; 1 K. 12:11, 14; 2 Ch. 10:11, 14; Ezk. 2:6); NEB also "lash"; [Gk. *skorpíos*] (Lk. 10:19; 11:12; Rev. 9:3, 5, 10). An arachnid of which about twelve different species are commonly found in Palestine.

Scorpions are members of the *Arachnida* and are thus related to spiders, ticks, and mites rather than to insects. All scorpions have front pincers held forward like a lobster's, a segmented body, and a tail curved forward ending in a poisonous sting. This sting is used to kill the insects and spiders upon which they feed. Its poison is extremely painful and occasionally fatal to humans. Scorpions, of which there are about five hundred species, live primarily in tropical climates. They range in length from about 13 mm. (½ in.) to 175 mm. (7 in.). The most common species in Palestine is the yellow *Buthus quinquestriatus*. Scorpions appear as religious symbols in ancient Egyptian and Mesopotamian literature, undoubtedly in respect for their potent sting.

Scorpions were one of the dangers the Israelites faced in their journey through the wilderness (Dt. 8:15). The "ascent of Akrabbim," a place on the border between Judah and Edom (Nu. 34:4; Josh. 15:3; cf. Jgs. 1:36), probably derived its name from the abundance of scorpions known to that territory. This mountain pass is now usually identified with Naqb eṣ-Ṣafā.

In response to the Israelites' request for an alleviation of the heavy burdens placed on them by Solomon, Rehoboam promised instead an even harsher rule: "My father chastised you with whips, but I will chastise you with scorpions" (1 K. 12:11, 14; 1 Ch. 10:11, 14). The parallelism suggests that "scorpions" denotes an instrument of pun-



A boundary stone of Nebuchadnezzar I depicting a scorpion-man with a bow and arrow and a scorpion (bottom) with other god symbols (12th cent. B.C.) (courtesy of the Trustees of the British Museum)

ishment (G. H. Jones, *1 and 2 Kings* [*NCBC*, 1984], I, 252). In Roman times the term was applied to whips weighted with leather bags filled with sand and fitted with spikes. But whether this type of SCOURGE was known in OT times is uncertain. It is possible that Rehoboam was simply using a figure of speech to say that the pain he would inflict would be greater than that inflicted by Solomon, as a scorpion's sting is greater than a whip's lash.

In his commission as a prophet, Ezekiel was warned that he should not fear the words of the rebellious nation, even though they inflict as much pain as scorpions. (Ezk. 2:6).

The book of Sirach twice mentions scorpions: in 26:7 taking hold of an evil woman is compared with "grasping a scorpion," and in 39:30 these creatures appear in a list of instruments of God's wrath.

The NT also refers to scorpions several times in terms of the great pain they can inflict. Jesus gave power to the Seventy "to tread upon serpents and scorpions" without harm (Lk. 10:19). These creatures seem to represent all the evil forces opposed to Jesus; they may also recall the hardships of Israel's wilderness wanderings. Jesus taught that as an earthly father would not give his son a scorpion when he had asked for an egg, so the heavenly Father will certainly give the Spirit to those who ask (11:11-13). Rev. 9:3-5, 10 depicts a woe that will befall those who do not have God's seal upon their foreheads: they will be tortured for five months by demonic locusts with scorpion tails that inflict an excruciatingly painful sting. B. C. BIRCH

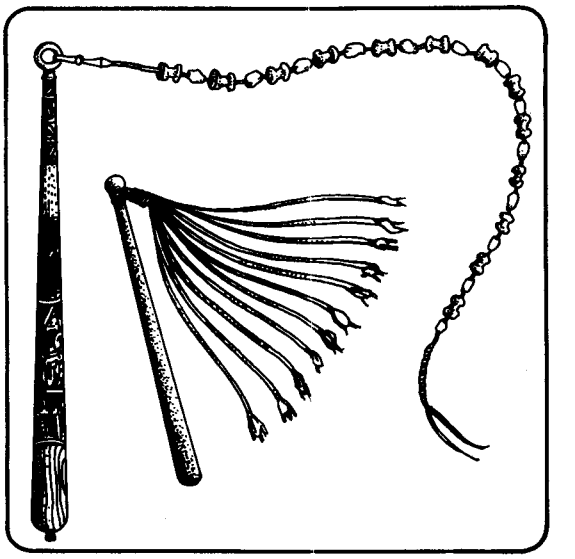
SCOURGE [Heb. *šôṭ*–'whip' (Job 5:21; Isa. 10:26; 28:15 [*Q*; *K šyṭ*), *šôṭēṭ* (Josh. 23:13), *nega'*–'stroke, affliction' (Ps. 89:32 [MT 33]; 91:10); Gk. *mastigóō*–'whip, flog' (Mt. 20:19; 23:34; Mk. 10:34; Lk. 18:33; Jn. 19:1), *mastízō* (Acts 22:25), *phragellóō* (Mt. 27:26; Mk. 15:15)]; AV also STRIPE, PLAGUE; NEB also WHIP, FLOOD (Isa. 28:15), WATER (28:18), CALAMITY, FLOG, etc.; **SCOURGING** [Gk. *mástix*–'whip' (Acts 22:24; He. 11:36)]; NEB FLOGGING; **WHIP** [(nouns) Heb. *šôṭ* (1 K. 12:11, 14; 2 Ch. 10:11, 14; Prov. 26:3; Nah. 3:2); Gk. *phragéllion*–'whip, lash' (Jn. 2:15)]. AV also SCOURGE (Jn. 2:15); [(verbs) Heb. piel of *yāsar*–'chastise' (Dt. 22:18), niphal of *nāḵā'*–'be whipped out' (Job 30:8)]; AV CHASTISE, etc.; NEB PUNISH, HOUND.

Beating with leather straps or rods was a form of punishment administered to slaves (Ex. 21:21f.), to children (Prov. 13:24), and to fools (Prov. 17:10; 19:29; 26:3). Particularly cruel was the use of a special whip, probably with bone or rock on the ends of the thongs, called the "scorpion" due to its potential to inflict a painful sting (1 K. 12:11, 14; 2 Ch. 12:11, 14).

Scourging was the only form of corporal punishment allowed in the OT. While the number of stripes varied with the offense, OT law set the upper limit at forty stripes to spare the culprit unnecessary humiliation (Dt. 25:1-3). In order to prevent any possibility of breaking this law, thirty-nine became the maximum possible number of lashes. Although many offenses could receive corporal punishment, the law specifically stated that a man who wrongly slandered his wife should be beaten (Dt. 22:18). According to later Jewish practice the minister (Heb. *ḥazzān*) of the synagogue meted out the punishment to the guilty individual; after the hands of the culprit were bound to a pillar, the minister used a calf-hide whip to inflict the stripes, one-third given upon the chest and two-thirds given upon the back (Mish. *Makkoth* iii.12f.).

Divine punishments may come upon the nation as a scourge (Josh. 23:13; Ps. 89:32; Isa. 10:26; 28:18; cf. 2 S. 7:14). In the same manner God's blessing will shield one

A drawing of Roman scourges made of leather cords knotted with pieces of bone or metal



from such disasters (Ps. 91:10). Figuratively, the tongue may become a scourge (Job 5:21; cf. 1 Clem. 56:10).

In Jn. 2:15 Jesus made a whip (Gk. *phragéllion* is a loanword from Lat. *flagellum*) of cords when He entered the temple to cleanse it. Since weapons were forbidden in the temple area (cf. Mish. *Berakoth* ix.5), Jesus probably made His whip out of the ropes used to tie the animals. This rope was usually woven from the bedding material provided for the cattle (R. E. Brown, *Gospel According to John I–XII* [*AB*, 2nd ed. 1979], p. 115).

Jesus predicted that His followers would be beaten by the Jews and expelled from their synagogues (Mt. 23:34; cf. 10:17). Paul declared that he received five beatings of forty lashes less one (2 Cor. 11:24). Sosthenes, the ruler of the Corinthian synagogue, was beaten by his fellow Jews for bringing Paul before Gallio and losing the case (Acts 18:17).

The Romans used three forms of corporal punishment: beating (Lat. *fustigatio*), flogging (*flagellatio*), and scourging (*verberatio*). Freemen received punishments inflicted by either rods of birch or elm that were often bound together in a bundle. Slaves or non-Romans could be punished with whips made of leather straps or knotted cords often weighted with pieces of metal or bone. Roman law allowed their use in four situations: as a torture to promote the questioning of a prisoner, as a self-standing punishment, as a capital punishment (people were sentenced to death by beating), or as a preparation for execution. On some occasions these beatings were so severe that bones and organs were left exposed (Josephus *BJ* ii.21.5 [612]; vi.5.3 [304]).

Jesus predicted that He would be beaten by the Romans before His crucifixion (Mt. 20:19; Mk. 10:34; Lk. 18:33). Lk. 23:16, 22 record how Pilate attempted to placate the anger of the Jewish rulers by simply scourging Jesus, but when Pilate observed their dissatisfaction with this measure he then scourged Jesus as a prelude to His execution (Mt. 27:26; Mk. 15:15).

In spite of his Roman citizenship, Paul was beaten three times (2 Cor. 11:25). One of these beatings occurred at Philippi, where the local officials beat Paul and Silas; only later could Paul and Silas substantiate their legal citizenship (Acts 16:23, 37-40). The tribune Claudius Lysias also intended to have Paul punished as part of his interrogation until Claudius learned of Paul's citizenship (Acts 22:25-29). Such punishment became typical of the suffering experienced by God's people (He. 11:36).

SCOUT [Heb. *šālaḥ*] ("sent out scouts," 1 K. 20:17); AV "sent out"; NEB "word was sent." The RSV adds "scouts" to complete the meaning of the sentence in the context of battle between Ahab and Ben-hadad. The task of Ben-hadad's men was reconnaissance.

SCRABBLE (1 S. 21:13, AV, NEB). *See* MARK.

SCREECH OWL (Isa. 34:14, AV). *See* NIGHT HAG.

SCREEN [Heb. *māsāḵ*] (Ex. 26:36f.; 27:16; 35:12, 15, 17; etc.; Nu. 3:25f., 31; 4:5, 25f.); AV HANGING, COVERING, CURTAIN. Three linen screens formed part of the furnishings of the tabernacle; one at the gate of the courtyard, a second at the entrance to the tabernacle proper, and a third between the holy place and the holy of holies. For this third screen the Hebrew text also uses *pārōḵeṯ*, "veil." It differed from the other two screens in that it was made of richly-colored linen and embroidered with cherubim. Herod's temple had a similar curtain, which could have been what was torn in two when Christ was crucified (Mt. 27:51 par.).

SCRIBES [Heb. *sōp^erîm*; Gk. *grammateís*]. A class of literate professionals ranging from copiers, secretaries, and government officials in the earlier OT period to special scholars and teachers of the Torah in the postexilic and NT periods.

I. In the Preexilic Era
II. In the Exilic and Postexilic Eras
III. In Judaism
IV. In the Gospels
V. Their Significance

I. In the Preexilic Era.—The importance of scribes (in the basic sense of those trained to read and write) goes back to the first use of writing in the ancient centers of civilization, Babylon and Egypt. Clearly these skills automatically made the scribe both a necessary and a powerful member of society. The ruling class depended on the scribes for a great variety of practical matters, and gradually scribes evolved from mere copiers and recorders to influential members of the government and representatives of the king.

This increasing importance of the scribe is apparent in the early occurrences of the word in the OT. Scribes in the role of secretary of state are regularly listed among the cabinet members of the government (e.g., 2 S. 8:17;

A statue of a Greek scribe writing on a tablet, found at Thebes in central Greece, 6th cent. B.C. (RMN/ARS, NY/SPADEM)

20:25; 1 K. 4:3; Jer. 36:12). They continue to function practically as secretaries with a variety of responsibilities, such as keeping official financial records (2 K. 12:10; 2 Ch. 24:11) and mustering troops (2 K. 25:19; 2 Ch. 26:11). But they also assume considerable importance and authority as personal secretaries and counselors of the king (2 K. 18:18; 22:3; 1 Ch. 27:32; cf. Ps. 45:1 [MT 2]). Levite scribes mentioned in 1 Ch. 24:6 and 2 Ch. 34:13 foreshadow the later importance of priestly scribes. The reference to "the families of the scribes" in 1 Ch. 2:55 indicates the forming of guilds and the passing down of the scribal profession from father to son.

In a quite natural development, scribes came to be valued not simply for their technical skills but for the wisdom and understanding they frequently possessed (cf. 1 Ch. 27:32). The scribe thus came to be known as "the wise man" (cf. Isa. 33:18, LXX; 1 Cor. 1:20). In the viewpoint that was soon to emerge in all clarity, the scribe was considered a wise man particularly because of his expertise in the interpretation and application of the Torah. This close connection between scribes and the Torah is already hinted at in the reading of the book of the law by Shaphan, the scribe of King Josiah (2 K. 22:10; 2 Ch. 34:18).

II. In the Exilic and Postexilic Eras.–The origin of the scribes as a professional class of TORAH scholars is to be found in the exilic experience of Israel. During the Exile it was important to know specifically how the Law should be obeyed in a foreign context, and thus the initial elaborations of the Torah, later known as scribal tradition, came into existence. This scribal tradition, together with the synagogue, which developed under the same circumstances, came eventually to dominate Judaism after the destruction of Jerusalem.

A scribe of the exilic period who deserves mention is Baruch, Jeremiah's secretary. Baruch is not identified as a Torah scholar; he is instead a scribe in the earlier sense of the word: he takes down the prophet's dictation (Jer. 36:4, 18), he reads the words as Jeremiah's representative (vv. 6, 10, 15), and he collects and preserves these words (v. 32). This points to the probability that one of the important early tasks of the scribes was the custody and transmission of Israel's written scriptures. This work was indispensable to the gradual emergence of a distinct group of writings that came to be regarded as canonical.

The key figure of the early postexilic period is the paradigmatic scribe Ezra. Although Ezra is also a priest (Ezr. 7:11; Neh. 8:9; 12:26), it is in his role as scribe that he reestablishes the centrality of the Law for the people of Israel. When he is first introduced in the book of Ezra, it is as "a scribe skilled in the law of Moses which the Lord the God of Israel had given" (Ezr. 7:6) and "learned in matters of the commandments of the Lord and his statutes for Israel" (v. 11). He is responsible not only for the reading of the Torah to the people (Neh. 8:1-8) but also for its study (v. 13), the special province of the scribe. For these reasons Ezra stands at the head of the emerging class of scribes as Torah scholars.

A wonderful glimpse of the status and nature of the scribe *ca.* 180 B.C. is provided by Ben Sira (Sir. 38:24–39:11). The passage begins with the words, "The wisdom of the scribe depends on the opportunity of leisure," which point to the legitimacy of the scribal calling as a profession in its own right. Furthermore, while other professions are good and necessary, they are inferior to the scribe's. Only the scribe attains "eminence in the public assembly" and is "sought out for the council of the people"; only the scribe can sit in judgment and "expound discipline" (38:33). The scribe "devotes himself to the study of the law of the Most High"; he "will seek out the wisdom of all the ancients, and will be concerned with prophecies [a possible allusion to the threefold OT canon; cf. the prologue to Sirach]; he will preserve the discourse of notable men [i.e., maintain oral tradition] and penetrate the subtleties of parables" (39:1f.).

The scribe "will serve among great men and appear before rulers" as an ambassador (v. 4). "He will be filled with the spirit of understanding; he will pour forth words of wisdom . . ." (v. 6). "He will reveal instruction in his teaching, and will glory in the law of the Lord's covenant" (v. 8). "His memory will not disappear, and his name will live through all generations" (v. 9).

III. In Judaism.–According to Mish. *Aboth* i.1, "Moses received the Torah on Sinai, and handed it down to Joshua; Joshua to the elders; the elders to the prophets; and the prophets handed it down to the Men of the Great Assembly [*kᵉneseṯ haggᵉḏôlâ*]. They said three things: Be deliberate in judgment; raise up many disciples; and make a fence around the Torah." Jewish tradition identifies Ezra as the leader of the 120 men of the Great Assembly. The above description of the assembly's goals is a quintessential definition of the scribes' calling: they were responsible for making decisions in courts of law; they taught the Torah to their students; and they expounded the meaning and application of the Torah. As Jeremias stated, the scribes were the "possessors of divine esoteric knowledge" and, as such, "the immediate heirs and successors of the prophets" (*Jerusalem,* p. 241).

In their role of scholar-teachers the scribes, especially those of the Pharisees, gained enormous prestige among the people. They possessed considerable power (Jeremias described them as "a new upper class"), since they formed a significant portion of the seventy-one-member Sanhedrin in Jerusalem, the main governing body of Judaism. They were also members of the lesser judiciaries in their respective localities and frequently held office in the synagogue and civil affairs. They wore special, long robes like those of the nobility, were given seats of honor, and enjoyed reverential salutations (cf. Mt. 23:5-7). From the 1st cent. A.D. on they were referred to as "Rabbi" ("my great one") and were to be accorded more esteem than even one's parents (Mish. *Aboth* iv.12).

According to the rabbinic literature, scribes were expected to have a practical vocation by which to support themselves. They were not allowed to earn their living by their scholarship (Mish. *Aboth* iv.5; cf. ii.2; *Bekhoroth* iv.6). This stands in some tension with Ben Sira's view that the scribe's special calling demands leisure. According to Matthew, too, the message of the Kingdom is to be given "without pay" (Mt. 10:8), although the missionary is to receive his "food" for his labor (Mt. 10:10; in Lk. 10:7 this is broadened to "wages"). Paul, who was himself a scribe, earned his keep by tentmaking rather than by his preaching, even though he defended the right of missionaries to earn their living from the gospel (1 Cor. 9:3-14; cf. 1 Tim. 5:18).

All the parties within Judaism had their Torah scholars. Some scribes were priests, some were SADDUCEES, but the majority were PHARISEES. The scribes of the Pharisees were responsible for maintaining and developing the oral tradition, and thus for promoting the study and practice of the Torah. The formal student of the Torah (a *talmîḏ*), after a number of years of undistracted study that included living with his RABBI, and after demonstrating his expertise in case law, became a qualified scholar (a *talmîḏ ḥāḵām*); but according to the Talmud (T.B. *Sotah* 22b) he could not proceed to ordination (and the status of *ḥāḵām,* "wise man") until the age of forty. The type of school (*bêṯ hammiḏrāš*) to which Ben Sira invites the unlearned (Sir.

51:23) was to become an institution in the rabbinic Judaism of the centuries following the destruction of Jerusalem. Before A.D. 70 the schools of Shammai and Hillel became famous for their vying opinions on certain topics. Later the term "scribes" was used only for the Torah scholars of the early period, and *ḥᵃḵāmîm*, "wise men," came to be used for contemporary rabbis.

IV. In the Gospels.–The scribes of the NT are Torah scholars. They are referred to not only as Gk. *grammateís* but also as *nomikoí* ("lawyers," i.e., those trained in the application of the Torah), e.g., in Mt. 22:35 (par. Mk. 12:28 has *grammateús*) and Lk. 11:46, 52 (Mt. 23 refers to *grammateís*). The term *nomodidáskaloi*, "teachers of the Law," occurs in Lk. 5:17 and Acts 5:34 (where it refers to Gamaliel).

The word *grammateús* occurs fifty-seven times in the Synoptic Gospels, but not once in John (except in the inferior text of Jn. 8:3). In more than a third of these instances the scribes are linked with the Pharisees. Clearly the scribes, as authoritative expositors of the Torah, were particularly important as the transmitters and developers of the oral tradition that was so central to Pharisaism. In the Gospels scribes are also linked with other powerful segments of Jewish society, such as chief priests and elders, most of whom were probably Sadducees. They are consistently presented as Torah or Scripture scholars (e.g., Mt. 2:4; Mk. 7:1 par.; 9:11 par.; 9:14), teachers (Mk. 1:22 par.; 12:35), and guardians of orthodoxy/orthopraxy (Mk. 2:6 par.; 2:16 par.; 3:22; 11:27 par.; Lk. 6:7; 15:2). On the darker side, they are among the main instigators of Jesus' death (Mk. 8:31 par.; 10:33 par.; 11:18; 14:1 par., 43, 53 par.; 15:1; Lk. 11:53; 20:19; 23:10).

Despite their acknowledged authority (Mt. 23:2) and the seriousness of their quest for righteousness (cf. 5:20), the scribes associated with the Pharisees receive harsh criticism, particularly in the Gospel of Matthew. Jesus says that their tradition has canceled out the commandments of God (Mt. 15:3 par.), and He castigates them for their hypocrisy (15:7f. par.). Six times in Mt. 23:13-33 (cf. parallel material in Lk. 11:39-52; 20:45f.; Mk. 12:38f.) the blistering refrain occurs: "Woe to you scribes and Pharisees, hypocrites!" In a seventh woe they are described as "blind guides" (Mt. 23:16).

Behind this heated polemic lay the very real competition between Jesus and the scribes concerning the true interpretation of Moses. Jesus, whose authority in the interpretation of the Torah far exceeded that of the scribes (Mt. 7:29), was for the disciples the "one teacher," the "one master" (23:8, 10). While this competition went back to Jesus' ministry, it was perpetuated between the Church and the synagogue; this explains the importance and the especially harsh character of the Matthaean material. The criticisms of the scribes and the Pharisees in the Gospels are broad generalizations that need not have applied to all scribes and Pharisees; certainly they do not apply to scribism and Pharisaism in principle.

Matthew alone identifies as a scribe the man who volunteered to follow Jesus wherever He went (Mt. 8:19; cf. Lk. 9:57). According to Mt. 22:35 it was a "lawyer" (*nomikós*; a "scribe" in Mk. 12:28) who asked about "the great commandment in the law"; according to Mk. 12:34 Jesus told him, "You are not far from the kingdom of God."

V. Their Significance. The professional Torah scholars were charged with the very great responsibility of interpreting the Law. The scribes, following in the tradition of Ezra their forefather, made the study and teaching of the Law the center of their lives. When another scribe came into the picture teaching the dawning of the awaited Kingdom — a scribe neither formally trained nor ordained (cf. Jn. 7:15), who nonetheless spoke with a unique authority — a clash was inevitable. And yet, as much as Jesus had to oppose the scribes, in a real sense He Himself stood in continuity with their calling. As God had in the past sent scribes to Israel, so in the new era of the Kingdom He had sent the one teacher and master. Matthew, writing to Jewish Christians, continued to find significance for the calling of scribe — but now the Christian scribe, who is "trained for the kingdom of heaven" and likened to "a householder who brings out of his treasure what is new and what is old" (Mt. 13:52). In keeping with this, Matthew alone recorded these words of Jesus: "Therefore I send you prophets and wise men and scribes, some of whom you will kill and crucify, and some you will scourge in your synagogues and persecute from town to town" (23:34). These words found their fulfillment in the early missionaries who, functioning as scribes, presented a Christian interpretation of the Scriptures and the true meaning of the Torah, based on the teaching originally given by their Lord.

SCRIP. An archaic term used by the AV for a small BAG or WALLET.

SCRIPT [Heb. *kᵉṯāḇ*] (Est. 1:22; 3:12; 8:9); AV WRITING. During the Neo-Babylonian (608-539 B.C.) and Persian (538-331 B.C.) periods literacy increased. The dispatches mentioned in Esther were sent out in the dialects and scripts of the Persian empire — Aramaic, Babylonian cuneiform and a simplified adaptation of it, Egyptian demotic, and linear scripts developed elsewhere.

See WRITING.

SCRIPTURE [Gk. *(hē) graphḗ*]; NEB also "what (the prophets) wrote," TEXT, etc.; [*tó gegramménon* (pf. pass. part. of *gráphō*–'write')] (Lk. 22:37); AV "this that is written"; [*anágnōsis*] ("public reading of Scripture," 1 Tim. 4:13); AV READING. A term used by the English versions of the NT to denote the sacred writings of the OT. The sing. of Gk. *graphḗ* (often with the definite article) is frequently used to designate an individual passage of the OT that is quoted (e.g., Mk. 12:10; Lk. 4:21; Jn. 13:18; 19:24, 36f.; Acts 1:16; 8:35; Rom. 4:3; 11:2; 1 Tim. 5:18; Jas. 2:8, 23); but it can also refer to the OT writings as a whole (e.g., Acts 8:32; Gal. 3:8, 22; 1 Pet. 2:6; 2 Pet. 1:20). The pl. *hai graphaí* is always used to denote the whole body of OT Scriptures (e.g., Mt. 21:42; 22:29; 26:54, 56; Mk. 12:24; 14:49; Lk. 24:27, 32, 45). By the time 2 Peter was written the term "scriptures" had been extended to include Paul's Epistles (2 Pet. 3:16).

James 4:5 reads: "Or do you suppose it is in vain that the scripture says, 'He yearns jealously over the spirit which he has made to dwell in us'?" The text is problematic because the passage quoted can be found in neither the OT nor the Apocrypha. Among the solutions that have been proposed are: (1) James is referring to scriptural teaching in general and not a specific passage; (2) he may be quoting an unknown version of the OT; (3) he may be quoting an unknown apocryphal work (see comms., esp. P. Davids, *Epistle of James* [*NIGTC*, 1982], p. 162).

The AV uses "scripture" once in the OT in the phrase "the scripture of truth" (Heb. *kᵉṯāḇ ʾᵉmeṯ*, Dnl. 10:21); for the more accurate RSV and NEB rendering, *see* BOOK OF TRUTH. In 2 Tim. 3:15, AV, "holy scriptures" represents Gk. *hierá grámmata* (cf. RSV, NEB, "sacred writings"). In Jn. 5:39 the AV renders: "Search the scriptures, for in them ye think ye have eternal life." The Greek verb *eraunáte* can be rendered either as an imperative or as an indicative. The AV follows a tradition going back to Origen, Tertullian, and the Vulg., but all modern commentators prefer the indicative because it better suits the line of argument (cf. RSV "You search the scriptures . . . "; see comms.).

For B. B. Warfield's interpretation of several key NT references to "scripture," *see* INSPIRATION.

N. J. O.

SCRIPTURE, AUTHORITY OF.

I. Scriptural Testimony.–Thinking about scriptural authority must start with the fact that Scripture views itself as a message from God. One appeals to Scripture in this matter not for proof but for information. If the Bible claimed no unique authority as God's self-revelation, there would be no reason to assert that authority. There would also be no reason for absolute commitment to biblical teaching. On the other hand, if the Bible does in fact present itself as God's authoritative Word, then one must reckon with it as such, by receiving that Word or rejecting it.

To the question whether Scripture itself claims any special authority, the twofold answer is that the OT and NT everywhere imply this, and that they sometimes give it direct and open expression. It is implied, e.g., when, Moses is said to have received from God both the moral law and also detailed cultic and legal statutes. The prophets maintained that they spoke not their own words but words that God had given them. Christ spoke with authority (Mt. 7:29) because of His awareness that He spoke not merely as a teacher but as the eternal Son. The apostles spoke boldly because they had received the Spirit (Acts 2:1-36) and thus believed that they spoke God's word, whether quoting the OT, appealing to Christ's teaching, or presenting the gospel as the Spirit directed them.

In these instances authority is claimed primarily for spoken words rather than the written word. Even if Moses and the prophets or Jesus and the apostles had a special commission and hence had unique authority, the question arises whether the written version contains an accurate account of what they said, or whether there is any reason to ascribe the same authority to the written form.

The answer is implied by the OT's frequent references to writing as well as speaking. God told Moses to record the defeat of the Amalekites in a book (Ex. 17:14). At the giving of the law God Himself wrote the first tablets ((32:16), and Moses wrote "all the words of the Lord" (24:4). Joshua wrote an account of the covenant at Shechem in the book of the law of God (Josh. 24:26). Josiah treated as authoritative the book of the law that was found in the temple (2 K. 22:8-16). Jeremiah committed his oral messages to writing (Jer. 36:1-4), adding to the record when the king destroyed the first scroll (vv. 27-32). Ezra read and expounded the law so as to teach the redeemed community how to fulfil its covenant obligations (Ezra 8).

In the NT Jesus Himself gives abundant testimony to the written form of God's Word. He answered the tempter with a threefold "It is written" (Mt. 4:3-10). He saw in His ministry a fulfillment of the passage from Isaiah that He read at Nazareth (Lk. 4:16-21; cf. Isa. 61:1f.). He predicted His death and resurrection on the basis of what was written (Lk. 18:31). He showed His disciples how everything had to be fulfilled that was written about Him in the law, the prophets, and the Psalms (24:44). Along similar lines the Evangelists stressed the foretelling of His person and work in the OT (e.g., Mt. 1:22f.). Paul's preaching to his own people consisted largely of a demonstration of Christ's messiahship from the OT (Acts 17:2f., 11). Other NT writers quoted the OT with the same deference as Paul (cf. 1 Pet. 1:24f.; 2:6-10; Jas. 2:21-25; He. 1:5-13; 2:5-8; etc.). Indeed, two explicit statements give the stamp of distinctive divine authority to the OT writings: 2 Tim. 3:16, which says that all Scripture is inspired by God, and 2 Pet. 1:20f., which states that no "prophecy of scripture" came by human impulse but "men moved by the Holy Spirit spoke from God."

Direct witness to the authority of the NT is naturally less readily available. Yet statements may be adduced that cumulatively amount to endorsement of the special authority of the apostolic writings as well. Luke claims to be offering an authoritative historical account in Lk. 1:1-4. John's Gospel roundly asserts that it is written to evoke the response of faith and resultant newness of life in Christ (Jn. 20:31). Revelation concludes with a warning not to add to the words of the book or to subtract from them (Rev. 22:18f.). 2 Pet. 3:16 seems to include Paul's Epistles among the scriptures. The second quotation in 1 Tim. 5:18 might also come from an early collection that forms a basis for the present NT (cf. Mt. 10:10). Sayings of Jesus obviously enjoy an uncontested authority (Acts 20:35) even if a written version does not always exist in the Gospels (for an example that is written, cf. 1 Cor. 7:10f.). Taken with the authority that is always implied, these references leave little room for doubt that the NT as well as the OT claims unique authority as God's written word.

II. Historical Testimony.–The early Church inherited from the NT a recognition of the authoritative status of the OT. The introductions to OT quotations in the Apostolic Fathers demonstrate this. Copious quotations show a high regard for the NT too, and as early as 2 Clement and Justin Martyr (*ca.* A.D. 150) the formula "It is written" came to be used for NT references. Justin (Apol. 67) reveals also that the Church granted to the "memoirs of the apostles" a liturgical status similar to that enjoyed by the "writings of the prophets." Shortly afterward, the Church was devoting attention to the question of a canon of NT writings, as shown by the witness of the Muratorian Canon. Theologians like Irenaeus, Tertullian, and the Alexandrians acknowledged biblical authority both implicitly by the use they made of Scripture and explicitly by statements emphasizing its position. Beginning in the 3rd cent. commentaries on the Bible provided doctrinal and devotional materials. In the 4th and 5th cents. biblical passages played an important role in the great trinitarian and christological controversies. The Nicene Creed endorsed the OT with the confession that the Holy Spirit "spoke by the prophets." Augustine summed up the thinking of this early period with the judgment that Scripture rests "on the highest pinnacle of divine authority" (*Ep.* 82). (*See also* CANON OF THE OT; CANON OF THE NT.)

Doubts about the extent of the NT canon plagued the Church for many years, and the inclusion of the so-called Apocrypha in the LXX enlarged the Christian canon of

the OT. Hermeneutical differences, e.g., between Antioch and Alexandria, caused practical difficulties in the application of biblical authority. At the functional level the supreme authority of Scripture was challenged by secondary standards in the form of creeds, councils, and hierarchical rulings. The appeal to tradition, made in good faith by Irenaeus and Tertullian in reply to Gnostic heresy, carried with it an incipient if unintentional threat. The erosion of scriptural authority gained force in the Middle Ages when the lack of adequate translations robbed the laity of biblical knowledge, deficient education of the clergy compounded errors, the intrusion of philosophy had a corrupting impact on theology, unsupported popular traditions multiplied, and the ecclesiastical hierarchy defined as necessary to salvation dogmas that at best could claim only the flimsiest basis in Scripture.

Nevertheless, the Church never renounced the divine authority of Scripture. Schoolmen like Thomas Aquinas found a basis for their theses in the Bible, and the papacy (e.g., in Unam Sanctam, 1302) appealed to biblical verses in its efforts to establish papal primacy. Thus, when the sixteenth-century Reformers reasserted scriptural authority they were simply attempting to apply more rigorously in practice what the Church already believed in principle. In so doing, they claimed that the Bible teaches everything necessary to salvation (Thirty-Nine Articles, VI; Second Helvetic Confession, I), that nothing is to be commanded that is contrary to it (Theses of Berne, 2), that all things in the Church should be examined, regulated, and reformed according to Scripture (Gallican Confession, V), that the Bible is the sure rule of faith and truth (Gallican Confession, IV and V), that the Holy Spirit speaking in Scripture is the supreme Judge (Westminster Confession, I.x), that the Bible should be translated for the benefit of all Christians, and that under the Holy Spirit the natural sense of Scripture offers the key to authoritative exposition, not the interpretation of the so-called teaching office. Unavoidably, difficulties arose in the application of these principles as the Reformers differed sharply on many matters of faith and order. Yet by their adherence to the unique authority of Scripture and their consistent attempts to give it practical expression, the Reformers made an incomparable contribution in this area.

The modern period brought new threats to biblical authority. On the one side liberal scholars engaged in literary and historical research that questioned traditional authorships, challenged factual reliability, rejected or refashioned divine inspiration, and promoted a relativism destructive to doctrinal and ethical absolutes. On the other side Roman Catholicism embraced a doctrine of papal infallibility which along with the concept of dogmatic development, permitted the weakening of biblical authority by addition or expansion. The authority of Scripture, however, found new and eloquent supporters in Reformed circles, varying widely from B. B. Warfield to K. Barth. Moreover, as the tide of Liberalism receded to some extent, and as Roman Catholicism gave itself with new zeal to the study and translation of Scripture and to a reconsideration of its primacy as a source of revelation, Scripture regained in these circles something of the acknowledgement of its unique authority that its own testimony demands.

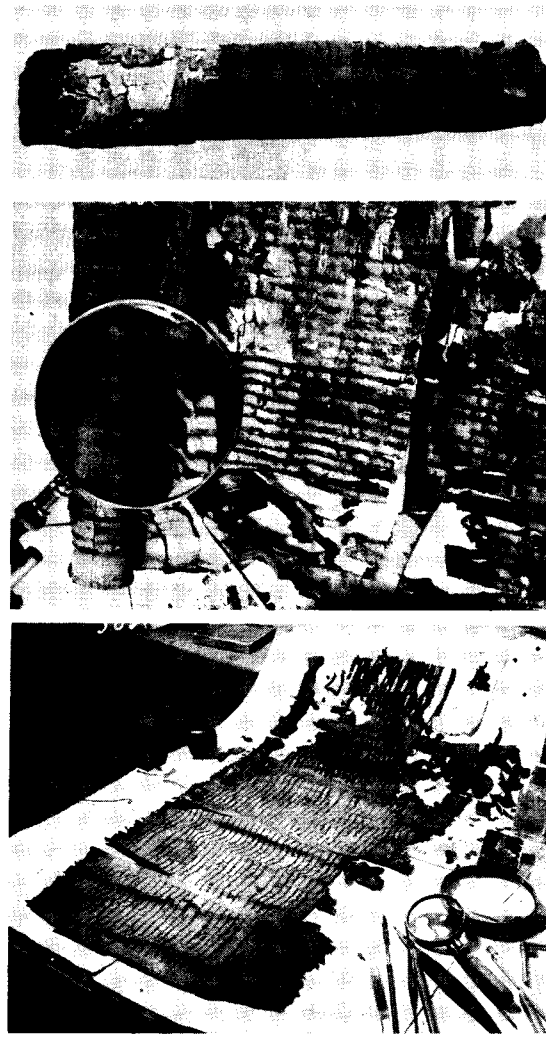
G. W. BROMILEY



Three stages (from top to bottom) in the painstaking procedure of unrolling a Dead Sea Scroll, in this case the Genesis Apocryphon (The Shrine of the Book, Israel Museum)

SCROLL [Heb. *m^egillâ* (Jer. 36:6, 14, 20f., 23, 25, 27-29, 32; Ezk. 3:1-3; Zec. 5:1f.), *m^egillaṯ-sēper* (Jer. 36:2, 4; "written scroll," Ezk. 2:9), *sēper* (Isa. 34:4; Jer. 36:8, 10f., 13, 18, 32); Aram. *m^egillâ* (Ezr. 6:2); Gk. *biblíon*– 'book, scroll' (Rev. 5:1-5, 8f.; 6:14; 10:8), *biblarídion*– 'little book' ("little scroll," Rev. 10:2, 9f.)]; AV also ROLL, ROLL OF A BOOK, BOOK, LITTLE BOOK (Rev. 10:8-10); NEB also BOOK; the RSV supplies "scroll" (AV "book") in Rev. 5:7. An early form of the book, used before the development of the codex (i.e., writing done on flat surfaces such as boards, vellum, or parchment, which were sometimes folded once [folio] and bound or sewn). A papyrus scroll (without writing) was found in an Egyptian tomb dating to *ca.* 3000 B.C.

As the word *m^egillâ* (from the root *gll*, "roll, be round") suggests, the scroll was rolled up, both before and after being written upon. Contrary to some artists' representations, the rolled scroll was not opened from top to bottom but from side to side, as is clearly demonstrated by the Dead Sea Scrolls. The writing space was usually marked off by scribing vertical lines for the columns and horizontal lines for the written lines. The scribing was done with a blunt-pointed instrument that left a slight indentation but no colored mark.

Hebrew *m^egillâ* apparently was a later word, found only in Jeremiah, Ezekiel, Zechariah, and Ps. 40:7 (MT 8).

The earlier and more widely used word was *sēper* ("document, writing, book"), which was perhaps a loanword taken early from Akk. *šiprum* ("message, messenger"; cf. I. J. Gelb, *Glossary of Old Akkadian* [1957], p. 281), although the change from *š* to *s* has not been explained. The etymology that relates *sēper* to the root *spr* ("count, recount, tell"), and thus to *sōpēr* ("muster-officer, counter, secretary, scribe") has been disputed. The *sēper* was intended to preserve records, as indicated by Ex. 17:14, "Write this as a memorial in a book [*sēper*]." The official records of kings were kept in the *sēper dibrê hayyāmîm* (lit. "scroll of the events of the days") followed by the appropriate modifier (e.g., "of Solomon," 1 K. 11:41; "of the kings of Israel," 14:19). A fuller term is used in Est. 6:1, where the purpose ("remembering," "memorial") is added to the more common expression.

The account of the burning of Jeremiah's scroll (Jer. 36:20-23) provides some information about a scroll of the 7th cent. B.C. It was divided into columns (v. 23) and could be cut with a knife and burned in the fire in the brazier. It was probably a papyrus scroll, since burning that much leather in a closed room in winter would have made the place practically uninhabitable for hours or even days.

At what period the scroll was introduced in Israel is uncertain. Evidence from the Amarna Tablets and archeological discoveries at several sites suggest that clay tablets written in cuneiform were used widely in Palestine in the 14th cent. B.C. The ruler of Byblos *ca.* 1100 B.C. received papyrus as part of the payment for timber (J. H. Breasted, *History of Egypt* [1919], p. 517); this importing of papyrus by the Phoenicians was probably connected in some way with the development of the Phoenician alphabet. Most likely the use of papyrus scrolls spread to Israel not long after that. Hence scrolls were the most probable form of the "chronicles" of the kings of Israel and Judah, and, in view of Solomon's close connections with the Phoenicians, it is entirely possible that he used papyrus for his records (1 K. 11:41).

Both *m^egillâ* and *sēper* are translated by Gk. *biblíon* in the LXX. The expression "scroll of the book" (Gk. *kephalís biblíou*) in He. 10:7 is a quotation from the LXX of Ps. 40:7 (MT 8) (Heb. *m^egillaṯ-sēper*). Eng. "Bible" comes from the plural form *biblía* ("books"), which might be what Paul had in mind when he asked Timothy to bring "also the books, and above all the parchments" (2 Tim. 4:13) — although the more usual word for the Scriptures was Gk. *grámmata* (3:15; cf. Rom. 3:2). At any rate, Paul's use of the two words *biblía* and *membrána* reflects the fact that scrolls were written on both papyrus and leather. Both materials have been found in caves at Qumrân and Murabba'ât.

"Scroll" is used figuratively in Isa. 34:4 and Rev. 6:14. Both passages, describing the cataclysmic events that will herald the last days, depict the destruction of the heavens with the image of a scroll suddenly rolling up.

W. S. LASOR

SCRUPLES [Gk. *syneídesis*] (1 Cor. 10:29); AV, NEB, CONSCIENCE. This Greek term is usually translated "conscience" in the RSV, but here it denotes the ethical considerations that inhibit an individual from acting in a certain way, rather than the mechanism of moral discrimination. *See also* CONSCIENCE.

The RSV Apocrypha uses "scrupulous" (Gk. *akribḗs*, Sir. 19:25) and "scrupulously" (*epimelṓs*, 1 Esd. 6:29 [LXX 30]; 8:21) with reference to a strict adherence to law. Sir. 19:25 observes that it is possible for clever persons to keep the letter of the law while perverting its purpose of establishing justice. In 4 Macc. 4:13 "have scruples" represents the vb. *eulabéomai*, "be afraid."

N. J. O.

SCUM. *See* RUST.

SCURVY [Heb. *gārāḇ*; LXX *psóra agría*] (Dt. 28:27); AV SCAB; NEB SCABS. The term "scurvy" is a modified form of the medieval Eng. "scurfy," meaning "covered with scurf." This was a morbid cutaneous condition, especially of the scalp, in which flakes or scales formed and were precipitated.

The reference is apparently to an itching scalp disease such as would be characteristic of the *tinea* infestations. Such ailments have no relationship to the disease known as scurvy (*scorbutus*), which results primarily from a deficiency of vitamin C. It is unfortunate that the RSV introduced confusion on this matter by using "scurvy"; the NEB rendering "scabs" (cf. AV) indicates the most likely nature of the disease.

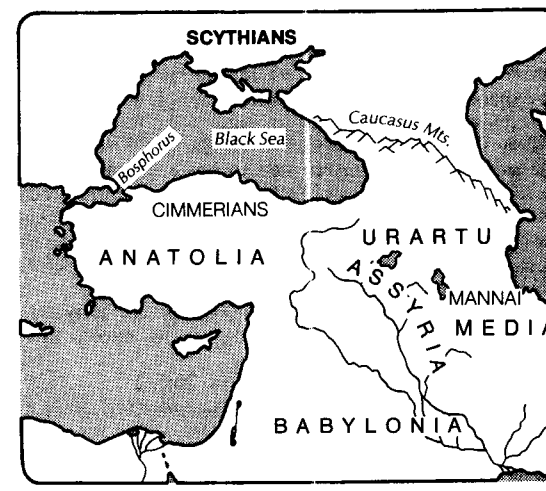
SCYTHE. *See* CHARIOT V.

SCYTHIANS sith'ē-ənz [Gk. *Skythai*] (Col. 3:11); OT **ASHKENAZ** [Heb. *'aškᵉnaz*; Assyr. *Iškuzai, Ašguzai*] (Gen. 10:3; 1 Ch. 1:6; Jer. 51:27); AV also ASHCHENAZ. A nomadic people that originated in Central Asia. Disturbances on the northwestern Chinese border in the 8th cent. B.C. may have been a major factor in their movement westward to trouble the Near East for the next two hundred years.

Of Indo-European stock, these nomads had learned the art of breaking and riding the horses of the Asian steppes, where they pastured their flocks and lived in tents and covered wagons. Their simple life had little use for writing, so scholars today must depend on references in the records of other peoples for information about Scythian language and history. In *Hist.* iv Herodotus furnished much descriptive material about the Scythian people and their customs. The skepticism with which some scholars have viewed his accounts has been dispelled with the discovery of rich burial mounds, preserved in the frozen ground of the Altai region of Central Asia, conforming in almost every detail to the Greek historian's accounts of funerary practices.



SCYTHIANS

Driving the Cimmerians before them (*see* GOMER), the Scythians crossed the Caucasus and moved into eastern Anatolia (Urartu) and northwestern Persia during the 8th cent. B.C. There they came against the outposts of Assyria, whose ruler Sargon II (*ca.* 722-705 B.C.) checked them. Later Sargon's grandson Esarhaddon (*ca.* 680-669 B.C.) defeated a coalition of Scythians and Manneans in northwest Persia (*ARAB*, II, 517, 533). But the Medes were a more potent threat to the Assyrians, so Assyria engaged Scythian help to counter the Median pressure; a daughter of Esarhaddon was given in marriage to a Scythian chieftain, Bartatua. Just after the middle of the 7th cent. B.C. the Scythians apparently became strong enough to control much of Anatolia, Urartu, and the Manneans for two or three decades, and also for a time the Median kingdom. The TABLE OF NATIONS alludes to the Scythian presence in Anatolia in listing Ashkenaz as one of the "sons" of Gomer (the Cimmerians) (Gen. 10:3; 1 Ch. 1:6).

Probably no more than a loose confederation of tribes, the Scythians were unable to sustain a large realm, and after about twenty-eight years their Median subjects regained their liberty. Allied with Babylon, the Medes aided in the overthrow of Assyria and the fall of Nineveh in 612 B.C. The part played by the Scythians in these events is unclear; if they aided Assyria at first, they apparently changed sides before its defeat. The empire was divided by the Babylonians and the Medes, with the Medes taking the Persian and Anatolian provinces, including much of land occupied by Scythians.

Obscurity surrounds the tradition of a Scythian invasion of Palestine in the 7th cent. B.C. Eusebius's *Chronicle* (completed by Jerome) notes the extension of Scythian power to Palestine *ca.* 630 B.C. According to Herodotus this event occurred during the Scythians' twenty-eight-year domination of "Asia" (i.102-106; iv.1), a period roughly occupying the third quarter of the century. Herodotus recorded the penetration of a Scythian detachment as far as Ashkelon where any further advance was bought off by Psamtik of Egypt.

Despite the doubts of some scholars, the movement across Syria and Palestine of a Scythian band *ca.* 630 B.C. is quite feasible. Certainly the Assyrian forces had beaten off Cimmerian attacks in Cilicia ten or fifteen years earlier; but the events of the ensuing years are unknown, and a decline in Assyrian power is very likely. An alternative date in the last decade of the century seems less probable in the light of fairly full knowledge of those years gleaned from the Babylonian Chronicle. Whatever its date — and the earlier date is preferable — the Scythian incursion was confined to the main road S and may have been little more than a major raid. If this opinion is correct, the "foe from the north" depicted by Jeremiah was probably not the Scythians (Jer. 4:5–5:21; 6:1-26; 14:17–15:9), for there is no trace of an onslaught so terrible as the prophet foretold, apart from the Babylonian invasion under Nebuchadrezzar, nor is the chronology easy to follow (contra H. H. Rowley, *Men of God* [1963], pp. 140-153).

Material evidence of Scythian presence in the Fertile Crescent is elusive. A form of bronze arrowhead with three blades and a curved barb on the shaft, found at sites from Armenia to Palestine, is commonly termed Scythian, and may have been used by these famous bowmen. The types of objects found in the main area of Scythian occupation N of the Black Sea are very rarely found S of Anatolia, showing that the Scythians hardly crossed the horizon of the OT world. That is the position they occupy in Jeremiah's prediction of Scythian troops joining men of Urartu and Mannai in the conquest of Babylon, which

Scythian bowmen may have used bronze arrowheads of this distinct design, with three blades and a barb on the shaft (drawing A. Millard)

is perhaps a reference to the constituents of Cyrus's army (Jer. 51:27).

The chief group of Scythians, the "Royal Scyths," established themselves in the lands N of the Black Sea from the Caucasus around to the Danube. While the bulk of the people continued their nomadic life, a minority eventually settled in a few towns; their capital in Crimea was known to the Greeks as Neapolis. Here the Scythians made contact with Greek merchants, exchanging slaves, timber, and grain for sophisticated Greek goods. Indeed, it was to cut the supply of timber and grain that Darius I led his armies from Persia across the Bosphorus, the Danube, the Dnieper, and the Don in a vain attempt to subdue the Scyths (*ca.* 513 B.C.).

Greek workmanship and influence is evident in outstanding metal vessels from princely tombs, but the Scythians are justly renowned for their own art. Cast and chased plaques of gold and bronze representing the animals familiar to the herdsman and the hunter are typical. Some are naturalistic, others stylized in flowing patterns traceable across Europe in the art of Celtic and Saxon Britain. In Persia similar designs are found in the multitude of bronzes from Luristan. Here it is hard to distinguish the product of one folk from that of another; Median and Scythian styles mingle, incorporating designs from earlier centuries and from Assyria and Urartu.

By the 1st cent. A.D. the coasts of the Black Sea were hellenized, and even Jewish settlements existed there. But to the Greeks the Scythians represented the opposite

On this gold clothing ornament (5 cm., 2 in., high), two Scythians drink from the same horn, apparently a common Scythian ritual (4th cent. B.C. from Crimea) (Lee Boltin)

of civilization, what English usage would term savagery. This reputation is reflected in the references in 2 Macc. 4:47; 3 Macc. 7:5; 4 Macc. 10:7, and it is apparently in this sense also that the word is employed by Paul in Col. 3:11 to show the comprehensive embrace of Christian equality.

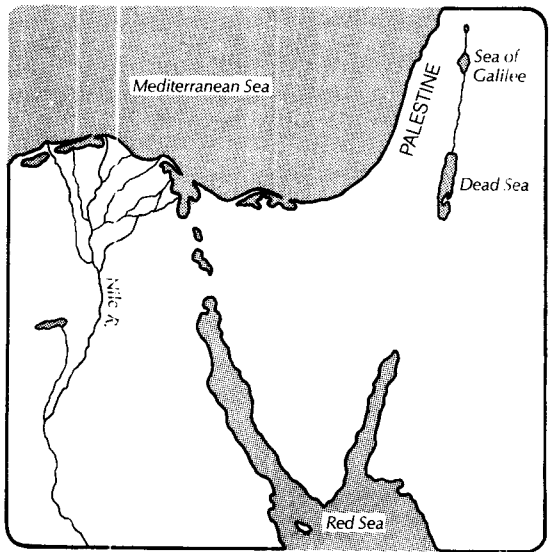
SEA [Heb. *yām*, also *mayim*—'waters' (Ps. 18:15 [MT 16]; Ezk. 27:26), *gal* ("wave of the sea," Ps. 107:25, 29); Aram. *yām* (Dnl. 7:2f.); Gk. *thálassa*, also *parathalassíos* ("by the sea," Mt. 4:13), *pélagos* ("open sea," Acts 27:5), *bythós* ("depth of the sea," 2 Cor. 11:25), vb. *anágō* ("put to sea," Acts 27:2, 4, 12)]; AV also WATERS, DEEP (2 Cor. 11:25), SEA-FARING MEN (Ezk. 26:17), LAUNCH (Acts 27:2, 4), DEPART (v. 12), etc.; NEB also COAST, ROADSTEAD (2 Ch. 2:16; Ezr. 3:7), DEEP (Isa. 27:1), LAKE, OCEAN, RIVER (Isa. 10:26), WATER(S), SALT WATER (Lev. 11:9f.), WATERS OF THE NILE (Ezk. 32:2), NILE (Isa. 63:11; Nah. 3:8), EUPHRATES (Zec. 10:11), DEAD SEA (2 Ch. 20:2), RED SEA (Josh. 24:6; 1 Cor. 10:1), WEST (Nu. 11:31; 1 K. 18:43f.; Isa. 24:15), WESTWARDS (Josh. 15:46; 16:6), MONSTER OF THE DEEP (Job 9:8; 26:12; Ps. 74:13), etc. Any large body of water (of glass only in Rev. 4:6; 15:2); primarily used of oceans, their major offshoots, and lakes, but occasionally of rivers and of water in a container (*see* SEA, MOLTEN).

In biblical cosmology the sea, the heavens, and the earth (or dry land) constitute the basic structural components of the universe (Ps. 135:6; Hag. 2:6; Acts 4:24; Rev. 5:13; etc.). At creation God collected the waters covering the earth's surface into "seas" of fixed limits and stocked them with living creatures (Gen. 1:9f., 20f.; Job 38:8; Acts 14:15; Rev. 14:7; etc.). The dry land that thus emerged was itself anchored in subterranean seas (2 S. 22:16; Ps. 18:15 [MT 16]; 24:2), the same waters whose gushing forth contributed to the Great Flood (Gen. 7:11; 8:2). God the Creator maintains mastery of the seas. His power stirs up the sea's fits of rage and thunderous roar (Isa. 51:15; Jer. 31:35; Jonah 1:4); His rebuke subdues and silences them (Ps. 89:9 [MT 10]; Isa. 50:2; Nah. 1:4). God's parting of the Red Sea was, for biblical writers, the classic example of His might (Ex. 14:21; 15:1, 4; Josh. 4:23; 24:6f.; Ps. 78:13, 53; Acts 7:36; He. 11:29; etc. cf. His parting of the Jordan River, Ps. 114:3, 5). Jesus' calming of the stormy Sea of Galilee testifies to the same might (Mt. 8:24-27 par.). The psalmists commanded the sea to roar in praise of God's righteous rule (Ps. 69:34 [MT 35]; 96:11; 98:7).

This alabaster relief depicts Assyrian trading vessels dragging or carrying logs in the sea, which contains various creatures including a merman (left) and a huge serpent (center). From Khorsabad, 721-705 B.C. (CNMHS/ARS, NY/SPADEM)



Four seas figure prominently in the Bible. Along the west coast of Palestine lies the MEDITERRANEAN SEA, which the Bible calls "the Great Sea" (Heb. *hayyām haggāḏôl*, Nu. 34:6f.; Josh. 15:12, 47; Ezk. 47:10, 15, 19f.; 48:28), "the western sea" (*hayyām hā'aḥ^{a}rôn*, lit. "the aftermost sea," i.e., to their backs [as they faced E],

The Mediterranean Sea near the ruins of Leptis Magna, a major Roman port city in North Africa (R. H. Smith)

The Dead Sea shore S of Masada (L. K. Smith)

Dt. 11:24; 34:2; Joel 2:20; Zec. 14:8; AV "uttermost," "utmost," or "hinder sea"), "the sea of the Philistines," (Ex. 23:31), or simply "the sea" (cf. Acts 10:6, 32; 17:14; 27:30, etc.). Its waters ferried building materials for the temple from Lebanon (1 K. 5:9 [MT 23]; 2 Ch. 2:16), the prophet Jonah toward Tarshish (Jonah 1), and Paul to Rome (Acts 27; 28:11; 2 Cor. 11:25f.). Its location to Palestine's west probably explains the use of the Hebrew word *yāmmâ* to mean "west" (e.g., Gen. 13:14; Nu. 2:18; *see* NATURAL FEATURES VIII).

Much of Jesus' ministry, on the other hand, happened on and around the Sea of Galilee (*thálassa tḗs Galilaias,* Mt. 4:18; 15:29; Mk. 1:16; 7:31; *thálassa tḗs Tiberiados,* Jn. 6:1; 21:1), a lake in northeast Palestine that the OT calls "the Sea of Chinnereth" (*yām kinn^{e}reṯ,* Nu. 34:11; Josh. 13:27) or "Sea of Chinneroth" (*yām kinn^{e}rôṯ,* Josh. 12:3; NEB always "Sea of Kinnereth"). *See* GALILEE, SEA OF.

The RED SEA was the site of the deliverance of Israel from Egypt (Ex. 10:19; 13:18; Nu. 14:25; Dt. 1:40; etc.). The Heb. *yām-sûp* ("sea of reeds"?) refers either to a marshy area E of the Nile delta or, more probably, to the south end of the Bitter Lakes region (in the NT lit. "Red Sea," Gk. *erythrá thálassa,* Acts 7:36; He. 11:29). Isa. 11:15 calls it "the sea of Egypt" (*yām-miṣrayim*).

The Bible calls the DEAD SEA "the Salt Sea" (*yām melaḥ,* Gen. 14:3; Nu. 34:3; etc.; NEB "Dead Sea"), "the sea of the Arabah" (*yām hā^{ʿ}rāḇâ,* Dt. 3:17; 4:49; Josh 3:16; etc.; AV "sea of the plain"), "the eastern sea" (*hayyām haqqaḏmōnî,* Ezk. 47:18; Joel 2:20; Zec. 14:8; AV "east" or "former sea"), or simply "the sea" (Isa. 16:8; Jer. 48:32).

In addition, the Bible applies *yām* to the rivers Nile (Nah. 3:8; cf. Isa. 19:5) and Euphrates (Jer. 51:36); cf. Isa. 21:1, where it probably refers to the Persian Gulf. Neither the RSV nor the NEB takes Heb. *yām yāpô'* (Ezr. 3:7) to be a place name (but cf. AV "sea of Joppa"; cf. also 2 Ch. 2:16). The second occurrence of *yām* in Jer. 48:32 (AV "sea of Jazer") should probably be omitted, reading with the LXX.

Though Israel was not a naval power like its Phoenician neighbors, under Solomon it did launch a fleet from Ezion-geber that brought the king gold from Ophir (1 K. 9:27f.; 10:22; 2 Ch. 8:17f.; cf. the sailors' experience, Ps. 107:23-32). The Israelites observed that rain came from the sea (1 K. 18:43f.; Am. 5:8; 9:6; cf. Eccl. 1:7). Moreover, biblical writers frequently used maritime metaphors. They compared the "sand of the sea" to the blessing of many descendants (Gen. 22:17; 32:12; Isa. 48:19; Rom. 9:27), sizable armies (Josh. 11:4; Jgs. 7:12; Rev. 20:8), amazing wisdom (1 K. 4:29 [MT 5:9]), and a weighty calamity (Job 6:3). The sea's stirring provided an apt description of human restlessness (Isa. 57:20; Jer. 49:23), a doubter's instability (Jas. 1:6), and shameful carousing (Jude 13). The sea's expanse was used to describe great distances (Ps. 139:9; Am. 8:12), wide political domains (Ps. 72:8; etc.), the vast ruin of Jerusalem (Lam. 2:13), and Yahweh's limitless wisdom (Job 11:9). Biblical writers compared the finality of God's forgiveness to the burial of Israel's sins in the ocean depths (Mic. 7:19). The prophets looked forward to a day when the earth would be as full of the knowledge of God as the sea is full of water (Isa. 11:9; Hab. 2:14). Jesus said that the sea's roar would announce His return (Lk. 21:25).

Biblical writers also saw the sea's sinister, treacherous side (cf. its association with death in Jonah 2:1-6) and described the rise of satanic powers from its depths (Dnl. 7:2f.; Rev. 13:1). Thus John's vision that "the sea was no more" (Rev. 21:1) probably suggests the end of evil or of life's turmoil.

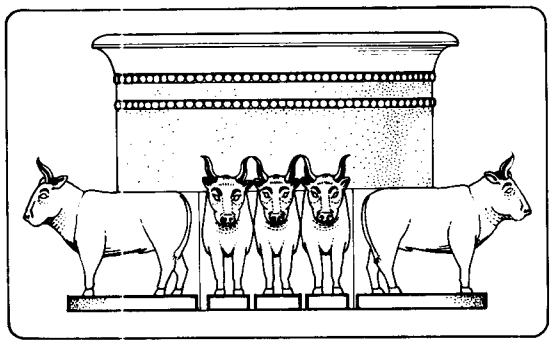
SEA GULL [Heb. *šaḥap*; Gk. *láros*; Lat. *Larus canus*] (Lev. 11:16; Dt. 14:15); AV CUCKOO; NEB LONG-EARED OWL. A web-footed aquatic bird of the family Laridae. The RSV has based its translation on the LXX and Vulgate. The NEB translation is based on the suggestion of G. R. Driver (*PEQ,* 1955, pp. 5-20), who argued that the place of the *šaḥap* on the two lists pointed to a land bird. But the long-eared owl is nocturnal and rare, whereas the sea gull is diurnal and common all along the Mediterranean coast and around the Sea of Galilee. Among the species that have been recorded are the common gull, the herring gull, the black-headed gull, and the lesser black-backed gull. Its conspicuous nature makes the sea gull a more likely candidate for the abomination list than either the cuckoo or the long-eared owl. To a steady diet of fish, gulls add refuse that they are able to scavenge along the shore, as well as such items as small birds and bird eggs. Thus they would have been classed as unclean birds. N. J. O.

SEA, HINDER. *See* MEDITERRANEAN SEA; SEA.

SEA, MEDITERRANEAN. *See* MEDITERRANEAN SEA.

SEA, MOLTEN [Heb. *yām mûṣāq*]; NEB SEA OF CAST METAL. A gigantic basin of bronze supported by twelve bronze bulls and placed in the courtyard to the southeast of Solomon's temple (1 K. 7:23-26; 2 Ch. 4:2-5). The "sea" was cast by Hiram of Tyre, who was responsible for all the bronze work at the temple (1 K. 7:13f.). According to 1 Ch. 18:8 (where the basin is called the "bronze sea") the bronze used was taken by David in battle.

The basin's diameter was 10 cubits (about 4.4 m. or 14 ft. 7 in., assuming the cubit was 17.5 in.), its height 5 cubits (2.2 m. or 7 ft. 4 in.), and its circumference 30 cubits (13.3 m. or 43 ft. 10 in.). It was a "handbreadth"



A reconstruction of the molten sea based on the biblical description (L. Bauer, after T. A. Busink)

(about 8 cm. or 3 in.) thick. Its weight has been estimated at roughly 30 tons, its capacity at close to 45,425 l. (12,000 gals.). This latter figure is based on a capacity of 2,000 baths, as stated in 1 K. 7:26; but 2 Ch. 4:5 gives the capacity as 3,000 baths. C. C. Wylie suggested that the figure in Kings was computed on the assumption that the "sea" was hemispherical in shape, whereas the figure in Chronicles assumed a cylindrical shape.

The brim of the basin turned outward, suggesting the curvature of a lily flower. Under the brim were ornamental "gourds" (MT *pᵉqāʿîm*, 1 K. 7:24) in two rows. In place of "gourds" 2 Ch. 4:3 reads "the likeness of oxen" (*dᵉmūṯ bᵉqārîm*; cf. RSV mg.); some have thought this historically more probable, arguing that the text in Kings may have deliberately avoided a reference to bulls because of their association with Jeroboam's idolatrous cult. T. Willi, however, suggested that the Chronicler here did not understand his source.

The twelve bulls supporting the "sea" were arranged in four groups of three, each group facing a point of the compass (1 K. 7:25; 2 Ch. 4:4). It has been suggested that the bulls were pediment figures with their back parts hidden under the curve of the basin, which rested on the ground. These bulls were later removed by Ahaz (2 K. 16:17; Jer. 52:20 indicates that they remained for Nebuchadnezzar to remove, but the phrase "the twelve bronze bulls" is lacking in the par. 2 K. 25:16); the "sea" was then set upon a stone base (or, perhaps, directly on the pavement of the courtyard). After the fall of Jerusalem in 587 B.C., the "sea" was broken in pieces and the bronze taken to Babylon (2 K. 25:13 par. Jer. 52:17).

According to 2 Ch. 4:6 the "sea" was used for the priests' purification, apparently as a replacement of the LAVER of the tabernacle. Most scholars, however, seek some symbolic significance as well because of possible links with the artificial "seas" connected with Mesopotamian temples. (The closest archeological parallel to Solomon's "sea" is a large stone basin from Amathonte in Cyprus, now in the Louvre.) Possibly, then, the water of the basin represented the cosmic sea, and its containment within the basin signified Yahweh's triumph over the waters of chaos (cf. Ps. 89:9 [MT 10]; 93:3f.). But in the absence of any clear indication of how the *Israelites* understood the symbolism of the "sea," de Vaux has wisely advised that such suggestions be treated with great caution.

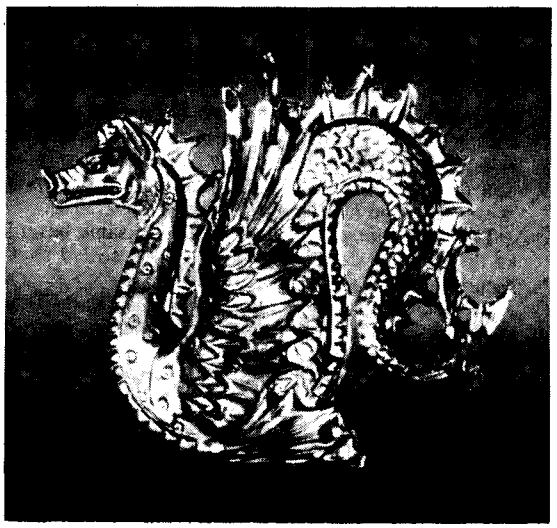
SEA MONSTER [Heb. *tannîn* pl. *tannînîm*; LXX *kētos*, *drákōn*] (Gen. 1:21; Job 7:12; Ps. 148:7); AV WHALE, DRAGON; NEB also MONSTER OF THE DEEP, "water-spout." In a number of texts the RSV translates *tannîn* by "serpent" (*see* SERPENT; in the DSS *tnyn* occurs with this meaning, e.g., 1QH 5:10, 27; CD 8:9f.; 19:22) or "dragon" (*see* DRAGON; cf. LXX). In Jer. 51:34 the personified Jerusalem likens its capture by Nebuchadrezzar to being swallowed "like a monster" (Heb. *tannîn*). In its other occurrences *tannîn* denotes a mythical sea monster subdued by Yahweh at creation. See the similar monster in the Ugaritic texts (e.g., *ANET*, p. 138); its relation to *ltn* (OT LEVIATHAN?) and *ym* is uncertain (see A. Cooper, in S. Rummel, ed., *Ras Shamra Parallels*, III [1981], 424-28).

In Gen. 1:21a the huge sea monsters (*hattannînîm haggᵉḏōlîm*) are specified over against the general reference to the other members of the aquatic kingdom. In Ps. 74:13 the Lord's shattering the "heads" (Heb. *rōʾšê*) of the *tannînîm* is confessed as an act that took place at creation (cf. T. Ash. 7:3). This provides the traditio-historical background for Job 7:12, where Job denies that he should be guarded like the *tannîn*. In Ps. 148:7 the *tannînîm* are counted among the inhabitants of the earth who are to praise Yahweh. In Isa. 51:9 the slaying of the monster by Yahweh refers to the Exodus. In 27:1 the tradition is eschatologized, and the defeat of Leviathan and *tannîn* inaugurates the new world order envisioned in chs. 24–27.

These texts may reflect a divine battle ideology in which cosmic events determine historical realities. Yahweh's defeat of the primeval sea monster represents victory over

A half-man, half-fish creature depicted on a stone orthostat from the temple (or palace) of Kapara at Tell Ḥalâf (Neo-Hittite, ca. 9th cent. B.C.) (Staatliche Museen zu Berlin, DDR, Vorderasiatisches Museum 8799)



A Scythian gold clothing ornament in the shape of a sea monster (Crimea, *ca.* 4th cent. B.C.) (Lee Boltin)

chaos and is the (cosmic) presupposition for orderly existence (see the dragon/serpent in Rev. 12; 20:2). A disputed reference to the battle in Egyptian literature may be found in "The Instruction for King Merikare" (line 131): "He [the deity] subdued the water monster" (M. Lichtheim, *Ancient Egyptian Literature*, I [1973], 106; cf. *ANET*, p. 417; W. Helck, *Die Lehre für König Merikare* [1977], pp. 83-86, offers an alternative interpretation).

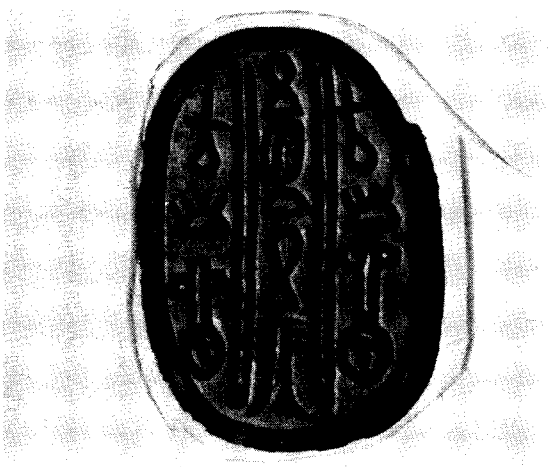
SEAL. Any one of a variety of small engraved objects used for many types of sealing activities or worn as charms.

I. OT Terms
II. NT Terms
III. Seals and Scarabs in the Ancient Near East

I. OT Terms.–The most common word for "seal" in the OT, *ḥôṯām*, can apparently refer to several different types of seals. In Gen. 38:18 Judah probably gave Tamar a scarab, if the late patriarchal period is dated to the Hyksos period (the Middle Bronze II.C period — *ca.* 1700-1550 B.C.) when scarabs were very frequent in Palestine (see III.C below). Alternatively, it could have been a cylinder seal, but these were more common in the Early Bronze Age (*ca.* 3000-2200 B.C.) in Palestine. Jer. 22:24 refers to a seal worn upon the hand, probably indicating a stamp seal in a ring casing, which was very popular in Jeremiah's day. The same word can also refer to the impression, or bulla, which results from the sealing act (Job 41:15 [MT 7]). Although normally made of semiprecious stones, materials mentioned in the Bible include gold (Ex. 28:36) and onyx (Ex. 39:6).

Biblical uses for seals include a pledge (Gen. 38:18), decoration for priestly garb (Ex. 28:11, 21, 36; cf. 39:6, 14, 30) and the sealing of letters (1 K. 21:8). Figuratively the seal is used to indicate change (e.g., as the seal changes the clay, Job 38:14), the identity of a lover (Cant. 8:6; the seal upon the heart may be an allusion to the Egyptian mummification practice of placing scarabs in the heart so the heart would not betray its owner at the judgment; if so, the seal also indicates romantic loyalty in this passage), attachment (Hag. 2:23), and the deputized power of God (Hag. 2:23, where Zerubbabel is like a seal to God). In Gen. 38:25 the hapax legomenon Heb. *ḥōṯemeṯ* is clearly a derivative of *ḥôṯām*.

A white steatite seal with remnants of its former bronze casing. The base of the seal is divided into three vertical bands. The hieroglyphs may read *nfr, ḥ', nfr* ("beauty, appearance, beauty") on right and left columns, and in the center, *w3ḥ, m3 't, R', w3ḥ, ḏd* ("enduring, truth, Re, enduring, stability") (M.B. IIC from Shechem) (Joint Expedition to Shechem, photo L. C. Ellenberger)



This seal impression on clay once sealed a papyrus document, as indicated by the fabric impression on the reverse side. The design shows the Persian king as a hunter. Found at Shechem (stratum V) (Joint Expedition to Shechem, photo L. C. Ellenberger)

The cognate verb Heb. *ḥāṯam* indicates other uses for seals. These include sealing up the door of a treasury (Dt. 32:4), the sealing of important legal documents, in one case a covenant (Neh. 9:38) or in another case a deed (Jer. 32:10), the sealing of a royal edict (Est. 3:12; 8:8), and the sealing of a scroll (Isa. 29:11). Figurative use is again very rich, indicating ideas such as constipation (Lev. 15:3, the bowels are sealed), shutting off from sight (Job 9:7; 14:17; Cant. 4:12), restriction of knowledge (Isa. 29:11; Dnl. 9:24; 12:4), and perfection (Ezk. 28:12, alluding to the gem quality of most seals).

The basic meaning of Heb. *ṭabba'aṯ* must refer to a ring in its widest sense including finger rings and rings used in furniture and textiles (*see* RING). In Gen. 41:42, however, when Joseph is given the accoutrements of deputized pharaonic power, which included a ring, a scarab was probably embedded in it, because a seal is more symbolic of deputized power than a mere ring. Likewise in Est. 3:10, 12; 8:2, 8, 10 it is worn on the hand like a ring, but is also used to seal royal edicts of the Persian king.

In Dnl. 6:17 (MT 16) the Aramaic noun *'izqā* seems to refer to a normal seal (note that the verb *ḥāṯam* is used).

II. NT Terms.–The Greek word *sphragís* seems to refer to the same type of object used for similar purposes. It is used to seal up scrolls (Rev. 5:1; 6:1; etc.) and can figuratively indicate covenant ratification (Rom. 4:11, where Paul may be alluding to the Jewish circumcision prayer, which calls circumcision a "seal of the covenant"), identity (1 Cor. 9:2, where Paul's converts are the identification [seal] of his apostleship), and ownership (2 Tim. 2:19; Rev. 9:4) implying security.

The cognate verb *sphragízō* shows that seals could be used to seal doors (Mt. 27:66, in this case the rolling stone of a tomb; cf. Herodotus ii.121 for the practice of sealing tombs). Figurative contexts include ratification of belief in truth (Jn. 3:33), thereby being sealed to redemption (2 Cor. 1:22; Eph. 1:13), restriction of knowledge (Rev. 10:4), and imprisoning the devil (Rev. 20:3).

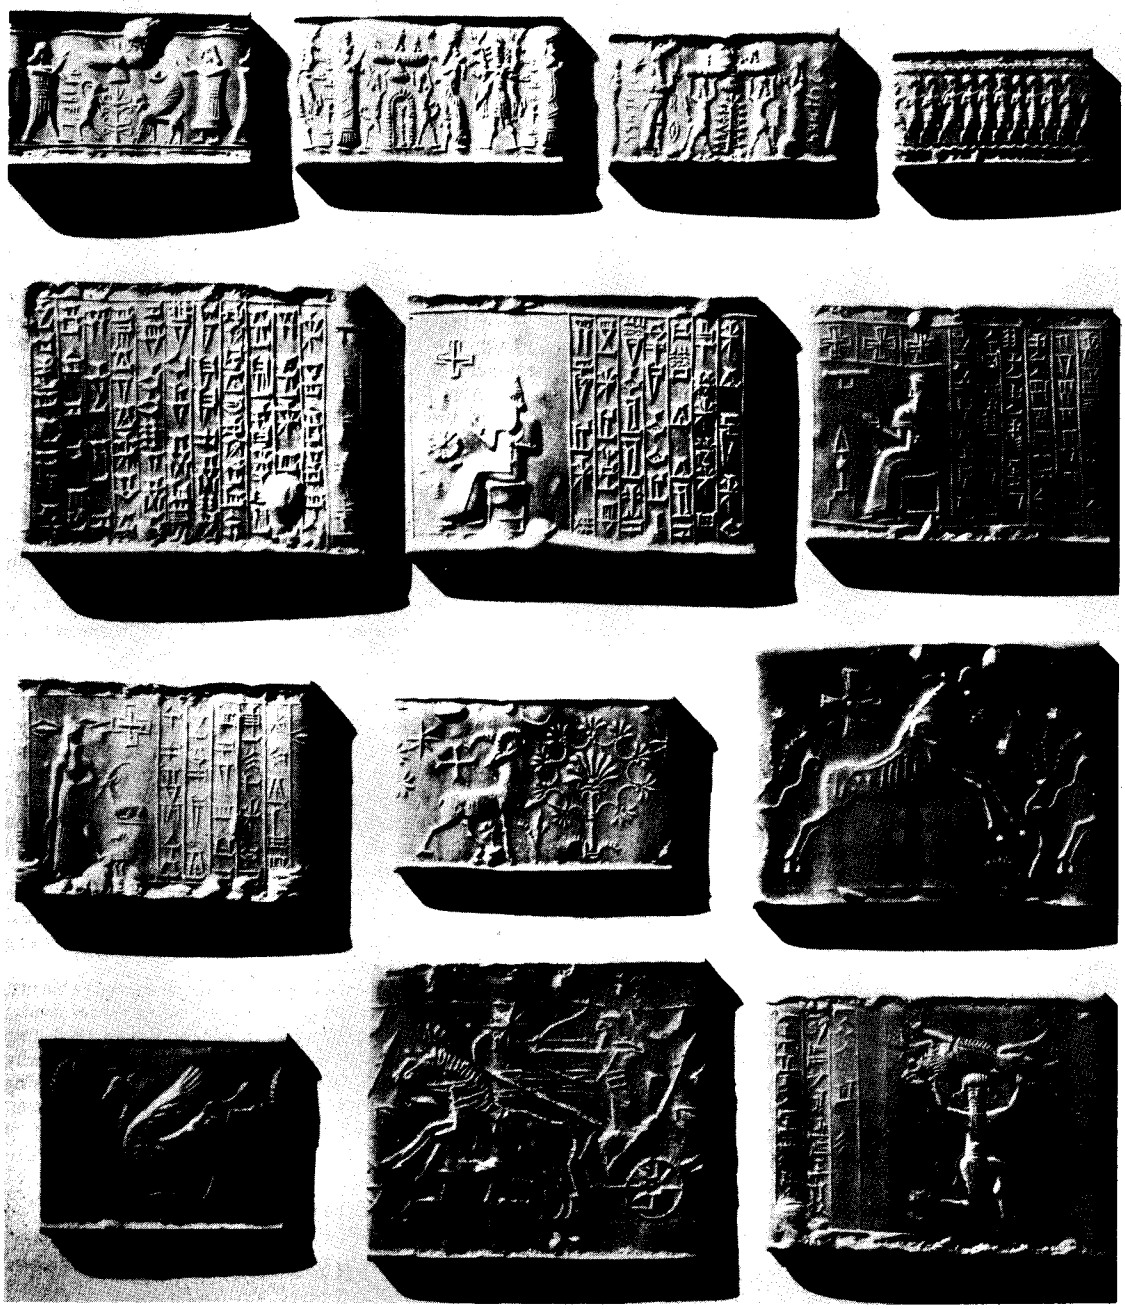
The term *katasphragízō* refers to the same basic idea as the previous term, where a scroll is sealed shut for security and authentication.

III. Seals and Scarabs in the Ancient Near East.–The following discussion of seals and scarabs from the ancient Near East is basically in chronological order. Although a regional factor is involved in the appearance of the various types of seals (cylinder seals in Mesopotamia, scarabs in Egypt, and alphabetically inscribed stamp seals in the Levant), one may plot the history of seals and sealings from region to region by arranging them chronologically in order of appearance.

A. Origins. Although an isolated find of what may have been a seal made of unbaked clay and engraved with a crude swastika was found in Neolithic levels of Jericho (*ca.* 7000 B.C.), seals as a group of artifacts do not seem to have begun prior to the late 4th millennium B.C. Probably first appearing as stone amulets and charms, their use for identification and authentication soon became apparent to the landlords and merchants of early Mesopotamia. The earliest seals were stamp seals found both in tombs and in settlements. They were designed to be hung from the neck, wrist, and possibly also the waist, either on a cord by themselves or together with beads in a necklace or bracelet. A hole was bored through the stone to accept the cord. Pictographic writing does not appear on the earliest seals. The spaces are instead engraved with geometric designs. Sites where these earliest seals have been found include Susa in the south and Gawra and Arpachiyah in the north.

B. Cylinder Seals. Contemporary with the development of writing is the consistent appearance of cylinder seals in southern Mesopotamia. Found by the thousands through-

An Assyrian cylinder seal made of stone and speckled with an azure blue pigment. It depicts an animal with horns, hooves, and a bull's head and tail, and common Assyrian seal motifs: the winged disk over a stylized tree, the seven stars of the Pleaides, and a moon-crescent (found in a fill at Shechem, probably dating between the 13th and 11th cents. B.C.) (Joint Expedition to Shechem, photo L. C. Ellenberger)



Impressions of Assyrian, Kassite, Neo-Babylonian, and Phoenician cylinder seals from the 18th to 7th cents. B.C. (courtesy of the Trustees of the British Museum)

out the Near East they remained in vogue for about 2,500 years, from *ca.* 3000 B.C. to the period of the Neo-Babylonian empire (6th cent. B.C.). During the 3rd millennium B.C. they were carried by merchants and officials throughout the Fertile Crescent; many have been found at Palestinian sites. The Mesopotamian seals seem to have been the impetus behind the earliest Egyptian seals. Their long history and wide geographical dispersion led to a wide variety in styles of decoration which, outside of archeological contexts, have become the basis for dating the seals usually within a century or two.

Cylinder seals are small and barrel shaped, normally no larger in diameter than a finger and no longer than 2 or 3 cm. (an inch). They can be made of a variety of materials, but most common are semiprecious gem stones, such as lapis lazuli, carnelian, blue chalcedony, pink marble, and jasper. Other materials include gold, silver, ivory, haematite, and even glazed pottery. Some stones were not used because they were apparently considered "unlucky."

The engraved decoration on the seals (done in reverse) was geometric in the early periods, but religious scenes

quickly became popular. These latter included mythological and legendary scenes as well as religious symbols such as trees, heavenly luminaries, animals, and flowers. During the Early Dynastic period (early 3rd millennium B.C.) the seals began to have inscriptions. Generally the inscription included the name of the owner, sometimes the owner's title, and, more rarely, an expression of loyalty to the king. Frankfort's study is generally considered the seminal study of glyptic art. But compare his work especially with those of E. Porada and A. Ben-Tor.

Normally these seals have a small hole bored through the long axis of the barrel so that the seal could be hung by a cord from the neck, wrist, or waist, with or without other beads. When the seal was needed, the owner could easily remove it from his person and roll the seal over damp clay with the palm of his hand. The distinctive scene on the seal, easily identified as belonging to the owner, emerged on the clay which, when hardened, could be relatively easily preserved. Many of these impressions have been found either in their fragile, unbaked form or in a much more permanent form when the impression was, for one reason or another, brought in contact with a fire and baked.

From their archeological contexts and their appearance on inscribed cuneiform texts the seals were used to mark ownership on objects, either by direct impression as on ceramic vessels or by affixing a clay impression to the object by means of string. They were frequently used to secure documents, especially official documents. They could also be used much like a modern signature on contracts to imply legal assent.

The idea of the cylinder seal seems to have been exported from Mesopotamia to Egypt in Predynastic times, where cylinder seals with similar designs and symbols, but more lightly etched, were placed in tombs. No impressions of these Predynastic seals have been found. Cylinder seals continued in use during the Old Kingdom. They came to be represented in the pictographic determinative for words like "seal" in hieroglyphic. They were primarily used by kings and high officials for administrative use and to seal goods in pyramids.

C. Scarabs. The Egyptian scarab is a small seal made of semiprecious stone carved in the shape of a dung beetle with a hieroglyphic inscription or design on the flat side. These seals developed over a period of time from a variety of amulets and charms made like stamp seals beginning near the end of the Old Kingdom and flourishing during the First Intermediate Period. The majority of these amulets were made of steatite and many were covered with a glaze, sometimes filling the engraved design. They were thus apparently not used as seals.

In the Middle Kingdom the outlines of a dung beetle, *Scarabaeus sacer,* began to be carved on the back side of the seals, perhaps because the beetle, as a symbol of resurrection and long life, added to the charm factor of the amulet. Because the scarab beetles deposited their eggs in balls of dung and pushed them in front of them, they reminded the ancient Egyptians of the creator god, Kheper-Re, who rolled the sun across the sky; and because the young later emerged from the ball, the dung beetle took on a very important role in the symbolism of Egypt, tying in eternal life with Kheper-Re. The flat side of the scarab seal was engraved with the names and titles of kings and officials. They could be worn as necklaces or bracelets or could be attached to rings and worn on the finger for easy use. When the growing bureaucracy of the Middle Kingdom expanded the number of state officials, the production of scarabs was stimulated greatly. Several persons from this period in fact retained the title of "sealer" or "royal sealer."

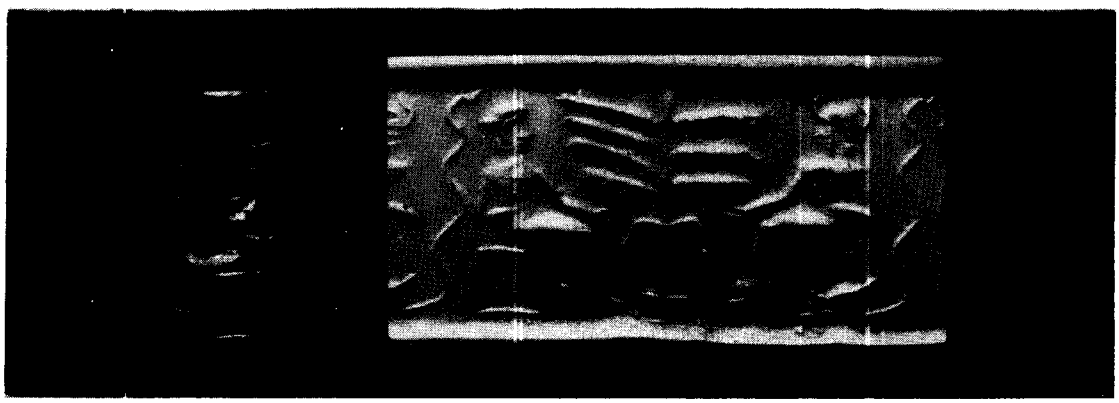
During the Second Intermediate Period scarabs became very popular, often containing inscriptions with good wishes. During the Hyksos dynasties, however, the inscriptions were many times meaningless.

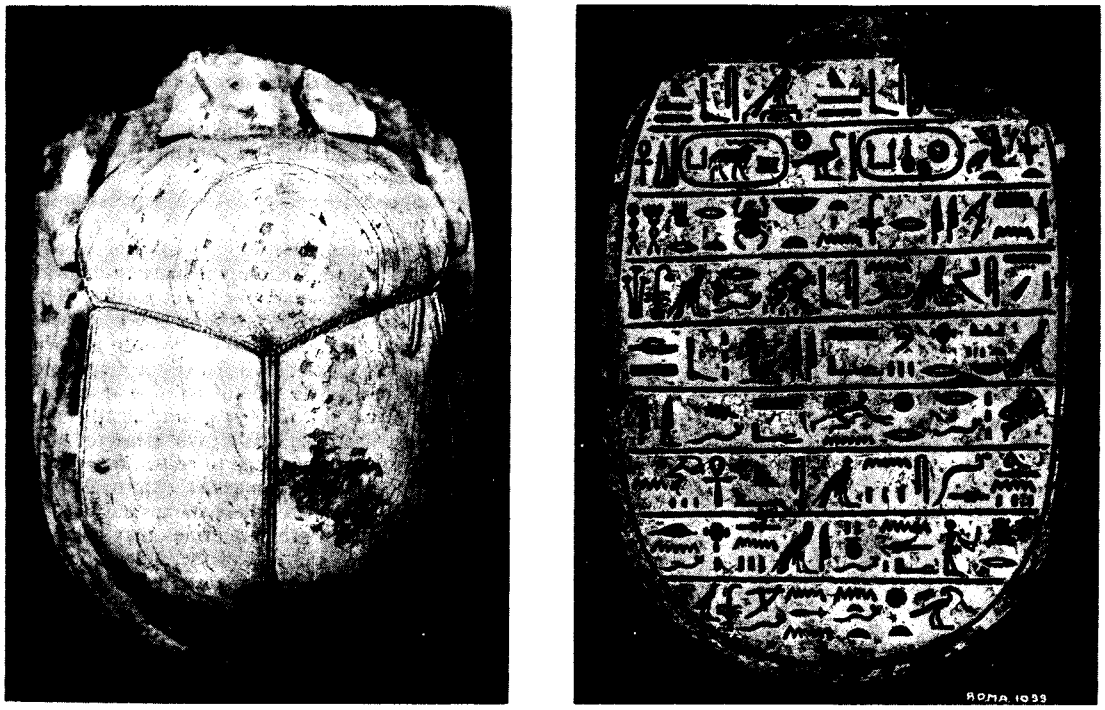
Because most of the scarabs from Egypt itself have been acquired on the antiquities market, while those from Palestine have been found in excavations, the development of scarabs can be better documented in Palestine than in Egypt (see esp. Tufnell). Hundreds of scarabs from the Hyksos period have been found in Palestine, many with meaningless inscriptions. After the New Kingdom scarabs were no longer officially produced, but reproductions flowered for several more centuries.

Scarabs are useful for dating purposes when found on excavations because they often contain the name of a king of Egypt whose reign is known chronologically. However, there is also very good evidence that scarabs were kept as heirlooms for generations and, in some cases, centuries. Therefore they must be used carefully along with other dating evidence.

Although scarabs were probably often used as charms, it would seem that they were used as seals in similar ways as were cylinder seals in Mesopotamia. The ring given to Joseph by Pharaoh in Gen. 41:42 undoubtedly contained a scarab, since the scarab and not the ring embodied the identity and authority of the king by containing his name and titles. Anyone having the use of such an object had the deputized power of the king. The

A Sumerian (3rd millennium B.C.) cylinder seal and impression depicting a sacred tree with a seated god on one side and a woman and a snake on the other (courtesy of the Trustees of the British Museum)





A scarab of the Egyptian king Shabaka proclaiming his victory over rebels and foreign enemies (716-701 B.C.) (Royal Ontario Museum)

practice of depositing scarabs in the heart of the deceased during the mummification process may be alluded to in Cant. 8:6.

D. Inscribed Stamp Seals. Between the late 9th cent. and the early 6th cent. B.C. inscribed stamp seals became popular in the region of Syro-Palestine. These seals and their impressions have been found in relatively great numbers in recent times. At present there are over 600. Well over half of these are from Israel and Judah, especially the latter. There are also well over 100 Aramaic seals (around 20 of these are cylinders), approximately 50 Ammonite seals, about 10 each from Moab and Edom, and over 20 from Phoenicia (scores of other seals from this last region and its colonies are, however, uninscribed).

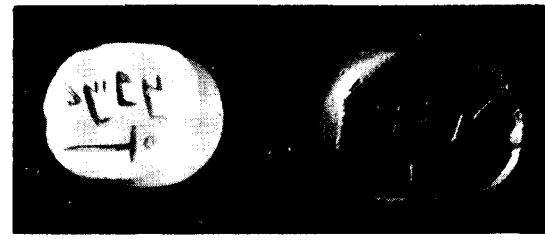
The form of these seals seems to have developed from the Egyptian scarab, which apparently was considered an important heirloom in Palestine. The seals are often carved in the size and form of scarabs, though at times without the scarab design. Rarely, they are conical. Most were made of semiprecious stones, though they also appear in limestone, bone, and various metals. Some were probably also made of wood. During the 8th cent. Israelite and Judean seals were often decorated with animals, plants, and rarely people, but in the 7th cent. decoration consisted solely of one or two engraved lines separating two lines of inscription. At times stylized fruits or simple decorative motifs embellished the lines.

A few of the seals were found to show signs of being encased within a ring setting and a few have had holes bored through them for wearing on a string. It is unknown, however, how most of the seals were carried — perhaps in the owner's purse or pouch. They seem to have been used much like the earlier cylinder seals of Mesopotamia and the scarabs of Egypt. An analysis of the biblical references, most of which refer to these types of seals, indicate that they were used to seal official documents (Jer. 32:10) and letters (1 K. 21:8). Archeological evidence suggests that they were also used to indicate ownership (seal impressions on objects such as pottery) and the sealing of containers to ensure the quality and/or quantity of merchandise.

These seals are important for several branches of study, including ancient Syro-Palestinian art, Northwest Semitic onomasticon (the study of names), and paleography (the study of the development of writing). Using all these lines of study, especially that of paleography, one may now identify the various national groups to which the seal owners belonged and to date many of them to within a generation or two of their engraving.

Normally the inscriptions contain the name of the owner together with the word *ben* ("son of") or *bat* ("daughter of" — a few owners were women) followed by the name of the owner's father. A few seals list the title of the owner instead of the patronym. Some of these titles are of interest, often relating the owner to the king. The phrase *bn hmlk*, "son of the king," refers to a member of the royal family. A few of these may be identified with future biblical kings, e.g., the seals of "Manasseh

A Hebrew seal of exceptionally clear blue chalcedony. It says "belonging to 'Mibneh' or 'Miben,'" possibly a shortened form of "Mibneyahu" or "Mibne-'El," meaning creature of Yahweh or God. The symbol below might be an upright mace (early 8th-late 7th cent. B.C.) (Joint Expedition to Shechem, photo L. C. Ellenberger)



A Hebrew sea was found at Megiddo that read "(Belonging) to Shema servant of Jeroboam." This is a bronze cast of the jasper original from the 8th cent. B.C. which has been lost (courtesy, Israel Department of Antiquities and Museums)

the son of the king," and "Jehoahaz the son of the king." Both these seals have been dated paleographically to the times when these individuals would have been princes in their fathers' courts.

Another interesting title, *'bd hmlk* ("servant of the king"), refers to an official who was probably an important member of the royal bureaucracy. Sometimes the king's name is mentioned instead of the phrase "the king," such as Jeroboam II, Ahaz, Hezekiah, and Uzziah. The use of the word "servant" for such a high official may indicate that the servant in the Servant Songs of Isaiah, who has certain royal attributes, should be seen as a highly honored deputy of God rather than a humble slave. Two other titles, *'šr hmlk* ("henchman" or "official of the king") and *'šr 'l hbyt* ("who is over the house"), may refer to high governmental positions as well. A few seal owners are called *spr* ("scribe"). One Ammonite owner even claims to be a devotee of Astarte of Sidon, a Phoenician deity, indicating a certain international syncretism in the region.

Many of the Hebrew names on the seals are familar from biblical personages, though only rarely can the name be identified with the known biblical personality. Three seals contain the name Jeremiah, but none can be dated to the prophet's lifetime. Other biblical names include Hananiah, Gedaliah, Menahem, Jeroboam, Manasseh, Jotham, Jehoiachin, Nehemiah, and many more. But these are popular Hebrew names of the biblical period and do not necessarily belong to the biblical personages of those names. Indeed, some identifications which have in the past been made with biblical people must now be abandoned. The seal of Jotham is often identified with the king who ruled Judah in the 8th cent., but it is actually an Edomite seal from the 7th cent. The seal of "Gedaliah who is over the house" is from the middle of the 7th cent. and thus most likely does not belong to the Gedaliah who ruled Judah from 586 to 582. The seal of "Eliakim the representative of Yaukin [Jehoiachin]" has often been identified with an official of King Jehoiachin, but the seal dates to the 8th cent. and not the early 6th cent. when Jehoiachin ruled.

Other names certainly refer to biblical persons. The most famous single seal is of the "servant" of Jeroboam II. Another seal, mentioning a certain Jaazaniah and dating to the late 7th cent., may be the person mentioned in 2 K. 25:22. Three seals were discovered near Jerusalem which refer to biblical persons mentioned in Jeremiah: "Berechiah the son of Neriah the scribe" can refer only to Baruch (a nickname for Berechiah) the scribe of Jeremiah; "Seriah the son of Neriah" was Baruch's brother mentioned in Jer. 51; "Jerahmeel the son of the king" was a princely official known from Jer. 36. Finally, in 1984 a seal impression of a servant of Baalis (Jer. 40:41) was discovered at Tell el-Umeiri in Jordan. This is the first extrabiblical reference to this king.

E. Royal Stamps. Hundreds of seal impressions have been found on jar handles at sites in the region of Judah. The oval impressions are inscribed with the word *lmlk* ("belonging to the king") in the upper portion and with the name of one of four towns in the lower portion: Hebron, Ziph, Socoh, and *Mmšt* (the last town is not known from the Bible). Separating these two inscriptions is a winged scarab, sun disk, or scroll. Because the impression is usually found on a single type of jar, it is assumed that the impression was intended to guarantee the capacity of the vessel by signifying it as a royal measure. Another view holds that they were used to collect taxes in kind. They may also have been connected with royal commercial enterprises. The date of these stamps has been much debated. One group of scholars claims they belonged to the late 7th cent. at the end of the Judean monarchy, while others date them to the late 8th cent. during the reign of Hezekiah. The crux of the matter is the date of the destruction of Level III at Lachish, because it is the corpus of pottery from Lachish III which is used to date all other deposits where royal stamps also occur. Archeological consensus is presently moving from an early 6th cent. date to *ca.* 700 B.C. for the destruction of the stratum. If correct, this would date all royal stamps to the late 8th century.

F. Yhwd Stamps. Many seal impressions inscribed with the name Yehud, for Judah, have been found in and around Jerusalem dating to the Persian period. Written in several spellings in either Hebrew or Aramaic script (*yhd, yhwd, or yh*), they occur like the royal stamps only on a certain type of jar probably used for wine and seem to have indicated official approval of capacity. Some of the stamps also contain a private name, possibly that of an official. A few similar impressions are inscribed with the name Jerusalem, usually together with a five-pointed star.

G. "Rhodian" Jar Handles. Seal impressions in Greek on the handles of two-handled jars from the Aegean are frequent in Hellenistic layers of Palestinian cities. Although most come from the island of Rhodes (whence their name), they also come from other Aegean islands, such as Cos and Knidos. Generally they date to the 3rd and 2nd cents. B.C. and include an inscription giving the name of an official and the month of manufacture or information concerning the potter. Lists of the officials derived from the inscriptions whose dates are known enable very precise dating, a boon to the archeological endeavor. The jars were intended to contain exported wine. Because each island had its own "brand" of wine, the impressions may have denoted the quality of the wine, as well as ensuring its quantity.

SEALED FOUNTAIN [Heb. *ma'yān ḥāṯûm* (pass. part. *ḥāṯam*; cf. *ḥôṯām*–'seal')] (Cant. 4:12). A metaphor for a chaste woman. Sealing a fountain would secure it against access by any but the rightful owner. *See also* SEAL.

SEALSKIN (AV mg. Ex. 25:5; Ezk. 16:10). *See* GOATSKINS; LEATHER.

SEAM, WITHOUT [Gk. *árraphos*] (Jn. 19:23); NEB SEAMLESS. According to John the soldiers cast lots for Jesus' tunic because it was "without seam," and they did not want to tear it (vv. 23f.). To weave a tunic of this sort did not demand exceptional skill; thus the garment was not necessarily a luxury item (see Brown, II, 903). According to Josephus (*Ant.* iii.7.4 [159-161]) the high priest wore a long, blue robe that was woven in one piece and had slits for the head and the arms. The seamlessness of Jesus' tunic has given rise throughout history to various symbolic interpretations of this passage (see Brown, II, 920-22; Lindars, p. 578; Morris, p. 809).

SEARCH. *See* SEEK.

SEARCHINGS OF THE HEART. *See* SEEK.

SEARED [Gk. pf. pass. part. of *kaustēriázō*–'brand with a hot iron'] (1 Tim. 4:2); NEB BRANDED. The Greek term refers to the practice of cauterizing flesh. This could be done with one of two purposes: (1) to brand the forehead of a slave (*see* MARK I), or (2) to anesthetize flesh. Most scholars interpret 1 Tim. 4:2 in the first sense (cf. NEB). Thus, according to J. N. D. Kelly, the false teachers' consciences are "stamped with the brand-mark which indicates [Satan's] ownership" (*Comm. on the Pastoral Epistles* [*HNTC*, 1963], p. 94). A. T. Hanson, however, contends that the second meaning makes more sense in the context: "The false teachers are liars; they deliberately deceive, because they have managed to anaesthetise their consciences, no doubt by means of their constant habit of deceit" (*Pastoral Epistles* [*NCBC*, 1982], p. 87). N. J. O.

SEASON [Heb. *ʿēṯ*–'time, appointed time,' 'the right time (for a thing)' (Gen. 31:10; Lev. 26:4; Dt. 11:14; Ps. 1:3; Prov. 15:23; Jer. 5:24; etc.), *môʿēḏ*–'appointed time,' 'appointed date' (Gen. 1:14; 17:21; Ps. 104:19; Ezk. 46:11; Hos. 2:9 [MT 11]; etc.), *yôm*–'day' (Nu. 13:20), *zᵉmān*–'appointed time' (Est. 9:31; Eccl. 3:1), *rēʾšîṯ*–'beginning' (Hos. 9:10); Aram. *zᵉmān*–'(fixed) time' (Dnl. 2:21; 7:12); Gk. *kairós*–'point or period of time,' 'the right, proper, favorable time,' 'time of crisis, the last times' (Mt. 21:34, 41; Mk. 11:13; Acts 1:7; 14:17; 1 Cor. 7:5; Gal. 4:10; 6:9; 1 Thess. 5:1), *eukaírōs* ("in season," 2 Tim. 4:2), *akaírōs* ("out of season," 2 Tim. 4:2)]; AV also TIME, DUE SEASON, SOLEMNITIES (Ezk. 46:11), etc; NEB also TIME, PROPER TIME, DUE SEASON, etc.; **SUMMER** [Heb. *qayiṣ* (Gen. 8:22; 2 S. 16:1f.; Ps. 74:17; Prov. 6:8; 26:1; Jer. 8:20; Zec. 14:8; etc.), *qûṣ*–'spend or pass the summer' (Isa. 18:6); Aram. *qayiṭ* (Dnl. 2:35); Gk. *théros* (Mt. 24:32; Mk. 13:28; Lk. 21:30)]; NEB also FRUIT (Jer. 40:12; 48:32); **WINTER** [(nouns) Heb. *ḥōreṗ* (Gen. 8:22; Ps. 74:17; Zec. 14:8), *sᵉṯāw*–'rainy season, winter' (Cant. 2:11); Gk. *cheimṓn* (Mt. 24:20; Mk. 13:18; Jn. 10:23 [Greek text, v. 22; so AV, NEB]; 2 Tim. 4:21), *paracheimasía*–'wintering' (Acts 27:12)]; NEB also WINTERING; [(verbs) Heb. *ḥārap* (Isa. 18:6); Gk. *paracheimázō*–'winter, spend the winter' (Acts 27:12; 28:11; 1 Cor. 16:6; Tit. 3:12)]; NEB also "for the whole winter" (1 Cor. 16:6). In Zec. 8:19 the RSV supplies the word "seasons." The best and earliest MSS omit Jn. 5:4, where the RSV "seasons" translates Gk. *kairós*.

I. Climatic Seasons in Palestine.–There are two major seasons, summer and winter, and two brief intermediate seasons. The summer (Heb. *qayiṣ*), lasting from about June 15 to September 15, is extremely regular. Complete drought prevails with temperatures reaching 29.4° C (85° F) and considerably higher in the central valley. But this is counteracted by the dryness of the air, a sharp drop of temperature at night in the hill country and eastern plateau, and the development of a powerful sea breeze during the day, which reaches the eastern plateau in the mid-afternoon. On the coast and western slopes there can be heavy dew.

Winter is above all things the "rainy season" (Arabic uses the same word, *shitta*, for "winter" and "rain"), and is very irregular. Normally mild on the coast and in the rift-valley, winters bring sharp frosts to the highlands especially in upper Galilee, and snow to the high eastern plateau each year.

The intermediate seasons are dry, although severe spring thunderstorms with occasional hail have sometimes occurred. The chief feature of both intermediate seasons is the sirocco, an excessively dry and hot east wind lasting about three to seven days.

II. Seasons in Biblical Thought.–The biblical writers did not think of the "four seasons" but of a period of time, usually short but sometimes long, during which something happened, e.g., rainfall, fruit ripening, harvest, etc. They viewed all climatic phenomena as entirely the activity of God, incomprehensible to human minds. The two most commonly used words, *môʿēḏ* and *ʿēṯ*, as well as *zᵉmān* (Eccl. 3:1; Dnl. 2:21; 7:12), have the sense of the appropriate times appointed by God (e.g., Lev. 26:4; Dt. 11:14; 28:12; Job 38:32; Ps. 145:15). Thus a divinely appointed festival was called *môʿēḏ* (e.g., Nu. 9:2f., 7, 13; RSV "appointed time"; AV "appointed season"). The term *ʿēṯ* can also mean "appropriate time," e.g., "a word in season" (Prov. 15:23), which refers to the effectualness of timely spoken words. The use of *zᵉmān* in Eccl. 3:1 suggests a predetermined pattern to one's life. Hosea compares Yahweh's delight in Israel to the delight of finding the first ripe figs of a tree's initial productive season (RSV "first season" for Heb. *rēʾšîṯ* in Hos. 9:10; cf. F. I. Andersen and D. N. Freedman, *Hosea* [*AB*, 1980], p. 540).

In the RSV NT the most common word for "season" is Gk. *kairós*, which can designate proper or appropriate time (e.g., Mk. 11:13), a period of time (e.g., 1 Cor. 7:5), or the eschatological time of crisis (e.g., Acts 1:7; 1 Thess. 5:1). Just as harvest occurs at the proper time, so the reaping of rewards for previous efforts will occur (Gal. 6:9). While Acts 1:7 indicates that the time of the consummation is known only by the Father, 1 Thess. 5:1f. appears to say that a specific time is discernible by the church; however, the latter passage merely indicates that in regard to the last times Paul can offer no specific information beyond what the Thessalonians already know (cf. 5:2-10). In Gal. 4:10 Paul finds the scrupulous observance of *kairoí*, probably Jewish feasts or festivals, as bondage to the law from which the Galatians had been released.

The Greek phrase *eukairōs akairōs* (timely/untimely) in 2 Tim. 4:2 is obscure because the preceding verb *epistēthi* has no object, which makes the whole sentence unclear. It could mean "stand on guard" or "press forward." Commenting on 2 Tim. 4:2 A. Malherbe suggested that Timothy should preach, whether people listen or refuse to listen (*JBL* 103 [1984], 235-243); Dibelius and Conzelmann translate 2 Tim. 4:2 as, "Stand by — whether you are expected or not" (*Pastoral Epistles* [Eng. tr., *Hermeneia*, 1972], p. 118).

SEASON [Heb. *mālaḥ*–'salt (offering)' (Lev. 2:13), pual of *mālaḥ* (Ex. 30:35); Gk. *artýō*–'prepare,' specif. 'season, salt' (Mk. 9:50; Col. 4:6)]; AV also TEMPERED (Ex. 30:35); NEB also SALTED (Ex. 30:35), "shall be salted" (Lev. 2:13), "be . . . never insipid" (Col. 4:6). In Ex. 30:35 "season" does not necessarily refer to actual seasoning, but it suggests either the association of salt with covenants or the use of salt to accelerate a fire's burning (see J. P. Hyatt, *Exodus* [*NCBC*, repr. 1983], p. 296; cf. U. Cassuto, comm. on Exodus [Eng. tr. 1967], p. 400). Lev. 2:13 stipulates repeatedly that salt is to be an ingredient in the cereal offering; here the salt may symbolize the covenant between God and the worshiper (see G. Wenham, *Book of Leviticus* [*NICOT*, 1979], p. 71). Mk. 9:50 refers to the domestic use of salt as a preservative. Mark's logion warns the disciples about losing their usefulness like salt that becomes insipid and hence useless. Col. 4:6 enjoins believers to exercise graciousness in their conversation with non-Christians.

SEAT; SITTING. Two Hebrew nouns rendered "seat" in the RSV, *môšāḇ* and *šeḇeṭ*, are formed from the verb *yāšaḇ* ("sit, stay, dwell"). *Môšāḇ* can thus mean "seat" (e.g., 1 S. 20:18, 25), but it can also denote a "location" (cf. "seat" in Ezk. 8:3) or even an "assembly" (i.e., company of those sitting, Ps. 1:1); and *šeḇeṭ*, while used literally of a seat in 1 K. 10:19; 2 Ch. 9:18, means "location" in Nu. 21:15 (cf. AV, NEB, "dwelling[s]") and perhaps "dwelling-place" (or "place of enthronement"?) in Am. 6:3. Note also that the verb *yāšaḇ* (and its Aramaic cognate *yᵉṯiḇ*, Dnl. 7:9) itself is frequently rendered with the English idiom "take a seat" (2 S. 19:8 [MT 9]; 2 K. 11:19; Jer. 13:18; etc.). The Hebrew term *kissē'* (also rendered "throne") is usually reserved for seats of those held in esteem (cf. 1 K. 2:19; 2 K. 25:28 par. Jer. 52:32; Est. 3:1; *see* THRONE). The derivation of *tᵉḵûnâ* (Job 23:3) from *kûn*, "stand firm" suggests that the word means "fixed" or "established place," hence (God's) "dwelling-place" (NEB "court"). Heb. *merkāḇ* (Cant. 3:10; AV "covering") appears to denote the seat of a litter. In the RSV NT "seat" is used to translate Gk. *kathédra* (Mt. 21:12 par. Mk. 11:15; Mt. 23:2) the verb *kathízō* ("take a seat," Acts 12:21; 25:6, 17; 2 Thess. 2:24), and *kathḗmai* ("have a seat," Jas. 2:3). *See also* BEST SEAT; JUDGMENT SEAT; MERCY SEAT; MOSES' SEAT.

In the RSV OT "sitting" usually renders a form of the Hebrew verb *yāšaḇ*. In several verses where the RSV has "sitting," the AV reflects the ambiguity of *yāšaḇ*, e.g., Gen. 23:10 ("dwell"); Ruth 4:4 ("the inhabitants" [for "those sitting"]); 1 S. 22:6 ("abode"); 24:3 ("remained"). In Est. 2:19, 21; 5:13 the NEB uses the paraphrase "be in attendance at court" in place of be "sitting at the king's gate." In Dt. 22:6 "sitting" represents Heb. *rāḇaṣ*, which refers to a mother bird sitting upon the young or upon the eggs.

Three man sitting on low Egyptian stools, probably folding seats made of leather or rope and wood (facsimile, wall painting from the tomb of User-het, *ca.* 1430 B.C., Thebes) (The Metropolitan Museum of Art)

Several Greek verbs lie behind the RSV rendering "sitting": most often *káthēmai* (Mt. 9:9; 11:16; etc.; cf. NEB "mounted" in Jn. 12:15; Rev. 17:3), but also *kathézomai* (e.g., Lk. 2:46), *katákeimai* (lit. "recline," Lk. 5:29), *synkáthēmai* ("sit with," Mk. 14:54; Acts 26:30), and *synanákemai* (lit. "recline [at table] with," hence "eat with," Mk. 2:15).

"Sitting" was the posture taken by those required to try a legal case (e.g., Ruth 4:1-4; Jer. 26:10; cf. Dnl. 7:9), by those who awaited a prophet's word (2 K. 4:38; 6:32; Ezk. 8:1), by teachers (Mt. 5:1; 13:1f.; 24:3; etc.), by those in mourning (i.e., sitting in ashes, Job 2:8; Jonah 3:6; Lk. 10:13), and by rulers at their enthronement (1 K. 16:11; Jer. 22:30; Mk. 14:62; He. 1:2; rulers are sometimes depicted as sitting while others stand in their service, 1 K. 22:10, 19; Neh. 2:6; Est. 5:1f.). Jas. 2:3 reflects the honor bestowed upon a visitor who is given a seat while others are compelled to stand. S. WESTERHOLM

SECOND SABBATH. *See* SABBATH, SECOND AFTER THE FIRST.

SECRET; SECRETLY. ***I. Biblical Terms.***–The RSV uses these English words to render a number of important Hebrew idioms. Among the most common are *bassēṯer* ("secretly" or "in secret"; Dt. 13:6 [MT 7]; 27:15, 24; 28:57; 1 S. 19:2; 2 S. 12:12; Job 31:27; Ps. 101:5; 139:15; Prov. 21:14; Isa. 48:16; Jer. 37:17; 38:16; 40:15; AV also "in a secret place," "privily"; NEB also "in my secret heart," "privately," "in private"), *mistār* ("in secret," "secretly," or "in secret places"; Ps. 10:9; 64:5; Jer. 13:17; 23:24; Hab. 3:14; AV also "privily"; NEB "stealthily," "secret plans," "shed tears" [Jer. 13:17], etc.), *lāṭîm* ("secret arts"; Ex. 7:22; 8:7, 18 [MT 3, 14]; AV "enchantments"; NEB "spells"), *sôḏ* ("secret," "secret plots"; Ps. 64:2 [MT 3]; Prov. 11:13; 20:19; 25:9; Am. 3:7; AV also "secret counsel"; NEB also "factions," "knowledge of his plans," etc.). The RSV also uses "secret" or "secretly" in rendering the following Hebrew expressions: the hapax legomenon *l^{e}hāṭîm* ("secret arts," Ex. 7:11; cf. *lāṭîm*), niphal part. of *sāṯar* ("secret thing," Dt. 29:29 [MT 28]), *d^{e}ḇarsēṯer* ("secret message," Jgs. 3:19), *sāṯûm* (pass. part. of *sāṯam*; Ezk. 28:3), *b^{e}sāṯum* ("in my secret heart," Ps. 51:6 [MT 8]), pass. part. of *ʿālam* ("secret sins," Ps. 90:8), niphal part. of *ʿālam* ("secret thing," Eccl. 12:14), *taʿ^{a}lumâ* (Job 11:6; Ps. 44:21 [MT 22]), *n^{e}ṣûrîm* ("secret places," Isa. 65:4), *pōṯ* ("secret parts," Isa. 3:17; NEB "foreheads"; the meaning of the Hebrew is uncertain), piel of *ḥāpā'* ("do secretly," 2 K. 17:9; the meaning of the Hebrew is uncertain).

The NT terms and expressions are Gk. *kryptós* (Mt. 6:4, 6; Mk. 4:22; Lk. 8:17; Jn. 7:4; 18:20; etc.), *kryphaíos* (Mt. 6:18), *kryphḗ* ("in secret," Eph. 5:12), pass. part. of *krýptō* (Jn. 19:38), *mystérion* (Mt. 13:11; Mk. 4:11; Lk. 8:10; Rom. 16:25; 1 Cor. 2:7), *láthrą* (Mt. 2:7; Acts 16:37), *sigáō* ("keep secret," Rom. 16:25), *myéomai* ("learn the secret of," Phil. 4:12; AV "be instructed"; NEB "be very thoroughly initiated"), *pareiságō* ("secretly bring in," 2 Pet. 2:1; AV "privily bring in"; NEB "import"), *pareísaktos* ("secretly brought in," Gal. 2:4), *pareisdýnō* ("secretly gain admission," Jude 4; AV "creep in unawares"; NEB "worm their way in"), *hypobállō* ("secretly instigate," Acts 6:11; AV "suborn"; NEB "put up").

II. OT Usage.–The variety of Hebrew terms referring to secrecy belies the fact that most occur in the context of a few broad themes. Most striking is the theme of doing evil "in secret." Hab. 3:14, e.g., speaks of "devour[ing] the poor in secret," and both Dt. 13:6 and Ps. 44:21 (MT 22) refer to serving other gods in secret. Although the RSV's translation of the piel of *ḥāpā'* in 2 K. 17:9 suggests this same idea, the context speaks not of the Israelites' secret service to other gods but of their public idolatry: the building of high places (Heb. *bāmôṯ*) "at all their towns," the setting up of pillars and Asherim "on every high hill and under every green tree" (v. 10). Nathan's judgment on David (2 S. 12:12) juxtaposes the the evil David had done in secret (in taking Bathsheba) with his coming public humiliation. The doing of evil in secret is graphically captured in the aphorism spoken by the adulteress in Prov. 9:17: "Stolen water is sweet, and bread eaten in secret is pleasant." Another form of evil is the revealing of secrets through gossip (Prov. 11:13; 20:19; 25:9; cf. Sir. 22:22; 27:16f.; 21), and Ps. 101:5 condemns the slandering of one's neighbor in secret. Moreover, it is God who knows and requites the wrongs done in secret (Eccl. 12:14; cf. Ps. 90:8; 101:5).

The theme of secrecy as a cloak for evil is balanced by the positive theme of God as the source and revealer of secret knowledge (e.g., Job 11:6; cf. Wisd. 2:22). Dt. 29:29 confesses that "the secret things belong to the Lord our God." Am. 3:7 expresses the further belief that "surely the Lord God does nothing without revealing his secret to his servants the prophets." This tradition is also found in Dnl. 2:19, 27-30, 47, where God is the revealer of "mysteries" (LXX *mystḗria*) — an idea that culminates in the literature of the Apocrypha and NT (see III below).

Secret liaisons or words spoken in secret form another recurring motif. Often such secrecy is based on political necessity (e.g., Ehud's assassination of the king of Moab, Jgs. 3:19; King Zedekiah's secret conversations with Jeremiah, Jer. 37:17; 38:16; cf. also 40:15; 1 S. 19:2f.).

"Secret arts" in Ex. 7:11, 22; 8:7, 18 refers to the magic practiced by the "magicians" (Heb. pl. of *ḥarṭōm*) of Egypt (*see* MAGIC II.A[2]).

Finally, the RSV has inserted "secretly" or "in secret" into the text in three instances where the MT makes no direct mention of secrecy (Gen. 31:27; Josh. 2:1; 2 S. 15:10).

III. NT Usage.–The RSV NT's use of "secret" and "secretly" reflects the continuation and development of OT themes. First, Jesus' teaching that "nothing is hid that shall not be made manifest, nor anything secret that shall not be known and come to light" (Lk. 8:17; cf. Mk. 4:22), reflects the ancient wisdom tradition that the evil done in secret is known to God and will be punished by Him (cf. Rom. 2:15f.). Jesus' teachings also refer to secrecy in a positive sense: His hearers are enjoined to do good and pray "in secret" (Gk. *en tṓ kryptṓ*) in order to be seen by the Father "who sees in secret" (Mt. 6:4, 6, 18). Paul's reference to the prophetic disclosure of "the secrets of the heart" (Gk. *tá kryptá tḗs kardías*) of an unbeliever who enters a worship service (1 Cor. 14:25) reflects not only the tradition that God knows one's secret thoughts (cf. Ps. 44:21 [MT 22]) but also the belief that He is the revealer of secrets (see II above), especially in the congregation (cf. Sir. 1:30).

Another key motif is that of the "secret(s) [*mystérion*] of the kingdom of God/heaven" (Mt. 13:11 par. Mk. 4:11; Lk. 8:10), which Jesus referred to in explaining why He taught in parables. The "secret of the kingdom," i.e., that Jesus was the Messiah who was establishing God's kingdom on earth, was concealed from the masses (cf. Isa. 6:9f.) but revealed to the Twelve. (On the so-called messianic secret, *see* MESSIAH IV.B.) Similarly, Paul wrote

that "we proclaim the wisdom of God [*theoú sophían*] in mystery [*en mystēríǭ*], the hidden wisdom [*tḗn apokekrymménēn*]" (RSV "a secret and hidden wisdom," 1 Cor. 2:7). *See also* MYSTERY III.A, B.

Finaliy, Paul and other NT writers were concerned about the infiltration of the Church under false pretenses by persons outside the faith, especially by false or heretical teachers (cf. Gal. 2:4; 2 Pet. 2:1; Jude 4).

D. G. SCHLEY

SECRETARY [Heb. *sōpēr*–'scribe'] (2 S. 8:17; 20:25; 1 K. 4:3; 2 K. 12:10 [MT 11]; 18:18, 37; etc.); AV SCRIBE; NEB also SCRIBE, ADJUTANT-GENERAL.

The RSV uses this term in two ways. (1) Sometimes it denotes an ordinary scribe, i.e., a person who could read and write. For example, Baruch was Jeremiah's secretary (Jer. 36:26, 32; note the RSV's inconsistency in translating *sōpēr* as "secretary" in v. 26 but as "scribe" in v. 32).

(2) It can denote a state official. He is sometimes called "the king's secretary" (e.g., 2 K. 12:10 par. 2 Ch. 24:11), and even when he is not so designated that function is often clear (e.g., 2 K. 22:3, 8-12). Since this title usually occurs simply in a list of officials, its precise nature is uncertain. The OT does mention that the secretary assisted the high priest in counting the temple taxes (2 K. 12:10), and with two other officials negotiated on behalf of the king with an enemy (2 K. 18:17-36). Jer. 36:12 refers to the "secretary's chamber" in the king's house.

According to some scholars this secretary was the scribe "responsible for royal correspondence" (T. Mettinger, *Solomonic State Officials* [1971], p. 42; similarly J. Soggin in J. Hayes and J. Miller, eds., *Israelite and Judaean History* [*OTL* 1977], p. 358). Other scholars have attributed much more importance to this official, connecting the Heb. *sōpēr* with the Akk. *šāpirum,* which sometimes refers to a royal ambassador (see A. Crown, *VT,* 24 [1974], 366-370; W. McKane, *Prophets and Wise Men* [*SBT,* 1/44; 1965], pp. 23-32). According to this view Heb. *sōpēr* refers to a "Secretary of State" in these texts, not just to someone who dealt with correspondence. Cf. G. Jones, *1 and 2 Kings* (*NCBC,* 1984), I, 135f., who attempts to resolve this question by saying there were two officials: a Secretary of State who dealt with internal affairs and correspondence, and another official who dealt with foreign affairs and external correspondence.

Apparently other high officials had similar secretaries; e.g., a "secretary of the commander" conscripted men for the army (2 K. 25:19 par. Jer. 52:25; cf. 2 Ch. 26:11). According to J. Montgomery and H. Gehman (comm. on Kings [*ICC,* 1951], p. 564) this official was an "army adjutant . . . charged with military enrolment, a secretary of war in modern terms."

The "king's secretaries" in the Persian court (Est. 3:12; 8:9) were apparently ordinary scribes rather than high officials (so D. Clines, comm. on Esther [*NCBC,* 1984], p. 297). They had the task of writing down the king's edicts in the languages of every province in the empire.

See also SCRIBES.

G. A. L.

SECT [Gk. *haíresis*] (Acts 24:5, 14; 28:22); AV also HERESY. The AV also renders *haíresis* "sect" in 5:17; 15:5; 26:5 (RSV "party"). *See* HERESY I-II; PARTY.

SECU sē'kōō [Heb. *śekû*; LXX *Seph(e)i*]; AV SECHU. An unidentified place between Gibeah and Ramah (1 S. 19:22). The readings of some Greek and Latin MSS imply that the Hebrew word was *śᵉp̄î,* indicating a threshing floor on a bare hilltop (*GAB,* p. 161). The suggestion that the Hebrew consonants might represent the name Shuweikey (cf. Socoh) is of no help, for no such name is found in the area (*GTTOT,* § 695).

W. S. L. S.

SECUNDUS sə-kun'dəs [Gk. *Sekoundos*]. A gentile Christian from Thessalonica who accompanied Paul on his final journey from Greece to Jerusalem (Acts 20:4). He and Aristarchus were probably entrusted with delivering to the Christian community in Jerusalem the gift contributed by the Thessalonian church (see comms.).

SECURE [Heb. *bāṭaḥ*–'trust' (Prov. 11:15; Isa. 47:10; Am. 6:1), *(lā)beṭaḥ*–'safety' (Ps. 16:9; Prov. 1:33; Ezk. 34:27; Zeph. 2:15), *baṭṭuḥâ*–'security' (Job 12:6), *miḇṭaḥ*–'trust' (Isa. 32:18), hiphil of *'āmaḏ*–'cause to stand, station' (2 S. 22:34; Ps. 18:33 [MT 34]), pass. part. of *šāmar*–protect' (2 S. 23:5), piel of *'āmaṣ*–'make strong' (2 Ch. 11:17), *yāṯēḏ*–'nail,' 'holding' ("secure hold," Ezr. 9:8), hophal part. of *yāṣaq*–'be firmly grounded' (Job 11:15), *šālēw*–'at ease' (Job 21:23), polel of *kûn*–'establish' (Ps. 40:2 [MT 3]), *šāḵēn*–'settle' ("dwell securely," Ps. 102:28 [MT 29]), *'ārûz*–'tightly twisted' (Ezk. 27:24), *yāšaḇ*–'dwell' ("dwell securely," Mic. 5:4 [MT 3]); Gk. *perikatḗs gínomai*–'be in control' (Acts 27:16), *heurískomai*–'obtain' (He. 9:12), supplied contextually in 1 Cor. 7:35; 9:15]; AV also SURE, SAFE(LY), TRUST, SET (Heb. hiphil of *'āmaḏ*), "nail" (Ezr. 9:8), QUIET, IN HOPE, etc.; NEB also CONTINUE, FIRM FOOTING, AT EASE, WITHOUT A CARE, UNAFRAID, etc.; **SECURELY** [Heb. *(lā)beṭaḥ* (Lev. 25:18f.; 26:5; Prov. 3:23; 10:9; Isa. 47:8; Jer. 23:6; etc.); Gk. *en asphaleíǭ* (Acts 5:23)]; AV SAFELY, SURELY, CARELESSLY, etc.; NEB also CAREFREE, UNDISTURBED, etc.; **SECURITY** [Heb. *beṭaḥ* (Jgs. 18:7; Job 24:23; Zec. 14:11), *tᵉšûmâ* (Lev. 6:2 [MT 5:21]), *'ᵉmeṯ*–'reliability' (2 K. 20:19; Isa. 39:8; Jer. 33:6), *'ᵉmûnâ*–'steadiness' (Ps. 37:3), *šalwâ*–'ease' (Ps. 122:7), *'āraḇ*–'stand surety for' ("be security," Isa. 38:14); Gk. *aspháleia*–'safety, certainty' (1 Thess. 5:3), *tó hikanón*–'pledge' (Acts 17:9)]; AV SAFETY, SAFELY, TRUTH, FELLOWSHIP (Heb. *'ᵉšûmâ*), PEACE, PROSPERITY, SAFE, STAND SURETY (Isa. 38:14), etc.

The RSV OT translates nineteen different Hebrew terms with "secure," "securely," and "security" amd the richness of the OT vocabulary is demonstrated by the variety of synonymous meanings represented in the English versions. "Secure," etc., most often represent derivations of the root *bṭḥ,* which expresses the sense of security that comes from trusting in someone or something. The adverb "securely" is used exclusively to render *(lā)beṭaḥ,* which is used primarily with verbs of going and dwelling. The NEB follows the AV in ascribing the less accurate (and perhaps misleading) connotation of "careless" or "carefree" to *(lā)beṭaḥ* in Jgs. 18:7; Prov. 1:33; 3:23; Isa. 47:8. The AV apparently confuses *'ārûz,* "tightly twisted [rope]," with *'erez,* "cedar," in Ezk. 27:24.

The OT wisdom literature makes frequent use of the root *bṭḥ* in describing the benefits of following the path of wisdom, i.e., the fear of the Lord. The righteous (wise) live at ease, enjoying long life and having no dread of the calamities that befall the wicked (Prov. 1:33; 3:21-26, esp. 23). They are preserved from the way of evil, the negative consequences of sin, and the devices of the perverse (10:9; cf. 2:10-15). The psalmists also confessed that God grants security to those who seek refuge in Him; Yahweh protects them from the evil intentions of their enemies (Ps. 18:33 [MT 34]; 40:2 [MT 3]; cf. 18:31-42 [MT 32-43] par. 2 S. 22:32-43).

Job's friends also believed that God grants security

to the righteous but punishes the wicked (Job 11:15). Job contended, however, that this is not an absolute principle in the divine order, and he pointed to the prosperity of the wicked around him as evidence (12:6; 21:23; cf. Ps. 73:2-14).

The prophets also recognized that the wicked often live lives of ease and luxury, but they exposed as false and short-lived any security built on something other than God (e.g., Jer. 49:31f.; Am. 6:1; cf. vv. 4-7). They pronounced certain doom on those who assumed themselves to be invulnerable and boasted, "I am, and there is no one besides me" (Isa. 47:8-11; Zeph. 2:15).

On the other hand, God's promises to the Israelites, as they journeyed to the Promised Land, included the assurance that they would "dwell securely" in their own land (Lev. 25:18f.; 26:5; cf. Dt. 12:10; 33:12, 28). Later, after Israel had suffered defeat and exile, security — along with spiritual restoration and material prosperity — was again promised as one of the blessings of the messianic age (Isa. 32:18; Jer. 23:6; 33:16; Ezk. 28:26; 34:25-28; 38:8, 14; 39:26; Zec. 14:11).

In the NT, Gk. *asphalízomai* occurs only in Mt. 27:64-66 (cf. *aspháleia* in Acts 5:23). Its repetition indicates the Pharisees' great anxiety over Jesus' claim that He would rise from the dead, and it emphasizes the Roman government's painstaking efforts to seal the tomb — all to no avail. The use of *heurískō* in the middle voice, meaning "acquire, obtain, procure," occurs in the NT only at He. 9:12. The position and force of the verb call attention to the complete and eternal nature of Christ's sacrifice. In 1 Thess. 5:3 Paul, in a manner reminiscent of the OT prophets, warns about the destruction that awaits those who have a false, misplaced sense of security.

For the use of "security" in the sense of a pledge or deposit (Lev. 6:2 [MT 5:21]; Acts 17:9), *see* PLEDGE.

SEDECIAS sed-ə-sī'əs (AV Bar. 1:1, 8). *See* ZEDEKIAH 7, 8.

SEDITION [Aram. *'eštaddûr*–'struggling,' 'revolt'] (Ezr. 4:15, 19). The reference seem to be to the revolts that had led to the Babylonian destruction of Jerusalem, although Jews may also have revolted under the Persian rulers preceding Artaxerxes. In Gal. 5:20 the AV renders Gk. *dichostasía* (a "standing asunder") as "sedition." A better translation is the RSV and NEB "dissension," because "sedition" connotes political disturbances and relates to the affairs of state, while Paul was here referring to internal quarrels disrupting the Christian community.

L. HUNT

SEDUCE [Heb. hiphil of *ḥānēp*] (Dnl. 11:32); AV CORRUPT; NEB WIN OVER; [hiphil of *tā'â*] (2 K. 21:9 par. 2 Ch. 33:9); AV also MAKE TO ERR; NEB MISLEAD; [piel of *pāṭâ*] (Ex. 22:16 [MT 15]); AV ENTICE; **SEDUCTIVE SPEECH** [Heb. *leqaḥ*] (Prov. 7:21); AV FAIR SPEECH; NEB SEDUCTIVE WORDS. To mislead or entice (someone) away from what is right according to God's prescribed standard. The RSV uses "seduce" in two general contexts: (1) that of a wicked ruler leading God's people away from proper worship of Yahweh, and (2) that of a man or woman enticing someone of the opposite sex to engage in illicit sexual intercourse.

Two rulers who led God's people into sin were King Manasseh of Judah and the Seleucid king Antiochus Epiphanes. In the qal stem Heb. *tā'â* means "wander off," "go astray"; thus in the hiphil it means "lead astray." During his reign Manasseh led the people of Judah into the worship of Baal and other false gods (2 K. 21:9 par. 2 Ch. 33:9). When used with human subjects, the qal stem of *ḥānēp* usually refers to conduct that is deceptive or hypocritical. The hiphil stem, used elsewhere with respect to the land, usually means "pollute" or "desecrate," but in Dnl. 11:32 it probably means "cause to dissemble" (see *TDOT*, V, 41) or "cause to apostasize" (see Lacocque, pp. 220, 222). Through flattery the "contemptible person" (v. 21), Antiochus Epiphanes, will cause the covenant-violators (i.e., those with Hellenistic sympathies) to be untrue to their professed faith in Yahweh.

Exodus 22:16 (MT 15) refers to a man who "seduces" (piel of *pāṭâ*, lit. "fools, deceives") an unbetrothed virgin and has sexual intercourse with her. The man who did this was required to marry her and give her father the marriage present; if her father refused to give her to him in marriage, the man nonetheless had to pay the equivalent of the marriage present for a virgin. Prov. 7:21, on the other hand, refers to a harlot seducing a young man. Heb. *leqaḥ* means literally "what is received" (cf. *lāqaḥ*, "take, receive"), hence "persuasiveness."

W. D. ZORN N. J. O.

SEE [Heb. *rā'â*, *nāḇāṭ*; Heb. and Aram. *ḥāzâ*; Gk. *blépō*, *horáō*, *eídon*, *theáomai*, *theōréō*, *anablépō*–'see again (after sight has been restored),' etc.]; **SIGHT** [often in RSV as paraphrase of verb; Heb. *mar'eh*–'what is seen,' *pānîm*–'faces,' *neged*–'(in the) presence/sight of,' *'ayin*–'eye, (in the) sight of'; Gk. *eídos*, *hórama*–'sight, what is seen,' *theōría*–'spectacle,' *enṓpion*, *katénanti*–'before, in the sight of,' *anáblepsis*–'recovery of sight,' etc.]. In addition to references to the physical sense of sight, that which a blind person lacks (Acts 9:9), which can be restored by healing (e.g., Lk. 7:21; 18:41-43; Jn. 9:7), and which often fades with advancing age (Gen. 27:1; 1 S. 3:2; 4:15; 1 K. 14:4; cf. Ps. 38:10 [MT 11]), "see" is widely used in biblical figurative language.

To "see" can be to experience, for example, good (Ps. 34:12 [MT 13]; RSV "enjoy"; Heb. *rā'â*), evil (Ps. 90:15), or death (Ps. 89:48 [MT 49]; Lk. 2:26). Another basic figurative use of "see" is for the process of receiving information or coming to understand something (e.g., Gen. 37:14; 1 S. 12:17; 1 K. 20:7; Job 34:32). These two figures, which are simple and common enough that they do not rely greatly on any metaphorical picture, underlie most other figurative uses of "see."

Those who experience, receive, or understand salvation or the blessings of the eschaton can be called those who "see" God's salvation (Ex. 14:13), His goodness (Ps. 34:8 [MT 9]), the kingdom of God (Lk. 9:27; cf. par. Mt. 16:28; Mk. 9:1), or life (Jn. 3:36; cf. also Lk. 10:23f.; Jn. 1:50). Conversely, those who are not alive to these realities fail to "see" (Isa. 5:12; 6:10) and might be called "blind" (Mt. 15:14; 23:16-19; 2 Pet. 1:9; Gk. *typhlós*) or "shortsighted" (2 Pet. 1:9, Gk. *myōpázōn*; AV "cannot see afar off"). Jesus made the giving of physical sight to a man who had been born blind a living metaphor for the coming of understanding of eschatological realities (Jn. 9). Those who oppose Jesus are those who claim to "see," that is, to have knowledge, but in the new situation brought by Jesus' coming are actually "blind" (vv. 39-41).

For those who experienced the Exodus, there was a distinction between, on the one hand, "seeing" what God was doing in the sense of being aware of physical events, and, on the other hand, "seeing" in the sense of under-

standing those events. This distinction allowed Moses to speak of the Israelites both as those who saw with their eyes and as those who did not have eyes to see (Dt. 29:2-4; cf. Isa. 6:9; Mk. 4:12). A similar distinction is behind the description of Jeremiah's and Ezekiel's audiences as those "who have eyes (to see), but see not" (Jer. 5:21; 43:8; Ezk. 12:2; cf. Mk. 8:18). Sight (Gk. *eídos*), i.e., the faculty to perceive presently existing reality, is distinguished from faith in 2 Cor. 5:7 (cf. He. 11:1). But it was also possible for physical "seeing" to lead to "seeing" in the sense of understanding (Ex. 14:30f.).

A person can also "see" something present not in the physical world but presented in a VISION. Such visions are usually revelatory in nature. The designation "seer" (Heb. *ḥōzeh, rō'eh*) for prophets arises mainly from their experiences as those who "see" what is revealed by God (1 S. 9:9; 1 Ch. 21:9; *see* PROPHET I.B). What Amos saw in his visions was what God "showed" (hiphil of *rā'â*) the prophet (Am. 7:1, 4, 7; 8:1). "Seeing" became the normal metaphor for the prophet's reception of revelation to such a degree that one could speak of a prophet's "seeing" the words he was to deliver to his audience (Am. 1:1). (The clearest, though not absolute, distinction between Heb. *rā'â* and Heb *ḥāzâ* [which is borrowed from Aramaic] and associated words is the association of *ḥāzâ* with prophecy.)

What is seen in a vision is a revelation from God. Statements that human beings have seen or will see God Himself do not refer to a perception of a physical aspect of God by human physical senses but a process of coming to some amount of understanding of God, often just a simple realization of His greatness or some other aspect of His nature, either by a revelatory vision (Isa. 6:1-5; Ezk. 1:26-28), by their own purity of heart (Mt. 5:8), or by their acquaintance with Jesus Christ (Jn. 14:9; cf. 1:18). It is stated that on one occasion Israel's elders "saw the God of Israel" (Ex. 24:10; cf. v. 17), but there is a differentiation between this experience of the elders and the further experience of Moses, which was itself limited (33:20-23). Moses' character was such that he displayed understanding of God which could, in a metaphorical sense, be called "seeing him who is invisible" (He. 11:27). Even though passages concerned with "seeing God" are thus figurative expressions, ideas of "sacred space" — places where God's presence is more likely to be experienced — are involved (Sinai, Ex. 24:10; the temple, Isa. 6:1). When it is denied that human beings can see God, this means that the limitations of human mental capacity or human holiness make "seeing" God impossible (Ex. 33:20-23). *See also* ANGEL II.C.

To speak of God Himself "seeing" is a natural metaphor that indicates that God is aware of what takes place on earth, be it human sin (Ps. 94:7, 9), His people's suffering (Ex. 3:7), or the inner qualities of persons (1 S. 16:7; cf. Gen. 1:4; 38:7; 2 Ch. 24:22; Ps. 139:16; Am. 9:8).

J. W. SIMPSON, JR.

SEED [Heb. *zera'*] (Gen. 1:11f., 29; 3:15; 47:19, 23f.; Ex. 16:31; etc.); NEB also BROOD, GRAIN, STOCK, DESCENDANTS, RACE, etc.; [*zāra'*] ("put in seed," Jgs. 6:3); AV SOW; [*p'ruḏōṯ*] (pl., Joel 1:17); NEB SOIL; [*kil'ayim*] ("two kinds of seed," Lev. 19:19; Dt. 22:9); AV MINGLED SEED, DIVERS SEEDS; [*ḥarṣān*] (Nu. 6:4); AV KERNEL; NEB SHOOT; [*mešeḳ*] (Ps. 126:6); AV "precious"; NEB BAG; [Aram. *zera'*] (Dnl. 2:43); NEB MEN; [Gk. *spérma*] (Mt. 13:24, 27, 32, 37; Mk. 4:31; etc.); [*spóros*] (Mk. 4:26; Lk. 8:5, 11; 2 Cor. 9:10); [*sporá*] (1 Pet. 1:23); NEB PARENTAGE; [*sínapi*] ("mustard seed," Mt. 13:31; 17:20; etc.); supplied contextually by the RSV in Mt. 13:4f., 7f. par. Mk. 4:4f., 7. The part of a flowering plant that contains the embryo from which a new plant will grow; thus, by extension, offspring of animals or human beings.

The word "seed" occurs in many contexts and has a variety of meanings; these can be grouped roughly into two categories: (1) the seed of plants, and (2) the offspring of (primarily) human beings. Heb. *zera'* occurs in the former, literal sense forty times in the OT, most frequently referring to GRAIN seeds that are not specified according to type (Gen. 47:19); some contexts, however, specify seeds of barley (Lev. 27:16), coriander (Ex. 16:31), and fruit (Gen. 1:11). *Zera'* may refer to the seed produced by a plant (1:11), to the seed used for planting (47:24), or to the harvested grain stored in barns (Job 39:12). A related meaning is that of human "seed," i.e., "semen" (e.g., Lev. 15:16-18; 22:4).

Most often, however, *zera'* (also Gk. *spérma*) is used in the figurative sense of "offspring" (e.g., Gen. 3:15; cf. Mt. 22:24 [RSV "children"]). God promised Abraham "seed" (so AV; RSV "descendants") so numerous that it could not be counted (Gen. 13:16; 22:17; etc.). *Zera'* appears frequently in various stock phrases identifying Israel as the "seed" of Abraham (e.g., Jer. 33:26; cf. AV Jn. 8:33 [RSV "descendants"]). Although *zera'* can refer to an individual, most often it signifies a lineage or family as a whole. While the AV almost always renders *zera'* (and Gk. *spérma*) by "seed," the RSV and NEB more often use terms such as "offspring," "descendants" or "children" when it occurs in this figurative sense. *See* OFFSPRING.

Hebrew *mešeḳ* signifies a pouch or bag for carrying seed (cf. NEB Ps. 126:6). *P'ruḏōṯ* is a hapax legomenon, and its translation is highly questionable; possibly it denotes "dried figs" (*CHAL*, p. 297). *Ḥarṣān* is also a hapax legomenon; it may refer to "unripe grapes" (*CHAL*, p. 118). *Kil'ayim* means simply "two kinds" or "diverse"; the Torah forbade the sowing of mixed seed.

In the NT Gk. *spérma* (the usual LXX translation of Heb. *zera'*), *spóros*, and *sporá* carry basically the same semantic range, identical to *zera'*. In several of His parables Jesus used the imagery of seed sown in a field to convey an important teaching about the kingdom of God. In the parable of the Sower (Mt. 13:1-9 par. Mk. 4:1-9; Lk. 8:4-8) the seed represents the "word" of God (Mk. 4:13-20 par.), and the different kinds of soil on which the seed is sown represent the diversity of responses to the proclamation of the gospel. Cf. the parables of the wheat and the tares (Mt. 13:24-30, 36-43), the seed growing secretly (Mk. 4:26-29), and the mustard seed (Mt. 13:31f. par. Mk. 4:30-32; Lk. 13:18f.; cf. Mt. 17:20 par. Lk. 17:6; *see also* MUSTARD).

Since the 1960s archeologists have been recovering seeds on excavations by means of various flotation devices (carbonized seeds float while soil sinks in water). These have included seeds of plants mentioned in the Bible, e.g., wheat, barley, millet, flax, spelt, lentils, chick-peas, coriander, figs, grapes, dates, olives, pomegranates, mustard, cucumbers, and possibly carob.

1. Seek.–The various Hebrew words translated "seek" in the OT exhibit a wide range of meanings. The most common term is *biqqēš* (piel of *bāqaš*), which connotes the general idea of "seek, search, look for." It occurs often in the sense of searching for someone or something whose location is unknown, e.g., Saul searching for his father's donkeys (1 S. 10:2, 14) and for David (23:25; 24:2 [MT 3]; 26:2; etc.), Joseph looking for his brothers (Gen. 37:15f.), and a person searching for a hidden treasure (Prov. 2:4), water (Isa. 41:17), missing records (Neh. 7:64), a lost camel (Jer. 2:24), and lost sheep (Ezk. 34:6). It can also mean to look for someone in order to secure that person's services, e.g., a skilled musician (1 S. 16:16), a wise woman (28:7), or the most beautiful woman in Israel (1 K. 1:2f.; cf. Est. 2:2). Similarly, it can be used in the sense of going to persons whose locations are known in order to secure their services; e.g., the Israelites were commanded not to "seek" mediums or wizards (Lev. 19:31), and errant Israel "sought" her lovers (Jer. 2:33).

The common expression "seek [*biqqēš*] the Lord" seems to exhibit two different meanings. Sometimes it connotes a spiritual searching for God, who has become hidden to a nation or individual because of that nation's or individual's sin. The purpose of seeking God is to "find" (*māṣā'*) Him, i.e., to come to know Him and thus to experience divine acceptance, forgiveness, and support. Disobedient and exiled Israel is promised, "But from there you will seek the Lord your God, and you will find him, if you search after him with all your heart and with all your soul" (Dt. 4:29). Likewise, in Jer. 29:13f. the Lord declares to the Judean exiles, "You will seek me and find me; when you seek me with all your heart, I will be found by you" (cf. Isa. 65:1). In most occurrences, however, to "seek the Lord" means to come before Him (at His sanctuary, in prayer, etc.) in order to seek help, guidance, or information. According to Ex. 33:7 Moses set up the "tent of meeting" outside the camp, and "every one who sought the Lord would go out to [it]." Likewise David is said to have "besought God for the child," lying prostrate on the floor of his palace (2 S. 12:16). Godly Jehoshaphat and the people of Judah gathered in Jerusalem to "seek the Lord" when the Moabites invaded from the east; the people assembled before the Lord's temple and Jehoshaphat led them in a prayer of supplication to the Lord (2 Ch. 20:4, etc.). Hosea mentions the practice of bringing sacrificial animals to the temple when coming to "seek the Lord" (Hos. 5:6; cf. Zeph. 2:3; Zec. 8:21f.).

The expression *biqqēš pᵉnê* (lit. "seek the face of") may have the sense of seeking an audience with a human ruler. According to 2 Ch. 9:23, "all the kings of the earth sought the presence of [i.e., an audience with] Solomon to hear his wisdom, which God had put into his mind" (cf. 1 K. 10:24). Sometimes it connotes seeking an audience specifically to request help: "Many seek the favor of a ruler; but from the Lord a man gets justice" (Prov. 29:26). The frequent expression "seek the face of the Lord" seems generally to have this latter meaning, i.e., to seek an audience with God in order to appeal to Him for help (e.g., Ps. 24:6). In 2 Ch. 7:14 God declares that in times of distress and judgment, "if my people who are called by my name humble themselves, and pray and seek my face, . . . I will hear from heaven, and will forgive their sin and heal their land." David sought God's face during a famine (2 S. 21:1) and in a time of great distress (Ps. 27:8; cf. Hos. 5:15).

To "seek (someone's) life" (*biqqēš napšô*) means to make plans to kill that person. The psalmist, e.g., often alludes to those who are seeking his life (Ps. 38:12 [MT 13]); 54:3 [MT 5]; etc.), and the phrase occurs many times in Jeremiah (4:30; 11:21; etc.) and elsewhere. *Biqqēš* is also used of "seeking" certain qualities, e.g., peace (Ezr. 9:12; Neh. 2:10; Ps. 34:14 [MT 5]), wisdom (Prov. 2:4; Eccl. 7:25), justice (Isa. 1:17), righteousness and humility (Zeph. 2:3). Often *biqqēš* is followed by an infinitive and means "make plans to, attempt to, or seek a way to"; e.g., Jonathan "sought to go over" to the Philistine garrison by Michmash (1 S. 14:4).

Another Hebrew word often translated "seek" is *dāraš.* In contrast to *biqqēš, dāraš* is never used of seeking lost things or people. It almost always takes a person as its direct object (exceptions include Ps. 119:155 and Jer. 29:7). Like *biqqēš,* it often refers to "seeking" God (who has hidden Himself) in order to obtain a restored relationship, forgiveness, or help. The people of Judah are exhorted, "Seek the Lord while he may be found, call upon him while he is near" (Isa. 55:6). The psalmist laments, "In the day of my trouble I seek the Lord; in the night my hand is stretched out without wearying" (Ps. 77:2 [MT 3]). The Chronicler records several instances of people (esp. kings) "seeking" the Lord, including Solomon and the assembled people of Israel (2 Ch. 1:5), Asa (14:7), Jehoshaphat (17:3f.; 20:3), and Uzziah (26:5). Most commonly, however, *dāraš* means to seek information, guidance, or direction from God through prayer, Urim and Thummim, a prophet, going to the temple, etc. The psalmist declares, "I sought the Lord and he answered me" (Ps. 34:4 [MT 5]). When used in this sense, *dāraš* is often rendered "inquire" by the RSV (*see* INQUIRE).

The RSV usually chooses "seek refuge" to render *ḥāsâ,* which means "go to for asylum, safety, protection." Biblical writers sometimes used the image of a young bird fleeing to its mother to find protection under her wings

(cf. "take refuge," Ruth 2:12; Ps. 57:1 [MT 2]; "Oh to be safe," 61:4 [MT 5]). In times of distress or danger, the psalmists and other OT writers "sought refuge" in the Lord (Ps. 17:7; 31:1 [MT 2]; 141:8; Zeph. 3:12).

The AV usually renders *šiḥēr* (piel of *šāḥar*) "seek early" because of a supposed etymological connection with *šaḥar*, "dawn" (e.g., Ps. 63:1; Prov. 1:28; 8:17; Isa. 26:9; Hos. 5:15). RSV prefers "seek diligently" (or "eagerly") or simply "seek"; the latter is probably the most accurate rendering.

The NT expresses the idea of "seeking" almost exclusively by Gk. *zētéō* and its derivatives, which exhibit the same broad range of meanings as Heb. *biqqēš*. Reference is made to seeking God (Acts 15:17; 17:27; Rom. 3:11; He. 11:6), God's kingdom (Mt. 6:33), one's own glory (Jn. 8:50; cf. Rom. 2:7), a sign (Mt. 12:39; 16:4; Mk. 8:11f.; etc.), a lost coin (Lk. 15:8), etc. As people can seek God, so God through His Son seeks mankind (Lk. 19:10; Jn. 4:23). Satan is said to be stalking about "like a roaring lion, seeking some one to devour" (1 Pet. 5:8).

II. Search.–The RSV OT uses "search" to render several Hebrew verbs. The most comon is *ḥāqar*, which connotes a thorough search for or investigation of something, e.g., a quest for wisdom "out to the farthest bound" (Job 28:3; cf. v. 27), a months-long search for corpses (Ezk. 39:14), and the spying out of a city (2 S. 10:3). It can be used forensically not only of human investigations (e.g., Dt. 13:14 [MT 15]; Job 5:27; 29:16) but also of God's "searching" and evaluating an individual's inner thoughts and motives. The psalmist prays, "Search me, O God, and know my heart." (Ps. 139:23; cf. v. 3); and God says, "I the Lord search the mind and try the heart" (Jer. 17:10). The noun *ḥēqer* occurs in Jgs. 5:16 (and, as emended by the RSV and many scholars, in v. 15). Various interpretations have been proposed for the phrase *ḥiqrê-lēḇ*. Apparently the Reubenites had some noble intentions of aiding their fellow Israelites but in the end chose instead to guard their own flocks.

The verb *biqqēš* is translated "search" nine times in the RSV. (For its range of meanings, see I above.) Sometimes it refers to looking for someone or something whose location is not known. The men of Jericho "search" for the two Israelite spies all the way to the Jordan River (Josh. 2:22). The wise person "searches" for wisdom as for hidden treasures (Prov. 2:4). *Biqqēš* can also refer to a spiritual search for God, who has become hidden to a people because of its sin: "But from there you will seek the Lord your God, and you will find him, if you search after [*biqqēš*] him with all your heart and with all your soul" (Dt. 4:29).

The terms *dāraš* and *ḥippēś* (piel of *ḥāpaś*) also connote the actions of searching for or investigating. In Ezk. 34:11 God, the good shepherd, promises, "I myself will search [*dāraš*] for my sheep (cf. vv. 6, 8); David confessed that God "searches [*dāraš*] all hearts, and understands every plan and thought" (1 Ch. 28:9). Saul determined to "search out" (*ḥippēś*) David's hiding place (1 S. 23:23); and Yahweh told the faithless Israelites that He would "search" (*ḥippēś*) them out and slay them, no matter where they hid (Am. 9:3). *Tûr*, on the other hand, is normally used of spying out or exploring; the objects of exploration include such things as land (Ezk. 20:6; cf. Nu. 13:32 [RSV "spy out"]) and a philosophical question (Eccl. 2:3; 7:25).

In the NT the idea of searching for something or someone is generally expressed by *zētéō*. Examples include Herod's search for the child in Bethlehem (Mt. 2:13), a shepherd's search for a lost sheep (18:12), a merchant's search for fine pearls (13:45), and the crowd's search for Jesus (Mk. 1:37; cf. also 2 Tim. 1:17). The verb *eraunáō* connotes more the activity of examining or investigating. The Jews "searched" the Scriptures — i.e., they pored over them — thinking thereby to attain eternal life (Jn. 5:39); and Jesus' critics declared, "Search and you will see that no prophet is to rise from Galilee" (7:52). God "searches" (i.e., carefully examines and evaluates) the hearts and minds of all mankind (Rom. 8:27; 1 Cor. 2:10; Rev. 2:23).

SEER. *See* PROPHET.

SEETHE. An old English term meaning "boil" used by the AV to render the Heb. piel of *bāšal* (lit. "boil"; cf. RSV, NEB) in Ex. 16:23; 23:19; 29:31; 34:26; Dt. 14:21; etc. The AV also uses the archaic past tense "sod" (2 Ch. 35:13; Lam. 4:10), the passive "be sodden" (pual of *bāšal*, Ex. 12:9; Lev. 6:28; 1 S. 2:15), and the adjective "sodden" (*bāšēl*, Nu. 6:19). In Gen. 25:29, AV, "sod" represents the hiphil of *zîḏ* (RSV "boil"; NEB "prepare").

"Seethe" occurs once in the RSV and NEB. In Ezk. 24:5 the RSV follows the AV in rendering *rattaḥ* by "boil" and the synonymous parallel *bāšal* by "seethe," while the NEB does the reverse.

SEGUB sē'gub [Heb. *śᵉgûḇ*. (1 K. 16:34, *Q*; *K śᵉgîḇ*)–'(the Deity) is exalted'].

1. The youngest son of Hiel. Possibly Segub and his brother were offered as foundation sacrifices when their father rebuilt Jericho (1 K. 16:34). This ancient world custom is attested by archeological evidence but there is no definite indication that it occurred here; however, the book of Joshua reports that Joshua pronounced a curse on anyone who rebuilt the city of Jericho (Josh. 6:26). As the writer of Kings notes, Segub's death was a fulfillment of this curse. See J. Gray, *I & II Kings* (*OTL*, 2nd ed., rev. 1970), pp. 369-371.

2. A great-grandson of the patriarch Judah, son of Hezron and father of Jair (1 Ch. 2:21f.). R. L. PRATT, JR.

SEINE [Heb. *miḵmereṯ*] (Hab. 1:15f.); AV DRAG; NEB TRAWLS. A large fishing net, used figuratively here for the Babylonians' means of capturing other nations. *See* NET.

SEIR sē'ər [Heb. *śēʿîr*–'hairy,' 'wooded' (?)].

1. The hill country of Edom (Heb. *har śēʿîr*, Gen. 14:6) and contiguous territory (*ʾereṣ śēʿîr*, 32:3 [MT 4]), generally located E of the ARABAH (cf. Y. Aharoni and M. Avi-Yonah, *Macmillan Bible Atlas* [rev. ed. 1977], maps 7f.) but certainly located W of it as well; also a people and its eponymous ancestor (Gen. 36:20f.). Based on the route of the Exodus, F.-M. Abel (*GP*, I, 389-391) argued convincingly for a region W of the Arabah but conceded that, since it is identified with Edom, the name must have been transferred to the east. His conclusions are borne out by a careful examination of the biblical and extrabiblical records, which seem to place Seir on both sides of the Arabah.

The Horites, now generally identified as Hurrians (but *see* HORITES), were the original dwellers in the region of Seir; they were displaced or destroyed by the Edomites (Dt. 2:12, 22). Chedorlaomer and his lies subdued, among others, "the Horites in their Mount Seir as far as El-paran on the border of the wilderness" (Gen. 14:6; Heb. *harᵉrām*

sē'îr [RSV "their Mount Seir"] may suggest that there were two or more locations by this name, or the *m* suffix may be an adverbial *mêm*; *BHS* emends it with the versions to pl. *har'rê*, "the mountains of"; *see also* map in PARAN). Ramses III (*ca.* 1194-1163 B.C.), reporting his conquest of the sea-peoples, added "I destroyed the people of Seir among the Bedouin tribes" (*ANET*, p. 262). Earlier, Abdi-Ḥeba of Jerusalem (first half of the 14th cent. B.C.; *see* JERUSALEM III.B) had referred to "the lands of Šeeri [Akk. *adi mâtâti še-e-ri*^{ki}] as far as Ginti-Carmel" (Am. Tab. 288:26; *ANET*, p. 488), but this seems more likely to refer to a more northerly location (see 2 below; cf., however, *LBHG* [rev. ed. 1979], pp. 188f. n. 112).

Deuteronomy 1:2 states: "It is eleven days' journey from Horeb by the way of Mount Seir to Kadesh-barnea." This would put Mt. (or the hill country of) Seir W of the Arabah, which would also be the most probable location of the forces of Ramses III mentioned above. On the other hand, after leaving Kadesh-barnea the Israelites for many days "went about Mount Seir" and then were commanded to "turn northward" (2:1-3), after which they went away from the Edomites, away from the Arabah road, and journeyed in the direction of the wilderness of Moab (2:8). This seems to place Seir E of the Arabah.

Mount Seir is generally identified with modern Jebel esh-Shera', a range of mountains E of the Arabah, stretching from Wâdī el-Ḥesā in the north to Wâdī el-Hismah in the south, with peaks rising above 1700 m. (5000 ft.). Part of this range is clearly the Edom around which Israel was forced to detour (Nu. 21:4; Dt. 2:8). To identify Arab. *šera'* with Heb. *śē'îr* requires a transposition of *'ayin* and *rêsh*, which is not an impossibility. But it also requires the transfer of the site-name Mt. Seir to the eastern side of the Arabah, as does Mt. HOR, the place of Aaron's death (Nu. 20:22-29), which is now traditionally located at Jebel Nebī Harun, near Petra, E of the Arabah.

Between their arrival at Kadesh-barnea and their departure for the conclusion of the journey, the Israelites were chased by the Amorites and defeated "in Seir as far as Hormah" (Dt. 1:44). HORMAH has been identified with Tell el-Meshash, SW of Tell 'Arâd (see *LBHG* [rev. ed. 1979] pp. 215f.), in the Negeb. This western location would be in agreement with the description of Joshua's conquest in Josh. 11:17; 12:7.

It would seem, therefore, despite the strong objections of N. Glueck (*AASOR*, 15 [1935], 112f.; *HUCA*, 11 [1936], 141ff.; *JAOS*, 56 [1938], 462ff.), that Seir included the hill country W of the Arabah between Judah and the Sinai and extended eastward across the Arabah to the south of Moab. The Mt. Seir where five hundred Simeonites destroyed a remnant of the Amalekites (1 Ch. 4:42) could have been on either side of the Arabah, but the closing statement (v. 43) seems to suggest the west side.

Esau located in Seir (Gen. 32:3; 33:14, 16; Josh. 24:4); hence the land was called EDOM (cf. Gen. 36:1, 39). "Seir" is generally used as a synonym of "Edom" (Gen. 32:3; Nu. 24:18; Jgs. 5:4; 2 Ch. 25:11, 14; Ezk. 35:15); but the names are clearly distinguished in Gen. 36:15, 20 par. 1 Ch. 1:35, 38, which give separate genealogies for Esau and Seir. The close association of the names Ammon, Moab, and Edom indicates that at some time before or after the Israelite invasion of Canaan the Edomites were located E of the Arabah. "Seir" or "Mount Seir" is used in place of "Edom" in 2 Ch. 20:10, 22f. and probably in Isa. 21:11. In Israel's dark days before and during the Exile, the Edomites moved into southern Judah. This is reflected in the prophecy against Edom in Ezk. 35 and possibly also in that of Am. 1:11f. The reference to Seir in the MT of Ezk. 25:8 (cf. RSV mg.) seems to be misplaced; it is lacking in the LXX, and the prophecy against Edom follows in v. 12.

2. A location on the northern border of Judah (Josh. 15:10). This border lay W of Baalah and N of Mt. Jearim, and then went down to Beth-shemesh; Mt. Seir is named between Baalah and Mt. Jearim. A location has been proposed near Sārîs, about 15 km. (9 mi.) W of Jerusalem (*GP*, I, 372). This location is too far north to be the Seir in Dt. 1:44 (cf. the identifications of V. R. Gold [*IDB*, IV, *s.v.*], which are based on the mistaken location of the Edomite Seir solely on the eastern side of the Arabah).

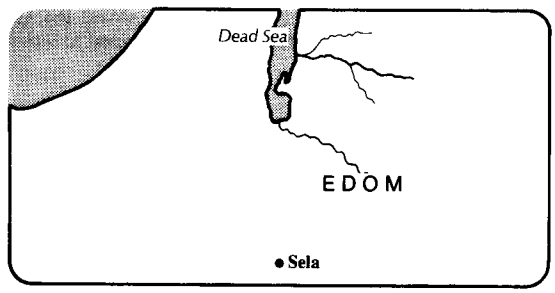
B. MACDONALD W. S. LASOR

SEIRAH sē'ə-rə, sə-ī'rə [Heb. *haśśe'îrâ*, with the definite art., and the suffix *-â* indicating direction–'to the Seir']. The place to which Ehud fled after assassinating Eglon king of Moab (Jgs. 3:26). From the context it could be located in Ephraim, in the Jordan Valley, or in Moab. The identification with Mt. Seir in *Onom.* 158 is quite unlikely. Simons understood as a region, "the wooded hills," rather than as a place name (*GTTOT* §545, p. 288).

W. S. L. S.

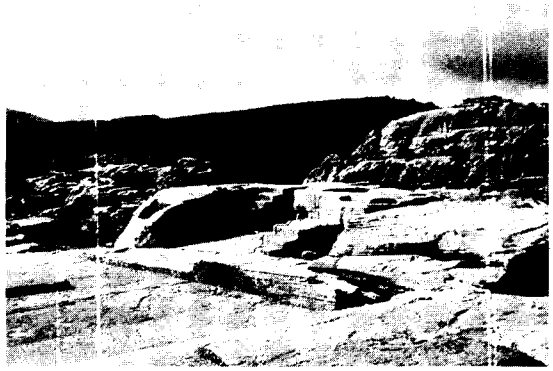
SEIRATH. *See* SEIRAH.

SELA sē'lə [Heb. *sela'*–'jagged cliff, crag' (Isa. 16:1; 42:11), *hassela'* (Jgs. 1:36; 2 K. 14:7); LXX *petra, hē petra*–'rock']; AV also ROCK, SELAH. Hebrew *sela'* occurs about sixty-five times in the MT, usually not as a proper noun (see BDB, pp. 700f.); hence it is important to study the context to determine whether a specific site is being named. Cf. Jgs. 15:13 and Ps. 40:2 (MT 3), where it is unlikely that the location is Petra.



1. An Edomite citadel captured by Amaziah and named Joktheel (2 K. 14:7); possibly the site later called PETRA. In the light of 2 Ch. 25:11f. it is most likely Umm el-Bayyâra, the peak that dominates Wâdī Mûsā, the valley in which the Nabatean city of Petra was built. The quantity of Edomite (Iron II) remains found there, the defenses, and the retention of the name in Greek all point to this identification, despite claims that some scholars have put forward for other sites. It has been proposed that this is also the site of temporary sanctuary for the Moabites mentioned in Isa. 16:1, based on the reference to the Brook of the Willows (15:7), usually identified with Wâdī el-Ḥesā, which was the boundary between Moab and Edom; the oracle, however, seems to be entirely concerned with Moab (cf. 15:1), and Petra is located about 80 km. (50 mi.) from Wâdī el-Ḥesā and considerably farther from Dibon (15:9). Umm el-Bayyâra may be the "rock" that gave Edom a false sense of security (Ob. 3; cf. RSV mg. "Sela"). Isa. 42:11 may refer to the same site.

2. A location on the border of the Amorites (Jgs. 1:36), mentioned along with the ascent of Akrabbim (lit. "scorpions"), which is located at the southwest end of the Dead



The high place at Petra, which some identify with Sela (G. J. Wenham)

Sea (see L. H. Grollenberg, *Atlas of the Bible* [Eng. tr. 1965], map 12; *WHAB*, plates VI, X), leading up from the Arabah toward Beer-sheba. Some scholars have read "Edomites" (with LXX A) for "Amorites," leading to confusion with **1** above. P. C. HAMMOND W. S. L. S.

SELAH sē'lə [Heb. *selâ*]. *See* PSALMS II.C; MUSIC III.B.3.

SELA-HAMMAHLEKOTH sē-lə-hə-mä'lə-koth (1 S. 23:28, AV). *See* ESCAPE, ROCK OF.

SELED sē'ləd [Heb. *seleḏ*]. A Jerahmeelite, son of Nadab, who died childless (1 Ch. 2:30).

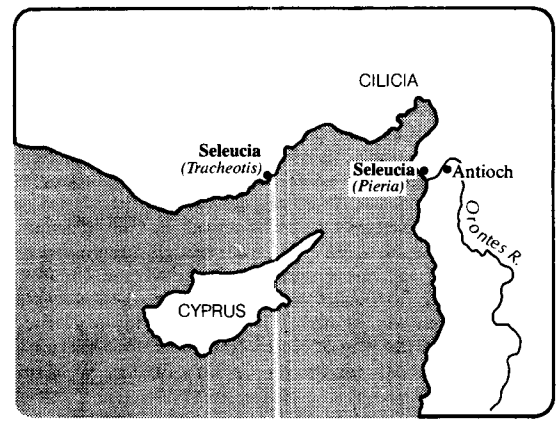
SELEMIA sel-ə-mī'ə [Lat. *Selemia*]; NEB SHELEMIAH. One of the five scribes who wrote down the visions of Ezra, chosen because they were "trained to write rapidly" (2 Esd. 14:24).

SELEMIAS sel-ə-mī'əs (1 Esd. 9:34, AV, NEB). *See* SHELEMIAH **6.**

SELEUCIA sə-lōō'shi-ə, sə-lōō'shə [Gk. *Seleukia*]. The designation of perhaps ten cities named (or renamed) after the founder of the Seleucid dynasty, of which one is of primary significance for biblical studies and two or three others of lesser significance.

1. Seleucia on the Orontes (Seleucia Pieria). A port city and fortress 8 km. (5 mi.) inland from the Syrian coast on the Orontes River, near the modern city of Samandağ in Turkey. It served as the seaport for the city of Antioch, which lay about 26 km. (16 mi.) further upstream. It was from Seleucia that Paul and Barnabas set sail for Cyprus on their first missionary journey (Acts 13:4). In describing their return 14:26 states that "they sailed to Antioch"; but they would have needed to leave the ship at Seleucia and continue to Antioch by land. When Barnabas sailed to Cyprus a second time with Mark, he must have boarded ship in Seleucia again (15:39).

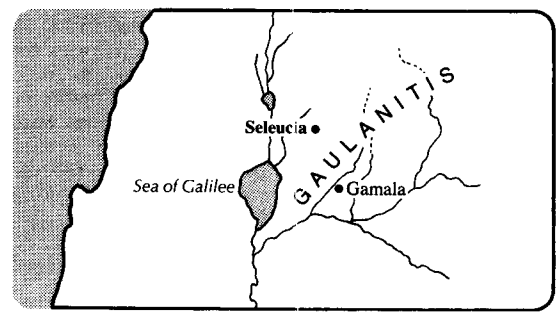
The ancient city of Seleucia, one of four cities known as the Syrian Tetrapolis (the others being Antioch, Apamea, and Laodicea), was built on the rocky slope of a spur of the Amanus Mountains, Mt. Pierius, known now as Jebel Mûsā (Mûsā Dağı). The site was so favorable for a frontier fortress that Seleucia has been called a "Syrian Gibraltar." The city extended in a narrow strip up the mountain slope and was surrounded by a wall 6 km. (4 mi.) in perimeter. A natural moat was formed by two mountain torrents flowing outside the walls on the east and on the west. Originally the stream on the west terminated inside the



city in the inner harbor, but it posed such a threat when flooded that the Romans built a remarkable canal to divert it. This excavation, still visible, is nearly 1.5 km. (1 mi.) long, 6 m. (20 ft.) wide, and over 6 m. (20 ft.) high. Two sections were tunneled through the mountain; one contains the inscription *Divus Vespasianus et Divus Titus* ("Divine Vespasian and Divine Titus"), suggesting that it was constructed *ca.* A.D. 70. The port, the business district, and the suburbs are in the lower city, from which a winding stairway cut into the rock leads to the upper city. The ruins of the amphitheater, a paved area that may have been the agora, and a large Doric temple are in the upper city. From the Antioch Gate a road led to that city along the north side of the river. The acropolis is 300 m. (1000 ft.) above sea level and is well fortified. Many of the city's residents were sailors or fishermen. Wine was produced in the surrounding territory.

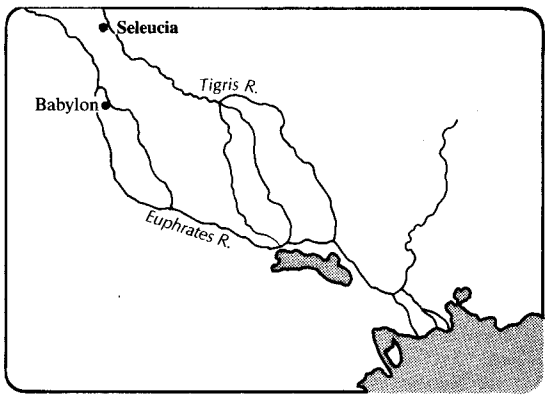
Seleucia was built by Seleucus Nicator in the early 3rd cent. B.C. It had great military significance in the struggles between the Seleucids and the Ptolemies. Ptolemy III Euergetes captured it in the middle of the 3rd cent., but in 219 it was regained by Antiochus III the Great. According to 1 Macc. 11:8 the city passed back into the hands of Egypt in 146 B.C. when Ptolemy VI sought to reestablish Egyptian control over the Syro-Palestinian seacoast. At one time Seleucia served as a refuge for Cleopatra Thea. In 108 it became independent and remained so even after Pompey's conquest of Syria in 64 B.C. Its status as a free city was confirmed in A.D. 70, and it was the base for an imperial fleet throughout the 1st century. Efforts to maintain the harbor proved unsuccessful, since silt deposited by the Orontes River turned it into a marshland.

Bibliography.–R. Stillwell, ed., *Antioch-on-the-Orontes. Publications of the Committee for the Excavation of Antioch and Its Vicinity, III: The Excavations of 1937-1939* (1941); Pauly-Wissowa, II/1, 1184-1200; H. V. Morton, *In the Steps of St. Paul* (1936), pp. 98-101. D. H. MADVIG



2. Seleucia in Gaulanitis. Josephus mentioned Seleucia and Gamala in Gaulanitis (Golan) among the cities held by the Jews at the time of Alexander Janneus's victories in Transjordan (*Ant.* xiii.15.4 [397]; cf. xiii.15.3 [393]). Foreseeing that Galilee would be the object of the Romans' first assault, Josephus fortified Seleucia, Soganea, and Gamala in Gaulanitis, as well as many other sites (*BJ* ii.20.6 [574]; *Vita* 37 [187f.]). Seleucia has been identified with Selûqiyeh about 16 km. (10 mi.) SE of the former site of Lake Huleh.

3. Seleucia on the Tigris. In 312 B.C. Seleucus Nicator founded this city on the right bank of the Tigris, about 32 km. (20 mi.) SE of Baghdad at the mouth of the "Royal Canal" that connected the Tigris with the Euphrates, to be his eastern capital. It was built largely with materials brought from Babylon, and its founding marks the end of Babylon's political significance. Seleucia was populated with Macedonians and Greeks and also included many Jews and Syrians. Avidius Cassius burned the city in A.D. 164, and when Septimius Severus passed through the region on his Parthian campaign of 198 the site was completely abandoned. Nothing remains above ground, and the excavations of Tell 'Umar (its modern name) in 1927-1932 uncovered nothing of more than passing interest. The destruction of Seleucia marked the end of Hellenism in Mesopotamia.



4. Seleucia Tracheotis (or Trachea). This Seleucia, near the modern city of İcel or Silifke in Cilicia, was founded by Seleucus I on the Calycadnus River (modern Gök Su), probably as a fortification protecting the region from attacks from the sea. Its ruins include a castle on the acropolis, city fortifications, a reservoir cut in rock, and an extensive necropolis.

Other cities named Seleucia are located in Pisidia, Pamphylia, Phrygia, Caria, on the upper Euphrates near Samosata, in the Persian province of Margiana (originally called Alexandria; founded by Alexander the Great and renamed by Antiochus I), and on the Belus in Syria.

SELEUCIDAE sə-lo͞o'si-dī. *See* SELEUCUS.

SELEUCUS sə-lo͞o'kəs [Gk. *Seleukos*]. The name of four Seleucid kings (Seleucidae) who play a role in the biblical record. For a list of all the Seleucid kings from 312 B.C. to 129 B.C., *see* ANTIOCHUS 2.

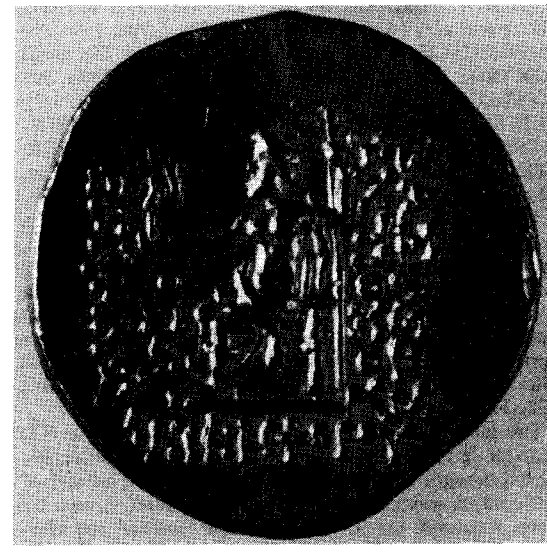
1. Seleucus I Nicator (Conquerer) (312-281 B.C.), a general in the army of Alexander the Great, and one of the Diadochi (Successors) who vied for control of the Macedonian empire following Alexander's death in 323 B.C. The situation following Alexander's death is alluded to in Dnl. 8:8, where Seleucus I is represented by one of the "four conspicuous horns" that arise after the breaking of the "great horn," i.e., Alexander (cf. also v. 22; 11:14; 1 Macc. 1:7-9). From the struggle among the Diadochi (323 to 301 B.C.) Seleucus I and Ptolemy I Soter emerged as the most powerful figures. Dnl. 11:5 refers to Ptolemy I as the "king of the south" (Egypt) and goes on to state that "one of [Ptolemy's] princes shall be stronger than he and his dominion shall be a great dominion"; this prince is Seleucus I, who was dependent on Ptolemy I for his rise to power. Although made the satrap (governor) of Babylon in 321, Seleucus was forced to flee to Ptolemy in Egypt in 316 to escape defeat by Antigonus, who was trying to reunite Alexander's empire. When Ptolemy defeated Antigonus's son Demetrius in 312, Seleucus returned to Babylon. Following Antigonus's death in the battle of Ipsus (301), Seleucus received the largest portion of Alexander's empire. An agreement among the Diadochi awarded him the area from Palestine to Babylon and beyond; but Ptolemy I quickly asserted his control over Palestine and lower Syria, and the Ptolemies maintained control of Palestine until 198 B.C.

The beginning of Seleucus I's reign and of the Seleucid dynasty is usually dated to 312, the year that Seleucus returned from Egypt to Babylon, although Seleucus did not assume the title of king until *ca.* 305. His reign lasted until his death in 281. Seleucus founded the city of Antioch-on-the-Orontes. Josephus (*Ant.* xii.3 1 [119]) stated that Seleucus conferred citizenship upon Jews living within the cities of his realm.

See also PTOLEMY 1.

2. Seleucus II Callinicus (Gloriously Triumphant) (246-226 B.C.). He was the son of Antiochus II, who under pressure from Ptolemy II had divorced his wife Laodice and married Ptolemy's daughter Bernice, with the promise that his kingdom would go to Bernice's son. When Ptolemy died, however, Antiochus returned to Laodice and designated her oldest son, Seleucus, as the legitimate heir to the throne. Seleucus II came to the throne in 246 after his mother Laodice instigated the murder of Antiochus II;

A gold stater of Antiochus IV of Syria (175-163 B.C.). The reverse depicts the seated figure of Zeus holding a victory figure on his outstretched hand. The Greek inscription reads: "King Antiochus, God manifest, bringer of Victory" (courtesy of the Trustees of the British Museum)



later she also murdered Bernice, and Bernice's son. This complicated situation is alluded to in Dnl. 11:6. Verses 7-9 describe how Ptolemy III, successor of Ptolemy II and brother of the spurned and murdered Bernice, sought revenge on Seleucus II, "the king of the north." After taking Syria and other territories (vv. 7f.), Ptolemy III returned to Egypt. Seleucus II was able to reassert his control over Syria in 242 (cf. v. 9).

3. Seleucus III Soter (Savior) (226-23 B.C.), the son of Seleucus II. He was murdered in 223 during an invasion of Asia Minor to put down Attalus, and was succeeded by his brother, Antiochus III the Great. The sons of Seleucus II are mentioned in Dnl. 11:10.

4. Seleucus IV Philopator (Father-loving) (187-175 B.C.) the son of Antiochus III. After the battle of Magnesia in 190, the Seleucid kings were forced by the Romans to pay heavy tribute. Antiochus III was probably trying to obtain funds for this payment when he was killed in 187 while plundering a temple in Elymais. Not surprisingly, Dnl. 11:20 describes Seleucus IV as "one who shall send an exactor of tribute through the glory of the kingdom." 2 Macc. 3:1-40 gives a more complete account. Although Seleucus IV seems to have subsidized the tmple in Jerusalem at one time (v. 3), he was later informed of the large sum in the temple treasury and sent Heliodorus (the "exactor of tribute" in Dnl. 11:20) to collect some of it (2 Macc. 3:7-14). Vv. 15-40 describe how a divine intervention prevented Heliodorus from plundering the temple treasury. Heliodorus later murdered Seleucus IV, who was succeeded by his brother, Antiochus Epiphanes IV (Dnl. 11:21; 2 Macc. 4:7). Antiochus IV was the infamous "little horn" of Dnl. 7:8; 8:9; the other ten horns of the fourth beast in Daniel's vision (7:7, 24) may have included Seleucid kings who preceded him.

SELF-ABASEMENT. *See* HUMBLE II.A.

SELF-CONDEMNED. *See* CONDEMN.

SELF-CONTROL [Heb. *ma'ᵉṣār lᵉrûḥô*] (Prov. 25:28); NEB CONTROL TEMPER; AV RULE OVER HIS SPIRIT; [Gk. *enkráteia*] (Acts 24:25; Gal. 5:23; 2 Pet. 1:6); AV EMPERANCE; [*enkrateúomai*] (1 Cor. 7:9; 9:25); NEB CONTROL THEMSELVES; STRICT TRAINING; AV CONTAIN, TEMPERATE; [*sōphronismós*] (2 Tim. 1:7); NEB SELF-DISCIPLINE; AV SOUND MIND; **SELF-CONTROLLED** [Gk. *enkratḗs*] (Tit. 1:8); AV TEMPERATE; **LACK OF SELF-CONTROL** [Gk. *akrasía*] (1 Cor. 7:5); AV INCONTINENCY.

The only occurrence of "self-control" in the OT is in Prov. 25:28. A person with no self-control is defenseless, always subject to attack and defeat; cf. 16:32, which has a similar statement from a positive perspective (Heb. *māšal bᵉrûḥô*, "rule his spirit"). Self-control is not a dominant theme in OT ethics but occurs more frequently in the Apocryphal/Deuterocanonical literature (e.g., Wisd. 8:7 [Gk. *sōphrosýnē*]; 2 Esd. 7:125; 4 Macc. 1:3, 6, 18, 30f.; 5:23, 34; 13 16; 15:18).

The idea of self-control is more prevalent in the NT, although in comparison to classical Greek and Hellenistic ethical thought the concept is surprisingly rare here also. Self-control was considered one of the chief virtues by Plato, Aristotle, the Stoics, Philo, the Essenes, the Hermetica, and others (see *DNTT*, I, 499f.; *TDNT*, II, 340f.). The *enkráteia* word-group originally meant "mastery or power over oneself or something"; eventually it came to mean "control over oneself," especially one's desires and actions. The opposite was *akrasía*, "self-idulgence" or "licentiousness" (cf. RSV "rapacity" in Mt. 23:25).

It is not surprising that in the NT self-control is primarily the concern of Paul, since he more than any other NT author consistently ministered the gospel in a Greek context. The most important statement comes in Gal. 5, where he deals directly with the Christian life-style. In vv. 22f. he lists nine virtues that are the "fruit of the Spirit," beginning with love and concluding with self-control. As Betz observed, the place of self-control "at the end of the list . . . is conspicuous and this is certainly intended; it stands in juxtaposition to love (v 22). The concept of self-control in the present context implies the claim that Christian ethics is the fulfillment not only of the Torah (cf. 5:14), but also of the central demand of Greek ethics. The gift of the Spirit and the 'fruit of the Spirit' reach their climax in the old Greek ideal of self-control" (Betz, p. 288). Tit. 1:8 and 2 Pet. 1:6 similarly list self-control as an important Christian virtue.

In 1 Corinthians Paul uses *enkrateúomai* twice. Since the Corinthians were a very Greek congregation this terminology would have been familiar to them. In 7:9 he uses the term with regard to sexual desires, as was common in classical Greek; he urges those who lack such self-control to marry. (Cf. 7:5, where he warns married couples not to refuse one another sexual relations, since this might tempt those lacking self-control [*akrasía*] to engage in extramarital affairs.) In 9:25 Paul compares the believer's self-control to that of an athlete.

In 2 Tim. 1:7 Paul summarizes the Christian way of life provided by God: God has given Christians "a spirit of power and love and self-control." Gk. *sōphronismós* (which occurs only here in the NT) belongs to another word-group that is very common in Greek ethical thought. In classical Greek the term can mean either "good judgment" (cf. AV) or "self-discipline, self-control." But since the cognate noun *sōphrosýnē*, vb. *sōphronízō*, adv. *sōphrónōs*, and adj. *sōphron* are used consistently in the Pastoral Epistles to express temperance, restraint, and self-control (cf. 1 Tim. 2:9, 15; 3:2; Tit. 1:8, 2:2, 4-6, 12), most modern commentators have concluded that in 2 Tim. 1:7 *sōphronismós* means "self-control" and not "good judgment."

Although self-control is not mentioned often in the NT, its several occurrences are very important. Clearly self-control does not come naturally or by hard effort but is the gift of God through His Holy Spirit (Gal. 5:23; 2 Tim. 1:7). Nonetheless the Christian consciously lives out this self-control just as an athlete exercises self-discipline (1 Cor. 9:25-27). There is no ultimate power over self here but only a control granted and sustained by God. This is the primary reason why a concept so central to Greek ethics found such a small place in biblical ethics. "The reason for this is that biblical man regarded his life as determined and directed by the command of God. There was thus no place for the self-mastery which had a place in autonomous ethics" (*TDNT*, II, 342).

The idea of self-control received greater emphasis among the Apostolic Fathers than in the NT. This is not surprising, however, since the Christian faith matured in a Hellenistic context.

V. R. GORDON

SELF-DENIAL. The phrase "deny oneself," so characteristic of the biblical ethic, is found literally in Scripture only in one saying of Jesus (Mt. 16:24 par.). The synonymous Greek verbs *aparnéomai* (Mt. 16:24; Mk. 8:34) and *arnéomai* (Lk. 9:23) mean "deny" or "say no." The NT is distinctive in its use of these verbs for the denial of a person, rather than just of a statement or thing.

Jesus' radical message about discipleship comes through clearly in this powerful saying: "If any man would come after me, let him deny himself and take up his cross [Lk. 9:23 adds "daily"] and follow me." Thus, Jesus calls those who wish to be His followers to reject the natural human inclination toward the self. He also calls them to take up their cross, the instrument of death by crucifixion, and in this way to follow Him. This call is not so much a call to martyrdom as a command to deny self even to the point of death. In Bonhoeffer's now famous words, "When Christ calls a man, he bids him come and die" (p. 99). A disciple must be prepared to die if that is where the road of discipleship leads, but "the saying refers not so much to literal martyrdom as to the attitude of self-denial which regards its life in this world as *already finished*" (I. H. Marshall, p. 373). The disciple now lives for Christ, not for self.

While the phrase *aparnéomai/arnéomai heautón* occurs only in the above saying (except for 2 Tim. 2:13; see below), the idea of self-denial is everywhere present in the NT understanding of Christian discipleship. This is especially true in Jesus' teaching (e.g., Mt. 5:38-48; 10:37-39; Mk. 9:33-35; Lk. 14:25-35; Jn. 12:24-26; 13:38) Jesus called His disciples to practice self-denial in their acts of piety (e.g., Mt. 6:1-4, 16-21). He taught His disciples this lifestyle of self-denial not only with His words but also by His acts. Notice that His call to self-denial came immediately after His prediction of His own sacrificial death (Mt. 16:21-24; Mk. 8:31-34; Lk. 9:22f.). Jesus Himself was the supreme model of the self-denial to which He called others (Mk. 10:42-45; Jn. 13:1-17; cf. 2 Cor. 8:9; Eph. 5:1f.; Phil. 2:5-11; 1 Pet. 2:21-24).

The concept is also at the heart of Paul's teaching on discipleship. Disciples have died with Christ (Rom. 6:1-11; Gal. 5:24; Col. 2:12; 3:3-11; 2 Tim. 2:11) and are called to sacrifice their lives for Him (Rom. 12:1f.). In Tit. 2:12 Paul writes of the grace of God "training us to renounce [*arnéomai*] irreligion and worldly passions," i.e., to deny the desires of the self. Paul's life also modeled self-denial (cf. 1 Cor. 15:31; 2 Cor. 4:7-11; 6:1-10; 11:16-33; Gal. 2:20; Phil. 3:7-11).

A somewhat different use of the phrase *arnéomai heutón* occurs in 2 Tim. 2:13, where Paul writes that God "cannot deny himself." The idea here is that God is faithful and cannot deny His character or His promises (cf. Rom. 3:3f.). But a comparison of this statement with Jesus' call to self-denial is instructive. God, being so different from self-centered humanity, has nothing in His perfect character that needs to be denied. In His perfect goodness God can only affirm Himself. Indeed the NT calls Jesus' disciples to deny themselves, but never to deny Jesus or the Father (Mt. 10:33; 2 Tim. 2:12; Tit. 1:16; 2 Pet. 2:1; 1 Jn. 2:22; Jude 4; Rev. 2:13; 3:8).

SELF-INDULGENT. "Be self-indulgent" is the RSV translation of Gk. *spataláō* in 1 Tim. 5:6 (AV "live in pleasure"; NEB "given over to self-indulgence"). The verb connotes a life-style of abandonment to one's own desires for comfort and pleasure. Its only other NT occurrence is in Jas. 5:5 (RSV "live . . . in pleasure"; AV "be wanton"); cf. also the LXX of Ezk. 16:49 (RSV "ease"); Sir. 21:15 (part., "reveler"). Some commentators have seen in 1 Tim. 5:6 a reference to sexual immorality and possibly even prostitution (cf. *IB*, XI, 436), but this is not implied by the term itself. *See also* PLEASE.

SELFISH; SELFISHNESS [Gk. *ponērós*] (Lk. 6:35); AV EVIL; NEB WICKED; [*eritheía*] (2 Cor. 12:20; Gal. 5:20; Phil. 2:3; "selfish ambition," Jas. 3:14, 16); AV STRIFE; NEB also (PERSONAL) RIVALRY, AMBITION. The RSV has used "selfish" to render *ponērós* ("bad, wicked, evil") in Lk. 6:35, apparently because the context makes clear that the reference is to those who will not return loving deeds (note its use with *acháristos*, "ungrateful"). *See* AMBITION.

SELF-RIGHTEOUSNESS. The belief that one is morally upright and has earned salvation because of strict adherence to moral and religious laws; often associated with an attitude of superiority toward those who are considered less righteous. The word does not occur in the RSV or AV, but the NAB uses it four times to render Gk. *díkaios* (Mt. o:13 par. Mk. 2:17; Lk. 5:32; 18:9; AV, RSV, "righteous"; NEB "virtuous"). In each of these passages *díkaios* denotes self-righteousness rather than the righteousness that comes from God. Jesus told the parable of the Pharisee and the publican "to some who trusted in themselves that they were righteous and despised others" (Lk. 18:9). The Pharisees considered themselves righteous and refused to associate with sinners such as tax collectors (v. 11; cf. Mt. 9:10f. par.). Jesus reserved His strongest words for the Pharisees, whose righteousness was merely a matter of external actions rather than of the heart (Mt. 23, esp. vv. 25-28).

Both the OT and the NT teach very clearly that trust in one's own righteousness can never make one acceptable to God (cf., e.g., Isa. 64:6 [MT 5]; Dnl. 9:18; Rom. 3; Gal. 3:10f.; Eph. 2:8f.; Phil. 3:8f.). The righteousness that comes from God is accomplished by Christ and is received by faith alone (2 Cor. 5:21).

SEMITES sem'īts [< Heb. *šēm*, "Shem" (hence the archaic "Shemites"), through Greek *Sem* and Lat. *Sem*]. A name conventionally applied to a group of Near Eastern peoples among whom closely related languages (called Semitic) were spoken. There is evidence for various Semitic peoples from *ca.* 2500 B.C. to the present.

I. Name
II. Classification of Semitic Languages
III. Proto-Semitic
IV. The Primal Home of the Semites
V. The Problem of Common Semitic Culture

I. Name.–The name Semite is derived from that of Shem, son of Noah, father of Elam, Asshur, Arpachshad (ancestor of Abraham), Lud, and Aram (Gen. 10:21-31; 11:10-26). The designation "Semite" is an artificial one, unknown in ancient times (it was coined by A. C. Schlözer in 1781), which came into common use when the close similarities between Arabic, Hebrew, and other languages of the group were first discovered, and when it was commonly held that the similarities in language should correspond to the biblical classification of peoples into descendants of Shem, Ham, and Japheth (cf. Gen. 10:32). The artificial character of the designation is clear when one considers that the genealogical classification of the TABLE OF NATIONS is built on a geographical and cultural basis and not on a linguistic one (at the time of its composition the principles of linguistic classification were unknown). The Elamites and Lydians (cf. Gen. 10:22) are not Semites in the modern classification, whereas the Amorites and Canaanites (which the Table of Nations considers to be descendants of Ham; cf. Gen. 10:15f.) are Semites. The classification of Semitic languages is today established on completely different lines from the genealogical scheme of the Table of Nations, being built exclusively on the analysis of linguistic data.

II. Classification of Semitic Languages.–The region of the most ancient diffusion of Semitic languages consists of the Arabian peninsula, Syria-Palestine, and Mesopotamia. In this area the presence of Semitic languages is as ancient as that of the first written records (the only type of evidence which may provide us with material appropriate for research), dating back to the 3rd millennium B.C. in Mesopotamia and Syria, to the 2nd millennium in Palestine, and to the 1st millennium in Arabia. Semitic languages continue without interruption down to present times (although shifts in the internal relationships of the languages have taken place, with the prevalence of Aramaic around the middle of the 1st millennium B.C., and of Arabic from the 7th cent. A.D. to the present). Outside this area Semitic languages are attested only as a result of the diffusion of peoples or of cultures. These can be clearly defined in their historical setting and are of different levels of importance — e.g., the presence of Assyrian merchants in Cappadocia (19th-18th cents. B.C.); the use of Aramaic in Iran and Egypt under the Achaemenids; the Phoenician colonies around the Mediterranean Sea (7th cent. B.C. and later); the spread of southern Semites in Ethiopia; the wider diffusion of the Arabs in all of North Africa following the Islamic conquest; and the Jewish dispersion to Europe and subsequently to the whole world.

The secondary developments are of interest only for studying the histories of the individual languages, whereas the overall study of Semitic languages is mainly based on the situation of the most ancient times, and especially on a period which ranges from the beginning of written records to the advent of the Christian era. The Semitic languages which have come down from this period may conveniently be organized into three groups, rather independent in their geographical setting:

A. East Semitic. The eastern group comprises a single language group, Akkadian (or Assyro-Babylonian), spoken by the Semitic population of Mesopotamia. Evidence for this language dates from ca. 2500 B.C. to ca. 300 B.C. The group may be subdivided both dialectally and chronologically into Old Akkadian (ca. 2500-1950 B.C.); Babylonian (Old Babylonian, ca. 1950-1530 B.C. [North Babylonian, South Babylonian, Mari, etc.]; Middle Babylonian, ca. 1530-1000 B.C.; Neo-Babylonian, ca. 1000-625 B.C.; Late Babylonian, after 625 B.C.); and Assyrian (Old Assyrian, ca. 1950-1750 B.C.; Middle Assyrian, ca. 1500-1000 B.C.; Neo-Assyrian, ca. 1000-600 B.C.). (Cf. W. von Soden, *Grundriss der akkadischen Grammatik* [*Analecta Orientalia*, 33/47; 2nd ed. 1969], pp. 2-4.)

B. Northwest Semitic. The earliest Semitic language of Syria is Eblaic (*ca.* 2500-2300 B.C.), the classification of which is still open to debate. It shares some features with contemporary Old Akkadian, but more with later Northwest Semitic (cf. I. J. Gelb, *Thoughts about Ibla* [1977]; L. Cagni, ed., *La lingua di Ebla* [1981]; P. Franzaroli, ed., *Studies on the Language of Ebla* [1984]). After the disappearance of the Ebla culture the Northwest group is rather uniformly represented by the so-called Amorite (*ca.* 2100-1500 B.C.; cf. I. J. Gelb, *Computer-Aided Analysis of Amorite* [1980]). Later, a more obvious division into dialects began to set in, of which we know particularly the dialect of the city-state of UGARIT (14th-13th cents. B.C., called "Ugaritic") as well as sparse elements of the "Canaanite" of el-Amarna (*see* AMARNA TABLETS III; CANAAN VI). In the 1st millennium B.C. the division into dialects is more distinct, and we may pinpoint an Aramaic group and a Canaanite group. The betterknown Canaanite dialects are Hebrew (with its different phases; *see* HEBREW LANGUAGE) and Phoenician-Punic (*see* PHOENICIAN III). Aramaic, after an archaic phase (10th-7th cents. B.C.), was diffused widely under the Assyrian, Neo-Babylonian, and Persian empires (7th-4th cents. B.C.). Later it may be divided into two branches, Western and Eastern, with many dialects and rich religious literature (*see* ARAMAIC).

C. Southwest Semitic. The south or southwest group consists of: Epigraphic (Old) South Arabic, evidence of which ranges from the middle of the 1st millennium B.C. to the middle of the 1st millennium A.D., divided into many dialects (Minaean, Sabean, Qatabanian, Awsani, Hadramauti; cf. K. Conti Rossini, *Chrestomathia Arabica Meridionalis Epigraphica* [1931]); the modern South Arabian dialects; Epigraphic North Arabic (also known to us from the middle of the 1st millennium B.C. to the middle of the 1st millennium A.D.); Classical Arabic (mainly

attested in the Koran, 7th cent. A.D.). Classical Arabic became the literary language of Islam, and enjoyed a wide diffusion and long literary history which continues in present-day literary Arabic. Modern Arabic dialects, on the other hand, show considerable evolution and differ significantly among themselves. Finally there is Ethiopic, the product of South Arabian settlers in northeastern Africa. It developed especially in Christian religious literature, which was written in classical Ethiopic (Ge'ez), and subsequently divided into many modern dialects (Amharic, Harari, Tigre, etc.). *See also* ARABIA IV.

III. Proto-Semitic.–The reason for the obviously close relationship between the many Semitic languages requires an explanation, as is also the case in other linguistic groups (and esp. in the case of the Indo-European group which has been the subject of more intensive study on the part of linguists).

A. The "Genealogical Tree." At the end of the 19th cent. the problem was solved in a simple fashion, with the idea of a derivation from a common stock (the theory of the genealogical tree). The differences among the Semitic languages were considered a progressive phenomenon, and the common elements were held to be the heritage of a single ancient language. Using comparative analysis, the phonetic laws of the progressive differentiation were brought forth, as were archaic morphological elements and innovations, and the common lexical complex. In this way the original language (Proto-Semitic) was reconstructed. An actual historical basis was attributed to this language, i.e., it was believed to have been spoken by a specific population in a certain period of time. This reconstruction of Proto-Semitic had a tendency to enhance Arabic to a high degree. It must be remembered that Akkadian was still relatively little known, and the archaic phases of Northwest Semitic (Eblaic, Amorite, Ugaritic) were at that time unknown, whereas the more recent phases of the same group had been distorted by obvious evolutionary phenomena in the phonetic system (reduction of consonants, alteration of the vowel system following the accent shift) and in the morphological system (dropping of declension, alteration of the verbal system).

B. More Recent Theories. In later periods the views on the matter have become less rigid, as a consequence both of new discoveries and studies and of new directions in methodology. The knowledge of Akkadian and of the most ancient phases of Northwest Semitic has deeply altered the theories about the most ancient phases of Semitic, and the study of the relationships between the Semitic language group and other groups (improperly termed "Hamitic"), such as the Cushitic languages, Libyco-Berber, and especially ancient Egyptian, have shown that the Semitic languages are to be set in a tightly knit network of relationships less rigid but equally important for a definition of their origins. Among the Semitic languages, relationships which tend to contradict the division of the group into three branches and the rectilinear derivation from Proto-Semitic have been brought to light: connections between Akkadian and Ethiopic (and also, as regards Hamito-Semitic, between Akkadian and Egyptian and between Akkadian and Libyan) could represent the traces of a more archaic layer, compared to which the linguistic type represented first by Amorite and then by Arabic is to be considered evolutionary.

But finally and especially, the study of the connections between the many Semitic languages in the historical period (for which we have much evidence) disproves the rectilinear development (of the genealogical-tree type) that had been theorized for the period previous to the use of writing. Instead, we are faced with more complex superimpositions, interconnections, extinction of some branches which, however, have left elements in the branches by which they were overcome, etc. One need only reflect on the diffusion of Aramaic among the populations which spoke Akkadian in Mesopotamia or Canaanite in Palestine, and subsequently on the diffusion of Arabic among Aramaic peoples. And one should also notice, with reference to the relationships with languages outside the group, the influence of Sumerian on Akkadian, of Cushitic on Ethiopic, of Greek on Syriac, etc. It is only logical to believe that this complexity of relationships, well attested in the historical period, should have existed also in predocumentary times. Going backward in time, one cannot imagine the many Semitic languages as having been increasingly similar to one another and finally unified in origin (a concept more mythical than historical in character). Rather, they must be imagined as having been in a perpetually unstable relationship among themselves, resulting not only from facts of differentiation but also from convergence and assimilation.

In the light of these complex problems the reconstruction of "Proto-Semitic" becomes more a convention than a historical truth. Faith in the possibility of reconstructing, through analysis, a language assumed to have been spoken in a certain period and in a certain area by real persons is progressively lost. On the other hand it becomes clearer that we are only establishing connections which may clarify the languages of historical times and allow interpretation of dead languages. As for the historical reconstruction (a goal which remains valid), having abandoned the too-simple scheme of the genealogical tree, one must find single facts of diffusion, of segmentation, of assimilation or of superimposition, etc., which will obviously be set in different levels of time, space, and social environment, and in connection with different historical events, not unified in a mythical "original" state. Therefore, the problem is not one of trying to reconstruct a "Proto-Semitic" which never was, but of trying to lengthen back in time, over the barrier of the beginning of written evidence, the history of Semitic languages.

IV. The Primal Home of the Semites.–The evolution in the reconstruction of Proto-Semitic and, generally speaking, in the comparative study of Semitic languages, has naturally been accompanied by a similar evolution in the reconstruction of the human and environmental basis of the language. In the past the simplistic reconstruction of a "Proto" language, from which the historically attested languages derived in a genealogical-tree pattern, was obviously accompanied by a reconstruction of an original population (Proto-Semites) which was held to have lived in a certain territory (the primal habitat or "home") in a certain period. This population was believed to have eventually spread itself out from the original "home" and divided itself into the different historical populations which spoke Semitic languages.

A. The Arabian Desert. The theory of an Armenian origin of the Semites (derived from a literal use of the biblical narrative describing the spread of the peoples after the Deluge [cf. Gen. 9:18f.], proposed anew, with unfortunate results, by J. Grintz, *JNES*, 21 [1962], 186-206) was soon replaced by the theory of an Arabian origin of the Semites (esp. by H. Schrader, *Zeitschrift der deutschen morgenländischen Gesellschaft*, 27 [1873], 397-424). This theory was based on the notion that Arabic represents the most archaic Semitic language, that Semitic peoples in Arabia are "pure," i.e., not mixed with non-Semitic peoples as in more exposed zones (Syria, Mesopotamia), and that in historical times waves of Semitic invaders actually set out from Arabia toward the outlying regions.

In this reconstruction the archetype of the (Proto-) Semite would be represented by the bedouin nomad of the Arabian Desert, and the process of settlement of the nomad in the conquered agricultural zones (a process illustrated by the tribes of Israel even before the great phenomenon of Islamic expansion) would be typical of the separation of the single Semitic peoples from the original nomadic stock.

This theory was opposed by I. Guidi (*Della sede primitiva dei popoli semitici* [*Memorie dell'Accademia Nazionale dei Lincei*, 3; 1879], pp. 566-615). This scholar, basing his research on an analysis of the common Semitic lexical heritage, which comprises common names for cultivated plants, a common name for "river" (but not for "mountain," a concept which every Semitic language renders by a different word), tended to set the primal home in an agricultural valley region rather than in a desert zone; in Mesopotamia, therefore, rather than in Arabia. But the Arabian theory prevailed and was systematized by L. Caetani (*Studi di storia orientale, I* [1911], 51-228), who noted that Arabia should have enjoyed a more favorable climate in Proto-Semitic times than at present, so as to allow for the presence there of rivers and agricultural activities. According to this theory the progressive drying-up of Arabia was the cause for the periodic outflow of Semitic peoples in search of more favorable living conditions. The various "waves" were said to have been: (1) ca. 3000 B.C., Akkadians in Mesopotamia and Canaanites in Syria-Palestine; (2) ca. 2000 B.C., Amorites; (3) ca. 1200 B.C., Arameans and Israelites; (4) at the end of the 1st millennium B.C., Nabateans and other Arabs; (5) in the 7th cent. A.D., the great Islamic expansion. Theories of this type have become classical, and — although surpassed by studies and discoveries — still survive in works which are not up to date or sufficiently critical (e.g., R. Dussaud, *La pénétration des Arabes en Syrie avant l'Islam* [1955]).

