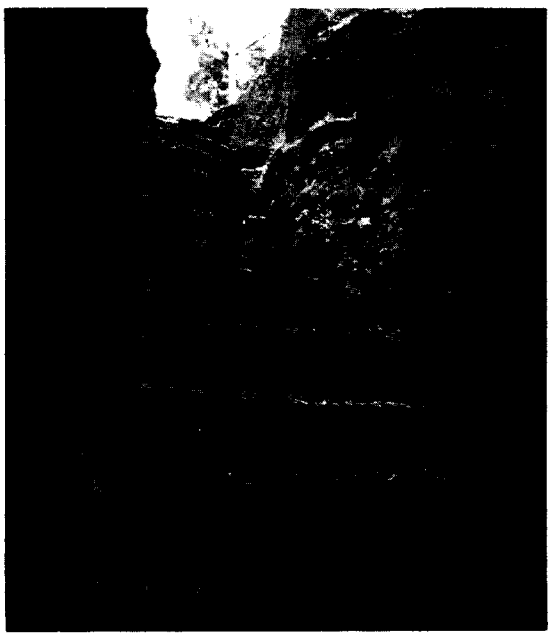
STAGE [Heb. *massā'*] (Ex. 17:1; Nu. 10:12; 33:1f.); AV JOURNEYS. The various intervals of the Israelites' itinerary that they traveled enroute from Egypt to Canaan — possibly the distance from oasis to oasis.

STAIR [Heb. *lûl*] (1 K. 6:8); AV WINDING STAIR; NEB SPIRAL STAIRWAY; [*ma'ălâ*–'step, stair'] (Neh. 3:15; 12:37); NEB STEP; [*ma'ăleh*–'stand, platform'] (Neh. 9:4); NEB STEP; **STAIRWAY** [Heb. *ma'ăleh*–'ascent, rise'] (Ezk. 40:31, 34, 37); AV "the going up"; NEB etc.; **STEP(S)** [Heb. *ma'ălâ*–'step, stair'] (Ex. 20:26; 1 K. 10:19f.; 2 K. 9:13; 2 Ch. 9:18f.; Ezk. 40:6, 22, 26, 31, 34, 37, 49; 43:17); AV STAIR; [Gk. *anabathmós*] (Acts 21:35, 40); AV STAIR.

In 1 K. 6:8 the AV and NEB translations for the hapax legomenon Heb. *lûlîm* find support in the LXX, Targ., and Vulg., though in postbiblical Hebrew *lûlîm* apparently referred to trap doors (cf. G. H. Jones, *1 and 2 Kings* [*NCBC*, 1984], I, 166). This stairway provided access between the stories in Solomon's temple.

Stairs cut into the rock of a first-century tomb (the traditional tomb of Lazarus) at Bethany (L. K. Smith)



The stairs mentioned in Neh. 3:15 and 12:37 refer to steps cut into rock. They led up from the Fountain Gate to the city of David, which was located on the southeast hill in Jerusalem near the Kidron Valley. *See* JERUSALEM III.F.2.i.

In Neh. 9:4 Heb. *ma'ăleh* refers to a platform upon which the Levites stood during the assembly. For AV "stairs" in Cant. 2:14 *see* CLEFT.

In Ezk. 40:31, 34, 37 "stairway" refers to an indefinite architectural structure located within the temple of Ezekiel's vision. "Stairway" in Ezk. 41:7 (NEB "ramp") is conjectural since the MT here is obscure.

The RSV translation "steps" for Heb. *ma'ălôṯ* refers to steps ascending to an altar (Ex. 20:26; Ezk. 43:17) and to Solomon's throne (1 K. 10:19f. par. 2 Ch. 9:18f.), as well as the various steps of Ezekiel's temple (Ezk. 40 *passim*).

The RSV "steps" in 2 Ch. 9:11 (AV "terrace"; NEB "stand") for Heb. *mᵉsillâ* remains conjectural (see the comms.). For "steps" in 2 K. 20:9-11 and Isa. 38:8 *see* DIAL OF AHAZ.

The "steps" mentioned in Acts 21:35, 40 (AV "stairs"; Gk. *anabathmós*) refer to the flights of stairs leading up to the Fortress of Antonia from the outer court of the temple. G. L. KNAPP

STAKE [Heb. *yāṯēḏ*]; NEB PEG. The Hebrew word is used often in the OT of various types of pegs, pins, and stakes used to secure tents (Ex. 39:40), to drive into a wall to hang things on (Ezk. 15:3), to dig with (Dt. 23:14), etc. Jael killed Sisera with one (Jgs. 4:21). The *yāṯēḏ* could be made of wood or metal (e.g., Ex. 27:19). English versions usually render the word "peg" (Ex. 27:19; 35:18; 38:31; etc.), but in Isa. 33:20 and 54:2, where the pegs of Jerusalem's figurative tent are mentioned, the RSV renders it "stakes."

In Job 6:29 most of the English versions paraphrase Heb. *ṣiḏqî-ḇāh* (lit. "my righteousness is in it"; so AV; cf. RSV "my vindication is at stake"; NEB "my integrity is in question"). See the comms., especially E. Dhorme (Eng. tr. repr. 1984), and H. H. Rowley (*NCBC*, repr. 1980). D. A. DORSEY

STALK (noun) [Heb. *qāneh*] (Gen. 41:5, 22); [*'ēṣ*–'tree,' 'wood'] (Josh. 2:6); (verb) [Heb. *hālaḵ*–'go'; 'walk'] (Ps. 91:6); AV WALKETH; [*ṣûḏ*] (Prov. 6:26); AV HUNT; NEB IS OUT FOR. The noun is mentioned in Gen. 41:5, 22, in Pharaoh's dream, according to which seven plump and good ears of grain were growing on one stalk, presumably wheat or barley. In Josh. 2:6 Rahab hid the two Israelite spies among the stalks of flax spread out on the roof of her house. Ps. 91:6 uses the verb "stalk" (Heb. *hālaḵ*) of the movement of the pestilence that goes about during the night. In Prov. 6:26 the adulteress "stalks a man's very life." Heb. *ṣûḏ* usually refers to the action of hunting animals (e.g., Gen. 27:3; Job 10:16), and thus provides a vivid characterization of the adulteress. D. A. DORSEY

STALL [Heb. *'uryâ*] (1 K. 4:26 [MT 5:6]; 2 Ch. 32:28); NEB also STABLE; [*marbēq*] (1 S. 28:24; Am. 6:4; etc.); RSV also FATTED; AV also FAT; NEB also FAT, STALL-FED; [*repeṯ*] (Hab. 3:17). A compartment within a stable for the housing and feeding of an animal.

The *'uryâ* is associated with both Solomon and Hezekiah. Although 1 K. 4:26 attributes 40,000 horse stalls to Solomon, 2 Ch. 9:25 gives the more likely figure of 4000.

A manger and hitching pillars from what may have been a stable complex at Megiddo during Ahab's reign (D. Harris)

Hezekiah used them apparently for cattle as well as horses (2 Ch. 32:28).

The *marbēq* is usually associated with young animals apparently being fattened for a feast (Am. 6:4). If one restricted the animal to feeding in the stall instead of ranging freely on the pasture lands its food was more readily turned to fat. The joyful leaping of such calves when freed was apparently well known (Mal. 4:2 [MT 3:20]). Cowardly soldiers were likened to them, weak and fat from no exercise (Jer. 46:21). The *repeṯ* was apparently an enclosure for sheep and goats.

The excavators at Megiddo uncovered buildings they thought were STABLES. Although many scholars have suggested other functions, the identification has received renewed and vigorous defense. The "stables" were divided into stalls by pillars, each with its own manger. According to modern stall structure the ancient buildings remarkably fit the pattern. But the issue is still debated.

Based on the suggestion that the pillared structures were stables, some scholars have also suggested that the pillared areas in many Israelite houses were domestic stalls, housing the animals belonging to the family (*marbēq* and *repeṯ*).

See also STABLE.

L. G. HERR

STAMMERER [Heb. *'illēg*] (Isa. 32:4); NEB WHO STAMMERS. The precise meaning of the Hebrew term is uncertain. It may be derived from the root *l'g* ("stammer") by metathesis (BDB, p. 541); thus it could, like the Arabic cognate *la'aga*, indicate either a foreign language or a speech impediment. In Isa. 32:4 the "tongue of the stammerers" speaking "readily and distinctly" is paralleled by the "mind of the rash" receiving the ability to understand. Thus the context suggests a reference to a speech impediment.

R. L. PRATT, JR.

STANDARD [Heb. *degel* (Nu. 1:52; 2:2f., etc.; 10:14, 18, etc.), *nēs* (Isa. 31:9; Jer. 4:6, 21; 51:12, 27)]; AV also ENSIGN (Isa. 31:9); NEB also "flee" (Isa. 31:9), SIGNAL (Jer. 4:6); [Heb. *middâ*–'measure' (2 Ch. 3:3), *maṯkōneṯ*–'measurement' ("standard measure," Ezk. 45:11); Gk. *týpos* (Rom. 6:17), *sárx*–'flesh' ("worldly standards," 1 Cor. 1:26)]; AV MEASURE, FORM, FLESH; NEB also PATTERN (Rom. 6:17); **ENSIGN** [Heb. *nēs*] (Isa. 11:10, 12; 62:10; Ezk. 27:7); AV also STANDARD, SAIL (Ezk. 27:7); NEB SIGNAL, SAIL; ['*ôṯ*–'sign'] (Nu. 2:2); NEB EMBLEM; FLAGSTAFF; [*tōren*] (Isa. 30:17); AV BEACON; NEB POLE.

The term "standard" is used by the RSV in two different senses: (1) a symbol mounted on a pole and used as an emblem for group identification, as a marker for a rallying point (i.e., an ensign), or as an object of worship; (2) a criterion established by custom or authority.

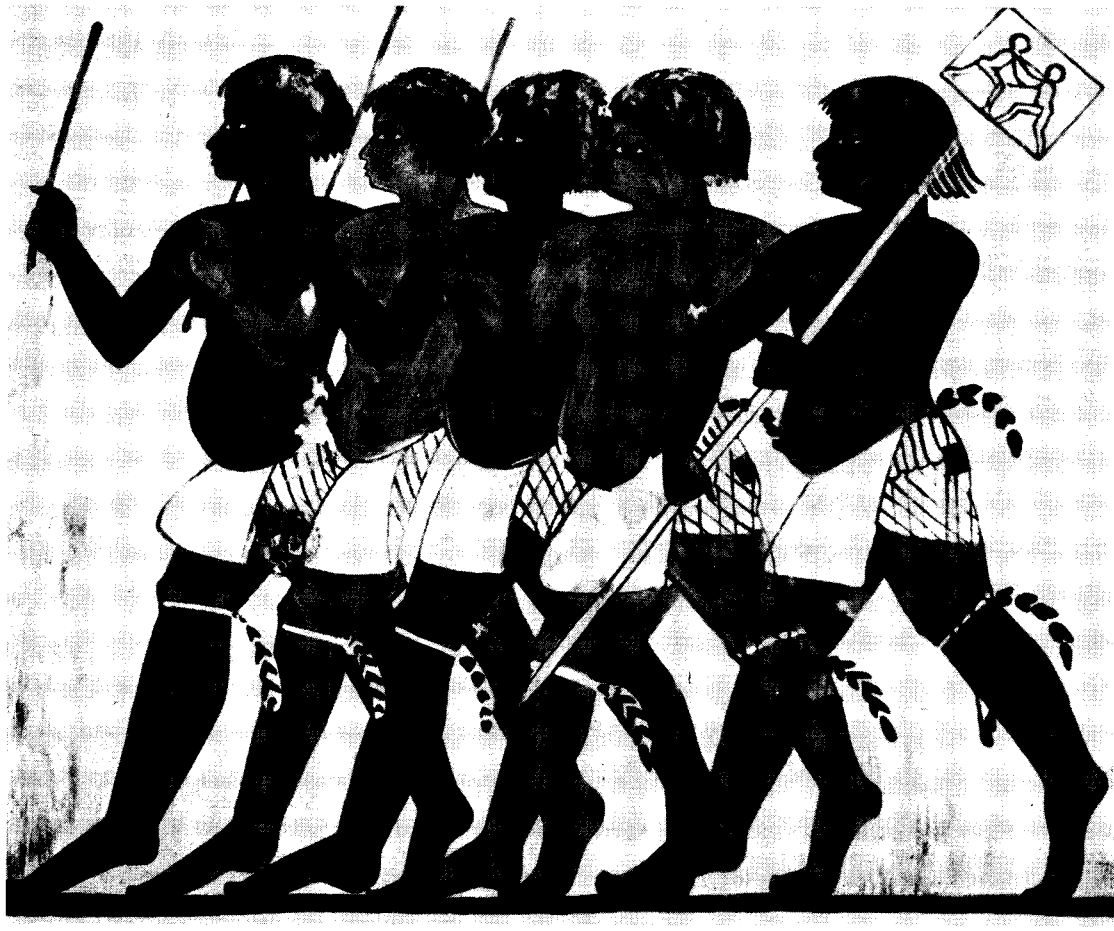
(1) Standards or ensigns composed of cloth, metal, or wooden symbols mounted on poles (cf. "flagstaff," Isa. 30:17) were used throughout the ancient Near East and northern Mediterranean by military, cultic, and political institutions (*see* BANNER; POLE). This is generally understood to be the meaning of Heb. *degel* and *nēs*, although R. de Vaux has argued that *degel* signifies a division of the army and *nēs* denotes simply a pole or mast raised as a signal for an army (*Ancient Israel* [Eng. tr. 1961], I, 226f.).

The OT contains little information about the use of such standards, and the NT makes no reference to them. Nu. 1:52–2:34 and 10:14-25 describe Israel's use of standards for organization and identification of the tribes. Heb. *'ôṯ*, a general term for "sign," occurs with *degel* in 2:2; here *'ôṯ* may represent the ensign of an individual tribe or subdivision of a tribe (cf. the use of *'ôṯ* for the military standards of the sons of light in 1QM 3:13–4:17; see below), while *degel* signifies the standard of one of the major divisions consisting of three tribes. Ezk. 27:7 refers to a nautical ensign, which seems to symbolize the wealth of Tyre. Isa. 11:10 refers figuratively to the Messiah as an ensign that the nations will seek (cf. v. 12; 62:10). The references to standards in Jer. 4:6, 21; 51:12, 27 illustrate their military uses. In Isa. 10:18 the AV uses "standard-bearer" to render the difficult term *nōsēs* (part. of *nāsas*), but this translation is doubtful (cf. RSV "sick man").

Archeologists have discovered three metal standards from ancient Israel. Two of them have been dated to the Late Bronze Age (from Hazor and Beth-shean) and one to Iron Age II (from Tell esh-Shari'ah).

The War Scroll from Qumrân describes an elaborate system of standards for the army of the sons of light (1QM 3:13–4:17). The standards were to be of decreasing sizes, from fourteen to seven cubits in length, for the following eight divisions: the whole congregation, camp (three tribes each), tribe, ten thousand, thousand, hundred, fifty, and ten. Each banner was to bear a slogan (e.g., "Vengeance of God"), the leader's name, and the names of subordinate leaders. The inscription was to be changed at the three phases of war: going to war, going to battle, and return (see Yadin).

Josephus recounted three events involving Roman standards and the Jews in the 1st cent. A.D.: the Jews successfully protested Pilate's bringing a Roman legion with an iconic standard into Jerusalem (*Ant.* xviii.3.1 [55]); they also persuaded Lucius Vitellius (the Roman legate in Syria) to detour his legions with iconic standards around Judea (*Ant.* xviii.5.3 [121]); but Titus's victorious troops sacrificed before their standards in the Jerusalem temple (*BJ* vi.6.1 [316]). Each Roman legion had an eagle standard (Lat. *aquila*), and each cohort had its own individualized standard (*vexillum*). The latter bore the name of the



A band of Nubian soldiers carrying staves and accompanied by a standard-bearer (wall painting from the tomb of Tjanumy at Thebes, 1420-1411 B.C.) (courtesy of the Oriental Institute, University of Chicago)

commander or emperor and images of the emperor, deities, and/or zodiac symbols. Because of the Roman military's "cult of the standard," from republican times Jews were exempted from military service.

(2) In 2 Ch. 3:3 and Ezk. 45:11 "standard" refers to an accepted criterion of measurement for length (the cubit) or capacity (the homer); *see* WEIGHTS AND MEASURES. In the NT Paul refers to two different criteria for judgment of character, behavior, or worth. In Rom. 6:17 he refers to the gospel teaching as a "standard" (Gk. *týpos*; lit. "pattern") to which the lives of the Roman Christians have become conformed; in 1 Cor. 1:26 he mentions that according to the criteria of society (*katá sárka*) few of the Corinthian Christians were well-educated or powerful.

STANDING. *See* POSTURES; ATTITUDES I.

STAR [Heb. *kôḵāḇ*; Gk. *astḗr* (Mt. 2:7, 9f.; etc.), *ástron* (Lk. 21:25; Acts 7:43; 27:20; He. 11:12).

The appearance of the stars marks the end of the day (e.g., Neh. 4:21 [MT 15], "we labored at the work . . . from the break of dawn till the stars came out"). The OT shows awareness of the stars' immense number, for they are employed as a symbol for the numerous descendants that God promised Abraham through the covenant (Gen. 22:17). Moses, near the end of the wilderness wanderings, claimed that this promise had been fulfilled, saying in his address to the Israelites, "You are this day as the stars of heaven for multitude" (Dt. 1:10; cf. He. 11:12).

In the ancient Near East both individual stars and constellations were considered gods, but Israel, of course, was forbidden to worship them (Dt. 4:19). Thus throughout the OT occur strong polemics against all forms of ASTROLOGY and star worship. The stars were created by God; their task is simply to rule the night (Gen. 1:16-18). They are totally subordinate to God and under His control. This status is further emphasized in Ps. 147:4, which says God determined their number and gave them their names, meaning that their destiny is completely under His will. When He desires He can keep them from shining (Job 9:7).

In battle God can command the stars to fight against Israel's foes; e.g., "From heaven fought the stars, from their courses they fought against Sisera" (Jgs. 5:20). Although this language is poetic, it does mean that God uses all the forces of the universe to accomplish His purpose.

A pierced marb e scaraboid seal found at Shechem (imported from Mesopotamia) c epicts two figures standing on either side of an altar above which is a star (symbolizing a god); seven circles (left) represent the Pleiades (Assyrian, 724-721 B.C.) (Joint Expedition to Shechem; photc L. C. Ellenberger)

As creatures they respond to God and His work. At creation the mo ning stars sang together (Job 38:7), and throughout the universe all the stars are to praise God (Ps. 148:3). At the birth of His Son God sent a star to communicate to men from the East His deeds and where they were being accomplished (Mt. 2:2, 7, 9f.).

When God acts, He often causes spectacular things to happen through nature, as shown at the Red Sea and Mt. Sinai. A series of drastic events will take place in the heavens when the great Day of the Lord comes. The sun and moon will fail to shine; "the stars of the heavens and their constellations will not give their light" (Isa. 13:10; cf. Joel 2:10; 3:15 [MT 4:15]). Jesus also predicted, "The stars will fall from heaven" (Mt. 24:29). In the drama described in Revelation groups of stars are struck down (8:12; 12:4). All of this language shows that the battle of the last days is totally God's and not merely that of some mighty earthly army.

Interestingly, stars can stand for exalted creatures (no doubt because of their brilliance and glory), either foes of God or His servants. While the stars are lofty, God dwells above them (Job 22:12, NEB). According to Isa. 14:12 the king of Babylon imagined himself to be the "Day Star, son of Dawn" (*see* DAY STAR). He was not satisfied with his dominant position but sought to ascend above the stars and establish his throne on high. This language, of course, means that he desired to take the place of God. He challenged the power of God and was cast down in defeat (14:12-15). In Jude 13 the opponents of God are similarly called "wandering stars for whom the nether gloom of darkness has been reserved for ever." Conversely, one prophecy of the OT compares the coming Messiah to a star: "I see him, but not now; I behold him, but not nigh: a star shall come forth out of Jacob, and a scepter shall rise out of Israel; it shall crush the forehead of Moab, and break down all the sons of Sheth" (Nu. 24:17). In Revelation Jesus Himself declares, "I am the root and the offspring of David, the bright morning star" (22:16). 2 Pet. 1:19 figuratively refers to Christ as the morning star (*see* MORNING, MORNING STAR). In Revelation the seven stars stand for the angels of the seven churches (1:20). Stars also symbolize the glory of the resurrected life. Those who turn many to righteousness will rise in the resurrection, and then they will shine "like the stars for ever and ever" (Dnl. 12:3). Paul compared the glory of the resurrected body to the glory of the stars (1 Cor. 15:40-49).

On Am. 5:8, *see* PLEIADES; on "star-god" in Am. 5:26, *see* KAIWAN.

STATELY [Heb. hiphil part. of *yāṭaḇ*–'be well, good, glad, pleasing'] (Prov. 30:29); AV WELL, COMELY; [*qômâ*/*qômâ*–'(high) stature'] (Cant. 7:7 [MT 8]); AV STATURE; [Heb. *'addîr*–'majestic'] (Isa. 33:21); AV GALLANT; [Heb. *kᵉḇûddâ*] (Ezk. 23:41); NEB OF STATE. In Prov. 30:29 "stately" translates a form of Heb. *yāṭaḇ* twice. This term describes the grand or majestic manner in which a king and various animals carry themselves as they walk. Heb. *qômâ* in Cant. 7:7 (MT 8) refers to a woman's tall height (cf. Sir. 26:17). The stately ship mentioned in Isa. 33:21 is likely a broad and powerful vessel (cf. *TDOT*, I, 73f.). In Ezk. 23:41 a scribe perhaps confused the similar Hebrew consonants *r* and *k* resulting in Heb. *kᵉḇûddâ* (RSV "stately") rather than Heb. *rᵉḇûdâ*, "bespread, deck" (see LXX *estrōménēs* < *strōnnýein*, "spread"; see *BHS*). G. L. K.

STATURE [Heb. *middâ*–'of high growth, tall' (Nu. 13:32; 2 S. 21:20; 1 Ch. 11:23; 20:6; Isa. 45:14), *qômâ*–'height' (1 S. 16:7; Ezk. 13:18), *gāḏēl*–'becoming great, growing up' (1 S. 2:26); Gk. *hēlikía*–'age, time of life,' 'bodily stature' (Lk. 2:52; 19:3; Eph. 4:13)]; AV also "grew on"; NEB also SIZE, TALL, GIANT, AGE, "bearing tribute," etc. Terms rendered "stature" in the RSV indicate measures of height, life, or maturity. The concept of physical size predominates in the OT, with close association to the attribute of greatness. In the RSV NT "stature" translates Gk. *hēlikía*, which primarily indicates age (as in the LXX), but also size (Lk. 19:3) and maturity (Eph. 4:13).

See also SPAN. C. N. JEFFORD

STATUTE [Heb. *ḥōq*] (Gen. 47:26; Ex. 15:25; 18:20; Dt. 6:20; 1 Ch. 16:17; Ps. 94:20; 99:7; 105:10; 119; Isa. 24:5; Mal. 3:7; etc.); AV also LAW, ORDINANCE; NEB also PRECEPT, LAW, DECREE; [*ḥuqqâ*] (Gen. 26:5; Lev. 18:3-5; Nu. 9:3, 12, 14; 10:8; 15:15; 19:2; 31:21; etc.); AV also RITE (Nu. 9:3), ORDINANCE; NEB also INSTITUTIONS, RULE, LAW, etc. Both Hebrew terms designate something prescribed either by man or by God,

such as ritual laws (Ex. 27:21; 28:43; 29:9; Lev. 3:17; 10:9; etc.) or civil codes prescribed by God (Ex. 18:16; Lev. 10:11; Dt. 4:6; 6:24; 16:12; etc.). The term is often used in combination with terms such as "law" (*tôrâ*) or "commandments" (*miṣwōṯ*); cf. Ps. 119, where "statute" appears twenty-two times as a general synonym for LAW. Israel was to keep the statutes of the Lord but not those of Canaan (Lev. 18:3-5).

STAVES. *See* STAFF (Nu. 21:18). For AV uses *see* POLE.

STEADFAST [Heb. *kûn*–'be firm, straight' (niphal, Ps. 57:7 [MT 8]; 78:37; 108:1 [MT 2]; 119:5; hiphil, Ps. 78:8), *ḥāzaq*–'be firmly resolved' (Josh. 23:6), niphal part. of *'āman* (Isa. 55:3); Gk. *hedraíos* (1 Cor. 15:58; Col. 1:23), *bébaios*–'firm, permanent' (He. 6:19), *kardía*–'heart' (Acts 11:23), part. of *hypoménō*–'remain' ("those . . . who were steadfast," Jas. 5:11)]; AV also FIXED, "set aright," "were directed," "as" (Prov. 11:19), SURE, HEART, SETTLED, "those who endure"; NEB also "fixed steadfastly," LOYAL, "hold a steady course," FAITHFULLY, HEART, FIRM, SURE, "those who stood firm"; **STEADFASTLY** [Heb. *dāḇaq*–'keep close to' ("followed steadfastly," 2 S. 20:2); Gk. *proskarteréō*–'adhere to, persist in' ("continue steadfastly," Col. 4:2)]; AV "clave," CONTINUE; NEB "stood by and followed," PERSEVERE; **STEADFASTNESS** [Gk. *hypomonē*–'patience, endurance, perseverance' (Rom. 15:4f.; 1 Thess. 1:3; 2 Thess. 1:4; 3:5; 1 Tim. 6:11; 2 Tim. 3:10; Tit. 2:2; Jas. 1:3f.; 5:11; 2 Pet. 1:6)]; AV PATIENCE, "patient waiting"; NEB also FORTITUDE, "stood firm." For *kûn* in Prov. 11:19 see the comms. and *BHS*. The quality of being immovable or firmly fixed in place.

Throughout the OT Heb. *kûn* is used most often to convey the idea of something being established (e.g., a kingdom, 1 K. 2:12, 46) or standing firm (e.g., the world, 1 Ch. 16:30). This quality of steadfastness or firmness often has a moral character to it; a heart that is steadfast toward God is a faithful heart that trusts Him under all circumstances.

In Isa. 55:3 "steadfast" translates the niphal part. of *'āman*. In many instances, both the RSV and AV use "faithful" to translate this participle (e.g., Ps. 101:6; Prov. 25:13; Isa. 1:21; 49:7; etc.). The word "sure" (so RSV, AV; NEB "never fails"), meaning something that is enduring and certain, is also used (cf. Ps. 19:7 [MT 8]) to translate this form. The idea in Isa. 55:3 is that the "sure love for David" was not merely God's past blessing upon the great king, but also a promise for God's people in the future.

In Prov. 11:19 RSV "He who is steadfast" translates Heb. *kēn*, which usually has a comparative meaning, "thus, so, as" (hence AV "as"). As KD points out, however, when *kēn* is used comparatively it usually stands in the second clause, not the first. The RSV reflects a more direct connection between *kēn* and *kûn*, "stand firm," "be secure" (see KoB, p. 442; BDB, p. 467). The difficulties of this verse are reflected in the ancient versions (see *BHS*), as well as in modern commentaries, many of which offer radically different solutions (cf., e.g., C. Toy [*ICC*, 1899], pp. 231f.; R. B. Y. Scott [*AB*, 1965], p. 86).

In 2 S. 20:2 the RSV translates Heb. *dāḇaq* as "followed . . . steadfastly" (AV "clave"; NEB "stood by"). This verb also occurs in Gen. 2:24 where a man "cleaves" to his wife. Unswerving allegiance is the idea thus connoted.

In the RSV NT "steadfastness" uniformly translates Gk. *hypomonē*, which the RSV also renders as "patience," "endurance," "perseverance," and "patient endurance." It conveys a quality of personal character that is undergirded by the hope of Christ's return. This runs counter to that brand of Greek moral philosophy that saw *hypomonē* as a "courageous endurance which manfully defies evil" and which regarded the linking of *hypomonē* with hope as "an inadmissable weakening" (*TDNT*, IV, 581f., 584). On the other hand, "steadfastness" in the NT corresponds to the LXX usage of *hypomonē*, which sees endurance as predicated upon God's promises to establish justice and reward righteousness (e.g., Ps. 141:8; cf. Sir. 36:15).

In Col. 4:2 Paul's injunction to "continue steadfastly" in prayer translates the only imperatival form of *proskarteréō* in the NT. The word refers to strong devotion to either a person or a task; thus in Acts 10:7 it describes two soldiers who "waited on" Cornelius (i.e., who were his attendants), while in Acts 6:4 the apostles "devote" themselves "to prayer and to the ministry of the word," to the exclusion of all else (cf. 2:42).

The RSV twice uses "steadfast" to translate Gk. *hedraíos*. The word occurs only three times in the NT, and derives from the Gk. *hédra*, "seat." Thus the NT term means "seated," or "settled." Paul uses the term in connection with personal faith; in 1 Cor. 15:58 he commands his readers to be steadfast in faith on the basis of Christ's resurrection and second coming, and in Col. 1:23 he commands steadfast faith in order that his readers might be found blameless when Christ returns. Thus Paul sees steadfast faith both as a result of our hope in Christ and as a condition for that hope.

In He. 6:19 the writer speaks of God's promises as a "sure and steadfast [*bébaios*] anchor." *Bébaios* occurs four times in Hebrews (2:2; 3:14; 6:19; 9:17), but only four times elsewhere in the NT, and is rendered elsewhere as "guaranteed," "unshaken," "valid," "fast," "takes effect," "confirm" (2 Pet. 1:10; AV "make sure"), "sure." This word, unlike *hedraíos*, does not describe the believer's faith, but characterizes the promises of God as absolutely certain (but cf. 2 Cor. 1:7).

In Acts 11:23 the RSV has "steadfast purpose" for *prothései tēs kardías* (lit. "purpose of heart"). In biblical thought the heart is the seat of the will as well as the mind and emotions; thus Barnabas urged a faith that involved a person's total dedication.

STEADFAST LOVE. In the RSV "steadfast love," (AV "mercy" "lovingkindness," etc.; NEB "love unfailing," etc.) is always a translation of Heb. *ḥeseḏ*, one of the most important theological terms in the OT. *Ḥeseḏ* occurs over two hundred times, and most frequently refers to the certainty of God's concern for people. It has been recognized as usefully translatable by the word "loyalty" in that it connotes God's (or human beings') consistent ("steadfast") reliable allegiance and willingness to do good ("love") on behalf of another. But scholars disagree about the nature of that "loyalty." Since the study of Glueck, one school of thought has held that *ḥeseḏ* indicates an actual divine or human obligation to be loyal within the covenant relationship between God and His people or between human allies. According to this view the nation's God must show loyalty because of His covenant promises to do so. Sakenfeld has argued for a more voluntarily given loyalty as the referent for *ḥeseḏ*, and she illustrates this with Ruth's *ḥeseḏ* (Ruth 3:10) and God's *ḥeseḏ* (e.g.,

Joel 2:13; Jonah 4:12) in contexts that do not indicate covenant obligation.

The term is distributed widely in the OT, e.g., in the historical books and especially the Psalms (e.g., Pss. 89, 103, 106, 107, 118, and esp. 136), and suggests the loving, merciful dependability of God. The famous Israelite confessional of Ex. 34:6f. and its parallels (Nu. 14:18f.; Neh. 9:17; Ps. 86:15; etc.) include the term among other similar terms that describe God's gracious, steadfast character. It is also used in parallel with such terms as *ʾĕmeṯ* ("truth, reliability") and *bᵉrîṯ* ("covenant"), which emphasizes God's absolute reliability, and also in parallel with *raḥûm* ("compassionate") and *ṭôḇ* ("goodness"), which emphasizes the generosity God shows by remaining loyal to His human creatures even when they are not deserving of such faithful attention.

A special nuance of *ḥesed* is that of firm determination. God's loyalty is shown to His people not merely out of a sense of appreciation for their worship, or out of self-interest, but because God has determined to be loyal to them. Thus *ḥesed* stresses the certainty of God's unfailing willingness to help and comfort. When human beings show *ḥesed* to one another (e.g., Gen. 19:19; Josh. 2:12; 2 S. 2:5; etc.) they reflect this attribute of God by showing themselves to be continually loyal persons.

STEAL; THEFT; THIEF (Heb. *gānaḇ;* Gk. *kleptō* and cognates; the AV also uses "thief" in eleven Gospel passages to translate the Gk. *lēstēs* [RSV "robber"; *see* ROB, ROBBER]). These terms occur over seventy-five times in the Bible.

Whereas robbery denotes the taking away of something from someone by force, stealing or theft denotes that the victim is deprived of property or possessions secretly and without consent, and implies deception and dishonesty. One who so steals is a thief. That something can be considered stolen also implies the right to private property, so that an injustice is done when it is taken.

In the OT stealing is prohibited by the eighth commandment of the Decalogue: "You shall not steal" (Ex. 20:15); "Neither shall you steal" (Dt. 5:19). The general prohibition against stealing also occurs in Lev. 19:11f., where it is grounded in the name, and hence the nature, of God: "You shall not steal . . . and so profane the name of your God: I am the Lord." Stealing as a sin against God's name also occurs in Prov. 30:8f., where Agur asks God to give him only his "daily bread" lest he be rich and deny God, or poor and turn to stealing and so profane God's name. In his temple sermon, the prophet Jeremiah warned Jerusalem against using the temple "which is called by my name" while practicing theft, murder, adultery, etc. (Jer. 7:9-11). For God's chosen people to steal would be a violation of His covenant with them. By keeping this commandment Israel witnessed to its faith in and loyalty to Yahweh.

The prohibition of stealing occurs also in other Near Eastern societies. It is banned with severe penalties in the Code of Hammurabi, Assyrian and Hittite law, and the records of ancient Egypt. The main difference between the OT and these other regulations is that the latter are much more severe in the punishments meted out for stealing. In them it is often a capital offense.

The OT refers often to theft or stealing in general. Thieves are burglars who are guilty of breaking and entering (Ex. 22:2). They come by night (Job 24:14), and people shout after them (30:5). Hosea pointed out that while there is no faithfulness, kindness, and knowledge of God in the land, swearing, lying, killing, stealing, and adultery exist in abundance (Hos. 4:1f.; cf. 7:1). Continuing the prophetic indictment of Israel, Isaiah called Israel's leaders "rebels and companions of thieves" (Isa. 1:23), while Jeremiah compared them to shamed thieves, caught in idolatrous sin (Jer. 2:26f.). When God's day of judgment comes, an enemy army will leap upon the city, run on its walls, and climb into its houses "through the windows like a thief" (Joel 2:9). In their condemnation of Edom, Obadiah and Jeremiah agree that while thieves steal only enough for themselves, Yahweh will strip Edom bare (Jer. 49:9f.; Ob. 5f.).

Specific stolen objects fall into four categories: inanimate things, animals, people, and moral or spiritual realities. First, and most often, references pertain to stolen objects: household gods (Gen. 31:19, 30, 32), money or unspecified property (Gen. 44:4, 8; Ex. 22:7f.), booty devoted to destruction (Josh. 7:11), food (Prov. 6:30), and water (Prov. 9:17). Second, stolen animals are a subject of Israelite law (Ex. 22:1, 4, 12), and of a dispute between Jacob and Laban (Gen. 30:33; 31:39).

Third, with respect to "stolen" people, the Covenant Code prohibits kidnapping (Ex. 21:16), which warrants the death penalty, while Dt. 24:7 refers specifically to the kidnapping of a fellow Israelite. Yet Joseph said, "I was indeed stolen out of the land of the Hebrews" (Gen. 40:15). The men of Israel protested that the men of Judah had "stolen" King David away from them (2 Sam. 19:41). The bones of Saul and Jonathan were stolen by the men of Jabesh-gilead from the Philistines (21:12), and the infant Joash was stolen away from the evil queen Athaliah (2 K. 11:2; 2 Ch. 22:11).

Fourth, two references pertain to stolen moral or spiritual realities. Absalom cleverly "stole the hearts of the men of Israel" away from loyalty to his father, King David (2 S. 15:6). In a striking passage God accused the false and deceitful prophets of Judah of stealing the word of God from each other. They had no revelation from God, so they only repeated what others said, claiming the Lord had spoken to them too (Jer. 23:30).

The NT endorses the eighth commandment of the Decalogue. In Mt. 19:17f. Jesus tells the rich young man to keep the commandments, including, "You shall not steal" (note that in the Synoptic parallels Jesus simply says to him, "You know the commandments" [Mk. 10:19; Lk. 18:20]). Stealing evidences the stubborn, out-of-the-heart sinfulness of human beings (Mk. 7:21 par. Mt. 15:19; Rev. 9:21).

In the Sermon on the Mount Jesus mentions thieves breaking in and stealing. He warns His disciples not to "lay up treasure" for themselves here on earth where that can happen, but in heaven where it cannot (Mt. 6:19f.). A similar saying occurs in Lk. 12:33. There Jesus counsels His disciples to sell their possessions and give to the poor, to provide for themselves "purses" that do not wear out and heavenly treasure that is not susceptible to theft. In disobedience both to this teaching and to the eighth commandment, Judas did not care for the poor but was a thief and took money from the disciples' purse (Jn. 12:6).

In Matthew's Gospel Jesus' opponents asked Pilate to put a guard on Jesus' tomb "lest his disciples go and steal him away, and tell the people, 'He has risen from the dead'" (Mt. 27:64). After Jesus' resurrection the same group bribed the Roman soldiers to say that Jesus' disci-

ples actually "came by night and stole him away" while the soldiers were asleep (28:13).

John 10 makes special use of the term "thief." Jesus said (1) that the person who does not enter the sheepfold by the door ("I am the door of the sheep," vv. 7, 9) is a thief and a robber (v. 1); (2) that "all who came before me are thieves and robbers" (v. 8) whom the sheep did not heed; and (3) that the thief's purpose is to steal, kill, and destroy, in contrast to His own purpose, which is to give abundant life (v. 10). The reference here is likely to those who are Jesus' opponents throughout the Fourth Gospel, viz., the Jewish leaders who have not believed in Him (cf. 9:39-41; 10:19-21).

Paul taught that (1) when a thief becomes a Christian, he must give up stealing and earn a living with his hands (Eph. 4:28); (2) no thief or robber will inherit God's kingdom (1 Cor. 6:10); (3) it is hypocritical and dishonoring to God for people who claim to belong to Him to preach against stealing but then to practice stealing (Rom. 2:17-24, esp. v. 21); and (4) all the commandments, including "You shall not steal," are summed up and fulfilled in the word, "You shall love your neighbor as yourself" (Rom. 13:8f.). Peter included the admonition that while Christians can expect to suffer for the name of Christ, they ought not to suffer as murderers, thieves, wrongdoers, or mischief-makers (1 Pet. 4:14f.).

A final group of references uses the image of the thief eschatologically. The coming of the Son of Man, Jesus said, will be at an unexpected hour like a thief in the night (Mt. 24:43f. par. Lk. 12:39f.). Paul uses the same picture in 1 Thess. 5:2: "the day of the Lord will come like a thief in the night." It will be sudden, but it will not catch believers by surprise "like a thief" (v. 4), since they are "day people," not "night people" (vv. 4-8). The same language appears in 2 Pet. 3:10 ("the day of the Lord will come like a thief"), and Christ Himself confirms this in Rev. 3:3 ("I will come like a thief") in a warning to the church at Sardis, and in 16:15 ("Lo, I am coming like a thief"). Believers are called to be ready for His return, awake, repentant, and living in holiness.

STEEL. The AV term for Heb. *neḥûšâ* (2 S. 22:35; Job 20:24; Ps. 18:34 [MT 35]), and *neḥōšeṯ* (Jer. 15:12). *See* BRONZE.

STEM [Heb. *geza'*–'stump, root-stock'] (Isa. 40:24); AV STOCK; NEB "they"; [*maṭṭeh*–'staff, rod'] (Ezk. 19:11f., 14); AV ROD; NEB BRANCH. In a metaphor from horticulture, the rulers of Israel and other nations figure as plants blighted and burned by God's condemnation. In Ezk. 19:10-14 the allusion is to Israel as the vine and Zedekiah as the stem at the time of Judah's fall (586 B.C.); cf. 17:5-21.

STEP. *See* STAIR.

STEPHANAS stef'ə-nas [Gk. *Stephanas*–'crown'; short form of *Stephanēphoros* (?)–'crown-bearer', or a development of *Stephanos* (?)]. A member of the church in Corinth. Paul called attention to several things about him (and his family). First, Stephanas and his household were among the earliest converts in Achaia (1 Cor. 16:15). Since Athens is technically in Achaia, some have taken this reference to mean that he was of Athenian origin and that he was among the "others" who became believers along with Dionysius the Areopagite and Damaris (Acts 17:34; cf. *NBD*, p. 1215). It more probably indicates that his was the first Christian family in the province (A. Robertson and A. Plummer, comm. on 1 Corinthians [*ICC*, repr. 1978], p. 395). Second, he and his household were among the few in Corinth that Paul baptized (1 Cor. 1:16). In their case Paul made an exception to his usual practice, perhaps because they were the foundation of the church there. Third, he said that they had voluntarily taken upon themselves ministry (*diakonía*) to the saints, a reference not to the poor in Jerusalem but to believers generally. They had literally "appointed themselves" (Gk. *étaxan heautoús*; RSV "devoted themselves"; NEB "laid themselves out"). Paul made clear, however, that he approved of their action (16:16), thinking possibly of the divisive tendencies among the Corinthians. Finally, Stephanas, along with Fortunatus and Achaicus (16:17), was perhaps an emissary of the Corinthian believers who brought Paul's reply back to them from Ephesus (cf. 7:1). Paul said that these three "refreshed [his] spirit," and he urged the Corinthians to respond appropriately to them: "be subject to such men" and "give recognition to such men."

D. B. PECOTA

STEPHEN [Gk. *Stephanos*]. The charismatic leader of the seven men elected to attend to the social welfare of the Hellenistic Jewish Christian widows (Acts 6:5), who made his mark through his pathbreaking understanding of the inherent newness of Christianity over against Judaism. Because of his convictions he became the early Church's first martyr.

I. Stephen and Early Hellenistic Jewish Christianity
II. His View of the Law and the Temple
III. His Trial and Speech
IV. His Martyrdom
V. His Significance

I. Stephen and Early Hellenistic Jewish Christianity.–It is virtually certain that Stephen was a Hellenistic Jew, despite attempts to describe him as a Gentile (Blackman), an Essene (or Essene-influenced, M. Simon), a Samaritan (Spiro), a proto-Ebionite (Schoeps), a Hebrew-speaking Jew (Munck), etc. The dispute between "the Hellenists" and "the Hebrews" referred to in Acts 6:1 was not between Gentiles and Jews, but between Greek-speaking Jews (thus *Hellēnistai* is used rather than *Hellēnes*, "Greeks") and Aramaic (Hebrew)-speaking Jews (*see* SEVEN, THE). The latter were mainly native Palestinians who took a strong, patriotic stand against the hellenization that had been forced upon them following the conquests of Alexander the Great. The former, on the other hand, were mainly Diaspora Jews, highly influenced by Hellenism, who had immigrated to Israel for religious reasons and hoped to finish their lives and be buried in the Holy Land. Thus, while both groups had very strong religious convictions, significant cultural differences separated them, and it is not surprising that there were certain tensions between them.

The Hellenistic Jews were more familiar with and accommodating to the gentile world, and more universal in their outlook. They were less narrow culturally than the native Palestinian Jews, and some at least were probably less rigid in their interpretation of the Law. With this kind of background, Stephen and his colleague Philip were able to break through cultural and religious barriers more easily than any of the twelve apostles would have been able to do (contra Munck).

Stephen had much in common with the Diaspora Jews who worshiped at the Jerusalem synagogue(s) mentioned in Acts 6:9, and he himself may have worshiped there regularly. How he had become a Christian is not known,

although he may have been one of the 120 of Acts 1:15 or among the three thousand converts on the day of Pentecost. He is described not only as "a man full of faith and of the Holy Spirit" (6:5; cf. 7:55), but as "full of grace and power" and as having performed "great wonders and signs among the people" (6:8). Stephen was almost certainly a leader among the Hellenistic Jewish Christians of Jerusalem before his ordination as one of the Seven. It was probably precisely because he was a Hellenistic Jew that the stir he created could not be overlooked by the Hellenistic Jews who did not share his views. Thus some of them challenged his teaching (presumably about Jesus and the implications of what He had accomplished), but none could "withstand the wisdom and the Spirit with which he spoke" (6:10).

II. His View of the Law and the Temple.—Luke reported in Acts neither the content of Stephen's teaching nor the exact nature of his debate with the Hellenistic Jews. These must be inferred from the charges made by Stephen's accusers and from the speech that he gave in his defense (see III below). The general accusation that Stephen spoke "blasphemous words against Moses and God" (6:11) involved two specific charges: (1) that he spoke against the temple, saying that Jesus would destroy it; and (2) that he spoke against the Law, claiming that Jesus would "change the customs which Moses delivered to us" (vv. 13f.).

It is sometimes argued that these accusations cannot be taken as accurate, since the men who made them were "secretly instigated" to do so and are explicitly described as "false witnesses" (6:11, 13). Without question, there is a sense in which from Luke's perspective Stephen, like Jesus, was disloyal to neither the temple nor the Law. Because Jesus had fulfilled what both the temple and the Law pointed to, there was no truth to the charge that Stephen's views on the obsolescence of the temple and the possibility of fundamental changes in the Law amounted to blasphemy against Moses and God.

At the same time, however, Stephen had clearly begun to see the discontinuity implied by Christ's work. There must have been some substance to the charges, distorted though they were, brought by the false witnesses (cf. the charges brought against Jesus at His trial). It seems certain that Stephen came to his convictions through the stimulus of some of Jesus' sayings, known to him through oral tradition. (This seems much more likely than M. Simon's speculation that Stephen's negative view of the temple derived from Samaritan influence.) Regarding the temple and its destruction (6:13f.), therefore, Stephen probably had in mind Jesus' saying recorded in Mk. 13:2 (par. Mt. 24:2; Lk. 21:6; cf. also Jn. 2:19; Mt. 12:6). Jesus' anticipation of the imminent demise of the temple opened the door to rethinking its significance, especially in the light of His atoning death. Similarly, Stephen must have been aware of Jesus' words and deeds that taught a new freedom concerning the Law (e.g., Mk. 2:27; 7:15; cf. 10:4f.; Mt. 8:22). While it is improbable that Stephen went as far in articulating this newness as Paul was later to do, he probably had begun to explore (in a more radical way than M. Simon allows) the implications of what Jesus had said and done.

Hengel may well be correct in suggesting that some of the Hellenistic Jews were attracted by Jesus' teaching because their high idealism had been offended by the actual practices they encountered in connection with the temple and the Judaism of Palestine. Stephen may also have foreseen the appeal of these new emphases to many Diaspora Jews — and hence the potential success of the gospel among them — if not the possibility of preaching this gospel even among the Gentiles.

III. His Trial and Speech.—Stephen was apparently brought to a formal trial before the Sanhedrin ("council"), which included "the elders and the scribes" (6:12) as well as the high priest (7:1), although all seventy-one members may not have been present. Acts 6:12–7:58 gives a very abbreviated account of the proceedings, but the testimony of witnesses and the opportunity for defense indicate a legal process.

Stephen's speech (Acts 7:2-53) is a strange kind of defense, however, since it is designed not so much to defend himself as to instruct and even to indict his hearers. The considerable space given to this long speech, much of which has only an indirect relevance to the charges brought against Stephen, has often been noticed. The speech near the end does address the issue of the temple (vv. 44-50; see Kilgallen), but not that of the Law. Instead it is a general defense of Christianity against those who have not believed. The genre of the speech is similar to the later anti-Judaistic polemic of the early Church, which may to some extent have been modeled on this speech.

Stephen's speech, taking the well-known form of a review of the history of Israel, begins with the call of Abraham in Mesopotamia, thereby implying that God's presence is by no means limited to Palestine or the temple (7:2-8). In a similar way, God was with Joseph in Egypt (vv. 9-16). Here a further, increasingly prominent motif is introduced: God's people have habitually rejected the leaders He has sent to them. Thus Joseph was sold into slavery by his brothers (v. 9), but he was responsible for their survival. Moses (vv. 17-43) was also rejected by the Israelites, but "this Moses whom they refused . . . God sent as both ruler and deliverer" (v. 35). In v. 37 the Moses-Jesus typology is made even more explicit by the quotation of Dt. 18:15. The speech next turns to the wilderness tent of witness and to Solomon's temple, drawing the conclusion that "the Most High does not dwell in houses made with hands" (Acts 7:48) and sealing that point in vv. 49f. with the forceful quotation of Isa. 66:1f. The speech reaches its climax in the crushing indictment of vv. 51-53. Although it does not say so explicitly, the speech clearly implies that the pattern of failure exemplified in Israel's history finds its climax in the Jewish leaders' rejection of the truth brought by Jesus (cf. v. 52). The Law is mentioned only briefly at the very end of the speech, where Stephen says that although the Jews honored the Law, they "did not keep it" (v. 53).

Stephen may well have said more than what is recorded in Acts, but it is also probable that he was cut short by the crowd's hostile reaction. Thus the speech as it stands seems to lack a suitable conclusion. Even so, it is clear that the key to Stephen's unorthodox teaching about the temple and the Law lies in the truth brought by "the Righteous One, whom you have now betrayed and murdered" (7:52). The vision of the Son of man (vv. 55f.), with its high Christology, confirms this point. Although Stephen does not articulate it in these terms, the reader of Luke-Acts will know that a new era in the history of salvation has been inaugurated.

IV. His Martyrdom.—Acts 7:54 notes the rage of the crowd at what Stephen was saying, and that "they ground their teeth against him." At this point Stephen received the vision of "the glory of God, and Jesus standing at the right hand of God" (v. 55), which, when he articulated it to the Sanhedrin, was what finally sealed his fate.

The members of the Sanhedrin could not tolerate this statement about one whom they themselves had recently condemned to death. In this unique reference to the Son of man title outside the Gospels (the only time in the NT

that this title is spoken by someone other than Jesus Himself), Stephen, alluding to Dnl. 7:13f., clearly understands Jesus to be on the same level as God, ruling with God as His vicegerent. It is evident that Stephen and the Hellenistic Jewish Christians held to a high Christology.

It is no coincidence that it was also a reference to the Son of man that finally led to Jesus' death (cf. Lk. 22:69). In presenting the story of Stephen's martyrdom, Luke went out of his way to portray Stephen as an archetypal witness who followed exactly in Jesus' steps. Just as there are similarities in the charges brought against Jesus and Stephen (see II above) and in the references to the Son of Man, so too there are striking similarities in the two martyrdoms. Like Jesus, Stephen prayed for the forgiveness of his persecutors (Acts 7:60; cf. Lk. 23:34) and committed his spirit to divine safekeeping (Acts 7:59; cf. Lk. 23:46). The striking difference, however, is that whereas Jesus began His prayers with "Father," Stephen began his with "Lord Jesus" (Acts 7:59f.). This further indicates the exalted — indeed, divine — status of Jesus in Stephen's Christology.

The narrative of Acts (esp. 7:57) gives the impression that Stephen's death resulted from spontaneous and uncontrollable hostility rather than from due legal process. This would accord with the fact that the Romans did not allow the Sanhedrin to exact the death penalty. On the other hand, there was at least a semblance of legal process in the testimony of witnesses before the Sanhedrin and in the manner of the execution: Stephen was stoned (the penalty for blasphemy) outside the city by (at least to begin with) the witnesses against him (7:58; cf. Lev. 24:14; Dt. 17:5-7).

V. His Significance.–Stephen is a pivotal figure in the book of Acts and in the history of the early Church. Stephen and the other Hellenistic Christians provide the first indication of the variety that existed in the early Church (contra Munck). But most important, Stephen's new understanding of the temple and the Law in the light of the new situation inaugurated by Jesus' recently accomplished work made it impossible for Christianity to remain a sect within Judaism. The new freedom that Stephen articulated with respect to the temple and the Law not only facilitated the spread of the gospel among Hellenistic Jews both within and outside of Palestine, but also implied a universalism that ultimately made the mission to the Gentiles a reality.

It would be going too far to conclude that Stephen's views concerning the temple were as developed as those of the author of Hebrews (on the possible connection, see W. Manson, *Epistle to the Hebrews* [1951], pp. 25-36), or that his view of the Law was the same as that later held by Paul, or that he ever contemplated the gentile mission that Paul was to fulfil. But that he was a pioneer who helped to make possible these developments, is beyond question. It is no coincidence that the mission to Samaritans and Gentiles quickly follows Stephen's death in the narrative of Acts (cf. 8:4). Stephen may indeed be viewed as a forerunner of Paul, as Acts seems to hint by the note about Saul's presence at Stephen's execution (8:1). Stephen's courage in contending for the truth in the face of the hostility of his Jewish brethren and at the cost of his life was later to be mirrored in Paul's own experience.

STEPHEN, REVELATION OF. An apocryphal apocalypse rejected in the so-called Gelasian Decree. No such work has been found, and nothing more is known about it. Some have suggested that the Gelasian Decree refers not to an apocalypse but to an account of the discovery of Stephen's bones, written by Lucian in A.D. 415. See *ANT*, pp. 564-68; H-S, II, 754.

STEPPE [Heb. *miḏbār* (1 Ch. 6:78 [MT 63]), *ʿărāḇâ*–'desert' (Job 39:6)]; AV, NEB, WILDERNESS. A wide belt of land between the agricultural and desert areas that is able to support some vegetation, principally bushes and grass, but not forests. The Hebrew terms are usually rendered "wilderness" by the RSV as well as the AV and NEB. *See* DESERT; PALESTINE.

STEWARD [Heb. *ʾăšer ʿal bayiṯ* ("the one over the house," Gen. 43:16, 19; 44:1, 4), *śar* (1 Ch. 27:31; 28:1), *sōḵēn* (Isa. 22:15), *melṣar*–'guardian' (Dnl. 1:11, 16); Gk. *epítropos* (Mt. 20:8; Lk. 8:3), *oikonómos* (Lk. 12:42; 16:1-3, 8; 1 Cor. 4:1f.; Tit. 1:7; 1 Pet. 4:10), *oikonoméō*–'manage as a house steward' ("be steward," Lk. 16:2)]; AV also RULER, TREASURER, MELZAR; NEB also OFFICER, GUARD, "be manager" (Lk. 16:2); **STEWARDSHIP** [Gk. *oikonomía* (Lk. 16:2-4; Eph. 3:2)]; AV also DISPENSATION; NEB GIFT, etc.

The role of a "steward" in the OT varies according to vocabulary and context. As the Hebrew phrase *ʾăšer ʿal bayiṯ* (lit. "[the one] who [was] over [the] house") indicates in Gen. 43 and 44, the steward was a servant in charge of his master's (i.e., Joseph's) household. The idea conveyed by "steward" is much more common than the word itself. For example, Eliezer of Damascus was Abraham's slave and trusted steward; as such, he had oversight over all his master's affairs, including the important task of finding a wife for Abraham's son, Isaac. And Joseph, who eventually was to have a steward of his own, first served as steward over Potiphar's household.

In Isa. 22:15 "steward" (RSV, NEB) is almost certainly preferable to "treasurer" (AV) since Heb. *sōḵēn* here is paralleled by the phrase "the one over the house," which clearly indicates a steward in Gen. 43 and 44. "Steward" in 1 Ch. 27:31 and 28:1 is not so certain, however, since the RSV departs from "steward" numerous times in this section by rendering Heb. *śar* as "leader" (27:22), "official" (28:1, 21), "officer" (28:1), and "commander" (27:1, 3, 5, 34; 28:1). The context clearly indicates that military commanders, and not household managers, are in view here.

In Dnl. 1:11, 16 the "steward" who watched over Daniel and his three friends was a guard (so NEB) or overseer in the service of King Nebuchadnezzar. Evidently he supervised the training and feeding of these young men until they were fit for the king's service. The AV transliterates the Hebrew as a proper name, MELZAR; this is almost certainly an error.

The most common NT expression for "steward" is *oikonómos*, a term whose very etymology speaks of a household manager (*oikós*, "household"), and whose usage in the LXX confirms this meaning (e.g., Isa. 36:3, 22; Est. 1:8). Such an estate manager could be either slave or free. In Lk. 12:42 the "faithful and wise steward" is parallel to the "faithful and wise servant" of Mt. 24:45, while in Lk. 16 the steward is probably a free man (cf. *TDNT*, V, 150).

Elsewhere the NT uses *oikonómos* in a metaphorical sense, depicting believers as "stewards of the mysteries of God" (1 Cor. 4:1), "God's steward" (Tit. 1:7), and "stewards of God's varied grace" (1 Pet. 4:10). As a steward of God, the Christian is entrusted with the responsibility of taking care of the gospel message and giving out that message to others faithfully and as directed by the Lord Jesus.

The word "stewardship" in Lk. 16:2-4 means simply "the office and duties of a steward." In Eph. 3:2 the sense is less precise and more metaphorical. Here Paul speaks of the "stewardship of God's grace" having been given to him for the benefit of the Ephesians. Greek *oikonomia* is also used in Eph. 1:10 and 3:9, both of which the RSV renders as "plan" (AV "dispensation"; "fellowship"). It is possible, then, that in 3:2 Paul is speaking not so much of his role as one entrusted with God's plan of salvation, as he is of the plan itself. The context, however, favors the RSV "stewardship," which sees this verse as speaking of Paul's unique role in God's plan of salvation.

Greek *epítropos* is twice rendered "steward." In Mt. 20:8 the steward of the vineyard is in charge of the men who labor therein, while in Lk. 8:3 the expression "Herod's steward" is problematical. Since Luke elsewhere uses *oikonómos* to speak of an estate manager, it is likely that in 8:3 he speaks of Chuza as having some other responsibility to Herod — perhaps as one in charge of Herod's servants, or even as Herod's bodyguard.

See also STEWARD OF THE FEAST.

See *TDNT*, V, *s.v.* οἶκος κτλ.: οἰκονόμος, οἰκονομία (O. Michel). T. M. DORMAN

STEWARD OF THE FEAST [Gk. *architríklinos*–'table-master, master of the feast'] (Jn. 2:8f.); AV GOVERNOR OF THE FEAST. This word occurs in connection with the wedding at Cana and Jesus' "sign" of turning water to wine. The "steward of the feast" tested the wine that Jesus had made and pronounced it "the good wine," which was usually served first at such occasions. The steward, sometimes a servant but here probably an appointee from among the invited guests, was responsible for the arrangements and conduct of the banquet, and functioned as a "master of ceremonies." Sir. 32:1f. also offers advice to such a "master of the feast" (Gk. *hēgoúmenos*). T. F. JOHNSON

STICK (noun) [Heb. *ʿēṣ*–'wood' (Nu. 15:32f.; 1 K. 17:10, 12; 2 K. 6:6; Ezk. 37:16f., 19f.), *yāṯēḏ*–'peg' (Dt. 23:13 [MT 14]), *maṭṭeh* (Isa. 28:27), *maqlôṯ* (1 S. 17:43); Gk. *phrýganon* (Acts 28:3)]; AV also STAFF; NEB also TROWEL, "leaf (of a wooden tablet)," "piece of wood"; (verb) [Heb. *dāḇaq*–'cling, cleave to' (Prov. 18:24; hiphil, Ezk. 29:4), *šûp* (Job 33:21), *mᵉʿûḵâ* (1 S. 26:7); Gk. *ereídō* (Acts 27:41)]; NEB also CLING, THRUST.

In Nu. 15:32-36 a man is found gathering sticks on the sabbath, and he is punished by being stoned to death. Many commentators regard this story as a midrash similar to the one in Lev. 24:10-23 (see comms. on Numbers by P. Budd [*Word Biblical Comm.*, 1984], G. B. Gray [*ICC*, 1903], N. Snaith [*NCBC*, repr. 1977]). The point of the story is to underscore the importance of keeping the sabbath (cf. Ex. 31:12-17: failure to keep the sabbath results in the death penalty). The context seems to require that this incident be interpreted as deliberate defiance of the sabbath laws, an instance of "sinning with a high hand" (Nu. 15:30; so Budd, Gray, Snaith). According to J. Weingreen (*VT*, 16 [1966], 361-64) this story is akin to the rabbinic principle of putting a fence around the Torah: gathering the wood was a prelude to building a fire, which was specifically prohibited (Ex. 35:1-3; see also Mish. *Shabbath* xii.2). A. Phillips (*VT*, 19 [1969], 125-28) responded that it was not a "fence" but instead reflected an extension of sabbath principles from occupation to domestic work. It is interesting to note that the people knew that this deed was wrong, but apparently the punishment for it had not yet been established, so they needed special revelation (Nu. 15:34f.; cf. 9:6-13; see T.B. *Sanhedrin* 78b).

The gathering of sticks occurs in two other passages, with less dire consequences. In 1 K. 17:10, 12 the Lord sends Elijah to a widow in Zarephath, whom he meets as she is gathering sticks to prepare a final meal for herself and her son. Their encounter results in the miracle of the jar of meal and cruse of oil that do not fail, and leads to a greater miracle when Elijah revives the woman's stricken son (vv. 17-24; cf. Lk. 4:25f.). The other incident concerns Paul, who had gathered a bundle of sticks for a fire after the shipwreck near Malta. A viper came out of the sticks and bit him, but he survived, to the amazement of the natives (Acts 28:1-6).

Among the symbolic acts the Lord tells Ezekiel to perform is taking two "sticks," one for Judah and one for Joseph, writing on them, and then joining them together to symbolize the reunification of the nation (Ezk. 37:15-28). The difficulty is determining whether Heb. *ʿēṣ* here means "sticks" or perhaps wooden tablets (cf. Tg., which reads *lûḥā'*, "tablets"). See W. Zimmerli, *Ezekiel 2* (Eng. tr., *Hermeneia*, 1986), pp. 267-275.

In Isa. 28:23-29 the prophet uses agricultural imagery to illustrate his point. Scholars disagree about the interpretation of this passage. Many call it a parable and see wisdom influence (see J. W. Whedbee, *Isaiah and Wisdom* [1971], pp. 51-68). According to some (e.g., R. E. Clements, *Isaiah 1–39* [*NCBC*, 1980], pp. 232-34; J. Watts, *Isaiah 1–33* [*Word Biblical Comm.*, 1985], pp. 373-78) the parable's point is that just as the farmer (who is instructed by God, vv. 26, 29) does not thresh dill with a sledge but beats it with a stick, so also God knows the proper way to deal with Israel, i.e., He does not continually punish but also saves. For other interpretations see comms. by O. Kaiser (Eng. tr., *OTL*, 1974) and J. Oswalt (*NICOT*, 1986).

In 2 K. 6:6 Elisha throws a stick into the river to recover an iron axe-head. Some commentators see this as an example of imitative magic (e.g., J. Montgomery and H. Gehman [*ICC*, 1951], p. 381), and others remove the miraculous element by saying Elisha simply used the stick to fish out the axe-head (e.g., J. Gray [*OTL*, 2nd ed. 1970], pp. 511f.; G. H. Jones [*NCBC*, 1984], II, 422). But, as T. Hobbs (*2 Kings* [*Word Biblical Comm.*, 1985], p. 76) noted, the grammar here argues against such interpretations. *See* MIRACLE II.A.

In Dt. 23:13 the Lord commands that people include a "stick" with their weapons so that when they go outside the camp to excrete their waste they can dig a hole with the stick and cover their excrement. The RSV translation of Heb. *yāṯēḏ* here as "stick" is unique; elsewhere it refers to a pin (e.g., for a loom) or a peg (e.g., for a tent), which seems like an unusual implement for digging. But R. de Vaux (*VT*, 9 [1959], 399-407) noted the application of this law at Qumrân (as well as in Josephus *BJ* ii.8.9 [147-49]) and suggested that an implement found there is to be identified with this tool.

Job 33:21 is problematic. The *kethibh šᵉpî* is apparently a noun meaning "bareness"; the *qere šuppû* is a verb meaning either "laid bare" (if related to the noun just mentioned; see H. H. Rowley, *Job* [*NCBC*, repr. 1980], p. 214; cf. R. Gordis, *Book of Job* [1978], p. 376, who translates it "protrude") or "crushed" (on the basis of Aram. *špy*; so Tg., Vulg.; see S. R. Driver and G. B.

Gray, comm. on Job [*ICC*, repr. 1977], pp. 246f.). E. Dhorme (comm. on Job [Eng. tr., repr. 1984], pp. 499f.) translated it "are emaciated" on the basis of an Arabic cognate and the parallelism. For a radically different interpretation of the verse, see N. H. Tur-Sinai, *Book of Job* (Eng. tr. 1981), p. 471.

In Prov. 18:24b is the famous line: "there is a friend who sticks closer than a brother." Although the first line of the verse is obscure, the general emphasis seems clearly to be on the importance of faithful friends (see comms. by D. Kidner [*Tyndale OT Comms.*, 1964], pp. 45, 131; W. McKane [*OTL*, 1970], pp. 518f.). C. Toy (*ICC*, 1899) noted that some have interpreted this as a reference to the Messiah (cf. R. Alden, *Proverbs* [1983], p. 142).

G. A. LEE

STIFF-NECKED; STIFFEN THE NECK. In the RSV the phrase "stiffen the neck" (AV "hardened the neck," etc.; NEB "obstinate," "still stubborn," "remained stubborn," etc.) occurs eight times and translates the hiphil of Heb. *qāšâ*, "became stubborn," and the noun *ʿōrep*, "neck" (2 Ch. 36:13; Neh. 9:16f., 29; Jer. 7:26; 17:23; 19:15; Prov. 29:1; cf. 2 Ch. 30:8). In the RSV OT the term "stiff-necked" (Ex. 32:9; 33:3, 5; 34:9) translates Heb. *qāšeh ʿōrep* (lit. "stiff of neck"; NEB "stubborn"), while in the NT it translates Gk. *sklērotrachēlos*.

Stiff-necked is a Hebrew idiom that first appears in the account of Israel's wilderness wanderings after the golden calf incident (Ex. 32:9). The original meaning of the idiom is likely to be found in an agrarian setting. Farm animals wore yokes on their necks (Hos. 10:11), and animals that stiffened their necks were stubbornly refusing to accept the yoke. For the Israelites, obedience to the covenant stipulations was bearing the yoke, while disobedience was breaking the yoke (Jer. 2:20; 5:5); therefore, to wear Gods' yoke was the ideal, but to break the yoke was apostasy and to stiffen the neck was a refusal to wear it. Outside the Exodus account the biblical literature continues to apply this idiom to Israel's idolatry and disobedience (e.g., Dt. 9:6; Neh. 9:29). The prophets frequently used the expression to describe Israel's refusal to listen to God's word through His prophets (2 K. 17:13f.; Jer. 7:26; 17:23; Zec. 7:11f.).

In Acts 7:51 Stephen compared the Jewish leaders of his day with "stiff-necked" Israel of old, and criticized them for their stubborn resistance of the Holy Spirit.

J. K. HOFFMEIER

STILL [(verb) Heb. *šāḇaṭ*–'cease' ("be stilled," Isa. 24:8; hiphil, Ps. 8:2 [MT 3]), *šāḇaḥ*–'soothe' (piel, Ps. 89:9 [MT 10]; hiphil, 65:7 [MT 8]), *ʿānâ*–'be bowed down' ("be stilled," Isa. 25:5), hiphil of *ḥāšâ*–'command to be silent' (Neh. 8:11), *rāgaʿ* (Job 26:12), piel of *ʾāḇaḏ*–'destroy' (Jer. 51:55)]; AV also CEASE, BE BROUGHT LOW, DIVIDE (Job 26:12), DESTROY; NEB HUSHED, BE SILENT, SILENCE, CALM, DIE AWAY, etc.; [(adjective) Heb. *dᵉmāmâ* (1 K. 19:12), *mᵉnûḥâ*–'resting place' (Ps. 23:2)]; NEB LOW, PEACE; **BE STILL** [Heb. *dāmam* –'be silent, dumb, motionless' (Ex. 15:16; Job 30:27; Ps. 37:7; Isa. 23:2; Jer. 47:6), hiphil of *šāqaṭ*–'rest, keep quiet' (Job 37:17; Ps. 76:8 [MT 9]; 83:1 [MT 2]), hiphil of *ḥāraš*–'be deaf and dumb,' 'keep silent' (Ex. 14:14), hiphil of *rāpâ*–'let drop,' 'cease' (Ps. 46:10 [MT 11]); Gk. pass. of *phimóō*–'be silenced' (Mk. 4:39)]; AV also REST, QUIET, HOLD ONE'S PEACE; NEB also KNOW PEACE, WAIT QUIETLY, etc.; **KEEP STILL** [Heb. hiphil of *ḥāraš*] (Isa. 42:14); NEB KEEP SILENCE; **LIE STILL** [Heb. *šāḵaḇ*–'lie down'] (Jgs. 5:27; Ezk. 32:21); AV also LIE DOWN; NEB LIE, BE LAID TO REST; **SIT STILL** [Heb. *yāšaḇ*–'sit' (Jgs. 5:17; Jer. 8:14), *šeḇeṭ*–'sitting quietly' ("who sits still," Isa. 30:7)]; AV also CONTINUE; NEB LINGER, SIT IDLE, QUELLED; **STAND STILL** [Heb. *ʿāmaḏ*–'stand' (Josh. 3:8; 10:13; 1 S. 14:9; 2 S. 2:23; 18:30; etc.), *dāmam* (Josh. 10:12f.), hithpael of *yāṣaḇ*–'take one's stand' (1 S. 12:7, 16), hiphil of *ʾāman*–'be firm,' 'believe' (Job 39:24); Gk. (aorist) pass. of *hístēmi*–'stop, stand still' (Lk. 7:14; 24:17)]; AV also STAND, BELIEVE (Job 39:24), omits (Lk. 24:17); NEB also TAKE ONE'S STAND, STAY, STOP, STAND, LINGER, HALT (Ezk. 1:24f.; 10:17), etc.

This article is concerned only with the RSV's use of "still" as a verb, adjective, or adverb referring to silence or inactivity. "Still" is used in this sense more than forty times in the OT but only three times in the NT. Apart from Heb. *ʿāmaḏ* ("stand still"), the most common OT verb rendered with "still" is *dāmam*, which generally denotes "a silence caused by the powerful impress of an impending or actual calamity or by the expectation of coming salvation" (*TDOT*, III, 264). This verb is therefore often associated with emotions of terror (e.g., Ex. 15:16), grief (e.g., Isa. 23:2), or hope (e.g., Ps. 37:7). The verbs *ḥāraš* and *ḥāšâ* refer more specifically to ceasing or refraining from speech. *Šāḇaṭ* means to cease from activity, while *šāqaṭ* carries the idea of tranquility. For further discussion of the terms rendered by "still," *see* DUMB; QUIET; SILENCE; WAIT.

Many texts celebrate Yahweh's power to create silence and calm where there has been noise and turmoil. Yahweh's sovereign power is manifest in His quieting of the raging seas (e.g., Job 26:12; Ps. 65:7 [MT 8]; 89:9 [MT 10]; 107:29; cf. Mk. 4:39, which reports that Jesus also had this power). Yahweh's judgment silences festive music-making (Isa. 24:8) and puts an end to the opposition of enemies (Ex. 15:16; Ps. 8:2 [MT 3]; Isa. 25:5; Jer. 51:55). The earth's tumult ceases when God acts on behalf of the oppressed (Ps. 76:8 [MT 9]). On the other hand, the Lord's sword cannot rest until His judgment is complete (Jer. 47:6f.).

Trust in Yahweh's providential rule lies behind several texts that exhort God's people to "be still." By refraining from efforts to save themselves, God's people demonstrate their faith that Yahweh alone is the source of their salvation. When the Israelites were being pursued by the Egyptians, Moses told them that they had only to "be still" (possibly meaning to stop their crying, or to refrain from sounding a battle cry) and watch Yahweh fight for them (Ex. 14:14). Similarly, when during Jehoshaphat's reign Judah was threatened by the invasion of a massive army of Moabites, Ammonites, and Syrians, the people were exhorted to "stand still, and see the victory of the Lord on your behalf" (2 Ch. 20:17). In Ps. 37:7 the psalmist urges those who are suffering injustice to stop fretting and wait patiently for Yahweh to act, trusting that He will vindicate them in His own time. Ps. 46:10 (MT 11) emphasizes that because Yahweh is the sovereign Lord of nature and of history, His people can relax and depend upon Him for their safety.

Two passages require more detailed attention. The first is Josh. 10:12f., where the RSV translates Joshua's prayer and its results as follows: "'Sun, stand thou still at Gibeon, and thou Moon in the valley of Aijalon.' And the sun stood still, and the moon stayed, until the nation took vengeance on their enemies." The translation of *dāmam* as "stand still" has been largely responsible for the traditional interpretation that the earth ceased its rotation for a period of about twenty-four hours. *Dāmam* usually indicates silence rather than inactivity, although the idea of waiting or remaining motionless is certainly present

A wall panel from the Dura-Europos synagogue showing Joshua ordering the sun to stand still (3rd cent. A.D.) (Yale University Art Gallery, Dura-Europos Collection)

in some passages (e.g., Ex. 15:16; 1 S. 14:9; Ps. 37:7). Some interpreters have used the available nuance of silence to suggest that Joshua was requesting simply that the sun's heat be decreased (see Scott). This interpretation does not adequately explain why the moon was included in the request. The weakness of the traditional view is that, since the sun is described as being over Gibeon and the moon over Aijalon (east and west respectively), the request was apparently made at dawn before the battle had begun. This would make Joshua's request highly unusual: why did he not simply ask for victory?

Others have suggested that the verbs used here are probably technical terms from astronomical literature. Based on references in Babylonian astronomical texts, R. D. Wilson suggested that *dāmam* be rendered "be eclipsed" instead of "be still." Also using the Babylonian materials, J. S. Holladay concluded that Joshua was requesting that a conjunction of sun and moon not occur. When the first day of the full moon (signaled by the conjunction of sun and moon in east and west respectively at dawn) occurred on the fourteenth day, it was seen as a favorable omen, because then the month would be a favorable twenty-nine days in length. This view has in its favor that Joshua's request apparently came at dawn after a full night's forced march; moreover, the opposition of sun and moon in the east and west indicates the time of the full moon. Holladay suggested that Joshua was asking for the omen for his own army's sake, but it is also possible that he was asking for an omen that he knew would destroy the morale of his enemy. Instead of reading in v. 13 that the sun did not go down "for about a whole day," Wilson (in his eclipse interpretation) suggested reading that it did not hasten to set as on an *ordinary* day. Alternatively, it may be significant that Akk. *šalmu*, which parallels Heb. *tammîm* (RSV "whole"), is used in reporting "favorable" omens (W. von Soden, *Akkadisches Handwörterbuch*, III [1981], 1149). For those who accept the idea that this is a natural astronomical occurrence, the "miracle" is seen in the timing. They point out that v. 14 says "there has been no day like it before or since," with the qualification, "when the Lord hearkened to the voice of a man." The text therefore cites the unusualness of the day not in terms of the astronomical occurrence but in terms of a human being presenting a battle strategy to God. The complexities of the issue place this passage among the most problematic in Scripture.

The second passage that warrants special attention is 1 K. 19:12, where the Lord comes to Elijah in a "still small voice" (NEB "low murmuring sound"). Many interpretations have been given to this passage (see comms.). The Hebrew term translated "still," *dᵉmāmâ*, occurs in only two other passages (Job 4:16; Ps. 107:29). In Job it describes the stillness (RSV "silence") that accompanies a supernatural manifestation; therefore it bears some similarity to 1 K. 19:12. Ps. 107:29 describes the stillness of the sea after a raging storm. 1 K. 19:12 likely describes the reverberating echo (*qôl* means "voice" or "sound") in the silent aftermath of the destructive power accompanying the approaching theophany. Elijah had been instructed concerning the various phenomena that would occur, and the echoing din is the signal that the destructive effects of the divine presence have passed so that his audience with Yahweh can take place. Yahweh does not speak in a "still small voice," but the "echoing sound of silence" indicates that Elijah is now in the presence of Yahweh.

J. WALTON
N. J. O.

STING [Heb. hiphil of *pāraš*–'strike' (Rev. 9:5), *kéntron*–'sharp point']. To inflict a wound by means of a sharp, pointed organ or instrument; the wound or organ istelf. The translation of the verb in Prov. 23:32 depends more on the context than on understanding of the word itself. It may mean "secrete," a form of a verb with the basic meaning "divide, separate" (KoB, p. 783), or it may be taken as a separate verb with the basic meaning "pierce" (BDB, p. 831). The noun *kéntron* basically refers to the organ used in inflicting the wound, as in Rev. 9:10, but in 1 Cor. 15:55f. it could also refer to the wound. In v. 55, a free quotation from Hos. 13:14, death is personified as a deadly animal, like a scorpion or serpent, which inflicts destruction by means of sin as its *kéntron*. Acts 26:14 uses the same word with reference to exciting fear, rather than causing death. Both figures are pertinent, for death is powerless except through sin, and when sin is vanquished the fear of death (cf. He. 2:15) is gone.

H. E. JACOBS

STOCK [Heb. *mahpeḵeṯ*] (2 Ch. 16:10; Jer. 20:2f.; 29:26); AV PRISON HOUSE, PRISON; [*saḏ*] (Job 13:27; 33:11); [*kannâ*–'support (of tree)'] (Ps. 80:15 [MT 16]); [*zera'*–'descendant, offspring'] (Ezk. 44:22); AV SEED; NEB etc.; [Gk. *xýlon*–'wood'] (Acts 16:24). This term refers

either to a device used for prisoners or to a plant or person.

The most common term rendered "stock" in the RSV is Heb. *mahpeḵeṭ*. This device, which kept the prisoner in a crooked position (KoB, p. 500), confined both Hanani the seer (2 Ch. 16:10) and Jeremiah the prophet (Jer. 20:2f.; cf. 29:26). The device mentioned in Job 13:27 and 33:11 may have been a post with notches into which the prisoner's feet were fastened.

In the RSV NT "stock" occurs once. In Acts 16:24 the authorities who arrested Paul and Silas placed them in stocks. This device may resemble an instrument of torture mentioned in Eusebius's writings (*HE* v.1.27; vi.39). Torturers inflicted great pain and discomfort upon prisoners as their legs were spread increasingly further apart in this device.

In Ezk. 44:22 "stock" (Heb. *zera'*) denotes a human off-spring or physical descendant (cf. Jer. 23:8). Scholars have various opinions regarding the hapax legomenon *kannâ* in Ps. 80:15 (MT 16) (see the comms.).

G. L. K.

STOICS. stō'iks [Gk. *Stoikos*]; AV STOICKS. One of the most important philosophical groups of the Hellenistic period, including the first centuries A.D.

I. Stoics in the NT.– The only direct reference to the Stoics in the Bible occurs in Acts 17:18, where Paul is reported to have addressed Epicurean and Stoic philosophers in Athens. During this speech the apostle, perhaps following his own principle of being "all things to all men" (1 Cor. 9:22), introduced a quotation from "some of your poets," including the Stoic Aratus, who in the introductory dedication to Zeus of his poem *Phaenomena* said: "For we are indeed his offspring" (cf. Acts 17:28). At the end of the address some of the philosophers mocked Paul, but others wanted to hear more (v. 32).

There is no real support for the theory that the division ran along party lines, the Epicureans being the mockers and the Stoics the ones who showed more interest. But Stoicism undoubtedly has a greater affinity to biblical teaching than Epicureanism. Parallels may be found between Stoic thought and the wisdom literature, and especially the Apocrypha. He. 4:12 recalls the hymn of the Stoic Cleanthes, and NT lists of virtues are similar to Stoic lists. Paul's contentment in Phil. 4:11f. may be compared to Stoic "ataraxy" (see III below), and the concept of the Logos offers a point of contact in a formal sense. Even stylistcally Paul perhaps shows the influence of the Stoic diatribe.

II. Stoic Thinkers.–Stoicism was founded in Athens by Zeno (332-260 B.C.) and acquired its name from the painted porch (Stoa) in the Agora where its proponents taught. Zeno himself came from Cyprus and was possibly of Semitic origin. The development and influence of his school were due to a succession of able thinkers, especially Chrysippus (d. *ca.* 205 B.C.), who gave the philosophy a more systematic form. Panaetus brought Stoicism to the Roman world, where it mingled to some extent with Platonism, e.g., in Posidonius's works, and took a more practical bent. It influenced Cicero and found able expositors in Paul's contemporary Seneca (A.D. 4-65), Epictetus (55-138), and the philosopher emperor Marcus Aurelius (121-180). Knowledge of the earlier Stoics is limited to the accounts of Diogenes and fragments. In contrast, the works of the Roman Stoics provide rich documentation and show why Stoicism could enjoy such popularity in the educated circles of antiquity.

III. Stoic Teaching.–Fundamental to the Stoic view of reality was the postulate of an all-determinative cosmic force which could be popularly identified as Zeus. This force embraced all things; the things themselves were composed of material atoms, souls being made of finer atoms than bodies. Stoicism could hardly be classified as materialistic, however, for it saw dynamic reason (*lógos*) as everywhere present, and within it were the seminal *lógoi,* through which individual things came into being. Human souls were thus regarded as emanations from the cosmic *lógos*. The destiny which controlled all things, therefore, was neither blind nor hostile, but wise and good, as might be seen in the harmonious operation of the universe. Virtue consisted of finding the thrust of destiny (or nature) and adjusting life to it. Individual passions and emotional reactions represented a disruptive force which could only cause conflict and a losing battle with nature; they were thus to be suppressed.

Mastery of emotions and indifference to changing circumstances (ataraxy) constituted the summit of virtue. Those who achieved this entered into a relation to the cosmos that identified them with universal reason, lifted them above human conflicts and distinctions, and thus fashioned them into a cosmopolitan society.

IV. Stoic Influence.–For all the obvious parallels to Christian doctrine, Stoicism differs from the gospel at essential points. It has no concept of a personal God, no radical view of sin, no place for historical divine acts culminating in the incarnation, no idea of ethical renewal through the ministry of the Word and Spirit, and no hope of the resurrection and eternal fellowship with God in His kingdom. Nevertheless, Stoicism had a considerable impact on early Christian theology. 1 Clement echoes Stoicism in its presentation of the divine order (20; 33). Justin Martyr reflected Stoicism and Platonism in his description of God's role in creation (*Apol.* i.20, 44, 59). Theophilus of Antioch made use of such technical Stoic words as "immanent" (*Ad Autolycum* i.2). The parallel between the Johannine and the Stoic *lógos* appealed to Justin Martyr, possibly for apologetic reasons in the first instance, but with implications for his general understanding of Christian truth (*Apol.* i.32, 46). Tatian, too, equated the preexistent *lógos* with the rationality of the Father (*Oratio ad Graecos v;* cf. Justin Martyr *Dial.* 61.2). Origen would later find in the seminal *lógos* the principle which enables human beings to maintain identity in the resurrection from the dead (*De prin.* ii.10.3). Even Athanasius in the 4th cent. could use the Stoic idea of the *lógos* as the soul of the universe, although for him the *lógos* was, of course, personal. His animation of His human nature makes sense as a special instance of His animation of the cosmos in its totality (*Contra gentes* § 44; *De incarnatione* § 17).

Justin Martyr found another useful parallel in the Stoic idea of the world's destruction by fire (*Apol.* i.45). Tertullian, for all his distinction between Athens and Jerusalem (*De praescr. haer.* 7), not only could invoke the ideas of *lógos* and spirit in Zeno and Cleanthes (*Apol.* i.21) but also could accept the concept of the materiality of the soul (*De anima* ix) and even use materialistic language when speaking of the divine Trinity (*Adv. Prax.* ix).

Stoicism also exerted a considerable influence in the ethical sphere, as may be seen in Clement of Alexandria's equation of sinlessness with freedom from passion (*Paedagogus* i.2) and also in many of the detailed discussions of Latin fathers, especially Ambrose and Augustine. But the overall impact of Stoic philosophy should not be exaggerated. Christian theology drew its main substance from the gospel, developed to a large extent independently of Stoic teaching, and even directly opposed it at such important points as its pantheism and fatalism. For the most part, Christian thinkers simply appropriated what seemed to be useful Stoic terms and concepts — not without some risk — in their attempt to offer either

an apologetical presentation or a contemporary intellectual formulation of the biblical message.

Bevan, *Stoics and Sceptics* (1913); *Hellenistic Popular Philosophy* (1923); R. Bultmann, *Der Stil der paulinischen Predigt und die kynisch-stoische Diatribe* (1910); R. D. Hicks, *Stoics and Epicureans* (1910); J. N. D. Kelly, *Early Christian Doctrines* (1959); M. Pohlenz, *Die Stoa* (1948-55). G. W. BROMILEY

STOMACH [Heb. *qēḇâ*] (Dt. 18:3); AV MAW; [*mē'îm*–'intestines'] (Job 20:14; Ezk. 3:3; 7:19); AV BOWELS; NEB also "full," BELLY; [Gk. *koilía*] (Mt. 15:17; Mk. 7:19; 1 Cor. 6:13; Rev. 10:9f.); AV, NEB also, BELLY; [*stómachos*] (1 Tim. 5:23); NEB DIGESTION. In human beings and most vertebrates, a membranous, sac-like portion of the alimentary canal in which the early stages of digestion occur, enabling food to begin yielding its nourishment. In the OT the stomach is referred to literally only in Dt. 18:3, in reference to offerings for Levitical priests. The NT also mentions the stomach literally only once, where Paul is giving Timothy some advice about treating dyspepsia (1 Tim. 5:23).

All other biblical uses are figurative. Both Ezekiel in the OT and John the seer in the NT were commanded to eat a scroll or book containing prophecy (Ezk. 3:3; Rev. 9:10f.), symbolizing their complete assimilation of the prophetic message before communicating it to others. The book turned bitter in John's stomach probably because it told of the ordeal through which believers would have to pass before the final triumph (see R. Mounce, *Book of Revelation* [*NICNT*, 1977], pp. 214-16). In 1 Cor. 6:13 Paul is apparently quoting a slogan of the gnosticizing party: "Food is meant for the stomach and the stomach for food" — i.e., what one eats is, religiously speaking, a matter of indifference. He seems to agree with this statement, but he goes on to disagree with this principle when it is applied to the body and sexuality (see comms.).

STOMACHER (Isa. 3:24, AV). *See* ROBE.

STONE [primarily Heb. *'eḇen*; Gk. *líthos*]. The many biblical references to stone reflect both the importance and the accessibility of stone in Palestine and in the ancient Near East in general (see, e.g., 1 K. 10:27; 2 Ch. 1:15; *see also* PALESTINE III). Its primary use, of course, was for building: houses (Am. 5:11; *see* HOUSE II.A), temples (Solomon's temple, 1 K. 5:17f. [MT 31f.]; the rebuilt temple, Ezr. 5:8; *see* TEMPLE), walls (Neh. 4:3; Prov. 24:31; *see* FORTIFICATION), altars (Ex. 20:25; Dt. 27:6 — note that this altar is to be of unhewn stone; *see* ALTAR; 1 S. 14:33-35; 1 K. 18:31f.). (*See also* BUILD.) It was also commonly used as material for vessels (Ex. 7:19; Jn. 2:6) and idols (Lev. 26:1; Dt. 4:28; 28:36, 64; 29:17; etc.; *see* IDOL). INSCRIPTIONS were frequently carved on stones, the most famous being the stone tablets on which God inscribed the Decalogue (Ex. 24:12; 31:18; 34:1, 4; Dt. 4:13; 5:22; 9:9-11; etc.). Weights were also made of stone (Heb. *'eḇen*; "weight," Lev. 19:36; Dt. 25:15; 2 S. 14:26; Prov. 16:11; see *TDOT*, I, 50; *see also* WEIGHTS AND MEASURES II.D).

In their natural (unhewn) state, stones could also be used as markers (e.g., of the boundaries between tribes, Josh. 15:6; 18:17), often with theological significance (Gen. 31:45-54; 35:14; Josh. 24:26f.; 1 S. 6:14-18; on 1 S. 7:12 *see* EBENEZER). They were also used to cover or seal wells (Gen. 29:2f., 8, 10; *see* WELL), caves (cf. Dnl. 6:17 [MT 18]), or tombs (Mt. 27:60, 66; 28:2 and par.; Jn. 11:38f., 41; *see* BURIAL; TOMB). Small stones were used as a weapon, either in war, often hurled by a sling (Jgs. 20:16; 1 S. 17:49f.; *see* WEAPONS OF WAR), or as a punishment (Lev. 20:2, 27; 24:23; etc.; *see* PUNISH III.A). Some texts mention stones used as props (Ex. 17:12); Jacob even used a stone as a pillow (Gen. 28:11), and then as a PILLAR (vv. 18-21).

In Josh. 4:5-7 Joshua passes on the Lord's instructions (cf. Dt. 27:4f.) to select twelve stones from the Jordan, which the people are about to cross to enter Canaan; these stones are to be a "sign," a "memorial," of the Lord's deliverance to succeeding generations. As many commentators have noted, the narrative in Josh. 4 is confusing, for v. 8 states that the men chose twelve stones "out of the midst of the Jordan" and carried them over and laid them down on the other side of the river, but v. 9 says that Joshua "set up twelve stones in the midst of the Jordan, in the place where the feet of the priests bearing the ark of the covenant had stood; and they are there to this day," and v. 20 states that Joshua set up the twelve stones at Gilgal. While many commentators resolve this difficulty by positing the presence of different traditions (see, e.g., J. Soggin [Eng. tr., *OTL*, 1972], pp. 64f.; J. Gray [*NCBC*, rev. ed. 1986], pp. 66-68, 72), on the basis of the LXX others (e.g., M. Woudstra [*NICOT*, 1981], pp. 77-79, 91f.) harmonize these verses and conclude that two sets of twelve stones were involved (cf. KD).

A number of texts use "stone" figuratively, drawing on one or another of its primary characteristics. For example, some texts compare the hardness of a heart that rejects God to the hardness of stone (Ezk. 11:19; 36:26; cf. also Job 38:30; 41:24 [MT 32]). Others use the weight of a stone in similes (Ex. 15:5; Neh. 9:11), and Ex. 15:16 draws on the inanimate nature of stone in relating the paralyzing effects that God's power had on the Egyptians at the time of the Exodus: they became as still as stone (cf. also 1 S. 25:37 — here the image may refer to a paralyzing stroke brought on by shocking news). Still other texts use the durability of stone as the point of comparison (Job 6:12). Most significant among these texts is Isa. 8:14 (quoted in Rom. 9:33), which refers to the "stone of offense" (AV, lit., "stone of stumbling"). Here Isaiah reverses the common, comforting image of God as the ROCK of refuge or sanctuary for Israel to the disturbing image of God as the One who causes Israel to stumble (see W. Vischer, *Foi et Vie*, 64/6 [1965], 454f.; G. Knight, *Christian Theology of the OT* [1959], pp. 184-89; *see also* STUMBLING BLOCK). This image is linked with another important messianic image, that of Christ as the stone which was rejected but which God made the CORNERSTONE (Isa. 28:16; cf. Ps. 118:22, which is quoted in Mt. 21:42 par.; Acts 4:11; 1 Pet. 2:7; see also Dnl. 2:34f., 44f.; Zec. 12:3). Playing on this imagery, 1 Pet. 2:4f. refer to "living stone(s)," i.e., Christ(ians).

Similar reversals of imagery occur in other texts to dramatize a point. Thus Hab. 2:11 pronounces a woe upon those who get "evil gain" — their evil is so great that the stone in the wall will cry out. Perhaps alluding to this text, Jesus, in response to the Pharisees' request that He silence the crowds, states that events are so astounding that if the people do not voice their praise, the inanimate stones will cry out (Lk. 19:40; see I. H. Marshall, *Gospel of Luke* [*NIGTC*, 1978], pp. 716f.; cf. *TDNT*, IV, 270). Similarly, John the Baptist rebukes those who think that their descent from Abraham obviates their need for repentance, for God could raise up children to Abraham from stones (Lk. 3:8).

On the twelve stones in the breastpiece of the ephod worn by the high priest, *see* EPHOD.

Bibliography.–*DNTT*, III, 381-399; *TDNT*, IV, *s.v.* λίθος, λίθινος (J. Jeremias); *TDOT*, I, *s.v.* "'ebhen" (Kapelrud); *TWOT*, I, 7f. G. A. LEE

STONECUTTER [Heb. *ḥōṣēḇ* (*hā'eḇen*)] (2 K. 12:12 [MT 13]; 1 Ch. 22:2, 15); AV HEWER OF STONE, MASON; NEB also MASON. The stonecutters in these passages were men skilled in quarrying or cutting stone used in the building. *See also* BUILD; CRAFTS; MASON.

STONE-HEAP [Heb. *gal*] (Job 8:17); AV HEAP; NEB STONY PATCH. Although the intertwining of the plant roots among the stones would naturally provide a strengthening of the plant (see H. H. Rowley, *Book of Job* [*NCBC*, rev. ed. 1976], p. 74), it will eventually be uprooted (v. 18). Bildad applies to Job this figure of the temporary prosperity of the wicked. The RSV rendering finds support in the LXX, Targum, and Vulgate.

STONES, PRECIOUS [Heb. *'eḇen yᵉqārâ;* Gk. *líthos tímios*].

I. Introduction
II. Origin
III. History
IV. Description

I. Introduction.–Those mineral and stone products of the earth that came to be considered precious in antiquity were especially regarded for the color, hardness, and rarity of the materials (the ancient method of classification until 1768 when Quist proposed a fairly modern system). Other criteria were brilliance, dispersion, clarity, and transparency. Few gemstones ideally display all these properties individually.

People in ancient times discovered pebbles and fragments of various brightly colored minerals and rocks in streambeds, in the fields, along mountain slopes, and even in barren deserts. Such finds attracted attention and were collected as treasured objects of appeal and beauty.

Minerals are naturally occurring inorganic chemical elements and compounds having an atomic structure that yields a definite external crystal form. Characteristic physical properties are color, streak, luster, transparency, refractive index, birefringence, fluorescence, hardness fracture, cleavage, specific gravity, magnetism, radioactivity, crystal symmetry system, habit and form, taste, and thermal conductivity.

An objective modern assessment of minerals as a whole and biblical precious stones specifically views them as members of a chemical classification proposed by Dana (d. 1895) having the same anion or anionic groups (with an example):

Native elements (gold — Au, diamond — C)
Sulfides (galena — PbS)
Sulfosalts (enargite — Cu_3AsS_4)
Nitrates (niter — KNO_3)
Borates (borax — $Na_2B_4O_7 \cdot 10H_2O$)
Phosphates (apatitite — $Ca_5[F_2Cl][PO_4]_3$)
Oxides (sapphire — Al_2O_3)
Halides (fluorite — CaF_2)
Carbonates (malachite — $CuCO_3 \cdot Cu[OH]_2$)
Sulfates (barite — $BaSO_4$)
Tungstates (scheelite — $CaWO_4$)
Silicates (quartz — SiO_2)

The silicate class, however, was not adequately characterized by chemical composition alone. X-ray determination of internal atomic structures has provided crystal lattice parameters data for physical properties of these complex forms.

Excavation and museum laboratory examination of precious stones from biblical sites now determines them in this adequate modern conceptual framework.

The Bible has three primary lists of precious stones: Ex. 28:17-20 is the list of stones in the BREASTPIECE OF THE HIGH PRIEST (*see* Vol. I, Plate 10); Ezk. 28:13 lists the gems in the covering of the king of Tyre; and Rev. 21:19f. describes the jewels that adorned the foundations of the walls around the new Jerusalem. In addition, Job 28:16-19; Isa. 54:11f.; and Ezk. 27:16 mention several gems, and occasional references to precious stones are scattered throughout the Bible.

Many Greek and Hebrew names have afforded the numerous references to precious and semi-precious stones in English biblical texts. Of the nearly three thousand precious stones known today, approximately thirty different mineral substances are mentioned in the Bible. Some of these names denote mainly the color of the stones, and since some minerals may exhibit nearly every color of the spectrum, the precise modern equivalent for every mineral/gem/precious stone substance of the Bible and its contemporaneous world cannot be determined with certainty. The uncertainty arises in the absence of ways to test the accuracy of some of the translations. Identification is further complicated by the differences among the ancient sources; for example, the MT, LXX, and Josephus (who discusses the breastpiece in *Ant.* iii.7.5 [168]; *BJ* v.5.7 [234] — note that even these lists do not match) do not always agree. Indeed not only do modern English translations vary a great deal from one another, but some are internally inconsistent (cf., e.g., the RSV translation of Heb. *taršîš* as both "beryl" and "chrysalite").

II. Origin.–The treatment of precious stones in the Bible is strictly phenomenal; appearance, beauty, and value are the criteria of selection and mention. The Bible postulates nothing about origin nor about superstitious, mysterious, or magical powers imputed to gems and stones. In contrast, Aristotle apparently considered some stones to be composed of water. For Theophrastus (d. 287 B.C.), stones were made of earthly substances.

Pliny the Elder (d. A.D. 79) was aware of both physical and chemical diagnostic tests for minerals. He meticulously compiled the knowledge of the precious stones of the first-century NT world (see *Nat.hist.* xxxvii). He only rarely succumbed to the superstitions of his Roman religion; for example, he scorned the magicians who believed that amethyst would prevent drunkenness (although that is the meaning of this Greek name for the purple quartz). Thus Pliny's encyclopedic precious-stone lists, descriptions, and criteria are important for an understanding of the culture in which Paul and John lived and wrote.

Precious stones originate as geochemical concentrations in environments where depositional agencies are active. Those minerals valued by people occur under the same conditions of the rock-forming mineral groups that are the host-rock localities. Broadly considered, the three major modes of origin are:

(1) Igneous, a molten history of formation from magma in, or slightly below, the crust of the earth, including hydrothermal and vein deposits. Examples of minerals: native elements are gold, diamond, platinum; silicates are quartz, feldspars, olivine, topaz; oxides are beryl, corundum (sapphire, ruby, spinel); sulfides are galena, chalcopyrite; a phosphate is turquoise. Examples of rock masses are basalt, obsidian, specular hematite.

(2) Sedimentary, deposition by water, ice, wind, gravity, and weathering. Examples of minerals: native elements include diamond, gold, platinum in placer sediment bodies; silicates are quartz, amethyst, chalcedony, jasper, agate, opal; carbonates are azurite, malachite, calcite. Examples of rocks: limestone, chert/flint, pearl, alabaster.

STONES, PRECIOUS

(3) Metamorphic, solid-state recrystallization under the influence of heat and/or pressure and chemically active fluids. Examples of minerals: silicates include beryl, lapis lazuli: (lazurite); oxides include corundum, spinel. Examples of rock: marble, steatite.

(4) Organic agencies, not mineral substances. Floral are amber (the hardened and petrified sap/resin of ancient pine trees), jet (hard variety of coal formed by the compression of lignite); faunal are coral (skeletal $CaCO_3$ accretion of small coral polyps living in large colonies), ivory (material forming the tusks of elephants usually), shell (the skeletons of marine invertebrates), pearl (concentric layers of shell [$CaCO_3$] nacre deposited by a mollusk upon a foreign particle in its body).

III. History.–The specific uses of precious stones have varied through time and in different cultures. The intaglio cylindrical signet seals that abound in Early and Middle Bronze Age Mesopotamia (*ca.* 3000-1500 B.C.), apparently used by Judah (Gen. 38:18, 25), and the parallel use of the scarab signets and seals by the Egyptians throughout their history are well known (*see* SEAL). Precious-stone carving reached its zenith in the raised relief technique of the Greeks and especially the Romans and their use of the cameo from *ca.* 300 B.C.

The ancient Egyptians also used precious stones as amulets. The wearer was afforded protection from unknown hostile forces, such as diseases and noxious animals, by talismans made of carnelian, turquoise, lapis lazuli, and artificial fabrications that were tied to the neck, waist, wrists, and ankles.

In addition, precious stones were used in Bible lands for settings in sacerdotal garments and royal attire; for jewelry, beads, and personal ornaments; as inlaid decorations on furniture, sarcophagi, chests, and boxes; and as burial accoutrements. Some minerals of little modern value were highly esteemed in antiquity.

Pliny recorded the raging appeal for precious stones in the life-styles of Roman nobility. His wrathful scorn was incited by the overindulgence of his fellow Romans in luxuries. For example, Roman women in Pliny's time wore fortunes in jewelry: earrings, diadems, fillets, necklaces, chains or strings of trinkets, intaglios and cameos (negative and positive etchings on coral, agate, etc.), pendants, bracelets, armlets, anklets, rings, and hair pins. Tired of cataloging the feminine adornments, Pliny expressed amazement at the women's ability to survive the weight. NT advice is decidedly to the contrary (1 Tim. 2:9; 1 Pet. 3:3).

The history of precious stones must now be considered in the light of excavation experience. Dig object registries offer catalogs of stone finds and their stratigraphic contexts. Other research resources are the precious stone object inventories of the art and history museums of the Middle East, Europe, Canada, and the United States. If curated by competent specialists, the collections will accurately illustrate the geographic and chronological range of precious stone objects throughout biblical history.

For the purpose of comparative study, selective citation is made by excavation finds at Carthage, Tunisia; Kourion/Curium, Cyprus; Gezer, Israel; and Abila, Jordan. Museum collections at Cairo, Amman, Damascus, Jerusalem, and locally in Israel, Nicosia, Ankara, Istanbul, Salonica, Athens, Tunis, Rome, Paris, London, New York, and Chicago are important resources.

According to Pliny gem occurrences of commercial importance were particularly numerous in India, Asia Minor, Egypt, and Arabia, and, with the exception of Greece, were rare in other parts of Europe. Certain gem localities

Jewelry of gold and precious stones found on a female attendant in the death-pit at Ur. Some beads are orange carnelian and the rest are a deep blue lapis lazuli (courtesy of the Trustees of the British Museum)

were cited by the authorities that Pliny used in his writing, and some of these localities could have been exhausted by Pliny's time (e.g., the carnelian deposits at Sardis and in Babylonia). Thus he must be used with caution in the designation of some OT sources. One must also remember that in antiquity a gem said to be from a distant land could command a higher price at Rome.

Pliny knew the following sources: Ethiopia, Egypt, the Red Sea islands, Arabia, Armenia, Babylonia, Bactria, Cappadocia, Caria, Persia, Cyrenaica, Galatia, India, Pionia, Lydia, Media, Paphlagonia, Phrygia, Pontus. In Europe: Alpine area, Britain, Epirus, Attica, Germany, Spain, Portugal, Scythia. In the Mediterranean islands: Crete, Cyprus, Lesbos, Paros, and Sicily (see Ball).

The road to the East was open and rumors of India's wealth, spices, and precious stones may have led Greek merchants to that area before the time of Alexander, whose soldiers took booty in his Indian campaign that dwarfed the spoils of Persia. Soldiers returned with pearls, ivory, gold, and precious stones to fill the homes of Greece. The route of Alexander's marches passed close to the turquoise locality of Persia and the Badakhshan lapis lazuli locality (now northeastern Afghanistan). Ruby mines also were known in this area. Ctesias (415-397 B.C.)

knew of the Indian agate mines and stated that Assyria in his time obtained quartz or carnelian and onyx for her finer seals from India. Roman-Indian commerce in gems was highly developed by Pliny's time, and most of these minerals arrived in Rome by way of Alexandria, one of the Arabian towns, or one of the Parthian cities.

After loading, Roman vessels returned to Egypt where the cargo was transferred by camel from the Red Sea to the Nile and then down to Alexandria. A fleet carrying gems sailed yearly under the empire from Alexandria to Puteoli near Rome. This oriental trade brought enormous wealth to Rome in the NT period with which the Romans indulged their tastes, no matter how fantastic or extravagant they might have been. The Roman gem merchant had to consider not only his profit but the great risk of shipwreck and piracy in bringing the stones to Italy. Even so, profits from those ships that arrived were enormous, with certain minerals being sold at one hundred times their original cost, according to Pliny. It is important to remember that India was considered the best source for fine gems. Metals always moved east in exchange for gems and other important commodities; thus Roman gold coins of Tiberius and Nero appear on the Malabar coast.

IV. Description.

Agate. A distinctly banded form of chalcedony (see below) in which the bands vary in color and degree of translucency. The bands are usually more or less concentric, having a white and brown coloration, with a little blue occasionally. See also below on onyx and sardonyx.

Agate was the second stone on the third row of the high priest's breastplate (Heb. *šᵉḇô,* Ex. 28:19; 39:12). In Isa. 54:12 the Lord promises to restore the devastated Jerusalem, using agate (Heb. *kaḏkōḏ* for its pinnacles (NEB "red jasper" follows LXX). Ezk. 27:16 mentions agate (Heb. *kaḏkōḏ*) as one of the items that Edom traded to Tyre (NEB again has "red jasper"). Agate is also the third stone in the foundations of the wall around the new Jerusalem (Gk. *chalkēdṓn,* Rev. 21:19; AV, NEB "chalcedony").

Amber. A hard, translucent fossil resin. Its composition varies according to the species of pine trees producing the sap. The material is yellow, reddish to brownish yellow occurring in amorphous lumps displaying a resinous luster. Its hardness is 2-2.5, and the specific gravity is low enough to float in sea water, about 1.2. The fossilized resin sometimes contains the remains of entrained insects. Sources for the biblical world include Baltic, Sicilian, and the Romanian amber.

Amber beads were found in a number of the infant jar burials in the tophet cemetery at Carthage. The beads were shaped like pendants and were apparently a part of assemblages on necklaces, which were made up of as many as ten different precious stones and metals.

The AV uses "amber" in Ezk. 1:4, 27; 8:2 to translate Heb. *ḥašmal*; perhaps amber's property of assuming a static charge of electricity led to this identification (cf. LXX *ēlektron*; *see* ELECTRUM).

Amethyst. This variety of quartz (see crystal below) ranges in color from a pale lilac to a deep purple with occasional reddish highlights. Traces of manganese as an impurity account for the color. As amethyst crystals grow, compositional changes occasionally lead to color zoning in the crystals. Its hardness is the same as quartz (7), and the mineral exhibits no cleavage, which makes objects moderately resistant to abrasion and shock.

Amethyst has been mined in Arabia Petraea, central Anatolia, and Egypt. It was used for cylinder seals in Mesopotamia, and bracelets, amulets, and scarabs in Egypt. Two amethyst scarabs with seals were discovered in the Late Bronze Age strata at Tell Gezer. Roman use of amethyst was much bolder: Pliny describes the use of cups cut from the large crystals.

Amethyst was the third stone in the third row of the high priest's breastpiece (Heb. *ʾaḥlāmâ,* Ex. 28:19; 39:12), and the twelfth jewel adorning the foundations of the wall around the new Jerusalem (Gk. *améthystos,* Rev. 21:20).

Beryl. This mineral, composed of beryllium aluminum silicate ($Be_3Al_2Si_6O_{18}$), is frequently associated with trace amounts of sodium, lithium, and cesium. The pure variety is completely colorless, while traces of various elements cause the color variations. The bright green variety, emerald, contains chromium, which yields the rich green color (see below). Aquamarine, the blue or greenish-blue variety, occurs because of the presence of iron. Morganite, pink beryl, arises from the presence of lithium.

Beryl occurs in metamorphic rocks, but the principal gem quality crystal forms arise in igneous pegmatite veins in which large crystals occur. The mineral possesses a hardness of 7.5 to 8, and has a specific gravity ranging from 2.6 to 2.9. Its natural crystal habit is hexagonal, an observation which Pliny made.

Beryl was mined from the hills of Egypt near the Red Sea. The earliest use of beryl in Egypt was in the form of hexagonal crystals; apparently, since it is harder than quartz, the Egyptians were unable to cut it until a later date. The beryl that made its way into the biblical world seems to have originated in India, and, although Pliny attributes a source to Arabia, the reference most probably is to trading stations that received their merchandise from the East.

In his analysis of gems in the Cairo Museum, Lucas found that some of the 12th and 20th Dynasty material labeled beryl was in fact green feldspar (see below) or amazonite. Some other materials from the New Kingdom and before were also found to be olivine or peridot (see below) rather than the mineral beryl. This is not to say that no beryl existed in ancient Egypt, because large beryls have been discovered in silver jewelry, and a single uncut emerald has been determined in a necklace from a predynastic grave.

A very famous beryl (aquamarine) was engraved as the head of Julia the daughter of the emperor Titus and is on exhibit in the Cabinet des Medailles in Paris. Extrabiblical texts attribute special healing powers to the beryls.

Beryl was the first stone on the fourth row of the high priest's "breastpiece" (Heb. *taršîš,* Ex. 28:20; 39:13; NEB "topaz"). Ezk. 28:13 mentions beryl (Heb. *šōham*; AV "onyx"; NEB "cornelian") as one of the precious stones that the king of Tyre had. In one of his visions Daniel saw a man with a body like beryl (Heb. *taršîš,* Dnl. 10:6; cf. NEB "topaz"). The eighth jewel mentioned as adorning the foundations of the wall of new Jerusalem is beryl (Gk. *bḗryllos*).

Carbuncle. Probably a red variety of garnet, though in antiquity ruby and spinel were also sometimes called carbuncle (see ruby below). Garnet constitutes a group of very closely related aluminum silicates, each with magnesium, iron, manganese, calcium, and chromium individually as a part of the composition. The hardness is approximately 7, about that of quartz, and the specific gravity is nearly 7. The common occurrence is dodecahedral crystals. Garnet may originate in igneous and metamorphic environments, most commonly the later.

The garnet abounds especially in Egypt at Aswan, in the eastern desert, and in Sinai. Pliny referred to *carbunculus almandicus,* the modern almandine garnet. *Bāreqeṯ,* one of the Hebrew terms for carbuncle, denotes a glowing coal or flashing stone (cf. Heb. *bāraq,* "lightning"). Carbuncle

seems to embrace a variety of red precious stones including the ruby as well. Theophrastus describes the carbuncle as resembling a burning coal emitting light in the dark and cites places of origin as Carthage, Marseilles, Egypt, and elsewhere. The ruby was the anthrax of Theophrastus, described as blood-red in color.

Garnet is one of the most important minerals, the common, imperfectly transparent varieties being distributed throughout the earth's crust. Transparent precious garnet is less abundant, but occurs under the same conditions. In some cases when the gem variety is used to observe a candle through the crystal, a four- or six-rayed star of light may appear.

Carbuncle (Heb. *bāreqeṭ*, which is elsewhere translated "emerald") is the third stone in the first row of the high priest's breastpiece (Ex. 28:17; 39:10; cf. NEB "green felspar"). It was also one of the precious stones that the king of Tyre had (Heb. *nōpeḵ*, Ezk. 28:13; AV "emerald"; NEB "purple garnet"; elsewhere the RSV translates it "emerald"). In Isa. 54:12 carbuncle (Heb. *'eqdāḥ*) is the material used for the gates of the restored Jerusalem (cf. NEB "garnet").

Carnelian. A dark red or orange-red to reddish-brown variety of chalcedony (see below). It was one of the precious stones of the king of Tyre (Heb. *'ōḏem*, Ezk. 28:13; AV "sardius"; NEB "sardin"). In his vision of a heavenly throne the author of Revelation described the one seated on the throne as having the appearance of carnelian (Gk. *sárdion*, Rev. 4:3; AV "sardine stone"; NEB "cornelian"). The sixth stone in the foundations of the wall of the new Jerusalem was carnelian (Gk. *sárdion*, Rev. 21:20; AV "sardinus", NEB "cornelian").

The name of this variety of quartz (SiO_2) arises from Chalcedon, an ancient Greek city of Anatolia. It is formed in the near-surface environments where temperatures and pressures are relatively low. It occurs commonly as massive hydrothermal replacement deposits and as bodies of chert in sedimentary rocks of chemical origin. This variety of silica (hardness 7) is composed of tiny grains or fibrous crystals. Accumulating in banded deposits, the different layers may be stained various colors by chemical coloring agents. The result is a great variety of patterns, color-banding effects, and even whispy inclusions in a translucent matrix. This variety of silica is known as cryptocrystalline, or microscopically crystallized quartz. Chalcedony is translucent and somewhat waxy in appearance and, in the absence of impurities, it is white or greyish blue-white in color.

Chalcedony occurs in abundance in Egypt in the eastern and western deserts and the Fayum and Sinai. Its use ranges from Predynastic to late Roman times.

The AV and NEB render Gk. *chalkēdṓn* in Rev. 21:19 as "chalcedony" (cf. RSV "agate").

Varieties of chalcedony that are discussed elsewhere in this article are agate, carnelian, chrysoprase, jasper, onyx, and sardonyx.

Chrysolite. The name referred to more than one type of mineral including topaz (see NEB uses below), yellow sapphire, yellow zircon, yellow garnet, and yellow-green olivine (a variety of peridot; see below). In the 19th cent. this term was assumed to denote mineral entities thought to have derived from volcanic activity. It should be considered presently indeterminant.

Ezekiel used Heb. *taršîš* to describe the appearance of the wheels accompanying the four living creatures he saw in his first vision (Ezk. 1:16) and in a later vision (10:9), as well as a stone of the king of Tyre (28:13). The AV "beryl" in these texts is consistent with the translation of *taršîš* elsewhere (see beryl above); the NEB has "topaz" in these texts. Chrysolite was also the seventh foundation stone in the wall around the new Jerusalem (Gk. *chrysólithos*, lit. "golden stone"; Rev. 21:20; AV "chrysolyte").

Chrysoprase. Apple-green chalcedony (see above). It was the tenth jewel in the foundations of the wall in the new Jerusalem (Gk. *chrysóprasos*, Rev. 21:20; AV "chrysoprasus").

Coral. The calcium carbonate accretion forms by polyps creating the hard skeletal framework. The organisms exist in warm, shallow, marine ecological niches where the temperatures are above 68°F, and the waters are clear and active with sufficient nutrients. Important sources are the Red Sea and the Mediterranean Sea along the coasts of Italy, Tunisia, Algeria, Sardinia, and Morocco. Coral may be white, various shades of red, or black in color. Both white and red appear in Egyptian finds. Of the two varieties of red coral, both branching and solid, the solid or precious coral is obtained mainly in the western Mediterranean. Examples of pipe coral artifacts occur in predynastic to 18th Dynasty contexts in Egypt.

For its use in Job 28:18; Lam. 4:17; and Ezk. 27:16, *see* CORAL.

Crystal. Another term for quartz. Its composition is silicon dioxide (SiO_2). The hardness is 7, and there is no cleavage, only conchoidal fracture. Specific gravity is 2.65. Characteristic prismatic crystals are hexagonal.

The colorless variety of quartz is known as rock crystal. Other varieties of quartz occur under the names of amethyst (see above), rose quartz, citrine (a clear yellow variety), smoky quartz, milky quartz, aventurine, with mica or hematite inclusions, cat's eye, the opalescent variety with inclusions of asbestos, and tiger-eye with lustrous yellow to brown parallel fibers.

Quartz is an important rock-forming mineral and develops in many different environments. In Egypt it occurs abundantly as veins in the igneous rocks of the eastern desert and at Aswân where it has been falsely identified as alabaster. Occurrences in Sinai are also recorded.

Rock crystal was employed in Egypt from predynastic times and throughout its ancient history. Objects include beads, small vases, the cornea of eyes in statues and on coffins, as inlay set in colored cement to imitate other gems, a knob of a dagger handle in Tutankhamen's tomb. A large block of uncut rock crystal of Hellenistic/Roman date was found at Memphis.

Pliny considered rock crystal (*crystallus*) to be formed in the same way and under the same conditions as ice. He identified sources for the NT world to be India, Cyprus, islands of the Red Sea, and Asia Minor. He mentioned that a governor of King Ptolemy dug out a crystal about one cubit in length. The Romans of his time enjoyed it as a luxury; the largest piece that he ever saw was one which the empress Livia Augusta dedicated in the Capitol; it weighed about 23 kgs. (50 lbs.).

A drinking bowl of crystallus was bought for 150,000 sestertia. Pliny commented that Nero, upon realizing his lost politial condition, smashed two crystal drinking cups into fragments in his moment of anger.

Both Heb. *gāḇîš* and *qeraḥ* are related to terms for "ice" (cf. NEB variants below). Job stated that wisdom's price far surpassed that of crystal (Job 28:18; AV "pearls"; NEB "alabaster"). In Ezekiel's first vision the firmament shone like cyrstal (Ezk. 1:22; NEB "ice"). In a vision the author of Revelation saw "a sea of glass, like crystal [Gk. *krýstallos*]" before the throne (Rev. 4:6; NEB "ice"; later he said the radiance of the new Jerusalem was "clear as crystal" (Gk. *krystallízō*, 21:11).

Diamond. This term derives from Gk. *adámas*, "un-

conquerable," and hence connoted resistance to abrasion. In antiquity it was used for a number of minerals, including diamond, quartz, hematite, and colorless sapphire.

The diamond is composed of pure carbon, the atoms of which are arranged in the highest possible concentration or packing coordination. It is the hardest natural substance known (10 on the Mohs scale) and occurs in octahedral crystals or rarely in cubic form. The outstanding luster of the diamond arises from its refracting power by which it disperses the light which strikes it at an angle of slightly more than 24°. These refractive and dispersive properties produce its attractive play of fiery colors.

The color of the diamond is usually clear, but gem stones have been discovered that represent every hue of the rainbow and black. The diamond possesses a characteristic property of some isometric minerals, that of cleavage, a plane of parting along the weakest bonding faces of the atoms of the mineral, which, in the case of the diamond, lie parallel to the faces of the octahedral crystal expression.

The evidence for the diamond in the Middle East before the 5th cent. B.C. is lacking. The earliest source was India. Ptolemy refers to a diamond river in India. Persian and Arabian traders probably account for the appearance of this gem stone in the biblical world.

OT references to the diamond need careful scrutiny. The reference that best fits the character of the precious stone is Ezk. 3:9: "an adamant harder than flint" (*see* ADAMANT). The most ancient reference to an industrial use of diamonds is Jer. 17:1: "the sin of Judah is written with the pen of iron; with the point of diamond [Heb. *šāmîr*; NEB "adamant"] it is engraved upon the tablet of their heart." Diamond (Heb. *yāhᵃlōm*) was also the third gem in the second row of the high priest's breastpiece (Ex. 28:18; 39:11; NEB "jade"). Some commentators challenge the interpretation of diamond in translation, but caution should be the watchword here until all the excavation object inventories have been searched. It is not impossible that commerce with India, whose diamond mining activities are assigned to as early as the 8th and 9th cents. B.C., could have brought the gemstone to the Levant.

There is no question about the presence of diamond in the NT world. Indians brought pearls and diamonds to Ptolemy II Philadelphus. Ptolemy the Alexandrian mentioned several diamond fields in his geography written about India (A.D. 150). In addition, Pliny stated that at one time Ethiopia was a source, but this could have been reference to a trade route station along the India-to-Rome commercial line.

Emerald. A bright green variety of beryl (see above). The earliest known emerald locality apparently is Upper Egypt, not far from the coast of the Red Sea, S of Kossier. The ancient Egyptian mines are partly surface and partly underground workings. Tools found in the mines date to the time of the Middle Kingdom. Cleopatra later presented herself as an engraving on emerald. The occurrence of the crystals is in a dark mica/talc interfoliated schist. Interestingly, fine emeralds and other precious stones have been washed up on the beach zone near Alexandria, probably part of a sunken ship bearing treasure.

Emerald was the first stone in the second row of the breastpiece (Heb. *nōpeḵ*, Ex. 28:18; 39:11; NEB "purple garnet"; in Ezk. 28:13 the RSV translates *nōpeḵ* as "carbuncle"). Emerald was also one of the items that Edom traded to Tyre (*nōpeḵ*, Ezk. 27:16; NEB "[purple] garnet"). In Ezk. 28:13 the RSV translates Heb. *bāreqeṯ* as "emerald" (elsewhere "carbuncle"; so AV; NEB "green felspar"). The seer of Revelation likened the rainbow around the throne to an emerald (Gk. *smáragdos*, Rev. 4:3), and the fourth jewel in the foundations of the wall around the new Jerusalem was an emerald (Gk. *smarágdinos*, 21:19).

Green feldspar. A mineral composed of potassium aluminum silicate, $KALSi_3O_8$; also called microcline. This mineral is very abundant in the earth's crust. The color in the gem variety derived from the substitution of lead for potassium, ranging from bright green to blue green, is non-transparent and has been mistaken for jade and emerald (see above). In the Near East microcline or amazon stone has been found in the eastern desert of Egypt and in Libya and appears in objects from Neolithic times and into the New Kingdom period: jewelry from Dahshur and Lahun of the 12th Dynasty and amulets and inlay in objects in the tomb of Tutankhamen.

The NEB uses "green felspar" to translate Heb. *bāreqeṯ* in Ex. 28:17 (RSV, AV "carbuncle") and Ezk. 28:13 (RSV "emerald"; AV "carbuncle").

Jacinth. This mineral, also called zircon, is composed of zirconium silicate, often with hafnium ($ZrSiO_4$). It occurs in gray, brown, yellow, green, red transparent (hyacinth), colorless, or smoky (jargoon); tetragonal crystals are in short prismatic form. The hardness is 7.5 and the specific gravity 4.65.

Zircon occurs in igneous and metamorphic environments. The name is derived from the Pers. *zargun* ("gold color"), and Arab. *zarqun* (vermillion).

Carved zircons have been listed among the finds of the most ancient of dated archeological sites; and it may have been the earliest of all gems.

The term *hyacinth* (Gk. *hyákinthos*) shows all of the characteristics of the sapphire (see below) from ancient writers. Solinus described the mineral from Ethiopia as blue and not cuttable by anything except a diamond. The red zircon, or hyacinth, has the luster of the ruby, while the yellow zircon is similar to the yellow topaz in appearance. The term hyacinth or jacinth was employed for both blue and orange-red gems in antiquity.

Jacinth (Heb. *lešem*) was the first gem in the third row of the breastpiece (Ex. 28:19; 39:12; AV "ligure"; cf. LXX *ligýrion*; NEB "turquoise"). It was also the eleventh gem in the foundations of the wall around the new Jerusalem (Gk. *hyákinthos*, Rev. 21:20; NEB "turquoise").

Jade. This name is derived from Spanish *ijada*, "flank, loin," and was supposed to cure kidney ailments. Jade includes two distinct unrelated minerals: nephrite or true jade, calcium magnesium hydroxy silicate, the amphibole group; and jadeite, sodium aluminum silicate, the pyroxene group. Colors vary from white or gray, to various shades of green; its appearance is translucent with a waxy or greasy luster. The natural occurrence of the mineral is in dolomitic limestones affected by metamorphism. The hardness varies from 6 to 7.

Several specimens of nephrite or jadeite occur in the finds of Egypt (amphiboles of the Tremolite-Actinolite group occur in the eastern desert of Egypt). Materials from predynastic through the New Kingdom are inventoried in museums.

The NEB uses "jade" to translate Heb. *yāhᵃlōm* in Ex. 28:19; 39:11 (RSV, AV "diamond") and in Ezk. 28:13 (RSV "jasper"; AV "diamond").

Jasper. A green, yellow, brown, or mottled red chalcedony (see above). It was the third gem in the fourth row of the breastpiece (Heb. *yāšᵉpēh*, Ex. 28:20; 39:13; NEB "green jasper"). In Ezk. 28:13 RSV "jasper" translates Heb. *yāhᵃlōm*, which elsewhere refers to the diamond (so AV; cf. NEB "jade"). In Rev. 4:3 the one on the throne has the appearance of jasper (Gk. *íaspis*), as does the new

Jerusalem (21:11), which has jasper walls and jasper as the first jewel adorning the foundations of the walls (21:18f.).

Lapis lazuli. This precious stone is not a pure mineral, but a combination of several minerals: lazurite, a silicate of sodium, calcium, and aluminum, with some sulphur and appreciable amounts of calcite, diopside, and pyrite. The blue mineral present varies in color from azure to violet to greenish-blue and has a dull to greasy luster and exhibits a pale blue streak. Its hardness is 5-5.5. Its environment of formation is frequently in hornfels as a contact metamorphic mineral. The precious stone is often veined or spotted, and its value is a function of the uniformity of color and the absence of pyrite.

The principal occurrence of lapis lazuli for the biblical world was in Badakhshan in northeastern Afghanistan. Unconfirmed occurrences are attributed to Persia, although this may be the result of the trade passing through that land. The Afghanistan source was probably also known to the Sumerians, and is a possible source for the finds discovered in the royal tombs of the 3rd Dynasty of Ur. Ugaritic texts also mention it (Ugar. *iqnu*; see *UT*, p. 365).

The names azurite, lapis lazuli, lazurite, and a later word, lazurius (Lat.) have been derived from the Arab. *lāzuward*, "blue."

Babylonian tradition of the Early Bronze Age credits stars as being transformed into lapis lazuli. The derivation of this legend could be based upon the dispersion of golden pyrite crystals in some specimens. Additionally, Heb. *sappîr* in Job 28:6 may refer to lapis lazuli (RSV "sapphire"; see below).

Lapis lazuli is one of the most significant precious stones in antiquity, equaling the value of gold at times. Used in ancient Egypt from predynastic times, lapis luzuli was most popular during the Middle Kingdom. The 18th Dynasty tomb of Tutankhamen contained fabulous quantities of lapis lazuli objects, including some cylinder seals with cuneiform inscriptions revealing foreign trade.

In antiquity, lazurite, the blue portion of this precious stone, was ground up as blue powder pigment and made into a paint known to artists as ultramarine. As the only quality blue pigment known, it was comparatively costly.

The NEB usually translates Heb. *sappîr* as "lapis lazuli" (the RSV mg. sometimes notes it as an alternative). See sapphire below.

Malachite. The composition is basic copper carbonate ($Cu_2CO_3[OH]_2$). Malachite is the product of secondary zones of alteration in near surface occurrences. The name is from the Gk. *molóchē*, "mallow," in reference to the leafy-green color. The mineral is both a gem stone and a copper ore.

The texture of the stone shows successive layering of alternating light and dark hues. Malachite occurs in the oxidized zones of the Upper Pillow Lavas on the northern and eastern flanks of the Troodos Mountains of Cyprus (the very name of the island denotes the metal derived from this ore). Other occurrences are in Sinai and the eastern desert of Egypt, where the ancient mining processes also harvested turquoise (see below). The archeological record shows usage in jewelry and amulets from predynastic to the 19th Dynasty.

The principle use of the malachite was in the form of powder, which was used as pigment and as an eye paint. Nero, a patron of the Green racing faction in Rome, once covered the arena of the Circus Maximus with powdered malachite as Caligula had done earlier, both showing their allegiance to the color-coded charioteers.

In Est. 1:6 the NEB has "malachite" for Heb. *bahaṭ*; *see* PORPHYRY.

Onyx. A variety of chalcedony (see above), specifically a banded agate in which milk-white layers alternate with black.

The land of Havilah was apparently known for its onyx (Heb. *šōham*; NEB "cornelian") as well as gold and bdellium (Gen. 2:12). It was one of the offerings that the Lord required of Israel in the wilderness (Ex. 25:7; 35:9). The ephod had two onyx stones, on which were carved the names of the Israelite tribes (28:9; 35:27; 39:6), and the breastpiece of the high priest had onyx as the second stone in the fourth row (28:20; 39:13). Great quantities of onyx were among the things that David provided for Solomon to build the temple (1 Ch. 29:2). According to Job wisdom was valued above onyx (Job 28:16). The king of Tyre had onyx as one of the precious stones in his covering (Heb. *yāšᵉpēh*, Ezk. 28:13; the AV "jasper" and NEB "green jasper" seem preferable; see above). Onyx (Gk. *sardónyx*) was the fifth gem in the foundations of the wall around the new Jerusalem (Rev. 21:20; AV, NEB "sardonyx").

Opal. The composition is hydrous silica ($SiO_2 \cdot nH_2O$). Even though essentially amorphous, scanning electron microscopic investigation has shown that it is made up of closely packed spheres of silica in hexagonal or cubic closest packing. The tiny spheres vary in diameter from 1500 to 3000 Å. When white light strikes the planes of spaces between the spheres diffraction of certain wave lengths occurs that yields spectrally pure colors and play of hues as is seen in precious opal. Common opal has the same structure but is without internal reflections because the spacings are less than the wave lengths of visible light and do not satisfy the Bragg refractive index equation.

The hardness of opal varies from 5 to 6. It has a relatively low specific gravity, about 2.0, and exhibits a conchoidal fracture. The luster is vitreous, frequently resinous. The color varies from white through pale shades of yellow, red, brown, green, gray, and blue. Frequently an "opalescent" effect yields a play of colors.

Pliny was especially enamored of opal (Lat. *paederos*). "In it there seemed to merge the color of the sky having a greenish tint with a clear transparent *crystallus*. These tints are accompanied by a purple and a certain yellow and bright gold color of muscat. . . . It appears to have all these colors mixed together, since each color appears to have its own reflection. There is no other gem more pure and clear and it is pleasing to the eye. The best comes from India. . . Of less rank is that of Egypt where it is called *Senites*. A third variety of poor quality comes from Arabia." He speaks of other sources in Pontus, Galatia, Thrace, and Cyprus (*Nat. hist.* xxxvii.46).

Opal was valued in antiquity, especially by the Romans, above other precious stones. For example, Nonius preferred exile rather than surrendering to Mark Antony his famous opal, variously valued at $100,000 to $100,000,000.

Pearl. A hard, shiny concretion of shell material formed as an abnormal growth in some mollusks. Several biblical texts mention pearl along with other precious stones. In Job 28:18 the RSV translates Heb. *pᵉninîm* as "pearls" (AV "rubies"; NEB "red coral"; *see also* CORAL), whereas the AV translates Heb. *gāḇîš* as "pearls" (RSV "crystal" — see above; NEB "alabaster"). *See also* PEARL.

In the Roman world of NT times the pearl was highly valued; Julius Caesar paid the equivalent of $350,000 for one prized pearl (see Mt. 7:6; 13:45f.). 1 Tim. 2:9 exhorts women to adorn themselves modestly and avoid pearls and gold (cf. Rev. 17:4; 18:12, 16). The twelve gates in the new Jerusalem were each "made of a single pearl" (Gk. *margarítēs*, Rev. 21:21).

Peridot. Magnesium olivine, Mg_2SiO_4. "Peridot" is ap-

parently derived from Arab. *farīda,* "precious stone." Its hardness is 6.5-7.2, its specific gravity 3.8. The color is pale yellow-green to olive-green. Its use as a gemstone in jewelry (except pendants) is limited because of its tendency to scratch easily, and its brittle nature (fracture is conchoidal).

Olivine is a rock-forming mineral occurring in basic igneous formations. In the biblical world examples occurred in the lavas of Vesuvius; the finest material comes from St. John's Island (Zebirget) in the Red Sea (due east of Aswân). An old legend says that the inhabitants of this island mined green stones as early as 1500 B.C. The stones were greatly prized by the Egyptian kings (one example occurs in a scarab of the 18th Dynasty) who dominated the island, and the inhabitants were forced to mine them under rather harsh conditions. It was believed that the gems glowed in the dark, so that they were hunted at night and the locations of the glowing spots were carefully marked for recovery the next day. In Greek this gem was called *tópazos,* and the island was known as Topazios. Today we know that topaz is a completely different gem (see below); the gem in the high priest's breastpiece was probably peridot rather than topaz (Heb. *piṭ^{e}ḏâ,* Ex. 28:17; 39:10; NEB "chrysolite").

Ruby. A red (cf. Lat. *rubur*) variety of the mineral corundum, which is composed of aluminum oxide (Al_2O_3). Its hardness is 9; it has a high specific gravity, about 4.0. Its resistance to abrasion is next to that of diamond and above that of topaz. It has a hexagonal crystal form, sometimes in a tapering prismatic habit. The six-rayed star arises from light reflection on oriented, needle-like inclusions of rutile.

Corundum occurs in several distinct environments: in pegmatite dikes, in contact metamorphic environments with hornfels, and in regional metamorphic terrains with micas, garnets, and sodium feldspars. Its red color is due to the presence of chromium oxide.

In antiquity the stones grouped under the name *carbunculus* (ruby, spinel, and garnet; see carbuncle above) were not always distinguished among themselves. The ruby may correspond to the *ánthrax* of Theophrastus and to the *lychnís* of Pliny, both of which came under his general term *carbunculus.* Both Greek names were derived from characteristic color and luster (*ánthrax* means "red color," and *lychnís* implies brilliance and lamplight. The name spinel may come from the Lat. *spina,* "sharp."

Historically the ruby and the red variety of spinel have been confused probably because they are associated in gem gravels. Spinel may occur in various colors, as does corrundum. The most valuable variety of spinel is red.

Spinel is composed of magnesium aluminate ($MgAl_2O_4$); it is colorless, but trace amounts of other elements yield colors of red (so-called ruby-spinel), brownish-red, rose-red, orange, pale blue, dark blue, bluish-violet, purple, greenish, and black. The hardness is 8 and the specific gravity is about 3.6. The mineral occurs in octahedral crystals and exhibits a vitreous luster. It occurs in intrusive igneous and metamorphic rocks.

The Badakhshan ruby mines were important sources of this precious stone. The exact dates when these mines operated are not known.

The AV translated Heb. *p^{e}nînîm* as "rubies" in Job 28:18; Prov. 3:15; 8:11; 20:15; 31:10; Lam. 4:7; the RSV has "coral" in the first and last texts, and "jewels" in the Proverbs texts.

Sapphire. A blue variety of corundum (see ruby above). Its blue color arises from the presence of titanium and ferric oxides. The six-rayed star arises from light reflection on oriented, needle-like inclusions of rutile in the hexagonal crystal growth structure.

The name sapphire is derived from Heb. *sappîr,* Arab. *safir,* Sanskrit *śanipriya* (Saturn's Stone), Gk. *sáppheiros,* and Lat. *sapphirus.* But many modern scholars (e.g., KoB, p. 664; cf. BDB, p. 705) identify Heb. *sappîr* as lapis lazuli, which is how the NEB usually translates it (so also the RSV mg. in some texts).

Sapphire is one of the most frequently mentioned jewels in the Bible. In the high priest's breastpiece it was the second gem in the second row (Ex. 28:18; 39:11); it was one of the gems in the covering of the king of Tyre (Ezk. 28:13); and it was the second gem adorning the foundations of the wall around the new Jerusalem (Rev. 21:19; NEB "lapis lazuli"). In addition, when Moses, Aaron, and the elders of Israel saw God, they saw "as it were a pavement of sapphire stone" under His feet (Ex. 24:10; cf. Ezk. 1:26; 10:1). Job 28 twice mentions sapphire: in v. 6 the stones of the earth are said to be the place of sapphires, and in v. 16 wisdom is said to be more valuable than sapphire. The lover in Cant. 5:14 describes her beloved's body as "encrusted with sapphires" (cf. Lam. 4:7). In Isa. 54:11 the Lord promises that the restored Jerusalem will have sapphire foundations. In a vision the seer of Revelation saw horsemen with breastplates "the color of fire and of sapphire" (Gk. *hyakinthinos,* Rev. 9:17; AV "jacinth"; NEB "blue").

Sardius. A deep orange-red or brownish-red variety of chalcedony (see above), similar to carnelian (see above) and perhaps equivalent to the modern sard.

Sardius was the first gem in the first row of the high priest's breastpiece (Heb. *'ōḏem*; LXX *sárdion*; Ex. 28:17; 39:10; NEB "sardin").

Topaz. Its composition is aluminum fluro silicate ($Al_2SiO_4[F, OH]_2$). The mineral occurs in colorless, white, yellow, pink, bluish, and greenish varieties. Its hardness is 8 and specific gravity is about 3.5. The occurrence is in high-temperature environments in igneous rocks and veins. It has been found in massive hydrothermal replacement deposits.

The name topaz has an uncertain derivation, but historians suggest that the Greek word *tópazos* or *topázion* may refer to a Red Sea island (Zebirget). This locality was an important source for peridot (see above). The excavator Flinders Petrie suggested that the term may have applied to green serpentine.

Other minerals which appear under the name of topaz as inferred by their properties are yellow quartz, peridot (magnesium silicate), chalcedony (silica), jacinth (zirconium silicate), and perhaps chrysolite, which the NEB uses to translate Heb. *piṭ^{e}ḏâ*).

Greek intagli attest to the early use of topaz and to their ability to engrave it.

Topaz was the second stone in the first row of the high priest's breastpiece (Heb. *piṭ^{e}ḏâ,* Ex. 28:17; 39:10). Job 28:19 mentions the "topaz of Ethiopia," probably referring to Zebirget (see peridot above), as being less valuable than wisdom. The coverings of the king of Tyre included topaz (Ezk. 28:13). The ninth gem in the foundations of the walls around the new Jerusalem is topaz (Gk. *topázion,* Rev. 21:20).

Turquoise. This is hydrous basic phosphate of copper and aluminum (some iron may be present). The composition is $CuAl_6(BO_4)OH_{(8)}\cdot$ 4-5_2O. The mineral has a sky-blue, bluish-green, or apple-green color with a waxy-dull appearance. Its hardness ranges from 5 to 6 and it exhibits no cleavage, the fracture being conchoidal. It forms in hydrothermal replacement deposits in secondary mineralized alteration zones.

Turquoise was one of the most highly valued precious stones in early antiquity, with pieces of jewelry found on a mummy dated at 7500 B.C., or as early as the Neolithic

period. The 4th-Dynasty tomb of Hetepheres at Gîzeh contained a number of anklets with turquoise inlay. Twelfth-Dynasty discoveries at Lahun and Dahshur feature excellent examples of turquoise. Additionally, a scarab and inlay on two pectorals from Tutankhamen's tomb in the Valley of the Kings are recorded.

The need for accurate find analysis is illustrated by the fact that Breasted's translation of ancient Egyptian records does not include the word turquoise. This is surprising in view of the early extensive cultural employment of this mineral. Lexicographical correction is needed for the ancient Egyptian word for turquoise, *mfk3t*, which was wrongly rendered malachite.

The occurrence of turquoise, especially that employed by the Egyptians, and possibly also the Israelites, was at Serābît el-Khâdim and at the Wâdī Maghara, where the mineralization occurred in seams in sandstone host rock. A high quality of turquoise was found at Khorassan in Persia where the host rock of clayey slate has entrained veins of turquoise.

The modern name of this mineral is derived from the land of Turkey, through which this mineral commodity was introduced into Europe.

Turquoise occurs naturally as incrustations, nodules, veins, and seams which have been deposited through the agency of groundwater. The rich blue colors are the result of the presence of copper while small amounts of iron shift the stone to a greenish cast.

The NEB uses "turquoise" for Heb. *lešem* as turquoise in Ex. 28:19; 39:12 (RSV "jacinth"; the LXX has *ligýrion*); and for Gk. *hyákinthos* in Rev. 21:20 (RSV, AV "jacinth").

See Plates 1-5.

STONESQUARERS (1 K. 5:18, AV). *See* GEBAL.

STONING [Heb. *rāgam*–'cover with a heap of stones' (Lev. 20:2, 27; Nu. 14:10; 15:35f.; Dt. 21:21; Josh. 7:25; 1 K. 12:18; Ezk. 16:40; etc.), *sāqal*–'put to death with casts of stones' (Ex. 8:26 [MT 22]; 17:4; Dt. 13:10 [MT 11]; 17:5; 22:21, 24; Josh. 7:25; 1 S. 30:6; 1 K. 21:10, 13), niphal of *sāqal*–'be stoned' (Ex. 19:13; 21:28f., 32), pual of *sāqal*–'be stoned' (1 K. 21:14f.); Gk. *litházō* (Jn. 10:31-33; 11:8; Acts 5:26; 14:19; 2 Cor. 11:25; He. 11:37), *lithoboléō*–throw stones at someone,' 'stone (to death)' (Mt. 21:35; 23:37; Lk. 13:34; Acts 7:58f.; 14:5; He. 12:20), *katalitházō*–'stone to death' (Lk. 20:6)]. A form of ritual execution, usually carried out by the assembled congregation; also an expression of mob violence.

The Pentateuch prescribed stoning in the following cases: an ox that gores, and its owner as well, if the ox is accustomed to goring (Ex. 21:28f., 32); anyone who sacrifices a child to Molech (Lev. 20:2); any medium or wizard (20:27); anyone blaspheming the divine name (24:14, 16, 23); anyone who leads the congregation astray to serve other gods (Dt. 13:10 [MT 11]); anyone who serves other gods (17:5); a stubborn and rebellious son (21:21); a young woman who, upon consummating her marriage, is found to be without the tokens of virginity (22:21); a man and a betrothed virgin who have sexual relations within a city (22:24). In addition, the Scriptures contain other traditions of ritual stonings: any man or beast drawing too near the mount of the theophany (Ex. 19:13); a man gathering sticks upon the sabbath (Nu. 15:35f.); Achan's violation of the *ḥerem* (Josh. 7:25).

As a form of ritual execution, stoning was carried out by the congregation, i.e., the assembled people acting as a cultic community (cf. Lev. 24:14; Nu. 15:32-36; Josh. 7:22:26). Dt. 17:6f. stipulates that no one shall be put to death on the evidence of a single witness, and that the witnesses shall be the first to cast stones against the accused. This law forms the background for the stoning of Naboth (1 K. 21:8-16). The laws of Dt. 22:21, 23f. and 17:6f. also form the background to the prophecy against Oholah and Oholibah (Ezk. 23, esp. v. 47) and to the story of the woman taken in adultery (Jn. 8:2-11).

Stoning was also an expression of mob violence. The people sought to stone Moses (Ex. 17:4), and Moses and Aaron (Nu. 14:10). Adoram, sent to the northern tribes by Rehoboam, actually was stoned (1 K. 12:18 par. 2 Ch. 10:18). Several such cases are cited in the NT including the murder of the landlord's emissaries in the parable of the wicked tenants (Mt. 21:35) and the related traditions of the stoning of the prophets (23:37). Lk. 20:6 depicts the chief priests, scribes, and elders as fearing that the people would stone them for denying that John the Baptist was a prophet. The soldiers escorting the apostles from the temple are presented as having a similar fear (Acts 5:26). The stoning of Paul at Lystra also seems to have been a spontaneous act of mob violence (14:19).

A third category of stonings involves officially sanctioned lynchings. These include the stoning of Zechariah, the son of Jehoiada the priest, at the instigation of King Joash (2 Ch. 24:21); the stoning of Naboth (1 K. 21:8-16); the attempt to stone Jesus for blasphemy (Jn. 10:31-33; 11:8; cf. Lev. 24:14, 16, 23), and the stoning of Stephen (Acts 7:58f.; Stephen's was sanctioned by witnesses). Indeed, since stoning demanded mass participation, every stoning may have had the quality of a lynching. Execution by stoning was highly formalized and circumscribed in the Mishnah (see esp. *Sanhedrin* vi.1–vii.1, 4, 6f., 9f.).

STORAX. *See* STACTE

STORE-CITIES [Heb. *'ārê misk^{e}nôṯ*]; AV also TREASURE CITIES (Ex. 1:11), CITIES OF STORE (1 K. 9:19; 2 Ch. 17:12). Towns whose main purpose was to serve as sites for royal warehouses. Those mentioned in Ex. 1:11, PITHOM (perhaps modern Tell er-Reṭâbeh) and RAMESES (perhaps modern Ṣân el-Ḥagar, but more likely Qanṭîr), were built by an Egyptian pharaoh (prob. Ramses II; *see also* WANDERINGS OF ISRAEL III.A). Other store-cities were constructed under Solomon (1 K. 9:19; 2 Ch. 8:4, 6), Baasha (presumably; in 16:4 the two Hebrew words are transposed), or Jehoshaphat (17:12).

Store-cities in the OT are uniformly symbolic of the might and prosperity of the king in whose reign they were erected. R. F. YOUNGBLOOD

STOREHOUSE [Heb. *(bêṯ) 'ôṣār* (2 K. 20:13, 15; Neh. 10:38 [MT 39]; 13:12f.; Job 38:22; Ps. 33:7; Jer. 10:13; Mal. 3:10; etc.), *'āsōp*–'stores' (1 Ch. 26:15, 17; Neh. 12:25), *misk^{e}nôṯ*–'storage place' (2 Ch. 32:28); Gk. *tameíon* (Lk. 12:24)]; AV also TREASURE, TREASURY, ASSUPPIM (1 Ch. 26:15, 17), GARNER (Joel 1: 17), etc.; NEB also GRANARY (Gen. 41:56), GATEHOUSE (1 Ch. 26:15, 17), HOUSE, etc. In Gen. 41:56 the MT has *^{a}šer bāhem*, "which was in them." *BHS* suggests *'ōṣ^{e}rôṯ bar*, "stores of grain" (NEB "granary"; cf. LXX; Syr.). On "storehouse" in Jer. 28:11 *see* WARDROBE.

Storehouses might contain anything from agricultural produce (Neh. 13:12) to the treasure of the kingdom (2 K. 20:15 par. Isa. 39:4). Full storehouses might indicate the blessing of God (2 Ch. 32:27-29); empty ones, destruction from the Almighty (Joel 1:15-17). Of course, full storehouses have their negative side, too, when potential enemies covet their contents (2 K. 20:16 par. Isa. 39:6).

In several places the OT pictures God as bringing the elements of His creation from His storehouses, e.g., the snow and hail (Job 38:22), the wind (Ps. 135:7; Jer. 10:13; 51:16), and the sea (Ps. 33:7). G. WYPER

STORK [Heb. *ḥ^{a}sîḏâ* < *ḥāsîḏ*–'loyal, pious' (?) (Lev. 11:19; Dt. 14:18; Ps. 104:17; Jer. 8:7; Zec. 5:9)]; NEB mg. also HERON (Lev. 11:19; Dt. 14:18). The stork is a member of the *Ciconiidae* family. The most familiar species is the white stork (*Ciconia alba*)), which lives in Europe and the Near East during the summer but migrates to southeast Africa and northern India in the winter (cf. Jer. 8:7). Both species can be observed passing through Israel and Jordan each spring. This large elegant bird possesses a white body with attractive black patches on its large wide wings. Its long slender legs are a deep pink color and its beak is red. The black stork (*Ciconia nigra*) is smaller and darker than the white species. Ps. 104:17 indicates that storks nest high up in the tops of trees; the diminution of forest lands in Israel has severely restricted this, however.

Storks and herons are closely related and tend to eat the foods available in swamps and marshy areas. Thus some of the references to storks may actually refer to herons. The *ḥ^{a}sîḏâ* mentioned in Lev. 11:19 and Dt. 14:18 is probably a stork. It was regarded as unclean because it was a bird of prey whose diet included mice, frogs, fish, and small birds.

From ancient times the stork was renowned for the affectionate care that it provided its young, a phenomenon that is reflected in its Hebrew name *ḥ^{a}sîḏâ*, "loving, faithful, constant." Also, a pair of storks will return annually to the same nest, and their fidelity to each other has long been considered a paradigm of marital happiness.

See F. S. Bodenheimer, *Animal and Man in Bible Lands* (1960), pp. 61, 119. R. K. H.

STORM [Heb. *sûpâ* (Job 21:18; Isa. 17:13), *s^{e}'ārâ* (Ps. 107:29; Jer. 23:19; 30:23; Nah. 1:3), *šō'â (Q; K šā'^{a}wâ*, Prov. 1:27; Isa. 10:3; Ezk. 38:9), *zerem* (Isa. 4:6; 25:4; 28:2), *hawwâ* (Ps. 57:1 [MT 2]), *hāzîz* (Zec. 10:1); Gk. *laílaps* (Mk. 4:37; Lk. 8:23; 2 Pet. 2:17), *seismós*–'earthquake' (Mt. 8:24)]; AV also WHIRLWIND, TEMPEST, DESOLATION, etc.; NEB also TEMPEST, HURRICANE, RUIN, etc.; **STORM-TOSSED** [pual of Heb. *sā'ar* (Isa. 54:11); Gk. *cheimázō* (Acts 27:18)]; AV TOSSED WITH A TEMPEST; NEB STORM-BATTERED, HEAVY WEATHER; **STORMWIND** [Heb. *sûpâ* (Isa. 66:15)]; AV, NEB WHIRLWIND; **STORMY** [Heb. *s^{e}'ārâ* (Ps. 107:25; 148:8; Ezk. 1:4; 13:11, 13); Gk. *cheimṓn* (Mt. 16:3)]; AV also WHIRLWIND, FOUL WEATHER; NEB also GALES; **TEMPEST** [Heb. *sa'ar* (Ps. 55:8; 83:15 [MT 16]; Jer. 23:19; etc.), *s^{e}'ārâ* (Isa. 29:6; 40:24; 41:16), niphal of

A thunderstorm near Amman. Severe thunderstorms may occur at any time during the rainy season, but at the edges of the desert on the eastern plateau they are most likely either at the beginning or at the end of the season (D. Baly)

śā'ar (Ps. 50:3), *śa'ar* (Isa. 28:2), *śe'ārâ* (Job 9:17), *sûpâ* (Prov. 10:25), *zerem* (Isa. 30:30; 32:2), *hamullâ* (Jer. 11:16), *te'rû'â* (Am. 1:14); Gk. *cheimōn* (Acts 27:20), *thýella* (He. 12:18)]; AV also WHIRLWIND, TUMULT; NEB also STORM, WHIRLWIND, GREAT GALE, etc.; **TEMPESTUOUS** [Heb. *sa'ar* (Jonah 1:11, 13); Gk. *typhōnikós* (Acts 27:14)]; NEB FIERCE, "worse," "higher." In Job 30:22 the *K* is *te'šuwwâ*, which most scholars prefer, equating it with *te'šu'â* (see *BHS*; *CHAL*, p. 395); the *Q tušîyâ*, meaning "success," does not seem to fit the context. In Hos. 10:15 the RSV has emended MT *šaḥar* ("dawn"; cf. AV "morning" and NEB "day dawns") to *śa'ar*, "storm." But most commentators prefer to retain MT (see H. Wolff, *Hosea* [Eng. tr., *Hermeneia*, 1974], p. 188; F. I. Andersen and D. N. Freedman, *Hosea* [*AB*, 1980], p. 572).

Storms in Palestine normally occur in winter, accompanied by strong, even tempestuous, winds and rain from the west, by thunder and lightning, and occasionally by hail. They are especially dangerous to small sail boats, and long-distance sailing normally ceased during the winter months (Ps. 107:22-30; Jonah 1:4, 11; Acts 27:13ff.). Even on the Sea of Galilee and the Dead Sea the strength of the wind pouring down the mountainside can endanger small craft (Mt. 8:23-27; Mk. 4:36-41; Lk. 8:22-24). Although some modern translations speak of a "hurricane" (e.g., RSV Ps. 83:15) or "tornado"(e.g., NEB Ezk. 38:9), this is misleading, since such storms do not occur in the Mediterranean. Dust storms sometimes develop in desert regions in late summer; they are characterized by a sudden and visible beginning and end. Isa. 25:4 seems to envisage a severe dust storm. As with all weather phenomena, storms were understood to be the work of God (Ps. 148:8; Isa. 28:2), but God could also provide protection from the storm (Isa. 4:6; 25:4).

STORY [Heb. *K yāṣû(a)', Q yāṣî(a)'*] (1 K. 6:6, 10); AV CHAMBER; NEB ARCADE, TERRACE; [*ṣēlā'*] (1 K. 6:8; Ezk. 41:6f.); AV CHAMBER, SIDE CHAMBER; NEB ARCADE, TIER (Ezk. 41:6f.); [*le'ma'lâ le'ma'lâ*] ("from story to story," Ezk. 41:7); AV "still upward"; NEB "one above the other"; [*pa'am*–'time, occurrence'] (Ezk. 41:6); AV ORDER; NEB TIER; [Gk. *tristegon*] ("third story," Acts 20:9); AV THIRD LOFT. By the time of Solomon many houses were built with an upper story (cf. 1 K. 17:23; 2 K. 1:2; 4:10). Solomon's temple and Ezekiel's ideal temple each had three stories. The RSV emends the MT in 1 K. 6:6, 10 to read *haṣṣēlā'* for *hayyāṣî(a)'*, following the LXX. The MT of Ezk. 41:6f. is corrupt, and each version has reconstructed it somewhat differently. The RSV six times supplies "story" when rendering Hebrew adjectives — hence *tîḵōnâ* is rendered "middle story" (1 K. 6:8; Ezk. 41:7), *'elyônâ*, "top story" (Ezk. 41:7), *taḥtōnâ* is "lowest story" (41:7), and *me'šulāšôṯ* (lit. "threefold") is "in three stories" (42:3, 6).

See also HOUSE; TEMPLE. For Gen. 6:16, AV, *see* DECK; for Am. 9:6, AV, *see* CHAMBER. N. J. O.

STORYWRITER (Esd. 2:17, 25, AV). *See* RECORDER.

STOUT. In the RSV OT "stout" translates three Hebrew terms. In Isa. 10:16 "stout warriors" renders the noun Heb. *mišmān*, "fatness." Yahweh will overthrow these "warriors" (AV "fat ones"; NEB "sturdy frame") despite the strength of these Assyrian forces. Am. 2:16 affirms that even the mighty (Heb. *'ammîṣ*, "strong"; AV "courageous"; NEB "bravest") soldiers shall not withstand Yahweh in His day of judgment. In Mal. 3:13 the Lord says that the accusations of the people (vv. 14f.) have become "stout" (Heb. *ḥāzaq*, "grow strong or firm"; NEB "hard"). This may mean that their words are arrogant or, perhaps, intolerable, i.e., their words are "too much" for Yahweh (cf. N. M. Waldman, *JBL*, 93 [1974], 546). G. L. K.

STOVE [Heb. *kîr*–'small hearth' (Lev. 11:35)]; AV RANGES FOR POTS. Ceramic jar stand. Only Lev. 11:35 mentions "stove." It occurs here with the more common *tannûr*, "oven, fire pot."

In this passage, clay vessels contaminated by contact with dead "swarming things" are to be broken (v. 33), as are the oven and the stove (v. 35), which most likely were also made of clay. Since the *kirayim* is mentioned in connection with the oven, rather than with the vessels, it was not likely a pot or jar, but rather something designed to hold a fire or to support the vessels, or both. This is supported by the use of prepositions in the two verses: in v. 33, the contamination falls "into" (*'el-tôḵô*) the vessel, while in v. 35 it falls "onto" (*'ālāyw*) the oven or stove.

The form *kîrayim* is dual, and this may signify that the stove (1) supported two pots, or (2) served one of two functions, that of supporting a jar over the floor or a cooking pot over a fire, or (3) was conceived of as a two-part object, i.e., the stand and the vessel it supported.

The stove was similar to the oven since both could support a cooking pot, but the latter was more commonly used for baking bread and it had a much smaller opening

An open oven with stands for holding cooking pots found in Zealot living quarters at Masada (courtesy, Israel Museum, photo D. Harris)

at the top. If (1) above is correct, then the difference is obvious. But no such two-part stands have been excavated.

D. M. HOWARD, JR.

STRAIGHT [Heb. *yāšār* (fem. *yᵉšārâ*) (1 S. 6:12; Ezr. 8:21; Ps. 107:7; Prov. 29:27; Jer. 31:9; Ezk. 1:23), *negeḏ*–'opposite' (Josh. 6:5, 20; Neh. 12:37; Jer. 31:39; Am. 4:3), *lipnê*–'before, in front of' (Jer. 49:5), *'el-ʿēḇer pānāyw*–'to the side of his face' ("straight forward," Ezk. 1:9, 12; 10:22), *nōḵaḥ*–'opposite' (Ezk. 46:9), *nāḵō(a)ḥ* (Prov. 8:9); Gk. *euthýs* (Mt. 3:3; Mk. 1:3; Lk. 3:4f.; Acts 13:10), *orthós* (He. 12:13), *euthydroméō*–'run a straight course' ("came by a straight course," Acts 21:1)]; AV also RIGHT, PLAIN, "over against"; NEB also HEADLONG, "safe," "smooth," etc.; **MAKE STRAIGHT** [Heb. *yāšar* (Prov. 3:6; Isa. 40:3; 45:13; "be straight," Prov. 4:25; "go straight," 9:15; "keep straight," 11:5), *tāqan* (Eccl. 1:15; 7:13); Gk. *anorthóō*–'rebuild, restore' (Lk. 13:13), *euthýnō* (Jn. 1:23)]; AV also GO RIGHT, "direct"; NEB also "smooth," "clear," "what lies ahead," "hurry"; **STRAIGHTEN** [Gk. *anakýptō*–'stand erect'] (Lk. 13:11); AV "lift up"; **STRAIGHTFORWARD** [Gk. *orthopodéō*–'walk straight'] ("were not straightforward," Gal. 2:14); AV WALK UPRIGHTLY; NEB "did not square." In Ps. 5:8 (MT 9) the *qere* is *haysar* while the *kethibh* is *hôšar*; both are hiphil imperatives of *yāšar* (see GKC, § 70b). In Ps. 49:14 (MT 15) the RSV emends the MT (AV "the upright shall have dominion over them in the morning" follows MT; cf. RSV mg.). In Ezk. 1:7 the MT has (lit.) "their feet a straight foot" (cf. AV "their feet were straight feet"; see comms.).

Hebrew *tāqan* is used only in Ecclesiastes, where it seems to mean "arrange in order" (Eccl. 12:9), "make straight" (so BDB, p. 1075; KoB, p. 1039). Thus in 1:15 Qoheleth states, "What is crooked cannot be made straight." Some commentators (e.g., R. Gordis, *Koheleth — The Man and His World* [3rd ed., repr. 1973], pp. 148, 211; J. Loader, *Ecclesiastes* [Eng. tr., *Text and Interpretation*, 1986], p. 25) take this as a fatalistic or pessimistic proverb reinforcing the point of v. 14 ("all is vanity"). But J. Ellul (*La raison d'être* [1987], pp. 93f., 214) sees it as a realistic view of work, which can change only the exterior, not the inner core, of things or people — only God can change that (see 7:13f.).

The most significant texts involving "straight" are those connected with "path" or "way" in the expression "make/keep straight your paths/ways." The principal root here is *yšr*, which can be used literally or figuratively. In its literal use it may have a geographical or directional sense. Thus it can refer to a direct route (e.g., 1 S. 6:12) or to something that is not curved or bent (e.g., straight legs, Ezk. 1:7).

Another primary sense of *yšr* is "smooth, level." Thus in Isa. 40:3f. to "make straight in the desert a highway for our God" means "Every valley shall be lifted up, and every mountain and hill be made low; the uneven ground shall become level [Heb. *mîšôr*, from *yšr*; see "level" in Ps. 26:12; 27:11; 143:10; Prov. 15:19; Isa. 26:7; 42:16] and the rough places a plain." (The Gospels [Mt.

3:3 par.], in applying this text to John the Baptist, follow the LXX rendering, thus offering an example of freedom in regard to the text.) See also Jer. 31:9, where the Lord consoles His people with the promise that He will lead them in a "a straight path in which they shall not stumble." According to I. H. Marshall, "making straight" in Lk. 3:4 is "a poetic way of saying that the way of the Lord is made easier by having a people already repentant of their sins and prepared to meet him" (*Gospel of Luke* [*NIGTC*, 1978], p. 136).

In Ezr. 8:21 Ezra proclaims a fast so that the exiles who are returning with him from Babylonia to Judah might humble themselves before God to seek from Him a "straight way." In Ps. 107:7 the psalmist may be referring to the Exodus when he says that God "led them by a straight way, till they reached a city to dwell in" (cf. comms.). But in these examples one could also see something more than a directional, literal sense, for the contexts suggest that safety or trustworthiness is more in view than direction (cf. NEB "safe journey" in Ezr. 8:21). On this relational aspect of *yšr* see G. von Rad, *OT Theology*, I (Eng. tr. 1962), 372 n. 6.; *ILC*, I-II, 341, 529.

In its more common figurative use *yšr* has ethical or theological significance (hence it is often translated "right" or "upright"; *see* RIGHT; UPRIGHT). It is frequently linked with the root *ṣdq*, "righteous" (e.g., Ps. 5:8 [MT 9]; Isa. 45:13; cf. Prov. 11:5; 29:27; see H. Cazelles, "De l'idéologie royale," in D. Marcus, ed., *Gaster Festschrift* [*Journal of the Ancient Near Eastern Society of Columbia University*, 5; 1973], pp. 59-73). Thus the expression "straight way" connotes not so much a direct path as a smooth, easy one that is therefore safe or trustworthy. Hence in Ps. 5:8 the psalmist, oppressed by his enemies, prays that the Lord will lead him in His righteousness and make His way straight before him. Prov. 3:5f. clearly states the relational aspect of *yšr*: trust in the Lord, acknowledge Him, and He will "make straight your paths." In 11:5 the way of a blameless person is kept straight by his righteousness, in contrast to the wicked person who "fails by his own wickedness." Similarly, 29:27 contrasts the unjust man, who is "an abomination to the righteous," with "he whose way is straight," who is "an abomination to the wicked."

In Prov. 8:8f. Heb. *nāḵaḥ* parallels *yāšar*: all the words of Wisdom's mouth "are righteous," not "twisted or crooked" — they are all "straight [i.e., plain; so AV, NAB] to him who understands, and right [*yāšar*] to those who find knowledge."

The NT uses similar language and imagery. When Elymas tried to turn the proconsul Sergius Paulus away from the preaching of Paul and Barnabas, Paul rebuked Elymas for "making crooked the straight paths of the Lord," i.e., for perverting the gospel (Acts 13:10). In Gal. 2:14 Paul also rebuked Cephas (Peter) for being "not straightforward about the truth of the gospel," i.e., for being hypocritical or inconsistent, denying "freedom from the Law and justification by faith alone" (*TDNT*, V, 451; see also comms. on Galatians by E. Burton [*ICC*, repr. 1977], pp. 109-111; H. Betz [*Hermeneia*, 1979], pp. 110-12). The author of Hebrews exhorted his readers to "make straight paths for your feet" (a quote from Prov. 4:26, LXX). Scholars have debated the meaning of this expression. According to Preisker (*TDNT*, V, 449f.) it means "pursuing ways which are directed straight to their goal," but for others it means to make a smooth path so that even the lame (the spiritually weak) might not stumble (see F. F. Bruce, *Epistle to the Hebrews* [*NICNT*, 1964], pp. 362f.).

STRAIGHT STREET [Gk. *hē rhýmē hē kalouménē Eutheia*–'the street called Straight'] (Acts 9:11). It is probable that the street of this name in modern Damascus is the one mentioned in the story of Paul's conversion (*see* map in DAMASCUS). Apparently it was well known, perhaps even fashionable (cf. comms. on Acts 9:11, esp. E. Haenchen, *Acts of the Apostles* [Eng. tr. 1971], p. 323).

See also STREET.

STRAIN; STRAINING [Heb. *raʿyôn libbô*–'striving (?) of his heart' (Eccl. 2:22); Gk. *epekteínomai* (Phil. 3:13), *diylízō* (Mt. 23:24)]; AV also VEXATION (OF HIS HEART), REACHING; NEB also SCHEMING, REACHING; The RSV uses this term in two senses: to strive (Eccl. 2:22; Phil. 3:13) and to filter out (Mt. 23:24).

In Eccl. 2:22 the RSV, AV, and NEB translations reflect the uncertainty of the meaning of the Hebrew expression (Heb. *raʿyôn* occurs elsewhere only in Eccl. 1:17 and 4:16 in the expression "striving after wind," Heb. *raʿyôn rû[a]ḥ*; cf. AV "vexation of spirit"; NEB "chasing the wind"). The AV "vexation" is based on a derivation from the root *rʿʿ* I, "do evil"; the NEB "scheming" and RSV are based on a supposed root *rʿh* III, "desire" (which later developed in Aramaic to mean "think"; cf. Dnl. 2:29f.; 4:19 [MT 16]; 5:6, 10; 7:28; see J. A. Montgomery, comm. on Daniel [*ICC*, 1927], p. 164). See further R. Gordis, *Koheleth — The Man and His World* (3rd ed. repr. 1973), pp. 210f., who examined the evidence and concluded that in Ecclesiastes *raʿyôn* retains its early meaning of "desire." On the meaning of this verse in the context of Qoheleth's thought, see G. von Rad, *Wisdom in Israel* (Eng. tr. 1970), pp. 226-237.

The Gk. *epekteínomai* occurs only in Phil. 3:13, though it is related to the common term *ekteínō*, "stretch out." As most commentators point out, this term begins the racing imagery that Paul develops in v. 14 (see, e.g., G. Hawthorne, *Philippians* [*Word Biblical Comm.*, 1983], p. 153).

The imagery in Mt. 23:24 alludes to the practice of straining wine in order to avoid eating unclean insects. (Camels were also unclean; cf. Lev. 11:4, 42f.) The first edition of the AV read "strain out," but a later edition misprinted this as "strain at," and the error was never corrected. See SB, I, 934 for a discussion of parallels in rabbinic texts.

G. A. L.

STRAIT; STRAITEN; STRAITLY; STRAITNESS. The noun "strait" (meaning lit. "narrow place") is used figuratively by the RSV for Heb. *ṣārar* (lit. "be narrow, constricted," "be hard pressed") in the sense of a "situation of distress" in the expression "be in straits" (Jgs. 2:15; 1 S. 13:6; Job 20:22).

The AV sometimes uses the adjective "strait," the nouns "strait" and "straitness," and the verb "straiten" in the literal sense of "(be) narrow, restricted," e.g., for Heb. *ṣar* (2 K. 6:1; Isa. 49:20), *ṣārar* (Prov. 4:12), *mûṣaq* (Job 37:10), the niphal of *ʾāṣal* (Ezk. 42:6); Gk. *stenós* (Mt. 7:13f. par.), and *stenochōréō* (pass., 2 Cor. 6:12). In other AV passages these words are used figuratively in the sense of "strict" (e.g., for the Heb. hiphil of *ʾāḇaʿ* in Ex. 13:19 ["strictly swear"]; Gk. *polýs* in Mk. 3:12; 5:43; *akribéstatos* in Acts 26:5) or "distressed" (e.g., for Heb. *mâṣôq* and the hiphil of *ṣûq* in Jer. 19:9; *ṣārar* in 2 S. 24:14 par. 1 Ch. 21:43; Gk. *synéchō* in Lk. 12:50; Phil. 1:23).

STRAKES. (AV Gen. 30:37; Lev. 14:37). *See* SPOTS; STREAKS.

STRANGE [Heb. *nēḵār* (Dt. 31:16), *zār* (Dt. 32:16; Ps. 44:20 [MT 21]; 81:9 [MT 10]; Prov. 23:33; Isa. 28:21; 43:12; Hos. 8:12), part. of *lāʿaz*–'speak a foreign language' ("strange language," Ps. 114:1), *lāʿēg*–'stammering' (Isa. 28:11); Gk. *parádoxos*–'contrary to expectation' (Lk. 5:26), part. of *xenízo*–'surprise' (Acts 17:20), *xénos* (He. 13:9; 1 Pet. 4:12), *mégas*–'great' (2 Cor. 11:15), *heteróglōssos*–'of another tongue' ("man of a strange tongue," 1 Cor. 14:21)]; AV also STAMMERING (Isa. 28:11), MAN OF (AN)OTHER TONGUE (1 Cor. 14:21), GREAT (2 Cor. 11:15); NEB also FOREIGN, OTHER, OUTLANDISH (Ps. 114:1), etc.; **FOREIGN** [Heb. *nēḵār* (Gen. 35:2, 4; Dt. 32:12; Josh. 24:20, 23; Jgs. 10:16; etc.), *noḵrî* (Ex. 2:22; 18:3; 21:8; 1 K. 11:1; etc.), *zār* (2 K. 19:24), *ʿereḇ*–'mixed people' ("foreign folk," Jer. 25:20; "foreign troops," 50:37), *ʿāmēq*–'unintelligible' (Ezk. 3:5f.); Gk. *allótrios* (He. 11:9, 34), *éxō*–'outside' (Acts 26:11), *xénos* (Acts 17:18)]; AV STRANGE, OUTLANDISH (Neh. 13:26), MINGLED PEOPLE (Jer. 25:20; 50:37), ALIEN (He. 11:34); NEB also STRANGER, ALIEN, RABBLE (Jer. 25:20; 50:37), etc.

The primary terms for "strange" and "foreign" in the RSV OT are Heb. *zār*, *nēḵār*, and *noḵrî*. "Strange" most often represents *zār* (part. of *zûr*, "turn aside," "deviate," "be alienated" [hophal]), which denotes that which is "alien" and "deviant" and therefore considered a threat to the covenant community. The term is often used by the prophets to designate Israel's enemies (RSV usually "strangers" or "aliens"), such as the Assyrians, Babylonians, or Edomites, who bring violent destruction on the land (Jer. 51:51; Lam. 5:2; Isa. 1:7; 25:2; Ezk. 28:7; etc.). It is also applied to the gods of these hostile nations, which threaten to corrupt Israel's faith and thereby destroy its welfare. The terms *nēḵār* and *noḵrî* (both from the root *nkr*) mean "foreign," and the RSV has usually chosen this translation in place of AV "strange." These terms are generally applied to foreign lands and to the people and gods from those lands.

As a nation, Israel was prohibited by God from associating with "strange" or "foreign" gods. The Israelites were commanded to destroy any images that they encountered as they took over the land of Canaan (Dt. 7:25). They were not to worship any gods other than Yahweh (e.g., Josh. 24:20; Ps. 81:9 [MT 10]). But despite the prohibition and warnings, Israel often strayed to serve the gods of neighboring peoples (cf. Dt. 31:16; 32:16), beginning already in the days of Joshua (Josh. 24:23). During the time of the judges they served the Baals (*see* BAAL) and ASHTAROTH, the gods of Aram, Sidon, Moab, Ammon, and Philistia (Jgs. 10:6). Because of the Israelites' APOSTASY Yahweh sent enemies to oppress them; but when they put away their foreign gods, Yahweh delivered them (v. 16). Some of the Israelite kings were instrumental in leading the people into the worship of foreign gods. Solomon was led by his foreign wives into the worship of ASHTORETH, CHEMOSH, and MOLECH (1 K. 11:1-8). Starting with Jeroboam, all the northern kings gave in to IDOLATRY. This was also a problem in the southern kingdom. Manasseh brought the worship of idols even into the temple itself (2 Ch. 33:7). Some of the southern kings, however, led reforms against the worship of foreign gods: Asa (2 Ch. 14:3 [MT 2]; 15:8), Jehoshaphat (19:3), Jehu (2 K. 10:28), Hezekiah (2 Ch. 31:1), Manasseh (later in his life, 33:15), and Josiah (34:3-7); cf. also the reform under Jehoiada the priest (2 K. 11:18).

The RSV translates Heb. *noḵrî* "foreign" eleven times in connection with women. INTERMARRIAGE with foreigners was forbidden due to the negative spiritual influences that would result (Dt. 7:1-5). As mentioned above, Solomon succumbed to the worship of foreign gods through seeking to please his foreign wives (1 K. 11:1-8). Ezra was very distressed about Israel's unfaithfulness in marrying foreign women during the Exile (Ezr. 9:2f., 10-15). In order to turn aside God's anger (10:14) the whole assembly made a covenant with Him to send away all their foreign wives (ch. 10). Nehemiah also condemned foreign marriages, insisting that they were treachery against God (Neh. 13:23-27).

The book of Proverbs uses both *zār* and *noḵrî* as technical references to harlots or prostitutes. The AV uses "strange" to translate both terms; the RSV uses "loose" for *zār* and "adventuress" for *noḵrî* (Prov. 2:16; 5:3, 20; 6:24; 7:5; 22:14; 23:27).

STRANGE FIRE. *See* UNHOLY FIRE.

STRANGER (OT). *See* SOJOURNER, ALIEN, STRANGER.

STRANGER (NT) [Gk. *allótrios* < *állos*–'another' (Jn. 10:5), *xénos* (Mt. 25:35, 38, 43f.; 27:7; Eph. 2:12, 19; He. 11:13; 3 Jn. 5)]; NEB also FOREIGNER, ALIEN. In He. 13:2 "show hospitality to strangers" (AV "entertain strangers"; NEB "show hospitality") is a contextual translation of Gk. *philoxenía*, "hospitality." One who is personally unknown to another or differing in geographical or ethnic origin.

In many ways "foreigner" best captures the sense of these words, because in the ancient world members of one's own community were generally all well-known to each other. Treatment of foreigners in both Jewish and Greco-Roman circles varied greatly. Both cultures came to enjoin and legislate hospitality to visiting and resident aliens, but hostilities and prejudices often remained, especially where a history of warfare or religious incompatibility separated peoples. He. 13:2 and 3 Jn. 5 respectively commend OT and NT examples of hospitality to strangers (cf. the explicit requirement for church leaders in 1 Tim. 3:2; 5:10; Tit. 1:8).

The references in Mt. 25 occur in the parable of the sheep and goats in which Jesus equates welcoming a stranger with welcoming Himself. Commentators debate whether Jesus is discussing how His disciples should treat others or how the "world" should respond to His followers and their message (for a concise survey of approaches, see D. A. Carson, "Matthew," in F. Gaebelein, ed., *Expositor's Bible Comm.*, VIII, [1984], 519f.). In Mt. 27:7 Judas's "unclean money is used for an unclean purpose, the purchase of a cemetery for foreigners, presumably gentiles" (E. Schweizer, *Good News according to Matthew* [Eng. tr. 1975], p. 505), whom the RSV calls "strangers."

Ephesians 2:12, 19 deal with the abolition of the hostility between Jews and Gentiles that had greatly increased since the intertestamental hellenization of much of Judaism. Now these groups are united as new creations in the household of Christ, and the Gentiles, who have been alienated from God's blessings as virtual "enemies" of His chosen people, are no longer "strangers." He. 11 balances this by highlighting the fact that even faithful OT believers died "as strangers and exiles on the earth" without receiving the promises of God in full. Both Jewish and

Gentile Christians recognize that they still live as strangers in a strange land and that their true citizenship is only in heaven (Phil. 3:20).

The sole RSV use of "stranger" for Gk. *allótrios* contrasts the shepherd of a flock with an unknown one who cannot command the allegiance of the sheep (Jn. 10:5). Jesus proceeds to explain that He is the good shepherd and all competitors are hirelings (10:11f.).

Bibliography.—*DNTT*, I, 684f., 686-690; *TDNT*, V, *s.v.* ξένος κτλ. (Stählin). C. L. BLOMBERG

STRANGLED [Heb. piel part. of *ḥānaq*] (Nah. 2:12 [MT 13]); NEB BROKE THE NECK; [Gk. *pniktós*] (Acts 15:20, 29; 21:25). A term applied to animals that have been killed by choking. The Jews were forbidden to eat animals killed in this way because the flesh contained the blood (Lev. 17:10-14); they were required to slaughter animals by slitting the throat and draining the blood. The Apostolic Council decided to request gentile converts to abstain from meat that had been strangled so as to avoid offending the Jews. *See* APOSTOLIC COUNCIL IV.

STRANGLING [Heb. *maḥ^{a}nāq*—'suffocation' < *ḥānaq*—'strangle'] (Job 7:15); NEB CHOKED. While in a state of misery Job voiced his preference for death by choking; this does not, however, suggest premeditated suicide as in the case of Ahithophel (2 S. 17:23), who "hanged himself" (niphal of *ḥānaq*). *See* HANGING.

STRAW [Heb. *teḇen*] (Gen. 24:25, 32; Ex. 5:7; Job 21:18; 41:27 [MT 19]; Jer. 23:28; etc.); AV also STUBBLE (Job 21:18), CHAFF (Jer. 23:28); NEB also CHAFF (Jer. 23:28); [*maṯbēn*—'straw-heap'] (Isa. 25:10). Straw comes from the stalks of wheat, emmer, and barley that have been chopped up by the threshing sledge (*see* THRESHING). After the grain and its stalk have been threshed, it is necessary to separate the combination of grain and straw. By the winnowing process the unwanted lighter material or CHAFF (Heb. *mōṣ*) is blown away. Naturally, chaff became idiomatic for the wicked or enemies of Israel that God would blow away (Job 21:18; Ps. 1:4; 35:5; Isa. 17:13; 29:5; 41:15; Hos. 13:3; Zeph. 2:2).

The primary use of straw was for feed (Gen. 24:25, 32; Jgs. 19:9; 1 K. 4:28 [MT 5:8]; Isa. 11:7; 65:25). It could also be mixed with grains for fodder or PROVENDER (Heb. *bᵉlîl* or *mispō'*). In the Middle East the straw (Arab. *tibn*) is still used today primarily for feed.

A secondary use of straw was as a binding substance in the making of bricks and in ceramics (usually large crude vessels). Before the Exodus from Egypt the Hebrews were engaged in brick-making projects that included the use of straw (Ex. 5:7, 10-13, 16, 18). C. Nims (*BA*, 13 [1950], 24-28) observed that the presence of straw in bricks depended on two factors: first, the use of the brick (those used in vaulting needed to be stronger, while bricks in a vertical wall in the same structure did not always contain straw); second, soil consistency (if the clay content was too high, then bricks tended to crack when drying, and so straw was added to prevent this from happening). Both archeological finds and literary sources (see *DOTT*, p. 184; *ANET*, p. 424) indicate that the ancient Egyptians used straw in clay for bricks and pottery.

J. K. HOFFMEIER

STRAWED. An archaic form of the past tense of Eng. "strew," used by the AV to render Heb. *zārâ* (Ex. 32:20; RSV "scattered"); Gk. *diaskorpízō* (Mt. 25:24, 26; RSV "did sow," "sowed") and *stróṅnymi* (Mt. 21:8 par. Mk. 11:8; RSV "spread").

STREAKS [Heb. *pᵉṣālôṯ*—'peeled strips (on rods, boughs)' < *pāṣal*—'split'] (Gen. 30:37); AV STRAKES; NEB "strips of bark." The strips of bark that Jacob cut from various wooden rods.

STREAM. *See* RIVER.

STREET. The most common OT term for "street" is Heb. *ḥûṣ*, which basically means "outside" (cf. the frequent LXX rendering, *éxō* or *éxōthen*). This term reflects the situation in most ancient cities, where the street was simply the place left outside of (i.e., between) the buildings.

The next most common OT term, Heb. *rᵉḥōḇ* or *rᵉḥôḇ*, apparently refers to a wide area, usually near a gate, suitable for public gatherings, markets, etc. (Gen. 19:2; Ps. 144:14; Prov. 1:20; 5:16; 7:12; 22:13; 26:13; Lam. 2:11f.; 4:18; Ezk. 16:31; Zec. 8:4f.). Thus the RSV usually translates it "(open public) square" or "market (place)." *See* SQUARE.

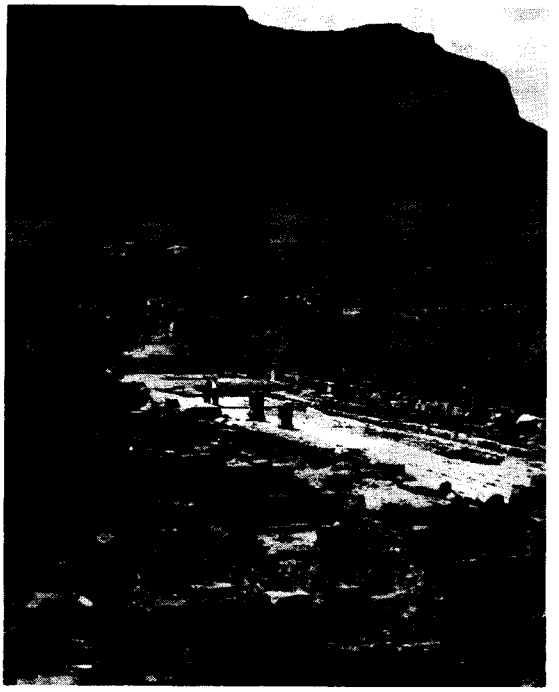
Other OT terms used are Heb. *šûq* (Prov. 7:8; Eccl. 12:4f.; Cant. 3:2), *dereḵ* (Ezk. 16:25; *see* ROAD), and *nᵉṯîḇâ* (Isa. 58:12; *see* PATH).

The usual term behind the use of "street" in the RSV NT is Gk. *plateía*, which originally referred to a flat or wide area. In Lk. 14:21 it is used with Gk. *rhýmē* (RSV "lane"), a term for a narrow street that is also found in Mt. 6:2; Acts 9:11; 12:10.

Other NT terms rendered "street" are Gk. *hodós*, "road" (Mt. 22:10) and *ámphodon* (Mk. 11:4).

Throughout most of ancient Near Eastern history, streets were laid out haphazardly, without much direction from a preconceived plan. Frequently they were no more than the random minimum spaces left over as freestanding building complexes expanded toward each other to accommodate a growing population. These streets, therefore, were twisting lanes of irregular width, often barely wide enough to allow two people to pass and ending in cul-de-sacs. Such neighborhood streets were familiar and cozy retreats for residents but rather uninviting to strangers. Paving was often minimal, consisting of packed earth, crushed limestone, or undressed cobbles. These surfaces tended to build up gradually from the accumulation of windblown dust and human and animal refuse (cf. Isa. 5:25 and the references to dust [Lam. 2:21], mire [e.g., 2 S. 22:43], and mud [Zec. 9:3; 10:15] of the streets). If the street was in use for decades or centuries, modern arch-

A section of a stone street at Philippi. The worn grooves were made by chariots (D. H. Condit)



The main street of Corinth once lined with shops and houses (R. H. Smith)

eologists will find a series of street surfaces superimposed on one another.

Examples of random street layout can be cited from almost every phase of the history of Palestine, such as Early Bronze Arad, Early Iron Tell Beit Mirsim, and Early Christian Mampsis and Umm el-Jimal.

One or more broader main streets often crossed such unplanned cities in a more or less straight line from gate to gate to allow for vehicle traffic and military or ceremonial processions and to give access to public buildings and markets. In Early Iron Age Beer-sheba an oval street running parallel to the perimeter wall superimposes a planned pattern on an otherwise fairly random street layout. In more formally sponsored cities, such as Ahab's Megiddo, the public section appears to have had a more regular layout. (The excavation of most such places is too incomplete to make safe generalizations about street planning.)

Unplanned cities had no squares other than the open spaces on which buildings had not encroached. These could occur randomly as wider parts of streets or more deliberately, inside city gates or in front of public buildings like temples or palaces.

Although Egypt's Amarna offers an early example of carefully planned street layout, street systems in a preplanned grid pattern came to Palestine late. They were introduced by the hellenized rulers who followed Alexander the Great, such as Herod (Caesarea Maritima) and Hadrian (Roman Jerusalem). The main streets of these cities were straight, at right angles to each other, and lined with columns and public buildings. Secondary streets also followed rigid rectangular grids. The main streets were often paved with smooth flagstones and provided with storm sewers. Among the best preserved are the spectacular main streets of Jerash (Gerasa) and Petra.

Residents of such cities experienced a sense of order and familiarity when visiting similar cities, e.g., a native of Caesarea would have been able to find his way easily on the streets of Ephesus or Carthage.

In the Hellenistic planned city the intersection of two main streets was often enlarged and embellished with a *tetrapylon,* a symmetrical arrangement of four piers that supported statues. Other planned open spaces were the *temenos* around a classical temple, where worshipers gathered for sacrifice, and the *agora* or *forum,* where citizens congregated for politics and business. The *temenos* of the Artemis temple and the oval forum at Jerash are outstanding examples of these (*see* Vol. II, Plate 18; *see also* picture in GERASA).

B. DE VRIES
E. W. S.

STRENGTH OF ISRAEL (Joel 3:16, AV). *See* STRONGHOLD; FORTIFICATION IV.

STRIFE; STRIVE. In the RSV the twenty-eight occurrences of the verb "strive" translate six Hebrew terms and seven Greek terms, some of which share similar meanings.

Several terms indicate a literal, physical struggle, e.g., a fight between individuals (Ex.21:2 [Heb. *nāṣâ*]), a wrestling between Jacob and the angel of God (Gen. 32:28 [MT 29]; Hos. 12:3f. [MT 4f.] [*śārâ*]), and a battle against Yahweh, i.e., a waging of war against His people (Jer. 50:24 [hithpael of *gârâ*]).

The image of physical fighting or struggling may be used figuratively for those who contend with the wicked (Prov. 28:4 [Heb. hithpael of *gārâ*]), for one who struggles in the realm of the spiritual life (Lk. 13:24; Col. 1:29; 1 Tim. 4:10 [Gk. *agōnízomai*]; Col. 2:1 [*agṓn*]), and for one who struggles together for the faith of the gospel (Rom. 15:30 [*synagōnízomai*]), and in prayer (Phil. 1:27 [*synathléō*]).

"Strive" can also refer to a fighting that takes place on a verbal level, e.g., to attack with reproaches (Isa. 41:11; Dt. 33:8 [Heb. *rîḇ*]), to dispute with one's Maker (Isa. 45:9 [*rîḇ*]), or to contend, perhaps in a legal sense, over land rights (Jgs. 11:25 [*rîḇ*]).

"Strive" also denotes an effort to achieve something, e.g., striving for wisdom, pleasure, lasting achievement (Eccl. 1:14; 2:11, 17, 26; 4:4, 6; 6:9 [Heb. *rᵉʿût*]; Eccl. 1:17; 4:16 [*raʿyôn*]), seeking to excel in building up the Church (1 Cor. 14:12 [Gk. *zētéō*]), making effort to be obedient (He. 4:11 [*spoudázō*]), and pursuing peace and holiness (He. 12:14 [*diṓkō*]).

The word "strife," which occurs thirty-two times in the RSV, translates six Hebrew terms and one Greek term. These terms exhibit approximately the same range of nuances as those above. In some of the contexts it is unclear whether the strife is physical or verbal.

Some texts indicate physical struggle or conflict (Prov. 13:10; 17:19 [Heb. *maṣâ*]), while others indicate a stirring up of strife in the sense of an attack or threat of attack (Isa. 54:15 [*gûr*]).

Strife expressed on a verbal level may range from particular disputes (Gen. 13:7; Dt. 1:12 [Heb. *rîḇ*]; Gen. 13:8 [*mᵉrîḇâ*]), to general quarrels (Prov. 17:1; 20:3; 26:21 [*rîḇ*]), verbal hostility and verbal attacks (Nu. 27:14 [*mᵉrîḇâ*]; 2 S. 22:44; Ps. 18:43 [MT 44]; 31:20 [MT 21]; 55:9 [MT 10]; Prov. 18:6; 30:33; Jer. 15:10; Hab. 1:3 [*rîḇ*]; Rom. 1:29; 1 Cor. 3:3; Gal. 5:20 [Gk. *éris*]).

Strife can designate contention in general (2 S. 19:9 [MT 10] [Heb. *dîn*]), or be used as an expression of ill will (Prov. 10:12; 15:18; 16:28; 17:14; 22:10; 23:29; 28:25; 29:22 [*māḏôn*]). It can also refer figuratively to pain (Job 33:19 [*rîb*]).

R. K. DUKE

STRIKE. *I. In the OT.*–In the Hebrew Bible the chief word for "strike" is the hiphil of *nāḵâ*, which is also frequently rendered "smite" (*see* SMITE). In eighty-seven instances the RSV has translated this term as "strike" (and so also in three occurrences in the hophal and one in the niphal). Its most common context is the scene of battle or of personal combat. Examples include Saul's campaign against the Philistines (1 S. 14:31), his personal vendetta against David (19:10), David's personal combat with Goliath (17:46. 49f.), David's arrangements to have Uriah slain in battle (niphal, 2 S.11:15), Eleazar's heroic exploits against the Philistines (23:10), Ahab's fatal injury during the battle for Ramoth-gilead (1 K. 22:34 par. 2 Ch. 18:33), the apocalyptic battle with Gog (the striking of the bow symbolizing defeat in battle, Ezk. 39:3), and the Babylonian siege of Jerusalem (Mic. 5:1 [MT 4:14]).

This term also appears frequently in contexts of succession struggles, coups, and political assassination attempts, e.g., the assassinations of Amnon (2 S. 13:28), Amasa (20:10), Nadab (1 K. 15:27), Elah (16:10), Ahab's heirs (2 K. 9:7; 10:9), Joash (12:21 [MT 22]), Zechariah (15:10), Shallum (v. 14), Pekah (v. 30), and Gedaliah (Jer. 41:2); cf. also the assassination opportunity (against Saul) welcomed by Abishai but rejected by David (1 S. 26:8), Absalom's attempted coup (2 S. 17:2), and the execution of Absalom (18:11, 15). (The RSV also uses "slay" to describe similar events and deeds; *see* SLAY.)

The hiphil of *nāḵâ* is also used to denote the administering of a beating or blow in non-combat contexts, e.g., the fighting of two Hebrews in Egypt (Ex. 2:13) and the beatings applied by Balaam to his ass (Nu. 22:23-32). It may refer to a slap in the face (1 K. 22:24 par. 2 Ch. 18:23; Job 16:10) or simply to hitting someone (e.g., Prov. 19:25; 1 K. 20:35, 37); Prov. 23:35 refers humorously to the drunkard's inability to realize when he has been struck. The term refers to a fatal blow in the case of the two contending brothers from Tekoah (2 S. 14:6f.). The murder laws of Nu. 35:16-18, 21 prescribe the death penalty for fatal blows administered with implements of several kinds. Similarly, Ex. 21:12, 15, 18-20, 26 details the punishments for both fatal and non-fatal blows inflicted on other persons (cf. also the use of the hophal of *nāḵâ* in 22:2 [MT 1]). The hiphil of *nāḵâ* may also be used for symbolic gestures such as the clapping of hands as a sign of extreme displeasure (Ezk. 22:13), the striking of the ground with arrows in a ritual of sympathetic magic (2 K. 13:18f.), and the chopping blows that Ezekiel applied to one-third of his hair round about Jerusalem to symbolize the slaughter of the city's inhabitants (Ezk. 5:2).

The hiphil of *nāḵâ* is also used of various wonders, plagues, or judgments that "strike" from the hand of Yahweh. At Yahweh's command Aaron struck the Nile with his rod, and the Nile turned to blood (Ex. 7:17, 20, 25); similarly, Aaron used his rod to strike the dust of the earth, and it produced gnats (8:16f. [MT 12f.]). Other examples include Moses' striking of the rock at Horeb (Ex. 17:5f.) and the rock at Meribah (Nu. 20:11) to produce water, Elijah's and Elisha's striking of the Jordan with Elijah's mantle to part the waters (2 K. 2:8, 14), the angels' striking of the men of Sodom with blindness (Gen. 19:11), Yahweh's striking of Egypt with pestilence and hail (Ex. 9:15, 25), His striking down of the firstborn of Egypt (Nu. 33:4), His threat in the wilderness to strike His own people with pestilence (Nu. 14:12), His striking of the Philistines with tumors (hophal, 1 S. 5:12), His striking of the Syrian soldiers with blindness (2 K. 6:18), and His chastening strikes of judgment against Ephraim (Hos. 6:1; hophal, 9:16), Jerusalem's leaders (Zec. 13:7), and Jerusalem's foes (12:4).

In Hos. 14:5 (MT 6) the RSV and NEB render the phrase *nāḵâ* (hiphil) *šōrēš* by "strike root." This image symbolizes expansion and recovery, the perdurability of Yahweh's new creation.

Hebrew *pāga'* ("meet with, encounter") is translated "strike down" by the RSV five times in 1 K. 2:25-46 (vv. 25, 29, 31, 34, 46), referring to a series of executions carried out by Benaiah at King Solomon's command. In each instance the verb is followed by *bô* (*be-personae*), designating the person "struck" or hostilely encountered (Adonjah, Joab, and Shimei). In Job 36:32 the RSV emends the MT to read *mipgā'* ("target, mark," derived from *pāga'*; cf. 7:20) and supplies "strike" in a reference to God's ordering the lightning to "strike the mark"; cf., however, M. H. Pope's translation "with sure aim" for MT *mapgî(a)'* instead of the usual emendation to *mipgā'* (*Job* [*AB*, 3rd ed. 1983], p. 276).

The verb *hālam* ("hit, strike, smash") is translated "strike" by the RSV four times with a variety of nuances. In Ps. 141:5 it refers to a well-intended corrective blow. In Jgs. 5:26 it is one of the terms used to describe the smashing blow of the mallet (*halmût*, a word play on *hālam*) wielded by Jael in crushing the head of Sisera (cf. the same verb in v. 22, where it describes the "beating" of horses' hooves). Isa. 16:8 depicts the devastation of Moab (renowned for its vineyards) under the figure of the "lords of the nations" striking down the great vine of Sibmah (the NEB has reordered the syntax so that it is the grapes of that vine that "once laid low [*hālam*] the lords of the nations"). In Isa. 41:7 *hālam* refers to the goldsmith's beating of the anvil.

Hebrew *nāga'* ("touch, strike") is in six instances translated "strike" by the RSV. Twice it refers to natural disaster: the striking of the fiercely hot east wind (Ezk. 17:10) and of the "whirlwind" (so NEB; Job 1:19). In 1 S. 6:9 the Philistines endeavor to determine whether it was Yahweh who afflicted them with tumors. In Ps. 73 the psalmist struggles to understand the prosperity of the wicked and the suffering of the innocent. The traditional theology taught that the righteous are not "stricken" (cf. v. 5; NEB "suffer torments"); yet the righteous psalmist finds himself constantly "stricken" (v. 14). *Nāga'* appears most notably as "stricken" in the fourth Servant Song of Isaiah (53:4): "we esteemed him stricken [Heb. *nāgû(a)'*], smitten by God [*mukkēh 'ĕlōhîm*]"; this remarkable phrase expresses (in order to contradict) the nearly universal ancient view of suffering as divine punishment that one brought upon oneself through wicked deeds (*see also* SMITE).

Hebrew *nāgap* ("smite, strike") is in three instances translated "strike" by the RSV. In two of these Yahweh is represented as controlling the timing of certain persons' death: the baby of Bathsheba in 2 S. 12:15, and the foes of the Davidic dynasty in Ps. 89:23 (MT 24). In Nu. 14:42 the niphal of *nāgap* is translated "be struck down" in reference to defeat in battle. *See also* SMITE; SLAY.

Eleven other Hebrew verbs are translated "strike" by the RSV. In Prov. 1:26f. the common verb *bô'* (lit. "come") is used twice with the subject *paḥaḏ* ("terror, dread") to refer to the "panic" that will "strike" (AV "come"; NEB "come upon") the fool or evildoer "like a storm." In Dt. 19:5 the common verb *māṣā'* ("find, meet") is rendered "strike" because it refers to a "meeting" between a flying axe-head (that has slipped off the handle) and a bystander, resulting in an accidental death. In Job 15:29 the RSV and NEB follow the Vulgate in translating Heb. *nāṭâ . . . minlām* as "strike root." The verb *nāṭâ*, "extend, spread," could connote the spreading of roots, but the object *minlām* is a hapax legomenon of uncertain

meaning. (The LXX has *skiá*, "shadow".) See M. H. Pope, *Job* (*AB*, 3rd ed. 1983), pp. 118f., for a proposed revocalization of *minlām* based on Arab. *manāl*, "acquisition"; if this translation is correct, the phrase may mean that the wicked will not be able to extend their possessions beyond this earth.

In Job 20:24 the AV and RSV use "strike through" to translate the verb *ḥālap* ("pierce"; cf. NEB). Heb. *sāpaq* ("clap, slap") usually occurs in references to gestures such as clapping the hands (at someone in mockery, Lam. 2:15) or slapping the thigh (in distress, Ezk. 21:17). Twice the RSV translates it "strike": in Nu. 24:10 Balak expresses his anger at Balaam by striking (AV "smite"; NEB "beat") his hands together, and in Job 34:26 God is said to clap the evildoer with a stroke of justice. The same term, with an alternate sibilant orthography (*ś* in place of *s*), occurs in the difficult final phrase of Isa. 2:6, which reads, literally, "with the children of foreigners they clap [hiphil of *śāpaq*]." The RSV takes the verb in the technical sense of "striking hands" to enter into a treaty or seal a bargain. The AV, however, has "please themselves with foreigners," and the NEB (following the LXX) reads "with the children of foreigners everywhere" (see comms.).

Hebrew *ḥālal* ("wound, slay, be slain") occurs in Ps. 109:22, where the psalmist complains of a heart that is "stricken" (NEB "distracted"; AV "wounded"). Lam. 4:9 uses the pual of *dāqar* ("be stabbed, pierced") in a clever wordplay to suggest that those who died by the sword defending Jerusalem were much better off than those who were "stricken" (lit. "stabbed") by hunger.

In a few instances the RSV translates verbs as "strike" only because of the context. In Ps. 10:18 the common verb *yāsap* ("increase") combined with *ʿrôṣ* ("fear"), is rendered "strike terror." Similarly, in 2 Ch. 32:21 the hiphil of *nāpal* ("make fall"), used in combination with *ḥereḇ* ("sword"), is translated by the RSV "struck . . . down . . . with the sword" (AV "slew"). In two instances *šānâ* ("do again, repeat") is translated "strike," the meaning being supplied from the prior use of the hiphil of *nāḵâ* (1 S. 26:8; 2 S. 20:10).

Three Hebrew substantives are each once rendered "striking" or "stricken" by the RSV. *Ḥabbûrâ* ("stripe, blow"; cf. "stripes" in Isa. 53:5) is rendered "striking" (NEB "blow"; AV "hurt") in the boastful song of Lamech (Gen. 4:23). In Isa. 16:7 the hapax legomenon *nāḵā'* is apparently related to the verb *nāḵā'* (a rare form of *nāḵâ*), "beat, scourge." The noun *nega'*, usually rendered "blow" or "plague" (cognate to the verb *nāga'*; see above), is translated "stricken" in reference to the Servant of the Lord in Isa. 53:8.

In Dnl. 2:35 the RSV translates the Aramaic verb *mᵉḥā'* "strike" in reference to the smashing of a statue by a falling stone (but cf. the RSV's use of "smite" in v. 34 for the same verb).

II. In the NT.–The RSV uses "strike" to render a variety of Greek terms with the general meaning of "hit," "beat," or "strike." The verb *patássō* appears more than four hundred times in the LXX, usually as the equivalent of Heb. hiphil of *nāḵâ*. In seven of its ten NT occurrences the RSV translates it "strike" (for the other three, *see* SMITE). Three of these are in quotations from the OT: Acts 7:24 quotes Ex. 2:12 (where the RSV renders the Heb. hiphil of *nāḵâ* by "kill"), and Mk. 14:27 par. Mt. 26:31 quote Zec. 13:7. *Patássō* is also rendered "strike" in two passages referring to the cutting off of the ear of the high priest's slave by one of Jesus' disciples (Mt. 26:51 par. Lk. 22:49f.; cf. Mk. 14:47 and Jn. 18:10, which employ the synonymous vb. *paíō*). In Acts 12:7 *patássō* describes a jostling administered by the angel awakening Peter in jail.

Patássō also occurs with some frequency in the Apocrypha, and in eleven instances the RSV translates it "strike"; e.g., in references to the defeat of Shechem (Jth. 9:3; cf. Gen. 34:25-29), to Judith's striking off the head of Holofernes (Jth. 13:8, 15; cf. 9:10), to military victories of Judas and Jonathan in the Maccabean revolt (1 Macc. 2:44; 5:7, 65; 9:47, 66), and to God's role in the horrible death of the detested Antiochus IV Epiphanes (2 Macc. 9:5; cf. vv. 6-12).

The verb *týptō* has the basic sense of "stupefy by a blow"; its original sense was "stamp on a mark," but it came to be used as a general term for "strike" or "beat" (*TDNT*, VIII, 260). In the LXX it is much less common than *patássō*, but it is used most often to translate the Heb. hiphil of *nāḵâ* (occurring only twenty-six times). In six of its thirteen NT occurrences *týptō* is translated "strike" by the RSV (AV "smite"; elsewhere the RSV usually has "beat"). In Mt. 27:30 par. Mk. 15:19 the reference is to Pilate's soldiers' mockingly hitting Jesus on the head with a reed. In Lk. 6:29 (cf. par. Mt. 5:39, which has Gk. *rhapízō*) Jesus counsels offering the other cheek to someone who hits one on the cheek. *Týptō* is also translated "strike" by the RSV in 2 Macc. 3:39, which refers to God's punishment of those who come to Jerusalem for ill purpose.

In four instances in the RSV NT "strike" represents *paíō*, "another general term for "hit" or "strike." Two of these occurrences (mentioned above) refer to the cutting off of the ear of the slave of the high priest (Mk. 14:47; Jn. 18:10). The other two instances refer to the behavior of the chief priests and members of the council who mockingly asked Jesus to identify who it was that "struck" Him (Mt. 26:68 par. Lk. 22:64; AV "smite"; NEB "hit").

The verb *kolaphízō* ("beat, ill-treat, harass") is used to refer to the same incident of striking Jesus in Mt. 26:67 par. Mk. 14:65; in Lk. 22:63 the generally synonymous verb *dérō* is used for the same action but translated "beat" by the RSV and NEB. *Dérō* is twice translated "strike" by the RSV. In Jn. 18:23 Jesus responds to an officer of Annas with the words: ". . . if I have spoken rightly, why do you strike me?" In 2 Cor. 11:20 Paul lists striking in the face among the abuses that the Corinthians were tolerating from his opponents the false apostles; the reference is perhaps figurative for insult, but it more likely indicates actual physical assault (cf. Mt. 26:67 par.; Acts 23:2f.).

Greek *proskóptō* with the preposition *prós* has the meaning "strike (something) against (something)." In the second wilderness temptation of Jesus (Mt. 4:6; par. Lk. 4:11) the devil cites Ps. 91:11f. to the effect that if Jesus threw Himself off the top of the temple, angels would bear Him up ("lest you strike your foot against a stone"); thus the crowds would be deeply impressed with His powers.

Greek *píptō* ("fall, collapse," "strike") is used of the sun's relentless beating in Rev. 7:16, where this is listed among the hardships that those clothed in white robes will no longer face. Its cognate *peripíptō* ("fall into," "encounter") is translated "strike" in Acts 27:41, where it refers to a drifting ship's hitting of a shoal or reef off the island of Malta (cf. AV "fall into"; NEB "run aground"). *Apokteínō* ("kill [someone], put to death") is usually translated "kill" (e.g., Mt. 10:28), but in Rev. 2:23 the RSV and NEB translate the phrase *apoktenṓ en thanátǫ́* "strike dead" (AV "kill with death"). It is possible, however, that *thánatos* ("death") is here used in the sense of a particular kind of death, namely, "pestilence" (cf. Rev. 6:8; 18:8; see comms.).

In Acts 27:14 the common verb *bállō* ("throw, cast") with the preposition *katá* is rendered "strike down" by the RSV in reference to the catastrophic impact of a tem-

pestuous "northeaster" on the ship carrying Paul to Italy (NEB "tear down"; AV "arise"). The cognate *katabállō* ("knock down") is also once rendered "strike down" by the RSV, in a figurative reference to the impact of daily hardships ("struck down, but not destroyed," 2 Cor. 4:9). The RSV also translates *katabállō* "strike down" several times in the Apocrypha, referring to a blow from a hot-tempered person (Sir. 8:16), to David's overthrow of Goliath's boasting (47:4), to the defeat of Lysias (1 Macc. 4:33), and to God's strong defense against the foes of the Maccabears (2 Macc. 8:18).

The verb *plḗssō*, which occurs only once in the NT, refers in Rev. 8:12 to a cosmic blow that causes the sun to lose a third of its light. Its cognate *kataplḗssō* (RSV "strike down") is used in 2 Macc. 15:24 of blasphemers who will be struck by terror from God.

Greek *rhapízō* ("hit, slap") is translated "strike" by the RSV in Matthew's Sermon on the Mount, where Jesus advises turning the other cheek when someone "strikes you on the right cheek" (Mt. 5:39; AV "smite"; NEB "slap"; cf. *týptō* in par. Lk. 6:29). The cognate noun *rhápisma* (a "blow" or "hit") in combination with the verb *dídōmi* ("give") is translated "strike" by the RSV in two references to Jesus' being hit or slapped during His trials before Annas (Jn. 18:22; cf. *dérō* in v. 23) and Pilate (19:3).

D. G. BURKE

STRING [Heb. *pāṯîl*–'rope'] (Jgs. 16:9); AV THREAD; NEB STRAND; [*yeṯer*] (Ps. 11:2); [*ḥ*ᵃ*rûzîm*] ("strings of jewels," Cant. 1:10); AV, NEB, CHAINS. Hebrew *pāṯîl* was a twisted cord or thread made from the coarse, broken part of flax ready for spinning. *Yeṯer*, "bowstring," was commonly made from ox gut, braided hair, or flax. The *ḥ*ᵃ*rûzîm* of Cant. 1:10 probably refers to a necklace of beads. The RSV reading of Hab. 3:9 is an attempt to correct an obscure passage in the MT; the AV gives a literal translation.

STRINGED INSTRUMENTS; STRINGS. *See* MUSIC II.B.

STRIPE, STRIPES (Ex. 21:25; Dt. 25:2f.; 2 S. 7:14; Isa. 53:5). *See* FLOG, PUNISH IV.A.; SCOURGE; WOUND.

STRIPED [Heb. *'āqōḏ*] (Gen. 30:35, 39f.; 31:8, 10, 12); AV RINGSTRAKED. This term occurs only in Genesis and implies a variation in the color distribution of animals in Laban's flocks. But KoB (p. 730) suggests that it describes a twisting of the tail in sheep and goats. Perhaps Jacob's experiments with his father-in-law's animals in selective breeding produced sheep with distinctive tails such as the fat-tailed variety.

See also SPECKLED.

See C. Westermann, *Genesis 12–36* (Eng. tr. 1985), pp. 482f.

R. K. H.

STRIPLING. *See* YOUTH.

STRONGHOLD [Heb. *'almān*] (Ezk. 19:7); [*'armôn*] (Isa. 34:13; Jer. 49:27; Hos. 8:14; Amos 1:4, 7, 10, 12, 14; 2:2, 5; 3:9-11; 6:8); AV PALACE; [*biṣṣārôn*] (Zec. 9:12); [*miḇṣār*] (Nu. 13:19; Ps. 89:40 [MT 41]; Jer. 48:18; Lam. 2:2, 5; Dnl. 11:24; Mic. 5:11 [MT 10]); [*misgereṯ*] (Mic. 7:17); AV HOLE; [*māʿôz*] (Jgs. 6:26; Ps. 27:1; Prov. 10:29; Isa. 23:4, 11, 14; 25:4; Jer. 16:19; Ezk. 24:25; 30:15; Joel 3:16 [MT 4:16]; Nah. 1:7); AV also STRENGTH, FORTRESS (Jer. 16:19); [*mᵉṣāḏ*] (Jgs. 6:2; 1 S. 23:14, 19, 29 [MT 24:1]; 1 Ch. 11:7; 12:8, 16; Jer. 48:41; 51:30; Ezk. 33:27); AV also HOLD, CASTLE, FORT; [*mᵉṣûḏâ*] (1 S. 22:4f.; 24:22 [MT 23]; 2 S. 5 7, 9, 17; 23:14; 1 Ch. 11:16; AV also HOLD,CASTLE; [*mᵉṣôḏâ*] (Isa. 29:7); AV MUNITION [*miśgāḇ*] (2 S. 22:3; Ps. 9:9 [MT 10]; 18:2 [MT 3]; 94:22; 144:2); AV HIGH TOWER, REFUGE (Ps. 9:9), DEFENCE (94:22); [*'ōz*] (Prov. 21:22); AV STRENGTH; [*ṣᵉrî(a)ḥ*] (Jgs. 9:46, 49); AV HOLD; [Gk. *ochýrōma*] (2 Cor. 10:4); in Jer. 48:7 the RSV has "stronghold" instead of AV "work" (Heb. MT *maʿᵃśeh*) because the LXX has Gk. *ochýrōma*, which presupposes Heb. *māʿôz* or *mᵉṣûḏâ*, in place of both *maʿᵃśeh* and *'ôṣār*, "treasure."

See FORTIFICATION, esp. I.B. The only terms not treated there are: (1) *mᵉṣāḏ*, for which see *mᵉṣûḏâ*; (2) *misgereṯ*, a puzzling term translated "fastness" in 2 S. 22:46 par. Ps. 18:45 (MT 46); and (3) Gk. *ochýrōma*, which means fortress or dungeon.

E. W. S.

STUBBLE [Heb. *qaš*] (Ex. 5:12; Job 41:28f. [MT 20f.]; Isa. 5:4; Joel 2:5; etc.); NEB also CHAFF, REED; [Gk. *kalámē*] (1 Cor. 3:12); NEB STRAW. Grain stalks left in the ground after harvesting.

Although many contexts seem to suggest that *qaš* is synonomous with CHAFF and STRAW, being easily blown by the wind at the threshing floor, there seems to be a distinction between it and *teḇen*, "straw," in Ex. 5:12. When the *teḇen* was withheld from the Israelites in Egypt, they were forced to collect *qaš*. Stubble is most frequently used in a figurative sense of worthlessness, lightness, and something that is easily destroyed and burned (e.g., Isa. 5:24; 47:14; Joel 2:5; Ob. 18). When blown by the wind it is vain to pursue it (Isa. 40:24; 41:2; cf. Job 13:25); Leviathan treats slingstones and clubs like it (Job 41:28f.); and the enemies of God are consumed like it (Ex. 15:7).

The Greek *kalámē* is related to *kalámos*, "reed." 1 Cor. 3:12 indicates that it is a building material. Paul's comparison of superior building materials ("gold, silver, precious stones") with inferior materials ("wood, hay, stubble") pictures the ultimate value of a minister's contribution to the church, i.e., works of value will remain whereas inferior works will be destroyed, as fire consumes combustible materials.

L. G. HERR

STUBBORN; STUBBORNLY; STUBBORNNESS [Heb. hiphil of *qāšâ*] (Ex. 13:15; Dt. 10:16); AV HARDLY, STIFFNECKED; [*qᵉšî*] (Dt. 9:27); [*qāšeh*] (Jgs. 2:19); NEB WILFUL; [hiphil of *qāšâ* + *'ōrep*, *qᵉšēh 'ōrep*, *'ōrep qāšeh*] (Dt. 9:6, 13; 31:27; 2 K. 17:14); AV STIFFNECKED, STIFF NECK, HARDEN (ONE'S) NECKS; [*qᵉšê-lēḇ*] (Ezk. 3:7); AV HARDHEARTED; [*bᵉṣawwā'r*] (Job 15:26); AV ON (HIS) NECK; NEB HEAD DOWN; [*nāṯan kāṯēp sōreret*] ("turn a stubborn shoulder," Neh. 9:29; Zec. 7:11); AV WITHDRAW/PULL AWAY THE SHOULDER; NEB also TURN (THEIR) BACKS IN DEFIANCE; [*'abbîr lēḇ*] (Isa. 46:12); AV STOUTHEARTED; [*ḥizqê-lēḇ*] (Ezk. 2:4); AV STIFFHEARTED; NEB OBSTINATE; [*sārar*, part. *sôrēr*] (Dt. 21:18, 20; Ps. 78:8; Jer. 5:23; 6:28; Hos. 4:16); AV also REVOLTING, GRIEVOUS, SLIDE BACK, BACKSLIDING; NEB DISOBEDIENT, ARCH-REBELS, WILD; [*ṣᵉrîrût*] (Dt. 29:19 [MT 18]; Ps. 81:12 [MT 13]; Jer. 3:17; 7:24; 9:14 [MT 13]; 11:8; 13:10; 16:12; 18:12; 23:17); AV IMAGINATION, LUST; [hiphil of *pāṣar*] (1 S. 15:23); NEB "yielding to men"; [Gk. *sklērýnō*] (Acts 19:9); AV BE HARDENED; NEB OBDURATE; **OBSTINATE** [Heb. piel of *'āmaṣ*] ("make obstinate," Dt. 2:30); [*qāšeh*] (Isa. 48:4); NEB STUBBORN. Unyielding in course or purpose.

A frequently used metaphor for stubbornness is that of

being "stiff-necked" (*qšh,* "[be] hard," + *ʿōrep,* "neck" [*ṣawwāʾr* also means "neck"]) or "turning a stiff shoulder" (Neh. 9:29; Zec. 7:11) — behavior characteristic of an animal that refuses to follow its master's directions. This metaphor is used to describe Israel's rebelliousness and refusal to heed the prophets of Yahweh. This rebellious or indifferent attitude is also described as "making hard" (Heb. *qāšâ*; Gk. *sklērýnō*) or "strong" (Heb. *ʾabbîr, ḥāzaq*) the heart (*lēḇ*). Heb. *šᵉrîrûṯ* occurs always in conjunction with "heart," referring to those who follow their own evil wills instead of walking in accordance with the word of Yahweh.

See STIFF-NECKED; HARDEN. G. WYPER
N. J. O.

STUD, ROYAL [Heb. *rammāḳîm*] (Est. 8:10); AV YOUNG DROMEDARY; NEB ROYAL STABLES. Although the precise meaning of *hārammāḳîm* is uncertain, the verse clearly refers to horses with the speed and endurance to carry the royal dispatches quickly throughout the empire.

STUDDED [Heb. *nᵉquddâ*–'point,' 'drop'] (Cant. 1:11); AV STUD; NEB BEAD. The hapax legomenon Heb. *nᵉquddôṯ* probably refers to "small bright bits or other glittering material for decoration" (M. Pope, *Song of Songs* [*AB,* repr. 1983], p. 345).

STUDY [Heb. *dāraš*–'seek, inquire'] (Ezr. 7:10; Ps. 111:2); AV SEEK, SEEK OUT; [*śāḵal*–'understand'] (Neh. 8:13); AV UNDERSTAND; [*ḥāqar*–'search'] (Eccl. 12:9); AV SEEK OUT; NEB SEEK HOW; [*lahag*] (Eccl. 12:12); [Gk. *manthánō*] (Jn. 7:15); AV LEARN; NEB (UN)TRAINED. The first three terms refer to diligent application in seeking the knowledge and wisdom of God. A more technical reference to academic study is found in Eccl. 12:12, and also in Jn. 7:15, where Jesus' hearers were surprised with His learning because He was not formally trained.

STUFF. The Hebrew phrase *tôlaʿaṯ šānî* (Ex. 25:4; 26:1, 31, 36; 27:16; 28:6, 8, 15, 33; etc.), rendered "scarlet stuff" in the RSV (AV "scarlet"; NEB "scarlet," "scarlet yarn," "scarlet thread"), refers to the red dye obtained from the body of the *Coccus ilicus,* an insect found attached to the kermes oak. The dried bodies of the females were used to produce a brilliant and permanent crimson dye that was highly prized for those qualities (see *MBP,* pp. 194f.). Thus *tôlaʿaṯ šānî* came to refer to yarn or fabric that had been dyed in this manner and color.

In Ex. 36:7 Heb. *mᵉlāʾḵâ,* a general word for "work" or "occupation," refers to the products of various work or occupations (35:20-29) that were given as freewill offerings by the Israelites for the construction of the tabernacle. In Josh. 7:11 Heb. *kᵉlî,* a general term for any vessel or instrument, refers to the baggage, utensils, vessels, etc., that the Israelites carried with them as they traveled. Among these belongings some had hidden "devoted things," thereby sinning. Hebrew *šaʿaṭnēz* (Lev. 19:19; Dt. 22:11) is a fabric made from a mixture of materials such as a wool and linen. Such mixtures were prohibited, though the reason for the prohibition is uncertain. According to some scholars, *šaʿaṭnēz* is a loanword from Egyptian, hence this prohibition may be associated with Israel's sojourn in Egypt before the Exodus (see P. Craigie, *Book of Deuteronomy* [*NICOT,* 1976], p. 290; cf. G. Wenham, *Book of Leviticus* [*NICOT,* 1979], pp. 269f.). In later Judaism, this practice of separation, called *Haḇdalah,* was expounded in greater detail. For a rabbinic explanation of *šaʿaṭnēz* see Mish. *Kilaim* ix.8. In Ezk. 27:24 *bᵉrōmîm,* "colored stuff," refers to multicolored cloth or fabric that was in carpets, which were part of Tyre's trade. Heb. *bᵉrōmîm* occurs only here, but its meaning is clarified by Arabic and Akkadian cognates (see H. Cohen, *Biblical Hapax Legomena in the Light of Akkadian and Ugaritic* [1978], pp. 48f.). In Jgs. 5:30 *ṣeḇaʿ* (< *ṣbʿ,* "dip," "dye") refers to material that has been dyed. Although some scholars suggest deleting the second and third occurrences of *ṣeḇaʿ* here (see *BHS*), textual evidence supports MT, and as other scholars have noted, such repetition is characteristic of early Hebrew poetry (see, e.g., W. F. Albright, *Yahweh and the Gods of Canaan* [repr. 1969], pp. 13f.; cf. J. Kugel, *Idea of Biblical Poetry* [1981], pp. 37f.).

STUMBLING BLOCK [Heb. *miḵšôl* < *kāšal*–'stumble'; Gk. *skándalon, próskomma*]; AV also CAUSE TO FALL; NEB OBSTACLE, CAUSE OF DOWNFALL, etc.; **STUMBLING STONE** [Gk. *líthos toú proskómmatos*] (Rom. 9:32); NEB STONE. Something that causes one to stumble or fall. The concept of a stumbling block was especially appropriate to a rocky land like Palestine, where stones and pebbles are plentiful on all the unpaved roads (in contrast to countries with alluvial soil, like Egypt or Mesopotamia). The term occurs literally in Lev. 19:14, which forbids placing stumbling blocks in the way of blind persons to make cruel sport of their helplessness. But generally the term is used figuratively of anything that causes someone to fall into unbelief or immorality.

In Jer. 6:21 the Lord indicates that He will place stumbling blocks before the wilfully disobedient and impenitent people of Israel, that they may fall over them to their ruin. Similarly, in Ezk. 3:20 He states that He will lay a stumbling block before the erstwhile righteous man who has fallen into apostasy — a danger of which the prophet is to warn him. In fact, this term occurs more frequently in Ezekiel than in any other OT book. In 7:19 greed for silver and gold is called a stumbling block and a cause of ruin for Judah. In 14:3f., 7 the term refers to the idolatry of captive Israel's elders, which prevents them from receiving any revelation from God.

Isaiah 8:14 warns that the Lord will become a "stone of offense" (Heb. *ʾeḇen negep*; AV "stone of stumbling") and a "rock of stumbling" (*ṣûr miškôl*; AV "rock of offence") to both houses of Israel. Here God Himself is the obstacle over which the people fall to calamitous ruin because of their unbelief and unfaithfulness. The root of *negep* is *nagap,* "strike against"; it refers here to striking the foot against a hindering stone.

Greek *skándalon* originally meant "trap" (cf. LXX Josh. 23:13; Ps. 140:9 [MT, RSV, 141:9]; 1 Macc. 5:4 [RSV "snare"]; cf. also Rom. 11:9 [RSV "pitfall"]). From this was derived the meaning "cause of ruin," especially in the sense of a temptation to sin. Sir. 31:7 describes gold as a *skándalon* that brings many to ruin (cf. v. 6). In Rev. 2:14 the term refers to a temptation to commit apostasy and immorality. Paul states in 1 Cor. 1:23 that the crucified Christ is Himself a stumbling block to the Jews, who are offended that one who died such an accursed death should be called Lord and Christ. In Gal. 5:11 Paul warns against compromising the *skándalon* of the cross by insisting on the necessity of circumcision.

The noun *próskomma* is derived from *proskóptō* ("strike against," "stumble against"; cf. Heb. *negep* < *nāgap*) and, like *skándalon,* can denote a "cause of ruin" in the sense of an obstacle to faith or a temptation to sin.

Sometimes *próskamma* and *skándalon* are used together as synonyms. Rom. 9:33 and 1 Pet. 2:8, quoting loosely from Isa. 8:14, refer to Christ Himself as a *líthos proskómmatos* (RSV "stone that will make men stumble") and a *pétra skandálou* (RSV "rock that will make them fall") to the unbelieving Jews. In Rom. 14:13, however, Paul warns Christians against putting an unnecessary *próskomma* (RSV "stumbling block") or *skándalon* (RSV "hindrance") in the way of other believers. In 1 Cor. 8:9, likewise, he uses *próskomma* to denote the obstacle to faith presented by Christians who insist on eating meat offered to idols without regard for how their actions may offend other believers.

STUMP; BRANCH. The occurrences of "stump" in the RSV can be grouped into three categories: (1) use of the term as a graphic symbol of hope for restoration in the face of destruction; (2) use of the term more specifically to reflect Israel's messianic expectations (along with occurrences of "branch" with messianic overtones); and (3) use of the term that connotes neither hope for restoration in general nor the more specific messianic hope (Isa. 7:4).

I. Hope for Restoration.–Perhaps the most beautiful passage in the first category occurs in Job 14:7-9: "For there is hope for a tree, if it be cut down, that it will sprout again, and that its shoots will not cease. Though its root grow old in the earth, and its stump [Heb. *gēza'*] die in the ground, yet at the scent of water it will bud and put forth branches like a young plant." Here Job contrasts the tenacious persistence of vegetation in an arid climate with his pessimistic view of the future of a person cut down by death (v. 10).

Also in this category are three occurrences of Aram. *'iqqar* in Dnl. 4:15, 23, 26 (MT 12, 20, 23). King Nebuchadnezzar relates a dream in which a heavenly watcher decrees the destruction of a mighty tree (symbolizing Nebuchadnezzar himself): "Hew down the tree and cut off its branches. . . . But leave the stump [*'iqqar*] of its roots in the earth" (vv. 14f. [MT 11f.]). Daniel's interpretation of the dream reveals that the stump is preserved as a promise of future restoration (v. 26 [MT 23]). The tree's remarkable ability to regenerate following severe destruction becomes a parable of divine punishment that nonetheless holds out hope of restoration for the repentant.

The two terms employed in these passages (Heb. *gēza'* and Aram. *'iqqar*) probably describe slightly different parts of the tree. *Gēza'* is always paralleled by *šōreš*, "root," and thus seems to denote the subterranean portion of the tree's life-support system. Aram. *'iqqar* is always connected to *šōreš* by the construct state (*'iqqar šoršôhî*, "the *'iqqar* of its root"); thus "stump" may be an appropriate translation here, although other suggestions include "taproot" (*CHAL*, p. 417).

In Isa. 6:13, a grammatically difficult and possibly corrupt text describing the coming destruction of Judah, the RSV translates Heb. *maṣṣeḇeṯ* as "stump," referring to the terebinth and oak mentioned in the same verse. In its only other occurrence *maṣṣeḇeṯ* refers to a stone (RSV "pillar") that was set up as a memorial to Absalom (2 S. 18:18). The closely related term *maṣṣēḇâ* denotes a stone pillar erected as a memorial (e.g., Gen. 28:18; 31:45; 35:20) or as a representation of the male fertility deity of the Canaanite cult (e.g., Ex. 23:24; 2 K. 3:2). The translation "stump" thus remains uncertain. If it is correct, the MT of Isa. 6:13 as it now stands seems to be saying that Judah will suffer total destruction like that of a forest whose stumps are burned after the trees are cut down; yet the last line expresses the hope that even from a burned stump new growth may appear — and that this offering of Judah will be holy to the Lord.

II. Messianic Expectation.–In Isa. 11:1 the durative powers of the tree stump provide an image of Israel's messianic hope: "There shall come forth a shoot from the stump [Heb. *gēza'*] of Jesse, and a branch [*nēṣer*] shall grow out of his roots [pl. of *šōreš*]." Here again the point is that what is now apparently dead (the nation of Israel) is still capable of revivification in God's own timing. The "branch" that grows from the "roots" (par. to "stump of Jesse") is a metaphor for the restoration of the Davidic kingship. In Jer. 23:5 (and its reinterpretation in 33:15) the metaphor is isolated and particularized by the definition of David's descendant as the "righteous Branch" (*ṣemaḥ ṣḏāqâ*). By the time of Zechariah (520-518 B.C.) the metaphor had become fixed as a title, and it was possible to refer to "my servant the Branch" (*'aḇdî ṣemaḥ*, Zec. 3:8) or "the man whose name is the Branch" (*'îš ṣemaḥ šᵉmô*, 6:12).

III. Isaiah 7:4.–The use of "stump" in this passage does not signify hope for restoration of any sort. Here the prophet tells King Ahaz of Judah, who is besieged by Rezin of Syria and Pekah of Israel, "Take heed, be quiet, do not fear, and do not let your heart be faint because of these two smoldering stumps [pl. of *zānāḇ*] of firebrands." Heb. *zānāḇ* is translated elsewhere as "tail" (of a snake [Ex. 4:4] or of foxes [Jgs. 15:4]). Here it describes the smoldering "tail end" of a piece of firewood.

STUPID [Heb. *ba'ar* (Ps. 73:22), qal and niphal of *bā'ar* (Ps. 49:10 [MT 11]; Prov. 12:1; 30:2; Isa. 19:11; Jer. 10:8, 14, 21; 51:17), *kᵉsîl* (Ps. 92:6 [MT 7]; Prov. 17:21), pass. part. of *nāḇaḇ* (Job 11:12), niphal of *ṭāmâ* (Job 18:3), *sāḵāl* (Jer. 4:22); Gk. *mōrós* (2 Tim. 2:23; Tit. 3:9)]; AV BRUTISH, FOOL, FOOLISH, VAIN (Job 11:12), VILE (Job 18:3), SOTTISH (Jer. 4:22); NEB also BRUTE, BRUTISH, BLOCKHEAD (Jer. 10:8), FOOL, FOOLISH, SILLY (Jer. 4:22).

Related in all contexts to the wisdom tradition, "stupid" connotes the opposite of "wise." The terms it renders have varying nuances of meaning. *Ba'ar* and *bā'ar* are related to the term for "beast" (*bᵉʿîr*); hence the AV and NEB renderings "brutish" and "brute," which are justified by Prov. 30:2 (cf. RSV "brutal" at Ezk. 21:31 [MT 36]). The pass. part. *nāḇûḇ* literally means "hollow, empty-headed"; Job 11:12 seems to be using a sarcastic comparison to say that a senseless person will never become wise. Heb. *niṭmînû*, unique to Job 18:3, is difficult, and various emendations have been proposed. Traditionally related to *ṭm'*, "be unclean," the term is now usually explained by the Aramaic root *ṭmm*, "be blocked, stopped up," and hence "stupid." The conjectured by-form *ṭmh* preserves the vocalization of the MT. (See N. C. Habel, *Book of Job* [*OTL*, 1985], p. 281.)

The other terms, Heb. *kᵉsîl* and *sāḵāl* and Gk. *mōrós*, are commonly rendered "folly" or "fool(ish)" and represent an ungodly habit of mind. Thus 2 Tim. 2:23 and Tit. 3:5 warn that "speculations and genealogies" are not merely unprofitable, but antithetical to faith. *See* FOOL.

SUBAS sōō'bəs [Gk. *Soubas*] (1 Esd. 5:34); AV SUBA. Head of a family included within a group called SOLOMON'S SERVANTS who returned from the Babylonian Exile. The lists in Ezr. 2:55-58 and Neh. 7:57-60 omit this name.

SUBJECT; (PUT IN) SUBJECTION [Heb. *hāyâ lāmas*] ("become subject to forced labor," Jgs. 1:30, 33, 35); AV TRIBUTARY; NEB PUT TO/REDUCE TO FORCED LABOR; [*'ābaḏ*–'serve'] (2 S. 10:19; 1 Ch. 19:19); AV SERVE, BECOME SERVANTS; NEB SUBMIT; [niphal of *kāna'*–'be subdued'] (Ps. 106:42); [*kābas*–'subjugate, make subservient'] (Jer. 34:11, 16); NEB FORCE INTO SLAVERY, etc.; [Gk. *hypotássō*–'place under'] (Lk. 10:17, 20; Rom. 8:20; 13:1, 5; 1 Cor. 14:32; 15:27f.; etc.); AV also SUBMIT, SUBDUE; NEB also SUBMIT, MAKE THE VICTIM, CONTROL, etc.; [*énochos*–'liable'] ("subject to," He. 2:15); NEB IN SERVITUDE; [supplied contextually by the RSV in 1 S. 2:27; Eph. 5:22, 24b]; **SUBMIT; SUBMISSION; (BE) SUBMISSIVE** [Heb. hithpael of *'ānâ*–'humble oneself'] (Gen. 16:9); [Gk. mid./pass. of *hypotássō*] (Rom. 8:7; 10:3; Tit. 2:5, 9; 3:1; Jas. 4:7; 1 Pet. 2:18; 3:1, 5); AV also BE OBEDIENT, BE SUBJECT, BE IN SUBJECTION, etc.; NEB also BE SUBJECT, RESPECT THE AUTHORITY, etc.; [*hypotagḗ*] (Gal. 2:5; 1 Tim. 2:11; 3:4); AV SUBJECTION; NEB also "to dictation," OBEDIENCE; **BE SUBORDINATE** [Gk. pass. of *hypotássō*] (1 Cor. 14:34); AV BE UNDER OBEDIENCE; NEB KEEP (ONE'S) PLACE; [pass. of *dogmatízō*–'lay down as a decree'] ("submit to regulations," Col. 2:20); AV SUBJECT TO ORDINANCES; NEB "let people dictate to you"; [mid. of *anéchō*–'endure'] (2 Cor. 11:4); AV BEAR WITH; NEB "manage to put up with"; [pass. of *enéchō*–'be loaded down with'] (Gal. 5:1); AV BE ENTANGLED; NEB BE TIED TO; [*hypeíkō*–'yield, give way'] (He. 13:17); NEB DEFER.

The primary meaning of both "subject" and "submit" has to do with subordination, i.e., being placed under the control or authority of another. Subordination can be either voluntary or enforced. The RSV uses "subject" for both voluntary and involuntary subordination; it uses "submit" ("be submissive," etc.) only for voluntary subordination.

The RSV OT mentions various examples of involuntary subjection. Through military conquest the Israelites were able to subject the Canaanites to forced labor (Jgs. 1:30, 33, 35). Similarly, the Syrians were forced by David's military victories to "serve" (Heb. *'ābaḏ*) the Israelites (2 S. 10:19 par. 1 Ch. 19:19). Through economic domination wealthy Israelites forced other Israelites to become their personal slaves (Jer. 34:16). In Gen. 16:9, however, Hagar's subjection is voluntary: the angel tells her to return to Sarah and to "humble herself" (hithpael of *'ānâ*) in obedience to Sarah's authority.

The most common NT term rendered by "subject" and "submit" is Gk. *hypotássō*. The active voice (usually rendered "subject" or "put in subjection") means "place under" and denotes an enforced subordination. The middle voice refers occasionally to compulsory subordination (cf. Lk. 10:17, 20), but usually the middle and passive denote a voluntary act. The English versions seem to use "be subject," "submit," "be submissive," and "be subordinate" interchangeably as translations of the middle and passive of *hypotássō*.

The NT attributes to God or Christ alone the power to subject (in passages using the active of *hypotássō* or the passive with God understood as the subject). Thus "every authority and power" and "all things" are subjugated to the Messiah (1 Cor. 15:24-28; cf. Phil. 3:21; 1 Pet. 3:22; He. 2:5, 8), and "the creation was subjected to futility, not of its own will but by the will of him who subjected it in

Enemies submit to the governor Ur-Ningirsu of Lagash by kneeling with tribute at his feet. Telloh, 21st cent. B.C. (CNMHS/ARS, NY/SPADEM)

hope" (Rom. 8:20). It was through Christ's name that the disciples were able to subjugate the demons (Lk. 10:17, 20). In each of these instances subjection is involuntary. The enforced subordination reveals a hierarchy or establishes a proper order: the weaker is forced to take a lower place involving obedience and service to a higher authority (namely, God or Christ).

The situation is different, however, where the middle or passive of *hypotássō* is used to describe the attitude that Christ has toward God (1 Cor. 15:28) or that Christians are to have toward God (He. 12:9; Jas. 4:7), toward civil authorities (Rom. 13:1, 5; Tit. 3:1; 1 Pet. 2:13), toward church leaders (1 Cor. 16:16; 1 Pet. 5:5), and toward one another in general (Eph. 5:21; cf. 1 Pet. 5:5). Specifically, wives are exhorted to have this attitude toward their husbands (Eph. 5:22, 24; Col. 3:18; Tit. 2:5; 1 Pet. 3:1, 5) and toward a proper "order" in worship (1 Cor. 14:34; cf. v. 40; *hypotagḗ* in 1 Tim. 2:11), and slaves are called upon to demonstrate this attitude toward their masters (Tit. 2:9; 1 Pet. 2:18). As many exegetes have observed, such subordination is an action of free agents. It does not involve a breaking of the will or servile submission to another's rule; rather, the verb "describes a voluntary attitude of giving in, cooperating, assuming responsibility, and carrying a burden" (M. Barth, p. 710). That the use of this verb does not prescribe a hierarchy within the Church is clear in Eph. 5:21f., where the call for the specific subordination of wives to husbands occurs within the framework of a call to mutual subordination (in fact, the verb *hypotássomai* is not even repeated in several early Greek texts of v. 22); this clearly implies that husbands are also to subordinate themselves to their wives, and masters to their slaves (note that Paul instructs husbands to love their wives sacrificially [vv. 25-33; Col. 3:19; cf. 1 Pet. 3:7] and masters to treat their slaves as equals [Eph. 6:9; Philem. 16f.]; cf. also the egalitarian tone of Gal. 3:28; Col. 3:11). Thus, the general attitude that is to mark every Christian in relation to God, to other Christians, and to civil authorities is one of "readiness to renounce one's own will for the sake of others . . . and to give precedence to others" (*TDNT*, VIII, 45).

Subordination to the will of God does not come naturally to unregenerate human beings. In Rom. 8:7f. Paul states: "For the mind that is set on the flesh is hostile to God; it does not submit to God's law, indeed it cannot; and those who are in the flesh cannot please God." As Cranfield observed, "Fallen man's fierce hostility to God is the response of his egotism (which is the essence of his fallenness) to God's claim to his allegiance. Determined to assert himself, to assert his independence, to be the center of his own life, to be his own god, he cannot help but hate the real God whose very existence gives the lie to all his self-assertion" (p. 180). Even the Jews of Jesus' day, with all their zeal for righteousness, lacked the proper attitude of *hypotássomai*: "For, being ignorant of the righteousness that comes from God [i.e., through faith in Christ; cf. 10:4], and seeking to establish their own, they did not submit to God's righteousness" (10:3).

The attitude of subordination to other human beings does not involve blind obedience to their dictates, however. For example, when the truth of the gospel was threatened by legalism, Paul emphasized that "we did not yield submission even for a moment" (Gal. 2:5), and he exhorted the Galatian Christians to "stand fast . . . and do not submit [*enéchomai*] again to a yoke of slavery" (5:1). He likewise chided the Corinthian Christians for putting up with (*anéchomai*) diverse preachers, spirits, and gospels that led them away from a pure devotion to Christ (2 Cor. 11:4) and he criticized the Colossians for submitting to human regulations (pass. of *dogmatízō*, Col. 2:20). For the Christian, therefore, the primary calling of obedience to Christ defines the limits of submission to human beings, institutions, and regulations.

N. J. OPPERWALL

SUBORN (Acts 6:11, AV). *See* SECRET.

SUBSTANCE [Heb. *ḥayil*–'strength, power, wealth'] (Dt. 33:11); NEB POWER; NEB mg. SKILL; [*gōlem*–'embryo'] ("unformed substance," Ps. 139:16); AV "substance, yet being unperfect"; NEB "limbs unformed in the womb"; [*qinyān*–'(individual) property'] (Josh. 14:4); NEB HERD; [*hôn*–'power, wealth'] (Prov. 3:9; 29:3); NEB WEALTH; [*rᵉḵûš*–'property, goods'] (Dnl. 11:28); AV RICHES; NEB BAGGAGE-TRAIN; [Gk. *sṓma*–'body, reality'] (Col. 2:17); AV BODY; NEB SOLID REALITY.

Hebrew *ḥayil* occurs about 246 times in the OT. The RSV translates it "substance" only in Dt. 33:11. In the majority of its occurrences it means "strength" or "power," often denoting military power or might. In about thirty-four instances it has the derivative meaning "wealth, riches." Thus "substance" in Dt. 33:11 may refer to the priestly power or skill of the Levites (so NEB) or to material blessings (see *TDOT*, IV, 353).

The phrase "unformed substance" in Ps. 139:16 refers to the developing and still unformed embryo within the mother's womb over which Yahweh watches with sovereign care (see the comms., *BHS*, for textual questions on this verse).

The four remaining OT texts (i.e., Josh. 14:4; Prov. 3:9; 29:3; Dnl. 11:28) use "substance" in the sense of personal property or wealth.

In Col. 2:17 Paul contrasts *sṓma* ("reality") with *skiá* ("shadow, foreshadowing"). This contrast parallels the similar contrast in He. 10:1 between *skiá* and *eikṓn* ("form, appearance") in which the law is the shadow of what is to come in contrast to the "true form." Both contrasts apparently reflect the influence of Platonic philosophy, in which outward appearance was opposed to the reality or essence (cf. the famous image of the cave in Plato's *Respublica* 514a-518b). Thus Josephus tells of how Archelaus, son of Herod the Great, appeared in Rome to appeal to Augustus for "the shadow [*skiá*] of royalty, of which he had already appropriated the substance [*sṓma*]" (*BJ* ii.2.5 [28]).

But O'Brien (p. 140) properly points out that the contrast in Colossians is not purely Platonic since "the antithesis is not set within the framework of a timeless metaphysical dimension but is understood as a contrast between the two ages." It is, in other words, eschatological and has to do with the contrast between the reality and the shadow that foreshadows and points to the reality.

