B.S., M.Div., Th.M., Ph.D., Assistant Professor of New Testament, Bethel Theological Seminary, St. Paul, Minnesota.

SCHULTZ, SAMUEL J.
Th.D., Emeritus Professor of Biblical Studies and Theology, Wheaton College, Wheaton, Illinois.

SEGERT, STANISLAV
Ph.Dr., C.Sc., Professor of Biblical Studies and Northwest Semitics, Department of Near Eastern Languages and Cultures University of California, Los Angeles, California.

SHEA, WILLIAM H.
B.A., Ph.D., Research Associate, Biblical Research Institute, General Conference of Seventh-Day Adventists, Washington, D.C.

SHEPPARD, GERALD T.
B.S., M.Div., M.A., M.Phil., Ph.D., Associate Professor of Old Testament, Emmanuel College of Victoria University in the University of Toronto, Canada.

SIMPSON, JOHN W., JR.
B.A., M.A., Editorial Asssociate, Reference Works, William B. Eerdmans Publishing Company.

SITTERLY, CHARLES FREMONT*
M.A., Ph.D., S.T.D., Professor of Biblical Literature, Drew University College of Theology, Madison, New Jersey.

SMICK, ELMER B.
B.A., Th.B., S.T.M., Ph.D., Professor of Old Testament, Gordon-Conwell Theological Seminary, South Hamilton, Massachusetts.

SMITH, DUANE E.
B.S.E.E., M.A., M.Th., Biblical Scholar and Lecturer, Pomona, California.

SMITH, EDGAR W., JR.
B.A., B.D., Ph.D., Project Editor, *ISBE* Revision.

SMITH, GARY V.
B.A., M.A., Ph.D., Professor of Old Testament, Bethel Theological Seminary, St. Paul, Minnesota.

SODERLUND, SVEN K.
B.A., M.A., M.C.S., Ph.D., Registrar and Associate Professor of Biblical Studies, Regent College, Vancouver, British Columbia, Canada.

SPINA, FRANK A.
B.A., M.Div., M.A., Ph.D., Professor of Old Testament, The School of Religion, Seattle Pacific University, Seattle, Washington.

SPITTLER, RUSSELL P.
B.A., M.A., B.D., Ph.D., Associate Professor of New Testament, Fuller Theological Seminary, Pasadena, California.

STEELE, FRANCIS R.
B.A., M.A., Ph.D., Minister-at-Large, North African Mission, Upper Darby, Pennsylvania.

STEIN, ROBERT H.
B.A., B.D., S.T.M., Ph.D., Professor of New Testament, Bethel Theological Seminary, St. Paul, Minnesota.

STUART, DOUGLAS K.
B.A., Ph.D., Professor of Old Testament, Gordon-Conwell Theological Seminary, South Hamilton, Massachusetts.

SUN, HENRY T. C.
B.A., M.A., M.A., Doctoral Candidate in Old Testament, The Claremont Graduate School, Claremont, California.

SWEET, RONALD F. G.
B.A., Ph.D., Professor, Department of Near Eastern Studies, University of Toronto, Ontario, Canada.

TENNEY, MERRILL C.
Th.B., A.M., Ph.D., Late Professor of New Testament and Dean, Graduate School of Theology, Wheaton College, Wheaton, Illinois.

THIELE, E. R.
B.A., M.A., Ph.D., Late Professor of Antiquities, Andrews University, Berrien Springs, Michigan.

THOMPSON, JOHN ALEXANDER
A.B., M.Div., Th.M., Ph.D., Former Research Consultant, Translations Department, American Bible Society.

THOMPSON, JOHN ARTHUR
B.A., B.Ed., M.Sc., M.A., Ph.D., Former Reader and Chairman, Department of Middle Eastern Studies, University of Melbourne, Australia.

THOMPSON, WINFIELD L., JR.
M.A., M.A., Adjunct Faculty, Fuller Theological Seminary, Pasadena, California.

TREVER, JOHN C.
B.D., Ph.D., Director, Dead Sea Scrolls Project, School of Theology at Claremont, Claremont, California.

VAN ALSTINE, GEORGE A.
B.A., B.D., Th.M., Pastor, Altadena Baptist Church, Altadena, California.

VAN DAM, CORNELIS
B.A., B.D., Th.M., Th.D., Professor of Old Testament, Theological College of the Canadian Reformed Churches, Hamilton, Ontario, Canada.

VANELDEREN, BASTIAAN
A.B., B.D., M.A., Ph.D., Professor of Theology, Free University, Amsterdam, The Netherlands.

VANGEMEREN, WILLEM A.
B.A., B.D., M.A., Ph.D., Professor of Old Testament, Reformed Theological Seminary, Jackson, Mississippi.

VAN LEEUWEN, RAYMOND C.
A.B., M.A., B.D., Ph.D., Assistant Professor of Old Testament, Calvin Theological Seminary, Grand Rapids, Michigan.

VAN SELMS, ADRIANUS
Dr.Theol., Late Professor of Semitic Languages, University of Pretoria, South Africa.

VERHEY, ALLEN D.
B.A., B.D., Ph.D., Professor of Religion, Hope College, Holland, Michigan.

VIVIANO, PAULINE
B.A., M.A., Ph.D., Associate Professor of Theology, Loyola University, Chicago, Illinois.

VÖÖBUS, ARTHUR
M.A., D.Theol., Director of the Institute for Syriac Manuscript Studies and Professor Emeritus of Church History, Lutheran School of Theology at Chicago, Chicago, Illinois.

VOS, CLARENCE J.
A.B., Th.B., Th.M., Th.D., Professor of Religion, Calvin College, Grand Rapids, Michigan.

VOS, HOWARD F.
B.A., Th.M., Th.D., M.A., Ph.D., Professor of History and Archaeology, The King's College, Briarcliff Manor, New York.

WALLACE, RONALD STEWART
B.S., M.A., Ph.D., Professor Emeritus of Biblical Theology, Columbia Theological Seminary, Decatur, Georgia.

WALTON, JOHN H.
A.B., M.A., Ph.D., Assistant Professor of Bible, Moody Bible Institute, Chicago, Illinois.

WARING, DAWN E.
B.S., M.A., Ph.D., Adjunct Assistant Professor of Old Testament, American Baptist Seminary of the West, Southwest Branch, Covina, and Fuller Theological Seminary, Pasadena, California.

WATSON, DUANE F.
B.A., M.Div., Ph.D., Pastor, Tri-Church Parish United Methodist Church, North Western, New York.

WAY, R. J.
M.A., M.A., Minister, St. Columba's United Reformed Church, Leeds, England.

WEAD, DAVID W.
A.B., B.Th., B.D., Th.D., Minister, First Christian Church, Nashville, Tennessee.

WEDDLE, FOREST
A.B., M.S., Ph.D., Late Professor of Biblical Archaeology and History, Fort Wayne Bible College, Fort Wayne, Indiana.

WEIR, THOMAS HUNTER*
B.D., M.A., M.R.A.S., Lecturer in Arabic, University of Glasgow, Scotland.

WENHAM, GORDON J.
M.A., Ph.D., Senior Lecturer in Religious Studies, The College of Saint Paul and Saint Mary, Cheltenham, Gloucester, England.

WESTERHOLM, STEPHEN
M.A., D.Th., Assistant Professor of Religious Studies, McMaster University, Hamilton, Ontario, Canada.

WHALEY, E. BOYD
B.A., M.Div., Doctoral Student in Old Testament at Emory University; Director of Pastoral Services, Metro Atlanta Recovery Residences, Clarkston, Georgia.

WIEBE, JOHN M.
B.A., M.Div., Adjunct Professor, American Baptist Seminary of the West, Covina; Teaching Fellow, Fuller Theological Seminary, Pasadena, California.

WILLIAMSON, H. G. M.
B.A., M.A., Ph.D., Lecturer in Hebrew and Aramaic, University of Cambridge, England.

WILSON, GERALD H.
B.A., M.A., M.Div., M.A., Ph.D., Associate Professor of Biblical Studies, George Fox College, Newberg, Oregon.

WILSON, MARVIN R.
B.A., M.Div., M.A., Ph.D., Ockenga Professor of Biblical and Theological Studies, Gordon College, Wenham, Massachusetts.

WISEMAN, DONALD J.
B.A., M.A., D.Lit., Emeritus Professor of Assyriology, University of London; Chairman and Former Director, British School of Archaeology in Iraq.

WOLFF, ROBERT J.
B.A., M.A., Ph.D., Associate Professor of Biology, Trinity Christian College, Palos Heights, Illinois.

WRIGHT, CHRISTOPHER J. H.
M.A., Ph.D., Tutor and Lecturer in Old Testament, All Nations Christian College, Ware, England.

WRIGHT, G. ERNEST
B.A., B.D., Ph.D., Late Professor of Divinity, Harvard University, Cambridge, Massachusetts.

WYATT, ROBERT J.
B.A., M.A., Ph.D., Former Editorial Associate, *ISBE* Revision.

WYPER, GLENN
B.A., B.D., Th.M., Registrar, Professor in the Biblical/Theological Studies Department, Ontario Bible College, Willowdale, Ontario, Canada.

YAMAUCHI, EDWIN M.
B.A., M.A., Ph.D., Professor of History, Miami University, Oxford, Ohio.

YOUNG, BRADFORD H.
B.A., M.A., Ph.D., Lecturer in Early Christianity and Judaism, Hebrew University, Jerusalem, Israel.

YOUNGBLOOD, RONALD F.
B.A., B.D., Ph.D., Professor of Old Testament and Hebrew, Bethel Theological Seminary, West Campus, San Diego, California.

ZORN, WALTER D.
B.A., M.Div., Ph.D., Professor of Biblical Languages and Old Testament, Great Lakes Bible College, Lansing, Michigan.

PUBLISHERS' NOTES TO VOLUME FOUR

With this volume the process of revising the *ISBE* comes to a close. We are grateful to the editors and to the hundreds of authors who have helped us achieve our goals.

A new name on the title page is that of Gerald H. Wilson, who has served as Consulting Editor for Old Testament in the work on this volume, while Lawrence T. Geraty, now a college president, relinquished similar duties.

The publishers' staff has seen a few more changes. For Volume IV, Trudy Weicker Luke has done the work with photographs and proofreading formerly done by Rollins-Page and Adams, and John W. Simpson, Jr. served as Editorial Associate during the latter stages. The work of others mentioned in previous volumes — Smith, Lee, Opperwall, Knapp, Prus, Barney, Bauer and Beversluis — has continued. THE PUBLISHERS

ABBREVIATIONS

GENERAL

A	Codex Alexandrinus (*See* TEXT AND MSS OF THE NT I.B)
abbr.	abbreviated, abbreviation
act.	active
Akk.	Akkadian
Amer. Tr.	J. M. P. Smith and E. J. Goodspeed, *The Complete Bible: An American Translation*
Am.Tab.	el-Amarna Letters (*See* AMARNA TABLETS)
Apoc.	Apocrypha
Apost. Const.	Apostolic Constitutions
Aq.	Aquila's Greek version of the OT (*See* SEPTUAGINT)
Arab.	Arabic
Aram.	Aramaic
art.	article
Assyr.	Assyrian
ASV	American Standard Version
AT	Altes (or Ancien) Testament
AV	Authorized (King James) Version
b.	born
B	Codex Vaticanus (*See* TEXT AND MSS OF THE NT I.B)
Bab.	Babylonian
bk.	book
Boh.	Bohairic (dialect of Coptic)
ca.	*circa*, about
Can.	Canaanite
cent., cents.	century, centuries
CG	Coptic Gnostic (*See* NAG HAMMADI LITERATURE)
ch., chs.	chapter(s)
Chald.	Chaldean, Chaldaic
col., cols.	column(s)
comm., comms.	commentary, commentaries
Copt.	Coptic
d.	died
D	Deuteronomist (*See* CRITICISM II.D.4); also Codex Bezae (*See* TEXT AND MSS OF THE NT I.B)
diss.	dissertation
DSS	Dead Sea Scrolls
E	Elohist (*See* CRITICISM II.D.4); east
E.B.	Early Bronze (Age)
ed., eds.	editor, edition, edited (by), editors, editions
Egyp.	Egyptian
E.I.	Early Iron (Age)
Einl.	*Einleitung* (Introduction)
Eng. tr.	English translation
ERV	English Revised Version (1881-1885)

Q.

I. Definition
II. Data
  A. Arguments For Postulating Q
  B. Arguments Against Postulating Q
III. Provenance and Purpose
IV. Theology

I. Definition.–A close inspection of the Synoptic Gospels shows that some material is common to Matthew and Luke but does not appear in Mark. Q (from Ger. *Quelle*, "spring, source") is the name given to the hypothetical body of teaching from which this common material was derived. (On the origin of the siglum Q see W. F. Howard, *Expos.T.*, 50 [1938/39], 379f.; supplemented and corrected by H. K. McArthur, *Expos.T.*, 88 [1976/77], 119f.; L. H. Silberman, *JBL*, 98 [1979], 287f.; J. J. Schmitt, *JBL*, 100 [1981], 609-611.) Q also stands for the theory of Gospel origins that combines the notion that Mark was the first Synoptic Gospel to be written (so C. H. Weisse, in 1838) with the hypothesis that Matthew and Luke each drew on both Mark and non-Markan material.

The supposition of Q has, however, come under close and critical scrutiny beginning in the 1950's. Some opponents of the theory have become so emotionally stirred as to register their disavowal of the hypothesis in terms like "unnecessary and vicious" (B. C. Butler, *Originality of Matthew* [1957], p. 170). C. S. Petrie (*Nov.Test.*, 3 [1959], 28-33) commented, "'Q' stands for 'quirk' and should be wholly forgotten and promptly dispatched to the limbo of forlorn hypotheses," on the ground that the number of hypotheses about Q have predisposed scholars to doubt its existence. J. Moffatt (*Intro. to the Literature of the NT* [3rd ed. 1918], pp. 194-204) listed no fewer than sixteen attempts to reconstruct the scope of Q. Other doubts regarding Q's inferred existence will be discussed later.

II. Data.–A. Arguments for Postulating Q. 1. Matthaean and Lukan Diction. Over two hundred verses (225 is the number usually assigned in recent criticism) in Matthew and Luke have similar content and diction. In several the agreement is verbally exact. Mt. 3:7-10 par. Lk. 3:7-9 have a precise agreement of 61 out of 63 words in the Greek, with only minor variations within the text. Two of the differences are clearly Luke's stylistic improvements, such as *árxēsthe* ("begin") for *dóxēte* ("presume"), and an adverbial *kaí*. Other instances of such parallel reporting — and in some cases verbatim correspondences — are Mt. 6:24 par. Lk. 16:13 (27 out of 28 words identical); Mt. 7:7-11 par. Lk. 11:9-13; Mt. 11:21-23 par. Lk. 10:13-15 (in the woes on the Galilean towns 43 words out of 49 are the same); Mt. 12:43-45 par. Lk. 11:24-26; cf. J. A. Fitzmyer, p. 151.

But the two Gospels sometimes diverge in what is ostensibly the same account of Jesus' teaching. V. Taylor (*JTS*, 4 [1953], 27-31) examined these passages and suggested four reasons for the divergence in seven of them (Lk. 10:25-28 par. Mt. 22:34-40; Lk. 12:54-56 par. Mt. 16:2f.; Lk. 13:23f. par. Mt. 7:13f.; Lk. 13:25-27 par. Mt. 25:10-12; Lk. 14:15-24 par. Mt. 22:1-10; Lk. 15:4-7 par. Mt. 18:12-14; Lk. 19:12-27 par. Mt. 25:14-30). (1) Each evangelist had the liberty of making minor editorial alterations when transmitting the text. (2) There may be different recensions. One may cite here a few cases not in Taylor's list: Mt. 5:3f. par. Lk. 6:20f.; the two versions of the Lord's Prayer (Mt. 6:9-15; Lk. 11:2-4). G. Bornkamm (*Jesus of Nazareth* [Eng. tr. 1960], p. 218) used this flexibility to argue, "Q is still relatively close to the oral tradition, and remained exposed to its continuing influence." (3) Differing diction in two parallel accounts may have been caused by overlap of Q and Matthew's special source, his *Sondergut* (sometimes called M). In these cases Luke would have followed Q (and it is generally conceded that Luke presents the original *order* of Q), and Matthew M. Thus the verbal disagreements are ascribed to Matthew's conflating of M and Q, as V. Taylor argued (*Expos.T.*, 46 [1934/35], 68-74). J. P. Brown similarly thought that Matthew's version of Q blended material from Mark to produce "a larger sayings-document Q^{mt}" (*NTS*, 8 [1961/62], 27-42; see Fitzmyer, p. 169). (4) The idea of a composite Q document has been proposed to account for the discrepancies between Matthew and Luke. The theory is that there were two editions of Q, the Aramaic source R (showing variations between Matthew and Luke) and the Greek source T (showing close agreement). This view has been criticized severely (T. W. Manson, pp. 20f.), although C. K. Barrett defended it (*Expos.T.*, 54 [1942/43], 320-23). In a modified form, however, it has been refurbished in the more recent idea that Matthew's Q is a Greek production, whereas Luke's Q is a primitive translation from Aramaic (so M. Black, *Aramaic Approach to the Gospels and Acts* [3rd ed. 1968], pp. 270ff.). But this translation hypothesis is weak in view of N. Turner's strictures (*Expos.T.*, 80 [1969], 324-332).