B. A Non-Desert Home. In later times many essential points were clarified. For one thing, the change in climate in the Near East at the end of the last Ice Age (*ca.* 10,000 B.C.) was too ancient to explain invasions which took place in more recent times when the climate had long since attained present-day levels. Also, it became clear that the technological basis of the nomads down to the end of the 2nd millennium B.C. was lacking in some essential elements for desert life, such as the domestication of the camel (R. Walz, *Zeitschrift der deutshen morgenländischen Gesellschaft*, 101 [1951], 29-51; 104 [1954], 45-87; W. Dostal in F. Gabrieli, ed., *Ancient Bedouin Society* [1959], pp. 11-33; B. Brentjes, *Klio*, 39 [1960], 23-52) and the digging of deep wells. Central Arabia was therefore inaccessible to all (except for small groups, historically unimportant), and nomadism was exercised near irrigated territories and was conditioned by the types of animals bred (donkeys as a means of locomotion, sheep as a source of sustenance).

One last feature became clear: although the processes of settlement of nomads may sometimes assume the aspect of violent irruption (an event which takes place in combination with crises of the sedentary states that had become for the time unable to defend themselves), more often and normally these processes show the pattern of a slow and peaceful infiltration of small groups (families, isolated individuals) in search of employment in the city or countryside, with no abrupt alteration of the demographic balance. Especially due to research on the texts from MARI (18th cent. B.C., located on the middle Euphrates), the model of the Proto-Semitic nomad is no more the Arab bedouin (camel-driver) but rather the Amorite seminomad (shepherd) who comes not from central Arabia but from the steppes immediately adjacent to the Syrian and Mesopotamian valleys (J. R. Kupper, *Les nomades en Mésopotamie au temps des rois de Mari* [1957]). In this view the unity of the Proto-Semitic peoples is notably cut up, and the "primal home" loses its compact character, becoming altered into a long strip of steppeland (enclosed by the real desert on one side, inaccessible, and the cultivated territories on the other) which stretches from Yemen through all of Hejaz and Transjordan and inner Syria, to Mesopotamian Jezirah. The belief that Proto-Semites were seminomads holds fast, however, as does the opinion that their settlement is a secondary process, from which stem the single Semitic peoples.

C. More Recent Theories. Recently, from many directions, further steps have been made toward a new revision of the problem. This revision may be considered parallel to the one which took place on a strictly linguistic level. In the lexical field the observation that terms for agriculture are as much Proto-Semitic as are terms for sheep-breeding has taken on value. As a result there is no real basis for considering NOMADISM as the only original Proto-Semitic form of life (P. Fronzareli, *Rendiconti dell'Accademia Nazionale dei Lincei*. 15 [1960], 123-144; J. Aro, *Zeitschrift der deutschen morgenländischen Gesellschaft*, 113 [1964], 471-480). In any case, anthropological theory has long abandoned the idea that nomadism is a condition of living which preceded the settled stage and that animal-breeding preceded agriculture. More careful study of the Bronze Age has made it clear that animal-breeding took place not only and not so much on the steppes as in hilly or forest zones which alternate with cultivated valleys (M. Rowton, *Studies in Honor of Benno Landsberger* [1965], pp. 375-387); that from the economic point of view nomads and settled populations are in mutual symbiosis (M. Rowton, *XV Rencontre Assyriologique Internationale* [1967], 109-121); that the processes of settlement and of attaining power on the part of the nomads are events of social character (i.e., vertical movements in a certain society) and not due to migration (i.e., horizontal movements from one region to another, cf. G. Mendenhall, *BA*, 25 [1962], 66-87); lastly, that processes of nomadization of settled populations, due to crises in mercantile or state organization (W. Caskel, *Zeitschrift der deutschen morgenländischen Gesellschaft*, 103 [1953], 28-36; *American Anthropologist*, Memoir 76 [1954], 36-46), or perhaps to temporary fluctuations of the climate (M. Liverani, *Oriens Antiquus*, 7 [1968], 77-89) are attested, as well as processes of settlement of nomads.

In sum, it seems best to abandon the ideas that Proto-Semites may be characterized as nomads or seminomads and that their diffusion is an event that always takes place along the same lines. On the other hand the situation of mixture between two sectors of the population, cultivators and pastoralists, which we notice in historical times, should probably be projected back into the period before written evidence. This pattern was certainly now and then altered by migrations; but these took place in many directions, hence explaining linguistic contact of various types. Above all, on a general theoretical level, counter to the normal tendency to explain every linguistic (and esp. lexical) connection as a consequence of migrations (i.e., of general movements of populations), the trend today is toward imagining (on the strength of what is shown by the historical period) the population as more or less immovable, and linguistic innovations and lexical elements shifting according to the diffusion of ideas or of new techniques, to political events, to commercial contacts, to military conquest, events which only require

Syrians and Libyans bow down before an Egyptian royal servant. Relief from the tomb of Horemheb at Saqqârah, *ca.* 1300 B.C. (National Museum of Antiquities, Leiden, photo A. deKemp)

the movement of a limited number of people (specialists in a particular technique, bands of warriors, *et al.*), or even no movement at all.

D. The Arabian Peninsula and Contiguous Regions. In this light the concept of a Proto-Semitic population is in fact set aside, and for it is substituted the idea that historical (i.e., political, commercial, cultural in general) contacts between the various Semitic populations — inhabiting a relatively small area and therefore in close contact with one another — have a long prehistory, which may explain the close linguistic connections. This does not mean to say that, going back in time beyond the "urban revolution," in an age in which political organizations, social structures, and technical notions were developed, the complex of the Semitic peoples cannot have been more homogeneous, more tightly knit. All this is quite possible, and perhaps probable. As for the primitive "home," there is no reason for us to imagine it as an area smaller than the compact group of lands between the Euphrates, the Mediterranean, the Red Sea, and the Persian Gulf, occupied by Semitic peoples at the beginning of written evidence.

V. The Problem of Common Semitic Culture.–The different solutions proposed at various times for the linguistic concept of "Semites" have consequently brought about different ideas concerning the existence of other cultural elements, which may characterize the Semitic peoples and set them apart from non-Semitic peoples. Doubtful is the existence of actual Semitic elements in art or literature or social organization, or (especially) in religion and religiosity. The problem is made less clear by the fact that the elements of a possible Semitic culture have been searched for not so much in the most ancient phases (as should have been obvious) but in the more recent ones, i.e., Semites of which we have direct experience today. To speak of Semites means in fact — especially for the layperson rather than the specialist — to speak of Arabs and particularly of Jews. The latter is a population which has been subject to mixture with (while being generally unwilling to be assimilated to) European and (later) American society, with consequent reactions of intolerance and even hatred which have clear sociological motivations (of religious or economic character, etc.). Even the idea of a Semitic "race" has been propounded, coupled with that of its presumed inferiority in comparison with the Indo-European race, with tragic consequences ("anti-Semitism"). These positions must obviously be rejected radically, since no race, i.e., a complex of physical characteristics, may be qualified as Semitic (we have seen that the common denominator of the Semites is linguistic in character), and since cultural elements are transmitted from one individual to another through learning and not by genetic means.

But apart from these gross misunderstandings, and

going back to the problem in its scientific form, it must be noted that the concept of a Semitic culture can hardly sustain a rigorous criticism, although it is still widely employed (in a more-or-less conscious manner). Just as the affinities between the various Semitic languages are the product not only and not so much of a derivation from a common original stock but also of historical contacts of various types, and just as the processes of convergence and assimilation are of the same importance as the processes of segmentation, similarly cultural affinities must be understood as the product of historical contact (apart from similar conditions of living) rather than the heritage of a "Proto-Semitic" culture, from which the disparate Semitic cultures are derived.

In this historical light the problem loses part of its emotional implications, even if it loses none of its historical relevance. Pinpointing a common cultural element between two or more Semitic peoples is not immediately and automatically the sign of a common derivation and even less that of a racial predisposition (or characterization). It may be due to secondary convergence and may above all be extended to peoples speaking non-Semitic languages. It is well known that elements of material culture (types of houses, of weapons and tools, of clothing, of systems of cultivation, etc.) and ideological elements (matrimonial habits, types of families, systems of government, religious beliefs, mythological heritage, etc.) do not have a coincidental (if not casual) diffusion with that of linguistic isoglosses. Therefore the definition of a Semitic unity, which is a linguistic concept, has no necessary correspondence on the cultural level.

The phenomena of cultural diffusion within the Semitic group have naturally been made easier by linguistic community (apart from territorial contiguity) and certainly took place repeatedly in the course of time, in the historical as well as in the predocumentary period. The diffusion in each instance was advanced by elements of the particular drive (e.g., sanctuaries for the diffusion of religious ideas, commercial channels for the diffusion of techniques and objects), by political and military events, by the development of the social structure itself. During a large part of the pre-Christian period Mesopotamia was the most advanced center, from which many cultural elements spread toward the outlying regions (thus leading to the theory of "pan-Babylonianism," now discredited, or better, brought back to concrete and reasonable historical dimensions). On the other hand seminomadic peoples, such as the Amorites first and the Arameans later, although less advanced technologically, spread languages, religious ideas, and family structures thanks to a stronger social and demographic organization. In later times great religious currents, such as Judaism and Islam, were factors in the propulsion of Jewish and Arabic elements of culture. Similar phenomena must have taken place in the predocumentary period, but only sparse facts are borne out by lexical studies.

Other cultural elements are common because they correspond to common conditions of living (and therefore are not exclusively of Semitic heritage), and in this sense it is a misunderstanding to term "Semitic" what simply derives from nomadic-pastoral conditions. For example, in the economic field a certain tendency toward private property of the family groups vis-à-vis the community organization of the temple-cities of ancient Mesopotamia may be attributed not so much to the Semites as opposed to the Sumerians but rather to tribal habits as opposed to city life. In the field of religion certain tendencies to monotheism represent the outflow of a nomadic religious character tied to a tribal organization of society, as opposed to the urban organization with differentiation in social functions, which expresses itself — on the contrary — through a polytheistic pantheon. Not to mention, of course, some traits that have been attributed to Semites, in opposition (explicit or implicit) to the Greeks (the latter seen as the first expression of an Indo-European "genius"), traits which correspond simply to the structures of a "mythical" or "prelogical" thought (this last term is quite open to discussion) attested in civilizations of the same technical-cultural level, even though distant in space or time. An example is the tendency of Semites to engage in practical activity rather than in theoretical reflection. Lastly, a few proposals that attempt to set apart specifically "Semitic" cultural traits depend exclusively on prejudice or wrong judgment, as in the case of a "Semitic" tendency toward commerce, an opinion which stems from a comparison of the merchant activities of the ancient Phoenicians and the Jews in the post-Christian era. The two phenomena took place in clearly different historical situations; in no way are they to be related to original characteristics of the Semitic peoples.

A more critical look at this complex of problems should advise employing today the term and the concept "Semites" exclusively in its linguistic sense, and, on the other hand, tracing back every cultural fact to its concrete historical environment. The use of the term "Semitic" in culture, subject as it is to arbitrary simplifications, shows methodological risks which exceed by far the possibility of positive historical analysis. In any case the "Semitic" character of every cultural fact is a problem which in each situation must be ascertained in its limits and in its historical setting (both in time and in the social environment), and may not be assumed as obvious or traced back to a presumed "Proto-Semitic" culture, statically conceived.

Bibliography.—For the phonological and morphological comparison of Semitic languages, see the fundamental work by C. Brockelmann, *Grundriss der vergleichenden Grammatik der semitischen Sprachen* (2 vols., 1908-1913), and the more recent work of S. Moscati, *et al., Intro. to the Comparative Grammar of the Semitic Languages* (1964, repr. 1969). For lexical comparison: D. Cohen, *Dictionnaire des racines sémitiques* (1970-76); P. Fronzaroli, *Studi sul lessico comune Semitico* (1964-1972). On Hamito-Semitic: I. M. Diakonoff, *Semito-Hamitic Languages* (1965); J. and T. Bynon, eds., *Hamito-Semitica* (1975). On the trends in research: G. Levi Della Vida, ed., *Semitic Linguistics: Present and Future* (1961). For a historical outline of the spread of Semitic peoples: S. Moscati, *Semites in Ancient History* (1959). Recent overall studies: on material culture and social life: J. Henninger, *Über Lebensraum und Lebensformen der Frühsemiten* (1968); on religion: S. Moscati, ed., *Ancient Semitic Deities* (1958); J. Roberts, *Earliest Semitic Pantheon* (1972). On cultural characterizations, the works of E. Renan, *De la part des peuples sémitiques dans l'histoire de la civilization* (1862) and F. Delitzsch, *Die grosse Täuschung* (1920), are of interest today only for the history of the problem.

tr. W. S. LASOR

SENAAH se-nā'ə [Heb. *s^{e}nā'â*; Gk. Apoc. *Sanaas, Sama*] (Ezr. 2:35; Neh. 7:38; 1 Esd. 5:23); AV Apoc. ANNAAS; NEB Apoc. SANAAS. Name of a town that appears in lists of cities whose inhabitants returned from the Exile with Zerubbabel. The number of returning people includes varying estimates of 3,630 (Ezr. 2:35), 3,930 (Neh. 7:38), and 3,330 (1 Esd. 5:23; LXX B, 3,301). In Neh. 3:3 the name of the town appears as HASSENAAH (Heb. *hass^{e}nā'â*), i.e., Senaah with the definite article. A connection between these people and the Benjaminite clan Hassenuah (1 Ch. 9:7) seems unlikely. The close association with Jericho in both lists (Ezr. 2:34; Neh. 7:36) may indicate

a location near that city, e.g., Magdalsenna 13 km. (8 mi.) NE of Jericho, but this remains uncertain.

R. L. PRATT, JR.

SENATE [Gk. *gerousía* (Acts 5:21; Jth. 4:8; 11:14; etc.), *bouleutḗrion*–'council,' 'senate chamber']; AV also ANCIENTS, ELDERS, COUNCIL. Greek *gerousía* (cf. *gérōn*, "old man"), like Lat. *senatus* (cf. *senex*, "old"), denotes a "council of elders." In Acts 5:21 *gerousía* is evidently equivalent to the foregoing "council" (*synédrion*) and refers to the SANHEDRIN. The Sanhedrin was preceded by a Jewish "council of elders" that is mentioned in Jth. 4:8; 11:14; 1 Macc. 12:6; 2 Macc. 1:10; 4:44; 11:27. Made up of the *presbýteroi* ("elders" representing the various families and clans; cf. 1 Macc. 1:26; 7:33; 2 Macc. 13:13; 14:37) and presided over by the high priest, this "senate" was the chief Jewish legislative and judicial body (*see* GOVERNMENT IV.C).

In 1 Macc. 8:15, 19; 12:3 *bouleutḗrion* refers to the Roman senate. According to tradition a senate of one hundred members was first established by Romulus. During the time of the Maccabees its membership numbered about three hundred (Sulla in 81 B.C. increased it to six hundred); it met when summoned by the magistrate (not daily as stated in 1 Macc. 8:15). Roman senators were chosen by the king during the monarchical period; under the republic they were chosen first by the consuls and later by the censors. Like the Jewish *gerousía*, the senators were originally representatives of wealthy families and clans. During the last two centuries of the republic the senators were primarily ex-magistrates, supplemented by representatives of patrician (in time also plebeian) families selected by the censor. During this period the senate gained extensive powers. Although constitutionally the senate was only an advisory body, its advice became a mandate that few dared to disregard. It became the chief governing body in Rome and assumed the right to conduct negotiations with foreign powers. Challenges to the senate's authority by military leaders led to the collapse of the republic. Under the empire (beginning in 27 B.C.) the senate lost much of its independence. Although it performed judicial functions and held authority over the "public" provinces (*see* PROVINCES, ROMAN II), its role in legislation and foreign policy was generally limited to advising the emperor.

Bibliography.–*Enc.Brit.* (1965), *s.v.*; J. A. Goldstein, *I Maccabees* (*AB*, 1976), pp. 356, 452; *Oxford Classical Dictionary* (2nd ed. 1970), *s.v.* "Senatus."

W. A. HEIDEL N. J. O.

SENATOR. The AV translation of Heb. *zāqēn* ("elder"; LXX *presbýteros*) in Ps. 105:22 (RSV "elder"; NEB "counsellor"). *See* ELDER IN THE OT.

In 1 Macc. 8:15 Gk. *bouleuómenoi* refers to Roman senators who meet in the *bouleutḗrion* ("senate chamber") to "deliberate [*bouleúomai*] concerning the people, to govern them well" (*see* SENATE). 2 Macc. 6:1f. refers to an "Athenian senator" (*géronta Athēnaion*; AV "old man of Athens"; NEB "elderly Athenian") sent by Antiochus IV Epiphanes to compel the Jews to forsake the worship of God and to "pollute" the Jerusalem temple and call it "the temple of Zeus." There has been much discussion about the meaning of *gérōn* (nominative of *géronta*). It could be a man's name (Geron has been attested as a Greek name) or the title of a member of the Athenian *gerousía* (thus "elder" or "senator"), or it could mean "old man" (cf. AV, NEB). For stylistic reasons (e.g., the author of 2 Maccabees elsewhere gives the names of all persecutors) J. A. Goldstein has recommended the translation "Geron the Athenian" (see Goldstein, *II Maccabees* [*AB*, 1983], pp. 268-272).

N. J. O.

SEND. Most frequently a translation of Heb. *šālaḥ* in the OT and Gk. *apostéllō* or *exapostéllō* in the NT. The concept of sending involves several elements: a definite mission assigned to a messenger, the messenger's subordination to the will of the sender, the impartation of the sender's authority to the one sent, the faithful completion of the mission by the messenger, and often the reception of the messenger by the sender when the assignment has been completed. It is significant that the prophets, who were committed to the task of faithfully proclaiming God's word (cf. Zec. 7:12; Isa. 55:11), are designated also as His servants (Rev. 10:7). Angels likewise were commissioned to declare God's purposes to His people (Lk. 1:26; He. 1:14). *See* ANGEL; MESSENGER; PROPHET IV.

John the Baptist was sent by God to prepare Israel for the coming of Jesus the Christ (Jn. 1:6). Jesus in turn was sent by the heavenly Father (4:34; 10:36) — a sending that marked the most important watershed in human history. Jesus Himself was keenly conscious of His status as one sent and referred to it frequently (e.g., Jn. 3:17; 5:30; 6:39; 7:29; 17:3). He was also aware of being directed by the Holy Spirit (Lk. 4:18; cf. v. 1).

The apostles chosen by Jesus were sent out by Him to preach and to heal (Lk. 9:2). After His resurrection Jesus sent them out again, this time on a permanent mission to bring the message of the gospel (Jn. 20:21). Sending and being sent continued to be important factors in the life of the early Church. The Jerusalem church sent Barnabas to shepherd the growing gentile congregation at Antioch (Acts 11:22). Later the Antioch church sent him and Paul to evangelize areas to the north and west (13:1-3). The word "missionary" underscores the central importance for Christianity of sending and being sent. *See also* APOSTLE.

John 9:7 states that a pool in the Jerusalem area was called Siloam, meaning "Sent." Jesus anointed the eyes of a blind man with clay and sent him to this pool to wash. Using a wordplay built on the etymology of the name Siloam, John seems to be drawing a parallel between the blind man's obedience to Jesus and the Savior's obedience to the Father (v. 4). Quite possibly the reader is being invited to contrast this dual obedience with the recalcitrance of Judah in the days of King Ahaz (Isa. 8:5-8; here the MT has Shiloah but the LXX has Siloam).

E. F. HARRISON

SENEH sē'nə, se'nə [Heb. *senneh*]. One of two mountain peaks of the Michmash pass mentioned in 1 S. 14:4; the other is Bozez. The first peak is said to be "on the north in front of Michmash" and the second "on the south in front of Geba" (14:5). This description locates them along the Wâdī es-Ṣuweinîṭ, about 11 km. (7 mi.) NE of Jerusalem and 5.5 km. (3½ mi.) SE of Michmash.

In 1 S. 14:4 Jonathan and his armor-bearer passed between Seneh and Bozez to enter the Philistine garrison. The order in which these mountains and their locations appear in the biblical text implies that Seneh is on the south side of the pass.

The name of the mountain may have been derived from the root *snh*, "thorn," and used because thorn bushes grew in that area. Josephus (*BJ* v.2.1 [51]) mentions a "Valley of Thorns" near Gabeah of Saul that may account for the naming of this mountain.

P. VIVIANO

SENIOR PRIESTS [Heb. *ziqnê hakkōhᵃnîm*] (2 K. 19:2; Isa. 37:2; Jer. 19:1); AV "elders of the priests," "ancients of the priests"; NEB also "elders of the priests." The actual position of the senior priests is not known, but if this phrase is analogous to "elders of the people," then they were probably the heads of the priestly families.

SENIR sē'nər [Heb. *śᵉnîr*; Gk. *Sanir*]; AV also SHENIR. According to Dt. 3:8f., the Amorite name for Mt. Hermon. But Senir and Hermon are named as two different mountains in Cant. 4:8, and both names also appear in 1 Ch. 5:23, which defines the boundaries of the half-tribe of Manasseh Perhaps the apparent discrepancy can be explained by the fact that Mt. Hermon has three peaks, two on the east and one on the west. Medieval Arab geographers designated Senir as the part of the mountain range that is N of Damascus.

In a lamentation over Tyre, Ezekiel (27:5) likens that city to a ship whose planks were made from the firs of Senir. The same passage has Lebanon parallel to Senir but does not mention Hermon at all; thus it seems to identify Senir in some way with the Anti-Lebanon Range. Hazael of Damascus built a fortress on Mt. Senir to ward off an invasion by Shalmaneser III of Assyria (859-824 B.C.). Although Shalmaneser won the battle, he did not take Damascus. In his records Senir is called the mountain peak at the entrance of Lebanon, but a different passage locates it at the north end of the Anti-Lebanon.

D. H. MADVIG

SENNACHERIB sə-nak'ər-ib [Heb. *sanḥērîḇ* (2 K. 18:13); Akk. *Sin-aḫḫê-eriba*–'[the deity] Sin has multiplied brothers.' King of Assyria and Babylonia (705-681 B.C.), son of Sargon II and father of Esarhaddon. He besieged Jerusalem in the days of Hezekiah. Sennacherib left copious records of his reign (cf. *ARAB*, II, §§ 115-198), the final edition of his annals being known as the Taylor Prism (*DOTT*, Plate 4), and a better copy known as the Oriental Institute Prism (cf. Luckenbill, *ANET*, pp. 287f.).

I. Military Campaigns
II. Building Projects
III. Literary Ability
IV. One or Two Invasions of Judah?
V. Death

I. Military Campaigns.–Sargon II was killed in battle at Tabalu, N of the Taurus Mountains, in the month of Ab, 705 B.C., and on the twelfth of the same month his son Sennacherib ascended the throne of Assyria. Since Sennacherib was well trained, both in military and in administrative matters, the transition of government was seemingly smooth and no insurrections broke out. Nevertheless Babylon was always a problem for Assyria.

Merodach-baladan, king of Babylon (721-710), had fled when Sargon invaded Babylon (710 B.C.), but apparently had been allowed to continue as ruler of the province of Bit-Yakin. When SARGON died MERODACH-BALADAN initiated a number of efforts at revolt. Elam obviously was involved, for with its help Merodach-baladan seized the throne from Marduk-zākir-šumi who had reigned but a month (703 B.C.). It is likely that Merodach-baladan sent envoys to Hezekiah at this time (2 K. 20:12); he may have made some overtures also to Egypt as well as to several city-states in Hatti (Syria).

Sennacherib reported that in his first campaign he marched on Babylon, and at Kish (about 20 km. [12 mi.] SE of Babylon) he inflicted a terrifying defeat. Merodach-baladan saved his life by fleeing. Sennacherib continued on, plundering the treasury at Babylon and much of Bīt-Yakin, a region at the northern end of the Persian Gulf (*ARAB*, II, §§ 234f., 257-267, 270-76, 301-303, 345). He placed Bel-ibni, a Babylonian who had served in the palace at Assyria (*ARAB*, II, § 263), on the throne as king of Babylon (702-700 B.C.), and carried back to Nineveh much booty and many captives (see *ARAB*, II, §§ 234, 261, 267, 272).

With Sennacherib's attention on Babylonia it was obviously the time for revolt in other regions. Accordingly, Sennacherib's second campaign was against tribes E of the Tigris (*ARAB*, II, §§ 236-38, 277-282, 304-308, 346). Again he brought back much plunder and many captives. The Medes bought him off by paying tribute.

In his third campaign (*ca.* 701 B.C.) Sennacherib moved against the west. He captured the city-states from Tyre to Sidon (cf. *ARAB*, II, § 239; *DOTT*, pp. 66 and 68 n. a; *ANET*, p. 287), and continued down the coast putting cities of the Philistine Plain and Shephelah under tribute. According to his rather full account (*ARAB*, II, §§ 239f., 309-312; *ANET*, pp. 287f.; *DOTT*, pp. 64-69; *CPOT*, 340-44), he forced Hezekiah to release Padi, the king of Ekron who had been loyal to Assyria and restored him to his throne; and he captured 46 of Hezekiah's strong, walled cities, plundered them, and gave them to the kings of Ashdod, Ashkelon, Ekron, and Gaza. Hezekiah he shut "like a caged bird" in Jerusalem, imposed a heavy tribute (30 talents of gold, 800 talents of silver, all kinds of palace treasures, his daughters, palace women, male and female singers), and carried 200,150 persons in addition to many animals to Nineveh. For the problem of harmonizing Sennacherib's account with the biblical accounts, see IV below.

From his records we know that Sennacherib conducted at least eight campaigns. The fourth and sixth, like the first, were against Bīt-Yakin. The fifth campaign was against tribes in the mountains E of the Tigris (*ARAB*, II, §§ 244f., 293-98, 316f.), accounts of which contain some of the fine descriptive writing for which Sennacherib is noted. The seventh campaign was against Elam, principally to secure the loyalty of the border cities (*ARAB*, II, §§ 248-251, 354f.).

The eighth campaign was also against Elam (*ARAB*, II, §§ 252-54, 352, 356f.). In this campaign the battle of Halule took place (*ca.* 690 B.C.), certainly one of the bloodiest waged by Sennacherib, the description of which is breathtaking (cf. *ARAB*, II, §§ 253f.). On his return Sennacherib sacked Babylon, diverted the canals to flood the city "that in days to come the site of that city . . . might not be remembered" (*ARAB*, II, § 341). Sennacherib thereafter called himself "king of Sumer and Akkad" (cf. J. Oates, *Babylon* [1979], p. 120), not "king of Babylon," for he had not taken the hands of Marduk. In fact, Marduk had been carried to Asshur. It was as though Sennacherib deliberately broke the traditional importance of Marduk and Babylon. The Babylonian Chronicle, following the account of the capture of Babylon, records, "During eight years there was no king in Babylon" (col. 3, line 28; Rogers, p. 215) — which would be the years 689-681. The King List from Asshur, however, lists Sennacherib as "king of Assyria and Babylon" (col. 4, line 12; *ARAB*, II, §§ 1188, p. 425; *ANET*, p. 273).

There are other, undated military actions to be accounted for: an expedition against Arabia (*ARAB*, II, § 358); a siege of Lachish recorded on wall reliefs at Nineveh (*ARAB*, II, § 489; *AAAO*, Plate 101) and mentioned in the OT (2 K. 18:13–19:8); an attack on Egypt, if Herodotus's account is to be believed (Herodotus ii.141); a revolt and a palace coup which resulted in the assassination of Sen-

Sennacherib riding in his chariot near some water, accompanied by an armed envoy. From a palace relief at Nineveh, *ca.* 690 B.C. (courtesy of the Trustees of the British Museum)

nacherib (recorded by his son Esarhaddon, *ARAB*, II, §§ 501-506; *ANET*, pp. 289f.). The problems will be considered in IV below.

II. Building Projects.–As soon as Sennacherib became king, he began his building projects at Nineveh, which had lain in ruins for years. Using captive Chaldeans, Arameans, Manneans, and peoples from Cilicia (*ARAB*, II, § 364), he built the "Palace without a Rival," apparently having decided even while his father was ruling from Dūr-Šarrukin (Khorsabad) to abandon that location. He razed the former palace, the foundations of which had been cut away by the raging waters of the Tebiltu when it was in spate (*ARAB*, II, § 365). Then he changed the course of the river, and using great boulders and stone slabs built a seawall to prevent future erosion while enlarging the area (*ARAB*, II, § 385). Backfilling this wall, he built a larger, higher platform for the palace, 440 by 700 cubits (about 220 by 350 m. [725 by 1155 ft.], using the "great cubit" which was about 10% larger than the standard cubit; cf. *ARAB*, II, § 388). Excavations showed that the palace measured 180 by 190 m. (600 x 630 ft.; cf. *Enc. Brit.* [1970], XVI, 528 [M. Mallowan]). The palace consisted of more than 80 rooms, with 9,800 feet of stone slabs, inscriptions, and low-reliefs, including the famous reliefs depicting the siege of Lachish, that lined the walls. The roof consisted of great cedar beams from the Amanus Mountains; the doors of great panels of cedar wood. Colossal bulls, lions, cows, and sheep were placed at strategic locations.

The Khosr river also emptied into the Tigris near Nineveh; this was dammed and used to irrigate the parks and orchards which Sennacherib installed. To augment the waters of this river, he dug eighteen canals (*ARAB*, II, § 332). From a dam at Bavian (M. Beek, *Atlas of Mesopotamia* [1962], Map 11) he brought water by a canal 50 km. (30 mi.) long. To slow down the waters he formed a swamp and set out a cane-brake, turning the area into a preserve for wild animals (*ARAB*, II, § 401). The modern course of the Khosr is about 1350 m. (4500 ft.) from the ancient city walls.

The circumference of the city he enlarged from 9,300 cubits to 21,815 great cubits (12 km. [7.5 mi.]; *ARAB*, II, § 396); after the excavations, G. Smith reported that the circumference of the wall was 8 mi. (12.8 km.), which is in reasonable agreement with Sennacherib's figures (*ISBE*, IV [1929], 2148). A wide moat (100 great cubits [50 m., 165 ft.]) surrounded the wall (*ARAB*, II, § 474).

Sennacherib brought trees and plants from distant places to create a great park "like unto Mt. Amanus" (*ARAB*, II, § 376). He straightened and widened the suqs (market streets) (*ARAB*, II, § 474), built a royal road 52 great cubits wide (26 m. [86 ft.]) (*ARAB*, II, § 475), which he made to pass over a bridge built of burnt brick and white limestone (*ARAB*, II, § 381). All of this was largely completed by the third year of his reign, for inscriptions containing the records are dated in the eponymy of Nabu-ilu (702 B.C.) and in the eponymy of Mutunu (700 B.C.). Sennacherib made Nineveh's splendor to rival that of ancient Babylon.

There were further building projects at Asshur (*ARAB*, II, § 452ff.), at Tarbasi (modern Sherif Khan; *ARAB* II, § 480), and other places.

III. Literary Ability.–Sennacherib's ability to paint graphic pictures is evidenced in many of his inscriptions. The account of the siege of Jerusalem has so often been quoted that only a brief portion will be repeated: "As for Hezekiah the Judean who did not submit to my yoke, 46 of his strong, walled cities, as well as the small cities in their neighborhood, which were without number, by escalade and by bringing up siege engines, by attacking and storming on foot, by mines, tunnels, and breaches, I besieged and took. . . . Himself like a caged bird I shut up in Jerusalem, his royal city" (*ARAB*, II, § 240; cf. *ANET*, pp. 287f.).

Of the campaign in the hills E of the Tigris he described his experiences: "I had my camp pitched at the foot of Mt. Nipur and with my picked bodyguard and my relentless warriors, I like a strong wild-ox went before them. Gullies, mountain torrents and waterfalls, dangerous cliffs, I surmounted in my sedan chair. Where it was too steep for my chair, I advanced on foot. Like a young

gazelle I mounted the high peaks in pursuit of them" (*ARAB*, II, § 244).

His descriptions of the battle of Halule contains these graphic words: "Like a lion I raged. I put on (my) coat of mail. (My) helmet, emblem of victory, I placed upon my head. My great battle chariot, which brings low the foe, I hurriedly mounted in the anger of my heart. The mighty bow which Assur had given me, I seized in my hands; the javelin, piercing to the life, I grasped" (*ARAB*, II, § 253; the account continues in § 254).

To read his records is also an education in the materials used in building, the locations from which these materials were brought, and even some of the methods used. For example: "Beams of cedar, the product of Mt.Amanus, which they dragged with difficulty out of (those) distant mountains, I stretched across their ceilings (?). Great door-leaves of cyprus, whose odor is pleasant as they are opened and closed, I bound with a band of shining copper and set them up in their doors" (*ARAB*, II, § 366). "With the keen understanding which Ea lord of wisdom gave me, I made clay molds for all the copper work" (*ARAB*, II, § 431). To fashion the colossal lions, "open at the knees, which no king before my time had fashioned" (*ARAB*, II, § 412), he gives the following method: "I built a form of clay and poured bronze into it, as in making half-shekel pieces" (*ARAB*, II, § 413).

IV. One or Two Invasions of Judah?–The theory that Sennacherib made two invasions into southern Palestine, one in 701 B.C. and the other in 688/87 B.C. has been debated for a century or more (cf. H. H. Rowley, *Men of God* [1963], pp. 98-132, in which he defended the one-invasion view). L. L. Honor presented the evidence for both theories in *Sennacherib's Invasion of Palestine* (1926, repr. 1966). W. F. Albright espoused the two-invasion view (*JQR*, 24 [1934], 370f.) and continued to hold it despite criticism (cf. *FSAC*, p. 314 n. 53), as did his student J. Bright, *BHI*, [3rd ed. 1972], pp. 298-309). B. S. Childs reviewed the evidence without drawing a conclusion (*Isaiah and the Assyrian Crisis* [*SBT*, 2/3, 1967]).

The argument for one campaign may be summarized briefly: Sennacherib's accounts mention only one campaign, and the OT likewise mentions only one campaign (2 K. 18:17–19:37). The basis for the two-campaign theory is found in Sennacherib's Lachish reliefs, Lachish not being mentioned in his campaign of 701 B.C.; the biblical mention of the occupation of Lachish, a battle with Tirhakah of Egypt (2 K. 19:8f.), and the juxtaposition of Sennacherib's hasty retreat and his assassination (19:35-37), which does not fit with an invasion in 701 and the assassination in 681 B.C. Further, the fact that Isa. 36:1-22 closely parallels the account in 2 Kings, except that it omits 2 K. 18:14-16 — which is precisely the portion that most closely parallels Sennacherib's account — suggests to some scholars that two invasions have been merged in the account in 2 Kings. In sum: Sennacherib's first invasion resulted in the seige of Jerusalem, the payment of tribute by Hezekiah, etc., as presented in Sennacherib's third campaign and in 2 K. 18:13-16; in the second invasion Egyptian forces came to the aid of Hezekiah and a crisis developed in the Assyrian camp, described in Herodotus as mice eating the leather of their weapons (ii.141; *LAP* [2nd ed., 1959], pp. 213f.), and in the Bible as an act of "the angel of the Lord" that resulted in the death of 185,000 Assyrian soldiers and Sennacherib's hasty retreat (2 K. 19:35f.).

Leaving aside the difficulties in the biblical text — such as whether Lachish (2 K. 18:14ff.) was occupied by Sennacherib in 701 or later, the shift of scene from Lachish to Libnah (19:8), the promise of Isaiah that Sennacherib would not come to the city (19:32) contrasted with the account of the siege and the payment of tribute (18:13-18) — as matters to be discussed in commentaries, one must consider the historical and archeological data. Unless one dismisses the biblical account as historically worthless and Herodotus as hopelessly confused, these historical data must be somehow integrated into Sennacherib's accounts.

Two studies have undertaken this task. W. H. Shea took up three sets of data from Assyria, Palestine, and Egypt that appear to support a second invasion. From Assyria, Shea cited a text concerning the siege of Azekah and other Philistine cities that refers to "Anshar my lord." Shea noted that the use of Anshar as a supporting deity is not found until after the destruction of Babylon in 689 B.C. Further, Isaiah's reference to Sennacherib's feats in hydraulic engineering (2 K. 19:24, reading *māṣôr* as [Mt.] Muṣri; cf. *ARAB*, II, § 401) has to be later than the event, which is dated in 694 B.C. (cf. H. Tawil, *JNES*, 41 [1982], 195-206).

From Palestine, Shea introduced the Adon Papyrus, found at Saqqârah, which appears to be an appeal from Adon, the ruler of Ekron, for Egyptian support in the face of an Assyrian invasion. Since Adon refers to "the king of Babylon," this would require a date after 689. The evidence is supportive but not fully convincing.

From Egypt a text formerly attributed to Sheshonq I is now attributed to Tirhakah. It refers to an earlier debacle in Asia, probably Palestine, which could have been his defeat by Sennacherib, but it must be dated later than 701, for evidence from Egypt places the reign of Shabaka 713-699. Since the reign of Shabataka (Shebitku) must therefore be after 699, he could not have sent Tirhakah into battle prior to that date. Tirhakah's campaign and battle with Sennacherib, therefore, could not have been in 701, but requires a later date.

R. W. Younker's approach is quite different. He reasoned that if Sennacherib conducted two campaigns into Judah, archeological evidence of two campaigns should exist, either in sites where two destructions or occupations are attested, or in sites where the destruction or occupation is dated to the earlier or the later invasion. He found nine such sites. Of these, six witness to two destructions in the late 8th or early 7th cent.; Tel Lahav, Tel ʿErani (= Libnah?), Tell Beit Mirsim (Ashan?), Tel Beersheva, Arad, and Tell ez-Zakariyeh (Azekah). The other three sites, Tel Miqne (Ekron), Tel Batash (Timna), and Lachish, yield evidence of only one destruction, later than 701 B.C. The evidence therefore supports the conclusion that Sennacherib conducted two campaigns into Judah.

It is not yet possible to claim that the basis for two campaigns is beyond dispute; hence J. Bright's statement is still valid: "Though new evidence may alter the picture, and though dogmatism is certainly to be avoided, a two-campaign theory seems at present to satisfy the evidence best" (*BHI*, 3rd ed., p. 309).

V. Death.–According to Esarhaddon's records, his father Sennacherib had named him over his brothers as successor. "To gain the kingship they slew Sennacherib their father" (*ARAB*, II, § 502). Esarhaddon was on a campaign in Hanigalbat, and he hastened back to secure the throne. According to the Babylonian Chronicle, Sennacherib was murdered by "one" of his sons (*DOTT*, p. 72). This has sometimes been taken to contradict the biblical account, which names Adrammelech and Sharezer as the assassins (2 K. 19:37). Esarhaddon's words, "they slew" (cf. *ANET*, p. 288), should settle the matter. Details given in the biblical acount are otherwise not known.

W. S. LASOR

SENSE [Heb. *śeḵel* or *śēḵel*–'insight, understanding'] (Neh. 8:8; "good sense," Prov. 12:8; 13:15; 19:11); AV also WISDOM, UNDERSTANDING, DISCRETION; NEB also INTELLIGENCE; [*lēḇ*–'heart,' always used with another term in a negative sense] (e.g., *ḥᵃsar lēḇ,* "has no sense," Prov. 6:32; 12:11; 15:21; "lacks sense," 10:13, 21; 11:12; Eccl. 10:3; "without sense," 7:7; 9:4, 16; 17:18; 24:30; *ʾên lēḇ,* "without sense," Hos. 7:11); AV UNDERSTANDING, WISDOM, HEART; NEB also FOOL, FOOLISH, EMPTY-HEADED, etc.; [Gk. *ósphrēsis*–'sense of smell'] (1 Cor. 12:17); AV, NEB, omit; **SENSELESS** [Heb. *lō' ḥāḵām*–'not wise'] (Dt. 32:6); AV UNWISE; NEB STUPID; [*nāḇāl*–'fool'] (Job 30:8); AV FOOL; NEB VILE; [*ʾên lēḇ*–'there is no heart'] (Jer. 5:21); AV WITHOUT UNDERSTANDING; [niphal of *yāʿal*] (Jer. 5:4); AV FOOLISH; NEB STUPID; [Gk. *anóētos* (1 Tim. 6:9), *apaídeutos* (2 Tim. 2:23), *asýnetos* (Rom. 1:21)]; AV FOOLISH, UNLEARNED; NEB FOOLISH, IGNORANT, MISGUIDED; **SENSIBLE** [Gk. *phrónimos* (1 Cor. 10:15), *sṓphrōn* (1 Tim. 3:2; Tit. 2:2, 5)]; AV WISE, SOBER, TEMPERATE, DISCREET; NEB also TEMPERATE; **SENSIBLY** [Gk. *sōphrosýnē*] (1 Tim. 2:9); AV with SOBRIETY; NEB SOBERLY.

In the OT these terms, which occur most often in the wisdom literature, are used in both positive and negative contexts. Negative texts are by far the more numerous; the few positive texts use *śeḵel.* Thus in Prov. 12:8 "a man of good sense" (here the RSV supplies "good") is commended, in contrast to "one of perverse mind," who is despised (cf. Sir. 25:9). Similarly, in Prov. 13:15 "good sense wins favor, but the way of the faithless is their ruin" (see comms. for the difficulties of this verse). In Neh. 8:8 Ezra and his assistants (Levites?) read from the book of the law of God and "gave the sense [Heb. *śûm śeḵel*], so that the people understood the reading." Scholars disagree about whether this verse refers to explanation or to translation (see comms.; cf. the prologue to Sirach; *see also* TARGUM).

As H. W. Wolff (*Anthropology of the OT* [Eng. tr. 1975], p. 48) pointed out, *ḥᵃsar lēḇ* (lit. "lack of heart") "does not mean coldness of feeling but lack of thought." Fabry (*TDOT,* V, 86f.) has further delineated the meaning of this expression: lack of sense of responsibility, simple stupidity, foolishness, carelessness, and thoughtlessness. But most important is its theological meaning; it can "refer to a person's inability to perceive God's binding will." Since this expression occurs in contexts that are clearly meant to be instructive (esp. the wisdom literature), one should not assume that it refers to limited mental capacity; as Barth pointed out, in biblical thought a fool is one who thinks he has no need of God (*CD,* IV/2, 411f.). One should recognize that it is God who enables us to have sense ("the fear of the Lord is the beginning of knowledge," Prov. 1:7). Thus in 9:4, 16 Wisdom calls for the senseless to come to her (cf. the parallel in Jesus' parable of the wedding feast, Mt. 22:1-14).

Those who lack sense include adulterers (Prov. 6:32; Sir. 25:2), those who succumb to harlots (Prov. 7:7-27), fools (10:21; cf. 15:21; Dt. 32:6; Eccl. 10:3; Jer. 5:21; Sir. 16:23), those who belittle their neighbors (Prov. 11:12), those who follow worthless pursuits (12:11), and those who give a pledge (17:18; cf. 6:1-5, see comms.; cf. also Sir. 29:14). The consequences of such senseless behavior are serious: beating with a rod (Prov. 10:13), agricultural failure (24:30-34), and death (6:32; 7:23, 26f.; 10:21).

Elsewhere the OT has similar descriptions of the senseless. Jer. 5:4 describes "the poor" as having no sense, "for they do not know the way of the Lord, the law of their God." Here "the poor" may refer, not to those who are economically poor, but to those who are spiritually poor (see comms.). Note that Jeremiah goes on to say that he went to "the great," thinking that "they know the way of the Lord," but he discovered that they too "had broken the yoke" (i.e., rebelled against the Lord). Hos. 7:11 likens Ephraim to a dove, "silly and without sense," for vacillating politically between Egypt and Assyria. In Job 30:8 Job laments his reversal of fortune: he had formerly counseled men who respected him (29:21-25), but now even social outcasts (30:5, 8) who act like animals (vv. 3f., 6f.) — a "senseless, a disreputable brood" — abhor him (v. 10).

The NT also mentions those who lack sense. Rom. 1:21 speaks of Gentiles who became "futile in their thinking, and their senseless minds were darkened"; they did not honor God or give thanks to Him. To desire to be rich is to fall into temptation — it is a senseless and hurtful desire that leads to ruin (1 Tim. 6:9; see *TDNT,* IV, 962). Timothy is urged to "have nothing to do with stupid, senseless controversies" (2 Tim. 2:23), which do not "promote spiritual development" (*TDNT,* V, 625).

In contrast, a bishop must be sensible (1 Tim. 3:2), as should older men (Tit. 2:2) and younger women (Tit. 2:5; on the sexual connotation of *sṓphrōn* here, see *TDNT,* VII, 1103). Women should "adorn themselves modestly and sensibly" (1 Tim. 2:9), in contrast to prostitutes (see comms., e.g., J. N. D. Kelly [*HNTC,* 1963], p. 66, for the sexual connotation of *sōphrosýnē*). Paul calls his Corinthian readers "sensible men" who can judge for themselves what he says (1 Cor. 10:15). Some commentators think he is being ironic or sarcastic, as in 2 Cor. 11:19 (e.g., C. K. Barrett [*HNTC,* 1968], pp. 230f.; cf. J. Héring [Eng. tr. repr. 1964], p. 93), but others disagree (e.g., A. Robertson and A. Plummer [*ICC,* 2nd ed. repr. 1978], p. 211; H. Conzelmann [Eng. tr. *Hermeneia,* 1975], p. 171 n. 12).

SENSUOUS MIND. [Gk. *noús tḗs sarkós*–lit. 'mind of the flesh'] (Col. 2:18); AV FLESHLY MIND; NEB WORLDLY MIND. The RSV and NEB translations reflect the Pauline use of Gk. *sárx,* "flesh," in the sense of that which is opposed to the Spirit or the spiritual. *See* FLESH III.B.

SENTENCE [(nouns) Heb. *mišpāṭ*–'justice, judgment' (2 K. 25:6; Jer. 26:11, 16; 39:5; 52:9; Ezk. 23:45), *piṯgām*–'decision, decree, word' (Eccl. 8:11); Aram. *dāṯ*–'law, decree' (Dnl. 2:9), *piṯgām*–'word, decree' (Dnl. 4:17 [MT 14]); Gk. *krísis*–'judgment' ("being sentenced," Mt. 23:33), *kríma*–'judicial verdict' ("sentence of condemnation,' Lk. 23:40), *katadíkē*–'condemnation' (Acts 25:15), *lógos*–'word' (Rom. 9:28; 13:9), *epithanátios*–'condemned to death' ("men sentenced to death," 1 Cor. 4:9),

apókrima–'official report, sentence' (2 Cor. 1:9)]; AV also JUDGMENT, DECREE, MATTER, DAMNATION, etc.; NEB also CASE, CONDEMN, LAW, ISSUE, etc.; [(verbs) Heb. *šāpaṭ* ("give sentence," 1 S. 24:15), infinitive of *dāḇar* (Ps. 51:4 [MT 6]); Gk. *epikrínō*–'decide' ("gave sentence," Lk. 23:24)]; AV also GAVE SENTENCE, JUDGE, SPEAKEST (Ps. 51:4); NEB DECIDE, CHARGE.

The RSV uses "sentence" almost exclusively with a judicial sense. Many texts refer to a sentence of death imposed by human judges (Jer. 26:11, 16; 1 Cor. 4:9; 2 Cor. 1:9; cf. 2 K. 25:6; Jer. 39:5; 52:9; Ezk. 23:45; Dnl. 2:9; Lk. 23:24, 40; Acts 25:15); two texts refer to sentences issued by the divine Judge (Mt. 23:33; Rom. 9:28). Only in Rom. 13:9 is "sentence" used in its grammatical sense; here Gk. *lógos* refers to a saying, specifically an OT quotation (Lev. 19:18). G. L. K.

SENUAH sə-nōō'ə (Neh. 11:9, AV). *See* HASSENUAH.

SEORIM sē-ôr'əm [Heb. *śᵉʿōrîm*]. The name of the fourth priestly division of the descendants of Aaron (1 Ch. 24:8). The organization of the priesthood is reported to have been established by David (cf. v. 3), but it reflects the postexilic concerns of the Chronicler.

SEPARATE; SEPARATION [Heb. niphal and hiphil of *bāḏal* (e.g., Lev. 20:24, 26; Nu. 16:9, 21; 1 K. 8:53), niphal and hiphil of *pāraḏ* (e.g., Jgs. 4:11; Neh. 4:19 [MT 13]; Job 41:17 [MT 9]), *ḥāṣâ*, niphal and hiphil of *nāzar, nēzer, nāzîr, ḥopšîṯ*; Gk. *aphorízō* (e.g., He. 7:26), *chōrízō, apochōrízō, chōrís*]; AV also DIVIDE, SEVER, SEVERAL (2 K. 15:5; 2 Ch. 26:21), SUNDER, PART, DEPART, WITHOUT (Eph. 2:12); NEB also PART, (SET) APART, DIVIDE, DISPERSE, ISOLATED, ABSTAIN (Nu. 6:3), DEDICATE, (vv. 2, 12f.), REDEDICATE (v. 12), (NAZARITE) VOW (vv. 4-8, 12), "keep oneself holy" (v. 5), RENOUNCE (Ezk. 14:7), "prince" (Gen. 49:26), etc.

Of the Hebrew verbs translated "separate," the most common is *bāḏal*. The hiphil of *bāḏal* is used in Gen. 1 to describe how God created order out of chaos by separating the light from the darkness (vv. 14, 18) and the waters under the firmament from those above it (vv. 6f.). It is also used in several passages that distinguish between clean and unclean and between sacred and profane. Ex. 26:33 mentions the veil that separated the holy place from the most holy place, and Ezk. 42:20 refers to the wall that separated the holy temple area from its profane surroundings. Isa. 59:2 speaks of the iniquities that separate humanity from God, while 56:3 assures proselytes that God will not exclude them from His people. The niphal of *bāḏal* is used reflexively with the sense of separating oneself. The Israelites were instructed to maintain their distinctiveness as God's holy people by separating themselves from the heathen peoples of the land (Ezr. 6:21; 9:1; 10:11; Neh. 9:2; 10:28; cf. hiphil in 13:3). Nu. 16:21 records God's command to Moses and Aaron to withdraw from Israel so that He might consume the rebellious nation. (See *TDOT*, II, *s.v.* "bdl" [B. Otzen].)

The verb *pāraḏ* is generally used in more secular contexts. The niphal is used to describe the parting of ways between Abram and Lot in Gen. 13:9, 11, 14 and between Heber and the Kenites in Jgs. 4:11. The hiphil is used similarly in Dt. 32:8; 2 K. 2:11; Prov. 16:28 (cf. Gen. 30:40). In Nu. 31:42 the verb *ḥāṣâ* ("divide") is used to describe Moses' division of the war booty taken in the war against Midian.

Of special interest is the verb *nāzar*, which means to "dedicate," "consecrate," or "separate" in a religious and ceremonial sense. The niphal appears in Ezk. 14:7, which refers to those who keep themselves away from Yahweh by their worship of idols. The hiphil in Lev. 15:31 speaks of Israel's need to keep itself "separate" from the ceremonial uncleanness that would defile the tabernacle. This form is also found throughout Nu. 6 with the specific meaning "be or live as a Nazarite" (vv. 2f., 6, 12). The noun *nēzer* (lit. "consecration," "Nazariteship") also appears in Nu. 6 with specific reference to the NAZARITE vow, (vv. 4-8, 12f., 21), which involved "separation" from grapes, from the cutting of one's hair, and from contact with corpses. The noun *nāzîr* (lit. "one consecrated, devoted") is translated "Nazarite" in Nu. 6; in Gen. 49:26 it is used of Joseph as one set apart by prestige or position.

The obscure term *ḥopšîṯ* occurs only in 2 K. 15:5 and 2 Ch. 26:21 in the phrase *bêṯ haḥopšîṯ*. Some scholars have interpreted it as a noun meaning "isolation," referring to the separate house in which the leprous King Azariah (Uzziah) lived (cf. RSV). Others, however, have emended the MT to read *bêṯōh ḥopšîṯ*, taking *ḥopšîṯ* as an adverb. The phrase would then say that the king lived in "his own house, released from (royal) obligations" (cf. NEB). (see J. Gray, *I & II Kings* [*OTL*, 2nd ed. 1970], pp. 618-620.)

The Greek verbs *aphorízō* and *chōrízō* underlie most of the appearances of "separate" in the NT. *Aphorízō* ("set apart," "take away") refers in Mt. 13:49; 25:32 to the separation between the saved and the unsaved at the final judgment, and in Gal. 2:12 to Peter's withdrawal from fellowship with the Gentile believers at Antioch. In 2 Cor. 6:17 Paul, in what appears to be a composite quote from the OT (cf. Isa. 52:11; Lev. 26:12; Ezk. 37:27), instructs the Corinthian Christians to be separate in moral holiness from the rest of mankind (cf. 7:1).

Paul uses the verb *chōrízō* ("divide, separate") in Rom. 8:35, 39 in speaking of God's constant love, from which no obstacle can separate believers. In He. 7:26 the phrase "separated from sinners" may be construed either with that which precedes it (thus referring to Christ's difference from sinners) or with that which follows (referring to His withdrawal from the world in the ascension). Perhaps the author intended both a moral and spatial separation (see Bauer, rev., p. 890). The passive of *chōrízō* is used as a technical term for divorce in 1 Cor. 7:10, 15. In Acts 15:39 the passive of *apochōrízō* is used to describe the separation of Paul and Barnabas prior to Paul's second missionary journey. The phrase "separated from Christ" in Eph. 2:12 translates the preposition *chōrís* (lit. "without, apart from") with the genitive of person (*Christoú*), which has the sense of separation from a person.

W. H. GLOER

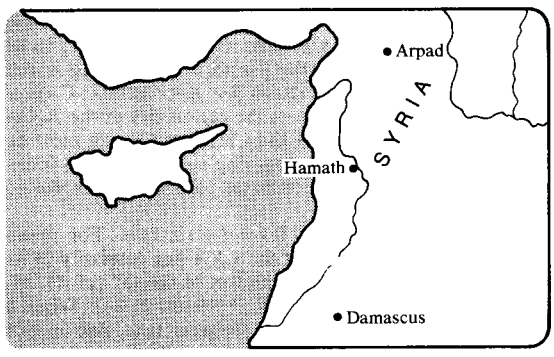
SEPHAR sē'fər [Heb. *sᵉpār*]. A place mentioned only in Gen. 10:30, which describes the territory of Joktan's descendants as extending "from Mesha in the direction of Sephar to the hill country of the east." Since Joktan's "sons" included Hazarmaveth, Sheba, Ophir, and Havilah, names that have been identified with places for the most part in south Arabia or across the Bab el-Mandeb in Africa, Sephar has generally been placed in south Arabia. Various attempts to identify it with places that have somewhat similar-sounding names (often similar only to Western ears not accustomed to the phonemic and phonetic structure of the Semitic languages) have not been convincing. S. Cohen (*IDB*, IV, *s.v.* suggested that it may not have

been a name at all, but a word meaning "border country" (based on postbiblical Hebrew); but this presents some difficulty in the context. W. S. LASOR

SEPHARAD sef'ə-rad [Heb. *s*ᵉ*pārāḏ* (Obad. 20)]. A place named as the location of exiles from Jerusalem. The problem of identification is obscured by various theories of date and textual transmission. In Jewish tradition Sepharad has become Spain (Tg. Jonathan), but the name was probably transferred from a site in the Near East. Sargon mentions a *Šaparda* (*ARAB*, II, § 147) in connection with a campaign along the Lower Zab into the land of the Medes. Another suggestion identifies Sepharad with Sardis, capital of the Lydian kingdom and location of the western end of the Royal Road built by the Achaemenids. The name Sardis appears as *sparda* in Old Persian (Darius, Behistun Inscription 1.15; Persepolis Inscription 12) and as *išparda* in Elamite (R. G. Kent, *Old Persian* [1950], p. 210). Sargon also campaigned against the Mushki (Phrygians), and after the destruction of Phrygia by the Cimmerians, Lydia rose to prominence, taking over much Phrygian territory. However, Sardis would seem to be too remote from Palestine for exiles to have been located there, although a Jewish colony was located in Sardis certainly by the 2nd cent. A.D. (and probably earlier), based on the discovery of a synagogue in the excavations since 1958. All things considered, the location in Media would seem the more likely.

Bibliography.–S. Parpola, *Saparda in Neo-Assyrian Toponyms* (1970); reports on seasons at Sardis in *BASOR* from 1958 (annually with few exceptions). W. S. LASOR

SEPHARVAIM sef-ər-vā'əm [Heb. *s*ᵉ*parwayim*; Gk. *Sepharouain, Seppharim*, and var.]. A city, probably located in Syria, mentioned in 2 K. 17:24, 31; 18:34 (par. Isa. 36:19); 19:13 (par. Isa. 37:13). In 2 K. 17:24-34 the origin of the Samaritans is traced to the replacement of the exiled Israelites (cf. vv. 7-23) by "people from Babylon, Cuthah, Avva, Hamath, and Sepharvaim" (v. 24). These people brought with them the worship of their own deities, to which they syncretistically added Yahweh-worship (vv. 29-34). The SEPHARVITES continued the practice of child sacrifice to their gods ADRAMMELECH and ANAMMELECH (v. 31). The Rabshakeh, the official in charge of the Assyrian armies, tried to induce Judah to surrender by referring to several cities and kings in Syria whose destruction had apparently become proverbial: Hamath, Arpad, Sepharvaim, Hena, and Ivvah (18:34; 19:13 par. 36:19; 37:13).



The identification of Sepharvaim is disputed and uncertain. Various suggestions follow:

(1) The older identification with Sippar in Babylon (e.g., E. Schrader, *Cuneiform Inscriptions and the OT* [Eng. tr., 2 vols., 1885], pp. 271ff.) can now be rejected. Sippar was never an independent city-state and never had a king of its own. But, more important the OT closely connects Sepharvaim with Syrian sites. In 2 K. 17:24 it follows Hamath, and in 18:34; 19:13 it is used with Hamath and Arpad. Moreover, the deities mentioned in 17:31 can be plausibly explained as Northwest Mesopotamian or Syrian deities. The divine element *-melech* in their names is surely to be connected with the divine names *malik* and *muluk*, which occur in the Mari texts (*ca.* 1700 B.C.) from Syria (see *ARI* [5th ed. 1968], p. 157), and J. Gray has amassed abundant evidence for the name as a title of the Syrian deity Athtar (*JNES*, 8 [1949], 77-80; *see* MOLECH). Hence it is highly probable that the city was located in Syria.

(2) In this light A. Kapelrud identified Sepharvaim with the Sibraim of Ezk. 47:16, "which lies on the border between Damascus and Hamath" (*IDB*, IV, 273). But M. C. Astour noted that since this city was located on the border of the territories of these two city-states, it probably did not form a separate kingdom (*IDBS*, 807).

(3) The identification with the *Šab/mara'in* that Shalmaneser V conquered (Babylonian Chronicle, I, 27f.) is no longer possible, since this refers to Samaria (see Tadmor).

(4) M. C. Astour argued that since cases of graphic confusion between the Hebrew letters *waw, resh*, and *daleth* are attested in the OT, one should read *separdîm* (instead of *separwayim*), i.e., "the people of Sepharad." Astour identified SEPHARAD, a city mentioned in Ob. 20, with Saparda, a city-state in Media conquered by Sargon II in 716 B.C. and to which he exiled prisoners from Syria-Palestine (*IDBS*, 807). Apart from the totally unsupported emendation required by this suggestion, the major difficulty is that the several texts mentioning Sepharvaim much more naturally call for the name of a city than for the name of a people.

Thus in the present state of our knowledge the identity and location of Sepharvaim remain unknown.

Bibliography.–*ARI* (5th ed. 1968), pp. 157f., 222f. n. 116; *IDBS*; H. Tadmor, *JCS*, 12 (1958), 39f. F. W. BUSH

SEPHARVITES sef'ər-vīts [Heb. *s*ᵉ*parwîm*; Gk. LXX A *Sephpharouaim*, B *Seppharoun*]. Colonists from SEPHARVAIM brought in to populate the conquered territory of Samaria by the Assyrian king Sargon II after 722 B.C. along with peoples from Babylon, Cuthah, Avva, and Hamath. These groups, which became the heathen ancestors of the Samaritans, practiced a syncretistic religion that combined worship of Yahweh with worship of their native gods (2 K. 17:31). The names ADRAMMELECH and ANAMMELECH, given for the gods to which they sacrificed children, possibly refer to the Babylonian storm-god Adad and the god of the heavens Anu. On the assumption that Heb. *s*ᵉ*parwîm* is a corruption of *s*ᵉ*pardîm* (due to a graphic confusion of the letters *w* and *d*) origin might be traced to Separda, a city in Media, but this can be considered only a possibility in the light of present knowledge. The peoples mentioned in 2 K. 17:31 are otherwise from Spain and Mesopotamia.

Bibliography.–*ARI*, pp. 163-220; H. H. Rowley, "The Samaritan Schism in Legend and History," in B. Anderson and W. Harrelson, eds., *Israel's Prophetic Heritage: Essays in Honor of James Muilenburg* (1962), pp. 208f., 222; H. Tadmor, *JCS*, 12 (1958), 40. J. M. WIEBE

SEPPHORIS sef-ō'rəs [Gk. *Sepphōris*]. A city in lower Galilee about 5 km. (3 mi.) NW of Nazareth, not mentioned in the Bible but appearing several times in Josephus

(e.g., *Vita* 8 [30]; 67 [373]; 71 [394-96]; *Ant.* xvii.10.9 [289]). It may have been the administrative center of Galilee during the Hasmonean period. Excavations have shown that the site was occupied as early as Iron Age II, but its significance for biblical study is in providing an illustration of the military, political, and cultural life of Jewish and Gentile society in one of the important cities of Hellenistic Galilee.

    1. Version of Aquila
    2. Version of Theodotion
    3. Versions of Symmachus and Others
    4. Recension of Origen
    5. Recension of Lucian
    6. Recension of Hesychius and Others
  C. Daughter Versions and Citations
  D. Printed Editions
IV. Characteristics
  A. Pentateuch
  B. Historical Books
  C. Poetic Books
  D. Prophetic Books
  E. Books Outside the Hebrew Canon

I. Importance.—A. Pioneering Effort. The LXX holds a unique place among the ancient translations of the OT. Begun in the 3rd cent. B.C., it was a bold pioneering work. Not only was it the first attempt to reproduce the Hebrew Scriptures in another tongue, but the size and nature of the undertaking were entirely unprecedented in the Hellenistic world (cf. S. P. Brock, "The Phenomenon of the Septuagint," in *Oudtestamentische Studiën*, 17 [1972], 11-36). Sociologically it bore witness to the breakdown of international barriers and to the dissemination of the Greek language as a result of the conquests of Alexander the Great. The Jewish settlers in the cosmopolitan city of Alexandria, forced by circumstances to abandon their language, nonetheless clung tenaciously to their faith. For them the translation of their sacred law into Greek was of utmost significance in safeguarding their religion as well as in satisfying their liturgical and educational needs. Conversely, for the gentile world this translation served as an introduction to Jewish history and religion.

B. Influence on Subsequent Literature. The LXX is also important as a source for later literatures, both Jewish and Christian. The impact of the special translation-Greek vocabulary created by the LXX can be seen in the writings of Philo and Josephus, the Pseudepigrapha, and other Jewish-Greek historical, exegetical, poetic, and apologetic works. Then came what was probably the most momentous event for the LXX: it was taken over from the Jews by the Christian Church. Thus the translation had an even wider circulation and influence than if it had remained exclusively within Jewish circles. The LXX was the Bible for most writers of the NT. Not only did they take from it most of their express citations of Scripture, but their writings — in particular the Gospels, and among them especially Luke — contain numerous reminiscences of its language. The theological terms of the NT, such as "law," "righteousness," "mercy," "truth," "propitiation," were taken over directly from the LXX and must be understood in the light of their use in that version (cf. C. H. Dodd, *Bible and the Greeks* [1935]; D. Hill, *Greek Words and Hebrew Meanings* [1967]). Further, the LXX became the Bible of the early Church Fathers and thereby helped to mold dogma, e.g., it furnished proof texts to both parties in the Arian controversy (cf. the use of *ektísen*, "created," in Prov. 8:22). Finally, the LXX was a potent tool in the missionary work of the early Church, and when translations of the OT Scriptures into other languages became necessary, in most cases they were made from the LXX and not from the Hebrew.

C. Influence on the Christian OT Canons. The LXX has also vitally influenced the titles, order, and number of books in the Christian OT canons (Protestant, Roman Catholic, and Greek Orthodox). Several of the familiar titles of OT books — especially those of the Pentateuch — derive from the LXX rather than from the Hebrew. Likewise, the standard order of books in the Christian OT is largely a Greek rather than a Hebrew inheritance. Although it must be emphasized that the LXX MSS and the patristic and synodical lists seldom arrange the books identically (see the lists in Swete, *Intro.*, pp. 201-214), in essence the Hebrew threefold division of Law, Prophets, and Writings was replaced with the Greek fourfold division of Law, History, Poetry, and Prophets, which is apparently based on literary character and chronological sequence. Modern printed editions of the LXX follow (with slight variations) the order of books found in Codex Vaticanus. The same pattern is basically adopted in the Bibles of Western Christendom, although with certain further modifications, e.g., the Minor Prophets follow rather than precede — as in the LXX — the Major Prophets.

A more crucial question concerns the number of books in the OT canon. Most of the Greek MSS and the patristic synodical lists of the OT contain more books than the Hebrew canon, as well as additional sections to some canonical books (e.g., Additions to the Book of Esther). This extra material constitutes the bulk of the so-called Apocrypha, declared by Jerome and the Reformers to be of lesser standing than the Hebrew canon. For a full discussion of the critical issues *see* APOCRYPHA; CANON OF THE OT. But regardless of the canonicity of the Apocrypha, all traditions within the Christian Church must be grateful to the LXX for preserving so much of the intertestamental literature, which forms part of the background of the NT.

D. Contribution to OT Textual Criticism. For many scholars, the significance of the LXX lies primarily in its contribution to the textual criticism of the OT (cf. H. M. Orlinsky, pp. 144, 149-155; *BA*. 9 [1946], 21-34). When a difficult reading occurs in the Hebrew text, one means of dealing with it is to turn to the ancient translations, among which the LXX takes pride of place, for possible clues to the meaning of the Hebrew word or passage. Thus an attempt is made to reproduce the Hebrew text that lay before the Greek translator and on that basis to compare the relative merits of the two texts. A classic

example of a text thought to be preserved in its original form in the LXX (together with the Syriac and Vulg.) is Gen. 4:8. Here the MT simply reads, "Cain said to Abel"; the LXX, however, completes the dangling construction by adding Cain's words, "Let us go out to the field." Similarly, it is virtually certain that in 1 S. 14:41 the LXX preserves the authentic passage missing in the MT through scribal error.

But this process of retroversion has its own hazards and must be used with extreme caution. Three problem areas may be cited. There is first the question whether the extant Greek text accurately represents what the Greek translators wrote. In this field LXX scholarship has made significant strides; yet many unresolved inner-Greek textual problems remain. Second, there is the question of the type of translation — literal, idiomatic, paraphrastic, midrashic. Confidence in the restored Hebrew text depends upon how literally a given person translated, and this judgment can be made only on the basis of intimate acquaintance with the translator's overall style. Finally, there is the possibility that the translator may have misunderstood the passage or tried to smooth out a difficult reading; in these cases his translation has almost no value for the elucidation of the MT. When to these considerations is added the complication that the extant LXX consists of compositions differing greatly in quality, it may be appreciated that the restoration of the Hebrew text directly from the LXX is at best a risky business (cf. M. H. Goshen-Gottstein, *Textus,* 3 [1963], 130-158). This precaution is ignored in much of the discussion on the subject (note esp. the misuse of the LXX in the critical notes of *BH*).

It used to be said that the LXX is important as a text-critical tool because it represents a Hebrew text nearly a millennium older than the earliest extant Hebrew MSS, which are medieval. Since the discovery of the Dead Sea Scrolls (2nd cent. B.C.–1st cent. A.D.) this is no longer true, at least for portions of the OT. But far from undermining interest in the LXX, the DSS have intensified it, especially since a number of their readings support the LXX against the MT. Thus many of the discrepancies between the Hebrew and Greek texts of certain books (e.g., Samuel and Jeremiah), previously blamed on the translators, actually go back to a Hebrew text (*Vorlage*) different from, and sometimes superior to, the MT.

These data have given rise to new theories about the early stages and development of the Hebrew text, e.g., the theory of "local texts" originally propounded by W. F. Albright (*BASOR,* 140 [1955], 27-33; repr. in F. M. Cross and S. Talmon, eds., *Qumran and the History of the Biblical Text,* pp. 140-46) and elaborated by F. M. Cross (*HTR,* 57 [1964], 281-299; repr. in Cross and Talmon, pp. 177-195). According to this theory distinct varieties of texts developed in three centers of Jewish learning during the intertestamental period — Palestine, Babylon, and Egypt; the LXX is a witness to the Egyptian text-type. An application of these theories to LXX use in OT textual criticism is found in R. Klein, *Textual Criticism of the OT: From the Septuagint to Qumran* (1974). But since the MS evidence is still incomplete, a final verdict regarding these controversial theories is not yet possible (cf. G. Howard, *VT,* 21 [1971], 440-450; D. W. Gooding, *Tyndale Bulletin,* 26 [1975], 113-132).

E. Its Own Literary Significance. Although important for NT exegesis and OT textual criticism, the LXX must not be limited to these servant roles. It ought also to be appreciated as a vital religious document in its own right. For many generations the LXX was the "authorized" version of Greek-speaking Jews and Christians who had no recourse to the Hebrew; thus it significantly influenced the religious and intellectual history of the cultures that it touched, either directly or indirectly, through its daughter versions.

A recognition of this influence carries with it a mandate for certain tasks in LXX scholarship. First, scholars must ascertain the meaning that the LXX had for its original readers by applying to it the same canons of criticism that obtain in the NT. This involves doing exegetical studies on the language and syntax of the LXX, writing commentaries on its individual books, and providing worthy translations into modern languages. Some studies along these lines have already been undertaken (e.g., R. R. Ottley, *Book of Isaiah According to the Septuagint* [2 vols., 1904-1906]; L. H. Brockington, *VT,* 1 [1951], 23-32; C. T. Fritsch, "The Concept of God in the Greek Translation of Isaiah," in J. M. Myers, *et al.,* eds., *Biblical Studies in Memory of H. C. Alleman* [1960], pp. 155-169). But more studies are required for the LXX to assume its due place in the history of interpretation.

Even so, the program outlined above is not sufficient, since LXX study cannot involve merely descriptive analysis of the Greek Bible. Scholars must ask the deeper questions concerning the LXX's "self-understanding" and must determine whether the concept of inspiration can be applied to this corpus in any way. As is well known, the church fathers — apart from Jerome — considered the LXX as inspired as the Hebrew (cf. Irenaeus *Adv. haer.* iii.21.3f.; Augustine *Ep.* 71.3-6, to Jerome). Significantly, the idea of LXX inspiration — albeit in a slightly modified form — has been revived in modern times; cf. P. Benoit (*Jesus and the Gospel,* I [Eng. tr. 1973], 1-10), whose views are supported by P. Auvray (*RB,* 59 [1952], 321-336) and P. Grelot (*Sciences ecclésiastiques,* 16 [1964], 387-418). Along different lines, H. M. Orlinsky, in the Grinfield Lectures on the LXX at the University of Oxford for 1973-74, spoke of the LXX translators' high view of Scripture and philosophy of translation, as well as the notion of the LXX's divine origin that lies behind the traditional account in the Letter of Aristeas (*HUCA,* 46 [1975], 89-114). Orlinsky's point was to enhance the reputation of the LXX as a reliable witness to an early form of the Hebrew Scriptures.

By contrast, in the Grinfield Lectures of 1968-69, D. W. Gooding presented evidence that the LXX contains material reflecting a rather different attitude toward Scripture from that proposed by Orlinsky (*Relics of Ancient Exegesis* [1976]). In his study of the Miscellanies of 3 Reigns (1 Kings) 2, Gooding showed that this material contains considerable midrashic interpretation, some of it extremely fanciful. This does not mean that the translators could not clearly distinguish Scripture from midrash, but that they saw their task as interpreting Scripture, with the necessary liberties taken. The only near-contemporary models of Bible translation — the Aramaic Targums — provide some external evidence for the prevalence of this attitude. Thus the LXX must be handled with great caution as a guide to the meaning of OT revelation, even though, as pointed out above, it forms a valuable stage in the history of biblical interpretation. Perhaps the NT in its selective use of the LXX — sometimes quoting, sometimes departing from it — is an exemplary forerunner to critical use of the LXX.

II. Origins.–A. Traditional Accounts. The most famous account of the translation of the Jewish law into Greek is the so-called Letter of Aristeas (Greek texts: P. Wendland, *Aristeae ad Philocratem Epistula* [1900]; H. St. J. Thackeray, appendix to Swete, *Intro.,* pp. 501-574; A. Pelletier, *Lettre d'Aristée à Philocrate* [1962]; Eng. trs.: Thackeray, *Letter of Aristeas* [1917]; H. T. Andrews, "The Letter of Aristeas," in *APOT,* II, 83-122; H. G. Meecham, *Oldest*

Version of the Bible [1932]; M. Hadas, *Aristeas to Philocrates* [1951]; R. J. H. Shutt, in J. H. Charlesworth, ed., *OT Pseudepigrapha*, II [1985], 7-34). This intriguing document purports to be a letter written by an official in the court of King Ptolemy II Philadelphus of Egypt (285-246 B.C.) and sent to his brother Philocrates. The document describes how the royal librarian at Alexandria, allegedly Demetrius of Phalerum, convinced the king of the importance of securing for his library a copy of the Jewish law. Since, however, the law existed only in the Hebrew language, it first had to be translated. Therefore Demetrius urged the king to send a delegation to the high priest Eleazar in Jerusalem to request the dispatch of seventy-two elders, six from each tribe, who would execute the translation. Aristeas, who formed part of the embassy to Jerusalem, took the opportunity to discuss and praise at great length various aspects of the Jewish customs, land, and religion. Having agreed to the king's proposal, Eleazar selected seventy-two translators, who brought to Alexandria a copy of the law written in letters of gold. After being honorably received and hosted by the king, the learned elders were conducted across the breakwater known as the Heptastadion to the island of Pharos; there, after collaboration and comparison of results, they completed their task, as if by a miracle, in seventy-two days. The version was submitted for approval to the Jewish community and then to the king, a curse being pronounced on any who add to, subtract from, or alter the translation.

One may compare this account with two pre-Christian allusions to the same event, in the writings of the Jewish philosopher Aristobulus (2nd cent. B.C.) and Philo (early 1st cent. A.D.). According to a passage preserved by Eusebius (*Praep. ev.* xiii.12) and Clement of Alexandria (*Misc.* i.22), Aristobulus declared before one of the Egyptian monarchs that portions of the Hebrew Scriptures had existed in Greek centuries earlier, but the entire law was translated into Greek under Ptolemy Philadelphus at the instruction of Demetrius of Phalerum (the authenticity of the passage has, however, been disputed). Philo (*De vita Mosis* ii.5ff.) recorded the story of Eleazar's dispatch of the translators at Philadelphus's request, adding that in his day the completion of the translation was annually celebrated on the isle of Pharos. Philo's account anticipates the later embellishments of the story by hinting at the inspiration of the translators: "They prophesied like men possessed," he wrote, "not one in one way and one in another, but all producing the same words and phrases as though some unseen prompter were at the ears of each." It is not clear whether Aristobulus and Philo show dependence on the Aristeas account or attest to independent traditions. The later Jewish historian Josephus almost certainly knew the Aristeas story, since he paraphrased large portions of it in *Ant.* xii.2.1-15 (11-118).

The Christian fathers, like Josephus, accepted the Aristeas story at face value. In time the narrative was amplified, so that later accounts assert that the translators worked independently in separate cells (or in pairs), all producing identical versions. Although the Aristeas account mentions only the Pentateuch, according to later versions the entire OT was translated.

Even though the ancients accepted Aristeas's letter as sober history, scholars have long known that the story cannot be taken as a contemporary account of the events described. As early as the 16th cent. the authenticity of the "letter" was doubted, the *coup de grâce* being delivered in 1684 by the Oxford scholar Humphrey Hody in his detailed analysis *Contra Historiam LXX interpretum Aristeae*. Hody showed that the story contains errors of history as well as internal contradictions and must be considerably later than the purported 3rd cent. B.C. Present consensus places the date of composition in the late 2nd cent. B.C.

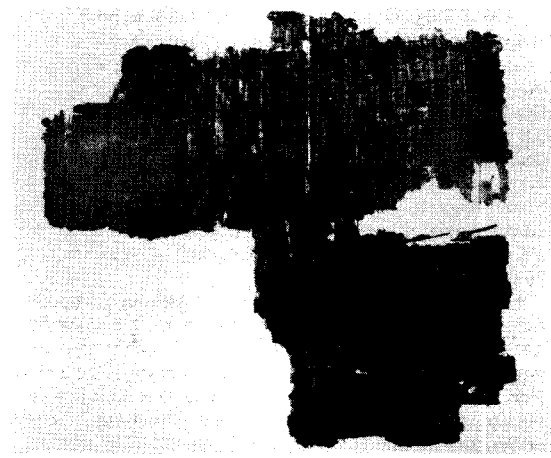
Nothing about the document's author is known except that, far from being a pagan in the service of Ptolemy's court, he was an ardent Jew writing on behalf of his own people. The narrative is thus seen as a piece of propaganda that glorifies the Jewish race and religion before a gentile audience (the view of most interpreters) or as an apology for Diaspora Judaism in the face of Palestinian criticisms (so V. Tcherikover, *HTR*, 51 [1958], 59-85; G. Howard, *JTS*, 22 [1971], 337-348).

With regard to the translation motif, a vigorous debate is still being carried on over the story's real purpose. P. Kahle (see below) assumed that the work was propaganda for a revision of the LXX, a view effectively refuted by G. Zuntz (*JSS*, 4 [1959], 109-126). A. F. J. Klijn (*NTS*, 11 [1964-65], 154-58) and S. Jellicoe (*NTS*, 12 [1965-66], 144-150) regarded it as an apology for the original LXX against an incipient revision, while D. W. Gooding saw it as a defense of the current LXX for those disturbed by the circulation of inaccurate Hebrew copies (*VT*, 13 [1963], 357-379). Although it may be difficult to disentangle fact from fiction in Aristeas and equally difficult to determine his real intent, most would agree that the story at least constitutes one bit of evidence for the translation of the Pentateuch in Alexandria in the 3rd cent. B.C.

An abiding witness to the influence of Aristeas's wonderful story is the very name Septuagint (full Latin title: *Interpretatio secundum Septuginta seniores* [or *viros*], i.e., "The Interpretation according to the Seventy Elders" [or "Men"]). The reference to "septuaginta" (seventy) rather than "septuaginta-et-duo" (seventy-two) may simply be an accommodation to brevity, or it may point to the influence of the tradition concerning the seventy elders in Ex. 24:1, 9. Attempts to displace the name Septuagint with a more accurate title such as Alexandrian Version or Old Greek are unlikely to succeed, at least on the popular level; however, the phrase "Old Greek" (= the oldest recoverable text form of a certain book) does have a certain usefulness in scholarly discussion.

B. Modern Theories. The absence of reliable firsthand information on the origins of the LXX makes the reconstruction of its early history speculative. In *ISBE* (1915), IV, *s.v.*, the eminent septuagintalist H. St. J. Thackeray propounded an explanation (later elaborated in *Septuagint*

A fragment of Rylands Greek Papyrus 458 showing Dt. 25:1-3. This is one of the earliest surviving texts of the Greek Bible (2nd cent. B.C.) (John Rylands University Library, Manchester)



and Jewish Worship. A Study in Origins [1921]) of the LXX's growth into its extant form. Accepting a historical core in the Letter of Aristeas, Thackeray acknowledged the bulk of the Pentateuch as having been translated at Alexandria in the 3rd cent. B.C. by a small official company. The next century, in Thackeray's scheme, saw the translation of the Latter Prophets (Isaiah, Jeremiah, Ezekiel, and the Minor Prophets), which was originally stimulated by the synagogue practice of reading a second lesson (*haphtorah*) from the Prophets to illustrate the reading from the Law. Such lectionary extracts would soon have been superseded by a complete version of the Prophets under the sponsorship of a company of translators analogous to the pioneering body responsible for the Greek Pentateuch. Following the Latter Prophets came a partial or "expurgated" version of the Former Prophets, later supplemented by an anonymous Asian Jew whose style has affinities with that of Theodotion (see III.B.2 below). The translation of the Writings came last and under very different circumstances, probably as the outcome of individual enterprises. Consequently these books were handled much more freely, the translation often amounting to mere paraphrase. The primary exception was the book of Psalms, which was treated with more fidelity. For external evidence that most of the OT existed in Greek by the late 2nd cent. B.C., Thackeray pointed to the Prologue to Sirach (*ca.* 132-100 B.C.), which mentions the prior translation of "the Law itself, the prophecies, and the rest of the books."

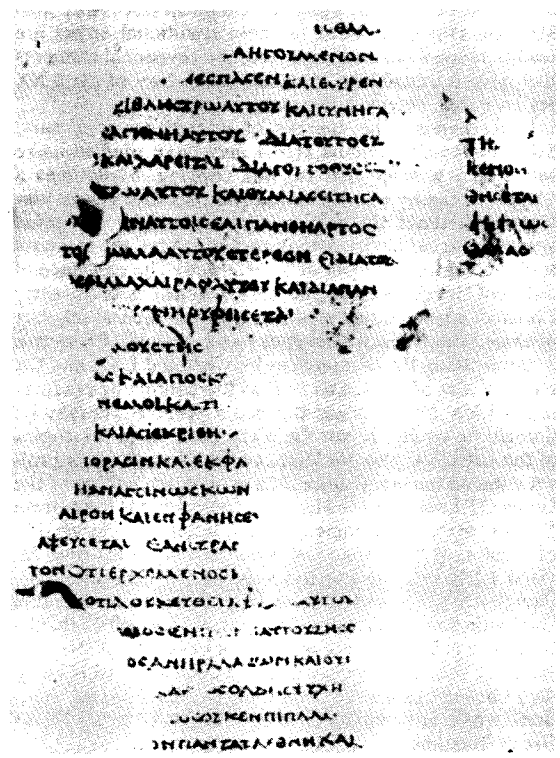
Although Thackeray's view may be criticized at various points, the strength of his approach is that by taking account of internal and external factors he sought to give an overview of the formation of the LXX. Such comprehensive reconstructions have otherwise been singularly lacking in the 20th cent., the debate over origins having taken quite a different turn. In 1915, the year that Thackeray's article first appeared in *ISBE*, P. Kahle published a controversial article, "Untersuchungen zur Geschichte des Pentateuchtextes" (*Opera Minora* [1956], pp. 3-37), in which he denied that the LXX derives from an official translation of any sort. He argued instead that it arose in a manner analogous to the Aramaic Targums; i.e., several competing translations for each book existed side by side until they were superseded by an official revision (Kahle's thesis was restated and greatly elaborated in *Cairo Geniza* [1947; rev. ed. 1959]).

Although Kahle's argument runs counter to Thackeray's theory of origins, his object of attack was not Thackeray but P. de Lagarde, the polymathic scholar from Göttingen who is called the founder of modern LXX studies. Implicit in de Lagarde's work is the assumption that behind the mass of scribal recensional variants in the present MSS lies an original Greek Ur-text which can be approximately recovered by use of predetermined text-critical principles. This view was bequeathed to the Septuaginta-Unternehmen — a research center established in Göttingen to pursue LXX studies and publish critical texts — and has also been espoused by various scholars around the world.

Kahle's challenge to the "Lagardian hypothesis" (as it has become known) made inevitable keen debate of the issue in the ensuing decades; in fact, this issue has become the watershed in modern LXX scholarship. Kahle's views have been accepted by many able scholars, his most enthusiastic follower undoubtedly being A. Sperber (see his articles in *JBL*, 54 [1935], 73-92; 59 [1940], 193-293; in the latter he moved considerably beyond Kahle). On the whole, however, the "Targum" theory originating with Kahle has failed to displace the Lagardian "Proto-LXX" theory as the dominant view in current LXX scholarship. Principal protagonists for the latter have been H. M. Orlinsky in North America (cf. *JAOS*, 61 [1941], 81-91), and in Europe P. Walters (formerly Katz) (cf. "Recovery of the Original LXX," in *Actes du premier Congrès de la Fédération internationale des Associations d'études classiques* [1951], pp. 165-182). These scholars are convinced that the variants in extant MSS are due to scribal and recensional causes, not to multiple translations.

The discovery in the Judean desert of a Greek leather scroll of the Minor Prophets from the 1st cent. B.C. or A.D. has significant implications for the question of LXX origins. Although Kahle used this MS to defend his thesis ("A Leather Scroll of the Greek Minor Prophets and the Problem of the Septuagint," in *Opera Minora*, pp. 112-127), it is more commonly held to prove the existence of an original translation that was later revised according to the current Hebrew text (cf. D. Barthélemy, *RB*, 60 [1953], 18-29; repr. in Cross and Talmon, pp. 127-139; F. M. Cross, *HTR*, 57 [1964], 283f. repr. in Cross and Talmon, pp. 179f.).

The controversy over origins is not merely a theoretical matter but has practical consequences for LXX studies and the editing of texts. In Kahle's view, "The task which the LXX presents to scholars is not the 'reconstruction' of an imaginary 'Urtext' nor the discovery of it, but a careful collection and investigation of all the remains and translations of earlier versions of the Greek Bible which differed from the Christian standard text" (*Cairo Geniza* [2nd ed. 1959], p. 264). Sperber proposed a reconstruction of the Greek Bible of the Church Fathers, which he thought possible by retroversion of the Old Latin version into Greek ("How to Edit the LXX," in S. Lieberman, *et al.*, eds.; *Harry Austryn Wolfson Jubilee Volume*, II [1965], 752f.). By contrast, the program of the Göttingen Septuaginta-



Part of the Greek scroll of the Minor Prophets from Naḥal Ḥeber in the Judean desert (mid-1st cent. A.D.). It shows Hab. 1:14–2:5 and 2:13-15 (courtesy, Israel Department of Antiquities and Museums)

Unternehmen is to publish a set of critical texts that as nearly as possible represents the earliest recoverable text-form of the Greek Bible. In the present state of knowledge the Göttingen approach is assuredly the correct one and appears beyond reasonable challenge.

III. Transmission.–A. MSS. The LXX, no less than any other document of antiquity, has a complicated history of textual transmission, including scribal corruption and deliberate revision. The MS witnesses to the text of the LXX are usually classified as uncials, cursives (or minuscules), and papyri. For a good summary of the most important, see Jellicoe, *Septuagint and Modern Study*, pp. 175-242; see also F. G. Kenyon, *Text of the Greek Bible*, pp. 32-53. A comprehensive list of the documents known in 1914 is A. Rahlfs, *Verzeichnis der griechischen Handschriften des AT, Mitteilungen des Septuaginta-Unternehmens*, 2. For an excellent catalog of biblical papyri see K. Aland, ed., *Repertorium der griechischen christlichen Papyri*, I. *Biblische Papyri* (*Patristische Texte und Studien*, 18 [1976]). The chief codices of the Greek OT are also the most important of the Greek NT: Vaticanus (B) and Sinaiticus (ℵ), both 4th cent. A.D., and Alexandrinus (A), 5th century. Of these three, B has been confirmed as containing the best text, with certain notable exceptions, e.g., Judges and Isaiah. In the 20th cent., however, numerous papyri have been discovered; some are from the 1st and 2nd cents. B.C. and thus antedate the chief uncials and the Christian "takeover" of the LXX. (*See* Vol. I, plate 14; picture in PAPYRUS.) The later cursives (9th-16th cents.) have been reinstated to a place of importance, especially if they go back to early codices now lost.

Since there are hundreds of MSS attesting different portions of the LXX (by far the majority are of the Psalms), inevitably the quality of text and scribal accuracy vary greatly from one source to another. An unedifying catalog of the scribal errors to which all such documents are heir — haplography, dittography, homoiarcton, homoeoteleuton, etc. — may easily be compiled (*see* TEXT AND MSS OF THE OT). Most of these traditional errors are readily recognized and corrected; the revisional elements that have intruded into transmission history of the LXX are harder to detect, however.

B. Revisions. The sources of revised readings vary. Sometimes an individual scribe may have tried to make sense of a passage that he was copying. Sometimes a "better" reading was borrowed from another Greek version. Sometimes the text was systematically reworded according to certain predetermined principles; the resultant text is commonly known as a recension. The existence of different Greek versions and LXX recensions in the early Christian era is attested by the two leading biblical scholars of their time, Origen (3rd cent.) and Jerome (4th cent.).

Confronting the divergences between the LXX and the Hebrew text of his day as well as the conflicting readings in his LXX MSS, Origen devised a scheme whereby he thought he could "repair the disagreements in the copies of the LXX" (*Comm. in Matt.* xv.14). His ambitious project entailed the compilation of a six-column edition of the Greek OT known as the Hexapla, comprising 1) the current Hebrew text, 2) the same in Greek letters, 3) the version of Aquila, 4) the version of Symmachus, 5) his own revised LXX text, and 6) the version of Theodotion. Although Origen's undertaking later caused considerable confusion and mixture of text-types, it is primarily thanks to him that scholars possess any knowledge of the versions of Aquila, Theodotion, and Symmachus (this being their chronological order according to long-standing tradition), which are commonly called The Three or the Minor Greek Versions.

1. Version of Aquila. When the Christian Church adopted the LXX as its Bible and began to cite proof texts from it in controversies with the Jews (e.g., *parthénos* in Isa. 7:14), the latter were considerably embarrassed and retorted that the LXX was an inaccurate translation. Having declared the LXX faulty, they needed another Greek version that would more accurately reflect their Hebrew text. This desideratum was provided in the most literal form imaginable by the version of Aquila, a proselyte from Pontus (d. *ca.* A.D. 150). Influenced by Rabbi Akiba and his school of strict exegesis, where every particle and minute detail of the Hebrew text was sacred, Aquila attempted to reproduce the Hebrew text word for word in Greek, without regard to Greek grammar or syntax. An illustration of Aquila's style is Gen. 1:1, which might be rendered into English, "In heading founded God with the heaven and with the earth." "Heading" was selected because the Hebrew word for "beginning" was a derivative of "head," while "with" represents the untranslatable sign of the Hebrew accusative (*'et*), which is indistinguishable from the preposition "with." Readings from Aquila's versions are identified in the margins of certain LXX MSS by the symbol α′. A useful aid to the study of this version is J. Reider and N. Turner, *Index to Aquila* (*SVT*, 12; 1966).

Aquila's version, although stylistically a barbarous Greek translation and largely unintelligible apart from the Hebrew (it has been called "a colossal crib"), nevertheless enjoyed great popularity and longevity among the Jews of the Dispersion; as late as the 6th cent. an edict of the emperor Justinian provided for its use in the synagogues. Although the version is commonly regarded as a new translation from the Hebrew rather than as a revision of the LXX, new evidence suggests that it was not an entirely fresh and independent undertaking, but actually the end product of a process started long before Aquila. In his epoch-making book *Les Devanciers d'Aquila* (*SVT*, 10; 1963), pp. 246-252, D. Barthélemy argued that the Greek leather scroll of the Minor Prophets found at Murabba'at bears witness to an antecedent revision (labeled *Kaige* by Barthélemy because it translates Heb. *gam*, "also," by Gk. *kaíge*) of the LXX toward the Hebrew text, that Aquila both knew and used.

2. Version of Theodotion. Another person who, in the 2nd cent., worked on the text of the Greek OT was Theodotion, possibly an Ephesian convert to Judaism who lived in the reign of Marcus Aurelius (A.D. 161-180). His readings are identified in marginal notations of LXX MSS by the symbol θ′. The outstanding characteristics of his version are avoidance of the Greek monstrosities of Aquila, frequent agreement with or slight improvement on the LXX, and a bias for the transliteration of Hebrew words into Greek letters. Early in the Christian era the version of Daniel that goes by Theodotion's name displaced the LXX version, which was an extremely free rendering of the canonical Daniel. Similarly, in certain MSS his version was used to fill out lacunae in the LXX of Job and Jeremiah.

It seems certain, however, that this second-century Theodotion was preceded in his work of revision by a person of the 1st cent. B.C. or 1st cent. A.D., styled "Ur-Theodotion" by modern scholarship. The reason for this postulate is the appearance of "Theodotionic" readings in writings antedating the time of the activity of the second-century Theodotion. Some of these readings are found in the NT (cf. the quotation in 1 Cor. 15:54 of Isa. 25:8, which corresponds exactly to that of Theodotion). In *Theodotionic Revision of the Book of Exodus* (1972), K. O'Connell listed new evidence for the existence of this Ur-Theodotion.

In fact, O'Connell said, this early revision of Exodus is to be identified with the *Kaige* recension discovered by Barthélemy. Barthélemy thought that the readings assigned to Theodotion in the Minor Prophets derive from neither the traditional Theodotion nor an Ur-Theodotion but from some other translator altogether. In an era when many long-held positions are being challenged, scholars have even doubted that the "Theodotionic" Daniel hails from Theodotion, thinking that it more likely is also a translation by Ur-Theodotion.

3. Versions of Symmachus and Others. A third version produced in the late 2nd cent. or early 3rd cent. A.D. was that of Symmachus, possibly a Jewish-Christian of the heterodox sect known as the Ebionites. This revision, identified in the MSS by the symbol σ′, apparently was a recasting of Aquila's text into idiomatic Greek with a free use of other sources, including the LXX and Theodotion (for a different assessment of Symmachus's sources see Barthélemy, *Devanciers,* pp. 261-65).

In addition to the versions named above, Origen also collated for some parts of the OT three anonymous versions which are known as the Quinta, Sexta, and Septima (i.e., the 5th, 6th, and 7th Greek translations — the LXX, Aquila, Symmachus, and Theodotion being the first four). Origen had discovered one of these versions at Nicopolis in Greece and another in a jar near Jericho. Renderings from the Quinta are extant for 2 Kings, Job, Psalms, Canticles, and the Minor Prophets. Barthélemy thought that it might actually have contained readings in the Minor Prophets from the version of Theodotion (*Devanciers,* p. 260). The Quinta was described by F. Field as stylistically the most elegant of the Greek versions. The Sexta is attested for Psalms and Canticles. Probably nothing from the Septima has survived, and some scholars have doubted its very existence. The most comprehensive collection of the Hexapla is still F. Field, *Origenis Hexapla . . . fragmenta* (1875), although it greatly needs updating.

4. Recension of Origen. Besides the non-LXX versions collated by Origen in the Hexapla, Jerome mentioned three LXX recensions circulating in the 4th cent. in different parts of the Christian world. In *Preface to Chronicles* he wrote: "Alexandria and Egypt in their Septuagint acclaim Hesychius as their authority, the region from Constantinople to Antioch approves the copies of Lucian the martyr, the intermediate Palestinian provinces read the MSS which were promulgated by Eusebius and Pamphilius on the basis of Origen's labors, and the whole world is divided among these three varieties of texts." The three recensions are frequently called, after Jerome's Latin phrase, the *Trifaria Varietas.*

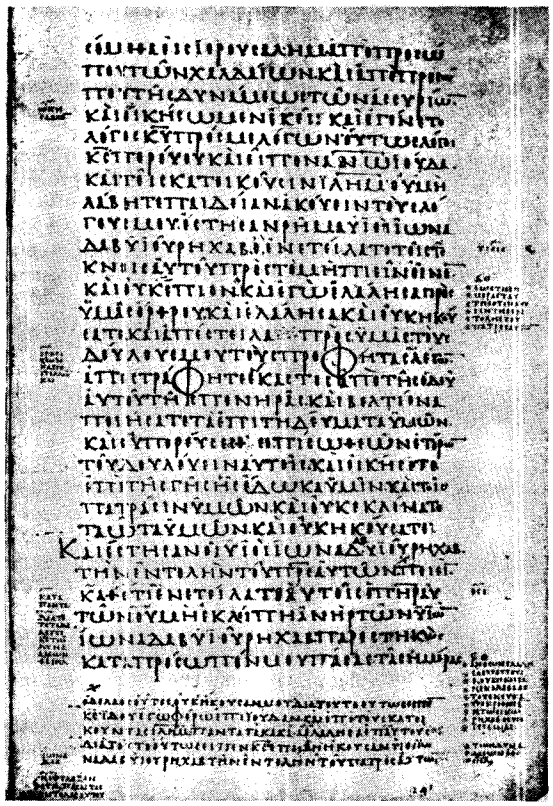
The fifth column of the Hexapla, as already mentioned, contains Origen's revised LXX text. Since he assumed that the Hebrew text of his day was the same one used by the LXX translators, Origen sought to amend the corrupted copies of the LXX text by making them conform to the current Hebrew text. In a famous passage in his *Comm. in Matt.* (xv.14) Origen explained his modus operandi: "When I was uncertain of the LXX reading because the various copies did not tally, I settled the issue by consulting the other versions and retaining what was in agreement with them. Some passages did not appear in the Hebrew; these I marked with an obelus as I did not dare to leave them out altogether. Other passages I marked with an asterisk to show that they were not in the Septuagint but that I had added them from the other versions in agreement with the Hebrew text." (In LXX MSS containing these signs the asterisk is usually given in the form ⁘, while the obelus appears most commonly as ÷ ; another symbol used by Origen to indicate the close of a specified reading is the metobelus, marked : or ⸒). By this editorial process Origen hoped to safeguard the readings of the current LXX as well as to correct them wherever they were faulty, although it is certain that he also introduced some unmarked changes, e.g., inversions and substitution of synonyms.

Although Origen's text-critical work was well intentioned, it nonetheless allowed many readings properly belonging to other versions to become embedded in the LXX as it was transmitted. The gigantic Hexapla was itself never copied, but the revised LXX text of its fifth column was transcribed by Eusebius and Pamphilius and circulated in Palestine, where it enjoyed great popularity. In the first copies of this Origenic (or hexaplaric) text, the critical signs were probably included; after much copying, however, the signs, divorced from their context, became unintelligible and were frequently omitted. Only a few MSS today preserve the Hexaplaric recension with the signs partially preserved. The best MS of this type is the Syriac translation of the fifth-column text by Paul of Tella, *ca.* A.D. 616, called the Syrohexapla, represented by Codex Ambrosianus. The manner in which most of the hexaplaric MSS were copied has brought much confusion to LXX scholarship, for Origen thus became, through the fault of others, indirectly responsible for the production of MSS in which the current LXX text and later versions are hopelessly mixed. Thus the first task of LXX textual criticism is as far as possible to identify and eliminate all of these "hexaplaric" elements and to restore a pre-Origenic text.

5. Recension of Lucian. The "Lucian the martyr" mentioned by Jerome was probably Lucian of Antioch (also called Lucian of Samosata from his birthplace), an elder and leading exponent of the Antiochian exegetical school, martyred under Maximin in A.D. 311. He has also been associated with the Syrian revision of the NT in the 4th century. The MSS probably deriving from this recension were first identified in the latter half of the 19th cent. by three scholars working independently — A. M. Ceriani, F. Field, and P. de Lagarde — who observed the agreement of readings in certain MSS with the Antiochian fathers Chrysostom and Theodoret. The special features of Lucian's recension are lucidity, fulness, and atticizing spelling. It often revises the LXX in favor of better Greek and includes readings from various sources, with the frequent result of "double readings." The sources of these revised readings are, however, of unequal worth. In the Prophets the text seems to be no more than an expansion of the hexaplaric text with further readings inserted from Aquila, Theodotion, and especially Symmachus. In Samuel, however, the Lucianic text appears to preserve elements of great antiquity, and by a careful analysis of its unique readings there J. Wellhausen and S. R. Driver were able to make significant emendations of the Hebrew text of that book. Barthélemy's suggestion that the Lucianic text of certain parts of Samuel-Kings actually preserves the original LXX of these portions has yet to be argued convincingly. As with other revisions, the existence of "Lucianic" readings antedating the historical Lucian has occasioned the hypothesis of an Ur- or Proto-Lucian (cf. E. Tov, *RB,* 79 [1972], 101-113; repr. in Cross and Talmon, pp. 293-305). For some books, e.g., Genesis, there appears to be no identifiable Lucianic text at all.

6. Recensions of Hesychius and Others. According to a widespread opinion the Hesychius mentioned by Jerome is the Egyptian bishop of that name who, Eusebius said (*HE* viii.13), was martyred in Alexandria, presumably during the Diocletian persecution in the first decade of the 4th century. But this identification rests mostly on specu-

SEPTUAGINT



A page from Codex Marchalianus (Jer. 24:11-19 [MT 35:11-19]). Note the peculiar features: the margins have hexaplaric readings and signs; corrections in the text (lines 14, 19, 24); vv. 16-18 have been omitted due to homoioteleuton (added at the bottom of the page); and words that occur frequently are abbreviated (The Vatican Library)

lation, and much controversy surrounds the subject. Also debated is the extent to which existing MSS preserve the Hesychian recension. As early as 1705 E. Grabe theorized that the Hesychian recension is primarily extant in Codex Vaticanus, an identification subsequently favored by various scholars. Others, however, beginning with Ceriani in 1890, have taken Codex Marchalianus (Q) as the Hesychian primary representative. Yet others, e.g., J. Ziegler, have doubted whether any tenable identification of this recension can be made.

In addition to the recensions mentioned by Jerome, other revisions, both prehexaplaric and posthexaplaric, existed in the early centuries, as shown by LXX text-critical work. M. L. Margolis in his thorough work on the text of Joshua discovered evidence of another recension popular in Constantinople and Asia Minor; he called it *C*. Similarly, A. Rahlfs isolated two recensions, which he labeled *R* and *C*, in Ruth, Judges, and Kingdoms (Samuel-Kings).

All these discoveries have enriched understanding of the early transmission history of the LXX, but they have also increased awareness of that history's complexity. One result has been questioning of the legitimacy of the traditional distinction between the Minor Greek Versions (Aquila, Theodotion, Symmachus) and the LXX recensions (Origen, Lucian, Hesychius), some scholars having been inclined to see all these texts as part of an ongoing revision of the basic LXX (Old Greek).

C. Daughter Versions and Citations. For several centuries the LXX served as the point of departure for the translation of the OT into other languages. Jerome's decision to base his Latin translation of the OT on the original Hebrew was fundamentally new in the history of Christian Bible translation. Because many of the translations inspired by the LXX go back to very early times, they constitute an important link in the transmission history of the LXX. Daughter versions of the LXX (i.e., translations of the OT based on the LXX) are found in the following languages: Latin, Coptic (in two dialects: Bohairic, the dialect of Lower Egypt, and Sahidic, the dialect of Thebes), Ethiopic, Gothic, Armenian, Arabic, Syriac, Georgian, and Slavonic. Of these, the most important translations, on account of their antiquity, are the Old Latin and the Bohairic. The Syriac translation of Paul of Tella (called the Syrohexapla), as mentioned above, is extremely important for the Origenic recension. Modern text-critical study of the LXX tries to take full account of the evidence of the versions and collates their readings in conjunction with those of the Greek MSS. *See also* VERSIONS.

Citations and allusions in early Jewish and Christian writings constitute another valuable set of witnesses to the text of the LXX. Chief among the Jewish-Greek writings are those of Philo and Josephus. Christian sources are the NT, the Greek and Latin church fathers, and church lectionaries. The patristic evidence available is indeed vast, but a true evaluation of it is often difficult, sometimes due to an uncertain text or to the tenuous distinction between citation and allusion. Nevertheless, important results have been obtained through careful analysis of these Jewish and Christian sources. They were invaluable in the isolation of the Lucianic and *Kaige* recensions, and they have a vital bearing on the problem of the Proto-LXX (a subject brilliantly explored by P. Katz, *Philo's Bible* [1950]).

D. Printed Editions. The earliest printings of the LXX (apart from portions of the Psalms) were those of the Complutensian Polyglot of Cardinal Ximenes (1514-1517), the Aldine edition of Venice (1518), and the Sixtine edition of Rome (1586), published under the auspices of Pope Sixtus V. The Sixtine, said to be based on Codex Vaticanus (B) but seemingly based on the Aldine edition corrected by B, was frequently reprinted and sometimes further revised; it became for many generations of LXX readers a *textus receptus*. In England a major publishing enterprise in 1707-1720 was the Oxford edition of the LXX begun by E. Grabe. Based on Codex Alexandrinus (A), it had the peculiar feature of using critical signs and print in different sizes to indicate divergences between the Hebrew and Greek. A greater achievement was the Oxford text by R. Holmes and J. Parsons (1798-1827). Although based on a revised Sixtine text, it was the first edition to embody a major critical apparatus in which nearly three hundred MSS were collated, a mammoth work still of use to LXX scholars. In 1850-1887 there appeared in Leipzig the seven editions of F. C. Tischendorf (the last two issued by E. Nestle). The basic text used was yet another revised Sixtine edition, accompanied by a small apparatus with collations from A and the newly discovered Codex Sinaiticus (ℵ); however, the quality of the work did not equal Tischendorf's achievements on the NT text.

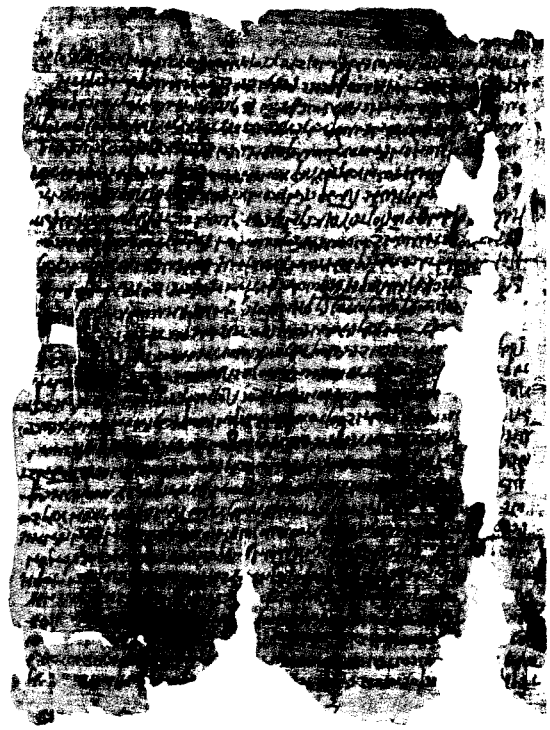
In the 20th cent. the centers of text-critical work on the LXX shifted to Cambridge and Göttingen. The first Cambridge text was the three volume "portable" edition of H. B. Swete, *The OT in Greek* (1887-1912), intended to be an accurate representation of B together with collations of the chief uncials. Swete's text was envisaged as a forerunner to the larger Cambridge edition under the same

title, whose execution was entrusted to A. E. Brooke and N. McLean (later joined by Thackeray). This edition was essentially a reprint of Swete's text but had a much fuller critical apparatus, including collations of all the uncials known at the time of publication, a careful representative selection of the minuscules, the principal daughter versions, and citations from Philo, Josephus, and the early church fathers. This eminent publishing venture lasted from 1906 to 1940, during which time about half the LXX appeared.

The Septuaginta-Unternehmen project in Göttingen was meanwhile proceeding along different lines. Whereas the Cambridge approach was to print one MS as the basic text, the reigning philosophy in Göttingen was to attempt a critically restored LXX text through a comparison of all the sources. Just as Swete's text preceded the larger Cambridge edition, so a two-volume manual edition by A. Rahlfs, *Septuaginta* (1935), initially demonstrated the Göttingen approach. The text is an eclectic one, determined on the basis of the three major uncials, B, ℵ, and A. Rahlfs was also the first to prepare a text—*Psalmi cum Odis* (1931) — in the larger Göttingen series. In P. de Lagarde's original plan for this series texts representing the three recensions mentioned by Jerome would first be prepared, and from a comparison of them an archetype text would be determined. To this end Lagarde himself published what he thought was the Lucianic text of the historical books (*Librorum Veteris Testamenti Canonicorum Pars Prior* [1883]). But his plan was abandoned by Rahlfs and his collaborators when they discovered that the MS evidence did not fit such a rigid pattern. It is now clear that each book or translation unit has its own peculiarities, with the number of textual families and recensions varying. In the current Göttingen program these groupings and recensions, together with the daughter versions and patristic citations, are clearly laid out in a full critical apparatus, a second apparatus being reserved for the hexaplaric versions. The body of the text represents the editors' decisions on the most probable reading of the Old Greek archetype. The most productive editor in this series has been J. Ziegler of Würzburg, the acknowledged dean of mid-twentieth-century LXX text-critical scholarship. An important addition to the series is the accompanying set of monographs published as *Mitteilungen des Septuaginta-Unternehmens,* which gives further extensive textual information on each book. There can be little doubt that the Göttingen project represents the outstanding and most thorough text-critical enterprise in LXX studies at this time.

IV. Characteristics.–This section surveys some of the salient translation features of the LXX. Since the LXX is not a unity, its portions do not have the same characteristics. Therefore the survey must proceed section by section, book by book. Attention will focus on the quality of Greek in each part and on the relationship of the Greek to the Hebrew. In general the LXX vocabulary and accidence are those of Hellenistic or Koine Greek, but the syntax of most books is better described as "translation" or Hebraic Greek, the various styles being heavily influenced by the underlying Hebrew. A few books, however, show a free and paraphrastic style. Fidelity to the Hebrew is also a variable factor; the translations range from quite accurate to very erroneous and misleading.

A. Pentateuch. On the whole, the Pentateuch represents the best translation unit within the LXX. It is distinguished by a uniformly high level of the vernacular style and by faithfulness to the Hebrew, with rare lapses into literalism. It set the standard that later translators imitated, although rarely with the same success. But it



Genesis 34:11-25 in the early cursive script of the Berlin Genesis, a papyrus codex from the end of the 3rd cent. A.D. (Deutsche Staatsbibliothek, Berlin, Ms. Graec. fol. 66)

does contain a number of secondary readings, frequently shared with the Samaritan Pentateuch. (For a review of the evidence affirming the secondary nature of these shared readings see B. K. Waltke, "The Samaritan Pentateuch and the Text of the OT," in J. B. Payne, ed., *New Perspectives on the OT* [1970], pp. 212-239.) Another problem area in the LXX Pentateuch is its account of the construction of the tabernacle in Ex. 35–40, where the Greek departs markedly from the Hebrew both in order and content. These divergences have been used as an argument for the later composition of the underlying Hebrew, but cf. D. W. Gooding, *Account of the Tabernacle: Translation and Textual Problems of the Greek Exodus* (1959). A tendency to avoid anthropomorphisms in certain parts of the Pentateuch has often been noted — e.g., Josh. 4:24, "power of the Lord" (MT "hand of Yahweh") — but the phenomenon has been the object of some overstatement. Cf. C. T. Fritsch, *The Anti-Anthropomorphisms of the Greek Pentateuch* (1943).

B. Historical Books. The book of Joshua links the Pentateuch with the later historical books. Although it diverges more often from the MT than the Pentateuch does, the Koine of its translation is otherwise as good as that of the Pentateuch. The most thorough study of the textual problems is M. L. Margolis, *Book of Joshua in Greek* (1931-38).

At the opposite end of the spectrum from the Pentateuch and Joshua is Judges. Two text-types, A and B, exist for this book, both marked by painful literalism, but B more so. It is generally held that A represents the earlier version and that B is a later revision toward the Hebrew. Rahlfs's edition of the LXX prints both texts. The book of Ruth is also rendered with marked literalism.

Samuel-Kings (called in the Greek the four books of

Reigns or Kingdoms) presents an uneven picture. Five translation units were isolated by Thackeray in his pioneering studies of these books: 1 Reigns (α), 2 Reigns 1:1–11:1 (ββ), 2 Reigns 11:2–3 Reigns 2:11 (βγ), 3 Reigns 2:12–21:43 (γγ), and 3 Reigns 22:1–4 Reigns (γδ). This nomenclature is still in use. Thackeray attributed sections βγ and γδ to a later translator whose style was marked by pedantic literalism, but Barthélemy preferred to view the majority text of these sections as an example of the *Kaige* recension (*Devanciers*, pp. 91ff.). 1 and 2 Reigns have often aided textual emendation of the difficult Hebrew text of the corresponding 1 and 2 Samuel. But 3 and 4 Reigns contain a number of peculiarities, including duplicate accounts of certain events (e.g., 3 Reigns 12:24a-z, a second account of the dismemberment of the kingdom; 16:28a-h, a second summary of Jehoshaphat's reign; 4 Reigns 1:18a-d, another summary of Joram's reign) and a chronology of the divided kingdom sharply at variance with the MT. While some have maintained that the Greek of 1 and 2 Reigns represents a recension superior to the MT (e.g., J. D. Shenkel, *Chronology and Recensional Development in the Greek Text of Kings* [1968]), D. W. Gooding showed in a series of articles that the LXX testifies rather to a widespread reordering and reinterpretation of the Hebrew material. For example, Gooding first demonstrated (*VT*, 15 [1965], 153-166) that behind the different order of events in the LXX lies a desire to put things in a strictly logical temporal sequence. The motives may be described as pedantic, sometimes perverse, and mistaken — evidently the work of a literalistically minded reviser (see also *VT*, 15 [1965], 325-335, 405-420; *VT*, 17 [1967], 143-189; R. P. Gordon, *VT*, 25 [1975], 368-393).

Chronicles contains numerous divergences from the MT, but none has the magnitude of those in Reigns; the Greek style, however, remains mediocre. The text has been subjected to a detailed analysis by L. Allen, *Greek Chronicles*, I (*SVT*, 25 [1974]), II (*SVT*, 27 [1974]). The latest historical books, Ezra-Nehemiah and Esther, are problematic in many areas. Of Ezra-Nehemiah there are two versions in Greek, 1 Esdras and 2 Esdras. 1 Esdras (also called the "Greek Ezra") contains free renderings of various parts of Chronicles and Ezra-Nehemiah. It is interrupted by a long passage (3:1–5:6) that has no equivalent in the Hebrew Bible, the Tale of the Three Guardsmen, from which comes the famous proverb, "Great is Truth, and mighty above all things." 2 Esdras (also called the "Hebrew Ezra") corresponds to the MT Ezra-Nehemiah and is a fairly reliable but literal rendition of it. The different titles by which these books are known cause extreme confusion. *See* ESDRAS, BOOKS OF.

The Greek version of Esther is marked by the addition of six blocks of material not found in the Hebrew. Although dispersed among the various chapters of the canonical Esther, in the Vulgate they are collected as Additions to the Book of Esther and are so titled in modern editions of the apocrypha. The style of the Greek Esther is free and paraphrastic.

C. Poetic Books. Among these books the Psalms are the best section and constitute a fairly faithful rendering of the Hebrew. Psalm numbering does not always correspond in the Greek and Hebrew texts because they combine some Psalms differently, e.g., Pss. 9–10, 113–116, 146–147. Ps. 151 was thought to be a late Greek production until the discovery of the Psalms Scroll in Qumrân Cave 11 (11QPsa). J. A. Sanders showed in *Psalms Scroll of Qumran Cave 11 (11QPsa)* (*DJD* 4; 1965), pp. 54-64, that the Greek Psalm actually goes back to two underlying Hebrew poems.

In contrast to Psalms, the books of Job and Proverbs are paraphrastic. The presence of Homeric and classical words in Job and of fragments of iambic and hexametric verse in Proverbs indicate that the translators of both may have known and in part imitated the Greek poets. A special feature of the Greek Job is its being approximately one-sixth shorter than the MT book, which may reflect an already shorter Hebrew *Vorlage* (but cf. D. H. Gard, *Exegetical Method of the Greek Translator of the Book of Job* [1952]). In the Greek MSS and printed editions of Job the lacunae are filled by passages from the version of Theodotion. Whereas Job is shorter in the LXX than in the MT, the Greek Proverbs includes many maxims not found in the Hebrew; some of these may derive from a lost Hebrew collection, but others may be of purely Greek origin.

The other poetic books, Canticles, Ecclesiastes, and Lamentations, are extremely literal translations, hardly intelligible apart from the Hebrew. As pointed out above, the rendering of Ecclesiastes may derive from Aquila's version or was at least heavily influenced by it.

D. Prophetic Books. The Greek of Isaiah is the best in this section, equal to that of the Pentateuch, but is the least faithful to the Hebrew. Because of this free rendering, the use of the LXX of Isaiah in MT textual criticism is severely limited, but the book is proportionately more interesting from the point of view of the translator's theology and exegesis (cf. I. L. Seeligmann, *Septuagint Version of Isaiah* [1948]).

Jeremiah-Ezekiel and the Minor Prophets manifest certain similarities of style and vocabulary and may have been translated *en bloc* or nearly so. But multiple-translation theories (e.g., the theory that a certain book was mechanically divided — usually in the middle — and given to different translators) have been proposed for each book. Jer. 30:17–51:32, LXX, is a prime example; cf. the change there of the standard formula *tade légei kýrios* to *houtōs eípen kýrios*. But these theories have all been challenged, in the case of Jeremiah most recently by E. Tov, *Septuagint Translation of Jeremiah and Baruch: A Discussion of an Early Revision of the LXX of Jer. 29–52 and Baruch 1:1–3:8* (1976). Jeremiah is also interesting on account of its shorter length (about one-eighth shorter than the MT) and its different arrangement of several passages, notably the Oracles Against the Nations. In the MT this section comes at the end of the book (chs. 46–51), while in the Greek it appears in the middle (25:14–31:44). The internal order of the oracles is also entirely different. The Greek almost certainly represents an already shorter Hebrew text, but which of the two traditions (the MT or the Hebrew *Vorlage* of the LXX — both attested in Qumrân fragments) represents the better text remains unresolved, notwithstanding the claims for the superiority of the Greek tradition made by G. Janzen in *Studies in the Text of Jeremiah* (1973). (For a critique of Janzen see S. K. Soderlund, *The Greek Text of Jeremiah: A Revised Hypothesis* [*JSOT Supp.*, 47, 1985], pp. 193-248.)

On the two texts of Daniel, see III.B.2 above.

E. Books Outside the Hebrew Canon. The books found in the LXX MSS but not in the Hebrew canon include translated works and original compositions. The Prologue to Sirach specifically states that it was translated from the Hebrew by the author's grandson. In the 19th and 20th cents. large portions of the Hebrew text have come to light, but the Greek text, a mixture of free and literal renderings, is still indispensable for determining the original Hebrew. Other translated books, it is generally agreed, are 1 Maccabees, Judith, 1 Esdras, the bulk of 2 Esdras, Epistle of Jeremiah, and the first half of Baruch. The style in these books ranges from good Koine in 1 Maccabees to strong

Codex Sinaiticus (4th cent.) of 1 Macc. 9:12f., 20-22; Jer. 9:9f.; Tob. 6:5-7, 11f.; these three sections were written by different scribes (British Library)

literalism in Baruch 1:1–3:8. Original compositions in Greek include 2–4 Maccabees, Wisdom, Prayer of Manasseh, and the latter part of Baruch. These books are generally composed in literary, pseudoclassical Greek. Other books that may also be Greek compositions but about which no consensus exists are Tobit and the additions to the canonical books of Esther and Daniel.

SEPULCHRE sep'əl-kər. *See* TOMB.

SERAH sir'ə [Heb. *śeraḥ*–'abundance']; AV also SARAH. Daughter of Asher and the head of a clan bearing her name (Gen. 46:17; Nu. 26:46; 1 Ch. 7:30). The unusual fact of her inclusion in the genealogies has given rise to Jewish legends explaining her prominence.

SERAIAH sə-ri'ə, sə-rā'ə [Heb. *śᵉrāyāh(û)*–'Yahu is prince'; LXX *Saraias, Saraia*]; AV Apoc. SARAIAS, ZACHARIAS; NEB Apoc. SARAEAS, ZARAEAS.

1. A non-Israelite secretary in the court of David (2 S. 8:17) who is also known by the names Sheva (2 S. 20:25), Shisha (1 K. 4:3), and Shavsha (1 Ch. 18:16). Most scholars conclude that his original name was Shavsha or Shisha (see comms. on 2 Samuel by P. K. McCarter [*AB*, 1984], pp. 254, 256; S. R. Driver [2nd ed. 1913], pp. 283f.; comms. on 1 Kings by G. H. Jones [*NCBC*, 1984], I, 135; J. A. Montgomery and H. S. Gehman [*ICC*, 1951], p. 118, but cf. T. N. D. Mettinger, *Solomonic State Officials* [1971], pp. 26-30).

2. A Judahite, the second son of Kenaz and father of Joab (1 Ch. 4:13f.).

3. A Simeonite who was the grandfather of Jehu (1 Ch. 4:35).

4. Son of Azriel; one of those sent by King Jehoiakim to arrest Jeremiah and Baruch because of the prophecies they had offered regarding the king; "but the Lord hid them" (Jer. 36:26).

5. A Judahite, the son of Neriah and brother of Baruch (cf. Jer. 32:12; 51:59). He was a quartermaster who accompanied Zedekiah to Babylon (*ca.* 594) and delivered Jeremiah's prophecy there (Jer. 51:59-64). Jeremiah instructed him to read the prophecy of doom, then tie a rock to it and throw it into the Euphrates to symbolize the sinking of Babylon.

6. Son of Tanhumeth the Netophathite. He was one of many military leaders remaining at large after the destruction of Jerusalem who eventually accepted the rule of Gedaliah, whom Nebuchadnezzar had appointed governor of Judah (2 K. 25:23-26; Jer. 40:7-10). When Gedaliah was assassinated, Seraiah and others fled to Egypt (42:6f.). Some have identified this Seraiah with **5** above, though this is uncertain.

7. A son of Azariah, grandson of Hilkiah (who discovered the "book of the law" during Josiah's reign; 2 K. 22:4, 8ff.), and high priest at the time Jerusalem fell to the Babylonians (1 Ch. 6:14 [MT 5:40]). Nebuchadnezzar executed him with other prominent captives at Riblah (2 K. 25:18-21; Jer. 52:24-27). His son Jehozadak apparently escaped execution, for he was taken into exile by Nebuchadnezzar (1 Ch. 6:15). Seraiah was thus the grandfather of Joshua, the high priest during Zerubbabel's postexilic restoration (Hag. 1:1; 1 Esd. 5:5).

Although Ezr. 7:1; 1 Esd. 8:1; and 2 Esd. 1:1 seem to suggest that this Seraiah was also the father of Ezra, the time separating Ezra from this Seraiah (about 150 years) does not allow that possibility. Thus scholars have suggested that either another Seraiah was Ezra's father or this Seraiah was an ancestor of Ezra (see comms. on Ezra

by D. J. A. Clines [*NCBC*, 1984], p. 99; H. G. M. Williamson [*Word Biblical Comm.*, 1985], pp. 91f.; KD). The nearly identical genealogies in 1 Ch. 6:14 (MT 5:40); 9:11; and Neh. 11:11, as well as the common practice of naming sons after their grandfathers, suggest that some of these genealogies may have omitted similar names. Thus it seems likely that Ezra (an abbreviated form of Azariah) was the son of Seraiah son of Azariah son of Seraiah son of Azariah son of Hilkiah (so J. M. Myers, *I Chronicles* [*AB*, 1965], p. 66). It is also possible that Seraiah and Azariah, which in Hebrew are quite similar in sound and in some scripts (*śryh* and *ʿzryh*), have been interchanged in some texts (see R. Braun, *1 Chronicles* [*Word Biblical Comm.*, 1985], pp. 83f.).

8. A returnee during the days of Zerubbabel (Ezr. 2:2; 1 Esd. 5:8). He is almost certainly to be identified with Azariah in Neh. 7:7 (unless that Azariah was this Seraiah's father; see the discussion in **7** above).

9. One of many who signed the covenant of Ezra (Neh. 10:2 [MT 3]). Some have identified him with **8** above.

10. A son (or descendant) of Hilkiah; one of the chief priests who served in the restored temple in Jerusalem (Neh. 11:11; 12:1, 12). Some identify him with Azariah in 1 Ch. 9:11 (e.g., Clines, comm. on Nehemiah [*NCBC*, 1984], p. 216), but this may be another case of a father-son confusion; see the discussion in **7** above. R. L. PRATT, JR.

G. A. L.

SERAPHIM ser'ə-fim [Heb. *śᵉrāpîm*]. Biblical evidence concerning the identity, nature, and function of the seraphim is based on the brief reference to them in the call of Isaiah (Isa. 6:2, 6). Each creature had six wings (a pair to cover its feet, a pair to cover its face, and a pair with which to fly). They appeared beside or above God's throne in the temple and worshiped Him, proclaimed His holiness, and declared His sovereignty over all the earth (v. 3). One of the seraphim performed a ritual act of cleansing and delivered a message of forgiveness to Isaiah (vv. 6f.).

A stone orthostat from Tell Ḥalâf showing a fluttering six-winged creature, possibly similar to the biblical seraphim (10th or 9th cent. B.C.) (Walters Art Gallery)

Hebrew *śᵉrāpîm* is derived from the root *śrp*, "burn," which appears 120 times in descriptions of the burning of sacrifices, cities, people, images, and bread with fire. Heb. *śārāp*, the masculine singular noun from this root, refers to the serpents that bit the Israelites in the wilderness with a burning sting (Nu. 21:6, 8; Dt. 8:15) and to flying serpents that were associated with judgment (Isa. 14:29; 30:6). The plural of this noun, *śᵉrāpîm*, may refer to serpent-like beings similar to those found in Egypt. The uraeus or cobra, an Egyptian symbol of royalty and authority, was depicted on the front of the pharaoh's headdress. A number of serpents with two wings, and a couple with four, appear on Egyptian paintings and artifacts, and similar designs appear on Palestinian scarabs (see K. R. Joines). Although this Egyptian form may have had some influence on Israelite art (cf. the Phoenician influence on the large cherubim in Solomon's temple in 1 K. 6:23-29), some scholars derive the seraphim's function from the seven lightning servants of Baal (see J. Day) or from ancient Near Eastern mythology (the Assyrian god Lugalgira or Nergal), while others connect the seraphim with the angel-like cherubim (cf. Ezk. 1, 10; Rev. 4:6-8). The duties and location of the seraphim were distinct from those of the cherubim (the latter were below the throne and provided locomotion), however; and the seraphim had human characteristics distinct from those of the Egyptian winged snakes. The most that can be said with certainty about the seraphim is that they were a separate group of attendants who praised God at His throne.

SERED sir'ed [Heb. *sered*] (Gen. 46:14; Nu. 26:26); **SEREDITES** sir'ə-dīts [Heb. *hassardî*] (Nu. 26:26); AV, NEB, SARDITE(S). The oldest son of Zebulun and head of the family called "the Seredites."

SERGIUS PAULUS. *See* PAULUS, SERGIUS.

SERIOUS [Heb. *raʿ*] (Dt. 15:21); AV ILL; [Gk. *barýs*] (Acts 25:7); AV GRIEVOUS; NEB GRAVE; [*semnós*] (1 Tim. 3:8, 11; Tit. 2:2); AV GRAVE; NEB OF HIGH PRINCIPLE, HIGH-PRINCIPLED. Excluded from the ritual eating of firstborn animals (Dt. 15:19f.) were not only animals blemished by lameness or blindness but also those with "any serious blemish whatever" (v. 21). *Raʿ* is the very common Hebrew word meaning "evil," "bad," or "ill-disposed." The intention was to exclude from sacrifice to Yahweh any animals that had no market value (cf. Mal. 1:7f., 12-14).

That the charges brought against Paul before Festus (Acts 25:7) were "serious" suggests the severity of their possible outcome, to which Paul refers in his response (v. 11). The specific charges, which are not preserved in Acts, apparently involved both Jewish and Roman laws (25:8; cf. 24:5-8). Gk. *barýs* was a common word usually translatable as "burdensome" or "difficult."

The author of the Pastoral Epistles desired that deacons

(1 Tim. 3:8), women (perhaps a special order of women in the church, v. 11), and older men (Tit. 2:2) be "serious." The same ideal is set by means of the noun *semnótēs* (RSV "respectful," "gravity"; NEB "high[est] principle[s]," "high standards of morality"; AV "honesty," "gravity") for the life of all the Church (1 Tim. 2:2), the children of a bishop (3:4), and the church leader Titus himself (Tit. 2:7). *Semnós* and *semnótēs* can be used for dignity that has gone to a fault and become pomposity, or for the sublimity and holiness of supernatural beings, including God; but in the Pastoral Epistles they have the more usual meaning of dignity, seriousness, and solemnity, i.e., conduct that calls forth respect and honor from others. This ideal is part of the Pastorals' general concern for the Church's right behavior and right appearance before society in general (cf. 1 Tim. 2:1f., 8-10; 4:12; 5:8, 10, 13, 24f.; 6:1; Tit. 1:7f.; 2:2-10; 3:1f., 8). *Semnós* could be applied to attitudes rather than to persons (e.g., Phil. 4:8; RSV "honorable"; AV "honest"; NEB "noble").

SERJEANTS. *See* POLICE.

SERMON ON THE MOUNT. The customary designation for the discourse of Jesus recorded in Mt. 5–7. It begins with the well-known BEATITUDES and then, by a series of startling antitheses, illustrates the relationship of Jesus' teaching to the Jewish legal system. It emphasizes the inner righteousness of the "kingdom of heaven" (Mt. 5:20) by warning against improper performance of religious duties; almsgiving, prayer, and fasting are not meant for public display or as currency for the purchase of religious status. Followers of Jesus are urged to dispel anxiety with simple trust and to live in love. The Sermon ends with a series of short parables that encourage people to put these truths into actual practice.

  E. A Suggested Approach

I. Impact.–Simple and straightforward in its pronouncements, the Sermon on the Mount has long been recognized as the loftiest ideal for human conduct ever conceived. The absolute quality of its demands has driven some to despair. Who can withstand the crushing weight of an obligation to be "perfect as your heavenly Father is perfect" (Mt. 5:48)? Some have insisted that the Sermon gives only an "interim ethic" for what was thought to be the end time. Others, by reinterpreting its commands on a "workable level," have accommodated it to human weakness. Still others have relegated it to some future age. All, however, have recognized that in its pristine form it presents a quality of life infinitely removed from the shallow ethic of legalistic achievement. For Canon Liddon in his Bampton Lectures it was "that original draught of essential Christianity." Augustine was convinced that the serious reader would find in it "the perfect pattern of the Christian life" (*De sermone Domini in monte* i.1.1). The great Hindu leader Mahatma Gandhi declared it to be the world's finest collection of ethical teaching.

But before the Sermon is interpreted several basic questions of a critical nature should be considered. As Marriott well said, "What your criticism has put asunder, let not your exegesis join together again" (p. ix).

II. Origins.–The Sermon as presented in Matthew appears to be a single discourse delivered by Jesus on a specific historical occasion. Jesus' threefold ministry of teaching, preaching, and healing had resulted in a wave of popularity. "Seeing the crowds," wrote Matthew, "he went up on the mountain, and when he sat down his disciples came to him. And he opened his mouth and taught them, saying . . ." (Mt. 5:1f.). At the close of the Sermon "the crowds were astonished at his teaching" (7:28). In spite of this historical context, which Matthew apparently intended to be accepted literally, most scholars have held that the Sermon is not a stenographic report of a particular discourse but a compilation of isolated sayings. Barclay called it "a kind of epitome of all the sermons that Jesus ever preached" (comm. on Matthew [2nd ed. 1958], I, 79).

What are the reasons for this verdict?

(1) The Sermon contains far too much concentrated material for one discourse. Jesus undoubtedly employed the customary techniques of rabbinic instruction by discoursing on a subject and then summarizing the main points in proverblike statements easy to learn and remember. Thus each saying must represent a much larger unit of discourse. Even if Jesus could have delivered the entire Sermon at one sitting, that would have been pedagogically unsound and psychologically unwise. Jesus the master Teacher knew the limitations of His listeners.

(2) The overall composition of the Gospel indicates that the Sermon is the first of five major discourses that Matthew has arranged around certain topics and inserted into the narrative framework provided by Mark. B. W. Bacon (*Studies in Matthew* [1930], pp. 80-82) pointed out that apart from the prologue and epilogue the Gospel of Matthew falls into five "books," each of which begins with narrative leading up to a major discourse and closes with the stereotyped formula, "And when Jesus finished these sayings" (Mt. 7:28f.; 11:1; 13:53; 19:1; 26:1). Although objections have been raised against Bacon's view of Matthew as a Christian legalist who modeled his "new law" after the five books of the Pentateuch, there is widespread agreement that he is essentially correct about Matthew's topical compilations.

(3) The most telling argument comes from a comparison of Matthew's Sermon with its Lukan parallel. Although the latter is usually called the "Sermon on the Plain" (Jesus came *down* from the mountain and stood "on a level place," Lk. 6:17) and is placed slightly later in the Markan framework (after 3:19a rather than 1:39), there can be little doubt that it and Matthew's Sermon are variant versions of the same discourse. Each begins with the Beatitudes and closes with the parable of the builders. The intervening material in Luke (on loving one's enemies, 6:27-36, and on judging, vv. 37-42) follows the same sequence as in Matthew.

Although the two Sermons are essentially the same, their lengths noticeably differ. Matthew's three chapters contain 107 verses, while Luke has but 29; Matthew's Sermon includes almost all of Luke's but has 81 verses

SERMON ON THE MOUNT

that are missing from Luke's. The point is, however, that 34 of these 81 verses occur in Luke's Gospel in other, and often more suitable, contexts. The Lord's Prayer is one such example; in Matthew it enters topically after the warning against vain repetition in prayer (Mt. 6:7f.), but in Luke it is given in response to the disciples' request, "Teach us to pray, as John taught his disciples" (Lk. 11:1). It is far more probable that Matthew inserted such material into his Sermon than that Luke, having found it in Sermon material, distributed it throughout his Gospel and invented historical contexts for the various sayings.

These considerations, however, do not force one to conclude that the entire Sermon is an arbitrary composition. In fact, Mt. 4:23–5:1 distinctly leads one to expect an important discourse delivered on a definite occasion. The crowd's reaction to the authority with which Jesus taught (7:28f.) is also fitting, and the reference to His descent from the mountain (8:1) follows quite naturally. Furthermore, within the Sermon are various sequences that appear to be "sermonettes" of Jesus rather than topical collections of separate *logia* (Hunter, p. 12, lists Mt. 5:21-48 and 6:1-6, 16-18). And when one notes again that both Sermons follow the same sequence, one readily concludes that in all probability a primitive framework corresponding to an actual discourse delivered on a specific occasion antedated the writing of either Evangelist.

A number of scholars have believed that the Sermon extant in Matthew is actually the Evangelist's combination of two sermons (from Q and M) along with occasional verses from yet other sources. Bowman thought that more likely Jesus Himself combined materials from two sermons He had preached, with Matthew using this combined form (pp. 22f.). A. M. Perry held that a continuous M source underlies the larger part of the Sermon and determines its outline (*JBL*, 34 [1935], 103-115). McArthur visualized three stages of growth: an early nucleus in Luke, a hypothetical intermediary document, and the final Matthaean version (p. 22). These variant answers suggest that one may have to wait some time for a consensus, although one need not be quite as pessimistic as A. M. Farrer, who said that any attempt to reconstruct Matthew's sources is "utterly vain" (*St. Matthew and St. Mark* [1954], p. 176).

Jeremias has made the most plausible case for the compilation theory — that each saying was originally something like an entire sermon by Jesus. In the first decades after His death these isolated sayings were gathered into an Aramaic Sermon on the Plain. Out of this Aramaic tradition developed first the Greek Sermon on the Plain in Luke and then the Greek Sermon on the Mount in Matthew. The purpose for making the collection was catechetical. By comparing the instruction on prayer in Mt. 6:5-15 and Lk. 11:1-13 Jeremias found that the Matthaean didache was designed for people who knew how to pray and might misuse the privilege, and the Lukan for people who had to learn to pray and needed encouragement. His conclusion is that Matthew's Sermon contains a catechism designed for Jewish Christians, and Luke's one for gentile Christians (pp. 19-23).

Similarly, C. H. Dodd argued that the catechetical instruction of the early Church provided a convenient framework for organizing the sayings of Jesus for teaching purposes ("The Primitive Catechism and the Sayings of Jesus," in A. J. B. Higgins, ed., *NT Essays* [1959], p. 116). He appealed to the structure of the Sermon to show how the catechesis has influenced not only the Gospels in their final form but also some of their constituent parts, "which may point to earlier sources construed on a similar plan" (p. 111). W. D. Davies admitted that a parallel may be drawn between the structure of Matthew's Sermon and catechesis but questioned whether the latter formatively influenced the former. He made the important point that neither Dodd's nor Carrington's catechetical hypothesis can account for all the material in the Sermon (p. 461).

Davies's own approach to the Sermon is to regard it as "the Christian answer to Jamnia" — "a kind of Christian, mishnaic counterpart to the formulation taking place there" (p. 315). The reconstruction at Jamnia was not only Judaism's conscious confrontation with Christianity in a giant self-assertion to survive, but also the outside stimulus for the Evangelist to formulate the way of the New Israel (pp. 286, 315).

The proposed origins of the Sermon are important for interpreters because they supply them with the background against which they must interpret it. If the Sermon is a mere patchwork of unrelated sayings they need not look for theme or structure. If, however, the Sermon is a Matthaean polemic, or a Jewish-Christian catechesis, it must be approached from the pertinent perspective. Those who deny to the Sermon in its existing form a setting in the life of Jesus create the problem that only the primitive Church's application of the sayings of Jesus — never really *His* actual teachings — can be known. Thus the meaning intended by Jesus in the Sermon will have been hopelessly obscured, with the historical Jesus allowed to speak only the dialect of the kerygmatic Christ.

This article maintains that Matthew took over a primitive sermon source, which corresponded to an actual discourse delivered on a specific occasion, and then expanded it with new, relevant material. All that is known of Jesus points to Him as an itinerant preacher. It would have been most unusual if at some time during His ministry He had not delivered a manifesto of His new ethic which contrasted with the legalism of His major antagonists. The result would have been a "sermon on a mount." This article further assumes that Matthew's relocation of *logia* did not appreciably alter their meaning. In fact, since most of Jesus' sayings are proverbial in nature, they were very likely employed by Jesus Himself in a number of different contexts and with numerous applications. The whole idea of later alteration, which leaves such widespread skepticism about the authenticity of Jesus' words, may ultimately turn out to be the unfortunate result of a failure to understand the manifold applicability of proverbial speech.

III. Circumstances.–Both Evangelists placed the Sermon in the first year of Jesus' public ministry, Matthew a bit earlier than Luke. It may have been Matthew's concern for discourse that encouraged him to bring the Sermon into the Markan framework as soon as possible. The location in Luke is preferable (following the appointment of the Twelve) and corresponds to the period in which popular success had necessitated the training of assistants. In both Gospel chronologies, however, the Sermon comes late enough for the fame of Jesus to have spread but too soon for the religious leaders to have rallied in opposition. Jesus spent the first months of His Galilean ministry preaching in synagogues (cf. Lk. 4:16-30; Mk. 1:21-28), but soon the rapidly expanding crowds forced Him to move outdoors. Another indication of the passage of time is the shift of emphasis in His preaching. The initial proclamation was, "Repent, for the kingdom of heaven is at hand" (Mt. 4:17). By the time of the Sermon this had been replaced by teaching on the nature of the kingdom.

There is no general agreement on the specific locale of the Sermon. A Latin tradition from the 13th cent. names a two-peaked hill, Qarn Ḥaṭṭîn, which lies SW of the plain of Gennesaret, but such a late tradition cannot be confirmed. Since Jesus soon entered Capernaum (Lk. 7:1; Mt. 8:5), the Sermon was more likely preached in that

area. Gk. *tó óros* can refer to the hilly region around the lake as well as to a specific mountain (cf. Mt. 14:23; 15:29). Of course, if the Sermon is a compilation there is no "mountain." K. Stendahl interpreted *tó óros* as "a place of privacy" (*Peake's Comm. on the Bible* [rev. ed. 1962], p. 775).

Usually Mt. 5:1 is interpreted to mean that Jesus withdrew from the multitude in order to direct the Sermon primarily to His own disciples. The problem of the crowds who were present at the close of the discourse is solved by the supposition that they had discovered where He had gone and followed Him there. Nothing in 5:1, however, indicates that Jesus withdrew *because* of the crowds. Nor is there any reason why the *autoús* ("them") of v. 2 cannot include *toús óchlous* ("the crowds") as well as *hoi mathētaí* ("the disciples").

In Lk. 6 the audience is defined more precisely, with three groups distinguished: (1) the "twelve, whom he named apostles," v. 13; (2) "a great crowd of his disciples," v. 17; and (3) "a great multitude of people" who came from far and near "to hear him and to be healed," v. 17. When Jesus addressed Himself to "his disciples" (v. 20), the context indicates that He was speaking to the second group. This group, however, included the Twelve and was undoubtedly equivalent to the "great multitude." Nothing in the Sermon implies its restriction to the small inner circle (the "Woes" in Lk. 6 are rhetorical). C. W. Votaw concluded, "The multitude was a *disciple* multitude in the sense that many were professed followers of Jesus, many were contemplating discipleship, and all were favourably disposed towards Him" (*HDB*, Extra Volume, p. 3).

IV. Theme and Structure.–On these matters, too, there is considerable difference of opinion among contemporary scholars. Jeremias took Mt. 5:20 as the theme and distinguished in it three kinds of righteousness — that of the theologians (scribes), that of the pious laymen (Pharisees), and that of the disciples of Jesus. This threefold division determines the construction of the following Sermon: 5:21-48 is controversy with the theologians over interpretation of Scripture, 6:1-18 treats the traditional piety of the Pharisee, and 6:19–7:27 develops the new righteousness of the disciples of Jesus. Thus the theme of the Sermon is "the way of life of Christians as distinct from that of their Jewish contemporaries" (p. 23).

Kürzinger divided the Sermon into twelve sections, six each for the two basic ideas of Mt. 5:17-20 — Christ came to fulfil the law; one's righteousness must exceed that of the scribes and Pharisees (*Bibl.*, 40 [1959], 569-589).

The most intricate suggestion came from A. Farrer (pp. 160-176). Following the Western and Syriac order, he reversed the second (the mourners) and third (the meek) Beatitudes and then divided the Beatitudes into three couplets, "the first simple, the second and third each having an additional line attached to them" (p. 165). The main body of the Sermon also falls into three parts (5:17-48; 6:1-18; 6:19–7:27), which turn out to be an exposition of the three couplets in reverse order. The Lord's Prayer, which has "slipped in unobtrusively in a sort of appendix (vi 7-15) to the paragraph on the second good work" (p. 169), then gives shape to the rest of the Sermon and is found to have influenced the arrangement of the Beatitudes as well.

W. D. Davies recognized that the approaches of Farrer and M. Smith (Smith fitted the three chapters into what he believed to be the accepted sermonic sequence of Jesus' day [*Tannaitic Parallels to the Gospels* (1951), p. 88]) are valuable as a reminder that Matthew was really an author and no mere editor. But Davies charged Farrer with "imposing a literary subtlety on the section which is alien to its purpose." He did agree, however, that Matthew "has used his sources for his own ends, so that v-vii do constitute for him an essential unity" (p. 13).

The nature of this essential unity may best be determined by a careful examination of the text itself. Filson has reminded us that Matthew sacrificed structural unity to topical unity (*JBL*, 75 [1956], 227-231), and with this as a clue we shall attempt a descriptive analysis of the content of the Sermon in Matthew.

V. Analysis.–A. Blessedness of Those in the Kingdom (Mt. 5:3-16). The Beatitudes are not prosaic statements promising recompense for the downtrodden, but exclamations of the messianic bliss of those who have renounced the world and submitted themselves to the divine sovereignty. The form is well known in wisdom literature (cf. Ps. 1:1). Gk. *makárioi* is best translated, "Ah, the supreme happiness of." The Beatitudes are not promises of reward for those who can measure up, but the very "rewards of grace" freely bestowed on the "poor in spirit." They do not describe eight varieties of virtuous persons but present the ideal person from eight different perspectives.

The difference between the Lukan and Matthaean Beatitudes has often been noticed. Luke's shorter and more direct form is probably nearer the original. One suggestion is that Jesus used the Beatitudes (originally four, and influenced by Isa. 43 and 61) to proclaim to the poor, afflicted, and hungry that in Him the kingdom was being inaugurated. Matthew later modified them to present an image of moral perfection, and Luke made them into morals about poverty and the danger of riches (J. Dupont, *Les Béatitudes* [1958ff.]). Regardless of how one accounts for the variations, the Matthaean Beatitudes are concerned with those inner qualities of the righteous person that contrast to the outward piety of the legalistic Pharisee.

Matthew 5:11-16 is an expansion of the final Beatitude and a digression about the disciple's role in an unbelieving world. Unjust treatment is to be received with joy, for the victim's reward is great in heaven. The context of inner righteousness should keep one from interpreting rewards as inducements for right behavior. Christian believers are salt, whose preservative influence retards the corruption of society; they are lights that allow all to see and appreciate the godly life.

B. The "New Righteousness" and the "Old Law" (5:17-48). The scribes' immediate reaction to Jesus' emphasis on inner righteousness would have been to claim that it would undermine the entire moral legislation of the OT. Not so, said Jesus: His "new morality," far from setting aside the Law and the Prophets, actually reveals their underlying principles. This concept of bringing the OT to its ideal fulfillment is the major thesis of the rest of ch. 5 and the proper background for interpreting the Sermon as a whole.

After this thesis is enlarged (5:17-20 underscores the abiding importance of law but argues that it must be interpreted on a deeper level), five antitheses occur (if vv. 31f., on divorce, are a topical subsection of the unit on adultery). They illustrate the thesis and apply it to the practical concerns of life. Stendahl pointed out that here is not a new law but a "Messianic intensification" of the law — "its restoration in its ultimate radicality" (p. 776).

The first antithesis ("You have heard it said. . . . But I say to you," 5:21f., 27f., 33f., 38f., 43f.) shows that the ultimate purpose of the prohibition of murder is to eliminate all anger. It is better to repair relations with one's brother than to seek God's favor while one is unreconciled to a brother. The second antithesis (5:27-32) opposes the scribal distinction between intention and action by showing that adultery is the fruit of an evil heart nourished on impure

desire. No measure is too drastic in rooting out the cause of sexual impurity.

The third antithesis (5:33-37) teaches that kingdom righteousness demands an honesty so transparent that oaths are unnecessary. The fourth (vv. 38-42) demands that the *lex talionis* give way to cheerful acquiescence in unjust treatment. When one is personally abused, defrauded by law, inconvenienced by forced labor, or faced with outright begging, one is allowed to retaliate only with kindness. The final antithesis (5:43-48) teaches that love is universal in its application. To love one's enemies is to demonstrate the "all-inclusiveness" (Torrey's understanding of Aram. *gᵉmar; The Four Gospels* [1933], p. 291) of God's own love.

C. Practical Instruction for Kingdom Conduct (6:1–7:12). Just as the five antitheses illustrate the theme of fulfillment stated in 5:17, the three warnings (about almsgiving, 6:2-4; prayer, vv. 5-15; fasting, vv. 16-18) supplement the teaching in 5:20 about the righteousness necessary for entrance into the kingdom of heaven. The recurring phrase "truly . . . they have their reward" (Gk. *apéchō,* vv. 2, 5, 16, commonly used in the papyri for commercial transactions) shows that the religionists have been paid in full by human applause; there remains no heavenly reward. Almsgiving, prayer, and fasting should instead be performed with passionate anonymity.

Into the section on prayer Matthew has inserted what has come to be known and revered as the Lord's Prayer. Although Luke's shorter version is probably closer to the original, the Church has found Matthew's more liturgical setting better adapted to purposes of worship. That the separate clauses can be paralleled in the literature of Judaism in no way impairs the originality of the prayer. Hunter aptly remarked, "The work of a great artist is not to manufacture his paints, but with them to paint a noble picture" (p. 66). The prayer's originality is to be found in its brevity, order, and universality.

After warning His followers against false piety Jesus instructed them to dispel anxiety with simple trust (6:19-34). In the somewhat loose context of these verses one can deduce that anxiety arises from the desire to possess, but God's loving concern for creation relieves mankind of any excuse for feverish acquisitiveness.

In 7:1-12 Jesus taught that mankind is intended to live in love. The speck in the brother's eye is no more than the reflection of the log in one's own eye (vv. 3-5).

D. A Challenge to Dedicated Living (7:13-27). The *logion* about the two ways, to destruction and to life (vv. 13f.), does not so much prophesy the relative populations of heaven and hell as teach that the way of self-denial is far more difficult than the way of self-indulgence. Verses 15-23 are a reminder that a good tree bears good fruit and that false prophets are to be recognized by the quality of their lives. The Sermon closes with the parable of the wise and foolish house builders (vv. 24-27). Against the background of impending catastrophe it teaches that only those who hear the words and *do* them will survive the eschatological judgment.

VI. Interpretation.–The basic problem in interpreting the Sermon on the Mount stems from the uncompromising quality of its demands and the loftiness of its ethic. There appears to be a great gap between what Jesus expects and what people even at their best can accomplish. Practically all the approaches to the Sermon are attempts to explain or alleviate this tension. For purposes of discussion they may be arranged in the following five categories.

A. Literalist View. In this approach everything in the Sermon is taken literally and applied consistently. Historically, this was the view of monasticism and later of the Anabaptist groups. A more recent and general exponent was Tolstoy, the Russian novelist and social reformer, who resolved the Sermon into five commandments (suppression of all anger, chastity, no oaths, nonresistance, unreserved love of enemies) and taught that if mankind would literally obey them the existing evils of society would vanish and history would usher in the Utopian kingdom. For Tolstoy the Sermon was "a kind of technique of passivity which is to lead man to a rational existence" (quoted in G. Bornkamm, *Jesus of Nazareth* [Eng. tr. 1960], p. 222). The value of the approach is that it safeguards the Sermon's moral seriousness. Its failure is that by freezing the language of the Sermon it deprives Jesus of freedom of expression. By artificially transforming a lofty ethic into an intolerable burden it converts the gospel back into law.

B. Qualification View. A second approach is to deny that the ethical demands of Jesus are as unattainable as they may at first seem to be. Sometimes this denial involves stressing the poetic nature of oriental speech. Jesus is pictured as constantly resorting to hyperbole in order to dramatize His commands; thus injunctions such as "If your right eye causes you to sin, pluck it out" (Mt. 5:29) are prophetic overstatements designed to make the point in a vivid and memorable way.

That Jesus used hyperbole is obvious to any student of literature. But reduction of all hyperbole to dull platitude is a patently wrong method of interpreting the Sermon; the note of urgency sounded by hyperbole is an integral part of the command. This exaggeration for the sake of emphasis cannot be removed without doing essential damage to the sayings.

Another way to take the ethical edge off the Sermon is to insist that Jesus was teaching general principles rather than issuing specific orders. This view leaves the feeling that one is no longer held responsible for the injunction itself. It is not clear, however, why one may assume that the principles taught by Jesus are any less radical than specific commands. Since the principles directly expressed in the Sermon (e.g., purity of heart, Mt. 5:8) are as unattainable as any direct injunction, one should expect the principles underlying the injunctions to be equally radical.

A variation of this approach is the claim that Jesus' real concern lay with human attitudes rather than with acts. W. Herrmann's *Gesinnungsethik* ("ethic of conviction") is a development of this idea. One may readily agree that Jesus was deeply concerned with the disposition that produced the act, but to allow this emphasis to undermine the significance of the specific act is unwarranted. People are not relieved of their obligation to turn the other cheek simply because nonretaliation is essentially an attitude, not an action.The situation is both/and, not either/or.

Yet another way to qualify the Sermon is to introduce "escape clauses." It is held that the Evangelist himself has set the precedent in his addition (indicated here by italics) to the *logion* on divorce: "Every one who divorces his wife, *except on the ground of unchastity,* makes her an adulteress" (Mt. 5:32). In like manner the interpreter is called upon to supply the proper qualification whenever the ethic becomes impractical; common sense becomes the key to acceptable ethics. The danger here is that the commandments will become less radical in becoming more practical. Still another approach, which ends at the same place, is the tempering of each command with verses taken from other parts of Scripture. This analogy-of-Scripture view (as McArthur called it, pp. 120-22) robs the Sermon of its dynamic by reducing its ethical pronouncements to their lowest common denominator.

C. Limitation View. Another way to handle the demands of the Sermon is to limit them. Roman Catholicism has limited their application by distinguishing between "pre-

cepts" (binding on all and essential for salvation) and "counsels" (for the select few and leading to perfection). Dispensationalism has limited the demands by referring the Sermon in its primary application to some future kingdom age (cf. *Scofield Reference Bible* on Mt. 5:2).

The application of the Sermon's ethic can also be tempered by pleading special circumstances, which is essentially what Weiss and Schweitzer did with their "interim ethics." In this view Jesus believed that the end was at hand; thus His demands were never intended for normal history but were tailored to that revolutionary interval before the replacement of human society by the kingdom of God. This view of the Sermon as "emergency orders" stands or falls with Schweitzer's total understanding of the ministry of Jesus. "Consistent eschatology" rescues the eschatological note in Jesus' proclamation but, in the judgment of most scholars, has fallen into the opposite error of losing the "this-worldly" element.

Luther's view of the Two Realms is also a limiting procedure. In his lectures on the Sermon he developed the thesis that human activity may be divided into two spheres, the spiritual and the temporal. Only in the spiritual sphere is the Christian obliged to keep the commands of the Sermon as they are given. In the temporal sphere, the "kingdom of the left hand," the Christian may follow a somewhat different standard of interpretation.

D. Recent Theological Interpretations. The modern historical school explains the Sermon exclusively in relation to the history of that time. Windisch saw Jesus as a religious teacher rather than an eschatological prophet. He taught a religious wisdom which He Himself followed, and He expected the same of His followers. The task of the twentieth-century interpreter is to distinguish between historical exegesis (what the original author actually said and how it was understood by his hearers) and theological exegesis (the relation of these insights to modern problems). A. Wilder followed Windisch but went beyond him in demonstrating how the eschatological sanction in Jesus' teaching evolved from the "sapiential" sanction, thus making the two types of teaching less distinct than Windisch claimed.

The basic problem with Windisch's position comes from his placing the Sermon entirely within the legalistic context of Judaism and the OT. The message of Jesus resists such confinement. The very thrust of the Sermon's five antitheses is that kingdom ethics stands in self-conscious contrast to every form of legalistic piety. Kingdom righteousness is qualitatively distinct. It is an inner righteousness without which no one may enter the kingdom of heaven (Mt. 5:20).

A second interpretation is that the Sermon is designed to shatter our self-confidence and lead us to repentance, to bring about an experience of despair that forces us to throw ourselves upon the mercy of God. This "theory of the impossible ideal" (*Unerfüllbarkeitstheorie*) is the view of Lutheran orthodoxy and has been championed by G. Kittel in *Die Probleme des palästinischen Spätjudentums und das Urchristentum* (1926). The major obstacle is that the Sermon itself contains no indication that Jesus ever intended it to be taken in this way. Jeremias called this view "a classic example of what the consequences are when one interprets Jesus in the light of Paul" (p. 9). Furthermore, as McArthur wisely noted, it solves the problem of measuring up to the commands only if repentance is conceived of as an alternative to obedience rather than a preliminary step in the right direction (pp. 125f.).

M. Dibelius is the popular exponent of a third view, that in the Sermon on the Mount one encounters the unconditioned will of God. Since these eschatological commands disregard human circumstances, they cannot be realized in this age. The demands retain their full weight, however, and the interpreter must bear the responsibility for adjusting them to earthly limitations. As the Sermon stands, it is God's absolute and unconditioned will for human life.

One last view — the christological — is represented by E. Thurneysen. He stressed that the demands of the Sermon are valid but find their fulfillment for humankind in Christ. This fulfillment does not exclude the demand for obedience, but includes it. The law of the Sermon is not a law that kills but a law that calls to life. To understand the Sermon as a law that must be fulfilled is to be guilty of a "Jesus-morality [that] drives men right into sin" (p. 78).

E. A Suggested Approach. How then should one interpret the ethical demands of the Sermon? A proper approach lies in the realization that many of the above-mentioned views have varying degrees of validity. Jesus *did* use hyperbole; the Sermon *is* primarily concerned with inner disposition; the commands *do* set forth the pure will of God; etc. The error of settling for one approach to the virtual exclusion of all others is the error of distortion by emphasis. A proper understanding of the Sermon combines all the best insights. On this basis the following interpretive guidelines are suggested.

(1) Even when allowance is made for Jesus' use of hyperbole, the quality of life demanded by the Sermon lies totally beyond what may reasonably be expected of human nature. No amount of literary reduction can render it prosaic or commonplace.

(2) The Sermon is not to be taken as a new law but as a description of the life and conduct of those who have entered the kingdom. Jeremias insisted that every word of the Sermon is preceded by "something else," i.e., the gospel (pp. 24-33). The Sermon retains only the apodoses; one must always supply the protasis, "Your sins are forgiven." Law demands, but the gospel challenges; the challenge is always on the basis of God's inexpressible gift. To take the Sermon as law is to violate its fundamental character. It boldly states the prophetic ideal (that "right actions should be the spontaneous expression of a right disposition in man") and vigorously opposes the approach of legalism ("character is, in the long run, determined by conduct") (T. W. Manson, *Teaching of Jesus* [2nd ed. 1951], pp. 295f.). It is, as Thurneysen said, "gospel and nothing but gospel" (p. 14).

(3) The Sermon is not a program for social reform but an ethic directed to those who have renounced the world in order to enter the kingdom. It is not a blueprint for the establishment of Utopia but a description of the divine transformation effected within the heart and life of individuals who open themselves to the grace of God.

(4) The Sermon is neither an impractical ideal nor a fully attainable possibility. Like all ideals, it grants direction without being overtaken by fulfillment. It describes true kingdom conduct in ultimate terms and challenges people to become what they really are in Christ. It is the "unattainable which we are yet bound to attain" (W. Manson, *Jesus the Messiah* [1946], p. 85). Perhaps the best summary is that of S. MacLean Gilmour, who wrote that the Sermon is "the ethic of that transcendental order which broke into history in Jesus Christ, has built itself into history in the church, but whose full realization lies beyond history when God will be all in all" (*JR*, 31 [1941], 263).

MOUNCE

SERMON ON THE PLAIN. The customary designation of the sermon of Jesus recorded in Lk. 6:20-40. According to v. 17, Jesus was standing on a level plain when He received those who were to hear His sermon, much of which is paralleled in Mt. 5–7 (*see* SERMON ON THE MOUNT). In Synoptic studies the two accounts are generally classified as Q material. Matthew's account is more than three times the length of Luke's, but parallels to much of Matthew's sermon are scattered throughout Luke's Gospel. This feature, coupled with the fact that both Evangelists leave traces of their editorial individuality, contributes to the problem of determining the precise relationship of the accounts, and scholars must wait for fresh data to form decisive judgments. Nor are scholars agreed on the literary design of Luke's report of the sermon, but a division into three major sections, vv. 20-26, 27-38, and 39-49, highlights the main lines of thought.

I. Beatitudes or Makarisms (6:20-26).—In contrast to the nine BEATITUDES in Matthew's sermon, Luke reports four. Whereas Matthew's makarisms emphasize personal characteristics of the addressees, Luke's formulations emphasize external conditions. The "poor" (v. 20) would have been understood by Luke's Greco-Roman audience as disadvantaged elements in the society. This is clear from other Lukan passages that contrast the poor with the rich (14:13, 21; 18:22; 19:8; 21:3), and especially from Luke's contrast of the fate of "poor" Lazarus (16:20, 22) with that of the unnamed "rich man" (v. 1).

The "poor" are those in need of compassion, mercy, and a helping hand. The ancient world viewed kingship as meaning responsibility for administering justice, with special consideration for the lot of the poor and the oppressed. Jesus' sermon therefore assures the poor that the kingdom of God is theirs, i.e., that they can count on God's intervention in their behalf.

Since a regular food supply is a primary need to be fulfilled by royal beneficence, the first explicit expression of divine beneficence in the new age relates to the alleviation of hunger (6:21). Subsequent passages in Luke-Acts illustrate the significance of this declaration and promise. Luke's Greco-Roman audience would have understood the feeding of the five thousand (9:12-17) from the perspective of their own experience with the imperial dole. Some might also have noted that the One who sated the crowd's hunger Himself became, according to 9:18-22, the object of the kind of hostility that Jesus associated in 6:22 with the makarism of v. 21. Luke's inclusion of the story of Lazarus and the rich man (16:19-31) shows that he understood Jesus' word concerning satisfaction (6:21) to mean that human beings would be involved in resourceful measures to care for the hungry. Acts 2:42-44, with its conjunction of concern for the needy with "breaking of bread," points in the same direction. In the absence of remedial measures, sufferers are assured that God, whose reign covers the future as well as the present, will meet all their needs, some in this life and far more in the world to come. Correspondingly, those who fail to serve as God's administrators to the poor will experience the woes pronounced in Lk. 6:24-26.

The blend of present and future perspective in the makarisms corrects any misunderstanding that the Magnificat (1:46-55) might have engendered with its traditional nationalistic eschatology. The kingdom of God is not to be identified with a restored nation of Israel. As the parable of the wicked tenant farmers and its sequel explain (20:9-19), it is Israel's hierarchy that is principally responsible for the persecution described in 6:22-24.

The series of four woes in 6:24-26 corresponds to the four makarisms. It should probably be construed either as homiletical application of Jesus' saying by a post-Easter and pre-Luke community, with adaptation by Luke, or as rhetorical rendition by Luke of other sayings of Jesus. The fact that Luke tended to reproduce traditions of Jesus' sayings with rather consistent fidelity (see J. Jeremias, *Die Sprache des Lukasevangeliums* [1980]) supports the former view. In their present literary context the woes indicate that the immediate enjoyment of the blessings anticipated for the new age — described in the Magnificat (1:46-55), the Benedictus (1:68-79), and the angelic proclamation (2:10-14) — has been thwarted.

The rich are said, in devastating irony, to have their "consolation" (*paráklēsis*) now. At one level this may appear to fulfil the prophecy of 2:25 concerning the arrival of the "consolation of Israel." But the present prosperity of the privileged is only an illusion. The promise of plenty for the hungry (1:53), like the joy associated with peace (2:10-14), is ironically echoed in 6:25. As 11:42-52 shows, Luke envisions certain Pharisees and legal experts (scribes) as the primary targets for this indictment. As a general category the rich are not excluded from the kingdom, but Luke does not underestimate their difficulty in entering it (18:25). The prosperous at their worst are represented by the rich man (16:19-31) and the retired farmer (12:16-21). Nevertheless, through a miracle of grace (18:27) even a person like Zacchaeus can be a genuine "child of Abraham" (19:9).

II. Reciprocity (vv. 27-38).—In continuity with 6:20-26, Luke explores in vv. 27-38 the theme of reciprocity, a basic factor in human relationships. The rights of the poor are not to be gained by vengeance exacted from the rich, nor is the overthrow of the rich the epitome of eschatological joy. Followers of Jesus have God as their model of reciprocity, and "the Most High . . . is kind to the ungrateful and the selfish" (v. 35). Greco-Roman auditors of Luke's Gospel would readily recognize the same benefactor-beneficiary model that underlay vv. 20-26. Although some ancient diplomacy was based on the principle of harming enemies and servicing friends (e.g., Lysias *Against Andocides* 7), the more enlightened policy of overcoming enemies through generosity and magnanimity, as expressed by Lacedaemonians (Thucydides iv.19.1-4) and echoed by Stoics and Pythagoreans (*Diogenes* viii.1.23), found creative expression in Roman domestic and foreign policy (e.g., Augustus *Res Gestae* i.3; iv.24).

III. Self-search (vv. 39-49).—This unit explores further the themes of self-centered moral exclusiveness (suggested in vv. 31-35) and the ultimate vindication of the poor through divine intervention (vv. 20-26). The entire unit (vv. 39-49) is constructed chiastically. Vv. 39f. appropriately introduce the illustration of mote and beam in vv. 41f. and the exposition of the learner-teacher relationship in vv. 46-49. Counterpart to the mote-beam imagery of vv. 41f. is the good tree-bad tree imagery of vv. 43-45. These last three verses formulate an answer to the verdict pronounced by the enemies (v. 22). The "sermon" ends, as the unit had begun at vv. 39f., with affirmation of the mutual responsibility of teacher and learners (vv. 46-49). There is no question about Jesus' credentials; it is the learners who must take inventory of their primary respon-

sibility — the hearing and doing of the Teacher's words.

F. W. DANKER

SERON sē'ron [Gk. *Sērōn*]. Commander of the Syrian army of Antiochus Epiphanes (1 Macc. 3:13, 23). He led his army into battle against Judas Maccabeus, boasting that he would thereby "make a name for myself and win honor in the kingdom" (v. 14). Judas's much smaller band of soldiers, however, crushed Seron's forces at Bethhoron, killing eight hundred of his men (vv. 23f.).

SERPENT. A snake; a long, limbless, scaled reptile belonging to the order *Serpentes* or *Opidia.* Although serpents are not particularly abundant in Palestine, they are mentioned often in the Bible. The OT has eleven Hebrew terms for serpents. The NT has four Greek terms. The LXX employs two of these and three others, as well as several compound expressions such as *óphis petámenos* ("flying serpent," Isa. 14:29), *óphis thanatōn* (lit. "deadly serpent," Jer. 8:17), *óphis dáknōn* (lit. "biting/stinging serpent," Dt. 8:15). In spite of this extensive vocabulary, it is impossible to identify satisfactorily a single species. Nearly every reference states or implies poisonous qualities, and in no case is there any hint that a snake may be harmless, except in several expressions referring to this characteristic as extraordinary (e.g., Ps. 91:13; Isa. 11:8). Of the nearly twenty-five species that are certainly known to be found in Syria and Palestine, four are deadly poisonous, five are somewhat poisonous, and the rest are absolutely harmless. Apparently in biblical times they were all thought to be poisonous.

I. Species in Palestine and Syria.–The following list includes all the serpents that are known with certainty to exist in Palestine and Syria, along with the geographical range of each species.

A. Harmless Serpents: Typhlops vermicularis Merr. (Greece and Southwestern Asia), *T. simoni* Bttgr. (Palestine), *Eryx jaculus* L. (Greece, North Africa, Central and Southwestern Asia), *Tropidonotus tessellatus* Laur. (Central and Southeastern Europe, Central and Southwestern Asia), *Zamenis gemonensis* Laur. (Central and Southwestern Europe, the Greek islands, Southwestern Asia), *Z. dahlii* Fitz. (Southeastern Europe, Southwestern Asia, Egypt), *Z. rhodorhachis* Jan. (Egypt, Southwestern Asia, India), *Z. ravergieri* Menatr. (Southwestern Asia), *Z. nummifer* Renss. (Egypt, Syria, Palestine, Cyprus, Asia Minor), *Oligodon melancephalus* Jan. (Syria, Palestine, Sinai Lower Egypt), *Contia decemlineata* D. and B. (Syria, Palestine), *C. collaris* Menetr. (Greek islands, Cyprus, Asia Minor, Syria, Palestine), *C. rothi* Jan. (Syria, Palestine), *C. coronella* Schleg. (Syria, Palestine).

B. Somewhat Poisonous Serpents: Tarbophis savignyi Blgr. (Syria, Palestine, Egypt), *T. Fallax* Fleischm. (Balkan Peninsula, Greek islands, Cyprus, Asia Minor, Syria, Palestine), *Coelopeltis monspessulana* Herm. (Mediterranean countries, Caucasus, Persia), *Psammophis schokari* Forsk. (North Africa, Southwestern Asia), *Micrelaps muelleri* Bttgr. (Syria, Palestine).

C. Deadly Poisonous Serpents: Vipera ammodytes L. (Southeastern Europe, Asia Minor, Syria), *Vipera lebetina* L. (North Africa, Greek islands, Southwestern Asia), *Cerastes cornutus* Forsk. (Egypt, Sinai, Arabia), *Echis Coloratus* Gthr. (Southern Palestine, Arabia, Socotra).

To this list should be added the scheltopusik, a large, snake-like, limbless lizard, *Ophiosaurus apus,* which inhabits Southeastern Europe, Asia Minor, Persia, Syria, and Palestine. Though harmless, it is commonly classed with vipers.

II. Biblical Terms.–The names employed in Hebrew and Greek for various reptiles indigenous to Syria-Palestine do not always have exact English equivalents; i.e., one English word is sometimes used to translate more than one Hebrew or Greek term. The following is a list of English terms used by the RSV and the Hebrew and Greek terms they translate, See also Murison; Joines, *Serpent,* pp. 1-15.

A. Serpent. The general terms for all serpents are Heb. *nāḥāš* and the corresponding Gk. *óphis* (e.g., Gen. 3:1-4, 13f.; Ex. 4:3; Ps. 58:4 [MT 5]; 140:3 [MT 4]; Prov. 23:32; Eccl. 10:8, 11; Jer. 8:17; Am. 5:19; Mt. 7:10; Lk. 10:19; Jn. 3:14; Rev. 9:19). Other terms are *śārāp* ("fiery serpent," Nu. 21:8; Dt. 8:15), *śārāp meʿôpēp* ("flying serpent," Isa. 14:29; 30:6; see Joines, *Serpent;* pp. 42-60). *Nāḥāš ʿaqallāṭôn* ("twisting serpent") and *nāḥāš bāri(a)ḥ* ("fleeing serpent," Isa. 27:1; perhaps a reference to a constellation in Job 26:13), *tannîn* (lit. "dragon"; RSV "serpent," Ex. 7:9f., 12; Dt. 32:33; Ps. 91:13; cf. Gen. 1:21 [RSV "monster"]; Ps. 74:13 [RSV "dragon"]; 148:7 ["monster"]; Isa. 27:1 and 51:9 ["dragon"]; Jer. 51:34 ["monster"]; Ezk. 29:3 ["dragon"]. General synonyms for "serpent" are Heb. *zōhalê* (RSV "crawling thing," Dt. 32:24) and Gk. *herpetón* ("reptile," Acts 10:12; Jas. 3:7; etc.).

B. Viper. Terms rendered "viper" by the RSV are Heb. *šeṗîp̄ōn* (AV "adder"; Gen. 49:17), *ʾep̄ʿeh* (Job 20:16; Isa. 30:6; 59:5), *ʿaḳšûḇ* (AV "adder"; Ps. 140:3 [perhaps should be read *ʿakkāḇîš,* "poisonous spider," according to BDB, pp. 747f.], and Gk. *échidna* (Mt. 3:7; 12:34; 23:33; Lk. 3:7; Acts 28:3).

C. Adder. Terms rendered "adder" by the RSV are Heb. *ṣep̄aʿ* (AV "cockatrice"; Isa. 14:29), *ṣip̄ʿônî* (AV "cockatrice"; Prov. 23:32; Isa. 11:8; 59:5; Jer. 8:17), and *peṯen* (Ps. 58:4 [MT 5]; 91:13).

D. Asp. The RSV uses "asp" to render Heb. *peṯen* (Dt. 32:33; Job 20:14, 16; Isa. 11:8) and Gk. *aspís* (Rom. 3:13).

See also ADDER; ASP; VIPER; REPTILE.

III. Role in the Bible.–*A. Association with Satan.* The biblical writers portray the serpent as dangerous to human beings spiritually as well as physically. In Gen. 3 the serpent, characterized by his craftiness (*ʿārûm,* v. 1), beguiles Eve. This incident results in the loss of mankind's innocence and the acquisition of shame regarding nakedness (*ʿêrōm,* v. 7). (On the ancient Near Eastern background to Gen. 3, see Joines, *Serpent,* pp. 16-41). The resulting alienation between God, mankind, and the serpent is specifically stated in Gen. 3:14-19 and referred to throughout the remainder of the Bible (*see* FALL, THE). Although Satan (Heb. *haśśāṭān,* "the adversary") is not explicitly mentioned by name in this pericope, the serpent's activity is consistent with Satan's adversarial role elsewhere in the biblical writings (cf. Job 1:9-22; 2:1-10; Mt. 4:1-11; Lk. 4:1-13). In Rev. 12:9 Satan is identified by John as "that ancient serpent, who is called the Devil and Satan, the deceiver of the whole world." But this predicament is to be reversed in the eschatological age, when neither the physical nor the spiritual welfare of mankind will any longer be threatened by the serpent or by Satan (cf. Isa. 11:8; Rev. 20:1-10).

B. In the Wilderness Wanderings of the Israelites. During Israel's wanderings en route to Transjordan serpents figured in a brief but memorable episode of rebellion. Complaining about the prospect of having to travel around Edom, the beleaguered Israelites rebelled "against God and against Moses" (Nu. 21:5). The Lord sent a plague of

venomous snakes against them as judgment for their distrust of Him and of Moses; many Israelites died as a result (v. 6). But after the people repented the Lord provided them a means of salvation: those who had been bitten by serpents were healed by gazing at a bronze snake that Moses constructed and mounted (vv. 8f.; see Joines, *Serpent*, pp. 85-96). This episode loomed prominently in the history of Israel. In Hezekiah's time Israelites were worshiping a bronze serpent they called NEHUSHTAN (2 K. 18:4; see Joines, *Serpent*, pp. 61-84). The author of the Fourth Gospel used the event in the wilderness as an analogy to Jesus' crucifixion: "And as Moses lifted up the serpent in the wilderness, so must the Son of man be lifted up, that whoever believes in him may have eternal life" (Jn. 3:14f.).

C. Figurative References. Most of the biblical references to serpents are figurative. Primarily the serpent signifies a threat to life (e.g., Dt. 8:15; Isa. 30:6); the serpent lurks in unexpected places and attacks people unawares (Gen. 49:17; Eccl. 10:8; Am. 5:19). Their poisonous bite made serpents an apt figure for the threats represented by the wicked (Ps. 58:4 [MT 5]; 140:3 [MT 4]), by enemies (Dt. 32:33; Isa. 14:29; Jer. 8:17), by the tribe of Dan (Gen. 49:17), by the Pharisees and Sadducees (Mt. 3:7; 12:34; 23:33; cf. Lk. 3:7), and by the effects of wine (Prov. 23:32), as well as by Satan himself (Gen. 3; Rev. 12:9; 20:2). The safety of those who trust in God (Ps. 91:13), of people in the millennial age (Isa. 11:8), and of Jesus' disciples (Mk. 16:18; cf. Acts 28:3-6) is depicted in terms of serpents being unable to harm them.

In a less negative sense, serpents were known for their craftiness (Heb. *ʿārûm*, Gen. 3:1; Gk. *parourgía*, 2 Cor. 11:3). This quality was recommended by Proverbs (1:4 [Heb. *ʿormâ*; RSV "prudence"]; 12:23 [*ʿārûm*; RSV "prudent"]) and by Jesus, who advised His disciples to "be wise [Gk. *phrónimos*] as serpents and innocent as doves" (Mt. 10:16).

Serpents were also characterized as mysterious creatures (Prov. 30:19). They could be charmed, but some were capable of outwitting the charmer (Ps. 58:4f. [MT 5f.]; Eccl. 10:11; Jer. 8:17; cf. Sir. 12:13).

Micah 7:17 prophesies that when the nations that have opposed God's purposes see the mighty deeds that He will perform "they shall lick the dust like a serpent, like the crawling things of the earth." "Licking the dust" — the curse pronounced on the serpent for leading Adam and Eve into sin (Gen. 3:14) — is a posture of humiliation and powerlessness.

D. Parallels with Pagan Creation Myths. Several poetic passages in the OT refer to a struggle between Yahweh and a giant serpent/sea monster/dragon in a manner that seems clearly to parallel similar accounts of a struggle between a high god and a sea monster in Mesopotamian and Canaanite creation myths. The similarity is particularly striking in references to a sea serpent called LEVIATHAN in the OT and Lotan in Ugaritic texts (e.g., cf. Ps. 74:13f.). Isa. 27:1 states that Yahweh "will punish Leviathan the fleeing [*brḥ*] serpent, Leviathan the twisting [*ʿqltn*] serpent, and he will slay the dragon that is in the sea." Cf. a passage in an Ugaritic myth expressing Baal's authority over the powers of chaos: "If thou [Baal] smite Lotan, the serpent slant [*brḥ*], Destroy the serpent tortuous [*ʿqltn*], Shalyat of the seven heads . . ." (*ANET*, p. 138; see also J. N. Oswalt, *Book of Isaiah: Chapters 1–39* [*NICOT*, 1986], pp. 490f.). In Job 26:13 Yahweh conquers the "fleeting serpent" (AV "crooked serpent"), which parallels the sea monster RAHAB (v. 12). *See also* DRAGON; SEA MONSTER.

On the ancient Near Eastern archeological and literary evidence, see Joines, *Serpent*, esp. pp. 109-127.

A cat representing the god Re destroys the evil serpent Apophis and puts a curse on him in this illustration from the *spell for getting rid of enemies* in the Egyptian Book of the Dead. Facsimile of a wall painting from the tomb of Sennedjem, Thebes, Dynasty XIX (The Metropolitan Museum of Art)

SERPENT CHARMING. The Bible has several allusions to this practice (Ps. 58:5 [MT 6]; Eccl. 10:11; Jer. 8:17; cf. Sir. 12:13; perhaps also Jas. 3:7; *see* MAGIC II.A [4]) but never describes it.

SERPENT'S STONE [Heb. *'eben hazzōḥeleṭ*]; AV, NEB, STONE (OF) ZOHELETH zō'hə-leth. A stone beside the spring EN-ROGEL, where Adonijah held a feast to celebrate his anticipated seizure of the throne (1 K. 1:9). Evidently it was a sacred stone, for springs of moving water were commonly so regarded in the Semitic world. An echo of the stone's name may have survived in the modern Arabic ez-Zehweleh, a rocky outcrop in the village of Siloam, opposite the spring of Gihon. Most scholars, however, identify En-rogel with Job's well (Bîr Ayyûb) and not with the modern Virgin's Spring (Gihon, where Solomon's coronation was held, 1 K. 1:33-39). Four objections have been offered against the identification of the Serpent's Stone with ez-Zehwêleh: (1) it is uncertain that the modern Arabic name is derived from the Hebrew; (2) the name is applied differently: in the Hebrew to a stone, in the Arabic to a rocky outcrop; (3) the name is not confined to this outcrop near the Virgin's Spring but extends to the ridge along the whole village site; (4) names have been transferred from one locality to another in Palestine so often that no valid conclusion can be based solely on a name.

E. W. G. MASTERMAN

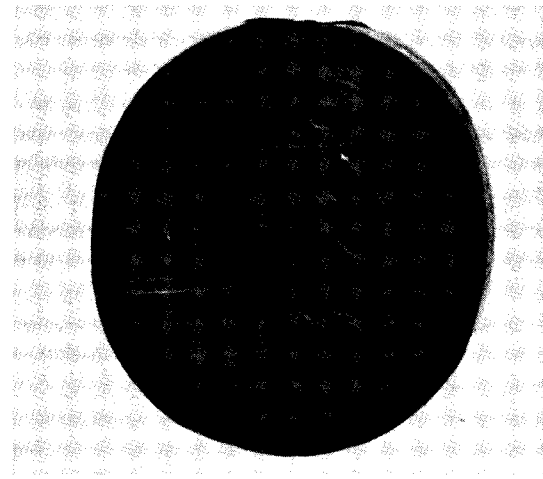
SERPENT WORSHIP. *See* NEHUSHTAN.

SERUG sir'əg [Heb. *śᵉrûg*; Gk. *Serouch*]; AV NT SARUCH. Son of Reu and father of Nahor the grandfather of Abraham (Gen. 11:20-22; 1 Ch. 1:26). Serug is said to have "lived after the birth of Nahor two hundred years, and had other sons and daughters" (Gen. 11:23). He is listed in the genealogy of Joseph the father of Jesus (Lk. 3:35).

SERVANT; SLAVE [Heb. *'eḇeḏ* (Gen. 18:3, 5; Ex. 12:44; 21:2; Nu. 11:11; 1 K. 1:26; etc.), *na'ar* (Gen. 18:7; Jgs. 7:10f.; Ruth 2:5; 2 S. 9:9; 1 K. 18:43; etc.), *'āmâ* ("maid-servant," Ex. 20:10, 17; "servant," 2 S. 14:16; etc.; "slave woman," Gen. 21:12; "female slave," Lev. 25:6), *šipḥâ* (1 S. 25:27, 41; "handmaid," 2 S. 14:15), *śāḵîr* ("hired servant," Ex. 12:45; Lev. 19:13; 22:10; 25:40; etc.), *nᵉṯînîm* ("temple servants," Ezr. 2:43, 58, 70; etc.), piel part. of *šāraṯ* (Ex. 24:13; 33:11; 2 S. 13:18; 2 K. 4:43; etc.); Aram. *'ᵃḇēḏ* (Ezr. 4:11; 5:11; Dnl. 3:26, 28; 6:20 [MT 21]), peal part. of Aram. *pᵉlaḥ* (Ezr. 7:24); Gk. *diákonos* (Mt. 20:26; 23:11; Jn. 2:5; Rom. 13:4; etc.), *doúlos* (Jth. 3:4; Mt. 25:14; 1 Cor. 7:21; 1 Pet. 2:16; etc.), *país*–'child' (Mt. 8:6, 8, 13; 14:2; Acts 3:13; etc.), *oikétēs*–'household slave' (Lk. 16:13; Acts 10:7; Rom. 14:4; 1 Pet. 2:18), *sýndoulos* ("fellow servant," Mt. 18:28f., 31, 33; 24:49; Col. 1:7; etc.), *místhios* (Lk. 15:17, 19), *hypērétēs* (Jn. 18:36; 1 Cor. 4:1), *douleúo* ("be servant," Gal. 5:13; "be slave," Gal. 4:9; Tit. 3:3; pass. "become slave," Rom. 6:18, 22; Gal. 4:3; Tit. 2:3; "make slave," 1 Cor. 9:19), *leitourgós* (He. 1:7), *therápōn* (He. 3:5), *paidískē* ("slave girl," Acts 16:16)]; AV also SERVITOR, NETHINIM, MINISTER, "young man," etc.; NEB also BOY, ATTENDANT, DISCIPLE, SERVITOR, etc. A person of lower status in a relationship.

I. OT.–Various types of subordinations within natural groupings (those based on birth, social class, residence, nationality) or voluntary associations (based on contracts or competition) in the OT and ancient Near Eastern literature use servant-lord terminology. It may be used of a person who serves another out of coercion (physical or financial), one who is a hired worker, or one who chooses to be at the disposal of another out of deference (1 S. 25:41). Any of the three vital social boundary markers may be articulated by this terminology: power, sexual status, or religion (see Malina, pp. 25-33).

Other than servanthood to an individual, the most important realms of servitude are to the monarchy, the temple, and God. Note the wide variety of relationships represented by servant-lord language: slave/owner (Ex. 21:2-6), employee/employer (1 S. 25:8), host/guest (Gen. 19:2), borrower/lender (Prov. 22:7), concubine/man (Jgs. 19:26), brother/brother (Gen. 27:37; 34:14), wife/husband (Gen. 18:12), sons of the prophets/prophet (2 K. 2:16), soldier/officer (2 S. 11:11), subject/king (1 S. 17:58), king/nation (1 K. 12:7), vassal/suzerain (2 S. 8:2, 6, 14; 2 K. 17:3), individual/God (2 S. 3:18), social sub-group/God (2 K. 9:7), nation/God (Dt. 32:43). A long chain of servant-lord relationships emerges in 2 S. 7–9: David/Yahweh (7:29), Mephibosheth/David (9:6), Ziba/Mephibosheth (9:2),



An onyx seal and impression depicting a fighting cock and the Hebrew words "(Belonging) to Jaazahiahu servant of the King." Late 7th cent. B.C. from Mizpah (courtesy, Israel Department of Antiquities and Museums)

and servants/Ziba (9:10). How many lords one has establishes one's relative status.

Israelite law distinguishes between hired servants and slaves (Lev. 25:6) based upon the voluntary/involuntary character of the relationship; but their functions are overlapping. One also finds a hierarchy among the servants (Gen. 24:2; 44:1). The monetary value of a slave was put at thirty shekels of silver in the Covenant Code (Ex. 21:32); this may be compared to the fifty-shekel value placed on a free adult male and thirty on a female (Lev. 27:3f.).

All subjects in a kingdom refer to the king as "lord" and themselves as "servants," including the king's family (2 S. 13:24 1 K. 1:17); the possible exception is the queen mother (see 1 K. 2:19-22). Furthermore, "the servants of Solomon" became an ongoing designation for royal servants even after the end of the monarchy (Ezr. 2:55, 58). The Israelite king could also be designated as a servant to the people (1 K. 12:7).

But a king may also be a servant to the suzerain king. At different times the Judean monarchs were vassals of Egypt (2 Ch. 12:8), Assyria (2 K. 16:7), Babylonia (2 K. 24:1), and Persia (Ezr. 9:9). The Israelite kings were vassals of Syria (1 K. 20:4) and Assyria (2 K. 17:3). In the ancient Near East a vassal took an "oath of servitude" (Akk. *māmītu ana ardūte*). But to be the servant/vassal (*ardu*) of the Great King could be taken as an honorable title, indicating a friend and ally (see McCarthy, p. 79).

Since the epithet "Lord" in reference to God takes its analogy from human honor relationships, everyone owes God allegiance as His servants (Mal. 1:6). This is made explicit in the epithet "Lord of lords" (Dt. 10:17; Ps. 136:3); viz., all lords are subordinate to Yahweh. The most common use of the self-designation "your servant" in human/divine relationships is in prayers or psalms of supplication (1 K. 3:7; Ps. 27:9; 86:4; Dnl. 9:17). This use also appears particularly in Hittite petitionary prayers (*ANET*, pp. 393ff.). The OT, however, reserves specification of an individual as "Yahweh's servant" or "My servant" for those especially faithful: (1) the head of a clan (Abraham, Gen. 26:24); (2) a national leader (Moses, Nu. 12:8); (3) a hero (Samson, Jgs. 15:18); (4) an Israelite king (David, 2 S. 3:18); (5) a prophet (Elijah, 1 K. 18:36; in general, 2 K. 9:7); (6) the "suffering servant" (Isa. 42:1); (7) Israel (Isa. 63:17); and (8) a foreign king (Nebuchadnezzar, Jer. 25:9). These relationships are unique in that they entail honor not only for Yahweh but also for the servant.

On "temple servants," *see* NETHINIM.

II. NT.–The lower position in a relationship of dominance-dependency was regulated in the case of slaves by various and extensive legal traditions in all Mediterranean cultures in the NT period. "There was no action or belief or institution in Graeco-Roman antiquity that was not one way or other affected by the possibility that someone involved *might be* a slave" (Finley, p. 65). The extent of the lord's or owner's control over the life, the family, the production, and potential freedom of the enslaved person varied greatly.

In contrast to the practice of the AV, *doúlos* should be translated "slave" instead of "servant" in order to point to the legal subordination of the "slave" as property of the owner. Yet in contrast to present connotations of the term "slave" in view of New World slavery in the 17th-19th cents., "slaves" in the NT texts must be described strictly in the profoundly different legal-social contexts of the 1st cent. A.D.

Furthermore, the significant differences among the three traditions relevant to NT texts (Jewish, Greek, and Roman) require examination of each text to determine which of the legal-philosophical frameworks was presupposed. For example, the Greek tradition tended to regard an enslaved person as inferior by nature (Herodotus, Aristotle, Cicero); the Jewish tradition saw the slave as one who had already become exclusively a "slave of God" by means of the liberation of his or her ancestors from Egyptian bondage and therefore inappropriately living as a slave of any human being (Lev. 25:55); and in the Roman tradition slaves on the one hand were rigorously regarded in much legislation as things and property ("chattel slavery"), yet on the other hand as fully human beings who were usually granted Roman citizenship when set free, as happened regularly.

Slaves did not constitute a class, since their social status was entirely dependent on the status of their owners. Those free persons who had to look for work each day without any certainty of finding it (day laborers) were at the bottom of the social-economic pyramid, not those in slavery.

The importance of the "extended household" (*oíkos*) in the NT period can hardly be overestimated for understanding the growth of the early Christian movement and its impact on those in slavery (Laub, pp. 19-62; Klauck). All the slaves mentioned in the NT are found in the context of extended households into which they had been born or had sold themselves (1 Pet. 2:18-25). The common practice of self-sale into slavery provided a model for freeborn persons who became Christians to regard themselves as having become "slaves of Christ" (1 Cor. 7:22) or "slaves of God" (1 Pet. 2:16). On the other hand, Christian slaves were encouraged to regard themselves as "freedmen" (*apeleútheros*, 1 Cor. 7:22) of Christ, who had bought them "with a price" (1 Cor. 7:23). In many cases such slaves became Christians along with their owners (1 Cor. 1:16; 16:15; Acts 16:15, 31-34; 18:8); yet it seems most likely that some became members of a Christian house-church without their owners' participation (1 Cor. 7:21; 1 Pet. 2:18-25).

The so-called household codes (*Haustafeln*) in Col. 3, Eph. 6, and 1 Tim. 6 are addressed to both slaves and their owners. Slaves are admonished to "obey in everything," "doing the will of God from the heart, rendering service with a good will as to the Lord and not to men." Owners are urged to treat their slaves "justly and fairly," without threatening, since they have a "master in heaven" who owns them as well as the slaves, and who shows no partiality. Christian slaves are not to take advantage of being "brothers" or "sisters" of Christian owners but rather "serve all the better" (see also Tit. 2:9). How a slave was treated depended entirely on the character of the owner.

In the larger cities, such as Rome, Corinth, Ephesus, and Antioch, as many as one-third of the population were legally slaves and another one-third had been slaves earlier in life. In the Roman empire manumission at age thirty was the rule. No kinds of work were, in principle, reserved exclusively for slaves. Freeborn persons and slaves worked side-by-side at the most menial as well as the most responsible tasks, e.g., as physicians, teachers, and business managers, as well as street-sweepers, handworkers, and

dockworkers. The emperor Claudius (A.D. 41-54) used his own slaves to create the first Roman civil service; after their manumission (about age 40) they often pursued profitable careers. But those who became slaves of the state because of conviction of criminal charges were sent into the mines and rowing-gangs on the galley ships and were expected to die working.

All evidence suggests that it was not uncommon for Jews to own slaves in the NT period (Urbach), which is the social context in which Jesus drew on slave/owner relationships for His parables (e.g., Mt. 25:21; Lk. 12:45). Yet neither Jesus, nor the Twelve, nor the 120 at Pentecost appears to have been owners of slaves.

The use of "slave" language as a designation of a special and honored relationship to God in the OT is continued in the NT, especially by Paul, who described himself (Rom. 1:1) and Timothy (Phil. 1:1) as "slaves of Christ Jesus," thereby stressing not only his full dependence on Christ but also his place of honor in the OT tradition of Abraham, Moses, etc. In Tit. 1:2 Paul is designated as a "slave of God."

SERVANT OF THE LORD [Heb. *'ebed yhwh*]. This designation of a divinely appointed servant has arisen from studies in the so-called servant oracles of Isaiah, although the actual phrase does not occur in those passages. Much discussion has focused on the problem of the identity of the servant who was called upon to undertake a task of great spiritual importance for the Lord — an issue first raised by nineteenth-century European scholars.

I. Use of the Term "Servant"
II. The Isaiah "Servant Oracles"
III. Authorship and Date of the "Servant Oracles"
IV. Identity of the Servant
V. Israel, the Servant, and the Messiah

I. Use of the Term "Servant."–Hebrew *'ebed*, like its NT Greek counterpart *doúlos*, means a "slave," acquired either as a result of conquest in war or through an act of voluntary servitude by an individual who preferred service in some notable household to independent work. In the ancient Near East captives of war who demonstrated ability as administrators could rise to high positions in households, and the OT records a long tradition of proficient domestic stewards from the time of Eliezer of Damascus (Gen. 15:2) and Joseph (41:40) onward.

While the steward never became greater than his lord, to whom he was always indebted for his protection and material prosperity, by enhancing his lord's interests and objectives he could make his own position secure as well as contributing to the well being of the household. The influence of individuals such as Joseph and Daniel ranged far beyond the parameters of the royal households that they served before they became state officials. This tradition has been preserved in cylinder seals and other seals recovered by archeologists, in which a "servant" of the king is mentioned by name. Such a person was clearly no menial, obscure individual, but rather a highly placed official charged with the responsibility for carrying out the king's commands.

In religious terms those who worshiped a particular deity were his servants, bound to his cult by pledges of loyalty such as oaths and vows. The Israelites were the Lord's servants, and their covenant relationship with Him demanded this obedience and loyalty to the God of Sinai as the one and only true God. While the nation as a whole was God's servant, groups and individuals were singled out for special tasks within the larger national family. Thus Abraham, Isaac, and Jacob are spoken of as God's servants (Gen. 26:24; Isa. 45:4; Ezk. 28:25), and Moses served conspicuously in that office (Ex. 14:31; Nu. 12:7; etc.). The prophets along with other faithful worshipers who paid the supreme price for their fidelity, are also referred to by God as "my servants" (2 K. 9:7). Of the rulers of Israel, Joshua (Jgs. 2:8), David (2 S. 3:18; etc.), Hezekiah (2 Ch. 32:16), and Zerubbabel (Hag. 2:23) are dignified by the appellation "servant of the Lord." This title is not even restricted to persons in covenant relationship with the God of Israel, for one notable foreign ruler, Nebuchadnezzar of Babylon, is also described in this manner (Jer. 25:9; 27:6; 43:10). It would thus appear that when the nation as a whole is referred to as the Lord's servant, it is within the context of covenant obligations. When an individual is so designated, he is a prominent person chosen to act on behalf of the Lord in an official capacity.

II. The Isaiah "Servant Oracles."–Nineteenth-century scholarship identified the following passages containing the servant motif: (1) Isa. 42:1-4 (or 1-9). This passage speaks of God's choice of a servant who will bring justice to the earth. The servant's mission will enlighten the Gentiles, who are said to be waiting for the rule of divine law. The servant's call in righteousness is pronounced as a covenant for the people to establish liberty and unfold a new destiny.

(2) Isa. 49:1-6 or 1-13. The divine servant is made aware of the predestined nature of his call and the enormity of the task confronting him. During a period of discouragement he still trusts in God's mighty power and sees his own mission as even greater than the restoration of Israel, namely, that of being a light to the Gentiles. These nations will respond to the Holy One of Israel in obedience to the favors that accompany the servant's mission.

(3) Isa. 50:4-9 (or 1-11). Here the narrator, evidently the servant, tells of his communion with God and his own submission to the divine will, despite discouragements and opposition. The servant trusts in God for the vindication of his mission, noting the blessings attendant upon obedience and the punishments coming upon those who despise God's word.

(4) Isa. 52:13–53:12. The narrative describes the initial humiliation and the subsequent exaltation of the servant. His mission is met with rejection as he suffers and atones for the nation's sin. But in God's will he will experience satisfaction as he triumphs over his adversaries and divides the spoils of victory.

While the intensive study of the servant oracles has been restricted to these passages, another Isaianic servant oracle embedded in a larger pronouncement concerning the "valley of vision" (Isa. 22:1-2) has apparently escaped the notice of scholars. In vv. 15-25 it is evident that Isaiah has been instructed to visit Shebna, the royal steward, and prophesy his destruction. Shebna will be replaced by God's servant, Eliakim son of Hilkiah, who will prove to be a true father to the nation. He is a genuine messianic figure who receives as his symbol of authority the key of the house of David (v. 22) and functions as a "peg"

(vv. 23-25; cf. Zec. 10:4) in a secure place. In harmony with the servant tradition of Isa. 53:7-9 it is significant that Eliakim's mission is to experience disaster (22:25).

III. Authorship and Date of the "Servant Oracles."–It is an axiom of liberal scholarship that the "servant songs" in Isa. 42:1–53:12 are the product of some person or persons other than the eighth-century B.C. Isaiah ben Amoz. Most commonly the author has been thought to be a purely conjectural figure styled "the unknown prophet of the Exile," or "Deutero-Isaiah." Some of the material was also attributed by certain scholars to an exilic "Isaianic school" in Babylon that had somehow survived the cataclysm of the Exile and was busily compiling the teachings of the long-deceased master to produce a section of the extant prophecy. On the difficulties of this simplistic view, see R. K. Harrison, *Intro. to the OT* (1969), pp. 765-786; *see also* ISAIAH VIII.C.

More objective evidence for the traditional authorship and date of the prophecy has been provided by the large Qumrân scroll of Isaiah (1QIsa[a]). This document, dated *ca.* 100 B.C., points to an autograph that was in existence "several centuries before the earliest date to which this manuscript can be assigned on any grounds" (M. Burrows, *Dead Sea Scrolls* [1955], p. 109). This conclusion effectively dismisses the notion of Maccabean authorship of any section of the prophecy, as well as the existence of an alleged "third" or "trito" Isaiah, held by some scholars to have been responsible for compiling later portions of Isaiah.

The format of the Qumrân Isaiah scroll points instead to a pattern of compilation that involves a holistic view of the material. According to W. H. Brownlee (*Meaning of the Qumrân Scrolls for the Bible* [1964], pp. 247ff.), the prophecy was assembled as a literary bifid, a device not infrequently adopted in antiquity for accommodating large literary compositions so that their contents could be more widely circulated in smaller half-units. The extant book of Isaiah would, on this analogy, have consisted of two parallel halves consisting of chs. 1–33 and 34–66. Brownlee's analysis showed that each half followed the same overall pattern of contents, so that the prophetic message would be quite evident even if only one half was available to a reader.

The Qumrân MS shows a distinct break in the text at the end of ch. 33; in addition, to emphasize the bifid nature of the composition, the prophecy contains a *merismus* at 1:2 ("heavens . . . earth") and in 34:1f. ("nations . . . earth") to mark the beginning of each volume. According to this analysis, which leans heavily upon ancient Near Eastern scribal methods of composition and transmission of literary materials, the extant Isaiah is not a pastische of utterances from several authors of widely-differing dates or times, but is a two-volume anthology of the prophet's utterances, carefully collected (perhaps by members of a contemporary "school") and organized in a sophisticated manner befitting the artistry of so gifted a person as Isaiah. If this bifid view of composition is basically correct, the extant prophecy, including all of the "servant oracles," need be dated no later than about 650 B.C. (*See* ISAIAH VIII.E.)

IV. Identity of the Servant.–The oracles seem to admit of both a collective and an individual interpretation of the servant. From 49:3 it would seem that the nation as a whole is being portrayed, but this then raises the question as to how the nation could fulfil the servant's atoning role and yet survive as a physical entity. Closer examination of the passage seems to indicate that the servant is called "Israel" because the nation had, by that period in its history, forfeited its own right to be called a "prince with God" through its repeated acts of apostasy. Vv. 14-21 draw a clear distinction between the nation's consciousness of being rejected by God and the covenantal love (*hesed*) which, having exacted punishment for sin, would bring about the restoration of the REMNANT scattered among the nations (vv. 22-26).

Israel as a people thus could not act as God's righteous servant, but those individuals who had remained faithful to covenantal spirituality were exemplifying in their own lives the obedience and righteousness that would be characterized supremely in the person and work of the servant. The fourth "servant oracle" makes it clear that the individual servant appointed by God was born to die a substitutionary death on behalf of the apostate nation (53:5-12). This act of atonement would assure the Lord's people that His covenant love would never leave them (54:10) and would be available to all who stood in need of it (55:1-9). This new covenantal relationship, however, would still be characterized by the same ethical considerations of justice and righteousness as the one that the Israelites had repudiated so consistently by their apostasy (Mic. 6:8).

In the light of these considerations early Christians usually identified the servant with the righteous, either collectively in terms of the faithful remnant of Israel, or as an individual historical personage. Following the general NT tradition (e.g., Acts 8:30-33), the Christian Church saw in Isa. 53 a messianic prophecy that was fulfilled in the work of Jesus Christ. This tradition began to be abandoned to some extent in eighteenth-century Europe when J. S. Semler (*Abhandlung von freier Untersuchung des Canons* [1771-75]), J. G. Eichhorn (*Allgemeine Bibliothek der biblischen Litteratur* [1794]), and other literary critics repudiated the Isaianic authorship of the "servant" materials.