But less certain is whether Paul intended *sṓma* strictly as a contrast to the shadow, thus simply opposing the regulations of the past (2:16) with Christ Himself, or whether he intended a wordplay in which *sṓma* is both a contrast with the shadow and a reference to the Church as the "body of Christ" (*tó sṓma toú Christoú*) as in 1:18, 24. In the latter case, the reality would belong to those who are members of the body of Christ and adhere to Him as head. Although this point is widely debated, it appears, in the light of the constant use of the term "body of Christ" in Colossians to denote the Church, that a double meaning is intended.

III. NT Application
IV. Doctrinal Significance

I. NT Basis.–The word "substitution," with the very similar "representation," is applied in theology to the work of Jesus Christ as something done in the place of and on behalf of others. "Substitute" and "representative" in this sense are not biblical terms; they do not refer in the Bible to Our Lord. Yet there are good grounds for thinking that some such word expresses a solid and important element in the NT witness.

This view is suggested by the prepositions used in the NT concerning the work of Christ. Four Greek prepositions may be cited: *perí*, "with reference to"; *hypér*, "on behalf of" (sometimes with a clear substitutionary meaning); *diá*, "on account of"; *antí*, "instead of." Some of these terms are obviously more general than the others or explicable along other lines than that of strict substitution. Yet they obviously contain the thought of representative substitution, or substitutionary representation.

This thought is also suggested by Gk. *katallagé* (Rom. 5:10; 2 Cor. 5:18), which is quite rightly translated "reconciliation" (i.e., atonement in its Old English sense of "at-one-ment") but which in a verse like 2 Cor. 5:18, especially in the light of 5:21, clearly has behind it the basic sense of the Greek term, "exchange." In other words, the divine reconciliation accomplished in Jesus Christ involves a substitution that must be brought to utterance in any explanation or presentation.

Substitution is suggested again by the more developed comparison between Christ and Adam worked out by Paul in Rom. 5. Here, perhaps, we have more of the thought of representation than substitution. The one acts for the many rather than in replacement of them. Yet precise differentiation between the two concepts is difficult at this point where they tend to merge into one another, and the one implies the other rather than constituting a definite alternative.

It is suggested finally by underlying OT motifs, especially in the sacrificial system and finally in the Suffering Servant of Isa. 53 on whom, as on a lamb led to the slaughter, all the iniquity and sorrow of the people is laid. In these prophetic pictures there is naturally no precision of statement, so that various lines of thought may rightly be seen in them. Yet a general theme of substitution is hardly contestable.

II. Meaning.–The question arises what is meant by substitution, especially as compared with representation. The following definitions are suggested not with a view to finality or exclusion, but rather in order to show that various nuances must be taken into account if we are to do full justice to the NT data.

To begin with "representative," the first and obvious meaning is a sample or specimen or typical embodiment. From this angle, the solidarity of Christ with humanity is plainly important. Then the word can be used for a delegate, i.e., someone who acts on behalf of others as himself one of them (cf. the political use). The Adam comparison of Paul is important here. This gives us, however, the slightly developed sense of an agent, e.g., the legal representative who undertakes to present the case of another which is not in the first instance his or her own. In this regard, the distinction of Christ from the race, as He who has come into it from without, obviously demands notice, and there is approximation to the thought of the substitute.

A "substitute" is primarily a person (or thing) performing a function instead of another, perhaps the plainest personal example being the substitute on a team who has to step in to replace the original player in case of injury, etc. In substitution there is much more pronounced than in representation the thought of exchange or replacement. While the representative acts for others, it is their action through him. The substitute, however, replaces the others, doing what they cannot do and must not even try to do. A person may be both a representative and a substitute with a clear differentiation of meaning, as when a speaker scheduled to give an address as the representative of a society is forced to withdraw through sickness, and therefore a substitute is arranged to perform this representative function. The element of replacement or exchange in the work of Christ makes it necessary to supplement representation by substitution.

On the other hand, the thought of the substitute as distinctive may sometimes be given an emphasis that we must avoid in understanding the NT doctrine of the atonement. Humanly speaking, the substitute is not in fact the same person and cannot do the same thing; the performance must be judged individually rather than representatively. Indeed, the word may even have a derogatory sense, the substitute being formally equivalent but intrinsically inferior as a mere stopgap. At this point there can be little question of an interchangeable use of representative and substitute; a particular danger arises in respect of the idea of an equivalent offering of Christ that is substitutionary only in this formal and not in the more precise material sense.

III. NT Application.–The NT data make it clear that if we apply these terms to the saving work of Christ, we must do so in the middle area where they approximate and overlap, and with a readiness to adopt a more comprehensive rather than a narrower understanding.

In the true sense Jesus Christ comes forth as the representative of the race, in solidarity with it as the Second Adam, and prepared to act on its behalf. Yet in so doing He replaces all other persons, both actively in His life and passively in His death fulfilling the work for which they are disqualified and incompetent. As the representative, He thus crowds out all other persons, both individually and as a whole. He does not merely act on their behalf; He acts in their stead. Indeed, there is not merely a replacement but an actual exchange, as the NT sees it. Jesus becomes Son of man that we might be sons of God. He dies on the cross that we might ascend to eternal life in heaven. He is made sin that we might be the righteousness of God. But this is not a simple exchange outside the broad category of representation. For if He dies in our place, we die in Him. And if we attain to new life and sonship, we do not do so alone, but only in Him. He takes our place that we might find our new and true place in Him.

It may be said without exaggeration that in substitution, construed in the light of the data and worked out in this broader sense which includes representation, we have not merely a theory or interpretation of the atonement but a basic factor in the divine work of reconciliation. There can be no biblical doctrine of the atonement that is not a doctrine of representative substitution.

It should be emphasized that the doctrine applies to the whole action of Christ from the Incarnation to the Ascen-

sion, and not merely to its admittedly central point in the death on the cross. A certain constriction and even distortion will inevitably result if it is related only to the crucifixion.

The element of representation is vital. We might say quite rightly that Jesus is condemned and we go free, or that He occupies the cross prepared for us. But this is superficial and even misleading if we do not recognize that we are in fact condemned and also acquitted and accepted, and therefore exalted to life in Him. What has made our acceptance possible was certainly performed by Him alone, in our stead. Yet it was performed also on our behalf. It implies a twofold identification of Him with us and of us with Him, which quite excludes the narrower crudities that have brought the whole thought of substitution into undeserved disrepute in some circles.

IV. Doctrinal Significance.—The centrality of substitution, its implication in the whole of God's reconciling action in Christ, naturally involves its deep and comprehensive significance in the most diverse areas of Christian doctrine and the related Christian life. A few of the more important instances may be given.

The truth of substitutionary representation sheds a new light on the doctrine of justification. It means basically that the true reality of the Christian is now the reality in Christ rather than in the self as a sinner. Hence in justification the supposed choice between a subjective work of cleansing and a merely legal decision is false. We are confronted by neither a false *de facto* nor a paradoxical *de iure*. The *de iure* decision corresponds to the true *de facto* situation. For Christ has now replaced us, and therefore the true reality is not in us but in Him. What appears to be our sinful reality is already displaced in Him. Only the unrealism of unbelief or misunderstanding can thus argue that there must either be an inward washing and sanctification in us or there can be only a legal pronouncement at odds with reality. To perceive the truth of substitution is to attain to the true realism of faith, which sees that we are pronounced righteous because righteousness is our new and lasting reality in Christ.

The doctrine similarly illuminates the Christian life or sanctification. Being displaced by Christ, we are at the same time given a new place in Him. Thus the Christian life cannot be the struggle to attain or maintain a given sanctity in ourselves. Nor can it be a mere attempt to live up to fine but impossible ideals. Its imperative is based on a true and unshakable indicative. We have a new place in Christ and as believers are set in this place (Eph. 1:3; Col. 3:1ff.). We are thus to live as those who belong to this place. Nor are the failures ultimately discouraging. The old man displaced by Christ rebels against the new place in Him. Their violent struggles for autonomy and self-preservation naturally cause defeats to the believers. Nor are these to be taken lightly. Yet Christ is our total and victorious representative whose work is already completed and cannot fail. The displaced man has already had to give way to Him, and therefore he must finally give way to the new man in Him. If the Christian life is lived as one of urgent conflict, it may also be lived with the joyful assurance that the decisive battle has been fought and that victory must finally rest with the new reality in Christ.

Nor is the doctrine of substitution without relevance for the Church. Applying to individuals, it applies also and perhaps primarily to the whole Church as the people of God and the body of Christ. The Church can be called one, holy, catholic, and apostolic, not because it is these things in itself, nor because these are its ideals, nor in a mere gesture of defiance or delusion, but because its true being is in Christ rather than in itself. The invisible and therefore the true and eternal reality of the Church (2 Cor. 4:18) is what it is in its Representative and Substitute, in the Head who is also in a true sense the whole body. Its task in terms of visible life, work, and organization is to fashion itself in conformity to this reality. Without a basis in the substitutionary work of Christ, there can be neither understanding nor effective realization of the true unity, sanctity, catholicity, and apostolicity of the Church. On this basis, however, in spite of every difficulty, assault, and failure, there may and should be at least a measure of practical attainment, and a recognition that here alone is the true and lasting reality of the Church displayed.

It should be noted that neither in relation to the individual nor the Church is substitution the same thing as mystical identification, except perhaps in the older sense of the term mystical as used sometimes by the Reformers. The Bible does not say that we are mystically in Christ or united with Him. It does not say that our righteousness is a mystical righteousness, or that the Church has its mystical reality in Him. The realities concerned are undoubtedly divine, miraculous, and as yet unseen (except in imperfect concretions). They may be apprehended only in faith. If "mystical" is used with this connotation, then it is obviously admissible. In the modern era, however, the so-called Christ-mysticism of Paul or mysticism of John has normally carried a very different and far more subjective sense, which can only distort the meaning. The substitution of the Bible is an objective divine act and not just a subjective movement of identification on our part.

The doctrine of substitutionary representation gives sharper edge to the problem of the scope of salvation. Of whom is Christ the substitute? We can hardly say that He is the substitute only of some men, for on good biblical grounds all responsible theologians have always recognized that He identified Himself with the race and offered a sufficient sacrifice for all. Yet if He is the substitute of all, this can hardly be taken to imply the far from biblical doctrine of absolute universalism, i.e., that all are in fact saved.

In what sense, then, does Christ represent all? It is here that a distinction has been seen between the sufficiency of Christ's work and its individual efficacy, or between its objective and subjective benefits, or between Christ's displacing of us and our entry in faith into our new place in Him. The difficulty in such distinctions is that they are hard to make in strictly biblical terms. Yet the necessity of some such distinction remains if we are to remain true to the biblical data, avoiding the extremes of limited sufficiency on the one side or weak universalism on the other.

Substitution undoubtedly means that God has done for us, and apart from us, what had to be done but could not be done by us. It carries with it, however, the corollary that, while there is all-sufficient salvation in Christ, there is salvation only in Him. Hence those who are outside Him, trying to cling to their own place and not finding their true place in Him, are certainly fighting reality but are also failing to enjoy the benefits of this reality. This may be worked out in the more narrowly Calvinistic form or otherwise. But the objective universality of substitution must certainly not be applied in the direction of an unbiblical and dangerous universalism.

See Bibliography in ATONEMENT. G. W. BROMILEY

SUBTLE [Heb. *'ārûm*]; AV SUBTIL; NEB CRAFTY. According to Gen. 3:1 the serpent is "more subtle than any other wild creature that the Lord God had made." Several points need mention here. First, the meaning of *'ārûm* is perhaps best expressed by the words "astute, clever, cunning" (C. Westermann, *Genesis 1–11* [Eng. tr. 1984],

p. 239); although Eliphaz used this term negatively twice ("crafty," Job 5:12; 15:5), in Proverbs it often occurs in a positive sense ("prudent," 14:15, 18; 22:3; etc.). Second, the author of Genesis makes a wordplay between *'ārûm* and "naked" (*'ārôm*) in 2:25. Finally, this creature, characterized by shrewdness (cf. Mt. 16:10), was one of the "wild creatures" that God created; the serpent does not seem (at least initially) to be anything more than the most "subtle" animal (see comms., esp. U. Cassuto [Eng. tr. 1978]; J. Skinner [*ICC,* 1930]; G. von Rad [Eng. tr., rev. ed., *OTL,* 1972]).

SUBURBS. A term used frequently by the AV as a translation of Heb. *migrāš,* denoting the common land surrounding Palestinian cities and villages (*see* PASTURE). On 2 K. 23:11, *see* PRECINCT. *See also* CITY III.

SUBVERT [Heb. piel of *sālap*–'distort' (Ex. 23:8; Dt. 16:19), piel of *'āwaṭ*–'make crooked' (Ps. 119:78; Lam. 3:36)]; AV also PERVERT, DEAL PERVERSELY; NEB MAKE CROOKED, WRONG, PERVERT. To overturn or overthrow.

In the RSV "subvert" occurs only in four OT passages. Ex. 23:8 and Dt. 16:19 speak against bribes in the court of law. The bribe is forbidden because it "subverts the cause" of the righteous defendant by "blinding the eyes" of the judge who receives the bribe. The issue is injustice against the righteous, not perversion of the righteous. Thus the RSV is to be preferred over the AV and NEB, which translate Heb. *dāḇār* as "word" instead of "cause," thereby making the "righteous man" into one who has been corrupted by a bribe rather than one who has been victimized by another (the judge) who has been so corrupted. Ps. 119:78 and Lam. 3:36 also convey the picture of one who has been treated unjustly as opposed to one who has been corrupted.

In the NT the RSV replaces the AV's use of "subvert" with "unsettle" (Acts 15:24, Gk. *anaskeuázō,* "tear down"), "ruin" (2 Tim. 2:14, *katastrophḗ*), "upset" (Tit. 1:11, *anatrépō,* "overturn, cause to fall"), and "pervert" (Tit. 3:11, *ekstréphō,* "turn aside").

SUCATHITES sōō'kə-thīts [Heb. *śûḵāṯîm*] (1 Ch. 2:55); AV, NEB, SUCHATHITES. The name of a family of scribes who lived in the town of Jabez, located perhaps near Bethlehem.

SUCCEED; SUCCESS; SUCCESSFUL(LY) [Heb. *ṣālaḥ* (Gen. 39:2; Nu. 14:41; Jgs. 18:5; 1 Ch. 22:11; 2 Ch. 7:11; 13:12; 20:20; Neh. 1:11; Ps. 118:25; Jer. 22:30; 32:5; Ezk. 17:15; Dnl. 8:24), *yāḵōl*–'be able, endure' (1 S. 26:25; 1 K. 22:22; 2 Ch. 18:21; Ps. 21:11 [MT 12]), *yā'al* (Isa. 47:12), hiphil of *śāḵal*–'understand' (Josh. 1:7f.; 1 S. 18:5, 14f., 30 [qal]; Jer. 20:11), *qûm*–'arise' (Dt. 25:6; Prov. 15:22), hiphil of *qārâ*–'cause to occur, ordain' (Gen. 24:12; 27:20), *taḥaṯ*–'in place of' (Lev. 6:22 [MT 15]), hiphil of *kāšēr* (Eccl. 10:10), *'aḥar*–'after' (1 Ch. 27:34), *šālam*–'be finished, keep peace' (Job 9:4), *yāraš*–'possess, dispossess' (Prov. 30:23), *tûšîyâ*–'wisdom, prudence' (Job 5:12); Gk. *euodóō*–'get along well, prosper' (Rom. 1:10), *phthánō*–'come up to, reach' (Rom. 9:31), *diádochos* (Acts 24:27)]; AV also PROSPER, PROFIT, PREVAIL, etc.; NEB also PROSPER, PREVAIL, PERPETUATE, etc.

The RSV uses "succeed" in two senses: (1) accomplish what one tries to do, and (2) follow or come after another in order. The latter sense occurs only a few times, of both sacred (Lev. 6:22) and secular leaders (1 Ch. 27:34; Acts 24:27). Also, the first son of a levirate marriage will "succeed to the name of his brother who is dead," i.e., that son will be considered the son of the deceased "that his name may not be blotted out in Israel" (Dt. 26:5; *see* MARRIAGE IV.A.2).

Proverbs 30:21-23 describes four earth-shaking situations, the final one being "a maid when she succeeds her mistress." Some scholars interpret these verses as ironic or humorous (see, e.g., comms. by C. H. Toy [*ICC,* 1899]; W. McKane [*OTL,* 1970], p. 659: "satire on the theme that there are some situations in which certain people are unbearable"), but others (e.g., KD; W. Roth, *Numerical Sayings in the OT* [*SVT,* 13; 1969], pp. 35f.) take them more literally as situations that contribute to the disruption of society. A textual problem further complicates v. 23. The LXX *ekbállō* (expel, remove) nowhere else translates the qal of *yāraš* (though twice it translates the hiphil); usually it translates some form of *gāraš.* Thus many scholars have suggested reading *tᵉgārēš* for MT *tîraš* (lit. "she inherits"; see *BHS*).

The more common use of "success" is usually linked to God: those who obey His laws will succeed (e.g., Josh. 1:7f.), those who are against Him (2 Ch. 13:12; Job 9:4), His laws (Nu. 14:41; Josh. 1:7f.), His prophets (2 Ch. 20:20; Jer. 20:11), or His people (Ps. 21:11) will fail. Thus when God is on a person's side, that person will succeed (e.g., Joseph, Gen. 39:2). Similarly, success in military ventures depends on the Lord's help (Jgs. 18:5; 1 S. 18:5, 14f., 30; 26:25; Jer. 22:20; 32:5; Ezk. 17:15). In Ps. 118:25 the psalmist asks the Lord to save His people and to give them success; the chiastic arrangement of the verse suggests that salvation and success are here identified. In both patriarchal and postexilic times the OT mentions prayers for success that God answered positively (e.g., Abraham's servant, Gen. 24:12; Nehemiah, Neh. 1:11).

Wisdom literature offers some practical advice concerning success. According to Prov. 15:22 many advisers ensure the success of plans (cf. 11:14; 13:10; see W. McKane, *Proverbs* [*OTL,* 1970], p. 482); here obviously politics is in view, and as W. L. Humphreys noted, the whole section (chs. 10–29) deals with the wise courtier ("Motif of the Wise Courtier in the Book of Proverbs," in J. G. Gammie, *et al.,* eds., *Israelite Wisdom: Theological and Literary Essays in Honor of S. Terrien* [1978], pp. 180f.). Eccl. 10:10 says that wisdom helps one succeed, though the precise meaning of this verse is debated, for the Hebrew text is obscure. Thus R. Gordis (*Koheleth — The Man and His World* [repr. 1973], pp. 321-23) took its theme as "the virtue of being prepared for any given task"; KD understood it to mean that wisdom is the proper use of means to achieve an end; according to J. A. Loader (*Ecclesiastes* [Eng. tr., *Text and Interpretation,* 1986], pp. 119f.), the point is that wisdom is meaningless in certain situations; and for J. Ellul (*La Raison d'être: Méditation sur l'Ecclésiaste* [1987], pp. 98-100) this text provides one of the positive aspects of work, namely, that wisdom does have a role to play in work; this positive view is in tension with the negative view that all work is vanity (e.g., 2:11, 18-23; 4:4).

Two texts require further comment. In 1 K. 22:22 par. 2 Ch. 18:21 the prophet Micaiah declares to Ahab that the Lord had sent "a lying spirit in the mouth of all his [Ahab's] prophets" in order to cause Ahab's defeat; indeed, the Lord had promised that this ploy would succeed. While such devious action may seem objectionable, it must be understood as part of God's judgment on the evil Ahab (see *CD,* III/2, 357f.). In Gen. 27:20 Jacob, impersonating his brother Esau at Rebekah's instigation,

lies to his father in saying that the Lord had granted him success, and Jacob attains the blessing Isaac intended for Esau. As W. Vischer pointed out, that Isaac's blessing is fulfilled in Jacob despite this treachery is a demonstration of God's grace (*Witness of the OT to Christ* [Eng. tr. 1949], pp. 148-150).

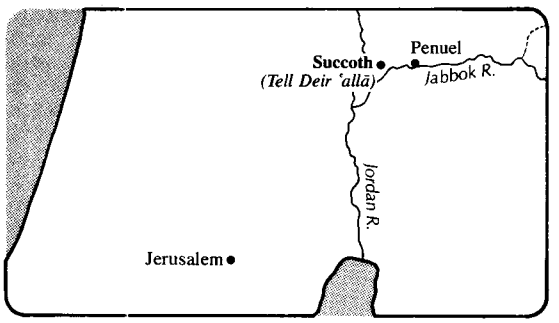
SUCCOTH suk'əth, suk'ŏth [Heb. *sukkôṯ, sukkōṯ–* 'booths'; Gk. *Sokchōth, Skēnai,* etc.].

1. A city situated E of the Jordan River, not far from the Jabbok River. Located in the central Jordan Valley, Succoth was within the kingdom of Sihon before it was allotted to the tribe of Gad (Josh. 13:27). It is first mentioned in connection with Jacob's travels near the Jabbok, where he wrestled an angel of the Lord (cf. Gen. 32:22-24). The day after this event Jacob journeyed to a place alongside the Jabbok, where he built himself shelter and "booths" for his cattle (33:17). Succoth and the neighboring site of Penuel are also mentioned in the account of Gideon's pursuit of the Midianite kings Zebah and Zalmunna (Jgs. 8:4-16). Having crossed the Jordan River, Gideon sought food and aid from Succoth and Penuel, but both refused (vv. 5f., 8). After defeating the Midianites Gideon returned and punished Succoth's seventy-seven elders with thorns and briers for their lack of support (vv. 14-16); he also broke down Penuel's tower and slew its men (v. 17). In Solomon's time the valley between Succoth and nearby Zarethan was the region where bronze vessels were cast for the Jerusalem temple (1 K. 7:46 par. 2 Ch. 4:17). The mention of the "Vale of Succoth" in Ps. 60:6 (MT 7); 108:7 geographically supports a location near the junction of the Jordan and Jabbok rivers.



The ancient mound of Tell Deir 'allā, situated 12 km. (7½ mi.) NNE of the current junction of these rivers, was suggested by Merrill as the site of Succoth, and this identification has gained the most support among scholars (e.g., Conder, p. 183; *HGHL,* p. 392; *LBHG,* rev. ed., p. 126, 284 n. 224). In T.P. *Shebuoth* ix.2, 38d Succoth is identified with Ter'ela (= Der'ela), which is possibly the extensive Roman-Byzantine village immediately E of Tell Deir 'allā. On the other hand, Jerome (*Quaestiones in Gen.* 33:17) said of the Gideon passage that there was to his day a city of this name in the territory of Scythopolis. Sixteen km. (10 mi.) S of Roman Scythopolis (OT Bethshean), W of the Jordan, lies an ancient mound called Sākūt, and Robinson supported this site as biblical Succoth. The Jacob and Gideon narratives indicate, however, that the location of Succoth was E of the Jordan and near the Jabbok.

H. J. Franken conducted excavations at Tell Deir 'allā for five seasons beginning in 1960. His efforts have revealed occasional occupation levels from the Chalcolithic to the Persian periods. The Chalcolithic remains included mud-brick structures that had been deserted. The earliest L.B. settlement consisted of an unfortified village containing a sanctuary surrounded by houses and storage areas. The sanctuary area was destroyed by an earthquake and a fierce conflagration. According to J. Yoyotte (*VT,* 12 [1962], 464-69), this occurred in the first quarter of the 12th cent. B.C.; Y. Aharoni (*LBHG,* rev. ed., p. 284 n. 224) has suggested that the sanctuary's destruction may have been a consequence of Gideon's judgment against Succoth. A later L.B. settlement gave no evidence of permanent occupation, but traces of furnaces for the smelting of bronze were found. These facilities may have been used by the Solomonic smiths mentioned in 1 K. 7 and 2 Ch. 4. A third L.B. settlement had a city wall, and a Syrian-Aramean material culture unlike the 8th-7th century cultures of western Palestine. During the 1967 season an Aramaic inscription dating from the Persian period, mentioning a prophet named Balaam, was discovered on a portion of plastered wall. Tell Abū Gurdan, located a few hundred meters from Tell Deir 'allā, supported the occupants of the Arab period, while Tell Deir 'allā was used as that community's cemetery. Tell Deir 'allā remained abandoned while Tell Abū Gurdan continued to be occupied until *ca.* A.D. 1500, with two occupational breaks of unknown duration.

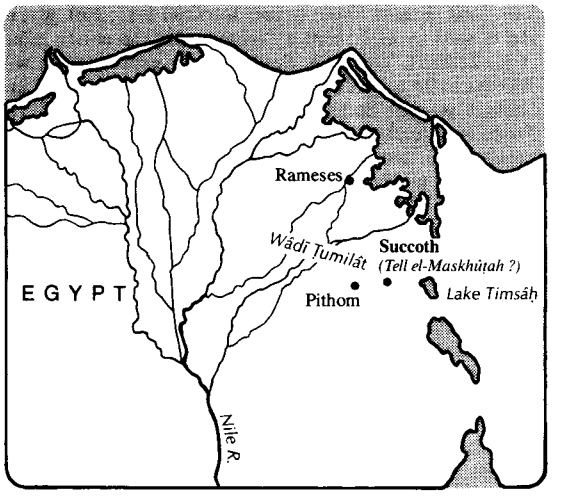
Franken, following F. M. Abel (*GP,* II, 470), did not support Tell Deir 'allā as the site of biblical Succoth but preferred Tell el-Ekhṣaṣ (= Aḥṣaṣ) 2.5 km. (1½ mi.) to the west. Although this name means "booths," its identification as the site of Succoth has not gained wide support. As Aharoni noted, Tell Deir 'allā is the largest and the most prominent ancient mound in the Succoth Valley, and its identification as biblical Succoth remains the most probable.

Bibliography.–C. R. Conder, *Heth and Moab* (3rd ed. 1892), p. 183; *EAEHL,* I, *s.v.* "Deir 'Alla, Tell" (H. J. Franken); Franken, *PEQ,* 1964, pp. 73f.; *VT,* 10 (1960), 386-93; 11 (1961), 361-72; 12 (1962), 378-382; 14 (1964), 417-422; 17 (1967), 480f.; *HGHL,* p. 612; *LBHG* (rev. ed. 1979), pp 126, 130 n. 35, 284 n. 224; S. Merrill, *East of the Jordan* (1881); E. Robinson, *Biblical Researches in Palestine and the Adjacent Regions* (3rd ed. 1970), III, 310.

2. The first station in the Exodus after the Israelites had left Rameses (Ex. 12:37; 13:20; Nu. 33:5f.). It is possibly to be identified with Tell el-Maskhûṭah, a border fortress located in the eastern portion of the Wâdī Ṭumilât. This is the region of the biblical "land of Goshen." The tell is situated approximately 15 km. (9 mi.) W of modern Ismailia and Lake Timsah. Egyptian sources refer to this region as *ṯ-k-w(t)* (Tjeku). Since the Hebrew letter *sameḵ* was originally pronounced as a compound sound (cf. Gk. *xi,* which was borrowed from it), Succoth may be an adaptation of Egyptian *ṯ-k-w(t)*; hence Succoth and Tjeku would be the same site.

Evidence from archeological expeditions at Tell el-Maskhûṭah has led many scholars to identify Tjeku as the Egyptian city of PITHOM, which along with Rameses was built by the enslaved Hebrews under the reign of Pharaoh Seti I (cf. Ex. 1:11). Among the ruins of Tell el-Maskhûṭah are numerous monuments that mention Tjeku in reference to the Egyptian god Atum (= Tum), several times in the phrase "temple [Egyp. *Per*] of Atum at Tjeku." Per-Atum or Per-tum (*p-t-m*) would be represented in Hebrew as Pithom (*p-t-m*). Thus Tjeku appears to refer to the city, the fortress, or the region, while Per-Tum represents its religious names. Based on this evidence, many have suggested that Tjeku is both Pithom and Succoth.

The Wâdī Ṭumilât has long been recognized as an important E-W route of travel in the southeast Delta region. In



an attempt better to understand this area, various scholars have established the Wadi Tumeilat Project as a multidisciplinary, long-range investigation of the numerous antiquity sites located along this wadi. Although there is still much debate regarding the site of biblical Succoth, at present Tell el-Maskhûṭah is considered the most likely candidate. The Wadi Tumeilat Project may establish a more conclusive identification in the future.

W. L. THOMPSON, JR.

SUCCOTH-BENOTH suk'əth bə-nōth' [Heb. *sukkôṯ bᵉnôṯ*–'booths of daughters']. An image of a deity or a religious object, made and worshiped by Babylonian colonists who settled in Samaria after 721 B.C. (2 K. 17:30). The Hebrew has been thought to be an oblique reference to "booths" (*sukkôṯ*) or chambers where sexual rites were undertaken in the cult of a Babylonian goddess, possibly Banitu (an epithet of Ishtar) or of Zēr-Banitu (Ṣarpanitu, the consort of Marduk). Another possibility is that the term refers to a cultic assignment (Bab. *sakkû*) of daughters (Heb. *bᵉnôṯ*) for prostitution, although the context seems to imply a known deity. A further suggestion is that "Succoth" is related to "Sakkuth your king (or Moloch)" (Am. 5:26), which was among the foreign elements, including images and stars (Bab. *sikkût* means "Saturn") that Amos ascribed to errant Israelites in Samaria (cf. Acts 7:43). *See also* SAKKUTH. D. J. WISEMAN

SUCCOUR. *See* HELP.

SUCHATHITES sōō'kə-thīts (1 Ch. 2:55, AV, NEB). *See* SUCATHITES.

SUD sud (1 Esd. 5:29, AV). *See* SIAHA.

SUDIAS sōō'di-əs [Gk. *Soudios*] (1 Esd. 5:26); NEB SUDIUS. A Levite, also called Hodaviah (Ezr. 2:40) and Hodevah (Neh. 7:43), whose family returned from the Babylonian Exile. *See* HODAVIAH 3.

SUFFERING.

I. Terminology
II. Its Reality
III. Its Origins
IV. Its Purposes
  A. In the OT
  B. Intertestamental Developments
  C. In the NT
V. Conclusion

I. Terminology.–The English verb "suffer" and the various Hebrew and Greek expressions that it renders cover very different semantic fields. Three chief meanings may be distinguished in the English versions: (1) "let," "allow"; (2) "experience," "endure"; (3) "feel pain or anguish."

(1) "Suffer" in the sense of "let," "allow" (rendering primarily Heb. *nāṯan*; Gk. *aphíēmi, epitrépō*) is an archaic usage; it is not found in the RSV or other modern versions but is frequent in the AV and RV (e.g., Ex. 12:23: "suffer the destroyer to come"; Mk. 10:14 par.: "suffer the little children to come unto me"; 1 Tim. 2:12: "suffer a woman to teach" [cf. RSV, NEB, "permit," "allow," "grant," "let"]).

(2) "Suffer" occurs often in the sense of "experience" or "endure," almost always with reference to something unpleasant (e.g., "suffer reproach," Ezk. 36:7; "suffer disgrace," v. 30; "suffer fools gladly," 2 Cor. 11:19, AV [RSV, NEB, "bear with"]; "suffer mocking," He. 11:36). Rendered in this sense, "suffer" primarily represents Heb. *nāśā', lāqaḥ;* Gk. *anéchomai,* and *lambánō*. Frequently, however, "suffer" does not correspond to any specific Hebrew or Greek verb but translates a derived form or passive, e.g., "suffer affliction" (Heb. hithpael of *'ānâ*, Ps. 107:17), "suffer loss" (Gk. pass. of *zēmióō*, 1 Cor. 3:15), "suffer wrong" (pass. of *adikéō*, 2 Cor. 7:12). In Ps. 34:10 (MT 11) "suffer hunger" simply renders Heb. *rā'ēḇ*, "be hungry"; in Neh. 2:17 "suffer disgrace" is literally "be a disgrace" (cf. AV). In 1 Cor. 13:4, AV, "charity suffereth long" (Gk. *makrothyméō*) means "love is patient" (cf. RSV, NEB).

(3) "Suffer" in the sense of "feel pain or anguish" renders a wide variety of Hebrew terms; in the NT it usually represents Gk. *páschō*, but also occasionally *kakopathéō* (Jas. 5:13), *synkakopathéō* ("share in suffering," 2 Tim. 1:8; 2:3), and *sympáschō* ("share in suffering," 1 Cor. 12:26). Hebrew has no general word for the passive experience of suffering; hence the infrequency of the word in the English versions of the OT (cf. Ps. 9:13 [MT 14], where "what I suffer" renders Heb. *'onyî*, lit. "my affliction"; cf. AV). Thus, entries under "suffer" in OT concordances give an inadequate indication of the importance of the *concept* of suffering, since Hebrew writers prefer to use more precise and vivid terms, rendered in the English versions by such expressions as "affliction," "anguish," "distress," "grief," "misery," "oppression," "pain," "plague," "sorrow," "straits," "travail," "tribulation," "vexation," "woe"; accounts of suffering (e.g., in war) may not even contain any of these terms. In the NT *páschō* (occurring about forty times) is used almost exclusively of Christ's sufferings (e.g., Lk. 24:26; Acts 3:18; He. 2:18) or of Christians' suffering for His sake (e.g., Phil. 1:29; 1 Pet. 2:20); sometimes it virtually means "die" (e.g., Lk. 22:15; Acts 17:3, both of Christ; cf. Acts 26:23). In spite of the prominence of suffering as a theme, *páschō* appears only once in Revelation (2:10) and not at all in John, Romans, Ephesians, Colossians, James, 2 Peter, or

1-3 John; Paul never uses it of his own sufferings. In two passages *páschō may* be used in the neutral sense of "experience": "I have suffered much over him today in a dream" (Mt. 27:19), and "[she] had suffered much under many physicians" (Mk. 5:26; cf. NEB: "in spite of long treatment by many doctors"); but in both cases it is more likely that an unpleasant experience is intended.

The noun "suffering" appears in the English Bible only in the third sense, meaning "pain" or "anguish." It appears rarely in the OT (never in the AV) as a translation of Heb. *maḵ'ōḇ* (Ex. 3:7; Lam. 1:18), *ṣārâ* (Neh. 9:27), *ke'ēḇ* (Job 2:13), or *'aṣṣeḇeṯ* (Job 9:28), and only sporadically in the NT for Gk. *páthēma* (e.g., Rom. 8:18; Phil. 3:10; 1 Pet. 1:11), *thlípsis* (Rom. 5:3), and *kakopátheia* (Jas. 5:10). But the concept of suffering occurs much more frequently in the NT than is suggested by the occurrences of the noun "suffering," being rendered by numerous other terms, e.g., "chastisement" (AV) or "discipline" (RSV; Gk. *paideía*), "distress" (*stenochōría*), "endurance" (*hypomonḗ*), "grief" (*lýpē*), "persecution" (*diōgmós*), "plague" (*plēgḗ*), "tribulation" (*thlípsis*), and their related verbs.

See also AFFLICTION; DISTRESS; GRIEF; PAIN; SORROW; TRIBULATION.

The following sections treat the biblical concept of suffering as a whole, rather than merely passages where the word "suffer" appears in the versions.

II. Its Reality.–The Bible takes suffering for granted as part of the normal human lot: "Man that is born of a woman is of few days, and full of trouble" (Job 14:1; cf. Eccl. 8:6-8; 12:1-7; etc.). Childbirth, sickness, and old age bring their suffering, as do famine, tempest, war, and external oppression. Individuals and communities cry out to God in their pain and misery; many psalms are "plaints of the sufferer" (e.g., Pss. 5, 6, 13, 44, 74). God's people had a particular share of suffering to bear through slavery in Egypt, exile in Babylon, persecution by Antiochus Epiphanes, and Roman domination and repression, including the sack of Jerusalem and the persecution of the Christian Church. The Bible also takes animal suffering for granted (e.g., Ps. 34:10; [MT 11]; 1 K. 18:5; Am. 3:12; but cf. Mt. 10:29), and there is a sense in which all creation groans in pain, waiting to be freed from bondage (Rom. 8:19-22). But the prophets looked forward to a time when creation will be at peace: the wolf will lie down with the lamb (Isa. 11:6-9), and there will be no more human distress or want (Isa. 25:8; 65:17-25; Rev. 21:4).

III. Its Origins.–The extent of suffering in the world raises profound questions about the nature of God. The Bible teaches that He is utterly good, a loving Father who cares for His creation and especially for His chosen people; He is the almighty Creator, King of the universe with all its natural forces. Why then does He permit suffering? How did evil originate, and where will it end? Neither the OT nor the NT provides facile answers to these questions, but they teach the "fallen" nature of humankind (Gen. 3; *see also* EVIL; FALL, THE) and the sinfulness of all, both Jew and Gentile (Rom. 2; 5:12f.). Individuals suffer not only as the result of their own sin but also as part of a sinful community. Sometimes God is described as sending suffering directly through natural phenomena and illness (cf. the plagues of Egypt, Ex. 7–12); sometimes God uses human beings as His instruments (e.g., Cyrus, Isa. 45:1); sometimes suffering is attributed to the action of Satan or other spiritual evil powers (e.g., Job 1–2; Eph 6:12; Rev. 2:10). In some religions such beings are seen as acting independently of the supreme God, but biblical thought contains only a modified dualism; ultimately God is the cause of all, both "weal and . . . woe" (Isa. 45:7; cf. Am. 3:6). God permits Satan to test Job (Job 1:12; 2:6), just as He is said to have sent a "lying spirit" to entice Ahab (1 K. 22:22f.). The Holy Spirit drives Jesus into the wilderness to be tested by Satan (Mk. 1:12f. par.), and Jesus Himself permits Satan to sift Peter as wheat (Lk. 22:31). There is an unfathomable mystery about the conflict between good and evil, which some writers expect to be intensified in the "end time" (2 Thess. 2:7-12; 2 Tim. 3:1-5; Rev. 20:7-10; cf. the suffering associated with the DAY OF THE LORD (and the "messianic woes"). But, in spite of the very real struggle, we are assured that God remains King, and that Jesus by His death has overcome all evil (Col. 2:15; cf. 1 Cor. 15:54-57; Rev. 12:10f.; etc.).

IV. Its Purposes.–Suffering fulfils a variety of purposes, not all of which can be fully understood. There are clearly developments of thought within the biblical tradition, as Israel grew in experience and the various OT authors pondered the problem of pain. The advent of Jesus Christ — and the experience of witnessing His suffering and resurrection — brought about radically new attitudes; but even within the NT, as in the OT, there are varieties of understanding, with some writers stressing one aspect and others another. Both the OT and the NT, even in the most pessimistic literature, evidence an overwhelming trust in God's purposes and a sense that He is with His people in their pain.

A. In the OT. Suffering is rarely, if ever, understood as purely fortuitous, although it is often mentioned as a matter of course without explanation or any implications about sin or guilt (e.g., 2 S. 4:4, Jonathan's crippled son; Gen. 34:25, pain from a wound). Three main purposes may be distinguished: (1) retributive, (2) educative and exemplary, and (3) vicarious and redemptive.

1. Retributive. It is a common thought in many religions that evil conduct brings divine retribution: in Greek mythology Zeus strikes the blasphemer with his thunderbolt, and the notoriously wicked are tormented in Hades. The Jewish people had a strong sense of divine justice: God rewards all according to their works (Ps. 62:12 [MT 13]; Prov. 24:12); if their deeds are evil, suffering will ensue (Gen. 12:17; 42:21; Am. 1:3-15; etc.). In the very beginning, according to Gen. 3, Adam and Eve suffered for their disobedience — Eve through the pains of childbirth and subjection to her husband, and Adam through having to earn his bread by the sweat of his brow. The Flood was a punishment for sin (Gen. 6:13), but Noah and his family were rewarded for their faithfulness, as were Abraham and the patriarchs. A holy God requires a holy people: OT covenant theology presupposes reward for obedience and punishment for disobedience. This thought underlies the Decalogue (Ex. 20:1-21), the Covenant Code (Ex. 20:22–23:33), and the Holiness Code (Lev. 17–26). It is a major theme of Deuteronomy (esp. chs. 4–11, 28–30) with its insistent message: "If you obey the voice of the Lord your God . . . all these blessings shall come upon you. . . . But if you will not obey the voice of the Lord . . . cursed shall you be" (Dt. 28:1f., 15f.). Suffering as a punishment for sin is a recurrent motif in all the historical books (e.g., 1 K. 16:17-19), being especially emphasized by the Chronicler. Because of Hebrew belief in collective responsibility and the solidarity of the family (see esp. Sutcliffe, ch. 4), the OT depicts whole communities suffering for the sins of their king, children for the sins of their parents, and wives for those of their husbands (e.g., Ex. 20:5; Josh. 7:24-26; 1 K. 21:29; but cf. also Jer. 31:29; Ezk. 18:2).

The Psalms, Prophets, Proverbs, and other wisdom writings reiterate the message that God punishes both individuals and whole nations for their sins. God makes His own people Israel suffer precisely because He loves them:

"You only have I known of all the families of the earth; therefore I will punish you for all your iniquities" (Am. 3:2). But the authors of many of these writings also displayed an awareness that sometimes the righteous suffer and the wicked appear to prosper (e.g., Ps. 37:35; Jer. 12:1; Hab. 1:13); they console themselves that the happiness of the wicked will be short-lived, that their end is destruction — in later Jewish thought, Gehenna (cf. Isa. 66:24). But the doctrine of suffering as punishment is not the whole picture; more developed Jewish thought recognized that suffering is not always the result of sin.

2. Educative and Exemplary. In the ancient world children were regularly disciplined; it was only to be expected that if God was a loving Father He would chasten His children (Prov. 3:11f.). In the OT such chastening often takes the form of testing by suffering. Abraham was tested by being asked to sacrifice Isaac, the mere contemplation of which must have cost him much anguish (Gen. 22). Though he was a blameless and upright man, JOB was tested even more severely. His suffering is clearly seen as educative; yet the book leaves many questions unanswered. What about those who "fail" the test and do not learn from their suffering? What about Job's wife? Did she learn from her sufferings? And how could their children who died benefit from Job's lesson? Such details are outside the scope of the story. But Job, like other righteous sufferers — e.g., Daniel in the lions' den (Dnl. 6) — serves as an example to encourage others who find their faith severely tested. In the NT (Jas. 5:11) Job is commended for his "patience" or steadfastness.

See also CHASTENING; DISCIPLINE I.

3. Vicarious and Redemptive. It is but a short step from educative and exemplary suffering to vicarious and redemptive suffering. Many of the great prophets seem to have suffered in a representative way for their people. Moses shared his people's sufferings and felt as if all their burdens were laid on himself (Nu. 11:1-15). Hosea suffered in his marital relationship, which was an enacted parable of God's loving and forgiving relationship to errant Israel (Hos. 1–3). Isaiah, Ezekiel, and above all Jeremiah felt the anguish of their prophetic vocation; at times Jeremiah could hardly bear it (Jer. 15:18; 20:7-12). The supreme OT example of vicarious suffering is the Suffering Servant of Isa. 52:13–53:12, of whom it is said, "He was wounded for our transgressions, he was bruised for our iniquities; upon him was the chastisement that made us whole. . . . All we like sheep have gone astray; . . . and the Lord has laid on him the iniquity of us all" (53:5f.). Scholars have debated whether these words originally referred to a contemporary individual such as the prophet himself, or, collectively, to the nation Israel (or a remnant thereof), or to a future redeemer. In the NT these words find their fulfillment in the figure of Jesus Christ, who, though innocent, suffered representatively and vicariously for others that their sins might be forgiven. (*See* SERVANT OF THE LORD.)

B. Intertestamental Developments. The wisdom and apocalyptic literature of the Apocrypha and Pseudepigrapha continue to affirm the belief that God rewards the righteous and punishes the sinful with suffering (e.g., Wisd. 4:18–5:23). The most significant development is the growth of a belief in an afterlife of blessedness for the holy (cf. 2 Macc. 7:14; 12:43; Wisd. 5:15f.) and of painful destruction or everlasting torment for the wicked (see Jth. 16:17; 2 Esd. 7:36; 1QS 4; etc.). The sufferings of the virtuous are seen as disciplinary (Wisd. 3:1-6; Ps. Sol. 13:10; 18:4). Although these sufferings may be deserved (2 Macc. 7:32f.), they may also atone for the sins of the community (7:37; 8:3). In rabbinic theology the sufferings of the just are seen as a "chastisement of love" with expiatory force (see *TDNT*, IV, 910f.; Bowker, pp. 33ff.).

C. In the NT. The NT presupposes the same basic purposes of suffering as the OT, but it transforms the concept by its message of the good news of Christ's vicarious redemptive suffering, which reconciles God and humankind (see esp. Mk. 10:45; Rom. 3:25; Eph. 2:16; Col. 1:20; He. 2:17f.; 1 Jn. 4:10). There are few references to the retributive function of suffering in this life (though cf. 1 Cor. 11:28-30), but there are solemn warnings about future judgment of the unrepentant, whose suffering is described in terms of exclusion from God's presence (e.g., 2 Thess. 1:9; cf. Mt. 25:10-12; Lk. 13:28), tribulation and distress (Rom. 2:9), and even "eternal" punishment (2 Thess. 1:9), symbolized by the lake of fire (Rev. 20:10, 15). Jesus' teaching, especially as presented by Matthew, employs the images of outer darkness, weeping, gnashing of teeth, the undying worm, and unquenchable fire (e.g., Mt. 8:12; 13:42; 25:30, 46; Mk. 9:48; cf. Isa. 66:24). But such references must be read in the light of the good news of God's free forgiveness of sins for all who will accept it through His grace. The NT's main emphasis is not on the threat of punishment but on the promise of pardon, peace, and joy.

1. Jesus and the Gospels. The Gospels freely recognize that suffering abounds and needs to be combated and alleviated. They do not speculate on the causes of suffering: rather they stress Jesus' power to heal and make whole. They present Jesus as filled with compassion at the sight of human distress, whether caused by sickness (Mt. 14:14; Mk. 1:41), hunger (Mt. 15:32), or spiritual helplessness (9:36: "He had compassion for them, because they were harassed and helpless, like sheep without a shepherd"). Jesus saw His healing miracles as bringing about the defeat of Satan (Lk. 10:18), and He commanded His disciples to continue His work of preaching, healing, and exorcism (e.g., Mk. 6:7 par. Mt. 10:1). Unlike many Jews of His day, Jesus declined to accept a systematic connection between sickness or accident and sin (Jn. 9:3; Lk. 13:2-5), although He recognized an interrelationship between a person's physical and spiritual state (Mk. 2:5-12 par.; cf. Jn. 5:14).

Jesus Himself experienced suffering: physical (from hunger, weariness, scourging, crucifixion), emotional (He wept for Lazarus [Jn. 11:35], and sorrowed for the fall of Jerusalem [Mt. 23:37; Lk. 19:41]), and mental/spiritual (cf. His agony in the garden [Mk. 14:34 par.] and the desolation of the cross [15:34 par.]). But He saw His suffering as the predetermined will of God: "The Son of Man must suffer many things . . ." (Mk. 8:31; cf. 9:12; etc.). He rebuked Peter for his inability to accept the idea of a suffering Messiah (8:32f. par.), and He taught that all who would be His followers must be prepared to humble themselves and go the way of the cross (Lk. 9:23; cf. Mt. 20:22; Mk. 13:9; etc.). All four Gospel writers bring out the deep theological significance of Jesus' suffering, and in their passion narratives emphasize that it took place in accordance with God's will and in fulfillment of Scripture (e.g., Mt. 26:54; Mk. 14:49; Lk. 24:45f.; Jn. 19:24, 28); it was through suffering that Jesus entered His glory (Lk. 24:26; Jn. 12:23).

By His teaching and example Jesus brought about a new attitude to suffering, especially when it is for the sake of the gospel (see, e.g., Mt. 5:4, 10-12). He identified Himself with the poor and the outcast (cf. 25:35-40); those who share in His trials will eat and drink at His table in the Kingdom (Lk. 22:28-30).

2. Early Christian Preaching, the Epistles, and Revelation. Christ's death on the cross was a stumbling block to

the Jews, who had expected a very different sort of Messiah, and folly to the gentile world (1 Cor. 1:18, 23). But for the early Christians His sufferings and sacrifice were the very heart of the gospel, part of God's eternal plan foretold in Scripture. This thought dominates the early apostolic preaching as recorded in Acts (3:18; 4:11; 17:3), 1 Peter (1:18-20; 2:22-24), and the Pauline Epistles (e.g., 1 Cor. 15:3); it also features prominently in Revelation, especially in the image of the Lamb that was slain (5:6, 12; 7:14; etc.).

If Christ had to suffer, so too must the Christian community. Peter and John counted it a privilege to suffer in His name (Acts 5:41); and Paul rejoiced in his sufferings (e.g., Phil. 3:8; Col. 1:24), which were a testimony to faith (2 Tim. 1:8, 12). Sometimes Paul catalogued the sufferings and hardships he endured for the gospel, seeing them as a sharing in Christ's death (2 Cor. 4:7-12; 11:23-29). Christians are also called to share in one another's sufferings (Rom. 12:15). Paul identified the suffering community so closely with Christ's body that he could write, "I complete what is lacking in Christ's afflictions" (Col. 1:24, perhaps an allusion to the suffering that the Church must undergo before the Parousia). He could truthfully say, "I have been crucified with Christ; it is no longer I who live, but Christ who lives in me" (Gal. 2:20). Because all baptized Christians participate in Christ's death and resurrection (Rom. 6:3f.), they are all called to suffer. 1 Peter, written to a church under threatened or actual persecution, expresses this thought especially clearly: it bids readers to rejoice because they are sharing Christ's sufferings (1 Pet. 4:13), and it promises them blessings, urging them to bear patiently even undeserved suffering (3:13-18). Hebrews stresses that God chastens those whom He loves (He. 12:5-11) and emphasizes that suffering was a test of obedience even for Jesus (5:8). Revelation also sees suffering as a form of testing (Rev. 2:10), and to those under persecution it urges faithfulness and endurance to the end. It predicts many woes for the world as Satan's power is unleashed and the end draws near, but it claims that Christ has already won the victory, and that to the martyrs He will give the crown of life (2:7, 10; 3:5, 21; etc.). The souls of those slain cry out, "How long?" (6:9f.); but at the consummation all suffering, pain, and death will be abolished, and every tear wiped away (7:17; 21:4).

V. Conclusion.–The Bible offers no simple solution to the very real problems of suffering and pain; but it affirms that God is good, that He cares, and that He gave His Son Jesus Christ to suffer and die for all humanity. Through His suffering Christ brings hope, dignity, and comfort to those who suffer. Suffering may be a form of discipline; when it comes for the sake of the gospel it should be welcomed as a mark of God's approbation, for those who share in Christ's sufferings share also in His glory (Rom. 8:17; 2 Cor. 4:17). Nevertheless, suffering should not deliberately be courted (Col. 2:23); instead, Christians are called to follow Christ's example in relieving the suffering of others and bearing it patiently when it comes to themselves, not returning evil for evil but overcoming evil with good (cf. Rom. 12:19-21). However difficult it may seem at times to discern God's purpose, Christians may be assured that nothing — no distress, tribulation, famine, or any other evil — "will be able to separate us from the love of God in Christ Jesus our Lord" (Rom. 8:35-39).

R. B. EDWARDS

SUFFERING SERVANT. *See* SERVANT OF THE LORD.

SUFFOCATION. A method of execution used by Persian kings (see J. A. Goldstein, *II Maccabees* [*AB*, 1983], p. 463), which effected the death of the unscrupulous high priest MENELAUS (2 Macc. 13:3-8).

SUICIDE. The taking of one's own life, or causing it to be taken by another, regardless of motive, circumstances, or method used. No single word for suicide occurs in Hebrew, Aramaic, or Greek, but, contrary to widespread opinion, the Bible has much to say about the subject. Relevant texts are of two types: (1) those that give specific accounts of persons taking their own lives; (2) those that, although not relating to suicide directly, have been used to portray suicide as either (a) a sin or a crime, or (b) a way of achieving martyrdom or of emulating the example of Jesus.

I. Biblical Accounts.–Seven accounts of suicide, or possible attempted suicide, occur in the Bible. (1) Jgs. 9:50-57 tells of Abimelech, who had his skull crushed when a woman dropped a millstone on his head from a tower. Knowing that death was imminent, he asked his armor bearer to slay him with the sword, "lest men say of me, 'A woman killed him.'"

(2) According to the definition given above, Samson's death (Jgs. 16:21-31) was suicide. Having spent his last days in torment, blinded and mocked by the Philistines, Samson prayed that he might have strength to avenge his enemies and die with them. He then caused the building in which they were gathered to collapse upon them all.

(3) Both Saul and his armor bearer killed themselves by falling on their own swords, in order to avoid being killed or abused by their enemies (1 S. 31:1-7). (Scholars generally consider a different account of Saul's death [2 S. 1:1-10] as a story invented by an ambitious young man who thought he would thereby please David.)

(4) After his military counsel to Absalom had been rejected, Ahitophel "went off home to his own city, . . . set his house in order, and hanged himself" (2 S. 17:23).

(5) Zimri, a would-be king, set fire to his house and died in the flames just as Tirzah was about to be captured by Omri's forces (1 K. 16:15-20).

(6) Some writers, including E. Wiesel, consider Jonah 1:11-15 a story of a suicide attempt.

(7) The only NT account of a suicide is the story of Judas's death in Mt. 27:3-5. (Acts 1:15-18 does not specify that Judas died by suicide.)

None of these accounts explicitly condemns suicide as a sin or a crime, or has a clear statement that suicide per se was a punishment for past sins. Indeed, in some instances the suicides were honored by their survivors. But in others they were clearly outside the divine will and purpose.

Accounts of suicide are found also in the Apocrypha (e.g., 1 Macc. 6:42-46; 2 Macc. 14:37-46; 4 Macc. 12:19; 17:1). Josephus, too, gave several accounts of individual and mass suicides (*Ant.* xiii.13.10 [367-69]; xv.2.1 [13]; *BJ* i.13.10 [271-72]; iii.8.4-7 [355-391]; vii.8.6-9.1 [320-401].

II. Negative Treatments.–Among the biblical texts that have been influential in shaping attitudes against suicide, the most important is the sixth commandment (Ex. 20:13; Dt. 5:17). Some early Christians' acceptance of, even desire for, martyrdom seems to suggest an acceptance of suicide (e.g., Ignatius [Ign. Rom. 4:1f.; 5:2f.]), but

Lactantius (*Div. Inst.* iii.18) vehemently opposed it. Chrysostom (*De consolatione Mortis*) cautioned against hurrying one's appointed end, and Jerome (*Comm. ad Matt.* 4.17) considered Judas's suicide a crime. Augustine used the sixth commandment to crystalize the opinion that suicide was wrong (*Civ. Dei* i.4-26). Probably in reaction to a large number of Christians who were eager to leave this life, he argued that suicide foreclosed any opportunity for repentance and that it was also an act of cowardice.

Later church councils (Guadix, 305; Carthage, 348; Braga, 563) and thinkers, including Thomas Aquinas (*Summa Theol.* 2a 2ae, q. 64, art. 5), reinforced this teaching. Aquinas relied on natural theology to insist that suicide was against nature and therefore against God's ordinance. God alone has the right to give and to take away life. Suicide was also a crime against society and should not be used, even to escape torture or rape.

Other biblical texts that have been used to prohibit suicide are Dt. 30:19; Job 1:21; Acts 16:27f.; 1 Cor. 6:19; Eph. 5:29.

The history of Judaism presents a varied pattern. After the Exile suicide was basically ruled out because of the strong reverence for human life. Yet mass suicides occurred at both Gamala (A.D. 67) and Masada (A.D. 73) at the time of revolt against Roman rule.

III. Positive Treatments.–The negative view went virtually unchallenged until the 17th cent., when John Donne, the English cleric, wrote *Biathanatos,* in which he argued cogently for a positive view of suicide. Donne relied heavily on Jesus' saying in Jn. 15:12f., "Greater love has no man than this, that a man lay down his life for his friends." Even more explicit is 1 Jn. 3:16, "By this we know love, that he laid down his life for us; and we ought to lay down our lives for the brethren."

Among other texts cited to support suicide in a broader sense are Mk. 8:34f.; Jn. 13:37; Rom. 5:7; 14:7f.; 2 Cor. 5:1; Phil. 1:21f. Serious discussion of the ethics of suicide requires careful attention to the definiton given of it. Some hold that strictly and properly self-sacrifice (e.g., Saul, military heroes, the socially concerned) is not suicide. But how far can that negation reach? Unless carefully monitored, the exclusive definition might allow unwittingly for a very broad interpretation of self-sacrifice. On the other hand, the unquestioned primacy of self-preservation can easily become a hindrance to genuine Christian altruism. Future discussion of this serious ethical issue must give due attention to the full breadth of the biblical evidence.

In the ongoing debate, scholars and ethicists reject the harsh condemnations of the Middle Ages, but are duly cautious in citing the extreme circumstances where suicide might fall within acceptable limits, e.g., the choice of death in Nazi concentration camps or self-slaying to avoid revealing military secrets.

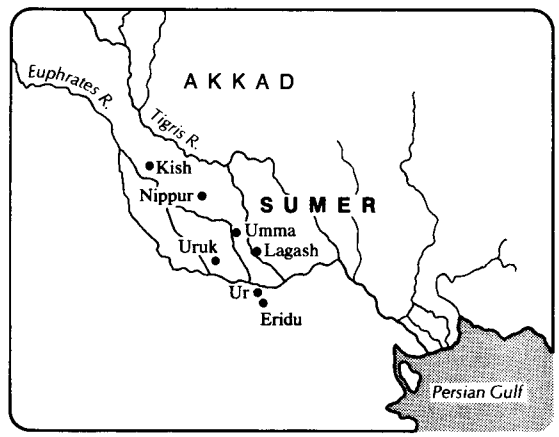
SUKKIIM suk'ē-im [Heb. *sukkîyîm;* LXX A *Trōglodytai,* B *Trōgodytai,* Luc. *Souchieim*] (2 Ch. 12:3); AV SUKKIIMS; NEB SUKKITE. Foreign mercenaries who, along with the Libyans (AV "Lubims") and the Ethiopians, campaigned with SHISHAK king of Egypt during his invasion of Palestine *ca.* 918 B.C. (*OTMS,* pp. 17f.; cf. 1 K. 14:25-28). H. G. M. Williamson, following K. A. Kitchen, suggested that the Sukkiim were perhaps auxiliary Libyan forces from the western desert oases (*1 and 2 Chronicles* [*NCBC,* 1982], p. 247).

SULPHUR [Gk. *theíon*] (Lk. 17:29; Rev. 9:17f.; 14:10; 19:20; 20:10; 21:8); AV BRIMSTONE; [*theiódēs*–'sulphurous,' 'yellow'] ("[color of] sulphur," Rev. 9:17); AV BRIMSTONE; NEB SULPHUR-YELLOW. A solid non-metallic element that is found particularly in deposits in combination with other minerals. It is most pure in volcanic areas of the earth. It burns at low temperatures and produces a colorless gas called sulphur dioxide. People of the ancient Near East were apparently familiar with volcanic eruptions that emitted burning sulphur, and they used this image as a picture of agonizing destruction. In the OT the RSV translates Heb. *goprît* (LXX *theíon*) by "brimstone." *See* BRIMSTONE. R. K. H.

SUMER sōō'mər [Sum. *kengir* (KI.EN.GI); Akk. *šu-meru*]; **SUMERIANS** sōō-mir'i-ənz. A land, later known as Babylonia, that included the southern part of modern Iraq, approximately from Baghdad to the Persian Gulf. Sumer is regularly linked in Sumerian geographical terms with Akkad to the north in the phrase *ki-en-gi ki-uri* ("Sumer and Akkad"); it is possibly related to biblical SHINAR. The Sumerians developed the earliest known high civilization.



I. Origin
II. Geography

IX. Art
X. Legacy

I. Origin.–The original homeland of the Sumerians is unknown, but there is no question that they did enter Mesopotamia from some outside area. Their language includes many non-Sumerian words for basic economic concepts such as farmer, herdsman, fisherman, plow, furrow, palm, date, weaver, basketmaker, and potter, which indicate the level of the local material culture when they arrived. In addition, the names of the two main rivers (Tigris and Euphrates) and of some of the ancient cities appear to have phonetic affinities to the pre-Sumerian language of lower Mesopotamia.

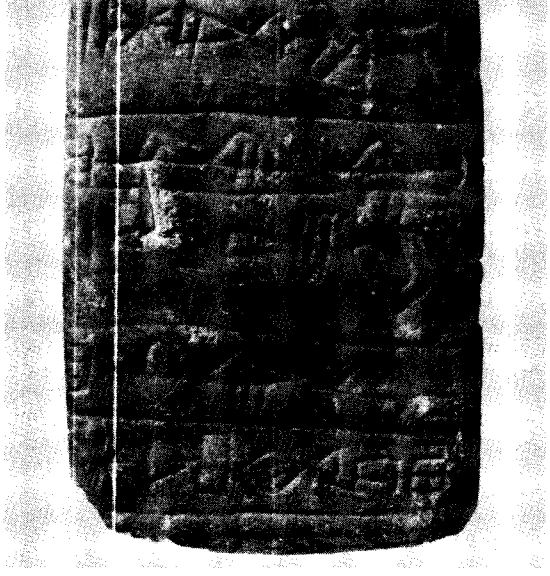
One theory is that the Sumerians came from the mountainous region to the northeast, since the early epics refer to cities like Aratta that were located beyond mountain ranges. Further support is found in the prominence their religion gave to the *kur* ("mountain"), e.g., *ekur* ("mountain house") as the name of the temple of Enlil, the chief god of the pantheon.

Most scholars, however, believe that the Sumerians arrived via the Persian gulf, because the concentration of the Sumerian population in historic times was in what is now southern Iraq. Early Sumerian history also shows signs of cultural links with the Indus Valley culture of India.

II. Geography.–Apparently throughout its history Sumer was a relatively arable land in an alluvial valley. There was certainly a greater number and variety of both plants and animals then than now, as shown by both written records and art forms. Moreover, in the last few centuries the country has become increasingly arid since forests and grasslands were destroyed, the climatic pattern has changed, and a vast and complex irrigation system has been largely destroyed. Primarily an agricultural area with virtually no stone or minerals, water transport was highly developed and industries grew in the prosperous cities through the importation of the necessary raw materials by extensive trading.

III. History.–In one sense the history of Mesopotamia began with the Sumerians, since they were apparently the inventors of writing. The earliest known historical records came from the period of Sumerian dominance and were written in the Sumerian language. The first historical records were quite brief. The longest was the King List, compiled during the post-Sumerian Isin dynasty from earlier records such as votive inscriptions, date lists, and probably also from oral tradition. Its picture of early history includes vast periods of time with rulers of extreme longevity, and a division of time into antediluvian and postdiluvian periods. True history emerges from legend at the beginning of the 3rd millennium and continues to the middle of the 2nd millennium. The historical picture becomes progressively clearer as the documents become more numerous and more detailed.

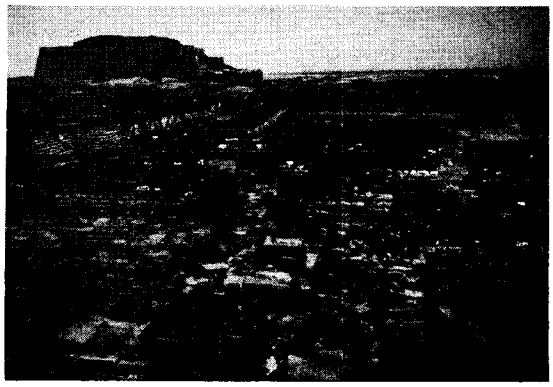
A limestone tablet from Ubaid (*ca.* 1600 B.C.) used as the foundation stone of a small temple. It reads: "A-anne-pada, King of Ur, son of Mes-anne-pada, King of Ur, for Ninhursag, has built a temple." The discovery of this tablet established the historicity of the 1st Dynasty of Ur (courtesy of the Trustees of the British Museum)



Written at the time of Sumerian supremacy and from the Sumerian point of view, these early records nevertheless mention other peoples and nations. Sometimes they mention other peoples by name, but often such references can be recognized solely by the large number of non-Sumerian personal names in the text. In fact foreign names, including Semites, predominate in the pre-Flood and early post-Flood periods. For the next several centuries (except for the Akkadian period) Sumerian names increase in number, but foreign names become more numerous again as Amorites move into the land. Finally Sumerian names disappear entirely. This phenomenon tells the story of the Sumerians succinctly: they entered the alluvial valley of lower Mesopotamia from some as yet unknown homeland, apparently in considerable numbers, and — having both the genius for and the basic elements of a sophisticated civilization — dominated the area for about fifteen hundred years. Then, perhaps because the source of immigration had dried up, they were completely absorbed into the general culture.

According to the Sumerian authors, history began when "kingship was sent down from heaven" to Eridu. Archeological evidence indicates that the earliest phase of sedentary occupation in southern Iraq did in fact occur in the region of Eridu. This phase was followed by the extensive Ubaid period (*ca.* 4000-3500 B.C.) and finally by the Uruk period (3500-3200 B.C.) in which writing was invented. The King List mentions five cities for this early period before the Flood, when "eight kings reigned 241,200 years." Of these cities only one besides Eridu has been excavated, namely, Shuruppak the home of Ziusudra, the Sumerian "Noah." After the Flood, according to the Sumerian scribes, "kingship descended from heaven" again, this time further north at Kish. After a succession of twelve rulers, several with Semitic names, Etana appears (*ca.* 3000 B.C.). He is the first king for whom the records bear any resemblance to history; but the documents were written centuries after his life. By the time of Enmebaragesi (*ca.* 2700 B.C.), the seventh king of Kish after Etana, contemporaneous, truly historical records of these ancient rulers are available. At about the same time the two other chief cities of this early postdiluvian period appear in the records: Uruk with its king, Meskiaggasher, and Ur with its king, Mes-anne-pada. Kish, Uruk, and Ur, the three chief Sumerian cities of this early period, contested for control of the whole territory. Interestingly enough, although the kings of Ur are known best by archeological artifacts, outstanding among which are those from the so-called Royal Tombs of Ur, the kings of Uruk are known almost entirely and in greater detail by epic poems composed to celebrate their heroic adventures. In fact, until relatively recently Lugalbanda, Dumuzi, Enmerkar, and Gilgamesh of Uruk were considered to be wholly legendary characters. Now they are known to have been historical people who led armies in battles long ago.

The actual course of history according to the earliest records is not clear. The King List records three major dynasties, one each for Kish, Ur, and Uruk, before Sumerian hegemony was dissolved by Elamite conquest. But a unique document, the Tummal tablet, which records the successive restorations of a prominent shrine in Nippur,



The temple complex foundations at Ur with the ziggurat in the background; the complex included shrines, storehouses, magazines, and housing for temple personnel (A. H. Tolhurst)

indicates that there were actually four major Sumerian dynasties although still only the same three cities (see Kramer, pp. 46-49). The problem apparently arises from the fact that two different kings of Ur had very similar names (Meskiagnanna and Meskiagnunna) that later scribes confused. But it is remarkable that we have as reliable information as we do since it reaches way back before the development of writing and was preserved only by oral tradition, appearing on documents written nearly one thousand years after the earliest events occurred. We must also bear in mind that our records are never complete. Certainly other large and important cities existed but are not mentioned, and many others listed by name only must have been more important than their brief mention would suggest. Nonetheless, we do have at least a bare outline of historical development from near the time that southern Iraq was first occupied right down to the present.

First, Mes-anne-pada of Ur defeated Agga of Kish. Not long afterward Gilgamesh of Uruk wrested control from Meskiagnunna of Ur. Then Meskiagnanna of Ur took back control from Urlugal of Uruk. Finally, the pressure of foreigners, especially the Elamites, became too much and the power of Ur was transferred to Awan, a non-Sumerian city. Then follow a number of different cities sharing control of Sumer. Few names of rulers are preserved.

Eventually we arrive at a period where a number of records, including some dated tablets, allow us to begin constructing a more coherent history. Once again, however, due largely to the accident of excavation, we have records principally from three cities only, Kish, Umma, and especially Lagash. The well-known Mesilim of Kish was apparently the major ruler in the area. Most of the documents of this period refer to rivalry between two neighboring Sumerian cities, Umma and Lagash, over the control of agricultural lands between them and especially the irrigation canals, which are of supreme importance to agriculture in southern Iraq. The best-known kings of Lagash are Eannatum, for whom there are many historical inscriptions, and Urukagina, whose main inscription gives many details of social customs and celebrates his reforms that made life more pleasant for the common citizens (see Barton, pp. 80-85; Moscati, p. 21). This period closes with the rise of Lugalzaggesi (originally king of Umma and finally, as his power grew, of Uruk), whose lengthy inscription on stone vessels was found in Nippur. His brief reign was brought to an end by the famous Semitic king Sargon of Agade (Akkad).

A paragonite stone statue of Gudea of Lagash, a pious ruler known for building and restoring religious structures (*ca.* 2141-2122 B.C.) (The Detroit Institute of Arts; Founders Society Purchase, Robert H. Tannahill Foundation Fund)

Sargon founded the famous Sargonid dynasty and soon became one of the most powerful rulers in Mesopotamian history. The Semites who had long lived in the land had finally gained power through this remarkable king. Sargon's grandson, Naram-sin, extended the power of the dynasty even farther. But in less than 150 years the Guti people grew strong enough to overthrow the last Sargonid king. Sumerian poets explained Agade's downfall as the result of the Sumerian gods punishing Naram-Sin for desecrating the shrine of Enlil in Nippur (see *ANET*, pp. 646-651).

After Sumer had been under the control of the Guti for quite some time, Urbau of Lagash reestablished Sumerian power in Mesopotamia. But Gudea is by far the best-known ruler in Lagash at this time because of the discovery of numerous diorite/basalt statues bearing lengthy inscriptions. He was apparently not primarily a military man, for most of his inscriptions dealt with building and repairing shrines and temples. The lengthy texts, however, do mention the materials used and the lands from which they came, indicating trade relations with widely separated cities to the north and south. The last governor of Lagash, Namhani, seems to have been a willing vassal of Guti kings who eventually destroyed Sumerian power again.

Utuhegal of Uruk finally broke away from the Guti and restored kingship to Sumer. His reign was also short-

lived, however. After no more than seven years Ur-Nammu of Ur gained control from Uruk and founded the last Sumerian dynasty, known as the Ur III Dynasty. Ur-Nammu reigned for sixteen years, and his son Shulgi reigned for forty-eight years. Between them they extended the power of Ur over territory well outside Sumer to the east and north. With their successors, Amar-Sin, Šu-Sin, and Ibbi-Sin (all Semitic names), the situation began gradually to deteriorate until Ibbi-Sin was virtually a prisoner in his own capital. Finally one of his governors, Išbi-Irra in Isin, broke off from Ur and founded the first of the three great Amorite dynasties, the kingdom of Isin. Political Sumer had come to an end.

We have more cuneiform tablets from the Ur III dynasty than from any other in Mesopotamian history. These tens of thousands of clay tablets are chiefly small, square receipts, roughly 3.75 cm. by 5 cm. (1.5 by 2 in.), which have been found in cities and towns all over Iraq. (Perhaps one reason for their preservation is that most were oven-baked and therefore less susceptible to damage.) These tablets provide an enormous amount of information about most aspects of daily life and are invaluable in reconstructing the private and public life of people who lived during the last, fading period of Sumerian history, almost four thousand years ago.

From now on Sumerian names become less and less frequent in the written records, and although the Sumerian language continued as the language of religion and many literary compositions, and many Sumerian words continued as technical terms in law and business, the Sumerians as such seem to have been completely absorbed into the general Mesopotamian culture.

IV. Government and Society.–When the Sumerians arrived the country was already organized into groups of largely agricultural villages and towns. Central to each town, apparently, was a temple carrying out its dual religious and economic functions under a staff of officials. The temple, residence of the god, had both to perform the cult service and to administer the property belonging to the god. During Sumerian times, secular government seems to have been in the hands of a governor, *en* or *ensi*, who may well have begun as a temple official but took up residence outside the temple as his secular duties expanded. It appears that the general populace enjoyed a certain amount of liberty or personal responsibility, for the governor referred major decisions to the local assembly (*ukkin*) before he took action. When military activity was required, either to defend the town or to take the field against the enemy, a *lugal* (lit. "great man" < *lu*, "man," and *gal*, "great") was appointed. This term eventually came to mean "king" as opposed to merely governor (later the word *lugal* was also used in a more general legal sense to refer to an "owner").

The agricultural base of the economy in this dry alluvial territory was irrigation farming. As the canal system grew, so grew the need for supervision. Accordingly, one of the most important officials was the *guedinna*, the canal supervisor. Not only was it necessary to regulate the use of the water, but also the canals had to be cleared of silt regularly and repaired, and new ones had to be built.

But then all of life had to be regulated. Family relations, business practices, etc., all must be directed in order to avoid confusion if not conflict. Therefore a system of regulation or law soon developed. The compilation and codification of law appears to be another major Sumerian contribution to the development of civilization. At least the first recorded legal documents, including contracts of all kinds, records of court cases, and collections of laws, appear in the Sumerian language and on tablets in Sumer.

A copper "foundation figure" of a kneeling god, with a traditional four-tiered headdress, found wrapped in cloth and buried beneath a building. The figure is driving a stake into the ground to ward off evil spirits and is inscribed with the name of the builder, Gudea (Lagash, end of the 3rd millennium B.C.) (CNMHS/ARS, NY/SPADEM)

Here as in all other aspects of society the assumed source of the rules and the original pattern of government is among the gods in heaven. According to the Sumerian theologians, the gods sent down the rules to mankind. There was a *me*, "regulation, norm," for every conceivable social function. Our best list contains over one hundred elements from law, truth, and love to fear and strife, including many crafts: the builder, basketmaker, smith, scribe, etc. When these regulations were received by mankind and obeyed, civilization resulted. But since gods and human beings were prone to ignore or break the rules, a system to maintain justice was necessary. In heaven Utu, the sun-god, was the supreme judge. He also provided the rules and authority to his earthly counterpart, the reigning king, who would appoint judges and establish a system of jurisprudence. The law code stele of the Babylonian king Hammurabi of Babylon is well known. But it had a direct ancestor in the code of Lipit-Ishtar of Isin who, though himself an Amorite, recorded his laws in Sumerian (*see* picture in LAW IN THE OT). He in turn had a cultural ancestor in Ur-Nammu, the first king of the Ur III Dynasty, a fragment of whose law code has survived. Yet the line goes much further back, at least to Urukagina of Lagash. These kings prided themselves on establishing law and order, known in a twofold sense as *níg-gi-na*, "truth," and *níg-si-sá*, "rightness," among their people. Thousands of tablets, from 2500 B.C. on, record

the practice of law in Mesopotamia. They include collections of laws, contracts, and suits for marriage, divorce, adoption, injuries, damages, loans, sales, etc.

V. Language and Writing.–The Sumerian language is unique, with no known cognates ancient or modern, although some have attempted unsuccessfully to link it with Hungarian. It has structural parallels with other agglutinative languages, but these do not indicate a generic relationship since there are no examples of related linguistic elements such as grammatical particles, common nouns, pronouns, numbers, etc. At least two dialects were spoken. One was the standard dialect *emegir*; the other was a more elegant dialect called *emesal*. The main difference seems to have been pronunciation. It is difficult to determine with precision the phonetic pattern of Sumerian since we hear it essentially through Semitic ears. That is, although the Sumerians developed the script, most of the documents that explain pronunciation come from the time when Sumerian had almost died out as a spoken language. The Semitic Akkadian scribes and teachers prepared vocabulary and lexical texts to teach non-Sumerian speakers how to read and write the language. Therefore, as one might expect, they related the Sumerian phonemes to the closest Akkadian phoneme. Thus the distinctive non-Semitic phonemes of Sumerian have been lost.

Another puzzling aspect of Sumerian is its many homophones (words that appear to have been pronounced alike). For example, the word *du* can mean either "enter," "go," "build," "bake," or "open." This has led many scholars to suspect that Sumerian was a tonal language.

Writing is undoubtedly a Sumerian invention, and perhaps their most important contribution to the development of civilization. When writing became sufficiently flexible to record abstract ideas fluently, it became possible not only to preserve a record of events and thoughts but also to transmit those ideas from one area to another at the same period in history. Thus recorded history began.

Three facts indicate that the Sumerians invented the script. First, writing arose in Sumer after the Sumerians arrived. Second, when the individual signs can be read syllabically the pronunciation of the syllable is the Sumerian word for the original picture. Third, the language of the earliest inscriptions is Sumerian.

In its earliest stages the script appears at level IV b of the ancient city of Uruk (*ca.* 3200 B.C.). By the following (Jemdet Nasr) period the script had developed to the extent that connected prose could be recorded. At first simple stylized pictures were scratched linearly in soft clay. Most of the objects depicted can be easily recognized. There were perhaps originally about two thousand pictographs. Next the linear pictographs were simplified and stylized. Then wedges made by a reed stylus pressed into the clay replaced the etched lines. This gave rise to the name CUNEIFORM for the script (< Lat. *cuneus*, "wedge"). Later the complex signs containing a dozen or more wedges were further simplified by the use of fewer wedges of more uniform size until by the late Assyrian and Chaldean periods there were very small signs mostly of just a few wedges. These signs bear no visible relationship to the original pictures. At first numbers were represented by impressions from a cylindrical stylus impressed at an angle or vertically in the clay. Later, wedges replaced the circles.

The cuneiform script spread throughout Mesopotamia, eventually reaching from Anatolia to Egypt and from the Mediterranean coast to Iran. It was accommodated to the different phonemes of other languages by arbitrary selection of duplicate Sumerian homophones for special sounds in the new languages. Thus it was used to write Semitic Akkadian, Indo-European Hittite, and Caucasic Hurrian, among others. The idea of constructing signs by using arbitrary groups of wedges, with no reference to original pictures, led to the cuneiform scripts of Ugaritic and Old Persian.

Early script appears on this tablet from Lagash showing a seated goddess holding date blossoms. Sprouts grow from her shoulders and other vegetation decorates her crown (mid-3rd millennium B.C.) (Staatliche Museen zu Berlin, DDR, Vorderasiatisches Museum 8836)

The impetus that gave rise to the origin of writing seems to have been economic. As more goods were bought, sold, exchanged, and stored, it became increasingly necessary to be able to identify the ownership of the commodities involved. Clay labels or tags bearing the owner's identification and a simple notification of contents were tied to animals or fastened to sacks and jars. For owner identification uniquely decorated beads or amulets were employed as stamp seals. When the seal was impressed on the label it identified the owner. These stamp seals later gave way to small cylinders of shell and stone that were rolled across the labels and later across tablets. Each cylinder bore a unique decoration: first geometric designs, later groups of figures including animals and human beings, and eventually special groups of people, including deities (*see* pictures in DRAGON; LIBATION). As time passed, inscriptions, often including the name of the owner, were also added. Cylinder seals were eventually replaced by stamp seals at the end of the Neo-Assyrian period. *See* SEAL.

The first representations on these labels were simple line sketches of the objects. The step from picture to syllable was facilitated by the fact that in Sumerian most words consisted of but one syllable; e.g., *u*, "day," *e*, "house," *ku*, "eat," *shu*, "hand," *she*, "barley," etc. It was easy, therefore, to take the next step from the picture to the one-syllable word for that picture and use the sign for the syllable alone without any connection to the original ob-

ject. It was now possible to record grammatical sequences by these purely syllabic signs. Another important step was to use the picture-sign to represent not just the original object (e.g., a human foot) but also for an idea associated with the object (to stand or walk). A wide range of new nouns and verbs resulted.

Eventually the script consisted of word signs (logograms), syllabic signs (syllabograms) and special signs, usually unpronounced, to indicate special classes of words (classifiers). By this time it was possible to write not just simple business lists but literary and historical texts as well as poetic compositions. Full-fledged writing led to the production of tens of thousands of tablets over the centuries containing every conceivable kind of document.

VI. Education.–Ever since cuneiform tablets were first discovered and deciphered, scholars wondered about the origin of this unusual kind of writing and how it was transmitted to succeeding generations. Then some so-called school texts (sign lists, word lists, and practice tablets) were found.

The earliest school texts, a few simple word lists from *ca.* 3000 B.C., were found at Uruk. More detailed lists of names and objects were found at Shuruppak from *ca.* 2500 B.C. Among the thousands of business documents are many, much more sophisticated lists, paradigms, and practice texts from *ca.* 2000 B.C. The first to be recognized, however, probably came from the great palace library of Ashurbanipal at Nineveh (*ca.* 600 B.C.). But none of these tablets dealt with the system of education. Finally, the vast collections of school texts from Nippur (1800 B.C. and later) provided information about education. These tablets were found in a mound first thought to have been the temple library but now known to be the remains of a group of private houses for professional scribes (Sum. *dubsar,* from *dub,* "tablet," and *sar,* "write"; Akk. *tupšarum*) that were adjacent to the temple.

In poetic narrative four tablets bore welcome information regarding the people and process involved in training future scribes (Kramer, pp. 229-249. These are the so-called School Tablets, named after the word *edubba,* "tablet house," which refers to the place where writing was taught. From these tablets scholars pieced together the process of teaching the use of the cuneiform script for writing. The titles given to these four poems by the modern translators are revealing: "Schooldays," "School Rowdies," "A Scribe and His Perverse Son," and "Colloquy Between an *ugula* [school official] and a Scribe." From this succession of titles we learn the educational process from "first grade to graduate student." (Note that difficult and rebellious students [rowdies] have been around for at least four thousand years — if that is any consolation.)

Some schools, it seems, were conducted in special buildings, as at Mari. Others were held in the homes of professional scribes, as at Nippur. We know of all kinds of textbooks: word lists, dictionaries of three or four columns, grammatical paradigms, collections of selected phrases, model business texts, and various kinds of literature. A receptacle for tablet clay was also handy because part of the instruction was how to make a tablet. The personnel consisted of the principal (*ummia*), the head teacher (*adda edubba,* "father of the tablet house"), the assistant professor (*šeš edubba,* "brother of the tablet house"), and the student himself (*dummu edubba,* "son of the tablet house"), together with several other minor staff. The poem "Schooldays" reveals that discipline was necessary: the student says that when he did something wrong the appropriate official caned him.

We also read of the various tasks in school: "I made my tablet," "I read my assignment," "I wrote my tablet," "I 'calculated' [referring to some branch of mathematics] my tablet." Many tablets illustrate scholarly progress from the earliest stage of writing simple syllables, like "ba, bi, bu," in large awkward characters to the copy texts, in which the teacher wrote the top line and the student attempted to reproduce it, on to excerpts of grammatical phrases, business sentences, etc., in large, rough signs on rude square pieces of clay, until finally the work of the students was indistinguishable from that of the teachers. It was a long process and was apparently open only to young men from fairly well-to-do families. Although not a lucrative profession, being a scribe did carry considerable social status.

Mathematics was also important. Since mathematical calculations were necessary for records of the different types of business, farming, and construction enterprises, scribes had to learn to perform these computations. The number system was a combined decimo-sexagesimal, with the base 60. Tablets containing multiplication tables, lists of reciprocals, square and cube roots, and weights and measures have been found. Practice mathematical texts involving various aspects of geometry and problems in quadratic equations have also been discovered. Sumerian science is impressive, but it was more pragmatic than speculative. (On Sumerian medicine *see* DISEASE II.B.).

See also EDUCATION I.

VII. Literature.–The Sumerian literary texts are a unique contribution of this culture and a rich source of information regarding the life and thought of the Sumerians.

Among the tens of thousands of cuneiform tablets recovered thus far from the ancient cities, about five thousand can be classed as literary texts. The vast majority we possess today, written *ca.* 1800 B.C. and later, were associated with the schools (see IV above) where scribes were taught their craft. To be sure, only a very few are from old times. In fact, the oldest known was an inscribed cylinder from *ca.* 2400 B.C. discovered at NIPPUR. Most of these particular types of texts come from Nippur, which was the chief cult center of the area throughout its history, though, so far as we know, never a political capital.

The various types of Sumerian literature did not all die out with the spoken language. Some were preserved in the original language and more often than not were provided with a translation in bilingual texts or appeared in translation alone in such diverse languages as Babylonian, Assyrian, Hittite, Hurrian, and Canaanite and in places as widely scattered as Nineveh, Babylon, Hattusas, and Ugarit.

Five different types of literary compositions — myths, epics, hymns, lamentations and elegies, and wisdom texts, nearly all in poetic form — occur in two different types of tablets. The first type are the well-written connected texts, sometimes on twelve-column tablets with poems of over a thousand lines (often more than one tablet is required to contain a whole poem). The other type of tablets, exercise and excerpt texts, come in many forms and were used as teaching tools in the schools.

Eighteen major myths are known in whole or in part. They focus on the following deities: Enlil (2 myths), Enki (4; see, e.g., *ANET,* pp. 27-41), Nanna (1), Ninurta (2), Inanna (5; see, e.g., *ANET,* pp. 52-57), and Dumuzi (4; see, e.g., *ANET,* pp. 41-42). These myths deal among other things with various aspects of creation, the establishment of human society, and exploits of the deities. They portray Sumerian speculation about both heavenly and earthly origins. One unusual text deals with the god

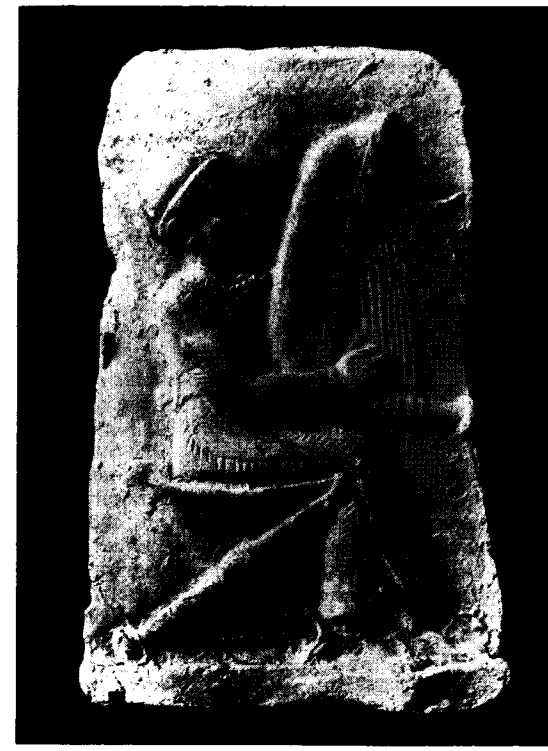
Martu of the western Semites, known as Amurru or Amorites, who according to the story lived in Ninab (as yet unidentified; see Kramer, p. 164). It relates how he met Numushda, god of Kazallu, at a banquet and asked for Numushda's daughter in marriage. Numushda assented over the protest of some friends, who pointed out that Martu was a barbaric, tent-dwelling bedouin who ate raw meat (an interesting insight into Sumerian thoughts about the Amorites). Only one tablet of the Sumerian Flood myth has been recovered, and only one third of this tablet remains. But the story is essentially identical to the part of the Akkadian Epic of Gilgamesh that recounts the flood and therefore is probably a source of the later poem.

Nine epic poems are extant, varying from about one hundred to over six hundred lines. Each one deals more or less with a single event involving one principal character. No doubt basic historical facts underly at least some of these tablets. Contemporaneous inscriptions from early times bear the names of some of the protagonists (see III above), thus confirming the historicity of once legendary figures. But, as is common with ancient literary epics, supernatural events are also related, and the gods often participate in the story. Strangely enough, all the chief characters were early kings of Uruk. Two poems are about Enmerkar, two are about Lugalbanda, and five are about Gilgamesh, the best-known hero then and now in Sumerian history. These epics are important for the historical and sociological information they contain. The first four reveal that Uruk in Sumer had close political ties with a major city, Aratta, which was probably located in Iran. But it is interesting to note that Sumerian deities were the tutelary gods of the foreign region also. And one governor (Sum. *en*) had a good Sumerian name, Ensukushsiranna. Whether this is poetic license or strict fact we may never know. But the stories of Gilgamesh contain hints about Uruk's societal structure during these early days (see IV above).

Hymns must have played an important role in Sumer, for scores have been recovered, ranging in length from about fifty to nearly four hundred lines. There are four classes: (1) hymns to gods, (2) hymns to kings, (3) hymns involving both gods and kings, and (4) hymns to temples. (See *ANET*, pp. 383-392, 573-586.) With few but significant exceptions the datable hymns related to kings come from the Ur III and Old Babylonian periods. One long temple hymn goes back to Gudea's time, indicating the long history of this type of composition. It is interesting to note technical terms on the hymn tablets that differentiate various kinds of hymns for special purposes and also notes regarding the musical instruments to be used. See Kramer, pp. 205-207.

The list of lamentations and elegies is short. Lamentations generally refer either to the destruction of a major city (e.g., Ur, Nippur; see *ANET*, pp. 455-463, 611-19; Kramer, p. 208), or to the death of the god Dumuzi; the latter lamentations seem related to the cult of the "dying god" and nature worship. In 1957 Kramer discovered a previously unknown type — the elegy or funeral song. So far we have only one tablet with two elegies. Both relate to the same man, Ludingirra, and celebrate the death of, first, his father Nanna, and second, his wife Nawirtum (note the Semitic name) in Nippur. This tablet reflects some novel ideas about life after death (see Kramer, pp. 208-217).

The final category is the wisdom texts. There are four different types: (1) disputations, (2) essays, (3) collections of precepts, and (4) proverbs (see Kramer, pp. 217-226). This kind of literature is worldwide in scope, of great appeal, and quite revealing of daily life and thinking, particularly the proverbs. At the same time the texts are difficult to translate, especially the proverbs, which are characteristically terse and full of allusions better known to contemporaries than foreigners some four thousand years later. The disputations are a genre familiar to medieval Europe if not widely known today. They consist of debates between two opponents representing opposite sides of a milieu, such as Summer and Winter, Cattle and Grain, Bird and Fish, Tree and Reed, etc. Each element is personified and engages in a dispute concerning their relative worth or useful function. The poems range between two hundred and three hundred lines. Few poems can be called essays; apparently it was not a very popular genre. One is a study of the problem of suffering and submission. Two others discuss the life and value of education in the scribal school.



A musician seated on a folding stool playing a seven-stringed harp with his fingers. Terra-cotta plaque from Tell Asmar, early 2nd millennium B.C. (CNMHS/ARS, NY/SPADEM)

There are three collections of precepts. One, called the Farmer's Almanac, reads like a short treatise on agriculture and supplements in this area what we read about in business documents and legal cases (see Kramer, pp. 105-109). Another is called "The Instruction of Shuruppak to His son Ziusudra," which reads like parts of the biblical book of Proverbs (cf. *ANET*, pp. 594-96; Kramer, p. 224). It begins "My son, I would instruct you, take my instruction; Ziusudra, I would utter a word to you, give heed to it; Do not neglect my instruction; Do not transgress the word I uttered." A third, fragmentary text seems to contain moral and ethical warnings.

The most interesting of all are the proverbs (see Gordon). About seven hundred tablets and fragments are extant, containing over a thousand proverbs. They belong to twelve or more official collections arranged in groups. Such proverbs are found, together with translations, on literary tablets as late as the Neo-Assyrian period. Like

other proverbs, they reveal fascinating insights, often far from flattering. Here are some examples. "He who eats much cannot sleep." "Into an open mouth a fly enters." "You are not a man of one place, you are a man of a thousand places" (complaint of the wife to her much traveled husband?). "A loving heart builds the home, a hating heart destroys the home." "The fox trod on the hoof of the wild ox saying 'didn't it hurt?'."

Finally, seven small tablets proved to be unique catalogs of literary compositions. Each of the forty or so lines on the tablet was the opening line of a literary composition (in the ancient Near East the opening line of a work served as its title). Thus from these catalogs we learn the titles of many more literary texts than we possess at present.

VIII. Religion.–An analysis of Sumerian religion raises two basic questions. First, how much of the religion that we discern in the literature and artifacts of Sumer came from the people already in the land when the Sumerians arrived? How much did the Sumerian immigrants add? We know there were temples and temple furniture in the pre-Sumerian period. Also, the Elamites, Guti, and Amorites, among others, must have had some effect on the culture, likely in proportion to the numbers who, having newly entered Sumer, stayed to be absorbed by the resident population. The second question, though related to Sumerian religion, applies equally to religion generally: how much of the religion expressed by sophisticated poets and theologians in the literature was part of the daily belief and practice of the average citizen? Was the elaborate structure of cosmology and of the hierarchy and function of the gods a later Sumerian attempt to integrate the various myths of many deities into a coherent whole? Since our sources of information are limited and a long span of time separates us from the Sumerians, we shall never have satisfactory answers to these questions. But it is well to bear them in mind.

Three sources allow for a reconstruction of Sumerian religion: first, temple buildings and cult objects; second, the literature (myths, hymns, etc.); and third, the documents that describe the actual religious practice. Let us begin with the temples. At first the Sumerians apparently adopted the style of temple popular when they arrived and developed it to a more complex design. For example, they enlarged the platform to become a sizable hill, sometimes, as at Uruk, up to 12 m. (40 ft.) high. This hill was later enlarged to become the ziggurat or temple stage-tower. By this time the larger main temple remained at ground level and became one unit in a large complex of religious buildings. The small temple on top of the ziggurat was the place where the god came down to "appear" to the people and, perhaps, to participate in the *hieros gamos* ("sacred marriage") each year. Another apparently Sumerian innovation was improved decoration of the previously drab walls (see IX below). A long Gudea text (2200 B.C.) explains in detail the construction of the Eninnu temple for Ningirsu in Lagash, from the god's delivery of a plan on a lapis-lazuli tablet to the finished building with all its utensils.

Not much more than the names of the temple personnel is known. But since the temple (or god, actually) owned vast estates, a greater number of persons probably engaged in secular rather than religious activities. Religious functionaries included the chief administrator (*sanga*), those who offered sacrifices and made libations (the *guda, mah, ishib, gala,* etc.), and also singers and musicians. Many temples also had a class of male and female prostitutes whose activities many scholars relate to the fertility cult. On the economic side, a large staff administered temple properties, managed the storehouse, and, apparently, subsidized craftsmen of different kinds.

In its simplest terms the Sumerian cosmology consists of the primeval sea (*absu*), the heaven above (*an*), and the earth below (*ki*), with the "atmosphere" (*lil*) in between. The origin of this cosmology is unknown. All the elements were eventually personified but *Absu* plays little part in later developments and *An* not much more. In earlier days (or more likely by later speculations), however, *Ki* was considered the consort of *An*, and these two were considered the parents of all the other gods. As "persons" earth (*ki*) and atmosphere (*lil*) later received names compounded with *en* ("lord"), so they were hereafter known as Enki and Enlil respectively. Incidentally, although the word *en* ("lord") may refer to the earliest secular and religious leader in Sumerian society and is therefore very frequent in human personal names, it was never used for any gods other than the two mentioned above. The common element *nin* ("lady"), used in the names of many female deities (Ningal, Ninhursag, Ninlil, etc.), was also used for a few males (e.g., Ningirsu and Ningishzida), which suggests that at first it was asexual.

The Sumerian pantheon as it appears in the literature had four leading deities — An, Enlil, Enki, and Ninhursag — and three chief astral deities — Nanna (the moon), Nanna's son Utu (the sun), and Nanna's daughter Inanna (earlier Ninanna, with numerous offices). But several other deities were very important also: Dumuzi (Babylonian Tammuz), Nergal, Ninurta, and Nidaba; of course, hundreds more were known by name only. Some of these "other gods" are really only personifications of the various aspects of one of the better-known gods. Many of the Sumerian gods are also known by their Semitic names as well — Enki-Ea, Nanna-Sin, Inanna-Ishtar — indicating the fusion of the two cultures.

Civil government and the divine order have an interesting parallel. Enlil was the chief god of the pantheon, for all practical purposes. Therefore his special city, Nippur, became the cult center of all Sumer and remained so for centuries. Even late Assyrian kings traveled to Nippur to "seize the hands of Enlil" and thus to certify their rulership. In fact, the Babylonian word for "lordship," *ellilūtu* (< *enlil-ūtu*) is derived from his name. But every city had its own tutelary deity as well: Enki for Eridu, Nanna for Ur, Ningirsu for Lagash, etc. Just as the final decision at Uruk to attack Aratta had to be made by the city council (*ukkin*), so major decisions among the gods regarding creation, the destruction of mankind (the Flood), etc., were also arrived at in their council, which was held in Enlil's temple, the Ekur at Nippur (see IV above).

In addition to the official form of religion (temple worship with sacrifices and incantations) the Sumerians had an apparently unique concept: on a strictly personal level each person had "his own (personal) god" (*dingirani*). Normally the relation between god and a human being, whether commoner or king, was as master and servant/slave. But the Sumerian (and some in the Old Babylonian period and even later) had a much more intimate relationship. First, the literature frequently referred to the aspect of parenthood. Lugalzaggesi speaks of himself as a "child born of Nidaba." Both Ur-Nammu and Šulgi of Ur claim they were born of Lugalbanda and Ninsun. Many of these personal gods were lesser deities, but on occasion even the paramount gods are so mentioned. Through this relationship the individual gained a sense of protection and guidance and developed the feeling of dependence and direction. In later times the phrase "to acquire a god" became idiomatic for being able, or having the good fortune, to do well. Nevertheless, so great was

the fear of demons who could inflict disease or cause misfortune that much of common religion was occupied with various attempts to appease the offended spirits.

The Sumerian concept of death and the underworld is in many ways obscure. For some reason the netherworld into which both gods and people descended is called *kur*, "mountain." It was ruled by Nergal and his consort Ereshkigal, assisted by many grotesque servants. Strangely enough some of the sky-gods were confined there. The deceased had to make offerings and present gifts to some of these deities as well as to some honored, deceased human beings. Utu performed judgment there, sometimes assisted by Nanna. In one illuminating passage Enkidu tells Gilgamesh that life there is much like that on earth, if not worse, and it is endless.

IX. Art.–The two earliest Sumerian artistic innovations are the decorations of their temples (see VIII above) and the introduction of the cylinder seal (see V above). The temples grew larger and developed more ornate half-columns and buttresses. Geometric designs of colored cones embedded in plaster often decorated the walls. Friezes of stone and shell appear and occasionally even frescoes. The artistic style and the material of the seals seem also to be paralleled in the development of sculpture in the round. Early examples of both were linear rather than fully modeled and were on softer materials such as shell and limestone (*see* pictures in BANQUET; BEAR; MARI; PRIESTS AND LEVITES). With the passage of time, however, the modeling became less angular and more lifelike and the material of harder substance, e.g., carnelian and agate for seals (later even hematite) and granite and diorite for sculpture. Since none of these later materials occurred locally, trading must have been extensive. The modeling and materials in the small wall plaques, which later became larger steles, developed similarly.

The divine and human standing figures from the Early Dynasty II and III periods are excellent examples of the dress and appearance of Sumerians at that period (*see* Volume I, Plate 2; picture in MARI). Best known, perhaps, are the dozens of statues, seated and standing, of Gudea from Girsu-Lagash. Expertly done in polished diorite, though rather monotonously uniform and stiff, they often bore long, highly informative inscriptions. Two steles deserve special mention. The Stele of the Vultures celebrating the conquests of Eannatum of Lagash was a prototype of later memorial monuments (*see* picture in NET), and the later stele of Ur-Nammu of Ur shows Nanna the god of Ur instructing the king to build the ziggurat. (Incidentally, though ziggurats were apparently few in number before this period — one known at Uruk, another possibly at Mari — Ur-Nammu built them all over his territory and they proliferated thereafter right down to the Neo-Babylonian period.)

The Royal Tombs of Ur provide a display of gold and silver vessels and implements plus a range of jewelry in gold and semiprecious stones that has no rival in Mesopotamian history (*see* pictures in ART; GOLD). This rich collection from just after 3000 B.C. exhibits remarkably advanced techniques in carving, casting, and filigree that, though largely lost today from other sites, must have adorned the religious, royal, and rich Sumerian. The exquisitely etched silver bowl of Entemena from Lagash supports this view.

X. Legacy.–Sumerian culture has contributed many important elements not only to later Mesopotamia but also to the classical world and even down to present Western civilization. Among the more obvious and certainly the most important is the idea of employing arbitrary symbols to record thoughts and speech, which led to the technique

An etched silver and bronze vase of King Entemena found intact at Lagash. The etching in the center of the vase depicts the lion-headed eagle Imdugud (2600-2350 B.C.) (CNMHS/ARS, NY/SPADEM)

of writing. The development of the sexagesimal number system also has had an influence far beyond Sumer; we still use that number system today when measuring angles or telling time. We may also owe a few mathematical principles to Sumerian genius: e.g., the use of reciprocals, the approximation of pi, and solving quadratic equations. Further, framing legal principles and organizing a system of jurisprudence to guide the conduct of family and business life seem also to stem from Sumer.

But the area of special interest is religion. Was Sumerian religion the historical origin of themes or basic ideas in the OT? Many motifs and expressions in the book of Genesis, for example, have parallels or analogues in Sumerian literature. Does this mean that the theme in the Bible originated in a Sumerian myth and was borrowed, altered, and used to support the later theological concepts of the Hebrews? Or does the motif in the Sumerian poem represent a vague reminiscence of a genuine event long past that has been preserved over centuries of transmission? If the latter is true, the Sumerian parallels support the accuracy of the biblical record rather than providing a source for them.

Three main topics appear to have convincing parallels: Creation, the Flood, and the tower of Babel. A few others are sometimes suggested: the concept of law, ethics, a "personal god," and speculation on "suffering" (e.g., Job). But these concepts are of such a general nature and were so widely known throughout the Near East (e.g., Egypt) that they do not demonstrate a particular connection between Sumerian origins and Hebrew culture.

So far only one fragmentary account of Creation exists in Sumerian. Later Babylonian texts, however, contain considerable details involving gods with Sumerian names, so it is at least possible that original Sumerian poems have not yet been found. The extant Sumerian rendition assumes the existence of matter and primeval gods before the creation of the earth and humanity. It appears that in both the Sumerian and OT accounts a command was first given before the deed was done (cf. "God said . . . so God made," Gen. 1:3ff.; but note Gen. 1:1, "In the beginning God created . . ."). But this hardly appears to be of great significance. Some scholars suggest a connection between Enlil (from *en lil*, "lord air") and the statement that "the Spirit of God brooded over the waters" (Gen. 1:2). This seems a bit strained, however, since Enlil was not the original creator but was himself created (see VIII above). Some also note that in both accounts mankind is created to serve God or the gods. But the difference is more striking than the similarity. Gen. 1:26 states, "let them have dominion over (all things)," implying responsibility toward God but also involving fellowship or companionship with God. In the Sumerian/Babylonian account, however, the chief gods decide to create mankind to provide the food and drink the lazy gods required. But since the proliferating human beings became extremely noisy and disturbing, the gods plotted to destroy them. Thus the purpose for creating mankind is as opposite as the nature of deity in the biblical and Sumerian accounts. *See also* RELIGIONS OF THE BIBLICAL WORLD: ASSYRIA AND BABYLONIA IV.

The Flood account in Sumerian is still rather brief (and the text badly broken), but the Babylonian story, contained in the Gilgamesh Epic, is nearly complete, greatly detailed, and bears many intriguing parallels to the Genesis record. Again, however, it is difficult to determine how much of the later version was in the earlier Sumerian poems. At least three elements must have been in the Sumerian myths; the gods (or a god) determine(s) to destroy mankind with a flood because they have become thoroughly objectionable. One god betrays this secret to a human being (Sum. Ziusudra; Bab. Utnapishtim, both meaning something like "life of long days"). This man is instructed to build a large vessel in order to survive. He does so and as a reward receives "endless life." The parallel elements are obvious, as are the ethical differences. *See also* FLOOD (GENESIS).

Some scholars see a parallel between the biblical story of the tower of Babel and the unique Sumerian ziggurat. But the connection is unconvincing. The setting of the biblical story is in remote antiquity before the divergence of human language. But Lenzen's careful study of the buildings at Uruk reveals the development of the ziggurat from a low platform on which a temple was built to a high mound and eventually to the ziggurat. And the whole process took place well after the Ubaid Period (*ca.* 3500 B.C.). So there cannot possibly be any connection between the tower as presented in the Bible and the ziggurat as built at Uruk. *See also* BABEL, TOWER OF.

There are indeed significant literary parallels. But the ethical and theological spirit of Genesis is so totally opposite to the carnal squabbling gods of Sumerian myth that the parallels such as they are need only demonstrate a relationship to sources earlier than both Sumerian and Hebrew cultures, sources that have been transmitted more accurately to the latter.

SUMMARY OF THE LAW. The Torah contains 365 prohibitions and 248 positive commands. Although Judaism taught an absolute obligation to obey every commandment (Mish. *Aboth* ii.1; iv.2), from time to time the question was asked, "Which commandment is the first of all?" When Jesus was asked by a scribe which was the most important commandment in the Torah, He replied by quoting Dt. 6:5 (the first part of the Shema), which summarizes the first table of the law, and Lev. 19:18b, which summarizes the second (Mt. 22:34-40 par. Mk. 12:28-34; cf. Lk. 10:25-27). Both of these OT passages were familiar to the Jews of Jesus' day. Devout Jews repeated the Shema twice a day, and Rabbi Akiba in the Sifra on Lev. 19:18 called this command "the greatest principle in the Torah."

Apparently the twofold emphasis on loving God and loving one's neighbor was not unique to Jesus either (cf. XII P. Dan. 5:3; Iss. 5:2; 7:6; Benj. 3:3; Philo *Spec. Leg.* ii.63). These parallels and the importance given to Dt. 6:4f. and Lev. 19:18 in the Jewish literature of Jesus' day have led some scholars to deny any originality in Jesus' summary of the law. Certainly much of His teaching is paralleled in the contemporary Jewish literature. It would be surprising if one did not find such parallels, for both Jesus and the rabbis held in common the validity of the OT's ethical teaching. But the rabbis dealt primarily with specific issues, whereas Jesus dealt with the ultimate ethical principles. Out of the 613 commandments of the Torah and the mass of traditions, Jesus selected and emphasized these two commands — a selection that certainly reveals His genius. Although Jewish literature contains formal parallels to Jesus' summary of the law, and although the two OT passages quoted by Jesus were important in Judaism, Jesus seems to have been the first to combine these two passages in this way.

This teaching of Jesus deeply impressed the early Church. Both Paul (Gal. 5:14; Rom. 13:9f.) and James (Jas. 2:8) used Lev. 19:18 as a summary of the law.

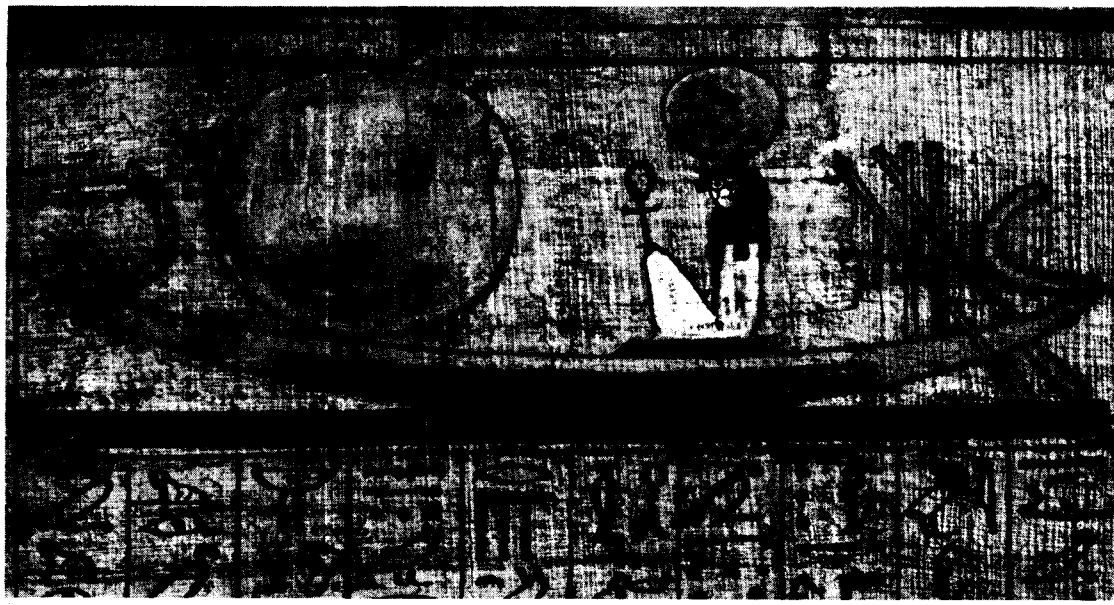
SUMMER. *See* SEASON.

SUMMER HOUSE. A translation of Heb. *bêṯ haqqāyiṣ* (lit. "house of the summer"), which occurs only in Am. 3:15 in reference to the luxurious seasonal residences of the affluent. Amos warned that Yahweh Himself would destroy these homes on account of their owners' exploitative and oppressive treatment of the poor. The mention of the WINTER HOUSE with the summer house suggests the totality of the imminent destruction. G. L. K.

SUN [Heb. *šemeš* (cf. Akk. *šamšu/šamaš*; Ugar. *špš*), also *ḥeres* (Jgs. 14:18; Job 9:7), *ḥammâ* (Job 30:28; Cant. 6:10; Isa. 24:23; 30:26), *'ôr*–'light' (Job 31:26); Gk. *hḗlios*]; on Isa. 19:18, *see* CITY OF THE SUN. The sun figures prominently in the language, imagery, and religion of the ancient Near East, and not least of all in Israel.

I. Sun Worship.—The sun, moon, and other heavenly bodies were worshiped throughout the ancient world. The ancient Egyptians worshiped the sun as Re (or Amon-Re). Under the heretical King Akhenaten (Amenhotep IV, *ca.*



The sun-god Re depicted with the sun disk over his head and an *ankh* symbol on his knees, riding in a boat. A vignette from the Papyrus of Ani (*ca.* 1300 B.C.) (courtesy of the Trustees of the British Museum)

1364-1347 B.C.), the powerful, long-standing priesthood of Amon was suppressed and the solar disk, Aten (Aton), became the royal family's sole object of worship. Akhenaten's religion was crushed shortly after his death, but the "Hymn to the Aton" (upon which Ps. 104 may have been modeled) has survived extant (see *ANET*, pp. 369-371). (*See also* RELIGIONS OF THE BIBLICAL WORLD: EGYPT.) In Mesopotamia the sun was worshiped as Šamaš, a male deity (*see* RELIGIONS OF THE BIBLICAL WORLD: ASSYRIA AND BABYLONIA II), while in Ugarit and Canaan the sun-deity Šapaš was understood as female. The place names EN-SHEMESH, BETH-SHEMESH, HAR-HERES (*see* HERES 1), and Timnath-heres (which some would emend to TIMNATH-SERAH) betray the locations of ancient centers of the sun-cult in Palestine.

Although forbidden in the Mosaic law (Dt. 4:19; 17:3), sun worship became a problem in ancient Israel, particularly during the period of Assyrian dominance. The kings of Judah dedicated horses to the sun and stationed them, along with chariots (symbolizing the horses and chariots used by the sun-god to traverse the heavens) at the entrance to the house of Yahweh (2 K. 23:11; *see* HORSES OF THE SUN). These and other sacrileges committed by the later Judean kings were probably performed under pressure from Judah's Assyrian overlords. With the collapse of Assyrian hegemony, King Josiah removed the horses, burned the chariots, and deposed the "idolatrous priests whom the kings of Judah had ordained to burn incense . . . to Baal, to the sun, and the moon, and the constellations, and all the host of the heavens [i.e., stars]" (v. 5). In Ezekiel's vision of "abominations" he saw men in the inner court of the Jerusalem temple, with their backs to the altar, worshiping the sun to the east (Ezk. 8:16). Job 31:26f. mentions kissing the hand at the sight of the sun, either as an idolatrous gesture or to stop the mouth from uttering an idolatrous word of praise.

The worship of the sun may also be reflected in its personification — a literary device used even in Yahwistic circles. Deborah's song, e.g., speaks of "the sun as he rises in his might" (Jgs. 5:31). Nathan's expression "in the sight of the sun" (2 S. 12:11) likewise involves a personification, as does Isaiah's claim that the sun would be "ashamed" when Yahweh manifested His glory on Mt. Zion (Isa. 24:23). Jeremiah prophesied that on the day of judgment the bones of Judah's kings, princes, priests, prophets, and ordinary citizens would be dug up and spread "before the sun and the moon and all the host of heaven" in punishment for their worship of these heavenly bodies (Jer. 8:1f.).

II. In Creation.—In contrast to this idolatrous worship, Gen. 1:14-19 "demythologizes" the heavenly bodies, making them "lights" (*mᵉʾôrōṯ*) "to give light upon the earth," and "to be for signs and for seasons and for days and years." The heavenly orbs here are not divine powers but simply important functional parts of the created order. Similarly, Jeremiah claims that it is Yahweh "who gives the sun for light by day and the fixed order of the moon and the stars for light by night" (Jer. 31:35). Ps. 74:16 celebrates God's (Elohim's) lordship over the creation, including His establishment of "the luminaries [*māʾôr*] and the sun" (see also Ps. 104:19; 136:8; cf. Job 9:7). Neither sun nor moon will be needed in the new order of Isa. 60:19f.

III. In Designations of Time.—Biblical references to the sun occur most frequently in the context of the role assigned to it in creation (Gen. 1:14): that of dividing day from night. Sunrise marked the beginning of daylight (Gen. 19:23; 32:31; Jgs. 9:33; Mk. 16:2) and sunset the beginning of the night (Gen. 15:12, 17; 28:11; Jgs. 14:18; 19:14; Dnl. 6:14; etc.). But for the Hebrews the DAY began at sunset and ended at sunset; cf. the refrain in Gen. 1:1–2:4a: "and there was evening and there was morning, one [or "a second," etc.] day." Sunrise was often set as the time for beginning battle (Jgs. 9:33; cf. 1 S. 11:11), and sunset brought an end to the fighting (Ex. 17:12; cf. Josh. 10:9-14; 2 S. 2:24). The "heat of the sun" was an expression for "midday" (1 S. 11:9; Neh. 7:3; cf. Mt. 13:6). *See also* DAY AND NIGHT.

The divisions of time marked by sunrise and sunset also played a role in the civil and cultic legislation. Because

nights are usually cold in Palestine, sunset was the deadline for returning a garment taken in pledge (Ex. 22:26; Dt. 24:13); it was also the deadline for paying the day laborer his wages (Dt. 24:15; cf. Lev. 19:13). In ritual matters sunset marked the time after which a person purifying himself was clean (Lev. 22:7; Dt. 23:11; cf. Mk. 1:32, where the sick were brought to Jesus as the sun was setting). Although Dt. 16:6 prescribes the sacrifice of the paschal lamb "in the evening at the going down of the sun" (so RSV; cf. Ex. 12:6), the Mishnah indicates that this rite took place in the late afternoon; this suggests that "the going down of the sun" was understood as referring to the sun's afternoon descent, not to its setting. The corpse of a hanged man was to be cut down at sunset (e.g., Josh. 8:29; 10:27; cf. Mt. 27:57-60; Mk. 15:42-46; Jn. 19:31-42). Sunset could also mark the end of a ritual fast (2 S. 3:35).

Despite the sun's importance in ordering the rhythm of day and night, the Hebrew Bible seems to have been written against the background of a lunar year of 354 days; in this system an extra month would have been added approximately every third year. At Qumrân, however, a solar calendar of 364 days has been discovered, and some have contended that this is older than the lunar calendar employed above all by the Jerusalem cult. (*See* CALENDAR.) The problem of just when the Last Supper took place (on the day of the sacrifice of the Passover lamb in the Synoptic gospels; on the day of preparation in John) may stem from the use of two different calendars: the Synoptics dating from the old solar calendar, John from the official lunar calendar.

IV. In Designations of Direction.–The sun formed the basic point of directional orientation. "The going down of the sun" (Dt 11:30; cf. Josh. 1:4) referred to the west, while the rising of the sun denoted the east (Isa. 41:25). Expressions such as "from the rising of the sun to its setting" became poetic designations for the whole earth (Ps. 50:1; 113:3; Isa. 45:6; Mal. 1:11). *See also* ORIENTATION; SUNRISE.

V. As a Natural Phenomenon.–The biblical writers noted both the positive and destructive effects of the sun. The sun's blackening of the skin is mentioned in Cant. 1:6 and Job 30:28. Its power to cause sunstroke is referred to in several passages (Ps. 121:6; Isa. 49:10; cf. Jonah 4:8; Jth. 8:3; *see* SMITE I), and its ability to scorch crops is noted in the parable of the Sower (Mt. 13:6 par.). These destructive effects may be reflected in the name of the Greek sun-god Apollo (*Apollōn*), which actually means "Destroyer." Conversely, Eccl. 11:7f. regards beholding the sun as one of the pleasures of life and uses nightfall as a metaphor for the onset of blindness in old age. Cant. 6:10 employs the phrase "bright as the sun" to describe a woman's beauty, and 2 S. 23:4 likens the just ruler to "the sun shining forth upon a cloudless morning."

VI. Irregular Solar Events.–In ancient Israelite life the sun played an important role as a sign or omen. The most important — and feared — sign relating to the sun was the eclipse, either total or partial. Prophets as well as pagans and common people believed such an occurrence to portend disaster. Numerous biblical passages may allude to eclipses as divine portents. Yahweh's threat to "make the sun go down at noon" and to "darken the earth in broad daylight" (Am. 8:9) may be an allusion to an eclipse. A similar threat occurs in Isa. 13:10: "the sun will be dark at its rising and the moon will not shed its light." Jeremiah said of the fallen city of Jerusalem: "her sun went down while it was yet day" (Jer. 15:9). A total solar eclipse did in fact occur on June 15, 763 B.C., immediately prior to the preaching of Amos, Isaiah, and Micah. While certain of these references may be only figurative, the language of the darkening of the heavenly bodies (esp. the sun and moon) as portending divine judgment or impending doom almost certainly derives from the negative role ascribed to eclipses in the lore of omens in the ancient Near East. This language is scattered throughout the OT prophetic literature (see also Ezk. 32:7f.; Joel 2:10, 31; 3:15 [MT 4:15]; Mic. 3:6); it also occupies a prominent place in the apocalyptic sections of the NT (Mt. 24:29 par.; Rev. 6:12; 8:12; 9:2).

Eclipses were regarded as bad omens because they appeared to break the fixed, rhythmic pattern of day and night (cf. Eccl. 1:5), which was basic to the stability of the natural order. Ancient cosmogony viewed the natural order as inherently fragile, forever threatened by the inbreaking of the primeval forces of CHAOS. The maintenance of this order required the constant vigilance of the gods. Conversely, the Creation account in Gen. 1:1–2:4a depicts Elohim as creating order out of chaos and attacks the belief that the natural order was constantly endangered by forces of primeval chaos. Certain passages even employ "while the sun endures" as a metaphor for "forever" (cf. Ps. 72:5, 17, which dates to the monarchy). From the prophetic writings, however, it appears that the Israelites generally adhered to the attitudes of the dominant culture on this subject. Significantly, some of the passages referring to the darkening of the heavenly bodies also describe the trembling of the heavens and the shaking of the earth (Isa. 13:13; Joel 2:10; 3:16 [MT 4:16]; Rev. 6:12-14) — signs of the impending collapse of creation. Thus, whatever historical referents these prophecies may have, their language reflects a cosmological background in which an interruption of the regular functions of the heavenly bodies aroused a fear of the imminent collapse of the created order, and the release of the forces of chaos, held in check since the foundation of the world.

The OT also contains records of two miraculous events involving the sun. Josh. 10:12-14 quotes the lost Book of Jashar as saying that at Joshua's command "the sun stood still" (v. 13) until Israel defeated the Amorites at Gibeon (*see* ASTRONOMY II.D). In 2 K. 20:8-11; Isa. 38:7f. the Lord causes the shadow of the sun to reverse its direction "ten steps" on a sun-dial as a sign to Hezekiah that he would be healed (*see* DIAL OF AHAZ).

VII. Idiomatic Expressions.–The Bible uses several expressions involving the sun; e.g., "under the sun" is used about thirty times in Ecclesiastes as a poetic equivalent of "mundane existence" (1:3, 9, 14; etc.), and "not seeing the sun" is used in parallel with "an untimely birth" to describe a premature, stillborn child (Ps. 58:8; Eccl. 6:3-5). The psalmist's desire that the king live "while the sun endures, . . . throughout all generations," reflects the desire of ancient Near Eastern kings to be immortalized (Ps. 72:5; cf. v. 17; 89:36).

SUN, CHARIOTS OF THE. *See* CHARIOTS OF THE SUN.

SUN, HORSES OF THE. *See* HORSES OF THE SUN.

SUN WORSHIP. A prominent feature in many ancient religions. The Babylonians and Assyrians worshiped the sun-god Šamaš, and the Egyptians worshiped Re (other names were used for certain phases, e.g., Horus, Chepera, and Osiris). As the name implies, the Egyptian

city of HELIOPOLIS was a center of sun worship (Jer. 43:13; the OT calls it ON in Gen. 41:45, 50; 46:20).

In one form or another sun-worship seems frequently to have perverted the true worship of Yahweh, and the OT writers repeatedly warned against this practice (e.g., Dt. 4:19; 17:3; Job 31:26-28; Ezk. 8:16-18).

SUNDAY. *See* LORD'S DAY.

SUN-IMAGES. The ASV translation of [Heb. *ḥammānîm* in Lev. 26:30; 2 Ch. 14:5 (MT 5); 34:4, 7; Isa. 17:8; 27:9; Ezk. 6:4, 6. The RSV and NEB have substituted "incense altars" (AV usually "images") for the ASV "sun-images" in the light of archeological discoveries. According to Albright, Heb. *ḥammānîm*, which probably derived from *hmm*, "to heat," applies to "incense-burning braziers and altars" (*ARI* [5th ed. 1968], pp. 142, 216 n. 58), which were condemned in Israel due to their use in pagan cults (*see* INCENSE III). G. L. K.

SUNRISE; SUNRISING. A direction based on solar movements. The RSV "toward the sunrise" (AV "toward the sunrising," "eastward," etc.; NEB also "east," "eastwards," "eastern," etc.) translates the locative Heb. *mizrāḥâ* (lit. "toward the place of the sunrise"; Nu. 2:3; 3:38; 34:15; Josh. 19:13). The RSV also renders *mizrâ* (lit. "place of sunrise") with Heb. *šemeš* (lit. "sun") as "toward the sunrise" (Nu. 21:11; Josh. 1:15; 19:12) or "toward the sunrising" (Josh. 12:1; 13:5; NEB "to the east" [13:5]). In each instance the direction indicated is "the place of the sun," namely, the east (*see* ORIENTATION I). G. L. K.

SUP (AV Hab. 1:9; Lk. 17:8; 1 Cor. 11:25; Rev. 3:20). In Hab. 1:9 the AV apparently takes the hapax legomenon *ᵉgammâ* as related to *gm'*, "sip, swallow," but such a derivation is improbable (cf. KD). Much more likely is the suggestion of P. Humbert (*Problèmes du livre d'Habacuc* [1944], pp. 36f.) that it is related to *gmm*, "be full," hence "all" (so KoB, 3rd ed., p. 517; *CHAL*, p. 182; R. Smith, *Micah-Malachi* [*Word Biblical Comm.*, 1984], p. 100). Cf. W. Brownlee, *Midrash Pesher of Habakkuk* (1979), pp. 68-70, for the Qumrân interpretation. The RSV "terror" requires an emendation to *ᵉgôrâ* (see *BHS*; KoB, 2nd ed., p. 493).

SUPERNATURAL (1 Cor. 10:3f., RSV). *See* SPIRITUAL.

SUPERSCRIPTION. *See* TITLE.

SUPERSTITION [Gk. *deisidaimonía*] (Acts 25:19); NEB PECULIAR RELIGION. In Acts 17:22 the cognate adjective *deisidaímōn* is rendered "superstitious" by the AV (RSV "religious"; NEB "uncommonly scrupulous").

The term *deisidaimonía* (lit. "fear of supernatural beings"; cf. Plutarch *De superstitione* 165b) could be used with either a positive connotation (often translated by Lat. *religio*, "piety, religious scrupulosity"; cf. Xenophon *Cyropaidia* iii.3.58; Polybius vi.56.7; Strabo *Geog.* i.2.8; Josephus *Ant.* x.3.2 [42]; xiv.10.13 [228], 14 [232], 18 [237], 19 [240]), or a negative connotation (an equivalent to Lat. *superstitio*, "superstition"; cf. Theophrastus *Characters* 16; Plutarch *De superstitione* 165b). There is no corresponding term in Hebrew or Aramaic (Gk. *deisidaimonía* and cognates do not occur in the LXX). As shown in his essay *De superstitione* ("On Superstition"), Plutarch shared with other educated pagans the assumption that the gods were not to be feared at all, since they were thoroughly benevolent (167d) and neither judged, punished, nor caused harm to mankind. Plutarch regarded "piety" (Gk. *eulábeia*; see *Camillus* 6; *Coriolanus* 25) as the mean between the undesirable extremes of atheism on the one hand and *deisidaimonía* on the other; but of the two extremes, he considered atheism to be preferable to superstition (*De superstitione* 169f-170f).

The God of Judaism was, of course, quite different from the gods of educated pagans. As the righteous judge He dispensed both rewards and punishments to those who kept or flouted His covenant. The phrase "fear of the Lord" is a very positive conception in Judaism, and it *never* occurs in a negative sense. Christianity inherited the Jewish conception of God (He. 10:31; 12:29) and regarded Jesus as the one chosen by God to execute judgment on His behalf (Jn. 5:30; Acts 10:42; 2 Tim. 4:1).

In Acts 25:19 Festus the Roman procurator of Judea, in a speech to King Agrippa and Queen Bernice, uses the term *deisidaimonía* to characterize the religion of Paul's Jewish accusers. Here the term is appropriately rendered "superstition," since Festus's attitude toward Judaism, like that of most Romans, would have been largely negative. Judaism was frequently characterized pejoratively by pagans as *deisidaimonía* or *superstitio*, i.e., as a "superstition" (Josephus *Ant.* xii.1.1 [5]; *CAp.* i.22 [208]). Christianity was closely associated with Judaism, and Christians were labeled with the contradictory epithets of "atheists" (M. Polyc. 9:2; Diogenes 2:6) on the one hand and "superstitious" on the other (Tacitus *Ann.* xv.44.4; Pliny *Ep.* x.96.8; Suetonius *Nero* xvi.2). Christians themselves sometimes referred to Judaism pejoratively as a *deisidaimonía* (Diogenes 1:1; 4:1). In Acts 17:22 Paul uses *deisidaímōn* as part of the *captatio benevolentiae* (i.e., an exordium intended to secure the audience's good will) of his address to the Athenians on the Areopagus. As the RSV's translation "religious" suggests, in this context *deisidaimonía* is used in a positive sense as a synonym for *eusebeía*, "piety, religiosity" (used in Pausanias i.17.1 to characterize the Athenians and in Josephus *CAp.* ii.11 [130] to characterize the Lacedaimonians).

D. E. AUNE

SUPH sōōf [Heb. *sûp*–'reeds'; Gk. *tḗs erythrás*–'Red Sea'] (Dt. 1:1); AV RED SEA. A place opposite which Moses spoke to the Israelites. Some scholars have located it in Moab. Musil, e.g., identified it with Khirbet Sūfah, S of Mâdebâ, but this name is a better linguistic equivalent for Suphah. Indeed, some have identified Suph with SUPHAH. The subsequent place names in Dt. 1:1b-2 seem to refer to previous stages in Israel's journey. Therefore some scholars have followed the LXX, Targum, Vulgate, and AV in understanding Suph as a shortened form of Heb. *yam sûph*, which when used in connection with the Arabah (e.g., Nu. 21:4) designates the Gulf of Aqabah. Kraeling equated Suph with Papyron (a Greek translation of *sûp*), a place that was mentioned by Josephus (*Ant.* xiv.2.3 [33]) but has not been located exactly.

Bibliography.—E. G. Kraeling, *JNES*, 7 (1948), 201; A. Musil, *Arabia Petraea*, I, *Moab* (1907), pp. 106, 125f., 211.

JOHN ALEXANDER THOMPSON

SUPHAH sōō-fə [Heb. *sûpâ*; Gk. *ephlógise*–'set afire']; AV RED SEA. A place in Moab, mentioned in a poetic quotation from the Book of the Wars of the Lord (Nu. 21:14). According to the RSV and NEB it was a district in which Waheb (NEB Vaheb) was located. The context (vv. 10-20) describes the passage of the Israelites through Moab. The Targum, Vulgate, and AV translate "Red Sea," but this does not fit the context in Moab. Some have regarded Suphah as another name for SUPH. It may well be Khirbet Sūfah, S of Mâdebā.

SUPPER. *See* MEALS; BANQUET.

SUPPER, LORD'S. *See* LORD'S SUPPER.

SUPPLY [(verb) Heb. piel of *nāhal* (Gen. 47:17), piel of *šāraṯ*–'serve' (Nu. 4:9), pilpel of *kûl* (1 K. 4:27 [MT 5:7], *nātan*–'give' (1 K. 5:10 [MT 24]), piel of *nāśā'*–'assist' (1 K. 9:11), pual of *dāšēn*–'be made fat' (Prov. 13:4), *hāyâ*–'occur, come to pass' (Isa. 23:18); Gk. *epichorēgéō*–'give, grant' (2 Cor. 9:10; Gal. 3:5), *prosanaplēróō*–'fill up, supply' (2 Cor. 9:12; 11:9), *plēróō*–'make full, fill (full)' (Phil. 4:19), *katartízō*–'put in proper condition, complete' (1 Thess. 3:10), *chorēgéō*–'provide, supply' (2 Cor. 9:10; 1 Pet. 4:11)]; AV also FEED, MINISTER, PROVIDE, GIVE, FURNISH, etc.; NEB also MAINTAIN, "used in its service," "grow fat and prosperous," "shall be given," etc.; [(noun) Heb. *rᵉḵûš* (Dnl. 11:13); Gk. *epichorēgía*–'support' ("with which it is supplied," Eph. 4:16)]; AV RICHES, etc.; NEB BAGGAGE-TRAIN, etc. "Supply" in 2 Cor. 8:14 is contextually derived.

In Gen. 47:17 Joseph "supplied" food for the famine-stricken people of Egypt. Elsewhere in the OT this verb (*nāhal*) denotes a loving concern of one person for another, or of God for His people (e.g., Isa. 40:11; 49:10). It implies the tender leading and care that a shepherd shows toward his sheep; indeed, the Hebrew noun translated "pasture" in Isa. 7:19 (*nahᵃlōl*) is derived from this root.

In Nu. 4:9 "supply" refers to a specific religious activity, namely, the use of various instruments used in the sanctuary during worship (cf. *šāraṯ* in vv. 12, 14).

The verb *kûl* in 1 K. 4:27 (MT 5:7) refers to officers who "supply provisions," i.e., food, to King Solomon. Elsewhere in the OT it often means "provide with food" (cf. *TWOT*, I, 432).

On two occasions (1 K. 5:10; 9:11) the RSV mentions King Hiram of Tyre as the one who furnished Solomon with cedar and cypress trees to build the temple. A different verb is used in each instance: 1 K. 5:10 uses the very common Heb. *nāṯan*, "give," while 9:11 uses *nāśā'*, which often conveys the idea of "carry" or "bear," including the notion of bearing iniquity (so Lev. 5:1; 7:18; Nu. 5:31; Isa. 53:11). Thus it appears that 1 K. 5:10 stresses the fact that Hiram gave Solomon the timber for the temple, while 9:11 indicates that Hiram himself had it transported to Israel for Solomon (as opposed to Solomon's sending men to retrieve it).

In Prov. 13:4 the person who is diligent shall be "richly supplied." The idea conveyed here and in all other OT usages of the pual of *dāšēn* (Prov. 11:25; 28:25; Isa. 34:7) is one of material blessing and spiritual well-being, i.e., one of "enrichment." The same verb, but in the piel form, is rendered "anointest" in Ps. 23:5: "Thou anointest my head with oil."

The only OT use of "supply" as a noun occurs in Dnl. 11:13. Here the picture is one of the "supplies" (RSV) or "riches" (AV; cf. NEB "baggage-train") of a large army on the march.

The RSV NT uses "supply" in a narrower sense than the OT. The principal idea is one of God's meeting or fulfilling the spiritual needs of the Body of Christ. In all but three instances the word "supply" renders the basic or intensive forms of either *chorēgéō* or *plēróō*. The three exceptions are: (1) 1 Thess. 3:10, where *katartízō* conveys the idea of making someone or something fit for use, or restoring someone or something to completeness or perfection (cf. Mk. 1:19, where James and John were "mending" their nets); (2) 2 Cor. 8:14, where the verb "supply" is implied by the context; and (3) Eph. 4:16, the only NT use of "supply" as a noun, which here means "provision."

T. M. DORMAN

SUR soor [Gk. A *Sour*, B *Assour*, ℵ *Tour*, Luc. *Soud*] (Jth. 2:28). An apparently important seacoast town of southern Lebanon or northern Israel, located between Tyre and Jamnia and sometimes identified with Dor, a port city between Caesarea and Mt. Carmel. Sur is included among a cluster of Levantine cities that surrendered to Holofernes, one of Nebuchadnezzar's generals.

For the gate called Sur (2 K. 11:6), *see* JERUSALEM III.D.5.p.

B. J. BEITZEL

SURE; SURELY. In addition to its use alone as a simple adjective, "sure" occurs frequently in the expressions "be sure" and "make sure." Among the terms rendered by the simple adjective are Heb. *'ᵉmûnâ* (Ps. 119:86; Prov. 11:18), the niphal part. of *'āman* (1 S. 2:35; 25:28; 1 K. 11:38; Ps. 19:7 [MT 8]; etc.), *'ômen* (Isa. 25:1), *'ᵉmeṯ* (Josh. 2:12; Ps. 132:11), the niphal part. of *kûn* (1 S. 23:23; Hos. 6:3); Aram. *qayyām* (Dnl. 4:26 [MT 23]), *'azdā'* (Dnl. 2:5, 8); Gk. *mē anéndekton* (Lk. 17:1), *asphalés* (He. 6:19), and *pistós* (Acts 13:34; 1 Tim. 1:15; 3:1; etc.). The verbs rendered "be sure" (or "feel sure") include Heb. *yāḏaʿ* (Nu. 32:23; 1 S. 1:10), the niphal of *'āman* (Ps. 93:5), *ḥāzaq* (Dt. 12:23), the hophal of *yāsaḏ* (Isa. 28:16); Gk. *peíthō* (Rom. 2:19; 8:38; 2 Cor. 2:3; Phil. 1:6; 2 Tim. 1:5; etc.), *oída alēthós* (Acts 12:11), and *ginóskō* (Eph. 5:5; 1 Jn. 2:3, 5, 29). "Make sure" represents Heb. *qûm* (Lev. 25:30), the niphal and hiphil of *kûn* (Prov. 4:26; 1 S. 23:22); and the comparative of Gk. *bébaios* ("made more sure," 2 Pet. 1:19).

The Hebrew and Greek terms listed above express confidence and assurance in a variety of senses. The sense may be that something will be lasting or enduring (e.g., 1 S. 2:35; Isa. 33:16), that it is trustworthy or reliable (e.g., 1 Tim. 1:15; He. 6:19), or that in the future it will be expected or demanded (e.g., Nu. 32:23; Prov. 11:18). Sometimes the reference is to another person, an object, or God (e.g., Ps. 19:7 [MT 8]), and at other times to the writer's own inner state of assurance or confidence in response to the external person, event, or object (e.g., 2 S. 1:10; Rom. 8:38). Several terms convey the sense of being "firm," "established," or "trustworthy," e.g., Heb. *'āman* (and cognates *'ᵉmûnâ* and *'ōmen*), *kûn*, *yāsaḏ*; Gk. *pistós* (usually translated "faithful") and *bébaios*. Heb. *qûm* means "raise up," "set in place," while *ḥāzaq* means "be strong." Heb. *yāḏaʿ* and Gk. *ginóskō* mean "know," while *peíthō* means "persuade."

The most common single Hebrew expression underlying "surely" in the OT is the use of an infinitive with the finite verb; cf., e.g., the common formula "he shall surely die" (Heb. *môṯ yāmûṯ*, e.g., 1 S. 14:39; *môṯ yûmaṯ*, e.g., Ezk. 18:13; cf. Gen. 20:7; 1 S. 22:16; 2 K. 1:4; etc.), a legal formula for passing sentence. The LXX generally translates this Hebrew idiom by pairing a Greek finite verb with either a participle (cf. He. 6:14, quoting LXX Gen. 22:17; AV "blessing I will bless, and multiplying I

will multiply") or a cognate noun in the dative case (cf. Mk. 7:10, quoting LXX Ex. 21:17; AV "die the death").

Another formula often translated "surely" is Heb. *'im lō'*, literally, "if not" or "unless" (Nu. 14:35; Josh. 14:9; Isa. 5:9; etc.). This phrase is part of an implied oath or curse formula, fully expressed in 1 S. 3:17: "God do so to you [or me] and more also, if . . ."; here Eli, speaking to the young Samuel, does not even name the content of the curse out loud, lest his speech should of itself bring the curse to pass (cf. 1 K. 19:2, where Jezebel takes an identical oath by the false gods she worships). In other contexts the cursing or binding of oneself or another by the oath is left completely unexpressed, but the implication is there when the speaker continues, "*unless* such and such a thing is done." The meaning can also be reversed by the use of the simple *'im*, "if"; then the sense is that the speaker will be cursed if he or she does do the thing — so "surely" it will "not" be done (Nu. 32:11; Isa. 22:14; Am. 8:7).

Other terms rendered "surely" are Heb. *'ûlām* (1 S. 25:34), *'aḵ* (Gen. 9:5; Isa. 63:8; Jer. 2:35; Lam. 3:3), *'āḵēn* (Gen. 28:16; Ex. 2:14; etc.), *kî* (Ex. 4:25; 1 S. 17:25; Job 5:2; Zeph. 3:7; etc.), *kî 'aẓ* (2 S. 2:27), *kî 'im* (Prov. 23:18), *raq* (Dt. 4:6); Gk. *hóti* (2 Cor. 1:18), *dépou* (He. 2:16), and *naí* (Rev. 22:20).

SURETY. In Gen. 15:13 the phrase "know of a surety" (RSV, AV; NEB "know this for certain") translates the finite verb Heb. *yāḏaʿ*, "know," and its infinitive absolute, which immediately precedes it. This particular construction, where the finite verb follows its infinitive absolute, perhaps further emphasizes and strengthens the verbal idea of *yāḏaʿ* (for this construction cf. Josh. 23:13; 1 S. 28:1; 1 K. 2:37, 42; Jer. 26:15; 42:19, 22).

See also PLEDGE.

SURNAME [Heb. piel of *kānâ*; Gk. *epikaléō* (Acts 1:23; 4:36), *ónoma epitíthēmi* (Mk. 3:16f.)]. Give an additional name to someone. All RSV uses of this term have to do with additional names, not family names. Heb. *kānâ*, used in Isa. 44:5 and 45:4, means "give [someone] an honorary name." The same term in Job 32:21 is translated "use flattery." The idea of honor is not implicit in the terms used in the NT. Neither the Greek nor the RSV usage is consistent. The same kind of naming is sometimes indicated in the Greek by the simple form, *kaléō*, and the RSV renders other uses of *epikaléō* with "called" (Acts 10:5, 32; 11:13) or "whose other name was" (12:12, 25).

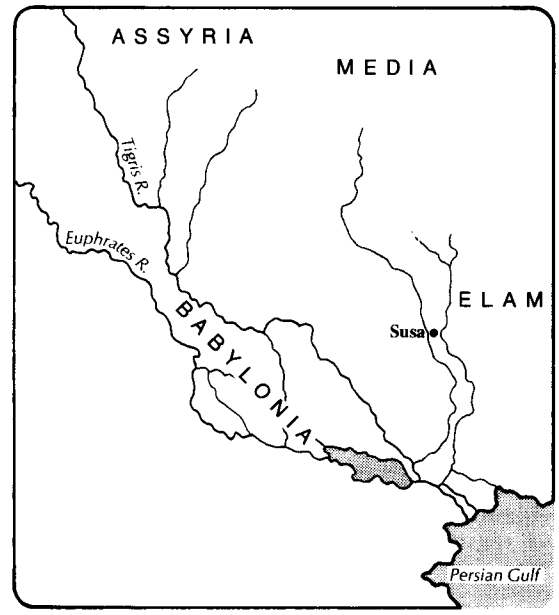
SUSA sōō'sə (1 Esd. 5:29, NEB). *See* SIAHA.

SUSA sōō'sə [Heb. *šûšān*–'lily'; Gk. *Sousan, Sousa*]; AV SHUSHAN. A city in ancient Persia, one of three royal cities of the Achaemenian kings; the setting of the book of Esther.

The remains of this great city lie about 80 km. (125 mi.) N of the Persian gulf in the ancient province of Susiana, called Khuzistan or "the Country of the Elamites." The name Šuš, known since the 3rd millennium B.C. was derived from In-Šušinak, the chief divinity of the Elamite pantheon; it has come down intact through the Greek (*Sous*), a language that has no orthographic provision for the sound *sh*.

Three OT books mention the city of Susa: Nehemiah (1:1), written in the second half of the 5th cent. B.C.; Daniel (8:2), written or edited between 163 and 104 B.C.; and Esther, written probably before the Maccabean era. In most passages Susa is called *habbîrâ*, "the fortress" or "citadel" (e.g., Est. 1:2, 5; AV "palace"; RSV "capital"; NEB "capital city"). The Scripture writers were aware that the Achaemenian capital was strongly fortified, and excavations have confirmed this. But a date for composition of Esther, which relates events from the time of Xerxes (486-465 B.C.), seems to be confirmed by the ignorance of its author about Darius the Great's palace Susa; the description of the "royal house" surrounded by gardens does not seem to correspond to the plan and location of the excavated palace.



The site, where the oldest recognized installations go back to the 4th millennium B.C., appears today in the form of four vast artificial hills covering more than 4 sq. km. (1.5 sq. mi.). Many thousands of cuneiform texts uncovered at Susa, like those found in Mesopotamia, show the city's role in the history of the 3rd millennium. Shortly thereafter it became a capital of the kingdom of the Elam-

SUSA

ites, a people neither Semitic nor Indo-European and whose language is all but unknown.

Susa was conquered repeatedly in the second half of the 3rd millennium by the neighboring powers of Mesopotamia, but early in the 2nd millennium it entered a period of expansion. Although Susa's Semitic neighbors and conquerors had earlier been influential, especially on its language and religion, by the end of the millennium Susa was renowned as a great capital whose palaces and temples displayed the Babylonian spoils brought back by its victorious princes. The long and decadent Elamite reign was ended after several centuries by the conquest of Persia by Ashurbanipal king of Assyria (*ca.* 640 B.C.); pillage and destruction of Susa followed.

After being ruled for a time by Babylon and then probably by Media, Susa became part of the Persian kingdom of Cyrus and was from the time of Darius (521-486 B.C.) a capital of the first world empire, together with Persepolis, Ecbatana, and Babylon.

To Susa fell the honor of being the diplomatic and administrative capital, where the sovereign and his court resided during the winter months. Situated in the heart of the empire, which extended from Egypt to India, Susa was tied by three land routes with the three other capitals. A fourth route, the great Royal Road described by Herodotus (v. 52f.), joined it with Sardis, capital of Lydia. Two maritime routes departed from the Persian Gulf, which would have extended considerably farther north, since at the time of Alexander the Great the Tigris and the Euphrates emptied separately into the gulf. One of these routes led east to India and the other to the west, where the canal dug by Darius between the Red Sea and the Nile allowed boats from Susa to reach the Mediterranean.

The city was beautified and palaces were built by Darius, who left a description of their magnificence in the cuneiform texts discovered in the excavations. These texts have established that the vast palaces maintained Elamite architectural traditions adapted to the warm climate and that they differed from the Persepolis palaces. The Susa buildings had probably been erected on the ruins

Decorated bricks from the palace area at Susa (6th-5th cent. B.C.); three bricks form a palmette motif glazed in blue, white, yellow, black, and yellow-green (The Metropolitan Museum of Art)

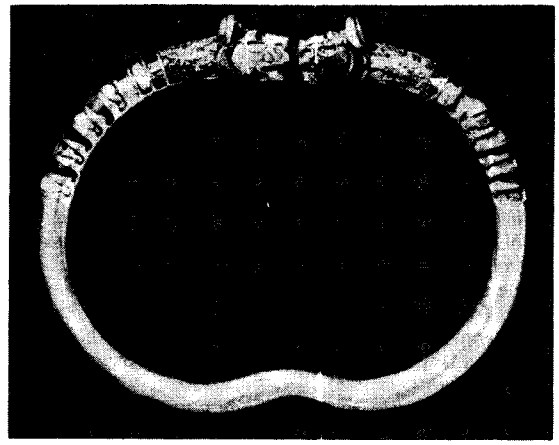
of the Elamite kings' palaces, which Ashurbanipal had destroyed. At Susa, according to the Chronicler, the events of the book of Esther must have unfolded. A strong wall surrounded the palace, the citadel, and the inhabited quarters of the city; in front of it was a large, deep ditch filled with water from the little river Eulaios, which flowed at the foot of the palace. The number of inhabitants was swollen by Israelites deported to Babylon not long before.

Alexander the Great won Susa without a fight and installed in the royal palace (which was found intact) the family of Darius III, who had been taken prisoner at Damascus. On his return from India (324 B.C.) Alexander organized a gigantic celebration of his marriage to Statira, the daughter of Darius III; he urged the men of his entourage to marry the daughters of noble Persian families and compelled ten thousand Macedonian warriors to marry young Persian women.

A century later Susa was besieged by Molon, the satrap who had revolted against Antiochus III. The city was taken but the citadel resisted victoriously. It may have been during this siege that the royal palace was burned; the ruins were later used as a stone quarry, since stone was a precious material in an alluvial plain.

Greek texts from Susa reveal how the ancient capital of the Persian kings became a flourishing Greek colony under the successors of Alexander the Great. Its name was even changed to Seleucia-on-the-Eulaios. The city was embellished with villas built in the western style; a stadium was erected, doubtless for the celebration of solemn games. The city remained faithful to its Hellenic traditions even under the Parthian dynasties, and a letter of Ar-

A one-piece gold bracelet of the Achaemenid period with a small amount of cloisonné inlay still intact and two lions' heads molded on the closure (4th cent. B.C.) (RMN/ARS, NY/SPADEM)



taban III (A.D. 16-40) addressed to the citizens of Susa is written in Greek. But an increase in mixed marriages and the great distance from Greece eventually made Susian society more Persian than Hellenistic.

With the advent of the Sassanide dynasty (3rd to 7th cents. A.D.) a new minority of Christians was added to the inhabitants of Susa. The city even became a bishopric. King Shapur II's persecution of Christians caused them to revolt; three hundred elephants of the royal army were sent against the dissidents (A.D. 350). Excavation has brought to light evidence of this disaster: skeletons of men scattered in the streets and alleys, and the interiors of houses whose walls had fallen, probably pushed in by the elephants.

Susa was among the first cities to fall to the Arabs at the time of their conquest of Persia. Arab geographers of the 10th cent. A.D. spoke of Susa as one of the most beautiful Islamic cities (ibn-Khordadbeh), where fabrics of plush and of silk stuffs "sought after by princes" were produced (ibn-al-Faqih), and exported across the entire world (Istakhri). Susa's bazaars were famous for their wealth and the region for its sugar, produced by its cane plantations (Maqdisi). Susian merchants even traded in the Far East, as confirmed by the discovery at Susa of porcelain from China and a mirror in T'ang bronze. The city also became an important intellectual center, where the Koran, the Islamic traditions, and literary works were taught.

It seems that the decline of the city had begun already in the 12th cent., although the precise causes cannot be specified. One of the last testimonies to Susa is that of Benjamin of Tudela, the learned Jewish doctor of Spain, who visited the city in 1172. His interest inclined to the so-called tomb of the prophet Daniel (one of several known in the country) and to the Jewish community of about seven thousand persons, who had fourteen synagogues. Apparently a century later the old city was abandoned by its last inhabitants, some moving to Dizful or Shushtar.

SUSANCHITES sōō'sən-kīts. The AV designation (RSV "men of Susa"; cf. NEB) for Aram. *šûšanḵāyē'* (Ezr. 4:9). They were displaced residents of SUSA, the Elamite capital city, whom Assyrian forces under Ashurbanipal (cf. *BHI* [3rd ed.], p. 314) deported to Samaria *ca.* 640 B.C.

SUSANNA sōō-zan'ə [Gk. *Sousanna*] (Lk. 8:3). One of the women whom Jesus had healed of evil spirits or diseases and who ministered to Him and His disciples during His preaching journeys in Galilee (Lk. 8:1-3). Presumably she also went with the women who brought spices to the tomb after Jesus' burial (23:55–24:1), although she is not among those named in 24:10 (cf. Mt. 28:1; Mk. 16:1). The women informed the disciples of their experience at the tomb, and one may conjecture that they later provided Luke with the details unique to his Gospel.

C. J. HEMER

SUSANNA sōō-zan'ə, **BOOK OF** [Gk. *Sousanna*]. One of the additions to the book of Daniel in the LXX. A fictional story, it tells of the vindication, through skilful interrogation by Daniel, of a beautiful and faithful wife who had been falsely accused of adultery by two lecherous elders. The account appears at the beginning of the book of Daniel in the LXX, but as ch. 13 in Theodotion and in the Vulgate.

I. Contents.–The devout and beautiful Susanna was the wife of Joakim, a wealthy Jewish exile living in Babylon. Two elders who had been appointed judges of the Jewish people became sexually attracted to her. One day the two men hid in Joakim's garden when Susanna came there to bathe. When she was alone they came out from hiding and demanded that she submit to their advances, with the threat that if she refused they would publicly accuse her of adultery. She refused their demand, and they brought her to trial, claiming that they had discovered her committing adultery with a man who was too strong for them to capture. She was convicted by their testimony and was being led out to be executed when the young man Daniel intervened. He was given permission to cross-examine the two elders separately, and he proved that they had borne false witness when they gave contradictory answers to the question of under which tree they had seen her sinning. Thus Susanna was vindicated, and the two elders were executed in accordance with the law of Dt. 19:16-19.

II. Language.–The story survives in two very different Greek versions, the older version being found in the LXX and the later one in Theodotion. Theodotion generally adds details to the LXX version (e.g., the bath scene in vv. 15-18, and the reaction of Susanna's household to the judges' accusation in vv. 24-27), although the LXX contains a prayer by Susanna at her trial that is missing from Theodotion. Even in the sixty verses that the two versions share, less than half exhibit pronounced verbal agreement. Moore suggested (pp. 78-80) that these observations may be best explained by positing two separate Semitic texts underlying the two Greek versions of the story; the verbatim agreements that do exist in the two Greek versions are then due to the use of the LXX by the author of Theodotion's translation.

Some scholars have argued, based on the presence of two puns in the Greek texts (vv. 54f., 58f.), that Greek was the story's original language. Throughout the story, however, Hebrew/Aramaic word order and idioms give internal evidence of a Semitic original underlying the Greek, and the Greek puns could easily be explained as the work of the Greek translators.

III. Purpose.–Like the other additions to the book of Daniel and the stories in Dnl. 1–6, Susanna was written to urge observance of the Torah as the wisest way to live. Susanna was confronted with the classic choice of sinning privately and retaining her station or remaining virtuous but being condemned for the very sin she eschewed. The story teaches that personal integrity before God is more important than public approval. It also depicts God as one who hears and answers the prayers of the righteous.

IV. Canonicity.–The fact that the story occupied two different positions in the book of Daniel suggests that it was never fully integrated into that book, and this may explain why it was rejected from the Hebrew canon. Some scholars have also noted that the villains of the story were elders, a feature that would surely have been unpopular with the elders who fixed the canon.

V. Date.–The story is obviously much later than the time in which it is set. On the other hand, the evidence for a Semitic original (see II above) seems to indicate that it was written before the book of Daniel was translated into

Greek (*ca.* 100 B.C.). A date in the 2nd cent. B.C. is probably about right. Some have suggested, however, that the story may have circulated earlier as a secular folktale and that it may even have become Judaized before Susanna's defender was identified with Daniel (for this and other theories of the story's origin, see Moore, pp. 84-89).

VI. Provenance.–One cannot say with certainty where the story of Susanna in its Jewish form was written. If Moore was correct in claiming that the original language was Hebrew or Aramaic, the story was most likely written in Palestine. Supporting that view is the fact that the story exhibits no tension with Greek life-styles, which suggests an audience living out of the mainstream of Greek influence.

Moore, *Daniel, Esther and Jeremiah: The Additions* (*AB*, 1977), pp. 23-34, 77-129; G. W. E. Nickelsburg, *Jewish Literature Between the Bible and the Mishnah* (1981), pp. 19-26. P. L. REDDITT

SUSI sū'sī, sōō'sī [Heb. *sûsî*–'my horse'(?)]. Father of Gaddi, an Israelite leader and spy who represented the tribe of Mannasseh (Nu. 13:11). See *IP*, p. 230.

SWADDLING [Heb. *ḥᵃṯullâ* ("swaddling band," Job 38:9); Gk. *sparganóō*–'wrap (up) in (swaddling) clothes' ("wrapped in swaddling clothes," Lk. 2:7, 12)]; NEB also CRADLED (Job 38:9). A cloth tied together by bandage-like strips.

After an infant was born, the umbilical cord was cut and tied, and then the baby was washed, rubbed with salt and oil, and wrapped with strips of cloth (Ezk. 16:4; note that "swathed" translates Heb. *ḥṭl*; cf. J. W. Wevers, *Ezekiel* [*NCBC*, repr. 1982], p. 95). These strips kept the newborn child warm and also ensured that the child's limbs would grow straight.

In a birth metaphor the Lord describes to Job how He wrapped up the sea in "thick darkness" (NEB "fog") like a mother would wrap up a newborn infant in swaddling (Job 38:9). Also, in Ezk. 16:4 the RSV "swathed with bands" (AV "swaddled"; NEB "wrapped in swaddling clothes") translates a phrase in which both the pual and hophal forms of Heb. *ḥāṭal*, "swaddle," occur (see GKC, § 113, p. 344). Ezekiel describes how God rescued abandoned Israel and nutured and cared for her as a mother cares for her child (16:1-7).

In the NT the RSV "wrapped in swaddling clothes" translates the Greek verb *sparganóō*, which means to wrap in *spárgana*, or strips of cloth. Lk. 2:7 displays Mary's maternal care for her newborn son Jesus (cf. Wisd. 7:4), but in 2:12 the clothes serve as a sign to authenticate the angel's message to the shepherds.

For AV "swaddled" in Lam. 2:22 *see* DANDLE.

See H. Granquist, *Birth and Childhood among the Arabs* (1947). D. E. GARLAND G. L. K.

SWALLOW [Heb. *dᵉrôr*, (Ps. 84:3 [MT 4]; Prov. 26:2), *sûs, sîs* (Isa. 38:14; Jer. 8:7)]; AV also CRANE (Isa. 38:14; Jer. 8:7)]; NEB also SWIFT (Jer. 8:7). Perhaps swallow or swift is appropriate in these passages; the ancient writers may not have distinguished between the two species.

The swallow is a small passerine bird of the family *Hirundinidae*, several species of which occur in the Near East. It spends most of its time on the wing, feeding on insects. It nests in clefts, cracks, and crevices, as well as in buildings (cf. Ps. 84:3 [MT 4]). The swallow still nests in the houses, barns, mosques, and other buildings of the Near East today. It makes a constant twittering noise as it flies. The swift, while quite similar to the swallow in appearance and behavior, belongs to the family Apodidae, related to the hummingbird. The swift also spends most of its time in the air, and it too feeds on insects. Its nesting habits resemble that of the swallow. Both are very fast fliers, although the swift is reportedly faster, attaining 112 to 130 km. p.h. (70 to 80 m.p.h.).

The biblical writers observed the habits of these birds and used their observations to illuminate their writings. In Ps. 84:3 the swallow is described as nesting in the temple. The psalmist envies the birds because they are able to live in the temple. Prov. 26:2 compares the flight of the swallow to a groundless curse that does not come to rest. The flight of the swallow is particularly apt in this regard, because it spends most of its time in the air. In Isa. 38:14 Hezekiah compares his mourning or complaining to the sounds of birds, particularly the moaning of the dove and the clamor of the swallow. Jer. 8:7 remarks on the migratory habits of birds: The birds know when to return, but the people of God are ignorant of such obvious rules. A. HICKCOX

SWAN (Lev. 11:18; Dt. 14:16, AV). *See* WATER HEN.

SWEAR [Heb. *šāḇaʿ* (Ezk. 21:23), niphal of *šāḇaʿ* (e.g., Gen. 21:23; Ex.32:13; Lev. 5:4; Nu. 11:12; Dt. 6:13; Josh. 2:12; Jgs. 2:1; 1 S. 3:14), hiphil of *šāḇaʿ* (e.g., Gen. 24:3; Ex. 13:19; Josh. 23:7; 1 S. 20:17; 1 K. 2:42; 2 Ch. 36:13), *šᵉḇûʿâ* ("sworn promise," 1 Ch. 16:16), *nāśāʾ yāḏ*–'lift up the hand' (Ex. 6:8; Neh. 9:5; Ezk. 20:5; 36:7), hiphil of *rûm* + *yāḏ*–'lift up one's hand' (Gen. 14:22), *'im-lō'*–'surely' (Isa. 5:9), *kî 'im*–'truly' (Jgs. 15:7); Gk. *omnýō* (e.g., Mt. 5:34, 36; Mk. 14:71; Lk. 1:73; Acts 2:30; He. 3:11, 18; 4:3; Rev. 10:6), *epiorkéō* ("swear falsely," Mt. 5:33), *hórkos* ("what one has sworn," Mt. 5:33)]; AV also OATH, "lift up one's hand" (Gen. 14:22), "of a truth" (Isa. 5:9), "yet" (Jgs. 15:7), etc.; NEB also OATH, "with uplifted hand bind oneself," etc. The act of swearing was a formal statement of one's word, promise, or intent in the presence of God and other witnesses. Generally it pertained to a future obligation rather than to one's truthfulness about a past act.

The root *šbʿ* occurs 216 times in the OT and is particularly prominent in the Pentateuch, the historical books, and the prophets; it is rare in wisdom literature. The words "swear" (*šāḇaʿ*) and "oath" (*šᵉḇûʿâ*) are sometimes explained with reference to the number "seven" (*šeḇaʿ*), but the exact relationship is unclear. The explanation of the name Beer-sheba in Gen. 21:25-34 suggests a relationship between the terms: Abraham set aside seven ewe lambs as a witness, and both he and Abimelech swore an oath at a place they called Beer-sheba ("spring of the oath" or "spring of seven"; cf. v. 31, RSV mg.; *see* BEER-SHEBA I). But because no other passage shows a clear connection between these two words, any etymological conjecture is questionable.

The verb "swear" occurs in three different contexts. First, swearing is found in the context of making a covenant (*see* COVENANT [OT] II-III). The covenant relationship, which was based on fidelity, was recorded, witnessed by other people or by God, and sworn to with an oath (cf. Dt. 4:31; Lk. 1:73; He. 6:13-17). God served as witness of the treaty between David and Jonathan: "We have sworn both of us in the name of the Lord, saying, 'The Lord shall be between me and you, and between my descendants and your descendants, for ever'" (1 S. 20:42). When God made a covenant with His people, He

swore by Himself (Gen. 22:16; Ex. 32:13), by His "holiness" (Am. 4:2; Ps. 89:35 [MT 36]), or by His fidelity (v. 49 [MT 50]).

Second, swearing is found in other contexts that involved taking an oath (e.g., Josh. 2:12, 17, 20; 6:22; 9:20; Ps. 119:106). Those who swore an oath usually took upon themselves a CURSE should their word be broken (e.g., 2 S. 3:35). One's oath could be binding on oneself alone or subsequent generations as well (cf. Gen. 50:5f., 25).

Third, swearing is found in the context of making vows (e.g., Nu. 30:2). *See* VOW.

The Israelites employed several forms of swearing (*see* OATH). Among the formulas used most frequently were: "May God do so to me and more also, if I . . ." (e.g., 2 S. 3:35; cf. 1 S. 3:17), and "For as the Lord lives . . ." (e.g., 1 S. 14:39). Several other formulaic expressions are used in Jgs. 21: "The men of Israel had sworn . . ., 'No one of us shall give his daughter in marriage to Benjamin'" (v. 1); "'What shall we do . . . since we have sworn by the Lord that we will not give them any of our daughters for wives?'" (v. 7); "For the people of Israel had sworn, 'Cursed be he who gives a wife to Benjamin'" (v. 18).

Often the swearer used a symbolic gesture to accompany the oath, e.g., raising one's hand upward (Gen. 14:22; Ezk. 20:5; 36:7; Neh. 9:15; Dnl. 12:7; Rev. 10:5f.) or placing one's hand "under the thigh" of another (Gen. 24:2; 47:29); *see* GESTURE I.

The binding nature of what was sworn was grounded in God's fidelity. God expected His people to be as faithful to their word as He was to His word. The OT records in anthropomorphic manner that God Himself has sworn (Gen. 22:16; Isa. 45:23; Ezk. 17:19; Am. 6:8). Swearing was a solemn act because God was called upon as witness (Gen. 31:50; Josh. 24:22, 27; 1 S. 12:5; Jer. 42:5; 2 Cor. 1:23; Phil. 1:8). The nations surrounding Israel swore by the gods of heaven and earth. A treaty of Esarhaddon king of Assyria states: "You are adjured by Ashur . . . by Anu, Anlil, and Ea . . . by Sin, Shamash, Adad, and Marduk . . . by all the gods of Assyria . . . by all the gods of Babylon, Borsippa, and Nippur . . . by all the gods of Sumer and Akkad . . . by all the gods of every land, you are adjured by the gods of heaven and earth" (*ANET*, pp. 534f.). Israelites were enjoined to swear by the Lord as an act of humble submission (Dt. 6:13; 10:20; Jer. 4:2; cf. 1 S. 25:26; 2 S. 15:21; Ps. 63:11 [MT 12]). But taking the name "Yahweh" in vain — i.e., swearing insincerely or with evil intent — was strictly prohibited in the third commandment (Ex. 20:7). Swearing falsely was considered a very serious sin (Lev. 6:3, 5 [MT 5:22, 24]; 19:12; Jer. 5:2; 7:9; Zec. 5:3f.; Mal. 3:5); *see* CRIME: False Swearing.

Jesus warned strongly against swearing merely as a form of asseveration (Mt. 5:34-37; 23:16-22). All swearing, no matter what one is swearing upon, involves calling upon God as a witness; thus one who swears is in danger of breaking the third commandment. Jesus enjoined the kind of veracity that does not need oaths to emphasize sincerity (Mt. 5:37; cf. Jas. 5:12). On the other hand, Jesus did not prohibit all swearing, since He Himself swore as commanded by the high priest (Mt. 26:63f.). Paul also invoked God as witness upon occasion (cf. 2 Cor. 1:23; Gal. 1:20). Peter was guilty of swearing falsely when he denied knowing Jesus (Mt. 26:72, 74).

W. A. VANGEMEREN

SWEAT [Heb. *zē'â* (Gen. 3:19), *yeza'* (Ezk. 44:18); Gk. *hidrṓs* (Lk. 22:44)].

The term occurs only twice in the OT. First, in the story of the fall in Gen. 3 the announcement of man's punishment includes the following: "In the sweat of your face you shall eat bread" (v. 19), implying the hardship and skimpiness of his livelihood in which work becomes toil as a result of the broken relationship with the Creator. Second, the word occurs in Ezk. 44:18 in the midst of a series of regulations for priests. Verses 17-19 refer specifically to clothing requirements for priests who enter the inner precincts of the temple area. The command in v. 17 to wear linen clothes is contrasted with a prohibition in v. 18 against wearing woolen clothing, where it reads that "they shall not gird themselves with anything that causes sweat." The rationale for such a prohibition possibly stems from the belief that sweat, like other human waste matter, is unclean (cf. Dt. 23:12-14; see also W. Zimmerli, *Ezekiel 2* [Eng. tr., *Hermeneia*, 1983], p. 460).

The only NT use of the term is in Lk. 22:44, where it is said that while Jesus was praying in the garden of Gethsemane, "his sweat became like great drops of blood falling down upon the ground." This problematic text (vv. 43f.) is omitted from many ancient and diverse textual witnesses. This omission is hardly accidental, and it may have been omitted in some texts for doctrinal reasons by a scribe who thought these verses incompatible with the divinity of Jesus. Those who hold it to be authentic to the Lukan text point out that the language and thought are compatible with Lukan authorship. Others argue that these verses may have been drawn from an authentic tradition that had not found its way into the Synoptic tradition but came to be added in response to those who questioned the humanity of Jesus.

Beyond the textual problem is the problem of understanding the meaning of the expression itself. While some have taken the phrase as meaning that Jesus was actually sweating drops of blood, the words do not necessarily mean more than that the drops of sweat in some way resembled drops of blood either in size, frequency, coloration, etc. In fact, the appearance of the Greek word *hōseí* ("as") argues against the identity of the sweat with drops of blood, and only intends certain similarity or comparison. Thus the phrase is most often understood metaphorically as (1) a rhetorical expression like our "tears of blood"; (2) a way of describing the sweat falling (like drops of blood); (3) a way of describing the coloration of the sweat (a reddish color may have been noticeable owing to an exudation of the arteries). Some have suggested that this is an allusion to a symptom called in ancient medicine *haimatodes hidros* ("bloody sweat"). This suggestion, however, would make the *hōseí* superfluous.

See I. H. Marshall, *Gospel of Luke* (*NIGTC*, 1978), pp. 831f.

W. H. GLOER

SWEET; SWEETNESS [Heb. *māṯôq*] (Jgs. 14:14, 18; Ps. 19:10 [MT 11]; Prov. 16:24; 24:13; 27:7; Eccl. 5:12 [MT 11]; 11:7; Cant. 2:3; Isa. 5:20; Ezk. 3:3); [Heb. *mōṯeq*] (Jgs. 9:11); [Heb. *māṯaq*–'make sweet'] (Ex. 15:25; Job 20:12; 21:33; Ps. 55:14 [MT 15]; Prov. 9:17); NEB also PLEASANT; [Heb. *mamtaqqîm*] (Cant. 5:16; "sweet wine," Neh. 8:10); NEB also SWEET DRINKS; [Heb. *nā'îm*] (2 S. 23:1; Ps. 81:2 [MT 3]); AV also PLEASANT; NEB "singer," "tuneful"; [Heb. *'arēḇ*] (Prov. 20:17; Cant. 2:14); NEB GOOD, PLEASANT; [Heb. *mālaṣ*–'make sweet'?] (Ps. 119:103a); [Gk. *glykýs*] (Rev. 10:9f.).

Literal uses of "sweet" are not frequent in the Bible, except for references to the sweetness of honey, usually in comparative figures of speech (e.g., Jgs. 14:14, 18; Ps. 19:10; Prov. 24:13; Rev. 10:9f.). An extension of this com-

parative use is in the typical contrast of sweet and bitter, like that of light and darkness (for the confusion of good and evil, Isa. 5:20; cf. Rev. 10:9f.). Other things referred to as being literally sweet are wine (Neh. 8:10), water (Ex. 15:25; Jas. 3:11f.; RSV "fresh"), and figs (Jgs. 9:11).

Generally, "sweet" appears in figures of speech describing that which is pleasant or beneficial, including God's law (Ps. 19:10), wisdom (Prov. 24:13f.), sleep for a laborer (Ecc. 5:12), pleasant speech (Prov. 16:24; Cant. 5:16), "light," i.e., enjoyment of life (Ecc. 11:7), lovemaking (Cant. 2:3), wickedness to the wicked (Job 20:12), death for those honored at death (21:33), the conversation of friends (Ps. 55:14 [MT 15]), and "stolen water," i.e., adultery, according to the seductress (Prov. 9:17). Ezk. 3:3 speaks of the word of God as that which is sweet to the prophet. Rev. 10:9f. expands on this in an apocalyptic context: the appropriation of God's revelation is "sweet," but the prophet's experience of the contents of that word (the disasters spoken of in Revelation) makes his stomach bitter.

Sometimes the translation "sweet" in an English version is itself a figure of speech, and the underlying Hebrew word does not carry the literal meaning "sweet" in any context. Examples of this are Heb. *yāpâ* in Cant. 4:10 (RSV "sweet"; AV "fair"), Heb. hiphil of *yāṭaḇ*, "do well," in Isa. 23:16, and uses of Heb. *nā'îm* (listed above).

That Heb. *mālaṣ* (Ps. 119:103a) means "make sweet" is suggested by the context and by Arabic cognates. Another suggestion for the niphal form used here means "slide," "slip past," which could be equally appropriate to the context (a loose translation would be: "How easily Your words slide down my throat"). Yet another possibility is that *mālaṣ* is related to *māraṣ*, yielding "How forceful are Your words to my mouth" (cf. Job 6:25). If this is the case, *ḥēḵ*, "palate," in the first part of Ps. 119:103 (AV, RSV "taste"; NEB "mouth") and *peh* in the second part of the verse (AV, RSV "mouth"; NEB "tongue") link together disparate figures of speech.

SWEET CANE. *See* REED.

SWEET INCENSE. *See* SPICES.

SWELL; SWELLING; SWOLLEN [Heb. *śe'ēṯ* (Lev. 13:2, 10, 19, 28, 43; 14:56), qal and hiphil of *ṣāḇâ*–'swell up' (Nu. 5:22, 27), *ṣāḇeh*–'swollen' (Nu. 5:21), *bāṣēq*–'become swollen' (Dt. 8:4; Neh. 9:21), *yāṣā'*–'go out' (Ps. 73:7); Gk. *pimprēmi*–'become distended, swell up' (Acts 28:6), *typhóō*–'be puffed up, conceited' ("swollen with conceit," 2 Tim. 3:4)]; AV also STAND OUT (Ps. 73:7), RISING, HIGHMINDED, etc.; NEB also "gleam through" (Ps. 73:7), MARK, DISCOLORATION, "swollen with self-importance (2 Tim. 3:4), etc.

The RSV term "swelling" in Leviticus refers to some cutaneous condition that might indicate leprosy, whether an unusual boil, subcutaneous nodule, or irritant patch of skin. OT law required the priest to examine the sufferer according to set procedures and to make a diagnosis. *See* LEPER III.

In Nu. 5:21f., 27 Heb. *ṣāḇâ* and its cognate adjective *ṣāḇeh* describe the abdominal swelling of a suspected adulteress subsequent to the trial by ordeal. In Dt. 8:4 and Neh. 9:21 *bāṣēq* depicts the swollen condition of feet due to strain or heat. In Ps. 73:7 *yāṣā'* indicates a condition of eye protrusion that is attributed to gluttony. Emotional disturbance or glandular dysfunction, especially in the obese, can also cause exophthalmia.

In the RSV NT "swell" translates Gk. *pimprēmi*, a rare word that expresses the idea of increasing bodily distension. In 2 Tim. 3:4 the passive of Gk. *typhóō* signifies the moral evil of excessive pride. R. K. H.

SWIFT (Jer. 8:7, NEB). *See* SWALLOW.

SWIFT; SWIFTLY [Heb. *qal*] (2 S. 2:18; Ecc. 9:11; Isa. 18:2; 19:1; 30:16; Jer. 46:6; Lam. 4:19; Joel 3:4 [MT 4:4]; Am. 2:14f.); AV also LIGHT; NEB also SPEED, APACE; [Heb. *qālal*–'be swift'] (2 S. 1:23; Job 7:6; 9:25; Isa. 30:16; Jer. 4:13; Hab. 1:8); [Heb. piel of *māhar*–'hasten, be swift'] (1 Ch. 12:8; Isa. 16:5; Mal. 3:5); AV also HASTE; NEB also PROMPT; [Heb. *(ʿaḏ-)meʰērâ*–'swiftly'] (Ps. 147:15; Isa. 5:26; Joel 3:4 [MT 4:4]); AV also WITH SPEED, SPEEDILY; [Heb. *ḥûš*–'be swift'] (Dt. 32:35; Hab. 1:8); AV (MAKE) HASTE; NEB IS FAST APPROACHING, SWOOP; [Heb. *dā'â*–'fly swiftly'] (Dt. 28:49; Ps. 18:10 [MT 11]; Jer. 48:40; 49:22); AV FLY; NEB SWOOP; [Gk. *oxýs*–'sharp, swift'] (Rom. 3:15); NEB HASTEN; [Gk. *tachinós*] (2 Pet. 2:1).

Words translated "swift(ly)" are used both of things which are physically swift — an advancing army (Dt. 28:49; Isa. 5:26; 30:16; Lam. 4:19; Hab. 1:8), a particularly fast man (2 S. 2:18), water-borne messengers (Isa. 18:2), and the wind (Ps. 18:10) — and, in an extended sense, characteristics which are said to operate with swiftness — the judgment of God (Dt. 32:35; Isa. 19:1; Joel 3:4; Mal. 3:5; 2 Pet. 2:1), the Davidic Messiah's accomplishment of righteousness (Isa. 16:5), the days of a man who feels he is dying (Job 7:6; 9:25), and the effectiveness of God's word (Ps. 147:15). The use of comparative language in speaking of swiftness allows us to know what was characteristically regarded as fast: eagles in flight (Dt. 28:49; 2 S. 1:23; Jer. 4:13; 48:40; 49:22), gazelles (2 S. 2:18; 1 Ch. 12:8), leopards (Hab. 1:8), a weaver's shuttle (Job 7:6), and skilled runners (Job 9:25).

Part of Qoheleth's insistence on the dominance of chance is his denial that swiftness is necessarily determinative in winning races (Ecc. 9:11). Similarly, prophetic oracles of judgment deny that swiftness will save in times of judgment (Jer. 46:6; Am. 2:14f.).

Hebrew *qal-hû'* (Job 24:18) is taken as it stands by AV ("He is swift"), but is now often emended to *qallû*, "they are swift" (so RSV "They are swiftly carried"), or, taking the verb in its other meaning, "they are cursed" (so NEB "Such men are scum"; see the comms. for further discussion).

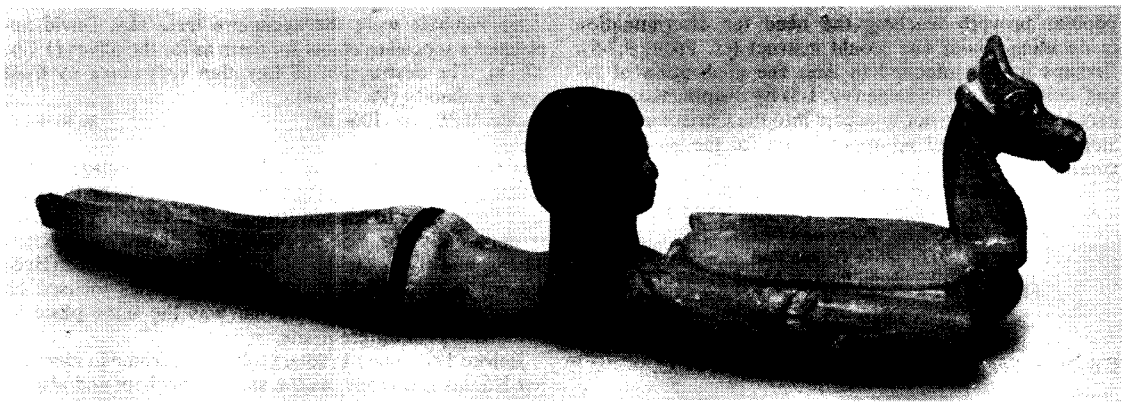
Hebrew *yeʿāp* in Dnl. 9:21 is uncertain. It may be related to *yā'ap*, "be wearied," and could refer to the manner of the angel's flight or to the seer's earlier vision of the angel (i.e., "when I was wearied"; cf. 8:18). "Swiftly" is suggested by some of the versions (including LXX *táchei*, Vulg. *cito*; cf. A. Lacocque, *Book of Daniel* [Eng. tr. 1979], p. 190).

See also ASS; HASTE; HORSE. J. W. SIMPSON, JR.

SWIFT BEASTS. AV term for RSV, NEB DROMEDARY (Isa. 66:20) and "steeds" (Mic. 1:13; *see* HORSE).

SWIM [Heb. *śāḥâ*] (Isa. 25:11; Ezk. 47:5); [Gk. *ekkolymbáō, kolymbáō*] (Acts 27:42f.); **SWIMMER** [Heb. part. of *śāḥâ*] (Isa. 25:11); AV "he that swimmeth."

According to Isa. 25:11 Moab's attempts to save itself will fail, and it will inevitably sink. In Ezk. 47:5 the river is deep enough for swimming, yet too deep to ford successfully. In Acts 27 swimming proved to be a means of self-preservation for the ship's passengers after it struck a shoal.



An alabaster spoon in the shape of a girl swimming behind a gazelle (the spoon cover) (Egypt, 1580-1350 B.C.) (The Metropolitan Museum of Art)

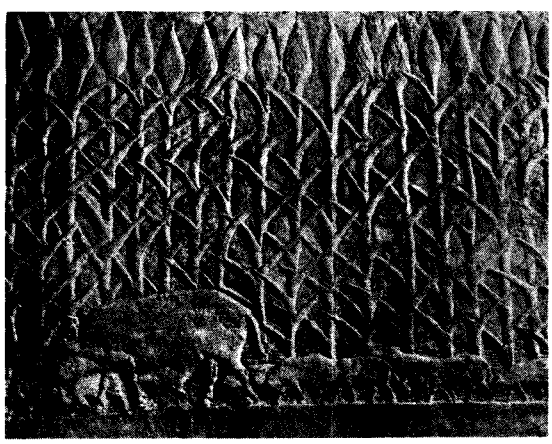
SWINE [Heb. *ḥᵃzîr*] (Lev. 11:7; Dt. 14:8; Prov. 11:22; Isa. 65:4; 66:3, 17); NEB also PIG; [Gk. *choíros*] (Mt. 7:6; 8:30-32; Mk. 5:11-13, 16; Lk. 8:32f.; 15:15f.); NEB PIG; **SOW** [Gk. *hýs*] (2 Pet. 2:22).

Leviticus 11:7 and Dt. 14:8 forbid the Israelites to eat the flesh of swine. The ancient world varied on this practice. On the one hand, many other Semites shared Israel's prohibition. On the other hand, the wild BOAR roamed Palestine and apparently was eaten by the pre-Semitic inhabitants. Certainly the Greeks ate pork, and that practice became one of the chief points of difficulty between Judaism and Hellenism. This conflict is highlighted in 1 Macc. 1:47, where Antiochus orders Jews to sacrifice pigs (Gk. *hýs*), and in 2 Macc. 6:18; 7:1, where Jewish heroes choose to die rather than defile themselves by eating pork.

The reason for the OT dietary law is not known with certainty. In fact, the reason may have been unknown even in the interestamental period. The Letter of Aristeas (2nd cent. B.C.) defends the laws on moral grounds: (1) the Jews must eat only animals that ruminate since ruminating resembles remembering and Jews are to remember Scripture; (2) prohibited animals (Aristeas mentions mice and weasels) exhibit polluting features. Such arguments appear to be later attempts to explain the law.

Modern commentators have made three suggestions to account for the law. (1) The least likely relates the prohibition to hygiene. This view states that since pork is sometimes contaminated with trichina worms, the prohibition might have been based on the observation that eating pork was sometimes followed by illness. One remark in the Talmud might suggest that the rabbis associated pork with ill health: "Ten *kabs* of sores descended to the world; nine were taken by swine" (T. B. *Kiddushin* 49b). But since illness only occasionally follows eating pork, it seems unlikely that the ancient Hebrews would have recognized the health hazard involved. (2) The second view is more likely, namely, that the OT rejected eating swine because of its association with the worship of certain Babylonian, Syrian, and Egyptian gods. The involvement of some Israelites in such pagan rites may well stand behind the prophet's condemnation of eating swine in Isa. 65:4 and 66:17 (cf. v. 3). Still, this theory does not explain why other animals were also rejected (cf. Lev. 11:4-6; Dt. 14:7). (3) Perhaps the best explanation for the dietary regulations of Leviticus as a whole is the symbolic interpretation of Douglas (pp. 54-57). The standard sacrificial animals of the pastoralist Israelites were sheep, goats, and oxen, which all had in common cloven hooves and the fact that they chewed the cud (cf. Lev.11:3). God had chosen certain animals for sacrifice in the same way that He had chosen one nation, Israel, to be His holy people. As God's people Israel was to reflect His holiness (cf. vv. 44f.) by restricting its diet to those animals that fitted the pattern of the animals chosen by God for His "diet" (namely, cloven hooves and chewing the cud). The pig is "unclean" because it meets only half the requirements: it has cloven hooves but does not chew the cud (v. 7).

A sow and several piglets walking through marshlands. Relief from the palace of Sennacherib, Nineveh, *ca.* 690 B.C. (courtesy of the Trustees of the British Museum)



The NT references to "swine" also reflect the Jewish notion that swine were "unclean." In the (gentile) region of the Gadarenes (OT Gerasenes) Jesus cast demons out of a man (women, according to Matthew) and into a herd of swine (Mt. 8:32; Mk. 5:13; Lk. 8:33), presumably because the swine were considered by the Jews to be worthless animals and an appropriate dwelling place for demons. The prodigal son was reduced to caring for swine and coveting their feed (Lk. 15:15f.); a Jewish man could sink no lower. 2 Pet. 2:22 cites a popular proverb (found also in the story of Ahikar) in its denunciation of false prophets for returning to immorality.

More difficult to understand is the saying of Jesus in Mt. 7:6: "Do not give dogs what is holy; and do not throw your pearls before swine." Sometimes "dogs" and "pigs" were used by Jewish teachers as scornful references to Gentiles, but it is inconceivable that Jesus was warning against missions to the Gentiles. The verse was probably a

popular proverb teaching the need for discrimination in deciding whom one would instruct (cf. Prov. 9:7-9). Perhaps it was intended to limit the application of Jesus' command not to judge (vv. 1-5) by warning that some care must be taken not to accept into the Christian fellowship those who had no appreciation for the gospel (see comms.).

SWORD. *See* WEAPONS OF WAR II.A.7-8; IV.C.

SYCAMINE TREE [Gk. *sykáminos*] (Lk. 17:6); NEB MULBERRY-TREE. The black MULBERRY (*Morus nigra* L.), native to Persia and renowned for its luscious fruit. It is identical with the mulberry of 1 Macc. 6:34. The white mulberry (*M. alba* L.), whose leaves are fed to silkworms, has been introduced into Palestine only in modern times.

See *MPB* pp. 140f. R. K. H.

SYCAMORE; SYCAMORE TREE [Heb. *šiqmâ, šiqmâ'*; LXX incorrectly Gk. *sykáminos*–'mulberry' (1 K. 10:27; 1 Ch. 27:28; Isa. 9:10; Am. 7:14; etc.); NT Gk. *sykomoréa* (Lk. 19:4)]; AV usually SYCOMORE TREE; NEB also SYCOMORE-FIG. The sycamore-fig (*Ficus sycomorus* L.), a robust evergreen that grows to about 12 m. (40 ft.) high, with branches spreading in every direction. (The sycamore of the Bible is unrelated to trees of that name in the West.) *See ISBE*, II, Plate 10.

The sycamore fruit, though abundant and often used for food, is smaller than, and inferior in quality to, the common fig. Just before sycamore-figs are gathered, the apex of the fruit must be incised to insure proper ripening. Amos was a "piercer" or "dresser" (so RSV, NEB) of sycamore-figs in this sense (Am. 7:14), not a "gatherer" (so AV) or "plucker."

The sycamore was valued in antiquity not only as a source of food but also as a source of a soft but durable lumber (cf. Isa. 9:10), which was used extensively in Egypt for utensils and mummy cases. The trees provided shade, and their many branches made them easy to climb (cf. Lk. 19:4).

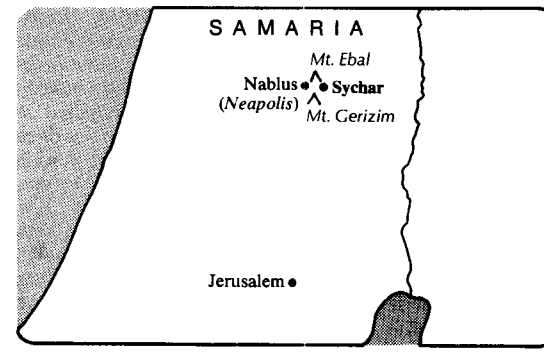
A sycamore tree (*Ficus Sycomorus*) in central Israel (W. Braun)

So valuable were the sycamore trees that David appointed a special overseer for them as for the olives (1 Ch. 27:18). The destruction of Egyptian sycamores by frost was a calamity (Ps. 78:47).

See *MPB*, pp. 106-108. R. K. H.

SYCHAR si'kär [Gk. *Sychar*] (Jn. 4:5). A village of Samaria where JACOB'S WELL was located, "near the field that Jacob gave to his son Joseph" (Jn. 4:5f.). This "field" is apparently the one at Shechem referred to in Gen. 33:18f. and Josh. 24:32, called a "mountain slope" (Heb. *šeḵem*) in Gen. 48:22. Much discussion has focused on the question of whether Sychar was the same place as SHECHEM or a different site.

Before 1913 many scholars followed Jerome in identifying Nâblus (Neapolis) as the site of Shechem and also of Sychar. But excavations at Tell Balâṭah, located about 2.4 km. (1.5 mi.) SE of Nâblus at the foot of Mt. Gerizim, have demonstrated that this tell is the site of ancient Shechem. Tell Balâṭah, therefore, is one of the sites suggested for Sychar. The other is Tell 'Askar, located NE of Tell Balâṭah and about 1 km. (0.6 mi.) N of Jacob's well on the eastern slope of Mt. Ebal. Joseph's tomb is located between Tell Balâṭah and 'Askar, and Jacob's well is about 0.8 km. (0.5 mi.) from Tell Balâṭah and about 1.2 km. (0.7 mi.) from 'Askar.

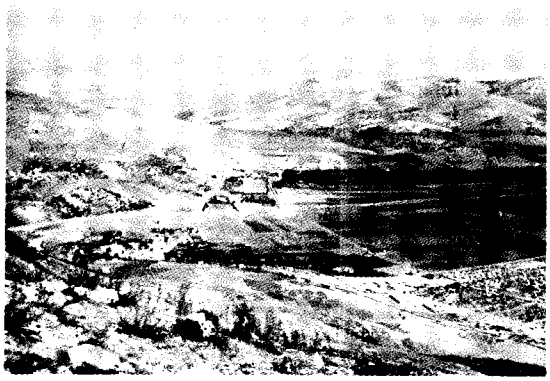


In A.D. 333 the Bordeaux Pilgrim located Sichar and Sichem 1 Rom. mi. apart. Likewise, Eusebius (d. *ca.* 339) in the *Onomasticon* located Shechem E of Neapolis. When Jerome (d. *ca.* 420) translated and edited Eusebius's work, he did not change this. In *Ep.* 108.13, however, Jerome equated Neapolis with *Sichem* and stated that *Sichar* was a misreading of *Sichem*. He accepted the Syriac version, which reads *Sychem* instead of *Sychar*.

Those who distinguish Sychar from Shechem generally support 'Askar as the site of Sychar. G. Smith pointed out that the *Samaritan Chronicle* (14th cent. A.D. or earlier) referred to a town "apparently near Shechem, spelt Ischar" (*HGHL*, p. 370). He argued that when Ischar was translated into Arabic it became 'Askar. 'Askar would fit with Eusebius's statement that Sychar is E of Neapolis. In addition, the Madeba Map (6th cent. A.D.) placed Sychar at the location of 'Askar with the note, "Sychar which is now Sychora."

The accuracy of the Madeba Map is questionable, however. Whereas Eusebius did not separate Jacob's well from Sychar, the map followed a later tradition that separated them. Moreover, 'Askar has a good supply of water from the spring of 'Askar, so that there would have been no need for an 'Askar resident such as the Samaritan woman to go to Jacob's well for water.

G. E. Wright believed that Jerome was correct in equating Sychar and Shechem. He too saw Sychar as a very



'Askar (from Mt. Gerizim), a possible site of ancient Sychar (W. S. LaSor)

ancient textual corruption of *Sychem* (Shechem). Although Shechem did not exist as a city during the time of Jesus, most likely a village always existed where the village of Balâṭah now stands — next to Jacob's well. The people of this village presently care for the Moslem shrine that houses Joseph's tomb. Thus, Sychar may have been a small village near or on Tell Balâṭah. This would account for its confusion with Shechem, which ceased to exist as a city *ca.* 100 B.C.

Thus the precise location of Sychar remains debatable. It was probably located at Tell Balâṭah (Shechem), 'Askar, or the modern village of Balâṭah, all of which are near Jacob's well.

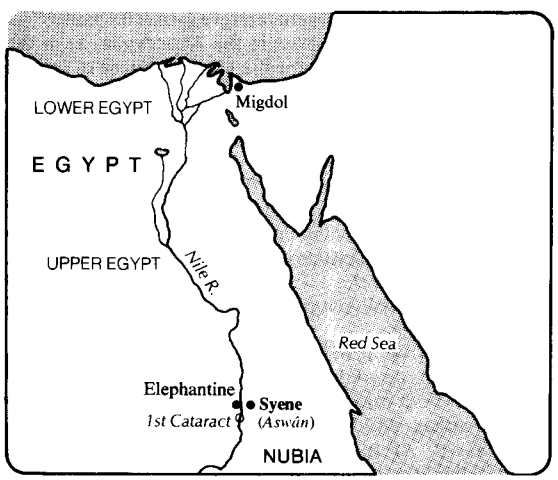
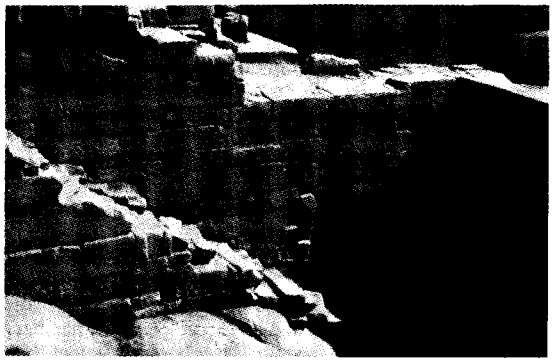
SYCHEM sī'kəm (Acts 7:16, AV). *See* SHECHEM.

SYCOMORE. *See* SYCAMORE.

SYENE sī-ē'nē [Heb. *sᵉwēnēh* (Ezk. 29:10; 30:6); var. *sînîm* (Isa. 49:12); Gk. *Suēnēs*]; AV SINIM (Isa. 49:12). An Egyptian town located on the east bank of the Nile River near the first cataract, marking the ancient natural border between Upper (southern) Egypt and Nubia. The Egyptian name is *Swn* (and the fuller spelling *Swnw*), which became in Coptic *Souēn* (also *Souan*). Etymologically it has been related to the noun *swenet,* "trade," and may be understood as signifying "market" or "trading place," reflecting the city's role in commercial exchange





The Nilometer at Elephantine used to measure the depth of the river (A. J. Couch)

between Egypt and the inner continent. The city is now known by its Arabic name, *Aswân.*

This region is characterized by sandstone cliffs, in contrast to the broad limestone-based floodplain of the northern Nile Valley, and is quite barren, with very little arable land along the river. The area around Syene has yielded a number of archeological discoveries, among the best known being the Nilometer on the island of Elephantine. Numerous rock-cut tombs in the cliffs on the opposite side of the river date to the Old and Middle Kingdoms. Two small Greco-Roman-period temples are among the few visible remains of ancient Syene, because the site has been continuously built upon. The modern city of Aswân is best known for the High Dam completed in 1968.

Because Syene was on the border between Egypt and Nubia, it played an important role both militarily and commercially, though in both aspects it was overshadowed by the adjacent island city of Elephantine, the capital of the first Upper Egyptian nome. In the late Predynastic or Early Dynastic Period, the political boundary of Egypt was established near Syene at the first cataract of the Nile. The geography of the area afforded Syene and Elephantine some protection from the attacks of Nubian chieftains from the south, since the Nile Valley is constricted in the region of the first cataract, where a series of rapids makes passage to the north difficult. During the Middle Kingdom, an extensive program of fortification was begun in the northern region E of the delta and in the south at Syene. The Egyptians referred to these two weak points in Egypt's natural defenses as "the gates of the barbarians," Syene being the "southern gate."

Both Elephantine and Syene were prosperous trading centers. During the periods of Egypt's wealth and power, goods of all kinds, including spices, ebony, and baboons, but particularly ivory, were imported into Egypt through these two cities. The antiquity of the two cities as commercial centers is suggested by their names: Elephantine, "ivory island," and Syene, "market."

Syene is perhaps best known for the beautiful red granite that was quarried from the surrounding region for royal building projects, now found in Egyptian ruins along the whole length of the land. Granite from Syene is known to have been used as early as the Old Kingdom, and in the period of Roman occupation was even exported to Rome. An unfinished obelisk and a colossal unfinished statue from the two major quarries at Syene have provided valuable clues for understanding Egyptian methods of cutting and removing huge blocks of hard stone.

In Isa. 49:12 Syene is mentioned in an oracle concerning the day of salvation. The name stands parallel to "the north" and "the west" and is used as a metaphor for "the

south." Perhaps an error is present in v. 12 of the MT, which reads *wᵉʾēlleh mēʾereṣ sînîm*. This phrase, translated by the AV as "and these from the land of Sinim," has been understood as a reference to the Chinese, or people from *Šina* at the foot of Hindu Kush. This problem, however, has been solved by one of the Dead Sea Scrolls (1QIsᵃ), which reads *swnyym* (unvocalized), from which we understand *sᵉwēnîyîm* or *sᵉwēnîm*, a plural gentilic. Thus we translate "those from the land of the Syenites," or more simply, "those from the land of Syene."

Syene occurs twice in Ezekiel's oracles against Egypt (Ezk. 29:10; 30:6). In both utterances the prophet spells Egypt's doom "from Migdol to Syene." Migdol, also known as Copt. *mechtōl* and as Egyp. *makthel*, has been identified with Tell el-Her on Egypt's northeastern border. "Migdol to Syene" designates Egypt in the same way that "Dan to Beer-sheba" does Israel (cf. Jgs. 20:1; 1 S. 3:20). Such a "top to bottom" description is inclusive, indicating the entire country. Ezekiel's message is clear: all of Egypt is under judgment; no part will escape.

Both Ezekiel passages in the MT have textual problems. Ezk. 30:6 reads *mimmigdōl sᵉwēnēh*, which the AV correctly translates as "from the tower of Syene." The LXX, however, reads *héōs Syēnēs*, suggesting that the MT should be revocalized to read *mimmigdōl sᵉwēnāh*, with *hê* locative, and translated "from Migdol to Syene" (so RSV, NEB). Some MSS suggest that the vowel of the *hê* locative was weakened, and should be read *sᵉwēneh* (cf. *nōḇeh*, 1 S. 21:2; 22:9; *ḏᵉḏāneh*, Ezk. 25:13). Syntactically, this emendation makes better sense of the preposition *min*, "from," and is commended by the general context of Ezk. 30, which indicates that all of Egypt will reap the fruit of God's judgment. In Ezk. 29:10 the MT reads *mimmigdōl sᵉwēnēh wᵉʿaḏ-gᵉḇûl kûš*, which the AV translates "from the tower of Syene even unto the border of Ethiopia." The LXX reads *apó Magdōlou kaí Syēnēs kaí héōs horíōn Aithiopōn*, suggesting that the MT should be emended to *ûsᵉwēneh* (with the addition of the conjunction *wāw*), and translated "from Migdol and Syene as far as the border of Ethiopia."

SYNAGOGUE sin'ə-gog [Gk. *synagōgḗ*–'assembly']. An assembly or congregation of Jews for the purpose of worship and study (Acts 13:43) or the building where such an assembly met (Lk. 7:5). In America, the term is generally not used for Reform congregations, which prefer the term "temple."

  C. Court of Law

I. Names.–A. Synagogue. Gk. *synagōgḗ* (derived from *sýn* + *ágō*, "to bring/come together, congregate") could be used of any assembly of persons, animals, or things (LSJ, pp. 1691f.; *TDNT*, VII, 799-801). In secular Greek it was generally not applied to the *place* or house of meeting. It was used in LXX to translate Heb. *ʿēḏâ*, "congregation," which could be used of animals (Ps. 68:30 [MT 31], RSV "herd"; Jgs. 14:8, "swarm") as well as angels (Ps. 82:1; RSV "the divine council"; NIV "the great assembly") and people (Ps. 7:7 [MT 8]). *ʿĒḏâ* usually refers to the congregation of Israel. *Synagōgḗ* is used sometimes to translate Heb. *qāhāl*, "assembly, convocation, congregation" (35 times according to *TDNT*, VII, 802), but *qāhāl* is more commonly translated by *ekklēsía*. In the OT, *synagōgḗ* principally refers to the whole congregation of Israel assembled for cultic purposes as a religious community or assembled for legal purposes as a nation (cf. *TDNT*, VII, 804). The shift in meaning to refer to a *local* congregation is found in the Apocrypha, where Judaism as a whole is described as *synagōgaí Israel* (Ps. Sol. 10:7) or *synagōgás hosíōn*, "assemblies of holy ones" (17:16), whereas the local congregation is called *hḗ synagōgḗ* (Sir. 4:7); but even in the Apocrypha, as in the OT, *synagōgḗ* is not used for the place or house of assembly.

In the NT *synagōgḗ* usually means the building (9 times in Matthew; 8 in Mark; 15 in Luke; 2 in John; 16 in Acts; likewise in Josephus *synagōgḗ* is used for the place of assembly, *Ant.* xix.6.3 [300]). The term may be used of a Christian assembly (Jas. 2:2). Epiphanius (*Haer.* 30:18) used the term of Christian congregations, as well as other assemblies. The Ebionites and Marcionites likewise used *synagōgḗ* for churches. But before long, *synagōgḗ* was reserved for Jewish congregations and *ekklēsía* for Christian congregations.

B. kᵉneseṯ *or* kᵉništâ. In Rabbinic writings, Heb. *kᵉneseṯ* (Mish. *Aboth* i.1) and Aram. *kᵉništâ* (*Gen. Rabbah* 6 on 1:17), both meaning "gathering," are used in preference to either *ʿēḏâ* or *qāhāl*. The building is either Heb. *bêṯ kᵉneseṯ*, Aram. *bêṯ kᵉništâ*, or simply *kᵉneseṯ* or *kᵉništâ*; the congregation itself can also be called by the

term including *bêṯ* (for references, cf. notes in *TDNT,* VII, 809). Heb. *bêṯ kᵉneseṯ* occurs throughout the Mishnah.

C. Other Names. 1. Place of Prayer. This term, though not referring to a synagogue, occurs as *bêṯ tᵉpillâ* in Isa. 56:7 and as *oikós proseuchḗs* in Mt. 21:13 and par. *Tópos proseuchḗs* appears in 1 Macc 3:46. The Greek term is shortened to *proseuchḗs* "[place of] prayer" in Acts 16:13, 16 (but cf. Bauer, rev., p. 713) and is used among Jews as a synonym for *synagōgḗ* (cf. refs. in LSJ, p. 1511). A modern synagogue is sometimes called *bêṯ [hat]tᵉpillâ,* "the house of prayer."

2. Holy Place. Gk. *hágios tópos* and Aram. *ʾᵃṯrâ kᵉništâ,* "holy place," have been found on inscriptions on ancient synagogues in Palestine. The term, of course, was not limited to synagogues (cf. 2 Macc. 1:29; Mt. 24:15; Acts 6:13).

3. House of Instruction. Heb. *bêṯ hammiḏrāš,* along with *bêṯ hakkᵉneseṯ,* is often used of modern synagogues. Part of the synagogue service, from antiquity, was an exposition (*miḏrāš*) of the Scripture portion that was read. Jesus followed this custom (cf. Lk. 4:16-22; Mt. 9:35). The term "school" was used at least as early as Sirach, cf. *en oikǭ paideías* (Sir. 51:23, apparently translating *bêṯ midrāš*; RSV "school"). Philo (*ca.* 20 B.C.-*ca.* A.D. 50) is apparently referring to synagogues when he says, "So each seventh day there stand open in every city thousands of schools of good sense. . . . But among the vast number of particular truths and principles there studied, there stand out . . . two main heads: one of duty to God as shewn by piety and holiness, one of duty to men as shewn by humanity and justice . . ." (*De specialibus legibus* ii.62f. [ch. 15], Loeb translation). The Yiddish term *shul,* "school," is often used of the synagogue by orthodox congregations.

II. History.–A. Origin. Although the synagogue is Judaism's most central and enduring instituion, its origins are shrouded in mystery. The synagogue is not mentioned in the Pentateuch. First-century literary sources (Philo, Josephus, NT) indicate that synagogues flourished in the Diaspora and in Galilee. Rabbinic sources connect the origin of the synagogue and many of its practices with Moses and Ezra (T. P. *Megillah* iv.1; Tg. Ps. Jon. to Ex. 18:20). Josephus follows the rabbinic tradition where he says, "He [Moses] appointed the Law to be the most excellent and necessary form of instruction, ordaining, not that it should be heard once for all or twice or on several occasions, but that every week men should desert their other occupations and assemble to listen to the Law and to obtain a thorough and accurate knowledge of it" (*CAp* ii.7 [175]). The word "synagogue," however, is not used, and assembling to listen to the Law does not specifically imply the existence of a synagogue. Acts 15:21 is sometimes taken to support the tradition, but a careful exegesis will not sustain this argument. Rabbinic tradition also attributes special innovations to Ezra and "the men of the Great Synagogue" (cf. *Lev. Rabbah* 2:11; *Cant. Rabbah* on 7:14; T.B. *Yoma* 69b).

Three different eras have been proposed by modern scholars for the origin of the synagogue: preexilic, exilic, and postexilic.

1. Preexilic. Preexilic origin is assumed by the rabbis, who nevertheless recognize some important innovations in the postexilic period as the result of Ezra's work and the "men of the Great Synagogue" (e.g., T.B. *Yoma* 69b). Some modern scholars connect the emergence of the synagogue with the Deuteronomic reforms (621 B.C.), which demolished sanctuaries across the land and created a new need for worship patterns away from Jerusalem. Some biblical references (e.g., *môᵃḏê-ʾēl,* "meeting places of God" [Ps. 74:8; AV "synagogues of God"; Aq. *synagōgḗ*; cf. BDB, p. 417, 3b], and *bêṯ hāʿām,* "the house of the people" [Jer. 39:8]) are considered cryptic references to the incipient institution. If we accept the development of the Israelite religion as presented in the OT without serious emendation, it should be obvious that some kind of assembly of the people was expected, and that the roots — and even the language — are present for the synagogue idea. Expressions such as "the congregation [*qāhāl*] of the people" (Ps. 107:32), "the council of the upright, the congregation [*ʿēḏâ*]" (111:1), and "the congregation of the pious [*qᵉhal ḥasîḏîm*]" (149:1) could easily be taken as applying to the synagogue.

2. Exilic. Most scholars support the contention that the synagogue originated in exile and in Babylonia. They surmise that it began as spontaneous gatherings of Jews for sabbaths and festivals, for communal worship and for mutual support. The synagogue owes its formation to these gatherings of the exiles.

Ezekiel provides a setting for the synagogue. Accordingly, the statement in Ezk. 11:16, "Thus says the Lord God: Though I have removed them far off among the nations, and though I scattered them among the countries, yet I have been a sanctuary to them for a while in the countries where they have gone," is understood in T.B. *Megillah* 29a, where *miqdāš mᵉʿaṭ* is taken to mean "little sanctuary" (RSV, "for a while"), to refer to the synagogue. The hand of God fell upon Ezekiel as he was with the elders of Judah in his house (Ezk. 8:1). On another occasion, the elders sat before him, when God rebuked them for inquiring of Him (14:1-5). A similar situation took place a third time (20:1-3). But these can hardly be understood to be synagogue meetings; rather the elders had come to inquire of Ezekiel the priest (1:3) the will of God. On the other hand, the scene in the opening chapter, where Ezekiel was "among the exiles by the river Chebar" (1:1), could be described as a synagogue, i.e., an assembly by a river (cf. Acts 16:13)). In this vein, reference has been made to Ps. 137:1 ("by the waters of Babylon") and to Dnl. 8:2 (Daniel was "at the river Ulai"); there is no reference to an assembly in the Daniel passage, and the waters of Babylon passage could simply refer in general to the location of the exiles. In Babylonia there was a tradition that the synagogue Shab we-Yatib in Nehardea had been established by the exiles who accompanied Jehoiakin (T. B. *Megillah* 29a; cf. *Encyclopaedia Judaica,* XV, 580).

3. Postexilic. Recently, growing attention has been given to a postexilic date for the synagogue as a Pharisaic parallel to temple worship (cf. J. Gutmann, pp. 38-40); see V below.

B. In the Time of the Second Temple. When the Jews returned from Exile, they proceeded to rebuild the temple. They may have needed encouragement to accomplish the task (cf. Hag. 2:1-9), but there is no suggestion that the synagogue had replaced the temple. In fact, there is no mention of a synagogue in Ezra, Nehemiah, or the postexilic Prophets. But when references to the synagogue did appear (certainly by the 1st cent. A.D.) it was already well established. Therefore, its roots must have gone back either to the Exile or to the beginning of the Second Temple period.

Sacrifices could not be offered on foreign soil, which was considered unclean (Am. 7:17), hence prayer became a substitute. The postexilic Prophets, Apocrypha, Pseudepigrapha, and Qumrân literature all testify to the rich development of prayer in the early Second Temple period. In fact, the rabbis came to believe that "prayer is greater than all the sacrifices" (*Tanhuma Wayyikra,* § 1, f. 31b; cf. C. G. Montefiore and H. Loewe, *Rabbinic An-*

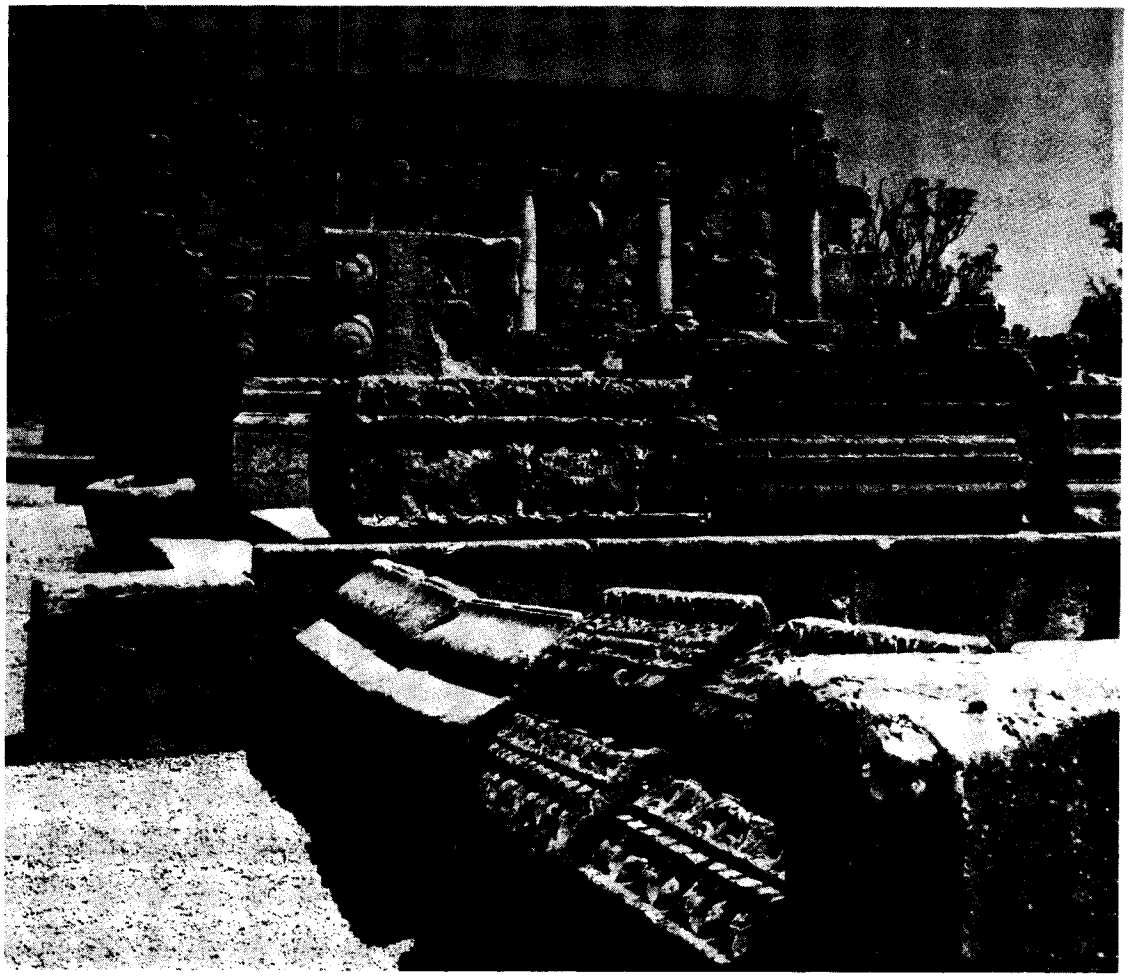
The synagogue at Masada, facing toward Jerusalem, was rebuilt by the rebel occupation in the 1st cent. A.D. (The Estate of Yigael Yadin)

thology (1974), p. 357). According to the Talmud, the Amidah, Kiddush, and Havdalah were composed by Ezra and the Men of the Great Synagogue (T.B. *Berakoth* 33a). It is reasonable to assume that a "house of prayer" was serving as a substitute for or in addition to the temple.

There is abundant literary evidence of the synagogue from the 1st cent. A.D. Philo says that there were many synagogues in Alexandria (*De legatione ad Gaium*, 132f.). A very large one was destroyed during the reign of Trajan (A.D. 98-117). Josephus mentions synagogues in Tiberias (*Vita* liv [280), Dora (*Ant.* xix.6.3 [305]), and Caesarea (*BJ* ii.14.4 [285]), and the NT adds Nazareth (Lk. 4:16) and Capernaum (Mk. 1:21) in Palestine and Damascus (Acts 9:2), Salamis (13:5), Pisidian Antioch (v. 14), Iconium (14:1), Thessalonica (17:1), Beroea (v. 10), Athens (v. 17), Corinth (18:4), and Ephesus (v. 19) in the Diaspora. The Talmud gives the number of synagogues in Jerusalem at the time of the destruction of the second temple at 480 (T.P. *Megillah* 73d) or 394 (*Ketuboth* 105a). It has been estimated that approximately four million Jews of the Diaspora had more than a thousand synagogues by the time the temple was destroyed in A.D. 70 (Birnbaum, *Jewish Concepts*, 81). By the 1st cent. A.D., the synagogue was already widely spread throughout the Diaspora, organized, and an important element in the Jewish community.

Synagogue buildings, like synagogue worship, took time to evolve into the standardized form that became normative. The process itself is not clearly recorded. The remains of a synagogue were found at Shedia, 26 km. (16 mi.) from Alexandria with a dedication to Ptolemy III Euergetes (246-221 B.C.) and his queen Berenice. From the same period, an inscription granted right of asylum to the synagogue (*Revue des études juives*, 45 [1902], 163f.; the reference to a synagogue is debated, cf. D. Gowan, *Bridge Between the Testaments* [1976], pp. 281f.). It is therefore not beyond credibility that a synagogue was founded at Ptolemais during the reign of Ptolemy IV (221-204 B.C.) as recorded in 3 Macc. 7:20. Archeological remains identified as synagogues have also been found at Delos (2nd cent. B.C.) and at Ostia (1st cent. A.D.). It may be that distinctive synagogue buildings in the Holy Land were not really common until after the destruction of the temple. Possibly assemblies for prayer and study convened in spacious private homes rather than in specially designated buildings. The earliest surviving synagogues in Palestine are the first-century structures in Masada, Herodion, Magdala, and Gamla. In both Masada and Herodion, structures originally built for other purposes were converted into synagogues by later occupants of the sites. Only the Theodotus inscription remains from an earlier period. The Greek stone inscription, found near Jerusalem and dated 1st cent. B.C. to the 1st cent. A.D., states, "Theodotus . . . son of the head of the synagogue [*archisynágogos*] grandson of the head of the synagogue built the synagogue for the reading of the law and teaching of the commandments . . . (Roth-Gerson, p. 76). Most ancient synagogue buildings in the Holy Land, of which archeology has identified more than a hundred, belong to the 3rd cent. and later. Some of the important ones are at Gush Halav, Hammath-Tiberias, and Capernaum.

C. In the Middle Ages. A detailed description of this period lies beyond the limits of this article. But it should be pointed out that the synagogue became a vital part of every Jewish community throughout the world. While holding to the basic forms of worship, each community



The ruins of the well-preserved Galilean synagogue at Capernaum (4th cent. A.D.) (W. Braun)

developed its individual characteristics — which becomes quite obvious to anyone visiting a variety of synagogues in the Meah Shearim district in Jerusalem on any Friday night. Two major groups with markedly different customs should be noted: the Sephardic, which spread when the Jews were driven out from Spain (1492) and Portugal (1496), and the Ashkenazic, developing in central and eastern Europe, resulting from several forced migrations (cf. A. L. Sachar, *History of the Jews* [5th ed. 1965], pp. 184-260; Donin, pp.192f.).

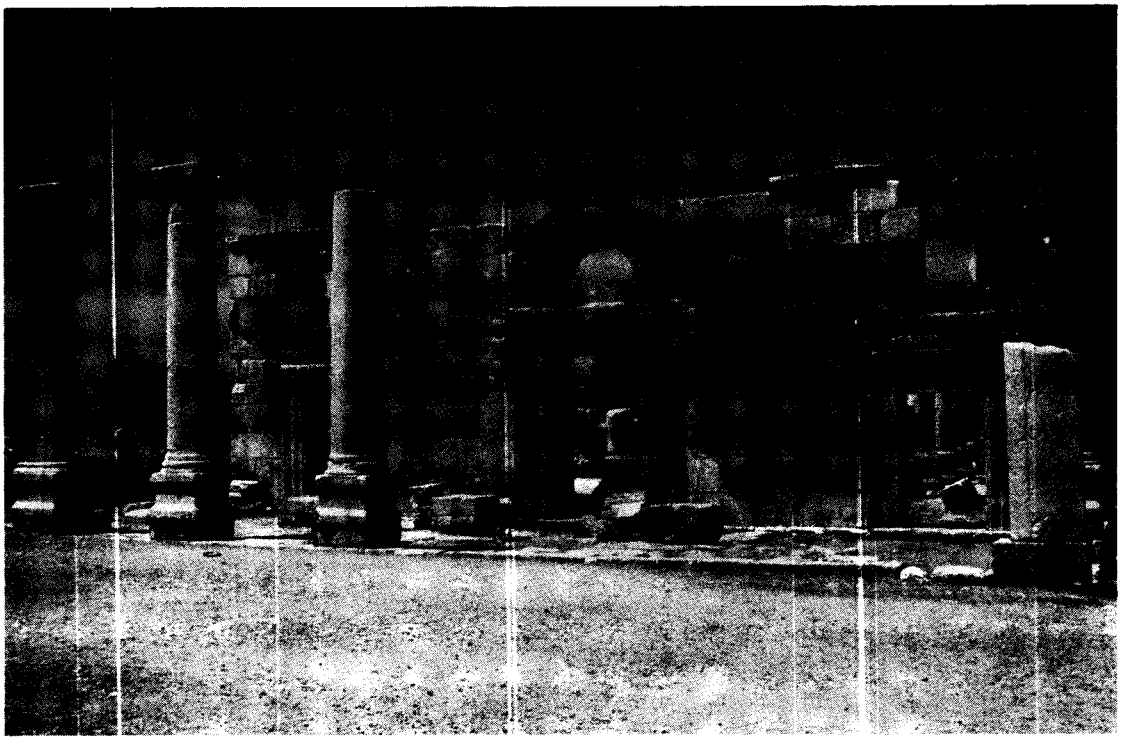
D. Modern Judaism. The rise of Hasidism in the 18th cent. had a profound effect on the synagogue. Synagogues generally became smaller and the service less formal, and fervor became dominant. A reaction in the 19th cent. resulted in the construction of larger buildings, in which the holy ark that housed the Torah scrolls was given a prominent place. Synagogues could be classified as "Orthodox," "Conservative," or "Reform," the last often called "temples." (Reform temples have marked architectural features, discussed below.) In all cases the synagogue was generally expanded to become a complex of buildings serving a variety of community services.

III. Structures.–A. General Features. Ancient synagogues display a variety of structure and stages of developments. An important common feature of ancient synagogues was orientation toward Jerusalem. The practice of praying in the direction of Jerusalem seems to be derived from 1 K. 8:44, 48 par. 2 Ch. 6:34, 38 (cf. Dnl. 6:10); later it became law (T.P. *Berakot* 4, 8b-c).

The earliest structures do not contain a bema, i.e., a special platform for the Torah scroll and readers (cf. III.B.2 below). This feature usually appears at the later strata of the building. For example, at Gush Halav, the third-century building did not have a bema, but was expanded in the 4th cent. to include one.

Archeologists identify three types of ancient synagogue buildings: (a) Galilean or basilical, oriented toward the short wall of the building; (b) broadhouse, oriented toward the long wall; (c) apsidal, characteristic of most of the later synagogues. Until recently it has been assumed that the development was from the first to the third. Excavations since 1967 attest, instead, to the simultaneity of some of these models (Meyers and Strange, p. 145; *IDB* Suppl., pp. 843f.).

Some synagogues had an upper gallery, others did not. The question whether women in the ancient period were separated in worship remains in dispute. Ancient synagogues had a series of stone benches along the walls. The Torah shrine (see III.C.1 below) was initially portable, becoming a part of the structure only at a later date when it was built in, in the direction of Jerusalem. The apsidal synagogues are the latest (5th-6th cents.) and most



The facade of the large synagogue at Kefr Bir'im in northern Galilee. The relief on the lintel once depicted winged victories or "Nike" that have been deliberately mutilated (3rd cent. A.D.) (J. Finegan)

elaborate, some with a spacious bema and platform large enough to accommodate the hazzan, translator, and elders.

Certain ancient synagogues, such as those in Dura-Europos (3rd cent.) and Beth-shean and Hammath-Tiberias (3rd-4th cents.), show highly developed artistic decorations, some of which are puzzling: in addition to images of persons in the frescoes of Dura-Europos, Greek symbols, such as helios, appear in elaborate floor mosaics which include signs of the zodiac (e.g., Hammath-Tiberias). These decorations conflict with rabbinic prohibitions of images (cf. Ex. 20:4; Dt. 5:8). They suggest either a period of more lenient interpretation of rabbinic injunctions, or a special understanding of floor decorations such as is found in Pseudo-Jonathan's comment on Lev. 26:1, which expresses special permission for floor designs: "A stone ornamented with pictures you shall not place in your hand to bow down to it. However, a stone on which figures and likenesses are carved you may put on the floors of your sanctuaries, but not to prostrate yourselves on it" (Meyers and Strange, p. 152).

B. Location. According to the Talmud, the synagogue was to be built on a high region and have windows (based on Dnl. 6:10, Tosephta *Megillah* [ed. Zunz] 4.227; T.B. *Shabbath* 11a); in practice it was not always feasible to locate on a height. Wherever possible, the synagogue was located near a river or a sea.

C. Interior. 1. Holy Ark. The sacred scrolls were housed in the ark, Heb. *'ārôn haqqōdeš*, "holy ark" — to call it simply *'ārôn* was sinful (T.B. *Shabbath* 32a) — or *tēḇâ*, a chest or cabinet which was often located in an alcove with a curtain (*parōḵeṯ*) to separate it from the rest of the synagogue. Originally it was a portable chest which could be carried into the open space in the town on the days of fasting (Mish. *Taanit* ii.1). In modern synagogues the *parōḵeṯ* is elaborately woven and decorated, and the holy ark is built into the structure and located at the end of the synagogue toward Jerusalem which the worshipers face during the service.

2. Bema or Platform. In the center of the synagogue or at one end was the bema (Heb. *bîmâ*, "stage, platform," < Gk. *bēma*) or almemar (< Arab. *al minbar*, "pulpit, platform"). On this were some or all of the following: a reading desk or table on which the scroll of the Torah or Haftarah was placed for reading the lessons; a chair or throne (Moses' seat, sometimes placed on a wall at a height for all to see), and chief seats for the persons participating (cf. Mt. 23:6; Tosephta *Megillah* [ed. Zunz] 4:21; note that Jesus sat down to teach, Lk. 4:20). Reference is sometimes made to Neh. 8:4 and 9:4; but the "wooden pulpit" of 8:4 is *migdal 'ēṣ*, "tower of wood," and the dignitaries of 9:4 stood on "the stairs of the Levites." In the modern Orthodox synagogues, the bema is still at the center, whereas in Conservative and Reform synagogues, the bema is typically at one end, often in the direction of Jerusalem. In Reform temples, the platform may extend across the entire front of the room, or there may be an organ and choir loft at one end.

3. Seats. In the most ancient excavated synagogues, low seats were located all around the walls, often as part of the structure, a practice which continues in oriental synagogues to this day. In others, chairs are placed around the central bema, while in still others, pews are arranged across the building, facing the ark and the bema. In Reform temples, pews are often rented.

4. Women's Section. The antiquity of the custom of separating the women from the men is a matter of debate among scholars. Several ancient synagogues reveal a balcony, which has been interpreted by some scholars as a special place for women. Others have no partition what-

ever; these may have had a lattice or screen to separate the two groups. It is also possible that women stood outside in some communities. The evidence has not survived, however. In modern Orthodox synagogues it is customary to separate men and women. Sometimes the women are placed in the balcony; sometimes they are separated by a screen. In Conservative and Reform synagogues men and women sit together and, especially in Reform congregations, participate equally in all aspects of worship.

5. Lamps. Certain lamps are generally features of the synagogue. The "eternal light" (Heb. *nēr tāmîḏ*, originally a temple feature) was a lamp which was never allowed to go out. The candelabra (*menōrâ*) had early become an important part of the synagogue and commonly appears in the relief decorations of ancient synagogues. In some modern synagogues it is located outside near the entrance, sometimes on a wall of the structure. Synagogues lighted by electric lights may have an electric timer to turn on the lights on Friday evening (*ereḇ šabbāṯ*; e.g., Heikal Shlomo in Jerusalem), when the Halakah forbids making a fire because the sabbath has begun.

IV. Officers of Ancient Synagogues.–Ancient synagogues did not have rabbis at their head, nor did participation in hierarchy and leadership depend on birth (such as the priestly line did). A mistaken idea sometimes found among Christians is that the rabbi was a priest: a priest had to be a descendant of Aaron, brother of Moses, of the tribe of Levi. (The name "Cohen," or some form of the word such as "Kahn," "Kahen," "Cohn," etc., indicates a descendant of the priestly line.) A rabbi could come from any segment of the community. Leadership rotated among influential and educated members in each community rather than being imposed by some overarching institution or system. In modern synagogues, communal influence and leadership are still great, but the rabbi (ordained man or woman appointed by the community in Conservative and Reform synagogues) is clearly the spiritual and practical head. Unlike ancient rabbis, modern Reform and Conservative rabbis receive a salary. Orthodox synagogues often continue the ancient tradition of having their rabbi earn his livelihood from some other occupation.

A. Head of the Synagogue. The synagogue was presided over by the head of the synagogue (*rō'š hakkᵉneseṯ*; Gk. *archisynágōgos* [Mk. 5:22], *árchōn tḗs synagōgḗs* [Lk. 8:41]; Mish. *Yoma* vii.1; *Sotah* vii.7f.). His duties included supervision of the services, maintaining order (Lk. 13:14), inviting a visitor to address the congregation (Acts 13:15), and handing the Scripture scroll from the hazzan to the one who was to read the lesson. The head of the synagogue ranked immediately below the scribes (T.B. *Pesahim* 49b; *Gittin* 60a). Recent inscriptional evidence indicates that in ancient Diaspora synagogues, women also were leaders (see Brooten, pp. 5-33).

B. Minister (Hazzan). The hazzan (or chazan, "attendant"; Heb. *ḥazzān*; Gk. *hypērétēs*, Lk. 4:20) was a paid employee who had charge of the synagogue, its contents, the copies of the Scriptures, and other appurtenances. In some cases he lived in the synagogue. He signaled the approach of sabbath from the roof of the synagogue by a threefold blast of the ram's horn (Tosephta *Sukkah* 4:11f.; T.B. *Shabbath* 35b), as well as the close of the sabbath. During the service, he took the sacred scroll from the ark and gave it to the reader; afterwards he returned it to the ark (Mish. *Sotah* vii.7f.; Lk. 4:20). He signaled the point at which the benediction was to be pronounced (*Siphre* Num. 39; T.B. *Sotah* 38a), and on fast days he gave the signal for blowing the trumpets (T.B. *Taanit* 16b; W. Bacher, "Synagogue," *HDB*, IV, 640f.). On occasion, when there were not enough readers, he read the lesson in part or entire, at which times another had to act as hazzan (Tosephta *Megillah* 4.227, 10). Sometimes he led in prayer (T.P. *Berakoth* 12b). Frequently, he had to serve as schoolmaster and also as interpreter (Mish. *Shabbath* i.3; cf. Moore, I, 317f.). He also served as an officer of the law court (Mish. *Makkoth* iii.12). His office was considered the lowest of the scribal offices. In the terminology of the modern synagogue, the hazzan is the cantor and also the *šᵉliaḥ ṣibbûr* who reads the Scripture. The person who fulfills the office previously called hazzan is now called the shamash (cf. Donin, pp. 195-198).

C. Others. The *elders* (Heb. *zᵉqēnîm*, Gk. *árchontes*, Lk. 7:3; Jn. 12:42; RSV "authorities") were the mainstays of the synagogue; from them the head of the synagogue was chosen. The *interpreter* (Heb. *metûrgᵉmān*) was responsible for interpreting the Scripture and the sermon, which meant not only translating it into the common language (if necessary), but expounding or explaining it (Mish. *Megillah* ii.3; cf. 1 Cor. 14:27f.). The *delegate* (Heb. *šᵉlîᵃḥ ṣibbûr*, "delegate of the community") recited the prayers aloud, standing in front of the holy ark to do so (Mish. *Berakoth* v.3f.; *Megillah* iv.3). (See discussion of modern terminology under IV.B above). *Men of leisure* (*baṭlānîm*) were used to form the required *minyan* (ten male adults) in communities where the pressures of business would otherwise make a daily service impossible (Mish. *Megillah* i.3).

V. Worship Service.–Worship in the synagogue comprised prayer and study. The focus on instruction is reflected in names for the synagogue: Ger. *Schule*, Yiddish *shul*. Any ten male adults constituted a sufficient congregation for worship. Any male could lead in prayer or read and translate Scripture (except for reading Esther, which was forbidden to minors). After the destruction of the temple, synagogue worship became a viable substitute for temple service, and was patterned accordingly. Temple sacrifices were offered in the morning, afternoon, and evening, hence synagogue worship convened at these times. On sabbath mornings the temple had an additional sacrifice, hence morning prayer in the synagogue had an

The Theodotus inscription from a second- or third-century synagogue. The translation reads in part: "Theodotus Vettanos, priest and synagogue leader, . . . built this synagogue for the purpose of the reading of the Law and for the instruction of the commandments of the Law" (translation from R. Mackowski, *Jerusalem* [1980], p. 26) (courtesy of the Israel Department of Antiquities and Museums)

additional sequence of prayers on the sabbath. Numerous details about synagogue worship appear in Mish. *Megillah* iv; many of these continue to this day. There are minor variations in the service, but in general the following outline applies.

A. Shema. The adult male Jew begins by putting on the prayer shawl (*ṭallîṭ*) with its fringes (*ṣîṣîṯ*) (T.B. *Menahot* 43b; *Nedarim* 25a; Nu. 15:38; Gk. *kráspeda,* Mt. 9:20; 23:5; Lk. 8:44), saying the proper prayers and meditations. Then the phylacteries (Aram. *tᵉpillîn*; Gk. *phylaktéria*, Mt. 23:5) are bound on the forehead and the left arm (Dt. 6:8). These are not worn on sabbaths and festivals, since sabbaths and festivals are in themselves signs of the covenant relationship. The head-phylactery contains four strips of parchment on which are written Ex. 13:1-10, 11-16; Dt. 6:4-9 and 11:13-21.

The Shema (Heb. *šᵉmaʿ*, "hear") consists of Dt. 6:4-9; 11:13-21; and Nu. 15:37-41 (Mish. *Berakoth* ii.2). However, at least twice each day, morning and evening (cf. Josephus *Ant.* iv.8.13 [212]), Jews proclaim simply the words, "Hear, O Israel, the Lord is our God, the Lord is One (*šᵉmaʿ yiśrāʾēl ʾᵃḏônāy ʾᵉlōhênû ʾᵃḏônāy ʾeḥāḏ*)," and many Jews recite these words additionally at other times. The Shema is preceded by the singing of Pss. 145-150 and may be preceded by recitation of the mourners' kaddish, a liturgical prayer recited by those in mourning.

B. Prayers Other Scriptures, especially Psalms, may be read. Then the Eighteen Benedictions (Heb. *šᵉmônēh ʿeśrêh*, T.B. *Berakoth* 28b) are recited (aloud, when a minyan is present) while the congregation stands, hence they are called the *ʿᵃmîḏâ*. The Eighteen Benedictions, also known as the Tefillah ("prayer," but in the Talmud, always the Eighteen Benedictions), are ascribed to the men of the Great Synagogue (T. B. *Megillah* 17b; T.P. *Berakoth* 4d). The order in which the Eighteen Benedictions are said was established by Rabban Gamaliel II (T.B. *Megillah* 17b; *Berakoth* 28b). A nineteenth, the birkat ha-minim ("blessing [= cursing] of the apostates," twelfth in the order designated in the Talmud), attributed to Samuel the Little, was added at the direction of Gamaliel, toward the close of the 1st cent. A.D. In its earliest form it may have read, "For apostates may there be no hope, and may the Nazarenes and the heretics suddenly perish" (Moore, I, 292 n. 8). The wording of this "blessing" changed several times, and debate continues about its object. In a modern form it reads, "For slanderers, let there be no hope. May all wickedness quickly perish. May all your enemies be cut off. May you speedily uproot the arrogant kingdom, and break it, crush it, and humble it speedily in our days. Blessed are you, O Lord, who breaks the enemies and humbles the arrogant" (S. Sandmel, *Judaism and Christian Beginnings* [1978], p. 149). Only the first three and the last three of the benedictions are recited on sabbaths and festivals, and the intervening thirteen are replaced by a single prayer which relates to the day and its observance.

After the Shemoneh Esreh follows the Tahanun ("petition"), which varies in form and length according to the day of the week. It is omitted on certain days (cf. Birnbaum, *Daily Prayer Book,* p. 104). Josephus noted, "At the sacrifices [in the temple] prayers for the common welfare come first, after them those for ourselves individually" (*CAp* ii.23 [196]). This order is followed in the "Lord's Prayer" (Mt. 6:10-13). Jewish prayers are almost always in the first person plural.

It is interesting that many of the prayers in the *Prayer Book* are in Aramaic, mixed with Hebrew. The rabbis believed that prayer should be in Hebrew. Thus Rab Judah: "Let a man never ask for what he needs in Aramaic," and R. Johanan: "Whoever asks for what he needs in the Aramaic language, the ministering angels do not ally themselves with Him, for the ministering angels do not understand the Aramaic language" (T.B. *Shabbath* 12b, *Sotah* 33a). R. Eliezer repudiated all fixed forms of prayer (Mish. *Berakoth* iv.4).

C. Scripture Readings. 1. Torah. The hazzan (IV.B) went to the holy ark, took out the Torah scroll, removed its cloth covering, opened it to the designated place, and put it on the table. A descendant of Aaron read first, then a Levite, and then five ordinary Israelites (T.B. *Gittin* 59b). Seven were to read on sabbath mornings; on Yom Kippur, six; on festival days, five; on the half-festival days of Passover and Sukkoth, four; and three on sabbath afternoons, Mondays, and Thursdays (cf. Mish. *Megillah* iv.1f.; Mondays and Thursdays were market days, when people came into the towns, hence were called *yᵉmê*

hakk^{e}ništâ ("synagogue days"). No one was to read less than three verses; nor was he to read more than one verse at a time to the interpreter (Mish. *Megillah* iv.4). Before the first reading and after the last the reader may offer a benediction. If only one person was able to read, he read the entire section (Tosephta *Megillah* iv.226). According to *Pesikta Rabbathi* 146, "When the Scriptures were read in Synagogue a translator stood beside the reader, and rendered the Hebrew into the vernacular. The reader was forbidden to take his eyes off the scroll — i.e., to improvise or trust to memory. . . . But the translator was forbidden to look into the scroll, since the Targum was oral."

The Torah was divided into a number of pericopes or readings (Heb. *pārāšâ*, pl. *pārāšîyôṯ*), arranged to take the reader consecutively through the Torah. A practical reason for this may have been the use of scrolls, which does not encourage the selection of random passages. The Babylonian custom was to read the Torah through in one year, the Torah being divided into fifty-four *pārāšîyôṯ*; the Palestinian custom was to read the Torah through in three (according to some, three-and-a-half) years, the passages variously counted as 153, 154, or 155 (T.B. *Megillah* 29a) or 175 (T.P. *Shabbath* xvi.1). The chapters and verses printed in Hebrew Bibles have no relationship to the pericopes, but were taken over from the Vulgate to facilitate references, particularly in a concordance. The readings are designated by the first word or words near the beginning of the pericope (e.g., the second *pārāšâ*, Gen. 12:1, is called *lēḵ l^{e}ḵâ*, "go") or by the general subject of the passage (e.g., the twenty-first *pārāšâ*, Ex. 30:11, is called *š^{e}qālîm*, "shekels," the ransom, v. 2). In printed Hebrew Bibles, the *pārāšîyôt* are indicated by three occurrences of the letter ס (transliterated *p*), written large, at the beginning of the pericope, and subdivisions are indicated by a smaller letter ס (*s*; a closed section) or ס (*p*; an open section). The modern custom is to read the Torah each year, reading two pericopes on certain sabbaths in order to complete the fifty-four *pārāšîyôt*. When festivals coincide with sabbath, the Scripture which is relevant to the festival is read instead of the portion for the week. Completion of reading through the Torah is marked by Simḥat Torah, the ninth day of Sukkoth, a joyous celebration emphasizing the commencement of the reading of the Torah anew, more than the completion of the cycle of readings.

2. Haftarah. After the Torah scroll is returned to the holy ark, a portion of the Prophets is read; this is the Haftarah (Heb. *haṭṭārâ*, "conclusion," pl. *haṭṭārôṯ*). Usually the passage from the Prophets contains some reference to the events or occasion of the portion from the Torah. The reading of Haftaroth is traced to the time of persecution preceding the Hasmonean revolt, when reading the Torah was prohibited; Haftarah is mentioned in the Mishnah and the Tosephta (cf. Birnbaum, *Daily Prayer Book*, pp. 373f., note). When reading from the Prophets, the reader could read three verses to the interpreter, and he was permitted to leave out verses in the Prophets, but not in the Torah (Mish. *Megillah* iv.4). Jesus was probably reading a Haftarah in the synagogue at Nazareth (Lk. 4:16-20).

3. Festival Readings. On festival days (Passover, Weeks, Sukkoth, Atonement, Dedication, Purim), New Years, New Moons, fast days, and the four sabbaths preceding the month of Nisan, portions of the Torah relevant to the day were appointed (Mish. *Megillah* iii.4-6).

4. Psalms. Even a cursory perusal of the *Daily Prayer Book* will indicate to some degree the use of Psalms in Jewish worship. From the large number of manuscripts of Psalms found at Qumrân and from the number of quotations of Psalms found in the NT, it is clear that Psalms were used extensively toward the close of the Second Temple period (as they probably were throughout that period). Similarly, the Christian Church has made the Psalter an important part of worship.

D. Benediction. There are many benedictions said by Jews, as the *Prayer Book* records (besides the Shemoneh Esreh, nineteen blessings are given in Birnbaum, *Daily Prayer Book*, pp. 774-78, and other blessings are included throughout). But at the end of the synagogue service, the priestly benediction (Nu. 6:24-26) is pronounced, in Hebrew, in three sections, with the people saying "Amen" after each (Mish. *Sotah* vii.6). The divine name was pronounced "Adonai" ("Lord"; *Siphre* on Nu. par. 29 — but in the temple it was pronounced as written, probably *Yah^{a}wê*; Mish. *Sotah* vii.6; *Yoma* vi.2), the priests who were present lifting their hands as high as their shoulders (cf. 1 Tim. 2:8). Certain Galileans were not allowed to speak the blessing, because their pronounciations of the gutturals could be misleading (T.B. *Megillah* 24b; cf. Mk. 14:70).