2. Matthaean and Lukan Sequences. The two Gospels record common teachings in basically the same order, but there are divergences, which have raised the question of

which order is preferable. The chief evidence shows that Luke's sequence is the more compact and unified, while Matthew's teaching is scattered throughout his Gospel. Some have tried to show that Matthew's version of Q is contained in the blocks of his teaching, and that each Q section ends with the same formula ("When Jesus had completed all these sayings"). But the insertions of Q in Luke seem to have preserved the order better, since Luke's editorial procedure is less open to obvious influence (e.g., ecclesiastical and liturgical) than Matthew's (so V. Taylor, "The Original Order of Q," pp. 246-269).

Matthew's and Luke's reproduction of their common matter in a common sequence but in different contexts suggests that Q was a written, not simply an oral, source. Fitzmyer (pp. 15f.) drew attention to an interesting fact: Matthew placed the sayings material in Markan contexts, but Luke generally grouped it in separate, interpolated blocks (this is the foundation of the proto-Luke theory). With these diverse and idiosyncratic methods, a common sequence is hardly to be expected, but V. Taylor convincingly showed (in the essays cited) that the peculiarity of distribution is Matthew's. Matthew inserted material not in a sequence established by Luke but into the framework set by M, and he sought a topical arrangement — a trait pervading his entire Gospel. This topicality is a clear sign of the "original" Lukan order of common material (see O. E. Evans, *Expos.T.*, 72 [1960/61], 298).

3. Doublets. W. G. Kümmel regarded "doublets" as "the decisive proof" for Q's existence. Doublets are the sayings that occur twice in the Synoptics, first in Mark and the double tradition of Matthew and Luke, and again only in Matthew and Luke. Hence it is concluded that the second saying must come from a source that contains an independent tradition — i.e., Q (*Intro. to the NT* [Eng. tr., 2nd ed. 1975], p. 67). The data can best be appreciated in a table. The left column shows the texts in the triple tradition (Mark, Matthew, and Luke); the right column indicates the same saying found elsewhere in the double tradition of Matthew and Luke.

Triple Tradition	Double Tradition
Mt. 13:12; Mk. 4:25; Lk. 8:18	Mt. 25:29; Lk. 19:26
Mt. 16:24f.; Mk. 8:34f.; Lk. 9:23f.	Mt. 10:38f.; Lk. 14:27; 17:33
Mt. 16:27; Mk. 8:38; Lk. 9:23f.	Mt. 10:32f.; Lk. 12:8f.
Mt. 24:9, 13; Mk. 13:9, 13; Lk. 21:12, 17	Mt. 10:19f., 22; Lk. 12:11f.

B. Arguments Against Postulating Q. Since the case for Q's existence falls short of positive proof, some counterarguments should be considered.

1. Heterogeneous Content. There are no accepted precise limits to the Q material, and critics have alleged difficulty in finding an inner coherent structure in its proposed contents. Its looking like a ragbag of "odds and ends" has been offered as an argument against it.

R. A. Edwards, however, in treating the theological emphases of the community that produced Q, saw a coherent pattern of beliefs and practices. He sought to build up an imaginative picture of the church that assembled the Q teaching. It was a community with a keen expectation of the Lord's imminent return, "standing on its tiptoes in anticipation of the parousia," yet cherishing a "clan wisdom" that ordered its affairs in the material world. A ministry of prophets drew its authority from Jesus the prophetic Son of man, but each member had the responsibility of proclaiming the message. This vivid picture probably takes the evidence to an unwarranted limit, but at least it shows an inner coherence of the Q material.

2. Uncertain Order. The sequence of Q's sections is undetermined. Luke's order is usually accepted as more reliable (i.e., better preserved) than Matthew's (as observed above), but there is a case for the superiority of the Matthaean sequence. If the latter case is correct, it would stultify the case for Q, for Luke would then have drawn on Matthew (on this thesis, see W. R. Farmer, "A Fresh Approach to Q," in J. Neusner, ed., *Christianity, Judaism and Other Greco-Roman Cults*, II [1975], 39-50; cf. earlier studies noted by J. A. Fitzmyer, p. 167).

Fitzmyer offered five reasons for denying Luke's dependence on Matthew's material. (1) The stories in M are original (e.g., Jesus' promise to Peter, Mt. 16:16b-19) and can hardly be regarded as examples of Mark's deletions, and so they cannot be Lukan omissions. (2) It has not been explained why Luke would have chosen to break up Matthew's sermons (e.g., Mt. 5–7) in order to scatter such material across his pages. (3) With minor exceptions Luke never inserted the material of the double tradition into the same Markan context as Matthew — a surprising fact if he had derived such material from Matthew, since the Matthaean framework was already appropriate to receive such inserted material. (4) It is simply not true that Matthew has exclusive rights to preserving the original setting of a Gospel episode; sometimes Luke retains the more natural setting, as L. Vaganay showed (*Le Problème synoptique* [1954], pp. 295-99). This retention is hard to explain if Luke simply depended on Matthew, but it is understandable if both evangelists followed and edited a common source. (5) Divergences in the Birth and Infancy narratives cannot be explained if Luke was indebted to Matthew. Fitzmyer (pp. 149f.) cogently refuted the leading objection to the Q theory (voiced by A. Farrer, "On Dispensing with Q," in D. E. Nineham, ed., *Studies in the Gospels: Essays in Memory of R. H. Lightfoot* [1957], pp. 55-88), namely, that it is "unnecessary" if Luke used Matthew. (See also, contra Farrer, F. G. Downing, *NTS*, 11 [1964/65], 169-181; E. L. Bradby, *Expos.T.*, 68 [1956/57], 315-18.)

3. Absence of Contemporary Parallels. Farrer also argued that there are no precise contemporary parallels to the hypothetical Q document. The nearest extant one is the Gospel of Thomas, part of the Nag Hammadi library, yet there are still differences, not least in the *Gattungen* or literary forms and usages of the two "documents." J. M. Robinson ("*Logoi Sophōn:* On the *Gattung* of Q," J. M. Robinson and H. Koester, eds., *Trajectories through Early Christianity* [1971], pp. 71-113) proposed that Q belongs to a literary pattern made up of collections of sayings of wise men found in canonical Proverbs, Mish. *Aboth*, and the Enoch literature. There was a line of development that began in Jewish writings and eventually included Gnostic compositions like the Gospel of Thomas. In this view Q is a book of the acts of Wisdom (a personified figure, identified with the Gnostic revealer in Gnosticism). Robinson's chief contribution is his frank admission that the *Gattung* of Q differs from that of the canonical Gospels (see C. H. Talbert, *What Is a Gospel? The Genre of the Canonical Gospels* [1977], esp. p. 116), and his inference that Q's presentation of Jesus is distinct from that of the Church's Gospels, even though two Gospels have incorporated the Q material. The difficulty with this proposition is that Thomas puts situationless *logia* (114 of them) into the mouth of the risen Lord, whereas Matthew and Luke fit Jesus' teaching into the historical contexts of His earthly, Palestinian ministry.

4. Unexplained Disappearance. If Q did exist, why did it disappear? T. W. Manson (pp. 19f.) replied that the early Christians had no interest in preserving archives. But, scholars have countered, Q is supposed to have been an indispensable collection of *logia* of Jesus, and thus it may well have had antiquarian interest and would hardly have been allowed to perish.

One suggestion is that after the substance of Q had been

incorporated into the Church's Gospels there would have been no further need to perpetuate Q's independent existence. But one cannot tell this, and arguments that rest on "lost" books are notoriously weak. For this reason, as will be observed, there is less talk today of Q as a literary unit and more recognition that Q is a cipher to denote the rule that "stuff in Matthew and Luke but not in Mark goes into Q" (H. Palmer, *Logic of Gospel Criticism* [1968], pp. 170f.). But this limitation has not prevented many modern scholars from insisting that Q — however delineated — possesses a recognizable theology and *Tendenz*.

5. Unusual Synoptic Handling. An argument partly from evidence and partly from logic is elaborated by T. R. Rosché (*JBL*, 79 [1960], 210-220). On the basis of statistical analysis of the triple- and double-tradition data, he showed that Matthew and Luke's handling of the Q sayings of Jesus seems to differ from their handling of the Markan sayings of Jesus. But Rosché's statistical data have been questioned by C. E. Carlston and D. Norlin (*HTR*, 64 [1971], 59-78).

One may conclude that many scholars now speak less confidently of Q as a document, preferring to call it a "layer of tradition" or "stratum," or even simply a cipher for oral material found in Matthew and Luke. Perhaps the best cautious summary is that of W. L. Knox: "It is necessary to insist that Q is simply a hypothetical document; its claim to have existed rests on its being the best hypothesis to explain the fact that there is much material in these two Gospels [Matthew and Luke] which shows so close a resemblance of wording (sometimes amounting to complete identity) that it must have been derived by both of them from a common written source, or at least an oral source which was regarded as authoritative and [was] memorized by Christian teachers" (*Sources of the Synoptic Gospels*, II [1975], 3).

III. Provenance and Purpose.–It has been asserted that Q has an early provenance, in a Palestinian setting, that takes one back to the earliest type of Christianity. Support for this assertion is found in Q's picture of Jesus' ministry, which vividly portrays the Jewish people, with their organized life in Palestine (see G. Theissen, *Sociology of Early Palestinian Christianity* [Eng. tr. 1978]).

Furthermore, the Q version of the mission charge (Lk. 10:2-12) still restricts this mission to Israel (as in Matthew's archaic source, 10:5f.; 15:21-28), though there are hints of an expansion (esp. in Lk. 13:28-30). Also, Q's kerygma has links with the preaching immediately following Pentecost (Acts 2–3), preaching that does not yet use Isa. 53 as a Passion text and that, on the basis of Psalm 118:22f., sees the Resurrection as a vindication of Jesus' claim. But Q's kerygma is not necessarily a rival kerygma, as Edwards suggested (p. 149).

The early Christians' desire to preserve the Lord's words is evidenced by Q, though they did not intend to codify His teaching or produce a verbally correct and rigid compendium. The purpose of Q has been actively debated. The older interpretations built on a firm distinction between the Church's public proclamation (kerygma) and its ministry of instruction (didache). The most suitable *Sitz im Leben* of Q is in the latter category, since it seems clearly to reflect a concern to preserve the Lord's words for the education and training of new converts (so A. Harnack, *Sayings of Jesus* [Eng. tr. 1908], pp. 243ff.; M. Dibelius, *From Tradition to Gospel* [Eng. tr. 1934], p. 235; R. Bultmann, *History of the Synoptic Tradition* [Eng. tr. 1963]; esp. T. W. Manson, pp. 15ff., who classified Q as a manual of pastoral care). This interpretation was later defended by M. Hengel, who called Q "a record of the teaching of Jesus" (*Son of God* [Eng. tr. 1976], p. 75), and by G. N. Stanton, who described Q as "authoritative words and actions [of Jesus], being used in instruction of those within the community and also in an evangelistic context" (p. 42).

The description of Q as catechesis needs modifying in the light of W. D. Davies's discussion (*Setting of the Sermon on the Mount* [1964], pp. 366-386). He insisted that Q's chief emphases all relate to the note of crisis that sounds throughout the material. This crisis is precipitated by Jesus' announcement of the new age of grace and centers in His person and claim. Davies's position is well argued, although some doubts may be entertained over his comparison of Q's so-called catechesis with the exhortations in the Pauline and Petrine Epistles. It could be that the former material belongs to the Palestinian church life, whereas the latter represents Christian ethical patterns adapted to life in Greco-Roman society.

The classification of Q as a repository of Jesus' words for pastoral instruction has been attacked, notably by H.-E. Tödt (pp. 241ff.). Tödt concluded from the absence of a Passion story in Q that Q's theology belongs to a different world from that of Mark and Paul — not parallel with that world nor geographically removed from it (as B. H. Streeter once proposed; cf. *The Four Gospels* [1924], p. 292). In Q one confronts a rival Christology in which Jesus is the exalted Son rather than a savior (who fulfils Isa. 53). According to Q, the Son of man will be vindicated in a future parousia (as in Acts 3:20ff.), and the words of Jesus carry weight as ordering the community's life in preparation for that event, when the Son of man will resume relations with His followers. But W. G. Kümmel (*Intro. to the NT*, p. 73) denied such a conclusion, maintaining that the only early Palestinian church that is known was already confessing Christ crucified for human sins (1 Cor. 15:3-5). M. Hengel (*Son of God*, p. 75) also denied the existence of any special "Q group" of Christians in whose theology the cross of Jesus does not atone for sin. In particular, Hengel opposed S. Schulz, who in the interests of a complex diversity within pre-Pauline Christianity attributed the Q sayings to the exalted Lord. Q, Hengel averred, contains what was said by the earthly Jesus.

Some have attempted to discover the historical Jesus through Q. For example, H. Schürmann ("Die vorösterlichen Anfänge der Logientradition," in H. Ristow and K. Matthiae, eds., *Der historische Jesus und der kerygmatische Christus* [1960], pp. 342-370) argued that some of Q was collected during Jesus' ministry and used by the disciples in their preaching mission (Mk. 6:7-13; Lk. 10:1-12). Q establishes a link between the pre-Easter and apostolic church communities.

An unsolved question is the extent of Q's knowledge of Jesus' mission. Some scholars have been content to describe Q as a digest of the sayings of Jesus, much like the prophetic books of the OT, which present the prophets' oracles with a minimum of narrative framework. These oracles are often introduced with an account of the prophet's call, but they do not include any account of his death. Thus Q might be designated "The Book of the Prophet Jesus" (F. F. Bruce, *St. Matthew* [1970], p. 3). E. Bammel, however, argued on the basis of Luke 22:29f. that Q is parallel with the testamentary literature of later Judaism (e.g., Testaments of the Twelve Patriarchs) and that it contains a story of a rejected son of man and a martyred teacher of wisdom, with the message of the cross conveyed as an "example to be imitated" ("Das Ende von Q," in O. Böcher and K. Haacker, eds., *Verborum Veritas* [1970], pp. 39-50).

IV. Theology of Q.–The issues of tradition and redaction have been raised in reference to Q (see R. D. Worden). The most elaborate attempt to detect several layers of

tradition in Q was made by S. Schulz. He contended that from the perspective of tradition history Q has no unity, but that various strata — Palestinian, Jewish-Hellenistic, and Hellenistic — may be uncovered (p. 42). Other studies have sought to locate the Q source in a suitable *Sitz im Leben* by means of its theological motifs, which would have developed in response to and in interaction with the needs and challenges of the community that preserved Q.

P. Meyer (*Community of Q* [1967]) saw Q's theology as that of a community being vigorously persecuted by Jews. The Q community would have likened itself to the OT prophets, who also were rejected. The motifs of the document are consolation for the faithful and judgment on the Church's enemies.

A. P. Polag (*SE*, 4 [1968], 72-74; *Die Christologie der Logienquelle* [1968]) distinguished three phases in Q's Christology. The earliest phase is the setting of the Q material in Jesus' own lifetime (specifically Lk. 7:18-23 par.; 11:14-23 par.); this is similar to Meyer's view. Here the emphasis falls on Jesus' activity and authority as heralding God's saving action. Jesus' ministry shows signs of God's saving power in the present; He overcomes Satan by announcing a kingdom at hand. The call is to follow Jesus, and the judgment on Israel as a disobedient people is sounded. But no christological titles are found at this stage, and there is no interest in Jesus' person or His teaching about the future. The message is ethical in the sense that it enshrines Jesus' call to discipleship, which in turn is based on His authority.