Some scholars, e.g., J. C. R. Eckermann (*Theologische Beyträge* [1790)], W. Vatke (*Die Religion des AT* [1835]), and H. Ewald (*Die Propheten des Alten Bundes* (1840), then began to consider the servant as the ideal rather than the actual historical Israel, on the ground that the text supported a difference between the political or religious community and its constituent members. This position was adopted subsequently by British scholars such as S. R. Driver (*Isaiah: His Life and Times* [1888], p. 179) and A. B. Davidson (*OT Prophecy* [1903], pp. 437ff.). Any view that entertains such a concept of the ideal is necessarily conjectural, however, and in the case of the Suffering Servant encounters formidable difficulties in endeavoring to explain precisely how an ideal nation could die redemptively for the iniquities of an actual nation. A more realistic view was one suggested by H. E. G. Paulus (*Philologischer Clavis über das AT für Schulen und Akadamien. Jesaias* [1793]), which saw the faithful minority in Israel as fulfilling collectively the role of the servant. This work of atonement was supposed by Paulus to have occurred during the Babylonian exile. Unfortunately his view failed the critical-historical test in that it did not show exactly how this concept worked out in practice.

An attempt to root the servant in history as an actual personage was made by W. Gesenius (*Der Prophet Jesaja* [1821]), who envisaged the prophetic order as performing the responsibilities bestowed upon the divine servant. C. F. Staüdlin (*Neue Beiträge zur Erläuterung der biblischen Propheten* [1791]) identified the servant with Isaiah, while B. Duhm initially preferred Jeremiah but soon abandoned this identification in favor of some anonymous individual (*Die Theologie der Propheten* [1875], pp. 287ff.). E. Sellin was probably the most diverse in his choice of historical personages, identifying the servant successively with Zerubbabel (*Serubbabel: Ein Beitrag*

zur Geschichte der messianischen Erwartung und der Entstehung des Judentums [1898]), Jehoiachin (*Studien zur Entstehungsgeschichte der jüdischen Gemeinde nach dem babylonischen Exil. I. Der Knecht Gottes bei Deuterojesaja* [1901]), Moses (*Mose und seine Bedeutung für die israelitisch-jüdisch Religionsgeschichte* [1922]), and Deutero-Isaiah (*Neue Kirchliche Zeitschrift,* 41 [1930], 73ff.). T. H. Weir identified the Suffering Servant with Cyrus the Persian (*Westminster Review,* 169 [1908], 309ff.), while R. Kittel thought of him as a contemporary and associate of "Deutero-Isaiah" (*Zur Theologie des AT II: Jesaja 53 und der leidendeMessias im AT* [1899]).

F. Delitzsch proposed a so-called pyramid theory of identification; the base represented the servant's roots in the physical nation of Israel, which was succeeded by a spiritual Israel and culminated in the personage of the Redeemer-Messiah (*Biblical Comm. on the Prophecies of Isaiah* [Eng. tr. 1890], p. 236). This view was discussed widely but rejected by those who were intent on identifying the servant with a historical personage. S. Mowinckel (*Der Knecht Jahwäs* [1921]) distinguished between the servant of the oracles, who was an individual ("Deutero-Isaiah"), and the servant of the literary material preceding and following the oracles, who was the nation of Israel. He subsequently abandoned this position in favor of thinking of the servant as a personage belonging to future times (*He That Cometh* [Eng. tr. 1956], pp. 228f.).

The identity of the servant was even subjected to mythological interpretation by such scholars as H. Gressmann (*Der Ursprung der israelitisch-jüdischen Eschatologie* [1905]), H. Gunkel (*RGG,* III [1912], cols. 1540ff.), H. S. Nyberg (*Svensk Exegetisk Årsbok,* 7 (1942), 5ff.), and I. Engnell [1945], 31ff.; *BJRL,* 31 [1948], 54ff.). A more traditional messianic interpretation of the servant's identity was maintained by J. Fischer (*Isaias 40–55 und die Perikopen vom Gottesknecht* [1916]), F. Feldmann (*Das Buch Isaias übersetzt und erklärt* [1926]), A. van Hoonacker (*Het Boek Isaias* [1932]), J. van der Ploeg (*Les Chants du Serviteur de Jahvé* [1936]), C. R. North (*Suffering Servant in Deutero-Isaiah* [1948]), H. H. Rowley (*Servant of the Lord and Other Essays on the OT* [1952]), and many other scholars.

V. Israel, the Servant, and the Messiah.–Some justification for the enormous output of literature on the servant problem, of which only representative items are mentioned in this article, can be found in the fact that these passages of Scripture make an individual, a corporate, an ideal, and a historical interpretation possible at different times. If the servant is to be identified with Israel, the picture of the nation that Isaiah presents is quite different from that encountered in the historical writings of the OT. If the description of the servant is in any significant sense that of an ideal individual, it cannot be represented by a historical personage such as Hezekiah, Cyrus, or the like. Even the notion of a "corporate personality," as espoused by H. Wheeler Robinson (*Cross of the Servant* [1926]) and O. Eissfeldt (*Der Gottesknecht bei Deuterojesaja* [1933]), fails to be entirely satisfactory as an explanation of the relationship between the nation, the servant, and the Messiah; it does not delineate the functions of the servant over against those of the nation, and thus it does not show how the servant's functions could be transmitted from Israel the nation to an individual.

Of one fact, however, there can be no doubt: the servant of the Isaianic songs is by no means a lowly human slave. On the analogy of the cylinder seals that mention the "servant" of the king, Isaiah's servant exhibits certain royal attributes and as such is a highly placed individual who serves as the Lord's deputy. While the servant is not the only messianic figure depicted in the book of Isaiah, his atoning functions give him a unique status. This led the early Church to see the fourth servant oracle fulfilled in the person and work of Jesus Christ (cf. Acts 8:31-35), in spite of some differences between the Isaianic servant and Jesus the Messiah.

Christ's incarnation and atonement linked the house of David with the redeeming functions that Isaiah saw as a fundamental part of the servant's work, and this was recognized also by the apostolic Church (Acts 13:34). Whatever may have been the original understanding of the servant oracles, the work of the servant was fulfilled preeminently by Christ's atonement for sin on Calvary.

SET ONE'S FACE. *See* EZEKIEL III.D; IX.D.

SETH seth [Heb. *šēṯ*; Gk. *sēth*]; AV also SHETH (1 Ch. 1:1). The third son of Adam and Eve, who was born after the death of Abel and the banishment of Cain (Gen. 4:25f.; cf. Josephus *Ant.* i.2.3 [68]). Eve called him Seth (Heb. *šēṯ*) because "God has appointed [*šāṯ*] for me another child instead of Abel, for Cain slew him" (4:25). But the official genealogy of Adam's family lists Seth as Adam's firstborn (5:3f.; 1 Ch. 1:1; Lk. 3:38). Thus it was through the line of Seth that the image of God, conferred upon the human race in Gen. 1:26f., was transmitted (cf. Gen. 5:3). When Seth was 105 years old, he became the father of Enosh (4:26; 5:6; 1 Ch. 1:1; Lk. 3:38; cf. Josephus *Ant.* i.3.4 [83]), and he died at the age of 912 (Gen. 5:7f.).

Genesis 4:26 states that it was during the lifetime of Seth and his son Enosh that people "began to call upon the name of the Lord." (Ex. 6:3 says that the divine name was not revealed until the time of Moses.)

Seth also figures significantly in other works, including apocryphal (e.g., Sir. 49:16), pseudepigraphic (e.g., Ascension of Isaiah; Jubilees; Life of Adam and Eve; Pseudo-Philo; etc.), and gnostic texts (e.g., Gospel of the Egyptians; Second Treatise of the Great Seth; etc.).

P. K. MCCARTER, JR.

SETHUR sē'thər [Heb. *seṯûr*–'concealed']. Son of Michael; an Asherite sent by Moses to spy out the land of Canaan (Nu. 13:13).

SETTING(S) [Heb. *mišbᵉṣôṯ*] (Ex. 28:11., etc.; 39:13, etc.); AV OUCHES; NEB ROSETTES; [*tip'ereṯ*–'beauty,' 'ornament'] (2 Ch. 3:6); AV BEAUTY; NEB DECORATION;

[*maśkîṯ*–'carved'] (Prov. 25:11); AV PICTURES; NEB FILIGREE; [*tuppîm*] (Ezk. 28:13); AV TABRETS; NEB JINGLING BEADS. The frame or bed in which a gem is mounted. The RSV's use of "settings" to render *tuppîm* is conjectural; usually the term denotes a musical instrument (cf. AV, NEB).

See FILIGREE; OUCHES.

SETTLE. The noun, denoting a wooden bench, is used by the AV to render Heb. *ʿazārâ* (Ezk. 43:14, etc.). The RSV more appropriately renders "ledge." *See* LEDGE.

SETTLE [Heb. qal and hiphil of *yāšaḇ* (Gen. 11:2, 31; 47:6, 11; Lev. 26:32; Dt. 2:12; 1 Ch. 4:41; Jer. 49:1; etc.), qal and hiphil of *šāḵan* (Ex. 24:16; Nu. 9:17; 10:12; Jgs. 5:17; Ps. 78:55; Ezk. 32:4), *gûr* (Isa. 23:7), *hāyâ*–'take place' (Dt. 21:5), *ḥānâ* (Nah. 3:17), piel of *kālâ* (Ruth 3:18), *nû(a)ḥ* (Ex. 10:14; Isa. 7:19), piel of *nāḥaṯ*–'level off' (Ps. 65:10 [MT 11]), *nāpal* (Gen. 25:18), *šāqaṭ* (Jer. 48:11), *rāḇaṣ* (Dt. 29:20 [MT 19]), *ʾᵉmānâ* ("settled provision," Neh. 11:23); Aram. *yᵉṯiḇ*–'dwell' (Ezr. 4:10); Gk. *synaírō* (Mt. 18:23; 25:19), pass. of *apallássō* (Lk. 12:58), *títhēmi* (Lk. 21:14), pass. of *epilýō*–'decide, solve' (Acts 19:39)]; AV also DWELL, SOJOURN, ABIDE, BE, DETERMINE, RECKON, etc.; NEB also REST, LEVEL (Ps. 65:10 [MT 11]), DEAL WITH, etc.

The primary sense of "settle" in the OT is to establish one's home in a certain place. The usual Hebrew words are *yāšaḇ* and *šāḵan*, both of which are often translated "dwell." Used transitively (in the hiphil stem), these roots take on the sense of giving someone a place to live (e.g., Gen. 47:6, 11; 2 Ch. 8:2; Ps. 78:55). Heb. *gûr* (Isa. 23:7), by contrast, is generally rendered "sojourn" and implies less stability; similarly, *ḥānâ* (Nah. 3:17) means to "camp" and often has military overtones.

But Eng. "settle" can also be transitive in a different sense, i.e., "determine the outcome, establish." This is the verb's sense in all the NT passages, where it represents a variety of Greek terms (e.g., *apallássomai*, "dispose of"; *títhēmi*, "put in place"). It also has this sense in several OT passages, e.g., Ruth 3:18, which uses the piel of Heb. *kālâ*, "bring to completion." In Dt. 21:5 the verb *hāyâ* (lit. "take place") relates to the social or legal processes for resolving disputes within a community. Out of such a process comes the "settled provision" (Neh. 11:23; NEB incorrectly "obligatory duty"); Heb. *ʾᵃmānâ* is related to the root *ʾāmēn*, "sure, reliable, true."

The use of Heb. *nāpal* in Gen. 25:18 is unusual; it may mean "settle" (although its usual meaning is "fall," including the sense of "fall upon," "attack"), or the text may be confused in some way. On the expression "settle on the lees" (*šāqaṭ ʾel-šᵉmārîm*) in Jer. 48:11, *see* LEES.

In Dt. 29:20 (MT 19) the RSV uses "settle" to render *rāḇaṣ*. The same Hebrew verb occurs in Gen. 4:7, where sin is said to "couch" at the door; the word usually refers to the crouching and stalking of beasts of prey such as lions. The Deuteronomy passage might best be rendered, "Every curse written in this book will lie in wait against him." The AV has simply "lie on him," while NEB offers "fall heavily on him"; neither catches the sense of sudden deadly attack.

G. CHAMBERLAIN

SETTLEMENTS [Heb. *môšāḇ*–'dwelling place'] (1 Ch. 4:33; 7:28); AV HABITATION; NEB also "places where they lived"; [*ṯîrâ*] (1 Ch. 6:54 [MT 39]); AV CASTLE; NEB ENCAMPMENT. The settlements mentioned in 1 Ch. 6:54 may have been enclosed by stone walls, according to the practice of nomadic tribes threatened by danger. Cf. the use of *ṯîrâ* in Ezk. 46:23, "a row of masonry."

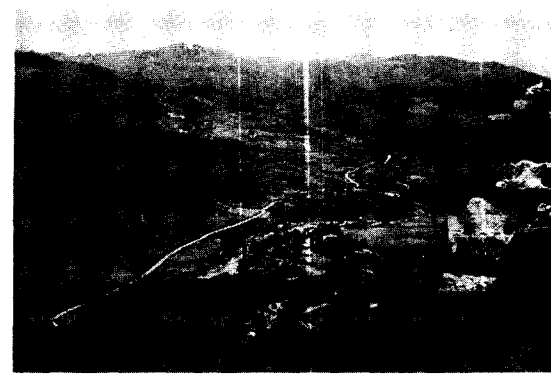
SEVEN. *See* NUMBER.

SEVEN CHURCHES [Gk. *hai heptá ekklēsíai*] (Rev. 1:4, 11, 20). The seven churches of Asia to which the book of Revelation is addressed, located in the cities of Ephesus, Smyrna, Pergamum, Thyatira, Sardis, Philadelphia, and Laodicea (1:11). Individual letters are addressed to these churches in chs. 2–3. The use of the definite article ("*the* seven churches") may imply that they were a recognized group, the principal centers of the Church in the Roman province of "proconsular" ASIA. There are good grounds for accepting W. M. Ramsay's suggestion (*LSC*, pp. 185196) that these seven places were postal centers of the Church in Asia, the natural stages in sequence on an inner circular route from which an encyclical message to the churches could be most efficiently distributed throughout the province. This theory fits with the facts of geography and naturally explains the selection of these seven rather than other early church cities (Troas, Miletus, Hierapolis, Colossae, Magnesia, Tralles) or other major towns (Apamea, Cyzicus, etc.), all of which either lie beyond the most economical route or were otherwise best reached from one of the seven. A messenger from Patmos would land at Ephesus and proceed N through Smyrna to Pergamum before turning SE through the other four. If seven copies of the book were first made from dictation, secondary messengers could then take a copy from each center to its neighborhood or hinterland. Perhaps this distribution system was already established in Paul's day, if Ephesians be taken as a Pauline encyclical to the churches of Asia focusing on Ephesus.

The number seven at once suggests symbolical significance, but here it is related to a specific group of churches. In 1:20 the seven stars are explained as the ANGELS OF THE SEVEN CHURCHES, and the seven lampstands as the seven churches. This explanation is not easy to grasp. The difficulty may arise from the use of symbolism in a manner alien to the more prosaic modern mind. Perhaps the stars and the angels are the heavenly counterparts, respectively, of lampstands and churches. It is simplest to regard the angels as in effect personifications of the churches.

The letters themselves are very rigidly structured, using repeated formulae. Each letter begins with an introductory declaration of the risen Christ, which uses images corresponding in almost every case to His attributes as seen in the Patmos vision of ch. 1 and presents Him in terms relevant to the needs of that church. The images in the

The countryside of Asia Minor viewed from the approach to Pergamum, geographical center of the seven churches (G. J. Wenham)



letters often derive ultimately from the OT, but they are pointedly applicable to the individual churches. They are reflected more fleetingly in symbols used later in the book and are taken up again in chs. 21–22, where the disabilities of the actual churches are finally transcended in the perfection of the heavenly Jerusalem.

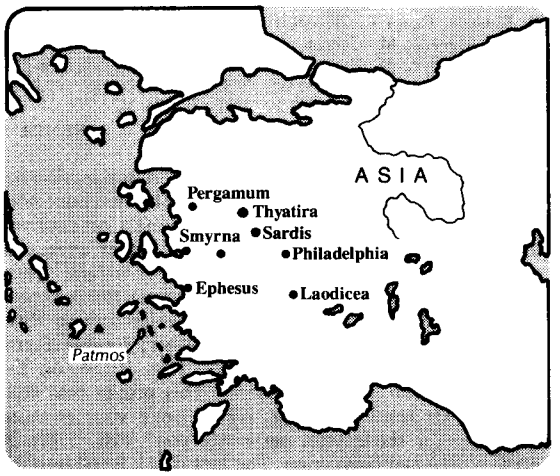
The writer of Revelation appears to have known these seven cities intimately. His prayer and meditation on Scripture relating to their needs formed the background for his visionary experience. The messages, then, must be interpreted primarily in the historical context of the churches, "the things which are" (1:19, AV). There is still much debate over certain features of that setting, since these touch on larger questions of the date and unity of the book as a whole. Some scholars have questioned the traditional dating of the book during a Domitianic persecution, either renewing arguments for an earlier dating or playing down the extent of the persecution implied in the letters. (Some have even assigned the letters to an earlier date than the final form of the book.) That persecution developed initially through social pressures. The references to Nicolaitans and "synagogues of Satan" may relate to opposite pressures from libertinism and Judaism. The struggle may have been severely intensified by the enforcement of emperor cult and the activities of informers under the suspicious Domitian.

The interpretation of the letters should focus on their content rather than on their literary structure. Some exegetes have tended to assimilate them to the pattern of successive sevens later in the book; by this approach they may be forcing these letters into an unwarranted "church-historical" mold. It is better to see their relatively concrete, contemporary imagery as the easiest direct approach to the book as a whole in its primary setting. The letters lend themselves to comparison and contrast: Ephesus and Sardis are in decline from outward success; Smyrna and Philadelphia are steadfast under comparable trials; Pergamum and Thyatira are compromised by paganism. Yet these pairings are situational and unsystematic, not structural, and do not detract from the individuality of each message. There is often a measure of identification between the characters of church and city. Thus the tepid water brought into Laodicea through a man-made aqueduct, where lime deposits encrusting the stone pipes still testify to its warmth and badness, provides a pointed image of the spiritual state of the Laodicean church: it was ineffectual rather than quite half-hearted (M. J. S. Rudwick and E. M. B. Green, *Expos.T.*, 69 [1957/58], 176-78), the self-sufficient Christless church of the affluent society. Historical and local study is thus important both for interpreting the larger situational context of the letters and for appreciating the pointedness of their detailed imagery.

EPHESUS (2:1-7) was the cosmopolitan center of Asia and had an outstanding, successful church, discerning in its rejection of false teaching, but called to repent and return to its "first love" on pain of being "moved from its place." The warning is couched in terms recalling the repeated changes of site in the city's long history. There may also be a background of contrast with the Artemis cult.

SMYRNA (2:8-11) was the city of suffering, which historically had "died and lived again." The name, being identical with the Greek word for "myrrh," lent itself to expressing the symbolism of suffering, death, burial, and the resurrection hope. The church is urged to be "faithful unto death." The "crown" is a rich local symbol of life, victory, and honor.

PERGAMUM (2:12-17) was the city of authority; as the provincial center of the emperor cult it was "Satan's throne," where the conflict between Christ and Caesar came to its sharpest form; here the Nicolaitans apparently advocated a ruinous compromise. The image of the "white stone" (*psḗphos*, "pebble" or "token") has been variously interpreted: it suggests Christ's acquittal and pledge of intimate relationship.



THYATIRA (2:18-29) was a city of trade guilds. The Christians' livelihood was at stake here if they did not belong and accommodate to the pagan basis of these guilds; "Jezebel," like the Nicolaitans, evidently stands for a radical pagan compromise. This longest and most difficult of the letters presents Christ as the true patron of daily work.

The church in SARDIS (3:1-6) had a name for being alive but had declined into a sham of outward show. Proverbially the city's impregnable citadel had fallen in 546 B.C., when Croesus had failed to guard it against the coming of Cyrus of Persia. The church, likewise, was negligent and complacent.

PHILADELPHIA, in sharp contrast, was weak and struggling but steadfast (3:7-13). The people here had taken to living outside the city because of fear of recurring earthquake shocks, and the church had "little power" and suffered rejection from the Jews, the professed people of God. The church is lovingly encouraged to endure: the conqueror will be a strong and stable pillar of the temple and will never "go outside."

In the letter to LAODICEA (3:14-22) the local references are more pervasive. The city was rich as a banking center because of its medical school and ophthalmic medicine and from its manufacture of black woolen clothing. Its affluence had enabled it to recover from earthquake destruction "by its own resources" (Tacitus *Ann.* xiv.27), and so it saw itself as prosperous and self-sufficient. The final appeal of this letter turns to the individual who will receive Christ.

As a group the seven letters give a penetrating analysis of the diverse infirmities of the Church. So brief a sketch cannot begin to explore them individually. See the articles on the separate cities.

C. J. HEMER

SEVEN LAST WORDS, THE. A common designation for the sayings of Jesus from the cross of Calvary. Those who suffered crucifixion were usually criminals or captives in warfare. Their outcries were mainly either curses or complaints. The utterances of Jesus were unique. They serve as windows through which to glimpse the response of Jesus to His crucifixion and the situation around Him.

1. The Word of Forgiveness. "Father, forgive them; for they know not what they do" (Lk. 23:34; on the textual problem see the comms.). This prayer was consistent with Jesus' teaching, e.g., "Love your enemies and pray for those who persecute you" (Mt. 5:44). A great wrong had been done. The fact that it fitted into the divine plan to bring salvation to mankind does not change its character as sin for which mankind is responsible.

This prayer applied to the soldiers. They seemed to take delight in their task, sadistic rather than sad in carrying out their duty. This prayer also applied to Pilate, for he had acted out of selfishness and weakness (cf. 1 Cor. 2:8). The same applied to the Sanhedrin. As in the case of Saul of Tarsus, what they did was done in ignorance and unbelief, so they were forgivable. The OT knew only two types of sin — what was committed in ignorance and what was done with a high hand. Only the former was forgivable (Acts 3:17). Was the prayer of Jesus answered? Pentecost assures us that it was (2:41). The prayer also set a pattern for the followers of Jesus (e.g., Stephen in 7:60).

2. The Word of Salvation. "Today you will be with me in Paradise" (Lk. 23:43). Jesus had been deliberately placed between two criminals. Let the greatest sinner be seen in his proper company! It was a calculated insult (He. 12:2). These two men were not common thieves but brigands, men who were prepared to take human life in perpetuating their crimes. Both of them taunted Jesus at first (Mt. 27:44) but one later relented. Jesus appears here as a divider of men as well as Savior.

One showed his faith by accepting the fact that Jesus would have a kingdom (Lk. 23:42). Jesus countered the criminal's "when" (v. 42) by His own "today" (v. 43). *Paradise* answers to *kingdom*.

3. The Word of Relationship. Jesus spoke to His mother regarding John: "Behold, your son," and to John, "Behold, your mother," referring to Mary (Jn. 19:26f.). Drawn close to the cross by her love for Jesus, Mary must have longed for some word from Him. She was not disappointed. During her time of watching and waiting, memories doubtless welled up within her — the angelic announcement to her (Lk. 1:30-33), the arduous journey to Bethlehem and the birth of her child in the manger (2:4-7), Jesus' boyhood years in the home at Nazareth, the tension between the brothers and Jesus, the wrenching experience of His departure from the home, and much more. He never failed to provide for her and would not fail her now.

As for John, to look on Mary as his mother was both an honor and a responsibility. It is possible that he had a home in the Jerusalem area (Jn. 18:15). Mary may have been instrumental in winning her other children to faith in Jesus (Acts 1:14).

4. The Word of Abandonment. "My God, my God, why hast thou forsaken me?" (Mk. 15:34; Mt. 27:46; cf. Ps. 22:1 [MT 2]). Did He merely feel abandoned? No, it was a reality attested by the companion darkness that settled on the scene. The great teacher on prayer now finds prayer unavailing. God cannot look upon sin, and now His Son is bearing the sin of the world in His own person, taking the sinner's judgment. What a terrifying lofliness! Yet His cry appeals to relationship — not "God" but "my God."

5. The Word of Distress. "I thirst" (Jn. 19:28). His thirst at Samaria (4:7) was paltry compared to this: a heavy loss of moisture matching the increasing loss of blood. Jesus demonstrated His unselfishness by caring for the needs of others before voicing His own. Even then He made no request, but simply stated a fact. He graciously refrained from blaming anyone. The One who refreshed others is now in need Himself. His cry fulfilled Scripture (Ps. 22:15 [MT 16]) and brought a response (Jn. 19:29) that provided strength for His two remaining utterances.

6. The Word of Triumph. "It is finished" (Jn. 19:30). What was finished? The obvious answer is His suffering, but it is questionable that John would have included this word if it pertained only to His physical agony. The earthly life of Jesus was coming to a close, but His was an indestructible life (He. 7:16). His mission was now about to be completed. The work of salvation was becg accomplished. He had given His life, the just for the unjust, that He might bring sinners to God.

7. The Word of Reunion. "Father, into thy hands I commit my spirit" (Lk. 23:46). His remaining strength was spent in this final utterance. It was not a request but an announcement. He was going home. Also, He was about to become our forerunner into the heavenly sanctuary by opening up the new and living way of access to God through the curtain of His flesh (He. 10:9f.).

E. F. HARRISON

SEVEN STARS. *See* SEVEN CHURCHES.

SEVEN, THE [Gk. *hoi heptá*] (Acts 21:8). A group of gifted leaders, "of good repute, full of the Spirit and of wisdom," chosen according to Acts 6:1-6 to look after the needs of the Hellenistic Jewish Christian widows, and referred to as "the seven" in 21:8.

The Seven themselves appear to have been Hellenistic Jews, and not Greeks as Cadbury maintained (thus in Acts 6:1 Luke calls the group they represent *Hellēnistai* rather than *Hellēnes*; for a discussion of Cadbury's and other views, *see* HELLENIST). All their names are Greek: Stephen, Philip, Prochorus, Nicanor, Timon, Parmenas, and Nicolaus; indeed, the last-named is identified explicitly as a gentile "proselyte of Antioch," i.e., a full convert to Judaism before he became a Christian. As Hellenistic Jews these men probably came originally from the Diaspora and spoke only Greek (see Moule), unlike the Palestinian Jews, who spoke Aramaic as their native language but would also have spoken some Greek. Tension between the two groups was inevitable, since the former were more open to certain aspects of Hellenism while the latter remained intensely protective of Jewish cultural dis-

tinctives. There can be no question concerning the religious fervor of the Greek-speaking Jewish Christians, which after all accounted for their residence in Palestine; but they were by nature less rigid in their interpretation of the Law and more open-minded to new ways of thinking and acting. Thus the progressive work of both Stephen and Philip, in theology and mission respectively, serves as a kind of transition to the eventual establishment of the gentile Church, which took place primarily through the work of Paul. The suggestion that the Seven were Samaritans or influenced by the Essenes is at best speculative.

The Seven were ordained by the twelve apostles with prayer and the laying on of hands (Acts 6:6). Since they were appointed for service (Gk. *diakonía,* 6:1; cf. v. 2), in particular to attending to the very practical distribution of goods to the widows of their group, some scholars have thought that Luke intended this passage to represent the first ordination of deacons. This is improbable, however, despite the reference to "serving tables" (*diakoneín trapézais*) in 6:2, since Luke does not in fact call them *diákonoi* in the later, technical sense of the word (cf. 1 Tim. 3:8-13). Furthermore, STEPHEN (Acts 6:8–8:2; 11:19; 22:20) and PHILIP THE EVANGELIST (8:5-40; 21:8) became known not for their social work but for a broader kind of *diakonía,* a ministry of the Word that was not essentially different from that of the apostles (cf. *diakonía* in Acts 1:25; 6:4). The Seven were indeed a kind of Hellenistic Jewish Christian counterpart to the Twelve, who were most probably exclusively Palestinian (i.e., Aramaic-speaking Jews) despite the Greek names of Andrew and Philip. It is somewhat ironic that two of the Seven, rather than the any of the Twelve, became the catalysts for the outward missionary activity of the Church. The anonymous "men from Cyprus and Cyrene" who began preaching in Antioch to wider audiences than had the Twelve (11:19f.) should probably be linked with the Seven as well.

Of the Seven, only Stephen and Philip are spoken of again in Acts. Although it is possible, it is far from certain that the antinomian Nicolaitans of Rev. 2:6, 15 should be traced back to NICOLAUS (as alleged by Irenaeus *Adv. haer.* i.26.3). Later tradition associated Prochorus with John the Evangelist, as his amanuensis and as the pseudonymous author of the fifth-century apocryphal Acts of John.

SEVENTH DAY. *See* SABBATH.

SEVENTY. *See* NUMBER.

SEVENTY DISCIPLES. A group of Jesus' followers whom He sent ahead two by two into towns He was about to visit (Lk. 10:1-20). It seems likely that the thirty-five pairs were sent to minister in the region of Judea, as the following summary of the context indicates. In 9:51-62 Jesus journeys through Samaria to Judea; in 10:1-20 He appoints the Seventy; in 10:25-37 He tells the story of the good Samaritan, which takes place in Judea on the Jericho road and in 10:38-42 He visits Bethany, the Judean town of Mary and Martha.

Variant readings in the Greek text of Lk. 10:1 raise the question whether this group of disciples numbered seventy (Gk. *hebdomékonta*) or seventy-two (*hebdomékonta dýo*). MS evidence slightly favors seventy-two, while internal (intrinsic) evidence strongly favors this larger number. The possibility of a symbolic use of the figure (70 or 72) has also been raised. Seventy, e.g., might be a stereotyped use ofu round figure to represent a moderately largenumber (cf. Jgs. 9:18, 56); or, since there were said to be seventy nations in the world (Gen. 10), Luke may have used the figure to refer symbolically to the universal proclamation of the gospel (see *TDNT,* II, 634f.).

Some have called attention to similarities between the appointment of the seventy(-two) and the commissioning of the Twelve (Mt. 9:37–11:1). The similarities include reference to the plentiful harvest (Mt. 9:37f.; Lk. 10:2), instructions concerning what may or may not be taken on the journey (Mt. 10:9f. par.; Lk. 10:4), and instructions concerning how to respond to acceptance or rejection (Mt. 10:11-15 par.; Lk. 10:5-16). Some scholars read these similarities as evidence of doublets; however, the similarities may simply indicate that the two groups were commissioned to fulfil the same ministry, although in different locales. The setting for the sending of the Twelve was Galilee (see Mk. 6:1-13), whereas the sending of the seventy(-two) took place in Judea. In each instance Jesus' purpose was to saturate the target area with the gospel of the Kingdom. Since the purpose was the same, it is not surprising that the instructions were similar, even to the point of duplication.

D. W. BURDICK

SEVENTY WEEKS [Heb. *šāḇu ʿîm šiḇ ʿîm* ("seventy weeks of years," Dnl. 9:24)]; AV, NEB, SEVENTY WEEKS.

In Dnl. 9:24 the expression literally reads "weeks seventy" (NIV "seventy 'sevens'"). The "weeks" are commonly thought to be weeks of years (i.e., consisting of seven years each) by analogy with the "seventy years" mentioned in 9:2, and by contrast with the three weeks of days (*šᵉlōšâ šāḇuʿîm yāmîm*) mentioned in 10:2. But since the word for "weeks" in 9:24 is not followed by "of years," we cannot be certain that the expression means an exact period of seven years. It is probably best to think of Daniel's seventy weeks as meaning periods of unspecified duration.

It should be noted that the vision of the seventy weeks came to Daniel in answer to his prayer of confession and his request for the return of God's favor to Jerusalem (9:3-19). The purpose of the visionis to reveal to Daniel what God has in store for His people in the future.

The common dispensational view of Dnl. 9:24-27 (summarized in *The New Scofield Bible* [1967], p. 913) is that the passage concerns only the Jews. The beginning of the seventy weeks, thought of as being weeks of years, is set at 445 B.C. During the time of the first sixty-nine weeks (seven plus sixty-two, as in v. 25, AV, NIV), "the Messiah,hhe Prince" (so AV) shall come (i.e., Jesus Christ) and Jerusalem and the temple shall again be rebuilt. After the first sixty-nine weeks Christ shall be put to death ("shall Messiah be cut off," v. 26, AV) and Jerusalem and the temple shall be destroyed by "the people of the prince that shall come" (AV). This last-named event occurred in A.D. 70. Both of the events mentioned in v. 26 are said to precede the seventieth week. Since what is said to happen during the seventieth week (v. 27) has

not yet occurred, the entire period of church history fills the interim between the sixty-ninth and the seventieth week. The seventieth week will begin with the rapture of the Church; the one who "shall confirm the covenant with many for one week" (AV) is the antichrist, who will break his covenant with the Jews in the middle of the week and thus usher in the "great tribulation."

The dispensational interpretation of this passage involves several exegetical problems. (1) When Gabriel says to Daniel, "Seventy weeks are decreed . . . " (v. 24), there is no indication that a gap of more than 1900 years must intervene between the sixty-ninth and the seventieth week; the obvious meaning is that the seventy weeks will be consecutive. (2) All the blessings promised in v. 24 (which are the goal of the seventy weeks) have been fulfilled in Christ, and none needs to wait for a future fulfillment. (3) What is predicted in v. 27 does not follow upon what is predicted in v. 26, as dispensationalists contend, but repeats what was said in v. 26, locating the death of the Messiah in the seventieth week; the poetic structure of the passage is marked by "repetition with elaboration" (see J. B. Payne, *JETS*, 21 [1978], 109). (4) The view that the one who "shall confirm the covenant with many" (v. 27) is the antichrist is an assumption without a clear textual basis.

The traditional messianic interpretation of this passage holds that, though this prediction refers primarily to Israel, it ultimately concerns all who will benefit from the work of the Messiah — in other words, the entire Church. Christ at His first coming carried out the six great transactions mentioned in v. 24. After the sixty-nine "weeks" have passed (see AV, NIV), Jerusalem and the temple having been rebuilt by that time, Christ, the Anointed One, will be put to death ("cut off," v. 26), and Jerusalem and the temple will once again be destroyed (these words refer to the destruction of Jerusalem by the Roman emperor Titus in A.D. 70). Repeating what was said in v. 26, v. 27 describes in further detail what will happen during the seventieth week (which follows immediately after the sixty-ninth). "He [i.e., Christ] will confirm a covenant with many" (NIV) *in* or *during* one week (since no preposition precedes the expression "one week" in the Hebrew [*šāḇû(a)ʿ ʾeḥāḏ*], this expression can be understood as simply an accusative of time, indicating when v. 27 will happen; see GKC, § 118i; note the parallels in Gen. 14:4; 27:45; Jgs. 14:12; Ps. 5:3 [MT 4]). During this seventieth week, therefore, by His sacrificial obedience Christ will confirm (cf. Rom. 15:8) the covenant of grace that had previously been made with the people of God. In the middle (NIV; cf. AV, NEB) of the seventieth week Christ will die on the cross, thus causing sacrifice and offering to cease by making them unnecessary (see, e.g., He. 7:27; 9:26-28; 10:8f.; and note the rending of the curtain of the temple immediately after Jesus' death [Mt. 27:51]).

A. A. HOEKEMA

SEVENTY YEARS. The period of the Judean exile in Babylon according to the prophet Jeremiah (Jer. 25:11f.; 29:10).

Since the number seventy represented completeness, seventy years seems to have been a conventional designation of a full period of time, such as a person's typical life expectancy (Ps. 90:10) or a time of divine disfavor. The prophet Jeremiah applied this conventional time span to the desolation of Jerusalem and Judah (Jer. 25:11f.; 29:10). It is used similarly in Isa. 23:15, 17 with respect to the period during which Tyre will "be forgotten," i.e., lie waste. R. Borger found a similar use of this time span by the Assyrian king Esarhaddon in reference to Babylon's period of devastation (*Inschriften Asarhaddons*, p. 15). He concluded that this evidence, together with the biblical evidence, suggests that seventy years was a proper or conventional period for an ancient Oriental city to lie in waste.

In the Persian period the biblical writers understood the seventy years to refer to an exact period of time for the desolation of Jerusalem and therefore of the temple (Zec. 1:12; 7:5), or of the land of Judah in general (2 Ch. 36:21). Whitley (*VT*, 4 [1954]) argued that the period from the destruction of the temple in 586 B.C. to its rededication in 516 represented precisely the seventy years referred to in the postexilic texts.

2 Chronicles 36:21 explains the role of the Exile in God's purpose by interpreting the prophecy of Jeremiah in the light of the warning in Lev. 26:34f. Dnl. 9 also refers to Jeremiah's prophecy (v. 2); based on the warnings in Lev. 26:18, 34f., the seventy years is interpreted as "seventy weeks of years" (Dnl. 9:24; *see* SEVENTY WEEKS).

E. B. WHALEY

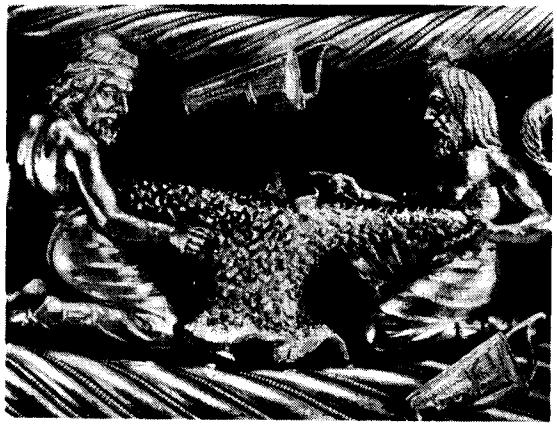
SEVER. A term used by the RSV and NEB in two different senses. In Lev. 5:8 it refers to cutting off a bird's head (Heb. hiphil of *bāḏal*, lit. "divide, separate"; AV "divide asunder"); cf. RSV Jth. 13:8; 16:9; 4 Macc. 9:21; 15:20. In Gal. 5:4 it refers to a broken relationship (Gk. *katargéō*, lit. "be estranged"; AV "become of no effect").

In the AV "sever" generally refers to the setting apart of people, animals, or lands (Heb. hiphil of *bāḏal* in Lev. 20:26; Dt. 4:41; Ezk. 39:14; hiphil of *pālâ* in Ex. 8:22; 9:4; niphal of *pāraḏ* in Jgs. 4:11). In Mt. 13:49 it represents a final judicial segregation of the wicked from the righteous (Gk. *aphorízō*). *See* SEPARATE. N. J. O.

SEVERAL. An adjective sometimes supplied by the RSV to emphasize the individuality (i.e., separateness and distinctness) of the things referred to: territories (Josh. 19:49), families (21:33, 40), gates (2 Ch. 8:14), cities (31:19), or portions (Ezk. 48:29). Similarly, the AV uses the term in Mt. 25:15 to render Gk. *ídios*, which means "belonging to an individual"; cf. 1 Cor. 12:11, AV, where "severally" renders the adverb *idíą* (RSV "individually"). In 2 K. 15:5 par. 2 Ch. 26:21, AV, "several" means SEPARATE. Only in Acts 9:19, RSV, is the term used to indicate an indefinite quantity of more than two but less than many (Gk. *tinés*).

SEW [Heb. *tāpar* (Gen. 3:7; Job 16:15; Eccl. 3:7; piel, Ezk. 13:18); Gk. *epiráptō* (Mk. 2:21)]; NEB also STITCH, MEND. To fasten (material) together by stitches.

Judging by the bone awls that have been found, scholars believe that sewing originated in two separate processes at some time in the Stone Age. The first process involved punching holes in leather (or later cloth); the second involved putting leather or fiber laces through the holes to fasten two pieces of material together. The invention of the needle made it possible to carry out both processes with the same tool, as the sharp end pierced the hole and the eye carried the thread through it. Metal needles (of copper and of bronze) appeared in the Early Bronze Age, as did large pins and toggle pins. Clothing at



Two Scythians are sewing a shirt made of animal skin in this detail from a gold pectoral. Scythian, 4th cent. B.C. (Lee Boltin)

the time was not cut and sewn but was formed of a length of cloth wrapped around the waist and held in place by a woven sash or a metal pin. Sometimes an end was thrown over the shoulder and fastened with a toggle pin, so that the length also covered the upper part of the body.

It is not clear when sewing as a means of constructing everyday garments came into general use. There are no clear biblical references to such a practice, although the Nineveh gate representations of Sennacherib's siege of Lachish (end of the 7th cent. B.C.) show the inhabitants of Judah wearing garments that may have been sewn (*ANEP*, nos. 371-73). The humor of Gen. 3:7 (sewing garments of fig leaves for the sake of modesty) would have been clear to every ancient hearer; they all knew how quickly fig leaves, once plucked, curl up and wither away.

The verb *tāpar* seems to have been used for patching clothing or fastening small things. Ezk. 13:18 speaks of fastening on wrist ornaments by sewing, while in Job 16:15 sackcloth is sewn together to be worn as a symbol of mourning. In Job 14:17, an allegorical verse, the verb *ṭapal* (AV "sew"; RSV "cover"; NEB "keep under seal") is used to describe fastening the mouth of a sack.

Both Eccl. 3:7 and Mk. 2:21 speak of patching or mending in contrast to tearing. It is probably in this sense also that Jesus' "seamless" (Gk. *áraphos*) robe (Jn. 19:23) should be understood. Since approximately four hundred hours of work went into the production of a single garment, mending was a common and essential practice; the Greek verb *rháptō* refers to mending or patching rather than new sewing. Instead of trying to imagine some unusual sort of loom in first-century Galilee, when it is known that looms at that time wove flat lengths of cloth (*see* WEAVING), we must understand *áraphos* as "unpatched," i.e., woven in one piece and so new that no additional pieces had been patched on.

SEX; SEXUALITY. The word "sex" appears only once in the RSV, in the instruction to husbands in 1 Pet. 3:7 to treat their wives considerately as "the weaker sex" (Gk. *asthenésteron skeúos*). "Sex" here is evidently a reference to gender, but the word it translates (Gk. *skeúos*; AV "vessel") is a figurative reference to woman based on an established euphemism for sexual intercourse ("to use as a vessel"; see *TDNT*, VII, 362; cf. 1 Thess. 4:4). The Bible has much more to say about sex than this one reference — both about issues of gender and about issues of sexual conduct and disposition. There is, however, no single biblical Hebrew or Greek term that covers the wide range of meanings subsumed under Eng. "sex."

Issues of sex and sexuality pervade every part of biblical literature. The Torah regulates sexual activity and establishes sexual roles. Prophetic literature uses sexual metaphors in its announcement of God's judgment on covenant unfaithfulness. Wisdom literature distinguishes wise sexual conduct from foolish and uses sexual imagery to characterize wisdom. The Gospels use the memory of Jesus' words and deeds to shape the sexual conduct and dispositions of His followers. The Epistles deal with concrete questions of sexual conduct. Revelation contains sexual imagery and instruction.

The pervasiveness of sexual imagery and instruction is not surprising, for sexuality was a fundamental issue for personal identity and communal life in biblical times even as it is today. The biblical materials, however, often reflect convictions about sex that arise out of their cultural context, and they can be little understood or appreciated without some awareness of that context.

  A. Sex and the God of Scripture
  B. Human Gender: Creation, Patriarchalism, and Redemption
  C. Human Sexuality: Fecundity, Sobriety, Delight

I. Background.–A. To the OT. Israel's attitude toward sex and sexuality shared much with its cultural context and in part reflected the attitudes of its neighbors. The patriarchal structure of society and many of the laws concerning sexual activity were common to Israel and the ancient Near East. (*See also* WOMAN II.A.).

1. Egypt. In Egyptian religion the gift of sex was bestowed on the earth by the chief god of the Egyptian

pantheon, the sun-god Re: "I am he who made the bull for the cow, so that sexual pleasures might come into being" (*ANET*, p. 13). The most significant sexual relationship among the gods is found in the myth of Isis and Osiris. Seth and Osiris, two male gods, vie for supremacy in the universe. Seth, representing the forces of chaos and destruction, murders Osiris, the god of agriculture and standing grain, and cuts him into pieces. Osiris's wife-sister consort Isis gathers his pieces, brings him back to life, and bears him a son, Horus.

Nudity was common in Egypt until the 13th cent. B.C.; illustrations on tomb walls portray nearly-nude dancing girls and female musicians (*see* pictures in DANCE; MUSIC). But sexual intercourse was prohibited in sacred places, and after sexual activity or menstruation one was not permitted to enter such places before going through a process of ritual purification. There is no evidence that ritual cultic prostitution took place in the temples: the pharaoh alone functioned to assure continued agricultural and animal productivity.

The Egyptians practiced circumcision, as attested on tomb paintings (*see* picture in CIRCUMCISION). Herodotus claimed that the Egyptians were the first to circumcise (ii.104).

Egyptians tended to be monogamous, although kings and nobles could have more than one wife. Adultery by a female could be punished by death, but a married male was permitted more than one sexual partner. The marriage of brothers and sisters was an acceptable custom in Egypt. Sanction for this custom is found in the goddess Isis's marriage to her brother Osiris and in Nephthys's marriage to her brother Seth.

2. Mesopotamia. Sexual intercourse was simply one of many facets of life to the ancient Mesopotamians, who evidence no inhibitions about sexuality and sexual behavior. The Sumerian ideograms for male and female are cuneiform representations of the respective male and female sexual organs. But openness about sexuality did not imply equality between the genders. Women were considered property, and adultery was a breach of the husband's property rights; thus sexual offenses with married women were treated differently from those with unmarried women. Marriage was primarily for procreation, and the male was free to pursue sexual fulfillment elsewhere if he desired. Prostitution was accepted and was widely practiced. In a highly erotic passage of the Gilgamesh Epic a prostitute seduces the wild man Enkidu as part of a plan to entice him to come to Uruk to meet the hero Gilgamesh.

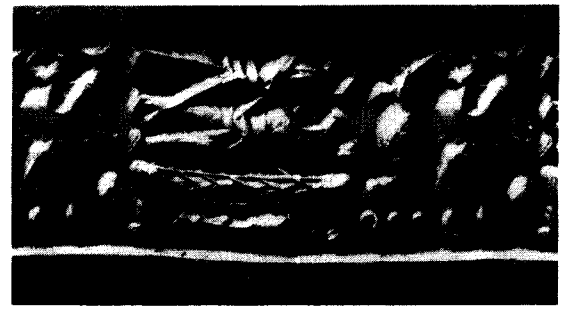
Middle Assyrian laws prohibited homosexuality (*ANET*, p. 181 § 20), and allegations of homosexual conduct — as well as of adultery — were considered libelous and were punishable (§§ 18f.). Male cult prostitutes who served the goddess Ishtar at the temple in Erech were called men "whose manhood Ishtar has changed into womanhood" (W. G. Lambert, *Jaarbericht . . . Ex Oriente Lux*, 15 [1957-1958], 184-196). Incest was forbidden: "If a man violates his own mother, it is a capital crime. If a man violates his daughter, it is a capital crime. If a man violates his son, it is a capital crime" (G. R. Driver and J. C. Miles, *Assyrian Laws*, I. [1952], 71 § 189). Bestiality was likewise a capital crime (§ 187).

The realm of the gods consisted of male and female deities. The creation of the world, according to the Babylonian creation story *Enuma Elish*, occurred by the mating of Apsu, the fresh-water ocean, with Tiamat, the salt-water ocean. The Mesopotamian goddess Inanna, later called Ishtar and Ashtarte, was the embodiment of love and the power of procreation. Numerous clay and stone figurines depicting sexual activities have been found on the sites of temples to Ishtar. Human sexuality was thought to be connected with the fertility of nature. During the New Year Festival celebrations a priest and priestess engaged in ritual intercourse to secure agricultural fertility for the coming year. At Ugarit the chief of the gods, 'El, was called the "creator of the earth," and his consort Asherah was called "creatress of the gods." The next generation of gods was ruled by another male-female pair, Baal and Anath.

B. To the NT. The Christian Church began within the Jewish faith of the 1st cent. A.D. and expanded throughout the Hellenistic world. The Church was constrained to relate to the moral traditions and practice of first-century

A Babylonian earthenware stele depicting a god embracing his consort (*ca.* 2000-1700 B.C.) (The Metropolitan Museum of Art)

An Akkadian cylinder seal from Tell Asmar depicting a god and goddess consummating a ritual marriage during the Babylonian New Year Festival. The scorpion below the bed may represent Ishtar, the goddess of love (mid-third millennium B.C.) (courtesy of the Oriental Institute, University of Chicago)



Judaism and Hellenism, and early Christian perspectives on gender and sexuality must be understood against that background.

1. Judaism. Jewish traditions and practices were not monolithic. The popularity of the book of Judith, with its widowed heroine remarkable for her intelligence and piety, her beauty and purity, and her dedication to Israel's national survival, stands as witness to one perspective. Quite another perspective is represented by Rabbi Eliezer's infamous claim that "every man who teaches his daughter Torah is as if he taught her promiscuity" (Mish. *Sotah* iii.4).

In the Judaism of the 1st cent. A.D. men were expected to learn and to keep the Torah. Among other things, this meant that men had a duty in obedience to Gen. 1:28 to marry and to have children (e.g., Mish. *Yebamoth* vi.6; some Essenes, however, eschewed marriage, according to Josephus *BJ* ii.8.13 [160]). Women were not expected to learn or keep the law (although some did, like Judith, in spite of Rabbi Eliezer); "All we [men] can expect from them [women] is that they bring up our children and keep us from sin" (T. B. *Yebamoth* 63a).

Women could expect to be "given in marriage" and, once married, were expected to have children and care for them. If they failed to have children they could be blamed and even (after ten years) divorced (Mish. *Yebamoth* vi.6). They were expected to satisfy their husbands sexually and avoid tempting another to immorality; thus they were veiled in public and segregated as much as possible from men. At the synagogues and Herod's temple they were excluded from the court of the men.

In the patriarchal household and society in general women could be praised and honored, but they could also be treated spitefully. Monogamy seems to have been culturally established by the 1st cent. A.D., although polygamy was still legitimate and was sometimes practiced among the wealthy. Divorce was exclusively a male prerogative.

Sexual immorality proscribed by the Torah included fornication, adultery, homosexual behavior, and "unlawful" marriages. Such immorality was linked with idolatry and gentile ignorance of God. All such offenses (and the suspected gentile susceptibility to them), especially homosexual offenses, were abhorent to the Jews (e.g., Wisd. 13:1–14:12; Sib. Or. 3:584-606; Philo *De Abrahamo* 134-144).

2. Hellenism. The Jewish suspicions were not altogether unfounded. Greek culture was much more tolerant of prostitution, fornication, adultery, and homosexuality than Judaism. The wealthy men "keep mistresses for pleasure, concubines for daily concubinage, and wives . . . in order to produce children legitimately and to have a trustworthy guardian of our domestic property" (Athenaeus *Deipnosophistae* xiii.573b). The poor had fewer options, but there were plenty of lower-class prostitutes and brothels, especially in a harbor town like Corinth ("to corinthianize" meant "to fornicate").

There were cultic prostitutes as well, especially in Asia Minor (e.g., the temple of Diana or Artemis in Ephesus). The temple of Aphrodite in Corinth was famous for its thousand prostitutes.

Extramarital intercourse was generally permitted to Hellenistic men, but not to their wives. This double standard shows that the status of women in Greek culture was generally no better than in Judaism. Where there was more freedom for women — and the further west one went, the more freedom women had — the standard of sexual morality did not improve, even though the double standard diminished. The decadent behavior of Roman women was satirized by Juvenal (*Satires* vi.127f.) and others. The extramarital intercourse permitted husbands included homosexual relationships, which were not only allowed but sometimes considered noble (Plato *Symposium* 178c-180a; Xenophon *Memorabilia* ii.6. 28-39).

There were various philosophical attempts at the reform of sexual ethics in Greece and Rome, especially in the 1st century. The Stoics, seeking to free men from the passions, condemned adultery. Dio Chrysostom insisted that prostitution and the use of a prostitute were morally illicit; moreover, he argued that such unrestrained sexual lust would not be satisfied but would turn one to homosexual relationships, which he regarded as contrary to nature and necessarily exploitative (*Discourse* vii, esp. 151f.). Another first-century Stoic, Musonius Rufus, went so far as to hold that all sexual intercourse outside marriage was wrong and that marriage, while including intercourse for the sake of generation, was sustained by the spiritual communion of equal partners (*TDNT*, I, 780; Klassen). Neo-Pythagoreanism commended an ascetic view of sex, and the ideals of continence and spiritual marriage became fairly widespread in the 1st century. According to Gnosticism the knowledge (Gk. *gnōsis*) of one's spiritual origin and destiny — one's true identity — liberated one from bondage to matter, i.e., to the body. Given the radical

An Etruscan sarcophagus lid showing husband and wife (Italy, *ca.* 330-300 B.C.) (Museum of Fine Arts, Boston, Gift of Mrs. Gardner Brewer)

dualism of Gnosticism, this knowledge and consequent liberation could be expressed either in stringent asceticism, treating the body as evil, or in licentious libertinism, treating what one does in the body as morally indifferent and not touching one's true self. The Gnostic movement was adept at adapting various religious convictions, and it threatened also to coopt Christianity in the 1st century.

Marriage in the Greek world, and especially in Rome, was generally monogamous, but divorce was common, and the frequent brief marriages of some persons might better be described as serial polygamy.

See also WOMAN II.b.

II. Terminology.–A. Gender. 1. Man, Woman, Humankind. The terms for "man" (Heb. *'îš*) and "woman" (*'iššâ*) could be used to distinguish between the male and the female of the human race. The folk etymology in Gen. 2:23 explains: "She shall be called Woman [*'iššâ*] because she was taken out of Man [*'îš*]." While effective as a pun, these words are probably not linguistically related. The root of *'îš*, "man," is presumably *'yš*, which is of uncertain derivation; it is perhaps related to Akk. *išanu*, "be strong." The root of *'iššâ* is *'nš*, which could mean either "be weak, sick," or "be friendly, social," depending on its derivation. In several instances *'îš* or *'iššâ* is used in the context of male-female sexual function (Gen. 19:8; 24:16; Ex. 22:16; Lev. 20:10f.; Dt. 22:22); these terms can also designate the male and female of animals (Gen. 7:2f.). In addition, they are used for the social functions of "husband" and "wife" (Gen. 2:24; 3:16; 29:32; Lev. 21:7; Nu. 30:6f. [MT 7f.]). Heb. *ba'al*, deriving from a root meaning "own, rule, lord over," is more specific than *'îš* in designating the husband's role (Gen. 20:3; Ex. 21:3, 22). On the other hand, Heb. *'ādām*, "human, humankind," does not imply sexual differentiation but is a collective term encompassing male and female: God created humankind (*'ādām*) as male and female (Gen. 1:26f.). This term stands in frequent contrast to all or part of the animal world (Gen. 6:7; Ex. 9:9f.; Jer. 21:6).

In the NT, Gk. *ánthrōpos* always distinguishes humankind from animals or angels or God, never male members of the species from female. When *ánthrōpos* is translated "man" or "men" (as it frequently is in the RSV, e.g., Mt. 5:16; Rom. 5:15) rather than "person" or "persons" (as it occasionally is in the RSV, e.g., Rom. 7:1), the inclusive character of this term must be understood. (The same sometimes applies when the pronoun "he" is used to translate third person singular verbs.)

2. Male and Female. The Gen. 1:27 account of the creation of sexual differentiation, "male and female he created them [i.e., *'ādām*]," employs the Hebrew terms *zākār* and *nᵉqēbâ*, respectively, rather than *'îš* and *'iššâ* as in the Gen. 2 account. This pair of terms is found most frequently in legal material referring to sacrificial animals (Lev. 3:1, 6; cf. also Gen. 6:19; 7:3, 9, 16), to human children (Lev. 12:7), or to human ailments (Lev. 15:33; Nu. 5:3). "Male" (*zākār*) is used to designate those children who needed to be circumcised (Gen. 17:10, 12, 14, 23; 34:15, 22, 24; Ex. 12:48; Lev. 12:2f.; cf. Isa. 66:7). Six times (1 S. 25:22, 34; 1 K. 14:10; 16:11; 21:21; 2 K. 9:8) the RSV uses "male" to render the phrase *maštîn bᵉqîr* (lit. "urinate against a wall"; cf. AV "any that pisseth against the wall").

Greek *anḗr*, "human," can simply designate a member of the human species, and in the plural *hoi ándres* frequently refers to both men and women (e.g., Mt. 14:35); but *anḗr* more often denotes a male person as distinct from female, and it is used to refer to bridegrooms and husbands. The corresponding term is *gynḗ*, which always denotes a female person as distinct from male (e.g., 1 Cor. 13:11). (It is noteworthy, however, that the classical use of *anḗr* to designate a sexually potent male in contrast to a EUNUCH does not occur in the NT; see Acts 8:27; cf. Dt. 23:1.) The terms that emphasize sexual differentiation, however, are Gk. *ársēn* and *thḗly*, which are used to translate Gen. 1:27 (see Mk. 10:6 par., and notably Gal. 3:28, where *ouk éni ársēn kaí thḗly* evidently refers to the sexual differentiation at the creation).

See also FEMALE; MALE.

B. Sexual Organs. The Bible does not have specific terms reserved for the sexual organs; most often it uses other terms in a euphemistic way (see Pope for a thorough — if exaggerated — interpretation of euphemisms in Canticles).

1. Flesh. Hebrew *bāśār* and Gk. *sárx* have a range of meanings: most often they refer to the human or animal body or to the flesh of the body, although frequently they denote the whole person in his or her corporeality, and in Paul *sárx* generally refers to the whole person as determined by resistance to God. But these terms can also be used as a euphemism for genitalia (for the vulva in Lev. 15:19 [RSV "body"]; for the penis in Ex. 28:42 [RSV "naked flesh"] and Ezk. 23:20 [RSV "member"; here also "issue," translating Heb. *zirmâ*, refers to semen]). The terms are regularly used as a euphemism in connection with circumcision (e.g., Gen. 17:11, 14, 23-25 [RSV "circumcised in the flesh of his foreskin"]; perhaps also in Rom. 2:28 [RSV "physical"]; Gal. 6:13; Eph. 2:11; Col. 2:13). Connected with this euphemism are two of Paul's harshest polemical remarks. In Gal. 5:12 he expresses the wish that his legalistic opponents who insist on circumcision would "mutilate themselves" (Gk. *apokópsontai*), i.e., "castrate" themselves or (NEB) "make eunuchs of themselves," thus cutting themselves off from the legal tradition (Dt. 23:2). In Phil. 2:2 Paul warns against those who would "mutilate the flesh" (Gk. *katatomḗ*, in wordplay with *peritomḗ*, "circumcision"). *See also* FLESH.

2. Loins, Thigh. The term *yārēḵ*, "loins," refers to the lower abdomen or thigh. It can be used euphemistically to refer to the seat of generative power in the male. Abraham's servant put his hand "under the thigh" of his master as he swore to find a proper wife for Isaac (Gen. 24:2, 9; cf. 47:29, an oath at Jacob's death); thus the oath was secured by the patriarch's "source of life." Gen. 46:26 and Ex. 1:5 refer to Jacob's immediate children as "his own offspring," literally, "issue of his loins." Rehoboam's young advisers counseled him to take an obdurate stand against the rebellious northern tribes and to say to them, "My little finger is thicker than my father's loins [Heb. *moṯnayim*]" — clearly a degrading comparative reference to Solomon's male organ (1 K. 12:10). The NT's euphemistic use of Gk. *osphýs* ("loins") in the sense of reproductive organs is determined strictly by LXX usage; cf. He. 7:5 (RSV "descended from Abraham"; lit. "came from the loins of Abraham"); He. 7:10 and Acts 2:30 (quoting Ps. 132:11; RSV "his descendants"; lit. "fruit of his loins"). *See also* LOINS.

3. Foot, Feet. Hebrew *regel* in the singular or plural ("foot, feet") is a common euphemism for the penis. Urine is called "foot water" (2 K. 18:27 and Isa. 36:12; *Q mêmê raglayim*). Pubic hair is called "hair of the feet" (Isa. 7:20; cf. also Ezk. 16:7). The euphemistic use of "feet" provides the key to understanding the otherwise obscure description of Zipporah's actions in Ex. 4:24-26. When she "took a flint and cut off her son's foreskin, and touched Moses' feet with it," she was performing the ritual of circumcision vicariously on what was now her "bridegroom of blood." Ruth's action of "uncovering [Boaz's] feet" (Ruth 3:7)

was a marriage proposal. In the legal ceremony attesting a kinsman's refusal to perform the levirate marriage obligation, he (or the widow) removed the sandal from his foot and the widow then spat in his face; this act symbolically revealed his nakedness and shamed him in the city gate (Dt. 25:5-10; Ruth 4:7f.). Each of the seraphim in Isaiah's temple vision had six wings: two to cover the face, two to fly, and two to cover the feet (Isa. 6:2); cf. the priestly stricture of covering one's nakedness in the presence of the divine (Ex. 20:26 [MT 23]). The "male member" in Dt. 23:1 is literally the "fluid duct" (Heb. *šopkâ*). "Feet" can also refer to female genitalia, as in Dt. 28:57: "her afterbirth that comes out from between her feet." Ezekiel's vivid picture of Israel's harlotry contains the phrase "you opened wide your feet" (RSV "offering yourself to any passer-by," 16:25).

4. Hand. Scholars have long suspected that *yāḏ* (lit. "hand") in Isa. 57:8 is a euphemism for "penis" (see, e.g., BDB, p. 390; KD). Both the Ugaritic texts (see e.g., M. Pope, *El in the Ugaritic Texts* [*SVT*, 2; 1955], pp. 38-40) and the Qumrân Scrolls (1QS 7:13) attest this meaning of *yd*. As Ackroyd has pointed out (*TDOT*, V, 399f., 402f.), scholars have debated whether *yāḏ*, "hand," is a euphemism or *yāḏ*, "penis," is a homograph derived from the root *ydd*, "love." For other possible examples of *yāḏ* meaning "penis," see M. Delcor, *JSS*, 12 (1967), 235-240; M. Pope, *Song*, pp. 517f.

5. Nakedness. At creation "the man and his wife were both naked [Heb. *ʿarûmmîm*], and were not ashamed" (Gen. 2:25). This term *ʿārôm* is associated primarily with lack of clothing, which is the state of the newly born (Job 1:21; Hos. 2:3 [MT 5]), the poor (Job 22:6; 24:7, 10; 26:6; Isa. 58:7), and those in a state of prophetic ecstasy (1 S. 19:24; Isa. 20:2-4). The closely related term *ʿērōm* occurs in Gen. 3:7, 10f.; Ezk. 16:7; 18:7, 16. Nakedness can also be associated with sexuality, although a different Hebrew term is used for this nakedness (*ʿerwâ*). To "uncover [someone's] nakedness" is to expose a male's or female's genitalia (Lev. 18:6-23). To see someone's nakedness is to bring shame upon that person, as when Ham saw the nakedness of his father Noah (Gen. 9:23f.). Figuratively, Jerusalem's nakedness was exposed when it played the harlot with the Canaanite gods or the foreign nations (Lam. 1:8; Ezk. 16:36f.; 23:10, 19). The seraphim, or angels, had to guard their nakedness (cover their "feet," Isa. 6:2) in the presence of God.

NT usage seems dependent on the OT in Rev. 16:15 (RSV "go naked and be exposed"; lit. "he goes naked and they see his shame [Gk. *aschēmosýnē*]"), where "shame" evidently refers to genitalia (cf. 3:18). In 1 Cor. 12:23f. Paul contrasts the "unpresentable parts" (*tá aschḗmona*, clearly a euphemistic reference to genitalia) with the "more presentable parts" (*tá euschḗmona*). The fact that "unpresentable parts" are treated with greater modesty provides an image for the care and regard that is due every member of the Church as a body. The polemical comment that some "glory in their shame" (Gk. *aischýnē*, Phil. 3:19) may also be a thinly veiled reference to genitalia.

See also NAKED.

6. Belly, Womb. Two of the general terms for BELLY (Heb. *beṭen*; Gk. *koilía*) can also refer to the uterus or WOMB (e.g., Gen. 25:23f.; 38:27; Lk. 1:15; 11:27; 23:29). The more specific Hebrew term for "womb" is *reḥem* (Gen. 49:25; Jer. 20:17), which is also used of the location of deep feelings of compassion in humans (cf. "pity," Am. 1:11) and especially in God (Isa. 63:15). In 1 Cor. 6:13 Gk. *koilía* is properly translated "stomach" (which is "meant for food"), but the association with the sexual organs is just below the surface in Paul's rejection of the moral indifference of the Corinthian libertines. In his charge that certain people "serve their bellies" (Phil. 3:19) Paul may very well have been referring to sexual licentiousness, although it is also possible that he was referring to sensuality in the broader sense, or to the legalistic piety of the Judaizers who refrained from certain foods.

7. Breast. The female's BREAST (Heb. *šaḏ*; Gk. *mastós*) gives nourishment to the young (Job 3:12; Lk. 11:27; 23:29; figuratively in Isa. 60:16; 66:11) and is the object of amorous description in Cant. 1:13; 4:5; 7:8 (MT 9); 8:10. Sexual intimacy takes place between the breasts (Hos. 2:2; cf. Ezk. 16:7; 23:3, 21).

C. Sexual Function. 1. Sexual Union. Sexual intercourse is referred to most frequently as a man "knowing" (Heb. *yāḏaʿ*) a woman (Gen. 4:1, 17, 25; 24:16; 38:26; Jgs. 19:25; 1 S. 1:19; 1 K. 1:4), a woman "knowing" a man (Gen. 19:8; Nu. 31:17; Jgs. 11:39), or even one man "knowing" another (Gen. 19:5; Jgs. 19:22). This Hebrew idiom for intercourse is reflected in the NT use of Gk. *ginóskō* at Mt. 1:25 and Lk. 1:34 (RSV "have no husband"; lit. "know no man"). The use of "know" for sexual intercourse is a euphemism, but a suggestive one, implying something important both about knowledge and about sexuality in the biblical materials. Knowledge is not just cognitive, but always experiential and deeply personal; and sexual intercourse is never just physiological, but always involves mystery and touches the whole person.

The Hebrew term *ʾāhaḇ*, "love," encompasses a wide range of nuances, including the emotional attachment and affection of a father for his son (Gen. 22:2), a husband for his wife (Gen. 24:67; Dt. 21:15f.), a wife for her husband (1 S. 18:20), a slave for his master (Ex. 21:5), a friend for a friend (1 S. 18:1, 3), and even a neighbor for a stranger (Lev. 19:18). It also can denote a sexual relationship, as when Solomon is said to have "loved" many women (1 K. 11:1), or when Hosea is commanded to "love" a prostitute (Hos. 3:1). *See also* LOVE I.A, B.

Sexual union can also be described as "becoming one flesh" (Gen. 2:24; quoted in Mt. 19:5; Mk. 10:7; Eph. 5:31), and the "joining" or "cleaving" of Gen. 2:24 can also be a reference to sexual union, as in 1 Cor. 6:16: "he who joins himself to a prostitute." The meaning of "one flesh" and "cleaving to" another is never merely physiological; the sexual union it refers to always involves a personal relationship and commitment. Other euphemisms for sexual intercourse are "touch" (Gen. 20:6; Prov. 6:29; 1 Cor. 7:1), "go in to" (Gen. 6:4; 16:2; 30:3, 16; Prov. 6:29), and "lie with" (e.g., Gen. 19:33, 35; 30:15f.; Ex. 22:16; *See also* LIE).

2. Conception. The OT views conception (Heb. *hārâ*) as ultimately a blessing from the Lord (Ps. 127:3; cf. Gen. 30:1f.) but as occurring through the impregnating agency of males (Gen. 19:36; 38:18). Women are made pregnant with the SEED (Heb. *zeraʿ*) or semen of the male (Nu. 5:28; lit. "she shall be made pregnant with seed"; cf. "emission of semen," Lev. 15:16-18, 32; 22:4). In Lev. 18:20; 19:20; Nu. 5:13 "to lie carnally with" is literally "to lie a lying of seed." In times when they experienced diminished attention from their husbands OT women sometimes attempted to seduce them with aphrodisiacs. Leah had her son Reuben gather mandrakes, an herbaceous plant of the nightshade variety, in a successful attempt to woo her husband Jacob and conceive by him (Gen. 30:14-24; cf. also Cant. 7:13 [MT 14]).

In He. 11:11 Gk. *spérma*, "seed," is used in a very unusual way: Sarah received power to "sow seed" (*katabolḗ spérmatos*, a technical expression for "begetting," otherwise always the function of males; RSV "conceive"). If there is no textual error here, it is a remarkable recogni-

tion of the more than passive contribution of women to conception. In Rom. 9:10 Gk. *koítē* ("bed," "marriage bed") is used euphemistically for a seminal emission; where the text reads, literally, "Rebecca had seminal emission from one man," the RSV has "Rebecca had conceived children from one man." The term for "conceive" in Lk. 1:24, 31, 36; 2:21 is *syllambánō*, the word used most often by the LXX to translate Heb. *hārâ*. Mt. 1:20 employs *gennáō* ("beget," "bear").

III. Canonical Literature.—*A. Torah.* Israel's pentateuchal legal codes contain numerous regulations concerning sexual activity and the maintenance of personal and community sexual hygiene.

1. Marital Intercourse. The creation narratives affirm the sexuality of human beings. Gen. 2:24f. recognizes sexual differentiation and sexual union as gifts of the Creator that call into being the companionship and intimacy of husband and wife. Sexual intercourse was considered basic to marriage; cf. Ex. 21:10f., which refers to a woman's MARITAL RIGHTS (Heb. *ʿônâ*) — presumably her right to have sexual intercourse for the purpose of engendering children. Intercourse was also a sign of the consummation of the marriage bond (cf. Gen. 29:23, 30). Although intercourse had significance apart from procreation, the hope was that God would bless the union with children (cf. 21:1-7).

Sexual contact was forbidden by law under certain conditions. Refraining from intercourse was part of a man's preparation for holy work. Prior to meeting God at Mt. Sinai all men were to abstain from sexual contact (Ex. 19:15). Warriors were to abstain from sex in preparation for and during a period of holy war (1 S. 21:4f. [MT 5f.]). This injunction explains Uriah's refusal to have relations with his wife Bathsheba, resulting in the frustration of David's attempt to make it appear that Bathsheba's pregnancy was due to Uriah rather than himself (2 S. 11:2-13). If a woman was in her menstrual period or had any unusual vaginal discharge, she was declared unclean for seven days during which time she was allowed no intercourse or physical contact (Lev. 15:19-30; 18:19).

2. Extramarital Intercourse. A young woman was required to remain a virgin until the consummation of her marriage. If a husband charged his wife with having had premarital intercourse and her parents could not produce the "tokens of virginity" (prob. the soiled bed linens of the wedding night; but for another view *see* VIRGIN I.B), the city elders would sentence her to be stoned to death (Dt. 22:13-21). There is no mention of a corresponding requirement of male virginity. Fornication, or sexual intercourse between a man and an unmarried woman, was forbidden; but if it occurred the man was obligated to marry the woman (Ex. 22:16f.; Dt. 22:28f.). Adultery, or sexual intercourse between a man and a woman who was married or betrothed to another man, was forbidden (Ex. 20:14; Dt. 5:20) and was punishable by the death of both parties (Lev. 18:20; 20:10; Dt. 22:22-24). Dt. 22:23-27 further differentiates between rape and voluntary intercourse on the part of a young woman. If the encounter took place within a city both parties were held responsible, because presumably the woman could have cried out for help and would have been heard. But if the act took place in the open country only the male was held responsible; if the young woman was unmarried he had to marry her, and if she was betrothed he was executed. A betrothed virgin was considered a man's wife even though the marriage had yet to be physically consummated.

Males were subject to fewer restrictions than females were. If a man suspected his wife of sexual unfaithfulness, even though he had no evidence of it, he could subject her to trial by ordeal, administered by the priest, to test her fidelity (Nu. 5:11-31). But a wife had no such recourse, nor was marital faithfulness expected of men. Men might be the husband of more than one wife (polygamy), but a woman might be the wife of only one man. Rape (Heb. *paṯâ*; "seduce," Ex. 22:16 [MT 15]) was defined only in relation to an unmarried woman (cf. also Dt. 22:23-29).

3. Prostitution. Practices regarding prostitution evidence a double standard in OT Israel. There was no explicit condemnation of men who made use of the services of a prostitute. Judah was not faulted for his liaison with his daughter-in-law Tamar who was disguised as a prostitute, but he acknowledged his guilt for not fulfilling his obligations under the levirate marriage law; Tamar, however, was to have been executed for her harlotry in the same affair until Judah's fault was exposed (Gen. 38:24-26).

Israel's neighbors engaged in temple prostitution, and the Israelites themselves fell into the practice. A cult prostitute (Heb. *qāḏēš* [male], *qᵉḏēšâ* [female]; lit. "holy one") worked in the service of a foreign god (Dt. 23:17 [MT 18]; 1 K. 14:23f.; 15:12; 2 K. 23:7; Hos. 4:14; Job 36:14). Such prostitutes engaged citizens in sexual activity for hire to enlarge the temple treasury; the act was an imitative fertility ritual (see the classic description in Herodotus i.199). The incident at Baal of Peor recorded in Nu. 25 was a blatant example of ritual intercourse. It was all the more outrageous because it was performed by a Midianite woman and an Israelite man in the very inner room of the Israelite tent of meeting. Phineas "took a spear in his hand and went after the man of Israel in the inner room, and pierced both of them, the man of Israel and the woman, through her body" (vv. 7f.) The term "dog" in Dt. 23:18 apparently refers to a male cult prostitute.

The terms *zônâ* ("harlot"), *zᵉnûnîm*, and *zᵉnûṯ* refer to female promiscuity outside the context of temple prostitution. Israel had no direct legislation expressly forbidding prostitution or sexual intercourse outside the bonds of marriage for the man. What was clearly protected, however was the exclusivity of the wife's relations: she might have relations only with the one man who was her husband. This notion of the man's exclusive rights to his wife lies at the heart of the frequent metaphorical use of "harlot" and "harlotry" in describing the relationship between God and His people (Jer. 2–3; Ezk. 16; Hos. 1–3). *See* HARLOT.

4. Incest. The legal corpus of the Torah outlawed incest. Lev. 18:6-18 and 20:10-21 detail the women with whom a man was barred from having sexual relations. The list includes a man's mother and stepmother, sister and stepsister, daughter, granddaughter, father's and mother's sisters, father's brother's wife, brother's wife, and son's wife. Notable instances of incest in the OT are Lot's impregnation of his two daughters (Gen. 19:30-38), Reuben's relations with his father's concubine (35:22; 49:4), Judah's relations with his daughter-in-law Tamar (ch. 38), and Amnon's rape of his half-sister Tamar (2 S. 13).

5. Emissions of Semen. The term "onanism" (i.e., *coitus interruptus*, in which the male deliberately interrupts intercourse to avoid insemination) derives from the account of how Judah's son Onan "spilled his seed on the ground" to avoid fostering children for his dead brother by his sister-in-law Tamar (Gen. 38:8-10). His sin lay not in the interruption of intercourse per se but in his evasion of his duty according to the law of levirate marriage (*see* MARRIAGE IV.A.2). Dt. 23:10 (MT 11) seems to be referring to an involuntary ejaculation of semen during the night: "If there is among you any man who is not clean by

reason of what chances to him by night. . . ." Since Lev. 15:16f. and 22:4 mention "emission of semen" without mentioning nighttime circumstances, the reference may be to masturbation.

6. Homosexuality. Male homosexuality is forbidden in Lev. 18:22; 20:13. The term "sodomy" derives from the Gen. 19:4-9 account of the attempt by the men of Sodom to rape the two angels visiting Lot. In this story the men of Sodom demand of Lot: "Where are the men who came to you tonight? Bring them out that we might know them." A similar story is told about the men of Gibeah in the tribe of Benjamin (Jgs. 19). Both stories emphasize the brutality of the perpetrators' sexual assault and seem to find fault more with the rapacious quality of their deeds than with the homosexual nature of their sexual lust. Female homosexuality is not mentioned in the OT. Dt. 22:5 forbids transvestitism: neither a male nor a female was permitted to wear clothes of the other sex.

7. Bestiality. Israelite law strictly forbade intercourse between a man or a woman and an animal (Lev. 18:23; 20:15f.).

B. Prophetic Literature. Various prophetic statements portray God in the role of parent and Israel as God's children. Isa. 63:16 declares: "For thou art our Father" (cf. also 64:8 [MT 7]; Jer. 3:4, 19; 31:9; Dt. 32:6). Hos. 11:1-4 describes God as a parent (though not necessarily as a father) who taught the Israelites how to walk, embraced them, bent down and fed them.

In their indictment of apostate Israel the prophets described God as a faithful husband and the nation as a bride who becomes an adulterous wife (Jer. 2–3; Ezk. 16; Hos. 1–3). Thus they communicated the intimacy of the covenant relationship between God and Israel by means of husband-wife imagery. Israel's harlotry consisted of forsaking the husband of her youth (Jer. 2:2) for the gods of the surrounding nations. To portray this unfaithfulness in a living parable, the prophet Hosea was commanded to marry a prostitute named Gomer (Hos. 1:2) and "have children of harlotry." Ezk. 16 depicts Israel as a foundling on whom God has compassion. He washes, cares for, and clothes her, and when she is "at the age for love" He marries her and bestows every good gift on her. But Israel only uses her new loveliness to entice other men and increase her harlotry. Therefore God says that He will cast off his wife Israel and return her to her original state of abandon, by an exile to Babylonia, until she will again acknowledge Him as her true and only husband. Isa. 54:4-6 addresses Israel in exile with hope for restoration of the marriage bond: "you will forget the shame of your youth, and the reproach of your widowhood you will remember no more. For your Maker is your husband." In fact, Israel's beauty and virginity will be restored, and the Lord will once again rejoice in His beloved (62:4f.).

God is also described in metaphorical terms of motherhood and womanhood. In various places Isaiah employs female images of God's love for Israel: a woman in labor (42:14; 66:9), a nursing mother (49:15), a consoling mother (66:13).

C. Wisdom Literature. Israel's wisdom literature is characterized by a strong appreciation of the goodness of God's created world. Canticles is frank and unabashed in its celebration of human love. It celebrates the comeliness of the female body ("Behold, you are beautiful, my love . . . your lips are like a scarlet thread . . . your two breasts are like two fawns," (4:1-5; 7:1-9) and that of the male body ("My beloved is all radiant and ruddy . . .," 5:10-16). The physical encounter between the bride and her lover is wholly mutual, with each party taking the initiative at one time or another. Canticles expresses unqualified joy in physical love and satisfaction in companionship. Love is valued above all: "Many waters cannot quench love, neither can floods drown it. If a man offered for love all the wealth of his house, it would be utterly scorned" (8:7). The language of Canticles was so powerful and explicit that the book was accepted into the Hebrew canon only after it was resolved that it was an allegory of God and His bride Israel. Later the Christian community saw it as an allegory of Christ and His bride the Church. Only in the 20th cent. has it come to be accepted again as a love song celebrating the sensual aspect of human life. (*See* CANTICLES.)

Proverbs 1–9 issues extensive advice to young men to beware of the enticements of the loose woman: "With much seductive speech she persuades him; with her smooth talk she compels him. All at once he follows her, as an ox goes to the slaughter" (Prov. 7:21f.). Young men are enjoined to be faithful to their wives: "Drink water from your own cistern" (5:15). Thus, while faithfulness to one's wife was not expressly required by legislation, extramarital sex was clearly recognized as foolish and dangerous (Prov. 2:16-19; 5:1-6; 7:6-21). In fact in this portion of Proverbs the life of marital fidelity serves to characterize the life of wisdom as opposed to that of folly. The figure of the tempting adulteress is on a deeper level the personification of foolishness, as Lady Wisdom personifies everything desirable for an ultimately fulfilling life.

For further discussion of attitudes toward women in the OT, *see* WOMAN III.

D. Jesus and the Gospels. Jesus announced the coming reign of God and already made its power felt in His ministry. God's future reign, as seen in the ministry of Jesus, extended to issues of gender and sexuality. In the new age, Jesus said, there would be neither marrying nor giving in marriage (Mk. 12:25 par.). While people remained male and female, that future made its power felt in Jesus' unconventional treatment of women and His radical revision of sexual morality.

Jesus broke convention simply by talking publicly with women (e.g., Jn. 4:1-26). He instructed women (e.g., Lk. 10:39) and included them among His followers (8:1-3). He commended women (e.g., Mk. 12:41-44 par.) and defended them (e.g., Lk. 7:38-40). He healed women even when it meant breaking the sabbath (Lk. 13:10-17) or risking ritual impurity (e.g., Mk. 5:27, 41). To the woman who called out from the crowd, "Blessed is the womb that bore you and the breast that you sucked!" He said, "Blessed rather are those who hear the word of God and keep it" (Lk. 11:27f.). In that exchange Jesus rejected the reduction of women to the reproductive and sexual roles that were conventionally celebrated, and He summoned women to a Kingdom in which they are taught the Word of God and treated as agents. When Martha implored Jesus to instruct Mary to leave the circle of disciples and return to a conventional role for women, Jesus would have none of it (Lk. 10:38-42). It is little wonder that women heard Him gladly, accompanied Him even in His suffering (Mk. 15:40-47), and were present at the empty tomb (16:1).

Jesus' teaching about a Kingdom with no marrying or giving in marriage presented a radical challenge not only to conventional role assignments for women but also to the traditional sexual ethic. CELIBACY was now an option (Mt. 19:10-12) as signaled by Jesus' own singleness. Marriage was no longer to be regarded as a duty of Torah or as a necessary condition for human fulfillment and divine approval. Of course, until the Kingdom comes celibacy is not a duty either (Mt. 19:12), and marriage remains an option. Within marriage, the law that permitted the husband (and only the husband) the option of divorce is set

aside (Mk. 10:2-12) or qualified (Mt. 19:3-9) by Jesus' account of God's purpose at the beginning (*see* DIVORCE). And within marriage having children remains a blessing of God, as signaled by Elizabeth's deliverance from barrenness. The coming of the Kingdom demands the response of the whole person, not just external conformity to the law; Jesus therefore radicalized the prohibition against adultery to a prohibition of lust (Mt. 5:27f.), i.e., a prohibition of any readiness to use women or to think of them as sexual objects rather than as heirs of the Kingdom. In this context it is clear that Jesus discarded the sexual double standard (cf. Jn. 7:53–8:11, a late addition). It is little wonder that self-righteous men found it difficult to welcome such a Kingdom and such a Lord, while prostitutes repented eagerly and gladly received God's forgiveness (Lk. 7:36-50; Mt. 21:31).

E. The Epistles. In addition to the memory of Jesus' own words and deeds that were eventually recorded in the Gospels, the early Church developed other traditions related to issues of gender and sexuality, which found expression in the Epistles.

The "magna carta" of equality, Gal. 3:26-28, appears to have been a traditional baptismal declaration quoted by Paul (see Fiorenza, Meeks, Longenecker). Those baptized "put on" Christ, in whom there is neither Jew nor Greek, neither slave nor free, "no male and female." In baptism one owned a new identity and envisioned a new world — an identity and a world in which sexual differentiation (along with ethnic and class distinctions) was radically subordinated to community and equality in Christ.

Distinctions remained, of course, between male and female (and between Jew and Greek, slave and free). The equality described in the baptismal formula was an eschatological reality, but it made its power felt in an egalitarian ethos and in a sexual ethic honoring singleness. The egalitarian ethos concerning gender was reflected in the women who worked "side by side" (Phil. 4:2) with Paul, women whom Paul considered his "fellow workers" (e.g., Rom. 16:3-5). It was reflected in the instruction given to women and in their participation in worship, praying and prophesying (1 Cor. 11).

Paul did insist that the Corinthian women not throw down the veil when they prayed and prophesied (1 Cor. 11:3-6). Evidently among the Corinthian enthusiasts, who on the basis of their spiritual gifts claimed already to participate fully in the new age, were some women who asserted their independence from their husbands in exercising their gifts and were disturbing the peace of church and home. Paul was not sympathetic to either their eschatology or their notion of freedom. With a variety of appeals he sought to convince the Corinthians not to tolerate the excesses of these women (cf. also 14:33-35 with reference to their speaking in tongues); for while he affirmed the egalitarian community, he insisted that it involved not assertions of independence but mutual submission. "In the Lord woman is not independent of man nor man of woman" (11:11).

Christian communities could not create *ex nihilo* a new social world with new gender roles and household structures. They assimilated but also reoriented and qualified existing moral resources and traditions. For example, the *Haustafeln* (tables of rules for household, Eph. 5:21–6:9; Col. 3:18–4:1; Tit. 2:1-10; 1 Pet. 2:13–3:8) articulated a Christian tradition that was indebted to the general reassertion in the 1st cent. of the Aristotelian position that the relation of ruler and ruled in household management was "natural." This tradition, with its instruction that wives "be subject," stood in some tension with the egalitarian character of the Christian baptismal identity, but it was also reoriented and qualified by that identity. It was reoriented in that the justification for submission was no longer "nature" but the model of Christ, and it was qualified and transformed by the requirement of mutual submission (e.g., Eph. 5:21) and by the focus not on the natural nobility of the man or husband but on the neighbor (e.g., Eph. 5:28, 33) and on Christ (in whom there is "no male and female").

The Pastoral Epistles resist the Gnostic claim to represent Christian identity and community in their (fundamentally misogynist) assertion that Gnostic women become "like males" (e.g., Gospel of Thomas 114). In the Pastorals, therefore, conventional gender roles are defended as sound morality with little sense of tension with the new identity and community in Christ. Women are not saved from being women and are not required to give up their sexual powers of bearing children (as among ascetic Gnostics). Rather, women are saved as women and will be "brought safely through childbirth" (1 Tim. 2:15; NEB mg.; a reference to the lifting of the curse on women in Gen. 3:16).

In terms of a sexual ethic, perhaps the most striking implication of the principle that there is "no male and female" in Christ was that marriage was no longer a duty. Singleness and celibacy were honored as a gift (Gk. *chárisma*) of God (1 Cor. 7:7). Some of the spiritual enthusiasts at Corinth, who claimed already to participate fully in the new age, insisted on an asceticism that prohibited sexual intercourse and made celibacy a duty or at least a mark of the spiritually elite. "It is well for a man not to touch a woman" (7:1) was probably a slogan of these enthusiasts. Paul affirmed celibacy but not the eschatological assumptions or the elitism of the enthusiasts. Celibacy is "better," not because the celibate may boast about full participation in the new age, but because of the "not yet" character of our existence (vv. 26-35); and for that very reason — the continuing power of evil (v. 2) — marriage must remain an option and be recognized as "gift" (v. 7).

The new baptismal identity in Christ can also shape marriage. The full mutuality and equality of the marriage relationship in 1 Cor. 7 — including the sexual aspects of that relationship (vv. 3-5) — can themselves betoken a new vision of sexual reality. Within marriage sexual intercourse is not only allowed but encouraged. Christian identity does not require asceticism, but chastity and fidelity.

The Pastoral Epistles also reject asceticism. The Gnostic opponents forbade marriage (1 Tim. 4:3) on the basis of their dualism, but the Pastorals condemned such teaching, since "everything created by God is good" (4:4). In their opposition to Gnosticism, the Pastorals seem to retreat from the recognition of celibacy as an option if they are making marriage a requirement for ecclesiastical office (1 Tim. 3:2, 12; Tit. 1:6); but perhaps "husband of one wife" is directed not against celibacy but against the degenerate Hellenistic practice of successive brief marriages (*TDNT*, I, 788).

The new identity in Christ could honor celibacy and marriage, but it could not tolerate sexual immorality. The advice to abstain from sexual immorality (Gk. *porneía*) was part of a very early tradition indebted to Judaism that was used in instructing Gentile converts (Acts 15:20, 29; 21:25; 1 Thess. 4:3-8; 1 Pet. 2:11-18). Sexual immorality was linked to pagan ignorance of God and contrasted to the "holiness" to which Christians were called. The Church never retreated from the very Jewish prohibition of sexual immorality.

Yet there were some libertines in the Christian commu-

nities. Some even boasted about their sexual libertinism (1 Cor. 5:1f.). The claim that what one did in the body was a matter of moral indifference grew out of the same soils as did asceticism: the Gnostics' dualism and the enthusiasts' pretense to be already fully in the new age — already altogether spiritual, already angelic. In a diatribe against such libertines (6:12-20) Paul insisted that they, including their bodies, belonged to Christ (vv. 13, 19f.) and were united with Christ (v. 17). He reminded them of Christ's resurrection and, contrary to their eschatological assumptions, insisted that God "will also raise us up by his power" (v. 14). With these and other appeals, Paul made it clear that the Christian identity leads one to "shun immorality" (v. 18) and "glorify God in your body" (v. 20).

The lists of vices, another traditional form of moral instruction in the Church, are one more index of the Christian tradition's unanimity in prohibiting sexual immorality. Gk. *porneía* (RSV "fornication," "immorality") occurs more often than any other word in these lists (eleven times) and frequently stands first in the list (Mk. 7:21f.; Gal. 5:19-21; 1 Cor. 5:10f.; Eph. 5:3-5; Col. 3:5-8). Moreover, in these lists licentiousness (Gk. *asélgeia*) is mentioned six times, impurity (*akatharsía*) four times, adultery (*moicheía*) three times, the profligate (*akratḗs*) once (2 Tim. 3:3), and *arsenokoítēs* twice: once with Gk. *malakoí* (1 Cor. 6:9; RSV "sexual perverts") and once alone (1 Tim. 1:10; RSV "sodomites").

These last two terms raise the issue of homosexuality. In the first (1946) edition of the RSV, Gk. *malakoí* and *arsenokoítai* in 1 Cor. 6:9 were together rendered "homosexuals." Boswell (p. 107) would translate these terms as "the wanton" and "male prostitutes" respectively. Such translations are linguistically possible but hardly necessary. Most commentators and translators continue to understand these terms as references to passive and active partners in male homosexual intercourse.

In Rom. 1:26f. Paul utilized the Jewish tradition of gentile unrighteousness (cf. Wisd. 13:1-9) in order finally to turn the accusation back against those Jewish Christians who refused to welcome gentile Christians (Rom. 2:1). The root sin is the refusal to honor and to give thanks to God (1:21). Because of this sin "God gave them up to dishonorable passions. Their women exchanged natural relations for unnatural, and the men likewise gave up natural relations with women and were consumed with passion for one another" (1:26f.). Here there can be no question about whether Paul is referring to homosexual conduct. But questions do remain. First, did Paul intend to teach anything about homosexual behavior here, or was his purpose simply rhetorical, i.e., to "set up" the Jewish Christians for the recognition that "all have sinned" (3:23) and need the righteousness of Christ? It suffices to point out that Paul shared the Jewish tradition's aversion to homosexual behavior. Moreover, while the passage was not written as instruction concerning homosexuality, Paul did choose to detail the perversity that resulted from God's giving people up to their passions by a description of homosexual behavior. The second question is more significant: how did Paul understand the homosexual behavior he condemned? Evidently he understood it as freely chosen (cf. "exchanged," "gave up") by people for whom heterosexual relations were "natural," and as chosen (by heterosexual people) because of their insatiable lust ("consumed with passion"). The question is whether Paul condemns all homosexual behavior or only that which is freely chosen, because of their insatiable lust, by people with a heterosexual orientation.

Jude 7 states that the people of Sodom and Gomorrah, like the angels of Gen. 6:1-4 (and 1 En. 6–7, 10–13), "went after other flesh" (Gk. *apérchomai opísō sarkós hetéras*; RSV "indulge in unnatural lust"). The reference is not to homosexual behavior but to sexual intercourse between human beings and angels. The point is to warn the readers against the apostasy of the gnostics, who in their elitism transgress all bounds of sexual morality (vv. 4, 10), and to announce that God's condemnation always falls on such apostates (v. 5). The parallel to Jude 7 in 2 Pet. 2:10 drops "other" and adds "in defiling passion" (Gk. *opísō sarkós en epithymíą miasmoú*). This parallel passage, along with the phrase *en epithymíais sarkós aselgeíais* (RSV "with licentious passions of the flesh") in v. 18, is as close as Scripture ever gets to an ascetic disposition toward sexuality.

See also ETHICS: NT ETHICS III.A.4, B; PASSION II.

F. Revelation. In the letters to the seven churches, the writer of the Revelation warns against those teachers who license sexual immorality (2:14, 20). Sexual immorality is listed among the sins that people cling to in the last days (9:21) and the sins that God condemns (21:8; 22:15). In the symbolic universe of Revelation, moreover, Babylon/Rome is depicted as "the great harlot" (17:1). The lurid description of the prostitute (vv. 1-5) contrasts with the description of the woman in 12:1-6 and the new Jerusalem as a bride in 21:2. The image of the prostitute points to more than sexual sins, of course. Her fall is lamented by those who have known her political and economic favors (18:9-19), but it is celebrated among God's people even as they heed the call for a spiritual exodus from the demonic values that marked her life and justified her doom (18:4f.). Those demonic values surely include — even if they cannot be reduced to — sexual immorality.

IV. Canonical Perspectives on Sex: A Summary.–A. Sex and the God of Scripture. The God of Israel transcends male and female sexuality. God is one (cf. Dt. 6:4) and as such is set apart from the pantheons of the ancient Near East. In Gen. 1 God creates through the agency of a powerful word, not by sexual intercourse with a divine consort (although in the wisdom tradition, Wisdom personified as female [Prov. 8:22-31] is the first of God's creative acts and is said to be alongside God in creation as His mastercrafter). Thus sexual procreation is not the cause or means of creation (cf., e.g., the Assyrian creation epic *Enuma Elish,* in which the male and female waters commingle to bring forth life); rather, sexual differentiation is a result of creation: God created humankind male and female (Gen. 1:27). Yahweh is fundamentally different from the fertility gods of the ancient Near East. The pantheons of Egypt, Mesopotamia, and Syro-Palestine consisted of both male and female deities. Comparative evidence from the ancient Near East raises the question of whether Yahweh also had a consort. Of course normative Israelite religion disavowed the worship of any god or goddess as a consort to Yahweh. Properly speaking, Israel was Yahweh's spouse (see III.B. above), wayward and unfaithful as she might be. But archeological evidence suggests that popular religion in Israel did worship a Yahweh-Asherah divine pair much like the pairs 'El-Asherah and Baal-Anath in the other religions of Syro-Palestine. An eighth-century Israelite inscription from Kuntillet 'Ajrūd contains a blessing "by Yahweh Shomron and by his Asherah" (see Dever).

The question of God's gender cannot be answered simply by looking at the grammatical features of the biblical text, e.g., the gender of divine names and attendant verbs. The divine names and images are generally masculine, but in a patriarchal society this is not surprising. Yet feminine images are also present (e.g., Isa. 46:3f.; 66:7-13; Ps. 131; Lk. 15:8-10). The presence of these female images is im-

portant evidence that one cannot infer from the masculine images that God is male. In whatever way God might be like a king or a father or a bridegroom, the likeness does not consist in God's being male. (*See also* WOMAN III.E.)

B. Human Gender: Creation, Patriarchalism, and Redemption. The creation of humankind as male and female (Gen. 1:26-28) did not entail any hierarchy of genders. On the contrary, male and female were created as mutually and equally image-bearers of God, responsible to God for the well-being of the creation, each as a biological and social complement to the other. Gen. 2 reinforces this point when it states, "It is not good that the man should be alone" (v. 18). The female was created as "a helper fit for" the male (vv. 18, 20). Heb. *ēzer* ("helper") denotes support in a general sense, not just help in begetting or in work. The term is not used to designate an inferior; its use in reference to God (Dt. 33:7; Ps. 33:20) shows that it does not connote subordination. Furthermore, the phrase "a helper fit for" suggests an equal and well-matched counterpart rather than a subordinate one.

The fall disrupted and disordered God's good creation, including the equality and mutuality of the sexes. Alienation and gender hierarchy are the result of wilful disobedience (Gen. 3) and do not reflect the created condition. The distorted relationship of supremacy and subordination between male and female is expressed in the curse: "your desire shall be for your husband, and he shall rule over you" (3:16).

Patriarchal society valued the female largely for her procreative function, and the males clearly held the positions of dominant social, religious, and political power. Prominent female figures (e.g., Miriam, Deborah, Athaliah) are notable because of their infrequency. But women could at times provide models of compassion, faithfulness, and piety, e.g., in the figures of Hannah, Naomi and Ruth, and Esther. Prov. 31:10-31 is effusive in praise of the faithful wife, attributing to her a significant place within family and society — albeit still subordinate to the husband.

Jesus came announcing the cosmic sovereignty of God with its victory over the power of sin. He actualized God's cosmic rule in His unconventional and anti-patriarchal treatment of women. He rejected the reduction of women to their reproductive roles and included them among the circle of those He taught and healed. The early Church was faithful to Jesus in its adoption of a baptismal tradition that initiated male and female into an eschatological community and radically subordinated gender distinctions to the equality of those "in Christ." The egalitarian ethos left its impression on the Church's appropriation and use of the patriarchal *Haustafeln.*

C. Human Sexuality: Fecundity, Sobriety, Delight. The creation of humankind as male and female (Gen. 1:27) is a precondition for its fulfillment of the mandate to be fruitful and multiply and fill the earth (v. 28). The description of the physical commonality of male and female ("flesh of my flesh," 2:23) indicates that it is natural and wholesome for them to marry and to achieve sexual union ("therefore a man leaves father and mother and cleaves to his wife, and they become one flesh," 2:24). This sexual union is a covenant of two selves, not just bodies; it involves whole persons, not just genitalia. And it is a cause for delight, not shame (v. 25).

Sexuality no less than gender roles has been affected by the fall. Sexuality became an occasion for shame, for license, for reduction to genital pleasure, for infertility or unwanted pregnancies, for the breaking of covenant, for divorce. After the fall delight must be joined with sobriety. It became necessary for sexuality to be regulated by law, for the sage to caution against adultery and fornication, for Our Lord to warn against lust, for eschatological enthusiasts to be reminded of "the temptation to immorality" (1 Cor. 7:2).

In Israel's patriarchal society a woman's worth to her husband tended to be gauged by the number of children she bore, and by how many of that number were male. Yet God's redemption touches sexuality also in its fertility dimension. The covenant promised fecundity (Ex. 23:26; Dt. 7:14; Isa. 54:1), and time and again God visited the barren womb and enabled conception (Sarah, Rebecca, Rachel, Manoah's wife, Hannah), exalting the humiliated woman with the birth of a son (cf. Hannah's song in 1 S. 2:1-10). Then at the dawn of the new age, Elizabeth's barrenness and "reproach" was removed (Lk. 1:25) and a virgin conceived (vv. 30f.). "Unto us," including the childless, "a child is born" (Isa. 9:6; cf. Lk. 2:11).

In the Christian community children remain a blessing to marriage, but childbearing is not a necessary condition for the human fulfillment of either male or female, nor of their status in the community. The promise of fecundity (Isa. 54:1f.) is fulfilled in the Church (Gal. 4:27), and the reproach of barrenness is transformed into a warning against being "unfruitful in the knowledge of our Lord Jesus Christ" (1 Pet. 1:8). Thus marriage ceases to be a duty; sexual fulfillment is not a necessary condition for human fulfillment; singleness is an option, even a "gift." Being no longer a duty, marriage also becomes a "gift," a vocation, a sexual and personal covenant sealed in vows of lifelong fidelity.

Redemption touches marriage itself in the mutual and sensuous delight of partners in each other's sexuality. Canticles is explicit and joyful in its celebration of the mutual attraction between a man and a woman. Proverbs, besides calling for sobriety about sexuality, also calls for delight in the sexual relationship with one's spouse: "Let her affection fill you at all times with delight, be infatuated always with her love" (Prov. 5:19). And Paul is as far from asceticism as from libertinism in his rejection of "celibate marriages" and his encouragement of married couples to abstain only if it be temporary, by mutual agreement, and for prayer (1 Cor. 7:3-5). The mutual desire and affection of equal sexual partners in marriage can give as eloquent a testimony to God's redemption as celibacy.

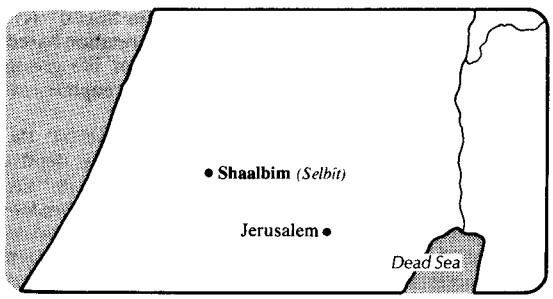
SHAALABBIN shā-ə-lab'ən [Heb. *ša'alabbîn*; Gk. A *Salamein*, B *Salabin*] (Josh. 19:42). An Amorite city assigned to the tribe of Dan between Ir-shemesh and Aijalon, probably identical with SHAALBIM (Jgs. 1:35; 1 K. 4:9), and possibly identical with Shaalbon (2 S. 23:32; 1 Ch. 11:33) and SHAALIM (1 S. 9:4). Most scholars associate this site with modern Selbît, 5 km. (3 mi.) NW of Aijalon and 13 km. (8 mi.) N of Beth-shemesh.

SHAALBIM shā-al'bim, shā-əl-bēm [Heb. *ša'alḇîm*; Gk. B *Bēthalamei*, Lucian *Thalamin*, Origen *Salabim*, A *hai alōpekes*–'the foxes'] (Jgs. 1:35; 1 K. 4:9); also **SHAALABBIN** shā-al'ə-bēn [Heb. *ša'alabbîn*] (Josh. 19:42); **SHAALBON** shə-al'bōn [Heb. *ša'alḇōnî*] (2 S. 23:32; 1 Ch. 11:33); AV SHAALBONITE. A town in the territory of Dan where the Amorites continued to stay and became tributary to the house of Joseph (Jgs. 1:35); later part of Solomon's second administrative district (1 K. 4:9).



The same town is called Shaalabbin in Josh. 19:42, from which comes the gentilic form in 2 S. 23:32; 1 Ch. 11:33. The name means "foxes"; cf. the rendering by LXX A; Arab. *ṯa'lab*, pl. *ṯa'âlib*, Akk. *šelabu*, etc.; and Shaalim (Heb. *ša'alîm* [pl.] = Arab. *ṯu'âl*, "fox" [fem. *ṯu'âlat*]) in 1 S. 9:4 (Jgs. 12:15 LXX ?), which has the same meaning but should not be identified with this locality.

Despite some skepticism by Kittel, Noth, and other scholars, the identification with the now destroyed Arabic village Selbît, 13 km. (8 mi.) SE of Lod (Lydda), is highly probable. The village was situated on a tell, and in its immediate neighborhood is a spring. During the war of 1948 an inscribed mosaic pavement from a fourth-century-A.D. Samaritan synagogue and two Greek inscriptions on pillars were discovered there. Jerome called the town Selebi (in his comments on Ezk. 48:22, *PL*, XXV, col. 488).

A. VAN SELMS

SHAALBON; SHAALBONITE *See* SHAALBIM.

SHAALIM, LAND OF shā'ə-lim [Heb. *ša'alîm*]; AV SHALIM. A region (in Benjamin?) traversed by Saul while looking for his father's asses (1 S. 9:4). The various readings in Greek texts (Easakem, Saaleim, Segaleim) are of little help. Some scholars would emend to Shaalbim, but without textual support. W. S. L. S.

SHAAPH shā'af [Heb. *ša'ap*–'balm'].

1. A Judahite; Son of Maacah the concubine of Caleb the brother of Jerahmeel; the founder ("father") of the town of Madmannah (1 Ch. 2:49).

2. Another descendant of Caleb the brother of Jerameel; youngest son of Jahdai (1 Ch. 2:47).

SHAARAIM shā-ə-rā'im [Heb. *ša'arayim*–'two gates'; Gk. *Sakarim*]; AV also SHARAIM (Josh. 15:36). An unknown site in the Shephelah or western foothills of Judah mentioned after Socoh and Azekah. According to 1 S. 17:52, after David killed Goliath the Israelites pursued the Philistines past Shaaraim to Gath and Ekron. Shaaraim therefore must have been in or near the Wâdī es-Sanṭ (*see* ELAH, VALE OF), where Goliath was slain. The LXX, not regarding Shaaraim as a proper name, translates: ". . . the wounded of the Philistines fell on the road of the gates to Gath and to Ekron."

See also SHARUHEN; SHILHIM. F. WEDDLE

SHAASHGAZ shā-ash'gaz [Heb. *ša'ašgaz*; LXX *Gai*]. One of the eunuchs in charge of the concubines of the Persian king Ahasuerus (Est. 2:14). Esther was one of the young women in the harem that he supervised.

The meaning and form of the name are uncertain (see L. B. Paton, *ICC* on Esther [repr. 1951], pp. 69, 179-181). The LXX uses *Gai* not only for Shaashgaz in v. 14 but also for Hegai in v. 8 (note that in vv. 13, 15, where MT has Hegai LXX has no personal name); thus it is difficult to determine the original text. R. L. PRATT, JR.

SHABBETHAI shab'ə-thī [Heb. *šabbeṯay*–'born at sabbath' < *šbt* Gk. LXX ℵ, B. *Sabathai*, A *Kabbathai* (Ezr. 10:15); Gk. Apoc. *Sabbataios*] (Ezr. 10:15; Neh. 8:7; 11:16; 1 Esd. 9:14, 48); AV Apoc. SABBATHEUS, SABATEAS; NEB Apoc. SABBATAEUS, SABBATAEAS. Name of a Levite who was present when Ezra enacted the edict against foreign wives (Ezr. 10:15; 1 Esd. 9:14). The phrase Heb. *'āme'ḏû 'al-zō't* in Ezr. 10:15 means "they opposed this" or possibly "they supported this." The former is the more common meaning and the preferred one here. As the introductory particle Heb. *'aḵ* (lit. "only") in v. 15 indicates, Ezra's decree met limited opposition. Perhaps the opposition stemmed from a desire for stricter treatment of the offenders, especially since Shabbethai served as an active participant in the postexilic reforms. He expounded the law (Neh. 8:7) and was one of the leading Levites responsible for work outside of the temple (11:16).

See D. J. A. Clines, *Ezra, Nehemiah, Esther* (*NCBC*, 1984), p. 130; F. C. Fensham, *Books of Ezra and Nehemiah* (*NICOT*, 1982), pp. 141, 246f. R. L. PRATT, JR.

SHACHIA shə-kī'ə (1 Ch. 8:10, AV, NEB). *See* SACHIA.

SHADDAI shad'ī. *See* GOD, NAMES OF II.B.1.

SHADE; SHADOW [Heb. *ṣēl* (Jgs. 9:15, 36; 2 K. 20:9-11; Cant. 2:3, 17; Isa. 16:3; Jer. 6:4; Hos. 4:13; etc.), *ṣelem* (Ps. 39:6 [MT 7]), hiphil part. of *ṣālal* (Ezk. 31:3), *ṣalmāweṯ* ("shadow of death," Ps. 23:4); Aram. *ṭ'lal* ("find shade," Dnl. 4:12 [MT 9]), *dûr*–'dwell' ("find shade," 4:21 [MT 18]); Gk. *skiá* (Mt. 4:16; Mk. 4:32; Lk. 1:79; Acts 5:15; etc.), *aposkíasma* (Jas. 1:17)]; AV also VAIN SHEW (Ps. 39:6 [MT 7]), HAVE HABITATION (Dnl. 4:12, 21 [MT 9, 18]); NEB also DARK AS DEATH (Ps. 23:4), PHANTOM, LODGE.

The usual Hebrew noun for "shade" or "shadow" is *ṣēl* (the cognate vb. *ṣālam* is not common, nor is its Aramaic

cognate *ṭelal*). Since the discovery of the Ugaritic texts at Râs Shamrah, scholars have observed that archaic Canaanite and Hebrew used a letter *m* at the end of many words for reasons not yet fully understood. The survival of this early feature (called the enclitic *mem*) may account for the use of *ṣelem* (usually meaning "image" or "statue") in Ps. 39:6 (MT 7); most likely this is simply *ṣēl* with a final *m*.

It is also probable, based on Ugaritic and other evidence, that Heb. *ṣalmāweṯ* (perhaps better read as *ṣalmûṯ*) does not mean "shadow of death" but simply "darkness" (see KoB, p. 805) or "deep darkness," the usual RSV translation of the term (see Thomas; *see also* DARK). In fact, the RSV has retained the traditional translation "shadow of death" (used consistently by the AV) only in Ps. 23:4 (but cf. RSV mg.), apparently because the psalm is so well known; the psalmist is likely referring to a very dark ravine through which the shepherd had to lead his sheep. The common LXX translation *skiá thanátou*, reflected in Mt. 4:16 (quoting Isa. 9:1) and Lk. 1:79, derives *ṣalmāweṯ* from *ṣēl* and *māweṯ* ("death"); but this translation is probably based on a folk etymology — unless Thomas is correct in arguing that *māweṯ* here simply means "to an extreme degree."

In Hebrew thought "shadow" never connotes a sinister or threatening phenomenon. On the contrary, it most often represents welcome shelter from the heat of the noonday sun (Jgs. 9:15; Job 7:2; 40:22; Cant. 2:3; Isa. 4:6; 32:2; 34:15; Ezk. 17:23; 31:6, 12; Hos. 4:13; Jonah 4:5f.; etc.). "Shadow" can therefore signify protection (e.g., Isa. 30:2f.); the "shadow of [Yahweh's] wings" (Ps. 17:8; 36:7 [MT 8]; 57:1 [MT 2]; 63:7) and the "shadow of [His] hand" (Isa. 49:2; 51:16) are metaphors for divine protection (cf. Ps. 91:1; 121:5; Isa. 25:4f.; Hos. 14:7; cf. Lam. 4:20). *See also* WING.

In a more negative sense, the fleeting, elusive character of a shadow can serve as a figure for the transitoriness of human life (1 Ch. 29:15; Job 8:9; 14:2; Ps. 102:11 [MT 12]; 109:23; 144:4; Eccl. 6:12). Job complains that his limbs have become a mere "shadow," i.e., they have shrunk to a skeleton (Job 17:7). In Eccl. 8:12b-13 Qoheleth appears to be quoting a conventional idea that he does not accept. Traditional wisdom taught that the wicked, like a shadow, would soon perish; but Qoheleth saw examples of wicked persons who went unpunished not only in their lifetimes but even in death (vv. 10f., 14; see R. Gordis, *Koheleth — The Man and His World* [3rd ed. 1968], pp. 184f., 293f.).

The shrinking of shadows indicates that the day is advancing (Cant. 2:17; 4:6), while the lengthening of shadows presages the coming of night (Jer. 6:4). 2 K. 20:8-11 (par. Isa. 38:8) describes a miracle in which Yahweh caused the sun's shadow to go backward (*see* DIAL OF AHAZ).

In the NT Gk. *aposkíasma* occurs only in Jas. 1:17. The phrase *tropḗs aposkíasma* (AV "shadow of turning"; RSV "shadow due to change"; NEB "play of passing shadows") has been the subject of much discussion, partly due to several variant readings in the Greek text (e.g., *tropḗs aposkiásmatos* in ℵ B p^{23}). The context (the reference to God as the "Father of lights") and the use of *tropḗ* ("turning," "variation," "change"), which in classical literature is sometimes a technical term for the movements of the heavenly bodies (see Bauer, rev., p. 827), suggests that the phrase refers to astronomical phenomena. Scholars have proposed several specific phenomena, e.g., "darkness caused on earth by the movements of the constellations" (*TDNT*, VII, 399), the shadow of an eclipse, and the shadow of night (see Davids, p. 89). Although the specific referent cannot be determined, the main point of the passage is clear: God does not change, and therefore He can never send evil (cf. v. 13).

Some scholars have claimed that the use of *skiá* in Col. 2:17; He. 8:5; 10:1 reflects Greek rather than Hebrew thought. As O'Brien (p. 140) has pointed out, however, "shadow" is used "not so much in the Platonic sense of a copy of the heavenly and eternal 'idea' as in the sense of a foreshadowing of what is to come." The new order established by Christ is the perfect reality to which the OT laws and sacrifices merely pointed. This reality means that the regulations belonging to the "shadow" no longer constitute a standard for judgment (cf. Col. 2:16-23).

G. CHAMBERLAIN N. J. O.

SHADES [Heb. *rᵉpā'îm*—'ghosts of the dead' (Job 26:5; Ps. 88:10 [MT 11]; Prov. 2:18; Isa. 14:9; 26:14, 19)]; AV DEAD, DECEASED; NEB also ANCIENT DEAD, etc. One of the biblical terms for deceased people residing in Sheol. The original meaning of Heb. *rᵉpā'îm* is uncertain. It was once thought to refer to "those who are sunken down [in death]" or "those who are low [i.e., in Sheol]," but it seems more likely to be associated with the verb *rp'*, "join together, mend, heal." One proposal is that it meant "those who are joined together [in Sheol]" (cf. Prov. 21:16). Another is "healers," an interpretation based on a belief that the *rᵉpā'îm* had healing or life-giving powers. Still another is "healthy ones," a euphemism for the dead.

In Job 26:5 "the shades below" are the dead (cf. Ps. 88:10 [MT 11]; Isa. 26:14). They dwell in "the depths of Sheol" (Prov. 9:18), where they live together in "the assembly of the dead [*rᵉpā'îm*]" (Prov. 21:16). This understanding of *rᵉpā'îm* seems to have been widespread in ancient Syria-Palestine. It is known from both Phoenician and Ugaritic texts. The inscriptions on the sarcophagi of Tabnit and Eshmun'azor II, who ruled Sidon in the 5th cent. B.C., refer to the kings' "resting place with the shades" (*rp'm*). (*See* picture in BURIAL; see *ANET*, p. 662.) The Ugar. *rp'um* are the dead who inhabit the underworld. According to one myth, they are subject to the rule of Shapsh, the sun-goddess (*UT*, 62:45f.), who probably was thought of as having jurisdiction over the living by day and the dead by night. Also at Ugarit was an individual god *rp'um*, evidently an underworld deity with considerable authority.

Another point of uncertainty involves the relationship of *rᵉpā'îm* meaning "shades" to its use as a designation for the Rephaim, one of the pre-Israelite inhabitants of the Promised Land. Most scholars believe that the first meaning, "shades," is primary. Thus it may have been applied secondarily to a group of great warriors of the past, who, it was believed, now resided in the underworld among the other *rᵉpā'îm*. According to another point of view, the term Rephaim originally referred to an elite group of warriors, devotees of the god *rp'um*, who, as noted above, is known from Ugarit. The deceased members of this guild were also called Rephaim, and the designation eventually extended to the dead in general. Thus in Israelite tradition Rephaim came to refer both to a race of great warriors of the past and to the dead residing in the underworld.

For bibliography, *see* REPHAIM.

P. K. MCCARTER, JR.

SHADOW OF DEATH. *See* SHADE.

SHADRACH shad'rak [Heb. and Aram. *šaḏraḳ* < either Akk. *šudur-Ak(u)*–'command of Aku' (Sumerian moon-god), or *šādurāku*–'I am very fearful (of God)'] (Dnl. 1:7; 2:49; 3:12-30). One of the three companions of Daniel who were among the young Judean nobles taken captive to Babylon by Nebuchadnezzar.

Shadrach's original Hebrew name was Hananiah ("God has shown mercy"; Dnl. 1:6), a common OT name. An officer of Nebuchadnezzar replaced Hananiah's Hebrew name with a Babylonian name that was perhaps comparable in structure (v. 7), and this name, Shadrach, is used exclusively in the Aramaic part of Daniel (2:4–7:28). Its meaning is uncertain. Some have suggested that Shadrach is an intentional corruption of Marduk (the chief Babylonian deity) by the author of Daniel, but this is doubtful. Of the four Babylonian names of Daniel and his companions, only ABED-NEGO is possibly a distorted form. The endings of Shadrach and Meshach may represent either the divine name *Ak(u)* or the pronominal suffix *ak(u)* as pronounced in Babylonian in the 6th cent. B.C., after case endings had dropped from normal speech (see Bibliography).

Taken captive and exiled in the first Babylonian deportation from Jerusalem in 605 B.C. (2 K. 24:1f.; Dnl. 1:1f.), Shadrach, Meshach, and Abed-nego (always listed together and in that order) were among the handsome, well-educated Jewish youths chosen to be trained for service in the king's palace (1:3f.). When they were assigned a daily portion of the king's food and wine, Shadrach and his friends supported Daniel in refusing to violate the OT food laws (1:8-16). Because of God's blessing they rose quickly in the Babylonian civil service (1:17-20).

An incident in Nebuchadnezzar's second year led to their promotion. Angered because the Babylonian wise men could not tell him his forgotten dream, Nebuchadnezzar ordered that all the wise men be slain — including Daniel and his three companions (2:1-13). After gaining a respite from the king, Daniel informed Shadrach and the others of the situation and asked them to pray for God's mercy (v. 17). God answered their prayer by revealing the dream and its meaning to Daniel, and thus the lives of all the wise men were spared. At Daniel's request Nebuchadnezzar then appointed Shadrach, Meshach, and Abed-nego "over the affairs of the province of Babylon" (v. 49).

Shadrach, Meshach, and Abed-nego showed great faith and courage when they refused to worship Nebuchadnezzar's golden statue (3:12-18). Nebuchadnezzar ordered that they be executed by being thrown into a fiery furnace, but they were miraculously delivered from death (vv. 19-27). As a result, even Nebuchadnezzar glorified God, and Shadrach and his friends were again promoted (vv. 28-30).

D. K. STUART

SHADY TREES (Job 40:21f., AV). *See* LOTUS.

SHAFT [Heb. *qāneh*] (Ex. 25:31; 37:17); AV also BRANCH; NEB BRANCH. The long slender part of an object, usually associated with any of a variety of attached heads; an alternate word for "arrow."

The Heb. *qāneh* usually means REED and most likely refers to the Persian reed (*arundo donax*) found throughout Syria and Palestine. At times it grows to a height of almost 6 m. (18 ft.) with a basal diameter of 8 cm. (3 in.). Because of its strength it could be used for staffs and even weapons. In the Bible it is used twice to indicate the shaft of the tabernacle lampstand. Elsewhere it is used to suggest a staff in the famous phrase "a bruised reed" (Ezk. 29:6). Some have sugested that, when used together with *yārēḵ*, "thigh" (e.g., in the passages associated with the lampstand), it is intended to indicate a thickened shaft. Such is indeed the case with lamp, incense, and brazier stands found at ancient Near Eastern sites.

Although the Bible does not seem to speak of the shaft of weapons, such as spears or javelins, the heads of such weapons found archeologically show two methods of attachment to the shaft. When the head tapered to a thin tongue (male), it was intended to be inserted into a hole drilled into the end of the shaft. On the other hand, when the head was formed into a long circular fillet (female), the end of the shaft was inserted into the fillet.

For "water shaft," *see* WATERWORKS.

See C. L. Meyers, *Tabernacle Menorah* (1976), pp. 19-22.

L. G. HERR

SHAGEE shā'gē [Heb. *šāgēh*; Gk. ℵ, B *Sōla*, A *Sagē*] (1 Ch. 11:34); AV, NEB, SHAGE. A Hararite; father (or, perhaps, grandfather) of Jonathan, one of David's thirty mighty men. "Shagee" is probably a misreading of "Agee" (cf. 2 S. 23:11, 32f.). *See* SHAMMAH 3.

SHAHAR. The AV transliteration of Heb. *šaḥar* (RSV lit. "dawn") in the title to Ps. 22 (MT v. 1). *See* DAWN; HIND OF THE DAWN, THE.

SHAHARAIM shā-hə-rā'im [Heb. *šaḥ^{a}rayim*; LXX A *Saarēm*, B *Saarēl*]. A descendant of the tribe of Benjamin (1 Ch. 8:8). Although the verse has several textual problems (see *BHS* and comms.), Shaharaim apparently had three wives, two of whom he divorced. He had seven sons by his wife Hodesh (v. 9), and two sons by his wife Hushim.

R. L. PRATT, JR.

SHAHAZUMAH shā'ə zōō'mə [Heb. *K šaḥ^{a}ṣûmâ*, *Q šaḥ^{a}ṣîmâ*] (Josh. 19:22); AV SHAHAZIMAH. A border town in the territory of Issachar, possibly identified with Tell el-Muqarqash, a mound about 8 km. (5 mi.) ESE of Mt. Tabor; Y. Aharoni, however, identified ANAHARATH (v. 19) with this mound (*JNES*, 26 [1967], 212-15). Abel (*GP*, II, 61) held that the *-â* ending of Shahazumah should be taken as *hê-* directive, which fits the context. Then *Q šaḥ^{a}ṣîmâ* could becead as a gentilic plural, and the place name read as *šaḥaṣ*, or Shahaz.

See W. F. Albright, *ZAW*, 44 (1926), 225-230.

B. R. AND P. C. PATTEN

SHAKE [Heb. *gā'aš* (Job 34:20), *ḥîl*–'writhe' (Ps. 29:8; Ezk. 26:15), *ḥāmas* (Job 15:33), *môṭ* (Ps. 13:4 [MT 5]; 46:2 [MT 3]; 62:6 [MT 7]; 82:5; 104:5), *nāwa'* (Job 16:4; Isa. 6:4; 7:2; Am. 9:9; Nah. 3:12; Zeph. 2:15), *nûḏ/niḏ* (1 K. 14:15; Jer. 18:16), *nûp* (Isa. 10:32; 19:16; Zec. 2:9 [MT 13]), *nā'ar* (Jgs. 16:20; Neh. 5:13; Job 38:13; Ps. 109:23; Isa. 33:9, 15; 52:2), *nāṭar* (Hab. 3:6), *'āmaḏ*–'stand' (Ezk. 29:7), *pāḥaḏ*–'fear' (Job 4:14), pilpel of *qālal* (Ezk. 21:21 [MT 26]), *rāgaz* (Job 9:6; Isa. 23:11), *rāḥap* (Jer. 23:9), *rā'a'* (Isa. 24:19), *rā'aš* (Ps. 77:18 [MT 19]; Isa. 13:13; 14:16; Ezk. 26:10; 27:28; 38:19; Joel 3:16 [MT 4:16]; Am. 9:1; Hag. 2:6f., 21); Gk. *apotinássō* (Lk. 9:5; Acts 28:5), *asáleutos*–'immovable' (He. 12:28), *ektinássō* (Mt. 10:14; Mk. 6:11; Acts 13:51; 18:6), *saleúō* (Mt. 11:7; 24:29; Mk. 13:25; Lk. 6:38, 48; 7:24; 21:26; Acts 2:25; 4:31; 16:26; 2 Thess. 2:2; He. 12:26f.), *seiō* (Mt. 27:51; He. 12:26; Rev. 6:13)]; AV also MOVE, TOSS (up and down), "sift," "be

troubled," "be at a stand," "removed," etc.; NEB also WRITHE, HEAVE, GIVE WAY, "shed," etc.

Several kinds of shaking occur in the Bible. Various parts of the body may shake; e.g., one may shake one's fist in anger (Isa. 10:32; 19:16; Zeph. 2:15; Zec. 2:9; *see* GESTURE I) or shake one's head in derision or repulsion (Job 16:4; Jer. 18:16; *see* GESTURE V); one's loins (Ezk. 29:7), bones (Job 4:14; Jer. 23:9), or heart (Isa. 7:2) may shake from FEAR; or one may shake one's entire body (Jgs. 16:20). In Isa. 33:15 a righteous person is one who "shakes his hands, lest they hold a bribe," i.e., one who by such a motion demonstrates clearly that he does not secretly hold a bribe (cf. Ps. 26:10; Prov. 17:23; 21:14).

The psalmist dramatizes how strong his faith is: though the mountains should shake, he will not fear, for God is his refuge and strength (Ps. 46:1f.; cf. 13:4; 62:6; Lk. 6:48; Acts 2:25). Indeed, God is often the cause of the earth (or parts of the earth, as well as the heavens) shaking (Joel 3:16; cf. Job 9:6; Ps. 29:8; 46:2; 77:18; 82:5; Isa. 6:4; 13:13; 24:19; Ezk. 26:10, 15; 27:28; 38:19; Am. 9:1; Hag. 2:6, 21; Mt. 24:29 par. Mk. 13:25; Lk. 21:26; He. 12:26-28; *see also* EARTHQUAKE; QUAKE). In the face of these many texts, Ps. 104:5 seems problematic, for it asserts that God so created the earth that it could not be shaken (Heb. *môṭ*, the same word used in 46:2 [MT 3]; 82:5). But taken together these texts should serve as a reminder of God's sovereignty — what He has created, He can destroy.

Some of the same verbs describe God's shaking the nations in judgment (Israel, Am. 9:9; cf. 1 K. 14:15; all nations, Hag. 2:7; Hab. 3:6; kingdoms, Isa. 14:16; 23:11). Nah. 3:12 likens Nineveh's mighty fortresses to fig trees; when shaken, the figs fall into the mouth of the eater (cf. Rev. 6:13 for a cosmic application of this image). Other agricultural images include Eliphaz's likening the godless to an unripe grape that God will shake off (Job 15:33), Isaiah depicting the land mourning and barren (Isa. 33:9), and the psalmist's lament of his weakened condition (Ps. 109:23).

In Neh. 5:13 Nehemiah shakes out his lap to dramatize the curse that will fall on the leaders if they fail to keep their promise to abolish the high interest rates that have enslaved so many of the people. Cf. the cosmic complement to this image in Job 38:12f., where God commands the morning to take hold of the skirts of the earth and shake the wicked out of it. On the similar action in Acts 18:6, *see* GARMENTS X.

In Job 34:20 Elihu describes the quick passing away of the nobles, the mighty; although many commentators have suggested emending Heb. *yᵉgōʿᵃšû*, "are shaken" (see, e.g., S. R. Driver and G. B. Gray [*ICC*, repr. 1977]), others (e.g., E. Dhorme [Eng. tr. repr. 1984], R. Gordis [1978]) defend the MT.

Several NT texts also call for comment. R. Gundry (*Matthew* [1982], p. 207) is surely correct that in Mt. 11:7 par. Lk. 7:24 Jesus' question to the crowds does not refer simply to the grass growing along the Jordan but is a metaphorical reference to human frailty (see also R. T. France, *Matthew* [*Tyndale NT Comms.*, 1985], p. 193; cf. A. H. McNeile, comm. on Matthew [repr. 1980], p. 153; M. D. Goulder, *Midrash and Lection in Matthew* [repr. 1977], p. 356). Cf. 2 Thess. 2:2, where the same verb is used for being "shaken in mind"; here Paul exhorts his readers not to be shaken by thoughts of Christ's return.

Twice in Acts God apparently causes earthquakes. In Acts 4:31 the young church is gathered together praising God for the release of Peter and John, and after they prayed, "the place in which they were gathered together was shaken, and they were all filled with the Holy Spirit." Some commentators take this shaking not as a literal "earthquake, but as a symbol of the presence of God" (so W. Neil [*NCBC*, repr. 1981], p. 92), but this interpretation assumes that the acknowledged OT parallels (e.g., Ex. 19:18; Isa. 6:4) also were not literal earthquakes, an assumption that seems unlikely (cf. F. F. Bruce, comm. on Acts [*NICNT*, repr. 1979], p. 107; I. H. Marshall, *Acts* [*Tyndale NT Comms.*, 1980], p. 107). According to E. Haenchen (comm. on Acts [Eng. tr. 1971], p. 228 n. 2), "to the ancient mind, the trembling of the place signified that the prayer had been 'heard,'" but the OT texts often cited are not real parallels, since they are not responses to prayer. He referred to true parallels in Ovid *Metamorphoses* xv.669-672; Virgil *Aen.* iii.88-91. In 16:26 "a great earthquake" shook the foundations of the prison that held Paul and Silas; the jailer obviously took this event as a sign that God was with Paul and Silas, and he "believed in God" (v. 34). Once again Haenchen (p. 497) noted a pagan parallel (Euripides *Bacchanals* 445-450).

Also in Acts is the account of Paul being bitten by a serpent, which he shakes off into the fire (28:5). Note that the verb used here is the same one used in Lk. 9:5 for shaking off dust.

Jesus' death was accompanied by many supernatural events, including an earthquake that resulted in tombs being opened (Mt. 27:51). Gundry (*Matthew* [1982], pp. 575f.) noted the parallel between this text and Ezk. 37:7, 12f. (AV "shaking" is preferable to RSV "rattling" for *raʿaš*, which usually refers to earthquakes; see W. Zimmerli, *Ezekiel 1* [Eng. tr., *Hermeneia*, 1979], p. 276).

On the shaking of arrows in Ezk. 21:21, *see* DIVINATION III.C.

For the expression "shake off dust" (Isa. 52:2; Mt. 10:14 par. Mk. 6:11; Lk. 9:5; Acts 13:51), *see* DUST; GESTURE II.

G. A. LEE

SHALEM shā'ləm [Heb. *šālēm*–'intact']. A place mentioned only in Gen. 33:18, AV. The AV, following the LXX (cf. Pesh., Vulg.), reads, "And Jacob came to Shalem, a city of Shechem." In support of this minority position taken by the AV, the Shalem Rabta or "Great Shalem" of Samaritan sources is identified with Salim, a village about 6 km. (4 mi.) E of Shechem (Nablus), called Sanim by Eusebius (*Onom.* 160.3). Perhaps this is the city referred to by the AV. Also, the events of Gen. 44 may have occurred here, although an old tradition placing Jacob's well and Joseph's tomb near Shechem argues against this view.

The RSV, however, reads "And Jacob came safely to the city of Shechem," rendering Heb. *šālēm* with the adverb "safely" (so NEB). This preferred translation receives strong support from the Tgs. Onkelos and Jonathan, Sam. Pent., and Arab. versions.

See also SALEM.

M. E. DERAUD

SHALISHAH shə-lī'shə [Heb. *šālišâ*; Gk. LXX A *Salissa*, B *Selcha*] (1 S. 9:4); AV, NEB SHALISHA. In search of his father's asses, Saul left his home in Gibeah and passed through "the hill country of Ephraim," "the land of Shalishah," "the land of Shaalim," "the land of Benjamin," and the "land of Zuph" (vv. 4f.). The geography of the passage suggests a "round trip" excursion ending in Ramah, a few miles N of Gibeah, where Saul sought the aid of the prophet Samuel (vv. 6f.). The vagueness of the passage does not afford confident identification of Shalishah. 2 K. 4:42 mentions a Baal-shalishah, which may indicate a local shrine to the god "Baal" in Shalishah (see J. Gray, *1 & 2 Kings* [*OTL*, rev. ed. 1970], pp. 474, 500f.). Khirbet Kefr Thilth some 30 km. (19 mi.) NE of Jaffa is a possible location on the basis that Arab. *ṯilṯ*

is etymologically related to Heb. *šāliśâ* (but cf. P. K. McCarter, Jr. *1 Samuel* [*AB*, 1980], p. 174).

Bibliography.–*GP*, II, 259f.; *GTTOT*; *LBHG*.

W. L. THOMPSON, JR.

SHALLECHETH shal'ə-keth [Heb. *šalleḵeṯ*] (1 Ch. 26:16). The name of a gate assigned to the gatekeepers Shuppim and Hosah, located on a road that led up from the Tyropoeon Valley to the west gate of Solomon's temple. Because of the possible meaning of Shallecheth, which is "casting forth," it is conjectured that the offal of the temple was carried through this gate.

SHALLUM shal'əm [Heb. *šallûm, šallum*].

1. Youngest son of Naphtali (1 Ch. 7:13); called "Shillem" in Gen. 46:24; Nu. 26:49.

2. A descendant of Simeon; son of Shaul and father of Mibsam (1 Ch. 4:25).

3. Son of Sismai and father of Jekamiah; a Jerahmeelite of the tribe of Judah (1 Ch. 2:40f.).

4. The fifteenth king of the northern kingdom of Israel, who reigned for only one month in the middle of the 8th cent. B.C. (2 K. 15:10, 13-15). He usurped the throne by assassinating Zechariah, the last king of the dynasty of Jehu, which had occupied the throne of Israel for almost a century. This assassination signaled the end of the long, prosperous, expansionistic period of rule under Zechariah's father Jeroboam II. Beginning with Shallum, Israel followed a downward path that led to the disintegration of its society and to its final destruction by the Assyrians. Shallum's brief rule was typical of what followed throughout the next quarter-century; Samaria was ruled by a rapid succession of short-lived usurpers until it was finally conquered in 722 B.C. Shallum was succeeded by his assassin, Menahem.

Shallum's name, which means "payment, recompense," is well attested on ancient Hebrew seals. Of special interest is its occurrence in the text of an ostracon found at Samaria ("Barley Letter"; see *ANET*, p. 321; J. C. L. Gibson, *Textbook of Syrian Semitic Inscriptions*, I [repr. 1973], 14f.). This text, which could not have been written more than half a century from the time of King Shallum, provides archeological evidence that his name was in use in the place and time in which the Bible locates him.

W. H. SHEA

5. Father of Jehizkiah, an Ephraimite chief in the time of Ahaz (2 Ch. 28:12).

6. [Gk. Apoc. *Salēmos, Salōm*; Lat. *Salame*]; AV Apoc. SALUM, SADAMIAS, SALOM; NEB Apoc. also SALEMUS. Son of Zadok and father of Hilkiah; a high priest and ancestor of Ezra (1 Ch. 6:12f. [MT 5:38f.]; Ezr. 7:2; 1 Esd. 8:1; 2 Esd. 1:1; Bar. 1:7). He is probably the same as MESHULLAM **7**.

7. Son of Tikvah (2 K. 22:14; Tokhath in par. 2 Ch. 34:22); husband of Huldah the prophetess; keeper of the sacred wardrobe during the reign of King Josiah.

8. An uncle of Jeremiah the prophet (Jer. 32:7).

9. Father of Maaseiah, the keeper of the threshold (an important priestly office) in the time of Jeremiah (Jer. 35:4).

10. Fourth son of Josiah (1 Ch. 3:15); enthroned as king of Judah following his father's death (Jer. 22:11); usually called "Jehoahaz" (e.g., 2 Ch. 36:1-4). *See* JEHOAHAZ **3**.

11. [Gk. Apoc. *Saloum*]; AV Apoc., NEB Apoc., SALUM. A Korahite, son of Kore; a gatekeeper who was among the first Levites to return from Babylon after the Exile (1 Ch. 9:17, 19, 31; Ezr. 2:42 par. Neh. 7:45; 1 Esd. 5:28). *See also* MESHELEMIAH.

12. [Gk. Apoc. *Salloumos*]; AV Apoc., NEB Apoc., SALLUMUS. A Levitical gatekeeper who divorced his foreign wife during the time of Ezra (Ezr. 10:24 par. 1 Esd. 9:25).

13. Son of Bani; an Israelite layman who divorced his foreign wife (Ezr. 10:42); the name is omitted in par. 1 Esd. 9:34.

14. Son of Hallohesh; he and his daughters helped to repair the wall of Jerusalem in Nehemiah's time (Neh. 3:12). He is called "ruler of half the district of Jerusalem," which probably means he was the foreman responsible for half the assignment of the city (see *IB*, III, 688).

15. [Heb. *šallûn*, a few MSS *šallûm*; Gk. *Salōmōn*]; AV, NEB, SHALLUN. Son of Colhozeh; "foreman of half the portion assigned to Mizpah" (Neh. 3:15, RSV mg.; cf. v. 19; see *IB*, III, 689). He repaired the Fountain Gate and built the wall of the Pool of Shelah.

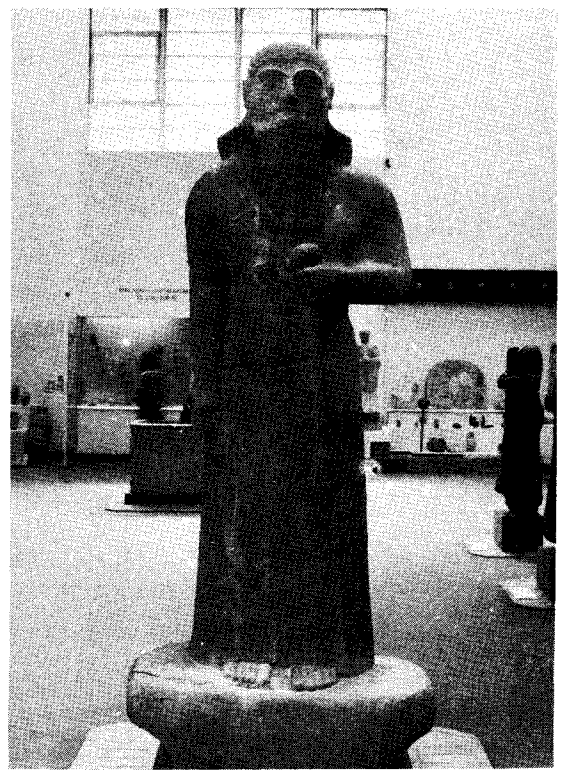
N. J. O.

SHALLUN shal'ən (Neh. 3:15, AV, NEB). *See* SHALLUM **15**.

SHALMAI shal'mī [Heb. *šalmay*] (Neh. 7:48). Head of a family of temple servants (NETHINIM) who returned from exile; called SHAMLAI (RSV, NEB; but AV "Shalmai") in Ezr. 2:46; cf. also 1 Esd. 5:30 (RSV SHAMLAI; AV, NEB SUBAI [LXX *Sybaï*]).

SHALMAN shal'mən [Heb. *šalmān*; LXX *Salaman*]. A non-Israelite king whose identity is uncertain (Hos. 10:14). Several identifications have been suggested. The name may be an abbreviation for Shalmaneser, the name of several important Assyrian kings. But elsewhere Shal-

A basalt statue of Shalmaneser III in a typical king posture holding a mace-scepter and sickle sword. He has daggers in his belt and sun-disks, symbols of gods, on his chest (*ca.* 850 B.C.) (Archeological Museum, Istanbul)



maneser is always written in full. Even if this is the correct understanding of the name, it is impossible to identify which particu ar Shalmaneser the writer had in mind. Another possibility is the Moabite king Salamanu whose name is found in the annals of the Assyrian king Tiglath-pileser III (cf. *ANET*, p. 282), but this connection also remains uncertain. R. L. PRATT, JR.

SHALMANESER shal-mə-nē'zər [Heb. *šalman'eser*; Assyr. *šalmanu-ašaridu*, "Shalman [a deity] is leader [first]"]. The name of five Assyrian kings, only two of whom are significant for OT studies.

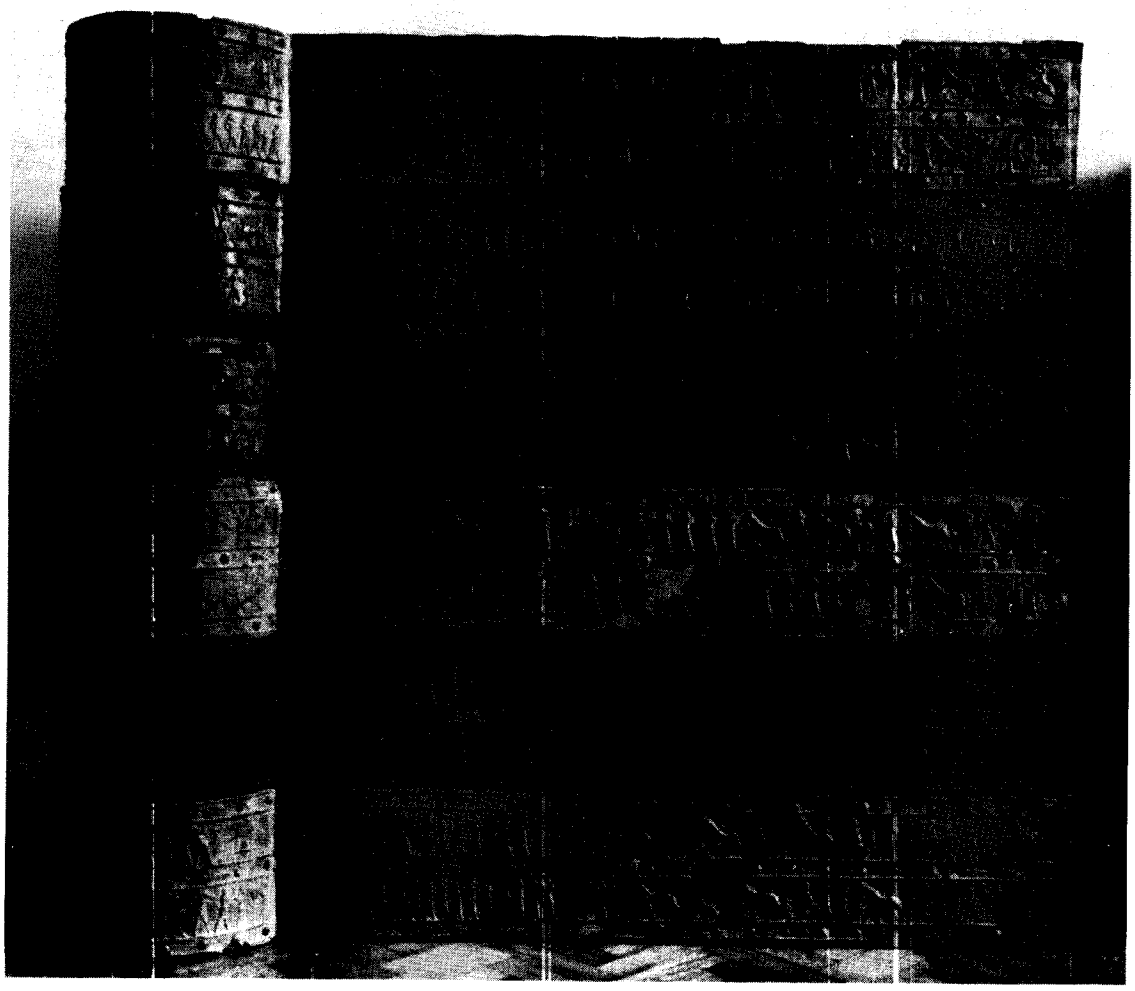
1. Shalmaneser I (1274-1245 B.C.), son of Adadnirari I, left the first detailed accounts of military operations by Assyrian kings (cf. *ARAB*, I, §§ 112-148; *CAH*, II/2 [3rd ed. 1975], 279-284). In the days of Adadnirari (1307-1275), Shalmaneser, and Tukulti-Ninurta I (1244-1208), Assyria became a major power and greatly extended its territory.

2. Shalmaneser II (1031-1020 B.C.), son of Assurnasirpal I, (1050-1032) and grandson of Šamši-Adad IV (1054-1051), left very few inscriptions (cf. *ARAB*, I, §§ 346f.). The 10th and 9th cents. were a period of weakness of the Assyrians and growth of Aramean power.

3. Shalmaneser III (858-824 B.C.), son of Ashurnasirpal II (884-859), grandson of Tukulti-Ninurta II (889-884), was one of the founders of the Assyrian empire. He was faced with opposition on the north, west, and south fronts, and finally, in his closing years, with civil insurrection. He left detailed records (cf. *ARAB*, I, §§ 553-721; *ANET*, pp. 276-281), so that it is possible to reconstruct much of his reign.

To judge from the number of campaigns to the north, this must have been the greatest problem area or military objective. Urartu had revolted when Shalmaneser I came to the throne (*ca.* 1274 B.C.), and military campaigns into the territory are recorded at frequent intervals. The kingdom of Urartu was centered about Lake Van (today in eastern Turkey). The region, including surrounding areas, was called Nairi (*ARAB*, I, § 685) and was marked by "the sea of the land of Nairi." Many of the petty kings of the area are named (I, § 722). In fact, Shalmaneser claimed that he was "conqueror from the upper sea and the lower sea of Nairi, and the great sea of the setting sun, as far as Mount Amanus -- the Hittite land to its farthest border" (I, § 647). From this it would appear that "the upper sea and the lower sea" were both in

The bronze Tel Balawat gates (below and on facing page) showing the military campaigns of Shalmaneser III (858-824 B.C.). The left gate depicts Assyrian chariots and archers; sacrifice at the Tigris River mouth; animal tribute from Gilzani; and prisoners being taken from Qarqar and Carchemish, among other cities.

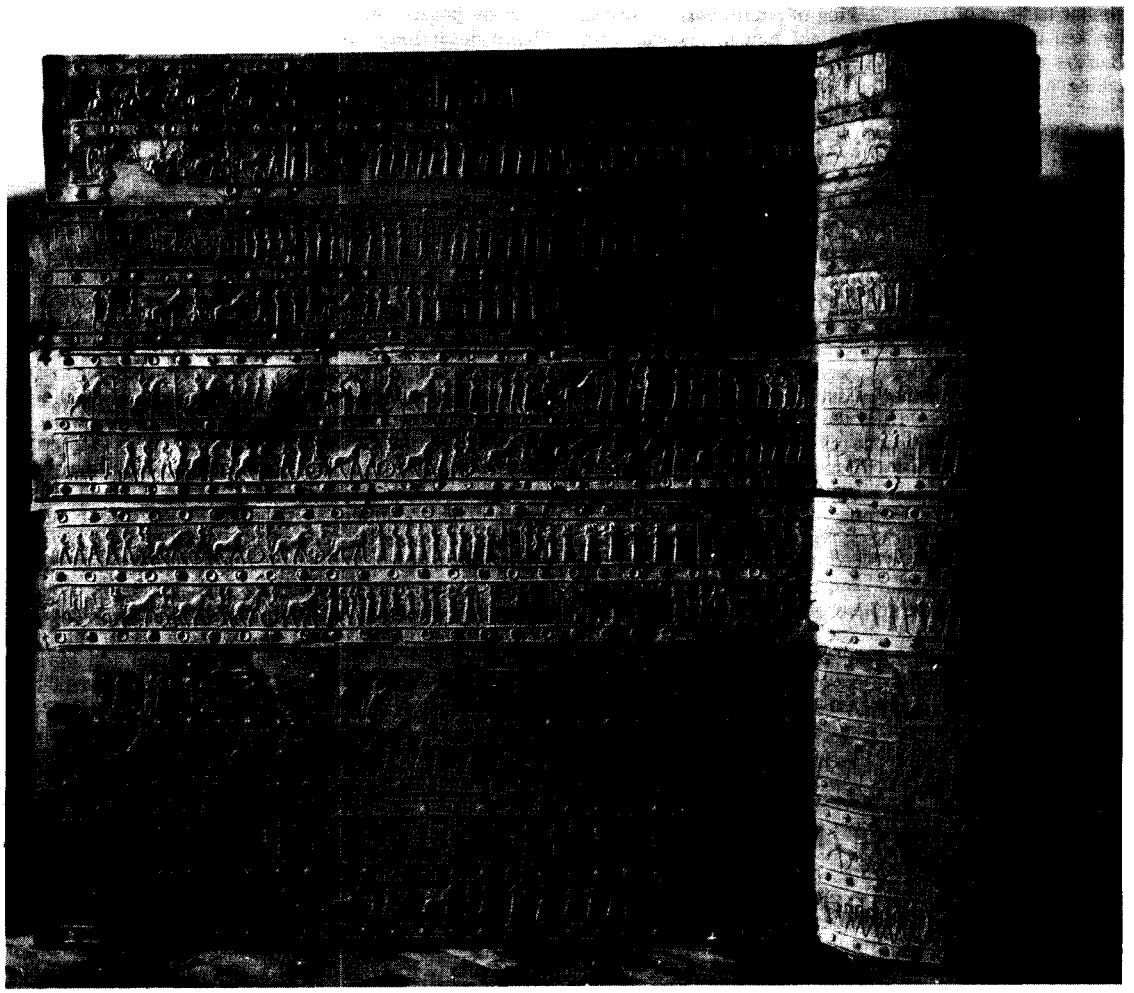


Nairi, and were distinct from the great sea of the setting sun (i.e., the Mediterranean), suggesting that the "upper" and "lower" seas may have been the Black Sea and Lake Van, or more likely, Lake Van and Lake Urmiah. In another inscription he described his conquest "from the sea of Nairi and the sea Zamua, which [is] inside" (I, § 617; *ANET*, p. 277). Since the land of Zamua is located in the Zagros mountains (M. A. Beek, *Atlas of Mesopotamia* [1962], p. 161), the sea of Zamua would seem to be Lake Urmiah and the sea of Nairi Lake Van. Shalmaneser claimed to have discovered the sources of the Euphrates and the Tigris rivers (*ARAB*, I, § 674; *ANET*, p. 276), and to have cut an image of himself "in the cliffs of the mountains, where the water [of the Tigris] breaks forth" (*ARAB*, I, § 660).

Campaigns to the north were broken by disturbances in other regions. In Shalmaneser's eighth year (851 B.C.), Marduk-bel-usate revolted against his brother Marduk-zakir-šumi, king of Karduniash (Babylonia). The Assyrian king, in support of the king of Babylonia, captured two cities. The next year another rebellion occurred. This time Shalmaneser marched on Babylon, captured several cities, and went on to Kaldu (Chaldea), to the sea called "Marratu" ("bitter [salty]," i.e., the Persian Gulf; cf. *ARAB*, I, §§ 566, 650; also called the Sea of Kaldu, I, § 641).

The greatest disturbances, except for those in the north and northeast, came from the Arameans. Shalmaneser I in his campaign in Ḫanigalbat (the kingdom of the Mitanni) had faced a contingent of Aḫlamê, a tribe or tribes from the Syrian desert (*CAH*, II/2 [3rd ed. 1975], p. 281). A little over a century later, Ašur-reša-iši (1133-1116) claimed that he had broken the groups of Aḫlamê that were ranging over a wide area to the north and west of Assyria, but Tiglath-pileser I (1115-1077) still had problems with these Aḫlamê, whom he identified as Arameans (*ARAB*, I § 239), in the city of Carchemish in the land of Hatti. In fact, he recorded on an eight-sided prism, "For the twenty-eighth time, in pursuit of the Aḫlamê Arameans, I crossed the Euphrates" (I, § 287). The Arameans were at that time located "from Tadmar . . . to Karduniash" (Babylonia), in other words, in much of the Syrian desert and into what is often called Aram-Naharaim, the region between the Euphrates and the Habur rivers.

The right gate shows chariots, battering rams, and impaled enemies. Also shown is tribute transported from Tyre in boats; animals and captives taken from Hamath and Hazuzu and other cities in Syria and Urartu; the Babylonians submitting to Shalmaneser, seated on a throne; and toward the bottom, soldiers crossing the mountains. The circles and squares on the gate represent military camps (courtesy of the Trustees of the British Museum)



These Aḥlamê Arameans, however, were no longer scattered tribes of nomads who lived largely by imposing tribute on all who used caravan routes. By the time of Shalmaneser III they had become federated — although never a nation — largely under Damascus. In his sixth year (853 B.C.) Shalmaneser was engaged by Hadad-ezer (Adad-idri) of Aram, Irḥuleni of Hamath, and other kings of Hatti and the seacoast (*ARAB*, I, § 563; *ANET*, p. 279), at Qarqar on the Orontes. In a fuller description, this battle of Qarqar included also Ahab the Israelite and numerous other peoples (*ARAB*, I, §§ 610f.). In spite of his claims of victory, Shalmaneser marched west again in his eleventh, fourteenth, and seventeenth through twenty-first years, sometimes mentioning only that he cut cedar timbers on Mt. Amanus, but on other campaigns he names Hazael of Aram (Damascus), and mentions the exaction of tribute from other city-states. Shalmaneser recorded the death of Hadad-ezer, and added that "Hazael, the son of a nobody, seized the throne" (I, § 681; *ANET*, p. 280). Since Hadad-ezer is named in Shalmaneser's fourteenth year (845 B.C.) and Hazael in his eighteenth (841 B.C.), the succession of Hazael must be placed within this period. The sickness and death of Ben-hadad (Adad-idri) and the succession of Hazael are recorded in 2 K. 8:7-18.

A certain Ben-hadad (for problems of identification cf. *ISBE*, I [1979], 458f.; *ben [Ḥ]adad*, "son of [the god] Adad," may have been a title used by several kings, similar to "son of David"), king of Aram, was requested by Asa of Judah (910-870) to aid him in his war with Baasha of Samaria (909-886). Ben-hadad complied by taking a number of northern cities and all the land of Naphtali (1 K. 15:16-20). In the thirty-eighth year of Asa, Ahab the son of Omri began to rule over Israel (874-853; cf. 1 K. 16:29). Naaman, commander of the army of Damascus, and Elisha the prophet fit into this period (cf. 2 K. 5:1-14). Ben-hadad besieged Samaria (6:24), but it was delivered at the word of Elisha (ch. 7). The battle of Qarqar also has to be placed in this period, probably shortly before the death of Ahab (853 B.C.). Presumably Ahab joined with Syria to face the threat of Shalmaneser's invasion, and after that threat was turned aside — for while Shalmaneser claimed victory, it is obvious that he had to return to face the Arameans several more times — Ahab talked Jehoshaphat of Judah into allying with him to take Ramoth-gilead from the Syrians (1 K. 22:29-40). Ahab was killed in that battle. Cf. *MNHK*, p. 62, esp. n. 6.

On the Black Obelisk, discovered at Nimrûd (Calah) and now in the British Museum, a panel shows Jehu (or his representative) bowing at the feet of Shalmaneser (*see* pictures in ARCHEOLOGY OF MESOPOTAMIA; JEHU; OMRI; cf. Beek, plates 179f.). An inscription above the relief reads "Yaua (Jehu), son of Ḫumri (Omri); silver, gold, a golden beaker, golden goblets, pitchers of gold, lead, staves for the hand of the king, javelins, I received from him" (*ARAB*, I, § 590; *ANET*, p. 281). This event is included in the record of his eighteenth year (841 B.C.), at which time Hazael gathered his forces on Mt. Saniru (Sirion, Hermon), and Shalmaneser defeated him, advancing as far as Mt. Hauran and Mt. Ba'li Ra'si (Carmel; cf. *ARAB*, I, § 672; *ANET*, p. 280). The OT does not record the paying of tribute by Jehu to Shalmaneser.

Shalmaneser's closing years are tragic, in a sense. In his twenty-seventh year (831 B.C.) he sent Dayan-Ashur, the "Turtan" ("second," from a Semitic root [*try*] attested also in Aramaic for "two"), against Urartu. In the following four years he recorded accounts of the campaigns led by Dayan-Ashur the Turtan in each instance. Significantly the accounts of these campaigns often are stated in the first person, although Shalmaneser was in Calah and not on the field of battle. The thirtieth campaign was against the Manneans and Parsua (Manni, Persia), on the east of Assyria, the first report of unrest on that side of the empire during his reign. In 827 B.C. his son Aššur-danin-apli raised a number of followers in many cities to oppose Shalmaneser's choice of Šamši-Adad to succeed him. Although twenty-seven cities supported the leader of the rebellion, Šamši-Adad V acceded to the throne in 824 B.C., and after two more years of struggle, he secured final victory with the help of the king of Babylon.

According to H. Frankfort, the period of Ashurnasirpal II and Shalmaneser III was the first of three great periods of late Assyrian art. Shalmaneser's contributions included a new use of metal, well-illustrated in the "bronze gates" of Balawat (Ingur-Enlil). See detail pictures in HAMATH; PHOENICIA; SIEGE; WAR. For a fuller discussion, cf. H. Frankfort, *Art and Architecture of the Ancient Orient* (1954), pp. 73-108, plates 91-93.

LaSor, *et al.*, *OT Survey* (1982), pp. 168, 264-272; *MNHK*, pp. 61-67; R. W. Rogers, *Cuneiform Parallels to the OT* (1912), pp. 288-304; *History of Babylonia and Assyria* (1915), pp. 222-250.

4. Shalmaneser IV (782-772 B.C.), son of Adadnirari III. What little is known of this king comes from the annals of Argistis I, king of Urartu. The Assyrian empire was at one of its low points, and Urartu was experiencing a new vigor. Shalmaneser fought campaigns against Urartu in every year from 781 to 774 with the exception of 777 and 775. Assyria lost many vantage points. More serious, probably, were the new attempts at revolt among the Arameans. Shalmaneser led punitive actions against Hatarika ("Hadrak," Zec. 9:1) and Damascus. He was succeeded by Aššur-dan III, who fared no better.

5. Shalmaneser V (727-722 B.C.), son of Tiglath-pileser III. Records from this king consist of a cylinder fragment recording the repair of the temple of Ezida in Borsippa (cf. *ARAB*, I, §§ 828-830).

Josephus cites a passage from Menander's annals, supposedly a translation of the Tyrian archives, concerning an invasion of Syria and all Phoenicia (*Ant.* ix.14.2 [283-87]). But some confusion seems to exist since Menander's name for the Assyrian king was "Selampsas" (§ 284), although Josephus connected this with "Salmanassēs," his customary form for Shalmaneser (§§ 277, 287). Moreover the king of Tyre is named Elulaios, "to whom they gave the name of Pyas [var. "Pylas"]" (§ 284). These names are remarkably similar to the Babylonian throne names of Tiglath-pileser III ("Pul," 2 K. 15:19; *CAH*, III, 32) and Shalmaneser V ("Ulalai;" *CAH*, III, 33; both names appear in the Babylonian King List; cf. R. W. Rogers, *Cuneiform Parallels to the OT* (1912), p. 202), suggesting that Menander or his source may have confused the names. The kings of Tyre at that time were Hiram and Mitinna (*ARAB*, I, §§ 772, 803), and Menander's statement that Elulaios "reigned thirty-six years") *Ant.* ix.14.2 [284]) cannot be fitted in with what is known of the history of Tyre. Mitinna (Metenna) was king of Tyre and paid tribute to Tiglath-pileser in 732 B.C. Sidon had a king called "Lule," who is generally identified with Elulaios; Sennacherib recorded that he conducted a campaign against the region in his third year (703 B.C.), and that Lule fled "far off into the midst of the sea," where he died (*ARAB*, II, § 239).

We are therefore left with the biblical account of Shalmaneser as our main source of information on the siege of Samaria (2 K. 17:5f.; 18:9f.). The accounts in Josephus (*Ant.* ix.13.1 [259]; ix.14.1 [277-79]) are simply a retelling

of the scriptural material. Tiglath-pileser III had invaded the northern part of Israel and captured parts of the land (*ca.* 732 B.C.; cf. 2 K. 15:29; 1 Ch. 5:26). Pekah of Israel was killed, and Tiglath-pileser set Hoshea on the throne (*ARAB*, I, § 816). From biblical chronology we may calculate this event shortly after the fall of Damascus (732 B.C.), or *ca.* 731/30 B.C. Tiglath-pileser died in 727 B.C. and was succeeded by Shalmaneser V. Hoshea of Israel probably took this occasion to cease paying tribute to Assyria, and he turned to Egypt for help (2 K. 17:4). This may be the background for expressions in Hosea's prophecy (Hos. 5:13; 7:11; 12:1).

Shalmaneser moved at once, and began a siege of Samaria which lasted three years (2 K. 17:5). In Hoshea's ninth year (*ca.* 722 B.C.), Samaria fell and the people of Israel were taken into captivity (17:6). Shalmaneser died in 722/21 B.C. in the month of Tebetu (December/January) and was succeeded by Sargon, who claimed that he had conquered Samaria (*ARAB*, II, § 55; *ANET*, pp. 284f.) The question whether Shalmaneser or Sargon captured Samaria has been the subject of scholarly debate. The consensus favored Sargon, but more recently there has been support for Shalmaneser, which seems to be the intent in 2 K. 17:5 (cf. H. Tadmor, *JCS*, 12 [1958], 22-40). According to the Babylonian Chronicle, Shalmaneser died in Tebetu, and on the twelfth day of Tebetu Sargon took his seat on the throne in Assyria (R. W. Rogers, *Cuneiform Parallels to the OT* [1912], p. 291 [lines 30f.]). Even if Shalmaneser's death was on the first day of Tebetu, time would not allow Sargon to capture Samaria and get back to Assyria by the twelfth of that same month. The actual capture of Samaria may have taken place in 720 B.C., Sargon's second year (*see* SARGON III).

The reference to Shalman in Hos. 10:14 is generally taken to be an abbreviated form of Shalmaneser, and the reference to the campaign of that king in his eighteenth year (*LBHG* [rev. ed. 1979], p. 341). Beth-arbel is identified with Irbid in Gilead.

Rogers, *Cuneiform Parallels to the OT* (1912), pp. 201-240; *ARAB*, II, §§ 422-442; *ANET*, pp. 274, 564-66.

W. S. LASOR

SHAMA sha'ma [Heb. *šāmāʿ*–'(God) has heard (a prayer)']. Son of Hotham the Aroerite (1 Ch. 11:44). He and his brother Jeiel were among David's "mighty men."

See *IP*, pp. 184f.

SHAMARIAH sham-ə-rī'ə (2 Ch. 11:19, AV). *See* SHEMARIAH 2.

SHAMBLES. An archaic term for "meat market" in 1 Cor. 10:25, AV. *See* MARKET.

SHAME; ASHAMED [Heb. *bôš*–'be ashamed' (e.g., 2 K. 2:17; Ezr. 8:22; Isa. 1:29; Jer. 6:15), hiphil of *bôš*–'put to shame' (e.g., 2 S. 19:5 [MT 6]; Ps. 53:5 [MT 6]; 119:31; Prov. 10:5), *bōšeṯ* (e.g., 2 Ch. 32:21; Ps. 35:26; Isa. 30:3, 5), *bûšâ* (e.g., Ps. 89:45 [MT 46]; Ezk. 7:18), niphal of *kālam*–'be humiliated' (e.g., 2 S. 10:5; 1 Ch. 19:5; Ezk. 16:27), hiphil of *kālam*–'insult' (e.g., Prov. 28:7), *kᵉlimmâ*–'insult' (e.g., Ps. 4:2 [MT 3]; Isa. 50:6; Ezk. 32:24f., 30), *ḥāpar* (e.g., Ps. 71:24), hiphil of *ḥāpar* (e.g., Isa. 54:4), *ḥerpâ*–'reproach' (e.g., 2 S. 13:13; Isa. 47:3), *qālôn*–'dishonor' (e.g., Ps. 83:16; Jer. 13:26; Hos. 4:7, 18), *ḥeseḏ*–'shame' (Lev. 20:17), etc.; Gk. mid./pass. of *aischýnō*–'be shamed' (e.g., Lk. 16:3; 2 Cor. 10:8), *kataischýnō*–'humiliate, dishonor' (e.g., pass., Rom. 9:33; 1 Cor. 1:27), *epaischýnomai*–'be ashamed of' (e.g., Mk. 8:38; Rom. 1:16), *aischýnē* (e.g., Lk. 14:9; Phil. 3:9), *aischrós*–'disgraceful' (1 Cor. 14:35; Eph. 5:12), *aischrokerdṓs* ("for shameful gain," 1 Pet. 5:2), *aischēmosýnē* ("shameless acts," Rom. 1:27), *anepaíschyntos*–'having no need to be ashamed' (2 Tim. 2:15), *atimía*–'dishonor' (2 Cor. 11:21), *atimázō*– 'hold in no honor' ("treat shamefully," Mk. 12:4; Lk. 20:11), pass. of *entrépō*–'put to shame' (2 Thess. 3:14; Tit. 2:8), *entropḗ*–'humiliation' (1 Cor. 6:5; 15:34), *hybrízō*–'mistreat,' 'insult' ("treat shamefully,"Mt. 22:6; Lk. 18:32; 1 Thess. 2:2), *deigmatízō*–'expose,' 'make an example of' (Mt. 1:19)]; AV also CONFUSION, REPROACH, UNCLEAN, CONFOUNDED, NAKEDNESS, etc.; NEB also HUMILIATED, CONFOUNDED, DISAPPOINTED DISGUSTED, BE TAKEN ABACK, LOOK FOOLISH, etc. A condition of humiliating disgrace.

In the RSV OT "shame" and "ashamed" are used primarily to render the Hebrew verbs *bôš* and *kālam* and their cognates. These terms most often denote an objective situation of disgrace rather than a subjective feeling of humiliation. The account of David's weeping for his son Absalom in 2 S. 19:3, 5 (MT 4, 6) illustrates two aspects of shame. First, shame is a situation or condition into which a person, city, or nation is brought, which involves a loss of respect and exposure to reproach. Such a situation may not be the fault of the one who must endure it. One cause for shame may be an unsuccessful venture, in which the opposite of what was sought is obtained. David's troops were in such a situation, for although they had successfully defended the king against Absalom, David's response was to mourn his lost son rather than to praise his troops for their victory; thus it was as if they had fled in battle (v. 3 [MT 4]). Other situations of shame included barrenness (cf. RSV "reproach," Gen. 30:23; Isa. 4:1; Lk. 1:25; *see* REPROACH; BARREN), widowhood (Isa. 54:4), military defeat (2 Ch. 32:21), and public humiliation (Lk. 14:9). The idioms "be put to shame" (e.g., Ps. 31:1 [MT 2]; 40:14 [MT 15]) and "be clothed in shame" (Ps. 35:26; 132:18) underscore the passive idea of shame as a condition that one has to endure.

Second, shame can refer to disgraceful conduct and its consequences. In 2 S. 19:5 (MT 6) Joab tells David that his weeping is shameful behavior, for its indicates that he loves those who hate him (Absalom) and hates those who love him (his troops). Other actions that create a situation of shame include premature litigation (Prov. 25:8), rape (2 S. 13:13), mutilation of a person's body (1 S. 11:2; RSV "disgrace" [Heb. *ḥerpâ*]), marriage to someone uncircumcised (Gen. 34:14; RSV "disgrace" [*ḥerpâ*]), lack of discipline in raising a child (Prov. 29:15), premature and impulsive answers to questions (Prov. 18:13), adultery (Hos. 2:5 [MT 7]; cf. Mt. 1:9), incest (Lev. 20:17), and arrogant mistreatment of another (cf. Mt. 22:6; Lk. 18:32).

The prophets employed the concept of shame theologically to describe both Israel's reproachable behavior toward God and the catastrophic consequences of that behavior. Israel's idolatry (Jer. 48:13; Hos. 4:18) and its attempts to find security through political alliances instead of through God (Isa. 30:3, 5; Jer. 2:36) were judged by the prophets to be shameful acts. Furthermore, Yahweh's judgment would bring to light the foolishness of such misplaced confidence in idols and foreign alliances, thereby exposing Israel's (as well as other idolatrous nations') shameful situation before God. Thus, Hosea prophesied that Israel's idols would not protect the nation from being destroyed by Assyria, and "Israel shall be

ashamed of his idol" (Hos. 10:6). Jeremiah proclaimed that Yahweh's judgment would bring everlasting shame on the false prophets who claimed to speak His word (Jer. 23:40). Isaiah pronounced a similar divine judgment against Babylon, graphically portraying Yahweh's vengeance as uncovering that nation's nakedness so that its shame could be seen by all (Isa. 47:3). Behind all these judgment oracles lies the implicit theological affirmation that Yahweh is the one who has the power to protect His people and thus to keep them from shame. This confession is frequently expressed by the psalmists (e.g., Ps. 25:2f., 20; 31:17 [MT 18]; for its expression in the NT, see below).

Divine judgment resulting in the exposure of shame can also be a means of salvation. The shaming of Israel's foes frequently signaled salvation for God's people (e.g., Jer. 50:2; 51:47; Ezk. 32:30; cf. the psalmists' petitions that their enemies be shamed, Ps. 25:3; 35:4; etc.; cf. also in the NT Lk. 13:17; Tit. 2:8; 1 Pet. 3:16). Furthermore, shame can also be associated with genuine repentance, which leads to salvation. Ezekiel described how God's gracious dealings with His people in forgiving them, restoring their fortunes, and establishing an everlasting covenant with them would bring into clearer relief their shameful infidelity of the past, and Judah's shame would lead to true humility (Ezk. 16:54, 59-61; cf. v. 52). Similarly, when the Passover was celebrated in King Hezekiah's time the priest and Levites "were put to shame, so that they sanctified themselves" (2 Ch. 30:15). So also, Ezra's prayer for forgiveness in Ezr. 9:6f. begins with an acknowledgement of shame. But those who refuse to acknowledge their shame (Jer. 3:3; 6:15) or who "glory in their shame" (cf. Phil. 3:19) are without hope.

In the NT "shame" and "ashamed" most often translate the Greek verb *aischýnō* (mid. or pass.) or a related term, e.g., the compounds *kataischýnō* and *epaischýnomai*, the noun *aischýnē*, and the adjective *aischrós*. *Aischýnō* is the most common LXX translation of Heb. *bôš*, and *aischýnē* of Heb. *bōšeṯ* and *bûšâ*. The NT usage of *aischýnzjewo* and its cognates is largely shaped by LXX usage. In a manner reminiscent of the OT prophets, Paul says in 1 Cor. 1:27 that God chose what was foolish and weak by worldly standards (a crucified Messiah) to "shame" (or "bring to nothing," v. 28) what was considered wise and strong; thus what the world viewed as shameful became glorious, and vice versa. He. 12:2 states that Jesus "endured the cross, despising the shame," and is now enthroned in glory. Like the OT psalmistsn NT believers confessed confidence that they would not be put in a situation of shame on account of their faith in Christ (Rom. 9:33; 10:11; Philm 1:20; 1 Pet. 2:6) or of their min stry in the gospel (2 Cor. 7:14; 10:8; 2 Tim. 2:15).

In several passages "being ashamed" (*epaischýnomai*) has the subjective sense of being embarrassed or afraid of ridicule. The NT writers recognized the constant temptation of Christians to be ashamed of a gospel that presented God's self-revelation in the weak and foolish (by worldly standards) form of a crucified Messiah. Thus Paul testifies in Rom. 1:16, "I am not ashamed of the gospel." In 2 Tim. 1:12, likewise, he states that although he suffers, "I am not ashamed, for I know whom I have believed." He also exhorts Timothy, "Do not be ashamed then of testifying to our Lord, nor of me his prisoner" (v. 8; cf. v. 16). Jesus warned that at His second coming He will be ashamed of (i.e., refuse to own as His disciples) those who draw back from following Him out of fear of human opinion (Mk. 8:38 par. Lk. 9:26). On the other hand, the author of Hebrews stated that God is "not ashamed" to be called the God of the OT saints (He. 11:16), and Christ "is not ashamed to call [those who suffer for Him] brethren" (2:11).

SHAMED shā'med (1 Ch. 8:12, AV, NEB). *See* SHEMED.

SHAMEFASTNESS; SHAMEFACEDNESS (1 Tim. 2:9, AV). The first spelling was the (correct) original. It was supplanted after about half a century by "shamefacedness," butwas restored by the RV. *See* MODESTY.

SHAMER shā'mər (1 Ch. 6:46, AV, NEB; 7:34, AV). *See* SHEMER 2, 3.

SHAMGAR sham'gär [Heb. *šamgar* (Jgs. 3:31; 5:6)]. One of a number of deliverers mentioned in the book of Judges who slew a host of Philistines in northern Israel preceding the rise of Barak and Deborah the prophetess (*ca.* 1125 B.C.). According to Josephus (*Ant.* v. 4.3 [197]) Shamgar died the same year he became judge. Our limited knowledge of Shamgar has led to a great deal of speculation among scholars and presents a number of problems for OT historians.

Most scholars view the first mention of Shamgar (Jgs. 3:31) as a later insertion (e.g., Richter, van Selms) that interrupts the narrative of Ehud. This is shown by the fact that one can easily jump from 3:30 (the defeat of Moab by Ehud and the Israelites) to 4:1 (the death of Ehud) without disrupting the text. Also, 3:31 lacks a number of elements common to the other "judges" (e.g., a divine calling, tribal affiliation, geographical details, duration of rule, and place of burial; note also the addition of "he too" [Heb. *gam hû'*]; see further van Selms). Even if one were to argue that Shamgar was simply a minor judge who had been accidently misplaced (presumably from 10:1-5 or 12:8-15?), this would still not account for the truncated state of the verse.

Scholars (e.g., Maisler) have been quick to point out the similarities between the heroic feat of Shamgar and other military exploits in the OT (e.g., those of the "mighty men" of David in 2 S. 21:15-22; 23:8-12, and esp. Samson's slaughter of a thousand Philistines at Lehi with the jawbone of an ass, Jgs. 15:14ff.). The mention of Shamgar in the Song of Deborah (a poem which predates its corresponding prose account in Jgs. 4) has led some (e.g., Cheyne) to the conclusion that Shamgar was inserted in the list of judges and supplied with a suitable heroic feat in order to provide some background for an otherwise unknown figure (or at least unknown to the later redactor who inserted 3:31). Since Shamgar is connected with Jael in the poem, the account of his victory is placed in the prose version so as to directly precede the story that leads to Jael's murder of Sisera.

Further problems arise when we consider the name itself. What type of name is Shamgar and how are we to understand *ben-ʿᵃnāṯ* ("son of Anath")? Although earlier scholars found parallels for the name in Hittite (Moore; Burney; Albright, *JPOS*), the more common view (following Maisler) has been that the name is Hurrian (e.g., Albright, *Yahweh*; Aharoni, "New Aspects"; de Vaux [qualified as a "Canaanite of Hurrian ancestry"]; Boling; Craigie; Gray; see Pfeiffer and Speiser for parallel Hurrian names). Van Selms, however, considered the name Canaanite (a shaphel or *š-* causative form based on the root *mgr*, p. 299), while Danelius preferred a combination of Hebrew (*gēr*, "sojourner") and Egyptian (*šm3* [*w*],

"foreigner," "stranger"; cf. the name Gershom in Ex. 2:22; 18:3).

Uncertainty continues with the second element of the name, *ben-ʿᵃnāṯ*, which could be: (a) the name of a town or village, located in Galilee (for similar place-names see Josh. 19:38; Jgs. 1:33), over which Shamgar possibly ruled (e.g., Albright, *JPOS; FSAC;* Noth; Alt; Bright); (b) a town in southern Palestine, located just N of Jaffa (near Philistine territory; see Danelius); (c) the name is a reference to the well-known Canaanite goddess Anath, who is often portrayed as a warrior-goddess, and serves to highlight Shamgar's role as a mercenary soldier (van Selms; Craigie); (d) a personal name (Garstang, pp. 63f., 284f., linked *ben-ʿᵃnāṯ* with a Syrian sea captain of the same name who had dealings with the Egyptian pharaoh Ramses II [*ca.* 1290-1224]; cf. also Milik, Aharoni ["New Aspects"], and Yeivin for occurrences of the name elsewhere). (We may safely ignore Fensham's proposal that *ben-ʿᵃnāṯ* identifies Shamgar as one of the Hanaeans, a semi-nomadic group attested in the Mari texts; see Danelius, van Selms, Craigie.)

The chronological implications of Shamgar's defeat of the PHILISTINES complicates matters further. Jgs. 5:6 seems to portray Shamgar and Jael as non-Israelites of a past age that preceded Deborah (*ca.* 1125 B.C.; Jael's role in 4:17ff. creates a problem for this view; cf. Freedman's proposed translation, which places the actions of vv. 6f. after Deborah's victory [pp. 149f.]) yet, according to the biblical text, the Philistines did not pose a real threat to the Israelites until the time of Eli, Samuel, and Saul (cf. 1 S. 4), a century later. (Note that Samson's clash with the Philistines was the result of the Lord's provocation [Jgs. 14:4], as opposed to any active aggression on the part of the Philistines themselves; this would seem to imply a state of fairly peaceful coexistence up to that point; see van Selms, p. 297.) Also, Shamgar's area of activity seems, at least according to the Song of Deborah, to have been in the northern part of Palestine, as opposed to the area of Philistine occupation in the south (i.e., the so-called pentapolis, which included the five cities Gaza, Ashkelon, Ashdod, Gath, and Ekron). (It is interesting that certain LXX MSS, along with a handful of other versions, insert the reference to Shamgar in MT 3:31 at the conclusion of ch. 16, following the Samson narrative, thus placing Shamgar in a more appropriate context for battle with the Philistines; see Moore, *JAOS*.)

In the light of the above comments, it would seem that Shamgar arrives on the scene too early and in the wrong place for his encounter with the Philistines. If we choose to accept him as a historical figure who preceded (or followed?) Deborah in the north, however, then perhaps his enemy was a faction of the group known as the sea-peoples (a general term denoting a number of Aegean peoples who invaded the coasts of Syria-Palestine and Egypt in the 13th and 12th cents. B.C.), of whom the Philistines formed only a part (Shamgar may have fought the group known as Tjekker [*ḏkr*], which Egyptian sources place in the area; see van Selms, Boling; also Aharoni, "New Aspects," pp. 257ff., who equates Shamgar's victory with the capture of Beth-shean, an Egyptian outpost manned by Aegean [sea-peoples] mercenaries). In this case, according to Aharoni, "it would not be surprising that they should be called Philistines since that became the standard biblical terminology for all the Aegean races that appeared in the land" ("New Aspects," p. 259).

While any conclusion is tentative, we may safely assume that Shamgar was not an Israelite. He was probably a Canaanite mercenary (following van Selms and Craigie) whose valiant deeds against the enemies of the newly emerging Israel caused his name to be remembered and subsequently recorded.

J. HUDDLESTUN

SHAMHUTH sham'huth [Heb. *šamhûṯ*] (1 Ch. 27:8). Commander of a division of David's army; called an "Izrahite" (NEB "Zerahite"; cf. v. 11). "Shammah of Harod" (2 S. 23:25) and "Shammoth of Harod" (1 Ch. 11:27) may well be the same person as Shamhuth. *See* SHAMMAH **4.**

SHAMIR shā'mər [Heb. *Q šāmîr, K šāmûr*] (1 Ch. 24:24). A Levite, son of Micah.

See *IP*, p. 231.

SHAMIR shā'mər [Heb. *šāmîr*–'thorn'].

1. The first of thirty-eight cities in the hill country (Josh. 15:48; LXX A *Saphir*, B *Samir*) that formed part of the tribal allotment of Judah (vv. 48-60).

2. A city located in the hill country of Ephraim (Jgs. 10:1; LXX A *Samareia*, B *Samir*). This city is mentioned as the home and burial place of the minor judge Tola (vv. 1f.), leading some to suggest that a single city Shamir may have been situated on the boundary between Judah and Ephraim. Others, however, identify Judahite Shamir with Khirbet Somerah (20 km. [13 mi.] WSW of Hebron) or Khirbet Ruddana (el-Bireh). The Ephraimite site is thought to have been located at or near the site of ancient Samaria.

See J. A. Callaway, *IEJ*, 20 (1970), 230-32.

G. H. WILSON

SHAMLAI sham'lī [Heb. *K šamlay, Q šalmay*; Gk. Apoc. *Sybaï* (Ezr. 2:46; 1 Esd. 5:30); AV, NEB mg., SHALMAI; AV Apoc., NEB Apoc., SUBAI. Head of a family of temple servants who returned from the Exile in Babylon; called SHALMAI in Neh. 7:48.

SHAMMA sham'ə [Heb. *šammā'*] (1 Ch. 7:37). An Asherite, son of Zophah.

SHAMMAH sham'ə [Heb. *šammâ*–'fame'].

1. Son of Reuel and grandson of Esau; a tribal chief of Edom (Gen. 36:13, 17; 1 Ch. 1:37).

2. Third son of Jesse, and an older brother of David; also called Shimeah (2 S. 13:3, 32), Shimei (2 S. 21:21; AV "Shimeah"; NEB "Shimeai"), and Shimea (1 Ch. 2:13; 20:7; AV also "Shimma"). He was present when David was anointed by Samuel (1 S. 16:1-13). With his two older brothers he fought under Saul against the Philistines and witnessed David's slaying of Goliath (17:13-51). He was the father Jonadab (2 S. 13:3, 32) and of Jonathan, who also slew a giant (21:20f.).

3. Son of Agee the Hararite; one of David's mighty

men known as "the three" (2 S. 23:11). He single-handedly defended a field of lentils against an attack by the Philistines (vv. 11f.). The parallel passage (1 Ch. 11:12-14) ascribes this feat to Eleazar son of Dodo, but this may be due to the accidental omission of three lines by a copyist (cf. 2 S. 23:9-12; 1 Ch. 11:12-14). In 2 S. 23:32f. the Hebrew for "son of" has probably been accidentally omitted between "Jonathan" and "Shammah the Hararite." The parallel passage (1 Ch. 11:34) has "Jonathan the son of Shagee [a misreading for Agee] the Hararite." If "son" here means "grandson," this passage conforms with 2 S. 23:32f. as restored. Lucian's version overcomes the difficulty by reading "son of Shammah." (See S. R. Driver, comm. on Samuel [*ICC*, 1913], pp. 365, 371.)

4. One of David's mighty men known as "the thirty"; a native of Harod, a village near Gilboa in the vale of Jezreel (2 S. 23:25). In the parallel list (1 Ch. 11:27) he is called SHAMMOTH; he is probably also identical with SHAMHUTH (27:8). J. A. BALCHIN

SHAMMAI sham'ī [Heb. *šammay*].

1. A Jerahmeelite of the tribe of Judah; son of Onam, brother of Jada, and father of Nadab and Abishur (1 Ch. 2:28, 32).

2. A Calebite of the tribe of Judah; son of Rekem and father of Maon (1 Ch. 2:44f.).

3. A Judahite; son of Mered by his Egyptian wife Bithiah (1 Ch. 4:17).

SHAMMOTH sham'oth [Heb. *šammôṯ*] (1 Ch. 11:27). One of David's mighty men known as "the thirty." According to the MT he was a "Harorite" (*hahᵃrôrî*; cf. AV, RSV mg.); the RSV has emended the text to read "of Harod" (NEB "from Harod") in order to harmonize this passage with 2 S. 23:25, where the same person is called "Shammah of Harod." The latter form is probably correct. *See* SHAMMAH **4.**

SHAMMUA sha-mōō'ə [Heb. *šammû(a)ʿ*]; AV also SHAMMUAH (2 S. 5:14).

1. A Reubenite, son of Zaccur; one of the twelve men sent by Moses to spy out the land of Canaan (Nu. 13:4).

2. One of the sons of David who were born in Jerusalem (2 S. 5:14; 1 Ch. 14:4); called "Shimea" in 1 Ch. 3:5.

3. A Levite; son of Galal and father of Abda (Neh. 11:17); called "Shemaiah" in 1 Ch. 9:16.

4. Head of the priestly family of Bilgah in the time of Joiakim (Neh. 12:18).

See *IP*, pp. 38, 185.

SHAMSHERAI sham'shə-rī [Heb. *šamšᵉray*]. A Benjaminite; first son of Jeroham (1 Ch. 8:26).

SHAPHAM shā'fəm [Heb. *šāpām*]. A Gadite who was second in command in his tribe and lived in Bashan (1 Ch. 5:12).

SHAPHAN shā'fən [Heb. *šāpān*–'rock badger, coney'].

1. Son of Azaliah. Shaphan was from a family of scribes and was a high ranking member of Josiah's administration (2 K. 22:3, 8-10, 12, 14, 22; 2 Ch. 34:8, 15f., 18, 20). Josiah sent him to Hilkiah the priest in the year 622 B.C. with the instructions and funds for the repair and renovation of the temple. It is possible that Shaphan was commissioned to oversee the project, for when Hilkiah discovered the book of the law in the temple, he reported it to Shaphan. When Shaphan gave a report to the king of the execution of his duties, he also read the book of the law to Josiah. Josiah appointed Shaphan as part of the committee to inquire as to the authenticity of the book. The committee consulted the prophetess Huldah, who commended Josiah for his repentant response.

The remainder of the references to Shaphan occur in the activities of his sons. One son, Ahikam, was likewise a member of the contingent that went to consult Huldah concerning the book of the law (2 Ch. 34:20). Ahikam also served as a protector to Jeremiah when the people wanted to kill him (Jer. 26:24). Another son, Elasah, was not only an official messenger of King Zedekiah in the delegation sent to Nebuchadrezzar, but he also was the one who carried Jeremiah's letter to the exiles in Babylon (29:3). A third son, Gemariah, had a chamber in the temple, from which Baruch read aloud the ominous prophecy of Jeremiah (36:10). Gemariah was among those who pleaded with King Jehoiachin not to burn the scroll of Jeremiah (36:25). Gedaliah, who was Nebuchadrezzar's appointee as governor of Judah after the fall of Jerusalem, was a son of Ahikam and grandson of Shaphan.

2. The father of Jaazaniah, who was apparently a leader of the seventy elders that Ezekiel saw in his vision (Ezk. 8:11). These were the elders of the house of Israel who were committing idolatrous apostasy in the temple area in Jerusalem. J. H. WALTON

SHAPHAT shā'fat [Heb. *šāpāṭ*–'judged'].

1. A Simeonite, son of Hori; one of the twelve men sent by Moses to spy out the land of Canaan (Nu. 13:5).

2. Father of the prophet Elisha; a resident of Abel-meholah (1 K. 19:16, 19; 2 K. 3:11; 6:31).

3. A descendant of the royal line of David (1 Ch. 3:22). According to the Hebrew text he was the youngest son of Shemaiah (so AV, RSV). The text is difficult, however, because it states that there were six sons but lists only five. Perhaps the phrase "and the Sons of Shemaiah" arose by dittography and should be deleted (cf. *BHS*, NEB; see comms.). This would make Shecaniah the father of Shaphat and his five brothers.

4. A Gadite who lived in Bashan (1 Ch. 5:12). Possibly the LXX and Targum are correct in reading *haššōpēṭ*, "the judge" (a title of Janai), in place of *šāpāṭ* (see *BHS*).

5. Son of Adlai; herdsman in charge of King David's herds in the valleys (1 Ch. 27:29).

6. [Gk. A *Saphat*, B *Saphag*]; AV SABAT; NEB SAPHAT. Head of a family of "sons of Solomon's servants" who returned with Zerubbabel from the Exile (1 Esd. 5:34); the name is lacking in par. Ezr. 2:57; Neh. 7:59. N. J. O.

SHAPHER shā'fər (Nu. 33:23f., AV, NEB). *See* SHEPHER, MOUNT.

SHAPHIR shā'fər [Heb. *šāpîr* < *šāpar*, "be beautiful or pleasing"; LXX *Kalōs*] (Mic. 1:1). A place whose name perhaps indicates the nature of its soil (*LBHG* [rev. ed. 1979], p. 109). This town "Beautiful," whose divine judgment will be nakedness and humiliation, is named by Micah in his lament over Judah (Mic. 1:8-16). Also, LXX A translated Heb. *šāmîr* in Josh. 15:48 as *Saphir*, suggesting the hill country of Judah as the location of Shaphir (*GTTOT*, § 1531, p. 472; but cf. *EAEHL*, IV, *s.v.* "El-Qôm, Khirbet" [W. G. Dever]). But on the basis of Eusebius (*Onom.* 156), who names a Shafir between Eleutheropolis and Ashkelon, some scholars identify Shaphir with es-Suwafir, SE of Ashdod. J. E. MCKENNA

SHARAI shâr'ī [Heb. *šāray*] (Ezr. 10:40). One of the sons of Binnui who had married a foreign woman in exile; the name is lacking in par. 1 Esd. 9:34.

SHARAIM shə-rā'əm (Josh. 15:36, AV). *See* SHAARAIM 1.

SHARAR shâr'är [Heb. *šārār*, some MSS *šārāḏ*]. A Harite; father of Ahiam, one of David's mighty men known as "the thirty" (2 S. 23:33). In 1 Ch. 11:35 he is called "Sachar" (Heb. *śāḵār*).

SHARE (1 S. 13:20, AV). *See* PLOW.

SHARE; SHARING [Heb. *ḥālaq* (1 S. 30:24; Job 39:17; Prov. 17:2), hithpael of *'ārab*–'be intermixed with' (Prov. 14:10), *pāras*–'break' (Isa. 58:7), *nāṯan min* (Prov. 22:9), *sāpaḥ* ("have a share," 1 S. 26:19), *ḥēleq* (Gen. 14:24; 1 S. 30:24; Job 17:5; Eccl. 9:6), *ḥeḇer* (Prov. 21:9; 25:24), *yāḏ* (2 S. 19:43), *peh* (2 K. 2:9); Gk. *koinōnéō* (Rom. 15:27; Gal. 6:6; He. 2:14; 1 Pet. 4:13; 2 Jn. 11), *koinōnía* (Phil. 3:10; Philem. 6; He. 13:16), *koinónós eimí* (2 Cor. 1:7), *synbasileúō* ("share the rule," 1 Cor. 4:8), *synkakouchéomai* ("share ill-treatment," He. 11:25), *synkakopathéō* ("share in suffering, 2 Tim. 1:8; 2:3), *synkoinōnéō* (Phil. 4:14; Rev. 18:4), *synkoinónós (gínomai)* (Rom. 11:17; 1 Cor. 9:23; Rev. 1:9), *metadídōmi* (Lk. 3:11; 1 Thess. 2:8), *metalambánō* (2 Tim. 2:6; He. 12:10), *klḗros* (Acts 1:17), *symmerízō* (1 Cor. 9:13), *(échō) méros* (Lk. 15:12; Rev. 20:6; 22:19), *merís* (Col. 1:12), *metéchō* (1 Cor. 9:10, 12), *métochos (gínomai)* (He. 3:1, 14)]; AV also PORTION, PART, DEAL, PARTAKER, FELLOWSHIP, etc.; NEB also PART, INTEREST, PLACE, etc.; supplied contextually by the RSV in 1 K. 2:26; Rom. 4:16; 5:2; 2 Cor. 1:5.

The English verb "share" has three basic senses: (1) "divide, apportion," (2) "give some of one's own possessions to another," and (3) "participate in someone else's action or fate." The Hebrew equivalent to the first sense is the verb *ḥālaq*. Its related noun *ḥēleq*, as well as the words *yāḏ* ("hand") and *peh* ("mouth") in idiomatic constructions, mean therefore "portion" in the sense of that which rightly belongs to someone (cf. the English phrase "fair share"). This sense is also conveyed by the Greek noun *méros* and its cognates *merís* and *symmerízō*. The Hebrew verb *pāras*, on the other hand, simply means "break," while Gk. *klḗros* (Acts 1:17) is better translated "lot" or "allotted portion."

The second sense of "share," with its connotations of charity and compassion, is expressed literally by the Hebrew phrase *nāṯan min* ("give some of"; Prov. 22:9). In the NT this sense is conveyed by Gk. *koinōnía* and its cognates. Most often translated "fellowship" (e.g., Acts 2:42; 1 Cor. 1:9), carries a concrete sense of social responsibility; i.e., it implies that Christian fellowship involves the sharing of physical goods with those who are needy.

The third sense of "sharing," i.e., that of participating in someone else's life, can be conveyed either by repetition of the phrase (e.g., 1 K. 22:6) or, in Greek, by the use of *metéchō* ("take part") and its cognates. Sometimes this sense is expressed simply by the use of *syn-* ("with") as a verbal prefix (*synbasileúō, synkakopathéō*).

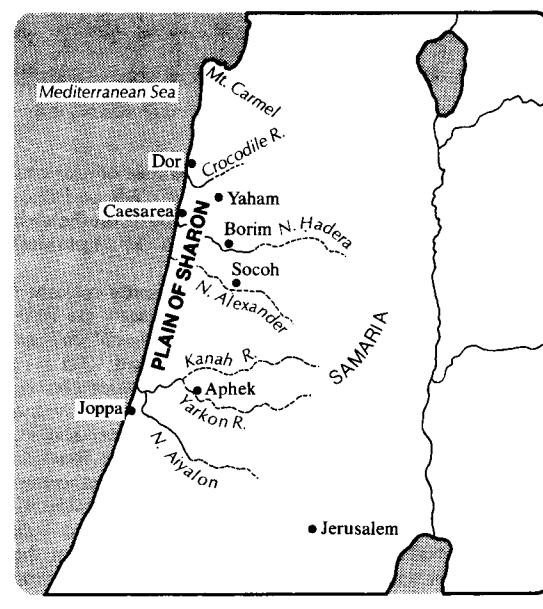
SHAREZER shär-ē'zər [Heb. *śar-'eṣer*]; AV also SHEREZER; NEB also BETHEL-SHAREZER (Zec. 7:2). The name of two persons in the OT. It corresponds to Akk. *šar-uṣur*, "protect the king," found otherwise not as a complete name but as elements in personal names, e.g., Bel-shar-usur (i.e., Belshazzar), "may Bel protect the king" (Dnl. 5:1, etc.).

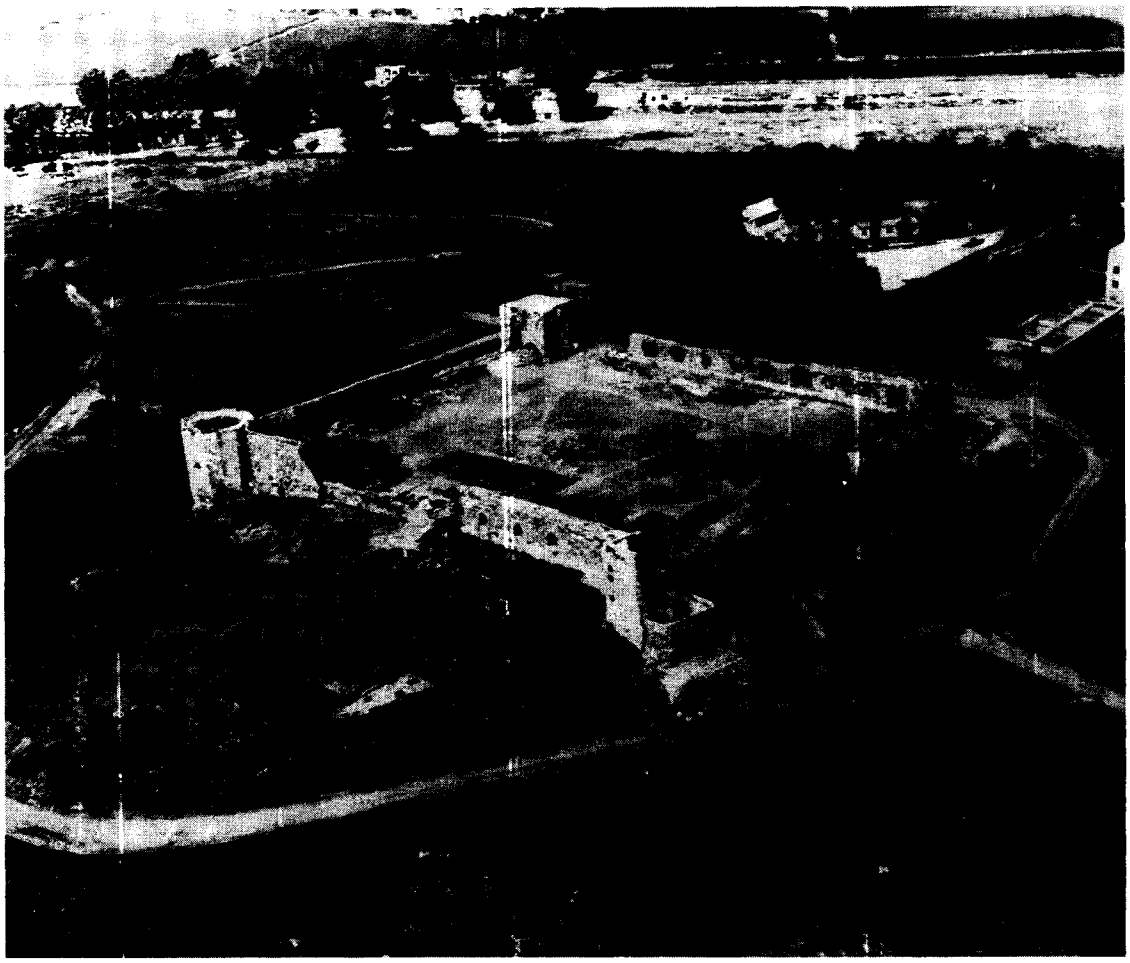
1. Son of Sennacherib king of Assyria, who with Adrammelech slew his father (2 K. 19:37 par. Isa. 37:38; cf. 2 Ch. 32:21). The Babylonian Chronicle says that Sennacherib "was slain by his son in a revolt," whereas the OT speaks of both the sons as assassins. The Chronicle, however, may refer to the actual murder by one son and the OT to the complicity of both (see *DOTT*, pp. 70-73). Sharezer is not otherwise known, and some have suggested that his full name is NERQAL-SHAREZER (cf. Jer. 39:3, 13) or that it is a corruption from Shar-etir-Ashur, the name of a son of Sennacherib (see J. Gray, *1 & 2 Kings* [*OTL*, 2nd ed. 1970], pp. 694-96).

2. A contemporary of the prophet Zechariah mentioned in connection with a delegation sent to the spiritual leaders to ask whether fasting need continue (Zec. 7:2). It is difficult to determine whether Sharezer was sent or sent others on the mission. The Hebrew text may read "They of Bethel sent" (so AV, RSV), or "They of Bethel, even Sharezer, sent"; or it may refer to the name of one person, viz., "Bethel-sharezer" (so NEB; lit. "May [the god] Bethel protect the king"). (See J. G. Baldwin, *Haggai, Zechariah, Malachi* [*Tyndale OT Comms.*, 1972], pp. 141-43.) M. A. MACLEOD

SHARON shâr'ən [Heb. *šārôn*–most probably 'scrub forest'; Gk. *tó pedíon, ho drymós, ho Sarōn*]; AV NT SARON. Apparently either a topographical term or a place name. It is used in the Moabite Stone (*šrn*, line 13) as a geographical designation; in the Sefire stele (i.a. 34) it corresponds to a north Syrian town known from Assyrian sources (uru*Sa-ru-na*). The reference in 1 Ch. 5:16 to a Transjordanian place or zone need not be emended to "Sirion"; it simply illustrates that as a topographical term "Sharon" is applicable to more than one place. But the Sharon par excellence (always with the definite article in the MT) is the central coastal plain.



I. Description.–Most ancient sources do not give the exact delimitation of the plain, but on three sides its natural boundaries are obvious. It begins on the southwest side of the CARMEL range, and it includes the region of DOR if the testimony of the Eshmunazer inscription can be taken as explicit (see below). But Eusebius (*Onom.* 162.5f.) counted it as only from the district of Caesarea,



The ruins of Aphek, an important crossroads city in the Sharon, occupied since the 4th millennium B.C. (W. Braun)

which must have excluded that of Dor, whose border was at the Chorseos River (Naḥl Daliyya = Wâdī ed-Difla). The Sharon's western border is the seacoast; on the east it is bounded by the foothills of Samaria (Mt. Ephraim) and the Carmel range.

The JOPPA area to the south was apparently reckoned with the Sharon (Eusebius *loc. cit.*), although the river Yarkon (Nahr el-ʿAujā), rising at Aphek (Râs el-ʿAin) and cutting across the plain to its outlet 5.6 km. (3.5 mi.) N of Joppa, forms a natural barrier to commerce coming from the south. The Yarkon is joined by the Naḥl Aiyalon (Wâdī esh-Shellâl) and on the north by the river Kanah. Some other streams work their way from the foothills across the Sharon to the coast. Among the most important are the Crocodile River (Naḥl Tanninim = Nahr ez-Zerqā), Naḥl Ḥadera (Nahr el-Mefjir = Wâdī Khuḍeirah), and Naḥl Alexander (Nahr Iskanderûneh), which comes out of the foothills to the south and curves north-northeast, collecting several other streams, until it finally turns west to the sea. Of lesser importance is Naḥl Poleg (Nahr el-Fâliq); but see below.

The Naḥl Alexander's detour northward is necessitated by a zone of higher ground in the middle of the plain. This Mousterian red sand was of little use for cultivation in ancient times (today it is prime citrus soil) and thus was an obstacle to ancient settlement. Only a few remnants of the famous oak trees remain from antiquity (although the land was not cleared in antiquity because of the soil's unsuitability for farming). Both Josephus (*BJ* i.13.2 [250]; *Ant.* xiv.13.3 [334]) and Strabo (xvi) make reference to these great woods. The long line of sandstone ridges shielding the Sharon from the sea also once blocked efficient drainage of the various streams, creating marshes and swamps which made human habitation difficult and forced most ancient traffic to follow the eastern edge of the plain. Effective drainage was achieved during Roman times, but there are some indications that earlier engineers anticipated those efforts.

The principal seaports were Dor in the north and Joppa in the south. Caesarea and other NT ports, apparently first established by Phoenicians during the Persian age, were not important in the OT period. A significant M.B. II enclosure (Tell Poleg) was discovered at the mouth of Naḥl Poleg.

Real settlement began mainly on the eastern side of the Sharon in OT times. The abundant water sources along the edge of Samaria's foothills led to the establishment of important Bronze Age urban centers, e.g., Gath-padalla, Yaham and Socoh. In the adjacent fields W of them (but not in the Mousterian sand) were a few other settlements, the most important at Tel Zeror (Tell edh-Dhurûr). The line of towns on the eastern edge of the Sharon formed

an essential link in the trunk route from Egypt to Mesopotamia. Caravans (and armies) normally turned east to avoid crossing the Yarkon; thus they passed Aphek and continued north along the margin of the foothills before entering one of the passes to the Jezreel Valley.

The plain was known for its grain-bearing lands (the eastern zone and the area S of the Yarkon) and especially for its pasturage (1 Ch. 27:29; Isa. 65:10). The famed "rose" (Heb. *ḥ^{a}ḇaṣṣeleṯ*, "crocus," so RSV mg.) of Sharon (Cant. 2:1) is probably a "fresh shoot of a reed" (Akk. *ḫabaṣillatu*). The Sharon's desolation (Isa. 33:9) is a sign of divine displeasure with Israel, and its abundant blossoming (35:2) symbolizes the return of God's favor.