E. Sermon. The synagogue service had a twofold purpose: to praise the Lord and to educate the people. From ancient times, a homily, an exposition of Scripture or sermon drawn from it, was part of the service. While it is not to be supposed that the sermon and Haggadah (*see* TALMUD VI) are synonymous terms, much can probably be learned of early Jewish homiletic from Haggadah. MIDRASH is the exposition of Scripture; it consists of Halakah, the study of the requirements of the Law, and Haggadah, illustrations of the teachings in stories, parables, and ethical sayings (cf. Neusner, pp. 177, 180). Haggadah ranges widely, using Scripture and observations from life. It seeks to make the scriptural text interesting and nonformal. To judge from the NT, the emphasis of the Jerusalem scholars was Halakic while the emphasis of Jesus was Haggadic (cf. Mt. 12:1-45).

The sermon could be given by anyone in the synagogue; usually it would be given only by one who had already devoted some study and thought to the text or by a visiting rabbi. There was no requirement that either the preacher or the interpreter be ordained, although later this was required for the preacher. The *Pesikta* gives illustrations of sermons. The sermon was part of the service in NT times, as evidenced by the message given by Jesus (Lk. 4:21-27) and by Paul's practice of commencing his work in each city by going to the synagogue (cf. Acts 13:15-41). Philo's description is helpful: "He [Moses] required them to assemble in the same place on these seventh days, and sitting together in a respectful and orderly manner hear the laws read so that none should be ignorant of them. . . . But some priest who is present or one of the elders reads the holy laws to them and expounds them point by point till about the late afternoon. . . . And so they do not resort to persons learned in the law with questions as to what they should do or not do, nor yet by keeping independent transgress in ignorance of the law, but any one of them whom you attack with inquiries about their ancestral institutions can answer you readily and easily. The husband seems competent to transmit knowledge of the laws to his wife, the father to his children, the master to his slaves" (*Apologia pro Iudaeis* vii.12-14, Loeb translation).

In a sense, the interpretation was a commentary on the scriptural passage. The *m^{e}ṯûrg^{e}mān* was to interpret the passage, verse by verse into the language of the people (Aramaic in the East, Greek in Alexandria and the West). This interpretation consisted of *p^{e}šaṭ*, "translation, the plain sense" (T.B. *Erubin* 23b), and *d^{e}raš*, "exegesis,

expansion to situations other than the original." As every translator knows, a strictly literal translation often becomes meaningless, whereas a loose paraphrase may become fanciful. In dealing with the word of God, the Jewish translator sought to be faithful to the original meaning while at the same time making it applicable to current needs. The task is always difficult. Rabbi Judah ben Ilai said, "He who translates a verse literally is a liar, and he who adds to it is a blasphemer" (Tosephta *Megillah* iv.41; T.B. *Kiddushin* 49a). *See* TARGUM.

VI. Other Uses of the Synagogue.–A. School. The date of the establishment of the school as an institution among Jews is a disputed point. Some place it in the 3rd cent. B.C. (cf. Moore, I, 312). Jose ben Joezer (*ca.* 200-162 B.C.) said, "Let thy house be a regular meeting place [Heb. *bêṯ wa'aḏ*] for learned men" (Mish. *Aboth* i.4); the term *bêṯ wa'aḏ* was later replaced by the term *bêṯ hammiḏrāš*, found (in Greek translation) as early as Jesus ben Sirach (Sir. 51:23; *ca.* 180 B.C.). But the office of scribe is traced back to Ezra (Ezr. 7:6), who "set his heart to study the Torah . . . and to teach in Israel" (v. 10).

But in some ways the discussion is academic: teaching the Law to children was part of Israelite religion from the time of Moses (Dt. 6:7). The first school was the home. The first textbook was the Hebrew Bible. When a father took his son to the synagogue — whatever date we put on its beginning — it is certain that the teaching of the son was part of the religious experience. At some date, the synagogue began to be used as a school for training young boys, and in many cases the teacher was the hazzan. At some date, a separate part of the synagogue or an adjoining building became the house of study (*bêṯ hammiḏrāš*), and the learned scribe or rabbi taught young disciples, some of whom in turn became rabbis (teachers). According to a statement in the Talmud (patently hyperbolical), "There were 400 synagogues in Bethar [the capital of Judea in the time of Bar Cochba], and in each of these there were 400 teachers, each with 400 children under his instruction" (T.B. *Gittin* 58a).

B. Community Center. The rule forbidding eating in synagogues (T.B. *Megillah* 28a) presumes that synagogues had been used as social gathering-places. Mention of meals is found in several references (*Gen. Rabbah* 65; T. P. *Berakoth* 11c), and in Babylonia travelers had lodging and sabbath meals in the synagogue (T.B. *Pesahim* 101a). Dining halls are mentioned in the inscriptions of some ancient synagogues (cf. Levine, ed., p. 3). Under certain circumstances, the stranger and the poor could be fed there (*Pesikta* 101a). Mourning for a man of standing in the community was held in the synagogue (Tosephta *Megillah* ii.225.2), and even for the daughter-in-law of a Babylonian Amora (T.B. *Megillah* 28b; cf. *HDB*, IV, 642b). As a community center, the synagogue also served for the collecting, depositing, and dispersing of money, usually for the purpose of charity. It frequently served as a residence for synagogue officials such as the hazzan.

To Christians, who sometimes think of church as a once-a-week event, it may come as a new idea that the synagogue was an everyday event. Philo, e.g., lists ten feasts recorded in the law. "The first, the mention of which may perhaps cause some surprise, is the feast of every day" (*De specialibus legibus* ii.41 [ch. 11], Loeb translation). (The *Prayer Book* has serices for every morning and evening, as well as special services for sabbaths and holy days.) In communities where numerous small synagogues may be found in proximity, men and their sons may be seen going to the house of prayer on any day. If a minyan is not present, a person or a few persons may have an informal or even personal service of prayers and Scripture reading.

When synagogues became larger, in antiquity and also in recent centuries, the scope of community activities was made broader. The huge synagogue at Sardis (4th-7th cents.) measuring approximately 20 by 80 m. (66 by 264 ft.) is an early example of this tendency. A modern synagogue or temple may consist of a complex of buildings that occupy a large part of a city block, with activities of all sorts taking place every day of the week.

C. Court of Law. Questions of law were decided in the synagogue (T.P. *Sanhedrin* 18a; T.B. *Yebamoth* 65a). A person could be banned (Heb. *hērem*, Gk. *anáthema, aposynágōgos*, T.B. *Moed Katan* 16a; Jn. 9:22; 12:42; 16:2; 1 Cor. 16:22), or temporarily excluded (Heb. *niddûy*, Gk. *aphorízein*, Mish. *Moed Katan* iii.1f.; Mish. *Taanith* ii.8; Lk. 6:22), or given a public reprimand (T.B. *Moed Katan* 16a; *Shabbath* 115a). The decision of *shammata*, handing over to desolation (Gk. *paradoúnai tṓ satanâ*, 1 Cor. 5:5), could be decreed (T.B. *Moed Katan* 17a; cf. Josephus *BJ* ii.8.8 [143-144]). Corporal punishment, consisting of forty stripes (Dt. 25:3; to prevent transgressing by miscounting, only thirty-nine were inflicted), could be administered for rebelling against rabbinic authorities (Mish. *Nazir* iv.3; 2 Cor. 11:25); it was administered by the hazzan (Mish. *Makkoth* iii.12; Tosephta *Makkoth* v.444:29, 31). The officers of a synagogue could serve as a local sanhedrin (Gk. *synédrion*, RSV "council," cf. Mt. 5:22; 10:17; Mk. 13:9) or *bêṯ dîn* ("house of judgment").

W. S. LASOR T. C. ESKENAZI

SYNAGOGUE, THE GREAT. In Jewish tradition, an assembly or council of learned men convened originally by Ezra, which played a significant role in the development of the OT canon and other features of Judaism.

The first mention of the "men of the Great Synagogue [Heb. *kᵉneseṯ haggᵉḏôlâ*]" is from the Mishnah (*ca.* A.D. 200). Mish. *Aboth* i.1 states, "Moses received the Law from Sinai and committed it to Joshua, and Joshua to the elders, and the elders to the Prophets; and the Prophets committed it to the men of the Great Synagogue." It is thought to have consisted originally of 120 men, although some rabbinic sources place the number at eighty-five. Ezra's leadership at the great assembly described in Neh. 8–10 became the basis in later rabbinic sources for regarding him as the founder and leader of the Great Synagogue. The translation of *kᵉneseṯ haggᵉḏôlâ* as "the Great

Synagogue" is unfortunate, since the term indicates a Great Assembly rather than connoting a building (see G. F. Moore). Furthermore, the reference to Gk. *megálē synagōgḗ* in 1 Macc. 14:28 signifies a great gathering rather than any kind of formal institution.

Talmudic sources ascribe to the men of the Great Synagogue four main accomplishments: (1) They collected certain canonical Scriptures, including Ezekiel, Daniel, Esther, and the twelve Minor Prophets (T.B. *Baba Bathra* 15a; a later comm. on the Mishnah also mentions Proverbs, Song of Solomon, and Ecclesiastes). (2) They instituted benedictions and prayers, including those for beginning and ending the sabbath (T.B. *Berakoth* 33a). (3) They classified Jewish learning into three main categories: Midrash, Halakah, and Haggadah (T.P. *Shekalim* 48c). (4) They established the festival of Purim (T.B. *Megillah* 2a).

The reliability of the traditions about the Great Synagogue has been a matter of considerable scholarly debate. On one extreme are those who have linked the Great Synagogue with the official Jewish government under the high priest in Jerusalem. Others have argued that it was a late invention and never existed as a formal institution. Skepticism has focused largely on the fact that this body is not mentioned in the Bible, nor in the Apocrypha, Josephus, or Philo. Furthermore, the Talmudic sages show considerable confusion about the period from the return from exile until the conquest of Alexander the Great. Illustrative of this is the reference to Simeon the Just as "of the remnants of the Great Synagogue" (i.e., one of its last leaders; Mish. *Aboth* i.2); he has sometimes been identified with Simeon II, high priest *ca.* 200 B.C., although many scholars have identified him with Simeon I son of Onias, high priest *ca.* 300 B.C. (cf. T.B. *Yoma* 69b).

Although the historical evidence connecting Ezra with the institution of a formal assembly is tenuous at best, the tradition should not be totally dismissed. Most likely it is grounded in some historical memory that perhaps goes back to the great convocation of Neh. 8–10. It appears that between the time of Ezra (*ca.* 450 B.C.) and Simeon the Just, a period of at least a century and a half, a loosely formed council of religious leaders (probably scribes) gathered on certain occasions to give theological and legal direction to the postexilic Jewish community. The limited nature of the evidence makes it unwise to draw further conclusions.

SYNECDOCHE sə-nek'də-kē. An indirect mode of expression, often used in rhetoric, whereby the whole is put for the part, or the part for the whole. Typical examples of this figure of speech occurring in the Bible are "for they have come under the shelter of *my roof* [my house]" (Gen. 19:8), and "How beautiful upon the mountains are *the feet of him* [the messenger] who brings good tidings" (Isa. 52:7). C. N. JEFFORD

SYNOPSIS. This term, as applied to study of the Gospels, refers to works that juxtapose the texts of the Gospels in such a way that their interrelationships can be examined, with special reference to their parallelisms, similarities, and differences in respect to content, arrangement of data, and mode of expression. The term is frequently used in connection with the first three Gospels because of their shared view (synoptic) of words and events. Unlike a work such as Tatian's (*ca.* A.D. 175; *see* HARMONY OF THE GOSPELS, a concept borrowed from music by A. Osiander [1537] to highlight his exhibition of agreements among the four Evangelists), which conflates the four Gospels, most synopses preserve the integrity of each Gospel. The earliest example of this approach is the work of Ammonius of Alexandria. Eusebius then developed an ingenious system for noting and cross-referencing narrative units in the four Gospels (cf. F. Danker, pp. 38-42). Notable among the many harmonies that were produced before the 18th cent. is the *Harmonia evangelica* by J. Le Clerc (1699), whose general order is followed by E. Robinson, *Harmony of the Gospels in Greek* (1834).

The first modern work is that of J. Griesbach, whose *Synopsis evangeliorum* (1776) features Matthew, Mark, and Luke. W. de Wette and F. Lücke (*Synopsis evangeliorum* [1818]) endeavored to achieve greater clarity in presenting the sequence of each of the first three Gospels. The first to display the material common to the three Evangelists ("triple tradition") in the order presented by Mark is W. Rushbrooke, *Synopticon* (1880). A. Huck's *Synopse der drei ersten Evangelien* (1892) exhibits Rushbrooke's emphasis on Mark, but the 3rd edition (1906) presents the Gospel texts in parallel columns without reference to assumed priority; H. Lietzmann and H. Opitz revised the work in 1936; and H. Greeven's "fundamentally revised" 13th edition (1981) incorporates the Johannine parallels. A. Wright, *Synopsis of the Gospels in Greek* (1896), assumed an oral hypothesis and analyzed the Gospel tradition into five "primitive sources": Mark, logia of Jesus, special Luke, fragments, and Infancy narratives. Through typographical arrangement in *Harmony of the Synoptic Gospels in Greek* (1920), E. Burton and E. Goodspeed focused attention on details of diction and phraseology and spurred consideration of the special character of Synoptic textual criticism. A systematic effort to apply quantitative methodology to Synoptic study marks B. de Solages's *Synopse Grecque des Évangiles* (1959). With K. Junack assisting him, K. Aland produced *Synopsis Quattuor Evangeliorum* (1964), which exhibited parallels from apocryphal and patristic texts; the work has gone through numerous editions, including especially the 9th (1976), which is adapted to the 26th edition of the Nestle-Aland Greek NT. In reaction to what he considered a bias in the direction of priority for Mark, B. Orchard based his *Synopsis of the Four Gospels, in Greek* (1983) on the two-Gospel hypothesis.

Synopses in English include W. Stevens and E. Burton, *Harmony of the Gospels for Historical Study* (1892; the rev. edition of this work, by Burton and Goodspeed, underlies the arrangement of their Greek text [1920] cited above); H. Sharman, *Records of the Life of Jesus* (1917); and H. Throckmorton, *Gospel Parallels: A Synopsis of the First Three Gospels* (3rd rev. ed. 1967), which is modeled after Huck-Lietzmann, but based on the RSV. H. Sparks supplemented *Synopsis of the Gospels: The Synoptic Gospels with the Johannine Parallels* (1964) with a companion volume, *The Gospel According to St. John with the Synoptic Parallels* (1974), both based on the RV. In R. Swanson's *Horizontal Line Synopsis* (1975), which

departs from the columnar arrangement, students can see at a glance the precise points of similarity or dissimilarity in the accounts. The RSV text of each Gospel is presented in sequence, with the other Gospels arranged in relation to it. The pilot volume of a Greek edition based on the same principles appeared in 1982 (Matthew). Orchard's English language edition (1982) of his synopsis in Greek contains the translation of his own reconstructed text. P. Benoit and M. Boismard include noncanonical parallels in *Synopse des quatre évangiles en Français avec parallèles des apocryphes et des pères* (I, *Textes*, 1965; II, *Commentaire*, 1972), which is drawn largely from the text of *La Bible de Jérusalem* (JB). R. Funk's *New Gospel Parallels*, I, *The Synoptic Gospels* (1985) was designed to assist in narrative analysis of the Gospels by featuring paradigmatic and syntagmatic dimensions. Analogous to synopses of the Gospels is *Pauline Parallels* (2nd ed. 1984), compiled by F. O. Francis and J. P. Sampley with a view to displaying similarity of letter structure, form, and theme or image within the Pauline corpus.

SYNOPTIC PROBLEM. *See* GOSPELS, SYNOPTIC II.

SYNTYCHE sin'ti-kē [Gk. *Syntychē*–'fortunate'] (Phil. 4:2). A Christian woman, possibly a deaconess, in the church of Philippi. Paul entreated her and another prominent woman in the Philippian church, EUODIA, to reach an agreement over some matter that they had been discussing. The nature of their disagreement is not known, but there is no reason to suppose it was a "quarrel." Considering the place that these two women seem to have had in the Philippian congregation, they may have disagreed over some practical or theological issue affecting the church. That two women were prominent in the Philippian church is not surprising, since according to Acts 16 the gospel was first preached in Philippi to women gathered in a "place of prayer" (probably a synagogue, v. 13), and evidently the first converts gathered in the house of Lydia (vv. 15, 40), who was one of those women converted. Paul also refers to Syntyche and Euodia as among those who "labored" (Gk. *synathléō*) with him in the gospel, which indicates that they worked as missionaries with Paul while he was in Philippi and probably also in other areas.

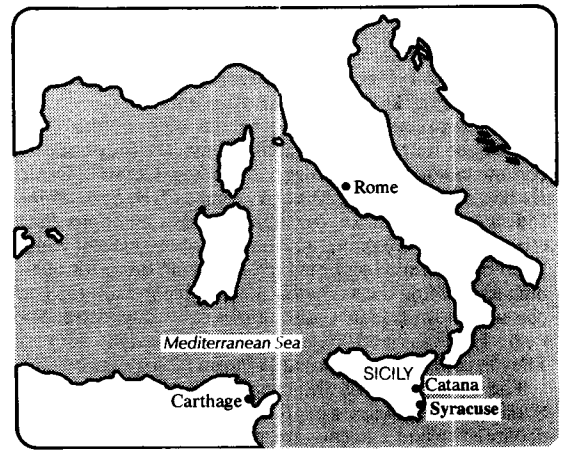
SYRACUSE sēr'ə-kūs [Gk. *Syrakousai*; Lat. *Syracusae*; Italian *Siracusa*]. A city on the east coast of Sicily, about midway between Catana and the southeastern extremity of the island; Paul stopped there three days on his voyage from Malta to Rome (Acts 28:12).

Syracuse was the most brilliant Greek colony in the western Mediterranean area. The original Corinthian colony founded in 734 B.C. (Thucydides vi.3) was confined to the small island Ortygia, which separates the great harbor from the sea. Later the city spread over the promontory lying N of Ortygia and the harbor.

Syracuse assumed a preeminent position in the affairs of Sicily under the rule of the tyrants Gelon (485-478 B.C.; cf. Herodotus vii.154f.) and Hieron (478-467). It flourished greatly after the establishment of popular government in 466 (Diodorus xi.668-672). The Syracusans successfully withstood the famous siege by the Athenians in 414, the narrative of which is the most thrilling part of Thucydides's history (vi–vii).



Dionysus the Elder took advantage of the fear inspired by the Carthaginians to elevate himself to despotic power in 405; he reigned for thirty-eight years and was succeeded by his son of the same name. Although democratic government was restored by Timoleon after civil dissensions in 344 (Plutarch *Timoleon*), it was not of long duration.

The most famous later ruler was the wise Hieron II (275-216), a steady ally of the Romans. But his grandson and successor Hieronymos switched allegiance to Carthage, an act that led to the celebrated siege of the city by the Romans under Marcellus and its fall in 212 (Livy xxiv.21-33). Henceforth Syracuse was the capital of the Roman province of Sicily. Cicero called it "the greatest of Greek cities and the most beautiful of all cities" (Cicero *In Verrem* iv.52).

The extant Greek ruins of Syracuse include the temple of Apollo (*ca.* 500 B.C.), the temple of Athena (*ca.* 470 B.C.) in which a Christian cathedral was built *ca.* A.D. 640, a theater, the foundation of Hieron II's great altar, and parts of a large fortress of Dionysus. There are also extensive Roman remains: private houses, an amphitheater built probably by Augustus, and Christian catacombs.

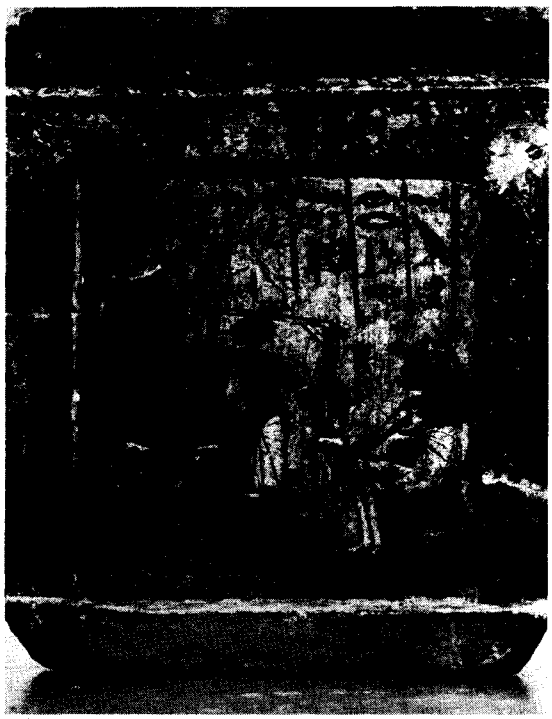
I. Definition.–In this article, "Syria" refers in general to the region N and NE of Palestine to the Euphrates and extending into the land between the Euphrates and Habor (Khābûr) rivers ("Aram-naharaim"). Since only a loose federation of tribes existed in biblical times, there were no exact boundaries. The term "Syria" as used here is not to be confused with the modern Republic of Syria, and has no intended political implications. The term "Arameans," which is to be preferred to "Syrians," refers to the peoples who occupied all or portions of that region in antiquity, who are mentioned at various points in the biblical narratives as well as in other ancient Near Eastern literature, down to the end of the biblical period.

II. Names.–*A. Sutû.* The term *Sutû(m)* or *Sutiû(m)*) occurs in cuneiform records over a considerable period of time. Sargon I mentions "the Sutû, desert folk," who had seized lands along the Euphrates (*ARAB*, I, § 68). The Mari Letters describe the *Sutûm* or *Sutêm* (*su-te-em* and *su-di-e-em*) as nomads spread along the Euphrates from Terqa to Yabliqa (cf. *ARM*, XV, 133). Esarhaddon (680-669 B.C.) referred to the "Suti-people" in connection with his campaign against the Arabs and Egyptians (*ANET*, p. 293). In the Amarna Letters, Sutû are nomadic tribesmen in Egyptian service (Am.Tab. 297:16). These are possibly the same as the *sṯtyw* of Egyptian documents from early dynastic times. The repeated references of Sargon II (722-705 B.C.) of Assyria to the Sutû and the problems he had with them (cf. *ARAB*, II, §§ 31-39, *passim*) coincide well with the activity of the Arameans in the 8th century.

B. Aḫlamê. Like the term "Sutû," the term "Aḫlamê" ("Akhlame") was used over a considerable period of time. Although it has been asserted that the word occurs from the mid-3rd millennium, the earliest certain references are in the Amarna Letters (*aḫ-la-ma-u*, Am.Tab. 200:10; *aḫ-la-ma-i*, Am.Tab. 200:8), a broken text that offers no details, and in the records of Adadnirari I (1307-1275 B.C.), who refers to "the hordes of the Ahlami and Suti, the Iauri and their lands, who enlarged boundary and frontier" (*ARAB*, I, § 73). Shalmaneser I (1274-1245 B.C.) told of his conquest of "Shattuara, king of Hani[galbat], the army of Hittites and Ahlami with him" (*ARAB*, I, § 116). But it was Tiglath-pileser I (1115-1077 B.C.) who identified the Aḫlamai with the Arameans (*ARAB*, I, § 239). He further recorded, "Twenty-eight times (I fought) the Ahlamu peoples," stating that he defeated them from Tadmar of Amurru, Anat of Suḫu, as far as Rapiqu of Kar-Duniash (Babylonia) (*ANET*, p. 275). As late as Sennacherib (705-681 B.C.) we find a reference to the Aḫlamû and the Sutû (*ARAB*, II, § 325).



A Syrian warrior and his Egyptian wife sitting on stools; he is sipping a drink through a reed straw. Painted limestone from Tell el-Amarna, 1380-1362 B.C. (Staatliche Museen zu Berlin, DDR, Ägyptisches Museum 14 122)

C. Aram, Arameans. Aram is listed as the fifth son of Shem and the father (or progenitor) of Uz, Hul, Gether, and Mash (Gen. 10:22f.). English versions often use the words "Syria" and "Syrians" to translate Heb. *ʾărām*. The Arameans appear first in extrabiblical records in the annals of Tiglath-pileser I. It is possible to translate *bn ʾrmy* as "son of the Aramean"; if so, the word occurs in Ugaritic (cf. *UT*, p. 366, no. 362, text 321:III:22).

D. Syria, Syrians. The word *su-rí-a* occurs in an Ebla tablet (no. 33 reverse, col. 5, line 9; cf. G. Pettinato, *Testi amministrativi della biblioteca L.2769* [1980], p. 226) containing a list of materials consigned to certain persons and places. Since the determinative ^{ki}, regularly used in this document to indicate a place name, does not occur after this word, it is not at all certain that the reference is to Syria. The word *su-úr-ri* occurs at Mari (*ARM*, I, 39.11) in a passage reading "his tell, *surri*, is lofty, his wall is great." The editor has taken the word as haplography for *<as>surri*, "assuredly." The location was in Allatru (tablet 39, lines 5, 7), which was ESE of Harran (*ARM*, XV, 120). According to P. K. Hitti (p. 58), a northern Euphrates region was known to the Babylonians as SU.RI, and he calls attention to the term ^{mat}*su-ri* in the Amarna Letters (Am.Tab. 108:17, usually emended to read ^{mat}*su-<ba>-ri* to conform to Am.Tab. 109:40).

Herodotus (5th cent. B.C.) used the Greek word *Syria* to include Ascalon and Phoenicia (i.105), and referred to "the Palestine part of Syria" (ii.106). Discussing the prov-

inces established by Darius, he mentioned a location "on the Cilician and Syrian border" (iii.91). Herodotus appears to have been responsible for deriving "Syrians" from "Assyrians" (vii.63), an etymology challenged by modern scholars (cf. Hitti, p. 58; Gk. *Syrioi* appears in Nu. 24:22 LXX B* to translate Heb. *'aššûr*).

E. Aram-naharaim, Naharin. In the account of seeking a wife for Isaac (Gen. 24), Abraham sent his servant to Aram-naharaim, usually translated "Mesopotamia" (but NIV "Aram Naharaim" [24:10]). The literal meaning is "Aram of two rivers," and has often been taken to refer to the Tigris and Euphrates, hence Mesopotamia. More accurately it refers to the triangular area between the great curve of the Euphrates and the Khābûr (Habor) rivers. Later this was the land of the Mitanni, called "Naharin" by the Egyptians (A. Gardiner, *Egypt of the Pharaohs* [1962], pp. 178, 194; *CAH*, II/2 [3rd ed. 1975], 8). The well-watered valleys of NE Syria and the coastal region form part of the Fertile Crescent.

F. Amurrû. The Akkadian word *amurrû*, "western," was possibly derived from Sum. MAR.TU, and was used from Old Akkadian on for the west and the people of the west (*CAD*, I/2, 92-94). Gudea of Lagash (*ca.* 2160 B.C.) brought marble from a mountain of Amurru (G. A. Barton, *Royal Inscriptions of Sumer and Akkad* [1929], pp. 184f.). Tiglath-pileser I referred to the Mediterranean as "the great sea of Amurru" (*ARAB*, I, § 271) and mentioned "Tadmar of Amurru" (§ 287). In another place he recorded, "Amurru in its entirety I conquered" and claimed to have received tribute from Gubal (Byblos), Sidon, and Arvad (§ 302). Amurru, then, stretched at least from Tadmor (Palmyra) to Sidon. As late as the time of Ashurbanipal (669-627 B.C.), we find references to the land or the kings of Amurru (II, § 870). Studies of the Amorite language are just beginning, at the time of this writing. The statement in the Table of Nations, that "Canaan became the father of . . . the Amorites" (Gen. 10:15f.), has not yet been fully understood (*see* AMORITES II.B). But it is certain that the Amorites were a West Semitic people, and it is probable that "Amurru" had approximately the same meaning as "Syria" (cf. *CAH*, I/2 (3rd ed. 1971), 562-65).

G. Chaldea, Chaldean. The Aramaic language of the Bible was sometimes called "Chaldee," as was the Syriac dialect. As a result, Chaldea and Chaldean are sometimes confused with Aramaic and Aramean. *See* CHALDEA.

III. Geography.—Strabo (1st cent. B.C.) described Syria as consisting of Cilicia, Mt. Amanus, Commagene, and the Seleucias of Syria; then Coelesyria, and Phoenicia on the coast and Judea in the interior (*Geog.* xvi.2.2). This approximates the region covered by this article, except that here Palestine is excluded, and the region to the Euphrates, and at certain periods portions lying beyond the Euphrates, are included. In modern terms, all of Lebanon and Syria, and portions of Turkey and Iraq are included.

This region can be divided into four zones: the coastal region, the steppe, the desert, and the river valleys of Aram-naharaim.

A. Coastal Region. Syria has a narrow coast, interrupted by several spurs of mountains (for details *see* PHOENICIA II). East of the coastal plain lies a range of mountains, broken by river valleys. In the north lie the Amanus Mountains and the plain of the Orontes, then Jebel Anṣariyya (en-Nuṣairiyah), also called Jebel Alawite, and then the Lebanon range. The mountains rise to elevations varying from 610 to 3088 m. (2000 to 10,131 ft.), the highest range being the Lebanon (*see* LEBANON).

The Great Rift, which extends from the KaraSu, a river valley E of the Amanus range in modern Turkey, to Victoria Falls at the southern border of Zambia (cf. *GB* [rev. ed. 1974], pp. 22-24), has left its mark in Syria, in the form of a valley between the coastal mountain range and the steppes (*see* PALESTINE IV.A.6). Most notable is the Beqa' Valley (*el-Biqâ'*) between the Lebanon and the Anti-Lebanon. The Orontes River (Nahr el-'Âṣi) rises N of Baalbek at an elevation of 1149 m. (3770 ft.), makes its way through marshes, then flows northward through the Ghâb to the plain of Antioch (the Amq or Amuq plain; Unqi of Assyrian records), where it is joined by the KaraSu; then it bends sharply to the west to flow into the Mediterranean (cf. L. Woolley, *A Forgotten Kingdom* [1953], pp. 17-23). It provides water for the cities in the valley, often by means of huge water-driven wheels and aqueducts. Not far south of the source of the Orontes the Leontes (Nahr Līṭânni) River arises. Flowing south in the Beqa', then turning west through a gorge, it receives the name Nahr el-Qāṣimiyeh, and empties into the Mediterranean between Sidon and Tyre. The coast has few natural harbors. The portion of Syria with the hollow between the mountain ranges was known as Coelesyria ("hollow Syria") (*Macmillan Bible Atlas* [rev. ed. 1977], maps 201, 203; Strabo *Geog.* xvi.2.21, Josephus *Ant.* i.11.5 [206]; xiii.13.2f. [355f.]). The term came to include more than the original hollow between the Lebanon ranges.

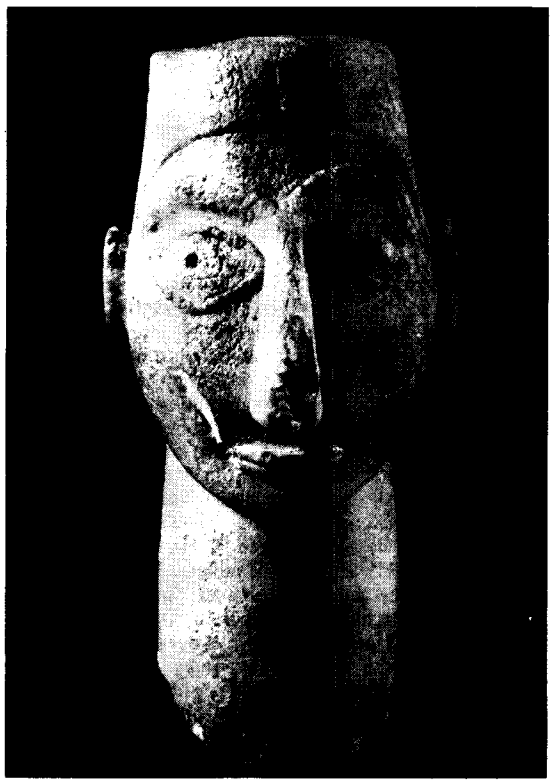
B. Steppe. Since the desert (see III.C below) is steppe rather than sand, the distinction is sometimes made between the cultivated steppe and the desert steppe. Of course, the cultivated steppe depends upon irrigation, and includes the wheat zone and principal agricultural regions. Cities grew up around these areas, including Aleppo, Ebla, Homs, Hamath, and Damascus. Similar sites along the upper Euphrates, the Balîkh, the Khābûr, and other tributaries to the Euphrates, were of importance in antiquity, and the region described as Aram-naharaim (see II.E. above) was the location of significant populations.

C. Desert. The Syrian Desert, an extension of the Arabian Desert (en-Nafud; *see* ARABIA III.A), is the region of nomads and seminomads. It lies at an elevation of 300 to 500 m. (985 to 1640 ft.) and includes several mountainous regions. Sheep can graze during winter, but the shepherds move them to less arid regions when summer comes. There were several oases, and the desert is crisscrossed by caravan routes, which were determined by the location of such water supplies. One of the best known of these oases was TADMOR (Palmyra).

D. River Valleys. The valleys of the coastal region have been considered (see III.A above). The most important inland river in Syria was the EUPHRATES, which rises in eastern Turkey, flows SW, then makes a great bend to flow SE, ultimately emptying into the Persian Gulf. We are concerned here only with the upper Euphrates valley and its tributaries.

Within the area formed by the upper Euphrates and the upper Tigris (which also rises in Turkey, not far from the source of the Euphrates) are numerous tributaries to the Euphrates, the most significant being the Balîkh and the Khābûr. This area is known as the Jezireh (Arab. *ǧazîrah*, "island, peninsula"). In this region were located such sites as Harran, Tell Halâf, Tell Chagar Bazar, and Tell Brâk. On the Euphrates were such important cities as Urshu, Carchemish, Tirqa, Mari, Tuttul (Hit), and Rapiqum.

E. Biota. 1. Flora. Lemon and orange trees grow along the coast; yew, lime, and fir trees grow on the mountain slopes, except where garigue and maquis form dense scrub areas. The cedars of Lebanon are famous from remote historical antiquity. Grains, grapevines, olives, apricots, oaks, and poplars are found in coastal and inland valleys. Forests are found particularly in Jebel Alawite.



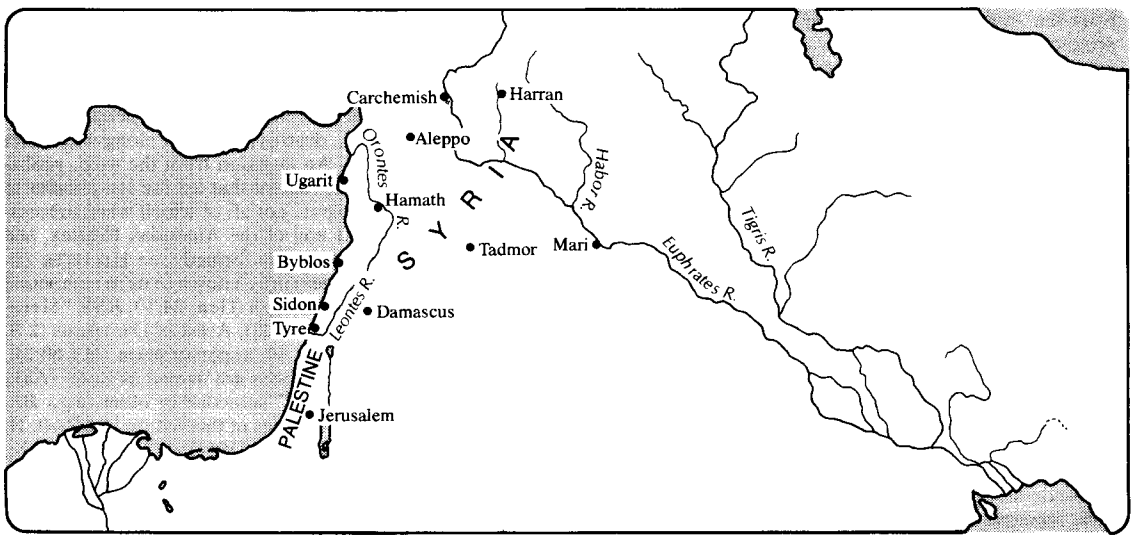
A white alabaster head found in the temple at Tell Brak in the Khābûr Valley (*ca.* 2800 B.C.) (courtesy of the Trustees of the British Museum)

Flowering plants cover the steppe at the end of the rainy season, but quickly die with the coming of summer, casting their seeds for the next rainy season. Many varieties of fruit orchards are found in cultivated areas around Damascus, Aleppo, and along the Orontes. A number of vegetables and fruit trees were introduced into Syria in the Hellenistic and Roman periods (Hitti, pp. 48-52).

2. *Fauna.* In antiquity there were wild animals such as are reported in Assyrian annals and portrayed on wall reliefs. Today there are wolves, hyenas, foxes, jackals, badgers, and wild boar, but larger game are not found. Deer, bears, and squirrels are also found, and desert animals such as the gazelle and jerboa, as well as vipers, lizards, and chameleons are common. The mule is the common beast of burden in the mountains, and the camel in the steppe. Evidence of domestication of the camel is found at Tell el-Ḥalaf (*ca.* 3000-2900 B.C.) and at Byblos (*ca.* 2500 B.C.; cf. Hitti, pp. 52f.). Eagles, kites, falcons, and buzzards are found in the mountains. Harmful insects include the mosquito, grasshopper, and locust.

F. Climate. The coastal region has typical Levantine climate (*see* PALESTINE V), i.e., a rainy winter and a dry summer. The general pattern is as follows: rainfall decreases as you move to the south or to the east. Summers heat up to 29° C (84° F) along the coast and up to 40° or even 46° C (104° to 115° F) in the desert. Winters cool down to 10° C (50° F) in the coastal regions, and down to 1° to 4° C (34° to 39° F) in the interior. Along the coast and in the mountains, rainfall averages 75 to 125 cm. (30 to 50 in.) per year; in the steppe it may be as little as 25 to 50 cm. (10 to 20 in.). Snow may fall in the mountains in winter, particularly in the interior, and frost is common in the interior.

IV. History.–A. Before 2200 B.C. 1. Neolithic Age. Our knowledge of the early history of Syria is limited to archeological discoveries, scant references in Sumerian and Babylonian documents, and the discoveries at Tell Mardikh (Ebla). Prior to the finds at Ebla, it was assumed that Syria was largely a place for illiterate nomads (cf. *CAH,* I/2 [3rd ed.], 319). This was not true of the outer parts of Syria, for archeology testifies that the Neolithic revolution either began in Syria or reached that region soon after. Agriculture, particularly the cultivation of barley and wheat, and the domestication of cattle developed probably *ca.* 8000 B.C. (the Natufian culture). Pre-pottery Neolithic remains have been found not only at Jericho, but also at Râs Shamrah (Ugarit, level V C) and Ramad (Level III), as well as at Jarmo in Iraq and Hacılar in southern Anatolia. A break in this period indicates the intrusion of newcomers, possibly from the north, who brought einkorn wheat with them. Pozzolanic ware, which is molded plaster rather than true pottery, was found in Râs Shamrah (V B) and Tell Sukas. Fired pottery appears in northern Syria over a wide area, at Amuq A, Râs Shamrah, and Byblos, and the evidence of domesticated animals include the bones of pigs, oxen, and sheep.



2. Chalcolithic Age. The Halafian culture appeared *ca.* 5300 B.C. in the region around the Khābûr River; remains were found at Râs Shamrah, Amuq C, and Hamath on the Orontes. The introduction of metallurgy stimulated the development of trade. By the end of the 5th millennium, town life was developing in Mesopotamia, which led to city-states (Ubaid culture). It was found at Râs Shamrah (Level III B; dated by carbon-14 to *ca.* 4180 B.C.), Tell el-Judeideh, Tell Brâk, and elsewhere in northern Syria. But the spread of Ubaid, Uruk, and Jemdet Nasr cultures was spotty. The Proto-Urban age, which introduced Early Bronze, appears to have originated in the Amuq valley or possibly in Tarsus in Cilicia.

3. Early Bronze Age. By the middle of the 3rd millennium there were important city-states in Syria, including Mari and Ebla. Semitic names of the ruling classes are found at both sites. Ebla, 67 km. (42 mi.) S of Aleppo, was a center of trade, with outposts at many places in Syria, Palestine, eastern Anatolia, and elsewhere (cf. G. Pettinato, *Ebla, Un impero inciso nell'argilla* [1979]; P. Matthiae, *Ebla in the Period of the Amorite Dynasties and the Dynasty of Akkad* [1979]). It was also a center of scribal activity, linked with other centers in Mesopotamia (Pettinato, p. 259) such as Fara (Shuruppak; cf. A. Deimel, *Die Inschriften von Fara, I-III* [1922-1924]) and Tell Abū Ṣalābīkh (cf. R. D. Biggs, *Inscriptions from Tell Abū Ṣalābīkh* [1973]), thus ending the idea that Syria was illiterate. Sargon I of Agade (Akkad) recorded his victorious campaign to the west, including Mari (Tell el-Ḥarîrī), Yarmuti, and Ebla, as far as the Cedar Forest (Lebanon) and the Silver Mountains (*see* SARGON I). Naram-Sin (2275-2239 B.C.) made a similar claim. His successor, Šarkali-šarri, boasted of defeating the Amurru at Basar, a group of mountains SW of the mouth of the Balîkh, modern Jebel el-Bishri. An Amorite threat to the kingdom of Agade may be indicated, although it would be several centuries before they would invade Babylonia.

Egyptian links to Syria began probably *ca.* 3000 B.C., and E.B. towns of Palestine and Syria give evidence of Egyptian trade, and in some cases, of Egyptian control. Ties with Byblos were particularly noteworthy, and gifts to temples of Byblos bear the name of the last king of the 2nd Dynasty. A seal with the inscription of Pepi was found at Ebla.

B. From ca. 2200 to ca. 1200 B.C. *1. Semitic "Invasions."* According to a popular theory (summarized in Hitti, pp. 62-64), there were invasions of Semitic peoples from the Arabian desert into the Fertile Crescent at approximately one-thousand-year intervals, the first being *ca.* 3500 B.C., when Semites first appeared in Mesopotamia. The second took place *ca.* 2500 B.C., when the Amorites moved into the upper Euphrates region. This was followed by a third, *ca.* 1500-1200 B.C., when the Arameans invaded Coelesyria and the Hebrews invaded Palestine. The Nabateans entered the southern part of Palestine and Sinai *ca.* 500 B.C. Finally the Islamic invasion took place *ca.* A.D. 600.

But the theory is seriously flawed. Evidence indicates that the original home of the Semites was not the Arabian desert but a region of rivers and fertile lands. This is based in part on the fact that there is no common Semitic word for "mountain" (of which the Arabian peninsula has many), whereas there are common words for "river" and for certain agricultural items and activities (almost unknown in the regions of Arabia from which the nomadic "invaders" are supposed to have come). Moreover, there is little if any evidence of "invasions," as the term is usually understood. Rather, there was a gradual influx of peoples, repeated from time to time, each of which probably extended over decades or centuries. The tying of Abraham's journey to Canaan with a hypothetical invasion, or that of the Hebrews with another hypothetical invasion, has led to continual disagreement between biblical scholars and archeologists. Nevertheless, much archeological and linguistic evidence suggests that new peoples did periodically enter the region, and one of these peoples is known to us as the Amorites.

2. Rise of Empires. At the end of the 3rd millennium there was a phenomenon that appears to have been new, i.e., the extension of a city-state to a large kingdom. The claim of Sargon I (2350-2295 B.C.) to have ruled "from the Upper Sea to the Lower Sea" (G. A. Barton, *Royal Inscriptions of Sumer and Akkad* [1929], pp. 104f.; *ANET*, p. 267), or Naram-Sin's self-conferred title of "king of the four quarters [of the earth]" (Barton, pp. 138f.), probably marked the beginning of the empire idea. The kingdom of Mari had been subjugated by Sargon, but under Išbi-Irra it overthrew the Third Dynasty of Ur, and under Yaḫdun-Lim extended its influence to the Mediterranean. This ruler was overthrown by Šamši-Adad of Assyria, but when he died, Zimri-Lim (*ca.* 1730-1700) ruled over a large area until he was defeated by Hammurabi of Babylon (*see* MARI III). In the Mari tablets, Ḫalab (Aleppo) is mentioned as the capital of Yamḫad, Gubla (Byblos) as a center for the manufacture of cloth, Qaṭana (Qatna, el-Mishrifeh) and Ḫarranu (Harran; Haran in Gen. 11:31) as important Amorite cities or city-states.

But this is about as close as Syria ever came in antiquity to unitary rule. The Egyptians controlled varying amounts of Syria from 2400 to 1200 B.C. They were checked by the MITANNI, a non-Semitic people who occupied much of northern Mesopotamia in the 17th-16th centuries. Under Thutmose III (1482-1450) Egypt was able to confront the Mittani, and the Egyptian ruler claimed to have defeated them at Aleppo and Carchemish.

But another antagonist arose, the HITTITES from Anatolia. Mursilis I (*ca.* 1595) destroyed Aleppo and Alalakh and threatened Babylon. But the occupation of much of Syria began with Šuppiluliuma I (*ca.* 1380-1346), who defeated Tushratta and brought the Mitanni kingdom to an end. This removed a block to Assyrian advance, however, the full effects of which would not be felt for another two centuries. A more immediate result was the formation of independent city-states in the southern portion (modern Lebanon). When the Hittites took over territory that had been under Egyptian control, Ramses II (1304-1237) marched against Muwatallish, and the battle of Kadesh was fought (*ca.* 1300). Both kingdoms were weakened by the struggle. Ugarit, which had reached the zenith of its power in the 14th cent., became a vassal of the Hittite empire. At the end of the 13th cent. the sea-peoples invaded the coastal regions, destroying Ugarit along with other city-states (*ca.* 1200). An invasion from the west, probably part of the same movement that led the sea-peoples to attempt various invasions, not all of which were successful, brought about the end of the Anatolian Hittites, and the Syro-Hittite kingdom was formed (*see* HITTITES II).

As a result, Aram is generally known to us in compound names, such as Aram-naharaim (Gen. 24:10; RSV "Mesopotamia"), Paddan-aram (25:20), Aram of Damascus (2 S. 8:6), and Aram-zobah (Ps. 60, superscription [MT 60:2]). Numerous Aramean city-states are named as Beth- (Akk. *Bit-*), "the [ruling] house of" someone or other, e.g., Bīt-Yakin (cf. the numerous names of this nature in *ARAB*, II, 454f. and several in *ARM*, XV [1954], 122f.).

3. Relation to the Patriarchal Narratives. At some points in this period the events of the biblical narrative of the patriarchs are to be placed. Abram journeyed from

A male deity on a throne wearing an Egyptianized crown and a long Syrian-style robe; one of a Syro-Egyptian group of small god statues, *ca.* 1400-1200 B.C. (The Metropolitan Museum of Art)

Haran to Canaan (Gen. 12:4f.). According to earlier commentators (cf. H. H. Rowley, *Servant of the Lord* [1965], pp. 292-98; J. Van Seters, *Abraham in History and Tradition* [1975], pp. 296-308), the events of Gen. 14 involved kings from Syria and beyond, but the name identifications formerly proffered have now largely been rejected. Abram's heir-apparent was Eliezer of Damascus (if correctly interpreted; cf. 15:2). Abraham sent his servant to Aram-naharaim, to the city of Nahor, to find a wife for his son Isaac (24:10). Isaac's son Jacob fled to Paddan-aram, at Isaac's instruction, to take a wife from one of the daughters of Laban (28:1-5). Jacob labored there for twenty years (31:38); all his sons except Benjamin were born there (cf. 35:16-18; this must be used to interpret 35:26). In the covenant between Jacob and Laban at Mizpah, Laban's words are recorded in Aramaic (31:47). According to tradition Nahor was located at 'Ain el-'Arûs ("the spring of the betrothed"), near the source of the Balîkh River (cf. B. J. Beitzel, "From Ḥarran to Imar Along the Old Babylonian Itinerary: The Evidence from the *Archives Royales de Mari*," in G. A. Tuttle, ed., *Biblical and Near Eastern Studies, Festschrift* for W. S. LaSor [1978], p. 211). It might be added that some of the descendants of Esau were connected with place names in Syria (36:31-43).

According to the larger definition of Syria, which includes Palestine, the Israelites entered Canaan during this period. The biblical accounts portray this as a single invasion led by Joshua. A number of scholars strongly dispute this, some (e.g., W. F. Albright, *BASOR*, 58 [Apr. 1935], 10-18; H. H. Rowley, *From Joseph to Joshua* [1950], pp. 109-113) finding evidence of two invasions, while others (cf. M. Noth, *History of Israel* [rev. ed. 1960], pp. 68-84; J. Bright, *Early Israel in Recent History Writing* [*SBT*, 19; 1956]) see no invasion at all, but a fusion of people who migrated into the land with indigenous populations.

C. From ca. 1200 to the Christian Era. 1. Arameans. The Arameans "appear" *ca.* 1100 B.C. As noted above, they are to be identified with the Aḥlamê, who beyond question were in the region long before that time, but the first certain appearance of the name Aramean is in the annals of Tiglath-pileser I (*ca.* 1115-1077; cf. *ARAB*, I, § 239), and the earliest known Aramean inscriptions date from the 10th cent. (J. A. Fitzmyer, *A Wandering Aramean* [1979], pp. 60f.; *see* ARAMAIC). Their language was a branch of Northwest Semitic, possibly developing first as a trade-language. Indeed, it is probable that Aramaic became the lingua franca of the later period precisely because it was a trade-language, widely used from Babylon to Egypt.

An important city-state was Zobah which controlled a region from the Euphrates to the Yarmuk. Its capital was Damascus, *Tirmaški* in the annals of Ramses III (1198-1167), *Dimašqa* or *Timašgi* in the Amarna Letters. Saul waged war against Zobah (1 S. 14:47). David defeated Hadadezer, king of Zobah, and put garrisons in Aram of Damascus (2 S. 8:3-6). Solomon took HAMATH-ZOBAH (2 Ch. 8:3), but the identification of this name is not certain. Hezion (*ca.* 925-915) founded a dynasty that included Tabrimmon and Ben-hadad I (*DOTT*, pp. 239-241) and made Damascus one of the two most powerful kingdoms in Syria. BEN-HADAD (I or II [?]) fought with Ahab (1 K. 20), was the target of Shalmaneser III's campaigns (853-845), and was murdered by Hazael in 843 (2 K. 8:15) after the siege of Samaria (6:24). Ben-hadad and Irḥuleni of Hamath led a coalition against Assyria, in which Ahab joined at Qarqar (853).

Hazael attacked Israel in the days of Jehu and Jehoahaz (2 K. 10:32f.; 13:22). His son Ben-hadad III (II [?]) continued the pressure on Israel (13:3), but Joash (798-782) was able to turn the tide (13:14-19, 22-25). Ben-hadad also led a powerful military coalition against Hamath in the days of Zakir (*DOTT*, pp. 242-250). The victory of Zakir was the end of the Aramean kingdom of Damascus (*ca.* 770). Jeroboam II (780-753) ruled over Damascus and Hamath for a brief period. Then Rezin allied with Israel against Judah, but when Ahaz petitioned Tiglath-pileser III for help, the Assyrian captured Damascus and put Rezin to death (732 B.C.; 2 K. 16:5-9; *ANET*, p. 283). The Arameans were deported to Qir (cf. Am. 1:4f.; Hitti, pp. 162-175.

A little-known kingdom, Sam'al or Ya'udi (8th cent. B.C.), needs particular mention, since its language is sometimes classified as a dialect of Aramaic and at other times as a dialect of Phoenician (cf. G. A. Cooke, *North-Semitic Inscriptions* [1903], texts 61-63; J. Friedrich, *Phönizisch-Punische Grammatik* [1951], pp. 153-162). Moreover, a number of scholars consider its king, Azriyau of Yaudi (*ARAB*, I, § 770; *ANET*, p. 282), to be Azariah of Judah (*BHI*, p. 268; H. Tadmor, "Azriyau of Yaudi," in *Scripta Hierosolymitana*, VIII [1961], 232-271; *CAH*, III/1 [2nd ed. 1982], 410f.; *see* TIGLATH-PILESER III).

2. Assyrians. In 1094 Tiglath-pileser I raided Syria and laid claim to all Amurru, but this was soon lost to the Arameans. His successor Ashurnasirpal and his son Shalmaneser III were forced to invade Syria several times. Shalmaneser defeated the alliance at Qarqar in 853, and extended his rule to Mt. Carmel in 842 (*ARAB*, I § 672). But Tiglath-pileser III, about a century later, had to rebuild this portion of the empire. The succeeding Assyrian kings continued to rule and to expand their territory, until Esarhaddon conquered Egypt. With Tiglath-pileser III, the Assyrians began a systematic relocation of conquered

peoples (*ARAB*, I, § 770; 2 K. 16:9; 17:6, 23f.; 18:9-12, 31-35).

3. Babylonians. The Assyrian empire was overthrown by an alliance of its enemies: the Medes and Babylonians at Nineveh in 612, and the final blow came in 609 when the Babylonians and the Umman-manda (possibly meaning both Medes and Scythians) routed the Assyrians at Harran; whether Neco was going to aid the Assyrians or to oppose them depends on the interpretation of 2 K. 23:29. Josiah of Judah was killed at Megiddo when he attempted to intervene (*CCK*, pp. 15-20, 45, 58-63). The defeat of the Egyptians at Carchemish (605) meant that Babylonia would control Syria, and the destruction of Jerusalem (586), together with the defeat of Tyre after a thirteen-year siege (572) underscored the fact.

The Babylonians were as harsh as the Assyrians had been. They also followed a policy of displacing their conquered peoples, but with one difference: whereas the Assyrians scattered the deportees so as to destroy their sense of identity, the Babylonians allowed the deportees to live together and to follow their former customs. Thus it was that the exiles from Judah were located in Babylon and maintained their Judean identity (2 K. 24:14-16; 25:11f.).

4. Persian and Hellenistic Periods. A. Persian Period. The Persian period in Syria is rather obscure due to a paucity of archeological and literary remains. Palestine and Syria became part of the vast Persian empire, which was well organized; together with Cyprus they formed the fifth satrapy, 'Abar Nahara ("Beyond the [Euphrates] River"), with its capital at Damascus. Aramaic became the official language of trade and diplomacy, not only in Syria but even in much of the empire. The Phoenician cities flourished, and furnished the ships for Cambyses' invasion of Egypt; the Persian empire now extended to Nubia. The Phoenician fleet also formed the basis of the Persian navy when Xerxes (485-465) attacked Greece. For a century and a half the struggle with Greece continued, ending in the defeat of the Persians by Alexander in the battle of Issus (333). The Phoenician cities had revolted against Artaxerxes III in 351, and the three cities, Tyre, Sidon, and Arad joined to form Tripoli ("Three Cites"), the capital of Phoenicia. Nine cities rebelled, expelling the Persians and declaring their independence. Artaxerxes advanced; the Sidonians panicked, burned their ships, and died in their homes in flames. Sidon was completely destroyed; the other Phoenician cities surrendered.

b. Conquest by Alexander. The campaign of Alexander the Great took him through Syria from Issus to Egypt. The Phoenician cities surrendered, with the exception of Tyre. Alexander built a mole from the mainland to the island city, and after a seven-month siege by land and sea he captured the city. This is generally taken to be the end of the Phoenician national spirit, although the colonies, especially in North Africa, remained (called "Punic"). *See* PHOENICIA.

c. Diadochoi. The Hellenistic empire collapsed when Alexander died. His generals, known as the "successors" (Gk. *Diadochoi*) divided it: Ptolemy over Egypt, Seleucus over Babylonia, Antigonus over Asia Minor, and Antipater over Macedonia. Actually, Syria was first under Laomedon, but was seized by Ptolemy I Soter in 320. Then Antigonus I Monophthalmus attempted to take over the entire empire, and for two decades Antigonus and his son Demetrius I were engaged in a struggle with the other Diadochoi. Demetrius was defeated by Ptolemy at Gaza in 312, Antigonus was killed at Ipsus in 301, and Seleucus I occupied Syria and built his capital at Antioch on the Orontes. The Seleucid era is dated from 312 B.C.

Ptolemy I controlled Syria as far as Aradus. Seleucus extended his rule eastward through Persia to the Indus, and crossed the Hellespont in 281 to add Macedonia, but was assassinated. The following years were marked by instability in Syria. Ptolemy III Euergetes (245-221) occupied Antioch and advanced to the Euphrates, but troubles in Egypt forced him to return. Antiochus III the Great (223-187) attempted to regain Syria, failed in 217 at RAPHIA, but was successful in 198 at Paneas (Caesarea Philippi). For the first time Rome entered the picture: an embassy warned Antiochus to keep his hands off Egypt. Antiochus disregarded the threat, was defeated by the Romans at Thermopylae (191), and again near Magnesia, and in 188, in accordance with the treaty of Apamea, he ceded all his territories beyond the Taurus and paid indemnity to the Romans.

This was an opportunity for Egypt, but Antiochus IV Epiphanes (175-164) made the first move by land and sea, and defeated the Egyptians at Pelusium (169), capturing the king Ptolemy IV Philometor. Pressure from Rome forced Antiochus to evacuate Egypt. At this time the Hasmoneans led a revolt against Antiochus, and a Jewish commonwealth came into existence. At the same time, the Arab Nabateans were invading parts of Syria, taking Damascus under protective custody. The Itureans overran much of the Phoenician coast. The Parthians ruled from the Euphrates to the Indus, and the Armenians, who were at their zenith under Tigranes, occupied Cilicia and North Syria (83).

5. Romans. Mithridates VI of Pontus was nibbling away parts of Asia Minor, and the Romans moved against him. He took asylum with Tigranes, and Rome declared war, forcing Tigranes to withdraw from Syria (69). The Seleucid prince Antiochus XIII Asiaticus, who took over Antioch, was acknowledged by Rome. Meanwhile, Mithridates recovered his throne, and Pompey moved against him. In 64 Tigranes surrendered all claims to Syria, and Pompey placed Syria under a Roman procounsul. In 63 Pompey occupied Palestine (Josephus *Ant.* xiv.4.1-5 [55-79]). Due to the conditions in Rome following the assassination of Julius Caesar (44), the Parthians were able to take much of the province of Syria. Mark Antony restored order, made Antipater procurator of Judea and his sons Phasael and Herod governors of Jerusalem and Galilee. Jewish revolts kept the Romans occupied for about a century, until Jerusalem was finally destroyed (A.D. 70), then wiped out entirely and replaced by Aelia Capitolina (A.D. 135).

In many ways Syria was the most thoroughly hellenized part of the Roman empire. Many cities were renamed with Greek names. Architecture was greatly influenced, and the remains of temples and public buildings can still be seen in many places in Syria. Greek philosophy and literature were cultivated especially in the Phoenician cities, and distinguished authors were natives of some of these cities, such as Zeno of Sidon, teacher of Zeno of Citium who founded the Stoic school, and Diodorus the Peripatetic of Tyre. Greek replaced Aramaic in most of Syria, leaving pockets around Damascus and in Palestine (cf. Hitti, pp. 251-261).

D. In the Christian Era. 1. To the Moslem Conquest. According to Luke, Jesus was born when Quirinius was governor (legate) of Syria (Lk. 2:2); the capital of the province was Antioch. Damascus was at that time under a Nabatean king (2 Cor. 11:32; *see* ARETAS), probably by arrangement with the Romans.

From the days of Paul, Syria was an important center of Christianity. The persecution of Christians in Jerusalem caused a dispersion that extended to Antioch (Acts 11:19), and when the church was established in Antioch, Barnabas and Saul (Paul) were teachers. There the disciples were for the first time called "Christians" (11:25f.). The admission of a large number of Gentiles into the church at Antioch led to the opposition by the Judaizers, and this in turn to the Jerusalem conference (15:1-22; *see* APOSTOLIC COUNCIL). Saul was from Tarsus, a major city in the Roman province of Syria-and-Cilicia (Cilicia was made an independent province in A.D. 72), and doubtless was responsible for many of the churches that had been founded there (15:23, 41; Gal. 1:21). After the destruction of Jerusalem, Antioch became the focal point of Christianity for a time. Ignatius of Antioch was the third bishop of Antioch. Justin Martyr was born in Nablus *ca.* A.D. 100. Origen (d. 253) founded a school in Caesarea. The first of more than thirty councils was held in Antioch in 269 (Eusebius *HE* vii.29). In the 4th cent. it was the see of a metropolitan bishop. John Chrysostom (d. 407) was the most famous representative of its school of theology.

Syria holds an important place in the history of the text of the NT. Scholars are familiar with the Koine or text recension used in Antioch. The Textus Receptus (TR), on which the Authorized Version (AV) is ultimately based, is an Antiochene or Byzantine text. Von Soden's **I** (Jerusalem) text was used by Eusebius the historian and bishop of Caesarea (264-*ca.* 349). The Church Fathers do not quote the **K** (Koine) text earlier than the 5th cent. (B. M. Metzger, *JBL*, 64 [1945], 457-489). It may be noted in passing that Origen, who according to one theory brought the Caesarean text to Antioch from Egypt (*ca.* 231), produced the Hexapla for textual study of the OT. The Syriac translation of the fifth column of the Hexapla, known as the Syrohexapla, was done by Paul of Tella in A.D. 616. The Ben Asher text of the Hebrew Bible (dated *ca.* 929) was preserved in a synagogue at Aleppo. The Western Masorah was the product of the Tiberian school, also in Syria. *See* TEXTS AND MSS OF THE OT I.B.3; TEXTS AND MSS OF THE NT.

The Syriac translations of the Bible can also be traced to Syria. An early translation (*ca.* 170) was Tatian's Diatessaron, a combination of the Gospels into one continuous account, of which only small fragments have survived. The Old Syriac version of the Gospels is dated to the latter part of the 2nd cent. (or at the latest the early 3rd cent.). Its title, *'ewangelyôn dam'parrešê'* ("the Gospel which is separated"), appears to imply the prior existence of the Diatessaron. (*See* VERSIONS II.) The best-known Syriac version is the Peshitta ("the simple or common [text]"), produced possibly in Edessa in the 5th cent. (cf. *LAP*, pp. 444-48). The existence of a Syriac text alongside the Greek text shows the division that was taking place, the eastern church using Syriac, an Aramaic dialect, as its common language. This division went further, with a western or Jacobite Syriac in Edessa and western Mesopotamia, and an eastern or Nestorian Syriac spreading eastward into India. The golden age of Syriac literature was the 7th cent., immediately before the Moslem advance (cf. T. Nöldeke, *Compendious Syriac Grammar* [Eng. tr. 1904], pp. xxxi-xxxiv.) *See* VERSIONS II.

From the 3rd to the 6th cents., Syria was almost entirely Christian. Greek was the principal language in the coastal region, but Syriac was used elsewhere. Christian churches were built in many cities, and art flourished, often in a style neither Roman nor Greek (cf. *LAP*, pp. 495-501, 539-545). Christian theologians were numerous. According to one Syriac MS, nineteen bishops from Palestine, twenty-two from Coelesyria, and six from Arabia attended the Council of Nicea (B. H. Cowper, *Syriac Miscellanies* [1861], pp. 9f.; Hitti, p. 363 n. 1). Syria was also the source of several Christian heresies and schismatic movements, including Nestorianism and Monophysitism. Monasticism was strong, especially of the hermit variety. Perhaps the most curious of the monks were the stylites, who lived on pillars. Simeon the Stylite (d. 450) is the best known (cf. Hitti, pp. 363-374).

The Roman emperor Constantine moved the capital from Rome to Byzantium, renamed Constantinople, in 330, having recognized Christianity as the official religion in 312. The fall of Rome is dated 476. The Persians under Chosroes I (531-579) invaded Syria, burned Aleppo, destroyed Antioch, and took tribute from other cities. Heraclius succeeded in recovering Syria from the Persians after Chosroes II (611-614) had ravaged the country, pillaged Damascus, and destroyed the Church of the Holy Sepulchre in Jerusalem. Arabs under Muhammad invaded the extreme south of Syria in 630, demanding submission. Five years later Damascus fell to Khalid ibn al-Walid. In the two years that followed, most of the major Syrian cities had surrendered. The decisive battle took place in the Yarmuk valley where it is joined by the Ruqqad (cf. *GP*, I, 171-74) on August 20, 636.

2. Since the Moslem Conquest. Mu'awiya was named caliph (successor [to Mohammed]) at Jerusalem in 61, but chose to make Damascus his capital. He was a descendant of Umayyah, a cousin of the Prophet's grandfather, hence the Caliphate was known as Umayyad; this became a dynasty when he named his son Yazid as his successor in 679. Under a program of expansion, the Syrian empire ultimately reached "from the Bay of Biscay to the Indus and the confines of China and from the Aral Sea to the cataracts of the Nile" (Hitti, pp. 471f.) — within a century of the Prophet's death. The Arabic language was replacing Greek and Aramaic.

During the Umayyad dynasty, the Dome of the Rock was built in Jerusalem by Abd el-Malik (691), then the el-Aqsa mosque, and in 705 the Cathedral of St. John the Baptist in Damascus was converted into the Umayyad Mosque, considered the fourth holiest place in Islam after the sacred shrines of Mecca, Medina, and Jerusalem. Learning increased greatly, but the Arabs were translators and transmitters, rather than originators. During this period many Greek and Latin works were translated, first into Syriac and then into Arabic, and were preserved for the West in the Renaissance (cf. Hitti, pp. 548-556).

The Umayyad dynasty was followed by the 'Abbasid (750), which located its capital in southern Mesopotamia at Kufa on the Euphrates W of Nippur. Persian customs and ideas strongly influenced it. Under el-Mansûr, Dâr-es-Salâm was built on the site of Baghdad on the Tigris (762) and became the capital. Best known of the caliphs were Ḥarûn er-Rashîd (786-809) and al-Ma'mûn (813-833), whose feats are told by Sheherazad in *The Thousand and One Nights*. Anti-Christian activities developed, particularly in Syria, with the destruction of all churches built since the rise of Islam, and distinctive clothing was prescribed for Christians and Jews. Except in the mountains of Lebanon, Islam almost obliterated Christianity. Syria was henceforth called esh-Sha'm ("the left, north") to distinguish it from el-Yemen ("the right, south"), locations taken with reference to Mecca.

With the collapse of the Abbasid dynasty, there were a number of lesser powers, then the Seljuks, founded by Turks, in northern Syria and the Fatimids in the south.

The Crusaders found the Fatimids in the Holy Land. But another line of Turks under Zangi, Nûr ed-Dîn, and Ṣalaḥ ed-Dîn (Saladin) finally defeated the Crusaders. Petty wars with Crusaders continued through the 13th century. Remains of Crusader castles and churches (now mosques) can be seen at many places in Syria.

A period under Ayyubids and Mamluks followed; then the Mongols invaded. Finally Sultan Salim I (1512-1520) incorporated the Arab world into the Ottoman empire. Syria remained under Ottoman rule until World War I. Syria was mandated to France, while Palestine and Transjordan were mandated to Great Britain. In 1946 Syria became an independent republic.

SYRIA-MAACAH. *See* MAACAH.

SYRIAC VERSIONS. *See* VERSIONS II.

SYRIACK; SYRIAN. AV rendering of ARAMAIC in Dnl. 2:4; Ezr. 4:7.

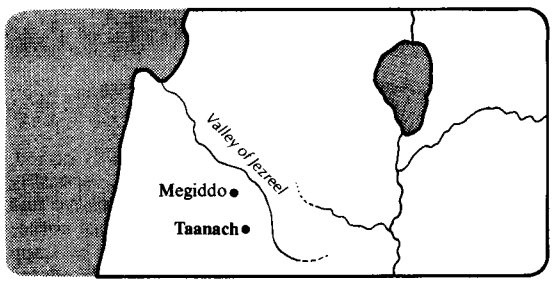
SYROPHOENICIAN sī'rō-fə-nish'ən, sir'ō- [Gk. *Syrophoinissa;* var. *Syro Phoinikissa, Syro Phoinissa, Phoinissa, Tyrophoinissa*]; AV SYROPHENICIAN; NEB PHOENICIAN. A woman from the region of Tyre and Sidon whose daughter Jesus healed is described in the RSV as "a Greek, a Syrophoenician by birth" (Mk. 7:26) and in a parallel account as "a Canaanite woman" (Mt. 15:22). This suggests that she was a non-Jewish native of the coastal region of Phoenicia (the early Phoenician people called themselves Canaanites) who possibly spoke Greek, though she may have been simply an inhabitant of the area. The region, designated *phoinē* by the Greeks for its trade in "red-purple" dye, was incorporated into the Roman province of Syria prior to the NT period, gaining official status as a separate district after the division of Coelesyria in A.D. 194. Recognized both as Phoenicia and Syria (cf. Acts 21:2f.), the more complete title "Syrophoenicia" was used to distinguish the area from Lybophoenicia in North Africa (Strabo *Geog.* xvii.3.19).

C. N. JEFFORD

SYRTIS sûr'təs [Gk. *Syrtis*] (Acts 27:17); AV QUICKSANDS; NEB "the shallows of Syrtis." The present-day Gulf of Sidra on Libya's northern coast. It is a wide but very shallow gulf whose danger to sailors was legendary (Vergil *Aen.* iv.40f.; Strabo *Geog.* ii.5.20; xvii.3.16f.) It has a counterpart called Lesser Syrtis, which is the present-day Gulf of Gabes on the east coast of Tunisia.

When the northeast wind forced Paul's ship away from Cyprus the sailors probably lowered some sort of sea anchor to act as a brake (see I. H. Marshall, *Acts* [*Tyndale NT Comms.,* 1980], p. 409) because they were afraid of being blown into Greater Syrtis (Acts 27:17). The fact that they were still very far away from Greater Syrtis illustrates the extent of the fear that the shallow waters and the quicksands of the gulf inspired. W. D. MOUNCE

TAANACH tā'ə-nak [Heb. *ta'ᵃnāḵ* or *ta'nāḵ*; LXX *Thaanach*, with many variants]. A city on the southern edge of the Valley of Jezreel, about 8 km. (5 mi.) SE of Megiddo.



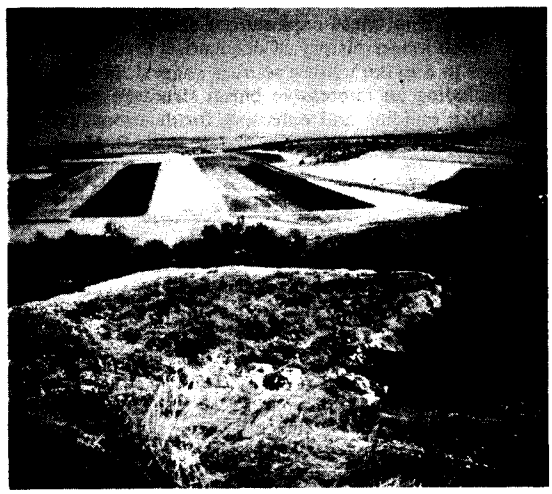
I. Recorded History.–Taanach first appears in the annals of Pharaoh Thutmose III (mid-15th cent. B.C.). During his first military campaign Thutmose discussed with his general staff the option of marching from the Sharon to the Jezreel Valley via the pass leading from Bâqā el-Gharbîyeh to the Valley of Dothan (Sahl 'Arrâbeh) and finally past Taanach. Fortunately for the Egyptians, scouts evidently warned them that the enemy was arrayed near Taanach in anticipation of their arrival, so that they were able to choose another route (*ANET*, pp. 235f.). After his victory at Megiddo, Thutmose also took Taanach, which appears in his great topographical list (*Ta-'(a)-na-k*; no. 42). Like most other Canaanite city-states, Taanach became subject to Egypt; emissaries of the *maryannu*-warrior class were sent from Taanach (*Ta-'[a]-na-ki*) to the pharaonic court (Papyrus Leningrad 1116 A).

Two cuneiform epistles discovered at Taanach (see III below) were demands by a certain Amenhotep to the local ruler that he come in person with his troops, apparently to join an expedition. In the Amarna correspondence a certain Yašdata reported that the men of *Ta-aḫ-[nu-k]a* had deposed him, slaughtered his cattle, and driven him away (Am.Tab. 248:10-17). The reading of this geographical name is quite uncertain, however. Yašdata had found political asylum at Megiddo; his ouster (from Taanach or elsewhere) may have been due to the machinations of Lab'ayu ruler of Shechem. Yašdata's association with Taanach rests on nothing but the poorly preserved place name (for a conflict with the present state of the archeological evidence, see II below).

As one of the royal Canaanite cities encountered by the Israelites (Josh. 12:7f., 21), Taanach fell within the tribal territory of Issachar but was later transferred to Manasseh (Josh. 17:11; 1 Ch. 7:29), who failed to occupy it (Josh. 17:12f.; Jgs. 1:27f.). The famous clash between the Israelite tribesmen and the city-state chariot forces took place in the Valley of Jezreel (= Esdraelon). but the Canaanite rulers, instead of dividing the spoil on the broad plain — i.e., the southern portion of the valley, before Taanach and Megiddo — were swept away by the "torrent Kishon" in the center of the valley (Jgs. 5:19-21).

When Israel finally did become the dominant power in the valley (cf., e.g., 1 S. 31), they subjected the inhabitants of the city-states, including Taanach (Jgs. 1:27f.), to forced labor. Taanach became a Levitical center (Josh. 21:25) along with several of its neighbors, and under Solomon it was included in the administrative district of Baana son of Ahilud (1 K. 4:7, 12). During the fifth year of Rehoboam, the Egyptian army under Shishak (Sheshonq; 1 K. 14:25-27; 2 Ch. 12:2-12) ravaged the northern kingdom of Israel, and Taanach was certainly one of its conquests, as witnessed by Shishak's topographical list (no. 14, *Ta-'-n-k-i3*). The city is not mentioned in written sources of the later Iron Age or of the Persian, Hellenistic, or Roman periods.

Tell Taanach and the surrounding fields (D. Blatt)



The tenth-century B.C. building where vessels, knives, a mold, and other cult-related objects were found (Taanach Expedition, courtesy A. Glock)

Eusebius knew Taanach to be a very large village either three (*Onom.* 100.7-10) or four (98.10-12) Roman mi. from Legio. This accords with the location of Tell Ta'annak, about 8 km. (5 mi.) SE of Megiddo (Tell el-Mutesellim). The Roman-Byzantine settlement known to Eusebius was on the plain below and E of this tell, and thus about 6.5 km. (4 mi.) from Legio (Lejjûn, today Ḥorvot Kefar 'Otnay). The town is also known from Crusader sources of the 12th and 13th centuries.

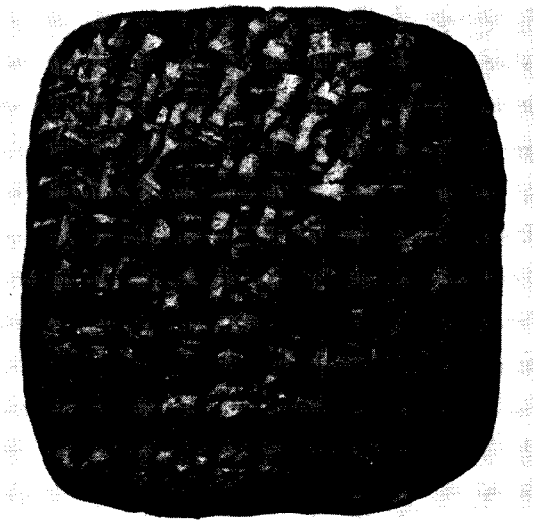
II. Archeological Excavations.–An expedition under E. Sellin of Vienna first excavated Tell Ta'annak in 1902-1904. Work was renewed on the site by an American team led by F. W. Lapp; three campaigns were conducted (1963, 1966, 1968) before Lapp's untimely death in 1970.

Evidence from these explorations shows that Taanach had a much longer history of occupation than the scanty allusions to it in the written sources suggest. Much material, including an impressive burial structure beneath a palace-like building and extensive fortifications, reflects the history of this important city-state in E. B. II and III. A glacis system and defense walls with associated buildings and burials characterize M. B. II; the latest and, according to the American excavators, most extensive M. B. construction phase is M. B. II C. Over these remains were found structures and occupation levels of L. B. I, especially a building unearthed by Sellin in the north center of the tell that contained twelve tablets or fragments inscribed in cuneiform (see III below). No evidence has been found of occupation in the ensuing period, L. B. II, which includes the Amarna Age; this fact casts doubt on the reading of the partially effaced place name in Am.Tab 248: 10-17 as "Taanach" (see I above). Some occupation levels and houses attest to a settlement in the late 13th and 12th cents. B.C., and the alphabetic cuneiform text (see III below) evidently dates to this period.

A building full of vessels and other objects, especially some for possible cultic use, is the most impressive find from the 10th cent. B.C. A tower on the northeast corner of the tell uncovered by Sellin was reexamined by Lapp and assigned by him to the 9th century. The later phases of the Iron Age are represented mainly by sherds, along with one structure on the southern part of the mound. A small amount of Persian and Hellenistic pottery is the only find from the postexilic to the NT periods. The Roman-Byzantine town was built below on the eastern plain. The top of the mound was reoccupied in the early Arab period. A fortified structure containing a bath installation dates to the 10th-12th cents. A.D.

III. Cuneiform Inscriptions.–Sellin discovered twelve cuneiform tablets and fragments that date to the 15th cent. B.C. and are the earliest witness to the special West Semitic dialect developed by scribes in Canaan. Four of the texts are epistles — two from a certain Amanḥatpa (see I above) and two from neighbors of the ruler at Taanach. The notes compiled by E. I Gordon and A. E. Glock have led to greatly improved readings and, with further checking of the tablets, have made possible a new grammatical analysis by A. F. Rainey of the West Semitic verbal system in use at Taanach. During the 1968 season an additional text (Taanach text 950) containing a list of personal names was discovered. Its script and the ethnic groups represented (Semitic, Hurrian, Indo-Aryan) suggest that the new tablet belongs to the original corpus and that all the tablets date to *ca.* 1450 B.C.

The 1963 season of excavations produced a small cuneiform docket in alphabetic script. The shape of the letters resembles that of Ugaritic texts, especially that of a small group of texts that apparently were imports into



The obverse of Taanach Tablet no. 2. After the greeting the sender asks for a small favor ("Give me a finger," line 7), saying "I am desolate in an empty house"; he then asks for a few gifts and concludes "let me send my man to you and let me arrange a marriage" (Taanach Expedition, courtesy A. Glock)

Ugarit. Thus it is no surprise that two more non-Ugaritic examples of this script have appeared: an inscription on a knife blade from nearby Wâdī Bîreh (Naḥal Tabor), and an incantation tablet from Beth-shemesh.

A. F. RAINEY

TAANATH-SHILOH tā'ə-nath-shī'lō [Heb. *ta'ᵃnaṯ šilōh*; LXX B *Thēnasa Kai Sellēsa*, A *Thēnathsēlō*]. A town between Michmethath and Janoah on the northeastern border of Ephraim (Josh. 16:6). According to Eusebius and Jerome (*Onom.*) it was positioned approximately 10 Roman mi. E of Neapolis (known then as *Thena*) and was on the Roman road to the Jordan Valley. This may be the *Thena* that Ptolemy refers to as a town in Samaria (*Geog.* v.16.5). Van de Velde identified the town with Khirbet Ta'nahel-Fôqā, located about 11 km. (7 mi.) SE of Nâblus (Neapolis) and 3 km. (2 mi.) N of Khirbet Yānûn (Janoah). Located there are "foundations, caves, cisterns, and rock-cut tombs" (*PEF*, II, 245). If Taanath is derived from *'nh*, "approach," the name may mean "approach to Shiloh."

K. L. C. R. BURTON

TABBAOTH tab'ə-oth, ta-bā'oth [Heb. *ṭabbā'ôṯ* < *ṭabba'aṯ*–'ring' (?); Gk. LXX, Apoc. ℵ, B, *Tabaōth*, Apoc. A, Tabōth] (Ezr. 2:43; Neh. 7:46; 1 Esd. 5:29); AV Apoc. TABAOTH; NEB Apoc. TABOTH. Head of a family of temple servants (*see* NETHINIM) who returned from the Babylonian exile.

See *IP*, p. 223.

TABBATH tab'əth [Heb. *ṭabbāṯ*] (Jgs. 7:22). A place E of Beth-shean and doubtless E of the Jordan, toward which Gideon pursued the Midianites. The account in Judges continues, mentioning Karkor (8:10), Nobah and Jogbeheh (v. 11), and the ascent of Heres (v. 13); hence Tabbath must be placed in the general area of these sites. A suggested identification is Râs Abū Tābât (see *LBHG*, p. 241 n. 174; *WHAB*, p. 42).

W. S. L. S.

TABEEL tab'i-əl [Aram. *ṭāḇᵉ'ēl*–'God is good' (Ezr. 4:7), *taḇᵉ'al* (Isa. 7:6); Gk. Apoc. *Tabellios* (1 Esd. 2:16)]; AV, NEB, also TABEAL (Isa. 7:6), Apoc. Tabellius.

1. Father of the man whom the Israelite and Syrian kings intended to set up as king of Judah in place of Ahaz during the Syro-Ephraimite war, 735-732 B.C. (Isa. 7:6; cf. 2 K. 16:1-10). Several possibilities for his identity have been proposed. Tabeel may be (1) the name of this pretender's father/ancestor, or (2) the name of his home region in northern Transjordan. The latter is suggested by an eighth-century B.C. letter discovered at Nimrûd, written by an Assyrian official Qurdi-Assur, which refers to "the messenger of Ayanur, the Tabeelite [*kur-Ṭa-ab-i-la-aya*], Ezazu by name" (see Saggs, Albright). Since "Tabeel" is a place name here, ben-Tabeel (Isa. 7:6) may have been a Judean prince whose mother was from Tabeel (see Mazar, p. 236). (3) The name may be connected with the influential family of the Tobiads in postexilic Judah (see 2 Macc. 3:11; Josephus *Ant.* xii.4.2 [160]), since during the Josianic reforms (*ca.* 620 B.C.) many "El" theophoric names were changed to "Yah" forms, thus "Tobiyahu" from "Tabeel" (see Mazar, p. 236; Torczyner, pp. 28-30). (4) Since the candidate for the throne is identified solely as "ben-Tabeel," he may have held a hereditary state office; this was the traditional form of designation for officials in Israel and Ugarit (see Alt, p. 212). (5) A vassal list of Tiglath-pileser III on a stele from 737 B.C. provides another possibility: it names a certain Tubail (*ᵐṬu-ba-il*) as the ruler of Tyre in Phoenicia. Perhaps Rezin and Pekah offered the Judean throne to their neighbor to the north in exchange for his support in their anti-Assyrian campaign (see Levine, Vanel).

The spelling *tāḇᵉ'al* may represent either a Hebrew pausal form or a subtle form of derision (meaning "not good").

2. A Samaritan official in the postexilic period (Ezr. 4:7; 1 Esd. 2:16). Along with other officials, he sent a letter to Artaxerxes I of Persia (465-425 B.C.) with the intention of halting the Judean rebuilding of Jerusalem. The letter accused the Jews of being rebellious and unlikely to pay their taxes.

K. C. HANSON

TABELLIUS ta-bel'i-əs (1 Esd. 2:16 [LXX 12], AV, NEB). *See* TABEEL **2.**

TABER tā'ber. A term used by the AV only in Nah. 2:7 (MT 8) for the polel part. of Heb. *tāpap* (cf. *tōp*, "timbrel," Ps. 68:25 [MT 26]), which means "beat continuously"

(KoB, p. 1038). In Nah. 2:7 "beating [so RSV, NEB] their breasts" portrays a gesture of extreme grief and sorrow (*see* GESTURE III), here resulting from Nineveh's fall.

TABERAH [tab'ə-rə, tə-bē'rə [Heb. *taḇ'ērâ*–'burning'], (Nu. 11:3; Dt. 9:22). An Israelite encampment during the wilderness wanderings. Here the Lord's anger was kindled against the people because of their complaining, and He burned part of the camp — hence the site's name (Nu. 11:1-3). Taberah is also mentioned in Dt. 9:22, but it is excluded from the wilderness itinerary of Nu. 33. The location has not been identified. *See also* WANDERINGS OF ISRAEL.

TABERNACLE [Heb. *miškān*–'dwelling-place'; Gk. usually *skēnḗ*, also *skḗnōma*]. The portable tent sanctuary which, according to Ex. 25–31, 35–40, was constructed by the Israelites at God's command in the wilderness period.

V. Significance

I. Terminology.–The same sanctuary is referred to by a number of different designations.

A. Tabernacle. This term occurs 108 times in the RSV, in each case for Heb. *miškān*. The AV also consistently renders "tabernacle" ("dwelling place" in 1 Ch. 6:32 [MT 17] is the sole exception). The following combinations may also be noted: "tabernacle of the testimony" (so called because the tabernacle contained the "ark of the testimony"; Ex. 38:21; Nu. 1:50, 53; 10:11); "tabernacle of the house of God" (1 Ch. 6:48 [MT 33]); "tabernacle of the Lord" (eleven times); and "tabernacle of the tent of meeting" (Ex. 39:32; 40:2, 6, 29; 1 Ch. 6:32 [MT 17]).

B. Tent. This term is used by the RSV for Heb. *'ōhel*. It occurs by itself (Ex. 26:36; 31:7; 36:37, etc.) and in combination: "tent of the testimony" (Nu. 9:15; 17:7f. [MT 22f.]; 18:2; 2 Ch. 24:6); "house of the tent" (1 Ch. 9:23); and, most frequently, "tent of meeting" (*'ōhel mô'ēḏ*, i.e., the tent where Yahweh met His people; LXX usually *skēnḗ toú martyríou*).

The AV renders *'ōhel* "tabernacle," the same term it uses for *miškān*. In this it follows the LXX, which uses Gk. *skēnḗ* and *skḗnōma* interchangeably for both Hebrew terms. Furthermore, the AV, relating Heb. *mô'ēḏ* ("meeting," "place of appointed assembly") with the cognate *'ēḏâ* ("congregation"), renders *'ōhel mô'ēḏ* "tabernacle of the congregation" (but "tent of the congregation" where *miškān* and *'ōhel* are used together; cf. Ex. 39:32, 40; 40:2, 6, etc.). The rendering "tent of meeting" is, however, to be preferred.

It is worth noting that the Ugaritic cognates to Heb. *'ōhel* and *miškān* are also used synonymously of divine dwelling-places. Furthermore, both Hebrew terms may be used for sanctuaries that are permanent structures rather than mere tents, particularly in Hebrew poetry. It is thus hazardous to draw conclusions about the nature of the sanctuary envisaged in poetic texts using *'ōhel* or *miškān* (e.g., Ps. 15:1; 27:6; 46:4 [MT 5]; 61:4 [MT 5]; 84:1 [MT 2]). At best, the use of such terms may reflect that at one time Yahweh's sanctuary was a tent structure.

C. Sanctuary. The tabernacle is also referred to simply as a "sanctuary" (*miqdāš*, Ex. 25:8; *qōḏeš*, Ex. 38:24).

D. In the NT. When the NT refers to the Mosaic tabernacle it employs the terminology of the LXX: "the tent of witness" (*hē skēnḗ toú martyríou*, Acts 7:44), or simply "the tent" (*hē skēnḗ*, He. 8:5; 9:21). Hebrews also refers to it as the "first tent" (9:8; RSV "outer tent" is less likely here) because it was the sanctuary of the "first covenant" (cf. v. 1). In vv. 2, 6, however, the "first tent" (RSV here rightly interprets as the "outer one") refers to the outer compartment of the tabernacle (the "holy place") as opposed to the "second" or inner compartment (the "holy of holies," vv. 3, 7).

II. The Tabernacle in Priestly Writings.–We will simplify the discussion of critical views of the tabernacle by treating the relevant "priestly" (P) materials in the Pentateuch first, then discussing the tabernacle as it appears in other parts of the Pentateuch and the rest of the OT. (For discussion of various critical theories about "P" and other sources of the Pentateuch, *see* CRITICISM II.D.5-6; PENTATEUCH IV.C-F.) Though modern discussions of priestly materials are often concerned to distinguish various strata within this material, in this synthetic study we will largely disregard such distinctions. Again, though some scholars find evidence of the priestly account outside the Pentateuch, the label is here used with reference to the pentateuchal materials alone.

A. Materials. The account of the tabernacle in Exodus opens with a list of the materials needed for its construction and, in part, for the later maintenance of the cult (Ex. 25:1-8). These were provided by the voluntary contribution (*t'rûmâ*) of the people (v. 2).

The metals — gold, silver, and "bronze" (i.e., copper with an alloy for hardening; but Heb. *n'ḥōšeṯ* may refer to simple copper as well) — are first listed, apparently in a descending scale of value, since gold was used in the most sacred places (the overlay of the ark, the cherubim, mercy seat, etc.), silver in areas of lesser sanctity (e.g., the bases for the tabernacle frames), and bronze in areas of still lesser sanctity (e.g., the bases for the screen at the front of the tabernacle and for the pillars of the courtyard). Though Ex. 25:1-8 speaks generally of the various materials as being contributed voluntarily, 38:25f. makes silver an exception: it was raised by a poll tax of half a shekel for each male twenty years and older, i.e., from 603,550 men. (This figure is the same as that reached by the census of non-Levites in Nu. 1:46.)

After the metals, the needed cloth materials are listed, distinguished by the various dyes that gave them their colors. "Blue" (probably a purple blue) and "purple" (probably a purple red) represent wool materials dyed to these colors with dyes extracted from different species of shellfish. The term for "scarlet stuff" is derived from the insect from which this dye was produced. "Fine twined linen" (Heb. *šēš*), a superior Egyptian variety, would also be needed. (*See* COLOR V.B, F, H; LINEN III.)

The Israelite flocks would provide "goats' hair" and "tanned rams' skins." The RSV then lists "goatskins," though the precise meaning of Heb. *taḥaš* is uncertain (*see* GOATSKINS; LEATHER; TANNED). "ACACIA wood,"

readily available at Sinai and known for its durability, completes the list of materials needed for the tabernacle construction.

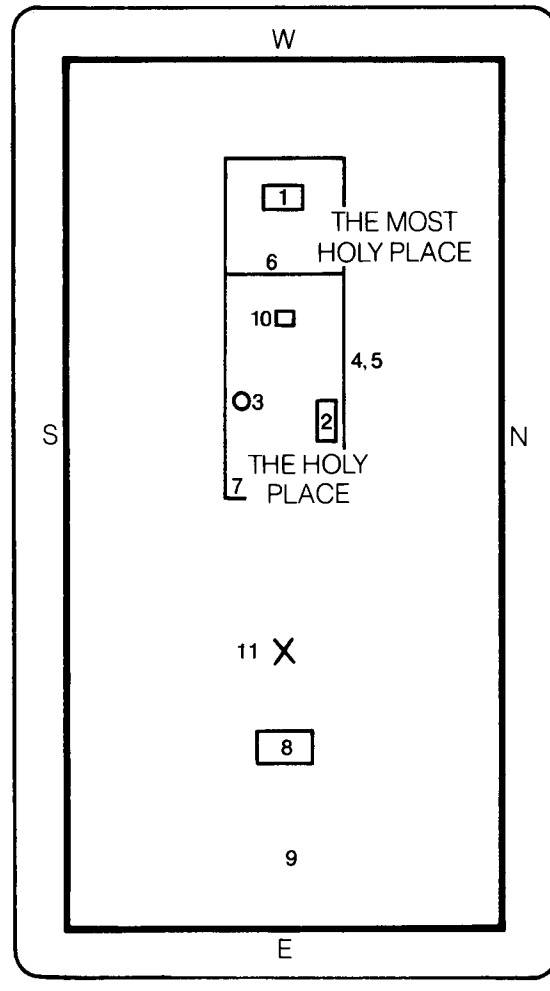
Scholars who regard these chapters in Exodus as a late, idealized portrait of the Israelite wilderness sanctuary have often suggested that the Israelites in the wilderness would scarcely have had at their disposal all the materials listed in the quantities required. The amount of gold, silver, and bronze needed was certainly considerable: nearly a ton of gold, 3¼ tons of silver, 2¼ tons of bronze (based on Ex. 38:24-31 and Hyatt's computations). Some of the dyes would not have been readily available in the wilderness. Cassuto was among those traditional scholars who have seen no insurmountable problem here. He suggested that the metals could have been brought from Egypt (cf. Ex. 12:35f.); Israelite flocks would have provided the skins; and the dyes, oil, and spices needed for the tabernacle and its cult could have been procured from passing caravans.

B. Pattern. The instructions for building the tabernacle are not always clear. Many details — some quite essential — are left unspecified. Of course, a record of every detail is not to be expected; yet it is possible that the refrain, "according to all that I show you concerning the pattern of the tabernacle, and of all its furniture, so you shall make it" (Ex. 25:9; cf. 25:40; 26:30; 27:8), is in part intended to obviate the need for spelling out every detail.

These references to a divinely revealed PATTERN are clearly paralleled in other ancient Near Eastern texts that describe an earthly sanctuary as a replica of the heavenly abode of the gods. A much-cited parallel (cf., e.g., Cassuto, p. 322) occurs in a cylinder of Gudea king of Lagash, which says that he was shown in his dreams a model of the sanctuary he was to build.

C. Design. Unlike modern "sanctuaries" the tabernacle was designed not as a meeting place for God's people (though on special occasions they would assemble in the tabernacle courtyard) but as a dwelling place for Yahweh Himself, a place where His cultic worship would be conducted. The tabernacle structure itself, made up of curtains resting on a framework, was divided by a veil into two compartments. The outer compartment, called "the holy place" (*haqqōḏeš*), contained the table for the bread of the Presence, the lampstand, and the altar of incense. At its entrance was a screen. The inner compartment, called "the most holy place" (*qōḏeš haqqᵒḏāšîm*), contained the ark of the covenant. Surrounding the tabernacle was a courtyard where the altar of burnt offering and the laver were located. These items will be discussed in the order in which they are introduced in the Exodus narrative.

1. Ark (Ex. 25:10-22). The instructions for building the tabernacle and its furnishings begin with the most sacred object, the ARK OF THE COVENANT. This ark of acacia wood was to be a rectangular chest 2½ cubits long, 1½ cubits wide, and 1½ cubits high, overlaid with "pure gold" (presumably gold that had been carefully freed from alloys) inside and out. According to instructions it had a rim ("molding") of gold around its four sides, though the text does not state whether this was attached at the top or part way down. Four short "feet" kept it from resting directly on the ground. To each foot was fixed a gold ring through which poles of acacia wood overlaid with gold could be placed in order to transport the ark. Ex. 25:15 states that the poles were to remain permanently in the rings, but Nu. 4:6 speaks of inserting the poles before the ark was transported. One proposed harmonization sees the poles as normally kept within



A plan of the reconstructed tabernacle (the numbers refer to the article outline II.C.1-11)

the rings but removed of necessity when the various coverings were placed over the ark (vv. 5f.); then they would be reinserted so that the ark could be carried (KD, I/3, 25). 1 K. 8:8 assumes that the poles were permanently in place in the ark in the Solomonic temple.

To the top of the ark a solid slab of "pure gold" was to be fixed. Its length and width matched those of the ark, though its thickness is not specified. This is called the MERCY SEAT (*kappōreṯ*). The Hebrew term is sometimes taken to mean no more than "covering," but it probably includes the idea of propitiation as well (i.e., the place or means of propitiation). On this "mercy seat" blood was to be sprinkled on the Day of Atonement (Lev. 16:14f.). Two gold CHERUBIM (probably human-headed, winged lions) were fixed to the ends of the "mercy seat." Their faces were turned toward each other, leaning downwards toward the mercy seat; their wings were outstretched.

The ark was to be the only furnishing in the most holy place. The stone tablets containing the Decalogue were placed inside it. Ex. 16:33f. seems to indicate that a jar containing manna was placed in front of the ark (called the "testimony"; cf. 30:36); Aaron's rod was later

placed here as well (Nu. 17:10 [MT 25]; but cf. He. 9:4, which says that these items were contained in the ark). The "book of the law" mentioned in Dt. 31:26 was also kept at the side of the ark.

It was "from above the mercy seat that was upon the ark of the testimony, from between the two cherubim," that Yahweh spoke to Moses (Nu. 7:89; cf. Ex. 25:22; 30:6, etc.).

2. Table for the Bread of the Presence (Ex. 25:23-30). The instructions call for a table of acacia wood overlaid with "pure gold," 2 cubits long, 1 cubit wide, and 1½ cubits high. Like the ark, it was decorated with a rim of gold, apparently running around the edge of the ends and sides. The "frame a handbreadth wide" (v. 25) was probably a rail connecting the legs; it also had a gold rim. A golden ring was fixed to each of the four legs, close to the "frame" at the "four corners" (perhaps where, according to Josephus *Ant.* iii.6.6 [139f.], the legs began to be rounded about halfway down). Poles of acacia wood overlaid with gold were inserted in the rings when the table was carried.

"Pure gold" was to be used in making "plates" (on which the bread was brought to the table or laid on it), "dishes" for the frankincense (cf. Lev. 24:7), and "flagons" and "bowls" (larger and smaller vessels respectively) used in pouring libations. Lev. 24:5-9 provides detailed instructions for setting forth the "bread of the Presence" (*see* PRESENCE, BREAD OF THE).

The table was to be located in the holy place on the north side (Ex. 26:35).

3. Lampstand (Ex. 25:31-40; cf. Lev. 24:1-4; Nu. 8:1-4). A LAMPSTAND made from one talent of "pure gold" was to be placed at the south side of the holy place, positioned in such a way that it would illuminate the area in front of it. According to instructions it had a central "shaft" with three "branches" rising upwards and outwards from the two sides of the shaft, making six branches (Ex. 25:32). The shaft rested on a "base" that is not described; some have suggested a tripod-type support, though Meyers's study, based on archeological parallels, finds it more likely that the lower part of the shaft was simply thicker than the upper part.

At three places on each branch were "cups made like almonds" (v. 33) accompanied by a downward-turned floral capital (so Meyers; RSV "capital and flower"). The central shaft (called the "lampstand" in vv. 34f.) also had such ornaments, but the description of their arrangement is not clear. Assuming that its "four cups made like almonds" (v. 34) are to be distinguished from the three capitals (one under each pair of branches, v. 35), we may conclude that two of the "cups" were placed above the highest pair of branches, the other two below the lowest pair. The location of the "seven lamps" is not given. The older assumption that one was placed at the top of each branch lacks archeological parallels from this period, and it is possible that a bowl with seven spouts was at the top of the central shaft. The lampstand was to be supplied with "snuffers" or tongs for drawing up the wicks, and "trays" or snuff-dishes, also of "pure gold."

Although Ex. 30:7f. and Lev. 24:1-4 might seem to suggest that the lamps burned throughout the night only, being "set up" each evening and "dressed" each morning (cf. 1 S. 3:3), Ex. 27:20 and Lev. 24:2 state that the lamps were to burn continually. In fact, the tabernacle would require illumination at all times.

4. Curtains (Ex. 26:1-14). In a narrow use of the term, "tabernacle" refers in 26:1-6 to the decorated curtains that formed the "dwelling" proper. Ten "curtains," each

An illumination from a medieval MS (A.D. 1299) showing various tabernacle objects: upper left, the tablets of the Decalogue and the two cherubim on the ark cover; lower left, the table for the bread of the presence; upper right, the lampstand with tongs and snuffers; lower right, the jar of manna between a barren rod and Aaron's budding rod (Bibliotèque Nationale, MS Hebr. 7, fol. 12v)

measuring 28 cubits by 4 cubits, were to be made of fine quality linen. With wool dyed "blue, purple, and scarlet," figures of cherubim were skillfully woven into the curtains. Five of the curtains were to be fastened together to form one broad tapestry, with a second tapestry made from the remaining five. Fifty violet "loops" on the outer curtain of each of the two tapestries allowed these to be joined by gold "clasps," thus forming a single tapestry 40 cubits long by 28 cubits wide. Since the tabernacle structure was to be 30 cubits long and 10 cubits high, the 40 cubits of tapestry would cover the length of the roof, then reach to the ground at the back; it would not extend down the front. The clasps joining the two halves of the tapestry would come 20 cubits from the front of the sanctuary. Since the tabernacle was to be 10 cubits wide, the 28 cubits of the tapestry breadth would cover the width of the roof and extend down 9 cubits on each side, ending 1 cubit above the ground.

To protect the tapestry, a covering of goats' hair (called a "tent" in 26:7-13) was to be laid over it. It was made of eleven curtains, each 30 cubits by 4 cubits, fastened together to make two sets, one of five curtains and the other of six. The two sets were again joined by clasps (this time of bronze) attached to loops (fifty on the outer curtain of each set). The whole covering thus measured 44 cubits by 30. Clearly the 30 cubits of the covering's width stretched over the width of the tabernacle (10 cubits) and down the two sides (each 10 cubits high) to the ground. There is, however, some ambiguity about how the covering was to be placed lengthwise. Of its 44 cubits, 30 would

stretch along the length of the tabernacle and 10 down its back side to the ground. Probably 2 extra cubits were allowed for the back (v. 12b), leaving 2 cubits to be doubled over at the front of the tabernacle (v. 9). Perhaps the latter were to be tucked under the tabernacle tapestry for added protection.

Verse 14 speaks of two further protective coverings, one of tanned rams' skins, the other of "goatskins" (see II.A above). This seems like excessive protection, though it has been suggested that these coverings were used only when the tabernacle was transported (Cole, p. 194).

The tabernacle coverings were apparently kept in place by cords that stretched to bronze pegs driven into the ground (Ex. 27:19; 35:18).

5. Framework (Ex. 26:15-30). The tapestry and coverings were to be supported at the sides and back of the sanctuary by "upright frames" (*qᵉrāšîm*) of acacia wood overlaid with gold. According to the instructions each *qereš* was 10 cubits long and 1½ cubits wide (no thickness is stated) and rested in two silver "bases." Each base had a socket to receive one of the two "tenons" with which each *qereš* was supplied. There were twenty *qᵉrāšîm* on each of the two sides of the sanctuary, six at the back, and an additional two at the back corners for added support.

What is meant by the *qᵉrāšîm*? Traditionally they have been understood as solid boards, twenty of which would form a continuous wall stretching the length of the tabernacle. But this does create problems. Would a sanctuary with solid walls of gold-plated wood be called a "tent"? How portable would it have been? Would not the fine tapestry, with figures of cherubim interwoven, have been hidden from view at the sides and back by the walls?

For these and other reasons, Kennedy (*HDB*, IV, 653-668) suggested that the *qᵉrāšîm* be understood as open "frames" made of two "uprights" (so he understood the "tenons" of 26:17) resting in silver bases, and having horizontal "crossrails" (the Hebrew term rendered "for fitting together" by the RSV in v. 17 means "joined by a cross-piece"). His explanation has been widely adopted, though there are still many scholars who prefer to understand the *qᵉrāšîm* as solid boards.

Added horizontal support for the framework was to be provided by "bars" of acacia wood overlaid with gold, which passed through rivs of gold attached to the "frames." Five bars were provided for each of the two sides as well as for the back. One of these (the middle bar) would stretch the entire length of each side (about 14 m., 45 ft.!). The two bars above and the two below were presumably each to stretch half the length.

The construction of the two additional "frames" at the back corners is described in 26:24, but the text is obscure. Kennedy suggested that the last frame at each end of the back was doubled. The second frame would buttress the first, sloping upwards from the outside and ending just under the uppermost of the horizontal bars described in vv. 26-29.

Earlier discussions of the tabernacle were sometimes concerned about how such an apparently flat-roofed structure could be called a "tent," and how sagging of the coverings would be prevented. Some suggested that the "tent" must have had a ridge-pole from which the roof sloped downwards to the supporting framework on the sides. Such a view would require that the "frames" at the back, as well as the pillars supporting the veil and the screen at the front, varied in height, the center ones being highest. The complete silence of the text on any of these measures, however, has led to the general abandonment of such hypotheses.

6. Veil (Ex. 26:31-35). The sanctuary proper was to be divided into two compartments, the "holy place" and the "most holy place," by a veil made from wool dyed "blue, purple, and scarlet," with linen perhaps used to highlight the cherubim design. The veil was suspended by means of gold hooks from four pillars of acacia wood overlaid with gold, set in silver pedestals. It was to be placed directly beneath the clasps by which the two halves of the tabernacle tapestry were joined. As noted above, the clasps came 20 cubits from the front of the tabernacle. The holy place was thus 20 cubits by 10, and the most holy place 10 cubits by 10.

Leviticus 16 uses a different terminology here. It calls the outer compartment of the tabernacle (elsewhere called "the holy place") the "tent of meeting" and refers to the inner compartment as "the holy place within the veil." Note too that He. 9:3 calls the veil "the second curtain" to distinguish it from the screen at the tabernkle entrance.

7. Screen (Ex. 26:36f.). A screen was to be placed at the front of the tabernacle, suspended by means of hooks of gold from five pillars of gold-covered acacia wood resting in bronze pedestals. The screen required the same materials as the veil, but less elaborate workmanship; because the screen involved no cherubim figures, the work could be assigned to an embroiderer rather than a more skilled pattern weaver.

8. Altar of Burnt Offering (Ex. 27:1-8). This ALTAR was to be made of acacia wood overlaid with bronze. According to the instructions it was square-shaped (5 cubits by 5, and 3 cubits high), with horns projecting from the four corners. Halfway up it was circled by a projecting ledge; presumably a priest would stand on this ledge while offering a sacrifice (cf. Lev. 9:22). The outward edge of the ledge was supported by a vertical bronze grating. To the corners of this grating were fixed bronze rings through which bronze-plated acacia poles could be placed for transporting the altar. Implements of bronze were to be supplied for the altar: "shovels" to collect the ashes, "pots" to carry them away, "basins" from which the blood of sacrificial animals would be tossed against the altar, "forks" for arranging the flesh on the altar, and "firepans" for removing coals of fire from the altar.

It has often been suggested that the inside of the altar, which was "hollow" (Ex. 27:8), must have been filled with earth (cf. 20:24f.). Alternatively, the altar may have had some kind of bronze top from the very beginning (cf. the altar "hearth" in Lev. 6:9 [MT 2]), though this is not specified in Exodus. According to Nu. 16:36-40 (MT 17:1-5) the bronze censers of Korah's men were later hammered into sheets for covering the altar.

The altar was to be placed in the courtyard outside the tabernacle entrance (Ex. 40:6). The actual slaying of animals would be N of the altar (cf. Lev. 1:11) and the animal parts would then be arranged on the altar. The ashes would later be dumped E of the altar (Lev. 1:16).

The fire on the altar was never to go out, not even during the daily cleansing of the altar (Lev. 6:8-13 [MT 1-6]). Burnt offerings were to be sacrificed on this "bronze altar" each morning and evening (Ex. 29:38-42; Nu. 28:3-8). Here individual Israelites were to bring their various sacrifices and offerings (Lev. 1-3). According to 17:8f. this was to be the exclusive site of Israelite "burnt offerings and sacrifices."

9. Courtyard (Ex. 27:9-19). As specified in the instructions, the tabernacle was surrounded by a rectangular courtyard 100 cubits long on the north and south sides and 50 cubits on the east and west. The courtyard was enclosed by hangings of fine white linen 5 cubits high, which were suspended by silver hooks from pillars of

wood: twenty pillars on the north and south sides, ten on the east and west. The hangings were kept in position by cords (cf. 35:18) that were stretched to bronze pegs driven into the ground. The pillars, standing in bronze bases, had capitals overlaid with silver. Narrow strips of silver ("fillets") encircled the pillars, probably at the base of the capitals. (The "fillets" have also been understood as silver rods connecting the pillars, though this seems less likely.)

The eastern side of the courtyard was to be left without hangings for a space of 20 cubits. This entrance was covered by a screen made of the same materials as the screen at the tabernacle front, suspended from four pillars.

The arrangement and number of the pillars of the courtyard have been the subject of much discussion. If one assumes that there was one pillar for each 5 cubits of hangings and that no pillar was counted twice (i.e., the pillars at the four corners of the courtyard were reckoned with only one of the two sides they linked), a total of sixty pillars is reached. But if, e.g., the pillar at the northeast corner is to be counted both among the twenty assigned to the north side and the ten assigned to the east, the total is fifty-six pillars. The exact number is not certain.

The courtyard of the tabernacle could be entered by lay Israelites of both sexes when they brought their sacrifices and offerings to "the entrance [RSV door] of the tent of meeting" (Lev. 1:3; 12:6; 14:23; 15:14; etc.) and when they gathered to hear a divine message (8:3f.; Nu. 10:3; 27:2; etc.). It thus had less sanctity than the tabernacle itself, from which the laity was barred. Nonetheless it still possessed a measure of sanctity: here "holy things" were to be eaten (Lev. 6:16, 26 [MT 9, 19]; etc.), and Israelites in a state of ritual impurity were not allowed to approach (e.g., 12:4).

10. Altar of Incense (Ex. 30:1-10). The altar of incense was to be located in the holy place, "before the veil that is by the ark of the testimony" (30:6; cf. 40:5, 26). (He. 9:3f. states that it was located in the inner compartment of the tabernacle, the "holy of holies"; but such a location would have made the *daily* burning of incense [Ex. 30:7f.] impossible due to restrictions on entering the holy of holies [Lev. 16:2; He. 9:7].) Made of acacia wood overlaid with "pure gold," this altar was 1 cubit square and 2 cubits high with four horns projecting from the corners and a rim ("molding") of gold encircling it. On two sides of the altar, just below the rim, were fixed two gold rings through which poles of acacia wood overlaid with gold were placed when the altar was transported.

Every morning and evening the high priest was to offer incense — the only offering permitted on this "gold altar." Once a year he was to make "atonement" for the altar by applying blood to its horns (Ex. 30:10).

11. Laver (Ex. 30:17-21). The instructions call for a basin ("laver") of bronze to be placed in the tabernacle courtyard between the entrance of the tabernacle and the altar of burnt offering. With the water it contained the priests were to wash their hands and feet before entering the tent or offering sacrifice. According to Ex. 38:8 the LAVER was made from bronze mirrors supplied by "the ministering women who ministered at the entrance [RSV "door"] of the tent of meeting." The way in which the women "ministered" is not specified.

D. Construction, Transportation, and Cultic Worship. Two divinely chosen and equipped men, Bezalel and Oholiab, were put in charge of the work of constructing the tabernacle (Ex. 31:1-11). The participation of the whole community is stressed, however (35:10-29). Men and women alike brought the needed materials. The construction work was carried out by "every able man" (35:10; 36:1f., 8; etc.), while competent women spun the needed yarn (35:25f.). The narrative stresses that all the work was done in precise accordance with the commands of Yahweh (e.g., 39:42f.). This point is reinforced by chs. 35-39, which largely repeat the instructions given earlier, now as a description of the way in which they were carried out.

Nine months after the Israelites arrived at Sinai (Ex. 40:1, 17; cf. 19:1) the tabernacle was erected. The tent and its furnishings were then anointed by a special oil (40:9-11; Lev. 8:10f.; cf. Ex. 30:22-33). When the work was complete, the tabernacle is said to have been filled with Yahweh's glory as He took up residence in the midst of His people. A cloud covered the tabernacle, and its movements indicated to the Israelites when their travels were to begin (cf. Nu. 9:15-23).

The layout of the Israelite camp is prescribed schematically in Nu. 2–3. In the center was the tabernacle. In its immediate vicinity the priests and Levites were to have their camps. Moses, Aaron, and Aaron's sons were to camp to the east, the rest of the Levite clans on the remaining sides: the Gershonites to the west, Kohathites to the south, and Merarites to the north. At a greater distance from the tabernacle were the camps of the other tribes: Judah, Issachar, and Zebulon to the east; Reuben, Simeon, and Gad to the south; Ephraim, Manasseh, and Benjamin to the west; Dan, Asher, and Naphtali to the north. What emerges is a picture of an ordered, holy camp with Yahweh at its center, the guardians of His sanctuary in closest proximity (cf. 1:53), the remainder of His people at a greater distance, and all that would defile banished "outside the camp" (5:1-4).

Similarly, careful instructions are given for the order of the camp on its journeys. The tribes camped to the east would proceed first (2:9), followed by those to the south (v. 16). The Levites would then follow, carrying the tent of meeting (so 2:17; but 10:17-21 specifies that two Levite clans were to precede the southern tribes). Then came the western tribes (v. 24), followed by those on the north (v. 31).

Numbers 3-4 outlines the Levites' duties of setting up and transporting the tabernacle. The priesthood was reserved for Aaron's sons, while the other Levites were "given to Aaron and his sons" to serve them (3:5-10). A study by Milgrom suggested that the Levitical duties amounted to taking down, transporting, and setting up the tabernacle (their "service," *ʿabōḏâ*) and guarding it from unlawful incursion (their "charge," *mišmereṯ*).

The Kohathite clan was responsible for transporting on acacia poles the ark of the covenant, the table, the lampstand, the incense altar, and the altar of burnt offerings. The Kohathites were not to touch or even see the sacred objects. The priests were instructed to cover these items before the Kohathites approached (4:4-20).

The Gershonites were appointed to carry the tabernacle tapestry and coverings, the screens, the hangings of the courtyard, the cords, and other accessories. They were provided with two wagons and four oxen for transporting these items (4:24-28; 7:7).

The Merarites were responsible for carrying the tabernacle frames and horizontal bars, the pillars of acacia wood, the silver bases, the pillars for the courtyard with their bronze bases, and also pegs, cords, and accessories. For this they were assigned four wagons and eight oxen (4:31-33; 7:8). That four wagons would be inadequate is self-evident; conservative scholars have suggested that there must have been others not mentioned in Nu. 7:8.

III. The Tabernacle Outside Priestly Writings.—To this point attention has been largely restricted to the taber-

nacle (or "tent of meeting") as it is depicted in the so-called "priestly" materials of the Pentateuch. Traditional scholarship has generally understood the priestly account as a literal description of events that took place and of institutions and practices that were established in the wilderness period. Thus conservative scholars have interpreted Pentateuchal texts from non-priestly materials in ways compatible with the priestly texts and have searched the rest of the OT for evidence of the later history of the tabernacle.

Critical OT scholarship has generally regarded the priestly materials not as a simple, historical account but as an idealized portrayal of the wilderness sanctuary. There is, to be sure, a growing appreciation of the fact that the priestly account contains much ancient material, particularly in its description of cultic rites, which would have changed little over the centuries. Moreover, many critical scholars concede that the "priestly"account of the tabernacle itself has its basis in history, since a (much less elaborate) "tent of meeting" probably did exist already in the wilderness period. The nature of the early "tent of meeting" and, in particular, its relation to the ark, remain subjects of lively discussion (Schmitt has provided a helpful survey of the debate). But such scholars believe that the priestly account combines these historical elements from the wilderness sanctuary with features taken from the Jerusalem temple and the developed state of the cult and its officials at a much later period. Some view the tabernacle account as (at least in part) providing legitimacy for later temple worship: the Jerusalem temple becomes the successor to a sanctuary whose plans were given by God to Moses; its rites represent the continuation of those divinely ordained on Mt. Sinai. For others, however, the priestly account is a polemic against worship at a fixed temple, which is seen as incompatible with Israel's roots and the nature of its God (see, e.g, Fretheim). For summaries of the critical position see Driver; Hyatt, pp. 258-264.

The argument that the priestly account of the tabernacle cannot be read as a straightforward historical account is partly based on apparent inconsistencies, improbabilities, and ideal elements in the account itself. The main thrust of the argument, however, rests on the alleged incompatibility of the priestly materials with other materials in the Pentateuch and with the early history of Israel as it can be reconstructed from the rest of the OT. Hence, to round out the traditional understanding of the tabernacle, and to better understand and evaluate the critical position, we need to look outside the priestly materials of the Pentateuch.

A. Ex. 33:7-11. The passage immediately preceding these verses describes the sin of the golden calf and Yahweh's consequent reluctance to accompany the Israelites (32:1–33:6). Moses has been given instructions for the tabernacle (or "tent of meeting") and its worship (chs. 25-31), but construction has not yet begun (chs. 35-40).

According to 33:7 Moses "used to take the tent and pitch it outside the camp, far off from the camp; and he called it the tent of meeting." It was here that Yahweh spoke to Moses "face to face" (v. 11) and here that the Israelites came to inquire of their God. After speaking with Yahweh, Moses would return to the camp, but Joshua would remain at "the tent."

What "tent" is described here? It can hardly be the "tent of meeting" of the priestly materials, which was not yet constructed. We might assume that chronological order has here been abandoned. But against this assumption are other differences from priestly material on the tabernacle. The tabernacle was to be located in the midst of the camp, not "far off from it"; moreover, Moses could hardly be said to"take" it and "pitch" it by himself (unless we assume a looseness of language similar to that in Ex. 40:18). Nor would the non-Levite Joshua have been allowed to remain in the tabernacle described in priestly writings. Also unlikely is the suggestion that Moses' own tent is referred to in 33:7-11 (as the LXX understands the text): it would surely be strange to say that Moses entered his own tent intermittently to speak with Yahweh, then returned to the camp.

The most common traditional view is that this was a *provisional* tent in which Moses spoke with Yahweh before the tabernacle proper was completed (Harrison, p. 587). That it was placed outside the camp is often seen as a temporary punishment for Israel's sin. To be sure, even this view is not without its difficulties. Why is "*the* tent" so abruptly introduced in v. 7 when no such tent has previously been mentioned? And how does one explain that this tent was pitched repeatedly, since the Israelites remained at the same site until the tabernacle was complete? Nonetheless this remains the most satisfactory form of the traditional view.

Critical scholars explain the passage as non-priestly material representing an earlier, more historical view of the "tent of meeting" of the wilderness period. They often assign it to the hypothetical source "JE," though some (e.g., North) think it impossible to assign it confidently to any of the main sources that they recognize in the Pentateuch. This view understands the statement that the tent was pitched repeatedly as evidence that in this early, non-priestly text it was such a simple tent that functioned as Moses' meeting-place with Yahweh throughout the wilderness period. The early (JE) texts picture Yahweh as descending *on various occasions* in a cloud to meet with Moses at the *entrance* to the tent; thus critical scholarship often sees the non-priestly "tent of meeting" as a tent for revelation rather than cultic worship. (The priestly materials, while retaining traces of this earlier view of the tent, are dominated [so Schmitt] by the theme of Yahweh's *continuous* presence in the *holy of holies*, a theme supposedly adapted from the Jerusalem temple theology.) Joshua's sole attendance at the tent is seen by such scholars as more in keeping with the wilderness period than the elaborate Levitical retinue of the priestly account. The location "outside the camp" is seen as further evidence of a difference between the conception of the tent in "JE" and that in "priestly" writings.

B. Nu. 11–12. The "tent of meeting" is also mentioned in the non-priestly material of Nu. 11–12. Here too it seems to be located outside the camp, since those who approach it are said to go "out" to the tent (11:26; 12:4) and are contrasted with those who remain "in the camp" (11:26). Moreover, Yahweh is again said to *descend* to the tent in a cloud (11:25; 12:5). Hence critical scholars see here the same conception of the "tent of meeting" as that of Ex. 33:7-11. The traditional view is that the references here are to the tabernacle of Ex. 25–31, 35–40. One attempt at harmonization suggests that people could be said to "go out" from the camp to the tabernacle even if the latter was in the midst of the camp, provided the tabernacle was in an area clearly separated from that in which the Israelite laity had their tents (Cassuto, pp. 429f.).

C. Dt. 31:14f. Traditionally these verses are read as referring to the Mosaic tabernacle. Critical scholars tend to see here a reference to the primitive "tent of meeting" of Ex. 33 and Nu. 11–12.

This is the only reference to the "tent" in Deuteronomy, and critical scholars do not regard this passage as part

of the original book. The virtual (though not complete) absence of references to the tent in Deuteronomy through 2 Kings forms an important part of the critical argument against the existence of P's tabernacle. This remains, of course, merely an argument from silence unless it can be shown that reference to such a sanctuary, had it existed, would have been necessary in a given context, or that references to existing institutions and practices preclude the existence of P's tabernacle. In the case of Deuteronomy, critical scholars point to the absence of any reference at all to the tabernacle in the protracted recapitulation of Israel's early history, to differences from priestly accounts of the ark (cf. Dt. 10:1-5 with Ex. 25:10-22 and the sequence of events in Exodus), and to a different (and, it is argued, earlier) view of the relationship between priests and Levites than that on which the priestly account of the tabernacle ritual is based (cf. Dt. 10:8; 18:1-8; 33:8-10 with Nu. 3:5-10; 18:1-7). The cultic laxity that Dt. 12:8 presupposes of the wilderness period is also considered incompatible with the elaborate tabernacle ritual recorded in priestly writings.

D. Joshua-Judges. The only explicit reference to the "tabernacle" is in Josh. 22:19; in 18:1; 19:51 the "tent of meeting" is said to have been erected at Shiloh. Nothing suggests that the "sanctuary" at Shechem (24:26; cf. v. 1) was the tabernacle. A typical argument from silence against the historicity of the tabernacle described in priestly literature observes that while Josh. 3–4 elaborately describes the Levites' transportation of the ark across the Jordan, it says nothing about the tabernacle. Judges contains no explicit reference to the tabernacle/tent, though 18:31 does speak of a sanctuary at Shiloh.

E. 1 and 2 Samuel. Here there is but one possible reference to the tent of meeting (1 S. 2:22). Traditionally this verse has been interpreted as indicating the presence of the Mosaic tabernacle at Shiloh. References to the Shiloh sanctuary as a "house" (1:7, 24; 3:15) are also interpreted to mean the tabernacle. More problematic are the references to the same sanctuary as a "temple" (1:9; 3:3) with a doorpost (1:9) and doors (3:15). Traditional scholars have sometimes suggested that by this time the well-worn materials of the tabernacle needed reinforcement, and that the sanctuary thus took on the nature of a more permanent structure.

Critical scholars have generally regarded the reference to the "tent of meeting" in 1 S. 2:22 as a gloss (it is in fact lacking in LXX B and 4QSam^a) that is inconsistent with the references in chs. 1-3 to a "temple" at Shiloh. Haran, however, has regarded the "temple" references as secondary and proposed, based on 2 S. 7:6, that the Shiloh sanctuary was a tent. (In fact, he has proposed that the description of the tabernacle in priestly literature had its historical basis in the tent sanctuary of Shiloh.)

According to the traditional view the tabernacle was located at Nob after the destruction of Shiloh (1 S. 21:1-9 [MT 2-10]; 22:9-19; cf. 4:12-22). Clearly there was a sanctuary there, though the tabernacle/tent is not mentioned.

In 2 S. 7:6 Nathan tells David that Yahweh (and, by implication, the ark) had not "dwelt in a house" from the time of the Exodus, but had been moving about in "a tent and a dwelling" (RSV "a tent for my dwelling"). This text (which is generally regarded as early) gives clear evidence that the ark had been kept in a tent; but it falls short of being evidence for the Mosaic tabernacle, since the reference to a "tent"must at least include the one pitched by David in which the ark was then located (2 S. 6:17). In fact, in 1 Ch. 17:5 the verse becomes: "I have not dwelt in a house . . . but I have gone from tent to tent and from dwelling to dwelling."

Throughout this period the evidence for a plurality of sites where sacrifices were offered (e.g., Jgs. 2:5; 6:24; 20:26; 21:2-4; 1 S. 6:15; 7:17; 9:12; 10:8; 16:1-5) appears to conflict with the regulation in Lev. 17:8f. that the "tent of meeting" alone was to be used for Israel's burnt offerings and sacrifices. (Any suggestion that this regulation was meant only for the wilderness period would seem to be precluded by the inclusion within the commandment of "the strangers that sojourn among [the Israelites]," a stipulation that normally assumes that the Israelites themselves are settled in Canaan; cf. Lev. 19:33; 20:2; 25:6, 45; etc.) The standard critical view is that the regulation in Lev. 17:8f. and the single legitimate sanctuary that it presupposes represent late ideals unknown to this period. Traditional scholars have made a number of counter suggestions: that the earlier law had fallen into disuse or been forgotten in a degenerate age (though it is difficult to attribute such neglect, e.g., to the faithful Samuel); that theophanies at the various locations of altars, or the prophetic status of those who sacrificed, legitimated such practices (though Lev. 17:8f. would seem to exclude this); or that, at least after the disaster at Shiloh and the Philistine capture of the ark (1 S. 4), normal practices were impossible to maintain and certain irregularities were countenanced (though this does not explain the irregularities before 1 S. 4, nor why, if the tabernacle itself continued to exist after the disaster at Shiloh [as at least the Chronicler maintains], the ark was never brought back to the tabernacle after its return to the Israelites [1 S. 6:1–7:2; cf. 2 S. 6:3, 17]).

It should perhaps be said that study of the premonarchic period is beset with difficulties on any view. A scholarly consensus has not been reached on several crucial issues, including the very nature of the Israelite confederation and the question of a central sanctuary.

F. 1 and 2 Kings. Evidently the tent that David pitched for the ark in Jerusalem became the site of a functioning sanctuary (cf. 2 S. 12:20; 15:25) where sacrifices were offered (2 S. 6:17; 1 K. 3:15; cf. 1 K. 1:50-53; 2:28-30). This tent, called the "house of the Lord" (2 S. 12:20) and the "tent of the Lord" (1 K. 2:28-30), must be kept distinct from the Mosaic tabernacle (see III.G below). (Cross has suggested, however, that the tabernacle had its historical base in this tent.)

Some scholars have used 1 K. 3:2-4 in arguing that the tabernacle was not in existence in Solomon's time. This passage excuses the Israelites' (including Solomon's) sacrificing at the "high place" at Gibeon because "no house had yet been built for the name of the Lord." The argument is that the Mosaic tabernacle, had it existed, should have precluded the need to sacrifice at high places. The traditional understanding of this passage is based on the Chronicler's version, which will be discussed below.

Kings has only one reference to the tent of meeting. 1 K. 8:4 states that it and the sacred vessels that it contained were brought to Solomon's newly built temple. This is understood by conservative scholars to represent the final stage in the history of the tabernacle. Critical scholars point out that the only sacred tent previously mentioned in Samuel-Kings to which the passage could refer is that pitched by David in Jerusalem; but they tend to view the reference here as a secondary accretion to the text.

G. 1 and 2 Chronicles. Whereas critical scholars have argued that the authors of Deuteronomy — 2 Kings did not have access to the priestly account, they have universally agreed that the Chronicler did. It is clear that this author was concerned to account for the later history of the tabernacle.

According to Chronicles the tabernacle was at Gibeon during the reigns of David and Solomon (1 Ch. 16:39; 21:29; 2 Ch. 1:3) until it was brought up to Solomon's temple (2 Ch. 5:5). But the Chronicler is also aware of the tent that David pitched for the ark in Jerusalem (1 Ch. 15:1; 16:1; 2 Ch. 1:4; etc.). Thus he describes worship as being carried on at both sites, with the Levites divided between them: they provided musical worship in both Jerusalem and Gibeon, while Zadok offered the daily burnt offerings at the tabernacle in Gibeon (1 Ch. 16:37-42; cf. also 1 Ch. 6:31-53 [MT 16-38]).

The earlier history of Kings does not mention the tabernacle at Gibeon but does speak of a "great high place" there (1 K. 3:4). Thus while traditional scholarship, following Chronicles, has maintained that the tabernacle was in Gibeon during the time of David and Solomon, many critical scholars have suggested that the Chronicler was merely attempting to provide a legitimate basis for Solomon's sacrifice at Gibeon's high place (cf. 1 K. 3:2-4 with 2 Ch. 1:3-6).

IV. Other Tent Sanctuaries.–The search for ancient Near Eastern parallels that might illuminate aspects of the biblical tabernacle has proved to be a fruitful area of study. *See* EXODUS, BOOK OF III.C for several such parallels. Others include the report by Diodorus Siculus (xx.65.1) that the Carthaginians carried a holy tent with them into battle. Late in the 12th cent. B.C. the Midianites apparently covered an abandoned Egyptian temple at Timna with curtains and used it as a tent shrine (though of course not a portable one; see Rothenberg). The parallel perhaps cited most often (though the resemblance is slight and the attestation late) is the *qubbah*, a small tent of red leather used by Arab tribes already in pre-Islamic times (deVaux, *Ancient Israel*, I, 296f.). The idols of the tribe were carried in the *qubbah*, and it was transported on camel-back in religious processions and significant battles.

Of course, tent sanctuaries are attested within the OT itself even apart from the tabernacle texts. As observed above, the tent that David pitched for the ark was used as a sanctuary. 2 K. 23:7 and Ezk. 16:16 may indicate that tent shrines were set up at some high places. Some have also suggested that Nu. 25:8 refers to a tent shrine.

V. Significance.–Our intention here is not to interpret and apply the tabernacle accounts for the modern reader but simply to note certain theological emphases in the texts themselves in their canonical form. Clearly the tabernacle texts were not intended to be merely (or even primarily) records of what once happened in the past. The texts were shaped with certain theological principles in mind. To ignore these principles while giving great attention to the physical details of construction and layout would be to distort the nature of the texts no less — and perhaps a good deal more — than to wring an allegorical significance out of every detail in the manner of a former era.

No reader of Exodus — Numbers can fail to be struck by the great attention given to the details of the tabernacle and its rites. This attention is presented as a divine concern: according to Ex. 25-31 it is Yahweh who delivers to Moses the painstaking instructions for the tabernacle's design, and it is Yahweh who later prescribes the procedures to be followed in its worship and transportation. Clearly the reader is meant to be impressed by the necessity of worshiping God on the terms that He prescribes, and by the claim that the divinely ordained terms are enshrined in the cult conducted by the descendants of Aaron.

The conviction that Yahweh is sovereign in His dealings with people underlies all the accounts. There is no suggestion that human beings, by building the tabernacle and observing its rites, have gained the means of manipulating God and guaranteeing His favor for their own endeavors. What the texts demonstrate is rather Yahweh's desire to "meet" with His covenant people and to manifest His glory in their midst (Ex. 29:43). Furthermore, the divine presence in Israel's midst is jeopardized by ritual impurity, ceremonial irregularity, and moral failings. Infringement in any of these areas leads repeatedly to disaster, and God's favor is restored not by any automatic ritual means but only as He sovereignly deigns to be appeased by the fervent prayers and zealous acts of His faithful people.

Particularly striking is the account of the golden calf incident between the instructions for erecting the tabernacle and its actual construction (Ex. 32–33). God's chosen, redeemed people could not remain faithful for forty days in Moses' absence; this imperiled Yahweh's continuing presence in His people's midst. It was only in response to Moses' earnest entreaty that Yahweh graciously relented and allowed His "presence" to go with them (33:14).

Much theology finds concrete expression in the nature of the tabernacle and its worship. Thus God's majesty is displayed in the grandeur required of His sanctuary. His holiness is expressed in the restrictions on access to His sanctuary. The divinely ordained sacrificial system shows that people can approach Yahweh only on the terms He appoints, and only as provision has been made to atone for sin.

But the central theme of the tabernacle account remains Yahweh's desire to dwell with His people. Here the tabernacle takes its place in the unfolding drama of the Bible as a whole. Humanity's unrestricted communion with God is forfeited by sin (Gen. 3). The tabernacle testifies, however, to God's continuing desire to commune with His people. Yet the communion made possible by divine grace and appointment in the tabernacle is in constant jeopardy because of human impurity and guilt. In the NT the theme is carried further. The language of the tabernacle is used to show how the Word of God became incarnate and "dwelt" (Gk. *skēnóō* is cognate with *skēnḗ*, "tent") among us (Jn. 1:14). The consummation of the divine plan will be reached when the "dwelling [lit. "tent"] of God is with men" (Rev. 21:3).

It is the Epistle to the Hebrews that most clearly develops the relation between the tabernacle of the old dispensation and the "great salvation" of the new. The author emphasizes the divinely ordained but imperfect role that the tabernacle and its services played. The tabernacle was but a copy of the heavenly sanctuary (He. 8:5; 9:24; cf. also Acts 7:44; Rev. 15:5) and was designed to foreshadow things to come (10:1). Its regulations were temporary (9:10), its sacrifices imperfect (9:9; 10:1-4), and the access it afforded to the divine presence very limited (9:7f.). But Christ has offered Himself as a perfect, once-for-all sacrifice (9:12-14, 26). He has entered the heavenly sanctuary not made with human hands (8:2; 9:11), thereby opening a "new and living way" into God's presence for all believers (10:19-22; cf. 6:19). Believers can therefore approach the "throne of grace" (i.e., the heavenly counterpart of the tabernacle "mercy seat") with the confidence that they will obtain the mercy and grace that they need (4:16).

S. WESTERHOLM

TABERNACLES, FEAST OF. *See* BOOTHS, FEAST OF.

TABLE. An English term derived from Lat. *tabula*, which means "board" or "flat slab." Thus Eng. "table" first denoted any flat surface, but especially one used for writing. Later it came to be used in a more specialized sense of a piece of furniture with a horizontal surface. Eventually "table" in the sense of a "surface for writing" was replaced by the diminutive "tablet," but "table" is still used often in this sense by the English versions. Thus in the English Bible "table" is used in a variety of senses. Sometimes it designates a surface or piece of furniture used for purposes of eating, working, displaying objects, etc. But it can also describe a dressed slab of wood or stone that is used for writing. Such "tables" were used in antiquity to promulgate formal legal enactments. For the Hebrews the Decalogue (Ex. 20:2-17), which constituted the basis of covenant law, was originally inscribed upon two tables of stone (Ex. 24:12). Similarly, the essence of the ancient Romans' corpus of law was inscribed on the Twelve Tables, promulgated in 451 B.C.

I. Biblical Terms
II. Types of Tables
  A. For Eating
  B. For Ritual Use
  C. For Inscriptions and Scribal Use
  D. For Business Use
III. Figurative Usage

I. Biblical Terms.—In the OT two terms are frequently translated "table." Heb. *lû(a)ḥ* is used predominantly of the stone tablets inscribed with the divine law that were presented to Moses on Mt. Sinai (Ex. 24:12; 31:18; 32:15f., 19; 34:1, 4, 28f.; Dt. 4:13; etc.). It is also rendered "table" by the AV (RSV "tablet") in Prov. 3:3; 7:3; Isa. 30:8; Jer. 17:1; Hab. 2:2. The same Hebrew term can be used to describe wooden planks (Ex. 27:8; Ezk. 27:5) and metal plates (1 K. 7:36). *Šulḥān* originally signified a hide spread out on the ground for meals, much like what the bedouin use today. The term is used variously to describe a domestic table (Jgs. 1:7; 1 S. 20:29; etc.), the table for the bread of the Presence in the sanctuary (Ex. 25:23-30; etc.), temple tables — whether of Yahweh (2 Ch. 4:8; Ezk. 40:39-43) or of heathen gods (Isa. 65:11), and the altar of sacrificial offerings (Mal. 1:7, 12). In addition, the idea of sitting at table is conveyed by the context in several passages. In Gen. 43:34 the RSV renders *mē'ēṯ pānāyw* (AV, lit., "from before him") by "from Joseph's table," and in 2 K. 25:29 par. Jer. 52:33 it translates *'āḵal leḥem lᵉpānāyw* (AV, lit., "eat bread before him") with "dine . . . at the king's table." In 1 S. 20:5 *yāšaḇ* ("sit") is rendered "sit at table."

In the NT "table" represents several terms. Gk. *trápeza* (lit. "having four feet") denotes a piece of furniture. It is used of a domestic table (Mt. 15:27), the Lord's table (1 Cor. 10:21), a stand at which money is exchanged (Mk. 11:15), and the table for the bread of the Presence (He. 9:2). *Plάx*, the NT equivalent of Heb. *lû(a)ḥ*, denotes a tablet. In He. 9:4 it designates the "tables of the covenant"; cf. 2 Cor. 3:3, which contrasts stone tablets with the tablets of human hearts (AV "tables"). The *pinakídion*, a small "writing tablet" (RSV), was usually made of wood overlaid with wax (Lk. 1:63; AV "writing table"). The AV also uses "table" to render Gk. *klínē*, "bed," in Mk. 7:4. The term occurs in some fifth-century uncials (e.g., A D) and many later Greek and Latin MSS, but not in the earliest MSS (e.g., ℵ B); hence it is omitted from most modern versions. Several Greek verbs also convey the idea of sitting or reclining at a table: *anákeimai* (Mt. 9:10; 26:7, 20; Mk. 14:18; 16:14; Lk. 22:27; Jn. 12:2; 13:28), *anaklínō* (Mt. 8:11; Lk. 12:37; 13:29), *anapíptō* (Lk. 11:37; 17:7; 22:14), *katákeimai* (Mk. 2:15; 14:3; Lk. 5:29; 7:37; 1 Cor. 8:10), *kataklínō* (Lk. 7:36; 24:30), *synanákeimai* (Lk. 7:49; 14:10, 15).

II. Types of Tables.—A. For Eating. Such tables as have been found in the ancient Near East seldom stand more than 45 cm. (18 in.) above the floor. In nomadic times and among the common people, meals were generally taken squatting or sitting on the ground (cf. the reference to rugs in Isa. 21:5), and the "table" consisted of a mat or tray on which the food was placed. Only the wealthy could provide a table and chairs for themselves and their guests (cf. the wealthy woman of Shunem's provisions for Elisha, 2 K. 4:10). Illustrations on reliefs and painted walls show banquet scenes in which nobles are seated on small stools around low tables. Fragments of a low bronze stool from the Persian period have been recovered from Sharuhen (Tell el-Far'ah South; *see* picture in FURNITURE), but any accompanying table has long since disappeared.

Although the custom of reclining on couches around a low table was already known by the degenerate rich in Amos's day (Am. 6:4; cf. 3:12), by NT times it had become an established practice — at least at banquets or feasts — due to Greek and Roman influence. Those who dined in this manner would lean on their left arm for support and eat with their right hand. Whereas the OT always refers to "sitting" (Heb. *yāšaḇ*) at meals, the NT invariably uses verbs for "reclining" (Gk. *anákeimi*, etc.). This does not necessarily indicate, however, that meals were always taken in a reclining position, or even that a table was always used. Very likely it remained common practice for most Jews to eat in a squatting or sitting position except for special banquets (see *TDNT*, VIII, 210f.). Those who could afford them acquired tables decorated extensively with inlays of costly woods or ivory. Cicero is reported to have paid a high price for a low table made of citron wood (*In Verrem* ii.4.17).

Position at the table (which in Roman times was often of a semicircular or horseshoe shape) defined the relative importance of guests at a banquet, the most exalted position being immediately to the right of the doorway through which the servants brought the food. The "lowest place" was to the left of the door, which was the last place to be served as the slaves carried the food around the room (cf.

Lk. 14:8-10). Domestic pets often scavenged for food dropped near or under the table by the guests (cf. Mt. 15:27).

See also MEALS.

B. For Ritual Use. The most prominent table in Hebrew religious life was the one designed to exhibit the bread of the Presence (AV "shewbread"). Its specifications (Ex. 25:23-30) indicate that it was of rectangular shape and stood about 70 cm. (27 in.) high. Its narrow width of one cubit emphasized its nature as a display stand rather than a conventional table. This gold-plated structure stood outside the curtain (Ex. 26:35) on the north side of the tabernacle (40:22), and the loaves placed upon it were renewed ritually by the attending priest every sabbath day (Lev. 24:5-8). In addition the table accommodated plates for the twelve loaves, as well as dishes (Heb. *kappōṯ*) for incense, flagons, and bowls for drink offerings. The Kohathites were given the responsibility of attending to the table (Nu. 3:27-31), and they were the only personnel authorized to move it when the Israelites transferred their encampment to another location (4:4-8).

Apparently the wilderness wanderings and the subsequent settlement in Canaan took its toll on the tabernacle furnishings, and this led Solomon to construct a new table of solid gold (1 K. 7:48). This structure was used until the Babylonians attacked Jerusalem and burned the temple (2 K. 25:9; Jer. 52:13) in the time of Zedekiah. During the postexilic period a new table was constructed, but this was carried off by Antiochus IV Epiphanes (175-164 B.C.), who looted the temple (1 Macc. 1:22). The vessels were subsequently replaced by Judas Maccabeus (4:49-51) and remained in use until the Romans destroyed Jerusalem in A.D. 70. This table is depicted on the Arch of Titus in Rome, along with other spoils of the campaign, though the accuracy of these sculptures is a matter of some debate. *See also* PRESENCE, BREAD OF THE; TABERNACLE II.C.2.

Other tables used in Israelite cultic rituals included ten for temple use (2 Ch. 4:8) made by Solomon, apparently from silver that David had provided for that purpose (1 Ch. 28:16). Precisely what role these tables played in Israel's rituals is not clear. Perhaps they accommodated the dishes, bowls, and other vessels that had been placed on the original golden table in the wilderness period, leaving the sanctuary table free to display the bread of the Presence. Ezekiel described more specifically the function of the twelve temple tables (40:39-43) in his vision of the new temple. Eight of these were to be set aside as the place where the burnt offering, the sin offering, and the guilt offering were slaughtered. The remaining four were apparently low square stands of hewn stone (about 45 cm. or 18 in. high) upon which were placed the sacrificial instruments and the flesh of the offerings. The "Lord's table" mentioned by Malachi (1:7, 12) was the altar of burnt offering, which the Jews had polluted by offering improper sacrifices. Isa. 65:11 refers to the idolatrous rite of preparing a meal for a pagan god, a practice that was typical of Canaanite religion.

C. For Inscriptions and Scribal Use. The tables containing the Ten Commandments were of hewn stone (Ex. 24:12) and were inscribed on both sides by God (32:15f.; Dt. 9:9-11), signifying the permanence of the covenant. The design was probably similar to Egyptian cultic stelae that have rounded tops (*see* pictures in INSCRIPTIONS). After Moses smashed the first set of tablets in response to the Israelites' covenant-breaking idolatry (Ex. 32:19; Dt. 9:17), he cut a second set from stone (Ex. 34:1-4; Dt. 10:1-3), and God again wrote His laws upon them (Ex. 34:28; Dt. 10:4). The two stone tablets were stored subsequently in the ark of the covenant. If the Hebrew covenant followed the familiar pattern of Hittite suzerainty treaties, as seems probable, these tablets were duplicate copies of the commandments.

Writing tablets were used by scribes for various types of communication (cf. Isa. 8:1). In NT times such tablets normally consisted of a piece of flat wood covered with wax (cf. Lk. 1:63), which made erasures or corrections easy (see Bouquet, pp. 114f.).

D. For Business Use. One type of table found in business circles was the low stool behind which the moneychangers sat on the ground (cf. Mt. 21:12; Mk. 11:15; Jn. 2:15). To overturn such tables, as Jesus did, would not have required particularly vigorous effort.

III. Figurative Usage.—"Table" is often used by metonymy to represent the meal that is served on it. In the ancient Near East eating together was an expression of intimate fellowship and trust (cf. Lk. 22:21, which emphasizes that Jesus' betrayer was one with whom He had shared table fellowship). To be invited to eat at the king's table was a great honor (cf. 2 S. 9:7, 10-13; 1 K. 2:7; 4:27; etc.). On the other hand, being reduced to eating the leavings of someone else's table signified great misery (e.g., Jgs. 1:7; Lk. 16:21; cf. Mk. 7:28). Sometimes the imagery of a banquet of thanksgiving is used to depict God's provision for His people (e.g., Ps. 23:5; 78:19). In a personification of Wisdom (Prov. 9:1f.) the sage describes her as having built her house, provided food, and laid her table, thereby symbolizing the blessings consequent upon following her precepts. By contrast, Ezekiel depicted Israel as a whore who had spread out a feast in order to attract lovers (Ezk. 23:40-42). Isaiah, in attaching much of the blame for Israel's spiritual and moral bankruptcy to the stupid self-indulgence of its priests and prophets, describes how far their debauchery has gone: "all tables are full of vomit" (Isa. 28:8).

Whereas the table of the Lord normally signified blessing to those who kept His covenant, it could become a symbol of utter destruction to God's enemies. In Ezk. 39:17-20 the Lord instructs the prophet to summon all the birds and animals to His table, where the fallen members of Gog's forces will be spread out for them to consume. In describing the end times Jesus employed the imagery of a feast in which believers would partake at His table with the patriarchs of old (Mt. 8:11; Lk. 13:29; 22:30). Unbelievers, by contrast, would be cast into "outer darkness" when the kingdom of God was established, to their great amazement and sorrow (Lk. 13:28).

"Table" in the sense of a writing tablet is also used figuratively. Prov. 3:3 enjoins young men to inscribe mercy and truth upon the tablet (AV "table") of their heart (cf. 7:3). The same imagery is used by Jer. 17:1 to describe the ingrained nature of Judah's sin. Paul employed a similar figure in his description of the Corinthian Christians as Christ's epistle, which has been inscribed by the Spirit not on hard stone tablets but upon the receptive, fleshy tablets of the human heart (2 Cor. 3:3).

TABLE OF NATIONS. The name by which the genealogy of Gen. 10 is commonly identified. Since the chapter is

cast in the form of a genealogy rather than a table, the title is somewhat misleading. The function and message of Gen. 10 in its present context may be determined by examining its literary form.

III. Function, Message, and Date

I. Literary Genre.–The introduction of Gen. 10 with *'ēlleh tōl^{e}ḏôṯ*, "These are the generations of . . ." immediately identifies the nature of the text. Forms of this expression occur eleven times in Genesis. Although in some of these occurrences the phrase requires a looser interpretation (e.g., 6:9), in this context (as in 5:1; 11:10; 25:12; 36:1, 9) a rather literal sense is intended. The "table" takes the form of a GENEALOGY similar to many other biblical family trees. In contrast to the linear genealogies of Adam in Gen. 6 and Seth in 11:10-26, this family tree is segmented, dividing into three major branches of which each is headed by one of the sons of Noah. As the diagram indicates, each major line has further segmentation. Clearly the author has not been concerned to maintain a balance in either the number of entries or the genealogical depth of the lines. Japheth's line is traced to three generations, Ham's to four, and Shem's to six. It is equally obvious, nevertheless, that the author has followed a basic pattern in each branch. Each contains its own introductory formula, (Japheth, 10:2; Ham, v. 6; Shem, v. 22), a list of names, and a concluding statement (Japheth, v. 5; Ham, v. 20; Shem, v. 31), producing three semi-independent family trees. Each could stand by itself; but the formal introduction (v. 1) and conclusion (v. 32) provide a framework for the entire document, emphasizing its unity and completeness.

II. Form.–A. Preamble. The formal nature of the preamble (Gen. 10:1) demonstrates that the "table" is the product of deliberate planning. The introduction contains two parts. The first defines the genealogy's scope: Noah and the descendants of his three sons. The second identifies its chronological context: "after the flood." This phrase creates an intentional link with the preceding narrative, in which the entire human race, except for this family, has been eliminated (cf. 9:28; 11:10). The deluge is clearly acknowledged as a divider of epoch, separating the previous civilization from that of the author (cf. the Sumerian King List, *ANET*, p. 265). Consistent with the Noachian blessing in 9:1-3, Noah is presented as a new Adam, the fountainhead of the new human race.

B. Genealogical Formulas. Although some genealogies begin with the most recent member of the line and trace their history back to the original ancestor (e.g., the lineage of Jesus, Lk. 3:23-38; section 2 of the Assyrian King List [Gelb, pp. 211f., 223f.]), this one follows the more common pattern of beginning with the earliest ancestor. The direction of the genealogy is indicated by the use of the genealogical formula, "The sons of A (were) X, Y, Z, etc.," as the formal introduction to each segment (Gen. 10:2, 6, 22; cf. the sons of Jacob, 35:22b-26). This formula is used to introduce second and third generations as well (Gomer, 10:3; Javan, v. 4; Cush, v. 7; Raamah, v. 7; Aram, v. 23). In the second and third generations of the Hamitic and Shemitic lines a second type of genealogical formula occurs: "A became the father of X, Y, Z, etc." This form appears first with the announcement of Nimrod, the sixth son of Cush (v. 8), and continues with the descendants of Mizraim/Egypt (vv. 13f.) and Canaan (v. 15). It reappears later when the sons of Arpachshad (v. 24) and Joktan (v. 26) are introduced (cf. the same form in the genealogies of Cain, 4:18; Adam, 5:3-32; Shem, 11:10-26). A third formula, "To A were born X and Y," is used for the descendants of Shem (v. 21) and Eber (v. 25).

The variation in formulas is generally attributed to the sources underlying the present document, the first one being recognized as "P," the second and third as "J" (see CRITICISM III.D; PENTATEUCH IV.C-F). But a comparison with the other genealogical formulas used in Genesis reveals several significant features. (1) A variety of genealogical formulas was available to Hebrew authors. (2) Variation in the formulas used occurs in both linear and segmented genealogies.(3) No genealogy uses only one formula (25:1-4 uses three!). (4) No hypothetical source (J, P, etc.) has a monopoly on any one formula. The use of Heb. *yālaḏ* is not restricted to J, nor is "These are the sons of A . . ." limited to P.

The Chronicler's treatment of these genealogical formulas (1 Ch. 1:1-23) is interesting. Although he sometimes deleted or changed the formulas in other genealogies reproduced from Genesis, and although he omitted some of the "notes" from Gen. 10, he carefully preserved the genealogical formulas in the "table." If, on the one hand, he was not averse to modifying the shapes of the genealogies, he apparently did not, on the other hand, feel compelled to standardize them either. His final document displays many variations in style and form.

It is doubtful that the genealogical formulas should be employed as criteria for identifying or dating the sources behind Gen. 10 (so also M. H. Segal, *Scripta Hierosolymitana*, 8 [1961], 87f.). The variation may be purely stylistic. The special attention given to Nimrod in the "note" (vv. 10f.) may have warranted a less formal introduction than that used up to this point. By attraction this formula was applied then to Egypt's and Canaan's descendants, but when the new line of Shem began the author reverted to the more formal style.

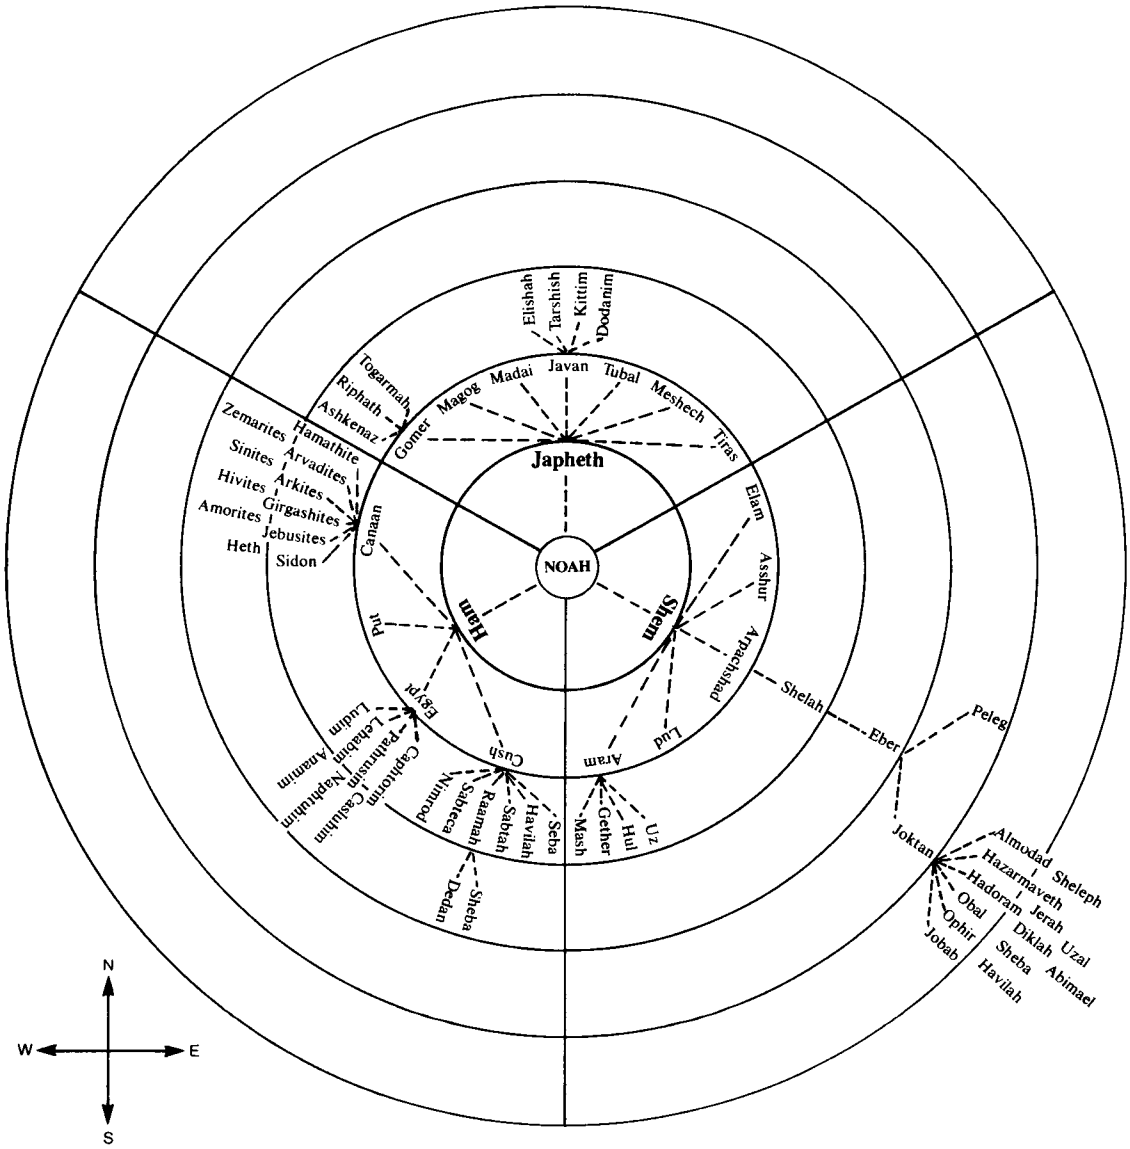
The terms for "son" and "become the father of" in these formulas may legitimately be interpreted more loosely as "descendant" and "become the ancestor of," respectively. Nevertheless, the selection of these terms, along with the introductory *tōl^{e}ḏôṯ* ("generations") formula, requires that the "table" be viewed as an actual family tree. Its function is to demonstrate how the process summarized in 9:17 transpired. The product is a tribal and ethnic map depicting all of the peoples as having a common origin in Noah, the first postdiluvian ancestor.

C. Genealogies. For discussion of the identification, location, and history of each of the names entered in the genealogy, see the separate articles. This article will discuss only the forms of the names and their significance in the context of Gen. 10.

1. Entries. The forms of the names included in the genealogy are bewilderingly diverse. Included are apparent individual names (Shem, Ham, Japheth, Nimrod, Shelah, Eber, Peleg), toponyms (Elishah, Tarshish, Sidon, Ophir), tribal names (many of the sons of Joktan), and gentilics with both a geographical (Arkite, Sinite, Arvadite, Zemarite, Hamathite, Dodanim) and a tribal (Jebusite, Amorite, Girgashite, Hivite) base. These forms have important implications for determining the function of the "table."

2. Telescoping. Ancient genealogies were seldom intended to be exhaustive, including every member in a given lineage. The omission of names is commonly referred

THE GENEALOGIES OF NOAH'S SONS



to as "telescoping." The absence of comparable external data makes it difficult to identify precisely the lacunae in this family tree. The incompleteness of the genealogy is obvious, however. More than three generations are required for the development of large national groups from a single ancestor. The only section for which an external parallel is provided is 10:21-25; the linear sequence from Shem to Peleg is reproduced in 11:10-17. The entries are in perfect agreement with respect to order and form; but the LXX of 11:12 (so also Jub. 8:1; Lk. 3:36) inserts the name Cainan immediately after Arpachshad, suggesting a gap in 10:24.

On the horizontal plane, telescoping is even more obvious. The absence of Edom, Moab, and Ammon, all very important in Israel's history, requires explanation. Furthermore, in none of the three major lines are the branches defined with equal completeness. Apparently the author has selected his entries, not only on the basis of names available to him, but also in accordance with external functional concerns.

The depth of several linear OT genealogies seems to have been artificially determined; e.g., the ten-generation depth of the family trees of Adam (Gen. 5), Shem (11:10-26), and David (Ruth 4:18-22) can hardly have been accidental. (Cf. also the lineage of Jesus in Mt. 1, which is divided into three sections of about fourteen generations each.) Obviously, such considerations have not determined the nature and depth of this genealogy. It is surely not coincidental, however, that the actual number of descendants of Japheth, Ham, and Shem should total seventy (the cities founded by Nimrod and the Philistines are part of a "note" and thus are not considered in the tabulation; see II.D below). The reason for the quota of seventy entries is apparently related to the Hebrew view of the

origins of the nations reflected in the LXX of Dt. 32:8 (also 4QD), which states that the human population was divided into nations according to the availability of patron "sons of God" (angels). If MT "sons of Israel" is preferred, it may point to the seventy who descended with Jacob to Egypt [Gen. 46:27]; cf. Tg. Yerushalmi, longer paraphrase, and Rashi's comm., on which see R. Meyer, "Bedeutung von Deuteronomium 32, 8f. 43 (4Q) für die Auslegung des Moseliedes," in A. Kuschke, ed., *Verbannung und Heimkehr [Festschrift* C. W. Rudolph, 1961], pp. 197-209.) The theory that connects the seventy entries with the seventy sons of Athirat in the Ugaritic texts (*UT* 51:6:46) is speculative (cf. W. F. Albright, *VT,* 9 [1959], 343f.), though the use of the number seventy suggests an idealized statement in both. The use of this artificial form in Gen. 10 conveys the author's conviction that all the nations of the earth descended from Noah through his three sons (cf. 9:19). The requirements of this quota, therefore, probably account for the large gaps in the third and subsequent generations.

This still does not explain, however, on what basis the entries were selected. If the document was written after Israel's settlement in Canaan, the absence of the Ammonites, Moabites, and Edomites — all nations with whom Israel had extensive contact — would be inexplicable. It would also be hard to account for the inclusion of the long list of obscure Arabic tribes under Joktan, with whom the Israelites had little or no contact. At the present time any explanation is speculative.

That some linear telescoping has occurred in the genealogy is obvious from the use of plural gentilics for the descendants of Egypt and singular gentilics with the article for the offspring of Canaan. Here the concern is not with individuals but with collectives, a development that presupposes several intervening generations. This is also true of geographic and tribal entries.

3. Fluidity. In genealogies the relative ages of sons are usually reflected in the order in which their names appear. This principle appears to have determined the priority of Sidon among the "sons" of Canaan, but it is violated elsewhere. In the preceding narratives the sons of Noah are consistently listed as Shem, Ham, and Japheth (Gen. 6:10; 7:13; 9:18; 10:1). In this genealogy the sequence is reversed. Furthermore, 9:24 identifies Ham as the youngest son; 10:21 suggests that Shem was the oldest (contra the NIV, which treats Japheth as older than Shem). Logical considerations seem to have overridden chronological. The order appears to reflect the relative importance of each of the segments for Israel's history, beginning with the Japhetic peoples, who appear but seldom in the OT, then dealing with the Hamites, with whom the Israelites were vitally concerned (esp. Egypt and the Canaanite tribes), and ending with their own line, Shem. This conforms to a common pattern in Genesis, in which by-lines to the primary family are dealt with in summary form before the detailed narratives of the patriarchs commence.

From 11:10 it appears that Arpachshad was the eldest son of Shem. In 10:22, however, his name appears in the middle of five entries. Since both texts are generally assigned to P, this cannot be explained on the basis of discrepant sources. Either the names appear in random order in the "table," or some other (as yet unknown) principle is operative. Furthermore, the "note" attached to the Sidon entry would have been redundant if chronological factors had determined the order of entries.

The genealogy also displays some internal fluidity. The presence of Havilah in two different major lines (Ham [v. 7] and Shem [v. 29]) is usually attributed to discrepant sources (the Hamitic member is in P, the Shemitic in J; cf. Westermann, pp. 499, 501). It is possible, however, for two lines to converge through intermarriage, migrations, or tribal amalgamation; consequently the same name would surface in two genealogies. In view of the Arabian peninsular location of both, it is doubtful that two different entities are intended.

The case of Lud/Ludim is more complex. If these are attributed to two separate sources (v. 13 to J and v. 22 to P), no harmonization is needed. On the other hand, the variation in the form and, more importantly, the present context of each suggest two widely separated peoples.

Several indications of external fluidity require explanation. In Gen. 25:1-4 the two sons of Raamah, Sheba and Dedan (10:7), are identified as descendants of Abraham through Keturah and Jokshan. Significantly, in both contexts Sheba and Dedan are treated as brothers. This dual reference may again point to the convergence of the Shemitic and Hamitic lines in southern Arabia.

The "table" presents Aram as the son of Shem and brother of Arpachshad the ancestor of the Hebrews (10:22); but 22:20-24 identifies him as the son of Kemuel and grandson of Nahor, thus a direct descendant of Arpachshad. Furthermore, 10:23 introduces Uz as Aram's son, whereas 22:21f. presents him as Aram's uncle! Some interpret both genealogies sociopolitically; Gen. 10 would then reflect the relative prominence of Aram, alongside Elam and Asshur, in the 1st millennium B.C., and ch. 22 would portray the more modest second-millennium position of the Arameans (see A. Malamat, "The Aramaeans," in Wiseman, ed., *Peoples,* pp. 139f.). This interpretation is unnecessary, however, for several reasons. First, the two genealogies serve different functions. Gen. 10 is a formal *tōlᵉḏôṯ* document, complete with colophons, summarizing world history; 22:20-24, on the other hand, is personal, sketching the progress of a by-line to the chosen family and explaining the affinity of the Hebrews to the "Arameans" of Haran genealogically. Furthermore, the latter is woven deliberately into the patriarchal narrative. Second, the internal discrepancies within the genealogies are too great to have been incorporated unmodified into the canonical book. It seems preferable, therefore, to understand the Aram in ch. 10 as some eastern ancestor of the Arameans, from whom they received their name, and the Aram in ch. 22 as an individual living in Aramean territory whose name is derived from the people (see Block, pp. 264-274).

Havilah, which appears a third time in the genealogy of Ishmael (25:18), presents another example of external fluidity. Here the name is clearly geographic and seems to reflect further intermingling of the tribes in southern Arabia.

D. "Notes." Ever since T. Jacobsen's study of the Sumerian King List, students of ancient Near Eastern genealogies have had to take more seriously the possibility of "intrusions" into otherwise coherent genealogies. Seven such intrusions occur in Gen. 10 as parenthetical "notes." (Cf. the notes following the entries of Enoch [5:22, 24], Uz [22:21], and Anah [36:24], all of which are deleted by the Chronicler.) Of the seven, those concerning the Philistines, Sidon, Eber, and Peleg are retained by the Chronicler, the Nimrod comment is shortened, and the Shem and Joktan statements are deleted. Although the notes vary in length, none is integral to the genealogies. They all consist of historical comments that give flesh and life to an otherwise cold literary composition.

1. Nimrod (Gen. 10:8b-12). This note, the longest and most complex, summarizes the personal prowess and political achievements of the man. Both aspects have their parallels in the Sumerian King List. Several features of

Nimrod's life are noted. (a) He was the first mighty man (*gibbôr*) on earth, his greatness being reflected in the phrase "before Yahweh" and his immortalization in the proverb. (b) His kingdom was a personal accomplishment, representing a radical departure from the flow of the "table." The *gôyim* ("peoples," "nations") are presented in the "table" as the end results of orderly genealogical segmentation; his, however, is an artificially created kingdom. (Cf. the reference to Assyria as "the land of Nimrod" in Mic. 5:6.) (c) His kingdom was expansive, beginning in the heart of Shinar (lower Mesopotamia; cf. 11:2) and moving up the Euphrates and the Tigris. The names of the first three cities are well known: Babel is Babylon; Erech is Uruk, an important city in the Gilgamesh Epic; Accad is Akkad/Agade in the Babylonian texts, but its location is unknown. Calneh is difficult; perhaps the word should be read *kullānâ*, "all of it," rather than as a place name (so W. F. Albright, *JNES*, 3 [1944], 254; J. A. Thompson, *JBL*, 90 [1971], 98-102). From Babylon Nimrod went out to Assyria, building Nineveh, Rehoboth-Ir, Calah, and Resen. Nineveh is the well-known city on the Tigris. Calah, in modern times named Nimrûd (no doubt through the influence of this tradition), is written *Kalḫu* in Assyrian texts. Rehoboth-Ir is uncertain; various scholars read it as a suburb of Nineveh, Rêbīt Ninua (so Cassuto), or a nearby city, or a phrase descriptive of Nineveh, "the broadest city" (so J. M. Sasson, *RB*, 90 [1983], 94-96). Resen, identified here as between Nineveh and Calah, has not been located either, but the name could be associated with *reš-ēni* ("fountainhead") indicating a location at the site of a spring. This description of Nimrod's empire in purely geographic terms represents a further departure from the presentation of the *gôyim* descendants of ancestors, but it is reminiscent of extrabiblical Babylonian and Assyrian perspectives.

Nimrod's significance, therefore, lies not in his eponymous ancestral position but in the empire he built, perhaps in defiance of the natural forces implicit in the genealogy. He represents the exception that highlights the rule, and in so doing he begins a pattern of Mesopotamian imperial rule that continues throughout the OT period.

One problem remains: What is this Hamitic personage doing in the heart of Shemitic territory? If Nimrod is identified with Tukulti-Ninurta I (13th cent. B.C.), the first Akkadian ruler of Babylon (so Speiser), this difficulty is removed but another, more serious, is created: a Semite in a Hamitic line. Westermann rejected the idea that Nimrod represents any historical personage: he is instead a type of early ruler like Gilgamesh, who became a legendary founder. But Wiseman ("Genesis 10," p. 21) pointed out that the Sumerians who preceded the Akkadians were not of Semitic stock. Jacobsen (p. 146) observed that stories like this originate while the memory of the person's accomplishments is still fresh.

2. Philistines (10:14). The comment "from which came the Philistines" was apparently intended to place the Casluhim within the international context. The Philistines represented the only non-Canaanite people with whom the Israelites competed for the land of Canaan. At first sight the note seems misplaced. According to Am. 9:7 the note would more appropriately follow Caphtorim rather than Casluhim. The difficulty may be resolved by positing a series of successive waves of sea-peoples who moved in from the Mediterranean and settled in Palestine (< "Philistine"). The first of these, the Pelasgo-Philistines, may have inhabited the Negeb prior to the arrival of the patriarchs (cf. Cassuto, p. 208; K. A. Kitchen, "Philistines," in Wiseman, ed., *Peoples*, pp. 53ff.). A later wave may have come directly from Caphtor, but their origin could well have been elsewhere. On the other hand, ethnic terms were not always used precisely, and the Caphtorim and Casluhim may have been closely associated; perhaps the names were even used interchangeably.

3. Sidon (10:15). The note "his firstborn" agrees with Sidon's leading position among Phoenician cities in the 2nd millennium. Although Tyre later superseded Sidon in importance, Seleucid coins inscribed with "Belonging to Sidon, the mother of Cambe (Carthage), Hippo, Kitium, and Tyre," reflect a similar if not identical tradition (cf. G. F. Hill, *Catalogue of Greek Coins in Phoenicia* [1910], pp. cvi-cvii).

4. Canaanites (10:18b-19). This note describes the expansion of the Canaanite line in geographic terms. The shift in meaning is reflected in the change from the personal name "Canaan" in v. 15 (used with the verb *yālaḏ*) to the gentilic in the phrase "the families of the Canaanites" (v. 18b). The geographical definition of "the land of Canaan" (cf. Nu. 34:1-12; Josh. 15:1-4) as extending from Sidon in the north to Gaza and the cities of the plain in the south corresponds to extrabiblical usage of the name, which in second-millennium texts consistently includes Phoenicia. (Cf. A. R. Millard, "The Canaanites," in Wiseman, ed., *Peoples*, pp. 29-33.) The presence of this note betrays the Israelite perspective in the "table": the author could not resist inserting a comment on the part of the genealogy that would concern his nation so directly.

5. Shem (10:21). By interrupting the flow of the genealogy, this note highlights once more the line most important for the author. It performs several functions in this context. First, it preserves the position and privilege of primogeniture for Shem. Because of the final position of the Shemite line, the reader might otherwise have understood Shem to be the youngest son of Noah. Second, Shem is identified directly with the children of Eber (*ʿēḇer*), the eponymous ancestor of the Hebrews. For the author, this represented for Shem a position of honor: although he was the ancestor of other nations as well, his special significance lay in his ancestral relationship to the Hebrews. Although other nations were also viewed as lineal descendants of Eber (e.g., Moab, Edom, Ammon, Ishmael), only the Israelites inherited the name. Abraham was acknowledged as "the Hebrew" (*hāʿiḇrî*) *par excellence* (Gen. 14:13). *See* HEBREW (PEOPLE); HABIRU.

6. Peleg (10:25). The explanatory note, "for in his days the earth was divided," could have been occasioned by two factors: the nature of the name (*plg*, "to divide, split"; cf. Akk. *palgu*, "canal"), and the association of the man with an important division of some sort. D. J. Wiseman ("Genesis 10," p. 22) has suggested that the event referred to was the division of the population into sedentary peoples (cultivating irrigated land) and true nomads (Eber). Others have suggested the split of the Joktanites from the northern Shemitic branch (e.g., J. Skinner, *ICC* on Genesis [2nd ed. 1930], p. 220). In its present broader context, the note seems to reflect an unnatural division or break in the evolution of the genealogy. Most likely the author of Genesis is alluding to the Tower of Babel incident, which follows immediately (cf. Ps. 55:9 [MT 10], where the expression *plg lšnm* [RSV "confuse their tongues"] may echo this conflated tradition).

7. Joktan (10:30). Like the Canaanite note in vv. 18b-19, this comment describes the territorial expansion of a branch. But in contrast to the specific boundaries (*gᵉḇûl*) given for the former, this note refers to the region of settlement (*môšāḇām*) only in general terms. It extended from Mesha, as one goes to Sephar, which is in the hill country of the east. Presumably this represented the western extremity

of their territory, the place where an Israelite would first encounter the Joktanites. In view of the relative insignificance of the Joktanites in Israelite history, the note is difficult to explain. Perhaps the author was simply filling in information for his readers, to whom this branch was not well known.

E. Colophons. Ancient Near Eastern scribes often concluded a tablet with a statement concerning its production (the identity of the scribe or the date of the copy) or a summary of its content. Such notices are commonly called colophons. The structure of the "table" suggests that it was modeled on some of these patterns. It seems to be composed of three basic documents, each with its own colophonic conclusion (Gen. 10:5, 20, 31). Like extrabiblical colophons, these are not uniform; all, however, serve to summarize the material that has just been presented. These colophons consist of two parts: a retrospective announcement of the tablet's subject, and a statement of the principles reflected in its organization. Similar colophons conclude other genealogies in Genesis (25:16; 36:30, 43).

The colophon for the Japhetic line (10:5) deviates considerably from the pattern followed in the other two. The MT (followed by the AV and NEB; cf. RSV mg.) lacks the expected opening ("These are the sons of"), providing instead a geographic observation reminiscent of the Canaanite and Joktan notes. The antecedent of "from these" is not clear. The use of *'îyîm*, "coastlands," suggests a limited reference applying only to the sons of Javan. But the context and the parallels in vv. 20 and 31 seem to require a more comprehensive colophon summarizing the entire line. The difficulty is easily resolved by assuming the loss of an original introductory phrase, "These are the sons of Japheth," after the first occurrence of *gôyim* (so the RSV and Westermann; Speiser places this phrase at the beginning of the verse). This solution has the dual advantage of allowing the first part of the verse to serve as a note applying only to the descendants of Javan, while ensuring a comprehensive scope for the remainder of the verse. On the other hand, the text is grammatically correct as it stands, and the suggested emendation assumes a degree of colophonic consistency not shared by other ancient documents. It is also possible that the common interpretation of *'îyîm* as "coastlands" is too narrow, since the term is frequently paired with *gôyim* ("nations") in the OT (e.g., Isa. 40:15; 41:1, 5).

The order in which the dividing factors are listed is also different in the Japhetic colophon: lands, languages, families, nations (cf. families, languages, lands, nations, vv. 20, 31). The variation is probably stylistic only. The use of the pronominal suffix with each term ("their lands," "their languages," etc.) suggests that the author wants readers to notice how the segmentation of the human family is reflected in the division of peoples recognizable by their distinctive territories, languages, and political structures. This theme reflects an ordered evolution in contrast to the expansionism of Nimrod.

F. Conclusion (10:32). The formal conclusion is also a colophon, similar to those concluding each branch of Noah's family. This colophon serves as a summary statement for the entire "table." The use of *tôlᵉḏôṯ* ("generation") recalls the preamble and reiterates the genealogical nature of the document. The sons of Noah are identified as *mišpāḥôṯ* ("families"), now recognized as *gôyim* ("peoples," "nations"). The verse also reiterates that these developments transpired "after the flood."

III. Function, Message, and Date.–Genesis 10 is commonly interpreted as an attempt to explain the interrelationship of the nations known to Israel by the artificial construction of a family tree. The "table" then represents a historiographic text that reconstructs history on the basis of present realities. This would account for the apparent geographic organization of the document, in which the world is divided into three regions: the north (Japheth), Mesopotamia and Arabia (Shem), and Canaan and the south (Ham). Other scholars read the "table" as a reflection of the Noachian curse of Canaan and the blessing of Shem and Japheth described in the previous chapter. The descendants of Ham are the nations subjected to the Semitic line at the time of composition (the J document); the Shemites are the dominant nations in ancient Near Eastern affairs; the Japhetic nations are those whose presence was felt only indirectly and about whom Israel had only vague knowledge (see Arldt). The fact remains, however, that no explanation that assumes a retrospective reading of present reality can explain the anomalies and apparent misplacements in the "table."

If the "table" is allowed to speak for itself in its present canonical context, several themes seem to be emphasized or implied. (1) The providential fulfillment of the Noachian blessing (cf. 9:1f.) and the population of the earth after the flood (cf. 9:19) proceeded in the main along ordered lines. (2) The world is one united family, all of whose members trace their origin back to a common ancestor, Noah, who in turn owed his existence to a salvific act of God. (3) The segmentation of Noah's family is reflected in the present existence of separate nationality groups, recognizable by their distinctive locations, ethnic self-consciousness, languages, and political structures. (4) The call of Abraham and Israelite history in general take place within the context of universal history; thus the effects of patriarchal revelation are felt throughout the earth.

As a literary and historiographic document the "Table of Nations" is without parallel in the ancient world. What makes it even more remarkable is its contrast to the parochialism that tended to plague the Israelites throughout their history. In one quick stroke the "table" puts the nation's history into its proper perspective. Although the Hebrews were the specially chosen agents of divine revelation (Dt. 7:6-8), they were but one member of the universal family of nations, all of whom had a common origin.

The date of the composition of the "table" remains an open question. Certain features point to a second-millennium date: (1) the absence of the important first-millennium states of Moab, Ammon, and Edom; (2) the primacy of Sidon among Phoenician cities; (3) the memory of non-Semitic Canaanites and Mesopotamians; (4) the nature of the Nimrod "note"; (5) the definition of the land of Canaan with reference to the cities of the plain in the south; (6) the association of the Philistines with the Casluhim rather than the Caphtorim, which may represent a more precise recollection than Am. 9:7; (7) the fascination with Eber, the eponymous ancestor of the Hebrews, who are not identified as such after the time of David. Although the genealogy may have existed as a separate document before its incorporation into Genesis, a discussion of its present form cannot be divorced from the examination of the date and composition of the book as a whole.

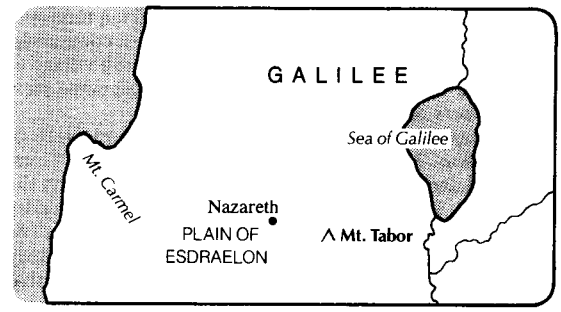
TABLET. *See* TABLE.

TABOR tā'bər [Heb. *tāḇôr*; Gk. B *Thachcheia*, A *Thabōr*]. A town in the territory of Zebulun, given with its pastures to the Merarite Levites (1 Ch. 6:77 [MT 62]; it is not found, however, in the parallel list, Josh. 21:34f.). Its exact location is unknown. Tabor refers either to an abbreviation of Chisloth-tabor (Josh. 19:12), the modern Iksâl 5 km. (3 mi.) W of the mountain, or to Daberath in the territory of Issachar on the western slope of Mt. Tabor, or to the mountain itself (*see* TABOR, MOUNT).

On 1 S. 10:3, *see* TABOR, OAK OF.

K. G. JUNG

TABOR, MOUNT tā'ber [Heb. *har tāḇôr*; Gk. *óros Thabōr, tó Itabyrion* (Jeremiah and Hosea)]. A height in Galilee, located 10 km. (6 mi.) E of Nazareth by air but about 32 km. (20 mi.) by road, and 19 km. (12 mi.) SW of the Sea of Galilee; the modern Jebel eṭ-Ṭôr. A majestically isolated limestone mountain rising to 562 m. (1843 ft.) above sea level, it has a fairly level plateau 1200 m. (3930 ft.) long and 400 m. (1320 ft.) wide (*see* picture in JUDGES, BOOK OF). Its sides are now covered with brushwood; formerly, however, it was covered with oak, olive, and fig trees.



The mountain is cut off from Little Hermon on the south by a fertile valley, which narrows to become Wâdī Bîreh and ultimately reaches the Jordan. Looking S from its summit, over Little Hermon with Endor and Nain at its base, one can glimpse Mt. Gilboa. Scanning from this point along the plain of Esdraelon, one sees the hills on the northern boundary of Samaria, Taanach and Megiddo, Carmel by the sea, and the oak forest N of the Kishon gorge. Looking W from Mt. Tabor, over 8 km. (5 mi.) of broken upland, one can see the higher houses of Nazareth. Eastward lie the Jordan Valley, the mountains of Gilead, the great chasm of the Yarmuk, and the steep cliffs E of the Sea of Galilee. To the north, the mountains of Zebulun and Naphtali appear to culminate in the shining mass of Great Hermon.

Mt. Tabor has a long and sacred history, but biblical references to it are sparse. It is named as part of the border of Issachar (Josh. 19:22). Jeremiah selected it as a symbol of certainty (Jer. 46:18). It also had special symbolic significance for the psalmist (Ps. 89:12 [MT 13]). Dt. 33:19 seems to indicate that it was a place of pilgrimage and worship for Zebulun and Issachar. Apparently it later became the scene of idolatrous rites (Hos. 5:1; see comms.). The only OT reference to "Mount Tabor" is Jgs.

An aerial view of Mt. Tabor from Nazareth (W. Braun)

4:6-16, where Deborah and Barak organized ten thousand men for a decisive attack against Sisera. Most commentators agree that either the mountain or a nearby village of this name was the site where Zebah and Zalmunna slew the brothers of Gideon (Jgs. 8:18f.).

The mountain was undoubtedly an important place of fortification. In the 3rd cent. B.C. Antiochus the Great captured and fortified Atabyrion, an inhabited city on the mountain. The Jews recovered the city and held it under Alexander Janneus, 105-70 (*Ant.* xiii.15.4 [396]). The mountain fell to the Romans, however, when Pompey conquered Palestine. It was not far from the mountain that Alexander son of Aristobulus II was defeated by Gabinius proconsul of Syria in 53 B.C. (*Ant.* xiv.6.3 [102]; *BJ* i.8.7 [177]). Josephus, who commanded in Galilee at the outbreak of the Jewish war, recognized the importance of the position and built a wall around the summit (*BJ* ii.20.6 [573]; iv.1.8 [54]). Later, when he was taken prisoner by the Romans at Jotapata, many fugitives took refuge in the fortress (*BJ* iv.1.8 [61]). The Roman general Placidus did not attempt an assault upon the fortress but drew its defenders to the plain and defeated them there; the city then surrendered.

Mt. Tabor is traditionally identified as the mount of transfiguration, although the Gospels do not identify the site of this event (Mt. 17:1-9 par. Mk. 9:2-9; Lk. 9:28-36; cf. 2 Pet. 1:18, which refers to the place of the Transfiguration as "the holy mountain"). The earliest authentic reference to this tradition is a statement of Cyril of Jerusalem (*Catecheses* xii.16). The tradition may have been due to the sacred character of Mt. Tabor and its striking appearance. Because, however, Mt. Tabor was inhabited during Jesus' time, and because He had just been in Caesarea Philippi with His disciples, it seems unlikely that the Transfiguration took place on this mountain.

Because of this association with the Transfiguration, Helen the mother of Constantine built a church on Mt. Tabor in 326 A.D. Later other churches and monasteries were built. The mountain has shared to the full the vicissitudes of Palestine's stormy history. Benedictine monks erected the Church of the Transfiguration there in 1100, but in 1113 Arabs from Damascus plundered the monasteries and murdered the monks. Saladin made an unsuccessful attack in 1183, but in 1187 he devastated the place. In 1212 his brother fortified the mountain. The Crusaders attempted to take the fortress in 1217 but failed. The next year, however, the Saracens threw down the defenses. Sultan Bibars ordered the destruction of the Church of the Transfiguration in 1263, and for a time the mountain was deserted. The Franciscan monks from Nazareth continued to celebrate the Feast of the Transfiguration, however, and in 1631 Emir Faker ed-Din permitted them to occupy the mountain once again. During the last quarter of the 19th cent. Roman Catholic and Greek Orthodox communities excavated the ruins of many ecclesiastical buildings.

In 1921-1924 the Franciscans erected a modern basilica on the summit. Styled after fifth-century Syrian churhes it is known for its mosaics portraying Jesus' transfiguration; its two towers are dedicated to Moses and Elijah. North of this area is the St. Elijah Church built by the Greek Orthodox Church in the 19th century. It is about as large as the Latin church and is also built on old foundations.

K. G. JUNG

TABOR, OAK OF [Heb. *'ēlôn tāḇôr*]; AV PLAIN OF TABOR; NEB TEREBINTH OF TABOR. A location near Bethel (1 S. 10:3), where Saul received the second of three signs confirming his anointing as king (vv. 3f.). The site was between Rachel's tomb at Zelzah in the territory of Benjamin (10:2) and Bethel, going toward Gibeath-elohim (10:5; cf. Y. Aharoni and M. Avi-Yonah, *Macmillan Bible Atlas* [rev. ed. 1977], map 86). On the basis of Gen. 35:8, some suggest emending to "the oak of Deborah" (but against this, cf. *GTTOT*, §§ 666-68).

W. S. L. S.

TABRET. *See* TIMBREL.

TABRIMMON tab-rim'ən [Heb. *taḇrimmōn*–'(the god) Rammon is good, bountiful, or helpful'; LXX L *Taberemman*, B *Taberema*, A *Tabenraēma*] (1 K. 15:8); AV TABRIMON. Son of Hezion and father of the Syrian king BEN-HADAD. The name Tabrimmon derives from Aram. *ṭāḇ*, "good" (= Heb. *ṭôḇ*), and "Rimmon," the Syrian national god identified with Hadad (2 K. 5:18; cf. Akk. *Rammānu*, "the Thunderer"). Little else is known about this early king of Damascus. Some scholars have reconstructed his name in a broken inscription (see *ANET*, p. 655); cf. Shea.

Bibliography.–G. H. Jones, *1 and 2 Kings* (*NCBC*, 1984), pp. 285, 419; W. H. Shea, *Maarav*, 1/2 (1979), 159-176; M. F. Unger, *Israel and the Aramaeans of Damascus* (repr. 1980), pp. 57, 142 n. 10.

TACHMONITE tak'mə-nīt (2 S. 23:8, AV). *See* TAHCHEMONITE.

TACKLE. *See* SHIPS.

TADMOR tad'môr [Heb. *taḏmōr*; Gk. *Thedmor*]. An oasis city in the Syrian desert, lying midway along the caravan routes from Damascus and Emesa to the Euphrates. Identified with modern Tudmur, in the Roman period it was known as Palmyra. 2 Ch. 8:4 lists Tadmor among other cities NE of Palestine that Solomon rebuilt or fortified. In 1 K. 9:18 the *qere* has "Tadmor" (so AV), but the *kethibh* has "Tamar" (so RSV, NEB); the RSV supplies the words "of Judah" here, apparently assuming that "Tamar" is the same city referred to in Ezk. 47:19; 48:28. Most versions, however (e.g., Lucian, Syr., Tg., Vulg.), follow the *qere* reading "Tadmor." (*See also* TAMAR.)

An inscription of Tiglath-pileser I (*ca.* 1100 B.C.) records his victory over the Aḫlamu Arameans all the way from "Tadmor in the land of Amurru" to Babylonia (see *ANET*, p. 275).

See ARCHEOLOGY OF PALESTINE AND SYRIA I.A.

D. H. MADVIG

TAHAN tā'han [Heb. *taḥan*; Sam. Pent. *taḥam;* LXX *Tanach*].

1. Son of Ephraim and progenitor of the Tahanites (Heb. *taḥ^{a}nî*; Nu. 26:35); in 2 Ch. 7:20 he is called TAHATH.

2. Son of Telah and father of Ladan, also of the Ephraimite family (1 Ch. 7:25).

TAHAPANES tə-hap'ə-nēz (Jer. 2:16, AV). *See* TAHPANHES.

TAHASH tā'hash [Heb. *taḥaš*; Gk. *Tochos*]; AV THAHASH. The third son of Nahor by his concubine Reumah (Gen. 22:24). Heb. *taḥaš* is often identified with the Arabic word for "dolphin, porpoise," but this translation is uncertain. Instead it may reflect a place name known from

An altar from the 1st cent. A.D. found at Tadmor. It depicts two men on either side of a portable incense altar and is inscribed with a dedication to Šamaš on the side (Ashmolean Museum, Oxford)

Egyptian texts as *Tiḫši*, the Amarna *Taḫši*, apparently located on the northeastern border of Palestine. This suggestion is strengthened by the pairing of Tahash with Maacah (Heb. *ma'ᵃkâ*), a place associated with the foot of Mt. Hermon (cf. 2 S. 10:6, 8; 1 Ch. 19:7).

D. G. SCHLEY

TAHATH tā'hath [Heb. *taḥaṯ*–'compensation'].

1. A Kohathite, son of Assir and father of Uriel (1 Ch. 6:24, 37 [MT 9, 22]).

2. An Ephraimite, son of Bered (1 Ch. 7:20); he is called TAHAN in Nu. 26:35.

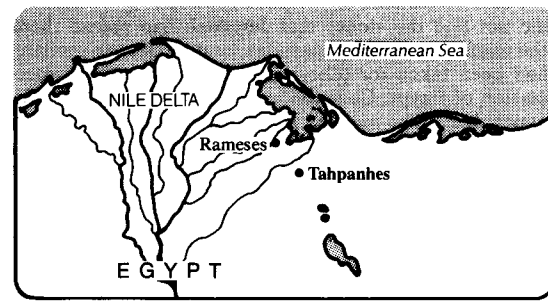
3. An Ephraimite, son of Eleadad (1 Ch. 7:20).

TAHATH tā'həth [Heb. *tāḥaṯ*] (Nu. 33:26f.). One of Israel's encampment sites in the journey from Egypt to Canaan as listed in the Nu. 33 itinerary. The site's location is unknown.

T. V. BRISCO

TAHCHEMONITE tä-kē'mə-nīt [Heb. *taḥkᵉmōnî*] (2 S. 23:8); AV TACHMONITE; NEB HACHMONITE. The family name of Josheb-basshebeth (*see* JASHOBEAM), one of David's MIGHTY MEN. This name's first consonant probably reflects a copyist's error due to a common scribal tendency to confuse the Hebrew letters ה and ח (*see* HACHMONI).

TAHPANHES tä'pən-hēz [Heb. *taḥpanḥēs* (Jer. 43:7-9; 44:1; 46:14; *Q* 2:16 [*K taḥpᵉnēs*]); Gk. *Taphnas*]; AV also TAHAPANES (Jer. 2:16), TAPHNES (Jth. 1:9); **HAPHNEHES** tə-haf'nə-hēz [Heb. *tᵉḥapnᵉḥēs*] (Ezk. 30:18); NEB TAHPANHES. An ancient Egyptian city in the northeast Delta, identified with modern Tell Defneh (also spelled Dafana, Defenneh, etc.), about 43 km. (27 mi.) SSW of Port Said and about 13 km. (8 mi.) W of el-Qanṭara. The LXX form *Taphnas* seems to equate Tahpanhes with classical Gk. *Daphnai*, which is preserved in modern Arabic Tell Defneh. The Hebrew consonantal spelling occurs also in a sixth-century B.C. Phoenician papyrus that associates *tḥpnḥs* with the god BAAL-ZEPHON.



W. M. F. Petrie made an exploratory excavation at Tell Defneh in the spring of 1886 and published the results in the 4th Memoir of the Egypt Exploration Society (*Tanis. Part II. Nebesheh [AM]and Defenneh [Tahpanhes]* [1888], pp. 47-96). The city was apparently founded in Ramesside times and served as a frontier checkpoint on a very old trade route. Herodotus (ii.107) mentioned it in connection with the return of Ramses II (*ca.* 1304-1227 B.C.) after an Asiatic expedition. Petrie's excavations, however, uncovered little predating the 26th Dynasty founded by Psamtik I (Psammetichus, *ca.* 664-610 B.C.). From this period he found a large brick building, which he identified as a palace-fort built by Psamtik I as a border guardpost to prevent incursions from Asia. In Petrie's time the building was known as Qasr el-Bint el-Yehudi ("Palace of the Jew's Daughter"). The large amount of Greek pottery and other objects led Petrie to conclude that the garrison was Greek. Herodotus (ii.154) recorded that during the reign of Amasis the Greek mercenaries at Daphnai were replaced by Egyptians, who were later succeeded by Persians.

The first mention of Tahpanhes in the Bible occurs in Jer. 2:16, which states that the men of Memphis and Tahpanhes had broken the crown of Israel's head because it had forsaken the Lord. As Petrie pointed out (p. 47), the reference must be to Pharaoh Neco's invasion of Judah. Since the mercenary troops at Tahpanhes were largely Greek, the campaign may mark the first real contact of the Jews with the Greeks, who later played so important a role in Jewish language and culture.

All the references to Tahpanhes in Jer. 43–46 are associated with the Jews' flight to Egypt after Ishmael betrayed and killed Gedaliah. Fearing reprisal by the king of Babylon and disregarding Jeremiah's warning that the Lord would protect them in Palestine but destroy them in Egypt, the Jews departed, taking the prophet and Baruch with them as unwilling refugees (43:1-7). Their first stopping-place in Egypt was Tahpanhes (v. 7). Petrie proposed that here the Jews may have picked up Greek names for objects such as musical instruments.

At Tahpanhes the word of the Lord again came to Jeremiah, directing him to hide large stones in the mortar in the pavement (AV "brickkiln") at the entry of Pharaoh's palace. He was then to announce to the men of Judah that Nebuchadrezzar would arrive and set up his throne and royal pavilion on that spot. The Babylonian king

would ravage the land of Egypt and destroy the temples of its divinities (43:8-13). In 44:1 Tahpanhes is listed as one of the Egyptian places in which Jews were living. Jeremiah prophesied that the Jews in Egypt would be destroyed because they had cut themselves off from Judah and were worshiping Egyptian gods (vv. 7-14). Chapter 46 again prophesies Nebuchadrezzar's invasion of Egypt; Tahpanhes is one of the cities to which Jeremiah was instructed to declare this message (v. 14). Ezk. 30:18 also singles out Tahpanhes in a prophecy against Egypt.

Petrie found part of the pavement of Jer. 43:9, but he did not find the stones that Jeremiah had placed there; the platform was much denuded, and the stones probably had been taken for other purposes in this stone-scarce section of Egypt. Commenting on this passage, J. Bright concluded: "The incident is undoubtedly authentic. Nebuchadnezzar's invasion of Egypt did not, however, take place until that king's thirty-seventh regnal year (568/7). From the fragmentary inscription that tells of it (cf. ANET, p. 308), it appears that Nebuchadnezzar did not aim at permanent conquest, but rather sought by a punitive expedition to deter Egypt from further meddling in Asia. The Pharaoh — at the time, Amasis (570-526) — retained his throne and seems thereafter to have maintained friendly relations with Babylon" (*Jeremiah* [*AB*, 1965], p. 265). Although the text of this inscription was published in the late 19th cent. and has been available in translation since the early 20th cent. (Zehnpfund-Langdon, in *Vorderasiatische Bibliothek* [7 vols., 1907-1916], IV, 206f.), books on biblical archeology seldom mention it.

Although his account does not mention Tahpanhes, Josephus (*Ant.* x.9.7 [180-85]) reported that Nebuchadnezzar invaded Egypt in his twenty-third year, five years after his devastation of Jerusalem, that he killed the Egyptian king and set up another in his place, and that he took the Jews in Egypt captive to Babylon. Josephus's statement has been challenged on the grounds of possible dependence on the Jeremiah passage; but Josephus cited Berossus as his source concerning Nebuchadnezzar's invasion of Egypt (*Ant.* x.11.1 [219-227]). Although the historical value of Judith is questionable, it is also noteworthy that Jth. 1:7-10 lists Tahpanhes among the places conquered by Nebuchadrezzar. Furthermore, Petrie reported that the Bulaq Museum in Cairo had obtained three cylinders, said to have come from the Isthmus of Suez, that bore inscriptions of Nebuchadrezzar. He suggested that these may have come from Defneh and were memorials of the Babylonian king's presence there. One may conclude that Nebuchadrezzar's invasion of Egypt is historical fact, but that the details of that campaign are unknown.

Petrie discovered no physical evidence of a Jewish presence at Tell Defneh, but he believed that this absence could be explained by the short duration of the Jews' residence there or by the limited extent of his investigation. He suggested that further excavation, especially of a mound to the southeast, might reveal the quarter occupied by the Jews. C. E. DEVRIES

TAHPENES tä'pə-nez [Heb. *taḥpᵉnês*, *taḥpᵉnēs*; LXX *Thekeminas*, *Thekemina*] (1 K. 11:19f.). An Egyptian queen of an unidentified pharaoh of the 21st Dynasty.

Pharaoh gave Tahpenes's sister in marriage to Hadad, an Edomite, who as a child had escaped Joab's slaughter of the Edomites and had fled to Egypt (1 K. 11:17). Tahpenes nurtured Genubath, the son of her sister and Hadad, in the pharaoh's house (v. 20).

Though usually treated as a proper name, "Tahpenes" may actually be a title from the Egyp. *t.hmt.nsw*, "the wife of the king" (G. H. Jones, *1 and 2 Kings* [*NCBC*, 1984], I, 239). G. L. K.

TAHREA tä'rē-ə, tə-rē'ə (1 Ch. 9:41, AV). *See* TAREA.

TAHTIM-HODSHI tä-tim-hod'shī (2 S. 24:6, AV). *See* KADESH 3.

TAIL [Heb. *zānāḇ* (Ex. 4:4; Dt. 28:13, 44; Jgs. 15:4; Job 40:17; Isa. 9:14f. [MT 13f.]; 19:15); Gk. *ourá* (Rev. 9:10, 19; 12:4)]; **FAT TAIL** [Heb. *'alyâ*] (Ex. 29:22; Lev. 3:9; 7:3; 8:25; 9:19); AV **RUMP**. Literally, the tails of animals such as foxes (Jgs. 5:4), snakes (Ex. 4:4), or Behemoth (Job 40:17). The fat of the tails of the main Palestinian breed of sheep (*Ovis laticaudata*), together with other fatty portions of the animal's body, were sacrificed to Yahweh in the peace, sin, and guilt offerings. The ancient Israelite regarded the fatty portions as the best part of the meat.

Figuratively, as the opposite of the "head" which is the place of honor or leadership, the tail signifies that which is most humble or inferior. If Israel kept Yahweh's covenant, they would be the head (Dt. 28:13); if they did not, they would become the tail (v. 44). In Isa. 9:15 (MT 14) the prophet Isaiah contemptuously describes the false prophets as the tail in relation to the rulers. In v. 14 (MT 13) he uses the inclusive expression "head and tail" to signify that the coming destruction will encompass the totality of the leadership, from the most honored to the most humble. In 19:15 the same expression is used to describe the leadership of Egypt.

In the apocalyptic imagery of the book of Revelation, tails sometimes symbolize the power to hurt or destroy. The tails of the locusts in 9:10 appear as those of scorpions with a venomous sting, while those of the horses in v. 19 appear as poisonous snakes. In 12:4 the tail of the great red dragon sweeps a third of the stars down to earth — a vivid picture of the destructive power of Satan. G. WYPER

TALE; TELL. With the exception of Ps. 90:9, the AV always uses "tale" in the sense of "number." When Moses requested permission for the Israelites to go on a three days' journey into the wilderness, Pharaoh responded by demanding from them the full "tale" (RSV "number") of bricks although they were now compelled to provide the straw themselves (Ex. 5:8, 18). David presented King Saul with the full "tale" (RSV "number") of two hundred Philistine foreskins (1 S. 18:27). Some of the Levites were assigned to "count" (so RSV; AV "by tale") the temple vessels as they were brought in and out (1 Ch. 9:28). Likewise, the AV sometimes uses the verb "tell" in the sense of "count" (cf. the "teller" in a bank) e.g., "[they] told the money that was found in the house of the Lord" (2 K. 12:10); "He telleth the number of the stars" (Ps. 147:4; cf. Gen. 15:5); "the flocks [shall] pass under the hands of him that telleth them" (Jer. 33:13); cf. also 2 Ch. 2:2; Ps. 48:12 (MT 13); 56:8 (MT 9). T. LEWIS
N. J. O.

TALENT. *See* MONEY I.B.; WEIGHTS AND MEASURES II.D.1.

TALITHA CUMI tal'ə-thə kū'mī [Gk. *talithá koúmi*] (Mk. 5:41); NEB TALITHA CUM. A Greek transliteration of the Aramaic phrase attributed to Jesus. Jesus used these words as a command to Jairus's daughter to bring her back to life. Mark translates the words into Greek (*tó*

korásion, soí légō, égeire; RSV "Little girl, I say to you, arise") for the benefit of his non-Aramaic speaking audience (cf. Mk. 7:11, 34; 14:36; 15:22, 34). The phrase consists of the Aramaic feminine noun *ṭalyā'* ("youth," or "lamb"), and an imperative form of Aram. *qûm* ("stand," or "arise"). *Koúmi* seems to be an older Palestinian dialect. The better Greek MSS (ℵ, B) and many critical texts have *koum*, a later Mesopotamian form of the feminine imperative. Other variants in this phrase may result from either dialectical differences or a scribal assimilation of *tabithá* in Acts 9:40.

The Church probably preserved the original Aramaic phrase because it remembered and valued the phrase as the actual words of Jesus used in a significant situation. If such is the case, this text stands as evidence that Jesus commonly spoke Aramaic. Additionally, the use of foreign words in magical formulas was common in the ancient world as a means of protecting the secrecy of the formula. Workers of magic believed secrecy preserved efficacy. That Mark accepted this notion is merely conjectural (W. L. Lane, comm. on Mark [*NICNT*, 1974], pp. 197f.).

D. W. WEAD

TALMAI tal'mī [Heb. *talmay*].

1. An Anakite dwelling in Hebron with Ahiman and Sheshai, two other descendants of Anak (Nu. 13:22). The Anakites' extraordinary physical stature intimidated the twelve Israelite spies (13:33). Frightened by these inhabitants of Canaan, the Israelites ignored the recommendation of Caleb to conquer the land, but forty years later Caleb displaced the Anakites to secure his allotment in Judah. (Josh. 15:14; Jgs. 1:10).

2. King of Geshur and father of King David's wife Maachah who gave birth to Absalom (2 S. 3:3; 1 Ch. 3:2). Geshur was a small Aramean state located NE of the Sea of Galilee. Talmai's grandson Absalom fled to this principality for political asylum after he had murdered his brother Amnon (2 S. 13:37). After three years Absalom left Talmai and returned to Jerusalem (2 S. 13:38; 14:23).

G. D. JORDAN

TALMON tal'mŏn [Heb. *ṭalmôn/ṭalmōn*, < Arab. *ẓalmun*–'light, brightness' (?); Gk. Apoc. *Tolman*]; NEB Apoc. TOLMAN. Name of an individual Levitical gatekeeper and the family name of gatekeepers who served in the temple (1 Ch. 9:17; cf. Neh. 11:19) and who returned from the Babylonian exile (Ezr. 2:42 par. Neh. 7:45; 12:25; 1 Esd. 5:28).

I. Origin, Nature, and Function of the Talmud
II. The Talmuds and the Torah: The Theological Context
III. The Literary Context of the Talmud
IV. The Mishnah and the Talmuds
V. The Relation Between the Talmuds
VI. Talmud, Midrash, Halakah, and Haggadah
VII. Contents of the Talmud
VIII. Influence and Significance of the Talmud

I. Origin, Nature, and Function of the Talmud.–Two Talmuds serve as a commentary upon, and expansion of, the Mishnah. The Mishnah is a philosophical law code, produced in Roman-occupied Palestine *ca.* A.D. 200. The first Talmud was formed in this area *ca.* A.D. 400 and is called "the Talmud of the Land of Israel" or "the Jerusalem Talmud," and, in Hebrew, "the Yerushalmi" (abbreviated T.P. in this encyclopedia). This Talmud covers thirty-nine of the Mishnah's sixty-two tractates. The second Talmud was created in Babylonia (present-day Iraq) around Baghdad, *ca.* A.D. 600, and is called "the Talmud of Babylonia," and, in Hebrew, "the Bavli" (abbreviated T.B. in this encyclopedia). This one treats thirty-seven of the Mishnah's sixty-two tractates, and not the same tractates as the other. Both Talmuds consist of a series of citations of paragraphs from the Mishnah and systematic, carefully drafted explanations of words and phrases of the Mishnah passage, followed by secondary expansions of principles of the Mishnah passage; these non-Mishnaic portions are called *Gemara*. Each Talmud may therefore be described as a commentary on the Mishnah, and both are organized in commentary form. In addition, the T.B. builds sizable compositions around systematic interpretation of passages of Scripture, which is read within the same basic approaches as apply to the Mishnah. Because the T.B. presents an ample restatement of the important principles of both Scripture and the Mishnah, it is the more compendious of the two Talmuds and also the more influential. Consequently, when people refer to "the Talmud," they mean the T.B. But we shall treat both, since each is a Talmud.

II. The Talmuds and the Torah: The Theological Context.–Defined theologically, the Talmuds form part of the Torah, i.e., God's revelation to Moses at Mt. Sinai. We can understand the origin, character, and influence of the T.B. as the single most authoritative document of Judaism only within that theological context. For the T.B. constitutes the authoritative statement of the Torah as the Torah would be read in Judaism from antiquity to modern times. To explain that fundamental conception of Judaism, from which all else follows, one needs to ask how the Talmud is deemed part of the Torah. The answer lies in the meaning of the word "Torah": God's revelation. At Sinai, Judaism maintains, God revealed the Torah in two media — writing and memory. The written Torah corresponds to the Hebrew Scriptures, which Christians call the OT. The memorized, or oral, Torah was orally formulated and orally transmitted for many centuries, from Moses to Joshua to prophets and sages and ultimately to the authorities who composed the Mishnah. That is the account of the origin and authority of the Mishnah given in tractate *Aboth* ("the founders") formed *ca.* A.D. 250, about a generation after the completion of the Mishnah (*ca.* A.D. 200). That systematic statement commences, "Moses received Torah at Sinai and handed it on to Joshua, Joshua to the prophets," and onward to the sages. Each name that is listed is given a saying, e.g., *Aboth* i.14: "If I am not for myself, who will be for me? If I am only for myself, what am I? If not now, when?' assigned to Hillel, who flourished toward the turn of the 1st cent. A.D. Since *Aboth's* list of sages continues right on through important figures in the Mishnah itself, the position of the authorship of Aboth is that sages of the Mishnah (called *Tannaim*) stand in a direct line to Sinai. And it further follows that the Mishnah constitutes a statement of the oral, or memorized, Torah of Sinai.

Commentaries and expansions of the Mishnah, as much as of Scripture, therefore fall into the classification of Torah — statements within the revelation of God to Moses at Mt. Sinai. Since the Talmud (i.e., T.B.) comes at the end of the process of expansion and amplification of both the Mishnah and also Scripture — oral and written Torah, respectively — it forms the authoritative and final

statement of the Torah for the formative period of Judaism.

III. The Literary Context of the Talmud.–A brief account of the writings between the Mishnah and the Talmuds will place into context that authoritative and conclusive statement of the whole. The writings of the sages between the Mishnah and the T.B., *ca.* A.D. 200 and 600, fall into two distinct groups, one beginning with the Mishnah and ending *ca.* 400, with the Tosephta and close associates of the Mishnah; the other beginnng with the T.P. *ca.* A.D. 400 and ending *ca.* 600, with the T.B. The Mishnah drew in its wake tractate *Aboth*, a statement concluded a generation after the Mishnah on the standing of the authorities of the Mishnah. Attached to the Mishnah also is the *Tosephta*, *ca.* A.D. 300-400, a compilation of supplements of various kinds to the statements in the Mishnah. There were also three systematic exegeses of books of Scripture or the written Torah, tied to the Mishnah because, in passages, they may cite the Mishnah or the Tosephta verbatim and raise interesting questions about the relationship between the Mishnah or the Tosephta and Scripture. These works are the *Sifra*, to Leviticus; *Sifre*, to Numbers; and another *Sifre*, to Deuteronomy. These books overall form one stage in the unfolding of the Judaism of the dual Torah, oral and written, which stressed issues of sanctification of the life of Israel, the people, in the aftermath of the destruction of the Jerusalem temple in A.D. 70.

The second set of the writings that culminated in the T.B., stressed the dual issues of sanctification and salvation, presenting a doctrine of Israel's redemption by the Messiah in the model of the sage himself. The amplification of the Mishnah, which led to the first of the two sets of writings, defined the literary expression of the theological program at hand. It begins with the T.P., addressed to the Mishnah as oral Torah. Alongside, work on the written Torah was carried on through *Genesis Rabbah*, a reading of the book of Genesis to interpret the history and salvation of Israel today in the light of the history and salvation of the patriarchs and matriarchs of old, deemed to form the founders of the family of Israel after the flesh. A second important work, *Leviticus Rabbah* (*ca.* A.D. 450), read for the lessons of Israel's salvation the book of Leviticus, which stresses issues of the sanctification of Israel. So Leviticus was reread for its lessons of how Israel's sanctification in the here and now led to Israel's salvation at the end of time. Finally, the T.B. addressed both Torahs, oral and written, Mishnah and Scripture, within one and the same document — the first of the writings of the Judaism of the dual Torah to do so systematically and extensively. The difference between the T.B. and the earlier writings, therefore, is that while the authors of the T.P. systematically interpreted passages of the Mishnah, and the other documents did the same for books of the written Torah, the authors of the T.B. did both. Alongside, there were some other treatments of biblical books important in synagogue liturgy, particularly the Five Scrolls, (Megilloth), e.g., *Lamentations Rabbathi* and *Esther Rabbah*. A remarkable compilation of scriptural lessons pertinent to the special occasions of the synagogue, *Pesikta de Rab Kahana*, also reached closure at the same time (the 5th or 6th cents.).

The difference in viewpoint between the documents from the Mishnah to the *Sifra* and *Sifre* is not merely technical; it is theological. The first of the two sets of writings, from the Mishnah to the T.P., exhibits no sign of interest in, or response to, the advent of Christianity. The second, from the T.P. forward, stresses points that in retrospect appear to respond to, and to counter, the challenge of Christianity. The point of difference, of course, is that from the beginning of the legalization of Christianity in the early 4th cent. to the establishment of Christianity at the end of that same century, Jews in Israel found themselves facing a challenge that, prior to Constantine, they had found no compelling reason to consider. The specific crisis came when the Christians pointed to the success of the Church in the politics of the Roman state as evidence that Jesus Christ was King of the world, and that His claim to be Messiah and King of Israel had now found vindication. The Judaic documents that were completed in the century after these events attended to questions of salvation, e.g., doctrine of history and of the Messiah, authority of the sages' reading of Scripture as against the Christians' interpretation, and the like, that had earlier not enjoyed extensive consideration.

IV. The Mishnah and the Talmuds.–Sages (called *Amoraim*) worked out in the pages of the T.P. and, later on, the T.B., as well as in the exegetical compilations of the age, a Judaism intersecting with the Mishnah's but essentially asymmetrical with it. The Talmuds and associated writings presented a system of salvation focused on the salvific power of the sanctification of the holy people. The first of the two Talmuds, the one closed at the end of the 4th cent., set the compass and locked it into place. The second concluded matters. The Mishnah, *ca.* A.D. 200, described an orderly world, in which Israelite society is neatly divided among its castes, arranged in priority around the center that is the temple, systematically engaged in a life of sanctification remote from the disorderly events of the day. The two Talmuds portrayed matters quite differently. While the Talmuds aim principally at the exegesis and amplification of the laws of the Mishnah, they also point toward a matrix beyond the Mishnah's text. Transcending the Mishnah's facts, the Talmuds' authors bring to the Mishnah a program defined outside the Mishnah. The Talmuds' discussions are not limited to the contents of the Mishnah. Discourse encompasses a world of institutions, authorities, and effective power quite beyond the imagination of the Mishnah's framers. Furthermore, the Talmuds' picture of that world essentially ignores the specifications, for these same matters, of the Mishnah's law.

To take one striking example, the Mishnah's government for Israel rests upon a high priest and a king, with administrative courts ascending upward to the authority of the temple mount. The Talmuds do not even pretend that such a world exists, knowing in its place a set of small-claims courts and petty bureaus of state, over which rabbis, defined as judges, lawyers, and masters of disciples in the law, preside. At the head of it all is a patriarch, not a priest anointed for the purpose. That example provides an instance of the curious discontinuity between the Mishnah's view of the world and of the society of Israel, on the one hand, and that of the Talmuds, continuous with the Mishnah and framed as little more than an exegesis of that code, on the other hand.

The Talmuds portray the chaos of Jews living among Gentiles, governed by a diversity of authorities, lacking consistent order and arrangement, awaiting a time of salvation for which, through sanctification, they make themselves ready. That social fact of Israel's life did not change between 200 and 400 in the land of Israel, and between 200 and 600 in Babylonia. But the representation of the social realities did change. The sages of both Talmuds represented themselves — and we have no reason to doubt them — as fully in charge of the everyday life of the community, hence in constant touch with a real "Israel" consisting of a social group living a palpable everyday life. We may compare the former authors to legal philoso-

phers, thinking in abstract terms about logic and order. The latter authors, those of the Talmuds, were deeply involved in the administration of the concrete social group, "Israel" as a real-life community. We may see those authors as analogous to judges, lawyers, bureaucrats, heads of local governments — not philosophers alone but men of affairs. When they represented "Israel," they drew upon concrete knowledge of, engagement in, a very real social world indeed. The facts portrayed by this second authorship draw upon experience entirely beyond the imagination of the first one.

The Mishnah's Israel is governed by an Israelite king, high priest, and Sanhedrin — a political world that for two centuries had existed, if at all, only in imagination or aspiration. The Talmuds' portrait of Israel represents Jews who lived under both rabbis near at hand, settling everyday disputes of streets and households, and also distant archons of a nameless state, to be manipulated and placated on earth as in heaven. In literary terms, in the transition from the Mishnah to the Talmuds we leave behind the strict and formal classicism of the Mishnah and come to focus upon the disorderly detail of the workaday world, taking the utopian Mishnah along with us.

The two Talmuds primarily studied the Mishnah line by line, word by word. The modes of study were mainly three. (1) Sages asked about the meanings of words and phrases. (2) Then they worked on the comparison of one set of laws with another, finding the underlying principles of each and comparing, and harmonizing, those principles. Thus they formed of the rather episodic rules a tight and large fabric. (3) They moved beyond the narrow limits of the Mishnah into still broader and more speculative areas of thought.

Once the work of reading the new code got under way, an important problem demanded attention: What is the relationship between the Mishnah and the established Scripture of Israel, the written Torah? The Mishnah only occasionally adduces texts of the Scriptures in support of its rules. Its framers worked out their own topical program, only part of which intersects with that of the laws of the Pentateuch. They followed their own principles of organization and development. They wrote in their own kind of Hebrew, which is quite different from biblical Hebrew. So the question naturally arose, Can we through sheer logic discover the law? Or must we tease laws out of Scripture through commentary, through legal exegesis? The Mishnah represented an extreme in this debate, since so many of its topics to begin with do not derive from Scripture, and, further, a large part of its laws ignores Scripture's pertinent texts in that these texts are simply not cited. The two Talmuds therefore paid attention also to the relationship of the Mishnah to Scripture.

V. The Relation Between the Talmuds.–Both Talmuds relate to the Mishnah. But each stands on its own. The T.B. is more than a secondary development of the T.P. On the one hand, both Talmuds organize their materials as comments on Mishnah sentences or paragraphs. Moreover, the two compositions differ from all other documents of the rabbinic canon both in their focus — the Mishnah — and in their mode of discourse. That is, Mishnah exegesis and expansion find their place, in the entire corpus of rabbinic writings of late antiquity, solely in the two Talmuds. What is shared between the two Talmuds and the remainder of the canon deals with Scripture exegesis, on the one side, and deeds and sayings of sages, on the other. To give one simple example, while *Leviticus Rabbah* contains exegeses of Scripture found also in one of the Talmuds, it does not subject a single passage of the Mishnah to modes of analysis common in the two Talmuds, even though on rare occasion a Mishnah sentence or paragraph may find its way into *Leviticus Rabbah*. So the two Talmuds stand together as well as take up a position apart from the remainder of the canon.

While the two Talmuds treat the Mishnah paragraphs in the same order, they do not say the same thing about them. They use different language to make their own points. Where they raise the same issue, it derives from the shared text, the Mishnah, and its logic. Even when the Talmuds share materials, the T.B.'s use of those materials does not depend upon the T.P.'s. Both refer back to the Mishnah and to the Tosephta, responding to the former in terms of the exegetical program precipitated by the contents available in the latter. When the two Talmuds wish to deal with the same issue, the overlap is in conception; but there is no point of verbal contact, let alone of intersection.

It remains to observe that the two Talmuds come into contact not only through shared access to the Mishnah and to the Tosephta as well as to some materials of earlier authorities but also in what appears to be a common exegetical program on questions or principles that bear upon a given Mishnah paragraph. But that common program derives over and over again from the contents of the Mishnah paragraph at hand, i.e., the principles of law implied by a given rule. It may emerge from the overall task that, linking the Mishnah to Scripture, formed the center of the hermeneutic labor of everyone who received the Mishnah and proposed to deal with it.

The T.B. and T.P. most certainly do form a cogent part of a larger, continuous statement, that of "the one whole Torah of Moses, our rabbi" or, in modern theological language, Judaism. The two authorships wish to do much the same thing, which is to subject the Mishnah to a process of explanation and amplification. While the authors of the T.B. developed their own principles of hermeneutics, composition, and redaction, still, the T.B. as a whole would not have baffled their predecessors, who created the T.P. Apart from disagreements on tertiary details, the two sets of authorities found themselves entirely at home in the conceptions, rhetoric, and documents created by their counterparts. That seems self-evident proof of the continuity of the T.B. with the T.P.

Where the two sets of authors deal with a shared lemma, however, each group does exactly what it wishes, imputing words to the prior authority (as if the said authority had actually spoken those words) simply not known to the other group. More important, what the framers of the T.B. wished to do with a saying of an earlier Amoraic authority in no way responded to the policy or program of the T.P. authors. The point in common was that prior authorities explained the same passage of the Mishnah. From that simple starting point, the T.B.'s authors went in a direction not imagined by the T.P.'s. The power and intellectual force of the T.B.'s authors in that context vastly overshadowed the capacities of the T.P.'s. The T.B.'s authors also innovated in their capacity to read Scripture in that same systematic and purposive way in which they read the Mishnah. They furthermore composed large-scale treatments of scriptural passages much like those on Mishnah paragraphs. The result was that through the medium of the T.B. Judaism would receive and read the written part of the Torah, or Scripture, in the same way as it received the oral part, or the Mishnah. That constituted the distinctive strength of the T.B., and, in theological terms, accounts for its priority and authority in Judaism.

VI. Talmud, Midrash, Halakah, and Haggadah.–It remains briefly to refer to some familiar terms concerning

the T.B. The first, *halakah*, means law, how things are done. The second is *haggadah*, lore. The word comes from the root that, as a verb, yields "to tell, to report, to narrate," and, accordingly, *haggadah* commonly means narrative or story. It bears the secondary meaning of fable. The third is *Midrash*. The English word "exegesis" carries the same generic sense as the Hebrew word "Midrash." So far as the authors of the T.P. or the T.B. read and interpreted the Mishnah, they engaged in a process of *midrash*, and so too for Scripture. But the word *midrash* bears a more limited meaning, namely, interpretation for the purpose of discovering a pertinent rule (in the Mishnah) or theological truth (in Scripture).

Midrash halakah refers to deriving a rule or a law from a verse of Scripture. One important exercise is to show the relationship of a rule of the Mishnah to a statement found in Scripture, thus proving that the oral Torah restates principles sustained by the (now more authoritative) written Torah. Another exercise will derive from a verse of Scripture a rule not found in the Mishnah. The *Sifra* to Leviticus, *Sifre* to Numbers, and the *Sifre* to Deuteronomy all fall into the category of *midrash halakah*.

Midrash haggadah refers to the "interpretation of a biblical story." Important parts of *Genesis Rabbah* and *Leviticus Rabbah* contain *midrash haggadah*, i.e., amplifications of scriptural stories. The relationship of the T.B. as a document to these two genres of writing is simple. The T.B.'s and T.P.'s authors included sizable passages of both *midrash halakah* and *midrash haggadah*. But while the T.P.'s authors produced a major treatment of the Mishnah and only episodic statements focused upon Scripture, the T.B.'s authors built considerable systematic statements out of both types of writing, as it worked its way toward a massive and encyclopedic restatement of both components of the Torah, written and oral.

VII. Contents of the Talmud.–Since both Talmuds begin with the Mishnah, an account of the contents of each one must begin with a picture of the base document. The Mishnah is a kind of law code, divided into six divisions. Here is a list of those divisions and the tractates in each division, with a literal translation of the titles and a brief description (largely dependent on Danby).

A. Zeraim *("Seeds")*. Sanctification of the economy and support of the priesthood, the holy caste.

1. Berakoth *("Blessings")*. The Shema (Dt. 6:4); the Eighteen Benedictions; grace at meals; other prayers.

2. Peah *("Corner")*. Gleanings from the "corner" of the field (Lev. 19:9f.; 23:22; Dt. 24:19ff.; etc.).

3. Demai *("Doubtful")*. Produce not certainly tithed; doubtful fruits (corn, etc.) of which it is uncertain whether the duty for the priests and, in the fixed years, the second tithe have been paid.

4. Kilaim *("Two Kinds")*. Forbidden mixtures (Lev. 19:19; Dt. 22:9-11).

5. Shebiith *("Seventh")*. Forbidden cultivation of land in the Sabbatical Year (Ex. 23:11; Lev. 25:1-7, 20-22; Dt. 15:1-3); year of release (Dt. 15:1ff.).

6. Terumoth *("Heave Offerings")*. Portion given to the priests (Nu. 18:8ff.; Dt. 18:4).

7. Maaseroth *("Tithes")*. First tithe (Nu. 18:21ff.).

8. Maaser Sheni *("Second Tithe")*. (Dt. 14:22ff.).

9. Hallah *("Dough")*. Dough offering (Nu. 15:18-21).

10. Orlah *("Uncircumcision")*. Forbidden use of the fruit of young trees (Lev. 19:23f.).

11. Bikkurim *("First Fruits")*. (Dt. 26:1ff.; Ex. 23:19).

B. Moed *("Feast")*. Sanctification of time, with reference to special occasions, appointed times, and the sabbath.

1. Shabbath *("Sabbath")*. (Ex. 20:10; 23:12; Dt. 5:14).

2. Erubin *("Mixtures")*. The ideal combination of localities with the purpose of facilitating the observance of the sabbatical laws.

3. Pesahim *("Passover")*. The Feast of Passover (Ex. 12; Lev. 23:5ff.; Nu. 28:16ff.; Dt. 16:1); the second Passover (Nu. 9:10ff.).

4. Shekalim *("Shekels")*. The shekel dues for the temple (cf. Neh. 10:32 [MT 33]; Ex. 30:12ff.).

5. Yoma *("Day")*. The Day of Atonement (Lev. 16).

6. Sukkah *("Booth")*. The Feast of Tabernacles (or Booths) (Lev. 23:34ff.; Nu. 29:12ff.; Dt. 16:13ff.).

7. Yom Tob *("Good Day") or* Betzah *("Egg")*. The difference between the sabbath and the festivals (cf. Ex. 12:10).

8. Rosh ha-Shanah *("New Year")*. The Feast of the New Year (Lev. 23:24f.; Nu. 29:1ff.).

9. Taanith *("Fasting")*. The days of fasting.

10. Megillah *("Scroll")*. The reading of Esther at the Feast of Purim (Est. 9:28), as well as public readings of other biblical passages.

11. Moed Katan *("Minor Feast")*. The days between the first and last days of Passover and of Tabernacles.

12. Hagigah *("Festival Offering")*. Statutes relating to the three feasts of pilgrimage (Passover, Weeks, Tabernacles) (cf. Dt. 16:16f.).

C. Nashim *("Women")*. Sanctification of the family and the individual.

1. Yebamoth *("Sisters-in-Law")*. Levirate marriage (Dt. 25:5ff.; cf. Ruth 4:5; Mt. 22:24).

2. Ketuboth *("Written Documents")*. Marriage deeds.

3. Nedarim *("Vows")*. Vows and their annulment (Nu. 30).

4. Nazir *("Nazirite")*. The Nazirite vow (Nu. 6).

5. Sotah *("Going Astray")*. The suspected adulteress (Nu. 5:11-31).

6. Gittin *("Writs")*. Bills of Divorce (Dt. 24:1; cf. Mt. 5:31).

7. Kiddushin *("Consecrations")*. Betrothals.

D. Nezikin *("Damages")*. The proper conduct of points of social conflict and the political life of the people. Originally the first three tractates were combined into one, called *Nezikin*.

1. Baba Kamma *("First Gate")*. Damages and injuries and the responsibility.

2. Baba Metzia *("Middle Gate")*. Lost property, guardianship, usury, and the hire of laborers.

3. Baba Bathra *("Last Gate")*. Ownership of immovable property.

4. Sanhedrin. The constitution and procedure of courts of law, especially concerning capital punishment.

5. Makkoth *("Stripes")*. The law against false witnesses (Dt. 19:19), the cities of refuge, and punishment of stripes (Dt. 25:1-3; cf. 1 Cor. 11:24). Originally this tractate was combined with *Sanhedrin*.

6. Shebuoth *("Oaths")*. (Lev. 5:1ff.).

7. Eduyoth *("Testimonies")*. Collection of Halakoth on unrelated topics.

8. Abodah Zarah *("Unlawful worship")*. Idolatry; commerce with Idolaters.

9. Aboth *("Fathers")*. Sayings of the Tannaim. Also known as *Pirke Aboth*.

10. Horayoth *("Instructions")*. Erroneous decisions and the sin offering to be brought in such a case (Lev. 4:1-21).

E. Kodashim *("Sacred Things")*. Sanctification of the temple and its offerings, with special emphasis on the everyday and the routine occasions.

1. Zebahim *("Sacrifices")*. Animal offerings (Lev. 1ff.).

2. Menahoth *("Meal Offerings")*. (Lev. 2:5, 11ff.; 6:7ff.; Nu. 5:15ff.; etc.).

3. Hullin *("Common Things")*. Slaughtering of animals for ordinary use (i.e., as food).

4. Bekhoroth *("Firstlings")*. (Ex. 13:2, 12f.; Lev. 27:26f., 32; Nu. 8:6ff.; etc.).

5. Arakhin *("Valuations")*. Valuations of persons and things dedicated to God (Lev. 27).

6. Temurah *("Substitution")*. The substituted offering of a common (non-sacred) thing for a sacred one (Lev. 27:10, 33).

7. Kerithoth *("Excisions")*. Offenses punishable by extirpation or cutting off from Israel (Ex. 12:15; Lev. 18; Nu. 15:30f.; etc.).

8. Meilah *("Trespass")*. Unfaithfulness to sacred things (Lev. 5:15f.; Nu. 5:6ff.).

9. Tamid *("Continuous")*. The whole offering brought morning and evening every day of the year (Ex. 29:38-42; Nu. 28:1-8).

10. Middoth *("Measurements")*. Measurements of the temple (before its destruction in A.D. 70).

11. Kinnim *("Nests")*. The offering of two turtledoves or two young pigeons (Lev. 1:14-17; 5:1-10; 12:8; etc.).

F. Tohoroth *("Cleannesses")*. The protection of the temple from uncleanness and the preservation of cultic cleanness. This title is used euphemistically for unclean things.

1. Kelim *("Vessels")*. The susceptibility of any useful object (clothing, utensils, etc.) to uncleanness (Lev. 6:27f. [MT 20f.]; 11:32ff.; Nu. 19:14-22; 31:20-24).

2. Oholoth *("Tents")*. The impurity originating with a corpse or a part of it (cf. Nu. 19:14).

3. Negaim *("Plagues")*. Symptoms of "leprosy" (Lev. 13–14).

4. Parah *("Cow")*. The use of the ashes of the red heifer for purification (Nu. 19:1-22).

5. Tohoroth *("Cleannesses")*. Susceptibility of food to uncleanness.

6. Mikwaoth *("Pools of Water")*. Pools in which unclean objects or people must be immersed (Lev. 14:8; 15:5ff., 12; Nu. 31:33; cf. Mk. 7:4).

7. Niddah *("Impurity")*. The menstruant (Lev. 15:19-24).

8. Makshirin *("Predisposers")*. Seven liquids that cause food to become defiled (Lev. 11:38).

9. Zabim *("Persons Having a Flux")*. (Lev. 15).

10. Tebul Yom *("One Immersed on the Day")*. Rules concerning one who, having become unclean, has taken the ritual bath but remains unclean until sunset (Lev. 15:5; 22:6f.).

11. Yadaim *("Hands")*. The ritual impurity of the hands and their purification (cf. Mt. 15:2, 20; Mk. 7:1-23).

12. Uktzin *("Stalks")*. The conveyance of ritual impurity by various parts of plants.

Among the six divisions of the Mishnah, T.P. addresses *Zeraim, Nashim, Moed,* and *Nezikin,* and the T.B. treats *Nashim, Moed, Nezikin,* and *Kodhashim*. The topical program throughout thus focuses upon the sanctification of the life of Israel, the Jewish people. The question taken up by the Mishnah, in the aftermath of the destruction of the temple, is whether and how Israel is still holy. And the self-evidently valid answer is that Israel indeed is holy, and so far as the media of sanctification persist beyond the destruction of the holy place — and they do endure — the task of holy Israel is to continue to conduct that life of sanctification that had centered upon the temple. Where now does holiness reside? It is in the life of the people, Israel — there above all. So the Mishnah may speak of the holiness of the temple, but the premise is that the people — that kingdom of priests and holy people of Leviticus — constitutes the center and focus of the sacred. The land retains its holiness too, and in raising the crops the farmer is expected to adhere to the rules of order and structure laid down in Leviticus, keeping each thing in its proper classification, observing the laws of the Sabbatical Year, for instance. The priesthood retains its holiness, even without the task of carrying out the sacrificial cult. Therefore priests must continue to observe the caste rules governing marriage as specified in Leviticus.

Since the two Talmuds focus upon *Moed, Nashim,* and *Nezikim,* let us address the main points important both to the Mishnah and the Talmuds in those divisions. These continue the special interest in sanctification. The relationship of man and wife forms a focus of sanctification, and that too retains its validity even now. The passage of time, from day to day with the climax at the sabbath, from week to week with the climax at the sanctification of the new month, from season to season with the climax at the holy seasons, in particular the first new moon after the autumnal equinox, marked by the Feast of Tabernacles, and the first new moon after the vernal equinox, marked by Passover — these too continue to indicate the fundamental state and condition of Israel the people: all these modes of sanctification endure, surviving the destruction of the holy temple.

Four of the six principal parts of the Mishnah deal with the cult and its officers. These are, first, *Kodhashim,* which addresses the everyday conduct of the sacrificial cult; second, *Tohoroth,* which takes up the protection of the cult from sources of uncleanness specified in the book of Leviticus (particularly Lev. 12–15); third, *Zeraim,* which centers on the designation of portions of the crop for the use of the priesthood (and others in the same classification of a holy caste, e.g., the poor), and so provides for the support of the temple staff; and, fourth, *Moed,* the larger part of which concerns the conduct of the cult on such special occasions as the Day of Atonement, Passover, Tabernacles, etc. (and the rest of which concerns the conduct in the village on those same days, with the basic conception that what you do in the cult forms the mirror image of what you do in the village). Of these four parts the T.P. attends to three and the T.B. to three, both of them omitting *Tohoroth*. Two further divisions of the document as a whole deal with everyday affairs, one, *Nezikin,* concerning civil law and government, the other, *Nashim,* taking up issues of family, home, and personal status.

This account of the topical program of the two Talmuds — which themselves share the same points of emphasis — tells us what the Talmuds did with the received statement of the Mishnah. But they made their own powerful and original statements as well. The most important point of those statements was to shift the focus upon the temple and its supernatural principles to close attention to the people Israel and its natural, this-worldly history. Once Israel, holy Israel, had come to form the counterpart to the temple and its supernatural life, that other history — Israel's — would stand at the center of things. Accordingly, a new sort of memorable event came to the fore in the Talmud of Israel. It was the story of Israel's suffering — remembrance of that suffering on the one side, and an effort to explain events of such tragedy on the other. The components of the historical theory of Israel's sufferings were manifold. First and foremost, history taught moral lessons. Historical events entered into the construction of a teleology for the Yerushalmi's system of Judaism as a whole. What the law demanded reflected the consequences of wrongful action on the part of Israel. So, again, Israel's own deeds defined the events of history.

But the paradox of the Talmuds' system lies in the fact that Israel can free itself of control by other nations only by humbly agreeing to accept God's rule. The nations — Rome, in the present instance — rest on one side of the balance, while God rests on the other. Israel must then choose between them. There is no such thing for Israel as freedom from both God and the nations, total autonomy and independence. There is only a choice of masters, a ruler on earth or a ruler in heaven. It is Israel's history that works out and expresses Israel's relationship with God. Thus the critical dimension of Israel's life is salvation; the definitive trait, a movement in time from now and then. It follows that the paramount and organizing category is history and its lessons. In the Talmuds we witness, among the Mishnah's heirs, a striking reversion to biblical convictions about the centrality of history in the definition of Israel's reality. The T.B. made the definitive statement of the matter. In the view expressed here, the principal result of Israel's loyal adherence to the Torah and its religious duties will be Israel's humble acceptance of God's rule. That humility, under all conditions, makes God love Israel.

> *"It was not because you were greater than any people that the Lord set his love upon you and chose you"* [Dt. 7:7]. The Holy One, blessed be he, said to Israel, "I love you because even when I bestow greatness upon you, you humble yourselves before me. I bestowed greatness upon Abraham, yet he said to me, *'I am but dust and ashes'* [Gen. 18:27]; upon Moses and Aaron, yet they said, *'But I am a worm and no man'* [Ps. 22:6 (MT 7)]. But with the heathens it is not so. I bestowed greatness upon Nimrod, and he said, *'Come, let us build us a city'* [Gen. 11:4]; upon Pharaoh, and he said, *'Who are they among all the gods of the countries?'* [2 K. 18:35]; upon Nebuchadnezzar, and he said, *'I will ascend above the heights of the clouds'* [Isa. 14:14]; upon Hiram, king of Tyre, and he said, *'I sit in the seat of God, in the heart of the seas'* [Ezk. 28:2]" (T.B. *Hullin* 89a).

The heart of the matter then is Israel's subservience to God's will, as expressed in the Torah and embodied in the teachings and lives of the great sages. When Israel fully accepts God's rule, then the Messiah will come. Until Israel subjects itself to God's rule, the Jews will be subjugated to pagan dominion. Since the condition of Israel governs, Israel itself holds the key to its own redemption. But this it can achieve only by throwing away the key. The paradox must be crystal clear: Israel acts to redeem itself through the opposite of self-determination, namely, by subjugating itself to God. Israel's power lies in its negation of power. Its destiny lies in giving up all pretense at deciding its own destiny. So weakness is the ultimate strength, forbearance the final act of self-assertion, passive resignation the sure step toward liberation. (Christianity's parallel for this paradox is in the person of the crucified Christ.) Israel's freedom is engraved on the tablets of the commandments of God: to be free is freely to obey. That is not the meaning associated with these words in the minds of others who, like the sages of the rabbinical canon, declared their view of what Israel must do to secure the coming of the Messiah.

VIII. Influence and Significance of the Talmud.–From its closure in the 7th cent. to the present the T.B. formed the first and most important resource for study. One reason for the success of the T.B., apart from its powerful representation of the unity of the written and oral Torah, lay in the historical success of the Babylonian Jews as against the decline of the community in Israel. Islam centered on Babylonia, not on Israel, and as the Islamic conquest of the Middle East, North Africa, and southern Europe took effect, the Jews of the West, as well as of the Middle East, looked to Babylonia for leadership. While one group of Jews, called Karaites, rejected the claim that God had revealed an oral Torah and therefore ignored both Talmuds, most Jews received the T.B. in precisely the terms in which it represented itself: the authoritative statement of the Torah, written and oral, of Sinai.

On this matter, R. E. Cohen states ("The Yerushalmi and its Critics," in *New Perspectives on Ancient Judaism* [1987], I, 21-36), "Medieval authorities perpetuated the bias against the Yerushalmi. . . , relegating the Yerushalmi to the status of an occasional supplement. Henceforth, on questions of Jewish law, religious authorities referred to the Yerushalmi only when the Bavli did not contain a complete and unambiguous discussion. In concrete terms, this meant that there was a general lack of texts, commentaries, and codifications. The medieval textual commentators, such as Rashi, and the codifiers of law, such as Joseph Caro, rarely mentioned the Yerushalmi and may not have had access to any manuscripts. As a result, the Yerushalmi remained obscure and mystified. Only a few elite men were familiar with its contents. Because they distinguished themselves by this exclusive knowledge, they benefitted from perpetuating the obscurity of this document."

When Judaic authorities wished to study the Torah, they therefore devoted themselves to the T.B., and, it follows, all authoritative statements within Judaism began with the T.B., which defined the way of reading both Scripture and the Mishnah alike. Today, the T.B. serves as a principal resource of Reform and Reconstructionist Judaism, while both Conservative and Orthodox authorities continue to identify Judaism with the T.B. According to the Israeli Talmudist, A. Steinsaltz (p. 3): "If the Bible is the cornerstone of Judaism, then the [Babylonian] Talmud is the central pillar, soaring up from the foundations and supporting the entire spiritual and intellectual edifice. In many ways the [Babylonian] Talmud is the most important book in Jewish culture, the backbone of creativity and national life. No other work has had a comparable influence on the theory and practice of Jewish life, shaping spiritual content and serving as a guide to conduct. The Jewish people have always been keenly aware that their continued survival and development depend on the study of the [Babylonian] Talmud."

One consequence of the centrality of the T.B. has been the neglect of the T.P. As R. E. Cohen (p. 22) has pointed out, "Apologists rationalized the neglect of the Yerushalmi by arguing that it deserved to be neglected because it was incoherent and incomplete. Today, scholars perpetuate this bias, criticizing the Yerushalmi as being unworthy of serious attention. When studied on its own terms, however, this document emerges as a highly sophisticated composition. It employs a remarkably uniform and coherent mode of argumentation to discuss a broad range of topics. The Yerushalmi appears to have been condemned without ever receiving a fair trial." In his study of the T.P., Cohen has shown that it "carefully formulates its discussions according to syllogisms and expects that its audience understands these implicit patterns of argumentation. Therefore, it expresses arguments concisely without appealing to technical terms and rhetorical devices to guide the reader through its arguments. The reader must think through each syllogistic argument. In this way, the Yerushalmi is a subtle document which depends on the intelligence of its audience. The next generation of students of the document, framing their judgment on the basis of their own, sustained analysis of the Yerushalmi's

traits in its own terms, may well appreciate the compliment that the authorship of the Yerushalmi pays its audience."

J. NEUSNER

TALSAS tal'sas. AV form for the RSV ELASAH (Gk. LXX B *Salthas*, A *Saloas*; NEB Apoc. SALOAS), who was a son of Pashhur and priest who had taken a foreign wife (1 Esd. 9:22; cf. Ezr. 10:22).

TAMAH tā'ma (Neh. 7:55, AV). *See* TEMAH.

TAMAR tā'mär [Heb. *tāmār*—'date palm'; Gk. *Thamar*].

1. Daughter-in-law of the patriarch Judah (Gen. 38:6, 11, 13, 24; Ruth 4:12; 1 Ch. 2:4; Mt. 1:3). Tamar was the wife of Er, the eldest son of Judah, whose death is attributed to God's judgment upon his evil ways (Gen. 38:7). She was then given in marriage to Onan, another of Judah's sons; but Onan also died when he incurred God's judgment by refusing to fulfill the duty of the HUSBAND'S BROTHER under the custom of the levirate (vv. 8-10; *see also* MARRIAGE IV.A.2). Judah's failure to give his only remaining son, Shelah, to fulfill the levirate responsibility led to Tamar's risky and morally questionable strategy of posing as a pagan cult prostitute (Heb. *qᵉḏēšâ*; *see* HARLOT) in order to become pregnant by her father-in-law (vv. 12-23). Judah thus became the father of her twin sons, Perez and Zerah (vv. 27-30). Upon learning that she was pregnant, Judah at first condemned her to be burned for harlotry; but after learning how she had become pregnant, he vindicated her as innocent of any wrongdoing (vv. 24-26). OT tradition presents Tamar as a heroic figure despite the dubious character of her actions, since she preserved the line of her husband.