At the Resurrection, according to Polag, a new era opens. Here he corrected Tödt, for whom the Resurrection meant simply a resumption in relations between Jesus and His followers. Polag argued that a new situation was created in the Resurrection, marked by a more profound call to decision that was based on a renewed interest of the community in scriptural exegesis. This interest led to a renewal of the preaching to Israel and produced more interest in Jesus' enigmatic person and His relationship to God. Scriptural proofs were added, and to this second redaction the introductory pericopes (the Baptist's preaching and Jesus' temptations) were added, as were the final christological elements, such as the titles of sonship and the work of the Holy Spirit.

The third redaction of Q indicates a change of *Sitz im Leben* from a post-Easter setting to one that enlarges the circle of the Christian mission (though it is still within Palestine) and takes in elements from the Church's liturgy.

D. Lührmann (*Die Redaktion der Logienquelle* [1969]) saw eschatology as a deciding factor in Q's redaction. Prominent features are the teaching of Israel's opposition and of the impending salvation of the Church as Jesus comes as Son of man to save His people and to judge Israel. Lührmann dated this eschatological perspective after the Palestinian period of the Church's life, and he maintained that Q picks up Hellenistic traditions, which are evident in the "hellenized" theology of the christological confession (Lk. 10:21f. par. Mt. 11:25-27) and in the Gentile opposition to Israel, a theme frequent in Q. Interestingly, this interpretation is exactly the opposite of T. W. Manson's. Manson thought that Q has "a friendly attitude towards Gentiles" (p. 20) and that its teaching contains a tacit invitation to them. The Hellenistic origin of the final formulation of Q (A.D. 50-60) was opposed by P. Hoffmann (*Studien zur Theologie der Logienquelle* [1968]; *BZ*, 13 [1969], 207-223), who argued that Q comes out of a nonviolent, nonrevolutionary Christian group, motivated by love for enemies and averse to the messianic struggle against Rome.

Another treatment of Q and its setting in early Christianity is that of G. N. Stanton. His chief contribution is an attack on Tödt's supposition that Q was composed with *one* specific purpose in mind. Stanton agreed with Tödt that Q has a firm conviction regarding Jesus' role as "the coming one" and "the herald of good news to the poor" (Mt. 3:11f. par. Lk. 3:16f.; Mt. 11:2-6 par. Lk. 7:18-23), and announces Jesus, in the temptation story (Mt. 4:1-11 par. Lk. 4:1-13), as entering on His mission as God's son and servant, anointed with the Spirit. But this picture is not incongruous with the possibility that the Q community cherished materials explaining Jesus' rejection and passion. Stanton thus opposed the idea that Q's Christology was a Passionless kerygma and argued that Q's lack of a specific Passion narrative does not mean that the community was uninterested in the significance of Jesus' death and vindication. On the contrary, Q's interest in His resurrection and continuing presence as Son of man requires that Q's community must have asked itself why Jesus had died.

The upshot of this discussion is to postulate a much wider purpose for Q than Tödt, Lührmann, and others have granted and to submit that Q may well have helped the community to instruct its members as well as to evangelize.

QESITAH. *See* MONEY.

QOHELETH kō-hel'əth. *See* ECCLESIASTES.

QOPH kōf [ק]. The nineteenth letter of the Hebrew alphabet, transliterated in this encyclopedia as *q*. It also came to be used for the number one hundred. *See* WRITING.

QUAIL [Heb. *śᵉlāw* (Ex. 16:13; Nu. 11:31f.; Ps. 105:40); Gk. *ortygométra* (Wisd. 16:2; 19:12); Lat. *Coturnix* (2 Esd. 1:15)]. The old world quail *(Coturnix coturnix)*, a small, mottled brown game bird about 18 cm. (7 in.) long, is the only member of the subfamily *Phasianinae* (including quails, partridges, and pheasants) that is migratory. The routes of migration run from southern Europe, along the eastern Mediterranean coast, through the Sinai Peninsula, to Arabia or West Africa. The quails travel southward in late summer and northward in early spring (the time of the Israelite exodus from Egypt). These birds are powerful fliers over short distances, but migration over long distances is almost impossible without the aid of winds (cf. Nu. 11:31). Since they normally fly low (cf. NEB "three feet above the ground"), a change of wind may force them to land. Because of exhaustion they sometimes need to rest on the ground for a day or two, making them easy prey for hunters. Herodotus (ii.77) described how the Egyptians spread out the quails to dry in the

A quail painted on the outside of an Egyptian coffin. This Middle Kingdom (*ca.* 2100-2000 B.C.) hieroglyph represents the letter *w* (Cairo Museum; photo Oriental Institute, University of Chicago)

sun (cf. Nu. 11:32). Pliny the Elder in his *Natural History* referred to quails landing on a ship in such numbers that they sank it (Ferguson, p. 57). As recently as the early decades of the 20th cent. migrating quails were killed by Egyptians at the rate of two million annually; in 1920 a kill of three million was recorded (Cansdale, p. 168).

G. WYPER

QUAKE [Heb. hithpael of *gā'aš* (2 S. 22:8 par. Ps. 18:7 [MT 8]), *zālal* (Jgs. 5:5; Isa. 64:1 [MT 63:19b], 3 [MT 2]), *ḥāraḏ* (Ex. 19:18), *nûṭ* (Ps. 99:1), *rāgaz* (1 S. 14:15; Isa. 5:25; Joel 2:10), *rā'aš* (Ps. 60:2 [MT 4]; 68:8 [MT 9]; Jer. 4:24; 8:16; 10:10; Ezk. 12:18; 31:16; 38:20; Nah. 1:5); AV also SHAKE, TREMBLE, BE MOVED, "flow down," "melt"; NEB also HEAVE, REEL, SHAKE, SHUDDER, TREMBLE. In Ex. 19:18 the NEB ("all the people were terrified") follows the LXX and nine Hebrew MSS in making the people (Heb. *hā'ām*) rather than the mountains (Heb. *hāhār*) the subject of the quaking (see *BHS*).

Every occurrence of "quake" is related to God. Some references are to the earth, mountains, etc. quaking at His presence (the theophany at Sinai, Ex. 19:18; Jgs. 5:5 [cf. v. 4]; Ps. 68:8; cf. Isa. 64:3). A number of texts refer to earthquakes being a result of God's wrath and judgment (1 S. 14:15 [cf. v. 23]; 2 S. 22:8 par. Ps. 18:7; Ps. 60:2; Isa. 5:25; 64:1, 3; Nah. 1:5). The personification of nature in such texts is clear from several other texts that parallel the quaking of the earth with the trembling of human beings (Ps. 99:1; Isa. 5:25; Jer. 10:10). Jer. 4:24; Ezk. 38:20; and Joel 2:10 seem to relate such earth-shaking judgment to a reversal of creation (see W. Holladay, *Jeremiah*, I [*Hermeneia*, 1986], 163-65; note esp. the listing of creatures in Ezk. 38:20 that parallels Gen. 1). In Ezk. 12:18 God tells Ezekiel to quake when eating and tremble when drinking in order to dramatize the coming judgment, when the inhabitants of Jerusalem will do likewise. In Jer. 8:16 the foe from the north threatens Judah, and the sound of the enemy horses makes the land quake. But even here God is the indirect cause, since, as the rest of the chapter makes clear, He has sent this judgment.

Though most scholars agree that the root *zll* II (meaning "quake, shake"), rather than *nzl* (meaning "flow"; hence AV), is used in Jgs. 5:5; Isa. 64:1, 3, the evidence is ambiguous. As R. N. Whybray pointed out (*Isaiah 40–66* [*NCBC*, repr. 1981], p. 262), in Jgs. 5:5 the MT has the qal of *nāzal* but the LXX presupposes the niphal of *zālal*, and in Isa. 64:1 the MT has the niphal of *zālal* but the LXX presupposes the qal of *nāzal;* either interpretation makes sense, though the frequency of the image of mountains quaking perhaps makes this interpretation preferable (cf. G. F. Moore, *ICC* on Judges [1895], pp. 141f.).

The verb *nûṭ* (Ps. 99:1) is a hapax legomenon, but its meaning is clear not only from the context but also from the Ugaritic cognate *nṭṭ*, which occurs in a similar context (*UT*, 51:VII:34f.), as M. Dahood pointed out (*Psalms*, II [*AB*, 2nd ed. 1973], 368; see also F. E. Greenspahn, *Hapax Legomena in Biblical Hebrew* [1984], pp. 14f.; cf. also pp. 48f.). Thus there is no need to emend the text (contra, e.g., KoB, p. 602).

See also EARTHQUAKE; SHAKE; TREMBLE. G. A. L.

QUARREL (noun) [Heb. *rîḇ* (Prov. 17:14; 26:17), hithpael part. of *'ānâ*–'happen,' 'meet' ("seek a quarrel," 2 K. 5:7); Gk. *machē* (2 Tim. 2:23; Tit. 3:9)]; AV also CONTENTION, STRIFE, STRIVING; NEB also DISPUTE, CONTROVERSY; (verb) [Heb. *rîḇ* (Gen. 26:20-22; Ex. 21:18; Isa. 58:4), *rāgaz*–'shake, tremble' (Gen. 45:24), niphal of *nāṣâ* (Lev. 24:10; 2 S. 14:6), hithpael of *qāla'* (Prov. 20:3), *dîn*–'judge' (Prov. 22:10), *māḏôn* (Prov. 18:19; 19:13; 26:20); Gk. *máchomai* (Acts 7:26), *éris* (Rom. 13:13; 1 Cor. 1:11; 2 Cor. 12:20), *dialogismós* (1 Tim. 2:8), *ámachos* ("avoid quarreling," Tit. 3:2)]; AV STRIVE, MEDDLE, CONTENTION, etc.; NEB also WRANGLE, "become involved in a brawl," etc.; **QUARRELSOME** [pl. of Heb. *māḏôn* (Prov. 26:21); Gk. *máchomai* (2 Tim. 2:24), *ámachos* (1 Tim. 3:3)]; AV CONTENTIOUS, STRIVE, "brawler."

Quarreling generally refers to verbal arguments (cf. *nṣh* in Lev. 24:10 and 2 S. 14:6, with its usual meaning of a physical struggle [see BDB, p. 663; KoB, p. 629]), though such verbal disputes can be the prelude to physical violence. The Bible mentions international political quarrels (2 K. 5:7) and local quarrels over land (Gen. 26:20-22), as well as individual, personal quarrels. Quarrels between individuals are the most common and the most frequently condemned, whether they are of a theological or personal nature. The biblical perspective on quarreling is clear: it is to be avoided.

In the OT several terms for quarrel have legal connotations. Heb. *rîḇ* means to strive or dispute; in many prophetic contexts it refers to a LAWSUIT. *Rîḇ* denotes a verbal argument (Gen. 26:10-22), which can, however, lead to physical violence (Ex. 21:18; cf. Isa. 58:4). The meaning of Prov. 17:14 is clear: one should halt strife as soon as one becomes aware of it (see Mt. 5:21-48). McKane (p. 505) suggests a legal context (note *māḏôn*, "strife"). Heb. *dîn* and its derived noun *māḏôn*, which occurs almost exclusively in Proverbs, also often have juridical connotations; thus in Prov. 22:10 McKane (p. 245; cf. pp. 566f.) translated *dîn* "litigation." Here again the meaning is clear: scoffing causes strife (cf. Jude 18f.).

Several texts are problematic. In Isa. 58:4 the syntax is ambiguous, and interpreters are divided about whether quarreling is the purpose or the result of fasting. Commentators like R. N. Whybray (*NCBC*, repr. 1981, p. 214), G. A. F. Knight (*International Theological Comm.*, 1985, pp. 24f.), E. J. Young (1972, p. 418), and KD understand it as the result of fasting, i.e., when one fasts, one becomes irritable. Others (e.g., C. Westermann [Eng. tr., *OTL*, 1969], pp. 335f.; Calvin, *in loc.*) interpret it as the purpose

of fasting, i.e., these people fast in order to have time to argue and scheme (about business).

In Gen. 45 24 most translations seem to have slightly misconstrued Heb. *rāgaz,* which nowhere else has the sense of "quarrel"; rather, it means "tremble, shake," and by extension, "be angry" (cf. LXX *orgizō*; cf. also Ps. 4:4 [MT 5]; Prov. 29:9; Isa. 28:21). Hence JB "be upset" seems more accurate and sensible in the context (see v. 5), though one could conclude that Joseph was concerned that his brothers would now be jealous of Benjamin, to whom Joseph had given more gifts (v. 22), just as they had been jealous of him (Gen. 37; cf. Luther, *in loc.*).

Similarly, in 2 K. 5:7 most translations offer an interpretative rendering of Heb. *'nh* (which occurs only here in the hithpael); nowhere else does this root in any other stem or related form mean "quarrel." It is perhaps best to appeal to rabbinical Hebrew *'ny, 'nh, 'nn,* "to oppress." Thus the fearful (and faithless) Israelite king sees the Syrian king's request for Naaman's healing as a pretext for war. See J. Ellul, *Politics of God and the Politics of Man* (Eng. tr. 1972), p. 29.

The meaning of Heb. *gl'* (which is used only in the hithpael and only in Prov. 17:14; 18:1; 20:3) is uncertain (note that LXX translates it differently in each text). According to Jastrow (p. 251) in rabbinical Hebrew *gl'* in the hithpael means "be scratched open, laid bare," and by extension, "be argued." In 20:3 *gl'* is antithetically parallel to "keep aloof from strife [*rîḇ*]," and thus the context seems to require a meaning that matches the rabbinical use (which also fits the other OT occurrences).

In the NT most references to quarreling occur in Pauline exhortations, which are reminiscent of the OT wisdom admonitions. The six references to quarreling in the Pastorals reflect the difficulties the church was facing. False teachers spawned various heresies, perhaps Gnostic or some form of Hellenistic Judaizing with ascetic elements. According to Fee (e.g., pp. xx-xxvi, 34, 44) the exhortations reflect antitheses to the false teachers' behavior or character. Thus in 2 Tim. 2:23f. and Tit. 3:2, 9 Paul exhorts his readers to avoid quarreling (in these texts he uses the related terms *máchē, máchomai,* and *ámachos,* all of which in classical Greek and in the LXX refer frequently to a physical battle, as in Acts 7:26, but which in the rest of the NT refer to verbal disputes; see *TDNT,* IV, 527f.). Instead, they should be kindly and gentle (see 1 Tim. 3:3, where Paul describes the character of a bishop as "not violent but gentle, not quarrelsome"). Some of the quarrels seem to be primarily theological in nature (Tit. 3:9; cf. *logomachía* in 1 Tim. 6:4; 2 Tim. 2:14: "disputes about words"); Paul's repeated admonitions to avoid quarreling about theological points are as relevant for modern readers as they were in the 1st century.

Éris refers to verbal argument and often is included in lists of vices (Rom. 13:13; 2 Cor. 12:20; etc.). In 1 Cor. 1:11ff. Paul mentions a specific quarrel that threatened to divide the church: apparently members were boasting (vv. 29-31) that they followed or belonged to various leaders (Paul, Apollos, Cephas, Christ). Paul dismisses such party spirit as focusing too much on human beings and forgetting God and the gospel. See K. Barth, *Resurrection of the Dead* (Eng. tr. 1933), pp. 17-26.

Finally, in 1 Tim. 2:8 the meaning of *dialogismós* is uncertain. According to some (see *TDNT,* II, 97f.) it means doubting (so AV) or questioning, a meaning more in line with its usual sense of "thought, opinion." But others (e.g., D. Guthrie, p. 74; M. Dibelius and H. Conzelmann, *Pastoral Epistles* [Eng. tr. *Hermeneia,* 1972], p. 45) take it as strife, which seems to fit the context better (see MM, p. 151; cf. Eng. "dialogue").

Bibliography.—G. Fee, *1 and 2 Timothy, Titus* (*Good News Comm.,* 1984); D. Guthrie, *Pastoral Epistles* (*Tyndale NT Comms.,* repr. 1983); W. McKane, *Proverbs* (*OTL,* 1970). G. A. LEE

QUARRY [Heb. hiphil of *ns'*] (1 K. 5:17 [MT 31]; Eccl. 10:9); AV BRING, REMOVE; [*massā'*] (1 K. 6:7); AV BRING; [part. of *ḥāṣaḇ*] 2 Ch. 2:2, 18 [MT 1, 17]); AV HEW, BE HEWERS; [*maqqeḇeṯ bôr*] (Isa. 51:1); AV "hole of the pit"; **QUARRIED** [Heb. *maḥṣēḇ*] (2 K. 12:12 [MT 13]; 22:6; 2 Ch. 34:11); AV HEWED, HEWN; NEB HEWN.