II. History.–The Sharon first enters recorded history, though not by name, during the first campaign of Thutmose III. He had marched from Egypt to crush a coalition of Canaanite city-states whose forces were waiting near Megiddo in the Jezreel plain. His soldiers reached Yaham (Yemmā), where they held a counsel of war before deciding to advance via the Aruna Pass. Their alternatives were the "southern" route, via Wâdī Abū Nâr to the Dothan Valley, and the "northern" route, which went past Zephath to enter the Jezreel beside Jokneam.

Thutmose's successor Amenhotep II was crossing the plain of Sharon (*p3 [ꜥ]-[m]-[qu] śù-ri-na*) on his return to Egypt from his first Syrian campaign when he captured an emissary from Naharina (Mitanni), who carried a clay epistle (in a pouch around his neck). Later Amenhotep had to return from Egypt to quell an uprising in Canaan. The town of Aphek received him with complete submission, but he apparently was resisted at Yaham (Yaḥm) and perhaps at Socoh. The most illuminating details about settlement in the Sharon are found in the description of what followed. Pharaoh attacked "the villages of *Mapasin* and the villages of *Ḥatazin*, two towns west of Socho"; the inhabitants with their horses and cattle were all seized as booty. The following day two more towns were attacked, Adoren (*ꜥa-turi-n*) and Migdol-yen( )t (*ma-k-da-la-yi-n-t*), probably Tel Zeror). The social organization is that of towns with dependent villages; the economy was largely pastoral.

During the Amarna age (14th cent. B.C.) the principal city on the Sharon seems to have been Gath-padalla (Jett), whose ruler Baꜥlu-mahr was deeply involved for a time in the intrigues of the prince at Shechem. After being arrested and escaping, he finally learned his lesson and probably ended his career as a loyal Egyptian vassal.

The aqueduct at Caesarea, a major coastal city of the Sharon at the time of Christ (W. Braun)

The prince of Gath-padalla may be the "king of the Sharon" in the list of conquered kings (Josh. 12:18; contra RSV "king of Lasharon"; cf. LXX *basiléa Aphek tḗs Sarōn*, "king of Aphek of the Sharon"; NEB "king of Aphek-in-Sharon"). The plain was allotted to the tribe of Manasseh (Josh. 17:7-10). Many small, unfortified communities sprang up in the Sharon during the early Iron Age. During the united monarchy David's royal flocks were pastured there by Shitrai, a local inhabitant ("Sharonite"). The plain was included in Solomon's third administrative district (1 K. 4:10).

Little direct information is available about the Sharon during the divided monarchy. Shishak marched across it during his campaign against Judah and Israel (1 K. 14:25-28; 2 Ch. 12:2-9). He conquered the Sharon cities of Borim, Gath-padalla, Yaham, and Socoh. After Tiglath-pileser III's victories over Israel (2 K. 15:29), the plain seems to have remained part of Samaria (733 B.C.). In any case, when the entire land of Samaria finally fell (722), the plain was attached to the new province of Samerina. In 671, when the Assyrian king Esarhaddon was marching toward Egypt, he passed "Apku [Aphek] which is in the region of Sam < ari > a" (*ANET*, p. 292).

During the Persian period the Phoenician cities on the Lebanese coast expanded their influence southward by establishing colonies at the mouths of the streams flowing across the Sharon. King Eshmunezer of Sidon claimed that the great Persian monarch had given him "Dor and Joppa, the rich mighty lands of Dagon, which are in the Plain of Sharon" (Eshmunazer stele, line 19; *ANET*, p. 662).

During the NT period the plain was divided among several municipal territories. Caesarea, to which was added the toparchy of Narbata, controlled the northern portion, while Antipatris (Aphek) had the southern, mainly the plain of Kefr Sava. Apollonia and Joppa also had districts along the coast. In Acts 9:35, the only NT reference to the Sharon, its residents saw Peter's mighty work at Lydda (Lod). Simon Magus (8:9-24), according to Justin Martyr (*Apol.* i.26.56), was a resident of Gitta, which is probably Gath-padalla. (*See* GATH III).

A. F. RAINEY

SHARONITE shâr'ən-īt [Heb. *haššārônî*] (1 Ch. 27:29); NEB OF SHARON. A designation applied to Shitrai, the herdsman in charge of King David's herds in the plain of SHARON.

SHARUHEN shə-rōō'ən. *See* SHAARAIM 2.

SHARUHEN [Heb. *šārûḥen*] (Josh. 19:6). According to the MT of Josh. 19:6, this was a town of Simeon. The parallel text in Josh. 15:32 has SHILHIM (Heb. *šilḥîm*). The Shishak list has *š-r-ḥ-m(?)* (no. 125), which tends to support the latter as the correct reading, since the Egyp. *r* could represent *l* or *r*. The Simeonite list in 1 Ch. 4:31 has SHAARAIM (Heb. *ša^{a}rayim*), which may be a scribal guess for a corrupted text. The LXX for Josh. 19:6 has *kaí hoi agroí autṓn*, "and their fields," which seems to represent an original Heb. *wšdwtyhn* instead of MT *wšrwḥn*. The name Sharuhen is therefore most likely a ghost word. But the fact that Egyptian records, viz., the tomb inscription of Ahmose and the Annals of Thutmose III, refer to a town named *š-r-ḥ-n*, probably to be read *šarḥân*/*šarḥôn* (with Albright) in southern Palestine, cannot be ignored. Albright had identified this town with the Sharuhen of Josh. 19:6 and placed it at Tell el-Farꜥah (south). But that site is too

small to have required a three-year Egyptian siege (or three campaigns). Kempinsky has suggested Tell el-ʿAjjûl as a much larger and more imposing site. To suit the statement in the annals of Thutmose III that at the beginning of his first campaign the Egyptian garrison was holding out at Sharḥan while the rest of Reṭjenu (= Canaan) from Yurza to the end of the earth had rebelled against Egyptian rule, one might make a different suggestion. Thutmose III says he came to Gaza, which is north of Tell el-ʿAjjûl, without opposition. So it seems only logical to look for Sharhan N or NW of Gaza. The most impressive site in that direction is Tel Haror (Tell Abū Hureirah), which has been advocated as a strong candidate for Gerar. But Gerar may be only a district and not a city. If Sharḥan were at Tel Haror, then Yurza might be at Tel el-Ḥesī (taken by Albright to be Eglon).

Bibliography.–W. F. Albright, *BASOR*, 33 (Feb. 1929), 7; *EAEHL*, IV, s.v. "Sharuhen, Tell" (Y. Yisraeli); A. Kempinsky, *IEJ*, 24 (1974), 145-152. A. F. RAINEY

SHASHAI shā'shī [Heb. *šāšay*; Gk. Apoc. B *Seseis*, A *Sess(e)is*] (Ezr. 10:40 par. 1 Esd. 9:34); AV Apoc. SESIS; NEB Apoc. SESSIS. An Israelite layman who divorced his foreign wife in the time of Ezra.

SHASHAK shā'shak [Heb. *šāšāq*] (1 Ch. 8:14, 25). A Benjaminite; the father of eleven sons. Depending upon the punctuation of the Hebrew text, he was either the son of Elpaal (cf. vv. 12-14, RSV) or of Beraiah (cf. vv. 14-16, NEB).

SHAUL shôl [Heb. *šā'ûl*; Gk. *Saoul* (cf. SAUL)]; AV also, NEB, SAUL; **SHAULITES** shôl'īts [Heb. *haššā'ûlî*] (Nu. 26:13); NEB SAULITE.

1. One of the ancient Edomite kings who ruled before Israel had kings (Gen. 36:37f.; 1 Ch. 1:48f.). He came from REHOBOTH ON THE EUPHRATES (NEB "Rehoboth on the River"; cf. AV).

2. Son of Simeon and a Canaanite woman, among those who traveled to Egypt with Jacob during the famine (Gen. 46:10; Ex. 6:15; 1 Ch. 4:24); head of the "Shaulites" (Nu. 26:13), a clan of mixed Israelite and Canaanite descent.

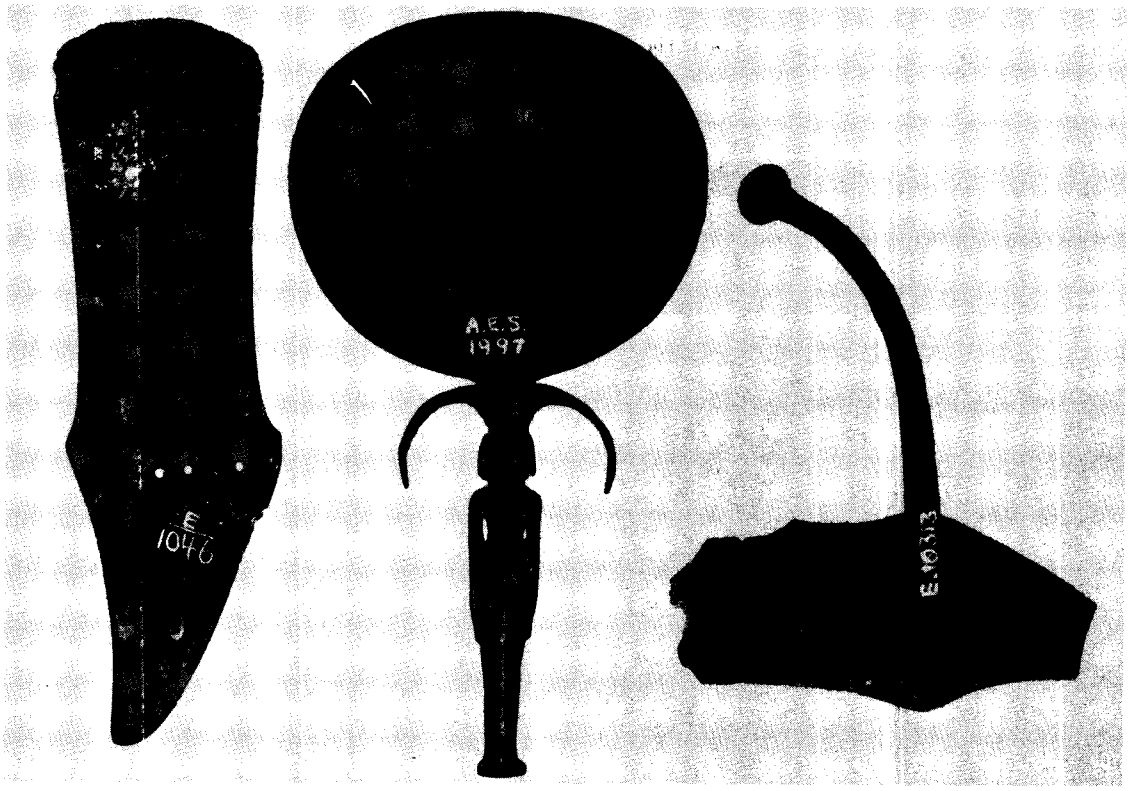
3. A Kohathite Levite, son of Uzziah (1 Ch. 6:24 [MT 9]).

See *IP*, pp. 136, 216.

SHAVE [Heb. *gālaḥ*] (Gen. 41:14; Lev. 14:8f.; Jgs. 16:19; Jgs. 16:19; Isa. 7:20; etc.); AV also POLL; NEB also CUT; [*gāzaz*] (Job 1:20); [Gk. *xyráō*] (Acts 21:24; 1 Cor. 11:5f.). To cut or scrape off hair, especially close to the surface of the skin.

Gālaḥ ("to be bald, smooth") is used in the OT to indicate both shaving and cutting the hair (Lev. 21:5 where the priests are prohibited from cutting the edges of their beards; Gen. 41:14 where Joseph shaves cleanly). The term seems to be used to indicate shaving facial, body, or head hair. Those wishing to be cleansed from leprosy must shave their body (Lev. 14:8f.); a Nazirite must shave the head hair and surrender it to a priest (Nu. 6:18); a non-Israelite captive woman must shave (presumably the head) before marrying her Israelite captor (Dt. 21:12), perhaps to mourn her separation from her family; David's emissaries to the court of Ammon were shamed when

Ancient bronze shaving equipment from Egypt (ca. 1550-1090 B.C.). From left, a razor with holes where the handle was attached (from Nagada); a mirror with a bone handle in the shape of a girl holding a lotus blossom on her head (from Abydos); and a razor with attached handle and chipped blade from Behun, Nubia (courtesy of the University Museum, University of Pennsylvania)



half their beards were shaved (2 S. 10:4); similarly a defeat in battle was expressed in shame by shaving the body (Isa. 7:20). In short, shaving one's hair in Israel was a public sign of shame or, as it relates to shame, mourning (*see* SACKCLOTH).

The term *gāzaz* occurs 14 times in the OT and is translated "shave" only once. Most frequently it is used to indicate the shearing of sheep (e.g., Gen. 31:19). Its purpose in Job. 1:20 is, like that of *gālaḥ*, to express shame.

The Gk. *xyráō* translates *gālaḥ* in the LXX and is also similar in purpose. Men under a vow must shave their heads (Acts 21:24) and women who prophesy in a public meeting without a veil are shamed as if their heads had been shaved (1 Cor. 11:5f.).

From Egyptian art it is known that Asiatics, such as the Israelites and Philistines, did not shave their beards, while the Egyptians were almost always clean shaven. Thus Joseph, when he was to appear before Pharaoh, shaved himself (Gen. 41:14).

See also BEARD; CUT; HAIR; RAZOR. L. G. HERR

SHAVEH, VALLEY OF *See* KING'S VALLEY.

SHAVEH-KIRIATHAIM shā'və kir-i-ə-thā'əm [Heb. *šaweh qiryāṯayim*–'plain of Kiriathaim' (or possibly 'plain of the double city'); Gk. *en Sauē tḗ pōlei*–'in Shave by(?) the city'] (Gen. 14:5); AV SHAVEH KIRIATHAIM. The place, possibly in Moab, where Chedorlaomer defeated the Emim. A location S of the Arnon near el-Qereiyât has been suggested (*GAB*, p. 162), although el-Qereiyât 11 km. (7 mi.) NNW of Dibon is also a possible site. Shaveh-kiriathaim cannot be identified with the Shaveh of v. 17 (*see* KING'S VALLEY), which was near Jerusalem.

W. S. L. S.

SHAVSHA shav'shə [Heb. *šawšā'*]. A scribe in the court of David (1 Ch. 18:16); also called "Seraiah" (Heb. *śᵉrāyâ*) in 2 S. 8:17, "Sheva" (*šᵉwā'* [*Q*], *šᵉyā'* [*K*]) in 2 S. 20:25, and "Shisha" (*šîšā'*; LXX B *Saba*) in 1 K. 4:3. The textual evidence for these variations suggests that originally the name was Shavsha or Shisha. But a high degree of certainty is not possible on this matter.

The etymology of the name is uncertain, but it may be related to Akk. *šamšu* (i.e., the sun-god). If so, Shavsha was probably not an Israelite. This would indicate the presence of international officers in David's court, especially in the position of secretariat, which involved interaction with foreign powers (cf. NEB, which translates Heb. *sôpēr* as "adjutant-general"). Apparently Shavsha served well in David's kingdom, for his sons Elihoreph and Ahijah were also secretaries in the court of Solomon (1 K. 4:3).

Bibliography.–*NBD*; *IP*, p. 222; G. H. Jones, *1 and 2 Kings* (*NCBC*, 1984), p. 135; P. K. McCarter, Jr., *II Samuel* (*AB*, 1984), pp. 254, 433. R. L. PRATT, JR.

SHEAF [Heb. *ʿalummâ* (Gen. 37:7; Ps. 126:6), *ʿōmer* (Lev. 23:10-12, 15; Dt. 24:19; Ruth 2:7, 15; Job 24:10), *ʿāmîr* (Jer. 9:22 [MT 21]; Am. 2:13; Mic. 4:12; Zec. 12:6), piel part. of *ʿāmar* (Ps. 129:7)]; AV also HANDFUL; NEB also SWATHE, ARMFUL; **SHOCK** [Heb. *gāḏîš*] (Jgs. 15:5; Job 5:26); NEB CORN, SHEAVES. A sheaf is a quantity of stalks of grain bound together; a shock is a pile of sheaves set up in a field.

The terms rendered "sheaf" fall into two groups: Heb. *ʿalummâ* means "bound (into a bundle)"; the other three terms come from the root *ʿmr* I and mean "a small heap (of cut grain)." The LXX usually renders all these terms by Gk. *drágma*. Heb. *gāḏîš* means "stack of grain" (cf. RSV "stacked grain," Ex. 22:6 [MT 5]).

At harvest time GRAIN was commonly bundled into sheaves (Gen. 37:7; Ps. 129:7; cf. Jth. 8:3) before it was transferred by cart to the threshing floor (Am. 2:13; Mic. 4:12). The two primary grains, barley and wheat, were harvested in the spring (March-June). The reaper used a small SICKLE, held in the right hand, to cut off a handful of the grain that was held in the left hand. These small bundles were then tied into larger sheaves. The method is still practiced in much of the Middle East. The book of Ruth (2:7, 15) illustrates the pentateuchal law requiring that a portion of the harvested grain be left in the fields for widows, orphans, and resident aliens (Dt. 24:19).

Sheaves of the harvest's first fruits were to be brought and dedicated (AV, RSV, "waved"; NEB "presented as a special gift") to the Lord (Lev. 23:10-12, 15).

SHEAL shē'al [Heb. *šᵉ'āl*; Gk. Apoc. *Asaēlos*] (Ezr. 10:29 par. 1 Esd. 9:30); AV Apoc. JASAEL; NEB Apoc. ASAELUS. Son of Bani; an Israelite layperson who divorced his foreign wife in the time of Ezra.

SHEALTIEL shē-al'ti-əl [Heb. *šᵉ'altî'ēl, šaltî'ēl*; Gk. Apoc. and NT *Salathiēl*]; AV, NEB, also SALATHIEL. Firstborn son of King Jeconiah (1 Ch. 3:17; Mt. 1:12); father of Zerubbabel (Ezr. 3:2, 8; 5:2; Neh. 12:1; Hag. 1:1, 12, 14; 2:2, 23; 1 Esd. 5:5, 48, 56; 6:2; Mt. 1:12). In 1 Ch. 3:17 Pedaiah, rather than Shealtiel, is called the father of Zerubbabel; since Pedaiah was Shealtiel's younger brother, this difficulty could easily be explained by the practice of levirate marriage (see comms., e.g., J. M. Myers, *I Chronicles* [*AB*, 1965], p. 21; see also I. H. Marshall, *Gospel of Luke* [*NIGTC*, 1978], p. 163). Another problem arises with the fact that Lk. 3:27 names Neri (rather than Jeconiah) as the father of Shealtiel; for a summary of several proposed solutions to this problem, see Marshall (pp. 163f.); *see also* GENEALOGY OF JESUS.

See also SALATHIEL 2. N. J. O.

SHEAR; SHEARER; SHEARING; SHEEPSHEARER [Heb. *gāzaz*, part. of *gāzaz*; Gk. *keírō* (1 Cor. 11:6), part. of *keírō* (Acts 8:32)]; NEB also HAVE HAIR CUT OFF (1 Cor. 11:6). Sheep are shorn of their wool in the springtime. During shearing they are held down or their front legs are tied up, yet they remain quiet. This is the background of Isa. 53:7 (quoted in Acts 8:32): "as a sheep that before its shearers is dumb." Since sheepshearing took many days for a sizable flock, Jacob was able to make his escape while Laban was shearing his sheep (Gen. 31:19). Shearing was also a time of festivity, when relatives or friends would be present (1 S. 25:2-11; 2 S. 13:23-28; Gen. 38:12f.). In Cant. 4:2 the young woman's teeth are compared to a flock of newly shorn and newly washed sheep, i.e., sheep whose pink skin shines through the clipped wool.

According to Mosaic law the firstborn of the flock were not to be shorn, because they were to be dedicated to God (Dt. 15:19). When shearing took place "the first of the fleece," i.e., the choicest portion of the wool, was to be given to the priests (18:4).

In 2 K. 10:12, 14 the AV renders Heb. *bêṯ-ʿēqeḏ* by "shearing house." The term seems to designate a place name, however, and thus the RSV "Beth-eked" is preferable to the AV or NEB ("shelter"). *See* BETH-EKED.

See also SHEEP. J. C. MOYER

SHEARIAH shē-ə-rī'ə [Heb. *šᵉʿaryâ*] (1 Ch. 8:38; 9:44). A Benjaminite who descended from Saul and Jonathan; the fourth of Azel's six sons.

SHEARING HOUSE (2 K. 10:12, 14, AV). *See* BETH-EKED.

SHEAR-JASHUB shē-är-jā'shōōb [Heb. *šᵉʾār yāšûḇ*–'a remnant will return']. The symbolic name given to Isaiah's first son (Isa. 7:3; cf. MAHER-SHALAL-HASH-BAZ; IMMANUEL).

Around 734-32 B.C. Rezin the king of Syria and Remaliah the king of Israel formed an anti-Assyrian coalition that Ahaz the king of Judah refused to join (2 K. 16; Ch. 28; Isa. 7:1-9.) Because Ahaz remaind loyal to Asyria, Israel and Syria attacked Judah and defeated all its cities except Jerusalem. Before these battles Ahaz oversaw the military preparations of Jerusalem, including the protection of the city's water supply at the upper pool (Isa. 7:3; cf. 32:2). Isaiah and his son Shear-jashub brought God's message to Ahaz at this crucial time (7:4-9).

Interpreters usually view Shear-Jashub's presence as a sign that: (a) "only a remnant will return" (cf. 10:22); i.e., Judah will only have a few that will return alive from its war with Syria and Israel (Blank); or (b) "a remnant will return" (cf. 6:10; 10:20f.); i.e., the remnant of Judah will return to God and trust in Him (Lindblom). The first approach takes Shear-jashub's name as a curse, while the second views the name as a promise of hope. The first runs contrary to the context of 7:4-9, and the second is determined primarily by 10:20-22.

Isaiah's spoken message challenged Ahaz to trust God and not to fear the armies of Israel and Syria (Isa. 7:4-9). Since the word of the Lord in 7:7-9 announces the defeat of the king's enemies, it seems that Shear-jashub is a sign that Israel and Syria will be defeated and will return to their own land with only a remnant remaining (Tiglath-pileser III defeated both nations; cf. 2 K. 15:29; 16:7, 9). The use of the phrase "only a remnant of them will return" in Isa. 10:20-22 is distinct from 7:3-9 and Isaiah's son is not present.

SHEBA shē'bə.

1, 2, 3. [Heb. *šᵉḇāʾ*; LXX *Saba, Sabeu* (Gen. 10:28)] (Gen. 10:7, 28; 25:3; 1 Ch. 1:9, 22, 32). A name appearing in both Semitic and Hamitic genealogies, referring apparently to two or three different progenitors of one or more Arabian tribes and/or places. Sheba is listed in Gen. 10:7 par. 1 Ch. 1:9 as a descendant of Ham and (along with Dedan) as a "son" (Heb. *bēn*) of Raamah. Another Sheba is listed in Gen. 10:28 par. 1 Ch. 1:22 as a descendant of Shem and "son" of Joktan. The Sheba mentioned in Gen. 25:3 and 1 Ch. 1:32 bears similarities to each of these but seems to be identical to neither of them; he is listed as a descendant of Shem (cf. 1 Ch. 1:24-27) and of Abraham (through his concubine Keturah), and (along with Dedan) as a "son" of Jokshan. Some scholars have suggested that these differing accounts reflect a confusion of two different traditions, one ascribing a Hamitic origin and the other a Semitic origin to the Sabeans. Others have suggested that the texts reflect a convergence of the Semitic and Hamitic lines in southern Arabia. Stil others have posited that the same name was held by different persons and tribes in different parts of Arabia. *See* SABEANS; *see also* DEDAN; TABLE OF NATIONS II.C.3.

4. [Heb. *šeḇaʿ*; LXX *Sabee*] (2 S. 20:1-22). Son of Bichri; a notorious Benjaminite (described as "a worthless fellow," Heb. *ʾîš bᵉlîyaʿal*, 2 S. 20:1) who led a revolt against King David. The forces of the ten tribes of Israel followed Sheba, but the men of Judah remained loyal to David (v. 2). David considered Sheba's revolt to be a serious threat to the unity of the kingdom, and he ordered first Amasa and then Abishai to pursue him. Abishai took with him Joab, the Cherethites and Pelethites, and all of David's best soldiers (v. 7). Joab pursued Sheba to Abel of Bethmaacah and besieged the city.in response to the counsel of a wise woman of Abel,Joab offered to withdraw from the city if Sheba were delivered to him. The wise woman orchestrated the execution of Sheba and had his head thrown over the wall to Joab. Joab evidently allowed Sheba's followers to go unpunished, since the rebellion had been thwarted (v. 22).

The immediate cause of Sheba's rebellion is not stated in the text. Evidently Sheba aroused the northern tribes' hostility against David by accusing David of partiality toward Judah — a partiality evidenced by David's request that the elders of Judah welcome him back first after he had put down the treacherous rebellion of Absalom (cf. 19:9-15, 41-43). The Haggadah (T. P. *Sanhedrin* 101b) reports that Sheba rebelled against David. Sheba had seen portents indicating that the kingdom would be divided, and he hoped to divide the kingdom and become king.

5. [Heb. *šeḇaʿ*; LXX B *Sebee*, A *Sobathe*] (1 Ch. 5:13). A Gadite, son of Abihail. He was apparently a leader of his kinsmen in the region of Bashan. According to v. 17 his family was enrolled in the official registry during the reigns of Jotham king of Judah and Jeroboam II king of Israel.

SHEBA shē'bə [Heb. *šeḇaʿ*–'seven'; Gk. B *Samaa*, A *Sabee*] (Josh. 19:2). One of fourteen cities listed as part of the tribal inheritance of Simeon within the larger allotment of Judah (Josh. 19:1-6). While fourteen cities are listed, the text gives a sum of only thirteen (v. 6). Possibly Sheba is an error of dittography from Beer-sheba, which immediately precedes it. In Josh. 15:21-32 a list of "twenty-nine" Judahite cities includes nine of the fourteen cities mentioned in 19:1-6, and, with the exception of Beer-sheba, these stand in the same relative sequence. In 15:26, however, Shema (Heb. *šᵉmaʿ*; Gk. A *Samaa*; B *Salmaa*) replaces Sheba (19:2) in that list, and Beer-sheba does not appear until later. If Sheba is identified with Shema, dittography would seem an unlikely solution in 19:6.

SHEBANIAH sheb-ə-nī'ə [Heb. *šᵉḇanyâ, šᵉḇanyāhû* (1 Ch. 15:24)].

1. One of the priests assigned to blow the trumpet when David brought the ark of the covenant to Jerusalem (1 Ch. 15:24).

2. One of the Levites who led the Israelites in worship on the day of fasting and confession of sins (Neh. 9:4f.); possibly identical with **4** or **5**.

3. Head of a priestly family in postexilic times (Neh. 12:14); called "Shecaniah" in v. 3. He was among the priests who signed the covenant of Ezra (10:4 [MT 5]).

4, 5. Two Levites who signed the covenant of Ezra (Neh. 10:10, 12 [MT 11, 13]); one of them may be identical with **2** above. N. J. O.

SHEBARIM sheb'ə-rim [Heb. *haššᵉḇārîm*–'the quarries' (?); Vulg. *Sabarim*; Gk. *kai synétripsan autoús*–'and they crushed them'] (Josh. 9:5); NEB QUARRY. The place to which the men of Ai chased the Israelite force after its first attack on Ai. Possibly the word is a common noun (note the definite article) meaning "the quarries." The LXX, however, reads a verbal form (so Syr. Pesh., Tg.) from *šāḇar*, "break." W. S. L. S.

SHEBAT shə-bät' [Heb. *šᵉḇāṭ* (cf. Akk. *šabaṭu*); Gk. Apoc. *Sabat*] (Zec. 1:7; 1 Macc. 15:14); AV SEBAT, Apoc. SABAT. The eleventh month of the Jewish year, corresponding to January/February. *See* CALENDAR II.A.2.

SHE-BEAR. *See* BEAR.

SHEBER shē'bər [Heb. *šeḇer*–'lion'] (1 Ch. 2:48). A Judahite, son of Caleb by his concubine Maacah.

See *IP*, p. 230.

SHEBNA sheb'nə [Heb. *šeḇnā'*] (2 K. 18:37; 19:2; Isa. 22:15; 36:3, 11, 22; 37:2); **SHEBNAH** [*šeḇnâ*] (2 K. 18:18, 26); AV, NEB SHEBNA. An official under King Hezekiah. The meaning of the abbreviated name is uncertain, but suggestions include "youthfulness" and "Return now, O Yahu" (for the full name; cf. 1 Ch. 15:24). The final ה indicates an Aramaic name and some scholars argue that Shebna was a foreigner since his father is mentioned nowhere (cf. Young, II, 106). Others link the name to Egyp. *šbnw* or *šbnw šrj* (e.g., de Vaux, p. 400; cf. H. Ranke, *Die aegyptischen Personennamen* [1935], p. 330). The name was common in Palestine, occuring on Iron II seals from Lachish and elsewhere (cf. J. C. L. Gibson, *Textbook of Syrian Semitic Inscriptions* [1971], I, 24, 63).

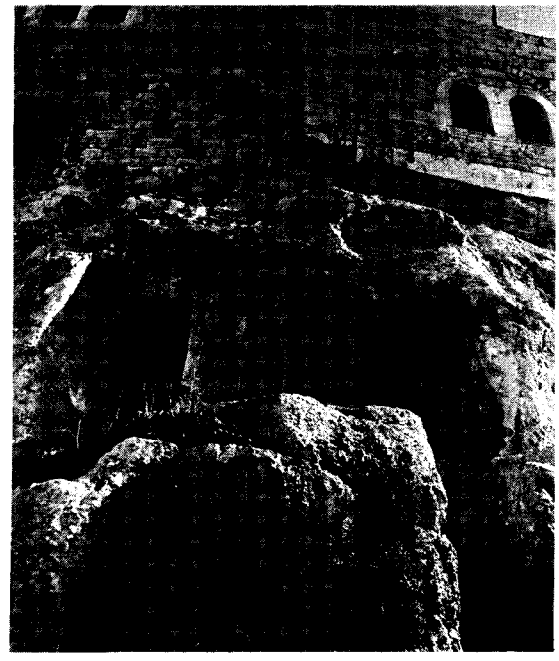
Shebna was an important official under King Hezekiah (*ca.* 716-687 B.C.) and a contemporary of the prophet Isaiah (2 K. 18:18, 26, 37; Isa. 36:3, 11, 22; 37:2). He is mentioned in connection with Sennacherib's siege of Jerusalem in 701 B.C. (2 K. 18:17f.). Although he is called a "secretary" (Heb. *sōpēr*, 18:18), he was more than a scribe. According to de Vaux (pp. 397f.) his office was similar to a present-day secretary of state. The biblical record sustains this, as Shebna was one of three statesmen sent to mediate the Assyrian crisis by initial negotiation with the Rabshakeh (18:18, 26; Isa. 36:3) and subsequent consultation with Isaiah (2 K. 19:2; Isa. 37:2). This cabinet post was introduced to the monarchy by David (2 S. 8:17).

The oracle proclaimed against Shebna in Isa. 22:15-25 has long proved troublesome to the reconstruction and understanding of his role in Hezekiah's court. The passage is Isaiah's only prophecy directed at an individual, although this is not uncommon elsewhere in the OT (e.g., Jer. 20:1-6; 28:15-17; Am. 7:16f.). Shebna bears the title "secretary" in 2 K. 18:18, 37 and Isa. 36:3, 22, but in Isa. 22:15 he is called the *sōḵēn*, "steward." This term indicates an office of great importance, perhaps akin to the Egyptian vizier (cf. Young, II, 105f.; Kaiser, pp. 150f.). It is unlikely that two high-ranking state officials of the same name (and without pedigree) held offices simultaneously; the question therefore, is how to account for Shebna's shift to a lower cabinet position.

Isaiah denounced Shebna as an example of the egotistic and materialistic attitude of the nation as he moved from the general to the particular in his proclamation against Jerusalem (cf. Isa. 22:1f., 13). Isaiah accused Shebna of a selfish desire for immortality that overshadowed his concern for the welfare of the nation (22:16; cf. 2 K. 20:19). Noteworthy is the discovery of a lengthy inscription on the lintel of a tomb prepared for a royal steward by the name of "[?]-yahu" (cf. R. Avigad, *IEJ*, 3 [1953], 137-152). Despite the obscurity of the first part of the name, many scholars believe that this was Shebna's tomb (e.g., Young, II, 108; but cf. Kaiser, p. 152). A further allusion to Shebna's vanity is the reference to the splendid chariots in Isa. 22:18. Presumably the prestige associated with his appointment clouded his political and spiritual vision.

Possibly Isaiah's antagonism toward Shebna stemmed from his support, or even instigation, of Hezekiah's anti-Assyrian and pro-Egyptian foreign policy (cf. Isa. 20, 30, 31) instead of dependence on Yahweh to solve the

The inscription above the door of this rock-hewn tomb reads "[ ]-Yahu"; this may be the tomb of King Hezekiah's steward Shebna, whom Isaiah denounced (8th-7th cent. B.C., Silwan, Jerusalem) (D. Harris)



problems of Judah's vassalage to Assyria (cf. 7:1-9). Scott suggested that Judah's immunity during the time of Sargon's punishment of Ashdod (711 B.C.) was due to the reversal of anti-Assyrian policy following Shebna's fall from power (*IB*, V, 292). But Bright (*BHI* [3rd ed., 1981], p. 292) contended that the preaching of Isaiah may have influenced Hezekiah not to join in the Egyptian-backed revolt by Ashdod against Assyria (cf. 14:28-32; 18:3-6; 20:1-6).

Most critical scholars view Isa. 22:15-25 as a three-part prophecy pieced together over a lengthy period of time: the original Shebna oracle (vv. 15-18), the Eliakim prophecy (vv. 19-23), and the addendum to the Eliakim prophecy (vv. 24f.; cf. Kaiser, pp. 149f.). Some even make v. 19 the product of a redactor so as to bridge more smoothly the Shebna and Eliakim oracles (e.g., R. E. Clements, *Isaiah 1–39* [*NCBC*, 1980], p. 189). The arguments adduced for this position are largely unconvincing, except for the possibility of v. 19 serving as an editorial explanation for Shebna's demotion in the latter accounts of Isa. 36 and 37. Unity of language and especially the larger context of ch. 22 affirm the essential integrity of the passage.

The precise fulfillment of Isaiah's diatribe remains uncertain. H. C. Leupold (*Exposition of Isaiah* [1968], p. 354) said Shebna took Isaiah's rebuke to heart, repented, was demoted by Hezekiah, but was found still worthy to retain a lower office. It seems better to recognize that Isa. 22:15-25 predates the events of 701 B.C., while the prophecy itself is fulfilled in stages (G. B. Gray, Comm. on Isaiah [*ICC*, 1912], pp. 373-383). For unknown reasons Shebna had been demoted by the time of Sennacherib's invasion of Judah, although the limited biblical evidence makes it impossible to determine the actual fulfillment of Isaiah's prediction of disgrace and exile for Shebna.

SHEBUEL shə-bū'əl, sheb'ū-əl [Heb. *šᵉḇû'ēl, šᵉḇu'ēl* (1 Ch. 26:24); Gk. *Soubaēl*]; NEB SHUBAEL.

1. Son of Gershom and grandson of Moses; a Levite who was "chief officer in charge of the treasuries" (1 Ch. 23:16; 26:24). In 24:20 he is called "Shubael."

2. A Levite who assisted with the temple music under the direction of his father Heman, King David's seer (1 Ch. 25:4); called "Shubael" in v. 20.

See also SHUBAEL.

SHECANIAH shek-ə-nī'ə [Heb. *šᵉḵanyâ, šᵉḵanyāhû*– 'Yahweh has taken (His) dwelling' (see *IP*, p. 194)]; AV also SHECHANIAH.

1. The name of the tenth priestly division of the descendants of Aaron (1 Ch. 24:11). This organization of the priesthood, reportedly established by David (cf. v. 3), reflects the postexilic concerns of the Chronicler.

2. A priest during Hezekiah's reign who assisted in distributing the freewill offering (2 Ch. 31:15).

3. The name of a priestly family that returned from the Exile with Zerubbabel (Neh. 12:3); called "Shebaniah" in 10:4; 12:14.

4. [Gk. Apoc. *Sechenias*]; AV Apoc, NEB Apoc., SECHENIAS. A descendant of David and of Zerubbabel; the father of six sons (1 Ch. 3:21f.; deleting "and the sons of Shemaiah," v. 22; *see* SHAPHAT 3), including Hattush, who returned from Babylonia with Ezra (Ezr. 8:3 par. 1 Esd. 8:29), and possibly also the Shemaiah mentioned in Neh. 3:29 (see 5 below).

5. Father of the Shemaiah who helped to repair the wall of Jerusalem under Nehemiah (Neh. 3:29); possibly identical with 4.

6. Father-in-law of Tobiah the Ammonite (Neh. 6:18).

7. [Gk. Apoc. *Sechenias*]; AV Apoc., NEB Apoc., SECHENIAS. Son of Jahaziel; one of those who returned from Babylonia with Ezra (Ezr. 8:5 par. 1 Esd. 8:32). The MT of Ezr. 8:5 lacks Zattu (AV "of the sons of Shechaniah"); some translations (RSV, NEB) insert Zattu here on the basis of the LXX (cf. *BHS*) and 1 Esd. 8:32.

8. [Gk. Apoc. *Iechonias*]; AV Apoc., NEB Apoc., JECHONIAS. Son of Jehiel from the family of Elam (Ezr. 10:2; the RSV reads Shecaniah in place of Jechonias in 1 Esd. 8:92 [LXX 8:89] in order to harmonize the two passages). He acted as spokesman for the Israelites who had married foreign women in exile but were zealous for religious purity. Ezra adopted his proposal to send away the foreign wives and their children (Ezr. 10:2-5 par. 1 Esd. 8:92-96). N. J. O.

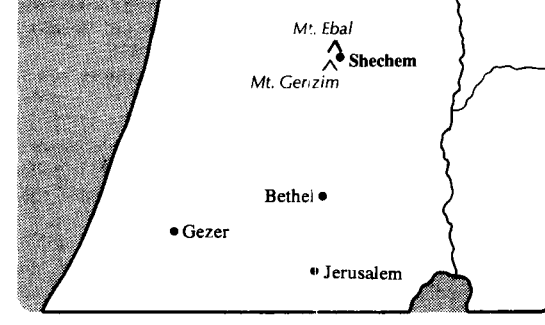
SHECHEM shek'əm [Heb. *šᵉḵem* (Gen. 33:19; 3r; etc.), *šeḵem*].

1. Son of Hamor the Hivite (Gen. 33:19; Josh. 24:32; Jgs. 9:28). His rape of Dinah infuriated her brothers and provoked them to take revenge (Gen. 34). Shechem and the men of his city were killed by Simeon and Levi. *See also* SHECHEM (city).

2. A descendant of Joseph and member of the tribe of Manasseh; founder of the Shechemite family (Nu. 26:31; Josh. 17:2).

3. Son of Shemida and member of the tribe of Manasseh (1 Ch. 7:19); possibly identical to 2 above.

SHECHEM she'kem, shē'kəm [Heb. *šᵉḵem*–'shoulder'; Gk. *Sychem, Sikima*]; AV also SICHEM (Gen. 12:6), SYCHEM (Acts 7:16). A city in Manasseh near the border of the tribal area of Ephraim (Josh. 17:7) and in the vicinity of Mt. Gerizim (Jgs. 9:7). Eusebius (*Onom., s.v.*) and the Bordeaux pilgrim (A.D. 333) placed it in the suburbs of Neapolis (modern Nâblus) by Jacob's Well (cf. Jn. 4:5f.). Jerome followed this tradition in his Latin edition of the *Onomasticon* but elsewhere rejected it; he instead identified the ancient city with the "new city" (Neapolis, founded by Vespasian in A.D. 72) and interpreted the



"Sychar" of Jn. 4:5 as a textual corruption of "Sychem." Before 1913 modern scholarship followed Jerome, even though the Madeba Map of the mid-6th cent. continued the tradition of Eusebius. But the excavations directed successively by E. Sellin, G. Welter, and H. Steckeweh in 1913-14 and 1926-34 proved the ancient site to be located at Tell Balâṭah, E. of Nâblus at the opening of the pass between Mts. Ebal and Gerizim, beside the traditional Tomb of Joseph (cf. Josh. 24:32) and near Jacob's Well. This location is in accord with that of Eusebius and the Madeba Map. An expedition, inaugurated by Drew University, McCormick Theological Seminary, and the American Schools of Oriental Research, did further work at the site between 1956 and 1973 and clarified its history and archeological chronology.

I. Patriarchal Period.–Although a sizable village existed at Balâṭah during the Chalcolithic period of the 4th millennium B.C., the city of historical times was founded *ca.* 1900 B.C., a creation of the "Amorite" period of Middle Bronze IIA (*ca.* 1900-1750). The Khu-Sebek Inscription on a stele from Abydos in Egypt refers to a conquest of "the foreign country" of Shechem (*skmm*) by Pharaoh Sesostris III (1878-1843). The city is also among the Asiatic enemies of Egypt named in a group of Egyptian execration texts now in Brussels that date to *ca.* 1800. These references suggest that during the second half of the Egyptian 12th Dynasty Shechem was a city-state of some importance.

Israel's patriarchal narratives probably refer to the city of this first major period. Jacob is said to have purchased a piece of land by the city and to have erected an altar there (Gen. 33:18-20). Abram is also credited with erecting an altar there, presumably in the *māqôm* ("place," here with the meaning "sacred area") where the oak of Moreh existed (12:6f.; cf. 35:4). In ch. 34, where the city is personalized, its inhabitants are called "the children of Hamor" (i.e., "of the ass"). Evidence from the Mari tablets (18th cent. B.C.) suggests that the Shechemites were "people of the (Ass-)Confederation"; the concept of a treaty or covenant was evidently integral to this people's existence. Gen. 34 also contains the tradition of the first patriarchal covenant with local people, this one permitting intermarriage, and a memory of an Israelite seizure of the city (cf. 48:22, where AV has "portion," RSV "mountain slope," and NEB "ridge," for Heb. *šᵉḵem*). The city was thus remembered as being closely associated with the family of Jacob (cf. 37:12).

The sacred area of Shechem has been found on the west side of the city and excavated. During Middle Bronze IIB (*ca.* 1750-1650 B.C.) four successive courtyard complexes containing sanctuary rooms were erected there, enclosed within the city first by Fortification Wall D, 2.5 to 3 m. (8 to 9 ft., 6 cubits) wide. The Hyksos reused this wall as the inner retaining wall of a vast earthen embankment (Wall C) placed around the city late in the 18th century. A great leveling operation had prepared the area for public use during the preceding age, M.B. IIA.

The excavation of the walls of the courtyard buildings of levels 901 and 902 at Shechem with the altar fill for the later fortress temple on the same site (Joint Expedition to Shechem, photo L. C. Ellenberger)

Aerial of the Shechem excavations, western quadrant, with the temple foundations in the center. In the foreground are Wall A and the Northwest Gate (Joint Expedition to Shechem, photo L. C. Ellenberger)

At that time the area was outside of any known city fortifications, and in view of the tenacity of the religious traditions connected with the sacred area, may possibly be the plot of land that Jacob purchased (Gen. 33:18-20) and the sacred area and tree (12:6f.) connected to Abram.

During the second half of the Hyksos period (M.B. IIC, *ca.* 1650-1550 B.C.) a heavy "cyclopean" wall was erected around the city (Wall A), just outside the earthen embankment (C). In places this wall still stands, some 10 m. (30 ft.) high. The top of the C embankment was pulled into the space between Walls A and C in a leveling operation. A heavily fortified, three-entry gate was put in place on the northwest side. Later in the same period a wall 4 m. (13 ft., 8 cubits) wide (Wall B) was erected on the top of the remaining C embankment around the north and west sides of the mound, and the space between Walls B and A was plastered in place as a glacis. At the very end of M.B. IIC still another fortification wall, Wall E, was thrown up either side of the NW Gate — a last-gasp defense against impending disaster (see below).

At the time that Wall A was erected, the courtyard complex was abandoned, and a great fortress-temple (*migdāl*) was built in its place. The Midgal's stone podium survives as a huge block of masonry, 50 by 40 "long" or "sacred" cubits, and the walls of the cella are 10 long cubits thick (about 26 by 21 by 5 m., 85 by 70 by 17 ft.). Towers stood on each side of the entry (which is 14 cubits wide); the lintel of the door was supported by a single stone column about 70 cm. (28 in.) in diameter. Fragments of fluted-stone columns, the only ones so far found in Western Asia, probably represent the interior supports in the cella. Before the end of its first period of use, the temple was partially destroyed and rebuilt, the entry column was eliminated, the entrance was narrowed, and two sacred standing stones (*maṣṣēḇôṯ*) were erected, one on each side of the new entrance.

The evidence suggests that the temple and fortifications were completely destroyed in the Egyptian conquest of Hyksos Palestine, evidently in two campaigns, perhaps of Ahmose and Amenophis I, *ca.* 1550-1540 B.C.

II. Amarna and First Israelite Periods.—After what appears to be an occupation gap of nearly a century, the city, its fortifications, and its temple were rebuilt. The new temple was placed on the foundations of the old, although it was less substantial and its axis was shifted five degrees south; its shape was now wider than it was long, more like the typical Canaanite temple of the era (about 30 by 24 long cubits, i.e., 16 by 12.5 m., 50 by 40 ft.). Two phases of this temple have been traced, the second and therefore latest of the whole sequence dating to the 13th-12th centuries. The foundation of the altar for this final phase is preserved, and a large sacred standing stone was erected in the court E of the altar. The top of the sacred stone is broken off, but the socket in which it stood is fully preserved. The stone is 145 cm. (57 in.) tall at its highest preserved point, 148 cm. (58¼ in.) wide,

The *maṣṣēḇâ* (standing stone) in its socket in the forecourt of the temple (L.B./Iron I, 1450-1150 B.C.) (Joint Expedition to Shechem, photo L. C. Ellenberger)

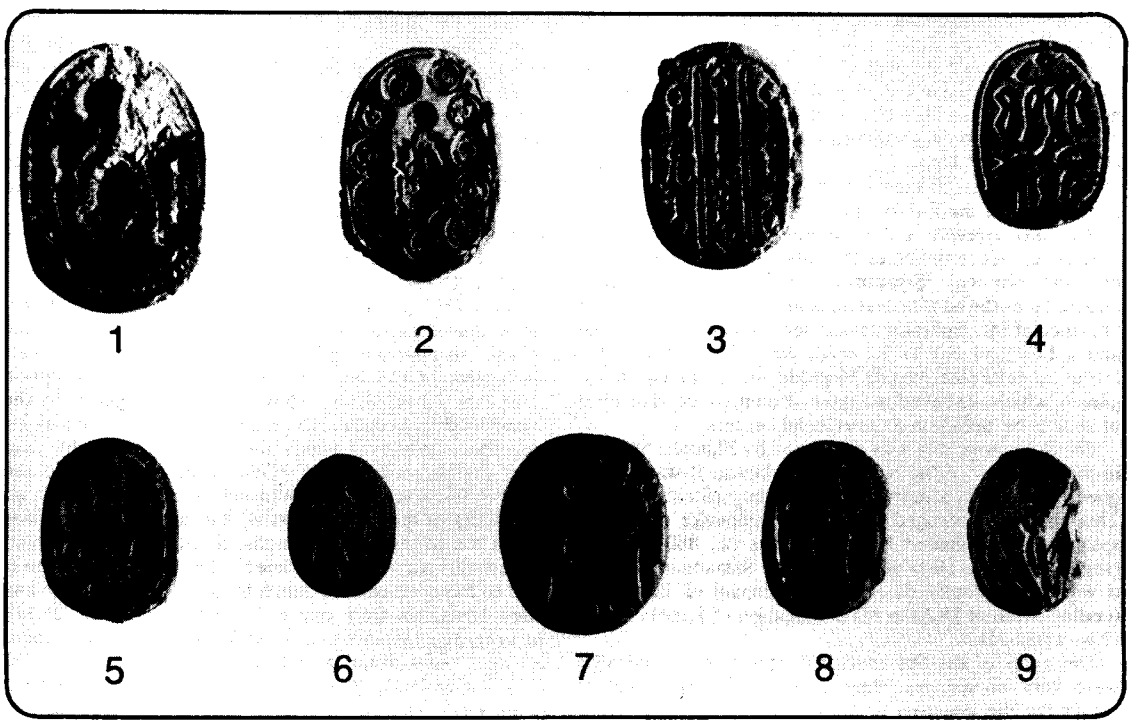
and 42 cm. (16½ in.) thick. It is white limestone, with rounded edges, and the surface has been ground smooth. It is a rare find; the only stones like it in the country are the two smaller ones flanking the entrance of the M.B. IIC fortress-temple and an unfinished one found in a thirteenth-century shrine located 200 feet away to the SE, outside of the sacred precinct.

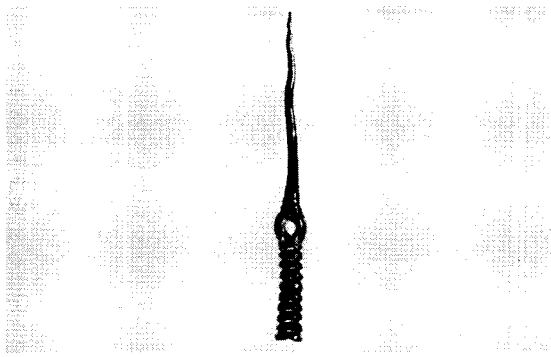
From the evidence of the Amarna Letters of the first half of the 14th cent., Shechem was the center of the only city-state of the north-central hill country, bordering on the city-state of Megiddo to the north and those of Jerusalem and Gezer to the south. Its ruler Lab'ayu, and later his sons, appear to have been hated intensely by their neighbors, evidently because of the security and strength of their state and their constant effort to enlarge their territory at their neighbors' expense. Three of the Amarna Letters were written by Lab'ayu himself (Am.Tab. 252-54); in them the only "sin" he admits to the pharaoh is his entry into the city of Gezer. His adventures and those of his sons are the subject of four letters written by others (Am.Tab. 244, 245, 250 and 289).

There is no biblical record of a conquest of Shechem by Joshua. Rather one must presume that the whole of the central hill country from Bethel to Megiddo (which became the tribal areas of Ephraim and Manasseh) came into Israel's federation of tribes by covenant (cf. Dt. 11:26-30; Josh. 8:30-34; Dt. 27) and that Josh. 24 is a text emanating from this covenant ceremony. This hypothesis is supported by the survival of Bronze Age Shechem at the time when cities such as Lachish (Josh. 10:31f.), Debir (vv. 38f. — assuming that it was located at Tell Beit Mirsim), and Hazor (11:10f.) were destroyed by Israel. Bronze Age Shechem was totally destroyed roughly a century later, during the 12th cent. B.C., and this accords well with the biblical story of the city's end at the hands of Abimelech (Jgs. 9:45-49).

This reconstruction of the data allows other elements of the texts in Josh. 24 and Jgs. 9 to assume added importance. The patriarchal narratives relating to Shechem center on the memory of the sacred area, tree, and covenant. Josh. 24 recounts another covenant ceremony deemed appropriate to hold at Shechem, whereby the city entered Israel by treaty rather than conquest. Verse 26, furthermore, mentions a tree in "the sanctuary [*miqdaš*] of the

Scarab seals found at Shechem. The first two are royal seals; nos. 3, 4, and 5 are Hyksos scarabs; nos. 6-9 are New Kingdom or Late Bronze Age seals (no. 8 is inscribed with the name of Queen Tiy, wife of Pharaoh Amenhotep III) (Joint Expedition to Shechem, photo L. C. Ellenberger)





A gold toggle used for pinning clothing together found in an Iron Age I pit filling (Joint Expedition to Shechem, photo L. C. Ellenberger)

Lord." In Jgs. 9:46 the sanctuary is called "the temple of El-berith," Hebrew for "the covenant God" (v. 4 has *ba'al b'rîṯ*, "lord of the covenant"); the same chapter speaks of the "tower" [*migdâl*] of Shechem in v. 47 and Beth-millo in v. 6, and an oak is mentioned in v. 6 (AV "plain"). In other words, sanctuary, covenant, and tree again appear together. These three ingredients, found in patriarchal story, covenant ceremony text, and story of events from the time of the federation — three different literary types — strongly suggest a continuity of religious tradition at the site.

In addition to sanctuary, covenant, and tree, the archeological evidence from the courtyard complex of the early 17th cent. and the subsequent fortress-temple suggests that sacred pillars were the central cultic objects, probably memorials of the various covenants. The tradition of "the great stone" erected by Joshua (Josh. 24:26) to commemorate the covenant is probably to be associated with the last of this series of sacred pillars. Although the editor of Judges, who lived after the judges period, considered the Shechem temple a pagan structure (Jgs. 8:33), probably in earlier days El-berith was regarded as a manifestation of the God of the Fathers, who in the Joshua covenant was identified with Yahweh (Josh. 24:26; cf. Ex. 3:13-15). In other words, the *b'nê ḥ'môr* of Shechem were probably not typical Canaanites but were a special enclave who in a much later time preserved the memory of their close relation with the Hebrew patriarchs, so that they entered the covenant as full members even though they had not participated in the Exodus or Conquest.

III. Later Israelite and Samaritan Periods.–The archeological evidence indicates that Shechem was not rebuilt until the 10th cent. (Stratum X). Probably Solomon constructed it as the administrative center of his newly created province of Mt. Ephraim; it also served as a city of refuge and a Levitical city (1 K. 4:7f.; Josh. 20:7, 9; 21:20f.). It thus takes its place beside Megiddo, Hazor, and Ramoth-gilead, which, excavations have shown, were also built or rebuilt by Solomon as provincial centers.

The Solomonic city was destroyed by Pharaoh Shishak in the fifth year of the reign of Rehoboam. It was subsequently rebuilt in a more substantial way (Stratum IXB). This city was damaged either by earthquake or by the assaults of Ben-hadad I of Damascus *ca.* 860-855 B.C. (suggested by the story of the attack on Samaria in 1 K. 20); it was subsequently destroyed by Hazael of Damascus (ending Stratum IXA) in his subjugation of Israel *ca.* 810 (2 K. 13:22-25).

The cities of the 8th cent. B.C. (Strata VIII and VII) were very prosperous; they served as a tax-collection center for the kingdom of Israel, as one can infer from the large granary or warehouse erected on the foundations of the temple. The fortifications, particularly Walls B and E and the gates, were repaired, probably in the 10th or 9th centuries. The city of Stratum VII was violently destroyed by the Assyrians in 724.

The reoccupied city under Assyrian control (Stratum VI) was not properous and suffered destruction twice (possibly in the Josiah reform between *ca.* 628 and 622). A few people continued to live on the mound in the 6th cent. (Stratum V; cf. Jer. 41:4f.), down to as late as *ca.* 475 B.C. Then the site was again abandoned.

Shechem's last period of prosperity was *ca.* 331-107 B.C., when it served as the capital city of the Samaritans. The city of Stratum IV was quickly and extensively built and fortified after 331, when Alexander the Great took Samaria from the Samaritans and gave it to a group of his Macedonian troops. Both Strata IV and III date from the Ptolemaic rule of Palestine, when Shechem was strongly fortified. During the 2nd cent. B.C. under the Seleucids, however, Strata II and I were unfortified although evidently extensively occupied and prosperous. The city was destroyed by John Hyrcanus in 128 B.C. (Josephus *Ant.* xiii.9.1 [255]), but the mound was not finally abandoned until shortly after 110. A vast amount of earth was then pulled down from the slopes of Mt. Ebal to cover Wall on the western side and the northwest gate so that they could never again be used. The name of the site survived for some centuries, but the settlement could have been only a small village, like modern Balâṭah, around the copious spring issuing from a cave in Mt. Gerizim.

SHECHEMITES shek'ə-mīts [Heb. *haššiḳmî*] (Nu. 26:31); NEB SHECHEMITE FAMILY. A family of the tribe of Manasseh, descended from SHECHEM (2).

SHED [Heb. *šāpaḳ*; also *šîm* (1 K. 2:5), hiphil of *nûp* (Ps. 68:9 [MT 10]), *yāraḏ* (Ps. 119:136), *ṣûṣ* (Ps. 132:18), hiphil of *nāgah* (Isa. 13:10); Gk. *ekchéō, ekchýnō*; also *ballō* (Rev. 6:13)]; AV also SEND (Ps. 68:9), RUN DOWN (Ps. 119:136), FLOURISH (Ps. 132:18), CAUSE LIGHT TO SHINE (Isa. 13:10), CASTETH (Rev. 6:13); NEB also POUR OUT (2 S. 20:10), BREAK (1 K. 2:5, where there is a textual problem), REFRESH (Ps. 68:9), STREAM (Ps. 119:136), SHINE (Ps. 132:18; Isa. 13:10), CUT-THROAT (for "shedder of blood," Ezk. 18:10), SPILL (Mt. 23:35), SHAKE DOWN (Rev. 6:13).

In the OT "shed" is used in the RSV and in most versions almost exclusively to render Hebrew *šāpaḳ*, which means "to pour out, spill out." In nearly all these cases, the object of the latter is "blood" (the one exception is in 2 S. 20:10, where "bowels" is the object). In the post-Flood institution of capital punishment Noah is instructed, "Whoever sheds the blood of man, by man shall his blood be shed" (Gen. 9:6). Accorkng to the regulation regarding the unknown murderer's crime, all the elders of the city nearest where the slain person was found are to testify,"our hands did not shed this blood, neither did our eyes see it shed" (Dt. 21:7). Manasseh is said to have "shed very much innocent blood, till he had filled Jerusalem from one end to another" (2 K. 21:16). In only five instances does RSV use "shed" to render Hebrew verbs other than *šāpaḳ* (see list above). In Ps. 68:9, for example, God "sheds abroad" (or "sprinkles, disperses") his rains; and according to Isa. 13:10 the day

of the Lord will be accompanied by the darkening of the sun, and "the moon will not shed [lit. "cause to shine"] its light."

In the NT "shed" almost always renders the Gk. verb *ekchéō* (or its Hellenistic Greek form, *ekchýnō*), in all cases with "blood" as the object. References include the shedding of the blood of the OT prophets (Mt. 23:30); of the OT saints from Abel to Zechariah son of Barachiah (Mt. 23:35); of Stephen (Acts 22:20); of "the saints and prophets" (Rev. 16:6); etc. According to He. 9:22, "without the shedding of blood [*haimatekchysía*] there is no forgiveness of sins." Interestingly, in the NT passages where reference is made to the shedding of Jesus' blood (Mt. 26:28; Mk. 14:24; Lk. 22:20), RSV translates the verb (*ekchýnō*) "pour out." D. A. DORSEY

SHEDEUR shed'ē-ər [Heb. *šᵉḏê'ûr*]. The father of Elizur, who was chief of the Reubenites during the journey through the wilderness (Nu. 1:5; 2:10; 7:30, 35; 10:18). The name means either "Shaddai is fire (*'ûr*)" or "Shaddai is light (*'ôr*)" (see *IP*, pp. 130, 168f.). On the meaning of Shaddai, *see* GOD, NAMES OF II.B.1.

SHEEP; SHEPHERD. In the OT "sheep" most frequently translates Heb. *ṣō'n*, a term also rendered "flock." Other OT terms include *keśeḇ* (lit. "young ram"; e.g., Lev. 1:10; 7:23; Nu. 18:17), *keḇeś* (lit. "young ram"; e.g., Ex. 12:5), and *śeh* (lit. "lamb," "kid"; e.g., Ex. 22:1, 4, 9f.; Dt. 17:1). The primary NT terms for "sheep" is Gk. *próbaton*; in Jn. 21:16f. the term is *probátion* (diminutive of *próbaton*). The usual OT term for "shepherd" is Heb. *rō'eh* (part. of *rā'â*, "tend," "graze"; cf. fem. *rō'â*, lit. "shepherdess," Gen. 29:9); the NT term is Gk. *poimḗn* (cf. *archipoímēn*, "chief shepherd," in 1 Pet. 5:4; vb. *poimaínō*, "be a shepherd," in Rev. 7:17).

The biblical terms are used of various kinds of sheep (see I below). Heb. *ṣō'n* means literally "small cattle," and the term sometimes includes goats. Sheep, goats, and cattle are related biologically (family *Bovidae*), all being ruminants with cloven hoofs and hollow horns. These and a few wild cloven-hoofed ruminants (the hart, gazelle, roebuck, etc.) were the only mammals allowed for food under Mosaic laws (Dt. 14:4-6; Lev. 11:3). Cattle, sheep, and goats were also approved animals for sacrifices (Lev. 22:18f.); *see* SACRIFICES AND OFFERINGS OF THE OT.

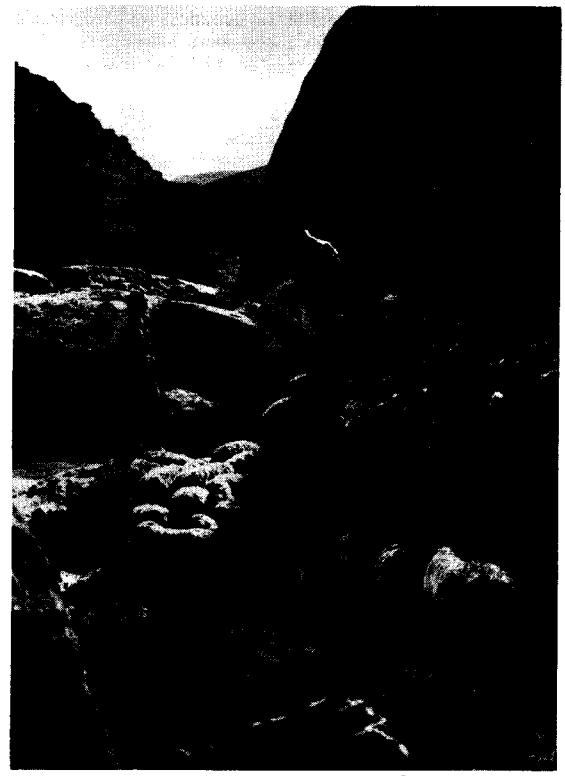
I. Types of Sheep.–Five different breeds of sheep (*Ovis aries*) were known in Mesopotamia in the patriarchal age. The sheep of the Bible can be pictured as generally cream-colored, deep-wooled, and having curled horns. There were taller sheep such as *O. orientalis* (adult animals about 1 m. [3 ft.] tall) and smaller sheep such as the Mouflon (adults about 0.6 m. [2 ft.] tall). The most common breed in Palestine today — and probably also in ancient times — is the "fat-tailed" *O. laticaudata*, known in Egypt by 2000 B.C. These have quantities of reserve fat stored in their tails, which by themselves weigh 5, 7, or even 14 kg. (11, 15, or 30 lbs.). (For the use of these "fat tails" in sacrifices, see Ex. 29:22; Lev. 3:9; 7:3; 8:25; 9:19.) Heb. *'āqōḏ* probably designates a type with "twisted tail" (Gen. 30:35, 39f.; 31:8-12) — not "ring-straked" (AV) or "striped" (RSV, NEB). Breeding techniques were used to increase the quality and size of flocks (Gen. 30:32-43; 2 K. 3:4).



Two shepherds tending sheep in Israel (Matson Photo Service)

II. Uses of Sheep.–In biblical times the tending of flocks, together with agriculture, was basic to the economy in Palestine. Sheep were so valuable that the wealthy man was described as the owner of "thousands" or "ten thousands" of sheep (cf. Ps. 144:13). Although sheep were also used for food (*see* FOOD III), they were raised principally for wool production. WOOL was used in various ways, e.g., for woolen GARMENTS (cf. Lev. 13:47-52, 59). Sheepskins were also used as clothing (cf. He. 11:37) and for a variety of other purposes (*see* SHEEPSKIN). For the average family the slaughtering of a sheep for a guest was generous hospitality (cf. 2 S. 12:4), and a sheep was an expensive sacrifice (but cf. the enormous numbers of animals sacrificed on great occasions, e.g., in 1 K. 8:63; 2 Ch. 5:6; 7:5; 15:11; 29:33). Sheep's horns served as containers for oil (1 S. 16:1) and even as musical instruments (the Heb. *šōp̄ār*, "ram's horn"; *see* HORN; MUSIC II.A.1, 2). From sheep's bones were made needles, scrapers, lances, and arrowheads; from the hides came clothing, curtains, and leather (which was sometimes prepared as vellum to receive writing). The sheep's gentleness and loyalty made it a common household pet (2 S. 12:2f.).

III. Shepherds and Shepherding.–Shepherds were responsible for the physical survival and welfare of their own or their master's flocks. In comparison with goats, which tended to fend for themselves, sheep depended on the shepherd to find PASTURE for them (cf. Ezk. 34:2, 9, 13f.), and they required "quiet" water (Ps. 23:3). Shepherds also had to provide shelter, medication, aid in

lambing time, and provision for lameness and weariness. Without the shepherd the sheep were helpless (see Nu. 27:17; 1 K. 22:17; 2 Ch. 18:16; Zec. 10:2; Mt. 9:36 par. Mk. 6:34).

Shepherds generally lived in tents made of water-repellent cloth woven from black goats' hair (cf. Gen. 4:20; Ex. 36:14; *see* TENT). Because of the lack of rainfall they had to move around during the summer months and they had to be prepared to be away from their base of supplies for days or weeks at a time (*see* NOMADISM). The shepherd's woolen, homespun garments included, for protection against cold, sharp winds, and rain, a long overcoat of stiff, felt material, which served as a coat, a blanket, and even a tent-like sunshade (cf. Jer. 43:12). In his BAG, a large leather container made of goatskin (1 S. 17:40, 49), the shepherd carried all the food he would need while away, such as bread, olives, and cheese. Milk he could get from the goats (1 Cor. 9:7). To protect himself and his flock from harm he carried a ROD or STAFF, a stout, straight stick, sometimes with a knot or knob on the end, which served as a club and also as a walking stick or a pole on which to carry the bag. Some (if not many) shepherds, like David, were skillful with the slingshot (1 S. 17:49). The shepherd had to be prepared for emergencies, as when a sheep injured itself (in which case balm, olive oil, or animal fat would be needed as ointment; cf. Isa. 1:6; Jer. 8:22) or stupidly wandered off into hazardous territory (cf. Ezk. 34:5; Mt. 12:11; Lk. 15:4). When "still waters" were not available the shepherd had to provide water for the sheep in a skin-bucket or trough (Gen. 30:38; Ex. 2:16), since sheep have to be watered several times daily — especially at noon (Gen. 29:2-10).

For the most part the shepherd's long days and nights in the field made for a lonely life. He entertained himself by talking to his sheep until they all recognized his voice (Jn. 10:4f.), by making music on a readily made reed pipe (Jgs. 5:16; see National Geographic Society, *Everyday Life in Ancient Times* [1953], p. 255). Often friends with their flocks would meet at a watering spot (Gen. 29:2f., 7f.) and would keep watch at night (Lk. 2:8). When they parted there was no difficulty in separating the animals, for each knew its own shepherd's call (Jn. 10:4, 14, 27). Each flock included about a hundred animals (cf. Mt. 18:12; Lk. 15:4). The shepherd was expected to count them, one by one, calling each by its own name (Jn. 10:3), both morning and evening, for he had to render accounting for any that were missing (Gen. 31:39; cf. 1 S. 25:15f., 21). The responsible shepherd did not kill and eat his sheep, no matter how rigorous conditions might become (Gen. 31:38-40; Ezk. 34:2f., 10; Am. 3:12). The shepherd's devotion to his sheep becomes evident when contrasted with the behavior of the "hireling" who "cares nothing for the sheep" (Jn. 10:12f.): "the good shepherd," if need be, "lays down his life for the sheep" (v. 11). That a shepherd might not return alive from his sheeptending was well understood (cf. Gen. 37:33). Shepherding was serious, demanding, and strenuous work. Nevertheless, the true or faithful shepherd was thought to have a disposition that was altogether admirable: thoughtful, tender, gentle, strong, resourceful in times of danger, but not hot-tempered.

Although fierce dogs often accompanied shepherds for protection, they were not used to round up the sheep (Job 30:1; *see* DOG). The shepherd controlled the flock by the sound of his chatter, shout, or whistle (cf. Isa. 5:26). Ordinarily he led the sheep (Ps. 23:2f.; Jn. 10:3-5), but there might be undershepherds who followed the flock (2 S. 7:8; 1 Ch. 17:7; Am. 7:15) to encourage the weary and aid the heavy-laden and the newborn lambs.

At night the sheep were gathered into a FOLD for protection against beasts, thieves, and the cold (e.g., Ps. 78:70; Mic. 2:12; Jn. 10:1). Sheepfolds were of various types. At times they were located in or near a cave (e.g., 1 S. 24:3). Some were permanent enclosures with a roof and stone walls, while others were temporary, consisting simply of an open pen with thornbush sides. The shepherd guarded the single opening with his own body (cf. Jn. 10:7, 9).

Sheepshearing took place annually in the spring. It was an important, happy occasion for the sheep breeder — equivalent to harvesttime for the farmer. Even when the flocks were some distance away, the owner went out to the site to supervise the work (cf. Gen. 31:19-23; 38:12; 2 S. 13:23f.). The "first of the fleece," like the first fruits of the harvest, was given to the Levites (Dt. 18:4). Relatives and friends participated in the shearing and also in the feasting that accompanied it (cf. 1 S. 25:2-11, 36; 2 S. 13:23-29). (See *ILC*, III-IV, 377f.) *See also* SHEAR.

IV. Figurative Uses.—The terms of the sheeptending business aptly made their way into the metaphorical religious language of the Bible.

A. God as Shepherd. Among the very earliest names given to God is "the Shepherd, Rock of Israel" (Gen. 49:24). In Ps. 78:52f. the psalmist recounts how in the Exodus the Most High God "led forth his people like sheep, and guided them in the wilderness like a flock. He led them in safety, so that they were not afraid. . . ." In the OT God is the supreme "Good Shepherd"; all the admirable personal characteristics of shepherds are His superlatively. His activities as "Shepherd" of His people include feeding, watering, leading, watching over, caring for, seeking out, rescuing, and gathering His flock; bringing back the strayed, binding up the crippled, strengthening the weak, and carrying the lambs in His bosom (see esp. Ps. 23; Isa. 40:11; Ezk. 34:11-24; also Ps. 95:7; 100:3; Mic. 7:14; Zec. 10:3; 11:7).

B. Jesus as Shepherd and as Lamb. The selfless, caring attitudes of the good shepherd are attributed to Jesus throughout the NT. The Synoptic Gospels describe Jesus' compassion for people as that of a shepherd for "sheep without a shepherd" (Mt. 9:36 par.; cf. 26:31 par., quoting Zec. 13:7; cf. also 1 K. 22:17 par. 2 Ch. 18:16; Isa. 13:14; Zec. 10:2; 11:4, 6). The term "shepherd" is applied to Jesus with the adjectives "good" (Jn. 10:11, 14), "great" (He. 13:20), and "chief" (1 Pet. 5:4). Jesus' discourse on Himself as the "good shepherd" (Jn. 10:1-18) reflects in detail the language of Ezk. 34. The application to Jesus of this familiar OT image for God establishes an identity of moral character and mission between the God of the OT and Jesus. A unique element is added in the description of Jesus as "the good shepherd [who] lays down his life for the sheep" (Jn. 10:11). This image of the shepherd who dies for the sheep is similar to the Johannine description of Jesus as "the lamb of God who was slain" (Rev. 5:12) and as "the Lamb of God, who takes away the sin of the world" (Jn. 1:29; cf. v. 36; 1 Cor. 5:7; 1 Pet. 1:19). The background for this theme is found in the OT descriptions of the Suffering Servant. Acts 8:32-35 applies to Jesus the description of the Suffering Servant as "a sheep led to the slaughter, and "a lamb" whose "life is taken up from the earth," quoted from Isa. 53:7f. Rev. 7:17 states that "the Lamb . . . will be their shepherd, and he will guide them to springs of living water" (cf. Ps. 23:2).

See also LAMB OF GOD.

C. God's People as Sheep. "We are the people of his [God's] pasture, and the sheep of his hand" (Ps. 95:7; 100:3; cf. also Ps. 74:1; Ezk. 34:31). These familiar words use a common biblical metaphor that emphasizes the utter dependence of human beings upon God for their existence, survival, and welfare. The figure gives glad recogni-

tion both to the needs of human beings as creatures and to God's sufficiency, as the Creator and Provider, for all human needs (cf. 2 S. 24:17 par. 1 Ch. 21:17; Ps. 78:52; Ezk. 34:31; Zec. 11:4-17; 13:7; Jn. 10:10-15). "Of his pasture" signifies that God's people live out their lives in a friendly environment — friendly because they have a Friend near at hand. Safety is depicted as being gathered "like sheep in a fold, like a flock in its pasture" (Mic. 2:12), "one flock, one shepherd" (Jn. 10:16; cf. Ezk. 37:24).

Conversely, people — like sheep — can go "astray" (Isa. 53:6; cf. Mt. 18:12 par.); thus separated from the Shepherd (1 Pet. 2:25) they can become "lost sheep" (Ps. 119:176; Jer. 50:6), variously described as "a hunted sheep driven away by lions" (v. 17), "scattered over all the face of the earth" (Ezk. 34:6; cf. v. 12), "the lost sheep of the house of Israel" (Mt. 10:6; 15:24; *see also* LOSE). In the Egyptian records a similar phrase appears: "like a stampeded herd without a herdsman" (Frankfort, p. 101). The psalmist described the painful experiences of human existence and the awareness of the proximity of death in these words: "for thy sake we are slain all the day long, and accounted as sheep for the slaughter" (Ps. 44:22, quoted in Rom. 8:36; cf. also Ps. 44:11; 49:14; Isa. 53:7; Jer. 12:3). Christ sent out His disciples as "sheep amidst wolves" (Mt. 10:16).

D. Shepherd as Judge. Some passages use the figure of a shepherd to describe God or Christ as Judge. As a shepherd in the daily head-counting of his flock separates the darkish goats from the whitish sheep, or the fat sheep from the lean sheep, so God (or Christ) distinguishes between the good and the evil (Jer. 12:3; Ezk. 34:17-22; Mt. 25:32).

E. Shepherd as National Leader. Many of the best-known OT national leaders (e.g., the patriarchs, political heroes, and inspired prophets) had personal experience as successful herdsmen. Prominent examples include Moses, who learned sheeptending from the seven daughters of Jethro and for a time tended the flock of the priest of Midian (Ex. 2:15–3:1); David, who when Samuel found him was "keeping the sheep" (1 S. 16:11); and Amos of Tekoa, an undershepherd whom "the Lord took from following the flock" and commanded to "prophesy to my people Israel" (Am. 7:15; cf. 3:12).

"Shepherd" is also used as a descriptive term for a national leader. By analogy with the "worthless" shepherd (Zec. 11:15-17), who is lazy and apathetic or greedy, gluttonous, and avaricious, the "bad" leader in state and religion can be identified as a "hireling," "thief," and "robber" (Jn. 10:8, 12f.). He is uncaring (Zec. 11:16), deserts the flock (v. 17), destroys and scatters (Jer. 12:10; 23:1f.; Ezk. 34:4-8), leads the people astray (Jer. 50:6), feeds and clothes himself without caring for the sheep (Ezk. 34:2f., 8, 10).

The Bible's paragon leader, "a man after [the Lord's] own heart" appointed to be "prince over [the Lord's] people" (1 S. 13:14), was David, who was twice a shepherd: once over his father's "few sheep" and later over the people of Israel. Ps. 78:70-72 states: "He chose David his servant, and took him from the sheepfolds; from tending the ewes that had young he brought him to be the shepherd of Jacob his people, of Israel his inheritance. With upright heart he tended them, and guided them with skilful hand." Thus, "as many passages show, the ideal future king, the 'Messiah,' was always thought of in the OT as a scion [son] of David, a 'shoot from the stump of Jesse,' descended from the ancient Bethlehemite line" (S. Mowinckel, *He That Cometh* [Eng. tr. 1956], p. 160); cf. Mt. 20:30f. par. Mk. 10:47; Lk. 18:38f.

The figure of "shepherd" is also applied to leaders of other nations. In Isa. 44:28 the Persian King Cyrus is called "my [the Lord's] shepherd." Similarly, certain Egyptian writings refer to the pharaohs as "herdsmen" of the people (Frankfort, pp. 78, 90ff.); the shepherd's crook was the pharaoh's symbol of authority. *Circa* 2400 B.C. Ipu-wer longed for the coming of a new pharaoh who would be "the herdsman of all men. Evil is not in his heart. Though his herds may be small, still he has spent the day caring for them" (*ANET*, p. 433). As early as *ca.* 2385 B.C., Lugalzaggesi of Umman, in conquering Uruk, prayed, "unto eternity may I be the foremost (?) shepherd" (S. Kramer, *Sumerians* [repr. 1972], p. 324). *Circa* 2050 B.C. Gudea, the governor of Lagash, was described as "the faithful shepherd" (G. A. Barton, *Royal Inscriptions of Sumer and Akkad* [1929], p. 214). It appears, then, that other peoples in the OT world joined Israel in hoping for the arrival of a leader who would "feed his flock like a shepherd, . . . gather the lambs in his arms, . . . and gently lead those that are with young" (Isa. 40:11).

F. Pastoral Ministry. Drawing on the rich OT background of shepherding imagery applied to national leaders, the NT uses this imagery for leaders in the Church's ministry. One of the gifts of the Spirit is that some should be "pastors" (Gk. *poiménes*, "shepherds," Eph. 4:11; *see* PASTOR). In the tradition of Peter (Jn. 21:15-17), pastors are called to fulfil their love for the Lord by feeding and tending His "lambs" and "sheep." Paul exhorted the Ephesian elders to "take heed to yourselves and to all the flock, in which the Holy Spirit has made you guardians, to feed the church of the Lord" (Acts 20:28); he warned them that after his departure "fierce wolves will come in among you, not sparing the flock" (v. 29). Likewise, 1 Pet. 5:2f. exhorts elders to "tend the flock of God that is your charge . . . not for shameful gain but eagerly, not as domineering over those in your charge but being examples to the flock."

SHEEP BREEDING. *See* SHEEP.

SHEEP GATE [Heb. *ša'ar haṣṣô'n* (Neh. 3:1, 32; 12:39); Gk. *probatikós*–'pertaining to sheep' (Jn. 5:2)]; AV also SHEEP MARKET (Jn. 5:2). The gate in the wall N or NE of Jerusalem, which was restored by Nehemiah. In Jn. 5:2 the "gate" (RSV supplies "gate"; cf. NEB "Sheep-Pool"; *see* SHEEP MARKET) would have been located in the later Herodian wall somewhat north of the earlier location. Sheep for sacrificial offering were probably led to the temple through this gate (*see* JERUSALEM III.F.2.w).

SHEEP MARKET. The AV translation of Gk. *hē probatikḗ*, "(thing) pertaining to sheep" (Jn. 5:2; cf. RSV "Sheep Gate"; NEB "Sheep-Pool"). The AV understands the substantive to be Gk. *agorá*, "market," but the RSV supposes *pýlē*, "gate," probably on the basis of Neh. 3:1, 32; 12:39 (LXX *hē pýlē hē probatikḗ*). The NEB finds the

substantive in the following word *kolymbēthra*, "pool" (read as dative), following ℵ (which, however, omits the preposition *epí* [variant *en*], "at"); but this rendering yields an awkward construction at the end of the verse. *See* BETHESDA; JERUSALEM III.F.2.w.

SHEEPSHEARING. *See* SHEAR; SHEEP III.

SHEEPSKIN. Leather prepared from the skin of a sheep. Since sheep and goats were the most common domesticated animals in biblical times, one may assume that the tanned skins of these animals were used extensively for domestic purposes. Our knowledge of their use is limited, however, since the Bible contains very few specific references to the skins of sheep and goats. It does mention that ram's skin (Heb. *ʿôr ʾayil*) was used in the construction of the tabernacle (Ex. 25:5; 26:14; 35:7, 23; 36:19; 39:34). It is likely, therefore, that such skins were also used extensively for tent construction in general, especially for the tents used by shepherds, herdsmen, and travelers. There are also references to the use of *ʿôr taḥaš* (RSV "goatskin") in the construction of the tabernacle and its sacred objects (Ex. 25:5; etc.; Nu. 4:6, 8, 10-12; etc.), but the meaning of *taḥaš* is uncertain (cf. AV "badger's skin"; NEB "porpoise-hide"; *see* GOATSKINS). The NT refers to sheepskins in He. 11:37, which states that some of the OT heroes of the faith "went about in skins of sheep [Gk. *mēlōtḗ*] and goats." Such clothing, a symbol of destitution, was apparently the traditional garb of the Israelite prophets; it may be alluded to also in Jesus' warning against false prophets in Mt. 7:15.

Sheepskin was probably used for a variety of domestic articles, including skins for liquids (wineskins, waterskins, and milkskins), garments, and sandals (*see also* SKIN). Sheepskins tanned with the fleece (Jgs. 6:36-40) were likely used for mats (e.g., for sleeping and for riding animals) as well as for protective outer garments. Job's statement "skin for skin" (Job 2:4) may reflect the use of such animal skins by traders for bartering purposes (see comms.).

See also LEATHER; TANNED.

L. DEVRIES

SHEERAH shē'ə-rə [Heb. *šeʾĕrâ*]; (1 Ch. 7:24); AV, NEB, SHERAH. The daughter of Ephraim, or possibly the daughter of Beriah, Ephraim's son. According to the MT she built Lower and Upper Beth-horon and Uzzen-sheerah.

SHEET [Gk. *othónē*] (Acts 10:11; 11:5); NEB "sheet of sail-cloth." A large sheet-like object, which perhaps resembled a ship's sail (cf. M. Polyc. 15:2), seen by Peter in a vision.

SHEHARIAH shē-ə-rī'ə [Heb. *šᵉharyâ*] (1 Ch. 8:26). Son of Jeroham; a Benjaminite chief who lived in Jerusalem.

SHEKEL shek'əl. *See* WEIGHTS AND MEASURES.

SHEKEL OF THE KING'S WEIGHT. *See* WEIGHTS AND MEASURES.

SHEKEL OF THE SANCTUARY. *See* WEIGHTS AND MEASURES.

SHEKINAH shə-kī'nə [Heb. *šᵉḵînâ*–'dwelling']. A circumlocution used in rabbinic literature to signify God's presence. In reaction to Hellenism and paganism, Judaism attempted on the one hand to preserve the biblical notion of God's presence while on the other hand emphasizing the vast gulf between the deity and mankind.

Although the word "Shekinah" does not occur in the Bible, the root *škn* occurs not only in the verb ("dwell"), but also in the noun *miškān* ("dwelling place," "tabernacle") and the name Shecaniah ("Yahweh dwells"; e.g., 1 Ch. 3:21f.). The promise that God would dwell with mankind goes back to Noah's blessing in Gen. 9:27: "God enlarge Japheth, may he [God] dwell in the tents of Shem" (cf. RSV "and let him [Japheth] dwell . . . "). The Aramaic Tg. Onkelos renders this verse: "He will cause his Shekinah to dwell in the dwelling-place of Shem."

Many passages in the Pentateuch affirm that the Lord came to dwell among His people Israel. First He revealed His glory-cloud (Ex. 13:21f.), which represented His presence and protection in the wilderness (*see* PILLAR OF CLOUD AND PILLAR OF FIRE). The cloud came to rest at Mt. Sinai and formed a canopy for Moses as he communed with Yahweh and received the commandments (cf. 24:15-18). The purpose of the revelation about the construction of the TABERNACLE and the commencement of the priestly service (chs. 25–31) was to ensure that Israel might be blessed by the divine presence in its midst: "And let them make a sanctuary, that I may dwell in their midst.

Leather craftsmen at work. From left, making a quiver, slicing rims, and attaching rims to wheels. Facsimile of ε wall painting from the tomb of Habu at Thebes, 18th Dynasty (The Metropolitan Museum of Art)

According to all that I show you concerning the pattern of the tabernacle, and all of its furniture, so you shall make it" (25:8f.). The divine presence was a guarantee of the covenant: "And I will dwell among the people of Israel, and will be their God. And they shall know that I am the Lord their God, who brought them forth out of the land of Egypt that I might dwell among them; I am the Lord their God" (29:45f.; cf. Lev. 26:11f.). Only the concept of Shekinah can explain the details of Israel's cultic, moral, and civil laws. By these means God taught Israel how to live as a holy and clean people in His presence (cf. Nu. 5:3).

When the "tabernacle" (*miškān*) of the Lord was completed, it was crowned with the descent of the glory-cloud. The Pentateuch stresses that all Israel saw the cloud covering the tabernacle as evidence of the presence of the Lord's glory (Ex. 40:34-38; Lev. 9:23f.). Israel believed that the divine presence was particularly associated with the Most Holy Place, where Yahweh dwelt between the cherubim above the ark (1 S. 4:4; 2 S. 6:2; Ps. 80:1 [MT 2]; *see* ARK OF THE COVENANT VI). The Shekinah signified God's presence and protection; thus when the ark was carried forward an early war hymn exclaimed, "Arise, O Lord and let thy enemies be scattered; and let them that hate thee flee before thee"; and when it rested the response was, "Return, O Lord, to the ten thousand thousands of Israel" (Nu. 10:35f.). Later in Israel's history the location of the ark signified the place of the divine Shekinah — first at Shiloh (1 S. 4:4) and later in Jerusalem (2 S. 6:12-19). Yahweh revealed His glorious presence again through a cloud at the dedication of the Solomonic TEMPLE (1 K. 8:10f.). Upon this occasion Solomon declared, "The Lord has set the sun in the heavens, but has said that he would dwell in thick darkness. I have built thee an exalted house, a place for thee to dwell in for ever" (1 K. 8:12f.).

Closely related to the motif of the PRESENCE OF GOD are other motifs: "the angel of the Lord" (cf. Ex. 14:19; 23:20-23; 33:1-3; Isa. 63:9; *see* ANGEL II.C), the "glory" of the Lord (Ex. 40:34-38; Ezk. 1:28; 10:18f.; 11:22f.), the "word" (Isa. 55:10f.), "wisdom" (Prov. 8), and "Spirit" of the Lord (Ezk. 2:2; 11:24). These reveal God's presence and the means of His judgment and deliverance.

When Judaism came into contact with Hellenism (3rd cent. B.C.), it developed a theological vocabulary. Instead of referring directly to God by His names and titles, it spoke of Him in circumlocutions. The concept of Shekinah proved useful as an in-between way of speaking about God as Spirit, wisdom, the word, etc. In the Jewish Aramaic versions any anthropomorphic expression was a candidate for a paraphrastic rendering; e.g., the Aramaic Targum renders "Yahweh" ("Lord") or "God" by *šᵉkînâ*, *yᵉqārā'* ("glory"), and *mêmrā'* ("word"). In Tg. Onkelos God's Shekinah is in the midst of His people: "And they shall make before me a sanctuary and I shall cause my Shekinah to dwell among them" (Ex. 25:8); God reveals Himself to Moses: "And the Lord caused his Shekinah to pass before him" (34:6). Thus the targumist avoids any allusion to God's direct involvement in human affairs.

In the Mishnah, Midrashim, and Talmud, the Shekinah motif shows a theological rather than an apologetic development. The Shekinah, like the rays of the sun, is at many places at the same time (T.B. *Sanhedrin* 39a) and more present at some places than others. This explains Yahweh's special presence at the burning bush, Mt. Sinai, the tabernacle, and the temple. The analogy also clarifies Israel's special status, since the Shekinah was more real to the Israelites than to the Gentiles (T.B. *Berakoth* 7a; *Shabbath* 22b; Midr. *Nu. Rabbah* vii.8) even after they had gone into exile (T.B. *Megillah* 29a).Moreover, the radiance of the Shekinah is more authentic wherever anyone practices the law of God (T.B. *Menahoth* 43b), or good works (T.B. *Baba Bathra* 10a) or is in need of the divine presence (T.B. *Shabbath* 12b; *Sotah* 17a). The Shekinah resists the proud, rebellious, sinful, and lazy (T. B. *Berakoth* 43b; *Hagigah* 16a; *Shabbath* 30b; *Sotah* 42a), but rests in large measure on the saintly, wise, leaders, affluent(!), and outstanding Jews (T.B. *Shabbath* 92a; *Sotah* 48b; *Sukkah* 28). Even the proselytes could find a special place (T.B. *Shabbath* 31a). Related designations of the Shekinah are "the Word" (*mêmrā'*), "the Spirit," "the Glory," "the Light," and "the wings of the Shekinah." From the Tannaitic and Amoraic literature it is apparent that these designations of the Shekinah refer to none other than the Lord. As Urbach has observed, "a survey of all the passages referring to the Shekina leaves no doubt that the Shekina is no 'hypostasis' and has no separate existence alongside the Deity" (p. 63).

This is different in Christianity, however, where the NT presents the Christ as the Word, Glory, and Light of God, and also speaks of the Spirit of God. The Shekinah motif helps to explain the oneness and separateness within the Godhead. The NT authors employed this language to explain the mystery of the incarnation (*see* PERSON OF CHRIST) and the indwelling of the HOLY SPIRIT (II).

At Jesus' birth the shepherds saw the "glory" of the Lord (Lk. 2:9). John observed Jesus' glory and identified Him with the *mêmrā'* ("word") of God: "And the Word became flesh and dwelt [Gk. *skēnóō* = Heb. *škn*] among us, full of grace and truth; we have beheld his glory, glory as of the only Son from the Father" (Jn. 1:14). At Jesus' baptism the Holy Spirit descended and "remained on him" (v. 32). The Messiah's glory was especially transparent on the mount of transfiguration (Lk. 9:29; cf. 2 Pet. 1:16-18). In the context of giving sight to a blind beggar, Jesus Himself declared, "I am the light of the world" (Jn. 9:5). Shortly before His death Jesus prayed the high priestly prayer, in which He stated that the Son shares in the glory of the Father and prayed that believers may also share in this glory (17:22).

In his epistles Paul used the concept of "dwelling" (Shekinah) to set forth the mystery of the incarnation (the dwelling of God in human flesh; cf. Col. 1:19; 2:9). The "glory" of the Shekinah rests on all those who are in Christ (e.g., Rom. 9:23; Eph. 1:18; 3:16; Col. 1:11, 27). Jesus is "the Lord of glory" (1 Cor. 2:8). The "glory" of the incarnate Christ has been greatly magnified in His Resurrection (Rom. 6:4). Through the Spirit, all who are in Christ already share in the benefits of the risen Christ in anticipation of His glorious appearing (cf. Rom. 8:15-18; 2 Cor. 1:20-22; Eph. 1:13f.). Paul stated the Christian hope thus: "Now the Lord is the Spirit, and where the Spirit of the Lord is, there is freedom. And we all, with unveiled face, beholding the glory of the Lord, are being changed into his likeness from one degree of glory to another; for this comes from the Lord who is the Spirit" (2 Cor. 3:17f.).

The association of Jesus with the Shekinah is also apparent elsewhere in the NT. Paul saw the glory of the resurrected Jesus and was blinded by His brightness (Acts 9:3-9; 22:6-11; 26:12-18). He. 1:3 speaks of God's supreme revelation in Jesus, who "reflects the glory of God and bears the very stamp of his nature, upholding the universe by the word of his power." Jas. 2:1 addresses the Christian community as those who "hold the faith of our Lord Jesus Christ, the Lord of glory."

The presence of the Holy Spirit is also a representation of the Shekinah. The Spirit descended and remained on

Jesus (Jn. 1:33). At Pentecost the Spirit came down and rested on the 120 disciples: "And there appeared to them tongues as of fire, distributed and *resting* on each of them" (Acts 2:3, emphasis supplied).

The NT is clearly set against the Jewish background. The NT authors attributed to the Spirit and to the Son the glory associated with the Shekinah. Jesus is the *mêmrā'* ("Word"), filled with the Spirit of God and full of glory, and He reflects the glory of God. The Holy Spirit bestows the glory of God on all who are filled with the Spirit, and thus they are gloriously renewed in the image of God (see Kline).

W. A. VANGEMEREN

SHELAH shē'lə.

1. [Heb. *šelaḥ*; Gk. *Sala*]; AV also SALAH, NT SALA. The son of Arpachshad (according to the MT) and father of Eber (Gen. 10:24; 11:12-15; 1 Ch. 1:18, 24). Lk. 3:35f. and the LXX list him as the son of Cainan (Gk. *Kaïnam*) and grandson of Arphaxad.

2. [Heb. *šēlâ*]. The third son of Judah by the daughter of Shua the Canaanite (Gen. 38:5; 46:12; Nu. 26:20; 1 Ch. 2:3; 4:21). After his brothers Er and Onan had died he was promised by Judah to his daughter-in-law Tamar; but because of Judah's fear that Shelah too might die, this promise was broken (Gen. 38:11, 14, 26). He was the head of a family called the Shelanites (Nu. 26:20).

N. J. O.

SHELAH, POOL OF. *See* SILOAM.

SHELANITES shē'lə-nīts [Heb. *haššēlānî*]. Descendants of Judah's son SHELAH (2) (Nu. 26:20).

SHELEMIAH shel-ə-mī'ə [Heb. *šelemyâ, šelemyāhû*–'Yahweh has recompensed'].

1. A Korahite Levite, father of Zechariah; chosen to be gatekeeper of the east gate of the temple (1 Ch. 26:14). In vv. 1f., 9 he is called MESHELEMIAH.

2. Son of Cushi and ancestor of Jehudi (Jer. 36:14).

3. Son of Abdeel; according to the MT (LXX omits), one of three men sent by Jehoiakim to seize Baruch and Jeremiah after a scroll of Jeremiah's prophecies had been read in the king's presence (Jer. 36:26).

4. Father of Jehucal (Jer. 37:3) or Jucal (38:1).

5. Son of Hananiah; father of Irijah (Jer. 37:13).

6. [Gk. Apoc. *Selemias*]; AV Apoc., NEB Apoc., SELEMIAS. One of the sons of Binnui (or Bani) who had married foreign women during the Exile (Ezr. 10:39; 1Esd. 9:34).

7. Another of the sons of Binnui who had married foreign women during the Exile (Ezr. 10:41; omitted in par. 1 Esd. 9:34).

8. Father of a man named Hananiah who helped to rebuild the wall of Jerusalem (Neh. 3:30).

9. One of the priests appointed by Nehemiah to distribute among the Levites the tithes of produce brought to the temple storehouses (Neh. 13:13). N. J. O.

SHELEPH shē'ləf [Heb. *šelep*; *šālep* in pause]. A son of Joktan (Gen. 10:26; 1 Ch. 1:20). Since most of Joktan's other sons can be identified with tribes and places in the Arabian peninsula, it is probable that Sheleph should also be associated with this same region. The name has been identified with Shilph, a district in Yemen, and with Shalph or Shulph, one of the Yemenite tribes. There is also a place named *šlpn* in Hadramaut, as well as es-Salf in 'Awâliq and Wâdī Salaf (cf. C. Conti Rossini, *Chrestomathia arabica meridionalis epigraphica* [1931], p. 196). The name (*Šlp*) possibly occurs on an ostracon found in Elat.

Bibliography.–*Encyclopedia Miqrait*, VII, 715; G. R. Driver, *BASOR*, 90 (Apr. 1943), 34; U. Cassuto, *Comm. on the Book of Genesis* (Eng. tr. 1964), p. 222. D. A. DORSEY

SHELESH shē'ləsh [Heb. *šēleš*–'third' (?)] Third son of Helem; head of an Asherite family (1 Ch. 7:35).

SHELOMI shə-lō'mī [Heb. *šᵉlōmî*–'peace' (?)]. Father of Ahihud, an Asherite leader chosen by Moses to assist Joshua in the division of the land of Canaan among the Israelite tribes (Nu. 34:27).

SHELOMITH shə-lō'mith [Heb. *šᵉlōmîṯ, šᵉlômîṯ*–'peaceful' (?); Gk. LXX *Salōmeith, Salōmethei, Salōmōth* (1 Ch. 23:18), *Salimouth* (Ezr. 8:10), etc.]; NEB also SHELOMOTH. A feminine form of Shelomi, sometimes confused with the masculine name Shelomoth (see *IP*, p. 165 n.6).

1. A Danite, daughter of Dibri; wife of an Egyptian; mother of a man who was stoned because he had "blasphemed the name" (Lev. 24:11; cf. vv. 10, 12-16, 22f.).

2. (1 Ch. 23:9, AV, NEB mg.). *See* SHELOMOTH 3.

3. A Levite; chief of the sons of Izhar (1 Ch. 23:18); more correctly called SHELOMOTH (1) in 24:22.

4. (AV 1 Ch. 26:25f., 28; RSV mg. v. 28). *See* SHELOMOTH 2.

5. A son or daughter of King Rehoboam by his wife Maacah the daughter of Absalom (2 Ch. 11:20).

6. [Gk. Apoc. *Assalimōth*]; AV Apoc., NEB Apoc., ASSALIMOTH. Son of Josiphiah of the family of Bani; head of a family whose representatives returned from Babylonia with Ezra (Ezr. 8:10 par. 1 Esd. 8:36). His name should probably be the masculine form "Shelemoth" (cf. *BHS*, LXX).

7. Daughter of Zerubbabel (1 Ch. 3:19). N. J. O.

SHELOMOTH shə-lō'moth [Heb. *šᵉlōmôṯ, šᵉlōmîṯ* (1 Ch. 26:28)]; AV also SHELOMITH. *See also* SHELOMITH.

1. A Levite, son of Izhar (1 Ch. 24:22); called "Shelomith" in 23:18 (cf. *BHS*).

2. A Levite, descendant of Eliezer (1 Ch. 26:25f., 28). He and his brethren were put in charge of all the dedicated gifts from the battle spoils of Samuel, Saul, Abner, and Joab.

3. A Gershonite Levite, son of Shimei (1 Ch. 23:9).

SHELUMIEL shə-lōō mi-əl [Heb. *šᵉlumî'ēl*–'God is peace,' or 'at peace with God,' or 'my friend is God' (?)]. A leader of the Simeonites; son of Zurishaddai. He was one of the twelve tribal leaders who assisted Moses in the census of the Israelites and in other ways (Nu. 1:6; 2:12; 7:36, 41; 10:19).

In Jth. 8:1 SALAMIEL, an ancestor of Judith, is presumably the same person as Shelumiel.

See *IP*, pp. 90, 165 n.3.

SHEM shem [Heb. *šēm*; Gk. *Sēm*]; AV also SEM (Lk. 3:36). The firstborn son of Noah, and the brother of Ham and Japheth (Gen. 5:32; 6:10; 10:1; 1 Ch. 1:4; Lk. 3:36; etc.). Shem and his wife boarded the ark with his father and mother and his brothers and their wives (Gen. 7:13) and disembarked with them after the flood (9:18). In biblical tradition, therefore, the subsequent population of the

world is divided into three groups: the descendants of Shem, Ham, and Japheth (ch. 10). To a limited extent this system of classification has persisted into modern times, especially with reference to the study of languages. "Hamitic" is now rarely used as a designation for Egyptian and related languages, and "Japhitic" has been entirely displaced by "Indo-European," but linguists still speak of Semitic (previously "Shemitic") languages. But the modern term does not correspond closely to biblical usage. The descendants of Shem listed in Gen. 10:21-31 and 11:10-27 (cf. 1 Ch. 1:17-27) include many peoples who did not speak Semitic languages in the modern sense. The biblical system of classification seems to be geographical or political rather than linguistic or even ethnic. Thus the descendants of Shem are generally the peoples who lived N and E of Canaan in biblical times. In Gen. 10:22 Shem is said to have been the father of Elam, ancestor of the people of a mountain country NE of Mesopotamia (where a non-Semitic language was spoken); Asshur, ancestor of the people of northern Mesopotamia; Arpachshad, ancestor of the Hebrews and perhaps the Babylonians; Lud, perhaps the ancestor of the Lydians of western Asia Minor; and Aram, ancestor of the Arameans. The Hebrews ("the children of Eber," 10:21) and ultimately the family of Abraham (11:10-27; 1 Ch. 1:24-27) descended through Shem's son Arpachshad. Thus the Israelites traced their ancestry to Abraham, Eber, and Shem. An important effect of this system is to distinguish the "Shemitic" Israelites sharply from both the Canaanites, who were descended from Ham (Gen. 10:6), and the Philistines, who, as coastal peoples, were descended from Japheth (cf. 10:5).

According to the story in Gen. 9:20-27, Ham dishonored Noah when he was drunk, leaving him lying naked in his tent. But Shem and Japheth covered their father with a garment. As a result Noah cursed Ham — or rather his son Canaan — and blessed Shem and Japheth. Most interpreters believe that these curses and blessings anticipate the later situation in the Promised Land, where, from the Israelite point of view, the cursed Canaanites were displaced by the Israelite descendants of the blessed Shem. From this perspective the statement that Japheth would "dwell in the tents of Shem" (9:27) refers to the enclaves of Philistines who lived on the coastal plain of Canaan after the Israelite conquest.

P. K. MCCARTER, JR.

SHEMA shē'mə [Heb. *šema'*–'he [God] has heard'].

1. A Judahite, descendant of Caleb; a son of Hebron and father of Raham (1 Ch. 2:43f.); possibly the name of a settlement near Hebron.

2. A Reubenite, son of Joel and father of Azaz (1 Ch. 5:8); possibly the same as Shemaiah or Shimei in v. 4.

3. A Benjaminite, head of a father's house in Aijalon (1 Ch. 8:13); called Shimei in v. 21.

4. [Gk. Apoc. A *Sammous*, B *Sammou*]; AV Apoc., NEB Apoc., SAMMUS. One of the men who stood at Ezra's right hand during the public reading of the law (Neh. 8:4 par. 1 Esd. 9:43).

SHEMA shē'mə [Heb. *šema'*; LXX A *Samaa*, B *Salmaa*]. A town of Judah in the Negeb, mentioned in the sequence "Amam, Shema, Moladah" (Josh. 15:26). the parallel passage, which records the inheritance of Simeon that was included in Judah, has "Beer-sheba, Sheba [Heb. *šeba'*; LXX A *Sabee*, B *Samaa*], Moladah" (19:2). The reading "Sheba" appears due to the preceding word, Beer-sheba, in the Simeon list; it also may be a hint that two places were called Beer-sheba (like Arad and Anim).

Some have also equated Shema with Jeshua, mentioned with Moladah in Neh. 11:26 as among the places occupied by Judeans in the 5th cent. B.C. But this identification is doubtful, as is that of Jeshua with Khirbet Sa'weh. Neither is there support for the equation of Shema with Birsama (Barsama) of the *Notitia dignitatum*. Birsama was the military center for the Gerar District (Saltus Gerariticus) in the Byzantine era.

It has recently been proposed to identify Shema/Sheba with Tell es-Seba' and Beer-sheba with Bîr es-Seba'. The neatly planned fortified center at the Tell with its horned altar must have been the administrative center; its remains are on the best tactical site in the vicinity (high ground near ample water sources). Bîr es-Seba', on the low ground along the bank of the Wâdī es-Seba' (where modern Beer Sheva' stands today), is a more suitable site for a civilian settlement. After the destruction of the fortress at Tell es-Seba', the settlement at Bîr es-Seba' continued to exist, and there the Greco-Roman and Byzantine cities grew up. Without further evidence the location of Shema remains uncertain.

A. F. RAINEY

SHEMA, THE shə-mä' [Heb. *šema'*—'Hear' (the first word of Dt. 6:4)]. The "watchword of Israel's faith," a declaration of the oneness and uniqueness of God as found in the opening words of Dt. 6:4: "Hear, O Israel: The Lord our God, the Lord is one" (RSV mg.; Heb. *šema' yiśrā'ēl yhwh 'elōhênû yhwh 'eḥād*).

The Shema is not a prayer (rabbinic literature never refers to "praying" the Shema) but a confession of faith or creed. The practice of reciting the Shema daily is firmly established in the Mishnah (*ca.* A.D. 200), which underscores the Shema's importance in Jewish religious experience by its opening words: "From what time in the evening may the *Shema'* be recited?" (*Berakoth* i.1). But there is also evidence of the Shema's use during and even before the NT era. The custom is alluded to in the Letter of Aristeas (160; *ca.* 150-100 B.C.); moreover, the Mishnah states that the Shema was recited by the priests in the temple — indication of its use prior to A.D. 70 (*Tamid* iv.3; v.1).

As the Shema developed it came to include three passages from the law of Moses. The first (Dt. 6:49) proclaims God's oneness (v. 4) and calls Israel to love Him and obey His commandments (vv. 5-9). The second (11:13-21) details the rewards for obeying these commandments and the punishments for disobeying them. The third (Nu. 15:37-41) sets forth the law concerning tassels on garments as a reminder to keep "all the commandments of the Lord" (v. 39).

In accordance with Dt. 6:7 the Shema was recited twice a day, in the morning and evening: ". . . when you lie down and when you rise" (cf. Mish. *Berakoth* i.1f.). This was considered the minimum religious requirement for a Jewish male. During the talmudic period much rabbinic debate focused on the question of precisely how long after dawn or sunset the Shema should be read (T.B. *Berakoth* 2a-3a, 9b). The school of Shammai also debated the school of Hillel about the proper posture for reciting it (T.B. *Berakoth* 10b-11a; cf. Dt. 6:7). Women, slaves, and children were not required to recite the Shema (Mish. *Berakoth* iii.3), but boys were taught the first verse of the Shema (Dt. 6:4) as soon as they could speak (T.B.

Sukkah 42a). The Shema was recited as the last utterance of martyrs being led to their death, and to this day it is recited at the conclusion to death-bed confessions. Thus Jews are taught to have the name of God on their lips from early childhood to the moment of death.

The Mishnah teaches that the morning recitation of the Shema is to be preceded by two benedictions and concluded by one. In the evening it is preceded by two benedictions and followed by two (Mish. *Berakoth* i.4; ii.2). The main theme of the morning benedictions is praise to God for creating the light of the day, giving the Torah, and redeeming Israel. The evening blessings likewise give thanks for physical and spiritual light but also attest to the truths of God and plead for a peaceful rest.

Of the 5,845 verses in the Pentateuch, "Hear, O Israel: The Lord our God, the Lord is one" sounds the historic keynote of all Judaism. This fundamental truth and leitmotif of God's uniqueness prompts one to respond by fulfilling the fundamental obligation to love God (Dt. 6:5). Accordingly, when Jesus was asked about the "most important commandment," His reply did not contradict this central theme of Judaism (Mk. 12:28-34; cf. Mt. 22:34-40). With 613 individual statutes of the Torah from which to choose, Jesus cited the Shema, including the command to love God; but He also extended the definition of the "first" and "great" commandment to include love for one's neighbor (Lev. 19:18).

Scholars have differed in their renderings of Dt. 6:4 (the RSV gives four possible translations; cf. mg.). Some translators have considered these six Hebrew words to be one nominative sentence, while others have read them as two. Perhaps of greater importance, however, is the meaning of the final word, *'eḥāḏ* ("one"). Jewish interpreters have largely understood the phrase "the Lord is one" to carry either or both of two emphases. (1) It is an affirmation of monotheism. In opposition to their polytheistic environment, the Hebrews were to know that there was only one God, not many. Yahweh is one in that there is no other God. C. H. Gordon has suggested further that Dt. 6:4 means not only that there is one God, but that "One" is His name (cf. Zec. 14:9). (2) It declares the uniqueness of God. Yahweh is the Supreme Being, wholly unlike all other things, in the universe, which have been created by Him.

In the OT *'eḥāḏ* usually refers to a single unit such as a person. Certain interpreters have insisted, however, that *'eḥāḏ* may also be used to designate a collective unit (e.g., Gen. 1:5; 2:24; Nu. 13:23), i.e., a "diversity within unity." Thus some Christian scholars have found room for trinitarian monotheism in the *'eḥāḏ* of Dt. 6:4. So interpreted, God is seen as a complex unity, not simply as numerically one. It must be remembered, however, that the main focus of the Shema in its original setting — ancient Near Eastern polytheism — is clearly on the fact there is one God (cf. 4:39). Yahweh alone claims the unqualified love and obedience of all His creation.

M. R. WILSON

SHEMAAH shə-mā'ə [Heb. (*haš*)*šᵉmā'â*]. A Benjaminite from Gibeah; father of Ahiezer and Joash (according to the MT; but according to the LXX the father only of Joash), who were among the "mighty men" who joined David at Ziklag (1 Ch. 12:3).

SHEMAIAH shə-mā'yə, shə-mī'ə [Heb. *šᵉma'yâ, šᵉma'yāhû* –'Yahweh has heard']. A name borne primarily by Levites, priests, and prophets.

1. A Reubenite, son of Joel (1 Ch. 5:4); possibly identical with Shema in v. 8.

2. A Simeonite chief, father of Shimri (1 Ch. 4:37); possibly identical with Shimei in vv. 26f.

3. Chief of the Levitical family of Elizaphan in the time of David (1 Ch. 15:8). He and his family assisted in bringing up the ark to Jerusalem (vv. 11-15).

4. Son of Nethanel; a Levitical scribe who recorded the divisions of the priests and Levites in the time of David (1 Ch. 24:6).

5. A Korahite Levite of the division of gatekeepers; eldest son of Obed-edom; father of several very able sons (1 Ch. 26:4, 6f.).

6. A prophet who denounced King Rehoboam's plan to make war against the ten tribes that had revolted under Jeroboam's leadership, because the revolt was sanctioned by Yahweh (1 K. 12:22-24 par. 2 Ch. 11:2-4). This apparently led to a temporary cessation of fighting (1 K. 12:24); but according to 14:30 "there was war between Rehoboam and Jeroboam continually" (see J. Gray, *I & II Kings* [*OTL*, 2nd ed. 1970], pp. 308-311). The LXX has a long insertion after 1 K. 12:24, which includes a brief version of the encounter between Ahijah reported in 11:29-39. In this account Shemaiah, rather than Ahijah, rends his garment and gives ten pieces to Jeroboam to signify his future kingship over ten tribes. Shemaiah appears again in the Chronicler's account of Shishak's invasion during the fifth year of Rehoboam's reign (2 Ch. 12:1-8; there is no mention of Shemaiah in par. 1 K. 14:25-28). His first message was that Yahweh had permitted Shishak's invasion because of Judah's sin (2 Ch. 12:5). After Rehoboam and the princes repented, he brought a new message: because they had humbled themselves, Yahweh would not allow Shishak to destroy Jerusalem (vv. 7f.). In v. 15 the Chronicler mentions his special source for his account of Rehoboam's reign: "the acts of Shemaiah the prophet and of Iddo the seer" (not mentioned by the author of Kings).

7. A Levite who took part in Jehoshaphat's reform (2 Ch. 17:8). He was part of a commission, consisting of five princes, nine Levites, and two priests, sent out by Jehoshaphat to teach "the book of the law of the Lord" in the cities of Judah.

8. A Levite of the family of Jeduthun who assisted in cleansing the temple during the reign of Hezekiah (2 Ch. 29:14).

9. One of six priests who assisted Kore in the distribution of the freewill offerings to the priests during the reign of Hezekiah (2 Ch. 31:15).

10. [Gk. Apoc. *Samaias*]; AV Apoc. SAMAIAS; NEB Apoc. SAMAEAS. One of the chiefs of the Levites who made a generous contribution of animals to the Levites for the Passover offering during Josiah's reign (2 Ch. 35:9 par. 1 Esd. 1:9).

11. The father of the prophet Uriah (Jer. 26:20).

12. The father of Delaiah the prince (Jer. 36:12).

13. An exile in Babylonia (*see also* NEHELAM) who opposed Jeremiah by predicting a speedy end to the captivity (Jer. 29:24-32). He wrote to the people in Jerusalem and to Zephaniah the priest demanding that Jeremiah be imprisoned for prophesying that the captivity would be long. Jeremiah foretold that Shemaiah's family would never return from the Exile because of his false prophecy.

14. The name of a priestly family that returned from exile with Zerubbabel (Neh. 12:6), was headed by Jehonathan in the days of Joiakim (v. 18), and sealed the

covenant in the time of Nehemiah (10:8 [MT 9]; see *IB*, III, 759).

15. Son of Mattaniah and descendant of Asaph; a priest whose grandson Zechariah was among those who blew the trumpet at the dedication of the new wall of Jerusalem (Neh. 12:35).

16. Son of Galal and descendant of Jeduthun (1 Ch. 9:16). His son Obadiah (called "Abda the son of Shammua" in Neh. 11:17) was among the Levites who lived in Jerusalem after the Exile.

17. Son of Hasshub; a Merarite Levite who lived in Jerusalem after the Exile (1 Ch. 9:14 par. Neh. 11:15).

18. [Gk. Apoc. *Samaias*]; AV Apoc. SAMAIAS; NEB Apoc. SAMAEAS. Head of a father's house that returned with Ezra from exile; his was one of the last three households of the family of Adonikam to return from exile (Ezr. 8:13 par. 1 Esd. 8:39; see Fensham, p. 112; *IB*, III, 634).

19. [Gk. Apoc. *Samaias*]; AV Apoc. MAMAIAS; NEB Apoc. SAMAEAS. One of the leaders sent by Ezra to Casiphia to obtain Levites when it was learned that there was none in the company returning from Babylonia (Ezr. 8:16 par. 1 Esd. 8:44 [LXX 43]).

20. [Gk. Apoc. *Samaios*]; AV Apoc. SAMEIUS; NEB Apoc. SAMAEAS. A priest from the family of Harim who married a foreign woman in exile (Ezr. 10:21 par. 1 Esd. 9:21).

21. A layman from the family of Harim who married a foreign woman in exile (Ezr. 10:31).

22. [Gk. Apoc. *Samatos*]; AV, NEB, RSV mg., SAMATUS. A layman of the family of Ezora who married a foreign woman in exile (1 Esd. 9:34).

23. Son of Shecaniah (1 Ch. 3:22; "and the sons of Shemaiah" should probably be omitted; *see* SHAPHAT **3**); possibly identical with the keeper of the East Gate, who assisted in repairing the wall of Jerusalem (Neh. 3:29).

24. Son of Delaiah and descendant of Mehetabel; a prophet hired by Sanballat and Tobiah to take part in a plot to discredit Nehemiah (Neh. 6:10). He attempted to make Nehemiah afraid of an assassination plot in order to induce him to take refuge in the temple, an act that would have left Nehemiah open to the charge of sacrilege because he was a layman and a eunuch (vv. 10-14).

25. Probably a priest; one who participated in the counterclockwise procession at the dedication of the rebuilt wall of Jerusalem (Neh. 12:34).

26. A priest or Levite; a musician who participated in the counterclockwise procession at the dedication of the wall (Neh. 12:36).

27. A priest who participated in the clockwise procession at the dedication of the wall (Neh. 12:42).

28. [Gk. A B *Semeios*, ℵ *Seme(l)ios*]; AV SAMAIAS; NEB SEMELIAS. A kinsman of Tobias referred to as "the great Shemaiah" (Tob. 5:13).

Bibliography.–F. C. Fensham, *Books of Ezra and Nehemiah* (*NICOT*, 1982); *IB*, III, 358, 634, 719-721, etc.; J. M. Myers, *Ezra, Nehemiah* (*AB*, 1965); *I Chronicles* (*AB*, 1965); *II Chronicles* (*AB*, 1965). N. J. O.

SHEMARIAH shem-ə-rī'ə, shə-mär'i-ə [Heb. *šᵉmaryâ, šᵉmaryāhû*–'Yahweh has preserved']; AV also SHAMARIAH.

1. One of the Benjaminite warriors who joined David at Ziklag (1 Ch. 12:5 [MT 6]).

2. A son of Rehoboam by his wife Mahalath (2 Ch. 11:19).

3. One of the sons of Harim who had married foreign women during the Exile (Ezr. 10:32).

4. One of the sons of Binnui who had married foreign women during the Exile (Ezr. 10:41).

SHEMEBER shem-ē'ber, shem'ē-ber [Heb. *šem'ēḇer*]. King of Zeboiim (Gen. 14:2), a city located in the plain of the Jordan along with Sodom, Gomorrah, Admah, and Zoar. After Chedorlaomer king of Elam, invaded southern Palestine with three other confederates, he made vassals of Shemeber and the rulers of the neighboring cities (14:4). After twelve years of subjugation the Canaanite kings revolted, and later fought the Mesopotamian coalition once again. The king of Zeboiim joined in the resistance (14:8), but since he was not named it is uncertain if he was Shemeber or a successor. His name has formal similarities to West Semitic names occurring in Mesopotamian texts from the 18th cent. B.C. (See, e.g., H. B. Huffmon, *Amorite Personal Names in the Mari Texts* [1965], pp. 247-49), but as most commentators point out, no exact parallel has been attested.

On the later variant spelling *šm'bd* (found in Sam. Pent. and 1Qap Gen), see J. Fitzmyer, *Genesis Apocryphon of Qumran Cave I* (1971), p. 163. R. K. H.

SHEMED shē'məd [Heb. *šemeḏ*–'destruction,' many MSS *šmr*]; AV, NEB, SHAMED. A Benjaminite, third son of Elpaal; builder of the towns of Ono and Lod (1 Ch. 8:12). The name occurs only in the pausal form *šāmeḏ*, which is the spelling used by the AV and NEB.

SHEMER shē'mər [Heb. *šemer*–'watch' (?), *šāmer* (pausal form, 1 Ch. 6:46 [MT 31]; 7:34)]; AV also SHAMER; NEB also SHAMER, SHOMER.

1. The original owner of the hill on which Omri built the city of SAMARIA. According to 1 K. 16:24 the city's name (Heb. *šōmᵉrôn*) is derived from "Shemer." Shemer may be the name of an individual but more likely represents the name of a clan (see J. Gray, *I & II Kings* [*OTL*, 2nd ed. 1970], p. 367).

2. A Merarite Levite (1 Ch. 6:46 [MT 31]).

3. An Asherite, son of Heber (1 Ch. 7:34); called Shomer in v. 32.

SHEMIDA shə-mī'də [Heb. *šᵉmîḏāʿ*]; AV also SHEMIDAH; **SHEMIDAITES** shə-mī'də-īts [Heb. *šᵉmîḏāʿî*]. A descendant of Manasseh; a Gileadite whose name appears in the second census taken by Moses in the wilderness (Nu. 26:32); the eponymous ancestor of a family named the Shemidaites who received an allotment of land in Manasseh (26:32; Josh. 17:2). His four sons were Ahian, Shechem, Likhi, and Aniam (1 Ch. 7:19).

SHEMINITH shem'ə-nith [Heb. *šᵉmînîṯ*–'eighth']. A musical term of uncertain meaning occurring in the superscriptions to Pss. 6 and 12 (MT 6:1; 12:1; NEB omits) and in 1 Ch. 15:21 (NEB mg.). The traditional interpretation is that it refers to men's voices "upon the octave" (cf. LXX Ps. 6:1; 11:1 *hypér tḗs ogdóēs*; Vulg. *pro octava*), i.e., sung in the lower octave (*see also* ALAMOTH, which appears to be related to Sheminith in some way [1 Ch. 15:20f.]; for this interpretation, see C. A. Briggs and E. G. Briggs, comm. on Psalms, I [*ICC*, 1906], lxxvii; M. Dahood, *Psalms*, I [*AB*, 1965], 38). Other scholars have pointed out, however, that there is no evidence that Israelite music was based on an octave scale; thus the traditional interpretation is highly unlikely (see S. Mowinckel, *Psalms in Israel's Worship* [Eng. tr. 1962], II, 215 n. 19). Some have therefore suggested that *šᵉmînîṯ* may denote an eight-stringed instrument (e.g., KoB, p. 988) or the eighth stage of a particular ritual (e.g., Mowinckel, pp. 215f.).

See also MUSIC III.B.2. N. J. O.

SHEMIRAMOTH shə-mir'ə-moth [Heb. *Q šᵉmîrāmôṯ; K šᵉmirāymôṯ* (2 Ch. 17:8); Akk. *Sammurāmat*–'goddess' (?)].

1. A Levite harpist among those appointed by David to supply music during the transfer of the ark from Obed-edom to Jerusalem (1 Ch. 15:18, 20) and to continue the musical functions before the ark thereafter (16:5).

2. One of several Levites authorized by Jehoshaphat to teach the books of the law in the cities of Judah (2 Ch. 17:8).

SHEMITES shem'īts. *See* SEMITES.

SHEMUEL shem'ū-əl [Heb. *šᵉmû'ēl* (same as SAMUEL)]; NEB SAMUEL.

1. Son of Ammihud; a Simeonite appointed by Moses to represent his tribe in the division of the land (Nu. 34:20).

2. Youngest son of Tola; head of a father's house in the tribe of Issachar (1 Ch. 7:2).

3. (1 Ch. 6:33, AV). *See* SAMUEL.

SHEN shen (1 S. 7:12, AV). *See* JESHANAH.

SHENAZAR shə-na'zər (1 Ch. 3:18, AV). *See* SHENAZZAR.

SHENAZZAR shə-na'zər [Heb. *šen'aṣṣar*; Akk. *Sin-uṣur*–'Sin (the moon-god), protect'] (1 Ch. 3:18); AV SHENAZAR. Son of Jeconiah (Jehoiachin) and uncle of Zerubbabel. The identification of Shenazzar with Sheshbazzar has been questioned (cf. P. -R. Berger, *ZAW*, 83 [1971], 98-100).

SHENIR shē'nər (AV Dt. 3:9; Cant. 4:8). *See* SENIR.

SHEOL shē'ōl [Heb. *šᵉ'ôl*]; AV GRAVE, HELL, PIT; NEB also GRAVE. A Hebrew proper noun without clear etymology and with a relatively wide range of meanings (mainly "death," "the grave," "hell," "the next world," "the nether world"), making it difficult to determine which of its meanings is in view in any given OT passage. The term occurs sixty-six times in the OT; but outside the OT it occurs independently only once, in the Aramaic Elephantine papyri of the 5th cent. B.C., where it seems to mean "the grave." The LXX renders it by Gk. *hádēs* (Hades), as apparently does the NT, at least in direct quotations of the OT. Conjectures that *šᵉ'ôl* is linked to Heb. *š'l*, "ask," are speculative at best.

The meaning of Sheol is of great interest because of its bearing on the issue of belief in an afterlife in the OT. Various theories about the meaning of Sheol include the following. (1) The OT contains no afterlife belief at all until the 3rd-2nd cent. B.C., to which many scholars date Dnl. 12:2; Isa. 26:19; etc. Thus Sheol means merely "the grave," to which all people, good or bad, go after death (cf. Gen. 37:35 and Nu. 16:30, respectively), and where no conscious existence is lived. (2) The OT imagines a shadowy, semi-conscious continuing life of some sort in a place where all people go after death, and Sheol is this place (cf. Ezk. 31–32). (3) Sheol, meaning in effect "the next world," is divided into two compartments, to one of which everyone goes upon earthly death. The lower compartment is a place of miserable existence (shadowy or otherwise), while the upper compartment (*limbus patrum*, "limbo") is where the good dwell as they await the resurrection. (4) Bodies only go to Sheol, while souls — at least those of the righteous — go to heaven. (5) Sheol is a NETHER WORLD inhabited by demons and some or all of the dead, who live an existence divorced from and, for demons, in opposition to the purposes of God and those who live on the earth. (6) Sheol is a term used in at least two different ways, one being simply "death"/"grave" and the other being "the next life."

With regard to these and other options, it must be noted that nowhere in the OT is Sheol described as a place of torment or punishment for the wicked. At most it is a place of confinement away from the land of the living. A word so widely used is bound to have a great range of meaning (cf. *šāmayim*, which can range from "sky" to "God's abode"). Moreover, its use in poetic passages (58 of 66 times), metaphors, and allegories (e.g., Ezk. 31–32) must be carefully evaluated to differentiate figurative or emotive usages from genuinely descriptive ones.

The picture of Sheol that emerges is multifaceted but not contradictory. Sheol can mean simply "death" (Gen. 42:38; Ps. 89:48 [MT 49]), and in that sense it is a place to which all people eventually go (*see* DEATH III). In the same sense it is a place of total or relative inactivity, thus completely divorced from life on earth, including worship (Ps. 6:5 [MT 6]; 31:17 [MT 18]). In other contexts Sheol may refer to a nether world, however that is conceived (Ps. 86:13 [?]; Jonah 2:2 [?]). In its sense of "the grave," Sheol is sometimes associated with factors common to graves, e.g., darkness, worms, dust, and physical corruption (Job 17:13-16). In contrast to *šāmayim*, "heaven," Sheol is characterized by a sense of depth (Ps. 139:8; Am. 9:2). The expression "be gathered to one's fathers" (e.g., 2 K. 22:20) may suggest that Sheol is a place where all meet in a future, conscious life; but it may also merely reflect family-grave burials in ancient Palestine.

Some have thought Sheol to be a place of prejudgment preservation or "sleep" because of the dead Samuel's words to Saul, "Why have you disturbed me by bringing me up?" (1 S. 28:15); but this caustic question may have been intended more as a mockery of Saul and embarrassment to the medium than as an accurate reflection of the nature of Sheol. The breadth of Sheol's domain is emphasized in passages such as Prov. 27:20; Isa. 5:14; Hab. 2:5. Its hold on the dead, from which return is impossible, is reflected in Prov. 1:12; Eccl. 9:10; Ps. 6:5 (MT 6). Sheol is described metaphorically as having confining bars (Job 17:16; cf. Mt. 16:18) or a large mouth to receive its inhabitants (Isa. 5:14). Not until the Hellenistic era (after 333 B.C.) was Sheol (Hades) conceived of as compartmentalized, with places of torment and comfort (cf. 1 En. 22). The NT view of HADES as a place of confinement for the wicked (Rev. 20:13) until their destruction in GEHENNA (Mt. 10:28; Rev. 20:14-15) goes beyond the far more neutral OT usage of Heb. *šᵉ'ōl*, and it corrects the often bizarre intertestamental uses of Gk. *hádēs*.

SHEPHAM shē'fəm, shə-fām' [Heb. *šᵉpām*]. One of the places in northeast Canaan that marked the eastern boundary of Israel (Nu. 34:10f.). Its exact location is unknown, but it was probably in the region of Mt. Hermon (*GTTOT*, § 284, pp. 102f.; *LBHG* [rev. ed. 1979], p. 73).

P. VIVIANO

SHEPHATIAH shef-ə-tī'ə [Heb. *šᵉpaṭyâ, šᵉpaṭyāhû*–'Yahweh has judged']; AV also SHEPHATHIAH (1 Ch. 9:8).

1. A Haruphite; one of the Benjaminite "mighty men" who joined David at Ziklag (1 Ch. 12:5 [MT 6]).

2. Son of Maacah; an officer in charge of the tribe of Simeon in the time of David (1 Ch. 27:16).

3. Son of David by Abital; the fifth son born to David at Hebron (2 S. 3:4; 1 Ch. 3:3).

4. A son of King Jehoshaphat (2 Ch. 21:2).

5. Son of Mattan; one of four Judean princes who demanded of King Zedekiah that Jeremiah be put to death because his prophecies were undermining the morale of the people (Jer. 38:1-4). Zedekiah handed Jeremiah over to them, and they attempted to kill him by leaving him to die at the bottom of a muddy cistern (vv. 5f.). The entire chapter shows the powerful position of the princes and Zedekiah's inability to stand up to them (cf. vv. 15f., 24-27).

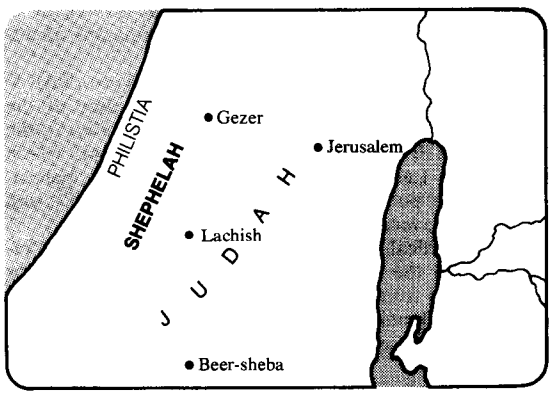
6. [Gk. Apoc. *Saphat* (1 Esd. 5:9), B *Sophotias*, Lucian *Saphatias* (8:34)]; AV Apoc. SAPHAT, SAPHATIAS; NEB Apoc. SAPHAT, SOPHOTIAS. Head of a family of which 372 members returned from Babylonia with Zerubbabel (Ezr. 2:4 par. Neh. 7:9; 472 members according to 1 Esd. 5:9); later eighty-one more male members returned with Ezra (Ezr. 8:8; seventy-one according to 1 Esd. 8:34).

7. [Gk. Apoc. B *Saphyei*, A *Saphythi*]; AV Apoc. SAPHYTHI. Head of a family of SOLOMON'S SERVANTS that returned from Babylonia with Zerubbabel (Ezr. 2:57 par. Neh. 7:59; 1 Esd. 5:33).

8. A Benjaminite whose son or descendant, Meshullam, was among the first returned exiles to reside in Jerusalem (1 Ch. 9:8).

9. A Judahite of the family of Perez; some of his descendants were among the first returned exiles to reside in Jerusalem (Neh. 11:4). N. J. O.

SHEPHELAH shə-fē'lä [Heb. *šᵉpēlâ*]; AV VALE, VALLEY, PLAIN, LOW PLAIN, LOW COUNTRY; AV Apoc. SEPHELA (1 Macc. 12:38).



I. Name.–The term means "lowland" and is frequently rendered thus in the RSV (Dt. 1:7; Josh. 9:1; 10:40; 11:2, 16; 12:8; 15:33; Jgs. 1:9; Zec. 7:7), but elsewhere the transliteration is "Shephelah" (1 K. 10:27; 1 Ch. 27:28; 2 Ch. 1:15; 9:27; 26:10; 28:18; Jer. 17:26; 32:44; 33:13; Ob. 19), which recognizes the term as a proper noun. The designation "Shephelah" originated among those on the hills above and to the east of the area. The Shephelah is clearly distinguished from the lower coast, or coastal plain on the west; the Shephelah proper is the intermediate zone separating the Judean hill country from the Philistine plain. (*See also* PALESTINE IV.A.2.) Only in one case does the term designate a second area (geographically similar) in the north, namely, the foothills behind Tyre (Josh. 11:2, 16b).

II. District–The Shephelah region most frequently is mentioned as one of the geographical entities comprising the land of Judah (Dt. 1:7f.; Josh. 10:40; 11:16a; 12:8; Jgs. 1:9). Delineation of its historical boundaries depends mainly upon the description of its towns in Josh. 15:33-44 (vv. 45-47 pertain to the coast, whose towns were not conquered by the Israelites under Joshua; cf. Jgs. 1:18f., LXX). Three districts in the tribe of Judah were located in the Shephelah; the list of Shephelah towns in Josh. 15 indicates that each of these administrative districts corresponded to one of three topographical zones: (1) the northern zone of E-W valleys and ridges (Josh. 15:33-36); (2) the southern zone, from Lachish southward (vv. 37-41); (3) the central zone between them (vv. 42-44). Thus, the towns in each district are distributed along the E-W valleys (cf. below). The towns in this list are not all identifiable, but several in each group have been located with varying degrees of certainty (the grouping itself is an important factor in seeking the unidentified towns), and these serve to define the general extent of each zone.

Topographically, the landscape presents a homogeneous zone of Eocene limestone separated from the older Cenomanian limestone hills of Judah by a long narrow trough created by the exposure of Senonian chalk. This rocky Eocene outcrop reaches about 550 m. (1500 ft.) in the south (the Judean hills opposite attain about 900 m. [3000 ft.]). Its northern vestiges are the foothills around Gezer and Gimzo (Jimzu, the northernmost Shephelah town mentioned in the OT [2 Ch. 28:18]). To the south the limestone hills diminish into a low arrow-shaped ridge pointing at Beer-sheba.

The geopolitical significance of the Shephelah is enhanced by the several valleys or stream beds (wadis) that cut across it from E to W, thus forming natural gateways to the Judean hills. From N to S these are: (1) the valley of Aijalon (Wâdī Selmân), which leads to the "ascent of Beth-horon," the easiest approach route to the central range; (2) the valley of Sorek (Wâdī eṣ-Ṣarâr), i.e., the lower extension of the deep, winding ravine that drains the valley of Rephaim; (3) the valley of Elah (Wâdī es-Sanṭ); (4) the valley of Zephathah (Wâdī el-Afranj); (5) the stream bed (today called Naḥal Lachish [Wâdī Qubeibeh]) passing by Lachish (Tell ed-Duweir) and reaching the sea N of Ashdod; and (6) modern Naḥal Adorayim (Wâdī el-Ḥesī).

III. In History.–The importance of the Shephelah as a buffer zone protecting the Judean hill country is reflected in the historical events recorded in Scripture. It was overrun by the invading Israelites, particularly the tribe of Judah (Josh. 10:16-35; cf. 10:40; 11:16a; 12:8; Jgs. 1:9). Since Debir was not reckoned with the Shephelah towns (Josh. 15:49), Tell Beit Mirsim, which is definitely in the Shephelah, must be identified with some other town (Debir is most likely Khirbet Rabûd). After the conquest the Shephelah was considered an integral part of Judah (Josh. 15:33-44; Jer. 17:26; 32:44; 33:13; Zec. 7:7). During the period of the judges numerous clashes occurred between the Judeans and their Philistine rivals to the west; the Shephelah was often the scene of these encounters, e.g., of the exploits of Samson (Jgs. 13:25–15:20), which generally centered on the valley of Sorek. Saul arrayed his troops for a confrontation with the Philistines in the valley of Elah (1 S. 17:1f.); during his outlaw days David went, evidently via the same valley, to rescue Keilah from Philistine raids (23:1-13).

Under the newly divided monarchy a government officer was in charge of David's royal possessions in the Shephelah; these were the sycamore groves, for which the region was famous, and the olive trees (1 Ch. 27:28; cf. 1 K. 10:27; 2 Ch. 1:15; 9:27). Some of Rehoboam's fortified cities (2 Ch. 11:5-10) formed a defense line along

the main western ridge of the Shephelah; other forts in this network guarded the principal lines of communication through the wadis listed above, in order to connect the western with the central lines of defense. Shishak failed to penetrate these defenses; he chose instead to strike at the northern end of the Shephelah via the Beth-horon approach. Zerah, who may have been Shishak's successor, tried to breach the Shephelah defenses from the south but was repulsed by Asa in the valley of Zephathah at Mareshah (2 Ch. 14:10 [MT 9]). During Jehoram's reign the Judean position in the Shephelah was greatly weakened by the apostasy of a key city, Libnah (21:10). King Uzziah's expansion into the Philistine plain led to increased building and development projects throughout the kingdom, including in the Shephelah (26:10). In the reign of Ahaz the Philistines regained their strength and seized various key towns in the Shephelah (28:18).

Many of the walled cities with their villages taken by Sennacherib on his campaign against Hezekiah (701 B.C.) must have been in the Shephelah; his best-known siege is that of Lachish. It is probably to this catastrophe that Micah alluded in his list of woes on the Shephelah cities (Mic. 1:10-16). King Josiah pushed the Judean hegemony as far as the seacoast (to Meṣad Ḥashavyahu); renewed Judean strength in the Shephelah is indicated in his having a wife from the formerly recalcitrant Libnah (2 K. 23:31). During Nebuchadnezzar's final campaign against Judah the northern and southern strongpoints of the Shephelah defense line, Azekah and Lachish, were the last to fall before Jerusalem (Jer. 34:7). The Judean kingdom's renewal would be symbolized by the regaining of the Shephelah (Ob. 19). During the postexilic period Judean settlements were in the Shephelah (Neh. 11:25, 29f.). The area was later occupied by migrants from Edom, the Idumeans of the Hellenistic period. Their principal Shephelah city was Mareshah. In the latter part of the 2nd cent. B.C. the entire Idumean region was conquered by John Hyrcanus, who required the inhabitants to convert to Judaism (Josephus *BJ* i.2.6 [63]; *Ant.* xiii.9.1 [257f.]; xiv.4.4 [75]).

During the Roman period the capital of the region was Eleutheropolis (Beit Jibrîn). This town became the administrative hub, as reflected in the network of Roman roads connecting it with Jerusalem and other important cities in the area. Eusebius and Jerome located the biblical towns in the region according to their respective distance from Eleutheropolis; numerous milestones that have been discovered on the roads in the Shephelah also indicate the Roman miles from Eleutheropolis.

Bibliography.--*GB* (1974), pp. 140-43; *GP*, I, 416-18; *LBHG* (rev. ed. 1979), pp. 25f.; M. Avi-Yonah, *Holy Land* (1966), pp. 159-162; *HGHL*, pp. 143-171; I. Finklestein, *Tel Aviv*, 8 (1981), 84-94; A. F. Rainey, *Tel Aviv*, 7 (1980), 194-202; *BASOR*, 251 (1983), 1-22.

A. F. RAINEY

SHEPHER shē'fər **MOUNT** [Heb. *šeper*–'beauty'] (Nu. 33:23f.); AV, NEB SHAPHER. A mountain at which the Israelites encamped during their wilderness journey (*see* WANDERINGS OF ISRAEL), located between Kehelathah and Haradah. The site is otherwise unknown.

SHEPHERD. *See* SHEEP.

SHEPHERD'S SHELTER. *See* BETH-EKED.

SHEPHI shē'fī [Heb. *šᵉpî*] (1 Ch. 1:40); **SHEPHO** shē'fō [Heb. *šᵉpô*] (Gen. 36:23). Fourth son of Horite chief Shobal, and head of a subclan in Edom.

SHEPHUPHAM; **SHEPHUPHAN** shə-fū'fəm, shə-fū'fən [Heb. *šᵉpûpām*/*šᵉpûpān*]; AV, NEB, SHUPHAM (Nu. 26:39). A Benjaminite (Nu. 26:39). The various genealogical lists indicate some variations as to how this name appears. In Nu. 26:39 the LXX, Syr., Tg., and Vulg. reflect the reading *šûpām*, which supports the AV, NEB, "Shupham." Gen. 46:21 seems to refer to this same individual as MUPPIM, while 1 Ch. 7:12 may refer to him as SHUPPIM. In 1 Ch. 8:5 he is called Shephuphan. This type of variation is not unusual in the genealogical lists. The forms of the Hebrew letters *m* and *š* are not similar in modern square script, but in some of the periods of Hebrew script only a short tail on the *m* differentiates them. An original reading of *šûpm* could then give explanation for each of the variants. This would be in line with the family name Shuphamites in Nu. 26:39.

See *IP*, pp. 258f. J. H. WALTON

SHERAH shē'rə (1 Ch. 7:24, AV, NEB). *See* SHEERAH.

SHERD. *See* POTSHERD.

SHEREBIAH sher-ə-bī'ə [Heb. *šērēbᵉyâ*–'Yahweh has sent heat' (?)]. The name of one, two, or three Levites in the time of Ezra and Nehemiah.

1. [Gk. Apoc. *Asebēbias* (1 Esd. 8:47 [LXX 46]), B A *Eserebias*, Lucian *Sarabias* (v. 54)]; AV Apoc. ASEBEBIA, ESEBRIAS; NEB Apoc. ASEBEBIAS, SARABIAS; RSV mg. Apoc. also ASEBEBIAS. A Levite of the family of Mahli, described as "a man of discretion"; he and his family were sent to join the group of exiles returning with Ezra after it was discovered that the group included no Levites (Ezr. 8:18 par. 1 Esd. 8:47). To him and Hashabiah and ten of their kinsmen, along with twelve of the leading priests, were entrusted the silver and gold vessels for the temple (Ezr. 8:24f. par. 1 Esd. 8 54f.). (The RSV, following the MT, considers Sherebiah as one of the twelve priests; the MT should be emended to read Heb. *wᵉšērēbᵉyâ* in place of *lᵉšērēbᵉyâ*; cf. *BHS*; NEB). He is possibly identical with 2 or 3.

2. [Gk. Apoc. *Sarabias*]; AV Apoc., NEB Apoc., SARABIAS. A Levite who assisted in the exposition of the law (the MT of Neh. 8:7 reads "and the Levites"; the RSV and NEB follow the Vulg. and 1 Esd. 9:48, which identify the Levites with the preceding names), participated in the public confession of sins (Neh. 9:4f.), and signed the covenant of Ezra (10:12 [MT 13]).

3. A Levitical family that according to Neh. 12:8 returned from the Exile with Zerubbabel (but the names appear to be from a later period, contemporaneous with Ezra and Nehemiah; see comms.). An individual by this name became a Levitical chief in the time of Joiakim (v. 24).

N. J. O.

SHERESH shē'resh [Heb. *šereš*–'root' (?), or 'sly, clever' (?)]. Son of Machir; head of a family of the tribe of Manasseh (1 Ch. 7:16).

See *IP*, p. 228.

SHEREZER shə-rē'zər (Zec. 7:2, AV). *See* SHAREZER.

SHERIFF sher'if (Dnl. 3:2f., AV). *See* MAGISTRATE.

SHESHACH shē'shak [Heb. *šēšaḵ*] (AV, RSV mg. Jer. 25:26; 51:41); NEB SHESHAK. A cryptic name for Babylon. *See* ATHBASH; BABYLON II.

SHESHAI shē'shī [Heb. *šēšay*]. One of Anak's three sons who lived in Hebron at the time of the conquest (Nu. 13:22). All three sons were driven from the land by Caleb (Josh. 15:14; Jgs. 1:10). "Sheshai" is perhaps an abbreviation of a longer name (see *IP*, pp. 40f.).

SHESHAN shē'shan [Heb. *šēšān*; Gk. *Sōsan*, B *Sōsam* (1 Ch. 2:34)]. Judahite and descendant of Jerahmeel (1 Ch. 2:31, 34f.). Apparently Sheshan had only daughters, one of whom married his Egyptian slave Jarha. This genealogical note establishes Elishama (1 Ch. 2:41) and his descendants in the Judahite line.

See *IP*, pp. 40f. R. L. PRATT, JR.

SHESHBAZZAR shesh-baz'ər [Heb. *šēšbaṣṣar*, probably corrupt from Akk. *Sin-aba-uṣur*, O Sin (the moon deity), protect the father; LXX *Sasabasar*]; AV Apoc. also Sanabassar (1 Esd. 2:12, 15), Sanabassarus (1 Esd. 6:18, 20). The leader appointed by the Persians for the first returnees from exile after the Cyrus Edict in 538 B.C. (Ezr. 1:1-4, 11). He is likely to be identified with SHENAZZAR of 1 Ch. 3:18 (Heb. *šen'aṣṣar*; see Clines; cf. Williamson) and was thus a son of Jehoiachin and the uncle of Zerubbabel, who followed him as leader of the returnees and largely overshadowed him in the biblical history (cf. Ezr. 5:1f.; Hag. 1:1).

Sheshbazzar is given two titles: (1) "prince" (Heb. *nāśî'*, Ezr. 1:8), a title which recalls the prophecies of Ezekiel (Ezk. 37:25) and is also in accordance with Persian generosity toward subjects of the empire; and (2) "governor" (Heb. *peḥâ*, Ezr. 5:14), which stops short of a royal designation and indicates his subordination to the Persian emperor as provincial ruler. As these titles suggest, his authority was entirely dependent on Persian approval. Cyrus commissioned him to oversee the reconstruction of the temple in Jerusalem and to handle the treasures sent back with the returnees for that purpose (Ezr. 1:11). These few facts are all that is known about Sheshbazzar. He passes quietly from the biblical scene and is not mentioned again.

Much scholarly attention has been given to whether Sheshbazzar is to be identified with ZERUBBABEL. Several items argue in favor of an identification. First, portions of Ezra leave a somewhat confusing picture by closely associating the work of the two men and never making an explicit differentiation (Ezr. 1:1–4:4). Second, both men are called "governor" (Ezr. 5:14; Hag. 1:1). Third, both are commissioned to rebuild the temple (Ezr. 1:1-11; 3:1-13). Fourth, both men are credited with completing the foundations of the temple (Ezr. 5:16; 3:2, 8). In line with this evidence it has been suggested that Sheshbazzar was the Babylonian name and Zerubbabel was the Jewish name for one individual.

Nevertheless, it seems best to treat Sheshbazzar and Zerubbabel as two individuals. Several considerations point in this direction. First, both Zerubbabel and Sheshbazzar are Babylonian names. Second, 1 Esd. 6:18 appears to distinguish between the two by stating that temple vessels were entrusted to both Sheshbazzar and Zerubbabel. Third, it seems clear from the text of Ezra that Sheshbazzar was commissioned under Cyrus (Ezr. 1:1-11) and that Zerubbabel received his authorization from Darius (2:2; 3:1–4:5). Fourth, the list of 1 Ch. 3:18 strongly suggests that Sheshbazzar was the uncle of Zerubbabel. In the light of this evidence it may be concluded that these were two different men.

R. L. PRATT, JR.

SHETH sheth.

1. [Heb. *šēṯ*–'tumult']; NEB STRIFE. In Nu. 24:17 Moab is called Heb. *bᵉnê-šēṯ* (RSV "sons of Sheth"). Many scholars suggest an emendation of *šēṯ* to *šᵉ'ēṯ*, "pride" or "defiance" (see BDB, p. 981; KoB, p. 1014; G. B. Gray, *ICC* on Numbers [1903], p. 371). Cf. Jer. 48:45, where Moab is called *bᵉnê šā'ôn* (RSV "sons of tumult"); in Isa. 16:6 Moab is characterized by pride.

2. (1 Ch. 1:1, AV). *See* SETH.

SHETHAR shē'thar [Heb. *šēṯar*]. One of the seven Persian princes who functioned in an advisory capacity to King Ahasuerus (Est. 1:14; cf. Ezr. 7:14).

SHETHAR-BOZENAI shē'thar-boz'ə-nī [Aram. *šᵉṯar bôznay*; Gk. LXX *Satharbouzana*]; AV SHETHAR-BOZNAI; **SATHRABUZANES** [Gk. Apoc. *Sathrabouzanēs*]. An official of the Persian government in the province "Beyond the River" (Ezr. 5:3, 6; 6:6, 13; 1 Esd. 6:3, 7, 27 [LXX 26]; 7:1). He and Tattenai the governor wrote to King Darius questioning the right of the Jews to rebuild the temple. After determining that Cyrus had indeed decreed the rebuilding, Darius ordered Tattenai, Shethar-bozenai, and their associates to encourage and to assist in the temple's reconstruction (Ezr. 5:3–6:13; cf. 1 Esd. 6:3–7:12).

R. L. PRATT, JR.

SHEVA shē'və [Heb. *šᵉwā'*–'like (the father, brother, etc.?)']. See *IP*, p. 222.

1. A son of Caleb by his concubine Maacah; founder of Machbenah and Gibea (1 Ch. 2:49).

2. State secretary during the reign of King David (2 S. 20:25, *Q*; *K šᵉyā'*). *See* SHAVSHA.

SHEW. An archaic spelling of "show" (so always RSV) used extensively by the AV. (It should be noted that "shew" is always pronounced shō and never shōō; cf. "sew").

As a verb "shew" (properly meaning "cause or permit [something or someone] to be seen") is the AV translation of a great many biblical terms, including some that the RSV translates otherwise; e.g., the AV has "be shewed" for Gk. *gínomai*, "come to be" (Acts 4:22; RSV "be performed"); "shew forth themselves" for *energéō*, "work" (Mt. 14:2; RSV "be at work"); "shew" for *poiéō*, "do," "make" (Acts 7:36; RSV "perform"), for *diēgéomai*, "tell, relate" (Lk. 8:39; RSV "declare"), etc.

The AV's uses of the noun "shew" usually connote appearance in contrast to reality. Thus the AV has "shew" for Gk. *próphasis*, "ostensible reason, pretext" (Lk. 20:47; RSV "pretense"), and for *lógos*, "word, speech" (Col. 2:23; RSV "appearance"); "make a fair shew" for *euprosōpéō*, "have a fair face" (Gal. 6:12; RSV "make a good showing"); "vain shew" for Heb. *ṣelem*, "image" (Ps. 39:6 [MT 7]; RSV "shadow"); etc. "Shew" means "spectacle" (so RSV) in Sir. 43:1 (Gk. *hórama*) and Col. 2:15 (*deigmatízō*). In Isa. 3:9 "the shew of their countenance" is a poor translation of Heb. *hakkāraṯ* (hiphil of *nāḵar*) *pᵉnêhem*, "their respect of persons" (RSV "their partiality").

B. S. EASTON N. J. O.

SHEWBREAD shō'bred. *see* PRESENCE, BREAD OF THE.

SHEWBREAD, TABLE OF. *See* PRESENCE, BREAD OF THE II.

SHIBAH shī'bə [Heb. *šiḇ'â*; LXX *Horkos*] (Gen. 26:33); AV SHEBAH; NEB mg. OATH. The well dug by Isaac's servants on the day that he took an oath of mutual recognition with Abimelech king of Gerar. Heb. *šiḇ'â* is not only the masculine form of the number "seven" but it is related to the root Heb. *šb'*, "swear." The account in the Abrahamic narrative (21:31) explains that the place

was called Beer-sheba "because there both of them swore an oath." The modern legend about seven wells has no support in the bible or any other ancient source.

A. F. RAINEY

SHIBBOLETH shib'ə-leth [Heb. *šibbōleṯ*–'torrent' or 'ear of grain'] (Jgs. 12:6). A password used by the Gileadites to determine who was an Ephraimite enemy. The word has cognates in Ugaritic, Akkadian, and Syriac, but its meaning in Jgs. 12:6 is uncertain. *Šibbōleṯ* may mean "flowing stream" (KoB, p. 942), as in Isa. 27:12; Ps. 69:2, 15 (MT 3, 16); or it may mean "ear of grain," as in Gen. 41:5-7, 22-24, 26f.; Ruth 2:2; Job 24:24; Isa. 17:5, or "bunch of twigs," as in Zec. 4:12 (cf. KoB, p. 942). Regrettably, the account in Jgs. 12 provides no clue as to which meaning the Gileadite sentries may have had in mind. The importance of the word lay not in its meaning but in its pronunciation.

The Ephraimites had been angered by Jephthah's failure to call upon them to help the Gileadite forces fight against the Ammonites (12:1). The Ephraimites attempted to extend their control to Gilead by war, but the Gileadites defeated them. As the Ephraimites retreated, Gileadite soldiers checked all who attempted to cross at the fords of the Jordan by asking them to pronounce *šibbōleṯ*. According to the MT, in the Ephraimite dialect "shibboleth" (Heb. *šibbōleṯ*) was pronounced "sibboleth" (Heb. *sibbōleṯ*). The MT expressed the distinction with the letter *samek* (*s*) rather than *śin* (*ś*), since the distinction between *śin* (*š*) and *śin* by the diacritical dot had not yet been introduced into written Hebrew. Speiser has argued, however, that both the "sh" and the "s" sounds were present in all the West Semitic languages, and that the Ephraimite fugitives could have easily imitated the "sh" sound. He has proposed that the people of Gilead may have pronounced "shibboleth" as "thibboleth," maintaining the orthographic form *šibbōleṯ*. There is some evidence from other West Semitic languages that the "th" sound was sometimes used in place of "sh," and that it was written as "sh." This proposal would clarify how the people of Gilead could distinguish between their dialect and that of the Ephraimites. Supposedly the Gileadites used the "th" sound but the Ephraimites did not, and even if they had attempted to imitate the sound, there would have been a noticeable difference. Regardless of how the phonemic difference is explained, however, the Ephraimites met a quick death when their pronunciation did not correspond exactly to that of the Gileadites.

The story is significant for the study of comparative philology. Evidence of Judean and Samarian dialects has come to light from the Samaria ostraca. Jgs. 12 suggests that dialectical differences also existed between peoples living E and W of the Jordan.

W. A. VANGEMEREN

SHIBMAH shib'mə (Nu. 32:38, AV). *See* SIBMAH.

SHICRON shik'ron (Josh. 15:11, AV). *See* SHIKKERON.

SHIELD. *See* WEAPONS OF WAR.

SHIGGAION shi-gā'yon; **SHIGIONOTH** shig-i-ō'noth [Heb. *šiggāyôn*, pl. *šigyōnôṯ*]; NEB omits. A technical term of uncertain meaning occurring in the superscriptions to Ps. 7 (MT 7:1) and Habakkuk's prayer (pl., Hab. 3:1). Several different explanations of its meaning have been proposed. Based on a possible relationship to Akk. *šegu* ("howl, lament"), S. Mowinckel suggested that *šiggāyôn* "probably indicates a lamentation psalm of a special character or for a particular purpose and perhaps therefore accompanied by special ceremonies, *šigyōnôth*, to which Hab. 3.1 alludes" (*Psalms in Israel's Worship* [Eng. tr. 1962], II, 209). Other scholars have related it to Heb. *šāgâ* ("go astray, err") and taken it to mean a "dithyramb," i.e., a poem characterized by wild emotions and irregular construction (e.g., M. Dahood, *Psalms I* [*AB*, 1965], p. 41). Still others have understood it as a corruption of HIGGAION.

N. J. O.

SHIHON shī'hon (Josh. 19:19, AV). *See* SHION.

SHIHOR Heb. *šîhôr/šîhōr*–'river, canal (in Egypt)], AV also SIHOR. A stream of water associated with northeastern Egypt (Josh. 13:3; 1 Ch. 13:5; Isa. 23:3; cf. RSV "Nile" for Heb. *šîhôr* in Jer. 2:18). Shihor is derived from the toponym *(p3)-š-ḥr*, "(the) waters of Horus" (A. H. Gardiner, *Ancient Egyptian Onomastica*, II [1947], 201f.). "The waters of Horus" is most likely to be identified with the northeasternmost stretch of the Pelusiac or Bubastite branch of the Nile, which is no longer flowing. Further south this tributary in ancient times was called "the waters of Re," but as it approached the Mediterranean and Egypt's northeastern border, it was known as "the waters of Horus" (K. A. Kitchen, *Pharaoh Triumphant: The Life and Times of Ramesses II* [1982], p. 3). The ancient road that connected Egypt and Palestine, beginning at modern Qantara or ancient *ḥtm ỉ3rw* ("Fortress of Tjelu"), was called "The Ways of Horus" (*w3t ḥr*). Thus the name of the falcon-god Horus was once again associated with this region, making the Pelusiac branch of the Nile the most likely identification of Shihor. The evidence appears to rule out identifying Shihor with Wâdī el-'Arîsh, located nearly 160 km. (100 mi.) E in the northern part of Sinai. But Wâdī el-'Arîsh could be "the brook of Egypt" (Nu. 34:5; Josh. 15:4, 47; 2 K. 24:7; etc.). *See* BROOK OF EGYPT.

The OT use of Shihor seems to indicate that it marked the border of Egypt, and ideally Israel's southernmost border (esp. Josh. 13:3; 1 Ch. 13:5). Isa. 23:3 further supports the association of Shihor with the Nile since it appears here in parallelism with the Nile.

The LXX translators also faced a problem translating Shihor. In Josh. 13:3 it is rendered "wilderness of Egypt," while 1 Ch. 13:5 calls it the "border of Egypt." Completely garbled is "a generation of merchants"(?) in Isa. 23:3. In Jer. 2:18 the LXX translators understood Shihor (Heb. *šîhôr*; RSV "Nile") as being a river, calling it the "waters of Gihon" (Gk. *hýdōr Gēōn*). The use of "Gihon" suggests that Jer. 2:18 apparently was interpreted in the light of Gen. 2:13, where the river Gihon (Heb. *gîḥôn*; LXX *Gēōn*) is said to be associated with the land of Cush (i.e., Nubia/Ethiopia, hence the Nile River; *see* CUSH; GIHON).

The MT traditions, when combined with the Egyptological evidence, make it fairly certain that the Shihor is the eastern most branch of the Nile that delineated Egypt from Asia.

J. K. HOFFMEIER

SHIHOR-LIBNATH shī'-hôr lib'nath [Heb. *šîḥôr liḇnāṯ*]; NEB "swamp of Libnath." A place on the southern boundary of Asher (Josh. 19:26). The southern boundary of Zebulun is described as ending at Shihor-libnath. Abel (*GP*, I, 470) takes *šîḥôr* to be a transcription of Egyp. *ši-Ḥōr*, "lake of Horus," a designation for a stretch of

shore or the arm of a river, and suggests that Shihor-libnath is the marshy region between Carmel (more precisely, Nahr ed-Diflè) and the Chorseos (Nahr ez-Zerqā), which flows into the Mediterranean Sea, 10 km. (6 mi.) S of Dor. Other scholars (e.g., *LBHG*, [rev. ed. 1979], p. 258) find this location impossible and suggest an alternate along the Carmel range at the mouth of the Kishon. Libnath was possibly the ancient name of the harbor town, Tell Abū Huwām, one of the settlements founded as seaports during the Late Bronze Age, perhaps with Egyptian aid.

It has been suggested that Shihor-libnath is actually two sites, both of which remain unidentified.

B. R. AND P. C. PATTEN

SHIKKERON shik'ə-ron [Heb. *šikkᵉrôn*–'drunkenness'; Gk. A *akkarōna*, B *sokchōth* (a few MSS read *sakcharōna*); cf. Josephus *Ant.* iii.7.6 [172] (Gk. *sakcharon*, 'henbane')]; AV SHICRON. One of the cities mentioned as landmarks for the northern boundary of the tribal allotment of Judah (Josh. 15:11). According to this text, Shikkeron is located between Ekron and Jabneel (Yebnā) and is probably to be identified with Tell el-Fûl (not the same site associated with Gibeah) approx. 5 km. (3 mi.) NW of Ekron (Tell el-Muqenna').

See Y. Aharoni, *PEQ* (1958), pp. 27-31. G. H. W.

SHILHI shil'hī [Heb. *šilḥî*]. Father of Azubah, mother of Jehoshaphat (1 K. 22:42; 2 Ch. 20:31).

SHILHIM shil'him [Heb. *šilḥîm;* Gk. *Sale, Saleeim, Seleem*]. One of the twenty-nine cities which formed the inheritance of Judah (Josh. 15:29). It is grouped with Ziklag, Lebaoth, etc. In Simeon's inheritance (19:1-8) a similar group of names occurs, but SHARUHEN is mentioned instead of Shilhim (19:6), and 1 Ch. 4:31 gives the name Shaaraim. Some scholars identify Shilhim with Sharuhen, suggesting that Egyptian *r* often is used to represent Hebrew *l*, but the different morphologies of the two words raise difficulties. Aharoni (*LBHG*, p. 261) apparently rejects this identification, pointing out that "the more westerly Sharuhen was possibly not included within the territory of the monarchy" — but this assumes that the list is from the time of the monarchy and includes locations that were not part of Simeon two centuries earlier. The forms in LXX give no help. The lists in Josh. 15 and 19 both suggest a location W of Beer-sheba, probably on Nahal Gerar or Nahal Besor. *See also* ZIKLAG.

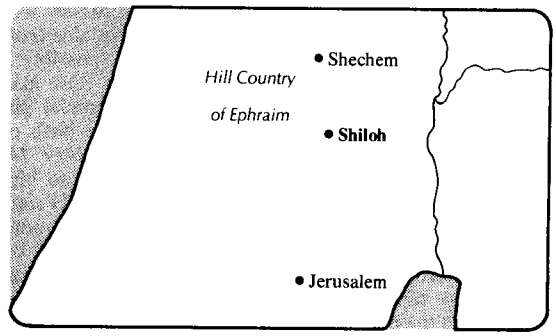
W. S. LASOR

SHILLEM shil'əm [Heb. *šillēm*–'recompense' (?); Sam. Pent. *šallûm*]; **SHILLEMITES** shil'ə-mīts [Heb. *haššillēmî*]. Fourth son of Naphtali; head of the family of the Shillemites (Gen. 46:24; Nu. 26:49). He is called SHALLUM (1) in 1 Ch. 7:13.

See *IP*, pp. 22, 174.

SHILOAH. *See* SILOAM.

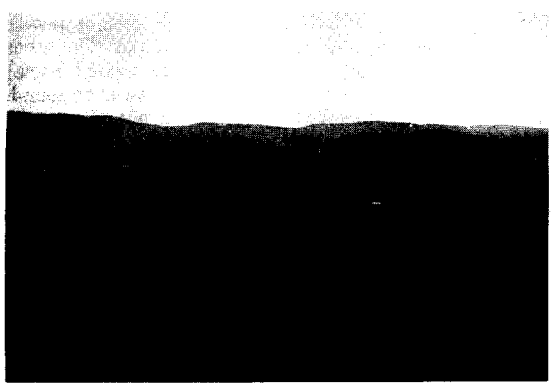
SHILOH shī'lō [Heb. *šilōh, šilô, šîlô*]. A town in Ephraim that was the center of tribal administration and worship for the twelve Israelite tribes from the time of Joshua until its destruction (probably by the Philistines) about 1050 B.C. The prominent tell of Shiloh, about 5 hectares (12 acres) in area, stands at the northern end of a large valley 31 km. (19 mi.) N of Jerusalem, just E of the main road to Shechem, in the hill country of Ephraim (Jgs. 21:19). An original Canaanite settlement had apparently been abandoned for some time before it was occupied by Joshua soon after the entrance of the tribes into the land.



The Israelites set up the tabernacle and the ark of the covenant at Shiloh (Josh. 18:1), and this remained the cult center during the period of tribal history recorded in Joshua and Judges (e.g., Josh. 21:2; Jgs. 21:12). The final division of the conquered lands was made at Shiloh: the whole community of the Israelites met together "in the camp at Shiloh, and Joshua cast lots for them before the LORD; and there Joshua apportioned the land to the people of Israel, to each his portion" (18:8-10; cf. 19:51). From Shiloh the tribes of Reuben, Gad, and half of Manasseh departed for their homes E of the Jordan (22:9); because of a misunderstanding about an altar that these tribes erected in the Jordan valley, the remaining tribes gathered at Shiloh to make war against them (v. 12). Jgs. 18:31 seems to be saying that the Danites set up a second cult center in Dan, using the graven image made by Micah the Ephraimite, and that this continued as long as the house of God was located at Shiloh.

According to Jgs. 21:19-21 there was a yearly feast at Shiloh, and the young women danced at it. Following the near destruction of the tribe of Benjamin in a tragic civil war (ch. 20), the remaining tribes agreed on a method by which the surviving men of Benjamin could obtain wives for themselves, since all the Benjaminite women had been slain and the other tribes had sworn that they would not give their daughters to the Benjaminites. Benjaminites were allowed to select wives from the young women of Shiloh in marriage (21:1, 16-18). The tribes agreed that when the virgins of Shiloh were sent to dance in the vineyards during the yearly feast, the Benjaminites could seize them and carry them off for wives, thus gradually restoring the severely reduced numbers of the tribe of Benjamin (vv. 20-23).

Seilûn in the Valley of the Maidens where, traditionally, the Benjaminites made off with the young women of Shiloh (J. C. Trever)



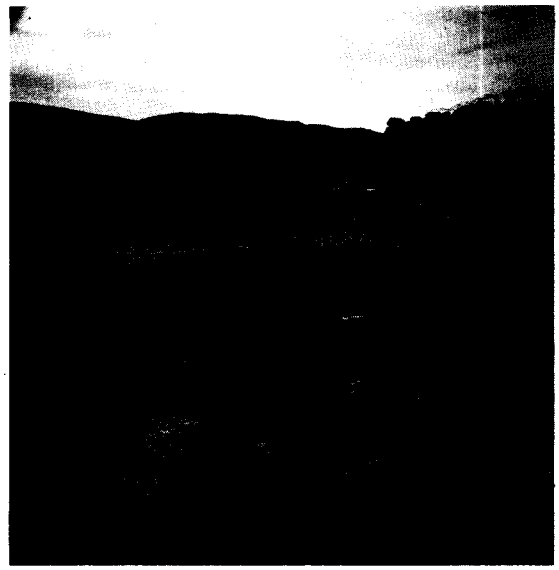
While located at Shiloh the tabernacle of Moses was apparently set up more like a temple than a portable tent. 1 S. 1:9; 3:3 refer to doorposts and a door; possibly a substantial building and adjacent storehouses were also added. Shiloh at this time was a place of annual pilgrimage, as can be seen in the account of the birth of Samuel (1:3, 9). Samuel was dedicated at Shiloh (v. 24) after he was weaned, and here Yahweh spoke to him (3:21). During this time Eli the priest and his ungodly sons Hophni and Phinehas presided over the sanctuary. Gradually the worship of Yahweh had become adulterated by the introduction of Canaanite idolatry and cult prostitution at the tabernacle (2:22-25; cf. vv. 12-17). Samuel prophesied the coming destruction of Eli's house because of the idolatrous practices of his sons (3:10-18; cf. 1 K. 2:27). Although not recorded in Scripture, Shiloh's violent destruction, accompanied by a great fire, is attested by the findings of archeological excavations at the site. The destruction of Shiloh is later referred to by Ps. 78:60 and Jer. 7:12-14; 26:6. Jeremiah's "temple sermon" (ch. 7) warns that the city of Jerusalem will also be destroyed because of the same sort of wickedness that had caused Yahweh to destroy Shiloh some six hundred years earlier. 1 S. 4:3–7:2 describes the Philistines' capture of the ark just prior to the destruction of Shiloh, and the circuituous route by which the ark was finally brought to Kiriath-jearim (eventually it was brought to Jerusalem; cf. 2 S. 6).

By the time of the divided kingdom a modest Israelite settlement had been reestablished at Shiloh. From this town came Ahijah the Shilonite, a well-known prophet in the days of Jeroboam I (1 K. 14:3). An Israelite settlement at Shiloh survived even after the Assyrian conquest (Jer. 41:5); it is referred to in the Mishnah and Talmud (Mish. *Megillah* i.11; Yoma xxxix.74) and other rabbinical sources. Eusebius placed Shiloh in the toparchy of Acraba, in Neapolis. Jerome found an altar there. On the Madeba Map it appears W of Gilgal.

Archeological work conducted by a group from the National Museum of Denmark from 1926-1932 attempted to clarify the history of the site, which had been heavily built up during Roman and Byzantine times and during the Middle Ages. The site today is heavily eroded, with bedrock exposed on many parts of the tell. The Danish expeditions found Shiloh to have been first settled in M.B. IIB (2100 to 1600 B.C.), at which time large-scale fortifications had been built there. But the site excavations thus far show no clear evidence of Canaanite occupation in the L.B. period (1600-1200 B.C.). The Israelite settlement phase is at first poor in architecture; the finds are consistent with the biblical picture of the conquest in Joshua's day and the period of the judges.

I. Finkelstein of Bar Ilan University, Tel Aviv, began seasonal excavations at the site in 1981, concentrating on the areas of the tell believed to be the ancient Jewish religious, political, and administrative center. The areas under intensive study center around excavated rooms where large "collared rim" storage jars have been found. These are thought to have been for public, not private use, e.g., for storing oil or water used in the cult. The ruins of two Byzantine churches are still present S of the tell, as well as an early structure further to the south known as Jama'es-Sitin. traditionally identified as the burial place of Eli the priest. The water supply for Shiloh came from a spring, 'Ain Seilûn, in the wadi just to the north.

A modern Jewish settlement called Shilo, begun in 1978, occupies about 400 hectares (1000 acres) on a steep hillside E of the tell. This community had reached four hundred residents, or about eighty families, by the summer of 1984. The ancient Arab village of Seilûn lies on the south side of the valley opposite the old and new sites of Shiloh. The local Arabs today call the valley Marj el-Id and Marj el-Bint (Valley of the Festival or Valley of the Girls), but these names may not be of ancient origin.



Ruins at Shiloh; the trenches are remains of Byzantine houses; the old wall at upper left dates from the 11th cent. B.C. (period of Samuel) (D. Blatt)

L. T. DOLPHIN

SHILOH shī'lō [Heb. MT *šîlōh*] (Gen. 49:10). The AV transliteration of a term that figures prominently but puzzlingly in the Blessing of Jacob (Gen. 49:2-27; RSV "to whom it belongs"; NEB "tribute . . . to him"). Jacob blesses each of the twelve original sons/tribes, giving by far the most attention to Judah (vv. 8-12) and Joseph (vv. 22-26) — thus foreshadowing their later prominence in southern and northern Israel respectively. In v. 10 the blessing of Judah employs rulership language, and from early times it has often been considered messianic.

Genesis 49:10 is composed of four poetic lines (two couplets) of which the third line has the Hebrew consonants *'d ky yb' šylh*, translated by the AV "until Shiloh come." This rendering suggests that Shiloh (*šylh*) might be a sign of the Messiah or even a metonymy for the Messiah Himself. Attempts at interpretation have been many. (1) In the Talmud (T. P. Sanhedrin 98b) Shiloh is derived from Heb. *šlh*, "be at ease," but the supposed connection with messianic attributes is unconvincing. (2) Shiloh is taken grammatically as "to Shiloh,"; and the clause is translated "until it [Judean sovereignty] comes to Shiloh"; the verse is then read as a prediction that Judah's greatness would reach even to northern Ephraim, where the city of Shiloh was located. (3) Shiloh is identified with Judah's third son Shelah (Gen. 38:5) — who is, however, otherwise insignificant. (4) *šîlōh* is revocalized to *šellōh* (eliminating the *y*), which is translated either "to whom" or "to whom it belongs" (cf. RSV, NIV, etc.) and interpreted as referring to the scepter's belonging to its rightful owner. Support for this option is found in the supposed parallel in Ezk. 21:27 (MT 32): *'d b' 'šr lw*, "until the com-

ing of the one to whom it belongs"; but the lack of a clear subject for the clause makes this option problematic. (5) Shiloh is emended to *mōšᵉlô* ("his ruler"), *ʾᵃšer lô* ("what is his"), or the like; but none of these options has good textual support. (6) *šîlōh* is taken without emendation as a hapax legomenon meaning "prince" or "ruler" (cf. Akk. *šêlu*, "prince"), with the pronominal suffix ("his ruler"), although the term is otherwise unknown in West Semitic. The clause is sometimes interpreted (along with Nu. 24:17-19; Dt. 33:7 etc.) as a pro-Davidic gloss interpolated into Gen. 49 at a later time.

Perhaps the most convincing interpretation is that of W. L. Moran (7), which follows the consonantal MT without emendation and with full contextual logic. It reads *ʿaḏ kî yūḇā' šay lōh*, "until tribute is brought to him," simply vocalizing MT consonantal *šylh* as two common words, *šay* ("tribute") and *lōh* ("to him"). This reading fits the parallelism of the verse and eliminates any over-messianizing. Interestingly, the NT ignores Gen. 49:10, and virtually all the ancient versions take *šylh* as other than a proper name in this verse.

D. K. STUART

SHILONITE shī'lə-nīt [Heb. *šîlōnî, šîlônî, šilônî*]; AV also SHILONI (Neh. 11:5); NEB also FROM (OF) SHILOH, SHELANITE.

1. An inhabitant of the city of Shiloh; a designation applied to the prophet Ahijah (1 K. 11:29; 12:15; 15:29; 2 Ch. 9:29; 10:15).

2. A designation applied to a Judahite family that resided in Jerusalem after the Exile (1 Ch. 9:5; Neh. 11:5). Many scholars agree that the Hebrew text should be vocalized here as "Shelanite" (so NEB; *see* SHELAH **2**; cf. Nu. 26:20) rather than "Shilonite."

SHILSHAH shil'shə [Heb. *šilšâ*]. An Asherite; son of Zophah (1 Ch. 7:37).

SHIMEA shim'ē-ə [Heb. *šimʿā'*–'he has heard'; see *IP*, p. 185]; AV also SHIMMA (1 Ch. 2:13).

1. Third son of Jesse (1 Ch. 2:13); a brother of David (20:7). *See* SHAMMAH **2.**

2. One of David's sons born in Jerusalem (1 Ch. 3:5).

3. A Merarite Levite (1 Ch. 6:30 [MT 15]).

4. A Gershonite Levite (1 Ch. 6:39 [MT 24]).

SHIMEAH shim'ē-ə.

1. [Heb. *šimʿâ*]. A Benjaminite; son of Mikloth and descendant of Jehiel the founder of Gibeon (1 Ch. 8:32). He is called Shimeam in 9:38.

2. [Heb. *šimʿâ*]. Brother of David and father of Jonadab (2 S. 13:3, 32); called SHIMEI (**3**) in 21:21 (RSV; but cf. AV "Shimeah"; NEB "Shimeai"). *See* SHAMMAH **2.**

SHIMEAI shim'ē-ī (2 S. 21:21, NEB). *See* SHIMEI **3.**

SHIMEAM shim'ē-əm [Heb. *šimʿām*]. A Benjaminite who lived in Jerusalem after the Exile (1 Ch. 9:38); called SHIMEAH (**1**) in 8:32.

SHIMEATH shim'ē-ath [Heb. *šimʿāṯ* (2 K. 12:21 [MT 22]; 2 Ch. 24:26)]. The parent of Jozacar, one of the murderers of Joash.

Although 2 K. 12:21 appears to understand Shimeath as the father of Jozacar (MT Jozabad), since it was customary to identify a man as the son of his father, the parallel 2 Ch. 24:26 clearly refers to Shimeath as "the Ammonitess," hence the mother of Jozacar (MT Zabad). While it is possible to harmonize these texts on this particular point by taking the Chronicler's account as definitive, other discrepancies and problems cast doubt on the Chronicler's text (cf. comms., *BHS*). Some commentators assume that the Chronicler altered his text on the mistaken notion that Shimeath was a feminine form. Thus he changed the Shomer of 2 K. 12:21 into Shimrith and added the nationalities of the two parents, perhaps as a polemic against intermarriage (so H. J. Wolf, *ISBE* [1929], *s.v.*; cf. J. Gray, *I & II Kings* [*OTL*, 2nd ed. 1970], pp. 590f.; H. G. M. Williamson, *1 and 2 Chronicles* [*NCBC*, 1982], pp. 325f.).

R. L. PRATT, JR.

SHIMEATHITES shim'ē-ə-thīts [Heb. *šimʿāṯîm*] (1 Ch. 2:55). A subdivision of the descendants of Caleb, listed among the families of scribes (Heb. *mišpᵉḥôṯ sōp̄ᵉrîm*) living in Jabez, further identified as Kenites from Hammath (according to RSV).

According to Myers "the whole verse is unintelligible as it stands." For example, the phrase *mišpᵉḥôṯ sōp̄ᵉrîm*, "families of scribes," may be a proper name (so NEB "clans of Sophrites"). The three names listed — Tirathites, Shimeathites, Sucathites — have been understood as designations of religious functionaries instead of names (so Vulg., which translates Shimeathites as *resonantes*, "traditionists," probably connecting the word with Heb. *šmʿ*, "hear"), though this view has been largely rejected. KD and others connect these names with individuals, but no Tira or Sucah is known (Shimea and similar names are common). Some have interpreted the phrase "Kenites who came from Hammath" as "Kenites who were connected by marriage" (so NEB). Thus, as Williamson said, the verse "remains a mystery."

Bibliography.–Comms. on Chronicles by E. Curtis and A. Madsen (*ICC*, 1910), pp. 97f.; J. Myers (*AB*, 1965), p. 16; W. Rudolf (*HAT*, 1955), pp. 22f.; H. G. M. Williamson (*NCBC*, 1982), pp. 55f.

R. L. PRATT, JR.

SHIMEI shim'ē-ī [Heb. *šimʿî*–(prob.) 'hear (me, Yahweh),' also *Q šimʿay* (2 S. 21:21), *Q šemaʿ* (1 Ch. 8:21); LXX *Semeei, Semei*]; AV also SHIMI (Ex. 6:17, SHIMHI (1 Ch. 8:21), SHIMEAH (2 S. 21:21), Apoc. SEMEI (Ad. Est. 11:2; 1 Esd. 9:33), SEMIS (1 Esd. 9:23), SAMIS (v. 34); NEB also SHIMEAI (2 S. 21:21), Apoc. SEMEIUS (Ad. Est. 11:2), SEMIS (1 Esd. 9:23), SEMI (v. 33), SOMIS (v. 34); **SHIMEITES** shim'ē-īts [Heb. *(haš)šimʿî*] (Nu. 3:21; Zec. 12:13); AV SHIMITES; NEB SHIMEI.

1. Grandson of Levi, son of Gershon, and brother of Libni; head of the Shimeites, one of the major Levitical families both before and after the Exile (Ex. 6:17; Nu. 3:18, 21; 1 Ch. 6:17 [MT 2]; 23:7, 10; Zec. 12:13). The repetition of Shimei in 1 Ch. 23:9 is probably the result of textual corruption.

2. Son of Gera; a Benjaminite of Saul's family who opposed David's kingship after the house of Saul was deposed. This Shimei cursed David and threw stones at him while the king fled from Absalom's forces (2 S. 16:5-13). At this time David refused to have Shimei put to death for his abusive actions, which reflected the widespread hostility among the Benjaminites toward the Davidic throne (cf. 20:1f.). After Absalom's revolt failed, Shimei met David on his return to Jerusalem and asked for forgiveness, and David granted him amnesty (19:16-23). On his deathbed, however, David charged Solomon to

watch for an opportunity to rid the kingdom of his enemies, including Shimei (1 K. 2:8f.). Solomon therefore ordered Shimei to stay in Jerusalem upon penalty of death; when Shimei left the city in search of some runaway slaves, Solomon ordered him executed upon his return (vv. 36-46). (See also **19** below.)

3. A brother of David (2 S. 21;21) whose son killed a giant in Gath. *See also* SHAMMAH **2.**

4. One of the company who sided with Solomon during Adonijah's attempt to usurp the throne in the final days of David's life (1 K. 1:8). His prominence is evident from his association with such figures as Nathan, Zadok, and David's special guard. Some scholars have suggested that the MT should be emended, following Josephus (*Ant.* vii.14.4 [346]), to read "Shimei the Friend [*rēʿeh*] of David" (cf. 4:5) in place of "Shimei and Rei" (see J. Gray, *I & II Kings* [*OTL*, 2nd ed., 1970], p. 79 n. a; *see also* REI). He is possibly to be identified with **5** below.

5. Son of Elah; appointed by King Solomon as one of twelve officers in charge of providing food for the king and his household (1 K. 4:8). He is possibly to be identified with **4** above.

6. The brother of Zerubbabel (1 Ch. 3:19).

7. Head of a Simeonite clan (1 Ch. 4:26f.).

8. Head of a Reubenite clan (1 Ch. 5:4).

9. A Levite descended from Merari (1 Ch. 6:29).

10. A Levite descended from Gershom; an ancestor of Asaph (1 Ch. 6:42).

11. Head of a Benjaminite clan (1 Ch. 8:21); in v. 13 he is called Shema.

12. One of six sons of JEDUTHUN (**1**) appointed by David as Levitical singers "who prophesied with the lyre" under the direction of their father (1 Ch. 25:3, 17).

13. A Ramathite; an officer of King David who was in charge of the royal vineyards (1 Ch. 27:27).

14. A Levite descended from Heman who had an important role in Hezekiah's cultic reforms (2 Ch. 29:14).

15. A Levite, brother of Conaniah; he was second in charge of the contributions brought to the temple after Hezekiah's reforms (2 Ch. 31:12f.).

16. A Levite who divorced his foreign wife in accordance with Ezra's reforms (Ezr. 10:23; 1 Esd. 9:23).

17. Son of Hashum; a layman who divorced his foreign wife during Ezra's reforms (Ezr. 10:33; 1 Esd. 9:33).

18. Son of Binnui; a layman who divorced his foreign wife during Ezra's reforms (Ezr. 10:38; 1 Esd. 9:34).

19. A Benjaminite who was a descendant of Kish and an ancestor of Mordecai (Est. 2;5; Ad. Est. 11:2); possibly to be identified with **2** above (see comms., e.g., C. A. Moore, *Esther* [*AB*, 1971], p. 19). R. L. PRATT, JR.

SHIMEON shim'ē-ən [Heb. *šimʿôn* (same as SIMEON)]; NEB SIMEON. One of the sons of Harim who had married foreign women during the Exile and were required to divorce them in the time of Ezra (Ezr. 10:31). He is called Simon Chosamaeus in 1 Esd. 9:32; *see* SIMON (APOCRYPHA) **1.**

SHIMHI shim'hī (1 Ch. 8:21, AV). *See* SHIMEI **11.**

SHIMI shim'ī (Ex. 6:17, AV); **SHIMITES** shim'īts (Nu. 3:21, AV). *See* SHIMEI **1.**

SHIMMA shim'ə (1 Ch. 2:13, AV). *See* SHIMEA **1.**

SHIMON shī'mən [Heb. *šîmôn*]. Head of a Judahite clan (1 Ch. 4:20).

SHIMRATH shim'rath [Heb. *šimrāṯ*]. A Benjaminite; one of the nine sons of Shimei (1 Ch. 8:21).

SHIMRI shim'rī [Heb. *šimrî*]; AV also SIMRI (1 Ch. 26:10).

1. A Simeonite clan chief; son of Shemaiah and father of Jedaiah (1 Ch. 4:37).

2. Father of Jediael and Joha, two of David's "mighty men" (1 Ch. 11:45).

3. A Merarite Levite assigned to the division of gatekeepers; son of Hosah, who made him chief although he was not the firstborn (1 Ch. 26:10).

4. A Levite of the family of Elizaphan; one of those who assisted in cleansing the temple in the time of Hezekiah (1 Ch. 29:13).

SHIMRITH shim'rith [Heb. *šimrîṯ*]. A Moabitess; mother of Jehozabad, one of the conspirators against King Joash (2 Ch. 24:26). In 2 K. 12:21 she is called SHOMER, a masculine form of the same name.

SHIMRON shim'ron [Heb. *šimrôn*]; AV also SHIMROM; **SHIMRONITES** shim'rə-nīts [Heb. *haššimrōnî*]. The fourth son of Issachar (Gen. 46:13; Nu. 26:24; 1 Ch. 7:1) and the family that descended from him (Nu. 26:24).

SHIMRON shim'ron [Heb. *šimrôn*]; AV SHIMROM. A Canaanite royal town (Josh. 11:1) that later was allotted to the Israelite tribe of Zebulun (19:15). Its king joined other Canaanite city-kingdoms against Israel in the battle of Merom (Josh. 11:1; 12:20). The LXX reads *Symoōn* and the list of Thutmose III contains the name *š-m-ʿ-n*, while the Amarna Tablets read *Šamḫuna*. Josephus writes the word as *Simōnias*; the Tosefta has *symwny'*; and the Talmud (T.P. *Megillah* 70a) gives the equation "Shimron-Simonia" (*LBHG* [rev. ed. 1979], p. 118). The site has therefore been identified with Tell Simuniya, located about 11 km. (7 mi.) W of Nazareth (*GP*, I, 63), but surface explorations have shown that the site was abandoned during the period of the Israelite conquest and settlement.

The name Shimron appears in the inscriptions found on small prisoner figurines (19th-12th cents. B.C.). The inscriptions were found to be curses composed to bring disaster on these towns. The town also appears on a papyrus that lists rations of grain and beer issued during the reign of Thutmose III. B. R. AND P. C. PATTEN

SHIMRON-MERON [Heb. *šimrôn merʿôn*; Gk. B *Symoōn . . . Mamrōth*, A *Samrōn . . . Phasga . . .Marōn*]. A Canaanite royal city whose king was defeated by Joshua (12:20). Since this city is followed by Achsaph, which follows the city Shimron in 11:1, Shimron and Shimron-meron, possibly the full name, may be identical. The LXX, however, separates the two names, and possibly Shimron and Meron are two distinct places.

W. W. BUEHLER

SHIMSHAI shim'shī [Aram. *šimšay*–'sun (child)'; Gk. *Samsai*; Gk. Apoc. *Samsaios*]; AV Apoc., NEB Apoc. SEMELLIUS. An official in the Persian government who opposed the reconstruction of Jerusalem (Ezr. 4:8f., 17, 23; 1 Esd. 2:16f., 25, 30 [LXX 12f., 19, 25]). With Rehum, he wrote to Artaxerxes and temporarily halted the rebuilding of the city (Ezr. 4:17-24; 1 Esd. 2:25-30).

See *IP*, p. 223. R. L. PRATT, JR.

SHIN shēn [ש]; **SIN** sēn [שׂ]. The twenty-first letter of the Hebrew alphabet, transliterated in this encyclopedia as *š* and *ś*. It also came to be used for the number three hundred. *See* WRITING.

SHINAB shī'nab [Heb. *šin'āḇ*, Sam. *šin'ar*; Gk. *Sennaar*] (Gen. 14:2). King of ADMAH, one of the CITIES OF THE VALLEY, linked particularly with Zeboiim.

The association of Admah with Gaza (Gen. 10:19) suggests that the modern view, which locates the cities of the valley under the Dead Sea at its south end, is substantially correct. Shinab king of Admah is mentioned with four other south Palestinian rulers who resisted the punitive onslaught of a Mesopotamian military coalition headed by Chedorlaomer of Elam (14:2-16). The identity of Shinab has not been established to date. Since there is no serious corruption in the Hebrew text (the Samaritan variant probably arising from confusion of *r* and *b*, which are similar in early Hebrew script), the name is almost certainly genuine. An Akkadian title *Sin-a-bi*, "[the moon-god] Sin is my father," occurs in texts recovered from Ur and is similar to other compound Akkadian names, e.g., *Šamaš-a-bi*, "Shemesh is my father," and *Adad-a-bi*, "Adad is my father." Shinab perhaps was the Hebrew form of Akk. *Sin-a-bi*. R. K. H.

SHINAR shī'när [Heb. *šin'ār*; LXX *Sannaar*] AV also BABYLONISH (Josh. 7:21). According to biblical tradition, the land of Nimrod, including Babel, Erech, Accad, and "Calneh" (so AV; cf. RSV, NEB, "all of them," Gen. 10:9f.), the location of the tower of Babel (11:2), and the kingdom ruled by Amraphel (14:1, 9). A "beautiful mantle from Shinar" was the cause of the sin of Achan (Josh. 7:21). In Isaiah's prophecy of the recovery of the remnant, Shinar is one of the lands named (Isa. 11:11); it is named between Elam and Hamath, suggesting perhaps a location in Mesopotamia. By the time of Daniel the land of Shinar was the location of Babylon (Dnl. 1:2). In Zechariah's vision of the woman sitting in the ephah, the prophet was told that the ephah was being taken to the land of Shinar (Zec. 5:11).

The name was once thought to be the Hebrew equivalent of a Sumerian word for Sumer, but this is now rejected. There appears to be no Sumerian or Akkadian equivalent. Some have suggested that Shinar is related to Egyp. *sangar*, perhaps reflected in Amarna *ša-an-ḫa-ar* (Am.Tab. 35:49). In this tablet the king of Alašia (probably Cyprus) warns the king of Egypt against making a treaty with "the king of Ḫatte and with the king of Shankhar." This has been taken to refer to the Hittite king and the Babylonian king, but strong objections have been offered against equating Shankhar with Babylon. H. Winckler believed it was in Asia Minor (see E. Schrader and H. Zimmern, *Keilinschriften und das AT* [3rd ed. 1903], 31:238). J. A. Knudtzon was of the opinion that it meant the Mitanni, as did Shinar in the Bible in his view (*Die El-Amarna-Tafeln* [2 vols., 1915], 1080-83). W. F. Albright equated it with Ḫana, a province in Mesopotamia between Assyria, Babylonia, and Mitanni (*AJSL*, 40 [1924], 125-133). I. J. Gelb located it in north Syria (*AJSL*, 53 [1937], 235-255). W. C. Hayes stated "it is almost certainly another name for Babylon" (*CAH*, II/1, [3rd ed. 1975], 462).

There is some difficulty philologically in equating Heb. *šin'ār* with Am.Tab. *šanḫar*. Heb. *'ayin* could represent either the unvoiced guttural ' or the voiced uvular *ǵ*. When it is the latter, the phoneme is usually represented in LXX by *gamma* (*g*). Since the LXX equivalent is *Sannaar*, it does not seem to represent either Egyp. *sangar* or Amarna *šanḫar* (cf. A. Poebel, *AJSL*, 48 [1931], 26).

That a king of a petty kingdom in Cyprus would attempt to influence a pharaoh against Babylon is, as Winckler and Knudtzon pointed out, quite unlikely. That Amraphel, an ally of such little-known kings as are mentioned in Gen. 14, could be identified as Hammurabi, or any king of Babylon, and be named after Chedorlaomer king of Elam and Tidal king of Goiim approaches the ridiculous. Yet the biblical passages seem clearly to equate Shinar with Babylon or some portion of southern Mesopotamia. W. S. LASOR

SHINE [Heb. *'ôr* (Nu. 6:25; Job 41:32 [MT 24]; Ps. 31:16 [MT 17]; 67:1 [MT 2]; 80:3, 7, 19 [MT 4, 8, 20]; 119:135; 148:3; Prov. 4:18; Eccl. 8:1; Isa. 60:1; Ezk. 43:2; Dnl. 9:17), *zāhar* (Dnl. 12:3), *zāraḥ* (2 S. 23:4; 2 K. 3:22), *yāpa'* (Dt. 33:2; Job 3:4; 37:15; Ps. 50:2; 80:1 [MT 2]; 94:1), *nāgah* (Job 18:5; 22:28; Isa. 4:5; 9:2 [MT 1]; Joel 2:10; 3:15), hiphil of *ṣāhal* (Ps. 104:15), hithpael of *nāsas* (Zec. 9:16), *qāran* (Ex. 34:29f., 35); Gk. *eklámpō* (Mt. 13:43), *lámpō* (Mt. 5:16; 17:2; Acts 12:7; 2 Cor. 4:6), *perilámpō* (Lk. 2:9; Acts 26:13), *periastráptō* (Acts 22:6), *phaínō* (Mt. 24:27; Jn. 1:5; 5:35; Phil. 2:15; 2 Pet. 1:19; 1 Jn. 2:8; Rev. 1:16; 8:12; 18:23; 21:23)]; AV also OF LIGHT, "lifted up like ensign," "terrible"; NEB also REKINDLE, FLASH, SHOW, LIGHT UP, DAWN, BRIGHT, etc.

In general, when light shines on an object, it is a blessing (Job 22:28; Prov. 4:18; Isa. 9:2; cf. Sir. 26:17; Bar. 3:33f.; Ep. Jer. 6:60f., 67); conversely, when light does not shine, it is a curse (Job 3:4; Joel 2:10; 3:15; Wisd. 5:6; 17:6; Rev. 8:12).

The expression "the Lord make his face to shine upon you" is best known from the Aaronic blessing in Nu. 6:25, though similar forms occur in Ps. 31:16; 67:1; 80:3, 7, 19; 119:135; Dnl. 9:17 (cf. 2 Esd. 2:35). As P. Miller (*Interp.*, 29 [1975], 245) and others have noted, "the shining countenance [of God] is an emphatically positive presence for help and favor, a sign of the friendly and well-wishing nearness of God, the gracious and helping turning of God to human beings."

Several texts apply related imagery to human beings. Thus Eccl. 8:1 states that "a man's wisdom makes his face shine" (cf. Dnl. 12:3; 2 Esd. 7:97, 125; Wisd. 3:7; see further *TDNT*, II, 247). According to R. Gordis (*Koheleth — The Man and His World* [3rd ed. 1968], p. 286) the expression "make the face shine," used elsewhere only of God, means "be gracious toward"; here Gordis takes it as advice to a court official to appear gracious to others in the court. In Sir. 24:27, 32 God's Torah "makes instruction shine."

Apparently reflecting God's glory, Moses' face shone after his encounter with God on Mt. Sinai (Ex. 34:29f., 35; cf. 2 Esd. 10:25; on the later rabbinical view relating this radiance to the Shekinah, see *TDNT*, II, 246, 249f.); indeed, it shone so brightly that he had to wear a veil (vv. 33-35). The verb used here, *qāran*, seems to be related to *qeren*, the common word for horn (hence Vulg. *cornuta esset*, "was horned," which led to the medieval depictions of Moses with horns), in which case it may mean "put forth rays like horns" (see Jeremias, p. 39 n. 3; see also comms. on Exodus by U. Cassuto [Eng. tr. 1967], pp. 448-451; B. Childs [*OTL*, 1974], esp. pp. 609f., 617-19, and on the treatment of this passage in 2 Cor. 3:7-18, see pp. 620-24). Many scholars (e.g., J. Hyatt, *Exodus* [*NCBC*, repr. 1980], p. 326; R. Gundry, *Matthew* [1982], p. 343) compare this passage with the Transfiguration (Mt. 17:2 par.; cf. W. Lane, comm. on Mark [*NICNT*, 1974], p. 318, who compares the Transfiguration to apocalyptic images).

In Ps. 104:15 God's providential care of the earth enables human beings to cultivate various beneficial products, including oil, which was used to soften the skin (*see* OIL III.B) and hence made a person's face shine (cf. M. Dahood, *Psalms*, III [*AB*, 1970], 41).

Other texts refer to God shining in THEOPHANY, reflecting the association of deity and light that is common to many religions, though the Bible is distinctive in that light is not deified — God is the Creator and light is part of His creation (on the ancient Near Eastern background, cf. *TDOT*, I, 149-151, 165; *TDNT*, IV, 22-24). The shining light is apparently a manifestation of God's presence. Thus Dt. 33:2 refers to the Sinai theophany (see Ex. 19:16-18). Isa. 4:5 recalls the PILLAR OF CLOUD AND PILLAR OF FIRE that accompanied the Israelites during the Exodus (cf., e.g., Ex. 13:21f.); here the prophet uses that imagery to describe God's presence with His people in the future (but according to J. Watts, *Isaiah 1–33* [*Word Biblical Comm.*, 1986], pp. 48, 51; and O. Kaiser, *Isaiah 1–12* [Eng. tr., 2nd ed., *OTL*, 1983], p. 88, this is not a theophany but simply imagery to denote God's care and protection of His people).

Similarly, in Ezk. 43:2 the approach of God's glory causes the land to shine (see ch. 1; see also 2 S. 23:3f., which states that a just king is to his people as the sun is [to the rain-soaked earth] on a cloudless morning; see P. McCarter, *II Samuel* [*AB*, 1984], pp. 477f., 483f.; cf. Sir. 50:6f.). In Ps. 94:1 the psalmist calls for God, "the God of vengeance," to shine forth, which C. A. and E. G. Briggs (comm. on Psalms, II [*ICC*, 1907], 288) associated with Ps. 50:2 and Dt. 33:2 (cf. A. Anderson, *Psalms*, II [*NCBC*, repr. 1981], 582, who thinks *yp'* means "challenge" on the basis of an Ugaritic cognate; see further P. Miller, *Divine Warrior in Early Israel* [1973], pp. 76-78). In Ps. 50:2 God shines forth from Zion (note the context of the sun in v. 1 and the fire in v. 3).

Many NT texts are similar. At Jesus' birth "the glory of the Lord shone around" the shepherds (Lk. 2:9). At the Transfiguration Jesus' face "shone like the sun" (Mt. 17:2; see A. M. Ramsey, *Glory of God and the Transfiguration of Christ* [1949]). Paul's experience of theophany on the Damascus road (Acts 22:6; 26:13; cf. 9:3) and Peter's rescue from jail by an angel of the Lord (12:7) also involved a bright shining light. The coming of the Son of Man will be like lightning shining from east to west (Mt. 24:27). In a vision the author of Revelation saw "one like the son of man" whose face "was like the sun shining in full strength" (Rev. 1:16). In the New Jerusalem there will be no need of sun or moon, for "the glory of the Lord is its light" (21:23; cf. 2 Esd. 7:42).

On the frequent NT imagery of "light shining" for God's illuminating effect on believers, *see* LIGHT.

SHION shī'ən [Heb. *šî'ôn*]; AV SHIHON. A border town in the territory of Issachar (Josh. 19:19). Abel (*GP*, II, 61) held that the name has been perpetuated in that of 'Ayûn eš-Še'ain, 3 km. (2 mi.) NE of Daburiya, near Nazareth. Another suggestion is Sirin, located about 22 km. (14 mi.) SE of Mt. Tabor, but Abel calls the change of Šî'ôn to Širôn to Sirin, a "gratuitous hypothesis" (*GP*, II, 464). Archeological evidence has not been sufficient, however, to support either identification. W. S. L. S.

SHIPHI shī'fī [Heb. *šip'î*–'overflow']. A Simeonite prince; son of Allon and father of Ziza (1 Ch. 4:37).

SHIPHMITE shif'mīt [Heb. *haššipmî*]; NEB OF SHEPHEM. The designation of Zabdi, who was in charge of the produce of King David's vineyards for the wine cellars (1 Ch. 27:27). It may indicate that he was a native of SHEPHAM or of SIPHMOTH (cf. LXX *hó toú Sephnî*).

SHIPHRAH shif'rə [Heb. *šiprâ*–'beauty']. One of the two Hebrew midwives who were commanded by Pharaoh to kill all newborn Hebrew male children.

See B. S. Childs, *Book of Exodus* (*OTL*, 1974), p. 20 n. 15.

SHIPHTAN shif'tan [Heb. *šipṭān*–'(God) has judged'(?); see *IP*, p. 187]. Father of the Ephraimite leader Kemuel (Nu. 34:24).

SHIPS; BOATS [Heb. *'oniyâ* (e.g., Gen. 49:13; Ezk. 27:9; cf. Ugar. *anyt*; Am.Tab. 245:28, *a-na-ya*), *'onî*, collective for ships in a fleet (e.g., 1 K. 9:26f.; 10:11, 22 [AV NAVY]; Isa. 33:21 [RSV GALLEY]), *ṣî* (cf. Egyp. *ḏ3ỉ*–'ferry across'), always of foreign ships (Nu. 24:24; Isa. 33:21; Ezk. 30:9, AV [text doubtful]; Dnl. 11:30), *ś'ḵîyâ* (Isa. 2:16; cf. Ugar. *ṯkt*; Egyp. *sḳḏỉ*–'to sail'), *s'pînâ* (Jonah 1:5, a ship with a deck; cf. Akk. *sapīnatu*),*k'lî*–'vessel' (used of a ship in Isa. 18:2 and perhaps 60:9); Gk. *ploíon*, the most common term, used in the Gospels for fishing boats on Galilee (e.g., Mt. 4:21f.), in the Acts for ships plying the Mediterranean (e.g., Acts 20:13), and elsewhere for ships in general (Jas. 3:4; Rev. 8:9; 18:17ff.), also *ploiárion* (diminutive of *ploíon*, Mk. 3:9; Jn. 6:22ff.; 21:8 in reference to boats on Galilee), *naús* and *skáphē*, which occur only in the story of Paul's shipwreck on Malta, where the former (Acts 27:41; RSV VESSEL) represents a large seagoing ship with 276 persons on board, the latter (Acts 27:16, 30, 32) the dinghy or small boat towed by the ship].

I. In the OT
II. In the Ancient East
III. In the NT
IV. In the Greek and Roman World

I. In the OT.—The Israelites were not in general a seafaring people. Their forefathers had come out of the desert to dwell largely in the hill country of Palestine. Among their most persistent enemies were the sea-peoples, particularly the Philistines along the Mediterranean coast. The presence of these enemies, together with the lack of natural harbors along the coast of Palestine, meant that Israel never became oriented to the sea. It is not surprising, then, that almost no pictures of ships have been found in Palestine from the OT period — an exception being two ships incised on the wall of a tomb at Khirbet Beit Lei, near Lachish, which Naveh dated probably to the time of Sennacherib's invasion (701 B.C.; *IEJ*, 13 [1963], 74-92). When ships do appear in the OT they are usually connected with foreign, and often unfriendly, powers. The earliest mention of a seafaring enemy appears in the Song of Deborah (Jgs. 5:17b): recounting the activities of the various tribes during the battle with Sisera, the poet asks, "And Dan, why did he abide with the ships?" Juxtaposition with Asher, Zebulun, and Naphtali (vv. 17f.) suggests that this is northern Dan, a landlocked tribe, and that it had become economically dependent on the Phoenicians by taking employment (Heb. *gûr*, "abide," may also be translated "sojourn") on their ships. Such dependence could have made them and their relatives at home reluctant to join the other tribes against the Canaanites.