Later Jewish tradition traced the line of the great King David through Perez the son of Tamar and Judah (Ruth 4:12; 1 Ch. 2:4). Tamar appears also in the genealogy of Joseph the father of Jesus (Mt. 1:3). This story demonstrates that God is able to accomplish His purposes by unexpected means.

2. Beautiful daughter of David and sister of Absalom (2 S. 13:1-32; 1 Ch. 3:9). The unchecked lust of her half-brother Amnon resulted in one of the classic tragedies of the OT: Amnon raped Tamar (2 S. 13:11-14). To make matters worse, he then sent her away, so that she was forced to live the rest of her life as an unmarried woman in her brother Absalom's house (vv. 15-20). Absalom's outrage provoked him to avenge this crime against his sister by having Amnon murdered, and this ultimately led to the bloody intrafamily strife that all but destroyed David's family and kingdom (vv. 23-39; etc.). David's silence and inaction in the face of Amnon's violation of Tamar was likely instrumental in Absalom's later attempt to overthrow his father.

3. The only daughter of Absalom, probably named for his beloved sister (2 S. 14:27). She is described as "a beautiful woman."

G. L. KEOWN

TAMAR tā'mär [Heb. *tāmār*—'palm']. A site in the Judean Arabah SSW of the Dead Sea, which constituted part of the traditional border between Israel and Edom. The biblical references to this site and the archeological evidence for its geographical identification present a number of uncertainties.

In Ezekiel's description of the boundaries of the future, ideal territory of Israel (47:13–48:29), Tamar is the initial point of an east-to-west description of the southern boundary (47:19; 48:28). The eastern boundary list (47:18) may also refer to Tamar as the southernmost point (reading, with the support of LXX and Syr., *tāmārāh* [RSV "as far as Tamar"] for MT *tāmōddû*). These indications would place Tamar at the extreme southeastern corner of the ideal boundaries, broadly SSW of the Dead Sea.

The LXX reflects subsequent confusion regarding the site (48:28, *Thaiman*; 47:19, *Thaiman kai Phoinikōnos*), apparently associating it with the Edomite locale of Teman (*Thaiman*; cf. Ezk. 25:13), which lay in the same geographical region. The translators may have been influenced by the similar boundary lists of Josh. 15:1-4 and Nu. 34:3-5, both of which mention Edom as the south-

eastern point of departure (cf. esp. Heb. *têmān*, which may mean "south" or "Teman," in Josh. 15:1) and neither of which mentions Tamar at all. The closeness of "Tamar" and "Teman" in the consonantal text of the Hebrew may have been a factor. The double reading at 47:19 (*Thaiman kai Phoinikōnos*) may have been an effort to preserve the variant understandings or simply a correction to MT (Gk. *Phoinikōnos* = "palm" = Heb. *tāmār*).

The other context that mentions Tamar is the list of building projects undertaken by Solomon; once again the text has significant difficulties. In 1 K. 9:18 the consonantal MT (*kethibh*) includes among the cities fortified by Solomon a "Tamar in the wilderness in the land" (cf. RSV, NEB). On the other hand, the vocalization of the MT (*qere*), a number of Hebrew MSS, the major versions (e.g., LXX 10:22a; cf. 2:35i, 46d), and the parallel 2 Ch. 8:4 (see *BHS*) provide the reading *Taḏmōr* (so AV), referring to a major Syrian city, approximately 190 km. (120 mi.) NE of Damascus.

Some have sought to defend "Tadmor" as a plausible site for northern defenses of the Solomonic empire. The name of the city is now attested from the late 12th cent. (cf. *ANET*, p. 275), and even the supposed anachronism of the Chronicler's "Hamath-zobah" (2 Ch. 8:3) has been challenged on the basis of epigraphic evidence from Hamath (10th-8th cent.). Moreover, the awkward expression "Tamar in the wilderness in the land" (1 K. 9:18) could be resolved, with only slight consonantal changes, into "Tadmor in the wilderness in Aram [Syria]."

There are, however, important reasons for maintaining that "Tamar" is the original reading in the traditions of Solomon's building activities. The weightiest of these is the preference for the more difficult reading: it is easier to explain the obscure "Tamar" being understood by reference to the famous "Tadmor" rather than the reverse. Moreover, Solomonic building at Tamar is more plausible historically, since the fortification of a strategic site in the Judean Arabah would serve to protect southern trade routes so valuable in Solomon's time. On this reading, the list of fortifications given in 1 K. 9:15-18 follows a geographical order, from Hazor in the north to Tamar in the south. The traditions associating Solomon with Tadmor-Palmyra may well have stemmed from the obscurity of Tamar in later periods (see above on Ezekiel). The similarities of the names in both orthography and meaning (Tamar/Tadmor="palm"), as well as the testimony in 1 Kings to the vast extent of Solomon's empire (e.g., 4:21 [MT 5:1]), may have encouraged the Chronicler as well as the subsequent translators of 1 Kings to interpret the apparently unknown Tamar by reference to the prosperous Syrian city.

Other biblical references have been associated with this site. "Hazazon-tamar" of Gen. 14:7 could plausibly be located in the Arabah, but its identification with En-gedi in 2 Ch. 20:2 has also been strongly supported. The "City of Palms" of Jgs. 1:16 also has been equated with Tamar because of the references to other southern locales in the same context ("wilderness of Judah," "Negeb near Arad"); however, it is probably to be understood as Jericho, which is commonly called the "City of Palms" (cf. Jgs. 3:13; also Dt. 34:3; 2 Ch. 28:15) and which may have been understood as the point of departure for the Kenites in this account (*GTTOT*, pp. 282f.).

The chief difficulty in identifying the precise location of biblical Tamar is the lack of extant corresponding toponyms in the region. A number of sources from the Roman era, ranging in date from *ca.* A.D. 150-600, mention a site in the Arabah with a name approximating Tamar (*thamarō*, Ptolemy *Geog.* v.15.5; *thamara*, Eusebius *Onom.* 8.8 and Madeba Map; *thamana*, *Notitia dignitatum* 34.46; *thamaro*, Peutinger Table; *thomarōn*, Edict of Beersheba). These traditions all seem to refer to a fortification in the Roman *limes* series of southern Palestine, itself an elaboration of caravanserai taken over from the Nabateans in the 2nd cent. A.D.

Giving special weight to the evidence of the Edict of Beersheba, A. Alt located the Roman fortress of Thamara at Qasr el-Juheiniya (18 km. [10 mi.] E of Kurnub/Mampsis; 21 km. [12 mi.] WSW of the Dead Sea; 173-048), and speculated that the related village lay further down the ghôr at the approximate location of modern ʿAin el-ʿArûs (map coordinates 183-044). These identifications have been influential, and are reflected in the present Israeli names for the two sites, Mezad Tamar and ʿAin Tamar respectively. Y. Aharoni has disputed this identification, however, and has argued from the reliability of road distances in the Peutinger Table for ʿAin Ḥoṣob (Ḥaṣeba; 29 km. [18 mi.] SE of Kurnub/Mampsis; 40 km. [22 mi.] SW of Dead Sea; 173-024) as the location of both biblical Tamar and the Roman Thamara.

Bibliography.–A. Alt, *ZDPV*, 58 (1935), 1-78; Y. Aharoni, *IEJ*, 13 (1963), 30-42; *EAEHL*, IV, *s.v.* "Tamara" (M. Gichon).

J. T. BUTLER

TAMARISK tam'ə-risk [Heb. *'ēšel*] (Gen. 21:33; 1 S. 22:6; 31:13, "tamarisk tree"); AV GROVE (Gen. 21:33), TREE; NEB also "strip of ground" (Gen. 21:33). Several species of tamarisk grow in the Palestinian maritime plain and the Jordan Valley, especially *Tamarix articulata* Vahl., *T. pentandra* Pall., and *T. tetragyna* Ehrenb. They seldom lose their verdure and consequently provide welcome shade. The AV term "grove" was formerly thought to refer to tamarisks but is now generally interpreted as oak trees. Heb. *ʿar'ār* in Jer. 17:6 (AV "heath"; RSV "shrub"; NEB "juniper") is most probably the *Juniperus oxycedrus* L., not the tamarisk as some have suggested. R. K. H.

TAMBOURINE. *See* TIMBREL.

TAMMUZ tam'uz, tä'mooz [Heb. *tammûz*; Akk. *tammuz*; Sum. *dumuzi*–'invigorator of the child (?)']. A Sumerian and Babylonian god of fertility mentioned once in the OT (Ezk. 8:14). The prophet in a vision during his Babylonian Exile saw an abomination: women in the north gate of the Jerusalem temple wailing for Tammuz.

S. N. Kramer may have found literary antecedents to Canticles in Sumerian love poetry celebrating the marriage of Dumuzi and the goddess Inanna (Akk. Ishtar). As

A tamarisk tree at the Ashkelon excavations in Palestine (J. C. Trever)

with Mesopotamian myths about creation and the flood, the contrast with superficially similar biblical material is striking. Intimate details of the Sumerian marriage consummation differ markedly from the beautifully delicate poetry of Canticles.

In the Sumerian King List the fourth king before the flood is Dumuzi, a shepherd who ruled 36,000 years in Bad-tibira; after the flood the "god" Dumuzi ruled 100 years in Uruk, i.e., biblical Erech (*ANET*, pp. 265f.). Early pictorial representations in fourth-millennium B.C. art indicate, however, that the god was primary rather than a deified historical ruler.

Studies of many Sumerian texts, especially T. Jacobsen's perceptive syntheses, show that Dumuzi represented the basic power of life manifest in milk, grain, dates, and the sap of trees and plants. Principal rites associated with the god were the annual sacred marriage of the king or governor to a chief priestess insuring the fertility of crops and livestock, and an annual mourning by women of Tammuz's departure to the underworld when vegetation died in the scorching summer heat.

In the Epic of Gilgamesh the hero rejects the advances of Ishtar and chides the goddess: "For Tammuz, the lover of thy youth, Thou hast ordained wailing year after year" (*ANET*, p. 84). While citing Canaanite gods of fertility that were the objects of similar lamentations, W. F. Albright found "no trace of the Babylonian god in Syria before the Neo-Assyrian period" (*ARI* [5th ed. 1968], p. 161). The cult of Tammuz survived in Aramean paganism well into the Moslem era. The Phoenicians called Tammuz by the name Adon ("Lord"), and a similar cult of Adonis and Aphrodite took root among the Greeks.

It is important to stress that the dictum of J. G. Frazer (*Adonis, Attis, Osiris* [1906]) — "under the name of Osiris, Tammuz, Adonis, and Attis, the peoples of Egypt and Western Asia represented the yearly decay and revival of life, . . . which they personified as a god who annually died and rose again from the dead" — though it enjoyed widespread scholarly acceptance for about half a century, has been invalidated by later material, as admirably set forth by O. R. Gurney.

In exilic and later Judaism the fourth month (June/July) was named Tammuz (*see* CALENDAR II.A.2). A fast on the 17th of Tammuz, commemorating Nebuchadrezzar's (586 B.C.) and Titus's (A.D. 70) breaching of Jerusalem's walls, began three weeks of mourning culminating on the 9th of Ab.

TANACH tā'nach (Josh. 21:25, AV). *See* TAANACH.

TANHUMETH tan-hū'meth [Heb. *tanḥumeṯ*–'consolation']. A NETOPHATHITE (2 K. 25:23) whose son Seraiah was a captain of forces that remained at large in Judah after the Babylonian Exile. Jer. 40:8 records the same account but reads "Seraiah the son of Tanhumeth, the sons of Ephai the Netophathite," which makes "the sons of Ephai" the descendants of Netophah.

See also EPHAI. G. L. K.

TANIS tā'nis, tan'əs [Gk. *Tanis*] (Jth. 1:10). *See* ZOAN.

TANNED [Heb. pual of *'ādam*–'make red' (Ex. 25:5; etc.)]; AV "dyed red," "red"; **TANNER** [Gk. *byrseús* (Acts 9:43; 10:6, 32)]. The process of treating animal skins with oak gall or other vegetable tannins to prepare leather, and the name of one who engaged in that trade for a living.

Although it has been well established that the art of tanning animal skins was practiced in the Near East as early as the 4th millennium B.C. (*see* LEATHER), the tanning process was never specifically mentioned in the OT. The RSV seems to have introduced "tanned" in Ex. 25:5; 26:14; 35:7, 23; 36:19; 39:34 by assuming that the "ram's skins" used for the covering of the wilderness tabernacle were "reddish" as a result of the tanning process for leather-making. The Hebrew term, however, could just as well have meant that the skins used were actually tinted by means of rubbing with red ocher (or some other dyeing process) to give them a reddish color. Such pigment was often used in OT times to inscribe names on pottery, as at Qumrân. If the Exodus tradition was recorded after the 10th cent. B.C., it could have reflected the more elaborate tabernacle of Davidic times (*see* TABERNACLE), rather than the period of the Exodus, as some scholars maintain. Then the intention of the text could have meant a dye treatment, rather than the tanning process. The AV use of "dyed red" (the LXX uses Gk. *erythrodanóō*, also meaning "dyed red") may, therefore, have been the original intention of the authors. The original tabernacle made in Sinai would probably have had a covering only of dried goat or sheepskins, since the tanning process reflects a stable village culture quite unlike that of desert wanderers. In fact, the absence of any technical Hebrew term for the tanning process in the OT may suggest that tanning was not a trade practiced by the Hebrews in OT times.

During intertestamental times and later, Jews were often engaged in the tanning trade, as the talmudic rules for the trade clearly imply. In the NT and the talmudic period the tanning process was usually referred to with technical terms from Greek (*byrseús, bursíyyon*, etc.; cf. T.B. *Baba Bathra* 16b; *Kiddushin* 82b; *burséki* was used for a "tannery" in Mish. *Baba Bathra* ii.9; and Mish. *Shabbath* i.2; cf. also SB, II, 695). The NT story of Peter's sojourn in Joppa with Simon, the tanner (Acts 9–10), implies that Peter had taken a step beyond the Jewish community with the Christian gospel. Since the tanner's trade was a demeaning task from Jewish perspectives, his shop was required to be on the outskirts of a community, for it was a malodorous process (Mish. *Baba Bathra* ii.9; cf. T.B. *Kiddushin* 82b, "woe to him who is a tanner by trade").

See R. Reed, *Ancient Skins, Parchments and Leathers* (1972), chs. 3, 8. J. C. TREVER

TAPESTRY. The AV "coverings of tapestry" (RSV, NEB, "coverings") renders the plural of Heb. *marḇaḏ* (<*rāḇaḏ*, "bespread, deck"), which refers to a fabric used both for bed coverings (Prov. 7:16) and, perhaps, for clothing (31:22).

TAPHATH tā'fath [Heb. *ṭāpaṭ*–'drop' (?)] (1 K. 4:11). Daughter of Solomon and wife of Ben-abinadab, one of Solomon's officers.

See *IP*, p. 226.

TAPHON tā'fon (1 Macc. 9:50, AV). *See* TEPHON.

TAPPUAH tap'ū-ə [Heb. *tappû(a)ḥ*] A son of Hebron and descendant of Caleb (1 Ch. 2:43).

TAPPUAH tap'ū-ə, tə-pū'ə [Heb. *tappû(a)*–"apple," "apple-tree")].

1. A city in the Shephelah (Josh. 15:34), among the inheritance of the tribe of Judah. It is described as "in the

lowland [Shephelah]," one of fourteen cities with their villages, including Eshtaol, Zorah, and Azekah. A Beth-Tappuah also appears in this inheritance list located in the hill country of Judah (15:53). The city is thought to have been south of Beth-shemesh and the Sorek Valley running through the Shephelah (possibly the modern village of Beit Nattif; cf. *GB*, p. 142).

2. A city on the border of Ephraim (Josh. 12:17; 16:8). The "land of Tappuah belonged to Manasseh, but the town of Tappuah on the boundary of Manasseh belonged to the sons of Ephraim" (17:8). The king of Tappuah who was defeated by Joshua and the people of Israel (12:17; cf. v. 7) is named with other kings in the northern region. It seems, however, that it could not be conquered except after a period of intense struggle, and Canaanite enclaves remained (16:10) even though the Ephraimites were later able to occupy the land of Tappuah (16:8; *LBHG* [rev. ed. 1979], pp. 257-260). Although doubt has been expressed concerning the exactness of the conquest narratives (*AOTS*, p. 369), the city has been identified with modern Sheik Abū Zarad, 12 km. (8 mi.) S of Shechem (*LBHG* [rev. ed. 1979], p. 442).

Extrabiblical references to a city of Tappuah are found in Test. Jud. 3:2; 5:6, and perhaps in 1 Macc. 9:50 (RSV, NEB "Tephon"; AV "Taphon"), but no location is indicated by these references. The LXX omits the name of Tappuah in Josh. 15:34, perhaps because of the Beth-Tappuah recorded in 15:53. J. E. MCKENNA

3. A city mentioned in 2 K. 15:16 as a place near Tirzah in Samaria. Located in the northern kingdom, this city was destroyed by Menahem, king of Israel, after its inhabitants refused to open their gates to him. This site has been identified by some with Khirbet Tafsah, about 10 km. (6 mi.) SW of Nâblus. This site, however, is probably too far from Tirzah. Since a Greek MS calls Tiphsah *Taphōe*, others have conjectured that Heb. *tipṣaḥ* herecouldbe a copyist's mistake for Heb. *tappû(a)ḥ*, "Tappuah," a town not far from Tirzah, hence the RSV translation "Tappuah" (AV "Tiphsah").

See also TIPHSAH. K. E. CORLEY

TARALAH tär'ə-lə [Heb. *tar'ᵃlâ*]. A town in the tribal allotment of Benjamin (Josh. 18:27). It appears between Irpeel and Zela in a list of cities that includes Mizpeh and Jebus (Jerusalem). This suggests a location about 10 to 12 km. (6 to 7 mi.) NW of Jerusalem. The summaries "twelve cities" (v. 24) and "fourteen cities" (v. 27) suggest that two lists have been combined (see discussion in *LBHG* [rev. ed. 1979], p. 315). But this would not affect the location of the cities in vv. 27f. W. S. L. S.

TARAH tā'ra, târ'a (Nu. 33:27f., AV, NEB). *See* TERAH.

TAREA tā'rē-a [Heb. *ta'rē(a)*] (1 Ch. 8:35); alternately **TAHREA** tä'rē a, ta rē'a [*taḥrē(a)*] (1 Ch. 9:41). A descendant of Saul and son of Micah.

TARES. *See* WEEDS.

TARGET [Heb. *maṭṭārâ*] (Job 16:12); AV MARK. Figurative picture used by Job to portray God as directing a siege against Job and making him His "target" (see esp. Lam. 3:12; cf. Job 7:20).

V. Impact of Targumic Study upon Biblical Studies

I Definition and Introduction.—The most elementary meaning of the word *targum* is "translation" or "interpretation," but it is quite often connected with the various Aramaic translations of the OT. Though the noun *targum* never appears in the OT, the verb does occur in Ezr. 4:7, "the letter was written in Aramaic and translated [*meṯurgām*] in Aramaic" (RSV mg.). The word *trgm* seems to be related to Akk. *targumānu* ("interpreter") and may have come from Hittite or from Ugar. *ragamu* ("say, call"). Though other explanations have been advanced for Ezr. 4:7, in the biblical text the word *meṯurgām* seems to refer to Aramaic annotations for the letter that Tabeel and his associates sent to King Artaxerxes. The letter was written in Aramaic and annotated in Aramaic with explanatory notes. (Interestingly enough the Aramaic translations of the Bible often abound with explanatory notes rather than a strict literal, word-for-word translation.) But the term *targum* came to be associated more with a translation from one language to another than an interpretation or explanation of a text in one language — though the second meaning continued to appear in rabbinic literature (e.g., T. P. *Sukkah* 55b; cf. also Midr. *Sifre Dt.* 161, where the word *targum* most probably indicates the interpretation of Scripture).

In later times the term *targum* became associated primarily with the various Aramaic translations of the OT (see IV below). Often these translations tend to be paraphrastic, and sometimes they contain extensive annotations rather than pure literal renderings of the Hebrew text. This fact can be best understood by an illustration. Here the more literal rendering of the Hebrew text in Targum Onkelos is compared with the paraphrastic form in Targum Neofiti.

MT: "Give ear, O heavens, and I will speak; and let the earth hear the words of my mouth." (Dt. 32:1)

Targum Onkelos: "Listen, heaven, and I will speak; let the earth hear the words of my mouth." (Drazin's translation)

Targum Neofiti: "When the appointed time of Moses the prophet arrived to be gathered in peace from the midst of the world, Moses thought in his heart and said: Woe now is me, since I am being gathered from the midst of the world and I have not borne witness against the children of the Lord. If I bear witness against them before the sons of man who die and taste the cup of death, the people die and their decrees are void; I shall bear witness against them, however, before the heavens and before the earth, who never die and who do not taste the cup of death, but whose end is (that) they wear out in the world to come; and thus did Isaiah the prophet explain and say: 'Lift up your eyes to the heavens and gaze on the earth beneath' for the heavens shall melt away like smoke and the earth shall be consumed like a garment, but the Lord is to 'create new heavens

and a new earth.' For two prophets arose to bear witness against Israel: Moses the prophet and Isaiah the prophet. Moses, since he was near the heavens and far from the earth, said to the heavens: 'Give heed,' and to the earth 'Listen'; Isaiah, the prophet, however, who arose after him, since he was near the earth and far from the heavens, said to the earth: 'Give heed,' and the heavens, 'Listen.' And both of them, because they feared the Holy Name, arose to bear witness against Israel. For this reason Moses, the prophet of the Lord, arose and took courage and said: 'Give heed, O heavens, and I will speak, and listen, O earth, to the word of my mouth.'" (McNamara and Maher's translation in Díez Macho's edition)

One can immediately note the difference between the more literal version of Onkelos and the annotated, paraphrastic "translation" of Targum Neofiti. It is wrong to generalize from one example, but the Targums of the Hebrew Scriptures are a highly specialized genre of translation literature and should not be viewed strictly as literal translations in the modern sense. The contents of the expanded form of the tradition in Targum Neofiti are reflected in other portions of rabbinic literature, and it may be that other current Jewish interpretations of the text influenced the targumist. To a lesser extent, even in the more literal Greek translation of the OT, at times one discovers that the *meaning* of the Hebrew text is translated or explained rather than the text being rendered word for word (see Bowker, p. 5).

Hence it is overly simplistic to think that the Targums arose from the need for a translation of the Hebrew text into the "Aramaic vernacular" of the people (see Golomb, pp. 5, 8). The Hebrew Scriptures were the primary source and inspiration for the Jewish way of life. Thus it was imperative to interpret the meaning of holy writ. The oral tradition, like the Targums, provided a more or less official interpretation of the meaning of Scripture and a semi-authoritative approach to Jewish life and the function of the Bible for faith and practice. One may ask: Why is there a need for oral tradition (law)? The answer is simple: Because we have a written one in the Bible. In other words, Jewish interpreters felt the need to elucidate the written law. Therefore the Targums, like the oral law, contain a wealth of information concerning the way the Jewish interpreters of late antiquity understood the Scriptures, and thus they should be studied carefully in conjunction with other rabbinic sources.

II. The Aramaic Language and the Targum.–The ARAMAIC language, which had been used widely in the ancient Near East, gained prominence with the decline of Alexander the Great's empire and the rise of the Persians, who made Aramaic the lingua franca of the age. Already in the wake of the destruction of the temple in 586 B.C. and the cruel exile of the Jewish people to Babylon, the people had to learn Aramaic, the language of the land of their captivity. Some of the people intermarried and spoke the various languages of their spouses (Neh. 13:23f.). But no evidence indicates that Hebrew was forgotten or ceased to be spoken among the Jewish people. The captivity lasted only about fifty years, and though a sizable number of Jews remained in Babylon, many returned to Israel and continued to speak Hebrew.

At the time of the return to Zion, the scroll of the law had to be interpreted (Neh. 8). Many biblical scholars have suggested that this account is an early reference to the later synagogal practice of reading the Hebrew text and translating it into Aramaic. This misconception developed in part because of a later talmudic tradition (T. B. *Megillah* 3a; *Nedarim* 37b; T. P. *Megillah* 74d, ch. 4, hal. 1, Rabbi Zeira in the name of Rabbi Ḥananel; Midr. *Gen. Rabbah* xxxvi.8; Albeck, p. 342, Rabbi Yudan; see also Golomb, p. 5). But the talmudic passage shows merely that the Babylonian sage Rab Ḥananel (3rd cent. A.D.) tried to establish the antiquity of the Targums on the basis of Neh. 8:8. The talmudic passage is far removed from the time of Ezra and Nehemiah, and the mention of the accentuation marks and Masoretic notes of the biblical text as having existed already at the time of the return clearly demonstrates that one cannot use the text to date the rise of the Targums. In fact the Hebrew wording of Neh. 8:8 offers no reason to refer to the Aramaic translation of the Bible. On the contrary, Heb. *pršh* (Neh. 8:8) connotes "to interpret" and seldom if ever can refer to a translation from one language to another. Could the Jewish people have forgotten Hebrew after the relatively short captivity? It seems more likely that the text of Nehemiah refers to the necessity of interpreting the law in Israel after the trauma of exile. Many laws dealt with the land of Israel and would have required elucidation after the return and within the context of the people's new freedom of religious expression.

Whatever the case may be, most scholars agree that the practice of translating the Bible into Aramaic was an early custom. Certainly the large Jewish community that remained in Babylon after the decree of Cyrus (537 B.C.) would have eventually required a translation of the sacred literature into Aramaic. But the earliest reference to reading a *Targum* of the Bible during worship is in later mishnaic times. The translations may have developed first as an effort to explain specific difficult words — a process which would naturally lead to full translations.

Every translation is an interpretation to a certain extent. The Targums were designed to communicate the message of the text to people, and the translator (*meturgeman*) sometimes injected stories, Jewish Haggadic teachings, or Halakic stipulations into his interpretation of the Hebrew text. This practice was much more than a free creative exegesis devoid of any system or purpose; the targumists seem to have operated according to their own specialized methodology. The Targums were indeed an actualization of the Bible, and they often elucidate the ancient Jewish understanding of particular texts.

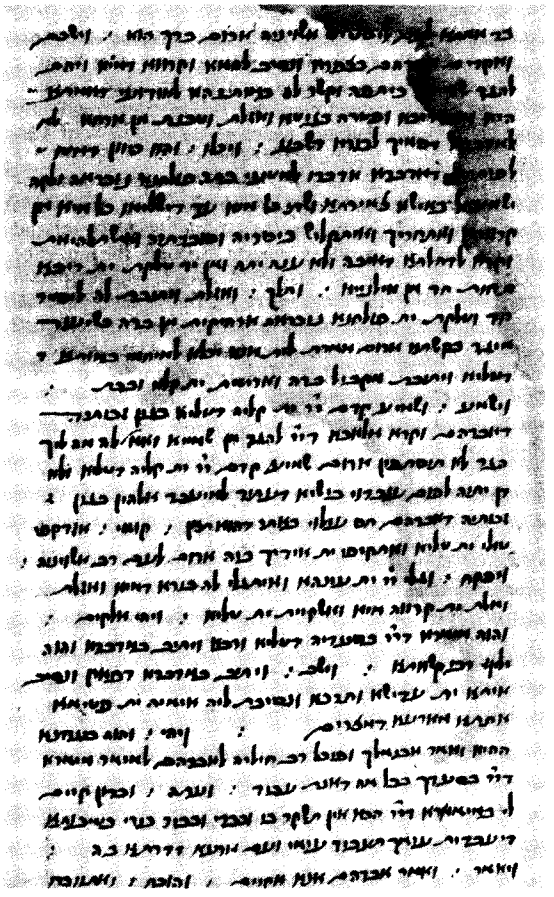
III. Origins.–The earliest Targums known are those discovered among the Dead Sea Scrolls. An Aramaic Targum of Job containing fragmentary portions of Job 17–39 was discovered in Cave 11 (11QtgJob). In Cave 4 two small fragments of an Aramaic Targum to Lev. 16:12-15; 18–21 and another fragment of Job came to light. Rabbinic literature relates a story about the famous Rabban Gamaliel the Elder (considered to be Paul's teacher), who was given a scroll of the translation (*targum*) of Job. After he discerned what had been given to him, he instructed a mason to hide it among the stones of the temple (Tosefta, *Shabbath* 13:2; T.P. *Shabbath* 15c; T.B. *Shabbath* 115a). Some have suggested that the translation which Rabban Gamaliel rejected may have been a version of 11QtgJob. But one must take care not to arrive at unfounded conclusions on the basis of insufficient evidence. The difficult book of Job no doubt gave rise to translations and interpretations that could not be allowed to replace the sacred text itself, and the writing down of oral tradition was prohibited. Though the evidence from Qumrân demonstrates the antiquity of the Targum of Job, it does not necessarily follow that the text referred in the story about Rabban Gamaliel describes an Aramaic rendering of Job — it could be a Greek translation of the biblical text or simply a commentary to explain this difficult book.

It may well be that the Targums were preserved and

transmitted as oral tradition long before they were committed to writing. Already the Mishnah and the Tosefta described the custom of reading the Hebrew Bible and having it translated into Aramaic (Mish. *Megillah* iv.4-6; Tosefta *Megillah* 3[4]:20f.; Lieberman, p. 359, commentary, pp. 1194f.). According to the Amoraim Joshua ben Levi and Ammi, the verse was read twice in Hebrew, once before the Aramaic translation and another time after it (T.B. *Berakoth* 8a-b; cf. Bacher, pp. 57f.). As is well known, the ardent study of the Scriptures was an integral part of the ancient synagogue liturgy; the people followed lectionary readings of the Torah. The Jewish custom stipulated that the reader of the Hebrew text could not be the same person who acted as translator (*meturgeman*). Some passages like the story of King David and Bathsheba (2 S. 11:2-17) were read but not translated, and others were neither read nor translated (Mish. *Megillah* iv.10). The *meturgeman* was not always understood strictly as the one who translated; he also assisted the academy teacher in his lectures by repeating and explaining the lesson to the disciples. As translator, he was required to follow accepted practices and a number of specific rules (though our knowledge of these principles from late antiquity is far from complete). For example, the *meturgeman* was not permitted to translate more than one verse at a time from the Pentateuch and not more than three from the Prophets (Mish. *Megillah* iv.4; cf. Bacher). Rabbi Judah ben Illai, a disciple of the influential Rabbi Akiba said, "If one translates a verse literally, he is a liar, but if he adds to it, he is a blasphemer" (Tosefta *Megillah* 4:41; Lieberman, p. 364; T.B. *Kiddushin* 49a). Hence the task of the *meturgeman* was by no means a simple one; it certainly involved much more than an explanation of the biblical text in the everyday language of the people, though the targumist no doubt had his intended audience in mind as he carried out his work.

While the practice of reading the Hebrew text and then allowing the *meturgeman* to make his Aramaic rendering of the verse is attested from the early sources of the tannaitic period at Usha, it is difficult to identify the Targums which have been preserved today with the Targums of the ancient synagogue. The Targums were never given the same authority as Scripture and have been transmitted in quite different textual recensions. For example, the text of Pseudo-Jonathan gives the wives of Ishmael the names of Muhammad's wife Adisha and his daughter Fatima (Tg. Pseudo-Jonathan on Gen. 21:21). The attribution of these names does not seem accidental. Targum Onkelos, Targum Neofiti, and the Fragment Targums do not mention these names, and most scholars view such later references as interpolations, i.e. they were added to the earlier text of the Targum at a later period. Nonetheless, that interpolations have been introduced into the Targums further underlines the complicated history of their textual preservation and the need for careful critical research.

That Targums have come to light among the DSS and are mentioned in tannaitic literature indicates that they were already in use during the second temple period. But one must take care *not* to identify the Targums surviving today with those of antiquity. 11QtgJob, though similar, is significantly different from the extant, more paraphrastic Targum of Job that has been preserved in the literature of the synagogue. Scholars are divided concerning the provenance of 11QtgJob. While the editors of the text (van der Ploeg and van der Woude) have suggested that it was written in first-century Israel, after careful linguistic analysis T. Muraoka has convincingly argued that the Qumrân Targums probably originated in Mesopotamia in the 2nd or 3rd cent. B.C. If one considers the extensive



Targum Pseudo-Jonathan on Gen. 21:14-24. The first word of each biblical verse is given, set off by two diagonal dots; the paraphrastic translation follows. An interpolation on v. 21 mentions the wife and daughter of Muhammad (The British Library)

finds of scrolls and scroll fragments of biblical, nonsectarian, and sectarian MSS at Qumrân, it may be significant that relatively few Targums have been found. This fact argues for a Babylonian origin of the Qumrân Targums.

Of the various extant Targums, Targum Onkelos for the Pentateuch and Targum Jonathan for the Prophets are the official Aramaic translations; Onkelos has probably had the greatest impact upon Jewish thought. The study of the Targums is of paramount importance, for they reflect early Jewish ideas, customs, and Halakah as well as Jewish interpretation of Scripture. Hence the Targums are relevant sources for the study of the Hebrew OT not only because they demonstrate how the text was translated and understood, in much the same way as the LXX and other ancient Bible translations, but also because the Targums preserve remnants of Jewish thought from late antiquity. In this respect, like rabbinic literature they can elucidate Jewish life and understanding of Scripture from the time of nascent Christianity.

IV. Texts.–A. Targum Onkelos. The text of Targum Onkelos contains only a rendering of the Pentateuch. The name Onkelos probably derives from the name Aquila, a mistaken identification that resulted from a confusion with the tradition concerning the translator of the LXX. Melammed suggested that this mistake could have occurred because the Babylonian schools did not use the LXX. Fur-

ther witness to the confusion of names comes from the Babylonian Talmud where the name Onkelos the Proselyte seems to be a corruption of the earlier form Aquilas the Proselyte, which is found in the Jerusalem Talmud. Targum Onkelos gained credence and is cited frequently in the Babylonian Talmud, which refers to it as "our Targum." But scholars have debated its origin.

Two lines of evidence led P. Kahle to suggest that Targum Onkelos was composed in Babylon. First, the text is never mentioned or cited in the midrashim of Israel and only once in the Jerusalem Talmud. Second, the language of Onkelos seems to be Eastern Aramaic, which Epstein noted is similar to the language of the Babylonian Talmud. As Melammed and others have pointed out, the text also contains Greek words transliterated into Aramaic.

After the discovery of the Dead Sea Scrolls, however, E. Y. Kutscher proposed that Onkelos originated in Israel and that the text was edited and redacted in Babylon, which would explain the apparent Eastern Aramaic influence. Unfortunately Kutscher's untimely death prevented him from carrying out an extensive investigation. While many scholars tend to accept Kutscher's suggestion, the entire matter has never been thoroughly investigated and the evidence that has so far been presented for either case is far from conclusive.

Of the Targums, Onkelos is the most literal. It has been suggested that at one time it was more paraphrastic and was subsequently tamed to conform to a more literal rendering of the Hebrew text. Here one enters into one of the most complex issues of targumic study. Which is earlier — the literal or the paraphrastic translations? One must never oversimplify such complex questions that carry so many ramifications. Some of the Targums (e.g., Esther) contain extended portions of Haggadic materials, and they seem to have been expanded from earlier sources. But a number of texts in Onkelos seem to have been abbreviated when one compares them to other versions of the Targums (see Bacher, p. 59). 11QtgJob is less paraphrastic than its rabbinic counterpart, but it is hazardous to draw far-reaching conclusions based upon fragmentary evidence. Nonetheless, one should not doubt that the revisions made upon the existing Targums include some abridgments as well as the more frequent expansions.

As in a number of other ancient translations, Targum Onkelos has difficulty in ascribing human qualities to God and often deals freely with anthropomorphisms. The text preserves the rich Jewish heritage that sanctioned the Scriptures as the way of life. Many scholars believe that Onkelos is probably the earliest of the Targums, and Epstein suggested that it was compiled during the beginning of the Amoraic period (from A.D. 220 to *ca.* A.D. 500), though certainly earlier sources are woven into the fabric of Targum Onkelos.

B. Targum Pseudo-Jonathan to the Pentateuch (Jerusalem Targum I). Targum Pseudo-Jonathan to the Pentateuch is a much more paraphrastic and freer translation than Onkelos, and some scholars (e.g., Bacher) felt that it was often more original. But most scholars think that Pseudo-Jonathan contains later expansions and is closely related to Onkelos. As Y. Komlosh has pointed out, the false attribution of the name Jonathan to the work is probably the result of a wrong interpretation of the abbreviation *t.y.* (י"ת), which was employed for the work. The initials actually stood for *Targum Yerushalmi* (Jerusalem

Part of a vellum scroll from the Cairo Genizah containing the Palestinian Targum on Ex. 21:22 (by permission of the Syndics of Cambridge University Library)

Targum), but perhaps due to the tradition which associated Jonathan with the Targums for the Prophets, a scribe interpreted the *t.y.* as *Targum Yonatan*. Thus modern writers have referred to the text as Pseudo-Jonathan for the Pentateuch in order to differentiate it from Targum Jonathan to the Prophets. In his famous work *Me'or Einayim* (1573-1575, Wilna ed., p. 127) Azariah de' Rossi mentioned a complete edition of the Aramaic Targums in two volumes, the first entitled the Jerusalem Targum, and the second Targum Jonathan ben Uzziel. On the basis of this bit of evidence it is possible to assume that the first volume could be identified with Pseudo-Jonathan for the Pentateuch and the second with Targum Jonathan for the Prophets.

A careful examination of the text reveals different levels of tradition. Most scholars prefer to view the work as being influenced by both Targum Onkelos and an earlier Palestinian Targum. The text therefore is a composite containing earlier materials and must be studied in the light of the other Targums and rabbinic literature.

C. The Fragment Targums (Jerusalem Targum II). The Fragment Targums to the Pentateuch (Jerusalem Targum II) are known from a number of MSS and contain selected texts from portions of the Pentateuch. They were first published in the Bomberg Rabbinic Bible (A.D. 1517-1518) and now has appeared in a new edition complete with text and an English translation by M. Klein. The Fragment Targums are similar to Pseudo-Jonathan and often betray an even more striking resemblance to Targum Neofiti.

D. Fragments of the Targums from the Cairo Genizah. Among the most important finds within the Genizah (storage area of holy writ) of the Ezra Synagogue in Old Cairo were fragments of Targums. As is well known, a horde of ancient MSS and texts were discovered in the Genizah in 1896. P. Kahle believed that the textual fragments of the Targums were representative of the Aramaic spoken in Israel. The vowel systems preserved in the rabbinic Bibles are considered to be corrupt, and these MSS contained pointed texts that are valuable in determining the pronunciation of Aramaic. Kutscher attributed great importance to these texts and felt that they preserved a purer Aramaic dialect that had not suffered as much from later redaction. Klein has prepared a critical edition of these fragments with vocalized Aramaic texts, plates, and English translation.

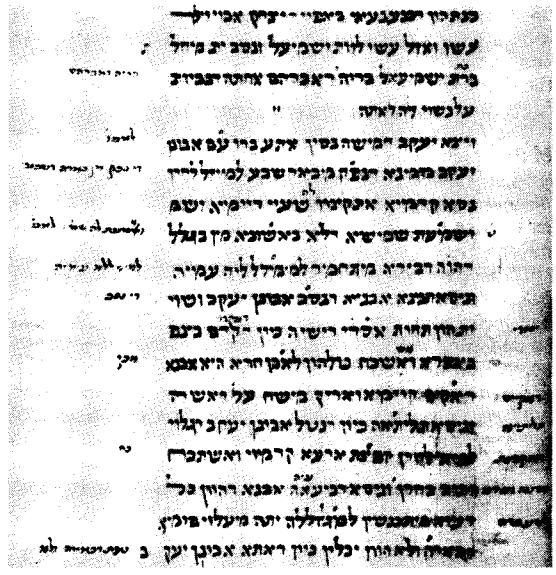
E. Targumic Tosefta. The Targumic Tosefta are works rich in Haggadic materials and are written in an Aramaic dialect similar to Targum Onkelos and the Babylonian Talmud. McNamara suggested that they were rendered from Palestinian Aramaic into Babylonian Aramaic so that the text would be better understood by the Jews of Babylon, but one wonders if Palestinian Aramaic texts would not be understood in Babylon and if a translation would be required. The language may indicate the origin of the text. Some of the Targumic Tosefta have been printed in the festival prayer book, *Maḥzor Vitri*.

F. Targum Neofiti. The discovery in 1956 of an entire MS of a hitherto unknown version of the Palestinian Targum to the Pentateuch, Targum Neofiti, has revolutionized targumic study and has greatly increased our knowledge of earlier texts and versions of the Targums. In 1949 A. Díez Macho observed the name Codex Neofiti I listed in the catalog of the Vatican Library under the entries for Onkelos. After he made a cursory examination of the codex, he doubted seriously that it could be a version of Onkelos. It was only later that Díez Macho examined the codex more carefully and discovered that it was a version of the Jerusalem Targum to the Pentateuch. The name Neofiti is derived from the collection of Hebrew and Aramaic texts and MSS that were donated to the Vatican Library from the Pia Domus Neophytorum in Rome. A colophon in Targum Neofiti reveals that the copying of the text was completed in A.D. 1504 for Maestro Egidio, whom McNamara has suggested should be identified with the humanist Giles (Egidio) of Viterbo (*Targum and Testament*, p. 184).

The importance of Targum Neofiti for targumic studies can hardly be overestimated. While not as literal as Onkelos, it is less paraphrastic than pseudo-Jonathan and therefore may well be a link between the incomplete Fragment Targums, the texts of the Targums from the Cairo Genizah, and the somewhat corrupt form of Pseudo-Jonathan on the one hand, and the text of Onkelos on the other. Much research is needed to understand the relationship of these versions and the scholarly debate will continue to be intense. Many linguists feel that Targum Neofiti contains a purer form of Aramaic even if it may not be as pure as the fragments discovered in the Cairo Genizah. Interestingly the biblical passages mentioned in the Mishnah as being forbidden for the targumist to translate in the service of the synagogue (see III above) do not appear in Targum Neofiti. The text appears to have suffered from a Christian censor, who deleted portions that deal with idols or that might be misunderstood by Christians in the 16th cent. (see McNamara, p. 184).

Komlosh has demonstrated that Targum Neofiti lacks uniformity in its translation techniques, sometimes containing interpretative expansions but at other times a concise rendering of the meaning of the Hebrew. But McNamara has pointed to a number of words and phrases from the Hebrew Bible that were given standard translations and rendered with Aramaic equivalents for the Hebrew text. A version similar to Targum Neofiti seems to have been used by Rabbi Nathan ben Jehiel of Rome (A.D. 1035-1110) when he composed his monumental lexicon, the *Aruch Completum*. Rabbi Nathan's work has many verbatim quotations whose origins were previously unknown; now these quotations appear to be from Targum Neofiti or a similar text. Díez Macho has claimed that

Targum Neofiti, folio 56a, showing Gen. 28:10 with a midrash on the well of Jacob (Vatican Library)



Targum Neofiti is essentially a pre-Christian text compiled in the 1st or 2nd cent. A.D., a view endorsed by R. Le Déaut. Many scholars have questioned such an early dating, which views Neofiti as an early recension of the proto-text for all the other Targums of the Pentateuch. Why is the Targum Neofiti unknown in tannaitic literature? The Aramaic text presents linguistic problems when compared to early Aramaic texts from the second temple period (e.g., those found at Qumrân). One of the main problems relating to the provenance and dating of Neofiti is connected to the origin of the Targums most resembling it. A more conservative approach views Neofiti as a recension of the Jerusalem Targum, which was compiled toward the close of the talmudic period; this seems more reasonable in the light of its parallels to rabbinic literature, its language, and its relation to Jewish Halakah. But none of these points has ever been adequately examined, and a conclusive dating of the text must await further research. Certainly the parallel traditions between Neofiti and rabbinic literature need careful scrutiny.

G. Targum Jonathan on the Prophets. Like Targum Onkelos on the Pentateuch, Targum Jonathan on the Prophets received an official status. It has been suggested that the name Jonathan is a corruption of the Greek Theodotion in a similar way to the derivation of Onkelos from Aquila. The traditional title is based upon the talmudic tradition (T.B. *Megillah* 3a) that Jonathan ben Uzziel, the disciple of Hillel the Elder, translated the prophets into Aramaic, revealing the divine mysteries, an endeavor that shook the foundation of the world, causing the land of Israel to move four hundred parasangs. He is said to have been tutored by the prophets Haggai, Zechariah, and Malachi — an anachronistic tradition to say the least. Beyond this legendary account, one can also note that when the Babylonian Talmud cites the Targum it sometimes introduces it by the attribution "according to the targumist Rav Joseph ben Ḥaiya" (e.g., T.B. *Moed Katan* 26a). Is this the name of a compiler, an editor, or a transmitter of an earlier version? While E. Schürer accepted this attribution at its face value and connected the text with Rav Joseph the head of the Babylonian academy in Pumbedita from the 4th cent. A.D., A. Geiger and G. Dalman more realistically viewed Rav Joseph as its compiler. In the final analysis, however, it is nearly impossible to learn very much about Targum Jonathan to the Prophets from these conflicting traditions. Nevertheless, scholarly research like that of P. Churgin has discovered earlier strata within the framework of Targum Jonathan, and careful investigation is required to unravel its sources.

The Targum of Jonathan to the Prophets contains many of the same elements that characterize Targum Onkelos; though it tends to be more paraphrastic, it deals with anthropomorphisms in much the same way. See Stenning for an English translation of the Targum to Isaiah and a brief introduction and notes.

H. Targums for the Hagiographa. An Aramaic Targum is known for every book of the OT, except Daniel, Ezra, and Nehemiah. According to the Talmud (T.B. *Megillah* 3a and par.; see IV.G above), after Jonathan ben Uzziel completed his translation of the Prophets he desired to prepare an Aramaic translation of the Hagiographa as well but was prevented by divine decree. The provenance of the Targums for the various books of the Writings is unknown, and they did not circulate widely. The great talmudic commentator Rashi said that he was not acquainted with a Targum to the Writings, but the Tosafot noted that Targums did indeed exist. Hai Gaon mentioned the Targums of the Writings (L. Ginzburg, *Geniza Studies* [1928, repr. 1969], II, 86).

The various Targums for the biblical books contained in the Hagiographa are not uniform. Psalms has portions that are literal translations but also contains paraphrastic sections, while the Targum for Proverbs is primarily a more literal rendering.

I. Targums for the Five Scrolls. The Targums of the Five Scrolls (Canticles, Esther, Lamentations, Ruth, and Ecclesiastes) are diverse renderings characterized by Haggadic portions. They should be studied individually. Jacob ben Chayim's Bible has two independent texts of the Targums for Esther: the Targum for Esther and what he termed the Targum Sheni. In the MS used in A. Sperber's critical edition the text sometimes follows the latter version and at other times the former. In 1898 M. David prepared a critical edition of the Targum Sheni, and his work is still useful (see also P. Cassel). E. Levine and B. Grossfeld have published English translations of the Targums for the Five Scrolls. The Five Scrolls were read in the liturgy of the synagogue during the Jewish feasts; thus the Targums provide insights into the text of Scripture as it was interpreted and studied during the Jewish festivals.

J. Targum for Chronicles. The early rabbinic Bibles were not printed with a Targum to Chronicles because the text was unknown until the end of the 17th century. The Schocken edition of the rabbinic Bible (*Mikraot Gedolot*) had the Targum of Chronicles published as an appendix. Sperber has also issued an edition of Chronicles based upon the MS first published by M. F. Beck in 1680 and again by Lagarde in 1873.

V. Impact of Targumic Study upon Biblical Studies.—In the 20th cent. renewed interest in rabbinic studies in general and the Targums in particular has given rise to a number of works concerning the Targums and the NT. Among others, G. Dalman and C. C. Torrey made significant contributions to this interest. Dalman recognized that it was difficult if not impossible to imagine that Jesus spoke Greek to Jews in first-century Israel. He theorized an Aramaic *Vorlage* for the sayings of Jesus in the Synoptic Gospels, and his work paved the way for others. But their pioneering efforts, especially those of Torrey, were based upon a comparative study that did not consider all the critical problems involved in dating the Targums and their impact upon linguistic research, for which subsequent NT scholars (e.g., M. Black and J. Fitzmyer) criticized them and modified their approaches. Certainly uncritical and unscientific approaches to the Targums that do not carefully consider the historical, textual, and philological questions will produce only questionable results. The discovery of the Dead Sea Scrolls has cast doubt upon the theory of an Aramaic background, primarily because they reveal that Hebrew was much more prevalent than previously thought. H. Birkeland, D. Flusser, R. L. Lindsey, J. Grintz, and R. Buth, among others, have theorized that a Hebrew Gospel source is reflected in the semitized Greek text of the Gospels and suggested by the Papias tradition. According to Díez Macho the language of Targum Neofiti may even represent the language of Jesus. It is doubtful whether a translated document can be employed as a source for either the literary or the spoken language of the people; but even if only non-translational sections of the Targums are used, such an approach rests upon some unproven assumptions concerning the Targums, the NT, and the language situation of first-century Palestine that are questionable to say the least.

At times the Targums shed valuable light on the textual criticism of the OT because the Aramaic text represents an important recension. While care must be exercised, especially when the Targums are paraphrastic, the textual variants of the Targums can hardly be ignored.

The Targums may also elucidate a number of key concepts in the NT that originally derived from early Jewish thought. As McNamara has pointed out, ideas like the second death in Revelation (*The NT and the Palestinian Targum,* pp. 117ff.) and the divine Logos in the Gospel of John (*Targum and Testament,* pp. 98ff.) have partial parallels in the Targums. The Targums employ the Aramaic term *mêmrā'*, "word," as a circumlocution for God. Few scholars would suggest that *mêmrā'* represents a hypostatized intermediary. Interestingly, the Targum cites a source, *The Book of Memorials,* that says, "The first night: when the Lord was revealed over the world to create it. The world was without form and void and darkness was spread over the face of the abyss and the Word of the Lord was the Light and it shone; and he called it First Night" (Targum Neofiti on Ex. 12:42; see McNamara, *Targum and Testament,* p. 103; Levey, p. 12). The description of creation and the Word of the Lord as light recall Jn. 1:1f.

But the divine Logos in John reflects other, much earlier, sources. Interestingly, the tannaitic midrash Sifre Deuteronomy states, "when the Holy One created the world He made it by His word [*ma'ᵃmār*] and by His command" (*Sifre* Dt. 330; cf. Wisd. 9:1; Jub. 12:4). Philo of Alexandria employed similar terminology (H. A. Wolfson, *Philo,* I, 226ff.; cf. C. H. Dodd, *Fourth Gospel* [1953], pp. 263-285; R. Schnackenburg, *Gospel According to St. John,* I [Eng. tr. 1968], 481-493). Hence the question of the origin of these ideas and who influenced whom will continue to be debated.

Moreover, it is always especially important to remember that these passages in the Targums have their parallels in rabbinic literature and may well have been adopted by the Targumists from earlier Jewish tradition as represented in the teachings of Israel's sages. The Targums must always be studied in the light of their parallels both in the rabbinic literature and in the pseudepigraphic and apocryphal literatures. A number of these concepts apparently originated in earlier common sources that were used by both the Targums and the authors of the NT. This fact makes the study of the Targums as well as rabbinic literature of paramount importance in any serious examination of the beginnings of Christianity.

The Targums therefore have great significance not only for OT studies but also for understanding the milieu of the NT. The early versions and translations can frequently elucidate the OT text, and often the Targums throw light upon exegetical questions (*see* TEXTS AND MSS OF THE OT I.B.2). Perhaps the greatest impact the Targums have had upon NT studies is the growing awareness among scholars that it is essential to view the Scriptures through the eyes of Jesus' people. Like rabbinic literature, the Targums can bridge the chasm between the OT and NT by providing insights into how early Jewish interpreters understood the Scriptures.

TARPELITES tär'pə-līts. The AV translation of the obscure Aramaic term *ṭarpᵉlāy* (Gk. LXX *Tarphallaioi*) found only in Ezr. 4:9, which the RSV translates "officials" (NEB "overseers"; NIV "men of Tripolis"). A number of suggestions have been made for emendations and possible etymologies but none is certain. The term could be ethnic, referring to a group of people settled in Samaria by the Assyrians. It could also be a title, referring to some office or party by a Persian designation. The immediate context of Ezr. 4:9 only indicates that these people were among those who wrote to Artaxerxes opposing the rebuilding of the temple under Zerubbabel.

R. L. PRATT, JR.

TARSHISH tär'shish [Heb. *taršîš*]. The Hebrew term may refer to varied precious stones (*IP,* p. 223).

1. Descendant of Benjamin and son of Bilhan (1 Ch. 7:10; AV "Tharshish").

2. One of seven Persian princes who functioned in an advisory capacity to King Ahasuerus (Est. 1:14; cf. Ezr. 7:14).

TARSHISH tär'shish [Heb. *taršîš*, possibly a *t*-formation word from a root *ršš* meaning "melt, refine" or "brightness"; cf. Akk. *rašāšu*].

1. Tarshish was a descendant of Javan (Gen. 10:4; 1 Ch. 1:7), grouped with Elishah, Kittim, and Dodanim (Rodanim in 1 Ch. 1:7). These have been identified with peoples and places in the Mediterreanean area near Greece, including a portion of North Africa, Crete, Cyprus, and Rhodes. Jonah attempted to flee to Tarshish, taking a ship from Joppa (Jonah 1:3; 4:2), hence Tarshish was on a Mediterranean ship lane. The juxtaposition of Put, Lud, Tubal, and Javan (Isa. 66:19) again suggests that Tarshish was somewhere in the eastern Mediterranean region. Products of Tarshish included silver (Jer. 10:6), iron, and tin, which were imported by Tyre (Ezk. 27:12) — minerals that came from Asia Minor and the islands of Cyprus and Crete. Various places have been suggested: Tartessos in Spain, Tyrseni (Etruscans) in Italy, Carthage in North Africa, and Tarsus in Cilicia — to name just four.

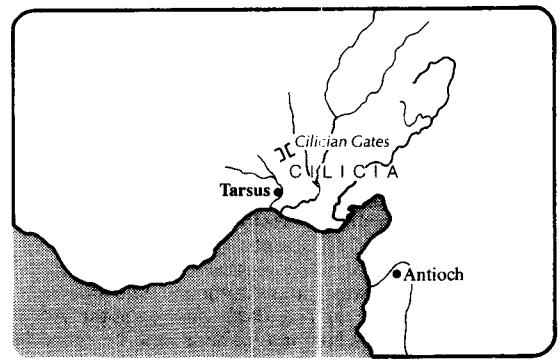
2. Tarshish is also mentioned in connection with Sheba, Seba, and Dedan (Ps. 72:10; Isa. 60:9; Ezk. 38:13). Ships were constructed in Ezion-geber to go to Tarshish (2 Ch. 20:30). It is, of course, possible to understand the term "ships of Tarshish" as describing a *kind* of ship, e.g., an ore ship or refinery ship (cf. W. F. Albright, *BASOR*, 83 [Oct. 1941], 14ff.), and thus to agree that, even if Tarshish was in the Mediterranean, such a ship could be built on the Gulf of Aqabah for service in Arabia and east Africa. But this ignores the clear statement in 2 Ch. 20:36, "ships to go to Tarshish," and the implications of passages that connected Tarshish with Sheba and other locations in south Arabia. Furthermore, Solomon's fleet, stationed at Ezion-geber, saw service on the Red Sea and brought back products of Arabia and east Africa: gold, silver, ivory, apes, and peacocks (or baboons) (1 K. 10:22). It seems reasonable to conclude that there was a place, or a descriptive word for such a place, located in Arabia or east Africa, probably on the Red Sea.

3. Tarshish also denotes a precious stone, perhaps yellow jasper or other gold-colored gem (BDB, p. 1076), obviously from a root having the basic meaning of "shining, splendor," or a similar idea (Ex. 28:20; Ezk. 28:13; cf. Dnl. 10:6; Cant. 5:14). W. S. LASOR

TARSUS tar'sus [Gk. *Tarsos* (Acts 9:30; 11:25; 22:3), *Tarseus* –'a Tarsian' (Acts 9:11; 21:39; 2 Macc. 4:30)]. (In 2 Macc. 3:5 RSV, "of Tarsus" is an error. The marginal reading should be used.) The capital city of Cilicia, in southeast Asia Minor.

I. Location
II. Foundation
III. History
IV. Paul
V. Later History

I. Location –The modern Tarsus is a town of over 60,000 people, on the navigable river Cydnus (Tarsus Cayı), the westernmost of the three main rivers of the alluvial Cilician plain. Tarsus stands 16 km. (10 mi.) from the coast, on the level plain. The low undulating hills begin immediately N of the city, and then swell rapidly to the foothills of the great Taurus range, which rises some 50 km. (30 mi.) N of the city. The first importance of Tarsus is as the city commanding the approach to the famous pass of the Cilician Gates, where engineers had at a very early date widened a narrow gorge into a wagon road that became the main route from Cilicia to the interior plateau of Asia Minor. About 10 km. (6 mi.) downstream from the city the river flowed into a lake named Rhegma, once a lagoon close to the shore, which formed



the harbor of the ancient city. There was also a residential hill-town to the north, marked by a triumphal arch, and apparently named Codrigae (Lat. *Quadrigae*, "four-horse chariot"). The ruins beneath the modern town and its neighborhood are said to be very extensive, and it has been estimated that ancient Tarsus may have comprised half a million people at its zenith. In its relations with the interior it was historically the rival of Adana on the river Sarus (Seyhan); as a harbor the rival of Mallus on the Pyramus (Ceyhan), a place now silted and forgotten.

The adjacent cities of Tarsa and Adaniya in the Hittite texts among the towns of the land of Kizzuwatna are certainly the later rivals Tarsus and Adana, both still called in Turkish by those classical names. Though the present site of Adana is not very ancient and must have shifted, that of Tarsus has been traced back beyond the Hittites to the Bronze Age (J. Garstang and O. R. Gurney, *Geography of the Hittite Empire* [1959], p. 61). As the outlet of Asia Minor through the Cilician Gates, Tarsus commanded the road eastward to Syria and Mesopotamia. After crossing the Sarus at Adana and the Pyramus at Mopsuestia, a southern branch ran round the gulf of Issus and by the Syrian Gates through the Amanus range to Antioch on the Orontes, while the eastern branch continued slightly north

The Cilician Gates of the Taurus Mountains, a pass controlled by the city of Tarsus in ancient times (Philip Gendreau, NY)

to Castabala, and thence due east to the Euphrates crossing at Zeugma.

The site of the city proper was level, lacking an acropolis, but the hill country and mountain slopes within its territory had a more invigorating climate. Though lacking natural advantages, the Tarsians made effective use of their strategic situation. They commanded less of the fertile plain than their rivals, but were proud of their hills and harbor, and of their river, which, unless in flood, flowed in a clear stream through the heart of the city, a pride of which Dio Chrysostom makes fun (*Orationes* 33.24).

II. Foundation.–The foundation of Tarsus was sometimes ascribed to the Assyrians. At Anchiale, 20 km. (12 mi.) SE of the city, was a monument known as the "tomb of Sardanapalus," bearing an inscription "in Assyrian letters" claiming that Sardanapalus built Anchiale and Tarsus in one day (Strabo *Geog.* xiv.5.9). Other legends assigned the foundation of Tarsus to Sennacherib (705-681 B.C.) or to the mythological heroes Perseus or Heracles (Hercules). Such traditions are apt to be of scant value, though they may express distant memories of changes and new beginnings within the city's history.

Tarsus was thought to have had a very ancient connection with the Ionian Greeks, associated with the seer Mopsus, whose name is preserved in local nomenclature (Ramsay, p. 117). The sons of Javan (Gk. *Ion*?) in the very ancient "table of the nations" (Gen. 10:4) include Tarshish and Elishah, which have been identified with Tarsus and the Aleian plain of Mallus. It is, however, very doubtful whether "Tarshish" elsewhere in the OT, and the expression "ships of Tarshish" in particular, can be referred to Tarsus. A difficulty is in the difference of sibiliant, for the Aramaic form of Tarsus is "Tarz," not "Tarsh." OT Tarshish is now commonly understood of Tartessus in Spain. *See* TARSHISH.

III. History.–The earliest reference to Tarsus after the Hittite period is preserved on the Black Obelisk of Shalmaneser of Assyria, marking an oriental ascendancy as the city came successively under Assyrian and Persian rule, and its Greek element became submerged. A native Cilician dynasty ruled at first under Persian suzerainty, but later the Persians exercised more direct rule through Persian satraps. These changes can be traced in the coinage, which bore Aramaic legends throughout the 5th-4th cents., and the local god is portrayed and named as the Baal of Tarz rather than the Greek Zeus. Local religion, as portrayed on coinage, is often the best key to the character of a city when its detailed history is little known. The typical Anatolian triad of supreme god, goddess, and their son, the active young god, is represented here by the prominence of Zeus and Heracles, the goddess being little in evidence. Yet the concept of divine personality was fluid and confused, and in various aspects Perseus and Apollo, and the native hero Sandan, seem to have been assimilated to one or other of the male deities, and the father-god became equated under Persian rule with Ahura-Mazda. Later coins depict a festival at which an effigy of the god seems to have been carried through the streets in a funeral pyre, and his burning represented a translation to heaven paralleled with that of Heracles (Dio Chrysostom *Orationes* 33.47; Ramsay, p. 149). Though the evidence in this case is of the Roman period, such religious practices were doubtless of long-standing native tradition.

There are few historical notes of Tarsus in the Persian period. Herodotus records the tribute of Cilicia to the Persian king (iii.90), and on the expedition of the younger Cyrus some of the Greek mercenaries plundered the city in 401 B.C. (Xenophon *Anabasis* i.2.26). The king is called Syennesis, which seems to have been the dynastic title of the kings of Cilicia (e.g., i.2.21ff.). In 333 B.C. Alexander came through the Cilician Gates on his way to his great victory at Issus. Against both expeditions the pass was virtually undefended, and the Macedonian advance guard actually saved Tarsus from destruction by the Persians (Arrian *Anabasis* ii.4.5f.; Quintus Curtius *Historia Alexandri* iii.4.14f.). Alexander himself nearly died of a fever induced by bathing in the cold waters of Cydnus when overheated (Arrian *Anabasis* 4.7; Quintus Curtius *Historia Alexandri* iii.5ff.).

Alexander's conquest of Tarsus began a new chapter of Greek influence. The city came under the rule of the Seleucid successors of Alexander. Greek civic institutions seem to have been slow to reassert themselves, for the Seleucids used the foundation and enlargement of cities to consolidate their central power. Like many other cities, Tarsus then received a dynastic name, Antioch-on-the-Cydnus, but this soon fell into disuse. 2 Macc. 4:30f. recounts a rebellion of Tarsus and Mallus against Antiochus Epiphanes (175-164 B.C.), because he had given them to his concubine Antiochis. The king was probably forced to deal carefully with these cities, since the settlement of Asia after the battle of Magnesia in 190 B.C. had exposed his western frontiers.

Ramsay argued that the new Seleucid constitution given by Antiochus provided the occasion for introducing many new colonists, Greeks, especially Argives, and Jews. The latter were probably given citizenship rights as a body, enrolled in a civic "tribe" of their own, whose religious bond was their own Jewish faith. It has even been suggested that those whom Paul calls his "kinsmen" in Rom. 16:7-21 were fellow-citizens of Tarsus (Ramsay, pp. 177f.). The dilemma put to Titus by Apollonius of Tyana (Philostratus *Vita Apollonii* vi.34) presupposes that it was a well-known fact that many Jews were citizens of Tarsus. There is no difficulty in ascribing this pro-Jewish initiative to Antiochus Epiphanes, for he was ready to favor Jews where they cooperated.

It seems probable that Paul's family had been long established as leading citizens in Tarsus. The only likely way of explaining his hereditary citizenship in a Greek city is to suppose that his ancestors had been among the Seleucid settlers. But the origins of his Roman citizenship are quite unknown, and we can only speculate that another of his forebears had received it from one of the great Romans who visited or benefited the city, whether Pompey, Caesar, Antony, or Augustus.

The coins of the later Seleucid period show a mixture of Greek and oriental types, as the central power declined with the advent of Rome to Cilicia *ca.* 104 B.C. Roman influence was interrupted by the temporary incursions of Mithridates VI of Pontus and Tigranes of Armenia before Pompey reorganized the East in 64 B.C. The Roman province of Cilicia was originally a "sphere of duty" rather than a territorial division, intended first to suppress piracy in "Rugged" Cilicia and so to secure the sea routes to the Levant. As governor in 51 B.C., Cicero occasionally resided in Tarsus (*Epistulae ad Atticum* v.20.3; *Epistalae ad Familiares* ii.17.1). The city was enthusiastic in its support of Julius Caesar, who visited it in 47 B.C., and received the status of a free city from Antony in 42 B.C., when it was the scene of his famous meeting with Cleopatra, who sailed up the Cydnus on her barge.

Strabo records that one Boethus, a protégé of Antony, whose favor he had won with a poem on the battle of Philippi, took advantage of the new freedoms to establish a corrupt influence over civic life that continued even after the fall of Antony until Augustus himself inter-

vened, sending his own former tutor, the Stoic philosopher Athenodorus (Strabo *Geog.* xiv.5.14). Athenodorus (*ca.* 74 B.C.-A.D. 7), himself a Tarsian, had spent many years in Rome as a trusted adviser who was not afraid to stand up to Augustus (cf. Dio Cassius *Hist.* lvi.43.2). Unable to influence Boethus otherwise, Athenodorus exerted his delegated authority to expel him and establish a new constitution in Tarsus. So the city of Paul's birth fell under the rule of philosophers, Athenodorus being succeeded by the Academician Nestor. Strabo's account is of first-hand value, for he writes as a friend and admirer of Athenodorus (*Geog.* xvi.4.21). Little is known of his settlement, except that a financial qualification of 500 drachmae was required of a citizen, and we hear of later unrest among the "linen-workers" who were excluded (Dio Chrysostom *Orationes* 34.21, 23).

Tarsus became important as a university city, whose people's zeal for learning and philosophy surpassed that of Athens or Alexandria, though it did not attract students from abroad as those more famous places did (Strabo *Geog.* xiv.5.13). Under Athenodorus the city presumably sponsored classes by qualified and approved lecturers: there was probably a close conjunction of city and university administration, though detailed evidence is lacking. Tarsians who had studied in their own city were known for completing their education abroad, and then making their home in Rome or elsewhere rather than returning to Tarsus. Strabo lists many notable scholars from Tarsus (*Geog.* xiv.5.14f.). Nestor, Athenodorus's successor, was also tutor to Augustus's intended heir Marcellus.

Other opinions of Tarsus were less favorable. The life of the first-century wonder-worker Apollonius of Tyana, written by Philostratus early in the 3rd cent., represents the sage as a fourteen-year-old student being so shocked by the luxury and frivolity of Tarsus that he moved to a more congenial place at nearby Aegae (*Vita Apollonii* i.7). Later Apollonius is said to have become reconciled with the Tarsians through his intervention with the emperor Titus on their behalf (*Vita* vi.34), and they acclaimed him a second founder. The orator Dio Chrysostom (late 1st cent. A.D.) addressed two speeches to the Tarsians (*Orationes* 33, 34), the first couching cutting criticism under an ironical literary style, the second a plainer indictment of their arrogant abuse of rival Cilician cities, their internal factional conflicts, and their oppression of non-citizens. The first speech turns their boasts against themselves in criticism of their manners and morals. They cannot really endure philosophy. Athenodorus would have been appalled. Their manners are unworthy of their supposed Hellenism. The one point in favor of their oriental ways is the custom of their women to be veiled in public.

IV. Paul.–It has often been suggested that Paul's character was significantly influenced by the city of his birth, Tarsus being a great educational center at a unique meeting-place of East and West. This traditional view has assumed that he received a significant part of his education there. Since the very important study by W. C. van Unnik this picture must be doubted. The crucial text is Acts 22:3. Van Unnik argued convincingly that the three perfect passive participles of that verse are parallel and progressive, and that the second (Gk. *anatethrammḗnos*) signifies upbringing in the parental home. The passage must be construed to say that Paul was born in Tarsus but brought up in Jerusalem and also educated under Gamaliel there. Acts 26:4 should probably be read in accordance with this view: the Jews knew Paul's manner of life from his youth, for it had been spent among his own people and in Jerusalem. This shift of perspective carries evident implications. We ought probably to understand Paul's background and his Greek culture in rather different terms from those often assumed.

A somewhat related point has been the focus of another influential study. In discussing the social standing of Paul's trade, R. F. Hock renews the argument about the precise character of the trade, and whether the assumption is justified that it was a Cilician speciality derived from his Tarsian origin (see esp. pp. 20-25). *Cilicium* (Gk. *Kilikion*) was the Latin name of a type of felt cloth made from the hair of the shaggy black goats characteristic of Cilicia then and now. Pliny says explicitly that it was used for making tents among an Arab tribe of Syria (*Nat. hist.* vi.32.143), as it is in the Cilician Taurus today. Hock, however, following Zahn and many later scholars, argues that Gk. *skēnopoiós* means not literally "tent-maker" but "leather-worker." There is then no ground for connecting Paul's trade with the making or use of *Cilicium* or with a background in Tarsus. But Hock's case is inconclusive. Despite some variable renderings in the early versions of Acts 18:3, which lend countenance to the doubt, there is no reason not to take the term literally (so scholars as diverse as J. B. Lightfoot, Ramsay, Deissmann, Dibelius, Bruce, Theissen), and some of the counterarguments are ambivalent. It remains possible that Paul's father trained him in a Cilician craft when living in Jerusalem, or that he made tents of other materials not characteristic of Cilicia.

If van Unnik is right, it may be best to explain Paul's Greek culture, and especially his citation of his fellow Cilician, the Stoic poet Aratus of Soli (Acts 17:28), from his wider reading or his mature residence in Tarsus (9:30; 11:25) rather than from early influences in the city of Athenodorus. His unusual combination of qualifications as Roman citizen, Jewish citizen of Tarsus, Hebraist and Pharisee, and the pupil of Gamaliel in Jerusalem, is none the less important on this reading.

V. Later History.–In the 3rd cent. Tarsus became metropolis of the three provinces of Cilicia, Isauria, and Lycaonia, and boasted many honorific titles, but had a new rival with the growth of Anazarbus in Eastern Cilicia. It has been occupied continuously into modern times, though now overshadowed by the recent development of Adana (pop. 700,000). The only extensive excavation is at the ancient mound of Gözlü Tepe, whose Hellenistic and Roman levels reveal only a poor suburb of the ancient Tarsus. Most of the old city is built over, and its topography has changed through the diversion of the Cydnus by Justinian.

C. J. HEMER

TARTAK tär'tak [Heb. *tartaq*] (2 K. 17:31). A deity worshiped by the AVVITES in Samaria *ca.* 722 B.C. Tartak may be a shortened form of Atargatis (< Heb. *'tr'th*; cf. 2 Macc. 12:26), also known as the goddess Derceto. This composite deity manifested the attributes of both Attar and his consort Anat, a Syrian fertility cult goddess.

See J. A. Montgomery, comm. on Kings (*ICC*, repr. 1976), pp. 474f.

TARTAN tär'tən [Heb. *tartān;* Akk. *tartanu, turtanu,* "second (in command)"]; NEB COMMANDER-IN-CHIEF. The title of an Assyrian general. The word occurs in 2 K. 18:17 and Isa. 20:1 (RSV "commander in chief"), and, until the Assyrian usage became known, was taken as a proper name. In view of Aram. *tᵉrê, tᵉrên,* (fem.) *tartê, tartên,* "two," the Assyrian word need not be taken as "of foreign origin," *pace* A. L. Oppenheim (*IDB,* IV, 519); rather it is a basic Semitic word for "two." Supporting the evidence of Aramaic are a number of Old South Arabic dialects (Curia Muria, Soqotri, Botahari, etc.), where *tro* or *ṯro* are found. Curia Muria has both *ṯnain* (cognate with Arab. *ṯnain* and Heb. *šᵉnayim*) and *ṯuro* (cognate with Aram. *tᵉrê*), meaning "two" (W. Leslau, *Bulletin of the School of Oriental and African Studies,* 1 [1947], 8, 16; W. S. LaSor, "Semitic Phonemes" [Diss., Dropsie, 1949], pp. 102f.). The Assyr. *tertennu,* "second in line of succession, vice-fratriarch," is found as early as the Nuzi tablets (*Harvard Semitic Series,* 5, tablets 7, 60), and *tartan(n)u* or *turtan(n)u* occurs often in inscriptions of Assyrian kings.

An interesting use of the word is found in the annals of Shalmaneser III, who remained in Calah in his thirtieth regnal year (829 B.C.) and dispatched Dayan-Ashur, "the Turtan, chief of (my) large host," to campaign in the east. Nevertheless, Shalmaneser wrote the account in the first person (*ARAB,* I, § 587), as though he personally were conducting the troop movements. In an eponym list of Shalmaneser, where order was probably determined by rank, the first year of Shalmaneser (858 B.C.) was the *limmu* (eponym year) of Shalmaneser, the next the *limmu* of Ashur-bel-ukin the Turtan, the third the *limmu* of Ashur-bunaia-usur the Chief Cup-bearer, the fourth the *limmu* of Abu-ekalli-lilbut the High Chamberlain, the fifth (854 B.C.) the *limmu* of Dayan-Ashur the Turtan (*ARAB,* II, § 1195, p. 431). One wonders whether Dayan-Ashur was promoted during the intervening years. Some texts mention a "Tartan of the left" (*tartannu ša šumeli*) and a "second Tartan" (*tartannu šanû*), referring to the military practice of dividing an army into two wings.

W. S. LASOR

TASKMASTER [Heb. part. of *nāgaś* (Ex. 3:7; 5:6, 10, 13f.; Job 3:18; Isa. 60:17), *śar mas* (Ex. 1:11)]; AV also OPPRESSOR (Job 3:18), EXACTOR (Isa. 60:17); NEB also OFFICER (Ex. 1:11), SLAVE-MASTER (3:7), OVERSEER, etc. In 1 K. 12:18 and 2 Ch. 10:18 the context supplies "taskmaster" in the RSV.

This word usually refers to the Hebrews' bondage in Egypt that began with the accession of a pharaoh who had no sympathy for Joseph's descendants (Ex. 1:8-11). In order to curtail the burgeoning population of Hebrews in Egypt, the Egyptian king decided to press the Hebrews into forced labor. Egyptian monarchs of the empire period (1550-1250 B.C.) customarily used prisoners of war in labor projects.

Two expressions occur in the book of Exodus that the RSV translates "taskmaster." The term Heb. *nōgᵉśîm* (< *nāgaś,* "drive to work") occurs most frequently. In Ex. 1:11 the Egyptians set "taskmasters" (Heb. *śārê-missîm;* lit. "chiefs of forced labor") over the Hebrews "to afflict them with heavy burdens." These two expressions seem virtually synonymous, but may indicate two different Egyptian officers. Kitchen thinks that the *nōgᵉśîm* were "junior officers" while the *śārê-missîm* were higher ranking overseers (pp. 145f.). He further argues that the mention of these two officials reflects the "two-tier oversight" known to have been used by the Egyptians in labor situations (p. 144).

Elsewhere in the Exodus story the RSV uses "foremen" (Heb. *sōṭᵉrîm* [Ex. 5:6, 10, 14f., 19]) to designate another group of Egyptian officials involved in the forced labor of the Hebrews. As Hebrew workgang leaders, they formed liasons between the Israelite workers and their Egyptian superiors.

The main task of all three officials was to see that the laborers completed work quotas (Ex. 5:13, 18). The setting of quotas, like the two-tier system of supervision, reflects Egyptian practices (Kitchen, pp. 140ff.).

See K. A. Kitchen, *Tyndale Bulletin,* 27 (1976), 137-147.

J. K. HOFFMEIER

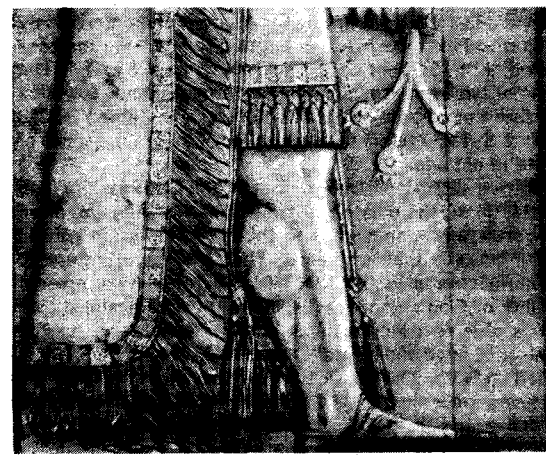
TASSEL [Heb. *ṣîṣiṯ* (Nu. 15:38f.), *gāḏil* (Dt. 22:12)]; AV FRINGE; NEB also "twisted tassels" (Dt. 22:12). *Ṣîṣiṯ* refers to a knotted cord or tassel on a garment. Cf. Gk. *kráspedon,* which can mean a hem but in rabbinic literature regularly translates *ṣîṣiṯ,* as in Mt. 23:5 (RSV "fringes").

The earliest OT injuction for Israelites to use tassels is Dt. 22:12. Nu. 15:38f. adds that the Israelites were to put a thread of hyacinth blue (the Yahweh color) "upon the tassel of each corner," which would be "a tassel to look upon and remember all the commandments of the Lord, to do them . . ." The current Jewish form of the garment (the large *ṭalliṯ*) is the "prayer shawl" with tassels on the four corners tied in traditional knots and with white and blue threads.

To lay hands on the *ṣîṣiṯ* of another was a serious matter. Stephens quoted one rabbi as saying, "What is the difference between cutting off the *tzîtzith* and cutting off his head?" and another as saying that when the world needed rain, school children, after being encouraged, went to a certain rabbi, "and they seized him by the *tzîtzith* of his mantle and said to him, 'Father, Father, give us rain.'"

Decorating hems of garments with colored fringes or tassels was common among ancient Near Eastern people (see *ANEP,* nos. 6, 476, Syrians; no. 7, Libyans, Syrians, and sea-peoples; Mesopotamians in nos. 18-20, 23, 448f.; Syrians in nos. 45, 52; Canaanite in no. 772). According to Stephens, Babylonian and Sumerian records show that (1) to seize the tassels of a god or a man when making a petition demonstrated one's deep earnestness; (2) to seal a document "with one's tassels" was equivalent to taking a solemn oath (Gottwald) or to employing a personal signet

The tassels on the bottom of an Assyrian king's robes (Ashurnasirpal II, 883-859 B.C.; drawing from A. H. Layard, *Monuments of Nineveh* [1849], of a temple relief from Nimrûd) (courtesy of the Trustees of the British Museum)



seal; (3) to tear one's tassels or the tassels of another was to be cut off from the god in honor of whom the tassels were worn. Hence wearing *ṣîṣiṯ* was no arbitrary practice but one with a long history of religious and juridical meanings.

Bibliography.–F. J. Stephens, *JBL*, 50 (1931), 59-71; A. C. Bouquet, *Everyday Life in NT Times* (1954), pp. 59f.; N. K. Gottwald, *All the Kingdoms of the Earth* (1965), p. 11. P. L. GARBER

TASTE [(noun) Heb. *ṭaʿam* (Ex. 16:31; Nu. 11:8; Job 6:6; Jer. 48:11), *ḥēḵ*–'palate' (Job 6:30; Ps. 119:103; Prov. 24:13; Cant. 2:3)]; NEB also SENSE, MOUTH, TONGUE; [(verb) Heb. *ṭāʿam* (1 S. 14:24, 29, 43; 2 S. 3:35; 19:35 [MT 36]; Job 12:11; 34:3; Ps. 34:8 [MT 9]; Jonah 3:7), *ʾāḵal*–'eat' (Job 21:25); Aram. *ṭᵉʿēm* (Dnl. 5:2); Gk. *geúomai* (Mt. 16:28; Lk. 14:24; Jn. 2:9; 8:52; He. 2:9; 6:4f.; etc.), *mōraínō*–'make tasteless' ("has lost . . . taste," Mt. 5:13 par. Lk. 14:34)]; AV also EAT, EATETH, "lost . . . savour"; NEB also ATE, TOUCH (2 S. 3:35), SAVOUR (Job 12:11; 34:3), "warmed" (Dnl. 5:2), "know what it is" (Jn. 8:52), "experienced" (He. 6:5), "becomes tasteless"; **TASTELESS** [Heb. *tāpēl* (Job 6:6)]; AV UNSAVOURY; NEB FLAVOUR.

In the RSV OT "taste" translates Heb. *ṭaʿam* in the Exodus journey narrative in describing the flavor of manna as resembling "wafers made with honey" (Ex. 16:31) or "cakes baked with oil" (Nu. 11:8). Job offers a truism about the insipidity of food eaten without salt (Heb. *tāpēl*, "tasteless"), and implies the same about Eliphaz's advice (Job 6:6). Job's second question in v. 6 asks whether there is "any taste [*ṭaʿam*] in the slime of the purslane?" (cf. NEB "any flavour in the juice of mallows?"). The precise meaning of "purslane" (Heb. *ḥallāmûṯ* is elusive (*see* PURSLANE).

A clever metaphor in the Moab oracle of Jer. 48 portrays Moab, untouched by the Babylonian devastations and deportations inflicted on Judah, as a wine vessel left to age without disturbance or decantation, "so his taste remains in him, and his scent is not changed" (v. 11). Moab lay outside the usual invasion routes into Palestine and was rarely disturbed, in sharp contrast to Judah and others more centrally located. The figure here is especially clever since Moabite wine was highly reputed.

Nine times in the RSV OT "taste" translates the cognate verb Heb. *ṭāʿam*, usually in a literal sense with reference to food and drink. Three of these (1 S. 14:24, 29, 43; cf. par. in Josephus *Ant.*, vi.6.3, 5 [119, 126]) refer to Jonathan's tasting of some honey in an inadvertent violation of the battle oath against eating imposed by his father. David's fast while mourning for Abner is characterized by his refusal to "taste bread or anything else till the sun goes down" (2 S. 3:35; cf. *Ant.* vii.1.6 [42]; vi.14.8 [377]). The king of Nineveh proclaimed a fast of repentance in which neither human nor beast was to "taste anything" (Jonah 3:7). 2 S. 19:35 refers to the problem of loss of the sense of taste in old age.

In two slightly varied versions of the same maxim (Job 12:11; 34:3), the palate's obvious function in tasting food is portrayed as analogous to the ear's important role in testing words that are heard. The lone figurative use of *ṭāʿam* occurs in Ps. 34:8 (MT 9), where the very present reality of God's goodness is so vivid to the psalmist that he is able to describe it as actually perceptible to the senses of taste and sight: "O taste and see that the Lord is good" (cf. Sir. 23:27; 1 Pet. 2:3). The cognate Aram. *ṭᵉʿēm* appears once in the OT (Dnl. 5:2) where it refers to Belshazzar's tasting the wine before his notorious feast.

Hebrew *ḥēḵ*, "palate," commonly represents the organ of speech (e.g., Prov. 5:3) or simply the mouth (e.g., Cant. 5:16), but in several instances it also denotes the organ of taste. In Prov. 24:13 honey, sweet to the taste, is linked with wisdom (24:14) by analogy. Honey was highly valued both for its medicinal benefit to human health and its good taste. Yet the wisdom of God is even sweeter and better for one's whole well-being (Ps. 19:10 [MT 11]), and His words are sweet, even sweeter than honey, to the taste (Ps. 119:103). In Cant. 2:3 the maiden's lover is figured as an apple tree whose fruit is sweet to the taste (*ḥēḵ*), and in Job 6:30 *ḥēḵ* is used figuratively of an ability to "discern calamity" (cf. also Job 12:11 and 34:3, where *ḥēḵ*, "palate," occurs with the verb *ṭāʿam*, "taste").

In Job 21:25 the common Hebrew verb *ʾāḵal*, "eat," refers figuratively to the ill-fortuned person who has died "never having tasted of good."

In the RSV NT thirteen occurrences of Gk. *geúomai* are translated "taste." Five of these convey the literal sense of "savor, taste, eat" (virtually the equivalent of Heb. *ṭāʿam*): partaking of a banquet (Lk. 14:24); tasting water just become wine (Jn. 2:9); Jesus' refusal to drink the pain-deadening wine and gall mixture after he had tasted it (Mt. 27:34); eating food (in a context of ascetic restrictions, Col. 2:21); the refraining under oath from partaking of any food (Acts 23:14; cf. also 1 S. 14:24-30, 43; Jonah 3:7; Tob. 7:11; 2 Macc. 6:20; Josephus *Ant.* vi.6.3, 5 [119, 126]).

In the remaining eight instances *geúomai* connotes the sense of "experience, come to know" (cf. the use of Heb. *ṭāʿam* in Ps. 34:8 [MT 9]), viz., "taste" (i.e., experience) the kindness of the Lord (1 Pet. 2:3; cf. Ps. 34:8), the heavenly gift (He. 6:4), the goodness of the word of God (6:5), and death (i.e., to die; Mt. 16:28 par. Mk. 9:1; Lk. 9:27; Jn. 8:52; He. 2:9; cf. 2 Esd. 6:26).

Although He. 6:4 may allude to the communal meal, *geúomai* in 6:5 has the metaphorical sense of "experience" or "participate in." It is so used by Josephus (*BJ* ii.8.11 [158]) in reference to those who had "tasted" Essene philosophy (*sophía*). In 1 Pet. 2:3 the newly baptized believers (the "newborn babes," 2:2) who have now "tasted" or experienced the kindness (Gk. *chrēstós*, as in LXX Ps. 34:8) of the Lord are pointed toward that nourishment by which they will truly "grow up to salvation," the milk of the word of God. The allusion is possibly to an early baptismal rite in which, after coming back up from submersion, the newly baptized received milk mixed with honey, symbolic of the word of God for which the new believers ought now to hunger and by which they might be nourished and grow.

Greek *mōraínō*, usually "make foolish, show to be foolish" (Rom. 1:22; 1 Cor. 1:20; Sir. 23:14), appears twice in the NT (Mt. 5:13 par. Lk. 14:34) with a rare, specialized nuance, "become insipid, tasteless," applied to salt. Salt is requisite for soil fertility, but in excess will produce infertility. Noting that "sodium chloride does not lose its taste or savor except by dilution," Albright and Mann (*Matthew* [*AB*, 1971], pp. 54f.) understand "salt of the earth" in this agricultural sense and give the translation "salt . . . of low grade" (i.e., diluted salt that will not help much to enrich the soil). The more usual understanding has been not to take "earth" literally as "soil," but to take salt as "seasoning" for food. The point of comparison is the disciples' call to witness and good works in the world (Mt. 5:16), which are understood either to "enrich" the world (as salt does soil) or to "season" the world (as salt does food).

D. G. BURKE

TATAM tā'təm [Gk. *Tatam*]. A town in Judah listed only in Josh. 15:59, NEB, following the LXX. *See* MANACH.

TATTENAI tat'ə-nī [Aram. *tattᵉnay*; Gk. Apoc. *Sisinnēs*] (Ezr. 5:3, 6; 6:6, 13; 1 Esd. 6:3; 7:1); AV TATNAI. The Persian governor of the province "Beyond the River" (Aram. *ʿaḇar-nahᵃrâ*) who followed Rehum and ruled during the reign of Darius I (521-486 B.C.).

Earlier attempts to identify Tattenai with a certain Ushtani who functioned under Darius I as "governor of Babylon and 'Across the River'" (see B. Meissner, *ZAW*, 17 [1897], 191f.) have been abandoned since the discovery of a Babylonian text of 502 B.C. that refers to a slave of "Tattanni governor of Ebir-nari [i.e., 'Across the River']" (see A. T. Olmstead, *JNES*, 3 [1944], 46). It appears that Tattenai functioned as governor (*peḥâ*, the word used both in Aramaic in Ezr. 5:3 and in Babylonian on the tablet mentioned above) under Ushtani, the satrap of Babylon at that time. F. W. BUSH

TATTLER (1 Tim. 5:13, AV). *See* GOSSIP.

TATTOO [Heb. *nāṯan*–'give, put, set'] (Lev. 19:28); AV PRINT. The procedure of making a mark or pattern on the skin by pricking it with a needle coated with indelible pigment. Here the practice is associated with mourning rites for the dead and is forbidden as a heathen practice. Lev. 19:28 literally refers to putting *kᵉṯōḇeṯ qaʿᵃqaʿ* (lit. "writing of imprintment"; RSV, AV, "marks") in one's skin. *See* CUTTINGS IN THE FLESH.

TAU tou; **TAV** täv. *See* TAW.

TAVERNER'S BIBLE. *See* ENGLISH VERSIONS III.E.

TAVERNS, THREE. *See* THREE TAVERNS.

TAW tou, täv [ת, ת]. The twenty-second and final letter of the Hebrew alphabet, used in Ps. 119 to designate its final section; transliterated in *ISBE* with the dagesh as *t*, and without (spirant) as *ṯ*. It also came to be used for the number four hundred. *See* WRITING.

TAX; TRIBUTE. Tribute is a contribution, either compulsory or voluntary, given by persons, nations, or kings who have been subjugated by another power in recognition either of their subservience or of a king's position or outstanding qualities. Taxation, in the sense of a compulsory contribution levied on wealth by a civil or religious authority for public purposes, is a later development. In each case the payments or contributions may be made in precious metals, goods, animals, forced labor, or persons. They may be paid at certain regular intervals or at one particular time.

I. In the OT and Intertestamental Periods.–*A. OT Terms.* "Tribute" and "tax" represent a variety of terms in the RSV OT. Heb. *mas*, the term most frequently translated "tribute" by the AV, usually means "forced labor" (cf. Gen. 49:15; Ex.1:11; Josh. 16:10; 2 S. 20:24; Prov. 12:24; Isa. 31:8; *see* FORCE [5]); in Est. 10:1, however, it seems to denote tribute in the traditional sense. *Minḥâ*, literally "gift" or "offering," is used to refer to exacted tribute (2 S. 8:2, 6 par. 1 Ch. 18:2, 6; Jgs. 3:15-18; 1 K. 4:21 [MT 5:1]; 2 K. 17:3f.; 2 Ch. 17:5; Hos.10:6) and possibly to voluntary tribute (Ps. 72:10 [here *minḥâ*, "tribute," is paralleled by *ʾeškār*, "gifts"]). In 2 Ch. 17:11 the RSV renders *minḥâ* as "presents" and *maśśāʾ* as "tribute"; in 24:6, 9f. *masʾēṯ* (cognate of *maśśāʾ*) is translated "tax." "Tribute" represents *kesep* ("silver"; cf. AV) in Ps. 68:30 (MT 31), and in 2 K. 23:33 *ʿōneš* refers to the tribute of gold and silver exacted from King Jehoahaz by Pharaoh Neco. The verb "tax" represents the hiphil of *ʿāraḵ* in 2 K. 23:35. In Ezr. 4:13, 20; 6:8; 7:24; Neh. 5:4, Aram. *mindâ*/*middâ* and Heb. *middâ* are used of the tribute and taxes paid to the Medes and Persians (see I.C.2 below). In Dnl. 11:20 the phrase "exactor of taxes" is used to translate the part. of Heb. *nāgaś* ("exact"), while in Isa. 33:18 "he who weighed the tribute" represents the part. of *šāḳal* ("weight," "pay").

Two words translated "tribute" by the RSV indicate offerings made to Yahweh. (1) Heb. *meḳes* is a proportionate contribution demanded by the Lord of the spoils taken in battle (Nu. 31:28, 37-41). (2) The meaning of the hapax legomenon *missaṯ* (or *missâ*) in Dt. 16:10 is not certain (see comms.; KoB, p. 541); in some way, however, it refers to a freewill offering given to Yahweh at the Feast of Weeks, the amount being proportional to Yahweh's blessing in the harvest.

B. Collected by Israel's Leaders. In the first glimpses of the Hebrew people in the Bible, no such institution as taxation appears.

1. In the Earliest Period. Like all primitive communities, the nomadic Hebrews had no regular system of taxation, nor use for any. Voluntary "presents" were given, however, by the less to the more powerful in return for protection or other advantages (e.g., Gen. 32:13-20; 43:11, 15, 25f.). One great taproot of the development of systematic taxation is to be found in this primitive custom of giving presents, for it was an easy transition from presents voluntarily given to those that were expected and finally to those that were demanded (cf. the use of *minḥâ* in 1 S. 10:27; 1 K. 4:21; 10:25; 2 K. 17:3f.; etc.).

2. Under Moses and Joshua. Another source of what later developed into systematic taxation was the custom of laying exactions upon conquered peoples. The first examples of this custom in the Bible involve a subject people being compelled to render forced labor (*mas*). The Israelites, who themselves had been forced to provide such service to the Pharaoh in Egypt (Ex. 1:11), subjected to forced labor the Canaanites who remained in the land after the conquest (Josh. 16:10; 17:13; Jgs. 1:28-35).

Under the theocracy the only fixed impost that had a semi-civil character was the so-called atonement money (Ex. 30:11-16; cf. 38:25f.), which was actually a poll tax amounting to a half-shekel for each enrolled male member of the community above twenty years of age. The proceeds of this tax were to be used for the service of the tent of meeting. It seems to have been levied by the authorities and accepted by the people whenever faithfulness to the ordinances of the Lord was the order of the day (2 Ch. 24:4-14; Neh. 10:32; note here that the amount has been reduced from one-half to one-third shekel). In later times this tax was devoted to the service of the temple. It was

paid by Jews at distances during the Dispersion. Josephus referred to the large sums that accrued to the temple treasury from this source (*Ant.* xiv.7.2 [110-13]). (On the mention of this tax in Mt. 17:24-27, see III below.)

3. Under the Judges. The period of the judges was too disorganized and chaotic to exhibit many of the characteristics of a settled nation. As far as we know the only source of public moneys was the giving of presents. If the action of Gideon (Jgs. 8:24) is indicative of the ordinary policy of the period, the judges received nothing more than a share of the spoil taken in battle. The account emphasizes that Gideon proffered a request and that the people responded freely and gladly.

4. Under the Kings. As could be expected, taxation assumed far greater prominence in the period of the kingdom. In 1 S. 8:10-18 Samuel responds to the Israelites' request for a king by warning them of the autocratic means that the king would employ in dealing with them. The passage gives a fairly exhaustive list of royal prerogatives. The king would exact from his subjects their young people, lands, vineyards, orchards, servants, cattle, and animals, and also a tenth of their crops and flocks. The underlying principle, fully exemplified in the actions of Israel's kings, is that the king would take what he needed for his public and private needs from the strength and substance of his people. The king took what he could get; the people gave what they could not hold back.

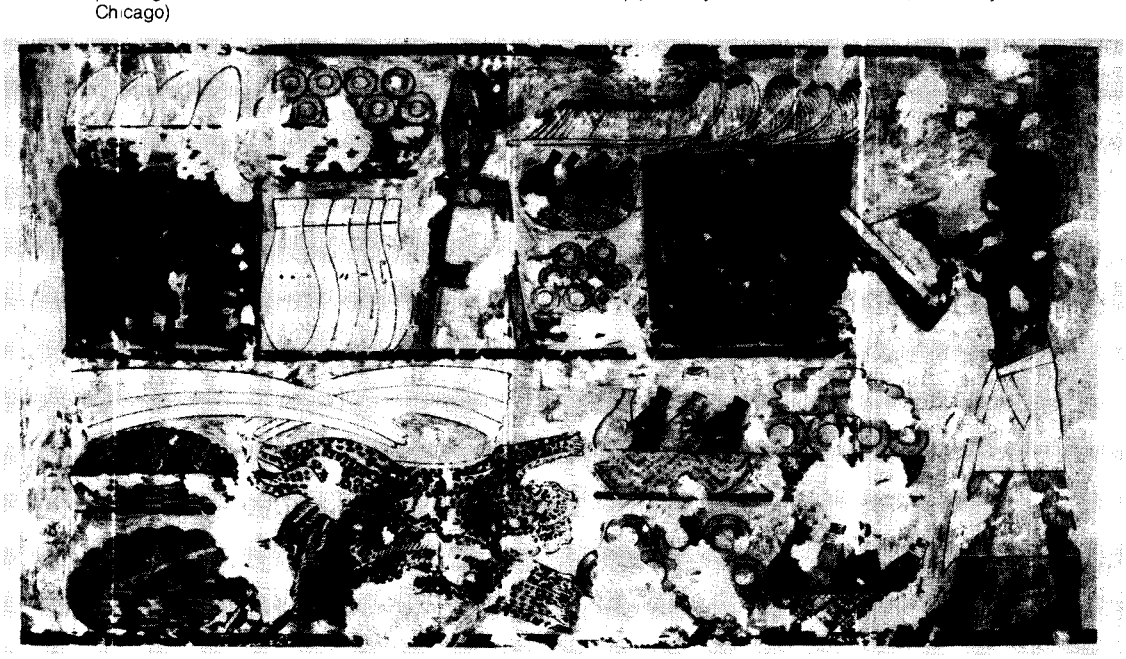
1 Samuel 10:27 (cf. 2 Ch. 17:5) cites the case of worthless fellows who brought Saul no present, clearly showing that fealty to the new king was expressed in the giving of presents. The refusal to make these so-called presents was interpreted by the writer as an act of constructive treason, for he mentions Saul's silence as something notable. It is evident that the word "present" has become euphemistic.

In David's time an unbroken series of victories in war so enriched the public treasury (see 2 S. 8:2, 7f.) that little is said about complaints of excessive taxation. David's habit of dedicating spoil to Yahweh (vv. 10-12) kept the sacred treasury well supplied. Solomon undoubtedly inherited David's scale of public expense (1 Ch. 27:25-31) and added to it through his well-developed love of luxury and power. At the same time the cessation of war made imperative the development of internal resources for carrying out his ambitious schemes. The boundaries of his kingdom are specified, and it is stated that other kingdoms paid tribute to him (1 K. 4:21 [MT 5:1]; 10:14, 24f.). His system of fiscal administration was very thoroughly organized. He put the whole country under twelve officers whose business it was to provide, by months, provisions for the court (4:7-19). Under Solomon also, apparently for the first time, Israelites were compelled to render forced labor (5:13-17). By the end of his reign the burden of taxation had become so severe that the people demanded from Rehoboam a lightening of the "hard service" and "heavy yoke" of Solomon as the condition of their fealty to his successor (12:4). Rehoboam's foolish answer of defiance precipitated the separation of the tribes into two kingdoms.

During the period of prophetic activity that followed, one recurring theme in the denunciations uttered by the prophets against the kings was the excessive burden of taxation imposed upon the people. Amos speaks of "exactions of wheat" taken from the poor (Am. 5:11; cf. 2:6-8). In 7:1 he refers incidentally to a custom of rendering to the king the first mowings of grass. Micah, with even greater severity, denounces rulers "who eat the flesh of my people" (Mic. 3:1-4).

C. Collected by Foreign Rulers. 1. Assyria and Babylonia. During the reign of Menahem, who succeeded Jeroboam II as king of Israel, the Assyrian invasion under Tiglath-pileser III ("Pul," 2 K. 15:19) began. Menahem bought off the Assyrian conqueror by a tribute of a thousand talents, which he obtained by exacting fifty talents of silver from each of the wealthy men in his kingdom (vv. 19f.). A little later Ahaz of Judah sent a present to the

An Egyptian scribe registering Nubian tribute including ostrich eggs and feathers, a monkey, gold, and ebony (wall painting from the tomb of Rekhamire at Thebes, 1475-1448 B.C.) (courtesy of the Oriental Institute, University of Chicago)



same ruler. In this case the precious metals were obtained by robbing the temple treasury and adding this to the accumulations at hand in the royal treasury (16:8). Hoshea of Israel, a contemporary of Ahaz, was also reduced to tribute (17:3); later, upon his neglect to pay, he was put in prison (v. 4). Later still, Jehoahaz the son of Josiah was deposed by Pharaoh, who placed a tribute upon the land of a hundred talents of silver and one of gold (v. 33). Jehoiakim, the puppet king, raised this tribute by a special tax upon the people (vv. 34f.). This same unfortunate Jehoiakim came under the heavy hand of Nebuchadnezzar (24:1-7). Although it is not stated that Nebuchadnezzar levied a special tribute, 2 Ch. 36:7 mentions that he carried away to Babylon the vessels of the temple.

2. Persia. The books of Ezra and Nehemiah refer to several classes of taxes imposed by Persian rulers. The work of rebuilding the temple in Jerusalem, begun during the reign of Cyrus, was stopped until the second year of Darius because of the harassment of hostile neighbors (Ezr. 4:4f., 24). Darius issued a royal decree that the work should continue and should be paid for by "the tribute of the province from Beyond the River" (6:8). Artaxerxes, in addition to generous gifts, exempted the priests and temple servants from paying "tribute, custom, or toll" (7:24). According to 4:17-22, however, Artaxerxes ordered that work on rebuilding the walls of Jerusalem should cease. This decree was in response to a letter from his officials from the province Beyond the River, which warned that if the Jews were allowed to rebuild the city walls they would no longer pay "tribute, custom, or toll" (4:13; cf. v. 20). These three terms evidently refer to three distinct classes of taxes. *See* TOLL.

In the days of Nehemiah a serious situation arose. The king's tax (Neh. 5:4) was so heavy that the Jewish common people were compelled to borrow money upon mortgages, and in so doing fell into the hands of usurers of their own people, by whom they were so impoverished as to be compelled to sell their sons and daughters into slavery (5:1-13). In addition to the royal tax, they were forced to support the governors who preceded Nehemiah with bread, wine, and forty shekels of silver annually (vv. 14f.). In the prayer that Ezra offered on the fast day (Neh. 9), he stated that their burdens of taxation were so heavy that they were servants in their own land (vv. 36f.).

3. Ptolemies and Seleucids. The Ptolemies, who practically controlled Palestine from 301 to 218 B.C., do not appear to have made excessive demands for tribute (twenty talents for Jews [*Ant.* xii.4.1 (158)] seems no great amount), but their custom of farming the taxes to the highest bidder introduced a principle that prevailed through all the subsequent history and was the cause of much popular suffering and discontent.

The story of Joseph, the Jewish tax collector (*Ant.* xii.4.2-5), who was for twenty-three years farmer-general of taxes for Palestine under Ptolemy Euergetes and the cause of a long train of disasters, is peculiarly significant for the student of the NT.

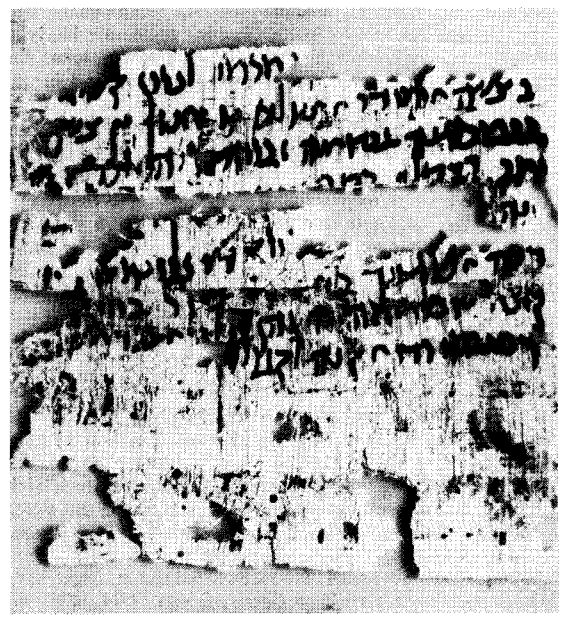
The conquest of Palestine by Antiochus the Great (202 B.C.) brought a certain amount of relief to the Jews of Palestine, which as of old was the buffer state between contending powers. According to Josephus (*Ant.* xii.3.3 [138-144]), Antiochus gave the Jews generous gifts in money, remitted their taxes for three years, and permanently reduced them one-third. He also released the senate, the priests, the scribes, and the temple singers from paying the poll tax, the crown tax, and the salt tax.

That the Seleucid kings were generally very severe in their exactions is clearly shown in the letters of Demetrius to the Jews (1 Macc. 10:26-30; 11:34f.; 13:39; cf. 11:28), in which he promises exemptions from paying "tribute" (Gk. *phóroi*), "salt tax," "crown levies" (*stéphanoi*), one-third of their grain, and half the fruit of their trees (10:29f.). 2 Macc. 3 describes how Seleucus IV (187-176 B.C.), who owed much money to Rome, made an unsuccessful attempt to rob the treasury of the Jerusalem temple (v. 7).

II. In the NT.–A. Taxation by Rome. The Romans continued the taxation of Palestine after their conquest in 63 B.C. Augustus canceled the tribute in 30 B.C., allowing Herod the Great to collect his own taxes. Thus taxes were paid to the king and collected by officers appointed by him. Among the taxes imposed by Herod were a tax on crops (*Ant.* xv.9.1 [303]) and a sales tax on items bought and sold (xvii.8.4 [205]). This system had changed, however, by NT times. After Archelaus was deposed (A.D. 6), at the request of the Jews themselves Judea was made an imperial province and put under procurators who were in charge of all financial administration, although the tetrarchs still collected the internal taxes. In this era the direct taxes (e.g., land and poll taxes) were not farmed out but were collected by regular imperial officers as part of their official duty. But the collection of tolls on exports and imports, and on goods transported by merchants within the country, were sold to the highest bidders.

Three Greek terms are used by the NT for these imperial taxes. The *kénsos* ("census") was the poll tax collected from individuals. It is generally thought that the enrollment (*apographḗ*) ordered by Caesar Augustus was for the purpose of collecting this direct tax (Lk. 2:1f.), and that Joseph and Mary went to Bethlehem for this reason (vv. 4f.; on the problems of dating this census, *see* CHRONOLOGY OF THE NT I.A.2; QUIRINIUS). In an attempt to trap Jesus, the Pharisees asked Him whether it was lawful to pay this tax to Caesar (Mt. 22:15-22 par. Mk. 12:13-17; in par. Lk. 20:20-26 the term used is *phóros*). The Jews hated paying this tax especially since they were forced to pay it in coins bearing the emperor's image and inscribed with his divine claims. When shown the tax coin (called *tó nómisma toú kénsou* ["legal money

A papyrus statement of indebtedness dated Year 2 of Nero found at Wâdī Murabba'ât (courtesy, Israel Department of Antiquities and Museums)



for the tax"] and *dēnárion*, Mt. 22:19) with Caesar's likeness on it, Jesus foiled their attempted entrapment by telling them to give to Caesar what was Caesar's and to God what was God's. *Kénsos* (RSV "tribute") is also used along with *télos* ("toll") at Mt. 17:25, where Jesus asks Simon from whom earthly kings exact "toll or tribute."

Phóros, also translated "tribute" or "tax," is found only in Lk. 20:22; 23:2; Rom. 13:6f. Luke's use of *phóros* instead of *kénsos* at 20:22 suggests that he considered it a synonym. In Rom. 13:6 the plural of *phóros* seems to be a general word for all taxes, while v. 7 distinguishes between the individual poll tax (*phóros*) and the indirect commercial taxes on property, transportation, and crops (*télos*).

The latter word, *télos*, found only at Mt. 17:25 and Rom. 13:7 usually refers to the taxes that were levied at ports of entry, bridges, important crossroads, and places of commerce on the transport and sale of goods. These monies were collected through the tax-farming system in which rich individuals, usually foreigners, bid for the contractual responsibility of collecting taxes for the government. These contract holders then employed others from the local communities to be responsible for the tax collections in their own areas; these employees were the *telónai* (AV "publicans"; RSV "tax collectors") of the Gospels. The *architelónēs*, or "chief tax collector" (Zacchaeus, Lk. 19:1), may have been an intermediary between the rich contract holder and the ordinary tax collector. Because these tax collectors were collecting monies for the hated foreigners, they were deeply despised by the Jews and considered in the same class as the "sinners" who did not keep the Law (Mt. 11:19; 18:17; Lk. 18:11). *See* TAX COLLECTOR.

B. Temple Tax. Besides the above taxes paid to government authorities, all Jewish males, including those of the Diaspora, were required to pay an annual half-shekel tax for the maintenance of the temple in Jerusalem (see I.B.2 above).

In Mt. 17:24-27 the collectors of this tax ask Peter whether his Master pays this tax. Peter assures them that He does. Later, Jesus draws an analogy between His situation and that of royal sons who are exempt from paying taxes to earthly kings. Jesus thus indicates that as free persons, He and His disciples are not obligated to pay such levies. But to avoid offending the collectors He tells Peter to go to the sea to fish, and to pay the temple tax for both of them with the shekel (*statér*) he will find in the fish's mouth (see *DNTT*, III, 753). In v. 24 the coin needed to pay this tax is called a *dídrachma*, which had the value of a half-shekel. The coin in the fish's mouth is called a *statér*, which was about the value of a shekel and therefore enough to pay for two persons (v. 27).

After the destruction of Jerusalem in A.D. 70, the emperor Vespasian (60-79) required that this temple tax be paid to Jupiter Capitolinus, the head of the Roman pantheon (Josephus *BJ* vii.6.6 [218]). It is generally assumed that by the time of Nerva (96-98) the tax had been abolished.

C. Collection for the Poor in Jerusalem. In 1 Cor. 16:1-3 Paul refers to a collection (*logeía*; RSV "contribution") that was taken in the Gentile churches for the poor in the Jerusalem church. While this was a voluntary love offering and not a formal levy, Paul in a sense considered it to be something the Gentile Christians owed the Jewish Christians in Jerusalem, since it was through the latter that they had come to share in the blessings of the gospel (Rom. 15:25-28; cf. also 2 Cor. 9:11f.).

L. M. SWEET
G. A. GAY

TAX COLLECTOR [Gk. *telónēs*; Lat. *publicanus*]; AV PUBLICAN; NEB TAX-GATHERER; **CHIEF TAX COLLECTOR** [Gk. *architelónēs*] (Lk. 19:2); AV CHIEF AMONG THE PUBLICANS; NEB SUPERINTENDENT OF TAXES. In the NT era the Romans collected a variety of indirect taxes and tolls (in contrast to the direct poll and land taxes) from the provinces through members of the local populations, making use of a network of tax-farming in Palestine similar to that which had existed under the Hellenistic rule of the Ptolemies. In this system one usually became a tax collector by bidding against others to guarantee the highest amount of money to the tax-farmers (the true *publicani*), who were directly responsible to the Roman government. This arrangement obviously provided the opportunity at several levels for considerable personal gain through the unrestricted inflation of taxes and tolls, a portion of which conveniently went into the pockets of the middlemen.

The many taxes and custom tolls that the Romans exacted from the provinces necessitated a large corps of tax collectors. Since a major source of tax revenue was derived from the customs tolls placed upon the transportation of merchandise, tax collectors were concentrated at key points of entry, i.e., at sea ports and on the main caravan routes. The tax collectors who appear in the Gospels are mainly associated with Capernaum in Galilee and with Jericho. Both towns were located on major roads and near borders, where it was natural to levy tolls.

Tax collectors were especially despised by the Jewish population of Palestine for several reasons: (1) they collected money for the foreign power that occupied the land of Israel, thus indirectly giving support to this outrage; (2) they were notoriously unscrupulous, growing wealthy at the expense of others of their own people; and (3) their work involved them in regular contact with Gentiles, rendering them ritually unclean. Contempt for tax collectors is found both in the NT and the rabbinic literature (see SB). According to the latter, hatred was to be extended even to the family of the tax collector, and since tax collectors were universally regarded as no better than robbers or thieves it was not thought wrong to attempt to defraud them.

In the Synoptic Gospels (which contain all the NT references) tax collectors are commonly linked with a group more generally designated as "sinners" (Mk. 2:15f. par.; Mt. 11:19 par.; Lk. 15:1). That they are so often mentioned separately, when they could naturally be included in the more general term, indicates how conspicuous they were in the minds of the populace. With its special Jewish interests, the Gospel of Matthew contains the most frequent derogatory references to tax collectors, linking the term with "harlots" (Mt. 21:31f.), putting the tax collector on the level of a Gentile (18:17), and indicating that even tax collectors love those who love them (5:46; this point takes on added meaning when one considers how universally hated they were).

Jesus' compassion for the tax collectors is one of the startling facts of His ministry. The good news of the inaugurated kingdom of God enables outcasts of all kinds to experience God's grace. Luke, who championed this message even more than the other Synoptic writers, included the most positive assertions about the tax collectors in the material that is unique to his Gospel. Luke's Gospel alone refers to the tax collectors who came to be baptized by

John and records John's exhortation to them: "Collect no more than is appointed you" (Lk. 3:12f.). Only Luke notes the tax collectors' excited response to Jesus' praise of John the Baptist (7:29). And Luke alone reports that superlative parable of grace, the story of the Pharisee and the tax collector (18:10-14). Even when Luke combines "tax collectors" with "sinners," it is in reference to them drawing near to hear Jesus, which sparks the Pharisees' response, "This man receives sinners and eats with them" (15:1f.; cf. 7:34).

Two stories in the Synoptic tradition mention individual tax collectors by name; both provide concrete manifestations of the grace of the gospel. Jesus' inclusion of such a disreputable figure as a tax collector among His own special disciples was both astonishing and offensive to the Jews. The call of Levi (Matthew) to be one of the Twelve is found in all three Synoptics (Mk. 2:13-17 par.). Matthew's initial act of discipleship was to throw a dinner party for a multitude of tax collectors and sinners. When the Pharisees faulted Jesus for associating with such rabble, Jesus responded with the memorable words that encapsulate the gospel and summarize His mission: "I came not to call the righteous, but sinners" (Mk. 2:17 par.).

In the second instance Jesus again took the initiative in reaching out to a chief tax collector of Jericho — if anything, an even more objectionable character (Lk. 19:1-10). Zacchaeus was in the hierarchy of the tax-farming system (perhaps truly a *publicanus*); he apparently had other tax collectors in his service and took a commission from each of them before turning the money over to his own superiors. Zacchaeus not only joyfully received Jesus' message, but he gave half of his wealth to the poor and restored fourfold (a threefold restitution is known from Roman sources; see Justinian *Digest* 39.4) whatever he may have defrauded from others. Undoubtedly restitution of this kind was expected of tax collectors who followed Jesus. When Jesus announced that salvation had come to Zacchaeus's house, He characterized His own mission in these words: "For the Son of man came to seek and to save the lost" (Lk. 19:10).

It is clear that tax collectors take on the importance they have in the Synoptic Gospels precisely because they are such striking examples of the surprising grace that constitutes the very essence of Jesus' message.

D. A. HAGNER

TAX OFFICE [Gk. *telónion*] (Mt. 9:9 par. Mk. 2:14; Lk. 5:27); AV RECEIPT OF CUSTOM; NEB CUSTOM HOUSE. A word occurring in the Synoptic tradition only in the passage describing the calling of Levi/Matthew (Mk. 2:13-17 par.). Each of the Gospels refers to him as "sitting at *tó telónion.*" The term probably refers to a toll booth or small customhouse at which all goods in transport were officially taxed. Capernaum's customhouse, where Levi/Matthew worked, must have been particularly important, since it was situated on the major caravan route that connected Damascus with the Mediterranean (the "way of the sea") and was thus a major point of entry into Palestine from the north and the east.

I. In the OT.–While the OT contains no specific reference to academic instruction, several allusions to public instruction or to teaching at court or sanctuary do appear among the earlier biblical texts; examples include Moses' instruction of the Israelites (Dt. 31:12f.), Eli's instruction of Samuel (1 S. 2–3), Nathan's counsel to King David (e.g., 1 K. 1:11-40), Jehoshaphat's programs of instruction in the law (2 Ch. 17:7-9), and Isaiah's relationship to a circle of disciples (Isa. 8:16). Further, the presence of schools among other Near Eastern cultures (3rd millennium B.C. in Sumer and Egypt), and the subsequent development of prominent academic circles within late Judaism, also argue for the existence of academic institutions in ancient Israel. Without question, however, the core of early Hebrew instruction occurred in the home.

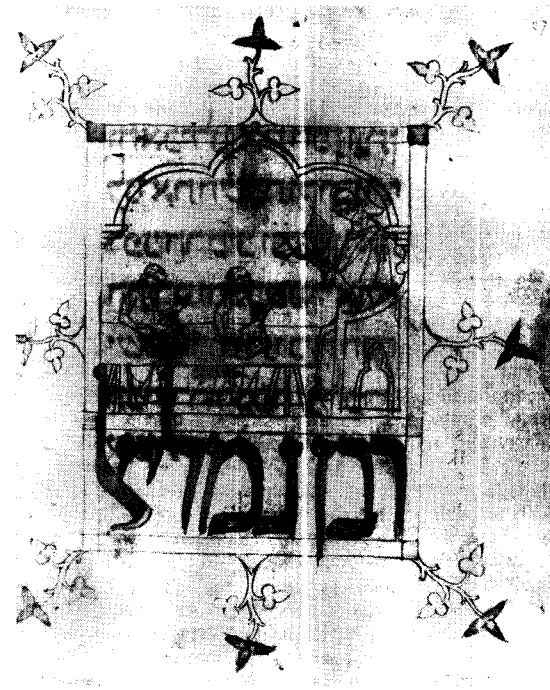
While the educational techniques used in ancient preexilic Israel are now lost to us, the various OT terms for teaching give indications of Israel's philosophy of instruction. The RSV OT most often translates as "teach" the verb *lāmaḏ* (piel), which conveys the idea of training or exercise. The term probably was first used for the training

of animals (cf. Jer. 31:18) but soon came to be used for the teaching of skills related to war, religion, and life. This verb implies the hearer's active participation in response to both the teacher and what is taught. The hiphil of *yārâ* ("throw," "shoot") focuses upon "direction" in the course of instruction. From this root is derived the noun *tôrâ* ("teaching" or "instruction," in distinction from the often misused translation "law"; cf. AV), which signifies the tradition by which the community was to conduct itself with respect to ritual and society. The practical focus of this verb is demonstrated in the wisdom literature, which equates teaching "the way of wisdom" with leading in "the paths of uprightness" (Prov. 4:11). The verb *yāḏaʿ* (hiphil) indicates the declaration of specific knowledge. It commonly refers to an individual's capacity to discriminate in learning situations (Job 37:19; Prov. 9:9).

From the beginning, the foundation upon which education in Israel was based was the need to develop an appropriate relationship with God (cf. Prov. 1:7). All instruction incorporated this total perception of life. Thus its functions included the shaping of the individual's morality and the structuring of the community's self-definition. Such teaching presupposes an outside authority figure, namely, God (Ex. 4:12; Isa. 2:3) or an agent of God (e.g., princes, Levites, and priests, 2 Ch. 17:7-9; prophets, Isa. 9:15; priests, Ezk. 44:21-23; Mic. 3:11). The teacher maintained authority by adhering to the teaching of God. The later texts of the OT (the soil of rabbinic Judaism) use *lāmaḏ* (piel) to suggest an exposition of *tôrâ* (e.g., 2 Ch. 17:7-9), which had the specific purpose of establishing an appropriate relationship between the individual and God on the one hand, and between the individual and neighbor on the other. In this context, the father-son relationship reflected in the wisdom literature became a model for teaching in the rabbinic schools (T.B. *Sanhedrin* 19b). In rabbinic literature the piel of *lāmaḏ* became associated with exegesis, being used often in the sense of "reach a scholarly opinion" (e.g., Mish. *Berakoth* ii.5-8).

The Hebrew terms rendered "teach" in the RSV can denote the transmission of specific statutes and ordinances associated with *tôrâ*, or the act of providing education in the broader sense. In every case, however, the concept of teaching is associated with that of revelation. Thus the early Deuteronomic tradition indicates that Moses "taught" the early Israelites the statutes and ordinances of God's law (Dt. 4:1, 5, etc.; cf. Lev. 10:11), and that the Lord "taught war" to Israel through the nations that remained in Canaan during the period of the Judges (Jgs. 3:2). Israel was taught its true identity through its intimate relationship to the God of salvation. This identity is reflected in the Shema, which became an axis for Hebrew teaching (Dt. 6:4-9). Wisdom literature understands teaching as a vehicle by which the righteous hearer can benefit from both instruction in wisdom and commonsense advice (cf. Prov. 4:11). Such wisdom and advice resided within the community of Israel but was also informed by the influence of Mesopotamian and Egyptian wisdom. Wisdom literature taught a way of life rooted in the fear of the Lord but guided by the principles of cultural wisdom (Job 32:7; Eccl. 12:9; see also the book of Sirach).

During the Babylonian captivity Judaism began to institutionalize its teaching in centers of instruction, or synagogues, in order to preserve the wisdom of the Mosaic law for its people. Those exiles who returned to Judah during the Second Temple period wept to hear their teachers read the "words of the law," which had been preserved under the oppression of the nations (Neh. 8:9). The preservation of instruction during the intertestamental



An illustration from the Haggadah showing Rabban Gamaliel with two pupils (Spain, *ca.* 1300) (Courtesy of the Library of the Jewish Theological Seminary of America)

period took place primarily in the community teaching provided by these synagogues. Teaching became a function of national identity and was the guiding light by which the Maccabean rebellion initiated the restoration of Jewish autonomy. The role of scribe, already prominent by the 5th cent. B.C., developed further in reaction to Hellenism. With the onset of Roman political oppression, teachers of Judaism gained prominence as leaders in society. Under Rome's dominance, however, it became more important — and safer — to study *tôrâ* than to practice it (T. B. *Kiddushin* 40b). As a result, Judaism's self-understanding was shaped by the rabbinic circles, which maintained Scripture as a focal consideration in both public and private spheres. "Scribal learning" was consequently the key to political influence as well as religious authority in Jewish society.

II. In the NT.—The basic assumptions about teaching in the OT appear also in the NT. Whereas Greek society viewed teaching as little more than the transmission of instruction, the OT concept of teaching's total claim upon the pupil continued in the NT. In contrast to the OT, however, the NT's focus of instruction shifts to the message and works of the historical Jesus, concluding with the Resurrection.

The primary NT term for "teach," Gk. *didáskō*, is attested from the time of Homer. The term incorporates various aspects of instruction (training, direction, and discrimination) represented by parallel words in the OT. It does not emphasize imitation of the teacher so much as the development of a pupil's talents and abilities. While the term appears in a religious context only rarely in Greek society, it occurs about one hundred times in the LXX as a translation of Heb. *lāmaḏ*. This suggests that *didáskō* came to have a technical significance for Greek-speaking Jews (see *TDNT*, II, 135f.).

The roles of teacher and student had become well de-

fined by NT times. Jesus' role as *didáskalos* ("teacher," "master"; cf. Mt. 8:19; etc.; teachers of the Mosaic law are most often designated as *nomodidáskalos*) falls within the parameters of the rabbi in first-century Judaism. Several passages mention that Jesus sat while He taught — a pedagogic style typical of contemporary teachers (Mt. 5:1; Lk. 5:3). Indeed, the Synoptics indicate that teaching was one of Jesus' prominent functions (e.g., Mt. 4:23). Thus He appears frequently at synagogues, where facilities for instruction were available (Mt. 9:35; Jn. 18:20; cf. T.P. *Megillah* 73d). The disciples may also be compared to the students of the great Jewish teachers, who themselves transmitted the traditions of *tôrâ*. Unlike the teaching of the scribes, however, Jesus' teaching is not concerned with the *preservation* of *tôrâ*; instead it is oriented toward an interpretation of the tradition that brings the hearer closer to the kingdom of God. Jesus is portrayed as the ultimate teacher. In contrast to His teaching, the teachings of His contemporaries are the "precepts of men" (Mk. 7:7). The Gospels depict Him as a new interpreter of *tôrâ* who shapes His audience's perception of God through both His teaching and His person. He is the catalyst behind the preaching and teaching of His followers (Mt. 28:19f.).

Outside the Gospels, teaching in the NT is based upon Jesus' instruction and the witness of His resurrection. This message underlies, e.g., the baptism of converts (1 Peter; cf. Did. 1–6). Paul considered the function of teaching to be a gift (Rom. 12:6f.) and associated it with the revelation of the risen Christ, which is taught by the Spirit (1 Cor. 2:13) to those who are able to understand it. With the development of offices in the early Christian congregations, the role of teacher (teaching was not distinguished from preaching; *see* PREACH II.B.1.b) became a primary function (cf. Acts 13:1; Eph. 4:11; 2 Tim. 1:11; Jas. 3:1). It was through the teacher that sound instruction was maintained. Thus, the Pastoral Epistles established guidelines for those who were to serve as teachers in the Church: temperance, seriousness, faithfulness, love, steadfastness, reverence, integrity, gravity (Tit. 2:1-15). Such criteria insured the rise of responsible leaders whose authority would be accepted by the community; the prominence of these teachers also led to the development of the office of bishop along a teaching model. As in the Jewish tradition, the context for teaching within the Christian community was ultimately the congregation, the extended family of faith.

C. N. JEFFORD

TEAR; TEARS [Heb. *dim'â* (2 K. 20:5; Ps. 6:6 [MT 7]; 39:12 [MT 13]; 42:3 [MT 4]; etc.), *bāḵâ*–'weep' ("beseech with tears," Est. 8:3), *beḵî*–'weeping' (Ps. 102:9 [MT 10]; Isa. 15:3; 22:4), *mayim*–'water' (Ps. 119:136; Lam. 1:16; 3:48), *dālap*–'leak,' 'weep' ("pour out tears," Job 16:20); Gk. *dákryon* (Mk. 9:24 mg.; Lk. 7:38, 44; Acts 20:19, 31; 2 Cor. 2:4; etc.), part. of *klaíō*–'weep' (Phil. 3:18)]; AV also WEEPING, WATER(S); NEB also "turn again and again" (Job 16:20), omits (Ps. 116:8), WEEPING, MISERY (Isa. 22:4), etc.

The biblical literature indicates that the Hebrews did not restrain themselves (as modern Occidentals characteristically do) from expressing emotion through weeping. The shedding of tears was an expresion of anguish due to approaching death (2 K. 20:5 par. Isa. 38:5; Ps. 39:12; 116:8; He. 5:7), oppression (Eccl. 4:1), persecution by enemies (Ps. 6:6; 56:8; Acts 20:19), defeat in battle (Isa. 15:3; 16:9), parting from a loved one (2 Tim. 1:4), penitence (Lk. 7:38, 44; cf. the false penitence of Mal. 2:13), or hopeless remorse (He. 12:17). The prophet Jeremiah has sometimes been called the "weeping prophet" because of the many references in his writings to weeping over the destruction of his people (Jer. 9:1, 18; 13:17; 14:17; Lam. 1:2, 16; 2:18; 3:48; etc.). Paul shed tears of deep anguish and concern when he had to admonish or reprove his converts (Acts 20:31; 2 Cor. 2:4; cf. Phil. 3:18).

Tears are referred to in a variety of figurative expressions. The psalmist described Israel's suffering as feeding on "the bread of tears" and being given "tears to drink" (Ps. 80:5; cf. 42:3; 102:9). Overwhelming grief is sometimes described hyperbolically in terms of a river (Ps. 119:136; Lam. 2:18; 3:48), flood (Ps. 6:6), or fountain (Jer. 9:1) of tears. Ps. 56:8 (MT 9) refers figuratively to God collecting the psalmist's tears in a BOTTLE (i.e., "wineskin" or "waterskin"); the metaphor emphasizes God's close attention to the afflicted one's sufferings and the idea that eventually justice will be done. Conversely, God's final conquest over death and its accompanying sorrow is depicted as the wiping away of all tears from the faces of those who will share in the joy of His kingdom (Isa. 25:8; Rev. 7:17; 21:4).

A. MACALISTER N. J. O.

TEAT tēt. AV term for Heb. *šaḏ* (Isa. 32:12), and *daḏ* (Ezk. 23:3, 21). *See* BOSOM; BREAST.

TEBAH tē'bə [Heb. *ṭeḇaḥ*–'(born at the time of a) slaughter' (?)]. Son of Nahor, Abraham's brother, and his concubine Reumah (Gen. 22:24). Presumably he is the ancestral father of the city TIBHATH.

See *BhHW*, III, *s.v.* "Teba" (G. Wallis).

TEBALIAH tēb-ə-lī'ə [Heb. *ṭᵉḇalyāhû*]. The third son of Hosah from the family of Merari (1 Ch. 26:11). He served as a gatekeeper in the temple.

TEBETH tē'beth [Heb. *ṭēḇēṯ* < Akk. *ṭebītu*] (Est. 2:16). The tenth month (Dec./Jan.) of the Hebrew CALENDAR.

TEETH. *See* TOOTH.

TEHAPHNEHES (Ezk. 30:18). *See* TAHPANHES.

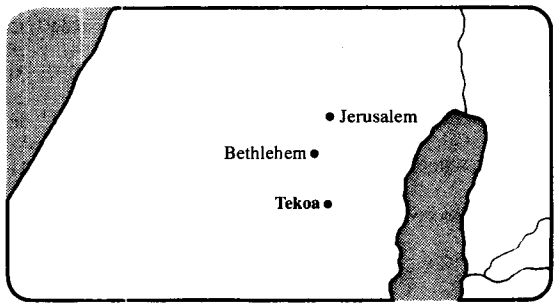
TEHINNAH tə-hin'ə [Heb. *ṭᵉḥinnâ*–'supplication for favor,' 'favor'] (1 Ch. 4:12). Name of a man or a Judahite family. *See* IRNAHASH.

TEIL tēl **TREE** (Isa. 6:13, AV). *See* TEREBINTH.

TEKEL. *See* MENE, MENE, TEKEL, AND PARSIN.

TEKOA tə-kō'ə [Heb. *ṭᵉqôa(ʿ)*, *ṭᵉqôʿî*/*ṭᵉqōʿî*; Gk. Apoc. *Thekōe*] (2 S. 14:9; 1 Ch. 2:24; 4:5; 2 Ch. 11:6; 20:20; Jer. 6:1; Am. 1:1; 1 Macc. 9:33; etc.); AV also TEKOAH, TEKOITE (2 S. 23:26; 1 Ch. 11:28; NEB also TEKOAH (2 S. 14:2, 4); AV Apoc. THECOE; **TEKOITE** tə-kō'īt [Heb. *ṭᵉqôʿî*/*ṭᵉqōʿî*] (1 Ch. 27:9; Neh. 3:5, 27); NEB "man of Tekoa" (1 Ch. 27:9), "men of Tekoa." A city of Judah about 16 km. (10 mi.) S of Jerusalem, known best as the home of the prophet Amos; it was also known as

Thekoue. It is represented today by Teqû', an unexcavated site of 1.5-2 ha. (4-5 acres).



In Josh. 15:59 (LXX and NEB) Tekoa heads a list of eleven cities of Judah, including Ephrathah (Bethlehem). The genealogies of Chronicles give Tekoa as a descendant of Judah and Tamar (1 Ch. 2:3f., 24), and Ashhur as "the father of Tekoa" (2:24; 4:5).

When Absalom the son of David was banished after he killed his brother Amnon (2 S. 13:20-29), Joab brought to David a "wise woman" of Tekoa to plead Absalom's cause adroitly (14:1-20). David restored his son to Jerusalem but for two years would not see him (vv. 23f., 28).

In the list of David's mighty men is "Ira the son of Ikkesh of Tekoa" (2 S. 23:26; 1 Ch. 11:28). He was the captain of the sixth month (1 Ch. 27:9), i.e., for that month he was the officer in charge of a division of 24,000 men and served as chief of military command.

After the division of the kingdom Rehoboam built cities for defense in Judah, including Tekoa and a number of other cities (2 Ch. 11:5f.). The mention of "the wilderness of Tekoa" (2 Ch. 20:20), a part of the wilderness of Judah, associates the city with the rough barren area E of Tekoa; here the men of Ammon, Moab, and Mt. Seir were annihilated by internal strife, after Jehoshaphat exhorted Judah to trust God for deliverance from the threatened invasion (vv. 1-30).

Amos was a shepherd and also a dresser of sycamore trees at Tekoa (Am. 1:1; 7:14) when the Lord called him and commissioned him to be a prophet to Israel. The area about Teqû' is well suited for such pastoral and agricultural pursuits.

In the closing days of the Judean kingdom Jeremiah made an alarming prediction of an imminent Babylonian conquest of the land and told the people to "Blow the trumpet in Tekoa" (Jer. 6:1) as a warning to its inhabitants.

After the Babylonian Captivity, Tekoites helped to rebuild the wall of Jerusalem, but their nobles did not take part (Neh. 3:5, 27; cf. *GTTOT*, § 1050).

In Maccabean times, when Jonathan and his brother Simon sought to escape the murderous intentions of Bacchides, "they fled into the wilderness of Tekoa and camped by the water of the pool of Asphar" (1 Macc. 9:31-33).

Josephus recorded that Titus sent him to Tekoa with a thousand horsemen to see if the village was suitable for a camp (*Vita* 75 [420f.]). He also related that Simon of Gerasa established his headquarters at "Thekoue" (i.e., Tekoa) when trying to make the Idumean garrison at Herodium surrender; further intrigue resulted in a general flight of the Idumeans assembled at Alurus (Halhul [Josh. 15:58], 11 km. [7 mi.] SW of Tekoa; *BJ* iv.9.5f. [518-528]).

Eusebius stated that "Thecua" was 12 Roman mi. from Aelia (Jerusalem) and near a wilderness of the same name. In his comments on Jer. 6:1, Jerome noted that the Tekoa of his day was situated on a mountain some 12 Roman mi. from Jerusalem and within view of Bethlehem. In A.D. 508 discontented monks from Mar Saba founded a monastery, the New Laura, in the wadi S of Tekoa. During the Crusades Tekoa became a benefice of the Holy Sepulchre, but in 1138 a band of Turks raided and largely destroyed it. A tradition locates the tomb of Amos here, and references to it are preserved from as late as the 14th century.

The Teqû' site shows surface remains of cut-stone buildings, apparently of medieval date. An octagonal limestone font, 1.1 m. (3.8 ft.) deep and 1.2 m. (4.0 ft.) wide, marks the presence of an ancient church. Many cisterns, grain-storage pits, and rock tombs of earlier date also exist in the vicinity.

With an elevation of about 850 m. (2800 ft.), Teqû' is higher than Bethlehem, Jerusalem, or Herodium. Visible from the site are Bethlehem, the Mt. of Olives, and Nebi Samwil; the Jordan Valley and Transjordan to the northeast can be seen, but rising ground obstructs most of the eastern view.

C. E. DEVRIES

TEL-ABIB tel ā'-bib, tel'ə-vēv [Heb. *tēl'āḇîḇ*]. An unidentified place in Mesopotamia by the CHEBAR canal between ancient Babylon and Erech, near ancient Nippur. Here Ezekiel made his first contact with the Jewish exiles in 597 B.C. (Ezk. 3:15). Though the name in Hebrew is quite intelligible, meaning "hill of ears" (cf. modern Tel Aviv), it should be read here as an adaptation of Akk. *Til-abūbi* (lit. "mound of the flood"), signifying the ruins of an ancient city long abandoned as the result of a flood (?) or a devastating war. Allocated by the Babylonian government, it became a Jewish settlement.

Bibliography.–*GTTOT*, § 1409; M. A. Beek, *Atlas of Mesopotamia* (1962), pp. 64, 347; W. Zimmerli, *Ezekiel 1* (Eng. tr., *Hermeneia*, 1979), pp. 94, 139.

J. P. J. OLIVIER

TELAH tē'lə [Heb. *telaḥ*–'fissure' (?)] (1 Ch. 7:25). An Ephraimite; an ancestor of Joshua the son of Nun (cf. v. 27).

TELAIM tə-lā'əm [Heb. *baṭṭᵉlā'îm*–'with the lambs' (?); Gk. *en Galgalois*–'in Galgal'] (1 S. 15:4). A city in southern Judah, close to the land of the Amalekites. Here Saul numbered the people before starting on the campaign against the Amalekites.

It is possibly identical to the place TELEM (Josh. 15:24), although the two Hebrew roots seem unrelated. The LXX and Josephus (*Ant.* vi.7.2 [134]) for an unexplainable reason, read Gilgal (Gk. *Gálgala*) instead of Telaim, but no other Gilgal mentioned elsewhere in biblical texts would have been a suitable starting point for Saul's advance against Amalek.

In 1 S. 27:8, *BH* suggested emending *mē'ôlām*, "from of old" (so RSV), to *miṭṭêlām*, "from Telem" (NEB "from Telaim"), on the basis of some twelve LXX MSS. But these MSS are inferior, and they read Gk. *Telapsour* for the better attested *Gelampsour*, which appears to render Heb. *šûrâ*, "to Shur."

The location of Telaim is not precisely established. Abel suggested Khirbet Umm eṣ-Ṣalefeh, SW of Kurnub (*GP*, II, 478). Another suggestion, eth-Thilma NW of Kurnub, is unlikely, according to Simons (*GTTOT*, §317 [11], §682).

W. S. L. S.

TEL-ASSAR tə-las'sar [Heb. *tela'śśār* (2 K. 19:12), *telaśśār*–'mound of Assur' (Isa. 37:12); AV also

THELASAR (2 K. 19:12). A ruined Aramean city in northern Syria. The name probably refers to the capital Til-Barsip (now Tell el-Aḥmar) or to a major city of the Aramean kingdom known in Assyrian sources as Bit-adini (cf. Am. 1:5). It was situated on the banks of the middle Euphrates at its great western bend. Ostensibly it offered severe resistance to Assyria's imperial expansion westward, but was subjugated and destroyed, thus serving as an example to Hezekiah under similar circumstances.

The suggestions of identifying Tel-assar with Til-Bašir (de Vaux) or with Til-Aššuri in Media (Astour) remain highly questionable (see Malamat) on account of (a) the common form of the name, and (b) its relation to Guzan, Harran, Rezeph, Arpad, and Hamath, all important cities on the major trade route between Assyria and the Mediterranean Sea. No definite identification is possible, but one may assume a location about 90 km. (56 mi.) E of Aleppo.

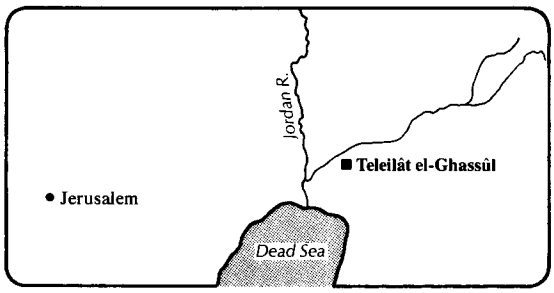
J. P. J. OLIVIER

TELEILÂT EL-GHASSÛL.–A series of low mounds (Arab. *teleilat*) located from 100 to 700 m. (330 to 2300 ft.) S of the Amman highway at a point 6 km. (3.75 mi.) E of the Jordan River bridge, 2 km. (1.5 mi.) NE of the Dead Sea. The Ghassulian culture at the site dates to the Middle Chalcolithic period (late 5th–early 4th millennium B.C.).



The site was excavated for the Pontifical Biblical Institute by A. Mallon and R. Koeppel for seven seasons between 1929 and 1938, and by R. North in 1960. It was most recently (1967, 1975) worked by B. Hennessey for the British School of Archaeology and the University of Sydney, Australia.

No evidence of a protective wall surrounding Ghassûl has yet been found. Buildings were of stone and mudbrick construction. The pottery proved to be distinctive, being handmade with considerable skill, thin, well-fired, and variously painted, incised, molded, and impressed. Large quantities of stone artifacts have been found, many with ground and polished working edges. Projectile points were rare. Utensils and ornaments of bone and shell are indicative of a rich industry.

Thus far unique to Ghassûl in this period are a number of wall paintings, the best-known example being the eight-pointed Star of Ghassûl. Executed in combinations of red, brown, yellow, black, and white mineral paints on both mud- and lime-plastered walls, the designs are both geometric and naturalistic.

The society was pastoral and horticultural. Information from cist graves indicates that the Ghassulians were tall and robust.

There is no truly Ghassulian site outside Palestine-Transjordan (R. North), although the period is roughly contemporaneous with the earliest Amratian (S. D. 30) of Egypt and with the late Halafian or early Obeidian of northern Mesopotamia (see *AP*). The Ghassulian of Palestine is represented at sites throughout the country, including Gezer, Lachish, Meggido, Hedera in the Sharon plain, Soquet (es-Saqati), 15 km. (10 mi.) NE of Beersheba, and probably at Tell es-Sulṭân (OT Jericho) and Beth-shean, although at the last two sites there are problems of pottery chronology. (For a brief discussion of other comparable sites within Palestine, see North, esp. pp. 39-70.)

Bibliography.–*AP*, pp. 45, 64, 65ff.; *EAEHL*, IV, *s.v.* "Tuleilat el-Ghassul" (J. R. Lee); B. Hennessey, *Levant*, 1 (1969), 1-24; R. North, *Ghassul 1960 Excavation Report* (*Analecta Biblica*, 1961).

S. G. DECLAISSÉ-WALFORD

TELEM tē'ləm [Heb. *ṭelem*; Gk. Apoc. B *Tolbanēs*]; AV Apoc., NEB Apoc., TOLBANES. A Levite; one of the gatekeepers who gave up his foreign wife in the time of Ezra (Ezr. 10:24; 1 Esd. 9:25).

TELEM tē'ləm [Heb. *ṭelem*]. A city in the inheritance of Judah, near the border with Edom (Josh. 15:24). Telem is usually taken as an alternate form of TELAIM. The roots of the two words are not identical, however.

TEL-HARSHA tel här'shə [Heb. *tēl ḥaršā'*; Gk. Apoc. B *Thelersas*, A *Thelsas*]; AV Apoc. THELERSAS (1 Esd. 5:36); NEB Apoc. THELSAS. An unidentified place in Mesopotamia, probably not far from ancient Nippur (Ezr. 2:59; Neh. 7:61; cf. 1 Esd. 5:36). Harsha is Aramaic for "forest," hence, "hill of woods/forest." The name may be an approximation of an ancient city, the ruins (*tell*) of which became the location of the exiles. According to the texts it was a settlement for exiled Jews who lacked proof of ancestry.

Bibliography.–*GTTOT*, § 1705; K. Galling, *Studien zur Geschichte Israels im Persischen Zeitalter* (1964), pp. 98f.; J. M. Meyers, *Ezra. Nehemiah* (*AB*, 1965), pp. 19f.

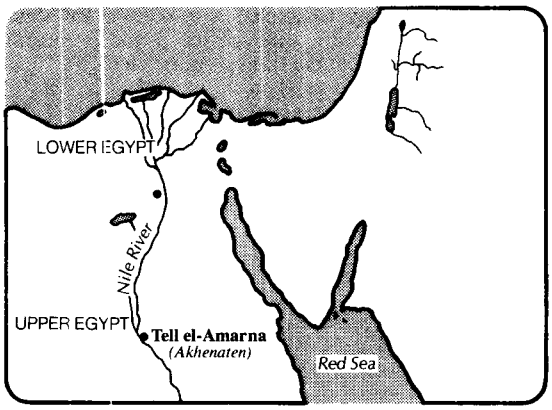
J. P. J. OLIVIER

TELL tel [Arab. *tall*, *tallat*; pl. *tilâl*, *'atlâl*, *tulul*–'hill, elevation']. In biblical or archeological usage, a mound that has resulted from successive layers of human occupation. The common Arabic word does not have this specific meaning. The Hebrew equivalent is *tel(l)* (cf. Josh. 8:28; 11:13; etc.), the Turkish is *tepe*. *See* ARCHEOLOGY V; MOUND.

TELL. *See* TALE.

TELL EL-AMARNA ə-mär'nə. The modern name of the site of ancient Akhetaten ("place of the effective glory of the sun-god"), located about 320 km. (200 mi.) S of modern Cairo. It should be noted that the name "Tell el-Amarna" is incorrect, for the site is not a *tell*. The name was transferred in part from the local village names of et-Till and Beni 'Amrân. El-Amarna is the name now preferred for the location.

Pharaoh Amenhotep IV (*ca.* 1369-1353 B.C.), whose name means "the god Amon is satisfied," embraced a nascent form of monotheism centering in sun-worship and changed his name to Akhenaten, perhaps meaning "it is well with the sun-god." He then built a new Egyptian capital, called Akhetaten, almost 480 km. (300 mi.) N of THEBES, the older pharaonic capital and center of Amon worship. Soon after Akhenaten died, his son-in-law Tutankhaten revived the worship of Amon, changed his



name to Tutankhamen, and moved the capital back to Thebes.

Nevertheless the "Amarna Revolution," with all its aesthetic, intellectual, and religious implications, made a lasting impact on subsequent Egyptian history. Biblical studies have been enriched immeasurably by discoveries beginning in 1887 of a large cache of cuneiform letters known as the AMARNA TABLETS.

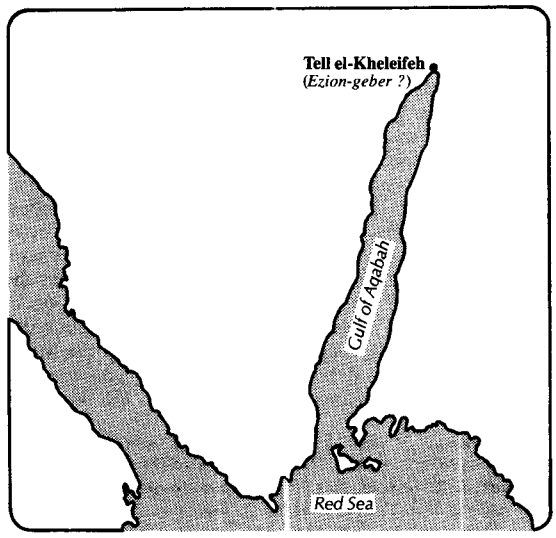
TELL EL-KHELEIFEH kə-lā'fə.

I. Location and Early Exploration of the Site
II. Reappraisal of Glueck's Conclusions
III. Earliest Phase: Casemate Fortress
IV. Last Major Phase of Occupation: Fortified Settlement
V. Dating the Fortified Settlement
VI. Later Occupation
VII. Problem of Identification

TELL EL-KHELEIFEH



I. Location and Early Exploration of the Site.—The Jordanian site of Tell el-Kheleifeh is located approximately 500 m. (550 yds.) from the northern shore of the Gulf of Aqabah, roughly equidistant between the modern cities of Eilat and Aqabah. Tell el-Kheleifeh was first surveyed in 1933 by the German explorer F. Frank (*ZDPV*, 57 [1934], 243-45), who identified the site with biblical EZION-GEBER (Nu. 33:35f.; Dt. 2:8; 1 K. 9:26-28; 22:47f.; 2 Ch. 8:17f.). In 1937 N. Glueck conducted a surface survey of this low mud-brick mound and concluded that the site had been occupied between the 10th and 8th cents. B.C. Glueck directed three seasons of excavation there (1938-1940), discerning six major periods of occupation with three subphases (*BASOR*, 71 [Oct. 1938], 3-17; 72 [Dec. 1938],

The western perimeter of the casemate fortress, the earliest occupational phase at Tell el-Kheleifeh (ASOR Archive: Harvard Semitic Museum)

2-13; 75 [Oct. 1939], 8-22; 79 [Oct. 1940], 2-18; *BA*, 28 [1965], 70-87). The occupational horizons were dated between the Iron I and Persian periods. He accepted Frank's identification with Ezion-geber, and, although his field records and later publications reflect some uncertainty, the identification of Tell el-Kheleifeh as Ezion-geber remained the underlying premise for the interpretation of the site's occupational history.

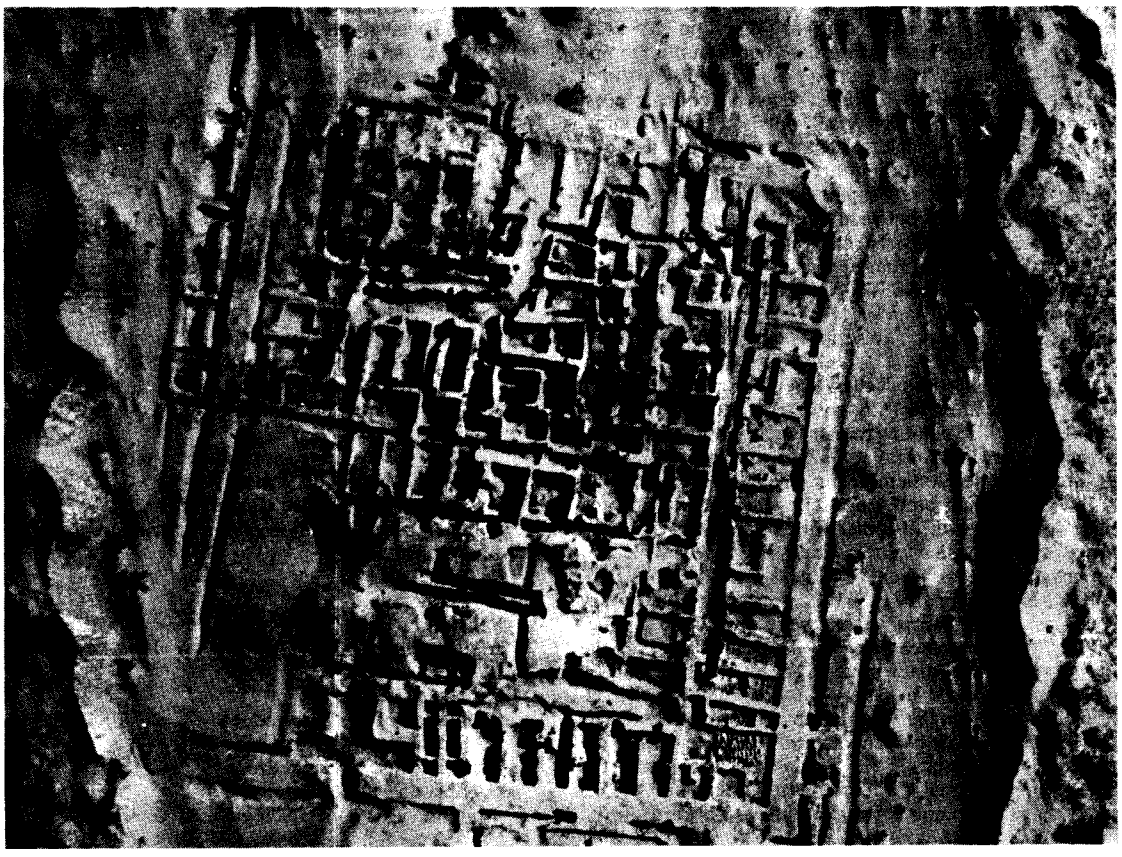
II. Reappraisal of Glueck's Conclusions.–Although Glueck's writings on Tell el-Kheleifeh are numerous (E. K. Vogel, "Bibliography of Nelson Glueck," in J. A. Sanders, ed., *Near Eastern Archaeology in the Twentieth Century: Essays in Honor of Nelson Glueck* [1970], pp. 382-394; *HUCA*, 42 [1971], 85f.; 52 [1981], 49f.), the site's stratigraphy, architecture, pottery, and other artifact data were never published in a technical report. A thorough reappraisal of Glueck's excavations has been completed under the auspices of the American Schools of Oriental Research (G. Pratico, *BASOR*, 259 [Summer 1985], 1-32). This reappraisal has confirmed some of Glueck's conclusions but has also suggested the need for some major revisions and refinements.

III. Earliest Phase: Casemate Fortress.–Tell el-Kheleifeh was occupied in two major architectural phases: casemate fortress and fortified settlement. The casemate fortress was the earliest level. It consisted of two elements: a square of casemate rooms, creating a small fortress of approximately 45 m. (150 ft.) on each side and a large building that was constructed in the middle of the casemate square. This mud-brick building, measuring approximately 12.5 m. (40 ft.) on each side, was constructed on the so-called four-room house plan (Y. Shiloh, *IEJ*, 20 [1970], 180-190; 28 [1978], 36-51). The space between these two architectural elements was devoid of building and served as an open courtyard. The date of the casemate fortress cannot be determined. It appears that the only pottery that was saved from this building was a tradition of handmade wares, now known as "Negevite" pottery, that dates throughout the Iron Age (1200-586 B.C.) with no typological refinement (N. Glueck, *Perspective*, 12 [1971], 45-56; cf. also R. Cohen, *BA*, 44 [1981], 93-104). "Negevite" pottery cannot be used as a chronological indicator.

Do studies in comparative architecture help in the dating of the casemate fortress phase? The plan of this earliest level at Tell el-Kheleifeh is reminiscent of an architectural tradition that is well attested from the central Negeb southward to the site of Kadesh-barnea (Tell el-Qudeirat). Israeli archeologists, including R. Cohen, Z. Meshel, and the late Y. Aharoni, have surveyed and in some instances excavated an extensive network of fortresses in this general region with a concentration in the central Negeb highlands (Y. Aharoni, *IEJ*, 17 [1967], 1-12; R. Cohen, *BASOR*, 236 [Fall 1979], 61-79; *BA*, 44 [1981], 93-104; *'Atiqot* [Eng. series], 11 [1976], 34-50; Z. Meshel, *Tel Aviv*, 4 [1977], 110-135). These fortresses usually feature a casemate fortification that encloses an open courtyard, often with nearby dwellings constructed on the "four-room house" plan.

The basic architectural components, therefore, are

An aerial view of the Tell el-Kheleifeh excavations at the end of the 1940 season (ASOR Archive: Harvard Semitic Museum)



those of Tell el-Kheleifeh's earliest settlement plan with a few variations in detail. These central Negeb fortresses, for the most part, are dated to the 11th or 10th cent. B.C. Herein is a major difference between these fortresses and Tell el-Kheleifeh's casemate fortress level. The earliest pottery at Tell el-Kheleifeh dates only to the 8th cent. B.C. with a few forms that could be dated as early as the 9th cent. B.C. The architectural parallels between the earliest level at Tell el-Kheleifeh and the Negeb fortresses must remain, therefore, a conclusion of comparative architecture and not of chronology.

IV. Last Major Phase of Occupation: Fortified Settlement.–After the destruction of the casemate fortress, the plan of Tell el-Kheleifeh was radically changed. The fortress was replaced by a significantly larger settlement with an offsets/insets wall and a four-chambered gateway. This solid wall was built along an entirely different line from the earlier casemate wall, although the new settlement plan incorporated a large portion of the earlier casemate fortress. The "four-room" building now stood in the northwest corner of the new plan, and sections of the old casemate wall continued in use, though much of this earlier fortification perimeter was abandoned. Unlike the casemate fortress, the solid wall plan appears not to have had large open courtyards. Spaces within the offsets/insets wall were now filled with buildings, thereby creating a true settlement. This solid wall fortress represents the last major architectural level at the site.

V. Dating the Fortified Settlement.–The date of this phase can be established with reasonable certainty from the wheel-made pottery and also from several very important seal impressions (N. Glueck, *BASOR*, 188 [Dec. 1967], 8-38; *Eretz Israel*, 9 [1969], 51-59; "Tell el-Kheleifeh Inscriptions," in H. Goedicke, ed., *Near Eastern Studies in Honor of William Foxwell Albright* [1971], pp. 225-242). Clearly, the wheel-made forms date between the 8th and early 6th cent. B.C. The vessel types are all diagnostic of the late Iron Age: the so-called Edomite cooking pots; inverted-rim kraters; "Assyrian" bowls, carinated cups, bottles and censers; juglets, decanters, saucers, and others. On the basis of the pottery, it is clear that Tell el-Kheleifeh's fortified settlement dominated the region of the southern Arabah between the 8th and early 6th cent. B.C. This chronology is also suggested by nearly two dozen stamp impressions that appear on the handles of certain wheel-made vessels. The small oval stamps read "belonging to Qaus'anal, servant of the king" (*lqws'nl 'bd hmlk*; *see* picture in EDOM). The script is datable to the late 7th or early 6th cent. B.C.

VI. Later Occupation.–Tell el-Kheleifeh shows evidence of occupation after the 6th cent. B.C., though it is very fragmentary. The building remains are scanty at best, consisting of a few mud-brick walls that were constructed on top of the fortified settlement but on a different alignment. A few Phoenician and Aramaic ostraca of the 5th and early 4th cents. B.C., together with a handful of fifth-century Greek body sherds, constitute the most reliable dating criteria for this level (N. Glueck, *BASOR*, 80 [Dec. 1940], 3-10; 82 [Apr. 1941], 3-11). Some sixth-fifth century bowls, jars, and storage vessels were also found.

VII. Problem of Identification.–The chronology of the site's extant wheel-made pottery, 8th-early 6th cent. B.C., raises an important question. Do the ruins of Tell el-Kheleifeh preserve the story of biblical Ezion-geber? The site provides no clear archeological evidence, either ceramic or architectural, for its identification with the Ezion-geber of Israel's wilderness traditions (Nu. 33:35f.) or even of Solomon's reign in the 10th cent. (1 K. 9:26-28); indeed, the site provides only questionable evidence for the 9th cent. (1 K. 22:47f.).

The identification of Tell el-Kheleifeh is both an archeological and a historical problem. One may argue the identification from the perspectives of possibility or probability, but the problem of verification precludes examination of the site in the context of biblical Ezion-geber or Elath. The biblical notices pertaining to these two sites are of special importance, however, for providing a rough chronological framework relative to Judean or Edomite control or influence over the region.

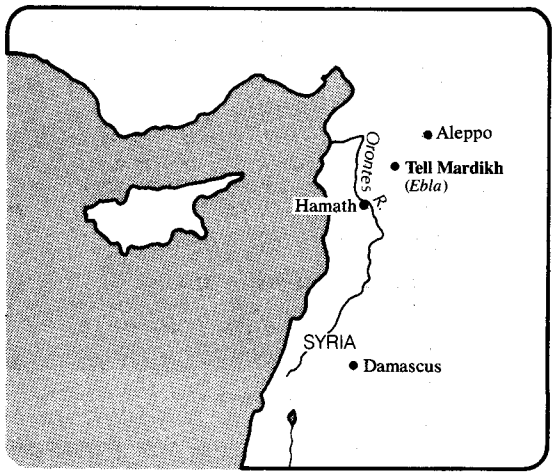
I. The Discoveries.–A. Location and General Descrip-

tion. Tell Mardikh is 3 km. (2 mi.) SE of the village of Mardikh, 70 km. (43.5 mi.) S of Aleppo, just E of the Damascus-Aleppo highway. The mound is trapezoidal in shape, about 1100 by 700 m. (3600 by 2300 ft.), covering an area of 56 ha. (140 acres), rising about 15 m. (50 ft.) from the surrounding plain; thus it is one of the largest mounds in northern Syria and, indeed, in the Middle East. By way of comparison, Hazor, long considered to be one of the largest tells, covers 71 ha. (175 acres), including the large northern portion (the city tell is only 10 ha., 25 acres), and Megiddo, which rises to a height of 21 m. (70 ft.) has a surface area at the top of only 5.25 ha. (13 acres). The "Old City" of Jerusalem (the part within the modern walls) is roughly the size of Tell Mardikh, being approximately 1100 by 800 m. (3600 by 2625 ft.), but because Jerusalem is more nearly rectangular, it comprises a larger area.



The name but not the location of Ebla (or Ibla) had long been known to scholars, since it is found in Old Akkadian texts. It was one of the two or three main centers on the route from Mari to the Mediterranean. It had been conquered by SARGON the Great (see Barton, p. 109) and by Naram-Sin (*ca.* 2250 B.C.; Barton, p. 139 ["Amarnu" should read "Armanu," see the Sumerian text on p. 138]). Gudea of Lagash imported wood "from the city Ursu on the mountain of Ibla" (Barton, p. 185) — a statement that appeared to suggest a location for Ibla on the Upper Euphrates, N of Carchemish. A governor had been appointed in Ebla during the Ur III Dynasty (*ca.* 2060-1950 B.C.); Ebla is mentioned in Alalakh texts from Level VII (*ca.* 1760-1650 B.C.), and again from Level IV, as well as in texts from Boghazköy and Cappadocia. The last reference to Ebla is in a list from Karnak in the days of Thutmose III (1490-1436 B.C.). Even a map showing Ibla, written on a clay tablet, was found at Nuzi (cf. N. Freedman, *BA,* 40 [1977], 32-34).

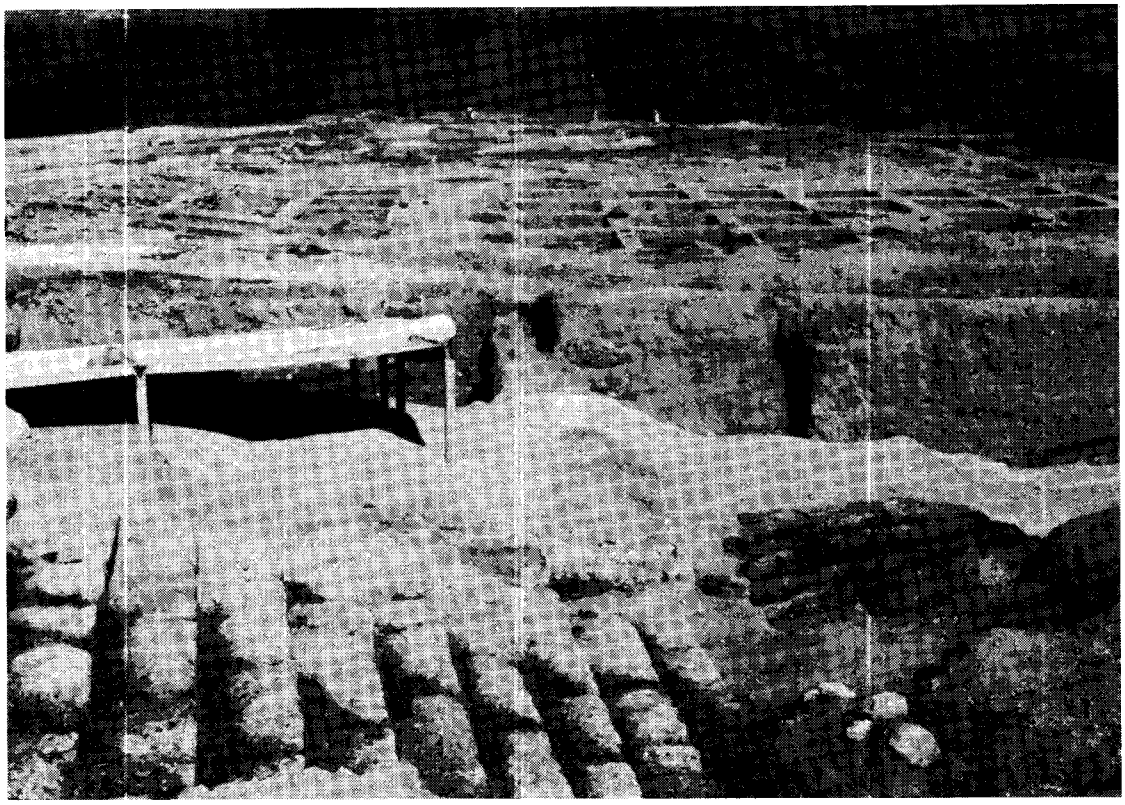
B. Discovery and Excavation. 1. Discovery and Identification. Because of its size, the tell was long considered to be desirable for exploration. Excavations were begun in 1964 by the Italian Archeological Mission in Syria of the University of Rome, with the cooperation of the Director General of Antiquities at Damascus. The chief archeologist was Prof. Dr. Paolo Matthiae, and the chief epigrapher Prof. Dr. Giovanni Pettinato. Excavations during the first ten years uncovered remains of a kingdom in the period of the Amorite dynasties (Middle Bronze I-II, *ca.* 2000-1600 B.C.). Identification of the site as Ebla was proposed when a torso of a male, carved in basalt, was discovered in 1968 with a twenty-six-line Assyrian inscription, of which lines 18-26 are incomplete. It had been dedicated by "Ibbit-Lim, son of Igrish-khepa, king of the Eblaite dynasty" (*šàr me-ki-im éb-lá-i-im*). Ebla was the only city mentioned, and it was mentioned twice. This identification was strongly challenged (cf. M. C. Astour, *Ugarit Forschungen,* 3 [1971], 9-19), but later discoveries supported it.

Naram-Sin mentions Armanum (sometimes identified with Aleppo; cf. *CAH,* I/2 [3rd ed. 1971], 442) and Ibla in connection with a reference to the Amanus, Mountain of Cedars, and the Upper Sea, "from the bank of the Euphrates as far as Ulisum" (cf. *CAH,* I/2, 325). Previously, scholars were inclined to locate this route to the north, with Cappadocia as the objective (p. 326). But if Ulisum is identified with Ullaza of the Amarna letters (Am.Tab. 60:23; on the Mediterranean at about the latitude of Qatna), then his route passed close to or through what is now Tell Mardikh.

2. Excavations 1964-1973. Early discoveries included the great Temple D in the western part of the acropolis, two or three other temples in the Lower City, and the monumental City Gate A at the southwest corner of the tell. It was already obvious that the site was of unusual importance, especially since it lay in an area the early history of which was almost totally unknown.

Excavations in 1973 indicated that an earlier level underlay the M.B. I-II, and in 1974 there was evidence of a large city-state in the period of the Dynasty of Akkad (E.B. IVA, *ca.* 2350-2250 B.C.). Building G on the southwest slope of the acropolis, identified as a palace that had

Ruins of the palace at Tell Mardikh showing the room divisions (L. K. Smith)



The grand stairway to the audience hall in front of the palace at Tell Mardikh (L. K. Smith)

been destroyed by fire, fragments of pottery of Amuq I-J, and other evidence suggested that this was the place that had been conquered and destroyed by Naram-Sin of Akkad *ca.* 2250 B.C., according to an inscription that reads, "Naram-Sin the mighty, king of the four quarters [or earth], conqueror of Armanu and Ibla" (Barton, pp. 138f. [8]). The palace was very large, another indication that Ebla was a major city-state of the period. This article will focus on the E.B. IVA level, because of its relevance to biblical studies.

3. Excavations 1974-1977. Building G was soon identified, by size and architecture, as a Royal Palace, with an "Audience Court," a "Ceremonial Stairway," and of great importance, the "Royal Archives." The first three walls of the archives to be uncovered had been faced with shelving 0.80 m. (26 in.) deep, and 0.5 m. (20 in.) between shelves (the wood, of course, had been consumed, but marks that were left provided the needed evidence). The tablets found *in situ* were heaped in the arrangement that had been made on the shelves, horizontally, with the obverse of the tablets parallel to the walls, much as a modern card file would be kept.

4. Excavations 1978-1982. The imposing building of the Western Palace, or Palace Q, discovered in the Lower City West, and the royal necropolis of the last two centuries of the great city were excavated (cf. P. Matthiae, *BA*, 47 [1984], 18-32). According to Matthiae, the proximity of the tombs to the palace, the Sanctuary B2, and the Temple B1 suggest a cult "dedicated to illustrious royal ancestry, *rp'um* — well known from Ugaritic texts" (p. 19). The *rᵉpa'îm*, "shades, ghosts," are also mentioned in the OT (Isa. 14:9; 26:14); *see* REPHAIM.

The Western Palace was built in M.B. I (2000-1800 B.C.), a huge building 115 m. (380 ft.) N-S by 60-65 m. (200-215 ft.) E-W. The monumental style of buildings at Ebla, Qatna, and Carchemish of this period furnished the basic elements of architectural and urban unity from northern Syria to southern Palestine (p. 20), whereas the temples at Ebla and Alalakh (Stratum IV) provided a tradition that spread over northern Syria and northern Palestine. The style of construction of city gates and earthen ramparts also spread from northern Syria.

***II. Royal Archives.**–A. General Description.* In 1974 the first archives were discovered: forty-two tablets, mostly administrative. In 1975 two other archives were discovered, in one about one thousand tablets, mostly economic, and in the second about fifteen thousand tablets of various types. (It should be noted that "tablets" actually means *tablets or parts of tablets*; when the fragments are "joined" the total may be closer to 4000 or 5000 actual tablets; cf. Pettinato, *Catologo*, xvii.) The approximate date of the archives is E.B. IV, *ca.* 2400-2250 B.C.

The tablets were in various sizes and shapes. Some were round, 2 to 10 cm. (0.8 to 4 in.) in diameter (at Fâra and probably also at Tell Abu Ṣalabīḫ, such tablets were incantations; cf. Biggs, *Inscriptions*, p. 41); most were square, 15 cm. (6 in.) on a side; there were also rectangular tablets, 26 by 24 cm. (10.2 by 9.4 in.) to 36 by 33 cm. (14 by 13 in.). For the most part, the tablets were written on both sides, with scribed vertical columns divided into registers (or cases), each register containing from one to eight or more signs. The columns on the front (obverse, recto) were read from top to bottom, from left to right; the tablet was turned bottom to top, and the reverse (verso)

TELL MARDIKH

Palace walls, about 2 m. (6.5 ft.) thick (L. K. Smith)

was read in columns from right to left. In other words, the bottom of the last column of the obverse joined the top of the first column of the reverse.

B. Dating the Tablets. Of the various methods of dating ancient texts, the most significant are the archeological, the historical, and the epigraphic.

1. Archeological Evidence. The archeological site, the level, and other facts will largely determine the relative date of any texts found at that site. Pottery from Ebla is contemporary with Amuq I, which in turn is contemporary with the Dynasty of Akkad. Mesalim of Kish was contemporary with kings of Ebla. A bowl with an inscription containing the name of Khafre (Egyptian pharaoh, 5th Dynasty) and a fragment of a vase with the cartouche of Pepi I (6th Dynasty) were found in Royal Palace G. These data indicate that the tablets found in the Royal Archives come from the period *ca.* 2400-2250 (Pettinato's dates are about 100 years earlier).

2. Historical Evidence. Reference to Iblul-Il of Mari in an Eblaite text (see IV.A below) plus a votive inscription from Mari by a king of the same name in the period immediately before Sargon, confirms the evidence of the pottery (cf. *CAH,* I/2, 323). The last king of the Eblaite dynasty and the destruction of the Royal Palace of Ebla can be dated by Naram-Sin's claim that he conquered Ebla (see IV.A below). The dynasty consisted of five (six?) kings, hence the contents of the Royal Archives are to be fitted into the same time frame. Certain archeological data (described in the preceding paragraph) also furnish historical data.

3. Epigraphic Evidence. The kind of writing (epigraphy), compared with other writing (earlier, contemporary, or later) that comes from a similar site, furnishes evidence that assists in dating the writing. The cuneiform writing on the Ebla tablets is like that of Jemdet Nasr (*ca.* 2800-2700 B.C.), Tell Fâra (Shuruppak), and Tell Abu Ṣalabīḫ (Eresh? Kesh?) (*ca.* 2600 B.C.), somewhat different from that of Lagash (*ca.* 2450), and markedly different from that of later periods. The development of CUNEIFORM writing passed through stages: Phase 1, *pictographic* (the graphs are simplified pictures, e.g., Uruk IVa); Phase 2, *logographic* (each sign stood for a word); Phase 3, *syllabographic* (each sign stood for a syllable, e.g., Jemdet Nasr; *see* WRITING III). Thereafter the use of logograms decreased and writing was almost entirely in syllabograms. The system used at Ebla had many logograms, mixed with syllabic writing. It may be noted that Pettinato's earlier dates for Ebla are based on the epigraphic evidence.

THE PHASES OF TELL MARDIKH

Mardikh I *ca.* 3500-2900 B.C.	Protohistoric
Mardikh IIA *ca.* 2900-2400 E.B. I-III	Early Protosyrian
Mardikh IIB1 *ca.* 2450-2200 E.B. IVA	Mature Protosyrian
Mardikh IIB2 *ca.* 2250-2000 E.B. IVB	Late Protosyrian
Mardikh IIIA *ca.* 2000-1800 M.B. I	Archaic Old Syrian
Mardikh IIIB *ca.* 1800-1600 M.B. II	Mature Old Syrian
Mardikh IVA *ca.* 1600-1400 L.B. I	Early Middle Syrian
Mardikh IVB *ca.* 1400-1200 L.B. II	Recent Middle Syrian
Mardikh VA *ca.* 1200-900 Iron I	Neo-Syrian or
Mardikh VB *ca.* 900-720 Iron II	Aramean and
Mardikh VC *ca.* 720-535 Iron III	Neo-Hittite Age
Mardikh VIA *ca.* 535-325	Persian Age
Mardikh VIB *ca.* 325-60	Hellenistic Age
Mardikh VII *ca.* 3rd-7th cent.	Late Roman and Byzantine

(adapted from Matthiae, *Ebla,* p. 52)

C. Tablet Categories. The tablets fall into five categories.

1. Economic-Administrative Texts. These texts deal with rations for palace personnel, offerings for temples and deities, lists of tributes paid to Ebla, agriculture, viticulture, raising of cattle, the metallurgical industry, textiles, wood, and precious stones. Most of the texts so far published fall into this category. International trade documents are unusually large, in some cases consisting of sixty columns of fifty lines, or about three thousand lines on a single tablet.

2. Lexical Texts. There were numerous school exercises, lists of animals, fishes, birds, lists of geographical places, rolls of professions and personal names. They are similar to tablets found at Fâra and Tell Abu Ṣalabīḫ (about 19 km. [12 mi.] NW of Nippur), some, indeed, having been written by the same scribes. In fact, more than one hundred lexical texts that were already known from Fâra and Abu Ṣalabīḫ have been identified among the Ebla tablets (Biggs, *BA,* 77). Arrangement was in some instances acrographic, i.e., by the first character of each word (much as we use the first letter of a word to form an alphabetic arrangement). At Tell Abu Ṣalabīḫ, literary and lexical texts are unusually large, generally 21 to 23 cm. (8¼ to 9 in.) approximately square (one [AbS-T363] when complete measures about 40 by 40 cm. [16 by 16 in.]), and column widths are relatively constant (2.5 cm., 1 in.), normally made with a core of clay over which a surface layer of fine clay was spread; such tablets usually are written on one side only.

3. Historical and Juridical Texts. There were many royal ordinances and edicts, state letters, lists of cities subject to Ebla, international treaties, purchase-sale contracts, and possibly law codes. One treaty was made by Asshur and Ebla concerning a commercial center — its

identification with Kaneš in Cappadocia is an intriguing possibility. However, Ilushuma (*ca.* 1962-1942 B.C.), by his claim "The freedom of movement of the Akkadians and of their children I established" (*CAH*, I/2, 708; *Zeitschrift für Assyriologie*, 43 [1936], 114ff.), seems to have established the *kârum* (an Assyrian enclave similar to a free-trade center in a foreign country) of Kaneš (cf. *CAH*, I/2, 721-23).

4. Literary Texts. Of particular interest to biblical students are the mythological stories, hymns to deities, incantations, and collections of proverbs. One fact that emerged from the discoveries at Tell Abu Ṣalabīḫ is of importance for textual studies and critical theories: some of the traditional works of Sumerian literature are as much as eight hundred years older that the copies previously known. The most notable is the Kesh Temple Hymn, which, except for orthography, is virtually unchanged. R. D. Biggs suggested "that other traditional works of literature may also go back in essentially their present form to the last third of the third millennium B.C. at least" (*Inscriptions*, p. 31).

5. Syllabaries. Some texts were designed for learning Sumerian, e.g., grammatical texts with verb paradigms in Sumerian and Eblaite. Most important are thirty-two bilingual vocabularies (Sumerian and Eblaite), one document having eighteen duplicates and listing nearly a thousand translated words. It is reasonable to assume that a scribal tradition extended across Syria and Mesopotamia, developing the same system of writing, using many of the same texts, sometimes with the same arrangement of lines in a column (cf. Biggs, *Inscriptions*, pp. 24-26). (It is to be noted that the Eblaite nouns regularly end in *-um*. In an early report Pettinato stated that such endings were absent in Eblaite — at which I expressed some surprise, for case-endings with mimmation, found in Old Akkadian, continued in use at least through the Old Babylonian and Mari documents and were present without mimmation in Neo-Assyrian and Ugaritic; cf. W. S. LaSor, *Theology News and Notes*, 23 [Dec. 1976], 22.)

D. Scholarly Conflict. One of the most regrettable episodes in modern archeology developed in connection with Tell Mardikh. Because of a number of events — some political, some religious, and some resulting from a clash of personalities — the chief epigrapher, G. Pettinato, resigned (or was forced out), and was replaced by Prof. Alfonso Archi of the University of Rome. Archi's account was published in *Bibl.*, 60 (1979), 556-566, and Pettinato's reply in *BA*, 43 (1980), 203-216. Prof. D. N. Freedman abstracted Archi's article in *BA*, 43, 200-202, and Archi continued to give his side in *BA*, 44 (1981), 145-154 (which originally appeared in *Studi Eblaiti*, 2 [1980], 17-40). The International Committee for the Study of the Ebla Texts published "A Rejoinder to G. Pettinato" in *BA*, 44 (1981), 137, signed by each member of the Committee.

E. Editions and Publications. Pettinato almost immediately began the publication of the texts that had been allocated to him, under the title *Materiali epigrafici di Ebla:* vol. I, a catalog of the texts; vol. II, a selection of administrative texts; vol. III, monolingual lexical texts; vol. IV, bilingual lexical texts. Perhaps his work was done too rapidly; certainly he had not yet gained sufficient experience in reading Eblaite texts to avoid some embarrassing errors; almost certainly he allowed himself to be encouraged to make injudicious statements and claims (notably by M. Dahood and D. N. Freedman). But at least he did get the work out for other scholars to study.

The International Committee for the Study of the Ebla Texts included the following: Paolo Matthiae, Alfonso Archi, Giorgio Buccellati, Dietz O. Edzard, Pelio Fronzaroli, Paul Garelli, Horst Klengel, Jean-Robert Kupper, Fawzi Rashid, and Edmond Sollberger. (Pettinato was originally a member of this committee, but he resigned, following the dispute noted above.) The publications are in a series entitled *Archivi reali di Ebla, Testi.* At the time of this article, four or five volumes have appeared: vol. II, administrative texts of various content, ed. D. O. Edzard; vol. III, administrative texts of various contents, ed. A. Archi and M. G. Biga; vol. V, hymns, oaths, ed. Edzard (?); vol. VI, bilingual Sumerian-Eblaite lexical texts, ed. A. Archi and P. Fronzaroli; and vol. VIII, texts concerning textiles, ed. E. Sollberger. Texts are given in transliteration, but there is no translation. There are excellent photographs of the texts, for those who wish to work on them — a feature that should have been offered a decade ago — and also a glossary, lists of personal names, names of deities, place names, and cuneiform signs.

III. Language of Ebla. *–A. Use of Sumerian.* An early report stated that 80 percent of the tablets were in Sumerian and only 20 percent in Eblaite. This statement may be misleading to those not familiar with cuneiform texts of the region. For example, the Sumerian sign DINGIR, "god," may also be read AN, "heaven"; it was then borrowed by Akkadian for the word *ilu* (*ilu*), "god," and for the syllable *il* (*il* or il_3 — the accent marks and subscript numbers are used simply to differentiate homophones; there are at least five signs that can be read *il*), as well as other values. Frequently a scribe will use a Sumerian logogram (a sign representing a word) to represent an Eblaite or Akkadian word, much as we use "&" (Lat. *et*) for "and."

Sumerian is an agglutinative language. The basic meaning of a sign must be modified by morphs (syllabograms) placed before and after that sign; without these morphs it would convey little meaning in Sumerian (cf. Eng. *row* without context). Of the few texts that I have examined, none is written in the Sumerian *language*, although many are almost entirely in Sumerian signs. (L. Viganò states that some incantations are written completely in Sumerian, *BA*, 47 [1984], 9.)

Pettinato noticed that the signs when read as Sumerian often made no sense. For example, he found tablets with *gál balag* where Sum. *dub gar*, "tablet written," should be. But when he read these signs as syllabograms, they had the values *ik túb*, hence he concluded that they were clearly Northwest Semitic *iktub*, "he wrote." From numerous such observations, he concluded that this was a Semitic language, which he called "Eblaite" (elsewhere I have given my reasons for preferring "Eblean" for the language, and "Eblaite" for the people or products of Ebla).

There are other indications that the texts are not Sumerian. For example, KALAM^{tim} is composed of Sum. KALAM, "land," plus a phonetic complement *tim*, indicating that it is to be read in Eblaite as *mâtim*, "of/to the land." We also use phonetic complements in writing English: "3" (an Arabic character) in English is read "three," but "3rd" is read "third."

B. Eblaite. 1. Relationship to Northwest Semitic. Scholars disagree about where to put Eblaite in the Semitic family of languages. Pettinato thought it was "Proto-Canaanite," closely related to Ugaritic, Hebrew, and Phoenician. I. J. Gelb thought it was more closely related to Akkadian and South Arabic. The evidence is mixed, and possibly Eblaite is to be considered as *both* Northwest and East Semitic — or more likely, *neither*. It clearly has connections with both.

For example, the conjunction "and" in Akkadian is *û* (written *ù*), in Northwest Semitic *wa*; both occur in Eblaite. (The enclitic *-ma*, "and," also occurs in Eblaite as in Akkadian; it probably is found also in Hebrew; cf. C. H. Gordon, *et al.*, in *Eblaitica*, I, 29-41.) The preposition "in" in Akkadian is *in* or *ina*, in Ugaritic and Hebrew it is *ba*; both occur in Eblaite. The king Ibbi-Sipish is called EN or *malikum* and the queen is *maliktum* (i.e., Northwest Semitic), but the ruler of Mari is called LUGAL *šarrum*, the Akkadian word for "king." The word *iktub*, "he wrote," mentioned above, is Northwest Semitic; in Akkadian it would be *ispur*. But at the same time, the morphology of the word, with preformative *yi-* > *i-* for the perfect, agrees with Akkadian; in Hebrew the form would be *katab*. (However, there are many indications in the Hebrew Bible that a *yqtl*-preterite existed also in Hebrew.) The causative stem of the verb is shaphel (Pettinato suggests shiphil), agreeing with East Semitic; Northwest Semitic has hiphil/haphel. There is evidence of "state" in Eblaite: construct (often written the same as the absolute), and indeterminate (*status indeterminatus*), which has no case-ending (Archi calls this "absolute state," *Eblaitica*, I, 14). Divine names, geographical names, and names of months (not always) are found in the indeterminate state. Ugaritic and Hebrew do not have the indeterminate state; Akkadian does. Eblaite *en-ma* introduces direct discourse, similar to *umma* in Akkadian.

Because of the shibboleth/sibboleth story in the OT (Jgs. 12:6), the alternation of *š*/*ś* is well known (but not well understood). There are three original sibilants in Semitic languages (s_1, s_2, s_3), which undergo phonetic shifts in different ways: in Arabic, s_1 and s_3 fall together as *śîn* and s_2 is *šîn*, whereas in Hebrew $s_1 > šîn$, $s_2 > śîn$, and $s_3 > sāmeḳ$. The evidence indicates that Eblaite agrees with Arabic on this point, although the problem of identifying the sibilants with the signs used is not yet fully worked out.

2. Vocabulary of Ebla. The personal pronouns identified are: *an-na*, "I"; *an-ta*, "you" (masc. sing.); *an-ta-nu*, "you" (masc. pl.); *su-wa*, "he"; *si-a*, "she"; *su-nu*, "they" (masc. pl.), *su-wa-ti* (3rd masc. sing. gen./accusative), *su-wa-si* (3rd masc. sing. dative). Again we note a bifurcation: Akkadian uses *anâku* for "I," Hebrew uses *ʾānî* and also *ʾānōḵî*; Hebrew uses *hûʾ* and *hîʾ* for 3rd masc. sing. and 3rd fem. sing. respectively; Akkadian agrees with Eblaite in all 3rd person independent pronominal forms (cf. A. Archi, *Eblaitica*, I, 13; Archi transcribes the DA = *da/ta* syllabogram as *da*, but the cuneiform is ambivalent on this and many other values where the voiced and surd consonantal phonemes are concerned). The Eblaite verbal forms *i-ti*, "he has given," and NI-*ti* (perhaps *i-ti*), "I have given" (?) suggest that the verb was related to Heb. *ntn* rather than to Akk. *ndn* (the syllabograms *di* and *ti* are entirely different). In addition to Eblaite *mi-at* (Heb. *mēʾâ*), "100," and *rí-bab*, (Heb. *ribbô*) "10,000," Eblaite *ma-i-at*, "100,000" (otherwise unknown in Semitic; but cf. Akk. *maʾâdu*, "to be many") and *li-im* (Akk. *leʾmu*), "1000," are found (cf. Edzard, *Verwaltungstexte*, no. 20, I.3); all forms (in my opinion) are construct, though Archi takes them as indeterminate.

There are about twelve hundred words in the bilingual (Sumerian-Eblaite) lexical texts, popularly called "dictionaries." In some cases the Eblaite has given the meaning to a formerly untranslated Sumerian word; in some cases the meaning of both is still unclear; but in many cases the bilingual texts give us a clear meaning (if not always the pronunciation) of the Eblaite.

3. Ebla as a Scribal Center. Ebla was a center of scribal training, similar to (or even related to) schools at Fâra (Shuruppak), Tell Abu Ṣalabīḫ, and other locations in Mesopotamia. (The language at those locations was Sumerian.) The head of the school was called *ummia*, "expert"; the teacher was *dubzuzu*, "knower of tablet"; and the student was *dub sar*, "scribe." The schools had two kinds of documents: exercises, to teach signs, words, paradigms, etc.; and redactions, to copy and/or translate "classical" works.

IV. Political, Social, and Economic Structure of Ebla. *–A. Political.* In the 3rd millennium Ebla was ruled by a succession of five or six kings: Igrish-Khalam, Irkab-Damu, Ar-Ennum, Ebrum, Ibbi-Sipish, and possibly Dubukhu-Ada. Whether they reigned consecutively may be disputed: Pettinato established a pattern that suggested a reign of seven years, during which period there was something like a governing council, consisting of the king, the queen, preceding kings and their children, princes, elders, and ministers of internal affairs and ministers of foreign affairs.

The rise of this Eblaite dynasty antedated Sargon of Akkad. Enna-Dagan of Ebla, probably a military general, waged a campaign against Iblul-El, the sovereign of Mari, who fled to Ḫaššum where Enna-Dagan captured him; Enna-Dagan thereupon proclaimed himself king of Mari. This may have been the occasion for Sargon's march westward to liberate Mari, and possibly the basis for his claim to have conquered Ebla (cf. *CAH*, I/2, 322f.; many of the conjectures in this chapter of *CAH* are in need of correction in the light of the Ebla discoveries). Pettinato suggested that this caused the dethronement of Ar-Ennum of Ebla and the accession of Ebrum, who subsequently retook Mari and made one of his sons its king. (A date formula from Ebla reads: DIS mu *su-ra* lugal ma-ri^{ki}, "The year Shura [Šura-Damu, son of Ebrum] became king of Mari.")

Early reports of the appearance of Sargon's name in an Ebla tablet have been retracted; nevertheless it still seems highly probable that Ebla was conquered and the palace destroyed by Naram-Sin, who boasted that never since the creation of man had any king conquered Armanum and Ebla (*CAH*, I/2, 325).

B. Social. Ebla was composed of an Upper City (acropolis) and a Lower City, and was divided into eight administrative districts, four in the Upper City and four in the Lower. There were four city gates, named for the deities Rasap, Sipish, Baal, and Dagan. The acropolis was divided into four parts: "the house of the king," "the principal house," "the stable" (*gigir*^{ki}), and "the house of the people." The Lower City was divided into four quarters: "Chief Quarter," "Quarter 2," "Quarter 3," and "Quarter 4." The entire complex was known as *sa* X^{ki} *wa íb-lá*^{ki}, suggesting that only the Lower City may have been called "Ebla"; the value of the other sign (X) is at present not known.

The inhabitants of Ebla were divided into two categories, the "sons of Ebla" (*dumu-nita dumu-nita íb-lá*^{ki}) and the "strangers" (BAR.AN-BAR.AN; cf. Pettinato, *Testi amministrativi*, p. 67; Edzard, however, reads BAR.AN as "donkey"; cf. *Verwaltungstexte*, p. 120). Under the category of "strangers," Pettinato lists merchants, scribes, priests, mercenaries, prisoners, and slaves. From the economic tablets we know that Ebla was a commercial center, therefore there must have been many artisans of various skills — an inference also supported by the lists of professions and functions. Evidence from at least two lines (provisions, distribution of population) indicates that there were about 260,000 inhabitants in Ebla — doubtless

Syrian and Mesopotamian Rulers						
Lagash	**Kish**	**Uruk/Ur**	**Umma**	**Akkad**	**Mari**	**Ebla**
Eannatum			Enakalle			
Enannatum I						
		Enshakushanna				Igrish-Khalam
Entemena	Inbi-Ishtar		Ur-Lumma		Iku-Shamagan	
		Lugalkingeneshdudu	II			Irkab-Damu
Enannatum II					Iblul II	
						Ar-Ennum
Enentarzi	Puzur-Sin	Lugaltarsi	Akush			
					Enna-Dagan	
Lugalanda	Ur-Zababa		Lugalzaggesi			
				Sargon		Ebrum
Urukagina				Rimush		
				Maništusu	Shura-Damu	Ibbi-Sipish
				Naram-Sin		[Dubukhu-Ada]
				Šar-kali-šarri		

including the surrounding villages (the area of ten villages was 10 *iku* [57 sq. km., 22 sq. mi.]). Even without complete decipherment of the tablets, we are safe in assuming that the social structure was of two levels: the palace and its retinue, and the workers and farmers.

C. Economic. From the lists of professions, the receipts for goods received or sent out, word-lists of various materials, and the names of places with which Ebla was in contact, one may infer that Ebla was the center of a vast economic network. Stores of lapis lazuli, both worked and unworked, indicate trade with the region known today as Afghanistan. Quantities of gold, silver, tin, and copper indicate trade with Anatolia, Cyprus, and the upper Euphrates region. Many tablets deal with textiles, indicating that the textile industry for which Damascus was famous had its start in north Syria. Carpenters, metalworkers, farmers, shepherds, doctors ($A.ZU_x$), and judges ($DI.KU_5$) are listed among the professions. Ebla was also a center of viticulture. Perhaps most important were the scribes, and some scholars are inclined to believe that Ebla was the center of scribal training that extended to cities in southern Mesopotamia; others hold that the movement was in the opposite direction.

V. Religion.–A. Pantheon. The Ebla texts mention over five hundred deities. The four city gates, named for Rasap, Sipish, Baal, and Dagan, may indicate the importance of these four gods. A number of the deities are known from biblical and Ugaritic sources: Rasap (Resheph), Adad (Hadad), Malik (Molech), Il (El), Ashtar (Ishtar), Kamish (Chemosh, but note *Kᵉmîš* in Jer. 48:7 *Kethibh*; this may suggest that Carchemish was originally Qar-Kamish, "the city of Kamish"; cf. Pettinato, *Oriens Antiquus*, 15 [1976], 11-15). Dagan seems to have special significance. Sipish is Ugar. *špš*, Heb. *šemeš*, the sun-god. (Pettinato reasoned that the basic form in Hebrew must have been **šimš* rather than **šamš*, since the Hebrew is *šimšôn*, "Samson"; however, this analysis overlooks the fact that the earlier form **šamšôn* is supported by LXX and Vulg. *Samson*, the *a* > *i* shift in closed, unaccented syllables in Hebrew took place between the time of the translation of the Vulgate and that of the Masoretic vocalization.) Sumerian and Hurrian deities are also named. The vocabulary (TM.75.G.2000) provides correlation of Mesopotamian and Syrian names of deities. Temples of Dagan, Ashtar, Kamish, and Rasap are specifically named in Ebla.

B. Cult. Description of the cult at Ebla will probably not be available for some time. Early reports from one scholar working on such texts indicated that they are extremely difficult to read, much as Biggs reports concerning similar texts at Tell Abu Ṣalabīḫ (cf. *Inscriptions*, ch. 5). Certain months of the Ebla calendar (*itu nidba*$_x$ . . . , "month of the feast of . . .") are named for certain deities, the 2nd month for Aštapi, the 4th month for Ada (Addu/Hadad), the 9th month for Adamma, the 11th month for Ishtar, and the 12th month for Kamish. It follows that celebrations or rituals were observed in those months. Offerings of bread, drink, and animals are referred to, but the details are not yet clear. Various offices of priests and priestesses are mentioned, and two classes of prophets, the *muḫḫû* and *nabi'ûtum* — the latter word related to the biblical word *nabî'*, "prophet," but the morphology suggests an abstraction (prophethood?) — are named.

Calendar from Tell Mardikh	
1 itu be-li	of the Lord
2 itu nidba$_x$ ^{d}aš-ta-pi$_5$	of feast of Ashtapi
3 itu ì-t'um	of the tax
4 itu nidba$_x$ ^{d}'à-ba	of feast of Ada
5 itu *er-me*	of the city
6 itu *hur-mu*	of the taboos
7 itu è	of the exit
8 itu kur$_6$	of provisions
9 itu ^{d}*a-dam-ma-um*	of [feast of] Adamma
10 itu se-gur$_{10}$-ku$_5$	of harvest
10(bis) itu se-gur$_{10}$-ku$_5$-mìn	of harvest (2nd)
11 itu ^{d}AMA-ra	of [feast of] Ishtar
12 itu nidba$_x$ ^{d}*kà-mi-iš*	of [feast of] Kamish

C. The Name Ya[h]. There has been much discussion about the name Yah (Yahweh) in the Ebla tablets. Alternate forms of names such as *Mi-kà-il/Mi-kà-yà*, *En-na-il/En-na-yà*, and *Is-ra-il/Is-ra-yà*, were at first taken as proof that *-il*, "god," and *-ya*, "Ya[h]," were intended. Other scholars objected, saying that *-ya* could be a hypo-

coristicon (a short form, a pet name, like Jackie, Bobby) or a gentilic (the name of a people, like *kᵉna'ᵃnî*, "Canaanite") — but would a personal name be a gentilic, especially if it occurs in a pair, like Enna'il/Ennayah, "god is gracious"? Perhaps a better suggestion is to read the sign NI (= *ni/ì-yà*) in such words as *-i* or *-ni*, "my/me" (Archi, *Eblaitica*, I, 11). It remains to be seen whether this will fit in each instance.

VI. Evaluation of the Discoveries.–*A. Relevance to History.* It was formerly held that the Semites entered Syria (including Palestine) in waves, at intervals of approximately one thousand years (cf. SYRIA IV.B.1). As late as 1971, it was believed that the Semites were the latest comers, who probably did not form any kind of ethnic or linguistic unit (J. Bottéro, *CAH*, I/2 [3rd ed. 1971], 565f.). This view must now be adjusted to the evidence from Ebla. There was a strong Semitic center in Syria, certainly by the middle of the 3rd millennium B.C., and because of its well-developed economic, political, and linguistic characteristics, we may safely assume that there had been a prior period — possibly as much as several centuries — during which that development took place (cf. A. Archi in *Eblaitica*, I, 7f.). According to Archi, the vast majority of the personal names are Semitic; there is not a single Hurrian name (p. 15). The theory that the original population of north Syria was Hurrian must therefore be abandoned. Archi's study of the system of weights found at Ebla suggests that there were several different systems, once again leading to the inference that Ebla's trade involved a number of areas each of which had its own standards of weights (cf. *Eblaitica*, I, 49-52).

The Lower City West at Tell Mardikh represents the second and last (based on our present knowledge about the site) stage of Ebla: the Old Syrian period. This period (the age of the Amorites) ended *ca.* 1600 B.C. The Old Hittite kings, Ḫattusilis I and Mursilis I, a half-century earlier, descended into Upper Syria, took Alalakh, Urshu (near Ebla, possibly to be identified with Tell Tuqan), Ebla (almost certainly), and Aleppo, and finally Mursilis I took Babylon, then ruled by the last king of Hammurabi's dynasty.

B. Relevance to Language. Eblaite stands between East Semitic (Akkadian) and Northwest Semitic (Canaanite, Ugaritic, Hebrew). Based on personal names, Eblaite could be identified as a form of Old Akkadian. Other elements — pronominal suffixes, prepositions, and the like — are also nearer to Akkadian. But on the basis of vocabulary, Ebla is clearly in the Northwest Semitic group. The use of *wa* as a tense-indicator ("waw conversive/consecutive") is attested at Ebla — again linking it to Northwest Semitic (C. H. Gordon in *Eblaitica*, I, 21f.); it should be noted, however, that *wa* does not have to be joined to, or stand immediately before, the verb.

Access to a Semitic language that is at least as old as Old Akkadian, centuries older than Ugaritic, and three millennia older than classical Arabic should certainly cause Semitists to discard some of their pet theories and work toward new ones — a process that will take many decades.

C. Ebla and the Bible. When the first announcements were made concerning the tablet-find at Tell Mardikh, claims were made that bordered on the fantastic. The names of OT persons were found (e.g., *ab-ra-mu* [Abram], *is-ra-ilu* [Israel], *e-sa-um* [Esau], *sa-u-lum* [Saul], *da-u-dum* [David]) — although the disclaimer was made that these were not the same persons as those named in the OT. The names of many OT cities and locations were found (e.g., Salim, Hazor, Lachish, Megiddo, Gaza, etc.). Perhaps most exciting was the announcement that the five Cities of the Plain (Gen. 13:12) were found in the same order in which they occur in the Bible: *si-da-mu* (Sodom), *è-ma-ra* (Gomorrah), *ad-ma* (Admah), *si-ba-i-um* (Zeboim), and *be-la* (Bela [Zoar]); cf. Gen. 14:2f. (M. Dahood wrote, "These same five cities appear in the same order in an Ebla tablet!" — *La Civiltà Cattolica*, 129 [1978], 338; cf. *BA*, 41 [1978], 149; Dahood later reported that the third and fourth names were not on the same tablet — a fact of which he had been uninformed; *BA*, 41 [1978], 143). There was a report of the story of a flood that lasted seven days, and of a creation story in which the order was heaven, earth, sun, and moon, as in Genesis. As mentioned above, several deities known from the OT are named, offerings of bread and drink are referred to, and various classes of priests and priestesses are named.

A cautious approach was advised, since the actual texts were not available (e.g., W. S. LaSor, in *Christianity Today* [Sept. 24, 1976], p. 49; *Theology News and Notes* [Dec. 1976], pp. 21f. [written Nov. 6, 1976]). Prof. Archi has been extremely critical of many of Pettinato's claims, and, indeed, Pettinato himself has retracted some of them (e.g., the identification of the "Cities of the Plain"). Even now caution is advised, since many texts have been published without translation, and many words in the vocabularies so far published have either questioned meanings or no meanings at all.

R. Biggs, an expert Sumerologist who has published texts from Tell Abu Ṣalabīḫ, stated, "In my opinion the Ebla tablets will have no *special* relevance for our understanding of the OT" (*BA*, 43 [1980], 85). That depends on the meaning attached to the word *special*. We already know that the history of north Syria has to be rewritten; that the relationship of Egypt, Ebla, Anatolia, and Mesopotamia is much more complex in the 3rd millennium than many scholars have been willing to admit; that Genesis as a whole fits better into the 3rd millennium than it does in the 1st (*pace* T. L. Thompson and J. van Seters). Ebrium of Ebla may not be the ancestor of Abram (Gen. 11:16), but that is not an argument against the historicity of Abraham. In Eblaite matters, as in all other pertinent studies, the person of faith will see relevance where others do not. The careful student will test all things and hold fast only to those that prove to be true.

We await the full publication of all significant texts: photographs, transcriptions (the cuneiform copied by hand by qualified scholars who know what they are reading), transliterations (the cuneiform symbols represented in a standard system of Roman letters), and translations. Seeking to defend his reading of the creation story, Pettinato has published photos of the relevant tablets, transliteration, and translation (*BA*, 43 [1980], 210f.). Those who disagree with his reading or translation must now furnish their own rendering(s). A similar procedure must be followed on all important points.

W. S. LASOR

TEL-MELAH tel mē'lə [Heb. *tēl melaḥ*–'mound of salt' (Ezr. 2:59; Neh. 7:61); Gk. Apoc. *Thermeleth* (1 Esd. 5:36)]; AV Apoc., NEB Apoc., THERMELETH. An unidentified place in Mesopotamia, probably not far from ancient NIPPUR; a settlement for exiled Jews who were without proof of ancestry. The Hebrew name probably signifies an area that had become infertile due to salinization, possibly as a result of the execution of a curse after a breach of treaty (cf. Jgs. 9:45). W. F. Albright (*JBL*, 51 [1932], 100f.) suggested that the name may be an adaptation of Akk. *malāḫu*, "hill of sailors." Some have proposed an identification of this site with Thelma (Ptolemy v. 20), but this would appear to be too far from Babylon for a location of Jewish exiles.

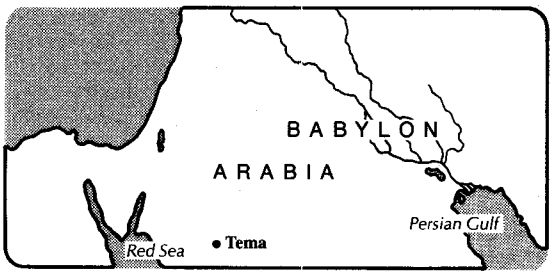
TEMA tē'mə [Heb. *têmā'*, *têmā'*]; NEB also TEMAN. Son of Ishmael, and a locality in Arabia named for a tribe descended from him (Gen. 25:15; 1 Ch. 1:30). Tema was one of the north Arabian regions against which Jeremiah prophesied (Jer. 25:23). Its desert setting is seen in Job 6:19, which alludes to caravans from Tema needing water, and in Isa. 21:14, which exhorts Tema's inhabitants to provide water and food for their fugitive countrymen — in an apparent reference to Tiglath-pileser III's invasion of Arabia in 738 B.C. According to Assyrian records, this invasion successfully defeated a coalition headed by Samsi queen of the Arabs, comprising Mas'a (the Massa of Gen. 25:14?), the city of Tema, and Haiappa (apparently the Ephah of 25:4). One of Sennacherib's gates at Nineveh was named "Gifts from Sumu'an and Tema Enter through It, the Desert Gate." In 522 B.C. Nabonidus, the final king of Babylon, conquered and destroyed Tema, slaughtering all its inhabitants. According to the "Haran Inscriptions," Nabonidus rebuilt and repopulated the city and established it as his royal residence for perhaps ten years, leaving his son Belshazzar as deputy ruler in Babylon. From Tema, Nabonidus established his control as far S as Yathrib (Medina). By the Persian period Tema had become a cosmopolitan town, as attested by the great variety of ethnic identities represented in the proper names of the "Teima Stele" (at the Louvre).

A detail of the Taylor Prism from Nineveh (691 B.C.) showing the beginning of the quote (continued on next column): "Gift of Samu'an and Tema. Enter through it, the Desert Gate" (courtesy of the Trustees of the British Museum)



Tema has been identified with modern Teimā, an oasis in the Jebel Shammar province of Nejd, in Saudi Arabia, about 400 km. (250 mi.) SE of Aqabah and 320 km. (200 mi.) NNE of Medina. This strategically located city guards the junction of two important ancient caravan routes: the Medina-Babylon route and the Arabia-Elath-Gaza/Egypt route (*see* ARABIA VII, VIII, and map).

TEMAH tē'mə [Heb. *temaḥ*; Gk. Apoc. *Thomoi*]; AV THAMAH, TAMAH, Apoc. THOMOI; NEB Apoc. THOMI. The family name of a group of temple servants who returned from the Exile with Zerubbabel (Ezr. 2:53; Neh. 7:55; 1 Esd. 5:32).

TEMAN tē'man [Heb. *têmān*]. The son of Eliphaz and descendant of Esau and Adah. Gen. 36 lists him as one of Eliphaz's sons (vv. 11f.; cf. 1 Ch. 1:36), as one of fourteen chiefs of Edom (v. 15), and as one of eleven chiefs of Edom (v. 42; 1 Ch. 1:53). He heads the first two lists (Gen. 36:11, 15), and one may assume that he was the eldest son and perhaps the most powerful chief. The third list places him eighth (36:42), according to "families and their dwelling places" (v. 40). The list of chiefs in Gen. 36:15-19 demonstrates a shift from the Edomites as a family to a politically structured group (Westermann, p. 564). Wellhausen connected the Judahite Temeni with Teman (1 Ch. 4:6); Bartlett argued that Teman was only a place name, never a personal or clan name.

TEMAN tē'mən [Heb. *têmān*]. A chief city and district of Edom (Ob. 9). In Hab. 3:3 God comes in judgment from Teman and from Mt. Paran; Teman here probably designates the mountainous country of the Edomites. In Ezekiel's prophecy against Edom, God threatens to stretch out His hand "from Teman even to Dedan" (Ezk. 25:13); since DEDAN seems to refer here to a north Arabian tribe living near the southern border of Edom (cf. Jer. 49:7f.), Teman was probably on or near the northern border of Edom. In *Onom.* 96.20, however, Eusebius mentions *Theman* as a town or Roman garrison, 24 km. (15 mi.) from Petra.

N. Glueck proposed the identification with Tawīlân, NE of Elji (*Other Side of the Jordan* [1940], pp. 25f.). F. M. Abel, however, declared this identification "inadmissible" (*GP*, II, 480). Other suggested sites are Ma'an, Tuwaneh, 'Odhroh, and Gharandal. Since Teman is used as a synonym for Edom (e.g., Jer. 49:20) and in parallel with the capital city of Bozrah (Am. 1:12), the possibility that it is another name for Edom's capital should not be ruled out.

The residents of Teman were renowned for their wisdom (Jer. 49:7; Ob. 8f.; cf. Job 2:11; 4:1; etc.; *see also* TEMANITE).

See N. Glueck, *AASOR*, 15 (1934), 82f. W. S. L. S.

TEMENI tem'ə-nī [Heb. *têmᵉnî*–'southerner'(?)]. A Judahite; son of Ashhur by his wife Naarah (1 Ch. 4:6).

TEMPER. In the RSV "temper" nevers refers to moderation (a proper mixture, the meaning related to "temperate") but is always used in expressions that have to do with ANGER. In Prov. 14:17 "quick temper" translates Heb. *qᵉṣar-'appayim*, "short of [in] anger," and in 14:29 "hasty temper" translates *qᵉṣar-rû(a)ḥ*, "short in spirit [mind]." A different expression occurs in 15:18, where "hot-tempered man" translates Heb. *'îš ḥēmâ*, "man of heat [anger]."

TEMPERANCE. For AV Acts 24:25; 1 Cor. 9:25; Gal. 5:23; Tit. 1:8; 2 Pet. 1:6, *see* SELF-CONTROL. For AV Tit. 2:3 (Gk. *sṓphrōn*) the RSV has "sensible."

TEMPERATE. *See* SOBER.

TEMPEST. *See* STORM.

TEMPLE. The thinnest part of the skull, located on each side of the forehead. Heb. *raqqâ* (lit. "thinness") occurs only at Jgs. 4:21f.; 5:26; Cant. 4:3; 6:7. Although the term's meaning is not certain, it probably denotes Sisera's temple, the most vulnerable spot in his skull, in Jgs. 4:21f.; 5:26 (but cf. NEB "skull," "brains"; see also R. G. Boling, *Judges* [*AB*, 1975], p. 98). On Cant. 4:3; 6:7 (RSV "cheeks"; AV "temples"; NEB "lips"), *see* CHEEK. The RSV also uses "temples" in Lev. 13:41 to render Heb. *pānîm* (lit. "face" [so AV]; NEB "scalp") and in 19:27 to render *rō'š* (lit. "head" [so AV]; NEB "side to side").

N. J. O.

TEMPLE [Heb. *hêḵāl*–'palace,' 'temple'; *bayiṯ*–'house'; Gk. *hierón*–'holy place'; *naós*–'temple']. The divine "house," where the deity is perceived as in some sense mysteriously present, and where his cultic worship is carried on.

In the OT, RSV "temple" most frequently renders Heb. *hêḵāl* (or its Aramaic cognate *hêḵal*), "temple," "palace," or *bayiṯ*, "house." When the former term is used of the temple, AV and NEB generally render "temple" as well, though NEB sometimes has "sanctuary" (1 K. 7:21; 2 Ch. 4:22; Neh. 6:10f., etc.) and once "house" (2 K. 23:4). It should be noted that the same Hebrew term is used for the largest compartment in the temple building, rendered "nave" by RSV (1 K. 6:3, 5, 17, etc.).

The Heb. *bayiṯ* basically means "house," and is sometimes so rendered by RSV, even when the reference is clearly to the temple (1 K. 6:1-3, etc.). This is especially true where *bayiṯ* is used in close proximity to *hêḵāl* (2 K. 24:13; Ps. 5:7 [MT 8]; 27:4; etc.). But whereas RSV frequently renders *bayiṯ* as "temple," NEB more often, and AV nearly always, read "house."

Once (Dnl. 11:31) RSV has "temple" for Heb. *miqdāš* (AV, NEB, "sanctuary"). Occasionally RSV supplies "temple" to aid the sense in a context where there is no Hebrew counterpart (2 K. 25:14 par. Jer. 52:18; 1 Ch. 9:33; 28:11 [?]; Ezk. 41:16).

In the NT, "temple" (RSV and AV) renders both *hierón* and *naós*, thus obscuring the fact that the NT writers generally preserve a distinction between the temple complex (*hierón*, Mk. 11:11; 14:49; Acts 3:1, etc.) and the temple building itself (*naós*, Mt. 23:35; 27:51; Lk. 1:9, 21f., etc.; but Mt. 27:5, in spite of *naós*, cannot refer to the temple building). The NEB usually uses "temple" for both terms as well, but does occasionally preserve a distinction: thus *hierón* is rendered "temple precincts" in Mt. 21:12; Jn. 10:23, and "temple court" in Mk. 11:16, 27; *naós* is rendered "sanctuary" in Mt. 23:16f., 21; Lk. 1:9, 22, etc., and "shrine" in 1 Cor. 6:19.

Our concern here is with the Jerusalem temple of Solomon and its successors in biblical times on the same site (*see also* TEMPLES). There is a theological justification (as well as one of convenience) for distinguishing the Jerusalem temple from all other sanctuaries. This is worked out most impressively in what (since Noth) is commonly called the "Deuteronomistic History," i.e., the great historical work which takes its starting-point in Deuteronomy and proceeds from Joshua through 2 Kings. Deuteronomy looks forward to the day when Yahweh will choose a place to "put his name and make his habitation there" (12:5), and makes it clear that that "place" will then be the only legitimate site for cultic worship (12:5-28). The site cannot, however, be marked out and sanctified until the Israelites have entered their "inheritance," and Yahweh has given them "rest" from all their enemies (12:8-11). Though 2 S. 7:1 seems to indicate that such a "rest" was achieved in the time of David, the "Deuteronomist" reserves its perfect fulfillment for Solomon's days: to Solomon Yahweh gave "rest on every side" (1 K. 5:3f. [MT 17f.]; 8:56). Hence it was first in the days of Solomon that the erection of what would henceforth be the sole legitimate sanctuary for Yahweh's cultic worship was possible (cf. 1 K. 3:2; 8:16).

I. Solomon's Temple.–*A. Sources.* Though incidental references to Solomon's temple are found elsewhere in the OT (particularly in the Psalms and in the works of the great Judean prophets), the main sources for its design are the accounts in Kings (esp. 1 K. 6; 7:13-51) and Chronicles (esp. 2 Ch. 3–4). Some scholars draw heavily on a third source — the prophetic vision of Ezk. 40–48 — rightly assuming that the vision must incorporate many features from the Solomonic temple with which the prophet was familiar. But though the general point must be conceded its application in detail remains hazardous. Hence in the account that follows attention will be drawn at various points to the relevant material in Ezekiel, but details from the latter will not be assumed without further ado to apply to Solomon's temple.

Our primary source for the physical features of the temple complex is thus the account contained within the framework of the so-called Deuteronomistic History (1 K. 6–7). Clearly the temple and its worship occupy a central position in the theology of this work. The detailed, generally unembellished, and obviously contemporaneous description of the temple construction has led a number of scholars to speak of "temple archives" as the ultimate source for much of the material. That very real difficulties remain for an understanding of the temple's design is due to (a) the incompleteness of the account; (b) the use of technical terms whose precise significance sometimes escapes us; (c) textual corruption in places; and (d) the reworking to which the basic source material has at various points been subjected.

One must not think of the parallel passages in Chronicles as a mere summary of, or even a supplement to, the account in Kings. Writing with the needs and interests of his own day in mind, the Chronicler has left his own stamp on the material by his selection and reshaping of the details to be presented. This reinterpretation of the temple and its worship is of great importance theologically, and some of the peculiar concerns of the Chronicler will be noted below. Naturally, however, where the accounts differ, the more contemporary account in Kings must be given precedence for the historical description of Solomon's temple; variants in Chronicles will be noted only parenthetically. A problem is raised at a number of places where the Chronicler includes details not found in the extant (Masoretic) text of Kings. In a few places it is possible that his text of Kings differed from ours. Elsewhere it is difficult to decide whether the Chronicler is following other sources not available to us or is writing independently, perhaps with a view to the tabernacle as described in Ex. 25–40, or to the second temple with which he was familiar. Details will be noted below.

Excavations along the southern wall of the temple mount, with the el-Aqsa Mosque in the background (L. K. Smith)

B. Location. It is clear that the site of today's "Dome of the Rock" on Jerusalem's eastern hill marks the location of Solomon's temple (as well as that of the later structures of Zerubbabel and Herod); but it is difficult to be more precise. Specifically, it is argued whether the huge rock (called the *Sakhra,* and measuring 17.7 by 13.4 m., 58 by 44 ft.) at the highest point of the sacred site was the location of the altar of burnt offering or that of the innermost sanctuary of the temple building (as is perhaps more likely, though questioned by A. S. Kaufman).

Justification for the building of a sanctuary on this site is provided by the account in 2 S. 24 in which an angel of Yahweh appears to David by the threshing floor of Araunah (1 Ch. 21: Ornan). David is commanded to build an altar, and he does so after purchasing the site from Araunah for fifty silver shekels (1 Ch. 21:25: 600 gold shekels). The legitimacy of the site is of special interest for the Chronicler, who notes that fire fell from heaven to ignite David's burnt offering, and David de-

clared, "Here shall be the house of the Lord God and here the altar of burnt offering for Israel" (1 Ch. 21:26; 22:1). By identifying the site further as Mt. Moriah (2 Ch. 3:1; the identification with the site of Solomon's temple may already be implicit in Gen. 22:2, 14), the Chronicler provides a link with another famous act of sacrifice in Israel's past (see Gen. 22).

C. Construction. David's part in the building of the temple, of which only an unfulfilled desire is mentioned in Samuel–Kings (2 S. 7:1-7; 1 K. 5:3 [MT 17]), is developed at great length in Chronicles (primarily in 1 Ch. 22; note also that Chronicles attributes to David the arranging of many details of the temple's cultic worship, 1 Ch. 23–26). Enormous quantities of materials are said to have been gathered already by David (cf. 1 Ch. 18:8). Solomon is given encouragement and instructions for the building of the temple (as are the Israelite leaders, 22:17-19), as well as a plan "in writing from the hand of the Lord" for all that is to be built (1 Ch. 28:11-19).

In 1 K. 5 we have a description of the diplomatic negotiations that preceded the building of the temple. A treaty was established between Solomon and Hiram king of Tyre by which the latter would supply the necessary timber — cedar (for paneling) and cypress (or pine, for the rough building) — cut from the forests of Lebanon by Hiram's skilled subjects and transported to the sea. There it was made into rafts and sent down the coast to a location of Solomon's choosing (2 Ch. 2:16 [MT 15]: to Joppa).

While the wood was supplied from Lebanon, white limestone was taken from the hills surrounding Jerusalem and prepared at the site of the quarries; this was in order that tools of iron would not be required at the temple site (1 K. 6:7). The bronze items with which the temple and its courtyard were furnished were cast in the lower Jordan Valley by a Phoenician named Hiram (whose mother, however, was Israelite).

A description of the work force is given in 1 K. 5:13-18 (MT 27-32); cf. also 1 K. 9:15-23. While Israelites provided the bulk of the laborers and the "chief officers who were over Solomon's work," they were assisted by the skilled workmen of Phoenicia ("Hiram's builders") and by "the men of Gebal" (Byblos). The various statements about forced labor in 1 K. 5 and 9 are perhaps to be interpreted as indicating that, while full Israelites were occasionally compelled to work on Solomon's projects for limited periods of time, they were not subject to permanent serfdom, as were the Canaanites.

The construction work at the temple was carried on over a period of seven years, from Solomon's 4th until his 11th regnal year. The statements that the work was completed in the 8th month (1 K. 6:38) and that the temple was dedicated in the 7th month (8:2) suggest either that the latter followed the completion of the work by eleven months, or perhaps that the temple was dedicated a month before the work (on the bronze furnishings?) was entirely complete.

D. Design. 1. Sanctuary. The temple building itself was rectangular in shape, the longer sides being those to the north and south. The shorter (eastern and western) sides were 20 cubits long (the measurements seem not to include the thickness of the walls). The temple had three compartments. These (proceeding from the east) were the vestibule (or porch, Heb. *'ûlām*), the nave (NEB "sanctuary," Heb. *hêḵāl*), and the inner sanctuary (or cella, also called the "most holy place"; AV "oracle," Heb. *dᵉḇîr*). Each compartment was 20 cubits wide (i.e., the full internal width of the temple). The vestibule was 10 cubits long, the nave 40, and the inner sanctuary 20. (1 K. 6:2 combines the latter two figures, so that the "house" is said to be 60 cubits long.) The height given to the "house" in 1 K. 6:2 is 30 cubits. Nothing is said here of a different height for the vestibule, and it is usually assumed to have had the same height. (According to the MT of 2 Ch. 3:4, the vestibule was 120 cubits high, but this cannot be right, and textual corruption is possible.) On the other hand, the inner sanctuary is later said to have been 20 cubits high (1 K. 6:20). Assuming that the 30 cubits of 1 K. 6:2 applies to the external height, we have either to imagine (a) that the floor of the inner sanctuary was raised 10 cubits above that of the nave, necessitating stairs between the two compartments; or (b) that the inner sanctuary had a ceiling 10 cubits below the roof of the building, the intervening space perhaps being occupied by "upper chambers" (cf. 1 Ch. 28:11; 2 Ch. 3:9). The problems remains, though its dimensions diminish, if we follow the LXX and read 25 cubits in 1 K. 6:2 instead of 30 as the external height.

According to 1 K. 6:5-10 the nave and the inner sanctuary (but not the vestibule) of the temple were surrounded by a three-story "structure" containing a number of side chambers; these latter would have served for the storage of offerings and equipment and perhaps for the accommodation of temple personnel. Each story was evidently 5 cubits high (so at least 6:10 is usually understood). The lowest story was 5 cubits broad, the middle story 6, the upper story 7. The width of the temple walls decreased at the points where the stories for the side chambers became broader, since the floors of the upper two stories were supported in part on ledges formed by recesses made in the walls of the temple building itself. The entrance to this "structure" for the side chambers was from the outside (some scholars assume an inside entrance as well), at the temple's "right" (RSV: the south side). The upper chambers were connected with the lower by *lûlîm*: either a spiral staircase (RSV "stairs," following the LXX) or perhaps "trap doors" (the meaning of the term in postbiblical Hebrew). No indication is given as to the number of chambers in the side structure. In Ezekiel's visionary temple there were ninety.

As noted above, the temple walls receded one cubit where the structure for side chambers became broader. Not only did this construction provide a ledge on which the floor of the upper stories of the side chambers could be supported; it also made the temple walls themselves lighter at the top and thus more stable. The width of the walls must have been considerable to allow such setbacks, but no figure is given. Those in Ezekiel's temple were 6 cubits thick, presumably at the base (Ezk. 41:5).

The temple walls were apparently made of stonework with a row of timber inserted after each three courses of stone (so we may perhaps deduce from 1 K. 6:36; 7:12; Ezr. 6:4; alternatively, walls of mud brick may have been raised above a bedding of cedar which rested on a stone foundation). The interior of the walls was paneled with cedar wood (so 1 K. 6:15; cypress, according to 2 Ch. 3:5) from floor to ceiling and decorated (1 K. 6:18) with relief work of "gourds" (an egg-shaped decoration) and "open flowers" (i.e., the calyxes, or open parts of the flowers; 1 K. 6:29 speaks of "cherubim and palm trees and open flowers," 2 Ch. 3:5f. of "palms and chains" and "settings of precious stones"). 1 K. 6:21f. refers to the inside of the "house" as being "overlaid" with pure gold, though this is often taken to refer to the decoration of the walls with *inlaid* gold, or perhaps simply to gold painted or sprayed on the walls. Similarly the floor, which was covered with planks of cypress, is said to have been "overlaid with gold" (6:30).

"Windows with recessed frames" are mentioned in

1 K. 6:4, but no precise location is given. Presumably they would have been located in the upper part of the temple walls above the side chambers, and would have served not so much for admitting light (the thickness of the walls would have minimized this) as for permitting some circulation of air. The "windows" would of course have been mere openings cut into the walls. It is debated whether the Hebrew rendered "with recessed frames" by RSV in fact refers to a construction by which the windows narrowed toward the outside or to a lattice-work covering for the window.

1 K. 6:9 is difficult. It has been taken to describe the roof of the temple as made up of beams laid in a crisscross pattern, leaving hollow rectangles between the beams which were taken up by recessed panels.

The suggestion that the temple was built on a platform and approached by stairs leading up to the vestibule is plausible in itself but is supported more by statements made about Ezekiel's temple (Ezk. 40:49; 41:8) than by any explicit evidence concerning Solomon's.

A solid wall divided the vestibule from the nave, and another wall (or perhaps a mere wooden partition, as Ouellette argues) divided the nave from the inner sanctuary; so much may be deduced from 1 K. 6:31-35, which speaks of doors between these compartments. No thickness is stated for these walls, though their counterparts in Ezekiel's temple were to be 6 and 2 cubits thick respectively. Similarly, no dimensions are stated for the doors between the compartments, though in Ezekiel's temple the double door between the vestibule and the nave was to be 10 cubits broad, that between the nave and the inner sanctuary was to be 6. We are told that the olivewood doorposts at the entrance to the nave formed a square (so, at least, many interpret 1 K. 6:33); the doors themselves were of cypress. The doorposts at the entrance to the inner sanctuary apparently formed a pentagon (but the Hebrew of 1 K. 6:31 is obscure). All the doors are said to have had carvings of cherubim, palm trees, and open flowers, and to be "overlaid" with gold.

Within the nave, and close to the inner sanctuary, was the altar of incense (the "golden altar" of 1 K. 7:48; cf. 2 Ch. 26:16-19; Isa. 6:6), made of cedar wood and overlaid with gold. The nave was also furnished with ten lampstands of pure gold, standing in rows of five on the north and south sides. In the same compartment was placed "the golden table for the bread of the Presence." (2 Ch. 4:8 curiously speaks of ten tables; cf. 4:19 and 1 Ch. 28:16. In other passages, however, the reference is to a single table, 2 Ch. 13:11; 29:18.)

Within the inner sanctuary was placed the ark of the covenant. This was overshadowed by two gigantic cherubim of gold-plated olivewood, each 10 cubits high with a wingspan also of 10 cubits. The wings stretched from the north to the south walls of the inner sanctuary and met in the center above the ark. According to 2 Ch. 3:13, the cherubim faced the nave.

2. Courtyard. According to 2 Ch. 4:9 Solomon's temple was surrounded both by a "court for the priests" and by a "great court" to which the laity would have been admitted. Such a distinction is not, however, apparent in earlier texts referring to Solomon's temple and is usually taken to reflect influence from Ezekiel and the second temple. (Note the frequent adjustments made by the Chronicler to the narrative of Kings out of a concern that the sanctuary and its immediate environs be kept from incursions by foreigners, the laity, or the ritually impure: cf. 2 Ch. 6:13 and 1 K. 8:22; 2 Ch. 8:11 and 1 K. 9:24; 2 Ch. 8:12 and 1 K. 9:25; 2 Ch. 23:2-7 and 2 K. 11:4-8; 2 Ch. 23:19 and 2 K. 11:18; 2 Ch. 24:8 and 2 K. 12:9; 2 Ch. 26:16-21 and 2 K. 15:5; 2 Ch. 27:2 and 2 K. 15:34; also 2 Ch. 29:15f., and note the implications of Ezk. 44:5-9 for practice in Solomon's temple.)

The text of Kings appears to distinguish three courtyards: a "great court" (1 K. 7:12) which surrounded not only the temple but also the royal buildings located at a somewhat lower height in the area south of the temple; a "middle court" (2 K. 20:4; cf. the "other court" of 1 K. 7:8), a kind of "inner court" for the palace south of the temple; and the "inner court" (1 K. 6:36, probably the "upper court" of Jer. 36:10) surrounding the temple itself. This latter court was paved (2 K. 16:17; 2 Ch. 7:3) and fenced about with a wall made of hewn stone held in place by a wood frame. 2 Ch. 20:5 speaks of a "new court" which must have been added recently in the time of Jehoshaphat (note also the "two courts" of 2 K. 21:5; 23:12).

Again we have no clear picture of the gates by which the courtyard was entered (cf. Ps. 24:7; 100:4; 118:19f.). It is usually assumed that there was one at the south side which would have been used by the king when coming from the palace (cf. 2 K. 11:19; 16:18; Jer. 38:14), though 1 Ch. 9:18 mentions a "king's gate on the east side." Clearly there was at one time a gate on the northern side known as the "upper gate" (Ezk. 8:14; 9:2); presumably this was the same as the "upper Benjamin Gate" of Jer. 20:2, where there was a place of confinement. But this was built first in the time of Jotham (2 K. 15:35), a fact that suggests it may be the "New Gate" of Jer. 26:10; 36:10.

The courtyard also contained "chambers" of various descriptions and purposes. Jer. 35:4 mentions "the chamber of the sons of Hanan the son of Igdaliah, the man of God, which was near the chamber of the princes, above the chamber of Maaseiah the son of Shallum, keeper of the threshold." In Jer. 36:10, Baruch is said to read aloud the scroll of Jeremiah "in the house of the Lord, in the chamber of Gemariah the son of Shaphan the secretary, which was in the upper court, at the entry of the New Gate of the Lord's house." There, we are told, he could be heard by all the people in the courtyard. A reference to a chamber of Nathan-melech the chamberlain, which was situated near "the entrance to the house of the Lord," is found in 2 K. 23:11. The Levites had their own chambers, according to 1 Ch. 9:33. While these were private chambers of temple officials, other references point to storage chambers as well (1 Ch. 9:26; 2 Ch. 31:11f.; cf. 1 Ch. 26:15).

Within the courtyard in front of the temple were several significant items: the bronze pillars, the altar of bronze, the molten sea, the bronze basins with their wheeled pedestals, and the "platform."

At the entrance to the temple were two bronze pillars. Their location is left vague in Kings, though some have interpreted 1 K. 7:19, 21 as implying that the pillars were a structural part of the vestibule, supporting the architrave. This, however, is unlikely, owing to their height (which falls far short of the presumed height of the vestibule), their construction (according to Jer. 52:21, they were hollow, the bronze at the circumference being "four fingers," or about 7½ cm., 3 in., thick), and the presence of similar freestanding pillars at the entrance to other temples in the ancient Near East. The view that sees the pillars as freestanding, one on either side of the vestibule entrance, seems to be supported by 2 Ch. 3:15 as well. *See* picture in TYRE.

Each pillar was 18 cubits in height (so 1 K. 7:15; Jer. 52:21 MT; 35 cubits in 2 Ch. 3:15 and Jer. 52:21 LXX) and 12 cubits in diameter (1 K. 7:15; Jer. 52:21). At the

top of each pillar was a bowl-shaped bronze capital 5 cubits high (1 K. 7:16; 3 cubits in 2 K. 25:17). The descriptions of the ornamentation of the capitals have suffered from textual corruption and are obscure at a number of points. Apparently each capital "bowl" was enveloped in a bronze mesh from which were suspended two chains of ornamental pomegranates, 100 to each chain. Four of these were attached to the capital, and the remaining 96 were left in suspension (so at least Jer. 52:22f. seems to suggest). The texts also speak of "lily-work" ornamentation (1 K. 7:19, 22), which suggests either that the capitals curved outward at the top in a lily shape or that they were adorned by long, narrow "leaves" like those of the lotus, perhaps projecting upward from the bottom of the capital. *See also* JACHIN AND BOAZ.

The "molten sea" was a gigantic basin of bronze supported by twelve statues of bulls and placed in the southeast of the temple courtyard. *See also* SEA, MOLTEN.

A bronze altar is not mentioned in the description of the temple and its furnishings in 1 K. 6–7 (cf., however, 1 K. 8:22, 64; 9:25; 2 K. 16:14f.; also Ps. 118:27), perhaps because Solomon merely rebuilt an earlier altar raised at the temple site by David (2 S. 24:25). According to 2 Ch. 4:1 (which may, however, be colored by knowledge of the altar of the postexilic temple) it was square, 20 cubits long and wide, and 10 cubits high. If its form resembled that of the altar in front of Ezekiel's temple (Ezk. 43:13-17), the altar had a series of terraces. For its later history *see* ALTAR III.C.

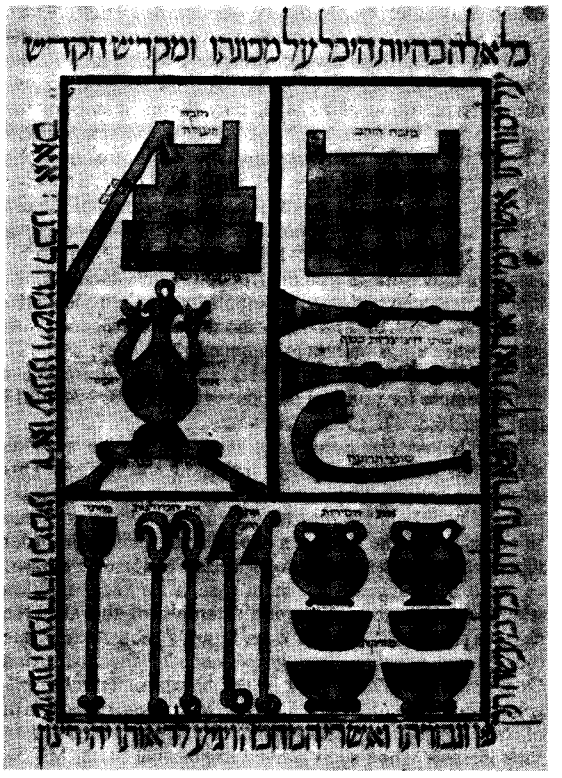
The courtyard also contained ten bronze basins (five on each side of the temple entrance), each with a capacity of 40 baths. According to 2 Ch. 4:6 the basins were used for the cleaning of the sacrificial victims. Each basin was supported on a wheeled stand. The description of the latter in Kings is both protracted and obscure. Each "stand" was 4 cubits long, 4 cubits broad, and 3 cubits high, and had four bronze wheels. The panels of the stand were decorated with carvings of lions, oxen, and cherubim (*see* picture in LAVER). Ahaz later removed the stands from under the basins (2 K. 16:17).

2 Chronicles (but not Kings) mentions a bronze platform in the courtyard on which Solomon stood and offered his dedicatory prayer (2 Ch. 6:13). The Chronicler's statement has been variously understood as drawn from his text of Kings, though omitted from ours by haplography; or as a tendentious attempt to conceal the fact that Solomon was standing at the altar (1 K. 8:22) to which, in the Chronicler's thinking, only priests should approach. (Note that the Chronicler, who has introduced a distinction between a court, *ḥāṣēr*, of the priests and a "great court," *ʿazārâ*, for the laity [2 Ch. 4:9], locates the platform for Solomon in the latter, 2 Ch. 6:13).

See picture in ARCHITECTURE.

E. Parallels. The closest structural parallel to Solomon's temple is that excavated at Tell Tainat on the Orontes River, dating from the 9th cent. B.C. Interestingly, the latter, like Solomon's sanctuary, is part of a temple-palace complex. The ground plan is rectangular and tripartite, the three rooms are of equal breadth, and the entrance is on one of the short sides: in each respect paralleling Solomon's temple. But the inner sanctuary was not square, and, while it contained a raised platform, the whole of its floor was not raised (as we have suggested that of Solomon's may have been). Furthermore two columns were definitely within the vestibule rather than just outside it, as the bronze pillars of Solomon's temple probably were.

Other parallels are less clear. Those most frequently mentioned are the 14th cent. B.C. temple at Hazor (tri-



An illustration in a 12th-century Hebrew Bible from France showing sanctuary utensils. At lower right are the basins for the blood of the sacrifices (Bibliothèque Nationale, Ms. Hebr. 7, fol. 13)

partite, though the three rooms were not of equal width, and the nave was square) and the Arad temple. The latter is particularly important since it represents an *Israelite* temple, built probably in the 9th cent. B.C., and apparently functioning for some time independently of the sanctuary in Jerusalem. Like Solomon's temple, that in Arad had an altar for sacrifice in the courtyard at the front; significantly, the Arad altar conformed with the prescriptions of Ex. 20:24-26, in that it was constructed of packed earth and unhewn stones and had no stairs. Parallels to the Jerusalem temple include the east-west orientation, with entrance to the temple from the east, and the presence of two pillars, comparable to Jachin and Boaz, at the entrance to the nave. But the differences are perhaps more striking. The Arad temple had only one main room (the nave), and it was entered on its broad side. It lacked a built-up vestibule, and the inner sanctuary was a mere niche in the wall of the nave. This niche, which was reached by three steps, was flanked by two altars of incense. It contained a well-formed *maṣṣēḇâ* (pillar). From the perspective of the Jerusalem cult, the sanctuary at Arad was an aberration, and there is some evidence, in the disuse into which the altar and temple at Arad fell, that the reforms of Hezekiah and Josiah extended to Arad.

F. Significance. 1. National Sanctuary. Some have suggested that Solomon's temple was rather a royal chapel than a national sanctuary. Certainly it was closely linked to the monarchy. The temple was built by Solomon in a city which David had chosen to be his capital but which had no place in earlier Israelite tradition. It was built in close proximity to Solomon's royal buildings — a proximity

which was later emphatically condemned (Ezk. 43:8). Kings seem to have officiated at important cultic events (1 K. 8; 9:25), their own coronations took place in the temple courtyard (2 K. 11:12-14), and, at least on a common interpretation of Ps. 110, they themselves bore the title "priest for ever after the order of Melchizedek." Clearly the kings exercised considerable control over the temple priesthood (cf. 1 K. 2:26f.; 2 K. 22:3-7; and note 2 Ch. 24:20-22!), and it was at royal instigation that repairs were made and modifications to the temple were introduced (2 K. 12:4-16 [MT 5-17]; 15:35; 22:3-7; 2 Ch. 15:8). Here we may note as well the freedom with which various kings introduced idolatrous symbols into the temple courtyard (2 K. 16:10-16; 21:4-7) — and the equal freedom with which other kings had them removed (2 K. 18:4; 23:4-12). On a number of occasions the kings used the treasures of the temple for political purposes (1 K. 15:18; 2 K. 12:18 [MT 19]; 16:8, 17f.; 18:13-16).

Nonetheless the Solomonic temple must be seen as a national sanctuary, both in intention and in fact. This is clearly indicated by the reference to Jeroboam's fears that the people of his (northern) kingdom would continue to be drawn to the southern capital of Jerusalem in order to worship there (1 K. 12:26-28; cf. 2 Ch. 11:16). Perhaps, as Noth has suggested, a main reason for the attraction was the presence in Solomon's temple of the ark, the most sacred cultic symbol from Israel's past. At any rate the Psalms provide moving evidence of the place that God's house on Zion held in the hearts of Israelite pilgrims (Ps. 26:8; 61:4 [MT 5]; 65:4 [MT 5]; 84:10 [MT 11]), of their longing to journey there (84:1f. [MT 2f.]; 122:1), their despair when such proved impossible (42:2 [MT 3]; cf. Jonah 2:4 [MT 5]), and their joy when they reached the goal of their pilgrimages (43:4). In the courts of the temple they met to bring their offerings (2 K. 12:4 [MT 5]; 22:4; Ps. 96:8), pay their vows (Ps. 65:1 [MT 2]; 66:13; 116:17-19), worship their God (5:7 [MT 8]; 135:1f.), and behold His beauty (27:4; 63:2 [MT 3]; cf. 96:6). Here too they came to fast in times of crisis (cf. Joel 1:14) and to make (or renew) their covenant with God (2 K. 23:2f.; Jer. 34:15). Not surprisingly the temple courtyard proved a favorite location in which prophets could address crowds of people (Jer. 7:2; 19:14; 26:2; 28:1, 5).

2. Legitimate Sanctuary. In Israelite faith the temple in Jerusalem was not (or not merely) a sanctuary which human beings had chosen to build in order to honor their God. Yahweh Himself had "chosen" to have His sanctuary there (Ps. 78:68f.; 132:13f.). The "Deuteronomist" insists that Jerusalem is the city where Yahweh chose to "put" His name (1 K. 11:36; 14:21; 2 K. 21:4, 7), and that, after He had done so, cultic worship at other sites was illegitimate; but his insistence, far from being a radical innovation, is quite in line with the lofty claims that must have been made for the Jerusalem temple cult from the beginning (cf. Ps. 68:16 [MT 17]; 87:2).