Three Hebrew roots are used for "quarry": *ns'*, *ḥṣb,* and *nqb. Nāsa'*, "tear out," in the hiphil can refer to removing rocks (cf. AV, lit., "bring," "remove"), i.e., quarrying (1 K. 5:17; "he who quarries," Eccl. 10:9). *Massā'* (1 K. 6:7) is a noun formed from *nāsa',* hence the AV again translates "bring." *Ḥāṣaḇ* is another verb meaning "hew" or "dig," and the noun *maḥṣēḇ* is derived from this root (cf. AV, NEB). The verb also occurs in the Siloam inscription (lines 1, 4, 6; see *KAI,* II, 186-88). Finally, Heb. *meqqeḇeṯ bôr* (Isa. 51:1), literally "piercing of a pit" (cf. AV), clearly from the context refers to quarrying; the verb *nqb* also occurs in the Siloam inscription (lines 1f., 4).

A quarry is a rocky site from which stone is excavated, and sometimes, dressed, for building purposes. The ancient Palestinian quarries were never very deep, since an adequate amount of satisfactory stone occurred near the surface. The stonemasons normally sought cracks running along the grain of the rock and enlarged them by driving in wedges, often of wood, at regularly spaced intervals until a length of stone broke away. Once such a block had been dislodged, it was subdivided by the drilling of holes in a straight line and then split by other wedges. Freshly quarried rock is softer than rock that

A close-up of Cheops's pyramid at Gîzeh showing massive quarried and shaped stones. This structure was a notable achievement since stone was first used as a building material during this period (2590-2470 B.C.) (B. K. Condit)

has been exposed to the air for some time and is therefore not as difficult for the stonemasons to remove and shape.

The AV rendering "quarries" (Heb. *pᵉsîlîm*) in Jgs. 3:19, 26 is unfortunate, since the word comes from a verb *pāsal*, "carve." The RSV translation "sculptured stones" is preferable. R. K. H.

QUART. *See* WEIGHTS AND MEASURES.

QUARTER. Literally, one of four parts (cf. AV Dt. 22:12; Heb. *kānāp*, lit. "wing"; RSV, NEB, "corner"); used by the RSV to designate (1) a district of a city (*see* SECOND QUARTER) or (2) a region lying in any of the four cardinal directions on the compass, as in Jer. 49:36 (Heb. *qāṣâ*, lit. "border, extremity"); 50:26 (*qēṣ*, lit. "end, extremity"; AV "border"; NEB "harvest-time"); Est. 4:14 (*māqôm*, lit. "place" [so AV]; probably a veiled reference to God); Mk. 1:45 (Gk. *pantachóthen*, lit. "every direction"). The AV also uses it in this latter sense to render a variety of terms, e.g., Heb. *gᵉḇûl* (lit. "border," Ex. 13:7; RSV, NEB, "territory"), *yᵉrēḵâ* (lit. "far portion," Ezk. 38:6; RSV "uttermost part"), *pē'â* (lit. "side" [so RSV], Nu. 34:3; Josh. 15:5; etc.), *rû(a)ḥ* (lit. "wind," hence "direction"; 1 Ch. 9:24; RSV, NEB, "side"); Gk. *tópos* (lit. "place" [so RSV], Acts 16:3; 28:7), *gōnía* (lit. "corner" [so RSV], Rev. 20:8). N. J. O.

QUARTERMASTER [Heb. *śar mᵉnûḥâ*] (Jer. 51:59); AV QUIET PRINCE. An officer in charge of supplies for the troops. A literal translation of the MT would be "officer of the resting place," i.e., the officer in charge of securing arrangements for overnight stops. The LXX and Targum emend to *śar mᵉnāḥôṭ*, "officer of tribute." The RSV and NEB apparently emend to *śar maḥᵃneh* (lit. "officer of the camp"), following the Syriac.

QUARTUS kwôr'təs [Gk. *Kouartos*]. An otherwise unknown Christian who sends greetings to the Christian community in Rome through Paul, who calls him a "brother" (Rom. 16:23).

QUATERNION (Acts 12:4, AV). *See* SQUAD.

QUEEN [Heb. *malkâ*, *gᵉḇîrâ* (1 K. 11:19), *šēgāl* (Neh. 2:6; Ps. 45:9 [MT 10]), *śārâ* (Isa. 49:23); Aram. *malkâ* (Dnl. 5:10); Gk. *basílissa*]; NEB also PRINCESS. Either a woman who reigns by her own power, or the consort of a king.

The OT uses Heb. *malkâ* (fem. of *meleḵ*, "king") only once in reference to Israel: in Cant. 6:8 the king is said to have sixty "queens" in his harem (cf. v. 9). The singular form is used only in reference to foreign queens. The QUEEN OF SHEBA who visited Solomon (1 K. 10; cf. Mt. 12:42 par. Lk. 11:31) apparently ruled her country as a sovereign. Queen Vashti, the consort of King Ahasuerus of Persia, held a position of special honor within the king's harem and wore a royal crown (Est. 1:11). Nevertheless, she was required to show absolute obedience to the king; when she disobeyed him she was removed from her "royal position" (1:19), and Esther was crowned queen in her place (2:17). Esther risked her life by appearing before Ahasuerus without having been summoned (4:11-16; 5:1f.; etc.) and pleading for the life of her people (7:3f.). Her courageous action preserved the Jews from annihilation, and consequently Queen Esther became a Jewish heroine.

The consort of King Artaxerxes, who is identified by the rare term *šēgāl* (Neh. 2:6), also appears to have held a position of honor. In its only other OT use, *šēgāl* designates the bride-consort of the Israelite king (Ps. 45:9 [MT 10]).

The goddess Isis conducts Queen Nefretere, consort of Ramses II, to her tomb. The hieroglyphs read: "Words spoken by Isis: Come, great royal wife Nefretere, beloved of Mut, justified, that I may give thee a place in the sacred Land." Facsimile of a tomb painting from the Valley of the Queens, Thebes (no. 66), 1295-1225 B.C. (courtesy of the Oriental Institute, University of Chicago)

In 1 K. 11:19 the title *gᵉḇîrâ* (lit. "great lady") is used of Tahpenes the consort of Pharaoh. In all other OT uses (where the term refers to Hebrew women) *gᵉḇîrâ* designates the queen mother rather than the king's consort. Most scholars agree that Aram. *malkâ* in Dnl. 5:10 refers to the Queen Mother rather than Belshazzar's consort. Likewise, "Candace" (Acts 8:27) is the title of the queen mother of Ethiopia, the ruling sovereign of that country (see comms.).

In Israel and Judah, as in surrounding countries, one of the wives in the royal harem held the king's preference (e.g., Bathsheba under David, Jezebel under Ahab; cf. Ps. 45:9). There is no evidence that the king's favorite wife was ever given an official title or position in the court, as the queen mother was. The only Hebrew woman who ever ruled by her own power was Athaliah, whose position as queen mother enabled her to seize the throne after the death of her son Ahaziah (2 K. 11:1-3). The influence exercised by some of the queen consorts (e.g., Jezebel; cf. 1 K. 19:1f.; 21:5-16) was probably due to the political power of their families.

On Rev. 18:7, *see* BABYLON IN THE NT.

See also QUEEN MOTHER; QUEEN OF HEAVEN.

N. J. O.

QUEEN MOTHER [Heb. *gᵉḇîrâ*]; AV QUEEN. The mother of the ruling king. The title *gᵉḇîrâ* (lit. "great lady")

designated an official position in the court. Although in 1 K. 11:19 the title is applied to Tahpenes the wife of Pharaoh, in Judah it is never used of the king's wife. Generally it was the king's mother who held the position of first lady in the realm.

The queen mother's importance is illustrated by the change in Bathsheba's position after her son became king. When her husband David was king she did obeisance to him like any other subject (1 K. 1:16, 31); but after her son Solomon became king, he did obeisance to her and had her sit at his right hand (2:19). The queen mother apparently wore a crown (Jer. 13:18). Often she is mentioned with the king (e.g., 2 K. 24:12, 15; Jer. 13:18; 29:2); the books of Kings almost always mention her name along with that of each Judean king) e.g., 1 K. 14:21, 31; 15:2; 22:42; 2 K. 8:26). Apparently it was possible for the queen mother to retain her position after her son's death: Maacah was queen mother under her son Abijam (1 K. 15:1f.) and also under Abijam's son (her grandson) Asa (vv. 8-10; cf. NEB). The *gᵉḇîrâ* could also be deposed by the king: Asa removed Maacah from the position because she had abused her authority by having an "abominable image" made for Asherah (v. 13). The extensive power of the queen mother explains why it was possible for Athaliah to seize the throne and reign over Judah for seven years after the death of her son Ahaziah (2 K. 11:1-3).

There is scant evidence that the queen mother held the same powerful position in the northern kingdom of Israel. Apart from Zeruah the mother of Jeroboam (1 K. 11:26), the mothers of the kings of Israel are not named. In 2 K. 10:13 the term *gᵉḇîrâ* is applied to Jezebel, but the word is spoken by a prince of Judah. Perhaps the dynastic instability of the northern kingdom did not allow this institution to develop there to the extent that it did in Judah.

In other ancient Near Eastern countries, as well as in Judah, the queen mother played a very influential role. For example, most scholars agree that in Dnl. 5:10 Aram. *malkâ* ("queen") refers not to Belshazzar's consort but to his mother (or possibly grandmother), Nebuchadnezzar's widow. The manner of her entry (without being summoned), the authoritative tone of her counsel, and her knowledge of Daniel's accomplishments during the reign of Nebuchadnezzar (vv. 11f.), all suggest that she held the important position of queen mother (see comms.). "Candace" ("the queen of the Ethiopians," Acts 8:27) was a hereditary title given to the queen mother of Ethiopia, who was traditionally the effective ruler of that country (see comms.).

QUEEN OF HEAVEN [Heb. *mᵉleḵeṯ haššāmayim*] (Jer. 7:18; 44:17-19, 25). A female astral deity worshiped by Jewish women in Judah and Egypt in the time of Jeremiah.

The veneration of astral bodies has been a part of human religion from very early times. In Mesopotamia the pantheon was liberally represented by deities connected with planets, stars, and celestial phenomena, while in Egypt the chief deity was the sun-god Re. Hadad, god of wind and storm, was a powerful member of the Canaanite pantheon, as was the fertility goddess Astarte, an astral deity usually identified with the Assyrian-Babylonian Ishtar, who was connected with the planet Venus. While the Sumerians thought of the deities merely as natural forces experienced personally, later generations attributed personality and extraordinary powers to the gods and venerated them superstitiously.

The Israelites were warned against participating in the cults of these pagan deities as early as the time of Moses (Dt. 4:19; 17:2-5) on pain of incurring the wrath of the one and only true God. Nevertheless, astral religion was a powerful competitor for the affections of the covenant people because of its wide popularity throughout the Near East, and by the time of Jeremiah it had established itself firmly, if perhaps surreptitiously, in Judah (*see* ASTROLOGY IV). Thus the prophet denounced the Jewish families who had violated the covenant faith by burning incense to *mᵉleḵeṯ haššāmayim*, baking cakes impressed with her image (or possibly in the shape of a crescent or star, symbols of Ishtar; *see also* RAISINS), and pouring libations to her. This goddess, who was venerated particularly by women (but with the support of their husbands), is probably to be identified with Ishtar/Astarte (*see* ASHTORETH), or possibly with the Canaanite goddess Anath, who on an Egyptian stele from Beth-shean is called "the queen of heaven, the mistress of the gods" (Ringgren, *Religions*, p. 142).

The Jews of Pathros in Egypt responded to Jeremiah's denunciation by declaring that they intended to continue to venerate the queen of heaven (Jer. 44:15-19, 35). Their interpretation of history was the opposite of Jeremiah's: they viewed the fall of Jerusalem (587 B.C.) and the other disasters that had befallen them as consequences of their neglect (probably due to Josiah's reforms) of the cult of the queen of heaven. The ELEPHANTINE PAPYRI give clear evidence of religious syncretism in the Jewish settlement in Egypt in the 5th cent. B.C.

QUEEN OF SHEBA shē'bə.

I. Biblical References
  A. OT
  B. NT
II. Traditional Elaborations
  A. Jewish
  B. Islamic
  C. Ethiopian

I. Biblical References.—Both Testaments chronicle a remarkable journey of an unnamed queen of Sheba (1 K. 10:1-10, 13; 2 Ch. 9:1-9, 12) or queen of the South (Mt. 12:42; Lk. 11:31), who traveled to Jerusalem with high curiosity and full retinue to confirm reports of Solomon's glory.

A. OT. 1. Literary Form and Purpose. The *genre* is an honorific narrative, part of a larger description of Solomonic splendor (1 K. 9:26–10:29; 2 Ch. 8:17–9:28). This literary form (sometimes called "legend"; see B. Long, p. 119) focuses not so much on the details or drama of the plot — neither the journey's date nor the queen's name is mentioned — as on the hero's remarkable attributes. The queen is the foil radiating the king's brilliance: she engages in a contest and loses (1 K. 10:2f.); disheartened (vv. 4f.), she affirms Solomon's grandeur (vv. 6f.), toasts the happiness of his household (v. 8), and blesses his God (v. 9); she bestows beneficence on him (v. 10), receives gifts from him (v. 13a), and returns home (v. 13b).

The *context* of the narrative in 1 Kings prompts comment on the literary purpose. The preceding verses (1 K. 9:26-28) describe Solomon's stepped-up commercial activities in the southern part of the Red Sea, which caught the queen's attention, and account for the placement of the queen's visit in the overall flow of 1 Kings. Note the repeated mention of "gold" which serves to stitch the materials

together (9:11, 14, 28; 10:2, 10f., 14, 16f., 18, 21f., 25).

If one purpose of the story is to glorify Solomon's wisdom, fame, and wealth, another may be to contrast Solomon's impeccable treatment of the queen and her appreciation of his God, Yahweh (10:9), with the shameful way that Solomon ultimately succumbs to the wiles of foreign women (probably of royal rank) and blatantly breaches Yahweh's covenant (1 K. 11; the Chronicler's celebration of David's household allows no mention of Solomon's apostasy).

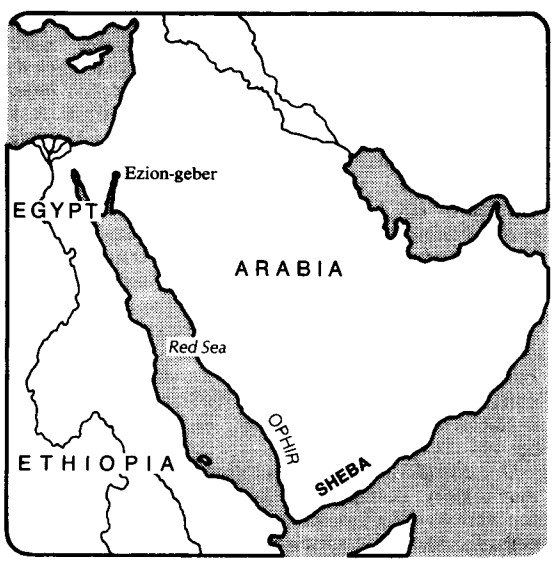
2. Historical Background. The first purpose of the queen's visit is stated plainly, "she came to test him with hard questions" (lit. "riddles"; 1 K. 10:2); such games or contests were apparently standard exercises among people of power, e.g., Samson [Jgs. 14:10-18]; *see* PROVERB); a similar use of a wisdom-saying in royal contest is Jehoash's fable against Amaziah of Judah (2 K. 14:9f.). That Solomon smartly passed all the tests (1 K. 10:3) contributed both to his glory and to the queen's dismay.

The second purpose has to do with the negotiation of commerical agreements and treaties regulating trade routes. The context, recounting the growth of Solomon's fleet and the enterprising actions of Hiram, the Phoenician ruler who managed it for him, points to this (1 K. 9:26-28; 10:11f.). Opening new sea lanes would decrease use of overland routes and various oases from which Sheba's court derived revenue.

The story yields cryptic clues that the chief motivations were political and economic: (1) the spices, gold, and gems of the queen's cargo (10:2, 10) were probably tribute paid for commercial favors and treaty concessions; (2) Solomon's answers (10:3) may not have been restricted to solving her puzzles but may have dealt with wider concerns (10:3); (3) the "all that she desired" (10:13) may include satisfactory political agreements.

Sheba is variously located (*see* SABEANS). Northern Arabia, NE of Medina, where a Wādī' eš-šeba may echo the name, was the home of a number of queens mentioned in Assyrian inscriptions as early as the 8th cent. B.C. (see N. Abbott, *AJSL*, 58 [1941], 1-22). If the queen ruled this northern area, the spices, gold, and gems carried to Jerusalem must have been acquired in trade, not procured in her homeland.