Solomon is reported to have employed "ships of Tarshish" in his foreign trade from Ezion-geber on the Gulf

of Aqabah; in this enterprise the Tyrians joined him as partners, and he was doubtless dependent on their seafaring skill (1 K. 9:26f.; 10:11, 22). "Tarshish" as a place has been identified with Tartessus, a Phoenician port in southern Spain, or with Tarsus in Cilicia. But Albright (*BASOR,* 83 [Apr. 1941], 21f.) connected the term with *tršš,* a Phoenician loanword from Akkadian, meaning "mine" or "smelting plant." Thus a "Tarshish ship" would be understood as a vessel from any port engaged in the metal trade. Wiseman (*NBD*) thought of Gk. *tarsós,* "oar" (e.g., Euripides *Iphigeneia in Tauris* 1346), and identified the "Tarshish ship" as a galley. In either case, the account in 1 K. 9–10 is understood most easily as referring to trade on the Red Sea, particularly with south Arabia and possibly Somaliland; the Egyptians made such voyages as early as the Old Kingdom (P. E. Newberry, *JEA,* 24 [1938], 192-94). The Chronicler's interpretation of "Tarshish ships" as ships that "went to Tarshish" (cf. 1 K. 10:22 with 2 Ch. 9:21; also 1 K. 22:48; 2 Ch. 20:36f.) appears to be a misunderstanding, for a voyage from Ezion-geber to a Mediterranean port could have been achieved only by circumnavigating Africa. The earliest account of what was probably a voyage from the Red Sea around Africa to Gibraltar is reported by Herodotus (iv.42) as having been carried out by Phoenician sailors in the time of Neco II of Egypt (609-594 B.C.). *See also* OPHIR; TARSHISH.

Jehoshaphat attempted unsuccessfully to revive trade on the Red Sea (1 K. 22:48f.); perhaps because he lacked Phoenician assistance, his Tarshish ships foundered at Ezion-geber. The Chronicler (2 Ch. 20:35-37) interpreted this disaster as a divine judgment because the undertaking was done in partnership with Ahaziah of Israel, "who did wickedly." Here the ship is an aspect of an unholy alliance with an enemy of Yahweh; its destructon is a mark of His displeasure (cf. Ps. 48:7).

Long before the Chronicler, probably toward the end of Uzziah's reign, during a period of prosperity in the area of Ezion-geber (Elath, 2 K. 14:22; 2 Ch. 26:2), Isaiah proclaimed a similar message: because the people of Judah "strike hands with foreigners" (Isa. 2:6), Yahweh rejected them, "for the Lord of hosts has a day . . . against all the ships of Tarshish" (vv. 12, 16). In view of the sentiment associated with ships of Tarshish in the foregoing passages, it is hardly surprising that when Jonah desires to flee "from the presence of the Lord" (Jonah 1:3), he boards "a ship going to Tarshish."

The "oracle concerning Tyre" in Isa. 23 associates Tarshish ships specifically with the Phoenician mercantile ports of Tyre and Sidon and begins the announcement of their destruction with "Wail, O ships of Tarshish." Similarly, in Ezk. 27:4-9a, 25b-36 a Phoenician merchant ship is described in detail as a symbol of Tyre and its far-flung trade: the ship's planking is of fir from Senir (Mt. Hermon), its mast of cedar of Lebanon, its oars from oak of Bashan, its deck of Cyprus pine inlaid with ivory, its sail of Egyptian linen, its awning of "blue and purple from the coasts of Elisha"; the crew is recruited from the Phoenician towns of Arvad, Tyre (or possibly Zemer), and Byblos. On the high seas the ship is wrecked by the east wind (vv. 26f.): thus the destruction of Tyre is portrayed.

In a different but related symbolism, Tarshish ships appear in Isa. 60:9 as vehicles for the eschatological gathering of Israel to Jerusalem. Thus this symbol of gentile wealth, which constantly tempted Israel away from Yahweh, here is turned around to represent the way by which that wealth comes into the possession of Israel in the latter day (vv. 11, 16).

Old Testament references to ships repeatedly symbolize foreign oppression. In Dt. 28:68 one of the catastrophes that will befall the Israelites if they are disobedient is that "the Lord will bring you back in ships to Egypt"; this phrase implies that Israel will not go freely but will be transported by foreigners. In Isa. 33:21 future peace and freedom from foreign oppression are symbolized by the absence of galleys and other foreign ships. A similar theme is reflected by the "ships of Kittim" (Nu. 24:24; Dnl. 11:30). "Kittim" referred originally to Citium in Cyprus; by extension "ships of Kittim" were any ships from across the Mediterranean that played a significant role in sacred history (cf. Josephus *Ant.* i.6.1 [128]). *See also* KITTIM.

The OT lyric and wisdom literature portrays the ship quite differently, as an object in nature. In Ps. 104:26 the ship is a denizen of the deep testifying to divine wisdom in creation; similarly, in Prov. 30:19 (cf. Wisd. 14:1-7) "the way of a ship on the high seas" is classed with natural phenomena that surpass human understanding. Other figurative uses are in Job 9:25f., where a light, swift ship symbolizes the speed with which human life passes (*see* SKIFFS OF REED); Prov. 23:34, where a drunken man is compared to a man tossed in a ship; Prov. 31:14, where a good housewife, like a merchant ship, is ready to travel afar to obtain necessities for her family. All these usages derive from natural characteristics of ships, rather than from their role in history, as in other parts of the OT.

II. In the Ancient East.—From earliest times ships played an important role in the life of the Egyptians and the various other peoples living on the coastlands and islands of the eastern Mediterranean; ships were also significant in southern Mesopotamia.

Geographically and economically the life of ancient Egypt focused on the Nile; virtually all traffic was by ship. Boats, or floats of some type, must have been used there from the beginning of human habitation.

The Palermo Stone records that as early as the 4th Dynasty (*ca.* 2600 B.C.) Snefru brought to Egypt "forty ships filled (with) cedarlogs" from Phoenicia or Cilicia; it mentions three ships each 100 cubits (over 50 m., 170 ft.) long (*ANET,* p. 227; cf. Casson, fig. 17). From this period also come the earliest remains of a ship yet discovered, a solar bark found dismantled near the Great Pyramid of Cheops. It was 43.4 m. (142 ft. 5 in.) long, 5.53 m. (18 ft. 2 in.) wide, and about 8 m. (26 ft.) deep. It had no keel and its planking appears to have been joined by mortise and tenon secured by cords. Some of its wood was from Asia Minor and Syria. An inscription from the cenotaph of a military commander, Uni, at Abydos, tells how he transported an army for Pepi I (6th Dynasty, *ca.* 2350 B.C.) by ship and landed "at the rear of the heights of the mountain range on the north of the land of the Sand Dwellers" (perhaps Carmel; *ANET,* p. 228). Throughout Egyptian history there was continuing sea trade with Phoenician ports, and military operations in Syria were conducted by both land and sea. The magnitude of Phoenician trade with Egypt *ca.* 1100 B.C. is suggested by the report of Wen-Amon, an Egyptian official from Karnak who traveled to Phoenicia, that there were twenty merchant ships at Byblos and fifty more at Sidon trading with Egypt (*ANET,* p. 27).

The marshlands of southern Mesopotamia also provided a setting for ships at the dawn of civilization. They appear in ritual scenes on seals from the Uruk period (mid-3rd millennium; H. Frankfort, *Cylinder Seals* [1939], plates III d,c). A series of cylinder seals extending from the Early Dynastic period into the 1st Dynasty of Baby-

lon, and thus bridging the transition from Sumerian to Semitic domination, shows a stereotyped design: the sun-god is seated in a ship, which often appears to propel itself and whose prow ends in a human body holding what is apparently a punting pole (*ANEP*, nos. 676f.). The extent to which actual sea travel was dependent on non-Mesopotamians, however, is reflected in Sennacherib's report of his sixth campaign (694 B.C.), in which he brought captives from Syria to Nineveh: "Mighty ships (after) the workmanship of their hand, they built dexterously. Tyrian, Sidonian, and Cyprian sailors, captives of my hand, I ordered (to descend) the Tigris with them . . . my brave warriors. . . . I embarked them in the ships, and provided supplies for the journey, together with grain and straw for the horses, which I embarked with them" (D. D. Luckenbill, *Annals of Sennacherib* [1924], pp. 73f., lines 58-61, 66-69). Such a warship is partially depicted on a broken relief from Sennacherib's palace at Kuyunjik (Nineveh) now in the British Museum. Propelled by two ranks of oarsmen, it had three decks, the uppermost protected by a row of shields; the prow is elongated into a ram.

III. In the NT.—In the Gospels boats appear repeatedly as vehicles used by Jesus and His disciples on the Sea of Galilee. The remains of one such boat were discovered near Magdala in 1986. From the 1st cent. B.C. or 1st cent. A.D., it is made of pine and measures 8.2 by 2.3 m. (27 by 7 1/2 ft.) (W. G. Pippert, *Christianity Today*, 30 [May 16, 1986], 58). (Boats are never mentioned in the Bible on either the Jordan or the Dead Sea, but their existence is attested by the Madeba Map [6th cent. A.D.], which shows two sailing ships on the Dead Sea and two ferries, apparently attached to lines, on the Jordan.) Ships form part of the setting of four miracle stories: the stilling of the storm (Mk. 4:35-41 par. Mt. 8:23-27; Lk. 8:22-25), the walking on the water (Mk. 6:45-52 par. Mt. 14:22-33; Jn. 6:16-21), and the miraculous catches of fish (Lk. 5:4-11; Jn. 21:4-8).

Whether or not the Evangelists, in recounting these miracles of Jesus, intended the ship to symbolize the Church (as has been suggested repeatedly), it does seem clear that they emphasized certain features of the stories to convey theological insights. The ship is the locus of the Christian community as it endures the onslaught of demonic powers symbolized by wind and wave (cf. Ps. 107:23-30), as it is saved in storm by a Lord who tramples on the waters of death (cf. Job 9:8; Sir. 24:5f.), and as it goes forth on the sea of the world to "fish" for converts. Here is brought together a complex of motifs from both biblical and classical literature: the ship as a community of individuals sharing a common interest and fate (Plato *Politicus* 302; Demosthenes *Philippics* iii.128 [69f.]; Horace *Odes* i.14; iii.2.26-30; T. Naph.6), the sea as an enemy of the Lord over which He triumphs (Job 26:12; Ps. 74:13f.; 89:9f.; Isa. 51:9f.), the sea as the place of death (Dt. 30:12f.; cf. Rom. 10:6f.; Job 38:16f.; Ezk. 26:19; Rev. 20:13; cf. Homer *Od.* xxiv.2 10f.), and the sea as the world (Rev. 17:15; Sib.Or. 5:530f.; cf. Isa. 17:12f.; Ezk. 26:3; Dnl. 7:3, 17).

Acts shows Paul and his companions repeatedly taking ship (Acts 13:13; 15:39; 16:11f.; 18:18, 21; 20:3-6, 13f.; 21:1-6; 27:1-6; 28:11-13); most thoroughly described is Paul's voyage from Caesarea to Rome (Acts 27:1–28:14). His route, except for his ship's being blown off course and shipwrecked on Malta, was the usual one between these points: Caesarea to Sidon, and then west between Cyprus and Asia Minor to Myra on the southern coast of Lycia, where they had to transship, probably because their "ship of Adramyttium" (27:2) was continuing to its home port in northwest Asia Minor. Taking an Alexandrian ship bound for Italy, they continued along the southern coast of Asia Minor and then across to the eastern tip of Crete, putting in on the southern coast at a small port called Fair Havens. Upon leaving there they were caught by a northeaster and driven westward for a fortnight, ultimately running aground on a shoal off Malta. Three months later, taking another Alexandrian ship, they continued via the common route Syracuse–Rhegium (Reggio di Calabria)–Puteoli (in Roman times a major port on the Bay of Naples; now Pozzuoli), whence Paul traveled overland to Rome.

The account of this voyage is rich in sailing lore, especially tactics used in bad weather: the importance of wintering in a good harbor, since traveling safely on the Mediterranean in winter was impossible (Acts 27:9, 12; sailing was considered dangerous from mid-September to mid-November and regularly was curtailed thereafter until February or March; but, Pliny declared that, because of the avarice of merchants, the seas were never entirely devoid of ships [Pliny *Nat. hist.* ii.47 (125); Vegetius *De re*

A mosaic on the floor of a trading company at Ostia showing two Roman vessels in full sail with a lighthouse in the background. The dolphins symbolize a fortunate voyage (1st cent. A.D.) (Superintendent of Ostia Archaeology)

mil iv.39]). When caught in a storm, the sailors hoisted the dinghy on board (vv. 16f.), employed *hypozṓmata* (probably ropes run under the hull to tighten the planking, v. 17; see Casson, p. 211 n. 45), lowered the rigging, and ran before the storm (vv. 17, 40). They threw cargo and ultimately tackle overboard (vv. 18f.), sounded for a shallow bottom (v. 29), and when one was perceived put out multiple anchors from bow and stern and secured the rudders to avoid running on rocks (vv. 29f.). Having failed to beach the ship (by loosening the rudders and hoisting the foresail; the main and topsails were evidently lost) when a likely spot was found (vv. 39f.), they finally had to abandon ship and swim, some with planks and other pieces of wood as life preservers (vv. 43f.). Similar accounts of sailing the eastern Mediterranean in storm are found in Josephus *Ant.* xiv.14.2f. (374-380); Lucian *Navigium* 7-9; Gregory of Nazianzus *Oratio* xviii.31; Chariton *Chaereas and Callirrhoë* iii.5.1.

Both "ships of Alexandria" on which Paul traveled during this voyage were probably wheat transports carrying grain from Egypt to Italy, a major aspect of Mediterranean commerce in the Roman period. On the first of these, at least, the owner as well as the captain was on board (Acts 27:11). The second vessel was named (and stood under the protection of) the Dioskuroi, the twin gods Castor and Pollux, patron deities of sailing. *See* TWIN BROTHERS.

In the Epistles the ships is employed in a number of figurative senses common in classical and Hellenistic literature. In Eph. 4:14 the figure of a storm-tossed ship representing a man beset by evil portrays the Christian, or the Church as a whole, threatened by heresy (cf. Euripides *Daughters* 103f.; *Rhesus* 322f.; Sir. 33:2). In 1 Tim. 1:19 shipwreck portrays personal disaster (cf. Plato *Republic* viii.553; Ovid *Tristia* i.5.36; Philo *De aeternitate mundi* 129). He. 2:1 implies the ship as a figure for the soul (cf. Philo *Legum allegoriae* iii.224). In Jas. 3:3-5 the figures of the bit in the mouth of a horse and the rudder on a ship are coupled, as they are also by Philo (*De opificio mundi* 88; *Legum allegoriae* ii.104; iii.223f.); in James they emphasize the power of the teacher's tongue (cf. v. 1) to guide the Church for good or ill. By implication the ship here, as perhaps in the Gospels, seems to symbolize the Church. The same is true of 1 Pet. 3:18-21, where the ark of Noah appears to represent the Church, just as the waters of the Flood and baptism are said to correspond. The symbolism of ship = church is common in patristic literature (e.g., Tertullian *De baptismo* 12; Hippolytus *Demonstratio de Christo et antichristo* 59) and may be related backward to such passages as T. Naph.6, where a ship symbolizes Israel, and Horace *Odes* i.14, where it is the state. In Rev. 8:8f., at the blowing of the second trumpet an eschatological convulsion of nature takes place in the sea; a third of it turns to blood, a third of its living creatures die, and a third of its ships are destroyed. Here, as in Ps. 104:25f. and Prov. 30:19, ships are considered denizens of the sea and thus suffer along with its other inhabitants (cf. Rev. 8:7, where a third of the earth and trees and all the green grass are destroyed). Finally, in Rev. 18:17-19 the ship-

masters and sailors of Rome, whose ships brought home wealth from the whole world, are vividly portrayed lamenting over its fall.

IV. In the Greek and Roman World.–The Greeks considered ships to have been invented by the Phoenicians; this attribution at least suggests the origin of Greek knowledge of ships and seafaring. Pottery from the Aegean period already portrays well-developed ships, relatively long and low, built on keels and sometimes carrying sails. Side rudders at the stern, usually one on each side — the common steering apparatus in antiquity — already appear. During the Minoan period (before *ca.* 1200 B.C.) both war and merchant ships bore sails. The oldest shipwreck yet discovered, from *ca.* 1400 B.C., was found off the coast of southern Turkey near Kaş in 1982 (G. F. Bass, *National Geographic,* 167/1 [1985], 1-3). Knowledge of ships during the Homeric period (*ca.* 12th cent.) is limited largely to warships, which were chiefly for the transport of soldiers; they were propelled both by oar and by sail. According to Homer *Od.* v. 252, 255; ix.322, ships had floors and carried a large mast.

As early as the Geometric period (11th-6th cents.) ships with rams appeared. Vessels from this period were characteristically high at the bow and stern with the midship cut low. By the 6th cent. both the classical warship, the "long ship" built relatively narrow and light, and the merchantman, the "round ship" with broader beam and heavier construction, reached the basic forms that they maintained into the Middle Ages (see illustrations in Casson, figs. 81f., 86f., 90, 94). As for the arrangement of oars, *ca.* 700 B.C. biremes appeared, and triremes about a century later (Herodotus iii.44; *see* TRIREME). In classical Greece the trireme remained most popular.

With the advent of the Hellenistic age, we learn of tetraremes, quinqueremes, and polyremes — "eights," "tens," "twenties," and even a "forty" built by Ptolemy IV (221-204 B.C.). For such ships to have had so many banks of oars superimposed on each other would have been functionally impossible. Casson (pp. 99-116) theorized that ships beyond the level of triremes had multiple rowers at each oar in no more than three banks. The numbers by which these ships were designated would refer then to the total oarsmen at each vertical segment of oars. How large such a ship could be is illustrated by Ptolemy's monster "forty": it measured 128 m. (420 ft.) in length; 17 m. (57 ft.) in width; its stern rose 24 m. (79 ft.) above the water, and its longest oars, counterbalanced with lead, were 17 m. (57 ft.) in length. This ship carried over seven thousand men, including four thousand oarsmen (Athenaeus v.203f.). Casson suggested plausibly that it was a catamaran, with rowers on each of the four sides of its two hulls (pp. 111f.).

Merchant ships were generally built higher and wider than warships. The only such ship for which we have precise measurements is the *Isis,* for which Lucian (*Navigium* 5) gave a length of 55 m. (180 ft.) a breadth-to-length ratio of 1:4 (14 m., 45 ft.), and a depth of 13 m. (43 ft.). As the description of this ship appears in a romance, it may not actually have existed outside the author's imagination; its dimensions, however, are not impossible when compared with the ship commissioned by Hiero II of Syracuse (306-215 B.C.), described by Athenaeus (v.206d-209b). This grain transport, which was also equipped with heavy weapons, fighting men, and even horses, must have been nearly the same size as that assigned to the *Isis.* Caligula transported the Vatican obelisk to Rome along with its pedestal, weighing together upwards of 500 tons, plus some 800-900 tons of ballast, in one ship (Pliny *Nat. hist.* xvii.76 [201f.]). Such ships, however, were much the exception. Among twenty-three wrecks discovered in the Mediterranean and catalogued by Casson (pp. 214-16) ranging from the 4th cent. B.C. to the 7th cent. A.D., the largest is one built by Caligula that measures 73 m. (240 ft.) in length. Most of the wrecks discovered are between 15 and 30 m. (50 and 100 ft.) long.

Travel was apparently limited to freight ships (at least two of the vessels on which Paul traveled to Rome must have been grain transports), but relatively large numbers of people were accommodated aboard, although the majority could scarcely have been given cabins. Some ships offered cramped quarters for passengers in the hold (Lucian *Juppiter Tragoedus* 48; Athenaeus v. 207f.); some had relatively small cabins at the stern where the specially privileged might stay (Achilles Tatius v. 15; see Casson, fig. 145), but most travelers had to make do on the open deck, sometimes arranging their own shelters (Petronius 100; Achilles Tatius ii.33). How crowded conditions might be is suggested by the report that the ship on which Paul was wrecked at Malta carried 276 persons (Acts 27:37), while Josephus (*Vita* 3 [13-16]) was shipwrecked with six hundred persons on board. Generally passengers were responsible for their own food (e.g., Achilles Tatius iii.33), although cooking facilities might be provided for the captain, the owner, and the specially favored. A Byzantine ship from the 7th cent. excavated off the southwest coast of Turkey near Yassi Ada had a galley at the stern with a hearth, a tile roof, and cupboards (G. F. Bass, *National Geographic,* 134 [1968], 419).

Ancient sailors, having no compasses, resorted to various other expedients to maintain their course. Much sail-

ing was done in sight of coastlines, even when this entailed circuitous routes. Where prevailing winds or currents could be relied on, ships might sail the open sea. The stars were an important aid in navigation, while the flight of birds and the shape of clouds were helpful in determining that land was near.

In Roman times the common westward route from Egypt was Alexandria–Phoenicia–Rhodes–Crete–Messina–Puteoli or Ostia; an alternative route was via Cyrene and across the Mediterranean to Sicily. From Italy the route west was Corsica–Marseilles–Tarragona–Cartagena–Cadiz (Livy xxvi.19.11f.), or by way of Carthage and along the North African coast. At times voyages were made directly from Italy to Spain (Strabo iii.2.5). Because of prevailing westerly winds ships could sail east directly across the Mediterranean from Messina to Alexandria; those bound for Greece and Asia Minor traveled by way of Corcyra and Cape Malea (Livy xxxvi.42). The speed of travel varied much with weather and locality. A number of records have been left of the length of different voyages, some of them remembered doubtless because of their unusual speed. Some of these are shown in Table 1 of Mediterranean voyages.

E. HILGERT

SHISHA shī'shə [Heb. *šîšā'*]. A high official in the court of King David (*see* SHAVSHA); his sons occupied the same office in Solomon's court (1 K. 4:3).

SHISHAK shī'shak [Heb. *šîšaq*; *šûšaq* (*K*,1 K. 14:25); Egyp. *šošenq*; Gk. *Sousakim*]. The king of Egypt who raided Palestine in the fifth year of Rehoboam king of Judah, identified with the pharaoh Sheshonq I of the Egyptian monuments, who founded the 22nd (Libyan) Dynasty (*ca.* 945-924 B.C.).

As "Great Chief of the Meshwesh" (abbr. Mā, Libyan tribesfolk settled in military colonies in Egypt), Sheshonq was already the most powerful man in Egypt under Psusennes II (last king of the 21st Dynasty), from whom he obtained high honors, as shown by an inscription from Abydos. The marriage of his son to Psusennes' daughter enabled him to ascend the throne peacefully at Psusennes' death (*ca.* 945 B.C.), as Sheshonq I.

The new king appears to have been a shrewd politician. Under the previous dynasty, the high priests of Amon at Thebes had ruled Upper (south) Egypt in virtual independence of the pharaohs at Tanis in the north. But Sheshonq ended their rule by installing his own son as high priest, thus restoring Egypt's political unity. His reign of twenty-one years (*ca.* 945-924 B.C. on likeliest dates, *pace* Albright) was mainly peaceful and conserved Egypt's strength. In foreign affairs he was cautious. While Solomon reigned over a united and powerful Israel, Sheshonq risked no open conflict but contented himself with harboring political refugees such as Jeroboam son of Nebat (1 K. 11:40), whose return to Israel at Rehoboam's accession precipitated the breakup of that kingdom (ch. 12).

1 Kings 14:25-28 and 2 Ch. 12:1-12 record that in the fifth year of Rehoboam king of Judah, as a divine punishment for forsaking the law, Shishak king of Egypt came forth with twelve hundred chariots, sixty thousand horsemen, and vast forces, including Libyans, Sukkiim, and Ethiopians. He took the fortified cities of Judah and came as far as Jerusalem. Rehoboam and his people repented at the preaching of the prophet Shemaiah, so Jerusalem was saved from destruction; but the king and the people had to become Shishak's vassals, and they stripped temple, palace, and city of their treasures (including Solomon's gold shields) to buy off the pharaoh.

Egyptian and other sources throw additional light on these events. A very badly damaged stele of Sheshonq from Karnak may be interpreted to mean that his invasion of Palestine was precipitated by a border incident. But recent study of the famous list of over 150 Palestinian place names in Sheshonq's triumphal relief at Karnak (south wall of the temple of Amen-Rē) shows that he sent troops into the Negeb to destroy Judahite forts there, while he marched through Israel (via Beth-horon and Gibeon and thus near to Jerusalem, as required by the biblical accounts). He therefore brought Jeroboam to heel as well as Rehoboam. Possibly Jeroboam had promised to be Shishak's vassal but had defied him when firmly seated on the throne of Israel — hence the invasion of Israel as well as the subjection of Judah.

Israelite place names in the Karnak list include Megiddo, Taanach, Shunem, Beth-shean, Penuel, Mahanaim, Gibeon, Beth-horon, and Aijalon. The name *Yd-h-mlk* should be vocalized *yad-hammelek*, "king's monument" — presumably a landmark, named near Megiddo in the list; it has nothing to do with either Rehoboam or Judah, as was once thought. A broken stele of Sheshonq found at Megiddo also attests his passage there, and excavators at various Palestinian sites have attributed Iron Age destruction levels to the pharaoh's raid.

Shortly after this expedition, in the twenty-first year of his reign, Sheshonq ordered the erection of a pillared court and pylon at Karnak. Neither these works nor the famous triumphal relief carved in conjunction with them was ever finished, for he died a few months later. His Palestinian campaign thus dates to the last years of his reign; he wisely refrained from venturing any farther into Asia. Sheshonq maintained friendly relations with Abibaal king of Byblos in Phoenicia, as is shown by a statue bearing both their names (in Egyptian and Phoenician, respectively). The enigmatic Sukkiim named among the pharaoh's troops in 2 Ch. 12:3 are identified by Egyptian texts (which name them as Tjuku, Tjukten) as scouts or auxiliaries from the Libyan oases.

SHITTAH TREE (Isa. 41:19, AV); **SHITTIM WOOD** (AV Ex. 25:5, etc.). *See* ACACIA.

SHITTIM shit'im [Heb. *haššiṭṭîm*–'the acacias'; Gk. *sattin*].

1. A place on the eastern side of the Jordan and N of the Dead Sea, probably a portion of the plains of Moab. According to Glueck, *haššiṭṭîm* is an abbreviated form of *'āḇēl haššiṭṭîm*, ABEL-SHITTIM. Simons, on the other hand, thought that Shittim was the name of the entire area, which stretched from Abel-shittim at the northern end to Beth-jeshimoth at the southern end (cf. Nu. 33:49).

Shittim was the last camping place of the Israelite tribes before they crossed the Jordan (Nu. 25:1); "the plains of Moab" in 22:1 apparently designates the same site. At Shittim "Israel yoked himself to Baal of Peor" (25:3), thus giving Balak the results that he had sought by trying to have Balaam curse Israel (chs. 22–24). The sin involved harlotry — probably in the name of religion — with Moabite and Midianite women (25:1-9). At Shittim Moses ordered a CENSUS of the people (26:1-4). Subsequently Moses was told to "go up into the mountain of Abarim, and see the land" (27:12-14) and to invest Joshua with some of his authority (vv. 18-23). Since Moses' obedience to this command is recounted in Dt. 34, the book's last chapter, one may assume that at least some of his words in Deuteronomy were spoken to the people at Shittim, the last encampment before the Jordan crossing. Nu. 30, then, represents only a selection of the entire message.

At Shittim vengeance was taken on the Midianites, and Balaam was slain (Nu. 31:1-20). The tribes of Reuben and Gad and half the tribe of Manasseh decided to take portions of Transjordan as their land allotment, and this was granted with the proviso that they first help their brothers conquer the land of Canaan (32:1-5, 20-23). From Shittim Joshua sent two men to spy out the land, "especially Jericho" (Josh. 2:1), after the death of Moses. And from Shittim the tribes of Israel at long last moved down to the waters of the Jordan to cross into the Land of Promise (3:1); God permitted them to cross on dry land by stopping the waters at ADAM (vv. 14-17).

Micah delivered a prophecy in which God called upon the people to 'remember . . . what happened from Shittim to Gilgal" (Mic. 6:5). Balak and Balaam are mentioned, but the context (vv. 1-5) deals with the gracious saving acts of the Lord. It is not enough, therefore, to say that the reference to Shittim indicates the miraculous stopping of the waters. Rather, it concerns the Lord's gracious willingness to save His people even though they had just committed an abomination with the Moabites and Midianites.

In Hos. 5:2 the RSV emends *šēṭîm*, "those who revolt," to *šiṭṭîm* (see *BHS*); thus "the revolters are profound to make slaughter" (AV; cf. NEB) becomes "they have made deep the pit of Shittim" (RSV). But where else is a "pit of Shittim" mentioned?

Josephus located Abel-shittim "where now Abile is" (*Ant.* iv.8.1 [176]), about 60 stadia (11 km. [7 mi]) from the Jordan (*Ant.* v.1.1 [4]). Jerome (comm. on Joel 3:18) located Shittim near Livias, 10 km. (6 mi.) from the Dead Sea. Abel located the site along the Wâdī Kefrein. At Tell el-Kefrein, about 11 km. (7 mi.) E of the Jordan and 10 km. (6 mi.) N of the Dead Sea, remains of Iron I and II (*ca.* 1200-500 B.C.) are numerous. Glueck probably made a more convincing case for Tell el-Ḥammâm, about 2.3 km. (1.4 mi.) E of Tell el-Kefrein. But the specific location of a camp that accommodated all Israel and that according to a Tannaite tradition extended over 19 km. (12 mi.) is perhaps too much to ask.

Bibliography.–*GP*, II, 234; *GTTOT*, § 460; N. Glueck, *BASOR*, 91 (1943), 13-18; *AASOR*, 25-28 (1945-48), 371-381.

2. A valley mentioned in Joel 3:18 that will be watered by a fountain that will come forth from the house of the Lord. Since the passage is eschatological, one need not press for geographical identification. The context suggests a valley in which water would flow away from Jerusalem, and the Wâdī en-Nâr, a continuation of the Kidron Valley, meets this requirement W. S. LASOR

SHIZA shī'zə [Heb. *šîzā'*]. A Reubenite whose son Adina was among David's warriors known as the "thirty" (1 Ch. 11:42).

SHOA shō'ə [Heb. *šô(a)'*]. An unidentified Mesopotamian people mentioned in Ezk. 23:23 together with the Babylonians, Chaldeans, and Assyrians, as one of Judah's allies who would turn against her. The proposed identification with the Sutu, a nomadic Aramean tribe, is unlikely on linguistic grounds (see W. Zimmerli, *Ezekiel 1* [Eng. tr., *Hermeneia*, 1979], p. 488). D. A. DORSEY

SHOAL The word "shoal" occurs twice in the RSV. In Lk. 5:6 "shoal" (Gk. *plḗthos*, lit. "large number, multitude"; AV "multitude"; NEB "haul") refers to a great quantity of fish. In Acts 27:41 the ship upon which Paul was traveling to Rome ran aground upon a "shoal" (Gk. *tópos dithállassos*, lit. "place of two seas"; so RSV mg.; cf. AV, NEB). This shoal was a shallow area located within a narrow waterway (cf. E. Haenchen, *Acts of the Apostles* [Eng. tr. 1971], p. 708).

SHOBAB shō'bab [Heb. *šôḇāḇ*].

1. Son of Caleb by his wife Azubah (1 Ch. 2:18).
2. One of the sons of David born in Jerusalem (2 S. 5:14; 1 Ch. 3:5; 14:4).

SHOBACH shō'bak [Heb. *šôḇaḵ*]. Commander of the Syrian forces of Hadadezer king of Zobah in a military campaign against King David (2 S. 10:16, 18). In the battle at Helam the Israelite forces soundly defeated the Syrians, and Shobach was mortally wounded. He is called Shophach in 1 Ch. 19:16, 18.

SHOBAI shō'bī [Heb. *šōḇāy*; Gk. Apoc. A *Sabei*, B *Tōbeis*, Lucian *Sōbaí*]; AV Apoc. SAMI; NEB Apoc. SABI. Head of a Levitical family of gatekeepers who returned with Zerubbabel from the Exile (Ezr. 2:42 par. Neh. 7:45; 1 Esd. 5:28).

SHOBAL shō'bäl [Heb. *šôḇāl*–'basket' (?) (see *IP*, p. 226)].

1. Second son of Seir; a clan chief of the Horites who occupied the land of Edom before the Edomites (Gen. 36:20, 23, 29; 1 Ch. 1:38, 40).
2. A Calebite; son of Hur and ancestor (or founder) of Kiriath-jearim (1 Ch. 2:50); also the ancestor of Haroeh, half of the Menuhoth (v. 52), and Reaiah (4:1f.). The clan was incorporated into Judah (4:1).

SHOBEK shō'bek [Heb. *šôḇēq*–'conqueror' (?) (see *IP*, p. 231)]. One of those who signed the covenant under Nehemiah's leadership after the Exile (Neh. 10:24).

SHOBI shō'bī [Heb. *šōḇî*]. An Ammonite prince, son of King Nahash; one of those who assisted David during the rebellion of Absalom (2 S. 17:27). He was a brother of Hanun, who succeeded his father Nahash as king of the Ammonites and whose shameful treatment of David's envoys produced the wars between Israel and Ammon (chs. 10f.). It appears that David, following his capture of the royal city of Rabbah (12:26-31), appointed Shobi to rule in his brother's place.

"The sandal bearer of the king of Upper Egypt" on a slate palette from Hierakonpolis, ca. 3000 B.C. (Egyptian Museum, Cairo)

SHOCHO shō′kō (2 Ch. 28:18, AV); **SHOCHOH** (1 S. 17:1, AV); **SHOCO** (2 Ch. 11:7, AV). *See* Soco.

SHOCK. The RSV uses this term in several senses. In Jer. 2:12, part of an oracle of judgment against Israel, the Lord calls for the heavens to "be shocked" (Heb. *śā'ar*) at Israel's apostasy (see W. McKane, comm. on Jeremiah, I [*ICC*, 1986], 34). The verb *śā'ar* is related to the noun *śē'ar*, "hair," and probably meant originally "cause one's hair to stand on end, bristle" (see *CHAL*, p. 353; W. L. Holladay, *Jeremiah 1* [*Hermeneia*, 1986], p. 91). Elsewhere the RSV translates the verb *śā'ar* as "be (horribly) afraid" (Ezk. 27:35; so AV in Jer. 2:12) and "shudder" (Ezk. 32:10; cf. NEB "tremble" in Jer. 2:12).

In Ezk. 26:9 the prophet pronounces an oracle against Tyre that tells of Nebuchadrezzar's siege of that city. The RSV "shock [Heb. *mᵉḥî* < *mḥh*, "strike"] of the battering rams" is a disputed translation (cf. AV, NEB; see KD; W. Zimmerli, *Ezekiel 2* [Eng. tr., *Hermeneia*, 1985], p. 28).

For "shock" in Jgs. 5:15; Job 5:26, *see* SHEAF.

G. A. L.

SHOE; SANDAL [Heb. *na'al*; Gk. *hypódēma, sandálion*]. The Hebrew noun *na'al* occurs twenty-three times (cf. the vb. *nā'al*; RSV "Shod," Ezk. 16:10; "give sandals" [hiphil], 2 Ch. 28:15); the LXX usually renders the noun with Gk. *hypódēma* (except at Josh. 9:13 [LXX 11] and Isa. 20:2, where it uses *sandálion*). The Greek noun *hypódēma* occurs ten times in the NT (cf. vb. *hypodéomai*, lit. "fasten underneath"; RSV "shod," Eph. 6:15; "put on," Acts 12:8; "wear," Mk. 6:9), and *sandálion* occurs twice (Mk. 6:9; Acts 12:8). The RSV, AV, and NEB render

The feet of the weapon bearers of King Ashurbanipal of Assyria (668-626 B.C.). They are wearing high leather shoes that lace around the leg at the top. Alabaster relief from Nineveh (Staatliche Museen zu Berlin, DDR, Vorderasiatisches Museum 8840)

these by "shoe" or "sandal" interchangeably. *Na'al* is the generic Hebrew term for either type of footwear. Gk. *hypódēma* refers to a sole bound with straps under the feet, while *sandálion* (the diminutive of *sándalon*) indicates a more protective, wooden sole, bound around the instep and ankle (see Forbes, p. 59, for other, extrabiblical terms).

Taking off sandals or going BAREFOOT could signify a number of things. (1) It was a sign of respect for a holy place; cf. the instructions to Moses (Ex. 3:5; Acts 7:33) and Joshua (Josh. 5:15). No footwear is mentioned in the otherwise detailed descriptions of the vestments of the priests; they probably performed many or all of their duties barefoot. (2) Going barefoot was a sign of mourning (2 S. 15:30; Ezk. 24:17, 23; cf. Jth. 10:3f.). (3) It was required of captives and slaves (2 Ch. 28:15; Isa. 20:2). (4) A widow whose brother-in-law refused to fulfil the obligations of levirate marriage could publically remove his sandal and spit in his face as a sign of reproach (Dt. 25:9f.). A similar (though not exactly analogous) symbolic gesture is referred to in Ruth 4:8. (5) Removal of a sandal also was a part of various types of legal transactions or exchanges (Ruth 4:7). The LXX of 1 S. 12:3 also refers to such a legal use of shoes (see Speiser, pp. 15-18). (6) God's "casting" His sandal upon Edom in Ps. 60:8 (MT 10); 108:9 (MT 10) may also symbolize His taking possession of the land (see de Vaux, p. 169); scholars have offered various interpretations of this symbolic action, but all agree that it affirms God's sovereignty over that nation.

The putting on, wearing, and possession of sandals could also signify several things. Wearing shoes or sandals often indicated a state of preparedness (cf. Eph. 6:15). The Passover meal was to be eaten with belt girded, sandals on, and staff in hand (Ex. 12:11). In Mk. 6:9 Jesus instructs His disciples to take sandals with them, but little

Assyrian sandals with wooden or leather soles strapped on with thongs. Detail from a relief of Ashurbanipal II, 9th cent B.C., from Nimrûd (courtesy of the Trustees of the British Museum)

Egyptian sandals made of leather and woven reeds (from Thebes, 18th Dynasty) (The Metropolitan Museum of Art)

else, when they go out to preach and heal; in the parallel passages, He forbids their taking sandals (Mt. 10:10; Lk. 10:4; 22:35), but probably extra pairs are meant. Wearing sandals was also a sign that someone was a free person and not a slave (Lk. 15:22). Sandals could even be a source of beauty on a woman (Cant. 7:1 [MT 2]; cf. Jth. 16:9).

As items of wealth, sandals and sandal-thongs were relatively insignificant (Gen. 14:23; Isa. 5:27; cf. Sir. 46:19). Am. 2:6; 8:6 seems to say that they were the equivalent of what the poor were sold for in Amos's day (although some scholars have suggested that the reference is to the use of sandals in the legal transfer of land; see Speiser; de Vaux, p. 169). John the Baptist considered himself unworthy even to touch the humblest part of Jesus' garb: to carry (Mt. 3:11) or untie His sandals (Mk. 1:7; Lk. 3:16; Jn. 1:27) — tasks usually performed by a slave (cf. 1 S. 25:41; Jn. 13:6f.).

Foot coverings of many types are known from most parts of the ancient Near East. Knowledge of these comes from paintings or reliefs on monuments, descriptions in classical and rabbinic literature, and archeological discoveries of actual samples. They provided varying degrees of protection from coldness and dampness in the winter and from sharp stones, briers, and hot sand in the summer. They also served decorative purposes (esp. for women) and military purposes (Greek and Roman soldiers wore nail-studded shoes). The most common material from which they were made was leather, and they usually had multi-layered soles. Many types of shoes had leather uppers, and there were also leggings of various types. The shoes mentioned in the Bible were mainly of the sandal type, with a simple sole attached by means of leather thongs.

D. M. HOWARD, JR.

SHOHAM shō'həm [Heb. *šōham*–'precious stone' (perhaps onyx, carnelian, or lapis lazuli)]. A Merarite Levite; son of Jaaziah (1 Ch. 24:27).

SHOMER shō'mər [Heb. *šōmer, šômēr*–'watcher'].

1. Mother (or father) of Jehozabad, one of the conspirators who slew King Joash (2 K. 12:21 [MT 22]); called "Shimrith the Moabitess" in 2 Ch. 24:26 (*see* SHIMRITH).

2. An Asherite, son of Heber (1 Ch. 7:32); called "Shemer" (NEB "Shomer") in v. 34.

SHOPHACH shō'fak [Heb. *šôpaḵ*] (1 Ch. 19:16, 18). *See* SHOBACH.

SHOPHAN shō'fan (Nu. 32:35, AV). *See* ATROTH-SHOPHAN.

SHORE [Heb. *ḥôp* (Gen. 49:13), *śāpâ*–'lip' (1 K. 9:26; 2 Ch. 8:17), *'ereṣ*–'land' (Ezk. 27:29); Gk. *prosormízō*–'come into (the) harbor' ("moored to the shore," Mk. 6:53)]; AV also HAVEN, SIDE, LAND, "drew to the shore"; NEB also COAST, "where they made fast", etc. Land that borders upon a generally large body of water.

Hebrew *ḥôp* designates the shore or coastal plain along the Mediterranean Sea (Gen. 49:13; cf. *ḥôp* for "coast," "seacoast," in Dt. 1:7; Josh. 9:1; Jgs. 5:17; Jer. 47:7; Ezk.

25:16). Heb. *śāpâ* (lit. "lip") in 1 K. 9:26 and 2 Ch. 8:17 refers to the shore of the Red Sea (Gulf of Aqabah).

See also COAST. G. L. K.

SHORTEN [Heb. *qāṣar*–'be (too) short,' also *ṣārar*–'be restricted, impeded' (Job 18:7); Gk. *kolobóō*]; AV also STRAITEN (Job 18:7); NEB BE (CUT) SHORT, LIMIT, TOTTER (Job 18:7). In Nu. 11:23; Isa. 50:2; 59:1 the shortening of God's HAND is a figurative expression for a limitation of His power. Job 18:7 pictures a person whose path becomes narrow and full of obstacles that cause him to stumble. The shortening of days refers to a premature death in Ps. 102:23 (MT 24) but to a curtailment of a period of suffering in Mt. 24:22 par. Mk. 13:20.

SHOSHANNIM shō-shan'əm. The AV transliteration of Heb. *šōšannîm* in the superscriptions to Pss. 45, 69, and 80. The RSV translates it "lilies." *See* LILIES (ACCORDING TO); *see also* EDUTH.

SHOULDER [Heb. *śeḵem*–'neck and upper part of the back' (Gen. 9:23; 24:15; Josh. 4:5; Ps. 81:6 [MT 7]; etc.), *zᵉrôʿ(a)*–'arm, forearm' (Nu. 6:19; Dt. 18:3; 2 K. 9:24), *kāṯēp*–'shoulder blade, shoulder,' 'slope, side of mountain' (Nu. 7:9; Josh. 15:8, 10f.; Isa. 9:6 [MT 5]; 11:14; etc.); Gk. *ómos* (Mt. 23:4; Lk. 15:5)]; AV also SIDE (Nu. 34:11; Josh. 15:8), ARM (2 K. 9:24), etc.; NEB also BACK, RIDGE, SLOPE, FLANK (Isa. 11:14), ARMPIT (Ezk. 29:7), etc.; **SHOULDER BLADE** [Heb. *kāṯēp* (Job 31:22)]; AV ARM; **SHOULDER-PIECES** [Heb. *kāṯēp* (Ex. 28:7, 12, 25, 27; 39:4, 7, 18, 20)]; AV also SHOULDER, SIDE; NEB also SHOULDER. In Gen. 24:46 the RSV supplies "shoulder" from the context. In 2 K. 6:31 the RSV translates Heb. *ʿālāyw* (lit. "on him") as "on his shoulders."

The terms may be used literally of the shoulders (Ex. 28:12) and shoulder blades (Job 31:22) of a person, that which sits on the shoulders, e.g., the shoulder-pieces of the priest's ephod (Ex. 28:7), or that which hangs between the shoulders, e.g., the javelin of Goliath (1 S. 17:6). In 1 S. 17:6 the NEB understands *kāṯēp* as being similar to the Ugar. *ktp*, "blade" or "weapon" (*UT*, 49:V:2); thus the NEB translates *bên kᵉṯēpāyw* as "one of his weapons."

Figurative uses vary. The shoulder of an animal may refer to rebellious Israel (e.g., Ezk. 34:21; cf. Zec. 7:11). Isa. 9:6 refers to the government being placed upon Messiah's shoulder, i.e., He will have authority to administer God's kingdom. Heb. *kāṯēp* also connotes the slopes, sides, or extensions of hills or mountains (e.g., Josh. 15:8).

In the well-known parable of the lost sheep, Jesus pictured the shepherd placing the one lost sheep on his shoulders and inviting his neighbors to rejoice over his rescuing it (Lk. 15:5). Some burdens, however, are too heavy for human beings. Jesus castigated the scribes and Pharisees for laying burdens upon others that the religious rulers themselves were unwilling to bear (Mt. 23:4).

G. WYPER

SHOUT [Heb. *rû(a)ʿ*, *tᵉrûʿâ*] (Ex. 32:17 [MT 18]; Nu. 23:21; Josh. 6:5, 10, 16, 20; Jgs. 15:14; 1 S. 4:5f.; etc.); AV also CRY, JOYFUL SOUND, REJOICING, SHOUT IN TRIUMPH, etc.; NEB also ACCLAIM, RAISE A WAR-CRY, HUE AND CRY, etc.; [*ʾāmar*] (Jgs. 7:18); AV SAY; [*rānan, rinnâ*] (Lev. 9:24; Ps. 20:5 [MT 6]; 32:11; 126:2, 5f.; Prov. 11:10; Isa. 43:14; etc.); AV also REJOICE, REJOICING, SINGING, JOY, etc.; NEB also SING ALOUD, SONGS OF JOY, JUBILATION, etc.; [*qārâ*] (Jgs. 18:23; 1 S. 17:8; 2 Ch. 32:18; Jer. 20:8); AV CRY; NEB also PROCLAIM, CRY OUT; [*hêḏāḏ*] (Isa. 16:9f.; Jer. 25:30; 48:33; 51:14); NEB also SONG: [*hēḏ*] (Ezk. 7:7); AV SOUNDING; NEB "crash of thunder"; [*tᵉšûʾôṯ*] (Job 39:7; Isa. 22:2; Zec. 4:7); AV also STIR, CRYING; NEB also TUMULT, ACCLAIM; [*qôl, qôl-rinnâ, nāṯan qôlām*] (Ps. 42:4 [MT 5]; Isa. 31:4; Jer. 4:16); AV VOICE, "give out their voice"; NEB also NOISE, HOWLING; [*ṣāhal*] (Est. 8:15; Jer. 31:7); AV REJOICE [*ʾānâ*] (Ex. 32:18); NEB CLAMOUR; [*zᵉʿāqâ*] (Eccl. 9:17); AV CRY; [*śô(a)ʿ*] (Isa. 22:5); AV CRYING; NEB "rousing cries for help that echo"; [Gk. *boáō*] (Gal. 4:27); AV CRY; NEB SHOUT OF JOY; [*krázō*] (Mt. 21:9; 27:23; Mk. 15:14); AV CRY OUT; [*epiphōnéō*] (Lk. 23:21; Acts 12:22; 21:34; 22:24); AV also CRY; NEB also SHOUT BACK, OUTCRY.

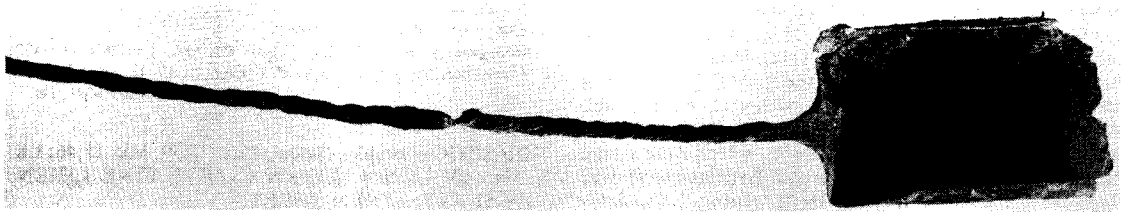
The RSV uses "shout" for several kinds of utterances. The Hebrew noun *tᵉrûʿâ* and verb rû(a)ʿ, e.g., generally denote a battle cry (*see also* BLAST; BLOW 1); such was the shout that preceded the collapse of the Jericho walls in Josh. 6:20 (cf. Jer. 50:15; Babylon). R. de Vaux (*Ancient Israel* [Eng., tr. 1961], pp. 9, 254, 259) thought that this battle cry became part of the ritual surrounding the ark of the covenant (2 S. 6:15), but the term could also indicate a shout of victory or praise (cf. Ps. 27:6; 33:3; 47:1, 5 [MT 2, 6]; 60:8 [MT 10]; Zec. 9:9).

The verbs *rānan* (noun *rinnâ*) and *ṣāhal* denote a shout of jubilation, e.g., because of God's restoration of Zion (Ps. 126:2, 5f.), while *hêḏāḏ* refers to the cheering of a multitude, particularly of those working in the vineyard and harvest (Isa. 16:10; Jer. 25:30; 48:33). *Hēḏ* appears only in Ezk. 7:7, a corrupt text; the various renderings are merely conjectures. In the passages above *tᵉšûʾôṯ* refers to the noisy shouts common to the life of a town. The shout of Zec. 4:7 (*ḥēn ḥēn lāh*) is probably best interpreted by the NEB, as an expression of approval regarding the stone, symbolizing the new temple. *Śoʿ(a)ʿ* sometimes means "a cry for help"; KoB, however, reads it as the name of a tribe (cf. Ezk. 23:23, "Shoa"). G. WYPER

SHOVEL [Heb. *yāʿâ*] (Ex. 27:3; 38:3; Nu. 4:14; 1 K. 7:40, 45; etc.); [*raḥaṯ*] (Isa. 30:24). A handled tool with a scoop at one end used to lift, carry, and throw soil or similar material.

All nine RSV occurrences where "shovel" translates Heb. *yāʿâ* refer to a type of tool used in the tabernacle and temple services, most likely for removing and carrying ashes from the altar and for placing coals in pots. The suggestion that shovels were used primarily for cleaning

A bronze shovel found at Megiddo (ca. 13th cent. B.C.) (courtesy of the Oriental Institute, University of Chicago)



purposes is supported by the verbal root *y'h*, which means "sweep away." These temple shovels were probably quite small and made wholly of bronze. One example from Megiddo was 56 cm. (22 in.) long. Similar shovels have been frequently found in Roman and Byzantine levels of excavations where they were probably used for hearths in private houses.

The "shovel" (Heb. *raḥaṭ*) in Isa. 30:24 was apparently much larger and was used in winnowing grain.

L. G. HERR

SHOWBREAD. *See* PRESENCE, BREAD OF THE.

SHOWBREAD, TABLE OF. *See* PRESENCE, BREAD OF THE II.

SHOWER [Heb. *rᵉḇîḇîm* (Dt. 32:2; Ps. 65:10 [MT 11]; 72:6; Jer. 3:3; 14:22; Mic. 5:7 [MT 6]), *gešem* (Ezk. 34:26; Hos. 6:3; Zec. 10:1), *gešem māṭār*–'rain of rain' (Job 37:6), hiphil imperative of *r'p*–'cause to trickle, drip' (Isa. 45:8); Gk. *ómbros*–'rainstorm, thunderstorm' (Lk. 12:54)]; AV also SMALL RAIN (Job 37:6), DROP DOWN (Isa. 45:8), RAIN (Hos. 6:3); NEB also Rain (Isa. 45:8), COPIOUS SHOWERS (Mic. 5:7), etc.

Although light showers of rain can sometimes occur, especially in areas of marginal rainfall, and brief heavier showers may mark the end of the rainy season, the use of "shower" in English translations is often misleading since it suggests relatively gentle rain.

Rᵉḇîḇîm means "plentiful showers." *Gešem* is a very general word for "rain," which can be either brief or last all day. The term *r'p*, which appears in Isa. 45:8 as "shower," normally means "trickle," but the context certainly indicates a long desired downpour.

According to the Scriptures, God controls the rain and the showers (e.g., Job 37:6; Isa. 45:8; Zec. 10:1). With them He waters the earth and brings forth its abundance (Ps. 65:10). The absence of showers signaled God's judgment upon unfaithful Israel (Jer. 3:3), whereas the presence of rain indicated His blessing. And as dew, rain, and showers provided necessary nourishment, so too the truth of God's message gave life and growth to His covenant-keeping people (Dt. 32:2).

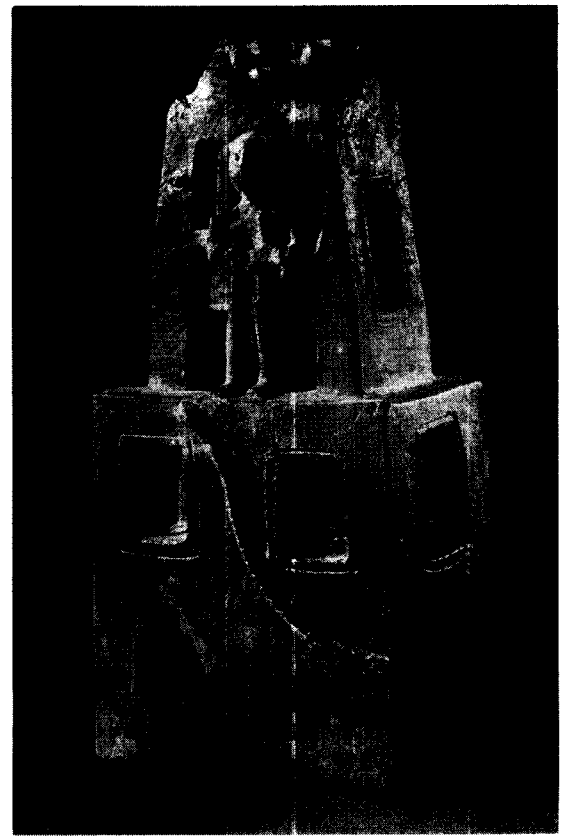
G. L. K.

SHRINE [Heb. *bêṯ 'ĕlōhîm*] (Jgs. 17:5); AV HOUSE OF GODS; [Heb. *bêṯ habbāmôṯ*] (2 K. 17:29, 32; 23:19); "shrines of the high places"; AV HOUSES OF THE HIGH PLACES; NEB HILL-SHRINES; [*bāmôṯ*]; AV HIGH PLACES; NEB PLATFORM; [Gk. *naós*–'temple'] (Acts 17:24; 19:24); AV also TEMPLES (17:24). The RSV supplies "shrine" in He. 6:19, which refers to the holy of holies ("the inner shrine behind the curtain;" cf. AV "that within the veil," NEB "through the veil"). An enclosed space for worship and sacrifice generally distinguished from a temple by its smaller size and customary lack of a regular priesthood.

Bayiṯ (*bêṯ* is the construct form) is a very common Hebrew word for any building or shelter, including the temple of Yahweh (cf. 1 K. 7–8; Hag. 1) and temples of other gods (e.g., Jer. 43:12; Nah. 1:14). None of the structures referred to as "shrines" in the RSV OT was part of the centralized worship that became normative in Israel. All shrines but the one possessed by Micah (Jgs. 17–18) were shrines of "high places" (*bāmôṯ*), which were a vital part of the localized religious life that Israelites took over from the Canaanites. In Ezk. 16:16 "shrines" translates



A Canaanite shrine model with two stories. On the top a nude figure stands in a doorway holding two birds; below, a serpent crawls between the windows (Beth-shean 11th cent. B.C.) (courtesy of the University Museum, University of Pennsylvania)

bāmôṯ because it refers to the preparation of the equipment of the high places. *See* HIGH PLACE.

In Acts 17:24 Gk. *naós*, a common word usually translated "temple," refers to the large number of structures for Greek worship, from large temples to small shrines, which Paul would have seen while walking through Athens. Paul's statement is based on Jewish understandings of the relation of God to the Jerusalem temple (1 K. 8:27; Acts 7:48), here influenced by the Jewish critique of Gentile idolatry (e.g., Wisd. 13–15).

The silver *naoí* of the Ephesian Artemis made by Demetrius (Acts 19:24) were possibly small hand-size shrines. Archeologists have found small terra-cotta representations of temples, but none of silver (but cf. Deiss. *LAE*, pp. 112f.). Either Demetrius made small silver statues of Artemis, examples of which have been found (see *BC*, V, 253; IV, 246), or the term *neōpoiós* (lit. "temple-maker") refers to the annually appointed supervisors of the offerings and repairs of the temple of the Ephesian Artemis. But Demetrius's actions demonstrate the protectiveness of the guild member.

J. W. SIMPSON, JR.

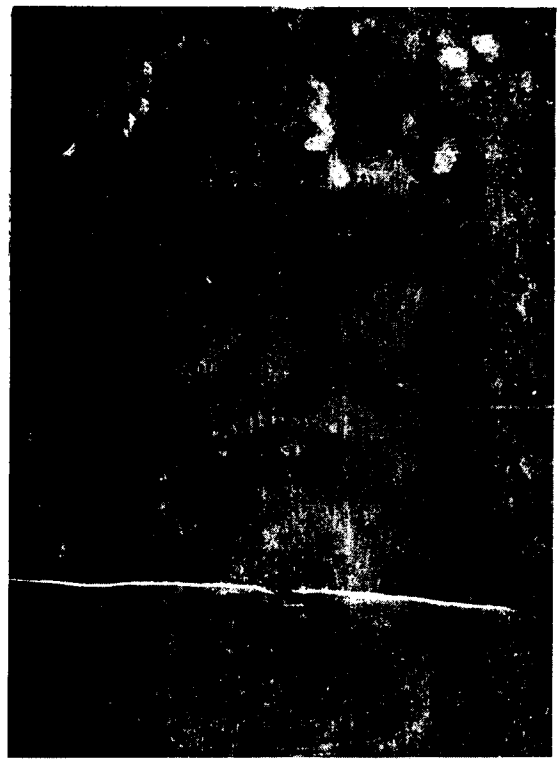
SHROUD [Gk. *sindōn*–'linen'] (Mt. 27:59; Mk. 15:46; Lk. 23:53); AV LINEN, LINEN CLOTH, FINE LINEN; NEB SHEET; LINEN SHEET.

The Gk. *sindōn* literally means "fine cloth," and usually refers to LINEN or anything made of it, e.g., a garment of linen (usually a kind of muslin).

In Mt. 27:59 par. Mk. 15:46; Lk. 23:53 *sindōn* describes a linen cloth used for the wrapping of a dead body in preparation for burial. Jewish burial practices in NT times included washing and anointing the body, perhaps even after it had been earlier cleaned with oil and washed at the place of death (cf. Jn. 19:40) or in the deceased's home. Anointing might be repeated in the tomb itself (cf. Mk. 16:1). The dead were then buried in their own clothes or specially prepared ones such as a simple linen cloth on which spices would be spread as the cloth was wound around the body. With regard to Jesus' burial, the Synoptic Gospels all relate how Joseph of Arimathea wrapped the body of Jesus in a shroud. The Johannine account states that Joseph and Nicodemus followed "the burial custom of the Jews," anointing the body with a mixture of myrrh and aloes weighing about 45 kgs. (100 lbs.) and binding it in "linen cloths" (Jn. 19:39f.). Those "linen cloths" (*othónia*) were found in the empty tomb on Easter morning along with a "napkin [*soudárion*], which had been on his head," which was "not lying with the linen cloths but rolled up in a place by itself" (20:6f.).

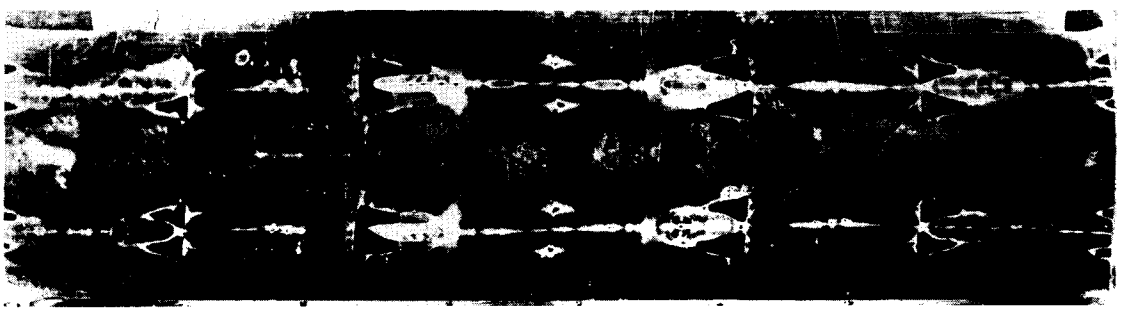
While biblical evidence does not indicate what happened to the burial linen(s) of Jesus, extrabiblical legends seem to mark the shroud's progress through history. During the Medieval period more than forty different alleged shrouds of Jesus were reported. Unquestionably the most famous of these is the Shroud of Turin, a piece of linen cloth 434 by 109 cm. (171 by 43 in.) that has imprinted upon it the frontside and backside images of a man's body — as if he had been laid upon it and then it had been folded over his head. The man is estimated to have been about 1.78 m. (5ft. 10in.) tall, weighing 77-79 kgs. (170-175 lbs.). The image bears marks of injury identical to those that, according to the Gospels, Jesus suffered during His scourging and crucifixion. The shroud's history can be traced with certainty only back to the 14th century. The earliest historical reference is found in the report of its display *ca.* A.D. 1357 in a small church in Lirey near Troyes in northeastern France. In 1453 the Duke of Savoy gained possession of the shroud and built a special church to house it in Chambery, France, where in 1532 it was nearly destroyed when the church caught fire. During the fire a drop of molten silver from the reliquary in which it lay set fire to one edge of the shroud, scorching all of its forty-eight folds. Fortunately the body images were only slightly harmed and the scorched areas were repaired with pieces of altar cloth. In 1578 the shroud was moved to Turin, Italy, where it continues to be housed in the Royal Chapel of the Cathedral of St. John the Baptist.

The shroud has been controversial from its earliest exhibition when the Bishop of Troyes, Henry of Poitiers, claimed that the shroud was a fraud, basing his testimony on the artist who had supposedly made it. Thirty years later, Pierre d'Aras, a successor to Henry, wrote to Pope Clement VII describing the shroud as "a product of human handicraft" and "an artificial painting or depiction" and pleading for its withdrawal. Clement responded by ordering that no liturgical ceremony or pomp surround its display and that a priest announce "in a loud and intelligible voice, without any trickery, that the aforesaid form or representation is not the true burial cloth of our Lord Jesus Christ but only a kind of painting or picture made as a form or represenation of the burial cloth." Frequent exhibition of the shroud, however, during the late Medieval and Renaissance periods aroused considerable popular devotion. While later church officials have been more receptive to the shroud, they have demonstrated a re-



The texture of the linen stands out in this picture of the Shroud of Turin, which shows what some believe is the face of Christ (R. Cappella S. Sindone, Turin)

The entire Shroud of Turin with the front and back sides of a man outlined on either side of the cloth (R. Cappella S. Sindone, Turin)



served attitude toward it. In modern times it has rarely been placed on public display (nine times in the last two centuries), the last time being 1978, the 400th anniversary of its arrival in Turin.

In the late 1970s interest in the shroud mushroomed as a result of the Shroud of Turin Research Project. For a five-day period in 1978 more than thirty American and European scientists, including specialists in physics, organic chemistry, computer technology, X-ray analysis, hematology, and spectroscopy, were allowed to conduct extensive experiments on the shroud in an effort to determine its authenticity. While concluding that the shroud is not a forgery, that the image is that of a crucified man, they acknowledged that their present scientific research cannot establish that it is the burial cloth of Jesus. Carbon-14 tests that could determine whether the shroud dates back to the time of Jesus (± 100 yrs.) have not as yet been allowed since they would require destruction of a piece of the shroud.

At this juncture in the history of the shroud there is widespread agreement that the image on the shroud was not produced through natural causes (such as secretions from the body). That the image blurs and fades when viewed from closer than 2m. (6.5 ft.) and the absence of any signs of brush marks suggest that the image is not itself a painting. In fact, no one has satisfactorily explained how the image was produced. The mystery is heightened by the fact that the image is more like a photographic negative, since highlights of the image are dark and recessed areas are light. Furthermore, computer enhancement of photographs of the shroud basically produces an undistorted three dimensional image; i.e., a realistic statue could be constructed based solely on the intensity of the image. Thus the process forming the image acted uniformly on both the front and back of the body and was present even in places where the cloth could not have touched the form. The degree of darkening on the cloth is proportional to the body's distance from the cloth. If the image had been produced solely by direct contact, there would have been anatomical distortion, but this is surprisingly not the case. These factors have led many to conclude that the image was caused by a sudden burst of energy.

Beyond the scientific and historical questions there remain significant textual problems that must be considered with regard to the shroud's authenticity. John's reference to (linen) cloths in the plural (*othónia*) and the specific reference to a separate cloth (*soudárion*) placed on Jesus' head must be considered alongside the Synoptic description of a single shroud (*sindṓn*). According to expert testimony the Johannine account best conforms to what is known of ancient Jewish burial practice. A shroud covering the head as well as the front and back of the body would be quite unusual. Furthermore, if John is correct that the burial procedures reflected the normal Jewish practice (Jn. 19:40), the body would have been washed as well as anointed, thereby eliminating the blood flows occurring before Jesus' death, which the shroud apparently exhibits. This would be even more probable in the light of the fact that the burial was hastily, though elaborately, arranged by Joseph of Arimathea and Nicodemus, both wealthy members of the Sanhedrin, who used a huge amount of spices (19:39). Moreover, the shroud contains what appear to be indications of a wound in the side (mentioned only in 19:34) as well as wounds in the hands and feet. Thus, while the marks on the shroud conform to or take account of distinctive features of the Johannine narrative, the shroud itself is not so easily accommodated to this narrative.

Thus the Shroud of Turin remains a fascinating, unfinished puzzle, whose pieces are not yet all in place. Significant biblical, historical, and scientific questions remain to be answered. The possibility that it was the burial shroud of Jesus cannot at this point be either proved or disproved, and while scientific testimony may ultimately be able to disprove the authenticity of the shroud (e.g., by means of carbon-14 tests), it can never prove its authenticity. Science may be able to prove a first-century date for the shroud and a mysterious origin for the image it bears, but even this will not verify it as the burial cloth of Jesus.

SHRUB. *See* BUSH.

SHUA shōō'ə.

1. [Heb. *šû(a)ʿ*–'help']; AV SHUAH; NEB BATH-SHUA. A Canaanite; father of Judah's wife (Gen. 38:2, 12). In 1 Ch. 2:3 the RSV renders Heb. *baṯ-šû(a)ʿ hakkᵉnaʿᵃnîṯ* (AV, lit., "daughter of Shua the Canaanitess") by "Bath-shua the Canaanitess" (*see* BATH-SHUA **2**).

2. [Heb. *šûʿā'*]. Daughter of Heber, an Asherite (1 Ch. 7:32).

SHUAH shōō'ə.

1. [Heb. *šû(a)ḥ*]. A son of Abraham by Keturah (Gen. 25:2; 1 Ch. 1:32). Abraham gave him gifts and sent him "away from his son Isaac, eastward to the east country" (Gen. 25:6). The Arabian or Aramean tribe that descended from him is probably to be identified with the SHUHITE people from which BILDAD came (cf. NEB "Bildad of Shuah," Job 2:11).

2. (Gen. 38:2, 12, AV). *See* SHUA **1.**

3. (1 Ch. 4:11, AV, NEB). *See* SHUHAH.

SHUAL shōō'əl [Heb. *šûʿāl*]. Third son of Zophah, an Asherite (1 Ch. 7:36).

SHUAL, LAND OF shōō'əl [Heb. *šûʿal*–'fox, jackal'] (1 S. 13:17). A region in the vicinity of Michmash. The term apparently is used in apposition with Ophrah (*see* OPHRAH **1**).

The exact location and the reason for the name are not known. W. S. L. S.

SHUBAEL shōō'bə-el [Heb. *šûḇā'ēl*].

1. A Levite of the family of Amram (the father of Moses); father of Jehdeiah (1 Ch. 24:20). *See* SHEBUEL **1.**

2. A Levite who served as a musician in the sanctuary; leader of the thirteenth band of musicians (1 Ch. 25:20). *See* SHEBUEL **2.**

SHUHAH shōō'hə [Heb. *šûḥâ*–'pit']; AV, NEB, SHUAH. A brother of Chelub (1 Ch. 4:11).

SHUHAM shōō'ham [Heb. *šûḥām*]; **SHUHAMITES** shōō'hə-mīts [Heb. *haššûḥāmî*]. The son of Dan, and his descendants (Nu. 26:42f.); called Hushim in Gen. 46:23.

SHUHITE shōō'hīt [Heb. *haššûḥî*]; NEB also OF SHUAH. Designation of BILDAD, one of Job's three friends (Job 2:11; 8:1; 18:1; 25:1; 42:9); probably the tribe descended from SHUAH **(1)** the son of Abraham by Keturah (Gen. 25:2, 6). Many scholars have connected Bildad's

tribe with Akk. *Suḫu*, a country on the Middle Euphrates below the mouth of the Habor River; others have suggested a location in Edom (see comms.).

SHULAMMITE shōō'lə-mīt [Heb. *šûlammîṯ*] (Cant. 6:13 [MT 7:1]). The name or title of the heroine of the book of Canticles. The term appears twice in 6:13 (MT 7:1), each time with the definite article. Its etymology has occasioned much discussion. Three main interpretations have been proposed.

Many scholars (e.g., Rowley) have related the term to "Solomon" (Heb. *šᵉlômô*) and the meanings of the root *šlm* (e.g., "perfect one," "peaceable one," or "pacified one"). This view takes *šûlammîṯ* (perhaps originally *šᵉlômîṯ*) as the feminine form of the name Solomon; thus Solomon's consort was called "the Solomoness."

Other scholars have read *šûlammîṯ* as a variant of *šûnammîṯ* (SHUNAMMITE), i.e., a female resident of the town of Shunem, based on the frequent interchangeability of *l* and *m* in Hebrew. Some have therefore identified her with ABISHAG, the beautiful Shunammite maiden who ministered to the aged King David (1 K. 1:1-4) and whom Adonijah requested in marriage after David's death (2:13-21). Solomon interpreted this request as an indirect claim to the throne and had Adonijah executed (vv. 22-25).

Those who have adopted the liturgical interpretation of Canticles (*see* CANTICLES II.C) have regarded the term as a name or epithet of a goddess. T. J. Meek, e.g., identified Solomon with the Canaanite god of peace, Shelem or Shulman, and the Shulammite with his consort, the goddess Shala or Shulmanitu.

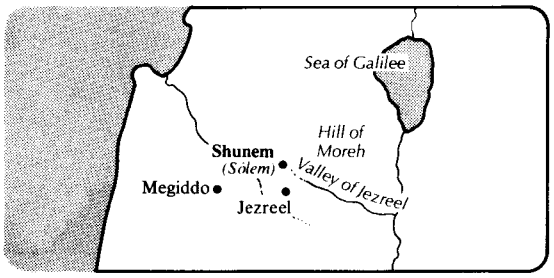
Bibliography.–T. J. Meek, *AJSL*, 39 (1922), 5-7; M. H. Pope, *Song of Songs* (*AB*, 1977), pp. 596-600; H. H. Rowley, *AJSL*, 56 (1939), 84-91. W. A. VANGEMEREN N. J. O.

SHUMATHITES shōō'mə-thīts [Heb. *šumāṯî*]. One of the Calebite families that resided in Kiriath-jearim; descendants of Shobal the son of Hur (1 Ch. 2:53).

SHUNAMMITE shōō'nə-mīt [Heb. *šunammîṯ šûnammîṯ*]. A general designation for a woman of SHUNEM, a village in the tribal territory of Issachar (Josh. 19:18). Two women are known to have come from Shunem. ABISHAG, the beautiful maiden who was King David's nurse in his last days (1 K. 1:3f., 15), and whom Adonijah wished to marry after his father's death (2:17, 21f.), was a Shunammite (*see also* SHULAMMITE). Elisha was frequently entertained by a wealthy woman from Shunem, who opened her house, prepared a room, and took care of the prophet whenever he passed through (2 K. 4:8-37). According to Elisha's promise she conceived a son, but one day the child died from a "sunstroke," while working in the field (*see* DISEASE III.E). By Elisha's personal intervention, however, he was miraculously resuscitated. Several years later she had become a widow, and at Elisha's urging she moved temporarily to Philistia during a seven-year famine (8:1f.). During this time her property was confiscated. Upon her return she sought justice from the king, who responded favorably to her in deference to Elisha (vv. 3-6). Some have observed a parallel between Elisha's resuscitation of the Shunammite's son and Jesus' resuscitation of a woman's son at Nain, which is located a short distance from OT Shunem (Lk. 6:11-17).

W. A. VANGEMEREN

SHUNEM shōō'nəm [Heb. *šûnēm*]. A border town at the foot of the hill of Moreh in the territory of the tribe of Issachar (Josh. 19:18). It is listed as a royal Canaanite city during the L.B. period. It was closely associated with the lives of Saul and Elisha. Scholars identify it with Sôlem, a village 14 km. (9 mi.) N of Jenin on the lower SW slope of Nebī Daḥī overlooking the Valley of Jezreel (Abel, *GP*, II, 420). The town appears as Šunama in the Amarna Tablets (see, e.g., *ANET*, p. 485).



Surface explorations show that the ancient site, which is located beneath the modern village, was occupied from the M.B. through the Islamic periods. The town was first mentioned in the list of those conquered by Thutmose III (1490-1435 B.C.). It was later controlled by Megiddo (Am.Tab. 365) but was destroyed in the 14th cent. B.C. by Lab'aya, king of Shechem (AmTab. 250; see *ANET*, pp. 485f.). Later the king of Megiddo plowed the lands again with the help of laborers (Am.Tab. 365; 250), but the town declined in importance soon afterward and was one of the few towns in the plain to be captured by the Israelites (Josh. 19:18). In the late 11th cent. B.C. the Philistines camped there to do battle with Saul (1 S. 28:4). Abishag, the girl who ministered to David in his old age (1 K. 1:3, 15), was a SHUNAMMITE; and during the 9th cent. B.C. Elisha frequently visited Shunem, staying at the home of a wealthy woman who, with her husband, built a chamber on the roof for the prophet. He later revived her dead son (2 K. 4:8-37). *See also* SHULAMMITE.

B. R. AND P. C. PATTEN

SHUNI shōō'nī [Heb. *šûnî*]; **SHUNITES** shōō'nīts [Heb. *haššûnî*]. The third son of Gad and his descendants (Gen. 46:16; Nu. 26:15).

SHUPHAM shōō'fam (Nu. 26:39, AV, NEB); **SHUPHAMITES** shōō'fə-mīts [Heb. *haššûpāmî*]. *See* SHEPHUPHAM.

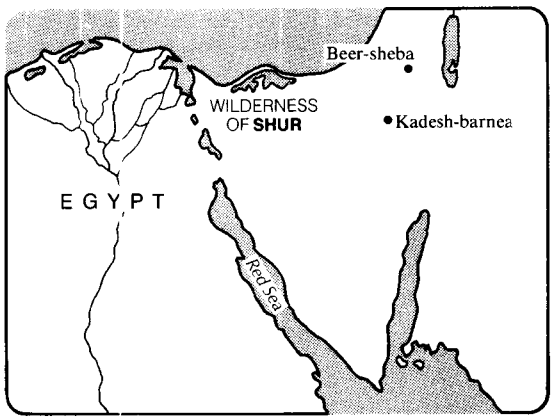
SHUPPIM shup'im [Heb. *šuppîm, šuppim*]; NEB emends the MT (cf. NEB mg.).

1. A Benjaminite (1 Ch. 7:12, 15). The AV and RSV follow the MT; many scholars, however, have proposed emendations because the text appears to be corrupt (see comms.). The occurrence of the names "Shuppim" and "Huppim" here is one instance of a pattern of twin names in the Benjaminite genealogies (cf. "Muppim, Huppim," Gen. 46:21; "Shephupham . . . Hupham," Nu. 26:39). *See* SHEPHUPHAM.

2. A gatekeeper assigned to the gate of Shallecheth on the western side of the temple (1 Ch. 26:16). Many scholars omit "Shuppim" as a dittography of the preceding word (Heb. *hā'ᵃsuppîm*; cf. NEB).

SHUR shōōr [Heb. *šûr*–'wall'; Gk. *Sour*, and variations]. An area E of Egypt (Gen. 25:18; 1 S. 15:7).

Hagar fled from Sarai into the wilderness near Kadesh "on the way to Shur" (Gen. 16:7). Abraham stayed for a while between Kadesh and Shur (20:1). The Israelites after crossing the Red Sea traveled in the waterless wilder-



ness of Shur and came to Marah (Ex. 15:22). David made raids on desert tribes whose territory extended from Shur as far as Egypt (1 S. 27:8).

Various suggestions have been made connecting Shur with Egyptian or Arabic names. Since Brugsch it has been linked with Egyp. *3nbw ḥḳ3*, "wall of the prince," apparently a line of fortresses or a wall guarding the Isthmus of Suez. Müller and others have connected it with the Egyptian border fortress *T3rw*, but the *r* was pronounced *l*, as shown by transcriptions, the *Zilu* of the Amarna Tablets, and the Roman *Sile*. J. Rowlands (as quoted by Williams) and others have identified it as a wall of cliffs, called Jebel es-Sur but more commonly Jebel er-Rāḥah, that is about 20 km. (12 mi.) E of Suez. Lawrence and Woolley's identification of "the way to Shur" with Arab. Darb esh-Shūr, a caravan route from Beer-sheba through the desert to Egypt, may be geographically correct, but Hebrew *š* is usually equivalent to Arabic *s*.

Bibliography.—*GP*, I, 434; H. Brugsch, *History of Egypt* (1879), I, 125, 207; II, 345, 360, 367; T. E. Lawrence and C. L. Woolley, *Wilderness of Zin* (*PEF* Annual, 1914/15), pp. 39f., 71; W. M. Müller, *PSBA*, 10 (1888), 476; G. Williams, *Holy City* (1849), I, 465. JOHN ALEXANDER THOMPSON

SHUSHAN. *See* SUSA.

SHUSHAN EDUTH shōō'shan ē'duth [Heb. *šûšan ʿēḏûṯ*—'lily of testimony'(?)] (superscription to Ps. 60 [MT v. 1]); NEB omits. *See* EDUTH; MUSIC III.B.3.

SHUTHALHITES shōō'thəl-hīts (Nu. 26:35, AV, NEB). *See* SHUTHELAH.

SHUTHELAH shōō'thə-lə [Heb. *šûṯelaḥ*]; **SHUTHELAHITES** shōō'thə-lə-hīts [Heb. *haššuṯalḥî*]; AV, NEB, SHUTHALHITE(S).

1. A son of Ephraim and his descendants (Nu. 26:35); called the father of Eram in v. 36, of Bered in 1 Ch. 7:20.

2. A descendant of **1** (1 Ch. 7:21); but the list in vv. 20f. includes the repetition of several names, and this Shuthelah may be a duplication of **1.**

SHUTTLE. *See* WEAVING.

SIA sī'ə [Heb. *sîʿā'*] (Neh. 7:47). One of the temple servants (*see* NETHINIM) who returned from the Exile (cf. "Siaha" in Ezr. 2:44; 1 Esd. 5:29).

SIAHA sī'ə-hə [Heb. *sîʿahā'*] (Ezr. 2:44); [Gk. *Soua, Sousa*] (1 Esd. 5:29); AV SUD; NEB SUSA. Alternate form of SIA.

SIBBECAI sib'ə-kī [Heb. *sibbᵉḵay*] (1 Ch. 11:29; 27:11; etc.); AV, NEB, also SIBBECHAI (2 S. 21:18 par. 1 Ch. 20:4). A HUSHATHITE and one of David's advocates and "thirty" valiant warriors (1 Ch. 11:29), who slew Saph (2 S. 21:18; "Sippai" in 1 Ch. 20:4) during a battle against the Philistines at Gob ("Gezer" in 1 Ch. 20:4). In 2 S. 23:27 (cf. 1 Ch. 11:29) his name appears as MEBUNNAI (Heb. *mᵉḇunnay*), a reading that resulted from scribal confusion of the letters *s* with *m*, and *k* with *n*.

SIBBOLETH sib'ə-ləth [Heb. *sibbōleṯ*] (Jdg. 12:6). *See* SHIBBOLETH.

SIBMAH sib'mə; **SEBAM** sē'bam (Nu. 32:3) [Heb. *śiḇmâ, śᵉḇām*]; AV also SHEBAM, SHIBMAH. A town in Moab in the territory allotted to Reuben, named with Heshbon, Elealeh, and Nebo (Nu. 32:2-5, 37f.; Josh. 13:15, 19). In Nu. 32:3 the MT reads *śᵉḇam*, but there is no reason to consider this a different place. Isaiah (16:8f.) and Jeremiah (48:32) mention the destruction of Sibmah's extensive vineyards in their prophecies against Moab.

Jerome (comm. on Isa. 16:8) located Sibmah only five hundred paces from Heshbon. G. A. Smith (*Atlas of the Historical Geography of the Holy Land* [1915], pl. 29, D.1), following Conder, identified it with Sūmiyé, 3.5 km. (2¼ mi.) NW of Heshbon. Abel, however, considered Sibmah too important to have been in the immediate vicinity of Heshbon and preferred to identify it with Qurn el-Kibš, between Ḥesbân and Nebo, 5 km. (3 mi.) ENE of Siyāġa on Wadī Salma (*GP*, II, 458). Simons gave the same location (but transliterated it as Qarn el-Qibs), 5 km. (3 mi.) WSW of Ḥesbân, and noted that "none of the identifications . . . can claim to rest on exclusive arguments" (*GTTOT*, p. 118). W. S. L. S.

SIBRAIM sib-rā'əm [Heb. *siḇrayim;* LXX A *Sephram*, LXX B *Sebram*]. A city on the northern border of Israel (Ezk. 47:16), located between Zedad and Hazer, and perhaps identical with Ziphron (Nu. 34:9) and possibly with SEPHARVAIM (2 K. 17:24). The location of none of the towns along this northern border is known with certainty.

SICK; SICKNESS. By far the most important OT word group for sickness is Heb. *ḥlh*. The verb *ḥālâ* and cognate nouns *ḥᵒlî* (Dt. 7:15; 28:59, 61; 2 K. 1:2; 8:8f.; etc.), *maḥᵒlâ* (Ex. 23:25; 1 K. 8:37; 2 Ch. 6:28; etc.), and *taḥᵃlû'îm* (Dt. 29:22) are all general terms for a state of bodily weakness. They can refer to a great variety of debilities and diseases, including injuries received in a fall (2 K. 1:2), battle wounds (8:29; cf. Isa. 1:5f.), diseases of the bowels (2 Ch. 21:15), sicknesses common to animals (Mal. 1:8, 13; cf. Ezk. 34:4), and even love-sickness (Cant. 2:5; 5:8).

The much less common term *dāweh* denotes the indisposition one suffers with menstruation (Lev. 15:33; 20:18). Used figuratively with *lēḇ* ("heart"), it refers to the weakness associated with anxiety (Lam. 5:17; cf. *dawwāy* in Jer. 8:18; *dᵉway* in Ps. 41:3 [MT 4]).

In the OT it is Yahweh who sends both sickness and health. Thus "sickness" occurs in contexts of blessings and curses: freedom from sickness is a great blessing from

God (Ex. 23:25; Dt. 7:15; cf. 1 K. 8:37-39); but those who incur God's wrath through their disobedience will be cursed with all kinds of sicknesses (Dt. 28:59, 61; 29:22 [MT 20]).

In the NT "sick" most commonly translates the Greek verb *asthenéō* (e.g., Mt. 25:36; Lk. 4:40; Acts 9:37; part. in Mt. 10:8; 25:39; Mk. 6:56; etc.) or the adjective *asthenḗs* (Mt. 25:43f.; Lk. 10:9; Acts 5:15f.), both of which are general terms for physical weakness. The phrase *échō kakṓs* likewise denotes "being ill" (e.g., Mt. 8:16; 9:12; 14:35; Mk. 1:32, 34). Gk. *árrhōstos* (Mt. 14:14; Mk. 6:5, 13; 16:18) literally means "powerless" (cf. *rhṓnnymi*, "be strong"). The verb *pyrḗssō* means "suffer with a fever" (Mk. 1:30; cf. *pýr*, "fire"), while the part. of *kámnō* denotes one who is exhausted or wasted away (Jas. 5:15).

In the NT the connection between sin and sickness is more general than in the OT. Sickness is associated with demonic powers that oppose God's kingdom. Many of Jesus' mighty acts — and those of His followers as well — involve healing those who are sick (e.g., Mt. 4:24; 8:16; 10:8; 14:14, 35; Acts 5:15f.).

SICKLE [Heb. *ḥermēš, maggāl*; Gk. *drépanon*]; AV also MATTOCK (1 Sam. 13:20). A small, hand-held implement for harvesting standing grain. Heb. *ḥermēš* is used only in Dt. 16:9; 23:25 [MT 26]; Heb. *maggāl* appears only in Jer. 50:16; Joel 3:13 [MT 4:13], but it is the more common term in later Jewish literature. The LXX translates each of these with Gk. *drépanon*, which is the term used in the NT (Mk. 4:29; Rev. 14:14-19). In Joel and the NT the sickle functions as a symbol of God's wrath and the fulfillment of His judgment.

The early sickles were curved wooden instruments, with serrated flints inserted into them. Later they were made of metal, with a wooden handle. These are mentioned with other metal agricultural tools in 1 S. 13:20 (LXX Gk. *drépanon*; the MT has Heb. *mahᵃrēšâ*, lit. "plowshare," but the text may be corrupt; see McCarter).

SIDDIM, VALLEY OF [Heb. *ʿēmeq haśśiddîm*]; AV VALE OF SIDDIM. The location of the battle between the kings of the five CITIES OF THE VALLEY and an eastern coalition of four Mesopotamian kings headed by Chedorlaomer king of Elam (Gen. 14:2, 8, 10). The kings of Sodom, Gomorrah, Admah, Zeboiim, and Bela (later called Zoar) had been vassals of the Mesopotamian kings for twelve years but rebelled in the thirteenth year. In the fourteenth year Chedorlaomer led a punitive force against these (vv. 1-3, 8f.) and several other kings (vv. 5-7). The exact route they took remains a problem, but they engaged and defeated the Pentapolis coalition in the Valley of Siddim. Sodom and Gomorrah were plundered, and Abraham's nephew Lot was carried off (vv. 10-12) — an action that necessitated a rescue operation by Abraham and his men (vv. 13-16). As the kings and inhabitants of Sodom and Gomorrah fled, some escaped to the mountains and others fell into the bitumen pits that apparently dotted the valley (v. 10). The valley was most likely an open, flat area suited for battle conditions. (Heb. *śiddîm* is usually derived from a term [with Ugaritic and Akkadian cognates] meaning "to drag, to plow [a furrow]," and this may signify that it was an unusually fertile area.)

The cities associated with the Valley of Siddim drew extraordinary interest, both in the Bible and in later tradition, as symbols of wickedness and of divine wrath and punishment. Their exact site is unknown, but they were somewhere near the DEAD SEA, with which the Valley of Siddim is expressly identified in Gen. 14:3. Scholarly consensus today identifies this valley with the shallow southern end of the Dead Sea, S of the peninsula el-Lisan. The water level of the Dead Sea was about 40m. (130 ft.) higher in the early 1970s than it probably was from biblical times until the 8th cent. A.D.; since the average depth of the southern basin today is no more than 6 m. (20 ft.), it would not have been covered by water in biblical times. This makes this basin a most likely candidate for the Valley of Siddim.

The valley's location is of course linked with those of the five cities. The description in Gen. 10:19 seems to place them at the southeastern border of Canaan. The verse's parallelism implies that the Canaanite territory extended SW from Sidon toward Gerar, near Gaza, in the same way that it extended SE toward the four cities named, near Lasha; this would suggest a location for these cities somewhere near the southeastern end of the Dead Sea.

Genesis 13:10-12 states that Lot settled in SODOM, which was part of the "Jordan valley" (Heb. *kikkar hayyardēn*, AV "plain of the Jordan") and was visible from Bethel (cf. vv. 3, 10). Since the southeastern end of the

An Iron Age II sickle found at Tell Beit Mirsim (courtesy of the Israel Department of Antiquities and Museums)

Dead Sea is not visible from Bethel, and since the "Jordan valley" elsewhere refers to an area N of the Dead Sea (1 K. 7:46 par. 2 Ch. 4:17), some have located Sodom and the other cities NE of the Dead Sea. It is very possible, however, that here the term *kikkār* ("environs") includes the Sea itself and some of the area S of it (in the same way that Heb. *'ărābâ* and Arab. *ghôr* variously designate the Jordan Valley N of the Dead Sea, the rift valley S of it, or the entire area N and S, including the Sea itself). Furthermore, not all of the Jordan Valley *north* of the Dead Sea is visible from Bethel, so the argument about Lot's area of vision cannot be pressed.

Genesis 19:28 states that Abraham saw from Hebron the smoke from the destruction of Sodom and Gomorrah. This would have been most easily seen if the cities were S or SE of the Dead Sea. Several passages associate ZOAR, the city to which Lot fled (vv. 17-23; perhaps one of the smallest of the five cities [cf. v. 20]), with Moab (vv. 30-37; Isa. 15:5; Jer. 48:34), which could accommodate a location either N or S of the Dead Sea. Zoar is also mentioned in Dt. 34:3, in the description of the lands visible to Moses from Mt. Nebo (vv. 1-3). The symmetry of the passage suggests that just as Dan was far N of Gilead (and not visible from Nebo), so Zoar was far S of the "valley (*kikkār*) of Jericho" (and likewise not visible from Nebo).

The clearest geographical reference, however, is in Ezk. 16:46, where Sodom is pictured as S of Jerusalem, as opposed to Samaria to the north of Jerusalem.

The biblical evidence thus seems to favor a southern location for the five cities and, by implication, for the Valley of Siddim. Some have located the cities (with the possible exception of Zoar) *in* the Valley of Siddim and thus see them as submerged today. This view is likely mistaken, however. Gen. 14:3, 8 states not that the kings lived in the valley but rather that they met here, as a common rendezvous point, to do battle with the enemy. If the valley was indeed a fertile place, then the cities were likely located near it, since agricultural land was at a premium and would have been reserved for that purpose. If, on the other hand, it was an infertile and hostile environment (or even submerged at times), this, too, would point to a location of the cities outside of the valley. Five perennial streams flow into the southeast end of the Dead Sea, each with one ancient site on it, and these are probably the sites of the cities.

The destruction of the cities, as described in Gen. 19:24-28, was spectacular. Yahweh rained brimstone and fire down on them, and He "overthrew" their inhabitants and everything that grew there (a possible reference to an earthquake). From Hebron Abraham saw the smoke rising "like the smoke of a furnace." Geological studies of the southern Dead Sea area reveal a salty, desolate area today. Lumps of BITUMEN have been found floating in the Dead Sea and deposited in the limestone of its western bank, which naturally recalls the bitumen pits of Gen. 14:10.

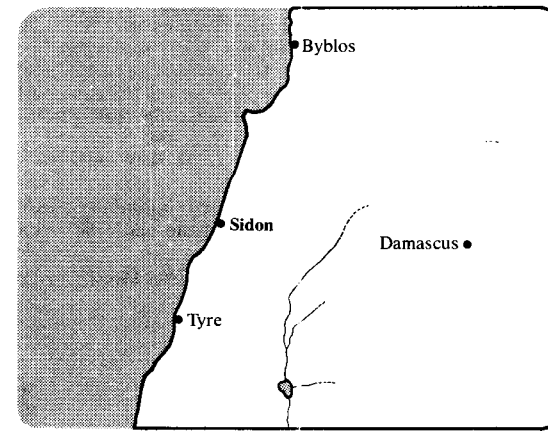
SIDE sī'dē [Gk. *Sidē*]. The easternmost of the arc of five Pamphylian cities E of Attalia; one of the cities to which a letter favorable to the Jews was sent by the Roman consul Lucius (1 Macc. 15:23). Although its people claimed that Side was an ancient colony of Cyme, they spoke a mixed language in the time of Alexander the Great. Under the Seleucids Side's coins bore the royal countermark, which gave them international currency. Side's position close to the fortifications of Cilicia Tracheia made it prominent as a port where the Cilician pirates disposed of their booty during the late Hellenistic era, and the city early established links with the Romans. Doubtless this is why it figured in the select list of cities to which the Romans addressed their manifesto on the protection of the Jews (1 Macc. 15:15-23; cf. Josephus *Ant.* xiv.8.5 [143-48]). Extensive ruins at Eski Adalia, including a theater that seated at least twelve thousand people and must have been one of the largest in the world, testify to Side's ancient eminence.

See *RRAM*, pp. 1133f. E. A. JUDGE

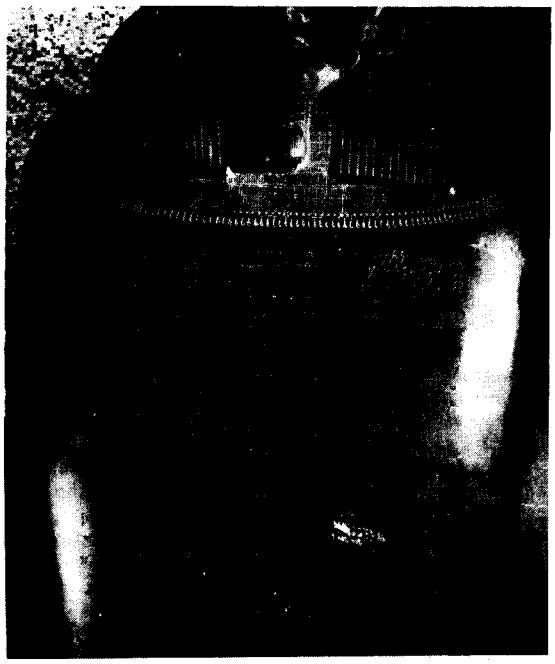
SIDEWALLS [Heb. *rōḥaḇ*–'breadth'] (Ezk. 40:48; 41:3); AV BREADTH; NEB CORNERS; [*kāṯēp*–'shoulder,' 'side'] (Ezk. 41:2, 26); AV SIDES; NEB CORNERS. The walls on each side of the entrance to the vestibule, the nave, and the inner room of the ideal temple. The RSV emends the MT of Ezk. 40:48; 41:3 (*rōḥaḇ*) with the LXX (Gk. *epōmídes*) to read *kiṯpôṯ* (pl. cf *kāṯēp*).

SIDON sī'dən [Heb. *ṣîḏōn*] (Gen. 10:15; 1 Ch. 1:13); AV also ZIDON (1 Ch. 1:13). The firstborn son of Canaan.

SIDON sī'dən [Heb. *ṣîḏôn*; Akk. *ṣidunnu*; Gk. *Sidōn*]; AV also ZIDON. A city-state on the Mediterranean coast, 40 km. (25 mi.) N of Tyre, the modern city of Ṣaida'. The name was explained by the ancients as derived from that of an eponymous hero, founder of the city (Side or Sidon in classical versions of the legend; cf. also Gen. 10:15, where Sidon is the "first-born" of Canaan); but since Justin the name of the city has been recognized as the Phoenician word for "fish." Today it is commonly thought that the etymology is to be sought in the root *ṣwd*, "to hunt," also "to fish," therefore the toponym signifies "fish market" or something similar; or else the name of the Phoenician deity Ṣid is cited from which the toponym can be derived.



I. Topography and Archeological Exploration.—The city sprang up in a small costal plain near the mouth of the Nahr el-'awali (Bostrenus), in a region long known for luxurious gardens and orchards. The topography is rather complex and scattered; the local inscriptions name various quarters: *Ṣdn ym* "Sidon by the sea," probably on the site of the modern city; *šmm rmm*, "elevated heavens," or *šmm 'drm*, "powerful heavens," evidently on the hill; *'rṣršp*, "land of Resheph"; *ṣdn mšl, ṣdn šd*, of uncertain locations; and the mountain sanctuary of *'n ydll*, "source (spring) of Yadlal." Likewise the Assyrian texts distinguished a "Great Sidon" (cf. the identical expression



Detail of Eshmun'azar's sarcophagus (5th cent. B.C.) showing the Phoenician alphabetic inscription (RMN/ARS, NY/SPADEM)

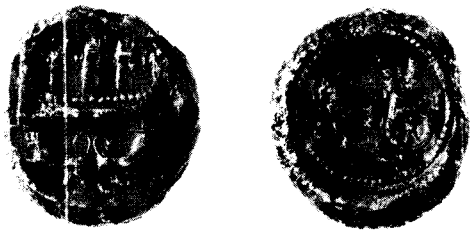
in Josh. 11:8 and 19:28) and a "Little Sidon," besides various villages of the interior and the new city, Kār-Aššur-aḫ-iddina, "Fort Esarhaddon," founded by the Assyrians very near that Phoenician city. The archeological recoveries confirm the dispersion not only obviously of the necropoleis (from Phoenician royal tombs of the 5th cent. at Maġarat 'ablun, to the various necropoleis of the Bronze Age at Kafr Ġarra, Lebe'a, Quraya, and of the Roman era), but also of the sanctuaries (the monumental one of Eshmun at Bustān eš-Šaiḫ, the identification of which with *'n ydll* is demonstrated by the inscriptions of Ba'al-šillem that have been recovered) and of the same city. The nucleus of this city was, however, on a promontory which was joined to a line of rocks that assured protection from the wind. South of the promontory a round little bay was located, possibly used as a landing-place but not serving regularly as a seaport in ancient times; the real port was north of the promontory, joined to two internal basins (on the site of the modern port) enclosed by a system of man-made jetties, and a more ample external roadstead.

The archeological explorations, following the recognized missions of E. Renan (1860) and the discovery of the royal necropoleis (A. Hamdy Bey and Th. Reinach, *Une nécropole royale à Sidon* [1892]; to the last by J. Assmann, *Archäologischer Anzeiger,* 78 [1963], 690-716), were conducted especially at Bustān eš-Šaiḫ by Macridy Bey in 1887, 1900-1901, 1909 (Macridy Bey, *Le temple d'Eshmun à Sidon* [1904]), by W. von Landau in 1903-1904, by G. Contenau in 1914 and 1920 (*Syria,* 1 [1920], 16-55, 108-154, 198-229, 287-317; 4 [1923] 261-281; 5 [1924] 9-23, 122-134) and by M. Dunand in 1924 (*Syria,* 7 [1926], 1-7). Subsequently the necropoleis were explored especially by L. Albanèse (*Bulletin du musée de Beyrouth,* 2 [1938], 73-98; 3 [1939], 37-51 [Greco-Roman graves]; and by P. E. Guiges (*Bulletin du musée de Beyrouth,* 1 [1937], 35-76; 2 [1938], 27-72; 3 [1939], 53-63: graves of the Bronze Age). The structure of the port was clarified (with aerial photography, underwater investigations, and archeological soundings on land) by A. Poidebard (1946-1950). More recently (from 1963ff.) the work at Bustān eš-Šaiḫ has been resumed and considerably enlarged under the direction of M. Dunand (*Bulletin du musée de Beyrouth,* 19 [1966], 103-105; 20 [1967], 27-44). See *KAI,* nos. 13-16, and the ostraca of the temple of Eshmun (A. Vanel, *Bulletin du musée de Beyrouth,* 20 [1967], 45-95).

II. History.–The earliest attestation of Sidon dates from the 15th-14th cents. B.C. with the Amarna letters: the king of Sidon, Zimrida, was submissive to Egypt (as was the entire region at that time), and was involved in local battles, Sidon being allied with Arwad and Amurru against Byblos and Tyre; in particular Sidon was attempting to take from Tyre all the mainland possessions as well as a considerable portion of its territories to the south (cf. Am.Tab. 147-49). The Akkadian texts from Ugarit preserve a pair of names of kings of Sidon (Yapaḫ-Addu and Imtu) datable to the 13th century. Egyptian texts name the city in Papyrus Anastasi I (cf. *ANET,* p. 477) and in the account of Wen-Amon (cf. *ANET,* p. 27). Egyptian domination came to an end toward 1200; in the 12th-11th cents. Sidon apparently gained a certain political preeminence, which seems necessary to explain the use of the term "Sidonians" to indicate the "Phoenicians" in general. Perhaps passages such as Josh. 13:4-6 and Jgs. 18:7 imply control by Sidon to the southern end of 'Ara S of the Carmel and toward the interior as far as Laish. About 1100 the Assyrian Tiglath-pileser I mentioned only Sidon (and not Tyre) as a Phoenician center S of Byblos. But this place of predominence was cut off by the establishment of the kingdom of Israel and by the political growth of Tyre toward 1000 B.C.

In the 9th cent. the inscriptions of Ashurnasirpal II and Shalmaneser III concerning expeditions in Syria show that Sidon was an autonomous kingdom alongside of Tyre. On the other hand the situation seems to have been altered by the time of Tigiath-pileser III (747-727) when there was no kingdom of Sidon and the city was certainly included in the territory of Tyre, where Hiram II reigned with the title of "king of the Sidonians" (*Corpus Inscriptionum Semiticarum* I, 5). The same situation pertained at the time of Sennacherib, who conducted an expedition (701) against Luli king of Sidon, whom Josephus (*Ant.* ix.14.2 [283f.]) called Elulaios and considered king of Tyre. According to the Assyrian texts, Luli fled from Tyre to Cyprus; Sennacherib replaced the fugitive with the Assyrophile Tubalu (**Itto-ba'al*) on the throne of Sidon. In 677 the king of Sidon, Abdi-Milkutti, rebelled against the Assyrian Esarhaddon, who intervened, conquered and destroyed Sidon, put Abdi-Milkutti to death, transformed the kingdom of Sidon into an Assyrian province, and founded a new capital (near or on the same site of the destroyed city) with the name of Kār-Aššur-aḫ-iddina ("Fort Esarhaddon"). For the events of 701 or those of 677, one might refer to Isa. 22:1-4, 12-14 (on the destruction of Sidon, integrated with vv. 5-11 and 15-18 relative to Tyre, probably later).

Included thus in the Assyrian empire and then in the Neo-Babylonian, Sidon remained notably central, and then received particular impetus by the works of the Achemenids, who made it the principal Phoenician center of the 5th-4th cents.: at Sidon there was a residence of the Persian kings with a park (Diodorus xvi.41); the Phoenician fleet, principal nucleus of the Persian, was commanded by the king of Sidon (Diodorus xiv.67); the king of Sidon was first in rank of the vassals of Xerxes (Herodotus viii.67), and he sailed aboard a Sidonian ship (Herodotus vii.128). The funerary inscriptions and monu-



A silver double shekel from Sidon (ca. 400 B.C.). One side depicts a galley, symbol of the maritime city, and two lions. The other side depicts the Great King of Persia and a driver in a chariot (courtesy of the Trustees of the British Museum)

ments recovered at Sidon permit the reconstruction in part of the local dynastic succession: Eshmunazar (*'šmn 'zr*) I, Tabnit (*tbnt*), Eshmunazar II, Bodashtart (*bd'štrt*) are to be placed at the end of the 6th cent. and in the first half of the 5th. From Tabnit and Eshmunazar II we have the inscriptions on their sarcophagi, from Bodashtart inscriptions of the temple of Eshmun at Bustān eš-Šaiḫ constructed by him (*see* picture in PHOENICIA). At the same temple of Eshmun a statue was successively dedicated by Prince Ba'al-shillem (*b'lšlm*) recording the names of the father Ba'ana (*b'n'*), of the grandfather Abdemon (*'bd'mn*), and of the great-grandfather Ba'al-shillem, all kings of Sidon during the the second half of the 5th century. In the 4th cent. reports of classical authors, confirmed in part by numismatic data, give credibility to the sequence of 'Abd-'Ashtart I, Bod-'Ashtart, 'Abd-'Ashtart II (Straton the Philhellene, of whom Greek inscriptions [*CIG*, I, 87] recorded close ties and assistance in Attica), Tennes, 'Abd-'Ashtart III, ranging between 400 and 332. Crucial moments of this period are the anti-Persian revolt of Straton in 362, the more serious revolt of Tennes in 351, ending with the destruction of Sidon, and finally the submission to Alexander in 332.

In the conflicts between the Seleucids and the Lagides Sidon was annexed to the latter and was made part of the Ptolemaic kingdom from 307 to 197, then of the Seleucid from 197 to 64, when it became part of the Roman province of Syria. In all this period a municipal government and a certain autonomy (*hierá kaí ásylos*) were preserved, at least from 111 when an era of dating was initiated "according to the people of Sidon"; but in 20 B.C. Augustus brought an end to the autonomy of the Phoenician cities, and Sidon progressively declined. Itineraries and travelers of the 4th-6th cents. A.D. considered the city a secondary center (less important than Sarepta), but with a local bishop; it had a limited role at the time of the Crusades, as did all the ports of the region, after which its horizons became exclusively local and remain so today.

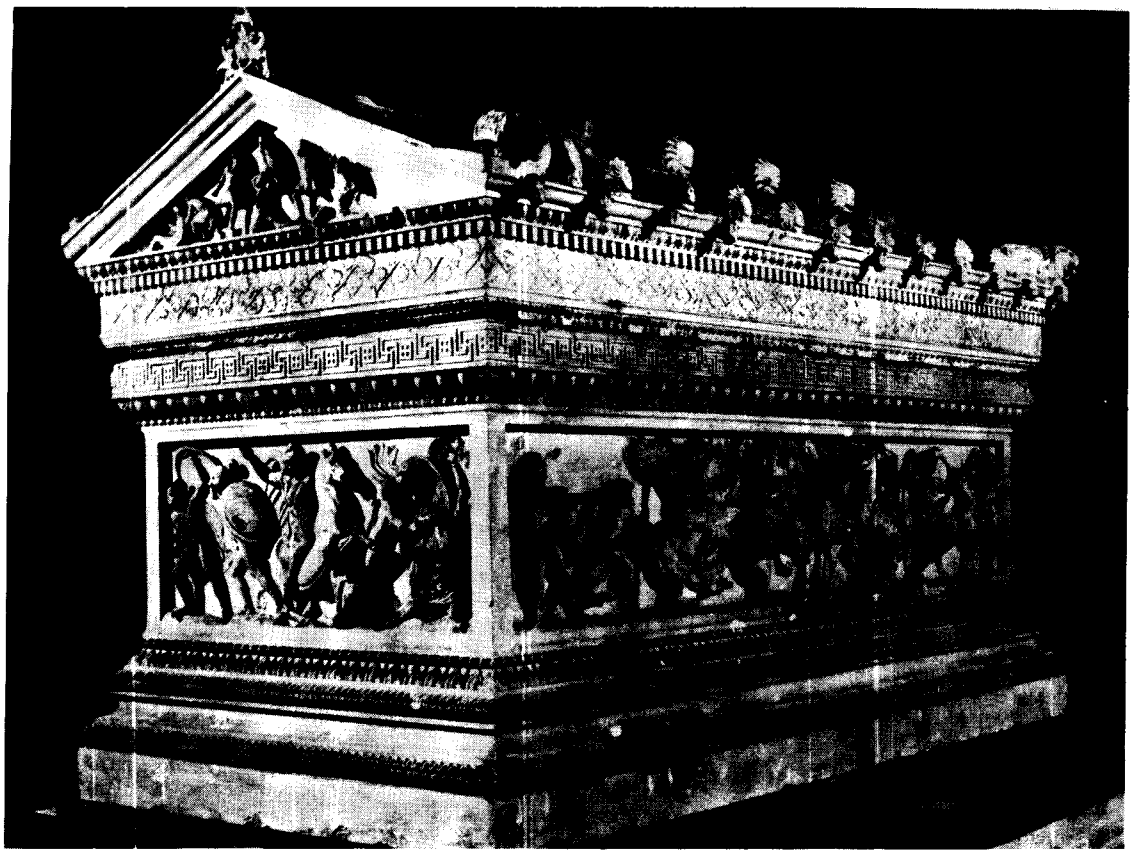
A royal sarcophagus from Sidon in early Hellenistic style. It probably belonged to King Abdalonymos, who was installed by Alexander the Great in 333 B.C. (Archeological Museum, Istanbul)



SIEGE; SIEGEWORKS; BESIEGE. Encirclement of a fortified position by a hostile force. In biblical times the position was usually a walled city or fortress (*see* FORTIFICATION).

I. Biblical Terms.–The most common verb translated "lay siege" or "besiege" in the RSV is Heb. *ṣûr* (lit. "blind," "secure"; Dt. 20:12, 19; 1 S. 23:8; 2 S. 11:1; 20:15; 23:8; 1 K. 15:27; 16:17; 20:1; 2 K. 6:24f.; 16:5; 17:5; 18:9; 24:11; 1 Ch. 20:1; Isa. 21:2; 29:3; etc.). Other verbs include *nāṣar* (lit. "watch," "guard"; Isa. 1:8; Jer. 4:16), the hiphil of *ṣārar* (lit. "tie up"; Dt. 28:52; 1 K. 8:37; 2 Ch. 6:28), and *ḥānâ* (lit. "pitch a camp against"; Josh. 10:31, 34; 1 S. 11:1; 2 K. 25:1; Jer. 52:4). The most common noun for "siege" and "siegeworks" is *māṣôr* (Dt. 20:20; 28:53, 55, 57; 2 Ch. 32:10; Eccl. 9:14 [emended from *māṣôḏ*]; Jer. 10:17; 19:9; Ezk. 4:2, 7f.; 5:2; Mic. 5:1; Nah. 3:14; etc.; cf. the expression *bô' bammāṣôr*, "be besieged," in 2 K. 24:10; 25:2; Jer. 52:5). Other nouns include *sōl^{e}lâ* (RSV, lit., "siege mound," 2 K. 19:32; Isa. 37:33; Jer. 6:6; 32:24; 33:4) and *dāyēq* ("siegeworks," Jer. 52:4; "siege wall," Ezk. 17:17; 26:8; "siege tower," 21:22). The terms "siege," "siegeworks," and "besiege" do not occur in the RSV NT.

II. Purposes.–As an aspect of warfare (*see* WAR, WARFARE), the siege was a strategy intended to bring the population of a city and its surrounding territory under the control of the attacker. The siege might represent an initial conquest by the hostile force (Dt. 20:10-14) or an effort to regain control of a rebellious city (e.g., the Assyrian conquest of Samaria, 2 K. 17:1-6).

III. Offensive Operations.–The siege of a city by a hostile force involved pitching camp near it (1 K. 16:15f.), blocking the roads, and cutting off access to sources of water outside the city.

A fortified city could be captured through six possible actions. (1) An approaching army could take up position outside the city and by this show of force intimidate the population into surrendering without a fight. Sennacherib's representative tried this approach against Jerusalem in the time of Hezekiah (2 K. 18:19–19:13), but without success (cf. vv. 35f.). (2) A city might be taken by ruse, a strategy successfully used by Joshua in the conquest of Ai (Josh. 8:10-23). If these two methods failed, four other actions could be attempted, either singly or in combination, but they all required more concentrated force: going over, through, or under the wall; or establishing a prolonged siege.

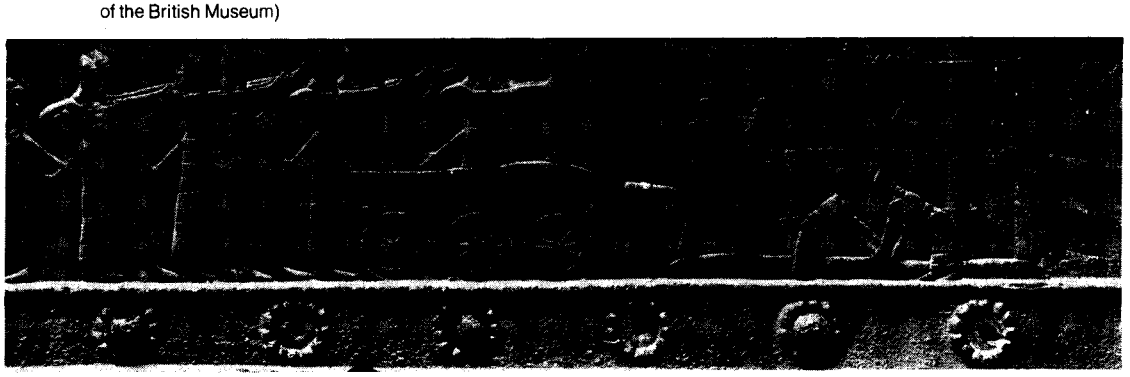
(3) Though fraught with danger, the quickest penetration of a city was over the wall. An Egyptian tomb relief discovered at Deshashe in Upper Egypt and dating to the 5th Dynasty in the Early Bronze Age shows warriors raising a ladder against the city wall while others beat against the city gate with poles in an effort to pierce that barrier. The use of assault ladders was hampered, however, by the height of city walls and by the vulnerable situation of those on the ladders beneath the firepower of the defenders on the walls.

A siege scene in a relief from Ashurnasirpal II's palace (Nimrûd, *ca.* 880 B.C.). Two men attempt to get through the wall, one by scaling it with a ladder, the other by tunneling under it. The defenders try to foil their attempts with shields and rounded rocks (courtesy of the Trustees of the British Museum)

(4) The Beni-hasan tomb painting (*ca.* 1900 B.C.) depicts a primitive battering ram consisting of a long pole with which three soldiers are attempting to penetrate a wall. They are protected by a covered framework. Such early techniques gave way to the developed battering ram in the M. B. II period, *ca.* 1900-1800 B.C. in Palestine. The remarkable fortifications constructed in that period were no doubt a response to this formidable new weapon (*see* FORTIFICATION III.D). The OT term for the battering ram is Heb. *kar* (Ezk. 4:2; 21:22 [MT 27]; cf. *m^{e}ḥî* [RSV "shock of battering rams"; AV "engines of war"] in 26:9).

Although no contemporary graphic illustrations of the M.B. battering ram are known, it is possible to imagine the weapon based on information in texts and the appearance of the Assyrian battering ram depicted on bas-reliefs of the 1st millennium B.C. A frame of sturdy beams was

Assyrians attack the doors of Dabigu, Syria, with a six-wheeled battering ram. The operator rides in a turret in the front and archers support the rear. This later type had a pointed snout and was lighter than older models, but was generally too low to be effective. From the Balawat Gates of Shalmaneser III, 858-824 B.C. (courtesy of the Trustees of the British Museum)

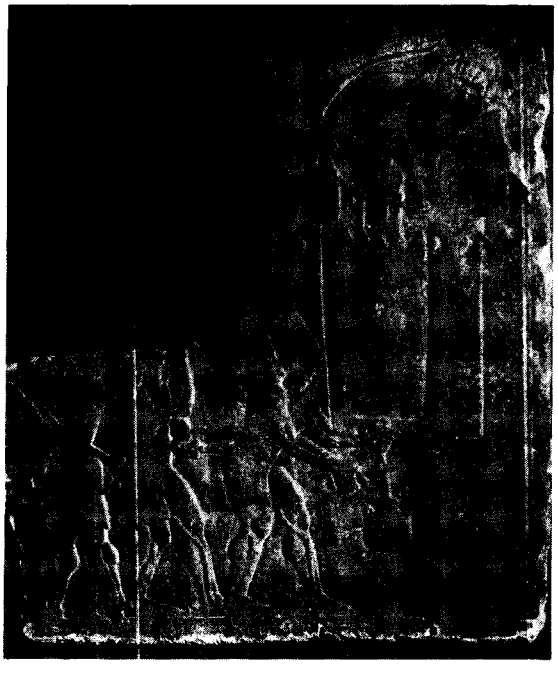


covered with protective sheathing above and along the sides. The ram was a long beam, metal-tipped, which was slung from the roof and could be swung forward through the open front. A crew of several men could swing the beam so that the pick-like end could penetrate the upper courses of the wall. Then it could be levered in several directions to loosen and dislodge the wall material (stone or mud brick). The action involved more probing and picking than battering. Such an instrument could be transported on a wheeled vehicle to the point of the siege. Later the battering ram was improved with the addition of integral wheels, as depicted in the Assyrian reliefs.

The battering ram was effective only when it was brought close to the wall. Because the city was frequently surrounded by a dry moat (fosse) and protected by a steep glacis, an earthen ramp (or "siege mound") had to be constructed to provide the needed access with the battering ram. Remnants of the Assyrian siege ramp used by Sennacherib to conquer Lachish in 701 B.C. are still visible at the site (*see* picture in ARMY). A Roman siege ramp was a significant factor in the capture of Masada, the last fortress of the First Jewish Revolt, which fell to the Romans in A.D. 73; it remains practically intact where it was constructed (*see* MASADA IV). Along with the battering ram and the siege ramp, siege towers were developed. These were strong, mobile platforms that were high enough to increase the effective firepower of the archers on them against the defenders on the walls. Archers on the siege towers and on the ground were necessary to provide protection for the crew in the battering ram and those outside it who were responsible for moving it forward (*see* picture in LACHISH).

(5) The annals of Sennacherib contain a description of his methods of attack on Hezekiah's Judean cities: he used "well-stamped (earth) ramps, and battering-rams brought (thus) near (to the walls) (combined with) the attack by foot soldiers, (using) mines, breeches as well as sapper work" (*ANET*, p. 288). The combined methods thus included weakening the foundations by tunneling, an operation carried out by sappers.

An Assyrian soldier cuts off the water supply to a besieged city. Fragment of a relief from Ashurnasirpal II's palace at Nimrûd, ca. 880 B.C. (courtesy of the Trustees of the British Museum)



(6) The purpose of the siege proper was to isolate the city from sources of food, water, and assistance from possible allies. The besiegers thereby maintained pressure on the defenders on the walls (cf. 2 K. 6:25-30) and waited for capitulation; a siege might extend however, over days, weeks, months, or even years. Nebuchadrezzar's siege of Tyre stretched over thirteen years. In the face of continued resistance the patience of attackers could grow thin; then, if the defenders showed a sign of weakness, the attackers would make a final assault on the walls and attempt to burn the gate, until they made a breach that allowed them entry to the city.

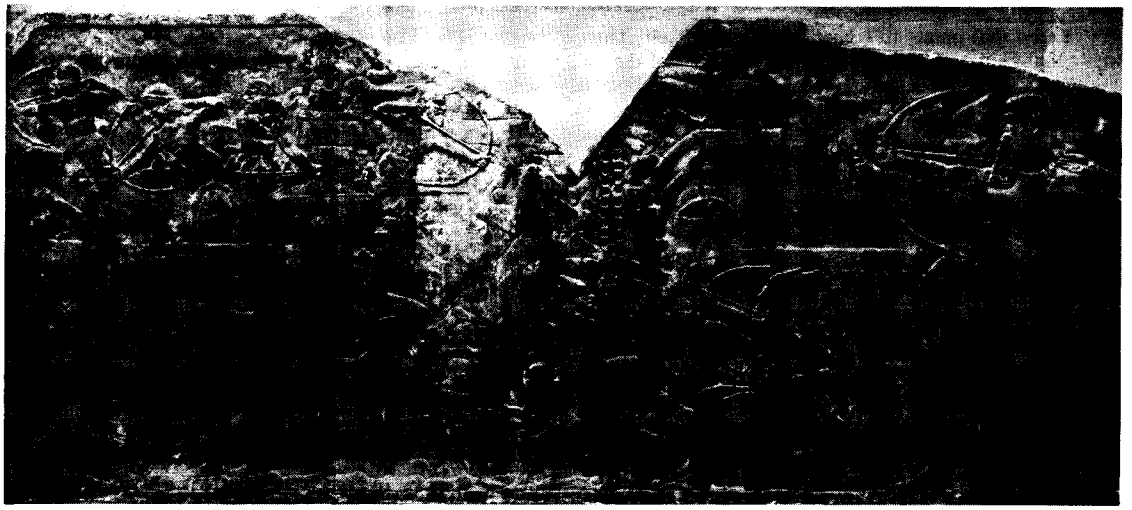
The aftermath of a siege was the slaughter of the defenders, the enslavement of the population, the pillaging of property, and the violent destruction of the city with fire and demolition. The outcome of Nebuchadrezzar's siege of Tyre is vividly foretold by Ezk. 26:1-13. The results of the earlier Assyrian conquest of Lachish are graphically depicted in the bas-reliefs that decorated Sennacherib's palace in Nineveh, discovered by Sir A. H. Layard's excavations in the mid-19th century. The slaughter that followed the Assyrian siege was corroborated by the discovery by British excavators in the 1930s of a cave at Lachish containing the skeletons of approximately fifteen hundred victims, many of them females.

Not all sieges ended in destruction, however; a siege might also be raised. The Ammonites besieged the Transjordanian city of Jabesh-gilead and offered such humiliating terms of surrender that the inhabitants requested — and received — a temporary ceasefire to ponder these terms (1 S. 11:1-3). During the seven-day respite they appealed to the newly anointed Israelite leader, Saul, who came to their rescue and forced the Ammonites to lift the siege, thereby winning the deep gratitude of the people of Jabesh (vv. 5-15; cf. 31:12f.).

IV. Defensive Operations.—Walled cities generally provided an effective defense against hostile forces whose only long-range weapons were bows and slings. So effective were the defenses of the M. B. ramparts that the battering ram appears to have been generally ineffective and unused until it was revived and perfected as an integral part of the Assyrian war machine of Iron Age II. Besides the ramparts and bastions of their fortifications, the defenders of a city could make other preparations for the approach of a hostile force. Their first priority was to ensure adequate stocks of food and water for themselves and to deny these to the enemy (cf. 2 Ch. 32:4). The storage of food was not difficult, but if the siege continued long enough the supply of food could run out, leading to starvation (2 K. 25:3) and even to the worst kind of cannibalism — mothers eating their own children (6:28f.). Biblical cities were usually built on top of the remains of previous cities (tells), and the sources of water were often situated outside the cities. The use of cisterns for water storage was a partial solution. At Megiddo, Hazor, Gezer, and other places, tunnels were dug from within the cities to underground springs or ground water sources.

The fortifications inside the wall might be strengthened by pulling down houses to fortify the wall (Isa. 22:10). The city gate(s) could be securely blocked with a bar (cf. Am. 1:5); *see* GATE I. Once the city was surrounded, the besieged might venture out in sorties against the attackers in an effort to break the siege (2 S. 11:17; 1 K. 20:15-21).

The defenders of a besieged city enjoyed an advantage of height over the attackers. Conventional weapons such as slings and stones, arrows and javelins could be supple-



Defenders attempt to deflect a battering ram with a chain that attackers try to remove with hooks. To the left, two soldiers are tunneling, and at far left two others are breaking down the wall with pikes and spears. Relief from Nimrûd, *ca.* 880 B.C. (courtesy of the Trustees of the British Museum)

mented by objects such as millstones (Jas. 9:53) and the parts of chariots, as graphically shown in the Assyrian reliefs of the capture of Lachish. Defenders could also cast down on the hostile forces boiling water, hot oil, and firebrands. (According to the RSV of 2 Ch. 26:15, King Uzziah made "engines [Heb. *ḥišše<u>b</u>ônô<u>t</u>*], invented by skillful men, to be on the towers and corners to shoot arrows and great stones." Although this is often interpreted as a reference to catapults, there is no reliable evidence that catapults existed this early, and the reference may be instead to "defensive constructions on the towers and the corners that enabled the soldiers to shoot arrows and great stones from a position of safety" [H. G. M. Williamson, *1 and 2 Chronicles* (*NCBC*, 1982), p. 337].) In one instance during the Roman period sacks of chaff were lowered to blunt the blows of the battering ram (*BJ* iii.7.20 [222-26]). Unfortunately, both the archeological and literary records testify to the numerous destructions of fortified cities. Apparently the tenacity of the besiegers and the ferocity of their assaults too often overwhelmed the forces of defense. The strata of destruction layers are a mute testimony to the outcome of many sieges in the biblical period.

V. Allusions in the NT.–The only explicit reference to siege operations in the NT is Jesus' prediction of the complete destruction of Jerusalem. Lk. 19:43f. reports that Jesus wept as He said, "your enemies will cast up a bank [Gk. *chárax*; NEB "siege-works"; NIV "embankment"] about you and surround you, and hem you in on every side." Josephus, an eyewitness to the event, recorded the details of the Jerusalem siege (*BJ* v.6.2–vi.10.1 [262-442]).

Paul employs siege terminology in a figurative manner in two of his letters. In 2 Cor. 10:4 he states, "for the weapons of our warfare are not worldly but have divine power to destroy strongholds," employing Gk. *kathaíresis*, a derivative of *kathairéō*, the usual LXX term for the conquest of a fortress (Prov. 21:22; Lam. 2:2). In Eph. 6:16 he makes faint allusion to the practice of defenders who shoot flaming arrows upon the attackers: with the shield of faith the Christian warrior can quench "the flaming darts of the evil one."

K. N. SCHOVILLE

SIEVE; SIFT [Heb. *nāpâ*–'yoke' (Isa. 30:28), hiphil of *nûp* (Isa. 30:28), *ke<u>b</u>ārâ* (Am. 9:9); Gk. *siniázō*–'shake in a sieve' (Lk. 22:31)]; NEB also YOKE (Isa. 30:28), FORCE (Isa. 30:28).

In biblical times a sieve was a type of winnowing tool usually with a coarse mesh, possibly made of string or reeds. In the sifting process the grain would fall to the ground and the stones, chaff, and other unwanted material would be retained in the sieve (cf. esp. Sir. 27:4).

The metaphorical sifting action of Yahweh is an act of His judgment upon the nations (Isa. 30:28). When He shakes Israel (Am. 9:9), those who remain in the sieve will receive judgment (cf. v. 10).

In Lk. 22:31 Satan's sifting process is designed to threaten Simon Peter's faith, but Jesus prays for Peter's ultimate fidelity.

G. WYPER

SIGN [(nouns) Heb. *'ô<u>t</u>, môpē<u>t</u>* (1 K. 13:3, 5; 2 Ch. 32:24, 31; Ezk. 12:6, 11; 24:24, 27), *qešeb*–'attentiveness' ("sign of life," 2 K. 4:31), *ṣîyûn*–'stone marker' (Ezk. 39:15); Aram. *'o<u>t</u>* (Dnl. 4:2f. [MT 3:32f.]; 6:27 [MT 28]); Gk. *sēmeíon, sýssēmon* (Mk. 14:44), *paratḗrēsis*–'observation' ("signs to be observed," Lk. 17:20)]; AV also TOKEN, MIRACLE, WONDER, ETC.; NEB also TOKEN WARNING, MIRACLE, etc.; [(verbs) Heb. *kā<u>t</u>a<u>b</u>*–'write' (Jer. 32:10, 12, 44); Aram. *rᵉšam* (Dnl. 6:8-13 [MT 9-14]); Gk. *dianeúō*–'beckon' ("make signs," Lk. 1:22), *enneúō* ("make signs," Lk. 1:62)]; AV also SUBSCRIBE, BECKON; NEB also PUT IN WRITING, ISSUE, etc.

Most occurrences of "sign" in the RSV represent Heb. *'ô<u>t</u>* or Gk. *sēmeíon*, which occur, respectively, seventy-eight times in the OT and seventy-seven times in the NT. The various contexts carry different shades of meaning, but the basic idea of pointing to something is always present. The medium is either exclusively or primarily visual: a sign is something one sees. The most important uses of

the word in Scripture are theological, i.e., they refer to an act of God that points to something beyond itself. Thus, signs that God performs take on the character of the miraculous. The true significance of signs in the Bible is found in their function. As acts of God the signs function in one way or another to display His credibility and reveal His power and glory.

I. In the OT
II. In the NT
  A. Synoptics
  B. Gospel of John
III. Signs and Wonders
IV. False Signs

I. In the OT.–Most of the OT uses of *'ôṯ* refer to acts performed by God. Helfmeyer (*TDOT*, I, 170-188) classified the signs performed by God in the OT according to seven (interrelated and often overlapping) major functions: (1) signs intended to bring about knowledge of God (e.g., Ex. 7:3; Dt. 4:34); (2) signs of protection (e.g., Ex. 12:13); (3) signs intended to instill and confirm faith in God (e.g., Nu. 14:11, 22; Dt. 11:3; Josh. 24:17; Isa. 7:11, 14); (4) signs intended to bring remembrance and thus reinforce Israel's faith (e.g., Ex. 13:9; 31:13, 17; Dt. 6:8; Josh. 4:6); (5) signs of the covenant, namely, the rainbow (the Noachic covenant, Gen. 9:12f., 17), circumcision (the Abrahamic covenant, Gen. 17:11), and the sabbath (the Mosaic covenant, Ex. 31:13, 17; Ezk. 20:12, 20); (6) signs intended to confirm a divine message (e.g., Ex. 3:12; Jgs. 6:17; 1 S. 2:34; 10:1, 7, 9; this sign often overlaps with [1] and [3]); (7) symbolic signs in which the prophets are called on to act out their prophetic message (e.g., Isa. 8:18; 20:3; Ezk. 4:3; cf. *môpeṯ*, 12:6, 11; 24:24, 27). In signs of this last type the actor is not God but the prophet, who acts in obedience to the word of God. These signs are not miraculous, but they attract attention because of their peculiar nature.

It is important to note that God's signs in the OT are not able to be understood on their own, but must be interpreted by a word from God. "This word declares in what or whom the sign is intended to motivate a person to believe. Therefore, there is no sign revelation without a corresponding word revelation interpreting the sign" (*TDOT*, I, 177). This is in accord with the biblical doctrine of revelation, which sees the acts and words of God as being of one piece and views both as indispensable to the revelatory process.

Many have pointed out that the miraculous signs of God do not occur with regularity throughout the OT. They are concentrated in three periods, apart from which they are rare: (1) the Exodus and the conquest (see III below), (2) the intense struggle with pagan religion in the ministries of Elijah and Elisha, and (3) the time of Daniel. The coming of Jesus and the apostolic ministry in the early Church mark a fourth biblical era characterized by God's miraculous signs.

II. In the NT.–The NT use of Gk. *sēmeíon* is heavily influenced by the OT use of Heb. *'ôṯ* and the LXX's consistent translation of *'ôt* with *sēmeíon*. Like *'ôṯ*, *sēmeíon* is used both in the secular sense of a "mark, sign" (e.g., Mt. 26:48; 2 Thess. 3:17), and in the predominant sense of a miraculous act of God that points to something else that the perceiver is to grasp or do.

A. Synoptics. The primary term used by the Synoptic Gospels for Jesus' miraculous deeds is not *sēmeíon* but *dýnamis* ("act of power"), a word often translated "miracle." In Luke's account, however, the angel speaks of the baby Jesus as a "sign" (*sēmeíon*) to the shepherds (Lk. 2:12), and Simeon calls the child a "sign that is spoken against" (*sēmeíon antilegómenon*, v. 34). The latter phrase is best understood as a reference to the rejection that will come from many who observe this legitimate sign. This illustrates that a true sign from God does not necessarily receive universal acceptance.

In first-century Palestine the Jewish people expected any true prophet of God to validate his ministry with signs. Thus the scribes and Pharisees said point-blank to Jesus, "Teacher, we wish to see a sign from you" (Mt. 12:38; cf. Mk. 8:11). The Sadducees demanded the same (Mt. 16:1; cf. also Lk. 11:16, 29f.; 23:8). Paul stated bluntly, "Jews ask for signs" (1 Cor. 1:22; cf. Lk. 11:16; Jn. 2:18; 3:2; 4:48; 6:30; 7:31; 9:16; 12:18; Acts 2:22). In the Synoptics, however, Jesus refuses to give such signs (Mk. 8:11f.; for a more positive side of the Synoptic tradition concerning signs, cf. Mt. 11:2-6 par. Lk. 7:18-23, and Mt. 12:28 par. Lk. 11:20). The only sign that He offers is the sign of Jonah and the obscure statement that the Son of man will "be three days and three nights in the heart of the earth" (Mt. 12:38-42; cf. Lk. 11:29-32). Jesus says that the kingdom of God that He is preaching "is not coming with signs to be observed" (Lk. 17:20; interestingly, the term used here is not *sēmeíon* but *paratḗrēsis*, which occurs only here in the NT). To look for such signs is, according to Jesus, evil and adulterous towards God (Mt. 12:39). The Pharisees and Sadducees rejected Jesus' teaching and asked for signs in order to test Him or entrap Him (cf. vv. 22-37). They misunderstood the character of the Messiah and His kingdom

The Synoptics also use *sēmeíon* in references to the future consummation of God's kingdom and the coming of the Son of man in glory. In Mt. 24:3 the disciples ask Jesus, "What will be the sign of your coming?" (cf. the less specific question in Mk. 13:4 par. Lk. 21:7: "When will these things take place?"). Jesus says that before the end there will be "great signs from heaven" (Lk. 21:11). "There will be signs in sun and moon and stars" (v. 25; cf. Acts 2:19). This apocalyptic language climaxes in Jesus' statement that "then will appear the sign of the Son of man in heaven, and then all the tribes of the earth will mourn, and they will see the Son of man coming on the clouds of heaven with power and great glory" (Mt. 24:30; only in Matthew does Jesus mention "the sign of the Son of man"). What is the sign? Many take it to be the coming of Christ — the greatest sign of Jesus' messiahship will be His parousia. T. F. Glasson (*JTS*, 15 [1964], 299f.) has argued with some force that *sēmeíon* should here be understood as "ensign" or "standard" (cf. Isa. 11:12); thus the standard or banner of the Son of man unfolds in the sky as He prepares to return in power and glory. "Sign" is also used in Rev. 12:1, 3 in this same sense of an eschatological portent.

B. Gospel of John. Sēmeíon plays a much different role in the Gospel of John. Here *sēmeíon* replaces *dýnamis* as the primary term for Jesus' miracles. The author of the Fourth Gospel presents Jesus' signs positively both as a source of knowledge about Him and especially as a motivation to believe in Him. Indeed, the author states his purpose for writing the Gospel in terms of presenting the signs of Jesus in order to instill the belief in Him that leads to eternal life: "these [signs] are written that you may believe that Jesus is the Christ, the Son of God, and that believing you may have life in his name" (Jn. 20:31). The signs of Jesus therefore play a prominent role in this Gospel.

Jesus' signs are integral to the structure of the whole Gospel, but especially to chs. 2–11. The author specifically numbers the first (2:11) and second (4:54) signs.

Most scholars find at least six signs in these early chapters: the changing of the water to wine at Cana (2:1-11), the healing of the official's son (4:46-54), the healing of the lame man at the pool (5:2-9), the feeding of the five thousand (6:1-14), the healing of the man born blind (9:1-7), and the raising of Lazarus (11:1-44); Jesus' walking on the sea (6:16-21) has sometimes been interpreted as a seventh sign. Some scholars think the author used a special "signs source" for this section of the Gospel, but there is no consensus on this point.

The Fourth Gospel clearly presents Jesus' ministry, at least in part, as a ministry of doing signs. These signs manifested His glory and motivated His disciples to believe in Him (2:11). John the Baptist performed no signs (10:41), but Jesus performed many during His public ministry — many more than the six or seven that are specifically recorded (20:30; cf. 2:23; 3:2; 6:2; 7:31; 12:37). These signs, especially those performed early in His ministry, effectively motivated people to believe in Him (cf. 2:23; 3:2; 4:53; 6:2, 14; 7:31; 12:18); later, however, unbelief persisted in spite of Jesus' many signs.

The meaning of *sēmeíon* is thus somewhat different in John's Gospel than in the Synoptics, though there are similarities. In the Synoptics a sign would prove that Jesus was the Messiah, leaving little if any room for faith. In John a sign points to Jesus as Messiah and may lead to faith. For the Synoptic writers (and also in Revelation) *dýnamis* is closer than *sēmeíon* to what John means by *sēmeíon*. The Synoptics have a central place for the *dynámeis* of Jesus, but not for His *sēmeía*. (*See also* MIRACLE II.B,C.)

III. Signs and Wonders.—In the OT *'ôṯ* and *môpēṯ* are found together in the plural expression *'ōṯōṯ ûmôpᵉṯîm* eighteen times (Ex. 7:3; Dt. 4:34; 6:22; 7:19; 13:2f. [MT 3f.]; 26:8; 28:46; 29:3 [MT 2]; 34:11; Neh. 9:10; Ps. 78:43; 105:27; 135:9; Isa. 8:18; 20:3; Jer. 32:20f.); this is especially impressive since *môpēṯ* occurs only thirty-six times. All but five of these texts (Dt. 13:2f.; 28:46; Isa. 8:18; 20:3) refer to God's activity during the period in which Moses led the Israelites out of Egypt. The Exodus was clearly the great redemptive act of God in the OT, when He did His powerful signs and wonders to save His people out of Egyptian bondage. This theme is especially developed in Deuteronomy, where nine of the OT occurrences of "signs and wonders" are found (cf. esp. 26:5-11).

The LXX always translates *'ōṯōṯ ûmôpᵉṯîm* by *sēmeía kaí térata*. The uses of *sēmeía kaí térata* in the Apocrypha continue to refer to God's redemptive activity during the Exodus period (e.g., Sir. 36:6; Wisd. 8:8; 10:16; Bar. 2:11). Thus, in Greek-speaking Judaism the expression "signs and wonders" seems to have been reserved for the wonders God performed in the days of Moses (*TDNT*, VII, 221).

"Signs and wonders" occurs sixteen times in the NT (Mt. 24:24; Mk. 13:22; Jn. 4:48; Acts 2:19, 22, 43; 4:30; 5:12; 6:8; 7:36; 14:3; 15:12; Rom. 15:19; 2 Cor. 12:12; 2 Thess. 2:9; He. 2:4). *Téras* carries the meaning of "unusual wonder," "amazing miracle," and occurs in the NT only these sixteen times, always with *sēmeíon* and always in the plural. Although the use of the phrase is influenced by the OT and the LXX, the coming of Jesus places a whole new perspective on its meaning. The phrase now refers, not to God's activity in the days of Moses, but to His even greater redemptive work in Christ and to the proclamation of this redemption by His apostles. The use of this phrase highlights the great eschatological significance of the miracles of Jesus and His apostles (cf. Mt. 11:2-6; 12:28; Acts 2:22f.; He. 2:3f.). The *sēmeía kaí térata*, "which now take place afresh as they once did at the exodus with its miraculous accompanying phenomena, are a pledge of the certainty of eschatological occurrence" (*TDNT*, VII, 241).

It is in Acts rather than the Gospels that "signs and wonders" are emphasized as God's redemptive acts. All three Gospel occurrences cast the phrase in a negative light (see IV below). As Deuteronomy is the key OT document that speaks of "signs and wonders," Acts is the key NT book that uses the expression. While Luke was reluctant to talk about Jesus performing signs in his Gospel, this was no longer true in his second volume. He described Jesus as "a man attested to you by God with mighty works [*dynámeis*] and wonders [*térata*] and signs [*sēmeía*] which God did through him in your midst" (Acts 2:22; *dýnamis, téras,* and *sēmeíon* also occur together in 2 Cor. 12:12; 2 Thess. 2:9; He. 2:4; cf. Acts 8:13). Thus it is now Jesus, not Moses, who performs "signs and wonders" in redeeming God's people from bondage.

While Acts depicts Jesus' earthly ministry as a ministry of "signs and wonders," recalling God's acts in Moses' day for the redemption of His people (Acts 7:36), the expression is used primarily of God's acts through the apostles. Luke wrote that "many wonders and signs were done through the apostles" (Acts 2:43), and "many signs and wonders were done among the people by the hands of the apostles" (5:12). For Luke it was through the apostles, the commissioned emissaries of the resurrected Jesus, that God now performed His signs and wonders in order to substantiate and confirm the gospel of redemption and to motivate people to believe in this gospel (cf. Acts 4:16, 22). The apostolic band that performed these signs and wonders did not have rigid boundaries, as it included Paul and Barnabas (14:3; 15:12; 19:11), Stephen (6:8), and Philip (8:6, 13); clearly, however, there was always a close association with the ministry of the apostles (cf. Acts 9:38).

Paul developed this understanding of "signs and wonders" further. He confirmed Luke's view of his apostolic ministry by stating the positive role that "signs and wonders" had played in his ministry (Rom. 15:18f.). He also stated the function of "signs and wonders" in validating his own apostleship: "The signs [or "marks," *sēmeía*] of a true apostle were performed among you in all patience, with signs and wonders and mighty works [*dynámeis*]" (2 Cor. 12:12). The author of Hebrews likewise ties "signs and wonders" to the apostolic ministry in He. 2:3f. Thus, in the NT the legitimate use of "signs and wonders" is always associated with the preaching of the gospel and with the apostles.

See also WONDER.

IV. False Signs.—Signs may also be performed by people not sent from God (cf. Ex. 7–8). Thus, from very early in their history as the people of God the Israelites were warned to test the signs and wonders of a prophet against his teaching (Dt. 13:1-5). The NT continues this emphasis. Jesus warned that "false Christs and false prophets will arise and show great signs and wonders, so as to lead astray, if possible, even the elect" (Mt. 24:24; cf. Mk. 13:22). This will occur especially at the end of the age and the consummation of the Kingdom (2 Thess. 2:9f.; Rev. 13:13f.; 16:14; 19:20). The emphasis throughout Scripture is that both the message and the signs must be from God (cf. Acts 4:29f. for a positive example of this point). Signs substantiate an authentic word from God, but many false prophets try to validate false messages with signs. Both Testaments teach that the people of God must be discerning in this matter.

V. R. GORDON

SIGNAL [Heb. *môʿēḏ*] ("appointed signal," Jgs. 20:38); AV APPOINTED SIGN; NEB AGREED SIGNAL; [*maśʾēṯ*] (Jgs. 20:40; Jer. 6:1); AV FLAME, SIGN OF FIRE; NEB BEACON, also omits; [*nēs*] (Isa. 5:26; 13:2; 18:3; 30:17; 49:22); AV ENSIGN, BANNER, STANDARD; NEB also STANDARD, SIGNAL POST; [*šāraq*] (Zec. 10:8); AV HISS; NEB WHISTLE. Previously arranged signs gave warning or commanded the people to rally together. They were visual, e.g., smoke and fire (Jgs. 20:38, 40) and signal posts (*nēs*), or audible, e.g., trumpet blasts, shouts, and whistles (*šāraq*). On blowing an alarm *see* BLOW 1. *See also* BANNER; SIGN; STANDARD.

SIGNATURE [Heb. *tāw*] (Job 31:35); AV "desire"; NEB omits. The allusion in Job is to the legal process of a defendant's putting his mark or "signature" upon a written statement of his innocence. Curiously, *tāw* is derived from the last letter of the Hebrew alphabet, which in ancient times was written somewhat like the English X, the mark used by illiterate people today. Cf. Ezk. 9:4, 6, where the RSV renders "mark" for Heb. *tāw*. References to the signing of legal documents also occur in Jer. 32:10, 12 (deed) and Dnl. 6:8-10, 12f. (royal edict).

G. WYPER

SIGNET [Heb. *ḥôṯām*–'seal'] (Gen. 38:18; Ex. 28:11, 21, 36; Jer. 22:24; etc.); NEB SEAL, SIGNET-RING, etc.; [*ḥôṯemeṯ*–'sealing-apparatus,' 'signet ring'] (Gen. 38:25); NEB "engraving on the seal"; [*ṭabbaʿaṯ*–'signet-ring,' 'ring'] (Gen. 41:42; Ex. 35:22; Isa. 3:21; etc.); AV RING; NEB SIGNET RING, FINGER-RING; [Aram. *ʿizqâ*–'signet-ring'] (Dnl. 6:17 [MT 18]). In Ezk. 28:12 the RSV emends the MT, which has the part. *ḥôṯēm* (cf. AV "seal up"; NEB "set the seal"), to read *ḥôṯām*, following the LXX, Syr., and Vulg. (see W. Zimmerli, *Ezekiel*, II [Eng. tr., *Hermeneia*, 1983], 81, 91f.). A signet was a seal engraved with a personal insignia that left an impression when pressed upon soft clay or wax. It was usually worn either as a ring on the finger or on a cord around the neck. *See* RING; SEAL.

The RSV often uses "signet" to translate Heb. *ḥôṯām* (< vb. *ḥāṯam*, "seal, affix a seal"). E. A. Speiser suggested that "seal and . . . cord" in Gen. 38:18 be construed as "the seal on the cord," since this best reflects the ancient Near Eastern convention of wearing a cylinder seal on a cord around the neck (*Genesis* [*AB*, 2nd ed. 1978], p. 298). In v. 25 the Hebrew term is the hapax legomenon *ḥōṯemeṯ*, a cognate of *ḥôṯām*.

According to Ex. 28:11, 21, 36 (cf. 39:6, 14, 30) engraved stones were affixed to the priest's ephod and breastpiece, and an engraved golden plate was fastened to his turban. Possibly these engraved stones and plate functioned like a signet ring in that they symbolized Yahweh's signature on His chosen people (cf. G. A. F.Knight, *Theology as Narration* [1976], p. 172). In Jer. 22:24 the removal of the signet ring symbolizes Yahweh's rejection of Coniah (i.e., Jehoiachin; cf. 52:31) as His official representative; this action is reversed, however, in Hag. 2:23, where Yahweh promises to make Zerubbabel "like a signet ring."

Another term that often designates the special ring used to seal and authenticate documents is Heb. *ṭabbaʿaṯ*. When Joseph became the Egyptian vizier he received from Pharaoh the royal seal, which enabled him to issue authoritative commands (Gen. 41:42). King Ahasuerus gave his signet ring to wicked Haman (Est. 3:10; cf. v. 12); later, however, the king retrieved his ring from Haman and gave it to Mordecai (8:2; cf. vv. 8-14). *Ṭabbaʿaṯ* also appears in several lists of jewelry items: those given by individual Israelites for the building of the tabernacle (Ex. 35:22), those acquired as war booty from the Midianites and offered by the Israelites to the Lord (Nu. 31:50), and those flaunted in Isaiah's time by members of the upper classes (Isa. 3:21; *see* GARMENTS IX).

According to Dnl. 6:17 (MT 18) King Darius used his signet ring (Aram. *ʿizqâ*, perhaps < Heb. *ʿāzaq*, "go around") to seal the rock that closed the opening to the lion's den into which Daniel was thrown. G. L. KNAPP

SIGNPOST [Heb. *yāḏ*] (Ezk. 21:19 [MT 24]); AV PLACE. A monument indicating where a road leads. The prophet Ezekiel was commanded by God to draw a map of Nebuchadrezzar's route from Babylon, with signs indicating alternative routes to Rabbah of the Ammonites and to Jerusalem. This symbolic action pointed to God's impending judgment against Jerusalem. For the use of *yāḏ* in the sense of a signpost or monument, cf. 1 S. 15:12; 2 S. 18:18.

SIGNS, NUMERICAL. *See* NUMBER.

SIGNS OF THE HEAVENS. *See* ASTRONOMY II.B.

SIHON sī'hon [Heb. *sîḥôn, sîḥôn*]. The Amorite king of HESHBON, who was defeated by the Israelites on their journey from Egypt to Palestine.

Under Moses' leadership the Israelites requested permission to pass through Sihon's territory (Nu. 21:21f.), which is said to have extended from the Arnon (Wâdī Môjib) N to the Jabbok (Wâdī Zerqā; v. 24; cf. Josh. 12:2f., 5), as they journeyed toward the Jordan in order to invade Palestine. Although the Israelites offered terms of peace (v. 22; cf. Dt. 20:10), Sihon refused their request and came out to fight against them (Nu. 21:23). God gave Israel their first taste of victory when they slew Sihon, defeated his forces, and took control of Heshbon and the other Amorite cities under his control (vv. 24f.). Soon after this Israelite victory, Og king of Bashan, another Amorite king who was probably an ally of Sihon, engaged the Israelites in battle at Edrei (v. 33); He met the same fate as Sihon (vv. 34f.; cf. Dt. 4:46f). When the land of Canaan was divided among the twelve tribes of Israel, the territory of Sihon and Og was assigned to Reuben and Gad and several clans from Manasseh (Nu. 32:33; cf. Josh. 13:8-12, 21, 27). In King Solomon's time this territory formed one of the twelve administrative districts (1 K. 4:19).

Israel's triumph over Sihon and Og is recalled and celebrated in its sacred traditions. An early victory song of either Israelite or Amorite origin is included in the narrative of Nu. 21 (vv. 27-30; cf. Jer. 48:45; see comms.). Shortly before the Israelites crossed into Canaan, Moses retold the story of these victories (Dt. 2:24–3:11; 29:7; 31:4) as an indication of what they might expect in Canaan. The Transjordan victory thus became a symbol of Yahweh's fidelity to His people (cf. Jgs. 11:19-23; Neh. 9:22; Ps. 135:10-12; 136:19) and a cause of terror for the surrounding nations (Josh. 2:10f.; 9:9f.).

SIHOR LIBNATH. *See* SHIHOR LIBNATH.

SILAS sī'las [Gk. *Silas*]; **SILVANUS** sil-vā'nəs [Gk. *Silouanos*]. A leader of the Jerusalem church who was later involved in ministries with Paul and Peter.

I. Name.–There is little doubt that Silas of Acts and Silvanus of the Epistles are the same person. Luke consistently uses the shorter name "Silas," which was likely used in Jewish circles (Acts 15:22-40; 16:19-29; 17:10-15; 18:5). Paul and Peter invariably refer to "Silvanus," the name that would have been recognized in Hellenistic and Roman communities (2 Cor. 1:19; 1 Thess. 1:1; 2 Thess. 1:1; 1 Pet. 5:12).

The name Silas is probably related to the Semitic name Saul (Aram. *šᵉ'îlâ* or OT Heb. *Šā'ûl*, "asked for"). Less likely is the suggestion that it is related to Heb. *Šelaḥ*, the name of a descendant of Shem (Gen. 10:24), the Hebrew equivalent of Tertius (who, like Silas, was an amanuensis, Rom. 16:22; cf. 1 Pet. 5:12).

The name Silvanus (which in Latin means "from the woods") has been regarded as : (1) the Latinized form of Silas (the Graecized form of a Semitic name), (2) a cognomen given because of its similarity to Silas, or (3) a longer name, of which Silas is an abbreviation. The first two suggestions are likely both correct (see Bruce, *Acts of the Apostles*, p. 301); the contracted form of Silvanus would have been Silvas. Like Paul (also called Saul), Silas probably used both names and had them from his birth. And, like Paul, he seems to have been a Jew with the advantage of Roman citizenship (Acts 16:37).

II. Missionary Activity.–Silas is first mentioned as the traveling companion of Judas Barsabbas (Acts 15:22-33). Together they were sent by the Jerusalem Council to Antioch to convey and interpret the council's decision that Gentiles were free from the obligation of circumcision. Silas and Judas were chosen because they were "leading men among the brethren" (v. 22). They are also described as "prophets" who "exhorted the brethren with many words and strengthened them" (v. 32). It appears that Silas and Judas may also have been the ones who drafted the council's letter; in the earliest NT MSS v. 23 begins with the phrase *grápsantes diá cheirós autón* (lit. "having written by their hand").

Evidently Silas made a very favorable impression on Paul in Antioch, for after Paul and Barnabas parted ways due to a disagreement over taking Mark with them, Paul chose Silas to accompany him on his second missionary journey (Acts 15:36-41). Either Silas had been recalled to Antioch after returning to Jerusalem with Judas, or (according to the Western text) he had remained in Antioch when Judas returned to Jerusalem (see vv. 33f., RSV mg.). In either case, he seems to have traveled with Paul through Syria and the provinces of Cilicia, Galatia, and Asia en route to Macedonia, although he is not specifically mentioned until the trouble in Philippi (16:19).

Silas was associated with Paul in his Philippian ministry and imprisonment, the jailer's conversion, and their subsequent release (Acts 16:11-40). He also shared Paul's ministry in Thessalonica and in Beroea, where he and Timothy remained after Paul left under the pressure of Jewish opposition (17:1-14). Paul sent a message from Athens indicating that Silas and Timothy were to come immediately (17:15), but he was in Corinth when they finally reached him (18:5). Silas is last seen at Corinth in the writings of both Paul and Luke; cf. 2 Cor. 1:19, where he is mentioned as Paul's co-worker at Corinth. Silas's ability to continue working in Beroea after Paul was compelled to leave may indicate that he was less controversial than Paul (17:14); but he was apparently more controversial than Luke, who was not arrested in Philippi.

III. Literary Activity.–The Epistles to the Thessalonians were written from Corinth, the last place in which Paul and Silas are known to have worked together. Both letters open with salutations from "Paul, Silvanus, and Timothy." Although the precedence of Paul's name and the occasional use of "I" show that Paul was the most important figure in the writing, the joint salutations and frequent use of "we" throughout the Epistles suggest joint authorship by Paul and Silas (not Timothy; cf. 1 Thess. 3:2, 6). The Thessalonians, who had seen these men in a cooperative ministry and had known the work of Silas longer than that of Paul, would have recognized a mutual authorship in the sentiments expressed. The actual writing was very possibly by the hand of Silas.

It is highly probable that the "faithful brother" mentioned as the amanuensis of 1 Peter (1 Pet. 5:12) is the same Silvanus who assisted Paul. This suggests that sometime after his ministry in Corinth, Silas served as Peter's associate in Rome. Scholars have observed that this letter reflects a style, vocabulary, and thought that are strangely Pauline. The solution to this puzzle may lie in Silvanus's work as Peter's amanuensis. Silvanus would have developed a familiarity with Paul's thinking and expression, and thus his style would likely show Pauline characteristics. Probably Silvanus wrote out what Peter had dictated only in basic outline. The letter's message remains Peter's, but its composition was committed to Silvanus as the person most able to express Peter's views and meet the needs of the gentile readers of Asia Minor. Silvanus was very likely also the person who carried the letter to the places listed in 1:1. In Peter's service, as in his service for the Jerusalem Council, Silvanus was responsible for expressing his thoughts in written form and expounding them to those who read the letter.

SILENCE; (BE) SILENT [Heb. *ḥāraš* (Job 6:24; 11:3; 13:19; Jer. 4:19; etc.), *ḥāšâ* (Ps. 28:1; Isa. 64:12 [MT 11]; etc.), *hās, dāmam* (Ps. 30:12 [MT 13]; etc.), *dûmîy, dᵉmāmâ, dûmām, dûmâ* (Ps. 62:1, 5 [MT 2, 6]; Isa. 41:1; etc.), *sāḳaṭ*; Gk. *siōpáō, sigáō, sigḗ, phimóō, hēsycházō, hēsychía phrássō, epistomízō*]; AV also "hold [one's] peace," "hold [one's] tongue," BE STILL (Ps. 4:4 [MT 5]), "keep [it] close" (Lk. 9:36), etc.; NEB also QUIETLY (Gen. 24:21), "be hushed" (Hab. 2:20), "not address" (1 Cor. 14:28, 34), (BE) QUIET (Mt. 20:31; Acts 12:17; 1 Tim. 2:12), "hold [one's] peace," "hold [one's] tongue," "curb" (Tit. 1:11), etc.

The fifty-one appearances of "silence" and "silent" in the RSV OT represent several Hebrew words with differing nuances of meaning and usage. By far the most common is the verb *ḥāraš* which in the narrowest sense means "be deaf and dumb," but in a wider sense can denote a deliberate silence by someone who is capable of speech. This notion of an active, intentional silence is most characteristic of the OT use of *ḥāraš*, whether in reference to God (Ps. 35:22; 50:3, 21 [MT 5, 23]; 109:1; Hab. 1:13) or to human beings. This silence may be an act of discretion (e.g., Gen. 24:21; Job 13:5; 33:33), for the lack of such restraint often proves a person unwise (Job 13:5; Prov. 11:12; 17:28). It may also be due to caution (2 K. 18:36 par. Isa. 36:21) or shame (Neh. 5:8; cf. Job 11:3). The

verb is used with strong urgency in pleas to others not to remain silent (e.g., Est.4:14), especially in prayers directed to God (Ps. 28:1; 35:22; 109:1; cf. RSV "hold thy peace" in 39:12 [MT 13]; 83:1 [2]; cf. the expression of confidence in 50:3).

The verb *ḥāšâ* generally means to refrain from speaking. In Eccl. 3:7, e.g., it is the antithesis of speaking. In some passages, however, it takes on the wider sense of passivity or inactivity (2 K. 7:9; Ps. 28:1; 62:1, 5 [MT 2, 6]). Similiar in meaning is the injection *hās,* "Silence! Hush!" (Jgs. 3:19; Am. 8:3 [cf. RSV mg.]; Hab. 2:20; Zeph. 1:7; Zec. 2:13 [MT 16]). The verb *sāqaṭ* in Dt. 27:9 means "keep silence and listen," i.e., "pay attention" (cf. AV "take heed").

The verbs *dāmam* and the nouns *dûmîy, dûmâ, dûmām, dᵉmāmâ,* and *dᵉmî* derive from the roots *dmh, dmm,* and *dwm,* which are difficult to differentiate in meaning. They are used frequently in contexts that announce impending catastrophe (e.g., *dāmām in Am. 5:13; dûmām* in Isa. 47:5) or lament one that has already struck (e.g., *dāmām* in Lam. 2:10; 3:28). Linked with this silence is often a kind of "quiet expectation" of a favorable response; cf. *dûmîyâ* in Ps. 39:2 (MT 3); 62:1 (MT 2), and *dāmām* in Ps. 30:12 (MT 13) and Job 29:21 (where the expectation is directed not to God, but to Job); cf. also *dûmām* in Lam. 3:26 (RSV "quietly"). The RSV renders *dᵉmāmâ* by "silence" in Job 4:16 but by "still" in Ps. 107:29 and in the Elijah theophany in 1 K. 19:12. In each passage God's revelation comes not in noise and tumult but in a calm, almost inaudible form (cf. NEB). The term *dûmâ,* on the other hand, connotes the silence of death in Ps. 94:17 (RSV "land of silence"; NEB "silent grave") and 115:17; in both passages the LXX renders *dûmâ* by "Hades").

Of the NT verbs rendered "be silent," the most common is Gk. *siōpáō,* which can mean either "keep silent" (Mt. 26:63; Mk. 3:4; 9:34; 14:61; Acts 18:9) or "stop talking" (Mt. 20:31; Mk. 10:48; Lk. 19:40); in Lk. 1:20 it connotes being silent due to an inability to speak (AV "dumb").

The verb *sigáō* is used in Lk. 18:39; 20:26; Acts 12:17; 15:12; 1 Cor. 14:28, 30, 34 with the meaning "say nothing" or "stop speaking." Paul's admonition to women to "keep silence in the churches" (1 Cor. 14:34) is problematic, especially in the light of his earlier recognition of their right to pray and prophesy in worship (11:2-16). Of the numerous suggestions for interpreting this admonition, the most significant are: (1) Paul was responding to the disorderly conduct of some women in Corinth who noisily interrupted worship, questioning and arguing with their husbands (the context, esp. v. 35, suggests that "wives" are intended), and thereby violating the accepted rules of propriety and/or rejecting their husbands' authority; (2) Paul was addressing the need for the Corinthian women to dissociate themselves from the ways of some in the secular community of Corinth, especially the temple prostitutes; (3) Paul's prohibition was meant to refer specifically to women speaking in tongues (cf. the broader context of ch. 14); (4) these verses were a later interpolation, not part of Paul's original letter (in light of the apparent contradiction with 11:2-16 and the appearance of vv. 34-36 at other places in some MSS); (5) The admonition in vv. 33-35 is actually a Pauline quotation of the position of some of the members of the Corinthian church, which Paul refutes in v. 36 (for discussion of these interpretations, see comms.). *Sigáō* is also used in the sense of "hold one's tongue," i.e., keeping something secret, in Lk. 9:36.

Several verbs are used in the sense of silencing the arguments of opponents, e.g., *epistomízō* (lit. "stop the mouth," Tit. 1:11), *phrássō* (lit. "shut," "stop," 2 Cor. 11:10), *sigáō* (Acts 15:12), *phimóō* (lit. "muzzle," 1 Pet. 2:15), *hēsycházō* (Acts 11:18), and *siōpáō* (Mk. 9:34). The Gospels depict Jesus as demonstrating His authority by silencing the demons (*phimóō,* Mk. 1:25 par. Lk. 4:35) as well as His human adversaries (*siōpáō,* Mk. 3:4; *hēsycházō,* Lk. 14:4; *sigáō,* 20:26; *phimóō,* Mt. 22:34).

The noun *sigḗ* (cognate of *sigáō*), denoting the absence of all noise, is used in Rev. 8:1 to describe the silence in heaven that occurs between the seven seals and the seven trumpets. This silence has been understood in three basic ways. (1) Some view it as a dramatic pause, something like the silence before the foreman of a jury reports a verdict. (2) Others understand it as a return to the total stillness that existed at creation (an expectation attested in various apocalyptic writings, e.g., 2 Esd. 7:29ff.). (3) Still others read it in light of the Talmudic tractate *Hagigah* (12b), which describes how God silenced the angels by day so that He might hear the prayers of Israel and show them His lovingkindness; in Rev. 8:1, however, all heaven is silenced, and in vv. 3f. the prayers of the saints are presented to God by an angel.

Finally, the noun *hēsychía* (cognate of *hēsycházō*) is used in 1 Tim. 2:11f. with regard to the demeanor of women in the Church. The primary meaning of this word is not "silence" (so RSV, AV) but "quiet," often in the sense of a quiet disposition (so NEB and the majority of English versions including NASV and NIV; see Bauer, MM, Thayer). The other NT uses of *hēsychía* and the adjective *hēsýchios* are instructive at this point (*see* QUIET).

When Paul wished to specify "silence" he commonly used *sigáō* (1 Cor. 14:28, 30, 34) rather than *hēsychía.* The context of 1 Tim. 2:11f. also supports the translation "quiet" (i.e., inner tranquility and freedom from outward disturbance), since it forms a natural pair with "submission" in v. 11 and a natural contrast to "domineer" or "lord it over" (*authentéō*) in v. 12.

SILK [Heb. *mešî*] (Ezk. 16:10, 13); NEB LAWN; [Gk. *sirikón*] (Rev. 18:12). It is improbable that true Oriental silk from silkworms was known to the people of the biblical world, although some words denoting fabric are so translated by the RSV. In Ezk. 16:10 Heb. *mešî* refers to a very fine and expensive cloth, as does the rhyming expression *šeši wameši* in v. 13 (for *šeš see* LINEN). In Rev. 18:12 the substantive *sirikón* more likely refers to cloth dyed with "syricon," a red dye from the coast of Syria (*see* PURPLE). D. IRVIN

SILLA sil'ə [Heb. *sillā'*–'embankment'; LXX B *Gaalla,* A *Gaalad*]. An embankment toward which Joash was going when he was assassinated by his servants at the house of Millo (2 K. 12:20 [MT 21]). Nothing is known of what it was or where it stood. The LXX readings suggest that the text may be corrupt. See J. Gray, *I & II Kings* (*OTL,* 2nd ed. 1970), p. 590 n.a.

SILOAM si-lō'əm [Gk. *Silōam*] (Lk. 13:4; Jn. 9:7, 11); **SHILOAH** shī-lō'ə [Heb. *šilō(a)ḥ*–'sent,' 'conducted'] (Isa. 8:6); **SHELAH** shē'lə [Heb. *šelaḥ*] (Neh. 3:15); AV (in Nehemiah) SILOAH. A name that, in view of its meaning ("conducted"), was probably applied first to an aqueduct on the east side of Jerusalem, then to one or more pools connected with Jerusalem's water supply, and finally to an area (where the tower of Lk. 13:4 stood) adjoining the southeast hill. It survives today as the name of an Arab village there (Silwan).

I. Early History.–The waters of Siloam issue from the

spring GIHON (2), commonly known as the "Virgin's Fount," and originally flowed naturally SSW down the lower part of the Kidron Valley. Possibly in Solomon's reign and certainly before Isaiah's lifetime, some of the water was "conducted" by an open aqueduct, traces of which remain, down to a pool just inside the southeast city wall. Isa. 8:6 (Shiloah) refers to the aqueduct, Neh. 3:15 (Shelah) to the pool. The latter was possibly identical with the King's Pool (Neh. 2:14) and may also have been known as the lower pool and/or the old pool (Isa. 22:9-11; *see* pictures in POOL). But various obscurities surround these identifications, and modern scholars have by no means agreed about them.

II. Hezekiah's Tunnel.–Late in the 8th cent. B.C. Hezekiah, faced with imminent Assyrian invasion, improved Jerusalem's water supply by constructing an underground aqueduct from Gihon into the city and a new reservoir to take the water (2 K. 20:20). "This same Hezekiah closed the upper outlet of the waters of Gihon and directed them down to the west side of the city of David" (2 Ch. 32:30). "A great many people were gathered, and they stopped all the springs and the brook that flowed through the land, saying, 'Why should the kings of Assyria come and find much water?'" (v. 4; see also Sir. 48:17). Probably the exit of the water at Gihon was entirely covered up, and the water flowed through 533 m. (1749 ft.) of tunnel and emerged in the pool made for it near the mouth of the Tyropoeon Valley. This second reservoir lay some 100 m. (330 ft.) NW of the earlier pool, which seems to have taken the overflow from it. The tunnel was now the aqueduct, and hence the name Shiloah was transferred to it and presumably to the new pool.

The upper pool of Siloam (Birket es-Silwān) connecting with Hezekiah's tunnel (L. K. Smith)

More recent excavations have suggested that the new pool was not an open reservoir but an underground cistern, of which only the access point needed to lie inside the city walls; an underground channel conducted the overflow into the earlier pool (so K. M. Kenyon, *PEQ* [1965], p. 15).

See also WATER WORKS IV.

III. The NT and Josephus.–Although Jn. 9:7 gives no details to aid certain identification, two facts support the probability that the NT pool of Siloam was the upper pool rather than the original lower-lying pool of Shelah. First, Josephus several times called Siloam a "spring" (Gk. *pēgḗ*), by which he meant the mouth of the tunnel. Second, a fifth-century Christian church was built, doubtless to commemorate the miracle by Jesus, at the exit of the tunnel. On the other hand, Josephus further stated that the "spring" of Siloam was at the mouth of the Tyropoeon Valley (*BJ* v.4.1 [140]); this description seems rather to support the identification with the earlier pool, where traces of Herodian buildings have been found. The identification of the NT Siloam with the upper pool is not, therefore, absolutely certain. Thus the identification of the "tower in Siloam" (Lk. 13:4) also remains uncertain (see I. H. Marshall, *Gospel of Luke* [*NIGTC*, 1978], p. 554).

IV. Present Situation.–The site of the earlier pool is today known as Birket el Ḥamra, "the red pool," even though it is now dry. The upper pool still preserves the biblical name as Birket es-Silwān, "the pool of Siloam." Hezekiah's tunnel still opens into it, and the water is still known as a "spring" (Ain Silwān). The pool is used by local people, though the water is brackish and unpleasant to taste. It is possible, except when the water level is exceptionally high, to wade into and along the tunnel.

V. Siloam Inscription.–The underground aqueduct of Hezekiah has been known for some centuries, but it was not until A.D. 1880 that an inscription in the tunnel wall, just inside the southern end, came to light. Removed from the wall, it is now in the museum of Istanbul. Famous as one of the earliest known Hebrew inscriptions, it reads as follows (according to Snaith): "(? the completing of) the piercing through. And this is the story of the piercing through. While (the stone-cutters were swinging their) axes, each towards his fellow, and while there were yet three cubits to be pierced through, (there was heard) the voice of a man calling to his fellow, for there was a crevice (?) on the right. . . . Then ran the water from the spring to the Pool for twelve hundred cubits, and a hundred cubits was the height of the rock above the head of the stone-cutters." (*See* picture in HEZEKIAH.)

SILVANUS. *See* SILAS.

SILVANUS, TEACHINGS OF. An apocryphal work attributed to the traveling companion of Paul, but probably dating from the late 2nd or early 3rd cent.; one of the documents discovered at Nag Hammadi (Codex VII, tractate 4; *see* NAG HAMMADI LITERATURE). The tractate is unusual in that it is not Gnostic, and it was apparently

used by early monastic communities in Egypt (see J. M. Robinson, ed., *Nag Hammadi Library* [1977], pp. 346-361).

SILVER [Heb. *kesep*; Gk. *argýreos*–'made of silver,' *argýrion*–'money,' *árgyros*–'silver'].

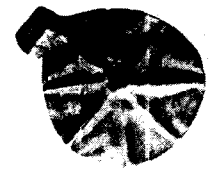
I. General.–Silver, often called the "pale metal," occurs rarely in a native state, being found most frequently in lead-silver ores (often lead sulphide, called galena) and copper-silver ores (such as tetrahedrite, a sulphide of copper and antimony). Silver is not difficult to extract, as its presence from earliest antiquity demonstrates. Much of it was derived from the cupellation of lead.

Silver mining and metallurgy must have been known in the ancient Near East by 3000 B.C., judging from the finds of fine silver objects at Ur and especially at Ebla (Tell Mardikh in Syria). The Ebla tablets give evidence of the extensive use of silver in trade. Specifically, some texts give the value of cattle in silver, received as tribute from Mari. These tablets show that Ebla received great amounts of silver; they mention some 2188 minas of silver as compared with only 134.26 minas of gold (one mina equals 470 grams, as at Râs Shamrah). Silver bars, daggers, adze-heads, and small shovels are articles that were probably used for ceremonial purposes.

Silver was valued for jewelry and amulets, as a standard for business transactions, and as a measure of wealth. In Gen. 13:2, the first biblical reference to silver, Abraham's possession of this "pale metal," along with his cattle and his gold, marks him as a wealthy man. Jgs. 17:4 indicates that Israelites knew of silvercraft; Micah's mother took eleven hundred pieces of silver to a silversmith to fashion an idol (vv. 1-6).

II. OT.–The OT has about four hundred references to silver (*CHAL*, p. 162). Silver is regularly mentioned before gold (except in Chronicles and Deuteronomy), which may point to its higher value in Israelite eyes despite its being rather common in Solomon's day (1 K. 10:27; 2 Ch. 9:27).

As a raw material silver could be used for various purposes (Ex. 31:4; 35:24, 32; 1 K. 15:15). It was mined (Job 28:1) and refined (Ezk. 22:20-22; Zec. 13:9; Mal. 3:2f.), sometimes in a CRUCIBLE (Prov. 17:3; 27:21), to produce a choice silver (Prov. 10:20; 1 Ch. 29:4).



An electrum pendant with eight rays found in a cellar fill at Shechem (1400-1350 B.C.) (Joint Expedition to Shechem, photo L. C. Ellenberger)

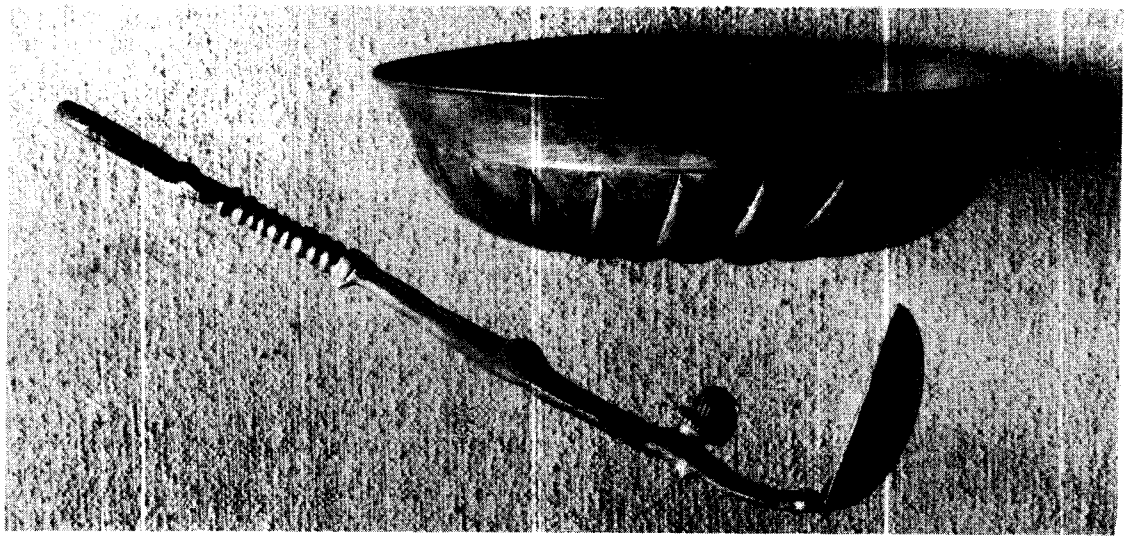
From the patriarchal period to the restoration of Israel after the Exile, silver was considered a standard of wealth (e.g., Gen. 13:2; 24:35; Zeph. 1:18; Hag. 2:8). Before the minting of coinage, silver was weighed out in shekels, talents, or minas (Gen. 23:15f.; 37:28; 45:22; Ex. 21:32; Lev. 27:16; 2 S. 24:24; Neh. 7:72; Isa. 7:23; cf. Gen. 20:16; Josh. 24:32; Jgs. 17:10; Job 28:15; Isa. 46:6; Am. 2:6; 8:6). *See* MONEY.

Silver was used for special articles of value and prestige, e.g., a noble's drinking cup (Gen. 44:2), a royal crown (Zec. 6:11), personal ornaments (Gen. 24:53; Ex. 3:22; 11:2; 12:35; Cant. 1:11), and idols (Ex. 20:23; Dt. 29:17; Jgs. 17:4; Ps. 115:4; 135:15; Isa. 2:20; 30:22; 31:7; 40:19; Jer. 10:4; Dnl. 2:32f.; Hos. 13:2).

The tabernacle was adorned with silver in its foundations (Ex. 26:19; 36:24, 26), its decorations (Ex. 27:10, 17), some of its vessels for worship (Nu. 7:13f.), and the trumpets used to summon the worshipers (10:2). Later silver was used in the Jerusalem temple and its treasury (1 K. 7:51; 1 Ch. 28:15f.; 2 Ch. 2:7; Ezr. 8:26, 28; Neh. 7:71).

Figuratively, the biblical writers used silver to symbolize great wealth or value (Job 3:15; 22:25; 27:16; Isa. 60:17; Zec. 9:3), but they viewed it as less valuable than wisdom (Job 28:15; Prov. 3:14; 8:19; 10:20; 16:16; 22:1). Silver is compared to the purity of God's word (Ps. 12:6 [MT 7]), to wise words (Prov. 25:11), and to the brightness

A fluted silver bowl and elaborately formed ladle of the Persian period from Tell el-Far'ah (S) (550-330 B.C.). The ladle is shaped like a woman with arms extending to the spoon and feet connected to the handle, which is shaped like two bulls' heads under a large ring (courtesy, Israel Department of Antiquities and Museums)



A skillfully designed silver tetradrachm of the 5th cent. B.C. It shows a squatting Silenus on the reverse side with letters reading *NAXOS*; on the front is the head of Dionysus (Naxos, Sicily) (courtesy of the Trustees of the British Museum)

of a dove's wings (Ps. 68:13 [MT 14]). Conversely, corroded silver could signify the spiritual deterioration of a people (Isa. 1:22; Jer. 6:30). The refining of silver is sometimes used as a figure for God's testing or purifying the hearts of His people (e.g., Ps. 66:10; Isa. 48:10). *See* REFINE II.

III. NT.–Three Greek words are used for silver. Gk. *argýreos* denotes things made with silver, such as vessels in a great house (2 Tim. 2:20), idols (Rev. 9:20), and the shrines of Artemis made by Demetrius the silversmith and his craftsmen (Acts 19:23-27).

Argýrion signifies money, e.g., Judas's thirty pieces of silver (Mt. 26:15; 27:3, 5f., 9). The value of all the books on the magic arts burned at Ephesus came to fifty thousand pieces of silver (Acts 19:19). Peter had no *argýrion* (3:6), and Paul received none for his preaching (20:33). Silver cannot ransom human souls from sin (1 Pet. 1:18).

Árgyros denotes silver in a general sense. Jesus instructed His disciples not to take silver with them on their missionary venture (Mt. 10:9). Speaking at the Areopagus, Paul told the Athenians that they should not think of the Deity in terms of things like silver (Acts 17:29). In 1 Cor. 3:12 he mentioned silver as a building material symbolic of the quality of a person's work. In Jas. 5:3 corroded silver represents the ephemeral character of all human wealth. Finally, in Rev. 18:12 silver is part of Babylon's cargo, which brings only weeping instead of joy.

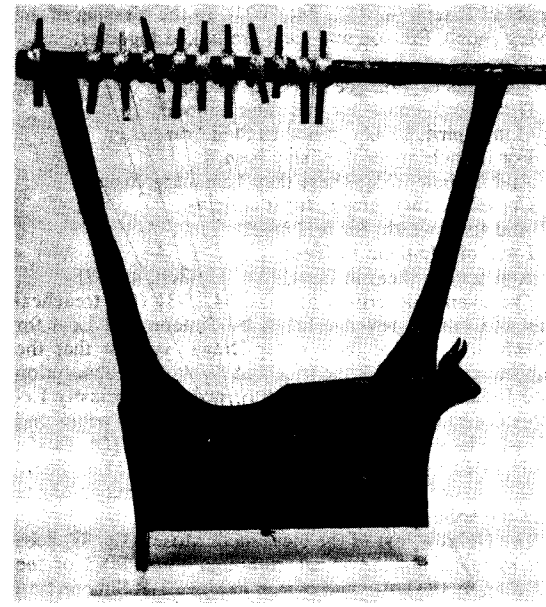
SILVERLING. The AV translation of Heb. *kesep* ("silver") in Isa. 7:23; the RSV has "shekels of silver." *See* MONEY.

SILVERSMITH [Heb. *ṣōrēp*] (Jgs. 17:4); AV FOUNDER; [Gk. *argyrokópos*] (Acts 19:24). A craftsman who makes articles of silver. Known from the ancient Near East as early as 3000 B.C., this skilled craftsman's art has been found at Tell Mardikh (Ebla) in such artifacts as silver bars, daggers, adze-heads, and small ceremonial shovels, as well as finely crafted jewelry and amulets. From Ur (*ca.* 2500 B.C.) comes evidence of Sumerian silver craft in musical instruments, pipes, statuettes, and filigree jewelry. Both direct and indirect biblical references reflect the activities of this artisan. The OT tells of a silversmith who plied his trade as early as the period of the Judges (*ca.* 1200-1000 B.C.), using pieces of silver to fashion an idol for Micah's mother (Jgs. 17:4).



A silver lyre with a bull's head found in the Ur "death pit" (*ca.* 2500 B.C., restored) (courtesy of the Trustees of the British Museum)

The OT writers recognized that each metal craft required different implements and techniques: "The crucible is for silver, and the furnace is for gold" (Prov. 17:3; 27:21). They were familiar with the methods of refining silver, and they were aware that various grades of silver could be produced (cf. Ezk. 22:20; Zec. 13:9; Mal. 3:2f.; "choice silver," Prov. 10:20; "refined silver," 1 Ch. 29:4). Refining silver was a more delicate process than refining some other metals (*see* REFINE). A. Robinson explained why this is so: "Molten silver gives off twenty times its own volume of oxygen with a hissing and bubbling known as 'spitting.' Unless the molten silver is treated with carbon (charcoal was used by the ancients), the silver reabsorbs oxygen from the air and loses its sheen and purity. . . . How does the refiner know when the silver is ready? . . . There is a dramatic moment when he knows that all dross has gone from it. Peering over it, the silver suddenly becomes a liquid mirror in which the image of the refiner is reflected. Then he knows that his task is done" (pp. 189f.).

The NT names one specific silversmith, Demetrius of Ephesus (Acts 19:24). Demetrius made silver shrines of the goddess Artemis and headed a band of craftsmen and other workers who opposed the Apostle Paul (vv. 23-41).

SIMALCUE sī-mal-kū'ē (1 Macc. 22:39, AV). *See* IMALKUE.

SIMEON sim'ē-ən [Heb. *šim'ôn*–'hearing'; Gk. *Symeōn*]; NEB also SYMEON (Lk. 3:30); **SIMEONITES** - īts [Heb. *šim'ōnî*].

1. The second son of Jacob by Leah; and the tribe named for him. In Gen. 29:33 and 35:23 Simeon is named as a full brother of Reuben, Levi, Judah, Issachar, and Zebulun, all sons of Leah; in 34:25 he is called the brother of Levi and Dinah. He was left as a hostage in Egypt by

order of Joseph (42:18f., 24; 43:23). In the blessing of the dying Jacob, Simeon and Levi are linked together:

"Simeon and Levi are brothers:
Weapons of violence are their swords.
O my soul, come not into their council;
O my spirit, be not joined to their company;
For in their anger they slay men,
And in their wantonness they hamstring oxen.
Cursed be their anger, for it is fierce;
And their wrath, for it is cruel!
I will divide them in Jacob
And scatter them in Israel." (Gen. 49:5-7)

The events described in Gen. 34:25-31 (the treacherous and violent revenge taken by Simeon and Levi for Shechem's rape of their sister Dinah) suggest that the subsequent history of the tribe and its eventual absorption into Judah were the result of violence. (The priestly Levites became distributed throughout the other tribes and likewise lacked tribal inheritance of their own [Dt. 18:1f.; Josh. 13:14]). The mention (Gen. 46:10; Ex. 6:15) of Shaul as the son of Simeon and a Canaanite woman may indicate that the tribe was of mixed race.

The Hebrew text of the blessing of Moses (Dt. 33) does not mention Simeon at all, although some MSS of the LXX apply the latter half of v. 6 to him: "Let Simeon be a small company." The history of the tribe is scanty and raises many problems. Of the many theories advanced to meet them, none answers all difficulties.

In the wilderness of Sinai the Simeonites camped beside the Reubenites (Nu. 2:10, 12; 10:18f.). It was Zimri, a member of one of the leading families of the Simeonites, who was slain by Phinehas for his liaison with a Midianite woman at Baal-peor (25:6-8, 14). The number of the Simeonites is given as 59,300 in Nu. 1:22f.; 2:12f., but as 22,200 in the 2nd census (26;14); thus the tribe was apparently diminishing, a phenomenon that some have connected with the sin of Zimri.

In Moses' instructions for the recital of the law at Mt. Gerizim, Simeon is mentioned first among those that were to respond to the blessings (Dt. 27:12). Jgs. 1:3 reports that in the conquest of Canaan, "Judah said to Simeon his brother, 'come up with me into the territory allotted to me, that we may fight against the Canaanites; and I likewise will go with you into the territory allotted to you.' So Simeon went with him" (cf. v. 17). (Many scholars have found in Gen. 34 an attempt by the Simeonites to gain possession of Shechem; if this is so, Judah did not assist, and the utter failure of this attempt may have been a cause of Simeon's subsequent dependence upon and final absorption into Judah.) In Jgs. 4–5 Simeon is not mentioned at all. The accounts of the settlement of the land do not tell how Simeon established itself in its territory (except in the brief reference of Jgs. 1:3, 17); instead, "its inheritance was in the midst of the inheritance of the tribe of Judah" (Josh. 19:1), "because the portion of the tribe of Judah was too large for [it]" (v. 9). The very cities that are apportioned to Simeon in 19:2-8 are allotted to Judah in 15:21-32, cf. Neh. 11:26-29. 1 Ch. 4:31 suggests that Simeon's independent possession of these cities ceased in the time of David. When David sent spoil to the elders of Judah, some of it was intended for Simeonite towns (1 S. 30:26f.); yet 1 Ch. 12:23, 25 reports that 7100 Simeonite warriors came to David in Hebron, and 27:16 mentions a ruler of the Simeonites, Shephatiah son of Maacah.

1 Chronicles 4:34-43 mentions certain isolated exploits of Simeonites in the south, at Gebor, against the Meunim, and at Mt. Seir. Other references, however, associate Simeon with the northern kingdom (2 Ch. 15:9; 34:6f.). Tradition apparently viewed Simeon as one of the ten northern tribes (cf. Ezk. 48:23-25, 33; Rev. 7:4, 7), even though all their recorded history is bound up with Judah and the southern kingdom. There is no mention of the return of any Simeonites after the Captivity; their cities fell to Judah (Neh. 11:26f.).

The cities of Simeon as given in Josh. 19:2-7; 1 Ch. 4:28-32 are (the names in parentheses are variations in the latter reference): Beer-sheba, Sheba (omitted in Chronicles), Moladah, Hazar-shual, Balah (Bilhah), Ezem (AV Azem), Eltolad (Tolad), Bethul (Bethuel), Hormah, Ziklag, Beth-marcaboth, Hazar-susah (Hazar-susim), Beth-lebaoth (Beth-biri), Sharuhen (Shaaraim), (Etam), En-rimmon (Ain, Rimmon), Ether (Tochen), Ashan. The total is seventeen cities in Joshua and seventeen in 1 Chronicles. Ashan (1 Ch. 6:59) is the only one assigned to the priests; the name is Ain in Josh. 21:16. All the above cities, with certain variations in form, and with the exception of Etam in 1 Ch. 4:32, which is probably a mistake, occur in the list of the cities of Judah (Josh. 15:26-32, 42).

The order of the names is the same in all the lists with the exception of Beer-sheba, which is mentioned in Josh. 15:28 after Hazar-shual. It seems that the lists were based on the same original document but that a long list of names was added at the head of the list, and a group of three towns was inserted at the beginning of the list of Simeon towns, between Moladah and Hazar-shual. The list of the twelve districts in Josh. 15 was probably made after the division of the monarchy (i.e., after King Solomon's reign); but the towns of Simeon in 1 Ch. 4:31 are mentioned together with a chronological remark, "until David reigned," and this cannot be ignored. Aharoni also thought that the Chronicles list of towns of Simeon is meant to record in detail just the towns of this tribe, whereas the list in Josh. 15 is a description of the district of the Negeb of Judah. In the latter list all towns within the administrative district are mentioned including towns of other families and tribes, i.e., the sons of Caleb (vv. 13-19), the Jerahmeelites (cf. 1 Ch. 2:25ff.) the Kenites (Josh. 15:55-57; cf. 1 Ch. 2:55) and others. Some of the towns mentioned in the Joshua list were founded in Iron II, i.e., after the prototype list was compiled. This list contains only the territory of the archaic "Negeb E of Simeon," although this name is not mentioned in the Bible; in its place the later name "Negeb of Judah" is used, Beer-sheba being the center of this district.

E. W. G. MASTERMAN
A. A. SAARISALO

2. Great-grandfather of Judas Maccabeus (1 Macc. 2:1).

3. The Hebrew name of the Apostle Peter (Acts 15:14; 2 Pet. 1:1). Elsewhere in the NT the name is given as Simon. Heb. *šim'ôn* was a name common among the Jews. *See* PETER.

4. An elderly prophet who encountered the infant Jesus when Joseph and Mary brought Him to the temple to be circumcised (Lk. 2:25, 34). Simeon is described as "righteous and devout, looking for the consolation of Israel" (v. 25). Under inspiration of the Holy Spirit he recognized Jesus as Israel's Messiah and as the Savior of Gentiles as well as Jews, and he uttered prophecies concerning both Jesus and Mary; this blessing (vv. 29-32) is now called the Nunc Dimittis. Legend has made him the son of Hillel

and father of Gamaliel I, but this has no historical basis.

5. A member of Jesus' genealogical line (Lk. 3:30). This Simeon is listed as being born nine generations after King David, thirteen generations before Zerubbabel, and thirty-three generations before Jesus.

6. One of the prophets in the church at Antioch (Acts 13:1). He is also called Niger, which was a Latin name he had assumed (perhaps because of his dark complexion; so F. F. Bruce, *Acts* [*NICNT*, 1954], pp. 259f.), Simeon being Hebrew. He was among those who set apart Paul and Barnabas for their missionary work (vv. 2f.).

SIMEONITES. *See* SIMEON.

SIMILITUDE. *See* FIGURE; FORM; LIKEN; PARABLE.

SIMON (APOCRYPHA) [Gk. *Simōn* < Heb. *šim'ôn*].

1. Simon Chosamaeus (1 Esd. 9:32). 1 Esd. 9:18-36 (par. Ezr. 10:18-44) provides a list of those who were found by Ezra's select committee (1 Esd. 9:16f.) to have married foreign wives. Simon Chosamaeus, who appears among the "sons of Annan" (v. 32), is noteworthy only in that his second name is most likely the result of a copyist's error (*see* CHOSAMAEUS).

2. Simon the high priest (d. *ca.* 270 B.C.), son of Onias and grandson of Jaddua (high priest in the time of Nehemiah [Neh. 12:11, 22] and of Alexander the Great). Upon his death Simon was succeeded first by his brother Eleazar and then by his uncle Manasseh before his infant son Onias II came of age. There is considerable debate whether it was this Simon (conventionally called Simon I) or his grandson Simon II (high priest *ca.* 219-196 B.C.) who was called "the Just" (or "Righteous"). According to Josephus (*Ant.* xii.2.5 [43f.]; 4.1 [157f.]) the first Simon, whose brother Eleazar succeeded him as high priest, received this title. But in the Talmud (T.P. *Yoma* 43c-d; T.B. *Yoma* 39a-b; *Menahoth* 109b) it is the father of the Onias "who built a temple in Egypt" (Onias III, *ca.* 200 B.C.) — therefore, Simon II — who is so designated. Most scholars have concluded that the chronology of events suggested in the *Pirke Aboth*, where Simon the Just is also mentioned (Mish. *Aboth* i.1-12), supports Simon II as the one designated "the Just."

3. Simon II, high priest *ca.* 219-196 B.C., son of Onias II and father of Onias III. If, as most contemporary scholars consider likely, it was this Simon who was known as "the Just," then it is his achievements that are celebrated in Sir. 50:1-24. He was a member and important survivor of the Great Synagogue (or Assembly), which governed Jewish life in the years following Ezra. He is reported to have passed on the traditions of that assembly to Antigonus of Socho (*ca.* 200 B.C.) and, therefore, to subsequent teachers including Hillel and Shammai at the time of Jesus (Mish. *Aboth* i.1-12). To him also is attributed the saying, "On three things the world stands: on the Torah, and on the [temple] service, and on deeds of loving kindness" (*Aboth* i.2). In the hostilities between the Ptolemies of Egypt and Antiochus III of Syria (*ca.* 200-198 B.C.), Simon, along with most of the sons of Joseph Tobias, supported Antiochus against the Egyptians; following the Syrian victory, Antiochus rewarded this commitment by showing considerable leniency to the Jews, including the restoration of Jerusalem and the temple and exemption from certain taxes. (See also 3 Macc. 2:1.)

4. Simon the Benjaminite; "captain of the temple" (Gk. *prostátēs toú hieroú*) during the high priesthood of Onias III (2 Macc. 3–4). During the reign of Seleucus IV (187-175 B.C.), Simon and Onias quarreled over the administration of the city market (3:4). The dispute evidently had to do with ritual restrictions that the high priest had placed on trade with foreigners. When Simon was unsuccessful in this conflict, he reported to Apollonius the governor of Coelesyria that Onias was concealing in the temple treasury large sums of money that did not belong to the temple account. As Seleucus was then badly in need of funds to pay a heavy fine imposed by the Romans, Apollonius dispatched Heliodorus immediately to Jerusalem to determine the status of the money in question and to confiscate all that had not been officially dedicated to temple use. Heliodorus was ultimately dissuaded from this task by an apparition in which he was flogged by two young men (3:22-30). Simon continued his hostility toward Onias, including an attempt to implicate Onias in the attack on Heliodorus, with the result that Onias was unable to continue as high priest (4:1-8).

While all Greek codices call Simon a Benjaminite, there is some doubt as to the accuracy of this designation, since it would indicate a non-priestly lineage. Old Latin and Armenian MSS support the alternative reading *Balgea* for the priestly clan of (Heb.) *bilgâ* (Neh. 12:5, 18; 1 Ch. 24:14), which was excluded from offering sacrifice for all time because of misconduct during the persecutions of Antiochus IV. (See J. A. Goldstein, *II Maccabees* [*AB*, 1983], p. 201.)

5. Simon the son of Mattathias and brother of Judas Maccabeus and Jonathan, whom he succeeded as high priest (143-135 B.C.). *See* HASMONEANS II.A.

G. H. WILSON

SIMON (NT) [Gk. *Simōn*].

1. The father of Judas Iscariot (Jn. 6:71; 13:2, 26; AV also 12:4 [RSV and NEB omit, following earlier MSS]).

2. Simon Peter; son of John (Jn. 1:42; 21:15-17; Jona, Mt. 16:17) and brother of Andrew (Jn. 1:40). *See* PETER.

3. Simon the Zealot (Cananaean). One of the twelve apostles called by Jesus. Only in Acts 1:13 does the RSV actually call him Simon the Zealot (Gk. *Simōn ho zēlōtḗs*; AV "Simon Zelotes"). Mt. 10:4 and Mk. 3:18 call him "Simon the Cananaean" (Gk. *Simōn ho Kananaios*; AV "Simon the Canaanite"; NEB "Simon, a member of the Zealot party"). And Lk. 6:15 names him as "Simon who was called the Zealot" (Gk. *Simōn ho kaloúmenos zēlōtḗs*; AV "Simon called Zelotes"). The Greek word *kananaíos* (translated "Cananaean" or "Canaanite"; see above) does not mean that Simon was a Canaanite nor does it mean that he was from the city of Cana. Instead, the word *kananaíos* is a Greek transliteration of Aram. *qan'ān*, which Luke aptly translates as "Zealot." Thus, all four references to Simon in the NT indicate that he was a member of the Zealot party. The Zealots were a revolutionary group, insisting that political submission to Rome was a denial of God's lordship. Most scholars agree that the movement began with Judas the Galilean's refusal to tolerate the Roman census in A.D. 6, although the philosophical roots of the movement lay deep in the OT (cf. Nu. 25:7-13; 4 Macc. 18:12) and prior Jewish history (cf. 1 Macc. 2:23-27). The movement came into full bloom with the revolt against Rome (A.D. 66), which culminated in the destruction of Jerusalem (A.D. 70). *See* ZEALOTS. It is interesting to note that Jesus selected both a Zealot and a tax collector to be among His apostles, for the two groups were at opposite ends of the political spectrum.

T. R. SCHREINER

4. A brother of Jesus (Mt. 13:55; Mk. 6:3). *See* BROTHERS OF THE LORD.

5. A leper in whose home in Bethany a woman anointed Jesus with a very expensive ointment (Mt. 26:6 par. Mk.

14:3). In what seems to be a parallel account in Jn. 12:1-8, Martha served the dinner and Mary was the woman who anointed Jesus. J. N. Sanders (*NTS*, 1 [1954/55], 29-41) therefore suggested that Simon was the father of Lazarus, Mary, and Martha. In any case, Simon was no longer afflicted with leprosy, since lepers were legally ostracized. Possibly he had been healed by Jesus.

6. A Pharisee who invited Jesus to dinner (Lk. 7:36, 40, 43f.). While they were eating, a woman referred to as a "sinner" entered, washed Jesus' feet with her tears, kissed them, and anointed them with ointment (vv. 37f.). Simon concluded from this that Jesus must not be a genuine prophet, for a real prophet would not have allowed a sinner to touch him (v. 39). Jesus used a parable to contrast Simon's attitude unfavorably with that of the woman. Simon, although he had not been impolite, had not shown Jesus any hospitality beyond what was required of a host (vv. 44-46). His lack of love showed that he had not experienced God's forgiveness as the woman had (v. 47).

7. A man from Cyrene who was compelled to carry Jesus' cross to Golgotha (Mt. 27:32 par. Mk. 15:21; Lk. 23:26). Many Jews lived in CYRENE, and Simon may have been in Jerusalem for the Passover. Mark mentions that he was the father of Alexander and Rufus, who must have become Christians and were apparently well known in the Christian community (cf. Rom. 16:13).

8. A Samaritan magician (Acts 8:9, 13, 18, 24). *See* SIMON MAGUS.

9. A tanner with whom Peter lodged at Joppa (Acts 9:43; 10:6, 17, 32). His house was by the seaside, probably segregated from the Jewish community, because tanning was an unclean trade (cf. Lev. 11:39f.). N. J. O.

SIMON MACCABEUS. *See* HASMONEANS II.A.

SIMON MAGUS sī'mən mā'gəs. The subject of two brief but connected reports preserved in Acts 8:5-24. He is designated only as Simon (Gk. *Simōn*) in Acts; but because his activities are described as *mageúōn* (part. of *mageúō*, "practice magic," 8:9) and as *mageía* ("magic," v. 11), he later came to be referred to as *Simōn ho mágos* (Simon Magus, or Simon the Magician; *see* MAGIC IV.A). From the 2nd-4th cent. A.D. Simon came to be regarded as the father of GNOSTICISM (Irenaeus *Adv. haer.* i.23.2, 27.1; Epiphanius *Haer.* xxi.7.2; xxvii.2.1). It is a matter of scholarly debate, however, whether the historical Simon was actually a Gnostic. His followers and adherents, called Simonians, were both active and influential for several centuries after the death of their founder. The later Simonians were an eclectic sect of Christian Gnostics who were frequently attacked by Christian apologists and heresiologists. The opponents of the Simonians tended to attribute the later views and practices of the sect to Simon. The problem is exacerbated by the tendency among early Christian apologists to attribute views of other Gnostics to the Simonians. As a result, traditions about Simon and Simonianism are extremely complex and will probably never be satisfactorily untangled. Two more recent monographs dealing comprehensively with Simonian traditions have arrived at diametrically opposed conclusions: G. Lüdemann concluded that the historical Simon was a Gnostic, while K. Beyschlag concluded that the historical Simon and early Simonianism had nothing to do with Gnosticism.

I. In Acts 8:5-24
  A. "The Great Power"
  B. Messianic Interpretations
  C. Was the Historical Simon a Gnostic?
II. In the Christian Apologists
  A. Traditions of His Life
  B. Simonian Theology

I. In Acts 8:5-24.—The earliest account of the person and activity of Simon Magus is found in Acts, which is variously dated from A.D. 70 to 100. Acts 8 contains two narratives that center on Simon Magus. The first focuses on the evangelistic activity of Philip in Samaria and includes the conversion and baptism of Simon (vv. 5-13); the second focuses on Peter and John's follow-up visit to Samaria and on Simon's rebuffed attempt to buy from them the power of the Holy Spirit (vv. 14-24; this is the origin of Eng. "simony," which refers to the buying or selling of ecclesiastical offices). The story concludes with the mention of Simon's repentance (v. 24).

Part of the reason for the inclusion of these traditions in Acts must be the antimagical polemic of the author (*see* MAGIC IV.C). Luke intended to present Simon as a convert to Christianity, and this is confirmed by Justin Martyr's observation that the Simonians were called Christians (*Apol.* i.26). Irenaeus later claimed that Simon's faith was merely feigned (*Adv. haer.* i.23.1). Simon was apparently a Samaritan, although the city in which he was active is not specifically mentioned (Acts 8:9; Sychar is a likely possibility). His reputation as a magician and sorcerer is based on Acts 8:11. According to v. 10 Simon was called "that power of God which is called Great" (Gk. *hē dýnamis toú theoú hē kalouménē megálē*). Several important questions must be addressed in view of the tendency of later Simonians and their critics to attribute all of their beliefs to Simon: (1) What does the phrase "that power of God which is called Great" mean? (2) Are there any traces of messianic beliefs or claims in these passages? (3) Was the historical Simon a magician or miracle worker? (4) Was the historical Simon a Gnostic?

A. "The Great Power." That the phrase "Great Power" can mean "God" is obvious from the quotation from Hegesippus preserved in Eusebius (*HE* ii.23.13), in which the dying James the Just sees the Son of man sitting by the right hand of "the great Power" (*hē megálē dýnamis*; cf. two related passages: Mk. 14:62, in which Jesus tells the high priest, "you will see the Son of man seated at the right hand of Power," and the apocryphal Gospel of Peter (5:19), where Jesus cries from the cross, "My power, O power, thou hast forsaken me!"). Moreover, in Samaritan literature the phrase "Great Power" (Samaritan Aram. *ḥylh rbh*) is used to refer to God (*ḥyl*, "strength, power," in both Hebrew and Aramaic can be used of God; see Epiphanius *Haer.* xix.2.2). H. G. Kippenberg showed that in doxological contexts in Samaritan litguries, *ḥylh* ("power", i.e., God) was praised as *rb* ("great"). Later traditions that Simon was recognized as a god lend support to this interpretation (Justin Martyr *Apol.* i.26). On the other hand, as W. F. Albright emphasized, the probable Aramaic phrase lying behind the title "that power of God which is called Great" is *ḥaylâ rabbâ d'elāhâ*. Since the Samaritan Aram. *ḥylh* (pl. *ḥyln*) can be used of an angel or a class of angels, the phrase may well mean "chief (angelic) power" (cf. Epiphanius *Haer.* xxi.2.4). Whatever the specific significance of this title, it was very probably a name given to Simon, as the Greek part. *kalouménē* ("called") suggests in Acts 8:10.