In fact, the so-called Deuteronomistic History emphasizes that the temple was in every respect one of divine appointment. It was made possible when Yahweh had given His people rest, and was thus built at the *time* of His choosing. It was erected, not by David, though he had desired to do so (2 S. 7:1-7), but by Solomon, for whom Yahweh reserved the honor (2 S. 7:12f.; 1 K. 8:17-20). Its location was divinely chosen (cf. 2 S. 24:18-25). Above all, Yahweh showed His approval by filling the temple with His glory (1 K. 8:10f.), deigning to dwell there in the "thick darkness" (1 K. 8:12f.; cf. 6:11-13), and Himself "consecrating" the temple as the appointed place where he could be sought and the ritual in his honor could legitimately be performed (1 K. 9:3, 7).

Something of the Chronicler's concern to show the legitimacy of the Jerusalem sanctuary has been noted above (see I.B). Here we may simply note as a further expression of this concern his efforts to show the *continuity* between Solomon's temple and the authorized worship of an earlier period at the "tent of meeting." This is seen, e.g., in his description of the temple's construction and dedication, which frequently echoes the account of the tabernacle in the "Priestly Code." Compare 1 Ch. 28:11, 19 with Ex. 25:9; 1 Ch. 29:6-9 with Ex. 35:20-29 and 36:2-7; 2 Ch. 2:7, 13f. (MT 6, 12f.) with Ex. 31:1-5; 1 Ch. 28:11 ("mercy seat," nowhere else mentioned in the accounts of the temple) with Ex. 25:17-22; 2 Ch. 3:14 (the "veil," not mentioned in Kings) with Ex. 26:31-33; and 2 Ch. 7:1-3 with Lev. 9:22-24.

3. Yahweh's Dwelling-Place. A number of texts make clear that Yahweh "chose" Zion to be His own dwelling-place (Ps. 132:13f.; cf. 1 K. 8:13; Ps. 9:11 [MT 12]; 46:4 [MT 5]; 74:2; 76:2 [MT 3]; Isa. 8:18, etc.). Zion was the "city of God" (Ps. 48:1f. [MT 2f.]; cf. 99:2). More specifically, Yahweh was said to "reign" as king in Zion (Ps. 48:2 [MT 3]; cf. Jer. 8:19), to be enthroned there (Jer. 14:21; 17:12). It seems clear that the cherubim located within the innermost sanctuary of the temple were envisaged as forming the throne on which Yahweh sat (2 K. 19:14f.; Ps. 80:1 [MT 2]; 99:1; Isa. 6:1-5; etc.), invisible but majestic, with the ark as His footstool (1 Ch. 28:2; Ps. 132:7). It should perhaps be added that Yahweh's "dwelling" on Zion was by no means regarded as a limitation on His power (cf. Ps. 134:3) or on the sphere of His authority (cf. Ps. 47; 48:9f. [MT 10f.]; and note that Ps. 24:7-10 follows 24:1f.).

The relation between Yahweh's "dwelling" in the temple on Mt. Zion on the one hand and in heaven on the other hand is generally left undefined. Certainly there must at all times have been an awareness that the earthly sanctuary was a less than adequate dwelling-place for heaven's king (cf. Ps. 24:7, 9, where the temple "gates" must be raised to allow Him to enter; and note Isa. 66:1f.). There is some evidence for the view that the Jerusalem temple was regarded as a replica of God's heavenly home (Ps. 78:69? implicit in Isa. 6? explicit in any case of the tabernacle in Ex. 25:9, 40, etc.). It is also possible that Mt. Zion was believed to be the place where heaven and earth intersected and ordinary distinctions between the two did not apply. A number of Psalms speak of Yahweh as dwelling on Zion as well as in heaven without any awareness of tension between the two (Ps. 11:4; 14:2, 7; 18:6, 13 [MT 7, 14]; 20:2, 6 [MT 3, 7]; 76:2, 8 [MT 3, 9]).

On the other hand, the "Deuteronomist" did see the language which speaks of Yahweh as "dwelling" in the temple as inviting misunderstanding, and he took pains to clarify the issue. Yahweh's dwelling is repeatedly insisted to be "in heaven" (Dt. 26:15; 1 K. 8:30, 39, 43, 49); in fact, "heaven and the highest heaven cannot contain" Him (1 K. 8:27). The temple was built "for the *name* of the Lord" (1 K. 3:2; 5:3, 5 [MT 17, 19]; 8:44, 48), and only His *name* is said to dwell there (2 S. 7:13 qualifies 7:5; cf. 1 K. 8:16-20, 29; 9:3; 2 K. 21:7). As a result, Yahweh hears prayers which are directed toward the temple where He has put His name, but He hears them "from heaven [his] dwelling-place" (1 K. 8:29f., 33f., 35f., 42-45, 48f.).

4. Mark of Yahweh's Favor. The primary focus of texts which speak of the temple as Yahweh's "dwelling-place" is not, however, to provide an answer to the physical (or metaphysical) problem of where He "lives." Rather these texts point to Yahweh's presence in the midst of His people as proof of His special love for them and

of the favors and privileges He confers upon them. That He has chosen Zion for His dwelling means that He will pour out His bounty upon her people (Ps. 132:13-18). His "blessing" is said to proceed from Zion (Ps. 128:5; 133:3; 134:3). From His dwelling there He offers His shelter and protection (27:5; 61:4 [MT 5]; 68:5 [MT 6]; etc.; see I.F.5 below). In the language of the "Deuteronomist," Yahweh's "eyes" are "open night and day toward this house," so that He hears from heaven prayers offered "toward this place" (1 K. 8:29); but this terminology is merely a refinement based on the widespread practice of directing one's prayers toward God in His temple (cf. 2 K. 19:14f.; Ezr. 10:1; Ps. 5:7 [MT 8]; 28:2; 138:2; Dnl. 6:10), and expecting Him to answer from there (Ps. 3:4 [MT 5]; 14:7; 18:6 [MT 7]; 20:2 [MT 3]; cf. Am. 1:2).

But Yahweh's presence in His temple meant more to His people than the bestowing of material blessings and protection. It opened the possibility for fellowship with Him by the "righteous" who were fit for His presence (Ps. 15; 24:3-6; 118:20). Many Psalms testify to the delight which the pious found in beholding the "beauty of the Lord" in His temple (Ps. 27:4; cf. 42:1f. [MT 2f.]; 63:1f. [MT 2f.]; 84:1-4 [MT 2-5]) and in feasting on His goodness there (36:8f. [MT 9f.]; 65:4 [MT 5]).

5. Divine Protection. Finally we must note the close link between the belief that Yahweh was present in His sanctuary on Mt. Zion and the conviction that He would defend the city against its enemies. This is clearly expressed in Ps. 46:5-11 (MT 6-12); 48:3-8 (MT 4-9); 125:1; the prophet Isaiah made similar statements (e.g., Isa. 8:9f.; 31:4f.; 37:33-35). It must be remembered, however, that Isaiah's statements were directed to specific situations in which he was sure that Yahweh would contend for His people. Other texts make it clear that Yahweh's protection was by no means to be regarded as timeless and unconditional (2:6; 29:1-4, etc.), and in fact Isaiah could denounce the cultic worship of Yahweh's rebellious sons (cf. 1:2) as an abomination in God's eyes (1:10-17).

Nonetheless there is clear evidence attesting to the belief that Yahweh's temple in Jerusalem *guaranteed* the protection of the city. Micah mentions such an assurance, though only to condemn it (3:11). Jeremiah denounced such "deceptive words" (7:4, 8), yet the offense which his denunciation roused is evidence that the belief was deeply rooted in the hearts of many (Jer. 26:9). Such a belief was no doubt fostered by the false prophets who proclaimed Jerusalem's "peace" when there was no "peace" (cf. Jer. 27:16-22; Lam. 2:14).

Against such misconceptions the scriptural prophets pointed out that Yahweh's presence in the midst of His people was rather a guarantee of judgment for the sins they committed than of unconditional protection. Zephaniah believed that Yahweh was in Zion's midst (3:5), but he knew that judgment was coming (3:1). Micah announced that "the mountain of the house" (= temple) would become "a wooded height" (3:12). Jeremiah, noting that the temple had become a "den of robbers" (7:11), and that it had been defiled by the "abominations" erected in it (7:30; 32:34; cf. 23:11), announced that God would treat His house in Jerusalem as He had treated that in Shiloh, the destruction of which was well known to his hearers (7:12-14; 26:6).

When Jerusalem fell to the Babylonians in 587 B.C., the temple was burnt, its treasures carried off to Babylon (2 K. 25:9, 13-17). That the end of the temple represented a shattering blow to Israelite sensibilities is attested in a number of laments, which mourn its defilement (Ps. 74:4, 7; 79:1; Isa. 63:18; Jer. 51:51; Lam. 1:10) and destruction (Ps. 74:3-7; Isa. 64:11 [MT 10]), the slaughter of its officials (Lam. 2:20), and the way in which Yahweh had abandoned His sanctuary (Ps. 74:1f.; Lam. 2:7). Yet faith in Yahweh did not end with the destruction of His sanctuary, no doubt in part because His prophets had predicted the events and proclaimed their place in Yahweh's purposes.

In fact, the prophets did more. Beyond judgment they saw — in Yahweh's time — restoration. And in the restoration of Yahweh's people to the promised land of their forefathers, a new temple — as a mark of Yahweh's renewed favor and blessing — was inevitably a part (Isa. 44:28; 60:7, 13; 62:9; cf. Jer. 31:6, 12, 23; 33:11). Ezekiel's great vision (Ezk. 40–48) was thus only the most detailed expression of a conviction shared by other prophets as well.

II. Ezekiel's Temple.—While the destruction of Jerusalem and its temple may have created a theological crisis for those who regarded them as inviolable, the situation was different for Ezekiel. Years before the catastrophe took place he had denounced the wrongs of his people, including their profanation of Yahweh's sanctuary (see esp. ch. 8; also 23:38f.; cf. 43:7-9). Ezekiel was convinced that the sins of Yahweh's people had driven His presence ("glory") away from the temple (8:66; 9:3; 10:18f.; 11:22f.); its destruction, then, was only to be expected (7:21-23; 24:21-27).

Ezekiel's understanding of what lay behind the tragedy of 587 B.C. was undoubtedly a factor in enabling disconsolate Jews to come to terms with the events. Of equal importance, however, was the portrayal of a glorious future in chs. 40–48 (cf. also 20:40-44; 37:26-28), a vision in which Yahweh again lives in the midst of His people, now in a sanctuary where the distinction between the sacred and the profane is perfectly maintained. This vision was clearly a formative factor in the construction of the postexilic Jewish theocracy.

Here we will first describe the features of the temple of Ezekiel's vision, then briefly discuss its significance.

A. Design. 1. Temple Mount. According to the vision the land once promised to Israel's fathers would again be the inheritance of their descendants (47:14). Each tribe would occupy a piece of land running west to east from the Mediterranean to the Jordan in parallel strips. The placing of the tribal allotments (Ezk. 48) is not related to their historical territories, but apparently follows a principle by which the concubine tribes (Dan, Asher, Naphtali, Gad) are furthest removed from the temple mount. Set apart from the rest of the land is a district 25,000 cubits from north to south, and stretching as far east and west as the tribal allotments extend in those directions (48:8). Seven tribes have their territory to the north of this district, five to its south. The central district contains a square 25,000 cubits on all sides (48:20). The parts of the district remaining to the east and west of the square are assigned as the possession of the coming (lay) "prince" (45:7f.; 48:21f.). The square itself is divided into three portions: the northernmost, stretching 25,000 cubits from east to west and 10,000 cubits from north to south, is to belong to the Levites; directly south of this is a district of equal dimensions for the (Zadokite) priests; the southernmost district, again 25,000 cubits from east to west, but only 5,000 cubits from north to south, is set aside for the city of Jerusalem (45:1-6; 48:8-20).

The center of the Zadokite portion is to be occupied by the temple complex, which is thus no longer a part of the city itself. The walls around the temple complex are to form a perfect square, each side measuring 500 cubits (42:15-20; 45:2). Since these walls are to be a mere 6 cubits high and 6 cubits thick (40:5), they clearly serve

no military purpose but are intended to "make a separation between the holy and the common" (42:20). Further protection of the sanctity of the temple complex is provided by an area stretching 50 cubits beyond the walls on all sides, which is to be left open (45:2).

2. Courtyards. Elaborate gateways through the outer walls lead to the outer court of the temple complex on three sides. The eastern gateway is described in detail in 40:6-16, the northern and southern briefly in 40:20-27. The latter two are intended for normal use (cf. 46:9f.). That to the east is to be used once by Yahweh Himself as He takes possession of His sanctuary (43:1-5, reversing the departure of Yahweh's "glory" through the eastern gate of the Solomonic temple complex, 10:18f.; 11:23), then shut forever (44:1f.).

Seven steps lead up to each gate entrance (40:22, 26); the entrance is 10 cubits wide (but apparently 13 when the gateposts are included, 40:11). From the point of entrance on the outside to the opposite end, which opens onto the outer court of the temple, is a distance of 50 cubits (40:15). This is made up as follows.

First a threshold is passed, 6 cubits (= 1 "reed") in length (i.e., the thickness of the outer wall through which it passes). This is followed by a corridor 28 cubits long. On either side of the corridor are three guard rooms ("side rooms"), evidently to be used by Levites who thus control the entrance to the outer court (cf. 44:10f.). Each guard room measures 6 cubits by 6, and has a "barrier" of some kind 1 cubit thick at its entrance. The distance from the back wall of one guard room to that of the room facing it is 25 cubits. The intervening space (called the "jambs" in 40:10) on each side between the first and second guard rooms, and again, between the second and third, is 5 cubits. Thus the total length for the corridor is (6 x 3 =) 18 cubits (for the guard rooms) + (5 x 2 =) 10 cubits (for the intervening spaces), or 28 cubits. Windows are placed in both the guard rooms and the walls between them. At the inside end of the corridor another threshold 6 cubits long opens onto a "vestibule" 8 cubits long and perhaps 20 cubits wide (but the text of 40:14 is uncertain). Finally the inside walls of the vestibule (i.e., those adjacent to the outer court) are 2 cubits thick (the "jambs" of 40:9, 16).

Passing inward from the outer gates one would enter the outer court, where ordinary Israelites might gather to worship (cf. 46:3). The outer court stretches a distance of 100 cubits from the outer gateways to the gateways leading into the inner court (40:19), access to which is reserved for cultic officials. Thirty "chambers" are located along the inside of the outer wall which encloses the whole temple area (40:17). Typically, no purpose is stated for these "chambers"; perhaps we are to conceive of them as serving for the eating of sacrificial meals by the laity (cf. 46:21-24, where four kitchens for preparing such meals are described, located in the four corners of the outer court). These chambers open onto a stone "pavement" (the "lower pavement" of 40:18) which, like the adjacent outer gateways, extends inward to a distance of 50 cubits from the outside of the outer wall.

Passage from the outer court to the inner court is made by way of "inner gateways," again on the east, north, and south sides (40:28-37). Eight steps lead up to these gateways. The inner gateways are identical to the outer ones with one exception: whereas the vestibules of the outer gateways are on the inside, opening onto the outer court, those of the inner gateways also face the outer court, being the first part of the gateway one enters from the outside.

Adjacent to the vestibule of the north (?) inner gateway is a chamber in which the victims used as offerings are to be rinsed after they are slaughtered (cf. Lev. 1:9). In addition, eight tables are mentioned for the slaughter of the various sacrificial animals: four within the vestibule itself and four outside along its walls. Alongside these tables are four others of hewn stone, each 1½ cubits square and 1 cubit high. On these the implements for sacrifice are to be placed (40:38-43).

On the south side of the north inner gateway is a chamber designated for the use of "the priests who have charge of the temple" (the Levites, according to 44:14; 45:5; cf. 46:24). On the north side of the south inner gateway is a chamber designated for the use of "the priests who have charge of the altar," i.e., the Zadokites (40:44-46). No more specific purpose is indicated.

The dimensions of the inner court, excluding the temple, are 100 cubits by 100 (40:47). In the midst of the court is the altar, a description of which is found in 43:13-17. At the foot of the altar (according to the interpretation followed by RSV) is a platform ("base") a cubit high and one cubit broad (i.e., it extends one cubit on all sides beyond the altar block above it); it had a rim (vv. 13 and 17) one span (= ½ cubit) high around its edge. According to another interpretation the "base" should be understood as a channel at the foot of the altar, one cubit deep and one cubit broad, and surrounded at its outer edge by a border. In the channel would be collected the blood of the sacrifices.

Above this base the altar rises in three tiers. The lowest block rises 2 cubits above the "base" and is 16 cubits square. The middle block rises 4 cubits above the lowest and is 14 cubits square (i.e., the lowest block extends one cubit beyond the middle one on each side). The highest block (called the "hearth") rises 4 cubits higher still, and is 12 cubits square. From the four corners of the hearth rise horns one cubit high (so at least the LXX). The altar had steps to the east.

3. Sanctuary. The temple itself is described briefly, most of the attention being given to its dimensions. The outside dimensions of the temple (including its walls and side chambers) are, from east to west, 100 cubits (41:13). The temple stands on an elevated platform, so that a climb of ten steps is required from the inner court before one can enter the temple vestibule (40:49; 41:8). The temple is divided into three compartments, each 20 cubits broad: these (from east to west) are the vestibule, the nave, and the "inner room" or "most holy place."

The entrance to the vestibule is 14 cubits wide (so 40:48 LXX; according to 41:25, there is a "canopy (?) of wood in front of the vestibule"), leaving 3 cubits of wall ("jambs") on each side. These "jambs" are 5 cubits thick. Two columns (corresponding to Jachin and Boaz of the Solomonic temple) are located alongside the vestibule "jambs." From east to west the vestibule is 12 cubits long (so 40:49 LXX; MT has 11 cubits).

A wall 6 cubits thick divides the vestibule from the nave. The entrance through the wall is 10 cubits in width, leaving 5 cubits of wall on each side. The nave is entered by way of a double door decorated with carvings of cherubim and palm trees (41:23-25). The nave itself is 40 cubits from east to west.

Separating the nave from the "inner room" is a wall 2 cubits thick. The entrance is 6 cubits wide, leaving walls 7 cubits wide on each side of the entrance. Again, a double door provides access to the inner room (41:23-25). The "inner room" is 20 cubits from east to west.

In 41:15-26 there is a brief (and, at places, unintelligible) description of the temple interior. Evidently the interior walls are paneled with wood; there are windows (latticed?

or "with recessed frames"?); carvings of cherubim (each with a human and a lion face) and palm trees adorn the walls. The only furniture mentioned is "the table which is before the Lord," located just outside the inner room and described as "resembling an altar of wood." It is 3 cubits high, its surface being a square with sides measuring 2 cubits. It corresponds to the table for the bread of the Presence in Solomon's temple.

The outside wall of the temple is 6 cubits thick. This measurement presumably applies to its base, for, just as in Solomon's temple, there are setbacks in the wall ("offsets," 41:6) higher up on which rest the supporting bases for each new level of a three-story structure containing side chambers. Hence the middle story of the structure is wider than the 4 cubits of the lowest story (41:5), and the upper story is wider still. Thirty "side chambers" are located in each story. The outside wall of the three-storied structure is 5 cubits thick; it has an entrance on its north and south sides. Beyond this wall the raised platform on which the temple and its side chambers are built extends another 5 cubits. Below this extension is an open space apparently 20 cubits wide.

To the west of the temple, beyond the open space (the "temple yard") just mentioned, is a building 90 cubits (north to south) by 70 cubits (east to west), with walls 5 cubits thick (thus the *outside* dimensions are 100 cubits by 80; cf. 41:15). Again, no purpose for the building is indicated (but cf. the PARBAR of 1 Ch. 26:18). The east-west measurement for the space between the temple and this building (20 cubits) plus the building itself and its walls (80 cubits) thus matches the 100 cubits of the temple's measurement from east to west (41:13).

Similarly, a measurement of 100 cubits is reached for the length from north to south of the temple (its "east front," 41:14) by adding its interior breadth (20 cubits), its two walls (6 x 2 = 12 cubits), the side chambers on the north and south sides (4 x 2 = 8 cubits), the walls of these chambers (5 x 2 = 10 cubits), the open space on the temple platform beyond these chambers (5 x 2 = 10 cubits), and the open space below (20 x 2 = 40 cubits). The perfect symmetry is of course a characteristic feature of the whole vision.

4. Priests' Chambers. In 42:1-14 we have a description of chambers in which priests are to don their holy garments (cf. 44:17-19) before entering the inner court and to remove them before returning to the outer court. In these chambers the priests are also to eat their part of the "most holy offerings" and to store offerings. According to 46:19f. a kitchen in which the priestly portions of the sacrifices are prepared is at the western end of the northern row of these chambers. The text describing the chambers is extremely obscure, and any reconstruction of details is tentative at best.

According to an older view (represented, e.g., by G. Cooke, comm. on Ezekiel [*ICC*, 1936]), the chambers are placed in rows just outside the open space 20 cubits broad and 100 cubits long immediately to the north and south of the temple building; the reference in 42:1 to the "building" opposite the chambers is interpreted by Cooke as referring to the outer temple wall of 40:5, where the same word is used. The rows of chambers thus run exactly parallel to the temple itself. Adjacent to the open space on the temple's north side is a long row of chambers stretching the entire length of 100 cubits. Between this row and another shorter row is a path 10 cubits broad and, again, 100 cubits long (42:4). Then comes a shorter row of chambers 50 cubits long, beginning from the western end (42:8). The 50 cubits remaining to the east alongside the path are occupied by a wall (42:7). These rows of chambers are constructed in three stories (42:3), the uppermost story being narrower than those below, leaving space for a corridor facing inward on that level (42:5f.). The entrance to the row of chambers is at the eastern end (42:9). The dimensions of the two rows of chambers and the path between them are 100 cubits by 50 (42:2). The two rows of chambers (and the path between them) to the south of the temple are identical to those on the north (42:10-12).

A more recent view (worked out by K. Elliger and adopted with some modifications by a number of scholars) places one end of the structures containing the priests' chambers against the outer (western) wall which surrounds the whole temple complex. From this point the chambers run eastward for a distance of 100 cubits along the north and south sides respectively of the "building" mentioned in 41:12, i.e., the one located to the west of the temple. The "building" of 42:1 is thus identified with that of 41:12; and the "temple yard" of 42:1 is applied to the area between the temple's western side and this "building."

If we consider the structure of priests' chambers to the north of the "building" (the one to the south is its exact counterpart), according to Elliger, it is built in three parallel blocks, each running from west to east. Between the southernmost of the three blocks and the "building" runs the path of 42:4. The southernmost block is the highest of the three (42:5), but its area is encroached upon by a projecting rock surface (so Elliger understands the term rendered "gallery" in 42:3, 5). Somewhat lower is the middle block to its immediate north; lowest of the three is the block furthest north. The last two blocks are constructed on terraces because the terrain is uneven (42:6). Since the blocks of chambers extend on the west to the outer wall of the whole temple complex, their northern side is adjacent to the pavement which stretches 50 cubits inward from the outer wall (which also contains chambers, 40:17f.; these latter chambers, according to Elliger, are referred to in 42:8a). Since, however, the northern side of the row of priests' chambers is 100 cubits long, the 50 cubits furthest east extend beyond the pavement, and the priest's chambers here are left exposed to view from the outer court. The wall of 42:7 is thus needed in order to shield the exposed part. The entrance to the whole structure is on the east (42:9). Such at least is Elliger's reading of an extremely difficult passage.

See picture in EZEKIEL.

5. Stream. Finally, an essential feature of Ezekiel's vision is the stream which begins beneath the temple threshold, flows just south of the altar, emerges to the east of the temple complex, and continues east to the Arabah and the Dead Sea (47:1-12). Beginning as a mere trickle (cf. 47:2, NEB), at a distance of 4,000 cubits from the outer wall surrounding the temple area it has become a river bringing life and abundance wherever it flows (cf. Joel 3:18 [MT 4:18]).

B. Significance. Undoubtedly the prime significance of the temple vision is the prophetic assurance that, despite the judgment of the Exile and the destruction of Jerusalem's sanctuary, Yahweh was not through with His chosen people but would return to dwell in their midst and to shower His bounty upon them (43:1-7; 47:1-12). That being said, it must be conceded that it is not clear to what extent the prophet envisaged a literal fulfillment of the details of the vision. Certain features at least must have had a symbolic rather than literal significance from the very beginning: the situation of the temple on a "very high mountain" (40:2; hardly true of Mt. Zion, but a common element in the ideology of sacred sites); the dividing up of the land, irrespective of its geographical

features, into perfectly symmetrical parts (tribal allotments; the temple hill); the stream from the sanctuary that begins as a trickle but is soon a mighty river (though, of necessity, without tributaries from outside the sacred area, 47:12). and so on.

Clearly this prophetic vision represents the embodiment of a number of OT ideals: an undisturbed, eternal dwelling of Yahweh in the midst of His people (43:7); the maintaining of perfect justice (45:9-12) in an environment of peace (note the low walls around the temple complex, 40:5!), health, and material abundance (47:12); the maintaining of distinctions between the sacred and the common, the clean and the unclean (44:19, 23, 25, 31, etc.) — indeed, the strict observance of all God's laws (44:24), etc. As a concrete embodiment of ideals this portrayal was clearly intended to serve the purpose of pointing out the dismal way in which Yahweh's people had fallen short of what He demanded, and so bringing them to shame and repentance (43:10f.). To the extent that the fulfillment of these ideals seems to have been expected in the near future (as a reversal of the Babylonian exile, cf. 43:7f.; 44:6-16), this prophetic vision shares a feature (the "near expectation" of the ideal future) with much of biblical prophecy. That the ideal future is ushered in at God's initiative, as an expression of His purposes and undeserved favor, is also significant (cf. 20:40-44).

On the other hand, the ideal temple worship of Ezk. 40–48 contrasted sharply not only with the sanctuary and cultic worship of Israel's past but also with what was in fact achieved in the period of the second temple. The discrepancy did not go unnoticed, and the belief that the prophetic word must nonetheless find its fulfillment led to the expectation — even before the second temple was destroyed — that a new temple must be raised for the eschatological age (cf. Tob. 14:5, where the new temple is to be built "just as the prophets said of it"). For some it was clear that God Himself would have to create such a temple (1 En. 90:28f.; Jub. 1:15-17, 26-29; cf. 25:21; 11QTemple 29:8-10). Indeed, it seems that the ancient idea that earthly sanctuaries are a copy of God's dwelling in heaven (cf. Ex. 25:9; T. Levi 5:1; Rev. 11:19; 14:17; 15:5, etc.) was combined with the expectation of a new and perfect temple in the age to come, so that the ideal sanctuary was seen as descending from heaven to earth at God's appointed time (suggested in 2 Bar. 4:2-7; 6:1-10; 1 En. 25:3?).

III. Zerubbabel's Temple.—*A. Sources.* Our knowledge of the temple of the restoration period is limited because the sources are so meager. From Ezr. 1–6 and the books of Haggai and Zechariah (chs. 1–8) we learn something of the difficulties encountered in the temple's construction and of the importance which the postexilic prophets attached to the undertaking. The temple's later history can be traced in some detail in the apocryphal books of 1 and 2 Maccabees and in Josephus. But for the temple's design we are dependent on references, scattered and incidental, throughout the literature of the period.

B. Construction. Already in his first regnal year (538 B.C.) Cyrus issued a decree by which exiled Jews were allowed to return to their homeland and rebuild the temple of their God. The authenticity of this decree as preserved in Ezr. 1:2-4 (in Hebrew) and 6:3-5 (in Aramaic) has been much discussed. In general terms we may say that such a decree corresponds to known policies of the Persian monarch (cf. the famous Cyrus Cylinder). More specifically, the authenticity of 6:3-5 as an official memorandum is widely conceded. On the other hand, it must be admitted that the terms of 1:2-4 seem to reflect Jewish faith; it is possible, however, that this form of the proclamation was drawn up for the benefit of their fellow countrymen by Jews holding high office in the Persian court.

According to Ezr. 6:4 the cost of the temple construction was to be borne by the royal treasury; and 3:7 states that Cyrus had given orders for the necessary timber to be supplied from Lebanon. Furthermore, the sacred vessels which had been removed by Nebuchadnezzar from Solomon's temple were to be restored to its successor. The stress placed upon this latter detail (Ezr. 1:7-11; 5:14f.; 6:5; 7:19) suggests that it was seen as an important link providing continuity with the worship of preexilic times.

Ezra 1:8-11 indicates that Sheshbazzar was in charge of the first group of exiles who returned to their homeland, and Ezr. 5:14-16 credits him with beginning the work of rebuilding the temple. Elsewhere, however, that honor is given to Zerubbabel (Zec. 4:9), and Sheshbazzar disappears without account from the record. According to Ezr. 3 the returned exiles, led by Zerubbabel and Joshua the high priest, soon erected an altar of burnt offering on the site of its predecessor, and work was begun — under Levite supervision — on the temple itself.

An important note relates that the work was done exclusively by such Jews as had returned from Exile (3:8). In fact, the cooperation of the local inhabitants (the "people of the land" of 4:4, who had been settled there by Assyrian kings, 4:2) was offered but firmly refused. As a result, these "adversaries" (4:1) directed their efforts toward frustrating the work of rebuilding. Their efforts (4:4f.), combined with the apathy of the Jews themselves (cf. Hag. 1:2), resulted in the interruption of the project. (It is important to note that there is no evidence of *official* opposition at this point. A misleading impression has perhaps been created by the introduction of the narrative in Ezr. 4:6-23; this interrupts the story of the temple's rebuilding in order to give a further, though much later, example of the opposition which Jewish construction plans encountered.)

It was first in the reign of Darius that the Jews, led by Zerubbabel and Joshua and inspired by the prophetic words of Haggai and Zechariah, resumed the work of rebuilding the temple (520 B.C.). Their progress led to an inquiry from Tattenai, governor of the province "Beyond the River" (i.e., W of the Euphrates) as to their authorization for building. The work continued, however, while Tattenai sent a report of the matter to Darius (5:7-17). The new king, after searching the royal archives and discovering the terms of Cyrus's initial authorization, gave orders that the work was not to be interfered with, and that funds were to be provided, both for the construction of the temple and the maintenance of its cult, from "the royal revenue, the tribute of the province from Beyond the River" (6:6-12).

Thus in the spring of 515 B.C. the temple was finished "by command of the God of Israel and by decree" of the Persian kings (Ezr. 6:14).

C. Design. That the second temple shared many features with the first may safely be assumed. Indeed, it has recently been suggested that the common view which sees the second temple as vastly inferior to the first (based on texts such as Hag. 2:3; Zec. 4:10; Ezr. 3:12f., all referring, however, to the *early stages* of rebuilding) is an exaggerated one in the light of the support given the project by the Persian authorities.

The dimensions of the temple area are given by Hecataeus (quoted in Josephus *CAp* i.22 [198]) as roughly 150 by 45 m. (500 by 150 ft.). A stone wall marked off the sacred site. According to Josephus (*Ant.* xi.4.7 [108]; xiv.16.2 [476]), there were porticoes within the temple

precincts. The sources contain numerous references to chambers used for storage and the accommodation of temple personnel (Ezr. 10:6; Neh. 10:37-39 [MT 38-40]; 12:44; 13:4f.; 1 Macc. 4:38, 57, etc.). These would have been in the temple courtyards and perhaps also in a structure of side chambers like the one attached to Solomon's temple.

The sanctuary was surrounded by more than one courtyard (1 Macc. 4:48; cf. 9:54). Presumably there was an inner court to which only the priests were admitted (cf. 2 Ch. 4:9; Josephus *Ant.* xiii.13.5 [373]). In it was the altar of burnt offering, made of unhewn stone, square, measuring 20 cubits on each side and 10 cubits high (Josephus *CAp* 1.22 [198]). A laver must also have been present (cf. Mish. *Middoth* iii.6).

The temple itself was built with a layer of timber above (each?) three courses of stonework (Ezr. 6:4; cf. 5:8, and see I.D.1 above). Its dimensions are not known, since the text of Ezr. 6:3 is incomplete and probably corrupt. A veil divided the nave from the innermost sanctuary; since there was more than one veil, we are perhaps to assume one at the entrance to the nave as well (1 Macc. 4:51). The nave contained one golden lampstand (contrast the ten of Solomon's temple), a table for the bread of the Presence, a gold altar of incense, and holy vessels (1 Macc. 1:21f.; 4:49-51). The innermost sanctuary was empty (lacking the ark and cherubim of Solomon's temple), but a stone apparently marked the spot where the ark once lay (Mish. *Yoma* v.2).

D. Significance. 1. Return of Yahweh's Favor. As noted above, the main focus of texts which speak of Yahweh as dwelling in His temple in Jerusalem is the divine favor which rests on His people. To the postexilic community Yahweh's presence in its midst meant the *return* of His blessing: the prophetic word proclaiming that God's glory had been withdrawn from Jerusalem was reversed, and new assurance was given of His love for Zion. Thus the material in Haggai and Zechariah is in some ways simply a repetition of the Zion theology of an earlier day, now, however, as divine promise to a discouraged community. Yahweh will again "choose" Jerusalem (Zec. 1:17; 2:12 [MT 16]; 3:2). He will again dwell in the midst of His people (Hag. 2:4f.; Zec. 2:10f. [MT 14f.]; 8:3), be their protection (Zec. 2:5 [MT 9]), and pour out His blessing upon them (Hag. 2:15-19; Zec. 8:9-15). Indeed, there is an eschatological fervor in the words of the prophets; the rebuilt temple is seen as ushering in an era of prosperity when all nations will seek the God of Jerusalem and bring their treasures to Him (Hag. 2:6-9, 20-23; Zec. 2:8-12 [MT 12-16]; 8:1-8, 20-23).

The return of Yahweh's favor to His people is apparent in Ezra-Nehemiah as well. The cooperation of the Persian kings and their desire to adorn the temple is emphasized throughout (Ezr. 7:13-24, 27; 8:25, 36, etc.); but this was possible only because God had "stirred" their spirits (Ezr. 1:1, no doubt echoing Isa. 41:25) and given His people favor in their eyes (Ezr. 6:22; 9:9).

2. Test of Devotion. Texts from the period of the second temple have a new emphasis. They stress that the way in which God's house is treated is an indication of one's devotion to God Himself and hence a crucial factor in the presence or withdrawal of God's blessing (Hag. 1:5-11; 2:15-19; Mal. 3:10-12; and note 2 Ch. 24:18; 28:24; 29:6f.; 31:21). Evidently there was a great temptation, in times of economic hardship and disappointed expectations, to neglect the temple and to concentrate on one's own affairs. This attitude is apparent from the early days of the return, when Haggai insisted that the priorities of a people who themselves lived in "paneled houses" while Yahweh's house remained "in ruins" must be askew (1:4). Malachi accused his contemporaries of being weary with worshiping God and showing contempt for Him by bringing imperfect sacrifices (1:6-14); he demanded that Yahweh be given the honor which is His due. Nehemiah too was confronted by indifference toward the temple and its personnel (Neh. 13:10-14). The concern expressed in these passages should not be attributed to the narrow-mindedness of authors for whom the external cult has become a matter of paramount importance. Rather, they see in attitudes toward the cult a reflection of attitudes toward God Himself.

3. Problem of Access. Here we may note (though we cannot develop) the problem that arose of deciding who was entitled to participate in the cultic worship of the temple. This, as we have seen, was clearly a crucial issue already at the time of the temple's reconstruction (cf. Ezr. 4:1-3). At stake was, on the one hand, the purity of Yahweh's people from pagan defilement (Ezr. 9:1f.; Neh. 9:2; Isa. 52:1; Joel 3:17 [MT 4:17]; etc.); on the other, the accessibility of Yahweh to all who chose to worship Him, regardless of race or physical disability (cf. Isa. 56:3-8). The several courts of Herod's temple ultimately permitted clear distinctions to be drawn; but they enforced in the process various "walls of partition" which limited access to the courts of God.

E. Later History. A major crisis was provoked by Antiochus IV Epiphanes, the Seleucid king who plundered and desecrated the temple, placing an altar to Zeus Olympus (the "abomination that makes desolate" in Dnl. 11:31) on the altar of burnt offerings (167 B.C.). Three years later Judas Maccabeus recovered control of the temple hill. The sanctuary was repaired and purified before its rededication. The events were celebrated in later years at the Feast of Hanukkah.

In 63 B.C. the temple was again defiled, this time by the entrance of the Roman general Pompey. He did not, however, remove any of the temple's treasures (Josephus *BJ* i.7.6 [152f.]; *Ant.* xiv.4.4. [71f.]). Nine years later the temple was plundered by Crassus (*BJ* i.8.8 [179]; *Ant.* xiv.7.1 [105-109]). Herod caused some destruction of the temple walls when he stormed Jerusalem in 37 B.C. (*Ant.* xiv.16.2 [476]).

F. Qumrân and the Temple. The attitude of the Qumrân sectarians toward the temple in Jerusalem may properly be noted here, since the origins of the sect date from the time when Zerubbabel's temple was still in use. Unfortunately a number of crucial texts are ambiguous. On the one hand, some passages in the Damascus Document seem to presuppose (because they regulate) participation in the Jerusalem cult (9:14; 11:17f.; 16:13; etc.). On the other hand, the Qumrân writings contain passages which speak of the temple's defilement (CD 4:18; 5:6; 20:23; 1QpHab 12:8f.; cf. also Jub. 23:21), roundly condemn the "wicked priests" responsible for the cult (1QpHab 9:4f.; 11:12-14), and appear to indicate the withdrawal of the Qumrân sectarians from any part in it (CD 6:11-16; 11:19-21). A frequent suggestion is that the sectarians at one time participated in the temple worship but were later cut off (or cut themselves off) from it. Clarity on the issue is not aided by Josephus, for the crucial passage in which he discusses the Essenes' relationship with the temple (*Ant.* xviii.1.5 [19]) suffers from textual uncertainty.

Perhaps because at some time in their history the Qumrân sect withdrew from the Jerusalem temple, the sectarian writings frequently emphasize the more "spiritual" aspects of divine service which might be thought to replace cultic worship (1QS 8:4-10; 9:3-5; 4QFlor 1:6f.). Already in the OT a number of texts denounce abuses of the

temple ritual and stress that what is really crucial lies elsewhere: in the maintaining of justice, the showing of compassion, the attitude of the heart toward God, obedience to His will, etc. (Ps. 50:23; 51:15-17 [MT 17-19]; 69:30f. [MT 31f.]; 141:2; Isa. 1:10-17; Jer. 7:21-23; Hos. 6:6; Am. 5:21-27; Mic. 6:6-8). Naturally pious people cut off from the national sanctuary would emphasize such texts. Indeed, some texts speak of the Qumrân community as itself forming the divine sanctuary: the Aaronites were a kind of "holy of holies," while the rest of the community was the equivalent of the holy place. Here atonement was made for the sins of Israel and acceptable worship was offered (1QS 5:1-6; 8:5-10; 9:3-6).

These texts must not, however, be taken to indicate that the Qumrân sectarians had come to "spiritualize" worship in any ultimate way. Their exclusion (if such it was) from the Jerusalem sanctuary was a temporary necessity during a darkened age, but full participation was certainly envisaged once the "sons of light" had prevailed (cf. 1QM 2:1-6). Of particular interest in this context is the Temple Scroll (11QTemple). Written in the 1st person singular as part of God's revelation to Moses on Mt. Sinai, the scroll describes in detail the temple, with its courtyard and cult, as it was one day to be established. Yet it is not the temple of the age to come that is described, for the latter is clearly distinguished from the one here portrayed; it is said that God Himself will create the temple of that day and dwell in it forever (29:8-10). Instead we are dealing with the Qumrân conception of the temple as it should have been, presented as divine instruction to Moses, but in fact the result of an elaborate sifting and amalgamation of the various descriptions of sanctuaries in the OT, all from the sect's own peculiar perspective.

In the very fragmentary section dealing with the temple building itself, a number of elements are familiar: an apparently tripartite sanctuary with a vestibule in front; side chambers in a structure surrounding the temple; a veil (of gold!) separating the nave from the innermost sanctuary; a lampstand, table for the bread of the Presence, altar of incense, and ark with mercy seat and cherubim. The temple is to be surrounded by three courtyards, each a perfect square. The inner court, accessible only to priests, is surrounded by a wall with a gate in the middle of each of its four sides. Columns run along the inside of the wall, and between the columns and wall are tables and chairs for the priests. Within the inner court, east of the temple, is the altar of burnt offering. To the north of this is the "House of Slaughter" (for the slaughtering of animals). To the northwest of the temple is the "House of the Winding Staircase," the upper story of which is connected to the upper story of the temple. Behind the temple (i.e., to its west) are freestanding pillars in two areas (called the *parwar*), where sacrificial animals for the priests and for the people are kept strictly separated from each other. To the southeast of the temple building are the House of the Laver (where priestly garments are deposited) and the House of Vessels (for storing vessels).

The middle court is entered by twelve gates (one for each of the twelve tribes of Israel), three on each side. It is to be accessible only to Israelite men over twenty years of age who have paid their half-shekel fee for the maintenance of the temple. The outer court, which again has twelve gates, is accessible to ritually clean Israelite men and women and to the descendants of proselytes in the third generation. Further isolating the temple from all that might defile is a moat 100 cubits wide surrounding the outside temple wall on all sides. Indeed, the temple city itself, in which presumably the temple is the center, is to maintain the purity standards of the Israelite "camp" in the wilderness.

IV. Herod's Temple.—A. Sources. Descriptions of Herod's temple are to be found both in Josephus (*BJ* v; *Ant.* xv) and in rabbinic literature (primarily in Mish. *Tamid* and *Middoth*). Josephus had the advantage of firsthand knowledge of the temple, though it must be remembered that he was writing after its destruction — thus under the obvious limitations of human memory — and with a patent desire to impress. The accounts in rabbinic literature, though written much later, draw on traditions originating with those who had seen the temple. Again, however, their accuracy is limited by what people could remember (note the engaging remark of Rabbi Eliezer ben Jacob in Mish. *Middoth* ii.5: "I forget for what [a certain chamber] was used") as well as by the rabbis' familiarity with the OT accounts of sanctuaries, which tended to color their descriptions. Hence though we may draw on these accounts with some confidence for the general features of Herod's temple, the discrepancies between them and the limitations which accompanied their recording leave us in some doubt as to details. The inevitable attempt will be made below to derive from the various sources a composite picture of Herod's temple; but the reader should bear in mind the imperfections of our sources throughout.

The information we derive from the literary sources can at times be corroborated or supplemented by the results of archeology. To be sure, the site of Herod's temple itself is inaccessible to the archeologist since an Islamic shrine (Ḥaram esh-Sherîf) now occupies it. But a good deal can be learned of the walls which surrounded the temple area, with their gates and porticoes. The more important of these results will be noted below.

B. Construction. Work on the temple began in Herod's eighteenth year, 20-19 B.C. (so *Ant.* xv.11.1 [380]; according to *BJ* i.21.1 [401], it was 3 years earlier). Josephus stated that the temple building itself (*ho naós*) was built in a year and a half, whereas the courts and porticoes required eight years (*Ant.* xv.11.5f. [420f.]). On the other hand, a later reference (*Ant.* xx.9.7 [219]) suggests that work on the temple precincts (*to hierón*) was not completed until the early 60s A.D. Perhaps the latter reference includes repair work and further ornamentation of the temple area which were not taken into account in the other passages. Similarly, Jn. 2:20 may refer to such repair work and ornamentation ("It has taken forty-six years to build this temple [*naós*]": *naós* usually refers to the temple building itself, but the term is required in this context by Jesus' words in 2:19, and it is possible that its usage in v. 20 should be understood as including the whole temple area). Interpreted strictly, the Greek verb indicates that the temple "was built" in forty-six years; but some scholars prefer a looser rendering by which the temple "has been (and still is) in the process of being built" forty-six years after its commencement.

Josephus tells us that Herod went to great trouble to ensure that the temple cult would not be disrupted during the construction work, and that priests would be trained to do the necessary masonry and carpentry in areas to which they alone had access (*Ant.* xv.11.2 [390]). He also tells of the work that was done to enlarge the temple area (*BJ* i.21.1 [401]; v.5.1 [184-89]; *Ant.* xv.11.3 [396-400]). This expansion has found corroboration in excavations at the site. The original area of the temple mount was in fact doubled with the construction of giant supporting walls and the filling in of the intervening spaces, creating a level surface for the (roughly) rectangular temple plat-

form. The leveling process required the lowering of the temple hill in its northwest corner and the filling in of the Tyropoeon Valley to the west and of a valley running southeast to the Kidron. The rock surface at the southeast corner of the temple area was raised about 30 m. (100 ft.) with stones and earth. Above this rise were built huge stone vaults (like "Solomon's stables" which can be seen today) to support the platform.

C. Design. 1. Temple Hill. The temple area was enclosed by a wall. According to Josephus (*Ant.* xv.11.3 [400]), each side was about 180 m. (600 ft.) long (500 cubits, according to Mish. *Middoth* ii.1, though here we may suspect the influence of Ezk. 42:20). The Fortress Antonia was enclosed within this outer wall, in the northwest corner (*BJ* v.5.2 [192]). On three sides (the east, south, and west) the enclosure of the present Ḥaram esh-Sherîf coincides with that of Herod's temple area. The north wall probably began a little to the north of the present Golden Gate. Parts of Herod's wall can be seen to this day, primarily in the lower levels of the (western) Wailing Wall, and in the huge stones (cf. Mk. 13:1) in the southeast corner of the Ḥaram wall. The latter corner, where the top of the wall rises to a "dizzying" height above the valley below (*Ant.* xv.11.5 [412]), is the traditional location of the "pinnacle of the temple" (Mt. 4:5 par.). Since the term for "temple" here is *hierón* (i.e., the whole temple area rather than the temple building itself), this tradition remains a possibility. But nothing more definite can be said than that some high point within the temple area is indicated.

An inscription found among the debris near the southwest corner indicates that, on a tower rising above the wall in this vicinity, a priest would stand to blow a trumpet, announcing the beginning of sabbath (cf. *BJ* iv.9.12 [582]; Mish. *Sukkoth* v.5; *see* picture in ARCHEOLOGY OF PALESTINE AND SYRIA).

The various references to gates leading through the outer wall are not easy to reconcile. Josephus mentions no gate on the northern side, whereas Mish. *Middoth* i.3 (cf. ii.3) refers to the Tadi Gate — two stones leaning against each other, without a lintel — but says it was not used. On the western side *Middoth* mentions only a Kiponus Gate (according to Mazar, this is today's Barclay's Gate, parts of which remain fairly well preserved). Josephus mentions four gates on the west, and this is confirmed by archeological study. One gate opened from the portico inside the western wall onto a causeway which crossed the Tyropoeon Valley and thus linked the Upper City of Jerusalem with the temple mount. This was at the site of what is today called Wilson's Arch. One gate (at the site of the Warren Gate) lying to the north of this, and one to its south (Barclay's Gate) led from a paved street (running along the outside of the western wall of the temple area) into underground passages which ran beneath the western wall and emerged in the temple courts. The gate furthest south opened from the portico onto what is now called Robinson's Arch. This "arch" was once thought to be a bridge connecting the temple mount with the Upper City; in fact it spanned the paved road which ran alongside the western wall, then descended by way of a stairway to the street below.

Josephus mentions gates on the southern side but does not specify their number (*Ant.* xv.11.5 [411]). *Middoth* refers to two Huldah gates used for public access to the temple area: pilgrims would enter by one gate and exit by the other (i.3; ii.2; cf. Ezk. 46:9). Again, archeology has provided important corroboration for the literary evidence.

Two large stairways led from a broad plaza below to a paved street running along the outside of the south wall of the temple area. The stairway to the west was 65 m. (215 ft.) wide; it ascended some 7 m. (22 ft.) by thirty steps and led up to the western of the two Huldah gates. This gate, also called the Double Gate because of its two arched entrances, was 13 m. (43 ft.) wide. A similar stairway would have led up to the eastern Huldah Gate. The latter was about 15 m. (50 ft.) wide and is also called the Triple Gate, since it evidently had one broad portal flanked on each side by a smaller one. Between the two

A limestone block inscribed "place of the trumpeting" found in the southwest corner of the temple mount (Israel Exploration Society)

The Wailing Wall with Wilson's Arch in the corner (W. S. LaSor)

stairways were a number of ritual baths for the purification of worshipers entering the temple area (*see* MIKVAH). The gateways opened into underground passages which ran beneath the south wall and emerged in the Court of the Gentiles.

Middoth mentions a gate through the eastern wall of the temple area on which was portrayed the palace of Shushan (i.3). It was used by the high priest and his assistants during the ceremony of the red heifer (cf. Mish. *Shekalim* iv.2; *Parah* iii.6). Today's Golden Gate, built much later, is perhaps the successor of the Shushan Gate, though the latter was probably further to the south.

Near the southeast corner of the temple area, in the upper part of the eastern wall, is the remnant of an arch, the counterpart to Robinson's Arch on the western side. It would also have supported a stairway ascending from a road skirting the eastern wall.

At the corners and gates of the outer wall surrounding the temple area Levites stood guard to ensure the ritual fitness of those who entered (Mish. *Middoth* i.1).

2. Court of the Gentiles. The outermost court was that of the Gentiles. Porticoes enclosed the court on all sides, running along the inside of the wall which surrounded the temple area. On three sides (the west, north, and east) the porticoes were 30 cubits broad and had two rows of columns. Each column was made of a single block of white marble some 25 cubits high (*BJ* v.5.2 [190]). The portico on the east side was known as Solomon's (Jn. 10:23; Acts 3:11; 5:12; cf. *BJ* v.5.1 [185]; *Ant.* xx.9.7 [221]). The famous Royal Portico was on the south side (*Ant.* xv.11.5 [411-415]). Here there were three aisles between four rows of columns, a total of 162 columns in all. Each column was 8 m. (27 ft.) high and had a circumference equal to the outstretched arms of three men. Their capitals were ornamented in the Corinthian style. According to Josephus, the two outside aisles were 9 m. (30 ft.) wide, 180 m. (600 ft.) long, and over 15 m. (50 ft.) high; the middle aisle was twice as high and one and a half times as broad. Panels of cedar with ornamental carvings were used for the ceiling. Many remains have been found from the Royal Portico; their decorations show floral and geometrical designs but no human or animal figures.

The Court of the Gentiles was paved with stone (*BJ* v.5.2 [192]). The dimensions given in *Middoth* would indicate that the open area of the court was greatest to the south and east. The placing of the temple building and the inner courts left much less space to the north and west.

Gentiles as well as Jews were admitted to this outer courtyard. Those excluded were men or women suffering a "discharge" (cf. Lev. 15), women during their periods of menstruation, and women who had not yet been purified after childbirth (Mish. *Kelim* i.8). In the porticoes surrounding the court teachers would address the crowds or engage in discussions (e.g., Mk. 11:27 par.; 12:35 par.). The Court of the Gentiles was the site of Jesus' cleansing of the temple, since here animals needed for sacrifice were sold and moneychangers changed current coinage into the Tyrian shekel required for temple dues.

At the northwest corner of the outer court was a stairway which descended from the Antonia fortress (*BJ* v.5.8 [238-246]). The southeast turret of the fortress provided a view over the whole temple area, enabling the Roman soldiers quartered there to oversee what was going on below and, if need be, to descend by the stairs and intervene to maintain order (cf. Acts 21:30-36).

3. Court of Women. Dividing the Court of the Gentiles from the inner courts (of Women, Israel, and the Priests) was a stone balustrade which, according to Josephus, was 3 cubits high (*BJ* v.5.2 [193]; cf. *Ant.* xv.11.5 [417]; but 10 handbreadths, or about 75 cm. [2½ ft.], high according to *Middoth* ii.3). Along this balustrade at regular intervals were placed slabs with inscriptions in Greek and Latin forbidding Gentiles, on pain of death, to go further (*see* picture in INSCRIPTIONS). It has often been suggested that Eph. 2:14 (the "dividing wall of hostility") contains an allusion to this barrier (cf. also Acts 21:28f.; 24:6). According to Mish. *Kelim* i.8 Jews unclean through contact with a corpse were also forbidden to go beyond this barrier.

Within the balustrade were fourteen steps (*BJ* v.5.2 [195]; cf. *Ant.* xv.11.5 [417]). Beyond these a level terrace stretched for 10 cubits. Then five more steps (on the north and south sides, but fifteen on the east, *BJ* v.5.3 [206]) led up to the gates which passed through walls 25 cubits high into the inner courts. (So Josephus; Mish. *Middoth* ii.2 refers to the terrace or "rampart," 10 cubits broad, but then speaks of twelve steps from the rampart to the gates on the east side of the Court of Women.)

Josephus mentions nine gates leading through the wall and into the inner courts: four on each of the north and south sides and one on the east. (The wall on the western side had no gates leading through it, *BJ* v.5.2. [200].) Since the Court of Women occupied the eastern part of the area marked off for the inner courts, of these nine gates it was only the one gate on the east side and the gate furthest east of the four on each of the north and the south sides that opened into it (cf. *BJ* v.5.2 [198f.]). The Court of Women also had a gate on its western side (the Nicanor Gate of rabbinic tradition) leading into the Court of Israel.

These gates were all overlaid with gold and silver, with the exception of the gate on the east side of the Court of Women, which was of Corinthian bronze. So at least Josephus appears to say (*BJ* ii.17.3 [411]; v.5.3 [201]), though many think his one exception refers to the Nicanor Gate which, according to rabbinic tradition, was on the *western* side of the Court of Women and was made of bronze (cf. Mish. *Middoth* ii.3). It is usually assumed that the famous bronze gate would have been the Beautiful Gate of Acts 3:2, 10, but, because of the apparent discrepancy noted in our sources, it is debated whether this gate was the one on the eastern or the western side of the Court of Women. We may also note here that mothers brought the necessary offering for their purification after childbirth to a priest at the Nicanor Gate (Mish. *Sotah* i.5); hence it is here that the incident in Lk. 2:22-24 would have taken place. (*See* picture in GATE, BEAUTIFUL.)

The Court of Women formed a square, each side measuring 135 cubits; so Mish. *Middoth* ii.5. The same text

refers to unroofed chambers in the four corners of the court (cf. Ezk. 46:21f.). The Court of Women was the scene of great festivity at night time during the Feast of Tabernacles (cf. Mish. *Sukkoth* v.2-4); hence a gallery was erected from which women could observe what happened while the men watched below.

Rabbinic tradition refers to thirteen boxes ("Shofar-chests") placed in the temple in which various offerings could be deposited (Mish. *Shekalim* vi.5). It is usually thought that the "treasury" in Mk. 12:41 par. refers to one of these boxes; if so, they must have been placed in either the outer court (i.e., of Gentiles) or the Court of Women, since a woman had access to it. On the other hand, the "treasury" of Jn. 8:20 may refer to one of the treasury chambers which, according to Josephus (*BJ* v.5.2 [200]; vi.5.2 [282]; *Ant.* xix.6.1 [294]) ran along the inside of the wall surrounding the inner courts. (Jesus would have been "near," not "in," such a chamber.)

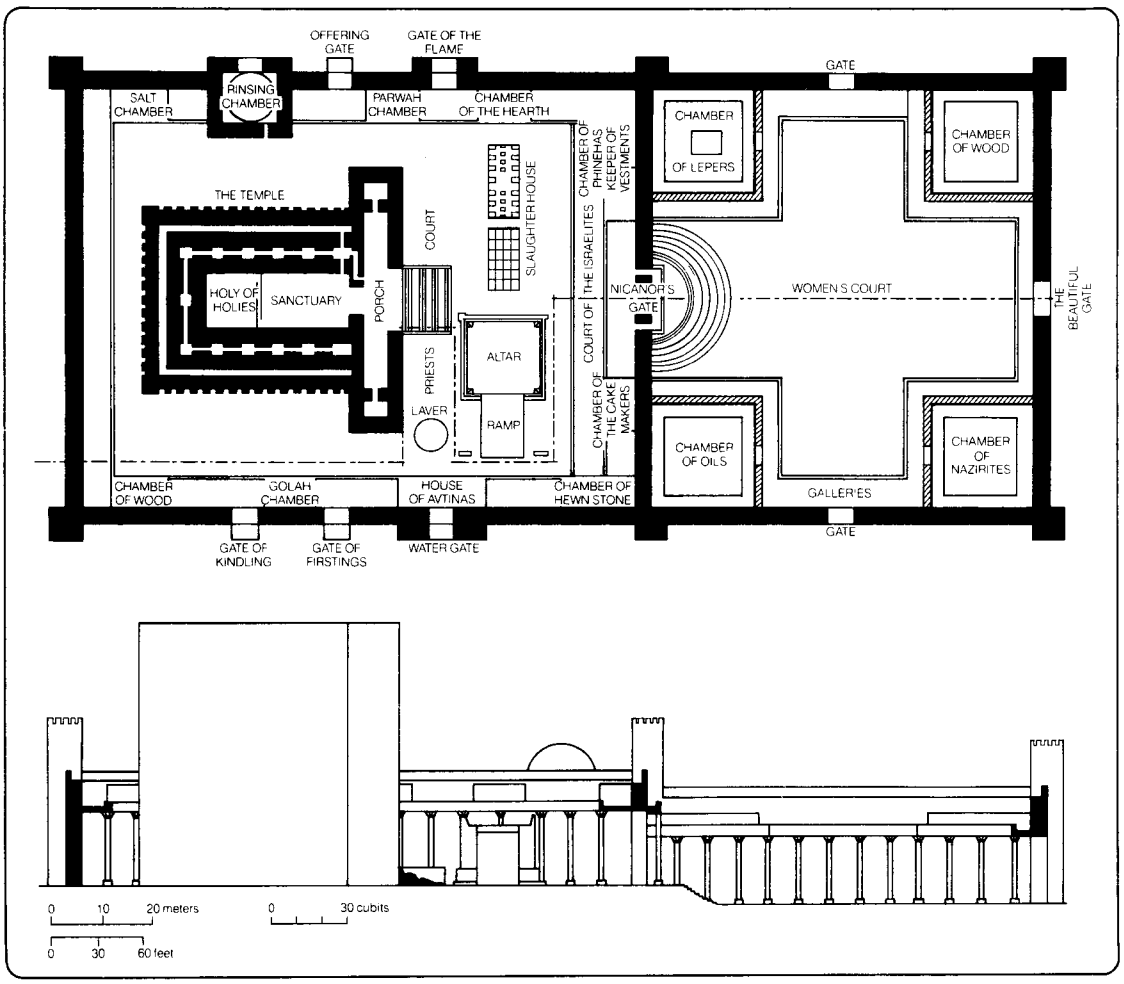
Just as there were porticoes (double and triple) along the inside of the wall surrounding the Court of the Gentiles, so there was a portico with a single row of columns along the inside of the wall surrounding the inner courts, including the Court of Women.

The Court of Women was for the Jews an area of still greater sanctity than the Court of the Gentiles and the rampart that surrounded the inner courts. According to Mish. *Kelim* i.8 no one was allowed to enter it on the day on which he had immersed himself for purification (since his purification was not complete until evening). Josephus speaks in general terms, saying that male Jews were allowed to enter, as were women Jews who were in a state of ritual purity (*CAp* ii.8 [103f.]).

4. Courts of Israel and of the Priests. As we have seen, the Nicanor Gate of rabbinic tradition led from the western side of the Court of Women into the Court of Israel. According to *Middoth* ii.5 fifteen steps, built in a semicircle, led up to the gate; on these the Levite choir used to stand to sing. Chambers located beneath the Court of Israel and opening onto the Court of Women were used for the storage of the Levites' musical instruments (ii.6).

According to *Middoth* ii.6 the dimensions of the Court of Israel were 135 cubits from north to south, but only 11 cubits from east to west. (It is possible, however, that the area accessible to Israelite males included strips to the north and south of the sanctuary up to a barrier beyond which the laity was not permitted; cf. *BJ* v.5.6 [226]). To this court were admitted only ritually pure Israelite men (Mish. *Kelim* i.8; *BJ* v.5.6 [227]; *CAp* ii.8 [103f.]). Here Israelite men would crowd on the afternoon of Nisan 14 for the slaughtering of the Passover lambs.

A plan of Herod's temple, adapted from *Encyclopedia Judaica*, 15 (1971), s.v. "Temple," p. 962



Here too they would gather for worship and prayer, especially at the time of the daily offerings (cf. Lk. 1:21f.; 18:10; Acts 3:1).

A low stone barrier, about a cubit high, divided the Court of Israel from that of the Priests (*BJ* v.5.6 [226]; cf. Mish. *Middoth* ii.6). Normally, lay Israelites were not allowed beyond this marking (for exceptions, see Mish. *Kelim* i.8). According to Mish. *Middoth* ii.6 (cf. v.1) the latter court too was 135 cubits from north to south, and only 11 cubits from east to west; but so narrow a strip is obtained only by distinguishing it from the altar area (the next 32 cubits from east to west) and a space of 22 cubits leading up to the sanctuary itself. These latter areas were also accessible only to the priests.

Since four gates led into the inner courts from both the north and the south sides, and only the easternmost of these opened into the Court of Women, it follows that three gates opened into the "Temple Court" (the *ʿazārâ*, i.e., the Court of Israel and the Court of the Priests) on both the north and south sides. These are listed in Mish. *Middoth* i.4. (Cf., however, Mish. *Middoth* ii.6 and *Shekalim* vi.3, where more gates are listed.) For the chambers between the gates, see *Middoth* v.3f. The chamber furthest east on the south side, traditionally rendered the "Chamber of Hewn Stone," is the traditional site for the gathering of the Sanhedrin (Mish. *Sanhedrin* xi.2; *Middoth* v.4); but a location on the western boundary of the temple hill is more likely.

As we have noted, the great altar for burnt offering was located according to Mish. *Middoth* v.1 just to the west of the narrow 11-cubit strip of the Court of the Priests. Josephus gives its dimensions as 50 cubits long and wide, and 15 cubits high (*BJ* v.5.6 [225]). According to *Middoth* iii.1 it was 32 cubits square at the base and tapered toward the top in several stages. Priests would approach the altar by way of a gentle slope on its southern side, 32 cubits long and 16 cubits wide (Mish. *Middoth* iii.3). To the north of the altar was the area in which animals were slaughtered, with six rows of four rings in which the animals were tied, eight pillars with iron hooks for hanging the slaughtered beasts, and marble tables between the pillars on which the animals were flayed. West of the altar and somewhat to the south was the laver in which priests washed their hands and feet.

5. Sanctuary. The temple building itself was approached by twelve steps (*BJ* v.5.4 [207]; according to *Middoth* iii.6, the twelve steps were in three groups, separated by terraces). At its front, the temple was 100 cubits wide and high, but behind the vestibule it was 20 cubits narrower on each side (*Middoth* iv.7: 15 cubits). The vestibule itself was 11 cubits from east to west, according to *Middoth* iv.7, perhaps following Ezk. 40:49 (MT); Josephus gives the measurement as 20 cubits, perhaps including the thickness of the walls. Behind the vestibule came the nave, 40 cubits from east to west, 60 cubits high, and 20 cubits wide (*BJ* v.5.5 [215]). Here were placed the lampstand with its seven lamps, the table for the bread of the Presence, and the altar on which incense was offered each morning and evening (cf. Zechariah's task in Lk. 1:9). Behind the nave was the innermost sanctuary, the holy of holies, a cube measuring 20 cubits on all sides, completely empty, and accessible only to the high priest on the day of atonement.

According to Mish. *Yoma* v.1 (cf. *Middoth* iv.7) two curtains a cubit apart from each other separated the nave from the holy of holies. The "veil" is described in Mish. *Shekalim* viii.5 as being one handbreadth thick, and measuring 40 cubits by 20. A wall 6 cubits thick divided the vestibule from the nave (*Middoth* iv.7). This wall was penetrated by the great temple gate (cf. Mish. *Tamid* iii.7f.), which had a wicket entrance on each side, though that to the south was never used. Above the gate were the famous golden vines with their enormous clusters of grapes. In front of this gate was another curtain of Babylonian tapestry. There is some debate whether the "curtain of the temple" of Mk. 15:38 par. refers to the curtain at the entrance to the nave or to the one which separated the nave from the holy of holies. Commentators usually decide the issue on the basis of the significance they attach to its being torn: when it is seen as foreshadowing the destruction of the temple, the curtain at the nave entrance is preferred, since such an omen should have taken place in public view; if, however, the rending of the veil is symbolic of the free access into God's presence made possible by Jesus' death (cf. He. 10:20), then the veil between the nave and the holy of holies is to be preferred.

Along the two sides and back of the temple building were chambers in three stories, rising to a height of 60 cubits (*BJ* v.5.5 [220f.]). The lowest story was 5 cubits wide, the middle 6, and the uppermost 7. There were fifteen chambers on each of the north and south sides, eight on the west (Mish. *Middoth* iv.3).

The literary sources tell little of the front (facade) of the temple. Perhaps we may infer from representations of the temple on coins from the Bar Cochba period that there were four pillars. The entrance to the vestibule (70 cubits high, 25 wide, according to *BJ* v.5.4 [208]; 40 cubits high, 20 wide, according to *Middoth* iii.7) had no doors, allowing view of the curtain at the entrance to the nave. The temple exterior was adorned on all sides by massive plates of gold. Where there was no gold overlay the enormous white stones used in the temple construction could be seen (*BJ* v.5.6 [222-24]). Sharp golden spikes protruded from the roof to prevent birds from sitting on and polluting the roof.

See Vol. II, Plate 43; *see also* picture in HEROD.

D. Significance. 1. For Judaism. According to an ancient saying preserved in Mish. *Aboth* i.2 the world is "sustained" by three things: the law (Torah), the temple service, and deeds of loving kindness. Here in a nutshell we see both the great significance of the temple for Judaism and one of the reasons why Judaism was able to survive its destruction.

Throughout its history the Jerusalem temple was the focal point of religious interest for Jews wherever they were living. Here was carried on the cultic worship given to Moses on Mt. Sinai. Admittedly, the temple priesthood in the first century seems largely to have been Sadducean, and the Sadducees had little popular support. Yet only extremist groups (as, perhaps, the Qumrân community) withdrew their support from the temple. The Pharisees, for all their differences with the Sadducees, nonetheless remained stoutly loyal to the temple cult, since it was so important a part of the divine law which guided their lives. And from all over the world Jews would gather at the temple in Jerusalem to observe the pilgrimage feasts (cf. Acts 2:9-11). Jewish writings of the period evince not only loyalty to the temple but great pride in its sanctity and splendor.

And yet Judaism survived the destruction of the temple at the culmination of the war with Rome in A.D. 70. Though we cannot enter a study of the later period here, it should be noted that several important factors already in Judaism of the second temple period provided a basis for continuity after the temple's destruction: the local synagogues, which had long since become the decisive center for religious instruction and worship for most Jews; the study

of Torah and the attempt by the faithful to conduct each area of their lives in strict obedience to its prescriptions; the awareness that the crucial matter in one's worship of God was not the externalities of cult but the attitude of the heart; and the hope of Israel's redemption, which continued even after Israel's sanctuary was destroyed.

2. For the NT. NT references to the temple may be summarized under three headings: (a) reverence for the temple as a divine institution; (b) criticism of current abuses of temple worship, together with the expectation that judgment would fall on God's recalcitrant people — a judgment which would include the temple's destruction; and (c) substitutes for the Jerusalem temple and its cult made possible under the new dispensation.

(a) In many ways, the NT shows Jesus and the early Jewish Christians as faithful adherents to the temple and its worship. Jesus is said not only to use the temple as a forum for His teaching (and healing, according to Mt. 21:14), but also to go up to (the temple in) Jerusalem at festival times (Lk. 2:41f.; Jn. 2:13; 5:1; 7:10, 14; 10:22f.; cf. also Paul, in Acts 20:16). The saying in Mt. 5:23f. presupposes the propriety of bringing gifts to the altar; Mt. 5:35 affirms the OT belief that God is resident in a peculiar sense in Jerusalem; and Mt. 23:21 is an even more emphatic insistence on the sanctity of the temple as the divine dwelling-place.

Of all the NT writers, it is Luke for whom temple worship plays the most significant role — naturally enough, for it was clearly his conscious design to portray Christian faith as the legitimate successor of OT piety. Luke's Gospel begins and concludes in the temple (1:9; 24:53). Much of the infancy narratives takes place at the temple (1:8-23; 2:22-38, 46-50). The faithfulness of Zechariah, Joseph, and Mary to the temple worship, and the "temple piety" of Simeon and Anna exemplify expectant Jewish faith at its best. Even after the resurrection of their Lord, the disciples find it appropriate to praise God in the temple and to participate in its services (Lk. 24:53; Acts 2:46; 3:1; 5:12, 42; cf. 21:26; 22:17).

Perhaps the most striking demonstration of reverence for the temple is found in the various accounts of the temple "cleansing." Whatever the specific abuses may have been which Jesus' actions were intended to correct, it is clear that he was motivated by "zeal" for God's house (Jn. 2:17).

(b) It is difficult, however, to be more precise about the wrongs which Jesus was attacking. Was it the fact that trade of any kind was being conducted in the temple, as Jn. 2:16 and the apparent allusion to Zec. 14:21 would imply? Was it dishonesty and greed on the part of the traders and moneychangers (thus perverting an otherwise legitimate practice), as the reference to a "den of robbers" (Mk. 11:17 par.) would suggest? Or was it the misappropriation for economic transactions of the one courtyard where Gentiles could worship, thus depriving the temple of its significance as a "house of prayer for all the nations" (cf. Mk. 11:17)? It is even possible that Jesus was acting in conscious fulfillment of such prophecies as Zec. 14:21; Mal. 3:1, and intended to offer a messianic alternative to the corrupt temple practices of the day. We cannot be sure.

There is a measure of uncertainty regarding Jesus' prophecy of the temple's destruction as well. The saying in Mk. 13:2 par. is clear enough (cf. also Mt. 23:38 par.). But according to Matthew (26:60f.; cf. 27:40) and Mark (14:57f.; cf. 15:29), Jesus was accused by "false" witnesses of having said that He would (so Mark; Matthew: He was "able to") destroy the temple (Mark: "made with hands") and in three days build another (Mark: "not made with hands"). The Evangelists must have understood the reference to "three days" as applying to Jesus' resurrection (so also Jn. 2:19-22). It is therefore possible that the new "temple not made with hands" should be understood as Jesus' resurrection body; alternatively, the words may contain an implicit claim that Jesus would be replacing the material temple with the new, spiritual temple of His Church (see below). On either understanding we may wonder why the Evangelists would have considered the testimony of Mk. 14:58 to be "false." Probably it is because Jesus is falsely accused of saying that *He would destroy* the temple, whereas in fact He only announced its destruction as part of God's impending judgment over Israel.

In Acts 6:13f. Stephen is charged by "false witnesses" with saying that Jesus of Nazareth would "destroy this place" (i.e., the temple). While Stephen's defense (7:2-53) contains no direct reference to the charge, he does appear to denounce Solomon's building of a "house" rather than a "tabernacle" (RSV "habitation," 7:46). Presumably this is because a tabernacle would have been more in keeping with the "tent of witness" which had been erected according to a divine plan (7:44); furthermore, a "house" perhaps suggested a permanent divine residence at a local sanctuary, whereas God cannot be so confined (7:48-50; cf. 17:24). Whatever the background of these charges, it is difficult to believe that Luke would have understood them to be a criticism of the temple per se; in Luke's intention at least, contemporary misunderstandings of the divine sanctuary would have been attacked.

(c) Implicit in the claim that Jesus would replace the temple "made with hands" with one "not made with hands" (Mk. 14:58) is the conviction that the Jerusalem temple, whatever role it may once have played in the divine economy, was due to be replaced in the new order brought about by Jesus. The inadequacy of the old order and the superiority of the new are apparent in Mt. 12:6 ("something greater than the temple is here") as well. This theme finds emphatic statement in Jn. 4:20-24. Worship at the temple in Jerusalem was doubtless part of God's purpose at one time, for in the statement that "salvation is from the Jews" (4:22) Jesus in part sides with the Jews in their dispute with the Samaritans over the legitimate cultic site (cf. v. 20). But such a worship belongs in any case to the past, for "the hour is coming, and now is, when the true worshipers will worship the Father in spirit and truth." These verses should not be understood as an argument in principle for the superiority of "spiritual" (or internal) to material (external) worship. What is being affirmed is rather that, with the coming of Jesus (the "truth") into the world, the old order of worship is done away and replaced by the worship of those who come to God through His Son (cf. 1:17).

In the NT epistles we meet the conviction that the individual Christian (1 Cor. 6:19; 2 Cor. 6:16?) or the Church of Christ as a whole (1 Cor. 3:16f.; Eph. 2:19-22; 1 Pet. 2:5; cf. Mt. 16:18; Rev. 3:12) represents the "temple of God," because here God's Spirit has taken up residence. Curiously, this conviction, which represents the culmination of a great biblical theme — the dwelling of God in the midst of His people — is never itself the subject of discussion but is merely the assumed common ground on which further argumentation is based: that the one who disrupts the unity of the Church will be punished as a destroyer of God's temple (1 Cor. 3:16f., in the context of 1:10–3:23); that the "temple of the Holy Spirit" must not be used for immorality (1 Cor. 6:12-20) or brought into compromising links with unbelievers (2 Cor. 6:14–7:1); that the temple of God is made up of Gentiles as well as Jews (Eph. 2:11-22); that it is the "spiritual

sacrifices" offered in the "spiritual house" made up of believers that are acceptable to God (1 Pet. 2:5). Yet if a measure of obscurity surrounds the origin of this conviction, the OT roots are nonetheless clear (cf. Ezk. 11:19; 36:26f.; 37:26f.; Ps. 118:22; Isa. 28:16), and the identification of the Church of Christ with God's temple is in fact not a great leap from basic Christian positions: that the OT sacrificial system (and with it the temple in which it was carried on) is done away by the perfect sacrifice of Christ; that the gift of God's indwelling Spirit to each believer is a mark of the new age; that God is living and active in the midst of the community of His redeemed people. There is thus no need to suggest that the (rather distant) parallel by which the Qumrân community saw itself as God's temple (cf. III.F above) was the origin of Christian teaching on this point.

  A. Gezer
  B. Dan

I. Introduction.–A temple is a building with a cultic function. The distinction must be preserved between the temple institution, conceived of as the god's dwelling place, and the so-called high place (Heb. *bāmâ*, pl. *bāmôt*) or "cultic open place," which usually does not consist of elements of architecture except perhaps for an enclosure wall around the sacred area (see H. H. Nelson, A. L. Oppenheim, and G. E. Wright, "Significance of the Temple in the Ancient Near East"; M. Haran, "Temples and Cultic Open Areas as Reflected in the Bible," in Biran, ed., *Temples*, pp. 31-37). This article will survey the major Palestinian (Canaanite) temples from the Chalcolithic period through the Iron Age. (For discussion of the Jerusalem temple, *see* TEMPLE.) The order of presentation is by chronology and by site, i.e., although the basic organization is by archeological period, a site's total horizon of temple architecture will be presented, beginning with the earliest temple.

Several surveys of Palestinian temples, including classification systems of temple types, are available. Dated, though still of value, are the articles by M. V. Seton Williams and G. R. H. Wright. More recent studies include

TEMPLES

A. Mazar, *Excavations at Tell Qasile, I* (1980); M. Ottosson; and E. Stern, *Excavations at Tel Mevorakh, II: The Bronze Age* (1984), pp. 28-39.

II. Chalcolithic Period.–*A. Enclosure of En-gedi.* On a hill terrace, high above the spring of En-gedi, was discovered a building complex that has been identified as a sanctuary or temple dating to the Chalcolithic period. The complex, built of solid stone walls, comprised a main rectangular building (20 by 6 m., 66 by 20 ft.) in the north and a small building of similar design, the "broad-room" plan, on the east. A thin enclosure wall connected the buildings, encompassing also a large open courtyard area to the south. In the center of this enclosed courtyard was a circular stone structure (3 m., 10 ft., in diameter), which likely served a cultic function. On the east side of the enclosure was a small gate leading to Nahal David. A more sophisticated gate was located on the south side of the complex, overlooking the Dead Sea. Discovered in the main "broad-room" building, on the north side, was a niche, surrounded by a low stone wall, that probably served as an altar. The building also yielded charred animal bones, pottery fragments, and an accumulation of ashes. A notable find was a clay statuette of a bull laden with a pair of churns. For further details, see D. Ussishkin, *BA*, 34 (1971), 23ff.; R. Amiran, "Some Observations on Chalcolithic and Early Bronze Age Sanctuaries and Religion," in Biran, ed., *Temples*, pp. 47-53.

B. Gilath Temple. Although technical architectural data are lean, a Chalcolithic temple was discovered at the northern Negeb site of Gilath (see D. Alon, *BA*, 40 [1977], 63-65). This find is particularly intriguing because of the unusually rich repertoire of artifacts found at the site and in its environs, including violin-shaped figures of granite and crystalline chalk veined with green copper, maceheads of granite, basalt, and copper, polished flint axes and hatchets, numerous other clay and stone objects, and a variety of clay vessels. Two pieces are particularly noteworthy. The first is a churnlike vessel, in the shape of a ram (32 cm., 12.6 in., long as preserved), with three goblets on its back. It is painted with horizontal lines and ten triangular horns that point downward from the top of the back to the belly. The second piece is a seated female figure (28 cm., 11 in., high) with a churn on her head. She is seated on a vessel that is modeled in the shape of a censer or pedestal. Braids of hair are represented by red lines. Horizontal lines of red paint on her body could possibly suggest a garment. Her sexual organs are emphasized. These two pieces are likely ritual vessels, perhaps in the worship of Ashtaroth, as the excavator suggested.

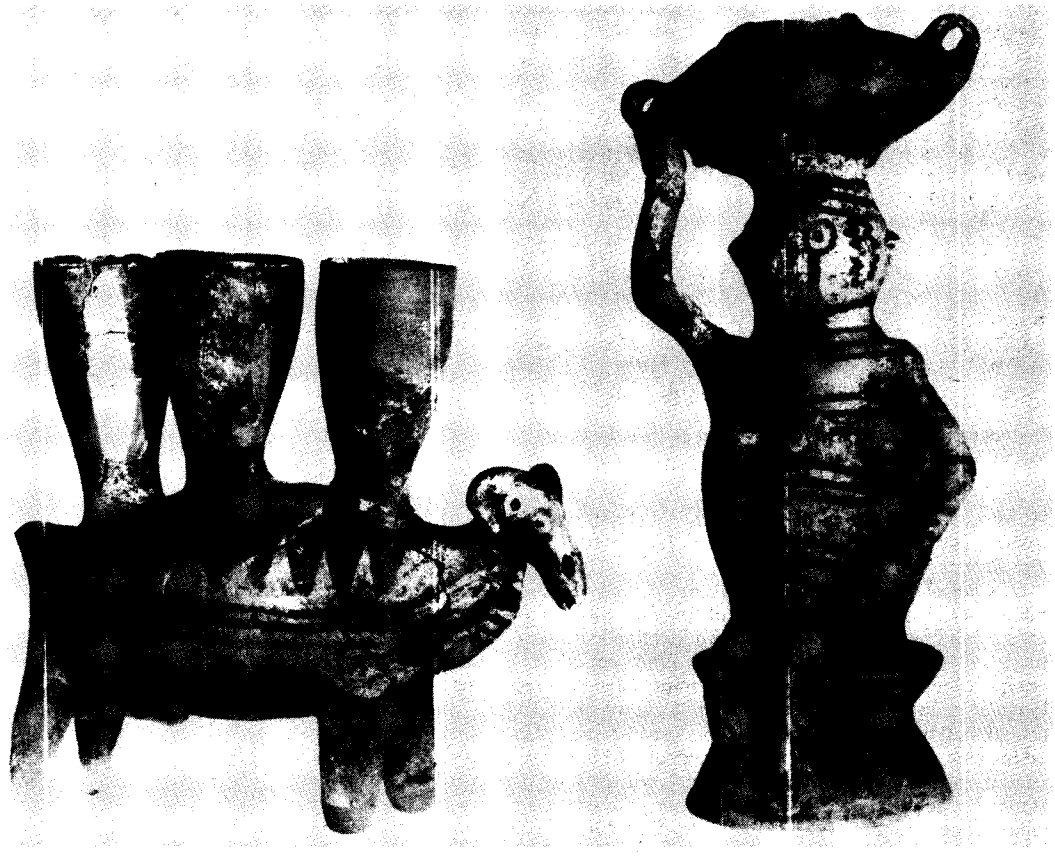
III. Early Bronze Age.–*A. Megiddo.* A series of temples was discovered in the early excavations of MEGIDDO, the great mound strategically located on the southern edge of the Jezreel Valley (see G. Loud, *Megiddo II: Seasons of 1935-39* [1948]). One area in particular, Area BB on the eastern side of the mound, yielded a succession of temples, beginning in the E.B. Age (stratum XIX) and ending in the L.B. II period. The sequence was not continuous; there were numerous gaps in the occupational history of this "sacred area." The stratigraphy and chronology of these structures are subjects of considerable debate among archeologists (see K. Kenyon, *Eretz-Israel*, 5 [1958], 51-60; I. Dunayevsky and A. Kempinski, *ZDPV*, 89 [1973], 161-187, esp. n. 3; Y. Aharoni, "Megiddo," in *EAEHL*, III, 837-841; *Archaeology of the Land of Israel* [Eng. tr. 1978], pp. 74-77).

The earliest temple erected in Area BB (Building 4050) was constructed on the "broad-room" plan (see Loud, *Megiddo II*, fig. 390). Opposite the entrance, which was located in the eastern wall, a raised, plastered platform was discovered. Two pillar bases were located toward the center of the rectangular hall. These served as roof supports. A large, sloping courtyard, paved with stone slabs, was located to the east. A contemporary structure (4047), of similar design and features, also may have served a cultic function. This earliest temple has been assigned to stratum XIX (E.B. IA/B-II). Megiddo was an unfortified settlement in this level.

In the E.B. II period (stratum XVIII) Megiddo was fortified with a massive city wall. Scholars assign the earliest phase of the great altar platform to either stratum XVIIIA (E.B. II) or stratum XVII (E.B. IIIA). This is surely one of the most impressive cult installations ever discovered in Syria-Palestine (see Loud, *Megiddo II*, figs. 164f., 180f.). The altar is a round platform (8 m., 26 ft., in diameter), constructed of fieldstones to a height of 1.4 m. (4.6 ft.), with a flight of seven steps on the east side. It is enclosed by a very substantial wall, within which were uncovered numerous fragments of pottery and animal bones. In the E.B. III period, three temples were constructed near the altar platform, one to the north and two in a line to the west (see Loud, *Megiddo II*, fig. 394). Scholars do not agree as to whether these structures were contemporary or were built in various stages. Dunayevsky and Kempinski believed that Temple 4040 was constructed in stratum XVI (E.B. IIIA) or possibly earlier (stratum XVII) with the addition of temples 5192 and 5269 in stratum XV (E.B. IIIB = E.B. IV). On the other hand, K. Kenyon maintained that the western pair of temples (5192 and 5269) was constructed first. Conclusions must be tentative in the light of data available at the time of writing.

These three temples are identical in plan. Each is composed of one "broad-room" unit with a vestibule entrance in front. Their dimensions are also quite similar, approximately 9 by 14 m. (29.5 by 45.9 ft.) for the main rectangular unit. The similarities also extend to internal arrangements. Opposite the entrance to each structure, located on the northeast side, was a rectangular platform. Two pillar bases, which served as roof supports, were also uncovered in each building. The basic plan recalls the Aegean *megaron* type, well-known from E.B. Age Syria and Asia Minor. The later stratigraphical and architectural history of these temples, i.e., through stratum XIIIA (M.B. IIA), will not be detailed further. See the discussion of Dunayevsky and Kempinski, *ZDPV*, 89 (1973), 162-175, especially figs. 1 and 5-11.

This cult precinct in Area BB retained its religious sig-



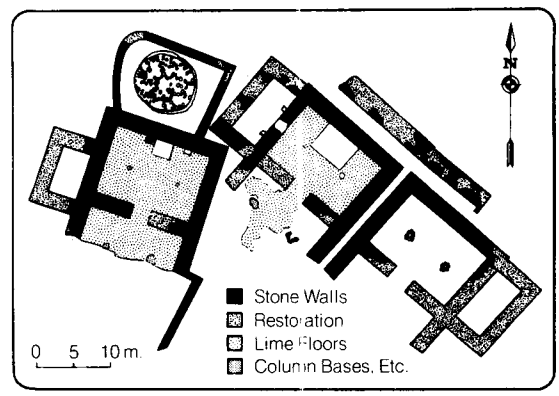
Two clay vessels probably for ritual use, found at the Gilath temple site (courtesy, Israel Department of Antiquities and Museums)

nificance in later levels (strata XII and XI), though remains of temple buildings were not uncovered. A new temple was built in stratum X (end of M.B.) and continued in use until stratum VIIA (L.B. IIB-Iron IA). The plan of this building (2048) was completely different from the "broad-room" design of the earlier temples (see Loud, *Megiddo II,* figs. 402-404; see also the revised stratigraphy of Dunayevsky and Kempinski, figs. 15 and 16-19). Temple 2048 consisted of a single large room, measuring 9.6 by 11.5 m. (31.5 by 37.7 ft.), with the entrance on the northern side. A niche was cut in the southern wall, directly opposite the entrance. The entryway was flanked on both sides by towers, one of which served as a stairway to the upper level. The building's walls were 3 m. (10 ft.) thick and even more in some places. While retaining its basic plan, the structure underwent a number of changes through strata IX, VIII, VIIB, and VIIA. This temple plan is that of the so-called fortified tower. Similar structures are well-known from Hazor and Shechem.

B. Acropolis Temple at Ai. Monumental buildings have been discovered at the site of Ai (et-Tell), located about 15 km. (9 mi.) NNE of Jerusalem, to which a cultic function has been assigned. The acropolis complex at Site D contains a large rectangular building that many scholars, perhaps most, consider to have been a temple. Site A has also yielded monumental architecture that has been designated as a "sanctuary." The latter will not be presented in detail. The definitive study is J. A. Callaway, *Early Bronze Age Sanctuary at Ai (et-Tell)* (1972). See also the critique of J. Marquet-Krause in G. E. Wright, "Significance of Ai in the Third Millennium B.C.," in A. Kuschke and E. Kutsch, eds., *Archäologie und AT* (1970), pp. 302-306.

The main building of Ai was located just W of the tell's highest point. It was a large rectangular structure (20 by 6.6 m., 65.6 by 21.6 ft.), facing east, with its entrance in the broad wall. This main unit was surrounded by a protective wall, best preserved on the western and southern sides, which curved around the back (western) corners. Four or five pillars uncovered in the main room served as

Plan of the Megiddo temple, stratum XV (1950-1850 B.C.) (adapted from *EAEHL,* III, 833)



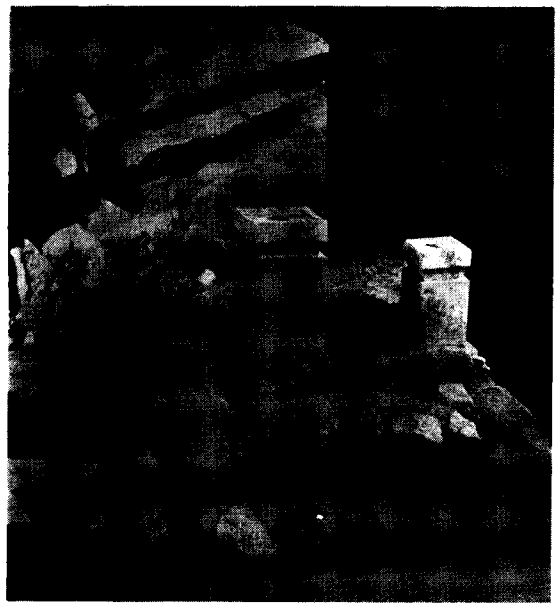
roof supports. Two main architectural phases were discerned, assigned to the E.B. II and III periods. This area was excavated between 1933 and 1935 by J. Marquet-Krause (*Syria*, 16 [1935], 330-33; cf. L. H. Vincent, *RB*, 46 [1937], 231-266). She identified this monumental building as a palace-citadel. Many scholars, however, prefer to identify this structure as a temple (M. V. Seton Williams; W. F. Albright, *AP*, p. 76; G. E. Wright, "Significance of Ai," 299-319; J. A. Callaway, "Ai," in *EAEHL*, I, 36-52, esp. 41).

C. Arad. About 32 km. (20 mi.) NE of modern Beer-sheba are located the impressive ruins of ancient ARAD (see Nu. 21:1; 33:40; Josh. 12:14; Jgs. 1:16; 4:11). This tell is actually a double site, preserving two distinct occupational horizons: a 10-hectare (25-acre) city of the E.B. Age and a small citadel of about 400 sq. m. (1 acre) that preserves a series of fortresses dating to the Iron Age. Both sites yielded important temples.

The temple complex discovered in the E.B. Age city is known as the "Twin Temple" (on this designation, see R. Amiran, "Some Observations on Chalcolithic and Early Bronze Age Sanctuaries and Religion," in Biran, ed., *Temples*, p. 49). It is composed of two large rectangular halls situated end to end with a short wall in common. Each of the two units is constructed on the "broad-room" plan. Both halls have entrances on their eastern long wall, thereby facing east, and both open onto courtyards. The unit in the north was initially constructed in stratum III (E.B. III) with some significant changes in stratum II (E.B. II). The southern hall was a later addition. Built into the eastern facade of the northern room was a *bāmâ* with a nearby laver. The latter was surrounded by a small enclosure wall. Temples of similar design include the Chalcolithic sanctuary of En-gedi, the E.B. Age temple on the acropolis of Ai (et-Tell), and the twin temple of Megiddo (4050 and 4047). See R. Amiran, "Beginning of Urbanization in Canaan," in J. A. Sanders, ed., *Near Eastern Archaeology in the 20th Century: Essays in Honor of Nelson Glueck* (1970), pp. 83-100; "Arad," in *EAEHL*, I, 74-81; *Early Arad: The Chalcolithic Settlement and Early Bronze City* (1978).

The temple of Arad's Iron Age citadel-fortress was discovered in the northwestern corner of the site. The basic building plan, oriented E-W, consisted of three architectural units: a broad-room that served as the *hêḵāl* ("holy place" or hall), a small niche in the back wall (1.2 by 1.2 m., 4 by 4 ft.) for the *deḇîr* ("holy of holies"), and a square courtyard (10 by 10 m., 32.8 by 32.8 ft.) in front of the broad-room in which was located a sacrificial altar. Two limestone incense altars flanked the entrance to the small niche, and behind them (in the niche) was a small platform with a stele. Plastered benches were constructed along the back wall of the "holy place," opposite the "holy of holies." The sanctuary was an integral part of the fortress. The temple continued in use, with some significant architectural changes, through strata XI (10th cent. B.C.), X (9th cent. B.C.), IX (8th cent. B.C.), VIII (end of the 8th cent., with abolition of the sacrificial altar), and VII (7th cent., with destruction of the "holy of holies"). For the architectural changes that were introduced through the four successive strata, see Y. Aharoni, *BA*, 31 (1968), 2-32; Z. Herzog, *et al.*, *BASOR*, 254 (Summer 1984), 1-3.

While similarities are apparent, comparison with the Solomonic temple in Jerusalem clearly suggests fundamental differences in architectural concept, especially with regard to the *hêḵāl*, or "holy place," the main hall of the temple. At Arad this was a broad-room, whereas the corresponding room in the Jerusalem temple was a long-room. It would appear that the Arad design was modeled



The incense altars of the Arad temple (collection Israel Department of Antiquities, photo Israel Museum/D. Harris)

according to the "four-room house" plan that was common in the Israelite period. See also Y. Aharoni, "Arad," in *EAEHL*, I, 82-89; *Arad Inscriptions* (1981).

It should be noted that Y. Aharoni, the excavator of the Iron Age temple at Arad, believed that a similar sanctuary once existed at Iron Age Beer-sheba. Aharoni's excavations at Beer-sheba did yield a magnificent horned altar, though identifiable temple remains were never found. For details of the discussion, see Z. Herzog, *et al.*, *BASOR*, 225 (Feb. 1977), 49-58; "Israelite Sanctuaries at Arad and Beer-Sheba," in Biran, ed., *Temples*, pp. 120-22. Y. Yadin challenged Aharoni's suggestions (*BASOR*, 222 [Apr. 1976], 5-17).

IV. Middle Bronze Age.—*A. Hazor.* The great mound of HAZOR, located some 15 km. (9 mi.) NNW of the Sea of Galilee, is composed of two distinct areas of occupation: the tell proper (6 hectares, 15 acres) and a vast rectangular plateau or lower city (80 hectares, 200 acres) to the north. The tell was occupied almost continuously between the E.B. Age and the Hellenistic period. The remains of the lower city embrace the M.B. II-L.B. IIB periods. A number of temples of various periods were discovered in both the upper and lower cities.

Perhaps the most famous of the Hazor temples is the "Stelae Temple," which was uncovered at the base of the lower city rampart in Area C. Two phases were discerned in the small shrine, dating to the L.B. II period (14th-13th cents. B.C.). Of special interest was a row of ten basalt stelae that were located in the niche in the eastern wall. One of them bore a relief depicting two hands stretched upward. Above the hands was the symbol of a deity that was composed of a crescent within which was a disk. This emblem, together with the inverted crescent that was depicted on the breast of a nearby deity statue, suggested to the excavator that the temple was dedicated to the moon-god (see Y. Yadin, *et al.*, *Hazor, I* [1958], plates XXIX:1-3).

The best-preserved Hazor temple was the Orthostats Temple in Area H (see Yadin, *et al.*, *Hazor, III-IV* [1961], plates CXX:1f.; CXXI:1f.; CXXII:1). The earliest phase of this structure dates to the M.B. IIC period (stratum 3,

17th-16th cent. B.C.). The building underwent several significant alterations until its final destruction in stratum 1A at the end of the 13th cent. B.C. Four successive levels were excavated (strata 3 [M.B. II], 2 [L.B. I], 1B [L.B. II], and 1A [end of L.B. IIB]). The building derives its name from the basalt orthostats that were used in the construction of the stratum 1A temple. These well-dressed stones were undoubtedly used in the earlier structures, perhaps even in the M.B. IIC period (stratum 3) but surely in the L.B. I temple (stratum 2). Similar orthostats are known from Alalakh and Tilmen Hüyük, some 12 kms. (7 1/2 mi.) SE of Zenjirli.

The cult objects that were discovered in the Orthostats Temple were particularly fine, including an incense altar, two libation tables, "liquids" kraters, a carinated basalt krater, an offertory table, a male statue and numerous other cult and votive objects (see *Hazor, III-IV,* plates CXXI-CXXIV; CCCXXIV-CCCXXXII; CCLXXX:11f.; CXXXII:2, 4; CCCXIX-CCCXXII). The "holy of holies" of the stratum 1A temple yielded a fragmented faience scarab with the name of Amenhotep III, thereby providing a definite *post quem* date for that temple.

Although not well preserved, a large temple complex was also discovered in Area F. The earliest structure is known as the "Double Temple" and was assigned to stratum 3 of the M.B. II period (see *Hazor, III-IV,* plates LXIX-LXXVII). As reconstructed, the building was divided into two symmetrical wings. The excavator believed that the temple was dedicated to two deities, though identification is impossible. Above this earliest temple in Area H was constructed a thick-walled building that is now known as the "Square Temple" (*Hazor, III-IV,* plates LXXIII:2; LXXIV-LXXV). It was assigned to the L.B. I period. A conspicuous parallel was provided by the square temple discovered near the old Amman airport in Jordan (see J. B. Hennessy, *PEQ,* 98 [1966], 155-162; E. F. Campbell and G. E. Wright, *BA,* 32 [1969], 104; V. Hankey, *Levant,* 6 [1974], 131-178). The area of these two temples was turned into an open high place in the L.B. II period (14th-13th cent. B.C.).

The last major temple at Hazor was discovered on the tell in Area A (Yadin, *Hazor* [1972], pp. 102-105). The building was a long rectangular structure (16.2 by 11.6 m., 53 by 38 ft.), oriented E-W, with its entrance on the northeastern side. A raised inner platform was discovered against the western wall. This "Long Temple" was first constructed in the M.B. II period and later reused in the L.B. I (16th-15th cent. B.C.). Several cultic installations were uncovered nearby, together with pits containing bones and votive vessels.

Within the horizon of Hazor temples, there are major differences in plan and orientation, even between contemporary structures. Yadin concluded that different deities had different plans and orientation. For a general survey of the Hazor temples, see Yadin, *Hazor,* pp. 67-105.

B. Fortress and Courtyard Temples of Shechem. The Megiddo Temple Towers of strata X-VII, just described, are closely paralleled by massive fortress temples at SHECHEM, the earliest of which dates to the end of the M.B. Age (M.B. IIC). Tell Balâṭah (ancient Shechem) is an impressive mound that is located at the eastern opening of the Nâblus pass, with Mt. Ebal to the north and Mt. Gerizim to the south. The sacred area of Shechem is located in the west-northwestern quadrant of the site. It was in this area, now designated Field V, that a long tradition of temple architecture was uncovered, embracing almost six centuries.

The earliest fortress temple consisted of one long room with two tower chambers, one on each side of a broad

The fortress temple at Shechem, looking south toward the reconstructed courtyard (W. S. LaSor)

entryway. Stairwells were constructed within these high flanking towers. This massive temple measured 26.3 by 21.2 m. (86.3 by 70 ft.) externally, with walls that were approximately 5.1 m. (16.7 ft.) thick. The interior measurements of the main hall or cella were only 13.5 by 11 m. (44.3 by 36.1 ft.). Six column bases for roof supports were discovered in this unit. Two construction phases were discerned in the building. The major architectural differences were observed in the entrance hall and in the arrangement of cult objects outside the entrance. The occupational history of the temple embraces the M.B. IIC period. For further architectural details, see G. E. Wright, *Shechem* (1964), pp. 80-102; figs. 13, 20, 41, 47f.; "Shechem," in *EAEHL,* IV, 1083-1094.

Constructed on the foundations of this fortress temple was a less massive L.B. Age successor. Although the new building was not as well preserved, it appears to have retained the same basic plan. The dimensions of the new hall were estimated at 16 by 12.5 m. (52.5 by 41 ft.). Two phases were also distinguished in this temple, although the second seems to represent only a repair of its predecessor with a new floor and altar. The two phases of this second temple cover the period 1450-1125 B.C.

These two fortress temples of Field V have been presented first because of the monumental character of their construction. They are probably the best known of the Shechem temples but they are not the earliest of the site's sacred buildings. To the east and southeast of the fortress temples was located another sacred area that was called the *temenos* by E. Sellin, one of Shechem's early excavators. This area, now designated Field VI, was carefully studied by the Drew-McCormick Expedition under the direction of G. E. Wright. A succession of courtyard temples was discerned, beginning in the 18th cent. B.C. They were composed of small rooms and a plaza that surrounded a central court (G. E. Wright, *Shechem,* figs. 63f.). Six distinct levels were discerned in this Field VI excavation area prior to the construction of the first fortress temple, which then became the main sacred area.

The first *temenos* level was a preparation stage for the sacred area and consisted basically of a leveling operation. The next four levels yielded a succession of courtyard temples that are known as the simple courtyard temple, casemate courtyard temple, pillared temple, and enlarged courtyard temple. The sacred area next shifts to the sequence of Field V fortress temples. The succession of Field VI temples is dated between the 18th and 17th cents. B.C.

For further details on these early structures and the attempt to integrate the Shechem temples with early bibli-

cal tradition, see Wright, *Shechem*, pp. 110-138; E. F. Campbell and J. F. Ross, *BA*, 26 (1963), 2-27. In addition to the excavation reports published season by season in *BASOR*, see R. J. Bull, *BA*, 31 (1968), 50-72; R. G. Boling, *BA*, 32 (1969), 82-103; E. F. Campbell and G. E. Wright, *BA*, 32 (1969), 104-116.

C. Nahariyah. A M.B. Age temple and *bāmâ* were discovered at the coastal site of Nahariyah, about 10 km. (6 mi.) N of Acco. The temple consisted of a large rectangular hall (13 by 8 m., 43 by 26 ft.) on the "broad-room" plan, oriented E-W, with the main entrance located in the southern long wall. Two phases were distinguished (strata IV-III and II-I). Several rooms (storerooms and a kitchen) were added in stratum II-I, primarily to the east of the main hall. The area yielded a rich artifact assemblage, including miniature offering vessels, incense burners, two metal statuettes, clay figurines, and several casting molds. For discussion of the *bāmâ*, see M. Dothan, "Sanctuaries Along the Coast of Canaan in the MB Period: Nahariyah," in Biran, ed., *Temples*, pp. 74-81. See also I. Ben-Dor, *Quarterly of the Department of Antiquities of Palestine*, 14 (1950), 1-43; M. Dothan, "Nahariya," in *EAEHL*, III, 908-912; "The Cult at Nahariyah and Canaanite High Places," in *Western Galilee and the Coast of Galilee* (1965), pp. 63-75.

D. Tell Kittan. Three temples, dating to the M.B. and L.B. periods, were discovered at Tell Kittan, 12 km. (7.5 mi.) N of Beth-shean (see E. Eisenberg, *BA*, 40 [1977], 77-81). The earliest temple (stratum V) consisted basically of a square room, measuring 5.5 by 6.9 m. (18 by 22.6 ft.) that was oriented to the east. The actual hall only measured 4.3 by 4.6 m. (14.1 by 15.1 ft.). A row of stelae, made from river stones, was discovered in a courtyard E of the entrance. One of these stelae was in the form of a nude woman, cupping her breasts in her hands. It is believed to be a local representation of the goddess Astarte. This temple is dated to the M.B. IIB period.

A larger temple was constructed in stratum IV, above the earlier structure. This building was rectangular, 11.5 by 14.3 m. (37.7 by 46.9 ft.), and preserved the eastern orientation. The entrance was located in the middle of the eastern wall. Ash piles uncovered outside the entrance contained the bones of animals. This level is also dated to the M.B. IIB period.

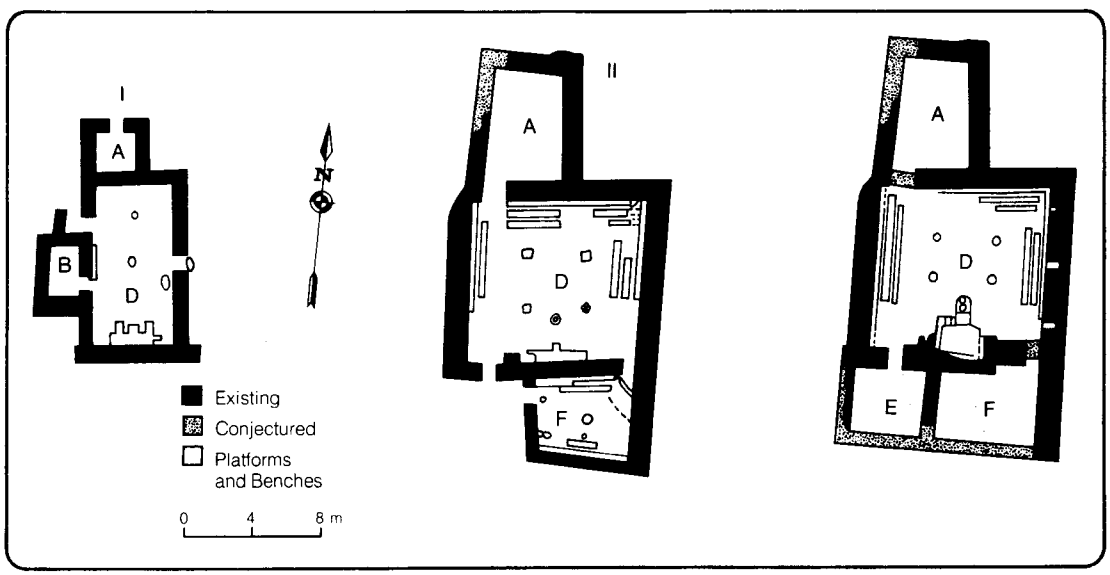
An even larger complex was constructed over the stratum IV temple in stratum III, dated to the L.B. I period. This temple consisted of a main hall with two small rooms on the south and a courtyard on the eastern side. Although the entrance was not discovered, it was believed to be located in the north wall of the complex that had been destroyed. This building yielded a large number of pottery vessels, beads, and jewelry. Stratum III was believed to have been destroyed in one of the campaigns of Thutmose III.

V. Late Bronze Age.–A. Fosse Temple at Lachish. Among the best-known temples of Syria-Palestine are those discovered at the impressive mound known as Tell ed-Duweir, ancient LACHISH. In the M.B. Age the city was protected by a fosse and a plaster-covered glacis that was crowned by a wall. With time the ramparts fell into disrepair and the fosse was allowed to fill with debris. At the beginning of the L.B. Age a small temple was constructed in the fosse. This was the first of three superimposed temples, constructed on the same general plan (see O. Tufnell, *et al., Lachish II: The Fosse Temple* [1940]).

The earliest temple was simple in plan (see plate LXVI in Tufnell). It consisted of a main rectangular sanctuary (10 by 5 m., 32.8 by 16.4 ft.) with two attached rooms, one on the north and the other on the west. Only the latter was entered through the sanctuary. The main entrance to the complex was in the west wall, in the northwest corner. The shrine, or focus of worship, was constructed against the south wall. It consisted of a low bench from which projected three rectangular blocks. It has been suggested that the blocks served as altars and that cult objects were placed on the bench. The chronology of this temple embraces most of the 15th cent. B.C.

Fosse Temple II was a larger complex, constructed on a different plan (see Tufnell, plate LXVII). The size of the main hall was enlarged (10 by 10.4 m., 32.8 by 34.1 ft.), thereby absorbing the small room that had adjoined the earlier sanctuary on the west side. The northern room of the earlier complex was also enlarged (7.6 by 4.3 m., 24.9 by 14.1 ft.), and another room was added on the south

Plan of the fosse temple I-III at Lachish (adapted from *EAEHL*, III, 739)



side. Despite these changes, the position of the shrine remained unchanged. A stone bench and a square altar were constructed against the southern wall of the main room. The other walls were bordered with long, narrow benches. The stone foundations of four pillars (roof supports) were also uncovered in this unit. This middle temple dated from the late 15th to mid-14th cent. B.C.

The changes between Fosse Temple II and III were not as drastic as those between the first two levels (see Tufnell, plate LXVIII). No major changes were introduced in the basic layout of the sanctuary, although the floor level was raised 0.65 m. (2.1 ft.). The stone bases that served as supports for roof pillars were located exactly above those of the previous structure. The adjoining rooms to the north and southeast (Rooms A and F) also remained basically the same. A new room (E) was added to the southwest corner of the complex, thereby balancing Room F. In the main central room, parallel rows of benches were constructed along the northern, eastern, and western walls. The focus of worship was again the south wall. This shrine area was more sophisticated in Fosse Temple III than in the previous levels. A broad platform was constructed against the back (south) wall with a mud-brick altar and three steps adjoining the platform to the north. To the right of the shrine was discovered a narrow "cupboard" of plastered mud containing lamps. A libation stand was situated nearby. The artifact assemblage from this level was particularly rich. Fosse Temple III was destroyed toward the end of the 13th cent. B.C. and thus ended the succession of temples. See also O. Tufnell, "Lachish," in *EAEHL*, III, 735-746; D. Ussishkin, *Tel Aviv*, 5 (1978), 1-97.

B. Area P Temple at Lachish. Although in a poor state of preservation, another L.B. Age temple was discovered at Tell Lachish. It was initially probed in the 1937 excavations of J. L. Starkey (*PEQ*, 1937, pp. 238f.; *Lachish III*, p. 77; plate 19:7). The building was excavated by D. Ussishkin, who considered it reasonably certain that the edifice was a temple, while acknowledging the possibility that it may have served a secular function (see C. Clamer and D. Ussishkin, *Tel Aviv*, 5 [1978], 10-25; "The Newly Discovered Late Bronze Age Temple at Tel Lachish," in Biran, ed., *Temples*, pp. 118f.).

The temple is located in Area P, just N of the Judean palace-fort. The building includes a main complex and subsidiary units. The former consists of an antechamber (on the west side), the main hall (16.5 by 13.2 m., 54.1 by 43.3 ft.), and the cella (on the east side). All are built along a straight axis with each unit standing on successively higher ground. The orientation is E-W with the entrance in the western wall of the antechamber. Two circular limestone bases were discovered in the center of the hall. They likely supported roof columns. A monumental staircase of stone slabs led from the main hall to the raised cella, which was poorly preserved. The subsidiary units adjoined the complex to the north. Notable among the artifact finds, which were generally lean, was the "Lady Godiva" plaque, a thin gold sheet (19 by 11 cm., 7.5 by 4.3 in.) depicting a naked goddess standing on a horse.

Several of the features of this stratum VI temple are paralleled in other second-millennium Syro-Palestinian temples. The arrangement of the three units along a straight axis is paralleled by Temple 7300 at Shechem (see W. G. Dever, *BASOR*, 216 [Dec. 1974], 31-52) and also by the stratum IB and IA temples in Area H at Hazor (see Y. Yadin, *Hazor* [1972], pp. 83-91). The feature of a main hall (with two central massive columns) and a staircase leading up to a cella is paralleled in levels VII and VI at Beth-shean (see A. Rowe, *Four Canaanite Temples of Beth-Shan* [1940], pp. 6-21; plates VI, VIII). Many affinities with Egypt were discerned in the structure's plan, architectural elements, and equipment.

C. Tell Mevorakh. A sanctuary of the L.B. Age was discovered at Tell Mevorakh, a small site on the south bank of the Crocodile River in the Plain of Sharon (see E. Stern, *BA*, 40 [1977], 89-91; *Excavations at Tel Mevorakh, II: The Bronze Age* [1984], pp. 28-39). The earliest phase of this temple consisted of a rectangular hall (5 by 10 m., 16.4 by 32.8 ft.) with an E-W orientation. The structure was built against the inner side of a M.B. Age fortification embankment, similar to the Fosse Temple at Lachish and the L.B. Age temple at Hazor in Area C. A rectangular platform with five steps was located in the northwest corner of the main hall. A plastered bench was found a short distance to the south, against the western wall. A stone-paved court surrounded the temple on the south, west, and east sides. This earliest phase dates to the 15th cent. B.C. Evidence of destruction by fire was clear throughout the temple. The second phase consists of a restoration in the 14th cent. B.C. Dimensions remained basically unchanged, and most of the benches on the north and west sides of the sanctuary continued in use. The platform in the northwest corner was raised, enlarged, and supported with stone walls.

The temples yielded an important horizon of artifacts: faience objects (two cylinder seals in the popular Mitannian style), bronze artifacts (two cymbals, arrowheads, a spear, and a dagger), a large quantity of beads, a large pottery repertoire, and a coiled bronze snake (20 cm., 7.9 in., long), similar to its famous counterpart from Timna' (B. Rothenberg, *Timna: Valley of the Biblical Copper Mines* [1972], plates XIX-XX).

D. Beth-shean. A succession of temples, embracing five continuous strata (IX-V), was also discovered at BETH-SHEAN (Tell el-Husn), an imposing mound situated between the Jezreel and Jordan Valleys. The precise dating of these temples is a subject of controversy, though the excavator's original chronology surely must be revised (see A. Rowe, *Four Canaanite Temples of Beth-Shan: The Temples and Cult Objects* [1940]).

The earliest temple (stratum IX) was amorphous in plan with numerous rooms, corridors, courtyards, and altars. This structure should be dated to the 14th cent. B.C. The sacred area yielded numerous artifacts of Egyptian provenance, including a stele erected to "Mekal, the (great) god, the lord of Beth-shan' (see Rowe, *op. cit.*, frontispiece with description on p. 59) and a cartouche bearing the name of Thutmose III. Although a temple was not discovered in stratum VIII, the presence of basalt column bases would suggest monumental architecture, perhaps a sacred building.

A temple was discovered in stratum VII (see Rowe, plates IV-VI) and dated by the excavators to Amenophis III. Other scholars have dated the temple to Ramses II or Merneptah. The plan consisted of a main hall, basically square, with benches constructed against the walls on the west, north, and east sides. Two pillars served as roof supports. To the north was located an elevated sanctuary (the "holy of holies"), approached by a flight of steps. A platform was built against the back wall, directly in front of the steps. An antechamber with two rooms was built on the south side of the main hall. The orientation was N-S, common among L.B. Age Canaanite temples. The artifact horizon for this building indicates strong Egyptian influence with numerous cult objects that belong to Canaanite fertility ritual. The plan of this stratum VII temple has many similarities with small Egyptian shrines of the Amarna period.

The ground plan of the stratum VI temple was basically unchanged from that of stratum VII (antechamber, roughly square main hall and broad-room sanctuary). Some significant changes, however, were introduced, especially in the sanctuary or "holy of holies" (see Rowe, plates IV and VIII). The platform was moved to the center of the room with a new stairway approaching from the main hall. The arrangement of the rooms of the sanctuary was also different, now three units instead of the two in stratum VII. The plan of the antechamber was also quite different. The rich and sophisticated artifact assemblage of this level again attests to the close ties between the city and Egypt. Again, there is disagreement on the chronology of this temple. The excavators dated the stratum to Seti I, while others have suggested Ramses II or III. For technical details on the architecture and artifact horizons of the stratum VII and VI temples, see Rowe, pp. 6-21.

Dramatic changes took place in stratum V. Two new temples were constructed with different ground plans and different orientation from those of their predecessors (see Rowe, pp. 22-30; plate X). The building on the west was the largest (24.1 by 21.6 m., 79.1 by 70.9 ft.). Its ground plan was similar to that of a basilica. Three aisles were created by two rows of pillars. There appears to have been a "broad-room" type of "holy of holies" on the eastern end of the building. The plans reconstruct a platform in this room that was approached by a stairway from the center aisle of the main hall. The entrance was located on the western side. The E-W orientation is common in temples of the Iron Age, the period to which this structure should be assigned. The building to the east was similar in plan but smaller (see Rowe, pp. 31-35; plate XII). Fewer details are available for this structure because it was not well preserved. It is clear, however, that its orientation was also E-W. Both buildings belong to stratum V, which is dated mid-12th-11th cent. B.C. On the basis of associated artifact finds, the largest temple was believed to be the house of Dagon (1 Ch. 10:10). The smaller structure was evidently the house of Ashtaroth (1 S. 31:10). A rich horizon of artifacts and cult objects was discovered in both stratum V temples and in their adjoining buildings.

The cult objects of the Beth-shean temples represent a particularly unique horizon and clearly emphasize the close ties between this city and several Egyptian pharaohs (see Rowe, pp. 37-57; plates XIV-LXXI; G. M. Fitzgerald, *Four Canaanite Temples of Beth Shan: The Pottery* [1930]).

VI. Iron Age.–A. Tell Qasile. A succession of temples, beginning in the 12th cent. B.C., was discovered at Tell Qasile, a small site within the borders of Tel Aviv on the north bank of the Yarkon River (see A. Mazar, *IEJ*, 23 [1973], 65-71; 25 [1975], 77-88; *BA*, 40 [1977], 82-88; "Philistine Sanctuary at Tell Qasile," in Biran, ed., *Temples*, pp. 105-107; *Excavations at Tell Qasile, I: The Philistine Sanctuary, Architecture and Cult Objects* [1980], pp. 13-56, 61-71; hereafter *Qasile I*). The stratum XII temple (Building 319) was a small structure (6.4 by 6.6 m., 21 by 21.6 ft., external dimensions) that was roughly square in plan (*Qasile I*, fig. 4 and reconstruction p. 15). The entrance was located in the eastern wall. Along the interior walls were plastered-covered benches. Opposite the entrance was a raised platform that was likely the focus of the cult in the temple. The area to the east and north appears to have been a spacious courtyard. Building remains, though poorly preserved, were uncovered S and W of the temple. One of the unique artifact finds was an ivory knife handle with a portion of its iron blade still held in place by bronze rivets.

The next temple (Building 200) was constructed in stratum XI over the ruins of the previous structure (see *Qasile I*, fig. 6 and reconstruction p. 23). It was slightly larger (7.75 by 8.5 m., 25.4 by 27.9 ft.) with the entrance located in the northern portion of the eastern wall. Benches lined the central hall as in stratum XII. A deep niche with benches discovered in the northwest corner of the building may have functioned as the holy of holies. The areas to the east and north consisted of open courtyard. The temple yielded a number of important artifacts, including two clay zoomorphic figurines, an anthropomorphic mask, a bird-shaped cult bowl, hundreds of faience beads, and dozens of small votive bowls. Strata XII and XI date to the 12th and 11th cents. B.C. For technical description of a small shrine that was located nearby in this level (Building 300, strata XI-X), see A. Mazar, *IEJ*, 25 (1975), 82f.

The stratum X temple (Building 131) was, in part, a reuse of the earlier stratum XI building (*Qasile I*, figs. 9-12). The northern, southern, and western walls of Temple 200 remained in use. The eastern wall was replaced by a new anteroom. The temple's entrance was located in the northern wall of this anteroom. This level is dated to the end of the 11th and beginning of the 10th cent. B.C. Although poorly rebuilt and preserved, the temple continued in strata IX-VIII (10th-9th cents. B.C.).

The Tell Qasile cult area was founded in the mid-12th cent. B.C. when the site was settled by the Philistines. The strata XII, XI, and X temples continued in use until the beginning of the 10th cent. when stratum X was destroyed by fire. All of them preserved the western orientation and the location of the "holy of holies." A number of sites have yielded temples that preserve architectural reminiscences of the Tell Qasile structures, including Hazor (Area C), the "Fosse Temple" at Lachish, Beth-shean, Tel Mevorakh, Kition, and Enkomi. See also A. Mazar, "Tell Qasile," in *EAEHL*, IV, 968-975.

VII. Two Important "High Places."–Although it is not within the scope of this article to survey installations that are properly classified as "high places," discoveries at two sites deserve special mention.

A. Gezer. The first is the famous high place that R. A. S. Macalister discovered at GEZER. This area is located on the northern side of the site, just inside the so-called Inner Wall. It consisted of a row of ten enormous standing stones or monoliths, some over 3 m. (10 ft.) high, that were erected in a straight, N-S line. Toward the center of the row and W of the line, a large stone block was discovered. It is nearly square with a similarly shaped hole in the center of the upper surface. It may have functioned as a basin or perhaps as a socket for another monolith that has not survived *in situ*. Recent research on the Field V Gezer "high place" has corrected and refined a number of Macalister's theories. Its construction has been assigned to the M.B. IIC period. Although disagreement remains as to the function of these standing stones, a cultic interpretation seems most plausible.

B. Dan. Another well-known "high place" was discovered at Tel Dan in northern Israel at the foot of Mt. Hermon. A massive square platform (18.5 by 9 m., 60.7 by 29.5 ft.) was discovered at the northern edge of the mound. Its sides are constructed of fine, dressed masonry laid in headers and stretchers, a building style characteristic of monumental buildings of the period of the Israelite monarchy. The platform's interior consists of a stone fill. The discovery of several seven-wicked oil lamps and an Astarte figurine suggested early in the excavations that the structure served a cultic function. A few years later, a horned altar was uncovered S of the platform area. The religious significance of the site was also emphasized with

the discovery of a bilingual (Greek and Aramaic) dedicatory inscription that reads: "To the god/ who is in Dan/ Zoilos made a vow" (see A. Biran, "'To the God who is in Dan,'" in Biran, ed., *Temples*, pp. 145-47). The inscription is dated to the late 3rd or 2nd cent. B.C.

Three architectural phases were discerned in this platform. The earliest structure (18.5 by 3 m., 60.7 by 10 ft.) was dated to the late 10th cent. and its construction assigned to Jeroboam I. The second phase of the *bāmâ* (18.5 by 19 m., 60.7 by 62.3 ft.) is dated to the first half of the 9th cent. and ascribed to Ahab. A flight of steps was built against the southern wall in the final phase. This level is dated to the 8th century. It appears that the area preserved its cultic significance even into the Hellenistic and Roman periods. The excavator will also allow the possibility of a cultic interpretation for the canopied structure that was discovered in the Iron Age gate complex in Area A (see A. Biran, "Tel Dan," in *EAEHL*, I, 318-321). *See* DAN.

TEMPLES, ROBBING OF. *See* ROBBING OF TEMPLES.

TEMPT [Gk. *peirázō* (Mt. 4:1 par.; Acts 5:9; 1 Cor. 7:5; 10:13; Gal. 6:1; etc.), *ekpeirázō* (Mt. 4:7 par. Lk. 4:12), *apeírastos*–'incapable of being tempted' ("cannot be tempted," Jas. 1:13)]; NEB also PUT TO THE TEST, UNTOUCHED BY EVIL (Jas. 1:13); **TEMPTATION** [Gk. *peirasmós* (Mt. 6:13 par.; 26:41 par.; Lk. 4:13; 8:13; 1 Cor. 10:13; 1 Tim. 6:9), *skándalon*–'stumbling block' (Mt. 18:7; "temptation to sin," Mt. 18:7; Lk. 17:1); supplied contextually in 1 Cor. 7:2]; AV also OFFENCE; NEB also TEST(ING), TRIAL, CAUSE OF STUMBLING (Gk. *skándalon*).

"Temptation" can connote two different ideas: (1) a testing to determine the inner quality of a person, or (2) an enticement into sin. The RSV uses "tempt" and "temptation" only in the NT and primarily in the second sense. The AV, however, uses these words in the sense of "test" to render several OT terms: Heb. *bāḥan* (Mal. 3:10, 15; RSV "put to the test"), the piel of *nāsâ* (Gen. 22:1; Ex. 17:2, 7; etc.; RSV "test," "put to the proof," etc.), and the noun *massâ* (Dt. 4:34; 7:19; 29:3 [MT 2]; Ps. 95:8; RSV "trial," "Massa").

I. Testing.–During their wilderness wanderings the Israelites often tested God's goodness by demanding that He provide food and water (Ex. 17:2, 7; Nu. 14:22; Ps. 78:18, 41, 56, 95:8f.; 106:14). In every instance where God is the object of the verb, His people are demanding that He prove His goodness. The Scriptures consider this practice sinful (Dt. 6:16; cf. Mt. 4:7). King Ahaz interpreted Isaiah's call to exercise his faith as a temptation to test the goodness of God (Isa. 7:12).

God also puts people to the test, as when He commanded Abraham to sacrifice Isaac (Gen. 22:1). Sir. 2:1 admonishes every servant of the Lord to be prepared for such times of testing.

In the NT the Pharisees often placed such tests before Jesus (cf. AV "tempt," Mt. 16:1 par.; 19:3 par.; 22:18 par.; v. 35; Lk. 11:16), seeking an occasion to accuse Him. In such testings, however, Jesus was able to prove His true character. Jesus tested His disciples on occasion to prove their faith (Jn. 6:6). Ananias and Sapphira died when they tested the Holy Spirit (Acts 5:9). Peter claimed that making the demands of Judaism a condition for Christian salvation would put God to the test (15:10).

See also TEST.

II. Enticement to Sin.–The OT has no specific term for temptation as an enticement to sin. While it contains examples of such temptation (e.g., Gen. 3; *see* FALL, THE) and depicts humanity as having a natural inclination to sin, it contains no discussion of human temptation.

The NT makes it very clear that although God tests people He does not entice them to sin (Jas. 1:13). The source of these temptations is SATAN (1 Cor. 7:5), who is also called "the tempter" (part. of *peirázō*, Mt. 4:3; 1 Thess. 3:5). The pattern of Satan's enticements to sin is illustrated by his TEMPTATION OF JESUS in the wilderness (Mt. 4:1-11 par.). Other times Satan works through human beings who entice others to sin — and are condemned for it (Mt. 18:7). Temptation also comes through humanity's physical nature. The source of temptation often rests in human desires (Jas. 1:13f.), e.g., desire for riches (1 Tim. 6:9) or for sexual experience (1 Cor. 7:2, 5); and physical weakness can make one more vulnerable to temptation (Mt. 26:41).

Such temptation is real, and if it is not resisted it can lead to destruction (Jas. 1:13f.; 1 Tim. 6:9). In the parable of the Sower, Jesus warned that the seed sown on the rocky ground withers in the face of temptation (Lk. 8:13). Paul feared that his converts might have fallen into sin, causing his evangelistic efforts to come to nothing (1 Thess. 3:5). Although temptation is a universal experience, God has promised a way for escape in every situation (1 Cor. 10:13). Thus the true responsibility for falling into sin rests with human beings.

The NT admonishes Christians to resist temptation in three main ways. (1) Paul urged each Christian to practice self-examination: "Look to yourself lest you too be tempted" (Gal. 6:1). Such self-examination should lead to the avoidance of situations in which temptation becomes stronger than one can bear. (2) In the Lord's Prayer (Mt. 6:13) Jesus admonished Christians to pray that they not be led into temptation. In Gethsemane He chided the disciples for sleeping when they should have been in prayer so that they could withstand temptation (Mt. 26:41; Lk. 22:40, 46). (3) Hebrews pictures Christ as having faced the same temptations as other human beings but as not having fallen into sin (He. 2:18). This uniquely equips Him to help those who are being tempted. Thus Christians are encouraged to turn to Christ, who will provide help in time of temptation.

TEMPTATION OF JESUS. ***I. Synoptic Accounts.***–All three Synoptic Gospels record that Jesus was tempted by the devil in the wilderness following His baptism by John. Mark states little more than this: only that the Spirit "drove" Jesus to this location, that Jesus remained there forty days with the wild beasts, and that angels ministered to Him (Mk. 1:12f.). In closely parallel accounts Matthew and Luke elaborate in some detail, describing three main confrontations between Satan and Jesus. In each case Jesus successfully thwarts the devil's ploys (Mt. 4:1-11; Lk. 4:1-13). In response to the challenge to turn stones

into bread, Jesus affirms that God's Word is the ultimate, true sustenance. Replying to the challenge to throw Himself off the wing (not "pinnacle"; probably the southeast portico) of the temple so that the angels could come on a spectacular rescue mission, Jesus cites the commandment not to tempt God. In rejecting the offer of all the world's kingdoms in return for allegiance to Satan, He banishes the devil with the reminder that God alone merits worship.

The relationship between the shorter (Markan) and longer (Matthaean and Lukan) versions of the temptation narrative has been variously explained. Some view the longer version as an expansion and embellishment of the shorter; others see one or both versions as an abbreviation of a longer original. The most common and preferable view is to explain the two as independent traditions, probably stemming from the pre-Markan and Q sources. The main distinctive of Mark's account is its reference to wild beasts. Their presence speaks against the view that the wilderness was a place for serene contemplation, while the idea that they point to Jesus as a second Adam in Paradise finds little support elsewhere in Mark. Rather, the beasts fit in with the austere nature of the wilderness (presumably the Judean desert) hinted at in Mk. 1:1-11, and with the common association of deserts with demonic activity (cf. Lk. 11:24).

The most noteworthy difference between Matthew's and Luke's accounts is the inversion of the sequence of the final two temptations. Matthew's order is almost certainly the most original, for three reasons: (1) Only Matthew uses the potentially chronological Greek connective *tóte* ("then") to connect the first two temptations (Mt. 4:5; cf. *kaí*, "and," in Lk. 4:5); (2) this order corresponds to that of a well-known midrash on the Shema, which links loving God with "heart," "soul," and "might" (Dt. 6:5) with loving despite one's evil (physical) inclinations, and with the possibility of losing one's life or surrendering one's property (see esp. Mish. *Berakoth* ix.5); and (3) Luke's climactic relocation of the second temptation ties in with his redactional interest in the temple as the locus of God's saving activity.

II. Historicity.–Evaluations of the historicity of the accounts have come to diverse conclusions. Many view the story as a creation of the early Church, which supposedly wanted to dramatize Jesus' sinlessness or (as is more commonly held) underline His humanity vis-à-vis those who held too exalted a view of the Christ. More recently the temptations have been associated with an anti-Jewish polemic. On the other hand, several considerations strongly support the historical authenticity of the temptations, including the profound theological coherence of these narratives with the details of the rest of Jesus' ministry, the unlikelihood of the Church inventing an account about the temptation of One they believed to be God (in the light of the consistent OT teaching against putting God to the test), and the narratives' depiction of a kind of vulnerability that contrasted sharply with the messianic expectations of the first disciples.

To affirm the historicity of the temptations does not, however, settle the question of how they were experienced. At least two features suggest that the temptations were some kind of visionary or inward, spiritual experience: (1) the impossibility of someone seeing all of the world from any mountain peak, and (2) the extreme improbability of one who has fasted for forty days embarking on such an arduous journey. The narratives' "historicity is not dependent" on Jesus' "having been taken to a specific geographical location" (R. Mounce, *Matthew* [*Good News Comm.*, 1985] p. 27), although tourists today

The traditional Mount of Temptation near Jericho (W. S. LaSor)

are still shown the traditional "Mount of Temptation" overlooking Jericho.

III. Significance.–More important is the debate over the significance of the temptations. The history of interpretation discloses four main approaches: (1) a parenetic or psychologizing view, in which Jesus' temptations represent the three main categories of all human temptations (cf. 1 Jn. 2:16: "the lust of the flesh and the lust of the eyes and the pride of life"; cf. also the three appeals of the tree of the knowledge of good and evil for Eve in Gen. 3:6); (2) a christological approach, which stresses the obedient nature of the Son of God; (3) a messianic interpretation, in which Jesus is tempted to reject the way of the cross in favor of following the more political, nationalistic hopes of His countrymen; and (4) a salvation-historical option, in which Jesus obeys the commands of God that Israel had disobeyed in its wilderness wanderings, thus proving Himself to be the true representative of Israel. None of these views necessarily excludes any of the others, although (1) has the least textual support.

Other features of the narratives also have theological significance. The temptation follows the baptism as a strategically located initial test of Jesus' commitment to the role His Father has earmarked for Him. The Spirit leads Jesus to the place of temptation but is not the one who tempts Him, thus displaying God's sovereignty over evil but also His dissociation from it. Each of Jesus' replies quotes Scripture (Dt. 8:3; 6:16; 6:13) as the authoritative answer to the devil's challenges — one of which itself quotes Scripture (Ps. 91:11f.). Satan's departure at the end of the ordeal "until an opportune time" (Lk. 4:13) does not contradict the demonic opposition Jesus continued to encounter in the exorcisms (or even in Peter's rebuke of Mk. 8:33 par.), but it does suggest that such an intense conflict was not to be repeated until Gethsemane and Golgotha.

IV. Later Temptations.–Jesus continued to be tempted (or tested) by questions from the Jewish leaders (e.g., Mt. 19:3; 22:15-18; Lk. 11:53f.), especially by their demands for signs (e.g., Mt. 12:38; 16:1; Lk. 11:16). He was tested also by His brothers (Jn. 7:2-5) and by the crowd that wanted to take Him by force and make Him king (6:15). In the garden He struggled against the temptation to avoid the crucifixion, to the extent that "his sweat became like

great drops of blood" (Lk. 22:44), and on the cross He endured His tormentors' derisive cry, "He saved others; he cannot save himself . . . let him come down now from the cross, and we will believe in him" (Mt. 27:42).

V. Temptation and Sinlessness.–The rest of the NT makes little mention of any of Jesus' temptations, but this is consistent with its general silence on the main events of Jesus' life apart from His crucifixion and resurrection. The two key exceptions both appear in Hebrews. The author stresses in 2:18 that because Jesus "has suffered and been tempted, he is able to help those who are tempted," and in 4:15 adds that Jesus is not "unable to sympathize with our weakness" but is "one who in every respect has been tempted as we are, yet without sinning [lit. "sin"]." The latter statement implies not that Christ suffered every specific temptation that others have faced but rather that He suffered every general category of seducement to sin. His ability to identify with His people's sufferings is not diminished by His sinlessness but enhanced; for only one who has fully resisted temptation's harshest onslaughts can know its full force. These verses admittedly go beyond what could be deduced solely from the Gospel narratives, but they reflect the apostles' growing belief in the full deity and full humanity of Christ.

As with so many questions about the union of Christ's natures, exegesis yields few clear answers and philosophical and logical considerations play a large role. But it would seem from Hebrews that at least two extreme (though often held) positions can be ruled out: (1) that it was impossible for Jesus to sin, in which case His temptations would not have been like ours (since every human being, including Adam before the fall, has had this possibility); (2) that although Jesus never committed specific acts of sin, He actually had a sinful nature (since in this case He could scarcely have made "expiation for the sins of the people" [2:17], and a sinful nature is not essential to humanity, as shown by Adam before the fall). Phrasing positively the correct doctrine is more difficult; perhaps M. Erickson has succeeded as well as any: "while he [Jesus] *could* have sinned, it was certain that he *would* not" (*Christian Theology*, II [1984], 720).

TEN. *See* NUMBER V.H.

TEN COMMANDMENTS [Heb. *ʿaśereṯ haddᵉḇārîm*–'the ten words']. The Gk. *hoí déka lógoi* has given the alternative English title, "the Decalogue." The term "ten commandments" is used in Ex. 34:28, Dt. 4:13; 10:4, and the commandments are recorded in Ex. 20:1-17; Dt. 5:6-21.

III. Theological Context
  A. Redemption
  B. Righteousness
  C. Covenant

I. Literary and Historical Context.–*A. Literary Form.* As we now have them, the commandments vary greatly in length and are not uniform in form (most are negative; two are positive). That they were called "ten *words*" and could be inscribed on two tablets has led most scholars to believe that originally they were ten short categorical phrases, whose form is best preserved in the sixth, seventh, and eighth. The expansions that take the form of motivation or threat (second and third), theological explanation (fourth), promise (fifth), or detail (tenth), are regarded as secondary additions. Support for this interpretation is that the Decalogue in Deuteronomy shows some variations in these secondary parts (in the fourth and tenth commandments) but not in the basic commandments themselves. Scholars have tried to reconstruct an original form of the Decalogue, but such attempts are bound to remain conjectural and rather pointless.

There have also been various ways of enumerating the Ten Commandments, both within Judaism and the Christian Church (for discussion and tabulation of the differing divisions see Nielsen). The most common enumeration — the one used in this article –- is that of the Protestant Reformed tradition.

B. Critical Debate. In Exodus God gave the Decalogue to the Israelites while they were encamped at Mt. Sinai in the third month after their deliverance from Egypt. Although Moses acted as mediator, as he always did when the law was being given, his role this time was minimal. God Himself inscribed the words on tablets, amidst awe-inspiring phenomena at the mountain. After the people committed apostasy in the golden-calf incident and Moses shattered the tablets, fresh tablets were inscribed, and the covenant was remade (Ex. 32–34). Deuteronomy likewise emphasizes that the covenant established at Horeb (Sinai) was based on the revelation of the Ten Commandments given at that time to Israel through Moses (Dt. 5:2-22). The biblical account, therefore, places the historical origin of the Decalogue *as a whole entity* in the time of Moses, between the Exodus and the Conquest. Literary criticism of the 19th and early 20th cents., however, detached the Decalogue from this context and regarded Mosaic authorship at such an early period as impossible. Critics argued that, with the Decalogue removed, the narrative flows more easily between Ex. 19:25 and 20:18. Source critics regarded 34:11-26 as a cultic decalogue, much earlier than the "ethical" one in ch. 20. They assigned the former to the source document J, and the latter — the extant Ten Commandments –- to E, the later, northern Israelite source. These attributions fitted the then-popular evolutionary view of early religious history, according to which Israel in Mosaic times was a primitive, polydemonistic people. Such features of the Decalogue as the sabbath law, the exclusive and the imageless worship of Yahweh, and especially the profound ethical thrust could not have arisen until after the eighth-century prophetic period, or even later, in the exilic period.

The same consensus about pentateuchal source documents no longer exists, however, and even those who accept these documents have been unwilling to locate the Decalogue of Ex. 20 in any one of them with certainty. The view that ch. 34 is a duplicate account of one original covenant event ignores the narrator's own statement that the covenant was *remade* on the basis of the original ten words (vv. 1, 28). In any case, it is difficult to find a clear decalogue in ch. 34. Furthermore, in the light of the vastly increased knowledge of ancient civilizations, including those of Mosaic and pre-Mosaic times, the idea of straightforward development from primitive to advanced ethics can no longer be held, or used to date such material as the Decalogue. It is as valid to see the Decalogue as the

TEN COMMANDMENTS

foundation of an ethical development as to regard it as the *end product*.

Although a few critical scholars (notably Volz, Gressmann, and Koehler) resisted the dominant position in the earlier 20th cent. the pendulum did not swing back toward a Mosaic (or at least early) origin of the Decalogue until H. H. Rowley published a major article in 1951. Rowley thoroughly examined all the arguments against early origin of the Decalogue and found no real substance in them. Along with Eichrodt and others he confidently accepted the biblical tradition of Moses as the towering figure in Israel's early development and of the Decalogue as originating from Moses' work as lawgiver. Rowley, however, did not overlook the modification and expansion of the original form through the centuries.

A very diverse scholarly debate over Decalogue history continues, however, (cf. the discussion and bibliography in Childs, pp. 385ff., and in Stamm and Andrew). No evidence can *prove* Mosaic authorship, but the biblical tradition on the stature and work of Moses is an important witness that can be accepted without fear of substantial or decisive refutation.

***II. Legal and Social Context.**–A. Survey of Viewpoints.* Twentieth-century scholarly discussion has moved from the issue of date and authorship to that of nature, function, and social context. What kind of law is the Decalogue? How did it function in Israel's life? What illumination can be gained from comparison with non-Israelite legal material? These are the questions that have given rise to most of the original and enlightening work in this century.

In 1927 S. Mowinckel initiated a new departure in Decalogue study. Though adhering to the current majority view that the present Decalogue is a late document (he attributed it to the disciples of Isaiah), he believed that its origins were very ancient and located in the cult. Its ancient prototype was specifically the formal challenge to worshipers such as is found in Pss. 15 and 24 — the "entrance liturgies." More formal (though more conjectural) was the place of an ancient decalogue in the New Year Enthronement Festival, postulated by Mowinckel. This would have been a covenant-renewal festival at which the law was proclaimed — the original Decalogue being this law's focal point or summary. He took as evidence Pss. 50 and 81, with their emphasis on loyalty and obedience and their festival setting. Dt. 31:10-13 likewise supports the link between cult and proclamation of the law. Mowinckel's demonstration of the close relationship between the law and the cult has been widely accepted. There is indeed much clear biblical evidence that the cult was a vehicle for the transmission and dissemination of the law. That evidence, however, does not necessarily point to a solely cultic *origin* of the law or of the Decalogue in particular, but rather to cultic function and use.

The work of A. Alt (1934) is concerned with the whole of OT Law (*see* LAW IN THE OT). By form-critical methods he arrived at two broad classifications of law in the OT: casuistic and apodictic. Casuistic (case) law usually describes a situation ("If . . . ") and then prescribes a penalty or remedy. Alt found many parallels between OT case laws and comparative ancient legal documents and deduced that the Israelites took over much of the Canaanite laws for life on the land when they invaded from the desert. Apodictic law is short, unconditional imperatives and prohibitions that are expressed in universal terms without description of cases or specified penalties. Alt considered apodictic the genuine, indigenous Israelite law, originating in their supposed pre-Canaanite days as wandering desert tribes bound together only by loyalty to Yahweh. This category obviously includes the Ten Commandments in their original form. Like Mowinckel, Alt believed that this form of law was preserved in the cult from the earliest times; he placed it even before the Mosaic era. But Alt regarded the Decalogue itself as a much later development of the apodictic form. In fact his view, also followed by M. Noth, of the early history of Israel leaves little room for the historical role of Moses. Subsequent critics of Alt's work have pointed out that apodictic forms of law were not unique to Israel, and they have dissented from the view of Israel's pre-Canaanite history as that of nomadic, independent, desert tribes. The abiding value of Alt's work is its clear differentiation of case law from law in the style of the Decalogue. The nature of this difference has been taken up by later scholars (e.g., Phillips; see below).

The next major stimulus to the debate was the work of G. Mendenhall, who in 1954 analyzed Hittite vassal treaties of the Late Bronze Age (which coincides with the Mosaic period) and compared them with OT covenantal texts (e.g., Ex. 19–24; Deuteronomy; Josh. 24). Common features that he pointed out include: a preamble identifying the overlord (cf. Ex. 20:1-2a); a historical prologue (cf. v. 2b; Dt. 1–3); stipulations of the treaty (cf. the Ten Commandments and the other laws); provisions for the deposit and reading of the treaty (cf. Ex. 25:16; Dt. 31:9-13); curses and blessings (cf. Dt. 27–28). Mendenhall argued that Israel's understanding of its covenant relationship with Yahweh was modeled on this international, political treaty form, and that Moses, who lived in the Late Bronze Age and knew Egyptian statecraft (Egypt had contact with the Hittite empire), can be credibly regarded as the mind behind the use of this pattern. Much work has been done on ancient Near Eastern treaty texts and their bearing on OT covenants since Mendenhall (*see* COVENANT [OT]). Some of his proposals have been contested — particularly those that correlate treaties and OT texts too precisely and suggest dating OT texts by reference to extrabiblical texts. But many scholars have accepted his insight that the Decalogue, as a summary of stipulations within a covenant relationship, has many of the formal features of a suzerain-vassal treaty.

E. Gerstenberger took yet another approach in 1965. Examining Alt's category of apodictic law, he rejected the view that such law was derived from or connected with treaty stipulations, except in a very secondary way. He abstracted from these laws an even purer, more original form, which he called "the prohibitive," and located its origin in "clan-ethos" — i.e., the authoritative instruction given by elders of the early Hebrew clans. The laws had a pithy form and were collected into short series to aid memorization; they primarily regulated social, sexual, economic, and legal conduct within the family and clan. Gerstenberger stressed parallels with wisdom material — both Israelite and non-Israelite, but he regarded the Sinai traditions and with them the Decalogue as a secondary cultic formulation with little historical value for determining the actual origin of the Decalogue. Gerstenberger rightly emphasized the central importance of the family and clan for understanding of OT law; however, like Mowinckel, he confused use with origin. It is evident in the OT that the family and clan had the major responsibility for transmitting knowledge of the law and that much of the law governs family and societal life. But these characteristics do not entail a purely clan origin for all such law. Gerstenberger simply did not deal with the OT emphasis on Moses' role and the events at Sinai, which were constitutive and initiatory elements in Israel's law, even though the law given then may have incorporated existing

clan ethics. See Stamm and Andrews, pp. 54-62, for further developments of and reactions to Gerstenberger's work.

Finally, A. Phillips attempted in 1970 to account for the special nature of the Decalogue. He argued that it was Israel's "criminal law." A crime is an offense that a state regards as contrary to the best interests of the whole community and accordingly punishes in the name of the highest authority in the state. Criminal law is thus distinct from civil law, which concerns private disputes between citizens. In Israel an offense against the covenant was an offense against the whole community, whose security and preservation were in danger if the covenant was threatened by Yahweh's wrath. Therefore such offenses were severely punished in the name of the highest authority — Yahweh Himself. Since Israel was a theocracy, social and theological realms fused together in the delineation of "crime." The Decalogue was thus both covenant and "criminal" law. Phillips noted that although penalties are not specified in the Decalogue itself, all offenses for which a judicial death penalty was required were either direct breaches of the commandments or closely related to one of them. His arguments and his handling of some specific commandments (particularly the eighth and tenth, which have no death penalty associated with them) are open to criticism (see esp. the articles by B. S. Jackson), but he has convincingly shown that the Decalogue had a definitive status in Israelite law. It defined the nature and extent of what, for Israel, constituted serious "crime" in relation to the covenant.

B. Conclusions. This brief survey of only the major contributions to the scholarly study of the Decalogue shows that there is no single or exclusive way of understanding its origin, function, and importance within Israel. In the words of Stamm: "Whatever one thinks about the authorship, the fact that the Decalogue . . . early held a central position in Israelite life remains as the most important result of recent research. These documents had their place in the festival, and stood in association with the review of the Sinai events as the binding charter expressing the will of the divine Lord of the covenant" (p. 39).

When elements are combined from different theories, the following conclusions emerge. There is no compelling reason to reject the biblical tradition that the Decalogue was introduced to Israel through Moses at Sinai; this event was one of several there that were constitutive of Israel's status as the covenant people of Yahweh. The Decalogue was a simple but comprehensive summary of the essential stipulations of the covenant relationship, which — more than any other section of law — was regarded as coming directly from God Himself. Distinctive in its form, it stood as the "boundary fence" of covenant membership. To transgress it was to threaten or deny the covenant itself — hence the severity of the penalties by which, through other laws, it was sanctioned. To preserve its centrality in the nation's life and public knowledge of it, it was made an integral part of the cult and family, the two aspects of Israel's life with the greatest conservatism and living continuity.

The Decalogue gave the prophets who defended the cult the moral support they needed for their attack upon certain cultic practices that had become divorced from the covenant demands of moral obedience (cf. Jer. 7:1-11, 22f.; Isa. 1:1-17; Ps. 50:16-20). Their attack was also upon the priests, who were not fulfilling their duty to make the moral demands of the law known among the people (cf. Hos. 4:1-9; Mal. 2:1-9).

The Decalogue was shaped by the Israelite family but in turn it makes the family part of God's covenant people. Initially, as Gerstenberger showed, the second group of commandments (fifth to tenth) are drawn from a kind of law whose content is not unique to Israel, but has much in common with ancient family ethics. Respect for parents and the prohibitions of theft, adultery, and even coveting were all known outside Israel and also in "pre-Sinai" Israel — as many narratives in Genesis evince. What the Decalogue does is make these elements of basic social law part of the covenant law of Israel as God's own redeemed people. But the family was given a primary role in the experience and preservation of the covenant relationship — of which these laws now formed the basis, alongside the more specifically God-oriented commandments. They were drawn from the family and then, as it were, reinvested in the family, for the new purpose of preserving and continuing the covenant.

The relationship between Israel and Yahweh was not a merely conceptualized, spiritual entity. It was very deeply rooted in the concrete circumstances of Israel's life — social, economic, and political. The primary symbol of this "concreteness" was the LAND (II), and the family — the household, or "father's house" — formed the basic unit of land tenure, as it did of the social, kinship structure. In many ways — economic, judicial, military, cultic, didactic — this social unit of "household-plus-land" was the basis of Israel's relationship with God. Since, therefore, the family was of pivotal importance in the mediation and enjoyment of the nation's covenant relationship with Yahweh, the family's protection, externally and internally, was important.

Externally, the economic viability of the family was protected by the eighth and tenth commandments, which were supported by other laws. These latter prohibited the removal of landmarks (Dt. 19:14, 27:17; Hos. 5:10; Prov. 23:10), and expressed the general moral abhorrence of theft, even though, like all other property offenses, it was not subject to capital punishment (Hos. 4:2; 7:1; Isa. 1:23; Jer. 7:9f.; Ps. 50:16-18; Prov. 30:9; Zec. 5:3f.). These laws were the basis of the prophetic vituperations against economic injustices that were threatening secure family life on the land. Internally, parental authority and sexual stability were protected by the fifth and seventh commandments, respectively, which are also surrounded by other laws (e.g., Ex. 21:15, 17; Dt. 21:18-21; cf. Prov. 20:20; Lev. 18:1-23; 20:10-21; Dt. 22:13-30), as well as prudential advice in the wisdom literature (Prov. 5:1-23; 7:1-27). (See further Wright, on the social aspects of the Decalogue.)

An understanding of the social context of commandments five through ten and of the importance of the household and its land within the covenant is helpful in two ways. First, one learns why violators of these commandments, which seem to be rather general moral laws, were so severely punished. For Israel the commandments were bound up with the continuance of the covenant and therefore with the survival of the nation. To break them was more than an act of private immorality; it was a threat to, a crime against, the social system on which the covenant rested. The national interest required severe sanctions for violations of these commandments just as much as for violations of the more "religious" ones, such as the prohibition of idolatry.

On the other hand, the social context explains why such penalties no longer have relevance within Christian ethics. The moral force of the Decalogue is fully felt in the NT, but the new covenant relationship between God and His redeemed people is no longer bound to a particular land, state, or social system of family land tenure. It no longer needs protection on that level. Legal penalties enforceable by judicial action were in the OT a social necessity but

have ceased to have moral significance within the new covenant of redemption (though, of course, many areas of secular law may overlap with specific commandments, and there may well be moral principles enshrined in OT punishments that are relevant to modern penal theory).

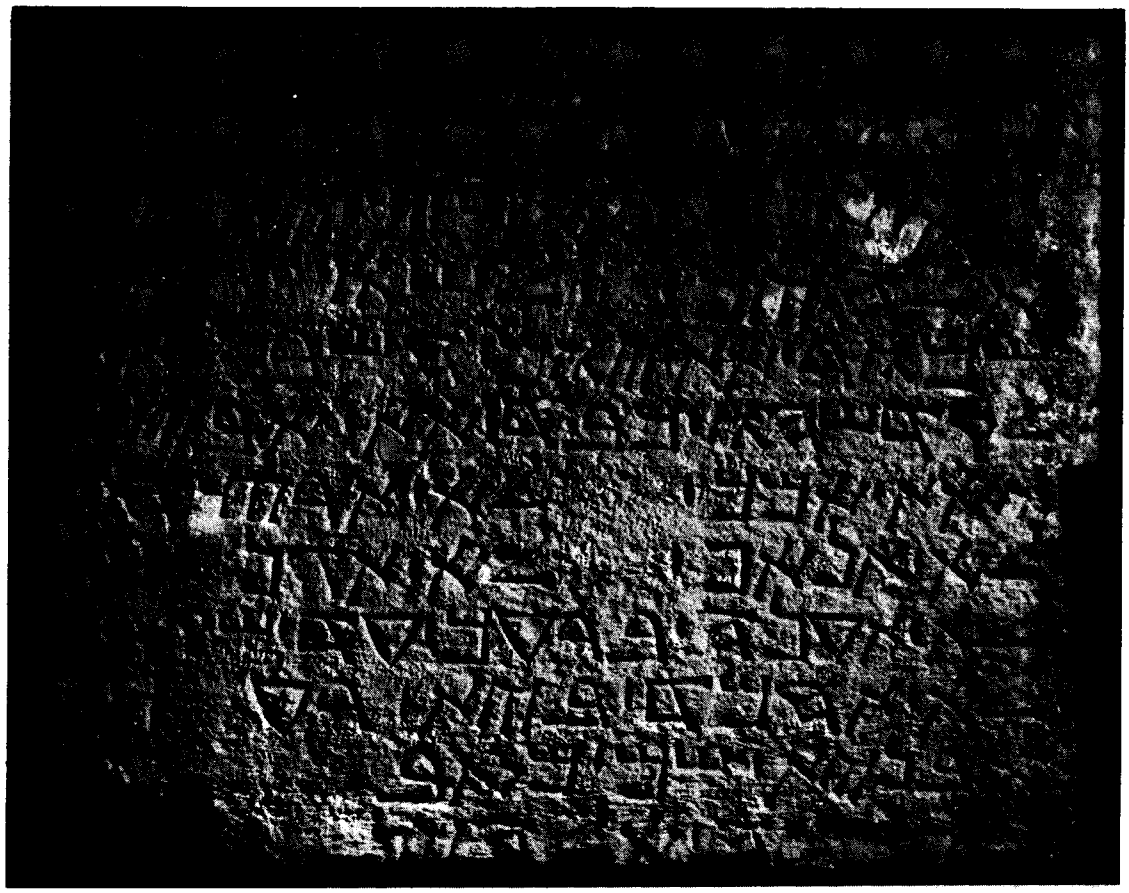
III. Theological Context.–A. Redemption. The Decalogue (in Ex. 20) begins not with the prohibition of other gods but with the statement "I am the Lord your God, who brought you up out of the land of Egypt, out of the house of bondage." This brief, historical summary of the previous chapters of Exodus is utterly crucial. The giving of the Ten Commandments (and of the rest of the law) was preceded by God's act of redemption. Moses did not take the tablets of the law down to Israel in Egypt with the promise that if Israel would obey the law, God would deliver the people. God acted first, in an initiative of love and grace and with mighty saving power. Then He said, "Now you have seen what *I* have done; *you* obey my commands and I shall establish a covenant between us" (cf. Ex. 19:3-6).

The giving of the law thus continues God's gracious action toward His people whom He has already redeemed, and Israel's keeping of the law is a response to that grace. Obedience is thus primarily an expression of gratitude for what God has already done and only secondarily a means of maintaining (but never of meriting or manipulating) the relationship established on the basis of God's redemptive act. Furthermore, the events of Ex. 32–34 showed not only that the covenant depended on the initiative of God's redeeming grace but also that its continuance depended on God's forgiving grace. This is also the repeated message of Dt. 1–8.

The Ten Commandments' firm connection to God's prior redemption of Israel is important for modern ethical use of them. Some have described them as the universal Moral Law, the "Maker's instructions" for mankind, and therefore have advocated and appealed to them as the law for even a society that is not Judeo-Christian. It is, of course, undeniable that some if not all of the moral requirements of the Decalogue can be inferred from the creation and patriarchal narratives. Since the God who redeemed Israel and spoke at Sinai was the same God who had created us in His own image, there is nothing surprising about this continuity of moral demand. It is equally undeniable that certain elements of the Decalogue are universally accepted and that the health of any human society is fostered by respect for these basic laws. Nevertheless, it is significant that the Ten Commandments are first promulgated to a people already redeemed and brought by God to Himself (Ex. 19:4). They must be seen primarily as laws for God's own people, whose covenant obedience will show how God intended mankind to live. Therefore they may be used for ethical endeavour and ethical judgment within secular society, but the divine redemption and grace that the preface so firmly inserts as the basis of the commandments themselves must also be proclaimed as necessary (Ex. 20:2; Dt. 5:6).

B. Righteousness. The Ten Commandments gave con-

A Samaritan inscription of the Ten Commandments, 4th cent. A.D. (Israel Museum, photo D. Harris)



crete expression to the righteousness that characterized God's act of deliverance in the Exodus and was to be accepted and grounded in Israel's own practical life. In both these senses right, or righteousness, was the social foundation of Israel.

First, Israel's liberation from Egypt was an act of righteousness. Their Egyptian oppressors had taken away their freedom and rights to enjoy the fruit of their own work, to worship the God of their fathers, and even to keep their male offspring. But God saw and heard, and in the Exodus He granted freedom to a captive people, restoring them to a "right" situation and simultaneously executing righteous judgment on the wrongdoers.

Second, almost immediately after the Red Sea crossing, the whole new experience of freedom was consolidated on a covenant basis at Sinai, with the Ten Commandments as the foundational charter, as has been shown. But the commandments themselves are prefaced by the clear statement that God's redemptive power had won the new freedom for the nation. Thus the two aspects are inseparably bound together — the freedom that redemption achieves, and the obligation that it entails. Both are included in righteousness.

By means of the Exodus, then, God had conferred rights and freedom on His people. But precisely to preserve these rights and freedom, they were translated into responsibilities — the Ten Commandments. Thus those who were freed by God to worship Him (as had been the express purpose of the release from Egypt, Ex. 4:23) had to worship only Him, with exclusive loyalty (first commandment). They had to do so without images or idols, for Yahweh is incomparable and jealous of His unique glory (second commandment). Having witnessed the power of His name at the Exodus, they were forbidden to use that name for their own selfish or malicious ends or in any foolish, worthless way (third commandment). Since they now could work as free people and no longer as oppressed slaves, they had to preserve the right of sabbath rest for themselves, their employees, and even their animals (fourth commandment). Now that they were freed from tyrannous violations of their family life under Pharaoh, they were responsible for preserving parental authority (fifth commandment) and the sexual integrity of marriage (seventh commandment) — not only for the good of the family itself but also for the good of the covenant community. Released from the murderous violence and terror of Egypt, the Israelites were not to tolerate murder among themselves (sixth commandment). Now that they were no longer bearing the stigma of landless aliens but rather had the prospect of a land and property of their own, by God's gift, they were not to steal, or even covet what belonged to a neighbor (eighth and tenth commandments). Since God had acted justly on their behalf and rescued them from the injustice of the "house of bondage," they were to protect from malicious injustice of untruthful witness any fellow Israelite who was under judicial suspicion or on trial (ninth commandment). For more detailed exegesis of individual commandments, see the comm., particularly by Childs and Craigie.

When read thus, the Decalogue can be seen as a table of human (and divine) rights, expressed, in the characteristic biblical way, as responsibilities. These rights at every point stand in glorious contradiction to the injustice and oppression of Egypt. The Decalogue is a kind of bill of rights and responsibilities for a free people. As a gift of grace, as a response to redemption, as an embodiment of righteousness, it is a most positive and liberating charter, not at all the narrow and restricting legalistic document of certain caricatures.

C. Covenant. The Decalogue is the covenant charter par excellence because of its dual purpose: it both explicitly presupposes God's act of grace in redemption and encapsulates the practical response required of God's people. It thus enshrines both the vertical and the horizontal dimensions that are integral to the covenant: God's act, and human obedience expressed in love for God and for one another.

This covenant dimension provides the bridge between the Decalogue in its original OT setting and its usage in the NT. The Decalogue is not a universal moral law standing independent of either Israel or the Church but inexorably imposed upon both; the constant factor is rather the *nature* of the relationship between God and His people. There was an old covenant and there is a new covenant, but they are alike in that they are both *covenants* and combine the prior action of God's redeeming grace with the necessity of the people's response of love and obedience. Therefore the Decalogue, which gave Israel the guidelines of the response required of them, could quite naturally be used, adapted, radically interpreted, and filled with new meaning, not only by Jesus, who preached the ethics of the kingdom of God (Mt. 5:17-48), but also by those who saw that in Christ the promise of the new covenant — "I will put my law within them and . . . write it upon their hearts" (Jer. 31:33) — was indeed fulfilled by the power of the indwelling Spirit. To have experienced the grace of redemption does not make the Christian "outside the law," although he is no longer "under the law" (1 Cor. 9:21). Rather, the result is "that the just requirement of the law might be fulfilled in us, who walk . . . according to the Spirit" (Rom. 8:4). But the principal fruit of the Spirit is love, and love is the fulfilling of the law, especially of the commandments (Rom. 13:8-10); to love God and one's neighbor as oneself constitute the very essence of the Decalogue as well as the whole Law and the Prophets. The Decalogue, then, retains its theological and moral validity for the Christian because it stands at the heart of the covenant, with its unambiguous call for obedience as the proof of love — love that is the grateful response to grace, which has established that covenant within which believers dwell securely.

TEN STRINGS. *See* MUSIC II.B.3.

TENDER [Heb. *raḵ* (Gen. 18:7; Dt. 28:54, 56; Prov. 4:3; Isa. 47:1; Ezk. 17:22), *rōḵ* (Dt. 28:56)]; AV also TENDERNESS; NEB also PAMPERED, SOFT-SKINNED; [Gk. *hapalós*] (Mt. 24:32 par. Mk. 13:28); [*splánchnon*] (Lk. 1:78); **TENDER CARE** [Heb. *ṭippuḥîm*] (Lam. 2:20); AV "a span long"; NEB BROUGHT SAFELY TO

BIRTH; **TENDER GRASS** [Heb. *deše'* (Dt. 32:2), *yereq deše'* (2 K. 19:26; Isa. 37:27); Aram. *deṭe'* (Dnl. 4:15, 23 [MT 12, 20])]; AV also TENDER HERB, GREEN HERB; NEB GRASS, GREEN HERB, LUSH GRASS; **TENDER HEART; TENDERHEARTED** [Gk. *eúsplanchnos*] (Eph. 4:32; 1 Pet. 3:8); AV also PITIFUL; NEB also KINDLY; **SPEAK TENDERLY** [Heb. *dibbēr 'al-lēḇ*] (Gen. 34:3; Isa. 40:2; Hos. 2:14 [MT 16]); AV SPEAK KINDLY, SPEAK COMFORTABLY; NEB also COMFORT. In Hos. 11:8 the RSV has rendered the MT *yaḥaḏ niḵmᵉrû niḥûmāy* (lit. "my feelings of pity have become hot all together") with the phrase "my compassion grows warm and tender" (cf. AV "my repentings are kindled together"; NEB "my remorse kindles already").

Hebrew *raḵ*, the term most commonly rendered "tender" (cf. also the noun *rōḵ*), is derived from the verb *rāḵaḵ*, "be soft" (e.g., Ps. 55:21 [MT 22]; cf. RSV "[be] faint," Dt. 20:3; Isa. 7:4; Jer. 51:46 [*see* FAINT]; "be penitent," 2 K. 22:19 par. 2 Ch. 34:27). Like the verb, *raḵ* is used in a variety of ways. It can describe the tenderness of youth: a calf (Gen. 18:7), a shoot (Ezk. 17:22), a child (Prov. 4:3; RSV "frail," Gen. 33:13; "inexperienced," 1 Ch. 22:5; 29:1; cf. *raḵ-lēḇāḇ* [AV "tender-hearted"; RSV "irresolute"] in 2 Ch. 13:7). It can also be used to describe people who are delicate because of their protected and pampered lifestyle (Dt. 28:54, 56; Isa. 47:1). In Gen. 29:17 Leah's eyes are described as *raḵ* (AV "tender"); the term may indicate simply that her eyes were "weak" (RSV) or "dull" (NEB), or it may suggest that she had some form of eye disease (*see* DISEASE III.G).

Hebrew *deše'* (and Aramaic cognate *deṭe'*), derived from the verb *dāšā'* ("be green"; hiphil "cause to sprout forth"), is a general term for fresh, new vegetation or grass (cf. Gen. 1:11, where it includes both "plants" [*'ēśeḇ*] and "fruit trees"). In Dt. 32:2 *deše'* "becomes the symbol of sprouting life and of fertility as a blessing of God" (*TDOT*, III, 309). *Yereq* (cf. *yārāq*, "greens") signifies "green (things)" (*see* COLOR V.E); in 2 K. 19:26 par. Isa. 37:27 the prophet Isaiah uses the familiar figure of green GRASS drying up in the heat to depict the devastation brought about by Sennacherib. In Mt. 24:32 par. Mk. 13:28 Jesus draws a lesson from the FIG tree, whose branches become soft (Gk. *hapalós*) with sap flowing through them and then sprout leaves near the beginning of summer.

Hebrew *ṭippuḥîm* (Lam. 2:20) is a hapax legomenon of uncertain meaning. The AV has related it to *ṭepaḥ* or *ṭōpaḥ*, both of which mean "span" or "handbreadth." The RSV and NEB have interpreted it in the light of the verb *ṭpḥ* (piel) in v. 22, which in the context seems to be referring to bearing or caring for children (see also *CHAL*, p. 125; KoB, p. 356; D. R. Hillers, *Lamentations* [*AB*, 1972], p. 40).

The phrase *dāḇar* (piel) *'al-lēḇ* means, literally, "speak to (the) heart." The same expression occurs in Gen. 50:21 (RSV "comfort"); 2 S. 19:7 (MT 8; RSV "speak kindly"), and 2 Ch. 30:22 (RSV "speak encouragingly"). *See* HEART II.A.

In Lk. 1:78 the phrase "tender mercy" is used to translate Gk. *splánchna eléous*. The plural noun *splánchna* originally denoted the inward parts (i.e., the BOWELS), which were regarded as the seat of emotions. By transferred usage it came to denote tender feelings of compassion. The NT uses *splánchna* (also *splanchnízomai* and *eúsplanchnos*) to express the sense of Heb. *raḥᵃmîm* (lit. "bowels," then "mercy," "compassion"; cf. AV "tender mercies" in Ps. 25:6; 40:11 [MT 12]; 51:1 [MT 3]; 69:16 [MT 17]; etc.). Thus in the NT the *splánchna* word-group has largely replaced the *oiktirmoí* word-group, which is generally used by the LXX to render Heb. *raḥᵃmîm* (see *TDNT*, VII, 552). As God has shown "tender mercy" to His people, so Christ's followers are exhorted to be "tenderhearted" (*eúsplanchnos*, lit. "well-boweled," thus "compassionate") toward one another (Eph. 4:32; 1 Pet. 3:8; cf. *splánchna oiktirmoú* [RSV "compassion"] in Col. 3:12). *See also* COMPASSION; MERCY; PITY.

N. J. OPPERWALL

TENON ten'ən [Heb. *yāḏ*–'hand']. A projection in a piece of material (e.g., wood), which is inserted into a mortise to form a joint. If *yāḏôṯ* is correctly translated "tenons" in Ex. 26:17, 19; 36:22, 24, each wooden frame in the tabernacle was held in place by two tenons that fitted into mortises in the silver bases. A. R. S. Kennedy suggested, however, that the *yāḏôṯ* were not tenons but the upright "arms" that formed the sides of each frame (*HDB*, IV, *s.v.* "Tabernacle"); for a discussion of this theory, *see* TABERNACLE II.C.5.

TENT [Heb. *'ōhel*, also *miškān*–'dwelling' (Cant. 1:8), *dōq* (Isa. 40:22), *yᵉrîʿâ* (1 Ch. 17:1; Ps. 104:2), vbs. *'āhal* ("move [one's] tent," Gen. 13:12, 18; piel, "pitch [one's] tent," Isa. 13:20), *ḥānâ* ("pitch [one's] tent," Nu. 1:52); Gk. *skēné* (Acts 7:43f.; He. 8:2, 5; etc.), *skénos* (2 Cor. 5:1, 4)]; AV also TABERNACLE, DWELLING (PLACE), CURTAIN (*yᵉrîʿâ*), etc.; NEB also TABERNACLE, CURTAIN, HOUSEHOLD, HOME, etc.; **TENT PEG** [Heb. *yāṯēḏ*] (Jgs. 4:21f.; 5:26; Zec. 10:4); AV NAIL; **TENT-CORD** [Heb. *yeṯer*–'sinew,' 'rope'] (Job 4:21); AV "excellency"; NEB "rich possessions"; on the "tent of meeting," "tent of witness," etc., *see* TABERNACLE; on He. 9:2, 6, 8 *see* OUTER TENT. A movable, collapsible shelter used by nomads, soldiers, shepherds, and others who are compelled to relocate frequently. The tent protects occupants from the burning sun, from the rain, and from the cold of night. *See* picture in PAVILION.

The Bible traces the use of tents to very ancient times. Jabal is said to have been "the father of those who dwell in tents and have cattle" (Gen. 4:20). The patriarchs are depicted as nomadic herdsmen who lived in tents (*see* NOMADISM). During the formative period of the wilderness wanderings the Israelites also lived in tents. After the settlement in Canaan tents were used by farmers at harvest time as well as by shepherds and soldiers (cf. Jer. 6:3). Out of faithfulness to the traditions of their ancestors, the Rechabites lived continuously in tents (Jer. 35:7-10).

Most likely the tents described in the Bible were similar to those used by the bedouin today. Thus the covering of the tent was made of "curtains" (*yᵉrîʿōṯ*) of hand-woven black goats' hair sewn together to form one piece. The covering was stretched over supporting poles and held in place by means of ropes that were tied to wooden pegs driven into the ground (cf. Isa. 54:2; Jer. 10:20). Pitching the tent was probably women's work, as it is among the bedouin today; this would explain Jael's facility with the mallet and tent peg in the slaying of Sisera (Jgs. 4:21). Tents were made in various sizes depending on the number of occupants. New sections might be added as the family grew (cf. Isa. 54:2). Some tents probably had separate quarters for women in the back (this is one interpretation of Jgs. 4:21; *see* RUG). Wives in wealthy families apparently had their own tents (e.g., Gen. 31:33).

Even after they settled in permanent dwellings in Canaan, the Israelites continued to use tent imagery. In Hezekiah's prayer the tent is a symbol of the temporary character of human life (Isa. 38:12; cf. Ps. 52:5 [MT

7]). Paul used similar imagery in 2 Cor. 5:1, 4 (cf. 2 Pet. 1:13, RSV mg.). Poetically the heavens are described as stretched out like a tent (Ps. 104:2; Isa. 40:22; cf. Job 9:8; Isa. 42:5; 44:24). As the home of those who live in it, the tent can also be described figuratively as the dwelling place of safety (Job 5:24) or of wickedness (11:14; 22:23; Ps. 84:10 [MT 11]) and bribery (Job 15:34).

The welfare of a people is often described in terms of what happens to its tent (e.g., Jer. 4:20; 30:18; Hos. 9:6; Zec. 12:7). The absence of tents signifies desolation (Isa. 13:20), but the enlargement of the nation's tent symbolizes its prosperity and expansion (54:2). Though the tents of the wicked may appear to enjoy peace (Job 12:6), destruction will come upon them (8:22; 18:6, 14f.; 20:26; 21:28). But God protects the tents of those who are His friends (Job 29:4), those who make Him their refuge (Ps. 91:9f.). Songs of victory are heard in the tents of the righteous (Ps. 118:15), and "the tent of the upright will flourish" (Prov. 14:11).

TENTH. *See* TITHE.

TENTH DEAL. The AV translation of Heb. *'iśśārôn* in Ex. 29:40; Lev. 14:10, 21; etc. Heb. *'iśśārôn* (lit. "tenth part") probably denotes the tenth part of an EPHAH (cf. RSV Lev. 14:10, 21; etc.). *See* WEIGHTS AND MEASURES.

TENTMAKER [Gk. *skēnopoiós*]. The occupation attributed to Paul, as well as to Aquila and Priscilla, in Acts 18:3.

The significance of the term *skēnopoiós* for understanding Paul's ministry has been emphasized by the work of R. Hock.

The term is found only at Acts 18:3 in the NT and only rarely outside the NT and the Christian works influenced by it. Since Paul was from Cilicia, some have understood the term to mean that Paul was a weaver who made tents from a rough cloth produced in Cilicia from goats' hair (Lat. *cilicium*), sometimes used for tents. Three factors, however, make this interpretation questionable: (1) it appears that in Paul's time tents were made chiefly from leather (see Hock, pp. 21, 73 n.16); (2) it is difficult to understand why a Pharisee like Paul would have chosen weaving, a despised occupation, as his trade; and (3) this view is not supported by early versional readings or by comments of the early church fathers, all of which indicate that Paul was a leatherworker of some sort. The use of the term "tentmaker" may reflect "a widespread tendency among artisans [of that period] to use specialized titles, even though they made more products than their titles would suggest" (Hock, p. 21). Thus Paul probably made a variety of leather products, including tents.

Leatherworking as practiced in this period involved two basic tasks: (1) cutting the leather with round-edge and straight-edge knives, and (2) sewing the leather with various awls. The fact that these tools were portable allowed the leatherworker a great deal of mobility (see Hock, pp. 24f.).

Although many scholars have assumed that Paul learned his trade as a student of Gamaliel in order to fulfil the rabbinic injunction to combine the study and teaching of Torah with the practice of a trade (Mish. *Pirke Aboth* ii.2; cf. iv.7), it is difficult to establish the existence of this rabbinic ideal before the mid-2nd cent. A.D. More likely, then, Paul learned his trade from his father — a common practice in both Jewish (*Tosephta Qiddushin* i.11) and Greco-Roman society as a whole. The possibility that Paul's father was a leather worker might also explain his family's acquisition of Roman citizenship, since the services of a leatherworker might have proved very useful to the Roman military (see Hock, pp. 22-24).

Various studies have focused attention on the significance of Paul's trade for his ministry. Apparently Paul's general policy was to support his missionary labors by the work of his hands (1 Cor. 4:12; 1 Thess. 2:9). His espistles suggest that on his second and third journeys he plied his trade in Thessalonica (1 Thess. 2:9), Athens (Acts 17:17), Corinth (Acts 18:3; 1 Cor. 4:12), Ephesus (Acts 19:11-12 [the apron and sweat rags probably refer to clothes worn while working]; 20:34f.; 1 Cor. 4:12 [written from Ephesus]), and Corinth again (2 Cor. 12:14). 1 Cor. 9:6 suggests that this was the case for the first journey also, and some understand Acts 28:30 as implying that Paul worked at his trade even while in custody at Rome.

If Acts 18:2 represents a typical pattern, it is possible that Paul, upon arriving at a new city, sought out a fellow artisan with whom he might practice his trade. Such association might have provided Paul with his first contacts in a new city. Furthermore, Paul's workshop may have been the locus of much of his missionary preaching and teaching (17:17). Certainly the nature of his trade would have allowed him to engage in conversation, lecturing, and teaching while working.

Finally, Paul's epistles suggest that working at his trade played a significant role in his self-understanding as an apostle. It allowed him to dissociate himself from the many religious and philosophical charlatans whose primary motivation was avarice (e.g., cf. 2 Cor. 2:17; 11:1-21). Paul's practice of supporting himself seems also, however, to have prompted criticism from his opponents in Corinth and elsewhere, since working with one's own hands was considered the least appropriate of the various means of support commonly employed by religious and philosophical teachers.

W. H. GLOER

TEPE te'pā. *See* TELL.

TEPHON tē'fon [Gk. *tephōn*] (1 Macc. 9:50); AV TAPHON. A city fortified by Bacchides, probably to be identified with TAPPUAH 2. See J. Goldstein, *I Maccabees* (*AB*, 1976), pp. 386, 537.

TERAH ter'ə, tē'rə [Heb. *teraḥ*; Gk. *thara*]; AV also THARA. The son of Nahor and the father of Abram (Abraham) and two other sons, Nahor and Haran (Gen. 11:24-26). Terah was a descendant of Shem (Gen. 11:10-26). He lived in Mesopotamia, where, according to Josh. 24:2, he and Abram "served other gods" (cf. Jub. 11–12). According to Gen. 11:31 his home was "Ur of the Chaldeans," evidently the great UR of Lower Mesopotamia, but many scholars think he was a native of the city of Haran in Upper Mesopotamia, the region with which Abram's family seems to be most closely associated. According to Gen. 11:31 Terah moved from Ur to Haran, taking with him his son Abram, his daughter-in-law Sarai, and his grand-

son Lot, the son of Nahor. He died in Haran at the age of 205 (Gen. 11:32), after which Abram and his family set out for the land of Canaan (cf. Acts 7:4).

The name of Terah has been compared to that of Til (ša) Turaḫi, "ruin of the ibex [?]," a town mentioned in the inscriptions of the Assyrian king Shalmaneser III (mid-ninth cent. B.C.). Til Turaḫi was located in the basin of the Balikh River in Upper Mesopotamia, not far from Haran. In the same general vicinity were the towns of Tel Naḫiri (earlier Naḫuru) and Sarugi, also mentioned in Neo-Assyrian documents, which correspond to Nahor, the name of Terah's father as well as his second son, and Serug, the name of his grandfather (Gen. 11:22-24). Many scholars believe that the names of Terah and his kinsmen were derived from the names of these places.

See C. Westermann, *Genesis 1–11* (Eng. tr. 1984), pp. 563-65. P. K. MCCARTER, JR.

TERAH ter'ə, tē'rə [Heb. *tāraḥ*] (Nu. 33:27f.); AV, NEB, TARAH. One of Israel's encampment sites on the journey from Egypt to Canaan. Its location is unknown.

TERAPHIM ter'ə-fim [Heb. *t^erāpîm*; Gk. *theraphin; eidōla,* "idols"; etc.]; AV also IMAGE; NEB also HOUSEHOLD GODS. A type of IDOL or image, often associated with DIVINATION. Most scholars think the teraphim were household idols similar to the *penates* of the Romans. The primary basis for this interpretation is the account of Rachel's theft of the teraphim (RSV "household gods") from her father, Laban (Gen. 31:19). Laban calls them his "gods" (v. 30). Some scholars, noting references to household gods in Babylonian inheritance documents from Nuzi, concluded that the possessor of these objects was entitled to inherit the household property, and therefore that Rachel stole her father's teraphim in order to transfer the rights to his estate to Jacob. Closer study of the Nuzi texts, however, has shown that they do not support these conclusions. Rachel's motive is more likely to have been religious loyalty to the gods of her home. The purpose of the story, moreover, may be to ridicule the importance both Rachel and Laban attach to the idols. Note that when they have arrived safely in Canaan, Jacob admonishes his household to rid themselves of the foreign gods they have brought back with them (Gen. 35:2).

The exact appearance and function of the teraphim are unknown. The "image" (RSV; Heb. *t^erāpîm*) Michal placed in David's bed to mislead Saul's soldiers in 1 S. 19:13, 16 seems to have been life-sized. But Laban's household gods were small enough for Rachel to hide under her saddle. Many passages, such as Zec. 10:2, mention teraphim in connection with divination. According to Ezk. 21:21 (MT 26), for example, the consultation of teraphim was one of the divinatory techniques resorted to by Nebuchadrezzar. Moreover, teraphim are especially associated with the EPHOD (Jgs. 17:5; 18:14, 17f., 20; Hos. 3:4), which also had a divinatory function.

It seems safest to conclude that teraphim were small idols kept in private households and consulted in divination. Perhaps they can be identified with the "gods" that adjudicated in clan or household law (cf. Ex. 21:6; 22:8f. [MT 7f.]). Elsewhere, however, their use is condemned (cf. 1 S. 15:23). Josiah attempted to eradicate them as part of his reform (2 K. 23:24).

Bibliography.–P. R. Ackroyd, *Expos.T.*, 62 (1950-51), 378-380; A. R. Johnson, *Cultic Prophet in Ancient Israel* (2nd ed. 1962), pp. 32f., with bibliography; M. Greenberg, *JBL*, 81 (1962), 239-248. P. K. MCCARTER, JR.

TEREBINTH ter'ə-binth [Heb. *'ēlâ*; Gk. *terébinthos*]; AV TEIL TREE (Isa. 6:13), ELM (Hos. 4:13), TURPENTINE TREE (Sir. 24:16). Elsewhere the AV and RSV translate Heb. *'ēlâ* "oak"; the NEB has "terebinth" or "oak." Much confusion exists in translations and comms. about the distinction between the oak and terebinth, even though the trees are quite different botanically (cf. RSV mg. "terebinth" for Heb. *'ēlôn* in Gen. 12:6 and for *'ēlōnîm* in 13:18; 14:13; 18:1; Dt. 11:30). The terebinth is probably referred to only in Isa. 6:13; Hos. 4:13; Sir. 24:16, and in 1 S. 17:2, 19 (lit. "valley of the terebinth"; RSV "valley of Elah"). According to an ancient tradition the "tree" (Heb. *'ēṣ*, Gen. 18:8) under which Abraham served his guests was a giant terebinth near Hebron that was still standing in the 1st cent. A.D. Josephus described it as "a huge terebinth-tree, which is said to have stood there ever since creation" (*BJ* iv.9.7 [533]).

The Palestinian terebinth, *Pistacia terebinthus* var. palaestina (Boiss.) Post, is a large deciduous tree with a thick trunk and heavy branches. It attains a maximum height of 7.5 m. (25 ft.). In its leafless state it resembles an oak, and it is liable to infection by colorful galls. It bears small flowers and red berries. All parts of the tree yield an aromatic resinous juice, the Cyprus turpentine of commerce (cf. Sir. 24:16, AV).

The AV translation "elms" in Hos. 4:13 cannot be correct; the common elm (*Ulmus campestris* L.) grew only in the mountainous areas of Lebanon and Syria, whereas the trees in the text were more common in Palestine. The "teil tree" (Isa. 6:13, AV), an obsolete name for the linden tree, is not native to Palestine.

The biblical terms listed above refer to a state of intense fear inspired by a variety of beings, forces, and circumstances. The terms are frequently used as synonyms (often in synonymous parallelism), although they carry different nuances of meaning.

The broadest and most common OT term for "fear" is the Hebrew verb *yārē'*. The niphal part. of *yārē'* (*nôrā'*; RSV "terrible") is often applied to God and His deeds. The noun *môrā'* is also derived from *yārē'*. The verb *bāhēl* and cognate noun *behālâ* denote a state of terror often produced by an unexpected event such as the prospect of sudden death (see *TDOT*, II, 4f.). Similarly, the nouns *'êmâ*, *ballāhâ*, *māgôr*, and *mᵉgûrâ* (fem. cognate of *māgôr*), as well as the verb *bā'aṭ* and its cognates *bᵉ'āṭâ* and *bi'ûṯ*, denote a sudden terror that strikes people who are confronted with a being or force that is overpowering and life-threatening. The verb *ḥāṭaṭ* and its cognates (*ḥittîṯ*, *ḥittâ*, *mᵉḥittâ*) are likewise general terms for terror and that which terrifies; often translated by "dismay" (e.g., Isa. 20:5), this word-group is used frequently to describe the panic that besets military forces whose courage has been broken (e.g., 30:31; RSV "panic," 31:9). The verb *pāḥaḏ* and cognate noun *paḥaḏ* describe intense fear that causes trembling; the noun sometimes denotes the external cause of the terror. The verb *ḥāraḏ* and cognate noun *ḥᵃrāḏâ* likewise depict trembling or quaking before a fearsome being or event.

In the NT "terrify" and "terror" most often represent a member of the Greek word-group *phob-* (*phobéō*, *phóbos*, *émphobos*, *phoberós*, *phóbētron*) — terms that the RSV more commonly renders by "fear" or "be afraid." In the LXX *phobéō* and its cognates are the usual translations of Heb. *yārē'* and its cognates; this word-group is also used frequently for Heb. *pāḥaḏ* and *paḥaḏ*. The Greek verb *tarássō* refers to the mental agitation and confusion associated with a frightening event. The verb *ptoéō* and cognate noun *ptóēsis* refer to terror or alarm.

One of the greatest terrors that people faced in biblical times (as in all times) was the threat of sudden, premature death. Saul was paralyzed by fear when he heard Samuel's prophecy (through the medium at Endor) that he and his sons were about to be killed and the Israelites defeated in a battle with the Philistines (1 S. 28:21). Haman was terrified when he realized that his plot against the Jews had backfired and "that evil was determined against him by the king" (Est. 7:6). Such terror could be experienced by the righteous, e.g., by Job (6:4; 7:14; 23:16; 30:15; 31:23) and the psalmists (Ps. 31:13 [MT 14]; 55:4 [MT 5]; 88:15 [MT 16]). More often, however, it is described as the fate of the wicked (e.g., Job 15:24; 18:11, 14; 20:25; 22:10; 27:20; Ps. 14:5; 53:5 [MT 6]; 73:19), and those who trust in God confess that He protects them from things that terrify (e.g., Ps. 91:5; cf. Lk. 21:9). Freedom from fear is promised as one of the blessings of the messianic kingdom (Isa. 54:14).

Many OT texts describe God Himself as "terrible" (*nôrā'*), i.e., "awesome," "inspiring intense fear" (Dt. 7:21; 10:17; Neh. 1:5; 4:14; 9:32; Job 37:22; Ps. 47:2 [MT 3]; 68:35 [MT 36]; 76:7, 12 [MT 8, 13]; 89:7 [MT 8]; Dnl. 9:4; Joel 2:11). His name (Ps. 99:3; 111:9), His angel (Jgs. 13:6), and His works (Ex. 15:11; 34:10; Dt. 10:21; 34:12 [*môrā'*]; 2 S. 7:23; 1 Ch. 17:21; Ps. 66:3, 5; 106:22; 145:6; Isa. 64:3) are likewise described as terrifying (*nôrā'*). Other passages also describe terror in the presence of Yahweh (e.g., Job 23:15f. [*pāḥaḏ*, *bāhēl*]). On terror inspired by God's presence or deeds, *see* FEAR (esp. II.B.3); REVERENCE.

Terror is frequently associated with the horrors of war. Invading armies terrorized their adversaries in order to demoralize them (e.g., 2 Ch. 32:18; Isa. 7:6; Hab. 1:9; cf. Ezk. 26:17; 32:23-32). "Terrors" sent by Yahweh (and His "terrible deeds") play an important role in the accounts of Israel's exodus from Egypt and conquest of Canaan (e.g., Ex. 15:11, 16; 23:27; 34:10; Dt. 4:34; 10:21; 26:8; 34:12; Ps. 106:22; cf. 1 S. 5:6; Isa. 64:3; Jer. 32:21); by means of terror Yahweh confused and paralyzed Israel's enemies, thus bringing about Israel's victory. The prophets also refer to terror as a weapon that Yahweh employs against Israel's enemies (Isa. 19:17; 30:31; 31:9; Jer. 48:43f.; 49:5, 29, 37; Ezk. 38:21; Zec. 1:21). But as punishment for Israel's disobedience, Yahweh also sends His terror against His own people through the invading armies of foreign nations (Lev. 26:16; Dt. 32:25; Isa. 28:19; Jer. 8:15; 14:19; 15:8; 29:18; Ezk. 7:27). On the great DAY OF THE LORD Yahweh Himself will arise in judgment against all His enemies, and no one who has opposed Him will be able to escape His terror (Isa. 2:10, 19, 21; 24:17f.; cf. Joel 2:11, 31 [MT 2:11; 3:4]; Mal. 4:5; Lk. 21:11).

Also terrifying to people in biblical times were life-threatening events of nature, such as powerful winds (Ps. 83:15 [MT 16]) and earthquakes (Rev. 11:13). Darkness was feared as a time when one was vulnerable to surprise attacks by enemies (Job 24:17 [cf. v. 14]; Ps. 91:5; cf. Job 3:5). Powerful animals could also inspire fear (e.g., the horse, Job 39:20; Leviathan, 41:14, 22 [MT 6, 14]; the ten-horned beast in Daniel's vision, Dnl. 7:7, 19). The wilderness through which the Israelites journeyed

was terrifying because of its poisonous snakes, scorpions, and lack of food and water (Dt. 1:19; 8:15; cf. Isa. 21:1).

TERRITORY [Heb. *gᵉḇûl*] (Gen. 10:19; Ex. 13:7; Nu. 20:16f., 21; 33:44; Dt. 2:4; 3:16; 11:24; 12:20; 16:4; 28:40; Josh. 1:4; etc.); AV BORDER, BOUND, COAST, etc.; NEB also BORDER(S), FRONTIER, BOUNDARIES, etc.; [*gᵉḇûlâ*] (Nu. 32:33; Josh. 19:49); AV COAST; NEB FRONTIER; [*gôrāl*–'allotted portion'] ("territory allotted," Jgs. 1:3); AV LOT; [*ḥeleq*–'share'] (2 K. 9:10, 36f.); AV PORTION; NEB PLOT, PLOT OF GROUND; ['*ereṣ*–'land'] (Gen. 20:1; 2 Ch. 34:33); AV COUNTRY; [*môšāḇ*–'residence,' 'abode'] ("territory in which they lived," Gen. 10:30); AV DWELLING; NEB "they lived"; [Gk. *hórion*] (Mt. 4:13); AV BORDER; NEB DISTRICT; supplied in 2 Ch. 26:6; etc.; **BOUNDARY** [Heb. *gᵉḇûl*] (Nu. 21:13, 24; 22:36; 34:3-12; Dt. 2:18; 3:16f.; Josh. 12:2, 5; etc.); AV BORDER, COAST; NEB also TERRITORY, FRONTIER, BORDER, LIMIT, etc.; [*gᵉḇûlâ*] (Nu. 34:12; Josh. 18:20; Isa. 10:13); AV COAST, BOUNDS; NEB also FRONTIER; [*ḥōq*–'limit,' 'ordinance'] (Mic. 7:11); AV DECREE; NEB FRONTIER; [*taklît*–'extremity'] (Job 26:10); AV END; NEB FARTHEST LIMIT; [Gk. *horothesía*–'fixed boundary'] (Acts 17:26); AV BOUNDS; NEB LIMIT; supplied in Ezk. 47:18; etc.

By far the most common term rendered by "territory" and "boundary" in the RSV is Heb. *gᵉḇûl*. Both *gᵉḇûl* and *gᵉḇûlâ* are derived from the root *gbl,* "establish a boundary," "bound (an area)," "border on" (see *CHAL,* p. 54), and both terms can mean either "border" or "territory." Sometimes it is difficult to determine which meaning is intended in a particular passage (cf. AV and NEB variants). *Gᵉḇûl* occurs frequently in passages defining the boundaries of tribes, lands, peoples, or cities (esp. in Numbers, Joshua, and Ezekiel).

The Israelites, like other ancient Near Eastern peoples, had great respect for boundaries. Israel confessed that Yahweh had "fixed the bounds [*gᵉḇulōṯ*] of the peoples" (Dt. 32:8; cf. Acts 17:26). The LAND of Canaan belonged to Yahweh (cf. Lev. 25:23), and it was He who gave it to Israel as an inheritance and defined its boundaries (Nu. 34:1-15; Josh. 13:1-7). When the territories of the tribes were assigned, it was Yahweh Himself who determined the boundaries through Moses and the tribal leaders (Nu. 34:16-29) or through the casting of lots (Josh. 14–19; cf. 22:25). The boundaries of family property were also to be respected: anyone who moved a neighbor's LANDMARK (*gᵉḇûl*) was under a curse (Dt. 27:17; cf. 19:14; Prov. 22:28; etc.).

TERTIUS tûr'shi-əs [Gk. *Tertios* < Lat. *tertius*–'third'] (Rom. 16:22). The secretary or scribe (amanuensis) by whom Paul wrote his Epistle to the Romans. Nothing else is known of Tertius, although many commentators infer that he was a Roman Christian. This would explain the unique inclusion of his name in this list of greetings to Rome; nowhere else does an amanuensis of Paul identify himself.

The practice of dictating letters to an amanuensis was widespread in the ancient world and was apparently used elsewhere by Paul (cf. 1 Cor. 16:21; Gal. 6:11; Col. 4:18; 2 Thess. 3:17). The measure of stylistic or conceptual freedom permitted to amanuenses is disputed.

TERTULLUS ter-tul'əs [Gk. *Tertyllos,* diminutive from Lat. *tertius*–'third'] (Acts 24:1f.). An orator who traveled with Ananias the high priest to Caesarea to plead the Jews' case against Paul before the governor Felix (Acts 24:1-8; cf. 21:27-36; 23:26-30). Although his Roman name has suggested to some that Tertullus was a Greek or Roman, his use of the first person plural (". . . we enjoy . . . we accept . . . we have found . . . we seized," etc., 24:2-8) implies that he was a Jew; moreover, it was common for Jews to carry Roman names. His position as the one who brought the charge to Felix required that he be well trained and skilled in rhetoric. His opening flatteries follow the rhetorical mode of the day.

The Western text includes as part of Tertullus's speech a statement summarizing the events of 21:33-36; 22:22-24, 30. (The AV includes it in the text [24:6b-8a]; the RSV and NEB print it in the margin.) Its mention of Lysias as the chief captain seems to add authenticity to this statement, but its omission from most texts casts doubt on its originality. If this text is correct, however, it does carry through Tertullus's argument that Paul had tried to profane the temple (v. 6), noting in particular that Paul had been arrested in accordance with Jewish law.

The more important charge, however, was that Paul was a seditious character, an agitator among all the Jews (24:5) and a disturber of the peace. While Felix was expected to allow the Jews to enforce their law properly when it was violated, it was the latter charge that would hold the Roman government's attention, and undoubtedly the Jews from Asia were most concerned to see Paul sentenced for this charge. Tertullus contended that were Felix to interrogate Paul he himself would conclude that Paul was a dangerous enemy, not only of established Jewish law and tradition, but also of the state (v. 8).

TEST [Heb. usually *nāsâ* or *bāḥan,* also *ṣārap* (Jgs. 7:4; Ps. 17:3; 105:19), *bārar* (Eccl. 3:18), *ḥāqar* (Lam. 3:40), *bōḥan* (Isa. 28:16); Gk. (verbs) *peirázō* (Mt. 16:1; 19:3; etc.), *ekpeirázō* (Lk. 10:25; 1 Cor. 10:9), *dokimázō* (2 Cor. 13:5; 1 Thess. 2:4; etc.), (adjectives) *dókimos* (2 Cor. 13:7; Jas. 1:12), *adókimos* (2 Cor. 13:5), (nouns) *dokimḗ* (2 Cor. 2:9; 8:2; 9:13), *dokímion* (Jas. 1:3), *dokimasía* (He. 3:9)]; AV TEMPT, PROVE, TRY, TRIAL (Ezk. 21:13; 2 Cor. 8:2), MANIFEST (Eccl. 3:18), KNOW THE PROOF (2 Cor. 2:9), EXPERIMENT (9:13), BE REPROBATE (13:5), APPROVE (13:7), TEMPTATION (He. 3:8); NEB also (PUT TO THE) PROOF (Gen. 42:15; Ps. 26:2; 66:10; Mal. 3:10; 2 Cor. 9:13; Rev. 2:2), ASSAY (Jer. 9:7; Zec. 13:9), TRY TO CATCH OUT (Mt. 22:18; Mk. 12:15), CHALLENGE (Dt. 6:16), "separate" (Jgs. 7:4), "be upon" (Ps. 11:4), WEIGH (v. 5), "plunge into" (Eccl. 2:1),VINDICATE (2 Cor. 13:7), EXAMINE (Gal. 6:4), UNDERGO SCRUTINY (1 Tim. 3:10). An evaluation of or challenge to the character or quality of a given object.

In both the OT and NT "test" most commonly appears in the context of an incident or action by which God or a human individual is enabled to determine the moral condition of particular people or objects. The most common OT terms for "test," Heb. *nāsâ* and *bāḥan,* are basically interchangeable; *bāḥan,* however, occurs more often in poetry, usually in religious contexts, and sometimes implies a more intuitive and less mediated comprehension. The

classic OT test involved Abraham's "near-sacrifice" of Isaac (Gen. 22:1; cf. He. 11:17). God also used the wilderness wanderings (Dt. 8:2, 16; Ps. 81:7 [MT 8]), false prophets (Dt. 13:3 [MT 4]), and pagan nations (Jgs. 2:22; 3:1, 4) to test Israel. Afflictions frequently revealed character and were designed to refine or purify God's people (Ps. 66:10; Jer. 9:7 [MT 6]; Zec. 13:9; cf. Jas. 1:3, 12; 1 Pet. 1:7). Examples of human beings doing the testing include Elihu's evaluation of Job's words (Job 34:3), Jeremiah's denunciatory prophecy (Jer. 6:27), the Babylonian officials' assessment of the health of Daniel and his friends (Dnl. 1:12, 14), and the Queen of Sheba's interrogation of Solomon (1 K. 10:1; 2 Ch. 9:1). NT examples include Paul's instructions to the Corinthians concerning a particular sinner (2 Cor. 2:9) and the collection for Jerusalem (9:13), which were tests of their obedience, and also instructions about the need to examine prospective deacons (1 Tim. 3:10), to evaluate doctrinal teaching (1 Jn. 4:1), and to assess alleged prophecy (1 Thess. 5:21).

A quite different use of "test" appears in settings where human beings challenge God through disobedience. The OT paradigm for such rebellion came to be the Israelites' faithless clamoring for water at Massah–the name itself meaning "a place of testing" (Dt. 6:16; 33:8; Ps. 78:18; 95:9; 106:14). In Isa. 7:12 King Ahaz refused to challenge God by asking for a sign to confirm the prophet's words. In Mal. 3:15 evildoers in general are characterized by this rebellious attitude of putting God to the test, but in v. 10 God invites His people to test the sincerity and efficacy of His promises by supplying the commanded tithe.

The three less common OT words for "test" have only slightly different shades of meaning. *Ṣārap* originally meant to "smelt" or "refine"; the figurative sense of "refining" may be implicit in the three occurrences listed above. *Bārar* should perhaps be translated "make clear" (see M. Eaton, *Ecclesiastes* [*Tyndale OT Comms.*, 1983], pp. 85f.). *Ḥāqar* may denote a more diligent, extensive probing.

In the MT of Jgs. 7:3 the phrase *wᵉyiṣpōr mēhar haggilʿāḏ* (AV, lit., "and depart early from mount Gilead") appears to be corrupt (Gideon was not fighting anywhere near Gilead). The RSV emends the text (employing *ṣārap*) to read *wayyiṣrᵉpēm giḏʿôn*, "and Gideon tested them"; the NEB prefers a less drastic emendation, "to leave Mount Galud" (a possible name for the area near the spring of Harod). Isa. 28:16 applies the sole use of the adjectival form *boḥan* to the "tested" cornerstone. Not all scholars agree, however, that the word derives from *bāḥan*; a suggested alternative meaning is "strong" or "secure" (cf. NEB "granite block").

Greek *peirázō, dokimázō,* and their derivatives often appear in contexts similar to those for the various OT forms of testing. But both word groups also carry more distinctive meanings in certain contexts. *Peirázō* is the common word for "tempt"; thus its use in 1 Cor. 10:9; He. 3:8f. to refer to the incident at Massah is hardly surprising. Afflictions intended to refine (Rev. 2:10) could also lead to rebellion by those without proper attitudes. The most frequent use of *peirázō* in the sense of "test" is in references to the Jewish leaders' attempts to trap Jesus through questions designed to make Him incriminate Himself (Mk. 8:11 par.; 10:2 par.; 12:15 par.; Mt. 22:35; Jn. 6:6; cf. *ekpeirázō*, Lk. 10:25). The *dokim-* word-group refers originally to the successful outcome of a test (cf. the adjective *dókimos*, "tested," "genuine"), but individual contexts determine how much emphasis should be placed on this etymology. The anonymous brother accompanying the Jerusalem collection has been tried and approved (2 Cor. 8:22), but the testing of a believer's works with fire at the final judgment can clearly have either a positive or a negative outcome (1 Cor. 3:13; cf. Gal. 6:4). 2 Cor. 13:5, 7 employs the antonymous adjectives *adókimos* and *dókimos* for those who, respectively, "fail to meet the test" and those who "have met the test" of perseverance in the Christian life.

TESTAMENT. The Greek term *diathékē*, "testament," was used to designate literary works cast as the last words of important persons. The presence or absence of the term *diathékē* in the title of a work, however, does not determine whether the work belongs to the genre "testament." The book entitled *The Assumption of Moses* belongs to the genre "testament," while the book called *The Testament of Abraham* does not. Works cast as the testaments of famous persons commonly have three parts.

(1) The *introductory section* may contain some of the following elements: (a) a title or superscription, (b) a description of the occasion on which the testament was made, (c) a report about the summoning of family members or other persons, (d) a report identifying the persons summoned, and/or (e) a statement about the age of the maker of the testament.

(2) The *body* contains a report of one or more speeches made by the maker of the testament. These testamentary addresses can incorporate elements from narrative, hymnic, wisdom, and apocalyptic genres.

(3) The *concluding section* may include such elements as: (a) a report about the death of the testator, (b) a report of the burial of the famous person, or (c) a report of the family's or community's mourning.

The forms of testaments vary from case to case, and the criteria for the precise definition of the genre "testament" and its relationship to other genres remain a subject for scholarly discussion. Testaments and farewell speeches can share similar external forms as well as common themes or motifs in their contents. The testament, however, seems to presuppose the impending death of the testator, which lends a heightened sense of urgency to the message.

It is in the messages of the testaments — messages intended for the contemporaries of the *authors* and presumably for future generations also — that the intentions of the various texts must be sought. The *Sitzen im Leben,* or settings in life, in which these literary testaments functioned (the settings in which authors sought to communicate their messages to their communities, and in which these communities read and discussed the testaments) must be distinguished from the setting in life pictured in the fiction of a given testament (that of a family gathered at the bedside of a dying patriarch or matriarch).

Testaments play significant roles as parts of larger works in the canonical form of biblical texts (Gen. 49 [Jacob]; Deuteronomy [Moses]; Josh. 23–24 [Joshua]; 1 K. 2:1-10 [David]; 1 Ch. 28–29 [David]; Lk. 22:7-38 [Jesus]; Jn. 13–17 [Jesus]; and Acts 20:17-38 [Paul]). Testamentary characteristics have also been seen in other texts, including 2 Timothy and 2 Peter. Testaments as parts of larger works are also found in the Apocrypha (1 Macc. 2:49-70 [Mattathias]; Tob. 4; 14:1-12 [Tobit; see also ch. 13]) and in the Pseudepigrapha (Jub. 20:1–23:7 [Abraham]; 36:1-18 [Isaac]; Life of Adam and Eve 49:1–51:3 [Eve]; Biblical Antiquities of Pseudo-Philo 19:1-16

[Moses]; 24:1-6 [Joshua]; and perhaps also Jub. 7:20-39 [Noah], and 35:1-27 [Rebecca]).

Independent Testaments are also known, such as the Testaments of the Twelve Patriarchs, the Testament of Job, the Testament of Isaac, the Testament of Jacob, the Testament of Moses (or Assumption of Moses), the Testament of Solomon, and the Testament of Adam. Fragments of an Aramaic Testament of Amram, the father of Moses, Aaron, and Miriam, were found at Qumrân (4Q'Amram abcde).

By using the fiction of testaments of famous persons, writers in late antiquity were able to lend authority to their own messages for their own communities by drawing upon a genre and upon characters and stories known in the authoritative texts of those communities.

For AV "testament," see COVENANT (NT); WILL (TESTAMENT).

TESTIMONY; TESTIFY [Heb. *ʿēḏûṯ, ʿēḏâ*] (Ex. 16:34; Dt. 4:45; 1 K. 2:3; Ps. 25:10; 119:14, 168; etc.); AV also WITNESS; NEB also INSTRUCTION, (SOLEMN) PRECEPTS, (SOLEMN) CHARGE, etc.; [Heb. *ʿānâ*] (Nu. 35:30; Dt. 21:7; 1 S. 12:3; Job 15:6; Isa. 59:12; etc.); AV also ANSWER, (BEAR) WITNESS; NEB also (BEAR) WITNESS, "lay your complaints," "tell me," etc.; [Heb. *ʿûḏ*] (2 Ch. 24:19; Ps. 50:7; Am. 3:13); NEB also DENOUNCE, BEAR WITNESS; [Heb. *teʿûḏâ*] (Isa. 8:16, 20); NEB MESSAGE; [Heb. *ʾālâ*–'oath,' 'curse'] (Lev. 5:1); AV SWEARING; NEB GIVE EVIDENCE AS A WITNESS; [Heb. *ʾôṯ*–'sign,' 'mark'] (Job 21:29); AV TOKENS; NEB SIGNS; [Gk. *martyría*] (Mk. 14:55; Jn. 1:7; 3:11; 5:31f.; 8:13f.; Acts 22:18; Tit. 1:13; 1 Jn. 5:9-11; Rev. 11:7; 20:4; etc.); AV also WITNESS, RECORD; NEB also EVIDENCE, WITNESS, etc.; [Gk. *martýrion*] (Mt. 10:18; Mk. 6:11; Lk. 9:5; Acts 4:33; 1 Cor. 1:6; 2 Tim. 1:8; He. 3:5, etc.); AV also WITNESS; NEB also WARNING, WITNESS, etc.; [Gk. *pseudomartyría*–'false testimony'] (Mt. 26:59); AV FALSE WITNESS; NEB SOME ALLEGATION; [Gk. *martyréō*] (Jn. 4:39; Acts 13:22; 1 Cor. 15:15; 2 Cor. 8:3; 1 Tim. 6:13; He. 7:8; 1 Jn. 1:2; 3 Jn. 12; Rev. 22:16; etc.); AV also BEAR RECORD, (BEAR) WITNESS, HAVE GOOD REPORT (passive); NEB also DECLARE, EXPOSE, EXCLAIM, etc.; [Gk. *diamartýromai*] (Acts 2:40; 10:42; 20:21; 23:11; He. 2:6; etc.); AV also WITNESS; NEB also "pressed his case," AFFIRM, INSIST ON, ASSURE, SPEAK URGENTLY, "there is a solemn assurance"; [Gk. *martýromai*] (Acts 20:26; Gal. 5:3; Eph. 4:17); AV also TAKE TO RECORD; NEB DECLARE, "you can take it from me," "I urge it upon you"; [Gk. *katamartyréō*–'testify against'] (Mt. 26:62; 27:13; Mk. 14:60); AV WITNESS AGAINST; NEB "the charge that these witnesses bring," etc. "Testimony" is supplied by RSV in He. 10:28.

The term "testimony" (Heb. *ʿēḏûṯ* and *ʿēḏâ*) is found most often in Exodus and Psalms. In Exodus the term refers to the two tablets of the law written by the finger of God (Ex. 30:6; 31:18; 32:15f.; 34:29; Nu. 17:10 [MT 25]) and placed in the ark (Ex. 25:16, 21; 40:20). These tablets which contained Yahweh's testimony — His will — were the heart of Israel's worship and of the nation's ethical and religious life. The other important elements of early Israel's worship were named with respect to these tablets of the testimony. The ark was "the ark of the testimony" (Ex. 25:22; 26:33f.; 30:6, 26; 39:35; 40:3; Nu. 4:5; 7:89; *ʿēḏûṯ* is used alone to indicate the ark in a few places: Ex. 16:34; 27:21; 30:36; Lev. 16:13; Nu. 17:4, 10 [MT 19, 25]), the tabernacle was "the tabernacle of the testimony" (Ex. 38:21; Nu. 1:50, 53; 10:11) and "the tent of the testimony" (Nu. 9:15; 17:7f.; 18:2; 2 Ch. 24:6), and the veil was "the veil of the testimony" (Lev. 24:3).

This use of "testimony" for the word of Yahweh came to be more broadly applied. In the Psalms "testimony" or "testimonies" refers to the Torah, God's law or instruction (e.g., Ps. 19:7 [MT 8]; 25:10; 78:5; 99:7; 119:88), and is paralleled by other terms such as "covenant," "ways," and "precepts" (e.g., 119:59, 168; 132:12). In Deuteronomy and the historical books the term is used in much the same way (Dt. 4:45; 6:17, 20; 1 K. 2:3; 2 K. 23:3 par. 2 Ch. 34:31). At the coronation of the child king Joash, "the testimony" was given to him (2 K. 11:12 par. 2 Ch. 23:11); this "testimony" may have been a book (perhaps a portion of the law; cf. Dt. 17:18), document, or amulet. The words of God through Isaiah are also called the "testimony" (Isa. 8:16, 20; Heb. *teʿûḏâ*).

A significant number of NT uses of Gk. *martyréō* and related words are concerned with testimony given to the revelation of God in Jesus. In the Gospel of John, in particular, a line of thought is developed with regard to this testimony. John the Baptist gave testimony to Jesus (Jn. 1:7, 19; 5:33). Jesus came as one testifying to what He knew as the one who had come from God (3:31-33; 8:14). The testimony of human beings to Jesus is effective (4:39; cf. 1 Jn. 1:2), but God Himself gave testimony to Jesus through the miraculous works Jesus did (Jn. 5:31-37; cf. 1 Jn. 5:9).

The gospel is to be preached "as a testimony to all nations" (Mt. 24:14). Testimony before rulers in conditions of persecution is considered an aspect of this testimony (Mt. 10:18; 2 Tim. 1:8; Rev. 11:7; 12:11). A prominent part of the presentation of the apostolic mission in the NT is its portrayal as the activity of those who testify to Jesus — to His identity (Acts 10:42; 18:5; 22:18; 23:11; 26:22f.; 28:23; 1 Cor. 1:6; 2:1f.; 1 Jn. 1:2; 4:14), to His resurrection (Acts 4:33; 1 Cor. 15:15), and to the need for repentance and faith in Him (Acts 2:40; 8:25; 20:21, 24; Eph. 4:17; 2 Thess. 1:10).

TESTIMONY, ARK OF THE. *See* ARK OF THE COVENANT.

TETA tē'tə (1 Esd. 5:28, AV). *See* HATITA.

TETH teth [ט]. The ninth letter of the Hebrew alphabet, transliterated in this encyclopedia as *ṭ*. It also came to be used for the number nine. It was used with *wāw* for fifteen (i.e., 9 + 6) and with *zāyin* for sixteen (9 + 7) to avoid forming the abbreviation for Yahweh. *See* WRITING.

TETRAGRAMMATON te-trə-gram'ə-ton. *See* GOD, NAMES OF II.C.

TETRARCH tet'rärk [Gk. *tetraárchēs* < *tetrás*–'four' + *archē*–'ruler' (Mt. 14:1; Lk. 3:19; 9:7; Acts 13:1), part. of *tetraarchéō*–'be tetrarch' (Lk. 3:1)]; NEB PRINCE. A term that originally meant "ruler of a fourth part" (Strabo *Geog.* xii.5.1 [567]). Euripides provided the first attestation of the tetriarchate in a reference to Thessaly (*Alcestis* 1154; cf. W. Dittenberger, ed., *Sylloge Inscriptionem Graecarum* [4 vols., 3rd ed. 1915-1924], I, no. 274), which was divided into four districts: Thessaliotis, Hestiaeotis, Pelasgiotis, and Phthiotis. In the Hellenistic East the term was applied to the four divisions of each of the three Galatian tribes (Strabo xii.5.1 [566f.]).

Gradually, especially in Roman times, the term began to be used more loosely of rulers with status less than that of a king (cf. NEB "prince"). Herod the Great and his brother Phasael were named tetrarchs by Mark Antony in 41 B.C. (Josephus *BJ* i.12.5 [244]; *Ant.* xiv.13.1 [326]). In 37 B.C. the Roman Senate gave Herod the title King of Judea. Herod's last will announced that his son Archelaus was to succeed him to the kingship and that two other sons, Herod Philip and Herod Antipas, were to be assigned tetrarchies (*Ant.* xvii.18.1 [188f.]). Augustus in turn redivided Herod's kingdom. He named Archelaus ETHNARCH (cf. Mt. 2:22. where the vb. *basileúō* is used generically) over half of Herod's territory, including Judea, Idumea, and Samaria; Antipas became tetrarch of Galilee and Perea (W. Dittenberger, ed., *Orientis Graeci Inscriptiones Selectae* [2 vols. 1903-1905], nos. 416.3; 417.4); and Philip became tetrarch of the northern portion of Herod's kingdom, including Gaulanitis, Auranitis, Batanea, Trachonitis, Paneas, and Iturea (see *BJ* ii.6.3 [93-95]; *Ant.* xvii.11.4 [317-19]).

Luke 3:1 uses the part. of *tetraarchéō* in reference to Herod Antipas, Philip, and Lysanias (of Abilene). Mt. 14 reflects the fluidity in political terminology: v. 1 refers to Antipas with the precise term "tetrarch" (as does Luke in every instance; cf. 3:19; 9:7; Acts 13:1), but v. 9 uses the more popular term "king" (so also Mk. 6:14, 22, 25-27; cf. Polybius xxi.37.1f.; xxi.39.4, in reference to Galatian tetrarchs).

TETTER [Heb. *bōhaq*; LXX *alphós*] (Lev. 13:39); AV FRECKLED SPOT; NEB DULL-WHITE LEPROSY. This term used to be applied in an untechnical manner to various cutaneous disorders such as eczema and lupus vulgaris, but it is now obsolete. The sufferer exhibiting this condition apparently had depigmented patches of skin on his body, described clinically as acquired leucoderma or vitiligo.

I. Witnesses to the OT Text.–The source materials for reconstructing the text of the OT consist of Hebrew MSS (including the Aramaic portions), ancient translations called the versions, and citations of the text in early Jewish and Christian writings.

A. Hebrew MSS. 1. Dead Sea Scrolls. The earliest MS evidence available for the OT text is also the most recently discovered. Since 1947 thousands of fragments of MSS, both biblical and nonbiblical, have come to light in the Dead Sea region. The biblical MSS represented range in date from the 3rd cent. B.C. to the 1st cent. A.D. Not surprisingly, these MSS have had an enormous impact on OT textual studies.

The most famous and best publicized discoveries have come from the caves associated with the ruins of ancient Khirbet Qumrân on the northwest shores of the Dead Sea. Altogether, eleven caves have yielded MS material, some of it intact in the form of large scrolls, but most of it consisting of small fragments. To date, close to two hundred biblical MSS have been identified among this material, over one hundred from Cave 4 alone. Every book of the OT canon is represented at Qumrân except Esther, the greatest number of MSS coming from the Pentateuch (15 MSS of Genesis, 15 of Exodus, 9 of Leviticus, 6 of Numbers, 25 of Deuteronomy), the Latter Prophets (18 MSS of Isaiah, 4 of Jeremiah, 6 of Ezekiel, 8 of the Minor Prophets), and the Psalms (27 MSS). Some of the best-known MSS are the two Isaiah scrolls from Cave 1 (1QIsa^a and 1QIsa^b), extensive fragments of a Samuel scroll from Cave 4 (4QSam^a), a Psalms scroll from Cave 11 (11QPs^a), and a commentary on Habbakuk also from Cave 1 (1QpHab). The earliest MS is probably that of 4QSam^b, originating in the late 3rd cent. B.C.

While the term *Dead Sea Scrolls* is officially applied only to the corpus of MSS associated with the library of

TEXT AND MSS OF THE OT

Qumrân, other sites in the Dead Sea region have yielded significant MS caches. The principal sites are those of Wādī Murabba'ât, Naḥal Ḥeber, and Masada. The MSS from Murabba'ât and Naḥal Ḥeber are particularly interesting since they come from the time of the Second Jewish Revolt under Bar Cochba, (A.D. 132-135).

The official publication of DSS material is found in DJD (1955ff.). For useful classifications of published DSS material see J. A. Fitzmyer, *Dead Sea Scrolls: Major Publications and Tools for Study* (1975), and J. A. Sanders, "Palestinian Manuscripts, 1947-1972" in F. M. Cross and S. Talmon, eds., *Qumran and the History of the Biblical Texts* (1975).

2. Nash Papyrus. Prior to 1947 the oldest witness to the OT text was a papyrus fragment that W. L. Nash acquired in Egypt in 1902, later donated to the Cambridge University Library. It contains what is probably a liturgical text of the Decalogue (with the sixth and seventh commandments reversed) and the Shema from Dt. 6:4f. Initially dated in the 1st or 2nd cent. A.D., it was later assigned by W. F. Albright (*JBL*, 56 [1937], 145-176) to the 2nd cent. B.C., a date now universally accepted.

3. Cairo Genizah Fragments. At the end of the 19th cent. Egypt was also the scene of a major MS discovery relating to the text of the OT: the thousands of parchment fragments preserved and uncovered in the genizah (store room) of the Ezra Synagogue in Old Cairo, a synagogue built in A.D. 882 on the ruins of a Coptic church sold to the Jews. Most of this material wound up in the libraries of Leningrad and Cambridge, though significant collections are also found in other libraries of the world. According to P. Kahle, who worked extensively on this material, most of the biblical fragments are to be dated between the 6th and 9th cents., i.e., slightly before the main Masoretic MSS detailed below. They have proved especially valuable in illuminating the historical development of the Hebrew vocalization systems.

Numbers 26:12-27 in one of the oldest Masoretic MSS, British Museum Codex Or. 4445 (*ca.* A.D. 850) (The British Library)

4. Principal Masoretic MSS. The Masoretes were Jewish scribes who, in the period between the 6th and 10th cents., labored to preserve and transmit the text of the OT Scriptures. The principal surviving MSS of their work, known as the Masoretic Text (MT), are the following.

The *Cairo Codex of the Prophets* (*Codex Cairensis*) (A.D. 895) contains the Former and Latter Prophets. A colophon or end-note mentions Moses ben Asher as the scribe; it is currently in the possession of the Karaite community in Cairo. See S. Loewinger, ed., *Cairo Codex* (2 vols. 1971).

British Museum Codex Oriental 4445 is an incomplete text of the Pentateuch (Gen. 39:20–Dt. 1:33 with brief lacunae in Numbers), dated variously from the middle of the 9th to the middle of the 10th century. Marginal notes frequently refer to (Aaron) ben Asher as an authority.

The *Leningrad Codex of the Prophets* (MS B 3 of the Russian Public Library, Leningrad) (A.D. 916) contains Isaiah, Jeremiah, Ezekiel, and the Twelve. It is especially important for the light it throws on the development of the vocalization system.

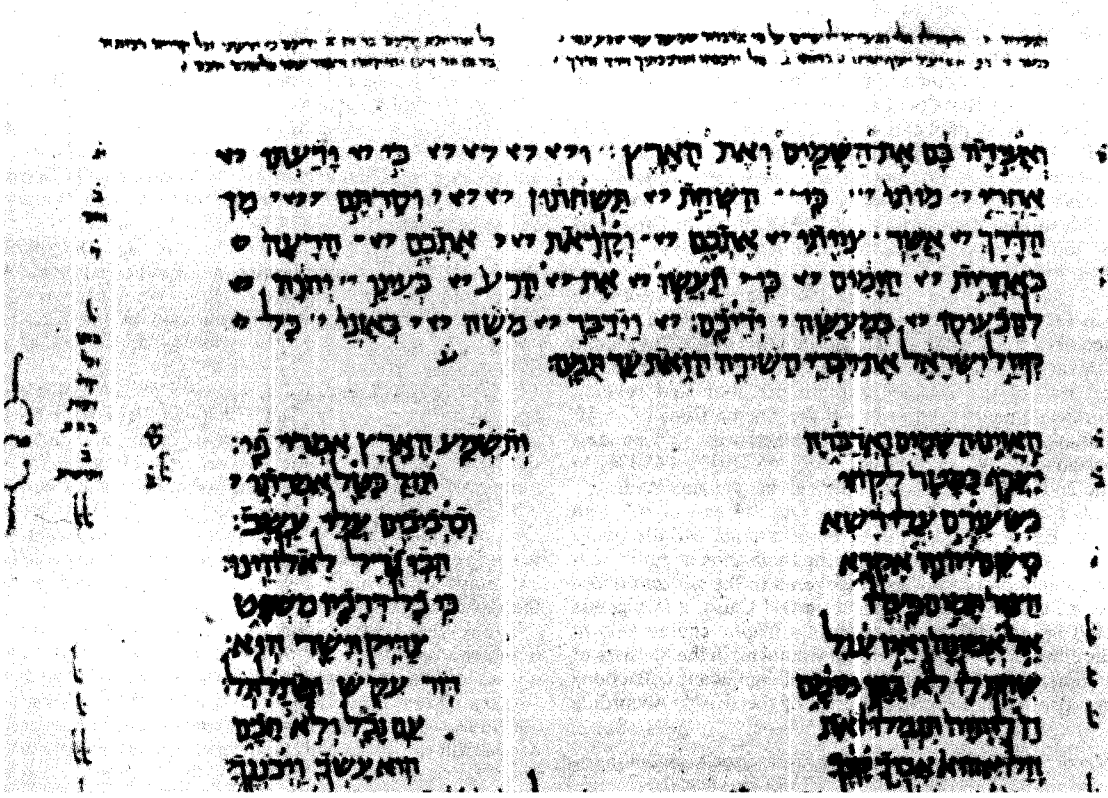
The *Aleppo Codex* originally contained the entire OT; it is generally dated *ca.* 900-925. Till 1948 it was kept in the Jewish synagogue in Aleppo (northern Syria) but was feared lost in the violence attending the founding of the State of Israel. Fortunately it surfaced in Jerusalem a decade later, though with the loss of a quarter of its text (missing was Gen. 1–Dt. 28:16 at the beginning, a few pages in the Prophets, and Cant. 3:12–8:14, Ecclesiastes, Lamentations, Esther, Daniel, and Ezra at the end). It may have been the MS designated by Maimonides as the model codex of Aaron ben Asher (cf. M. H. Goshen-Gottstein, *Textus*, 1 [1960], 17-58; J. S. Penkower, *Textus*, 9 [1981], 39-128). Where extant it constitutes the base text of the edition being prepared by the Hebrew University Bible Project. See M. H. Goshen-Gottstein, ed., *Aleppo Codex* (1976).

The *Leningrad Codex* (*Codex Leningradensis*), MS B 19a of the Russian Public Library, Leningrad, contains the complete OT text. According to a colophon it was copied in A.D. 1008/9 from MSS corrected by Aaron ben Moses ben Asher. In 1937 it was adopted as base text for the 3rd ed. of *BH*, a policy continued in *BHS* (1967-1977). See S. Loewinger, ed., *Codex Leningrad B19*^{A} (1970).

Although the above are the most important MSS of the MT, a limited number of other such MSS from the 10th and 11 cents. also exists, several in the state library of Leningrad. Following the 11th cent., however, Hebrew MSS of the Masoretic type become much more common. Many of these have been documented in the great collations of the last two centuries (see II.D below). Collation of Hebrew biblical MSS is currently being carried on especially in Jerusalem in conjunction with the Hebrew University Bible Project. A collateral Institute of Microfilms of Hebrew Manuscripts, which has also been established in the University, aims to have a comprehensive collection of all relevant Hebrew MSS for the study of the OT text. In Claremont, California, a similar institute exists, the Ancient Biblical Manuscript Center for Preservation and Research.

5. Samaritan Pentateuch. A special witness to the first part of the OT is that of the Samaritan Pentateuch (Sam.

TEXT AND MSS OF THE OT



The top half of a page from the Aleppo Codex (A.D. 900-950) showing Dt. 31:28-32:6 (Hebrew University, Jerusalem)

Pent.), the scriptures of the separate Samaritan community with roots going back to the time of the Exile. Accepting the Pentateuch alone as canonical, the Samaritans have preserved this portion of the OT in an independent line of transmission in archaic script resembling paleo-Hebrew.

For many centuries the text of the Samaritans was known only indirectly through comments about it in the writings of the early church fathers such as Eusebius and Jerome. But in 1616 the text was rediscovered in Damascus and published in Europe in the seventeenth-century Paris and London Polyglots. While the largest collection of Samaritan MSS is found in the Russian Public Library in Leningrad, other early MSS are in the possession of the John Rylands Library in Manchester (one is dated A.D. 1211/12) and the University of Cambridge (one codex contains a note to the effect that it was sold in A.D. 1149/50, hence probably copied some centuries earlier). The most important MS, however, is still the Abisha Scroll in the hands of the surviving Samaritan community, the older and more original part of which consists of Nu. 35–Dt. 34 and is probably to be dated to the 11th cent. A.D. The many differences between the text of the Samaritan Pentateuch and the MT have aroused considerable debate since the time of its discovery.

See also PENTATEUCH, SAMARITAN.

B. Versions. 1. Greek. The earliest translation of the OT into Greek is known as the SEPTUAGINT (LXX). According to the pseudepigraphal Letter of Aristeas, the beginnings of this translation go back to the days of King Ptolemy Philadelphus of Egypt (285-246 B.C.), who on the advice of his librarian commissioned the translation of the Hebrew sacred books for his famous library in Alexandria. Although the tale of Aristeas is largely legendary, it points back nonetheless to the translation at least of the Torah some time in the first half of the 3rd cent. B.C. From there the corpus of translated books grew by stages, so that well before the Christian era there was in place a Greek translation of the OT (along with some books not included in the Hebrew canon) essentially the same as the LXX version known to us.

The text of this version is extant in numerous Greek MSS, patristic citations, and daughter versions. The principal uncial MSS of the LXX are the same as those of the NT, e.g., Codex Vaticanus (4th cent.), Codex Sinaiticus (4th cent.), and Codex Alexandrinus (5th cent.). The main contribution of this century to the textual criticism of the LXX, however, has been the discovery of many papyri fragments and scrolls, some of which go back to pre-Christian times. The 20th cent. has also seen the production of improved critical editions of the LXX, primarily in Cambridge and Göttingen. With these and other editions the study of the LXX in relation to the MT has been placed on a much firmer footing than previously.

Although some scholars (e.g., P. Kahle and A. Sperber) have challenged the notion that the extant textual evidence for the LXX points back to an original translation (Ur-LXX) from the Hebrew — preferring instead to view it as the end product of a series of translations and revisions — the consensus of contemporary LXX scholarship is constantly moving in the direction of vindicating the Ur-LXX theory as espoused by such scholars as P. de Lagarde, P. Walters (formerly Katz), and H. M. Orlinsky. On this basis the LXX remains a primary witness to the Hebrew

TEXT AND MSS OF THE OT

OT text employed by the translators of the 3rd and 2nd cents. B.C., even though its text-critical value varies considerably from book to book.

But the LXX was not the only Greek translation of antiquity. In the 2nd cent. A.D. other translations came into being to challenge the dominance of the LXX; these are commonly known as the Younger or Minor Greek Versions. As the LXX gained circulation among Christians, it proportionately lost favor with Jews, who demanded a more accurate representation of the Hebrew in Greek. This demand was supplied in the extremely literal translation of Aquila, *ca.* A.D. 150. Two other translations in the latter half of the 2nd cent. were those of Symmachus and Theodotion, both of which employed more idiomatic Greek than Aquila. Theodotion may have reworked an existing translation since some Theodotionic readings are attested in pre-Theodotion sources such as the NT.

We know about these translations largely on account of the text-critical labors of the great third cent. scholar Origen, who in his pursuit of a better LXX text than the one current in his day produced the six-columned Hexapla. This was an undertaking of extraordinary proportions with separate columns devoted in turn to the Hebrew text, the same in transliterated Greek characters, the versions of Aquila and Symmachus, Origen's reconstituted LXX text, and finally Theodotion's version. For some books of the OT additional translations were also documented, known as the Quinta, Sexta, and Septima, i.e., the fifth, sixth, and seventh in addition to the basic four.

Origen's LXX column was a synthesis of readings found in current LXX MSS and other readings incorporated from the Minor Greek Versions, the net effect of which was to bring his text into much greater conformity with the current Hebrew text. Although Origen sought to preserve the distinction between the readings adopted from the LXX and other sources, his system of diacritical marks was later misunderstood or ignored, resulting in Hexaplaric MSS (those containing the fifth-column text of the Hexapla only) of very mixed character. Other revisions of the LXX also appeared in the 3rd and 4th cents., the best known being those of Lucian and Hesychius (referred to by Jerome in his preface to Chronicles). Although the Lucianic text is well established for the Former and Latter Prophets, it may not be extant for other parts of the OT. D. Barthélemy has challenged the traditional identification of the text in question as "Lucianic" throughout the OT (*Devanciers*, pp. 126f.). There is even less agreement on which MSS, if any, attest the Hesychian recension.

Other editions of the Greek text have also been identified among the MS material, the most important one being the pre-Christian *Kaige* recension identified by D. Barthélemy in a Greek scroll of the Minor Prophets from the Bar Cochba caves. Although the task of unraveling the relationship among each of the Greek versions and revisions mentioned above is very complex, it is nonetheless an essential undertaking, for each version has its own role to play in the search for the earliest and best possible text of the OT.

2. Aramaic. Even before the appearance of the LXX, oral translation of the Hebrew scriptures into Aramaic was commonly practiced in the synagogues of Palestine. The origins of this custom are not altogether clear, but they may go back to the time of Ezra and perhaps even to the incident recorded in Neh. 8, which states that Ezra's reading of the Law was relayed to the people by Levites who read "clearly" or "with interpretation" (RSV mg.), i.e., "translating it" (NIV mg.) into Aramaic. This process would have been necessary since Hebrew was increasingly becoming a forgotten language to many of the colonizers. In due course this practice of oral translation was formalized in the synagogue, the translator being called a *m^{e}ṯûrg^{e}mān* and his translation a *targûm* (< the verb *targēm*, "translate").

It is to be stressed, however, that for many centuries these translations were strictly oral — lest the translation be invested with the same authority as the original Hebrew. In the main, the translations appear not to have been written down till about the 5th cent. A.D., although there are some Targums, perhaps of an unofficial character, that had been committed to writing already by the 1st cent. A.D.; cf. the partial Targum on Job discovered in Qumrân Cave 11 and other fragments of early Aramaic paraphrases of Job and Leviticus identified in Cave 4.

The principal Targums are those of Targum Onkelos of the Pentaṭeuch and Targum Jonathan ben Uzziel of the Prophets (i.e., the Former and Latter Prophets of the Hebrew canon). Both are thought to have been edited in Babylon around the 5th cent. A.D. and both became official for Judaism. While Targum Onkelos is quite a literal and conservative translation, normally giving the plain sense of the Hebrew, Targum Jonathan tends to be more interpretative. This tendency towards interpretation, paraphrase, avoidance of anthropomorphisms, etc., is even more pronounced in what are called the Jerusalem or Palestinian Targums, such as the "Pseudo-Jonathan" Targum on the Pentateuch and other Targums on the Prophets and the Writings (apart from Daniel, Ezra, and Nehemiah, for which there are no extant Targums). These Targums may go back to an earlier era than those of Babylonian provenance. The study of the Palestinian Targums has been enhanced in the 20th cent. with the discovery of several fragments among the MSS of the Cairo Genizah, as well as by the discovery in 1957 of a complete MS (Neofiti I) in the Vatican Library.

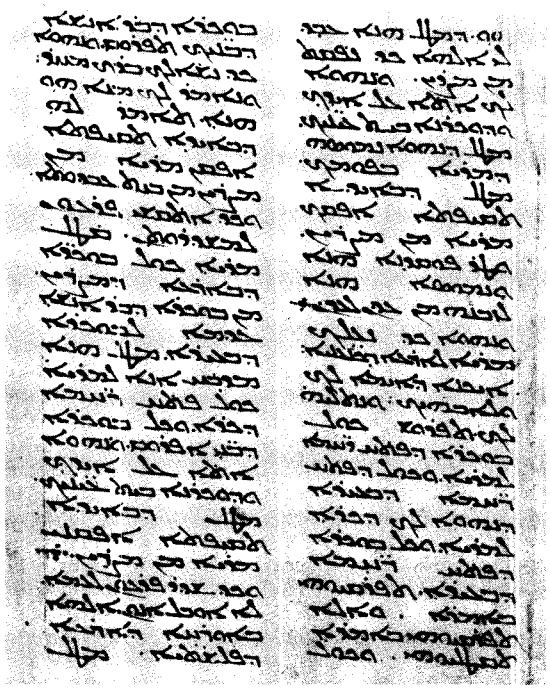
Because of the pronounced tendency toward popular exegesis and expansion in many of the Targums, their value for OT textual criticism is minimized, though certainly not eliminated altogether. The text of the most important Targums may be found in A. Sperber, *Bible in Aramaic*, I-IV (1959-1973).

See also TARGUM.

3. Syriac. While the Targums are written in the dialect known as Western Aramaic, other translations exist written in the dialect of Eastern Aramaic or Syriac, the language of northern Mesopotamia in the early centuries of the Christian era with its own distinctive script. The most important of the Syriac translations is the Peshitta, meaning "simple" or "common" version. Although the name itself is unknown before the 9th cent., the beginnings of the translation might go back to the 1st cent. A.D., though whether to Jewish or to Christian circles is uncertain.

The characteristics of this version vary greatly from one book to another, ranging between the extremes of sober literalism, e.g., the Pentateuch and Job, to free-flowing paraphrase, e.g., Chronicles and Ruth, a fact which suggests multiplicity of authorship and, as with other versions, urges caution in its application to OT textual criticism. The picture is further complicated by the existence of two recensions of the text among Peshitta MSS (one more literal and the other more paraphrastic with reminiscences of the Palestinian Targum) and the influence of the LXX on several parts of the Peshitta.

The text of the Peshitta lies at hand in a select number of early MSS, including the British Museum MS Add. 14425, copied in the year A.D. 464 (the earliest known *dated* biblical MS) containing the books of the Pentateuch except for Leviticus. Another extremely important MS is the sixth- or seventh-century codex found in the Ambro-



Exodus 13:8-17 in the Estrangela script of the oldest Peshitta MS, on parchment (A.D. 464) (The British Library, Add. 14425)

sian Library in Milan, published in photographic facsimile by A. M. Ceriani, *Translatio Syra Pescitto Veteris Testamenti* (1876). The printed text of the Peshitta is found in the seventeenth-century Paris and London Polyglots as well as in a few nineteenth-century editions, both in whole and in part. A new edition of the Peshitta with a significant critical apparatus is being issued by the Peshitta Institute of the University of Leiden under the general title *OT in Syriac According to the Peshitta Version* (1977ff.).

Besides the Peshitta, other ancient versions of the Syriac OT include the Philoxenian, the Palestinian Syriac, and the translation of Jacob of Edessa, but most notably the Syrohexapla, so called because it was based on Origen's fifth-column text of the Hexapla. This translation was executed by Paul, Bishop of Tella, in A.D. 615-617 and survives in an eighth-century MS — i.e., only a century after the original translation — also published photolithographically by A. M. Ceriani in *Monumenta sacra et profana*, VIII (1874). Because it is an extremely literal translation the Syrohexapla is an important witness (where extant) to the text of the Hexaplaric recension of the Greek OT and hence indirectly to the Hebrew text of Origen's day.

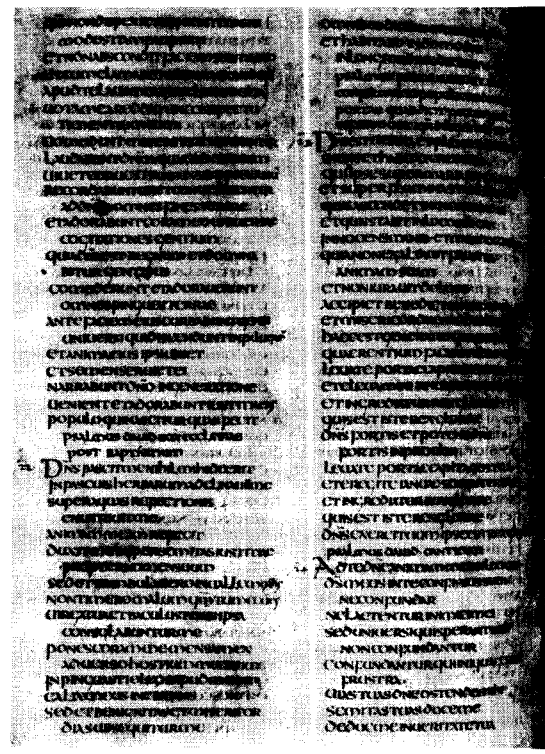
4. Latin. The translation of the Scriptures into Latin was undertaken primarily by the Christian Church, perhaps in north Africa in the middle of the 2nd cent., though Syrian Antioch and Rome have also been proposed. Once the process was begun it soon yielded a number of competing translations rather than one dominant version. This is clear from the considerable divergence of readings in MSS attesting this family of translations — known as the *Vetus Latina* or Old Latin — as well as from comments by Augustine and Jerome a couple of centuries later lamenting the variety and incompetence of translations then in existence. Another feature of the Old Latin translations is that they were based on the LXX rather than on the Hebrew. A modern edition of the *Vetus Latina* is being prepared by the Abbey of Beuron, initially under the editorship of Father Bonifatius Fischer (1949ff.). Another major project, sponsored in Madrid, is *La Vetus Latina Hispana* (1953ff.).

The confusion of translations then existing prompted Bishop Damasus of Rome in A.D. 383 to commission his secretary Jerome to prepare a reliable Latin translation. Although this assignment applied initially only to the NT, it soon became evident to Jerome that it needed to be extended to the OT as well. Jerome began his work on the OT with a superficial revision of the Psalter based on the LXX. Eventually Jerome realized that to translate the OT adequately he must go back directly to the Hebrew — a revolutionary idea at the time that encountered much opposition, not least from Augustine himself. But around the age of 40 Jerome set about to perfect his Hebrew and by A.D. 405 he had completed the translation of the entire OT.

Gradually over the centuries Jerome's eminent translation won the respect of the entire Latin-speaking Church and became known as the *Vulgate*, the common Bible. For the purposes of OT textual criticism the value of this version is undermined somewhat by its own complicated transmission history, being affected by considerable scribal interference and revision. For this reason Jerome's own comments on the text of the OT are sometimes as valuable or even more so than the translation itself.

The Vulgate was among the first books to be printed at the press of J. Gutenberg, the most famous surviving edition being the so-called Mazarin Bible of 1456. Before 1500 more than ninety editions of the Vulgate had appeared in print, but it was not till the end of the 16th cent. that an official version was promulgated, sponsored first by Pope Sixtus V and then amended in 1592 for

Codex Amiatinus, a Vulgate text from *ca.* 700, showing Ps. 22:25–25:5 (Vulg. 21:25–24:5) (Biblioteca Medicea-Laurenzianza, Florence)



Pope Clement VIII. The Clementine edition became the official Latin text of the Roman Catholic Church. In the 20th cent. new critical editions have been undertaken, notably the project sponsored by the Benedictine Order under the general title *Biblia Sacra iuxta Latinam Vulgatam Versionem*, commencing with the edition of Genesis in 1926. A two-volume text is that of the Württemberg Bible Society (1st ed. 1969; 2nd ed. 1975).

5. Other Versions. As the Church spread geographically it continually encountered new language groups. A typical pattern of evangelization and Bible translation soon developed. For the OT, however, most of this translation was based on the LXX. This fact enhances the importance of these versions for LXX studies, while at the same time providing further indirect witness to the Hebrew text.

The most important of the daughter versions of the LXX are the Coptic (in the Sahidic and Bohairic dialects), the Ethiopic, and the Armenian. Translations of the OT into Arabic also exist, but of very late origin (10th cent. and following). Finally, mention can be made of the translations of the Samaritan Pentateuch into Greek (known as the Samaritikon), Aramaic, and Arabic.

See also VERSIONS.

C. Citations. In addition to Hebrew MSS and ancient versions, large portions of the OT text are also attested in early rabbinic and patristic writings. These citations do not carry the weight of the MS and versional evidence (esp. the Christian writers who quote in Greek or Latin, often very freely) but a comprehensive review of all the textual data must also take account of these sources. Various scholars have investigated rabbinic quotations (see esp. Aptowitzer, who includes variants from the MT in Samuel, Joshua, and Judges). The new edition of the OT being prepared by the Hebrew University Bible Project in Jerusalem takes full account of the rabbinic variants in one of its critical apparati. Patristic quotations are documented in the critical apparatus of a large-scale edition of the LXX such as that of the Göttingen series. An index to patristic citations is now available in *Biblia Patristica*, published by the Centre d'Analyse et de Documentation Patristique in Paris (3 vols., 1975-1980).

II. History of the OT Text.–On the basis of available MS evidence the transmission history of the OT text may be traced through at least four different phases from *ca.* 300 B.C. to modern times.