More likely, Sheba is Saba on the southwest coast of the Arabian peninsula (modern Yemen), S of Ma'in and W of Qataban and Hadramaut, South Arabian states. Although the several expeditions that excavated Sabean cities have not reached levels assignable to the 10th cent. B.C. when Solomon's empire flourished, the developed cultures that appear in the 8th cent. may well have roots from as early as the 12th century. This southwestern location better suits the references to Solomon's fleet based at Ezion-geber and also the queen's precious cargo. So far, however, Sabean inscriptions have revealed no record of female rulers.



The third possible site is in the Horn of east Africa across the Red Sea from Saba, near present day Djibouti. Arguments for this location include: (1) traditions extant in Ethiopia, Josephus, and Gregory of Nyssa that connect the queen of Sheba with Ethiopia and Egypt (see below); (2) the evidence that both Punt and Ophir were names used from antiquity for territories on both the west and east coasts of the Red Sea; the freedom from foreign incursion coupled with the narrowness of the Bab el-Mandeb — the gate (approximately 40 km. [24 mi.]) at the south end of the Red Sea — promoted a vast amount of commercial and social intercourse between Africa and Asia; notable examples of this are the common crops of frankincense and myrrh, the contribution of Jewish traders and settlers to Ethiopia's religious life (which shares many pre-talmudic features), and the linguistic affinities between epigraphic South Arabian and the Semitic languages of Ethiopia, especially the classical Ge'ez (see E. Ullendorff, *Semitic Languages of Ethiopia* [1955]; *The Ethiopians: An Intro. to Country and People* [1960], pp. 47-57); (3) "almug wood" (1 K. 10:11f.; *see* ALGUM) may hint at East Africa's lavish forests (E. Ullendorff, *BJRL*, 45 [1963], 488). This interpretation hinges partly on our understanding of the verses (10:11f. par. 2 Ch. 9:10f.) that further describe Hiram's merchant marine and its cargo from Ophir: is this passage a parenthesis (so DeVries, Gray, Long) or an integral part of the story describing other gifts which the queen had dispatched by sea? The context suggests the latter: "It scarcely matters very greatly whether we have to seek the queen's home in South-West Arabia or in the horn of Africa . . ., for the connections between the two shores of the southern Red Sea have at all times been close" (Ullendorff, *loc. cit.*).

This evidence leaves much room to affirm the basic reliability and antiquity of the story while acknowledging that some of the argument is inferential, since no specific external record from Solomon's time has yet been found to confirm the identity and homeland of the queen.

B. NT. The Gospels call Solomon's admirer "queen of the South" (Mt. 12:42; Lk. 11:31), where the Greek (*basilissa nótou*) reflects a Semitic idiom (cf. M. Black, *Aramaic Approach to the Gospels and Acts*, p. 68) like *malkaṯ šᵉḇā'*. Using "south" for "Sheba" highlights the length of the journey, whose rigor contrasts with the ready access of Jesus' audiences, rather than its place of origin. Luke's version, chiastic in form, begins with Jonah's sign to Nineveh (Lk. 11:30), proceeds to the queen's witness against Jesus' unheeding contemporaries (v. 31), and finally returns to the Ninevites' condemning presence (v. 32). The structure underscores the message: like Jonah's preaching, her adulation of Solomon served as a sign of God's truth and blessing; with the men of Nineveh she changed her attitude to God's providence and call. Luke's major point is that Jesus' preaching both continued and outshone Jonah's prophetic ministry and Solomon's wisdom teaching. The greater Prophet, the heaven-sent Sage, was in their midst. What could they expect but condemnation if they failed to hear Him? (See J. A. Fitzmyer, *Gospel According to Luke*, II [*AB*, 1985],

933f.; I. H. Marshall, *Gospel of Luke*, [*NIGTC*, 1978], pp. 482-87.)

Matthew mentions Jonah's three days and nights in the whale's belly (12:40), thus focusing more on Jesus' resurrection as the sign than on Jonah's preaching or Solomon's teaching (see F. W. Beare, *Gospel According to Matthew* [1981], pp. 281f.). This may have been prompted by the verbs which signal the presence of the queen (*egerthēsetai* v. 42) and the Ninevites (*anastēsontai*, v. 41) at the final judgment. Both may connote either resurrection or standing forth as prosecution witnesses. Was part of Jesus' intention to sharpen his denunciation by summoning a *woman* as a key witness?

In both Testaments we are dealing with an honorific narrative: the OT uses the queen's story to laud Solomon's glory; the NT, to affirm Jesus' centrality. But the NT sharpens the continuity by the contrast: the ancient queen bowed to Solomon's wisdom and Solomon's Lord; Gospel evidence indicates that Jesus' hearers did otherwise.

II. Traditional Elaborations.–The faiths that stem from the OT and share a home in the parts of Asia and Africa which front on the Mediterranean, the Red Sea, and the Gulf of Aden have embellished the story of the queen's visit, reflecting its impact on the consciousness of Jews, Moslems, and Christians.

A. Jewish. Josephus (*Ant.* viii.6.5f. [165-175]) contains the earliest post-biblical account of the queen's journey. He identified her as "Queen of Egypt and Ethiopia," thus bearing early witness to an African, not Arabian, locale (cf. also Gregory of Nyssa [ca. A.D. 330-395], *In Cantic. Cant. Hom.* vii; *PG* XLIV, 908A).

The Talmud mentions the queen just twice (T.B. *Baba Bathra* 15b) -- in discussing Job's date (Job 1:15). The rabbis debated whether the reference to Sheba could be interpreted as making Job contemporary with the queen. Major Jewish commentators erased from Job any allusion to the queen: Rashi read "kingdom of Sheba"; Ibn Ezra, "the encampment of Sheba"; Meṣudat David, "the people of Sheba." Rabbi Jonathan (see S. Schechter, ed., *Midrash Haggadol* [1902], col. 379) tried to remove her record not only from Job 1:15 but from 1 K. 10:1, where he suggested the reading "kingdom" (*malkût*) for "queen." Though some (e.g., G. Salzberger, *Die Salomosage* [1907], p. 14) have read Rabbi Jonathan as attempting to shield Solomon from possible impropriety with the queen, talmudic debate probably centers not in the king's conduct but in Job's date (see L. H. Silberman, "The Queen of Sheba in Judaic Tradition," in J. B. Pritchard, ed., *Solomon and Sheba* [1974], pp. 69f.). While Midrash *Rabbah* relayed the basic story, later embellishment listed the queen's riddles and the king's answers (cf. L. Ginzberg, *Legends of the Jews* [Eng. tr. 1936-47], IV, 145-49; VI, 145-49; VI, 290f.; cf. M. Grünbaum, *Neue Beiträge zur semitischen Sagenkunde* [1893], pp. 220f. for material from *Yalkut* [1085] and Midrash *Mishley* [ed. Buber; 1893], pp. 40-44).

The Targum Sheni to Est. 1:2 (*ca.* A.D. 1200) contains the fullest rabbinic form of the story (see M. David, *Das Targum Scheni* [1898] for text, and Ginzberg, *Legends*, IV, 142-46, 148f., for translation). It describes how Solomon heard about the queen, whose realm it locates near the Garden of Eden, and how Solomon pressured her to visit him. She arrived with an entourage of 6000 youths and was tricked by Solomon to expose her limbs and reveal disfiguring hair on her feet. Posing her riddles and accepting Solomon's answers, she blessed God and eschewed her pagan worship.

The first rabbinic account of sexual intercourse between Solomon and Sheba is recorded in the *Alphabet of Ben Sira* (see M. Steinschneider, [1858], fol. 21b). Nebuchadnezzar was the fruit of this union.

B. Islamic. Koranic accounts (27:15-45) attest to the antiquity of the traditions in *Targum Sheni*, which they closely resemble. Commentaries of Zamakhshari and Al-Baidawi name the queen Bilqis (possibly derived from Gk. *pallakis*, "concubine"; Heb. *pʿlegeš*; or a corruption of Nikaulis, Josephus's name for her). *Stories of the Prophets*, compiled by al-Kisa'i and ath-Tha'abi (11th cent.), integrates Solomon and Sheba into Islamic traditions, while imputing to Bilqis demonic power, probably because of her hairy feet; cf. Tg. Job 1:15, where Sheba is called Lilith, the night demon. (For surveys of the Islamic traditions, see W. M. Watt, "The Queen of Sheba in Islamic Tradition," in *Solomon and Sheba*, pp. 85-103; G. Rosch, *Jahrbücher für protestantische Theologie*, 6 [1880], 524-572.) Though some accounts assume that Solomon married Sheba after removing her unsightly hair, they mention no offspring.

In the interplay between rabbinic and Islamic sources, intrinsic probability argues that the Jewish were earlier than the Islamic, though they may have taken written form much later (see A. Katsh, *Judaism in Islam* [1954]).

C. Ethiopian. These records of the story embrace it with a fervor that pales the rabbinic and Islamic uses. At stake for the Ethiopians are (1) their claim to succeed the Jews as God's chosen people, and (2) their conviction that their royal line stemmed from Menelik I, purportedly Solomon's son by their queen.

The *Kebra Nagast* ("glory of the kings") composed *ca.* A.D. 1320 with pre-Christian and early Christian materials, captures what Ethiopians have classically believed about their spiritual history. Key components in the *Kebra Nagast's* version include (1) the queen learned about Solomon's splendor from her merchant, Tamrin (the name may be a corruption of Hiram; cf. 1 K. 10:11f.), who contracted to supply wood, gold, and sapphires for the temple; (2) she ventured from Ethiopia at her discretion, not at Solomon's command; (3) she was converted from sun-worship to Solomon's religion; (4) called Makeda, a name of unknown origin, she was seduced by Solomon who tricked her into promising not to steal anything and fed her salty food so that she could not resist stealing water; she had broken her promise, thus freeing him of his promise not to touch her; (5) this intercourse produced Menelik, founder of the new Israel, who, with the ark of the covenant, was spirited home to Ethiopia. (For the entire text of the *Kebra Nagast* see C. Bezold, "Kebra Nagast. Die Herrlichkeit der Könige," *Abhandlungen der philosophisch-philologischen Klasse der königlich bayerischen Akademie der Wissenschaften*, 23/1 [1905]; E. A. W. Budge, *The Queen of Sheba and Her Only Son Menyelek* (1) [1922]; see also a Tigre version which adapts *Kebra Nagast* material, while using the NT name "queen of the South" (cf. Littmann, *Legend of the Queen of Sheba in the Tradition of Axum* [1904]; cf. C. Bezold, "Kebra Nagast," pp. LXIV-LI, for an Arabic version, stamped as late by its Christian elaborations; cf. also a 10th-11th-century Coptic fragment apparently dependent on the *Kebra Nagast*; A. Erman, *Abhandlungen der königlich Akademie der Wissenschaften zu Berlin* [1897], pp. 24f.). For discussion of these Ethiopian versions see E. Ullendorff, *Ethiopia and the Bible* (1968), and "The Queen of Sheba in Ethiopian Tradition," in *Solomon and Sheba*, pp. 104-114.

One aim of Kings and Chronicles was to celebrate Solomon's glory; that aim was accomplished remarkably as the various religious and national traditions cherished, embellished, and disseminated the story. And the ecu-

menism implied in the bond between the king and the queen, reinforced by Jesus' words, helped to account for the fruitful planting of the Church in Egyptian and Ethiopian soil.

D. A. HUBBARD

QUENCH [Heb. qal and piel of *kāḇâ*, also *šāḇar* (Ps. 104:11; emended to *śāḇaʿ*–'be sated'), *šôqēq*–'dried out' (Isa. 29:8); Gk. *sbénnymi*]; AV also "have appetite" (Isa. 29:8); NEB also STAMP OUT, EXTINGUISH, etc. To "put out" (e.g., a flame) or "satisfy" (e.g., a thirst), usually with a liquid.

The word is used literally in Ps. 104:11 of animals slaking their thirst, and in He. 11:34 of putting out a fire. Most often, however, it is used figuratively. To "quench my coal" (2 S. 14:7) is a figure for putting to death a family's last remaining heir. Near the end of David's life he was dissuaded by his men from going into battle lest he be killed, an event that would "quench the lamp of Israel" (21:17). God promised in Isa. 42:3 that His Servant would not quench a dimly burning wick, i.e., He would gently nurture those whose hope was dim. Jesus fulfilled this prophecy by refraining from denouncing or dismissing those who were weak in faith (Mt. 12:20).

A fire that nothing can extinguish can serve as a figure for true love (Cant. 8:7). It can also describe the wrath of God (e.g., 2 K. 22:17; 2 Ch. 34:25; Jer. 4:4; 7:20; 21:12; Am. 5:6). In the NT Jesus described hell in terms of an unquenchable fire (Mk. 9:44-48; Mt. 3:12; Lk. 3:17; cf. Isa. 66:24).

Paul counseled his readers to extinguish the "flaming darts of the evil one" by means of the shield of faith (Eph. 6:16). He also warned them not to "quench the Spirit" (1 Thess. 5:19), i.e., that they should not suppress the Spirit's manifestations in the area of prophesying (v. 20).

E. F. H.

QUESTION [nouns: Heb. *ḥîḏâ*–'riddle' ("hard question," 1 K. 10:1; 2 Ch. 9:1), *dāḇār*–'word' (Gen. 43:7; 1 K. 10:3; 2 Ch. 9:2; Jer. 38:14), *tôrâ*–'instruction, law' (Hag. 2:11); Gk. *lógos*–'word' (Mt. 21:24; Mk. 11:29; Lk. 20:3), *zḗtēma*–'question' (Acts 15:2; 18:15; 23:29), *zḗtēsis*–'controversy,' 'investigation' (Acts 25:20)]; AV also WORD, THING, LAW (*tôrâ*); NEB also RULING (*tôrâ*), BICKERING, DISCUSSION, etc.; [verbs: Heb. *šāʾal*–'ask' (Gen. 43:7; Jgs. 8:14; Job 38:3; 40:7; 42:4; Isa. 45:11; Jer. 37:17), *dāraš*–'inquire, demand' (2 Ch. 31:9); Gk. *dialogízomai*–'consider, argue' (Mk. 2:6, 8; Lk. 3:15; 5:21f.), *erōtáō*–'ask' (Jn. 16:30; 18:19), *eperōtáō*–'ask, put a question' (Lk. 23:9; Acts 5:27), *syzētéō*–'discuss, argue' (Mk. 1:27; 9:10; Lk. 22:23), *anakríno*–'question, examine' ("raise a question," 1 Cor. 10:25, 27)]; AV also DEMAND, ASK, ENQUIRE, REASON, MUSE; NEB also CONSULT, THINK, etc.; **ASK A QUESTION** [Gk. *eperōtáō*] (Mt. 22:23, etc.; Mk. 11:29; 12:18, 34; Lk. 2:46; 20:28, 40); AV also ASK; **QUESTIONING** [Gk. *dialogismós*–'doubt,' 'thought,' 'dispute'] (Lk. 5:22; 24:38; Phil. 2:14); AV THOUGHT, DISPUTE; NEB also "what they were thinking," WRANGLING.

1 Kings 10:1-5 par. 2 Ch. 9:1-4 relates a contest of wits between King Solomon and the Queen of Sheba. Practical wisdom, demonstrated by the ability to answer riddles and solve problems, was highly valued and cultivated in the royal courts of the ancient Near East. (*See* RIDDLE.)

The scribes, Pharisees, Sadducees, and lawyers attempted to trap Jesus with cunning questions (e.g., Mt. 22:15-46 par. Mk. 12:13-34; Lk. 20:19-40). But Jesus demonstrated His superior wisdom by His answers (e.g., Lk. 20:26 par.) and counter-questions (e.g., Mt. 21:24 par. Mk. 11:29; Lk. 20:3), so that His opponents no longer dared to debate with Him (Mt. 22:46 par.).

See also DISCUSSION; DISPUTE.

N. J. O.

QUICK; QUICKEN. Terms used by the AV in the archaic sense of "alive, living" and "revive, make alive" (cf. RSV). "Quick" translates Heb. *ḥay*, "living, alive" (Nu. 16:30; Ps. 55:15 [MT 16]; 124:3), the cognate *miḥyâ*, "preservation of life" (Lev. 13:10 [RSV also "quick"], 24; *see* chart in LEPER), and Gk. part. of *záō*, "live, have life" (Acts 10:42; 2 Tim. 4:1; etc.). "Quicken" translates Heb. piel of *ḥāyâ*, "keep alive," "revive" (Ps. 71:20; 80:18 [MT 19]; etc.), Gk. *zōopoiéō*, "give or preserve life" (Jn. 5:21; 6:63; Rom. 4:17; etc.), and *syzōopoiéō*, "give or preserve life together" (Eph. 2:5; Col. 2:13). *See* LIFE.