Further, it is possible that the Lukan expression, literally, "This is [*houtós estin*] the power of God called

Great," reflects an original "I am" revelatory self-disclosure statement by Simon (so G. Lüdemann; cf. Origen's paraphrase of an "I am" speech of a Syrian or Palestinian prophet in *Contra Celsum* vii.9). Origen stated that Simon himself claimed to be "the Great Power of God" (*Contra Celsum* vi.11; Comm. on Mt. 24:4f.). But despite the assertions of early Christian heresiologists that Simon claimed to be the highest God, the "I am" statements that he may have uttered can be interpreted equally well as claims to be the messenger or son of God. In fact, some Christian apologists stated that Simon claimed to be the son of God (Irenaeus *Adv. haer.* i.23.1; Origen *Contra Celsum* i.57 [here Origen equated "son of God" with "power of God"]; vi.11). R. M. Grant (p. 72) plausibly suggested that "the Great Power" was the high God invoked by Simon in his magical spells, and that in the style of many incantations found in Greco-Egyptian magical papyri, Simon identified himself with this deity using the "I am" formula.

There are close connections between Simonianism and paganism (in the view of some [G. Lüdemann], pre-Christian Gnosticism). A temple to Zeus Hypsistos was dedicated on Mt. Gerizim by Antiochus Epiphanes. Irenaeus (*Adv. haer.* i.23.4) related that Simon and Helena were worshiped in the images of Zeus and Athena (who, according to Greek myth, sprang from the head of Zeus). Lüdemann (pp. 49ff.) claimed that according to the oldest traditions Simon was worshiped as Zeus. Yet the oldest account (Acts 8:5-24) records that Simon was called "the Great Power," a Samaritan designation not for Zeus but for Yahweh.

B. Messianic Interpretations. Following A. Ritschl, many scholars have inferred from Acts 8:5-24 that Simon had made some sort of messianic claim. The acclamation of Simon as "the Great Power" cannot be used in support of that assumption. Acts 8:9 mentions, however, that Simon claimed "that he himself was somebody great." A similar statement is made in 5:36 of Theudas, who "gave himself out to be somebody." Alternately, J. Weiss has suggested that Simon himself claimed messianic status but the people regarded him as a divine incarnation. Origen thought that both Dositheus and Simon claimed messianic status (Comm. on Mt. 24:4f.).

In later literature Simon claims to be "the Standing One" (*Pseudo-Clementines* Recognitions 1.72; 2.7; Homily 2.22), which some scholars have construed as a messianic title (cf. Dt. 18:15, 18: "whom the Lord will raise up" [LXX *anístēmi*, lit. "stand up"]). "The Standing One" (Aram. *q'ym*), meaning "the Living One" (*Pseudo-Clementines* Homily 2.22; cf. *Three Steles of Seth* 119.15-18: "Great is the good Self-begotten who stood, the God who was first to stand" [J. M. Robinson, p. 363; the first line of this document claims to be "the revelation of Dositheus"]), is attested as a title for God in Samaritan texts (see G. Kretschmar, p. 433). In the later Simonian document called the *Megale Apophasis* ("Great Declaration"), Simon claims that the unformed Power "is He who has stood, stands, and will stand" (cited in Hippolytus *Ref.* vi.7). "The Standing One" can also, however, refer to the eschatological prophet like Moses who "stands by" God; and the Jewish and Samaritan expectation of an eschatological Mosaic prophet is closely related to messianism. J. E. Fossum (pp. 112-129) argued that Simon Magus or his followers identified Simon as the eschatological prophet like Moses. Fossum (pp. 123f.) further claimed that Moses became the "standing one" only when he had achieved the character of an angelic being. Origen mentioned that both Simon and Dositheus were miracle workers who perpetrated incredible frauds in imitation of Jesus (*Contra Celsum* vi.11) — and the performance of miracles was associated with the eschatological Mosaic prophet. There is more persuasive evidence, however, that Simon's competitor Dositheus claimed to be the prophet like Moses than that Simon made such a claim (S. Isser).

C. Was the Historical Simon a Gnostic? The central question is whether the later evaluation of Simon Magus as the father of Gnosticism was an addition to the original Simon tradition or whether it was merely the development of an actual component of Gnosticism in that tradition. K. Beyschlag concluded that the Simon presented in Acts was not a Gnostic but had been turned into a Gnostic by the time of Justin. He contended, further, that the Gnostic portrait of Simonianism in Irenaeus (*Adv. haer.* i.23.1-4) presupposed an earlier form of *Christian* (rather than Samaritan or pre-Christian) Gnosticism. On the other hand, G. Lüdemann concluded that the historical Simon was a Gnostic and that the accusation of sorcery found in Acts was a fabrication of early Christian apologetics. The fact that "the Great Power" and similar phrases are also found in Gnostic literature makes it difficult to ignore the possibility that the portrait of Simon in Acts contains some Gnostic features (see W. Ullmann).

II. In the Christian Apologists. *–A. Traditions of His Life.* After the report in Acts 8, the next evidence regarding Simon is from Justin Martyr (d. *ca.* A.D. 165), who identified Simon as a Samaritan from the village of Gitta and dated his appearance to the reign of Claudius, A.D. 41-54 (*Apol.* i.26). Justin also claimed that Simon practiced magic in Rome, empowered by the demons within him. Having either misread an inscription on a statue base or received incorrect information about it, Justin claimed that the Roman senate had honored Simon with a statue like other gods (*Apol.* i.56; cf. Irenaeus *Adv. haer.* i.23.1). The inscription (discovered on the island of St. Sebastian in the Tiber in 1574) reads *SEMONI SANCO DEO,* "to the god Semo Sancus" (an ancient Sabine deity), but Justin understood it as *SIMONI SANCTO DEO* or *SIMONI DEO SANCTO,* "to Simon the holy god."

An extensive section of the Acts of Peter, called the *Actus Vercellenses* (end of the 2nd cent.), narrates the conflict between Peter and Simon Magus in Rome (*see* APOCRYPHAL ACTS: THE "LEUCIAN" ACTS II). When Paul left Rome for Spain (Acts of Peter 1–3), Simon Magus arrived and through magic deceived and troubled the church (4). In obedience to a vision, Peter came to Rome and restored the troubled church. The struggle between Peter and Simon included a debate (23f.) and a contest of miracles (25-29). Simon demonstrated his ability to fly through the air; but when Peter prayed, Simon's magical abilities failed him, and he eventually died as a result of injuries suffered in his fall (32). Hippolytus (*Ref.* vi.15) preserved another story of Simon's death: Simon told his disciples that, should he be buried alive, he would rise on the third day; they buried him alive, but he was not able to raise himself.

In what is probably a largely fictional account in the *Pseudo-Clementines* (Recognitions 2.8-11; cf. Homily 2.23f.), Dositheus presides over a circle of thirty disciples following the death of John the Baptist. Simon becomes a member of this circle, struggles with Dositheus, and eventually wins control of the sect. Dositheus tries to strike Simon with his staff (the rod of Moses?), but it miraculously passes through Simon's body. Dositheus recognizes Simon as "the Standing One" (Recognitions 2.11; Homily 2.24), possibly signifying that Dositheus was dispossessed of the office of the prophet like Moses and that

the office was then taken over by Simon. While the *Pseudo-Clementines* in their present form date to the 4th cent., Origen was apparently familiar with a second-century document lying behind these writings (*Contra Celsum* i.57; vi.11).

B. Simonian Theology. According to Justin Martyr (*Apol.* i.26), the Simonians taught that Helena, a former prostitute, was the "first thought" (Gk. *énnoia*) produced by Simon, the "first god" (more details on Helena are found in Tertullian *De anima* 34; Hippolytus *Ref.* vi.14; Epiphanius *Haer.* xxi-xxii). A fuller account of Simonianism given by Irenaeus of Lyons (*ca.* A.D. 180), probably in dependence on a lost work of Justin (cf. Irenaeus *Adv. haer.* i.23.1-4), suggests that Simon and Helena were considered dramatic incarnations of a cosmological myth of creation, fall, and redemption. According to this account the "first thought" sprang forth from the "first God" and formed angels, powers, and the world (cf. the Sophia myth of Valentinianism). Simon, as the incarnation of the "first God," appeared among the Jews as the Son, descended in Samaria as the Father, and came to other nations as the Holy Spirit. His "first thought" was detained by those angels and powers who had been produced by her; but they had no knowledge of the "first God." The "first thought" was thereafter confined to a series of human female bodies, including Helen of Troy and finally the Helena of Simon. Simon had come to free her from slavery and to bring salvation to all by making himself known to them. The freedom that resulted from acknowledging Simon as the incarnation of the "first God" was expressed in moral libertinism. Simon anticipated the dissolution of the world and the ultimate freedom of his believers from the bondage of the angels and powers who rule the world.

SIMPLE [Heb. *peṯî*–'simple youth' (Ps. 19:7 [MT 8]; 116:6; 119:130; Prov. 1:4, 22, 32; etc.), *pāṯâ*–'be simple, inexpert, apt to be deceived' (Job 5:2)]; AV also SILLY ONE (Job 5:2), SIMPLICITY (Prov. 1:22); NEB also SIMPLETON, SIMPLE MAN, UNTAUGHT, etc.; **SIMPLE-MINDED** [Gk. *ákakos*–'innocent, guileless' (Rom. 16:18)]; AV SIMPLE; NEB INNOCENT; **SIMPLENESS** [Heb. *peṯî* (Prov. 9:6)]; AV FOOLISH; NEB "to be silly"; **SIMPLICITY** [Heb. *tōm*–'perfection, completion' (2 S. 15:11)]; NEB INNOCENCE. In Mt. 5:37 the RSV "simply" (NEB "plain") derives from the context.

In the OT the RSV words are related to the wisdom tradition. Their sense suggests illiteracy or unsophistication, with implications ranging from self-destructive stupidity (Prov. 1:32) to guileless innocence (Ps. 116:6; 2 S. 15:11). "Gullible" or "naive" generally conveys the sense. The words connote both condescension toward those who "should know better," and appreciation for those lacking the treachery of "city ways." But in general the quality of simplicity is, from the wisdom point of view, not desirable. Not only should one strive to be learned, but one must beware of the effects even of association with fools; thus Prov. 9:6 reads "leave simpleness" (RSV; lit. "abandon fools"; cf. AV; the RSV and NEB follow the ancient versions; McKane, "untutored companions").

In Rom. 16:18 the NEB correctly has "innocent" for Gk. *ákakos*; the AV "simple" is ambiguous, while the RSV "simple-minded" is an egregious error. The Greek speaks of one who is without malice, and therefore perhaps too trusting or unsuspecting, but not one who is intellectually disabled.

See also WISDOM; FOOL; STUPID.

SIN.

I. Terms
II. Definition
III. The Fall
IV. Original Sin
V. Sin and Freedom
VI. Effects of Sin
VII. Depths of Sin
VIII. Judgment of Sin
IX. Law and Sin
X. Gospel and Sin
XI. Unforgivable Sin
XII. The Christian and Sin

I. Terms.–The complexity of sin is illustrated by the great number of Hebrew words for it (for a full list cf. *TDNT,* I, *s.v.* ἁμαρτάνω [Quell, Bertram, Stählin, Grundmann]). Among the more important are: Heb. *ḥaṭṭā't,* "a missing"; *peša',* "rebellion," "transgression"; *'āwôn,* "perversion"; *ra',* "evil" in disposition; *reša',* "impiety." In the LXX and in the NT, which is largely determined by the LXX, common words are Gk. *hamartía,* "missing the mark"; *parábasis,* "transgression"; *adikía,* "unrighteousness"; *asébeia,* "impiety"; *anomía,* "lawlessness"; *ponēría,* "depravity"; *epithymía,* "evil desire."

II. Definition.–Sin is to be defined primarily in relation to God. It is disobedience, unbelief, ignorance, the positive assertion of usurped autonomy, and the wicked deviation from, or violation of, God's righteous will and law. The breach of a right relationship with God carries with it the disruption of a right relationship with others and the disintegration of the self. But this is derivative, for it is because of sin against God that there is sin against others and oneself (Ps. 51:4 [MT 6].

A feature of the biblical definition is that sin is not just a lack, a failure, or a deficiency. The ignorance that is sin involves not only the lack of true knowledge but also the substitution of falsehood. Sin is commission as well as omission. Yet this must not be pressed too far. Sin has no place in the positive will of God, nor does God allow the existence of another reality alongside and equal to His own creation. In the last analysis sin has only a negative or parasitic reality. Its positive reality is paradoxical and secondary, as is clearly illustrated by the manner of its entry into human life.

III. The Fall.–Sin is not native to humanity as God created it. In spite of Quell's rather perverse interpretation of Gen. 3 in *TDNT*, sin cannot be identified with human creatureliness. When God pronounced all His work good, He did not mean that Adam was simply the best of all possible men, the best that God could do, though still unfortunately a sinner. God is in no sense the author of sin; He does not make people sinners either deliberately or in spite of Himself. He created them good, and this goodness is intended to come to expression in obedience to the divine will. Sin arose when at the serpent's prompting Adam and Eve made the wrong choice of pursuing goals that, quite apart from their futility, involved rejection of the will and way of God. Analysis quickly shows that all the fundamental elements of sin — unbelief, disobedience, pride, weakness, covetousness, discontent, distrust — were present when this fateful decision was taken and executed.

Is sin itself in some way present even before the fall? No data are available in the Bible except references to the serpent, Satan, etc. What we do know, however, is that human beings are not sinners by created nature.Their story is not the story of a long upward struggle against inherent disabilities. They become sinners. Nor is the fall simply a depiction of what happens to each individual. Adam and Eve become sinners in the historical act and fact of the fall. All individuals become sinners because the human race itself has become and is sinful.

The story of the fall also brings out very finely the element of vanity or futility in sin, i.e., its ultimate lack of substance. This aspect was admirably perceived by Quell, who graphically described the collapse of a would-be Prometheus into a guilty schoolboy. Sin is in fact a grasping at the shadow in place of the substance. The choice of sin is no true choice. The divinity offered by sin ("ye shall be as gods," Gen. 3:5, AV) is no true divinity. Freedom to sin is no true freedom. The works of sin are real enough, but they carry no solid achievements. Sin does not really belong in human life. Hence human life in sin is only a caricature of real humanity. In Barth's fine phrasing, sin is a reality only, as it were, on the left hand of God. Instead of Eden, it offers a wasteland full of thorns and thistles. Instead of life, it offers a living death. Life under sin is in every sense a paradoxical life. Sinful humanity is paradoxical humanity. It is still God's creature, but God's creature distorted and corrupted. People live, but they are dead in trespasses and sin. They are destined for eternity, but their eternity is death in life and life in death.

God is not the author of sin, and sin is contrary to His positive will. Nevertheless, it should be emphasized that neither sin nor the sinner escapes the positive divine sovereignty. Although the Genesis story does not suggest that the fall was the fulfillment of a specific divine decree, it also does not suggest that God was in any way taken by surprise or that He lost control of the situation. If sin is not positively willed by God, it places no restrictions on the divine omniscience and omnipotence. When God deals with it, He displays from the very first that He is in full command. He asks questions, but He is obviously not seeking information. He knows what Adam has done; He knows why he has done it; He brings the consequences immediately to bear on man; He also announces already the promise of salvation. Sin is rebellion against the divine will and purpose, yet it can be and is ruled over in such a way that it can be made to serve the divine purpose. God does not do evil so that good may come, but He is more than able to bring good out of evil.

IV. Original Sin.–That sin comes into the world not by a series of individual falls but by the one historical fall implies, even though it does not specifically state, the reality and the doctrine of original sin. Original sin means that a nexus of sin embraces all people without exception. This is amply illustrated in the further story of the race. The murder of Abel follows almost at once, and wickedness increases so rapidly that it soon brings down the judgment of the flood (Gen. 4:23f.; 6:1-6). Nor does the elimination of all but Noah's family basically change the situation, for sin is present there, too (Gen. 9:20-24f.). The stories of Babel, Sodom, the Canaanites, and even of the family of Abraham, the children of Israel in the wilderness, and the settled people of the judges and the monarchy show that all people are constantly and persistently involved in sin. The prophetic literature is one long protest against the various forms of sin both against God and against neighbor. The psalmist recognizes both the sin of others (Ps. 53) and his own sin (Pss. 32; 51; 139:23f.), even from the point of conception (51:5 [MT 7]). That sin has become part of the very life and being of fallen humanity is clearly and forcefully stated in Gen. 6:5; Jer. 17:9; Prov. 6:14.

The truth of the universality of sin, of the solidarity of the race in sin, is worked out most systematically in the NT, especially in Romans. Rom. 1:18-3:19 is devoted to the shutting up of all — Jews as well as Gentiles — in sin. "All have sinned and come short of the glory of God" (Rom. 3:23; cf. Isa. 53:6). Carnal humanity cannot please God (Rom. 8:5-8). Sin is a bondage to which all are subject (Chs. 6f.). By the trespass of one, sin has entered into the world, and with it condemnation and death (5:12-14). Quite apart from the guilt of individual sins, there is a universal guilt and condemnation in Adam out of which none can contract and from which there can be no pardon or deliverance except in Christ, the second and righteous Adam.

Many questions relating to original sin are not answered or even raised in the Bible. It does not state how original sin is transmitted, whether by hereditary taint, environment, or a recurrent fall. It does not state how individual sin is related to original sin, whether by necessary consequence, concurrence, or influence. It does not state what measure of guilt attaches to original sin if it stands alone, e.g., in the day-old baby who dies without committing actual sin of its own. It does not state in what form original sin persists in the regenerate, whether as sin that is guilty, sin that stands under pardon, or as no more than a scar or weakness that easily leads to sin.

Dogmatic theology has occupied itself with these questions, and many conflicting answers have been given. Traducianists have favored hereditary transmission. Pelagians have claimed that there is no original sin except in the sense that Adam's sin is an example that almost all people follow. Augustinians have insisted on a depravity of the race involving all in sin, guilt, and eternal punishment apart from God's gracious and sovereign work through Christ. Some Roman Catholics have taught that what is lost at the fall is supernatural virtue, and that the main element in original sin is the resulting weakness. Official Roman Catholicism has denied that there is any

continuation of original sin in the true sense after baptism; only the combustible material of sin, not the actual fire, remains. Most of the positions advocated have to rely on systematic inference from Scripture rather than on direct exposition. On the other hand, there seems to be little room for doubt that, while the Bible does not even try to answer all these questions, it does teach that there is a real root of sin in addition to individual sins, that this cannot be identified merely with the power of influence or general environment, that there is a broader and deeper nexus of sin which none can escape, and that there is no true eradication of sin in this life even for believers.

It should be noted incidentally that sin is certainly linked to this mortal life but does not affect only one part of us, e.g., the body, as though a righteous mind or heart were contending with an unrighteous body. Paul certainly uses the word "flesh" for the dynamic principle of sin (cf. Gal. 5:17). An ungodly walk is after the flesh (Rom. 8:5). Sins are works of the flesh (Gal. 5:19). A wicked life is a sowing to the flesh (Gal. 6:8). But Paul in these passages is obviously not thinking merely of the body but of the whole of human life in sin and alienation from God. Thus the mind can be darkened and be a carnal mind. The will can be set toward evil as well as toward good. The heart is the source of unrighteousness, not the body (cf. Mt. 15:19). In other words, the picture that emerges is that the total person is a sinner, and "flesh" is a convenient term for our sinful being in opposition to the Spirit. Thus Christ can actually come in the flesh, even in the likeness of sinful flesh, and yet be without sin. Christians can live in the flesh and yet not live after the flesh (2 Cor. 10:3). The heart of flesh can be (in the OT) a good heart as opposed to the stony heart (Ezk. 36:26; cf. 2 Cor. 3:3). The corruption of original sin, while it may be summarized under the term "flesh," extends to the whole person in all aspects of the present life. It finds utterance not merely in acts of the body, but also in sins of motive, will, and thought.

V. Sin and Freedom.–The existence of original sin raises the problem of the freedom of the sinner. Can people enjoy freedom if they stand in the nexus of sin? Is freedom completely destroyed by sin? Can there be any responsibility if there is no freedom? Trenchant sayings from Scripture can be adduced in favor of different answers to these questions. Thus Ezekiel seems to argue that each individual is personally responsible before God and will be judged only for personal sins (18:19-29). Yet Paul in Rom. 6–7 paints a gloomy picture of servitude to sin. Even if one desires to do what is right, one has no power to do so. Sin has become a controlling power, which does things in one's name.

Before some of the issues involved are discussed, certain points should be clear. First, both Scripture and life generally show that humans never have had, nor can have, absolute freedom. They stand in the necessary context of conditions, influences, relationships, and limitations which restrict and to some degree affect their choices. Second, they are further debarred from absolute freedom in that they are conditioned by their own prior decisions and actions, so that in some cases it is obviously true both that they cannot help what they do and yet also that they themselves bear clear responsibility for it. Third, there is, as Augustine saw, a distinction between abstract or neutral freedom and freedom to do God's will — the freedom that is ultimately that of the *non posse peccare* (inability to sin). It cannot be claimed that this freedom in the full sense was that of Adam as first created. But he had at least the freedom of *posse non peccare* (ability not to sin), which could lead, according to choice, either to *non posse peccare* or to *non posse non peccare* (inability not to sin). People today are so bound by the past — both their own past and that of the race -- that they come under the rule of *non posse non peccare*. Their freedom is only the formal freedom of choice either to do, or not to do, this or that. Freedom not to sin is quite a different matter.

Certainly the Bible insists on our lack of freedom to be righteous. Yet it should be noted that in so doing the Bible in no sense presents a doctrine of detailed determinism. We do have quite plainly the responsibility of choice. Although our choices are not uninfluenced, they are not made for us. The nexus of sin is not a rigid mechanism of cause and effect, which means that in the face of any given possibilities one's choice is unavoidable and ineluctable. The prophetic and apostolic address, the summons to repent and believe, are based on our having responsibility of choice. Even the strictest view of predestination does not make of us helpless and neutral automatons whose choices are all foreordained by an unbreakable causation. Without the irruption of the Word we are, no doubt, incapable of response to God, for what is there to respond to? Even with the preaching of the Word the operation of the Spirit underlies the response. But the response itself, whether positive or negative, is not simply a foreordained effect. We are not just the playthings of forces completely beyond our control. Within limitations we ourselves are also one of the forces, and we can exercise our own measure of control even to the point of living a more vicious or a more virtuous life, quite apart from the choice that we make in the face of the liberating Word of God.

It should also be noted that the Bible in no sense does away with responsibility. This matter of responsibility is one of the most difficult things to understand. Adam's responsibility is plain enough, and the general interrelating of human responsibility and divine sovereignty creates no insuperable problems. But when the choices of Adam's successors are so heavily weighted or influenced by the nexus of past guilt and sin, racial as well as individual, how can they be held responsible? This is, of course, a problem in law as well as theology. What does one mean when one speaks of the guilt of a delinquent boy who is largely the victim of domestic or social circumstances? Or what does one mean by the guilt of the German people for the Hitler regime, which many individual Germans disliked or at least did not actively support until perhaps forced to do so for the sake of national survival? The point is that responsibility arises not because of membership in a sinful race but because of active or passive assent that adds to the quota of wrong. Individuals in their own actions are agents as well as victims. They may claim that they have no option, but they cannot deny that they assent to sinning. Their will, even though conditioned, is involved. The race is responsible and guilty, and its guilt affects that of individuals, but the race also is the sum total of the individuals who compose it. Hence each individual is also responsible and guilty. The individual's will assents to the common will. Belonging to the race, no one can make a decision in isolation. But having no entity of its own, the race cannot make a decision except in and with the decision of each member. The freedom of individuals is undoubtedly restricted by their solidarity with the race. But insofar as by their own assent and action, or even perhaps by their dissent and inaction, they contribute to the guilt of the whole, they cannot escape their own degree of responsibility. See further J. Ellul, *Ethics of Freedom* (Eng. tr. 1976).

VI. Effects of Sin.–The effects of sin are as coextensive as history, and listing them in detail is obviously impossible and unnecessary. Perhaps the best course is briefly to consider how sin mars the relationship (1) with God, (2)

with one's neighbors, (3) with self, and (4) with the world.

(1) Sin undoubtedly disturbs one's relationship with God. This is vividly portrayed in Adam's flight and excuses after the fall (Gen. 3:8-12) and also in his immediately coming under the judgment of God. He is expelled from the garden (Gen. 3:23), and death reigns from Adam onward (Rom. 5:14). True knowledge of God is lost (Rom. 1:25), and one substitutes one's own foolish imaginations (Eph. 4:18). Knowledge of God's will is also forfeited, at least as a practical knowledge. Thus begins the dreadful process so graphically portrayed by Paul in Rom. 1:24-32. Idolatry and wickedness of every kind overtake the race. Its best achievements always fall far short of perfection and are always doomed to futility, for it lives in a world in which the most important factor, the Creator, is either unknown or omitted. Without God there is neither meaning, goal, refuge, nor hope. The only hope is that, while God does not withhold the terrible effects of the fall, neither does He cease to be our God. In and with the condemnation He also intimates the promise (Gen. 3:15). But this promise in no way alters the terrible consequences of human alienation from God to which we are necessarily self-subjected as sinners.

(2) The naive but profound observation in Gen. 3:7 indicates that the relation between people is disturbed as well as the relation between people and God. It is so in its most elementary and basic form as the relation between man and woman. To some degree this was disrupted in the very act of the fall, when Eve took an initiative that properly belonged to Adam and when Adam accepted this inversion. But with the fall the possibility of a happy and harmonious fulfillment of the sexual relation was lost, and the way was thus opened for all the dreadful possibilities of sexual perversion, mistreatment, and misery. Nor did the mischief stop there, for the family was quickly affected as well as marriage. The stories of Cain and Abel, Ishmael and Isaac, Esau and Jacob, Joseph and his brothers, and Absalom and his half-brother all testify to the destructive effects of sin. The strife of families broadened out into the strife between families, into the inner tensions of tribes and nations, into the inner conflict of the whole human family in the forms of disastrous rivalries, quarrels, and even open wars between classes, nations, and races. The problems with which the modern world is so familiar and which are obviously beyond human solution — divorce, disrupted homes, juvenile delinquency, trouble between labor and management, racial oppression and racial violence, ideological conflict, economic pressure,and international tension and cleavage — are all the manifest outworking and consequence of human sin.

(3) Nor are people exempt from sin in their inner psychological life. Even if they could achieve self-isolation, which is itself a perversion, they would not escape the effects of sin. For they are people in contradiction. They are people of shame, fear, guilt, illusion. They are people of generous impulse and mean fulfillment, of idealism and cynicism, of intermingled good and evil. They do not really know themselves, flee no less from self than from God, and try to make this unknown self the center of life in place of God. Even as we seek self-fulfillment, we destroy all possibility of it. We present the puzzling aspect of half-angel on the one side, half-demon on the other. We can find hell even in our greatest achievements. We can set out with the noblest aims and finish in the vilest gutter. Our minds are capable of the highest flights and the most monstrous perversions; our bodies are apt for the most superb attainments and yet also for the loathsome ravages of debauchery and disease. The effect of sin on a person is to make him or her a riddle, a paradox, a good thing perverted, a bundle of inconsistencies, a problem to self as well as to others, a creature that has missed its high and holy destiny, self-condemned, self-disrupted, and self-destroying.

(4) The relation of people to their world is also perverted by sin. This, too, is apparent at the outset, for the garden yields to a place of thorns and thistles (Gen. 3:18), and the friendly beasts of Gen. 2 quickly become enemies to be resisted or hunted (cf. esp. 9:2f.). In fact, the whole beautiful and kindly cosmos of God's creating becomes a hostile world whose dangers are to be warded off and whose riches are to be selfishly exploited, so that "the whole creation has been groaning in travail together until now" (Rom. 8:22), awaiting the day of its deliverance (cf. Isa. 11:1-9; Rev. 22, the new heaven and the new earth). Beings who were created to exercise wise and beneficent dominion as the vicegerents of God, are now at odds with their environment. Space is a threat, and time an insoluble and apparently meaningless mystery. The harmony of the first days in Eden is only a fading memory. Within the divine limits earth is also a sufferer. The law of the jungle prevails among beasts. A note of sadness rings through the very music of the birds. The good earth is devastated, the waters are fouled, and the air of the heaven is polluted.

There has, of course, been good as well as evil. People have achieved some measure of working harmony with nature to create noble forests, fruitful fields, and beautiful gardens and to establish rapport with at least some animals and birds. But by and large the effect of the race on nature is one of the sorriest aspects of the human story, which the advance of civilization and technology has in no way mitigated. The pathos, indeed the tragedy of it all, is the more starkly revealed against the background of the wonderfully rich possibilities of the world if only humanity had taken the path of service instead of the path of sin.

VII. Depths of Sin.—Already consideration of the fall and of the ensuing implications and consequences of sin has given us some insight into sin's terrible depths. Yet the true profundity of sin is not to be seen in its extensive and terrifying external manifestations, but rather in the possibilities of inward perversion and corruption. Some of these possibilities are revealed in the OT. For not only does the OT trace down sin to the inward parts. It also shows that sin emerges in its full range and possibility in the very sphere of religion and morality, which might seem to be our securest refuge against it. This is true even of the religion and morality that are part of our response to the divine revelation. Thus in Israel itself there can be people so blunted and self-deceived (or self-deceiving) that they can call good evil and evil good (Isa. 5:20). Again, Am. 4:4 shows that the very practice of religion, even of the religion which is thought to be that of Yahweh and which is accompanied by all the appropriate ceremonial, can be a multiplication of transgressions. Prophecy itself can be an empty sham when, e.g., a message of reassurance is given for which there is no divine authority (Jer. 28:10-17). Indeed, so perverted can people become in their thinking that even within the sphere of the covenant, and perhaps with a sense of doing what is good and right, they can offer up their very children in human sacrifice. The greatest sin here is not the manifest cruelty, which is repeated a hundred times in human wars in the slaughter of helpless infants. Rather, it is in the inward perversion of thinking that can make something so intrinsically wrong appear to be divinely right, not merely to ignorant idolaters, but to those who are recipients of divine revelation in the Law and the Prophets. The worst is the corruption of the best.

This aspect of the matter is even more acutely brought

out in the NT. Paul appeals to the moral confusion that can lead people not only to do wrong things but to "approve those who practice them" (Rom. 1:32). Paul and Barnabas had practical experience of the sinful perversion that could make the pagans of Asia Minor idolatrously venerate even the messengers of the gospel (Acts 14). Yet the true depth and subtlety of sin are once again seen in the sphere of Israel. The Pharisees are generally not hypocrites in the sense of deliberately pretending to be what they are not. They do not carry through their practices for such ulterior motives as material wealth or advancement. They take their duties with genuine seriousness, even with enthusiasm, and they can say with truth that their religious life is different from that of others. The tragedy is that intertwining with all this scrupulousness is a deep and hidden sinfulness, which is the more sinister because it escapes even their own awareness. The inward corruption to which Jesus refers in the scathing denunciation in Mt. 23 is not the corruption of deliberate and calculated insincerity. It is the corruption of a sincere and sincerely practiced religion, which is ultimately a supreme manifestation of religious pride, a substitute which makes possible evasion of the true religion of humility, penitence, faith, and obedience.

The frightening picture opened up here is that when one recognizes obvious sin one has hardly begun to reckon seriously with this adversary. The open and blatant sinner, the oppressor or the harlot, is indeed a sinner. But it is not here that the genuine depth of sin is revealed, not even if the oppressor be ever so grasping or the harlot ever so shameless. It is in religious persons that the depths are to be seen. Nor do these religious persons have to be Pharisees. They may equally well be publicans if the publicans become proud of their humility, if they begin to thank God that they are aware of their sins and are not like the self-righteous Pharisees. They may be persons who despair of themselves and are fiercely aware of the merit of their despair, perhaps somewhat after the manner of Kierkegaard. They may be converted people who lean upon their conversion and make it a theme of self-congratulation rather than an occasion for the glorifying of God. The point is that sin is still couching at the door even when one is most sincere and one's dealings are genuinely with God Himself in His self-revelation. The point is that one is often the very last to see this. This is the depth of sin.

A final truth is that sin is to be found ultimately in inward thought and motivation. As Jesus Himself dramatically shows in Mt. 5:22, 27, one may never commit murder and yet be a murderer in the thought and intent of the heart; one may never be an adulterer and yet be an adulterer in the thought and intent of the heart. When it comes to the heart, however, who really knows? Who can be sure? Who can assert with final confidence that thoughts and intents are wholly good and pure, that motives are not mixed in any particular action? After all, the heart itself is deceitful above all things and desperately wicked (Jer. 17:9; cf. Ps. 139:23f.).

Even to be aware of the dangers of false motivation is not necessarily to reach the final roots of sin. Indeed, examination of motives, even for a good cause, can do harm as well as good, so sinful are we. It can issue in rationalization, or produce confusion, or paralyze all action. The more one tries to track down sin, the deeper it goes and the more elusive it becomes. It is parasitic, clinging even to what is good. Yet from another angle it seems also to have a kind of independent life of its own, so that even when one has made the firmest resolves and taken all possible precautions, one still does the wrong thing that one did not will to do, or fails to do the right thing that one did will. And even if one does the good or avoids the evil, how easily it is all soured by the self-righteous satisfaction that for once at least one has done a pure and blameless deed. In fact, the only possibility in the face of sin is to cast oneself wholly and utterly upon God, recognizing that even the motivation of this committal is just as much in need of the divine mercy, and that the committal cannot and must not become a new occasion for sinful pride.

VIII. Judgment of Sin.–The judgment of sin is plain throughout Scripture. Sin brings death. This is the divine warning in Gen. 2:17; it is the teaching of Ezk. 18:4 (with a strong emphasis on individual responsibility in the face of the gracious forgiveness of the penitent), and also of Paul (Rom. 6:23) and James (1:15). Whether judgment includes a sentence of physical mortality is much debated, although this seems to be a reasonable deduction from Gen. 2:9; 3:22; Rom. 5:14. Certainly judgments occur in the present life and take many forms. The first is the outworking of the consequences of sin, according to the principle that what a man sows he will reap (Gal. 6:7). The second is that the human heart is hardened in sin (Ex. 7:3) and that we are thus delivered up to further sin in an inexorable and truly vicious circle (Rom. 1:26-32). The third is retribution by historical catastrophes, which, with poetic justice, are to a large degree self-incurred, e.g., the judgments on Israel and the nations in the OT. Historical judgments have parallels in the lives of individuals, although the OT recognizes that these judgments are broad in nature and do not mean that every individual sin brings a proportionate penalty (cf. Pss. 37; 73; Job). Incidentally, the divine judgments, although severe, have an element of mercy, for, quite apart from God's readiness to forgive and restore, the judgments help to contain sin and its ravages. Bringing the final penalty of death, sin is ultimately self-destructive.

This is so, not merely in a temporal sense, but also and more particularly in the eternal. Sin is to be definitively judged and overcome, so that it will find no entry into the new heaven and the new earth (Rev. 20-22). But impenitent sinners are also involved in the fate of sin. Hence they too are under the sentence of eternal destruction, when even those who seem to have escaped lightly in this world will be brought to the last judgment (Dnl. 12:2f.; Mt. 25:31-46; Rom. 2:1-11), will fall under the sentence of the second death (Rev. 20:14f.), and will be cast into the lake of fire with death and hell.

The exact implications of the last judgment have given rise to much discussion. Does the second death involve a conscious life in death, or is it annihilation? How does it apply to those who have lived outside the knowledge of the gospel and who have never heard its call to repentance and faith? What about those who have died in infancy? If judgment is according to works, are there degrees of judgment? If conscious life is the lot of the condemned, will they endure positive torment or the negative punishment of deprivation? Obviously, no categorical answers are given to these questions of detail. What is known is that the Judge of all the earth can be trusted to do right (Gen. 18:25). What is known is that He is far more concerned to save than to destroy (Jonah 3:10; 4:2, 11). Finally, eternal death or perdition is "everlasting destruction from the presence of the Lord and from the glory of his power" (2 Thess. 1:9), and there can and will be no retracting of this sentence on sin and on those who persist in it. *See also* JUDGMENT, LAST.

IX. Law and Sin.–A particular question raised especially by the apostle Paul is the relation of the law to sin. The law is obviously not sinful. It is, in fact, the very reverse.

It is a revelation of the holy and righteous will of God. Hence the law itself is holy, "and the commandment holy, and just, and good" (Rom. 7:12). If its provisions were perfectly fulfilled both outwardly and inwardly, as they were by Jesus Christ, then we would be just before God (cf. Gal. 3:21). But the race is already sinful when the law is given. It is recognized from the very first that the law cannot justify sinners, for, even before the law is given, God has already given both the assurance that Abraham is justified by faith and also the promise that those who have faith are blessed with the faithful Abraham (Gal. 3:9). What then is the soteriological purpose of the law, apart from the direction it can give for living the life of faith? Paul, whose Pharisaic background made this a supremely important question, but who also perceived that the desire for self-justification by fulfillment of law is native to sinners, provides a full answer to this question in Galatians and Romans. The law is given not to set aside the promise or to constitute an alternative but to make clear beyond all dispute that salvation is to be found only in the promise and its fulfillment in Jesus Christ. Far from being an instrument of legalistic self-righteousness, the law is a servant of the gospel, driving one to the righteousness of faith.

The law does this by bringing us inescapably under conviction of sin. As Paul said, the law teaches us the knowledge of sin: "I had not known sin, but by the law" (Rom. 7:7, AV). The meaning is not that there is no sin where there is no law, but that there is no awareness of sin without the law. Those who are really dead in sin, imagine that they are alive until they come up against the stern and undeviating imperative of the law. "I was once alive apart from the law, but when the commandment came, sin revived and I died" (Rom. 7:9).

Face to face with this majestic imperative, which comes from God and which thus cannot be manipulated or relativized, sin does not cease or disappear. On the contrary, it emerges in its true nature and depth. It turns even the law itself into a temptation to defy and break the law, to do the opposite of what it demands, to fulfil it purely externally and to evade it inwardly. Sin makes sure that we do infringe the law, even if only at a single point (Jas. 2:10). Sin becomes "exceeding sinful"; it manifests itself in its true colors and with its full power, so that, even if there is a desire to fulfil the law, the desire turns into its opposite when it is translated into action.

Sin is unmasked by the law. But sin unmasked is not in any sense sin overcome. To know that one is a sinner is neither to find justification nor to find the way to avoid sinning. Indeed, the danger is that closer knowledge of sin will only lead the person who sincerely tries to keep the law into the more subtle manifestations and deceptions of sin. The law alone is powerless to prevent this. At best, it can only provide a false cover of legalism, of blamelessness "as to righteousness under the law" (Phil. 3:6). But this is not the law's proper work; it is a perversion of its true office. The proper work of the law is done when we face up to the revelation of sin that it brings, when we accept that we are sinners and that as such have no means whereby to justify ourselves, when we see that the fulfillment of the law's demands is beyond our power, and when we realize that the apparent life of self-righteousness is still death in trespasses and sin.

The law also drives us to the righteousness of faith by showing plainly that a curse rests on its nonfulfillment. "All who rely on works of the law are under a curse" (Gal. 3:10). They are so because they do not fulfil these works. Hence, though they make their boast of the law, they dishonor God by breaking it. It is not merely that they are shown to be sinners and to be dead in sin. They are also shown to be under a sentence that no attempt at fulfilling the law, even if it were successful, could ever lift. The curse can be removed only if it is lifted from outside. In itself, i.e., apart from the promise and its fulfillment in the One who truly keeps the law, the law cannot lift its own curse. The law reveals the righteousness and the righteous judgment of God. Only by the law fulfilled in Jesus Christ, the righteous One who bore the curse for the many (Gal. 3:13), can the curse be lifted. Hence the law drives us away from itself, or rather away from ourselves and our attempted fulfillment of it, to the gospel of the righteousness of faith in Jesus Christ, which is the only and all-sufficient answer to sin and its curse, to the question of the justification of the sinner.

X. Gospel and Sin.–The gospel is God's answer to sin, to sin's penalty, and to its power. The gospel is not a new device for use when the way of law has been tried and has failed. It always has been God's answer. The promise of the gospel is before the law. Already OT saints walk in the light and power of this promise. The gospel itself is the good news of the fulfillment of the promise in Jesus Christ. It is good news, for the curse of sin has been borne, its sentence remitted, its very reality defeated and destroyed, so that the sinner who languished under it is justified, liberated, and renewed. If false hopes are stripped away by the law, true and solid hope is given in the gospel.

The gospel does not treat sin lightly. The depth of sin is nowhere more fully revealed and its judgment is nowhere more strongly or sternly portrayed than in the teaching of Jesus (Mt. 5; 25:46). The gospel is no message that sin is unreal, or that sin does not matter, or that God is so indulgent that He cannot finally impose His judgment on sin or the sinner. If there is to be real forgiveness and renewal, the full reality of sin has to be recognized and met. Jesus in His own person is the one who supremely unmasks sin. Face to face with His purity, the purity that sees through every disguise, sinners will either acknowledge themselves to be such (Lk. 5:8), or, driven to desperation (Jn. 15:24), they will hound the sinless One to death and thus commit the most monstrous sin of all, the crucifixion of the righteous Savior, the putting to death of the Son of God.

Yet the glory of the gospel is that in unmasking the full reality of sin it is also in Jesus Christ the full answer to sin. It is the answer in three ways. First, the sinless One, even in and through the most monstrous sin of all, takes the curse of sin to Himself and thereby lifts it from others. "Christ redeemed us from the curse of the law, having become a curse for us — for it is written, 'Cursed be every one who hangs on a tree'" (Gal. 3:13). Second, by taking to Himself our human sin and the death that is its penalty, Christ destroys sin in His own body. "Sending his own Son in the likeness of sinful flesh and for sin, he condemned sin in the flesh" (Rom. 8:3). Under the gracious rule of God, the death that is the penalty of sin is also the death whereby sin is itself judged and destroyed, so that there is liberation, not merely from sin's penalty, but also from its power. Third, by dying and rising again for sinners, Christ enables all who believe in Him to die and to rise again in and with Him, i.e., to die to sin and to rise again to righteousness. In this way, in the power of the crucified and risen Christ and by the indwelling of the Holy Spirit, Christians are already able to win provisional victories over sin that are a first installment of the final victory of their eternal life with God. As Paul puts it in Rom. 6:7, "He who has died is freed from sin." To be dead in and with Christ is to be liberated from sin's bondage; to be raised in and with Him is to be liberated for a

life of righteousness. "Sin will have no dominion over you" (Rom. 6:14). What the lawuld not do because sin still retained its usurped claim and power, Jesus Christ is able to do because He has invalidated sin's claim, broken its tyranny, and destroyed its power.

The answer to sin is for those who repent and believe. Repentance is more than a feeling of regret and a mere desire for amendment (cf. 2 Cor. 7:9ff.). It is an open and unreserved acknowledgment of unworthiness, helplessness, and need, an abandonment of self and all its works, a committal to God with no sense of merit, right, or claim. True repentance arises out of the conviction of sin, which is the office of the Holy Spirit (Jn. 16:8). Faith is the accompanying turning to God in absolute confidence and trust, the reliance only upon His unmerited mercy demonstrated and fulfilled in the saving work of Jesus Christ. Faith thus arises out of the regenerating work of the Holy Spirit in His witness to Jesus Christ in all the wonderful reality of His person and work (Jn. 3:5; 16:14). Repentance and faith are not in any sense works that earn forgiveness of sin. Nor are they arbitrary conditions upon whose fulfillment God bases the granting of the forgiveness and liberation effected in His Son. Rather, they are the divinely effected means, the response, by which individuals identify themselves with Christ in His death and resurrection and thus are released from sin and restored to righteousness.

XI. Unforgivable Sin.–It is probably to this context that the so-called unforgivable sin belongs. In Mt. 12:24-32 Jesus is accused of casting out devils by the prince of devils. In His reply He first shows the folly of supposing that Satan works against himself. He then asks by whom the sons of the Pharisees cast out devils. He goes on to link the working of the Holy Spirit with the presence of the kingdom. He finally says that all kinds of "sin and blasphemy will be forgiven men, but the blasphemy against the Holy Spirit will not be forgiven" (v. 31).

This "blasphemy against the Spirit" can hardly mean some peculiarly wicked sin. Nor can it imply a formal blasphemy against the Holy Spirit, which is certainly sinful but which can hardly be distinguished from similar blasphemy against the Father or the Son. The peculiar element in the story seems to be the combination of the mighty operation of the Spirit and the presence of the kingdom in the person of Jesus Christ. The unforgivable sin is committed when there is dogmatic refusal to see in Christ the work of the Spirit. But this is refusal to accept the Spirit's witness to Christ as the one in whom the kingdom is present. It is not, of course, a simple refusal, for many could say, like Nicodemus, that Jesus was a good man, or even a man sent from God, and not yet believe in Him as the Son of God. This refusal is a blunt assertion of the opposite, namely, that Jesus is governed by an evil spirit and does the work of the devil. Nor is it a single refusal, for many may first deny the claims of Jesus and later come to saving faith (cf. the apostle Paul as a supreme example, who was perhaps so vividly conscious of the greatness of God's mercy because he had been so close to the unforgivable sin). It is a dogmatic, obstinate, and persistent refusal carried to extreme and final lengths.

Why this sin is unforgivable can easily be seen. It is the sin of refusing forgiveness. All the sin of the human race was laid on Jesus, but the persistent refusal to have it so laid removes one from the sphere of forgiveness. It is the ultimate defiance, the ultimate lie, the ultimate paradox, which inevitably leads to the ultimate judgment; and perhaps one of the ultimate torments of hell will be the realization that forgiveness was there all the time and it was not believed or accepted.

The descriptions of apostasy in He. 10 and mortal sin in Jn. 5:16f. seem to fit into the same category, for in the context of Hebrews the apostasy is a rejection of the Son's divinity (He. 1), and in the context of 1 John mortal sin is probably either a persistent denial of the Incarnation (1 Jn. 4:3; cf. 2:22f.) or its practical equivalent in the form of hatred of others (3:15). (*See also* MORTAL.)

XII. The Christian and Sin.–Christians know that sin is forgiven, that they are dead to it, and that sin itself has lost its power. Yet there is still sin in the life of the Christian. 1 John can certainly say, "No one who abides in him sins" (1 Jn. 3:6), but it also says: "If we say we have no sin, we deceive ourselves, and the truth is not in us" (1:8). Christians are still to pray that they may be forgiven (Mt. 6:13). Paul speaks of the conflict between the flesh and the Spirit (Gal. 5:17) and demands mortification of what is earthly (Col. 3:5). Sins are mentioned in connection with the congregations, e.g., at Philippi (4:2) and at Corinth (1 Cor. 1:10; 5:1–6:11). What, then, is the relation between the Christian and sin, in this life between conversion to Christ and the death or transfiguration of the body?

The formulation of this relation has been one of the most difficult questions of theology, and the various answers have given rise to serious deviations in both doctrine and practice. In the early Church the change at conversion or baptism was regarded as so striking and complete that postbaptismal sin brought a new problem, not merely of discipline but also of remission and salvation. Since sins are in fact committed by believers, a distinction soon came to be made between lesser and greater sins. Lesser sins did not remove one from a state of grace. But for the greater it was first held that there could be no restoration, then a single chance of penitence was extended (Hermas, the pre-Montanist Tertullian), and then the full penitential discipline was established. Theoretically it was still thought to be possible to maintain the state of baptismal integrity, and the saints in particular were those who either lived sinlessly or whose minor faults were more than balanced by extraordinary merits, especially ascetic practices and perhaps the final seal of martyrdom.

In the Middle Ages a developed doctrine arose. At baptism there is complete cleansing from all sin; if concupiscence remains, it is only the scar of sin and the fuel of future sin, not itself sin. Sin occurs when this combustible material bursts into flame. If the sin is very minor and is amply covered by compensating virtues in fulfillment of the evangelical counsels, sainthood may follow. If the sin is larger but venial, it incurs penalties that are borne in purgatory but that may be mitigated in various ways. If it is mortal, it brings fresh danger of perdition, and only through penance and absolution (or perfect contrition) can the sinner be restored to a state of grace.

Rethinking this whole question was one of the great achievements of the Reformation. When Luther realized that justification is by grace through faith, he also saw that the divine forgiveness extends to the whole life of the Christian, so that only refusal to believe can bring the danger of personal loss. But he also saw that if the Christians's victory over sin is by the death and resurrection of Christ received in faith, the reality of the Christian life in the present aeon, although it is not the final reality, does not yet correspond to that new and true reality in Jesus. In other words, there is no point in even pretending that sin is eliminated in baptism or conversion. Original sin itself still persists; so, too, do actual sins. Hence the Christian life is a continual life not of acts of penance but of penitence. Even though by faith in Jesus Christ one is justified and righteous, in oneself one is still a sinner. What one is

in Christ, one's new and true reality, is to be worked out in terms of the mortification of sin and provisional entering into the reality of righteousness that one already has in faith and that one is to enjoy in the fulness of sight at the last day. This is not antinomianism — an abandonment of the struggle against sin. It is genuine Christian realism — the realism not merely of facing the facts of this world but also of taking seriously the new facts and working in the Holy Spirit to replace the old facts by the new, to translate the life in Christ into practical Christian conduct.

Luther tended at this point to stress unduly the more negative aspect of mortification, the killing off of the old Adam who is most unwilling to die, but Calvin redressed the balance with his fuller emphasis on renewal, on being clothed with the new nature of righteousness. Christians belong to the new aeon but still live in the old. They are still engaged in pilgrimage and warfare, living out in love the new life that is theirs by faith, but doing so in the old world and thus in hope of the fulfillment of this new life at the future consummation.

Already in the Reformation period, however, there were other elements in the Protestant world that tended at least in the direction of a new perfectionism. The Anabaptist stress on conversion was obviously good in itself, and its later adoption by the Pietists was of incalculable blessing to the Reformation churches. But it could presuppose a striking change that made the thought of continuation in sin not just abhorrent, as it ought to be, but quite inconceivable. Candidates for baptism or the professed converts ought to be confident that they can live consistently with their profession, and that they will attain, either at once, or progressively, or by a further and fuller blessing of the Holy Spirit, the perfection and entire sanctification that is God's will for His people. It is probably fair to say that few have ever claimed to achieve this genuine state of sinlessness. It is also fair to say, however, that at least a strong tendency toward perfectionism accompanies this approach in many of its forms. The implied zeal for holiness is naturally to be commended. But the associated phenomena, e.g., a new legalism, artificial standards of righteousness, self-deception, Pharisaism, and distorted feelings of guilt, have in many cases nullified the force of the testimony and have revealed once again the truth of the saying that original sin does "remain in the regenerate" even though they try to deny it.

Of the three main dogmatic presentations, that of the Reformers seems on the whole to be most in conformity with the biblical data. The Bible does indeed tell us that sin is defeated, that the sinner is dead to sin, that the dominion of sin is broken. This is no deception or make-believe. It is the truth of the situation. Paul is not theorizing or hoping or wishing in Rom. 6 or again in Rom. 8 when he speaks of the new life in the Spirit. God has introduced this new situation as an accomplished fact which nothing can change. Thus far, however, it has been accomplished not in us, but in Jesus Christ for us, and in us by faith, not by sight. We believe that this is all so, that we are justified, sanctified, even glorified. We believe it because it is the truth, the new and abiding truth in Jesus Christ. We believe it because Jesus Christ has taken our place, and what is true of Him is true of us (cf. 2 Cor. 5:14). The ethical and eschatological movement of the Christian life is the translation of this truth of Christ for us into the visible truth of us in Christ, first in the form of provisional and progressive manifestations in this life, and then in the form of the perfect fulfillment in the life to come.

In themselves, then, the believers are still sinners. There is no magical eradication either at conversion, by progression, or in a fuller dedication to God. Living in the sinful aeon, they still commit sins of thought and word and act. Yet they are no cynics or defeatists. They know that the campaign against sin is a campaign against a decisively defeated foe. They must strive toward the mortification of sin and renewal in righteousness, but they can do so with the hope of genuine successes, for they know that they are not alone in this struggle. They are being fashioned in the likeness of Christ. They enjoy fellowship with Christ and the indwelling power of the Spirit. Continual penitence is needed, but not despondency or despair. If the final liberation is not yet, growth in freedom is to be expected and enjoyed. There is certainly no place for anxious speculation about final loss. Continuing conviction of sin only fixes the eyes more firmly on Jesus Christ, the mirror of election, the author and the finisher of faith. To see the self in Him is to have the assurance that sin is already defeated for us, and soon will be wholly and utterly defeated and destroyed in us.

For sin is in fact defeated. Its presence and action in the Christian are only the death throes of a mortally wounded foe. When the great work of God is brought to its consummation at the Parousia, there will be no more sin. Christians will attain to the freedom of the *non posse peccare* (inability to sin); they will do God's will as it is now done in heaven. Sin not only will be forgiven and put aside, but will be abolished. The death which it brought to us and which Jesus suffered for us will engulf it. It will find no entry into the new kingdom or its citizens. What Christians now know to be true by faith they will then know to be true by sight. Seeing the Lord as He is, changed into His image from glory to glory, they will be without sin even as He was without sin for them in His incarnate life, and even as He is without sin from eternity to eternity. The wages of sin is death, and death itself will receive its own wages. But the gift of God is eternal life, the new and sinless life of righteousness and love, through Jesus Christ Our Lord (Rom. 6:23).

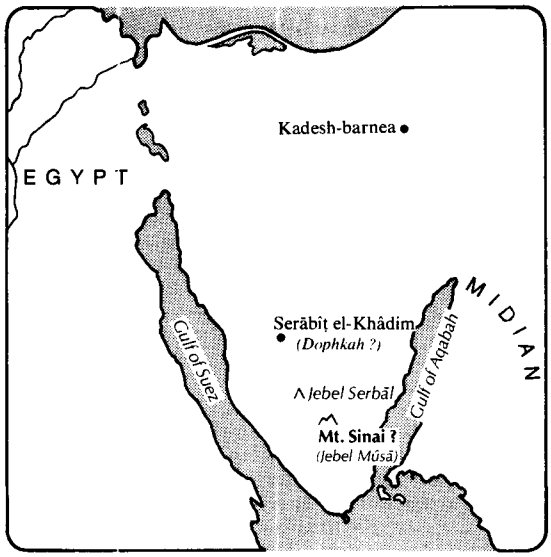
SINA sī′nə. Acts 7:38, AV, for SINAI.

SINAI sī′nī, sī′nə-ī [Heb. *sînay;* Gk. A *Sina,* B *Seina*]; AV also SINA (Acts 7:38). The name of the sacred mountain before which Israel encamped at the time of the lawgiving and the establishing of the covenant relationship. The Hebrew is sometimes qualified by the words *har,* "hill" or "mountain," or *miḏbār,* "desert." The origin of the name is uncertain; some have suggested that it is related etymologically either to Heb. *sᵉneh,* "thornbush," or to Bab. Sin, the ancient Semitic moon-deity. Neither of these suggestions seems particularly satisfactory, however, and "Sinai" is less likely the name of a mountain than the

normal designation of one particular peak in the Sinai wilderness. In several OT passages both the desolate Rephidim area to the northwest and the mountain itself are called "Horeb" (Heb. *ḥōrēḇ*, from a root meaning a "desolate region" or "ruin"), a feature that is prominent in Deuteronomy (1:2, 6, 19; 4:10, 15; etc.) although present elsewhere in the Pentateuch (Ex. 3:1; 17:6; 33:6). In many instances "Sinai" and "Horeb" are used synonymously; where a distinction appears, the mountain itself is Sinai and the neighboring wilderness area bears the wider designation Horeb.



I. In the OT.–The covenant between God and Israel was established at Mt. Sinai (Ex. 19–24). When the divine presence was revealed to the people, it was accompanied by seismic disturbances and a cloud of smoke that came down upon the mountain (19:16–18). Dt. 1:2 records that the journey from Horeb to Kadesh-barnea by way of Mt. Seir took eleven days. This distance has been confirmed independently by modern scholarship, on the assumption that the route went from the traditional Sinai (Jebel Mûsā) to Dhahab on the east coast of the Sinai Peninsula, then N toward Edom and across to Kadesh-barnea ('Ain Qudeis).

In the time of Ahab of Israel (874-853 B.C.) a discouraged and apprehensive Elijah made a pilgrimage to Horeb for spiritual enlightenment (1 K. 19:8). Perhaps the detailed list of stations between the mountain and Kadesh as found in Nu. 33:16-37 had been preserved with such care because religious pilgrimages similar to Elijah's were undertaken more often in the early days of Israel's nationhood, although such journeys were not recorded.

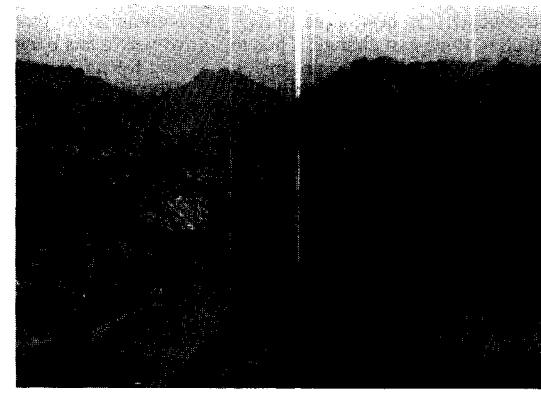
II. Traditional Location.–For about fifteen hundred years the sacred mountain of the lawgiving has been located by tradition in the rugged terrain at the apex of the Sinai Peninsula. In the 4th cent. A.D. the area attracted small settlements of monks and received some prominence through the reports of an Egyptian pilgrim named Ammonius, who visited Sinai *ca.* 373, having previously traveled to the holy places of Palestine. During Justinian's reign (527-565) the association of Sinai with Jebel Mûsā, the "mountain of Moses," became firmly established. Justinian established the present St. Catherine's monastery on the northwest slope of Jebel Mûsā to replace a smaller church built two centuries earlier.

Leaving the ancient Egyptian mining center of Serābîṭ el-Khâdim, perhaps to be identified with Dophkah, and journeying to the southeast, the traveler enters a wide valley called er-Râḥa. This area is much like a small plain, being about 3 km. (2 mi.) long, nearly 11 km. (7 mi.) wide, and about 1.5 sq. km. (1 sq. mi.) in area. It would have been the only natural area for the encampment of Israel before the sacred mountain (Ex. 19:1; Nu. 33:15). Rising majestically over the plain of er-Râḥa are the steep ascents of Râs eṣ-Ṣafṣafeh, with a valley on each side. This elevation, which is approximately 1970 m. (6540 ft.), comprises the northwest summit of the granite ridge stretching about 3 km. (2 mi.) SE, where Jebel Mûsā completes the formation and towers to a height of about 2300 m. (7500 ft.). Southwest of Jebel Mûsā is the elevation known as Jebel Katerīn, "Mt. of St. Catherine," which rises another 300 m. (1000 ft.) above Jebel Mûsā. The Monastery of St. Catherine is located between these two mountains.

The heart of the problem is that the etymology of Sinai is not known. *Ḥōrēḇ* is clearly a Semitic word, meaning "dryness, drought, heat," and "dry ground, waste, and desolation" (BDB, p. 351), and thus seems to be a good descriptive term for the Sinai Peninsula or a specific part of it. "Sinai" might be connected with the name of the Egyptian frontier city Sin, called Heb. *sîn* in Ex. 16:1 (*see* PELUSIUM). Another suggested root for Sinai is *s*eneh*, "bush," used of the burning bush in Ex. 3:2; according to this proposal the area was named for the bushes that covered it. Neither proposal has been accepted with any degree of confidence.

"Sinai" is used both for the area (wilderness of Sinai, sixteen times in the Pentateuch) and for the mountain (fourteen times in the Pentateuch). "Horeb," however, is used primarily as the name of the area. Only once in the OT is the mountain called Horeb (Ex. 33:6; cf. also 2 Esd. 2:33 [AV Oreb]), and that might be a shortened form (either deliberate or accidental) for the fuller expression "the mountain of God, Horeb" (cf. 3:1; 1 K. 19:8). In Ex. 3:1, where the term Horeb first appears, Moses is said to come to "the mountain of God *ḥōrēḇāh*." The directional *h* at the end of the word for Horeb suggests that Horeb was not the name of the mountain but of the area in which the mountain was located. This leads to the suggestion that both Horeb and Sinai are names for the general area, Horeb clearly a Semitic term and Sinai possibly a name used by some other people. A place having two different names representing different languages or ethnic groups is known elsewhere in the ancient Near East (K. Kitchen, *Ancient Orient and OT* [1966], p. 124). A good example is the city of Hebron (Semitic name), which was also known

Râs eṣ-Ṣafṣafeh, possibly the biblical Mt. Horeb, overlooking the plain where Israel camped, according to tradition. To the right (out of the picture) is Jebel Mûsā (L. T. Geraty)



as Kiriath-arba (Indo-European name; see Y. Arbeitman, "The Hittite is their Mother: An Anatolian Approach to Gen. 23," in *Amsterdam Studies in the Theory and History of Linguistic Science,* IV, 889ff.).

III. Problems of Identification.–The traditional interpretation has identified Râs eṣ-Ṣafṣafeh with Mt. Horeb and Jebel Mûsā with Mt. Sinai. Although the two elevations may be considered twin peaks of one large mountain, the association of Horeb in some OT passages with wilderness areas seems to preclude its identification with Râs eṣ-Ṣafṣafeh. Nevertheless, this peak has certain topographical features favoring its identification with Sinai. From the plain of er-Râḥa the summit of Râs eṣ-Ṣafṣafeh can best be reached by means of a detour up a steep ravine called "Jethro's path" (Sikket Shu'eib) near the northeast end of the range. Descending from this point, Moses and Joshua could have heard the tumult of the camp in er-Râḥa prior to witnessing it (Ex. 32:15-18).

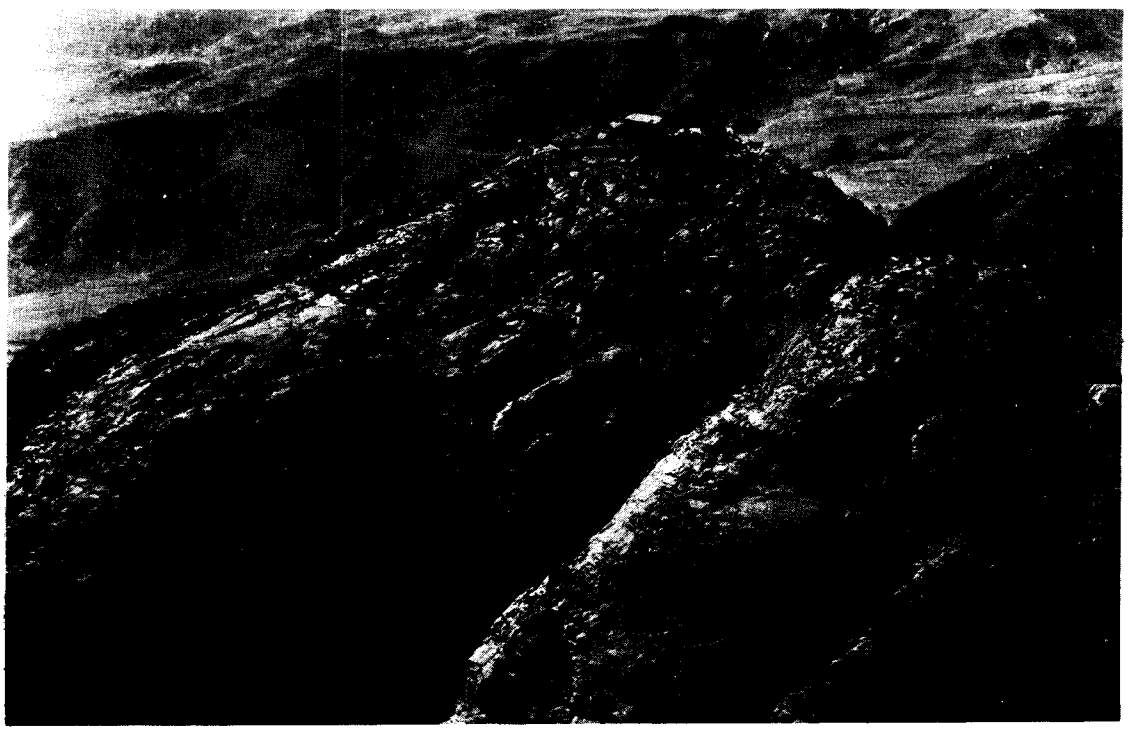
Jebel Mûsā has the double disadvantage of being about 5 km. (3 mi.) from the plain of er-Râḥa and of having the view from its summit restricted by other peaks to the east, south, and west. The prospect NW along the ridge extends beyond the peak of Râs eṣ-Ṣafṣafeh to the distant horizon. No part of the plain of er-Râḥa can be seen from Jebel Mûsā; there is, however, a smaller and more elevated plain beneath its highest part that could have witnessed the events connected with the lawgiving. Thus it is possible that the Israelites did not assemble in the plain of er-Râḥa.

From Jebel Katerīn, another peak, the view is obstructed only by the peak of Jebel Umm Shomer to the south; the Gulf of Suez and Egypt can be seen to the west and the Gulf of Aqabah and Arabia to the east. The principal difficulty with both Râs eṣ-Ṣafṣafeh and Jebel Katerīn is that neither appears to have been regarded as a holy mountain until well into the Christian era. Jebel Mûsā, on the other hand, seems to have enjoyed special sanctity long before Christian times, culminating in its identification with Mt. Sinai. Quite aside from the weight of tradition, the granite formations of the mountain are so imposing that they lend support to this identification (*see* picture in EXODUS, ROUTE OF THE; cf. Josephus *Ant.* ii.12.1 [264-69]; iii.5.1 [75-77). In addition, the presence of a few stations on the way to Jebel Mûsā that are traditionally associated with the wilderness wanderings point to the same conclusion.

IV. Other Identifications.–Because of the apparently volcanic phenomena associated with the giving of the law on Sinai, some nineteenth-century scholars thought that the most acceptable identification was with a volcanic peak near al-Hrob. But this opinion has fallen into disrepute because it makes the route of the Exodus virtually impossible to reconstruct and because it reads far too much into the phenomena of Ex. 19:11-25. Another view located Sinai at Jebel Serbāl, some distance W of the Jebel Mûsā–Râs eṣ-Ṣafṣafeh ridge, where the early Christian center of Pharan was situated. This identification is repudiated by the *Peregrinatio Silviae* (*ca.* A.D. 388), which specifically locates the "mount of God" 35 Roman mi. from Pharan (Feiran); this is the actual distance between the oasis in the Wâdī Feiran (*see* Vol. II, Plate 7) and Jebel Mûsā.

Volcanic interpretation of Ex. 19:16, 18 has led some to place Sinai in northwest Arabia, near Midian, where the nearest volcanoes active in historical times are located. Another argument supporting this site involves Moses' marriage into a Midianite family (Ex. 3:1; 18:1). Moses' father-in-law Jethro is also called a Kenite (Jgs. 1:16; 4:11), and the Kenites were a clan of wandering smiths (Nu. 10:29) whose presence near the mines of Sinai would hardly be surprising. But Midianite territory as such was too far N of the Sinai Peninsula proper to furnish the kind of topographical isolation from Egyptian influence that is

The traditional Mt. Sinai (Jebel Mûsā) (W. Braun)



depicted by the narratives of the wilderness sojourn. Furthermore, volcanic interpretation of the events of Ex. 19:16, 18 might well read too much into the narrative.

Yet another suggested location for Mt. Sinai is one of the mountains near Kadesh-barnea. This identification is based partly on the occasional OT association of Sinai with Seir, Mt. Paran, and even Teman, a town in Edom, as places of divine revelation (Dt. 33:2; Jgs. 5:4; Hab. 3:3). In addition, the association of Rephidim with Meribah — the latter being placed rather arbitrarily in the Kadesh-barnea area — as well as the Edomite king's apparent claim to territory on both sides of the Arabah at the time of the wilderness wanderings (Nu. 20:14-16), seem to support such a location. But since the tradition of producing water from the rock is narrated twice (Ex. 17:1-7; Nu. 20:2-13) and may actually have occurred even more frequently, too much geographical reliance ought not to be placed upon attempts to associate the incident in Ex. 17 with the area of Kadesh-barnea. Scholars have also argued that Sinai should be placed near Kadesh-barnea because Moses asked Pharaoh's permission to make a three-day journey into the wilderness to sacrifice (Ex. 5:1-3). This consideration has gained some currency in academic circles but is completely irrelevant in any discussion of the location of Sinai. The "holy mount" is not even mentioned in the request, and neither Kadesh nor Jebel Mûsā can be reached from the eastern delta region in three days' travel on foot.

Indeed, Moses' request on behalf of Israel can be fitted into any of the proposed locations for Sinai. None of the encampments of the wilderness wanderings can be meaningful if the Israelites went directly to either Kadesh or Midian. Again, locating Sinai elsewhere than at Jebel Mûsā would leave the ancient traditions about that mountain unexplained. Finally, the reference in Dt. 1:2 to a journey of eleven days from Kadesh to Horeb can be properly understood only in relationship to the southern portion of the Sinai Peninsula. On balance, therefore, the identification of Mt. Sinai with Jebel Mûsā, as traditionally maintained, seems the most satisfactory.

SINAITICUS sī-nə-it'ə-kəs. *See* TEXT AND MSS OF THE NT I.A.2.

SINCERE [Gk. *díkaios*] (Lk. 20:20) ; AV JUST; NEB HONEST; [*anypócritos*] (1 Tim. 1:5; 2 Tim. 1:5; 1 Pet. 1:22); AV UNFEIGNED; NEB also, GENUINE, SINCERITY; [*eilikrinḗs*] (2 Pet. 3:1); AV PURE; NEB HONEST; [*haplótēs*] ("Sincere devotion," 2 Cor. 11:3); AV SIMPLICITY; NEB SINGLE-HEARTED DEVOTION; [*akéraios*] (Ad. Est. 16:6); [*alēthḗs*] (Wisd. 6:17); NEB TRUE; **SINCERITY** [Heb. *tāmîm*] (Josh. 24:14); NEB LOYALTY; [Gk. *eilikríneia*] (1 Cor. 5:8; 2 Cor. 1:12; 2:17) ; [*alétheia*] (Tob. 8:7); NEB TRUE (MARRIAGE); [*haplótēs*] (Wisd. 1:1); NEB SIMPLICITY; **SINCERELY** [Heb. pass. part. of *bārar*] (Job 33:3); AV CLEARLY; NEB WITH SINCERITY; [Gk. *gnēsíōs*] (2 Esd. 10:50); **NOT SINCERELY** [Gk. *hagnōs*] (Phil. 1:17 [AV 16]) ; NEB "from mixed motives"; **INSINCERITY** [Gk. *hypókrisis*] (Gal. 2:13; 1 Pet. 2:1); AV DISSIMULATION, HYPOCRISIES; NEB PLAY FALSE, PRETENCE; **WITHOUT INSINCERITY** [Gk. *anypócritos*] (Jas. 3:17); AV WITHOUT HYPOCRISY; NEB SINCERE; **ACT INSINCERELY** [Gk. *synypokrínomai*] (Gal. 2:13); AV DISSEMBLE; NEB SHOW LACK OF PRINCIPLE.

The RSV normally translates Gk. *díkaios* as "righteous" or "just," but the variation in Lk. 20:20 is appropriate, since it refers to spies whose good intentions are only "pretended" (*hypokrinómenos;* see *TDNT*, II, 190). Related to the latter term is *synypokrínomai*, which in Gal. 2:13 describes the hypocritical actions of Peter and other Jewish Christians regarding table fellowship with Gentiles. On the related terms *anypócritos* and *hypókrisis*, *see* GENUINE; HYPOCRISY.

The basic meaning of Gk. *eilikrinḗs* is "unmixed, without alloy," hence "pure" (cf. Phil. 1:10). The noun *eilikríneia* likewise denotes moral purity, as in 1 Cor. 5:8. It refers to Paul's own godly behavior in 2 Cor. 1:12; 2:17 and in other literature is often contrasted with various kinds of insincerity and impurity (see Wisd. 7:25 and esp. T. Benj. 6:5). The NT use of *akéraios* in exhortations to be "innocent" (Mt. 10:16; Phil. 2:15) or "guileless" (Rom. 16:19) in relation to evil sheds light on its meaning in Ad. Est. 16:6.

The frequent occurrences of Gk. *alēthḗs* and *alétheia* in the NT and Apocrypha are almost uniformly rendered "true/truth," and the meaning in Wisd. 6:17 is similar; the RSV's use of "sincerity" in Tob. 8:7 is appropriate in that context of proper motivation for marriage (cf. NEB). Gk. *haplótēs*, originally meaning "simplicity" as the opposite of "duplicity," came to have the ethical connotations of sincerity and singleness of heart (cf. 1 Ch. 29:17, LXX; Eph. 6:5; Col. 3:22; Wisd. 1:1; T. Reub. 4:1; T. Sim. 4:5; T. Levi 13:1; T. Iss. 3:8). The adverb *hagnṓs* belongs to the *hagn-* word-group, which conveys the idea of purity (*see* PURE).

The RSV usually translates Heb. *tāmîm* as "without blemish" when referring to sacrificial animals (e.g., Ex. 12:5) as "blameless" referring to persons (e.g., Gen. 6:9), or as "perfect" referring to God (e.g., Dt. 32:4); (*See* PERFECT I). In Josh. 24:14 it describes an attitude of wholehearted faithfulness in serving God. The root *brr* basically means to "separate" or "choose," hence also to "purify" (e.g., Isa. 52:11; Dnl. 12:10); in both Job 33:3 and Zeph. 3:9 the pass. part. *bārûr* refers to pure speech.

Bibliography.–*DNTT*, III, 100-102, 571f.; *TDNT*, I, *s.v.* ἁπλοῦς, ἁπλότης (Bauernfeind); II, *s.v.* δίκη κτλ.: δίκαιος (Schrenk); *TDOT*, II, *s.v.* "bārar" (Hamp). P. A. FRANK

SINEW [Heb. *gîḏ*]; NEB also "stiff" (Isa. 48:4). A tendon, i.e., a cord or band of connective tissue that joins a muscle to a bone or other structure of the body (Job 10:11; 40:17; Ezk. 37:6, 8). In figurative language Isa. 48:4 compares the neck of the obstinate to an "iron sinew" (cf. the expression STIFF-NECKED).

Genesis 32:32 (MT 33) explains that the Jewish custom of not eating "the sinew of the hip" derived from the injury that Jacob received while wrestling with God (v. 25 [MT 26]). Jewish tradition understands *gîḏ* here to mean the sciatic nerve (cf. LXX *neúron*; Vulg. *nervus*), which Jews are required to remove when slaughtering animals that they intend to eat (Mish. *Hullin* vii). N. J. O.

SING; SINGER. *See* SONG.

SINGLE EYE. *See* SOUND EYE.

SINIM sī'nim (Isa. 49:12, AV). *See* SYENE.

SINITES sin'īts, sī'nīts [Heb. *sînî*, with def. art. *hassînî*, Gk. *tón asennaíon*]; AV SINITE. A northern Canaanite people listed under the sons of Canaan in the genealogies of Gen. 10:17 and 1 Ch. 1:15. The gentilic *hassînî* should be vocalized *hassiyānī*, which is cognate to second-millennium Akk. *siyan(n)i* and Neo-Assyr. *sian(n)nu*, gentilic *sianaya*. Thus their home of origin can be identified with the northern Phoenician city-state of Siyan(n)u. Ugaritic texts locate it at a large mound near the modern village in northern Lebanon of Siyānū. In the Late Bronze Age Siyan(n)u and a nearby city, Ushnatu, together formed a vassal state controlled by Ugarit until the Hittites under Mursilis II placed them under the power of the king of Carchemish, viceroy of northern Syria, *ca.* 1330 B.C. Both cities survived the fall of Ugarit and in 853 B.C. were part of the coalition of twelve nations, including Israel, that checked the advance of the Assyrians under Shalmaneser III at the battle of Qarqar. Independence from Assyria did not last, for Tiglath-pileser III made them part of the new province of Ṣimirra in 738 B.C.

Bibliography.–M. C. Astour, "Ugarit and the Great Powers," in G. Young, ed., *Ugarit in Retrospect* (1981), pp. 12, 22; *Ugarit Forschungen*, II (1979), 13-28; J. Nougayrol, ed., *Palais royal d'Ugarit*, IV (1956), 16f., 71-83, 281-291. J. M. WIEBE

SINNER [Heb. part. of *ḥāṭā'*, *ḥaṭṭā'*; Gk. *hamartōlós*]; AV also SIN (Prov. 14:21); NEB also WICKED NATION (1 S. 15:18), DO WRONG, BAD MEN, BAD CHARACTERS, etc. In the OT, generally one who despises God's will as expressed in the Torah, in contrast to the righteous who submit themselves to the law of God (e.g., Ps. 1:1, 5; Prov. 1:10; 13:21f.; 23:17; Eccl. 8:12; 9:2; Isa. 1:28).

In the NT the term is used with several different meanings. (1) In the Gospels the term is most often used to denote someone who does not keep the commandments of the Torah. This includes those who live flagrantly immoral lives, e.g., harlots (Lk. 7:37, 39) and tax collectors (who had a reputation for dishonesty; cf. 18:13; 19:7), but also those who have in any way fallen short of a strict observance of the Mosaic law. Jesus was criticized by the Pharisees for associating with such persons, but He replied that these were the persons He had come to save (e.g., Mt. 9:10-13 par.; 11:19 par.; Lk. 13:2; 15:1f., 7, 10). (2) Occasionally it refers to one who violates the Pharisaic interpretation of the Torah. The Pharisees accused Jesus of being a sinner because He did not follow their ordinances regarding the sabbath (Jn. 9:16, 24f., 31). (3) It can also refer to a Gentile as one who lives outside the Jewish law (Mk. 14:41; Lk. 6:32-34). (4) The NT Epistles most often use the term "sinners" to refer to the whole human race in its state of separation from God because of sin, i.e., to all human beings as they are without Christ (e.g., Rom. 5:8, 19; Gal. 2:15, 17; 1 Tim. 1:15; He. 7:26; 12:3). In a few instances, however, the term refers to those who lead lawless, immoral lives (e.g., 1 Tim. 1:9; 1 Pet. 4:18; Jude 15).

SIPHMOTH sif'moth [Heb. *śipmôṯ*; Gk. B *Saphei*, A *Saphamōs*, others *Sapheimōth*]. One of several Judahite cities with which David shared the spoil of his campaign against the Amalekites while in the service of the Philistine Achish (1 S. 30:28). 1 Ch. 27:27 mentions "Zabdi the Shiphmite," who may have come from Siphmoth. The exact location is unknown. G. H. WILSON

SIPPAI sip'ī [Heb. *sippay*] (1 Ch. 20:4). Elsewhere known as SAPH (2 S. 21:18), he was a Philistine warrior killed in battle by SIBBECAI the Hushathite.

SIR [Heb. *'ādôn*–'lord, master'] (Jgs. 6:13); AV, NEB, MY LORD; [Gk. *kýrios*–'lord,' 'Lord,' 'master'] (Mt. 13:27; Lk. 13:8; Jn. 4:11; etc.); AV also LORD; NEB also YOUR EXCELLENCY (Acts 27:63); [*anḗr*–'man'] (Acts 27:10); NEB GENTLEMAN. A polite, respectful form of personal address.

Only in Jgs. 6:13 does the RSV OT have "sir." Here Gideon addresses the "angel of the Lord" with "sir" (cf. Gen. 18:3; 19:2, 18; also *TDNT*, III, 1061 n. 118).

In the NT the RSV often translates the vocative form of Gk. *kýrios* (*kýrie*) by "sir." This form is used by slaves addressing their masters (Mt. 13:27; Lk. 13:8; 14:22), by people addressing officials of high position (Mt. 21:30; 27:36), and by people addressing other respected persons (Jn. 12:21; 20:15; Rev. 7:14). In John's Gospel people often employ *kýrie* as a polite form of address to Jesus (4:11, 15, 19, 49; 5:7). G. L. K.

SIRACH sir'ak, sir'ək. The preeminent wisdom book of the APOCRYPHA, also know as Ecclesiasticus (i.e., "the church book") in the Western Christian tradition.

IV. Background
V. Literary Character
VI. Content and Purpose

I. Date.–The Hebrew original was completed in Jerusalem between 198-175 B.C. by Jeshua ben Eleazer ben Sira (the MSS offer variant forms of the name in 50:27 and at the end of 51). The grandson of Ben Sira translated his grandfather's work into Greek sometime after the former arrived in Egypt, according to the prologue of his translation, in the thirty-eighth year of King Euergetes (i.e., Ptolemy Physcon VIII Euergetes II [170-117 B.C.]), thus after 132 B.C.

Two factors establish the temporal limits of the original Hebrew work between 198 and 175 B.C. First, Ben Sira devoted a hymn of praise (50:1-24) to a high priest Simon son of Onias (*ca.* 226-198 B.C.; perhaps "Simon the Just' of Pirke Aboth 1:2 [so Hengel, p. 161]), who had died not long before (50:1). The hymn concludes with a prayer that peace prevail among the sons of Simon and that God maintain for him and his descendants the priestly "covenant of Phineas" (Hebrew text of 50:23f.; cf. Nu. 25:13; Sir. 45:23-26). This prayer, which the grandson altered after the demise of Simon's priestly line, seems to indicate concern about potential conflict in the high-priestly house (cf. 7:4-7 on not seeking office).

Second, the book shows no awareness of the actual eruption of conflict between Simon's high-priestly son Onias III and his hellenizing brother Jason, shortly after the accession of Antiochus IV Epiphanes in 175 B.C. (cf. 1 Macc. 1:11-15; 2 Macc. 4:7). Also, there is no evidence of the tumultuous events culminating in the Hasmonean revolt, unless 36:1-17, taken by many scholars to be a later addition, refers to the period before the success of that revolt.

II. Author.–Ben Sira, the only author of an apocryphal book to reveal his name (but cf. 2 Macc. 2:23-32), lived in Jerusalem as a professional sage and scribe (cf. 38:24–

39:11) who was steeped in the Law and Prophets as well as in the wisdom traditions of Israel and possibly of other lands (prologue; 39:1, 4; cf. J. T. Sanders). A man of wide experience, he had traveled (34:9-12; 51:13), perhaps in the role of counselor and diplomat (39:4; cf. 38:33; 2 Macc. 4:11). He became master of a school (51:23), presumably for young male aristocrats, for his teachings address this social class with frequent admonitions ranging from advice on women (who are considered only in terms of their relationships to men) and table etiquette (31:25–32:2; 31:12-22) to the use and abuse of wealth and power.

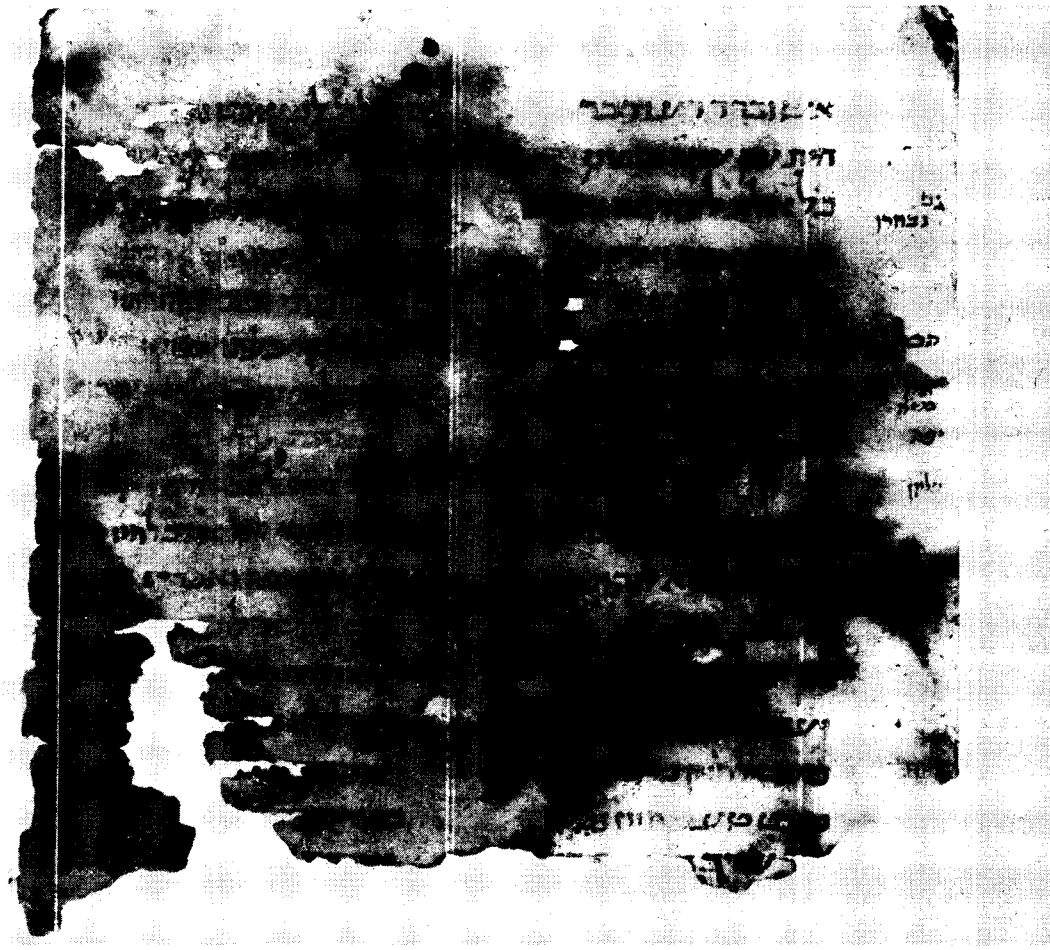
III. Text.–Until 1896, except for brief quotations in talmudic and medieval Jewish literature, knowledge of the text of Sirach was essentially dependent upon the Greek, Syriac, and Latin versions. Since then about two-thirds of the work has been recovered in Hebrew. Yet scholars are far from establishing the original text of the work, for the evidence is highly complex, often incomplete, and has undergone a variety of corruptions both deliberate and accidental.

A. Hebrew. The more recent Hebrew evidence is of two sorts. First, some ancient fragments come from Qumrân and Masada. The Qumrân texts contain scraps of 1:19f.; 6:14f., 20-30 (Baillet), and a portion of the appendix, 51:13-20, 30b, found in the large Psalm Scroll 11QPs^{a} (J. A. Sanders). The Masada fragments contain sections of 39:27–44:17 (Yadin). Second, extensive sections and fragments of Hebrew Sirach were found in the Genizah (depository for worn texts) of an old Cairo Synagogue in 1896. The MSS, which date approximately to the 11th cent. A.D., number five and are designated A through E. In the late 1950's two new pages of MS B and two of MS C appeared (J. Schirmann). Also, in 1979 and 1982 A. Scheiber published newly found fragments of MS D.

While scholars had debated the authenticity of the Genizah fragments (some held that they were retranslations into Hebrew from various secondary translations), the discovery of the Masada MS confirmed their general authenticity as descendants of Ben Sira's Hebrew original. Yet the Cairo Genizah MSS show the results of various scribal corruptions, including possible occasional contamination from the Syriac or Greek. It is a strong possibility that the Genizah texts of Sirach ultimately derive from an eighth-century-A.D. discovery of Hebrew scrolls in a (Qumrân) cave near Jericho as reported in a letter by the Nestorian patriarch of Seleucia, Timothy I.

B. Greek. Of the various versions of Sirach, the most important is the Greek, which exists in two forms. Greek I, preserved in the great uncials Sinaiticus, Vaticanus, and Alexandrinus, is a short text reflecting the grandson's

The first leaf of the Hebrew text of Sirach, discovered in the Cairo Genizah. MS B (shown) is Sir. 39:30–40:7 (the other side has 39:15-29). The text is generally similar to the LXX; the marginal notes are apparently variant readings (Cambridge University Library, Or. 1102)



translation. Greek II is an expanded text that seems based on an expanded Hebrew text (Hebrew II in contrast to Ben Sira's original Hebrew I).

C. Latin. Some scholars think that Greek II is actually best exemplified in the tertiary Old Latin translation, which contains only chaps. 1–43 and 51. After the gap in this text was filled by a later translator, Jerome incorporated the Old Latin into the Vulgate without making his own translation from the Hebrew that still existed in his day.

D. Syriac. The Syriac version reflects, in problematic fashion, a Hebrew base. It was contaminated by the Greek and underwent revision by Christians in the late 4th cent. A.D.

In sum, the matter of the text of Sirach is far from settled. Thus various modern translations are based on different texts. The RSV (also NEB, JB) follows Greek I with the additions from Greek II in footnotes. The NAB and *APOT* attempt to render a Hebrew text with the aid or supplementation of the versions.

IV. Background.–Sirach was written between two key moments in the history of Palestinian Judaism. In 198 B.C., after his victory over the Ptolemies, Antiochus III granted many benefits to the Jews. "Among these was the right to live 'according to their ancestral laws.' The Torah was officially recognized as the constitution of the state, and the authority to govern was delegated to the high priest in Jerusalem" (Nickelsburg, p. 71). This situation forms the immediate background of Ben Sira's book. Indeed, he was passionately concerned to defend, preserve, and glorify this status quo as God's will for His people. Sirach identifies the Torah or law of Moses with the cosmic wisdom that God bestowed upon the world (24:23; cf. 1:26; 6:37; 19:20; 39:8; etc.) and rails against those who forsake the law (41:8, cf. 10:19; 19:24). His "praise of the fathers" (chs. 44–50) culminates in a hymn celebrating the glory of the recently deceased Simon as he went about his high-priestly service in the temple.

This immediate background and Ben Sira's attitude toward it implies that the deepest cultural and historical background of Ben Sira's work is that of Judaism as defined by the Hebrew Scriptures. Indeed, Ben Sira's devotion to the Law and Prophets and his description of the ideal scribe confirm this assessment (39:1f.; cf. 24:23-34; 33:16-18; and prologue) as does the hymn in praise of the (Hebrew) fathers (chs. 44–50).

On the other hand, Ben Sira wrote just before the outbreak of conflict in the house of Simon (see I. above) and the vicious anti-Jewish policies of Antiochus IV. These policies attempted a thoroughgoing hellenization of Jewish culture. Concomitantly, they attempted to destroy what was indispensable in Jewish religion by desecrating the temple and proscribing the law and its essential acts of circumcision and sabbath — precisely those things most precious to Ben Sira.

Because Ben Sira did not mention these events, there is some scholarly controversy about where he stood with regard to the conflict between Judaism and Hellenism. Was his focus on law keeping and the temple cult merely traditional Judaism or was it an implicit polemic against hellenization and its Jewish advocates? Was his use of Hellenistic literary forms designed to combat Hellenism? These questions are made more complex because all scholars recognize a certain amount of Greek intellectual and literary influence in Ben Sira's work. The nature and extent of this influence are also a matter of debate. "Call no one happy before his death" (11:28), e.g., almost certainly derives from Solon's famous word to Croesus (Herodotus i.32). Other parallels carry varying degrees of certainty, since many of Ben Sira's thoughts reflect common ancient wisdom, or find parallels in more than one source. Indeed, in addition to Hellenic (Theognis) and Hellenistic influence, J. T. Sanders has sought to demonstrate Ben Sira's heavy dependence upon Egyptian wisdom, particularly upon the demotic wisdom book *Phibis,* best known from Papyrus Insinger. Aside from literary allusions, the difficult question of the influence of Hellenistic thought patterns in Sirach must be considered. Some of this type of influence is clearly unconscious, for it reveals an implicit tension with Ben Sira's avowed commitment to the Hebrew Scriptures. His creation theology and theodicy, e.g., are influenced by the spirit of Greek popular philosophy, which sought to rationalize the mysteries of good and evil and God's role in them. On the other hand, when Ben Sira declared of God, "He is the all" (43:27), we hear the vocabulary of Stoic pantheism, but it is placed in a context that clearly maintains the creator-creation distinction.

J. T. Sanders (p. 58) has summed up Ben Sira's relation to non-Judaic culture in this way: Ben Sira is "open to Hellenic thought *as long as it can be Judaized.* What he opposes is the *dismantling of Judaism.*" It is even likely that Ben Sira's use of Greek culture was sometimes a deliberate strategy of persuasion aimed at the cultured youth who were his pupils. If this is correct, it should yet be added that it is possible, as noted above, that Hellenic or Hellenistic thought is inadequately adapted or transformed by its attempted adoption into a biblical framework.

V. Literary Character.–Sirach belongs to the tradition of Israelite wisdom literature best exemplified by the book of Proverbs, to which it owes much. The poetry is generally made of bicola, after the pattern of Proverbs with its use of the one-line, two-parts saying. Yet in contrast to the earlier book, with its discrete sayings or small saying clusters, Ben Sira generally used sayings to create longer, clearly thematic "proverb poems" on topics like friendship, wealth and poverty, women, and business. He was also fond of numerical sayings (23:16f.; 25:1f., 7-11; etc.; cf. Prov. 30:15-31). In contrast to the "proverb poems" constructed of short sayings, Ben Sira also employed a variety of "wisdom essays" after the model of the instruction genre well-known from Prov. 1–9. Ben Sira's great poem on wisdom (ch. 24), e.g., has its antecedents in Prov. 1:20-33; 8; and Job 28. His account of the trades, however, culminating in praise of the scribe (38:24–39:11), has its roots in Egyptian wisdom (M. Lichtheim, *Ancient Egyptian Literature,* I [1973], 184-192; II [1976], 167f.). Ben Sira was the first Jewish wisdom writer to integrate covenant history into his work, especially (though not only) in his "praise of the fathers" (chs. 44–50). Yet here his form and focus on the exemplary character of the fathers show affinities with the Hellenistic genre *de viris illustribus* ("on famous men"). In a number of places, Ben Sira used the didactic autobiographical report to persuade his hearers/readers (e.g., 24:30-34; 33:16-19; 39:12-14; 51:13-30; cf. Prov. 24:30-34).

Ben Sira employs other genres that do not have a specific wisdom character. The forms and ideas of Israelite psalmody and prayer exerted a notable influence. Sir. 39:35 contains a doxological exhortation (cf. 32:13; 50:22-24), while the psalm on God as Creator (42:15–43:33) contains echoes of Gen. 1 and Ps. 29, 104, 107, 147, etc., masterfully shaped into a poem that is Ben Sira's personal creation and no mere anthology of quotations. Sir. 51:1-12 takes the form of an individual psalm of thanksgiving. Sir. 36:1-17 (though this may be a later addition) forms a communal lament that prays for Israel's deliverance and the

destruction of its enemies. The literary forms that Ben Sira employed are sometimes mixed. Sir. 17:25-32, e.g., combines prophetic admonition to turn from sin (17:25f.; cf. Am. 5:6, 14f.; Jer. 3:12) with the psalmic reflection that the dead do not praise God (Sir. 17:27f.; cf. Ps. 6:5; 115:17; Isa. 38:18).

There is no consensus on the larger literary arrangement of the book and its numerous subunits with their profusion of individual topics. As noted, the subunits themselves generally have a thematic coherence. And subunits are often connected by use of repeated keywords or common opening formulas. Yet some structural pillars help organize the book and its concerns. Scholars often divide the book (not counting the grandson's prologue and the epilogue in ch. 51) into two sections, chs. 1–23 and 24–50. Each of these passages is introduced by a poem on wisdom that sets forth the major theme of the book. Chs. 1–2 state that wisdom, cosmic in scope, comes from the Lord, who gives it to those who love Him. Thus wisdom is inseparable from the fear of the Lord and is to be pursued devoutly. The various topics treated in chs. 3–23 may then be seen as practical elaborations of God-fearing wisdom in the conduct of life. In ch. 24 cosmic wisdom appears again, now in a passage strongly reminiscent of Prov. 8. But here wisdom is identified with the Torah given through Moses to Israel as its unique possession and heritage (24:23). While this poem, like chs. 1–2, is followed by a variety of wise advice, it nonetheless anounces important concerns developed, and images employed, in the longer poems that are characteristic of the second half of Sirach. Note the connections between ch. 24 and the poem on the scribe (39:1 and 24:23; 39:14f. and 24:14f.; cf. 24:30f. and 24:25-29) and that on creation (42:15–43:33). Mack (p. 164) found that the structure of the wisdom poem in 24:3-17 is paradigmatic for the "praise of the fathers" in chs. 44–50. Significantly, the images used to describe the high priest Simon in the glory of his temple service derive from the poem on wisdom in ch. 24 and the hymn on creation in 42:15–43:33 (cf. 50:5-10, 12).

Thus the two great poems on wisdom (chs. 1–2, 24) and the series of long hymns of praise that conclude the book (42:15–43:33 [God as Creator]; 44–49 [praise of the fathers]; 50 [praise of the high priest Simon] are the literary pillars that provide the religious-cultural foundation for the mass of wisdom reflection in Ben Sira's book. W. Roth proposed that in addition to ch. 1–2 and 24, other shorter poems on wisdom (4:11-19; 6:18-37; 14:20–15:10; 32:14–33:15; 38:24–39:11) also have a subsidiary structuring function in Sirach. This suggestion holds promise but needs refinement as its stands, since 32:14–33:15 does not seem a wisdom poem strictly speaking, even though it is followed by a brief autobiographical poem, a feature that Roth found after each wisdom poem in the second half of the book.

VI. Content and Purpose.–Ben Sira's book contains a twofold agenda that determines its content. First, Ben Sira set out to compose a wisdom book for the instruction of all, but especially of the (male) aristocracy, who would be godly and wise in the conduct of their own lives as well as prudent in socio-cultural matters. In this he saw himself as an heir of the great Israelite wisdom tradition embodied in Proverbs (33:16-18). Here traditional theocentric wisdom in its cosmic and practical dimensions is developed and addressed to Ben Sira's time.

Second, and no less important, Ben Sira was concerned to combat threats to biblical religion and its institutions, both external (Hellenistic culture inasmuch as it is antithetical to Judaism) and internal (the potential politico-religious struggles among the heirs of the high priest Simon). Ben Sira pursued this goal by explicitly combining traditional wisdom with the historic, covenant faith of Israel based upon the Law and Prophets. He was the first Jewish writer so to combine wisdom and covenant history. His survey of history in his "praise of the fathers" (chs. 44–50) serves to equate true wisdom with faithfulness to the law (cf. 24:23) and Israel's religious institutions, especially the hereditary priesthood and temple. Thus key themes in the "praise of the fathers" are covenant (both as promise and demand for faithful obedience), election (esp. of leaders to exclusive [45:13, 18f.] hereditary office or property [44:10-13; 45:13, 15, 21, 24f.; 46:1, 9; 47:22; 50:23f. (Hebrew)]), law (44:20; 45:3b, 5, 17; 46:14; 49:4), and temple and priesthood (Aaron, Phineas, Samuel, Jeshua [49:12], Simon). Ben Sira's history also contains a cautionary look at enemies, outsiders, and rebels (45:2, 13; 46:1, 5, 7, 16-18, 20; 47:21; 48:17f.; 50:4). His selective history thus has the intensely practical purpose of admonishing the cultural and political leaders of his day to fear the Lord, keep the law, and support the legitimate high priest amid the difficulties and temptations of existence in a minor Hellenistic client state.

As a teacher of wisdom in the general sense, Ben Sira covered a welter of topics; his goal was to present a comprehensive vision of how life is to be lived and understood: "He wishes to show how the wise man judges the things of this world, and how he conducts himself in practical life. His book contains therefore an inexhaustible number of rules for behaviour in joy and sorrow, good fortune and adversity, wealth and poverty, in sickness and health, trial and temptation; in the society of fellow citizens; in intercourse with friend and foe, high and low, poor and rich, good and evil, intelligent and foolish; in trade and commerce, business and profession; above all also in one's own house and family — how children should be raised, servants treated, and how one should behave towards one's wife, and women in general" (*HJP*^{2}, III/1, 199).

Yet the details of life are presented under a comprehensive framework of key concepts. The first is Wisdom herself: a cosmic reality poured out by God upon His created world for the benefit of humankind (1:9f.). Like the sages who preceded him, Ben Sira was a theologian of creation. Wisdom is the agency in creation that gives order and meaning to life in all its details. Wisdom is "a beneficent, ordering power within creation to which man, in his world, is exposed, which woos him and leads him to knowledge" (von Rad, p. 242). While Wisdom is earnestly to be sought by human beings (51:13-30), she herself is active toward humanity: "She comes toward him, welcomes him, feeds him, exalts him (15:2-7). Sometimes she disguises herself before him, tests and terrifies him until she is able to trust him and reveal her secrets to him (4:11-18)" (von Rad, p. 242).

As cosmic reality, wisdom is prior to Torah. The famous identification of wisdom and the law of Moses must be seen in this light (24:23). Torah is the primeval order of creation expressed in new, covenant dress. For all his insistence on the keeping of the law, Ben Sira never spelled out the content of the law. This he took as a given that did not need elaboration. The content of his teaching is rather that of a traditional wisdom teacher.

A second key concept, connected with both wisdom and law, is the "fear of the Lord." Wisdom and law-keeping cannot be abstracted from a vital engagement with the God who is the source of wisdom, law, and life itself. The "fear of the Lord" is the proper human response to God and His orders for life.

Ben Sira's concern with the creation theology of wis-

dom was combined with a concern for a stable, biblical social order where leaders and their offices are respected. Thus the concept of glory or honor (the same word in Hebrew) is central to his thought. As the creation is full of God's glory (42:16, 17, 25) and the celestial beings have their proper glory (43:1, 9), each human being has a glory or position in life that is appropriate to him or her (e.g., 10:24; 44:7; 48:4; esp. 50:5-7). To live in accordance with this position and its norms is glory, but to transgress one's limits brings shame (3:17-24). Thus children should "glorify" or honor their parents (3:1-16) lest they be disgraced (3:10). Similarly the glory and offices of the "fathers" and especially of the high priest Simon are to be respected and defended against all threats.

Finally, Ben Sira sought to divide reality into opposites: good and evil, life and death, honor and shame. "Good is the opposite of evil, and life the opposite of death; so the sinner is the opposite of the godly. Look upon all the works of the Most High; they likewise are in pairs, one the opposite of the other" (33:14f.; cf. 15:17; 17:7; 18:8; 37:18). Not only has the Creator placed opposites in the world, each for its "need" or purpose — an idea that is the keystone of Ben Sira's theodicy (42:22-25) — but things themselves are ambiguously dual. This duality is central to the wisdom he wishes to teach. "Not everything is good for every one, and not every person enjoys everything" (37:28). Friends can be true or false (6:5-17); wives can be wonderful (26:1-4) or wicked (25:16-26). The physician is a gift of God or a punishment (38:12-15). Shame can be negative or positive (4:20); and even death has its place (41:1-4). God Himself brings both wrath and mercy (5:6) and the human race is worthy of honor or dishonor, depending upon whether it fears the Lord (10:19).

SIRAH sī'rə, **CISTERN OF** [Heb. *bôr hassîrâ*–'pit/cistern of Sîrah']; AV WELL OF SIRAH; NEB POOL OF SIRAH. The site from which Joab deceitfully recalled his rival Abner to Hebron in order to assassinate him in vengeance for the slaying of Asahel (2 S. 3:26; cf. v. 27; 2:18-23). Josephus (*Ant.* vii.1.5 [34]) calls the place Gk. *Bēsēra* and locates it 20 stades (about 3.7 km., 2.3 mi.) from Hebron.

G. H. WILSON

SIRION sir'ē-ən [Heb. *śiryôn*]; AV also SION (Dt. 4:48), FIELD (Jer. 18:14); NEB also SLOPES. The Sidonian (Phoenician) name for Mt. Hermon (Dt. 3:9), the southernmost major peak of the Anti-Lebanon Range. It has been suggested that Sirion was actually the name for the whole range, based on its usage in parallel to "Lebanon" in Ps. 29:6. "Sirion" and "Lebanon" are also found in parallel in a Ugaritic religious text (*UT* 51:6:18-21). Interestingly, "Senir" (said to be the Amorite name for Mt. Hermon in Dt. 3:9; but cf. 1 Ch. 5:23) also appears in parallel to "Lebanon" in Ezk. 27:5. Perhaps "Sirion" is best understood in Ps. 29:6 as an instance of *pars pro toto*, i.e., a designation of the whole (the Anti-Lebanon Range) by reference to one of its parts.

In two texts the RSV reads "Sirion" where MT does not. In Dt. 4:48 the RSV and NEB follow the Syriac rather than Heb. *śî'ôn* (LXX *Sēōn*), assuming that the MT here is corrupt. The Syriac reading was preferred because *śî'ôn* appears nowhere else in the OT and because the text explains the name as a designation for Mt. Hermon (cf. 3:9). The possibility remains, however, that the Syriac reading may have been an intentioned correction of a difficult text, and the explanatory note is a later gloss. In Jer. 18:14 the RSV emends Heb. *śāḏay* to *śiryôn* because of difficulties in the Hebrew syntax and because the word is used, as in Ps. 29:6, in conjunction with "Lebanon" (see comms.).

A. J. COUCH

SISAMAI sis'ə-mī (1 Ch. 2:40, AV). *See* SISMAI.

SISERA sis'ər-ə [Heb. *sîsᵉrā'*; Gk. *Sisara*, Apoc. *Serar* (1 Esd. 5:32)]; AV Apoc. ASERER; NEB Apoc. SERAR.

1. The Canaanite military commander whose chariot troops were defeated by Deborah and Barak and who was himself murdered by a Kenite woman named Jael. In the book of Judges Sisera is one of several foreign oppressors into whose hand Yahweh first delivered the Israelites because of their sin and from whose hand He later rescued them by summoning a "judge" or "deliverer" (*šōpēṭ môšî[a]'*) (cf. 2:11-23). Sisera's story is related in both a prose version (ch. 4) and a possibly earlier poetic version (5:24-30; see Freedman, pp. 56f., 61-63). Allusions to this event are found in Samuel's farewell speech (1 S. 12:9) and in Ps. 83:9f. (MT 10f.).

Although Jgs. 4:2 states that Sisera was the commander of Jabin king of Canaan, Jabin seems to have played no active role in this episode (cf. vv. 7, 17; he is not mentioned at all in the poem); the names are paired, however, in the other biblical references. Some scholars have contended that Jabin's title "king of Canaan" is problematic, since the highly balkanized Canaanite city-states had no single political head (see Gottwald, pp. 503f.; Soggin, pp. 62f.), the designation "king of Hazor" (cf. Josh. 11:1) may be more accurate. The name Sisera has no Semitic etymology, and scholars are divided over whether it is Indo-European, Illyrian, or Luvian (see Soggin, p. 63, esp. notes 2f.). The association with chariots and the general time period (see Dietrich, p. 22) suggest a derivation from one of the groups of Sea-Peoples (see Boling, p. 94).

The prose account states that Barak, Deborah's general, was initially to have had the honor of subduing Sisera (at Yahweh's behest), but because of his hesitation Deborah announced that a woman would get the credit instead (Jgs. 4:4-10). Although it first appears that the reference is to Deborah herself, later it becomes clear that another woman is meant, namely, Jael, the woman to whose tent Sisera fled when forced to abandon his defeated army (vv. 17-22). Sisera probably counted on refuge because of the prior relationship between Jabin and the house of Heber the Kenite (Jael's husband, v. 17, unless *ḥbr* refers to the group rather than the person; cf. Soggin, pp. 65f., although some have argued that the sacrosanct custom of hospitality lay behind his trust [Soggin, p. 77]). In any case the Kenites had divided loyalties, for they were also distantly related to none other than Moses (v. 11); in fact, these "smiths" seem to have had rather ancient ties with early Israel (see Gottwald, pp. 320f.).

This relationship is the only reason that the text gives for Jael's behavior.

First Jael took steps to convince Sisera that he would be safe with her: she invited him in, told him not to be afraid, covered him up (to hide or comfort him?), gave him a drink of milk (to assure him of good intentions [he had asked only for water] or to sedate him?), and stood watch at the door; then she brutally murdered him (Jgs. 4:18-21). When Barak finally caught up with Sisera, Jael had already fulfilled Deborah's prophecy (cf. vv. 9, 16, 22).

The poetic version makes no mention of Sisera's sleeping and seems to picture Jael killing him while he is drinking the milk (5:25-27). It also describes Sisera's mother, whose anxiety about her son's delayed return is calmed by the suggestion that his tardiness is due to the gathering of spoils (vv. 28-30).

Some scholars have suggested that Jael lured Sisera by a subtle offer of sex (see Zakovitch). This idea is based on several *double entendres* in the Hebrew, e.g., *sûrâ 'ēlay* ("turn aside to me," 4:18), *watt'kassēhû* ("and she covered him," v. 18), *bên raglêhā kāra' nāpal šāḵāḇ* ("he sank, he fell, he lay still at [between] her feet," 5:27), and at least surface similarities with similar "type-scene" pericopes (e.g., Esther-Haman, Judith-Holofernes, Samson-Delilah; cf. Prov. 7:6-27). While such an interpretation is possible, there is no way to be certain about it — although interestingly, the rabbinic tradition does find sexual innuendoes in the text (see Zakovitch, p. 367).

2. The "sons of Sisera" are listed among the temple servants who returned from exile (Ezr. 9:53; Neh. 7:55; 1 Esd. 5:32). Since the NETHINIM were apparently foreigners who had originally been taken as prisoners of war, it is possible — but not certain — that these "sons of Sisera" were descendants of the man defeated by Deborah and Barak (see 1 above).

F. A. SPINA

SISINNES si-sin'ēz [Gk. *Sisinnēs*] (1 Esd. 6:3, 7, 27; 7:1). The governor of Syria ("Coelesyria," 1 Esd. 6:29; 7:1) and Phoenicia, who questioned King Darius concerning Zerubbabel's rebuilding of the Jerusalem temple (6:2). Sisinnes assisted the Jews in rebuilding the temple (7:1f.) after he learned that Cyrus's decree had sanctioned the project (6:7-26).

SISMAI sis'mī [Heb. *sismay*] (1 Ch. 2:40); AV, NEB, SISAMAI. A Judahite who descended from the daughter of Sheshan and Sheshan's Egyptian slave Jarha (1 Ch. 2:34). An inscription indicates *ssm* as the name of a Phoenician deity (*IP*, p. 252).

SISTER [Heb. *'āḥôṯ* (Gen. 4:22; 20:12; 24:60; Cant. 4:9f.; 8:8; Jer. 3:7; etc.), *dôḏâ*–'father's sister' (Ex. 6:20); Gk. *adelphḗ*]; AV also BELOVED (Philem. 2); NEB also HALF-SISTER (2 S. 13:2), BROTHER (Jer. 22:18), FELLOW CHRISTIAN (Rom. 16:1), CHRISTIAN WIFE (1 Cor. 7:15). The RSV supplies "sister" contextually in Lev. 18:18. Philem. 2 has a textual problem (some MSS read Gk. *agapētḗ*, "beloved"; cf. AV).

In the OT Heb. *'aḥôṯ*, like the corresponding masculine term *'āḥ*, "brother," can refer to various relatives. Primarily it means a person's true sister (e.g., Gen. 4:22; Ex. 15:20; Nu. 26:59) or half-sister (e.g., Gen. 20:12; Lev. 18:9), but it can also refer to a female relative (kinswoman) of an extended family (e.g., Gen. 24:60; Job 42:11) or to a member of the same nation (e.g., Num. 25:18). It may also mean simply an intimate friend (Job 17:14; Prov. 7:4). The writer of Canticles uses *'aḥôṯ* as a term of endearment, referring to his bride or lover as his "sister" (Cant. 4:9f., 12; 5:1f.) In a figurative sense *'āḥôṯ* can denote a close relationship between nations or cities, e.g., Israel and Judah (Jer. 3:7f., 10), Jerusalem and Samaria (Ezk. 16:46; 23:4), and Jerusalem and Sodom (16:48f., 55f.).

Hebrew law forbade sexual relations with a sister or half-sister (Lev. 18:9, 11). It also prohibited a man from marrying his wife's sister while his wife was still alive, since this would create rivalry between the two sisters (v. 18). In patriarchal times, however, these restrictions were apparently not always observed. Jacob married two sisters, Leah and Rachel (note the rivalry between them, Gen. 29:16–30:24). Sarah the wife of Abraham is said to have been his half-sister (20:12). Some scholars have argued that the wife-sister theme found in Gen. 12:10-20; 20:1-18; and 26:1-11 reflects a Hurrian custom in which upper-class husbands adopted their wives as sisters to form the strongest possible marriage bond (see E. A. Speiser, *Genesis* [*AB*, 2nd ed. 1964], pp. 91-94).

In the RSV NT "sister" often means a literal blood sister (e.g., Mt. 19:29; Lk. 10:39f.; 14:26; Jn. 11:1, 3, etc.; Acts 23:16). Jesus' physical family included sisters as well as brothers (Mt. 13:56; Mk. 3:32 var.; 6:3; *see also* BROTHERS OF THE LORD). But like Gk. *adelphós* ("brother"), *adelphē* is often used in a spiritual sense to denote a "fellow Christian," a woman who shares with oneself a common faith. Jesus Himself states that His true sisters are all those who do the will of God (Mt. 12:50; Mk. 3:35). Paul refers both to Phoebe and to Apphia as "our sister" (Rom. 16:1; Philem. 2). Sometimes "sisters" denotes Christian women in general as part of the family of the Church (1 Tim. 5:2; Jas. 2:15). An entire congregation may also be referred to collectively as the "sister" of another congregation (2 Jn. 13).

As is common in the documentary papyri from Egypt (MM, p. 8), *adelphē* in the NT can also mean "wife." This is probably the term's preferred sense in 1 Cor. 7:15, where Paul says that a Christian "husband" (*adelphós*) or "wife" (*adelphē*) is not bound to a non-Christian partner that has deserted him or her. The connotation in 9:5 is similar, where Paul argues for the right of a missionary to be accompanied by a Christian spouse (RSV "wife"; lit. "a sister as a wife"; cf. AV); here "sister" means a "Christian woman" who is also a *gynḗ*, "wife."

SISTER'S SON (Col. 4:10, AV). *See* COUSIN.

SIT. *See* SEAT.

SITH. The AV translation of the emphatic Hebrew asseveration *'im-lō'* (similarly LXX *ei mḗn*) in Ezk. 35:6 (RSV "because"; NEB "most surely"), which simply means "certainly" (cf. GKC § 149b).

SITHRI sith'rī [Heb. *siṯrî*] (Ex. 6:22); AV ZITHRI. Son of Uzziel and cousin of Moses in the list of Levi's descendants (cf. *IP*, pp. 38, 158).

SITNAH sit'nə [Heb. *śiṭnâ*;–'enmity'; LXX *Echthria*] (Gen. 26:21). A well dug by the herdsmen of Isaac in the valley of Gerar. It was the second of three water sources used by Isaac's entourage after they had given up their residence at Gerar itself (vv. 16f.). The herdsmen of Gerar claimed the first well, which Isaac named Esek (Heb. *'ēśeq*, "contention"). So Isaac moved farther from Gerar and had the second well dug, but there was conflict over this one too, so he named it Sitnah ("enmity"). He called the third well Rehoboth ("broad places") because here there was no conflict with the Gerarite herdsmen: "For now the Lord has made room for us" (v. 22). The final move was to the site of Beer-sheba (v. 23).

If Gerar can be placed at Tell Abū Hureirah (Tel Haror) in the western Negeb, then the succession of wells ought to be between there and Beer-sheba, along the course of Nahal Gerar (Wâdī Sherî'ah) and its tributary, Nahal Paṭish (Wâdī el-Fuṭeis). The Byzantine city whose ruins comprise Khirbet er-Ruḥeibeh, between Beer-sheba and Nişşanah, may have been named Rehoboth by its founders in the belief that they were building their town on the site of Isaac's well. No ancient Roman-Byzantine or later source seems to preserve the name of this town, but there is some support for the suggestion that it was thought to be the Rehoboth of Isaac. First, nearby Elousa (Heb. and Aram. *ḥ^{a}lûṣâ;* Arab. *Khalaṣah*) is equated with Gerar in the Arabic version of Gen. 10:19; 20:1 (Khalûṣ). Second, the Tg. of Jonathan (Jerusalem) reads *ḥ^{a}lûṣâ* for Shur in 16:7; Ex. 15:22 and for Bered in Gen. 16:14.

Against this background, E. H. Palmer's suggested identification of Sitnah with a small valley called Shuṭnet er-Ruḥeibah can be taken as possible proof for the Byzantine tradition. But this site is hard to reconcile with the location of the Saltus Gerariticus on the Madeba Map.

SKIFFS OF REED [Heb. *'^{o}nîyōṯ 'ēḇeh*–'boats of reed'] (Job 9:26); AV SWIFT SHIPS; NEB REED-BUILT SKIFFS. Job compares the brevity of his life to swiftly moving reed boats, varieties of which were found in both Mesopotamia and Egypt (cf. Isa 18:2).

SKILFUL; SKILFULLY; SKILL; SKILLED [(nouns and adjectives) Heb. *ḥāḵām*–'skilful' (1 Ch. 22:15; 2 Ch. 2:7, 13 [MT 6, 12]; Isa. 3:3; Jer. 4:22; 9:17; etc.), *ḥēšeḇ*–'girdle, band' ("skilfully woven band," Ex. 28:8, 27f.; 29:5; 39:5, 20f.; Lev. 8:7), *t^{e}ḇûnâ*–'understanding, skill' (Ps. 78:72; Hos. 13:2), *maḥ^{a}šeḇeṯ* (Ex. 35:33, 35), *kišrôn*–'skill, success' (Eccl. 2:21; 4:4), *da'aṯ*–'technical knowledge, ability' (1 K. 7:14), *ḥoḵmâ*–'skill (in technical works)' (1 Ch. 28:21), *ḥārāš*–'artisan' (Ezk. 21:31 [MT 36]), *'āṯîḏ*–'ready' (Job 3:8), *śeḵel* (2 Ch. 30:22), *taḥbulôṯ*–'steering, skilful direction' (Prov. 1:5), *'ārbâ* (Isa. 25:11), *māhîr*–'quick, prompt' (Ezr. 7:6; Prov. 22:29); Gk. *sophós*–'clever, skilful, experienced' (1 Cor. 3:10)]; AV also CUNNING, CURIOUS GIRDLE, WISE COUNSEL, EQUITY, WISE, etc. NEB also UNDERSTANDING, CLEVER, etc; [(verbs) Heb. *ḥāšaḇ* (Ex. 26:1, 31; 28:6, 15; 36:8, 35; 39:3, 8; 2 Ch. 26:15), *yāḏa'* (Gen. 25:27; 1 S. 16:16, 18; Eccl. 9:11; Am. 5:16), hiphil of *śāḵal*–'have insight' (Dnl. 1:4, 17), hiphil of *bîn*–'be judicious, intelligent' (1 Ch. 25:7; 2 Ch. 34:12), hiphil of *yāṭaḇ*–'do well' (Ps. 33:3)]; Av also CUNNING, MEN OF SKILL, etc.; NEB also UNDERSTANDING, "at home" (Dnl. 1:4), etc. In Jer. 46:9 the context suggests the RSV "skilled." In Jer. 50:9 the MT should probably read *maśkîl* (hiphil part. of *śāḵal*, "prosper, have success") rather than *maškîl*.

The Hebrew and Greek words which lie behind "skill" and its related terms refer to crafts or professions requiring discipline, training, and practice. This is even true of the words generally rendered "wise" and "wisdom" (Heb. *ḥāḵām, ḥoḵmâ*; Gk. *sophós*). In the ancient Near East the wisdom tradition was at home in the royal courts of Egypt, Mesopotamia, and Israel. In that context wisdom meant statecraft — the combination of insight (*śāḵal*), discretion (*bîn, t^{e}ḇûnâ*), and prudence that best served the political interest of the nation. Other crafts such as weaving (Ex. 26:1, etc.), wielding weapons of war (Jer. 46:9), or playing a musical instrument (Ps. 33:3), were in principle no different from the skills of politics and diplomacy. AV "cunning" has acquired even more negative connotations than "crafty," but the original English sense was clearly not pejorative.

For the Greeks, too, wisdom was primarily political, and the primary means to political influence was public speaking — the craft of rhetoric. The "sophist" tradition, though strongly criticised by Plato, was still lively in the Roman empire, and is certainly the background for Paul's questions in 1 Cor. 1:20. But the practice of any skilled trade could be called "wisdom" in Greece and Rome as in the Semitic world (cf. AV "wise" in 1 Cor. 3:10; RSV "skilled").

See also WISDOM.

SKIN. The outer surface or protective covering of the flesh of humans, animals, and plants. The usual OT term translated "skin" is Heb. *'ôr* (e.g., Gen. 3:21; Ex. 22:27; 34:29f., 35; Lev. 4:11; 13:2-59; Job 2:4; 19:20; 41:7; Jer. 13:23); other OT terms include *geleḏ* (Job 16:15; NEB "body"), *hēmeṯ* (Gen. 21:14f., 19; AV "bottle"), *nō'ḏ* (Jgs. 4:19; 1 S. 16:20; AV "bottle"), and *nēḇel* (1 S. 1:24; 10:3; 25:18; 2 S. 16:1; AV "bottle"; NEB also "flagon"). The NT terms are Gk. *mēlōtḗ* (AV "sheepskin") and *dérma* in He. 11:37, and *askós* in Mt. 9:17 par.

I. Human Skin.–In the OT skin is recognized as the natural covering of the human body (Job 10:11; Ezk. 37:6, 8). Several characteristics of human skin are also mentioned; e.g., Jacob's skin is "smooth" while Esau's is "hairy" (Gen. 27:11); David (1 S. 16:12; 17:42) and the "beloved" of Cant. 5:10 have beautiful, "ruddy" complexions; the "bride" of Cant. 1:5 is "very dark, but comely." The inability of the Ethiopian to change his black skin or the leopard to change his spotted skin provides for Jeremiah an illustration of Judah's inability, after centuries of doing evil, to change and do good (Jer. 13:23). Moses' unique experience with God on Mt. Sinai was apparent to the people because the skin of his face was shining or aglow (Ex. 34:29f., 35).

Certain skin diseases posed a very serious threat to the peoples of the ancient Near East. Among the Israelites, therefore, certain skin conditions such as swelling, eruptions, or spots required an examination by a priest (the chief medical officer) in order to determine the nature of the disease (Lev. 13:2; *see also* LEPER). "If the hair in the

diseased spot . . . turned white" and appeared to be deeper than the skin, it was considered "a leprous disease" (Lev. 13:3), and the person was banished from the camp to prevent the spread of the disease (vv. 45f.). But if the spot appeared to be "no deeper than the skin and the hair in it "had not turned white" (v. 4), a less radical procedure was outlined, involving a period of quarantine (vv. 4-8). Job suffered from other sorts of skin ailments (Job 2:7f.; 7:5; cf. 18:13; 19:26). The expression "my bones cleave to my skin" indicates a severe emaciation (Job 19:20; also Lam. 4:8; cf. 3:4), while "my skin turns black" may describe an extreme feverish condition (Job 30:30; cf. Lam. 5:10). *See also* DISEASE III.I.

The term "skin" also appears in other idioms. The precise meaning of "skin for skin" (Job 2:4) is uncertain; perhaps it was terminology used by those engaged in trading (see comms.). The phrase "by the skin of my teeth" (Job 19:20) has become a modern expression for a narrow escape; the phrase in the MT is difficult, and various emendations have been proposed (see comms.). Micah used imagery involving the skin to depict the atrocities that the aristocratic class of his day committed against the poor; to "tear the skin" (Mic. 3:2) describes the activity of wild beasts, while "flaying" skin (v. 3) is the work of the butcher.

II. Animal Skins.–The Bible contains numerous references to animal skins or hides, reflecting the important role that such skins played in daily life and in sacrificial rituals. Because domesticated animals were an important part of Israel's economy, animal skins were a plentiful natural resource and were cured or tanned and used in a variety of ways.

The processed hides of small animals (esp. goats) were used as containers for the storage and transportation of certain liquids, especially wine (Josh. 9:4, 13; 1 S. 1:24; 10:3; 16:20; 25:18; 2 S. 16:1; Neh. 5:18; Job 32:19; Mt. 9:17 par.), water (Gen. 21:14f., 19; Job 38:37), and milk (Jgs. 4:19). These articles were extensively used in daily life. Wineskins, e.g., were used for carrying wine offerings (1 S. 1:24; 10:3), for travel (Josh. 9:4-6), for soldiers' rations (1 S. 16:20; 25:18; 2 S. 16:1; cf. Neh. 5:18), and for the storing of new wine (Job 32:19). Because wineskins eventually lost their elasticity, it was extremely important to replace them so that they would not burst when the new wine was fermenting (Mt. 9:17 par. Mk. 2:22; Lk. 5:37f.).

Although references are limited, cured or tanned animal skins were sometimes used for garments (Gen. 3:21; Nu. 31:20; He. 11:37; cf. Mt. 7:15). Larger garments made of skin probably included coats, robes and tunics; smaller articles included leather waistcloths or girdles and sandals (2 K. 1:8; Mt. 3:4; Mk. 1:6; *see also* GARMENTS I; LEATHER). GOATSKINS and rams' skins were also used in the construction of the tabernacle and its articles (Ex. 25:5; etc.). *See also* SHEEPSKIN; TANNED.

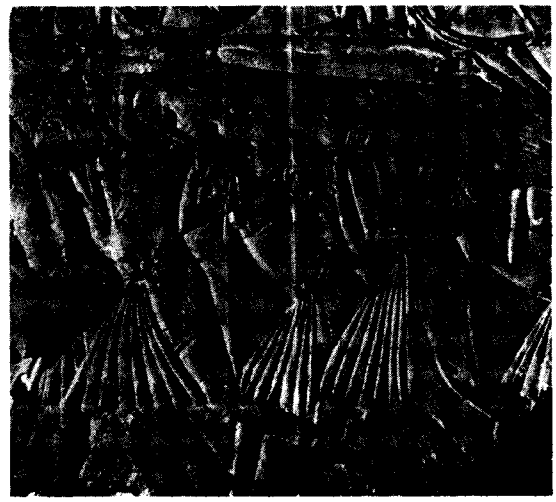
Skins from the animals offered as sacrifices were to be disposed of in different ways. In certain offerings, e.g., the sin offering for the priests (Ex. 29:14; Lev. 4:11; 8:17; 9:11; 16:27) and the purification rituals (Nu. 19:5), the skin was burned; in some instances, however, the hide was given to the priest (Lev. 7:8).

III. Plant Skin.–The only biblical reference to a plant's skin seems to be in Nu. 6:4, which prohibits the Nazirite from eating even "the skins" of the grape during "the days of his separation." L. DEVRIES

SKIRT [Heb. *kānāp*]; AV also ENDS (Job 38:13); NEB also EDGE, PIECE, FOLD, FRINGE, etc.; [*šûl*]; AV also HEM.

Hebrew *kānāp* (lit. "wing," "extremity") refers to the lower, loose part of a robe. Saul grasped the "skirt" of Samuel's robe in a gesture of supplication (1 S. 15:27). To cover with one's "skirt" was apparently a symbolic action indicating an intention to marry (Ruth 3:9; Ezk. 16:8).

In Ex. 28:33f.; 39:24-26 the "skirts" (*šûlîm*) of the priest's robe made up the lower edge or hem, which was ornamented with pomegranates and golden bells. Elsewhere the term appears to refer generally to the lower parts of the robe; to "lift up" a woman's "skirt" is to humiliate by exposing the private parts (cf. "and your shame will be seen," Jer. 13:26; also 13:22; Lam. 1:9; Nah. 3:5). S. WESTERHOLM



An Egyptian "skirt," wrapped and tied in front, depicted in a relief from the tomb of Haremhab at Saqqārah (*ca.* 14th cent. B.C.) (Museo Civico, Bologna)

SKULL [Heb. *gulgōleṯ*; Gk. *kranion*]. The Hebrew word, which is more commonly known in its Aramaic/Greek form "Golgotha," expresses the basically globular shape of the human cranium, being derived from a root meaning "to roll." It is usually translated "head" (e.g., Nu. 1:2, 18, 20, 22), but has the meaning "skull" in Jgs. 9:53; 2 K. 9:35. In the NT the word is found only in connection with GOLGOTHA, "the place of a skull" (Mt. 27:33; Mk. 15:22; Jn. 19:17) or "The Skull" (Lk. 23:33).

SKY. In the RSV OT "skies" usually translates Heb. *šᵉḥāqîm* (pl. of *šaḥaq*; but cf. sing. in Ps. 89:6, 37 [MT 7, 38], AV "heaven"]), which derives from the verb *šāḥaq* ("beat fine, pulverize") and originally denotes a layer of "fine dust" (cf. Isa. 40:15) or "clouds" (cf. Job 35:5; 38:37; Ps. 36:5 [MT 6]; etc.; *see* CLOUD). In some passages *šᵉḥāqîm* clearly refers to "skies" rather than "clouds." Job 37:18, e.g., refers to God's spreading out (Heb. *rāqaʿ*, lit. "beat out") the *šᵉḥāqîm* "hard as a molten mirror"; this poetic imagery reflects the idea of a hard, metallic FIRMAMENT that forms a vault over the earth and supports the waters above it. In other passages, however, it is not as clear that "skies" is a better translation than "clouds" (cf. Job 36:28; 37:21; 38:37; Ps. 68:34 [MT 35]; 77:17 [MT 18]; Prov. 8:28; Isa. 45:8).

In four passages the RSV uses "sky" or "skies" to translate Heb. *šāmayim*, a term usually rendered "heaven(s)" (cf. its use in parallel with *šᵉḥāqîm* in Dt. 33:26; Ps. 78:23; Jer. 51:9; etc.). In Isa. 34:4 *šāmayim* denotes the firmament; in Neh. 1:9; Ps. 85:11 (MT 12); and Prov. 30:19 it refers to the atmosphere.

In the RSV NT "sky" almost always represents Gk. *ouranós* (the LXX equivalent of Heb. *šāmayim*), which like *šāmayim* is usually translated "heaven(s)." The translators may have chosen "sky" in some of these passages because of the reference to the weather (Mt. 16:2f.; Lk. 12:56; 17:24); but it is not clear why this translation was preferred in several passages in Revelation that depict dramatic cosmic disturbances that will occur in the last days (Rev. 6:13f. [cf. Isa. 34:4]; 11:6; 20:11).

In Acts 19:35 the RSV uses the phrase "sacred stone that fell from the sky" to render Gk. *diopetés* (lit. "fallen from heaven"). *See* SACRED STONE.

SLANDER; SLANDERER [Heb. *rāgal*–'use the feet,' 'go about for spying or gossip'] (Ps. 15:3; piel, 2 S. 19:27); AV also BACKBITE; NEB HAVE MALICE, STORIES; [*rāḵîl*] (Lev. 19:16; Jer. 6:28; 9:4 [MT 3]; Ezk. 22:9); AV also TALEBEARER, TALES; NEB also MISCHIEF-MAKER, INFORMER; [*lāšan*–'use the tongue (for slander)'] (piel, Ps. 101:5; hiphil, Prov. 30:10); AV also ACCUSE; NEB SPREAD TALES, DISPARAGE; ['*îš lāšôn*–'man of the tongue'] (Ps. 140:11 [MT 12]); AV EVIL SPEAKER; [*dibbâ*–'calumny'] (Prov. 10:18); NEB CALUMNY; [*qāra'*–'tear up'] (Ps. 35:15); AV TEAR; NEB JEER; [*nāṯan dᵉpî*–'give fault'] (Ps. 50:20); NEB STAB IN THE BACK; ['*āḵal* '*eṯ-bāśār*–'eat the flesh'] (Ps. 27:2); AV EAT THE FLESH; NEB DEVOUR; [Gk. *blasphēmía*–'abusive speech'] (Mt. 15:19; Mk. 7:22; Eph. 4:31; Col. 3:8; 1 Tim. 6:4; Rev. 2:9); AV BLASPHEMY, EVIL SPEAKING, RAILING; NEB also CURSING; [*dysphēméō*–'speak ill of'] (1 Cor. 4:13); AV DEFAME; [*katalalía*–'evil report,' 'defamation'] (2 Cor. 12:20; 1 Pet. 2:1); NEB BACKBITING, RECRIMINATION; [*katálalos*] (Rom. 1:30); AV BACKBITER; NEB SCANDAL-MONGER; [*(ho) diábolos*–'slanderer,' 'devil'] (1 Tim. 3:11; 2 Tim. 3:3; Tit. 2:3); AV also FALSE ACCUSER; NEB WHO . . . TALK SCANDAL, SCANDAL-MONGER; **SLANDEROUSLY** [Gk. *blasphēméō*–'defame,' 'blaspheme'] (Rom. 3:8); NEB LIBELLOUSLY. The utterance of lies that damage another's reputation; one who utters such malicious accusations.

Both the OT and the NT contain frequent condemnations of the sin of slander. The Mosaic law forbade the Israelite to "go up and down as a slanderer among your people" (Lev. 19:16). The Decalogue specifically condemned bearing "false witness" (Ex. 20:16), i.e., carrying slander into a court of law. Slandering a servant to his master was an especially malicious act (Prov. 30:10). Because of its destructive consequences, slander was viewed as a crime worthy of severe punishment (cf. Ps. 101:5; 140:11 [MT 12]). Paul included slanderers in his catalogs of evil-doers (Rom. 1:30; 2 Tim. 3:3; cf. 2 Cor. 12:20; Eph. 4:31; Col. 3:8; 1 Tim. 6:4). In Rom. 3:8 Paul complains that "Some people slanderously charge[d]" him with encouraging immorality by his doctrine of justification.

It is significant that the great accuser and slanderer of God and His people is SATAN himself (cf. Gen. 3:4f.; Job 1:9-11; 2:4f.; Zec. 3:1). The LXX used Gk. *diábolos* to render Heb. *śāṭān* ("Satan," "accuser," "adversary"), and the NT frequently uses *diábolos* in the sense of "devil" (see RSV Mt. 4:1-11 par.; 13:39; 25:41; Lk. 8:12; Jn. 6:70; 13:2; Acts 10:38; 13:10; etc.; cf. 1 Tim. 3:6f. [mg. "slanderer"]). Satan's role as liar and slanderer is emphasized especially in the Johannine literature. The devil "has nothing to do with the truth, because there is no truth in him. When he lies, he speaks according to his own nature, for he is a liar and the father of lies" (Jn. 8:44). It is he who instigates the ultimate slander, for "who is the liar but he who denies that Jesus is the Christ?" (1 Jn. 2:22). Rev. 12 describes a war in heaven in which Michael and his angels defeat "that ancient serpent, who is called the Devil [*Diábolos*] and Satan, the deceiver of the whole world" (v. 9). Salvation is complete when "the accuser of our brethen has been thrown down, who accuses them day and night before our God" (v. 10).

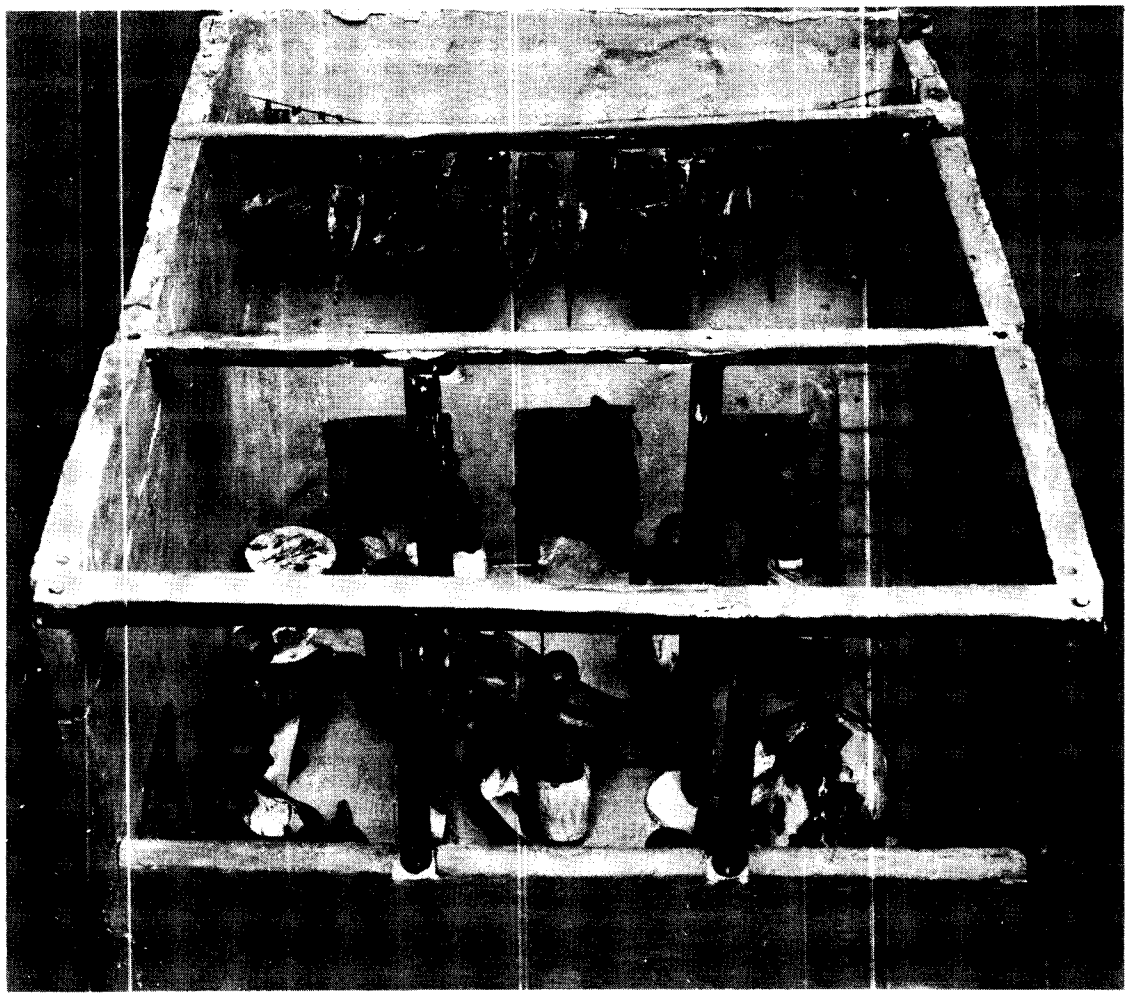
I. In the OT.–Hebrew *ṭāḇaḥ*, "slaughter, butcher," a rare verb that refers to (non-cultic) slaughter or butchering of animals for cooking and eating, is translated "slaughter" by the RSV in five of its eleven occurrences in the OT. Joseph's command in Gen. 43:16 is to "slaughter an animal" for a dinner in honor of his brother Benjamin. In Prov. 9:2 Wisdom slaughters beasts for her banquet. Isa. 34:2, Jer. 25:34, and Lam. 2:21 use this verb figuratively for the defeat of the nations, the fall of Judah's shepherds, and the fall of Jerusalem. Similarly, it appears in Ezekiel's sword prophecy (Ezk. 21:10 [MT 15]) as a figure of severe judgment. The RSV renders the cognate noun *ṭeḇaḥ* as "slaughter" in nine instances: literally of an ox (Prov. 7:22), and figuratively of such things as the defeat of Edom (Isa. 34:6), Moab (Jer. 48:15), and Babylon (Jer. 50:27), the dire fate of the Suffering Servant (Isa. 53:7), and in several "sword prophecies" (Isa. 65:12; Ezk. 21:15, 28 [MT 20, 33]). The RSV renders the cognate noun *ṭiḇḥâ* twice as "slaughter," in each case in the familiar figure of sheep going to slaughter: a simile of judgment on the wicked in Jer. 12:3, and a simile for the distress of the faithful in Ps. 44:22 (MT 23). The hapax legomenon *maṭbē(a)ḥ* (lit. "slaughtering place") is translated "slaughter" in Isa. 14:21, representing the doom of Babylon under the figure of butchered animals.

Hebrew *šāḥaṭ* almost always refers to the slaughter of animals for sacrifice. The RSV usually translates it as "kill" or "slay/slew" but in only eight instances as "slaughter," though the sacrificial connotation is always clear. In Ex. 29:16 the Levites were to "slaughter" the first ram to be offered up as burnt offering in the installation rite for the Aaronid priesthood. In Nu. 19:3 the "slaughter" of an unblemished red heifer is an integral part of the ritual for purification from contact with a corpse; in 11:22 the same verb has general reference to the difficult task of butchering enough animals to provide food for the wandering host in the wilderness. In Ezk. 40:39, 41f. this verb is used for the sacrificial offerings envisioned in the restored temple. Ezk. 16:21 and 23:39 refer to child sacrifice carried out by Samaria and Jerusalem



An Egyptian model of a butcher shop, ca. 2000 B.C., showing animals being slaughtered (Thebes, tomb of Meket-Rē) (The Metropolitan Museum of Art)

under the figures of the adulterous woman and the two faithless sisters.

The hiphil of Heb. *nāḵâ*, the chief OT term for "smite, strike," and its cognate noun *makkâ*, "blow, wound" are rendered "slaughter" a total of seventeen times by the RSV, always in the context of battle. Thus the RSV translates the hiphil of *nāḵâ* as "slaughter" with reference to such events as David's defeat of Goliath (1 S. 17:57) and of the Amalekites (2 S. 1:1), and Israel's crushing of the short-lived Moabite revolt (2 K. 3:24). *Makkâ* is frequently coupled with *gᵉḏôlâ (mᵉʾōḏ)* to characterize a particular battle as "a (very) great slaughter" (e.g., Gibeon [Josh. 10:10, 20]; Aphek [1 S. 4:10]; Beth-shemesh [6:19]; Michmash [14:14, 30]). It also occurs together with its cognate verb *nāḵâ*, which the RSV renders variously: "made a great slaughter" (1 S. 19:8), "slaying with a very great slaughter" (Josh. 10:20), "killed with a great slaughter" (1 K. 20:21).

Hebrew *zāḇaḥ* is translated "slaughter" only twice by the RSV, although it is the usual Hebrew term for sacrificial slaughter of food animals and occurs over one hundred times in the Hebrew Bible. In Dt. 12:15 *zāḇaḥ* refers to killing for food in a context that distinguishes between sacrifice and killing for food. Part of Ezekiel's condemnation of the false shepherds in Ezk. 34:3 is that they "slaughter the fatlings" instead of feed the sheep.

Hebrew *hārag*, the common verb for "kill," is translated "slaughter" only three times by the RSV. In two instances it refers to horrendous defeats in battle (Josh. 8:24; 1 K. 11:24; cf. Hos. 9:13). In Est. 9:5 the cognate noun *hereg* is translated "slaughter" with reference to the destruction of the anti-Jewish elements under Mordecai. *Hereg* is also used for the destruction of Tyre in Ezekiel's oracle against that city (Ezk. 26 15), and is used to characterize the Day of the Lord as a "great slaughter" (Isa. 30:25). Prov. 24:11 urges the rescue of someone who is "stumbling to the slaughter." *Hᵃrēgâ*, another cognate, occurs in Jer. 12:3 in the figure the prophet applies to the wicked, i.e., sheep "set . . . apart for the day of slaughter" (*hᵃrēgâ* parallels *ṭiḇḥâ* in 12:3a, both rendered "slaughter" by the RSV and AV). In Jer. 7:32 and 19:6, in biting allusions to child sacrifice, the prophet renamed Topheth, also known as the "valley of the son of Hinnom," to "the valley of Slaughter." In an oracle against Judah Zec. 11:4 refers to "the flock doomed to slaughter," (*hᵃrēgâ*) and 11:7 refers to "the flock doomed to be slain" (*hᵃrēgâ*; cf. 11:5 where the cognate verb *hārag* is rendered "slay").

Although the RSV never translates the verb *nāgap* as

"slaughter," its cognate substantive *maggēpâ*, "blow, defeat," is translated thus in three occurrences referring to battle (1 S. 4:17; 2 S. 17:9; 18:7). In one instance the piel of Heb. *rāṭaš*, "dash into pieces," is rendered "slaughter" by the RSV, in Isaiah's prophecy of the coming of the merciless Medes whose bows will "slaughter" the young men (Isa. 13:18). The hapax legomenon *mappāṣ*, "shattering," cognate to the verb *nāpaṣ*, "shatter," occurs in Ezk. 9:2 in the phrase *kᵉlî mappāṣ*, "weapon for slaughter." Similarly, the hapax legomenon *qeṭel*, cognate to the verb *qāṭal*, "kill," occurs in Ob. 9 where the RSV has "slaughter" in reference to fattening the flock for slaughter. Also the RSV translates the noun *maʾᵃḵāl* (lit. "food") as "slaughter" in the sense of butchered meat in the phrase "like sheep for slaughter" (Ps. 44:11 [MT 12]). *Ḥālāl*, usually rendered "slain," occurs in the phrase *ḥereḇ ḥālāl haggāḏôl*, which the RSV translates "sword for the great slaughter" (Ezk. 21:14 [MT 19]).

II. In the NT.–The term "slaughter" is uncommon in the RSV NT. The RSV translates the Greek noun *sphagḗ* as "slaughter," twice in the expression, "like sheep . . . to slaughter" (Acts 8:32; Rom. 8:36), and once in the judgment day figure, "day of slaughter" (Jas. 5:5). This noun is cognate to the verb *spházō*, which occurs some eighty-four times in the LXX, usually as the equivalent for the Hebrew verbs *ṭāḇaḥ* and *šāḥaṭ*. Like its cognate verb, the noun *sphagḗ* may be used in both a cultic and a non-cultic sense, almost always with reference to animals, but it is sometimes applied in metaphor or by extension to human beings.

The Greek noun *kopḗ*, "cutting down, slaughter," appears in He. 7:1 in reference to the meeting between Melchizedek and Abraham as the latter was returning from the "slaughter" of the kings (cf. Gen. 14:17; Jth. 15:7).

SLAUGHTER, VALLEY OF [Heb. *gê' hahᵃrēgâ*] (Jer. 7:32; 19:6). A name given to the Valley of Hinnom because of Israel's involvement in the cult of Topheth or Molech, which included human sacrifice. *See* HINNOM, VALLEY OF I.

SLAVERY. Voluntary or involuntary servitude to an individual, the state, or temple that entails reduction of legal and social status to the level of property. In Israelite law, whether the bondage was for a specified period of time or in perpetuity depended upon nationality, the form of servitude, and gender.

F. Metaphorical Applications

I. OT.–A. Sources. One might lose one's freedom in society in a number of different ways. When household slaves gave birth, their children began life with the status of slave. That those "born in the house" are indeed slaves is made plain in Gen. 17:23, where they are put together with those "bought with money" over against Ishmael, the son (see also Lev. 22:11). When used metaphorically of Israel, this is obviously a demeaning appellation (Jer. 2:14).

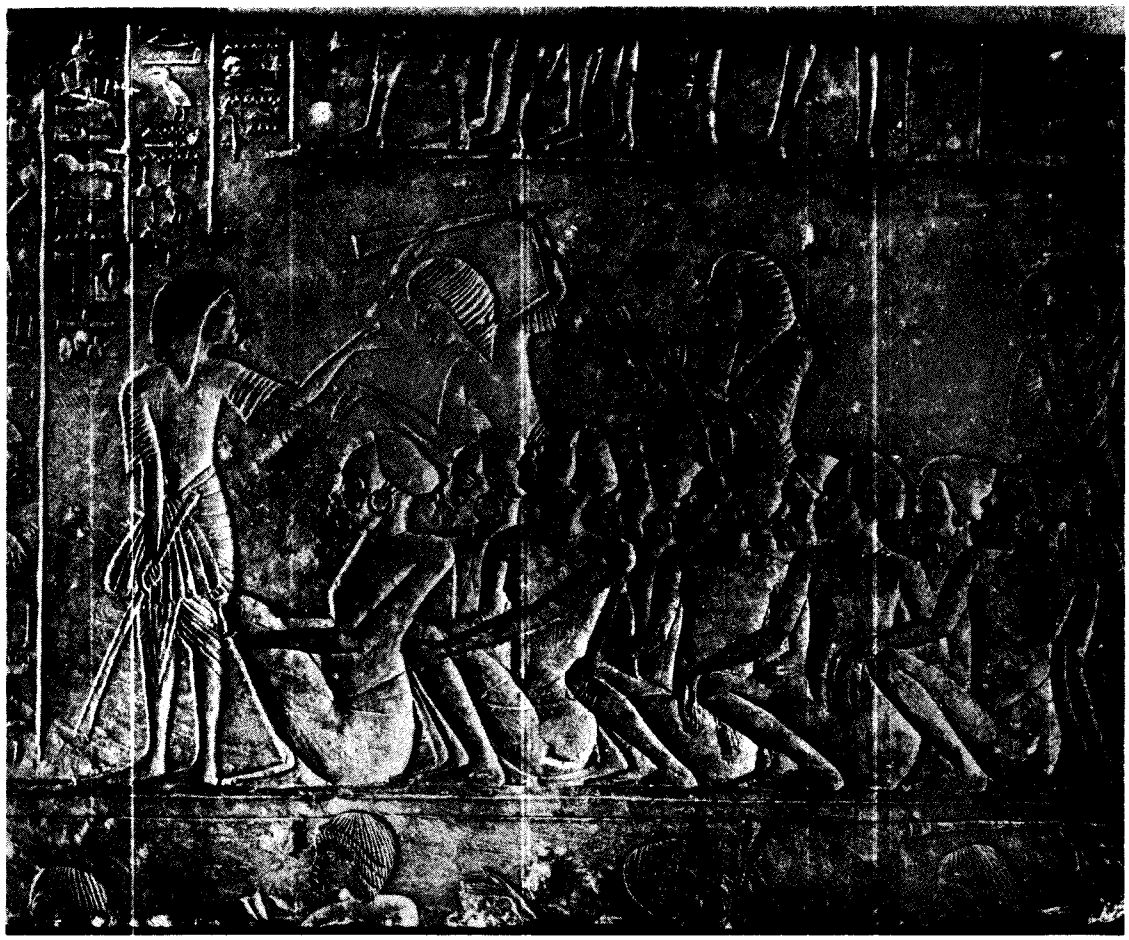
Slaves might also be purchased; in the ancient Near East slave merchants operated freely (Ezk. 27:13). Joseph was sold by his brothers to professional traders (Gen. 37:28), who then sold him in Egypt (37:36). Individuals might buy slaves for household tasks (e.g., Joseph, Gen. 39:4), and choose females for concubines (Gen. 30:1-13). The Covenant Code (Ex. 20:20–23:33) and Deuteronomic Codes (Dt. 12–26) allowed limited-duration sales of "Hebrews" (Ex. 21:2ff.; Dt. 15:12). The Holiness Code (Lev. 17–26), in its typically utopian vision, excluded their purchase as technically defined slaves; it allowed only the purchase of sojourners and foreigners (Lev. 25:44f.). (The present scholarly consensus is that "Hebrew" was originally a social rather than an ethnic or national identification; see Lemche, *VT*, 25; Gottwald, pp. 419ff.) Judeans did sell other Judeans in the postexilic period (Neh. 5:8).

The failure to repay a debt resulted in a man or his family being held in bondage by his creditor (Ex. 21:7; Dt. 15:12; Isa. 50:1); this is equivalent to "self-sale" (Lev. 25:39-55). Repeated bad harvests, heavy taxation (Neh. 5:3ff.), or the loss of the family's provider (2 K. 4:1) could lead to this type of debt-slavery. In the last case cited, the widow of one of the "sons of the prophets" appealed to Elisha for help; her children were about to be held over for the family debts. The Holiness Code allowed this relationship until the Jubilee Year (a maximum of 49 years; Lev. 25:39f.); but based upon the rationale that Israelites were Yahweh's slaves,they were to be treated as hired workers rather than as slaves (25:42f., 46b). The Covenant and Deuteronomic Codes limited debt-slavery to six years (Ex. 21:2; Dt. 15:12). The Code of Hammurabi (*ca.* 1725 B.C.) also provided for debt-servitude, but limited it to three years (§117; *ANET*, pp. 170f.).

The single criminal offense for which enslavement is specified as the punishment in the OT is housebreaking (Ex. 22:3 [MT 2]; note RSV rearrangement), so important was the security of the home. By contrast, the Code of Hammurabi called for the death penalty in such cases (§22; *ANET*, pp. 166f.). Hammurabi also stipulated enslavement and the selling of goods for the one who had reckless disregard for tending his dikes so that others were put in jeopardy (§§53f.; *ANET*, p. 168). The Hittite laws (*ca.* 1450 B.C.) included the case of a woman who eloped with a man who did not pay the bride price: she was enslaved for three years (§35; *ANET*, p. 190).

Kidnapping for slavery was deemed an offense worthy of death, because it threatened the very integrity of the community (Ex. 21:16; Dt. 24:7). Moreover, the enslavement of free Israelites was taken as an affront to Yahweh's honor, since He had freed them from Egyptian bondage (Lev. 25:35-42, 55; Dt. 15:15). Alt ("Verbot") argued that this was the original crime addressed by the eighth commandment (Ex. 20:15).

Prisoners of war provided slaves for state and temple throughout the ancient Near East (1 S. 17:9; 1 Macc. 3:41; 2 Macc. 8:10f.). Mesha king of of Moab bragged that he carried out his building projects with the aid of Israelite captives (*ANET*, p. 320), and Joel threatened the Phoenicians because they sold Judeans to the Greeks (3:6ff. [MT 4:6ff.]). The enslavement of war captives also took place between Israel and Judah (2 Ch. 28:8ff.). In the premonar-



An Egyptian relief depicting slaves and Egyptian overseers. From the tomb of Haremhab, ca. 14th cent. B.C. (Museo Civico, Bologna)

chic era, captives were also taken for personal use, especially as concubines (Nu. 31:18; Jgs. 5:30).

The enlistment of forced labor to carry out the building and agricultural programs of the state was common in the ancient Near East. Villagers, resident aliens, and the disenfranchised were the primary target groups for this sort of conscription. The Hebrews were subjected to forced labor by the Egyptians (Ex. 1:11), the tribe of Issachar by indigenous Canaanites (Gen. 49:15), and the Judeans by the Babylonians (Lam. 1:1). And "when Israel grew strong" it subjected the Canaanites to the same servitude (Jgs. 1:28). This type of servitude is well known from Babylon (*ARM*, II, 67:5; 88:9f.), Alalakh (*ANET*, p. 531), Ugarit (*Palais royale d'Ugarit*, 15.144:15ff.; 16.269:14ff.), and the Canaanite cities of Megiddo (*ANET*, p. 485) and Taanach (Taanach Letters, no. 2).

Similarly, David and Solomon organized forced labor in Israel. The texts disagree about whether these levies were drawn only from the indigenous Canaanite population (1 K. 9:20ff.) or from the free Israelites as well (5:13 [MT 27]; 11:28). The Hebrew terms for this type of corvée labor, *mas* and *sēḇel*, are cognates of the Akkadian terms *ma-as-sa* and *sa-ab-la-am*. In Israel the two were separately administered, but the distinction between them is not entirely clear (see I. Mendelsohn, *BASOR*, 167 [Oct. 1962], 31-35; Rainey, pp. 192-97). Under David and Solomon, Adoram was the administrator of the *mas* (1 K. 4:6; 5:28), and Jeroboam was over the *sēḇel* (11:28). What is clear is that the northern tribes revolted, following Solomon's death, in no small part due to the burden of forced labor (12:1ff.); moreover, they took that opportunity to stone Adoram to death. This form of servitude was of a limted nature; 1 K. 5:14 (MT 28) indicates three groups of workers on a three-month cycle. In Ugaritic texts corvée service ranged from two to sixty days per year to the crown (e.g., *UT*, 109).

B. Legal Status. Slavery necessarily calls for a different status before the law since it entails the ownership of one human being by another. No uniformity of treatment existed between the different cultures of the ancient Near East when one compares the OT laws to other law codes of the 3rd and 2nd millennia B.C. (Ur-Nammu, Eshnunna, Lipit-Ishtar, Hammurabi; Hittite, Middle Assyrian). But the basic issues of rights, monetary value, length of service, runaways, and gender distinctions are commonly addressed. The matter is further complicated by the variations among the OT law codes: Covenant Code, Holiness Code, and Deuteronomic Code. For general discussions of the Israelite laws, see Alt, "Origins"; Noth; Boecker; and Patrick. Sometimes OT law and practice distinguished between "Hebrews" and foreigners, and between male and female slaves.

As in contemporary cultures, slaves in Israel had the legal status of property. They had a market value (Ex. 21:32), could be bought and sold (Lev. 25:44f.) — indeed, they were considered the master's "money" (Ex. 21:21) — and passed on as inheritance (Lev. 25:46). They could also be physically beaten short of death (Ex. 21:20f.). The Covenant Code differentiated between the penalty for an ox-goring death of a free citizen and that of a slave: a slave's death called for a monetary settlement rather than the death penalty (Ex. 21:28ff.). Ancient Near Eastern laws often distinguished between free citizens and slaves when stipulating criminal and civil sanctions. For example, if a Hittite slave set a house on fire, the slave's owner had to make compensation, and the slave's ears and nose were cut off (§99; *ANET,* p. 193). The Code of Hammurabi stipulated the loss of an ear for striking a freeman, rather than the monetary compensation a freeman would have to make for the same offense (§205; *ANET,* p. 175).

Slaves were afforded a degree of legal protection in Israel. The Covenant Code stipulated three basic measures: beating a slave to death would necessitate an unspecified punishment (Ex. 21:20); if a master permanently injured a slave, release of the slave was required (21:26f.); and masters were required to provide the sabbath rest for their slaves (23:12). The Deuteronomic Code added that a female captive of war taken as a wife could not be sold (Dt. 21:14).

Besides these general regulations, the law afforded Hebrew slaves further protections. They could be held for only six years (Ex. 21:2ff.; Dt. 15:12; but see Lev. 25:39f.). The Deuteronomic Code further stipulated that the master would have to provide the freedman with animals, grain, and wine (Dt. 15:13f.). They were not returnable to foreign owners if they succeeded in running away (23:15f.); this is certainly a major legal concession, given their status as property, and unusual in the ancient world — anyone helping a slave run away was given the death penalty in Babylonia (Code of Hammurabi, §15; *ANET,* pp. 166f.).

The basic difference in treatment between male and female slaves regards release. The Covenant Code stipulated that a girl sold by her father would not be released after six years, as her male counterpart would (Ex. 21:7ff.). Rather, the master had additional legal and conjugal obligations to her (presumably due to the legal and social implications of her virginity). The Deuteronomic Code, however, requires that both male and female slaves be released after six years (Dt. 15:17).

Sumerian law (Code of Lipit-Ishtar; *ca.* 1850 B.C.) stipulated that if a freeman had children from both a free wife and a slave, the children of the latter could not inherit (§25; *ANET,* p. 160). The Code of Hammurabi required that all the children have a share if the father ever declared his children by a slave "my children," i.e., if he had changed their social status (§170; *ANET,* p. 173). A related (but not identical) case is presupposed in the story of Abraham and his heritage. Before having any children, Abraham feared that his property would fall to his slave, Eliezer of Damascus (Gen. 15:3f.), which may or may not imply an adoption transaction. Sarah insisted on Abraham driving Hagar from their home lest a dispute emerge over the priority of Isaac over Ishmael (Gen. 21:10; see also Prov. 17:2).

The average price of a slave inflated over the centuries: in the 3rd millennium B.C. prices were ten-twenty shekels per slave (Akkad and Ur III); in the late 3rd to mid-2nd millennium twenty (Babylon and Mari) to thirty (Nuzi); in the 2nd millennium, twenty-forty (Ugarit); in early to mid-1st millennium fifty-sixty (Assyria and Neo-Babylon); and in the late 1st millennium, ninety-one hundred-twenty (Mendelsohn, *Slavery,* pp. 117-155). The OT prices correspond favorably with these, given their approximate dates: Joseph fetched twenty silver shekels (Gen. 37:28), the Covenant Code stipulated a value of thirty (Ex. 21:32), and the 8th-century Israelites ransomed themselves for fifty (2 K. 15:20). Tangentially related is Lev. 27:2ff., which covers the monetary value of individuals (for special religious vows and not the purchase of slaves) and assigns different values based upon gender, age, and ability to pay.

C. Social Status. The status of a slave within Israelite society, as well as other ancient societies, was one of dependence and subservience. The slave was neither free to come and go at will nor accorded the dignity of a free citizen. When Yahweh asks whether Israel is one "born of the house," it is made clear that to be such would demean its status (Jer. 2:14). One example of this different status was the physical symbol of piercing the slave's ear to identify one who was a slave in perpetuity (Ex. 21:6; Dt. 15:17). In Mesopotamian cultures institutional slaves were branded, tattooed, or forced to wear an insignia (Code of Hammurabi, §§146, 226f., *ANET,* pp. 172, 176; de Vaux, p. 84; Dandamaev, pp. 229ff., 549f.). In the 5th cent. B.C. the Jewish slave manumitted at Elephantine is described as having the name of her master inscribed (tattooed?) on her right hand (Aramaic papyrus no. 5; *ANET,* p. 548).

Three other cases exemplify the diminishment of status in the realm of kinship relations. The first is the case of an Israelite man taking a female captive of war as a wife (Dt. 21:10ff.). Neither the woman nor her family had any say about the marriage; thus the slave-master relationship took precedence over kinship rights. Furthermore, the man could divorce her without just cause; this is identified in the text as "humiliating" her. The second is the way in which the slave-master relationship took precedence over the husband-wife relationship: when a master provided a slave with a wife, that slave forfeited his wife and children if he chose freedom at the end of his tenure (Ex. 21:4). Both examples accord with what has already been said about the legal status of the slave as property. Third, the slave-mistress relationship took precedence over the mother-child relationship. Sarah wanted to claim children born to her slave Hagar (Gen. 16:2), and both Rachel and Leah gained sons through their slaves Bilhah and Zilpah (35:23ff.). When Dan was born to Bilhah, Rachel said: "God has judged me, and has also heard my voice and given *me* a son" (30:6).

The temple servants were also assigned a separate housing area in postexilic Jerusalem (Neh. 3:31; 11:21)). They are traditionally last in lists: among the returnees from Babylon (7:46-60), they are listed before only those who could not prove their lineage, and after the priests and Levites, who were free citizens (Ezr. 2:70).

Household slaves, however, were accorded a certain degree of status in the Israelite family in connection with religious integration. The males were circumcised (Gen. 17:12f.). They were included at religious meals, while foreigners and hired servants were excluded (Ex. 12:44; Dt. 12:12ff.; 16:11ff.). And priests' slaves could eat dedicated offerings (Lev. 22:11).

That debt-slavery posed a serious threat to the fabric of Israelite society is seen in a number of texts. In the 11th cent. B.C. the band that gathered about David was composed of the oppressed and those fleeing from creditors (1 S. 22:2). Having lost their means of livelihood and facing slavery, they chose to join forces with a renegade military leader fleeing from the king.

In the 9th cent. B.C. the widow of one of the "sons of the prophets" was in jeopardy: her husband had died leav-

ing debts (2 K. 4:1ff.). The result was that her two children were going to be taken as slaves by the creditor. Only a miracle by Elisha delivered her; one might surmise that most were not so fortunate. The laws calling for mercy on widows and orphans addressed such cases (e.g., Ex. 22:22ff.; Dt. 24:17f.). Ancient Near Eastern societies presupposed that it was the monarch's duty to protect these two social groups, which were particularly vulnerable. The prologue of the Sumerian Laws of Ur-Nammu (*ca.* 2050 B.C.) from the Ur III Dynasty contended: "The orphan was not delivered up to the rich man; the widow was not delivered up to the mighty man; the man of one shekel was not delivered up to the man of one mina" (*ANET,* p. 524; see also Hammurabi's epilogue, *ANET,* p. 178; cf. Dt. 10:18; Isa. 10:2; Jer. 7:6; etc.).

Amos 2:6f. and 8:4ff. point to widespread abuse of debt-bondage in the 8th cent. B.C., whereby the wealthy could exploit the poor; the latter are identified by Amos as the "righteous" (i.e., innocent). This is precisely the abuse that all three major OT law codes sought to avert (Ex. 22:25ff.; Lev. 25:34ff.; Dt. 15:7ff.; see also Prov. 14:31). The prophets were acutely aware that the legal system was open to manipulation by the wealthy. Amos parallels such exploitation to father and son sharing the same concubine sexually (2:7b), an abuse of the woman's sexuality since as a slave she was subservient to their power.

In postexilic Judah (5th cent. B.C.) debt-slavery posed a serious threat to the reestablishment of the Jewish community (Neh. 5). Nehemiah accused the nobles and officials of taking advantage of the newly returned Babylonian exiles by charging interest and causing many to sell their lands, themselves, and their families into debt-slavery (5:3ff.). He required the wealthy and powerful to take a public oath that the practice would cease (5:12f.). This situation was the result of a natural disaster compounded by sociopolitical pressure, a famine (5:3), and the royal tax (5:4f.). The threat was that the Judeans would be released from one form of servitude only to be plunged into another.

The metaphor of the animal yoke is employed for all forms of enforced service: household slaves (Gen. 27:40), Egyptian bondage (Lev. 26:13), national levy (1 K. 12:4), and Babylonian exile labor (Isa. 47:6). In this context this symbolizes the degrading and humiliating status of servitude with an image of the subhuman under the compulsion of its owner.

That debt-slavery was a recurring problem in Israel and Judah is a reminder of several aspects of their social histories. First, the villagers were dependent upon the regularity of the crops for their livelihood; two or more years of drought or famine could plunge a family into debt-slavery to elites who were able to take advantage of the situation. Second, especially during and after the Solomonic era, the economic gap between the urban elite on the one hand and the urban non-elite and villagers on the other could be considerable. Lastly, whether autonomously ruled or under the vassalage of an empire, all non-elites found the burden of royal taxes difficult to bear.

D. Manumission. While forced labor was for limited periods, personal servitude might be limited or perpetual (Heb. *le'ôlām*). One might emerge from slave status by a number of means. One avenue to freedom was redemption, buying an individual out of slavery. This was accomplished by a member of the clan acting as "redeemer" (Heb. *gō'ēl;* Ex. 21:8; Lev. 25:48f.). This provision presupposed a strong clan structure, but it also required the financial solvency of this extended family. The slave might also accumulate personal assets and thus buy his or her own freedom (Lev. 25:49); the opportunities for this to occur would necessarily be infrequent. Texts that speak of Israel in Egypt and Judean exiles in Babylonia describe Yahweh as their redeemer (Ex. 6:6; 15:13; Isa. 43:14; Jer. 31:11; Mic. 4:10; etc.). The Code of Hammurabi includes the hypothetical case of a soldier captured in a royal war who had been redeemed by a merchant (§32; *ANET,* p. 167). The merchant was to be repaid, depending upon ability to pay, by the soldier's family, the city's temple estate, or the king.

If a master permanently injured a slave (the examples are the loss of an eye or a tooth), the slave was to be released for the injury (Ex. 21:26f.). This very liberal compensation was intended to restrain abuse of slaves. Other ancient law codes stipulated only monetary compensation for injuring someone else's slave (see Code of Hammurabi, §199; *ANET,* p. 175; Hittite laws §§8, 12, 16, *ANET,* p. 189). What one did to one's own slaves was evidently a private affair since they were considered property (see Ex. 21:21).

The Covenant (Ex. 21:2) and Deuteronomic Codes (Dt. 15:12ff.) agree that the limit was six years for Hebrew slaves, i.e., those in debt-bondage, double that stipulated in the Code of Hammurabi (§117, *ANET,* p. 170f.). After that time, the slave was released. A Hebrew slave might *choose* to remain a slave after the six-year tenure due to either family interests or financial security (Ex. 21:5f. [males only]; Dt. 15:16f. [males and females]). The six-year limitation is specifically excluded for non-Hebrews (Lev. 25:45f.). Evidently the temple servants (Heb. *nᵉṯînîm*) and servants of Solomon, as institutional slaves, were held in perpetuity (see Lemche, *VT,* 25). *See also* NETHINIM.

The legal obligations of slave ownership required that a master provide three things for a Hebrew slave girl taken as a wife: food, clothing, and conjugal rights (Ex. 21:10f.). Failing to provide for her in any of these ways required her release without payment. A foreign woman taken as a wife had to be treated fairly, but she could also be divorced without cause and set free (Dt. 21:10ff.). When Sheshan had no male heirs, he married his daughter to his Egyptian slave and continued his line (1 Ch. 2:34f.); this at least implies freedom for Jarha on the basis of the marriage.

The Jubilee Year, occurring every forty-nine (or fifty) years, provided a further means of freedom to all Israelite slaves (Lev. 25:47ff.) and established an interpretation of slave law different from the Covenant and Deuteronomic six-year span. There is, however, no evidence that the Jubilee was ever carried out (see Lemche, *VT,* 26). Furthermore, given the general life expectancy, this is a meager concession.

The only narrative of amnesty for slaves is Jer. 34:8ff. Jeremiah accused King Zedekiah of proclaiming liberty to the slaves of Jerusalem and not following through; the Jerusalemites complied and then reneged. R. Carroll argued for a number of reasons that this is probably a later lesson for the Jews on keeping the covenant rather than a historical account (*Book of Jeremiah* [*OTL,* 1986], pp. 646ff.).

The Hebrew term *ḥopšî,* "free," referred to the freed slave (e.g., Ex. 21:2; Dt. 12:15; Jer. 34); this parallels the common Semitic term *ḥupšu,* "freedman," used in the Amarna Letters, as well as at Alalakh, Assyria, and Ugarit (I. Mendelsohn, *IEJ,* 5 [1955], 65-72; Lemche, *VT,* 25; M. Dietrich and O. Loretz, *Die Welt des Orients,* 5 [1969], 57-93; and Gottwald, pp. 481f., 767f.). In other Semitic societies the freed slaves formed a separate class

between the slaves and free citizens, but Israel seemed to have no such identifiable class (I. Mendelsohn, *BASOR*, 83 [Oct. 1941], 36-39).

E. Economic Functions. Personal slaves were not a major economic force in the Semitic nations of the ancient Near East. As possessions of individual families (either debt-slaves or foreign purchases), slaves carried out primarily household and farming duties; in addition, young women served as concubines.

The OT evidence for one family holding large numbers of slaves is slim. Abraham is said to have taken 318 "born in his house" to battle (Gen. 14:14), but this would be very unusual. Only about 15 percent of the returnees from Babylon are designated as slaves: 7,337 as opposed to 42,360 free citizens (Ezr. 2:64; Neh. 7:66). Mesopotamian records indicate that two or three might be found in the household of a wealthy family in the 2nd millennium B.C. and three to five in Neo-Babylonia (de Vaux, p. 84).

As stated above, institutional slaves of the state and temple were maintained throughout the ancient world. They performed mostly menial functions. They were used in state building projects (2 S. 12:31), in the maintenance of state and temple properties, and as household servants (1 K. 9:15ff.).

II. In the NT.–The especially important social institution of compulsory labor and dependency is found in all cultures relevant to the NT, in which the ownership of some persons by others was defined and regulated by various legal traditions (the Roman empire embraced a legal conglomeration). Although slavery existed in most societies from as far back as records have been found, there have been only five genuine slave-societies, two of them in antiquity: classical Greece and Rome. The Greeks and Romans, apparently independently, transformed slavery into something new and wholly original in world history, "namely, an institutionalized system of large-scale employment of slave labour in both the countryside and the cities" (Finley, *Ideology*, p. 67). This ancient system of slavery was fully developed and stabilized as an institution by the 2nd cent. B.C. The uniformity of legal rightlessness of all persons in slavery "masks the wide range of different social and economic roles slaves played, and the fact that most functions performed by slaves could also be undertaken by persons of free status" (Wiedemann, p. 2).

A. Sources. No NT writer comments on the origins of slavery as an institution or seeks to justify human beings owning other human beings, in contrast to Augustine, who claimed that the institution was part of the punishment for Adam's sin (*Civ. Dei* xix.15). Nor is there any mention of how persons became slaves. The fact that no theological support for slavery can be found in the NT became important for those Christians who later fought against this institution.

Prior to the 1st cent. A.D., the chief means by which persons were enslaved were capture in war and kidnapping by pirates. Stealing persons and selling them into slavery had been practiced in the ancient Near East for many centuries. In 1 Tim. 1:10 the term *andrapodistḗs*, "kidnapper" (RSV, NEB), "menstealer" (AV), "slave trader" (NIV), appears in a traditional list of vices, indicating that knowledge of this practice could be assumed in the late 1st cent. A.D., even though the establishment of law and order within the empire had eliminated piracy and greatly reduced kidnapping by the middle of the 1st cent. B.C.

With the cessation of the great wars of conquest after the death of Augustus, the primary source for slaves became breeding. To be sure, the First Jewish Revolt (A.D. 66-70) opened up a new source of slaves for the empire; e.g., Vespasian sent 6000 Jewish prisoners to Nero as a labor force for the (unsuccessful) cutting of a canal through the Isthmus of Corinth. But the slaves who are mentioned and addressed in the NT were most likely born into slavery, according to both Roman and Greek law, as children of mothers in slavery. Such breeding was an adequate source to maintain the large slave population of the previous century.

Other sources of slaves are important to note in the light of early Christian practices. Large numbers of people sold themselves into slavery for various reasons, above all to enter a life that was easier and more secure than existence as a poor, freeborn person, to obtain special jobs, and to climb socially. It is quite likely that the Erastus mentioned in Rom. 16:23 as the "city treasurer" (*oikonómos tḗs póleōs*) of Corinth had to sell himself to the city (as a form of "bonding insurance") in order to secure this responsible position. Such special slaves were usually held in municipal slavery until about age forty, at which time as freedmen and Roman citizens they often pursued political careers. Inscriptional evidence suggests that this Erastus did just that by being elected an *aedile* of Corinth, who then gave to the city the paving of the street in front of the main theater.

Many non-Romans sold themselves to Roman citizens with the justified expectation, carefully regulated by Roman law, of becoming Roman citizens themselves when manumitted. The money that one received from such a self-sale usually became the beginning of the personal funds (*peculium*) that would later be used to enter freedom under more favorable circumstances, e.g., with former debts extinguished. Greek law also recognized the validity of self-sale into slavery, often with a contract limiting the duration of the enslavement. Such sales were frequent in the eastern provinces in imperial times. Temporary self-sale had been known in Jewish circles for centuries. Because of the reputation of Jewish owners for honoring Jewish laws calling for good treatment, many Jews who wished to sell themselves often could not find a Jewish purchaser. In view of these regulations it was (later?) said: "Whenever one acquires a Hebrew slave he acquires a master" (T.B. *Qiddushin* 22a).

It seems quite likely that Paul had such kinds of self-sale in mind, at least at one level, when urging the Corinthian Christians: "You were bought with a price; do not become slaves of men" (1 Cor. 7:23). If so, his plea was ignored by those Christians who exploited the system by selling themselves into slavery in order to gain money to ransom some (with cruel owners) from slavery and to provide food for others (1 Clem. 55:2)!

A popular means of post-birth control was "exposure"

(throwing away) of newborn infants; when such infants were found alive they could be raised as slaves. Christians urged each other not to expose their children (Did. 2:2; Justin *Apol.* i.27.1; Tertullian *Apol.* 9.6-8). Greek, Roman, and Jewish children were also frequently sold into slavery by their parents. This practice is not addressed in the NT.

B. Legal Status. Gaius, the Roman jurist, whose *Institutes* summarize the legal tradition valid in the 1st cent., observes that the basic legal distinction between persons is that of free or slave status (1.9). According to the law, a slave was a *res,* a thing, a chattel to be owned, bought, and sold. As such, a person in slavery could not contract a legal marriage, represent himself in court, or inherit; slaves were not regarded as having any kin and were often subject to more severe punishments than their owners for criminal acts. It was, of course, recognized that those in slavery, as many as one-third of the population in the large cities such as Rome, Ephesus, Antioch, and Corinth, were human beings if not "legal persons." As such they were protected by law against severe cruelty from their owners or others.

Under Roman, Greek, and Jewish laws, those in slavery could own property, including other slaves! Some well-educated slaves bought children, raised and educated them, and recovered the tuition costs when selling them to families needing tutors. A slave's property was entirely under the control of the slave, who could seek to increase it for use in purchasing legal freedom and in establishing a comfortable life as a freed person. The flamboyant, "nouveaux riches" activities of many former slaves called forth the scorn of the "old money" and staid Roman families.

Owning and using men and women as slaves were taken entirely for granted by all ancient teachers, including those such as Epictetus who had received their educations in slavery. The Cynic preacher, Dio of Prusa (*ca.* A.D. 40-120), concluded that the social and legal status of slavery had nothing to do with the values that the philosophers held to be important (15, 29-32). None of the major slave rebellions in the Mediterranean area, all of which occurred during 140-70 B.C., was motivated by the intention to abolish the distinction between slave and free. No revolutionary social programs were carried out in order to change the legal or economic structures. To the contrary, those who had been owners were forced into slavery.

Yet the uniformity with which slaves were not regarded as "legal persons" tends to hide the fact that slaves had many different roles and that people of free status would perform most of their functions. The principal exceptions were working in some mines reserved for convicted criminals and rowing in the chain gangs on galley ships; it was expected that these slaves of the empire would die working.

C. Social Status. To speak of "slaves" in the NT period is to refer to a logical class and a juridical class, but not to a social class as such. Any outcry for the "slaves of the world to unite" would have fallen on deaf ears, because the social sense of those in slavery was far more dependent on the social status of their owners than on their legal status as slaves. In outward appearance it was usually impossible to distinguish among slaves, freedmen and free persons. Neither the slave's clothing nor his or her race revealed a legal or social status. Patterns of religious life, friends, or work did not separate slaves from freed persons or freeborn workers. It seems quite likely that when working as a "tentmaker," Paul would have had persons in slavery as his shop-companions.

By no means was the slave's position always "subordinate," for in Greco-Roman households slaves served not only as cooks, cleaners, and personal attendants, but also as tutors of persons of all ages, physicians, nurses, close companions, and managers of the household. In the business world, slaves were not only janitors and delivery boys; they were managers of estates, shops, and ships, as well as salesmen and contracting agents. In the civil service slaves were not only used in street-paving and sewer-cleaning gangs, but also as administrators of funds and personnel and as executives with decision-making powers.

Thus, even though in Roman law, more than in Greek or Jewish law, the distinction between slave and free was quite sharp, in daily life a continuum of statuses existed in terms of social intercourse, culture, and wealth. Under Greek law special conditions blurred these distinctions even more. For example, many of the slaves who worked in handcraft factories lived apart from their owners, enjoying their own property and family life. Such a slave was usually employed by a person other than his or her owner and was paid a daily wage, about two-thirds of which went directly to the owner, who remained responsible for the physical well-being of the slave.

Certainly, capable slaves had an advantage over their free counterparts in that they were often given an excellent education at their owners' expense. Famous philosophers (Epictetus), teachers (Verrius Flaccus), grammarians (Palaemon), administrators (M. A. Felix, the procurator who was Paul's judge in Acts 23:24–24:27), artists, physicians, and writers were the result of this practice. These slaves and former slaves formed the broad "class" of intellectuals in the 1st century. Such slaves did not have to wait until manumission before they were capable of establishing friendships with their owners and other free persons as human beings. Many of these relationships confirmed the classical estimate of a person's "worthiness," viz., what was important was not legal status but *disciplina et mores* ("education and character").

Such friendships easily carried over into the religious life of the slave, for there was no cult preferred by slaves to which a freedman or freeborn person would not have wanted to belong, even if the actual social events tended to be socially homogeneous (Bömer).

For many, self-sale into slavery with anticipation of manumission was regarded as the most direct means to be integrated into Greek and Roman society. As such, in stark contrast to New World slavery in the 17th-19th cents., Greco-Roman slavery functioned as a process rather than a permanent condition, as a temporary phase of life by means of which an outsider obtained "a place within a society that had no natural obligations of kinship or guest-friendship towards him" (Wiedemann, p. 2).

Furthermore, the early Christians may well have regarded slaves as persons more highly than appears to have been the case in the surrounding cultures because of the Christians' strong disagreement with the prevailing attitude toward work and thus toward the persons who had to work to earn a living, including those in slavery. Cicero, e.g., claimed that working every day for a living was not worthy of a freeborn person, and those working with their hands were involved in a "dirty business" (*De Officiis* i.150). At least Paul expected all Christians to work for their living (1 Thess. 4:11f.; see Eph. 4:28).

The NT provides direct evidence that some early Christians were slaves or owners of slaves at the time the various documents were written (e.g., Philemon — Onesimus and Philemon; 1 Cor. 7:21 — "were you a slave when you were called?"; Col. 3:22–4:1; Eph. 6:5-9; 1 Tim. 6:1f.; 1 Pet. 2:18-21). Often overlooked are the slaves included in the phrases "those of the household of . . ." (*hoi ek tōn . . .*,

Rom. 16:10f.), "Chloe's people" (*tōn Chloēs*, 1 Cor. 1:11), and "the household of Stephanas" (*tón Stephana oíkon*, 1 Cor. 1:16; see Acts 11:14). These phrases cover the same kind of extended households designated by the Latin term *familia*.

It seems curious that no NT writer addresses directly the issue of sexual exploitation of slaves. Hillel is remembered to have said: "Whoever multiplies female slaves multiplies promiscuity and whoever multiplies male slaves multiplies thieving" (*Pirke Aboth* ii.8). Were texts such as 1 Thess. 4:3-8 (RSV: "that each of you know how to take a wife for himself in holiness and honor"; cf. NEB: "gain mastery over his body, to hallow and honour it") intended to deal with the possibility?

D. Manumission. Persons in slavery under Roman law in the 1st cent. A.D. could generally count on being set free by age thirty. At the beginning of the century owners were manumitting their slaves with a frequency that provoked Augustus Caesar to introduce laws restricting the numbers and ages of those who could be lawfully manumitted. From such legal texts (e.g., *Lex Aelia Sentia*, A.D. 4) it is clear that such slaves had to have reached age thirty if they were to receive Roman citizenship with their legal freedom. Pertinent inscriptions indicate, however, that large numbers, approaching 50 percent, were set free prior to their thirtieth birthdays, women more frequently than men, especially those between 15 and 20 whose owners decided to marry them.

Manumission was practiced very generously; sometimes all the slaves of an entire household were released, especially by testament upon the death of the owner. Manumissions were more than frequent occurrences; they were entirely normal and were expected. Thus very few persons are known to have reached old age in slavery, not because of ill-treatment, but because they had already been released before dying as freedmen/women in their thirties, forties, fifties, or more (Alföldy, pp. 105f.).

This, then, is the context in which such strongly debated texts as 1 Cor. 7:21 and Philem. 8-16 must be understood. The slave revolts and armies of runaway slaves proposed by some scholars as the background for these texts simply did not exist in the 1st cent. A.D. When Paul, in the earliest Christian text dealing with slavery (1 Cor. 7:21-24), mentions the possibility of the manumission of Christian slaves, he is not only speaking of a normal, everyday occurence; he is referring to an event over which the enslaved person had very little control. For manumissions were carried out to advance the interests of the owners and to keep the system functioning. Thus there would have been no point for him to have urged Christian slaves to "remain in slavery" (so Zürcher Bibel, Bible de Jérusalem, Einheitsübersetzung der Heiligen Schrift), for there was little influence the slave could have over the timing of his or her manumission apart from offering the owner an attractive sum of money or pleading with the owner to delay manumission for the slave's personal or financial advantage. Likewise, Paul's urging Christian slaves to "take freedom" (so Moff., RSV, NEB, JB, NIV, TEV) would seem in these circumstances to be superfluous. The point of his admonition (the imperative *chrēsai* in v. 21d must be completed from the context) is to "use" or "live according to" the new identity in Christ (the "calling") that has become more fundamental than any social, legal, or religious status (see 1 Cor. 7:19).

Runaway slaves were not a problem in the 1st cent. A.D.; indeed, Onesimus may well have not at all "run away" from Philemon's household but rather left a difficult situation to seek Paul's advice and intervention. In this social-legal context Paul's brief masterpiece of sensitive persuasion sent to Philemon and "the church in his house" is best seen in part as a request not to delay Onesimus's manumission because of any misdeeds (v. 18) but rather to forgive him and to manumit him very soon (v. 16: "no longer as a slave but . . . as a beloved brother"). Paul may have hoped that Onesimus would be sent back to help him, now as Philemon's freedman (v. 13).

In the context of Greek culture the more than one thousand manumission-contracts inscribed on the sacred wall in Delphi have attracted the attention of biblical scholars, especially to clarify aspects of Paul's doctrine of redemption (Deiss. *LAE*, pp. 320-27). In these contracts, dated between 200 B.C. and A.D. 74, Apollo (through his priests) functioned as the trustworthy intermediary of the manumission-money and as the strong religious and public guarantor of the contracts.

In contrast to Deissman's suggestion, however, these inscriptions do not shed any light either on Paul's teaching about redemption in Christ or on the unique phrase "freedman of the Lord" (*apeleútheros kyríou*) in 1 Cor. 7:22 (Bömer). The slaves set free at Delphi became neither "slaves of Apollo" nor "freedmen of Apollo." Indeed, no Greek would have asked another Greek to become a "slave of a god"; to describe "freedom" in such terms would have been unthinkable for a Greek. When Paul describes Christians who were born free as "slaves of Christ" (7:22), he is clearly writing in analogy to Israel's conception of itself as "slaves of Yahweh" (Lev. 25:55).

In the light of the fact that Greek notaries often openly rejected procedures prescribed in Roman law, one unique aspect of Greek legal traditions must be noted: viz., the description of gradual stages of freedom for those who were manumitted. Freedom was broken down into four elements: to represent oneself in legal matters, to be secure from seizure as property, to earn one's living as one chooses, and to live where one desires. More than one-fourth of the manumission inscriptions at Delphi fix limitations on at least two of these freedoms, usually of movement and employment, by means of a *paramonē* ("remaining") clause that was valid for a limited time (usually 2-10 years). Such a freed slave could not be sold (and was thus "free"); but the freedman was still bound to the former owner in a variety of ways.

When Paul describes the Christian slave as a "freedman of the Lord" (1 Cor. 7:22), he has in mind either such continuing legal and personal obligations as a manumitted slave owed to his or her former owner, or (more likely) the Roman legislation that required the freed slave to give *obsequium* ("eagerness to serve"), *operae* ("days of work"), and *officium* ("moral duty") to the former owner throughout the owner's life.

E. Economic Functions. The importance of the "household" (*oíkos*) in the economy of the Roman empire, and of the slaves within these households, can hardly be overestimated for a proper understanding of the economic context of the NT. Compulsory labor has taken a variety of forms, among which are debt-bondage, clientship, peonage, helotage, serfdom, and chattel slavery (the "slavery" of the NT period). Whatever the form, the concept of compulsion is basically different from the one implied by "hired labor," which abstracts a person's capacity for work from the person as such.

In the NT period, the closer Christian missionaries came to Rome the more the societies they encountered had come to depend on persons in slavery as the basic labor force, as essential components of the imperial economy, and as a normal part of the daily life of most families. Jewish missionaries such as Paul were already well acquainted with slavery, even in the Jerusalem tem-

ple where the priests relied on slaves to assist them in their ministrations. But they had not experienced there a true slave economy, such as the household of L. C. Secundus, who during the reign of Nero had four hundred slaves in his town house alone.

Whereas freeborn persons dominated small-scale (subsistence) farming and small-scale trading in the cities, slaves dominated and virtually monopolized large-scale production in the cities and the countryside (Finley, *Ideology*, p. 82). Those in slavery thus provided the greatest amount of immediate income from property. The Romans especially had learned how to use slaves not only to make a living but also to make money.

In such an economic context it was virtually impossible for anyone to conceive of abolishing slavery as a legal-economic institution. To have turned all the slaves into free day laborers would have been to create an economy in which those at the bottom would have suffered even more insecurity and potential poverty than before. To be sure, according to all known traditions, neither Jesus nor His immediate followers owned slaves; nor did Paul, Barnabas, or Timothy. So both the example of Jesus and His great concern for the poor proved to be a challenge for many early Christians to conceive of themselves as living already among themselves in an alternative social-legal environment (note how Paul appeals to Philemon to release Onesimus sooner than he may have planned). For the author of 1 Clem. 55:2 Christ's love working through humble spirits has motivated some Christians to sell themselves in order to have money to buy the freedom of others (see Shep. Herm. Mand. 8:10; Sim. 1:8; Ign. Polyc. 4:3).

Because the preaching of the gospel called into existence congregations that began to function as alternative households, the penetration of the gospel into the Roman extended family, made up of both freeborn and slaves, threatened in no small way its economic structure (Drexhage, p. 4).

F. Metaphorical Applications. Paul's use of "slave of Christ" in 1 Cor. 7:22 to express the exchange of owners/lords involved in becoming a Christian is quite striking. Greeks in general would not have responded positively to this conception. Yet they, too, were fully aware that one's relative status was determined by how many lords one was obliged to honor. Paul's phrase offered them a christological restatement of the first commandment of Israel: because Yahweh has freed you from the house of bondage in Egypt and made you His slaves, you will have no other gods before Him. To become a "slave of Christ" was to reject the legitimacy of the claims of all other lords.

On the other hand, for a person in slavery to be regarded as a "freedman of the Lord" was not simply to stress the power of the Lord to create in the slave an inner freedom from sin but to emphasize the personal relationship between the risen Lord and the slave, a relationship in which the slave was addressed as a moral agent, a fully human person worthy of honor and love.

Paul's striking use of the term *paidagōgós* in Gal. 3:24 to describe the function of "the Law" has created confusion for translators (cf. RSV "custodian"; AV "schoolmaster"; NEB "tutor"). Such a slave was entrusted with schoolboys, to make certain that they got to and from school safely, and that they did their homework and generally behaved well (Plutarch *Moralia* 439f). Despite the present meaning of the derivative "pedagogue," a *paidagōgós* was not a teacher. No particular education was assumed; indeed, this task was usually given to a slave who was no longer able to perform his usual physical labor.

Paul draws on the general awareness that a child born to a mother in slavery becomes a slave at birth when developing his Sarah-Hagar allegory in Gal. 4:21-31. He clearly presupposes the practice of self-sale into slavery in his exhortation in Rom. 6:16-22, and he continues to work with slavery/manumission imagery in Rom. 8:15, 21, contrasting slavery with sonship and speaking of the enslavement of the entire creation and of its future manumission and participation in "the glorious liberty of the children of God."

Paul also continues the OT use of "slave" language to designate for himself and Timothy (Phil. 1:1) an especially honored relationship to God, shared, e.g., with Abraham, Moses, and David.

SLAVONIC VERSION. *See* VERSIONS IX.

SLAY [Heb. qal, niphal, and pual of *hārag*, hiphil of *nākâ*–'strike, smite' (Gen. 32:11 [MT 12]; Josh. 7:5; 2 S. 13:30; Jer. 26:23), *ḥālāl*–'pierced' (Gen. 34:27; Jgs. 16:24; 1 S. 31:1, 8; 2 S. 23:8, 18; Ezk. 31:17), hiphil, qal, hophal, and pilpel of *mût*–'kill' (Gen. 18:25; Dt. 9:28; Hos. 2:3 [MT 5]; etc.), *māweṯ*–'death' (Jer. 18:23), *zāḇaḥ* (Lev. 17:5, 7; 2 K. 23:20), *šāḥaṭ* (Gen. 22:10; Nu. 14:16; etc.), *ṭāḇaḥ*–'kill ruthlessly' (Ps. 37:14), *nāgap*–'smite' (Ex. 12:23), *qāṭal*–'kill' (Job 13:15), *rāṣaḥ*–'kill' (Nu. 35:27; Josh. 20:5f.), *ḥāraḇ*–'smite down' (Jer. 50:21, 27), piel of *pāšaṭ*–'strip' (2 S. 23:10; etc.), *nāpal*–'fall' (2 S. 3:29); Aram. *qeṭal* (Dnl. 2:13f.; 3:22; 5:19); Gk. *spházō* (Rev. 5:6, 9, 12; 6:4, 9; 13:8; 18:24), *apokteínō*–'kill' (Rev. 13:10, 15; 19:21), *anairéō*–'destroy' (Acts 5:36; 2 Thess. 2:8), *sphágion*–'victim' ("slain beast," Acts 7:42), *kataspházō* (Lk. 19:27)]; AV also KILL, SLAUGHTER, SMITE, etc.; NEB also KILL, SLAUGHTER, STRIKE, etc.

I. In the OT.–In one hundred of the 165 occurrences of *hārag*, the RSV translates it "slay" or "slew." Elsewhere the RSV frequently translates it "kill." Its referent is almost always human subjects. The earliest meaning of *hārag* appears to be that of "killing enemies in battle," particularly under conditions of the ban. In Nu. 31:7f. *hārag* appears three times in the context of the war with Midian (being conducted under the rubrics of holy war) as the people of Israel "slew" every male, the kings, and Balaam. Cf. 31:17, where the RSV has "kill every male"; and cf. the narrative of Simeon's and Levi's destruction of Shechem where they "slew" (*hārag*) Hamor and his son Shechem with the sword (Gen. 34:26) and "killed" (*hārag*) all the males there (34:25). Similarly, in the account of

Gideon's battle with the Midianite army (Jgs. 8:17-21), *hārag* appears five times as "slay/slew" in acts of military reprisal.

In Est. 3:13 (par. 7:4; 8:11) *hārag* appears in the context of a Persian military-political pogrom against Jews. Haman sent orders to all the king's provinces "to destroy, to slay, and to annihilate" all Jews on one day (13 Adar). In Est. 9 *hārag* appears six times in the narrative that records a reversal of fortunes in which the Jews "slew" their enemies in Susa, the capital, and elsewhere (9:6f., 11f., 15f.).

Ezekiel translates *hārag* eight times, "slay/slew/slain" always in the violent context of battle or the execution of judgment. In Ezk. 9:6 the executioners of the city are given their instructions for the purge of idolaters in Jerusalem: "slay . . . outright" the old and young, women and children, except those marked (cf. 23:47). In Ezk. 26 the Lord says He will bring against Tyre the great Nebuchadrezzar, who will "slay with the sword your daughters [i.e., satellite towns] on the mainland" (v. 8) and, after persistent siege warfare, "will slay your people with the sword" (v. 11; cf. 28:9). Ezk. 21 painfully portrays the impending violent ruin of Jerusalem: "The sword . . . it is sharpened and polished to be given into the hand of the slayer" (v. 11 [MT 16]). In the vision of Ezk. 37 the dry bones seen by the prophet strewn all across the valley are the *ʰᵃrûgîm*, "the slain" (v. 9), the corpses of fallen warriors, symbolizing the "slain" hope of Israel that will yet live.

Hārag further applies to the "slaying" of political opponents (esp. in the wake of throne successions, revolutions, assassinations, coups, etc.). Examples include the coup of Abimelech in the course of which he "slew" (NEB "butchered") seventy rival claimant brothers at Ophrah, missing only Jotham (Jgs. 9:5, 18, 24), and the assassination by Rechab and Baanah of Ishbosheth, the last claimant to the house of Saul (2 S. 4:11; cf. 4:7). King David's response to this event was to have these assassins "killed" (*hārag*, 2 S. 4:12), just as at Ziklag he "slew" (*hārag*, 4:10) the messenger who brought him the news of Saul's death. Also, in 2 S. 12:9 Nathan confronts King David with the fact of his gross abuse of power for having "slain" (*hārag*) Uriah the Hittite "with the sword of the Ammonites."

Hārag is also used of God, who slew the first-born in Egypt (Ex. 4:23; 13:15), the faithless rebels (Ps. 78:31, 34), the mighty kings Sihon and Og during the wilderness sojourn (135:10f.; 136:17-20), the sea dragon (Isa. 27:1), all of Moab's princes (Am. 2:3), Samaria's young men (4:10), and the remnant of Israel (9:1, 4). In Hos. 6:5 the Lord says of unfaithful Ephraim and Judah, "I have slain them by the words of my mouth," in parellel with "I have hewn them by the prophets."

In Lam. 3:42f. Jerusalem's survivors struggled with the fact that this time God did not forgive, but rather He "pursued us, slaying without pity," even the young men, the priest, the prophet, the young maidens, and the elderly (2:4, 20, 21). *Hārag* appears twice (along with the cognate noun *hereg*) in Isa. 27:7, where the prophet raises the question whether Israel will be chastised as severely as those who oppressed her.

The RSV also translates *hārag* as "slay/slew" in contexts of crime. Included among the iniquities of the wicked in Ps. 94:6 is their crime of victimizing the helpless: "they slay [*hārag*] the widow and the sojourner, and murder [*rāṣaḥ*] the fatherless." A similar charge, "do not slay the innocent and righteous," appears in the covenant code in the context of safeguards against abuses in court procedures (Ex. 23:7). In Ex. 32:27 *hārag* is used for the executions of idolaters (cf. Nu. 25:5). Prov. 7:26 applies a figurative use of *hārag* to the "loose woman" who is said to have "slain . . . a mighty host."

The RSV translates the hiphil of *nāḵâ*, the chief OT term for "smite, strike down, attack," seventy-seven times as "slay/slew/slain," almost exclusively in contexts of battle or coups d'état. But the RSV also renders it "kill" and "destroy" in similar contexts. In Gen. 32:11 (MT 12) Jacob, expecting battle from his wronged brother Esau, fears that Esau might "slay us all" (cf. RSV "destroy" for the hiphil of *nāḵâ* in 32:8 [MT 9]). In some instances God is the subject, e.g., He "slew" the first-born in Egypt (Nu. 3:13; 8:17) and "slew" some men in Beth-shemesh for violating the sanctity of the ark (1 S. 6:19). Other examples include, e.g., Israel's slaying of Sihon and Og (Nu. 21:24, 35), Joshua's triumph at Gibeon (Josh. 10:10, 20) and defeat at Ai (Josh. 7:5), Abimelech's slaying of the men of Shechem (Jgs. 9:43f.), Samson's slaying of a thousand with the jawbone of an ass (Jgs. 15:15f.), and the internecine Benjaminite warfare (Jgs. 20:45) in which two thousand were "slain" at Gibeah. Examples from the Philistine wars include David's slaying of Goliath (1 S. 18:6; 19:5; cf. Sir. 47:5), the famous victory refrain of David, "Saul has slain his thousands, and David his ten thousands" (1 S. 18:7; par. 21:11; 29:5), and its corollary which reports the slaying of Goliath by Elhanan (2 S. 21:18f., 21; cf. 1 Ch. 20:5). In 2 K. 19:35 (par. Isa. 37:36; 2 Macc. 15:22 [Gk. *anairéō*, "slew"]) the angel of the Lord slew 185,000 troops of the Assyrian king Sennacherib; Sennacherib himself was subsequently killed by his own sons (2 K. 19:37).

The hiphil of *nāḵâ* also appears frequently in contexts of succession struggles or coups. Absalom slew his brothers (2 S. 13:30); Jehu slew everyone of the house of Ahab (2 K. 10:11) and all of Ahab's relatives in Samaria (10:17), and further ordered the guards to "slay" the Baal priests as well (10:25).

The RSV translates Heb. *ḥālāl* as "slain/slew" seventy-three times. Its cognate verb *ḥālal* also appears as "slain" in the RSV once (Ezk. 32:26). The reference is almost always to the corpses of those slain in battle (e.g., Gen. 34:27; Josh. 11:6; 13:22; 1 S. 31:1, 8; 2 S. 1:19, 22, 25; Dnl. 11:26; 1 Ch. 5:22; 2 Ch. 13:17), and most frequently of those slain "by the sword" (e.g., Dt. 32:42; Isa. 22:2; Jer. 14:18; Ezk. 32:26; 35:8).

Ḥālāl occurs twenty-nine times alone in Ezekiel, most often in reference to idolaters and the wantonly violent (e.g., 6:4, 7, 13; 9:7; 11:6f.; etc.). In the Tyre oracle *ḥālāl* carries a pejorative connotation: "you shall die the death of the slain" (28:8; cf. 28:23). According to Ezekiel's oracle against Egypt in ch. 31, even the great Pharaoh must eventually make the inevitable journey down to Sheol ignominiously "to lie among the uncircumcised, with those who are slain by the sword" (31:17f.; cf. 32:20-25, 28-32).

The RSV renders the hiphil of Heb. *mûṯ*, "put to death," as "slay" in thirty-nine instances. The same is true in fifteen occurrences of *mûṯ* in other tenses and in one instance for the cognate noun *māweṯ*. The context is most frequently that of politically related executions, e.g., that of Ishbosheth (2 S. 4:7), that presumed against Adonijah (1 K. 1:51), those by and that of Athaliah in her vain attempt to consolidate power in Judah (2 K. 11:2, 8, 15f., 20), and those that were associated with the revolution of Jehu (1 K. 19:17). The RSV also translates *mûṯ* as "slay/slew" in contexts of battle, e.g., the arranged death of Uriah the Hittite on the front lines (2 S. 11:17), Saul's request to the anonymous Amalekite to be put to death (1:9f., 16), and the deaths of Phineas and Hophni (1 S. 4:11; cf. 2:25).