A. Period of Textual Diversity (*ca.* 300 B.C. - A.D. 100). Although all the medieval MSS of the OT display a Hebrew consonantal text of remarkable uniformity, other lines of evidence point to an earlier period of relative textual diversity. The following are the primary witnesses to this phase of OT text history.

1. Rabbinic Traditions. Several rabbinic sources imply the existence at one time of variant readings in the biblical text or oral tradition. Especially noteworthy are comments dealing with the activity of the Sopherim, the scholars entrusted with the preservation and interpretation of the Scriptures from the time of Ezra. For instance, there are several references to the "Emendations of the Scribes" (*Tiqqune Sopherim*), by which the scribes were supposed to have changed some readings thought dishonoring to God, e.g., Gen. 18:22, "Abraham stood before the Lord," according to this tradition would originally have been "The Lord stood before Abraham." The usual number of such emendations is said to be eighteen; in addition to Gen. 18:22 they are found in Nu. 11:15; 12:12; 1 S. 3:13; 2 S. 16:12; 20:1 (with par. at 1 K. 12:16; 2 Ch. 10:16); Jer. 2:11; Ezk. 8:17; Hos. 4:7; Zec. 2:8 (MT 12); Hab. 1:12; Mal. 1:13; Ps. 106:20; Job 7:20; 32:3; Lam. 3:20. But the witnesses are by no means uniform on which passages or how many are to be included among the *tiqqune*. Nor is it certain that they are all historically reliable. At the very least, however, they probably point to a genuine tradition concerning scribal emendations embedded in the received text; cf. the thoroughgoing study by C. McCarthy, *Tiqqune Sopherim* (1981).

Other textual modifications attributed to the Sopherim are mentioned in T.B. *Nedarim* 37b-38a. The *Miqra Sopherim* ("Readings of the Scribes") are illustrated by three words perhaps of special pronunciation. Under the title of *Itture Sopherim* ("Deletions of the Scribes") are listed five passages (Gen. 18:5; 24:55; Nu. 31:2; Ps. 36:6 [MT 7]; 68:25 [MT 26]) where the scribes presumably omitted the conjunction *waw*. The passage continues with a list of six words "read but not written" (2 S. 8:3; 16:23; Jer. 31:38; 50:29; Ruth 3:5, 17) and five words "written but not read" (2 K. 5:18; Dt. 6:1; Jer. 51:3; Ezk. 48:16; Ruth 3:12). As the Masorah lists additional examples of these categories, it is assumed that these are merely instances of a larger phenomenon.

Further evidence which points to a concern for textual matters by the scribes are the references to "book correctors" associated with the temple of Jerusalem (T.B. *Ketuboth* 106a). One famous account relates how three scrolls of the Law were kept in the temple court and systematically compared. Where there was a discrepancy among the readings of the scrolls, that reading which was found in two of the three scrolls was adopted (e.g., T.P. *Taanith* 4:2; cf. S. Talmon, *Textus*, 2 [1962], 14-27). The antiquity of these traditions, some going back at least to Herodian times, points to a period of textual fluidity antedating the later uniform text of our medieval MSS.

Rabbinic literature also makes reference to codices now lost that contained variant readings from the standard text. One such is the Severus Codex, a MS supposedly brought to Rome in A.D. 70 and later presented by Emperor Severus (222-235) to a synagogue that he had built. A medieval list mentions thirty-two variant readings in the Pentateuch of this codex. Similarly, copies of the Torah made by R. Meir in the 2nd cent. A.D. contained a number of unusual readings.

Along the same lines are the variations between the consonantal text of the Masoretic MSS and passages quoted in the rabbinic literature. For instance, where the MT of Nu. 12:8 reads *ûmar'eh* (usually translated adverbially as "plainly"), several nonbiblical texts have the preposition b^e instead of the conjunction w^e (=*û*), as would be more natural in the context (cf. A. Mirsky, *Textus*, 3 [1963], 159-162). Many such variants have been documented (cf. B. Pick, *ZAW*, 6 [1886], 23-29, 102-121; Aptowitzer); at least some of these readings may go back to ancient biblical MSS now lost or to an oral tradition long since forgotten.

2. Parallel Passages. As is well known, the OT contains a number of parallel passages or deuterographs, e.g., 2 S. 22 par. Ps. 18; 2 K. 18:13–20:19 par. Isa. 36–39; 2 K. 24:18–25:30 par. Jer. 52; Isa. 2:2-4 par. Mic. 4:1-3; Ps. 14 par. Ps. 53; Ps. 40:13-17 (MT 14-18) par. Ps. 70; Ps. 57:7-11 (MT 8-12) par. 108:1-5 (MT 2-6); Ps. 60:5-12 (MT 7-14) par. 108:6-13 (MT 7-14); Ps. 96 par. 1 Ch. 16:23-33; Ps. 105:1-15 par. 1 Ch. 16:8-22; Ps. 106:1, 47f. par. 1 Ch. 16:34-36; not to mention the many parallels between the historical books of Samuel/Kings and Chronicles (cf. P. Vannutelli, *Libri Synoptici Veteris Testamenti* [1931]; A. Bendavid, *Parallels in the Bible* [1969]). Since few of these passages are identical throughout, one must account for instances where they diverge. Some of the variants can no doubt be explained by the different literary con-

TEXT AND MSS OF THE OT

texts of the passages; such have little text-critical relevance. Others, however, are more likely explained as witnesses to variant textual traditions. This is probably the case with the proper names in the historical books that include the abhorred name *ba'al* (Baal). In Chronicles the names appear with the *ba'al* form, whereas in the parallel passages of Samuel/Kings they are found with the more acceptable substitute *bōšet* ("shame").

3. Versions. Prior to the discovery of the Dead Sea Scrolls, by far the most telling witness to the existence of divergent text forms was that of the ancient versions. Even a casual acquaintance with the best known of these, the LXX, quickly reveals a number of interesting differences between this version and the MT. For example, in Gen. 1–2 the following types of variants can be documented: (1) LXX plusses over against the MT (1:8, "and God saw that it was good"; 1:12, "according to its likeness" and "on the earth"; 1:28, "and all the creatures and all the earth"; 2:15, "which he formed"; 2:25, "the two"; etc.); (2) MT plusses over against the LXX (1:27, "in his image"; 2:4f. 7, 9, 19, 21, the longer divine name "the LORD God" where LXX only has "God" [however, in 2:8, 15f., 18, 22 the LXX also has the longer form of the name]; (3) transpositions ("and it was so" is found at the end of 1:6 in the LXX but at the end of v. 7 in the MT; 2:4, "heaven and earth" in LXX, but "earth and heaven" in MT); and (4) different readings (1:9, MT "to one place" [מָקוֹם], LXX "to one gathering" [probably reading מִקְוֵה]; 2:2, MT "the seventh day," LXX "the sixth day").

These variants are typical of much of the LXX. While many such variants are probably the responsibility of the translators themselves or later scribes (cf. the rabbinic tradition in, e.g., T.B. *Megillah* 9a concerning the "passages which the sages changed for King Ptolemy"), it is clear that not all can be so explained. A number were undoubtedly found already in Hebrew MSS. The same holds true for other versions such as the Aramaic, the Syriac and the Latin, though the LXX remains the most fertile source of significant variants. Often the versions combine to support one another against the received Hebrew text, e.g., the addition of Cain's reply to Abel in Gen. 4:8, "Let us go out to the field," thus reinforcing the likelihood that Cain's statement derives from a divergent Hebrew MS tradition.

The MSS of the Samaritan Pentateuch point in the same direction. When this text was discovered in the 17th cent. it immediately caused a sensation because of its numerous variants from the MT: around 6000, many of which agree with the LXX. While most of these differences have to do with matters of orthography, the presence or absence of conjunctions and the like, a significant number of variants remain in the Samaritan Pentateuch that demonstrate its descent from a Hebrew recension different from that contained in the MT; cf. B. K. Waltke, "Samaritan Pentateuch and the Text of the OT," in J. B. Payne, ed., *New Perspectives on the OT* (1970), pp. 212-239.

4. Dead Sea Scrolls. The nature of the evidence in each of the sources cited above was indirect. Most scholars presumed that the same kind of textual diversity would be attested in Hebrew MSS from the B.C. era, never dreaming that such would ever come to light. The Nash Papyrus, which has points of agreement with the LXX, was a straw in the wind, but even so F. Kenyon wrote, "There is, indeed, no probability that we shall ever find manuscripts of the Hebrew text going back to a period before the formation of the text we know as Massoretic. We can only arrive at an idea of it by a study of the earliest translations . . ." (*Our Bible and the Ancient Manuscripts* [1895], p. 43). Happily, however, Kenyon lived to see his prophecy proved wrong by the discovery of the Dead Sea Scrolls.

As research has since shown, the kind of textual diversity suggested by the indirect witnesses is now confirmed by actual Hebrew MSS. With text specimens available from every book of the OT except Esther, it is now clear that in the Qumrân biblical library a variety of textual traditions existed side by side. Some MSS align themselves very closely with the "received text," some show considerable agreement with versional readings, and some apparently go their own way, independent of any previously attested text-type. The situation is best illustrated by reference to a few specific MSS.

Among the first MSS to be discovered and studied were the two famous Isaiah scrolls, 1QIsa^{a} (also known as St. Mark's Monastery Isaiah scroll) and 1QIsa^{b}. 1QIsa^{a} is a beautifully preserved scroll from the 1st cent. B.C. containing practically the whole text of Isaiah in well-formed script. Nevertheless, it attests a large number of variants in comparison with the medieval consonantal text. Many of these have to do with orthographic minutiae such as the large number of *matres lectiones* or vowel letters, the unusual spelling of proper names, or the frequent addition of conjunctions and particles. But larger omissions and additions of words and phrases are also found in considerable number, many apparently due to scribal carelessness. Another characteristic of the MS is the frequent interchange of synonyms or near synonymous expressions, usually in the direction of simplifying or "modernizing" the text. An interesting observation is that a number of its special readings are supported by the LXX. The document has been thoroughly analyzed; see especially E. Y. Kutscher, *Language and Linguistic Background of the Isaiah Scroll* (1974); M. Martin, *Scribal Character of the Dead Sea Scrolls*, I-II (1958ff.).

The situation of 1QIsa^{b} is somewhat different. The MS itself is older and less well preserved, containing many gaps due to rotting. Nonetheless, the text gives evidence of having been carefully copied, with little modernization of orthography or neutralization of difficult readings. Nor does it manifest any special affinity with readings characteristic of the LXX. In general it agrees well with the later MT, though not without a few potentially significant variants.

With the discovery of Cave 4 and its cache of thousands of text specimens representing more than a hundred different MSS, the evidence for the textual diversity of the Hebrew OT in the pre-Christian era was firmly documented. While most of the more than thirty Pentateuch MSS represented reflect a proto-Masoretic text-type (e.g., 4QpaleoEx^{e}), some (e.g., 4QEx^{a} and 4QDeut^{q}) agree with the LXX in several significant details, while others (e.g., 4QpaleoEx^{m} and 4QNum^{a,b}) show interesting agreements with the Samaritan Pentateuch. In the Cave 4 text samples from the historical books, many show a preference for LXX readings where the LXX and MT diverge; cf. especially 4QSam^{a,b,c}, though each in varying degrees. Since it has long been recognized that the received text of Samuel was one of the less successfully preserved portions of the OT, these Qumrân MSS are potentially very useful in the text-critical analysis of this part of the OT.

In the Latter Prophets the Qumrân texts of Ezekiel and the Twelve belong to the proto-Masoretic stream. This is also true for two of the three Jeremiah MSS, 4QJer^{a,c}. But fragments of a third MS of Jeremiah, 4QJer^{b}, attest readings which resemble the presumed Hebrew parent text of the shorter LXX. The text of Psalms in most

TEXT AND MSS OF THE OT

Qumrân MSS stands very close to that of the MT; however, the significant Psalms scroll from Cave 11 (11QPs^{a}) has a number of agreements with the LXX.

One of the important results of the scholarly study of the DSS has been a renewed interest in the reconstruction of the transmission history of the OT text on the basis of the new information. Initial response on the part of some scholars to the Qumrân MSS was that these represented "vulgar" or lay texts as opposed to the official texts of Jerusalem.

Other scholars, however, judging this explanation to be inadequate, have sought different approaches. The theory of "local texts," first proposed by W. F. Albright (*BASOR*, 140 [Dec. 1955], 27-33) and later modified and elaborated by F. M. Cross, has gained considerable attention. This theory maintains that the textual diversity encountered in the DSS can best be accounted for on the assumption that the OT was transmitted separately in three distinct geographical areas: Palestine, Egypt, and — more tentatively — Babylon. According to this theory, each of the three areas can be identified by specific scribal traits. Thus the Palestinian text is "characterized by conflation, glosses, synoptic additions, and other evidences of intense scribal activity," so that it is best defined as "expansionistic" (Cross, *IEJ*, 16 [1966], 86). The Egyptian text is related to the Palestinian, having branched off from the latter; it is described as being often a full text, though not to the same degree as the Palestinian. The third type of text — by a process of elimination assigned to Babylon — is generally the shortest and most conservative of the three, least affected by scribal intrusion.

Applied to the Pentateuch, the theory works out as follows. The full Palestinian tradition is represented by the Samaritan Pentateuch and, at Qumrân, by 4QpaleoEx^{m} and 4QNum^{a,b}, each of which show varying degrees of affinity with Samaritan readings. The Egyptian text is represented by the LXX, which occupies an intermediate position between the expansionist Samaritan text and the conservative, pristine Babylonian tradition preserved by the MT and proto-MT MSS at Qumrân.

But in other parts of the OT the picture is not as clear or consistent. For instance, the Babylonian text of Samuel, said to be represented by the MT, is a poor text marked by haplography and other scribal corruption, hence inferior to the longer Palestinian texts represented by the Qumrân MSS from Cave 4. On the other hand, the Egyptian text of Jeremiah, identified with the LXX and 4QJer^{b}, although short, is nevertheless judged superior to the longer Palestinian text of the MT and 4QJer^{a,c}. This lack of consistency in the theory has often been seen as one of its weaknesses.

Other aspects of the theory have also been questioned, e.g., the identification of Babylon as the third locale of textual preservation even though very little is known about scribal activity there during the intertestamental period, the subjective judgment involved in labeling text-types as "expansionistic," etc., or the assumption of an Egyptian provenance for the entire LXX. Furthermore, the very coexistence at Qumrân of separate text-types over long periods puts in question the necessity to postulate geographical isolation as the key to the emergence of distinct textual traditions. For this reason a scholar like S. Talmon has spoken of the preservation of distinct text-types in different socio-religious communities coexisting in the same geographical area (cf. *Cambridge History of the Bible*, I [1970], esp. 193-99).

Reconstructions of this type are necessarily speculative, but they do represent bold and creative attempts to come to terms with the new MS discoveries. Further research and new discoveries will continue to clarify the transmission process of the OT text in the pre-Christian era. For instance, in the light of the great variety of texts attested for many books of the OT among the Qumrân MSS, E. Tov (*HUCA*, 53 [1982], 11-27) has challenged even the relevance of a term like "text-types" — especially the limitation of these to three main types (i.e., the MT, LXX, and Sam. Pent.) — in the description of the biblical text during the period of the second temple. In the meantime the evidence for the existence of consonantal variants in Hebrew MSS prior to the emergence of the MT is beyond question.

B. Period of Stabilization (*ca.* A.D. 100-500). If the pre-Christian era is characterized by relative textual diversity and the medieval MSS by relative textual uniformity, when did the move to standardization occur? Various indications point to the era immediately following the destruction of the temple in A.D. 70 as the time in which the consolidation process took place. As before, the testimonies to this phenomenon are both circumstantial and empirical.

1. Rabbinic Traditions. Just as Jewish traditions imply the existence at one time of a relatively fluid text, so other traditions bear testimony to a fixed text. Reference was made above (II.A.1) to the existence of the three temple scrolls with variant readings. But the tradition is also a witness to the standardization process since it speaks of a deliberate choice of the majority reading in the creation of a new temple scroll. With respect to the Sopherim, the passing of time seems to have brought about a subtle change in their text critical role. Instead of being active participants in the process of deciding between variant readings, there are hints that they eventually assumed a more passive role as keepers of the text. Such a change is suggested by the oft-quoted statement from T.B. *Kiddushin* 30a that the Sopherim were so called because they counted the number of letters in the biblical text (the word *Sopherim* comes from the verb *sāpar*, one of its meanings being "count"). This counting of letters and concern for tradition is precisely the development that flowered later in the work of the Masoretes.

But it need not be assumed that the concept of a fixed text was a new phenomenon in Jewish religious history; on the contrary, the ideal was deeply rooted in biblical tradition and given clear expression already in Dt. 4:2, "You shall not add to the word which I command you, nor take from it; that you may keep the commandments of the Lord your God which I command you." There is no reason to doubt that this had always been the guiding principle of Jewish scribal activity, but there were evidently times when the existence of variant readings in MSS was felt not to conflict with that ideal, just as there were later influences that insisted on a more uniform text of Scripture.

2. Hermeneutics of Rabbi Akiba. One of those influences was apparently the school of interpretation associated with Rabbi Akiba (d. *ca.* A.D. 150), a towering figure in the history of Jewish interpretation. With the destruction of the temple in A.D. 70 and the establishment of religious centers outside Jerusalem, Jews focused more than ever on the study of Scripture. In this context rules of interpretation and a concern for the purity of the text took on ever greater importance. Although the movement flowered in the first half of the 2nd cent. under the leadership of Akiba, its antecedents can be traced back much earlier. Already during the temple era there is evidence for considerable preoccupation with minutiae such as conjunctions and particles in the interpretation of the text, e.g., the tradition that Zechariah ben ha-Kazzav based legal

TEXT AND MSS OF THE OT

decisions on the preservation of a *waw* (T.B. *Sotah* 28a). The legalistic discussions of Hillel the Elder and Shammai in the time of Herod presupposed a text fixed in small details. The same is true of Nahum of Gimzo, Akiba's mentor. Nevertheless, it was Akiba who became the principal spokesman of this concern for textual minutiae. For him the sanctity of Scripture meant that each letter, syllable, and word of the Torah was important. Even the tittle was the inspiration for a multiplicity of interpretative rules.

This approach to Scripture clearly had profound implications for the text of Scripture. An interpretation which took seriously the smallest detail could not tolerate the existence of official MSS with divergent readings. Hence Akiba warned against the teaching from "uncorrected" books (T.B. *Pesahim* 112a) and spoke of the importance of tradition as a hedge around the Torah (*Pirke Aboth* iii.14). His older contemporary, Rabbi Ishmael, urged extreme caution upon scribes lest they omit or add a single letter, for to do so would destroy the world (T.B. *Sotah* 20a, *Erubin* 13a). Given this orientation of Akiba and his colleagues, the nineteenth-cent. scholar P. de Lagarde even went so far as to postulate the existence of one supreme archetype text sponsored by Akiba from which all other MSS were copied. While this theory assumes more than the evidence permits, there can be little doubt that the influence of Akiba on the stabilization of the text was considerable.

3. Later Versions. The move toward stabilization is also reflected in the Greek and Latin versions of the 2nd to 4th centuries. For example, Aquila's slavishly literal translation from *ca.* A.D. 130 agrees very closely with the received text. According to J. Reider (*JQR*, 7 [1916] 289f.), Aquila departs from the MT on the average only once in three verses, and on those occasions that he does differ he frequently agrees with a *qere* reading (see II.2.a below). Tradition says that Aquila was a disciple of Akiba, and this seems plausible given Aquila's pedantic translation of the Hebrew particles, e.g., the translation in certain circumstances of the accusative indicator *'ēt* by the Greek preposition *syn*.

The versions of Symmachus and Theodotion disagree more frequently with the MT than Aquila, but even they approximate it much more than the LXX; cf. the Theodotionic version of Job and Daniel with the LXX. The same approximation to the standard Hebrew text observed in the second-century versions is carried over into Origen's 5th column of the Hexapla since he made his "corrections" of the LXX primarily on the basis of these three. Also Origen's own quotations of the OT tend to agree more with the received text than any other. Finally, mention may be made of Jerome's Latin translations. Especially to be noted are his translations of the Psalms, known respectively as the Roman Psalter (his early revision of the Old Latin based on the LXX), the Gallican Psalter (based on the Hexapla), and the Hebrew Psalter (based on Jerome's Hebrew MSS). What may be observed in these is an ever-increasing correspondence of readings to the standard edition of the Hebrew Bible known to us.

4. Bar Cochba Scrolls. In 1952, in a desert cave at Naḥal Ḥeber, an ancient scroll of the Minor Prophets in Greek was discovered. Archeological evidence shows that it was copied sometime between 50 B.C. and A.D. 50 and placed in its cave at the time of the Bar Cochba rebellion, A.D. 132-135. When D. Barthélemy studied it in detail he discerned a Greek version hitherto unknown. Called the *Kaige* recension after its most characteristic translation (*kaige* represents the Hebrew particle *gam*), it constitutes according to Barthélemy a revision of the LXX in favor of the emerging standard Hebrew text. This conclusion, if correct, shows that the trend to conform the Greek Scriptures to the Hebrew commenced much earlier than previously thought; it also demonstrates an intermediate phase in the standardization process of the official Hebrew text.

The discoveries at Naḥal Ḥeber, Murabba'ât, and Masada also yielded important Hebrew MSS from the time of the Bar Cochba rebellion. These are crucial witnesses in their own right to the OT text, for apart from the usual orthographic variants they are nearly identical with the text preserved in the standard MT MSS. This uniformity is eloquent testimony to the hegemony that the official rabbinic text had achieved already in the first half of the 2nd century.

C. Masoretes (*ca.* A.D. 500-1000). In the course of the centuries following the stabilization of the text, the scholars who busied themselves with the preservation of the sacred writings eventually came to be known as the *ba'ᵃlê hammāsōrâ*, the "masters [or scholars] of the Masorah" or, as noted above, the Masoretes. The term *masorah* (also spelled *massorah*) has been variously explained, but most commonly it has been derived from the postbiblical root *msr*, "to hand down." According to this derivation the phrase "masters of the Masorah" aptly describes the Masoretes as those who handed down the tradition of the sacred text that they had received from previous generations. With centers in the East (Babylon) and the West (Tiberias) the Masoretes labored hard to preserve the consonantal text and to develop a vocalization system, a cantillation system, and a body of the textual notes, itself called the Masorah.

1. Consonantal Text. The supreme task of the Masoretes, to which all other efforts were subordinated, was the preservation of the sacred text of Scripture. The strong notion of an inviolable text meant that nothing could be changed of what had been received — even if the "received" tradition at points contained acknowledged scribal imperfections. Such errors could be corrected in the margins but not in the consonantal text itself. The Masoretes' commitment to the received form of the text meant that they also preserved many of its special features hallowed by tradition, including the following:

a. Suspended Letters. Four words in the MT contain a letter suspended slightly above the line. These are found in Jgs. 18:30, Job 38:13, 15; Ps. 80:13 (MT 14). The first appears to be a pietistic attempt to make the text read Manasseh rather than Moses; the last probably indicates the middle letter of the Psalter; the two in Job are of uncertain significance.

b. Large and Small Letters. In the MSS a number of letters are often written larger than normal size; some are also written smaller than normal size. Some large letters begin the first word of a book (Genesis, Proverbs, Chronicles); others are found in Lev. 11:42 and 13:33 indicating respectively the middle letter and middle word of the Torah; two are found on the first and last words of the Shema in Dt. 6:4. For many of the others (e.g., Gen. 30:42; Nu. 13:30; 27:5; Dt. 29:27) no obvious reason is apparent, though the rabbis did not hesitate to speculate on the reasons with great imagination. The Masorah mentions three cases of a small *nun* in Isa. 44:14; Jer. 39:13; and Prov. 16:28. Other small letters are found in Gen. 2:4; 27:46; Lev. 1:1; Dt. 32:18. The MSS and Masorah lists are not uniform in their designation of odd-sized letters, however, the Aleppo and Leningrad codices being particularly sparing in their use of these.

c. Special Points (*puncta extraordinaria*). The text transmitted by the Masoretes contains fifteen words marked by

a dot or a series of dots either above or below them. The words in question are found in Gen. 16:5; 18:9; 19:33; 33:4; 37:12; Nu. 3:39; 9:10; 21:30; 29:15; Dt. 29:29 (MT 28); 2 S. 19:20; Isa. 44:9; Ezk. 41:20; 46:22; Ps. 27:13. These are the only marks, with one exception, that are permitted in the official synagogue scrolls. In spite of their antiquity, or perhaps because of it, the meaning of these points is uncertain. Normally they are thought to reflect some doubt on the part of the scribes with respect to the words or letters in question. That many words in the DSS MSS are marked with similar dots suggest their use as an ancient text-critical symbol (cf. the Prolegomenon by S. Talmon to the 1969 repr. of R. Butin, *Ten Nequdoth of the Torah* [1906], pp. xix-xxvii).

d. Inverted Nuns. What appears to be an inverted form of the letter *nun* occurs nine times in the body of the MT: before and after Nu. 10:35f., and seven times in Ps. 107:23-28 (21-26 in *Codex Leningradensis*), 40. Again the significance of this symbol is disputed, though in Numbers it may refer to the transposition or misplacement of the verses in question.

e. Divisions. The text edited by the Masoretes also enshrined paragraph divisions of great antiquity. These divisions were connected with the weekly reading of the Law and the Prophets in the synagogue. Two different cycles of readings were practiced, one in Palestine and one in Babylon. In Palestine the custom developed to read through the Torah in approximately three years; hence the Pentateuch was divided into 154 (a variant version is 167) weekly sections called *sedarim*. In Babylon, however, the Torah was completed in one year, being divided into 54 sections called *parashot*. It was the latter cycle that eventually became standard. The beginning of each *seder* is generally marked in the MSS by a large, ornamental *samekh*, while the beginning of a *parashah* is indicated by the abbreviation *prs* (often with some ornamentation) in the margin.

The text was also divided into smaller sections called *pisqot*, designated either "open" or "closed" according to the kind of break separating the sections. Open divisions (in later MSS and printed editions marked by the letter *peh* for *petuḥah*, "open") were presumably considered more important, hence commenced at the beginning of a line, the preceding line being left partly or wholly blank. Closed divisions (marked by the letter *samekh* for *setumah*, "closed") begin at a point other than the start of a line, being separated from the preceding sections merely by a space of several letters. If a *petuḥah* or *setumah* also begins a *parashah* this is sometimes indicated by the threefold *ppp* or *sss*.

2. Vocalization. About the time of the Reformation many held that the vowel marks and other signs in the Hebrew MSS were as old as the consonants. According to popular belief Moses received the signs orally and Ezra reduced them to writing. A contrary view, that the signs were of late invention, had been ventured from time to time in previous centuries, but it was not till the 16th cent. that the traditional view was seriously challenged by the erudite Jewish scholar Elias Levita. This challenge sparked a storm of controversy which lasted well into the 18th cent. and even became a point of bitter dispute between Catholics and some Protestants. Whereas the early Reformers had welcomed Levita's refutation of the antiquity of the signs, later Reformation scholars espoused the opposite view when they felt Catholics applied Levita's views to their own advantage. In Switzerland a law was even passed in 1678 that no person should be licensed to preach the gospel in their churches unless he accepted the integrity of the Hebrew text, including the divine origin of the vowel points and accents! Nevertheless, when the subject could be studied independent of its apologetic overtones and theological implications, the sheer weight of evidence in favor of the late date of the signs was incontrovertible.

The evidence was based primarily on the lack of knowledge of the signs by either Jerome in the 4th cent. or the Talmud in the 5th century. For even though both at times discuss in detail different vocalization possibilities of Hebrew consonants, they never mention any diacritical signs (see Ginsburg, pp. 445-452). It is inconceivable that had such signs existed Jerome and the rabbis should have failed to mention them. Probably they were introduced sometime in the 6th or 7th century.

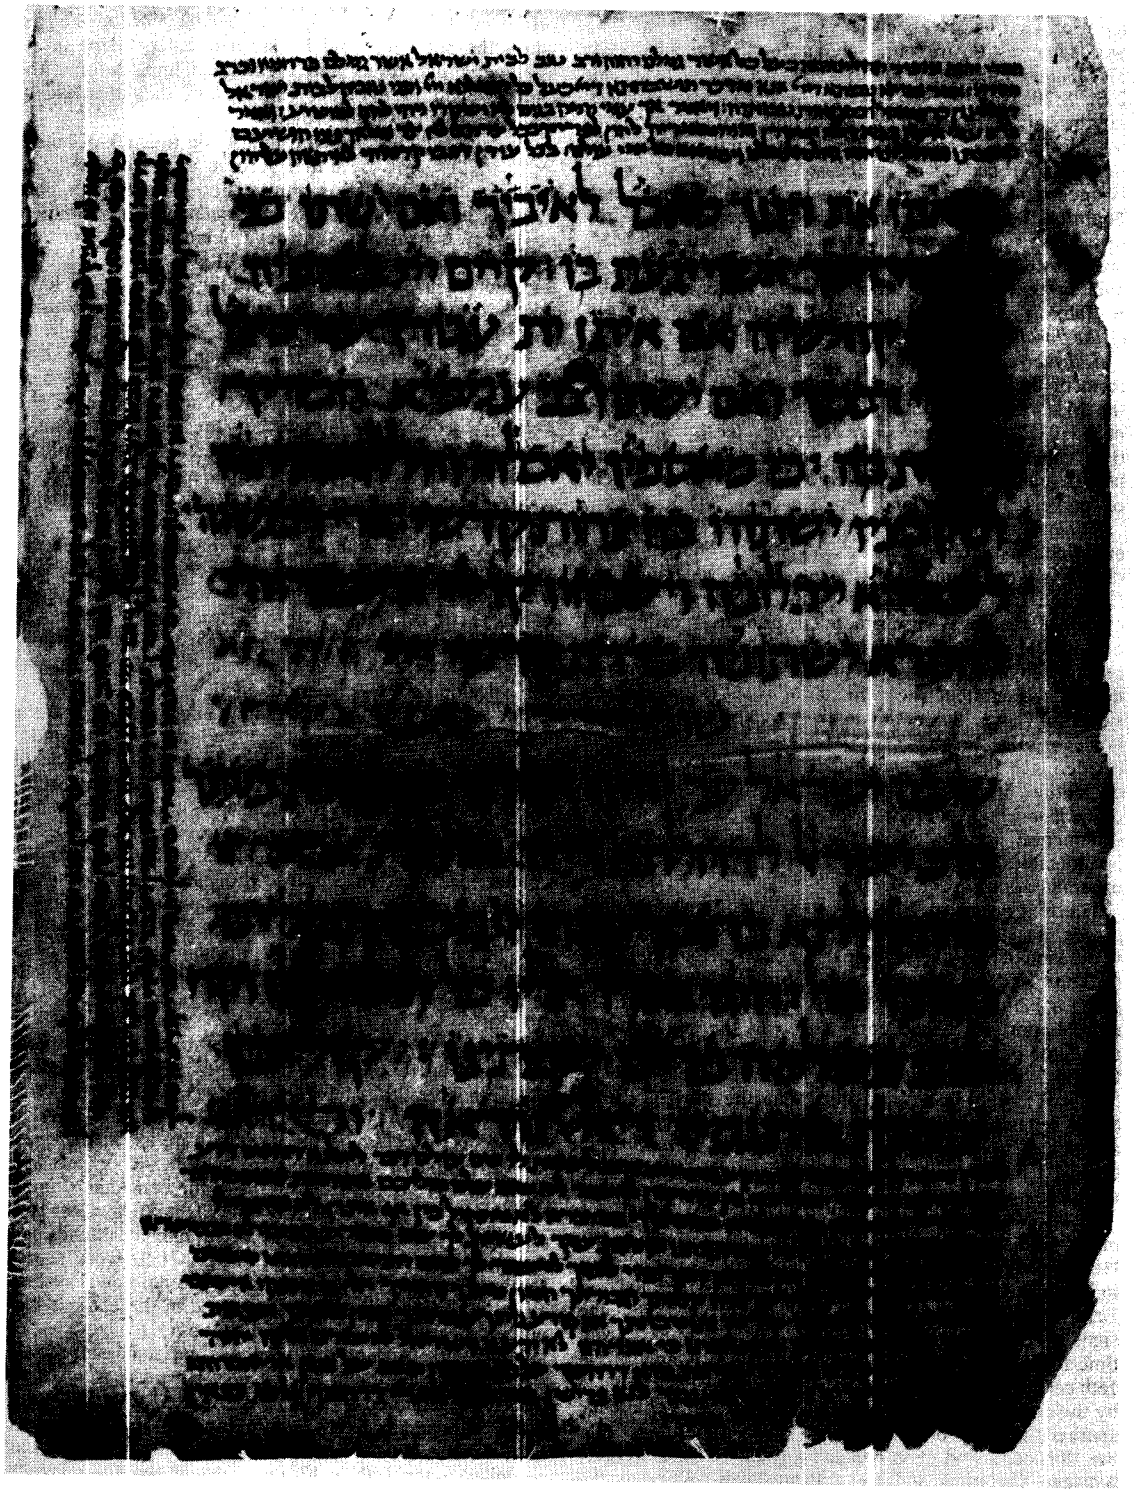
The reason behind the development of a vocalization system at this time is probably the increased need to guard the traditional reading and interpretation of the text, threatened as the Jews were by the loss of Hebrew as a living language, by the waning influence of oral tradition, by the geographical dispersion of the Jewish communities, and by the consequent challenges of new movements such as those of the Karaite Jews. Three schools of Masoretes are known to have emerged in response to these needs — the Babylonian, Palestinian, and Tiberian — all differing from each other in their methods of vocalizing the consonantal text. Although the three schools were apparently alluded to in the twelfth-century *Maḥzor Vitry,* it is only in recent times that a fuller understanding of their origins and development has been obtained.

For much of our reconstructed understanding of the history of the vowel systems we are indebted to the indefatigable scholar P. Kahle and his research on the MSS of the Cairo Genizah. According to Kahle the earliest of the three systems was probably that of the Babylonian school, in which the vowel signs were placed above the consonants. This system may have developed under the influence of Eastern Syrians who used a similar set of vowel marks. The Palestinian system is also supralinear and bears resemblance to the vocalization signs employed in Samaritan MSS. But only a small number of MSS with this kind of pointing have survived (see E. J. Revell, *Biblical Texts with Palestinian Pointing and Their Accents* [1977]).

The system that was destined to supplant the others, however, and become the "received tradition" familiar to all readers of the Hebrew Scriptures, was the predominately infralinear vocalization adopted by the Tiberian Masoretes. Two families in particular are associated with the development of this system — ben Asher and ben Naphtali. Five or six generations of the ben Asher family are known to have worked on the OT text, the last two of which were the most famous of all, namely, Moses ben Asher and his son Aaron ben Asher. Their work represents the apex of refinement of the Tiberian vowel system and it is this system that is preserved in the earliest surviving Masoretic MSS (see I.A..4 above).

Much less is known about ben Naphtali, since only a few MSS have been associated with this family (e.g., Codex Reuchlinianus, A.D. 1105) and no MS has been definitively so identified. But an important list of variants between the ben Asher and ben Naphtali readings was compiled in the 11th or 12th cent. by Mishael ben Uzziel in the Arabic treatise *Kitab al-Khilaf* (Hebrew title *Sefer ha-Ḥillufim*; see L. Lipschuetz, *Textus*, 2 [1962], אי-נה, and as a monograph in 1965). Nearly all variants, however, have to do with vocalic and accentual minutiae. The predominance of the ben Asher tradition may well be due to the imprimatur which the latter received from the hands of the great medieval authority Maimonides. Whatever

TEXT AND MSS OF THE OT



A Haphtarah fragment with Babylonian pointing of Isa 62:8f. and Hos. 14:2f.; each verse is followed by its Targum. In the margins a later scribe has added Isa. 63:7-16, again with each verse followed by its Targum (courtesy of the Syndics of Cambridge University Library, T-S B15,2)

the reason, the ben Asher text was an extraordinary achievement and it remains an important task of OT textual criticism to ascertain as closely as possible the genuine form of this text.

3. Cantillation. The Masoretes also added other signs as aids in the public reading of the biblical text. Since this reading took the form of a chant, these signs or accents function as melody pointers to the chanter. The accents are not musical notes as such but represent groups of notes or motifs which the chanter adopts to the needs of a particular passage.

Another useful function of the accents is to indicate the point of stress in a word. Since every word unit in the text carries some accent and since these accents — with only a few exceptions — all fall on the stress syllable, this phenomenon greatly facilitates the correct reading of the text. Stress pointers also serve a grammatical function since some forms are distinguished from each other only on the basis of stress differentiation.

The interest of the modern biblical scholars in these signs, however, is not so much in their chant or stress function as in their derivative role as indicators of syntactical relationships. Since the purpose of the chant is to communicate the meaning of the text as clearly as possible, one of the practical uses of the signs was to divide the text into logical word groupings, much like modern punctuation does. It is likely that this Masoretic division of the text into syntactical units was done in conformity with the official rabbinic interpretation of the text.

As with the vowel points, the accent systems varied considerably in the Palestinian, Babylonian, and Tiberian schools. But here too the Tiberian system represents the most elaborate and complete development of the three. The two main categories of accents are disjunctives and conjunctives. Disjunctive accents are marked on the last word of a clause or phrase, indicating a pause or break in the sense. Conjunctive accents are marked on words between the disjunctives to show their cohesion as a word-group, which ends at the next disjunctive. In the Tiberian system, too, a special category of accents exists for the three poetical books of Psalms, Job, and Proverbs (cf. W. Wickes, *Treatise on the Accentuation of the Three So-called Poetical Books of the OT* [1881, repr. 1970]; *Treatise on the Accentuation of the Twenty-one So-called Prose Books of the OT* [1887, repr. 1970]). Information on the accentual system is found in some Masoretic works that have survived, the best known of which is *Dikduke ha-Ṭe'amim* (see S. Baer and H. L. Strack, eds. [1879, repr. 1970]; cf. A. Dotan, a work purportedly written by Aaron ben Asher. See Yeivin, pp. 157-274, for a lucid introduction to the subject.

4. Masorah. The Masoretes also collected and systematized large quantities of statistical information pertaining to the text. Much of these data they had received orally from earlier generations of scribes, and to them they added many observations of their own, particularly those having to do with vocalization and accentuation. This body of information may have been catalogued initially in separate treatises such as *Ochlah we-Ochlah* (see S. Frensdorff, ed., *Ochlah W'ochlah* [1864, repr. 1972], F. Díaz Esteban, ed., *Sefer Oklah we-Oklah* [1975]) — a work dealing with homonyms — but eventually the advantages of having the data immediately accessible in the margins of the text broke down the traditional resistance to annotated MSS. In time the Masorah was organized in three separate divisions: the *Masorah Parva*, the *Masorah Magna*, and the *Masorah Finalis*.

The *Masorah Parva* (Small Masorah) is the name given to the body of information contained in the side margins of MT MSS. In the standard MSS a small circle or star over a word signals a marginal notation relating to that word. Since the object of these detailed annotations was the uniform preservation and transmission of the received text, attention was drawn to those words thought especially vulnerable to scribal error. Hence the most common subjects of Masoretic notes have to do with such items as the use of vowel letters, the presence or absence of particles, word combinations in which confusion would be easy, rare or unique forms, variants in parallel passages, and special vocalization or accent forms.

Probably the most significant body of information contained in the *Masorah Parva* — at least from the point of view of modern text-critical scholarship — has to do with the category of entry known as the *qere/kethibh*. In more than 1300 instances the Masoretes indicated that a word should be read (*qere*) differently from the way it was written (*kethibh*) in the consonantal text, the latter being sacrosanct and unalterable. Some of the important types of *qere* readings are the euphemistic replacement of strong language, modernization of archaic, unusual or defective forms, correction of presumed errors such as metathesis, omission and addition of letters, changes in the division of words, and the substitution of whole words. A few words have a form known as the *qere perpetuum* since they are not noted in the margins but are always read in a way different from the text, e.g., the substitution of Adonai ("my Lord") for the sacred name Yahweh (the Tetragrammaton or Four Letters). The resulting vocalization יְהוָה gave rise in translations to the word "Jehovah." A second perpetual *qere* is the pronoun *hî'* ("she") in the Pentateuch, always written הוּא (*hû'*) but read הִיא (*hî'*). For modern textual criticism the importance of the *qere* readings is that many may represent ancient textual variants. If so, they should be treated with the same respect as other variants found in parallel passages, in the major versions, and in the most ancient Hebrew MSS.

Similar to the *qere* readings are those called *sebirin* — "unexpected" or "supposed" forms. Readings so marked often display some unusual grammatical characteristic in the context (e.g., masc. for fem. at Gen. 19:23, or sing. for pl. at Nu. 9:6). These forms, however, were not changed in the public reading of the text, even though Ginsburg (pp. 187-196) argued that in many instances the terms *qere* and *sebir* are in fact interchangeable.

The *Masorah Magna* (Large Masorah) refers to the body of information contained in the upper and lower margins of the early MSS. This masorah is essentially an expansion of the material contained in condensed format in the *Masorah Parva*. For example, where the *Masorah Parva* to Gen. 1:1 states that the form of *b'rē'šîṯ* occurs five times in the Bible, three times at the beginning and twice in the middle of a verse, the *Masorah Magna* gives the exact references where these are found. In modern printed editions such as *BH* only the *Masorah Parva* is actually included in the margins, the *Masorah Magna* being printed in separate volumes (S. Frensdorff, ed., *Die Massora Magna* [1876, repr. 1968]; G. E. Weil, *Massorah Gedolah* [1971]).

The *Masorah Finalis* is the body of Masoretic lists introduced at the end of individual biblical books in the first printed editions of the Masorah. They contain alphabetized lists of data for which the margin of the corresponding page had no room. Other lists are of a summary type, such as those specifying the number of *sedarim* in a given book, the sum totals of words and letters, the

middle verse and letter, etc. In some MSS this kind of information is found at the beginning rather than at the end of the MS.

D. Printed Editions. The invention of printing in the 15th cent. ushered in a new era in the history of the Hebrew Bible. Some pious Jews welcomed this advance as a God-given gift with which to spread the sacred Scriptures. The first printing of any portion of the OT was that of a mostly unpointed edition of the Psalter in 1477, probably in Bologna. With improved printing techniques other portions soon followed, e.g., the Pentateuch (Bologna, 1482), the Prophets (Soncino, 1485/86), and the Writings (Naples, 1486/87). Between 1487 and 1491 the Pentateuch was also printed in Portugal and Spain, especially noteworthy being the magnificent Lisbon edition of 1491. The *editio princeps* of the complete Hebrew Bible, fully pointed and accented, was published at Soncino in 1488, later in Naples in 1491-1493, and in Brescia in 1494 — the last being the edition used by Luther for his translation of the OT into German

The persecution of Jews at the end of the 15th and beginning of the 16th cents. caused Jewish presses to be inactive for more than a decade. In 1505 a copy of the Pentateuch appeared in Constantinople, but serious printing did not commence till 1511 when work was begun on another edition of the Soncino Bible. The first Christian printing of the Hebrew Bible was undertaken by the reform-minded Cardinal Ximenes de Cisneros of Spain as a part of the Complutensian Polyglot (Complutum [Alcalá], 1514-1517), a three-columned Bible containing also the texts of the LXX and the Vulgate.

The work of the Venetian printer Daniel Bomberg, a wealthy Christian merchant from Antwerp, was destined to have the greatest influence on the subsequent history of the printed Hebrew Bible. At the encouragement of a Jewish convert to Christianity, Felix Pratensis of the Order of Augustinian Hermits, Bomberg sponsored the editing and printing in 1515-1517 of what has come to be known as the *First Rabbinic Bible*, a four-volume work fully pointed and accented, with Targums and rabbinic commentaries in the margins. The edition is also noteworthy for having the Christian chapter divisions marked for the first time in a Hebrew Bible, for dividing the books of Samuel, Chronicles, and Ezra-Nehemiah into two books each, and for recording the consonants of the *qere* readings for the first time in the margins.

In 1524/25 Bomberg published the even more influential *Second Rabbinic Bible*, edited by the Jewish refugee — later turned Christian — Jacob ben Chayyim. While the text of this edition was heavily dependent on the work of Felix Pratensis, the significant contribution of ben Chayyim's work was that it was the first printed Bible to include the Masorah. For four centuries this became the standard edition of the Hebrew Bible in both Jewish and Christian circles.

Other Polyglots and Rabbinic Bibles continued to be published by a variety of editors through the 16th and 17th centuries. The important Polyglots are those of Antwerp (1569-1572), Paris (1629-1645), and London (1657-1669); these often merged the texts of ben Chayyim and Ximenes. In Basel J. Buxtorf produced an important edition of a Rabbinic Bible (1618-1619) noteworthy for exhibiting a Hebrew text influenced by Sephardic (Spanish/Portugese) rather than the Ashkenazi (Eastern European) MS tradition reflected in the other editions. This text in turn formed the basis for the editions of D. E. Jabłoski (Berlin, 1699) and the German pietist J. H. Michaelis (Halle, 1720). The latter was the first Hebrew Bible in print to contain a significant critical apparatus, listing variants from nineteen printed editions and five Erfurt MSS. A Rabbinic Bible edited on different principles, namely, on the basis of Masorah lists rather than actual MSS, was that of S. Baer and F. Delitzsch (1869-1895). This procedure, however, never met with general acceptance.

The work of collating MSS and noting variants reached its apex at the end of the 18th cent. in the prodigious collations of B. Kennicott and J. B. de Rossi. With the help of assistants Kennicott noted variants from the consonantal text of more that 600 MSS and 52 printed Bibles, while de Rossi and his staff surveyed an even larger field, recording variants from 1475 MSS and editions. The chief result of this enormous investment of time, energy, and money was to verify the negative though important conclusion that most of the variants encountered in the MT MSS are inconsequential and do not affect the interpretation of the text. The editions of C. D. Ginsburg prepared for the British and Foreign Bible Society (1908-1926), containing the ben Chayyim text and a critical apparatus with collation of 73 MSS, yielded very similar results to those of Kennicott and de Rossi.

Although Ginsburg was happy to reproduce the ben Chayyim text as the basis of his editions, others sought to replace it with an even better representation of the ben Asher tradition. The definitive break came in 1937 with the publication of the 3rd edition of (*BH*) in Stuttgart. Unable to obtain access to the preferred Aleppo MS, its editors R. Kittel and P. Kahle opted for the next best alternative, Codex Leningradensis. Use of this MS was continued in the new edition of *BHS* (1967-1977). *BH* contains two separate apparati of variant readings, but these have often been found wanting in the areas of selectivity, accuracy, and proposed emendations (cf. Orlinsky). Even the single format apparatus of *BHS* has not been substantially improved (cf. Wevers). Both *BH* and *BHS* provide the *Masorah Parva* of Codex Leningradensis in the margin, but the Masorah of *BHS* has been freshly edited by G. Weil and keyed in a very helpful way to the *Masorah Magna*.

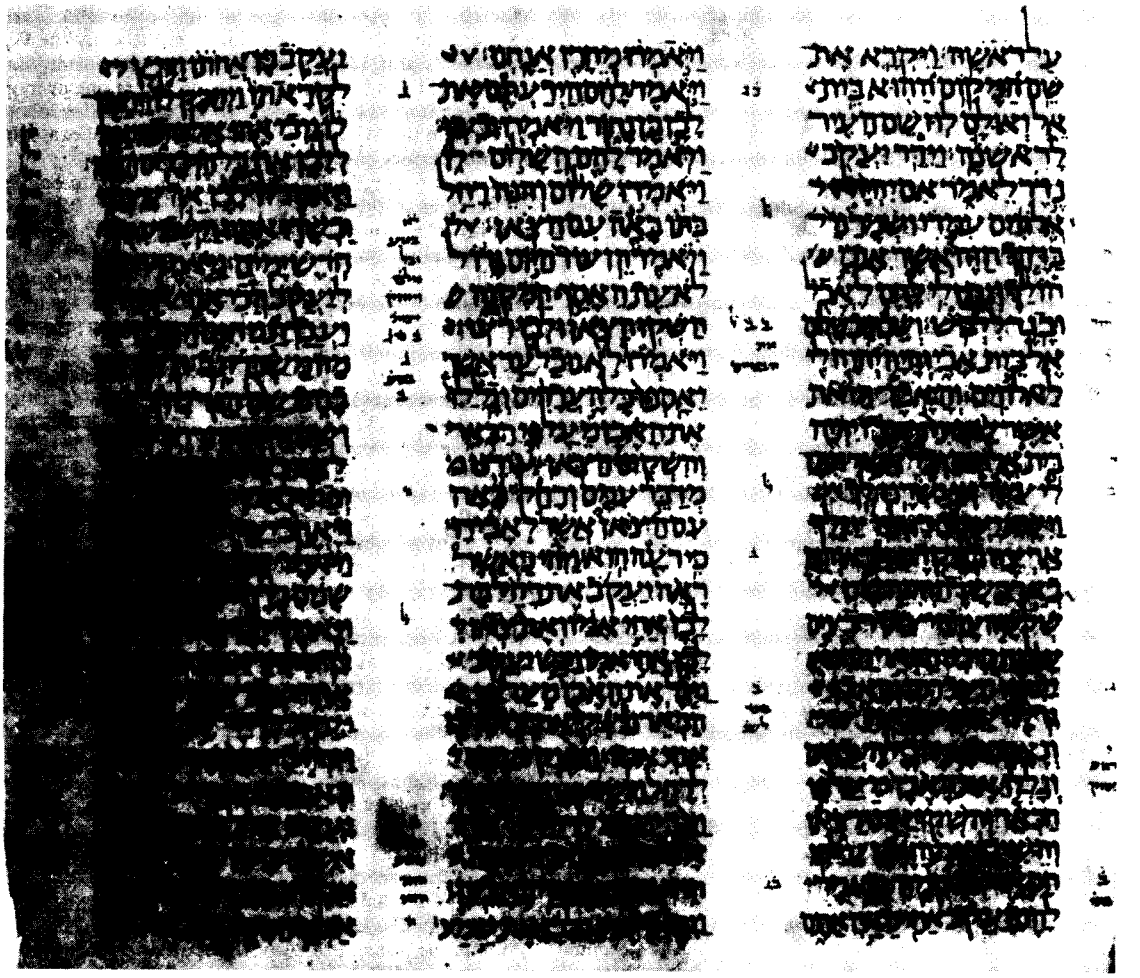
In England the British and Foreign Bible Society invited N. H. Snaith to prepare a new edition to succeed that of Ginsburg. Snaith's text, which appeared in 1958, was based on MSS accessible in the British Museum, primarily MS Or. 2626-2628, written in Lisbon in 1482. In spite of the different MSS employed, the resultant text is very close to that of *BH* (cf. Snaith, *VT*, 7 [1957], 207f.; *Textus*, 2 [1962], 8-13; and the critique by M. B. Cohen and D. B. Freedman, *HUCA*, 45 [1974], 97-132).

In Jerusalem, too, a new text of the OT is in preparation. Under the general editorship of M. Goshen-Gottstein, the Hebrew University Bible Project reproduces the text and Masorah of the famous Aleppo Codex (where extant) along with four comprehensive critical apparati. The first installment of this excellent edition appeared in 1975 (*Book of Isaiah*, Parts One and Two).

The United Bible Societies are also engaged in work on the OT text and hope eventually to publish a successor to *BH* and *BHS* using Codex Leningradensis and the Masorah edited by G. Weil but provided with an entirely new critical apparatus. In the meantime they have published five volumes containing valuable discussion of many textual variants (see D. Barthélemy, *et al.*, *Preliminary*).

III. Practice of Textual Criticism.–A knowledge of the transmission history of the OT text is interesting in its own right, but the ultimate goal of such study is its application to the practice of textual or "lower" criticism — the science of determining the earliest recoverable text form of an ancient document on the basis of the evidence available. As noted above, in the case of the OT this evidence consists primarily of Hebrew MSS and ancient

TEXT AND MSS OF THE OT



A page from Codex Leningradensis (*ca.* A.D. 1008) showing Gen. 28:18–29:22. This codex was the basis for *BH* and *BHS* (State Library, Leningrad)

translations. The responsibility of the text critic is to evaluate all relevant sources in the light of established text-critical principles and a knowledge of scribal habits. For the OT the most important considerations in this process are the following.

A. Role of the MT. The phenomenon of the MT is unique in the field of biblical textual criticism. No other stream of scribal transmission, in either the OT or NT, manifests such remarkable uniformity. Intense study of the MT MSS since the late 18th cent. has shown that only a limited number of consonantal variants of substance can be found in the entire tradition. When this observation is seen to hold true not only for the principal MSS of the ben Asher tradition but also for the numerous text specimens of the Cairo Genizah antedating those MSS, the phenomenon is truly extraordinary and bears witness to a genuinely conservative and cautious scribal tradition.

Yet the value of this tradition has been variously judged at different points in history. In the precritical era the MT text as enshrined in the ben Chayyim edition reigned supreme as principal witness to the form of the OT. But with the advent of the modern critical era and its flowering at the end of the 19th cent. this attitude toward the MT was almost completely reversed. The fashion then was to find fault almost at every point with the MT and prefer an alternate reading whether from the versions or on the basis of conjecture.

By contrast, OT textual criticism in the second half of the 20th cent. is characterized by a more balanced approach to the legacy of the Masoretes. This is due in large part to the discovery of the DSS as well as to progress in the field of comparative Semitics. For instance, it has been shown that the MT contains many instances of grammatical forms not found in later Hebrew but now attested in Ugaritic from *ca.* 1400 B.C. As for the vowel system, strong evidence suggests that even here, far from being innovators, the Masoretes were preservers of an ancient system of pronunciation and interpretation (contra Kahle; Barr, pp. 207-222). This new perspective brought on by modern researches does not suggest that the MT is faultless, but it does encourage one to take the MT seriously and to accord its witness a fair hearing. Given the empirical evidence for the longevity, relative uniformity, and conservatism of the MT tradition, one can only regard this new respect as a positive development.

B. Role of the Dead Sea Scrolls. As noted earlier, the DSS attest a Masoretic-type text, and this fact has contributed significantly to the new appreciation for the MT as an archaic text. The case is well illustrated by 1QIsa^{b}. This MS attests not more than a dozen significant variants

from the MT, and only two or three of these may be considered preferable to the MT. At the same time many readings in the DSS are at variance with the MT. How are such variants judged? Close scrutiny shows that many of the attested variants are simply scribal errors without text-critical merit (for a sampling of such errors see Würthwein, pp. 106-108). A number remain, however, which are variants of substance, i.e., they offer a consonantal text which yields a meaning different from that of the MT.

Confronted by such material variants the text critic must evaluate the relative merits of each conflicting reading and decide which one has greater claim to priority. In 1QIsa[a] a limited number of readings seem preferable to those of the MT. The RSV has adopted readings attested by 1QIsa[a] at the following places, five of them without support from any of the versions: 3:24; 14:4, 30; 15:9; 21:8; 23:2; 33:8; 45:2, 8; 49:24; 51:19; 56:12; 60:19. Seven of these are also adopted by the NIV, most of the others being referred to the NIV mg. as alternate readings. In four instances (37:20, 25; 52:5; 53:11) the NIV adopts DSS readings where the RSV did not. Since Isaiah is the book that has received most help from the DSS, one can appreciate that the main function of the DSS is to confirm the antiquity and general reliability of the MT, while providing a means for correcting some of its deficiencies.

C. Role of the Versions. The versions have traditionally been the most important source of variants from the MT, and among these the LXX has been appealed to more frequently than any other. By a process of retroversion scholars attempt to reconstruct the Hebrew text that lay before the translators of a particular version; this reading is then compared with the MT and the relative merits of each reading are weighed. The critical commentaries and the critical apparatus of *BH(S)* are full of examples where such reconstructed readings have been preferred to those of the MT.

It must be recognized, however, that the process of retroversion is not without its own dangers. At least three problem areas may be mentioned. (1) One must determine whether an available edition of a version actually represents the text that proceeded from the hands of the translators. Unfortunately the value of many studies on the versions has been undermined by an inferior textual basis. But in this area the situation continues to improve as more and more attention is devoted to the textual criticism of the versions, resulting in the production of excellent critical editions such as the larger Göttingen edition of the LXX. Nonetheless, the textual criticisim of the versions is a never-ending task so that the possibility of corruption in the transmission history of a particular version remains a factor in several problem passages. (2) One must determine what kind of translation the version represents. Is it a literal or a free translation? The serviceability of the version in OT textual criticism will be in inverse proportion to its literary quality in the receptor language. The more literal a translation the poorer it is as a literary document but the better it is as a text-critical tool — hence the significance of a literal translation like that of Aquila. The problem is complicated by the fact that the mode of translation in most versions varies from book to book. (3) One must determine whether the translator accurately interpreted the parent text or whether for a variety of reasons he may have misread or misunderstood the Hebrew text before him. One must even reckon with the possibility of deliberate alteration or omission at points.

An increasing sensitivity to these problem areas has fostered a more cautious use of the versions in recent textual criticism. But this caution is not to deny the versions their rightful role in the process of text restoration. A significant number of places remain where one or more of the versions have preserved an ancient reading lost or obscured in the MT (see III.G below for several examples of scribal errors corrected in the versions).

The first major English translation seriously to employ the versions in the task of translation was the RSV. But in spite of a generally sober approach to the adoption of versional readings it nonetheless encountered a hostile reaction in some quarters for preferring readings other than those of the MT. A translation which adheres much more strictly to the MT is the NASB. However, the relative lack of controversy over the adoption of versional readings in the even more recent NIV testifies to an increasing awareness of the complexity of the text-critical task and the necessary role that the versions can play in it.

D. Role of Comparative Philology. With the discovery and decipherment of several ancient Semitic languages sharing many features with Hebrew, OT textual criticism entered a new phase. Scholars working in this field have made many suggestions for reinterpreting difficult or unknown Hebrew words in the MT by appeal to a known root in a cognate language. For instance, instead of reading the root *yāḏaʿ*, "know," in places like Jgs. 16:9 and Isa. 53:3, it has been suggested that we understand the Arabic root *waduʿa*, "was low, humbled," to yield better sense. Ugaritic, discovered in 1929, has also been a rich source of Semitic roots with new meanings applied to the OT. Spearheading the application of Ugaritic philology to OT textual criticism has been M. Dahood (cf. *Bibl.* 40 [1959], 160-170). The net effect of this approach is often to affirm the traditional form of the text but to assign it a new meaning. The English translation most influenced by this school is the NEB. For an incisive critique of the positive and negative aspects of comparative philology in the service of OT textual criticism, see Barr.

E. Role of Conjectural Emendation. Conjectural emendation is the attempt to reconstruct an original form of a presumed corrupt MT reading without appeal to Hebrew MSS, versional support, or cognate Semitic roots. Thus it has often been assumed that the MT text of Ps. 2:11f. ("Serve the Lord with fear, and rejoice with trembling. Kiss the son . . .") has suffered dislocation and can be restored by rearrangement to yield the sense, "Serve the Lord with fear, with trembling kiss his feet" (RSV). Many have felt that the rhetorical question of MT Am. 6:12 "Will one plow with oxen [בַּבָּקָרִים]?" gives the wrong answer "Yes." Hence it is proposed to divide the words differently and read "Does one plow the sea with oxen [בְּבָקָר יָם]?" (RSV). Also appeal is often made to internal criteria such as poetic meter or poetic parallelism. By this means commentators have often excised a word or phrase in the MT because it did not fit the presumed meter or parallelism of the line. But the degree of subjectivity inherent in the latter approach has left it vulnerable to abuse. One should resort to it only in extreme circumstances.

F. Classical Principles. Textual criticism is a science with a long history of application to many different types of literature both inside and outside the field of biblical studies. The knowledge of scribal habits gained through this pooled experience has resulted in the formulation of basic principles to be applied to the restoration of ancient texts. Among the most important of these are to prefer: the shorter reading, the more difficult reading, the older reading, the reading with the best external MS

TEXT AND MSS OF THE OT

support, the reading that best explains the rise of other readings, the reading that best suits the style of the author.

These rules also have relevance for OT textual criticism. For example, it can be shown that scribal additions often make the Samaritan Pentateuch longer than the MT or LXX. The preference for the more difficult reading should act as a restraint on the tendency to prefer an easier reading in the versions and the DSS over against the MT. But one can never apply these rules rigidly. Counteracting the tendency for scribes to add is the equally well-attested phenomenon of haplography or accidental omission. Likewise, a simpler reading in the versions may be preferred over an obviously corrupted reading in the MT. These modifications of the rules are valid for all types of literatures, but perhaps especially for the OT, given its unique transmission history and the care with which the Hebrew Scriptures were copied in comparison with Greco-Roman literature or even the NT. Cf. Tov (*HTR*, 75 [1982], 429-448) and Albrektson for a discussion of the limited usefulness of these rules.

G. Common Scribal Errors. Intense study of Hebrew MSS has made it possible to identify and categorize typical scribal errors. Most of these have to do with accidental errors of the eye and ear.

1. Confusion of Similar Letters. A frequent cause of variant readings in the MSS and versions is the existence of several Hebrew letters of similar appearance. Here distinction has to be made between the archaic Canaanite script used in preexilic times and the later Aramaic square script. One must also recognize that even in the square script the shape of letters was far from uniform (cf. F. M. Cross, "Development of Jewish Scripts," in *BANE*, pp. 133-202). Nonetheless, the evidence shows that the letters most susceptible to confusion in the OT transmission history are *resh/daleth* (ר/ד), *he/heth* (ה/ח), and *waw/yod* (ו/י),though other letters such as *beth/kaph* (ב/כ) are also misread.

A classic illustration of this phenomenon occurs in the MT of Gen. 10:4, where the reading דֹּדָנִים should undoubtedly be רֹדָנִים, as it is in some Hebrew MSS, the par. 1 Ch. 1:7, the Sam. Pent., and the LXX. Similarly, the reading אֲרָם (i.e., Aram or Syria) in 2 S. 8:12f. should be אֱדֹם (i.e., Edom) as shown by the context, a few Hebrew MSS, the par. 1 Ch. 18:12, the LXX, and the Peshitta. The reading עֵדִים, "witnesses," rather than MT עָרִים, "cities," seems to be required by the context of Isa. 33:8, as had been recognized by scholars even before any textual evidence was available. Now, however, the former reading is attested in 1QIsa[a] and freely adopted by modern translations such as RSV, NEB, NIV, NAB. Where MS or versional support is lacking, conclusions are more tentative, but many suggestions for this kind of copyist error have been made, e.g., Ps. 110:3 where the MT has the reading בְּהַדְרֵי־קֹדֶשׁ, "in holy array" (ASV), others prefer the reading בְּהָרְרֵי־קֹדֶשׁ, "upon the holy mountains" (RSV).

2. Transposition of Letters. This scribal error — technically known as metathesis — sometimes produces awkward readings as in Ps. 49:11 (MT 12) where the traditional text has קִרְבָּם, "their inward thoughts." The LXX, Pesh., Tg., and Vulg., however, all presume the reading קִבְרָם, "their tombs," which fits the context much better and is normally adopted by modern commentators and translations (RSV, NEB, JB, NIV). In Isa. 38:11 the word חֶלֶד, "world," is undoubtedly the one intended instead of the MT חֶדֶל, "grave." Often earlier scribes had already detected errors of this type and given instructions in the margin for reading the correct form, e.g., 1 S. 14:27, where the *aleph* and *resh* have been transposed, resulting in the reading *wtr'nh*, "and his eyes saw," rather than the required *wt'rnh*, "his eyes brightened."

3. Incorrect Word Division. In MSS of continuous script it is understandable that words can sometimes be divided differently to yield conflicting readings. This is apparently what has happened in Jer. 23:33, where the MT (adopted by NEB, JB, NIV) reads אֵת־מַה־מַּשָּׂא, "What burden?" but the LXX and Vulg. have divided the words as "You are the burden," אַתֶּם הַמַּשָּׂא (followed by RSV). Another example is found in Ps. 73:4, where the MT reads, "For there are no pangs in their death [לְמוֹתָם]; but their strength is firm" (ASV). But if לְמוֹתָם is divided into two words, לְמוֹ תָם, then the verse can be better read, "For they have no pangs; their bodies are sound and sleek" (RSV; cf. NIV). In Ps. 44:4 (MT 5), instead of MT "Thou are my King, O God; ordain [אֱלֹהִים צַוֵּה] victories for Jacob," it makes better sense in the context to read "Thou art my King and my God, who ordainest [אֱלֹהַי מְצַוֵּה] victories for Jacob" (supported by LXX and Pesh. and adopted by many modern translations).

4. Haplography. Technically this is the name applied to the phenomenon of writing only once what should be written twice. It is a scribal slip that affects single letters, words, and entire phrases. Thus in the MT of 2 S. 22:41 a *nun* is missing, giving the nonsense form תַּתָּה instead of the obviously required נָתַתָּה, "you have given." In Jgs. 20:13 the MT reads simply בִּנְיָמִין, "Benjamin," whereas it is clear that what is intended is בְּנֵי בִנְיָמִין, "the sons of Benjamin," i.e., "the Benjaminites." Even the Masoretes recognized this haplography and inserted the required vowels for the missing בְּנֵי, though by convention the consonants had to be assigned to the margin.

The term "haplography" is also loosely applied to the omission of any word or words in between two identical or similar forms. The scribe's eye jumped from the first to the second occurrence of the form, resulting in the omission of the words in between. Omissions that occur because of similar beginning or ending of two words are technically known as homoioarchton and homoioteleuton respectively. This is one of the most common of scribal errors, and the book of Samuel seems to have been especially affected by this phenomenon. In several instances the LXX appears to have preserved a reading lost in the MT stream of copying. For instance, in 1 S. 10:1 the scribe's eye apparently jumped from the first to the second appearance of "the Lord anointed you," omitting in the process the long passage, "Has not the Lord anointed you to be prince over his people Israel? And you shall reign over the people of the Lord and you will save them from the hand of their enemies round about. And this shall be a sign to you that . . ." (RSV). Other typical examples of probable haplography are 1 S. 13:15 and 14:41.

Sometimes a combination of scribal errors like haplography and confusion of similar letters occurs, e.g., 2 S. 18:20 where בֵּן was omitted by its likeness to בֹּו. Similarly, the word בָּאִים was omitted because of its resemblance to the adjacent נָאֻם in Jer. 31:37 (MT 38).

5. Dittography. This is the phenomenon of writing twice what should only be written once. Like haplography, it may affect letters, words, or phrases. Thus at 2 K. 15:16 the article *he* is repeated at the beginning of the word *hārôṯeyhâ*, "pregnant women," and in Isa. 63:2 *l'ḇûšeḵā*, "your garment," has a dittography of the *lamed*. At Jer. 51:3 the Masoretes recognized that the verb *yiḏrōḵ* ("he will string") was unnecessarily written twice and instructed

that the second occurrence be omitted. It is probable that the MT of Ex. 20:10 repeats by dittography the phrase "if a man commits adultery with the wife of. . . ." The same scribal error explains the repetition of the words "the new cart, and brought it out of the house of Abinadab which was on the hill" in 2 S. 6:3f.

6. Confusion of Similar Sounding Words. In addition to the errors of the eye (ocular), other mistakes are best explained as errors of the ear (aural). Two words particularly vulnerable to this kind of confusion were the words לֹא, "not" and לוֹ, "his/its." A famous example of this occurs in Isa. 9:3 (MT 2) where the AV following the MT reads, "Thou has multiplied the nation and not [לֹא] increased the joy." What is obviously intended, however, is a positive statement about the nation's increase of joy. Hence the required reading is לוֹ as indicated by the *qere* substitution yielding the translation, "thou has increased its joy" (RSV). Similarly, the AV reading of Ps. 100:3, "it is he that has made us, and not we ourselves," is based on the MT לֹא over against the *qere* reading לוֹ, which translates, "It is he that made us, and we are his" (RSV). Similar sounding consonants are also confused, e.g., the *samekh* and *shin* in 1 S. 22:14 or the *qoph* and *gimel* in 2 S. 15:24.

H. Deliberate Scribal Intervention. While the majority of variants and errors in the OT text are undoubtedly accidental, some were also occasioned by deliberate scribal editing. It has already been seen (II.A.1 above) that at least some of the *Tiqqune Sopherim* can confidently be attributed to this kind of intervention, the objective of which was to avoid expressions thought disrespectful to the deity. The insertion of the *nun* in Jgs. 18:30 was prompted by the desire to relieve one of Moses' descendants of infamy. Other examples show a concern to remove logical or historical difficulties in the text, e.g., the reading "sixth day" rather than "seventh" in some versions of Gen. 2:2 — an attempt to avoid the implication that God worked on the sixth day. Assimilation to parallel passages probably accounts for other variants, e.g., Lev. 6:6.

Attempts were also made to explain rare words in the text by the addition or substitution of a more familiar synonym, e.g., Isa. 51:17, 22. In other cases variant readings in the margins were introduced into the body of the text resulting in what are known as "conflate readings" (e.g., perhaps 1 S. 28:13; cf. S. Talmon, *Textus*, 1 [1960], 144-184).

It should be clear that a knowledge of scribal habits and a judicious use of text-critical principles can greatly facilitate the detection of scribal errors, both accidental and deliberate, embedded in the MT. By this means biblical scholarship continues to make progress in the recovery of the earliest possible form of the OT text.

TEXT AND MSS OF THE NT.

The MS evidence for the text of the NT is vastly more abundant than that for any other ancient document. The oldest known MSS of the works of some of the Greek classical authors are copies made a thousand years or more after the author's death. The number of MSS of the ancient classics is also limited: about fifty MSS of the works of Aeschylus, a hundred of Sophocles, and only one each of the *Greek Anthology* and the *Annals* of Tacitus. Of the NT, however, there are almost five thousand MSS of part or all of the Greek text, two thousand Greek lectionaries, eight thousand MSS in Latin, and a thousand additional MSS in other ancient versions. These MSS include extensive parts of the NT copied hardly more than a century after the original, and fifty or more MSS, including two virtually complete NT codices, copied within three centuries after the NT books were originally written. In addition, the writings of the ancient church fathers in Greek, Latin, and Syriac contain thousands of quotations from the NT. Indeed, the available materials for the text of the NT are so extensive that their adequate study is a complicated task, but a task whose result is "to strengthen the proof of the authenticity of the Scriptures, and our

conviction that we have in our hands, in substantial integrity, the veritable Word of God" (Kenyon, *Story of the Bible*, p. 144).

  B. External Evidence
IV. History of Textual Criticism

I. Sources of Evidence for the Text of the NT.–A. Greek MSS. 1. Papyri. The original MSS (autographs) of the NT books were doubtless lost at a very early date, but contemporary documents discovered in the 19th and 20th cents. give a fairly clear idea of their probable form. The books of the NT were no doubt written on papyrus. The Gospels, Acts, Revelation, and perhaps Hebrews were very probably written on papyrus rolls, the accepted form for literary publication in the 1st Christian century. The Epistles, being more like private correspondence (*see* picture in LETTERS), were very likely written on papyrus sheets arranged in codex form (similar to the modern book form); the shortest Epistles were perhaps on a single sheet. In any case, at a very early date the codex form came to be used instead of the roll for all NT books. Indeed, although seventy-five papyrus MSS of the NT are extant, none is a papyrus roll (see Roberts, "The Codex," *Proceedings of the British Academy*, XI, esp. 185f.). Many of these MSS are small fragments of one or a few sheets. But the Chester Beatty and the more recently discovered Bodmer papyri contain large sections of the NT, e.g., virtually the complete Gospel of John, most of Luke and Acts, and extensive portions of the Epistles and Revelation. Under the present international system of enumeration of MSS, papyrus MSS are designated by the letter P followed by a number. (The *ISBE* uses a lowercase, italic, boldface *p*.) The following are some of the more important papyrus MSS of the Greek NT, with their numeric designations. (All have lacunae — places from which the MS material, and thus the text, is missing.) *See* picture of p^{52} in PAPYRUS (III, 654) and of p^{72} in PETER, SECOND EPISTLE OF.

p^{13} He. 2–5; 10–12. 3rd/4th cent., from Oxyrhynchus. British Museum, London.

p^{75} Luke, John. Early 3rd cent. Papyrus Bodmer 14–15. Bodmer Library, Geneva. *See* picture in LUKE, GOSPEL ACCORDING TO.

2. Parchment MSS. From ancient times tanned leather had been used to receive writing; it was the accepted material for scrolls of the Hebrew OT. Shortly before the Christian era a method was discovered of treating animal skins with lime and drying them in such a way as to produce an exceedingly fine, smooth, and firm writing surface. In precise definitions, vellum is calfskin or similar fine skin treated as described above, while parchment (named for the city of Pergamum, which produced much of it) is made from the more ordinary types of skin. At present, however, the two terms are used interchangeably. By the 4th cent. parchment had become the common material for NT MSS, although papyrus was used to some extent for another two centuries or so.

At the time that the NT was written, two styles of Greek handwriting were in use. One was a cursive or semiconnected hand, used for private purposes. The other, a somewhat rounded capital-letter handwriting known as uncial, was used for literary purposes. The Gospels, Acts, and some other books of the NT were therefore doubtless written in the literary, uncial hand. Although the Pauline Epistles might originally have been written in the cursive hand of private correspondence, they would very soon have been copied in uncials as literature. At any rate, even the earliest known MSS of all parts of the NT are in uncial handwriting.

The handwriting in the papyrus MSS is likewise uncial, but the term "uncial MSS" commonly designates only those written on vellum or parchment. Some two hundred fifty such MSS are now known, dating from the 4th through the 10th centuries.

Uncial MSS were previously designated by English capital letters, Greek capital letters that differ from English letters, and the Hebrew letter ℵ (aleph). Sometimes one letter was assigned to two MSS if their contents did not overlap, as in the use of D for two codices discussed below. In 1890, to provide a system of designation that would not be limited, C. R. Gregory developed the present system of designating all uncial MSS by a number preceded by a zero (e.g., Codex 08, Codex 0156), including those already designated by a letter; e.g., Codex A (02), Codex W (032). It is still common practice, however, to use the letter designations for MSS that have them.

The following are a few of the most important Greek uncial MSS.

Codex ℵ (01), Codex Sinaiticus, 4th cent., found by Tischendorf at St. Catherine's Monastery on Mt. Sinai and now in the British Museum in London, is the only uncial that contains the entire NT. It also contains the Epistle of Barnabas and part of the Shepherd of Hermas, and might also originally have included the Didache. It is written on 147 1/2 leaves of very thin vellum in four narrow columns of forty-eight lines each. The pages measure about 38 by 34 cm. (15 by 13 1/2 in.) with the leaves arranged in quires of four sheets. There is little punctuation and no use of accents or initial letters, but the Eusebian section numbers are found on the margins of the Gospels. The work of several correctors is found in the text. *See* pictures in MARK, GOSPEL ACCORDING TO; PASTORAL EPISTLES.

Codex A (02), Codex Alexandrinus, 5th cent., so named because it was supposed to have come from Alexandria,

The end of the Gospel of Luke in Codex Ephraemi Rescriptus (Bibliothèque Nationale, Paris)

was the gift of Patriarch Cyril Lucar to Charles I of England in 1627 and is now in the British Museum. It contains the entire NT except portions of Matthew, John, and 1 Corinthians. It also includes 1 and 2 Clement and the Psalms of Solomon. It is written on thin vellum in two columns of forty-one lines to the page, each page being 32 by 26.3 cm. (12⅝ by 10⅜ in.). This codex uses capital letters frequently and is divided into paragraphs, but has no marginal signs except in the Gospels. The handwriting of several different copyists is evident.

Codex B (03), Codex Vaticanus, 4th cent., which has been since at least 1481 the chief treasure of the Vatican Libary, is the oldest and best MS of the Greek NT. Written on very fine vellum, the leaves are about 25.4 by 26.7 cm. (10 by 10 1/2 in.), with three narrow columns of 40-44 lines per column and five sheets making the quire. Part of Hebrews and all of the Pastoral Epistles and Revelation are lacking. The MS is without accents, breathings, or punctuation. Later scribes have made numerous changes in the text. In the Gospels the divisions are of an earlier date than those in Codex Sinaiticus.

Codex C (04), Codex Ephraemi Rescriptus, 5th cent., is one of the most important of the palimpsests (MSS whose original text was scraped off and written over with another text, often not biblical). C originally contained the whole NT. Now, however, approximately half of every book is lacking and 2 Thessalonians and 2 John are entirely gone. It is written on good vellum, with each page of about 23 by 32 cm. (9 by 12 1/2 in.) having one column of forty-one lines in the original text. Several hands have corrected the MS. Brought to Italy from the East in the 16th cent., it came to France with Catherine de' Medici and is now in the Bibliothèque Nationale in Paris. First edited by Tischendorf (1843), it was re-edited by R. W. Lyon (*NTS*, 5 [1959], 266-272).

Codex D or D^{ea} (05), Codex Bezae, probably late 5th cent., was obtained in 1562 by Theodore Beza from the monastery of St. Irenaeus at Lyons. In 1581 Beza gave it to the University of Cambridge, where it remains. It is a Greek-Latin text containing only the Gospels, Acts, and a fragment of 3 John. The Greek text holds the chief place on the left-hand page. Each page measures 20.3 by 25.4 cm. (8 by 10 in.). Both Greek and Latin are written in large uncials and divided into short clauses, corresponding line for line. The hands of several correctors have been traced. The critical questions arising from the character of the readings are among the most interesting in the whole range of biblical criticism and are still unsettled.

Codex D or D^{p} (06), Codex Claromontanus, 6th cent., like Codex Bezae, is bilingual, with the Greek on the left and Latin on the right. Located in Paris, it contains the Pauline Epistles and Hebrews.

Codex W (032), Codex Washingtoniensis, 5th cent., was purchased by C. L. Freer in Egypt in 1906 and is now in the Freer Art Gallery of the Smithsonian Institution, Washington, D.C. It is a complete codex of the Gospels, whose order, as in Bezae, is Matthew, John, Luke, Mark. It contains Mark 16:9-20 with an interpolation found in no other MS. It is written in a slightly sloping hand in one column of thirty lines to the page. Pages measure 15.2 by 22.9 cm. (6 by 9 in.).

3. Minuscule MSS. In the 9th cent. a literary hand developed out of the cursive hand that for centuries had been used for private writing. Known as minuscule, it was more formalized than the cursive hand and had the obvious advantage over the uncial of allowing more rapid writing. By the end of the 10th cent. this hand had virtually displaced the uncial.

Minuscule MSS are designated by Arabic numbers. Approximately 2500 of these MSS are known, dating from the 9th cent. until after the invention of printing in the mid-15th century. The earlier minuscules tend to be more carefully written and to have little or no ornamentation, but in the later MSS a tendency toward less care in writing and more ornamentation is noticeable (*see* picture in MARK, GOSPEL ACCORDING TO). Being late in date, relatively few minuscules have a text that is significant for the determination of the original. The following are some of the more significant minuscules.

Codex 1, a twelfth-century codex now in Basel, is one of five or six MSS used by Erasmus in preparing his first edition of the Greek NT. MSS 118, 131, 209, and 1582 have texts very similar to that of 1, and the five MSS together are known as Family 1.

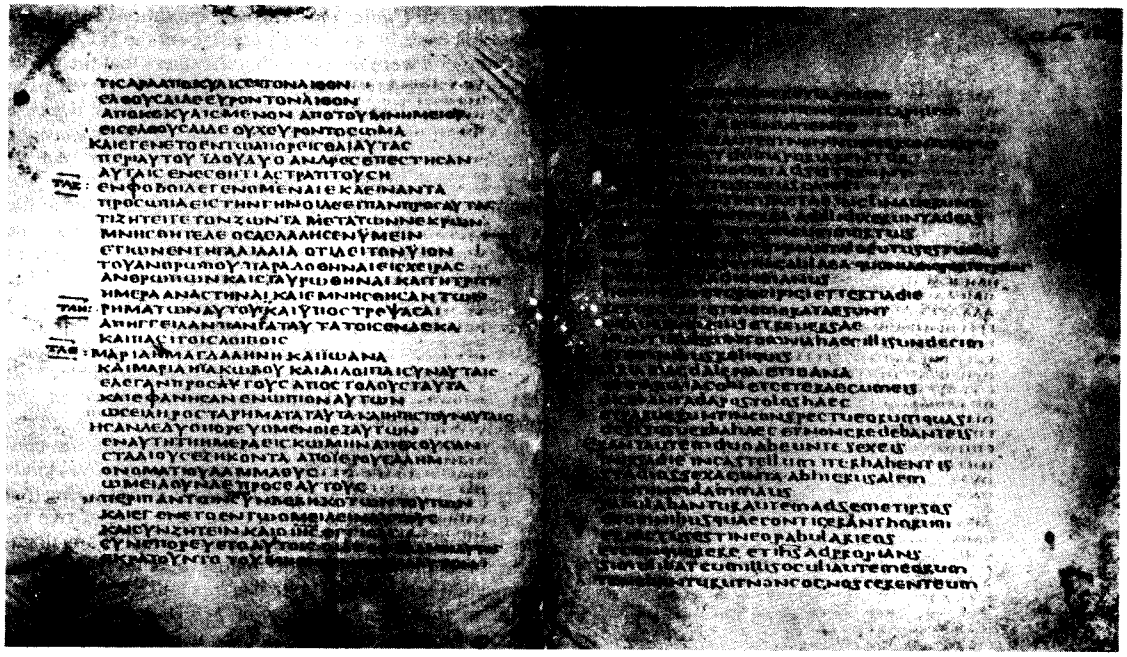
Codex 13, written in the 13th cent., is now in the Bibliothèque Nationale in Paris. The closely-related MSS 13, 69, 124, 346, 543, and a few others are known as Family 13.

Codex 33, a ninth-century MS, also at Paris, has been called "Queen of the Cursives [i.e., minuscules]" because of the excellence of its text.

Codex 565, Codex Purpureus Petropolitanus (i.e., "the purple codex of St. Petersburg"), is a MS of the 9th or 10th cent. in the public library of Leningrad. It was written in gold letters on purple vellum, perhaps for Empress Theodora. (*See* Plate 26.)

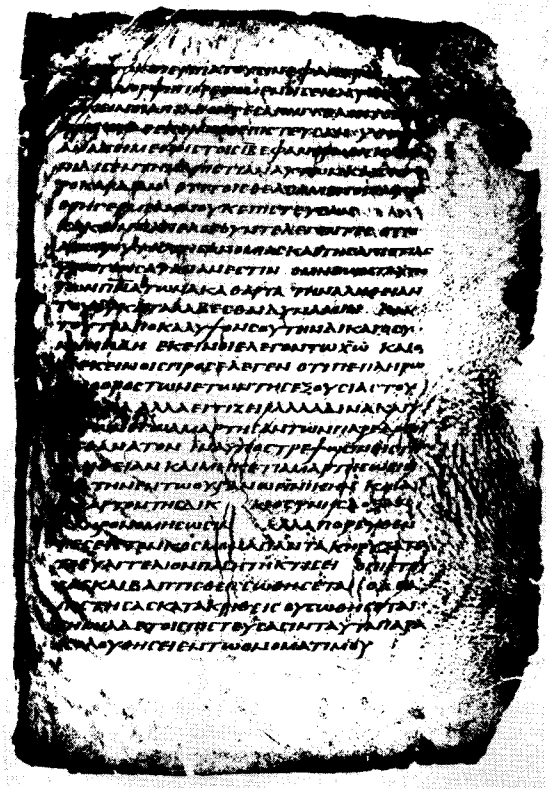
4. Lectionaries. At a very early date much of the NT was divided into sections designated as the Scripture readings for the days of the church year. Later, MSS called lectionaries were prepared, in which the NT was arranged not in its usual order of books and chapters but

TEXT AND MSS OF THE NT



A famous Greek-Latin diglot: Codex Bezae Cantabrigiensis, showing Lk. 24:1-16 (By permission of the Syndics of Cambridge University Library)

The end of Mark's Gospel in Codex Freerianus (5th cent.), an uncial codex of the four Gospels. This codex includes the famous Freer Logion, an addition following Mk. 16:14 (courtesy of the Freer Gallery of Art, Smithsonian Institution, Washington, D.C.)

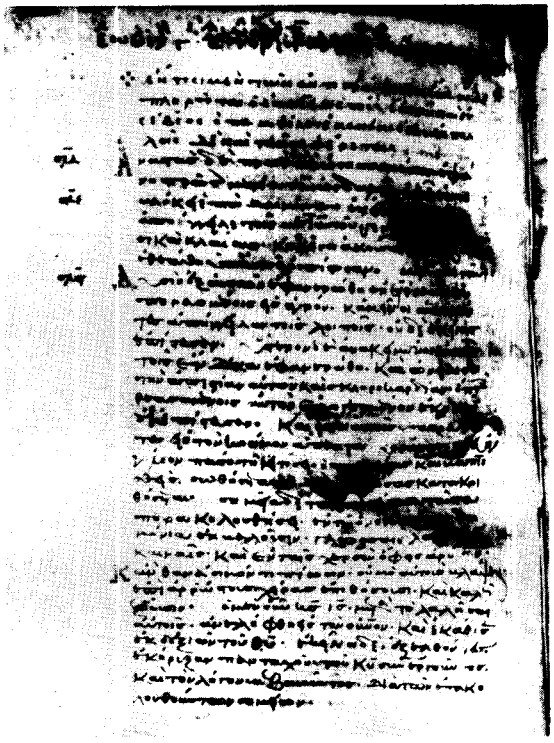


in the order of these readings for each day of the year or for each Saturday and Sunday of the year. Some two thousand Greek lectionary MSS are known at present, two-thirds or more containing the Gospel lessons, some containing the Gospels and Epistles, and the remainder containing lessons from the Epistles. An appreciable number are written in uncials, dating from the 10th cent. and later. Not until the middle of the 20th cent., however, was the significance of lectionaries for textual criticism properly recognized. Lectionaries are designated by an italic *l*, or by the abbreviation Lect., and an Arabic number (e.g., *l* 25, Lect. 299).

B. Versions. Translation of literature was not common in ancient times, and the translation of the Hebrew OT into Greek before the time of Christ occupies a unique place in ancient literature. In contrast, the NT was translated into other languages as early as the 2nd century. The Christian missionaries of the early centuries had the Scriptures translated into local languages wherever Greek would not serve the needs of the people. The most significant versions for NT textual criticism are the Latin, Syriac, and Coptic. (*See* VERSIONS.)

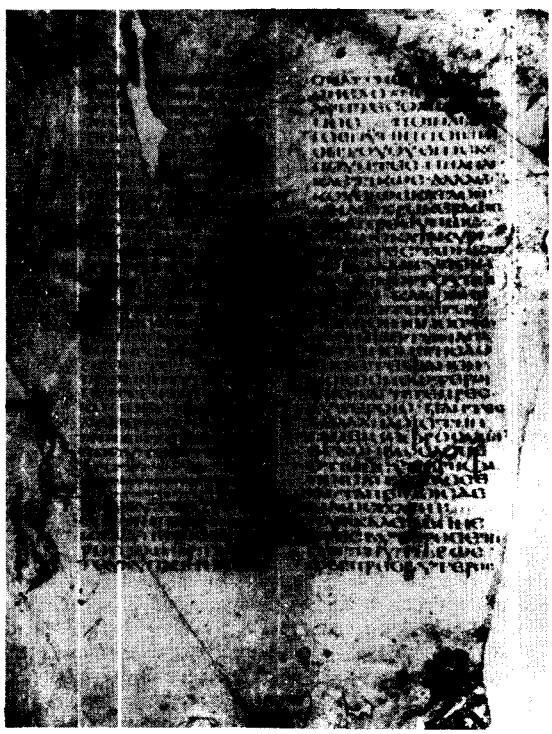
The value of a version in determining the original text of the NT is limited in certain respects. Since, like the NT autographs, all the original MSS of the versions are lost, extant MSS must be subjected to textual criticism to determine as nearly as possible the original wording of the version. Some versions, moreover, cannot reflect the difference involved in certain types of Greek variants. Latin, for example, has no definite article and therefore often will not attest the presence or absence of the Greek article. In addition, a version written in good literary form will not reflect differences characteristic of the Greek text, such as word order. Nevertheless, when a given variant is reflected in a version, it gives evidence that that reading was known in the place and time of the version's origin.

TEXT AND MSS OF THE NT



The ending of Mark's Gospel in an important minuscule, 1 (12th cent.) (Universitätsbibliothek, Basel)

An uncial lectionary (l 1575, 9th cent.) in Greek and Coptic: 1 Pet. 2:24–3:4 in Coptic; 5:1–5 in Greek; and 5:1 in Coptic (Österreichische Nationalbibliothek, Vienna)



C. Patristic Quotations. Patristic quotations furnish an additional basis for evaluating readings of the NT. So able and energetic were the early church fathers that the whole text of the Greek NT could probably be recovered from the quotations found in their writings. But, as in the case of the versions, some questions and cautions must be noted in using patristic quotations. Was it the writer's habit to quote carefully? Does he appear to have copied from a NT MS or did he quote from memory? Since the original MSS of the writings of the fathers are lost, the extant copies must be subjected to textual criticism to determine the form of the NT quotations as the father originally made them, for later copies might have been altered by scribes to harmonize the quotations with texts of the NT known to those scribes. Also like the versions, a church father's use of a particular text is evidence that that text was known in the region where he lived and during his lifetime.

II. Necessity of Textual Criticism.–Textual criticism concerns itself with the problems suggested by various kinds of errors. NT textual evidence is so vast — exceeding that of any other literature, as has been seen — that two results follow: First, since the copying by hand of any document of appreciable length almost inevitably involves change and error, many textual errors and variants will be found in this great quantity of MSS. Second, such a wealth of evidence makes it all the more certain that the original words of the NT have been preserved somewhere within the MSS. Conjectural emendation (suggesting a reading that is not found in any MS), to which editors have resorted in the restoration of other ancient writings, has almost no place in the textual criticism of the NT. The materials are so abundant that at times the difficulty is to select the correct rendering from a number of variant readings in the MSS.

It must not be overlooked, however, that the textual critic deals with a relatively small percentage of the text. With the NT, as with ancient literature in general, the wording of perhaps 85 percent of the text is unquestioned. It is true that if the total number of variant readings of all the MSS were counted, the sum would be many thousand. But the true perspective is probably given by E. Abbot: "About nineteen-twentieths of the variations have so little support that . . . no one would think of them as rival readings, and nineteen-twentieths of the remainder are of so little importance that their adoption or rejection would cause no appreciable difference in the sense of the passages in which they occur." The NT is of such supreme importance, however, that it is worth the attention of the textual critic to improve the text, if possible, even to a small degree.

Of the errors that give rise to variant readings, some are unintentional and others are intentional.

A. Unintentional Errors. 1. Errors of the Eye. The copyist sometimes confuses similar-appearing uncial letters, e.g., Ϲ Ε Θ Ο, Λ Δ Λ, Π with Τ or Γ. The fibrous surface of papyrus could have caused confusion between ΟϹ, "who," and $\overline{\Theta\Ϲ}$, the abbreviation for ΘΕΟϹ, "God," in 1 Tim. 3:16. Homoioteleuton is an error in which the scribe's eye skips from the first to the second nearby occurrence of an identical word or group of letters, omitting all the intervening text. Thus the Greek word underlying the AV in 1 Jn. 2:23 skips from the first "has the Father" (*tón patéra échei*) to the second, with the result that many editions of the AV put the entire second half of this verse in italics, indicating that the words "he that acknowledgeth the Son hath the Father also" are not in the Greek Text. The opposite error sometimes occurs, in which the scribe copies letters or words twice.

TEXT AND MSS OF THE NT

Errors of the eye also include the transposition of letters, producing a different word. In Mk. 14:65 some MSS changed *élabon,* "took," to *ébalon,* "cast." In Acts 13:23 two MSS changed *s̄r̄ān̄,* the abbreviation for *sōtéra Iēsoun,* "a savior Jesus," to *s̄r̄īān̄,* the abbreviation for *sōtērían,* "salvation."

2. Errors of Speech. These errors arise from similarities of pronunciation. For example, from early in the Christian era several Greek vowels were pronounced alike. One result of this "itacism" is confusion of "we/our/us" and "you/your" (plural), e.g., in 1 Jn. 1:4, *chará hēmṓn,* "our joy," or *chará hymṓn,* "your joy."

3. Errors of the Mind. These errors, resulting from misunderstanding or forgetfulness, include: changes in word order; the substitution of synonyms, such as *eípen* for *éphē,* "he said," or *ek* for *apó,* "from"; and such changes as the substitution of *karpós,* "fruit," for the less common word *kárphos,* "speck," in one MS of Lk. 6:42. Some harmonizations of parallel passages might be unintentional, such as the addition in a few MSS of "through his blood" to Col. 1:14 from the parallel in Eph. 1:7. Also, a scribe might have misunderstood an explanatory note in the margin of the MS he was copying and added it to the text of the new MS he was making. This could be the origin of the reference to the troubling of the waters in Jn. 5:3f.

B. Intentional Changes. 1. Linguistic or Rhetorical Corrections. These alterations were no doubt often made in good faith under the impression that a linguistic error had crept into the text and needed correcting (e.g., 2nd aorist endings on 1st aorist verbs).

2. Historical Corrections. These include changes introduced to correct an apparent error of fact, e.g., the change in Mk. 1:2 in many MSS from "Isaiah the prophet" to "the prophets."

3. Harmonistic Corrections. As distinct from unintentional harmonization, these include the apparent intentional assimilation of parallel passages, e.g., the assimilation of the Lord's Prayer in many MSS of Lk. 11:2-4 to the fuller form of Mt. 6:9-13.

4. Doctrinal Corrections. These are among the less frequent deliberate changes. Sometimes readings regarded as embarrassing were changed, e.g., the reference to Jesus' family going to take Jesus in hand and thinking Him mad in Mk. 3:31 was altered in various ways in some MSS of Mark. Other intentional doctrinal changes include the addition to 1 Jn. 5:7f. of the reference to the "three heavenly witnesses" (found in no Greek MS earlier than the 16th cent.), the addition of fasting to prayer in Mk. 9:29, and the addition of "who walk not according to the flesh but according to the Spirit" at the end of Rom. 8:1 and "and in your spirit, which are the Lord's" at the end of 1 Cor. 6:20. E. J. Epp has argued that the Western text shows a deliberate "anti-Judaic" tendency in various readings, and has pointed to the need for further investigation of this matter and other possible indications of deliberate doctrinal changes.

5. Liturgical Corrections. Certain changes might have been introduced into the text because of the use of the passage in the liturgy. The addition of the doxology to the Lord's Prayer, "for thine is the kingdom," etc. (Mt. 6:13, AV), might have had this origin.

III. Methods of Critical Procedure.–Textual criticism has gradually evolved certain rules, which are based upon patient classification and weighing of all the documentary evidence available, both internal (i.e., intrinsic probability) and external (i.e., the value of the MSS).

A. Internal Evidence. The basic principle of internal evidence is that the reading from which the other readings could most easily have arisen is probably the original reading. It must be borne in mind that scribes were engaged in copying a MS, not in studying it. Errors could therefore arise through a scribe's superficial grasp of the meaning of what he was transcribing. This basic principle has certain corollaries.

(1) A reading that at first seems more difficult to understand (Lat. *lectio difficilior*), but that on further examination proves to make good sense, is preferable to an easier reading. For example, in Jn. 1:18 "the only-begotten God has set him forth" is certainly more difficult than "the only-begotten Son"; but reflection shows that the author was intentionally referring to Jesus as deity here, and "only-begotten God" is doubtless original.

(2) If an intentional change is involved, the shorter reading is likely to be original. This is because scribes sometimes added clarifying words or phrases but rarely omitted words intentionally. Thus the doxology at the end of the Lord's Prayer (Mt. 6:13, "for thine is the kingdom . . .") is surely a later addition.

(3) If an unintentional change is involved, the longer reading might be original, as in 1 Jn. 3:1, from which "and we are" after "that we should be called children of God" was accidentally omitted by MSS used for the AV, probably because this phrase in Greek uncial letters, ΚΛΙΘΩΜΕΝ, looks so much like the preceding word ΚΛΗΘΩΜΕΝ.

(4) A reading that disagrees with a parallel passage (especially in the Gospels) is more likely original than a reading that harmonizes the parallels. Scribes were inclined to harmonize parallels, not to make them differ. Thus in Mt. 14:24 the correct reading is "many furlongs distant from the land" rather than "in the middle of the lake," read by some MSS, which is identical with Mk. 6:47.

(5) Another principle, that the reading that best accords with the author's style and vocabulary is probably original, can be applied only to an extensive passage. For example, Mk. 16:9-20 and Jn. 7:53–8:11 are clearly different from the rest of their respective Gospels and are surely not original. In single words or phrases, however, an author might by necessity or choice use a form that he does not commonly use.

B. External Evidence. External evidence seeks to determine which reading is supported by the most reliable witnesses — Greek MSS, versions, and patristic quotations. Many of the witnesses can be put into one of four groups or "text-types": Alexandrian, Caesarean, Byzantine, and Western. By examining a large number of textual variants, the scholar can determine the relative reliability of these text-types. Most scholars would put them in the order given above.

The Alexandrian text-type includes ℵ, B, C, L, T, Z, 33, 81, the Bohairic version, Cyril of Alexandria, and Origen in part. It is characterized by readings that are often terse and superficially more difficult and rough, and sometimes by refined and learned grammatical corrections. Although it is the best text-type, its readings must not be accepted uncritically.

The Caesarean text-type (only in the Gospels) has been thought to include Θ, 565, 700, p^{45}, W, the minuscule Families 1 and 13, the Old Georgian and Old Armenian versions, Cyril of Jerusalem, Eusebius, Origen in part, and other witnesses (see Metzger, *Textual Commentary,* pp. xxix-xxx). It was placed midway between the Alexandrian and Western text-types, although it generally does not show the longer Western variants and omissions. Greenlee's analysis of the Gospel quotations of Cyril of Jerusalem (4th cent.) gave support to the text-type, but some (esp. Hurtado) have raised serious doubts about the

unity of this group and the early date often attributed to the text-type. They believe that they have shown that Codex W, p^{45}, and Family 13, once regarded as representatives of an early stage of the Caesarean text (the "pre-Caesarean" witnesses), are not Caesarean witnesses at all, and they call for a reexamination of the whole Caesarean text hypothesis. Codex Θ and some other witnesses attached to this group do show a somewhat distinctive text that has some connections with both the Western witnesses and the Byzantine text-type.

The Byzantine, or Antiochian, text-type is found in many of the later uncial MSS, almost all of the minuscule MSS, and most of the later church fathers and versions. It formed the basis of the Textus Receptus and therefore of the AV. The Byzantine text is generally smooth and unobjectionable, with parallel accounts often harmonized, difficult readings alleviated, and rough and irregular constructions made smooth. It might have been produced by both intentional revision and unintentional development. It developed and became more prominent between the 4th and 8th cents., and thenceforth was the dominant and almost exclusive text in circulation. The support for some Byzantine readings in earlier witnesses such as p^{66} shows that the scribal tendencies associated especially with the Byzantine text-type began much earlier. Analysis of the Byzantine text was advanced considerably with the development of the "Claremont Profile Method" of classifying manuscripts by F. Wisse and P. McReynolds.

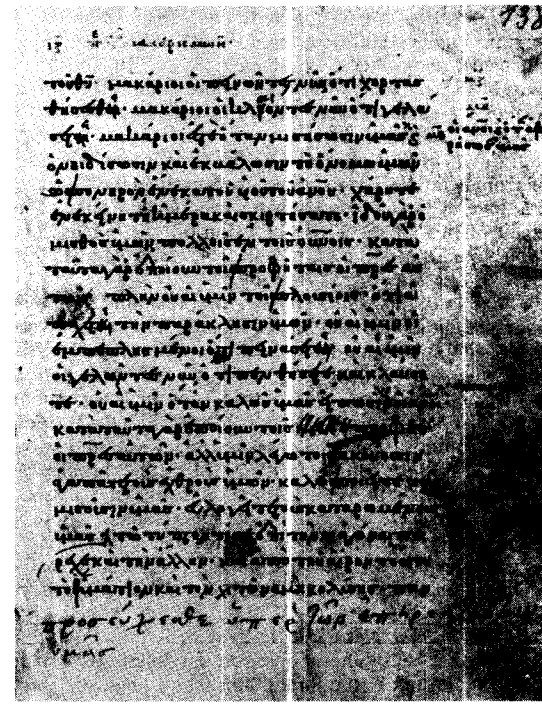
The Western text includes D (05 and 06), the papyri p^{25} and p^{38}, a few minuscules, the Old Latin, the Old Syriac, Irenaeus, Clement of Alexandria, and a few other witnesses. Attested as early as the 2nd cent., it includes, in addition to the more common types of variants, many long additions and paraphrases and some notably long omissions in comparison with other texts. Both the origin and the value of the Western text are much disputed, but most editors have been hesitant to accept readings that have only Western support.

This classification of text-types differs somewhat from the fourfold classification of Westcott and Hort. In place of the Alexandrian they postulated a Neutral text, which was predominantly the consensus of B and ℵ and in their view represented the original in virtually uncorrupted form. Their Alexandrian, whose witnesses (C, L. 33, Coptic version, Alexandrian fathers) they believed represented the original text as modified by grammatical and other minor learned corrections, was supposedly made by literary-minded scribes of Alexandria. They called the Byzantine text the Syrian or Antiochian. Their definition of a Western text is generally acceptable. (The theory of the Caearean text developed after the time of Westcott and Hort.)

H. von Soden, on the other hand, made a threefold division of the witnesses. His Hesychian (H) text corresponds to our Alexandrian. His Koiné (K) corresponds to the Byzantine. In analyzing the various layers in the development of the Byzantine text, von Soden performed a definite service. His Jerusalem (I) text includes the Western, the Caesarean, and other elements and is therefore more amorphous than his other two.

IV. History of Textual Criticism.—The invention of printing from movable type in the 15th cent. brought the age of handwritten MSS to an end. For the first time numerous textually identical copies of a given work could be produced. The first printed Bible was not, however, a Greek Bible but Latin — the famous Gutenberg Bible, of which a number of copies still exist. The first Greek NT was printed in Alcala (Complutum), Spain, in 1514 but was not actually issued until 1522. It comprised the NT volume of

TEXT AND MSS OF THE NT



Luke 6:20-30 in one of the inferior MSS (Greek Gospel Ms. 2, 12th cent.) that Erasmus used in the first edition of the Greek NT (Basel, 1516). In the margins are Erasmus's corrections and notes for the printer (Universitätsbibliothek, Basel)

the polyglot Bible edited by Cardinal Ximenes of Toledo.

Meanwhile, the scholar Erasmus, under the patronage of Froben, the printer of Basel, published a Greek NT in 1516 after only six months of preparation. It reached its third edition by 1522. His text was based on five or six MSS that happened to be available to him. His one MS of Revelation was defective, and he supplied the missing portions, including all of the last six verses of the book, by his own translations from the Latin text. The third edition was the only one to contain the "heavenly witnesses" passage of 1 Jn. 5:7f. (preserved in the AV), but since this was the edition used most by subsequent editors, the passage, which has virtually no Greek support, found its way into the printed Greek text.

The next important step was taken by Robert Estienne (Stephanus), whose third edition of 1550 contained marginal readings from fifteen MSS and was thus the first edition to have a form of critical apparatus. The French Protestant scholar Theodore Beza worked with Stephanus's son Henri to produce nine editions of the Greek NT between 1565 and 1604.

Two Dutch publishers, the Elzevir brothers, published seven editions at Leyden and Amsterdam between 1624 and 1678. In the preface to the second edition (1633) they optimistically stated: *Textum ergo habes, nunc ab omnibus receptum; in quo nihil immutatum aut corruptum damus* ("You have therefore the text now received by all; in which we give nothing altered or corrupt"). This is the source of the familiar term Textus Receptus, for this edition became the standard text for continental Europe, as the 1550 edition of Stephanus became of England and America. Thus began the period of dominance of the TR, from which scholarship would not be freed for three hundred years.

The second period, that of discovery and research, was ushered in by the great London Polyglot of 1657, edited by Brian Walton (later Bishop of Chester), with collations by Archbishop Ussher of fifteen fresh MSS, including A and 59. In 1707 John Mill of Oxford, after thirty years of labor, brought out the Greek TR with fresh collations of seventy-eight MSS, many versions, and quotations from the early fathers. His *Prolegomena* set a new standard for textual criticism. J. A. Bengel published in 1734 at Tübingen a Greek NT containing the first suggestions for genealogical classification of MSS. J. J. Wettstein of Basel and Amsterdam originated the system designating uncial MSS by capital letters and minuscules by numbers. J. J. Griesbach carried Wettstein's classification still farther, clearly distinguishing for the first time a Western, an Alexandrian, and a Constantinopolitan recension.

In the next epoch of NT textual criticism, scholarship successfully went behind the TR and established a text based on ancient sources and critical principles. Carl Lachmann applied the critical methods that he used in editing the classics, and with the help of P. Buttmann he produced an edition in 1842-1850 that led directly toward the goal. But by completely setting aside the TR and failing to state his principles except in an obscure journal, he brought down upon his head the most violent criticism.

Constantin Tischendorf, both as collector and as editor, is one of the foremost in the field. He discovered ℵ, edited or collated many MSS, and produced eight editions of the Greek NT. His eighth edition (1872), together with its *Prolegomena* (completed and published in 1884-1894 by C. R. Gregory), is still a necessity for serious textual study.

Gregory's *Die griechischen Handschriften des NT* (1908) not only gives a wealth of information about the witnesses to the NT but also correlates previously used MS designations to the system of designations now universally used. Meanwhile, S. P. Tregelles was doing prodigious and valuable work in England. F. H. A. Scrivener also did extensive and valuable, though conservative, scholarship.

In 1881 a landmark was reached with the publication of a critical edition of the Greek NT, the joint labor of the Cambridge scholars B. F. Westcott and F. J. A. Hort. This edition, accompanied by a volume carefully detailing the principles upon which they had proceeded, marked the final triumph of the critical text over the TR. There were some defenders of the TR and Byzantine text, notably J. W. Burgon and Edward Miller, supported by Scrivener, and a century later some were again insisting that the TR is the only true NT text. But from that time forward, editors were free to publish a text in accordance with their best judgment of textual principles without being bound in any way to the TR.

The massive work of Hermann von Soden was published in 1913. His extensive critical apparatus included the testimony of many minuscule MSS that had not been available previously. But in many respects his work has been one of the greatest disappointments of modern textual studies. For example, the importance that he attached to the work of Tatian is far out of proportion to what is actually known of it. His critical apparatus is presented not only in a tendentious manner but also in such a way that the actual reading of some of the MSS is impossible to determine. The new MS nomenclature of his apparatus was intended to involve some helpful principles but is exceedingly complex and impedes student use of his materials, since it has not otherwise been adopted.

For half a century after Westcott and Hort scholars tended to lean heavily upon the Neutral text, particularly the agreement of B and ℵ, unless internal evidence strongly indicated otherwise. The current tendency, however, is toward a more eclectic approach. Many scholars now give proportionately more attention to internal evidence. Although the Alexandrian text is still highly regarded, readings with good witnesses from various text-types must be considered as well as those supported by one generally reliable text-type. There is also more conscious recognition that a reading having primarily Byzantine support may occasionally represent an ancient reading whose older testimony is lost. Western readings are scrutinized, but readings with purely Western support are infrequent in recent editions of the Greek NT.

The principles just stated are generally those followed by the Greek NT published by the United Bible Societies in 1966 and in later editions. This NT text is unique in that it was prepared by a committee of scholars rather than by one or two individuals. Its critical apparatus is intended to be of particular help to Bible students and translators. The 3rd edition of the Bible Societies' NT has a text identical with the 26th edition of the Nestle-Aland Greek NT (1979), but the latter has a critical apparatus containing many more variants, intended for use by NT scholars.

The work of NT textual criticism goes on and much remains to be done. There is the (Anglo-American) International Greek NT Project, which has published a greatly improved textual apparatus of Lk. 1–9 (1984) and intends to continue this work. The most ambitious and prolific work is being conducted at the Munster Institute for NT Textual Research headed by K. and B. Aland. This group has produced several major studies and tools of NT textual research, is the headquarters for further editions of the UBS and Nestle-Aland Greek texts, and promises additional, major contributions to the study of the NT text.

Although traditionally emphasis has been placed on reconstructing the original (or earliest possible) NT text, some studies have also shown the importance of textual variants as evidence for tracing the history of doctrines and other aspects of early Christianity, and there is room for further investigation of these matters.

THADDAEUS tha-de'əs, thad'ē-əs [Gk. *Thaddaios* < Heb. *taḏay*–'breast'?] (Mt. 10:3; Mk. 3:18). The name of one of Jesus' twelve disciples. The AV adopts the least probable textual variant of the majority text for Mt. 10:3, "Lebbaeus, whose surname was Thaddaeus," while the NEB prefers the Western text, which reads simply "Lebbaeus" (Gk. *Lebbaios*). Luke's two lists of the Twelve (Lk. 6:16; Acts 1:13) replace the name Thaddaeus with "Judas the son of James." These variations gave rise to further textual corruptions in Mt. 10:3 and Mk. 3:18, including "Thaddaeus called Lebbaeus" and "Judas the Zealot." Probably the best solution is to take Judas as his given name and Thaddaeus or Lebbaeus (< Heb. *lēḇ*, "heart") as nicknames of devotion or endearment. The James who is the father of Thaddaeus cannot confidently be identified with any of the other NT persons of that name. The only other NT reference to this "Judas (not Iscariot)" is Jn. 14:22.

In extracanonical literature Thaddaeus is said to have traveled after Christ's ascension to minister to the people of Edessa in Mesopotamia and to their king, Abgar, who had previously written to Jesus asking that He come to them. Thaddaeus preached the gospel, performed miracles, instructed both Jews and Gentiles, baptized many, planted churches, and appointed bishops and deacons. The story is preserved in both Greek and Syriac versions of the Acts of Thaddaeus (*see* APOCRYPHAL ACTS, Other Acts, I; H-S, I, 437-444) and in an earlier account by Eusebius (*HE* i.13; ii.1.6-8). It is possible that Thaddaeus did minister in this area, but the details of these stories are highly unreliable. Eusebius also called Thaddaeus one of the Seventy (*HE* i.13.4, 11; cf. Lk. 10:1) and narrated his further ministry in the Mesopotamian city of Amis and his death in Berytus of Phoenicia (modern Beirut). The Nestorian "Liturgy of the Blessed Apostles" is ascribed in part to "St. Adaeus" (from the Syriac "Addai" for Thaddaeus).

THANK; THANKFUL(NESS); THANKSGIVING. An expression of gratitude, most often directed to God.

I. In the OT.–In the OT these words almost always represent the hiphil of Heb. *yāḏâ* or the derived noun *tôḏâ*. Both terms are also rendered "praise." The fundamental meaning of the Hebrew root is "confess"; it is used in two basic ways: (1) of confessing (declaring) God's attributes and works, and (2) of confessing sins. When it is used in the first sense, the RSV usually renders it "thanks." The OT has no independent concept of "thanks" as distinguished from "praise" (cf. the AV, which often has "praise" where the RSV has "thank" or "thanks[giving]"). The hiphil of *yāḏâ* often occurs in parallelism with other terms for praise, e.g., the piel of *hālal* and the piel of *zāmar* ("sing with musical instruments"). Moreover, it never has a human being as its object. (See Westermann, pp. 26f.)

The object of *yāḏâ* (hiphil) is always Yahweh or God (e.g., 1 Ch. 16:4, 8, 34f., 41; 2 Ch. 7:3, 6). Frequently a vow of thanksgiving concludes individual laments ("I will give thanks," Ps. 7:17 [MT 18]; 28:7; 35:18; 52:9 [MT 11]; 54:6 [MT 8]; 57:9 [MT 10]; 86:12; 109:30) and communal laments ("we . . . will give thanks," Ps. 79:13; "that we may give thanks," 106:47; etc.). Such vows are fulfilled by the *tôḏâ*, a joyful song of thanksgiving for God's mercy and deliverance (e.g., Neh. 12:27; Ps. 26:7; 42:4 [MT 5]; 69:30 [MT 31]; 95:2; 147:7; Isa. 51:3; Jer. 30:19; Jonah 2:9 [MT 10]). These songs often begin (or occasionally end) with the hiphil of *yāḏâ* ("I will give thanks," Ps. 9:1 [MT 2]; 30:12 [MT 13]; 108:3 [MT 4]; 118:28; 138:1f.; Isa. 12:1; etc.). (*See* PSALMS V.B.)

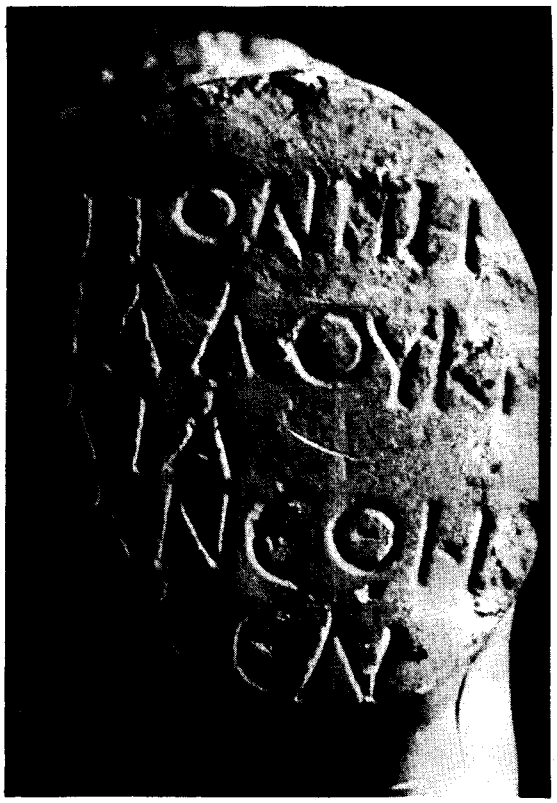
Vows of thanksgiving were normally fulfilled in the context of worship at the temple (cf. Ps. 100:4; 122:1-4), under the direction of the Levites (*see* SONG). Sometimes the song of thanksgiving (which might be sung as one walked about the altar; cf. Ps. 26:6f.) was accompanied by a "sacrifice of thanksgiving" or a "thank offering" (*zeḇaḥ tôḏâ*, Ps. 107:22; 116:17; sometimes simply *tôḏâ*, 2 Ch. 29:31; 33:16; Ps. 50:14, 23 [with the vb. *zāḇaḥ*]; 56:12 [MT 13]; Jer. 17:26; 33:11; Am. 4:5). Lev. 7:12-18 describes how the thank offering, which was a form of the peace offering, was to be presented (*see* SACRIFICES AND OFFERINGS IN THE OT). Ps. 69:30f. (MT 31f.) indicates, however, that the song of thanksgiving is more pleasing to God than sacrifice.

A summons to give thanks to the Lord (hiphil imperative of *yāḏâ*) is found at the beginning (and sometimes end) of many hymns of praise (e.g., 1 Ch. 16:8, 34; 2 Ch. 20:21; Ps. 105:1; 106:1; 107:1; 118:1, 29; 136:1-3, 26). Both in these hymns and in individual songs of thanksgiving, the reason for thanking the Lord is often stated in a clause beginning with the particle *kî* ("for . . .").

II. In the Intertestamental Literature.–Among the Greek terms used to render *yāḏâ* (hiphil) and *tôḏâ* in the LXX are *exomologéomai* and the noun *exomológēsis*. In classical Greek *exomologéomai* is used only in the sense of "confess" or "acknowledge"; but under the influence of Heb. *yāḏâ*, the LXX used it also in the sense of "praise" and "thank." *Exomologéomai* is the most common word rendered "thank" in the RSV Apocrypha. The object of thanks is always God (e.g., Tob. 12:6, 20; 13:6, 8, 10; 14:7; Sir. 39:6, 15; 51:1, 12). "Thanksgiving" usually represents *exomológēsis* (Jth. 16:1; Sir. 17:28; 51:11; 2 Macc. 10:38; 3 Macc. 6:35; 7:19).

Another verb that appears in the Apocrypha is Gk. *eucharistéō*. This term has no equivalent in Hebrew and does not occur in the LXX OT (except for *euchāristos* in Prov. 11:16). It specifically denotes the giving of thanks and can refer to thanks directed toward human beings (2 Macc. 12:31) as well as toward God (Jth. 8:25; Wisd. 18:2; 2 Macc. 1:11; 10:7; 3 Macc. 7:16). The same is true of the nouns *cháris* (directed to human beings in Sir. 12:1; 1 Macc. 14:25 [cf. *ácharis* in Sir. 29:25]; to God in 3 Macc. 1:9) and *eucharistía* (directed to human beings in Ad. Est. 16:4 [LXX 8:12d]; Sir. 37:11 [RSV "gratitude"]; 2 Macc. 2:27 ["gratitude"]; to God in Wisd. 16:28).

III. In the NT.–A. Terms. The primary terms for "thank," "thankful," "thanksgiving," etc. in the NT are *eucharistéō* and its cognate noun *eucharistía* (cf. also the adjective *euchāristos*, "thankful," in Col. 3:15). The noun *cháris* ("grace," "favor," "gratitude") is also rendered by



An ex-voto offering found at a bath in Jerusalem with a Greek inscription of thanksgiving from Ponpeia Loucilia (Louvre, photo G. Nalbandian)

"thank(s)," "thankfulness" eleven times (e.g., in the phrase *écho chárin,* lit. "have thankfulness," in Lk. 17:9; 1 Tim. 1:12; 2 Tim. 1:3; cf. He. 12:28 [RSV "be grateful"]). As in the Apocrypha (see II above), these terms can denote thanks directed to human beings. Such uses are rare, however, occurring only four times: (1) in concluding the parable of the unworthy servant, Jesus asks the rhetorical question: "Does he thank the servant because he did what was commanded?" (*échō chárin,* Lk. 17:9); (2) after being healed, the Samaritan leper falls at Jesus' feet, "giving him thanks" (*eucharistéō,* 17:16); (3) as part of his address to Felix, Tertullus politely acknowledges "with all gratitude" (*eucharistía*) Felix's reforms on behalf of the Jews (Acts 24:3); and (4) in Rom. 16:4 Paul expresses thanks (*eucharistéō*) to Priscilla and Aquila for risking their lives on his behalf. In all other instances these terms refer to thanks directed toward God.

Two other NT terms are rendered "thank(s)": *exomologéomai* (see II above) in Mt. 11:25 par. Lk. 10:21, and *anthomologéomai* in Lk. 2:38 (cf. its use in 3 Macc. 6:33; cf. also *anthomológēsis* in Sir. 17:27). Both terms express joyful thanksgiving addressed to God.

B. In the Gospels and Acts. The tone of thanksgiving dominates the prayers of the NT. The Gospels and Acts record several instances in which a prayer of thanksgiving is offered in the context of a meal. Jesus Himself followed this practice. The Synoptics describe His giving of thanks at the feeding of the four thousand (Mt. 15:36 par. Mk. 8:6; cf. the Johannine account of the feeding of the five thousand, Jn. 6:11, 23) and at the Last Supper (Mt. 26:27 par. Mk. 14:23; Lk. 22:17, 19). Acts 27:35 mentions that Paul, as a prisoner on a ship about to be shipwrecked, "took bread, and giving thanks to God in the presence of all he broke it and began to eat."

Other occasions also prompted a response of thanksgiving. Jesus offered a prayer of thanksgiving at Lazarus's tomb (Jn. 11:41); at another time He thanked God for revealing eschatological secrets to His childlike disciples (Mt. 11:25 par. Lk. 10:21). Luke reports Anna's prayer of thanksgiving at seeing the infant Jesus (Lk. 2:38), and the vain prayer of the Pharisee: "God, I thank thee that I am not like other men" (18:11). Paul responded with gratitude to God when he was met at Rome by fellow Christians (Acts 28:15).

On other occurrences of "thank," etc. in the Gospels, see III.A above.

C. In the Pauline Epistles. By far the largest number of references to giving thanks in the NT are in the Pauline Epistles. In the introductions to most of his letters (the only exceptions being Galatians, 1 Timothy, and Titus), Paul expresses thanksgiving to God. This thanksgiving is normally related to the theme of the letter; thus he thanks God "because your faith is proclaimed in all the world" (Rom. 1:8), "because I have heard of your faith in the Lord Jesus and your love" (Eph. 1:15f.; cf. Col. 1:3f.; 1 Thess. 1:2f.; Philem. 4f.), "for your partnership in the gospel" (Phil. 1:5), "because of the grace of God which was given you . . . so that you are not lacking in any spiritual gift" (1 Cor. 1:4f., 7), "because God chose you from the beginning to be saved" (2 Thess. 2:13), and because of "your sincere faith" (2 Tim. 1:3, 5).

For Paul, thankfulness takes its place along with faith and love as the proper and natural response to God's gifts and His grace. God is glorified through the thanksgivings of His people. Thus Paul tells the Corinthians that the goal of his evangelistic ministry is to bring greater numbers into the fellowship in order to increase the prayers of thanksgiving, thereby bringing glory to God (2 Cor. 4:15). In 9:1-12 Paul instructs the Corinthians to prepare an offering for the saints in Jerusalem, concluding: "you will be enriched in every way for great generosity, which through us will produce thanksgiving to God; for the rendering of this service not only supplies the wants of the saints but also overflows in many thanksgivings to God" (vv. 11f.).

According to Paul, it is the duty of all humankind to acknowledge God as Creator and give thanks to Him (Rom. 1:21). Ingratitude is listed among the sins of apostate humanity in the last days (2 Tim. 3:2). On the other hand, when infused with thanksgiving, mundane activities may become acts of worship (Col. 3:17); an example of this is the "blessing" or "giving of thanks" at meals (Rom. 14:6; 1 Cor. 10:30; 1 Tim. 4:3-5).

Thanksgiving should characterize the Christian's life in all circumstances (Phil. 4:6; Col. 2:7; 3:17; 4:2; 1 Thess. 2:13; 5:18). It should also mark corporate worship (cf. 1 Cor. 14:16f.; Eph. 5:19f.; Col. 3:16; 1 Tim. 2:1). Giving thanks must replace unfitting levity and other inappropriate behavior (Eph. 5:4). Christians have good reason to give thanks at all times, for the blessings they have received are superabundant (2 Cor. 9:15; Col. 1:12; 1 Tim. 1:12-14; cf. also Eph. 2:4-7; 3:16-19; Phil. 4:6f.).

D. In Hebrews and Revelation. The writer to the Hebrews urges gratitude for the certainty of "a kingdom that cannot be shaken," and for this reason he exhorts his readers to worship God with reverence and awe (He. 12:28). Hymns of praise and thanksgiving are a common feature in Revelation's descriptions of heavenly worship

in the age to come: "And whenever the living creatures give glory and honor and thanks to him who is seated on the throne, who lives for ever and ever, the twenty-four elders fall down before him . . . and worship him" (Rev. 4:9f.; cf. 7:11f.; 11:16f.).

THANK OFFERING. *See* SACRIFICES AND OFFERINGS IN THE OT V.

THARA thâr'ə (Lk. 3:34, AV). *See* TERAH.

THARRA thâr'ə [Gk. *Tharra*] (Ad. Est. 12:1). One of the two eunuchs who guarded King Ahasuerus's private chambers and plotted his assassination. In Est. 2:21; 6:2 he is called TERESH.

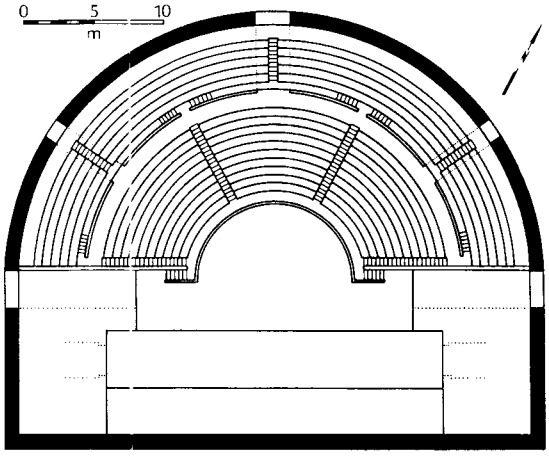
THARSHISH thär'shish (AV 1 K. 10:22; 22:48; 1 Ch. 7:10). *See* TARSHISH; TARSHISH, SHIPS OF.

THASSI thas'ī [Gk. *Thassi*] (1 Macc. 2:3). Surname of Simon the son of Mattathias and brother of Judas Maccabeus (*see* HASMONEANS II.A). The meaning of the name — perhaps transliterated from a shortened Hebrew or Aramaic term — is unknown.

THAT DAY. *See* DAY OF THE LORD.

THEATER [Gk. *théatron*; cf. *theáomai*–'see, look at'] (Acts 19:29, 31). From *ca.* the 5th cent. B.C. the Greeks built theaters for dramatic performances. Unlike the later amphitheaters (round or oval-shaped Roman buildings with tiers of seats completely surrounding an arena used for gladiatorial games; *see* picture in CAESAREA), the earliest Greek theaters consisted simply of an *orchéstra* (circular floor on which the actors and chorus performed) and tiers of seats built in a hillside hollow surrounding about two-thirds of the *orchéstra* (*see* picture in PERGAMUM). Later a raised stage and architectural background (*skēné*; cf. Eng. "scene") were added. In Roman theaters the *skēné* was greatly enlarged, and the *orchéstra* and seating area were constructed in the form of a semicircle (*see* picture in GAMES).

Plan of a small early Roman odeum at Pella (courtesy of the College of Wooster)



The theater could be used for public assemblies as well as dramatic performances. The enraged Ephesian silversmiths dragged Paul's companions to the municipal theater, where they convened an irregular and disorderly civic assembly (Acts 19:28-41; see F. F. Bruce, comm. on Acts [*NICNT*, 1954], pp. 399-402). For a description and picture of this theater, *see* EPHESUS; Vol. III, Plate 60.

Greek *théatron* could also denote the "play" or "spectacle" presented at a theater or amphitheater. In 1 Cor. 4:9 Paul uses the term ("spectacle") figuratively in a comparison of himself and his fellow apostles to "men sentenced to death" in a gladiatorial contest (cf. the vb. *theatrízō*, "expose publicly," in He. 10:33).

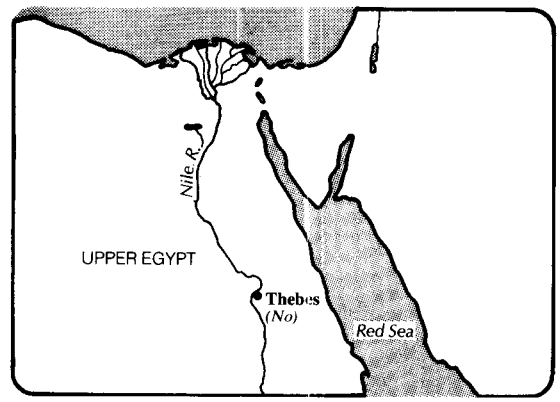
THEBES thēbz [Heb. *nō'*, *nō' 'āmôn* < Egyp. *ni'w[t]-'Imn*–'city of (the god) Amon']; AV, NEB, NO (Jer. 46:25; Ezk. 30:14-16); AV "populous No" (Nah. 3:8); NEB, RSV mg., also NO-AMON (Nah. 3:8). A city in Upper (i.e., southern) Egypt.



After the establishment of Egypt's Middle Kingdom in 1991 B.C., Thebes began to rise to national prominence as the pharaonic royal city. Although the Hyksos conquerors, who founded a new capital in the Delta, caused a temporary decline in Thebes' importance, the pharaohs of the New Kingdom enabled it to surpass its former glory. During their lifetimes they erected magnificent temples there to Amon and to lesser deities, and the pharaohs were buried in lavishly decorated and richly furnished rock-cut tombs in the area. Although all the tombs are located on the west bank of the Nile, and the most impressive temples are on the east bank (in the modern Arab towns of Karnak and Luxor), a few imposing temples are still to be found on the west bank (esp. at Qurneh, Deir el-Baḥrī, and Medînet Habu). Many of the New Kingdom monuments at Thebes remain remarkably well preserved.

The Assyrians under Ashurbanipal destroyed Thebes in 663 B.C. and gradually declined thereafter. Nah. 3:8-10 refers to this event, and this gives a *terminus a quo* for the writing of this prophecy. In their oracles against the nations Jeremiah (Jer. 46:25) and Ezekiel (Ezk. 30:14-16) warned Thebes of further impending doom. The Persian siege under Cambyses and rebellions against Ptolemy V and X merely postponed the eventual devastation of Homer's "Hundred-Gated Thebes" by the Romans in 30 B.C.

THEBEZ thē'biz [Heb. *tēḇēṣ*; Gk. LXX A *Thaibais*, B *Thēbēs, Thamasi*]. A town that was involved in Shechem's revolt against Abimelech and was destroyed by him (Jgs. 9:50; 2 S. 11:21). During the battle Abimelech himself was mortally injured by a millstone that a woman threw from the city's "strong tower," or bulwark. Nothing is known about the earlier or later history of Thebez.

Eusebius described Thebez as 13 Roman mi. from Neapolis on the road to Beth-shean *Onom.* 100.13, and thus it has been identified with the large village of Ṭūbâṣ, 16 km. (10 mi.) NE of Shechem. Ṭūbâṣ is in a valley and is surrounded by large olive gardens and numerous cisterns. The ancient town must have been much smaller than the present village, where no archeological findings have been recorded.

The resemblance of the names Thebez and Ṭūbâṣ is only superficial. But if the ancient name is related to Heb. *bōṣ*, "silt," and *biṣṣâ*, "marsh," it may be connected with the Arabic name, which is related to Arab. *ṭabs*, "mud." Other scholars have derived Thebez from a root related to Arab. *wabaṣa*, "be bright." A. VAN SELMS

THECOE thə-kō'ə (1 Macc. 9:33, AV). *See* TEKOA.

THEE-WARD. An archaic expression used by the AV at 1 S. 19:4, meaning "toward you."

THEOCRACY thē-ok'rə-si [Gk. *theokratía*]. A government in which God is the ruler.

The word "theocracy" itself is not in the Bible — it was apparently first used by Josephus (*CAp* ii.16 [165]) — but the concept underlying it surely is. Some scholars have argued that this idea, more often associated with the "kingdom of God," is among the Bible's most pervasive and unifying motifs (Eichrodt; Bright, p. 7; Wright, pp. 43f.; Mendenhall, pp. 1-31). Israel was the historical embodiment of the rule of God and Jesus made it a main element in His preaching (Mt. 3:17; Mk. 1:15).

Notwithstanding the important ruling functions throughout Israel's history of prophets, priests, sages, and kings, Yahweh was ultimately considered the sole sovereign ruler. Israel's leaders, whether their jurisdiction was political, religious, or social, were judged by the lone criterion of whether they appropriately manifested the divine will. The particular form of government was less crucial than the will of Yahweh which was to be expressed through it.

Thus the Torah depicts Israel as having been made into a "people" (Ex. 19:5f.) which would reflect God's purposes in every aspect of its socio-political existence (Gen. 12–Ex. 19), the details of which are provided in the law (Ex. 20–Nu. 10:10 [including Leviticus]). In the light of the narrative structure of the Torah, this new community Israel may also be seen as God's attempt to provide an alternative to hubristic human rule which systematically ignored or contravened divine purposes and directives for the created order (cf. Gen. 11:1-9; 12:1-3; see Brueggemann, pp. 97-104). In historical and sociological terms the precise details of this form of government can only be inferred (cf. Wilson; Gottwald, pp. 237-386), but in canonical terms the leadership role of Moses is predominant (cf. Beegle, pp. 65ff.; Childs, *Theology,* pp. 108-112; see Ex. 3:1ff.; 18:13ff.; 19:9ff.; 20:18-20; 32-34; Nu. 12:1ff.; Dt. 34:9-12).

The next major canonical section, the Former Prophets (Joshua–2 Kings [excluding Ruth]), also emphasizes the theocratic rule of God. Now that Moses was gone, Joshua assumed the role of his predecessor (Josh. 1:5-9, 16-18; 3:7f.; 4:14; 5:13-15; 8:30-35; 11:23). After Joshua's death Israel was led by a series of "judges" (*šôp^{e}ṭîm*), who were military deliverers divinely summoned to rescue the people from the very enemies into whose hand God had sold them in judgment (Jgs. 2:11-23). This particular form of theocracy was to be sharply distinguished from monarchy, which the famous judge Gideon rejected as an outright violation of Yahweh's own kingship (Jgs. 8:22f.). The subsequent disastrous reign of Abimelech, one of Gideon's sons who came to power by ruthlessly murdering all but one of his seventy brothers, only underscored this pronounced anti-monarchic tradition (Jgs. 9–10). Indeed, Abimelech's doomed experiment prompted one of the most negative assessments of kingship in the Bible: Jotham's parable of the trees (Jgs. 9:7-15; cf. Veijola, p. 103; Malamat).

But it would be facile to see biblical theocracy simply in anti-monarchic terms (cf. Dt. 17:14-20). In fact, while the main thrust of the book of Judges is decidedly anti-monarchic, chs. 17–21 present an opposite point of view, namely, that "law and order" in Israel will be nonexistent until a monarchy is established. This point is made by framing a narrative which reports outrageous misdeeds in Israel with the phrase: "In those days there was no king in Israel; every man did what was right in his own eyes" (Jgs. 17:6; 21:25; cf. 18:1; 19:1). Similarly, the very next book sees the monarchy as inimical to Yahweh's sovereignty (1 S. 8:7), so that its establishment is the result of a compromise on God's part (1 S. 8:9, 22; 10:17-19; 12:12ff.), but at the same time Yahweh elects the new king and sanctions his rule (1 S. 9:1–10:16). Then, when the first king is pronounced a failure by Samuel (1 S. 13, 15), in-

stead of the monarchy itself being abolished, another, more suitable monarch is chosen (1 S. 13:14; 16:1-13). To be sure, the overall editorial viewpoint of the material found in the former Prophets — Deuteronomy through 2 Kings if the hypothesis of a "Deuteronomist" is correct (Noth) — is such that most of the kings are soundly condemned (even the great Solomon, 1 K. 11; cf. Dt. 17:14-20), and the kingship is regarded as a major disappointment for its inability to promote Yahweh's will in the society. But the monarchy per se is not condemned. Based on compromise or not, it has attained the status of the preferred theocratic form. Indeed, if a king obeys Torah he is superlatively commended (2 K. 23:24f.). Subsequently the monarchy is "eschatologized" and becomes the basis for predictions about the future messianic reign (e.g., Isa. 9:2-7 [MT 1-6]; 11:1-9).

The Chronicler (1, 2 Chronicles, Ezra and Nehemiah) sees theocracy as a priestly kingdom in which Israel, after initial failure, is restored to the Torah way of life (Childs, *Intro.*, pp. 635f., 644). Chronicles proper depicts the political leaders as most solicitous of Torah, both in moral and liturgical issues, in a way which goes beyond even the presentations in the Former Prophets/"Deuteronomistic History" (e.g., 1 Ch. 15:1-24). When the kingship is destroyed by external forces, the new theocracy is run by priests and official interpreters of the law (Ezra and Nehemiah). In this postexilic situation, however, there is a shift in outlook, in that Israel has to learn to come to terms with being the "kingdom of God" *within* the non-Yahwistic kingdom(s) of this world.

But discussion of the biblical concept of theocracy cannot end here, for this concept is not unique to Israel. Virtually every state or empire in the ancient world also saw itself as a manifestation of the will and purposes of the divine world (Ishida, pp. 6ff.; Cross, pp. 217ff.; Albrektson, pp. 42f.; Mendenhall, pp. 188f.; Gottwald, pp. 591ff.). Without the relatively modern distinction between the sacred and the secular, all reality was collapsed into a single mode of existence: the sacred. In that sense all governments in antiquity were theocracies. Everything they did and everything they were, regardless of the social realm at issue, was "religious." Thus Yahweh's leading the Israelite slaves from Egyptian bondage did not constitute the abandonment of "secular" for "religious" government, but the substitution of one religio-political sphere (Egypt *and its gods*; cf. Ex. 5:2) for another (the kingdom Yahweh would found).

The biblical understanding of theocracy differs from the ancient Near Eastern understanding in the particular way the idea is construed. In the Bible it is clear that Yahweh's will may be manifested through virtually any conceivable socio-political form, though doubtless some forms and structures are more conducive than others to making the value system of the kingdom of God socially functional (Gottwald, pp. 608-649; Mendenhall, pp. 198ff.). In historical Israel there is evidence that some Israelites believed that nonmonarchic forms were preferable to monarchic ones, and vice versa, but in the canon this is relativized. God could work in and through the respective forms, but they were not to be reified and absolutized, so Yahweh may never be completely identified with any particular social form which Israel might have taken. Had the identification been complete, then logically Yahweh would have "disappeared" whenever the particular social form disappeared. But the prophets made it quite clear that Yahweh's existence was not tied to the ongoing existence of Israel in a given socio-political form.

One way of emphasizing Yahweh's transcendence of socio-political forms is the doctrine of the wrath and judgment of God, to which Israel itself was subject, perhaps especially so (Am. 3:2). Even for many Israelites this doctrine was most difficult to swallow, and the prophets who proclaimed this teaching were accordingly subjected to bitter denunciations and worse (Am. 7:10-17; Jer. 7; 18:18). It was one thing to grant God the "right" to issue judgment for covenant violation, but quite another to allow for the possibility that God could and would destroy the very community specially created by that very deity, only to resurrect it later in a completely new form.

After the demise of the Israelite state the notion of theocracy became more and more idealized and projected to the future, though there were always those who appealed to it to legitimate political aims and programs. In apocalyptic literature struggles between reigning temporal powers and the community of faith were seen in cosmic terms — one day these earthly powers would be abolished and by divine initiatives give way to the rule of God (Dnl. 7–12). In the meantime God's people were to realize that they were presently members of two opposing kingdoms, each of which could be given its due unless a conflict emerged, in which case God would have to be obeyed "rather than men" (cf. Mt. 22:21; Acts 5:29). Though earthly kingdoms are viewed as instituted by God and part of God's way of ruling this world (Rom. 13:1-7), the way they often manifest their power is regarded as the very epitome of evil and absolutely antithetical to God's rule (Isa. 14:1-27; Ezk. 28:1-23; Rev. 13).

THEODOTION thē-ə-dō'shən. *See* SEPTUAGINT III.B.2.

THEODOTUS thē-od'ə-təs [Gk. *Theodotos*].

1. One of three ambassadors sent by the Syrian general Nicanor to Judas Maccabeus to make peace (2 Macc. 14:19).

2. An Aetolian (cf. Polybius v.81) whose plot to assassinate Ptolemy Philopator was foiled (3 Macc. 1:2f.).

THEOLOGY thē-äl'-ə-jē [< *théos*–'god' + *lógos*–'word']. "Theology" etymologically means "a word about God" (the term does not occur in the RSV, AV, or NEB). The God of Christian theology is the OT God, the Father of Jesus Christ, and the word is the divine Word which became flesh in Jesus Christ. Jesus, as witnessed to in the Holy Scriptures, is the revelation of all God's ways and works with humanity. Christian theology, therefore, is concerned not with human words and thoughts about a god, but with all God's creative and redemptive ways and works with humanity in Jesus Christ.

A first principle of Christian theology is that God alone can speak His own word about Himself. Consequently, the first and continuing task of Christian theology is to

listen to and then reflect upon what it hears. When this is faithfully done, Christian theology is the reflective and obedient response of the church to the Word that God speaks about Himself in Jesus Christ.

But theology is also concerned with human response to this Word spoken by God alone. The necessity for this concern is grounded in the nature of the Word of revelation.

God speaks His word in history, and thus His Word is a historical Word. Because it was spoken in the history of Israel, in the history of the primitive Church, and with ultimate finality in the historical person Jesus of Nazareth, the Word of God is always also a human word. The authentic humanity and the concrete historicity of Jesus Christ demand this. Thus the Word of God in both the Holy Scriptures and in Jesus Christ is, though on different levels, both a divine and a human word. Were this not so, the Bible would not call its contents the "faith" once for all delivered to the saints, and theology as the church's reflection upon its faith would not be possible.

Because the Church in obedience has listened to the many forms in which the Word of God has been spoken in history, theology has taken many forms in understanding and shaping these manifold forms of revelation. First, because God's Word about His ways and works with the nation of Israel, and through Israel with all humanity, came to expression in the history of the OT, theology took the form of OT theology. Second, because this ancient Word of God came to a new and full announcement in the person of Jesus Christ and in the apostolic interpretation of Him, a theology of the NT arose. Third, because the Word of God is inextricably incarnated with both the human mind and human actions, both in Jesus Christ and in His Body, the Church, theology in its reflections on the Word of God took the shape both of systematic theology and of practical theology. In practical theology the Church concerns itself with its own life, holding before itself the scriptural norm, seeking both its amendment of life to this norm, and the best pastoral means to fashion the life of the Church increasingly in accordance with the demands of its Shepherd and Lord. During the Church's life the concern of practical theology has developed into special concerns, e.g., theologies of missions, ethics, preaching, counseling, social ethics, and others.

In the early Church, and until quite late in the Middle Ages, theology was less a science to make truth clear to the human mind than a hymn of praise and a meditation on the glories and mysteries of the Christian faith. In the later Middle Ages theology more and more resembled a science in which the truths of faith were synthetically structured into a coherent and systematic whole; theology increasingly came to be regarded as almost synonymous with systematic theology.

Systematic theology subsequently declined into an abstract, deductivistic scholasticism by conceding too much to rationalistic demands, and ceasing to pursue its task within the limits of faith and within the actual life and work of the Church. It had an inordinate interest in system and ignored the elusive aspect of the divine Word that transcends any total capture, containment, and possession by a human system, as it does any human mind. Thus systematic theology became increasingly divorced from the living faith and life of the Church and from pastoral theology. As a result it lost the passion and praise that informed the theology of antiquity as it informs the theology of the Scriptures. To the degree that systematic theology separated itself from the life of the Church and surrendered to the law of logic and metaphysics, it ceased to be a liberating theology of God's grace and truth.

Few modern theologians have great interest in systematic theology, and even fewer attempt to construct one. Systematic theology declined under the weight of its sterile, metaphysical, and rational interests, and under the impact of the modern awareness of history, which indirectly created a new awareness that the biblical revelation is grounded in history. Theologians of the systematic tradition almost overlooked the fact that Christian truth is not a metaphysically necessary truth, but rather the free and gracious decision of a God who freely chose to create and redeem people in Jesus Christ. They forgot that Christian truth is true because it happened, and thus is essentially historical and therefore not wholly reducible to a rational, systematic framework that ignores its temporal and historical ingredients.

Contemporary theology is dominated by the claims of the historical and is preoccupied with the problems of faith and history. Because of its low view of Scripture contemporary theology is largely hermeneutics, which is defined as the task of understanding how a historical Jesus can be the eternal Word of God, or, as some would see it, how a historical truth can be universally valid and significant for all people and all times.

Theology in any of its legitimate forms, and systematic theology in particular, will not flourish until the Church attempts the more modest and yet more difficult task of constructing a systematic, rational presentation of the Word of God, which in its very nature is a *historical* disclosure of the truth about God's ways and works with people, since it not only came through history but is history. Christian truth is not irrational because it is historical. As historical, however, it no more coincides with any human system or human mind than does faith wholly coincide with reason.

This inherent historicity of Christian truth and the consequent necessity of faith for its apprehension determine that theology in none of its forms is a private individual pursuit. A committee cannot write theology, but neither can an individual standing outside the Church. Theology is the mind of the Church, which in faith reflects upon that faith once for all delivered to the saints. It can be pursued successfully, therefore, only by people of faith who stand within the Church's life, work, and long history of theological tradition. The theological work of the church is never done, for no theology is absolutely definitive. Each generation must do theology anew, but always with an ear to tradition, which carries into the present what the Church has done in the past, and with an eye to the future, knowing that what has been done will have to be done anew and afresh in the future.

Theology can accomplish a liberating service for the Church only if it resists the temptation to absolutize itself by identifying itself with the Word of God. True theology is the Church's word about God, which responds to and is controlled by the Word that God Himself has spoken in His self-revelation.

THEOPHANY the-of'ə-ni. An appearance of God to the human mind. This is not a biblical word. It derives from two Greek terms, *theós,* "god," and *phaínō,* "shine," "give light," but in the passive the verb means "appear," "be revealed." That the divine could and did reveal itself to humanity was generally accepted by both the Hellenistic world and the Near East during the centuries in which both the OT and the NT developed. But the OT and the NT interpretation of the word "theophany" differs pro-

foundly from this general view. In order to delineate the biblical view of theophany, it will be helpful to describe briefly this general view and its background.

I. Background
  A. Greek Thought
  B. Hebrew Thought
II. Theophany in the OT
III. Theophany in the NT

I. Background.–A. Greek Thought. The Greek view of reality had the greatest influence upon Near Eastern cultures, many of which accepted it as the norm. Once Alexander the Great had spread his empire as far east as the Indus Valley (*ca.* 326 B.C.), he settled his veteran warriors in numerous towns across the known world of the east. These Greek-speaking settlers became unwitting missionaries of Hellenic culture to the "barbarians," as the Greeks called other peoples, priding themselves on being the successors of the great Athenian philosophers, the most educated of all peoples.

Plato is the most influential philosopher, even to this day, and his ideas, with modifications, shaped the thought of the whole Roman empire. For Plato, reality comprised two parts, the world of ideals and the world of the actual. Consequently he had to separate heaven from earth, matter from spirit, and body from soul. In fact, some of his disciples made the equation (in Greek) *sōma sēma,* "the body is a tomb," the soul being virtually imprisoned in the material world of the senses.

Modern secularists accept Plato's separation but focus on this material world. They think that life on earth needs no hereafter to follow the natural span of human life and give it meaning. Plato's ideal world is of no concern to them. They are completely unaware that the biblical concept of human life and destiny has no relationship to Plato's. They quietly dismiss the biblical theophanies as mental experiences in high-strung individuals that the science of psychology can explain and explain away. For example, they have treated Ezekiel's strange experiences in this manner.

Before Plato's day the Greeks had come into contact with the Egyptians. They greatly admired the Egyptians's philosophy of life, regarding it as necessarily true because it was ancient! So sure were the Egyptians of their dualistic ways of thinking that they supposed that "the other world" was as real as this one. Their "Book of the Dead" is like a traveler's guide to the afterlife in the other world; people lived here only to die and go there. Plato developed the Egyptian view of life after death. After a period of retribution in Hades, he taught, the soul would be reborn, for "god" had created it immortal.

B. Hebrew Thought. Hebraic thinking dismisses such dualism, with all its consequences, not by arguing against it but by presenting a wholly different view of reality, for which there exists only (a) God, and (b) His creation. The Bible assumes that heaven and earth are one, matter and spirit are one, body and soul are one. Thus the biblical idea of theophany is not the same as that of pagan society, which supposed that the divine enters this life when it "comes" from the "other world." In fact, there cannot be another world in the sense that the Egyptians supposed. The author of Zec. 9:13, writing late in Israel's developing knowledge of God, uttered a truth greater than he knew: "I will brandish your sons, O Zion, over [the philosophical ideas of] your sons, O Greece."

We note with amazement the beliefs of Moses and the Hebrews once they had escaped from slavery in Egypt. Acts 7:22 states that Moses "was instructed in all the wisdom of the Egyptians." He must surely have read "The Book of the Dead," which we possess today. Yet in Exodus we find not a trace of any philosophy of a life after death. Nowhere in the OT do we find the idea of a soul temporarily inhabiting a body. The OT does not even have a word for "soul" in this Platonic and Egyptian (and modern Hindu) sense. In the OT a person is a *nepeš,* a total unity of personality. That the RSV, AV, etc. translate this Hebrew word by many different English words ought to restrain us from dogmatically stating what it means. It took centuries for the Hebraic understanding of the loving activities of God to break through the "Egyptian" impasse.

The OT regarded the human *nepeš* as the seat of all human emotions and appetites, both "spiritual" and "carnal" at once. "Like cold water to a thirsty soul [*nepeš*], so is "good news from a far country" (Prov. 25:25). "What he [lit. his *nepeš*] desires, that he does" (Job 23:13b). The word even stands for the "brain" (Ps. 139:14c, AV).

The biblical concept of personality can be expressed more carnally still. Adam is essentially *bāśār,* "flesh." He is made of the dust of the ground (Gen. 2:7), and to dust he must return (Ps. 90:3). So he is no *scintilla dei,* no spark of the divine, which is set within his body of clay and will return to its source when the body dies. In fact, even the various inner organs can represent the whole person. When he saw his beloved city of Jerusalem laid waste, the author of Lamentations could cry: "My liver is poured upon the earth" (the MT of Lam. 2:11b). Similarly when Jeremiah experiences what we would call "desolation of *spirit*" he exclaims: "My bowels, my bowels! I am pained at my very heart" (Jer. 4:19a, AV). Even the kidneys can convey a "spiritual" experience: "My kidneys [RSV soul] will rejoice when your lips speak what is right" (Prov. 23:16). Incidentally we should note at this point how misleading the translation of the RSV here can be for modern readers in employing the word "soul."

Space, time, and eternity are other concepts which, when used in the Bible, convey ideas quite different from those inherited from the Greeks, and which form the background of Western teaching. Unlike the gods of the Near East, who dwell either "in heaven" or on top of the "great mountain" in the far north, Yahweh "dwells," as the pictorial Hebraic mind puts it, *above* the heavens.

The Bible regards time and eternity as interrelated. Eternity overarches time as a complete rainbow that covers the earth. Once again, God does not "dwell" in eternity; He created eternity. Both Testaments in fact reveal this unity of time and eternity.

The Heb. *ʿaḏ ʿōlām* or *leʿōlām* means something that we find hard to grasp as the "Hellenists" that many of us are. *ʿŌlām* probably derives from a root meaning "hidden": so *mēʿōlām weʿaḏ ʿōlām* could mean "out of the hiddenness and into the hiddenness." That is why *ʿōlām* is sometimes translated as "ancient" (i.e., in the past) and sometimes as "for ever" (i.e., in the hidden future). With a negative added, it can mean "never" (e.g., Ps. 104:5). At Gen. 9:16, where reference is made to God's overarching covenant with humanity, the covenant is called God's *bᵉrîṯ ʿōlām* ("everlasting covenant"). That is, since God is the living God, and is the same yesterday, today, and "for ever," the covenant is valid into the unknown future but also "up" into eternity. The implication is that what God does with us on earth is significant for all eternity. Any promise or word of God, spoken within time and space, belongs in eternity, and so has reference to both "now" and "then."

We can visualize this reality if we return to *God's* chosen picture of the rainbow as a sign of His everlasting covenant. A perfect bow may remain overhead covering as much of the earth as we can see in space and time. This

pictures for us how any earthly word or act of ours is equally present to the "heavenly" bow. Today we might say that whatever we do on earth is simultaneously valid for all eternity, or is "eschatologically significant." The Bible prefers to use not abstract but picture language to witness to the truth.

God's relationship to His "own possession" (Ex. 19:5) was unique. He was their Savior, Redeemer, Justifier. He justified them by forgiving them their sin, basically that of rebellion against the bonds of the covenant: "Fear not, for I have redeemed you . . . you are mine . . . your Savior . . . and I love you" (Isa. 43:1-4). By grace alone Israel was taught to see life as God sees it. Hence it no longer presupposed a natural, phenomenological division between this world and the other world, or between body and soul. Rather, it became assured that this world, or the reality that we experience now, is but one side of the coin of the total wholeness of God's creation. Israel learned this, not by "scientific" discovery, but by learning from God to see things with redeemed eyes, such as no other people possesses.

Israel thus discovered that certain awesome and even terrifying natural events are actually more than natural, but without being legendary or mythical. We ask, then, in what sense Israel recognized a theophany, and whether it could regard a theophany as an inbreaking of the divine into human experience.

II. Theophany in the OT.–Can the divine enter human consciousness? The answer lies in the biblical use of the concept of "sign," an idea native to Hebraic thinking while unknown to Platonic. God is not part of "the other world" who, from time to time, breaks into this one. He is Creator of both this world and "the other world," for they are one, even as a coin with two sides is one coin. Thus a biblical theophany has nothing to do with necromancy, spiritualism, second sight, the occult, sorcery, etc. For God emphasized to Moses: "you cannot see my face; for man shall not see me and live" (Ex. 33:20). But, adds the Lord, "you shall see my back" (33:23), the outward and visible sign that I have been present with you. A physical sign can thus point to a reality that humanity cannot grasp or understand. The OT expressed the mystery of the language of the "sign" by use of the verbal root *pl'*.

Genesis 18:1 ("And the Lord appeared to him [Abraham] by the oaks of Mamre") reads like a theophany sufficient to defy modern imagination. But we go on to read that in fact Abraham saw three men. These three thereupon addressed Abraham *as if* they were the Lord Himself! (v. 10). The Lord (sing.) then put a question: "Is anything too hard [RSV *mg.*, "wonderful," from the root *pl'*] for the Lord?" (v. 14). The form of the verb here is difficult to translate till we try to think it and "see" it as the Hebrews did. For it means something like "beyond our human capacity to grasp and understand." These three men had "appeared" to Abraham as a "sign" of the appearance or presence of the Lord. Even though they conveyed His Word, they were certainly not the Lord Himself.

In a similar situation Manoah (Jgs. 13:2-24) was faced with "an angel of the Lord," whose name was "wonderful," *pele'* (v. 18). Finally he said to his wife, "We shall surely die, for we have seen God" (v. 32). But they did not die; they had seen only a "sign" of God.

In a word, the OT regards its own theophanies in terms of the idea of "sacrament." Hence K. H. Miskotte could speak of the "presence of the absence" (e.g., pp. 94, 257-264). (See Ballentine, p. 172; Kuntz.) The theophanies of the OT are to be understood in this sense. None is a total revelation of God Himself. At Mt. Sinai Moses "heard" God say: "Man shall not see me and live" (Ex. 33:20). Yet Moses had also "heard" God's promise: "But [*kî*, meaning 'I declare that . . .'] I will be with you" (3:12). Then God continued: "This shall be the *sign* for you . . . you shall serve God upon this mountain." God was indeed present at Mt. Sinai, He did indeed "appear" to Moses, but always in terms of (a) a sign, and (b) through the sound of His word. At Ex. 3:2 we read: "The angel of the Lord appeared to him in a flame of fire," yet it was God Himself who called to him out of the bush (v. 4). A theophany therefore could indeed occur through the medium of sight — in this case, by means of the burning bush — but it did not present a view of God Himself. The Word came to Abraham through the "sign" of the three men. Through them he heard the word: "Is anything too hard for the Lord?" Similarly, Jacob "wrestled" all night with a "man" — we note again the Hebraic genius for describing a religious experience in picture form. Along with this "man," a remarkable sign of God's presence, Jacob *heard* God ask his name. The theophany ends with Jacob exclaiming: "For [*kî*, "I declare that"] I have seen God face to face" — yet, of course, only through the sign of a human being (Gen. 32:24-30).

A vitally important theophany is thus the name of God. God Himself actually revealed His name to Moses as I AM. As we have noted, Moses did not "see" God at this point, though he "heard" Him (Ex. 3:12-15; 6:2f.). But he saw God's back, so to speak. He saw God through the historical situation that had been promised him as the sign of God's presence. God had now kept His promise to bring His people out of Egypt: "This shall be the sign for you . . . you shall serve God upon this mountain." Moses had now seen the Word become fact.

From Moses onward the tabernacle that housed the ark was recognized as the specific place where God "abode" in Israel's midst. But over the ark hovered two cherubim (Ex. 25:18-20), the tips of their wings touching above it. Their task was to preserve the holiness of the divine presence from human sight (cf. Gen. 3:24 and Ezk. 28:14). Before the cherubim was placed the so-called bread of the Presence (AV "shew bread"; Heb. *leḥem pānîm*, lit. "bread of the face"). The face of God, yes, but of God Himself it was said: "Truly, thou art a God who hidest thyself"; yet He is in fact the Savior even when hidden from mortal eyes (Isa. 45:15). For God's saving work belongs in the category: "For my thoughts are not your thoughts, neither are your ways my ways" (Isa. 55:8).

The NT recognizes the importance of Elijah as the prophet who received a theophany, not, however, through the "great and strong wind that rent the mountains, and broke in pieces the rocks before the Lord," nor did he "see" God in the fire. What Elijah received in a special "presence" of God was conveyed to him in a still small voice (1 K. 19:11f.; Lk. 9:28-36).

If either Moses or Elijah had supposed he had actually "seen" God, because of his sinful human nature he would at once have created in his mind a picture of a "graven image" (Ex. 20:4; cf. Ezk. 33:32), for the sinful human creature cannot possibly envisage the powerful majesty and astonishing (cf. *pele'*) beauty of the all-holy God.

One aspect of the freedom of God, showing that He is not bound to employ any particular spiritual or physical means as a sign of His presence, is that at times He uses fire or thunder and lightning to reveal His presence, and that at times He uses His Spirit, but all of them only as signs of His theophanic revelation of Himself.

The ten so-called great plagues that befell the Egyptians, called in the OT "God's mighty acts," were in fact "signs and portents" of God's infinite might and power,

focused here upon certain moments in history to reveal that God's redemptive love was as infinite as His might, that His might was at the same time His mighty love.

Thus says the Lord is one of the basic utterances of the great prophets. Yet it is not an accurate translation of the original Hebrew (*kōh 'āmar YHWH*), which should be rendered: "thus the Lord has said." He has said it once and for all at Sinai. The prophets simply refer back to that once-and-for-all revealed Word of God given to Moses, and then apply it to the new contemporary situation. Such is the usage of Amos, Isaiah, Habakkuk, or Zephaniah. Thus Habakkuk can say: "I will take my stand to watch, and station myself on the tower, and look forth to see what he will say to *me*" (Hab. 2:1). Thereupon there follows an overwhelmingly powerful "theophany" (Hab. 2:2-5; 3:1-15), a "visitation" from the living God. Habakkuk had "heard the report of thee" from the written record of God's theophany at Egypt and Sinai. On the basis of the once-and-for-all-ness of God's terrible redemptive presence, he now "watched" the judgment and mercy of God "coming" to his contemporary people. A theophany, it seems, can express itself to minds prepared by God to receive it in terms not of direct revelation but of signs and wonders.

Ezekiel's strange visions of "wheels within wheels" occur to him in dreams or visions. Whether he is asleep or awake it is difficult to say. But these visions are not theophanies in the sense that they reveal God at the same level as the word "Thus says (or has said) the Lord." In his book he can say "The word of the Lord came to me" (7:1); but he also says: "The hand of the Lord was [lit. "fell"] upon me, and he brought me." God spoke not to his "soul" but to his whole *nepeš*, body, soul, and spirit (37:1). Ezekiel's visions reveal what Moses had discovered already, that he could behold only the Lord's back. He could not see God Himself, yet he was allowed to grasp what God had done, or was about to do, as the result of His Word uttered in history. Thus in his inaugural vision Ezekiel was careful to say, "there was the *likeness* of a throne," not a throne itself, "in appearance *like* sapphire," not composed of sapphire, "a *likeness, as it were* of a human form" (1:26). This is the kind of language that John the "Seer" used in Revelation. Moreover, both Mk. 13 and Revelation could interpret the advent only through signs and wonders. Hence the "desolating sacrilege" could be a sign at any point in history, in 587 B.C. at the destruction of Jerusalem, in the days of Antiochus at the desecration of the temple, in A.D. 70 when the Romans destroyed Jerusalem, or any other (cf. Lk. 17:31).

III. Theophany in the NT.—We should keep in mind this distinctly Hebraic (not Platonic) awareness of God's chosen means of revealing His mind and purpose when we hear it from the lips of Jesus. Mk. 13 has constantly been misinterpreted by those whose "world view" is based upon the Greek classics. Too often Jesus' apocalyptic pictures have been rejected as "un-Christlike" (!) by scholars who have used *eisegesis* instead of *exegesis* as they have searched the various sections of this chapter for anything and everything except the OT revelation that has been delivered once-and-for-all in the days of Moses.

This chapter is classed as belonging to the category of "apocalyptic." It is sometimes said that it uses apocalyptic language to describe a theophany that has not yet come about. But that would be to describe it in terms of a Platonic view of time. the God of the Bible is the living God; He is the same yesterday, today, and "for ever." He is thus the same for eternity as He is for time. Any theophany of such a God, therefore, evidences how every moment of time as humanity knows it is related to eternity. Jesus puts this reality in picture terms at Mt. 18:10; 25:31-46, in close conformity with the OT manner of expressing truth. Some scholars rightly recognize why Jesus saw no period of time between His coming death and resurrection on the one hand, and the parousia on the other. This is where the Fourth Gospel, "the Gospel of the resurrected Jesus," helps us understand the truth of the matter; for John's Gospel is deeply rooted in the Hebraic understanding of such ideas as theophany, apocalyptic, and eschatology in terms of the OT usage of "signs."

Thus we gather from Jn. 14:3 that Jesus regards the death of individual believers as taking place at the same moment as what we call "the end of the world." He can do so because the rainbow arc of Gen. 9 is equally above and over all the moments in time at which the deaths of all of us occur. This means that in some sense our death becomes a kind of theophany intended for us alone (see, e.g., A. Schweitzer, *QHJ*, p. 387; C. K. Barrett, *Holy Spirit and the Gospel Tradition* [1947], p. 154; J. Jeremias, *Parables of Jesus* [Eng. tr., rev. ed. 1972], pp. 43f., 55).

Recognizing the danger of isolating any NT passage from Hebraic thought, G. R. Beasley-Murray studied the issues involved carefully and then gave full place to the OT background of Mk. 13 in the mind of Christ (*Comm. on Mk. 13* [1957]). Jesus did not "foretell" the future, any more than did the OT prophets. Like Ezekiel in ch. 6, He could paint an intolerable picture of the "coming" destruction of the Holy City. Ezekiel also depicted people fleeing from the wrath of God as He turns their land into desolation and waste. Mk. 13 makes use of actual words and phrases from Ezekiel and other prophets, though the Hebrew terms appear in the corresponding Greek of the LXX. Jesus recognized that the overarching rainbow always lies over human affairs. Jerusalem will indeed fall, and that soon. But then wicked cities have always fallen and will always fall, and nations will always rise against nations, and there will always be earthquakes, famines, and troubles: "This is but the beginning of the sufferings" (Mk. 13:7f., RSV 1st ed. 1946). Wars and rumors of wars will always be a feature of human life.

Jesus was hailed by His disciples as Son of God, not as a prophet foretelling the future. Paradoxically, however, He was so because He recognized Himself to be Son of man. By this title He revealed that He knew Himself to be "Son of Adam," humanity, made in the image of God as male and female before the fall in the Garden. As such, He was "sinless man." The word "image" in Gen. 1:26 is important, for Jesus was not directly claiming to be God, He was the *image*, the ultimate "sign" of God. Because He was such, His words would not pass away (Mk. 13:31). He could say as much, knowing that from the beginning God had chosen to reveal Himself in theophany after theophany through the utterance of His Word. But now, as He knew, the Word had become flesh in Himself. By clinging to the title Son of man He was emphasizing that "of that day or that hour no one knows, not even the angels in heaven, nor the Son, but only the Father" (v. 32).

At His baptism Jesus "was praying" when He saw the heavens opened. Two events followed, in association with each other, as we would expect: first, the descent of the Holy Spirit, and second a voice from heaven. Mt. 3:16 records that "he saw the Spirit of God descending like a dove, and alighting on him." Mk. 1:10 merely says: "He saw the heavens opened . . . like a dove." At Jn. 1:32 *John the Baptist* reported that he "saw the Spirit descend

as a dove." Clearly the Evangelists are struggling to express the reality that in this theophany the God of Moses, who is the utterly other One, through His Spirit entering space and time and uniting with one particular human consciousness, became in fact "bodily" united with Jesus, in that He was not a mere soul or mind but a whole human *nepeš*. What this theophany was revealing, then, was not God as He is in Himself, but God in the reality of His incarnation in Jesus (cf. Jn. 1:14).

When, at the Last Supper, Jesus broke the bread that was set "before his face," and said, "This is my body" (Mt. 26:26 par.), His disciples would see at once that the bread He held in His hand was not to be identified with His physical body; rather it was a sign of who Jesus was and what He was accomplishing through the cross even while who He Himself was remained hidden, just as God the Father remains hidden from mortal eyes. Thus His action at the Last Supper was but a continuation of what He did from the beginning, when, as John says, He turned the water into wine as a "sign" of His glory (Jn. 2:11).

That a sign was always central to a theophany even of Jesus we observe in the story of the Transfiguration (Lk. 9:28-36). There three disciples, who were already in the fellowship of God's covenant, saw not God-in-Christ but the appearance, *tó eídos*, of His face. His raiment had become dazzling white, not its wearer. "They saw his glory." But the OT frequently uses "glory" as a picture term for God's "outer garment," not for God Himself.

Paul experienced a theophany, which Acts records several times (Acts 9:3; 22:6; 26:13), when "a light from heaven flashed about him." Those who were with him heard the accompanying voice, but the theophany was given to Paul alone. This is possibly the commonest theophany granted to men and women down the centuries and known even in today's secular world. Peter in prison had a similar experience (Acts 12:7). The "words" of interpretation come through a messenger (or angel) of God, acting as a "sign" of God's presence. Like Moses in Ex. 33:11, we notice that Peter did not *see* God. What he saw was a sign of God's presence.

Finally, what about the Resurrection appearances? In explicit agreement with the OT we point to four realities about these. (a) Nowhere is it suggested that the risen Christ is merely "spirit," a soul that has survived death. Platonists and Hindus might take this view, arguing that we must relate the stories to contemporary Jewish thought-forms in the 1st cent. A.D., but interpret them differently today. But we dare not negate the whole Hebraic view of the oneness and wholeness of the human *nepeš* and declare it to be outdated. This Hebraic view would never agree that an entity such as a soul could exist without a body (1 Cor. 15:35-44).

(b) Even the risen Christ is not a direct theophany of the living God, despite Thomas's unpremeditated exclamation "My Lord and my God." Jesus was still other than God the Father (Jn. 20:17). It is in Him that we see the Father (14:9).

(c) While only a sinless and therefore a holy Son of man could ever reveal the nature of God within space and time, even the resurrected Christ made use of the material body to reveal God.

(d) A "Platonic" resurrection of the "soul" of Christ has nothing to say about the nature of God Himself. On the Emmaus road (Lk. 24:10-13) the risen Christ has to interpret the heart of the biblical revelation to the two unnamed disciples by asserting that a revelation, a theophany, of God could not be complete without reference to the cross (vv. 25-27). The cross epitomizes the sufferings of the Christ that were "necessary" before He could enter into His glory, i.e., before He could fully reveal that at the heart of the universe there burns unquenchable fire, a fire of indescribable love (Dt. 4:12, 24; Hos. 11:1-4, 8f.; Isa. 33:14; 43:1-3; Lk. 3:16). The biblical idea of theophany requires a revelation of the very heart of God, both by the hearing of the Word and by an action that can reveal that heart only by signs and wonders. These conceal, just as much as they reveal, what we try in human terms to express as the unsearchable riches of God.

G. A. F. KNIGHT

THEOPHILUS [Gk. *Theóphilos*–'loved of God' (Lk. 1:3; Acts 1:1)]. The one to whom both volumes of the work Luke-Acts are addressed.

The meaning of the name has led some to argue that Theophilus was not a specific individual but any "friend of God" who might have occasion to read the two accounts. According to this understanding, Luke and Acts would have been written to Christian men and women who desired to have a more detailed and orderly account (cf. Lk. 1:3) about Jesus Christ and the origin of the Church. The application of the honorific "most excellent" (Lk. 1:3) to Theophilus, however, makes it more likely that the author is addressing a particular person.

Luke's use of "most excellent" in Acts (applied to the procurator Felix in 23:26 and 24:2; to his successor Festus in 26:25) suggests that Theophilus was a Roman official, or at least a person of some significant social standing. There is evidence that Luke composed his work partially to prove that neither Jesus nor his followers were politically dangerous to the Roman government (see Kümmel, pp. 162f.; Martin, II, pp. 60f.). Some have concluded from this evidence that Theophilus was the magistrate who heard Paul's case in Rome and that Acts was a legal brief in Paul's defense. B. H. Streeter (pp. 535-39) argued that Theophilus was the pseudonym for Titus Flavius Clemens, the cousin of the emperor Domitian, who was a likely inquirer into Christianity and who might have been especially concerned about rumors that this new faith was subversive. These last two views go well beyond the evidence, however, and are best left aside.

The question of whether Theophilus was a Christian continues to be disputed. To some degree the resolution of this question depends upon the proper translation of Lk. 1:4, specifically the verb *katēchēthēs*, which may refer to false information (as in Acts 21:21, 24) or to religious instruction (as in Acts 18:25). The verse may mean either "so that you may know the truth concerning the things of which you have been informed" (RSV) or "so that you may learn how well founded the teaching is that you have received" (cf. JB).

The former translation is consistent with an understanding of Theophilus as a non-Christian Roman official concerned about the political effects of the new faith. According to this view, Theophilus would have gotten some information about Jesus and His followers ("the things

of which you have been informed"), perhaps not all of it positive. Luke's purpose in such a case would have been to win him over to a more favorable view of Christianity ("that you may know the truth"), perhaps even to faith.

The latter translation of Lk. 1:4 assumes that Theophilus was a Christian who had received some instruction in the faith ("the teaching"). Luke's purpose in this case would have been to offer more extensive and detailed catechetical instruction. In this scenario Theophilus might have been a Roman official who had already embraced the Christian message or even simply a Christian middle-class Roman citizen who gave Luke the oportunity to write a complete account of Jesus and the early Church.

Unfortunately, it is impossible to determine which understanding is more likely since the evidence makes good sense from either perspective. It must be enough to say that Theophilus was probably a Roman citizen of some stature who was interested in the events surrounding the beginning of the Church. Such interest, whether that of a Christian or curious pagan, was enough to motivate Luke to pen his two-volume work.

T. E. PROVENCE

THERAS thûr'əs [Gk. Apoc. *Theras*]. The name of a canal in Mesopotamia where Ezra assembled the Jewish exiles returning to Jerusalem in 428 B.C. (1 Esd. 8:41, 61 [LXX 60]). The canal is probably named after an otherwise unknown town situated somewhere on the banks of the canal. D. J. A. Clines suggested it to be the classical site Scenae, an important caravan junction near Babylon (*Ezra, Nehemiah, Esther* [*NCBC*, 1984], p. 109). Elsewhere it is referred to as AHAVA (Ezr. 8:15, 21, 31).

I. Historical Background.–With the possible exception of Galatians, 1 Thessalonians is the earliest of Paul's extant epistles. It was written during Paul's second missionary journey, which took him into Europe after revisiting the churches of Asia Minor. The Epistle is part of the correspondence that Paul maintained with the church after leaving Macedonia for Achaia.

A. Founding of the Church. Paul opened his campaign in Macedonia at Philippi, where he and Silas were arrested and imprisoned on suspicion of activities subversive to Roman rule (Acts 16:11-40). Upon release, Paul and his companions traveled west through Amphipolis and Apollonia to Thessalonica, where he preached on three sabbaths in the Jewish synagogue (17:1-3). His work was rewarded with some Jewish converts, but most who responded to his message were Greek proselytes (v. 4). The Jewish population, jealous of Paul's success, enlisted the aid of the idle rabble of the streets and attacked the house of Jason, his host, in an attempt to capture Paul for trial before the popular assembly (v. 5). Failing to apprehend him, they dragged Jason and some other Christians before the city officials, accusing them of harboring potential rebels against Caesar, because Paul proclaimed that Jesus was a king (vv. 6f.). The magistrates of the city (Gk. *politárchēs*) exacted a bond from Jason and his fellow believers for the good behavior of Paul and his party and then released them. Rather than risk further trouble with the authorities, the Christians sent Paul and Silas away to Beroea. When the hostile Jews pursued them, Paul went to Athens, leaving Silas and Timothy to complete the work in Macedonia.

The Lukan narrative of Acts 17:1-10 is confirmed by allusions within 1 Thessalonians. Paul referred to his painful experience at Philippi (1 Thess. 2:2) and to his subsequent sojourn at Athens (3:1). His exhortation that the recipients of the Epistle greet *all* the brethen and that it be read to *all* (5:26f.), accords with Luke's implication that there were varied social strata in the church that could easily develop into factions. Paul endeavored to avert discord by ministering equally to all the people.

B. Occasion of the Epistle. 1 Thessalonians was written after Silas and Timothy had rejoined Paul (1 Thess. 3:1f.) at Corinth (Acts 18:5). The allusion to Timothy (1 Thess. 3:1f.) may indicate that Timothy visited Paul at Athens during his brief stay there, and that Paul, apprehensive for the safety of the Thessalonian church, had sent Timothy back to encourage them. When Timothy and Silas subsequently brought to Corinth the report that the Thessalonians were strong in faith and that they were making favorable progress (3:6f.), Paul was stimulated to new effort (Acts 18:5). He wrote this Epistle to defend himself against enemies who spread false rumors and to answer the queries of the Thessalonian Christians. His experience with the opposition of the Jews in Corinth, terminating in his expulsion from the synagogue, may well have been the reason for his strong condemnation of them in 1 Thess. 2:14-16. The controversy over the law that had plagued the churches of Galatia had not affected the churches of Macedonia, but Paul's Jewish adversaries had accused him of being a heretic, a deceiver, and a religious adventurer who made a living by victimizing an ignorant public.

II. Contents.–*A. Outline.*

I. Salutation (1:1)
II. Personal Relations (1:2–3:13)
  A. Response of the Church (1:2–10)
  B. Pauline Ministry (2:1–3:13)
III. Church Problems (4:1–5:11)
  A. Moral Irregularities (4:1–8)
  B. Brotherly Love (4:9–12)
  C. State of the Dead (4:13–18)
  D. Day of the Lord (5:1–11)
IV. Concluding Exhortations (5:12–28)

After the initial salutation the Epistle divides naturally into three parts: (1) Paul's personal defense against the accusations of his enemies (1:2–3:13), (2) the topics of ethical or doctrinal interest that relate to current problems in the Thessalonian church (4:1–5:11), and (3) the final exhortations (5:12-28). Probably the first section deals with Paul's reply to Timothy's oral report of the status of the church, the second section with the specific questions raised by the memorandum or letter that Timothy brought

with him, and the third section with the general duties of the leaders whose presence is indicated in 5:12.

B. Doctrinal Teaching. A wealth of doctrinal material fills this Epistle despite its brevity. Although not primarily a theological treatise, it contains allusions to almost every cardinal truth of the Christian faith. It predicates one living and true God (1:9), the Father (1:3), who has loved humanity (1:4) and has revealed Himself to them in His Word (2:13). This Word concerned His Son, the Lord Jesus Christ (1:3, 8, 10), who died and rose again (4:14) for our salvation (5:9f.). The ministry of the Holy Spirit is recognized as imparting joy, authoritative truth, and prophetic wisdom (1:6; 4:8; 5:19). Santification or holiness of life is required of every believer (4:3f.; 5:23). The greatest single doctrinal emphasis concerns the return of Christ, which is mentioned in every chapter (1:10; 2:19; 3:13; 4:13-18; 5:23).

The Pauline doctrine of justification by faith is not discussed in this letter, but the frequent allusions to "the gospel" presuppose that Paul had preached in Thessalonica the same message that he proclaimed elsewhere. Like his other letters, 1 Thessalonians is designed primarily as a treatment of the issue of the moment rather than as a general theological treatise. The totality of the Christian message is contained in the gospel preached by Paul and his associates (1:5; 2:2-4, 8f.; 3:2).

III. Authenticity.–Except for the Tübingen school of German criticism, which flourished in the first half of the 19th cent., no one has seriously challenged the Pauline authorship of 1 Thessalonians. F. C. Baur contended that the Epistle was not genuine because it contains anachronisms, i.e., it reflects a stage in the church's growth that demands a longer time for development than the few weeks that elapsed between Paul's entrance to Thessalonica and the traditional date of writing. Baur also raised the objection that the Epistle represents the opposition to Paul as emanating from the Jews, whereas the other Epistles indicate that Judaizing Christians were his chief adversaries.

Against Baur's first contention, the interval between Paul's departure from Thessalonica and the writing of the letter may well have occupied several months rather than a few weeks, since the missions to Beroea and Athens intervened, and since time must be allowed for the journeys of Silvanus and Timothy. Paul spent eighteen months in Corinth, and even if the letter was written in the first third of his sojourn there, six months could easily have elapsed between his departure from Thessalonica and the composition of this letter. That interval would have provided ample opportunity for the church to grow and for its reputation to spread through Macedonia and Achaia (1 Thess. 1:8).

Baur's objection to the character of the opposition is invalid because there is exact accord between the Epistle and Luke's narrative in Acts 17. Legalism was not the chief problem in Thessalonica, nor had it ever been an issue in the Macedonian churches as it was in Galatia. Apparently the Judaizing element that was powerful in Antioch and the East had not at this time penetrated the West.

A subsequent critic, R. M. Hawkins, has rejected certain paragraphs of 1 Thessalonians (1:10; 2:14-16; 4:13-18; 5:1-10) because they are apocalyptic (*Recovery of the Historical Paul* [1943], p. 292). But such a judgment is too sweeping and arbitrary, for Paul was familiar with the apocalyptic writings of the OT and probably also with those of contemporary Judaism. His use of apocalyptic is not abnormal, especially in a context dealing with eschatology.

A. External Attestation. Echoes of the phraseology of 1 Thessalonians occur in the writings of the Apostolic Fathers, although these cannot be identified as absolute quotations. Ignatius may have referred to 1 Thess. 2:4 in Ign. Rom. 2:1 and to 5:17 in Ign. Eph. 10:1. The Shepherd of Hermas possibly alludes to 1 Thess. 5:13f. in Vis. 3:9:2. The correspondence of these passages is precarious, however. Solid evidence is provided by the inclusion of 1 Thessalonians in the Canon of Marcion (*ca.* A.D. 140) and in the Muratorian Canon (*ca.* 180). Irenaeus (A.D. 180) quoted the Epistle by name, and by 200 it was universally recognized as a part of the Pauline collection. Origen (250) and Eusebius (350) listed it among the undisputed books of the NT.

B. Internal Attestation. 1 Thessalonians definitely claims to have been written by Paul (1:1; 2:18). Silas and Timothy, the men associated with him in the authorship, are known to have accompanied him on his second journey (Acts 15:40; 16:19; 17:10, 14; 18:5). Moreover, the occasional personal allusions in the letter agree with what is known of Paul's career at this time. He was acquainted with public opinion in Macedonia and Achaia (1 Thess. 1:6-8); he had encountered opposition at Philippi (2:2); the Jews had been antagonistic throughout the ministry of this journey (2:14-16); he had recently visited Athens (3:1). The references to moral problems and to the Lord's coming may reflect in some degree the predominance of these questions at Corinth where presumably he was writing.

Internal attestations to authenticity also include the vocabulary, which is Pauline. W. Hendriksen (p. 20) pointed out that more than four-fifths of the words used in 1 Thessalonians occur in the four major epistles, Romans, 1 and 2 Corinthians, and Galatians. If the Prison Epistles are included in the indisputably genuine group, almost nine-tenths of the vocabulary coincides.

The close accord with Paul's known activities and personality, plus the general acceptance within the early Church of the Epistle's genuineness, removes any reasonable doubt concerning the Pauline authorship of this Epistle. Forgery is inconceivable; had some anonymous writer been trying to imitate Paul, he would not have represented him as anticipating the Parousia of Christ if the apostle were already dead. The unstudied directness of the Epistle, its numerous coincidences with the life of Paul recorded in Acts, and its general agreement with his doctrinal teachings preclude pseudonymity.

C. Time and Place. The date of 1 Thessalonians can be determined with fair accuracy. An inscription discovered in Delphi in 1909 contains a letter from Claudius to Gallio, before whom Paul was arraigned in Corinth; it dates the proconsulship of Gallio to the twelfth year of Claudius's tribunicial power and before the latter's twenty-seventh acclamation in August, A.D. 52. Since proconsuls usually assumed office in the summer, Gallio probably began his term in midsummer of 51, for he must have held his position for some time prior to the date of the inscription. Just when Paul appeared before him is not stated, but Acts 18:12-18 implies that Gallio's succession took place near the end of Paul's eighteen-month stay in Corinth. 1 Thessalonians was written shortly after his arrival in the city, so that it should probably be dated not later than 51, although some, like Goodspeed (*Intro. to the NT* [1937], p. 11), have believed that 50 is correct. Knowing that Silas and Timothy met Paul at Corinth after their ministry in Macedonia (Acts 18:5), and that they shared in writing 1 Thessalonians, one may conclude that the Epistle was written in the early part of Paul's residence at Corinth, before its church had been completely established.

D. Critical Theories. Concerning the composition of

1 Thessalonians C. Faw (*JBL*, 71 [1952], 217-225) contended that the Gk. phrase *perí dé* ("concerning, as to"), which in 4:9, 13; 5:1 introduces the topics in didactic sections, is used in 1 Corinthians (7:25; 8:1; 12:1; 16:1) to introduce replies to definite questions asked by a letter (7:1); this same pattern in 1 Thessalonians should imply the same procedure (the theory of a letter from the Thessalonian church did not originate with Faw, for R. Harris had proposed substantially the same hypothesis more than half a century earlier [*Expos.*, 5th ser., 8 (1898), 157-178], although Faw made a somewhat better case than Harris did). Faw remarked that these topics are inserted abruptly, with little connection between them. One did not originate from the other immediately before it but must have been prompted by an external question. In one or two instances Paul was reluctant to make pronouncements on the subject (1 Thess. 4:9; 5:1). If so, why should he have raised it at all unless the Thessalonians required it?

Faw's hypothesis, however, does not affect authorship or genuineness of the Epistle, but only its format. The similarity with the form of 1 Corinthians does not necessarily prove the theory, although it is plausible. 1 Thessalonians does not directly mention a letter as 1 Corinthians does, and perhaps Timothy simply brought a memorandum to which he referred when he made his report to Paul. A. Plummer found no clear indication that the Thessalonians had written to the apostle before Timothy was sent back to Corinth, or that they had transmitted a letter to Paul through him (p. xviii).

IV. Evaluation–1 Thessalonians is an excellent example of apostolic teaching during the first generation of the Christian Church, less than twenty-five years after the beginning of Jesus' ministry. It not only affirms that Jesus' death and resurrection constitute the core of the gospel, but it also indicates that the eschatological expectation of His return was the hope of the Church. In the light of this expectation the new ethic of Christianity was formulated; idolatry, sexual promiscuity, idleness, and the hopelessness of death were abandoned. The hope of Christ's return was a powerful incentive to holiness. The eschatological teaching is important because it is the one explicit source in the NT, in conjunction with 1 Cor. 15, that deals with the translation of the living believers at the return of Christ, and because it marks the beginning of a new dynamic and philosophy in the Hellenistic world.

M. C. TENNEY

THESSALONIANS thes-ə-lō'nē-ənz, **SECOND EPISTLE TO THE.**

I. Relation Between 1 and 2 Thessalonians
II. Content
  A. Outline
  B. Doctrinal Teaching
III. Authenticity
  A. External Attestation
  B. Internal Attestation
  C. Time and Place
  D. Critical Theories
IV. Evaluation

I. Relation Between 1 and 2 Thessalonians.–The interval between the writing of 1 and 2 Thessalonians must have been rather short, for the Second Epistle does not presuppose any major changes in the inner constitution of the Thessalonian church nor in the conditions under which Paul was writing. Silas and Timothy were still with him, and since his companions were usually traveling constantly, both Epistles must have been written between missions.

The letter was apparently evoked by alarm on the part of the Thessalonian Christians, who had been informed that the day of the Lord had already arrived. They thought that the tribulation had begun, and that the Lord Himself would soon appear. The agitators who had confused them appealed for authority either to the utterances of inspired prophets within the church, or to some phrases from Paul's writings, or possibly to a forged epistle (2 Thess. 2:1f.). Some of the church members who expected the Lord's momentary return had stopped working and depended on others to supply them with the necessities of life (3:11f.). The church was uncertain of its position because of inexperience and needed reassurance in order to cope with the opposition of pagan culture and with the doubts aroused by erratic interpretation (2:15). Firm discipline was needed to keep the disobedient and lazy from disrupting the community life (3:13-15).

II. Content.–The Second Epistle, in giving the signs that should precede the day of the Lord, is more detailed than the First in its eschatological statements. Evidently the Thessalonians had not retained a clear concept of Paul's initial teaching (2:5), and consequently they were bewildered when confronted by a different doctrine. Paul encouraged them to adhere to the norm of faith embodied in the gospel (1:8), which he had imparted while present with them, or in the "traditions" (2:15; 3:6) incorporated into the Epistle(s) that he had written (3:14).

A. Outline.

I. Salutation (1:1f.)
II. Encouragement for the Church (1:3-12)
  A. Praise for Progress (1:3f.)
  B. Promise of the Lord's Return (1:5-10)
  C. Prayer for the Church (1:11f.)
III. Correction of Misunderstanding (2:1-17)
  A. Misapprehension of the Time of the Day of the Lord (2:1f.)
  B. The Sign of that Day (2:3-6)
  C. The Man of Sin (2:7-12)
  D. Paul's Confidence in the Church (2:13-17)
IV. Concluding Exhortations (3:1-18)

*B. Doctrinal Teaching.*The doctrinal background assumed in 1 Thessalonians appears also in the Second Epistle. God is the Father of humanity (1:1f.) and the righteous Judge (1:5). He is the God of grace and love (1:2; 2:16), who has chosen His people in Christ (2:13). Christ is the Lord (1:1, 8f., 12; 2:14, 16; 3:6, 12, 18), a title that carried the connotations of sovereignty and deity in the Hellenistic world. The emphasis of this letter is chiefly on the return of Christ, when the Church will be gathered to Him (2:1), as the First Epistle states more explicitly (1 Thess. 4:13-18), and when the wicked shall be judged (2 Thess. 1:6-9; 2:8).

Salvation is the work of the Holy Spirit, who sanctifies believers (2:13) so that they may be ready to participate in the glory of Christ.

The teaching concerning the "man of lawlessness" is the central doctrinal concept of 2 Thessalonians. It has been a standing puzzle to exegetes and commentators because the prophecy has never been completely fulfilled. The "man of lawlessness" has no exact counterpart in history, and Christ has not yet destroyed such a person "by his appearing and his coming" (2:8). The "mystery

of lawlessness" was already at work but was restrained by some unnamed power (2:7), so that it might burst forth at any time in uncontrollable fury.

The "man of lawlessness" is a human being who, possessed by diabolical power, arrogates to himself the prerogatives of deity and demands a place in the temple of God because he claims to be God. Perhaps Paul alluded to the persistent tendency of gentile rulers to impose heathen worship on the temple in Jerusalem. Antiochus Epiphanes of Syria had desecrated it in 168 B.C. by dedicating it to the worship of Zeus and by offering a sow upon the altar. Caius Caligula, the Roman emperor (A.D. 37-41), issued orders to have his statue erected in the temple, but the decree was never carried out because of his sudden death; the desire of dictators to be worshiped is generally still current. Accompanying the final apostasy will be a rise of organized evil, culminating in a blasphemous attempt to supplant the worship of God by the worship of a man who will be the final manifestation of Satanic power.

The force that delays the completion of the "mystery of lawlessness" has been variously interpreted as Roman imperial rule, which maintained law and order, or the Jewish nation, which served as a religious and ethical check on paganism, or the Holy Spirit, who strives against evil. Paul did not explain his allusion, probably because he assumed that his readers would understand its meaning in the light of previous teaching. The solution of the puzzle must await the fulfillment of the prophecy.

III. Authenticity.–*A. External Attestation.* The external evidence for the Second Epistle is stronger than that for the First. Polycarp quotes 2 Thess. 3:15 (*Polyc. Phil.* 11), and the Didache possibly alludes to 2 Thess. 3:11 in ch. 12 and to 2 Thess. 2:8-11 in ch. 16. Justin Martyr (*ca.* A.D. 150) in Dial. 110 referred unmistakably to the "man of apostasy" (2 Thess. 2:3-12). Irenaeus (180), when commenting on 2 Thess. 2:8f. (*Adv. haer.* iii.7.2), was the first to mention the Epistle by name and to ascribe it to Paul. Tertullian (200) quoted 2 Thess. 2:1-7 and attributed it to "the apostle" in *De res.* 24. Clement of Alexandria (200) also referred to the Epistle, and it was included in the canon of the Old Syriac and Old Latin versions as well as in the earlier canons of Marcion and the Muratorian Fragment.

B. Internal Attestation. Like the First Epistle, 2 Thessalonians professes to have been written by Paul (1:1; 3:17), whose associates were the same as in the First Epistle. The same general epistolary form is followed. There is a strong affinity in vocabulary between the two letters, and the phrases of the Second Epistle also agree with Paul's diction in his later writings. The attitude of the Epistle accords with Paul's feeling for the church. He gives thanks for the Thessalonians' faith (1:3); he is pleased with their progress (1:4); he desires their sanctification (2:13); he reemphasizes the need of industry among the church members (3:11f.); and he discusses eschatological problems in greater detail. There is no valid reason for denying the Pauline authorship on internal grounds.

C. Time and Place. 2 Thessalonians was written a few weeks, or at most a few months, after the First Epistle. Probably Paul sent it from Corinth after hearing of the Thessalonians' confusion concerning the time of the Lord's coming. Paul's allusion to "wicked and evil men" (3:2) seems to fit the conditions at Corinth, where the divisiveness and corruption of the church created unusual difficulties for him. His reference to working while in Thessalonica (3:8) would apply equally well to Corinth, where he labored as a tentmaker with Aquila and Priscilla (Acts 18:3; 1 Cor. 9:12-15).

D. Critical Theories. The genuineness of 2 Thessalonians has been disputed much more than that of the First Epistle. A difference in style has been alleged: 1 Thessalonians is informal and friendly; 2 Thessalonians is formal and reserved. The First Epistle encourages and persuades; the Second Epistle commands. Such a difference, if it is real, can be explained by the change in conditions. The first letter was written to a church that had recently been founded, and the questions that it raised grew out of its own immaturity. The Second Epistle was addressed to the church in danger of delusion by false teachers, and a somewhat sterner tone can be expected. The difference is not great enough to warrant the hypothesis of different authorship.

A more serious objection is that of an apparent contradiction in eschatological teaching between the two Epistles. In 1 Thessalonians the return of the Lord is an imminent hope, coming "like a thief in the night" (1 Thess. 5:1f.). In 2 Thessalonians the "day of Christ" will be heralded by an apostasy and by the appearance of the "man of lawlessness," whose rule will be preceded by a gradual falling away from godliness, and by the development of the "mystery of lawlessness," which will be consummated when this person assumes divine honors and demands worship in the temple of God (2:3-10). Some earlier critics claimed that the "man of lawlessness" was an allusion to the Nero *redivivus* myth, in which Nero would return after his reputed death to become the antichrist and rule the Roman world. If this were true, the Pauline authorship would be impossible, for Paul's death preceded that of Nero. Others, like Bousset (*Antichrist Legend* [Eng. tr. 1896]), have found the roots of this teaching in Jewish apocalyptic. But it is more likely that Paul was referring to the prophecies of Daniel and the teaching of Jesus (Mk. 13:14; cf. 1 Thess. 5:2; Lk. 12:39), for he had instructed the Thessalonians in these subjects while he was with them (2 Thess. 2:5). The concepts of 1 and 2 Thessalonians are not incompatible, for Paul's explanations in 2 Thess. 2 fit with his assertion in 1 Thess. 5:1f. that those he addressed were well informed about the signs of the Lord's appearing.

A difference in the two Epistles' destination has been predicated: 1 Thessalonians was directed to Gentiles, while 2 Thessalonians was intended for Jews. According to this argument, in the First Epistle Paul reassured his readers that they were beloved and elected by God (1:4), as if they had doubted their right to His favor; moreover, he said that they "turned to God from idols, to serve a living and true God" (1:9), which could not be said of Jewish Christians. In the Second, on the other hand, he seems to have been dealing with Jewish apocalyptic. But the reference to Gentiles in 1 Thess. 4:5 does not contrast the readers with Gentiles in general, but with those "who do not know God." Nor does the Second Epistle allude to the OT more than the First, for neither quotes it directly. The objection of an exclusively Jewish destination for the Second Epistle is not valid, for the Greek OT was widely circulated in the Roman world and was used in the preaching of the early Church. Since Paul had instructed the Thessalonians about the Lord's return, there is no reason why Gentiles would not have been as interested in the subject as Jews were. Furthermore, the Thessalonian church had a Jewish minority that would have been schooled in the prophecies of the OT.

Various critical theories have been proffered to account for the problems raised by the foregoing objections. Pseudonymous authorship of 2 Thessalonians can be rejected, for the Epistle's affinity with the other Pauline writings is close enough to establish its genuiness. The argument that its agreement with Pauline style indicates deliberate forgery is totally inadequate. As Hendriksen astutely observed,

"It is not immediately clear why Paul cannot have been the author of an epistle that contains Pauline passages" (p. 19).

A. Harnack and K. Lake suggested that 2 Thessalonians was written for a Jewish community in Thessalonica, while the First Epistle was written to the gentile church. Undoubtedly the church contained both Jewish and gentile elements, as observed above, but there is no indication that Thessalonica had two churches. The difference in emphasis between the two letters is not due to racial or religious antecedents, but to the new problems that had arisen in the interval between them. Paul regarded the Church as one body in which there was neither Jew nor Gentile, bond nor free (Gal. 3:28). It is extremely improbable that he would have perpetuated a division by writing separate letters to two groups in the same city.

Dibelius suggested that the Second Epistle was written for public reading, whereas the First Epistle was designed for a private group. But both Epistles were expressly intended for "all" the church (1 Thess. 5:27; 2 Thess. 3:16), and thus no such line can be drawn between them.

A number of scholars, beginning with Grotius in the 17th cent. have contended that 1 Thessalonians is really the second in order of writing (for full discussions, see J. C. West, *JTS*, 15 [1913-14], 66-74; E. Thompson, *Expos.T.*, 56 [1944-45], 306f.). Their reasons may be sumarized as follows:

(1) The present order of these epistles is based upon their length, not on priority of time; thus the longer 1 Thessalonians is placed first.

(2) The eschatology of 2 Thessalonians is more crude and Judaistic than that of 1 Thessalonians. The allusion to the day of the Lord in 1 Thessalonians seems more pertinent if it follows rather than precedes the discussion of 2 Thessalonians.

(3) 2 Thessalonians deals with the eschatological questions as if they were new, whereas 1 Thessalonians treats them as a familiar subject.

(4) 1 Thessalonians 5:1, "But as to the times and the seasons, brethen, you have no need to have anything written to you," is more appropriate if it presupposes the teaching of 2 Thess. 2.

(5) If Timothy had taken a letter on his journey from Athens to Thessalonica, 2 Thessalonians would have been a suitable communication.

These objections are subjective rather than objective and are not convincing. The traditional order of the Epistle is sustained by all existing canons of the text, even those that alter the sequence of other books. 2 Thessalonians presupposes previous correspondence (2:2, 15; 3:17); even if spurious epistles of Paul had been circulated, some other genuine writings must have existed to provide a plausible basis for acceptance of a forged epistle. One cannot imitate writings that have never been published.

The eschatological teaching in 2 Thessalonians concerning "the mystery of lawlessness" differs from that in 1 Thessalonians only in its greater detail. Paul merely enlarged upon one aspect of the total scheme that he had explained while present in Thessalonica but that the converts had not perfectly comprehended. Paul's stress on his own final signature (2 Thess. 3:17) does not necessarily imply that it was appended to the first letter sent to a given destination. By analogy with Gal. 6:11 and 1 Cor. 16:21, Paul may have employed this device to underscore his authority when engaged in controversy, whether with Galatian legalists or with Corinthian disbelievers of the Resurrection. Finally, there is no positive reason for thinking that Timothy took a letter from Athens to Thessalonica. Not only is the assumption gratuitous, but Timothy is mentioned in 2 Thessalonians (1:1) as coauthor, not as the messenger.

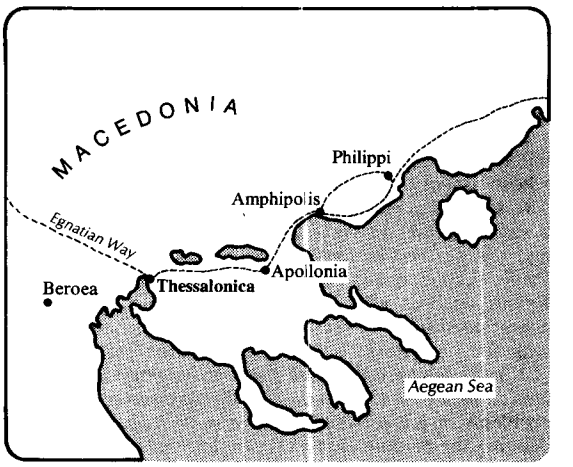
IV. Evaluation.–2 Thessalonians, like 1 Thessalonians, contributes eschatological teaching not found elsewhere in the NT. The concept of the "man of lawlessness" seems to parallel "the desolating sacrilege" of Jesus' Olivet discourse (Mt. 24:15) and the "beast" of Rev. 13. The Epistle predicts a general apostasy, accompanied by a resurgence of demonic power that will consummate the development of evil. No timetable is set for this climax. It was evidently not immediate, since apostasy would require the lapse of time; yet it was possibly imminent, since "the mystery of lawlessness is already at work" (2 Thess. 2:7). In this tension between Satan and Christ the Church must adhere to its faith and wait patiently for the Lord's return.

Bibliography.–*See* THESSALONIANS, FIRST EPISTLE TO THE.

M. C. TENNEY

THESSALONICA theś-ə-lō-nī'kə [Gk. *Thessalonikē*]; **THESSALONIAN** thes-ə-lō'nē-ən [Gk. *Thessalonikeus*). A principal city of ancient Macedonia. Today it is the second largest city in Greece.

I. Geographical Position.–Thessalonica is located on the western side of the Chalcidic peninsula on the Gulf of Salonika, which is on the northwest corner of the Aegean Sea. This gulf was known earlier as the Thermaic Gulf. The Egnatian Way, which linked the leading cities of Macedonia, passed through Thessalonica and continues to be the main thoroughfare of the modern city. The city is built on a productive alluvial plain that was deposited by the Vardar and Vistritza rivers Behind it are mountains, with Mt. Chalcidice to the east and Mt. Olympus to the southwest. This ideal location on the Egnatian Way and the possession of a fine harbor made Thessalonica a commercial and military center. It was, in fact, the chief seaport of Macedonia and is still one of the principal seaports of southeast Europe.



II. In the NT.–It was a three-day journey for Paul and his companions — Silas and Timothy — along the Egnatian Way from Philippi to Thessalonica. Amphipolis and Apollonia, which are mentioned in Acts 17:1, may have been places where they stopped for the night. Finding a synagogue in Thessalonica, Paul preached in it on three sabbaths; he testified that Jesus was the Messiah and supported his assertion with the OT Scriptures. Some Jews as well as many gentile God-fearers and prominent women believed

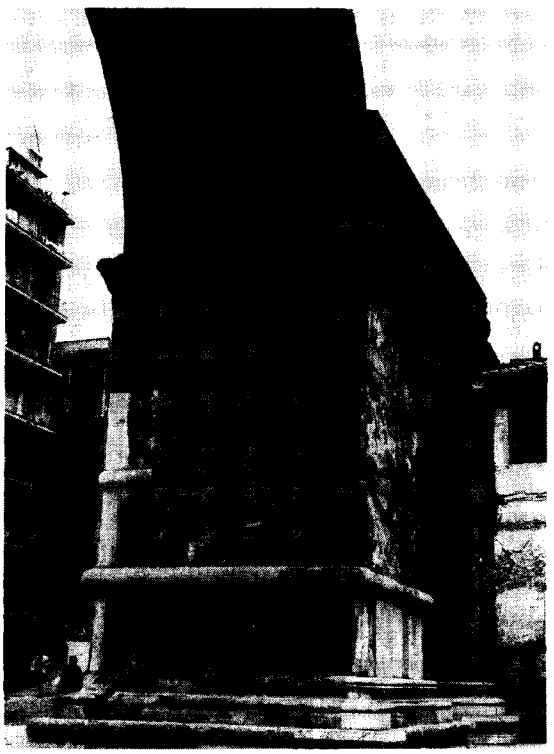
his message, but his success provoked the hostility of the Jews, who then started a riot. When they were unable to find Paul, they brought some of the believers before the local authorities and charged them with disloyalty to Caesar. The believers became fearful for Paul's safety and sent him and Silas to Beroea, where Timothy joined them later (vv. 2-10, 14f.).

The account in Acts 17 suggests that Paul stayed in Thessalonica a little more than three weeks. Nevertheless, the fact that on two occasions the church at Philippi sent material assistance to him in Thessalonica (Phil. 4:16), in addition to his own statement to the Thessalonians that he had worked night and day to support himself while in their midst (1 Thess 2:9; 2 Thess. 3:8), suggests a much longer stay. The guarantee that was demanded from Jason and Paul's other friends probably prevented Paul from returning to the city (Acts 17:9). An extended ministry apart from the synagogue seems to be implied in his assertion that the Thessalonian Christians had turned to God from idols (1 Thess. 1:9). (For a defense of a ministry of only three weeks, see L. Morris, *First and Second Epistles to the Thessalonians* [*NICNT*, 1959], pp. 16-18.)

Paul wrote two letters to the converts in Thessalonica, the first to express his joy when he heard from Timothy that they were remaining steadfast. The hasty departure that he had been forced to make from Thessalonica had aroused his concern for their spiritual welfare. He sent the second letter to correct concepts and conduct within the church. (*See* THESSALONIANS, FIRST EPISTLE TO THE; THESSALONIANS, SECOND EPISTLE TO THE.)

Two men from the church at Thessalonica, Aristarchus and Secundus, accompanied Paul as he journeyed to Jerusalem with the offerings from Macedonia and Achaia (Acts 20:4). Aristarchus also accompanied Paul to Rome (27:2), and stayed by Paul in the apostle's imprisonment (Col. 4:10; Philem. 24).

The Arch of Galerius over the Egnatian Way celebrating the Roman victory over the Persians (B. K. Condit)



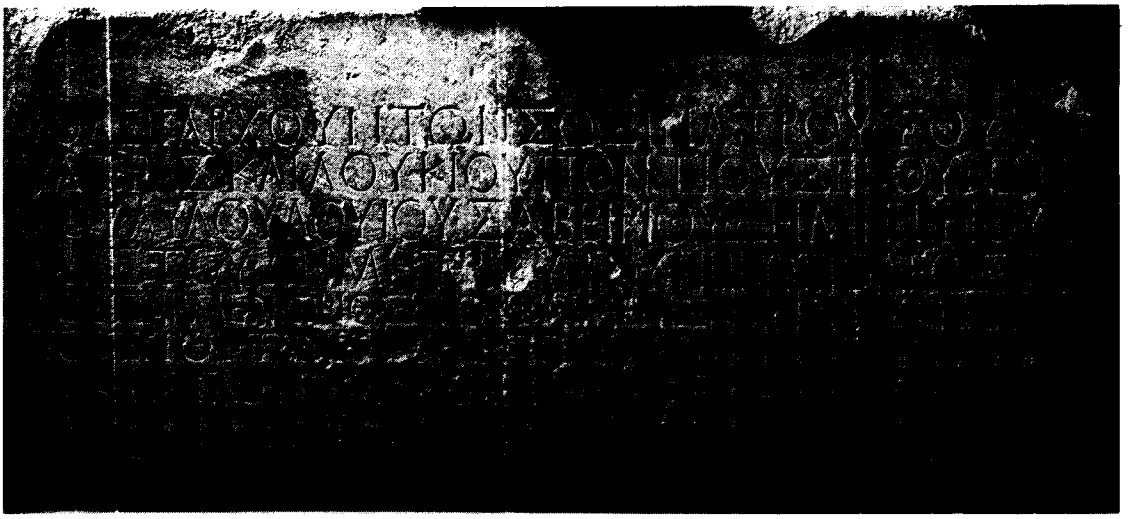
Some Jews from Thessalonica followed Paul to Beroea when they heard that he was preaching there. They stirred up so much trouble that Paul had to leave that city as well (Acts 17:13f.). In 2 Tim. 4:10 Thessalonica is named as the place to which Demas had gone after forsaking Paul.

III. History.–Thessalonica was founded in 315 B.C. by Cassander, a general of Alexander the Great. He named the city for his wife Thessalonica, who was the daughter of Philip of Macedon and the sister of Alexander. Strabo (*Geog.* vii.7.4, vii fragment 24) stated that Thessalonica was built on the site of the older Therma, which received its name from the hot springs in the vicinity. Both Thessalonica and Therma, however, were mentioned by Pliny (*Nat.hist.* iv.36) as existing at the same time.

The favorable location of the city undoubtedly contributed to its rapid growth in population, wealth, and importance. Livy (xliv.10) indicated that the Macedonian navy was stationed there during the war between Rome and Persia. In 168 B.C. Macedonia was divided into four districts by the Romans, and Thessalonica was designated the capital of the second district (Livy xlv.29). It became the capital of all Macedonia in 146 B.C. when this entire territory was made a single Roman province. Anthony and Octavia rewarded the city for supporting them in the Battle of Philippi by making it a free city in 42 B.C. (Pliny *Nat.hist.* iv.36). During Augustus's reign Thessalonica, according to Strabo (vii.7.4, vii. fragment 24), was the most populous town in Macedonia and the metropolis of the province; Lucian (*Asinus* 46), 2nd cent. A.D., called it the greatest city of Macedonia. Located strategically on the main road of communication between Rome and the east, Thessalonica had passed the height of its glory when Constantine moved the seat of the empire to Constantinople.

For centuries the city was famed as "the Orthodox city" because it was a bulwark guarding Christianity and civilization against the attacks of the barbarians and had an important part in the barbarians' conversion to Christianity. Thessalonica became the capital of the first of two divisions into which Macedonia was divided by Diocletian (A.D. 284-305). Emperor Galerius established his palace in Thessalonica in 305. In 390 Emperor Theodosius ordered the massacre of seven thousand citizens for insurrection. For several centuries the city successfully warded off the attacks of various enemies, but in 904 it was captured by the Saracens, who killed or took as prisoners a large number of the inhabitants and burned much of the city. Another massacre occurred when the city was taken by the Normans in 1185. In 1204 Thessalonica became the center of a Latin kingdom under Boniface of Monferrat. It then alternated between Latin and Greek rule until 1430, when Sultan Amurath II captured it. Thessalonica remained in the possession of the Turks until the Greeks regained it in the Balkan War of 1912. Its strategic military importance is seen in that it was the base of Allied operations in the Near East during World War I, and in that the Germans' capture of the city in World War II was an important victory in their conquest of Greece. A disastrous fire on Aug. 17, 1917, destroyed much of the city, including the famous Church of St. Demetrius.

IV. Archeology.–Extant are parts of the Roman-period city wall and two of the three original spans of the arch of Galerius, which was erected in honor of the emperor Galerius across the Egnatian Way where it enters the city from the east. It is made of brick and partially covered marble in which are carved scenes of Galerius's victories



The inscription from the Vardar Gate that lists six of the city officials or *politárchēs*, the term Luke also used in Acts (A D. 143) (courtesy of the Trustees of the British Museum)

over the Persians. The Vardar Gate, another arch, was built of massive stone and spanned the Egnatian Way where it enters the city from the west. This gate was torn down in 1876 to provide material for the repair of the city walls. An important inscription from it, which is now in the British Museum, contains the word Gk. *politárchēs*, the same term that Luke used to designate the officials (RSV "city authorities") before whom Jason was brought by the mob (Acts 17:6). Since this word has not been found in Greek literature, its discovery on the Vardar Gate is an important evidence of Luke's accuracy as a historian. Finegan (*LAP*, p. 352) gave the probable dates for the inscription as 30 B.C.-A.D. 143 and stated that several other inscriptions from Thessalonica in the time of Augustus also contain this term.

A number of churches from Byzantine times have been preserved in Thessalonica, making the city important for the study of early Christian art and architecture. They also offer silent testimony to the church begun by Paul's ministry there.

Bibliography –H. J. Cadbury, *Book of Acts in History* (1955); P. E. Davies, *BA*, 26 (1963), 91-106; Pauly-Wissowa, VI/1, 143-163.

D. H. MADVIG

THEUDAS thōō'dəs [Gk. *Theudas*]. The leader of an unsuccessful rebellion in the area of Judea during the 1st cent. A.D. The only reference to the name in Scripture appears in Acts 5:36, where Gamaliel, in his testimony before the Sanhedrin, indicates that the rebellion associated with Theudas occurred before the uprising led by Judas the Galilean, who "arose in the days of the census" (presumably a reference to the taxation associated with the governor Quirinius, *ca.* A.D. 6; cf. Lk. 2:1f.). A more probable date, however, was provided by Josephus (*Ant.* XX.5.1 [97-99]), who assigned the movement to the rule of the procurator Cuspius Fadus (A.D. 44-46) several years after the death of Gamaliel himself.

Josephus described Theudas as a self-proclaimed prophet who deluded "the majority of the masses" (four hundred men according to Acts) with his promise to divide the Jordan River upon command so that the people could cross with ease, thus repeating the miracle performed by Joshua. The attack of a Roman cavalry regiment soon brought an end to the uprising, however, and many in the movement were either slain or captured. Theudas himself was decapitated.

Some scholars (e.g., F. F. Bruce, *Comm. on the Book of Acts* [*NICNT*, 1954], pp. 124f., n. 47) have suggested that the accounts provided in Acts and Josephus refer to different individuals. But modern attempts to associate the Theudas of Acts with other historical rebels in Palestine, such as Simon (Herod the Great's former slave), Theudion (Herod the Great's brother-in-law), or Matthias (the son of Margaloth, a radical teacher of the law), have proven unconvincing. The name was relatively uncommon, and the significance attributed to the rebellion by the text of Acts certainly characterizes the movement as worthy of reference by Josephus. The disparity between the accounts of Acts and Josephus, with respect to both details and dating, would suggest instead some problem associated with the sources used by the authors.

THICK TREES (Lev. 23:40; Neh. 8:15, AV), *See* LEAF.

THICKET thik'-ət [Heb. *s^{e}baḵ* (Gen. 22:13; Isa. 9:18 [MT 17]; 10:34), *s^{e}bōḵ* (Jer. 4:7), *ya'ar* (Isa. 21:13), *'āḇ* (Jer. 4:29)]; AV also FOREST (Isa. 21:13); NEB also HEART (Isa. 10:34), SCRUB (21:13), LAIR (Jer. 4:7). A dense growth of vegetation, especially trees (*see* FOREST). The dense growth that held the ram in Gen. 22:13, the *ya'ar ba'raḇ* ("thickets [AV "forest"] in Arabia") in Isa. 21:13, and the thickets in the other references are among the plants unidentified by *MPB*.

THIEF. *See* STEAL.

THIGH [Heb. *yārēk*] (Gen. 24:2, 9; 32:25, 31f.; etc.); NEB also HIP, "miscarriage" (Nu. 5:21f., 27); [*šôq*] (Ex. 29:22, 27; Lev. 7:32-35; etc.); AV SHOULDER; NEB LEG; [*paḥaḏ*] (Job 40:17); AV STONE; NEB FLANK; [*y^{e}sôḏ*] (Hab. 3:13); AV, NEB, FOUNDATION(S); [Aram. *yar^{e}ḵâ*] (Dnl. 2:32); [Gk. *mērós*] (Jth. 9:2; Sir. 19:12; Rev. 19:16). That portion of the leg that extends from the hip to the knee. It was the place where men wore weapons that were suspended from the waist (Jgs. 3:16, 21; etc.). The thigh of a rider on horseback would probably be covered by a loose girdle on which his name might be embroidered

(Rev. 19:16). The "hollow of the thigh" (Gen. 32:25, 32 [MT 26, 33]) is the socket of the hip. A woman's well-formed thighs were deemed worthy of praise and admiration (Cant. 7:1 [MT 2]).

Among the Hebrews the thighs were associated with human vitality, perhaps because of their proximity to the reproductive organs. Thus children were regarded as offspring of the father's thigh (*yōṣe'ê yerēḵô*, Gen. 46:26; Ex. 1:5; etc.). The mother's thighs were also associated with procreation, as is evident in the so-called jealousy ordeal (Nu. 5:11-31). A woman who was guilty of marital infidelity and was subjected to the ordeal could expect her thigh to "fall away" (v. 22). Precisely what was meant by this expression is uncertain, but it may have implied a miscarriage.

Because of the association of the thighs with procreation, an oath taken with the hand under the thigh (Gen. 24:2, 9; 47:29), i.e., in contact with the genitals, was sworn by the life-power of the individual who requested the procedure. On the two occasions in Genesis where this was done, it is perhaps significant that the oath was exacted by persons approaching death. *See* GESTURE I.

The choice nature of meat from the thighs of sacrificial animals (cf. 1 S. 9:24; Ezk. 24:4) made it an important element in Israelite rituals, e.g., in the ordination offering of Aaron and his sons (Ex. 29:22; Lev. 8:25-27). The Israelites were forbidden to eat that portion of the hip adjacent to the hollow of the thigh (Gen. 32:32) out of respect for Jacob's divine encounter at Peniel, where he received the new name Israel (*see* DISEASE III.F; SINEW).

The thigh was also associated emotionally with pain and grief (Isa. 21:3; Nah. 2:10 [MT 11]), and thus to strike oneself on the thigh was to indicate contrition (Jer. 31:19) or terror (Ezk. 21:12). (*See also* GESTURE II.D.)

R. K. H.

THIMNATHAH thim'nə-thə (Josh. 19:43, AV). An AV misunderstanding of the name Timnah with *h* locale, meaning "toward Timnah." *See* TIMNAH 1.

THINK [Heb. *'āmar*–'say' (Gen. 20:11; Jgs. 15:2; Ruth 4:4; etc.), *ḥāšaḇ*–'reckon, account' (Gen. 38:15; 1 S. 18:25; Job 6:26; etc.), *zāḵar*–'remember' (Job 4:7; 21:6; 41:8 [MT 40:32]; Ps. 63:6 [MT 7]; 77:3 [MT 4]; 119:52; Lam. 1:9; 3:20 [hiphil]), piel of *dāmâ*–'imagine, intend' (Nu. 33:56; Est. 4:13; Ps. 48:9 [MT 10]; 50:21), *rā'â*–'see' (Gen. 20:10; 1 S. 20:3; 2 S. 18:27), piel of *dāḇar*–'menace' (Ex. 32:14), hiphil of *hûn*–'regard as easy' (Dt. 1:41), hithpael of *'āšaṯ* (Jonah 1:6), piel of *pālal*–'decide for an opinion' (Gen. 48:11), piel of *šāḇaḥ*–'congratulate' (Eccl. 4:2), pass. part. of *šûḇ*–'turn back, return' (Mic. 2:8), *tāmam*–'be complete, finished' (Ps. 64:6 [MT 7]); Aram. *seḇar*–'intend' (Dnl. 7:25); Gk. *dokéō* (Mt. 22:17, 42; Jn. 5:37; 1 Cor. 3:18; etc.), *nomízō* (Mt. 5:17; 10:34; 20:10; Acts 8:20; 17:29; 1 Cor. 7:26, 36), *logízomai* (Rom. 14:14; 2 Cor. 11:5; 12:6; Phil. 4:8), *dialogízomai*–'consider, ponder, reason' (Lk. 12:17), *hēgéomai* (Acts 26:2; 2 Cor. 9:5; Phil. 2:25; 2 Pet. 1:3), *phronéō* (Rom. 12:3; 1 Cor. 13:11), *noéō*–'consider,' 'imagine' (Eph. 3:20; 2 Tim. 2:7), *hyperphronéō*–'think too highly of oneself' (Rom. 12:3), *axióō*–'consider suitable, fitting' ("thought best," Acts 15:38), *enthyméomai* (Mt. 9:4), *krínō*–'judge' (Acts 26:8), *mnēmoneúō*–'remember, mention' (He. 11:15), *oíomai* (Phil. 1:17), *peíthō*–'persuade' (Acts 26:28), *pronoéō* (Rom. 12:17)]; AV also SAY, REMEMBER, SEE, PRAISE (Eccl. 4:2), "averse from" (Mic. 2:8), etc.; NEB also SAY, COUNT, CONSIDER, etc.; **THINKING** [(nouns) Gk. *dialogismós* (Rom. 1:21), *phrḗn* (1 Cor. 14:20)]; AV IMAGINATION, UNDERSTANDING; **THOUGHT(S)** [Heb. *maḥᵃšāḇâ* (Gen. 6:5; Job 21:27; Ps. 33:11; etc.), *dāḇār*–'word' (Dt. 15:9; Ezk. 38:10), *higgāyôn*–'whispering' (Lam. 3:62), *ḥešbôn*–'account, device' (Eccl. 9:10), *maddā'*–'knowledge' (Eccl. 10:20), *mᵉzimmâ*–'evil thoughts' (Ps. 10:4), *'aštûṯ* (Job 12:5), *rû(a)ḥ*–'breath, wind, spirit' (Prov. 1:23), *rē(a)'*–'will, intention' (Ps. 139:2, 17), *śē(a)ḥ* (Am. 4:13), *śᵉ'ippîm*–'disquieting thoughts' (Job 4:13; 20:2), *śar'appîm*–'disquieting thoughts' (Ps. 139:23); Aram. *ra'yôn* (Dnl. 2:29f.; 4:19 [MT 16]; 5:6, 10; 7:28); Gk. *dialogismós*–'opinion, reasoning' (Mt. 15:19 par.; Lk. 2:35; 6:8; 9:47; 1 Cor. 3:20; Jas. 2:4), *logismós*–'calculation, reasoning' (Rom. 2:15), *enthýmēsis* (Mt. 9:4; 12:25; He. 4:12), *nóēma* (2 Cor. 10:5; 11:3), *dianóēma* (Lk. 11:17), *énnoia* (1 Pet. 4:1)]; AV also THING, DEVICE, SPIRIT (Prov. 1:23), COGITATION (Dnl. 7:28); NEB also MURMUR (Lam. 3:62), SCHEME, COUNSEL (Prov. 1:23), PURPOSE, etc.

The word "think" in Gen. 26:7; Ps. 59:7; Isa. 36:5; and Jer. 22:15 translates no specific Hebrew terms but derives from the respective contexts. "Thoughtless" in Nu. 30:6, 8 also has no Hebrew equivalent. Often the phrase Heb. *beᵉênê* (lit. "in the eyes of") refers to a person's faculties of cognitive or spiritual understanding (e.g., Nu. 36:6; 2 S. 3:19; 4:10; 10:3; 1 Ch. 19:3; Jer. 40:4f.; cf. *'ayin* in Gen. 45:20). "Thought" in Isa. 57:11 and 1 Tim. 3:7 paraphrases the original texts, and in 1 Cor. 2:11 the RSV twice translates Gk. *tá* (lit. "things"; so AV) by "thoughts."

In the RSV OT over one-half of the occurrences of the verb "think" translate the common Hebrew verb *'āmar*. In most occurrences, the context clearly indicates that inaudible speech (i.e., "saying to oneself") rather than audible conversation is in view, although where the AV retains the translation "say" there is often no reason why both could not be involved (e.g., 2 K. 18:20; Ps. 59:7; Isa. 36:5). The other common verb for "think" is Heb. *ḥāšaḇ*, which refers to the mental process of creative reflection and the generation of new ideas, i.e., it can be a somewhat less static concept than Heb. *bîn* (*see* UNDERSTANDING). When the psalmist, e.g., marvels that God should "think" of man (Ps. 144:3) he refers to the active care and concern that God displays for him. More negatively, when Jeremiah berates the false prophets "who think to make my people forget my name" (Jer. 23:27), he refers to the plan or scheme that they have begun to implement.

Other Hebrew terms for "think" in the RSV OT occur infrequently. *Zāḵar* is the common verb generally translated "remember," which often refers to the "active intellectual engagement of a person with himself" (*TDOT*, IV, 66f.). Heb. *rā'â* (lit. "see") in certain contexts refers to an inward perception, which justifies the translation "think" without excluding the more literal rendition (2 S. 18:27). Similarly *dāḇar*, "speak," one of the most common words in the entire OT, may, like *'āmar*, also occasionally refer to inward speech. In Gen. 48:11 the RSV has "thought" for the piel of *pālal*, where Jacob declares, "I had not thought to see your face." Usually in the hithpael, the verb means "pray," but its derivatives can mean "estimate" or "expect," which fits well here.

When the writer of Ecclesiastes "thought . . . of the dead" (Eccl. 4:2), he was probably "praising" or "commending" them (Heb. *šāḇaḥ*). In Jonah 1:6 the captain of the ship requested Jonah to pray to his God that He "might give [them] a thought" (hithpael of *'āšaṯ*), i.e., care or concern. In Mic. 2:8 "those . . . with no thought of war" literally reads, "those turning back" or "returning" from war, but the metaphorical interpretation of the RSV is equally plausible.

In the RSV NT the usual verb for "think" is Gk. *dokéō*. It refers frequently to the thought directed at that which is

illusory or deceptive (e.g., Mt. 6:7; 1 Cor. 12:23; Gal. 6:3), and often in contexts in which the standards and suppositions of this world contrast with those of God's people and kingdom. In the Gospels Jesus frequently employs the rhetorical, impersonal interrogative Gk. *tí dokeí* ("What do you think?"), especially as an introductory formula to short parables and metaphors (e.g., Mt. 18:12; 21:28), to arouse attention. Another common verb is *nomízō*, which is often used of faulty assumptions, as when Jesus debated with the Pharisees over the Law (Mt. 5:17; cf. 20:10; Acts 8:20; etc.) The only other term to occur with any frequency is *logízomai* and its compound, *dialogízomai*. The former means primarily "reckon" or "credit" and is a standard Pauline term for the imputation of God's righteousness to human beings. In a few contexts, however, it has the less technical sense of "estimate" (2 Cor. 11:5; 12:6) or "consider" (Rom. 14:14), and even the somewhat unusual idea of "reflect" (e.g., "think about these things," Phil. 4:8). Gk. *dialogízomai* can mean "reason" or "debate," often with oneself, and frequently in contemplating evil (Lk. 12:17).

Other terms for "think" include Gk. *enthyméomai*, which usually carries a negative connotation of evil or foolish thought (Mt. 9:4), *hēgéomai*, which can mean "regard" or "consider" (Acts 26:2; 2 Pet. 1:13), and *peíthō*, normally translated "persuade," e.g., in Agrippa's famous reply to Paul, "In a short time you think to make me a Christian" (Acts 26:28). *Phronéō*, a predominantly Pauline term, sometimes refers more to the manner or content rather than the process of thought (1 Cor. 13:11); its compound *hyperphronéō* appears pejoratively in Rom. 12:3 for inflated self-assessment. In Eph. 3:20 Gk. *noéō* refers more to the activity of the mind (*see* UNDERSTAND) and when compounded (*pronoéō*) means "think of beforehand," though often without emphasis on the temporal prefix, except in the secondary sense of making preparation for something (e.g., "take thought for what is noble," Rom. 12:7). In Acts 15:38 *axióō*, "thought best," is literally "deemed worthy" or "fitting." *Krínō* in Acts 26:8 is literally "judge" in its neutral sense of "evaluate."

In the RSV OT the most common substantive for "thought(s)" derives from the verb of the same root. Heb. *maḥᵃšāḇâ* (< *ḥāšaḇ*, "think, account") occurs eighteen times, always in the plural (*see* PLOT).

Less commonly used terms include the plural *śᵉʿippîm* and its variant form *śarʿappîm*, which refer to "disquietings" or "excited thoughts," like those that haunted Job by night (Job 4:13). *Mᵉzimmâ*, from *zāmam* ("purpose," "plot"), usually refers to a person's evil plans or to God's judgment on the wicked. In Prov. 1:23 Heb. *rû(a)ḥ*, the common word for "spirit," a sense that fits well here, has the unusual translation "thought." *Higgāyôn* (< *hāgâ* "mutter") usually means "meditation," but this translation in Lam. 3:62 would attribute more piety to Jeremiah's evil assailants than is due. Aram. *raʿyôn* appears six times, all in Daniel, often in the context of alarming or troubling thoughts.

In the RSV NT most nouns for "thought" are cognates of Greek verbs treated above, with only a few additional nuances in meaning: *logismós* < *logízomai; dialogismós* < *dialogízomai*, virtually always of evil thoughts (e.g., Mt. 15:19), and frequently those known or revealed by Jesus and/or God (e.g., Lk. 6:8); *noēma* (2 Cor. 10:5; 11:3); *dianóēma* (Lk. 11:17, with the negative sense of "hostile thought"); and *énnoia* (1 Pet. 4:1), an attitude of mind or "guiding conviction," < *noéō; enthýmēsis*, that to which the word of God can pierce (He. 4:12) < *enthyméomai*; and *phrḗn*, thinking or understanding (1 Cor. 14:20) < *phronéō*.

G. L. KNAPP

THIRD [Heb. *šᵉlîšî*; Gk. *tritos*]. The use of the term in Isa. 19:24, "In that day Israel will be the third with Egypt and Assyria," does not mean that Israel will be third in rank after the two great powers of that day but that Israel will be equal with Egypt and Assyria. The rest of the passage indicates that Egypt and Assyria will have come to share the worship of Yahweh with Israel.

For other uses *see* NUMBER IV, V.C. For "third hour" *see* DAY II; HOUR. For "third month" *see* CALENDAR II.

THIRD DAY. Scholars have proposed several views to explain why "the third day" (Gk. *hē tritē hēméra*) became an important part of the early Christians' proclamation of Jesus' resurrection (Acts 10:40; 1 Cor. 15:4; cf. Lk. 24:46). Among these views are claims that it is related to: (1) three-day motifs found in some mystery religion myths; (2) a view that the human soul remained near the body for three days until it departed; (3) apocalyptic expectation that the general resurrection would occur three days after the end of the world (Hos. 6:2); or (4) an idea that evil would triumph for three days, followed by vindication. More likely is the proposal that the "third day" (Heb. *yôm šᵉlîšî*) was associated with the day of salvation and divine manifestation (cf. Gen. 22:4; 42:18; Ex. 19:16; Josh. 3:2; Hos. 6:2; Jonah 1:17 [MT 2:1]). Another interpretation focuses on the significance of Hos. 6:2, which speaks of the national revival of Israel on the third day.

"The third day" is a Semitic idiom referring to an unexpectedly short period of time (cf. Lk. 13:32f.). In His predictions of His passion, Jesus used this idiom to mean that He would be raised "in a short time" (Mt. 16:21; 17:23; 20:19; 27:64; Lk. 9:22; 18:33; 24:7, 21, 46). "On the third day" would then mean the same thing as the phrase "in a little while," used in Jn. 16:16-22. The fact that the "third day" prediction was literally fulfilled had such an impact on the disciples that it became a part of their proclamation of the Resurrection.

D. E. GARLAND

THIRST; THIRSTY [Heb. *ṣāmāʾ*, *ṣāmāʾ*, *ṣimʾâ* (Jer. 2:25), *ṣimmāʾôn* ("thirsty ground," Dt. 8:15; Isa. 35:7; Ps. 107:33), *ʿăyēp* (Prov. 25:25), *šōqēq*–'dried out' (Ps. 107:9), *lōʾ-śāḇᵉʿâ*–'no satiation' (Prov. 30:16); Gk. *dipsáō, dípsos* (2 Cor. 11:27)]; AV also ATHIRST, LONGING (Ps. 107:9), "not filled" (Prov. 30:16), DRY GROUND (Ps. 107:33), DROUGHT (Dt. 8:15); NEB also DRY (Prov. 25:25). In Job 5:5 the AV renders MT *ṣammîm* "the robber"; the RSV ("the thirsty") and NEB ("thirsting") follow Aq., Symm., Syr., and Vulg. in emending the MT to read *ṣᵉmēʾîm*. Literally, the physical sensation of dryness in the mouth and throat caused by lack of fluids, and the resultant craving for liquids.

These terms are used sixty-one times by the RSV. Almost all of the forty-four OT uses translate some form of Heb. *ṣm'*. In the NT the only Greek verb thus translated is *dipsáō*.

The climate of Palestine, especially away from the coastline and the hill country, can often be hot and dry. Occasional sirocco winds bring intense heat from the desert. Maintaining an adequate water supply for human

and animal consumption, as well as for agriculture, was in biblical times a perennial problem. Thirst was a frequent and occasionally life-threatening concern.

The Israelites lacked water on their trek across the wilderness and accused Moses of bringing them, their children, and their cattle out of Egypt "to kill us . . . with thirst" (Ex. 17:3). On at least two occasions God assuaged their thirst with water from a rock (Ex. 17:6; Nu. 20:2-13; Neh. 9:15, 20; 1 Cor. 10:41).

Thirst was one of the forms of judgment for disobedience prophesied by Moses (Dt. 28:48), Hosea (Hos. 2:3 [MT 1]), Isaiah (Isa. 5:13), and Ezekiel (Ezk. 19:13). Both Israel and Judah experienced thirst in their defeat and exile (cf. Lam. 4:4). The book of Isaiah promised the exiles, however, that the threat of thirst would be overcome as they made their new exodus from Babylon to their former homeland (Isa. 35:7; 41:17; 44:3; 48:21; 49:10).

Four OT passages on thirst are cited by the NT. All the Gospels quote Ps. 69:21 (MT 22): "They gave me poison for food, and for my thirst they gave me vinegar to drink" (Mt. 27:34, 48; Mk. 15:36; Lk. 23:36; Jn. 19:29); and John reports that just before receiving the vinegar Jesus said, "I thirst." Rom. 12:20 cites Prov. 25:21 as a counsel against vengeance: "If your enemy is hungry, give him bread to eat; if he is thirsty, give him water to drink." Jesus appeared to have two texts from Isaiah (49:10; 55:1) in mind when He proclaimed, "If any one thirst, let him come to me and drink" (Jn. 7:37). These texts also lie behind Revelation's promises that God's victorious, redeemed people will hunger and thirst no more (Rev. 7:16) and will drink freely from the fountain of the water of life (21:6; 22:17).

These Isaiah passages (esp. Isa. 55:1) illustrate the spiritual dimension of "thirst" in both Testaments. The psalmist expressed the thirst of his soul for God — a craving that only the experience of God could assuage (Ps. 42:2 [MT 3]; 63:1 [MT 2]; 143:6). In Jer. 2:25 "thirst" describes Judah's craving for foreign gods. Amos foresaw a time when Israel would experience a famine and a thirst for hearing the words of the Lord (Am. 8:11). But in Isa. 44:3 God promises that after the Exile He will pour out His Spirit on His people like water in a thirsty land.

As is evident in the NT passages cited above, Gk. *dipsáō* in the NT has both physical and spiritual connotations, sometimes in the same passage. In His conversation with the Samaritan woman Jesus contrasted the "living water" that He would give her, enabling her never to thirst again, with the water of Jacob's well (Jn. 4:10-14). The woman misunderstood, thinking He had promised her satisfaction from physical thirst and relief from the burden of drawing water (v. 15). But the Gospel of John makes it clear that Jesus is the source of the spiritual refreshment that is ultimately satisfying: one who believes in Him will never thirst, for Jesus is the fountain of the Spirit, and to receive Him is to drink "rivers of living water" (Jn. 6:35; 7:37f. [cf. RSV mg.]).

Matthew's Gospel depicts Jesus' true disciples as having such a strong yearning for righteousness that they hunger and thirst after it (Mt. 5:6; cf. 6:33). One of the proofs of the genuineness of their discipleship is that they give drink to the thirsty (25:35, 37, 42, 44). Those who have done this have served the Son of Man, for "as you did it to the least of these my brethren, you did it to me" (v. 40).

In his letters to the Corinthians Paul twice referred to being hungry and thirsty as part of the lot of an apostle (1 Cor. 4:11; 2 Cor. 11:27). Such sufferings were signs of the authenticity of his apostleship and of his Christianity, in contrast both to the unspirituality of the self-important Corinthians (1 Cor. 3:1; 4:8-10) and to the falseness of the "superlative" apostles (2 Cor. 11:5, 13, 22-29).

THISBE thiz'bē [Gk. B *Thisbē*, A *Thibē*] (Tob. 1:2). Tobit's home in northern Galilee, from which he was taken into captivity by the Assyrians. It is described as lying S of Kedesh in Naphtali (*see* KEDESH 3) and "above Asher" (LXX B *Asēr*), i.e., HAZOR (LXX *Asōr*; cf. NEB). The Vulg. does not mention the city, and the name occurs nowhere in the MT (cf. 2 K. 15:29).

J. Simons (*GTTOT*, §§ 1614f.) suggested that the name Thisbe in Tob. 1:2 was influenced by 1 K. 17:1, and that probably it was originally Heb. *mittôšᵉḇê* ("from the inhabitants of"; cf. RSV mg. "of the settlers," 1 K. 17:1 [RSV "of Tishbe" follows LXX *ek Thesbōn*]) plus a place name. No identification has been proposed for the site.

THOCANUS thok'ə-nəs (1 Esd. 9:14, NEB). *See* TIKVAH 2.

THOMAS [Gk. *Thōmás* < Aram. *tᵉ'ômā'*—'the twin']. One of Jesus' twelve disciples. In the Synoptic lists (Mk. 3:18 par.) Thomas is paired with Matthew; in Acts 1:13 he is paired with Philip. John three times refers to him as "Thomas, called Didymus" (Jn. 11:16; 20:24; 21:2), utilizing the Greek word for "twin." Later Syriac and gnostic traditions knew him as Judas Thomas; this development is reflected in the NT by two Syriac MSS that replace the reference to "Judas (not Iscariot)" in Jn. 14:22 with "Thomas" and "Judas Thomas." Many scholars therefore believe that Thomas was not a proper name but a title or nickname, although there is some evidence for the opposite view (see Bauer, rev., p. 367). If Thomas was a twin, no record of his sibling's identity has been preserved. Some apocryphal traditions present Thomas as Jesus' twin, but this claim finds no historical support and is motivated, at least in part, by heretical (esp. Gnostic) theology, which sets forth Thomas as another redeemer figure alongside Jesus.

The only NT information about Thomas's actions comes from the Fourth Gospel. John first introduces Thomas as addressing his fellow disciples, urging them to go with Jesus to Judea so that they might die with Him there (11:16). Thomas recognizes the threat that the Jewish authorities pose, but his reaction seems to reflect more pessimism than perception of what was happening at this stage of Jesus' ministry. His lack of insight reappears in 14:5, where he questions Jesus about how to know the way to the Father; Philip's follow-up question (14:8) proves, however, that Thomas is scarcely the only puzzled disciple. The main incident for which Thomas is remembered occurs after Jesus' resurrection. Having missed Jesus' first appearance to the ten (20:19-24), Thomas refuses to believe that Jesus is alive unless he sees "in [Jesus'] hands the print of the nails," and places his own "finger in the mark of the nails" and his "hand in [Jesus'] side" (20:25). Eight days later "doubting Thomas" has the opportunity to do precisely that (although John does not record whether Thomas actually touches Jesus), and Thomas responds with belief.

C. K. Barrett has described Thomas's reply, "My Lord and my God!" (20:28), as "the climax of the gospel," John's "final Christological pronouncement" (*Gospel Ac-*

cording to St. John [2nd ed. 1978], p. 573). Most Johannine scholars dismiss the account as largely unhistorical; but if its historicity is accepted, it is the earliest recorded example of anyone explicitly confessing Jesus as God (Gk. *ho theós*). In either event, its significance is debated. Is John underlining the importance of Jesus' bodily resurrection for Christian apologetic (L. Morris, *Gospel According to John* [*NICNT*, 1971], p. 854)? Or is he downplaying it, preferring the model of those "who have not seen and yet believe" (20:29) (B. Lindars, *Gospel of John* [*NCBC*, repr. 1982], p. 614)?

Thomas plays a prominent role in extracanonical literature, but few of these later traditions are at all reliable. Most plausible is the claim that Thomas traveled E to Parthia (between the Tigris and Indus rivers; see Eusebius *HE* iii.1.1) and possibly even to India. The Acts of Thomas (*see* APOCRYPHAL ACTS: THE "LEUCIAN" ACTS V) describes his ministry to the Indian King Gundaphorus (whose reign is attested in other historical sources) and his work in the trade of carpentry (in the Roman Catholic Church, Thomas is the patron saint of architects, masons, and stonecutters). For other traditions about Thomas, see H-S, II, 59f. Thomas appears also in the NT Apocrypha: he is the alleged author of the Infancy Gospel of Thomas (*see* APOCRYPHAL GOSPELS II.C), a coauthor of the Epistle of the Apostles (*see* APOCRYPHAL EPISTLES II.A), and the recipient of divine revelation in the Apocalypse of Thomas (see H-S, II, 798-803). Among the Gnostic documents of the Nag Hammadi library, his name is connected with the Coptic Gospel of Thomas (*see* APOCRYPHAL GOSPELS V.J.1) and the Book of Thomas the Contender (Athlete). These later writings, however, add no verifiable facts about the man whose name they borrow.

THOMAS, GOSPEL OF. *See* APOCRYPHAL GOSPELS V.J.1; II.C.

THOMI tom'ī (1 Esd. 5:32, NEB); **THOMOI** tom'oi (AV). *See* TEMAH.