QUICKSANDS (Acts 27:17, AV). *See* SYRTIS.

QUIET; BE QUIET; QUIETNESS [(verbs) usually Heb. qal or hiphil of *šāqaṭ*, also hiphil and hithpael of *ḥāraš*–'keep still' (Jgs. 16:2; 18:19), hiphil of *ḥāšâ*–'delay' (1 K. 22:3), hiphil of *hāsâ*–'hush' (Nu. 13:30), *has*–'hush!' (Neh. 8:11), *šāṭaq*–'be calm' (Ps. 107:30; Jonah 1:11f.), palal of *šāʾan*–'be at rest' (Jer. 30:10), polel of *dāmam* (Ps. 131:2), *gāmal*–'wean' (131:2); Gk. *katastéllō* (Acts 19:35f.)]; AV also "hold [one's] peace" (Jgs. 18:19; Neh. 8:11), WEANED (Ps. 131:2), CALM, STILL, REST, APPEASE; NEB also TAKE NO ACTION, DO NOTHING, BE TRANQUIL, etc.; [(nouns and adjectives) Heb. *tām*–'ordered, peaceful' (Gen. 25:27), *šeqeṭ*–'tranquillity' (1 Ch. 22:9), *rāgē(a)*–'resting' (Ps. 35:20), *šalwâ*–'ease' (Prov. 17:1), *naḥaṭ*–'calmness' (Prov. 29:9; Eccl. 4:6; 9:17), *šaʾᵃnān*–'untroubled' (Isa. 32:18; 33:20); Gk. *hēsychía* (Acts 22:2; 2 Thess. 3:12), *hēsýchios* (1 Pet. 3:4), *érēmos* (1 Tim. 2:2)]; AV also PLAIN (Gen. 25:27), REST, SILENCE; NEB also SETTLED, PEACEABLE, CONCORD, etc.

Hebrew *šāqaṭ* (qal and hiphil) occurs forty-one times in the MT and is eighteen times rendered "be quiet," "keep quiet," etc., by the RSV. The root denotes a state of tranquillity that is free from trouble and strife (e.g., 2 K. 11:20 par. 2 Ch. 23:21; 1 Ch. 4:40; 22:9; 2 Ch. 20:30; Prov. 15:18, Jer. 47:6f.) or from fear and anxiety (e.g., Jgs. 18:7, 27; Isa. 7:4; 30:15; Jer. 49:23; Ezk. 38:11). The prophets looked forward to a time of peace and quietness after the restoration from exile (e.g., Isa. 14:7; 32:17f.; 33:20; Jer. 30:10; 46:27). Job (3:26) complained that his continual torment allowed him no "ease" (*šālâ*; AV "safety"), "quiet" (*šāqaṭ*; AV "rest"), nor "rest" (*nû[a]ḥ*; AV "quiet").

Sometimes "to quiet" means "to silence talking or commotion" (Nu. 13:30; Acts 19:35; cf. Jgs. 18:19; Neh. 8:11; Acts 19:36; 22:2). Wisdom literature values highly the quietness that comes from inner peace and security (e.g., Eccl. 4:6; 9:17; cf. Prov. 29:9). Ps. 131 compares the calmness of one who has found security in God to the contentment of a child who rests on its mother's breast after receiving nourishment.

A calm, peaceable spirit was also prized by the early Christian community. The Gk. *hēsychía* ("silence"), *hēsýchios* ("quiet"), and *hēsycházō* ("be quiet"; RSV "live quietly") refer to a tranquil disposition free from the inner turmoil that causes disturbances in the community (e.g., 1 Thess. 4:11; 2 Thess. 3:12; 1 Pet. 3:4; cf. 1 Tim. 2:2 [RSV "peaceable"]; *see also* SILENCE), while *érēmos*

("quiet," 2:2) refers to freedom from outward disturbance.

For the AV's use of "quiet" in Jgs. 8:28 (Heb. *šāqaṭ*); Job 3:26 (*nû[a]ḥ*); 20:20 (*šalwâ*); Zec. 6:8 (hiphil of *nû[a]ḥ*); *see* REST. On "quiet prince" (Jer. 51:59, AV), *see* QUARTERMASTER. N. J. O.

QUINTUS MEMMIUS. *See* MEMMIUS, QUINTUS.

QUIRINIUS kwi-rin'ē-əs [Gk. *Kyrēnios*] (Lk. 2:2); AV CYRENIUS. A governor of Syria when Jesus was born.

I. In Extrabiblical Sources.–From various ancient historians emerges the following outline of Quirinius's life (cf. esp. Josephus *Ant.* xvii.13.5 [355]-xviii.1.1 [3]; xviii.2.1 [26]; Tacitus *Ann.* iii.22-24, 48; Dio Cassius *Hist.* liv.28.2; Suetonius *Tiberius* 49; Florus *Epit. of Rom. Hist.* ii.31). Publius Sulpicius Quirinius was born *ca.* 51 B.C. into a family of no particular distinction in the Roman municipality of Lanuvium. He became a soldier, and during his fourth decade (perhaps in 16-15 B.C.) he distinguished himself in the Gaetulian war in North Africa. In 12 B.C. he received a consulship in Rome. Sometime during the next fourteen years, probably before 6 B.C., he gained further military honors after successfully subduing the Homonadensian tribes in the central and southeastern regions of Asia (skirmishes probably ranged from Galatia to Cilicia). In 3 B.C. he was named proconsul in Asia.

The date of Quirinius's first marriage, to Claudia Appia, is unknown, as are all further details about her. In *ca.* A.D. 3 Quirinius divorced her and married Aemilia Lepida, the woman who had been set aside to be the bride of Lucius Caesar, heir-apparent to the Roman throne until his untimely death the previous year. Quirinius's access to imperial circles had been facilitated by his recent appointment as adviser to Lucius's brother Gaius, during Gaius's command in Armenia. (Gaius also died prematurely, in A.D. 4.)

From A.D. 6 to 9 Quirinius ruled as imperial legate in Syria-Cilicia. At the beginning of his term of office he was commanded by Caesar to take a census of Syrian property and to sell the estate of the deposed Archelaus. At this time Judea was under Syrian jurisdiction, and at first the Judeans rebelled against the idea of such a census. Eventually, however, Joazar the high priest convinced most of them to participate. Those who remained rebellious rallied around a certain Judas, who became the instigator of the Zealot movement (cf. Acts 5:37).

After these years abroad Quirinius returned to Rome, where he lived until his death in A.D. 21. He apparently had no children. At some point he divorced Lepida. Shortly before his death he instituted legal proceedings against her on the charges of attempted murder by poison (years earlier) and (more recently) of adultery. His malicious behavior during the trial aroused much public sympathy for her and hatred toward him. These feelings probably account for the fact that Tiberius's eulogy at Quirinius's funeral elicited no acclaim from the Roman senate. Perhaps it was because Quirinius had deliberately courted his favor by visiting him during his exile in Rhodes that Tiberius was nonetheless willing to eulogize him, emphasizing his skill and faithfulness as a military officer. Other Romans chose instead to remember "the combination of meanness with exorbitant power which had marked his later days" (Tacitus *Ann.* iii.48).

II. In the NT.–The sole biblical reference to Quirinius is Lk. 2:2. Here the Gospel of Luke ascribes to him a governorship (Gk. *hēgemoneúō* can refer to several types of administrative command) of Syria at the time of an empire-wide census under Augustus. Luke calls it "the first enrollment," which suggests that it is being distinguished from one or more later censuses. But since Christ was born at least by 4 B.C. (the year of Herod's death), Luke cannot be referring to the census of A.D. 6. Thus, either Luke's Gospel is referring to an event otherwise unattested by ancient historians, or else it has confused the historical data, dating the census of A.D. 6 to Herod's reign.

Many scholars have found the former possibility improbable and have opted for the latter (see the classic treatment in *HJP*², I, 399-427). Their arguments are based primarily on the lack of mention in other historical sources of a census during Herod's reign. But the only full treatment of this period is provided by Josephus, who focused primarily on events dealing with the Herodian family. That Josephus would fail to mention a census less directly related to the Herods than the one of A.D. 6 is not at all implausible. And since Luke's historical integrity has been repeatedly vindicated in numerous places, it is fairer to give Luke the benefit of the doubt here. Related objections to the historicity of Lk. 2:1f. (cf. esp. R. E. Brown, *Birth of the Messiah* [1977], pp. 547-556) have all been successfully answered (see, e.g., I. H. Marshall, *Gospel of Luke* [*NIGTC*, 1978], pp. 97-104).

Those who defend Luke's accuracy generally proceed along one of two lines. Some prefer to translate v. 2 as "this was the census before Quirinius was governor of Syria." This solution avoids the problem of having to fit Quirinius's name into a list of earlier governors, where seemingly there is no room for it. It also fits in with Tertullian's reference to Jesus' birth occurring in connection with a census taken by Sentius Saturninus, who governed Syria from 9 to 6 B.C. (*Adv. Marc.* iv.19). But the Greek of Lk. 2:2 can be translated this way only with some awkwardness.

A better solution, therefore, is to reexamine the evidence for an earlier rule of Quirinius in Syria. It is not clear that the names of previous governors cover the entire two decades prior to A.D. 6; possible gaps include 12-10, 11-8, and 3-2 B.C. The two earlier periods would permit a brief first term for Quirinius and the beginning of a census that may have taken a considerable time to complete. More plausibly, Quirinius may have held some type of "extraordinary command" during the term of Saturninus. His military maneuvers in Cilicia would have occurred most naturally had he held some official position in Syria; this proposal would therefore explain Tertullian's testimony. An attractive reconstruction of the chronology would place the census in 8 B.C. (by analogy with Egyptian practice, in which censuses were taken every fourteen years, and in the light of the *Monumentum Ancyranum*, which attests to a census of Italy by Augustus in that year) and Christ's birth in 7 or 6 B.C. (since censuses seldom took much more than a year to complete, and Mt. 2:16 may imply that Jesus was nearly two years old when Herod ordered the massacre of the innocents). But the existence of many rival hypotheses prevents certainty about any one scheme of dating.

Two Latin inscriptions have often been cited in support of an early administration of Quirinius. The *Lapis Venetus* (*CIL*, III, 6687) describes a census ordered by Quirinius of the Syrian city of Apamea. Some evidence suggests a date of 10-6 B.C. for this inscription, although many take it to refer to the A.D. 6 census. The *Lapis Tiburtinus* (*CIL*, XIV, 3613) speaks of a person (unspecified, due to the fragmentary nature of the inscription) who had earlier been proconsul of Cyrene (in North Africa) and Crete, and who had later effectively put down the Homonadensians, finally to be rewarded by receiving "again" (Lat. *iterum*) the legateship of Syria and Phoenicia. The parallels with Quirinius's career make it natural to associate the inscription with him, but there is no way of

proving this; moreover, *iterum* could simply mean that this person again received a legateship, rather than that he served twice in the same locale. E. J. Vardaman has claimed that "micrographic" evidence conclusively associates this inscription with Quirinius (*Archeology and the Living Word* [rev. ed. 1981], p. 138), but until that evidence is published and evaluated, no certain assessments can be made.

In any event, several plausible possibilities exist for explaining the evidence without the assumption that Luke erred.

C. L. BLOMBERG

QUIT. A term used by the RSV to render Heb. *ḥāḏal* (lit. "cease") in Jgs. 15:7, *nāṭaš* (lit. "'leave off, desist from") in Prov. 17:14, and *šāḇaṭ min* (lit. "cease from, stay away from") in Lam. 5:14. The AV used "be quit" several times in the sense of "be free of responsibility, be without guilt" (niphal of *nāqâ* in Ex. 21:9; *nāqî* in Ex. 21:28; Josh. 2:20). "Quit" means "behave, conduct" in the expression "quit you(rselves) like men" (*hāyû la'ᵃnāšîm* in AV 1 S. 4:9; Gk. *andrízomai* in AV 1 Cor. 16:13).

QUIVER [Heb. *'ašpâ*] (Job 39:23; Ps. 127:5; Isa. 22:6; 49:2; Jer. 5:16; Lam. 3:13); NEB also "jaws" (Jer. 5:16); [*ᵗᵉlî*] (Gen. 27:3); [Gk. *pharétra*] (Sir. 26:12). An important piece of archery tackle used to hold arrows.

Quivers with shoulder straps as shown in a wall painting at Thebes; quivers were elaborately decorated during this period as seen in the stylized ornamentation and feathers. From the tomb of Kenamun, *ca.* 1436-1411 B.C. (The Metropolitan Museum of Art)

The earliest pictorial evidence suggests that quivers were used first for holding javelins rather than arrows. Mesopotamian art from *ca.* 2500 B.C. depicts quivers containing javelins attached to chariots (Y. Yadin, *Art of Warfare in Biblical Lands,* I [1963], 130, 132-35). From the 6th Dynasty in Egypt (*ca.* 2250) comes a battle scene in which a soldier is carrying a large quiver, probably for javelins (Yadin, p. 147).

Quivers containing arrows began to appear in representations shortly after 2000 B.C. (Yadin, pp. 155, 167); but such quivers did not become a regular piece of archery tackle until a few centuries later. In battle scenes from 2000-1700 B.C. arrows are generally shown carried in the hand by archers or lying on the ground (Yadin, pp. 158-163). From the 15th cent. B.C. onward the quiver is a regular feature of hunt and battle scenes where archers are portrayed (Yadin, pp. 186f., 192-200). These quivers, made of wood, leather, metal, and cloth, were either carried by the warrior or fixed to the body of a chariot.

The quiver is used figuratively in several passages. Just as the warrior with a quiver full of arrows will not be defenseless in battle, so the man with many sons will not be defenseless in judicial matters when he reaches old age (Ps. 127:4f.). In Isa. 49:2 the bearer of Yahweh's penetrating word is described as an arrow that is hidden in a quiver until it is employed. The unusual figure in Jer. 5:16 ("their quiver is like an open tomb") is lacking in the LXX, and the MT may be corrupt (cf. emendation of NEB; see comms.).

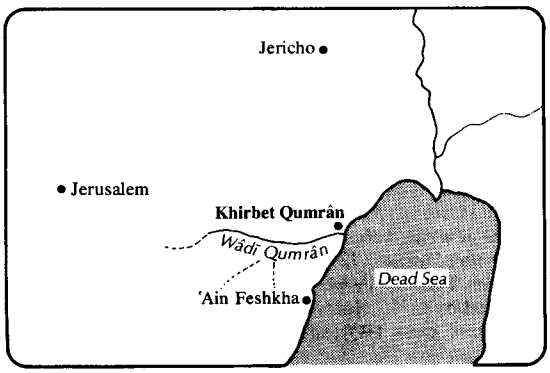
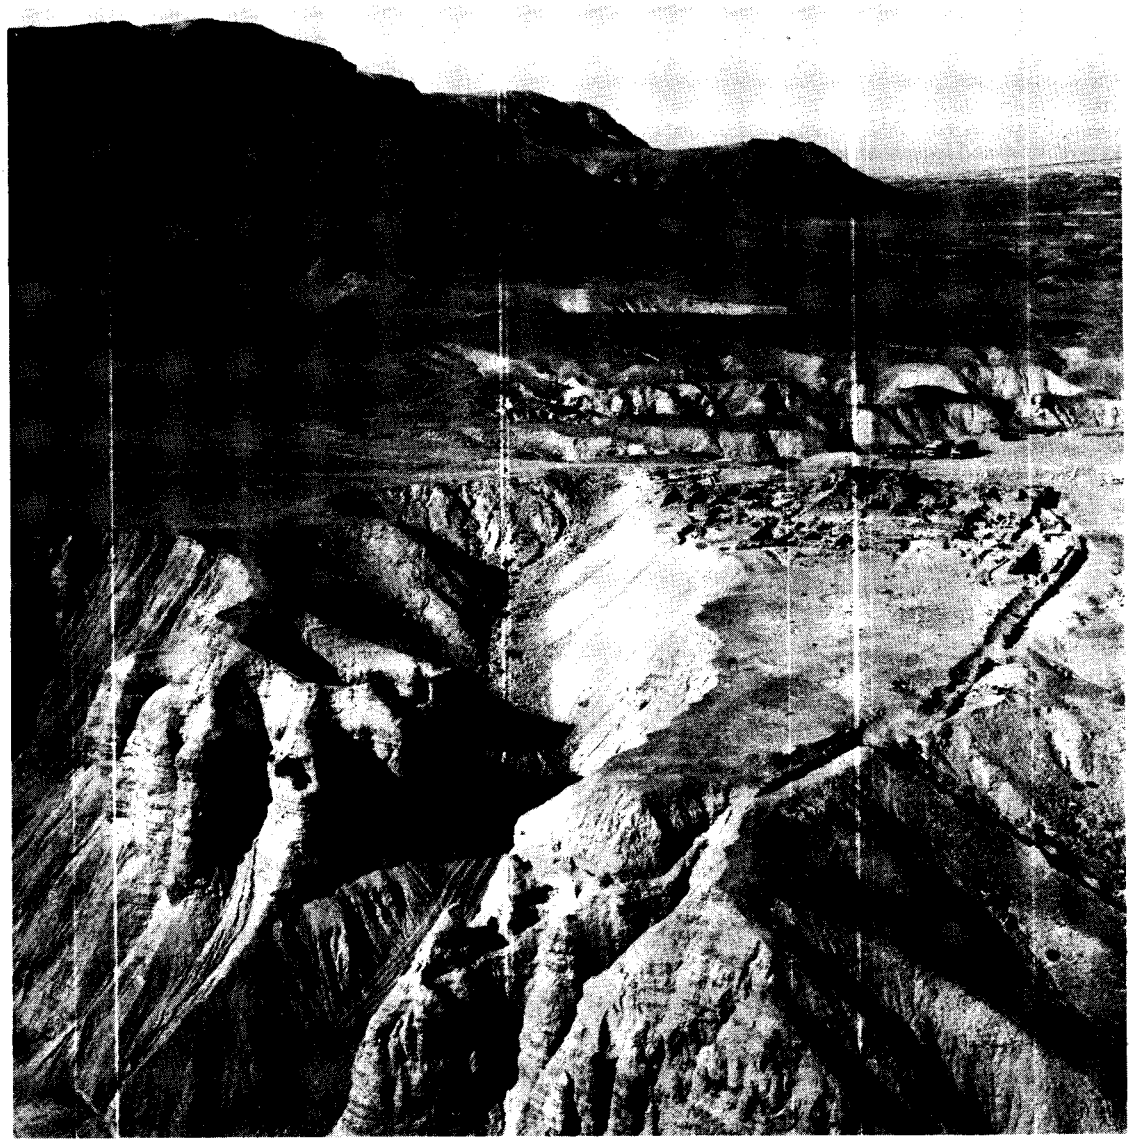
V. Historical Conclusions