The Hebrew verb *šāḥaṭ* properly means "slaughter (ani-

mals as sacrifice), kill (so as to drain the blood)" and has clear Akkadian and Arabic cognates with a similar meaning. While the ritual or sacrificial sense of this term is clear, and most of its occurrences refer to the slaughter of food animals for sacrifice, the RSV prefers in most instances simply to translate "kill" or "slay/slew" rather than "slaughter." In most of the cases where the RSV renders *šāḥaṭ* "slay/slew" the reference is to the killing of human beings, but where the RSV translates *šāḥaṭ* as "kill" the reference in all but one instance is to animals to be sacrificed or eaten.

In several occurrences *šāḥaṭ*, "slay," refers to animals: a bull offered in sacrifice by Samuel's parents (1 S. 1:25), the animals taken in spoil from the Philistines and killed for food (1 S. 14:32, 34), and the burnt offerings in Ezekiel's vision of the restored temple (Ezk. 44:11). Otherwise, *šāḥaṭ* as "slay" is applied to human beings, often with regard to a slaying that has sacrificial connotations, e.g., the "sacrifice" of Isaac (Gen. 22:10), the wilderness threat (Nu. 14:16), and child sacrifice (Isa. 57:5). In several cases mass killing is involved, e.g., the annihilation of 42,000 Ephraimites by the Gileadites in the notorious shibboleth incident (Jgs. 12:6), the extermination of Ahab's line in connection with the coup of Jehu (2 K. 10:7, 14), the offspring and court of Zedekiah by the troops of Nebuchadnezzar (2 K. 25:7; Jer. 39:6; 52:10), and of the eighty emissaries from the northern towns slain by Ishmael following the assassination of Gedaliah (Jer. 41:7). In 2 S. 14:11 the homonymic verb *šāḥaṭ* (piel), "ruin," is translated "slay" in the request of the wise woman of Tekoah on her sons' behalf that King David restrain the avenger of blood from slaying any more.

The Hebrew verb *zāḇaḥ* is the OT term for sacrificial slaughter, especially the work of the butcher. Although it appears 113 times in the Hebrew Bible, the RSV renders it "slay/slew" only five times and "kill" only three. In three instances in Lev. 17:5, 7 the people of Israel are instructed regarding their sacrifices "which they slay in the open field." It is thus applied to the oxen Elisha "slew" at the time of the passing of Elijah's mantle (1 K. 19:21). In the one instance that this verb is used of human beings (2 K. 23:20) there are sacrificial connotations to what happens — Josiah's slaying of the priests in the Samaritan high places.

Hebrew *ṭāḇaḥ*, "slaughter, butcher," is a rare verb in the Hebrew Bible, occurring only eleven times. In two cases it is translated "slay/slain." The list of covenant curse amplifications in Dt. 28 includes "your ox will be slain" (28:31). In Ps. 37:14 the wicked seek to "slay those who walk uprightly."

Rāṣaḥ is used in Prov. 22:13 in reference to the sluggard's fear that he shall be "slain in the streets by a lion." The participial form of this verb, *rōṣē(a)ḥ*, "murderer," appears eight times in Josh. 20–21, always in a context of refuge for homicide cases (see de Vaux, I, 158-163).

Hebrew *qāṭal*, "kill," is translated "slay" twice by the RSV. In Ps. 139:19 the psalmist urges God to "slay the wicked" and in Job 13:15 stubborn Job determines to defend his ways even though God "slay" him. Seven times the RSV renders the Aramaic cognate *qᵉṭal*, as "slay/slew/slain," all in the Aramaic section of Daniel. Nebuchadnezzar, who was possessed of such power that he could slay whomever he pleased (5:19), decrees in 2:13f. that the wise men of Babylon should be slain, and his forces thus sought to "slay" Daniel and his three companions. When Daniel and his companions were bound and thrown into the fiery furnace (3:22) the flames "slew" the bearers instead of the intended. The slayings of Belshazzar (5:30) and the horned beast (7:11) are also examples.

Hebrew *nāgap*, "smite, strike," in three instances in Exodus refers to the activity of "the destroyer" (*mašḥîṯ*), the angel of death who in the Passover narrative passed through Egypt to "slay" (Ex. 12:23, 27; see de Vaux, II, 489). In oracles against Pekod and Babylon in Jer. 50:21, 27, the denominative verb Heb. *ḥāraḇ*, "put to the sword" (< *ḥereḇ*, "sword") is twice translated "slay" by the RSV. In 2 S. 23:10 the RSV introduces "slain" from the context to translate the piel of Heb. *pāšaṭ*, "strip off." Here the object of *lᵉpaššēṭ* is understood — "to strip the slain" (cf. 1 S. 31:8; 1 Ch. 10:8 for examples with the object given).

II. In the NT.—Almost all the RSV NT examples of "slay/slain" occur in the book of Revelation. In seven instances the RSV translates the Greek verb *spházō*, as "slay/slain." *Spházō*, the original sense of which is "slay (by slitting the throat)," occurs about eighty-four times in the LXX, almost exclusively for Heb. *ṭāḇaḥ* and *šāḥaṭ*. It thus reflects both cultic and non-cultic use and, in some cases, is applied by extension to the "slaying" of people in battle. In Rev. 6:4 the rider of the red horse is authorized to remove peace so that people will "slay one another." Elsewhere passive forms of *spházō* are employed to describe "the Lamb that was slain" (5:6, 9, 12; 13:8) and the martyrs who had been slain for their witness (6:9; 18:24). The cognate noun *sphágion* occurs only in the NT in Stephen's great historical recital (Acts 7:42) where the RSV translates, "Did you offer to me beasts and sacrifices?" (*sphágia kaí thysías*). In this passage Stephen cites the prophet Amos's familiar sarcastic attack on empty ritualism (Am. 5:25). Also, the related verb *kataspházō*, "slay, slaughter," occurs once in the NT in Lk. 19:27, where it refers to the slaying of those who reject the king in Jesus' parable of the pounds.

The RSV usually renders Gk. *apokteínō* as "kill" but in four instances in Revelation the RSV renders it "slay/slain." It appears as such twice in Rev. 13:10: "if anyone slays with the sword, with the sword must he be slain." The second beast appears in 13:15 and causes all who refuse to worship the first beast to be slain. In the vision of the final eschatological battle in 19:21, after the rider on the white horse had dispatched the beast and the false prophet, their entourage is also said to have been "slain."

The RSV renders Gk. *anairéō* as "slay" in reference to the mysterious "lawless one" whom the Lord Jesus will slay with the breath of His mouth (2 Th. 2:8). In another instance the RSV translates *anairéō* as "slain" in reference to the unsuccessful revolt of Theudas who was "slain" along with many of his followers (Acts 5:36).

SLEDGE, THRESHING [Heb. *ḥārûṣ*] (Job 41:30 [MT 22]; Isa. 28:27; Am. 1:3); AV "sharp pointed thing," THRESHING INSTRUMENT; NEB also SLEDGE; [*môrag*] (2 S. 24:22; 1 Ch. 21:23; Isa. 41:15); AV THRESHING INSTRUMENT. A heavy wooden platform studded with flint, nails, or knives (Isa. 41:15), dragged by one or two animals over the grain as it lay spread out on the threshing floor. *See* AGRICULTURE III.A.

SLEEP; ASLEEP. The translation of a variety of Hebrew and Greek terms. In the OT the noun "sleep" most often

represents Heb. *šēnâ* (Gen. 28:16; 31:40; Jgs. 16:14, 20; Job 14:12; etc.); "deep sleep" usually renders *tardēmâ* (Gen. 2:21; 15:12; 1 S 26:12; Job 4:13; 33:15; Prov. 19:15; Isa. 29:10) or the niphal of *rāḏam* ("fall in a deep sleep," Dnl. 8:18; 10:9). The verb most frequently represents *šāḵaḇ* (lit. "lie down"; Gen 28:11; Ex. 22:27 [MT 26]; Dt. 24:12f.; 31:16; etc.) or *yāšēn* (Gen. 2:21; 1 K. 19:5; Job 3:13; Ps. 3:5 [MT 6]; 4:8 [MT 9]; etc.). "Asleep" is used to translate *yāšēn* (Gen. 41:5; 1 S. 26:12; 1 K. 18:27), the niphal of *rāḏam* ("lie/be fast asleep," Jgs. 4:21; Jonah 1:5), and *nûm* ("be asleep," Nah. 3:18).

In the NT the noun "sleep" renders Gk. *hýpnos* (Mt. 1:24; Lk. 9:32; Jn. 11:13; Acts 20:9; Rom. 13:11). The verb usually represents *katheúdō* (Mt. 9:24; 13:25; 25:5; Mk. 4:27; etc.; cf. part.; "sleeper," Eph. 5:14), but it is also used to translate the pass. of *koimáō* (Lk. 22:45; Acts 12:6; 1 Cor. 15:51) and *exypnízō* ("awake out of sleep," Jn. 11:11). The adjective "asleep" renders the part. of *katheúdō* in Mk. 4:38; 13:26, while the phrase "be asleep" translates *katheúdō* (Mt. 8:24; Mk. 14:37), the pass. of *koimáō* (Mt. 28:13; 1 Thess. 4:13), and *nystázō* (lit. "doze"; 2 Pet. 2:3). "Fall asleep" is employed frequently by the RSV to render the pass. of *koimáō* (Mt. 27:52; Jn. 11:11f.; Acts 7:60; 13:36; 1 Cor. 15:6, 18, 20; etc.); in Lk. 8:23 it translates *aphypnóō*. In 2 Cor. 11:27 the RSV renders *agrypnía* (lit. "sleeplessness," "watching") by "a sleepless night."

The Bible generally views sleep as necessary and pleasant for mankind (e.g., Eccl. 5:12; Jer. 31:26). Sometimes the imagery of sleep is applied to Yahweh in calls for Him to respond to His people's needs (e.g., Ps. 44:23, 26 [MT 24, 27]; 59:4f. [MT 5f.]; cf. 78:65). This poetic imagery is used as a dramatic expression of God's decision to act directly in human affairs; it does not derive from pagan mythology, which depicts the gods as literally sleeping and needing sleep (cf. Elijah's taunt to the prophets of Baal, 1 K. 18:27). The psalmist confesses that Yahweh never slumbers nor sleeps (Ps. 121:4). Because God always watches over His people, those who trust in Him may lie down and sleep in peace (Ps. 3:5 [MT 7]; 4:8 [MT 9]). Following the way of wisdom (i.e., fearing Yahweh) enables one to enjoy sweet sleep (Prov. 3:24). God's people do not rob themselves of sleep to pile up wealth (Ps. 127:2); nor do they indulge themselves like the rich so that their sleep vanishes (Eccl. 5:12). But neither does this wise person use sleep to escape life — unlike the SLUGGARD, whose laziness leads to poverty (Prov. 6:9-11). The God-fearing person finds the proper balance between sleep and activity.

Sleep can also make one an easy prey for an enemy (cf. Prov. 6:4f.). Jael drove a tent peg into the temple of Sisera as he lay fast asleep from exhaustion (Jgs. 4:21), and Delilah robbed Samson of his superior strength while he was sleeping (16:19f.; cf. Judith's decapitation of Holofernes while he lay in a drunken stupor [Jth. 12:16–13:8]). When Saul was overcome by sleep David spared his life but took his water jar and spear (1 S. 26:7-12). Sleep kept the disciples from agonizing with Jesus in the Garden of Gethsemane and made them vulnerable to temptation (Mt. 26:40-45, esp. v. 41).

Sometimes God communicates His message to people during their sleep or causes a "deep sleep" (Heb. *tardēmâ*) to overtake a person so that He may accomplish His purpose. Such sleep befell Adam while God created Eve from his side (Gen. 2:21f.). It fell upon Abraham when he offered sacrifice to seal the covenant, and then God spoke to him about what would happen in the future (15:12-17). On the other hand, God figuratively caused a "deep sleep" to fall on the false prophets so that they were hindered from discovering the truth (Isa. 29:10).

Scripture often uses "sleep" as a euphemism for death. Kings and Chronicles frequently state, "[the king] slept with his fathers and was buried" (1 K. 2:10; 11:43; 14:31; etc.), meaning that he died a natural death and was given a proper state burial. At the final judgment even the dead will be awakened from their sleep, some to eternal life and others to eternal condemnation (Dnl. 12:2). The NT often uses "fall asleep" in the sense of natural death (Mt. 27:52; Jn. 11:11; Acts 7:60; 13:36; 1 Cor. 15:6, 18, 20; 1 Thess. 4:14f.; 2 Pet. 3:4), but it also extends the concept to refer to spiritual death. This spiritual meaning is apparent in Mk. 13:35f., where Jesus warns His followers: "Watch . . . lest he [Christ] come suddenly and find you asleep." A hymn in Eph. 5:14 emphasizes this point: "therefore it is said, 'Awake, O sleeper, and arise from the dead, and Christ shall give you light'" (cf. Rom. 13:11; 1 Thess. 5:6f.). J. E. HARTLEY

SLEEVES [Heb. *pas*] (Gen. 37:3, 23, 32, 2 S. 13:18); AV "of many colours," etc.; NEB SLEEVED. The meaning of Heb. *pas* is difficult to ascertain with certainty since even the early textual authorities vary widely. In the MT *pas* occurs only in the phrase *kᵉṯōneṯ passîm* (AV "coat of many/diverse colours"; NEB "long sleeved robe"), which was a type of garment worn by Joseph and Tamar. Assuming that *pas* is closely related to Aram. *pas* ("palm" or "sole"), the Hebrew phrase probably refers to "a tunic reaching to the hands and feet" (cf. S. R. Driver, *Notes on the Hebrew Text and the Topography of the Books of Samuel* [2nd ed. 1913], pp. 299f.).

See also COAT; GARMENTS II.A. G. L. K.

SLEIGHT (Eph. 4:14, AV). *See* CUNNING.

SLIME [Heb. *rîr*–'spittle, slobber'] (Job 6:6); AV WHITE OF AN EGG; NEB JUICE; [*temes*–'melting away'] ("dissolves into slime," Ps. 58:8 [MT 9]; AV "which melteth"; NEB "which melts away."

The Heb. *rîr* is a bland viscous fluid that exudes from an unidentifiable plant (see the comms.). Job 6:6 uses this term figuratively to designate something that is insipid. In Ps. 58:8 (MT 9) the RSV translates Heb. *temes* with "dissolves into slime." G. R. Driver, however, suggested that in v. 8a Heb. *šabbᵉlûl* (RSV, AV "snail") means "miscarriage" (*JTS*, 34 [1933], 41-44), which would parallel "untimely birth" (NEB "still-born child") in v. 8b. Thus it would not be a "snail which dissolves into slime" (RSV), but rather "an abortive birth which melts away" (NEB).

See BITUMEN; PITCH. G. L. K.

SLING, SLINGSTONES. *See* WEAPONS OF WAR II.C.2; IV.B.

SLIP [(verbs) Heb. *môṭ*–'stagger, reel' (Dt. 32:35; Ps. 17:5; 38:16 [MT 17]; 66:9; 94:18), *māʿaḏ*–'wobble, shake' (2 S. 22:37; Job 12:5; Ps. 18:36 [MT 37]; 37:31; Prov. 25:19), *pālîṭ*–'escaped one' (2 K. 9:15), *mālaṭ*–'escape' (2 S. 4:6), pual of *šāpaḵ*–'pour out' (Ps. 73:2), *nāšal*–'loosen, drop off' (Dt. 19:5); Gk. *pareisérchomai*–'sneak in, come in' (Gal. 2:4)]; AV also SLIDE, ESCAPE, BE MOVED, etc.; NEB also STUMBLE, FALTER, ESCAPE, etc.; [(noun) Heb. *zᵉmôrâ*–'branch' (Isa. 17:10)]; NEB CUTTINGS; **SLIPPERY** [Heb. *ḥᵃlaqlaqqôṯ* (Ps. 35:6 [MT 7]; Jer. 23:12), *ḥālāq* (Ps. 73:18)].

The RSV uses the verb "slip" in two ways: to move quietly (e.g., 2 S. 4:6; 2 K. 9:15; Gal. 2:4), and to slide

(e.g., Dt. 32:35; 2 S. 22:37). The most frequent use is the latter, usually in the expression "(my, his, their) feet (steps, ankles) slip." As S. R. Driver (comm. on Deuteronomy [*ICC*, 3rd ed. repr. 1973], p. 374) pointed out, both *môṭ* and *māʿaḏ* are used in this expression as "a frequent image of a reverse of fortune." This image can refer to slipping in a spiritual sense (e.g., from God's paths, Ps. 17:5; cf. 37 31; 38:16; 73:2; 94:18) or in a general sense (Job 12:5; Ps. 66:9; Prov. 25:19).

The meaning of *ḥālāq* and *ḥᵃlaqlaqqôṯ* is debated. The majority of scholars take these terms in their traditional, well-established sense of "slippery" (which fits the contexts well; see *TDOT*, IV, 444-47). But M. Dahood (e.g., *Psalms*, I [*AB*, repr. 1973], 211) argued that Hebrew had another root *ḥlq*, cognate with Ugar. *ḥlq*, "perish," hence meaning "Destruction," i.e., a poetic name for the underworld, in Ps. 35:6; 73:18; Jer. 23:12 (cf. W. Holladay, *Jeremiah 1* [*Hermeneia*, 1986], p. 628, who allows for wordplay, with *ḥᵃlaqlaqqôṯ* meaning both "slippery" and "perdition").

Most scholars take Isa. 17:10 to refer to a foreign cult that has infiltrated worship in Jerusalem, though the identity of this cult is uncertain (cf. comms. on Isaiah by R. Clements [*NCBC*, 1980], p. 160; O. Kaiser [Eng. tr., *OTL*, 1974], pp. 82f.; J. Oswalt [*NICOT*, 1986], p. 354). *See also* PLEASANT PLANTS. G. A. L.

SLOPE. *See* HILL; PISGAH.

SLOW [Heb hiphil of *ʾārak*–'make long'] ("make slow," Prov. 19:11): AV DEFER; NEB BE PATIENT; [*ʾārēḵ*–'long'] (Ex. 34:6; Nu. 14:18; Prov. 14:29; etc.); AV also LONG(SUFFERING); NEB LONG(SUFFERING), FORBEARING, etc.; [*kāḇēḏ*–'heavy'] (Ex. 4:10); [niphal of *ʾāṣal*–'be lazy'] ("be slow," Jgs. 18:9); AV BE SLOTHFUL; NEB HANG BACK; [hithpalpel of *māhah*–'linger'] ("seem slow," Hab. 2:3); AV TARRY; NEB DELAY; [Gk. *bradýs*] (Lk. 24:25; Jas. 1:19); [*bradýnō*] ("be slow," 2 Pet. 3:9); AV BE SLACK; **SLOWLY** [Heb. *leʾiṭṭî*–'gently'] (Gen. 33:14); AV SOFTLY; NEB BY EASY STAGES; [Gk. *bradyploéō*] ("sail slowly," Acts 27:7); NEB MAKE LITTLE HEADWAY; **SLOWNESS** [Gk. *bradýtēs*] (2 Pet. 3:9); AV SLACKNESS; NEB omits.

"Slow" occurs primarily in the phrase "slow to anger," which usually renders Heb. *ʾereḵ ʾappayim* (lit. "long of NOSE"). The phrase first appears in Ex. 34:6, where Yahweh appears to Moses in a theophany on Mt. Sinai and reveals His character by the words "merciful and gracious, slow to anger, and abounding in steadfast love and faithfulness." These words were apparently preserved as a cultic formula, for they recur (sometimes in abbreviated form) throughout the OT (Nu. 14:18; Neh. 9:17; Ps. 86:15; 103:8; 145:8; Joel 2:13; Jonah 4:2; Nah. 1:3). God's slowness to anger does not imply that He never acts in WRATH, but it means that He delays His judgment in order to allow an opportunity for repentance (cf. Joel 2:12-14). Interestingly, in Jonah 4:2 the disillusioned and angry prophet uses the whole formula as an accusation against His God; the NEB puts these words in quotation marks, indicating that Jonah is quoting a tradition that he finds particularly frustrating.

The NT also emphasizes God's forbearance with sinners. 2 Pet. 3:9 explains the "slowness" of Christ's return as due to God's desire that all should come to repentance before the day of judgment.

The phrase 'slow to anger" is used of a human subject four times in Proverbs (14:29; 15:18; 16:32; 19:11). The prudence of controlling one's temper was an important theme in wisdom literature. In the NT, Jas. 1:19 appears to be quoting a proverb concerning the wisdom of careful listening as opposed to rash and angry speech (see P. Davids, *Epistle of James* [*NIGTC*, 1982], pp. 91f.). *See also* PATIENCE. G. CHAMBERLAIN
N. J. O.

SLOTH. *See* SLUGGARD.

SLUGGARD [Heb. *ʿaṣēl*]; AV also SLOTHFUL MAN; NEB also IDLE MAN, LAZY (MAN); **SLOTH** [*ʿaṣlâ*] (Eccl. 10:18); AV SLOTHFULNESS; NEB NEGLIGENT; **SLOTHFUL** [*rᵉmîyâ*] (Prov. 12:24, 27); NEB LAZINESS, LAZY; [Gk. *oknéros*] (Mt. 25:26); NEB LAZY; **SLOTHFULNESS** [Heb. *ʿaṣlâ*] (Prov. 19:15); NEB LAZINESS.

In the OT a sluggard is one who avoids the action that wisdom requires. With one exception (Jgs. 18:9; RSV "slow"), the *ʿāsēl* word-group is confined to the Wisdom books, Proverbs (sixteen times) and Eccl. 10:18. These terms present the negative side of an important wisdom opposition between slothfulness and DILIGENCE (Prov. 13:4). Proverbs devotes no less than three poems to the sluggard (6:6-11; 24:30-34; 26:13-16) in addition to scattered sayings (10:26; 13:4; 15:19; 19:24 [par. 26:15]; 20:4; 21:25; 22:13; cf. 19:15; 31:27). Semantically, the sluggard is a sub-category of the FOOL, since wisdom requires diligence at the *right time* (cf. Eccl. 3:1-8; Isa. 28:23-29); i.e., hard work (which the sluggard avoids) is wise when it fits into the divinely ordained cosmic order. The industrious ant is wise because her actions are in tune with the cosmic rhythm of the seasons: "she prepares her food in summer, and gathers her sustenance in harvest" (Prov. 6:8; cf. 30:24f.; 20:4, and the prudent son in 10:4f.). In contrast, the sluggard does not work at the right time and reaps the disastrous consequences of his laziness: "poverty will come upon you like a robber . . ." (24:34 par. 6:11). The sluggard's folly is most sharply satirized in Prov. 26:13-16. Another term, *rᵉmîyâ*, is used in 12:24, 27, which depict slothfulness by the image of a slack hand.

Many of the sluggard sayings cited above employ agricultural imagery that was especially pertinent to the Israelite peasant for whom sloth meant POVERTY and hunger (cf. Prov. 20:13; 28:19; 12:11; 18:9; 23:20f.; 31:27). But such imagery has an application far beyond its original setting (as does the modern proverb, "Strike while the iron is hot"). Thus, in 27:23-27 the royal house is exhorted to care diligently for its "flocks," i.e., its subjects.

In the broadest sense, the OT's negative judgment on sloth is rooted in God's purpose in creation, namely, that people be industrious stewards of the earth (Gen. 1:28; Ex. 20:9).

In the NT the terms for sloth appear infrequently (in addition to Mt. 25:26, cf. *oknéros* in Rom. 12:11 [RSV "never flag"; lit. "do not be sluggards"], *nōthrós* in He. 6:12 ["sluggish"], and *argós* in Tit. 1:12 [RSV "lazy"] and 1 Tim. 5:13 ["idlers"]). But the antithetical counterparts of sloth, WORK and LABOR, are richly present in the NT. Moreover, the parable of the talents (Mt. 25:14-30) vividly shows the incompatibility of sloth with the kingdom of heaven. R. C. VAN LEEUWEN

SLUICE (Isa. 19:10, AV). *See* HIRE.

SMELL [(verb) hiphil of Heb. *rûḥ(a)ḥ* (Gen. 8:21; 27:27; Lev. 26:31; Dt. 4:28; Job 39:25; Ps. 115:6)]; NEB also ACCEPT, SCENT; [(noun) Heb. *rêḥ(a)ḥ*–'scent, odor' (Gen. 27:27), *ṣaḥᵃnâ* ("foul smell," Joel 2:20); Aram. *rêḥ(a)ḥ* (Dnl. 3:27); Gk. *ósphrēsis*–'sense of smell' (1 Cor. 12:17)];

AV also ILL SAVOUR; NEB also ROTTING CORPSES.

In six instances in the RSV OT "smell" translates Heb. *rû(a)ḥ*. In two of these (Gen. 8:21; Lev. 26:31) it is part of the ancient idiom for divine acceptance of a sacrifice (lit. "smell the pleasing odor;" *see* ODOR). In Gen. 27:27 the same verb occurs with its cognate noun *rê(a)ḥ* in reference to the scent of Jacob's garments and to Isaac's smelling of their odor. In two others (Dt. 4:28: Ps. 115:6) it refers to handmade idols that "neither see, nor hear, nor eat, nor smell" (cf. Ps. 135:15-18; Isa. 40:19f.; 44:9-20; Jer. 10:3-5; Hab. 2:18f.). In Job 39:25 the mere sound of the battle trumpet excites the warhorse that "smells the battle from afar."

The Aramaic cognate *rê(a)ḥ* occurs in Dnl. 3:27, where, as evidence of the miracle in the fiery furnace, not even the "smell of fire" was upon the three young men. Joel 2:20 prophesies the demise of the enigmatic "northerner" whose removal includes the rising of his "foul smell" (Heb. *ṣaḥ^{a}nâ*).

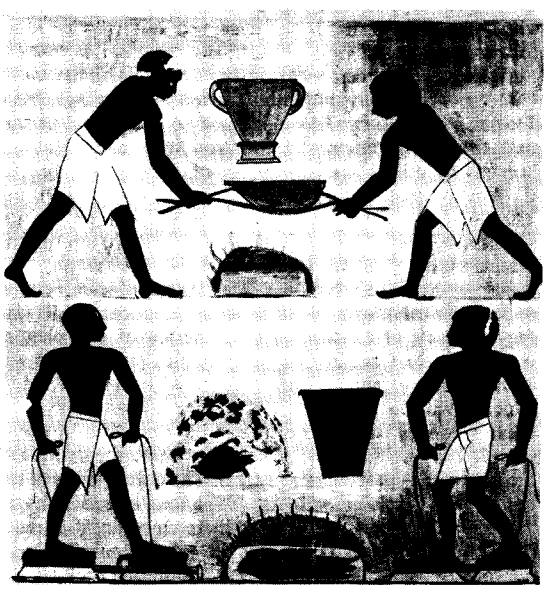
In the RSV NT "smell" occurs only in 1 Cor. 12:17 for Gk. *ósphrēsis*. Here in the context of Paul's body metaphor it illustrates the interconnectedness of spiritual gifts within the community of believers. This Greek term, which by extension often refers simply to the nose (cf. Marcus Aurelius, *Meditations* 10.35; cf. also T. Reub. 2:5), is used here with its literal meaning: "If the whole body were an ear, where would be the sense of smell?"

D. G. BURKE

SMELTING [Heb. *ṣārap*] ("smelt away," Isa. 1:25); AV PURGE AWAY; NEB REFINE AWAY; [*yāṣaq*] (Job 28:2); AV MOLTEN. The process of extracting metal from ore by melting.

Smelting and/or forging furnaces have been found at many places in Palestine, e.g., Tell el-Kheleifeh in the Arabah, Tell Jemmeh, ʿAin Shems, et-Tell (Ai), Tell el-Qasîleh near Tel Aviv, Tell Abū Maṭar near Beer-sheba, Tell el-Mazâr and Tell Deir-ʿallā in the Jordan Valley, the Jabbok Valley, Mughâret el-Wardeh in the Gilead district, and Ge-harashim (lit. "valley of craftsmen," 1 Ch. 4:14; cf. Neh. 11:35). Not all these furnaces are from the same period; they range in time of use from the 13th cent. B.C. to A.D. 1485.

A Theban wall painting showing smelters and smiths at work: above, the workers pour and shape molten metal; below, they use bellows to heat the crucible. From the tomb of Rekhmira, Thebes, 13th Dynasty (ca. 1500 B.C.) (The Metropolitan Museum of Art)



Copper was the first metal to be smelted by the Hebrews, who probably learned the art from the peoples of Transjordan. The ore was heated over charcoal in furnaces or pottery crucibles. Sometimes flues supplied a draft, but often BELLOWS were used to supply more air and thus more heat. The crude metal thus produced was usually remelted to refine it. (For a more detailed description of how iron was smelted, *see* REFINE III.)

Until 1972 it was believed that the large copper smelter at Ezion-geber (Elath), one of the largest in the ancient Near East, was Israelite. Then Rothenberg challenged the prevailing view that the Timna mines and the Tell el-Kheleifeh site were Solomonic, pushing back their dates to the 13th cent. and first half of the 12th cent. B.C. Fresh evidence (see Bimson) has restored the possibility of a Solomonic (10th cent.) date, but the smelter may well have been Egyptian.

Isaiah 1:25 uses the familiar figure of God purifying His people from sin as the refiner removes dross and alloy (cf. 48:10; Jer. 6:29f.; 9:7; Ezk. 22:20f.; Zec. 13:9; Mal. 3:2f.; etc.). Some scholars (e.g., O. Kaiser, *Isaiah 1–12* [Eng. tr., *OTL*, 2nd ed. 1983], p. 39 n. 8) have suggested that in this verse Heb. *kabbōr*, "as with lye," be amended to read *bakkur*, "in the furnace."

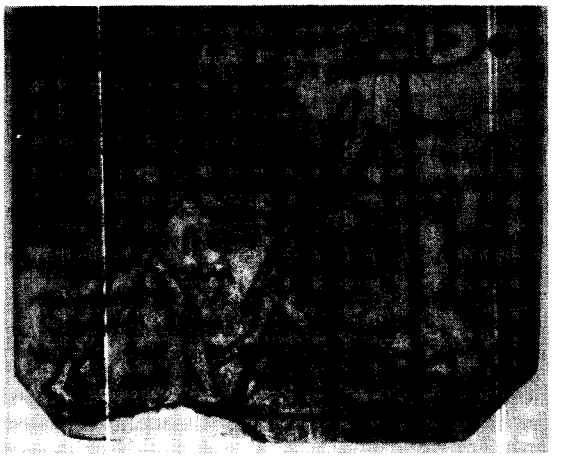
SMITE [Heb. *nāḵâ* (e.g., hiphil, Ex. 3:20; huphal, Ps. 102:4 [MT 5]), *nāgap* (e.g., 1 S. 26:10), piel of *nāgaʿ* (e.g., 2 Ch. 26:20), *māḥaṣ* (e.g., Job 5:18), *sāpaq* (e.g., Jer. 31:19), niphal of *šāḇar* (Jer. 14:17), piel of *śāpaḥ* (Isa. 3:17), *ḥereḇ* (Zec. 11:17); Aram. *m^{e}ḥâ'* (Dnl. 2:34); Gk. *patássō* (Acts 12:23; Rev. 11:6; 19:15)]; AV also PUNISH, SLAY, WOUND, etc.; NEB also ASSAIL, SUBDUE, SLAUGHTER, CHASTISE, etc.

I. In the OT.—In the Hebrew Bible the chief word for "smite, strike" is the hiphil of *nāḵâ*, which occurs nearly five hundred times. In forty-three instances the RSV translates the hiphil of *nāḵâ* as "smite/smote/smitten" (and so also in two cases involving the passive hophal). In the LXX the usual equivalent is Gk. *patássō*.

The most common context for the use of *nāḵâ* (hiphil) is that of battle, e.g., Israel's early engagements against Midian, peoples of the Transjordan, and Og of Bashan (Nu. 25:17; 32:4; Dt. 3:3; cf. Ps. 135:10f.; 136:17-20); campaigns under Joshua's leadership against Ai (Josh. 8:21f., 24), the Amorite coalition (10:10, 26; 11:8), and the cities of Makkedah, Libnah, Lachish, Gezer, Eglon, Hebron, Debir, and Hazor (10:28-39; 11:10-17), engagements at Kiriath-sepher by Caleb (Josh. 15:16), at Jerusalem and Bethel by Joshua (Jgs. 1:8, 25), and at Gibeon by the Amorite coalition (Josh. 10:4). In all these instances the RSV renders *nāḵâ* (hiphil) as "smite" (but cf. Josh. 9:18 [RSV "kill"]; 10:40f. [RSV "defeated"]).

Nāḵâ (hiphil) as "smite" also figures in numerous military engagements during the time of the judges: Gideon smiting Midian (Jgs. 6:16), Jephthah smiting Ammon and Ephraim (11:33; 12:4), Samson devastating the Philistines (15:8), the Danites' smiting of Laish (18:27), and the bloody internecine Benjaminite wars (20:31, 37, 39, 48).



An ivory plaque from Abydos that reads: "First Time of Smiting of the East," celebrating the victory over the Semites by King Wedymu, who is smiting a bearded figure with a bound mace (ca. 2900 B.C.) (courtesy of the Trustees of the British Museum)

Similarly the OT frequently characterized campaigns during the early monarchy as "smitings" (hiphil of *nāḵâ*) e.g., Saul's defeat of Amalek (1 S. 14:48), David's smiting of a lion during his youthful shepherd years (17:35), and his later exploits in service of the Philistine king of Gath (27:9), his victory over Amalekite marauders (30:17), and (as Saul's successor) his triumph over the Philistines whom he "smote from Geba to Gezer" (2 S. 5:25); cf. further 1 K. 20:29; 2 K. 8:21; 1 Ch. 20:1; 2 Ch. 14:14f. (MT 13f.). Occasionally *nāḵâ* (hiphil) combines idiomatically with *mûṯ* (hiphil) in the phrase "smote and killed" (e.g., 1 S. 17:35; 2 S. 1:15), underscoring the utter finality of most "smitings" in battle (cf. also the same combination in Josh. 11:17, "smote . . . and put . . . to death").

During the late monarchy Jeremiah anchored his prophecy against Philistia in a time "before Pharaoh smote Gaza" (Jer. 47:1). In an oracle against Kedar (49:28) the prophet referred to this place as a kingdom "which Nebuchadrezzar king of Babylon smote." In exilic times *nāḵâ* (hiphil) is used in Est. 9:5 in describing the Jewish reprisals under the leadership of Mordecai when "the Jews smote all their enemies with the sword, slaughtering, and destroying them." In 2 S. 4:7 it refers to a political assassination in which Rechab and Baanah smote (hiphil of *nāḵâ*) and slew and beheaded Ishbosheth, the only heir apparent to Saul's crown.

In many cases the Lord is described as leading the army of Israel into battle or as the chief protagonist of the battle, e.g., smiting the Philistines (2 S. 5:24; 1 Ch. 14:15), or Egypt (Ezk. 32:15). Numerous "smitings," not only those inflicted in battle but also other catastrophes, are also often attributed to the Lord as divine judgment, corrective punishment, or discipline for Israel. After the episode of excessive greed over the abundant quails in the wilderness, the Lord's anger was kindled and He "smote the people with a very great plague" (Nu. 11:33). Part of the punishment promised for waywardness at the conclusion of the Holiness Code is a sevenfold smiting from the Lord (Lev. 26:24). In the amplification section of the covenant curses (Dt. 28:22, 27-35) the Lord threatens to smite the disobedient with all sorts of ills and calamities (e.g., consumption, drought, boils, madness, etc.). David's national census was an important move toward centralization of government, but it incited the Lord's wrath and a chastising punishment came in the form of pestilence, manifest in the form of an angel "smiting the people" (2 S. 24:17 par. 1 Ch. 21:7). In 2 S. 6:7, Uzzah, one of the guides for the cart bearing the ark of God, reached out to touch the ark and "God smote him there . . . and he died."

The chastening punishment of the Lord is prominent in the prophets. As judgment on an unfaithful people, the Lord declares through the prophet Amos: "I smote you with blight and mildew . . . yet you did not return to me" (Am. 4:9; cf. Hag. 2:17). Isaiah expresses his dismay that his people persist in rebelliousness against the Lord in the words, "Why will you still be smitten, that you continue to rebel?" (Isa. 1:5); he also states that "the people did not turn to him who smote them" (9:13 [MT 12]; cf. 27:7; 57:17). Isaiah perceived the Assyrians as the Lord's rod of anger (Isa. 10:5; 14:29; cf. 5:25; 10:20), yet the Assyrians are not to be feared when they "smite with the rod" (10:24) for eventually they will be the target of God's smiting anger (10:25; 30:31). In the rebuilding prophecy of Isa. 60 the prophet announces an end to the smiting; eventually a great reversal will occur as "foreigners shall build up your walls . . . for in my wrath I smote you, but in my favor I have had mercy on you" (60:10).

Similarly Jeremiah lamented the unheeded disciplinary punishment (Jer. 5:3). In Ezekiel the Lord's judgment is aimed especially at smiting the poison of idolatry: to the "executioners of the city" (9:1) the Lord gave instructions to follow the man clothed in linen and to "pass through the city after him, and smite" (9:5; cf. 9:7f.). In 7:9 Ezekiel embellishes his familiar refrain in the context of purging "abominations" — "Then you will know that I am the Lord, who smite" (cf. also Am. 3:15; 9:1; Mic. 6:13).

The two incidents of "smiting" in the Suffering Servant songs (Isa. 50:6; 53:4) are theologically very significant. In Isa. 50:4-6 the servant chants that he was not rebellious, but "gave his back to the smiters," and in so doing has been faithful to his calling to the word, affirming and accepting the need of suffering for the sake of this calling. To say such in the thought world of that time was quite revolutionary, for it meant that the servant regarded all the smiting he had borne as justified because God was on the side of the opponents. Similarly, in 53:4 the phrase "we esteemed him stricken [Heb. *nāgûa(a)*], smitten by God [*mukkēh ʾᵉlōhîm*]," is remarkable in that it runs counter to a concept of suffering throughout the ancient world, viz., that all suffering is the deserved suffering we incur for having aroused God's wrath. But this reveals that the Suffering Servant has vicariously borne this abuse *for us* ("he has borne our griefs and carried our sorrows," Isa. 53:4), and all the while was himself so ordinary a person that the disfigurement he incurred had made him abhorrent to others and an object of scorn. (See further C. Westermann, *Isaiah 40–66* (Eng. tr., *OTL*, 1969), pp. 230, 262-64; cf. also Lam. 3:30 and Mt. 5:39 on smiting someone's cheek, and Ps. 3:7 [MT 8], where smiting on the cheek is an insulting gesture.)

Just as the Lord's "smiting" may take the form of defeat in battle or other calamities, in some instances it falls into the category of "wonders." The series of ten plagues worked by the Lord in Egypt exemplifies this — "So I will stretch out my hand and smite Egypt with all the wonders which I will do in it" (Ex. 3:20). The climactic finale of these wonders was the smiting of the first-born in Egypt (12:12, 29; Ps. 78:51; 105:36) or alternately the smiting of the land of Egypt itself (Ex. 12:13). The entire series of the ten plagues is rehearsed in Ps. 105, a long historical hymn that says that the Lord "smote their vines and fig trees" (105:33). Also in this category is the subsequent wonder at the rock of Meribah where Moses "smote the rock so that

water gushed out" (Ps. 78:20; cf. Ex. 17:6. Accompanying the return of exiles anticipated in the messianic age will be the wonders signaling a new Exodus (Isa. 11:10-16), among which is the smiting of the Euphrates into seven channels so that the returnees will be able to cross it dryshod (v. 15; cf. also Zec. 10:11).

Various passages employ *nāḵâ* (hiphil) in expressing humanly administered punishment, e.g., in 2 K. 25:21 (par. Jer. 52:27), where, after the sack of Jerusalem, the leaders of Jerusalem were brought before the king of Babylon at Riblah, where he "smote them, and put them to death."

Several other passages employ *nāḵâ* (hiphil) for the "smiting" that occurs in situations of individual conflict. Many examples of this occur in 1 and 2 Samuel, e.g., Abner smiting Asahel in revenge (2 S. 2:22f.), Joab similarly smiting Abner (3:27), David ordering the death of the Amalekite who had put Saul to death (1:15), Saul threatening to kill David with a javelin (1 S. 20:33), David's slaying of a prowling lion (17:35), his conquest of Jerusalem (2 S. 5:8 par. 1 Ch. 11:6), and the exploits of Benaiah, who "smote" the two champions of Moab (2 S. 23:20; cf. 23:10, where the RSV has "struck down" for the hiphil of *nāḵâ*). In the strange case of the prophet (at the time of the Syrian wars) who kept asking people to strike a blow at him (1 K. 20:37), *nāḵâ* (hiphil) appears three times. The first two of these the RSV renders "strike" and the third "smiting," thus giving further evidence of a general interchangeability between the concepts of smiting and striking.

Some passages that use *nāḵâ* (hiphil) refer to a kind of verbal smiting, e.g., the enemies of Jeremiah (Jer. 18:18) who sought to "smite him with the tongue" (i.e., slander him; cf. NEB "invent some charges against him"). *Nākâ* also appears for the "smiting" one receives from the conscience. "David's heart smote him" when he had taken liberties in playing tricks on the anointed king of Israel (1 S. 24:5 [MT 6]), and when he had numbered the people (2 S. 24:10). The hophal of *nāḵâ* appears in Ps. 102:4 with the sense of the heart being smitten by distress.

Several OT passages refer to the sun's smiting of people (i.e., sunstroke) and Ps. 121:6 also refers to the moon's assumed power to smite by night. Examples of sunstroke include the following: 2 K. 4:18f., which implies that sunstroke occurred out in a field, although no verb is used in describing it (cf. Jth. 8:3, where Judith's husband Manassas was "overcome" while binding sheaves in the field); and Jonah 4:8, where the sun "beat upon [hiphil of *nāḵâ*] the head of Jonah so that he was faint" and was prepared to die. But in only two instances does the RSV render the hiphil of *nāḵâ* as "smite/smote" with reference to the sun: Isa. 49:10, where it is said of the returning exiles that "neither scorching wind nor sun shall smite them;" and Ps. 121:6, where the faithful are assured that the Lord, their "keeper" and "shade," will not allow the sun to smite them by day nor the moon by night. That sunstroke is referred to here is obvious; but the ancients also thought persons could be "moonstruck," which is literally the meaning of the Greek term *selēniazoménous* in Mt. 4:24, usually translated "epileptics" (so RSV). The AV rendering "lunatic" (Mt. 4:24) comes from this notion of being "moonstruck," but the above Greek term does not imply insanity as the word lunatic has come to mean in contemporary English usage.

Hebrew *nāgap* is the next most common term translated "smite/smote" in the RSV. In the Holiness Code the consequences for Israel's disobedience included the punishment of being "smitten before your enemies" (Lev. 26:17). In four instances *nāgap* is the term used for God's being responsible for the timing of someone's death: Nabal (1 S. 25:38), Saul (26:10), Jeroboam (2 Ch. 13:20), and Joram (21:18).

In Jgs. 20:39 "surely they are smitten" translates Heb. *niggôp niggāp*, the niphal of *nāgap* with its infinitive absolute. This passage expresses the overconfident glee of the Benjaminites in the rush of their initial success in battle against the Israelites.

Elsewhere in the prophets *nāgap* appears twice in Isa. 19:22 concerning Egypt (the context of which is perhaps Egypt's defeat at the hands of Sargon II of Assyria in 711 B.C.), who will receive the same treatment as Israel's, i.e., being smitten with a healing punishment — "And the Lord will smite Egypt, smiting and healing." Zec. 14:12 depicts horrendous plague with which the Lord will smite foes — indeed, one that will cause human flesh to rot away from the living.

The RSV translates five other Hebrew verbs as "smite/smote." Heb. *nāga'* (piel), "touch, strike," is used in 2 K. 15:5 par. 2 Ch. 26:20 to describe the sudden onset of leprosy with which "the Lord smote the king," i.e., King Azariah (Uzziah) of Judah. Isa. 3:17 employs the piel of *śāpaḥ*, "make scabby," to describe a humiliation that awaits the proud women of Judah — "the Lord will smite with a scab." In Jer. 14:17 the prophet laments that "the virgin daughter of my people is smitten [Heb. niphal of *šāḇar*, "be broken"] with a great wound, with a very grievous blow." Twice in Job Heb. *māḥaṣ*, "break to pieces" is translated "smite/smote" by the RSV. In Job 5:18 Eliphaz reminds Job of the importance of accepting God's corrective or disciplinary punishment, for "he smites, but his hands heal." In Job 26:12 Job reminds Bildad that "by his understanding [God] smote Rahab." Heb. *sāpaq*, "slap, smack" occurs twice with *'al-yārēḵ*, an idiomatic expression that the RSV translates "smite on the thigh" (Jer. 31:19; Ezk. 21:12 [MT 17]; *see* GESTURE II.D).

In Zec. 11:17 the RSV extends the sense of the Hebrew noun *ḥereḇ*, "sword," in the phrase *ḥereḇ 'al-zᵉrôʿô* (lit. "a sword upon his arm"), and translates the phrase "may the sword smite his arm." In Dnl. 2:34 the RSV renders the Aramaic verb *mᵉḥā'* as "smote" in reference to the striking of a blow unaided by human hand, i.e., the falling of a stone that smashes into a stone statue. In 2:35 the RSV translates this same verb "struck" in reference to the same action of the falling stone.

II. In the NT.–In three instances out of ten in the NT the RSV translates *patássō* as "smite/smote." Acts 12:23 reports that " an angel of the Lord smote" Herod Agrippa I and that he was eaten by worms and died (cf. the similar deaths of Herod the Great [Josephus *Ant.* xvii.6.5 (168–170)] and Antiochus IV Epiphanes, the Seleucid tyrant [Gk. *patássō* in 2 Macc. 9:5; RSV, NEB, "struck"]). Rev. 11:6 states that the "two witnesses" (perhaps referring to Moses and Elijah, who were commonly expected to return in the messianic age) have, among other powers, the power to "smite the earth with every plague." Rev. 19:15 portrays the rider on the white horse, whose title is "The Word of God" (v. 13), as having a sharp sword issuing from his mouth (cf. 1:16) "with which to smite the nations," again a figure of divine retribution.

SMITH [Heb. *ḥārāš*–'graver, artificer'] (1 S. 13:19; Isa. 54:16; Zec. 1:20 [MT 2:3]; AV also CARPENTER; NEB also BLACKSMITH; [*masgēr*] (2 K. 24:14, 16; Jer. 24:1;

An iron-smelting furnace and two smiths at work. The bellows blow air on the shaft furnace from behind, and a smith forges wrought iron in the front (Greek vase painting, 6th cent. B.C.) (courtesy of the Trustees of the British Museum)

29:2); NEB mg. HAREM; [qal part. of *ṣārap*–'smelt, refine, test'] (Prov. 25:4); AV FINER; NEB SILVERSMITH. A skilled worker in metals.

The prototype of all smiths in the Bible is Tubal-cain (Gen. 4:22), known traditionally as the father of METALLURGY (*see* METAL). He is described as "the forger of all instruments" (Heb. *lōṭēš kol-ḥōrēš;* but cf. *BHS*). Thus the context of Gen. 4:22 includes the work of a smith with the arts and crafts associated with early mankind (see C. Westermann, *Genesis 1–11* [Eng. tr. 1984], pp. 332-34).

In 1 S. 13:19 Heb. *ḥāraš,* which may refer to any sort of craftsman or artisan, has often been misinterpreted as an ironsmith in order to connect the activity with the presumed Philistine iron monopoly for the two-hundred-year period before David's ascent to the throne of Israel. Isa. 54:16 uses the term to indicate workmen that made weapons. In Zec. 1:20f. (MT 2:3f.) the "smiths" are instruments of divine wrath used to punish the nations that dispersed Judah.

The meaning of Heb. *masgēr* is uncertain. Translated "smith" in 2 K. 24:14, 16 and Jer. 24:1; 29:2 (but cf. LXX), it might refer to a guild of artisans that were deported to Babylon during the reign of Jehoiachin (see the comms.).

The translation "smith" for the part. of Heb. *ṣārap* is probably correct (W. McKane, *Proverbs* [*OTL,* 1977], p. 591). Cf. the use of *ṣārap* in Jgs. 17:4; Neh. 3:8, 32; Isa. 40:19; 41:7; 46:6; Jer. 10:9, 14; etc.

SMITING BY THE SUN. *See* SMITE I.

SMOKE; SMOKING [Heb. *ʿāšan* Ex. 19:18; Dt. 29:20 [MT 19]; Ps. 74:1; 104:32; 144:5), *ʿāšēn* (Ex. 20:18), *ʿāšān* (Ex. 19:18; Ps. 37:20; 68:2; 102:3 [MT 4]; Prov. 10:26; Cant. 3:6; Isa. 4:5; 9:18 [MT 17]; 14:31; 34:10; 51:6; Joel 2:30 [MT 3:3]; Nah. 2:13 [MT 14]; etc.), *ʿālâ* ("go up in smoke," Jgs. 20:40), *qîṭôr* (Gen. 19:28; Ps. 119:83), *qeṭōreṭ* ("smoke of the sacrifice," Ps. 66:15), *ʿāṭār* (Ezk. 8:11), *maśśāʾâ* (Isa. 30:27); Gk. *kapnós* (Acts 2:19; Rev. 8:4; 9:2; etc.)]; AV also ASCEND (Jgs. 20:40), INCENSE (Ps. 66:15), THICK (Ezk. 8:11), BURDEN (Isa. 30:27); NEB also GO UP IN FLAMES (Jgs. 20:40), SAVORY OFFERING (Ps. 66:15), etc.

The Hebrew verb *ʿāšan* and its cognate noun and adjective account for most of the OT occurrences of "smoke." This root is used in four contexts. (1) Sometimes it refers to the physical phenomenon itself, the evidence that something is burning (Josh. 8:20f.; Jgs. 20:38, 40. (2) It is used as a symbol of all that is transitory (see esp. Hos. 13:3, where "smoke" is grouped with "cloud," "dew," and "mist"). (3) It is a manifestation of God's mighty presence (e.g., Ps. 104:32), and more particularly of His fierce wrath (e.g., 2 S. 22:9 par. Ps. 18:8 [MT 9]); the dangers attending the terrifying crocodile (Leviathan) are similarly symbolized in Job 41:20 (MT 12). (4) Only in one instance (Gen. 15:17) is this root clearly used in a cultic context of the smoke of incense or sacrifice. Hence it is not clear whether the smoke that fills the temple in Isa. 6:4 should be understood as clouds of incense; more likely it represents the result of earthly things being in proximity to the mighty judge of the world (cf. Ex. 20:18).

On the other hand, Heb. *qeṭōreṭ* is used only of INCENSE or, by analogy, of the smoke of sacrifice that is pleasing to God (Ps. 66:15). And *ʿāṭār,* which occurs only in Ezk. 8:11, probably means "fragrance" rather than "smoke" (cf. NEB "fragment smoke").

The contrast between the smoke of God's wrath and the smoke of incense is forcefully present in the imagery of Isa. 65:5, where the very offerings intended to please God provoke His wrath instead (hence the use of *ʿāšān* rather than *qeṭōreṭ; see also* NOSE, NOSTRILS). On the other hand, the verb *ʿālâ* is related to *ʿōlâ,* "whole burnt offering"; this suggests that in Jgs. 20:40 the destruction of Gibeah is an offering pleasing to the God who had commanded the city's annihilation. A similar interpretation of Gen. 19:28 is possible; but *qîṭôr,* although it is related to *qeṭoreṭ,* simply denotes natural smoke in Ps. 119:83 (cf. Ps. 148:8, where the RSV translates it "frost").

The translation of the phrase *kōḇeḏ maśśāʾâ* in Isa. 30:27 is difficult. The AV ("the burden is heavy") is a literal rendering of the Hebrew, but it is hardly clear. The NEB ("his doom is heavy") is unambiguous but goes beyond the text. The RSV ("in thick rising smoke") has a conjectural reading based on the context.

All the RSV NT uses of "smoke" represent Gk. *kapnós.* In Acts 2:19, a quotation from Joel 2:30 (MT 3:3), smoke is one of the signs that accompany the Day of the Lord. In Revelation the uses of *kapnós* cover most of the meanings of the Hebrew words discussed above, e.g., smoke from the physical burning of "Babylon" (Rev. 18:9, 18), preternatural wrath (chs. 9 and 14), and incense (8:4; 15:8). 19:3 contains a strong image that is similar to that in Jgs. 20:40. Although there is no mention of sacrifice, the smoke from the fire of Babylon's destruction "goes up forever and ever" to the jubilant cries of the saints, suggesting the image of a whole burnt offering that is pleasing to the Lord.

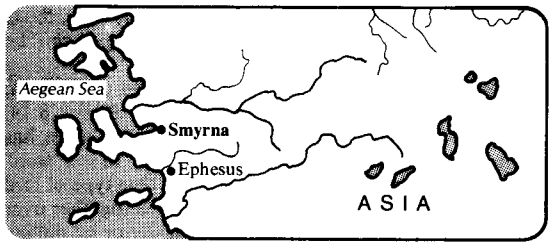
SMYRNA smer'nə [Gk. *Smyrna*–etymology unknown] (Rev. 1:11; 2:8). A port city of ½ million people on the southern tip of one of the most sheltered inlets of the South Aegean; modern İzmir in Turkey. Excavations by Ankara University have shown that the primitive site was 13 km. (8 mi.) NE across the Kemer River, at an opposite edge of the bay, now Bayrakli-Tepekule. Pottery finds indicate that the settlement was founded before 2000 B.C. and was Hittite (or a branch called "Lelages" by Greek historians) until the immigration of Hellenic sea-peoples connected with the fall of Troy (*ca.* 1100).



The Greek islanders infiltrated commercially, first Aeolians from Lesbos and then Ionians from Colophon, as at Phocaea farther N on the bay (E. Langlotz, *Kulturelle und künstlerische Hellenisierung der Küsten des Mittelmeers durch die Stadt Phokaia* [1966]). Smyrna was one of the cities claiming to be Homer's birthplace, and eventually it had a school named for him (Strabo *Geog.* xiv.1.37). After 900 B.C. the Ionians predominated in Smyrna, and in 688 they incorporated it into an Ionian confederacy. But the Lydian Alyattes II invaded Smyrna *ca.* 600 (J. M. Cook, *Annual of the British School at Athens*, 80 [1985], 25-28) and completely destroyed it.

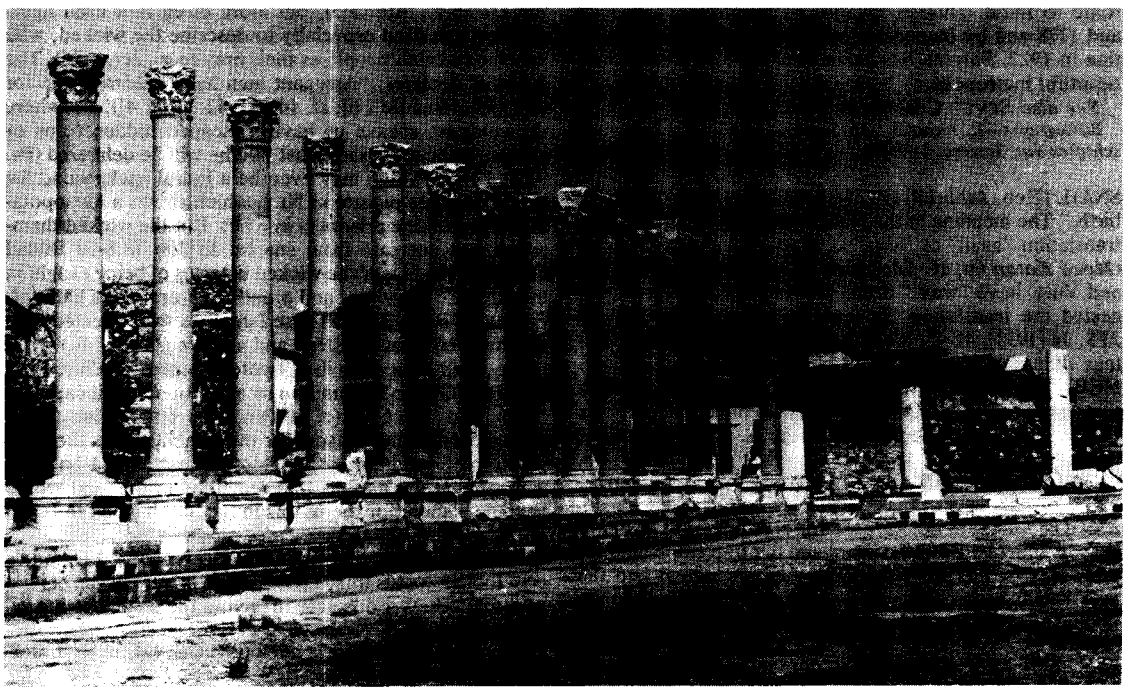
The survivors regrouped in villages and their numbers gradually increased again. In 300 B.C., with the help of Alexander's officer Lysimachus, the urban center was moved SW to the slopes of Mt. Pagus, on whose 200-m. (650 ft.) crest a citadel (now Kadifekale) was built. Some have suggested that the salutation of Christ, "who died and came to life" (Rev. 2:8) and the reference to the "second death" (from persecution), which will not harm "him who conquers" (v. 11), contain allusions to the destruction by Alyattes and unexpected rebirth of the city.

By Paul's time Smyrna had become the highway terminus and commercial metropolis of an immensely fertile hinterland. (See S. Johnson, *JBL*, 77 [1958], 1-17, citing two works on *Strade romane* from 1938 fascist Rome by D. Levi and S. Talip.) Smyrna began to outshine even in culture the great Roman centers Ephesus and Pergamum 65 km. (40 mi.) S and N of it. Already in 193 B.C. a temple was erected at Smyrna to "the deity Rome" (see Pauly-Wissowa, III/1, 730; *RRAM*). The temples of Zeus and Cybele were linked by a mall said to surpass all others of the ancient world. The agora prominent today in midtown İzmir was largely rebuilt under Marcus Aurelius (A.D. 161-180) after an earthquake (R. Naumann, *İstanbuler Forschungen*, 17 [1950], 69-114).

Julius Caesar's co-murderer Trebonius took refuge in Smyrna, and Rome sacked the city to capture him. But in A.D. 23, in consideration of Smyrna's long record of loyalty, it was the one chosen from the eleven cities contending for the privilege of building a temple to the emperor Augustus and his mother (Tacitus *Ann.* iv.56; C. Cadoux, *Ancient Smyrna* [1938]).

It is not clear why the Jews of Smyrna, more than those

The Corinthian columns of the agora at Smyrna. Originally destroyed by an earthquake, the agora was largely rebuilt by the Romans in the 2nd cent. A.D. (B. K. Condit)



of neighboring towns, felt antagonism toward the Christians. Smyrna and Philadelphia alone among the SEVEN CHURCHES are praised without reserve (Rev. 2:8-11; 3:7-13), and both of them for their passive resistance to the Jews who are called "satanic." *See* SATAN, SYNAGOGUE OF.

Bishop Ignatius of Antioch, on his journey to Rome for martyrdom (*ca.* A.D. 120), was halted at Smyrna. There he wrote four of his letters, which uniquely attest the earlier Christian practices and express his own yearning to be "milled by teeth of lions into the bread of Christ" (Ign. Rom. 4:1). When he stopped again at Troas, he wrote the remaining three of his letters, including one to the Smyrna community and another to its bishop Polycarp. His letters help to make clear the hierarchical organization of the local church, with bodies of presbyters and of deacons helping the bishop. Indeed, the "docetist" members are reproved for neglecting the bishop as well as the poor and the eucharist.

Polycarp, who also wrote an epistle (to the Philippians), was an old man when in 156 he was burned at the stake, "with his shoes on," according to his recorded request. The Martyrdom of Polycarp further records that Jews brought wood for his pyre even though it was a sabbath. This letter, addressed from Smyrna to "Philomelion and all the other churches in the world" is one of the most valued of the early Christian writings. On all these letters, see H. Leclercq, *Dictionnaire d'Archéologie Chrétienne et de Liturgie*, XV/2, 1519.

According to a common view, Irenaeus (d. 202) came from Smyrna to be bishop of Lyons in Gaul. After Constantine's installation at Byzantium in 330, Smyrna eclipsed Ephesus. The Seljuk Turks were able to overthrow the Byzantines there briefly in 1084 and 1320, and definitively in 1415 after Timur's sack of the city in 1402. Genoan domination during the Crusades left in Smyrna a rather persistent Latin bishopric served mostly by Franciscans.

Smyrna's sea trade was spoiled by the discovery of a route to India. Though ravaged by earthquakes in 1688 and 1778 and by incendiary strife against Greek occupation in 1922, Smyrna has again become a flourishing and beautiful metropolis.

SNAIL [Heb. *šabbᵉlûl*] (Ps. 58:8 [MT 9]); NEB "abortive birth." The meaning of the Hebrew term is uncertain. The translation "snail" or "slug" is supported by the Talmud (*Moed Katan* 6b; cf. *Shabbath* 77b), but the LXX, Syr., and Vulg. have "wax." Some modern scholars have suggested the translation "miscarriage" (see G. R. Driver, *JTS*, 34 [1933], 41-43; KoB, p. 942), which has the advantage of paralleling "untimely birth" in the next line (cf. NEB). The psalmist would then be expressing the wish that his enemies' names and influence might disappear as if they had never been born (see A. A. Anderson, *Book of Psalms*, I [*NCBC*, 1972], 433).

On Lev. 11:30, AV, *see* LIZARD. N. J. O.

SNARE; TRAP. A device used for catching birds and other wild animals. Both the snare and the trap catch animals unawares — the snare usually by entanglement and the trap usually by springing shut suddenly. The RSV uses the noun "snare" about fifty times and "trap" twelve times.

Most often these terms represent either Heb. *môqēš* (Ex. 10:7; Jgs. 2:3; 1 S. 18:21; Job 40:24; Ps. 69:22 [MT 23; RSV "trap"]; etc.) or *paḥ* (Job 22:10; Ps. 69:22 [RSV "snare"]; 91:3; 142:3 [MT 4]; Isa. 24:17f.; Jer. 48:43f.; etc.). Other less common terms for "snare" or "trap" include Heb. *mᵉṣûḏâ* ("hunting net," Ez. 12:13; 17:20), *māṣôḏ* ("hunting net," Eccl. 7:26; in Ob. 7 MT *māzôr* is usually emended to *māṣôḏ*), *malkôḏeṯ* ("catching instrument," Job 18:10), *mašḥîṯ* ("destruction," Jer. 5:26), *ṣammîm* ("snare" [?], Job 18:9); Gk. *pagís* ("snare," "trap"; Rom. 11:9; 1 Tim. 3:7; 6:9; 2 Tim. 2:26) and *théra* ("hunting of wild beasts," Rom. 11:9). Verbs for setting snares or traps include Heb. *qôš* (Isa. 29:21), *nāqaš* (Ps. 9:16 [MT 17; some emend it to niphal of *yāqōš*]; piel, Ps. 38:12 [MT 13]; hithpael, 1 S. 28:9), *yāqōš* (Ps. 124:7; Jer. 50:24; niphal, Prov. 6:2; Isa. 8:15; 28:13; pual or qal pass., Eccl. 9:12), niphal of *lāḵaḏ* ("be captured," Ps. 59:12 [MT 13]), and hiphil (emended to hophal) of *pāḥaḥ* ("be captured," Isa. 42:22).

Môqēš and *paḥ* are often used in parallel (e.g., Josh. 23:13; Ps. 69:22 [MT 23]; 140:5 [MT 6]; 141:9; Isa. 8:14) and seem to be synonymous, although G. R. Driver has argued that *môqēš* is technically the "striker" of the "trap" (*paḥ*). Both terms are used of a bird trap. One type of bird trap consisted of a pair of nets that snapped together over the bird when triggered either automatically or by pulling a rope. The "clap-net" was popular among the Egyptians and possibly also among the Hebrews. Another bird snare consisted of a pliable small branch stuck in the ground with a cord tied to the end. The branch was set to spring at a light touch, and the cord would catch the legs or body of the unsuspecting bird. Another kind of trap was a net or noose that was laid along a path frequented by animals or birds; it was either dropped from above or tightened around the animal's feet (cf. Job 18:9). A more complex trap was built on the principle of a jaw, with one bar firm and the other movable; the upper part fell on the victim when it shook the bait, thus pinning it to the lower bar. In addition there was the pitfall, a pit concealed by a loosely woven mesh of some kind (e.g., Job 18:8-10; Jer. 48:43f.). *See also* HUNTING.

The trap or snare is sometimes referred to literally in the OT (e.g., Am. 3:5), but more often it is used figuratively. It is used especially to describe the wicked, who scheme to catch people as their prey (e.g., Jer. 5:26). The psalmist declares, "Arrogant men have hidden a trap for me" (Ps. 140:5 [MT 6]; cf. 141:9; 142:3 [MT 4]); elsewhere the psalmist speaks of having escaped hidden traps or snares, or he expresses trust that he will be delivered (Ps. 91:3; 124:7). There may even be a literal background for this image; *see* picture in NET, which shows a Mesopotamian king taking prisoners in a net. But the wicked themselves are not safe from snares. In Job 18:8-10 Bildad describes the fate of the wicked in terms of being caught in traps, snares, nooses, and pitfalls that are in his path (cf. Ps. 69:22; Rom. 11:9). Those Israelites who rejected God experienced Him as a trap and a snare (Isa. 8:14f.).

Sin itself is a trap in a twofold sense: it allures the people of God to succumb to its attraction, and it captures those who succumb (cf. 1 Tim. 3:7; 6:9; 2 Tim. 2:26). An especially alluring trap for the Israelites was the false worship of neighboring peoples. In Josh. 23:13 Israel is warned that the nations that remained in the land would become a snare for them; this in fact did happen to Israel (cf. Ps. 106:36).

Proverbs warns that one can also be snared by one's own foolish words (6:2; 12:13; 18:7; 20:25); but the person who fears the Lord is able to "avoid the snares of death" (13:14; 14:27).

A vertical net used to trap quail. One man stands at each corner of the net while two other men catch birds that have been driven inside. Tomb painting from Thebes, 1570-1345 B.C. (Staatliche Museen zu Berlin, DDR, Ägyptisches Museum 18540)

SNEEZE [Heb. poel of *zārar*] (2 K. 4:35); NEB BREATHE; [*ʿāṯîšâ*] (Job 41:18 [MT 10]); AV NEESING. In 2 K. 4:35 the boy's sneezing seems to be a sign of life; some scholars have suggested that it also signifies the expulsion of demons (see J. Montgomery and H. Gehman, comm. on Kings [*ICC*, 1951], p. 372). The LXX omits the verb and has the prophet stretching himself seven times over the boy; the NEB translates the verb (as "breathe") but takes Elisha, not the boy, as the subject.

If, as many scholars have argued, Leviathan in Job 41 is a crocodile, its "sneezings" (v. 18 [MT 10]) are the spray issuing from the animal's nostrils and flashing in the sunlight. But if Leviathan is the dragon Lotan of Ugaritic mythology, as M. Pope has contended, then the "sneezings" are exhalations of flame (*Job AB*, [3rd ed. 1973], p. 340). G. WYPER

SNOW [Heb. *šeleg* (Ex. 4:6; Ps. 51:7 [MT 9]; Prov. 26:1; etc.), hiphil of *šālag* (Ps. 68:14 [MT 15]); Aram. *ṯelag* (Dnl. 7:9); Gk. *chiōn* (Mt. 28:3; Rev. 1:14)]; AV also SNOWY, etc; NEB also SOAP, SNOWFLAKE (Ps. 68:14), etc.

Snow is infrequent throughout most of Palestine, occurring about once every five years in Jerusalem (usually in the latter part of the rainy season) though more commonly in upper Galilee. Snow on the coastal plain is exceedingly rare but not entirely unknown, and has been recorded only once in Jericho (Feb., 1950). On the Transjordanian plateau it is more frequent and falls almost every year on the highlands of Gilead and the uplifted plateau edge of Edom. The mountain of Bashan (Jebel Druze) is snow covered during most of the winter. Further north the towering mountains of Lebanon and the anti-Lebanon Range have heavy snow, especially on the western slopes, lasting on the ground from December through June (cf. Jer. 18:14). On Mt. Hermon patches of snow may remain in the sheltered crevices through the summer.

Snow as an actual event is recorded once in the OT, when Benaiah killed a lion in a pit in a time of snow (2 S. 23:20 par. 1 Ch. 11:22), and once in the apocrypha, when a very heavy snowfall prevented Trypho from bringing his army into Judea (1 Macc. 13:22). Severe snowfalls meant considerable hardship for most Israelite households; the wise wife and mother took precautions in advance (Prov. 31:21).

Most biblical mentions of snow are symbolic. Leprosy is described as making the sufferer "as white as snow" (Ex. 4:6; Nu. 12:10; 2 K. 5:27). But it is also a symbol of purity (Ps. 51:7 [MT 9]; Isa. 1:18; Lam. 4:7) and of the divine glory (Dnl. 7:9; Mt. 28:3; Rev. 1:14). As with all other climatic phenomena, snow was understood to be sent from God, and therefore beyond human comprehension (Job 37:6; 38:22; Ps. 147:16; 148:8). Job, which mentions snow more than any other biblical book, speaks of "snow water," apparently meaning melting snow, as symbolizing disappearance from life (24:19). The Hebrew for "with snow" (*Q*; cf. *K*) in Job 9:30 is problematic, since Heb. *šeleg* may also mean "soap" (so NEB), which is favored by the parallel "lye" (see the comms.).

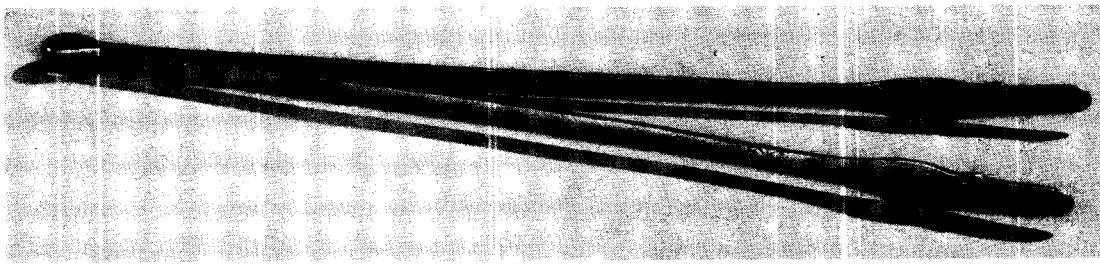
SNOW WATER (Job 9:30, AV). *See* SNOW.



Bronze snuffers from Tell el-Amarna, Egypt (*ca.* 1350 B.C.); the tongs are designed like human hands (courtesy of the Trustees of the British Museum)

SNUFFERS [Heb. *malqāḥayim*] (Ex. 25:38; 37:23; Nu. 4:9); AV, NEB also TONGS; *mᵉzammᵉrôṯ* (1 K. 7:50; 2 K. 12:13 [MT 14]; 25:14; 2 Ch. 4:22; Jer. 52:18). Utensils linked with the lampstands in accounts of the tabernacle and temple. The precise function of these tools is a matter of conjecture. Particularly problematic is the occurrence of both Hebrew terms in the list of implements found in 1 K. 7:49f. par. 2 Ch. 4:21f. (here the RSV renders *melqāḥayim* "tongs"), which suggests that they need to be distinguished. Some have proposed that the root from which *mᵉzammᵉrôṯ* is derived (*zmr*) favors the rendering "snuffers" — i.e., a kind of scissors for trimming the wicks of the lamps — for this term; this may then be distinguished from *malqāḥayim*, whose root (*lqḥ*) suggests "tongs" or even "tweezers," which would have been used for removing burned up wicks and replacing them with new ones. An alternative suggestion takes both terms to mean "snuffers" and explains the mention of both terms in the same passage as a result of its literary history (*melqāḥayim* perhaps having been added through the influence of the tabernacle account). *See also* LAMPSTAND; TONGS.

S. WESTERHOLM

SO [Heb. *sô'*]. The Egyptian king whom Hoshea (732-722 B.C.), the last king of Israel, was counting on for support when he revolted against Shalmaneser V (727-722 B.C.), the Assyrian emperor. When the new tribute imposed by Shalmaneser proved to be oppressive for Hoshea he approached Egypt for help (2 K. 17:4). As a result Shalmaneser laid siege against Samaria that lasted three years (17:5), ending with destruction of the city and deportation of many people (27,290 according to Sargon II's annals; cf. *ANET*, p. 284).

The name So, at least its present form, is not attested in Egyptian records of the late 8th cent. B.C. One interpretation, which enjoyed a degree of popularity, was to identify So with *Sib'e* of Sargon's annals (*IDB*, IV, 395). But Borger's observation that *Sib'e* should be read *Re'e* (*JNES*, 19 [1960], 49ff.) makes this unlikely. H. Goedicke (*BASOR*, 171 [Oct. 1963], 64-66 suggested that So was the name of the capital, Sais (Egyp. *S3W*). Albright, in an addendum to Goedicke's article (p. 66) supporting this view, emended the text to read "he had sent messengers to So (to) the king of Egypt," the second "to" (*'el*) being omitted by haplography. Goedicke believed the king was Tefnakht (727-720 B.C.), the 24th Dynasty king who controlled the western Delta from Sais (*S3W*). R. Sayed (*VT*, 17 [1967], 116-118) thought that So may be shortened from the Tefnakht's Horus name *Si3-ib*, supporting this by the reading *Sib'*e in Assyrian texts, now recognized to be erroneous.

Kitchen (§§ 332-36) criticized a connection with Tefnakht because Sais was located in the western Delta at the same time that another dynast was located in Tanis (biblical Zoan) in the eastern Delta. It seems inconceivable that Hoshea's emissaries traveled 120 km. (75 mi.) further to Sais when the Tanite kings since the days of Ahab had enjoyed warm relations with Israel (§ 284). Kitchen suggested that So is an abbreviation for O(so)rkon IV, the Tanite king (730-715 B.C.). Support for this view is found in Isa. 19:11-15, which is directed at Tanis.

D. B. Redford (pp. 75f.), following Goedicke's suggestion that Sais was in the mind of the biblical writer, pointed to Manetho's writing of king "Nechepso," "Necho the Saite" (Egyp. *nk3w p3 s3w*). He suggested that the name *pso* in Aramaic texts from Egypt is derived from the Egyp. *p3 s3w(w)* and may be behind the biblical king So. This, however, leaves the geo-political questions raised by Kitchen unanswered. Whether So is O(so)rkon or Tefnakht, the Egyptian king was not in a position to assist Hoshea, and there is no evidence to suggest that he did.

Bibliography.—K. A. Kitchen, *Third Intermediate Period in Egypt (1100-650 B.C.)* (1973); D. B. Redford, *Journal of the Society for the Study of Egyptian Antiquities*, (1981) 75f.

J. K. HOFFMEIER

SOAP [Heb. *bōrîṯ*] (Jer. 2:22; Mal. 3:2); AV SOPE. Soap today is far more refined than the crude product known in Palestine during the biblical period. An essential ingredient for the manufacture of soap is alkali, which is combined with certain oils to produce the cleansing agent. For both OT occurrences of *bōrîṯ* LXX B reads Gk. *poía*, "grass"; the Vulgate of Jer. 2:22 transliterates and glosses, giving *herba borith*, "borith grass," while in Mal. 3:2 only *herba* occurs. This later rendering suggests that *bōrîṯ* was burnt herbiage, or vegetable alkali (see *MPB*, pp. 215f.), which acts as a detergent in combination with the oils of the skin. The Arabs call this substance *'al-qily*, whence Eng. "alkali."

R. J. WAY

SOBER [(verb) Gk. *nḗphō*–'be self-controlled'] (1 Thess. 5:6, 8; 1 Pet. 1:13; 4:7; 5:8, "be/keep sober"); NEB also KEEP SOBER; "be perfectly self-controlled" (1 Pet. 1:3); "lead (a) sober life" (4:7); AWAKE (5:8); [*sōphronéō*–'be of sound mind'] (Rom. 12:3, "sober judgment"); AV SOBERLY; NEB SOBER ESTIMATE; (noun) Gk. *sōphrosýnē*–'reasonableness, rationality, mental soundness'] (Acts 26:25); AV SOBERNESS; [(adv.) Gk. *sōphrónōs*–'soberly, moderately'] (Tit. 2:12); AV SOBERLY; NEB TEMPERANCE; **TEMPERATE** [Gk. *nēphálios*–'clear-headed, self-controlled'] (1 Tim. 3:2, 11; Tit. 2:2); AV also VIGILANT (1 Tim. 3:2); SOBER; NEB SOBER.

Originally in classical Greek the *nḗphō* word-group referred to one who was completely unaffected by wine, i.e., one who avoided intoxication, but the word-group later indicated a sober manner of living demonstrated by self-control. In the NT this word-group is also used

to express self-control, i.e., the antithesis of all mental fuzziness (1 Thess. 5:6, 8; cf. 2 Tim. 4:5). The verb Gk. *nḗphō* especially refers to watchfulness in regard to one's responsibility to God and to self-control (1 Pet. 1:13; 4:7; 5:8). In the Hellenistic world the word-group (e.g., *nēphálios*) described a virtue expected of public servants; it was also expected of those in church leadership (1 Tim. 3:2, 11; Tit. 2:2). In the NT this word-group focuses not on the sobriety achieved by not drinking wine, but rather it refers figuratively to the clarity of mind and self-control for Christian service (*see* MIND).

The *sōphronéō* word-group in the NT basically relates to calmness of mind, saneness, rationality, sober judgment. In the Hellenistic world this word-group also referred to proper conduct rooted in modesty (cf. 1 Tim. 2:9) which was quite early viewed as a primary virtue in Stoic and Philonic philosophy.

The verb *sōphronéō* (*lit.* "be of sound mind," "make sober judgment"; cf. Mk. 5:15; Lk. 8:35; 2 Cor. 5:13; Rom. 12:3; Tit. 2:6) is translated "sane" (RSV) in 1 Pet. 4:7 where the exercise of both *sōphronéō* and *nḗphṓ* (RSV "sober") results in mutual love, surrender to God, and prayer. *Sōphronízō* basically means to bring one to reason. In Tit. 2:4 the verb is used in calling upon the older women to "train" (in self-control) the younger women to love their husbands. The cognate *sōphronismós* refers to "calmness of mind" or "self-control" (2 Tim. 1:7). *Sōphrōn* (1 Tim. 3:2; Tit. 1:8; 2:2, 5) conveys the notion of soundness of mind, but also modesty, chasteness, and temperateness. *Sōphrosýnē* indicates restraint (Acts 26:25) and/or modesty (1 Tim. 2:9, 15).

The Pauline use of these words parallels the classical meaning of observing "the proper measure" in regard to one's activities, especially in relation to one's fellow Christian (cf. 2 Cor. 5:13-14). The use of *sōphronéō* words in the Pastoral Epistles reflects ancient popular Hellenistic philosophy which saw in their practice a way in which one could put the world into proper perspective and overcome it (see esp. Tit. 2:12).

Bibliography.–*TDNT*, IV, *s.v.* νήφω (Bauernfeind); VII, *s.v.* σώφρων κτλ. (Luck). L. M. MCDONALD

SOCHO, SOCHOH. *See* SOCOH, SOCO.

SOCKET [Heb. *'eḏen*] (Ex. 38:12); [*pōṯ*] (1 K. 7:50); AV HINGES; NEB PANEL; [*qāneh*] (Job 31:22); AV BONE; [*ḥôr*] (Zec. 14:12); AV HOLE; [*peṯaḥ*] (2 Ch. 4:22); AV DOOR; NEB ENTRANCE. A small opening or recess into which anything is fitted.

Although the RSV translates *'eḏen* "base" 51 times, it uses the AV "socket" once, probably mistakenly since the neighboring passages with almost identical wording (vv. 10f., 14f., 17) consistently use "base." It is the base or socket for the tabernacle frame in these occurrences. Used only twice in the OT, *pōṯ* is associated with furnishings in Solomon's temple. It may mean "front." *Qāneh*, usually meaning "reed," in one instance seems to indicate the arm socket, while *ḥôr*, elsewhere "hole," is the eye hole or socket. The RSV has emended MT *peṯaḥ* to *pōṯ* in 2 Ch. 4:22 (following 1 K. 7:50) and so translates "socket."

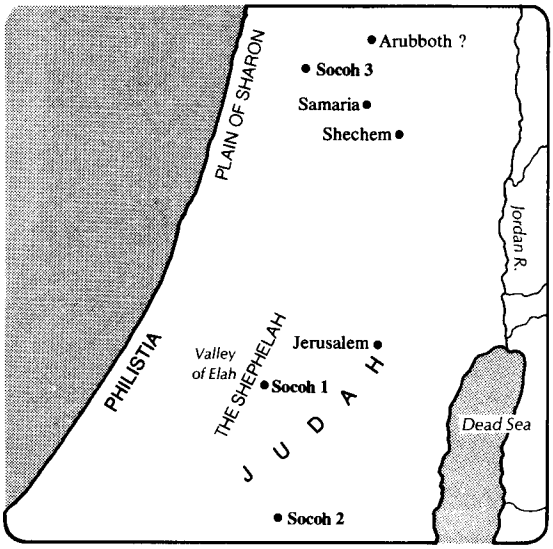
Many ancient doors swung on pivots in hollowed-out stone sockets placed within the thresholds.

L. G. HERR

SOCOH; SOCO sō'kō [Heb. *śôḵōh, śôḵô* (Chronicles only)–'thornbush'; Gk. *Sōchō* and var.]; AV also SOCHO, SHOCO, SHOCHO, SHOCHOH, SOCHOH. The name of three towns in ancient Palestine. The construction with final *ô* is subject to various interpretations (cf. W. Borée, *Die alten Ortsnamen Palästinas* [1930], p. 66).

1. In the Shephelah. The OT town was located on Khirbet 'Abbâd, a lofty Iron Age mound on the south edge of the Valley of Elah; the ruin shares a prominent ridge with a Roman-Byzantine site, Khirbet esh-Shuweikeh.

The dual nature of the site is reflected in Jerome's comment (Eusebius *Onom.* 156.18-20; 157.18-20) that there were two settlements, one on the mountain and the other on the plain. But the Madeba Map represents only one town.



Socoh guarded the junction of the Wâdī eṣ-Ṣûr with the Wâdī el-Jindī, which formed the Wâdī Sanṭ (the Valley of Elah); thus the town could control two major approach routes to the hill country (one to Hebron and the other to Bethlehem). Within Judah's settlement this Socoh was assigned to the northernmost district in the Shephelah (Josh. 15:35). The Philistines arrayed their forces beside Socoh for a confrontation with Israel under Saul (1 S. 17:1). Rehoboam fortified the town as a link between his western and central lines of defense (2 Ch. 11:7).

During the reign of Ahaz the Philistines again penetrated the Shephelah and occupied Socoh and its villages (2 Ch. 28:18). A private seal impression with the inscription "(belonging to) Hoshea (son of) Zaphan" was recently discovered there. Surface remains of very heavy structures and fortifications as well as many industrial installations (oil and wine presses, etc.) were recorded in a partial survey of Khirbet 'Abbâd conducted by M. Kokhavy under the auspices of the American Institute of Holy Land Studies (1965).

Bibliography.–W. F. Albright, *BASOR*, 15 (Oct. 1924), 9; 18 (Apr. 1925), 10f.; G. Beyer, *ZDPV*, 54 (1931), 115; II, 21; *SWP*, III, 125.

2. In the hill country of Judah, in the southernmost district. This town is mentioned only once (Josh. 15:48). It is one of the four cities represented on the royal seal impressions (inscribed *lmlk*, "for the king," and bearing a special symbol) used on storage jars in the 8th cent. B.C. The archeological survey of 1967 (led by M. Kokhavy) confirmed its identification with Khirbet Shuweikeh. Perhaps what appears as a personal name in 1 Ch. 4:18 should be considered as the origin of this name.

Bibliography.–E. Robinson, *Biblical Researches in Palestine* (2nd ed. 1856), I, 494; *SWP*, III, 410; A. F. Rainey, *BASOR*, 245 (1982), 57-62.

A jar handle inscribed with a seal impression that reads "(belonging) to the king" and "Socoh" (7th cent. B.C.) (Israel Museum, photo D. Harris)

3. On the Sharon plain. King Solomon's third administrative district embraced "the land of Hepher," and its commissioner was stationed at Arubboth; the Socoh included here (1 K. 4:10) must be distinguished from the two towns in Judah (1 and 2 above), since its district is clearly associated with the north. Even though the exact locations of Arubboth and the land of Hepher are disputed, the relationship of Hepher with the genealogy of Manasseh (Nu. 26:32; 27:1; Josh. 17:2) assures its propinquity to the zone N of Samaria. In fact, this Socoh can be confidently identified with Khirbet Shuweiket er-Râs at the foot of the western slopes of Mt. Ephraim.

The towr appears three times in Egyptian records, and the contexts confirm its location vis-à-vis the other towns along the great international trunk route along the eastern edge of the Sharon plain. In the topographical list of Thutmose III, Socoh (*śu₄-kú*; no. 67) appears after Aphek and before Yaham (Yaḥm). Amenhotep II in his campaign against recalcitrant peoples mentioned it (*śù-kú*), again in association with Yaham and other places in the Sharon. Socoh was strategically located not only on the N-S highway but also near the mouth of the Naḥal Shekhem, the main entryway to Samaria and Shechem from the west.

According to the Samaritan Chronicle, Socoh was the home of a Samaritan high priest; a Samaritan community apparently existed there until the 4th cent. A.D. During the Crusader period the town was known as *casal Socque*.

A. F. RAINEY

SOD; SODDEN. *See* SEETHE.

SODA (Jer. 2:22, NEB). *See* LYE.

SODERING. *See* SOLDERING.

SODI sō'dī [Heb. *sôḏî*]. Father of Gaddiel, the spy who represented the tribe of Zebulun (Nu. 13:10).

SODOM sod'əm [Heb. *sᵉḏōm*; Gk. *Sodoma*]. The most notorious of the five CITIES OF THE VALLEY. It was located along the southeastern border of Canaan (Gen. 10:19). Abraham's nephew Lot settled at this place, in or near the well-watered Jordan Valley (13:10-12; 14:12; 19:1). Although its exact location is unknown, it was probably somewhere along the south-eastern end of the Dead Sea near the VALLEY OF SIDDIM. Its king Bera was involved with his four fellow-kings in an ill-fated war against an eastern coalition of four Mesopotamian kings (14:1-12).

Sodom's notoriety derives from its wickedness and the attendant destruction that it suffered. Sodom's sins were manifold. Along with the other cities it displayed arrogant pride and haughtiness, and lived in prosperous luxury while ignoring the poor and needy (Ezk. 16:46-50). The men of Sodom violated the code of hospitality (Gen. 19:1-11), and they did "abominable things" (Ezk. 16:50). Sodom's most notorious sin was its engaging in homosexual acts (Gen. 19:5-8). Jude 7 affirms that Sodom "acted immorally and indulged in unnatural lust." Several passages in Genesis speak of Sodom's wickedness and unrighteousness in general terms (13:13; 18:20-33), and later Sodom became a point of comparison for wickedness in Israel (Dt. 32:32; Isa. 1:10; 3:9; Jer. 23:14). Rev. 11:8 likewise uses Sodom as an allegorical sign of great evil.

A miniature illumination from a Hebrew Bible (northern France, A.D. 1277-1278) showing the destruction of Sodom and Gomorrah. Each section depicts an angel casting fire and brimstone on a city; the Hebrew reads, "This is Sodom after the angels had destroyed it" (The British Library, Add. 11639)

The destruction of Sodom and the other cities (Gen. 19:24-28) was so spectacular and complete that it was frequently mentioned as a sign of God's wrath and judgment, and God often threatened Israel or other nations with a similar destruction (Dt. 29:23 [MT 22]; Isa. 1:9 [quoted in Rom. 9:29]; 13:19; Jer. 49:18; 50:40; Lam. 4:6; Am. 4:11; Zeph. 2:9; 2 Pet. 2:6). Jesus used Sodom's example to castigate any town that rejected His disciples (Mt. 10:15 par. Lk. 10:12). Jesus also proclaimed to unrepentant Capernaum that even Sodom would have repented had it seen mighty deeds like those done in Capernaum (Mt. 11:23f.). He also compared the day of the Son of Man's unveiling to the day of Sodom's destruction (Lk. 17:28-30).

D. M. HOWARD, JR.

SODOM, SEA OF [Lat. *mare Sodomiticum*] (2 Esd. 5:7); AV SODOMITISH SEA; NEB DEAD SEA. Another name for the Dead Sea cited in the Ezra Apocalypse and also employed by the Talmud. This term probably specifies the southern portion of the sea near the city called Sodom (cf. Josephus *Ant.* v.1.22 [81], Gk. *Sodomitidos límnēs*, "lake of Sodom").

SODOM, VINE OF [Heb. *gepen sᵉḏōm*] (Dt. 32:32). The identity of this plant has been disputed, and some writers have even regarded the expression as metaphorical. But an actual plant seems implied, most probably the colocynth, *Citrullus colocynthis* (L.) Schrad., which flourishes near the Dead Sea; it has long tendrils and bears a globular fruit containing at maturity merely a dusty powder mixed with the seeds. The Palestinian nightshade (*Solanum sodomeum* L.) is an improbable alternative. R. K. H.

SODOMITE sod'ə-mīt [Gk. *arsenokoítēs*–lit. 'one who sleeps with a male'] (1 Tim. 1:10); AV "them that defile themselves with mankind"; NEB PERVERT. A male homosexual. The same Greek word appears in 1 Cor. 6:9, where it is combined with *malakós* ("soft, effeminate") and translated in the RSV (2nd ed. 1971) by "sexual pervert" (NEB "homosexual perversion"). The term "sodomite" comes from the story of SODOM in Gen. 19:1-11.

SODOMY. *See* CRIMES; SODOM.

SOJOURNER; ALIEN; STRANGER. Neither the AV nor the RSV displays consistency in rendering the biblical terms for "outsiders." At times different Hebrew and Greek terms are translated by the same English equivalent; at other times the same expressions in the original are rendered by different English translations. Since the context has not always determined the translation, this study will be based on the words used in the original.

I. OT
A. *Gēr*
B. *Tôšaḇ*
C. *Nokrî / ben nēkār*
D. *Zār*
E. Conclusions
II. NT

I. OT.–Apart from specific terms like "enemy" (*'ōyēḇ*), "servant" (*'eḇeḏ*), "hireling" (*śāḵîr*), four general Hebrew expressions designated outsiders.

A. Gēr (AV, RSV, "sojourner," "stranger"; LXX usually *prosélytos* or *paroíkos*).

1. Definition. In the narrowest sense a *gēr* was a person attached to the household, but not a member of the actual family (cf. 1 K. 17:20). Frequently he was an employee of the household. In Job 19:15 *gēr* (RSV "guest"; NEB "retainer") is juxtaposed with "my maids." The sabbatical rest in the Decalogue extends to the manservant, maidservant, and sojourner (Heb. *gēr*; Ex. 20:10; 23:12; Dt. 5:14; 16:11, 14). Elsewhere the term is associated with "hired servant" (Lev. 25:6; Dt. 24:14; Mal. 3:5), which was perhaps Jacob's status (Gen. 32:4). In Ex. 3:22 the term is paired with "neighbor" (*šāḵēn*), and seems to apply to non-Israelite adherents.

The *gēr* was also a non-native resident of a town or region, whose full acceptance as citizen was resisted (cf. Gen. 19:9). He may not have even been sympathetic to the local populace (Jgs. 19:16-30). In Dt. 18:6ff. the Levites were to "sojourn" (RSV "live") throughout Israel in localities chosen by the Lord, but this injunction was not always obeyed (Jgs. 17:7-9; cf. 19:1). During the monarchy individuals adopted a transient life-style for a variety of reasons (cf. 2 S. 4:3; 2 Ch. 15:9; Jer. 35:6-10), and this image of mobility was even applied to God's presence (Jer. 14:8).

As sojourners in foreign lands the patriarchs represented the *gēr* par excellence (1 Ch. 16:19; Ps. 105:12). Canaan was called a land of sojournings (Heb. *'ereṣ māgûr*, Gen. 17:8; 28:4; 36:7; 37:1; Ex. 6:4). As sojourners they settled down (*yāšaḇ*) only with the permission of the local rulers (Gen. 20:1; cf. v. 15), and had few if any rights (cf. Gen. 21:23f.; 23:1-10). Although Jacob was dwelling (*yāšaḇ*) in Canaan, where his father had sojourned, he felt free to move his entire household to Egypt when famine struck the land (Gen. 37:1; 47:9). For the patriarchs the actual occupation and possession of Canaan (an "eternal possession," *'aḥuzzaṯ ʿôlām*, Gen. 17:8), as opposed to a "place of sojourning," remained a promise of God to be fulfilled through their descendants (17:8; 26:3; 28:4; Ps. 105:11; 1 Ch. 16:18). The period spent by the Israelites in Egypt is viewed similarly. (Gen. 47:4, 11; Ex. 22:21 [MT 20]; 23:9; Lev. 19:34; Dt. 10:19; 23:7 [MT 8]; 26:5; Ps. 105:23; Isa. 52:4; cf. the proleptic reference in Gen. 15:13). At the time of the Exile the pro-Egyptian party in Jerusalem wanted to sojourn (Heb. *gûr;* RSV "live") in Egypt (Jer. 42:15, 17, 22; 43:2; 44:8, 12, 28; cf. Ezk. 20:38). The returning exiles were regarded as sojourners in Babylonia (Ezr. 1:3f.).

Other "international sojourners" included Moses (Ex. 2:22; 18:3). Elimelech of Bethlehem (Ruth 1:1); the Amalekite would-be assassin of Saul (2 S. 1:13), the Shunammite woman (2 K. 8:1f.) and the colonialist Tyrians (Isa. 23:7).

2. Status of the Gēr. Despite the typical oriental concern for hospitality to strangers (cf. Job 31:32), aliens were vulnerable in society, being frequently associated with other groups subject to exploitation: servants (Ex. 20:10; Lev. 25:6; Dt. 5:14), hirelings (Lev. 25:6; Dt. 24:14), the needy (*'ānî*, Lev. 19:10; 23:22; Dt. 24:14; Ezk. 22:29), the poor (*'eḇyôn*, Dt. 24:14; Ezk. 22:29), orphans and widows (Dt. 10:18; 14:29; 24:17-21; 26:12f.; 27:19; Ps. 94:6; 146:9; Jer. 7:6; 22:3). Repeatedly Israel was reminded that their own attitude toward the *gērîm* was to be tempered by the memory of their own experience in Egypt (Ex. 22:21 [MT 20]; 23:9; Lev. 19:34; Dt. 10:19; 23:7 [8]; cf. Isa. 16:4). They were not to treat the outsider as they were treated.

The Mosaic legislation was quite open to receive outsiders into the covenant community (hence the LXX ren-

dering of *gēr proselytos*). Certain rights were conceded to them, including sabbatical rest (Ex. 20:10; 23:12; Dt. 5:14), a fair trial (1:16), access to the cities of refuge (Nu. 35:15; Josh. 20:9), and participation in the Feasts of Booths and Weeks (Dt. 16:11, 14). Their sustenance was to be guaranteed by provision for gleaning (along with other needy groups, Lev. 19:10; 23:22), by the triennial tithe (Dt. 26:11f.) and by the produce of the land during the Sabbatical Year (Lev. 25:6f.). Indeed, the juxtaposition of *gēr* with "native of the land" (*'ezrāḥ* e.g., Ex. 12:19, 48), "your countrymen" (*'aḥîḵâ*, lit. "your brother"), "sons of Israel," and similar expressions clearly indicates that sojourners were to be treated for the most part just like ordinary Israelites. Their privileges and responsibilities thus included observing the Day of Atonement (Lev. 16:29), the Passover (Ex. 12:49; Nu. 9:14), Unleavened Bread (Ex. 12:19); sacrificial procedures (Lev. 17:8; 22:18; Nu. 15:14-16); atonement for unintentional and defiant sin (15:26-31); purification rites after eating unclean meat (Lev. 17:15; Nu. 19:10), sacrifices to Molech (Lev. 20:2); blaspheming the name of the Lord (24:16), sexual and moral purity (18:26), lex talionis (24:20-22). Lev. 19:33f. summarized the idealized position of the *gēr* in Israel. The *gēr*'s position was so secure that his prosperity could conceivably exceed that of the native Israelites, and the latter could become servants for the former (Lev. 25:47-55). Covenantal infidelity would bring these conditions as a curse upon Israel (Dt. 28:43).

Such rights and privileges only accrued to the sojourner following complete identification with the covenant community, including circumcision (Ex. 12:43-47). Those who refused were treated as foreigners (*nokrî*). Whereas Lev. 17:15 forbids the native and the *gēr* to eat animals that have died a natural death, Dt. 14:21 suggests that such animals could be given to the *gēr* or sold to foreigners for consumption. Rather than treating the former reference as a postexilic development, in which the *gēr*'s status had improved greatly, as is commonly done, the conjoining of *gēr* with *nokrî* suggests that the term is not being used technically, the allusion apparently being to an uncircumcised *gēr*.

At an early period Israel probably adhered to these ideals (Dt. 29:10f. [MT 9f]; cf. also 31:12, which included the sojourners in the assembly of those gathered for instruction in the Torah and the fear of the Lord). The *gērîm* were also present at the covenant renewal ceremony conducted at Mt. Ebal and Mt. Gerizim (Josh. 8:33).

Second-class treatment of sojourners may, however, be documented from later history. The *gêrîm* noted separately in David's census (2 Ch. 2:17 [MT 16]) became the basis of Solomon's work crews, some of which consisted entirely of sojourners (cf. 1 Ch. 22:2). Nevertheless, in Ezekiel's vision of the restored community (47:22), the identification of the *gērîm* with native Israelites is almost complete, even to receiving an inheritance of land in the midst of the tribe in which they resided.

3. Gēr *in Theological Usage*. The concept of sojourner received a special theological application. The land of Canaan was considered the estate of Yahweh. It represented a grant given to Israel as a nation of sojourners in it, subject to the will of the owner (Lev. 25:23; 1 Ch. 29:15). The psalmists frequently describe themselves as but sojourners in the presence of the Lord (Ps. 5:4 [MT 5]; 15:1; 39:12 [MT 13]; 61:4 [MT 5]; 119:54).

B. Tôšaḇ (AV, RSV, "sojourner"). This term occurs thirteen times in the OT, always in conjunction with another term: with "hireling" (Ex. 12:45; Lev. 22:10; 25:6, 40); with *gēr* (Gen. 23:4; Lev. 25:23, 35, 45, 47; Nu. 35:15; 1 Ch. 29:15; Ps. 39:12 [MT 13]). Since the expression never appears alone, its precise significance is not clear. Its root, Heb. *yšb*, suggests some type of resident alien, but the distinction between the *gēr* and the *tôšāḇ* is perhaps minor; the terms were readily interchanged.

C. Nokrî / ben nēḵār (AV, RSV, "foreigner," "stranger"; LXX *allótrios, allogenēs, xénos*). The basic sense of the root, "to be unknown, unrecognizable, changed," may be reflected in a context like Ps. 18:44f. (MT 45f.), where the *bᵉnê-nēḵār* are identified as "a people you do not know," or in 1 K. 14:5f., where the hithpael stem means "make oneself unrecognizable." The connotations of the Hebrew term are not as overtly hostile as the related Akk. *nakrum*, "enemy" (W. von Soden, *Akkadisches Handwörterbuch* [1965], p. 723; but cf. Isa. 62:8). Usually the reference is to someone from a foreign land (Dt. 29:22 [MT 21]; 1 K. 8:41; 2 Ch. 6:32f.), e.g., Moses (*'ereṣ nokrîyâ*, Ex. 2:22; 18:3), Israel (*'aḏmaṯ nēḵār*, Ps. 137:4), Ruth (Ruth 2:10), Ittai the Gittite, (2 S. 15:19), and Solomon's foreign wives (1 K. 11:1ff.; Neh. 13:26f.). In Gen. 42:7 Joseph treats his own brothers as if they are foreigners. But a *nokrî* could also be from nearer by, anybody ethnically distinct from Israel. Jebus was a city of the foreigner to the Levite (Jgs. 19:12). In Ezra 10 the foreign wives of the returned exiles came from the local "peoples of the land." Neh. 9:2 distinguishes the "seed of Israel" from "the sons of the foreigner."

In a still more limited sense, a *nokrî* could be anyone who was an alien to the household (cf. Job 19:15; Ps. 69:8 [MT 9]; Prov. 5:10; 27:2), and according to Gen. 17:12 a household *ben nēḵār* could be purchased with money. This connotation throws significant light on the complaint of Leah and Rachel (Gen. 31:14-16).

Many times, however, *nokrî* is used in the more general sense, "stranger," synonymous with *zār* (cf. below). In Neh. 13:30 sacred cultic objects are distinguished from profane (*nēḵār*). Isa. 28:21 uses the term to signify "extraordinary, unusual."

In general the *nokrî* was viewed as the spiritual antithesis, as well as the ethnic opposite, of Israel (cf. Ezk. 44:7-9). According to Lev. 22:25 sacrificial animals acquired from the *bᵉnê nēḵār* were already intrinsically defiled. Ps. 144:7-11 suggests that his characteristic quality was insincerity and deceit. Ezr. 9:2 condemns the intermarriage of the men of the new commonwealth with the foreign women of the land because this constituted a mixing of "the holy seed" (*zeraʿ haqqōḏeš;* cf. Dt. 14:21). Perhaps because a large proportion of prostitutes were non-Israelites, in Proverbs the feminine form, *nokrîyâ*, functions almost as a *terminus technicus* for "harlot." Cf. BDB, 649. See 2:16; 5:20; 6:24; 7:5; 23:27 (opposite *zônâ*, "harlot"); 27:13.

Theologically any gods other than Yahweh were treated as "alien gods" (*'ĕlōhê hannēḵār*), Gen. 35:2, 4; Dt. 31:16; 32:12; Josh. 24:20, 23; Jgs. 10:16; 1 S. 7:3; 2 Ch. 33:15; Jer. 5:19; 8:19; Mal. 2:11; Ps. 81:9 (MT 10). Cf. Dnl. 11:39.

The *nokrî* presented a serious threat to Hebrew life and worship (Zeph. 1:8; Mal. 2:11), and in general the Mosaic legislation was much less sympathetic to him than to the *gēr*. No *nokrî* was permitted to eat the Passover (Ex. 12:43); none of his animals was suitable for sacrifices (Lev. 22:25); debts owed to him by an Israelite were not remitted in the Sabbatical Year (Dt. 15:3); interest could be collected from those who had borrowed money from an Israelite (23:20 [MT 21]); animals which had died a natural death could be sold to him for consumption (14:21). Isa. 2:6 scolds the Israelites for intercourse with "foreigners." Jeremiah bemoans the fact that whereas Israel was planted

a choice vine (*šōrēq*) of pure seed (*zera' 'ĕmeṯ*), they have degenerated into a wild vine (*haggepen nokrîyâ*) (Jer. 2:21).

D. Zār (AV "stranger"; RSV "stranger," "outsider," "alien," "foreigner"; LXX *allótrios, allogenḗs*). The root seems to signify "to turn aside, depart, deviate."

In its most limited application a *zār* was an outsider to the household (Job 19:13-19). Similarly the levirate law of marriage forbade a childless widow from marrying a "strange man" (*'îš zār*), if the deceased husband had an unmarried brother (Dt. 25:5). In 1 K. 3:18 the two harlots assured Solomon that there were no witnesses to the tragedy described; no *zār* was in the house.

Zār is used also of laymen, especially individuals who do not belong to the priestly or Levitical families (Ex. 29:33; 30:33; Lev. 22:10ff.; Nu. 1:51; 3:10, 38; 16:40 [MT 17:5]; 18:4, 7). The same distinction is applied to foreigners. In Isa. 61:5 foreigners are contrasted with the nation of Israel, presented as priests of Yahweh, while Joel 3:17 (MT 4:17) warns that Jerusalem is not to be defiled by *zārîm*. The term is also used of illegitimate sacrificial fire (Ex. 30:9; Lev. 10:1; Nu. 3:4; 26:61).

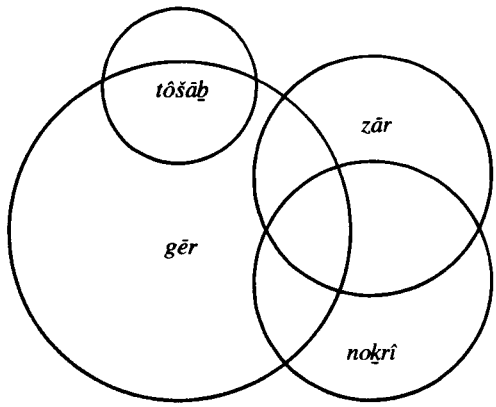
As outsiders, *zārîm* tended to be viewed with suspicion. Frequently they are portrayed as creditors who seize one's possessions (Ps. 109:11; Prov. 6:1; 11:15; 14:10; 20:16), or as outsiders who enter the estate and consume all of the produce (Prov. 5:10). In Ps. 54:3 (MT 5) the psalmist expresses a particular paranoia toward the vengeful stranger, but Prov. 27:2 commends praise from a *zār*.

Similar to the use of *nokrîyâ*, the *zârâ*, "strange woman," in Proverbs is actually an adulteress or prostitute (2:16; 5:3, 20; 7:5; 22:14). Snijders (*TDOT*, IV, 56) suggests that the term designates someone who had deserted her proper place in society. It may also describe an illegitimate intruder into private family relationships. Ezk. 16:32 chastises Israel, a nation which has gone after *zārîm* instead of her own husband, Yahweh, while Hos. 5:7 goes one step farther, declaring that Israel has borne illegitimate children (sons of strangers). The plural form, *zārîm*, often signifies strangers who are enemies of a nation (Isa. 1:7; 29:5; Jer. 5:19; 30:8; 51:51; Ezk. 7:21; 11:9; Hos. 7:9; 8:7; Joel 3:17 [MT 4:17]; Ob. 11), Babylon (Jer. 51:2), Assyria (Ezk. 31:12), Tyre (28:7, 10), and Egypt (30:12). Violent overtones are reflected in the occasional association of the term with *'ārîṣîm*, "usurpers, tyrants" (Ps. 54:3 [MT 5]; Ezk. 28:7; 31:12). Jer. 5:19 speaks of bondage to *zārîm* in an alien land.

Like *nēkār, zār* is often used theologically to describe strange gods, other than Yahweh (Dt. 32:16; Ps. 44:20 [MT 21]; 81:9 [MT 10]; Isa. 43:12; Jer. 2:25; 3:13; 5:19; cf. Ezk. 14:5; Hos. 8:12).

E. Conclusions. Although each of the terms used in the OT to designate outsiders had its own particular nuances, their meanings overlapped considerably. The diagram on this page illustrates these semantic relationships.

The Israelites recognized several categories of outsiders, depending on the degree of identification of the alien with the covenant community. The *gēr*, and perhaps the *tôšāḇ* as well, tended to represent those aliens who chose voluntarily to identify with Israel as completely as possible, including a commitment to their national deity and their spiritual values. By contrast, the *nokrî / bᵉnê nēkār* and the *zār* were usually those who resided in Israel and/or had political contacts with Israel, but who refused a closer association. Consequently, Israel was able to receive the former legitimately, but acceptance of the latter was forbidden.



II. NT.–The vocabulary used to designate outsiders by the NT writers was inherited from the LXX, as was their attitude toward foreigners. Abraham and the patriarchs continue to be acknowledged as the sojourners par excellence (Acts 7:6; 13:17; He. 11:9), dwelling in alien lands but without a permanent residence, looking for a city whose builder and maker was God (cf. Acts 7:29). The Christians in the diaspora are compared to the Israelites and Judeans sojourning in exile (1 Pet. 1:1; 2:11ff.), and they are instructed about their conduct. They must maintain their personal integrity, be submissive to the authorities, express a disciplined freedom as servants of God, and show special love for their fellow sojourners.

In NT times Ezra's aversion toward intermarriage with non-Israelites had hardened to strong feelings of superiority within Judaism. The term *ethnikós* had become as opprobrious as "tax collector" (Mt. 18:17). Tacitus, an outsider, observed, "They regard the rest of mankind with all the hatred of enemies" (*Hist.* v.5). By contrast with the openness to strangers in the Mosaic legislation, the broad chasm between Jew and Gentile was institutionalized in the Herodian temple with a separate Court of the Gentiles, beyond which no foreigner was permitted to pass, under threat of death (Josephus *Ant.* xv.11.5 [410-420]). According to Mt. 27:7f. the money Judas had received for betraying Jesus was used to purchase the Potter's Field as a special burial place for strangers who died while in Jerusalem on business or pilgrimages. Peter expresses common Jewish feeling toward the outsider in Acts 10:28, but apparently the Athenians were much more tolerant (Acts 17:21).

The crisis precipitated by the shift in the proclamation of the gospel from the Jews to the Gentiles is not surprising when it is interpreted against this backdrop. Even Peter required a special vision from God to convince him that Gentiles were not intrinsically defiled (Acts 10), and that their piety was as acceptable as was that of his own people. Subsequently the Jews were amazed that the Holy Spirit had been poured out "even on the Gentiles" (10:45). An extremely important part of Paul's message was that the barriers between Jew and Greek were broken down in Christ (Gal. 3:28; Rom. 3:22ff.; 1 Cor. 12:13; Col. 3:11). In Eph. 2:19ff. especially, Paul emphasizes that the Ephesian Christians are no longer to view themselves as "strangers and aliens" (*xénoi kaí pároikoi;* cf. Heb. *gēr wᵉtôšāḇ*), but fellow citizens (*sympolitai*) with the saints of the household of God.

Jesus associates the welcoming of strangers (*xénoi*) with feeding the hungry, giving water to the thirsty, clothing the naked, visiting the sick and imprisoned, all of which, if they were done in his name, constituted minis-

tering to the Savior Himself. In so instructing, He acknowledges a principle which was normative in the OT but which was all too easily perverted into exploitation of the weak. John encourages hospitality toward brothers, especially toward strangers (*xénoi*, 3 Jn. 3).

D. I. BLOCK

SOLDERING [Heb. *deḇeq*–'joining, soldering,' 'appendage'] (Isa. 41:7). The fusing of any of various soft or hard alloys to metal surfaces often, requiring red heat for application in a molten state. In Isa. 41:7 Heb. *deḇeq* (< *dāḇaq*, "cling, cleave to") refers to the craft of idol-making (cf. Isa. 40:18-20). In 1 K. 22:34 (par. 2 Ch. 18:33) this Hebrew term indicates the scale-like appearance of Jehoshaphat's armor (RSV "scale armor"). Perhaps, then, *deḇeq* intimates how a coat of mail may have been fabricated, i.e., by the process of soldering. In Job 41:17 (MT 9) and 41:23 (MT 15) Heb. *dāḇaq* occurs with reference to the characteristic compactness of Leviathan's scales.

R. A. COUGHENOUR

SOLDIER [Heb. *raglî*–'on foot' ("foot soldier," 1 S. 4:10; 2 S. 10:6; 1 K. 20:29), *'îš raglî*–'man on foot' ("foot soldier," 2 S. 8:4; 1 Ch. 18:4; 19:18)]; AV FOOTMAN; NEB also INFANTRY, FOOT; [*'îš (ham)milḥāmâ*–'man of war'] (1 K. 9:22; 2 Ch. 8:9; 17:13; Isa. 3:2; Jer. 38:4; 39:4; 41:3; 49:26; 50:30; 51:32); AV MAN OF WAR; NEB ALSO FIGHTING MAN, WARRIOR; [*gibbôr*] (Joel 2:7; Nah. 2:3 [MT 4]); AV MIGHTY MAN; NEB WARRIOR; [*gᵉḇārîm 'anšê hammilḥāmâ*] ("soldiers," Jer. 41:16); AV MIGHTY MEN OF WAR; NEB MEN, ARMED AND UNARMED; [*ḥayil*] ("army of soldiers," 2 Ch. 26:11; Ezr. 8:22); AV HOST OF FIGHTING MEN, BAND OF SOLDIERS; NEB ARMY/ESCORT OF SOLDIERS; [*'amrāb*–'many people'] ("many soldiers," Ezk. 26:7); AV

Elamite soldiers depicted on a limestone relief from Nineveh (668-633 B.C.). They carry bows and an Elamite quiver made with a cover. One soldier watches behind as they march forward (Museo Barracco, Rome)

The RSV uses "soldier" to render a number of diverse Hebrew terms, including *'îš milḥāmâ*, *gibbôr*, and *gibbôr ḥayil*. The AV consistently rendered *'îš milḥāmâ* with "man of war," *gibbôr* with "mighty man," and *gibbôr ḥayil* with "mighty man of valor." While the RSV has generally followed the AV on each of these terms, its preference for "soldier" has often obscured the fine distinctions in the Hebrew. Thus *'anšê (ham)milḥāmâ* (LXX *ándres polemistaí*; AV, RSV also, "men of war") in early tradition designates the armed men of the Israelite tribes (e.g., Nu. 31:28, 32, 49, 53), who mustered for war with the weapons each was able to provide for himself (usually swords; Jgs. 20:17 defines *'îš milḥāmâ* as a man "bearing the sword"). From the early monarchy on *'îš milḥāmâ* denotes the common, albeit professional, soldier of the standing army (1 K. 9:22; Isa. 3:2; Jer. 38:4; 39:4; 41:3).

Hebrew *gibbôr* (which occurs over a hundred times; AV, RSV, "mighty man"; RSV also "soldier," Jer. 2:7; 41:16; Nah. 2:3 [MT 4] parallels the use of Gk. *hḗrōs*. *Gibbôr* stands for the half-man, half-god figures of the distant past (Gen. 6:4) who correspond to such Greek "heroes" as Heracles and Perseus. NIMROD (prob. Tukulti-Ninurta I of Assyria) is called a *gibbôr* (Gen. 10:8) in accordance with a further nuance of *hḗrōs*: a mighty warrior-king and founder of great cities (cf. E. A. Speiser, "In Search of Nimrod," in *Oriental and Biblical Studies* [1967], pp. 35-40). The most common meaning of *gibbôr* — i.e., someone of exceptional prowess, particularly in war — fits the Homeric designation of the Greek warrior chiefs who fought at Troy as *hḗrōes*. Consequently, *gibbôr* refers to an elite warrior as distinguished from a "man of war" (*'îš [ham]milḥāmâ*; cf. Isa. 3:2; Ezk. 39:20). David's MIGHTY MEN (*gibbôrîm*) included only the most renowned warriors (cf. 2 S. 23:8-39 par. 1 Ch. 11:10-47), and Saul seems to have had a similar body of men (cf. *'îš gibbôr . . . ben-ḥayil*, 1 S. 14:52).

The expression *gibbôr ḥayil* (AV, RSV, usually "mighty man of valor") likewise designates an elite warrior (cf. Jephthah the Gileadite, Jgs. 11:1; RSV "mighty warrior"; NEB "great warrior") and stands in parallel with *'îs bāḥûr* (RSV "picked man," 2 Ch. 13:3), which also denotes an elite soldier in contrast to the "men of war" (cf. Jgs. 20:16f.). Conversely, 1 S. 16:18 describes David as a *gibbôr ḥayil wᵉ'îš milḥāmâ* (RSV "a man of valor, a man of war"), suggesting that both *gibbôr ḥayil* and *'îš milḥāmâ* may stand in certain contexts for "trained warrior/professonal soldier" (cf. 2 Ch. 17:13; Jer. 41:16; 49:26; 50:30).

The most frequent NT word for "soldier" is Gk. *stratiōtēs* (occurring twenty-one times), which in the Gospels and Acts usually refers to Roman legionnaires. While the Romans permitted native officials to maintain some military forces (cf. Mt. 27:65; Jn. 18:3, 12; etc.), order in the provinces was secured by the Roman legions. The legions did not rely on elite warriors supported by less skilled recruits, as had the armies depicted in the OT, but on large, homogeneous units of highly disciplined professionals, trained to fight as an organized body.

The Greek mythical warrior Achilles depicted on an amphora; he is wearing a short coat of mail and carries a javelin (by the Achilles Painter, *ca.* 440 B.C.) (Vatican Museum)

The Gk. *spekoulátōr* (Mk. 6:27) refers to a member of the "head-quarters' staff of a legionary commander or provincial governor (whose duties included the carrying out of executions)" (*LSJ*, *s.v.*); cf. AV "executioner."

The Pauline and Pastoral Epistles develop the metaphor of the Christian life as one of spiritual warfare. Thus 2 Tim. 2:3 refers to the believer figuratively as "a soldier of Christ," and Paul designates Epaphroditus as his "fellow-soldier" (*systratiōtēs*, i.e., "comrade-in-arms," Phil. 2:25) in a greater spiritual "conflict" (*agṓn;* Phil. 1:30). Eph. 6:10-17 likewise enjoins the believer to "put on the whole armor of God" in order to contend with "principalities . . . powers . . . [and] rulers of this present darkness." In these texts Christians are depicted as armed legionnaires fighting alongside one another and mutually supporting one another in a wider conflict.

D. G. SCHLEY

SOLEMN; SOLEMNLY. In the RSV the adjective "solemn" occurs primarily in the phrases "solemn rest" and "solemn assembly." "Solemn rest" translates Heb. *šabbātôn,* which occurs eleven times in Exodus and Leviticus. The RSV translation is appropriate, since the term is obviously related to *šabbāṯ,* "sabbath" (the ending *-ôn* can indicate abstract nouns in Hebrew), and thus connotes a time of rest and of special sanctity (the NEB has "sacred rest"; AV "sabbath" or "rest"). It is applied not only to the sabbath day (Ex. 16:23; 31:15; 35:2; Lev. 23:3) but also to the Day of Atonement (Lev. 16:31; 23:32), the Feast of Trumpets (23:24), the first and eighth days of the Feast of Tabernacles (v. 39), and the Sabbatical Year (25:4f.). *See also* REST.

"Solemn assembly" is the AV and RSV translation of Heb. *ʿaṣereṯ/ʿaṣārâ.* The Hebrew term's derivation from *ʿāṣar* ("restrain" or "close up"), as well as the contexts in which it occurs, suggests an occasion of fasting and abstention from work and other profane activities. The NEB renders it "closing ceremony" (Lev. 23:36; Nu. 29:35; Dt. 16:8; 2 Ch. 7:9; Neh. 8:18), "sacred ceremony" (2 K. 10:20; Am. 5:21), "day of abstinence" (Joel 1:14; 2:15), or simply "ceremony" (Isa. 1:13). The term may be used with deliberate irony in Jer. 9:2 (MT 1), where the RSV has simply "company."

In Ps. 68:24 (MT 25) "solemn procession" represents Heb. *hᵃlîḵâ* (<*hālaḵ,* "go," "walk"), which is probably better rendered simply "procession" (so NEB; AV "goings"); the context indicates more festivity than solemnity. Elsewhere the term simply means "caravan" (Job 6:19) or "pathway" (Nah. 2:5 [MT 6]; RSV "go"). In Ezk. 21:23 (MT 28) "solemn oaths" represents Heb. *šᵉḇuʿôṯ,* a form of superlative that could be translated more literally "oaths upon oaths."

The expression "solemnly warn" translates the infinitive absolute with a finite form of the hiphil of *ʿûḏ* in Gen. 43:3; 1 S. 8:9; Jer. 11:7; but the finite verb stands alone in Dt. 8:19 and 1 K. 2:42 (RSV "solemnly admonish"). Similarly, in Ex. 13:19 "solemnly swear" represents the infinitive absolute with a finite form of the hiphil of *šāḇaʿ.*

In the sole NT instance of the English term, "solemnly forewarn" (1 Thess. 4:6) translates a pair of Greek verbs, *proeípon* and *diamartýromai,* which the AV translates literally as "forewarn and testify."

G. CHAMBERLAIN N. J. O.

SOLID FOOD [Gk. *bróma*–'food'] (1 Cor. 3:2); AV MEAT; [*stereá trophḗ*] (He. 5:12, 14); AV STRONG MEAT. In 1 Cor. 3:2 Paul employs a common metaphor from his day to express how the Corinthians had received "milk" (Gk. *gála*), i.e., the revelation of salvation, but by remaining as "babes in Christ" (v. 1) they were unable to assimilate the spiritual wisdom intended for persons mature in the faith.

In He. 5:12, 14 the phrase Gk. *stereá trophḗ* derives from *stereós* ("firm, hard, solid, strong") and *trophḗ* ("nourishment, food"). According to 5:11-14 only "solid food" will effect the desired result of progressing beyond "first principles" (6:1f.) toward spiritual maturity and moral discernment. G. L. K.

SOLOMON sol'ə-mən [Heb. *šᵉlōmōh;* LXX usually Gk. *Salōmōn, Solomōn*]. Son of David and third king of Israel.

I. Ascent to the Throne.–A. Parents and Birth. Solomon was David's eighth son. Six sons — all of different mothers — were born at Hebron before David's capture of Jerusalem. When he had established his capital and court there, David fell in love with a married woman, Bathsheba, and committed adultery with her, a son being born of the union. Meanwhile David arranged the death of Bathsheba's husband, Uriah, and made her his wife (2 S. 11:2-5, 14-17, 26f.). The firstborn of David and Bathsheba died within a week (12:15-18); their second child was Solomon (v. 24). Solomon was thus David's son by his favorite wife; that is presumably why David chose Solomon to succeed him, rather than the older sons born at Hebron.

B. Name. According to 2 S. 12:24f., Solomon was given two names at birth. The first, Solomon, by which he is invariably known in the Bible, was given to him by his parents. The root meaning of the word is "peace," but it may be connected with the name of the capital, Jerusalem. The other name, Jedidiah, "loved of Yahweh," was given to him by the prophet Nathan. Other Hebrew kings had more than one name (e.g., Zedekiah, also calld Mattaniah; cf. 2 K. 24:17); possibly Solomon was a throne-name and Jedidiah a personal name.

C. Adonijah's Conspiracy. Although Solomon was David's chosen heir to the throne, his eldest surviving brother, Adonijah, saw no reason why he himself should not become king. Thus when it became clear that David was dying, Adonijah sought to establish his own position, and gained the support of Joab the army commander and Abiathar the priest (1 K. 1:7). The conspirators left the city and held a banquet at En-rogel, at which no doubt Adonijah was proclaimed king.

In his rival's absence Solomon acted swiftly. His mother Bathsheba and another influential figure at court, Nathan, went to David, reminded him of his long-standing promise to Solomon, and persuaded him to act (1 K. 1:11-37). The aged king's favor proved decisive, for he was able to furnish Solomon with more effective backing than that possessed by Adonijah. Zadok the priest was not inferior to Abiathar, and Benaiah had the military advantage over Joab in that his men — the king's personal troops — were ready and at hand.

Solomon took his supporters to Gihon, near Adonijah's convocation at En-rogel (1 K. 1:9, 38), and there he was crowned king of Israel. He was anointed by priest (Zadok) and prophet (Nathan) and was surrounded by the royal bodyguard, who acclaimed him David's successor (vv. 32-40). The trumpet was sounded, and the festivity was such that Adonijah could not fail to be aware that some unusual ceremony was taking place. When the explanation reached him, his conspiracy at once fell to pieces, the conspirators departing hastily for the safety of their homes (vv. 41-53). Thus Solomon became king shortly before his father's death.

Solomon showed himself ruthless as he consolidated his own position. Adonijah pleaded for his life, but Solomon would make no promises (1 K. 1:51f.). As soon as Adonijah showed the first signs of further ambition, the king had

him killed (2:13-25; *see* ABISHAG). Joab scarcely outlived Adonijah; he too was struck down before he could endanger Solomon (vv. 28-34). This execution had been suggested by David himself (vv. 5f.); Solomon was swift to comply. Abiathar was deposed and confined to his estate (vv. 26f.). An ancient foe of David, Shimei, was similarly put under house arrest (vv. 36f.); as soon as he left Jerusalem, he was pursued and killed (vv. 39-46). Benaiah, who acted as executioner in these cases, was given Joab's position as commander-in-chief; Zadok became high priest without a rival, taking over Abiathar's duties and functions. "So the kingdom was established in the hand of Solomon" (v. 46).

II. Achievements.–*A. Biblical Record.* Solomon's reign is described in 1 K. 1–11 and 2 Ch. 1–9. Relatively few details are given, however; both accounts dwell on the building of the temple and its attendant circumstances. It is not easy, therefore, to assess the character either of Solomon or of his reign. He is credited with great piety, but his apostasy does not go unremarked; his wisdom is proverbial, but his folly was responsible for the disintegration of his realm after his death; the surface peace and prosperity barely veiled considerable oppression and unrest. Since Solomon's reign was long, one may conclude that his character, ability, and farsightedness and the state's economic security and political strength were impaired gradually, perhaps imperceptibly.

B. Political Alliances. Having consolidated his own position, Solomon immediately took steps to consolidate the kingdom. Further conquest was unnecessary; he had only to strengthen his frontiers. He first sealed an alliance with Egypt, marrying Pharaoh's daughter (1 K. 3:1). This alliance even brought him a small increase in territory (9:16). His northern neighbor, Hiram I of Tyre, had been David's ally, and Solomon renewed this bond (5:12). Their treaty proved of greater commercial than military importance (see II.E below); but unfortunately Solomon relied commercially on Hiram to such an extent that he could not repay him in kind and was eventually forced to cede twenty Galilean cities to him (9:10f.).

C. Military Measures. Besides forming these very shrewd alliances, Solomon made sure that his empire would be safe in the event of war. A series of cities throughout his territory was fortified and given permanent garrisons (1 K. 9:15-19); of these Jerusalem itself, Hazor (*see* picture in KINGS, BOOKS OF), and Megiddo are notable. This fortification process was a new step militarily. It involved the novel features of a standing army and the employment of chariots especially on a large scale (10:26).

D. Administrative Measures. Israel had changed radically since the days of Saul, and it is no wonder that Solomon felt the need to implement a number of administrative changes. Moreover, his heavy expenditure necessitated heavy taxation, and his grandiose schemes demanded some forced labor (or corvée), both of which required efficient administration. The old tribal divisions had lapsed, especially since the Canaanite cities had been incorporated into Israel; thus the land was redivided into twelve administrative districts, with an officer appointed over each (1 K. 4:7-19). Solomon made several other new appointments, as a comparison of 2 S. 20:23-26 (David's officials) with 1 K. 4:1-6 shows.

E. Trade and Industry. Solomon was competent as a diplomat, strategist, and administrator but showed exceptional perspicacity in his commercial enterprises. To secure a sound economy, he utilized Israel's own resources to the full and took complete advantage of its geographical position astride the trade routes of the ancient world. For example, 1 K. 10:28f. describes a very lucrative royal venture. His import requirements of horses and chariots led Solomon to realize that he controlled the trade routes from Egypt, which manufactured chariots, and Cilicia ("Kue"; the RSV is to be preferred in v. 28), famed for its horses. Solomon by acting as middleman could make his own profit from these Egyptian and Cilician exports.

The narrative about the Queen of Sheba emphasizes Solomon's wisdom, and the story has often been called a legend (1 K. 10:1-13). But the context indicates that her visit to Solomon was really connected with trade and as such is intelligible; its historicity need not be doubted. In the ancient world embassies frequently issued polite fictions to explain their visits; cf. the Babylonian embassy to Hezekiah (2 K. 20:12). The queen's purpose, then, was to negotiate for overland trade between south Arabia and Israel; an arrangement suitable to both parties was presumably concluded (1 K. 10:13).

Trade flourished particularly between Israel and Tyre. Hiram supplied timber and gold for the temple in return for wheat and oil (1 K. 5:10f.). Together the two kings operated the Red Sea fleet, which promoted trade with Arabia or East Africa ("Ophir"; cf. 9:26-28) and brought all sorts of treasures to the royal court at Jerusalem (10:11f., 22). The Phoenicians were the leading sea merchants of the time, and their skill and knowledge must have been invaluable to Solomon.

"The History of Solomon and Building the Temple," an illumination in an eleventh-century Latin MS from Spain. The scenes depict Solomon sending a message to Hiram (left), the queen of Sheba visiting Solomon (bottom right), a sacrifice on the temple altar and Solomon being blessed by the hand of God (middle right). Toward the top is the ark of the covenant between two cherubim (the twelve heads signify the twelve tribes) (Bible of San Pedro of Roda, lat. ms. 6, fol. 129, Bibliothèque Nationale, Paris)

Solomon's home industries are not mentioned in the Bible, but archeological investigation has revealed his exploitation of Israel's mineral wealth. Copper, which abounded in the extreme south of his realm, was mined, refined, and shipped from Ezion-geber. These copper shipments were the original reason for constructing the Red Sea fleet. Since the Phoenicians were also skilled at refining metals, probably Solomon used their services in the copper industry. The chief artificer of the bronze work in the temple was a Tyrian, with the Tyrian name Hiram, although his mother was Israelite (1 K. 7:13-45).

F. The Temple. Solomon's greatest achievement, in the eyes of the biblical writers, was constructing a temple to Yahweh in Jerusalem. Proposed by David, it was completed by Solomon in the eleventh year of his reign, having taken seven years to erect (1 K. 6:38). *See* TEMPLE for a full description. Since the architect was Tyrian, the temple exhibited features that were not all of purely Israelite conception; but the worship inaugurated in it was without doubt thoroughly Yahwistic in character. The temple was to have a profound influence on Israel, as its central shrine, housing the ark of the covenant; thus Solomon, for all his faults, was ever remembered as its builder, and his name was honored because of it.

When the temple had been completed, a dedication ceremony was held. The ark was brought with great pomp from its temporary shrine in the city itself to the hill N of it where the temple stood (1 K. 8:1). Solomon himself uttered the prayer of dedication (vv. 12-53; 2 Ch. 6) and an enormous number of animals were sacrificed (1 K. 8:63). The prayer includes a clear reference to an exile (8:46-51), but it is mainly attributable to Solomon, particularly in its references to Yahweh (e.g., vv. 12f.), which have parallels in the Râs Shamrah Tablets (see Gray, comm. on 1 K. 8:32). Solomon is credited with having enriched the cultus in various ways, especially musically (cf. 10:12; 2 Ch. 5:11-13).

G. Other Buildings. Solomon erected a considerable complex of buildings N of the City of David. His own palace was probably even more magnificent than the temple, for it took almost twice as long to build (1 K. 7:1). It was called "the House of the Forest of Lebanon," after its great cedar pillars (v. 2). The building housed a "Hall of Pillars" and a "Hall of the Throne" (for judgment) (vv. 6f.). There was also a separate palace for his chief wife, Pharaoh's daughter (v. 8). *See* plan in JERUSALEM III.C.2. All these were sumptuously furnished. Solomon's building program -- it included the fortification mentioned in II.C above — was very extravagant and endangered the economy, despite the flourishing commerce.

H. Wisdom. Above all else, Solomon is renowned for his wisdom. It is recorded that he asked Yahweh for discernment and wisdom (1 K. 3:7-9) and that Yahweh granted him the boon, together with long life and prosperity (vv. 10-14). A single instance of his shrewdness in administering justice is given (vv. 16-28). He is credited with three thousand proverbs (4:32), although no examples are given. But in view of his later reputation, it would be foolish to dismiss this as a groundless legend. His reign was, in fact, a golden age of literature. Many scholars agree that the court history of David and parts of the Pentateuch were written during this period of peace and prosperity. Wisdom literature, in particular, is evidenced in the Near East from the 2nd millennium B.C. so that even if the OT wisdom writings were not finally edited until postexilic times, there is no reason to doubt that the beginnings of Israelite wisdom thought and writing can be placed in Solomon's reign.

III. Failings.–Despite all that Solomon did to boost Israel's economy, his expenditure must have outweighed the income. Doubtless the oriental luxury of the court (cf. 1 K. 10:16-22) made the situation worse. The result was heavy taxation (cf. 4:7), which must have rankled many. Some of Solomon's measures, moreover, such as the exploitation of the copper mines, demanded forced labor. It is not clear to what extent the corvée was applied to freeborn Israelites, for 5:13-18 and 9:20-22 seem to be mutually contradictory on this point; possibly different conditions prevailed in different periods of his reign. Nor is it clear whether Judah received preferential treatment. At any rate, the complaint of Israel in Rehoboam's reign clearly indicates the extreme discontent with Solomon's measures (12:4); it is noteworthy that Adoniram, the chief of the corvée, was killed by the angry populace (v. 18).

The MT records no outright rebellion against Solomon, but toward the end of his reign a young and able Ephraimite, Jeroboam the son of Nebat, in some way incurred the king's wrath and fled to the Egyptian court (1 K. 11:26-40), biding his time. Jeroboam clearly had political ambitions and received a measure of prophetic backing, but he apparently was given no time nor opportunity to cause Solomon trouble. The LXX, however, inserts a long passage in 12:24, claiming, perhaps correctly, that Jeroboam did in fact stage an abortive revolt.

If many Israelites felt they were badly treated, the vassal peoples had stronger reason to complain, for they had been used for slave labor since the time of David. No vassal state actually succeeded in breaking away from Solomon's empire, but two of them caused him trouble. Hadad, a member of the royal house of Edom, long resided at the Egyptian court, fomenting what trouble he could in his own land (1 K. 14-22). In Damascus a guerrilla leader, Rezon, arose and called himself king of Damascus; Solomon never succeeded in apprehending him (vv. 23-25).

Solomon began his reign faithful to Yahweh (1 K. 3:3), but he gradually lapsed. His huge harem was the main reason (11:1-8). No doubt Solomon himself worshiped no god but Yahweh; but he tolerated the idolatrous cults of his foreign wives and even had shrines built for them (vv. 4-8). This, naturally enough, led many Israelites astray before long; the biblical writer found such conduct reprehensible and stated that Solomon's actions were the direct cause of the political unrest at the end of his reign. It was punishment from Yahweh for his apostasy (vv. 9-14, 23).

So Solomon died, his empire intact but fast disintegrating. He reigned forty years, according to 1 K. 11:42 (2 Ch. 9:30), but this may be a round number. In Albright's chronology 922 B.C. is the approximate date of his death; Thiele (*MNHK*) placed it in 931.

Solomon exhibited great ability in a variety of fields; as a politician, diplomat, strategist, organizer, and administrator he excelled, and his poetry and proverbs apparently were equally admirable. Ruthlessness mars his early days as king, to modern eyes; but he may well have noted the dire results of David's leniency, e.g., with Absalom. His real undoing was his lack of moderation. His extravagance in his harem, court luxury, and building schemes laid an impossible burden on his subjects, and moreover served to emphasize the contrast between his happy position and their own increasing poverty. Because of these failings, Solomon brought his empire to the brink of disruption from which Rehoboam, his son and successor, was unable to rescue it.

SOLOMON, ODES OF. A collection of forty-two early Jewish Christian hymns celebrating the union of Christ and the believer.

I. Text
II. Language
III. Provenance
IV. Date
V. Contents
VI. Theology
VII. Relationship to Other Literature
A. Gnostic Literature
B. Qumrân Literature
C. NT

I. Text.–Although it was known through its mention in lists of apocryphal works, the book was lost until its discovery by J. R. Harris on January 4, 1909, in a Syriac MS (15th cent.) already in his possession. The only other texts that have been found are Codex Nitrensis (Syriac, 10th cent.), Bodmer Papyrus XI (Greek, 3rd cent.), and quotations in Codex Askewianus (Coptic, 4th cent.). None of these texts is complete.

II. Language.–Scholars have been divided over the original language of the Odes. Since they follow the LXX of Ps. 50:3 (MT 51:1) and 20:4 (MT 21:3), and since the Bodmer Papyrus was written in Greek, some scholars concluded that the Odes were composed in Greek. Other scholars suggested Hebrew or Aramaic. Most scholars have decided in favor of Syriac, based on three considerations: (1) the extant Syriac MSS exhibit fine poetic style with assonance and metrical scheme; (2) the MSS also contain plays on words possible only in Syriac; and (3) the Greek of the Bodmer Papyrus appears itself to have been translated from a Semitic original.

III. Provenance.–The provenance of the Odes is unknown. Some, e.g., Harris and Mingana, argued for Syrian Antioch, while others have suggested Edessa, an important city in Syrian Christianity (see Charlesworth, *Pseudepigrapha*, II, 727). It is even possible that the Odes were composed in different areas and later collected (see VII.B, C below).

IV. Date.–It is impossible to date the Odes precisely, since they make no identifiable references to their own period of history, and since they are not cited during the first two centuries A.D. Clearly, though, they cannot date earlier than the mid-1st cent., and they were probably composed somewhat later than this. If they arose from circles close to the Johannine tradition (see VII.C below), a date around the end of the 1st cent. would be most likely. Scholars who consider the Odes to be Gnostic date them later, but their views have fallen into disfavor (see VII.A below).

V. Contents.–Since the Odes of Solomon is a collection of songs, there is no consecutive narration or systematic discussion of themes. Rather, the hymns contain many themes, including wisdom (e.g., 7:8), immortal life (e.g., 3:8; 10:2; 15:8-10), Logos (or Word, e.g., 12:5-12), creation (e.g., 16:10-19), light (e.g., 10:1, 6; 25:7), God as a living spring (e.g., 30:1-7), truth (e.g., 38:1-16), and Messiah (e.g., 29:6; 41:3, 15). Despite its title, the extant portions of the book make no claim for Solomonic authorship (it should be kept in mind, however, that Ode 2, the beginning of 3, and perhaps part of 1 are missing). Perhaps the book was attached to Solomon's name because Solomon was the traditional author of some of the biblical Psalms, or perhaps the identification was suggested by the fact that Solomon was a son of David like the Messiah.

VI. Theology.–The dominant theme of the Odes of Solomon is the author's joy in his relationship with God through God's Son, the Messiah. This relationship might be called theistic mysticism. The author does not report a loss of individuality, but he does say that he has been (1) united with or joined to God, making him immortal and a son of God (3:7f.), so that nothing can divide him from God (28:5), (2) filled with God's love (3:1-7; 11:2), (3) emptied of all that is not God's light (25:7), and (4) made wise so as not to fall into the hands of "the deceiver(s)" (38:16).

The resolution of opposites that is so characteristic of mystical literature appears in at least two ways. (1) God is characterized as the Father whose breasts were full of milk, drawn by the Holy Spirit and mixed with milk from her own breasts; the milk represents the Son (19:1-5). (2) Many of the odes begin in the third person, with the singer lauding Christ, but shift to become hymns sung by Christ, giving at least the appearance of the blending of subject and object. In addition, it should be noted that the Odes have a strong trinitarian emphasis (e.g., 23:22; cf. 19:2). Reference is made to Jesus' incarnation (7:4-12; 19), baptism (24), crucifixion (27; 28:9-20; 31:8-13; etc.), and resurrection (e.g., 42:6-20).

VII. Relationship to Other Literature.–*A. Gnostic Literature.* In 1910 H. Gunkel declared that the Odes were Gnostic. This opinion was furthered by E. Preuschen, who attributed the Odes to Valentinus. J. R. Harris and A. Mingana disputed Gunkel's conclusion as early as 1920, and Charlesworth (1969) subjected the question to careful study. In fact, the Odes distinguish themselves from GNOSTICISM in several ways. (1) In Ode 7:9-13 (cf. Ode 16) the author praises the Creator God, whom the Gnostics disdained for His contact with matter. (2) In 8:10f. knowledge is paralleled with faith, while Gnostics saw them as opposed. (3) In 42:11-20 Christ descends to the underworld and grants resurrection, while in Gnosticism He ascends through cosmic spheres. (4) Although the Odes do not quote the OT, they are obviously familiar with it and to some extent dependent on it (cf. the influence of Ps. 22:16-18 on Odes 28:14, 18; 31:8-13; of Gen. 2:2 on Ode 16:12; of Ezk. 47 on Ode 6; etc.), whereas Gnosticism deprecated the OT. (5) The Odes are anything but dualistic, which is characteristic of Gnosticism (see Charlesworth, *CBQ*, 31 [1969]). It seems clear, then, that the Odes are not Gnostic. Still, their use of images such as light and their emphasis on knowledge, as well as their understanding of salvation, might have influenced the later Gnostic systems.

B. Qumrân Literature. There are numerous parallels between the Odes and the Dead Sea Scrolls Both emphasize "knowledge," "the war," "crown," "living water," and "the sun" as "symbols of a realized salvation that has not yet been fully consummated" (Charlesworth, *OT Pseudepigrapha*, II, 728). While it is possible that these were simply common themes in first-century Judaism, most scholars have concluded that the Odes were more likely influenced by the sectarian writings from Qumrân; some have even suggested that the author was once a member of that sect. Theories that note parallels between Qumrân and the Odes often point out similarities with the Gospel of John as well (see below).

C. NT. Although the Odes may represent the type of Christian literature referred to in Eph. 5:19; Col. 3:16; Acts 16:25; etc., the NT book that shows the strongest links with the Odes is the Gospel of John. M. Lattke (pp.

298f.) cited parallels in the use of the terms "keep" (Gk. *tēréō*), "knowledge" (*gnōsis*), "light" (*phōs*), "love" (*agápē*), "truth" (*alétheia*), etc., as well as in the shared concepts of the way of passing on life and realized eschatology. Charlesworth and Culpepper (pp. 320f.) summarized three hypotheses about this relationship: (1) the Odes depend upon John, (2) John depends upon the traditions in the Odes, and (3) the Odes and John come from the same religious environment. The first view they refuted by examining twenty-six parallel themes without finding literary dependence. The second hypothesis they rejected because it requires too early a date for the Odes. It seems best to conclude, then, that the Gospel of John and the Odes of Solomon arose in the same milieu, perhaps even in the same religious community, and that both were influenced by the Essenes. Whether the author of the Odes ever belonged to the Johannine community remains uncertain.

SOLOMON'S SERVANTS [Heb. *'abdê šelōmōh*; LXX *doúloi Salōmōn*]. In a general sense all kings in the ancient Near East had servants, and Solomon was no exception. He surrounded himself with a large company of subordinates.

The precise terminology "Solomon's servants," however, appears in several OT texts referring to a company of royal servants who performed tasks related to Solomon's temple. According to 1 K. 9:27 par. 2 Ch. 8:18 Solomon's servants went with Hiram's servants to collect gold for the temple; the Chronicler adds that they also brought algum trees and precious stones (9:10). Some scholars (e.g., de Vaux) have suggested that Solomon's servants were among Israel's state slaves (*see also* NETHINIM). State slavery was common in the ancient Near East. David formed a work force of Ammonite prisoners of war (2 S. 12:31), and Solomon's building projects required a much larger compulsory work force (1 K. 9:15-22). Many scholars (e.g., Mendelsohn and comms. on Ezra-Nehemiah by D. Clines [*NCBC*, 1984], p. 57; H. Williamson [*Word Biblical Comm.*, 1985], pp. 35f.) have suggested that "Solomon's servants" were non-Israelites — Canaanite prisoners of war and their descendants — among these slaves. The problem with this view is that despite Ezekiel's insistence that Gentiles not be allowed to serve in the temple (Ezk. 44:9), Ezra and Nehemiah list the "sons of Solomon's servants" as participants in the second temple (Ezr. 2:58; Neh. 7:60). It seems more likely, therefore, that Solomon's servants were Israelites who were associated with these foreign slaves. 1 K. 9:20-23 indicates that foreigners made up the levy of slaves, but that Israelites served as overseers "who had charge of the people who carried on the work" (v. 23). Among these overseers are specifically mentioned Solomon's "officials" (Heb. *'ṣāḏîm*, v. 22). It is probable, therefore, that Solomon's servants were originally a class of Israelite supervisors who were involved in building Solomon's temple.

References to "sons of Solomon's servants" (Heb. *bᵉnê 'abḏê šᵉlōmōh*) appear in postexilic writings. This company is listed four times among those who returned from the Exile (Ezr. 2:55, 58; Neh. 7:57, 60) and is closely associated with the "temple servants" (Ezr. 2:58; Neh. 7:60; 11:3). In the light of this association and their background in the Solomonic period, it can be assumed that Solomon's servants had significant responsibilities in the second temple.

SOMETIME(S). In Jer. 28:12 "sometime after" translates Heb. *'aḥar*, a preposition of time with the temporal meaning "after" (so AV, NEB). In Nu. 9:20f. the RSV "sometimes" renders Heb. *yēš 'ašer* ("it occurs that"; KoB, p. 409), a phrase that expresses existence (cf. Eccl. 2:21, AV "There is"; R. J. Williams, *Hebrew Syntax* [repr. 1980], § 477, p. 79).

In the RSV NT "sometimes" occurs only twice, both in He. 10:33, where it renders Gk. *toúto mén* and *toúto dé* (AV "partly whilst"). Gk. *mén* followed by *dé* often shows a contrast; here, however, the construction separates one thought in a series from another so that each thought is clearly distinguished (Bauer, rev., p. 503). Thus He. 10:33 states that not only did those addressed endure personal suffering, but they also sympathized with their fellow Christians who were experiencing persecution.

SON. In the RSV the most common terms translated "son" include Heb. *bēn, yeleḏ*; Aram. *bar*; and Gk. *huiós* and *téknon*. In the majority of instances, the OT follows the common denotation of a male begotten by a father or set of parents. But "son" is also employed in a broader sense to signify a range of familial, hereditary, and social relationships.

A son was considered heir of his father's possessions. The firstborn son received a double share of the inheritance (Dt. 21:17) and was regarded as the head of family on the death of his father. Sons were desired by Israelite families because they ensured the continuance of the family line, providing the means for parents to live on through their posterity. They were thus considered blessings and gifts from God (Gen. 4:50-52; 2 K. 4:14-17; Ps. 127:3-5; 128:1-4). This perspective is best illustrated by Isaac, whose birth fulfilled the promise God gave to Abraham (Gen. 15:1-5; 21:1-7).

Following the practice of other Semitic peoples, the Hebrews used the patronymic phrase "son of . . ." to specify the family to which a certain person belonged. Its use in the genealogies demonstrates that a son was considered to be part of a broader network of relationships which included clan, tribe, and nation. Because he was an extension of the family, a son could bring either honor or shame to his parents (Prov. 10:1; 15:20; 17:25; etc.); note also the designation of Judas as "son of Simon Iscariot" (Jn. 6:71; 12:4; 13:2, 26). Teachers or sages often addressed their students as sons (1 S. 3:6; Ps. 43:11; Prov. 2:1; 3:1; Eccl. 12:12), following a practice characteristic in

ancient Near Eastern wisdom literature. In common parlance, the members of certain social or professional groups were also called sons, as in "sons of the prophets" (1 K. 20:35; 2 K. 2:3; Am. 7:14); and "sons of the priests" (Ezr. 10:18; Neh. 12:35; 1 Ch. 9:30).

The father/son model expresses God's relationship with the covenant community, especially in the preaching of the prophets. Yahweh calls Israel His son (Ex. 4:22f.; Hos. 11:1), while Ephraim (the northern kingdom) is portrayed as a son without wisdom (Hos. 13:12f.). Of special note are references to the king as the son of God (2 S. 7:14; Ps. 2:7; 89:26f.). Such a pronouncement was not originally meant to be taken literally but was used figuratively to communicate Yahweh's legitimization and recognition of the reigning dynasty. *See* SON OF GOD I.B.1.

Father/son imagery is appropriated in the NT to refer to God's relationship to Christian believers, who are called sons (children) of God (Jn. 1:12; 1 Jn. 3:1). A distinction is made between Christ, the only begotten son of God (Jn. 1:18; 3:16), and Christians, who have been adopted as sons (children) and thus are heirs of the promises of God (Gal. 3:26–4:7).

  C. The Son and the Confession of the Early Church

I. The Self-Testimony of Jesus.–*A. The Son and the Father.* Jesus' sonship is fundamental to His address of God as Father throughout the NT (Mk. 14:36; Rom. 8:15; Gal. 4:6). It speaks especially of Jesus' unity of will with the Father's will. God acts not only through Him but with Him (Mk. 2:7 par.). The book of Hebrews intimately relates obedience to the sonship of Jesus; even though He possesses intrinsic dignity as the Son, He learned obedience through suffering (5:8-10).

The function of Jesus as the Son of God in John's Gospel is based on this intimate relationship. He possesses authority equal to the Father's (Jn. 3:35f.; 5:18; 10:18, 30, 34-36; 16:32; 17:10; 20:28), since the Father both bears witness of Him (5:31-39) and glorifies Him (8:50-54; 11:4; 13:31f.; 16:14; 17:1, 5). The Fourth Gospel also presents Jesus as sharing in the Father's prerogatives to bring life and to judge (5:21-24). Mt. 11:25-27 speaks of the Father's absolute sovereignty in revealing the Son, who in turn exercises an absolute sovereignty in revealing the Father. This sovereignty extends to the Son being the mediator of revelation to all persons.

Matthew 11:25-27 expresses the mutual knowledge between the Father and the Son. This passage, whose authenticity has been intensively debated (see A. M. Hunter, *NTS*, 8 [1961/62], 221-249; I. H. Marshall, *Interp.*, 21 (1967), 91-94), has been characterized as a "meteor from the Johannine heaven" (K. von Hase, *Die Geschichte Jesu* [2nd ed., 1876], p. 422) because of its close affinity with the Fourth Gospel. Some scholars have attributed the saying to Hellenistic mysticism, others to Gnosticism. But its similarity with the OT is equally striking: "For they shall all know me . . . and I will remember their sin no more" (Jer. 31:34).

James Dunn persuasively argued that it is natural to see Mt. 11:27 as the beginning of a long tradition that reached its fruition in John's Gospel (*Jesus and the Spirit,* pp. 28f.). Dunn stated that the closest parallel is with wisdom literature, which speaks of the righteous man who claims to have knowledge of God and calls himself a child of Yahweh (Wisd. 2:13; cf. Sir. 4:10; 51:10). The strongest historical evidence for the authenticity of Mt. 11:25-27 has been Jesus' use of Aram. *'abbā'*, "father" (see J. Jeremias, *Prayers of Jesus* [*SBT*, 216; 1967], pp. 11-65). It is argued that the presence of an untranslated Aramaic word points to a Palestinian origin and an early date.

Did Jesus consider Himself the Son of God? Apart from Mt. 11:27 Jesus' use of "Son" is not extensive, although numerous times He allows Himself to be addressed as such (e.g., Mt. 4:3, 6; Mk. 1:11; 3:11; 5:7; 9:7; Lk. 3:22). Luke significantly portrays Jesus as conscious of sonship before His baptism when He visits the temple, which He calls "my Father's house" (Lk. 2:49). When sonship is understood to refer to one who enjoys intimacy and union with God, and also to one who reveals true knowledge of God, the self-consciousness of Jesus reveals an instinctive sense of sonship even when He Himself does not use the title.

The NT teaching on sonship as a christological theme yields striking, though not necessarily contradictory, differences. Mark speaks of sonship in terms of mission, suffering, and dying; Matthew in terms of a mission that fulfills the destiny of Israel, based on Jesus' conception by the power of the Spirit. In Luke, Jesus is the Son of God at birth, through the Spirit. Hebrews unites a Platonic cosmology and Jewish eschatology; and John emphasizes preexistence. These various perspectives illuminate rather than obscure the central theme of sonship. Jesus is the divine Son who comes from God and who, through His eschatological person, makes God's fatherly presence available to all. *See* GOD THE FATHER: NT II.

B. The Son and Election. 1. In Israel. "Son of God" in the OT can refer to a "heavenly court" of supernatural beings (Gen. 6:2, 4; Job 1:6; 2:1; 38:7; Ps. 29:1; 82:6; 89:6 [MT 7]), or to the mysterious "fourth man" in the furnace who was like a "son of the gods" (Dnl. 3:25). But the most important usage in the OT is for Israel and the Davidic king. Sonship is a fundamental part of the election of Israel. It involves a legal claim (Mal. 1:6), and it also implies a love for Israel as the "first-born" son (Ex. 4:22; Jer. 31:9). This becomes the background for the prophets' oracles of judgment. Israel the son proved ungrateful (Hos. 11:1f.) and less enlightened than mere beasts (Isa. 1:2f.; cf. 30:1, 9). The king is crowned David's son based on 2 S. 7:12-16. Only after he has received his full royal name (2 S. 7:9; 1 K. 1:47), has been granted his first request (Ps. 2:8; 20:4 [MT 5]; 21:1, 3 [MT 2, 4]), and has been invested with a scepter (110:2), can he begin his rule. The king takes the place of God on earth, as His representative. This is a messianic function, as 2 S. 7:12-16 and Ps. 2:7 make clear. He is not God's Son by nature, but he is nonetheless acknowledged by Yahweh as one from whom Yahweh's inheritance and authority come. This clearly shows that sonship is not a natural right, nor is it a power of office. Rather, it is a presence and power of God Himself bestowed through God's free grace of election and confirmation.

2. In Pre-Christian Judaism and Hellenism. "Son of God" was not a common title for the Messiah in pre-Christian Judaism. One exception is the messianic expectation at Qumrân based on Ps. 2:7 and 2 S. 7:14 (4QFlor; cf. 1QSa 2:11f.; 4Qps Dan A). R. Bultmann supported the possibility that the Messiah could also be understood as a Son of God because of the use of "son of God" in Ps. 2 as a royal title (*Theology of the NT,* I [Eng. tr. 1951], 50).

Sonship is used in an eschatological sense in Jub. 1:22-25 (cf. 2:20; 19:29), which depicts God as returning to His children. The Maccabean martyrs are called "children of heaven" in 2 Macc. 7:34. The wisdom tradition intertwines "sonship" and ethics. In Sir. 4:1-10 God calls the righteous man who is a father to orphans a "son." In Wisd. 2:13, 18 the righteous man is mocked as having been forsaken by his father (cf. Mt. 27:43). M. Hengel has made much of the Jewish mystical book *3 Enoch,* where Enoch, translated into heaven, becomes God's vizier and plenipotentiary. Metatron, "the prince of the world," and is even called "little Yahweh" (*Son of God,* p. 46). This, however, appears to have been a fringe element of Judaism.

Many, especially R. Bultmann, have seen a Hellenistic "divine man" (*theíos anḗr*) miracle worker behind the "son of God" in the NT (p. 130). But O. Cullmann pointed out Jesus' rejection of the Hellenistic conception of divine sonship in the temptation story (pp. 276f.). More recently, M. Hengel has shown that the Hellenistic mystery cults did not know of a dying and rising son of God, and the gnostic redeemer myths were not fully developed until the 2nd cent. A.D. (ibid., pp. 25-35). While it must be admitted that "son of God" was used in a broad sense in the hellenistic world for anyone from a Greek mythic hero to the emperor Augustus, this was not generally true for pre-Christian Judaism.

3. The Only Begotten Son. Although Luke (1:32f.) bases Jesus' sonship on 2 S. 7 and Matthew (2:15) on Hos. 11:1, both speak of a virgin birth that is an eschatological new creation by God. Since there is no human father, it is quite appropriate to call Jesus the Son of God, conceived and filled with the creative power of the Holy Spirit. While it is true that, linguistically, the NT takes over the title "Son of God" from the OT, K. Barth reminds us that, of all the titles ascribed to Jesus, "Son of God" came to the forefront for expressing His activity from the standpoint of its *origin* (*CD* IV/1, p. 206). In the Fourth Gospel particularly Jesus is the one who has life in Himself (5:26), who has come in His Father's name (5:43), and who is the living bread that came down from heaven (6:50). This origin of Jesus is not a subject of speculation but is assumed as the basis for His intimate relation with the Father and as the source for His obedience to the Father. In Hebrews, as in Phil. 2, preexistent, divine sonship and the humiliation of His passion are stressed simultaneously (He. 2:18; 5:7; 12:2; 13:12f.; cf. Mk. 15:39; Jn. 3:14; 8:28; 19:5). For Greek minds this was the "intolerable scandal," even up to the 6th cent. A.D. In the title "high priest" the historical passion of Jesus is united to the divine sonship, although this seems paradoxical to the writer (He. 5:8). Only in the exalted Lord are these two designations one and the same (4:14). *See* ONLY BEGOTTEN.

C. The Son as Messiah. Is "the Son of God" an ontological or functional title? O. Cullmann stimulated the discussion by stating, "It is only meaningful to speak of the Son in view of God's revelatory action, not in view of his being" (p. 293). This view is based on his exegesis of 1 Cor. 15:28, and the eschatological subordination of all things to the Father. J. Moltmann, however, has recently countered this view by suggesting that it is the lordship of Christ over all things that is surrendered, not His divine sonship (*Trinity and Kingdom,* [Eng. tr. 1981], pp. 92f.). R. Bultmann, along with others, has suggested that the early Christian use of Ps. 2 for Jesus as a "royal title" does not connote a "supernatural being" but a messianic office. In this view the title "Son of God" is the eschatological title of the bearer of salvation, not a description of Jesus as belonging in essence to God. More recent scholarship, however, appears to agree with J. Dunn that "the primary concept for Jesus does not appear to have been messiahship" (*Jesus and the Spirit,* p. 59). His sense of sonship did not arise from regarding Himself as Messiah. On the contrary, He seemed to resist the use of this title. As K. Barth has said in speaking to this issue, Jesus did not first become the Son of God by being so for us. "He becomes it from eternity; He becomes it as the eternal Son of the eternal Father" (*CD,* I/1, p. 427).

In the 1st cent. the Messiah is the anointed son of David who establishes the kingdom of God in power. Mk. 12:35-37 makes clear that, according to Jesus, the Messiah must be more than David's son. He must be not only the son of David but also the Son of God. This seems to be true when the two titles are combined in the high priest's question to Jesus, to which He replies in the affirmative (14:60-64). In the Transfiguration account, when Jesus appears with Moses and Elijah (regarded as forerunners of the Messiah), He is called "my beloved Son" (9:7). *See* MESSIAH IV.

D. The Son as Lord. In the Epistles of Paul, Gk. *huiós,* "son" appears only 15 times compared with 184 times for *kyriós,* "Lord." While Paul seemingly assigns relatively minor importance to the title "Son of God," he does tend to unite "Son of God" with "Lord," in much the same way as Mt. 26:63f. unites "Son of God" with "Son of man" to connote the high, exalted, apocalyptic figure that Jesus appeared to represent. For Paul, Jesus is "Lord" only because he is "Son of God." Thus "sonship" is given soteriological meaning, uniting ontology and function.

In Rom. 1:3f., the "Son" is the subject of the two-part confession that ends with confessing Jesus as "Lord." The Son's lordship can also be related to "Kingdom," for God has transferred us from the dominion of darkness to the Kingdom of His Son (Col. 1:13).

II. The Son as the Theme of the Gospel.–A. The Son as Servant of Yahweh. The Son as "sent" from God is found in many different strata in the NT. In the parable of the vineyard the son is sent after the servants are killed (Mk. 12:1-12), an obvious reference by Jesus to His own role. Jesus as the "sent one" is the foundation of salvation in the Gospel of John (17:3, 18). The Son can do nothing apart from the commission of the Father (5:19; 7:18). So also, in the pre-Pauline traditions embodied in Gal. 4:4 and Rom. 8:3, the sending of the Son has a soteriological purpose. For Paul the love of God is the motive in sending, which expresses itself finally in not sparing His Son (Rom. 8:32). While some have argued that the Greek verbs used in Gal. 4:4 and Rom. 8:3 do not necessarily imply preexistence, others, including E. Schweizer, contend that since the sending formula occurs only in Paul and John, who have well-developed concepts of preexistence, the preexistence of Jesus as divine Son of God probably is implied (see esp. J. D. G. Dunn, *Christology in the Making* [1980], pp. 36-46).

If one views the sending of the Son as more than a divine commission, there is an ontological foundation for this sending in the filial obedience of Jesus, which can then be seen as the root of what it means for Jesus to be

Son of God. In His subordination to the Father, Jesus presents Himself as the one who is related eternally to the Father as the Father is to Him. Thus, as K. Barth says, the divine sonship of Jesus reveals to us the one God in His mode of being as the Son. "The One who eternally begets is never apart from the One who is eternally begotten" (*CD*, IV/1, p. 209). Intrinsic to the soteriological function as servant of Yahweh is the divine sonship of Jesus that reveals to us the innermost being of God as one who possesses a divine humility and subordination as well as exalted power and sovereign will. Thus the temporal obedience of sonship in Jesus points to an eschatological obedience and sonship (1 Cor. 15:23-28).

B. The Son as Reconciler. The supreme value of the death of the Son was the theme of Paul's gospel (Acts 9:20; 13:33). This was because the One who died was in such intimacy with God (Rom. 5:10; 8:32; Gal. 2:20; Col. 1:13f.). It was as God's Son that He lived and died. Through the sending of His Son in the likeness of sinful flesh, God condemned the rebellion of sin in the flesh (Rom. 8:3). To reconcile to Himself all things is the goal of the sending of the "beloved Son," who is the "image of the invisible God, the first-born of all creation," through whom and for whom "all things were created" (Col. 1:13, 15f., 20). The giving, or the giving up, of the Son on the part of the Father is not the abandoning of the Son, but rather the carrying out of that divine love and purpose which is proper to God in His mode of being as Son. Intrinsic to the "self-emptying" (Phil. 2:7) of Jesus is the subordination of divine Sonship in being obedient, even unto death. Through this death which the Son of God assumed, along with His humanity in the Incarnation (He. 2:17f.; cf. 4:14-16), sinners have been delivered from the power of death and have become children of God (Jn. 1:12). Jesus, as the Son who died, was raised, and lives forever, expiates the sins of all His people, gives them life (1 Jn. 4:9f.; 5:11f.; cf. Rom. 5:10), and cleanses them with His blood (1 Jn. 1:7).

C. The Son as the Power of God over Sin and Death. The power of the Son of God is expressed particularly in the enthronement tradition embodied in Rom. 1:3f. On the basis of Ps. 2:7 and 110:1f., resurrection and enthronement are united in history with the Son of David who is the Son of God. This leads to the emphasis on the resurrection of the Son of God "in power" (Rom. 1:3). The qualitative difference that resurrection makes is related to the ontological status and present efficacy of the Son. While some scholars are cautious about attributing divine Sonship to Jesus before His resurrection, many agree with V. Taylor that "Son of God," "the Son," and "My Son" are presented in the Gospels not as postresurrection titles but as names used during His ministry (*Names of Jesus* [1953], p. 59). The early Church clearly did not restrict His sonship to a postresurrection status. Even in Paul, Rom. 1:3f. is the only text that links "Son of God" with the Resurrection. In fact, the title achieves a further significance in the Parousia (1 Thess. 1:10) and the consummation of all things to the Father (1 Cor. 15:28).

III. The Son as the Source of a New Humanity.–A. The Son and the Spirit. The coming of the Spirit upon Jesus and the opening of the heavens during His baptism points to the eschatological revelation of the king of the last times. Some scholars see Isa. 42:1 as the background of the baptism of Jesus: "In thee I am well pleased," viewing the beloved Son as the Servant of Yahweh. Others claim Ps. 2:7 as a more likely source. But conflation of the two concepts could well be seen in the baptismal announcement and anointing. The Son bears the Spirit of God from baptism onward, and ministers in the power of the Spirit. The Spirit henceforth becomes a "Spirit of sonship" (Rom. 8:15-17), and those who receive the Spirit of Christ are adopted into His own sonship, and become children of God (Jn. 1:12; cf. 1 Cor. 12:12f.; Gal. 3:26f.).

B. The Son from Whom Sonship Comes. In one sense, all persons can be called the sons of God through their descent from Adam (Lk. 3:38; Acts 17:28). The particular emphasis of the NT, however, is on the sonship bestowed by the Son. The disciples of Jesus and Christians in general are called "sons" (Mt. 17:26; He. 2:10; 12:5-8; cf. "children" in Jn. 1:12). Their origin is in God Himself (Jn. 1:13; 3:3; 1 Jn. 2:29; 3:9f.; 4:7; 5:1, 4, 18), because the Son has confessed them as brethren (He. 2:10f.). Their destiny is to be conformed to the image of God's Son (Rom. 8:29). This is a gift (1 Jn. 3:1), based on the authority of the Son (Jn. 1:12). Sonship as a Christian privilege is a product of the Spirit and baptism (3:5f.), through which the eschatological divine sonship in the OT is fulfilled (Hos. 1:10; Rom. 9:26). They are sons of God because they are "sons of the resurrection," and the Son Himself is their brother. This clearly shows that the eternal sonship of Jesus is the continuing foundation and objective reality upon which Christian experience and faith rests.

C. The Son and the Confession of the Early Church. The essential confessional term of the early Church is that Jesus is the Son of God. Although Paul does not use the title frequently, he does use it strategically. It is fundamental to his theology of revelation and his call to be an apostle (Gal. 1:15f.; cf. 1:1). There is little mention of the title in Acts until Paul's conversion (Acts 9:20). In the Gospels it is located in Peter's confession (Mt. 16:16), as well as the climax to Mark's Gospel (15:39; cf. 1:1; 14:61). Both demons and pagans confess Him as Son of God (Mt. 8:29; Mk. 5:7; 15:39; Lk. 4:41). The title is an integral part of an early trinitarian catechism in the Church (Mt. 28:19). In the Fourth Gospel "Son of God" is equated with the confession of Jesus as the "King of Israel," and "Christ" (Jn. 1:49; 11:27; 20:31). Johannine literature also speaks of a participation, or "abiding" in the being of the Son (1 Jn. 4:15). Faith in the Son equals faith in God (5:10). To confess the Son is to confess the Father (2:23). True confession of God can be done only in the "name of the Son" (3:23; 5:13).

Thus in confessing Jesus as the Son of God, early Christians acknowledged not only a new revelation of God but a "new man." G. D. Dragas suggested that, in acknowledging Jesus as Son of God, the early Church saw the perfect image of a new humanity, formed by an act of God, personally mediated through God the Spirit and centered on God the Son ("The Eternal Son," in T. F. Torrance, ed., *The Incarnation*, [1980], p. 22). In this sense the sonship of Jesus was the subject of their faith and not merely object. It was initially the subject of creed, doxology, liturgy, a new human existence, and therefore a new theology. The human act of faith, obedience, and worship was coordinated initially in Jesus Himself as the unique Son of God, and consequently in all those who were adopted into His own unique divine sonship and became the church of God, His body.

SON OF MAN. The singular indeterminate form, Heb. *ben-'āḏām*, occurs one hundred seven times in the OT (e.g., Nu. 23:19; Job 16:21; Ps. 8:4 [MT 5]; Jer. 49:18, 33; 50:40; Ezk. 2:1), often translated "man"; the phrase occurs forty-eight times in the plural, thirty-two times in the indeterminate form *bᵉnê 'āḏām* ("sons of men," i.e., "human beings," "mortals"), and sixteen times in the determinate form *bᵉnê-hā'āḏām*. In one instance only, Dt. 32:8, the LXX renders the indeterminate plural as *huioús Adam*, "sons of Adam." Heb. *ben 'ĕnôš* occurs one time (Ps. 144:3; NEB "mankind"). Heb. *ben 'îš* occurs three times in the indeterminate plural (Ps. 4:2 [MT 3]; 49:2 [MT 3]; 62:9 [MT 10]). Aram. *bar 'ĕnāš* occurs in Dnl. 7:13. Gk. *ho huiós toú anthrṓpou* appears in the NT; since this phrase is both an awkward and an ambiguous expression in Greek (lit. "the man's son"), it is probably a Semitism used to translate a Hebrew or (more likely) Aramaic original. The "Son of man" designation, therefore, could hardly have been the creation of Hellenistic Christianity, but must have roots in the earliest Palestinian Christian community if not in the sayings of Jesus Himself. The original is probably Galilean Aramaic (the major spoken language of Palestine in the 1st cent. A.D.), since there is scarcely any evidence that the definite article was used with the Hebrew expression *ben 'āḏām* (the only exception is 1QS 11:20).

I. Use of the Idiom in the Hebrew Bible. *–A. General Usage.* Of the one hundred seven occurrences of Heb. *ben 'āḏām* in the OT, ninety-three are in Ezk. 2:1–47:6. In the fourteen outside Ezekiel, with the exception of Dnl. 8:17 (where Daniel is addressed as "son of man" in imitation of Ezekiel), the phrase occurs only in poetic couplets, *always* in the second line, and almost always parallel to either *'āḏām* or *'ĕnôš*, both of which mean "man" or "human being" (Nu. 23:19; Job 16:21; 25:6; 35:8; Ps. 8:4 [MT 5]; 80:17 [MT 18]; 146:3; Isa. 51:12; 56:2; Jer. 49:18, 33; 50:40; 51:43). In each instance *ben 'āḏām* is literally translated in the LXX with the anarthrous Greek phrase *huiós anthrṓpou*. In this context, therefore, *ben 'āḏām* also means "human being." An Ugaritic poetic text also has the terms *adm* and *bn adm* in parallel couplets, indicating that in Ugaritic the phrase *bn adm* also means "human being" (Smith, pp. 59f.). Since eleven of the fourteen passages contain couplets in synonymous parallelism it is clear that "son of man" is a poetic synonym for "man," perhaps with the connotation "a mere mortal." The fact that "son of man" is limited to the second line of poetic couplets indicates the presence of a Hebrew poetic convention. The Hebrew plural indeterminate form *bᵉnê 'āḏām* occurs forty-eight times in the OT, most frequently in poetic couplets in which the phrase often occurs in the second line, although it is used in a greater variety of ways than the singular phrase (e.g., Dt. 32:8; 2 S. 7:14; Ps. 12:8 [MT 9]; 21:10; Isa. 52:14). The Hebrew idiom *bᵉnê 'āḏām/bᵉnê-'îš* (lit. "sons of man"/"sons of men") means "men of low estate and men of high estate" (Ps. 49:2 [MT 3]; 62:9 [MT 10]). The Hebrew phrase *bᵉnôṯ hā'āḏām* ("daughters of men," i.e., "mortal women," as contrasted to *bᵉnê-hā'ĕlōhîm*, "sons of god," i.e., "divine beings") is found just twice in the OT (Gen. 6:2, 4). *Ben 'āḏām* is used positively (Ps. 80:17 [MT 18]; Isa. 56:2; cf. Ps. 45:2 [MT 3]; Prov. 8:31) and neutrally (Job 25:6; Ps. 89:47 [MT 48]; 90:3), but primarily negatively, for whether it occurs in the singular or plural form, it has a generally negative significance in the OT, an emphasis particularly prominent in the OT wisdom literature (cf. Eccl. 1:13; 2:3; 3:10; 8:11; 9:12; cf. Caragounis, p. 57). The neutral sense (helplessness, weakness, frailty) is closely related to the negative sense (selfish, wayward, lawless, i.e., "fallen").

B. Ezekiel. In Ezekiel, the prophet is addressed seventy times as "son of man" (e.g., 2:1, 3; 3:1, 3, 4, 10), and twenty-three times in the more emphatic form, "you son of man" (e.g., 2:6, 8), both vocative uses of the term. Since the term *'āḏām* is used collectively in Hebrew, its use in conjunction with *ben* means "you individual man." The emphasis here is not on the individuality of the prophet, but rather on "an individual within the created order" (Zimmerli, I, 131), for the implicit counterpart to *'āḏām* is *'el* (Isa. 31:3; Ezk. 28:2). Ezekiel is called "son of man" by God because he is identified as a representative of Israel, the people of God. The vocative use of "son of man," so common in Ezekiel, is rarely found in later Jewish literature (cf. Dnl. 8:17; 1 En. 60:10).

C. Daniel. The Hebrew plural *bᵉnê 'āḏām* occurs once, in Dnl. 10:16, while the plural Aramaic phrase *bᵉnê-'ᵃnāšā'* occurs twice (2:38; 5:21). The singular form occurs twice: once in Hebrew in 8:17, where Daniel is addressed as "son of man" in a way similar to Ezekiel, and once in Aramaic, when the term *kᵉbar 'ĕnāš* ("like a son of man") occurs (7:13). Whether it occurs in the singular or plural, the phrase refers to a human being or to human beings in general, with the exception of 7:13 and 10:16. In the latter passage an angel is described as "one in the likeness of the sons of men."

Many theories of the non-Israelite origin of the Danielic Son of man figure have been proposed, including Canaan (Hadad/Baal according to Colpe and Kearns), Ugarit, Egypt, Gnosticism, Iran (Mowinckel), and Babylon. Borsch has even proposed that the basis for the Son of

man figure in Judaism is found in a more general Royal Man myth, said to be widespread in the ancient Near East. No particular theory has commanded widespread agreement among scholars. (The various theories are reviewed by Colpe, *TDNT,* VIII, 408-420.)

Though the exact significance of the phrase "one like a son of man" is disputed, it seems relatively clear that it is neither a title nor a reference to a well-known figure. Since the four beasts seen by Daniel are symbols referring to human kingdoms, the "one *like* a son of man" is not a human being but something or someone that is *compared* to a human being. In contrast to the four beasts seen by Daniel in 7:2-12, which are later interpreted as four kings (v. 17), the fifth figure is "one like a son of man" (v. 13), later interpreted as "the saints of the Most High" (v. 18). In the LXX version of v. 13, instead of a presentation of the "one like a son of man" to the Ancient of Days (which clearly distinguishes the two figures), the "one like a son of man" is identified with the Ancient of Days: "he came like a son of man, and like the Ancient of Days was present, and those who were near were present with him." Perhaps the LXX translators had in mind Ezk. 1:26, in which Ezekiel reportedly saw God as one "in the likeness of a man" sitting on "the likeness of a throne." The phrase "the saints of the Most High" (Dnl. 7:18) is generally but probably incorrectly understood as a reference to Jews who remained faithful to Yahweh during the Maccabean rebellion (cf. Ps. 34:9; Dnl. 7:22, 25, 27).

Several scholars have proposed that the Danielic son of man should be understood as a divine figure, i.e., as a hypostatization of the glory of Yahweh (Kim, pp. 13-18), or "a heavenly Being with honors and powers normally predicated of God" (Caragounis, pp. 80f.). Other scholars have understood the phrase as a reference to angels, since most references to "holy ones" (i.e., "saints") in the OT are used of angels (Collins, pp. 123-152). Similarly, the phrase "one like a son of man" is commonly understood as a collective representation of Israel (the older view that it refers to the Messiah has been generally abandoned).

The view that this figure refers to an angel, perhaps representative of the angelic host, though not widely held, is based on weighty arguments. In Dnl. 8:15 (cf. 10:16) the phrase "one having the appearance of a man" is used of the "man" Gabriel (9:21; cf. 10:5; 12:6). Since both ch. 7 and ch. 8 can be understood as referring to the heavenly battle described in 10:12–11:1, it is probable that the "son of man" figure in 7:13 represents either the angelic host or Michael the leader of that host, who receives the kingdom on behalf of the host of angels and of Israel (Collins, pp. 144-46). Thus the phrase "the people of the saints of the Most High" in 7:27 refers to "faithful Jews who share in the eschatological triumph of the [angelic] host" (Collins, p. 146). The figure of the "one like a son of man," then, is a type of heavenly angelic savior figure occasionally mentioned in early Jewish literature (cf. 1QM 17:6-8; 11QMelch; Testament of Moses 10:2). 1QM 17:6-8, for example, has: "He will raise up the kingdom of Michael in the midst of the gods, and the realm of Israel in the midst of all flesh." In Dnl. 7:13, therefore, the phrase "son of man" is perhaps not used in a titular sense, but rather refers to a heavenly angelic being whose victory in the heavenly realm both guarantees and is paralleled by the victory of the people of God in the earthly realm.

II. Use of the Idiom in Early Jewish Literature. *–A. General Considerations.* The designation "son of man" occurs only rarely in early Jewish literature. It occurs six times in the OT Apocrypha (1 Esd. 4:37; Tob. 7:7; Jth. 8:12, 16; Wisd. 9:6; Sir. 17:30), and always (with the exception of Tob. 7:7) in the negative or neutral sense. In the Pseudepigrapha the designation is found in 1 En. 37–71 (see II.C below) and in the Apocalypse of Elijah (Coptic) 1:1 (1st-4th cents. A.D.). In the latter, Elijah is addressed as "son of man" in imitation of Ezekiel. The concept, if not the exact designation, also occurs in 4 Ezra (see II.C below). There is some evidence suggesting that Dnl. 7:9-14 was interpreted messianically by the end of the 1st cent. A.D. (4 Ezra 13). Thereafter the messianic interpretation is attested only sporadically in rabbinic literature (Vermes, *Jesus,* pp. 170-72), and it is based on the mention of two thrones in Dnl. 7:9 rather than on the mention of "one like a son of man" in 7:13.

B. 1 Enoch 37–71 (the Parables of Enoch). One of the significant texts in which the Son of man conception is found is the Similitudes or Parables of Enoch, 1 En. 37–71. After an introduction (37:1-4), this section of 1 Enoch consists of three discourses or parables: (1) First Parable (chs. 38–44), (2) Second Parable (chs. 45–57), (3) Third Parable (chs. 58–69), (4) Epilogue: The Ascension of Enoch (chs. 70–71). The designation "son of man" (reflecting three different Ethiopic expressions: "son of man," "son of the male," and "son of the child of the mother of all the living") occurs sixteen times in 1 En. 37–71 (46:2, 3, 4; 48:2; 60:10; 62:7, 9, 14; 63:11; 69:26, 27 [following *APOT,* II, 235], 29 [twice]; 70:1; 71:14, 17), while the term "Elect One" occurs fifteen times (e.g., 39:6; 40:5; 45:3f.), the term "Messiah" or "Anointed One" occurs just twice (48:10; 52:4), and the term "Righteous One" only twice (38:2; 53:6). Both the Son of man and the Elect One sit on a throne (45:3; 62:5); both are righteous (46:3; 62:2); both exercise judgment (45:3; 46:2). In contrast to these terms, however, the three expressions translated "son of man" are not used in a titular sense (except in 1 En. 70–71) because they are preceded by the demonstrative adjectives "this" or "that" (*TDNT,* VIII, 423). All of these designations apparently refer to the same person. While "son of man" dominates the texts from 62:5–71:17, it appears that the author is trying to equate this nontraditional and nonmessianic designation with other, more traditional, messianic titles. In other words the author of 1 En. 37–71 used Dnl. 7 to produce a Son of man who functions as a messianic figure without parallel in Jewish eschatology.

This figure is portrayed as preexistent and hidden (48:3; 62:7), yet eventually revealed (48:7 [following *APOT,* II, 216]; 62:7; 69:29). He functions as judge (46:4-6; 62:3-11; 69:27, 29), revealer (46:3), vindicator of the righteous (48:4; 62:12f.; 71:17), universal ruler (62:6f.; 71:15-17), and object of worship (48:5; 62:9; cf. Caragounis, pp. 116-19). Enoch is addressed (like Ezekiel and Daniel) as "Son of man" in 60:10, and identified as the Son of man in 1 En. 71:14-17. This is significant, for it constitutes the identification of a human being (Enoch) with a heavenly figure, a phenomenon that is also reflected in 11QMelch, where the biblical figure Melchizedek (Gen. 14:18-20; Ps. 110:4; He. 7:1-17) is presented as an angelic, heavenly figure with an important eschatological role. Theisohn argued convincingly that the description and functions of the Son of man or the Chosen One in 1 En. 37–71 are derived from the OT, and it is readily apparent that 1 En. 46 (in which the designation "son of man" occurs three times), is dependent on Dnl. 7.

Before the discovery and publication of the Dead Sea Scrolls (1947ff.), 1 En. 37–71 was dated to the 1st cent. B.C. (Charles, *Book of Enoch* [1893], p. liv). Since not a single fragment from 1 En. 37–71 has been identified among the numerous fragments found in Cave 4 at Qumrân, or indeed among those from any of the other ten caves (Milik, p. 89), it is now widely accepted that 1 En.

37–71 was composed *after* A.D. 70. Milik has proposed that the Parables of Enoch is a Christian Greek composition (which uses the LXX), inspired by the Son of man title found in the Gospels (p. 92), and composed *ca.* A.D. 270 (p. 96). Most scholars disagree with Milik, however, and regard the Parables as a Jewish composition (originally written in Aramaic or Hebrew), written after A.D. 68., probably toward the end of the 1st cent. A.D. (Knibb, pp. 358f.; *HJP*^{2}, III/1, 259).

C. 4 Ezra (= 2 Esdras). It is often proposed that 4 Ezra is dependent on 1 En. 37–71. 4 Ezra 3–14 is a Jewish apocalypse composed toward the end of the 1st cent. A.D. Later a Christian interpolator added chs. 1–2 and 15–16. Chapters 3–14 consist of a series of seven visions: (1) 3:1–5:20; (2) 5:21–6:34; (3) 6:35–9:25; (4) 9:26–10:59; (5) 11:1–12:51; (6) 13:1-58; (7) 14:1-48. In the sixth vision the figure of "the man from the sea" (his origin in the sea is a metaphor for his hiddenness, cf. 13:51f.) has many points of similarity with the "one like a son of man" in Dnl. 7. For the author, the Messiah or Anointed One is hidden, to be revealed at the end of days, and a descendant of David (4 Ezra 7:28; 12:32). He will act as judge and will first rebuke and then destroy the wicked (12:32f.).

While the functions of the Messiah, understood as equivalent to "the man from the sea" in 4 Ezra, are similar to the functions of the "son of man" of 1 En. 37–71, those similarities are not sufficient to posit literary dependence by either author. The author of 4 Ezra 13, like the author of 1 En. 37–71, was dependent on Dnl. 7. Dependence on Dnl. 7:13 is particularly evident in 4 Ezra 13:1-3. The major characteristics of "the man from the sea" include the facts that (1) he is *preexistent* (13:52; cf. 7:28; 14:9), (2) he is the *son of God* (13:32, 37; cf. 7:28f.), (3) he is the *Messiah* (7:28f.; 12:32), (4) he is a *Judge* (12:32f.; 13:37f.). The real significance of 4 Ezra 13 is that it is probably the earliest extant evidence for the messianic interpretation of Dnl. 7:13 in Judaism.

D. Summary and Conclusions. The Jewish exegetical technique called midrash pesher, according to Perrin, was the means whereby the post-Easter Christian community and the authors of 1 En. 37–71 and 4 Ezra 13 (all independently of each other) interpreted the Son of man figure of Dnl. 7:13 as an individual, supernatural apocalyptic Son of man redeemer figure. In his view, which is basically correct, there was no pre-Christian messianic Son of man figure. Yet the weakness in this view is that a similar step should be taken in three different eschatological circles (one Christian, two Jewish), all independently of one another.

C. Colpe, too, regarded the evidence from Dnl. 7, 1 En. 37–71, and 4 Ezra 13 as an inadequate basis on which to posit a pre-Christian Son of man concept in Jewish apocalyptic thought. He therefore proposed a fourth source based on evidence from eight passages in the Synoptic Gospels (Mt. 24:27 par. Lk. 17:24; Mt. 24:37 par. Lk. 17:26; Lk. 17:30; 18:8b; 21:26; 22:69; Mt. 10:23; 24:30a; Colpe, pp. 433-38). This he considered a common source for both the Jewish and Christian interpretations of the Son of man figure in Dnl. 7:13 (pp. 420-430). Yet this solution too raises more questions than it answers.

In the light of our discussion of Dnl. 7, 1 En. 37–71, and 4 Ezra 13, it appears that (1) there were emerging beliefs in Judaism of heavenly, angelic redeemer figures (e.g., Michael), and of human beings who were somehow identified with heavenly, angelic figures (e.g., Enoch, Melchizedek); (2) there was a tendency to speak of the preexistence of the Messiah; (3) there is no evidence for a pre-Christian messianic Son of man figure that could serve as a background for understanding the Son of man sayings in the Gospels; (4) two functions of the Son of man in 1 En. 37–71 and of the man from the sea in 4 Ezra 13 that are not found in Dnl. 7 are that he judges the nations on behalf of God and that he gathers the redeemed for the kingdom.

III. Use of the Idiom in the NT.-A. General Considerations. The title "Son of man" occurs eighty-two times in the Gospels; sixty-nine times (in 39 pericopes) in the Synoptics (14 times in Mark, 30 times in Matthew and 25 times in Luke), and thirteen times (in 11 pericopes) in John. In the Gospels the designation is used only by Jesus Himself except in one text, where His words are quoted. In Jn. 12:34 the crowd responds to Jesus by asking, "How can you say that the Son of man must be lifted up? Who is this Son of man?" In addition, "Son of man" occurs once in Acts, where it is attributed to the dying Stephen (Acts 7:56).

No attempts are made in the Gospels to explain the meaning of the phrase. This absence of any definition or explanation may imply that the designation was so well known to Jesus' contemporaries that any such explanation would be superfluous. Alternately, the same phenomenon may be explained by supposing that the title was so familiar to the Evangelists that they assumed that their readers would not require explanation or definition.

Another significant feature about the Greek phrase *ho huiós toú anthrópou* is that, with the exception of Jn. 5:27, it always has the definite article, suggesting that it referred to a well-known entity. It may, therefore, reflect an Aramaic expression that did not simply mean "son of man" but "*the* Son of man," or "*that* Son of man." C. F. D. Moule, who considered the Son of man figure in Dnl. 7 of decisive importance for understanding the designation in the Gospels, has suggested that Jesus alluded to "*the* [well-known, Danielic] Son of man" (Moule, p. 14). While this theory is possible, Galilean Aramaic alternated between the definite (arthrous) and indefinite (anarthrous) use of the idiom *bar nāš(ā')*, so that it is not possible to be certain that the use of the arthrous Greek phrase *ho huiós toú anthrópou* is a consistent way of translating a corresponding arthrous Aramaic idiom. Jesus is never addressed as the Son of man in the Gospels, nor is the designation ever used in credal form like the titles Christ, Son of God, and Lord. (The closest to a use of Son of man as a confessional designation is reflected in Jn. 9:35-37.) Furthermore, there is not a single instance in the Gospels in which a saying of Jesus is introduced with "The Son of man says."

The Son of man sayings in the Synoptic Gospels were classified into three groups by Jackson and Lake (*BC*, I, 375), followed by R. Bultmann (I, 30). These three categories include sayings that speak of the Son of man (1) *as presently at work* (the *earthly* Son of man sayings), e.g., the Son of man has authority over the sabbath (Mk. 2:28 par. Mt. 12:8 par. Lk. 6:5), the Son of man has authority to forgive sins (Mk. 2:10 par. Mt. 9:6 par. Lk. 5:24); (2) *as suffering, dying, and rising again*, e.g., the Synoptic passion and resurrection predictions (Mk. 8:31 par. Mt. 16:22 par. Lk. 9:22; Mk. 9:31 par. Mt. 17:22f. par. Lk. 9:44; Mk. 10:33f. par. Mt. 20:18f. par. Lk. 18:31-33); and (3) *as coming again in eschatological glory*, often using the Danielic motif of coming with the clouds (Mk. 14:62 par. Mt. 26:64 par. Lk. 22:69), or simply coming (Mt. 10:23; 24:27, 37, 39; Mt. 24:44 par. Lk. 12:40; Lk. 18:8) and the non-Danielic motifs of the gathering of the elect (Mk. 13:26f. par. Mt. 24:30f.), and of the Son of man acting on God's behalf as the eschatological judge (Mt. 13:41f.; 19:28). The largest number of sayings are those that concern the coming or eschatological Son of man (twenty-seven occurrences).

This system of classification is useful though problematic. The thirteen occurrences of the phrase Son of man in John do not easily or naturally fit into this classification. Furthermore, there are passages in which several of these categories occur in the same context. In Lk. 17:22-30, for example, a present Son of man saying is found next to a suffering Son of man saying and two coming Son of man sayings. Again, in Mk. 8:31-38, suffering is closely associated with exaltation.

B. Mark. In Mark the Son of man designation is used fourteen times, including two *earthly* sayings (2:10, 28), nine *suffering* sayings (8:31; 9:9, 12, 31; 10:33, 45; 14:21 [twice], 41), and three *future* sayings (8:38; 13:26; 14:62). Twelve of these sayings are placed after the episode of the confession of Peter at Caesarea Philippi (8:27-30), when Jesus begins to predict His suffering and death. With few exceptions (2:10, 28; 14:62), the designation is used by Jesus in conversation with His disciples, yet in spite of that fact the Son of man designation is Jesus' way of publicly claiming to be the earthly, suffering, and vindicated one who asserts His divine authority in the face of opposition (Kingsbury, pp. 168-173). The Son of man sayings appear to be ways in which Jesus reveals His real status, and therefore complement the secrecy motif that pervades the Second Gospel. Many critical scholars hold that the three sayings that predict the passion, death, and resurrection of the Son of man (Mk. 8:31; 9:31; 10:33f.) are variations of one underlying saying.

The common feature linking all occurrences of the "Son of man" designation in Mark is the *authority* of Jesus. The authority of Jesus as Son of man is proclaimed (2:10, 28), denied by Jewish leaders, which leads to the Son of man's suffering (8:31; 9:9, 31; 10:33, 45; 14:21, 42), and vindicated (8:38; 13:26; 14:62); cf. Hooker, pp. 178-182. Mark makes clear throughout his Gospel that Jesus, who designates Himself as the Son of man, is the Messiah, the Son of God (1:1; 11, 24; 3:11; 5:7; 9:7; 10:47f.; 11:9f.; 12:6; 14:61f.; 15:2, 39). This is particularly so in Mk. 8:38: "For whoever is ashamed of me and of my words in this adulterous and sinful generation, of him will the Son of man also be ashamed, when he comes in the glory of his Father with the holy angels." Here the reference to "the Father" indicates that "the Son of man" is in fact "the Son of God" (Kim, p. 1; Kingsbury, pp. 171f.).

C. Q. The phrase "Son of man" occurs eleven times in Q, the Sayings Source, including four *earthly* sayings ([Mt. 5:11 par.] Lk. 6:22; Mt. 8:20 par. Lk. 9:58; Mt. 11:19 par. Lk. 7:34; Mt. 12:32 par. Lk. 12:10), and six *eschatological* sayings ([Mt. 10:32 par.] Lk. 12:8; Mt. 19:28 par. [Lk. 22:30]; Mt. 24:27 par. Lk. 17:24; Mt. 24:37 par. Lk. 17:26; Mt. 24:39 par. Lk. 17:30; Mt. 24:44 par. Lk. 12:40). The suffering Son of man sayings are absent from Q (a possible exception is Mt. 12:40 par. Lk. 11:30), though the absence of a passion narrative in Q sufficiently accounts for this absence. In Q the Son of man is already identified with the figure in Dnl. 7:13.

D. Matthew. The phrase "Son of man" occurs thirty times in Matthew, including seven *earthly* sayings (8:20; 9:6; 11:19; 12:8, 32; 13:37; 16:13), ten *suffering* sayings (12:40; 17:9, 12, 22f.; 20:18f., 28; 26:2, 24 [twice], 45), and thirteen *eschatological* sayings (10:23; 13:41; 16:27, 28; 19:28; 24:27, 30 [twice], 37, 39, 44; 25:31; 26:64). Two additional sayings are found in variant readings (18:11; 25:13). Six occurrences of Son of man are unique to Matthew (10:23; 13:37, 41; 24:30a; 25:31; 26:2). Matthew obviously understands the Hebrew idiom, for he changes the phrase "sons of men" in Mk. 3:28 to "men" in Mt. 12:31. In two instances Matthew adds the phrase "Son of man" in rewriting Mark (16:28; 26:2). Matthew often changes the designation "Son of man" in his sources to "I," "me," or "he" (referring to Jesus): in Mt. 16:21, the author substitutes the pronoun "he" (= Jesus) for the phrase "Son of man" found in Mk. 8:31; in Mt. 5:11, "because of me" is substituted for "because of the Son of man" probably found in Q (Lk. 6:22); in Mt. 10:32, "I will confess" replaces "the Son of man will confess" probably found in Q (Lk. 12:8); in 10:32 Matthew apparently substitutes "I" (= Jesus) for the phrase "Son of man" in Q (cf. Lk. 12:8). These variations suggest that Matthew did not regard Son of man as a messianic title, but as a self-designation of Jesus. One of the more remarkable uses of the Son of man designation is in 16:13: "Who do people say that the Son of man is?" Not only does the Evangelist use the designation "Son of man" to replace the "I" of Mk. 8:27, he also clearly implies that "Son of man" is not a title that could be an appropriate answer to the question "Who do people say that I am?" Matthew tends to emphasize the role of the Son of man as eschatological judge (16:27; 19:28; 24:30f.; 25:31-33). Furthermore, the Son of man designation is virtually synonymous with Messiah in some passages (13:41; 16:27; 24:30f.; 25:31).

E. Luke. The Son of man designation occurs twenty-five times in Luke, including eight *earthly* sayings (5:24; 6:5, 22; 7:34; 9:58; 12:10; 17:22; 19:10), seven *suffering* sayings (9:22, 44; 11:30; 18:31; 22:22, 48; 24:7), and ten *eschatological* sayings (9:26; 12:8, 40; 17:24, 26, 30; 18:8; 21:27, 36; 22:69). Seven Son of man sayings are unique to Luke (17:22, 30; 18:8; 19:10; 21:36; 22:48; 24:7; cf. Acts 7:56). In keeping with his historical intentions (cf. Lk. 1:1-4; Acts 1:1-5), the author adapts written sources (Mark and Q) for his own literary and historical purposes, but does not freely invent material. Yet in two suffering sayings found only in Luke (22:48; 24:7) it is clear from the absence of parallels in Matthew and Mark that Luke added the title to the material found in his sources and that for him the title was a special feature of Jesus' speech in which He referred exclusively to Himself.

F. John. The phrase "Son of man" occurs thirteen times in John (1:51; 3:13f.; 5:27; 6:27, 53, 62; 8:28; 9:35; 12:23, 34 [twice]; 13:31). Since none of the Johannine Son of man sayings has parallels in the Synoptic tradition, and the authenticity of the Johannine sayings is widely doubted, many regard these sayings as suggesting that the Son of man designation could be inserted into the Jesus tradition in such a way that the convention that Jesus alone uttered the title was maintained. In Jn. 12:34 the crowd responds, "We have heard from the law that the Christ remains for ever. How can you say that the Son of man must be lifted up? Who is this Son of man?" This suggests that the identity of the Messiah and the Son of man caused difficulties, perhaps indicating either that the concept itself was unknown or (more likely) that the crowd did not know who was playing the role of the Son of man. The healed blind man is asked by Jesus if he believes in the Son of man (though a majority of witnesses read "Son of God," "Son of man" is doubtless the more original reading), to which he responds, "And who is he sir, that I may believe in him?" (9:35f.). In neither case is it clear that the Son of man designation was known in Judaism (though it was obviously well known to both John and the community he represents).

The preexistence of the Son of man, referred to in Jn. 3:13 and 6:62, is a feature found only in the Fourth Gospel. Most occurrences of the Son of man designation refer to his suffering and death, which are regarded as constituting his exaltation (3:13f.; 6:62; 8:28; 12:23, 34; 13:31). Moloney argued (against Schnackenburg, Schulz, *et al.*) that the Johannine Son of man is a title that is not

interchangeable with either "Son" or "Son of God." Rather, claimed Moloney, the title Son of man is used of the present earthly activities of Jesus as revealer and judge. Though He has come from heaven, the title refers to neither His pre-incarnate nor His post-incarnate state. J. L. Martyn has demonstrated that in four extensive passages the Evangelist never allowed the identification of Jesus as the prophet or the Messiah to be emphasized without replacing it with the Son of man title (cf. 3:1-14; 6:14-53; 7:25–8:28; 9:17-41; Martyn, pp. 130-35).

G. Pauline Letters. Although the designation "Son of man" is absent from the thirteen NT letters attributed to Paul (as it is from the other NT letters with the exception of Hebrews), some scholars insist that Paul knew either the title or at least the concept. This view is based on the tenuous supposition that oriental Primal Man speculation took two specific yet related forms in early Judaism: (1) a Heavenly Man (i.e., the Son of man), who is now hidden but who will appear at the end to judge the nations and to gather the elect (only in Dnl. 7; 1 Enoch 37–71; 4 Ezra 13); and (2) a Heavenly Man, who was identified with the first man Adam (Philo of Alexandria; rabbinic Adam speculation; Paul). Since the phrase *ben 'ādām* can be understood not only as "a human being" but also as "son of Adam," Cullmann has proposed that Paul's contrasts between Adam and Christ (Rom. 5:12-21; 1 Cor. 15:42-50; Phil. 2:5-11) are related to the Son of man concept in Judaism (Cullmann, pp. 166-181). Though the first Adam and the second Adam, or the earthly man and the heavenly man, referred to in these passages are complex matters, there is general agreement among scholars that the distinction between the heavenly and earthly man is pre-Pauline (H. Conzelmann, *1 Corinthians* [Eng. tr., *Hermeneia,* 1975], pp. 284-86).

The figure of the heavenly man first appears in the biblical commentaries of Philo of Alexandria. Yet Philo's distinction between the heavenly or "intelligible" (Gk. *noētós*) man of Gen. 1:26 and the earthly or "sensible" (*aisthētós*) man of Gen. 2:7 (*De opificio mundi* 134f.; *Legum allegoriae* 1.31f.; *Quaestiones et solutiones in Genesin* i.4, 8) is pre-Philonic (Tobin, pp. 102-134). Both Paul and Philo were dependent on a Hellenistic Jewish interpretation of Gen. 1–2 that had taken shape by the end of the 1st cent. B.C. in Alexandria. Arius Didymus (late 1st cent. B.C.), an eclectic Hellenistic philosopher influenced by both Middle Platonism and Stoicism, specifically proposed that an archetypal generic man who was part of the *kósmos noētós,* "intelligible world," was the paradigm for specific human beings in the *kósmos aisthētós,* "sensible world" (Eusebius *Praep. ev.* xi.23). It was this notion that was picked up by Hellenistic Jewish philosophers and was developed by Philo. Paul's innovative contribution to this exegetical tradition, determined by his Adam/Christ antithesis, was to stand the tradition found in Philo on its head by having the earthly man precede the heavenly man. There is therefore no real connection between the Adam/Christ antithesis of Paul and the hypothetical messianic Son of man figure in pre-Christian Judaism. Furthermore, even the earthly and heavenly man speculation found in Philo is based on the cosmological speculation of Middle Platonism rather than on oriental myths concerning the Primal Man.

H. Hebrews and Revelation. Outside of the eighty-three times that the designation Son of man occurs in the Gospels and Acts, the phrase occurs anarthrously in He. 2:6; Rev. 1:13; 14:14. He. 2:6 quotes Ps. 8:4 (MT 5) without any suggestion that the author is aware of the use of the Son of man title in the Gospels. In Rev. 1:13 and 14:14 the expression "one like a son of man" is used, clearly alluding to Dnl. 7:13, but again without any clear indication that the author was aware of the Son of man designation in the sayings tradition. The description of this figure is drawn in part from the description of the Ancient of Days in Dnl. 7. This reflects an ancient Jewish exegetical tradition expressed in two LXX MSS of Daniel, the Codex Chisianus (MS. 88), and the incomplete Chester Beatty Papyrus Codex 967, which may be literally translated: "he came like a son of man, and like the Ancient of Days was present, and those who were near were present with him." Thus these LXX MSS and Rev. 1:13 understand Dnl. 7:13 as describing a single figure, rather than two figures. Rev. 14:14 describes "one like a son of man" seated on a cloud with a sickle in his hand, including a judgment motif, a clear allusion to Dnl. 7:13.

IV. Use of the Idiom in Early Christian Literature.–Three texts generally dated to the first quarter of the 2nd cent. A.D. use the phrase "son of man" as a way of designating the human nature of Jesus. In Ign. Eph. 20:2 Jesus Christ is called "the son of man and the son of God," referring to His human and divine natures. Similarly, Barn. 12:10 states, "See again Jesus, not as a son of man, but as a son of God," reflecting His current heavenly status. Finally, Odes of Solomon 36:3 has, "And although I was a son of man [Syr. *br 'nš'*], I was named the light, the son of God." Similarly, the Georgian translation of Did. 16:8 (with interpolations in parentheses) reads, "Then will (this) world see (our) Lord (Jesus Christ, the Son of man who at the same time is Son of God as) coming on the clouds," etc. (Audet, p. 474). In *HE* ii.23.13 Eusebius has preserved a fragment from the Christian historian Hegesippus that includes a statement attributed to James the Just, containing allusions to both Ps. 110:1 and Dnl. 7:13, immediately before his martyrdom: "Why do you ask me about the Son of man? He is sitting in heaven on the right hand of the great power [Ps. 110:1], and he will come on the clouds of heaven [Dnl. 7:13]." In Acts of John 109, the phrase "him that for us was called the Son of man" occurs in a prayer of John, along with a string of other christological titles.