THONG [Heb. *'aguddâ*] (Isa. 58:6); AV BURDEN; NEB KNOT; [*môsērâ*] (Jer. 27:2); AV BOND; NEB CORD; [Gk. *himás*] (Mk. 1:7 par.); AV LATCHET; NEB "unfasten"; **SANDAL-THONG** [Heb. *śerôk-na'al*] (Gen. 14:23; Isa. 5:27); AV SHOELATCHET; NEB also SHOE-STRING. A strip of leather used for tying. Heb. *'aguddâ* occurs only four times in the OT; its basic meaning is "bundle." In Isa. 58:6 it refers figuratively to the yoke-thongs binding prisoners. Heb. *môsērâ* usually denotes bonds or chains; in Jer. 27:2, like *'aguddâ*, it refers to yoke-thongs binding prisoners (cf. Sir. 33:26). In Acts 22:25 Gk. *himás* shows a similar use: Paul was bound with thongs in preparation for a lashing (cf. 4 Macc. 9:11). Elsewhere in the NT *himás* is used only by John the Baptist, who said he was unworthy to untie the sandal thongs of Jesus (Mk. 1:7 par. Lk. 3:16; Jn. 1:27). Heb. *śerôk-na'al* occurs only in Gen. 14:23, where it is used as an example of insignificant personal property, and in Isa. 5:27, where it is mentioned as one of the items a warrior checks in preparation for battle.

THORN [Heb. *'āṭāḏ, ḥēḏeq, ḥô(a)ḥ, na'aṣûṣ, sîr, sallôn, ṣēn, ṣᵉnînîm, qôṣ, qimmāsôn, šayiṯ, meśûḵâ* ("thorn hedge"); Gk. *ákantha, akánthinos* ("of thorns"), *skólops*]; AV also THISTLE (Job 31:40); NEB also BRIAR, THISTLE, "heap of brushwood" (Ex. 22:6), "brushwood" (Ps. 118:12), "barbed hooks" (Josh. 23:13), "panniers" (Job 5:5), THORN-BUSH (Ps. 58:9; Hos. 2:6), WEED (Prov. 15:19), "snares" (Prov. 22:5), CAMEL-THORN (Isa. 55:13), "renegades" (Ezk. 2:6); **THISTLE** [Heb. *dardar, ḥô(a)ḥ; Gk. tríbolos* (Mt. 7:16; He. 6:8)]; AV also BRAMBLE (Isa. 34:13), BRIER (Heb. 6:8); NEB also BRIAR (Isa. 34:13); **BRAMBLE** [Heb. *'āṭāḏ, ḥô(a)ḥ*; Gk. *bátos* ("bramble bush," Lk. 6:44)]; AV also THORN (Cant. 2:2); NEB also THORN-BUSH, THORN (Jgs. 9:14f.; Cant. 2:2); **BRIER** [Heb. *barqānîm, ḥēḏeq, sillôn, sirpād, šāmîr, sārābîm*]; NEB BRIAR, also THORN (Isa. 5:6; etc.), "rebels" (Ezk. 2:6), "rank weeds" (Mic. 7:4); **THORNBUSH** [Heb. *na'aṣûṣ*] (Isa. 7:19); AV THORN; NEB CAMEL-THORN. Much confusion exists concerning the identity of these plants; for a full discussion *see MPB*.

Hebrew *'āṭāḏ* (Jgs. 9:14f.; Ps. 58:9) is probably the European boxthorn (*Lycium europaeum* L.), and Heb. *barqānîm* (Jgs. 8:7, 16) are doubtless true brambles of the genus *Rubus*, either *R. sanctus* Schreb. or *R. ulmifolius* Schott.

Hebrew *dardar* (Gen. 3:18; Hos. 10:8) is a species of true star thistle, perhaps *Centaurea calitrapa* L., *C. verutum* L., or *C. iberica* Trev. The *ḥēḏeq* (Prov. 15:19; Mic. 7:4) is probably the Palestinian buckthorn, *Rhamnus palaestina* Boiss.

A difficult term is Heb. *ḥô(a)ḥ*, for which the RSV has "thorn" (Job 31:40; Prov. 26:9; Hos. 9:6), "thistle" (2 K. 14:9; 2 Ch. 25:18), "bramble" (Cant. 2:2), and "hook" (2 Ch. 33:11; Job 41:2; *see* HOOK). The botanical references are probably to some vigorous thorn or thistle. Species of *Centaurea, Rhamnus*, and the Syrian thistle (*Carduus syriacus* L.) have all been suggested.

The "thornbush" of Isa. 7:19 (Heb. *na'aṣûṣ*, also 55:13) is probably the Syrian Christ's-thorn, *Zizyphus spina-christi* (L.) Willd. Another thorn bush, perhaps *Rhamnus palaestina* Boiss., is mentioned in Ep. Jer. 6:71 (Gk. *rhámnos*).

Hebrew *sîr* (Eccl. 7:6; Isa. 34:13; Hos. 2:6; Nah. 1:10) is perhaps the thorny burnet, *Poterium spinosum*, or the burweed, *Xanthium spinosum* L. The same word can mean "hook," as in Am. 4:2. Heb. *sirpād* in Isa. 55:13 possibly refers to the Palestinian nightshade, *Solanum sanctum* L.

General terms include Heb. *sillôn* (Ezk. 28:24), *sārābîm* (Ezk. 2:6), *ṣēn* (Job 5:5; Prov. 22:5), *ṣᵉnînîm* (Nu. 33:55; Josh. 23:13), *qôṣ* (Gen. 3:18; Ex. 22:6; Jgs. 8:7, 16; 2 S. 23:6; Ps. 118:12; Isa. 32:13; 33:12; Jer. 4:3; 12:13; Ezk. 28:24; Hos. 10:8), *qimmôš* (Prov. 24:31; elsewhere "nettles"), *šayiṯ* and *šāmîr* (Isa. 5:6; 7:23-25; 9:18; 10:17; 27:4; *šāmîr* also in 32:13), and *meśûḵâ* (Mic. 7:4; *see* HEDGE).

In the NT the terms are Gk. *ákantha* (Mt. 7:16; 13:7, 22 par.; 27:29; Lk. 6:44; Jn. 19:2; He. 6:8), *akánthinos* (Mk. 15:17; Jn. 19:5), *bátos* (Lk. 6:44), *tríbolos* (Mt. 7:16; He. 6:8), and *skólops* (2 Cor. 12:7; *see* THORN IN THE FLESH).

The variety of Hebrew terms for thorns and thistles reflects the enormous number of prickly plants in Palestine. Some of these have a striking appearance and often attain a height of 2.5 m. (8 ft.). Neglected fields are quickly overgrown with thorns and thistles (Prov. 24:30f.; cf. the parable of the SOWER, Mt. 13:9 par.), and in prophetic imagery God's defeated and exiled people is sometimes depicted as an overgrown vineyard (Isa. 5:6; Jer. 12:13). Before the peasant can cultivate land he has to burn the thorns and thistles (cf. Isa. 10:17; 27:4). Autumn winds often pick up and blow along masses of star-thistle fragments; perhaps the "thistledown" (NEB; RSV "whirling dust") of Isa. 17:13 refers to this sight. Thorns and thistles are said to be God's curse upon the ground for human sin (Gen. 3:18; cf. Isa. 7:23-25). Their removal and

replacement by more useful plants signify divine blessing (Isa. 55:13; Ezk. 28:24). Jotham's parable compares Abimelech to a useless bramble (prob. *Lycium europaeum* L.), which, unlike the olive tree, fig tree, and vine, yields no fruit and little shade (Jgs. 9:14f.). Similarly, in 2 K. 14:9 par. 2 Ch. 25:18 Jehoash of Israel contemptuously likens Amaziah of Judah to a thistle, which can easily be trodden down by a wild animal (2 K. 14:9). Similarly, the NT uses thorns and thistles as symbols of fruitlessness (Mt. 7:16; He. 6:8).

Thorns and thistles were eaten by goats and camels. Thorns burned quickly (cf. Ps. 118:12; Isa. 9:18 [MT 17]; 33:12) and were widely used as fuel for cooking (Ps. 58:9 [MT 10]; Eccl. 7:6) and for lime kilns. Fields, dwellings, and vineyards were commonly hedged with thorns, including species of *Zizyphus* and *Rhamnus* (cf., e.g., Mic. 7:4; cf. Isa. 5:5). The prickly pear (*Opuntia ficus-indica*), widely used for hedges today, was introduced rather recently to Palestine.

The Savior's thorny crown (Mt. 27:29; Mk. 15:17; Jn. 19:2, 5) was probably made from the twisted branches of a species of *Rhamnaceae*. The Syrian Christ's-thorn (*Zizyphus spina-christi*) is less likely than the *Paliurus spina-christi* Mill., another variety of Christ's-thorn, which does not grow as tall and thus would have been easier to gather.

See Plate 5 in Vol. II. R. K. HARRISON

THORN IN THE FLESH [Gk. *skólops tệ sarkí*] (2 Cor. 12:7); NEB "sharp physical pain." Paul's vague reference to a thorn in his flesh has stirred an enormous amount of discussion. The actual term "thorn" (*skólops*) means "splinter," "thorn," "sharpened stake," or even "cross." It can indicate something tiny or huge, physical or mental; the context does not identify exactly what it is. God permitted Satan to afflict Paul as he did Job (Job 2:6). Paul understood the reason for his suffering to lie in the visions and revelations that he had received (v. 7): these had the potential of making him drunk with elation and therefore proud and boastful. The Lord used Satan's affliction to discipline Paul (cf. He. 12:10) and to demonstrate cogently that His power did not require human effort to be effective (v. 9). The affliction seemed to hamper Paul's work, and he prayed for its removal three times (v. 8). But it was to be permanent, as Paul soon learned, and productive of many blessings (vv. 9f., 12; 13:3).

The thorn, called "a messenger of Satan," could possibly refer to Paul's opponents, who are mentioned so frequently in the context (e.g., 2 Cor. 11:13). But the phrase itself does not require a personal reference: the thorn may equally well be a mental or physical liability. Exactly the same figure of speech occurs in Nu. 33:55; here the reference of the thorns is explicit — the inhabitants of Canaan as potential enemies of Israel. Possibly 2 Corinthians itself offers a clue in its references to Paul's great sufferings in Asia (1:8f.) or even his afflictions in Macedonia (7:5). Nevertheless, the allusion is stubbornly vague.

There has, however, been no dearth of efforts to pinpoint it. Tertullian thought that the "thorn" was an earache or headache (*On Modesty* 13). Chrysostom was sure that it referred to Paul's enemies (*Hom. 26 in 1 Cor.*). Augustine saw in it a general description of Paul's physical sufferings. Influenced by a bad translation in the Vulgate (*stimulus carnis*), many Catholic interpreters detected an allusion to sexual lusts. Among the solutions proposed by modern scholars are an eye affliction (cf. Gal. 6:11), epilepsy (cf. Acts 22:17), hysteria, malaria, and speech impediment. P. H. Menoud believed that Paul referred to the continual anguish caused by Israel's unbelief.

This remarkable confusion has resulted from attempts to supply information that Paul did not provide. Possibly Paul's readers knew his reference. Some interpreters (e.g., Hughes) have refused to guess, and so should we all. The word "thorn" is a general term in Scripture for sorrow and suffering, and nothing in it can indicate whether the suffering was physical or spiritual. Many of the suggested interpretations are clearly possible, but none can be proved or disproved.

THOUSAND [Heb. *'eleṗ*; Gk. *chiliás, chílioi*]. *See* NUMBER IV, V. J.

THRACIAN thrā'shən [Gk. *Thrqx*] (2 Macc. 12:35). A person from Thrace. Ancient Thrace was a region in the Balkan peninsula in what is now northeastern Greece, southern Bulgaria, and European Turkey, generally the area between the Strymon (Nestus) and Danube Rivers (*see* Map XVI in Vol. I). The Thracians, who had a reputation for military prowess, were often employed as mercenary soldiers, like the horseman of 2 Macc. 12:35 who rescued Gorgias.

THRASAEUS thrā-sē'əs; **THRASEUS.** The NEB and AV translations, respectively, of Gk. *Thrasaios* in 2 Macc. 3:5; according to these versions, the name of the father of Apollonius. The RSV, however, interprets it as TARSUS, a place name (see J. A. Goldstein, *II Maccabees* [*AB*, 1983], p. 204).

THREAD [Heb. *ḥûṭ*] (Gen. 14:23; Jgs. 16:12; Cant. 4:3); NEB also PACK-THREAD; [*šānî*–'scarlet'] (Gen. 38:28, 30); [*pāṭîl*–'twisted cord'] (Ex. 39:3); AV WIRE; NEB BRAID. The AV, RSV, and NEB differ in their interpretations of Heb. *'ammaṭ biṣ'ēḳ* (lit. "the cubit of your being cut off") in Jer. 51:13. The RSV offers a free translation of the MT: "the thread of your life is cut." The AV ("the measure of your covetousness") understands *biṣ'ēḳ* in terms of the noun *beṣa'* ("gain, profit") rather than the verb *bāṣa'* ("cut off"). The NEB ("your destiny is certain") follows the LXX in reading Heb. *'ĕmeṭ* (lit. "truth," thus "certain") instead of MT *'ammaṭ*. In the MT the phrase is a metaphor from the WEAVING industry: cutting the wool symbolizes death (cf. Isa. 38:12).

THREESCORE. Three times a score (twenty), i.e., "sixty." In the AV "threescore" most often translates Heb. *šiššîm* or Gk. *hexḗkonta* ("sixty"), but "threescore and ten" usually renders Heb. *šiḇʿîm* ("seventy"; cf. RSV Ps. 90:10; *see* NUMBER V.F).

THRESH; THRESHING [Heb. *dûš* (2 K. 13:7; 1 Ch. 21:20; Isa 28:28; 41:15; Hos. 10:11; Am. 1:3; Mic. 4:13; hophal, Isa. 28:27), *dayiš* (Lev. 26:5), *mᵉḏuššâ* ("threshed one," Isa. 21:10), *ḥāḇaṭ* (Isa. 27:12); Gk. *aloáō* (1 Cor. 9:10)]; AV also TREAD (Hos. 10:11), BEAT OFF (Isa. 27:12); NEB also "under foot" (2 K. 13:7), CRUSHING, TREAD OUT, BEAT OUT (Isa. 27:12); **THRESHING FLOOR** [Heb. *gōren* (Ge. 50:10f.; Nu. 15:20; 18:27, 30; etc.), *ʿālâ*–'go up' ("come up to the threshing floor," Job 5:26); Aram. *ʾiddar* (Dnl. 2:35); Gk. *hálōn* (Mt. 3:12 par. Lk. 3:17)]; AV also FLOOR, VOID PLACE (1 K. 22:10 par. 2 Ch. 18:9), CORN (Dt. 16:13), BARN (FLOOR), "come in" (Job 5:26); NEB omits in 1 K. 22:10 par. 2 Ch. 18:9; **THRESHING SLEDGE** [Heb. *môrag* (2 S. 24:22; 1 Ch. 21:23), *ḥārûṣ* (Job 41:30; Isa. 28:27; 41:15; Am. 1:3)]; AV also SHARP POINTED THINGS; NEB also SLEDGE.

The Hebrew verb *dûš* (Gk. *aloáō*) denotes the activity of threshing, i.e., the separation of seed from the husks of the grain. The harvested grain was spread out on a threshing floor (Heb. *gōren;* Aram. *ʾiddar;* Gk. *hálōn*), a hard, level surface in the open air, which was prepared by first removing the stones and then packing down the earth. Circular in shape, these floors usually had a border of stones to keep in the grain. They were located outside the town or village in places where the prevailing breezes would carry away the chaff in the subsequent WINNOWING process. Many threshing floors belonged to individuals (e.g., Atad, Gen. 50:10; Araunah, 2 S. 24:16), but some may have been communally owned (cf. 1 K. 22:10 par. 2 Ch. 18:9; but *see* VOID).

Various implements were used in threshing. The sledge (Heb. *ḥārûṣ* or *môrag*) was a flat, heavy wooden board to the underside of which were affixed sharp stones or pieces of metal. As the sledge was dragged over the grain, with stones or people on top of it to add to its weight, it tore the grain from the husks (e.g., Isa. 41:15). In other instances a cart with toothed rollers was used (e.g., 28:28). The sledge or cart was drawn either by horses (v. 28) or by oxen (which were not to be muzzled, Dt. 25:4). These implements were not used, however, on dill and cummin (Isa. 28:27); because of their delicacy and small quantities, such crops were beaten with a flail (cf. Jgs. 6:11). The verb *dûš* is sometimes used figuratively to express the idea of destruction by pulverization into myriad pieces (e.g., 2 K. 13:7; Mic. 4:13). The cognate noun *mᵉḏuššâ* in Isa. 21:10 denotes a nation that has been "threshed."

Threshing floors were favorite targets for thieves and raiders (1 S. 23:1). Thus farmers had to guard their harvested crops closely, and someone usually slept on the threshing floor through the night (cf. Ruth 3). It seems, however, that such hardships were softened by feasting (3:3) and sometimes by the services of harlots (Hos. 9:1). The threshing season (*dayiš*), usually from May to August, would in good times last until the time of vintage in the fall.

Traditional village threshing in Palestine seems to be virtually identical to that described in the Bible. Threshing carts in Egypt and Palestine are made of a frame with three wooden rollers set with sharp points. Sledges are made of solid wooden planking embedded with similar sharp points and are dragged over the grain.

THRESHOLD. *See* HOUSE III.C.

THRESHOLD, KEEPER OF THE [Heb. *šōmēr hassap*] (2 K. 22:4; 23:4; 25:18; 1 Ch. 9:19; 2 Ch. 34:9; Jer. 35:4; 52:24); AV KEEPER OF THE DOOR, KEEPER OF THE GATE; NEB also "on duty at the entrance," GUARD OF THE THRESHOLD, etc. A high-ranking officer among the temple personnel. The importance of this priestly post is suggested by the fact that three keepers of the threshold are mentioned along with the chief priest and the second priest in Jer. 52:24. The primary task of these officers was to guard against the intrusion of Gentiles or any other profane or unclean elements into the temple precincts.

See also GATEKEEPER. N. J. O.

THRONE [Heb. *kissē'* (Gen. 41:40; Ex. 11:5; etc.), *kissēh* < *kissē'* (1 K. 10:19); Aram. *kārsē'* (Dnl. 5:20; 7:9); Gk. *thrónos* (Mt. 5:34; 19:28; etc.), *bḗma*–'speaker's platform' (Acts 12:21)]; AV GOD (Rev. 20:12), HEAVEN (Rev. 21:3), SEAT (Rev. 13:2; 16:10); etc.; NEB also KING (Eccl. 4:14), ROSTRUM (Acts 12:21), RULE (Rev. 13:2), etc.

The Hebrew word has identical cognates in Ugaritic (*ks'*) and Akkadian (*kussû*) and the basic meaning of the root *ks'* is "seat of honor." In the OT the term designates divine thrones (e.g., 1 K. 22:19; Ps. 11:4), royal thrones (e.g., of Egypt, Gen. 41:40; Israel, 1 K. 1:46; Babylon, Jer. 43:10; Assyria, Jonah 3:6; and Persia, Est. 1:2), as well as conveying ideas of kingship, dominion, and authority (2 S. 3:10; 7:13; 2 K. 11:19; Jer. 49:38; Zec. 6:13). The close link between the king and the throne can be seen in 2 S. 14:9, where the association connotes "ruling dynasty," and in 1 K. 16:11, where the authority to reign commences on ascension to the throne.

Generally in the ancient world accession to the royal throne was accompanied by an ENTHRONEMENT festival or ritual. The basic components of the Israelite ritual, which can be reconstructed from the accounts of Solomon's and Joash's enthronements, included the anointing of the king, the blowing of trumpets, sacrifices and feasting, an oath of allegiance by the general populace, and a procession from the holy place to the throne (1 K. 1:32-40; 2 K. 11:4-20; cf. 1 K. 1:5-10, 41-53).

While the throne is the privilege of the king, Heb. *kissē'* is also used in conjunction with the seat of the queen mother (1 K. 2:19) and lesser positions of authority like tribal judgeships (Jgs. 3:20), the jurisdiction of Nehemiah as governor (Neh. 3:7), and perhaps the priesthood (cf. 1 S. 1:9; 4:13, 18; Zec. 6:13).

Royal thrones in the ancient Near East were made of wood and were usually high-backed chairs with armrests and an accompanying footstool (cf., e.g., *ANEP*, nos. 379, 416f., 421f., 458; *see* pictures in ART; FOOTSTOOL; GARMENTS; KISS; MEGIDDO). Adornment included carvings of animal shapes, geometric designs, and astrological signs, along with ivory inlays, gold-leaf overlays, and insets of precious stones. Solomon's throne room was called the "Hall of Judgment" (1 K. 7:7) and his elaborate throne described in detail in 1 K. 10:18-20 appears to be patterned after a Phoenician prototype (cf. *ANEP*, nos.

The throne of Tutankhamen found in his tomb (1361-1352 B.C.). Made of wood, it is overlaid with sheet gold, inlaid with precious stones, and ornamented with animal shapes, such as winged cobras wearing the crowns of Upper and Lower Egypt (The Metropolitan Museum of Art, photo Egyptian Expedition)

456, 458, 460). The throne as a symbol of royal authority was moveable, as the kings of both Israel and Judah held audience on their thrones at the gate of Samaria (1 K. 22:10; cf. Jer. 1:15; 43:10).

Although thrones were symbols of human governments, the Hebrews recognized that all thrones were established by Yahweh, the sovereign ruler of the nations who sets up kings and removes them (Ps. 47:7f. [MT 8f.]; cf. Dnl. 2:20-23). Israelite kingship especially was to mirror the rule of their God, a throne established through justice, mercy, and righteousness — not violence (2 Ch. 9:8; 13:8; Ps. 122:5; Prov. 16:12; 20:8, 28; 25:5; 29:14; Isa. 16:5). In fact, the throne of the Davidic dynasty is called the throne of Yahweh over Israel (1 Ch. 28:5; 29:23; cf. Ps. 45:6f. [MT 7f.]). To this end the throne of David is equated with the throne of Messiah (Isa. 9:6), a throne established in steadfast love and occupied by one who sits in faithfulness, who judges, seeks justice, and is quick to do righteousness (Isa. 16:5; cf. Jer. 33:12-26; Ezk. 37:24-28; Hag. 2:20-22).

The throne of Yahweh is in the heavens (Ps. 11:4; 103:19), and the earth serves as His footstool (Isa. 66:1). The OT conception of the throne of God borrows its imagery from the earthly counterpart as shown by the deliberate juxtaposition of the two in 1 K. 22:10, 19 and 2 Ch. 18:9, 18 (cf. Isa. 6:1-5; Ezk. 1:15-28; 10:1-22). The throne of God is from eternity (Ps. 93;2) to eternity (Lam. 5:19). It is founded on righteousness, justice, steadfast love, and faithfulness (Ps. 9:4 [MT 5]; 89:14 [MT 15]; 97:2), and the authority of His sacred throne extends over all nations (Ps. 47:8 [MT 9]). Yahweh's throne is surrounded by the four living creatures and the twenty-four elders who offer Him praise and worship continually (Rev. 4:2-11). When Israel is restored at the end of the age, Jerusalem shall be called the throne of God (Jer. 3:17), for His divine presence will emanate from His throne in the new temple (Ezk. 43:7).

According to the NT, Jesus as the Son of Man will ascend His glorious throne to rule His kingdom when He returns in the eschaton (Mt. 19:28; 25:31; cf. Dnl. 7:9, 22). Unlike the pardoning mercy that now streams from the throne of grace where Christ is seated at the right hand of God (He. 4:16; 8:1; 12:2), then judgment for the nations will issue from His throne in the form of rewards for the righteous and punishment for the wicked (Mt. 25:32-46). Those who conquer sin and the evil one by faith in the Amen and by righteous living will share in Christ's millennial rule (Rev. 3:21), and their names will be found in the book of life at the judgment at the great white throne, God's final judgment of humanity at the conclusion of the millennium (Rev. 20:11-15).

Elsewhere in the NT, Paul combats false teaching in the church at Colossae by asserting that angels have no power apart from Christ (Col. 1:15-20). The "thrones" mentioned in 1:16 are apparently a high class of angels, perhaps similar to the twenty-four elders who sit on thrones in the presence of God (cf. Rev. 4:4-11; see W. Hendriksen, *Colossians and Ephesians* [1964], pp. 72-74).

Finally, John locates the "throne of Satan" in Pergamum (Rev. 2:13). The difficult phrase has prompted several suggestions, but the most plausible interpretation is to understand Pergamum as the center of satanic activity in the East, even as Rome was in the West due to the combined influences of the widespread pagan idol worship and firmly entrenched emperor cult found there (cf. R. H. Mounce, *Book of Revelation* [*NICNT*, 1977], pp. 96f.). That Satan has a throne is presupposed in Rev. 13:2 when the dragon gives the beast his power, throne, and authority. Later the fifth angel pours his bowl of wrath on the throne of the beast (16:10) and at the second coming of Christ his kingdom of darkness is overcome by the fury of the Word of God (19:9-21).

THUNDER; THUNDERING; THUNDEROUS [Heb. *ra'am*, hiphil of *rā'am*, *qôl*–'voice,' *rōgez* (Job 37:2), *hāmôn*–'uproar,' 'crowd' (Isa. 17:12; 33:3), *hāmâ*–'make noise,' 'roar' (Isa. 17:12), *te'šu'â*–'noise' (Job 36:29); Gk. *bronté*, *gínomai bronté* (Jn. 12:29)]; AV also VOICE, NOISE, MULTITUDE, TUMULT (Isa. 33:3); NEB also NOISE, ROAR, etc.; **THUNDERBOLT** [Heb. *ha'zîz qôlôṯ*] (Job 38:25); AV "lightning of thunder"; NEB THUNDERSTORM; [*rešep*] (Ps. 78:48); NEB "arrow of pestilence"; **THUNDERPEAL** [Gk. *bronté*] (Rev. 19:6); AV THUNDERINGS; NEB ROARS OF THUNDER.

Thunder and LIGHTNING are normally phenomena of the stormy winter season from October to early April, but in exceptional cases they may occur in late April or even

early May (1 S. 12:17f.). They are often very limited in extent, and a torrential thunderstorm may sometimes soak the fields of one village but leave the fields immediately adjacent completely dry (Am. 4:7). The occasional rain of the desert regions frequently takes the form of a very heavy thunderstorm.

Almost without exception biblical references to thunder and thunderstorms speak of them as the direct activity of God (e.g., Ex. 9:23-34; 1 S. 7:10; Ps. 104:7). Thunder is an awesome manifestation of divine power, altogether beyond human comprehension (Job 26:14; 38:25; 40:9). Sometimes thunder accompanies God's speaking to His people. In Jn. 12:29 the voice of God from heaven is thought by many bystanders to be no more than thunder. When God gave the law upon Mt. Sinai there were "thunders and lightnings and a thick cloud upon the mount" (Ex. 19:16; 20:18), and in the book of Revelation thunder accompanies all the proclamations from heaven (Rev. 4:5; 6:1; 8:5; 10:3f.; etc.).

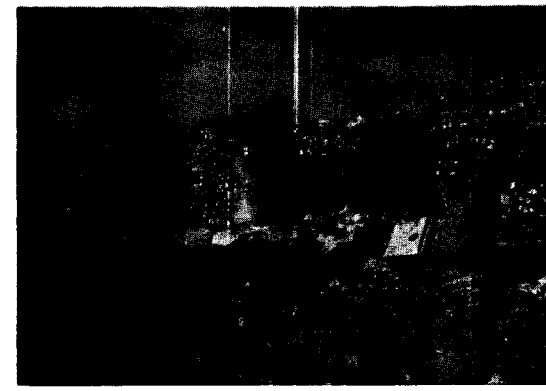
THYATIRA thī-ə-tī'rə [Gk. *Thyateira*] (Acts 16:14; Rev. 1:11; 2:18, 24). A city in Asia Minor, lying off the main highway between Pergamum to the west and Sardis to the southeast (for the NT relevance of this see S. Johnson, *JBL*, 77 [1958], 1), 80 km. (50 mi.) NE of Smyrna on a branch of the Hermus River; today the town of Akhisar. In ancient times the region was sometimes classed as Mysia, although it was more properly in the northern part of Lydia.

Not much is known about the early history of the town. It was apparently first founded as Pelopia, a shrine of the Lydian sun-god Tyrimnus. This solar-deity background might plausibly underlie the description of Christ as having eyes "like a flame of fire" and feet "like burnished bronze" (Rev. 2:18). On coins, however, Tyrimnus is represented simply as a horseman with a (Hittite) double-headed battle-ax. Seleucus Nicator (301-281 B.C.) rebuilt the town and made it an important frontier garrison. It became a center of small manufacture and trade, vassal to Pergamum after 190 and to Rome after 133.

Thyatira was famous in the ancient world both for its highly organized trade unions (actually "cooperatives") and for its special technology for producing "purple" (Turkish red) dye from the madder root rather than shellfish. The first recorded Christian convert beyond Asiatic soil was Lydia at Philippi (Acts 16:14). Since she was from Thyatira, it is not merely coincidental that she was a seller of purple goods. It is going too far to see in her a matriarch inaugurating a "tradition of female leadership" that was abused by an incumbent called Jezebel in Rev. 2:20-25 (E. M. Blaiklock, *Cities of the NT* [1965], p. 110).

Acts 16:14 characterizes Lydia as "a worshiper of God" who prayed with other women on the sabbath by the river outside Philippi. This is usually interpreted to mean that she was a gentile convert to Judaism, and that therefore a colony of Jews had earlier become established at Thyatira. Acts 19:10 states, however, that gentile as well as Jewish residents of the coastal towns of Asia Minor heard Paul's preaching during his two years in Ephesus (*ca.* 52-55), and it is possible that a Christian community was founded in Thyatira at this time.



Ruins of ancient Thyatira (L. K. Smith)

At any rate, the Christian community that was firmly established in Thyatira by A.D. 95 had special local problems arising from the semireligious traditions of the trade guilds (see W. Ramsay, *Social Basis of Roman Power in Asia Minor* [1941]). A more general problem was that of eating at banquets meat that had been slaughtered under the invocation of false divinities (Rev. 2:20; cf. Acts 15:29). Some Christian casuists of Thyatira seem to have argued that membership in a trade guild was necessary for earning one's living, and that participation in its banquets did not necessarily involve a religious commitment to the deities being honored. Such Christians probably reasoned that one day their enrollment in a guild would be sufficiently strong to "secularize" it, but this could never happen unless for a time they conformed minimally to existing guild practices.

Some exegetes see these compromises as the "immorality" or "deep things of Satan" that were inculcated by "Jezebel" (Rev. 2:20, 24). Although this view might be correct, the text affords no real proof that the harsh name of JEZEBEL (an allusion to the OT queen) is here applied to an active member of the Christian community rather than, e.g., the known priestess of an oracular Sambethe cult (Pauly-Wissowa, VI, 657ff.). Despite the warning against cooperation with Jezebel, the local churchgoers are specially praised for continuing their faithful works (Rev. 2:19, 24f.). *See also* SEVEN CHURCHES.

Thyatira has a few remains of the temples and other buildings for which Caracalla (A.D. 211-217) received the title "Local Benefactor." Explorers have found smaller monumental remains, mostly columns or tombstones built into humble homes. From *ca.* 200 the city was wholly Christian but Montanist (Epiphanius *Haer.* 51.33; *LTK*, X, 176f.). In 1313 the neighboring Muslim metropolis of Manisa took over Thyatira, thenceforth named *Ak-Hisar* from its "White Castle." It was incorporated into the Ottoman empire after 1425.

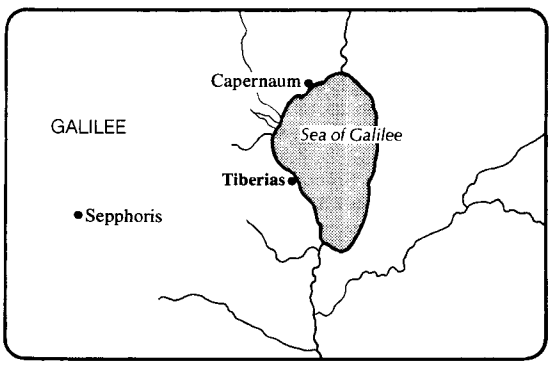
TIBERIAS tī-bēr'ē-əs [Gk. *Tiberias*]. A leading city on the west coast of the Sea of Galilee. Built by Herod Antipas

ca. A.D. 18-22 to serve as the capital of his tetrarchy of Galilee and Perea, and named in honor of the emperor Tiberius, the city is mentioned only once in the NT (Jn. 6:23). Although it was the largest and most important city of the region and lay less than 16 km. (10 mi.) along the shore SW of Capernaum, there is no evidence that Jesus ever visited it during His public ministry. This was undoubtedly due to the Greek spirit of the city and Jesus' principle of going to "the lost sheep of the house of Israel." The modern designations, Arab. Ṭabarîyeh and Heb. Tᵉvaryah, preserve the name Tiberias.

In 4 B.C. Herod Antipas had built Sepphoris as his capital; but later he chose the new site along the western shore of Galilee because it was more central to the two districts under his control and more closely related to the important system of roads. When Tiberias was under construction, workmen stumbled onto an ancient burial place, and the Jews withdrew because of the ceremonial uncleanness of the site (cf. Nu. 19:11-13). By coercion and promises of houses and land, Herod managed to populate the city with an odd assortment of poor people and foreigners (Josephus *Ant.* xviii.2.3 [36-38]). It grew rapidly, nevertheless, and soon boasted many public works of beauty and the "finest synagogue in Galilee."



The modern Tiberias lies near the northern end of the crescent-shaped plain on the west shore of the sea of Galilee. Since it is almost 200 m. (700 ft.) below sea level and shut off from the western breezes by the mountains, the climate is hot and humid. Extensive ruins indicate that the ancient settlement lay S of the plain. Josephus spoke of the "hot spring not far from it in a village called Ammathus" (*Ant.* xviii.2.3 [36-38]). This village is usually identified with the old fortified city of Hammath in Josh. 19:35 and may account for the ancient graveyard encountered in laying the foundations for Tiberias. The ruins include a palace, the famous "Golden House," on the acropolis to the northwest; a long wall on the land side fortified with towers; and the foundations of many buildings. All indications are that the city was a flourishing metropolis in the time of Christ.

When the Jewish War broke out in A.D. 66 the inhabitants of Tiberias remained loyal to the Jewish cause; but when Vespasian laid siege with three legions in 67 they opened their gates to Roman occupation. The city was dishonored by Herod Agrippa II's moving the capital back to Sepphoris.

In the early 2nd cent. Tiberias became a center of Jewish learning. A city once declared unclean by the Jews became one of the four sacred cities in Palestine (Jerusalem, Hebron, and Safed being the others). The Sanhedrin was moved there from Sepphoris *ca.* A.D. 150, and several schools of rabbinic study were established. Under

The synagogue at Tiberias looking east to the Sea of Galilee (D. Blatt)

the famous Rabbi Judah the Prince, the Mishnah was compiled (*ca.* 220). Tiberian vowel pointing was developed, and in the 4th cent. the Palestinian Talmud was codified there. Tiberias was the burial place of the great Maimonides, as well as Akiba and, reportedly, 24,000 of his disciples. The Talmud reports thirteen synagogues in Tiberias (*Berakoth* 8a, 30b; *see* Vol. III, Plate 3). Although Constantine built a church and established a bishopric in the city, Christianity has never flourished there. The region is subject to severe earthquakes; on Jan. 1, 1837, Tiberias was almost destroyed.

R. H. MOUNCE

TIBERIAS, SEA OF. *See* GALILEE, SEA OF.

TIBERIUS tī-bē'ri-us [Gk. *Tiberios*]. Successor of Augustus Caesar as the second Roman emperor. Born Tiberius Claudius Nero on November 16, 42 B.C., his father — of the same name — was an officer under Julius Caesar. His mother, Livia Drusilla of the Claudian family, divorced his father in 38 B.C. and became the third wife of Augustus.

Tiberius spent his early life in successful campaigns in the regions of Pannonia, Dalmatia, Armenia, and Gaul. In 12 B.C. he became a consul, receiving proconsular authority three years later. In 11 B.C. he was obliged to divorce his wife, Vipsania Agrippina, to marry the daughter of Augustus, Julia, who was subsequently banished by her father for immorality. After bitter personal and political disputes with Augustus, Tiberius retired in voluntary exile to Rhodes for study (6 B.C.), returning to Rome after eight years. When all hope of direct succession was lost, both he and Agrippa Postumus were adopted reluctantly by Augustus on June 26, A.D. 4, at which time he was renamed Tiberius Julius Caesar and appointed tribune. Eight years later he became military governor of the Roman provinces and soon was raised by special law to a position of co-regency (A.D. 13; A.D. 11 according to Mommsen). At the age of 56, Tiberius was named emperor by the Senate (September 17, A.D. 14), one month after the death of Augustus, and assumed the designation Tiberius Caesar Augustus. In A.D. 26 he retired to the island of Capri where he died on March 16, A.D. 37. He was succeeded as emperor by Caligula.

A statue (A.D. 14-37) of Tiberius Claudius Nero (Vatican Museum, photo Philip Gendreau, NY)

The reign of Tiberius was conservative, primarily preserving the earlier policies of Augustus. Included among the principal events of his twenty-three-year rule are the campaigns of Germanicus and Drusus, the withdrawal of the Romans to the Rhine, the settlement of the Armenian question, the rise and fall of Sejanus, and the submission of Parthia. While lenient in taxation, Tiberius's strict administration of the economy increased the revenues of the empire. He further elevated the standards of civil service and the administration of justice, though a personal fear of conspiracy resulted in numerous death sentences for his rivals. Ancient historians differ in their estimates of Tiberius: contemporary sources are favorable to his reign (Velleius Paterculus 2; Valerius Maximus *Praef.*), though later senatorial historians exaggerate his faults (Tacitus *Ann.* i-vi; Dio Cassius *Hist.* xlvi-xlviii; Suetonius *Tiberius*).

Tiberius is mentioned by name once in the NT (Lk. 3:1) and as "Caesar" in numerous other instances (though Lk. 2:1 is a reference to Augustus). Jesus' public ministry occurred during his reign. Lk. 3:1 places the first appearance of John the Baptist in the fifteenth year of Tiberius's reign, though this leaves unclear the point at which the Evangelist marks the beginning of Tiberius's rule. The silver denarius coin mentioned in the NT (cf. Mt. 22:15-21; Mk. 12:13-17; Lk. 20:20-26; 23:2) no doubt bore the image of Tiberius, accompanied by the inscription "Tiberius Caesar, son of the divine Augustus, Augustus" (*see* picture in MONEY). Tiberius himself never laid claim to divinity.

Showing no enthusiasm for foreign religions and cults, Tiberius's reign saw the expulsion of all Jews from Rome in A.D. 19 (Josephus *Ant.* xviii.3.5 [81-84]), though they were allowed to return later in his administration. While he probably had no knowledge of nascent Christianity in Palestine, his policies affected much of the religion's early history there.

Tiberius both appointed Pontius Pilate to Judea in A.D. 26, in accordance with his practice of governing Palestine by Roman procurators, and removed him from office ten years later. Early Christian authors were inspired to record Pilate's report of the trial and crucifixion of Jesus to the emperor (Justin Martyr *Apol.* i.35; Tertullian *Apol.* xxi; Eusebius *HE* ii.2).

C. N. JEFFORD

TIBHATH tib'hath [Heb. *tiḇḥaṯ*] (1 Ch. 18:8). A city belonging to Hadadezer the Aramean king of Zobah, whose domain stretched from the central Lebanese Beqaʿ as far as the upper Euphrates. King David of Israel, in the aftermath of his considerable victory over the Arameans, brought to Jerusalem large supplies of bronze taken from Tibhath, Berothai (2 S. 8:8), and CUN; these materials were later used in Solomon's construction. In 2 S. 8:8 the MT reads *beṭaḥ* (Betah) in place of Tibhath, but it should be read *teḇaḥ* with the Syriac (cf. also Lucian). TEBAH, the nephew of Abraham (Gen. 22:24) and ancestor of an Aramean tribe, may have been the founder of this city.

The city is identified with Am. Tab. Ṭubiḫi, a town described as situated in the country of Amurru, i.e., roughly the territory between Tunip and Baalbek.

B. J. BEITZEL

TIBNI tib'nī [Heb. *tiḇnî*] (1 K. 16:21f.). One of three rivals for the throne of Israel after Zimri's assassination of King Baasha. Following Omri's defeat of Zimri, Tibni waged a civil war against Omri for four or five years. The struggle ended with Tibni's death and Omri's ascent to the throne. Some have suggested that Tibni is a nickname meaning "man of straw," a parody of the name *Tabni* (LXX) (see J. Gray, *I & II Kings* [*OTL*, 2nd ed. 1970], p. 365).

TIDAL tī'dəl [Heb. *tiḏʿāl*; Gk *thargal*; Hitt. *tudḫaliyas*]. The king of GOIIM, who, along with Amraphel king of Shinar, Arioch king of Ellasar, and Chedorlaomer king of Elam, fought a war against the kings of the five "cities of the valley" in the time of Abraham (Gen. 14:1, 9). The name Tidal can be identified with Tudḫaliyas, the name of at least five Hittite kings of the 18th-13th cents. B.C. (*see* HITTITES). The earliest of these, who is thought to have lived before 1700, is known only from a sacrificial list of former rulers. A grandfather and grandson by the name of Tudḫaliyas ruled in the second half of the 15th cent., and one of them — it is not certain which — was responsible for reasserting Hittite power in Syria after a period of domination by the Egyptians and the Hurrian empire of Mitanni. Yet another Tudḫaliyas reigned early in the 14th cent.; though a weak ruler himself, he

was the father of the great Suppiluliuma, who established the Hittite empire. The last known Hittite king with the name Tudḫaliyas lived in the mid-13th century.

It is not clear, however, that one of these is intended by the biblical references to Tidal. The name of his country, Goiim or "Nations," does not refer to the Hittites elsewhere; the king of Goiim mentioned in Josh. 12:23 seems to have ruled somewhere in Galilee (so RSV, following LXX against MT "Gilgal"), perhaps at Harosheth-ha-goiim (Jgs. 4:2). Goiim is sometimes compared to Umman-Manda ("the people of Manda"), a general term in cuneiform texts for the warlike peoples of the northern mountains; but the Umman-Manda were enemies of the Hittites.

P. K. MCCARTER, JR.

TIDINGS [Heb. piel of *bāśar*, hithpael of *bāśar* (2 S. 18:31), *bᵉśōrâ* (2 S. 18:20, 22, 25, 27), *dāḇār*, *šēmaʿ*–'report' (Gen. 29:13), *šᵉmûʿâ*]; AV also (for part. *mᵉḇaśśēr*) MESSENGER, "who publish it," RUMOUR, WORD; NEB NEWS, RUMOUR, MESSAGE, SENTENCE, etc. A piece of news, either good or bad. Heb. *dāḇār* (lit. "word," "matter") refers to bad news in the three passages in which the RSV renders it "tidings" (Ex. 33:4; 1 S. 11:5; Jonah 3:6). Heb. *šᵉmûʿâ* (lit. "something heard," "report") can denote either good news or bad news (cf. RSV "news" in 2 S. 4:4; 1 K. 2:28; Prov. 15:30; 25:25; "rumor" in 2 K. 19:7; Jer. 10:22; etc.; "report" in Jer. 51:46; 1 K. 10:7; etc.). In the passages in which it is rendered "tidings" it always denotes bad news (1 S. 4:19; 2 S. 13:30; Ps. 11:7; Jer. 49:14, 23; Ezk. 21:7 [MT 12]; Dnl. 11:44; Ob. 1).

The root *bśr* in other ancient Near Eastern languages (e.g., Arabic, Aramaic, Ugaritic) generally denotes "good news" (*TDOT*, II, 313). In the OT it usually refers to good news from the battlefield (e.g., Ps. 68:11 [MT 12]), although in 1 S. 4:17 the part. *mᵉḇaśśēr* refers to the messenger who brought Eli the news of Israel's defeat and his sons' death. In 2 S. 18:19-31 the message of Absalom's death is bad news for King David; but it is considered good news by Ahimaaz (v. 19), and the king had expected the news to be favorable (v. 27; cf. 1 K. 1:42). The imagery of Isa. 40:9; 41:27; 52:7; 61:1; Nah. 1:15 (MT 2:1) clearly depicts a messenger who announces joyful news of Yahweh's saving deeds (*see* GOSPEL II).

See also GLAD TIDINGS; GOOD NEWS; MESSENGER.

Bibliography.–KoB, pp. 156f., 985f.; *TDOT*, II, *s.v.* "bśr" (Schilling).

TIGLATH-PILESER tig'lath-pil-ē'zer **TIGLATH-PILNESER** tig'lath-pil-nē'zər [Heb. *tiglaṯ pil'eser* (2 K. 15:29), *tiglaṯ pᵉleser* (2 K. 16:7), *tiglaṯ pilnᵉ'eser* (1 Ch. 5:6), *tiglaṯ pilneser* (1 Ch. 5:26); Assyr. *Tukulti-apil-ešarra*, "my trust [is] in the heir of [the temple] E-sharra"; Aram. *tgltplsr*, Zinjirli stela]. The name of three Assyrian kings, only one of whom is significant for biblical studies.

I. Tiglath-pileser I (*ca.* 1115-1077 B.C.).–Tiglath-pileser referred to himself as the son of Aššur-reš-iši (1133-1116), the grandson of Mutakkil-Nusku (1134), and lawful descendant of Aššur-dân (1179-1135?) (Mutakkil-Nusku and Ninurta-Tukulti-Aššur were sons of Aššur-dân, and each occupied the throne for a *ṭuppu*, i.e., either an unspecified period or a period of less than a year), and descendant of Urta-apil-Ekur (1192-1180; cf. *ARAB*, I, §§ 255-58). Hence there was considerable stability in the land. He left detailed records for his first five years, and after that we have only scattered inscriptions. We know that his first campaigns were toward the north, against the Muški (Phrygians) and their tributaries, against the Nairi (in the region of Lake Van), even as far as the "Upper Sea," possibly the Black Sea (cf. *CAH*³ II/2, 459 n. 4), and the Muṣṣri (for location, cf. H. Tadmor, *IEJ*, 11 [1961], 143ff.). He then took action against the Aḫlamē, Aramean tribes who long tyrannized the peoples along the Euphrates, and finally against Amurru, a region extending from Tadmor to Sidon. The serious problem of the Aḫlamē, who had been mentioned in records of his predecessors, is pointed up by Tiglath-pileser's statement, "for the twenty-eighth time, in pursuit of the Aḫlamē-Arameans, I crossed the Euphrates, the second time in one year" (*ARAB*, I, § 287). Tiglath-pileser prided himself on being a great hunter, having killed or captured, among other quarry, ten mighty bull elephants (four taken alive), eight hundred lions from a chariot plus 120 on foot, and with a harpoon from a boat in the Mediterranean one narwhal (§§ 247f.). He recorded the most unusual catches in bas reliefs on the royal palaces at Asshur. He rebuilt or restored palaces and temples in Asshur (which he called "my city Assur" (§ 234), restored the walls of Nineveh, and left a collection "in what must be one of the oldest extant libraries" (*CAH*³, II/2, 464).

See *ARAB*, I, 72-104; *CAH*³ II/2, 457-464.

II. Tiglath-pileser II (*ca.* 940 B.C.).–Of this king we know next to nothing. Aššur-dân II (934-912), founder of the Neo-Assyrian empire, refers to himself as "son of Tiglath-pileser, . . . (grand)son of Assur-resh-ishi . . . (great-grand(son) of Assur-rabi)" (*ARAB*, I § 350). It seems clear that toward the end of the reign of Tiglath-pileser I, the Aḫlamē-Arameans were once again active, and probably other enemies of Assyria as well, and the kingdom went into a period of obscurity for about 140 years. See *CAH*², III/1, 247f.

III. Tiglath-pileser III (745-727 B.C.). (R. W. Rogers [*History of Babylonia and Assyria*, II, 189; *Cuneiform Parallels to the OT* pp. 308ff.], numbers this ruler as Tiglath-pileser IV, the previous as III, and omits II. The Assyrian king lists show this to be erroneous; cf. *CAH*, III [1925], 32 n. 1.) During the reign of Adad-nirari III (810-783) a period of decline is noted which reached its nadir in the reigns of Shalmaneser IV (782-773), Aššur-dân III (772-755), and Aššur-nirari V (754-745). The last two led few foreign campaigns, possibly due to the revolts in Asshur and other cities (cf. *ARAB*, II, 435; "in the land" signifies no foreign campaign). Local officials seem to have exerted more power than kings. Urartu was strong, and the western regions (Syria and Aramean city-states) were restless. At that moment, Tiglath-pileser seized the throne (the eponym list gives the date as 13th of Ayaru [April-May], probably 745 B.C.). Since he does not give his ancestry in any of the extant inscriptions, as is customary, it would appear that he was not of royal lineage.

In the Babylonian King List A the name *Pulu* appears as king before *Ululai* (Shalmaneser) and *Marduk-apluiddin* (Merodach-baladan) (cf. Rogers *Cuneiform Parallels*, p. 202). Thus the name "Pul" in 2 K. 15:19 is explained: it was the Babylonian throne-name of Tiglath-pileser. In 1 Ch. 5:26 we should therefore read, "And the God of Israel stirred up the spirit of Pul king of Assyria, *even* [not *and*] the spirit of Tiglath-pilneser king of Assyria, and *he* [note the singular subject] carried them away. . ." The form found in Chronicles, Tiglath-pil*n*eser, may be a dialectal variant of a later period, or possibly a corruption (but it occurs also in 1 Ch. 5:6 and 2 Ch. 28:20). The form in Assyrian and Aramaic supports "pileser" without *n*.

Tiglath-pileser's first campaign (744 B.C.) was against Urartu, which was in the process of nibbling away northern Assyrian territory. Then he turned toward the west. It was probably at this time that Tiglath-pileser captured

Tiglath-pileser III receiving homage from a defeated warrior. A relief from a palace at Nimrûd, 745-727 B.C. (The Detroit Institute of Arts, Founders Society Purchase, Ralph Harmon Booth Fund)

portions of the northern kingdom of Israel (2 K. 15:29), and Menahem of Israel paid tribute (2 K. 15:19f.). Tiglath-pileser listed among those whom he laid under tribute Raṣunu of Aram (Rezin), and Menihimmu of Samerina (Menahem of Samaria, 752-742) (*ARAB*, I, §772; in *CAH*², III/1, 412ff. Rezin is called "Rakhianu" without explanation; the cuneiform character read *ṣun* in *ra-ṣun-nu* is composed of the signs *ḫi* and *a*, hence the name could be read *ra-ḫi-a-nu* — but the Judeans apparently heard the word pronounced in such a way that they consistently rendered it *r'ṣîn* in 2 Kings and Isaiah).

In 739 Tiglath-pileser conducted a campaign in Ulluba (near Bitlis, close to the source of the Tigris River) in an attempt to strengthen his northeastern border, and that was the occasion for the Syrian states to attempt to loosen their Assyrian bonds. The sequence of events is not entirely clear, but it seems that Unqi led a number of other small states, including "nineteen districts of Hamath" (*ARAB*, I § 770) in what the Assyrian king regarded as forgetting "the oath sworn to me." One of the leaders mentioned is "Azriyau of Yaudaya" (*ARAB*, I, § 770; *ANET*, p. 282), sometimes identified as Azariah of Judah (790-740, including coregencies; he is also known as Uzziah), despite the difficulty of waging a campaign over such a great distance (cf. *BHI*, 3rd ed., p. 268, and H. Tadmor, "Azriyau of Yaudi," *Scripta Hierosolymitana*, 8 [1961], 232-271). Some scholars have returned to the conclusion of H. Winckler (*Altorientalische Forschungen*, 1 [1897], 1ff.) that this was a little-known king of a small state (cf. *CAH*², III/1, 410f. and references in the footnotes thereto), possibly to be identified with Sam'al, which in inscriptions is also called *y'dy* (cf. Panammu and Barrakib inscriptions from Zenjirli, in G. A. Cooke, *Text-book of North Semitic Inscriptions* [1903], pp. 159-186; Tiglath-pileser is named in texts 62 and 63; see also *KAI*, nos. 214-221; Tiglath-pileser is named in nos. 215-17).

Tiglath-pileser reorganized north Syria, forming two larger provinces, and instituted (or enlarged upon) the plan of deporting populations (*ARAB*, I, § 770). Then he once again turned to his northern borders with a campaign in Urartu and Nairi. The record increasingly contains references to peoples that he carried off, and places that were resettled with the displaced persons (§ 775). But the Aḫlamē were again troublesome, and after a campaign against the Philistines in 734, he turned his attention to Damascus (733-32). According to the biblical account, Rezin of Damascus and Pekah of Israel waged war against Ahaz of Judah (2 K. 16:5), apparently in an effort to force him into an alliance against Tiglath-pileser. At that time Ahaz was about twenty and had recently become coregent with Jotham (cf. *NBC* [1970], p. 323). Ahaz went to Damascus to solicit his help (16:7), becoming tributary to Assyria (v. 8). Tiglath-pileser lists *Yauḫazi* (Jehoahaz = Ahaz) of Judah among those who paid tribute (*ARAB*, I, § 801; *ANET*, p. 282). Of the fall of Damascus (732) and the death of Rezin we have only the biblical account (2 K. 16:9), but it fits with other details in Tiglath-pileser's annals. The Bible indicates that Hoshea made a conspiracy against Pekah, killed him, and took over the throne of Israel (2 K. 15:30). In a fragmentary text, the Assyrian king records that all the people of *Bit-Ḫumria* (the House of Omri, Israel) and their goods he carried off, *Paqaḫa* (Pekah) their king they deposed, and *Ausi'* (Hoshea) he placed over them as king (*ARAB*, I, § 816; *ANET*, pp. 283f.). There are obvious problems in harmonizing the accounts, but basically they are in agreement.

Babylon was relatively quiet during the early part of the reign of Tiglath-pileser, hence he was able to deal with problems in the north and east and in the west. But trouble was brewing, and finally civil war broke out when Nabû-nāṣir (Nabonassar, 747-734) died. He was succeeded by his son Nadinu (Nabu-nadin-zer), who was killed in the revolt after a reign of two years. Nabû-šum-ukin, a rebel, seized the throne, but after a reign of one month and 12 days, Ukīn-zēr (Nabû-mukīn-zēr) seized the throne. Tiglath-pileser moved quickly, placed kings, including Merodach-baladan, under tribute. In 729 he offered sacrifices to Marduk, and took the throne as king of Babylon (*ARAB*, I, § 810; Babylonian Chronicle 1.23). Accordingly, the Babylonian King List A lists him, under the name Pulu, as reigning for two years (728-727), following the reigns of Nabû-šum-ukin and Ukīn-zēr. He was the first

Assyrian king to be called king of Babylon since Tukulti-Ninurta I in 1234 B.C. The Babylonian Chronicle puts the death of Tiglath-pileser in the month of Tebeṭu (December-January) of his second year (1.24; *Cuneiform Parallels*, p. 209), and on the twenty-fifth of the same month, Shalmaneser took his seat on the throne in Assyria.

Tiglath-pileser built his palace at Calah (Nimrûd). Excavations at this site have recovered reliefs, including those that portray the king himself in various activities. According to A. L. Oppenheim, it was the first palace to be built in a new style introduced from Syria (*IDB*, IV, 642).

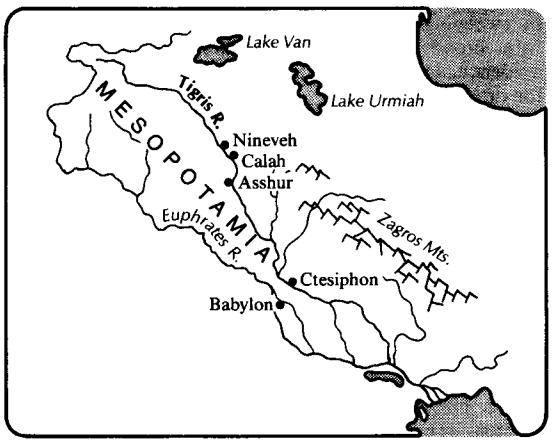
TIGRIS tī'gris [Heb. *ḥiddeqel*; Gk. *Tigris, Tigrēs* (Dnl. 10:4) < Old Pers. *Tigrâ*–'arrow,' originally < Sum. idiglat/idigna–'ever-flowing river,' through Assyr. *i-di-ig-na* or *i-di-ig-lat*]; AV OT HIDDEKEL. The well-known river of eastern Iraq which, together with the EUPHRATES to the west, enclosed "the land between the rivers," MESOPOTAMIA. Gen. 2:14 lists it among the four rivers that flowed from the Garden of Eden. On its banks Daniel received a vision of Israel's fortunes in the latter days (Dnl. 10:4). It is also mentioned in the Apocrypha (Tob. 6:1; Jth. 1:6; Sir. 24:25). The English name follows the Greek transliteration of the Old Persian name, but the Hebrew word derives from the Assyrian and Sumerian cognates. According to Sumerian mythology, Enki, god of the primeval ocean, filled the Euphrates and the Tigris with water and stocked them with fish.



The Tigris originates in the melting snows of the Taurus Mountains in eastern Turkey. (*See* color plate 20.) It flows SE through 480 km. (300 mi.) of mountain gorges and lakes (even underground at one point), then down into the highlands of northern Mesopotamia. Its steep, straight descent makes for a very swift current, hence its Persian name "arrow." Four tributaries from the Zagros Mountains to the east feed it on its 1850-km. (1150-mi.) journey to the Persian Gulf: the Greater Zab, the Lesser Zab, the Adhaim, and the Diyâlā. It passes through three distinct terrains: the river steppes of the north, the broad alluvial plain itself, and the marshy delta in the south. Although today it joins the Euphrates 190 km. (120 mi.) inland to form the Shaṭṭ el-'Arab, in antiquity both rivers emptied directly into the Persian Gulf several miles apart (Pliny *Nat.hist.* vi.31). Earlier scholars thought that centuries of silt deposits had extended the coastline further S than in biblical times, but recent studies suggest that a rise in gulf sea level has probably buried the ancient coastline and created a new one further inland.

The Tigris was the bloodstream that nourished Mesopotamian civilizations. When peasants from the mountain valleys to the east first arrived on the plain (*ca.* 5000 B.C.), they found a very fertile carpet of red-brown loam that had been laid down over centuries by the silt-laden Tigris. Harnessed by a remarkable system of dikes and canals, the Tigris produced extraordinary harvests of barley and wheat on the plain and dense, date-laden palm groves in the delta marshes. Its waters also offered an abundant harvest of fish to enrich ancient diets, as attested by the bas-reliefs of many ancient buildings. The Tigris served as a highway S for boats transporting raw materials (copper, iron, silver, wooden beams) from Asia Minor. Merchant caravans and marching armies washed in and drank from the river. *Ca.* 689 B.C. Sennacherib led a successful amphibious assault on Babylon after sailing down the Tigris from Nineveh to Ctesiphon (Opis).

Unfortunately, the benevolent Tigris can turn into an unpredictable tyrant. Swollen by the spring run-off of mountain snows, from March to May the river violently overflows its banks and floods the plain with forty times its normal volume of water. A major cloudburst in the north and east can raise the water level by 6 m. (20 ft.) in several hours. Such outbursts have reshaped the river's course over the centuries and forced the relocation of royal cities and peasant fields alike. Such an upheaval may underlie the flood accounts of the Bible (Gen. 6-9) and other ancient literatures. The Tigris thus thrust upon its subjects a twin dilemma: they needed to protect themselves from its excess in spring and to conserve its scarcity in summer. Small wonder, then, that Sumerian tablets view mankind as a powerless slave of higher powers.

A voyage down the Tigris takes one past the capitals of ancient empires. On its banks stood Nineveh, Calah, Dūr-Šarrukin, and Asshur: the Assyrian capitals from which successive kings launched military campaigns, including those against Israel and Judah. Further S (below modern Baghdad) were Seleucia, the Greek capital of western Asia built in 312 B.C., and Ctesiphon, the capital of the Parthian empire in the West (*ca.* 2nd cent. B.C.).

TIKVAH tik'və [Heb. *tiqwâ*–'hope'; Gk. Apoc. B *Thokanos*, A *Thōkanos*, Lucian *Thekoue*]; AV Apoc. THEOCANUS (1 Esd. 9:14); NEB Apoc. THOCANUS; **TOKHATH** tok'hath [Heb. *Q toqhaṯ, K tôqʿhaṯ*] (2 Ch. 34:22); AV TIKVATH; NEB TIKVAH.

1. The father-in-law of Huldah the prophetess (2 K. 22:14; 2 Ch. 34:22).

2. The father of the Jahzeiah who opposed Ezra's plan for dealing with the problem of intermarriage with foreign women (Ezr. 10:15; 1 Esd. 9:14).

TILES. The RSV translation of Gk. *kerámoi* ("clay," "roof tiles") in Lk. 5:19 (AV, NEB, "tiling"); *see* HOUSE III.E. The AV and NEB use "tile" to translate Heb. *lᵉḇēnâ* in Ezk. 4:1, but the term is more correctly rendered "brick" by the RSV (*see* BRICK).

TILGATH-PILNESER til'gath pil-nē'zər. *See* TIGLATH-PILESER.

TILL; TILLAGE. To work the soil by breaking it up, sowing seed, and raising crops. In the AV and RSV "till" represents the Hebrew verb *ʿābaḏ*, "work, serve" (e.g., Gen. 2:5, 15; 3:23; 4:12; Prov. 12:11; 28:19). "Tillage" in the AV can denote either the operation of tilling the soil (Heb. *ʿăḇôḏâ*, 1 Ch. 27:26; Neh. 10:37 [MT 38]), or ground that has been broken up and cleared (Heb. *nîr*, Prov. 13:23).

See AGRICULTURE.

TILON tī'lon [Heb. *tîlôn*]. Son of Shimon; head of a family of the tribe of Judah (1 Ch. 4:20).

TILTERS [Heb. part. of *ṣāʿâ* (Jer. 48:12); AV WANDERERS; NEB "men to tilt the jars." Workers in a wine cellar who pour wine from one vessel to another. The metaphor warns that some day Moab, like Judah, will suffer deportation — an experience that Moab had been spared until Jeremiah's time (cf. v. 11).

TIMAEUS ti-mē'əs [Gk. *Timaios*] (Mk. 10:46). A person known only as the father of the blind beggar BARTIMAEUS.

TIMBREL [Heb. *tōp*–'timbrel, tambourine'] (Ex. 15:20; Jgs. 11:34; 1 S. 18:6; Ps. 81:2 [MT 3]; 149:3; 150:4; Isa. 5:12; 24:8; 30:32; Jer. 31:4); AV also TABRETS; NEB TAMBOURINE, TABOR, JINGLES (Jer. 31:4); [part. of *tāpap*–'beat (the timbrel)'] (Ps. 68:25 [MT 26]); NEB TAMBOURINE; **TAMBOURINE** [Heb. *tōp*] (Gen. 31:27; 1 S. 10:5; 2 S. 6:5; 1 Ch. 13:8; Job 21:12); AV TABRET, TIMBREL; NEB also DRUM.

Hebrew *tōp* is an onomatopoetic word for a percussion instrument (*see* MUSIC II.D.1) often used by women while singing and dancing (e.g., Ex. 15:20; Jgs. 11:34; 1 S. 18:6; Jer. 31:4; cf. *tāpap* in Ps. 68:25 [MT 26]). The instrument was used to accompany festive occasions (Gen. 31:27; 2 S. 6:5; 1 Ch. 13:8; Job 21:12; Isa. 5:12; Jer. 31:4), victory celebrations (Ex. 15:20; Jgs. 11:34; 1 S. 18:6), and the worship of the Lord (Ps. 81:2 [MT 3]; 149:3; 150:4).

In Job 17:6 the AV (following Rashi) has "tabret" (NEB "portent") for the hapax legomenon Heb. *tōpeṯ*, which the RSV more accurately renders "spit" (cf. 30:9f.; see N. C. Habel, *Book of Job* [*OTL*, 1985], pp. 266f., 277). In Ezk. 28:13 the meaning of MT *tuppeyḵā* (AV "thy tabrets"; RSV "your settings"; NEB "your jingling beads") remains obscure, and various emendations have been proposed (see comms.).

See *TWOT*, II, 978. G. L. K.

TIME. Study of the biblical words for "time" out of their contexts will not yield a scriptural doctrine of time. Biblical teaching on time (or any given subject) is based not on the linguistic method of treating words in isolation, but upon direct biblical statements and word usage.

Sweeping conclusions have been drawn from supposed contrasts between Gk. *kairós* (time as event) and *chrónos* (time as duration), or between *kairós* and *aiōn* (age), and from the presence or absence of certain key terms in one of the Testaments. Such an approach may distort the actual lexical data and mislead the reader. Scholars are tempted to display a very tidy concept of time, which Scripture does not justify, in order to contrast it sharply with the supposed Greek conception, which is generally distorted in the opposite direction.

I. Biblical Words for Time.–The OT has a wealth of words for time units (hour, day, night, week, month, year) but no abstract term for "time" like Gk. *chrónos*. Hebrew, however, can express the same idea with its own grammatical syntax and terms. Heb *ʿēṯ*, a frequent term in the OT (296 times), expresses a point in time, whether of instant or longer duration (Ex. 9:18; 2 S. 11:1). It corresponds quite closely with Gk. *kairós* in the NT, which can also denote a point in time or a short duration (the LXX translates *ʿēṯ* by *kairos* 162 times). Heb. *môʿēḏ* has more the force of a fixed appointment or appointed date ("time," Ex. 9:5; "appointed [feasts]," Lev. 23:2). More flexible is Heb. *yôm* "day," which in the singular denotes a general time ("on the day when . . . ") and in the plural an extended period. "All the days" really means "always" or "forever"; Heb. *ʿôlām* is used in the same sense. Thus biblical Hebrew possesses numerous terms to indicate linear, chronological time. Neither the OT nor the NT contrasts temporality with timelessness; instead Scripture depicts God as the Lord of time who acts in time.

In the NT Gk. *chrónos* denotes a measurable time interval, either long or short (Mt. 25:19; Rev. 20:3). Gk. *kairos* is most often paired and contrasted with *chrónos*. Basically the contrast is accurate, for *kairós* does usually mean a fixed time or opportunity ("opportunity," He. 11:15; Acts 24:25). But it can also, like *chronós*, denote a longer period ("periods," Acts 17:26). Thus the two terms can overlap and serve as synonyms. Gk. *aiōn* consistently indicates time duration, referring to segments of time in the world's history ("age," Mt. 28:20; "world," 2 Cor. 4:4). *Aiōn* also refers to the age that Christians await, i.e., the messianic age (Eph. 1:21; 2:7), as well as eternity, an unlimited duration of time (e.g., "for ever," Jn. 6:51; Rom. 1:25; 11:36; etc.). The NT uses Gk. *hēméra*, "day," much as the OT uses Heb. *yôm* (*see* AGE; ETERNITY; DAY).

II. Faulty Interpretation.–Before attempting to construct the biblical conception of time, one must clear the way by sweeping aside the various theories of time that arise from broad generalizations on the basis of insufficient evidence, and from illegitimate usage of the biblical words for time.

(1) One category consists of careless or misleading statements. Such statements include these: "The OT has no word for abstract time"; "biblical time is linear, while Greek time is cyclic"; "the biblical concept of time is concrete, the Greek is abstract"; "God is outside time"; "eternity is timeless." Such affirmations are not biblically based. Although Hebrew has no word comparable to Gk. *chrónos*, this does not mean that Hebrew thought lacks a concept of chronological time. On the contrary, the OT expresses this idea continually in its numerous genealogies, its historical narratives, and its special expressions (see I above). Certainly biblical time is usually linear, but the cyclic idea is also present (e.g., Ecclesiastes; see Barr, pp. 137-143). Similarly, while some Greek authors had a cyclic view, many of them used the same terms in linear ways. One must avoid making the contrast sharper than it is. That God is called eternal (Rom. 16:26) does not imply that He is somehow timeless, as though time is real only to humans and not to Him. God is the Lord in the past, present, and future (Rev. 1:4), but this does not mean He exists in all three at once! Pantheism makes history illusory, but biblical theism does not.

(2) The contrast between *kairós* and *chrónos* was vastly overstated by John Marsh, for the two terms, as shown above, overlap in actual usage. The duality that Marsh thought he found compelled him to ignore part of the evidence. His bias against chronological time is inexplicable in the light of extensive OT passages that establish this very concept. The number of terms in either Testament simply does not equal the number of thought nuances

possible. The thought patterns of the Bible are discovered by word usage and not by word occurrence.

(3) O. Cullmann also erred in his contrast between *kairós* and *aiōn*. Here too the absolute contrast is inappropriate. Although *aiōn* always denotes a period and never a point in time, and *kairós* usually denotes a fixed time, *kairós* can also denote a period. The antithesis is therefore artificial, never made in Scripture. Cullmann confused his readers by using *kairós* in an untranslated, transliterated form, thereby giving the word new contexts and nuances in their newly found associations. A single word like *kairós* may convey many meanings (polysemy); thus it is dangerous to select the "real meaning" and exclude the rest. Cullmann may have been correct in interpreting *aiōn* as unlimited time duration and not timelessness, but this is a subtlety that Scripture does not discuss. It is certainly false to charge Plato with using *aiōn* only to mean timelessness, for he often employed the word in the sense of temporal duration.

J. Barr exposed these fallacies and showed that most of them go back to Orelli's work (1871). Barr's own book offers the beginning of a sound linguistic investigation, which is the only possible basis for the biblical concept of time.

III. Biblical Conception of Time.–Primarily, the Bible views time as the limited succession of days in which human experience of the world flows. Human beings are allotted their appointed span of time; the Lord gives, and He takes away (Job 1:21). The steady reduction of years recorded for the lives of the earliest human beings (Gen. 5) indicates the effects of human sin on human vitality. Long life is considered a divine blessing, but sin and death increase life's vanity and transitoriness. Ultimately, God controls human destiny (Ps. 31:15; 139:16). Through sin, history has become the record of the activities of fallen human beings. Even before the fall human life was temporal, however, for the days of history began when God created the world. Again, even after the final triumph of God in history, the time line will continue into the ages to come. Sin did not make human beings temporal, and redemption does not make them immortal (1 Tim. 5:15f.), for nothing in Scripture suggests that in eternity people will not experience the passage of time. Even in their final, glorified state, human beings will still be creatures.

God displays His redemptive grace toward lost humanity through the medium of history. His sovereignty over history (Eph. 1:11) is seen in the historical acts of redemption (Isa. 46:8-10). In the election of Abram God set in motion a historical salvation designed to bless all the families of the earth (Gen. 12:1-3). His actions form a progressive unity proceeding toward His final goals. In "that day," according to the prophets, the Lord will display His righteousness and consummate history. Although cyclic notions of time do occur in the OT, the latter days, despite their similarity to the lost Paradise, have a final character. History does not issue in a new cycle that just repeats the same old story.

Divine ingression into history took place most dramatically in the Incarnation. In this event the hour had come, the time was fulfilled (Gal. 4:4; Mk. 1:15). Jerusalem was punished for not recognizing the "time of [its] visitation" (Lk. 19:43f.). The religious leaders had failed to interpret correctly the "present time" (Lk. 12:56). Jesus' coming, and more particularly the hour of His crucifixion (cf. Jn. 12:27), was fixed by the Father, who alone has this authority (Mk. 13:32; cf. Acts 1:7). At that point the "once for all" act of divine reconciliation occurred (He. 9:26). When Christ's work was accomplished, He sat down at the right hand of God to wait until His enemies are made a stool for His feet (10:12f.). Only after Jesus had been glorified was the Holy Spirit poured out (cf. Jn. 7:39). These facts reveal the strict chronological order within which God acts. Nowhere do the Scriptures give the impression that the time is an illusion, an idea in the mind of God, for He respects its movement and does not violate it. Much evidence demonstrates that God foreknows and predetermines events in history, but none of it suggests that He sees them happening all at one time. One must conclude that time is real to both humanity and God.

The Christian Church exists "between the times," in the interval between the Resurrection and the Parousia. It trusts the Lord for redemption accomplished, looks to the Spirit for the redemption applied, and waits eagerly for redemption consummated (Phil. 3:20f.; 1 Jn. 3:2). The call of the gospel is to heed the urgency of the hour (He. 3:7-9; 2 Cor. 6:2). The calling of the believer is to redeem the time (Eph. 5:15f.) and press toward the prize (Phil. 3:14). God's mighty act in Christ has opened new possibilities for this period of history (Col. 1:26). The fulness of time dawned at Bethlehem (Gal. 4:4), but the fulness of all the times awaits manifestation (Eph. 1:10).

God is the Lord over time and history, but not in a philosophical sense which would mean that He negates time. He is Lord because He created the succession of days (Gen. 1) and supervises their flow. His existence is limitless, and thus a thousand years in His sight are as yesterday (Ps. 90:4). Time, in the sense of days and nights determined by the astral bodies, will pass away with sun and moon (Isa. 60:19). Thus the mode of experiencing time will change (no more night, Rev. 21:25), but time is expected to continue (Eph. 2:7). God's sovereignty over time does not lie in a metaphysical timelessness but in His ability to influence and bring the whole process to His own saving ends.

Thus one ought to be very cautious about stressing the unique biblical view of the nature of time. When the NT preaches Christ it points to what happened in history, not to a theory of time. Making a distinction between Hebraic and Greek views of time was not a concern of biblical writers. The biblical gospel, however, did eventually have a profound effect on the pagan mind in this matter, for the doctrine of creation gave considerable significance to the natural order and human history. The Incarnation revealed the divine concern with time-space history and provided a redemption acted out in flesh and bone. Eschatology in turn offered future hope and an escape from despair. In the last analysis, therefore, the biblical view of time is not to be culled simply from the scriptural words for time, but is found to be embedded deeply in the nature of the gospel itself.

C. H. PINNOCK

TIME, LAST [Gk. (*en*) *kairṓ eschátṓ* (1 Pet. 1:5), (*ep'*) *eschátou toú chrónou* (Jude 18)]; NEB END OF TIME, FINAL AGE; **LAST DAYS** [Gk. (*en*) *eschátais hēmérais* (Acts 2:17; 2 Tim. 3:1; Jas. 5:3), (*ep'*) *eschátou tṓn hēmerṓn* (He. 1:2), (*ep'*) *eschátōn tṓn hēmerṓn* (2 Pet. 3:3)] NEB also FINAL AGE (OF THIS WORLD), AN AGE THAT

IS NEAR ITS CLOSE (Jas. 5:3); **LATTER DAYS** [Heb. *'aḥ^{a}rîṯ hayyāmîm* (Nu. 24:14; Dt. 4:30; Isa. 2:2; etc.), *'aḥ^{a}rîṯ* (Job 8:7; 42:12); Aram. *'aḥ^{a}rîṯ yômayyā'* (Dnl. 2:28)] AV also LATTER END, LAST DAYS; NEB DAYS TO COME, END, FUTURE DAYS (Ezk. 38:16), END OF THIS AGE (Dnl. 2:28); **LATTER TIME** [Heb. (*'eṯ 'aḥ^{a}rôn*] (Isa. 9:1 [MT 8:23]); AV AFTERWARD; NEB SECOND (INVADER).

I. OT Terms.–The expression "latter days" (usually *'aḥ^{a}rîṯ hayyāmîm*) is used prophetically to describe a time that is future from the writer's perspective. The meaning of the phrase varies with the context, but it commonly designates the messianic age that is to come (BDB, p. 31). In Job 8:7 and 42:12 *'aḥ^{a}rîṯ* refers to the latter part of Job's life — thus the very near future.

Often "latter days" has a double meaning: it refers both to events happening in the nearer future and also to the messianic age. In Nu. 24:14 its immediate reference is to King David's defeat of Moab some four hundred years after Balaam's prophecy; but the prediction in v. 17 of a star that would come out of Jacob suggests that the "latter days" must refer ultimately to the messianic era. In Ezk. 38:16 the phrase, used in a prophecy against Gog, should probably be understood as referring to Antiochus Epiphanes's attack on Jerusalem in 167 B.C.; but, since Gog and Magog are also mentioned in Rev. 20:7-9, its ultimate reference is to the end-time just before the Second Coming. When Daniel told King Nebuchadnezzar that God had made known to him "what will be in the latter days" (Dnl. 2:28), he was referring to a succession of world powers that would arise over the next five hundred years and would be crushed by the Kingdom of God to be established in the messianic age. In 10:14 the phrase refers to events that would climax in the persecution under Antiochus Epiphanes in the 2nd cent. B.C., although many interpreters understand these events as culminating in the appearance of the antichrist at the end of the NT era.

In the other instances "latter days" refers to the messianic era of the distant future, in which God's plans for His people will reach their final goal: Dt. 4:30; Isa. 2:2; Jer. 23:20; 30:24; 48:47; 49:39; Hos. 3:5; Mic. 4:1.

The expression "latter time" (*hā'aḥ^{a}rôn*) occurs only in Isa. 9:1, where it refers to the time of Christ.

See also ESCHATOLOGY II.A.

II. NT Terms.–"Last days" (usually [*en*] *eschátais hēmérais*) designates the NT era in which believers are now living. Whereas the OT expression "latter days" commonly pointed to the messianic age that lay in the future, the NT believers recognized that the predicted "latter days" had arrived and that they were now living in the "last days." Peter made this clear on the day of Pentecost (Acts 2:17), and the author of Hebrews explained that God's final revelation in Christ has come to us "in these last days" (He. 1:2). Although the RSV renders Jas. 5:3 "you have laid up treasure for the last days," both the NEB and the NIV change "for" to "in," which is probably the better rendering; on the basis of this translation, "last days" means the NT era. The "last days" in which slanderers and other evildoers will come, according to 2 Tim. 3:1-5, must mean the days in which Timothy is living, since he is told to "avoid such people" (v. 5; cf. also 2 Pet. 3:3). It is significant, however, that although the NT writers referred to the present era as the "last days," the "last day" (*eschátē hēméra*) is still to come (Jn. 6:39; etc.; *see* DAY, LAST).

The expression "the last time" occurs twice, with different meanings. In Jude 18 it designates the NT era: "in the last time [*ep' eschátou toú chrónou*] there will be scoffers." In 1 Pet. 1:5, however, it describes the time of the final glorification of believers in the resurrection: "a salvation ready to be revealed in the last time" (*en kairṓ eschátṓ*).

Bibliography.–J. Barr, *Biblical Words for Time* (*SBT*, 1/33; 1962); O. Cullmann, *Christ and Time* (Eng. tr., 2nd ed. 1964); S. J. DeVries, *Yesterday, Today and Tomorrow* (1975); J. Marsh, *The Fulness of Time* (1952). A. A. HOEKEMA

TIME, (TWO) TIMES, AND HALF A TIME [Aram. *'iddān w^e'iddānîn úp^{e}lag 'iddān* (Dnl. 7:25); Heb. *mô'ēḏ mô'^{a}ḏîm wāḥēṣî* (12:7); Gk. *kairós kaí kairoí kaí hḗmisu kairoú* (Rev. 12:14)]; AV TIME AND TIMES AND THE DIVIDING OF TIME (Dnl. 7:25), TIME, TIMES, AND A HALF (12:7), TIME, AND TIMES, AND HALF A TIME (Rev. 12:14); NEB TIME AND TIMES AND HALF A TIME (Dnl. 7:25), TIME, TIMES, AND A HALF (12:7), THREE YEARS AND A HALF (Rev. 12:4).

I. In the OT.–The RSV translates the OT instances of this expression by "time, two times, and half a time" (most other versions have simply "time, times, and half a time"). In both the Aramaic and the Hebrew the second word (*'iddānîn* and *mô'^{a}ḏîm*, respectively), as pointed in the MT, is plural rather than dual. Most interpreters, however, understand it as a dual ("two times"). One reason for this judgment is that the dual form of nouns became obsolete in later Aramaic, so that the Masoretes would have pointed the word as a plural even if it was originally a dual. The consonantal text of this word in both the Aramaic and the Hebrew could be read either as a dual or as a plural. The RSV rendering, therefore, is probably correct.

The expression is commonly understood as meaning "a year, two years, and half a year" — thus three and a half years. The author of Daniel, however, does not use the word "year" but the word "time." It is therefore probably better to understand the expression as meaning a period of time somewhat analogous to a year, followed by a period that is twice as long, followed by a period that is half as long. It points to a future time of suffering and trial for the people of God which will be intense but of limited duration.

The expression in Dnl. 12:7 is commonly thought to describe the oppression of the Jews under Antiochus Epiphanes from 168 to 165 B.C., a period of approximately three and a half years. Since, however, Antiochus Epiphanes is a type of the antichrist who is to appear before Christ's second coming, the expression in both Daniel passages (7:25; 12:7) applies also to the future oppression of God's people by the antichrist. The words "half a time" then refer to a sudden end to this oppression; cf. Jesus' words in Mt. 24:22: "for the sake of the elect those days [of tribulation] will be shortened."

The dispensational interpretation understands the expression as pointing to the "great tribulation" of the people of Israel that will occur during the second half of the seven-year tribulation period immediately before Christ's return. This understanding is derived from Dnl. 9:27, "and for half of the week he shall cause sacrifice and offering to cease" (*see* SEVENTY WEEKS).

II. In the NT.–In Rev. 12:14 the RSV renders *kairós kaí kairoí kaí hḗmisu kairoú* by "time, and times, and half a time." The expression is obviously taken from Dnl. 7:25 and 12:7, having by this time become a "conventional symbol for a limited period of unrestrained wickedness" (*NIV Study Bible* [1985], p. 1938). The expression refers to the terrible time of persecution by the antichrist, who under the figure of the beast is said in Rev. 13:5 to exercise authority for forty-two months — an obvious parallel to "time, times, and half a time," or approxi-

mately three and a half years (see also 11:2). Rev. 12:14 states that the woman (symbolizing the messianic community) will be nourished and protected in the wilderness (a place of refuge) during the antichrist's cruel reign. The same point is made in v. 6, which says that the woman will be nourished in the wilderness for 1260 days — another parallel expression (cf. 11:3). It should also be noted, however, that some interpreters understand "time, times, and half a time" in 12:14 as referring to the entire NT era.

According to the dispensational interpretation, "time, times, and half a time" in Rev. 12:14 means the second half of Daniel's seventieth week — a time of terrible suffering for the people of Israel, inaugurated when the antichrist breaks his covenant with Israel in the middle of the seventieth week (*see* SEVENTY WEEKS).

A. A. HOEKEMA

TIMES, OBSERVERS OF. *See* MAGIC II.A (5).

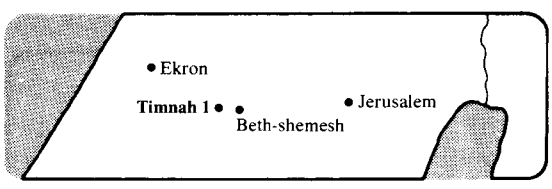
TIMNA tim'nə [Heb. *timna*ʿ; LXX *Tamna*]; AV also TIMNAH (Gen. 36:40; 1 Ch. 1:51).

1. Sister of the Horite clan chief Lotan (Gen. 36:22; 1 Ch. 1:39). She became the concubine of Eliphaz the son of Esau, and the mother of Amalek (Gen. 36:12). 1 Ch. 1:36 lists Timna as one of Eliphaz's sons rather than as his concubine. H. G. M. Williamson (*1 and 2 Chronicles* [*NCBC*, 1982], p. 44) has suggested the following explanation for this discrepancy: "Perhaps . . . clarity has fallen victim to compression: the names alone were loosely attached to the preceding list (note that there is an 'and' before Timna in the MT), with the Chronicler . . . relying on his readers' knowledge of Genesis for the full position."

2. A clan chief of Edom (Gen. 36:40; 1 Ch. 1:51). He may have been a son of Eliphaz (1 Ch. 1:36; but see 1 above).

TIMNAH tim'nə [Heb. *timnâ*–'allotted portion']; AV also TIMNATH, THIMNATHA; NEB also TIMNATH. Since Heb. *timnâ* means "portion, allotment," the name was not uncommon, and a tendency to find either too many or too few with this name must be carefully controlled by the contexts.

1. A town identified with Tell el-Baṭâshī, a 40-dunam (10-acre) mound situated in the fertile alluvial plain of the Sorek valley about 7 km. (4 ½ mi.) W of Beth-shemesh (Tell er-Rumeileh). The description of Judah's northern border in Josh. 15:10f. identifies Beth-shemesh, Timnah, and EKRON (Tell el-Muqennaʿ, about 14 km. [9 mi.] W of Beth-shemesh) along that line. Archeological evidence seems to corroborate the identification of Timnah with Tell el-Baṭâshī, the only important mound between Beth-shemesh and Ekron.



Archeological data and the square shape of the mound suggest that Timnah was established as a fortress during the M.B. period (18th-17th cents. B.C.), probably to control traffic along an important road passing from Yabneh near the Mediterranean coast, through Ekron, and on toward Beth-shemesh and Jerusalem to the east. A broad moat and massive earthen ramparts were part of a sophisticated fortification system that not only protected the early residents but also established the town's future shape and size.

The earliest biblical reference to Timnah appears in the account of Judah's illicit relationship with Tamar (Gen. 38:12-14). Although this Timnah has been identified with Khirbet Tibneh, an identification with Tell el-Baṭâshī is both geographically and chronologically possible.

Five distinct layers of Canaanite settlement during the L.B. period (15th-13th cents. B.C.) have been identified at Timnah. The first four towns were destroyed by intense fire, perhaps as the result of conquests or inter-city rivalries during the period of political instability reflected in the AMARNA TABLETS. This series of destruction presumably exhausted Timnah's resources, and so the final Canaanite settlement was poorer. While evidence of violent destruction is lacking, Timnah suffered a decline and possible desertion toward the end of the L.B. period.

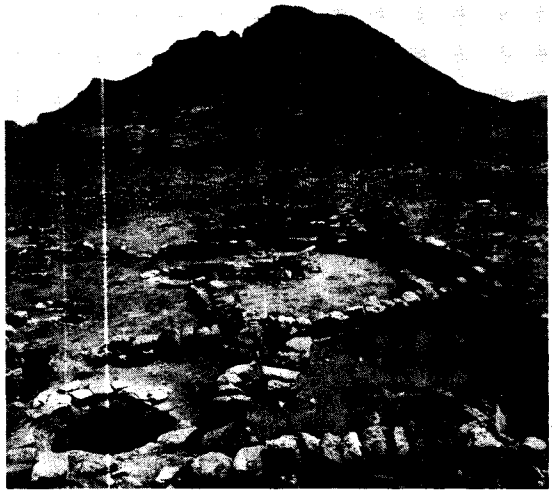
During the 12th-11th cents. B.C. the Philistines occupied the town (Jgs. 14:1f., 5). They appear to have reused Canaanite structures, modifying the inner plans and repaving the floors; their building technique is characterized by mud-brick construction on stone foundations. Architectural and cultural remains suggest that a thriving Philistine town existed at Timnah during the E.I. period.

During the united monarchy (10th cent. B.C.) an Israelite town was built on the ruins of the Philistine city. Archeological evidence suggests that the town was not fortified apart from an outer belt of houses along the crest of the mound. Pottery finds indicate that Timnah was definitely a part of the united kingdom, a fact that justifies its mention in the list of the cities of Dan (Josh. 19:43). The town's demise may be attributed to Pharaoh Shishak's campaign during Rehoboam's fifth year. Following this destruction there seems to be a gap in the site's occupation until the early 8th cent. B.C.

Early in the 8th cent. B.C. a new, fortified city was built at Timnah, possibly in the reign of King Uzziah, who conquered part of Philistia and established cities there (2 Ch. 26:6). The town was protected by a massive fortification system that included a 4-m. (13-ft.) thick wall and a sophisticated composite gate similar to those at Dan, Megiddo, and Beer-sheba. A large collection of *lmlk* ("belonging to the king") jars has been recovered from a storage complex. Well known from other Judean sites, such jars have been dated to the time of King Hezekiah and Sennacherib's invasion in 701 B.C.

The presence of these royal storage jars implies Judean activity at Timnah before Sennacherib's attack. Archeological evidence is lacking for the biblical account of Timnah's capture by the Philistines during the reign of King Ahaz, Hezekiah's father (2 Ch. 28:18). Presumably Timnah was still under Philistine control after the time of King Ahaz, perhaps under the jurisdiction of the city-state of Ekron. Since King Hezekiah forced Ekron to join his revolt against the Assyrians, it is possible that he placed a Judean garrison at the heavily fortified town of Timnah. The *lmlk* jars provide mute evidence of Hezekiah's preparations for the war with Assyria and his attempts to supply troops stationed along his western frontier. The punitive Assyrian attack appears to have inflicted selective structural damage on the town. While the inner gate, the outer revetment wall, and the military storage complex were utterly destroyed, many of the private dwellings continued in use. Timnah soon was rebuilt and flourishing.

Following a major rebuilding, perhaps early in the 7th cent. B.C., Timnah continued to flourish to the end of the century. Since written sources about the city in this



Ruins of an ancient copper workshop at Timnah (ca. 13th cent B.C.) (W. Braun)

period are lacking, one can only speculate that during Josiah's reign Timnah belonged to the kingdom of Judah. A conflagration destroyed the residential quarter a few years after Josiah's death, perhaps during the fateful years after 609 B.C., when a series of Babylonian invasions devastated many sites in the coastal plain. Only an impoverished settlement existed at Timnah during the Persian period, its final occupation.

2. A city in the southern hill country of Judah, named in a list of ten cities allotted to the tribe of Judah (Josh. 15:57). Since it is named with other cities tentatively identified, it is to be located SE of Hebron (*LBHG*, p. 312). Owing to a tendency of *m* to shift to *b* and vice versa, it may be identified with Tibnah (*LBHG*, p. 123; cf. GIBEAH 1). Other scholars locate it 24 km. (15 mi.) W by S of Jerusalem, but this does not agree well with the location of other cities named in the context. It has also been identified with the Timnah in Gen. 38:12ff., but see 1 above.

3. Timnah in the Samson story (Jgs. 14:1ff.) has been discussed in connection with Timnah (Heb. *timnāṯâ*) and Ekron in Josh. 19:43, and the suggestion made that this should be read as Timnah of Ekron or Timnath-Ekron (*LBHG*, p. 312; cf. *GTTOT*, §§ 336, 607).

4. In Papyrus Anastasi I, a Timnat located north of Damascus in the Lebanese Beqa' is mentioned (*LBHG*, p. 183).

Bibliography.–*GTTOT*, §§ 314, 319, 336, 397, 607; *GP*, II, 481; *LBHG*, pp. 183, 312. W. S. LASOR

TIMNATH tim'nath [Gk. *Thamnatha*] (1 Macc. 9:50); AV THAMNATHA; NEB TIMNATH-PHARATHON. A city fortified by the Seleucid general Bacchides in 160 B.C., along with Jericho, Emmaus, Bethel, and other sites. It is identified with Khirbet Tibnah, a strategic site about 19 km. (12 mi.) NW of Bethel in the hill country of Ephraim, just N of Mt. Ga'ash.

According to Josephus (*Ant.* xiv.11.2 [275] Thamna was one of several cities from which Cassius, a conspirator in Julius Caesar's assassination, collected heavy tribute. John the Essene was the commanding officer of the province of Thamna in A.D. 66, when the First Jewish Revolt began (*BJ* ii.20.4 [567]; iii.3.5 [55]; cf. 1 Macc. 9:50f.). In the spring of 68 the province fell to the Romans under Vespasian (*BJ* iv.8.1 [443f.]).

See also TIMNATH-SERAH. R. K. H.

TIMNATH-HERES. *See* TIMNATH-SERAH.

TIMNATH-SERAH tim'nath sē'rə [Heb. *timnaṯ-seraḥ*; Gk. *Thamarcharēs, Thamnathsara, Thamnasachar*, etc.] (Josh. 19:50; 24:30 [LXX 31]); **TIMNATH-HERES** tim'nath hē'rez [Heb. *timnaṯ-ḥeres*; Gk. *Thamnathares*] (Jgs. 2:9). A town in the hill country of Ephraim. It is distinguished from the other localities named Timnah by the genitive *seraḥ*, "overhanging," which indicates that the town was built on the top of a steep declivity. Jgs. 2:9 reads *ḥeres*, which may mean "sun"; many scholars have considered this the original name, assuming that it was intentionally altered to avoid the implication of idolatry. But names like Beth-shemesh ("house of [the sun-god] Shemesh") remained unchanged, and thus it is more likely that *ḥeres* is a spontaneous metathesis, other examples of which include Har-heres (Jgs. 1:35) and *ša'ar ḥarsûṯ* ("gate of the declivity" [Jer. 19:2], rather than the RSV's "Potsherd Gate").

Joshua received Timnath-serah as an inheritance (Josh. 19:49f.); it became his own city and was reckoned to neither Ephraim nor Dan, the tribes whose territory bordered it. Samaria was similarly Omri's private city, and Jerusalem was "the city of David." The fact that Timnath-serah was Joshua's special domain (and later as his burial place) attests to his exceptional status as leader of all the tribes and is a strong argument against the recent theory that he was a "judge" only of Benjamin.

Samaritan and medieval Christian tradition looked for Timnath-serah in the neighborhood of Shechem, but it should instead be identified with Thamna (cf. Eusebius *Onom.* 70.20f.), which is TIMNATH. Thamna played an important role in later times. It was fortified by Bacchides in 160 B.C. (1 Macc. 9:50) and conquered by Cassius in 43 B.C. (Josephus *Ant.* xiv.11.2 [271-75]). It became the capital of a toparchy in Josephus's times (*BJ* iii.3.5 [51-55] and was of military importance (*BJ* ii.20.4 [567f.]); Vespasian occupied it in A.D. 68 (*BJ* iv.8.1 [440-45]).

Timnath-serah is identified with Khirbet Tibnah, 19 km. (12 mi.) ENE of Lod (Lydda) overlooking the deep valley of Wâdī Reiya. The sanctuary of Nebi Ṣaleh, slightly more than 1.5 km. (1 mi.) NE of it, perpetuates the tradition of Joshua's tomb. Six km. (4 mi.) E of Tibnah is a small village, Umm Ṣuffa, which is also called Kefr 'Ishu'a, "village of Joshua." The ancient road, much used in Roman times, goes from Antipatris to the main road between Jerusalem and Nablus; its passing through both Tibnah and Umm Ṣuffa explains the strategic importance of ancient Thamna.

TIMNITE tim'nīt [Heb. *timnî*] (Jgs. 15:6). The designation of Samson's father-in-law, a resident of TIMNAH (1).

TIMON tī'mən, ti'mōn [Gk. *Timōn*]. One of the seven chosen to relieve the apostles by attending to the poor of the church in Jerusalem (Acts 6:5). *See* SEVEN, THE.

TIMOTHEUS ti-mō'thē-us. An AV form of TIMOTHY.

TIMOTHY tim'ə-thē [Gk. *Timotheos*–'one who honors God']; AV also TIMOTHEUS.

1. An Ammonite leader who opposed Judas Maccabeus and was on several occasions severely defeated by him (1 Macc. 5:6-11, 34, 37-44; 2 Macc. 8:30, 32; 9:3; 10:24-38; 12:2, 10, 18-25). These battles took place *ca.* 165-163 B.C. According to 2 Macc. 10:37 Timothy was slain at Gazara after having hidden in a cistern; but in 12:2 a Timothy appears again as an opponent of the Jews. Some have suggested therefore that there were two Ammonite leaders named Timothy (see J. A. Goldstein, *II Maccabees* [*AB*, 1983], pp. 340, 395f.). Others believe that there was only one Timothy and that the discrepancy resulted from carelessness on the part of the author or final editor of 2 Maccabees. N. J. O.

2. An associate and traveling companion of the apostle Paul. Timothy is first mentioned in Acts 16:1, where he is called a disciple (Gk. *mathētēs*). This term means that he was a Christian. How he became a Christian is not clear. On the one hand Paul calls him his "beloved and faithful child" (1 Cor. 4:17) and addresses him as his "true [*gnēsios*] child in the faith" (1 Tim. 1:2), expressions that suggest that Paul, Timothy's spiritual father, was directly responsible for his conversion. Paul also states that Timothy had fully known the severe troubles that had plagued him on his first visit to Antioch and Iconium and implies that his preaching was not lost on Timothy (2 Tim. 3:10f.). On the other hand, 2 Tim. 1:5 tells of Timothy's long heritage of faith — a faith that resided first in his grandmother Lois and then in his mother Eunice, a Jewish-Christian woman (cf. Acts 16:1). 2 Tim. 3:15 calls attention to Timothy's long acquaintance with the sacred Scriptures. Furthermore, Acts 16:1f. states that Timothy was already held in high esteem by the Christian leaders in Lystra, his hometown, and Iconium, a city some 29 km. (18 mi.) away, before Paul came this second time to Derbe, Lystra, and Iconium. In addition, 1 Tim. 1:18 (NEB, RSV) suggests that some prophetic utterances about Timothy had first pointed him out to Paul and had encouraged Paul to enlist him as a fellow-worker. Presumably, then, Timothy became a Christian through the influence of his mother and the church elders in Lystra, who in turn had heard the gospel through Paul and Silas on their first missionary journey (cf. Acts 14:20-23). Since Paul was at least indirectly responsible for Timothy's conversion, and since he had such a close working relationship with him, he could justly call him his "true child" (1 Tim. 1:2; cf. Phil. 2:22).

According to Acts 16:1 Timothy's mother was a "Jewish woman who was a believer," i.e., a Jewish-Christian woman. She had married a Greek, i.e., a Gentile. There is no reference to his having faith; hence he would have been considered a heathen by both Jews and Christians. Possibly this marriage, which Jewish law viewed as illegal (SB, II, 741) and which the Christian Church would also have opposed (cf. 2 Cor. 6:14), took place while Timothy's mother was not strictly observing Judaism and before she became a Christian. In spite of the "illegality" of his parents' marriage, Timothy was considered a Jew by the Jews and was therefore liable to be circumcised. The fact that Timothy had not been circumcised implies either that his mother had not taken her Jewish responsibilities seriously, or that his father had refused to allow the performance of this rite on his son. By the time that Paul came to Lystra and invited Timothy to join him in the gospel ministry, Timothy's father may already have died (cf. Gk. *chēras*, "widow," in some MSS of Acts 16:1; see also v. 3b, where the imperfect tense of Gk. *hypárchō* also favors this view).

It is noteworthy, however, that Paul had Timothy circumcised after he asked him to become his co-worker (Acts 16:3). According to the text Paul did this not out of deference to Timothy's mother but on account of local Jews who knew that Timothy had not been circumcised. Timothy's feelings about the matter are not mentioned; it may be assumed, however, that he had no desire to oppose the apostle's decision. Paul's refusal to have Titus, a Gentile by birth, circumcised (Gal. 2:1-5) is not inconsistent with his decision to have Timothy, a Jew by birth, circumcised; both decisions accord with his theology and missionary strategy. Paul considered circumcision per se as nothing, and the same was true of uncircumcision (Gal. 5:6; 6:15). If someone insisted that circumcision was necessary for salvation, Paul fought against this as false teaching and refused to permit the uncircumcised person to be circumcised. But in Timothy's case circumcision was simply a matter of expediency; and since Paul himself was prepared to become all things to all people so as to win some (1 Cor. 9:19-23), he did not hesitate to ask the same of Timothy. Paul would not risk impeding the gospel's progress among the Jews by having an uncircumcised Jewish-Christian as his associate. Had he obstinately done so, he would have alienated his audience immediately and forever. Therefore, Paul regarded Timothy's circumcision not as a means of salvation but as a legal act to remove a serious obstacle to the gospel.

Some time after Timothy had received the laying on of hands by the elders at Lystra (1 Tim. 4:14), he became a nearly constant companion of Paul. This long association began some time during Paul's second missionary journey. Timothy is probably the best known of all of Paul's coworkers, although Acts mentions his name infrequently and does not record all of his movements. But presumably Timothy traveled with Paul from the time of his calling at Lystra onward, at least until Paul's Roman imprisonment at the end of his third missionary journey.

On occasion Paul left Timothy behind while he went on ahead, in order that Timothy might accomplish some unnamed task (Acts 17:14) or, perhaps, act as a decoy, allowing Paul to escape danger (vv. 13f.). On other occasions Paul enlisted Timothy as an emissary to do what he himself could not do. For instance, when the Macedonian Christians were suffering persecution Paul sent Timothy to Thessalonica to strengthen them in their faith (1 Thess. 3:1-3). Later Paul sent him from Ephesus to other Macedonian churches with perhaps the same mission (Acts 19:22). Apparently Timothy was to go from Macedonia to Corinth, perhaps carrying Paul's first letter to the Corinthians (if *épempsa* in 1 Cor. 4:17 is an epistolary aorist; cf. NIV; but see 16:10), in order to remind them in person of Paul's way of life in Christ and to bring order to a confused situation (1 Cor. 4:17-21). Paul also made plans to send Timothy to Philippi (Phil. 2:19). Timothy, however, rejoined Paul as soon as possible after each separation (cf. Acts 17:15). On at least one return journey Timothy brought with him a monetary gift, which seems to have freed Paul from the need to work with his hands (cf. Acts 18:5, NIV; Phil. 4:15f.). Timothy accompanied Paul on his last recorded journey to Jerusalem (Acts 20:4) and was at his side during his Roman imprisonment. Apparently

the apostle always derived special comfort, encouragement, and strength from Timothy's presence (cf. Phil. 2:20-22).

Paul links Timothy's name with his own in saluting the churches at Corinth (2 Cor. 1:1), Philippi (Phil. 1:1), Colossae (Col. 1:1), and Thessalonica (1 Thess. 1:1; 2 Thess. 1:1). This indicates either that Timothy served with Paul in each of these churches, or that he had been sent there by the apostle, or that he had come to be known by them because of his close association with Paul (cf. Rom. 16:21).

As Silas took Barnabas's place as Paul's senior associate on his second missionary journey (Acts 15:36-41), so Timothy replaced Mark as Paul's junior associate. Paul poured his own life into Timothy's, faithfully passing on to him all that he had personally experienced or had learned from others about the gospel. Timothy's response to this training was everything that the apostle could have hoped for: he dedicated himself to learning, grew in the faith, gave his time and energies to evangelism and teaching, and became a trusted and invaluable colleague. He certainly earned Paul's description as *synergós mou*, "my fellow worker" (Rom. 16:21), and *synergós theoú*, "God's fellow worker" (1 Thess. 3:2). Timothy was "faithful in the Lord" (1 Cor. 4:17), genuinely interested in the welfare of others (Phil. 2:19f.), a Christian gentleman of proven worth (2:22). Thus Paul could not refrain from calling him "brother" (2 Cor. 1:1; Col. 1:1) but also "my son" (1 Tim. 1:18; cf. v. 1; 1 Cor. 4:14), and from saying, "I have no one like him" (Phil. 2:20). Timothy was a young man with exceptional potential for missionary statesmanship and church leadership. Thus Paul authorized him to appoint elders and establish order in the Ephesian church and simultaneously to supervise the other churches in Asia Minor.

Despite all this Paul never ranked Timothy with himself in terms of office or authority when he addressed the churches (e.g., "Paul, an *apostle* of Jesus Christ . . ., and Timothy our *brother*," 2 Cor. 1:1; Col. 1:1; but cf. 1 Thess 2:6). Furthermore, certain texts suggest that Timothy was not the fearless, commanding person that one might expect of the leader in Ephesus. He was frequently ill (1 Tim. 5:23), timid (2 Tim. 1:7), and even despised because of his youthfulness (1 Tim. 4:12; cf. 1 Cor. 16:10). He appears sometimes to have been neglectful, for again and again Paul urged him to be diligent in spiritual matters, to stir up the fire of his prophetic gift, and to persevere in the Christian ministry (1 Tim. 4:12-16; 2 Tim. 1:6; 3:14f.). As the apostolic envoy to Ephesus, he needed instruction on how to behave toward various groups of people (1 Tim. 5), on how to control his own inclinations (2 Tim. 2:22f.), and on how to respond to persons in error (3:1-8). Paul also reminded him to set an example by his own conduct in life, love, faith, and purity (1 Tim. 4:12), to fight the good fight (1:18), to keep the faith and a good conscience (1:19), and to keep himself from godless myths and speculations (1:4; 4:7).

It is impossible to fit Timothy's mission to Ephesus into the Acts account of Paul's activities. But this is no problem if the PASTORAL EPISTLES belong to a period of Paul's life that occurred after Acts 28:31. Paul's Roman imprisonment, with which Acts closes, may have ended not with Paul's execution but rather with his vindication and release. If so, then Paul most likely resumed his evangelistic efforts and continued this work until it ended in a second and final Roman imprisonment. This reconstruction, based in part on the silence of Acts and on the testimony of the ancient Church (Eusebius *HE* ii.22; 1 Clem. 5:7; and the Muratorian Canon, which explicitly states that Paul went to Spain from Rome), makes the theory of a second Roman imprisonment most plausible. Paul's request for Timothy to hurry and come to him — i.e., to leave Ephesus and come to Rome at the time of his second imprisonment — shows once again Paul's deep and lasting affection for Timothy and his need for Timothy's sympathy and care, especially at the end of his life (2 Tim. 4:9).

In He. 13:23 a Timothy is also mentioned: "You should understand that our brother Timothy has been released." Whether this Timothy is the same as Paul's associate is not certain. Paul was probably not the author of Hebrews, and no record exists of an imprisonment of Paul's companion Timothy. Nevertheless the writer mentions this Timothy without any explanation of who he is or what had caused his imprisonment, implying that the readers of this epistle were fully acquainted with him and his movements. Very likely, then, he was the same Timothy who had been Paul's companion — who thus was well known to the churches, who was imprisoned sometime after Paul's death, but who, unlike Paul, had escaped the executioner's sword and been set free.

G. F. HAWTHORNE

TIMOTHY, EPISTLES TO. *See* PASTORAL EPISTLES.

TIN [Heb. *bᵉḏîl*]. A metal separated by smelting from its ore, cassiterite or tin dioxide (SnO_2). In antiquity, however, it appears often to have been the by-product of silver extraction and thus a base metal. The Hebrew root *bdl* means "to separate." The principal use of tin was in the manufacture of BRONZE, an alloy of tin and copper.

The earliest biblical reference to tin is in Nu. 31:22, where Israel is in conflict with Midianite traders. Tin is mentioned among metals taken as booty that must be ritually purified. The source of the tin used in Palestine is not precisely known, although as early as the MARI tablets in the Canaanite period large quantities of tin were being sent to Hazor for the making of bronze. Ezk. 27:12 indicates Tyre imported tin in ships from Tarshish; the Balkans, Spain, and Cornwall (more specifically, the Scilly Islands) have been suggested as sources, but Asia Minor and the Hittites are also possibilities.

The only other certain biblical references are in Ezk. 22:18, 20, which use the figure of worthless base metals, produced by smelting silver, to describe Israel's profaned state. Heb. *bᵉḏîl* occurs also in the description of a plumbline in Zec. 4:10; but this seems to indicate a confusion between tin and the heavier lead, which was most often used for plumblines in antiquity.

R. A. COUGHENOUR

TIPHSAH tif'sə [Heb. *tipsaḥ*–'ford'; Gk. *Thapsá*].

1. A town of northern Syria located on the western bank of the Euphrates at its great western bend, about 120 km. (75 mi.) S. of Carchemish. Mentioned in 1 K. 4:24 (MT 5:4) as marking the northern border of Solmon's kingdom, it was an important city situated on a well-known E-W trade route. Known in classical times as Thapsacus, it was here that Cyrus the Younger, Darius Codomannus, and Alexander crossed during their campaigns (Xenophon *Anabasis* i.4, 11; Arrian *Anabasis* iii.7). It came to be called Amphipolis under the Seleucids, as it eventually spread over both sides of the river. Now

called Dibseh, this site is still used as a crossing point for modern travelers.

2. (2 K. 15:16, AV). *See* TAPPUAH 3.

K. E. CORLEY

TIRAS tī'rəs, tē'rəs [Heb. *tîrās*; LXX *Thiras*; Luc. *Theiras*]. A son (or descendant, or nation) of Japheth listed in the Table of Nations (Gen. 10:2; 1 Ch. 1:5). Tiras probably should be equated with the Etruscans, who eventually settled in Italy after leaving Asia Minor (Lydia) (according to Herodotus i.94). They were evidently the *Tyrsēnoi* of Greek sources, who raided throughout the Aegean Sea, and the *Turusha* (or *Tursha*, or *Teresh*) of Egyptian records, who fought against Egypt "from the sea" during the reigns of Merneptah and Ramses III. The name may also be related to the Hittite *Taruiša* — possibly ancient Troy, although this is uncertain.

Bibliography.–*CAH*, II/1 (3rd ed. 1973), 677; II/2 (3rd ed. 1975), 361-68.

D. A. DORSEY

TIRATHITES tī'rə-thīts [Heb. *tir'āṯîm*]. According to 1 Ch. 2:55, a family of scribes from Jabez (probably northern Judah) listed along with the Shimeathites and Sucathites. This genealogy identifies the Tirathites as a family from the Kenite tribe and connects them to the tent-dwelling Rechabite clan (cf. Jer. 35). While the genealogy indicates that they were descendants of Hammath, Hammath is known elsewhere only as the name of a village along the Sea of Galilee (Josh. 19:35). Because of the obscurity of 1 Ch. 2:55, several different interpretations of this word have been offered, namely, that it denotes singers (Jerome, Tg.), a musical term (J. Wellhausen), gatekeepers (E. Bertheau), or descendants of an unknown individual, Tira (C. F. Keil).

Bibliography.–E. L. Curtis, and A. A. Madsen, *ICC* on Chronicles (1910), p. 98; J. M. Myers, *I Chronicles* (*AB*, 1965), p. 16.

K. C. HANSON

TIRE. A term used several times by the AV to designate a woman's hair ornamentation or headband. In Isa. 3:18, AV, "round tires like the moon" renders Heb. *śahᵃrōnîm* (*see* CRESCENT); and in the AV of Ezk. 24:17, 23, "tire" represents Heb. *pᵉ'ēr* (RSV "turban"). In 2 K. 9:30, AV, the verb "tire" means to "adorn the head" (cf. RSV).

See GARMENTS VI, IX.

TIRHAKAH tir-hā'kə [Heb. *tirhāqâ*; Egyp. *Thrq*, prob. read Tiharqo and derived from Meroitic]. King of Egypt and Cush in *ca.* 690-664 B.C.; mentioned in the OT only in 2 K. 19:9 par. Isa. 37:9; extrabiblically known as Taharka.

I. Career.–Tirhakah was the next-to-last pharaoh of the 25th Dynasty, termed "Ethiopian" from its origin in Nubia (northern Sudan; the Greeks called it Ethiopia; the Hebrews called it Cush). He reigned twenty-six years (according to the Apis stele; cf. Parker, *Kush*, 8 [1960], 267-69), seemingly as sole king. But he was first summoned to Egypt while still a prince by his elder brother Shabataka (*ca.* 702-690 B.C.), probably soon after the latter's accession in 701 or 702. Thus he was probably only a prince when he led his troops in an unsuccessful assault on the Assyrians threatening Hezekiah of Judah (2 K. 19:9 par. Isa. 37:9). (*See also* EGYPT VIII.I.)

In accord with the Cushite rule of succession, Tirhakah became king at Shabataka's death: "in Memphis, after the Falcon [=Shabataka, deceased] had ascended to heaven" (Kawa stele V, 15 par.). Apart from the wars with Assyria, Tirhakah's reign was marked by fair prosperity and by notable building projects. Most striking is the surviving

A gold-plated bronze statue depicting Tirhakah presenting a thank offering to the god Khnum (*ca.* 680 B.C.) (RMN/ARS, NY/SPADEM)

column over 18 m. (60 ft.) high — one of a colonnade of ten — in the great forecourt of the Karnak temple of Amun at Thebes. His sixth year was marked by a heavy inundation of the Nile, resulting in a good harvest, thanks to a fourfold blessing attributed to Amun: land in good state, no vermin, no locusts, and no adverse winds. Some of the most important inscriptions of his reign come from the temple of Kawa in Nubia, which he built. In his reign Egypt was invaded by the Assyrians: Esarhaddon in 671 B.C. and Ashurbanipal in 666/665; Ashurbanipal in particular left subject princes and key garrisons in the Delta. Tirhakah had a pyramid tomb at Nuri near ancient Napata.

II. Tirhakah and the OT.–Because 2 K. 19:9 par. Isa. 37:9 refer to "Tirhakah king of Cush" in 701 B.C., while he did not ascend the thrones of Egypt and Cush until 690 B.C., some scholars have considered the OT passages anachronistic. But the term "king of Cush" is merely an identifying epithet applied by the biblical narrators writing after 690 B.C., much as an Englishman might refer to Queen Elizabeth II as being born in 1926. Such proleptic usage in terms of later status is universal and not an error; in fact, in the Kawa stele (IV, 7f.) Tirhakah used "His Majesty" to designate himself when only a prince.

M. F. L. Macadam suggested that Tirhakah was only about nine years old in 701 B.C. and thus unable to lead armies into Palestine in that year. But this is chronologically improbable. Tirhakah's father, King Piankhi, died between 717 and 713, probably in 716, and his son Tirhakah could hardly be born four to seven years after Piankhi's death! In fact, Tirhakah must have been at least twenty by 701 (Kawa stele V, 17 states that he was twenty at Shabataka's accession) and so was able to lead the troops. Thus no error need be supposed. A second Assyrian campaign in Palestine by Sennacherib is theoretically possible but not required by the Egyptian data.

Bibliography.–M. F. L. Macadam, *Temples of Kawa*, I (1949); J. Leclant and J. Yoyotte, *Bulletin de l'Institut Francais d'Archeologie Orientale du Caire*, 51 (1952), 17-27; K. A. Kitchen, *Ancient Orient and OT* (1966), pp. 82-84; *Third Intermediate Period in Egypt (1100-650 B.C.)* (2nd ed. 1986).

K. A. KITCHEN

TIRHANAH tûr-hā'nə [Heb. *tirḥanâ*]. A son of Caleb by his concubine Maacah (1 Ch. 2:48).

TIRIA tir'i-ə [Heb. *tiryā'*]. A Judahite; son of Jehallelel (1 Ch. 4:16).

TIRSHATHA tûr-shā'thə. The AV transliteration of Heb. *tiršāṯā'* (always with the prefixed article; RSV, NEB, "governor"), the title of the Persian provincial governor in Jerusalem (Ezr. 2:63; Neh. 7:65, 70 [MT 69]; 8:9; 10:1 [MT 2]). *Tiršāṯā'* appears to be a Persian loanword, probably derived from the pass. part. of the vb. *tarš*, i.e., *taršata*, "(the one) feared." This term roughly corresponds to Heb. *peḥâ* (Akk. *piḥatu*) found in Neh. 5:14, 18; 12:26; etc. The references to the *tiršāṯā'* in Ezr. 2:63 par. Neh. 7:65 and Neh. 7:70 appear to be to Zerubbabel. Neh. 8:9 and 10:1 (MT 2) refer expressly to Nehemiah.

D. G. SCHLEY

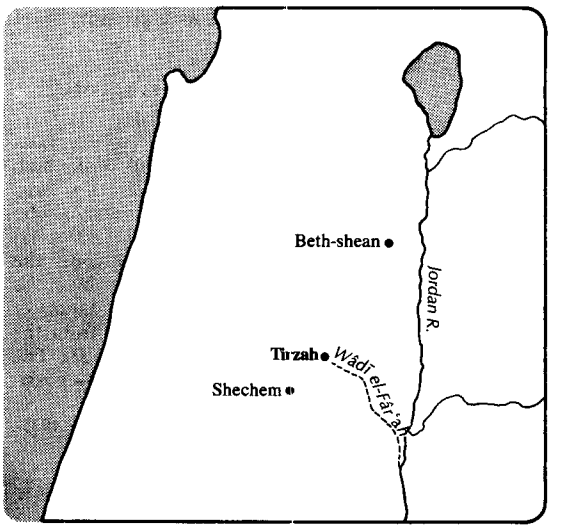
TIRZAH tir'zə [Heb. *tirṣâ*]. One of the five daughters of Zelophehad of the tribe of Manasseh (Nu. 26:33; 27:1; 36:11; Josh. 17:3); *see* MAHLAH 1. *See also* TIRZAH (place) II.

TIRZAH tir zə [Heb. *tirṣâ*; LXX usually *Thersa* or *Tharsa*]. An important town in the northern kingdom of Israel.

I. History.–Tirzah was known as a Canaanite city before it was captured by the Israelites under Joshua (Josh. 12:24). During the late 10th cent. B.C. Jeroboam I seems to have used it as his capital (1 K. 14:17; cf. v. 12) at least for a time, perhaps before his building operations at Shechem were completed (12:25). The town may have been destroyed during Pharaoh Shishak's campaign, if B. Mazar has correctly read no. 59 of that pharaoh's list (written [*x*]-*rú-ṣa-i3*) as "Tirzah." After assassinating Jeroboam's son Nadab (1 K. 15:25-28), Baasha also made Tirzah his capital (vv. 21, 33) and was buried there (16:6). His son Elah began to reign there but was murdered during the coup d'état by Zimri (16:8-10). Zimri was then opposed by Omri, who had returned from the battle front at Gibbethon and now besieged the capital; Zimri set fire to the royal residence and died in the flames (vv. 17f.). After consolidating his own position as ruler, Omri continued to reign from Tirzah (v. 23) until his new citadel at Samaria was ready (six years after his initial seizure of power), in the mid-9th cent. B.C. About a century later Menahem son of Gadi came from Tirzah (where he was perhaps district governor) to Samaria and seized the throne from Shallum (2 K. 15:14). During the political struggle that ensued, Menahem besieged a certain town (MT *Tipsaḥ*, supported by Josephus *Ant.* ix.11.1 [229]; but cf. LXX B *Thersa*, L *Taphōe* [for Tappuah], A *Tharseila* [a place in Batanaea, Eusebius *Onom.* 102.4f.]) and its territory, which seems to have been contiguous with Tirzah (2 K. 15:16). After this the Bible supplies no more historical details about Tirzah. The city's beauty seems to be celebrated in Cant. 6:4, although the LXX and Vulgate do not take the MT *tirṣâ* as a proper name in this passage.

II. Identification.–The location of Tirzah seems to have been forgotten after the fall of the northern kingdom of Israel. Eusebius offered no suggestion for its identification (*Onom.* 98.19f.; 102.3). Various sites have been proposed in modern times, but recent opinion has tended to accept W. F. Albright's identification (published 1931) of Tirzah with Tell el-Fâr'ah at the head of the Wâdī el-Fâr'ah, about 11 km. (7 mi.) NE of Shechem on the road between Shechem and Beth-shean.

In the Samaria ostraca the clan names of Manasseh appear as districts, including both Noah and Hoglah, two of Zelophehad's daughters. Another daughter, Tirzah (Nu. 26:33; 27:1; Josh. 17:3), is not named in these texts, but the omission is probably accidental. One ostracon does mention Shechem, bringing to mind the Manassite named Shechem (MT *šᵉḵem*, Nu. 26:31; Josh. 17:2; 1 Ch. 7:19), who probably had some connection with the city



(MT *šeḵem*). Thus the town of Tirzah evidently is to be associated with the daughter of Zelophehad by the same name. Hoglah's district can be located by the mention of two of its towns in the Samaria ostraca, namely, Yazith (identified with Yaṣîd) and Geba' (Jeba'), both NW of Tel el-Fâr'ah. The Tirzah district is presumbly to the east, facing the Wâdī el-Fâr'ah. If Albright is correct, then the role of Tirzah as capital of the northern kingdom gains new perspective. The earlier kings of Israel may have selected it for its convenient line of communications, via the Wâdī el-Fâr'ah, to their Transjordanian subjects.

III. Excavations.–The archeological evidence from Tell el-Fâr'ah tends to support the site's identification with biblical Tirzah, even though no epigraphic discovery has confirmed it. The site was excavated by R. de Vaux under the auspices of the École Archéologique Française de Jérusalem during nine seasons between 1946 and 1960.

The first human occupation at the site seems to have begun in the Pre-pottery Neolithic Age. Only a poor village of huts or dwelling pits has been attested for the Pottery Neolithic and Chalcolithic periods. A true city, with rectangular houses bordering on straight streets and enclosed by a defensive rampart, emerged at the beginning of the Early Bronze Age and was apparently destroyed or abandoned *ca.* 2600 B.C. A new city was founded in the 20th cent. B.C. (M.B. IIA) and enlarged and strengthened in the 18th cent. (M.B. IIB). These strata are poorly preserved, but an underground sanctuary contained pottery of the 18th-16th cents. B.C. The shrine contained pig bones and was evidently a place for offering sacrifices to deities of the underworld (cf. Isa. 55:4; 56:3, 17). The L.B. strata are also badly destroyed, but the meager evidence does show that the Canaanite town lasted until the 13th cent. B.C.

From the Iron Age de Vaux distinguished three major and one intermediate strata. He assigned the earliest (III) to the period under David and Solomon and estimated that it was destroyed at the beginning of the 9th cent. B.C. His intermediate stage followed next, with one large building that seems never to have been completed. After this stage the site was abandoned, only to be reoccupied on a very small scale. The next important rebuilding of the city (Stratum II) was attributed by de Vaux to the 8th cent. B.C. The stratum is well represented and characterized by a rich and a poorer quarter within the city; the settlement ended in a violent destruction. A much poorer stratum (I)

arose on the ruins. This last phase is characterized by Assyrian pottery, which dates it after the fall of Samaria in 722 B.C. (2 K. 17:5).

The importance of Tell el-Fâr'ah in the pre-Israelite period and its extensive Iron Age remains support its equation with Tirzah. De Vaux's more detailed attempts at correlation with the biblical allusions to Tirzah are interesting but not conclusive. K. M. Kenyon's supposed dovetailing of the biblical material with the stratigraphy of Samaria has been cast in doubt by the severe criticisms of G. E. Wright, Y. Aharoni, and R. Amiran. Until the current debate on the ceramic correlations of the monarchial period is resolved, direct correlations between the strata of Tell el-Fâr'ah and the history of Tirzah must be subject to skepticism.

TISHBITE tish'bīt [Heb. *(hat)tišbî*; Gk. *Thesbitēs*]; **TISHBE** tish'bē [Heb. *tōšāḇê*] (1 K. 17:1); AV INHABITANTS. ELIJAH is six times described as "the Tishbite" (1 K. 17:1; 21:17, 28; 2 K. 1:3, 8; 9:36). In the first of these references the MT describes Elijah as being "of the settlers [*mittōšāḇê*] in Gilead" (cf. AV, RSV mg.), which the LXX rendered "of Tishbe [Gk. *ek Thesbōn*] in Gilead" (so RSV, NEB). Glueck thought that both texts were corrupt and postulated "Elijah the Jabeshite of Jabesh-gilead" as the correct reading. The strength of Glueck's view lies in the fact that much of Elijah's work did take place in the Wâdī el-Yâbis area of Gilead; the difficulty with this view is that it would involve emending too many references to Elijah as the "Tishbite." To date no site has been identified conclusively with Tishbi, despite attempts to associate it with Listib in the northeast Gilead region. That Listib is an incorrect identification is indicated by the complete absence of a settlement there during the time of the northern kingdom.

Others have suggested that "the Tishbite" (*hattišbî*) is incorrectly vocalized and should read *hattôšᵉḇî*, meaning "a member of the *tôšāḇ* class" (see *IDB*, IV, 653f.). According to Mishnaic tradition the returning exiles were divided into classes, one of which was the *tôšāḇ*. This term described a person who was not a native but had been accorded rights of permanent settlement. It is obviously a mistake, however, to retroject into the kingdom period a social configuration that was unknown until some time after the return from exile. Furthermore, there is no indication in 1 K. 17 that Elijah was anything other than a native inhabitant of the northern kingdom who was pursuing a ministry to that nation.

Bibliography.–*IDB*, IV, *s.v.* "Tisbe" S. Cohen; N. Glueck, *AASOR*, 25-28 (1951), pt. I, 218, 225-27; A. Wiener, *The Prophet Elijah in the Development of Judaism* (1978). R. K. H.

TISHRI tish'rē [Heb. *tišrî*]. The seventh month of the Jewish year, corresponding to September/October. The Canaanite name was ETHANIM. *See* CALENDAR.

TITANS tī'tənz [Gk. *Titanoi*] (Jth. 16:7). The name of a family of giants in Greek mythology, used here in the general sense of GIANTS. The LXX uses *hē koilás tốn Titánōn* to render Heb. *ʿēmeq rᵉpāʾîm* ("valley of Rephaim") in 2 S. 5:18, 22; thus the Hebrew original of Jth. 16:7 may have read "sons of the Rephaim" (see *APOT*, I, 266). *See* REPHAIM.

TITHE [Heb. *maʿᵃśēr, ʿāśar* (piel, Dt. 14:22; Neh. 10:37; hiphil, Dt. 26:12; Neh. 10:38); Gk. *dekátē* (He. 7:4, 8f.), *dekatóō, apodekatóō* (Mt. 23:23; Lk. 11:42; 18:12; He. 7:5)]. The Hebrew noun *maʿᵃśēr*, literally "tenth part" or "tithe," is a cognate of the verb *ʿāśar*, "take the tenth part." The corresponding Greek noun *dekátē* is a cognate of the verb *dekatóō*, which means "collect tithes" in the active (He. 7:6) and "pay tithes" in the passive (v. 9). The compound *apodekatóō* can mean either "collect tithes" or "pay tithes."

V. In Judaism

I. In the Ancient Near East.–Many ancient cultures practiced tithing in some form. Israel was merely one among many ancient Near Eastern peoples who tithed their property, produce, or currency. Egyptians practiced tithing, as did Syrians (1 Macc. 10:31; 11:35), Lydians (Herodotus i.89), Babylonians (Oppenheim, pp. 183-198; Milgrom, pp. 55-62), and Assyrians. The tithe was known in Ugarit (14th cent. B.C.) and among the Carthaginians (Diodorus xx.14). Suetonius and Tacitus used Lat. *decumo* as a technical military term meaning "take every tenth man for punishment [i.e., decimate]" (cf. Lev. 27:32f.).

But despite these often cited parallels, none of the other tithing systems is as defined or as specific as Israel's. Vaguely similar practices do not point to similar motives. Deuteronomy clearly subsumes the purpose of Israel's tithe under the Shema (6:4-9) and love for one's fellow Israelites (14:28f.). Gen. 14:18-20 indicates, however, that before Israel was ever a nation Abram and the high priest Melchizedek were well aware of the practice of tithing. Jacob also promised to give God a tenth of his wealth (Gen. 28:22).

These biblical narratives indicate that tithing generally issued from theological rather than merely political, humanitarian, or economic motives, although in Israel, as in other ancient Near Eastern countries, these motives could not really be separated.

II. Goods Subject to the Tithe.–Typically in the ancient Near East the tithe was taken from a broad range of property, produce, or even currency, but particulars varied from culture to culture. Among property items that were tithed in Israel are listed grain, new wine (Heb. *tîrôš*), olive oil, fruit, cattle, and sheep (Dt. 14:23; Lev. 27:32; etc.), but other items were probably tithed as well. Abram tithed the spoils of battle (Gen. 14:20), and Jacob vowed to tithe all that God gave him (28:22). Throughout the ancient Near East all kinds of objects have been found designated as subject to the tithe: wool, cloth, wood,

weapons, gold, silver, donkeys, etc. In general, the Israelites were to tithe all of the wealth (Heb. *hayil*; also *tôḇ*) of the land that Yahweh gave to them (cf. Dt. 8:18).

III. OT Perspective.–Genesis 1 indicates that God is the Creator of all the earth's wealth (vv. 11f., 16-18, 20f., 24f., 29-31). After mankind's rebellion (3:1-7) the Lord cursed the land (vv. 17-19), but after the great flood He reinstituted His providential blessing and care for His creation (8:17-19, 22). As owner of all the land of Canaan, God could give it to whomever He desired (Dt. 2:5, 10-12, 20-23, 31). He gave the land of Canaan to Israel (4:1), and Israel was expected to give back to Yahweh a *pars pro toto* of the produce and wealth of the land; in some cases this involved the first fruits of the land and in others it involved a tithe of many different items (26:1-15).

The relationship of the first fruits to the tithe is unclear. A. S. Peake distinguished between them (*HDB*, IV, 780), but Guthrie maintained that they had a common origin. The tithe is not mentioned in the book of the covenant, though the two are mentioned together in Dt. 26:1-15. Dt. 18:4 complicates the issue by demanding that the first fruits be given to the priests; no such command is asserted about the tithe (McConville, pp. 68-123). The first fruits (*rē'šîṯ bikkûrîm*) is an offering falling under the general category of Corban, but the tithe is also considered a non-blood offering (J. G. S. S. Thompson, *NBD*, p. 1114).

Hebrew *ma'ᵃśēr* occurs thirty-two times in the OT: seventeen times in the Pentateuch, five times in the Prophets, and ten times in the Writings. The major texts describing the Lord's commands regarding tithing are Lev. 27:30-33; Nu. 18:21-32; Dt. 12:1-18 (esp. vv. 6f., 11f., 17-19); 14:22-29; 18:1-4; 26:12-15. In the final form of the OT canon, these texts are placed in a logical and theological sequence, and they occur early, in the formative years of Israel's history. The relevant texts are presented below in their canonical order.

A. Pentateuch. The first appearance of the word "tithe" is in Gen. 14:17-20 in a context that is both joyful and solemn. Melchizedek plays a priestly role by blessing Abram and providing wine and bread for the victory celebraton (in Israel the Levitical priests pronounced blessings and curses; cf. Dt. 10:8). Abram gave Melchizedek a "tenth of everything" (*ma'ᵃśēr mikkōl*), i.e., of the spoils of battle (Gen. 14:20). He apparently left the rest of the spoils with the king of Sodom (vv. 21-24), refusing to enrich himself at the expense of the king whom he had liberated (v. 23). Abram's giving of the tithe seems to have been theologically motivated: it was a recognition that it was God Most High who had given him the victory (v. 20).

Genesis 28:20-22 records Jacob's vow to tithe all of the increase that God would give him. This was predicated upon the supposition that God would care for him and prosper his way; the Lord would be Jacob's God, and he would give a tenth to confirm that fact. The tithe went to support "God's house," symbolized by the pillar (v. 22); this proleptically demonstrated a major purpose of the tithe in later Israel, namely, the care of God's house.

Leviticus 27:30-33 defines the "tithe of the land" as consisting of a tenth of the seed of the land or of the fruit of the trees (v. 30). More importantly, the passage gives a theological basis for bringing the Lord's tithe: it belongs to the Lord and is holy to Him. Implied is the fact that it is the Lord who produces, owns, and distributes the wealth of the land (cf. Dt. 8:17f.). Anyone who desired to could redeem his tithe of the land, but he had to pay its fair price plus a fifth to the Levites. The tithe of the herds or flocks could not be redeemed (Lev. 27:32f.).

Numbers 18:21-32 identifies the Levites as those who were to receive the tithe in return for their service in the tent of meeting (v. 21). The Levites in turn were to tithe the best of their tithe to the house of the Lord, specifically to the priests as represented by Aaron (vv. 28f.). The tithe of the flock and herds is not mentioned here, but it may be presupposed. The Levites were then free to eat the nine-tenths remaining wherever they wished. These tithes were not to be treated lightly, for Israel was to be a holy people, exclusively following their God's instructions.

Deuteronomy 12:5-19 delineates several things about the tithe: (1) it was to be taken to the place where the Lord would cause His name to dwell (vv. 5f., 11, 18); (2) there, and nowhere else (v. 17), it was to be eaten, with rejoicing, by the household of the one bringing the tithe (vv. 7, 12, 18); (3) it was to be shared with the Levites (vv. 12, 18f.). Deuteronomy envisions Israel in the land in the near future. Whereas the place to which the tithe was to be brought was not a major concern in Leviticus and Numbers, it is a predominant theological concern in these verses because of the need for unity and purity.

Deuteronomy 14:22-29 also presents information about the tithe that is not recorded in Leviticus or Numbers. The deposition of the yearly tithe was as follows: (1) the yearly tithe was to be eaten in God's chosen place, before the Lord, so that Israel would reverence its God (v. 23); (2) when the chosen sanctuary was far away, the worshiper could convert the tithe of various goods into money for the journey and then buy and consume whatever he desired at the proper place (vv. 24-26); (3) the Levites were not to be forgotten in all of this but were still to be cared for (v. 27). The deposition of the tithe every third year was handled differently. In the third year the tithe was to be laid up in the towns of Israel (v. 28) and was to be eaten by the Levite, sojourner, widow, and orphan (v. 29). These tithe laws in Deuteronomy seem to contradict the other tithe laws in Leviticus and Numbers, which say nothing about the worshiper's household eating a portion of the tithe. On these apparent discrepancies, see E below.

B. Prophets. Relevant references to tithing in the Prophets are found at Am. 4:4 and Mal. 3:8, 10. Am. 4:4 points out the hollowness of Israel's continuing to present tithes to the Lord when the people showed no concern for justice and righteousness (cf. 5:6f., 10-15, 21-24). Such a ritual program actually mocked the true motive for giving the tithe. Dt. 14:23, 26, 28f. makes especially clear that the giving of tithes was to be motivated by heartfelt love for God and one's brethren. In Amos's day Israel's tithes still came in, but without the joy, love, and sincerity that were to have marked the giving of the tithe. After the Exile, on the other hand, Malachi (3:8-10) attempted to motivate the people to bring the tithe for the right reasons; only then would they receive the Lord's blessing (cf. Dt. 14:29). Thus, Mal. 3:8-10 stresses the lack of blessing because of not bringing the tithe, while Am. 4:4 emphasizes the lack of blessing because of presenting tithes with the wrong motives.

C. Writings. The ten references to the tithe in these Scriptures occur in 2 Ch. 31:4-12; Neh. 10:36-39 (MT 37-40); 12:44; 13:5, 12. 2 Ch. 31:4-12 describes the reformation under King Hezekiah, who attempted to restore Israel's dedication to the "law of the Lord" (vv. 4, 21). Specifically he required that the tithes due to the priests and Levites, which had been allowed to lapse, be brought in (vv. 4-6, 12). After the Exile, Nehemiah again tried to restore the covenant obligations as written in the law (10:36), including rendering the tithe to the Levites, who would, under the supervision of the priest, bring the tithe of the tithe to the house of God in Jerusalem (vv. 37f.) The

other nine-tenths of the tithe was kept in the various towns where the Levites lived. McConville argued that this tradition in Nehemiah represents the oldest Jewish tradition about the tithe, and that it knew of only one tithe tradition. According to his view (pp. 75f.), Nehemiah draws from both Dt. 14:28f. and Nu. 18 ("D" and "P"), sources that are possibly in agreement about the chronological order and character of the tithe. Of course, outside these few verses very little is known about the policy of tithing in the period of the second temple.

D. Theological Implications. No institution in Israel, including tithing, existed merely to carry out a political, economic, or humanitarian function. By giving the tithe the Israelites were declaring solemnly that they were giving a portion back to the Lord who had prospered them (cf. Dt. 26:10-15). By giving the tithe they also recognized the validity of the priests' and Levites' role as God's representatives and acknowledged their right to receive support for the spiritual service they performed on the people's behalf. The tithe ritual afforded the Israelites an opportunity to remember Yahweh's blessings as He had remembered them, and to imitate their God's care for slaves, the poor, orphans, and widows. The tithe demanded that the Israelites serve their God at a significant cost to themselves. In this amazing system of tithing, Israel's economics became a channel for expressing love to God and love to neighbors, the heart of the Torah (Dt. 6:4-9; Lev. 19:18). Deuteronomy explicitly makes paramount the joy and fellowship of presenting the tithe in a family context (Dt. 14:26). The reforms under Hezekiah (2 Ch. 31:4) and Nehemiah (Neh. 10:37; 13:10-14) emphasized the seriousness of neglecting the support of the Levites, God's appointed ministers.

Finally, tithing helped to set Israel apart as Yahweh's people and His alone, a people holy to Him (Dt. 14:22-29; cf. vv. 1-21, esp. 2, 21). Only a holy people could be blessed (v. 29), and the blessing was to reinforce Israel's reverence for Yahweh and sense of belonging to Him. By tithing, therefore, the Israelites fulfilled the desire of their ancestor Jacob: "the Lord shall be my God, and this stone, which I have set up for a pillar, shall be God's house; and of all that thou givest me I will give the tenth to thee" (Gen. 28:21f.).

E. Critical Issues. As mentioned above, there appear to be discrepancies among the three main descriptions of the tithe and its deposition in Dt. 14:22-29; Lev. 27:30-33; Nu. 18:21-32. No more than a few of the issues involved can be noted here.

Jewish tradition and some more recent studies (e.g., Landrell, p. 36) have identified two or three different tithes in these passages. (1) A first tithe consisted of the tithe to the Levites (Nu. 18; Dt. 14:27); of this, one-tenth was passed on to the priests or to the house of God. (2) A second tithe (from the remaining nine-tenths) was set apart and eaten by the household, presumably in Jerusalem (Dt. 14:22-26; cf. Mish. *Maaser sheni* ii.1). Those living far from Jerusalem could change the tithe of the land into money, but they then had to add one-fifth to its price (Lev. 27:30f.); food, drink, or oil could be purchased with the money. According to Mish. *Zebahim* v.8, the cattle tithe belonged to this tithe and had to be used in Jerusalem. Landsell refers to this second tithe as the tithe for the sacred celebration. (3) The third tithe, according to Jewish tradition (Josephus *Ant.* iv.8.22 [240-43]; cf. also Landsell), was the tithe for the poor (Dt. 14:28f.), which occurred only in the third year. According to some of these possible scenarios, therefore, the tithing rate could run as high as thirty percent! Many believe that the third-year tithe replaced the second tithe every third year.

J. G. McConville, on the other hand, found the answer to the seeming discrepancies between Deuteronomy and Numbers to lie in the prominent theological and didactic purposes of Deuteronomy, particularly in its presentation of the tithe. He did not suggest a date for the tithe law in Deuteronomy because of its ambiguous language, since the book's purpose was to teach "truths which were fundamental to the situation of Israel in the land" (p. 87). According to his view, Dt. 14 probably assumes Nu. 18 and most likely Lev. 27:30-32 also (p. 72). In other words, McConville perceived a great amount of continuity between "D" and "P" laws, and he concluded that Nehemiah (10:36-39) drew on both (see III.C above).

One theory see two varying views of the tithe in the priestly material of Leviticus (the tithe goes to the priests) and Numbers (the tithe goes to the Levites), and a third view in Deuteronomy, where the tithe becomes almost a "philanthropic gift" (Weinfeld, col. 1161). This theory does not seem to take seriously enough the control that the sanctuary has over the disposition of the tithe in Dt. 14:22-29; nor does it sufficiently consider the tithe's placement within the larger theological framework of Deuteronomy, in which love for one's brother is an expression of love for the Lord (see also Weinfeld, col. 1160). Many critics have concluded that there was more than one basic tithe, but that the discrepancies in the documents arose because of historical evolution. The problem with this approach is that one can argue for either an early or a late date for any of the materials involved. Guthrie, e.g., concluded: "The references to tithing in the OT apparently reflect differing customs in differing times and places, and make it impossible to reconstruct any clear-cut picture of the practice or history of tithing in Israel" (*IDB*, IV, 654). Attempts to solve some of these knotty problems from a more literary or theological perspective may provide an alternative to Guthrie's conclusion. Even if the "search for the historical tithe system" of ancient Israel proves fruitless, it may be possible to develop a satisfactory picture of the institution's theological significance.

IV. NT Perspectives.—Several NT passages refer to tithing, and 2 Cor. 9:7-13 alludes to the practice although it does not specifically mention it. In Mt. 23:23; Lk. 11:42; 18:12 the giving of tithes is cast in a negative light because of the way that it was often practiced with no regard for justice, the love of God, mercy, and faith. Deuteronomy emphasizes the necessity of all virtues as the context in which the tithe is given (see esp. Dt. 14:22-29). By Jesus' time the Pharisees had legalized the whole affair, and Jesus denounced them for paying attention to minutiae while they ignored the realissue of a pleasing moral life before God (Mt. 23:23 par Lk. 11:42). Paul's exhortation to give with a cheerful heart (2 Cor. 9:7) reflects Deuteronomy's instruction about tithing, which emphasizes the importance of rejoicing (e.g., Dt. 12:7, 11f., 17f.; 14:26).

The author of Hebrews (ch. 7) uses the account of Abraham's paying a tithe to the priest-king Melchizedek (Gen. 14:18-20; see III.A above) to show the superiority of Christ's priesthood, which is "after the order of Melchizedek" (He. 7:11, 17). The fact that Abraham — the ancestor of both the Levites and of the Israelites who paid them tithes — gave a tithe of the battle spoils to Melchizedek shows that Melchizedek's priestly order is greater than the Leivitcal priesthood.

V. In Judaism.—Tithing was important in incipient Judaism. Thus the Apocrypha frequently mention tithes, offerings, and first fruits (e.g., 1 Macc. 3:49; 10:31; 11:35; 13:25-27; 32:10-15; Tob. 1:6-8; 5:13; Jth. 11:13; Sir. 35:9; cf. also Jub. 32:4-9). The Mishnah (*Maaseroth* i.1) and Talmud (T.B. *Maaseroth* 1a) delineate the principle of

tithing: "whatsoever is used for food and is kept watch over and grows from the soil is liable to Tithes." The rabbis described carefully the sacred times when things were to be tithed — there was a right time for cattle, land, and fruit from the trees to be presented. The rabbis also emphasized that all of the tithe that was supposed to go to the poor must be conveyed to them (e.g., Mish. *Peah* v.4f.; viii.2f., 8; *Aboth* v.9). In Midr. *Gen. Rabbah* i.6 the rabbis listed the tithe among the three bases upon which the world was created.

TITIUS JUSTUS tish'əs jus'təs [Gk. *Titios Ioustos*] (Acts 18:7); AV JUSTUS. *See* JUSTUS 2.

TITLE [Gk. *títlos*]; NEB INSCRIPTION. A term used by the RSV only in Jn. 19:19f. for the sign over Jesus' cross, on which was written the charge (Gk. *aitía*; cf. Mt. 27:37) against Him. Mk. 15:26 and Lk. 23:38 have the Greek term *epigraphḗ* (*see* INSCRIPTION).

Though the wording of the title over the cross varies in the four Gospels, the phrase "King of the Jews" occurs in them all. On this charge Jesus was crucified by the Roman authorities. Jn. 18:33-38 indicates that Jesus claimed to be a king, but not of this world. Nevertheless, the claim was interpreted as a political threat to Roman rule in Palestine and therefore as sufficient grounds for crucifying Him.

The title was also meant as a Roman warning to the Jews and as a taunt against them. It was placed prominently so that all could see it, and was translated into three languages so that all could read and understand it. When the Jewish leaders objected to the title, Pilate responded, "What I have written, I have written" (Jn. 19:21f.).

TITTLE. *See* DOT.

TITUS tī'təs [Gk. *Titos*]. A companion of Paul, and the recipient of a Pauline epistle. Little is known about him. That he was a Greek is certain (Gal. 2:3), as is the fact that he was one of Paul's early associates (v. 1). He accompanied Paul and Barnabas on their visit to the church in Jerusalem. The occasion may have been the controversy over whether it was necessary for gentile Christians to be circumcised and to keep the Jewish law (cf. Acts 15:1-29). In any case, there were Jewish Christians in Jerusalem who wanted Titus, a Gentile, to be circumcised. Paul would not accede to their wishes, however, and Titus was permitted to continue in the ministry of the gospel without being circumcised (Gal. 2:1-5).

Titus may have been brought to faith in Christ by Paul, for Paul calls him "my true son in our common faith" (Tit. 1:4). Paul also calls him his "brother" (2 Cor. 2:13), emphasizing their close relationship as fellow Christians, and his "partner and fellow-worker" (2 Cor. 8:23), stressing their close association in the gospel ministry. Titus may have accompanied Paul before his second missionary journey and in most of his subsequent travels.

Paul placed a great deal of confidence in Titus, sending him on difficult missions to Corinth in order to correct the problems that existed there. Titus's willingness to go to Corinth (8:17), his genuine affection for the Corinthians (7:15), his deep concern and eagerness to help them (8:16), and his studied care not to take advantage of them (12:18) combined to make him very successful in his various missions to that city. The Corinthians responded to Titus in such a positive way, righting the wrongs and collecting the needed funds (cf. Rom. 15:26), that Paul's fears about them were allayed and he was filled with joy over their response (2 Cor. 7:6-15; 8:6-23).

Titus is never mentioned in the book of Acts (he is not to be confused with the Titius Justus of Acts 18:7), and no satisfactory explanation has been given to account for this strange absence. 2 Tim. 4:10 states that he went to Dalmatia on the West Balkan coast, whereas Tit. 1:5 has him going to Crete to straighten out disorders there, appoint elders, rebuke, encourage, and teach sound doctrine (Tit. 1:5; 2:1, 15).

It is not known precisely when Titus went to Crete. He apparently traveled there with Paul, rather than being sent by him (Tit. 1:5). But Acts has no record of Paul's traveling to Crete except as a prisoner, and then only for a very brief stop at the port of Fair Havens on the way to Rome (Acts 27:7-21). Some scholars therefore conjecture that Paul was tried, exonerated, and set free after his first Roman imprisonment, that he then made a number of missionary journeys with Titus, and that one of these journeys took them to Crete, where Titus remained while Paul proceeded to other destinations. According to this view Paul was later arrested again and sent to Rome, where he was imprisoned a second time and eventually put to death. Others conjecture that the references to Titus serving in Crete and Dalmatia come from the time of Paul's imprisonment in Caesarea or Ephesus.

Perhaps, however, it is best not to make such attempts at precise reconstruction but to recognize that Acts makes no claim to list every city Paul entered or every imprisonment he experienced (cf. 2 Cor. 11:23-27). It could be, then, that at some time not specifically mentioned in Acts, Paul's mission took him and Titus to Crete, where he left Titus to set right the wrongs they found there. From Crete Titus was asked to join Paul once again in Nicopolis, on the west coast of Greece, as soon as either Artemas or Tychicus should arrive to relieve him (Tit. 3:12). Later, when Paul was imprisoned at Rome, Titus was there also to assist him. Apparently from here Paul sent him off on another mission, for in describing to Timothy his personal loneliness, Paul wrote that Titus had gone to Dalmatia (2 Tim. 4:10). There is no hint that Titus had abandoned Paul out of self-interest or that Paul was in any way critical of him for leaving. It appears, therefore, that Titus's final act of service to the apostle was to go as his personal envoy to churches that Paul, perhaps, had never had an opportunity to visit himself.

Although there is insufficient information for an accurate biography of Titus, there is enough to show his genuine Christian character and his leadership qualities. He had the heart of a pastor (Tit. 1:5), the willingness to serve conscientiously in the shadow of more prominent people (no mention of him in Acts), an earnest devotion to the Church of Jesus Christ (2 Cor. 2, 7, 8, 12), and devotion to his friends and leaders. Paul's epistle to Titus has been an encouragement and inspiration to many throughout the centuries, especially to ministers of the Church.

According to tradition Titus became the first bishop of Crete. This is stated in a late ninth-century subscription to the Greek text of the epistle to Titus.

TITUS, EPISTLE TO. *See* PASTORAL EPISTLES.

TITUS JUSTUS. *See* JUSTUS 2.

TITUS MANIUS. *See* MANIUS, TITUS.

TIZITE tī'zīt [Heb. *hattîṣî*]. A designation of Joha, one of David's mighty men (1 Ch. 11:45). The name probably refers to a place, but its location is unknown.

TOAH tō'ə [Heb. *tô(a)ḥ*]. A Kohathite Levite, ancestor of Samuel and of the singer Heman (1 Ch. 6:34 [MT 19]); probably the same as NAHATH (2) in v. 26 (MT 11) and Tohu in 1 S. 1:1.

TOB tob, tōb [Heb. *ṭôḇ*; Gk. *Tōb*, Apoc. *Toubion*]; AV also ISHTOB (for "men of Tob," 2 S. 10:6-8), Apoc. TOBIE; NEB Apoc. TUBIAS; **TOUBIANI** tōō-bē-ä'nē [Gk. *Toubianoi*] (2 Macc. 12:17); AV TUBIENI; NEB TUBIAN (JEWS). An Aramean city and its environs in the southern Hauran. It was at Tob that the elders of Gilead found Jephthah after he had escaped from his half-brothers (Jgs. 11:3, 5). When the Ammonites under Hanun raised a combined force to revolt against David, Tob contributed twelve thousand men (2 S. 10:6, 8). After the Exile Jews settled in Tob. When the Gentiles attacked these Jews, slaying a thousand and taking captive their wives, children, and goods, Judas Maccabeus marched in to liberate the area (1 Macc. 5:9-13, 17). The "Toubiani" of 2 Macc. 12:17, Jews who had ocupied the town of Charax, were probably inhabitants of Tob. In the list of Thutmose III, *t-b* (no.22) seems from its relative position to other names to be Tob, as does *Dubu* in the Amarna letters (EA 205).

The modern village of eṭ-Ṭaiyibeh, SE of Der'ā (which was the border-crossing point on the old highway from Damascus to 'Ammân), fits the location and probably preserves the name of Tob. W. S. L. S.

TOBADONIJAH tōb-ad-ə-nī'jə [Heb. *ṭôḇ 'ᵃḏônîyâ*] (2 Ch. 17:8). According to the MT and LXX, one of the Levites sent by King Jehoshaphat to teach in the cities of Judah. The name should probably be deleted, however, since it appears to be a dittography from the two previous names, Adonijah and Tobijah.

TOBIAH [Heb. *ṭôḇîyâ*–'Yahweh is good' (cf. TOBIJAH); LXX *Tōbias* Apoc. *Ban* (emended by RSV, 1 Esd. 5:37)]; AV Apoc., NEB Apoc., BAN.

1. An ally of Sanballat the Horonite and Geshem the Arab, chief opponents of Nehemiah's efforts to rebuild the walls of postexilic Jerusalem (*ca.* 445 B.C.). Tobiah is called "the servant, the Ammonite" (Neh. 2:10). Most scholars understand "the servant" to be an official title designating his role as a representative of Persian authority in the provincial government. He may have been a governor like Sanballat of Samaria and Nehemiah of Judah (cf. v. 9). The reference here to Ammon signifies his jurisdiction over Ammonite territory, not his ancestry.

It is possible that Tobiah was a descendant of Jews who had fled to Ammon after the sack of Jerusalem (Jer. 41:15), since extrabiblical records attest to the prominence of a family by that name in Ammon during the Persian period (see *IB*, III, 676f.; Myers, pp. 98-101). The name Tobiah suggests he was an Israelite whose parents may have had some formal attachment to the temple cult. Bright (p. 383) stated that Tobiah was also a Yahwist on the basis of his son's name, Jehohanan (6:18); but Myers (pp. 98f.) added that he was also a syncretist.

By marriage both Tobiah and his son were related to influential segments of Jewish nobility, many bound to him by oath (politically?), and these spoke well of him to Nehemiah (6:17-19). This may explain why Tobiah was allowed to occupy a chamber in the temple precincts during Nehemiah's absence from Jerusalem (13:4-9). Tobiah is recognized as the ancestor of the Tobiads, who in the 3rd cent. B.C. rivaled the Oniads for the office of high priest in Palestine (see Josephus *Ant.* xii.4 [156-236]).

As a co-conspirator with Sanballat and others,Tobiah sought to thwart Nehemiah's administration first by insinuating his insurrection against the Persian overlords (2:19), and then by public ridicule of the restoration program (4:1-3). When these measures failed to deter Nehemiah, Tobiah was among those who planned military raids against Jerusalem to disrupt the rebuilding of the city walls and to dishearten the builders (4:7-9). When these raids also failed to acomplish their purpose, Tobiah plotted — again unsuccessfully — to lure Nehemiah out of the city in order to assassinate him (6:1-3).

Later Sanballat and Tobiah hired a prophet (and apparently incited others of the prophetic corps) to speak false oracles to Nehemiah in order to lure him into committing a ritual transgression (6:10-14), thereby discrediting himself. Since Nehemiah was probably a eunuch and was certainly a layman, it would have been unlawful for him to enter the temple (Lev. 21:17-24; Dt. 23:1); even to flee to the altar to seek asylum would have been unlawful under the circumstances (cf. Fensham, p. 204). Finally, in league with certain Jewish nobles, Tobiah staged a letter-writing campaign to enhance his own position and frighten Nehemiah (6:18f.).

Nehemiah's unmitigated opposition to Tobiah and his allies may be attributed to both religious and political motivations. Nehemiah's religious reforms (9:1-5; 13:15-22), his concern about personal sin (6:13), his appointment of godly officials (7:1f.), his expulsion of Tobiah from the temple chambers and subsequent purification of those rooms (13:4-9), and his unshakable faith in God (2:20; 4:9; etc.) all indicate his seriousness about maintaining the purity of the temple cult. For this reason he conceded Tobiah and the others no legal or religious authority in Jerusalem (2:20).

Politically Nehemiah intended to look after the welfare of Judah in accordance with the commission granted by Artaxerxes I (2:1-8, 10). Nehemiah incurred the hostility of Tobiah, Sanballat, and Geshem, because by restoring Judah to a place of equal standing with their provinces he was threatening their status and economic power in the region. This was especially a problem for Tobiah, since Judah's lack of provincial sovereignty had permitted his alliance with the priesthood (13:4) and had probably brought him considerable economic gain, given his tie to the Jerusalem aristocracy (6:15-19). Nehemiah could ensure Judah's political future and economic freedom only by severing the administrative tendrils of the surrounding provinces.

2. Eponym of a family or clan numbered among the exiles who returned to Jerusalem with Zerubabbel and Jeshua, and catalogued with those who were unable to prove their Israelite ancestry (Ezr. 2:60; Neh. 7:62; 1 Esd. 5:37).

TOBIAS tō-bī'əs [Gk. *Tōbias*–'Yahweh is good'].

1. The son of Tobit. *See* TOBIT, BOOK OF.

2. The father of Hyrcanus; described as "a man of very prominent position" (2 Macc. 3:11).

TOBIE tō'bē (1 Macc. 5:13, AV). *See* TOB.

TOBIEL tō'bē-əl, tō-bī'əl [Gk. *Tobiēl*] (Tob. 1:1). The father of Tobit.

TOBIJAH tō-bī'jə [Heb. *ṭôḇîyâ, ṭôḇîyāhû*–'Yahweh is good']; NEB TOBIAH.

1. One of the Levites King Jehoshaphat sent to teach the law of God in the cities of Judah (2 Ch. 17:8).

2. One of the four exiles who returned from Babylon with silver and gold from which a crown was to be made for Joshua the high priest (Zec. 6:10, 14). In both verses the LXX translates *ṭôḇîyâ* by Gk. *chrēsimoi* ("useful men," from Heb. *ṭôḇeynâ*) instead of taking it as a name.

TOBIT. A didactic or moralizing short story in the Apocrypha extolling a righteous life-style for Jews living in the Diaspora.

I. Title.–The book is called "the book of the Acts [lit. "words"] of Tobit." The name Tobit (Gk. *Tōbit, Tōb[e]lith*) is derived from Heb. *ṭôḇî* ("my goodness") or *ṭôḇîyâ* ("Yahweh is good"). The RSV follows the convention of the Syriac version and LXX in calling the son Tobias, whereas the Latin Vulg. called both father and son Tobias.

II. Contents.–The book concerns the fortunes of two families. The first is the family of Tobit, a righteous Israelite, and includes his wife Anna and their son Tobias. The second is the family of Tobit's cousin Raguel (Tob. 7:3), and includes his wife Edna and their daughter Sarah. In addition, the angel RAPHAEL aids Tobit, while the demon ASMODEUS plagued Sarah. The Assyrians took Tobit into exile at Nineveh in the 8th cent. B.C. He was a generous man (1:3, 6f.), sharing food and clothing with the needy (1:8, 17), and burying dead Jews left exposed by the Assyrians (1:17-19). Performing this service would render him ritually unclean, so on one occasion he slept outside rather than pollute his family and was blinded by droppings from sparrows (2:3-10). Raguel and his family lived in Ecbatana, the capital of Media. Their problem involved their beautiful daughter Sarah, who had been widowed seven times on her wedding nights when the demon Asmodeus killed her grooms before the marriages could be consummated (3:7-9). Both Tobit (3:1-6) and Sarah (3:11-15) prayed to God about their conditions, and He sent the angel Raphael, disguised as a kinsman named Azarias, to rectify matters (3:16f.).

Tobit recalled that he had left a large sum of money with a man named Gabael in the city of Rages (4:1). He sent Tobias with Raphael to fetch the money (4:2–5:21). En route, Raphael told Tobias about Sarah, informing him that he was Sarah's nearest kinsman and ought to marry her (6:9-12). To prevent Tobias from dying on his wedding night, Raphael told him to catch a fish that had thrown itself at his feet and remove its heart, liver, and gall (6:15-17). On his wedding night, Tobias burned the heart and liver on the incense ashes, thus driving away Asmodeus (8:1-3). After Raphael secured the money from Gabael for Tobit (ch. 9), he and the newlyweds returned to Tobit's house, where Tobias anointed Tobit's eyes with the gall, thus healing him (11:7-15). Before Tobit died, he told Tobias to leave Nineveh in order to avoid the destruction proclaimed by Jonah (14:4-15).

III. Historicity.–The presence of several historical errors demonstrates that the book is best understood as a short story written long after the events narrated, rather than as a historical narrative. According to 1:2 Shalmaneser carried Tobit into captivity, while 2 K. 15:29 says that Tiglath-pileser carried away the tribe of Naphtali (in 733), to which Tobit belonged. Further, Tob. 1:4 seems to say that Naphtali broke away from Jerusalem and its temple while Tobit was a young man. That time frame is impossible since the monarchy divided when Solomon died *ca.* 930, and the events of the story occurred after 733 (cf. 14:14). Also, 1:15 names Sennacherib as the son and successor of Shalmaneser V, when in fact Sargon II (722-705 B.C.) succeeded Shalmaneser V, and Sennacherib (705-681) succeeded Sargon II. Finally, 14:15 says that Nebuchadnezzar (king of Babylon, 605-562) and Ahasuerus (Xerxes I, Persian ruler, 485-464) destroyed Nineveh, when actually two kings who broke away from Assyria, Nabopolassar (Babylonian ruler, 626-605) and Cyaxares (Median ruler, *ca.* 625-585), defeated Nineveh in 612.

IV. Purpose.–The story was written for Jews living in the Diaspora, counseling them to follow the law righteously. The book constitutes a defense of Judaism for people tempted by gentile ways. Hence it emphasizes burying the dead (1:17-19; 2:3-10), tithing (1:6-8), observing feasts (1:5f.), prayer (3:1-6, 11-17; 8:4-8, 15-17; 13:1-18), etc.

V. Theology.–A. Attributes and Functions of God. The doctrine of God found in the book of Tobit is quite orthodox. God is praised as the Creator (8:6) and King of heaven and of the ages (13:7-11). Majestically He gave the law (4:5), controls life and death (3:6; 13:2), hears prayers (3:16), and judges all people (3:2; 13:2). Yet in His dealings with His people, He is righteous, merciful, and true (3:1). God dwells in heaven in great glory (3:16). He is worshiped by a host of angels (8:15).

The book of Tobit seems to teach the doctrine of providence, i.e., the idea that God cares for His children with benevolence. In 1:13 God intervened to provide a post in the government of Shalmaneser. When Tobit fell out of favor, his nephew Ahikar was appointed to a high position and restored Tobit (1:21f.). While the text does not state that God intervened directly in Ahikar's promotion, the context certainly implies it. In 3:16f. God hears the prayers of Tobit and Sarah and sends Raphael to rescue them. The remainder of the book shows how God accomplished that task through Raphael. Finally, in 12:11-15 Raphael himself declares that none other than God had instigated his whole mission.

B. Angels and Demons. Instead of intervening directly in Tobit's case, God sent Raphael to carry out His will. The book does not actually teach that each person has a protecting angel, but Raphael functions as such for Tobias. While the book features no Satan or fallen angels, it does depict Asmodeus as a demonic figure capable not merely of harming persons but also of killing them. It was possible to thwart the power of Asmodeus through magic (i.e., the use of earthly material to manipulate the spirit world), but that knowledge came from Raphael. Thus the book seems to suggest that one needed divine assistance to defeat the demonic.

C. Ethics. 1. Marriage. The ethical teachings of the book of Tobit (found largely in ch. 4) focus on keeping the law and living righteously before God. The first requirement in living a righteous life was to marry an Israelite woman. Indeed, before Tobias left for Rages, his father told him to marry a woman from the tribe of Naphtali (4:12), a commandment fraught with danger when the woman turned out to be Sarah (6:13-16). This concern with marrying a kinswoman is reminiscent of the concern of the patriarchs that their sons marry relatives and the actions of Ezra to force the citizens of Jerusalem to divorce foreign wives (Ezr. 9–10).

2. Burial. The book of Tobit makes explicit that God's people should receive a proper burial (*see* BURIAL I). Tobit himself lost his fortune and eventually his eyesight as a consequence of burying his people who had been left unburied. If, as some scholars think, Tobit was written in Persia, the insistence on a proper burial might have been a reaction against the Persian Zoroastrian custom of exposing their dead. One other burial practice enjoined by Tobit seems unusual: placing bread upon the grave of the righteous (4:17). Dt. 26:14 forbids offerings to the dead (cf. Sir. 30:18), but the righteous Tobit seems to recommend either violating that law or perhaps simply limiting its applicability to sinners.

3. General Admonitions. Beyond the rules associated with marriage and funerals, the book of Tobit lists a series of other obligations. One should give alms to the needy (4:7-11, 16), avoid immorality, pride, and selfishness (4:12f.), pay wages daily to one's workers (4:14), refrain from doing to others what one would not want done to oneself (4:15; cf. Mt. 7:12), and avoid excessive use of alcohol (4:15).

In addition to these obligations the book of Tobit teaches that an ethical life is properly founded on religious duties. Two duties receive prominent attention in 1:6-8, where Tobit informs the reader that he had worshiped in Jerusalem and faithfully paid his tithes. In addition, in 4:19 he admonishes Tobias to praise God daily, seek His guidance, and remember His commands.

VI. Unity.–Although most scholars agree on the unity of Tobit, some have denied its integrity, primarily for two reasons. First, 1:1–3:6 is written in the first person, from Tobit's point of view, while the rest of the book is written in the third person. But the break at 3:6 is natural, since 3:7-15 deals with Sarah and her family, not Tobit. That the author never returns to the first person, even though Tobit is prominent in later chapters, may be explained by two observations. (1) The use of the first person in 1:1–3:6 was only a literary device, since the book was written long after the 8th century. (2) While Tobit appears later in the book, the protagonist in chs. 4–14 is Tobias.

Second, the material in chs. 13 and 14 seems secondary. Tob. 13 is a hymn, having nothing to do with Tobit's situation. In fact, Zimmermann (pp. 26f.) argued that the psalm presupposes the destruction of Jerusalem in A.D. 70. But the discovery of fragments of every chapter at Qumrân (see XI below) testifies to the unity of the book at an early date (see VIII below). Also, it was not unusual for an Israelite writer to place hymns in the mouth of a character (cf. Jonah 2). Thus the hymn is better viewed as a source used by the author rather than as an addition. Tob. 14 relates Tobit's final counsel to Tobias and concludes their story. Its omission from one late text caused Zimmerman (pp. 26f.) to consider it secondary, but it seems congruent with the intentions of the author. Thus no compelling reason remains to deny the final two chapters to the original author, though both might contain expansions (see *APOT*, I, 194-96; Pfeiffer, p. 276).

VII. Sources.–The most obvious source employed by the author of Tobit was the OT. The book quotes Am. 8:10 in 2:6 and Gen. 2:8 in 8:6; and it refers to Lev. 19:13 (or Dt. 24:15) in 4:14 (cf. Jas. 5:4), and the preaching of Jonah in 14:4. Beyond those citations are numerous allusions (see Simpson's list in *APOT*, I, 192 n. 6). In addition, Dnl. 1:8f. may have provided the pattern of Tobit's behavior in 1:10-12 (refusing to eat gentile food), and many scholars (e.g., Pfeiffer, pp. 267f.) hear echoes of the story of Job in Tobit's loss of all his possessions despite his unparalleled piety.

The author of Tobit seems to have drawn on a number of sources outside the OT. Most obvious is the legend of AHIKAR (*see also* AHIKAR, BOOK OF). For example, in 14:10 the author alludes to the story of Ahikar in a way that shows he knew the story and thought his readers would know it too (see further *APOT*, I, 189-192; Pfeiffer, pp. 268f.). Some scholars regard the "Tale of the Grateful Dead," in which creditors refuse to allow a man to be buried until his debts were paid, as providing the author of Tobit with a general outline and some key elements of the plot (see *APOT*, I, 188; Pfeiffer, pp. 269f.). See further *APOT*, I, 187-194; Pfeiffer, pp. 264-271.

Some scholars have also seen parallels to Sirach. For example, both emphasize the efficacy of almsgiving (Tob. 4:11; 12:9; Sir. 3:30; 29:12; 40:24), the importance of proper burial (Tob. 1:17; 2:3, 7; 4:3f.; Sir. 7:33; 38:16), etc. (see further Pfeiffer, p. 268 n. 27; *ISBE* [1929], V, 2992). As other scholars have pointed out, however, these parallels may stem from common tradition rather than direct dependence.

VIII. Date.–Although some scholars defended the historicity of Tobit and thus dated it in the 8th-7th cent. B.C., most scholars now reject its historicity (see III above) and date it much later. It was certainly written before A.D. 70 (contra Zimmerman, pp. 25, 27), because fragments of the book were found at Qumrân, and that community was destroyed during the Jewish wars against Rome. Since 14:5 seems to presuppose the temple of Zerubbabel, the book must be earlier than 25 B.C. The use of the drachma in 5:14 suggests a date after Alexander the Great (late 4th cent. B.C.). Although some scholars (e.g., Pfeiffer, p. 274) argue that Tobit's references to the OT prophets presuppose a date after 200 B.C., as Nicklesburg pointed out (p. 45) these references "need not imply a fixed body of writings" (supposedly the Prophets were canonized *ca.* 200 B.C., though there is little evidence for this assumption). Most scholars date the book of Tobit in the 2nd cent., many between 200 and 170, since it does not mention the persecutions of Antiochus Epiphanes that provoked the Maccabean revolt *ca.* 168 B.C. (See *APOT*, I, 183-85; Pfeiffer, pp. 273-75). But Richardson (pp. 203f.) argued for a date between 350 and 300 B.C. on the basis of the Aramaic of the Qumrân Scrolls, which is close to that of Ezra.

IX. Place of Origin.–The provenance of Tobit remains unknown, but several places have been suggested. The

setting of the story suggests Mesopotamia (Assyria) or Media, but neither seems very likely. The author appears to think that the Tigris River lies between Nineveh and Ecbatana (5:1), a geographical mistake unthinkable for someone living in Mesopotamia (cf. Richardson, p. 202; Eissfeldt, p. 585; Nicklesburg, p. 45). Milik argued that the story originated in Samaria but was reworked by a Jewish scribe; this interpretation has gained few adherents, however. The emphasis on the Jerusalem temple has led some (e.g., Pfeiffer, p. 275) to assign it a Palestinian origin, but most scholars reject that option because the atmosphere of the book is clearly that of the Diaspora (see Richardson, p. 202). Some scholars (e.g., Deselaers, Simpson) have argued for Egypt, which had a large Jewish population in the Diaspora and could account for several of the book's features (e.g., ignorance of Mesopotamian history and geography, supposed reliance on certain sources). But as Richardson pointed out (p. 202), the reference to Egypt in 8:3 seems to argue against an Egyptian provenance. Finally, some scholars favor Antioch in Syria, which was a Jewish center in the Diaspora that was between Palestine and Mesopotamia (see Richardson, pp. 202f.).

X. Canonicity.–Tobit was part of the LXX, but was never accepted into the Hebrew canon. Its popularity in Judaism is attested not only by its use at Qumrân but also by its later translation into Hebrew (see *APOT*, I, 178-180, 198). In addition, some of the Pseudepigrapha may reflect Tobit (e.g., cf. Tob. 4:12 and Jub. 4:33; see *APOT*, I, 198).

Simpson (*APOT*, I, 199) noted some parallels between Tobit and the NT, but most of these can be explained as part of common Jewish tradition. Several early church fathers referred to it; Clement (*Misc.* ii.23.139) even quoted Tob. 4:16 as "scripture." See further *HJP*^{2}, III/1, 227. Martin Luther rejected it from his Bible, but considered it a helpful book to read. The Roman Catholic church accepted Tobit at the Council of Trent, reversing the opinion of Jerome. The Roman, Orthodox, and Anglican Churches retain the book in their readings for worship, but the Anglican Articles reject its canonicity.

XI. Text and Versions.–The textual tradition of Tobit has received much attention (see *APOT*, I, 174-182; Pfeiffer, pp. 258-260; *HJP*^{2}, III/1, 227-230). The debate about whether the original language was Greek, Hebrew, or Aramaic has been partially resolved by the discovery of one Hebrew and four Aramaic fragments of the book among the Qumrân Scrolls, though it is not clear which of these languages was original. It has come down in three Greek recensions, as well as in Latin, Syriac, and Ethiopic versions.

TOCHEN tō'kən [Heb. *tōḳen*–'measure'; Gk. *Thokka* (LXX B*), *Thochchan* (LXX A)].

One of the cities mentioned by the Chronicler as belonging to the tribe of SIMEON (1 Ch. 4:32). Tochen is not mentioned elsewhere in the OT. Ashan, the name following Tochen in the Chronicler's list, is preceded by Ether in the closely parallel list of Simeonite possessions in Josh. 19:7 and in the (apparently later) list of Judean cities in Josh. 15:42. But LXX B gives the additional name of *Thalcha* before Ether in Josh. 19:7, and gives *Ithak* for MT Ether in Josh. 15:42; the last Greek name is very close to MT *ʿāṯāḳ* in 1 S. 30:30, which is also associated with (Bor-)Ashan. Hence, Noth argued that Tochen is identical with Ether, or that both represent variants of still a third name, ʿAtak.

If Tochen is not to be identified with Ether, its location cannot be specified beyond its general situation in the transition between the southern Shephelah and the northern Negeb of Judah. Eusebius identified the Thalka of LXX B Josh. 19:7 with a prominent Judean village called Thala in his day, and located it 16 Roman mi. (23.5 km., 14¾ mi.) from Eleutheropolis (Beit Jibrîn) into the Negeb (*Onom.* 98.26f.).

TOGARMAH tō-gär'mə [Heb. *tôgarmâ*]. A name occurring in the TABLE OF NATIONS (Gen. 10:3; cf. 1 Ch. 1:6) with Ashkenaz and Riphath as the sons of GOMER (1) and grandsons of Japheth. In Ezekiel Beth-togarmah is a nation of the north (Ezk. 38:6) that trades in horses and mules (27:14).

The word is variably and confusedly rendered in the LXX MSS, and Josephus identifies the *Thygramaioi* with the Phrygians (*Ant.* i.6.1 [126]). Traditionally the place was thought to be in Armenia, but it is now generally equated with the Hittite Tegarama (Assyr. Til-Garimmu), the region of classical Gauraena (Gürün) in Cappadocia, 110 km. (70 mi.) W of the Hittite Meliddu (Melitene, modern Malatya) on the upper Euphrates (J. Garstang and O. R. Gurney, *Geography of the Hittite Empire* [1959], pp. 46-48). C. J. HEMER

TOHU tō'hōō [Heb. *tōhû*]. An ancestor of Samuel (1 S. 1:1); probably the same person who is called NAHATH (2) in 1 Ch. 6:26 (MT 11) and TOAH in 1 Ch. 6:34 (MT 19).

TOI tō'ī, toi. *See* TOU.

TOIL [Heb. *ʿiṣṣāḇôn, ʿeṣeḇ*] (Gen. 3:17; 5:29; Ps. 127:2; Prov. 14:23); AV also SORROW, LABOUR; NEB also (HARD) LABOUR; [*ʿāmāl*] (Dt. 26:7; Ps. 90:10; 105:44; Eccl. 1:3; 2:10f., 18, etc.; 3:9, 13; etc.; Jer. 20:18); AV LABOUR, TRAVAIL; NEB also HARDSHIP, LABOUR, TRY; [hiphil of *ʿāḇar* (emended to *ʿāḇaḏ* by RSV and NEB)] (2 S. 12:31); AV "make (one) pass through"; NEB MAKE (ONE) WORK; [*yāgāʿ*] (Josh. 7:3; Job 20:18; Ps. 109:11; Prov. 23:4); AV (MAKE) LABOUR; NEB also GAINS, EARNINGS, SLAVE; [*pōʿal*] (Job 24:5); AV, NEB, WORK; [*maʿaśeh*] (Hag. 2:17); AV LABOURS; NEB HARVEST; [*ḥeḇel*] (Prov. 5:22); AV CORDS; [Gk. *kopiáō*] (Mt. 6:28; Lk. 5:5; 12:27; Acts 20:35; Col. 1:29; 1 Tim. 4:10); AV also LABOUR; NEB also (HARD) WORK, BE HARD AT WORK, LABOUR; [*kópos*] (2 Cor. 11:27; 2 Thess. 3:8; Rev. 2:2); AV WEARINESS, LABOUR; [*móchthos*] (1 Thess. 2:9); AV TRAVAIL; NEB DRUDGE. Strenuous labor that causes fatigue. In Prov. 5:22 "toils" (Heb. *ḥeḇel*) refers to a net or snare.

In Lk. 12:27 the NEB follows a Greek textual variant, reading "they neither spin nor weave" in place of "how they grow; they neither toil nor spin" (RSV; cf. AV). Although critical scholars once preferred the NEB reading (supported by D and other western MSS) because they suspected that the other was an assimilation to Mt. 6:28, they now prefer the AV and RSV readings because of the superior textual support ($\mathfrak{p}^{45}$, $\mathfrak{p}^{75}$, ℵ, A, B, etc.).

As a result of the fall and God's curse upon the ground, work that was once a positive and creative part of human

existence became tedious and toilsome (Gen. 3:17; cf. Ps. 90:10). The author of Ecclesiastes struggled with the question of the value of human labor (Eccl. 1:3; 2:10f., 18-23; 3:9; 4:4-9; 5:15 [MT 14]; 6:7; 8:17; 10:15) and concluded that the ability to find enjoyment in one's toil is a gift of God (2:24-26; 3:13; 5:18f.; 8:15; 9:9). The Apostle Paul willingly labored hard to bring to maturity the Christians under his care (2 Cor. 11:27; Col. 1:29; 1 Thess. 2:9; 2 Thess. 3:8).

See also LABOR; WORK.

N. J. O.

TOKEN tō'kən [Heb. *ʿarubbâ* (1 S. 17:18), *beṯûlîm* (Dt. 22:14f., 17, 20); AV PLEDGE (1 S. 17:18), MAID, etc.; NEB also PROOFS, PROOF(S) OF VIRGINITY. A token normally comprises a sign or indication of something.

When Jesse sent David to enquire as to the welfare of his brothers at a time when Goliath and the Philistines threatened the Israelites, he sought some assurance of their physical safety (1 S. 17:18).

In the regulations dealing with the treatment accorded to an unchaste bride, some scholars suggest that the required token was a blood-smeared garment or cloth consequent upon a ruptured hymen (cf. *TDOT*, II, 342). Other scholars suggest that the blood-stained cloth verified the young girl's menstruation immediately prior to the marriage, which proved that the young girl was not impregnated before marriage (cf. A. D. H. Mayes, *Deuteronomy* [*NCBC*, repr. 1981], p. 310; cf. esp. G. J. Wenham, *VT*, 22 [1972], 326-348).

R. K. H.

TOKHATH tok'hath. *See* TIKVAH 1.

TOLA tō'lə [Heb. *tôlāʿ*–'cochineal, crimson worm'].

1. One of the four sons of Issachar (Gen. 46:13; 1 Ch. 7:1), mentioned among those who journeyed to Egypt with Jacob (cf. Gen. 46:8f.); head of the clan of the Tolaites (Nu. 26:23), which was probably the leading clan of Issachar. His descendants in the time of David included 22,600 "mighty warriors" (1 Ch. 7:2). Interestingly, both Tola and his brother Puvah (Gen. 46:13; Nu. 26:23) or Puah (1 Ch. 7:1; Heb. *pûʾâ*, a plant from which a red dye was made) were named after red dyes.

2. A judge from the tribe of Issachar; son of Puah and grandson of Dodo (Jgs. 10:1). He lived at Shamir in the hill country of Ephraim and was buried there after judging Israel for twenty-three years (v. 2). In the succession of judges he is listed between Abimelech and Jair. The fact that Puah and Tola are elsewhere named as two clans of Israel (see **1** above) but are here identified as father and son has suggested to some scholars a confusion between clan and individual names; but these may simply have been popular names within the tribe of Issachar. Although some early critical scholars viewed Tola and some of the other minor judges as unhistorical figures created by a later editor to make up a total of twelve judges, more recent scholarship views them as historical figures.

TOLAD tō'lad [Heb. *tôlāḏ*] (1 Ch. 4:29). One of the cities belonging to the tribe of Simeon. It is probably the same as ELTOLAD in Josh. 15:30 (but there it is allotted to Judah) and 19:4.

TOLAITES tō'lə-īts [Heb. *(hat)tôlāʿî*] (Nu. 26:23). *See* TOLA.

TOLBANES tol-bā'nēz, tol'bə-nēz (1 Esd. 9:25, AV, NEB). *See* TELEM.

TOLL [Aram. *hᵃlāḵ*] (Ezr. 4:13, 20; 7:24); AV CUSTOM; NEB LAND-TAX; [Gk. *télos*] (Mt. 17:25). A tax paid for the privilege of using a road.

The three terms translated "tribute," "custom," and "toll" by the RSV in the Ezra references are probably derived from Babylonian terminology: *mindâ* (RSV "tribute") from *mandattu*, a monetary tax; *bᵉlô* ("custom") from *biltu*, a payment in kind; and *hᵃlāḵ*, of uncertain derivation, but probably a toll collected from those in transit and/or a duty collected on goods being transported. It has been estimated that the Persian king collected the equivalent of $20,000,000-$35,000,000 annually through a system of taxation administered by the Persian satrap of each province. According to Herodotus (iii.89), Darius Hystaspes decreed that the satraps would pay a fixed sum into the royal treasury. One method of collecting this sum was by exacting tolls or customs duties.

In Ezr. 4:13 *hᵃlāḵ* appears in an Aramaic letter to the Persian emperor Artaxerxes (464-423 B.C.) by Rehum the "commanding officer" and Shimshai the scribe in Samaria, in which they opposed the rebuilding of the Jerusalem walls on the grounds that the completion of this work would put the Jews in a position where they could rebel against paying "tribute, custom, or toll" to the king. The loss of that revenue would have been a great financial burden to the king, whose treasury had already been depleted by the wars of Darius and Xerxes. The term recurs in Artaxerxes' reply (4:20), which decrees that the rebuilding should cease until a specific order is issued by the king. In 7:24 the term appears in a letter from Artaxerxes to Ezra, which states that no "tribute, custom, or toll" was to be imposed on the priests, Levites, singers, doorkeepers, temple servants, or other servants of the house of God. That such exemptions were in keeping with Persian practice is attested elsewhere; e.g., in the Gadatas Inscription Darius censured Gadatas for imposing taxes on the priests of Apollo at Magnesia (Olmstead, p. 156). Similar exemptions were granted by Darius Hystaspes to Phoenecia, Cyprus, and Palestine-Syria (Herodotus iii.91), and by Antiochus the Great to the Jews (Josephus *Ant.* xii.3.3 [142]). In later rabbinic literature the rabbis (believing themselves to be heirs of the rights and privileges of the priests) cited Ezr. 7:24 to support their claim to similar exemptions, arguing that taxation would transgress a scriptural precedent (T.B. *Baba Bathra* 8a).

In Mt. 17:25 Jesus asks Peter: "From whom do kings of the earth take toll [Gk. *télos*] or tribute [*kḗnsos*]? From their sons or from others?" The terms employed clearly refer to civil taxes, despite the apparent reference to the temple tax in v. 24 (on this problem, see Bibliography below). The toll (*télos*) is generally understood to refer to the Roman *portorium*, a variety of indirect taxes or tolls that included customs, taxes on special goods entering, leaving, or passing through towns, and tolls for use of roads, bridges, and other public structures. The collection of these tolls was generally farmed out to natives called *publicani*, who leased the customs office for a fixed annual fee (*see* TAX COLLECTOR).

TOMB; SEPULCHRE. A place where a corpse is buried. In the RSV OT "tomb" or "sepulchre" usually represents Heb. *qeḇer* or *qᵉḇûrâ* (AV often "grave" or "sepulchre"). Both Hebrew terms are cognates of the verb *qāḇar* ("bury") and denote a grave or burial place. Other Hebrew terms are *ṣārî(a)ḥ* (lit. "chamber," "cellar," "vault," 1 S. 13:6; AV "high place"; NEB "pit"), *gāḏîš* (lit. "heap," Job 21:32), and *bayiṯ* (lit. "house" [so AV], Isa. 14:18; NEB "home"). In the RSV NT "tomb" usually represents Gk. *mnēmeíon* or *mnêma* (AV often "sepulchre" or "grave"). Both Greek terms are cognates of the verb *mimnḗskomai* ("remember") and signify, literally, a memorial or monument connected with remembrance of the dead (see *TDNT*, IV, *s.v.* μιμνήσκομαι κτλ. [Michel]). Gk. *táphos* (Mt 23:27, 29; 27:61, 64, 66; 28:1) is a general term for a grave (cf. Rom. 3:13), tomb, or sepulchre.

See BURIAL III. N. J. O.

TOMORROW; MORROW. In the RSV OT "tomorrow" (cf. AV "to morrow") always translates Heb. *māḥār*, a term meaning "the next day." A cognate, *moḥᵒrāṯ*, is usually rendered "[on the] morrow" by the AV (e.g., Gen. 19:34; RSV "[on the] next day"). The AV also uses "to morrow" or "[on the] morrow" to render Heb. *bōqer* (lit. MORNING) in passages in which this term is related to the preceding day (e.g., Lev. 22:30; Nu. 16:5; 22:41; 1 S. 9:19; RSV usually "[in the] morning"). Whereas *māḥār* and *moḥᵒrāṯ* refer to the whole day that follows, *bōqer* generally refers only to the first part of the day (see *TDOT*, II, *s.v.* "bōqer" [Barth]).

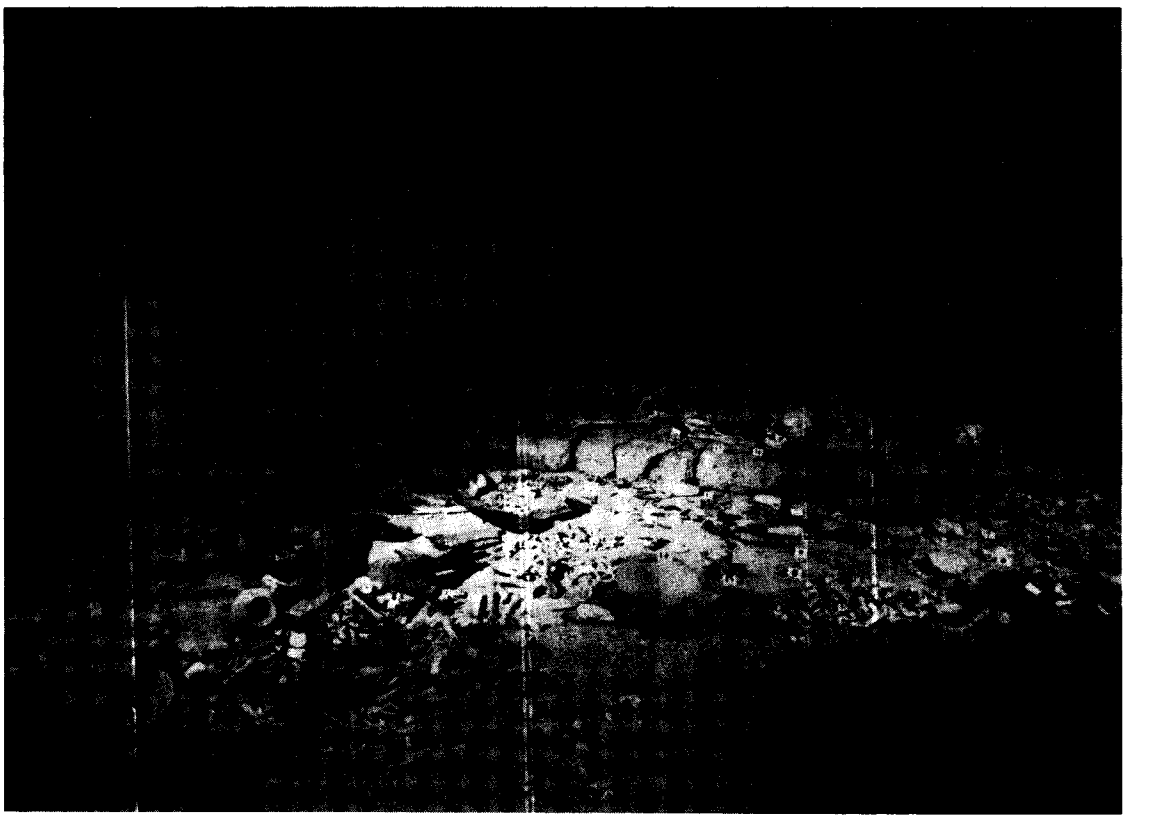
In the NT "tomorrow" usually represents Gk. *aúrion* (lit. "next day"). The AV sometimes uses "morrow" to render *aúrion* (e.g., Mt. 6:34), *epaúrion* (e.g., Mk. 11:12), and *hexḗs* (Acts 25:17), all of which refer to the following day (RSV usually "tomorrow" or "next day"). N. J. O.

TONGS [Heb. *melqāḥayim* . One of the golden implements used in Solomon's temple (1 K. 7:49 par. 2 Ch. 4:21). The dual form (*-ayim*) suggests a tool with two parts, and the term's appearance in Isa. 6:6 (where an angel uses a *melqāḥayim* to take a burning coal from the altar) points to tongs as the instrument referred to. *See also* SNUFFERS.

TONGUE [Heb. *lāšōn* (e.g., Job 5:21; Ps. 5:9 [MT 10]; Prov. 6:17; Isa. 11:15; 66:18; Jer. 9:3, 5, 8); Gk. *glṓssa* (e.g., Mk. 7:33, 35; Acts 2:3f., 11, 26; 10:46; 19:6; Rom. 3:13; 14:11; 1 Cor. 12–14 [21 times]; Phil. 2:11; Jas. 1:26; 3:5f., 8; 1 Pet. 3:10; Rev. 5:9, 7:9; 10:11; 11:9; 13:7; 14:6; 17:15), *heteróglōssos* (1 Cor. 14:21)]; NEB also SPEECH, LANGUAGE, SLANDER, WORDS, etc.

"Tongue" appears in the Bible only rarely in a purely anatomical sense (e.g., Jgs. 7:5; Ps. 68:23 [MT 24]; Isa. 41:17; Mk. 7:33, 35; Lk. 1:64). Even when the meaning seems primarily physical, as in Ps. 22:15 (MT 16; "my tongue cleaves to my jaws") or Job 20:16 ("the tongue of the viper will kill him"), the figurative element is often

A tomb found at Jericho containing some thirty individuals, a table with utensils and food, and a basket with personal items (courtesy, Israel Department of Antiquities and Museums)



predominant; Ps. 22:15 (MT 16) refers to the physical, emotional, and spiritual agony resulting from God's absence, while Job 20:16 refers to God's punishment of the wicked. Several times *lāšōn* is used to indicate a long, narrow shape ("bay," Josh. 15:2, 5; 18:19; "bar [of gold]," 7:21). Most often, however, Heb. *lāšōn* is associated with SPEECH by the same process of synecdoche at work in many uses of the words for LIP (Heb. *śāphâ*; Gk. *cheílos*) and for MOUTH (Heb. *peh*; Gk. *stóma*). These uses of "tongue" may be divided into four categories: (1) a particular language or dialect; (2) a person's manner of speaking; (3) speech as the outward expression of a person's inward character; (4) the organ of speech as a powerful instrument for good or evil, thus needing discipline; and (5) "speaking in tongues" (often termed glossolalia, though the word is not found in the NT) as one of the gifts of the Spirit, for which *see* TONGUES, GIFT OF.

The synonymity of "tongue" and "language" (< Lat. *lingua*, "tongue") is so characteristic of Hebrew, Greek, and English that the two words are used interchangeably as translations of Heb. *lāšōn* and Gk. *glóssa*. The RSV and other modern versions usually choose "language" instead of "tongue," which is more frequently used by the AV. Literary style, however, occasionally suggests the translation "tongue," as in the RSV of Ps. 55:9 (MT 10): "Destroy their plans, O Lord, confuse their tongues. . . ." The predominance of "tongue" in all English Versions from Wyclif through the AV reflects the early translators' preference for the blunt vocabulary of Old and Middle English (*tunge*; Gothic *tuggo*) as opposed to the more learned, and hence less accessible, derivatives of Latin. The story of Jgs. 12:1-6 reflects early dialect differences between the Israelites living E and W of the Jordan (*see* SHIBBOLETH).

Only a few uses of "tongue" relate directly to the physical manner of speaking. Moses, shrinking from the Lord's command that he go to Pharaoh on behalf of the enslaved Hebrews, protested that he was "slow" (Heb. *kāḇēḏ*, "ponderous," "heavy") of speech and tongue, which would suggest a speech impediment. Moses' speech problem would certainly be exacerbated by a public appearance before the Egyptian "god" Pharaoh and his court. In Isa. 33:19 foreigners speaking in an unknown language are said to sound as if they stammer (Heb. *lāʿag*). Mk. 7:31-35 describes Jesus' healing of a deaf man who also had a speech impediment. After commanding that the man's ears be opened, Jesus loosed the "string" (so AV; Gk. *desmós*, "cord," "ligature") of his tongue, and "he spoke plainly" (7:35). Had the man's speech problem been the result of lifelong deafness, he presumably would have been described as "mute" or "dumb" (Gk. *kōphós*). Rather, the hapax legomenon *mogilálos* ("having an impediment in one's speech") seems to indicate the condition known as "tongue-tie," a reduction in the tongue's mobility due to shortness of the frenum, which binds the tongue to the floor of the mouth.

The most numerous occurrences of "tongue" relate to the moral, ethical, and spiritual nature of the tongue's utterances. Only God sees the heart; human beings must rely on the outward expression, most importantly on what one speaks. Thus the tongue becomes a kind of barometer of the heart. As the heart of natural humanity "is deceitful above all things and desperately corrupt" (Jer. 17:9), the tongue may become the instrument of a sinful nature. Every kind of iniquity — lying (Ps. 78:36; 109:2; Prov. 12:19; 21:6; 26:28; Jer. 9:5), flattery (Ps. 5:9 [MT 10]; Prov. 28:23), perverseness (Prov. 10:31; 17:20; "wickedness," Isa. 59:3), ridicule (Isa. 57:4), slander (Ps. 15:3; Prov. 25:23), deceitfulness (Ps. 50:19; 52:4 [MT 6]; 120:2f.; Mic. 6:12; Zeph. 3:13), insolence (Ps. 12:3f. [MT 4f.]; Hos. 7:16), strife (Ps. 31:20), mischief (Ps. 10:7; Prov. 17:4) — is given vent and power for evil by the tongue. On the other hand, the tongue of the righteous, whose heart has been renewed by God's forgiving grace, is enabled to glorify and serve God (e.g., Ps. 35:28). Job, asserting his righteousness, appealed to the ultimate evidence: "Is there any wrong on my tongue?" (6:30). Praise (Ps. 51:14 [MT 16]; 71:24), healing (Prov. 12:18), confession of the lordship of Jesus (Phil. 2:11), laughter and joy (Ps. 126:2), preaching of the Word (Ps. 119:172), dissemination of knowledge (Prov. 15:2), and kindness (Prov. 31:26) are among the fruits of the Spirit that manifest themselves by the tongue.

In several OT and NT passages this organ of speech signifies a powerful instrument that can be used for either good or evil according to how it is ruled, whether by the sinful self or by God. James states that only God's grace is powerful enough to tame the tongue, for "no human being can tame the tongue — a restless evil, full of deadly poison" (Jas. 3:8). He describes the tongue as a "fire . . . an unrighteous world among our members, staining the whole body, setting on fire the cycle of nature, and set on fire by hell" (v. 6). The OT as well as the NT enjoins God's people to rule (or "bridle," Jas. 1:26; cf. 3:2) their tongues (e.g., Ps. 34:13; Prov. 21:23) by the power that comes from God (cf. Ps. 51:10-14). C. D. LINTON

TONGUES AS OF FIRE. (Acts 2:3). [Gk. *glóssai hōseí pyrós*] (Acts 2:3). The description of a vision given to the disciples at the PENTECOST event (Acts 2:1-13). In view of the familiar biblical association of fiery apparitions with visions of God (e.g., Ezk. 1:27; Dnl. 7:9f.; *see also* FIRE I.D.), as well as passages such as 1 En. 14:8-15; 71:5, which refer to "tongues of fire" in the context of visions of heaven, the phenomenon in Acts likely symbolizes divine presence and activity, which is seen "distributed" upon the disciples (2:3; AV "cloven" is a mistranslation). The phrasing "*as* of fire" in this description of the inauguration of the Church bears some similarity to the same writer's account of the beginning of Jesus' ministry in Lk. 3:22; there Jesus sees the Spirit descending "in bodily form, as [*hōs*] a dove." The author may have intended to draw a parallel between the two visions that accompany scenes of empowerment by the Spirit.

TONGUES, CONFUSION OF. *See* BABEL, TOWER OF.

TONGUES, GIFT OF. Cited by Paul as a spiritual gift (Gk. *chárisma*; *see* SPIRITUAL GIFTS), this phenomenon is most frequently represented in the Greek NT by the noun *glóssa* ("tongue"; or by the instrumental *glóssais*, "in" or "with tongues") in combination with the verb *laléō* ("speak"; cf. Eng. "glossolalia.") The RSV translates these words literally as "speak in a tongue" or "speaking in tongues." The AV often adds the interpretive adjective "unknown" (1 Cor. 14:2, 4, 13f., 19, 27), emphasizing the spontaneous and evidently supernatural character of this gift. This understanding is enhanced by the NEB translations "ecstatic speech" (1 Cor. 14:5, 18 [mg.]), "ecstatic language" (v. 6), "ecstatic utterance" (12:10, 28; 14:9, 13, 18f., 26f., 39), "language of ecstasy" (14:2, 4), "tongues of ecstasy" (12:30; 13:8; 14:5; Acts 10:46; 19:6), or "strange tongues" (1 Cor. 14:22f.; Mk. 16:17). In contrast, the NIV parallels the RSV (except at 1 Cor. 13:8, where it translates "tongue" as the physical organ); but it always pro-

vides the alternate reading "language," thereby underscoring its understanding of tongue-speaking as speech in predictable human languages rather than as non-sensible ecstatic speech. A second term, Gk. *diálektos* (cf. Eng. "dialect"), appears in Acts 2:6, 8 (RSV, NEB, NIV, "language"; AV "language," "tongue").

The source, purpose, and value of speaking in tongues, as well as guidelines for their appropriate use, are discussed by Paul at length in 1 Cor. 12–14; this phenomenon may also lie behind the Pauline understanding of the Spirit's intercessions in Rom. 8:26f., and of spiritual songs in Eph. 5:19. Luke does not refer to the ability to speak in tongues as a spiritual gift, but he does describe the phenomenon in Acts 2:1-21; 10:44-46; and 19:1-6; allusions to speaking in tongues are also apparent in 11:15-17; 15:8f.; and possibly 8:14-19, where this phenomenon may explain the magician Simon's request for power to impart the Spirit. The longer ending of Mark (16:17) also makes brief mention of the phenomenon.

  B. Modern Manifestations

I. Ecstatic Speech in the Ancient World.–Descriptions of ecstatic speech are common in the study of comparative religions. In some cases the phenomena bear striking resemblance to the glossolalic speech described in the NT. Ecstatic behavior is found most frequently in the shaman, the seer, and the prophet. Generally the ecstatic state is associated with divine or spirit possession and inspiration. Of particular relevance to this discussion are the religions of Israel and of Greece.

A. Religion of Israel. Although Gk. *ékstasis* ("ecstasy") occurs some thirty times in the LXX, it is never used of prophets or prophetic activity. The descriptions of the behavior of the guild of singing prophets and of Saul after the Spirit of Yahweh came upon him and "turned [him] into another man," enabling him to prophesy (1 S. 10:5-13; cf. 19:20-24), are significant, but they do not adequately define ecstasy. More commonly the prophets are pictured as receiving a heightened awareness of Yahweh's voice through vision (Am. 7:1-9), dream (Jer. 23:25), or reflection upon daily activities (Jer. 18:1-11) or contemporary events (Joel 1:1–2:11). Significant, too, is the prophetic consciousness of the distinction between Yahweh and prophet (Isa. 6:1-11).

There is no evidence that the OT writers knew of "speaking in tongues," although they knew of prophetic activity that was associated with a variety of "ecstatic" behaviors. Peter's response to the charge of drunkenness on the day of Pentecost (Acts 2:12-18) clearly suggests that he understood "speaking in tongues" to be a form of prophetic speech, for Joel (2:28f.) never mentioned tongues — only visions, dreams, and prophesying.

B. Greek Religion. The Delphic and Pythian religion of Greece understood ecstatic behavior and speech to be evidence of divine inspiration by Apollos. Described in Greek literature by the terms *ékstasis* and *mántis* (cf. Eng. "mantic"), this behavior may provide background to the Corinthian misunderstanding of tongues-speaking. Plutarch (*Moralia* 432, 438, 758) described the Delphic oracle as a mantic who sought divine inspiration that enabled her to speak in an ecstatic manner. A second person, an interpreter (*prophḗtēs*, "prophet"), stood by to make intelligible to paying customers what the mantic had received under inspiration (cf. Plato, *Timaeus* 71f.). Uninterpreted tongues at Corinth were apparently understood by some as sufficient indication of Spirit possession, and hence, of spirituality (1 Cor. 14:4-6, 37f.).

II. Tongues-Speaking in the NT.–*A. Pauline Perspective.* Paul noted that the Holy Spirit has sovereignly bestowed the ability to speak in tongues on various members of the body of Christ (1 Cor. 12:10f., 28, 30) for the good of the community (v. 7). Like other *charísmata*, the ability to speak in tongues is temporary, destined to disappear when that which is perfect (*tó téleion*) has come (13:8-10). Identification of "the perfect" remains a subject of debate, the main theories being that these gifts ceased with the close of the apostolic age (Warfield) or with the completion of the canon of Scripture (Chantry), or that they will cease with the future parousia (Hoekema). The last position is most appropriate in the light of the eschatological language of 13:8-12 (which parallels 1 Jn. 3:2) and the consistent patristic support for this interpretation (Clement of Alexandria *Quis dives salvetur* 38; Origen *Contra Celsum* vi.20; *De oratione* xxv.2; Tertullian *Adv. Marc.* v.15.6; *De patientia* i.10).

During the present age the gift may be manifest in a variety (*génē*, 1 Cor. 12:10) of forms, ranging from human to angelic (13:1). Such diversity helps to explain the ambivalence in translations of *glṓssais laléō*. It may also explain the discrepancies between many modern claims to tongues as a foreign language and the conclusion of recent linguistic analysis that it is *not* a language (Samarin). Whatever form it may take, tongues-speech was conceived by Paul to be a spontaneous, unlearned form of communication to God made in the Spirit (1 Cor. 14:2, 15f.), through which mysteries are spoken (v. 2), prayer is offered (v. 14), and blessing or thanksgiving is made known (vv. 16f.).

1. Its Purposes. According to Paul, the gift of tongues serves a variety of purposes. (1) It provides a form of *personal edification* (1 Cor. 14:4). This was not viewed negatively by Paul (v. 18) except when it was done in the public assembly without the benefit of an interpretation, since only with interpretation could it be a meaningful experience for all who hear it. The nature of this personal edification may lie in the gift's witness to the immanence of God.

(2) It can enable a congregation to enter into a form of *Spirit-directed worship*. Proper interpretation of a "blessing" or "thanksgiving" in tongues, through the complementary gift of interpretation (*see* INTERPRET IV), can lead to the participation of others in the "Amen" to these forms of praise (1 Cor. 14:16). The provision of a hymn (v. 26) is one of several contributions to corporate worship; so too, might be singing in the Spirit (v. 15). As such, the reference to "psalms and hymns and spiritual songs" in Eph. 5:18f. might be taken to refer to singing in tongues.

(3) It is a *sign* to observers. While this gift can be a positive sign of God's blessing and presence, as witnessed by its ability to provide personal and community edification when properly used, it also has the potential of becoming a negative sign to the uninitiated or the unbeliever. If it is improperly used, some will witness it but fail to recognize God's hand at work (1 Cor. 14:23). Tongues-speaking without responsible corporate constraint might be construed as community madness.

(4) It may manifest an *intercessory character*. Tongues-speaking is a preconceptual (Montague) or transrational mode of Spirit-assisted prayer (1 Cor. 14:14). This has led

some (e.g., Käsemann) to explore the parallels between 1 Cor. 14:14 and Rom. 8:26f., understanding *stenagmoí alalḗtoi,* the "unutterable groans" of the Spirit, as inherently glossolalic.

2. Guidelines for Its Use. For Paul the ultimate guide to the use of this and all other gifts is love (1 Cor. 12:31b–14:1). Love is eternal and outward looking. Thus mere possession or even frequent exercise of the gift of tongues is no definitive mark of spirituality, for edification of the community is to take precedence over edification of the self (14:12, 24). Without love, tongues-speech is reduced to a noisy intrusion that is both disruptive and irritating (13:1).

Paul's exposition of the proper use of the gift suggests that the tongues-speaker is able to exercise considerable self-control. Hence any suggestion that the speaker participates in an altered state of consciousness, or any concept of tongues as "ecstatic speech," needs to be tempered. Several indications point toward this conclusion. (1) The speaker apparently knows beforehand when she or he will speak in tongues and is encouraged to anticipate the need for an interpreter (1 Cor. 14:28). Should one not be present, the speaker may choose one of two alternatives: remain silent, speaking quietly to God (v. 28); or pray for the gift of interpretation of tongues (*hermēneía*) — a gift that, paired with tongues, is apparently acquired spontaneously through prayer (v. 13). The latter gift allows the utterances of tongues to achieve a value for the Christian community approximating that of prophetic oracles (v. 5). In either case, the tongues-speaker is challenged to exercise self-control in order to provide for community edification (vv. 6-13).

(2) The speaker as well as the community is able to act in accordance with preexisting guidelines. Paul suggested that the number of such utterances be limited to perhaps two or three per meeting. They should be given consecutively rather than simultaneously, and each must be interpreted (1 Cor. 14:27). Those who fail to allow for such regulation or assessment are not to be given the courtesy of public acknowledgement (vv. 37f.).

(3) God is by nature a God of peace, not of confusion (1 Cor. 14:33). Both the tongues-speaker and the community of faith are called upon to exercise and permit the exercise of *charísmata* in a way that reflects the nature of the Giver; i.e., they are to do so decently and in order (v. 40). The speaker in tongues must, therefore, seek the good of the whole body of Christ, and the body must not forbid the appropriate use of this spiritual gift (v. 39). Such forbidding may fall into the category of quenching the Spirit (cf. 1 Thess. 5:19) and deprive the whole community of the benefits this gift might bring to it.

B. Lukan Perspective. Luke's understanding of tongues-speaking shows many similarities to Paul's. This is not surprising since Paul and Luke spent time together (Philem. 24; Col. 4:14). If Luke incorporated the "we" sections of Acts (16:4; 20:5–21:18; 27:1–28:16) from his personal diary, then he joined Paul shortly after Paul had written to the Corinthians (Acts 20:1-4). Like Paul, Luke understood the ability to speak in tongues as originating in the Holy Spirit (Acts 2:4; 10:44-46; 19:6). Both writers used the terms *glṓssa* and *laléō* to describe the phenomenon (cf. 10:46; 19:6), although Luke also used the term *diálektos* in 2:6, 8. The common verb *légō,* "speak," was never used by either writer in conjunction with speaking in tongues. In Acts *laléō* sometimes carries a special significance, being clearly associated with inspired speech (see Jaschke). Like Paul, Luke noted a behavior in tongues-speakers that outsiders or the uninitiated could misunderstand: Paul's mention of the charge of "madness" (1 Cor. 14:23) is paralleled by Luke's description of the charge of drunkenness (Acts 2:13, 15).

Luke had a unique perspective, however. He never used the term *chárisma* to describe the ability to speak in tongues. His concern was not with the misuses of the gift but with its meaning in the light of Pentecost, which he seems to have connected with the Sinai tradition (Ex. 19:18f.; Jub. 6:14-21; 15:1-24; 16:28-30; 1QS 1:1–2:26; T. B. *Megillah* 31a) and with the reversal of Babel (Gen. 11:1-9). On the day of Pentecost the 120 spoke in tongues (Acts 2:1-11), while the wondering multitude asked the agenda-setting question, "What does this mean?" (v. 12). Hence, in Acts speaking in tongues on the day of Pentecost acquires an evidential flavor. It provides adequate evidence for the following points.

(1) According to Peter, a member of Jesus' inner circle of disciples, the long-standing promise of Joel (2:28f.) has been fulfilled. The Holy Spirit has been poured out in the inaugural eschatological event, the inbreaking of the age to come into the present (vv. 16-21).

(2) John the Baptist's prophecy of one who would baptize in Spirit (Lk. 3:16) is continuous with the Spirit-filled ministry of Jesus (4:18-21) and with the anticipated mission of the fledgling Christian community (24:49; Acts 1:4-5, 8). Jesus continues to manifest Himself among His people through the Spirit that has been poured out.

(3) The mission of the Church empowered by the Holy Spirit has begun in earnest. It is a mission that began in Jerusalem and Judea and then moved in ever-expanding circles through Samaria to the farthest reaches of the world (Acts 1:8). Thus it is a mission that ultimately includes the Gentiles.

(4) The Church's message includes the fact that God is satisfied with the work of the crucified, risen, and ascended Jesus. The coming of the Spirit, evidenced by the phenomenon of tongues at Pentecost, demonstrates that the murder of Jesus (Acts 2:23), which should have resulted in a curse, has been transformed by God into a blessing. God has raised Jesus up (vv. 24f.), exalted Him as Lord with a seat at the right hand of God (vv. 33-36), and poured out the Spirit that Jesus promised. As a result, the gift of the Spirit is available to all who are called, who repent, and who identify with Jesus Christ in baptism (vv. 38f.).

(5) The inclusion of the Gentiles in the believing community is assured. The experience of Cornelius and his household including speaking in tongues (Acts 10:45f.), parallels that of the 120 on the day of Pentecost. It is cited to justify Peter's ministry among the Gentiles (11:15-18) and again in the argument to open the way for wider ministry among the Gentiles (15:8f.). The account of the Ephesian "Pentecost" (19:1-6) communicates the continuation of this reality among the Gentiles in Paul's ministry.

C. Markan Perspective. Mark is the only Gospel that mentions speaking in tongues. MS evidence suggests that Mark's longer ending, in which this reference appears (16:17), is of second-century origin. Early MSS do not contain it, but it was known by Irenaeus (*Adv. haer.* iii.10.5) and quoted by Tatian (*Diatessaron* lv.8-10). This independent witness to the teaching of the risen Lord anticipates tongues-speech to be among those signs (*sēmeía*) that would continue to accompany the believing community. The plural *toís pisteúsasin,* "to those who believe," suggests corporate rather than individual possession. While the NEB renders the adjective *kainós* as "strange" tongues (consistent with its view of tongues as ecstastic speech), the AV and RSV translate it more literally as "new" tongues; the Greek term may indicate the writer's

understanding of tongues as a product of the inbreaking "age to come."

III. In the Church.–*A. Early Citations.* Speaking in tongues has always been in the Church, although with varied levels of expression and acceptance. If Chrysostom pleaded ignorance of such a phenomenon (*Hom. in 1 Cor.* 12:1f.), Irenaeus (*Adv. haer.* v.6.1) noted its presence among those who lived according to the precepts of the gospel. Tertullian (*Adv. Marc.* v.18.12) enlisted it as an apologetic argument for the validity of orthodoxy, while Origen (*Comm. on Rom.* 1:13; 7.6 var.) viewed it as a bridge to cross-cultural preaching. The phenomenon is cited in several medieval papal bulls and makes repeated appearances among a variety of monastic groups and enthusiastic sects.

B. Modern Manifestations. Early in the 20th cent. speaking in tongues became prominent with the rise of Pentecostalism, which has often, though inaccurately, been called the "Tongues Movement." Pentecostals tend to highlight the differences in Lukan and Pauline perspectives, although more coincidentally than by design. Many understand Acts as teaching that speaking in tongues is *the* initial evidence for a normative, post-conversion, crisis experience available to *all* Christians. It is identified as the "baptism in the Holy Spirit," and its purpose is power for ministry. Paul's writings are understood to teach that speaking in tongues is a gift given only to *some* Christians. This gift may be used devotionally in private praise and intercession for personal edification, and when properly interpreted it may also contribute to public worship and corporate edification. These distinctions between Lukan and Pauline emphases blur at times, especially when the issue of devotional tongues is addressed, since the "gift of tongues" is so closely tied to the doctrine of BAPTISM IN THE HOLY SPIRIT.

Since the 1960's speaking in tongues has been the subject of numerous theological, historical, behavioral, and social scientific studies; this renewed interest was due to the growth of the so-called charismatic movement. This charismatic renewal within the historic churches emphasizes more of the Pauline perspective on tongues as gift, a position shared by nearly all Christians. It encourages intercessory and devotional tongues-speaking and limited (small group, conference, and prayer meeting) public use of this gift. Since "baptism in the Spirit" is generally understood to have taken place at the time of conversion, baptism, and/or confirmation, or as a post-conversion sanctification experience (in the Holiness tradition), the ability to speak in tongues is generally not viewed evidentially within charismatic renewal.

TONSURE. *See* BALDNESS.

TOOLS. Tools are implements used for various kinds of commercial, industrial, craft, or agricultural pursuits. In the ancient Near East tools were made of stone or of metals, e.g., IRON, COPPER, and BRONZE. The earliest Palestinian tools dated from prehistoric times, with implements such as worked flint knives occurring commonly at Neolithic levels. The KNIFE (*ma'ăkeleṯ*) was the least complicated of cutting tools (Gen. 22:6; Jgs. 19:29), and although the smelting techniques of the Hittites made iron implements popular, FLINT continued to be utilized in ceremonial rituals such as circumcision, and also in agriculture. Some commentators have attributed this reluctance to confront new technology to the traditional conservatism of both religion and agriculture, but the real reason was that flint maintained a sharp edge much longer than iron, which became dull quickly. Palestinian knives varied between 15 and 25 cm. (6 and 10 in.) in length, but a limestone mold for a 40 cm. (16 in.) knife was unearthed at Tell Beit Mirsim, indicating that larger knives, perhaps intended for sacrificial purposes, were not uncommon. Knives of this length generally had some sort of handle attached, normally by a tang or by rivets.

Iron Age technology widened the range of tools considerably, as might be expected. The Heb. *ḥereḇ*, "sword," included a range of knives and cutting instruments, hence the rendering "knife" in Josh. 5:2; 1 K. 18:28. While not mentioned in the RSV, the adze, which was an axe with an iron blade set at right angles to the shaft, was almost certainly used for cutting purposes, if a fragmentary iron blade from the Greco-Roman period at Bittîr has been identified correctly. The AXE, of which seven types are mentioned in the OT and one in the NT, included a large chopping implement used by stonemasons (*garzen*), and referred to in the Siloam Inscription. An elaborately designed bronze axehead was recovered from Beth-shean

A relief from Warka depicting a carpenter working with an adze (2nd millennium B.C.) (RMN/ARS, NY/SPADEM)

TOOLS

A wall painting of a man sawing a plank. From the tomb of Rekhmira at Thebes, 18th Dynasty (The Metropolitan Museum of Art)

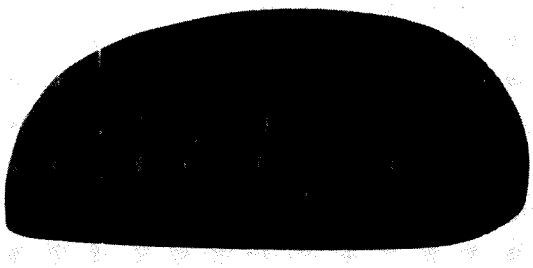
(13th cent. B.C.), while iron axeheads have been found at various Palestinian sites including Ramah. One kind of axehead used in pruning (Jer. 10:3) had a curved blade that could pick up metal objects ("tongs," Isa. 44:12). Axes were also employed as formidable military weapons (Ps. 74:5f.; Jer. 46:22).

Even before the Iron Age commenced, metal saws had been introduced from Egypt where they had been used for centuries in conjunction with special axes for cutting and shaping stone and wood. Egyptian saw blades had teeth that pointed in the direction of the handle, and were normally operated by two people alternately pushing and pulling from opposite ends. Marks left by stonecutters' saws are still visible in some Palestinian quarries. According to tradition Isaiah was executed by being sawn in two (Asc. Isa. 5:1f.; cf. He. 11:37).

Hammers and mauls of various sizes and shapes were used from the Bronze Age onward, and are represented by four Hebrew terms (*see* HAMMER). Originally they were simply roughly shaped pieces of stone used for pounding, but in the Early Bronze Age holes were bored in the stone by means of metal drills, and handles were driven into the apertures. Such hammerheads have been recovered from many Near Eastern sites. Chisels were used by stonemasons and carpenters for both rough and fine cutting, and were made of bronze or iron. The "plane" of Isa. 44:13 was most probably a chisel made of copper (*see* PLANES). Carpenters used a variety of tools, including awls and drills for making holes in wood (Ex. 21:6; Dt. 15:17). The copper drill was actually a bit fastened to a handle, which was rotated by means of a box and a leather thong. The carpenter also used metal files and scrapers for smoothing rough wood. Plumb lines began to be used in the Bronze Age for establishing vertical and horizontal levels (2 K. 21:13; "plummet," Isa. 28:17). Such horizontal "chalk marks" have occasionally been uncovered at Palestinian sites. Amos's vision (7:7f.) depicted the Israelites being measured by God's plumb line to determine the extent of their deviation. *See* MEASURING LINE.

The craft of the POTTER was enhanced considerably by the invention of the potter's wheel *ca.* 4000 B.C. Early forms comprised a small flat stone fixed to a shaft, with a larger stone disk at the opposite end. The potter spun the wheel by hand as he shaped the clay into a symmetrical vessel. Early potters employed tools known as "paddles and anvils" to produce thin-walled, shaped pottery. The anvil, made of clay, stone, or wood, was placed inside the vessel and pressed against the exterior paddle to bring the

A mason's reel and line from the tomb of Lisht at Thebes (The Metropolitan Museum of Art)



The Sumerian "Blau Monument," possibly a pottery scraper, depicts an overseer and workmen kneeling beside anvils (*ca.* 2900 B.C.) (courtesy of the Trustees of the British Museum)

vessel to the desired shape and thickness. In the Early Bronze period the so-called tournette was invented, consisting of a low rotary stone or wood stand, and this device accelerated the production of pottery. Excavations have uncovered several specimens of tournettes, while pottery remains from all the archeological periods have enabled a firm schedule of ceramic dating to be established.

A millennium later a more advanced model of a potter's wheel consisted of two wheels one above the other and joined by an axle. The potter seated himself in front of the wheel and kept the lower part in motion with his feet, thus leaving both hands free to shape the clay. This device made a great impression on Jeremiah, who envisaged God as the master potter molding His people Israel (Jer. 18:2-8). Other equipment used by the potter included scrapers, sharp sticks, combs, and polishers, as well as materials for exterior decoration. From a tomb at Saqqârah archeologists recovered a model of an Egyptian potter's workshop in excellent condition, which provided valuable information about the craft in ancient Egypt (*see* picture in POTTER). Potters' wheels have been recovered from numerous Palestinian sites, including Lachish, Megiddo, and Hazor.

Metalworkers of Palestine in the Bronze Age were renowned for their skills, some of which are depicted in the Beni-hasan tableau (*ca.* 1900 B.C.). The scene showed a traveling Semite and his family, and one of the donkeys in the caravan was bearing metallurgical equipment including bellows on its back (*see* picture in BELLOWS). It is not surprising, therefore, that Bezalel and Oholiah were able to do metalworking for the wilderness tabernacle, especially when divinely endowed with skill and energy (Ex. 31:1-11 35:30–36:1). The metalsmith would have available several different types of hammers and mallets, including some suitable for beating out GOLD on an anvil until it assumed the appearance of a very thin sheet. Ironworkers also needed furnaces and hand-bellows, tongs, molds, files, drills, and rudimentary clamps. (*See also* METAL.) Other CRAFTS such as painting, manufacturing jewelry, engraving, and weaving required their own special tools, some of which have been recovered by excavators.

TOOTH; TEETH [Heb. *šēn*] (e.g., Gen. 49:12; Job 4:10; Prov. 10:26; 25:19; Zec. 9:7); NEB also FANGS, "noose" (Job 13:14); [*mᵉṯallᵉʿôṯ*–'jawbone'] (Prov. 30:14; Joel 1:6); AV JAW TEETH, CHEEK TEETH; NEB also JAWS; [*pîpîyôṯ*–'double edges'] (Isa. 41:15); [Gk. *odoús*] (e.g., Mk. 9:18). In Cant. 7:9 (MT 10) the RSV and NEB follow the LXX, Syr., and Vulg., which read "teeth" (Heb. *wᵉšinnîm*) instead of MT *yᵉšēnîm* ("sleepers"; cf. AV).

Only a few passages refer to teeth in a literal sense (e.g., Nu. 11:33). The loss of a tooth caused permanent disfigurement, and a perfect set of teeth was therefore a mark of rare beauty (Cant. 4:2; 6:6). The OT law of retribution protected Israelites from personal injury by their neighbors by requiring "tooth for tooth" (Ex. 21:24; Lev. 24:20; Dt. 19:21). If a master injured his slave, causing the loss of a tooth, he had to let the slave go free (Ex. 21:27). Ethically, Jesus went beyond the law of "tooth for tooth," exhorting His followers to turn the other cheek instead of avenging injuries (Mt. 5:38f.).

The teeth of wild beasts inspired terror on account of their cruel power (e.g., Dt. 32:24; Job 41:14 [MT 6]) and were therefore a fitting symbol for the power and cruelty of the enemy (e.g., Job 16:9 [here God is the enemy]; Ps. 35:16 [cf. v. 17]; 57:4 [MT 5]; 124:6; Prov. 30:14; Joel 1:6; cf. Dnl. 7:5, 7, 19; Rev. 9:8). Breaking an enemy's teeth symbolized breaking his power (e.g., Job 29:17; Ps. 3:7 [MT 8]; 58:6 [MT 7]). In the OT the gnashing of teeth generally signifies a menacing rage (e.g., Job 16:9; Ps. 35:16; 37:12; 112:10; Lam. 2:16; cf. also Acts 7:54); in the NT it usually describes the misery and despair of those who are forever excluded from the Kingdom (Mt. 8:12; 13:42, 50; 22:13; 24:51; 25:30; Lk. 13:28); *see also* GNASH.

"Teeth" appears also in other expressions, including the familiar "by the skin of my teeth" (Job 19:20). In Am. 4:6 "cleanness of teeth" signifies famine and starvation. Both Jeremiah and Ezekiel rejected an ancient proverb that stated the principle of collective guilt: "the fathers have eaten sour grapes, and the children's teeth are set on edge" (Jer. 31:29; Ezk. 18:2). These prophets taught instead the principle of individual responsibility: "each man who eats sour grapes, his teeth shall be set on edge" (Jer. 31:30; cf. Ezk. 18:3f.). N. J. O.

TOPAZ tō'paz. *See* STONES, PRECIOUS.

TOPHEL tō'fəl [Heb. *tōpel*; Gk. *Tophol*]. A place in the wilderness of indeterminate location. Dt. 1:1 mentions Tophel with five other place names, located where "Moses spoke to all Israel beyond the Jordan in the wilderness, in the Arabah over against Suph, between Parah and Tophel, Laban, Hazeroth, and Di-zahab." Some tentatively identify Tophel with eṭ-Ṭafîleh (e.g., *WHAB*), but Arab. *ṭ* is not reflected by Heb. *t*, and the vowel patterns of the Arabic and Hebrew words differ. Y. Aharoni provisionally located Tophel on the King's Highway between Punon and the Zered brook (*LBHG* [rev. ed. 1979], p. 203 map 14). But if this is intended to locate the place where Moses addressed the Israelites, we should expect it to be "in the land of Moab" (Dt. 1:5; but rejected by *GTTOT*, p. 255 n.233). Possibly Dt. 1:1f. is a mutilated text, although the LXX generally supports the passage. For an attempted reconstruction of the route, cf. *GTTOT*, §§ 430-441.

TOPHETH tō'fəth [Heb. *tōpeṯ*–'place of burning']; AV also TOPHET. A place in the Valley of Hinnom where the devotees of Molech, a Semitic deity, offered their children as human sacrifices (*see* HINNOM, VALLEY OF). The name probably derives from Aram. *tēpaṯ* ("burning place"), vocalized in Hebrew with the vowels of *bōšeṯ* ("shame") to emphasize the shameful nature of the rites performed there.

Jeremiah spoke of the HIGH PLACE of Topheth as a

place in the Valley of Ben Hinnom where some Israelites burned their sons and daughters in the fire (Jer. 7:31). He predicted that the name of the place would be changed to the "valley of Slaughter" because of the great many people who would be killed there by an invading enemy. Topheth would be so full of corpses that there would not be room to bury all the dead, and vultures would feed on many of the bodies (7:32f.; 19:6). He further warned that Jerusalem would become, like Topheth, a place of slaughter (19:11-14).

During his great religious reform Josiah desecrated Topheth so it could not be used for human sacrifice (2 K. 23:10). Isaiah referred to a "burning place" (Heb. *topteh*; RSV mg., NEB "Topheth") that was being prepared by Yahweh for the king of Assyria (Isa. 30:33).

Topheth was probably located at the lower end of the Valley of Hinnom (Wâdī er-Rabâbeh) near the junction with the Kidron Valley (*see* JERUSALEM II.B; III.F.2.c).

J. F. PREWITT

TORAH. A Hebrew term, normally rendered "law," and universally recognized as central to OT and postbiblical Jewish piety. Both the meaning of the term and the role Torah has played in the religious thinking of Jews remain, however, subjects of debate.

I. The Term
II. Significance
  A. "Law" in OT Piety
  B. "Law" in Judaism of the Second Temple Period
  C. NT Views

I. The Term.–In his famous *Aspects of Rabbinic Theology*, S. Schechter contended that Gk. *nómos* and English "law" mistranslate Heb. *tôrâ*. Schechter noted that the rabbis use *tôrâ* to refer to the Pentateuch, to the whole of the Scriptures, or to the entirety of revelation. In each case Torah contains more than law. "Teaching" or "instruction," he claimed, is a better translation.

That *tôrâ* in some contexts may best be translated "teaching" or "instruction" is clear enough (e.g., Ps. 78:1; Prov. 1:8; 4:2; 13:14, where RSV has "teaching"; Job 22:22; Isa. 30:9, where RSV has "instruction"); and when (the) Torah became a designation for a collection of traditional materials for which divine revelation was claimed, the term obviously included more than laws. Nonetheless the general claim that *tôrâ* does not mean "law" is simplistic and misleading. Since Schechter it has become common to view "law" as a distortion of *tôrâ* and to see the mistranslation as at least in part responsible for the common misunderstanding of Judaism as a religion of "legalism." Indeed, since the LXX itself normally translated *tôrâ* with *nómos*, the distortion of Judaism is sometimes said to begin already in Hellenistic Judaism (e.g., Dodd, Schoeps); and Paul's negative views of the law are at times attributed in part to the legalistic distortion of *tôrâ* introduced in the Greek Scriptures (e.g., Herford, Schoeps). Arguments raised in defense of these latter claims are, however, very dubious.

(1) Most questionable are arguments that suggest, on the basis of a proposed etymology of the term, that *tôrâ* "properly" means "instruction," "teaching," or "revelation." Actually the etymology itself remains a matter of dispute (*see* LAW IN THE OT); more importantly, it is a fallacy to suppose that the etymology of a word determines its "proper" or "basic" meaning. The usage of a term, not a history which the users of the language had long since forgotten, is crucial in establishing meaning (Barr).

(2) C. H. Dodd correctly pointed out that the LXX's *nómos* misrendered *tôrâ* where it refers generally to "instruction in the principles of religion" (e.g., Prov. 13:14; Isa. 1:10; 8:16). Such mistranslations should be attributed, however, to the LXX's stereotypical rendering of the term rather than to the exaggerated legalism of Hellenistic Judaism. Above all, we may not conclude from the instances given by Dodd that "law" (or *nómos*) mistranslates *tôrâ wherever* the latter term occurs.

(3) Schechter's own argument, often repeated since, was that, since *the* Torah contains more than legal material, "law" must be a mistranslation of the term. But the use of "the Torah" as a technical term designating a collection of disparate material represents a development in the history of the term. It does not follow that *tôrâ* has never meant "law."

The OT in fact provides us with many instances in which a *tôrâ* is (or *tôrôṯ*, pl., are) said to be "commanded" to be "done" or "kept" and not "transgressed," and where words like "commandment," "statute," and "ordinance" are introduced as parallel terms (Gen. 26:5; Ex. 16:28; Lev. 26:46; Ps. 105:45; etc.). Most significantly, we encounter in Deuteronomy, and in the literature closely related to or influenced by Deuteronomy, the use of *tôrâ* to represent the substance of the Deuteronomic code: the covenantal responsibilities — with the accompanying sanctions — imposed on Israel by Yahweh. The context of the covenant is of course crucial in assessing the nature of Israelite law; moreover, it must be remembered that the demands placed upon Israel encompass areas not included in the laws of many cultures (e.g., morality, religious observance). Nonetheless, the pattern of commands issued by a sovereign to be observed by his subjects, with sanctions to be enforced upon their transgression, all but requires the English term "law" for an adequate rendering (Dt. 4:8; 30:10; 32:46, etc.). Later literature of the OT continues to use *tôrâ* of Israel's covenantal responsibilities, or of the "book" in which these are spelled out (e.g., Dnl. 9:11; Neh. 9:13f.). The LXX can hardly be faulted for rendering *tôrâ* with *nómos* in such cases. Indeed, it should be noted that the LXX translation of *tôrâ* with a term meaning "law" was anticipated by the Aramaic portion of Ezra, where the Aramaic *dāṯ* ("law") is clearly the equivalent of Heb. *tôrâ* (7:12, 14, 21, 26; cf. 7:6, 10).

In a not unnatural development, "the *tôrâ*" (or "the *tôrâ* of Moses," or "this book of the *tôrâ*," etc.), applied originally to the Deuteronomic code, came to be extended to the Pentateuch as a whole, of which it formed an integral part. Hellenistic Judaism, in following suit and referring to the Pentateuch as *ho nómos* ("the law"), can hardly be accused of introducing a distorted notion of its nature. Since the entire normative tradition of rabbinic Judaism was traced to the revelation given to Moses on Mt. Sinai, Torah came to be used to designate the whole tradition. But the more specific Deuteronomistic sense of *tôrâ* as Israel's covenantal obligations — the commands which, as they were met with obedience or rebellion, determined Israel's blessing or curse, life or death — continued to be reflected in the use of both *tôrâ* and *nómos* in the intertestamental and NT periods (e.g., Sir. 24:23; 45:5; 1 Macc. 1:49; 2:20f., 67f.; 2 Macc. 7:30; Bar. 4:1, 12f.; Ps. Sol. 14:2; Josephus *CAp* ii.30 [217f.]; 1QS 5:8; 8:15, 22; CD 7:7f.; Acts 7:53; 15:5; He. 9:19; 10:28; etc.). Paul's use of *nómos* in this sense (e.g., Rom. 2:12f.; 7:7; Gal. 3:12f.; 5:3) is fully in line with Hebrew usage of *tôrâ*.

II. Significance.–***A. "Law" in OT Piety.*** For decades the views of J. Wellhausen dominated the thinking of OT scholars. In the preprophetic period, according to Wellhausen, Israel had no established legislative code. Israel's relationship with its deity was a natural one that did not

depend on the observance of the conditions of a covenant. People conducted themselves according to their own free impulse. The prophetic task, for Wellhausen, was not that of summoning Israel to the observance of God's law, but rather that of purifying Israel's notion of Yahweh: He was God alone, and His concerns were seen to be universalistic, not confined to Israel; ethical rather than cultic: and focused on the hearts of individuals rather than on the laws and institutions of society.

In a sense Deuteronomy represents for Wellhausen an attempt to make concrete the prophetic ideals. But when Deuteronomy gained the status of an authoritative code or law, it spelled (in Wellhausen's view) the end of prophecy — indeed, the end of the earlier spontaneity of the religious spirit and its worship. And when, in exilic and postexilic times, cultic procedure was recorded and included in the law, the "immense retrogression" that marked postexilic Judaism was complete. The "narrow shell" of Ezra's law perhaps served to protect the "kernel" of prophetic insights from foreign influence, but meant at the same time a decline into a preoccupation with the cult and the loss of the freedom and joy of preexilic worship.

A negative assessment of the piety of postexilic Judaism remains fixed in the opinions of many scholars today. Otherwise Wellhausen's sketch of its development has been subjected to major modifications. It is today widely recognized that Israel from the earliest period perceived itself as subject to the demands of Yahweh, demands that set Israel apart from neighboring peoples (Dt. 4:8; Ps. 147:19f.). Uniquely characteristic of Yahwism of all periods, for example, was its intolerance for the worship of any deity but Yahweh. Many scholars believe the proclamation of Israel's basic responsibilities under the covenant was a feature of festival observances from the time of the settlement (Alt, Noth, von Rad, etc.; cf. Dt. 31:10-13). Nor can the message of the prophets be dissociated from Israel's law, denouncing as they did the unfaithfulness of Yahweh's people to the obligations placed upon them, and threatening them with the sanctions that would inevitably follow disobedience.

Israel's religion from earliest times, then, included the conviction not only that Israel was the elect, redeemed people of Yahweh, but also that, as the covenantal people of Yahweh, Israel was subject to His comprehensive demands. They would encounter Yahweh's blessing or curse as they obeyed or disobeyed His law (Ex. 22:23f. [MT 22f.]; 23:21; Dt. 4:23f.; 6:13-15; 28:1-68; etc.).

B. "Law" in Judaism of the Second Temple Period. The prominence of Torah is thus scarcely a postexilic development. Indeed, the frequent references in the later literature to attempts at patterning life and institutions according to what was "written in the law of Moses" (Ezr. 3:2; 6:18; Neh. 8:14; 10:29 [MT 30]; 13:1) themselves imply an endeavor to maintain continuity with preexilic piety. Nonetheless there are important shifts in emphasis. Whereas Israelite religion from earliest times recognized the basic demands of Yahweh as binding on His people, it is in the postexilic period that the divine will came increasingly to be seen as embodied in the very wording of the pentateuchal law codes. The terms of the sacred texts became the subject of casuistic interpretation aimed at defining proper procedure.

A few illustrations may be given. The various regulations that the Pentateuch contains relating to tithing (Lev. 27:30-33; Nu. 18:21-32; Dt. 14:22-29) became a subject of harmonistic exegesis in order to determine the precise scope of the Jew's obligation (cf. Tob. 1: 6-8; Jub. 32:9-15). The legitimacy of divorce in a given case came to be seen as depending on whether "some indecency" (i.e., the relevant phrase in Torah's statute on the matter, Dt. 24:1) had occurred, and the latter phrase became a subject of exegetical debate (cf. *Sifre* to Dt. 24:1; Mish. *Gittin* ix.10). The biblical command that no "work" be done on the sabbath (Ex. 20:10) required a good deal of amplification, since observant Jews needed to know what constituted the "work" that would infringe on the commandment (cf. Jub. 2:29f.; 50:6-13; CD 10:14–11:18). When the terms of scriptural law proved impracticable, resort was had to legal fiction by which the wording of the statute could be thought to be upheld while its undesirable consequences were circumvented (cf. Mish. *Erubin* v.1-9; viii.1f.).

Finally it should be noted that the question of who could authoritatively interpret the terms of Torah divided the "parties" of the Second Temple Period: the Sadducees appear to have maintained that such interpretation was a priestly prerogative, the people of Qumrân supported the claims of the Zadokite priests in their midst (1QS 5:2f., 9), while the Pharisees adhered to the teaching of their "scribes," who were drawn from the ranks of priesthood and laity alike. That the traditions held to be authoritative by the pharisaic scribes went beyond the text of Scripture (the *written* Torah) was recognized by all and became a point of contention (Josephus *Ant.* xiii.10.6 [297]; Mk. 7:8-13). In time the claim would be made that such traditions were part of the *oral* Torah, also given to Moses on Mt. Sinai (T.B. *Shabbath* 31a).

That adherence to the commands of Torah constituted the divine will for Israel appears to have been a conviction held by all pious Jews of the Second Temple Period. It does not follow, however, that Jews believed they were "earning" their "salvation" by the "good works" they performed in keeping the law. Such a notion, based largely on a misreading of the Pauline evidence and widespread among Christian scholars, has been attacked in the works of E. P. Sanders. In a study of early rabbinic materials, the DSS, and the (OT) Apocrypha and Pseudepigrapha, Sanders concluded that "covenantal nomism" is characteristic of virtually the whole of the literature: i.e., Israel's standing before God is not perceived as "earned" by human obedience, but as based on the divine election of Israel as His covenantal people; obedience to the laws of Torah was regarded as necessary if the Israelite's position in the covenant was to be maintained, but such obedience was a response to God's grace rather than the means by which salvation was earned.

Sanders's depiction of Judaism in this period has met with widespread, though not universal, acceptance. We must, however, note at least the following three aspects of the view of Torah in the period, each of which undermines to some extent the uniqueness of the Sinaitic revelation.

(1) Hellenistic Judaism engaged in a kind of Torah apologetic in which the Jewish "constitution" (*politeía*) as enshrined in Torah was compared favorably with the laws and constitutions of the Greeks. More ancient than any Greek code (Josephus *CAp* ii.15, 31 [154-56, 226]), the Jewish law had never needed amendment (*CAp* ii.20f. [183f.]; Philo *De vita Mosis* ii.12-16). Every area of life was included in its demands (Josephus *CAp* ii.16f. [171-74]). It was practicable (*CAp* ii.31 [220-25]), embodied a worthy conception of God (*Ant.* Proem 3 [15]; *CAp* ii.16, 33-39 [163, 239-286]), and far surpassed other constitutions in inculcating virtue (*Ant.* Proem 2 [6]; *CAp* ii.14, 16f. [145f., 170-74]; cf. 4 Macc. 2:23; 5:23f.). Moses is thus seen as superior to other lawgivers, but the unique function of Torah within the divine covenant tends to become subordinate.

(2) In both Palestinian and Hellenistic Judaism, Torah came to be identified with the "wisdom" by which God created the world (cf. Prov. 8:12-31). Hence it was affirmed to be eternal and universal in its scope, though, to be sure, it was perfectly embodied in the revelation given to Israel on Mt. Sinai (Sir. 24:1-23; 4 Macc. 1:16f.; Bar. 3:9–4:4). This universalizing tendency allowed Hellenistic Jews to make the apologetic claim that the Jewish law corresponds fully with the "law of nature," perceived less perfectly by Gentiles (cf. Philo *De opificio mundi* 3; *De vita Mosis* ii.9.51f.; *De Decalogo* 132; *De specialibus legibus* i.155; ii.42, 129; iii.32, 46; *De Virtutibus* 18). A further consequence is that it becomes increasingly difficult to conceive of right behavior in terms other than conformity with Torah, even among those who could not have benefited by the revelation of Sinai: adherence to the commands was widely attributed to the patriarchs — and even to the angels in heaven (e.g., Jub. 2:18, 30; 6:18f.; 15:27; 16:21, 28)!

(3) Though the normal view in Judaism certainly came to be that the revelation of Torah given to Moses on Mt. Sinai was comprehensive and complete, apocalyptic literature in general posits other revelations, and the question has been raised whether the Qumrân sectarians envisaged a "second Torah." Certainly they regarded themselves as those who had returned wholeheartedly to the Torah of Moses (1QS 5:8), as the "doers of Torah" (1QpHab 7:11; 8:1; 12:4f.; cf. 1QS 5:21; 6:18); among their number were those who engaged in intensive study of Torah to determine the divine will (1QS 6:6). But in the course of such study things that were "hidden" from all Israel were "revealed" to the sectarians (CD 3:12-16; 1QS 5:7-12; cf. 8:1f.); and though knowledge of the "hidden things" is here ostensibly derived from inspired biblical exegesis, the question has been raised whether the Temple Scroll, with its implicit claim for direct divine revelation and its extensive regulations in matters not touched upon in pentateuchal law, was not believed to be itself a revealed Torah (Yadin). The debate will doubtless continue.