I. Caves.–The first positive notices of the sensational discovery of the Qumrân MSS go back to Nov. 25, 1947, when E. L. Sukenik was informed of their existence. His account and extracts from his personal diary are published in Sukenik, *Dead Sea Scrolls of the Hebrew University* (1955), pp. 13-17, and in Yigael Yadin, *Message of the Scrolls* (1957), pp. 16-29. On the basis of information





Aerial view (facing northwest) of the Qumrân community and the surrounding land. Across the ravine (which leads to Wâdī Qumrân) are four of the caves where Dead Sea Scrolls were found (W. Braun)

reported by the American scholars M. Burrows, J. C. Trever, and W. H. Brownlee, W. F. Albright announced (in *BASOR* 110 [Apr. 1948], 2f.) "the greatest manuscript find of modern times" and gave a first and astonishingly accurate interpretation.

After a difficult search, conducted particularly by a Belgian officer, Philippe Lippens, the cave from which the MSS came was identified on Jan. 28, 1949, by Col. Ashton and Capt. Akkash ez-Zebn in the rocky cliff that dominates the western shore of the Dead Sea for about 300 m. (330 yds.), some 11 km. (7 mi.) S of Jericho (see G. L. Harding, *PEQ*, 81 [1949], 112-16; G. Lambert, *La Revue générale belge* [Jan. 1950], pp. 405-425; *La nouvelle revue théologique*, 72 [1950], 53-65).

From Feb. 15 to Mar. 5, 1949, a scientific expedition directed by G. L. Harding and Père R. de Vaux recovered from this cave (1Q) some cloth (dated by radioactive carbon to A.D. 33 ± 200 years), a large quantity of pottery (in particular fragments of jars), and above all, fragments of parchment, some of which belonged to the same MSS that had been put on sale in Jerusalem (see G. L. Harding, *Qumran Cave I* [*DJD*, I; 1955], pp. 5-7; R. de Vaux, *RB*, 56 [1949], 234-37, 568-609).

At the end of February, 1952, some bedouin discovered a second cave (2Q), and from Mar. 10 to 29, 1952, a new scientific expedition, directed by W. L. Reed and R. de Vaux, explored the rocky cliff for 8 km. (5 mi.) from Ḥajar el-Aṣbah to S of Râs Feshkha. Of the soundings, 230 yielded nothing, forty contained traces of pottery or human occupation, and a single cave (3Q) contained MSS, including the famous Copper Scroll (see R. de Vaux, *RB*, 60 [1953], 540--561; or, better, his *Les "Petites Grottes" de Qumran* [*DJD*, III; 1962], pp. 3-25).

At the beginning of September, 1952, the same bedouin

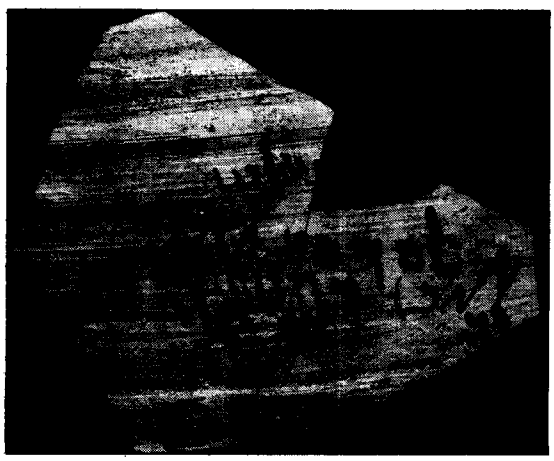
discovered another cave (4Q), very rich in MSS, that was not in the rocky cliff but in the marly terrace carved out by the bed of Wâdī Qumrân, quite near the ruins called Khirbet Qumrân. A scientific expedition from Sept. 22 to 29 completed the excavation of this cave, discovered another cave (5Q), and located a cave previously visited by the bedouin (6Q). In February-March, 1955, during the excavation of Khirbet Qumrân, the archeologists discovered in the immediate vicinity of the building four other caves (7Q, 8Q, 9Q, 10Q), with some written documents. In January, 1956, the bedouin discovered yet another cave (11Q) 2.1 km. (1.3 mi.) farther north, which had been inhabited in the Chalcolithic era (4000-3000 B.C.) and in Iron II (*ca.* 7th cent. B.C.). It also contained an important group of MSS. (On caves 4Q to 11Q see R. de Vaux, *RB,* 63 [1956], 572-74; *Les "Petites Grottes" de Qumran,* pp. 26-31; *L'Archéologie,* pp. 40-46).

II. Khirbet Qumrân.–The presence of ancient ruins partly buried under sand about 900 m. (1000 yds.) SE of the first cave could not help but attract the attention of the archeologists. From Nov. 24 to Dec. 12, 1951, R. de Vaux directed the first campaign of excavation, followed by four others (Feb. 2 to Apr. 24, 1953; Feb. 13 to Apr. 14, 1954; Feb. 2 to Apr. 6, 1955; Feb. 18 to Mar. 28, 1956). Since the official report is not yet published the brief notices furnished by preliminary reports will be discussed here.

A. Israelite Period. Discovered among the ashes under a part of the present ruins were the foundations of a building of considerable size from the 8th-7th cents. B.C. It was flanked on the west by a smaller building containing a large round cistern. Also recovered were a number of sherds of this period and an ostracon in Paleo-Hebrew.

About 900 m. (1000 yds.) farther S was another building, perhaps slightly older. It was rectangular, 64.3 by 60.4 m. (211 by 198 ft.), comprising a large court surrounded by a number of rooms. These remains accord with 2 Ch. 26:10; "[Uzziah] built towers in the wilderness, and hewed out many cisterns, for he had large herds." Perhaps these buildings constituted the CITY OF SALT of Josh. 15:62. The Copper Scroll (4:13; 5:2, 5, 13) allows the supposition that the Hebrew name of Wâdī Qumrân was *s^{e}ḳāḳâ* (Josh. 15:61; *see* SECACAH).

Ostracon from Period I containing the Hebrew alphabet with the letters ה and כ omitted. ש and ם would presumably be in the missing section. This was the exercise of a student scribe—several letters are repeated and some are awkwardly written (Israel Museum, courtesy of Israel Department of Antiquities and Museums)



Period Ib assembly hall; this building was also used as a refectory (W. S. LaSor)

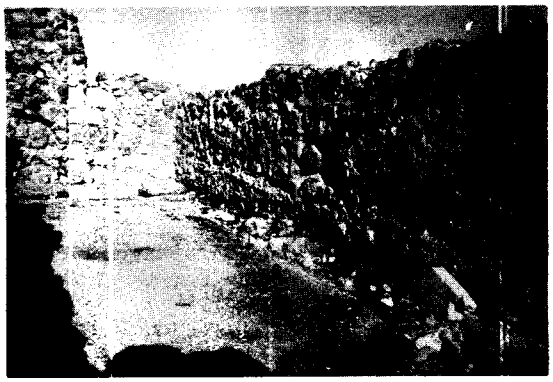
B. Period Ia. About the time of the reign of John Hyrcanus (134-104 B.C.) other buildings were erected on the existing foundations and were fitted with a number of supplementary rooms, two pottery kilns, and two new cisterns.

C. Period Ib. Under Alexander Janneus (103-76 B.C.) these buildings were enlarged and adapted to the life of a community. A solid tower protected the entrance. A kitchen, a laundry, an assembly hall, a library, numerous storage rooms, and several workshops were laid out, with a new pottery kiln and particularly with a very complete water system. The water was collected in the cascade of Wâdī Qumrân in the midst of the rocky cliff and brought by canals to several decantation basins, to a bath, and to seven cisterns (three old and four new, very large ones; *see* MIKVAH). One of the pantries contained 708 bowls, 210 plates, 75 goblets, 38 earthenware dishes (pans), 21 jars, and 11 pitchers when the building compound was destroyed by a violent earthquake that dropped one part of the ground and caused a fire (*see* picture of damaged staircase in EARTHQUAKE). This was doubtless the terrible earthquake of the spring of 31 B.C., which Josephus described (*BJ* i.19.3f. [369-379]; *Ant.* xv.5.2f. [121-146]).

From this period and the preceding (which are sometimes very difficult to distinguish) eleven coins of the Seleucids were found. They comprise three from the period 132-129 B.C., one of John Hyrcanus (134-104 B.C.), one of Aristobulus I (104-103), 143 of Alexander Janneus (103-76), one of Alexandra (76-67), five of Hyrcanus II (67, 63-40), and four of Antigonus Mattathias (40-37).

D. Period II. After a brief interruption, the buildings were reoccupied and repaired near the beginning of the Christian era. The tower was covered with a glacis (a

QUMRÂN

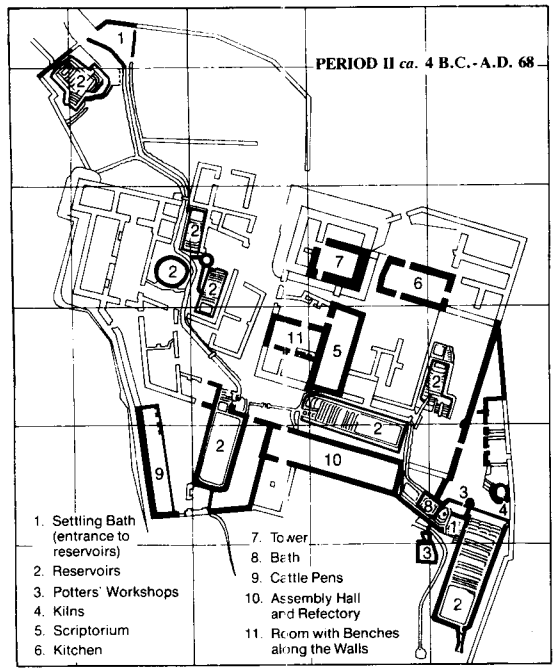


The scriptorium (Period Ib-II) where benches, tables, and inkwells were found (W. S. LaSor)

sloping bank), several walls were propped up, and several rooms were subdivided. Two cracked cisterns and several rooms that could not be repaired were abandoned. But the use of the building compound remained almost exactly the same. In the artisan's quarter several ovens as well as a mill formed by two basalt millstones were still used. A stairway ascended to the upper floor, which constituted the scriptorium; with the debris that had fallen to the floor it was possible to reconstitute three tables that had been covered over with plaster, one of which was more than 4.8 m. (16 ft.) long. Even the benches and inkwells of the scribes were discovered (cf. B. M. Metzger, *RQ*, 1/4 [1958], 509-515; K. Greenleaf-Pedley, *RQ*, 2/1 [1959], 21-41; *see* picture in INK).

Among the coins that could be attributed to this period, ten have been identified as belonging to Herod the Great (37-4 B.C.), sixteen to Herod Archelaus (4 B.C.–A.D. 6), ninety-one to the procurators, and seventy-eight to Agrippa I (A.D. 41-44). In addition, buried under the ground were three jars containing a treasure of 561 pieces of silver struck almost entirely at Tyre, of which the most recent is from 9/8 B.C. Without doubt this treasure had been hidden a little after this date, at the time of the reoccupation of the site, therefore toward the reign of Archelaus. The date of the destruction is indicated by another treasure of thirty-nine pieces in bronze, of which thirty-seven are from Year 2 of the First Jewish Revolt (A.D. 67/68) and two from Year 3 (68/69). The material removed after the destruction by the new occupants contained one coin of the procurators, one of Agrippa I, one of Nero dated to 62/63, thirty-one of Year 2 of the First Revolt, and two of Year 3.

The archeologists were surprised to discover, either between the buildings or in the immediate environs, more than fifty deposits of bones buried almost at ground level in new or damaged jars and coming from different kinds of animals: at least five sheep, five goats, twenty-six sheep or goats, ten lambs or kids, four bulls or cows, six calves (see F. E. Zeuner, *PEQ*, 92 [1960], 28-30). Most of these deposits had been made during Period Ib, but others certainly during Period II. These bones have no connection with the Passover lamb, since they include those of calves or of bulls; neither is there any reason to attribute them to victims offered as sacrifices, of which there is no evidence at Qumrân (and which would violate Dt. 12:4-14 and contradict 1QM 2:3-6; CD 11:17–12:2). E. M. Laperrousaz (*Numen*, 7 [1960], 60-68, 75f.; *RHR*, 160 [1960], 1-9) supposed that they are the remains of meals interrupted in Period Ib by the earthquake and



Period Ib-II (*ca.* 135 B.C.–A.D. 68). Plan of Khirbet Qumrân at its height. During Period II, the basic structures of Ib were retained except for buttressing the buildings that were damaged by an earthquake (after a plan by R. de Vaux, *L'Archéologie et les manuscrits de la Mer Morte* [1961])

in Period II by the arrival of the aggressors; but to consume in two meals or even in two days so many animals would require a community much larger than the one gathered in the buildings of Qumrân. H. Bardtke ("Die Tierknochenfunde aus chirbet Qumrân," in *Lehre, Forschung, Praxis: Die Karl-Marx-Universität zum zehnten Jahrestag ihrer Namensgebung am 5. Mai 1963* [1963], pp. 328-349) suggested that the care with which these bones were preserved resulted from belief in the resurrection of animals, but this belief is attested neither in the Bible nor in the documents of Qumrân — which are not even very explicit about the resurrection of the human body. Thus no explanation has yet been completely satisfactory.

Period II was terminated by a violent destruction, attested by iron arrowheads and a new layer of ashes. Coins indicate a date of this destruction in Year 3 of the First Revolt. It is known from Josephus that the 10th Legion occupied Jericho on June 21, A.D. 68 (*BJ* iv.8.1 [440-450]), and encamped there until the siege of Jerusalem in A.D. 70. This conclusion is confirmed by carbon-14 dating: a piece of palm tree burned at the time of the final fire is dated to A.D. 66, with a margin of error of 80 years.

E. Period III. After this destruction a military post was installed for some time to keep watch over the vicinity of the Dead Sea. But the occupants, doubtless fewer in number, were content with repairing the approaches to the tower and using a cistern. They left behind one coin of Claudia and Poppaea (A.D. 65), one coin of Antiochus under Nero (before 68), nine coins of Caesarea and four of Dora (all from 67/68), another of Antiochus under Vespasian and Titus (69/70), two of Ascalon (72/73), four of Titus inscribed "Judaea Capta," and one of Agrippa II (87).