V. Use of the Idiom in Gnostic Literature.–The Son of man title occurs with some frequency in Gnostic sources. In the Coptic codices discovered at Nag Hammadi in Egypt in 1945, many of which are Gnostic in character, the title Son of man occurs about fifty times. In most Gnostic sources the title is used in ways that often differ markedly from the usage in the canonical Gospels. In the fragments of *Baruch,* a book written by the Gnostic Justin (Hippolytus *Ref.* v.26.30 [according to the enumeration in M. Marcovich, *Hippolytus Refutatio Omnium Haeresium* (1986)]), the angel Baruch addresses Jesus as "Son of man" in a way reminiscent of Ezekiel. In the Coptic-Gnostic *Treatise on the Resurrection* 44.21-26 we read, "Now the Son of God, Rheginos, was the Son of Man. He embraced both of them, possessing the humanity and the divinity." This passage goes on to claim that as Son of man (Copt. *psere mprome*) the Savior was able to restore the Pleroma, from which he originally came, to its pristine state (44.30-33). The same author states that as Son of man Jesus rose from the dead (46.14-17), a passage reminiscent of the Synoptic Son of man passion predictions. Similarly, *Sophia of Jesus Christ* 105 mentions "the whole kingdom of the Son of man, the one who is called Son of God." More frequently Gnostic writers regarded Man as part of the heavenly divine Pleroma, and the Son of Man as a designation for Jesus as His earthly or extra-pleromatic counterpart. Irenaeus, for example, quoted an Ophite source (*Adv. haer.* i.30.6) in which "the Father of all, the First Man, and the Son of man" are said to be located above Ialdabaoth. In the Coptic-Gnostic *Apocryphon of*

John 14.14f. a similar claim is made that "Man exists, and the Son of man" in the Pleroma. Heracleon, the Valentinian Gnostic commentator on the Gospel of John, interpreted the sower of Jn. 4:37 as the Son of man of the Pleroma (Origen *Comm. in Joh.* 13.49). The Valentinian Marcus speculated that Jesus called Himself Son of Man because He was a descendant of Man and Church in the Pleroma (Irenaeus *Adv. haer.* i.12.3; cf. i.15.3). In the mythological systems of the Naasenes (Hippolytus *Ref.* v.6.3; v.7.33) and Monoimus (Hippolytus *Ref.* viii.12.3; 14.2), Man is the origin of all things and the Son of man derives from him (cf. Hippolytus, *Ref.* viii.13.3: "from the perfect Man has come the Son of man whom no one knows").

VI. Various Interpretations of the Son of Man Designation.–*A. Messianic Title.* Until the late 1960s, the prevalent view among NT scholars was that pre-Christian Jewish apocalyptic thought included the expectation that a preexistent, transcendent heavenly figure, the Son of man, would be revealed in the last days as a messianic redeemer and judge. One of the more extensive presentations of this traditional view is that of Mowinckel (pp. 346-450). Yet if the Son of man title was a familiar form of messianic expectation in pre-Christian Judaism, this would stand in apparent contradiction to the reticence of Jesus, as presented in the Synoptic Gospels, to make any overt messianic claims. But the view that the Son of man was a designation for an apocalyptic, transcendental redeemer figure in pre-Christian Judaism has come under attack by several prominent NT scholars (Leivestad, Lindars, Perrin). Even though this view is still held by a number of scholars, it now has very little to commend it.

B. Ambiguous Title. Since the Son of man idiom was used in a variety of ways in Hebrew and Aramaic, this argument runs, it could have no clearcut and unambiguous meaning for the contemporaries of Jesus. Jesus, it is proposed, used the Son of man designation of Himself precisely because, unlike such titles as Messiah, Son of God, and Son of David (which were understood primarily with regard to their political significance), with this puzzling title He was free to define His own role in and through it (Cullmann, Kim).

C. Idiomatic Self-Reference. According to more recent scholarship, there are no less than three ways in which the Aramaic idiom *bar* ʾ*ĕnāšā*ʾ (with the definite article) and *bar* ʾ*ĕnāš* (without the definite article) could be used by a speaker to refer to himself in the third person: (1) as an exclusive self-reference in which the speaker refers to himself alone (Vermes); (2) as a general or generic statement in which the speaker includes himself (M. Casey); and (3) as a way of referring to a class of people with whom the speaker identifies himself, a usage requiring the idiomatic use of the generic article (Lindars). Each of these proposals requires some elaboration and explanation.

1. Circumlocution for "I" or "Me." Vermes has interpreted the Aramaic phrase for "son of man" as an ordinary Aramaic way in which individuals referred exclusively to themselves in certain situations. Vermes observed that the parallel expression, *hhw' gbr'* ("that man"), is used as a circumlocution for "I" or "me" when the speaker wishes to avoid immodest emphasis on himself, when he openly says something disagreeable about himself, when he pronounces a curse, and as "a protestation" (Vermes, "Use," p. 320). It is therefore possible that Jesus used the designation *bar nāšā*ʾ as a substitute for the first person singular "I" in Son of man sayings that speak about His present activity. For example, in Mk. 2:10 and Lk. 19:10 "Son of man" replaces "I" for reasons of modesty and reserve. Yet the chief difficulty with this view is that there is no evidence roughly contemporaneous with Jesus that attests the use of Son of man as a circumlocution for the first person pronoun. Fitzmyer (pp. 152f.) argues that Vermes's examples are all relatively late and do not necessarily reflect idioms current in first-century Galilean Aramaic.

2. Generic Use of bar nāšāʾ. M. Casey, basing his work on that of Vermes, proposed that *bar nāšā*ʾ was an Aramaic idiom that could be used in general statements about human beings in which the speaker is included. Used in this way, the idiom has two levels of meaning, referring to both the general and the specific simultaneously. He judged that twelve Son of man sayings reflect this original use of *bar nāšā*ʾ and so may be considered authentic (Mk. 2:10, 28; 8:31 [including 9:31; 10:33-34], 38; 10:45; 14:21ab; Mt. 8:20 par. Lk. 9:58; Mt. 11:19 par. Lk. 7:34; Mt. 12:32 par. Lk. 12:10; Lk. 22:48; 12:8b). Casey, like many other scholars, rejected as inauthentic any Son of man sayings attributed to Jesus that, in his judgment, reflect Dnl. 7:13 either directly (Mk. 13:26; 14:62), or indirectly (Mk. 8:38c; Mt. 10:23; 16:27; 24:44 par. Lk. 12:40; Mt. 25:31; Lk. 18:8). These sayings, he thought, derive from the exegetical activity of the early Church rather than from Jesus Himself.

3. View of B. Lindars. Lindars understood "Son of Man" primarily as an idiomatic use of the generic article in which the speaker refers to himself as a member of a general class of persons. He thought that *bar* (ʾ*ĕ*)*nāšā*ʾ could not have been a title familiar to Jesus' audience, but was a distinctive feature of the style of Jesus. Lindars, like Vermes and Casey, used his understanding of the meaning of the *bar* (ʾ*ĕ*)*nāšā*ʾ idiom as a criterion to determine which Son of man sayings derive from Jesus Himself. He then proposed that only nine sayings of Jesus have preserved the meaning that the expression had for Jesus (Mt. 8:20 par. Lk. 9:58; Mt. 11:16-19 par. Lk. 7:31-35; Mt. 12:32 par. Lk. 12:10; Lk. 11:30; Mt. 9:6 par. Mk. 2:10f. par. Lk. 5:24; Mt. 10:32f. par. Lk. 12:8f.; Mk. 8:31; 9:31; 10:33f.). The Greek translation in the Gospels of the *bar* ʾ*ĕnāšā*ʾ idiom, however, made the phrase *appear* to be an exclusive self-reference, and thus virtually a title. Thus, in Lindars's view, the original idiom is misunderstood since the Evangelists understood references to Son of man as referring exclusively to Jesus. Again, like Vermes and Casey, Lindars regarded Son of man sayings that directly (Mk. 13:26; 14:62) or indirectly (Mk. 8:38c) allude to Dnl. 7:13 as secondary. Lindars also suggested that in certain parallel passages in the Synoptic Gospels in which "Son of man" stands in one Gospel and "I" in another (e.g., Mt. 10:32f. par. Lk. 12:8f.; Mt. 16:27 par. Mk. 8:38c par. Lk. 9:26), it is possible that two different translations from the Aramaic phrase *bar* (ʾ*ĕ*)*nāšā*ʾ are reflected.

VII. Problem of Authenticity.-*A. General Considerations.* One of the central issues in the Son of man question is whether all or any of the Son of man sayings in the Gospels actually originated with the historical Jesus. Three possibilities have been proposed. (1) Some scholars have proposed that sayings from *all* of the three categories (i.e., the Son of man as present, suffering, and coming), are authentic. (2) Others have contended that *none* of the Son of man sayings is authentic. (3) Still others have proposed that only sayings in one of the three categories should be regarded as authentic. (4) More recently other scholars have proposed that, regardless of category, only those Son of man sayings are authentic that preserve the Aramaic *bar* (ʾ*ĕ*)*nāšā*ʾ idiom used by Jesus. The problem that must be resolved when option (2), (3), or (4) is chosen is that of accounting for the origin for the other sayings.

This is usually done by appealing to the creativity of the early post-Easter Christian community. It is clear, however, that the Son of man title in the Gospels has at least two different origins, one as a self-reference (whether as a circumlocution for "I" or in a generic sense), and another as a reference to the figure of Dnl. 7:13 understood in a messianic sense.

B. Criteria for Determining Authenticity. Several methods used for determining the historicity or authenticity of pericopes in the Synoptic Gospels have been proposed. (1) The *criterion of historical congruity* — a pericope is possibly authentic if it coheres with features characteristic of Palestinian Judaism of the period before A.D. 70. (2) The *linguistic criterion* — pericopes in the Synoptic Gospels reveal their antiquity, if not their authenticity, if they reflect Semitic rather than Greek syntax and usage. (3) The *criterion of dissimilarity* — pericopes are authentic if they are without parallel in first-century Judaism or first-century Christianity. (4) The *criterion of multiple attestation* — features in the sayings of Jesus may be authentic if they permeate all or most of the the various literary strata of the Synoptic Gospels, Mark, Q, M (Matthew's special source), L (Luke's special source), and John. (5) The *criterion of coherence* — emphases in the teaching of Jesus that cohere with emphases that pass other criteria for authenticity have themselves a strong claim to authenticity.

C. None of the Sayings Is Authentic. Some scholars deny the authenticity of any Son of man sayings (Vielhauer, Käsemann, Conzelmann, Teeple, Perrin). Vielhauer, following Sharman, observed that the figure of the Son of man is absent from sayings of Jesus that speak of the kingdom of God. While some Synoptic pericopes do refer to *both* the Son of man and the kingdom of God (e.g., Mk. 8:31 and 9:1; Lk. 17:21 and 22; 21:27 and 31; Mt. 10:7 and 23; 13:37 and 43; 25:31 and 34), Sharman and Vielhauer argued that the two concepts have been linked only in the later process of compilation. Since there is at least a strong core of kingdom sayings in the Synoptic Gospels that are certainly authentic, they contended that the Son of man sayings must belong to a different and secondary stage of tradition and hence are inauthentic.

D. Only the Eschatological Sayings Are Authentic. One widely held view is that only the *future* or *eschatological* Son of man sayings are authentic (Bultmann, Jeremias, Hahn, Tödt, Higgins). Some proponents of this view (e.g., Bultmann) find it difficult to believe that Jesus could have thought of Himself as a supernatural being who would come with the clouds of heaven. Since Jesus is presented in the Gospels as regularly speaking of the eschatological Son of man in the third person, the argument runs, he was referring not to Himself but to a heavenly redeemer figure who would vindicate both Him and His ministry in the near future. The Evangelists, who thought that Jesus was referring to Himself (and could therefore substitute "I" for "Son of man" in their sources, cf. Mt. 10:32f. with Lk. 12:8f.), were mistaken. Yet others who regard the future Son of man sayings alone as authentic think that Jesus expected His mission to be vindicated after His death by His receiving the exalted status traditionally associated with the apocalyptic figure of the Son of Man (Higgins). The passion predictions in which the Son of man designation occurs (Mk. 8:31; 9:12f., 31; 10:33f.; Lk. 17:25; 24:7), in this view, were created by the Christian community in the light of the crucifixion and resurrection of Jesus. The great weakness with this view is the fact that there was no eschatological Son of man concept in early Judaism to which Jesus could have referred (see the above discussions of 1 En. 37–71 and 4 Ezra).

E. Only the Present Sayings Are Authentic. The authenticity of the present Son of man sayings is held by those who think that Jesus may well have used the phrase "son of man" as a circumlocution for "I" for reasons of modesty or reserve, or as a generic term meaning "anyone," "someone" (Leivestad, Vermes, Lindars, M. Casey). Those who hold this view often suggest that the similarity of this idiom to the figure of Dnl. 7:13, who is "like a son of man," accounts for the origin of the future or eschatological Son of man sayings and their attribution to Jesus. Thus the Son of man sayings that directly allude to Dnl. 7:13 are judged secondary (Mk. 13:26 par.; 14:62 par.) and are said to have entered the Synoptic tradition through the exegetical reflection of early Christians on the significance of Jesus in the light of the OT.

F. Sayings in All Categories Are Authentic. A number of other NT scholars think that authentic sayings of Jesus are to be found among all three categories of Son of man sayings (Barrett, Borsch, Bruce, Goppelt, Marshall, Cullmann, Caragounis, Kim). More recently, Fuller, who earlier regarded the present and suffering Son of man sayings as inauthentic, has suggested that great caution be exercised in evaluating the authenticity of the various categories of Son of man sayings: "At the very minimum we must now work on the assumption that there was a basis in the original authentic Jesus tradition for all three types of Son of man sayings, present, suffering and future, however much they were added to and adapted in the post-Easter tradition" (p. 209). Those who defend the position that *all* the Son of man sayings are essentially authentic or that a substantial portion of the Son of man sayings from each of the three categories is authentic often appeal to the *criterion of dissimilarity.* Since the Son of man designation is found almost exclusively on the lips of Jesus Himself and was not a messianic title in Judaism nor used as a designation for Jesus outside the four canonical Gospels, the Son of man sayings have a strong claim to historicity. Appeal can also be made to the *criterion of multiple attestation,* since Son of man sayings are found in all layers of Gospel tradition, as well as to the *criterion of historical congruence,* since the Greek phrase reflects an Aramaic idiom.

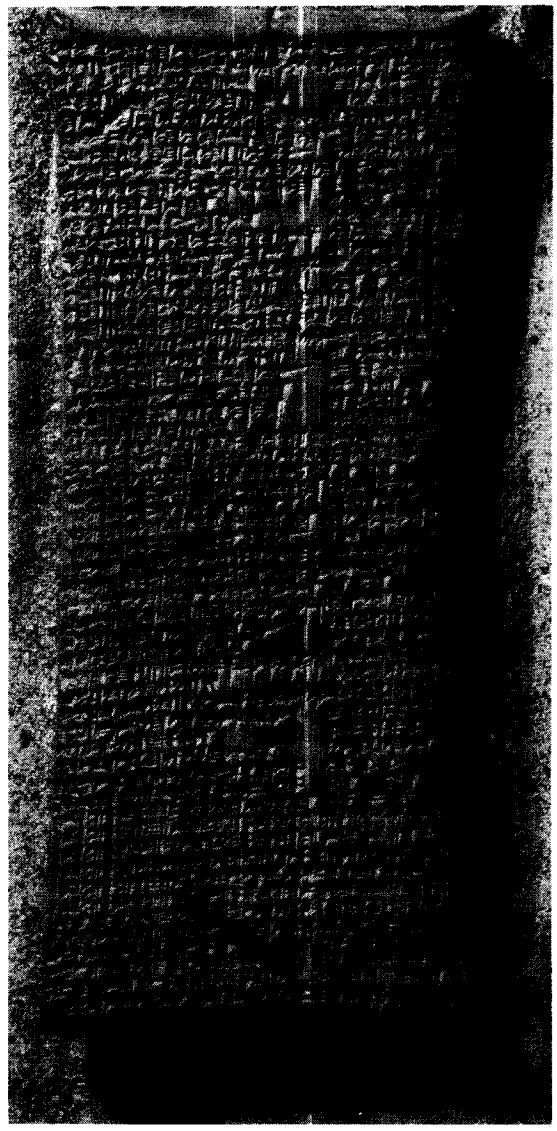
ALOUD; SING FOR GLADNESS [Heb. qal, piel, and hiphil of *rānan*] (1 Ch. 16:33; Ps. 5:11 [MT 12]; Isa. 12:6; etc.); AV also SHOUT FOR JOY, REJOICE, TRIUMPH IN, etc.; NEB also SING THE PRAISES OF, CELEBRATE, SHOUT IN TRIUMPH, etc.; **SING HYMNS** [Gk. *hymnéō*] (Mt. 26:30; Mk. 14:26; Acts 16:25); AV also SING PRAISES; NEB SING THE PASSOVER HYMN, SING PRAISES; **SING IDLE SONGS** [Heb. *pārat*] (Am. 6:5); AV CHANT; NEB PLUCK; **SING TO STRINGED INSTRUMENTS** [Heb. *nāgan negînâ*] (Isa. 38:20); NEB SOUND THE MUSIC OF PRAISES; **SINGER** [Heb. qal and poel parts. of *šîr*] (1 K. 10:12; 1 Ch. 6:33 [MT 18]; 2 Ch. 5:12; etc.); NEB also MUSICIAN; [Aram. *zammār* (Ezr. 7:24); NEB MUSICIAN; **BALLAD SINGER** [Heb. *māšal*–'speak in parables'] (Nu. 21:27); AV (HE) THAT SPEAKS IN PARABLES; NEB BARD.

I. In the OT.–As the above survey suggests, singing and song are part of the vocabulary of praise. In two texts judged to be among the oldest in the OT, Yahweh is praised in song on account of His saving acts: Moses, Miriam, and the people sing a song in response to the Exodus (Ex. 15:1, 21); and Deborah and Barak sing in response to another deliverance from the Canaanites (Jgs. 5, esp. vv. 1 3, 12).

These early indications of the close association between singing and praise are confirmed by later material. For example, of the forty-six instances in which the RSV translates Heb. *rānan* by a form of "sing," fifteen fall within the portions of Isaiah that relate to deliverance from exile, and another fifteen are in the book of Psalms, which is known in Hebrew as *tehillîm*, "praises." The two other Hebrew roots associated primarily with singing, *šîr* and *zāmar*, are concentrated even more heavily within the Psalter. Approximately half of the nominal and verbal forms of *šîr* occur in the psalms; the noun *šîr* occurs in twenty-nine psalm titles. As for *zāmar*, all but four of its forty-five occurrences are in the Psalter, and the cognate noun *mizmôr* occurs in fifty-seven psalm titles. Although the RSV translates the noun by "psalm" rather than "song," it is clear that the root *zmr* was associated with singing and not just with instrumental music. Also, some psalm titles give instructions that the psalm is to be sung to the melody of a favorite older song (e.g., titles of Pss. 22, 45, 57–59, 69, 75, 80; *see* MUSIC III.B.2). In addition to the titles of the psalms, there are other indications that the psalms were meant to be sung: frequent imperatives inviting congregational participation, refrains apparently designed to be sung by worshipers, and occasional references to singers and the instrumentation that apparently accompanied their songs (cf. Ps. 68:25 [MT 26]; etc.).

Although early texts such as Ex. 15 and Jgs. 5 seem to preserve spontaneous outbursts of praise through singing, it is clear that praise came to be centered in the temple. Scholars disagree as to the precise nature of the ceremonies and rituals that took place in the temple, but there is general agreement that praise and singing played an integral part. In this regard, it is not surprising that the Chronicler, who shows a keen interest in the temple and its worship, makes no less than thirty references to Levitical singers. These singers were responsible for instrumental and vocal praise (cf. 2 Ch. 5:13f.). In 1 Ch. 15:16-28 the Chronicler traces the institution of the Levitical singers to the time of David. According to his account the singers returned from exile (Ezr. 2:41) and resumed their duties in the second temple (Neh. 7:1; 12:27-47). Although it is theorized that the Chronicler attributed post-exilic conditions to an earlier era, the origin of the singing guilds is probably to be located before the Exile, possibly as early as the time of David and Solomon.



A section of a lamentation to the goddess Ishtar that would have been accompanied by a ritual incantation. The supplicant addresses the greatest of goddesses, describes his sufferings, and requests prosperity so that the goddess will be glorified. From a temple in Babylon, Neo-Babylonian period (courtesy of the Trustees of the British Museum)

While singing and praise are intimately associated in the OT, not all singing in ancient Israel and Judah was for the purpose of praising God. Singing also occurred upon occasions of destruction and death. Such singing is generally designated as *qînâ*, "lamentation, dirge." 2 Ch. 35:25 states that "all the singing men and singing women [masc. and fem. part. of *šîr*] have spoken of Josiah in their laments [*qînôt*] to this day." Ordinarily, however, the root *šîr* is presented as the opposite of *qînâ*; e.g., prophetic oracles of judgment warn that "songs" will disappear to be replaced by "lamentation" (cf. Ezk. 26:13, 17; Am. 8:10).

Not all singing in OT times was for religious purposes. Singing was a part of family celebrations (e.g., Gen. 31:27; Job 21:12), courtship and marriage (e.g., Cant. 1:1, etc;

title of Ps. 45), and festivities following victorious battles (e.g., 1 S. 18:6f.). Singing was also apparently associated with such occupations as well-digging (Nu. 21:17), work in the vineyard (Isa. 5:1; 27:2-5), and harlotry (23:15f.).

II. In the NT.–The NT references to singing confirm its importance in Jewish worship and also indicate its place in the life of the early Church. After Jesus and His disciples ate the Passover meal, they sang a hymn (Mt. 26:30; Mk. 14:26). The early Christians are enjoined to give thanks to God as they "sing psalms and hymns and spiritual songs" (Col. 3:16; cf. Eph. 5:19f.). Indeed, so intimate is the connection between singing and praise that the author of the Revelation cannot envision the presence of God without the singing of a new song by all in attendance (Rev. 5:9; 14:3). As the primal act of deliverance was celebrated in song (Ex. 15:1, 21), so will be God's final act of deliverance. The redeemed will "sing the song of Moses, the servant of God, and the song of the Lamb" (Rev. 15:3). *See also* HYMNS IN THE NT

III. Sound and Performance of Biblical Singing.–Although much progress has been made since the 1950s, relatively little is known about the way ancient music sounded and was performed. For a survey of the current knowledge, *see* MUSIC.

SONG OF DEGREES. *See* ASCENTS, SONG OF.

SONG OF SONGS. *See* CANTICLES.

SONG OF THE THREE YOUNG MEN; AV SONG OF THE THREE HOLY CHILDREN; NEB SONG OF THE THREE. One of three additions (along with Bel and the Dragon and Susanna) in the Greek text of Daniel. The song is inserted between what would be Dnl. 3:24 and 25 in the Hebrew text and purports to describe the response of Daniel's three Hebrew companions (Hananiah, Mishael, and Azariah, Dnl. 1:7) upon being cast into the fiery furnace constructed by Nebuchadnezzar (3:1-7).

I. Circumstances of Origin.–This contribution to the Apocrypha was composed by an unknown author sometime in the 2nd or 1st cent. B.C. There is continuing debate about the original language of composition, with the majority opinion holding that all three apocryphal additions to Daniel were composed in Greek. Of the three, however, the Song of the Three is most compatible with translation from the Hebrew. The idiom is thoroughly biblical, and *parallelismus membrorum*, typical of Hebrew poetic style (*see* POETRY, HEBREW III), is employed throughout. In addition, the use of the repeated refrain "Sing praise to him and highly exalt him forever" in Song Three 29-68 (Dnl. 3:52-90) is reminiscent of Ps. 136 (Moore, pp. 44-47).

II. Structure and Content.–The Song is actually made up of two independent compositions that have been joined editorially to function within the context of Daniel: the Prayer of Azariah and the Song of the Three. Both are included as separate hymns among the odes appearing at the end of the Psalter in some Greek versions of the OT.

A. Prayer of Azariah. Following two verses that provide a connection with the events in Dnl. 3:1-24, a prayer attributed to Azariah (also known by his Babylonian name Abednego, Dnl. 1:7) constitutes the first segment (Song Three 3-22; Dnl. 3:27-45). As a national confession and plea for salvation, the prayer is not entirely appropriate to its context in Dnl. 3, where a plea for deliverance of the three young men from the peril of the furnace is expected. The prayer itself contains no reference to the actual distress of Dnl. 3; concern is largely with national abuse at the hands of "lawless enemies, most hated rebels" and "an unjust king, the most wicked in the world" (v. 9). Mention is made, however, of the demoralizing lack of leadership ("no prince, or prophet, or leader," v. 15) and of the cessation of the temple sacrificial system (v. 16), leading some to suggest the persecutions of Antiochus Epiphanes as the original historical setting (Metzger, pp. 103f.).

B. Song of the Three. Preceding this segment is a prose narrative of several verses (Song Three 23-28; Dnl. 3:46-51), which once again makes an explicit connection with the events in Daniel. The heat of the fire and its effects on the Babylonian stokers is described, as is the appearance of the angel of the Lord to cool the flames and deliver the three. There follows a song of considerable beauty and skill (Song Three 29-68; Dnl. 3:52-90), which is ostensibly the three young men's hymn of praise to God for delivering them through the angel's intervention. The Song is in reality a hymn calling all of creation to the praise of its creator. Each verse begins with "Bless the Lord" and ends with the refrain "sing praise to him and highly exalt him for ever"; cf. the canonical Ps. 136. It shares clear similarities of theme and content with Pss. 148 and 150. Its structure and content follow the pattern of the creation narrative in Gen. 1. Song Three 29-34 contain an invocation in which praise is directed to God Himself. Some would even classify these verses as a separate composition (e.g., Moore, p. 41). Beginning in v. 35, a general call to praise is issued to "all works of the Lord." The remainder of the hymn is divided into two major sections based on the pattern of the Genesis narrative. Verses 36-51 call the heavens and its associated elements (angels, waters, sun, moon, stars, fire, cold, nights and days, etc.) to praise the Creator. At v. 52 a new call is made to the earth and its products and denizens. The Genesis pattern of sea creatures, birds of the air, and land animals (with human beings in the final position) is preserved in vv. 57-60. The call for human praise (vv. 60-65) escalates to include "sons of men," "Israel," "priests," "servants of the Lord," "spirits and souls of the righteous," and the "holy and humble of heart." The poem is reconnected with the events in Dnl. 3 by the inclusion of Hananiah, Azariah, and Mishael among the worshipers and by direct reference to their divine deliverance from the fiery furnace (v. 66). The hymn concludes in vv. 67f. with the standard thanksgiving known from numerous canonical psalms: "Give thanks to the Lord, for he is good, for his mercy endures for ever" (cf. Pss. 106, 107, 118, and esp. 136).

III. Influence.–These hymns were quoted by many of the church fathers as part of the canonical book of Daniel. Others, especially those who adhered to the Hebrew canon, were aware of their secondary nature (Metzger, p. 100; Moore, pp. 50f.). The hymns continued to form parts of the canon of ancient versions (Syriac, Coptic, Ethiopic, etc.) and were adopted for liturgical use within the Church in medieval times (Metzger, p. 104). In the Roman Catholic and Episcopal Churches the Song of the Three, known today as the *Benedicite*, is occasionally used in place of the *Te Deum*, while the Prayer of Azariah (called *Benedictus es*) serves as an even briefer replacement (Dentan, p. 40) and is part of the priest's obligatory morning private devotions (*see also* DANIEL XI).

SON-IN-LAW. *See* RELATIONSHIPS, FAMILY.

SONS OF GOD (OT) [Heb. *bᵉnê (hā)'ĕlōhîm, bᵉnê 'ĕlîm*]. Divine beings. Just as "sons of man" means human beings in Hebrew, so "sons of God" means divine beings, i.e., gods. In Canaanite religion and myth, the term "sons of God" or "sons of the gods" referred to the gods in general. They were the deities of the pantheon who convened to render decisions regarding the governance of the world. Ugaritic mythological texts, e.g., call this divine council "the assembly of the sons of God" (or "of 'El," the chief god). The survival of this idea in Canaanite tradition is illustrated by a reference to "all the sons of the gods" in a Phoenician incantation of the 7th cent. B.C. found at Arslan Tash in northern Syria.

The same usage occurs, at least vestigially, in certain passages in the Hebrew Bible. Dt. 32:8 says that "When the Most High gave to the nations their inheritance, when he separated the sons of men, he fixed the bound of the peoples according to the number of the sons of God" (so RSV, NEB; the MT erroneously has "sons of Israel" [*bᵉnê yiśrā'ēl*], but the versions [e.g., LXX, Symm., Old Latin] and a scroll from Qumrân support the reading "sons of God" [*bᵉnê 'ĕlîm*]). In other words, the Most High assigned one of the peoples of the world to each of the divine beings in the council. As v. 9 indicates, Yahweh's portion was Israel. The original notion seems to have been that Yahweh, God of Israel, stood alongside the other national gods in a council presided over by the Most High. But those who included this old poem in Deuteronomy understood Yahweh and the Most High to be identical, as they are elsewhere in the Bible (e.g., Ps. 83:18 [MT 19]), and the sons of God to be subordinate, angelic beings. Thus Yahweh distributed the other nations to His angels, keeping Israel for Himself (cf. Sir. 17:17).

The sons of God appear in other poetic passages, all of which have an archaic character. Job 38:7, e.g., identifies them with "the morning stars" and recalls that they shouted their acclamation at Yahweh's creation of the earth. Ps. 29:1 calls upon the "sons of God" (Heb. *bᵉnê 'ĕlîm*; RSV "heavenly beings") to praise Yahweh. Ps. 82:1 describes Yahweh as rising "in the midst of the gods" — i.e., "in the divine council" (lit. "council of 'El") — to pass judgment on the other gods. Verses 6f. say, "You are gods, sons of the Most High, all of you; nevertheless, you shall die like men." Ps. 89:6 (MT 7) is an assertion of Yahweh's incomparability: "Who among the heavenly beings [*bᵉnê 'ĕlîm*] is like the Lord . . ." (cf. Ex. 15:11). Again, the original intent of these passages may have been to present Yahweh as one deity (albeit the greatest and the only just deity) alongside others in the divine council. But the passages were preserved because they can be understood in the light of the general biblical idea of a council of subordinate divine beings ("messengers" or "angels") ruled by Yahweh (on Ps. 82 see esp. G. E. Wright, *OT Against its Environment* [*SBT*, 1/2; 1950], pp. 30-41).

The prologue to Job reflects this more usual biblical notion of subordinate divine beings. Job 1:6 and 2:1 refer to "a day when the sons of God came to present themselves before the Lord." In this case the sons of God are angelic beings who carry out Yahweh's will on earth and report to Him in His heavenly council. The relatively independent figure of "the adversary" (*haśśāṭān*, RSV "Satan") in this context anticipates later developments in the Judeo-Christian tradition according to which SATAN or Lucifer and his fellow angels were viewed as having sufficient autonomy to rebel against God.

For "sons of God" in Gen. 6:2, 4 *see* NEPHILIM.

See also CHILDREN OF GOD I. P. K. MCCARTER, JR.

SONS OF GOD (NT) [Gk. *huioí (toú) theoú* (Mt. 5:9; Lk. 20:36; Rom. 8:14, 19; Gal. 3:26); **CHILDREN OF GOD** [Gk. *tékna (toú) theoú* (Jn. 1:12; 11:52; Rom. 8:16f, 21; 9:8; Phil. 2:15; 1 Jn. 3:1f., 10)].

Although Gk. *téknon* and *huiós* may be distinguished, they are often used interchangeably. *Téknon* more naturally speaks of one who is a descendant by birth, while *huiós* describes a relationship, e.g., legal. Most NT uses of these terms fall into one of two categories.

(1) A designation of believers in Christ. In the writings of John the term *téknon* is used exclusively to designate believers. In Jn. 1:12 and 1 Jn. 3:1f., 10 Christians are declared to be the children of God. In John's thought people are God's children because they have been born into the family of God (Jn. 1:12f.; 1 Jn. 2:29; 3:9f.; 5:1). Paul's use of the concept of sonship, however, is not set in the context of birth but in the context of adoption (*huiothesía*, Rom. 8:15; Gal. 4:5-7). Here we enter God's family through the legal act of adoption. According to John, because we are children of God righteousness will be the chief characteristic of our life-style (1 Jn. 2:29; 3:9f.). This may also be what Paul meant when he declared that those led by the Spirit of God are the sons of God (Rom. 8:14). Paul also indicated that another evidence of sonship is the internal witness of the Spirit (v. 16). Both Paul and John also spoke of sonship in the future tense (Rom. 8:19, 21; 1 Jn. 3:2).

(2) The indication of likeness. The NT contains the concept expressed in the proverb, "Like father, like son." It was typically Hebrew usage to employ the term "son" to express likeness. Those who are peacemakers will be called God's sons because they are like God (Mt. 5:9). Similarly, people who love their enemies are God's sons (Mt. 5:45; Lk. 6:35f.). And those who do not grumble or doubt, who are blameless and pure, shining as lights in this evil world, likewise are called God's sons (Phil. 2:15). It is probable that Jesus had this concept of likeness in mind when He referred to the righteous as sons of God and of the resurrection (Lk. 20:36). God's people are like Him in that they, too, are immortal.

SOPATER sō'pə-tər [Gk. *Sōpatros*]. A man from the Macedonian city of Beroea who, with others, accompanied Paul on his travels from Greece through Macedonia and the western parts of Asia to Jerusalem (Acts 20:4). His name is a variant of SOSIPATER, and he is probably the Sosipater mentioned in Rom. 16:21.

SORCERER; SORCERY. *See* MAGIC II.A, III.A; MEDIUM (for Isa. 19:3).

SORE. A sore may be defined as any kind of open skin lesion, ulcer, or wound. Accordingly the *ʿaḇaʿbuʿôṯ* of Ex. 9:9f. which were to afflict the Egyptians as one of the pre-Exodus plagues would fit the category of sores admirably, since the term included such cutaneous conditions as ulcers, pustules, and blisters. Since the plague in question included animals, a pathological condition which could be shared equally by people and their flocks is obviously

indicated. The most probable disease would be anthrax, an infectious ailment transmitted to humans from animal sources. The responsible organism, the *Bacillus anthracis,* doubtless arose, according to Hort, when the rotting fish from the first plague infected the frogs of the Nile and killed them. The anthrax spores were communicated subsequently to the animals, and then to the Egyptian populace (G. Hort, *ZAW,* 69 [1957], 84-103; 70 [1958], 48-59). The particular form would be cutaneous anthrax, of which malignant pustules or malignant edema would be symptomatic. Anthrax in its various forms is characterized by hemorrhages, serum discharges in bodily organs, and a general condition of extreme illness.

The "loathsome sores" (*šᵉḥîn raʿ*) that afflicted Job (2:7) seem to have been a product of his emotionally disturbed personality. The lesions were of the multiple irritant variety accompanied by muscular debility and general depression. They were distributed over his body in a manner which suggests a typical allergic reaction. The obvious emotional disturbance of Job would seem to preclude ailments such as impetigo or staphylococcal infections (*see* DISEASE III.J).

The "sore" of Isa. 1:6 (*ḥabbûrâ*) is of unspecified aetiology, and is probably best understood in terms of cutaneous infections such as boils or pustules that have become worse due to neglect or improper treatment. A similar situation no doubt applied in the story of the poor man of Lk. 16:20f., who was described as "full of sores" (*ēlkoménos*). These doubtless included suppurating ulcers which the dogs attempted to cleanse by licking. The therapeutic behavior of the animals stood in sharp contrast to the neglect shown by a wealthy human being. The sores of Rev. 16:2 are also of unspecified nature, but could well have been fetid, discharging lesions of various kinds.

The RSV also uses "sore" in a poetic sense to imply some severe condition or situation (Ps. 71:20; Eccl. 6:2; Ezk. 14:21). In Gen. 34:25 the post-circumcision recovery process is being described. R. K. H.

SOREK sôʻrek, **VALLEY OF** [Heb. *naḥal śōrēq*–'wadi of the choice vine'; Gk. LXXA *toú cheimárrou Sōrēch*]. A valley mentioned only once by name in Scripture: ". . . [Samson] loved a woman in the valley of Sorek, whose name was Delilah" (Jgs. 16:4). It can be located in relation to the identifiable towns in the vicinity. Samson was from Zorah, identified with Ṣarʿah on the northern ridge overlooking the Wâdī Ṣarâr. Eusebius and Jerome (*Onom.* 160.2-4; 161.2-4, respectively) reported the existence of a village named Sōrēch or Kaphar Sōrēch (Gk. corrupt; Lat. *Cafarsorech*) on the border of the Eleutheropolis metropolitan district near Zorah. About 3 km. (2 mi.) W of Zorah is the ancient ruin Khirbet es-Sūreik (modern Heb. Kefar Soreq), standing on the same ridge. Albright even suggested that the name Sorek must have been limited to the small wadi descending from Khirbet es-Sūreik to the Wâdī Ṣarâr; but it is far more likely that the entire Wâdī Ṣarâr, or at least the segment from the Judean hills through the Shephelah to the coastal plain, was called Sorek.

Wâdī Ṣarâr (modern Naḥal Soreq) was probably second only to the Valley of Aijalon as an approach to the Judean hills. It is the extension of the steep ravine known as Wâdī Ismaʿîn, which is created by the junction of Wâdī es-Sikkeḥ (today Naḥal Refaʾim) and Wâdī Beit Ḥanîneh. (Wâdīs Ismaʿîn and Beit Hanîneh together are called Naḥal Soreq.) When the stream bed of Wâdī Ṣarâr issues from the Judean hills, it is joined by the Wâdī el-Ghurâb (today Naḥal Kesalon) from the northeast and Wâdī en-Nejîl (today Naḥal Zanoaḥ) from the south; a large basin is formed, with the mound of the former ʿArtûf in the center. On the southern side stands Tell er-Rumeileh (ancient Beth-shemesh).

The Valley of Sorek NE of Beth-shemesh (W. S. LaSor)

The northern boundary line of Judah (Josh. 15:10f.) also passed along the Valley of Sorek. As the stream bed makes a broad arc toward the northwest it passes by the site of ancient Timnah, 7.2 km. (4.5 mi.) WNW of Beth-shemesh. The low ridge that follows the course of the Sorek on its southwest side is evidently "the shoulder of the hill north of Ekron" (v. 11).

When the ark of the covenant was brought back from Ekron, two cows carried it up the valley of Sorek to Beth-shemesh. The dividing line between the Philistine and Judean territories fell somewhere between this latter town and Timnah (cf. Jgs. 14:1; 1 S. 6:12).

One Roman legion marched up the valley of Sorek to attack Bar Cochba at Bether (Khirbet el-Yehûd, near Bittîr). In Jewish legend the blood of the defenders flowed to the sea via the Sorek.

A. F. RAINEY

SORES sôr'es [Gk. *Sōrēs*]. A town of Judah listed only in Josh. 15:59, NEB, following the LXX (v. 59a). *See* MANACH.

SORROW [Heb. *yāgôn*–'grief, vexation' (Gen. 42:38; 44:31; Est. 9:22; Ps. 13:2 [MT 3]; 107:39; Isa. 35:10; Jer. 45:3; etc.), *maḵʾôḇ*–'pain' (2 Ch. 6:29; Eccl. 1:18; Isa. 53:3f.; Lam. 1:12), *tûgâ*–'grief' (Ps. 119:28; Prov. 10:1), *ʿaṣṣeḇeṯ*–'hurt, pain' (Ps. 16:4; Prov. 15:13), *ʿeṣeḇ*–'pain' (Prov. 10:22), *ʾaḇôy*–'uneasiness' (Prov. 23:29), *ḥēḇel*–'labor pains, travail' (Jer. 49:24), *kaʿas*–'vexation, grief' (Eccl. 7:3), *ʿnî*–'poverty, affliction' (Ps. 88:9 [MT 10]), *rāʿâ* (Gen. 44:29); Gk. *lýpē*–'grief, sorrow, pain' (Lk. 22:45; Jn. 16:6, 20-22; 2 Cor. 2:7; Phil. 2:27), *odýnē*–'pain' (Rom. 9:2)]; AV also GRIEF, AFFLICTION, HEAVINESS, etc.; NEB TROUBLE, MISERY, GRIEF, etc.: **SORROWFUL** [Heb. *kāḇēḏ*–'heavy, opressing' (Gen. 50:10); Gk. *lypéō*–'be grieved, be pained' (Mt. 19:22; 26:22, 37; Mk. 10:22; 14:19; Jn. 16:20; 2 Cor. 6:10), *perílypos*–'very sad, deeply grieved' (Mt. 26:38; Mk. 14:34)]; AV also SORE, GRIEVED; NEB BITTER, "with a heavy heart" (Mt. 19:22; Mk. 10:22), "plunged in grief" (Jn. 16:20), etc.; **SORROWING** [Gk. *odynáomai*–'feel (mental and spiritual) pain' (Acts 20:38)]; NEB DISTRESSED. In Gen. 48:7 the RSV "to my sorrow" trans-

lates Heb. *'ilay* (lit. "upon me") with an adversative sense expressing disadvantage.

The biblical notion of sorrow stresses personal destitution and loss but goes on to confess our ultimate dependence on God and a firm hope in His comfort. In the biblical world mourning was rarely private. Sorrow was often expressed as a public lamentation that drew in the support and sympathies of the community. The community in turn could lift the mourner above the present crisis and assert God's promised eschatological salvation: "They shall obtain joy and gladness, and sorrow and sighing shall flee away" (Isa. 35:10).

In the OT a broad variety of Hebrew words expresses sorrow (*bāḵâ, sāpaḏ, 'āmal, 'ānâ, ḥāraq, 'āḇal,* etc). The most common term, *bāḵâ,* describes extreme grief, such as the story of the childless Hannah (1 S. 1:7; cf. Lam. 1:16) or the mourning of Joseph over his deceased father (Gen. 50:1; cf. 23:2). Not only was sorrow expressed individually, but often the nation would engage in cultic lamentations (Jgs. 20:23, 26; 1 S. 25:1), frequently accompanied by a fast. This explains the Psalms of lament, which were used in ritual worship (Pss. 74, 79, 80).

Israelite mourning employed vivid customs to display grief. Many would rend their garments (Gen. 37:34), wear sackcloth (1 S. 3:31-34), shave their hair or beards (Isa. 7:20; 15:12), and beat their breasts (Nah. 2:7). Above all, profuse wailing was commonplace (Isa. 15:2; Jer. 34:5; Am. 5:16), especially among women (Jer. 9:17-20; Nah. 2:7). What distinguishes biblical grief is the belief in God's ultimate help. Thus in Ps. 22, the cry of the afflicted man cited by Christ on the cross, the final stanzas affirm God's deliverance (22:24-31).

The NT vocabulary is also diverse (*klaíō, kóptō, thrēnéō, penthéō, lypéō* [passive only], *brýchō,* and *stenázō*). Mourning, replete with its vivid public expressions, is recorded in the Gospels, e.g., at the raising of Jairus's daughter (Mk. 5:38f.). Here and at Nain (Lk. 7:11-17) Jesus interrupted a funeral party. The same public lamentation, including wailing women, is recorded at Lazarus's funeral in Bethany (Jn. 11:31) and Jesus' march to Golgotha (Lk. 23:27f.). The Jewish funeral included profuse and protracted mourning since most people believed that the dead could hear the dirge and be comforted.

Bereavement, however, is only one aspect of sorrow in the NT. Sorrow will typify the lost who failed to respond to Christ's kingdom (Mt. 8:12; Lk. 13:28; Jas. 4:9). Here the word-group of *brýchō* ("gnashing" [of teeth]) occurs most often in Matthew (Mt. 8:12; 13:42, 50; 22:13; 24:51; 25:30), graphically depicting the unsaved.

Christians experience sorrow due to personal affliction (Rom. 12:15) and as a response to sin (1 Cor. 5:2; 2 Cor. 7:10). Some would even view most of 2 Corinthians as Paul's rebuke and homily on sorrow, in which sorrow is our response to failed righteousness (cf. He. 12:11).

There is an important connection between the Holy Spirit and sorrow. In Jesus' upper-room farewell, He indicated how His departure would bring great sorrow (Jn. 16:20-22), but it would be the Spirit who would eliminate grief and replace it with joy. Paul makes this same connection in Rom. 8. In 8:18-25 Paul describes the inadequacies of our mortal world and the sorrows we experience as we yearn for perfection. It is the Spirit who comes to our aid (v. 24), strengthening and interceding for us (cf. 2 Cor. 5:2-5).

Paul also believed that sorrow may be beneficial — even essential — to the Christian life. In 2 Cor. 7:9-13 Paul speaks of "godly sorrow" (*lýpē*) that detaches the Christian from the world and gives him a zeal for God. According to Paul sorrows push us toward a greater dependence on God. Thus the apostle could view his own afflictions and sorrows as constructive inasmuch as the presence of Christ was manifested in him (2 Cor. 4:7-12). Sorrow had become for him a spiritual discipline.

In the eschaton, sorrows will be gone forever. The NT holds out the promise for those who trust in Christ. Mourning will be turned to laughter (Lk. 6:21). The new Jerusalem will celebrate the absence of sorrow: "[God] will wipe away every tear from their eyes, and death shall be no more, neither shall there be mourning nor crying nor pain any more, for the former things have passed away" (Rev. 21:4). G. M. BURGE

SORRY [Heb. *nāḥam*] (Gen. 6:6f.); AV REPENT; [*ḥālâ*] (1 S. 22:8); NEB "spare a thought"; [*dā'ag*] (Ps. 38:18 [MT 19]); NEB BE ANXIOUS; [Gk. *lypéō*] (Mt. 14:9; 2 Cor. 7:8); NEB BE DISTRESSED, CAUSE PAIN; [*perílypos*] (Mk. 6:26); NEB DISTRESSED. The use of "sorry" in Gen. 6:6f. is an anthropomorphic manner of referring to God's relations with people. In Himself God is immutable (Mal. 3:6), but in His relationships with people He moves in judgment or in mercy upon His sinful creatures. A change from blessing to judgment may, from a human standpoint, be referred to as a change of heart. G. WYPER

SOSIPATER sō-sip'ə-tər [Gk. *Sōsipatros*]. One of Paul's "kinsmen" who send greetings in Rom. 16:21. "Kinsman" means that he was a Jew. He is probably the same person as the SOPATER of Acts 20:4. Nothing further is known of him.

SOSTHENES sos'thi-nēz [Gk. *Sōsthenēs*] (Acts 18:17; 1 Cor. 1:1). In Acts 18:17 Sosthenes is identified as the *archisynágōgos* ("leader" or "president") of the synagogue in Corinth (Acts 18:8). On the basis of Luke's earlier reference to Crispus (18:8), perhaps Sothenes succeeded Crispus after the latter converted to Christianity. Following an unsuccessful attempt by Corinthian Jews to have Paul arrested, the crowd seized and beat Sosthenes. The manuscript tradition reflects the difficulty in identifying the participants in the beating. The Western and later ecclesiastical texts add in v. 17 the identifying words, "the Greeks," suggesting that the attackers were Gentiles who looked with typical Roman disfavor on what appeared to them to be the ill-founded accusations brought by the Jews. Several minuscules (307, 431) read "all the Jews," suggesting that Sosthenes' failure to win a conviction against Paul caused certain Jews to vent their wrath on him. Both identifying additions should probably be rejected in favor of the simple "they" with the implication that both Greeks and Jews participated in the beating — Greeks because Sosthenes was a Jew, and Jews because of his failure to win a conviction. Some scholars suggest that *archisynágōgos* in 18:17 was a title within the Corinthian church and that Sosthenes was beaten because he was a Christian. While little evidence supports the use of this title in the early Church, one must remember that some early Christians referred to their assembly as a "synagogue" (Gk. *synagōgḗ,* Jas. 2:2). Perhaps Sosthenes represented a Jewish-Christian element in Corinth that sought to inhibit Paul's Gentile mission.

The name Sosthenes also appears in 1 Cor. 1:1 along with Paul. The fact that Paul identifies him as "the brother" suggests that he is a Christian who is well known to the Corinthian congregation. Luke's inclusion of Sosthenes in Acts 18:18 and the mention of Crispus in 1 Cor. 1 suggest that the identification of Sosthenes in 1 Cor. 1:1

with the Sosthenes of Acts 18:17 is possible (some would say probable). Still the frequency with which the name Sosthenes appears in the papyri and inscriptions precludes certainty and opinion divides sharply on this question. According to Eusebius (*HE* i.12.1) Sosthenes was one of Jesus' seventy disciples and later tradition identifies him as the first bishop of Colophon is Asia Minor.

Conzelmann, *1 Corinthians* (Eng. tr., *Hermeneia*, 1975), p. 20; F. W. Grosheide, comm. on 1 Corinthians (*NICNT*, 1953), p. 22; J. Héring, comm. on 1 Corinthians (Eng. tr., 1962), p. 1.

W. H. GLOER

SOSTRATUS sō'stra-təs [Gk. *Sōstratos*] (2 Macc. 4:28). Military commander and representative in Jerusalem of the Seleucid ruler, Antiochus IV, when MENELAUS was high priest. According to 2 Macc. 4:27f., he was responsible for collecting revenues. When he was unable to collect the payments owed by Menelaus, both he and Menelaus were summoned to the court of Antiochus. Nothing else is known of him.

SOTAI sō'tī [Heb. *sôṭay/sōṭay*] (Ezr. 2:55; Neh. 7:57). Head of a family included within a group called SOLOMON'S SERVANTS that returned from the Babylonian exile (Ezr. 2:55-58; Neh. 7:57-60).

SOTERIOLOGY sō-tēr-ē-ol'ə-jē [< Gk. *sōtēría*–'deliverance, salvation']. The branch of theology that deals with SALVATION and the savior.

SOTTISH sot'ish (Jer. 4:22, AV). *See* STUPID.

SOUL. The essence of being or life; the animating principle, ultimately derived from God, who "breathed" (Heb. *nāpaḥ*; LXX *emphysáō*; Vulg. *inspiro*) into mankind (Heb. *'ādām*, "human being"), thereby creating a "living soul" (Heb. *nepeš;* Gen. 2:7).

The term "soul" (Vulg. *anima*) translates several biblical words, the most frequent of which are Heb. *nepeš* and Gk. *psychḗ*. The AV uses "soul" almost exclusively to render these two terms, while the RSV and NEB employ a variety of English terms and idioms that more precisely express the meanings of these biblical terms in their specific contexts.

Occasionally Heb. *nepeš* and Gk. *psychḗ* are applied to God (e.g., Lev. 26:11, 30; Isa. 42:1; Mt. 12:18; He. 10:38); this usage is generally a circumlocution for the personal pronoun ("my soul" means "I"). *Nepeš* and *psychḗ* can also be attributed to animals (e.g., Gen. 1:30 [RSV "breath"]; Rev. 8:9 [RSV "living"]), although this use is quite infrequent; in such cases the term indicates that these animals are living beings. When applied to human beings, *nepeš* and *psychḗ* take on a variety of meanings. *Nepeš*, e.g., often substitutes for personal and reflexive pronouns (e.g., Ps. 88:3; Isa. 58:3, 5). In general, the "soul" denotes the "self," complete with emotions, appetites, and volition.

In the RSV NT "soul" always represents Gk. *psychḗ*. In the OT, however, the RSV occasionally uses "soul" to render terms other than Heb. *nepeš*. These include Heb. *kāḇôḏ* (AV "glory," Ps. 16:9; 30:12 [MT 13]; 57:8 [MT 9]; 108:1), *mē'îm* (AV "bowels," Isa. 16:11; Lam. 1:20; 2:11), *lēḇāḇ* (AV "heart," Ps. 73:21), and *kᵉlāyôṯ* (AV "reins," Prov. 23:16).

I. OT Uses of *Nepeš*
II. NT Uses of *Psychḗ*
III. Theological/Historical Issues

A papyrus vignette depicting an Egyptian soul tree (*ca.* 1000 B.C.). Winged souls hover on a bare-branched tree guarded by the jackals of Anubis. On either side of the tree two soul birds with human heads are perched on water (Staatliche Museen zu Berlin, DDR. Ägyptisches Museum P. 10477)

I. OT Uses of Nepeš.–As mentioned above, Gen. 2:7 states that *'ādām* became a *nepeš* (RSV "living soul") when God breathed into the formed dust. Likewise, death is described as occurring when the breath ceases, i.e., when the *nepeš* departs (e.g., Gen. 35:18). Elijah prayed for the *nepeš* (AV, RSV, "soul"; NEB "breath of life") to return to the dead son of the widow from Zarephath (1 K. 17:21), for he was without "breath" (*nᵉšāmâ*, v. 17). It is a simple step to the use of *nepeš* to signify "throat" (Nu. 11:6, NEB), that part of the body that carries the windpipe. "Neck" is an equally appropriate translation at points, especially in breath-stifling, life-threatening situations (RSV, NEB, Ps. 69:1).

Perhaps because of its association with the throat as the passageway through which physical hunger and thirst are alleviated, the *nepeš* can be described as craving food and water (cf. AV Dt. 12:15, 20f.; 14:26; 1 S. 2:16; Ps. 107:5, 9; Prov. 6:30; 10:3; etc.). But it is also described as the seat of other desires, e.g., for personal property such as oxen, sheep, and wines (cf. AV Dt. 14:26), for a sexual relationship (Gen. 34:3, 8; Cant. 3:1-4), for another's presence (as in the intense friendship between David and Jonathan, 1 S. 18:1, 3), or for a child (1 S. 1:15). In essence, *nepeš* can refer to any unfulfilled longing or unmet need.

By extrapolation *nepeš* can be used to refer to the seat of spiritual as well as physical needs and cravings (e.g., Ps. 42:1f. [MT 2f.]; 63:1 [MT 2]; 84:2 [MT 3]; 119:20; 143:6; Isa. 26:8f.). Some passages describe the satisfac-

tion of the needs of the soul (e.g., Ps. 19:7 [MT 8]; 23:3; 63:5 [MT 6]; 131:2; Jer. 31:25).

Nepeš can also be used in a more comprehensive sense to denote the seat of emotions and experiences. The *nepeš* may be sad (e.g., Dt. 28:65; Ps. 42:6 [MT 7]; 119:28), grieved (e.g., Job 30:25), or in pain (e.g., Ps. 13:2 [MT 3]), and it may weep (Jer. 13:17). It may be distressed (e.g., Gen. 42:21), bitter (e.g., Job 3:20; 7:10; Isa. 38:15), or troubled (e.g., Ps. 6:3 [MT 4]; 88:3 [MT 4]); it may tremble (e.g., Isa. 15:4). The *nepeš* can also hate (e.g., 2 S. 5:8; Ps. 11:5). On the other hand, it can rejoice (e.g., Ps. 35:9; Isa. 61:10), be cheered (e.g., Ps. 86:4; 94:19), bless the Lord (e.g., Ps. 103:1, 22; 104:1, 35), and love (e.g., 1 S. 18:1, 3; Cant. 1:7; 3:1-4). Thus the term is associated with a full range of needs, desires, and feelings, as well as with thought and memory (e.g., Ps. 103:2; Lam. 3:20).

The idea that *nepeš* is integral to life itself is especially clear in the relationship between blood and *nepeš*. "The blood is the life [*nepeš*]," states Dt. 12:23. The *nepeš* (often rendered "life" by the RSV when used in this sense) can be poured out (Isa. 53:12; Lam. 2:12); it may be taken by God (Job 27:8), sought by others (Prov. 29:10), or forfeited by oneself (Hab. 2:10). On the other hand, it can be the object of salvation (Ps. 116:4), redemption (2 S. 4:9; Ps. 34:22 [MT 23]; 72:14), or deliverance (Ps. 55:18 [MT 19]; 116:8), even from Sheol (86:13).

Since *nepeš* is integral to life, death of the *nepeš* means a loss of personhood. The *nepeš* frequently appears not as the possession of *'ādām* but as what *'ādām is*. Thus the most frequent translation of *nepeš* in the RSV and NEB is "person" (e.g., Lev. 7:20; 19:8), "any one" (e.g., Lev. 4:2; 5:1f.), or one of a wide variety of personal pronouns.

II. NT Uses of Psyché.–In the NT Gk. *psyché* carries most of the basic meanings of Heb. *nepeš*, because of the LXX use of *psyché* to render the Hebrew term. Sometimes *psyché* connotes that which makes a body into a "living being" (cf. its use in reference to sea-dwelling animals, Rev. 8:9; 16:3 [RSV "living"]); thus, Adam *became* a living *psyché* (1 Cor. 15:45). In enumerations people are sometimes referred to as individual "souls" (*psychai*, e.g., Acts 2:41; 7:14; cf. 4:32, which refers to Christians being united as one *psyché*). In Lk. 12:19 the rich man addresses his own soul, i.e., he speaks to himself.

The term can also denote one's inner life or true personhood. As God created the *psyché*, He has the power to destroy it; but Jesus taught that whereas other human beings may succeed in killing the body, they cannot kill the *psyché* (Mt. 10:28). It appears that at death a transformation takes place in which the body is corrupted but the *psyché* continues to exist in a form different from that known in the earthly existence. In John's vision the souls of the martyrs continue to exist under the heavenly altar (Rev. 6:9; 20:4). The Scriptures testify that Jesus' *psyché* was not abandoned in Hades (Acts 2:27, 31).

Jesus taught that the human soul (RSV "life") is priceless (Mt. 16:26 par. Mk. 8:37). Those who try to save their *psyché* will lose it, but those who lose their *psyché* for Christ's sake will find it (Mt. 16:25 par. Mk. 8:36; Lk. 9:25). Jesus Himself demonstrated this principle. In His salvific death He gave His *psyché* as a ransom for the many who were under penalty of death (Mt. 20:28 par. Mk. 10:45).

According to 1 Pet. 1:22 Christians' souls are purified by obedience to the truth (cf. 3 Jn. 2f., where the author says that he knows that "it is well with your [Gaius's] soul" because he has heard that Gaius follows the truth). In 1 Thess. 5:23 Paul prays that his readers' "spirit and soul and body [may] be kept sound and blameless at the coming of our Lord Jesus Christ." The souls of believers may be strengthened through the ministry of others (Acts 14:22). Christian leaders have the responsibility of keeping watch over the souls of those in their charge (He. 13:17). "Unsteady souls" are especially vulnerable to being led into sin by false teachers (2 Pet. 2:14; cf. Acts 15:24 [RSV "minds"]). But Jas. 5:20 teaches that "whoever brings back a sinner from the error of his way will save his soul from death and will cover a multitude of sins." Hope in God's covenant promises provides Christians with "a sure and steadfast anchor of the soul" (He. 6:19). 1 Pet. 4:19 exhorts those who suffer according to God's will to "do right and entrust their souls to a faithful Creator." Those who endure suffering without losing faith will "keep their souls" (He. 10:39).

The Pauline reference to spirit, soul, and body in 1 Thess. 5:23 has led to extended debate over the significance of these terms. Earlier students of Pauline anthropology tended to interpret the *psyché* in terms of a Greek psychological dualism between body and soul. More recent scholars have come to view these terms in a more Hebraic fashion, recognizing them as differing perspectives on a single human reality. When placed alongside other aspects of the person, *psyché* may be seen as but one way of viewing the human life. Thus, the reference in He. 4:12 to the Word of God "piercing to the division of soul and spirit" appears to mean simply that God's Word probes the inmost recesses of the total human being (see F. F. Bruce, *Epistle to the Hebrews* [*NICNT*, 1964], pp. 81-83).

III. Theological/Historical Issues.–Early Christians were often influenced by Greek as well as Jewish thought. For example, many were influenced by Pythagoras's teachings about the division of the soul into several parts and about the transmigration of the soul. Platonic and Neoplatonic (esp. Plotinus's) understandings lay behind Origen's view of the soul as pure mind that had grown cool (pass. of *psýchō*) through the fall. Origen also taught the preexistence of the soul (*De prin.* ii.8.3; ii.9.7) — a position that was condemned by the larger Church but is found today in Mormon doctrine.

Tertullian followed Stoic thought, arguing that the soul was a "spiritual essence" that could also be described as a "corporeal substance" (*De anima* 5.2). The corporeal nature of the soul, he argued, was supported by various philosophical arguments, by reference to the deceased Lazarus's finger in Lk. 16:19-31 (esp. vv. 23f.), by the fact that the souls of the martyrs were visible to John as he was "in the Spirit" (Rev. 6:9-11), and by a vision received by a certain Montanist "sister" (*De anima* 8.1–9.8).

The issue of the origin of the soul has been debated extensively in the Church's history. Augustine spurned as blasphemous the Greek idea that the soul had been a part of God (*De anima et eius origine* 2.4). A second position, known as creationism, understands each soul as a unique creation of God from the moment of conception or the time when it is given a body. This position was very popular, especially with Jerome and in the Eastern Church; it tends to cite Nu. 27:16; Eccl. 12:7; and Isa. 42:5 for support. A third position, known as traducianism, understands each soul to be derived from the parents along with each body; it was favored by Tertullian (*De anima* 27) but was questioned by Augustine (*De anima et eius origine* 1.24). One strength of this view is that it does seem to provide an explanation for the concept of universal original sin through Adam and also for the true humanity of Jesus. Passages such as He. 7:9f. are cited as supporting this position.

C. M. ROBECK, JR.

SOUND. As a noun "sound" almost always represents the word for VOICE in Hebrew (*qôl*), Aramaic (*qâl*), or Greek (*phōnḗ*), e.g., the *qôl* of the trumpet (Ex. 19:19; Josh. 6:5, 20; etc.), of marching (2 S. 5:24), of chariots (2 K. 7:6), or of wings (Ezk. 1:24; 3:13; 10:5); the *qâl* of the horn (Dnl. 3:5, 7, etc.); the *phōnḗ* of many waters (Rev. 1:15; 14:2; 19:6) or of harpers (14:2; 18:22). The only passages in which the noun represents another term are Ps. 150:3 (Heb. *tēqaʿ* < *tāqaʿ*, "blow, blast"); Isa. 14:11 (*hemyâ* < *hāmâ*, "make noise"); 30:29, 32 (supplied by the RSV in translating *behālîl* [lit. "with the flute"] and *bᵉṯuppîm* [lit. "with timbrels"]; cf. AV); Am. 6:5 (*peh*, lit. "mouth"); and Acts 2:2 and He. 12:19 (Gk. *ḗchos*, "sound, noise," "report"). *See also* NOISE.

The verb is used most often in the sense of "cause to be heard." As such it translates Heb. *tāqaʿ* (lit. "blow [the trumpet]"; Jgs. 3:27; 6:34; Neh. 4:18; Zec. 9:14), the hiphil of *rûᶜ(a)* ("sound an alarm," e.g., Nu. 10:7, 9; Hos. 5:8; Joel 2:1; cf. 2 Ch. 13:12), the hiphil of *šāmēᶜ(a)* (lit. "cause to be heard"; 1 Ch. 15:19; 16:5; Ezk. 19:4 [as emended]), *nāṯan* (lit. "give"; Ps. 81:2 [MT 3]), *hāgaʿ* ("make a sound," Ps. 115:7); Gk. *salpízō* ("sound a trumpet," Mt. 6:2; 1 Cor. 15:52; Rev. 10:7), *laléō* (lit. "speak"; Rev. 10:3f.), pass. of *exēchéō* ("sound forth," 1 Thess. 1:8), etc. *See* BLOW 1.

Two passages use the verb in the sense of "investigate" or "measure the depths." In 1 S. 20:12 Jonathan states that he will "find out" (Heb. *ḥāqar*) his father's intentions. In Acts 27:28 Gk. *bolízō* means to "take soundings," i.e., to measure the depths of a body of water with a sounding line (see MM, p. 114). N. J. O.

SOUND; SOUNDNESS [Heb. *tûšîyâ* ("sound wisdom," etc.), *tām* (as emended by RSV, Ps. 73:4), niphal part. of *nāṣaḇ*, *mᵉṯōm*; Gk. *haploús, ponērós* ("not sound"), *agathós, holóklēros, hygiaínō, hygiḗs*]; AV also WISDOM, "the thing as it is" (Job 26:3), SINGLE, EVIL, GOOD, WHOLESOME, etc.; NEB also ABILITY, SUCCESS, SICKLY, HEALTH, WHOLESOME, GOOD, etc. Free from injury, disease, defect, or error.

In the OT "sound" appears most often in the expressions "sound wisdom" (Prov. 2:7; 3:21; 8:14; Mic. 6:9), "sound knowledge" (Job 26:3), and "sound judgment" (Prov. 18:1). These all translate Heb. *tûšîyâ*, which denotes the kind of practical WISDOM that leads to success (cf. RSV "success" in Job 5:12; "resource" in 6:13).

In Ps. 73:4 the RSV and NEB emend the MT *lᵉmôṯām* (AV lit. "in their death") to read *lāmô tām*. *Tām* derives from the root *tmm* ("be complete, blameless") and refers here to the bodies of the wealthy, which are free of any injury or disease. On the other hand, a body that has "no soundness" (*ʾên mᵉṯōm*, also derived from *tmm*) is one that is desperately ill (Ps. 38:3, 7 [MT 4, 8]); the same expression figuratively describes the critical plight of the whole nation (Isa. 1:6). In Zec. 11:16 the niphal part. of *nāṣaḇ* (lit. "stand, stand firm"; cf. AV "that stand still") can be interpreted in two ways with opposite meanings: it may denote the firm, strong bodies of healthy animals (RSV "sound") or the "sickly" (NEB) bodies of animals that stand still instead of moving about.

In Jesus' saying of Mt. 6:22f. par. Lk. 11:34-36 the meaning of Gk. *haploús* (RSV "sound") and *ponērós* ("not sound") is not totally clear. Gk. *haploús* generally means "single" (so AV) or "simple," while *ponērós* can mean either "evil" (AV) or "sick" (cf. NEB "bad"). Some exegetes have interpreted *ophthalmós ponērós* in a moral sense as "evil eye," i.e., a "hostile" or "grudging" disposition (cf. Mt. 20:15; Mk. 7:22; *see* EVIL EYE); *haploús* is then understood as "generous" or "whole-hearted" (see *TDNT*, I, 386; VI, 555f.). More likely, perhaps, is the view that *haploús* denotes single-minded receptivity to the light (i.e., to Christ, God's Word). One who is focused totally on Christ is illumined by the light, while one who is closed to Christ or tries to focus on both Christ and material possessions (resulting in "double vision"; cf. the context in Mt. 6:24-34) remains in darkness. See comms. on Matthew (e.g., D. Hill [*NCBC*, repr. 1981]) and on Luke (e.g., J. A. Fitzmyer [*AB*, 1985]; I. H. Marshall [*NIGTC*, 1978]).

Greek *hygiaínō* usually means "be in good health" or "make well again." In Lk. 15:27, e.g., the lost son is said to have returned "safe and sound" (part. of *hygiaínō*). In the Pastoral Epistles, however, this verb (usually part.) and the adjective *hygiḗs* (lit. "healthy") are used in a different sense, found nowhere else in the NT, to characterize the content of Christian preaching (e.g., "sound doctrine," Tit. 2:1; "sound teaching," 2 Tim. 4:3; "sound speech," Tit. 2:8; cf. v. 2). The background for this usage is to be found in Greek popular philosophy, which frequently used these terms in the sense of "reasonable," i.e., conforming to the order and balance present in reality (see Dibelius and Conzelmann; *TDNT*, VIII, 308, 312). In the Pastoral Epistles the apostolic DOCTRINE provides the norm for determining what teaching is "sound" and what is to be rejected as erroneous (cf. 1 Tim. 1:10f.; 6:3f.; 2 Tim. 1:11-14; Tit. 1:9, 13f.).

Greek *holóklēros* (lit. "complete in all its parts"; cf. RSV "complete" in Jas. 1:4) in 1 Thess. 5:23 refers to the sanctification of the whole person (cf. the denotation "unblemished" sacrificial victims in Josephus *Ant.* iii.9.2 [228]; viii.4.4 [118]).

SOUR [Heb. *bōser*] (Jer. 31:29f.; Ezk. 18:2). A term applied to grapes that are starting to ripen (KoB, pp. 135f.) in a proverb describing the effect of one generation's sins upon the next: "The fathers have eaten sour grapes and the children's teeth are set on edge." Both Jeremiah and Ezekiel quoted the proverb in order to reject it. Their corrective message was that all individuals would suffer for their own wrongdoing. Although the principle of collective responsibility was strong in Israel and the ancient Near East in general, the principle of individual responsibility was not new with Jeremiah and Ezekiel (cf., e.g., Dt. 24:16). The proverb cynically elevated collective responsibility to a level that denied individual responsibility and obscured God's justice. G. WYPER

SOURCE [Heb. *qāṣeh*—'end, extremity'] (Isa. 7:18); AV UTTERMOST PART; NEB DISTANT; [Gk. *aítios*] (He. 5:9); AV AUTHOR. In 1 Cor. 1:30 "source" is supplied by the context.

In Isa. 7:18 the term Heb. *qāṣeh*, "end," probably refers to the headwaters of a river.

The literal meaning of Gk. *aítios* is "culpable" or "re-

sponsible." As a substantive it refers to one who is the "cause" or "source" of something to a person. This use is well attested in Jewish and pagan literature and in the papyri, where it often appears in connection with salvation. In fact, the phrase "source" or "cause of salvation" is fairly common. The 4th cent. B.C. Greek orator Aeschines, e.g., described the gods as "the authors of salvation" (*Against Ctesiphon* 57). Josephus used the phrase with reference to Antipater (*Ant.* xiv.8.2 [136]). Philo described Noah as the source of Ham's salvation (*De virtutibus* 202), the brazen serpent as "the source of complete salvation" to those who beheld it (*De agricultura* 96), and God as the source of His people's salvation (*De specialibus legibus* i.252). He. 5:9 refers to Christ whose perfect obedience in suffering makes Him "the source of eternal salvation to all who obey him" (cf. Isa. 45:17). While "eternal" could mean unending or pertaining to timelessness, here and throughout Hebrews it denotes that which belongs to the world to come. "Source" in He. 5:9 has practically the same meaning as *archēgós* in 2:10, where *archēgós* identifies Christ, who was made perfect through suffering, as the "originator" or "author" (RSV "pioneer") of our salvation.

SOUTH. ***I. OT Usage.***–Several Hebrew words are employed by the OT to refer to the southern direction. Generally these terms are either relative to the position of the speaker (*yāmîn*, "right") or geographically oriented (*negeḇ*, "the Negeb"), and only secondarily have they taken on the connotation "south." For this reason, in many instances it is not possible to determine absolutely that "south" was the intention of the author.

A. Negeḇ. By far the most common term used to refer to the southern direction is *negeḇ*, a geographical reference to the dry desert region that marked the southern boundary of Israel (*see* NEGEB). *Negeḇ* occurs frequently enough in association with terms of the other three compass points (*ṣapôn, mizrāḥ/qeḏem*, and *yām*) to confirm its reference to the southern region (Gen. 13:14; 28:14; 1 K. 7:25; 2 Ch. 4:4; Ezk. 48:10, 17). This is especially clear in 1 Ch. 9:24, where reference is made to "the four winds" (*le'arba' rûḥôṯ*), "east, west, north, and south" (*mizrāḥ yāmmāṣāpônâ wᵉnegbâ*).

B. Yāmîn. The term *yāmîn* ("right side, right hand") is occasionally found with its antithetical parallel *śᵉmô'l* ("left side, left hand") in passages where their original meaning as relative directions from the speaker's point of view is obvious (Job 23:9; cf. also 1 K. 7:39; Ezk. 16:46). Such relative directions become absolute when the direction one faces is fixed in the east, perhaps from the habit of facing the rising sun in morning prayer (*see* ORIENTATION). Naturally it is difficult, if not impossible, in some instances to determine whether relative or fixed directions are intended (cf. Josh. 17:7; 1 S. 23:19, 24). The use of *yāmîn* in parallel with *ṣāpôn* ("north," "Mt. Saphon") in Ps. 89:12 (MT 13) confirms its directional reference to the south.

C. Têmān. Based on the same root (*ymn*) as the preceding term, *têmān* (originally "area to the right") closely approaches a true designation of the direction "south," as indicated by its use as a sort of "explanatory gloss" on the word *negeḇ* in the phrase *pᵉ'aṯ negeḇ têmānâ*, "[on] the Negeb side, to the south" (Ex. 27:9; 36:23; 38:9; Ezk. 47:19; 48:28). *Têmān* parallels Edom in Zec. 6:6 and may refer to that southern kingdom in other passages (esp. Josh. 12:3; 13:4; 15:1; Hab. 3:3). Elsewhere the term describes winds that originate from the southern quarter (Job 39:26; Cant. 4:16; Ps. 78:26; Zec. 9:14).

D. Dārôm. Infrequently occurring, except in Ezekiel where it appears twelve times (20:46 [MT 21:2]; 40:24, 27f., 44f.; 41:11; 42:12f., 18), *dārôm* is a term whose origin is uncertain. Reference to the "south" is established in Ezk. 20:46 (MT 21:2), where *dārôm* stands between and parallel to *têmān* and *negeḇ*. Outside Ezekiel it appears only in Dt. 33:23; Job 37:17; Eccl. 1:6; 11:3.

II. NT Usage.–The NT knows two methods of orientation, one based on solar/stellar movements and another based on nautical wind direction. In the former system "south" is designated by Gk. *mesēmbría*, "midday" (Acts 8:26), since the sun stood in the southern sky at noon. Nautical wind directions included Gk. *nótos* (Lat. *notus*) for "south" (Mt. 12:42 par.; Lk. 12:55; 13:29; Acts 27:13; 28:13; Rev. 21:13) and Gk. *líps* (Lat. *africus*) for "southwest" (Acts 27:12).

See also ORIENTATION. G. H. WILSON

SOUTH, CHAMBERS OF. *See* ASTRONOMY II.C.

SOUTH, QUEEN OF. *See* QUEEN OF SHEBA.

SOUTH RAMOTH. *See* RAMAH 5.

SOUTHEAST. In 1 K. 7:39 par. 2 Ch. 4:10 the southeast (Heb. *qēḏᵉmâ mimmûl negeḇ*; lit. "eastward towards the south") corner of the temple was the location of the molten sea. On Acts 27:12 *see* NORTHEAST, SOUTHEAST.

SOVEREIGN; SOVEREIGNTY. The Aram. *malḵû* is most often translated "kingdom" (e.g., Dnl. 2:37, 39, 40, 41, 42, 44), and it represents "kingdom" in the senses of both a sovereign government and the power held by that government. RSV has "sovereignty" for *malḵû* in its second occurrence in Dnl. 2:44 (AV, NEB, "kingdom") to distinguish that use (power held by the government) from the first and third uses of the word in the verse (the government itself, the "kingdom").

Greek *dynástēs* is used in the NT of God only in 1 Tim. 6:15 (AV "Potentate"; NEB paraphrases). When used of human beings, it is a general term for the "mighty," those who possess *dýnamis*, "power" (e.g., Lk. 1:52).

Greek *despótēs* is used three times in the NT for God addressed in prayer. Of these, RSV has "Lord" once (Lk. 2:29) and "Sovereign Lord" twice (Acts 4:24; Rev. 6:10; AV "Lord"; *dynástēs* is used similarly in 2 Macc. 12:15, 28; 15:23, 29). RSV has "master" for *despótēs* where it is used of Jesus (2 Pet. 2:1; Jude 4) and of human masters in relationship to slaves (including a metaphorical reference to God, 2 Tim. 2:21). The latter is the most common use of the word and may be considered a fair indicator of its meaning when it is applied to God.

To

An Egyptian wall painting showing tillers hoeing the ground and scattering seed from seedbags (facsimile from the tomb of Nakht, Thebes, 18th Dynasty) (The Metropolitan Museum of Art)

scatter seed upon the ground for the purpose of producing a crop.

The primary Hebrew term for "sow," *zāraʿ*, most often indicates a literal scattering of seed for crops. While it usually refers to the planting of grains, it can also be used with reference to grapes (Dt. 22:9). In Jgs. 9:45 it refers to the ancient practice of strewing a conquered city with SALT. *Zāraʿ* also occurs in several figurative uses. "Sowing" and "reaping" are used to describe the normal connection between one's actions and their consequences (e.g., "those who plow iniquity and sow trouble reap the same," Job 4:8; cf. also Prov. 11:18; 22:8; Hos. 8:7; 10:12). On the other hand, catastrophic events (viewed as punishment from Yahweh) can prevent people from profiting from what they have "sown" (e.g., Job 31:8; Jer. 12:13; Mic. 6:15; Hag. 1:6). The noun *zeraʿ* usually denotes "seed," but in a few instances it refers to the time of sowing. Other cognates include *zērû(a)ʿ*, which denotes seed that has been sown, and *miẓraʿ*, which indicates land that has been sown.

Several other Hebrew verbs are translated "sow." The part. of *māšaḵ* (lit. "draw") is used once to refer to one who carries a bag for seed (*mešeḵ*). The piel of *šālaḥ* (lit. "send," "let go") is used in the figurative sense of "sowing" discord. *Zāraq* (lit. "scatter," "sprinkle") refers in Isa. 28:25 to the planting of cumin.

Greek *speirō* has the same semantic force as Heb. *zāraʿ*. In addition to its literal use for the planting of crops, it is used figuratively. In general, people "reap" what they "sow," i.e., what they receive back from life is proportional to what they have given (Gal. 6:7; cf. v. 8; 1 Cor. 9:11; 2 Cor. 9:6; Jas. 3:18). In 1 Cor. 15:42-44 Paul uses the contrast between seed that is sown and the plant that comes from it to describe the difference between the mortal body and the resurrection body.

Jesus also used the imagery of sowing seed in several of His parables (*see* SEED; cf. also Jn. 4:37). In his interpretation of the parable of the Sower, Jeremias (pp. 11f., citing G. Dalman, *Palästina-Jahrbuch*, 22 [1926], 120-132; *Arbeit und Sitte in Palästina*, II [1932], 179ff.) pointed out that it was the Palestinian practice in biblical times to sow before plowing. Thus the Sower was not being careless when he sowed seed on the footpath, on rocky soil, and amidst the thorns, since this was all to be plowed up later. Although some scholars have contested the idea that sowing preceded plowing (cf. *TDOT*, IV, 146), Jub. 11:11 gives clear evidence that this was the practice at least in some times (see also J. A. Fitzmyer, *Gospel According to Luke I–IX* [*AB*, 2nd ed. 1983], p. 703).

According to Egyptian art the seed was carried in jars or baskets in one hand while the farmer broadcast the seeds with the other (*see* picture in GRAIN). Presumably the seeds were plowed into the soil before the birds could eat them.

Sowing took place soon after the first rains had fallen and the soil had become soft. Barley was sown in November, followed soon by wheat in late November or December. Millet, sesame, melons, and vegetables were planted in January and February.

Excavations at Jericho have uncovered agricultural tools made of stone from the early Neolithic period (*ca.* 7500 B.C.). The Natufian culture (late Epipaleolithic period, *ca.* 8000 B.C.) in the hill country of Israel has produced sickle blades and hoes, suggesting crop agriculture.

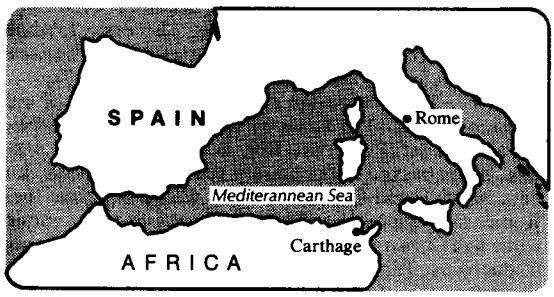
SPAIN spān [Gk. *Spania*] (Rom. 15:24, 28). The only biblical references to Spain occur in the NT: in Rom. 15:24, 28 (but cf. 1 Macc. 8:3), where Paul not only states his intention to visit the Christians in Rome, but expresses his desire to proclaim the gospel in the western end of the Mediterranean world.



Paintings discovered in a cave at Altamira in northern Spain permit the tracing of Spain's cultural history to Paleolithic times. Hecataeus of Milesia (6th–5th cent. B.C.) attests the name Iberia (*hē Ibēria*) derived from the Iberians, who appear to have arrived from North Africa in the Neolithic or Bronze Ages. Beginning *ca.* 1100 B.C. Phoenicians established trading posts on the southwest coast that included Gades (Gadira), present-day Cadiz (cf. Velleius Paterculus i.3). Four centuries later Greek traders and colonists, apparently attracted by Spain's precious metals, rapidly gained control of commercial interests. In modern times interesting traces of Greek civilization have been found, especially at Ampuria.

Carthage, a Phoenician settlement, subsequently took the lead in releasing most of coastal Spain from the Grecian grip. With the help of the Etruscans, the Carthaginians routed the Phoceans at Alalia (Aléria), and the Carthaginians made Carthago Nova (Cartagena) to the southeast their captial. With their revenues constantly replenished through Spain's abundant resources of lead, tin, iron, silver, and gold, the Carthaginians posed a continuing threat to the Romans until the Second Punic War (218-201) when Scipio Africanus's army took New Carthage (209) and ultimately broke the Punic power (206) in Spain.

To overcome political instability nourished by weak native principalities, the Roman Senate (*ca.* 197) converted its conquered Spanish territory into two new provinces divided by the river Ebro. Hispania Citerior, or Hither

Spain, so termed because it was nearer to Rome, was situated mainly on the eastern seaboard. Hispania Ulterior, "further" from Rome, was located in the area of modern Andalusia. Under Augustus (cf. *Res Gestae* i.12.) Hither Spain became known as Tarraconensis, named after its capital Tarraco, and the western province gave way to Lusitania and Baetica (Pliny *Nat. hist.* iii.6-30). Remains of numerous theaters, amphitheaters, aqueducts, and bridges attest the prosperity to which Augustus's urbanization policies, which Claudius later pursued with vigor, made a major contribution. Augustus's commitment to an extensive road system further stimulated a process of cultural unification that perhaps inspired Paul with the hope of a successful and rapid dissemination of the gospel via strategically located municipalities.

Whether Paul ever fulfilled his plan remains uncertain. According to Acts 28:30f., Paul was under house arrest in Rome for two years, and the silence of Acts about his subsequent fortunes, which appears to relate more to literary-theological than biographical considerations, offers no convincing support for the tradition expressed by Clement (cf. the Muratorian Canon, lines 37-39) that Paul was released and before his martyrdom had reached "the Western limit" (*tó térma tēs dýseōs,* 1 Clem. 5:7), an expression that probably refers to Spain. The very late tradition first traceable to Bishop Isidore of Seville (*PL* LXXXIII, 151), that the apostle James introduced Spain to the gospel merits little credence. The early foothold that Christianity took in Spain finds attestation in Irenaeus (*Adv. haer.* i.10.2) and Tertullian (*Adv. Judaeos* 7).

In A.D. 73-74 Vespasian extended the privilege of citizenship (*ius Latii*) to Spain by taking her into his *tribus,* the Quirina (cf. Pliny *Nat. hist.* iii.30). Besides this prestige, Spain basked in the literary splendor of Seneca, Lucan, Martial, and Quintilian, all of whom outshone their Roman contemporaries. From the same part of the empire came five Caesars: Galba, Trajan, Hadrian, Maximus, and Theodosius. The development of provincial worship was instrumental in fostering the antagonism that ultimately developed between the imperial government and Christianity.

SPAN [Heb. *zereṯ*–'span (of the hand)' (Ex. 28:16; 39:9; 1 S. 17:4; Isa. 40:12; Ezk. 43:13); [*rōḥaḇ*–'eagerness, insistence'] (Ps. 90:10); AV STRENGTH; NEB HURRYING YEARS; [Gk. *hēlikía*–'age, time of life,' 'bodily stature'] ("span of life," Mt. 6:27 par. Lk. 12:25); AV STATURE; NEB HEIGHT; NEB mg. LIFE.

The RSV always translates Heb. *zereṯ* by "span," which is a linear measurement equal to about 23 cm. (9 in.), i.e., the distance between the tip of one's little finger and the end of the extended thumb.

In Ps. 90:10 the RSV presupposes a text that includes Heb. *rōḥaḇ* (lit. "breadth, width"), which the RSV, along with various other versions (e.g., LXX, Tg., Syr., Vulg.), translates by "span"; the MT, however, has Heb. *rōḥaḇ,* "eagerness, insistence," a reading accepted by various OT scholars (e.g., KD; A. Weiser, *Psalms* [Eng. tr., *OTL,* 1962], p. 594; cf. M. Dahood, *Psalms I* [*AB,* 2nd ed. 1973], pp. 321, 325).

In the RSV NT "span" occurs only in the phrase "span of life" (Mt. 6:27 par. Lk. 12:25; RSV mg. "stature"). Although Gk. *hēlikía* may refer to spatial measurement, its combination with Gk. *pēchys,* also a measure of distance and time, has a temporal application (cf. R. A. Guelich, *Sermon on the Mount* [1982], pp. 338f.).

G. L. K.

SPARE [Heb. *ḥāmal, ḥûs, ḥāśaḵ, ḥāyâ* (qal, piel, hiphil), also *pāsaḥ* (Isa. 31:5), *nāsā'* (Gen. 18:24, 26), *šāmar* (Job 2:6), *pāga'* (Isa. 47:3), *ḥānan* (Ps. 59:5), hiphil of *šā'ar* (2 K. 10:14), hiphil of *yāša'* (Josh. 22:22), hiphil of *nāṣal* (Ex. 12:27), *'āḇar* (Hos. 10:11), etc.; Gk. *pheídomai,* also *perisseúō* ("have enough and to spare," Lk. 15:17)]; AV also SAVE (ALIVE), BE MERCIFUL (Ps. 59:5), QUICKEN (Ps. 119:88), LEAVE (2 K. 10:14), PASS OVER, etc.; NEB also PITY, SHIELD, PARDON (Gen. 18:24, 26), SAVE (Josh. 22:22), HAVE MERCY (Ps. 59:5), SHOW MERCY (Prov. 6:34), RESTRAIN (Isa. 58:1), SHOW LENIENCY (1 Cor. 13:2), etc.

In the OT "spare" is employed by the RSV and most other English versions to translate a variety of Hebrew terms. *Ḥāmal* usually means to show mercy by not taking the life of a person or animal. Saul was commanded not to spare the life of any of the Amalekites or of their animals (1 S. 15:3; cf. vv. 9, 15; cf. also Jer. 51:3). When David handed over seven of Saul's sons and grandsons to be slain by the Gibeonites, he spared Mephibosheth because of his covenant with Jonathan (2 S. 21:7). Hebrew law demanded that no leniency be shown to any person convicted of promoting idolatry; such persons were to be stoned (Dt. 13:8). In Job 16:13 and Prov. 6:34 the term means to refrain from attacking or punishing. Occasionally *ḥāyâ,* like *hāmal,* means to preserve someone's life (1 K. 20:31; 2 K. 7:4; Ps. 119:88; Jer. 38:17, 20; etc.).

The verb *ḥûs* seems to carry the more general sense of "pity, show compassion." Joel 2:17 calls upon the priests to pray that God will "spare" (i.e., "show compassion on") His people (cf. Neh. 13:22; Jer. 13:14; 21:7; Ezk. 5:11; 7:4, 9; etc.). But this term also can mean to refrain from taking someone's life (e.g., 1 S. 24:10). Where it translates *ḥāśaḵ* (Ps. 78:50; Isa. 58:1; Job 21:30; etc.), "spare" means to "hold back, withhold, restrain"; e.g., "He who spares the rod hates [i.e., deems of little value] his son" (Prov. 13:24).

Apart from Lk. 15:17, all the RSV NT occurrences of "spare" render Gk. *pheídomai.* Its subject is most often God, who gave up to death even His own Son (Rom. 8:32), and who has not refrained from cutting off the "natural branches" (i.e., Israel, Rom. 11:21), from punishing the sinful angels (2 Pet. 2:4), and from destroying the sinful world of Noah's day (v. 5). Paul wrote to the Corinthian Christians that he would like to relieve unmarried people of the necessity of undergoing the worldly troubles that marriage would bring upon them (1 Cor. 7:28). He avoided a painful confrontative visit with the Corinthians because of his tender feelings for them (2 Cor. 1:23).

See also PITY.

D. A. DORSEY

SPARK. Various Hebrew terms rendered "spark," "sparkled," "sparkles," or "sparkling" in the RSV refer either to burning particles or to bright reflected light. In Isa. 1:31 (cf. Sir. 11:32) the "spark" (Heb. *nîṣôṣ*), identified as man himself, acts as a catalyst to destroy both men and their

work. Usually understood to mean "flame" in Job 5:7, Heb. *rešep* may also have reference to the word "bird" (NEB "birds"; NEB mg. "sparks"; see the comms.). In Job 41:19 (MT 11) the biblical hapax Heb. *kîḏôḏ* occurs in the phrase *kîḏôḏê 'ēš* (lit. "sparks of fire"). These "sparks," which are understood figuratively, emanate from the mouth of the mythical Leviathan.

In Ezk. 1:7 "sparkled" (NEB "glittering") renders a participial form of Heb. *nāṣaṣ*, "shine, sparkle," and refers to the bronze-like shining of the living creatures in Ezekiel's vision. "Sparkles" in Prov. 23:31 (AV "colour") and "sparkling" (AV "colour"; NEB "sparkle") in Ezk. 10:9 (RSV has "gleaming" for Heb. *'ayin* in 1:4, 16, 27; 8:2) reflect a nuance of *'ayin* that refers to the look or appearance of an object, specifically to its brilliance or brightness.
ness. G. L. K.

SPARROW [Heb. *ṣippôr*] (Ps. 84:3 [MT 4]; Prov. 26:2); AV also BIRD; [Gk. *strouthíon*, diminuitive form of *strouthós*] (Mt. 10:29, 31; Lk. 12:6f.). Any of various singing birds related to the finch family.

While the RSV translates Heb. *ṣippôr* (< *ṣpr*, "peep, twitter") with "bird," "fowl," and "sparrow," the term may refer to birds of every sort, and is often applied to any of the wide variety of small passarine birds that are numerous in Palestine. While *ṣippôr* may be translated "bird" (as in Ps. 102:7 [MT 8]), its use with swallow in Ps. 84:3 suggests that it probably belongs to the various genera of the finch family (*Fringillidae*) and is best rendered "sparrow". In 84:3 the psalmist speaks with envy of the *ṣippôr* that finds a home in the temple and the swallow that finds a nesting place there. Both Josephus (*BJ* v.4.6 [224]) and rabbinic literature (Mish. *Middoth* iv.6) mention efforts to discourage such birds from perching in the temple sanctuary, a circumstance with which the psalmist is clearly familiar.

In the NT "sparrow" appears only in Mt. 10:29, 31 par. Lk. 12:6f. "Sparrow" had come to mean any small bird sold very cheaply and used for food by the poor. According to Mt. 10:29 two sparrows sold for a penny (Gk. *assarion*, a small Roman copper coin worth about one-sixteenth of a denarius). Thus the sparrow was understood as an example of an article with little value. Jesus uses the diminutive form of sparrow while speaking of God's concern for persons. According to Jesus, even that which has little earthly value is within the pale of God's care. Thus, using the Rabbinic *qal waḥomer* argument, i.e., from the "lesser" to the "greater," Jesus demonstrates the extent of God's care for each person. A similar saying is attributed to Rabbi Simeon ben Jochai (*ca.* A.D. 150): "No bird perishes without God — how much less a man!" (T. P. *Shebith* 9, 38d, 22; SB, I, 582f.)

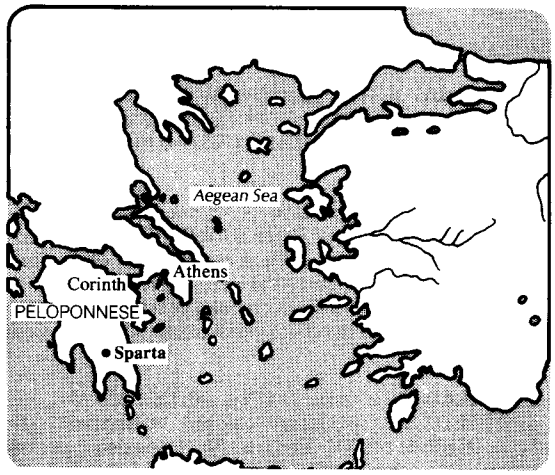
SPARTA spär'tə [Gk. *Spartē*] (1 Macc. 14:16); **SPARTANS** spär'tanz [*Spartiatai*] (1 Macc. 12:2, 5f., 20f.; 14:20, 23; 15:23); AV LACEDEMONIANS; **LACEDAEMONIANS** las-ə-dī-mō'ni-ənz [*Lakedaimonioi*] (2 Macc. 5:9); AV LACEDEMONIANS; NEB SPARTA. The name of the main city and capital of the region of Laconia in southern Greece whose inhabitants were called "Spartans" or "Lacedaemonians."

The people thus described lived in Lacedaemon, a city-state originating perhaps *ca.* 1000 B.C. with the Dorian settlement of Greece, and later known as Sparta. It became the capital of Laconia in southeastern Greece, displacing Amyclae after a lengthy war. The Spartans subsequently expanded westward into Messenia shortly before 730 B.C., and conquered it after a little more than a century of sporadic fighting. With Laconia, the land thus acquired became known officially as Lacedaemon. These conquests enabled Sparta to concentrate on military consolidation from the 5th cent. B.C., with the result that it had become the dominant city in Greece by the end of the Peloponnesian War in 404 B.C.



By the end of the next century Sparta had embarked upon a course of friendly relations with the Jews during the high priesthood of Onias I (320–290 B.C.). Perhaps it was the virility of Spartan culture that led the Jews to claim the common descent of their people and the Lacedaemonians from Abraham (1 Macc. 12:21). It is equally possible, however, that what both nations had in common was a trading relationship with Egypt. In any event, a small Jewish settlement existed in Spartan territory by the 2nd cent. B.C., because Jason fled to this group after failing to occupy Jerusalem (2 Macc. 5:9).

The Maccabean Jews made further contacts with Sparta *ca.* 146 B.C., when Jonathan sought to develop earlier relationships (1 Macc. 12:6-18; cf. Josephus *Ant.* xiii.5.8 [164]; xii.4.10 [225]). His letter and the reply to it have been regarded in some circles as inauthentic. If, however, the letter of the Roman proconsul Lucius to the pharaoh of Egypt is genuine, which mentions that a Jewish envoy was attempting to renew the friendship between the Jews and the Romans (1 Macc. 15:16-21), then the document from Jonathan to the Spartans may be genuine also (cf. R. K. Harrison, *Intro. to the OT* [1969], p. 1262). A brief communication sent by the Spartan authorities to Simon the high priest in Jerusalem, the successor of Jonathan, appears in 1 Macc. 14:20-22. Finally, the letter from Lucius, which was also sent to nations other than the Egyptians, requested the recipients to abstain from fighting the Jews, and in this connection Sparta was mentioned specifically (15:23 cf. *Ant.* xiv.8.5 [145-48]), thus encouraging the continuance of friendly relations. It was evidently important for the Maccabean Jews to have contacts with mainland Greek culture, as opposed to Syrian Hellenism, even after the Roman conquest of the Peloponnese in 146 B.C. considerably reduced Greek influence.

SPEAKING EVIL. *See* SLANDER.

SPEAR. *See* WEAPONS OF WAR.

SPECIALLY. A term used by the AV in the obsolete sense of "especially" (cf. RSV), "most of all," translating Gk. *málista* (Acts 25:26; 1 Tim. 4:10; 5:8; Tit. 1:10; Philem. 16).

SPECK [Gk. *kárphos*] (Mt. 7:3-5 par. Lk. 6:41f.); AV MOTE; NEB also SPECK OF SAWDUST. A small piece of anything dry or light, such as straw, chaff, or a splinter of wood, that might enter the eye. Jesus contrasted the speck with a log in order to rebuke officiousness in correcting small faults in others while retaining greater faults in oneself.

SPECKLED [Heb. *nāqōḏ*] (Gen. 30:32f., 35, 39); NEB SPOTTED, etc.; [*śāḇû(a)*ʿ–'colored, variegated'] (Jer. 12:9); NEB HYENA. In Gen. 30 "speckled" perhaps refers to the coloring of various animals in Laban's flocks, although some scholars suggest that the etymology of the term pertains more to spatial arrangements or sizes than to the classification of actual colors (see A. Brenner, *Colour Terms in the OT* [1982], pp. 169-171). Heb. *nāqōḏ* also occurs in Gen. 31:8, 10, and 12, where the RSV renders it "spotted" (AV "speckled").

On Jer. 12:9 see J. A. Thompson, *Book of Jeremiah* (*NICOT*, 1980), p. 358; W. L. Holladay, *Jeremiah 1* (*Hermeneia*, 1986), pp. 383, 387.

SPECTACLE. *See* THEATER.

SPEECH [Heb. *śāp̄â*–'lip' (Gen. 11:7; Job 12:20; Prov. 16:21, 27; etc.), *peh*–'mouth' (Ex. 4:10; Ps. 55:21 [MT 22]; Prov. 4:24; etc.), *ḥîḏâ*–'riddle' ("dark speech," Nu. 12:8), *leqaḥ*–'teaching' (Dt. 32:2; "seductive speech," Prov. 7:21), *dāḇār*–'word' (1 S. 16:18), *'imrâ* (Job. 6:26; 32:14; Isa. 28:23; etc.), *millâ* (Job 33:1), *'ōmer* (Ps. 19:2f. [MT 3f.], *mᵉḏabbēr* (Prov. 2:12), *ḥikkâ*–'palate' (Prov. 5:3; Cant. 5:16), *lāšôn*–'tongue' (Isa. 3:8); Gk. *lógos*–'word' (Acts 20:7; 1 Cor. 1:5; 2:4; etc.), *glṓssa*–'tongue' (1 Jn. 3:18), *mogilálos* ("a man who has an impediment in his speech," Mk. 7:32), *pithanología*–'persuasive argument' (Col. 2:4)]; AV also LIP, MOUTH, etc.; NEB also RIDDLE, WORDS, UTTERANCE, etc.; **SPEECHLESS** [Gk. *phimóō*–'muzzle' (Mt. 22:12), *eneós* (Acts 9:7)]; NEB also NOTHING TO SAY.

I. Nature, Function, Origins
II. In the OT
III. In the NT

I. Nature, Function, Origins.–Speech is the verbal means by which the speaker articulates the thoughts and images in his mind. It uniquely identifies people, manifesting body, soul, and spirit. Scripture is clear that God created the power of speech in its fulness in Adam and Eve, and that speech constituted an essential dimension of their reflection of God's image (Gen. 1:27). The first specific action recorded in the Bible (following the assertion that God has created all things) is speech — God's speech (1:3). The validity and power of the Bible depend upon the existence of the power of communication, or speech. The silence and consequent impotence of the false gods described in the OT (1 K. 18:26-29) dramatizes the difference between them and the true, speaking God of Abraham, Isaac, and Jacob; likewise the NT even more dramatically differentiates between the Word of God incarnate in Jesus Christ and the unspeaking false gods (Acts 17:22-31; Rom. 1:19-23).

Our access to God through our speech is one aspect of the glory of God's revelation of Himself through His word, His speech, to us (Ps. 28:6; Isa. 1:18; Acts 1:14; He. 1:1). He is not only speaker but hearer (Ps. 4:3; Isa. 38:5; etc.). "Hear the word of the Lord" is the repeated invitation of Scripture. That Word, incarnate in Jesus Christ (Jn. 1:14), brings perfectly to us the speech of the Father (8:28) and is the source of our hope and joy (15:11).

The last act of God recorded in Scripture is, like the first, speech: "He who testifies to these things says, 'Surely I am coming soon'" (Rev. 22:20). Speech is essential to all communion. No human being can imagine the beauty and glory that must invest communion among the persons of the triune God; but a hint of speech in the heavenly realm appears in Job, "Now there was a day when the sons of God came to present themelves before the Lord" (Job 1:6). It is not an unreasonable hypothesis that the language used on that day was the same that God gave to Adam and Eve, unmarred by the fall and unconfused by Babel. Gen. 2:19f. clearly shows that Adam participated to some degree in the development of his vocabulary. But this assignment of vocal signs to the animals that God "brought . . . to the man to see what he would call them" does not suggest that Adam was "learning to talk," or that the essential structure of a complete language system — morphology, syntax, grammar, etc. — was not implanted in humankind at creation.

Over the centuries, and virulently since the 18th cent., controversy has existed over the origins of speech. Is a knowledge of the structure of language innate in every individual at birth, or has humanity learned over the millenia to speak by moving step-by-step from unstructured animal grunts to Demosthenean rhetoric? The Bible seems to imply the former; naturalistic determinism (notably Darwinism) teaches the latter, postulating the gradual development of linguistic complexity, subtlety, and intellectualization over the aeons of the presumed evolutionary process. This view undoubtedly dominated the study of linguistics (i.e., the nature and history of language) for many decades. (One popular bit of "evidence" was the belief that each child relives in its own formative life each stage of the ages-long evolutionary process — from the silence of the primordial cell, to animal grunts, to human communication. "Ontogeny recapitulates phylogeny" ran the previously accepted axiom.) In more recent years prominent linguists have reverted to the belief that language ability is innate. Notably, and controversially, Noam Chomsky (*Language and Mind* [1972]) has supported this view, saying that "When we study human language, we are approaching what some might call 'human essence,' the distinctive qualities of mind that are, so far as we know, unique to man." Other studies have cast doubt on the belief that animal "language" represents simply a point on an unbroken scale of oral communication from silent cell to articulate human beings, bearing out philosopher Bertrand Russell's humorous comment that "No matter how eloquently a dog may bark, he cannot tell you his parents were poor but honest." "Animals do not 'speak' to each other in anything like the sense that we speak" (R. D. King, *Discovery*, 7/3 [1983], 18).

Skepticism also exists about the biblical account of the division at Babel of the original speech-language given by God to Adam and Eve into many different languages. The underlying similarity of language structure in all languages throughout recorded history, however, suggests a common origin, as does the fact that language seems to have eroded, not advanced, in complexity and precision over the period of history when it can be studied. The odd fact that children learn their own languages at about the same

speed, no matter how complex or simple the language may be, also suggests universal similarity in humankind's innate sense of language structure.

These considerations, however, though of interest to one considering "speech" in the Bible, intrude upon esoteric areas and centuries of learned speculation. (Those interested in examining a remarkable eruption of interest in the 17th and 18th cents. in "restoring" the original universal language may wish to examine James Knowlson's *Universal Language Schemes in England and France: 1660-1800* [1975].)

II. In the OT.–Writing is a very inadequate medium through which to examine speech, but in dealing with the Bible we have no other means of doing so. Recorded speech in the OT may be loosely divided into two categories: formal and informal. The former consists largely of the words recorded for moral, religious, and spiritual purposes, e.g., the words of the priests and prophets; the latter, those recorded for everyday, secular purposes, including conversation and other casual utterances.

Rhetoric — the art of using speech (or writing) to produce the desired effect upon the hearer — did not exist as a formal discipline of instruction among the Hebrews of OT times. The dignity, power, orderliness, and literary beauty (in short, the rhetorical effectiveness) of the great formal oral passages in the OT emerged not from obedience to textbook rules but from the verbal culture of this people of God, from the innate aesthetic sensibility and intellectual power of the speaker, and from divine inspiration. The songs and prayers of Moses (Dt. 31:30–32:43), Deborah and Barak (Jgs. 5), Hannah (1 S. 2:1-10), and innumerable other magnificent oral utterances may be studied as brilliant pieces of oratorical rhetoric, but they are not so because of the influence of rhetorical treatises or rules. This fact is a reminder that great literature always comes first, is primary, and provides the basis for later mere cataloguing and codification of accepted "rules," such as those promulgated by Corax of Syracuse (5th cent. B.C.), the earliest known theoretical rhetorician, and others including Aristotle, Hermagorus, Cicero, Quintilian, Longinus, etc., whose works provided one of the foundations of Western education almost to our own time. Learned treatises undoubtedly were produced in the cultural centers of the Fertile Crescent long before Abraham; but no evidence indicates that such works influenced the nomadic Hebrews. Their unique relationship to God (" . . . the Jews are entrusted with the oracles of God," Rom. 3:2) and their sanctification ("separation") in the midst of the world's debased religion and culture were providentially controlled and strictly commanded. Inspiration (which even secular thought sometimes calls "divine fire") not only guaranteed inerrancy in the original writing but also (to use a dictionary definition) "infused an animating, quickening, or exalting influence" in the style of the speakers, while preserving the personal characteristics of each.

One must not think, however, that premonarchical Israel was entirely insulated from the accumulated lore and wisdom of the ancient world. Abraham, Moses, and Joseph received their "higher education" in pagan centers of learning where rhetoric would have been stressed. Moses' oral utterances (despite his early speech problem) must have exerted a profound influence on the formal speech patterns of his contemporaries and his successors. With the establishment of the Israelite kingdom and its rapid growth and sophistication during and after Solomon, outside learning rapidly permeated Israel, including, unhappily, the moral and spiritual contamination so strictly forbidden. Isaiah, e.g., used formal rhetorical principles powerfully to warn against pagan spiritual contamination; and Daniel, who achieved the highest academic ranking in Babylon, undoubtedly possessed a level of rhetorical erudition that infused his noble prayers and his formal addresses to Babylonian royalty. Still, however, the power of the speech of the later prophets (e.g., Amos and Jonah) continued to reflect the inward, unique cultural tradition of the Hebrews, with its consciousness of the need for a fitting dignity and eloquence when holy things were handled, particularly when God was addressed or when His messages were reported. In this latter matter, i.e., reporting the speech of the Lord, there appears one of the few OT evidences of rhetorical uniformity in the OT, perhaps even a rule of usage. The word *n^{e}'um*, "utterance" (< *n'm*, "speak"; often translated simply "say"), often introduces the words of the Lord (Gen. 22:16; Nu. 14:28; 1 S. 2:30; Isa. 56:8; etc.).

Informal speech in the OT exhibits the qualities praised by John Milton: it is "simple, sensuous, and passionate" (*Of Education*). It exhibits, in short, the rhetorical and literary qualities that mark the OT as a whole: compression, rhythm, dramatic intensity, and the constant use of figurative language (e.g., simile, metaphor, synecdoche, metonymy, irony, apostrophe, hyperbole, litotes, parallelism, antithesis, etc.). Such adornments are natural and innate in the human aesthetic sensibility, as "primitive" literature demonstrates. Instances of memorable informal speech are numerous, and everyone will have favorite passages — Joseph talking with his brothers in Egypt (Gen. 42:7–43:34); the conversations of Ruth, Naomi, and Boaz; Nathan before David (2 S. 12:1-14); Job's discussions with his "friends"; the brief interchange between Nehemiah and Artaxerxes (Neh. 2:1-7); David's personal exchanges; etc. Appropriate speech embodies sorrow (e.g., David's exquisite lament over Saul and Jonathan, 2 S. 1:17-27), confidence and exhortation (e.g., Josh. 24:2-15), love (Canticles), and every other mood, in words and forms fitting to the subject. In an age when speech, not writing, constituted the major channel for transmitting civilization (i.e., history, wisdom, story, song, law, and faith) from one generation to another, the oral use of words naturally received immense value. Moses believed (or timidly professed to believe) that his lack of eloquence (perhaps a speech impediment) disqualfied him from serving as the Lord's spokesman at the court of Pharaoh, and it was Aaron's proficiency in this area that secured him the role of orator (Ex. 4:10-16). It was by the power of speech that individuals and nations were persuaded and things were done, for good or ill (Prov. 7:21; 17:7; 18:21; cf. also D. Kidner, *Proverbs* [*Tyndale OT Comms.*, 1964], pp. 46-49).

III. In the NT.–In the NT one learns most profoundly of the mysterious identity between speech and speaker (Jn. 1:1f.). Here God may truly be found in His written word (Scripture) and in the incarnate Word (His Son) in a perfect oneness of speech and person not found on earth since the fall except in God's utterance and epiphany. Sin introduced the lying tongue, which destroys the unity of heart and speech, beginning with Satan, the father of lies, in whom there is no truth (8:44). It is a crucial work of grace that empowers the redeemed to trust wholly in the veracity of God, in both written and incarnate Word, and to say with Paul, "Let God be true though every man be false" (Rom. 3:4).

By NT times the classical emphasis on oral rhetoric, which was a basic element in the education of anyone professing to be learned, permeated the patterns of formal speech. Such skill was essential for the conduct of political and other public affairs. Professional orators were

hired to advance special causes, such as Tertullus, whom the Jews hired to make their case against Paul before Felix (Acts 24:1-8). Rival schools sang the praises of their own theories, and the term "sophist" commonly identified the public teacher of oratorical and even epistolary rhetoric. Aristotle's opinion that rhetoric involves four purposes (corrective, instructive, suggestive, and defensive) underlay even very diverse schools of rhetoric, and may be detected in Paul's Mars' Hill address (17:22-31), one of the few pieces of organized classical rhetoric recorded in the NT. Paul may have been stung to display his learning by the contemptuous comments of the learned philosophers and the rhetoricians he met and talked with in the agora. "What would this babbler [Gk. *spermológos*, "rag-picker" or "seed-picker"] say?" they asked disdainfully (v. 18). Paul responded with a formal piece of oratory. It was his only attempt, so far as the record shows, to adapt his speech to the "plausible words of wisdom" (1 Cor. 2:4) that formal theory required, and thenceforward he determined "to know nothing among you except Jesus Christ and him crucified . . . in demonstration of the Spirit and power, that your faith might not rest in the wisdom of men but in the power of God" (2:2, 4f.).

Of all written forms, letters most eagerly try to capture the manner and tone of face-to-face speech. Paul achieved this effect, and in doing so followed established Roman epistolary style, as seen most visibly in his letter to Philemon. This style may be found in hundreds of Roman letters, and the epistolary form amounts to little more than developing a sequence of salutation (identification of writer and recipient), expressions of regard and personal wishes for the health and prosperity of the recipient, message, exhortation when appropriate, and closing greetings, with hopes and prayers for the recipient's well-being and greetings from mutual friends. Very abbreviated versions of such letters may be found in Acts 15:23-29 and 23:26-30.

As acknowledged earlier, the silent words of the Bible are difficult to clothe with the sound of the voices, the gestures, the rhythms, the facial expressions and all the other audible and visible components of true speech, which is the primary and complete mode of communion and fellowship. One yearns to hear the Lord's voice as He spoke with Adam and Eve before the fall. After that we read that God spoke only to Moses "face to face, as a man speaks to his friend" (Ex. 33:11; cf. Dt. 34:10), and even in Moses' case God had to veil His glory lest Moses die (Ex. 33:18-23).

In the NT the voice of God, incarnate in His Son, was heard once again on this earth, speaking face to face. And who can doubt that every grace adorned that discourse as His disciples and the multitudes listened in amazement? (Lk. 2:33; Jn. 7:46). Since those days we have not heard that voice; but God has promised that we shall hear it, and that when we do, we shall, by means known only to Him, instantly recognize it (10:16, 27). C. D. LINTON

SPELT [Heb. *kussemeṯ*; cf. Ugar. *ksmm*] (Ex. 9:32; Isa. 28:25; Ezk. 4:9); AV RIE, FITCHES (Ezk. 4:9). An inferior and coarse type of wheat often identified with *Triticum spelta* L., a hard-grained variety common in the East and perhaps originally native to Mesopotamia (*see* GRAIN). Spelt will also grow in conditions less fertile and humid than those required by wheat. Species identification of spelt has also included *Triticum sativum* (KoB, p. 448) and *Triticum dicoccum* (wild emmer). In Egypt spelt and wheat harvest (Mar./Apr.) followed that of flax and barley (Feb./Mar.). Ex. 10:5, 15 indicate that the wheat and spelt remaining from the plague of hail (9:31f.) were ultimately destroyed during the locust plague.

See *MPB*, pp. 231, 233f. R. K. H. G. L. K.

SPICE [Heb. *bōśem/beśem/bāśām*–'balsam'] (Ex. 25:6; 35:8; 1 K. 10:2, 10, 25; 1 Ch. 9:29f.; Est. 2:12; etc.); AV also SWEET ODOUR (2 Ch. 16:14; Est. 2:12); NEB also PERFUME (Ex. 35:8, 28; Est. 2:12), BALSAM (Ex. 25:6; Cant. 6:2); [pl. of *sam*–'paste, perfume'] ("sweet spices," Ex. 30:34; 2 Ch. 2:4 [MT 3]; 13:11); AV also SWEET INCENSE; NEB also FRAGRANT SPICE, FRAGRANT INCENSE, etc.; [*reqaḥ*] (Cant. 8:2); NEB MULLED; [*miśrᵉpôṯ*–'burning'] ("spices were burned," Jer. 34:5a); AV BURNINGS; NEB FIRES; [*śārap*–'burn'] ("burn spices," Jer. 34:5b); AV BURN ODOURS; NEB KINDLE FIRES; [Gk. *árōma*] (Mk. 16:1; Lk. 23:56; 24:1; Jn. 19:40); NEB AROMATIC OIL; [*ámōmon*] (Rev. 18:13); AV ODOUR.

A general term for pulverized fragrant substances is Heb. *sammîm* (Ex. 30:34; cf. 37:29; 2 Ch. 2:4 [MT 3]; 13:11), usually rendered "sweet spices" by the RSV. Heb. *reqaḥ* (Cant. 8:2), from *rāqaḥ*, "compound," refers to mixed spices used to flavor WINE (cf. 2 Ch. 16:14).

The holy anointing oil was made from aromatic spices blended with oil (Ex. 30:23-25); certain temple officials had charge of the spices (1 Ch. 9:29). Hezekiah showed the spices and precious metals and oil in his treasure house to the Babylonian embassage (2 K. 20:13). Spices were used as cosmetics (e.g., by women in Est. 2:12) and at funerals, especially those of nobility (2 Ch. 16:14). The Canticles references to spices (4:10, 14; 5:1, 13; 6:2; 8:2, 14) indicate spices made from low-growing plants such as *Astragalus tragacantha* L., which can be cultivated in beds; thus arborescent species such as sandalwood, cassia, and cinnamon are excluded here.

In Jer. 34:5 the RSV supplies "spices" twice where the MT has only "burn." But as commentators (e.g., KD) have pointed out, this is no doubt a reference to the custom of burning aromatic spices to honor the dead.

See also GUM (Gen. 37:25; 43:11).

On the NT term Gk. *árōma* (Mk. 16:1; Lk. 23:56; 24:1; Jn. 19:40), which in Jn. 19:39 defines as a mixture of myrrh and aloes, *see* PERFUME. In Rev. 18:13 Gk. *ámōmon*, literally "blameless" or "without blemish," is the ancient Greek name of an Indian spice plant of uncertain identity.

See *MPB*, pp. 51f., 84-86. R. K. H.

SPIDER'S WEB [Heb. *bêṯ ʿakkāḇîš*] (Job 8:14); [*kāʿāš*–'moth'] (Job 27:18); AV MOTH; NEB BIRD'S NEST; [*qûrê ʿakkāḇîš*] (Isa. 59:5); NEB COBWEB.

Hundreds of species of arachnids live in Palestine. Spiders' webs are mentioned in only two passages in the MT. Isa. 59:5f. compares the plans of wicked persons to a spider's web (lit. "threads of spiders"), which cannot serve as substantial clothing. Job 8:14f. likens the hope of the godless to a spider's web (lit. "spider's house") because it cannot support those who lean on it.

In Job 27:18 the RSV has emended *kāʿāš* ("moth"; cf. AV) in the MT to read *kaʿăḵāḇîš* ("like a spider"), following the Syr. and LXX; but this emendation is not certain. In Ps. 140:3 (MT 4) the NEB has emended Heb. *ʿaḵšûḇ* ("viper") to *ʿakkābîš* ("spider") by metathesis; this emendation is also uncertain. The AV translates *śᵉmāmîṯ* in Prov. 30:28 as "spider," but the term is better rendered "lizard" (so RSV; *see* LIZARD). R. L. PRATT, JR.

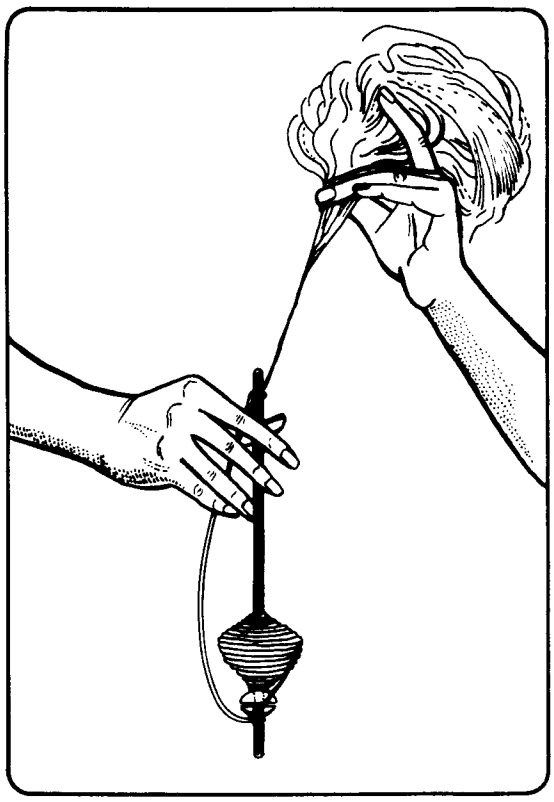
SPIKENARD. *See* NARD.

SPIN [Heb. *ṭāwâ*] (Ex. 35:25f.); NEB also YARN; [Gk. *néthō*] (Mt. 6:28 par. Lk. 12:27); **SPINDLE** [Heb. *pelek*] (2 S. 3:29; Prov. 31:19); AV STAFF, DISTAFF; NEB also DISTAFF.

Spinning is the process that distinguishes the making of cloth from matting. Whereas matting or basketry is done by weaving fibers that have not been spun, the weaving of cloth requires spun thread. In spinning, fibers from plants or animals are twisted to make them smaller in diameter, tighter, and stronger, while forming thread much longer than nature provides. This resulting thread is then woven into cloth. The entire Bible assumes the presence of linen and wool textiles for clothing and other uses, and its passing references can be supplemented by finds of textile tools, of which the most common by far is the spindle whorl. It is hard to realize that cloth as we know it today originated with this little object.

The spindle whorl is a round disk of stone, clay, or sometimes even ivory or glass. It ranges in shape from flat to cylindrical to conical, and in size from 1.3 cm. (0.5 in.) in diameter to as large as 8 or 10 cm. (3 or 4 in.). It has a hole in the exact center, and the drop spindle (Heb. *pelek*) is formed by inserting a stick of wood or bone tightly into this hole. The length of the stick depends on the diameter of the whorl, with small whorls having a stick 13 to 18 cm. (5 to 7 in.) long and the largest up to 38 cm. (15 in.) long. The sticks have usually disintegrated (an exception is the small, beautifully decorated, complete ivory spindle from Megiddo), while the whorls have been uncovered at every excavation in Palestine.

A diagram of a spindle and its use. The thread is first attached near the whorl, then around the lower end of the spindle and back up, looping it around the upper end. The spinner then twists it in her fingers and lets go, while feeding it with the coarse wool or linen (drawing L. Bauer)



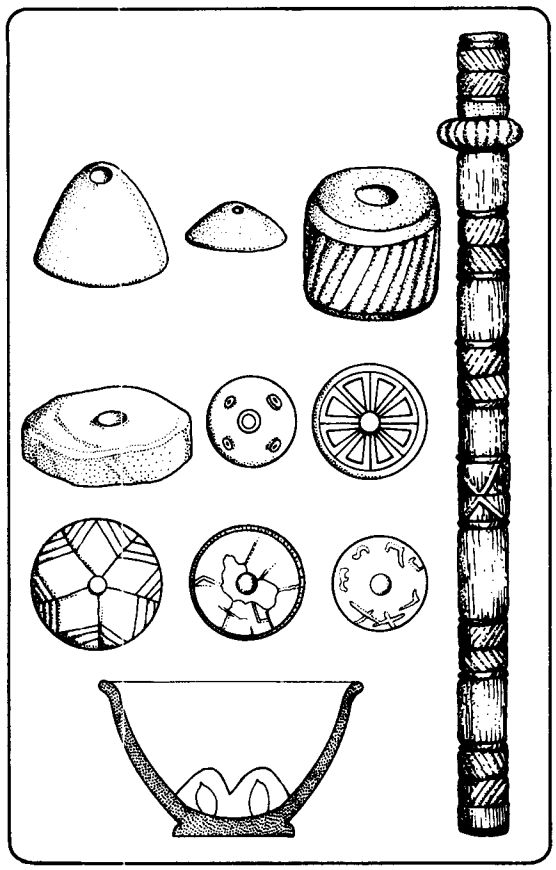
The whorl must be exactly round and relatively heavy, because its weight serves to stretch the thread during spinning and to maintain the momentum of the spin once the spinner's hands set the spindle in motion. The spinner first forms a coarse thread with her fingers and fastens it to the spindle shaft near the whorl. She loops this thread first around the lower end of the spindle and then around the upper end, so that the spindle hangs in an upright position, and sets it spinning by twisting the stick between her fingers. She lets go and allows it to spin, meanwhile feeding carded wool or linen into the growing thread from a bunch that she holds in her other hand, until the spindle loses momentum. Then she unloops the thread from the ends of the spindle and winds onto the spindle the length (perhaps 45 to 60 cm., 18 to 24 in.) of newly spun thread. Thread can be spun either to the right (as viewed from the top) or to the left; the former is called an S-twist and the latter a Z-twist. Examples of both are found in textile remains from Palestine. Great skill is required to spin a fine, even thread without breaking it. In biblical times spinning was women's work (Ex. 35:25f.; Prov. 31:19).

Fibers most commonly spun in the biblical world were flax (*see* LINEN), WOOL, and goats' hair. Goats' hair is strong and water repellent, but itchy, so it was commonly used for tents (Ex. 35:26; 36:14) and perhaps sacks, rather than for clothing. It is a stiff thread and requires a large, heavy spindle.

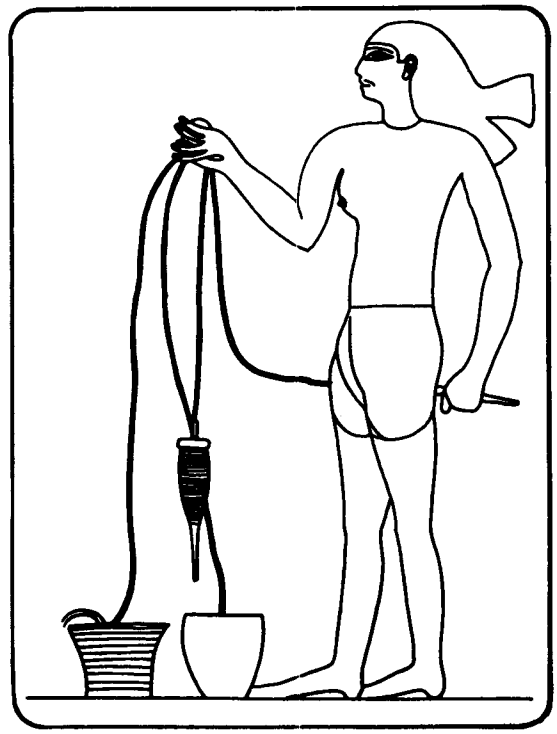
Wool clipped from sheep may be spun either after washing or without washing (called spinning "in the grease"). In either case it must be carded or combed out into relatively straight, parallel strands before spinning. No ancient carding tools have been recovered from Palestine, unless the combs of wood and ivory found at Jericho and Megiddo, and generally supposed to have been used exclusively for combing one's hair, were used for this purpose. Wool requires a whorl whose weight is the same around the outer edge as in the center, thus a disk of uniform thickness. Those 2 cm. (0.8 in.) in diameter give a fine thread, while for coarse cloth, sizes up to 7.5 cm. (3 in.) in diameter were used. Cheap wool whorls were made by carefully chipping or scraping a piece of broken pottery of uniform thickness and very little curvature into a circle, and putting a hole through the center. These are a common find in excavations.

It is known that in more recent times distaffs have been used in spinning linen (the linen is arranged [dizened] on a distaff in such a way that it will come off quickly and with a minimum of tangling during spinning), but we do not know for certain whether the distaff was used in the biblical period. Heb. *kîšôr* in Prov. 31:19 may, however, refer to a distaff (so RSV, NEB; AV "spindle"). Linen is best spun with a whorl whose weight is concentrated in the center; thus linen whorls, whether of clay or stone, are shaped like a flattish cone, or even a steeper or rounded cone, with a flat bottom. Many linen whorls are extremely small, 1.6 cm. (0.6 in.) across and weighing less than 15 gm. (0.5 oz.). With these the finest linen was spun. Linen whorls are seldom more than 4 cm. (1.5 in.) in diameter. Additional weight in the center could be gained by using two linen whorls back to back on the same spindle; occasionally found are clay whorls made in the form of a double cone in one piece.

A few whorls have an incised geometric or other design or, rarely an inscription. Some are made of unusual and expensive materials, e.g., ivory (imported from Africa), alabaster, serpentine, or glass.



A drawing of various whorls, a spindle, and a bowl found in Palestine (after K. Galling, ed., *Biblisches Reallexikon* [2nd ed. 1977], p. 312)



The Egyptian method of plying depicted in a wall painting from the tomb of Khnumhotep at Beni-hasan, *ca.* 2000 B.C. (The Metropolitan Museum of Art)

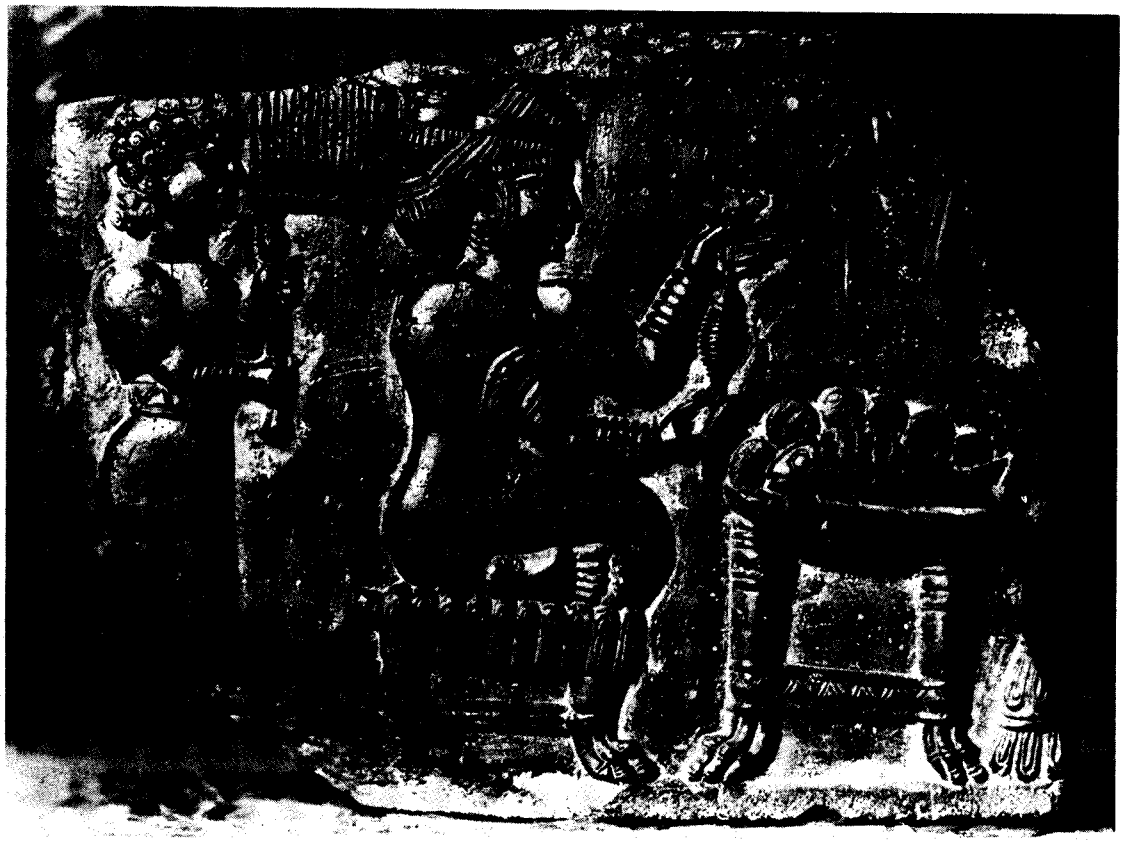
Spindles from the Roman period sometimes have an iron hook in the end of the stick nearest the whorl and were used "upside down" by comparison with those described above; i.e., the thread was run through the hook rather than looped around both ends of the spindle, so that the whorl would be at the upper rather than the lower end of the spindle while spinning. This technique would speed up spinning by eliminating the looping and unlooping for each length of thread spun. Another aid to spinning very fine linen may have been the spinning bowl; the spindle was set during spinning in the bowl, which supported the weight of the spindle and kept the growing thread from breaking. It also prevented backspin, i.e., unwinding at the end of the spin, and thus would speed up spinning. Bowls that may have been used as spinning bowls have been found. Cup holes in rocks may also have been used in this way.

Fabric in the biblical period was often made of plyed thread, i.e., two (or even three) spun threads that were twisted together in a second spinning process known as plying. Fabric woven of plyed thread is found among the earliest textile remains in Palestine (in the Jericho tombs) and among the latest (the Qumrân scroll wrappings). Egyptian wall paintings illustrate the technique of plying. In Palestine it was carried out with the aid of a plying bowl, a rather large (30-38 cm., or 12-15 in. wide) clay bowl with two loops of clay in the bottom of the inside surface. The balls of spun thread were placed in the bowl and one thread was pulled through each loop as the two threads were plyed together. The sanctuary hangings in Exodus were of fine plyed linen (*šēš mošzār*; 26:1, 31, 36; 27:9, 16, 18; 36:8, 35, 37; etc.). Eccl. 4:12 states that "a three fold cord is not quickly broken."

A simple garment made from 3 m. (3.3 yds.) of cloth of medium fineness, about twelve threads per centimeter (thirty per inch), would probably require more than two hundred hours of spinning time with a drop spindle, according to the best estimates that can be made today. Added to that is the time it took to raise the sheep, shear them annually, wash and comb the wool, card and dye it, make or set up the loom, and weave the cloth. Linen would require planting, cultivation, and harvesting, as well as the long and elaborate retting, cleaning, combing and dyeing. To produce one garment, therefore, might involve approximately four hundred hours of work. There was no better or faster way to make clothes.

Spinning was a relatively light, portable, continuous task that fitted well into the interstices of women's heavier and seasonal labor (planting, harvesting, herding sheep and goats, milking, processing the milk into yogurt and cheese and dried milk, harvesting and curing olives, making olive oil and wine, keeping doves or pigeons for their eggs, gathering brushwood for cooking, cleaning and grinding grain for flour, carrying products to market, hauling water, and, of course, child care and cooking). Each woman probably kept her spindle close at hand — perhaps stuck through her belt — and spun whenever her hands were free of other work. Her hands would never be idle (Prov. 31:27) if the family was to be decently clothed, with enough left over to sell (v. 24). She might even light a lamp and spin at night (vv. 18f.). If she was very capable

SPIRIT



A woman spinning while seated on a low stool. In one hand she holds a spindle and in her other hand she holds rough thread, perhaps on a card (CNMHS/ARS, NY/SPADEM)

at working herself and assigning work to the younger women in the house (v. 15), she might be able to provide each member of the household with two garments so that they could wear both at once in cold weather and snow (v. 21, reading "clothed double" rather than "clothed in scarlet"). She could use the money that she earned by marketing the things she had made to reinvest for more income (v. 16; cf. v. 31).

Jesus questioned the ethic of unceasing and anxious work that the ancient world (and necessity) imposed on women; this is illustrated in the story of Mary and Martha (Lk. 10:38-42) and in His allusion to the "clothing" more beautiful than Solomon's, displayed by the lilies of the field, which do not toil or even spin in the intervals of their toil (Mt. 6:28f. par Lk. 12:27). Undoubtedly most of the women among His listeners were spinning as He spoke.

D. IRVIN

SPIRIT. Hebrew and Aram. *rû(a)ḥ* and Gk. *pneúma* could mean "wind" (e.g., Gen. 8:1; cf. the word play in Jn. 3:8; *see* WIND) or "breath" (e.g., 2 S. 22:16; *see* BREATH) as well as "spirit." Both *rû(a)ḥ* and *pneúma* are used most with regard to the Spirit of God (*see* HOLY SPIRIT) and the spirits of human beings. Like other terms, such as "soul," "heart," "mind," and even "body," "spirit" is not a designation of some *part* of the human person but of the person viewed from particular aspects.

I. OT
   A. Life Principle
   B. Emotion and Motivation
   C. Prophecy and Charismatic Leadership
   D. Words Other Than *Rû(a)ḥ*

II. NT
   A. Uses Similar to OT Uses
   B. Relationship with God
   C. Non-corporeal Beings

I. OT.–A. Life Principle. *Rû(a)ḥ* refers to the person, divine or human, viewed as an active, moving being or as possessing the inner vitality that makes activity and motion possible. The involvement of the Spirit of God in creation (Gen. 1:2; NEB "mighty wind") includes the giving of the "breath of life" (2:7; Heb. *nišmaṯ ḥayyîm*) or "spirit" (*rû[a]ḥ,* Ps. 104:30; Eccl. 11:5; Isa. 42:5; 57:16; Zec. 12:1; cf. Job 33:4; NEB sometimes "breath [of life]") to mankind and to each person.

God's maintenance of "spirit" in things or persons is that which sustains their existence as *living* things (Gen. 6:3; Nu. 16:22; 27:16; Job 10:12; 27:3 [NEB "breath"]; 34:14f.; Ps. 31:5 [MT 6]; 104:29 [RSV, AV, NEB "breath"]; Mal. 2:15; cf. Eccl. 8:8 [NEB "wind"]; Ezk. 1:20b; 10:17). Since the spirit is thus subject to the sovereignty of God, death can be referred to as the release of the spirit to God (Ps. 146:4 [RSV "breath"]; Eccl. 12:7; cf. 3:21). That the spirit is thus that aspect of things which sustains their animate life allows a contrast with the

"flesh" of the Egyptians' horses spoken of by Isaiah: God will not sustain the lives of the horses but will bring them to death (Isa. 31:3). In Job 4:15 *rû(a)ḥ* is used of a vague vision or a disembodied apparition, but it may be best to translate "breath" or "breeze" in this verse, understanding the *rû(a)ḥ* passing Eliphaz's face as part of the physical sensations accompanying his vision.

B. Emotion and Motivation. Often a statement about a person's emotional state is made by the attribution of the emotion to their spirit, e.g., bitterness (Ps. 106:33), jealousy (Nu. 5:14, 30), confusion (Isa. 19:14), anguish (Job 7:11; Isa. 65:14), grief (Isa. 54:6), anxiety (Dnl. 7:15), vexation (1 K. 21:5), "heat," i.e., perhaps, anger (Ezk. 3:14), and a state of being troubled (Gen. 41:8; Dnl. 2:1, 3). *Rû(a)ḥ* sometimes means simply "anger" (so RSV in Jgs. 8:3; cf. Job 15:13; Prov. 16:32; 17:27).

Some characteristics attributed to the spirits of persons are not what we would call emotions but are traits of persons that account for their actions. Thus Caleb is said to have had "a different spirit" than the rest of the generation of the Exodus from Egypt, with the result that he was obedient to God (Nu. 14:24). A person's spirit can be marked by deceit (Ps. 32:2), unfaithfulness (78:8), "harlotry," i.e., inconstancy (Hos. 4:12; 5:4), rightness (Ps. 51:10 [MT 12]), willingness (51:12 [MT 14]), trustworthiness (Prov. 11:13), haughtiness (16:18), humility (16:19; 29:23; Isa. 57:15; 66:2), compassion (Zec. 12:10), erring (Isa. 29:24), patience or pride (Eccl. 7:8), excellence (Dnl. 5:12; 6:3), or wisdom (Isa. 11:2; cf. Job 32:8). God is said to examine the spirit of a person, i.e., look to their motives not just their actions (Prov. 16:2). The spirit, as the place of the innermost thoughts of a person, is also a place in which the search to know God occurs (Isa. 26:9).

Sometimes what is said about the experience of a person's spirit indicates that a person's emotional and motivational situation makes possible or, more often, makes impossible their pursuit of a course that leads to success. The spirit can be faint, failing, broken, crushed, downcast, emptied out, or cut off (Ex. 6:9; Josh. 5:1; 1 K. 10:5 par. 2 Ch. 9:4; Job 17:1 [AV "breath"]; Ps. 34:18 [MT 19]; 51:17 [MT 19]; 76:12 [MT 13]; 77:3 [MT 4]; 142:3 [MT 4]; 143:4, 7; Prov. 15:4, 13; 17:22; Isa. 19:3; 61:3; Ezk. 21:7 [MT 12]). Job speaks of his spirit as being poisoned (Job 6:4). The spirit can also return, revive, or be refreshed (Gen. 45:27; Jgs. 15:19; 1 S. 30:12; Isa. 57:15).

There is occasionally some overlap between *rû(a)ḥ* as emotional experience and *rû(a)ḥ* as "wind" or "breath." In Job 20:3b "wind" is probably the best translation (RSV "spirit"), giving Zophar's statement about Job's outbursts a similar meaning as earlier statements of both Bildad (8:2b; AV, RSV "wind") and Eliphaz (15:2a; RSV "windy"; AV "vain"). Tightness of breath brought on by an emotional state is in mind in 32:18.

While it is not entirely valid to relate too closely the uses of *rû(a)ḥ* found in different contexts, it can still be observed that statements concerning emotions in terms of the experience of the spirit — the principle of animate life — portray emotions as enhancing or threatening life itself (cf. Prov. 18:14).

The spirit of a person is subject to the rule of God; in some situations God accomplishes His purposes by intervening in the mental and emotional experience of a person. It is on the basis of this exercise of God's sovereignty that we should understand the replacement of the Spirit of Yahweh, which had enabled Saul to prophesy and to lead effectively (1 S. 10:6, 10; 11:6; 18:10; 19:9; see I.C below), with "an evil spirit from God" (16:14-16, 23), which caused Saul's mental dissolution and the destruction of his reign. So also God hardened the spirit of King Sihon of Heshbon (Dt. 2:30; cf. Dnl. 5:20 [AV "mind"]) and "sent an evil spirit between Abimelech and the men of Shechem" (Jgs. 9:23) in order to accomplish His purposes. Sennacherib's departure from the siege of Jerusalem in response to a rumor was brought on by the same kind of divine intervention (2 K. 19:7 par. Isa. 37:7 [AV "blast"]).

The sovereignty of God in human affairs also includes His capacity to "stir up" the spirit of a person so that that person carries out some great undertaking (1 Ch. 5:26; 2 Ch. 36:22 [par. Ezr. 1:1]; Ezr. 1:5; Jer. 51:1, 11; Hag. 1:14). Here *rû(a)ḥ* represents the human will, the capacity to make decisions and carry them out.

C. Prophecy and Charismatic Leadership. The idea of the spirit possessed by prophets or charismatic leaders (Nu. 11:17, 25f. 29; 27:18; Dt. 34:9 [the "spirit of wisdom"]; Isa. 28:6) can be thought of as an extension of the concept of the spirit as the animating principle placed in persons by God and maintained by Him (see I.A above). A prophet might be called a "man of the spirit" (Hos. 9:7; AV "spiritual man"; NEB "inspired seer"). Because this special endowment of "spirit" is from God, it is sometimes hard to specify whether a text is speaking of God's Spirit (as in 1 K. 22:24) or the human spirit endowed with prophetic ability by God (as in 2 K. 2:9, 15; cf. Lk. 1:17). Prophets who "follow their own spirit" (Ezk. 13:3; NEB "inspiration") are communicating their own thoughts, not a message from God. The statement that in Daniel is "the spirit of the holy gods" (or "God"; Dnl. 4:8f., 18 [MT 5f., 15]; 5:11, 14; cf. v. 12) is an attribution to Daniel, made by a Gentile, of extraordinary gifts.

God, who, as noted, intervenes in human emotional experiences, also exercises His sovereignty in the realm of the prophetic spirit. Thus God might give "a spirit of deep sleep" to prophets (Isa. 29:10), as He sent a lying spirit into the prophets who spoke to King Ahab (1 K. 22:21-23 par. 2 Ch. 18:20-22). This lying spirit is personified as the prophet Micaiah tells of it (1 K. 22:19-21 par. 2 Ch. 18:18-21), but this should be regarded as a rhetorical device rather than as a representation of a belief concerning a spirit world. The "unclean spirit" to be purged from the land according to Zec. 13:2 (NEB "spirit of uncleanness") should also not be understood as a personal being but as a characterization of the manner in which the prophets speak.

The eschatological hope of a new human spirit, i.e., the resumption of the life of the community of the people of God and their reorientation to the law of God (Ezk. 11:19; 36:26; cf. 18:31), is an aspect of the age to come, as is a greater experience of prophecy and charismatic leadership (Isa. 28:5f.).

D. Words Other Than Rû(a)ḥ. In 2 K. 5:26 the RSV has "spirit" for Heb. *lēḇ*, which is usually translated "heart" (so AV). What is spoken of here is not necessarily a disembodied state in which Elisha followed the actions of Gehazi, but merely the knowledge possessed by the prophet, however he came by it. Other words translated "spirit" in the RSV are *kāḇôḏ*, usually "glory," in Gen. 49:6, and *nᵉšāmâ* in Job 26:4b; Prov. 20:27. For Heb. *'ôḇ* (AV "familiar spirit," e.g., Lev. 19:31; 2 K. 21:6), *see* MEDIUM.

In 2 S. 13:39 Heb. *dāwiḏ hammelek* ("King David") probably represents a scribal error for *rû(a)ḥ hammelek*, "the spirit of the king," as in LXX *tó pneúma toú basiléōs*.

II. NT.–A. Uses Similar to OT Uses. The human spirit (Gk. *pneûma*) is that which marks a human being as a *living* person (Lk. 8:55; Jas. 2:26; Rev. 11:11; 13:15; RSV and NEB sometimes "breath"; cf. Jn. 6:63), and death is the release of the spirit to God (Mt. 27:50 [AV "ghost";

NEB "breathed his last"]; Jn. 19:30 [AV "ghost"]; Acts 7:59). The human spirit, the life principle given by God, is probably what is spoken of in Jas. 4:5 (see the comms.). In a metaphorical use, Paul speaks of having the same "spirit of faith," i.e., being animated by the same faith, as the psalmist (2 Cor. 4:13; cf. Ps. 116:10). *Pneúma* could also be a term for the dead, those who are no longer alive in the body, even though they may have a conscious existence and appear in a visible form (Lk. 24:37, 39 [NEB "ghost"]; He. 12:23).

"Spirit" could also be a term for the deepest thoughts and emotions of a person, whether expressed or kept secret (Mk. 2:8; 8:12; Lk. 1:47; Jn. 11:33; 13:21; Acts 17:16; 1 Cor. 2:11; 16:18; Gal. 6:18; NEB often paraphrases). The character exhibited by persons could be characterized as, e.g., "the spirit of the world," i.e., worldliness (1 Cor. 2:12), or "a spirit of gentleness" (4:21; Gal. 6:1; cf. 2 Cor. 12:18; 1 Pet. 3:4). Other phrases, such as "a spirit of wisdom and of revelation" (Eph. 1:17), are similar to OT phrases discussed above. "Spirit" as thought and character is named in conjunction with "body" (*sóma*, 1 Cor. 7:34; 1 Thess. 5:23), "flesh" (*sárx*, 2 Cor. 7:1; RSV "body"), and "soul" (*psyché*, 1 Thess. 5:23; cf. He. 4:12) as a designation of the whole person.

When Paul says that he is "present in spirit" (1 Cor. 5:3), this does not mean simply that his thoughts are concerned with the situation facing his readers and about which he is concerned. It means also that his authority as apostle is active among them so that he is able to give them explicit instructions (vv. 3b-5; cf. Col. 2:5).

B. Relationship with God. Pneúma is the realm of relations between God and human beings (Jn. 4:23f.; Rom. 1:9; Phil. 3:3; He. 12:9). A person's spirit, as such, could be "poor" (Mt. 5:3), "strong" (Lk. 1:80), "fervent" (Acts 18:25), united with the Spirit of God (1 Cor. 6:17), a "spirit of slavery," or a "spirit of sonship" (Rom. 8:15f.).

The reference to the "spirit of power and love and self-control" given by God (and to the "spirit of timidity" *not* given by God, 2 Tim. 1:7) shows that the line between "spirit" as thought and character and "spirit" as the arena of God's relationship with and influence on human beings is not absolute. The same overlap should be kept in mind in regard to doxological statements such as "the Lord be with your spirit" (2 Tim. 4:22; cf. Phil. 4:23; Philem. 25). The process of coming to Christian faith is sometimes described as a revivification of the human spirit (Rom. 8:10; 1 Pet. 4:6; cf. 3:18).

Paul speaks of "spirit" and "flesh" as contenders against each other within each person, spirit representing the new age and flesh the old ways that have been left behind with the adoption of the Christian life (Rom. 8:3-6; Gal. 5:16f.; *see* FLESH III.B). It is the spirit of a person that will experience final eschatological salvation (1 Cor. 5:5; cf. 1 Pet. 3:18; 4:6). In Mt. 26:41 par. Mk. 14:38 the contrast is between "flesh" as the human tendency to fall when tempted and "spirit" as the desire of Jesus' disciples to do what is right.

Paul also contrasts "spirit" with "mind" (*noús*; 1 Cor. 14:14-16), "spirit" in this case standing for ecstatic spiritual experiences that are not subject to rational comprehension; but in other contexts, where the conscious practice of Christian experience is in view, they are treated as synonyms (Eph. 4:23; Phil. 1:27).

As in the OT, "spirit" is that which enables persons to function as prophets, though in the NT this is now regarded as an eschatological charism given to individuals for the good of the Church (1 Cor. 14:32; 2 Thess. 2:2; Rev. 22:6).

C. Non-corporeal Beings. Pneúma was also a term for non-corporeal, conscious, malevolent beings, usually with a modifier such as "unclean" (e.g., Mt. 10:1; Gk. *akáthartos*), "of infirmity" (e.g., Lk. 13:11; *astheneías*), "evil" (e.g., Acts 19:13; *ponērós*), etc. (*see* DEMON). A "spirit" need not be malevolent (Acts 23:9). Spirits were not considered invariably malevolent; some are "of God," which makes it necessary to distinguish between spirits (1 Cor. 12:10; 1 Jn. 4:1), the thought being that a genuine prophetic spirit may be present (cf. 1 Jn. 4:2f., 6; Rev. 19:10). He. 1:14 refers to angels as "ministering spirits." Belief in or rejection of the existence of such spirits was a matter that divided the Sadducees from the Pharisees and from most other Jews (Acts 23:8).

SPIRITUAL [Gk. *pneumatikós, en pneúmati* (Rom. 2:29), *logikós* (Rom. 12:1; 1 Pet. 2:2)]; **SPIRITUALLY** [Gk. *pneumatikós*]. Greek *pneumatikós*, an adjective related to *pneúma*, "spirit," is used in three general ways in the NT. It is used to designate that which is not, or is not only, physical or literal, but exists, or also exists, in the world of spirits, demons, angels, and God. It is used to indicate that typology, i.e., the application of models derived from the OT to explanations of realities of Christ and the Church, is being employed. And it is used for that which is attuned to God's redemption of mankind in Christ and to the presence of God's Spirit. While it is useful to distinguish these three uses of *pneumatikós*, they do not exclude each other but are, rather, usually overlapping.

In its reference to "the spiritual [NEB "superhuman"] hosts [*tá pneumatiká*; "hosts" is supplied in RSV] of wickedness in heavenly places," Eph. 6:12 makes it clear that what is *pneumatikós* (and what is in the "heavenly places") need not be allied to God and His people. *Pneumatikós* refers here to the realm of spirit, that which is not physical ("we are not contending against flesh and blood," earlier in the verse). The devil is called a "spirit" in 2:2, and the NT frequently refers to evil forces as "spirits" (e.g., Mt. 8:16). *See also* HEAVEN II.

Pneumatikós is contrasted with *psychikós* (RSV "physi-

cal"; AV "natural"; NEB "animal") in 1 Cor. 15:44, 46. Because God originally created mankind as *psyché* (Gen. 2:7 LXX, quoted in 1 Cor. 15:45; RSV "being" in both passages; AV "soul"), *psychikós* in 1 Cor. 15 describes the body in which a person lives in this life; *pneumatikós* describes the body which a person who has experienced the resurrection will have (*see* BODY III.A).

Pneumatikós also refers to that which is distinguished from the physical or the merely physical where "spiritual food" (1 Cor. 10:3; RSV, NEB "supernatural food"; AV "spiritual meat"), "spiritual drink," the "spiritual rock" (v. 4; RSV, NEB "supernatural drink," "supernatural rock"), the "spiritual house," and "spiritual sacrifices" (1 Pet. 2:5) are mentioned. But in these passages the adjective also relates what is spoken of with God's actions on behalf of His people and their worship of Him.

In 1 Cor. 10:3f. Paul's description of the food and drink provided for the Israelites in the wilderness (Ex. 16; 17:6; Nu. 20:7-11) as *pneumatikós* means first of all that, being supernaturally provided, it was not ordinary food and drink, an idea that had its beginning already in the OT (Ps. 78:23-25; cf. Wisd. 16:20). Second, *pneumatikós* points to the significance of the manna and water as types of what God provided in the new age of salvation in Christ. That it has this typological value is made most clear by the designation of the rock which provided water to the Israelites as Christ (v. 4). It is probable (but interpreters disagree) that the spiritual food and drink are spoken of as types of baptism (cf. v. 2) and the Lord's Supper (cf. vv. 16ff.), in which the Church experiences the presence of Christ, who was also present with Israel in the rock (*see* LORD'S SUPPER IV.B).

In 1 Pet. 2:5 *pneumatikós* is not applied to the OT realities (temple and sacrifices) but to the antitypical reality known in the Church; the Christian community is itself to become a spiritual house (i.e., temple [so NEB], though Elliott, *Home*, esp. pp. 168f., disagrees) and a holy priesthood to offer spiritual sacrifices. This new temple and its sacrifices are "spiritual" in the sense that there is no literal building or physical sacrifices (as there was in the old covenant) and in the sense that the presence of God's Spirit and the work of God's redemption in Christ determines the nature of and activity within this "temple." Circumcision is treated similarly in Rom. 2:29, but there the designation is not *pneumatikós*, but *en pneúmati* (RSV "spiritual"; AV "in the spirit"; NEB "directed . . . by the Spirit") contrasted with *en grámmati* (RSV "literal"; AV "in the letter"; NEB "directed . . . by written precepts"). The adverb *pneumatikós* clearly signals that an OT type is being referred to in Rev. 11:8 (RSV "allegorically"; NEB "in allegory"), but the type is negative ("Sodom and Gomorrah"), and there is no thought of the presence of God's Spirit.

What is "spiritual" can be that which is brought into being or altered by the presence of the Spirit of God. The relatively frequent occurrence of *pneumatikós* in 1 Corinthians is probably due partly to the importance of the word in the thinking of the Corinthian church and that community's emphasis on SPIRITUAL GIFTS as evidence of the Spirit's presence. The designation *pneumatikós* for persons endowed with the more evident spiritual gifts, such as prophecy, was apparently employed by the Corinthians (1 Cor. 14:37; NEB "inspired"; cf. 12:1, RSV mg.). Paul employed the designation in his letter to them, though with a different emphasis: the *pneumatikós* is a person marked by stability and maturity in living by God's Spirit (2:15; 3:1; also Gal. 6:1; NEB "gifted with the Spirit," "who have the Spirit," "endowed with the Spirit").

Pneumatikós thus plays a part in the portrayal of ideal Christian personal and community life, which also includes the wisdom taught by Christian teachers (Col. 1:9; cf. 1 Cor. 2:13; 9:11 [where RSV supplies "good"]) and the songs sung in the Christian fellowship (Eph. 5:19; Col. 3:16), both also described as *pneumatikós*. This life is predicated on God's bestowal of "every spiritual blessing in the heavenly places" (Eph. 1:3; cf. Rom. 15:27, where RSV supplies "blessings").

Even the law of Moses, as a good gift of God, is called "spiritual" by Paul (Rom. 7:14). As such it is in contrast to the fleshly (*sárkinos*; RSV "carnal") nature of mankind.

Greek *logikós* could bear the meaning "reasonable, rational," but it is more likely to be similar in meaning to *pneumatikós* in its two appearances in the NT. Gk. *latreía*, the noun attached in Rom. 12:1 to *logikós* (RSV "spiritual worship"; AV "reasonable service"; NEB "worship offered by mind and heart"), is used in speaking of sacrificial worship, so Paul most likely makes a typological reference to OT religion like those signaled by use of *pneumatikós*. In 1 Pet. 2:2 it is "milk," representing basic Christian teaching (cf. 1 Cor. 3:2; He. 5:12f.) which is said to be *logikós*. It has been thought that *logikós* here means "of the word" (so AV), i.e., of the *lógos*, the written and spoken word of God, but this meaning is not attested for *logikós*, and "spiritual" in the sense of nonphysical is both attested and comprehensible in the context.

For Hos. 9:7 (AV "spiritual man") *see* SPIRIT I.C. For Rom. 8:6 (AV "spiritually minded") *see* SPIRIT II.B.

SPIRITUAL GIFTS. Varied endowments graciously bestowed by the triune God upon individual Christians, but particularly intended to enhance the community, worship, and service of locally gathered Christians and thereby to enrich the whole Church.

I. Terminology
  A. Vocabulary
  B. Distinctions
II. Varieties
III. Descriptions
IV. Theology and Practice

I. Terminology.–A. Vocabulary. The expression "spiritual gifts" (pl.) appears in the RSV only at 1 Cor. 12:1 and 14:1, where it translates Gk. *pneumatiká* (lit. "spiritual things"). But the idea it expresses is conveyed more specifically by *chárisma*, the plural of which (*charísmata*) the RSV translates simply "gifts" (Rom. 11:29; 1 Cor. 12:4, 9, 30f.). The RSV uses the singular "spiritual gift" only at 1 Cor. 1:7 (for *chárisma*) and at Rom. 1:11 (*chárisma pneumatikón*, the sole NT instance of both Greek words together). Paul occasionally (1 Cor. 14:12, 32) referred to spiritual gifts as *pneúmata* (lit. "spirits") and the variant readings at both references reflect attempts to regularize the term. This curious usage may be paralleled by the Johannine use of *pneúmata* to refer, not to independent spirit beings, but to the vocal utterances given by charismatic prophets (1 Jn. 4:1f.) — i.e., "prophecies."

Both *chárisma* and *pneumatikós* are predominantly Pauline words; *chárisma* appears elsewhere only at 1 Pet. 4:10, and *pneumatikós* only at 1 Pet. 2:5 and Rev. 11:8. Surprisingly, neither term occurs in Luke-Acts, despite that author's keen interest in the work of the Holy Spirit in the Christian communties. There is no equivalent He-

brew expression; *chárisma* appears twice in the LXX but only as a variant reading (Sir. 7:33; 38:30; also in Th. Ps. 30:22). The few secular uses of *chárisma* outside the NT are mainly much later, and they bear the nuance of "favor" or "benefit." The books of Romans and 1 and 2 Corinthians provide the biblical core for teachings about spiritual gifts, even though similar lists appear elsewhere (e.g., Isa. 11:2; Joel 2:28f.; 1 Pet. 4:10f.) and Luke-Acts describes charismatic phenomena without calling them "spiritual gifts."

Greek *chárisma* itself stems from the Indo-European root *gher-*, which means to "desire" or "like." Derived words include Ger. *gern* ("gladly"), Eng. "yearn" and "greed," and Lat. *hortari* ("urge"). *Cháris* ("grace") causes the fulfillment of such desire, while *chará* ("joy") describes the personal sensation of completed desire. A *chárisma* ("gift") is the consequence of a gracious disposition — preeminently of the charitable favor of God Himself. Because of its linguistic connection with *cháris* ("grace"), *chárisma* could be translated "free gift" (so RSV at Rom. 5:15f.), "grace-gift," or perhaps (to coin a word) "gracelet." The connection of the *charísmata* with the Holy Spirit arises not from the term's history but from the attribution of these gifts to the Holy Spirit in the classical text of 1 Cor. 12:4-11 (cf. He. 2:4).

B. Distinctions. Yet the NT refers to other and broader gracious bestowals besides the spiritual gifts. *Chárisma* is sometimes used interchangeably with another Greek word for gift, *dōreá* (or *dōron*). These words appear throughout the NT, and it is helpful to distinguish the specialized spiritual gifts, as community-enhancing enablements of specific persons, from certain other divine gifts granted to all who believe.

Paul described as follows the grandest of all grace-gifts, which stands in opposition to earned wages: "the free gift [*chárisma*] of God is eternal life in Christ Jesus our Lord" (Rom. 6:23). In Acts 2:38 the Holy Spirit, the energizing giver of gifts, is Itself (the Greek noun is neuter, but personhood is clearly assumed) called "the gift" (*dōreá*) received by those who repent and are baptized. Paul stated in 1 Cor. 12:11 that the (given and received) Holy Spirit bestows differing gifts within the body of Christ: "all these [various *charísmata*] are inspired by one and the same Spirit, who apportions to each one individually as he wills." And yet Eph. 4:11 says that Christ's gifts were "that some should be apostles, some prophets, some evangelists, some pastors and teachers."

Such imprecision may confound Western minds in search of controllable discreteness. But Scripture presents a God who graciously gives His Son and His Spirit — and these in turn bestow other gifts. Paul concludes his appeal to the Corinthians for their own gifts (a monetary contribution for the Jerusalem poor) with celebrative gratitude "to God for his inexpressible gift" (2 Cor. 9:15). Here the "gift" (*dōreá*) is not identified — perhaps precisely because God's giving is "inexpressible."

II. Varieties.–More than two dozen distinct *charísmata* can be identified in several NT listings (1 Cor. 12:8-10, 28-30; Rom. 12:6-8; Eph. 4:11; 1 Pet. 4:10f.). That such lists are suggestive rather than exhaustive is clear from 1 Cor. 13:1-3, where tongues, prophecy, knowledge, and faith are repeated from the list just given in 12:8-10 but philanthropy and martyrdom are also mentioned without prior notice (13:3).

In effect the *charísmata* range from the unspectacular (serving, 1 Pet. 4:11) to the extraordinary (miracles, 1 Cor. 12:10, 28). In function they range from single events (martyrdom, 1 Cor. 12:10, 28) to ongoing offices (apostles, pastor-teachers, Eph. 4:11). Some gifts appear to represent a special ability recognized only in certain individuals (interpreting, 1 Cor. 14:28); others seem to be a heightened capacity for what is expected of every Christian (showing mercy, Rom. 12:8).

Some capacities (e.g., exorcism) appear to be spiritual gifts but are not labeled as such. Deacons, elders, eunuchs are not described as having a special *chárisma*, nor are those who have the ability to inflict an illness (Paul, Acts 13:11) or death (Peter, 5:9f.). Scripture nowhere describes musical and artistic skills as charismatic endowments. But the free listing of *charísmata* that is characteristic of Paul — who thought of his own celibacy as a *chárisma* (1 Cor. 7:7) — warrants the recognition of such capacities in the Christian community as gifts of a gracious God.

III. Descriptions.–The placement of the "word of wisdom" and "word of knowledge" (AV 1 Cor. 12:8) at the beginning of Paul's major list of spiritual gifts reflects the situation at Corinth. "Knowledge" — perhaps better translated "insight" (*gnōsis*) — was prized at Corinth, and Paul had to caution against the excessive emphasis on it (8:2). Though human *sophía* ("wisdom") is inadequate to lead to God (1:19–2:5), true wisdom does have a divine source and comes only through the Spirit (2:6-16). *Lógos* (AV "word"; RSV "utterance") in this verse has commonly been understood as referring to the knowledgeable speech of teachers or the wise counsels of leaders; but it may mean merely a "case" or "matter," i.e., an "occasion" of insight or wisdom. Paul was eager to attribute both gifts to the same Spirit — perhaps to balance the Corinthian elitist pursuit of spiritual insight with a pastoral plea for the less spectacular, but more unitive, wisdom.

"Faith" (*pístis*, 12:9) is the only *chárisma* listed in 1 Cor. 12 that is also listed as a "fruit of the Spirit" in Gal. 5:22 (where the RSV translates it "faithfulness"), and it is the only one that is elsewhere identified as a universal characteristic of all Christians. Here, however, *pístis* seems to mean an unusual degree of faith "so as to remove mountains" (cf. 1 Cor. 13:2).

"Gifts of healings" (1 Cor. 12:9) may refer to the effected cures rather than to the capacity to bring about healing. "Working of miracles" (v. 10) would then refer to the endowed abilities to effect recoveries from illness.

"Prophecy" (v. 10) is inspired speech (some interpreters have equated it with preaching) that produces "upbuilding and encouragement and consolation" (14:3). Yet prophecy seems to have been practiced by many in the congregation ("you can all prophesy one by one," 14:31), and such prophetic utterances were never beyond the control of those prophesying (v. 32) or the evaluative critique of those listening (v. 29).

"Kinds of tongues" (*génē glōssōn*, 1 Cor. 12:10, 28) can refer to anything on a glossolalic continuum ranging from (1) prayer "with groans that words cannot express" (Rom. 8:26, NIV; preferable to RSV "sighs too deep for words"), through (2) tongues speech in a controlled ecstatic jargon that "no one understands" by someone who "utters mysteries in the Spirit" and "speaks not to men but to God" (1 Cor. 14:2), to (3) charismatic use of a recognizable language never learned by the speaker (Acts 2:8). Paul's placement of this gift at the end of the stratified list at 1 Cor. 12:28 must be compared with the addition of interpretation at 12:29 as well as at 12:10. It is clear that Paul was providing strong correction to the excessive valuation placed on tongues by dominant members of the Corinthian congregation.

"Discernment of spirits" (*diákrisis pneumátōn*, 1 Cor. 12:10; RSV "ability to distinguish between spirits") refers to the ability to evaluate either the spirits themselves

or spirit-inspired utterances. As an example of the need for such discernment, Paul stated in v. 3 that no one inspired by the Holy Spirit could utter a curse on Jesus.

"Apostles," "prophets," and "teachers" are mentioned in 12:28f.; these functions emerge in Acts and throughout the Pauline literature. Obviously the role that these early leaders played as founders of the faith cannot be repeated. But since the functions of prophet and teacher have continued throughout church history, it would be strange if apostle did not — unless by "apostle" is meant not merely one who is "sent out" but one who can claim equality with the original circle.

Finally, Paul mentions "administrators" (*kybérnēsis*, lit. "steering," "pilotage"), those gifted with the ability to hold a leading position in the church (v. 28). If the *charísmata* are ranked in order throughout this passage, it is significant that these leaders are placed next to last — one level above speaker in tongues.

The lists in Rom. 12:6-8 and 1 Pet. 4:11 mention some of the less visible — but no less essential — spiritual endowments: serving, speaking, exhorting, contributing (financial support), and showing mercy.

IV. Theology and Practice.–1 Corinthians, the fullest biblical discussion of spiritual gifts, contains instructive guidelines for the use of these gifts. The clear message of ch. 13 is that such gifts are useless if they are not accompanied by love. But already at 8:1 the apostle has cautioned that "knowledge [insight] puffs up, but love builds up." The fundamental error of the Corinthians was a defective anthropology that relinquished earthly human responsibilities in favor of heavenly experiences. Love calls such charismatic individualists away from their elitist — and sometimes arrogant — spiritual insights and measures spirituality in terms of how one relates to others. Hence upbuilding — the advance of the community as a whole — outweighs individual spiritual experience. A balanced recognition of both unity and diversity, of the same Spirit but gifts that differ, is a critical mark of a healthy Christian community.

For what period were the spiritual gifts intended? For centuries the view of Augustine prevailed, namely, that the gifts were intended only for the period of the early Church. According to this view the gifts were no longer needed after the apostles passed off the scene, or after the canon of Scripture was established, or after it became clear the Jews had rejected Christ. Various forms of this view have been maintained in this century by writers such as B. B. Warfield, C. I. Scofield (in the Scofield Bible), and M. Unger.

One effect of the rise of the Pentecostal and charismatic movements in the 20th cent. has been the recapture of a theology of spiritual gifts throughout wide sectors of the Church — even where the distinctives of these movements have not been adopted. As a result, the Augustine-Warfield arguments for the "cessation of the *charísmata*" are much less widely heard today, although these views continue to be strongly held by some adherents.

The "fruit of the Spirit" (Gal. 5:22f.) is the natural outcome of the Spirit's presence within all believers, while the "gifts of the Spirit" reflect the divine penchant for variety. The healthiest Christian communities will value both the fruit and the gifts of the Spirit and will neglect neither.

R. P. SPITTLER

SPIRITUAL MAN. *See* SPIRITUAL.

SPIRITUAL SONGS. *See* SPIRITUAL.

SPIT; SPITTLE [Heb. *yāraq* (Nu. 12:14; Dt. 25:9), *rāqaq* (Lev. 15:18), *rōq* (Job 30:10; Isa. 50:6), *tōpeṯ*–'object of spitting' ("one before whom men spit," Job 17:6); Gk. *ptýō* (Mk. 7:33; 8:23; Jn. 9:6), *emptýō* (Mt. 26:67; etc.)]; AV also TABRET (Job 17:6); NEB also PORTEND (Job 17:6); SPITTLE [Heb. *rîr* (1 S. 21:13), *rōq* (Job 7:19); Gk. *ptýsma* (Jn. 9:6)]; NEB also DRIBBLE (1 S.21:13).

As in many cultures, in ancient Israel spitting on a person expressed extreme contempt or disapproval (cf. Nu. 12:14). Job complained that he had fallen into such disrepute that he had become the object of spitting (Job 17:6; 30:10). Isa. 50:6 foretold that those who scorned the Servant of the Lord would beat him, pull out his beard, and spit in his face. The Gospels record that people at Jesus' trial and crucifixion spat on Him (Mt.26:67; 27:30; Mk. 14:65; 15:19; cf. 10:34; Lk. 18:32). Hebrew law stipulated that if a man refused to marry his brother's widow (*see* HUSBAND'S BROTHER), she was to spit in his face in the presence of the elders as an expression of the community's strong disapproval (Dt. 25:9). If a man with a discharge spat on somebody, he made that person unclean (Lev. 15:8). Among the Qumrân sectarians, spitting in an assembly was punished by thirty days of separation (1QS 7:13; cf. Josephus *BJ* ii.8.9 [147]).

In Judaism and Hellenism spittle was thought to possess medicinal qualities and was sometimes used in healing the sick. It is interesting, therefore, that in three recorded instances Jesus used spittle in His healing ministry: twice with blind men (Mk. 8:23; Jn. 9:6) and once with a deaf-mute (Mk. 7:33).

See SB, II, 15-18. D. A. DORSEY

SPOIL [nouns: Heb. *šālāl*–'booty, plunder' (Gen. 49:27; Ex. 15:9; Nu. 31:11f.; Dt. 2:35; etc.), *baz*–'plundering,' 'objects of plundering' (Nu. 31:32; Jer. 15:13; 17:3; Ezk. 23:46; 25:7 [emended from *bag*]; 26:5), *bizzâ*–'act of plundering' (2 Ch. 25:13; 28:14), *ḥᵃlîṣâ*–'clothes and weapons stripped from a slain enemy' (Jgs. 14:19; 2 S. 2:21), *mᵉšissâ*–'plundering' (2 K. 21:14; Isa. 42:22; Jer. 30:16), *beṣa'*–'(illegally obtained) gain' (Jgs. 5:19), *gᵉzēlâ*–'stolen goods' (Isa. 3:14); Gk. *akrothínion*–'best part of the booty' (He. 7:4), *skýlon*–'booty' (Lk. 11:22)]; AV also PREY, GAIN; NEB also BOOTY, GOODS, PLUNDER, etc.; [verbs: Heb. *šālal*–'plunder' (Ezk. 26:12; hithpael, Ps. 76:5 [MT 6]), *šāsâ*–'plunder' (Ps. 44:10 [MT 11]), hiphil of *šāḥaṯ*–'ruin' (Jer. 13:9), piel of *ḥāḇal*–'destroy' (Cant. 2:15)]; AV also MAR; NEB also PLUNDER; **SPOILER** [Heb. part. of *šāsâ* (2 K. 17:20), *mᵉšissâ* (Isa. 42:24)]; NEB FOR PLUNDER, PLUNDERER; **DESPOIL** [Heb. *bāzaz*–'plunder' (1 S. 14:36; niphal, Isa. 24:3), piel of *nāṣal*–'strip, plunder' (Ex. 3:22; 12:36), *šāḏaḏ*–'devastate' (Ps. 17:9; part., Jer. 25:36; pual, Zec. 11:3), *šōḏ*–'destruction' ("despoiled," Ps.12:5 [MT 6], *šāsas*–'plunder' (Ps. 89:41 [MT 42]), qal and qal part. of *qāḇa'*–'rob' (Prov. 22:23), *šāsâ*–'plunder' (Isa. 17:14; Jer. 30:16), *šālal*–'plunder' (Ezk. 29:19; 39:10), part. of *gāzal*–'take away by force' (Ps. 35:10)]; AV SPOIL, OPPRESS,

OPPRESSION; NEB PLUNDER, HARRY, RUIN, OBSTRUCT, PREY ON, ROB, SPOIL, etc. PLUNDER taken from a defeated enemy in warfare, or the act of stripping valuables from a defeated enemy. (In Cant. 2:15 and Jer. 13:9, however, the verb "spoil" is used in the sense of "ruin" or "destroy.")

In the ancient Near East it was assumed that victorious forces had the right to strip valuables from their fallen enemies (cf. Jgs. 14:19) and to take from defeated villages anything they could carry or drive away. Thus it was customary for victorious soldiers to return from battle with many valuables, including clothes and precious metals (e.g., Gen. 14:11; Josh. 7:21; Jgs. 8:24-26), cattle (e.g., Dt. 2:35; 1 S. 14:32; 30:20; 2 Ch. 15:11; Jer. 49:32), and women and children as slaves (e.g., Gen. 14:12, 16; 1 S. 20:1-3). The song of Deborah expresses the expectations of the women who stayed at home, awaiting the return of their men: "Are they not finding and dividing the spoil? — A maiden or two for every man; spoil of dyed stuffs for Sisera, spoil of dyed stuffs embroidered . . ." (Jgs. 5:30).

Annals of Egyptian, Assyrian, and Babylonian kings list in great detail the servants and treasures taken as booty. An example is this excerpt from Thutmose III's list of booty taken at Megiddo *ca.* 1468 B.C.: "[List of the booty which his majesty's army carried off from the town of] Megiddo: 340 living prisoners and 83 hands; 2,041 horses, 191 foals, 6 stallions, and . . . bowls of costly stone and gold, various vessels, . . . jars, bowls, . . . bronze vessels, and much clothing of that enemy" (*ANET,* pp. 237f.).

Like their neighbors, the Israelites too enjoyed the material benefits of war. But their laws regulated how they should act in war and under what conditions they could despoil their adversaries. Before leaving Egypt they "despoiled" the Egyptians by asking for valuables, "jewelry of silver and of gold, and clothing" (Ex. 12:35f.). The rules of war in Dt. 20:1-20 prescribe precisely under what conditions the Israelites might attack a city and, when victorious, under what conditions they could take and "enjoy the spoil of your enemies, which the Lord your God has given you" (v. 14). The spoils were the Lord's gift to His people. When the Israelites conquered cities belonging to any of the seven original nations of Canaan, they were commanded to place all that was alive under the "ban" (*ḥērem,* v. 17; cf. Josh. 6:21). In many cases they were permitted to take the material valuables and cattle as booty (Josh. 8:2; 11:14), but Jericho was an exception; the only things to be saved were precious metals and vessels, which were to be put in the treasury of the Lord (6:18f.). In some instances the Lord gave specific decrees adjusting the rules of war; e.g., the booty from Israel's victory over Midian had to be purified (Nu. 31:20) either by fire or by water (vv. 22f.) and divided between the men of war and the rest of the people, and a portion was to be given as an offering to the Levites (vv. 26-30). The practice of devoting a portion of the spoils to the treasury of the tabernacle or temple was continued under Samuel, Saul, and David (cf. 1 S. 21:9 [MT 10]; 1 Ch. 26:26-28; 29:2-5).

When the city of Samaria fell in 722 B.C., it was despoiled by the Assyrians (2 K. 17:20). In 586 B.C. Jerusalem fell to the Babylonians, who despoiled its people, exiled its craftsmen, and plundered the temple (24:14-16; 25:13-17; 2 Ch. 36:17f.); but at the time that the exiles returned, Cyrus decreed that the precious vessels be restored to the temple (Ezr. 1:7-11). The temple was pillaged again by Antiochus Epiphanes in 167 B.C. (*BJ* i.1.1 [32]). When Jerusalem fell to Rome in A.D. 70, Titus once again despoiled the people, the leaders, and the temple (cf. *BJ* vii.5.5 [148-150]). The Arch of Titus in the Roman Forum shows the menorah being taken from the temple.

W. A. VANGEMEREN

SPOKE [**Heb.** *ḥiššuq*] (1 K. 7:33); AV FELLOE. Part of the wheel assembly that joined the wheel rims to the hubs on the molten sea. *See* SEA, MOLTEN.

SPONGE [Gk. *spóngos*] (Mt. 27:48; Mk. 15:36; Jn. 19:29); AV SPUNGE. Sponges are the skeletons of marine animals and are common to the Palestinian coastline of the Mediterranean Sea.

In the RSV "sponge" occurs only in the Gospel accounts of Jesus' crucifixion. After saying "I thirst" (Jn. 19:28; cf. Ps. 69:21 [MT 22]), Jesus was offered a drink from a sponge saturated with vinegar or sour wine. Roman soldiers commonly used sponges as drinking vessels.

T. F. JOHNSON

SPOON. *See* DISH.

SPORT; MAKE SPORT [Heb. *śāḥaq*] (Jgs. 16:25a, 27; Job 30:1; Ps. 104:26; Hab. 1:10); AV also HAVE IN DERISION, DERIDE, PLAY; NEB also FIGHT TO MAKE SPORT, LAUGH TO SCORN, PLAYTHING, HOLD IN DERISION; [Heb. *śeḥôq*] (Prov. 10:23); [Heb. hithpael of *ʿālal*] (Ex. 10:2; Nu. 22:29; 1 S. 6:6; 31:4; 1 Ch. 10:4); AV WROUGHT (WONDERFULLY), MOCK, ABUSE; NEB also MAKE A FOOL (OF); [Heb. *ṣāḥaq*] (Jgs. 16:25b); [Heb. hithpael of *ʿānag*] (Isa. 57:4); NEB (BE) THE TARGET OF YOUR JESTS.

To "make sport" (Heb. *śāḥaq* and hithpael of *ʿālal*) of someone is to ridicule that person, often by demonstrating or gloating over their inability to prevail in battle (cf. Gk. *empaízō* in 1 Macc. 9:26; 2 Macc. 7:7, 10). Balaam's ass made sport of him by her recalcitrance (Nu. 22:29); Saul did not wish the Philistines to have the pleasure of killing him (1 S. 31:4 par. 1 Ch. 10:4); the Neo-Babylonian empire's army made sport of all the rulers they conquered (Hab. 1:10); and Job regarded the words of his "friends" as their ridicule of an elder (Job 30:1). God's actions on behalf of the Israelites are viewed as His making sport of the Egyptians (Ex. 10:2; 1 S. 6:6). In this way God is viewed as the one who enters into battle on behalf of the Israelites and prevails decisively.

Hebrew *śāḥaq* is also used for "sport" in the sense of entertainment or play. Thus Samson was called upon to entertain a Philistine audience (Jgs. 16:25, 27), Leviathan appears to be one who plays in the waves (Ps. 104:26), and the "fool" entertains himself by doing evil (Prov. 10:23; cf. 26:19; RSV "joking"; NEB "It was only a joke"). The same word is also used for mockery and (usually mocking) laughter (e.g., Prov. 29:9; Eccl. 3:4; Lam. 1:7) and for joyous worship (e.g., 2 S. 6:5).

Isaiah 57:4a portrays the idolatrous worship of some of those living in Jerusalem as an active attempt to deride Yahweh (cf. 37:23). The hithpael of Heb. *ʿānag,* usually translated "delight" in AV and RSV (NEB sometimes "enjoy"), denotes taking pleasure in some object or person (Ps. 37:11; Isa. 55:2; 66:11), sometimes God (Job 22:26; Ps. 37:4; Isa. 58:14). In the rhetorical question of Isa. 57:4, that malevolent pleasure is taken is signaled only by the other clauses of the verse (*ʿal* is used, as in most other instances of the verb).

For Gen. 26:8 (AV "sporting"), *see* FONDLING. For 2 Pet. 2:13 (AV "sporting themselves"), *see* REVEL.

J. W. SIMPSON, JR.

SPORTS. *See* GAMES.

SPOT [Heb. *bahereṭ* (Lev. 13:2, 4, 19, 23-26, 38f., etc.), *nega'*–'plague, mark (by skin disease)' (Lev. 13:3, 6, 42, 55), *pe·heṭeṭ*–'eating out, boring' (Lev. 13:55), *šeqa'a·rûrâ*–'depression, hollow' (Lev. 14:37), *mu'ûm*–'(moral) blemish, defect' (Job 31:7), *ha·barburôṭ*–'skin specks' (Jer. 13:23); Gk. *spílos*–'stain, blemish' (Eph. 5:27), *áspilos*–'spotless, without blemish' (1 Pet. 1:19; 2 Pet. 3:14)]; AV also BRIGHT SPOT, PLAGUE, HOLLOW STRAKES (Lev. 14:37), etc.; NEB also INFLAMMATION, SORE, ROT, DEPRESSIONS, etc.; **SPOTLESS** [Gk. *ámōmos*–'blameless' (Rev. 14:5)]; AV WITHOUT FAULT; NEB FAULTLESS; **SPOTTED** [Gk. *spilóō*–'stain, defile' (Jude 23)]; NEB CONTAMINATED; **BLOT** [Gk. *spílos* (2 Pet. 2:13)]; AV SPOT.

Both Hebrew terms *bahereṭ* and *nega'* refer to eruptions that may indicate a malignant skin condition. If the skin had been penetrated by the spot and the color of local hair had been affected, a malignant condition was to be suspected. But if the spot appeared to be superficial, and after a seven-day quarantine period had either healed or begun to diminish in extent, then the person was discharged as clean by the examining priest. *See* LEPROSY.

The meaning of Heb. *pe·heṭeṭ* in Lev. 13:55, which refers to disease affected clothing, is somewhat dubious, although it may derive from *pḥṭ*, "bore." In Job 31:7 *mu'ûm* (apparently a variant of *mûm*) refers to a moral defect (cf. 11:15; Dt. 32:5). In Jer. 13:23 Heb. *ha·barburôṭ* designates a distinguishing mark on the coat of an animal.

When translated by "spot" and "spotted" in the RSV, the Greek terms *spílos* (RSV "blot" in 2 Pet. 2:13), *áspilos*, and *spilóō* are used in a metaphorical sense to describe various moral blemishes. Gk. *ámōmos*, "spotless" (Rev. 14:5), is a sacrificial term used in an ethical sense of purity or freedom from fault.

G. L. K.

SPOUSE. This AV term in Cant. 4:8-12; 5:1; Hos. 4:13f. (RSV "bride") translates Heb. *kallâ* ("bride [before marriage]," "[young] daughter-in-law," "newly married woman"). *See* MARRIAGE I; BRIDE OF CHRIST.

SPREAD. Of the numerous Hebrew words translated "spread" in the OT, the one most often so translated is Heb. *pāraś*. (The second most often so translated is *pāśâ*, which is used only in connection with the spread of the signs of "leprosy" in Lev. 13–14.) *Pāraś* is used of the actions of laying out fabric or similar material, often to cover something (e.g., Nu. 4:6-14; NEB sometimes "lay on," "cover"; 2 S. 17:19; 2 K. 8:15; NEB "laid it over"; 2 K. 19:14). Laying out a covering in such a fashion is a figure of speech for God's actions in providing the cloud that led the Israelites through the desert (Ps. 105:39; cf. Job 36:29). *Pāraś* is also used of the cherubim's hiding the ark from sight in the temple of Solomon (1 K. 8:7), of the action of lifting one's hands toward heaven in prayer (v. 22; Ezr. 9:5; Isa. 1:15; cf. 65:2), of laying out nets on the water to catch fish (Isa. 19:8), of spreading out one's hands to swim (25:11), of a large bird's spreading its wings (Dt. 32:11; Job 39:26; Jer. 48:40; 49:22), of laying a trap (Ps. 140:5; Lam. 1:13; Hos. 5:1), and of using a net to hold captives (Ezk. 12:13; 17:20; NEB "cast . . . over"). Ruth's request that Boaz spread (*pāraś*) his skirt over her (Ruth 3:9) is a request for protection (cf. 2:12, where "wing" is the same word [*kānāp*] as "skirt" in 3:9), specifically the protection of marriage (cf. Ezk. 16:8).

Hebrew *šāṭaḥ* is used less commonly, but with similar variety (Nu. 11:32; Ps. 88:9 [MT 10]; AV "stretched out"; Jer. 8:2; NEB "expose"). Heb. *pûṣ* is used when the dispersion of people, whether a gradual spreading or a sudden scattering, is spoken of (e.g., Gen. 10:18; 2 S. 18:8; AV "scattered"). Heb. *nāṭâ* is a very common word in the OT, generally translatable as "stretch out." It is sometimes translated "spread" when it refers to the action of pitching a tent or canopy (Gen. 33:19, AV; RSV and NEB "pitched"; Jer. 43:10). God's creation of the sky or the earth is spoken of as His action of spreading them out (Heb. *rāqa'*: Job 37:18; NEB "beat out"; Ps. 136:6; AV "stretched out"; NEB "laid"; Isa. 42:5; NEB "fashioned"; 44:24; NEB "hammered"; Heb. *ṭāpaḥ*: Isa. 48:13; AV "spanned"; NEB "formed"; cf. Job 26:9; NEB "unrolling"; Ps. 105:39).

A number of Greek verbs, some verbs of "going out" used metaphorically, are used in the NT to speak of the dissemination of some message or report, most often public knowledge of the acts of Jesus or of the gospel (Gk. *apérchomai, exérchomai, diaphēmízō, dianémō*, and *diaphérō*; Mt. 4:24; AV "went"; NEB "reached"; 9:31; NEB "they talked about him"; 28:15; AV "is commonly reported"; NEB "became widely known"; Mk. 1:28, 45; AV "blaze abroad"; NEB "made . . . public"; Lk. 7:17; AV "went forth"; NEB "ran through"; Jn. 21:23; AV "went . . . abroad"; NEB "became current"; Acts 4:17; 13:49; AV "was published"). According to Paul, the knowledge of Christ spreads everywhere like a fragrance (2 Cor. 2:14; *phaneróō*, AV more literally: "maketh manifest"). Paul also speaks of death's spread from Adam to all people (Gk. *eisérchomai*, Rom. 5:12; AV "passed upon"; NEB "pervaded"). When Jesus entered Jerusalem the crowds spread (*[hypo]strṓnnymi*) garments and branches on the road (Mt. 21:8; Mk. 11:8; Lk. 19:36; AV sometimes "strawed"; NEB sometimes "carpeted").

SPRING. *See* SEASON; EN-ROGEL; GIHON; JERUSALEM II.C; WATERWORKS.

SPRING RAIN. *See* PALESTINE V.B; RAIN.

SPRINKLE [Heb. qal and hiphil of *nāzâ*–'spurt, spatter, sprinkle'] (Ex. 29:21; Lev. 4:6, 17; 5:9; 6:27; etc.; Nu. 8:7; 19:4, 18f., 21; Isa. 63:3); NEB also SPLASH, FLING, SPURT; [*zāraq*–'toss, throw, scatter abundantly' (see BDB, p. 284)] (Nu. 18:17; 2 Ch. 30:16; Job 2:12; Ezk. 36:25; Hos. 7:9); NEB also FLING, TOSS, "turn white"; [*šālaḳ*] (Ezk. 43:24); AV CAST; NEB THROW; [Gk. *rhantízo*] (He. 9:13, 19, 21; 10:22); [*rhantismós*] (He. 12:24; 1 Pet. 1:2); [*próschysis*] (He. 11:28).

The sprinkling of blood, water, or oil was important in the OT rituals of sacrifice, purification, and consecration. The sprinkling act in itself does not clearly have a single significance in all the situations in which it was used. Thus an indication of its significance is to be sought by examining the meaning of the rituals of which the sprinkling formed a part.

The principal word translated "sprinkle" in the RSV OT, Heb. *nāzâ*, occurs mainly in the context of purification rites. In the sin offering presented for the sin of the anointed priest or of the whole congregation (Lev. 4:1-21), some of the blood from the slain bull was sprinkled seven times on (or perhaps before) the veil of the most holy place (vv. 6, 17). Some of the blood was also smeared on the horns of the altar of incense, and the remainder was poured at the base of the altar of burnt offering (vv. 7, 18). On the Day of Atonement (ch. 16) Aaron was to go behind the veil, taking some of the blood of the bull offered for his own sin and of the goat offered for the people's sin, and sprinkle this blood on the front of and before the mercy

seat (vv. 14, 19). In the case of an individual Israelite who sinned unknowingly (RSV "it is hidden from him"), the blood was sprinkled only on the side of the altar of burnt offering (5:9).

According to G. Wenham (p. 94), the meaning of these ceremonies lies in the removal of the pollution of sin (cf. Lev. 15:31). While the burnt offering reconciled the sinner with God, the sin offering decontaminated God's people and tabernacle. The blood sprinkled and smeared was the means by which the altars, veil, and mercy seat of God's sanctuary were cleansed of the pollution of sin and reconsecrated (16:19). The seriousness of the pollution caused by the sin of the high priest or of the entire congregation is evident from the fact that the blood had to be taken inside the tabernacle and sprinkled on the veil and altar of incense; but if an ordinary individual Israelite sinned, the sprinkling took place only at the altar of burnt sacrifice outside the tabernacle (see Wenham, p. 96). Because of the priest's ordained position, his sin affected all Israel. In the Day of Atonement ritual, once the pollution had been removed by the sin offering, the priest was free to sacrifice the burnt offerings (16:24).

Sprinkling was also part of the ritual purification for leprosy, which marked a person's reincorporation into the covenant community (Lev. 14:1-32). If someone considered himself or herself cured of a leprous skin disease, the priest was summoned to examine this person outside the camp. If the priest was convinced that the disease was healed, two clean birds were brought. One was killed and its blood mixed with fresh water in an earthern vessel. The living bird was dipped in this blood, and the person healed of leprosy was sprinkled with it seven times (v. 7; cf. the ceremony for cleansing a house, v. 51); then the priest declared the person cleansed, and allowed the living bird to fly away. On the eighth day of the purification process, certain sacrifices and anointings were prescribed, including the sin offering and the burnt offering. The priest sprinkled anointing oil seven times before the Lord (vv. 16, 27); then some of it was put on the cured person's right ear, thumb, big toe, and head. The purpose of this sprinkling with oil seems to have been the consecration of the healed person (see also Wenham and other comms.).

A person (or a tent and its furnishings) might also become unclean from contact with a corpse (Nu. 19). For such situations a red heifer was slaughtered, and the priest sprinkled some of its blood toward the tent of meeting seven times (v. 4). Then the red heifer was burned with cedarwood, hyssop,and scarlet stuff, and the ashes were used in the water of purification, which was sprinkled upon the person or object to be made clean (vv. 18f.; *see also* HEIFER, RED). In the ritual described in 8:7, however, water alone is used for purification. Here the Levites are purified for the service of the Lord. In Ezk. 36:25 Yahweh promises figuratively to sprinkle clean water upon Israel in order to deliver His people from all their uncleanness and to put a new heart and spirit within them.

In addition to its use in the consecration ritual for persons healed of leprosy, anointing oil was also used in the dedication of the tabernacle and the ordination of Aaron and his sons (Lev. 8). Moses sprinkled some of the oil on the altar seven times (v. 11), and he sprinkled both anointing oil and blood from the altar onto the garments of Aaron and his sons (v. 30). The meaning of the sprinkling in these ceremonies seems to have been that of consecration to Yahweh's service.

Like other features of OT ritual, the sprinkling of blood is compared in the NT with the death of Christ (e.g., 1 Pet. 1:2). He. 9:13, 19, 21 and 12:24 allude to several of the rites mentioned above (along with the Ex. 24 narrative of the blood of the covenant) to show the superior efficacy of the purification wrought by the sprinkling of Christ's blood (cf. also He. 10:22; 11:28).

In some instances "sprinkle" does not have cultic connotations. The sprinkling of Job 2:12 seems to symbolize mourning; the friends throw dust toward heaven and allow it to settle on their heads (see *TDOT*, IV, 163; comms.). In Hos. 7:9 the MT *gam-śêḇâ zārᵉqâ bô* is usually read as a pual, "gray hairs are sprinkled upon him" (RSV). Andersen and Freedman (p. 467) have suggested that the "hairs" in question refer not to human hair on an elderly person but to hairs of mold on food; thus the analogy of the unturned cake in v. 8 is continued in v. 9. The NEB, on the other hand, assumes a second root *zrq*, meaning "turn white" (cf. KoB, p. 269; "be white, bright"). Another suggestion, based on Arab. *zaraqa*, "penetrate," is that "old age has crept up" (J. Blau, *VT*, 5 [1955], 341).

G. WYPER

SPURN [Heb. *mā'as*] (Lev. 26:15, 43f.; Ps. 36:4); AV DESPISE, CAST AWAY, ABHOR; NEB REJECT; [Heb. *nā'aṣ*] (Ps. 107:11; Jer. 14:21; Lam. 2:6]; AV CONTEMN, ABHOR, DESPISE; NEB FLOUT, DESPISE, SCORN; [Heb. *zānaḥ*] (Ps. 77:7 [MT 8]; Hos. 8:3, 5); AV CAST OFF; NEB REJECT, "stink," "is utterly loathsome" (reading a different root); [Heb. *sālâ*] (Ps. 119:118); AV TREAD DOWN; NEB REJECT; [Gk. *katapatéō*] (He. 10:29); AV TREAD UNDER FOOT; NEB TRAMPLE UNDER FOOT. To reject or treat with contempt.

God threatened the Israelites that if they spurned His law dire consequences would follow (Lev. 26:15ff., 43; cf. Ps. 107:11; Hos. 8:3), but also promised that even when His punishment of them had reached its height, He would not spurn them (Lev. 26:44; cf. Ps. 77:7; 119:118; Jer. 14:21; Lam. 2:6). According to the rhetorical question posed in He. 10:28f., one who has "spurned the Son [Christ]," i.e., one who, having accepted the gospel, has gone on to reject it, faces more serious punishment than one who violated the Mosaic law.

For Dt. 22:13-21, *see* HATE I.A. *See also* REJECT.

J. W. SIMPSON, JR.

SPY [Heb. piel of *rāgal*–'go out, spy' (Gen. 42:9; Dt. 1:24; Josh. 6:22; etc.), *tûr*–'spy out, explore' (Nu. 13:2, 16f., 21; 14:6; etc.; hiphil, Jgs. 1:23), *šāmar*–'keep, watch' (Jgs. 1:24), *rā'â*–'see' (2 K. 9:17), *ḥāpar*–'search out' (Job 39:29); Gk. *enkáthetos*–'hired to lie in wait' (Lk. 20:20), *kataskopéo*–'spy out, lie in wait' (Gal. 2:4), *katáskopos* (He. 11:31)]; AV also SEARCH OUT, VIEW, SEEK, ESPY (Josh. 14:7), etc.; NEB also EXPLORE, SECRET AGENTS, SCOUTS, etc.

The most usual word for "spies" in the RSV OT is the piel participle *mᵉraggᵉlîm* (< Heb. *rgl*, "foot"), which occurs twelve times in the OT; the piel infinitive *raggēl* is commonly translated "to spy out" (e.g., Nu. 21:32; Josh. 6:25; 14:7; etc.).

Spies were common in military operations in the ancient Near East. As in modern times, knowledge of the strengths and weaknesses of an enemy were invaluable for success in conflict. Thus the OT mentions spies frequently. They are mentioned first in connection with

Joseph's dialogue with his brothers. Knowing that they were his deceitful brothers, Joseph put them to the test by accusing them of being spies sent to search out the state of Egypt during the famine (Gen. 42:9-17, 29-34). Spies also played an important role in holy war. In Nu. 13:1-33 Moses sent out twelve spies to explore the land of Canaan. But only Joshua and Caleb brought back positive reports. Another instance of spying occurs in Nu. 21:32 when Moses sent men to spy out Jazer. The paradigmatic holy war battle of Jericho stressed the role of spies (Josh. 2:1-6, 22-24; 6:22-25). Apparently the use of spies was seen as an important dimension of holy war. Spies investigated Ai (Josh. 7:2-5). The clan of Joseph also employed spies to find an entrance to the city of Bethel (Jgs. 1:23-25). During the monarchy spies were described as a part of the conflict between David and Saul (1 S. 26:1-5). In 2 S. 10:1-5 the Ammonites accused David of sending emissaries who were spies (cf. 1 Ch. 19:3).

In the NT the scribes and Pharisees investigated Jesus' ministry by means of spies (Lk. 20:20). Also, the writer of Hebrews praised Rahab's faith as demonstrated in her treatment of the spies at Jericho (He. 11:31). Lastly, Paul refers in Ga. 2:4 to false brothers who surreptitiously entered a gentile Christian community in order to impose legalism upon the Galatian churches. R. L. PRATT, JR.

SQUAD [Gk. *tetrádion*] (Acts 12:4); AV QUATERNION; NEB SQUADS OF FOUR. A military technical term for a company of four soldiers (so NEB). Acts 12:4 reflects the Roman practice whereby each group kept watch for a three-hour interval during one of the four night watches.

SQUARE [Heb. *rᵉḥōḇ*] (Dt. 13:16; Jgs. 19:15, 17, 20; 2 S. 21:12; 2 Ch. 29:4; 32:6; Ezr. 10:9; Neh. 8:1, 3, 16; Est. 4:6; 6:9, 11; Job 24:20; 29:7; Cant. 3:2; Isa. 15:3; etc.); AV STREET, BROAD WAY, BROAD PLACE; NEB also STREET, FORECOURT, MARKET-PLACE, WIDE SQUARE, BROAD STREET, OPEN PLACE OUTSKIRTS. (In Job 24:20 the RSV follows the conjectured reading *rᵉḥōṭ* while the AV and NEB translate *reḥem* ["womb"] of the MT in this obscure passage.)

Excavations of some Israelite cities have revealed open spaces or plazas just inside the gates. These squares may be what the cited passages intend, but the precise meaning of *rᵉḥōḇ* is uncertain.

See also CITY; MARKET; STREET. G. WYPER

STACHYS stā'kis [Gk. *Stachys*–'ear (of grain)']. The name of a believer in Rome whom Paul identifies simply as "my beloved" and to whom Paul sent greetings (Rom. 16:9). Although it is a rare Greek name, it does appear as the name of a slave within the imperial household (*CIL* 6.8607). D. B. PECOTA

STACK [Heb. *gāḏîš*–'sheaves'] ("stacked grain," Ex. 22:6 [MT 5]); AV STACKS OF CORN; NEB SHEAVES. Grain sheaves placed in a pile.

STACTE stak'ti [Heb. *nāṭāp*–'drops' < *nṭp*–'drip'; Gk. *staktḗ*] (Ex. 30:34; Sir. 24:15); AV Apoc. SWEET STORAX; NEB GUM RESIN; NEB mg. MASTIC. A gum that exudes from either *Styrax officinalis* L., the storax tree, or the species *Commiphora opobalsamum*. The gum was obtained by incising the stems and branches. In Ex. 30:34 it is an ingredient of the holy anointing incense.

See *MPB*, p. 224.

STADIA stā'dē-ə [Gk. *stádia, stádioi*, plurals of *stádion*, a "stade" or "stadium"] (Rev. 14:20; 21:16); AV FURLONGS; NEB FURLONGS, etc. A stade was a Greek measure of distance, about 185 m. (202 yds.) or one-eighth of a Roman mile. A *stádion* could also be a racetrack ("race," 1 Cor. 9:24), the footrace course at Olympia being just one "stade" in length. Greek *stádion* gave rise to Latin *stadium* and thus English "stadium."

Revelation 14:20 and 21:16 refer respectively to 1600 and 12,000 stades. The latter is evidently a symbol of the perfection of the heavenly city. It is not clear why the former figure was chosen. It might be seen as four hundred times four, or as forty squared. The suggestion that it represents the length of Palestine has no force, and A. M. Farrer (*Revelation* [1964], p. 168) is oversubtle in his numerical symbolism.

C. J. HEMER

STAFF [Heb. *maṭṭeh*] (Gen. 38:18, 25; Lev. 26:26; 1 S. 14:27, 43; Ps. 105:16; Isa. 9:4 [MT 3]; etc.); AV also ROD; NEB also STICK, DAILY, ROD, etc.; [poel part. of *ḥāqaq*] ("ruler's staff" Gen. 49:10); AV LAWGIVER; [*maqqēl*] (Gen. 32:10; Ex. 12:11; Nu. 22:27; 1 S. 17:40; Jer. 48:17; Hos. 4:12; Zec. 11:7, 10, 14); AV also ROD; NEB also STICK, BATON, FETISH; [*maśʿênâ*–'support'] (Isa. 3:1); NEB STAY; [*miśʿeneṭ*] (Ex. 21:19; Jgs. 6:21; Ps. 23:4; Isa. 36:6; etc.); NEB STICK, CANE, CROOK, etc. [*šēḇeṭ*] (Lev. 27:32; Jgs. 5:14; Mic. 7:14; etc.); AV ROD, PEN; NEB also ROD, CROOK, CLUB; [Gk. *rhábdos*] (Mt. 10:10; Mk. 6:8; Lk. 9:3; He. 11:21; Rev. 11:1); AV also ROD; NEB also STICK, MEASURING-ROD. A rod used as a walking stick and a variety of other related functions.

When "staff" translates *maṭṭeh* it usually refers to the common walking stick that must have been carried by every man. When carried by a soldier it could also be a weapon; it may have been used much like a medieval quarter-staff. In Gen. 38:18 it apparently carried some economic value in order to be used as a pledge for payment; from the same context it must also have borne identifying marks of the owner, possibly in the form of carvings, inlay, or appliqué (vv. 25f.). It could be used as a punishing tool (Isa. 30:32). Figuratively, it was a symbol of oppression (9:4). It was also used to depict dependency on bread in the phrase "staff of bread" (Lev. 26:26), which refers to the round loaves of bread suspended around the staves.

In Gen. 49:10 Heb. *mᵉḥōqēq* (poel part of *ḥāqaq*) refers to Judah's position of kingship. This connotation of *mᵉḥōqēq* (RSV "scepter") also appears in Ps. 60:7 (MT 9) and 108:8 (MT 9).

The term *maqqēl* is used almost identically to *maṭṭeh*. In Nu. 22:27 it was used by Balaam to beat his donkey. Along with the sling it was a part of David's weaponry when he went to meet Goliath (1 S. 17:40). The term is also used symbolically to refer to preparedness (Ex. 12:11) or to the covenant that is useless when broken (Zec. 11:7-14).

The term *maśʿênâ* refers to food support, while the related word *miśʿeneṭ* refers to the simple walking stick. The ancient Song of the Well in Nu. 21:18 mentions that nobles dug a well "with the scepter and with their staves." For various suggestions about the meaning of this difficult text, see comms. (see also D. N. Freedman, *ZAW*, 72 [1960], 105f.). In 2 K. 4:29, 31 Elisha's staff possessed miraculous powers, even when held by his servant. Thus the identity and essence of the owner may be seen as inherent within his staff (cf. Gen. 38:18, 25). In Zec. 8:4 the old use it for support, even while sitting.

The term *šēḇeṭ* is often used to indicate the common

walking stick that can also function as a weapon (Lev. 27:32; 2 S. 23:21; 2 Ch. 11:23). It was also used as a standard to identify military commanders marching in battle (Jgs. 5:14).

In the NT *rhábdos* is usually the simple walking stick used by the disciples (Mt. 10:10; Mk. 6:8; Lk. 9:3), but in Rev. 11:1 it refers to a long, bamboo-like cane used for measuring purposes (cf. Ezk. 40–42).

See also ROD; SCEPTER. L. G. HERR

STAG [Heb. *'ayyāl*–'fallow buck'] (Cant. 2:9, 17; 8:14); AV HART; NEB WILD GOAT. In Prov. 7:22 the RSV follows the LXX, Syriac, and Targum in conjecturing *'ayyāl* for *'ĕwîl* (cf. AV "fool"). The stag in question may have been the small fallow deer (*Dama dama*) or its larger relative (*Dama mesopotamica*) that formerly inhabited the hill forests of Mesopotamia and Palestine.