C. NT Views. From the discussions in the early Church (cf. Acts 15:1-21; Galatians), one might conclude that Jesus never explicitly renounced the validity of Torah's demands — otherwise the issue would have been clear-cut among his followers — but that there were sufficient indications of a critical stance toward contemporary Torah observance to allow His adherents to abandon it. Such conclusions are confirmed by the Gospel traditions. Among His contemporaries, who thought God's will lay in conformity with the terms of Torah's statutes, the Jesus of the Gospels finds cause to denounce the hypocrisy that conforms with statutes outwardly while hearts remain uninvolved (Mk. 7:6; Mt. 23:25-28); the self-sufficiency which imagines that, since the terms of a prescribed code have been met, one is righteous in God's eyes (Lk. 18:9-14); the lack of perspective that loses sight of the "weightier matters of the law" while insisting on details (Mt. 23:23); and the contempt shown for "sinners" whose conduct transgresses the code (Lk. 7:36-50; 15:1-32). Nor does Jesus Himself identify God's will in any direct way with the terms of Torah's statutes: Torah contains provisions necessitated by human evil but falling short of God's will (Mt. 5:33-37; 19:8f.); the ritual uncleanness proscribed by Torah is treated as a matter of relative indifference (Mk. 7:15; cf. v. 19; Mt. 23:25); proper sabbath behavior is not determined by interpreting Torah's prohibition of "work" but by returning to the intention of the Creator and to basic humanitarian concerns (Mk. 2:27; 3:4; Lk. 13:15f.). In short, Jesus assumes the right to interpret the divine will authoritatively; and though the moral demands of Torah are applied radically (e.g., Mt. 5:21f., 27f.), other areas become at best secondary in importance.

Among the NT writers, Paul devotes the most attention to the place of Torah in God's plan. Torah's sanctions did indeed include life for those who observed its precepts (Rom. 2:13; 10:5; Gal. 3:12); but, as a result of human sin, "no human being will be justified in [God's] sight by works of the law" (Rom. 3:20). The actual effect of the law has been to bring knowledge of sin (3:20) — indeed, to provoke and so increase sin (5:20; 7:5, 7-11; 1 Cor. 15:56; Gal. 3:19) — and consign humanity to sin and God's wrath (Rom. 4:15; 5:13; 2 Cor. 3:6f., 9; Gal. 3:22) as a prelude to the revelation of God's mercy in Christ (Gal. 3:22-25; Rom. 3:20-22; 10:4; cf. 11:32). Believers are no longer subject to the demands and sanctions of Torah (Rom. 6:14; 7:1-6; 1 Cor. 6:12; 9:20; Gal. 2:19; 3:13; 4:5; 5:18). They serve God in the new way of "walking in the Spirit" rather than in the old way of conforming with a code (Rom. 7:6; 2 Cor. 3:6; Gal. 5:18). The practical result of a life led by the Spirit is, however, "fruit" that no law can condemn (Gal. 5:22f.); above all, a love that fulfills the very essence of God's demands as embodied in the law (Rom. 8:4; 13:8-10; Gal. 5:14).

S. WESTERHOLM

TORCH [Heb. *lappîḏ* (e.g., Gen. 15:17), also *pᵉlāḏâ* (Nah. 2:4 [MT 5]); Gk. *lampás*]; AV also LAMP, FIREBRAND; NEB also FIREBRAND (Job 41:19 [MT 11]). A burning stick used to give light (e.g., Jn. 18:3). Although most simply a torch is a highly flammable stick of wood set on fire, sometimes a twist of tow is tied to the end of the stick, dipped in oil, and ignited. Torches were used to strike terror into the hearts of the Midianites in Gideon's surprise nighttime attack (Jgs. 7:16, 20). Samson used torches, tied to the tails of foxes, to set fire to the Philistines' fields (15:4f.). The flaming brightness of the torch provided a poetic figure for the fiery breath of Leviathan (Job 41:19 [MT 11]), for the dazzling eyes of an angelic figure (Dnl. 10:6), for Nineveh's flashing chariots (Nah. 2:4 [MT 5]), for the visibility of Israel's future restoration (Isa. 62:1), for Israel's power to destroy its foes (Zec. 12:6), for a falling star (Rev. 8:10), and for "the seven spirits of God" (4:5; *see* LAMP II). W. Zimmerli has suggested that Ezekiel's vision of fire "like torches moving to

and fro among the living creatures" (Ezk. 1:13) may contain an allusion to Yahweh's sealing of the covenant with Abraham by passing a flaming torch between the pieces of the sacrifice (Gen. 15:17; see Zimmerli, *Ezekiel 1* [Eng. tr., *Hermeneia*, 1979], p. 127). N. J. O.

TORMAH. A name given in the RSV mg. of Jgs. 9:31. No such place is known. The MT reads *bᵉṭormâ*, which could be translated either "in Tormah" or "in secret" (cf. AV "privily"; NEB "resorted to a ruse"). Many scholars, however, prefer to emend the MT to read *bā'rûmâ*, "at Arumah" (so RSV; see *BHS*), the place mentioned in v. 41 (see comms.).

TORMENT; TORMENTORS [Heb. piel of *'ānâ*] (Jgs. 16:19); AV AFFLICT; NEB TAKE CAPTIVE; [piel of *bā'aṯ*] (1 S. 16:14f.); AV TROUBLE; NEB SEIZE; [*ṣārar*] (2 S. 13:2); AV VEX; NEB DISTRESS; [hiphil of *yāgâ*] (Job 19:2; Isa. 51:23); AV VEX, AFFLICT; NEB also EXHAUST; [*ma'ᵃṣēḇâ*] (Isa. 50:11); AV SORROW; [*tôlāl*] (Ps. 137:3); AV WASTE; NEB CAPTOR; [Gk. *básanos, basanismós, basanízō*] (Mt. 8:29; Mk. 5:7; Lk. 8:28; 16:23, 28; Rev. 11:10; 14:10f.; 18:7, 10, 15; 20:10); **TORTURE** [*basanismós*] (Rev. 9:5); AV, NEB, TORMENT; [*tympanízomai*] (He. 11:35). To cause extreme pain, suffering, or distress.

The OT references to torment range in severity from 1 S. 16:14f., where Saul is terrified by an evil spirit from the Lord, to Jgs. 16:19, where Delilah cuts off Samson's hair and he begins to "be subdued" (NIV) or "grow weak" (LXX; the meaning of the piel of *'ānâ* here is ambiguous; but since Samson remained asleep, the stronger translations seem less likely). 2 S. 13:2 describes Amnon's obsessive passion for his sister Tamar, which made him ill. In Job 19:2 the hiphil of *yāgâ* seems limited to the mental vexation suffered by Job because of his friends' worthless advice; but the same word in Isa. 51:23 describes the physical suffering inflicted on the Israelites as they were taken into exile. Isa. 50:11, however, prophesies that Israel's enemies shall in turn lie down in a "place of pain." Least certain is the meaning of *tôlāl* in Ps. 137:3; the term is perhaps best rendered "mockers" (for a discussion of the options, see L. C. Allen, *Psalms 101–150* [*Word Biblical Comm.*, 1983], p. 236).

With the exception of He. 11:35, all the NT references employ a term from the *básanos* word-group. Originally an Egyptian loanword, the term referred to a touchstone used for testing the genuineness of precious metal, especially coins. Applied to human beings, the meaning first passed over to torture used in examination of persons accused of crimes, and then to torment in general. In the parable of Dives and Lazarus (Lk. 16:19-31) the rich man discovers HADES to be a place of torment (vv. 23, 28). The other Synoptic references occur in the parallel accounts of the Gerasene demoniac's plea that Jesus not "torment" him. Otherwise "torment" appears only in Revelation, in the context of divine, eschatological judgments on the world, the godless who dwell in it, and the demonic powers that have enslaved them. The climax of judgment is pictured in terms of a lake of fire and sulphur that tortures its inhabitants "day and night forever and ever" (Rev. 20:10).

The sole NT use of *tympanízomai* appears in the He. 11 catalog of persecutions endured by the OT "heroes of the faith" (v. 35). The precise type of instrument used in this torture is no longer certain; possibly it was a kind of cudgel.

TORTOISE (Lev. 11:19, AV). *See* LIZARD.

TOTEMISM. A term John Long adapted in 1791 from the language of the Ojibwa Indians (located in the USA from central North Dakota to the eastern shore of Lake Superior) for a pattern of thought prevalent among some "primitive" or small-scale societies that regard a particular species of animal or type of plant as a member, benefactor (particularly with regard to the food supply), and perhaps even the ancestor of a family, clan, or tribe. In its pure form totemism is found only among isolated tribes in Australia and America. The well-being of human societies in these regions is thought to be intimately linked with the totem (which can be an animal, plant, or inanimate object, e.g., rain or red ochre). Characteristically, the social group bears the name of the totem and in many cases regards it as their ancestor, having developed a myth of descent. Totemism also frequently involves taboos, e.g., the prohibition of intermarriage within the same social group (exogamy), and the prohibition of killing or eating the totem animal or plant (except on certain occasions).

Late nineteenth-century anthropologists and ethnologists were preoccupied with reconstructing the evolutionary development of human culture based on the presupposition that earlier stages of religion and culture were preserved among "primitive" peoples, and that there was an essential uniformity to "primitive" thinking among all nationalities. Totemism first became popular through a series of articles by J. F. McLennan in the *Fortnightly Review* in 1869 and 1870. Articles on "totemism" have become obligatory in dictionaries and encyclopedias of the Bible since the late 19th cent., when W. Robertson Smith and then James G. Frazer sought to reconstruct the history of primitive Israelite and Semitic religion in the light of the then-current tendency among anthropologists to universalize such theories of the most elemental form of religious thought as animism, totemism, *mana*, and ancestor worship. Smith used the totemic clan to explain the organization of the Semitic family and other aspects of totemism to explain the phenomenon of sacrifice. Through the sacrifice and consumption of the totemic animal, the worshiper and the totem became mutually assimilated to one another (cf. the critique of this view in de Vaux, p. 448). This program was carried out (in a particularly random and atomistic way by Frazer) on the supposition that the earlier stages in the history of Semitic and Israelite religion and culture survived through the accidental preservation of archaic rituals and customs due to the conservative nature of religious thought and practice. One particular type of survival was found in the use of names (Caleb means "dog," Deborah means "bee," Jonah means "dove," Nahash means "serpent," etc.). It was proposed that such theriophorous names were originally the names of families or clans and thus provide evidence for totemism among the ancient Semites. Yet such names

are attributed to *individuals*, not families or clans, and come from periods when they cannot be correlated with any other supposed survivals of primitive totemism (de Vaux, p. 44). Since the mid-20th cent. anthropological studies and ethnographical reports have made it increasingly evident that the religious lives of most small-scale societies are actually far too complex to be reduced to either animism, totemism, *mana*, or ancestor worship. Thus totemism is no longer fashionable in the study of ancient Israelite religion and culture.

D. E. AUNE

TOU tō′o͞o [Heb. *tō'û*] (1 Ch. 18:9f.); **TOI** tō′ī, toi [Heb. *tō'î*] (2 S. 8:9f.). King of Hamath on the Orontes in the time of King David. David's defeat of Hadadezer king of Zobah, an enemey of Tou, prompted Tou to send David congratulations and gifts.

TOUBIANI. *See* TOB.

TOW [Heb. *ne'ōreṯ*] (Jgs. 16:9; Isa. 1:31). The coarser part of flax, with short threads, used as an example of easily flammable material. In Isa. 43:17, AV, "tow" represents Heb. *pištâ*, the usual word for "flax," here used for a wick (as in Isa. 42:3; Mt. 12:20).

TOWER. The translation of several biblical terms with various meanings, but generally denoting a high structure used for purposes of watching, protection, or defense. The most common Hebrew word is *migdâl*, from the root *gdl*, "be great, large." It could designate a WATCHTOWER for guarding a flock (Mic. 4:8) or vineyard (Isa. 5:2), a tower used as a place of refuge in a city (Jgs. 9:51), and possibly a ziggurat (Gen. 11:4). The term is used figuratively of the Lord as a tower of refuge in Ps. 61:3 (MT 4); cf. Prov. 18:10. Canticles likens a woman's neck to "a tower of David" (4:4) and "an ivory tower" (7:4). Towers located at defense points in city walls were often named (Neh. 3:1, 11; 12:38f.). Some such towers became place names, e.g., Migdal-eder, "tower of the flock" (Gen. 35:21; cf. NEB), and Migdal-gad, "tower of Gad," a stronghold in Judah (Josh. 15:37). From the same root come the words *migdôl*, a place on the Egyptian border (Ex. 14:2; Nu. 33:7; Jer. 44:1; etc.), and *magdîl* (*K*; *Q* *migdôl*), a term used figuratively of Yahweh (cf. AV "a tower of salvation"; RSV "great triumphs he gives").

Possibly derived from the root *bḥn* ("examine, test, try") are the words *baḥan* (for **baḥḥan*), "watch-tower" (Isa. 32:14), and *bāḥûn* (*Q*; *K bāḥîn*), "siege tower" (23:13). The siege tower was mobile; it was brought up to try the wall and if possible to breach it. Similarly, from the root *ṣwr* ("besiege") is derived *meṣûrâ*, "siege-works, fortified cities" (e.g., 2 Ch. 11:10f.).

Hebrew *miśgāḇ* ("secure height"), from the root *śgb* ("be high, inaccessible, exalted"), appears frequently in figurative references to God in the Psalms, e.g., 9:9 (MT 10; RSV "stronghold"); 46:7, 11 (MT 8, 12; RSV "refuge"); 48:3 (MT 4; RSV "defense"). It is rendered "high tower" by the AV in three passages (RSV "stronghold"): 2 S. 22:3; Ps. 18:2 (MT 3); 144:2.

A corner tower in an ancient wall between Jerusalem and Samaria (R. H. Smith)

In 2 K. 5:24 the AV uses "tower" to translate *'ōpel* (RSV "hill"), but a more accurate translation would be "acropolis," the higher part of a city (cf. NEB "citadel"). Twice in Zephaniah *pinnâ* ("corner") is translated "tower" in the AV (RSV "battlements," 1:16; 3:6). The corners in a wall structure were often the locations of towers. Exterior corners provided a wide angle for lookout and defensive armaments, while the interior corners were the weaker portions of the wall and therefore in need of buttressing by towers; thus corner walls provided both defense and protection for citizens. *See* pictures in ARCHEOLOGY OF PALESTINE AND SYRIA; BUILD; NEHEMIAH, BOOK OF.

In classical Greek *pýrgos*, cognate with Eng. "-burg(h)," refers primarily to a tower that forms part of a wall (*LSJ*, *s.v.*). In Mt. 21:33 par. Mk. 12:1, however, it refers to a watchtower built in a vineyard to provide shelter for a watchman. In this parable Jesus tells of a householder who planted a vineyard, set a hedge around it, and built a tower. The tower of Siloam (Lk. 13:4), on the other hand, must have served a different purpose (possibly a place of refuge for the citizens of Siloam), since its fall caused the death of eighteen persons. Likewise, the tower that a man planned to build in Jesus' parable about counting the cost (14:28) must have been other than a tower in the field, since the latter would have been built of available materials, usually stone.

See also FORTIFICATION. W. S. L. S.

TOWER IN SILOAM si-lō′əm [Gk. *pýrgos en t� ̣ Silōam*] (Lk. 13:4); NEB TOWER . . . SILOAM. A tower in Jerusalem whose collapse killed eighteen people. The tower probably formed part of the fortifications in the old wall of Jerusaelm, which according to Josephus "turned [from the east] southwards above the fountain of Siloam" (*BJ* v.4.2 [145]). *See* SILOAM III. Nothing more is known about the tower or about the disaster referred to by Jesus.

TOWER OF BABEL. *See* BABEL, TOWER OF.

TOWER OF DAVID (Cant. 4:4). *See* JERUSALEM III.C.1.e.

TOWER OF EDAR; TOWER OF EDER. *See* EDER, TOWER OF.

TOWER OF HANANEEL; TOWER OF HANANEL. *See* HANANEL, TOWER OF.

TOWER OF IVORY. *See* IVORY TOWER.

TOWER OF LEBANON [Heb. *migdal hall^ebānôn*] (Cant. 7:4 [MT 5]); NEB TOWERING LEBANON. The phrase appears only in Cant. 7:4 and may refer to a watch tower, a temple, or even a mountain. The designation "overlooking Damascus" in v. 4 suggests a promontory in the east range of the Lebanon mountains looking east toward Damascus.

TOWER OF MEAH mē'ə. *See* HUNDRED, TOWER OF THE; JERUSALEM III.F.2.x.

TOWER OF PENUEL pen-yōō'əl [Heb. *migdāl p^enû'ēl*] (Jgs. 8:17); NEB CASTLE OF PENUEL. A strong tower in the city of Penuel (*see* PENUEL, PENIEL) that was torn down by Gideon in revenge for that city's refusal to provide his men with food as they were pursuing the Midianites (cf. v. 9). J. Gray suggested that the tower "may have been a redoubt attached to an unwalled settlement such as those noticed as a feature of Ammonite settlement west of 'Ammān" (*Joshua, Judges, Ruth* [*NCBC*, rev. ed. 1986], p. 296); see also G. M. Landes, 24 [1961], 58-74).

TOWER OF SHECHEM [Heb. *migdal-š^eḵem* (Jgs. 9:46f., 49); Gk. LXX A *pýrgos Sikimōn*, B *pýrgos Sychem* (Jgs. 9:46f.)]; NEB "castle of Shechem." The stronghold of the house of El-berith destroyed by Abimelech (Jgs. 9:46-49). Excavations at Shechem (Tell Balâṭah) have uncovered the remains of a large temple-fortress that stood atop the acropolis of the M.B. and L.B. city of Shechem. The structure was first built in the mid-17th cent. B.C. to replace a smaller temple complex, and measured 26.3 m. by 21.2 m. (86¼ ft. by 69½ ft.) with walls 5.1 m. (16⅔ ft.) thick. It was destroyed in the mid-16th cent. B.C. during the Egyptian campaign against the Hyksos, but was rebuilt on a smaller scale. In the 12th cent., *ca.* 1125 B.C., Abimelech destroyed the city of Shechem, slaughtered a large number of its inhabitants, and left the temple-fortress in ruins.

TOWER OF SYENE. The AV translation of Heb. *migdōl s^wēnēh* in Ezk. 29:10; 30:6. The RSV and NEB read "from Migdol to Syene." *See* MIGDOL 3; SYENE.

TOWER OF THE FURNACES. *See* OVENS, TOWER OF THE.

TOWER OF THE OVENS. *See* OVENS, TOWER OF THE; JERUSALEM III.F.2.d'.

TOWN [Heb. *'îr*–'city' (Dt. 12:12; Josh. 10:37, 39; Ruth 1:19; Ezr. 2:70; Hab. 2:12; etc.), *baṭ* (Josh. 15:45, 47; 1 Ch. 5:16; 7:28f.; 8:12), *qiryâ* (Isa. 22:2), *ḥawwâ*–'tent camp' (Josh. 13:30), *ša'ar*–'city' (Dt. 12:12, 15, 17f.; 14:27-29; 16:5; etc.), *miḇdālôṯ*–'enclaves' (Josh. 16:9), *qereṭ* (Prov. 8:3; 9:3, 14), *'ereṣ*–'land' (Josh. 17:8), *giḇ'â*–'hill' (Josh. 24:33); Gk. *pólis; kōmópolis* (Mk. 1:38)]; AV also CITY, GATES, etc.; NEB also CITY, WALLED TOWN (1 S. 23:7), SETTLEMENTS, etc.

The RSV OT uses "town" most often to render Heb. *'îr*, a term that connotes a fortified permanent settlement without reference to size. Most translations (including the RSV in hundreds of passages) usually render *'îr* as "city," which is now somewhat misleading to English readers since the typical *'îr* in ancient Israel was only 12-25 ha.

Almond trees and the Israelite town of Anathoth (modern 'Anâtâ), Jeremiah's home (R. H. Smith)

(5-10 acres). The feature that apparently distinguished the *'îr* from other types of settlements (*ḥāṣēr*, etc.) was that a surrounding wall fortified it. "Town" is perhaps a more appropriate translation in most cases. Heb. *qereṭ* appears to be more or less synonymous with *'îr*, and also represents a walled urban center (Prov. 8:3). Heb. *bānôṯ* (lit. "daughters" often refers to the satellite villages and hamlets near a large fortified city. In Josh. 24:33 the RSV has "at Gibeah the town" for Heb. *b^egiḇ'aṯ* (cf. LXX). The context supplies "town." The term *giḇ'â* is probably a proper name, "Gibeah," a place name common enough that an appellative might be added (thus "Gibeah . . . of Phinehas" [Josh. 24:33]; cf. Israel's first capital, "Gibeah of Saul" [1 S. 11:14]). *See* GIBEAH 2.

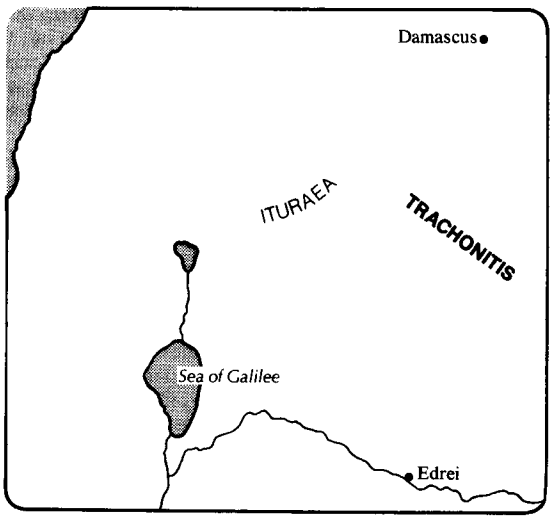
In the RSV NT "town" occurs over twenty times, and in all but one instance renders Gk. *pólis*, which is also the LXX equivalent of Heb. *'îr*. The "towns" mentioned include a Samaritan town (Mt. 10:5), Sodom (Lk. 10:12), Arimathea (23:50), the towns around Jerusalem (Acts 5:16), etc. In Mk. 1:38 Jesus visits the "towns" (Gk. *kōmopóloi*, lit. "village towns" or "market-towns" in the region of Galilee.

See also CITY; VILLAGE. D. A. DORSEY

TRACHONITIS trak-ō-nī'təs [Gk. *Trachōnitis*–'stony region']. A region in northern Transjordan corresponding to the modern el-Lejâ. Trachonitis is mentioned in the Bible only in Lk. 3:1, which says that John the Baptist began preaching in the wilderness when Philip was tetrarch of Ituraea and Trachonitis.

The term is first found in Strabo, who referred to "the Trachones," or rugged, stony tracts (*Geog.* xvi.2.16), and to "two Trachones" (2.20). These two areas are generally identified with el-Lejâ and es-Safa, volcanic areas respectively S and SE of Damascus. But in history (contra Strabo) Trachonitis (i.e., the region around Trachon) is limited to one area, el-Lejâ. Josephus said that Trachonitis's rugged rocks made access difficult, and that robber bands lived in its caves (*Ant.* xv.10.1 [344-48]); the Arabic name el-Lejâ, "the refuge," indicates continued use of the area by outlaws. Targum Jonathan identifies Trachonitis with ARGOB.

El-Lejâ is a triangular (or pear-shaped) area E of the highway from Damascus to Edrei (Dera'a), with its apex to the north. It is about 40 km. (25 mi.) long and 32 km. (20 mi.) wide, covering about 670 sq. km. (260 sq. mi.). Lava from a great eruption has left a well-defined area that rises 15 m. (50 ft.) above the surrounding terrain. (For a detailed description of the formation, see *GP*, I, 47.) The land is virtually untillable, but a few springs and



the rainfall made some areas fertile and able to support vineyards and pasturage for sheep and goats.

According to Josephus (*Ant.* xv.10.1 [344-48]), Zenodorus allowed the brigands of Trachonitis to pillage systematically the property of the Damascenes; this was reported to Caesar, who in turn assigned the territory to Herod, *ca.* 9 B.C. When Herod died (4 B.C.) his son Philip received Trachonitis (*Ant.* xvii.8.1 [188f.]) and ruled it with a firm hand for about thirty-seven years. At Philip's death (A.D. 34) the territory became part of the Roman province of Syria (*Ant.* xviii.4.6 [106-108]), but shortly thereafter Caligula gave it to Herod Agrippa I (*Ant.* xviii.6.10 [237]; *BJ* ii.9.6 [181-83]), who ruled it from 37 to 44. Trachonitis reverted to Roman governance until Herod Agrippa II received it (A.D. 53; *Ant.* xx.7.1 [137f.]; *BJ* ii.12.8 [247-49]. At his death in 100 it passed finally to Roman rule and six years later was incorporated into the new Roman province of Arabia. The cities of Trachonitis are called "black cities" in *Arabian Nights* because of their buildings, made entirely of black basalt. The numerous remains include theaters, temples, and public edifices, which like the well-built roads, belong to the Roman period, particularly to the time of Trajan (98-117).

Bibliography.–*GP,* I, 46f.; II, 156; Strabo *Geog.* xvi.2.16, 20.

W. S. LASOR

TRADE; TRADER [Heb. *sāḥar* (Gen. 34:10, 21; Jer. 14:18; part., Gen. 37:28; 1 K. 10:28 par. 2 Ch. 1:16), part. of *rāḵal* (1 K. 10:15; Ezk. 27:13, 15, 17, 20, 22-24), *markōla* (Ezk. 27:24), *rᵉḵullâ* (28:5, 16, 18), *kinʿan/kᵉnaʿan/kᵉnaʿᵃnî* (Isa. 23:8; Ezk. 16:29; 17:4; Hos. 12:7 [MT 8]; Zeph. 1:11; Zec. 14:21), *nāṯan*–'give' (Lam. 1:11), *ʾᵒnôš tār* (part. of *tûr;* 1 K. 10:15; 2 Ch. 9:14), *ḥabbār*–'associate in a trade' (Job 41:6 [MT 40:30]), *tᵉmûrâ*–'something acquired by exchange' (Job 20:18); Gk. *ergázomai*–'work,' 'do' (Mt. 25:16; Rev. 18:17), *empórion*–'market' (Jn. 2:16), *emporeúomai*–'be a merchant' (Jas. 4:13), *pragmateúomai* –'do business' (Lk. 19:13), *diapragmateúomai* ("gain by trading," v. 15), *téchnē*–'skill' (Acts 18:3), *homótechnos*– 'practicing the same skill' ("of the same trade," v. 3), *méros* (19:27)]; AV also TRAFFIC(KER), MERCHANT (MAN), MERCHANDISE, CANAAN (Ezk. 16:29), CANAANITE (Zec. 14:21), CHAPMAN (2 Ch. 9:14), CRAFT, etc.; NEB also MOVE ABOUT FREELY, MERCHANT, CUSTOMS OFFICER, DEAL(ER), COMMERCE, etc.

In most of the RSV usages "trade" refers to COMMERCE, i.e., the BUYING and selling or bartering of commodities. For discussion of the terms rendered by "trader," *see* COMMERCE II.D; MERCHANT.

In a few instances "trade" denotes an occupation or craft requiring a particular skill. In Job 41:6 (MT 40:30) Heb. *ḥabbār* (< *ḥāḇar,* "be joined, coupled") actually denotes "partners" or "associates" in a company of fishermen. Acts 18:3 states that Paul stayed with Aquila and Priscilla while he was in Corinth because they shared the occupation of tentmaking. In 19:27 "trade" refers to the livelihood (Gk. *méros,* lit. "part," "share") of the silversmiths in Ephesus, who earned their living by manufacturing images of Artemis.

See also MERCHANDISE; TRAFFIC; TRAVEL I, III.

N. J. O.

TRADES. *See* CRAFTS.

TRADITION. The Greek word for RSV "tradition" (AV "ordinance" [1 Cor. 11:2]) is *parádosis,* which can denote both the act by which something is handed down, and the object handed down. The word does not occur with this meaning in the LXX or the Apocrypha but is so used thirteen times in the NT (Mt. 15:2f., 6; Mk. 7:3, 5, 8f., 13; 1 Cor. 11:2; Gal. 1:14; Col. 2:8; 2 Thess. 2:15; 3:6). Gk. *paradídōmi* in various NT passages means "hand down (as tradition)" (Mk. 7:13; Lk. 1:2; Acts 6:14; 16:4; 1 Cor. 11:2, 23; 15:3; 2 Pet. 2:21; Jude 3); and Gk. *paralambánō* can mean "receive (as tradition)" (e.g., Mk. 7:4; 1 Cor. 11:23; 15:1, 3; Gal. 1:9, 12; Phil. 4:9; Col. 2:6; 1 Thess. 2:13; 4:1; 2 Thess. 3:6). The same general idea, however, lies behind many other terms that denote preaching, teaching, scholarly activity, example, and imitation.

I. General Remarks
II. Consolidation of the Jewish Torah Tradition
III. Jesus and the Primitive Church
IV. Development of the Primitive Christian Tradition
V. Origin of the Gospel Tradition

I. General Remarks.–As social creatures, human beings depends not only on a contemporary group and a milieu but also on earlier generations and their living conditions. They receive and benefit from a rich and diversified heritage, which may be called tradition. The very heart of this heritage may be designated "inner tradition" (beliefs, evaluations, insights, reflections, etc.). Inner tradition, however, is connected very intimately with the concrete elements in the tradition, which may be called "outer tradition": (1) institutional tradition (inventions, cultural subjects, organizations, etc.), (2) practical tradition (behavioral patterns, skills, habits, etc.), and (3) verbal tradition (words, sentences, texts). Verbal tradition includes oral and written tradition; this article will disregard the forms of verbal transmission created by modern technology. Inner tradition constantly finds expression in, creates, and (when necessary) changes institutions, customs, and texts; but it is strongly influenced by the way that these things have firmly established themselves in the people's thinking. The concrete forms play a very important positive role in the creation, continuity, and progression of the inner tradition. But they can also continue to exist long after their original intention has been forgotten, and they always make thoroughgoing reforms and beginnings of new spiritual movements much more difficult.

II. Consolidation of the Jewish Torah Tradition.–In order to understand the early Jewish traditionalism, one must begin with the concept of the covenant: the belief that a covenant existed between Yahweh and His chosen people Israel. Both the blessings and obligations of the covenant were thought to be inherited, and to hand them down to

subsequent generations was a solemn duty. The leaders would teach the people, the older would instruct the younger, and the fathers would instruct their sons concerning all that God had done for His people and said to them (cf., e.g., Gen. 18:19; Dt. 4:9f.; 6:6f.; Ps. 78:3-7).

The catastrophes that occurred in connection with the Exile, the infiltration of a foreign culture during the Hellenistic period, and the coercive attempts by Antiochus IV Epiphanes and later the Romans to hellenize the Jewish community increased the Jews' conviction that the tradition inherited from their venerated fathers must be preserved and defended. Now, more strongly than ever before, the Jews felt a loyalty to the covenant and to their cultural heritage that their fathers handed down in its entirety. Institutions, behavior patterns, and holy words had to be maintained as a consciously enforced, living program for life.

Behind the authority of the fathers was seen the authority of God. The religious heritage was God's Torah, which in essence was given at Sinai. The psychological conditions lying behind this development are reflected with great clarity in the books of Maccabees. "Zeal for the Torah" motivated some to defend with weapons the traditional values (both religious and material) of the covenant people. But the same zeal produced an impressive program of instruction and education centered on the holy Torah with all its manifestations — institutions, customs, and texts. A conscious technique of teaching and of transmitting traditional material developed from this, in direct connection with ancient pedagogical methods (learning by rote memory, imitation). By the end of the Amoraic period (late 5th cent. A.D.) the public educational system had become very well-developed in Judaism.

The rabbis made a distinction between written Torah and oral Torah, i.e., between the authoritative Holy Scriptures (the OT) and an orally transmitted authoritative tradition, which interprets, supplements, and sometimes corrects the written Torah (e.g., T. B. *Shabbath* 31a). The NT designates this unwritten tradition as *hē parádosis tôn presbytérōn,* "the tradition of the elders" (Mt. 15:2; Mk. 7:3, 5). Paul's expression *paradóseis tôn patrikôn mou,* "the traditions of my fathers" (Gal. 1:14), refers to the Torah in its entirety, both the written and the unwritten, in keeping with the way that it was practiced in his day. Cf. *tá éthē tá patrṓa,* "the customs of our fathers" (Acts 28:17; cf. 6:14; 15:1; 21:21; 26:3), and *ho patrṓos nómos,* "the law of our fathers" (Acts 22:3), have this same broad meaning.

III. Jesus and the Primitive Church.—The preaching of Jesus and of primitive Christianity simultaneously emphasized the present and looked to the future. The overarching message was that the coming kingdom of heaven is near. Within this framework Jesus demonstrated with radical words and deeds God's love for sinful humanity and His unconditional offer of forgiveness, healing, health, and salvation from the threatening judgment of wrath. At the same time Jesus called for a radical love for God (faith, obedience) and for other people (compassion, self-giving). However, Jesus did not present this as something completely new and unexpected, but as a deep and genuine execution of the intentions of the covenant that He and His people had inherited: the "new" covenant took shape in the framework of a strong feeling of fidelity to the tradition.

Among the verbal traditions that had been handed down "the Holy Scriptures" held a unique position for Jesus. He accepted them without criticism as holy and authoritative, but He reinterpreted them. Although the wording in Mt. 5:17 may be secondary, it summarizes very well Jesus' attitude toward the Scriptures, apparent in everything that He said and did: "I have come not to abolish them but to fulfil them [the Law and the Prophets, i.e., the Holy Scriptures]" (cf. Lk. 4:16-21). In this passage "to fulfil" means to reinterpret; it includes both giving the final meaning and living according to the Scriptures.

The primitive Church continued to work along the same lines, as a result of its assurance that a new covenant was established, and that the Holy Spirit was poured upon the people of the new covenant, the Church (see esp. Lk. 24:13-49; Acts 1:1-8; 2 Cor. 3:4–4:6). It did not interpret this "new" covenant as a different covenant but rather as the true continuation of the old covenant. In the new interpretation of Scripture God's love, grace, and forgiveness are primary, because the good news concerning the suffering and redeeming Christ is understood as Scripture's main message. In a radical way, the Church saw the two commandments enjoining love as the focal point of the legal material in the OT (see esp. Mt. 22:34-40 par.; cf. 7:12; Rom. 13:8-10; Gal. 5:14). The rabbis could also believe that the two commandments pertaining to love summed up the Torah, but they could not carry out this idea radically. They believed that the Jews' duty was to keep every commandment in the written and oral Torah.

The sources do not present a completely unified picture of Jesus' attitude toward the oral decrees of the Torah ("the tradition of the elders"). In His speech compiled in Mt. 23, Jesus recognized the Pharisees and their scribes as authoritative teachers and administrators of Torah. Of course, He criticized them because they did not practice what they preached, interpreted Torah as if it were a burden, and did not put the greatest emphasis on "the weightier matters of the law," instead "straining out a gnat and swallowing a camel" (vv. 23f.). Yet Jesus urged His disciples to "practice and observe" all that these teachers and magistrates said, which must have included their teaching of the oral Torah (v. 3). In Mk. 7:1-23 (cf. Mt. 15:1-20) Jesus issued more severe criticism, and even directly repudiated the oral tradition. He clearly distinguished the commandments of God in the Scriptures from certain decrees of the elders, and on the basis of this distinction He concluded that the oral decrees of the elders were wholly of human origin (note "your tradition," "the precepts of men," and "the tradition of men," Mk. 7:6-13; Mt. 15:3, 6, 9). Jesus' criticism of "the tradition of the elders" came to play an important role in the separation of Jewish Christianity from Judaism (cf. Col. 2:6-23). For the Jews "the tradition of the elders" guided their interpretation of the Scriptures and understanding of their faith. It was inevitable that a different understanding of religion and a different interpretation of Scripture would come into conflict with this oral tradition, even if not with all of its elements.

This role of tradition explains why Jesus had a relatively negative attitude toward the practical and institutional traditions of the Jews. The crucial issue was Jewish loyalty. On the one hand, Jesus stood for central matters that established institutions and persisting customs impeded. On the other hand, His opponents were committed to those institutions and customs even at the expense of central matters. Quite consistent with this, a gradual separation from Judaism characterized the subsequent development of Jewish Christianity.

IV. Development of the Primitive Christian Tradition.—As Christianity spread into the heterogeneous milieu of the Hellenistic world outside Palestine, it assumed different forms in different localities. But Christians felt that they were one (the Church of Jesus Christ), and their unity was not merely a unity "in spirit." It consisted in certain fun-

damental agreements on verbal, practical, and institutional levels.

When a Jew converted to belief in Jesus Christ, his life was radically reoriented (cf. Phil. 3:4-11), but he did not need to abandon the old completely. For a Gentile, conversion involved a much more radical severance with the views, practices, and traditions of his earlier life (cf., e.g., Gal. 4:8-12; Col. 3:5-11; 1 Thess. 4:1-8). On the other hand, the sources show that to a remarkable extent the Church could acknowledge and identify with the ethical ideals and rules of life in the Hellenistic world. Moreover, the Church could give its members a freedom in life-style that was impossible in Jewish congregations, with their regulated customs and rules of life.

With some simplification the growth of the primitive Christian tradition may be outlined in the following way. Primitive Christianity preached a message of salvation and reconciliation that was based on the suffering, death, and resurrection of Jesus (cf., e.g., 1 Cor. 15:1-11). But Jesus was also proclaimed as universal authority and as the ideal for the right attitude about life. Thus the Christ who gave Himself in death was recognized as the leading creative principle in the formation of the new tradition. References to the example of Jesus already occur in the Gospels, especially in the sayings concerning crossbearing and its consequences (see esp. Mt. 10:38; 16:24; Mk. 8:34; Lk. 9:23; 14:27; Mt. 20:25-28; Lk. 22:24-27; Jn. 13:12-15; 15:12-17). Jesus is set forth as an example in the Pauline letters (Rom. 15:1-7; 1 Cor. 10:33–11:2; 2 Cor. 8:9; Eph. 4:31–5:2, 25; Phil. 2:4-11; Col. 3:13; etc.), in Hebrews (12:2f.), and in the Petrine and Johannine letters (1 Pet. 2:18-25; 1 Jn. 2:3-11; 3:16f.; 4:7-11; etc.). The teaching concerning Christ does not refer merely to the leading principle in His work (His self-giving love), however. It is made specific in quotations of His teachings and in stories about His responses to life situations (cf. V below).

The other leaders in primitive Christianity, especially the apostles, also became models and standards for the formation of the Christian life-style (ethics), ecclesiastical organization, and customs, even though their authority was always thought secondary to Christ's. For example, Paul exhorted his churches to imitate him in everything (with the characteristic addition) just as he imitated Christ (1 Cor. 10:33–11:2; 1 Thess. 1:6; cf. 1 Cor. 4:16f.; 2 Thess. 3:6-13). This exhortation implies first of all that one will accept and obey Paul's teaching (1 Cor. 4:15-17; cf. 11:1f.; Rom. 6:17; 1 Thess. 4:1f.; 2 Thess. 2:15). But the apostle also exhorted the churches to imitate his deeds that they saw him perform (Phil. 4:9; cf. 2 Thess. 3:6-11). He is, however, no unique father of the Church but only a representative of all who accept Jesus Christ as their pattern for life (Phil. 3:17).

The desire of the primitive Christian tradition for unity also appears in efforts to create a uniform practice "in all the churches of the saints" at some points (1 Cor. 11:4f., 16; 14:33-36). Thus, the oldest (Jewish-Christian) churches, especially the mother church in Jerusalem, came to be an example and model (1 Cor. 14:36; cf. 1 Thess. 1:6f.; 2:14). The stabilization of the primitive Christian tradition on the verbal, practical, and institutional levels was already advanced when the Pastoral Epistles were written. These letters regard what was given through Christ as a deposit (*parathḗkē*), which the Church is faithfully to preserve, observe, and obey (1 Tim. 6:20; 2 Tim. 1:12-14; cf. 2:2; 3:14).

On the other hand, Christianity regarded the new covenant as a covenant of freedom, in which shackling and burdensome commandments given without reason are out of place (cf., e.g., Gal. 2:4f.; 4:21–5:1). This freedom allowed differences among the churches and enabled the Church later to develop, change, and reform. Such freedom was also preserved by warnings against attempts to bring Christians into bondage again, i.e., either by precepts that cannot be reconciled with faith in Christ, or by precepts that are genuine but have taken on a wrong value or function (cf. Gal. 5:1; Col. 2:20-23; etc.).

V. Origin of the Gospel Tradition.–Within this framework, the earliest history of the Synoptic tradition took place. The Pauline Epistles show that at an early stage Paul, in establishing his churches, handed down to them a tradition (*parádosis*) containing words of Jesus and stories about Him (1 Cor. 11:23-25; 15:1-8). It is difficult to ascertain the nature and extent of this Jesus tradition, since in his letters Paul usually was building upon the foundation that he had laid long before. He rarely repeated the basic traditions about Jesus (1 Cor. 11:23-25; 15:1-8) or directly cited them (1 Cor. 9:14; 1 Thess. 4:15), although his letters contain many echoes of Jesus' words.

In what way was the tradition about Jesus transmitted to the churches in the earliest period of primitive Christianity, before there was any major written Gospel? Comparisons with contemporary techniques of Jewish teaching and transmission suggest that the teachers passed on the oral texts by reciting them over and over again until those who heard them could recite them faultlessly from memory. It is likely that some records were soon made; notebooks and "secret scrolls" would have been used as aids to the memory. In this way small collections of traditions about Jesus would have emerged. The work of the Evangelists indicates that traditions about Jesus were compiled into large collections and with a panoramic picture of Jesus' work in mind. According to the prologue in the Gospel of Luke (1:1-4), the traditions about Jesus in the Gospels were handed down to the church ultimately by "those who from the beginning were eyewitnesses and ministers of the word," i.e., by the disciples closest to Jesus and by leading apostles. From a historical perspective this theory certainly is a simplification. But Luke's statement seems to be much closer to the truth than the view of some modern scholars (radical representatives of form criticism) that the traditions about Jesus were created by anonymous persons in the primitive Christian churches who lacked intimate knowledge of what Jesus of Nazareth actually said and did. It indeed seems likely that Jesus Himself taught and did so using the contemporary technique of repetition. *See* GOSPELS, SYNOPTIC. *See also* JOHN, GOSPEL ACCORDING TO, on the tradition lying behind this book.

tr. J. T. WILLIS

TRAGACANTH traj'ə-kanth (Gen. 37:25; 43:11, NEB). *See* GUM.

TRAFFIC [Heb. part. of *sāḥar* (Isa. 47:15; Ezk. 27:12, 16, 18, 21), *miṣḥār* (1 K. 10:15), *kēn ʿᵃnîyîm* ("who traffic," Zec. 11:7)]; AV also (BE A) MERCHANT, POOR (Zec. 11:7); NEB also TRADE, (BE A) SOURCE OF COMMERCE, DEALER; **TRAFFICKER** [Heb. *kēn ʿᵃnîyîm*] (Zec. 11:11); AV POOR; NEB DEALER. The verb "traf-

fic" is used by the RSV in the sense of "carry on trade." The noun *mishār* (which should possibly be emended to read *missahar*; see *BHS*; KoB, p. 541) denotes merchandise that is traded or profit from the sale of merchandise. The MT of Zec. 11:7, 11 is unintelligible (cf. AV "poor" as a translation of *ʿanîyîm*), and *kēn ʿanîyîm* should probably be emended to read *kᵉnaʿanîyîm* (see LXX, *BHS*); the latter term means, literally, "Canaanites" but is frequently used in the sense of "traders," since the Canaanites were known as traders par excellence in the ancient world (*see* CANAAN I).

See also BUYING; COMMERCE; MERCHANT; TRADE; TRAVEL I, III. N. J. O.

TRAIN. In Isa. 6:1 (RSV, AV) the Hebrew noun *šûl* denotes the long, trailing skirts of Yahweh's royal robes (cf. NEB "skirt of his robe"). In other passages the RSV uses "train" in the sense of a group of persons who follow someone in a procession. In Ps. 45:14 (MT 15) it refers to the bride's retinue of attendants and friends (Heb. *ʾaḥᵃreyhâ*; AV lit. "that follow her"); cf. the AV's use of "train" in 1 K. 10:2 for the Queen of Sheba's retinue (Heb. *ḥayil*, lit. "wealth," "power," "troops"). In Ps. 68:18 (MT 19) (Heb. *šeḇî*; AV lit. "captive") and Dnl. 11:43 (Heb. *bᵉmiṣʿāḏāyw*; AV lit. "in his steps") "train" denotes a victory procession that includes prisoners of war. N. J. O.

TRAIN; TRAINED; TRAINING [Heb. *ḥānaḵ*–'train, educate' (Prov. 22:6), *ḥānîḵ* (Gen. 14:14), *lāmaḏ*–'teach' (piel in 2 S. 22:35; Ps. 18:34 [MT 35]; 144:1; pual in 1 Ch. 25:7; Hos. 10:11), *yāḏaʿ*–'know' (2 Ch. 2:7, 14), piel of *yāsar*–'discipline' (Hos. 7:15); Gk. *gymnázō*–'exercise, train gymnastically' (1 Tim. 4:7; He. 5:14; 12:11; 2 Pet. 2:14), *gymnasía*–'training of the body' (1 Tim. 4:8), *paideúō*–'educate, discipline' (Tit. 2:12), *paideía* (2 Tim. 3:16), *sōphronízō*–'advise, train the mind' (Tit. 2:4), pass. of *mathēteúō*–'make a disciple' (Mt. 13:52), *oikonomía*–'stewardship' (1 Tim. 1:4)]; AV also INSTRUCTED, SKILFUL, TEACH, EXERCISE, EDIFYING, etc.; NEB also EXPERT, EXPERIENCED, BROKEN IN (Hos. 10:11), DISCIPLINE, etc. Instruction through discipline or drill. The primary goal of education, in the OT (Prov. 22:6) as well as in the NT (1 Tim. 4:7f.; etc.), is to produce a person who is self-disciplined in godly attitudes and habits.

See EDUCATION; TEACH. N. J. O.

TRANCE [Gk. *ékstasis*] (Acts 10:10; 11:5; 22:17). An altered state of consciousness, usually experienced by an individual privately, in which extrasensory sights and sounds, or visions and auditions, are experienced (*see* ECSTASY). The three occurrences of the term in the NT are all closely connected with divine revelation.

The two primary altered states of consciousness may be categorized under the headings "possession" and "trance," or (following the typology of E. Bourguignon in *Religion, Altered States of Consciousness, and Social Change* [1973] and *Possession* [1976]) "possession trance" and "vision trance." The former primarily involves possession by spirits, while "vision trance" may typically involve hallucinations, visions, and out-of-body experiences (including ascents to heaven and descents to the netherworld).

Acts 10:10 and 11:5 are parallel passages that narrate first Peter's experience of a symbolic vision (10:9-16) and later his retelling of this event in very similar terms in the form of a vision report (*see* VISION IV.C) before a gathering of leaders of the church in Jerusalem (11:1-10). The expression *egéneto ep' autón ékstasis* ("he fell into a trance") in 10:10 is simply rendered *en ekstásei* ("in a trance") in 11:5. Like many biblical visions, the content of this vision is symbolic, requiring interpretation. The vision therefore concludes with a short dialogue between the revealer (God) and Peter. In Acts 22:17 Paul is narrating a vision that has formal links to the prophetic call narrative (*see* VISION IV.A [1]).

A conceptual (though not verbal) parallel to these passages is the use of the phrase *en pneúmati* ("in the Spirit") in Rev. 1:10; 4:2; 17:3; 21:10. The problem in interpreting these passages lies in determining whether they refer to an ecstatic state (and so are appropriate parallels to Acts 10:10; 11:5; 22:17) or simply to the experience of revelation in general apart from any ecstatic experience. Most likely they refer to an ecstatic state, since the latter alternative appears somewhat artificial.

Bibliography.–*See* Bibliography in ECSTASY. D. E. AUNE

TRANSFIGURATION [Gk. *metamorphóō*–'transform, change in form']. The Greek word occurs in Mt. 17:2 and Mk. 9:2 in reference to Christ's appearance in splendor on a mountain ("he was transfigured"). The parallel Lukan account does not use the term, instead stating, "the appearance of his countenance was altered" (Lk. 9:29). *Metamorphóō* in Rom. 12:2 ("be transformed") and 2 Cor. 3:18 ("are being changed"; NEB "are transfigured") describes the change in life-style produced by faith in Jesus Christ; in the Symmachus translation of the OT it forms part of the title of Ps. 33 (34 in the English versions), indicating the change in David's countenance in the presence of Abimelech. This article will deal exclusively with Christ's transfiguration.

I. Accounts
II. Interpretation
III. Significance
IV. Observance

I. Accounts.–The Lord's appearance in glory during His earthly ministry is described only in the Synoptics (Mt. 17:1-13; Mk. 9:2-13; Lk. 9:28-36), although 2 Pet. 1:16-18 probably alludes to it. John does not report it, possibly because this Gospel is a "perpetual theophany" (Loisy). But the voice from heaven in Jn. 12:28 has a function similar to that of the Transfiguration in the Synoptics: it is heavenly approval of Christ's task of suffering.

The noncanonical Apocalypse of Peter has a passage descriptive of paradise that some have thought echoes the Synoptic accounts (Akhmim Fragment 4-6). There are also hints of the Transfiguration story in the Acts of John (90f.), the Acts of Peter (20), and the Acts of Thomas (143), although the Gospel of Thomas makes no reference of any kind to it. A later Gnostic document known as Pistis Sophia contains a bizarre reworking of the story, apparently a fusion of the NT Transfiguration and Ascension accounts.

The Synoptic records have seven common elements: Jesus took Peter, James, and John to the top of a mountain; He was transfigured before them; Moses and Elijah appeared; Peter responded with the suggestion that three booths be set up; a cloud overshadowed the whole group; a voice was heard out of the cloud; Jesus was seen alone. These items were treated somewhat differently, however, by each Gospel, as a few statistics demonstrate. Of the 121 words contained in the Markan account, 80 (66 percent) are also found in Matthew, and 65 (54 percent) in Luke. Of Matthew's 144 words, 80 (56 percent) occur in Mark, and 70 (49 percent) in Luke. Of the 165 words in the Lukan version, only 70 (42 percent) are found in Matthew, and 65 (39 percent) in Mark. These figures indicate that

Matthew is more closely related to Mark than it or Mark is to Luke. Luke has by far the most variations.

The three Synoptics differ in areas much more significant than terminology. Only Luke, e.g., states that Jesus' appearance changed as He prayed (9:29). Matthew (17:2) tells that the face of Jesus shone, while Mark notes only the brilliance of His clothing (9:3). Mark alone observes that Jesus' garments were so white that no fuller on earth could duplicate their splendor (9:3). Matthew is content to note that they were white as light (17:2), and Luke describes them as "dazzling white" (9:29; AV "glistering," i.e., glittering or shining with reflected light).

Luke alone gives the detail that the disciples were "heavy with sleep" (9:32). This notice, plus the further statement that they descended on the next day (v. 37), may mean that the incident occurred at night.

There are some significant differences in the words ascribed by the Synoptic writers to the voice from the cloud. Mark has simply, "This is my beloved Son; listen to him" (9:7). Matthew alone inserts after "Son" the clause "with whom I am well pleased" (17:5). Luke more explicitly echoes the Servant Song (Isa. 42:1) by using "my Chosen" for "my beloved" (9:35).

Just as Moses and Elijah were leaving, Peter made his suggestion of building three booths, according to Luke (9:33). The other two Gospels are not so specific but do record the same proposal (Mt. 17:4; Mk. 9:5). In Mark, Peter addresses Jesus as "Master"; Matthew has "Lord" (Gk. *kýrie*, 17:4), and Luke has "Master" (*epistáta*, 9:33). Mark indicates that the disciples were so afraid that Peter did not know what he should say (9:6). On this point Luke observes that Peter did not know what he was saying (9:33). Matthew omits this item completely.

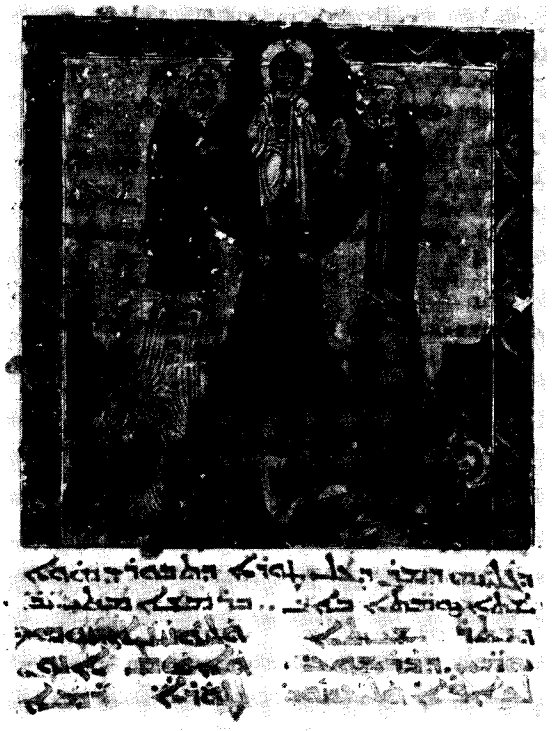
It is clear from these differences that each account has its own emphases. A very evident example is Luke's changing the specific time reference "after six days," found in both Mark (9:2) and Matthew (17:1), to the more general "about eight days after these sayings" (9:28).

The context of the Transfiguration in the Third Gospel is different from that in the other two Synoptics. In both Mark and Matthew the incident occurs just before Jesus' final quick departure from Galilee to Judea (Mk. 10:1; Mt. 19:1) and after Peter's confession at Caesarea Philippi (Mk. 8:27-30; Mt. 16:13-20). Luke refers to this confession, to be sure, but has no specific reference to Caesarea Philippi (9:18-21). Furthermore, in Luke the journey toward Jerusalem is rather leisurely, designed to inculcate the kind of teaching that is given in other contexts by the first two Gospels (9:51-18:14).

II. Interpretation.–The Transfiguration belongs to the most difficult Gospel materials, which include the accounts of Jesus' baptism and temptation. All three incidents involve the person of Our Lord in a way that provides a unique glimpse into the cosmic proportions of His life and work; and it is largely this extra dimension that complicates the task of interpretation.

Neither the Apostolic Fathers nor the second-century Apologists, in their available works, ever refer to the Transfiguration. The event is first mentioned in Origen's *Contra Celsum* and commentary on Matthew. Tertullian referred to it, John of Damascus has a very profound homily on it, and Chrysostom treated the lection in his regular textual expositions. All of these interpretations, however, are little more than comments on the text.

Not until the beginning of the 19th cent. were attempts made to explain the event comprehensively. Five different views of it can be identified: (1) as an atmospheric phenomenon (H. E. G. Paulus, K. Hase, Friedrich Spitta); (2) as a psychological experience (vision or dream),



An illumination depicting the transfiguration of Christ, from a Jacobite Syrian MS (Vatican Library, Syr. 559)

either of Jesus alone or of Jesus and His disciples (E. Underhill, E. Meyer, A. von Harnack, M. Goguel, B. Weiss, O. Holtzmann, F. J. Badcock, J. Neander); (3) as a bit of "Gemeinde-theologie" ("[church-] community theology"; J. Weiss, M. Dibelius, U. von Williamowitz-Moellendorf, O. Pfleiderer, E. Lohmeyer, J. M. Robinson, A. Meyer, H. J. Holtzmann, Rudolf Bultmann); (4) as a literary creation (B. Bacon, J. Wellhausen, A. Schweitzer, J. B. Bernardin); (5) as an actual occurrence (H. B. Swete, A. M. Ramsey, H. Baltensweiler).

III. Significance.–To do justice to the three Synoptic accounts, one must look at each to determine its particular accents. Some of the major divergences in Luke have already been mentioned. In Mark's sequence the Transfiguration is linked very closely to Peter's confession, "You are the Christ" (Mk. 8:29). This utterance is followed by instructional matter on the fate of the Son of Man and on the cost of discipleship in terms of suffering. As the story of the Transfiguration is about to begin, Mark refers to the coming of the kingdom of God *with power* (9:1).

All the Transfiguration accounts begin with Jesus taking His three closest disciples to be with Him alone on a high mountain; this language is a reminder of the Lord's temptation. Mark's Gospel makes much of Jesus' shining clothes (9:3), a brilliance which symbolizes the heavenly sphere.

In regard to the specific time reference in the story of Jesus' ministry, namely, "after six days" (Mk. 9:1 par. Mt. 17:1), Baltensweiler demonstrated that this phrase was most likely imbedded in the pericope during the latters' oral transmission and remained a fixed part of it, because the original incident occurred at the time of the Feast of Tabernacles, on the seventh day of which messianic expectations were given rather pronounced expres-

sion in the worship at Jerusalem. In the original setting, then, Jesus did not go to Jerusalem, because He did not propose to be the kind of Messiah expected there. Instead He withdrew to deal once more with the question of the nature of His messiahship. He was determined to remain true to the Father's will that He suffer and die; this choice received Heaven's approval, as shown by the shining garments and the voice from the cloud.

Mark's account contains more, however. It includes a note of concern that the disciples understand this choice. They were confronted by a vision intended to persuade them that the end time had come and that the kingdom of God consists of His people in both the old and the new dispensations, gathered around Jesus Christ. They were to see that their Lord stood at the very center of time as the fulfillment of all eschatological hopes — hence their awe at the appearance of Elijah and Moses. If the incident occurred during the Feast of Tabernacles, Peter naturally would have thought of building booths, for in the vision he saw the fulfillment of the expectations of the faithful in Israel. He wanted the vision to tarry, not realizing that suffering still lay ahead for the Messiah and His followers.

Matthew's Gospel has somewhat different emphases. For example, Peter's confession is given a longer reading: "You are the Christ, the Son of the living God" (Mt. 16:16). This incident at Caesarea Philippi includes the *logia* on the rock and the church. The subsequent reference to the Parousia (vv. 24-28) mentions the reward to be given to each but, unlike Mark, has no reference to the kingdom of God coming *with power*.

Matthew describes the Transfiguration as involving splendor shining from Jesus' face and garments (17:2). This description, together with the observation that the disciples were overcome by awe when they heard the voice from the cloud (vv. 5f.), suggests that this Gospel intends to describe Jesus more as the new Moses than as the Suffering Servant. In giving a longer version of the words from the cloud (v. 5), Matthew reveals an interest in validating Peter's confession that Jesus, like Israel, was the son of obedience and, as such, the Lord of the new Israel (16:16). Peter therefore addresses Him as "Lord" (17:4).

As already noted, Luke's account of this incident has a different relationship to the total ministry of Jesus. The Transfiguration does not occur near the end of Jesus' career; nor is the preceding context located at Caesarea Philippi. Peter's confession reads, "[You are] the Christ of God" (9:20). Some instructions on discipleship follow (vv. 23-27). Then comes the opening statement of the Transfiguration account: "Now about eight days after these sayings . . ." (v. 28).

Luke is the only Gospel that depicts Jesus at prayer in the moment of transfiguration (9:29). In fact, it states that Jesus took His disciples to the mountain to pray (v. 28). A clue to the Third Gospel's intention is quite probably its description of the disciples being awed as they observed how the cloud hovering over Jesus, Moses, and Elijah began to move toward them (vv. 33f.). This detail seems to suggest that Luke's chief interest is showing that discipleship involves the kind of suffering that Moses and Elijah discussed with Jesus under the heading of His "exodus" (RSV "departure" for Gk. *éxodos*, v. 31). The voice from the cloud confirmed that God's chosen would suffer, a point that constituted the burden of the instruction given by Jesus in the days preceding (vv. 23-27).

When one attempts to construct some composite significance of the three Synoptic accounts of the Transfiguration, the following points are revealed: (1) the OT has been fulfilled by the coming of the new Moses; (2) the messianic age has come, although its full splendor is to be seen only beyond the cross; (3) the people of God assemble around the Prophet, rather than a priest; (4) both the old and the new dispensations testify to Jesus' being the Messiah, standing as He does at the very center of time; (5) the full splendor of which they saw but a glimpse awaits Jesus and the disciples beyond the cross; (6) political messianism is decisively rejected; (7) the disciples are encouraged to enter a kingdom of suffering rather than of power.

To see the full import of the Transfiguration one must look for a setting in the life of Jesus (*Sitz-im-Leben Jesu*). Ramsey was near the truth when he observed: "But just as the Christian conception of our Lord's Messiahship arose not from an amalgam of current notions but from a history which created them, so in particular the story of the Transfiguration may be the creation not of certain *theologoumena* but of the creative history that molded them." Behind the Gospel accounts is One who is still the "riddle of the NT." To His serving and suffering messiahship the Transfiguration bears eloquent testimony.

IV. Observance.—In the calendar of the church year the Feast of the Transfiguration (*Transfiguratio Domini*) is observed Aug. 6, except in the Lutheran tradition, which observes it on the last Sunday after Epiphany. The feast originated in the Eastern Churches, where it appears to have been at first a local and unofficial observance sometimes known as the *Thaborion*, "Tabor feast." In the West, Pope Callistus III ordered its universal celebration in 1457 to commemorate the victory over the Turks at Belgrade on Aug. 6, 1456.

M. H. SCHARLEMANN

TRANSFIGURATION, MOUNT OF. The place where Jesus appeared in splendor to three of His disciples (Mt. 17:2; Mk. 9:2; Lk. 9:28). Both Matthew (17:1) and Mark (9:2) call it "a high mountain." Luke (9:28) refers to it as "the mountain," as though it was so familiar that it required no further identification.

The mount of Transfiguration has been identified with four mountains: the Mt. of Olives, Tabor, Jebel Jermuk, and Hermon.

I. Mt. of Olives.—Some commentators have seen in the choice of the three disciples (John, James, and Peter) an inner connection with the account of Jesus' suffering in Gethsemane. Others have regarded the Transfiguration as a Resurrection account projected back into the ministry of Jesus (e.g., *HST*, p. 259), or as an account having some connection with the Ascension, similar to later Gnostic treatments. In all three instances the mountain in question has been identified with the Mt. of Olives.

II. Mt. Tabor.—The traditional site of the Transfiguration is Mt. Tabor (see H. B. Swete, comm. on Mark [repr. 1977], p. 187), and to this day the Feast of Transfiguration

is called the *Thaborion* ("Tabor feast") in the churches of the East. Mt. Tabor, modern Jebel eṭ-Ṭôr, is situated in the northeast corner of the Valley of Jezreel. Although it reaches a maximum elevation of only 562 m. (1843 ft.), its isolation and steep sides give it an air of majesty that invites comparison with Mt. Carmel and Mt. Hermon (Ps. 89:12; Jer. 46:18). Mt. Tabor was perhaps the site of an early sanctuary (Dt. 33:19). In A.D. 326 Helena mother of Constantine built a church on Mt. Tabor to mark the assumed site of the Transfiguration. By the 7th cent. there were three shrines dedicated to Jesus, Moses, and Elijah, respectively, on its summit.

But Mt. Tabor does not seem to have been the mount of Transfiguration, especially since a Roman camp was there during Our Lord's ministry, according to Josephus (*BJ* iv.1.8 [54-61]). Furthermore, it is not a high mountain at all.

See also TABOR, MOUNT.

III. Jebel Jermuk.—In 1907 the *Expository Times* published the suggestion of W. Ewing that Jebel Jermuk best fits the details of the Transfiguration account. Jermuk is the highest mountain in Galilee — 1200 m. (4000 ft.) — and is in the west over against the Safed uplands. The mountain rises from the midst of a district that had many Jews in Jesus' day, and such important Jewish centers as Kefr Bir'îm, Gishcala, and Meiron lay around the mount's base. These centers, Ewing believed, best explain the presence of scribes (Mk. 9:14) at the events after the Transfiguration. In Ewing's opinion Matthew in effect says that the healing of the demoniac took place in Galilee (Mt. 17:14-21). Despite its logic, Ewing's suggestion has received no general acceptance.

IV. Mt. Hermon.—Most contemporary scholars have accepted Mt. Hermon as the locale of the Transfiguration, to the degree that they have accepted the account as representing a historical incident (cf. V. Taylor, comm. on Mark [repr. 1981], p. 388). This mountain, in a region that was largely gentile, rises 2800 m. (9100 ft.) above the sea and is a majestic sight from far away. The Arabs call it Jebel el-Sheikh, "gray-haired mountain," or Jebel el-Thalj, "mountain of the snow." From antiquity it has been a sacred mountain, and even in later periods it was used as a cult place. A Greek inscription has been found describing the local god of the mountain.

Some of the misgivings of Ewing and others for this site may be countered by the observation that the Galilean Jews were not so sharply separated from Gentiles that rather sizable Jewish crowds could not have accompanied Jesus to Caesarea Philippi. The scribes were present perhaps because they were determined to find something in Jesus' actions or words that would compromise Him as a teacher.

Although Mt. Hermon is situated in the region once belonging to Dan, from which traditionally the antichrist would come, Jesus may well have chosen such a place for His transfiguration to symbolize His eventual victory over any anti-Messiah. But His choice may also have been intended to give body to such OT expressions as "Mount Zion, in the far north, the city of the great King" (Ps. 48:2). If this is the case, His choice is indirect evidence of the extent to which the ancient Canaanite view of Mt. Hermon as the cosmic mountain, where heaven and earth met, persisted in the culture of Palestine.

A strong argument for Hermon as the mount of Transfiguration is its proximity to Caesarea Philippi, where, according to Matthew and Mark, Peter made his great confession (Mt. 16:13, 16; Mk. 8:27, 29); this confession is in the immediate context of the Transfiguration.

M. H. SCHARLEMANN

TRANSFORM [Gk. *metamorphóō*] (Rom. 12:2). Paul's use of *metamorphóō* (in 2 Cor. 3:18 [AV, RSV "changed"; NEB "transfigured"] as well as in Rom. 12:2) represents the thorough change in the nature of a Christian's life as it comes to conform to God's will. This change is contingent on God's mercy (Rom. 12:1) and the action of His Spirit (2 Cor. 3:17f.). It is dependent upon an internal process ("the renewal of your mind") and is paralleled by the the person's differentiation from "the world" (Rom. 12:2). It distinguishes present hope in Christ from that which was available with the "old covenant" under Moses (2 Cor. 3:12-18). This transformation is described in both imperative terms (Rom. 12:1f.) and in indicative passive terms, as that which is done to or for the Christian (2 Cor. 3:18).

For 2 Cor. 11:13-15 (AV "transforming," "transformed") *see* DISGUISE.

See *TDNT*, IV, *s.v.* μεταμορφόω (Behm).

J. W. SIMPSON, JR.

TRANSGRESSION. An act of "going beyond" or violating a duty, command, or law. Thus the term connotes lawlessness, iniquity, fault, ungodliness, unrighteousness, and wrongdoing.

"Transgression" is used by the AV and RSV primarily to translate Heb. *peša'*. The NEB on the other hand, translates *peša'* as "transgression" only once (He. 2:2), elsewhere using a variety of terms such as "crime" (Gen. 50:17; Mic. 1:5), "rebellion" (Ex. 34:7; Nu. 14:18; Isa. 59:20), "offence" (Job 13:23; 14:17; 33:9), "iniquity" (8:4), "folly" (35:15), "disobedience" (Ps. 89:32 [MT 33]) and "sin" (Ps. 32:1; 36:1 [MT 2]; Prov. 10:19; 17:19; 29:6, 16; Isa. 24:20; 57:4). In the NT the RSV uses "transgression" to render Gk. *parábasis* (Rom. 4:15; 5:14; Gal. 3:19; He. 2:2; 9:15) and *paranomía* (2 Pet. 2:16).

The basic meaning of Heb. *peša'* is "rebellion," and it has to do with the violation of a relationship or of the rights of another (Prov. 28:24). Joseph's brothers were fearful for their safety when their father Jacob died, because their brother Joseph, against whom they had transgressed, had the authority to treat them in whatever manner he saw fit (Gen. 50:17; cf. 37:12-36). The psalmist cried out for deliverance from his enemies on the ground that he had not transgressed against them (Ps. 59:3f. [MT 4f.]). On the other hand, Proverbs warns that unguarded lips often lead to transgression (10:19), and those who engage in transgression frequently find their lives marked with needless strife (17:19).

Scripture provides repeated accounts of incidents in which human beings transgress against God. Transgression against God is an act of rebellion (cf. Ex. 23:21; Nu. 14:41; Prov. 29:16; He. 2:2). It is an act of sin to which guilt must be assigned (Job 13:23; 33:9; 34:6; Ps. 36:1 [MT 2]; Isa. 53:8; 57:4; 58:1; Am. 4:4). It generally involves a breaking of the covenant relationship with God, a violation of His commandments and statutes (Ps. 89:31f. [MT 32f.]; Isa. 53:8). The psalmist speaks of individual transgression when he requests that God protect him from presumptuous sins so that he might be found innocent of great transgression (Ps. 19:13 [MT 14]). The prophet Micah, however, speaks of corporate transgression against God when he refers to the transgression of Jacob (Mic. 1:5; 3:8; cf. Isa. 58:1; 59:20).

The term occurs three times in the apocalyptic writings

of Daniel (Dnl. 8:12f.; 9:24). In 8:12f. the Hebrew is obscure, but the "transgression that makes desolate" appears to describe Antiochus Epiphanes's erection of the Zeus altar in the temple in 167 B.C. (cf. 9:27).

The Bible warns that the person who transgresses is under the power of that act. Bildad the Shuhite wondered aloud whether Job's children had been destroyed because God had delivered them into the power of their transgression (Job 8:4). More commonly expressed is the warning that repeated transgression ensnares those who engage in it (Prov. 12:13; 29:6) and (figuratively) weighs them down (Isa. 24:20). Repeated transgression reinforces an attitude of defiance toward God, for there is no longer any fear in the heart of the transgressor (Ps. 36:1 [MT 2]; cf. Isa. 44:20; Rom. 1:18-32; 3:18).

As it is possible for human beings to forgive the transgression of others (e.g., as Joseph did for his brothers, Gen. 50:15-21; cf. Prov. 17:9), so too God forgives those who acknowledge their guilt before Him (Ex. 34:7; Nu. 14:18). Thus Job sought God's forgiveness for any transgression he might have committed (Job 7:21; 14:17). Isaiah prophesied that the Servant of Yahweh would be stricken for the transgression of Yahweh's people (Isa. 53:8), and he promised redemption for those of Jacob who turned from their transgression (59:20). The psalmist wrote about the blessedness of those who have been forgiven their transgressions (Ps. 32:1; cf. v. 5).

C. M. ROBECK, JR.

TRANSLATE [Heb. pass. part. *meṯurgām* < *trgm* (Ezr. 4:7); cf. Akk. *targumānu*–'interpreter'; Gk. *hermēneúō*–'interpret' (Ad. Est. 11:1), *hermēneía*–'interpretation' (prologue to Sirach), *metágō*-'transfer, transport' (prologue to Sirach)]; AV also INTERPRET; NEB also READ ALOUD (Ezr. 4:7), etc.; **TRANSLATION** [Gk. *methermēneúō*–'translate, interpret' (prologue to Sirach), *hermēneúō* (He. 7:2)]; AV INTERPRET, INTERPRETATION; NEB also "means" (He. 7:2).

The RSV uses "translate" (Ezr. 4:7; Ad. Est. 11:1; prologue to Sirach), and "translation" (prologue to Sirach; He. 7:2) to render various Hebrew and Greek words which have essentially the same idea: "give the meaning of one language in that of another." But always involved in this concept of translation is the companion idea of interpretation (cf. also Aram. *pršˀ*, "separate," "distinguish"; NIV "translate" [Ezr. 4:18]), for any true translation requires that the translator not attempt to retain a word-for-word or structure-for-structure rendering of the old into the new. Rather the translator must make every effort to express accurately in the receptor language the precise meaning of the original, a procedure that demands interpretation. The people of biblical times understood this, because all the words noted above that are rendered "translation" or "translate" have as their fundamental meaning "interpretation" or "interpret." The words of Ben Sira's grandson serve as an illustration of this. Clearly he recognized the difficulty, the importance, and the nature of the translator's work when he wrote, upon finishing the translation of his grandfather's book (Ecclesiasticus) from Hebrew into Greek: "Ye are urged . . . to be indulgent in cases where, despite our diligent labor in translating [*hermēneía*], we may seem to have rendered some phrases imperfectly. For what was originally expressed in Hebrew does not have exactly the same sense when translated into another language . . . it seemed highly necessary that I should myself devote some pains and labor to the translation [*methermēneúō*] of the following book, using in that period of time great watchfulness and skill in order to complete and publish the book" (prologue to Sirach). *See* ENGLISH VERSIONS; TARGUM; VERSIONS.

In the AV "translate" appears once in the OT (2 S. 3:10) and three times in the NT (Col. 1:13; He. 11:5), while "translation" appears once (He. 11:5).

In 2 S. 3:10 "translate" (Heb. *ʿāḇar*) has the specialized sense of "take away," "transfer" (so RSV); hence, God "took away" the kingdom from Saul and gave it to David.

In Col. 1:13 "translate" in the AV renders Gk. *methístēmi* (lit. "remove from one place to another"). The expression "God translated us" of Col. 1:13 means that God in His redemptive work removed us from the realm of darkness and "transferred" (RSV) us into the kingdom of His Son. In He. 11:5 the verb Gk. *metatíthēmi*, "convey to another place," refers to Enoch's being "translated," in the sense that he was transferred from earth to heaven without passing through the intermediate experience of death.

In He. 11:5 "translation" (Gk. *metáthesis* < *metatíthēmi*) also refers to God's removal of Enoch from earth to heaven. The Greek term has a secondary meaning as well, namely, "transformation" or "change." Both ideas may be present here, but the writer of Hebrews is silent about what was involved in this transfer of Enoch — about precisely what took place, how it happened, or the nature of any transformation that may have been involved in this unusual experience. G. F. HAWTHORNE

TRAP. *See* SNARE.

TRAVAIL [Heb. *yālaḏ*–'bear, bring forth children' (Gen. 35:16; Ps. 48:6 [MT 7]; Isa. 13:8; 21:3; 42:14; Jer. 6:24; 13:21; 22:23; 31:8; 49:24; 50:43; Mic. 4:9f.; 5:3 [MT 2], *ḥûl/ḥîl*–'have labor pains' (Isa. 23:4; 45:10; 54:1), piel of *ḥāḇal*–'be in travail with' (Cant. 8:5), *ḥālâ*–'be weak, sick' (Jer. 4:31); *ʿāmāl*–'labor' (Isa. 53:11); Gk. *ōdínō* (Gal. 4:19, 27), *ōdín*–'birth pain(s)' (1 Thess. 5:3), *synōdínō* (Rom. 8:22), *tíktō*–'bear, give birth (to)' (Jn. 16:21)]; AV also BRING FORTH (Cant. 8:5; Isa. 45:10); NEB also "in labour," "bringing to birth" (Isa. 45:10), CHILDBIRTH (Mic. 4:10), PANGS (1 Thess. 5:3), etc.; **LABOR (OF CHILDBIRTH)** [Heb. *yālaḏ* (Gen. 35:16f.; 38:28; Jer. 30:6), *ḥûl/ḥîl* (Isa. 66:7f.)]; AV also TRAVAIL; NEB also PAINS, PANGS.

A term for the painful process a woman experiences in giving birth to a child (Gen 35:16, 17), but also used figuratively to describe the anguish and sorrow of disastrous or disappointing circumstances of life (Isa. 13:8; Jer. 4:31; Gal. 4:19). The comparison of such major calamities to the dreaded pain of childbirth illustrates the widespread fear and anxiety in that day caused by childbirth.

In the OT this metaphor sometimes refers to Yahweh's judgment (often sudden) upon disobedient peoples who cannot expect to receive His salvation, but only His punishment (Isa. 13:8; Jer. 49:24). It also expresses the process of rebirth of the nation of Israel that Yahweh accomplishes through pain and suffering (Isa. 45:10; 66:7-9; cf. 26:17f.). The OT often depicts Israel as an expectant mother in painful labor who is delivered from the agony by Yahweh in the messianic age (Isa. 66:7f.; Mic. 4:10; cf. Isa. 26:17–27:1). These ideas no doubt influenced the Qumrân community, for it saw the afflictions of its people as signs of the end times that would come upon the faithful community prior to their birth into the messianic age (1QH 3:7-12; 5:30-32; cf. Jer. 13:21; 30:6; 2 Esd. 4:41-44).

The childbirth imagery also appears in the NT. Jn. 16:21 tells of "travail" of the people of God prior to the joy

of the new age. Paul describes the whole of creation "travailing together" prior to the redemption of the body in the age to come (Rom. 8:22). He also compares the suddenness of labor pangs with the speed with which the Lord's judgment shall come upon those who are self-deceived with false security (1 Thess. 5:3). Paul also employs the childbirth imagery to relate his own toil and anguish in discipling his converts (Gal. 4:19), and to speak of the growth of the Christian community without labor pains through the supernatural power of God (4:27; cf. Isa. 54:1).

V. Traveling Conditions

I. Reasons for Travel.–Although there were certainly periods during Israel's checkered history when travel came to a near standstill (cf. Jgs. 5:6), during normal times traveling was undoubtedly common and frequent. The biblical and extrabiblical records are filled with accounts of personal travel for a great variety of reasons. Individuals traveled for the same kinds of reasons that have motivated people of all times and lands to travel. One finds, for example, mention of travel for such common purposes as courting a young woman (Jgs. 14:5-7), determining the well-being of one's kin (Gen. 37:13f.), procuring food (Prov. 31:14), searching for employment (Jgs. 17:7f.), paying a vow (2 S. 15:7f.), or with destinations such as a wedding (Jgs. 14:8-10), a burial or funeral (Gen. 35:28; 50:1-14; 1 S. 25:1), a sheep-shearing (Gen. 38:13), a banquet (2 S. 13:23-27), or a new residence (1 K. 2:36). For these and countless other reasons the common people of Israel traveled back and forth on the roads of the land. It appears that the thoroughfares were generally bustling with *'ōḇrê dereḵ* ("passers-by"); e.g., Job 21:29; Prov. 9:15; Lam. 1:12; 2:15; cf. 1 K. 13:25).

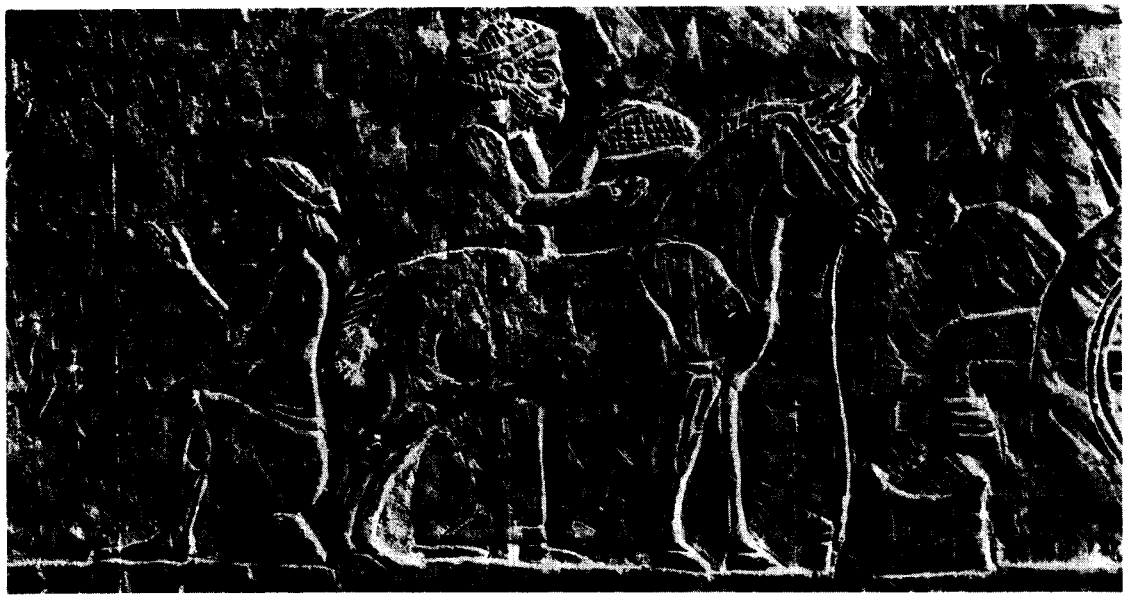
In addition to the multitude of common occasions for travel, four special kinds of travelers are mentioned throughout the biblical and extrabiblical literature: messengers, government officials, merchants, and people on journeys for religious purposes. Royal and governmental messengers are eloquently attested as early as the Amarna period. Of the 379 published Amarna tablets, about 300 are letters brought to Egypt by couriers from officials and rulers of Palestine and Syria. Likewise, the Arad and Lachish ostraca bear witness to the corps of messengers that kept the various officials and military commanders of Judah informed. The Bible is full of references to messengers (Heb. *mal'āḵîm*) and couriers (*rāṣîm*, lit. "runners") traveling among the capitals, kings, and nobles of the lands. David, for example, is said to have sent messengers to potential allies (2 S. 2:5; etc.), to rivals (3:14; etc.), to his military commanders (11:19; etc.), and to many others. Heb. *mal'āḵ*, in fact, occurs fifty-two times in Samuel and Kings alone. During the NT period the extensive *cursus publicus*, the state postal and messenger service, kept the emperors of Rome in contact with all parts of the empire. This system included regular stops along the main highways where horses could be changed (*mutationes*), and larger stations and inns (*mansiones*), which were established about one day's journey (37 km., 22 mi.) apart. It would not be unwarranted to suppose that throughout both OT and NT periods messengers were constantly traveling back and forth.

Travel by government officials, whether state or local, is also well attested in ancient Israel, a natural consequence of the burgeoning bureaucracy. Royal officials and representatives of the king, for example, are frequently found on the move in biblical narratives, visiting foreign dignitaries (2 S. 10:2), taking a census (24:1f.), collecting taxes (2 K. 15:20), traveling to banquets in the country (2 S. 13:23-27), procuring provisions for the palace (1 K. 4:27f.), overseeing the forced labor gangs (4:6; 5:13-17; 11:28f.), traveling as ambassadors (Isa. 30:2ff.; 39; Jer. 27:3), attending conferences (2 S. 3:17), visiting potential allies (v. 20), and pursuing many other such activities (e.g., 1 K. 1:3), independently and for the king. During the Roman period high officials generally traveled by the *cursus velox*, a relatively swift and comfortable system of travel available throughout the empire. Lower government officials employed the more cumbersome ox-drawn *clabulariae*, imperial transport wagons used to carry heavy goods, military equipment, etc.

The royalty, usually with entourages, also traveled frequently. Solomon (1 K. 3:4), Hiram king of Tyre (9:12), the queen of Sheba (ch. 10), Rehoboam (12:1ff.), Jeroboam (12:29ff.), Ahab (18:16, 42-46), and Ahaziah (9:16) are among those whose peacetime travels are mentioned in the books of Kings.

The movement of traders and caravans in ancient Israel is well known. The vigorous development and pursuit of trade within Israel and between Israel and its neighbors during the Iron Age is treated in detail by M. Elat. Local trade primarily involved agricultural products (wheat, barley, olives and olive oil, wine, and various fruits and vegetables) and livestock, which were brought to the cities and towns to sell (cf. 2 K. 7:1), and manufactured products and imported foreign wares, which could be purchased in the cities. In international trade, Israel exported mainly agricultural products, such as olive oil, wine, grain, and dried fruit (1 K. 5:11; Ezk. 27:17), but also commercial products such as woolen cloth and embroidered or woven garments. Imports included tin, lead, silver, copper, iron, gold from southern Arabia (1 K. 9:28; 10:10f., 14f.; 2 Ch. 8:18; 9:9), cedars from Lebanon (1 K. 5:6, 8f.), fine white linen from Egypt (Ex. 9:31; Ezk. 27:7, 16), and precious wood, gems, ivory, spices, and exotic curiosities from Ethiopia and beyond (1 K. 10:2ff.; 2 Ch. 9:9ff.). These exports and imports departed from and arrived in Israel both by caravans and by ship. (Of course shipping was dependent on caravans as well, to transport the goods to and from the ports.) During the Persian, Hellenistic, and Roman periods trade continued to flourish and to account for much of the traffic on the highways.

Travel for religious purposes is well attested in ancient Israel. Incidental references and allusions to journeys made to religious festivals, to feasts, to cultic centers, and to high places abound in the biblical literature. The major religious centers at Shiloh, Dan, Bethel, and of course Jerusalem, were frequented regularly (1 S. 1:3ff.; 2 K. 10:18ff.; 1 K. 12:26-33; Am. 5:4f., 21f.; Lk. 2:41ff.; Jn. 2:13; etc.); and if the vehement, oft-repeated denunciations by the prophets are any indication, the various cultic



Elamite prisoners grooming a mule tied to a two-wheeled wagon. An Assyrian relief from Ashurbanipal's palace at Nineveh, ca. 668-630 B.C. (CNMHS/ARS, NY/SPADEM)

high places throughout OT Israel had no lack of visitors either. The three annual pilgrim festivals, Passover, Weeks, and Succoth, involved a journey to "the place which Yahweh your God will choose." Recorded celebrations of the Passover during the OT period include those attributed to the reigns of Hezekiah (2 Ch. 30) and Josiah (2 K. 23:21-23; 2 Ch. 35), while Solomon is said to have assembled Israel to celebrate Succoth at the capital (1 K. 8:2, 65). The regular practice of these pilgrim festivals, however, probably did not occur until the second temple period.

In addition to these four special kinds of travel, one other should be mentioned, the movement of military forces. Israel's own armies often moved about within its land and occasionally invaded neighboring countries as well. During the reign of David, for example, the army seems to have been constantly on the march, including campaigns against Jebusite Jerusalem (2 S. 5:6f.), the Philistines in the valley of Rephaim (5:17-25) and in their home territory (8:1; 21:15-21), the Moabites (8:2), Zobah (8:3), Aram (8:4-6), Edom (8:13f.), the Amalekites (8:12), the Ammonites (8:12; 10:1-19; 12:26-31), and the rebels under Sheba at Abel-beth-maacah (ch. 20). The recorded campaigns and battles under subsequent kings of Israel and Judah are numerous, and the evidence indicates that national armies often went on campaigns, both in Israel itself and against neighboring lands. The frequency of these campaigns may account for the almost routine note in 2 S. 11:1 (following *BHS*): "at the turn of the year, when kings go forth [on campaigns]." During the intertestamental and NT periods the movement of armies in and through the land of Israel continued and in fact probably intensified, as witnessed in the works of Josephus.

II. Modes of Travel.–During the biblical period land travel was confined to only a few modes. These included primarily: by foot, donkey, mule, horse, camel, palanquin (rarely attested), and chariot.

A. On Foot. In both the OT and NT periods traveling was normally by foot. Most of the traveling mentioned or alluded to in the Bible is either expressly or presumably by foot, such as that done by the Israelites during the Exodus, wilderness wanderings, and entrance into Canaan Dt. 8:4; 11:24f.; 29:5; Josh. 1:3; 3:13, 15; etc.), the spies (Nu. 13:23), military couriers (1 S. 4:12; etc.; note the term *rāṣ*, "runner," as the standard term for courier), Samson (Jgs. 16:1-3; etc.), David when he departed from Jerusalem (2 S. 15:30), Elijah (1 K. 18:46; etc.), most military men (2 S. 2:18f., etc.), and Jesus and His disciples as they traveled about the country (Mt. 10:10-14; 12:1ff.; 20:29-34; etc.).

Outside Israel the same was true, as Egyptian, Mesopotamian, and Hittite literature and art attest. For example, in the scene from the tomb of Khnumhotep III at Benihasan, depicting the arrival of a group of Semites into Egypt, the men and women are all on foot, while donkeys carry the baggage and children (*ANEP*, no. 3; see also nos. 10, 11, 350, etc.). In Mesopotamia able-bodied travelers normally went by foot. Apparently even civil servants usually walked, as analysis of ration lists for government officials shows; only the most important persons were supplied with animals for riding.

B. Donkeyback. Travel by donkeyback is also well-evidenced in the Bible. The wife and children of Moses, for example, traveled back to Egypt on a donkey (Ex. 4:20). Others who are said in the OT to have traveled by donkeyback include: Caleb's daughter (Josh. 15:18; Jgs. 1:14), Abigail, when she rode to meet David (1 S. 25:20, 23, 42), the wives and children of David when they left Jerusalem before Absalom (2 S. 16:1f.), lame Mephibosheth (2 S. 19:26), the lying prophet of Bethel (1 K. 13:13), the feeble captives who were taken from Samaria to Jericho (2 Ch. 28:15), Balaam (Nu. 22:21ff.), the people of Deborah's song (Jgs. 5:10), the Shunammite woman (2 K. 4:22ff.), and the humble king of Zechariah's prophecy (Zec. 9:9). It appears that the donkey was used as a riding animal most often by women and children, or by men who were old (as was the prophet of Bethel) or infirm (as was Mephibosheth). Jesus' selection of a donkey, rather than a chariot, horse, or mule, to make His triumphal entry into Jerusalem was clearly a statement

of His humility and the nonmilitary nature of His kingdom.

C. Muleback. The use of the MULE for traveling is not attested in the Bible before the time of David, probably because of the scarcity of horses in the region. Even during David's time the examples are few. David's sons fled on mules from the scene of Amnon's assassination at Baal-hazor (2 S. 13:29), and Absalom was riding a mule when his hair was caught in the branches of a tree (2 S. 18:9). Young Solomon went to be crowned king on his father's own mule (1 K. 1:33, 38, 44), and lastly, some of the returnees from the Exile would return on mules (Isa. 66:20). From the scarcity of allusions to mule-riding in the Bible it seems that this mode of travel was used primarily by royalty, at least during the OT period. By the Roman period travel by mule became much more common.

D. Horseback. Travel by horseback also seems to have been rare in Israel during the biblical period. Nearly all the references to riding horses in the Bible are in military settings. The practice is not mentioned before the period of the divided kingdom. References to mounted soldiers and riding horseback in military contexts include: 1 K. 20:20; 2 K. 7:13ff.; Isa. 30:16; Jer. 6:23; 50:42; 51:21; Ezk. 23:6, 12, 23; 38:15; Hos. 14:3; Am. 2:15; Hab. 3:8; Hag. 2:22; Zec. 1:8; 10:5. The only possible allusions to horseback riding in times of peace are: Job 39:18 (a horse ridden in hunting), Est. 6:8-11 (a man honored by being placed on the king's own horse to ride through the open square of the city), Est. 8:10 (Persian couriers carry letters by horseback throughout the land), 2 K. 9:18f. (one mounted horseman, then a second, sent from Jezreel to meet Jehu, who is returning from the battle front), and possibly Eccl. 10:7 ("I have seen slaves on horses, and princes walking on foot like slaves").

Thus it appears that horseback riding did not become common in Israel until the 10th cent. B.C., and even then was used mainly for military purposes. This corresponds to the pattern in the rest of the ancient Near East. Horses (and mules) are known from *ca.* 2300 B.C., but were not used as riding animals until shortly before the beginning of the 1st millennium B.C. (when pictures of mounted warriors begin to appear). The earliest evidence of Assyrian cavalry units dates from the reign of Ashurnasirpal II (883-859 B.C.). From that time on not only cavalry but horseback riding in nonmilitary situations gradually increased. Messengers rode more and more. Sennacherib claims that he himself rode horseback during his campaign whenever the terrain was too difficult for his chariot (Luckenbill, I:69f.). During the time of Esarhaddon some royal officials were riding about on horses with trappings (see R. F. Harper, ed., *Assyrian and Babylonian Letters* [1892], 32:9-17). The SADDLE appeared *ca.* 700 B.C., but the stirrup was not introduced until the Middle Ages. Horseback riding also became popular in hunting. During the Roman period higher government officials often traveled by horseback. *See also* HORSE; BIT.

E. Camelback. Travel by CAMEL in Israel during the biblical period is only scantily attested. In the patriarchal narratives the practice is occasionally mentioned (e.g., Gen. 24:10, 64). During the Iron Age camel-riding is not attested in Israel, except in the cases of nomadic invaders from the east and south (Jgs. 6:5; 7:12; 1 S. 30:17), and once of the returning Jewish exiles (Isa. 66:10). The Israelites of the period apparently did not travel on camels, nor did their armies seem to use camels for riding. The same was true in Mesopotamia and Egypt. Camel-riding in Palestine during the NT period seems to have been equally rare. The camel was more adapted to desert travel than to the rocky terrain of Canaan.

F. Palanquin. Palanquins may have been used occasionally as a means of travel in Israel, since their use is attested elsewhere in the ancient world. The profession of "chair-bearer" (Sum. gu-za-la) is attested as early as the Sumerian period, as is the sedan chair itself, Sum. ^{giš} gu-za sìr-da. During the Assyrian period the royalty on occasion traveled in litters, especially when ill (palanquins provided a smoother ride than other available forms of conveyance). In one campaign Sennacherib rode in a sedan chair in rugged terrain where he could not use his chariot (Luckenbill, IV:4f., 7; see also IV:19). Palanquins were also used by nobles during the period of the Assyrian empire (*Assyrian and Babylonian Letters,* 1285:rev. 18-20). In Egypt palanquins are known to have been used by both nobles and kings (see *ANET,* p. 469; etc.). Thutmose III claims to have taken six palanquins (*kniw*) as part of the booty at Megiddo (Luckenbill, I:101).

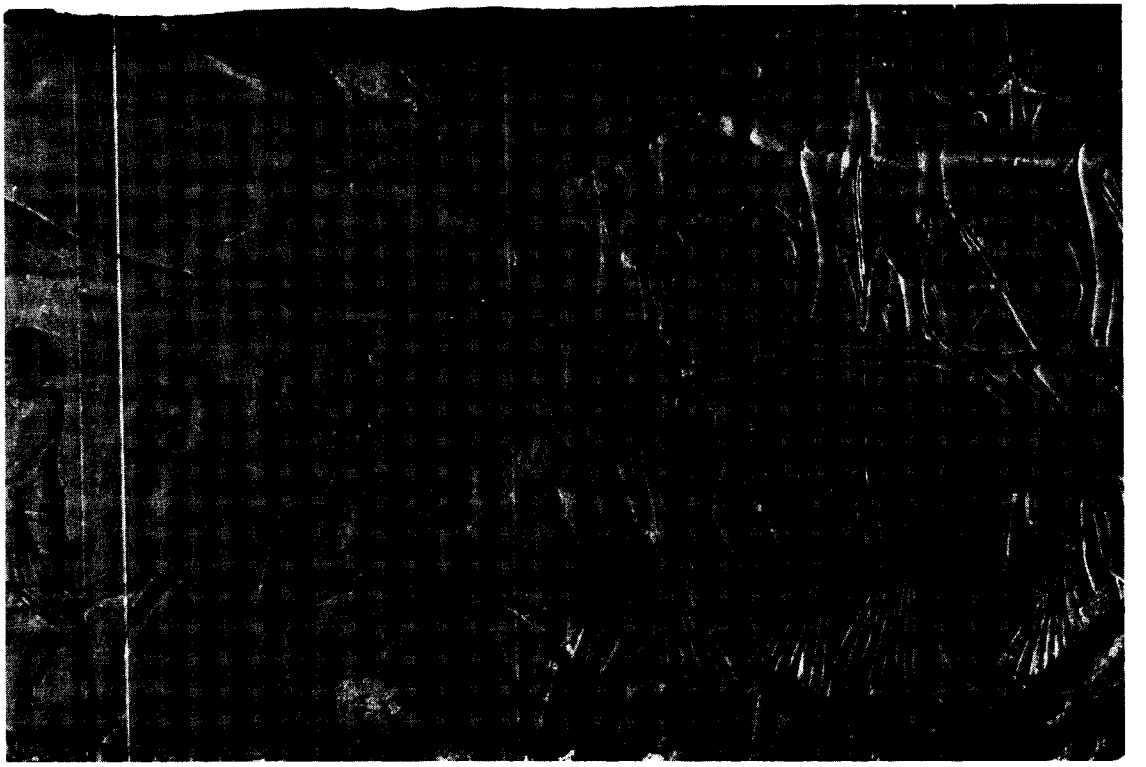
The only biblical mention of a palanquin is in Cant. 3:7-10 (called *miṭṭâ* in v. 7 and *'appiryôn* in v. 9), where the bridal PALANQUIN that Solomon made is described. Apparently the litter was rare in ancient Israel. During the NT period the sedan chair became more common, particularly among the well-to-do.

G. Chariot, Carriage. In addition to travel on foot or on animals, three types of wheeled vehicles also existed in ancient times: the four-wheeled wagon, the two-wheeled CART, and the light CHARIOT. Of these, the first two served primarily to transport goods. The chariot, however, was used mainly as a means of travel.

The light, horse-drawn chariot appeared early in the 2nd millennium B.C., having developed from the heavier riding carts of the 3rd millennium. With its two spoked wheels and light body, pulled by two horses, the chariot had far greater mobility than its predecessors. It became an invaluable vehicle for the armies of the ancient Near East, and remained so for over a millennium. Chariots fill the scenes of warfare in Mesopotamia, Syria, Anatolia, and Egypt. They figure prominently in the royal annals, royal correspondence, and lists of tribute and booty. Kings, whether Egyptian, Assyrian, Hittite, Mitannian, or other, rode out to battle or set out on campaigns in their royal chariots, accompanied by armies containing all-important chariot units. *See* pictures in CHARIOT; HORSE.

Chariots were also used for hunting and for private travel in times of peace, particularly by the wealthy. In the well-known Dialogue of Pessimism, for example, the master commands his slave to fetch his chariot and hitch it up so that he can drive to the palace, then changes his mind and tells his slave to prepare his chariot so that he can ride to the open country (see W. Lambert, *Babylonian Wisdom Literature* [1960], p. 144). In the Mari correspondence a certain Ila-Salim writes to request a new chariot from his lord Yasmaḫ-Adad, since his old one has broken down from his constant traveling back and forth from the flatlands to the mountains (*ARM,* V, 66:15f.).

What was true of the rest of the ancient Near East was also true of the land of Canaan. Although Sinuhe encountered no chariots when he traveled through Retenu in the early 2nd millennium B.C., by the Late Bronze Age the land appears to have been filled with them, both Egyptian and Canaanite. In the Letter of the Satirical Scribe (*ANET,* pp. 475-79) Hori takes Amenemope on an imaginary journey by chariot through Syria and Palestine, passing such places as Beirut, Sidon, Tyre, Acco, Hazor, Rehob, Beth-shean, Megiddo and its pass, Joppa, and Gaza. In the Amarna Letters, chariots are mentioned some sixty times. Shalmaneser III (858-824 B.C.) claims to have faced a coalition in the Levant that included 2000 chariots from Ahab the Israelite (some think the figure



A relief from the Abu Simbel temple (1290-1223 B.C.) depicting a boy riding bareback on a horse and, in the upper right corner, chariots and drivers on uneven terrain (Museo Civico Archeologico, Bologna)

is too high) and 1200 chariots from Damascus (*ANET*, pp. 278f.). Throughout subsequent Assyrian, Greek, and Roman records chariots often occur in the travels and movements of armies in Syria and Palestine.

In the light of this extrabiblical evidence it is not surprising that chariots find frequent mention (some 160 times) in the Bible, often for military uses. During the united kingdom, individuals traveled about in chariots even during times of peace. Absalom had his own chariot and horses, with fifty men to run before him (2 S. 15:1), as did Adonijah, David's eldest son (2 K. 1:5; cf. 1 S. 8:11). Such was the surplus in the kingdom that Solomon's traders began selling the chariots imported from Egypt to the kings of Syria and the Hittites (1 K. 10:28f.).

Travel by chariot continued throughout the rest of biblical history. Rehoboam had his chariot with him at the inaugural ceremonies at Shechem, for he fled back to Jerusalem in it (1 K. 12:18). The Syrian army under Benhadad that besieged the city of Samaria brought with it a chariot force of unspecified size (1 K. 20:1). Later, Israel and Judah fought Syria at Ramoth-gilead, and Jehoshaphat was pursued by the captains of the chariots, while Ahab was shot in his own chariot (1 K. 22:29-35). Naaman, commander of the Syrian army, came by chariot from Syria to Samaria in search of Elisha, then from Samaria to Gilgal, and finally home (2 K. 5:9ff.). Jehu traveled by chariot from the battlefront at Ramoth-gilead to Jezreel, and as he approached Jezreel, Joram and Ahaziah rode out to meet him in their own chariots (2 K. 9:16ff.). Ahaziah fled in his chariot toward Jerusalem, but was wounded near Ibleam. Isaiah, describing Judah's wealth and prosperity during his day, states that "their land is filled with horses, and there is no end to their chariots" (Isa. 2:7). Shebna, one of Hezekiah's officials, appears to have owned more than one personal chariot (Isa. 22:18).

Travel by chariot is also well-attested for the NT period, although the NT mentions only one instance — that of the Ethiopian eunuch, who was traveling back to Ethiopia from Jerusalem by chariot when Philip met him (Acts 8:28ff.; cf. also the references to chariots in Rev. 9:9 and 18:13). More common was travel by the carriage, a vehicle used throughout the Roman world, particularly by wealthier citizens. One type, the *verreda*, originally used only by women, was drawn by four mules and could transport two or three persons. A two-wheeled *birota*, on the other hand, had three mules and carried one or two passengers.

III. Means of Transporting Goods.—Goods and materials of considerable size and weight often needed to be transported by farmers, taxpayers, merchants, caravans, government officials, and the like. The means of transportation employed in ancient Israel were varied and relatively efficient.

A. Donkey. By far the most common means of transport was the donkey, which since the earliest periods of Near Eastern history had served in this capacity. The superiority of the donkey in transportation was its ability to travel easily along steep and stony mountain paths, which could not be used by wheeled vehicles and were uncomfortable or dangerous for camels. Donkeys are known in Mesopotamia as early as 3000 B.C. During the Old Assyrian period merchandise was normally transported by donkeys; only in Anatolia, and mainly for transport of larger quantities of copper, were wheeled vehicles em-

ployed. In Old Babylonia, transporting by donkey is well attested, both in Babylonian and Mari archives. Caravans of donkeys are frequently mentioned in these texts.

The same continued to be true throughout ancient Near Eastern history. The Bible contains numerous allusions to transportation by donkey. Abraham, for example, carried the firewood for the sacrifice of Isaac on a donkey (Gen. 22:3, 5). In the Joseph narratives the sons of Jacob transport goods and food between Egypt and Canaan by donkey (42:26f.; 44:3, 13; 45:23), and a special provision appears in the Book of the Covenant dealing with a donkey that has fallen under its load (Ex. 23:5). The Gibeonites brought loaded donkeys with them to Gilgal (Josh. 9:4), as did Abigail when she went to meet David (1 S. 25:18). Jesse sent supplies down to the Israelite camp in the valley of Elah by donkeyback (1 S. 16:20), and Nehemiah saw Judeans transporting grain by donkeys on the Sabbath (Neh. 13:15). Similar examples abound. *See* picture in BELLOWS.

B. Mule, Camel, and Ox. Other beasts of burden include the mule, the camel, and the ox. The Israelites, for example, brought gifts to David "on donkeys, and on camels, and on mules, and on oxen" (1 Ch. 12:40). Horses, on the other hand, are never mentioned as pack animals, and mules and oxen only occasionally (1 Ch. 12:40; 2 K. 5:17).

Use of the camel for transportation in Israel during the biblical period was limited. The camel, or more accurately the dromedary (the one-humped *Camelus dromedarius,* or Arabian camel), was apparently domesticated in Arabia in very early times, but not until the very end of the 2nd millennium B.C. did it come into general use in the populated lands of the Near East. The advantage of this animal lay in its ability to carry much greater loads than the donkey, having perhaps five times the capacity of the latter, and to travel for extended periods of time without water, a characteristic that made it especially valuable in desert transportation. The disadvantage of the camel was that its physical make-up, especially its wide, tender hooves, prevented it from being useful in hilly regions and on rugged or rocky mountain paths.

Apart from references in the patriarchal narratives, the dromedary (Heb. *gāmāl*) is mentioned only occasionally in the Bible in connection with transportation. The queen of Sheba, for example, came to Jerusalem accompanied by, among other things, "camels bearing spices" (1 K. 10:2). According to 2 K. 8:9 Ben-hadad, king of Syria, sent "forty camel loads" of goods to Elisha, who was in Damascus at the time. David appointed an Ishmaelite named Obil to be in charge of the camels of the king (1 Ch. 27:30), and Isaiah later pronounced woe upon the Israelites, who carry "their treasures on the humps of camels to a people [Egypt] who cannot help them" (Isa. 30:6). Although there is one reference to Israelites transporting goods locally by camel (1 Ch. 12:40), most transportation appears to have used the donkey.

C. Wheeled Vehicles. In addition to pack animals, the Israelites used wagons and carts to transport goods. Wheeled vehicles apparently originated in Sumer during the Uruk period. The earliest type was a heavy, four-wheeled, ox-drawn wagon, from which developed the two-wheeled cart, a lighter vehicle that could be drawn by horses or mules. Covered wagons, with leather or linen covers, are represented in Sumerian models as early as 2500 B.C., as well as at Carchemish and Asshur. Wagons and carts appear to have been extensively used in the ancient Near East. In the Code of Hammurabi, for example, two laws (§§ 271f.; *ANET,* p. 177) deal with the rental of a wagon (with or without driver and oxen), and at Alalakh "twenty wagons" are mentioned in a Hurrian list of objects. Šamši-Adad sent instructions that the inhabitants of Qattunan transport some goods from Qattunan to Šubat-Enlil in wagons. In fact, the most common Akkadian term for wagon, *eriqqu,* occurs quite frequently in Old Assyrian, Old Babylonian, Middle Babylonian, Nuzi, and Late Babylonian (see *CAD,* Vol. E, 296f.). Moreover, the iconography of the times, particularly the period of Assyrian ascendancy, includes a number of representations of carts and wagons. For example, a relief from Nimrûd, depicting a city under attack, shows several two-wheeled, ox-drawn carts carrying away women and children prisoners (cf. *ANEP,* no. 367). A closed, four-wheeled, covered wagon is depicted on Ashurnasirpal's obelisk. For other Mesopotamian examples, see *ANEP,* nos. 169, 303f. Carts and wagons were used especially in the transportation of heavier loads, such as large quantities of copper, timber, and military supplies (cf. Annals of Sennacherib, I:25). For additional evidence of the widespread and varied use of carts and wagons in the ancient Near East, see the entries in *CAD, s.v.* "eriqqu," "magarru," and "ṣimbu."

In Palestine also such wheeled vehicles were used. The relief of Ramses III's battle with the sea-peoples, in which the Philistine warriors are accompanied by caravans of ox-drawn carts (each with solid wheels and drawn by four oxen), shows that these newcomers to Canaan brought with them the practice of using carts for transportation. In the biblical literature wheeled transportation is well evidenced. *See* CART. A two-wheeled cart also appears in Ashurbanipal's relief of the siege of Lachish, drawn by two oxen, carrying two women and two children sitting on top of some bundles. A man walks alongside the left ox, guiding it with a rod. The people are Judean captives departing from Lachish (with their belongings?). It seems likely, therefore, that the use of wheeled vehicles for transportation was fairly common in Israel.

During the Roman period the most common means of land transportation was the ox-drawn wagon, normally drawn by eight oxen or horses in the summer, ten in the winter. Heavy goods, army supplies, products from the imperial estates, lower officials, soldiers traveling great distances, and sick people were all transported by heavy *clabulariae,* which could carry as much as 1500 Roman pounds. Express goods, precious metals, etc., were carried by the swifter *cursus velox* which employed several types of carriages: (1) the *rheda,* a mule-drawn four-wheeled cart (using 8-10 mules) which bore a maximum load of 450 kg. (1000 lbs.); (2) the *carrus,* a four-wheeled cart carrying 270 kg. (600 lbs.); (3) the *verreda,* originally used only by women, which was drawn by four mules and carried two to three persons and up to 135 kg. (300 lbs.) of goods; and (4) the two-wheeled *birota,* with three mules, carrying a maximum of 90 kg. (200 lbs.) and one to two passengers. The *cursus velox* also had riding horses (*veredi*) and pack-horses (*parhippi*), which carried up to 45 kg. (100 lbs.) apiece.

IV. Average Traveling Speeds.—A typical day's journey by foot was about 30 km. (20 mi.), depending on the terrain, road conditions, etc. The claim of the Sumerian king Šulgi to have traveled from Nippur to Ur (160 km., 100 mi.) and back in a single day despite a fierce hailstorm on the return trip is obviously exaggerated. During the Persian period ordinary travelers averaged about 29 km. (18 mi.) a day on the Royal Road, and could cross the empire from Persepolis to the Aegean Sea in about three months. Josephus states that the journey from the southern edge of Galilee to Jerusalem, a distance of about 105 km.

Captives and Assyrian soldiers walking from Lachish with their goods. Ox-drawn wagons and camels with loads are also part of the procession (relief from Sennacherib's palace at Nineveh, 704-681 B.C.) (courtesy of the Trustees of the British Museum)

(65 mi.), was generally done in three days by foot, in two by horseback. The journey of Mary and Joseph from Nazareth to Bethlehem, therefore, probably took three days, if they took the shortest route through Samaria.

Travel by horse or mule was somewhat faster (and less tiring), averaging about three miles per hour in normal terrain. A person could travel 40-50 km. (25-30 mi.) in a day on horseback without too much difficulty, and the couriers of the ancient world covered far greater distances.

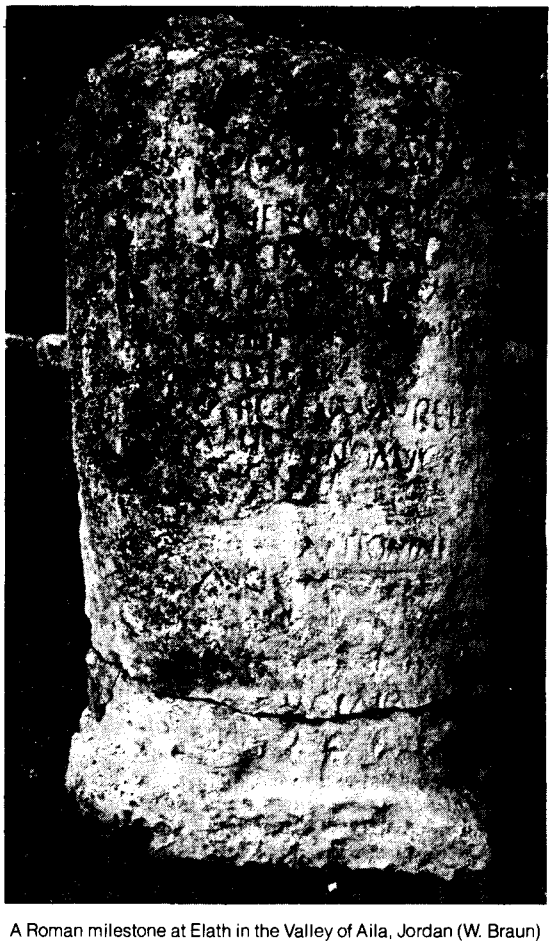
Camels could travel 40 km. (25 mi.) a day, even carrying loads of 225-450 kg. (500-1000 lbs.), and could continue three days without water. When necessary, distances of up to 100 km. (60 mi.) in a single day were possible.

By chariot or carriage 40-50 km. (25-30 mi.) were easily covered in a day, 64-72 km. (40-45 mi.) if one were in a hurry — although such distances would be tiring. In 51 B.C. Cicero traveled at a speed of about 39 km. (24 mi.) a day in his province. Later, carriage travel was made swifter by the paving of the Roman roads. From Toulouse to Carcassone (a distance of 100 km., 62 mi.) a carriage normally took two days, 47 km. (29 mi.) the first day and 53 km. (33 mi.) the second, as shown by the locations of the two main inns along the route.

Messengers and couriers traveled more quickly. Hammurabi, for example, expected an official at Larsa (200 km., 120 mi. away) to travel day and night and to arrive at Babylon within two days; i.e., 100 km. (60 mi.) a day. Imperial Persian messengers covered the Royal Road from Persepolis to Sardis (a distance of about 2510 km., 1560 mi.) in 9 days, averaging about 275 km. (170 mi.) a day. This efficient postal service was set up somewhat like the well-known Pony Express in early America, with regular posting stations about 24 km. (15 mi.) apart, with fresh horses and riders. Roman government couriers averaged 8 km. (5 mi.) per hour (by horse or carriage), 80 km. (50 mi.) per day. Special dispatch bearers sometimes could average 16 km. (10 mi.) per hour, but about 232 km. (144 mi.) is the longest day's journey by courier mentioned in an ancient text.

Armies generally moved at speeds of up to 22-24 km. (14-15 mi.) a day. Thutmose III, for example, crossed Sinai from Sile, Egypt, to Gaza, a distance of about 240 km. (150 mi.), in 9 or 10 days, i.e., about 24 km. (15 mi.) per day. From Gaza to Yaham, a distance of 120 km. (75 mi.), Thutmose averaged only 9-16 km. (6-7 mi.) per day — which suggests his army encountered some Canaanite resistance along this stretch. Alexander the Great's army, famous for its speed, could average 29-32 km. (18-20 mi.) a day, but on certain occasions even marched about 72 km. (45 mi.) in a single day.

V. Traveling Conditions.–Throughout the biblical period travel was generally not as difficult as some have suggested. Even as early as the Sumerian period (3rd millennium B.C.) the main highways had adequate supplies of inns and way stations. Šulgi king of Ur stated that he built along the highways "big houses, planted gardens alongside of them, established resting-places, settled there friendly folk, (so that) [the travelers] might refresh themselves in its cool (shade), the wayfarer who travels the highway at night, might find refuge there like in a well-built city" (*ANET*, p. 585). The Persian royal road had inns and way stations spaced at intervals of 16-24 km. (10-15 mi.), depending upon the terrain. Likewise there is evidence that inns and way stations existed in Israel during the OT period (cf. Josh. 4:3, 8; Isa. 10:29; Gen. 42:27; 43:21; Ex. 4:24; 2 K. 19:23). Some of the excavated



A Roman milestone at Elath in the Valley of Aila, Jordan (W. Braun)

sites along the wilderness roads of ancient Israel (such as Kuntillet ʿAjrūd) appear to have been government-established inns for travelers and merchants.

During the Roman period a fairly adequate network of inns and hostels existed throughout the empire. These serviced the traveler with food, a place to sleep, and care for his animals. There, too, carriages or animals could be rented. Along the Appian Way inns were available, for example, 19 km. (12 mi.) from Rome, at Bovillae, at Aricia, 6 km. (4 mi.) beyond Bovillae, and at Tres Tabernae, another 27 km. (17 mi.) along, where some Christians met Paul on his way to Rome (Acts 28:15). This last town, to judge by its name, had three inns. Normally, larger inns were established at intervals of 40-48 km. (25-30 mi.) in desert and unpopulated areas, much closer in densely settled areas. Usually there was an inn (*mansio*), followed by one or two more simple hostels (*mutationes*, then another larger inn, and so forth. Such an inn is alluded to in Jesus' parable of the Good Samaritan (Lk. 10:34f.).

There is little evidence that signs and markers to assist the traveler were in common use during the OT period, although markers are mentioned in Jer. 31:21 in connection with Israel's journey into captivity. Egypt and classical Greece sometimes used piles of stones ("shrines of Hermes" in Greece, which later were standing stones with a carved likeness of Hermes at the top) to mark their roads. During the NT period the Romans methodically marked the highways of the empire with inscribed milestones, many of which can still be seen along the roads today.

Another development that assisted travelers in the Roman period was the publication of travel handbooks and travel maps. The handbooks (*itineraria*) were lists of inns and way stations along a particular route, with distances between them. The maps were schematic, and indicated not only the stopping places but what each of these places had to offer. The Tabula Peutingeriana is evidently a medieval copy of one of these Roman period maps.

D. A. DORSEY

TRAVELER [Heb. *hālaḵ nᵉṭîbâ*–'go on the path' (Jgs. 5:6), *hēleḵ*–'one going,' 'traveler' (2 S. 12:4), *hᵃlîḵâ*–'traveling company' (Job 6:19), part. of *ʿāḇar*–'pass through' (Ezk. 39:11), *minnî-regel*–'by (or from) the foot' (Job 28:4)]; AV also COMPANY (Job 6:19), "of the foot" (28:4), PASSENGER (Ezk. 39:11); NEB also "men who had followed the high road" (Jgs. 5:6), HORDE (Ezk. 39:11), etc. In OT times travel was often difficult and during wartime it could be dangerous (cf. Jgs. 5:6). Traders and armies traveled in groups (cf. Job 6:19); individuals traveled alone only out of necessity. Because the traveler was frequently dependent upon the hospitality of others, hospitality to strangers was considered a sacred obligation in the ancient Near East (cf. 2 S. 12:4; *see* ENTERTAIN).

See TRAVEL.

N. J. O.

TRAVELERS, VALLEY OF THE [Heb. *gê hāʿōḇᵉrîm*]; AV VALLEY OF THE PASSENGERS; NEB VALLEY OF ABARIM. A valley located "east of the [Dead] Sea" that is to be given to Gog as a burial place (Ezk. 39:11). The designation of the valley, "of the Travelers," is appropriate to what is said about the place — that it will no longer be available for travelers to cross because of the great amount of space needed to bury Gog's soldiers. This designation may also have been the name of some Transjordanian valley often crossed by travelers. Because of its use as the cemetery of Gog's army it will come to be called "the valley of Gog's multitude" (vv. 11, 15; Heb. *gê' hᵃmôn gôg*; RSV "the Valley of Hamon-gog").

The NIV combines the designation of the valley with the statement regarding its location to produce: "the valley of those who travel east toward the Sea," in this way attempting to deal with the description of the valley as "a burial place *in Israel*." According to Ezk. 47:18 the Dead Sea will form part of the eastern boundary of ideal Israel. But "in Israel" may not be a difficulty for a Transjordanian location if it be thought of as a statement regarding who

will control the valley (cf. 39:12) rather than a description of the valley's location.

It has been suggested that the vowels of Heb. *ʿōbᵉrîm*, "travelers," be emended to produce *ʿăbārîm*, "Abarim." The highlands of Moab to the east of the Dead Sea were called "the mountain(s) of Abarim" (e.g., Nu. 27:12; 33:47). "The valley of [the] Abarim" (so NEB, JB), if this is what Ezekiel referred to, may have been the valley of the Arnon River (so JB mg.) or the lowland area to the east and northeast of the Dead Sea. J. W. SIMPSON, JR.

TREAD. *See* AGRICULTURE III.A.3; OIL II; WINE PRESS.

TREASON. An attempt to overthrow the ruler to whom one owes allegiance. The RSV uses this term in four passages. In 1 S. 24:11 (MT 12) (Heb. *peša*ʿ, lit. "rebellion"; AV "transgression") David assures King Saul that he has plotted no "treachery" (so NEB) against the king. In 2 K. 11:14 par. 2 Ch. 23:13 "Treason! Treason!" (Heb. *qešer*, lit. "conspiracy") is Queen Athaliah's cry when she sees that her grandson Joash has been crowned king. In Ezk. 17:20 God warns the Israelites that He will severely punish them for "treason . . . committed against [Him]" (Heb. *māʿal*, "act undutifully," "be unfaithful"; for textual problems see *BHS*; cf. AV, NEB). N. J. O.

TREASURE. Wealth that is stored up or hidden.

I. In the OT.–In the RSV OT "treasure" most often represents Heb. *ʾôṣār*. Although it may occasionally refer to a treasure house (2 K. 20:13) or TREASURY (1 Ch. 29:8), in the majority of its many occurrences it simply means "treasure." The other OT words translated "treasure" include Heb. *maṭmôn* (hidden treasure, Gen. 43:23; Job 3:21; Prov. 2:4); *sᵉgullâ* (private property, 1 Ch. 29:3; Eccl. 2:8), *ʿāṯûḏ* (something made ready and thus valuable, Isa. 10:13), *ḥosen* (something stored, Prov. 15:6; Ezk. 22:25), *maḥmāḏ* (something desirable, Lam. 1:11; Joel 3:5), pass. part. of *śāpan* (something concealed, Dt. 33:19), etc.

The RSV OT use of "treasure" is overwhelmingly literal. Some forty occurrences are literal, referring to money (Gen. 43:23), to wealth stored up by nations (Babylon, Jer. 51:13; Assyria and lands it had conquered, Isa. 10:13; many nations, Hag. 2:7; Judah, Jer. 20:5), to natural wealth coming from pursuits such as fishing (Dt. 33:19), to ill-gotten wealth ("treasures of wickedness," Mic. 6:10), to the wealth of kings (1 K. 14:26; 15:18; 2 K. 16:8), to wealth in which people trust rather than in God (Jer. 48:7; 49:4), to hidden wealth ("treasures of darkness," Isa. 45:3), etc.

"Treasure" is used figuratively only twice in the RSV OT. In Job 20:26 "treasure" (Heb. *ṣapûn*) is used in a negative sense, depicting judgment stored up for the wicked. But in Isa. 33:6 the fear of the Lord is said to be a valuable treasure for the people of God.

II. In the NT.–In the RSV NT "treasure" appears twenty-one times, translating Gk. *thēsaurós* (sixteen times), *thēsaurízō*, "store up, gather" ("lay up treasure," Lk. 12:21; Jas. 5:3), and *gáza*, "treasury" (Acts 8:27).

Eight of the RSV NT uses of "treasure" are literal, referring to such things as personal wealth (Mt. 6:19), the wealth of Egypt abandoned by Moses (He. 11:26), a hidden treasure, perhaps of gold or silver (Mt. 13:44), the official funds of the Ethiopian queen (Acts 8:27), and gold and silver and perhaps costly garments (Jas. 5:2f.; such garments were an important form of wealth).

The concept of "treasure" is a natural metaphor for spiritual or moral values, and the RSV NT uses the word in this way eleven times. Jesus advised His disciples to lay up "treasures in heaven" (Mt. 6:20; cf. Lk. 12:33) — a metaphor for eternal values that cannot be destroyed as earthly riches can (cf. Mt. 6:19). He urged the rich young ruler to follow Him and thus gain "treasure in heaven," i.e., the eternal life he was seeking (Mt. 19:21 par.). A person's speech flows from what is stored up in the heart, whether good or bad (Mt. 12:35; Lk. 6:45). Paul characterizes the gospel as a treasure stored in the "earthen vessel" of the body, like gold or silver kept in a first-century clay pot (2 Cor. 4:7). In Christ are all the hidden treasures of spiritual understanding (Col. 2:3). D. W. BURDICK

TREASURER. A word that occurs five times in the RSV OT, referring to an official (Dnl. 3:2f.) whose responsibility it was to handle the moneys, articles, or commodities committed to his care (cf. Ezr. 1:8; 7:21) and to disburse such items to the proper persons (Neh. 13:13). Ezr. 1:8 (Heb. *gizbār*) refers to the treasurer of Cyrus king of Persia, while 7:21 (*gizbār*) refers to local treasurers in the western parts of the empire. Dnl. 3:2f. (Aram. *gᵉḏāḇār*) indicates that there were numerous treasurers in Nebuchadnezzar's governmental organization. Neh. 3:13 (Heb. *ʾāṣar*) mentions several treasurers appointed by Nehemiah.

"Treasurer" appears only once in the RSV NT (Rom. 16:23; AV "chamberlain"), where it translates Gk. *oikonómos*. This term has the general meaning of "steward," but in Rom. 16:23 it may refer to the treasurer of the city of Corinth (Bauer, rev., p. 560), who at his own expense laid a pavement just below the Corinthian theater. D. W. BURDICK

TREASURES OF ALL NATIONS. This phrase in Hag. 2:7 is translated either "desire of all nations" (AV) and given a messianic interpretation (Vulg. and Luther), or "wealth of all nations" (NASB), "treasure(s) of all nations" (RSV, NEB, JB) and understood as God's provision of gold or precious vessels (cf. 2:8) for the temple built by Zerubbabel.

The Hebrew word *ḥemdâ*, "desire, treasure," comes from the root *ḥmd*, "desire, take pleasure in," and is parallel to *taʾᵃwâ*, "appetite, desire," in Gen. 3:6 (cf. *ḥmd* in Ex. 20:17; Dt. 5:21; Prov. 6:25). The word *ḥmd* can describe both evil desires (Josh. 7:21; Prov. 1:22; Isa. 1:29; Mic. 2:2) and good desires (Ps. 19:10 [MT 11]; Dnl. 9:23; 10:11). The participle as well as the masculine and feminine nouns from this root frequently refer to precious or desirable things, but in some cases these forms describe desirable people (Ezk. 23:6, 12, 23; Dnl. 9:23; 10:11, 19). This evidence suggests that either translation (messianic or nonmessianic) is within the realm of semantic possibilities.

The syntactical function of this phrase is complicated by the plural verb "they will come" and the singular "treasure/desire of all nations." The singular "desire" suggests to some a messianic interpretation (see Vulg.), but this does not explain the plural verb. As Smith (p. 156) points out, the LXX reverses the problem by having the subject plural (*tá eklektá*) and the verb singular (*hḗxei*). One could follow the LXX and conjecture a plural Hebrew noun (sing. in Syr., Vulg., and Tg.; cf. *BHS*), or understand the singular noun to be a collective (so Verhoef, pp. 92 n. 12, 103) or translate this phrase as the object rather than the subject of the sentence (NASB "they will come with the wealth of all nations").

The context of this passage seems to be the safest guide to its interpretation. Those who first returned from exile were frustrated in their efforts to build a new temple in Jerusalem until the second year of Darius, *ca.* 520 B.C. (Ezr. 1:1–5:2; Hag. 1:1-15). Once the process of rebuild-

ing began, discouragement set in because the new structure was inferior (Hag. 2:3) when compared to the size and grandeur of Solomon's ornate temple complex (1 K. 6; 1 Ch. 2–4). Haggai encouraged the people with promises of God's presence among them (Hag. 2:4f.) and His sovereign might over all the nations when He appears in theophanic power (2:6). These promises were designed to create hope and to motivate, but the problem of a small and unimpressive temple remained unsolved. If the "treasures of all nations' is related to God's claim in 2:8 that "the silver is mine and the gold is mine" (see KD; Petersen, pp. 67-69), then God's promise is a solution to the problem raised in the people's complaint (cf. Isa. 60:5, 11). God's promises were fulfilled when Darius gave liberally from his royal revenues from the province beyond the river (Ezr. 6:1-12).

TREASURY. Either a place where valuables are kept (e.g., 1 Ch. 28:11f.) or a collection made up of valuable items (e.g., Ezr. 2:69).

I. Terms.–The usual OT term rendered by "treasury" is Heb. *'ôṣār* (*see* TREASURE). Other terms include Heb. *yôṣēr* (Zec. 11:13; AV "potter"), *ganzaḳ* (1 Ch. 28:11), *genez* (Est. 3:9; 4:7); Aram. *gᵉnaz* (Ezr. 7:20), *bayiṯ* (Ezr. 6:4; AV, lit., "house"). In the RSV NT "treasury" is used to translate Gk. *gazophylakeíon* (Mk. 12:41, 43; Lk. 21:1; Jn. 8:20) and *korbanás* (Mt. 27:6).

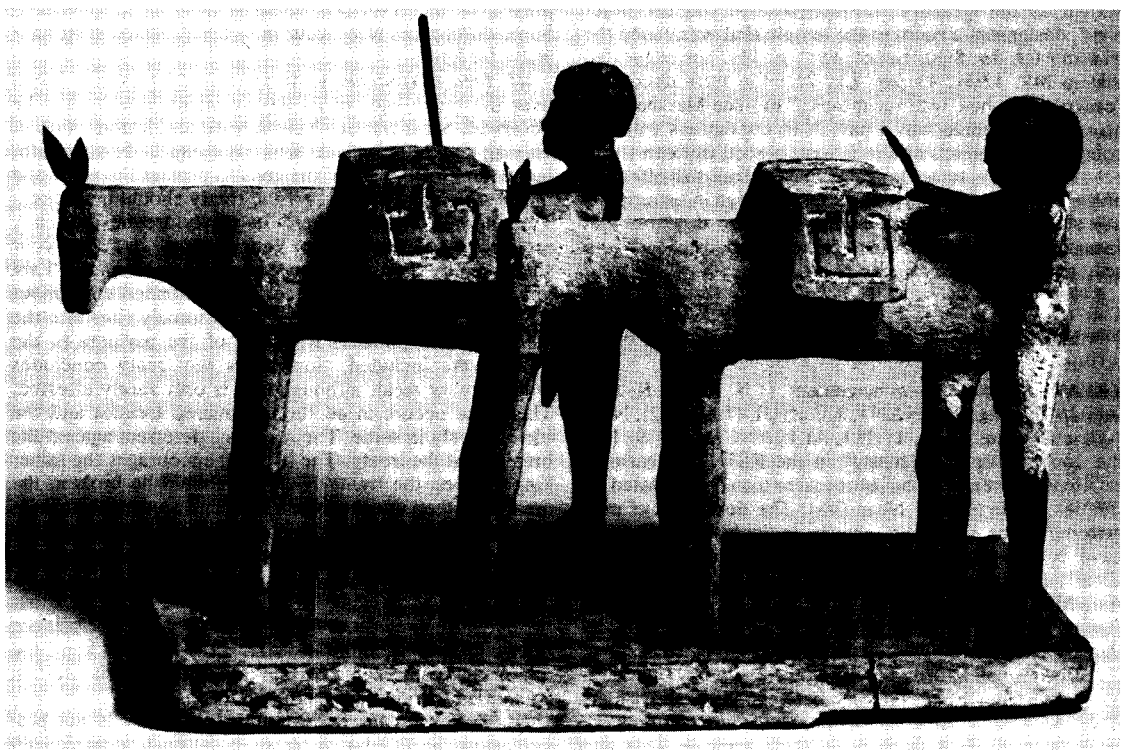
II. Usage.–There are at least ten specific senses in which the word is used literally. (1) The "treasury of the Lord" — probably the same as the "treasuries of the house of God" (1 Ch. 28:12), which were located in the courts of the temple; (see III below); (2) the treasuries of the vestibule (v. 11) — probably storage rooms for materials for temple worship; (3) the treasuries of dedicated gifts (26:20, 26; 28:12), where spoils of battle were stored (26:26f.); (4) the combined temple treasuries, including those of the house of God and those of dedicated gifts (1 Ch. 26:24; 2 Ch. 8:15), all of which were at one time supervised by Shebuel, a descendant of Moses; (5) the royal treasury (2 K. 12:18; 14:14; 18:15; 1 Ch. 27:25; 2 Ch. 25:24; 32:27; Ezr. 6:4; 7:20), which contained the riches of the kings; (6) the treasury of the work (Ezr. 2:69; Neh. 7:70f., i.e., special funds for specific projects such as rebuilding the temple or the city walls; (7) local treasuries in small towns (1 Ch. 27:25), from which gifts to the temple worship could be made; (8) the private treasuries of individuals (Prov. 8:21); (9) royal treasuries of gentile nations (of King Ahasuerus, Est. 3:9; 4:7; of the king of Tyre, Ezk. 28:4); (10) the treasury of a pagan temple (Dnl. 1:2).

In two OT passages the RSV uses "treasury" figuratively. Dt. 28:12 refers to the heavens as God's "treasury" from which He pours out crop-producing rain. The opposite side of God's nature is seen in 32:34, which depicts His treasuries as filled with vengeance waiting to be poured out on the wicked.

In the NT "treasury" always refers to the temple treasury during the time of Herod's temple (see III.D below).

III. Temple Treasury.–A. Tabernacle. The earliest reference to "the treasury of the house of the Lord" is found in Josh. 6:19, 24 in connection with the destruction of Jericho. All of the confiscated "silver and gold, and the

An Egyptian tomb model of two donkeys bearing saddlebags inscribed "Royal Treasury" (20th-18th cents. B.C.) (courtesy, Royal Ontario Museum)



vessels of bronze and of iron," were placed in "the treasury of the house of the Lord" (v. 24). In the days of David several men were in charge of the treasuries of the Lord's house (1 Ch. 26:20-26), indicating that the tabernacle had more than one treasury by this time (see II above).

B. Solomon's Temple. Toward the end of his reign David gave his son Solomon plans for the temple that was to be built (1 Ch. 28:11f.). Included in those plans were facilities designated as "treasuries," which were to be located in the vestibule (v. 11) and in the courts of the house of the Lord (v. 12). One of David's last acts as king was to invite the people to contribute gold and silver to the treasury of the Lord's house for use in the construction of the temple (29:1-9; esp. v. 8). Upon completing the temple, Solomon placed all the dedicated silver and gold and vessels in the treasuries of the Lord's house (1 K. 7:51; 2 Ch. 5:1).

After the glory of the temple dedication, the subsequent history of the treasuries of the Lord's house seems to have been quite dismal. When King Hazael of Syria threatened Jerusalem with conquest, King Jehoash of Judah depleted the treasuries of the Lord in order to buy him off (2 K. 12:17f.). Such depletion occurred on at least six other occasions (1 K. 14:25f.; 15:18; 2 K. 14:14; 16:8; 18:15; 24:12f.).

C. Second Temple. Scripture records little concerning the treasuries of the second temple. Several passages refer, however, to the "chambers" or "storehouse" (Neh. 10:37-39 [MT 38-40]; Heb. *bêṯ hā'ôṣār*) where commodities for the support of temple activities were stored (cf. 12:25 [*'āsōp*], 44 [*'ôṣār*; RSV "store"]; 13:4f.). Nehemiah appointed treasurers over these "storehouses" (*'ôṣārôṯ*, 13:13).

D. Herod's Temple. The NT uses two Greek words to designate the treasury of Herod's temple (see I above). Gk. *korbanás* (Mt. 27:6) seems to refer to moneys used to support the temple program rather than to a specific place known as the treasury. *Gazophylakeíon*, on the other hand, designates a room in the temple that was called the treasury (cf. Jn. 8:20; Bauer, rev., p. 149, has suggested that in Mk. 12:41, 43 par. Lk. 21:1 the term denotes a "contribution box" or "receptacle," but see Marshall and Morris). This room was a part of or contiguous with the court of the women, and in it were placed thirteen trumpet-shaped receptacles for receiving the free-will offerings of the people; each receptacle carried a sign indicating the use of the money placed therein. It was in this area that Jesus observed and commented upon the poor widow who only gave two small copper coins.

Bibliography.–Bauer, rev., p. 149; I. H. Marshall, *Gospel of Luke* (*NIGTC*, 1978), p. 751; L. Morris, *Gospel According to John* (*NICNT*, 1971), p. 444. D. W. BURDICK

TREATY [Heb. *bᵉrîṯ*–'arrangement' (1 S. 11:1; 1 K. 5:12 [MT 26])]; AV COVENANT, LEAGUE (1 K. 5:12); NEB "come to terms" (1 S. 11:1f.), ALLIANCE. In 1 S. 11:2 the context supplies "treaty" in the RSV. International relations between two countries were usually regulated by treaties in the ancient Near East. The discovery of new material since the 1950s clearly indicates that treaties have been contracted from the 3rd-1st millennia B.C. Clearly the influence of treaty situations was pervasive in Asia Minor, northern Syria, Mesopotamia, Palestine and Egypt, and a knowledge of the treaty situation will certainly enhance a better understanding of Israel's history.

I. Distribution of Material.–The oldest available material has come from Ebla. Treaties between Ebla and Emar, Ebla and Asshur, Ebla and Hama, and Ebla and Edu have been discovered. A diplomatic letter between Ebla and Ḫamazi in northern Iran, 1,000 km. (600 mi.) from Ebla, shows that a treaty existed between these two countries. All this material can be dated *ca.* 2500 B.C. Mesopotamian material indicates that treaties were formed from the 3rd-1st millennia B.C., e.g., from the Mari texts as J. M. Munn-Rankin has shown for the 2nd millennium, and a treaty between Aššur-nirari V of Assyria and Mati'ilu of Arpad in *ca.* 754 B.C. The greatest number of treaties have been discovered in the land of Hittites, all written between *ca.* 1400-1200 B.C. The texts of a few treaties between the Hittite king and the king of Ugarit have been unearthed at Ugarit. We have traces of treaties in Syria from the 2nd millennium (between Yarim-lim of Aleppo and Abba-AN of Yamḫad) as well as the 1st millennium (between Barga'ayah of KTK and Mati'el-Mati'-ilu of Arpad; see Fitzmyer). The Armarna letters' terminology shows that the international treaty was well known in Palestine and vicinity. The OT makes it clear that the treaty between Aššur-nirari V of Assyria and Mati'-ilu of (see below). This same custom was also known to the Egyptians as seen in the treaty between Ramses II and Hattusilis III, as well as the material published by D. Lorton. It was thus a widespread and most persistent international institution of biblical times.

II. Different Kinds of Treaties.–One can make a broad division between treaties, viz., parity and vassal treaties. A parity treaty is between two equals, and a vassal treaty is between a great king and a subordinate. But the phenomenon of treaty-forming was quite diversified, e.g., certain vassal treaties show a remarkable leniency from the great king to his subordinate king (e.g., in calling him "my son"). Some treaties are more politically motivated, others more economically motivated (e.g., the treaty between Ebla and Asshur and between Solomon and Hiram). Through the years the accent on certain aspects of treaties shifted, e.g., the more lenient approach of Hittite vassal treaties can be compared with the rigid approach of the Assyrian vassal treaties of Esarhaddon. Some differences also occur in treaties formed geographically far apart.

III. Treaty Terminology.–In spite of a diversity in forms over the many ages of its development, a unity can be observed. Most treaties have a historical introduction of varying length; provisions which are imposed under oath, invocation for the aid of the gods to protect the oath, and the enumeration of curses if the treaty should be broken. Terminology like "brother" in parity treaties (already present at Ebla) and "I am your servant" or "I am your son" used by the vassal and "I am your master" or "I am your father" used by the great king is applied throughout the history of this institution. Occasionally rites like the marriage of a princess with one of the partners in the treaty were included. Sometimes the treaty concludes with a treaty meal, although this is only rarely attested. The curse occurs in all the discovered treaties and the blessing only in some. The curse is a deterrent against the breaking of the treaty. The blessing encourages the minor king to keep the treaty. But if it should be broken, the great king then attacked the vassal and applied the curses of the treaty on him and his country. The breaking of a treaty was regarded as a major offense since it abrogated the oath made in the names of the gods, who by their presence as witnesses formed the treaty. In treaties that include both curses and blessings, one has a neat balance of two different conditions, viz., if the treaty is kept, the minor king will receive certain favors, but if it is broken, calamities will overtake him.

IV. Treaties in the OT.–A complete treaty is not preserved in the OT but a treaty situation is occasionally

described. Early traces of this situation occur in various OT traditions. In Ex. 18 the meeting between Moses and Jethro possibly refers to a treaty formed between Israel and the Midianites, probably the Kenite faction of the Midianites. Because the Kenites showed covenant solidarity (Heb. *ḥeseḏ*) to the Israelites during the Exodus, Saul endeavored to protect them (1 S. 15:6), an action which suggests such a treaty. According to the tradition in 1 Samuel the Kenites then left the ranks of the Amalekites.

The oldest definite reference to a treaty situation occurs in Josh. 9, which describes a vassal treaty formed between the Israelites and the Gibeonites. In accordance with the protection clause in such a treaty the Israelites attacked the five kings who harassed the Gibeonites (Josh. 10:1-27). In 2 S. 21:1f. the story is told of a famine in Israel as a result of the breaking of this treaty by Saul. David had to make amends to restore the balance.

The Israelites in the time of David, but especially in the time of Solomon, formed a parity treaty with the Phoenicians (1 K. 5:12). Economic reasons, especially funding for the building of the temple and palace, precipitated this action. This treaty continued in the times of Omri and Ahab, which may explain the marriage of Ahab to the Phoenician princess Jezebel. After his victory over Benhadad of the Arameans, Ahab formed a vassal treaty with Ben-hadad in which he received the right to trade in Damascus (1 K. 20:34), the same right granted to Ebla in the treaty between Ebla and Asshur about 1700 years before Ahab.

The books of Kings indicate that when the Assyrians moved into Syro-Palestine they made vassal treaties with the minor kings. Tiglath-pileser III made such a treaty with the northern kingdom of Israel and a little later with the kingdom of Judah. When Pekah of Israel and Rezin of Aram revolted against the Assyrians, Ahaz of Judah remained loyal (2 K. 16). Ahaz called in the Assyrian's aid by referring to his vassalship in very old treaty terminology: "I am your servant and your son" (16:7). In accordance with the protection clause of the vassal treaty, Tiglath-pileser was obliged to assist him. The same treaty relationship existed also in the time of the Babylonians when Nebuchadrezzar came to Judah to punish the Judeans for breaking the treaty after Zedekiah's rebellion (2 K. 25:1; 2 Ch. 36:13; cf. Ezk. 17:16).

TREE. *See* FLORA.

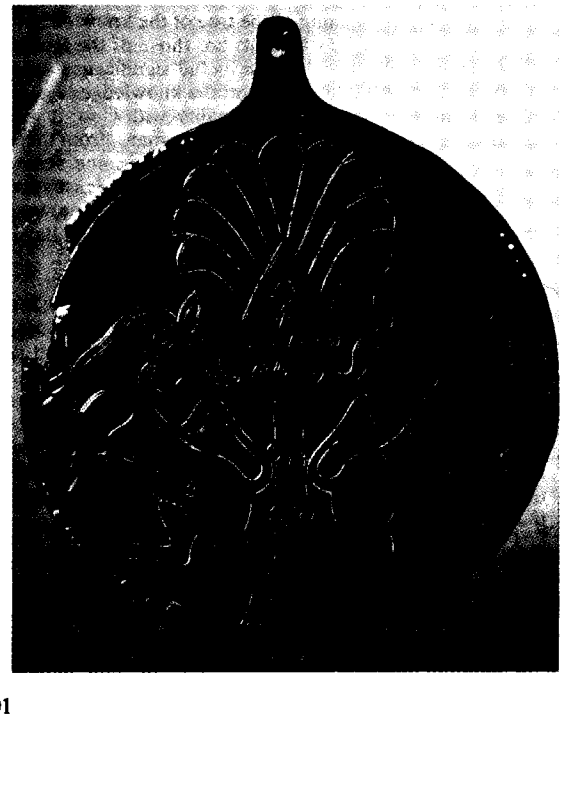
TREE OF KNOWLEDGE [Heb. *ʿēṣ haddaʿaṯ* (Gen. 2:9, 17)]; **TREE OF LIFE** [Heb. *ʿēṣ (ha)ḥayyîm* (Gen. 2:9; 3:22, 24; Prov. 3:18; 11:30; 13:12; 15:4); Gk. *xýlon tḗs zōḗs* (Rev. 2:7; 22:2, 14, 19)]; AV BOOK OF LIFE (Rev. 22:19); NEB STAFF OF LIFE (Prov. 3:18; 13:12; 15:4).

The two trees are theologically related, and both appear in Gen. 2 and 3. The tree of knowledge appears only in the account of the Garden of Eden (Gen. 2:9, 17); the tree of life appears not only in Genesis (2:9; 3:22, 24), but in Proverbs (3:18; 11:30; 13:12; 15:4), which uses it figuratively of the source of life and happiness (see D. Kidner, *Proverbs* [*Tyndale OT Comms.*, repr. 1978], p. 54). The tree of life appears again in Scripture only in Revelation (2:7; 22:2, 14, 19). The omission of the definite article before the word "life" in the Proverbs references may indicate that its use of the term is not a conscious reference to the Genesis account (cf. *CD*, III/1, 282f.).

A sacred tree motif in ancient Near Eastern art could be linked to the tree of life in the biblical account, but no literature in the ancient Near East clearly supports this identification (see *ANEP*, nos. 88, 667-69, 706, and notes, pp. 260, 329, 334). As for the tree of knowledge, the closest artistic symbol comes from an impression on a cylinder seal where a tree is flanked on one side by a seated god and on the other by a woman, behind whom is what appears to be a snake (*ANEP*, no. 858 and note, p. 381). But no extant literature identifies this seal's religious implications. Speiser (p. 26) points to the Gilgamesh Epic where Enkidu, after yielding to temptation by a courtesan, is described as now possessing "wisdom, broader understanding" and is told, "You are wise Enkidu, you are like a god." But again no tree of knowledge is mentioned in the account. Speiser (p. 27) and others see the tale of Adapa (*ANET*, pp. 101-103) as the major analogue for the tree of life, but no tree of life appears in the account.

One does not have to hold that the trees in the Garden of Eden were legendary to see them as symbolic, even sacramental in character. The tree of life symbolized Adam and Eve's continued relationship with God in maintaining obedience and, therefore, continued bliss. This view denies that inherent virtue resided in the fruit of this tree. Charles Hodge was not certain of the symbolic view

A Persian bronze plaque depicting a tree of life between two prancing bulls. Luristan, 6th cent. B.C. (Rosenthal Art Slides; M/M J. W. Alsdorf)



but he assured us that it is enough to know that in some way the tree secured "the enjoyment of eternal life" (*Systematic Theology* [repr. 1973], II, 125). The most significant thing about the tree of life theologically is that when our first parents broke their relationship with God through disobedience they were driven from the Garden "lest he put forth his hand and take also of the tree of life, and eat, and live for ever" (Gen. 3:22). In Rev. 2:7 the tree of life is found still in the midst of the paradise of God and those who overcome are able to eat of it.

Those who uphold a mere legendary view of the account of the Garden of Eden tend to feel that the Hebrews looked upon the tree of life as a source of magical elixir. Somehow the eating of this fruit would produce immunity from disease either by one dose or by continuous partaking. Those who hold this view tend to connect it with Rev. 22:2, where the tree's leaves were for the healing of the nations. But Rev. 22 is full of symbolic language. Rev. 22:14 says, "Blessed are those who wash their robes, that they may have the right to the tree of life and that they may enter the city by the gates." Consuming leaves and washing robes is certainly symbolic, although the prophecy predicts historical events. The Bible here pictures at the end of the world a reversal of the damage done in its beginning. Basically the use of the tree of life in Revelation supports the symbolic view of the tree of life in Genesis. As sacramental, the tree is analogous to the sacrificial system of the later OT. But Adam and Eve were on probation in the Garden and were not in the status of permanent spiritual children of God, i.e., regenerated. Partaking of the tree of life implies not only continued probation (negative obedience) but also a positive commitment analogous to what believers do in the Lord's Supper and what the OT saints did at the sacrifices (on this see J. O. Buswell, Jr., *Systematic Theology* [1962-63], I, 275f.). So Adam and Eve were excluded as sinners for the same reason that unbelievers are excluded from the Lord's Supper. Thus the tree of life stood in the paradise of God as the symbol of blissful eternal life in the presence of God. If the Garden of Eden is a type of heaven, then the tree of life is a type of Christ through whom eternal life may be gained.

The nature and meaning of the tree of the knowledge of good and evil are not as clear as are those of the tree of life. Opinions differ widely as to its full significance. Certain things are clear in the account: the knowledge of good and evil implied some kind of equality with God; it was forbidden to man; and it was secured by man. From these inferences it is necessary to hold that, in some sense, partaking of the tree imparted knowledge or at least symbolized the fact that those who partook of the tree were possessors of a knowledge they did not previously have. And this involved a change in relationship to God. According to the words of God, "Behold, the man has become like one of us, knowing good and evil" (Gen. 3:22). The serpent also assured the woman that the fruit would open her eyes (3:5), and the woman regarded the fruit as desirable (3:6). The result was that the eyes of the transgressors were opened. But this imparting of knowledge did not have to come from any inherent virtue in the tree itself. It could have been, as Hodge says, "from the appointment of God." Hodge's words are well put: "All that the text requires is that knowledge followed the eating of that fruit" (II, 126).

A number of interpretations suggest what the "good and evil" was. That it was magical knowledge should be ruled out since this was not godlike knowledge and certainly was not universal to humanity in the OT. In some places, Scripture uses the idiom "good and evil" as a way of expressing immaturity without a necessary reference to morality. Cf. Dt. 1:39, "your children . . . have no knowledge of good or evil," and Isa. 7:16, "before the child knows how to refuse the evil and choose the good." A similar use in He. 5:14 clearly implies morality, where mature believers "have their faculties trained by practice to distinguish good from evil." It is difficult to believe, however, that moving out of immaturity is all that the Genesis tree implies.

Another view with some merit is that the tree is dealing with physical good and evil, i.e., happiness and misery: the experiential knowledge of the difference between the bliss they enjoyed in their innocent state and the misery that would become real through disobedience.

The traditional view is that here the good and evil is moral good and evil. While on the surface this seems to be the simplest way to go, it might entail holding to the view that Adam did not originally have a moral nature and that his partaking of the tree simply awakened his moral nature. Why would God want to keep Adam from having a nature that would be able to distinguish between right and wrong? The terminology of Solomon's prayer for a heart to "discern between good and evil" supports the moral view (1 K. 3:9).

Others have tied the tree more closely to God's Word or God's law so that Adam, in partaking of this tree, aspired to know for himself what was good and evil in an attempt to be free of the authority of God. But the problem with this view is that it involves a false knowledge in contrast to true knowledge of God's law. In this sense Adam had less true knowledge after the Fall than he had before. Cf. *CD*, III/1, 284-88.

A modern philological view takes the expression "good and evil" as a merism, i.e., a figure of speech in which opposites express totality. Hence the knowledge is of all things relating to human culture, since Gen. 4 speaks about the expansion of human culture. This view was popular in the early 20th cent. although the merism "good and evil" was not immediately appreciated. This view has some merit but it tends to ignore the seriousness of the offense as sin against God that resulted in the curse on the man, the woman, and the serpent.

Another view maintains that the knowledge does not come through the cultural achievements but through nature. This view includes but is not limited to sexual knowledge. The point is that human beings moved from a primitive state of childlike ignorance and purity (cf. the "immaturity view" above) to knowledge involving total possession of their mental and physical powers. Those who hold this view like to refer to Christ's saying in Mt. 18:3, "unless you turn and become like children, you will never enter the kingdom of heaven."

In 2 S. 19:35 (MT 36) Barzillai's words, "Can I discern between good and evil?" (so AV), suggest that the idiom can refer to the capacity for physical pleasures. Following Ehrlich, Speiser thought that this text supports the view that the Genesis usage refers to the mystery of sex. He noted that Adam and Eve became ashamed of their nakedness only after partaking of the forbidden fruit (*Genesis*, p. 26). But again one must question why God would want to withhold from Adam and Eve full possession of their mental and physical powers.

Each of the above views has some valid features that may be included in the total meaning of this tree in the middle of the Garden. But if we follow the principle of the analogy of Scripture and the NT as divine commentary, then the Genesis text presents the origin of sin as it was understood by the Paul in Rom. 5:12: "Therefore as sin came into the world through one man and death through sin, and so death spread to all men because all men

sinned." The word "knowledge" in Hebrew, as in English, can have the connotation of experience and that should certainly be stressed in our understanding of the meaning of the tree of knowledge. But since sexual experience was commanded in Gen. 1:28, it is not that experience that constitutes the knowledge. Nor is it merely the increase of mankind's cultural sophistication, although both of these were affected.

The serpent's insinuation that man would extend his experience beyond the limits set by God at Creation is a key to proper interpretation of the account. When our first parents broke God's simple probation regarding the tree they became rebels. As sinners their perception and experience of all parts of life were affected: their intellectual and cultural life, their sexual life, etc. But most important, sin affected their spiritual life in fellowship with their Maker. G. Vos (*Biblical Theology* [repr. 1980], pp. 37-51) touched the heart of the issue when he pointed out that Adam and Eve were confronted with a choice for or against continued fellowship with God through this simple probation of choosing to be obedient or disobedient with regard to this tree. So the choice of good as well as evil is symbolized in man's relationship to the tree.

TREES, GOODLY. *See* GOODLY.

TREES, SHADY (Job 40:21f., AV). *See* LOTUS.

TREES, THICK. *See* LEAFY.

TRELLIS [Heb. *sᵉḇōḵ*–'thicket'] (Ps. 74:5); AV THICK TREES; NEB FOREST. The text of this verse is obscure. The *sᵉḇōḵ* was perhaps carved woodwork at the entrance to the temple (cf. 74:6), or a thicket or forest of trees.

TREMBLE; TREMBLING [Heb. *ḥāraḏ* (Gen. 27:33; 42:28; Ex. 19:16; etc.), *ḥᵃrāḏâ* (Isa. 21:4; Ezk. 26:16; Dnl. 10:7), *ḥārēḏ* (Jgs. 7:3; 1 S. 4:13; Ezr. 9:4; 10:3; Isa. 66:2, 5; Ezk. 26:16), qal and hiphil of *rāgaz*–'shake,' 'quake' (Dt. 2:25; 28:65; Ps. 77:16f. [MT 17f.]; 99:1; Prov. 30:21; Isa. 13:13; 14:16; 64:2 [MT 1]; Jer. 33:9; etc.), *rāgzâ*–'agitation' (Ezk. 12:18), *rāʿaš*–'quake' (Jgs. 5:4; Ps. 46:3 [MT 4]; Isa. 24:18; Jer. 49:21; 50:46; 51:29), qal and hiphil of *ḥîl*–'writhe' (1 Ch. 16:30; Job 26:5; Ps. 96:9; 97:4; 114:7; Jer. 5:22), qal and hiphil of *rāʿaḏ* (Ezr. 10:9; Ps. 104:32; Dnl. 10:11), *raʿaḏ* (Ex. 15:15; Ps. 55:5 [MT 6]), *rᵉʿāḏâ* (Job 4:14; Ps. 2:11; 48:6 [MT 7]; Isa. 33:14), *nûʿ* (Ex. 20:18; Isa. 19:1; hiphil, Dnl. 10:10), poal of *rāpap*–'shake' (Job 26:11), hithpael of *pālaṣ*–'shake' (Job 9:6), *sāmar*–'bristle' (Ps. 119:120), *yāraʾ* (Isa. 15:4), *gûr*–'be afraid' (Hos. 10:5), *gāʿaš*–'be in an uproar' (2 S. 22:8 par. Ps. 18:7 [MT 8]), hiphil of *māʿaḏ*–'shake' (Ps. 69:23 [MT 24]), *ḥāpaz*–'resort to flight' (Dt. 20:3), *ḥārag* ("come trembling," 2 S. 22:46 [emended from *ḥāgar*] par. Ps. 18:45 [MT 46]), *piq*–'wobbling' (Nah. 2:10 [MT 11]), *rᵉʿēš* (Hos. 13:1), *zûʿ* (Est. 5:9; Eccl. 12:3; pilpel, Hab. 2:7); Aram. *zûʿ* (Dnl. 5:19; 6:26 [MT 27]); Gk. pass. of *seiō*–'shake' (Mt. 28:4), *trémō*–'tremble,' 'be afraid' (Mk. 5:33; Lk. 8:47), *éntromos* (Acts 7:32; 16:29; He. 12:21), *trómos* (Mk. 16:8; 1 Cor. 2:3; 2 Cor. 7:15; Eph. 6:5; Phil. 2:12)]; AV also FEAR, BE AFRAID, SHAKE, BE MOVED, etc.; NEB also WRITHE IN FEAR, QUAKE, SHUDDER, QUAIL, BE IN PANIC, etc.

The Hebrew words translated "tremble" generally refer to one of two particular situations: a human response of fear before God or some danger (e.g., Gen. 42:28; Ex. 15:14f.; 20:18; Dt. 2:25; Ps. 2:11; 99:1), or the response of nature to God's presence (e.g., an earthquake; cf. 2 S. 22:8; Job 9:6; Ps. 46:3 [MT 4]; 77:16, 18 [MT 17, 19]; Isa. 24:18). People tremble in fear before God because His presence is experienced as awesome and terrible (i.e., fear-inducing), whether He comes as judge (e.g., Isa. 32:11; Joel 2:1) or as savior (e.g., Jer. 33:9). The trembling of mountains, of earth's foundations, or of the earth itself reflects the ancient world's sense that earthquakes, storms, and volcanoes clearly signified God's presence and action. In the presence of God the Israelites felt the overwhelming sense of events or powers being beyond their control or even their comprehension.

The pervasiveness of this "fear and trembling" motif in Scripture explains the variety of terms that the OT uses to speak of these things. The most common verb, *ḥāraḏ* (cf. cognate nouns *ḥārēḏ* and *ḥᵃrāḏâ*) seems to mean "panic"; where "the earth" is the subject (e.g., "the ends of the earth," Isa. 41:5) it is clear that the people inhabiting the earth are meant. The verb *rāgaz*, on the other hand, is used of both human fear and natural tremors (cf. Isa. 13:13; 64:2 [MT 1]), while *rāʿaš* refers only to phenomena of nature. The verb *ḥîl* means "writhe" and is often used of a woman's labor in childbirth (e.g., Isa. 13:8); in 1 Ch. 16:30 par. Ps. 96:9 the NEB has rendered it "dance," apparently emending it to *ḥûl*.

In the NT, Gk. *trémō* and its cognates (*trómos* and *éntromos*) are the usual words for "tremble." *Seiō* usually means "quake" or, in the passive (Mt. 28:4), "be profoundly shaken"; it is most commonly used of tremors of nature (in the LXX it usually translates Heb. *rāʿaš*), including the apocalyptic rumblings and stirrings of the last days.

TRESPASS [(nouns) Heb. *peša*ʿ–'rebellion, revolt'; Gk. *paráptōma*–'false step, transgression, sin'; (verb) Heb. *māʿal*–'act undutifully, be unfaithful']; AV also OFFENCE, FALL (Rom. 11:11f.), FAULT (Gal. 6:1), SINS, TRANSGRESS (Ezr. 10:10), etc.; NEB SINS, WRONG, WRONGDOING, OFFENCE, OFFEND, MISDEED, LAW-BREAKING (Rom. 5:20), "commit an offence" (Ezr. 10:10), etc. A breach of faith, an act of unfaithfulness, treachery, or transgression.

In the RSV OT "trespass" occurs only in 1 S. 25:28 where it translates Heb. *peša*ʿ, a word the RSV normally renders "transgression" (*see* TRANSGRESSION). In the RSV NT the word "trespass," commonly in the plural, occurs twenty times as the translation of Gk. *paráptōma*.

In the NT Jesus noted that trespasses are acts committed against individuals, but He tied the forgiveness of the trespasses of others to the forgiveness of God. Those who choose not to forgive a breach of faith by another individual will find that God will deal with them in a similar way (Mt. 6:14f.). Instead, Jesus encouraged His disciples to forgive so that their Father in heaven might forgive their own trespasses (Mk. 11:25). While Mk. 11:26 is present in the AV, but absent in the RSV, the NEB, and the bulk of better MSS of most text-types, its presence in some MSS is explained as being a scribal insertion of Mt. 6:15.

As in Levitical law and Jesus' teachings, Paul noted that a trespass can have corporate implications. The entire human race experienced vicariously the trespass of Adam (Rom. 5:15). In like manner, because of the tres-

pass of Israel the message of salvation through Jesus came to the Gentiles (11:11f.).

Paul used Gk. *paráptōma* extensively to refer to the act of Adam by which sin entered into the world (e.g., Rom. 5:15-18). Through Adam's trespass came condemnation (5:18), the result of which was the death of all those who shared in that trespass (5:15; Eph. 2:1, 5; Col. 2:13). The purpose of the law was to increase the trespass (Rom. 5:20). Yet God was at work through the reconciling activity of Christ, not counting human trespasses (2 Cor. 5:19). Jesus was put to death for those trespasses (Rom. 4:25), and by His death and resurrection came acquittal, forgiveness, justification, righteousness, and life for those who had previously been dead in their trespasses (5:15-20; Eph. 1:17; 2:1, 5; Col. 2:13).

Finally, Paul advised the Galatians that when they observed a person overtaken in any trespass, they should carefully and gently seek to restore that individual (Gal. 6:1). Paul further reminded all Christians that a safeguard to the censorious criticism of others' trespasses is a recognition of our own vulnerability to commit similar trespasses.

Bibliography.–*DNTT*, III, 585f.; J. Murray, *Imputation of Adam's Sin* (1959); *TDNT*, I, *s.v.* πίπτω κτλ.: παραπίπτω, παράπτωμα (Michaelis). C. M. ROBECK, JR.

TRESPASS OFFERING. The AV translation of Heb. *'āšām* (RSV "guilt offering"). *See* SACRIFICES AND OFFERINGS IN THE OT V.H.

TRESS. In Cant. 7:5 (MT 6) "tresses" (RSV, NEB; AV "galleries") translates Heb. *rᵉhāṭîm*, which in Gen. 30:38, 41; Ex. 2:16 means "runnels" or "watering troughs." In Cant. 7:5 its meaning is uncertain, but the context suggests that it refers to a woman's hair, which is described in terms of flowing water.

TRIAL [Heb. *massâ* < *nsh*, "test, try"] (Dt. 4:34; 7:19; 29:3 [MT 2]); AV TEMPTATION; NEB CHALLENGE; [Gk. *peirasmós*–'test'] (Lk. 22:28; Acts 20:19; Jas. 1:2, 12; 1 Pet. 1:6; 2 Pet. 2:9; Rev. 3:10); AV TEMPTATION; NEB also ORDEAL. An adversity with the potential either to purify or to corrupt.

Although both the Hebrew and Greek terms might elsewhere mean nothing more than an "attempt" or "examination," none of the RSV occurrences of "trial" remains this neutral. The three occurrences in Deuteronomy all refer to the plagues that God brought upon Pharaoh and the Egyptians through Moses. In Luke-Acts, both Jesus and Paul refer to the suffering they have endured; while human hostility is probably foremost in view, natural calamity cannot be excluded (Lk. 22:28; Acts 20:19; cf. 2 Cor. 12:23-27). Jesus' prayer for Peter that his faith might not fail (Lk. 22:32) perhaps explains the petition in the Lord's Prayer, "lead us not into temptation" (Mt. 6:13, also Gk. *peirasmós*, better translated "test"), since Scripture consistently acknowledges the positive value of external affliction. Jas. 1:2 says to count such trials "all joy," and v. 12 declares that those who endure such are "blessed" — both echoes of the Sermon on the Mount (Mt. 5:10-12). (That *peirasmós* can have the more negative sense of "enticement" or "temptation" to sin is clear from Jas. 1:13f., but the RSV never uses "trial" with this connotation.) The purifying purpose of "various" kinds of trials is made explicit in 1 Pet. 1:6f.; the Roman persecution of Christians was perhaps the most prominent of these trials. God will nevertheless rescue His people from overwhelming assault (2 Pet. 2:9), and the larger context here describes the characteristic situation of the believer "in a world in which the powers of good and evil confront each other" so that he is continually "exposed to attack from evil" (R. Bauckham, *Jude, 2 Peter* [*Word Biblical Comm.*, 1983], p. 253). This attack will intensify in the days immediately preceding Christ's return, often referred to as the great tribulation (from the description of Mt. 24:9-44). Rev. 3:10 promises the faithful in Philadelphia protection from this "hour of trial which is coming on the whole world"; "in the foreshortened view of the future which was taken by the Apostolic age this final sifting of mankind was near at hand, not being as yet clearly differentiated from the imperial persecution which had already begun" (H. B. Swete, *Comm. on Revelation* [repr. 1977], p. 56).

TRIAL OF JESUS. *See* JESUS CHRIST, ARREST AND TRIAL OF.

TRIBE. The English term "tribe" derives originally from Lat. *tribus*, literally a "third part" of the Roman people, namely, any one of the three ethnic divisions of the early Roman state. Later the term applied to any of the thirty-five local tribes into which all Roman citizens were organized for administrative purposes.

I. Terminology
II. Social Structure
III. Tribal Organization in Early Israel
IV. The Twelve Tribe System

I. Terminology.–The Hebrew terms for tribe are *šēḇeṭ/šeḇeṭ* (lit. "staff" 190 times in the OT, 89 in the sense of tribe) and *maṭṭeh* (lit. "staff" 251 times in the OT, 216 in the sense of tribe). Both terms can refer to a "rod" or "staff" as a shepherd's implement (*šēḇeṭ*, Ps. 23:4) or walking stick (*maṭṭeh*, Gen. 38:18). The rod came to be a symbol of authority and power, hence "scepter" (*šēḇeṭ*, Ps. 45:6 [MT 7]). Both terms can designate individual tribes of Israel (sing., e.g., "tribe of Judah," *šēḇeṭ yᵉhûḏâ*, 1 K. 12:20; *maṭṭēh yᵉhûḏâ*, Ex. 31:2) or all the tribes together (pl., e.g., "tribes of Israel," *šiḇṭê yiśrā'ēl*, Dt. 33:5; *maṭṭôṭ yiśrā'ēl*, Nu. 31:4; "tribes of the sons of Israel," *šiḇṭê bᵉnê yiśrā'ēl*, Josh. 4:5, 8; *maṭṭôṭ bᵉnê yiśrā'ēl*, Nu. 36:9). Other phrases include "tribe of the fathers" or "ancestral tribe" (*maṭṭēh 'āḇôṭ*, Nu. 1:16, 47; 33:54), "tribe of your father" (*šēḇeṭ 'āḇîḵā*, 18:2). The Aramaic term for tribe is *šᵉḇaṭ* (Ezr. 6:17).

The Gk. *phylé* (31 times) can designate the "twelve tribes of Israel" (Mt. 19:28; Lk. 22:33; Rev. 21:12; cf. Jas. 1:1, Rev. 7:4; in Acts 26:7 Gk. *dodekáphylon* is a compound term designating the "twelve tribes"), the individual tribes (Asher, Lk. 2:36; Benjamin, Acts 13:21; Rom. 11:1; Phil. 3:5; Judah, He. 7:14; Rev. 5:5; cf. Rev. 7:5-8 for a list of the twelve tribes by name), and a "nation" or "people" not necessarily Israelite: "tribes of the earth" (Mt. 24:30; Rev. 1:7).

The notions of tribe and tribalism are central to an understanding of Israel's culture and history in the premonarchial period. An examination of "tribe" involves a number of issues, for tribe can designate a population group, a type of social organization, or a geographical area. An understanding of "tribe" has implications for the organization of family and society in ancient Israel and bears profoundly on the historical issues of conquest and settlement. Modern research into the anthropology

and sociology of early Israel and the Near East in general has provided significant insights into the social organization of Israel during this period (see esp. Gottwald and Lemche).

II. Social Structure.–The meaning of "tribe" must be understood in relation to other structures within the context of a comprehensive picture of Israel's social organization. The terminology of Israel's social structure indicates various levels of social organization. The tribe is only one of many levels in the system of relationships.

A. Nation, People. The highest level of structure is the nation, or league of tribes, referred to as Israel, "sons of Israel" (*bᵉnê yiśrā'ēl*; the phrase "sons of Israel" can designate the literal sons of Jacob, Gen. 29:35, or Israel as a nation), or "tribes of Israel" (*šiḇṭê yiśrā'ēl*). The last term and "all the tribes of Israel" (*kol šiḇṭê yiśrā'ēl*; Dt. 29:20; Josh. 24:1) perhaps come closest to a term for the totality of Israelite society. This level of structure is the level of centralized religious institutions.

The terms "Israel" and "Israelites" are virtually equivalent. "Israel" is more often used of the whole nation under the sovereign administration of Yahweh ("Yahweh, the God of Israel," not of the Israelites, e.g., Ex. 5:1); and "Israelites" is used of the people distributively.

Other terms that refer to the people as a whole are *ʿām* and *gôy*. *ʿĀm* is chiefly a social and cultural or religious term, as in "people of Yahweh" (1 S. 1:12). *Gôy* is a political term referring to nation states, usually other than Israel (Gen. 10:5; Dt. 15:6; but cf. Gen. 12:2; 18:18, where it is used of Israel). In Nu. 23:9 both terms are used in such a way as to make the distinction clear. (*See also* NATIONS; PEOPLE.) Terms that refer to Israel as a religious gathering are *qāhāl*, "assembly" (Dt. 5:22), and *ʿēḏâ*, "congregation" (Nu. 1:2, a congregation as assembled for holy war).

B. Tribe. The second level of organization is the tribe. Both *šēḇeṭ*, the most commonly used term in the Deuteronomistic historical sources, and *maṭṭeh*, used primarily in certain priestly traditions and in Chronicles, referred originally to the rod or staff as a weapon, pastoral implement, or ceremonial object. Since staff and scepter have military and political denotations, the terms were presumably extended to apply to the realms over which authority was wielded. As applied to a social unit, the term "tribe" refers to a group with autonomy and political self-rule. Each tribe within the "tribes of Israel" is on the same organizational level. However, this does not imply equality in population size or territorial possession. Individual tribes can be referred to as "the tribe of X" or "the sons of X," e.g., Dan in Ex. 31:6; Nu. 10:25 (RSV "men of"); 26:42.

C. Clan. Mišpāḥâ, while it can be used synonymously with "tribe" (cf. Jgs. 13:2; 18:2), is the most frequent term for the third level of organization. *Mišpāḥâ* is most often translated either "family" or "clan." It is composed of kinsmen bound in a protective association. The book of Ruth contains the best example of the protective function of the clan. Boaz was of the same *mišpāḥâ* as Elimelech, Ruth's father-in-law, but not the same extended family (Ruth 2:1; see below). Consequently Boaz was obligated to function as redeemer (*gō'ēl*) of Elimelech's family.

A tribe consists of from one (Dan) to eight (Manasseh) *mišpāḥôṯ* (cf. Nu. 26). De Geus suggested that the clan was an endogamous unit, and hence was the most important unit in Israel's unilateral, unilinear kinship system. Gottwald preferred the term "protective association of families" to the term "clan."

Mendenhall and Gottwald claimed that *'elep*, another term used in the clan context, has a military organizational meaning. It is traditionally translated "one thousand," but their research suggested that it is not a fixed number of men but a group mustered by the clan (*mišpāḥâ*) on behalf of the tribe to fight in Israel's wars. *'Elep* and *mišpāḥâ* are in fact interchangeable in 1 S. 10:17-27.

D. Extended Family. The "father's house" (*bêṯ 'āḇ*) is the household or extended family. It consists of grandparents, parents, children, and even unmarried uncles, aunts, and cousins. Membership in the extended family was based primarily on consanguinity, though those members were excluded who married into other extended families. *Bêṯ 'āḇ* can also be used as a synonym for "tribe" (*maṭṭeh*), as with Aaron's rod in Nu. 17: twelve rods, one for each "father's house." De Geus claimed that the extended family is an exogamous unit, meaning marriage was outside the family; on the other hand, marriage was probably to take place within the clan.

The four divisions of social organization just described are listed in one literary unit, Josh. 7:16-18, in the process of locating the one who broke the strictures of holy war at Jericho: (1) nation, *bᵉnê yiśrā'ēl;* (2) tribe, *šēḇeṭ* and *maṭṭeh;* (3) clan, *mišpāḥâ*; (4) extended family or "household" (RSV), *bêṯ 'āḇ*.

III. Tribal Organization in Early Israel.–*A. Models of Organization.* Tribalism as a mode of social organization is generally assumed to be the shape of early Israel. But the specific character of this organization is a debated issue. Scholars have developed three prominent models, the choice of which largely determines the perspective on how early Israel came into possession of the land.

1. Pastoral Nomadic Model. The early patriarchs and the group that left Egypt under Moses are generally assumed to be nomads or semi-nomads. This is what might be called the intuitive model of Israel's social character. This model suggests that early Israelites were pastoral nomads who moved seasonally in search of pasturage and water. Nomadism and tribalism are virtually equated here. Using textual and anthropological data, first Mendenhall (in 1962) and then others (de Geus, Gottwald, Lemche) examined the claimed identification of pastoral nomadism and tribalism. They suggested that it is impossible to distinguish absolutely between the farmer (as settled agriculturalist) and the nomad (as traveling pastoralist). According to Gottwald, Israel's tribally organized peoples were settled agriculturalists who also practiced animal husbandry. And this transhumant pastoralism can characterize a settled people. In fact, both farmers and nomads could belong to the same tribe. Evidence for full camel nomadism, involving true migration, appears in the ancient Near East only after 1200 B.C. *See also* NOMADISM.

2. Amphictyony Model. Noth was the first to apply fully the amphictyony model to the structure of premonarchical Israel. Based on the classical Italian-Hellenic amphictyonies, and especially the Delphic amphictyony of central Greece, this model suggests that a religious league consisting of a number of tribal entities banded together around central shrines and common cult festivals. The twelve tribes, under Joshua's leadership, assembled at Shechem to accept Yahweh and to form a religious covenant defined by law. They took oaths of allegiance and agreed to assemble annually at the central shrine, now the home of the ark of the covenant. Thus they were bound together by religious principle rather than by ethnicity or by blood.

Noth's thesis was defended by Alt, but the validity of the hypothesis in the light of the OT evidence has been questioned by de Vaux, Mayes, and de Geus. For example, the existence of a single central shrine in Israel is

disputed. The OT suggests a succession of shrines, including Bethel, Gilgal, and Shiloh. The ark is evidenced only at Shiloh, and none of the sites provides evidence of an all-Israel gathering.

3. Retribalization Model. This model, proposed most forcefully by Mendenhall and Gottwald, suggests that the early Israelites were an ethnically mixed group of people, consisting primarily of settled Canaanite agriculturalists. The majority reorganized themselves into tribes to counter the repression of a feudal system of Canaanite city-states. The villagers and peasant agriculturalists organized into regional tribes to extend mutual aid and to defend themselves better against the political and military power of the city-states.

B. Tribal Organization and the Conquest of Canaan. The origin of Israel as a geographical and ethnic entity is intimately associated with theories of tribal organization. The following are the three primary models of Israel's occupation of Canaan corresponding to the above three models of organization.

1. Conquest Model. The conquest model is based on the pastoral nomadic view of Israel's organization. The presupposition is that the early Israelite tribes were migrating nomads who entered Palestine from outside it and settled in Palestine after conquering it. A twelve-tribe confederation formed on the basis of ethnic and religious solidarity, primarily deriving from the difference between Baalist Canaanites and Yahwist Israelites.

The picture projected by Josh. 1–12 is of a decisive military campaign with all tribes united. The Israelites traveled north through Transjordan and mounted an attack upon the central region at Jericho and Ai. After further forays south and north they secured the land of Canaan and divided it among the tribes.

Archeology has been enlisted (esp. by the Albright school) in support of the conquest model. There is evidence of widespread destruction from the time of the conquest (Late Bronze Age, i.e., late 13th and early 12th cents.) at four sites Joshua is reported to have destroyed: Hazor, Lachish, Eglon, and Debir. Furthermore, the subsequent occupation at those sites is materially poorer and architecturally simpler. This level of culture is assumed to be consistent with a semi-nomadic Israelite population.

Problems with the conquest model arise when Josh. 1–12 is compared with Josh. 13–19 and Jgs. 1. The discrepancies between these lists and a purported total conquest suggest that the invasion was less than total. Furthermore, archeological material from Jericho, Ai, and Gibeon fails to support a military conquest. Jericho was only a small unwalled settlement in the late 13th cent., and neither Ai nor Gibeon was occupied at that time.

2. Immigration Model. This model proposes that Israel came into existence as the result of a long process of peaceful infiltration by a series of separate groups of people. These diverse peoples gradually joined together in an umbrella organization along with certain indigenous Canaanite types. The twelve-tribe system was the organizational framework, and the religion of Yahweh became the official cult of the tribal league. There was a protracted struggle for possession of the land, and only in the time of David did a decisive military operation secure for them unchallenged control.

This view is advocated by the school of Alt and Noth, who formulated most clearly the amphictyony hypothesis; it has been defended more recently by Weippert. The immigration model suggests the early Israelites were seminomadic seasonal migrants into Canaan who later either settled in the unoccupied spaces between the fortified Canaanite city-states, or actually siezed portions of land by force of arms. The infiltrations took place in an uncoordinated way at different times and from various directions. These bedouin-like early migrants are usually viewed much as the *'apiru* of the Amarna Letters (late 15th-13th cents.) who established a presence in Palestine.

3. Social Revolution Model. According to this model, Israel's rise to power in Canaan resulted from the revolt of native Canaanites (aided by a group of invaders from the desert) against their suzerains. The core of the revolt movement was a group of exodus Israelites, but the formation of the nation was a coalition of various groups with separate traditions, including *apiru*, pastoral nomads, and disaffected Canaanite peasants rebelling against city-state overlords. Mendenhall, Gottwald, and Chaney advocate some form of this theory.

IV. The Twelve Tribe System.–Ancient Israel consisted of twelve tribes (Gen. 49:28; Ex. 24:4). The names of the original twelve tribes derive from the names of Jacob's twelve sons by his two wives Leah and Rachel and their handmaids Bilhah and Zilpah (Gen. 35:23-26). The number twelve making up the nation remains constant, though the specific tribes making up the twelve vary, depending on whether Levi is counted as one of the tribes. If Levi is included there is a tribe of Joseph (Gen. 49; cf. also 29–30; 35:23f.; 46:8-24; Ex. 1:1-5; Dt. 27:12f.; 1 Ch. 2:1f.). If Levi is excluded, Joseph is split into Manasseh and Ephraim (deriving from Joseph's two sons), and in the ordering of the tribes Levi's slot is given to Gad (Nu. 1; 26; cf. also chs. 2; 7; 10; 13). Moses' blessing in Dt. 33 lists ten tribes, including Levi and omitting Simeon and Issachar.

The tribe was a geographic entity as well as a population group. The tribal boundaries are specified in Josh. 13–19, though one can see some fluidity when comparing this allotment with other allocations. The Solomonic administrative system (1 K. 4:7-19) lists twelve officials along with their respective geographical areas. This may reflect a twelve-tribe system, but the areas do not correspond to traditional tribal boundaries, and may rather be tied to a twelve-month royal support schedule. The system of Solomonic districts may in fact be a deliberate restructuring to overcome traditional tribal loyalties and replace them with centralized royal control. Although the Greek amphictyony analogy has been criticized, similar models have been suggested: an Egyptian tax structure for temple support employed by a 22nd Dynasty pharaoh (Redford); a five-member Philistine league centered at the Ashdod Dagon shrine (Rahtjen); and the BALA system (a calendric system of 12 30-day units assigning one or more cities to contribute to the central cult shrine) for the Sumerian League of Ur III times (Hallo, Chambers).

VII. Levitical Cities
VIII. The Remaining Land
IX. Conclusion

I. Introduction.–The territories of the Israelite tribes will be examined from two aspects: the forms of the literature and the chronology of the texts. Brief examination will be made of scholarly opinion regarding these matters, noting points of unity and of disagreement. The forms of the literature have proven to be most important in understanding the tribal territories. Josh. 13–19 preserves a system of borders and towns for all the tribes. The exception of Levi, in ch. 21, is considered separately. The identification of consistencies in the organization of this material leads to conclusions as to how the lists of places are to be understood. A study of the chronology of these texts in Josh. 13–19 assumes they have had an important place in the historical development of ancient Israel. The value of such discussion is not to be found so much in a determination of when the texts were written; that is a separate question. Rather, the value of a chronological study is to observe those historical junctures at which various parts of Josh. 13–19 may have played key roles in ancient Israel's history and in our understanding of it. In this way the description of the tribal territories becomes, rather than a single event, an ongoing reality.

At the heart of the definition of tribal territories lies the question of the location of the places named as forming the boundaries or territories of each tribe. The identification of the sites named in Josh. 13–19 is too complex to be covered in this article (*see* the articles on individual sites).

II. Forms of the Literature.–A major problem in understanding current thought on Josh. 13–19 concerns the variant approaches of modern scholars to the subject. But dispute over sources and purposes should not obscure the general concern of this material as a focus on the twelve tribes (for Levi, cf. Josh. 21). Surely this number does not first appear with the monarchy (Mowinckel), but considerably predates that period, "since otherwise the order of the birth of Jacob's sons would have followed their relative positon in the country at that stage in Israel's history" (Kallai, *Proceedings*, p. 219). Further, the first half of the book of Joshua fits with the second half as the latter depicts the final stage of settlement in the country (Kallai, *Eretz-Israel*, p. 106). Thus we have a certain contextual and conceptual unity pointing to an early period in Israel's history.

Alt (*KS*, II, 276) first distinguished the two types of material of interest in the descriptions of the tribal territories in Josh. 13–19. First, the individual tribal areas are treated in the form of statements concerning their borders. Simeon, Issachar, and Dan do not have such border descriptions, but otherwise statements drawing boundaries for much of the land are found. Second, the town lists appearing within the tribal areas may suggest administrative divisions within Judah and Israel. Complementary to these two basic categories are the territorial lists, prominent E of the Jordan. These may serve as boundary descriptions or as town lists. Boundary descriptions may also indicate cities where, in fact, the city-state territory is intended. Alt (*KS*, I, 200-202) initiated the suggestions that these two, the city and its territory, may each belong to different tribes in some instances.

Alt (*KS*, I, 193-202) postulated a late premonarchic or early monarchic date for a single document that constituted the boundary descriptions. It emerged from tribal disputes concerning claims to lands. Noth added the concept of fixed border points that determined the boundary. Kallai (*Tribes*) found in the biblical accounts a complete text of the boundary descriptions, although he suggested there may be some abbreviations. He argued that each tribe had its own boundary description. Aharoni (*LBHG*) maintained that all border descriptions have been abbreviated to some extent. He noted the detailed description around Jerusalem on the Benjamin-Judah boundary and suggested that we have here a boundary description in its unabbreviated form. Aharoni argued that the borders of Judah are missing. The southern, eastern, and western boundaries correspond to those of Canaan as found in Nu. 34. The northern boundary of Judah is the same as that of Benjamin. This leaves Benjamin, Ephraim, Manasseh, Asher, Zebulun, and Naphtali with border descriptions among the tribes W of the Jordan River. Hence Aharoni found the boundary lists to have originated in a covenant of the northern tribes during the period of the Judges. Thus the discussions suggest an early date for these lists, with at least some material appearing as premonarchic.

In 1925, Alt (*KS*, II, 276-288) noted the variations in town lists according to the region of their origin. The southern tribes of Judah, Benjamin, and Simeon have many place names in their town lists. The northern tribes of Asher, Zebulun, Issachar, and Naphtali have only fragments. In the middle, the Joseph tribes of Ephraim and Manasseh have no town lists. Thus Alt argued that the editor of Joshua used two sources, a southern source and a Galilean source. The southern source was dated by Alt to the time of Josiah. Aharoni (*VT*, 9; *LBHG*) identified two texts from which all town lists derive: a Solomonic district list and a Judean district list. The original purpose of these lists was administrative and the dates assigned to them by scholars have varied from David's time to that of

Josiah. Kallai (*IDBS*, p. 922) observed that, in general, the town lists fit into the boundary division system. Therefore, the two systems should date from the same period. The exceptions to this rule are the town lists of Judah and Benjamin. Kallai found later additions in these lists.

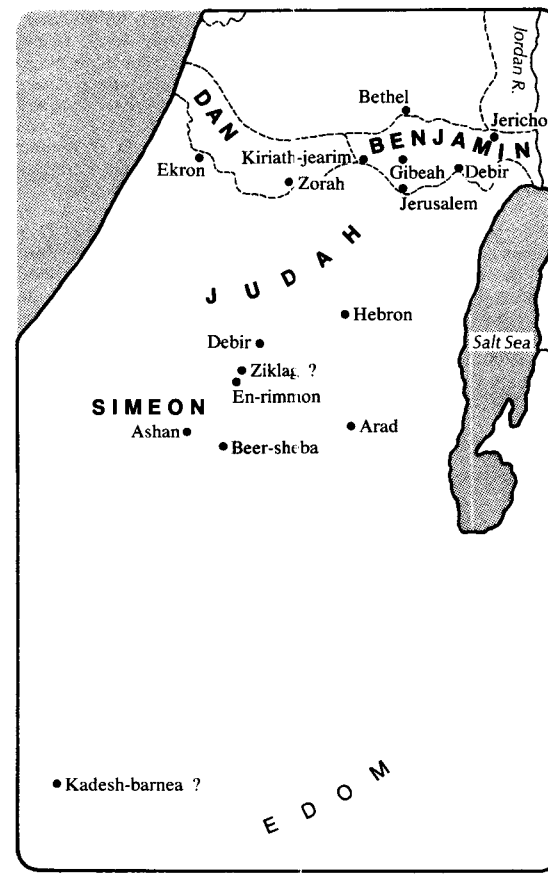
The study of the time and place of tribal settlement must now consider the biblical data on the individual tribes and the issues associated with each of them.

III. Southern Tribes.–A. Boundary Descriptions. The southern tribes include Judah, Benjamin, Simeon, and Dan. Judah and Benjamin have the most complete descriptions of any of the tribes. They each have boundary descriptions and town lists of some length. The boundary description of Judah (Josh. 15:1-12) begins in the south and proceeds in a counterclockwise direction, traveling east, north and west. Judah's southern boundary was sometimes an ideal and sometimes a reality throughout the monarchy's history. The eastern border saw virtually no change. But the northern border of Judah has become the subject of some controversy. The matter concerns the Judean districts and the extent to which they included territory in Benjamin and Dan. It is also a matter of dispute as to how far west the border actually extended. When the boundary description reaches the hill country and coastal plain, it has fewer points of description than are found in the mountainous area to the east, including the region around Jerusalem. Thus an early date for the boundary description requires us to understand this western boundary as a theoretical one (Elliger, *IDB*, IV, 704) filled out by the gradually westward movement of the tribe during the monarchy. The boundary description of Benjamin (Josh. 18:11-20) also progresses in a counterclockwise direction, beginning at the north. From Kiriath-jearim to the Jordan, the southern border of Benjamin corresponds to Judah's northern boundary.

B. Town Lists. The town lists of Judah fit within the border outlines. Study of these lists has focused on their division into districts, the date and number of the districts, and their relation to town lists of the remaining southern tribes. Thus the southern district (Josh. 15:21-32) has correspondences with the town list of Simeon (19:2-8). There are three districts in the western hill country, i.e., the Shephelah (vv. 33-36, 37-41, 42-44), which Alt (*KS*, II, 286) found to have been settled early and to have been derived from the territories of three city-states: Adullam, Lachish, and Kegila. Alt assigned the district that lies farther west and reaches to the Mediterranean (vv. 45-47) to Josiah's period. The inclusion of this district in the original list has been widely disputed, however, owing both to the unique form of the description and to the lack of historical evidence for Judah's possession of this area.

Three additional districts are in the southern mountain region (vv. 48-51, 52-54, 55-57). Alt named these districts after their major towns: Debir, Hebron, and Maon. To the north lies the district of Beth-zur (vv. 58f.). We should add to this a district including Bethlehem that is found only in the LXX (v. 59a). The district of v. 60 consists of only two towns. As a result it is often incorporated into a larger district, constructed from town lists of other tribes. Verses 61f. comprise the list of names in the wilderness district. Although various dates may be assigned to the settlement of this region, the survey and archeological evidence point to the 8th and 7th cent. B.C. (e.g., Mazar, *et al.*, *En-Gedi*; Bar-Adon; Stager).

By excluding vv. 45-47 and including the LXX district of Bethlehem, we are left with eleven districts, including the partial district of v. 60. Believing that there were twelve original districts, scholars have sought the remainder in neighboring tribal town lists. For this reason, scholarly opinion regarding the historical context of the Judean districts is closely connected to the town lists of Benjamin and Dan. From the viewpoint of Josh. 13–19, both these tribes are allotted portions on Judah's northern border. A further reason for associating the town lists has been found in the duplications of names among the three tribal town lists. Kiriath-jearim and Beth-arabah are found in both Judah (15:60f.) and Benjamin (18:22, 28). Eshtaol and Zorah are found in both Judah (15:33) and Dan (19:41).



C. Benjamin. The town list of Benjamin (Josh. 18:21-28) includes two districts, one to the east (vv. 21-24) and one to the west (vv. 25-28). Kallai-Kleinmann (*VT*, 8, 139) suggested an original third district, composed of Gibeah, Anathoth, Azmaveth, and Alemuth. These towns are not listed (however, cf. Gibeath of v. 28 with Gibeah), although elsewhere they belong to Benjamin. Since part or all of the town list in Benjamin is regularly included as one or more of the Judean districts, the date of this list is also closely related to the date of the districts.

D. Dan. Dan possesses no boundary description; it has only a town list (19:40-48). As with Benjamin, the list has an eastern (vv. 42-44) and a western section (vv. 45f.). Alt (*KS*, II, 33) had observed that the boundary descriptions for Judah and Ephraim exclude separate space for Dan. He located Dan's city list in the "Ekron district" (15:45-47) of Judah. Yeivin (p. 262) and Aharoni (*LBHG*, p. 299) followed Mazar (*SVT*) in assigning a Davidic origin to the list as the first occasion when this area was conquered. Elliger (*IDB*, IV, 709) found the list to be unhistorical and described its origin as taken from infor-

TRIBES, TERRITORIES OF THE

mation in the narratives of Jgs. 13–18. The Danite list, as portrayed in Josh. 19:40-48, predates the movement of at least a portion of the tribe northward to the city of Dan (= Laish or Leshem; cf. Jgs. 18:11).

E. Judah. Returning to consideration of the Judean districts of Josh. 15:21-62, we see how the Danite and Benjaminite lists play a significant role in the scholarly discussion. As noted above, survey work in the eastern Judean district would suggest a date during the latter part of the Judean monarchy for the occupation of this region. The problem of assigning a date for these lists cannot be resolved without taking into account their function within Josh. 13–19.

These chapters of Joshua present an attempt to outline further the settlement of Israel in the land. This settlement may be realized in different regions at different times. The various chronological schemes reflect attempts to understand this process in relation to one or more historical events (cf. Alt, *KS,* II, 276-288; Cross and Wright; Kallai-Kleinmann, *VT,* 8; Aharoni, *VT,* 9). At the same time, a distinction must be made between the historical process of settlement and the written lists as we now have them in Joshua. The district divisions present a comprehensive scheme for the southern tribes. Since they are administrative documents, their existence provides the members of these tribes with a legal identity in the land, an identity closely tied to the tribal self-perception of this people. That this was of value to the people of Judah is evident from the lists and their retention in the biblical literature. That it was perceived as part of the greater tribal identity is evident from the literary context of the districts within the tribal allotments, the geographical context of the lists of Josiah and Benjamin within the tribal boundaries, and the explicit statements of 15:20; 18:21, 28. Since this identity was part of the people's national awareness, it is reasonable to suppose that the districts outlined here (or something similar) remained a reality from the beginning of Judah's settlement in the land until the end of the period of the monarchy. This is true, as well, for the other town lists in Josh. 13–19, which by their very nature also define distinctive districts.

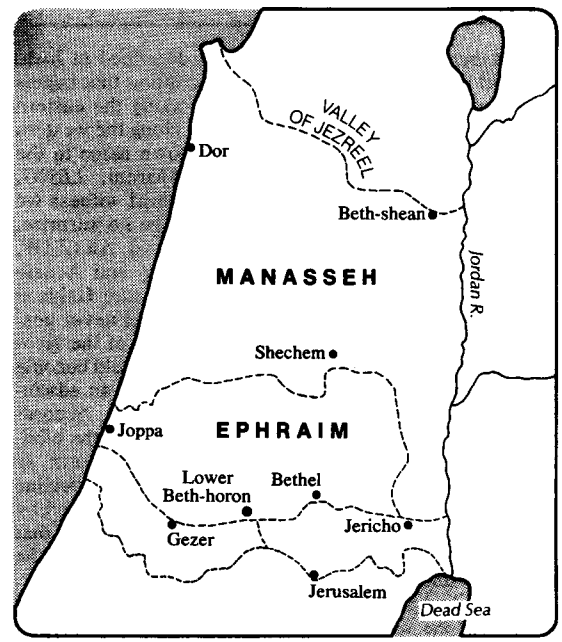
F. Simeon. Simeon, like Dan, has no boundary description, only a list of towns (19:1-9) located within the southern borders of Judah. The list is divided into two districts, an eastern and a western. Closely related to this town list are the lists of Judah's southern (15:26-32) and central Shephelah (15:42) districts, where the same towns appear. Also related is the list of 1 Ch. 4:28-33, which forms the same list and order of towns with some modification. This list explicitly dates Simeon's occupation of these cities to a period preceding David. Rainey (*Tel Aviv,* 7; *Beer-sheba II*) has argued that Simeon originally had only five towns (1 Ch. 4:31f.): Etam, En-rimmon, Tochen, Ether, Ashan. These were situated in the region of Hormah, conquered by Simeon after Israel's defeat (Nu. 14:39-45). The movement into the Negeb towns near Beer-sheba formed part of David's reorganization of the Negeb, the creation of the southern administrative districts. Like their brother tribe, Levi (see below), the members of Simeon may have served as guardians or, more likely, as representatives of the official theology. This would have helped to unite the disparate elements of southern Judah. This function would also help to explain Simeon's unusual posture, located in one region of another tribe.

Along with Simeon, several other groups occupied the southern territory of Judah (Rainey, *Beer-sheba II*). Josh. 15:13-19 describes how Caleb received Hebron and how Debir was conquered by Othniel, son of Kenaz, and future son-in-law of Caleb. Thus the Calebites and Kenizzites conquered the southern hill country, including the Hebron area. This region would later be called the Negeb of Caleb (1 S. 30:14). The Kenites settled in the region around Arad (Jgs. 1:16), in the eastern part of the Beer-sheba Valley. Also in this region were the settlements of the more obscure Jerahmeelites (1 S. 27:10) and the Cherethites (1 S. 30:14). David seems to have encountered these groups and incorporated them into his early kingdom with its center at Hebron. However, there is insufficient evidence for the existence of a unique tribal covenant among them, as Aharoni suggested.

IV. Joseph Tribes.–The Joseph tribes, consisting of Ephraim and Manasseh, settled in the central area of the hill country. To the south lay Dan and Benjamin, and to the north was located the Valley of Jezreel. The territorial information of Josh. 16:1-8 and 17:7-11 contains what appear to be abbreviated lists. The one town list is that of Manasseh (17:11), but here we find only towns outside the tribal border. Simons (*GTTOT*) observed an overall description of the Joseph tribes in 16:1-3 (southern boundary) and 17:10 (western, northern, and eastern boundaries). Within this he noted an outline of the remainder of Ephraim's south boundary (16:5-6a, with a fresh introduction in v. 4), the border between Ephraim and Manasseh (16:6b-8), Manasseh's northern and southern boundaries (17:7-9), a summary (v. 10), and the list of extratribal cities (v. 11). The descriptions are abbreviated, however.

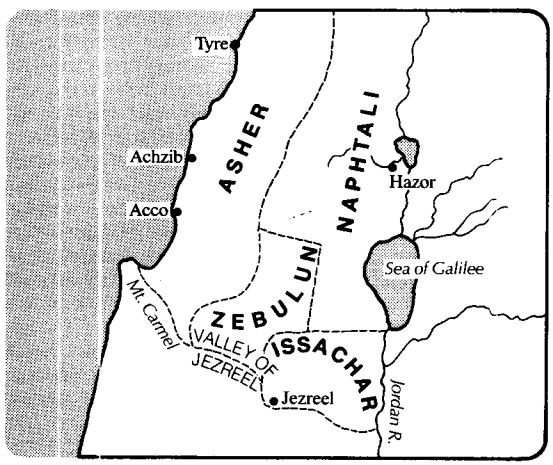
The complete lack of town lists within the territories has given rise to speculation that the destruction of the northern kingdom and subsequent expansion of Josiah's kingdom (Alt, *ZAW,* 45), the early Second Temple period priestly author/redactor's lack of interest in Samaritan regions (Mowinckel), or the outright removal of the material in a later edition (Kaufmann) may have been involved. In any case, the Joseph tribes were among the earliest to settle in their allotment. Their swift movement westward may be reflected in the lack of any details concerning a western boundary.

The southern boundary of Joseph (16:1-3) should match that of Ephraim (16:5). The northern boundary of Ephraim (16:8) correlates with the southern boundary of Manas-



seh. The northern border of Manasseh touches upon Asher and Issachar (17:10). The preposition *b* preceding both Asher and Issachar in 17:11 is probably to be understood as "beside" or "near" (so Kaufmann; not "in," as RSV has it), expressing areas lying outside Manasseh's tribal boundary system but belonging to that tribe. 17:1 describes the assignment of Gilead to Machir, a warlike portion of the Manasseh tribe (cf. 13:29-31). This forms the basis for the allotment of the half-tribe of Manasseh.

V. Northern Tribes.—Asher, Zebulun, Issachar, and Naphtali represent the tribes with territories in Galilee. Although Dan is also recorded as moving north, the locations in its town list are to the south. Alt (*ZAW*, 45) determined that, in the descriptions of these tribes which are all found in Josh. 19, the boundary descriptions and the town lists are mixed. Cross and Wright (*JBL*, 75) disputed this because they found the fragments left over, once Alt's divisions were applied, to be unacceptable as boundaries or town lists. Of course, Issachar is an example of a tribe that preserves only a town list. Other tribes, such as Asher, may have both boundary descriptions and town lists within their text. In such examples, however, the two have explicit expressions to help identify them.



A. Asher. The territory of Asher is described in Josh. 19:24-30 by means of a boundary description that begins in the south (vv. 24-26), moves north along the eastern border (vv. 27f.), and then travels south along the western coastal border. If it does appear in a town name in the reliefs of Ramses II's eighth year (Aharoni, *LBHG*, p. 181), it would be the earliest extrabiblical witness we have of any tribe of Israel. That would be no surprise, given its key location along the coast. Indeed, Alt (*ZAW*, 45, 77-81) used the coastal cities of Acco and Achzib (Josh. 19:29) to argue for a date for the entire Galilean tribal list document. He suggested that Israel never possessed such cities. Rather, they formed part of the Neo-Assyrian province of Megiddo. Thus, what would become the Galilean tribal territories was recorded in an administrative document of the Neo-Assyrian period. According to Alt this document was incorporated into the biblical material when Josiah extended his kingdom north, as far as Naphtali, during the period of Assyrian decline (2 Ch. 34:6). Other scholars have not been convinced by this explanation, preferring to find here a description that was, at least in large part, realized during the period of the monarchy (cf. Yeivin; Aharoni, *LBHG*, p. 255).

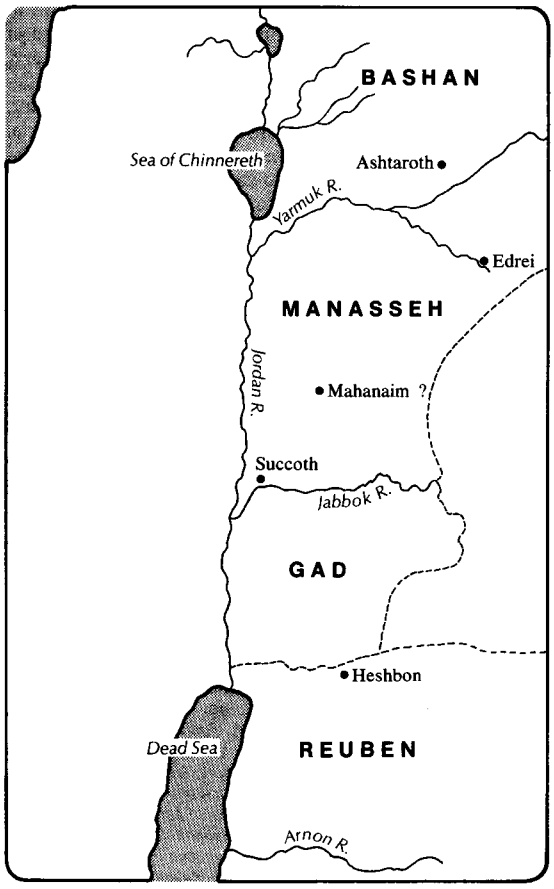
B. Zebulun. The Zebulun description (19:10-16) defines an area in the western region of the Lower Galilee, between the valleys of Jezreel and the Beit Neṭôphāh (Sahl el-Baṭṭauf, the Baṭṭōf depression). The text provides one of the most detailed examples of boundary descriptions that we have in Joshua. The description appears to begin in the south (vv. 10f.), to travel along the eastern perimeter (vv. 12f.), and to turn along a northern line (v. 14). Suggestions to locate the cities of v. 15 along the coast are prompted more from a desire to harmonize the text with Gen. 49:13 than from a realistic appraisal of the site names and their context within the inland outline of Zebulun as sketched in vv. 10-14. At the same time, it may be observed that the number of towns listed in v. 15 is far lower than the count assigned, i.e., twelve. Thus we may have only a fragment of the original town list preserved here. The lack of a western boundary description may suggest a western location for some of these towns. On the other hand, recording the western boundary may have been unnecessary due to the existing description of Asher's eastern boundary (cf. Josh. 19:27f.).

C. Issachar. The information on the tribe of Issachar in Josh. 19:17-23 provides us with a town list. Verse 22 seems to include a fragment of a northern boundary line. Otherwise, Issachar had no boundaries (Alt, *ZAW*, 45) or they were unknown (Mowinckel). In fact, the northeastern border of Manasseh (17:10) and the cities of 17:11 were somehow related to Issachar's southern boundary. This would suggest the inclusion of much or all of the Beth-shean plain in the south as part of Issachar's inheritance. Northward the tribal territory did not extend beyond the Valley of Iphtahel. This comprises much of the eastern part of Lower Galilee and the surrounding valleys. Gal (*Tel Aviv*, 9) has found no evidence for settlement throughout eastern Lower Galilee during the Late Bronze and Early Iron Ages. Thus actual settlement of this area did not take place before the 10th cent. B.C. The tribe may have lost its independent existence in later periods and have been absorbed into its neighboring tribes.

D. Naphtali. The description of Naphtali (Josh. 19:32-39) includes both a boundary description (vv. 33f.) and a town list (vv. 35-38). The major issue concerns the border described in v. 33. Is it Naphtali's northern (so Noth, Elliger, and Boling) or southern (so Alt, Mazar, Aharoni, and Yeivin) boundary? Although most of the sites in this verse are of unknown identification, the question comes to a focus with the location of the oak at Zaanannim, which Jgs. 4:11 says is close to Kedesh. If this Kedesh is the major Canaanite city of Kedesh in Upper Galilee, then the oak at Zaanannim should be located in the north and v. 33 should be a northern border. As Aharoni (*LBHG*, pp. 223f.) has observed, however, if Barak, leader of the Israelites in Jgs. 4, was from Kedesh, and if the Kedesh of Galilee was a major Canaanite city opposed to the Israelites (cf. Josh. 12:22), then the Kedesh of Barak should be sought elsewhere. Aharoni proposed a site W of the Sea of Gaililee. Somewhere nearby the oak at Zaanannim might well serve as part of the southern border of the tribe of Naphtali. The date of Naphtali's list should precede the incorporation of two major cities during David's reign, Ijon and Abel-bethmaacah. Although they do not appear in the Josh. 19 list, they would naturally be included in the territory of Naphtali, which comprises eastern Upper Galilee.

VI. Transjordanian Tribes.—A comprehensive inventory of the inheritance of the Transjordanian tribes is found in Josh. 13:8-14. In the following verses the specific inheritances of each tribe are given: Reuben (vv. 15-23), Gad (vv. 24-28), the half-tribe of Manasseh (vv. 29-31). The designated boundary to the south of the tribes was the Arnon River, which lay between Reuben and Moab. To

the west lay the Jordan River. To the east was the desert and the upper reaches of rivers such as the Jabbok. The northern border is a matter of dispute, but it appears to have reached into Bashan and may have extended into the area of Mt. Hermon.



A. Reuben. The inheritance of Reuben (Josh. 13:15-23) is also mentioned in Nu. 32:34-38. The account in Joshua consists of a territorial description (v. 16), a town list (vv. 17-20), and a summary statement (v. 21), which specifies the Jordan River as the west boundary (Simons, *GTTOT,* p. 116). As the town list includes some sites which Nu. 32:34f. designates as having been built by the sons of Gad, Reuben may have made some penetration into Gad's territory. Reuben's territory represents part of that which had been Sihon's with its capital at Heshbon. We read of its conquest by Israel in Nu. 21.

B. Gad. The remainder of Sihon's kingdom was occupied by Gad (Josh. 13:24-28). The description's structure is similar to that of Reuben (Simons, *GTTOT,* p. 119). There is a general statement of districts that the tribe is to receive (v. 25), a town list (vv. 26-27a), and a summary statement (v. 27b) referring to the general region of the inherited towns ("the rest of the kingdom of Sihon king of Heshbon") and the western border ("having the Jordan as a boundary, to the lower end of the Sea of Chinnereth, eastward beyond the Jordan"). However, the northern part of this description overlaps with that of the half-tribe of Manasseh, who occupied the upper Jordan Valley and the area around the Sea of Chinnereth. Gad's settlement seems to have been restricted to the lower Jordan Valley and the southern part of the corresponding ascent to the east. As the forested mountain area between Reuben's border to the south and the Jabbok River to the north comprised the region of Gilead, it is not surprising to find Gad and Gilead used interchangeably to describe identical peoples. For this reason, the earliest settlement of Gad is identified with the Gilead region. In the Levitical town list, towns from both the half-tribe of Manasseh (e.g., Mahanaim) and from Reuben (e.g., Heshbon) are assigned to the tribe of Gad (Josh. 13:38f.). This may suggest an expansion of Gad (at the expense of the other tribes) when Josh. 21 was composed.

C. Half-Tribe of Manasseh. The inheritance of the half-tribe of Manasseh (so called in Josh. 13:29) is described as having been conquered and settled by Machir and Jair, sons of Manasseh (Nu. 32:39-42; Josh. 13:31b). The descriptions of the territory are brief in both Numbers and Joshua. Josh 13:29-31 does not follow the pattern of description evident in the territorial outlines of Reuben and Gad. Instead, two districts (Bashan and Gilead) are named amid four sites (including "the towns of Jair" as one of the four). The central and earliest settlement may have occurred in the region between the Jabbok and the Yarmuk rivers.

VII. Levitical Cities.—Although Levi was always understood as one of the twelve sons of Israel and thus as a legitimate tribe, no territory was assigned to the Levites. This fact is repeatedly stressed throughout the text of Joshua. Instead, Josh. 21 and 1 Ch. 6 record the assignments of towns to this tribe. Although Issachar, Dan, and Simeon also possess towns but no territory, the Levites are singled out for special treatment. Besides being charged with the care of the priestly cult, they are the only tribe to be assigned cities to dwell in which can be found scattered throughout the entire inheritance of Israel. Josh. 21:41 gives the number of Levitical towns as forty-eight, though only forty-four are named. The remaining four may be found in the area of Reuben's allotment, omitted in the Joshua list (cf. 1 Ch. 6:63). Alt (*KS,* II, 306-315) noted that most of these town are located in frontier regions or in areas which were formerly Canaanite. Such towns would have been conquered only during David's reign. These would have been royal lands assigned to the Levites. Alt regarded the list of Josh. 21 as basically historical and assigned its final form to the period of Josiah. Mazar (*SVT,* 7) dated the list to the end of David's reign. He found the purpose of the Levitical towns to be civil and religious. They were both cultic and royal centers of the united monarchy in which the Levites functioned as officers and judges. Peterson's survey of the Levitical towns found that thirty of the forty-eight towns had no tenth-century B.C. pottery. This has called into question a date during the united monarchy. Peterson has argued for an eighth-century date.

The emphasis upon the Levitical towns as administrative (or fortified) centers has been challenged. Peterson observed the problem of administrative centers on the borders of the lands, rather than in their centers. He preferred to regard them as "Yahweh teaching centers." Aharoni also argued that the purpose of these towns was to promote national theology, ideology, and unity. Although the functions of such towns may have changed with time, the theological purpose of their existence is most closely related to the biblical perspective of the Levites as special ministers before God. The dates of specific additions to the list and its final form have been disputed. However, the existence of some form of religious centers must have been envisioned from the very beginning of the settlement process when even a core of Israelites held to the Yahwistic faith of Moses (cf. Josh. 24:15) and sought

to render a clear distinction between it and the Canaanite religion.

See also LEVITICAL CITIES.

VIII. The Remaining Land.–The remaining land is that land not possessed by Israel but lying within the borders of Canaan, which are defined in Nu. 34:1-12. The remaining land is summarized in Josh. 13:2-6 and Jgs. 1. Since Canaan does not include any of the regions occupied by Reuben, Gad, or the half-tribe of Manasseh, these tribes are not mentioned in the discussions. Josh. 13 mentions the regions of the Philistines and Avvim in the south (vv. 2f.); the coastal areas of the Canaanites and Sidonians to the west and north (v. 4); and the region controlled by Byblos (Gebalites) extending eastward through the whole hill country of Lebanon and reaching to Baal-gad below Mt. Hermon and the entrance of Hamath (vv. 5f.). Much of this land was not specifically allotted by the territorial divisions of Josh. 13–19.

Judges 1:21, 27-33 provides a list of unconquered Canaanite cities. That this list parallels the tribal borders of Josh. 13–19 has long been noted. All the Cisjordan tribes with borders are listed as having omissions in their settlement responsibilities (for Judah, cf. v. 19). The omission of any mention of the Philistines, the designation of Jerusalem as Jebusite, and the note concerning Gezer as unconquered all point to an early historical memory for the document.

IX. Conclusion.–The forms of literature that have served as our primary sources of information have been defined as boundary descriptions and as town lists. The distinction between the two is most clear with the southern tribes. Elsewhere it becomes significantly blurred and must be used with caution. Particularly with the northern tribes, there has been a variety of attempts to distinguish the two forms. The greater the difficulty, the greater is the artificiality of retaining the distinction.

The question of chronology has proven to be complex. Three distinctions need to be made. First, there are the historical circumstances reflected in the variety of events which have been associated with the lists. These include the initial tribal settlement, early tribal covenants, the Davidic and Solomonic administration, later administrative reforms under figures such as Jehoshaphat and Josiah, and the foreign influence of powers such as Phoenicia, Philistia, Egypt, and Assyria. Second, to be distinguished from the historical circumstances is the settlement itself. Israelite settlement patterns have been identified where there is an increase in number but decrease in size of settlements, in comparison with the Late Bronze Age Canaanite predecessors. The more recent survey work (cf. Kochavi, *Judea*; Stager; Gal, "Lower Galilee"; Zertal; Zori; Finkelstein, "'Izbet Sartah") suggests that the areas of the Transjordanian tribes and of the Joseph tribes (plus Benjamin) were among the first to experience such settlement. This took place in the Early Iron I, *ca.* 12th cent. B.C. Israelite settlement patterns emerge among the northern tribes during the Late Iron I, *ca.* 11th cent. B.C. Subsequent to this period, during Iron II, Israelite settlement patterns are found in Judah. Of couse, settlement is related to the chronology of the lists, but in no way does it absolutely define that chronology. Along with the historical circumstances, it is a factor which enables us to locate important focal points in defining the function of the texts themselves. The material in Josh. 13–19 may therefore influence and be influenced by such events. The third distinctive element in the chronology is the date of the composition of the material in Josh. 13–19. This is a separate problem requiring its own evaluation.

Theoretically, the process of composition could have taken place in a relatively short or in an extended period of time. As we have seen, scholars have a variety of views regarding this problem. It is therefore important to consider another strand of evidence, the literary context of Josh. 13–19. In general, we find in Joshua an account of the initial settlement in the land. It is a partial account of Israel's taking possession of its divinely given territory, and of that territory's distribution to the tribes. The material does not form the substance of a sacred covenant, such as we may read of in Josh. 24. Rather, the territorial material of Josh. 13–19 serves as a legal and administrative document, something that can be referred to time and again for defining boundaries and population centers within those boundaries. Its importance is such that other administrative reforms are related to it, but none replaces its position at the center of Israel's self-identity. Its legal nature would mean that the initial divisions, once established, would undergo a limited number of changes. Alterations did occur, but as long as tribal self-identity remained, each tribe would naturally seek to maintain the full extent of its allotted territory. Changes would take place, to a larger extent, in the means used to define the boundaries. The method used would undergo adjustments in the designations of the borders according to points of reference contemporary to each generation making use of the texts. In this process the boundaries themselves would remain unchanged. The varied fortunes of the tribes and regions are thus reflected in the material preserved for us.

R. S. HESS

TRIBULATION [Heb. *ṣar*–'trouble' (Dt. 4:30), *ṣārâ*–'trouble' (1 S. 26:24), *ṭᵉlā'â*–'trouble' (Lam. 3:5); Gk. *thlípsis*–'affliction,' 'pressure' (Mt. 13:21; 24:9, 21, 29; etc.)]; AV also TRAVAIL, BE AFFLICTED, AFFLICTION; NEB DISTRESS, TROUBLE, PUNISHMENT, SUFFERING, etc. External circumstances that cause an individual a great deal of internal stress.

Hebrew *ṣar* and *ṣārâ* and Gk. thlípsis derive from roots that graphically portray the process in which a person is first limited, then walled in, and gradually squeezed until something must give. Sometimes the tribulation is seen as a punishment for sin (Rom. 2:9; cf. Lam. 3:5), sometimes as a part of life to be expected and tolerated (Rom. 12:12), or even, by God's grace, as a cause for rejoicing (Jn. 16:33; cf. Acts 14:22; Rom. 8:35). The forces applying such pressure may be political enemies (1 S. 10:18f., AV) or personal enemies (1 S. 26:24), predictable troubles in life (Rom. 5:3, AV; 12:12) or times of extreme crisis (Rom. 8:35).

The "Great Tribulation," as a specific period of suffering at the end of earthly history, is hinted at in the OT (Dt. 4:30; cf. Dnl. 12:1), developed by Jesus in His "Olivet Discourse" (Mt. 24:15-31; Mk. 13:14-27), and prophesied in the book of Revelation (Rev. 7:14). Some Christians debate whether the "Great Tribulation" will occur before or after Christ removes His Church from the earth. For a discussion of the various interpretations, *see* PAROUSIA IV.

G. A. VAN ALSTINE

TRIBUNAL. *See* JUDGMENT SEAT.

TRIBUNE [Gk. *chilíarchos*–'leader of a thousand soldiers' (Acts 21:31-33, 37; 22:24, 26-29; 23:10, 15, 17-19, 22; 24:22; "military tribunes," 25:23)]; AV CHIEF CAPTAIN; NEB COMMANDANT, "officer commanding" (Acts 21:31), "commanding officer" (24:22), "high-ranking officers" (25:23). A Roman military leader.

During the period of the Republic, down to 362, the consuls entrusted command of Roman legions to senior officers of the equestrian class, who were given the title *tribunus militum* (military tribune). In 362 six were elected in the tribal assemblies (*comitia tributa*). In 311 the plebs elected sixteen, and after 207 twenty-four, or six to each of the first four legions, which they commanded in rotation (Polybius vi.34.2-6). In the course of the early Principate two groups of these military amateurs emerged: the *laticlavii*, young men of senatorial descent embarking on a senatorial career (Suetonius *Augustus* 38); and the *angusticlavii*, older men of equestrian rank (Suetonius *Otho* 10).

In the time of Julius Caesar (*Gallic War* i.39) the importance of tribunes began to decline. Despite the rise of legates and prefects, however, the responsibilities of tribunes were not reduced, as suggested, e.g., by Appian (*Civil Wars* iii.44) and Tacitus (*Annals* i.37.1; 44.4), to mere supervision of exercises and drills, granting of discharges and furloughs, or keeping of military rolls.

In Acts 21–23, a Claudius Lysias (23:26; 24:22), who headed a cohort based in Jerusalem, is termed a *chiliarchos*. Since the customary term for commanders of auxiliary units, whose recruits were drawn from the provincial population and ordinarily numbered about five hundred to six hundred men, is Gk. *éparchos* (see *BC*, V, 430; *HJP*², I, 366 n.60; Mason, pp. 138-140), the cohort referred to in this section of Acts may have been a *cohors milliaria*, which was double the size of the normal cohort and was ordinarily commanded by a tribune. On the other hand, Acts 25:23 applies the plural *chiliarchoi* ("military tribunes"; NEB "high-ranking officers") to the commanding officers of the five cohorts stationed at Caesarea, and there is no reason to assume that this force totaled more than three thousand men. It is probable that in this latter passage Luke followed the more popular eastern Mediterranean usage and employed the term *chiliarchos* in the more general sense of high-ranking military officers, as in Mk. 6:21; Rev. 6:15; 19:18; and perhaps Jn. 18:12.

F. W. DANKER

TRIBUTE. *See* TAX.

TRIM. A term used by the AV in the archaic expression "trimmest thy way" (Jer. 2:33), translating Heb. *têṭîḇî* (hiphil of *yāṭaḇ*, "make good") *darkēḵ*. The RSV appropriately renders the phrase "direct your course" (NEB "pick your way").

TRINE (TRIUNE) IMMERSION.

I. Linguistic Basis.–The meaning of Gk. *baptízō* is "dip repeatedly," "immerse" (Thayer; LSJ); it means "bathe" in the middle voice. The NT uses it, with *báptisma*, for "baptism" as the rite of Christian immersion first practiced by the disciples, then commanded by the Lord, and constantly used in the NT.

Threefold immersion is based on the trinitarian baptism commanded in Mt. 28:19 ("in the name of the Father and of the Son and of the Holy Spirit"). The assumption is that the one baptism involves a separate dipping for each person of the trinity. Some theologians also have seen a reference to Christ's three days in the tomb.

II. Doctrinal Argument.–Trine immersion does not rest on any biblical precept or precedent. It is argued from the consideration that the form of baptism should be most nearly analogous to its trinitarian content. Appeal is also made to the threefold nature of the work of Christ and of

the believer's identification with Him, in death, burial, and resurrection. Sometimes emphasis is laid on the psychological value of a sign thus brought into closer conformity with its meaning.

III. Historical Practice.–There is no evidence that the Jews practiced trine immersion, nor had they doctrinal reason to do so. A threefold scheme is sometimes detected in the sequence of circumcision, baptism, and sacrifice; but this sequence is reflected rather in the baptism, confirmation, and first communion of the early Church.

The NT neither commands trine immersion nor provides any example of it. The only possible connection is with the trinity (Mt. 28:19), but single immersion might equally well be deduced from the reported baptizing in the name of Christ.

Yet trine immersion is undoubtedly early and seems to have established itself quickly as the common practice, though with no apparent appeal to the apostles. Thus the Didache speaks of trine immersion (or affusion): "But if thou hast neither [cold or warm running water], pour water three times [Gk. *trís*] on the head 'in the Name of the Father, Son and Holy Spirit'" (7:3). Justin Martyr, too, seems to have hinted at trine immersion (*Apol.* i.61), and it is plainly attested by Tertullian: "And indeed it is not once only, but three times, that we are immersed into the Three Persons, at each several mention of Their names" (*nam nec semel, sed ter, ad singula nomina, in personas singulas, tinguimur*; *Adv. Prax.* 26; cf. also *De corona* 3). The Apostolic Constitutions reiterate: "If any bishop or presbyter does not perform the three immersions of the one admission, but one immersion, which is given into the death of Christ, let him be deprived" (xlvii. 50).

At a later stage Gregory allowed single immersion, in Spain, thus giving rise to the famous Toledo ruling much cited by the Reformers. This ruling seems to have been in opposition to a false Arian conception of the three persons and to emphasize their essential oneness in deity. In both Western and Eastern churches trine immersion has continued to be the common practice.

IV. Reformation Teaching.–The Reformers did not object in principle to trine immersion. For Luther it was a neutral matter. Calvin, too, argued for liberty in the matter, although he did not practice trine baptism; he also permitted either immersion or sprinkling (*Inst.* iv.15.19). The principle of a primary conformity to what is actually found in Scripture probably influenced Calvin's own practice.

In England the Sarum Use prescribes dipping, "first on the right side, then the left, then the face." In 1549 the first *Book of Common Prayer* maintains trine immersion; in the 1552 edition dipping remains, but the three dippings are abandoned as of no true moment. T. Becon (*ca.* 1511-1567) granted that the trine practice is ancient, but he listed it among things indifferent, since "Christ left the manner of baptism free in the church" (*Works*, 2, ed. J. Ayre for Parker Society [1843-44]). Later opinion tended to harden against the practice. Thus J. Calfhill (*ca.* 1530-1576), almost certainly erroneously, dismissed it as a "strange invention of Tertullian" (*Works*, 213, ed. Parker Society). Reformation teaching and practice was generally biased against the custom on the ground that it was an addition with no biblical sanction or true theological weight. A principle of liberty was not abandoned, however, except by the narrower Puritans.

The Reformation view seems on the whole to be the most satisfactory. Since trine immersion lacks direct biblical support, it is not a binding obligation. A different baptismal practice does not affect the sacrament and may be preferred by churches that try to exclude what is not biblically enjoined. Nevertheless, trine immersion has impressive historical attestation. It is not devoid of helpful signification and does not corrupt the sacrament. A liberty of judgment may thus be conceded to churches that maintain the practice. In other words, it belongs to the sphere where each church may and should decide for itself the most appropriate form of fulfilling the scriptural ordinance.

IV. History of the Doctrine of the Trinity
  A. Early Church to Nicea
  B. Fourth- and Fifth-century Trinitarianism
  C. Medieval Theories
  D. Modern Trinitarianism

I. Introduction.–Though "trinity" is a second-century term found nowhere in the Bible, and the Scriptures present no finished trinitarian statement, the NT does contain most of the building materials for later doctrine. In particular, while insisting on one God, it presents Jesus Christ as the divine Son in distinction from God the Father, and probably presents the Holy Spirit or Paraclete as a divine person distinct from both. Obvious problems admittedly attach to both claims; indeed, "person" as a trinitarian (threeness) term has itself been controversial since Augustine, and especially in the modern period. Still, the doctrine of the trinity does lie in Scripture "in solution" (B. B. Warfield, *ISBE* [1929], *s.v.*); i.e., the NT presents events, claims, practices, and problems from which church fathers crystallized the doctrine in succeeding centuries.

A classic statement emerges in Augustine (*De trin.* v.8.9) and comes down the centuries as the 15th and 16th verses of the Athanasian Creed: (15) So the Father is God, the Son is God, and the Holy Spirit is God; (16) and yet they are not [or, there are not] three Gods, but one God.

II. Relevant OT Concepts.–Pious Christian writers from the time of the church fathers have found covert binitarian or trinitarian thought in some of the expressions and events in the OT, e.g., the language of "my Son" and "my Lord" (Ps. 2:7; 110:1), the tantalizing plurals in quotations of God's thought (Gen. 1:26; 3:22; 11:7; Isa. 6:8), the trisagion (Isa. 6:3), and the mysterious trio that visited Abraham at Mamre (Gen. 18:1-22). None of these references — nor of those to the angel, face, name, or glory of the Lord — indicates certainly, or even probably, OT awareness of hypostatic plurality in God, though several are striking and some reappear in NT christological contexts.

More obviously preparatory for NT materials are the OT concepts of word, wisdom, and spirit. The word of God in the OT is a powerfully creative (Gen. 1:3; Ps. 33:6), redemptive (Isa. 55:11), and commissioning (Jer. 1:4f.) instrument that reveals and performs the purposes of God. Though rarely personified, the OT concept, especially as developed in intertestamental thought, becomes a major Johannine metaphor for the Son of God who reveals God (Jn. 1:14, 18), mediates in creation (1:1-3), and transmits the word of His Father (3:34; 7:16; etc.).

OT wisdom, famously personified in Prov. 8:22-31, serves similarly as a concept available for NT claims of

Jesus Christ's preexistence, mediatorship, and revelatory work (1 Cor. 1:24; Col. 2:3; cf. Mt. 11:19; 12:42; and Hamerton-Kelly, pp. 11f., 68, 130ff., 192).

Spirit in the OT is not only breath or wind, but also divine presence and power — especially animating (Ps. 33:6), activating (Ezk. 36:26f.; 37:1-10), and equipping (Jgs. 3:10; 1 S. 10:6, 10; Isa. 42:1) power. As one might expect, the Spirit and word of God sometimes coalesce (2 S. 23:2; Ps. 33:6), as do Spirit and wisdom (Isa. 11:2; cf. Jn. 1:32f.). Joel 2:28 (MT 3:1) expresses the OT hope of the universal dispensing of God's Spirit, a hope fulfilled at Pentecost (Acts 2:16-21).

OT writers ascribe personal activities and moods to the Spirit (Gen. 6:3; 2 S. 23:2; Neh. 9:20; Isa. 34:16; 63:10), but only occasionally and without easily discernible intent. Still, OT language seems to anticipate the fuller NT attribution to the Spirit of personal acts and properties.

In sum, the concepts of word, wisdom, and spirit come short of complicating the monotheistic thought of the OT, but they do, together with intertestamental developments, produce a hospitable atmosphere for NT recognition of distinct hypostases, or even persons, in God. For they are all ways of expressing the immanence of a transcendent God — an immanence astonishingly focused in Jesus Christ, who "pitches His tent" among us (Jn. 1:14).

III. NT Witness to Father, Son, and Spirit.–*A. Divinity and Distinctness of Jesus Christ.* The NT witness to Jesus Christ's divinity is rich, varied, and impressive. To be sure, the NT writers only rarely apply "God" to Christ (He. 1:8f.; Jn. 1:1, [some MSS of] 18; 20:28; 1 Jn. 5:20; Rom. 9:5; Tit. 2:13; 2 Pet. 1:1), usually reserving Gk. *ho theós* ("the" God) for the Father. Still, Jesus Christ in the NT is "what God is," i.e., He is divine.

Six sorts of ascriptions of divinity may be distinguished: (1) The NT uses three titles for Jesus that are redolent of divinity. Besides "God," which is untypical but sometimes significantly placed (e.g., as a confessional frame in the Fourth Gospel, 1:1 and 20:28), "Son of God" (Jn. 5:18f.; 1 Jn. 4:15; He. 1:3) and "Lord" (Rom. 10:9; Phil. 2:9-11; He. 1:10; Rev. 19:16) connote divinity in some NT literature, the latter especially because of the powerful associations derived from its use for *ʾᵃḏōnāy* in the LXX. At least for the Church's gentile mission, "Lord" connotes ontic divine nature (Fuller, pp. 230f.).

(2) In the NT Jesus Christ is described with OT passages formerly applied to Yahweh (e.g., Isa. 45:23 in Phil. 2:10; Ps. 102:25 [MT 26] in He. 1:10; Joel 2:28 [MT 3:1] in Rom. 10:13); His name is placed in formal contiguity with God's (e.g., in Pauline salutations); and He expresses Himself in magisterial "I am" language (e.g., Jn. 8:58) reminiscent of Ex. 3:14.

(3) Jesus Christ performs such uniquely divine works as forgiving sin (Mk. 2:10), creating (He. 1:10), saving (2 Tim. 1:10), cosmically ruling (Phil. 2:10f.), and judging (Rev. 22:12).

(4) Various NT writers make what appear, on balance, to be ontological claims of divinity for Jesus Christ. Thus, Christ is "equal with God" and "in the form of God" (Phil. 2:6); the unique Son (Gk. *monogenés*) of the Father, who is the Father's "exegesis" (Jn. 1:18), bearing "the very stamp of his nature" (He. 1:3); the one in whom dwells all the fulness (Col. 1:19) or the fulness of the Godhead (2:9).

(5) Virtually every layer of the NT contains either plain or implicit testimony that Jesus Christ transcends time (Jn. 1:1; 17:1; He. 7:25; 13:8; Rev. 1:17; 2:8; 22:13; cf. Hamerton-Kelly, *passim*).

(6) In the NT Jesus Christ becomes a center of sacrament (Mt. 28:19; Jn. 6:54), doxology (2 Pet. 3:18; Rev. 1:5), and prayer (Acts 7:59f.; 1 Cor. 16:22). He is, in fact, a proper recipient of worship (He. 1:6). He deserves alone, or with the Father, the reverence one reserves for God (Jn. 14:1; Rev. 5:13; 7:10; cf. also Wainwright, pp. 93-104).

Of course, these ascriptions of divinity raise the problem of monotheism in the NT. Do some of its writers in effect present Jesus Christ as a second God? One long-popular proposed solution to the problem is the theological claim that in the NT Jesus Christ's divinity consists of His transparency to God the Father and His deftness as a tool of divine purpose, work, and love. On this view God the Father is really the only divine agent in the NT. Jesus Christ is His revealer, advocate, human face, representative.

But the NT picture is actually more scandalous. Surely Jesus Christ is transparent to the Father and does represent Him in work, will, and love. But in the NT it is not this — let alone only this — that makes Christ divine. For other great redemptive and revealing mediators such as Abraham and Moses have served God similarly. Yet Abraham was never himself "in everything preeminent" (Col. 1:18). And if "Moses was faithful *in* all God's house as a servant," then Christ was faithful "*over* God's house as a son" (He. 3:5f.). The NT scandal is that Jesus Christ differs not only in degree but also in kind from God's other revealers and agents. Although the NT never calls Him "a second God," He is Himself an object of worship — He, not just the Father in Him, and He with the Father. He preexists in the very form of God; He divinely judges at the end. He is both eschatological judge and protological Lord, both "the Alpha and the Omega" (Rev. 21:6). He is on God's side of the gap between Creator and creature.

Moreover, as suggested above, Jesus Christ is everywhere in the NT distinguished from God the Father. In some full sense of "person" (knower, willer, lover, actor) not only is God the Father a particular divine person — the "high Christology" of the NT literature makes the sober claim that Jesus Christ is another such person. There is one God, the Father; there is also one Lord, Jesus Christ (1 Cor. 8:6). Grace and peace are from God the Father and the Lord Jesus Christ (e.g., 1 Cor. 1:3). God the Father is "on the throne" (Rev. 4:2). Christ is "at his side," or "in his bosom," or "at his right hand" (Jn. 1:18; He. 10:12f.; 1 Pet. 3:22).

These last citations indicate, still further, that the NT distinction between Christ and God, Son and Father, holds not only for the Incarnation but also for the pre- and postexistent stages of Christ's career. NT literature pointedly claims that Jesus Christ and the eternal divine Son of God are the same person (Jn. 20:31; He. 4:14; cf. Jn. 10:36 and 5:18), and that this person is distinct from the Father.

The problem of monotheism thus raised is handled in two main ways. First, some texts that echo the Shema (Dt. 6:4) and the general prophetic opposition to polytheism (e.g., Isa. 37:19) identify the one God more specifically with the Father. This identification occurs indirectly when Jesus is called the Son of man (Mark), or the Son absolutely (John), over against this one God (Mk. 12:29; Jn. 17:3). And it occurs directly in such places as 1 Cor. 8:6, where Paul refers to the "one God" who is the Father and the one Lord who is Jesus Christ. Such NT habits of speech contribute to the Christian trinitarian tradition of thinking of the Father as the source or head of divinity, even if the Son is also divine (Augustine *De trin.* iv.20.29; Aquinas *Summa theol.* i.33.1-3; Calvin *Inst.* i.13.20).

Second, in Johannine literature the mystery of the divine interpenetration, or "in-ness" (Jn. 10:38; 14:10f., 20; 17:21, 23), represents some primal, ineffable union of Christ and God, Son and Father. But if Father and Son are

one (10:30), they are assuredly not one person. Although there is no precise human parallel, theirs is a unity somewhat like a marriage (cf. Gen. 2:24), or like that of a body or community (Brown, pp. 777f., on Jn. 17:21-23 and the Qumrân concept of communal oneness), or especially like that of a human son and father, the former conceived as "his father all over again." This organic, or familial, or communal concept of the oneness of Father and Son (and, by extension, Paraclete) generates the Christian trinitarian tradition of sometimes using the term "one God" for the whole trinity (Augustine *De trin.* v.8.9).

Of course, the NT writers were not mainly or explicitly interested in the intra-trinitarian ontological status of Jesus Christ. Prevailing descriptions and accounts of Christ have rather a soteriological or eschatological purpose and a functional cast. For instance, "Son of God" in John functions, among other things, as a title of obedience. To Jesus, the Father is "the one who sent me" (7:16; 14:10b). Furthermore, the Gospel of John says less about the derivation of Son from Father than the classic trinitarian statement of eternal generation in the Nicene Creed suggests. Recent translations of Jn. 1:14, 18 and 3:16, 18 render Gk. *monogenḗs* as "only" (RSV) or "one and only" (NIV) rather than "only begotten" (*unicus*, rather than Vulg. *unigenitus*, taken as the proper Latin rendering of *monogenḗs*). Still, ontological claims and implications about Christ remain and, in fact, sometimes follow from functional assertions — as when Jesus Christ is identified as creator or judge.

What is finally remarkable about the NT picture of Christ is that it combines multifaceted difference with broad unity. The NT hardly contains a host of rival Christologies, each backed by a different community, but it does express Christ's uniqueness with a rich, untidy "multiplicity of approximations" (Hengel, p. 57). Biblical writers show no hesitance in describing Jesus as both God and Son of God, or Son of God and Son of man (John), or high priest and apostle (Hebrews), or wisdom and Second Adam (Paul).

Some of the christological literature of the NT is also open to an adoptionist interpretation. Indeed, texts like Acts 2:22, 36; 5:31; 10:42; 13:32f.; 17:31; Rom. 1:3f.; He. 5:8f. are sometimes thought to represent a Christology flatly inconsistent with the preexistence motif of Paul, Hebrews, and John. But this view is myopic, for the key claim in such summary texts as Rom. 1:3f. and Acts 2:36 is that the Resurrection gave Jesus a new function and role. The Resurrection made Him Son-of-God-in-power. This claim in fact fits snugly within the broad, parabola-shaped states-of-Christ Christology as its upward stroke. The conceptually largest pattern is that of the preexistent Son of God condescending to move from riches to poverty; ministering, suffering, and dying; and then by resurrection and ascension being exalted, promoted, and recognized as "Prince and Savior" (Acts 5:31). What thus emerges in accommodating the adoptionistic texts to the larger picture is a biblical process-Christology within the parabola of the states of Christ.

B. Status of the Holy Spirit. The NT treatment of the Spirit is difficult, ambiguous, and sometimes even oblique to the interests of later trinitarianism.

1. Personhood of the Spirit. A number of NT passages seem to treat the Holy Spirit impersonally, reflecting what Bultmann called "dynamistic thinking" (I, 555). Thus the Spirit is able to fill or endow a person (Lk. 4:1; Acts 2:4; etc.), or is granted as a gift (Lk. 11:13; Rom. 5:5; etc.), or is poured out like fluid (Acts 2:17f.; Tit. 3:6). Some such references are anarthrous: what is promised as a gift is not "the Holy Spirit" but "Holy Spirit" (Lk. 11:13). Partitive genitive constructions suggest that Spirit is available in shares (He. 6:4). One obscure passage appears to assert that God's Spirit is to God as a human spirit is to a human being (1 Cor. 2:10f.).

On the other hand, the NT also contains a number of references to the Spirit or Paraclete that are undeniably personal. The Spirit speaks (Acts 21:11), searches (1 Cor. 2:10), bears witness and intercedes (Rom. 8:16, 26), teaches (Jn. 14:26), apportions gifts (1 Cor. 12:11), exercises will (Acts 16:6f.), can be grieved (Eph. 4:30), reflects (Acts 15:28), appoints (20:28), sends (13:4), and is lied to (5:3). The Johannine account of the Paraclete is especially rich in personal language.

Here is a methodological crux. On the one hand, the apparently impersonal statements are not conclusive. For even if the Spirit is a gift, persons can be gifts — as the Son is in Jn. 3:16. And if the Spirit is available in shares, so is Christ (He. 3:14). Indeed, if such titles as "Christ" and "Holy Spirit" are often used to refer to persons, they are also used, especially in Paul, in a sort of depersonifying soteriological synecdoche to refer to those persons' effects: their power, gifts, fruits, or even the whole new situation in history they inaugurate (Vos, pp. 58-61, 163-171; Smedes, pp. 43-77). And this latter usage in no way invalidates the personhood of either Christ or Spirit. On the other hand, perhaps biblical writers sometimes use personal references to the Spirit in a personifying way for what they actually regard as the power or presence of God — as they do elsewhere for God's name, hand, glory, face, finger, wisdom, and word.

What tips the balance in favor of a personal concept of the Spirit in the NT generally is the appearance of the Spirit's name in bi- and triadic formulas. Thus, if in Rom. 8:26, 34 Paul attributes the same intercessory function to Christ and the Spirit, and if intercession is a personal function, and if Christ is a person, then a reasonable inference is that the Spirit is a person too. The same is true of the reference to "another counselor" in Jn. 14:16 (cf. He. 10:5-8, 15-17, 29).

NT triadic formulas (Mt. 28:19; Rom. 14:17f.; Gal. 3:11-14; 4:6; 2 Cor. 1:21f.; 3:3; 13:14; 1 Pet. 1:2; etc.) are similarly suggestive. It is abstractly possible that the authors of these formulas have combined a reference to a faculty or power with references to two persons, but it seems relatively improbable. So one warily concludes that on balance the NT data present and support a personal concept of the Spirit.

2. Divinity of the Spirit. Evidence for the divinity of the Spirit is thinner and hazier than symmetrical fifth-century trinitarian statements suggest (cf. Athanasian Creed, above). The Spirit is called "God" at most once (Acts 5:3). OT passages about Yahweh are not applied to the Spirit. No ontological statements of divinity appear, as they do with regard to Christ. And the Holy Spirit in the NT is never an object of worship or prayer.

Still, the Spirit performs some divine functions. He judges (Jn. 16:8-11), pours out the love of God (Rom. 5:5), gives joy (14:17), hope (8:17-25), peace (8:6), regeneration (Jn. 3:5), and faith (2 Cor. 12:9). Also, the Holy Spirit can be blasphemed (Mk. 3:29; Lk. 12:10), which in the NT is usually an act of verbally injuring someone divine.