During the Second Jewish Revolt (132-135) some partisans took refuge in the ruins of the tower and hid ten coins in a bowl, six of which were of the Second Revolt.

III. Cemeteries.–A cemetery of about 1100 tombs, well aligned and marked by heaps of pebbles, extended 50 m. (165 ft.) E of the buildings on the same marly terrace. Twenty-six tombs have been excavated. Each yielded a man's skeleton without any other item. On the western edge of the cemetery are four tombs of a different type; three contained a man in a coffin and the fourth a woman. Farther east, on the knolls that rise gradually between the shore of the Dead Sea and the marly terrace, are other tombs arranged without any order. Seven graves were excavated. One held a man, one a child, four held women, and one body was of indeterminable sex. Two other small cemeteries, one of about a dozen and the other of about thirty graves, are located some distance N of the building and S of the wadi. Six tombs were excavated: one of a man, three of children, and two of women. The majority of the dead were under forty years of age.

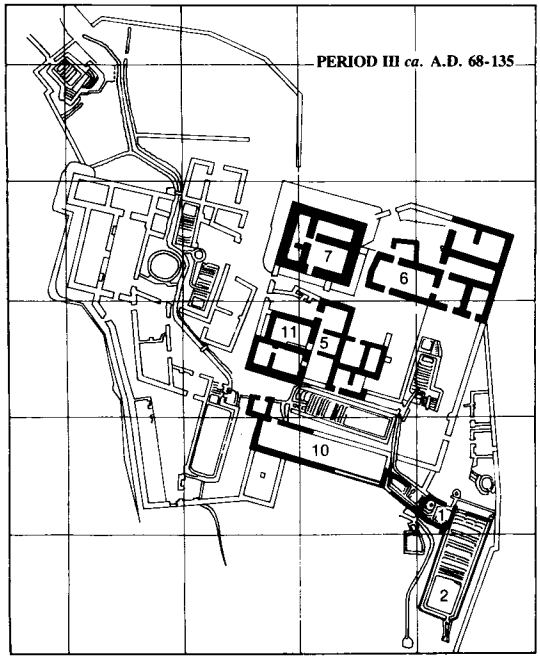
Such are the results of the excavations carried out by R. de Vaux in 1951, 1955, and 1956. In 1964 and 1966, however, S. H. Steckoll excavated ten other graves, all in the main cemetery, and found the remains of six men (one of whom had been seriously injured in the forehead), three women, and a child.

IV. 'Ain Feshkha.–Near a spring called 'Ain Feshkha, about 3 km. (2 mi.) S of Khirbet Qumrân, de Vaux undertook from Jan. 25 to Mar. 21, 1958, the excavation of a structure. He discovered a central building surrounded at the southwest and the northeast by two large enclosures

A. Central Building. This structure measures 24 by 18 m. (80 by 60 ft.) and consists of a court surrounded by storehouses and rooms. Its history exactly parallels that of Qumrân.

Period I is represented by pottery analagous to Period Ib at Qumrân and by some coins: four of Alexander Janneus (103-76 B.C.), one of Antigonus Mattathias (40-37), one of Year 3 of Herod the Great (37)), and a fortuitously discovered coin of Ptolemy II (285-247 B.C.). No trace of violent destruction has been revealed.

Period III (A.D. 68-135). The Romans occupied only the main block and used a simplified water system with one reservoir (from R. de Vaux, *L'Archéologie et les manuscrits de la Mer Morte* [1961])



After a period of abandonment, this building had been put back into condition in Period II. Certain rooms were remodeled, and an upper floor was constructed with a stairway leading to it. The pottery was like that of Period II of Qumrân, and the decipherable coins were distributed as follows: four of Herod Archelaus (4 B.C.–A.D. 6), thirty-two of the procurators, forty-five of Agrippa (A.D. 41-44), one of Tyre (36/37), and one of Year 2 of the First Revolt (67/68). The building was destroyed by a fire, during which its walls and ceilings collapsed.

The northern part of the building was partially cleared and summarily arranged at the time of Period III. At this level was found a stone weight with the three Latin letters *LEB* (possibly for *libra*, "scales"), one coin of Antiochus under Domitian (A.D. 81-96), seventeen coins of Agrippa II (between 78 and 95), and another not identified. (All eighteen were contained in the same small bag.) There were three coins of the Second Revolt (132-135) together with one coin of Aelia Capitolina under Antoninus Pius (138-161). This evidence might imply the temporary presence of the Roman military post or, more likely, of a group of refugees at the time of the Second Revolt.

B. Southwest Enclosure. Although belonging to Period II the enclosure succeeded another of Period I that left very little trace. A shed (for drying dates?) with a room (for the attendant?) adjoin the wall on the north. The rest of the space was empty (for a cattle pen?). In the Byzantine era (6th cent.) a hermitage was installed in this room, doubtless mentioned in the *Spiritual Ground* of John Moschos (p. 158) as a dependency of the monastery of MIRD.

C. Northeast Enclosure. This enclosure, 23 by 40 m. (76 by 132 ft.), was built during Period II. All of the western part remained empty, while the eastern part included a water system with several basins and conduits to fill or empty them. The dimensions are too small for the basins to have been tanks for cultivations of fish, and chemical analysis of the residue does not permit consideration of them as a tannery. No positive hypotheses have been established.

On 'Ain Feshkha, see R. de Vaux, *RB*, 66 (1959), 225-255; *L'Archéologie*, pp. 49-70; F. E. Zeuner, *PEQ*, 92 (1960), 33-36.

V. Historical Conclusions.–These archeological excavations have made some deductions probable or even certain.

(1) The MSS have a direct relationship with the excavated buildings, for several caves (4, 5, 7, 8, 9, 10) are in the immediate vicinity of the buildings, and exactly the same pottery has been found in the buildings, in all the MS caves, and in many other caves.

(2) These MSS do not come from a genizah (a kind of depository for documents removed from use), for then they would not have been scattered in so many different places and certainly would not have been so carefully wrapped in cloth and stored in jars.

(3) The buildings were not constructed to provide a room for each individual or family. Rather, they were built to house the collective services of a community, with a common kitchen, a common refectory, a common scriptorium, a common artisan's quarter, and common farms. The "personal" life of each member was passed outside the common buildings, doubtless in tents or in the caves.

(4) The location of the buildings — the northwest shore of the Dead Sea — seems to correspond to the statements

of Pliny the Elder about the Essenes (see, however, the objection of J. P. Audet in *RB*, 68 [1961], 346-387, and the reply of C. Burchard, *RB*, 69 [1962], 533-569). But the excavations of S. H. Steckoll in the cemetery seem to prove the presence of women in the Qumrân community, which does not accord with Pliny's statements.

(5) During the reign of John Hyrcanus (134-104 B.C.; Period Ia) this community envisaged only a limited installation, but under Alexander Janneus (103-76) B.C.) it grew to more than a hundred members and organized a true center. This enlargement corresponds entirely with Josephus's account (*BJ* i.3.2, 5 [72-74, 78-80]; *Ant.* xiii.11.1f. [301-313]) of a venerated Essene prophet who was still teaching in the temple at Jerusalem in 103 B.C. but then took a political attitude that set him at variance with Alexander Janneus, who became king some weeks later. Forced to go into exile, the group of Essenes took refuge in the buildings of Qumrân; it then would have been adapted to the needs of a community so numerous.

(6) The MSS discovered in the caves are the remains of the library of this community, which removed its precious documents from grave danger (the arrival of the Romans) by hiding them carefully in the caves of the rocky cliff. When danger became more imminent they crammed documents hastily in the excavations quite near the marly terrace (esp. 4Q).

(7) The buildings were destroyed by an attack of the Roman legions, near the end of June, 68. The conquerors left a guard there for some years thereafter.

(8) At the time of the Second Jewish Revolt (132-135) some fugitives sought temporary shelter in the ruins, but without organizing any real seat of resistance.

  E. Textual Sources
  F. Typological Interpretation
  G. Presuppositions of NT Use of the OT

I. Introduction.–Quotations appear in the NT from the OT, from other Jewish writings (e.g., in Jude 14f.), and from Christian and classical sources (e.g., respectively, in Acts 15:23-29; 1 Cor. 15:33). OT texts appear 250 times in explicit quotations (cf. E. Nestle and K. Aland, *Novum Testamentum Graece* [25th ed. 1960], pp. 658-671); if allusions are included, the number is over 2500 (cf. K. Aland, *Novum Testamentum Graece* [26th ed. 1979], pp. 739-769). The number of OT passages cited is somewhat less than the number of quotations because many texts appear more than once, although a citation may merge two or more OT texts but be counted as a quotation of only one. H. B. Swete (*Intro.*, p. 386) counted about 160 references, largely from the Pentateuch (51), Isaiah (38), and Psalms (40). Swete and L. Venard (*DBSup.*, II, 24-28), whose analyses are the most helpful, respectively classified them as follows: Synoptic Gospels, 46 (46); John, 12 (14); Acts, 23 (24); Paul, 78 (88); Hebrews, 28 (30). Philippians, Colossians, 1 and 2 Thessalonians, Titus, Philemon, 1, 2, and 3 John, Jude, and Revelation contain no explicit quotations from the OT. The remaining Epistles contain very few.

See Turpie, Toy, and Dittmar for a columnar comparison with the LXX and MT; although textually dated, these studies remain usable tools. Similar studies are provided by Archer and by Ellis (*Paul's Use*) on the Pauline letters, by Clarke on Acts (LXX and NT), and by Freed on John (LXX, MT, Tg., DSS).

Of the many OT allusions or parallels, comparatively few include an explicit OT reference. Sometimes one NT writer will quote a reference omitted or overlooked by others (e.g., Mt. 21:4f.; cf. Mk. 11:3; Lk. 19:31). Sometimes the OT allusion is made explicit by a copyist (e.g., Lk. 9:54b, AV; cf. RSV mg.).

II. History of Research.–*A. Patristic Church.* In the patristic Church the NT applications of the OT were already a matter of concern, e.g., in the theological schools of Antioch and Alexandria (cf. F. W. Farrar, *History of Interpretation* [1886], p. 218; R. M. Grant and D. Tracy, *Short History of the Interpretation of the Bible* [rev. ed. 1984], pp. 63-72). The textual background of the quotation also was an issue. Most, like Irenaeus (*Adv. haer.* iii.21.3), regarded the LXX as inspired and believed that the NT quoted in accordance with it. Jerome rejected its inspiration and supposed, "Wherever the Seventy agree with the Hebrew, the apostles took their quotations from that translation; but, where they disagree, they set down in Greek what they had found in the Hebrew" (*Apologia contra Rufinum* ii.34). Augustine recognized the secondary, though inspired, character of the LXX and reconciled its differences with the Hebrew: "[The LXX at Jonah 3:4 is] not saying something against the sense, but . . . in another signification. . . . It is as if the LXX intended to stir the reader to look further into the matter than the mere history . . ." (*Civ. Dei* xviii.42-44). Similarly, Irenaeus regarded the LXX reading *parthénos*, "virgin," in Isa. 7:14 as a "just interpretation of what had been truly prophesied" (*Adv. haer.* iii.21.4). Thus the problems of the text and of the application, ever the two crucial issues in NT quotations, were brought together very early. After the Reformation both received intensive consideration.

B. Sixteenth-Seventeenth Centuries. R. Stephanus gave

an abbreviated list of quotations in his edition of the Greek NT (Paris, 1550). Forty years later J. Drusius set out, in a four-column arrangement, OT (Hebrew, Latin) and NT (Latin, Greek) parallels with critical notes on variant readings. In the following century L. Cappellus (*Critica sacra* [Paris, 1650], pp. 53-67) and J. Alting (on Mt. 1–12) pursued similar studies and disclosed textual variants that posed a considerable problem.

C. Eighteenth Century. W. Whiston sought to justify the text of NT quotations by arguing that they were identical with OT Greek and Hebrew texts of the 1st cent. but that the Jews, because of opposition to Christianity, soon altered their MSS and produced the present textual problems (*Essay Toward Restoring the True Text of the OT* [London, 1722], pp. 220-280). In support of his thesis he pointed to the different biblical texts displayed by Philo, the Samaritan Pentateuch, and Josephus, who probably had official texts from the temple in Jerusalem (cf. Josephus *Vita* 75 [414-421]). Wondering "why so pernicious a book has escaped so long without an answer," M. Marcus, a converted Jew, translated J. G. Carpzov's reply. The reply was that textual variants from the Hebrew were "sometimes the application of a testimony to the present purpose which might be properly made by changing the words of the prophecy a little; sometimes a synonymous expression wanted to be unfolded and explained" (J. G. Carpzov, *Defense of the Hebrew Bible* [Eng. tr., London, 1729], p. 111; so also J. Major).

Whiston's notation of several variant first-century textual traditions, apart from the LXX and the MT (*Essay*), and Carpzov's observation that texts might have been altered for hermeneutical purposes or contemporary applications, were important for subsequent research, e.g., that of the later eighteenth-century writers T. Randolph and H. Owen. According to Owen NT writers generally followed the LXX but "might assume the liberty of altering some words the better to express the sense of the original. . . . For it is the *sense* and *meaning* and not the *words* of it that is truly and properly Scripture" (p. 10). Randolph allowed that some quotations varying from the Hebrew might have been taken from "other translations or paraphrases" (pp. 26f.).

In 1713 G. Surenhusius published in Amsterdam perhaps the most significant contribution of the period (*Sepher hamashuah sive biblos katallagēs*). Besides extensively discussing the problems of textual variants and the applications of the quotations (pp. 113-712), he examined the introductory formulas and the practices of combining quotations and of citing seriatim from the Law, the Prophets, and the Writings. In all he demonstrated widespread agreements of methodology with the rabbinic writings. This broader approach continued in J. Major and in Owen.

A. A. Sykes addressed the problems of typology and the meaning of the formula *hína plērōthē̆*, concluding that typology represents "only an analogy of things of a general likeness" (*Essay upon the Truth of the Christian Religion* [London, 1725], p. 194). He rejected any "double completion" of prophecy (p. 211) and regarded many "fulfillments" in the Gospels and Acts as "an accommodation of Scriptural language to a present occasion" (p. 249). T. Sherlock (*Use and Intent of Prophecy in the Several Ages of the World* [London, 1725], pp. 127-172), with better insight, tied the twofold sense of OT prophecies to the two covenants (Gal. 3:17).

D. Nineteenth Century. A brief review of German research by F. A. G. Tholuck stated the exegetical problem: to establish the propriety of the NT usage, one must show either that the NT application of the text was the original sense or that there was a double sense, a *hypónoia* (p. 569). Of course, *plēróō*, "fulfil" (Mt. 2:15), might mean only "illustrate," unidentifiable quotations (e.g., 2:23) might refer to the general sense of Scripture, and variations of sense (e.g., cf. 2 Cor. 6:17f. with Isa. 52:11; 2 S. 7:14; cf. He. 12:6 with Prov. 3:11f.) might represent a generalizing application (so L. Woods, *Objection to the Inspiration of the Evangelists and Apostles* [1824], following A. A. Sykes). But these expedients were generally found to be inadequate.

Typological exegesis was not necessarily based on a "double-sense": "the scripture fulfilled [e.g., in Mt. 2:15; Jn. 19:36] was prophetical, simply because the circumstance it recorded was typical" (Fairbairn, I, 110; cf. Gardiner, pp. 262-273; Johnson, pp. 186-198; Hartmann, pp. 731-768). In the 20th cent. this distinction was to be sharpened.

The recognition of the LXX as the principal source of NT quotations (so Swete, *Intro.*, p. 392; F. H. Woods, *HDB*, IV, 186f.) did not resolve the problem of the textual variants. Like Whiston, some sought to locate their origin in a first-century text no longer extant. The text was conceived variously as an Aramaic "Bible of the people" (*Volksbibel*, E. Böhl [1873]), as oral Targums (Toy, pp. xvi ff.), or as "manuals . . . of extracts from the OT" (Hatch, pp. 136f., 203-214). Also like Whiston, Hatch suspected that some OT variants were the alterations of Jewish scribes who wanted to avoid Christian interpretations. J. Scott and F. Johnson, however, justified the variants as the product of literary license. Johnson found that the NT phenomena of exegetical paraphrase, of pointer quotations "designed to bring to mind the longer passages" (p. 64), of summary and combined (i.e., merged) quotations, and of a typological or double reference (not double sense) of a text have parallels in Greco-Roman literature and are the legitimate tools of any writer.

E. Twentieth Century. In the first half of the 20th cent. scholars continued the work of Clemen, Haupt, and Massebieau by studying quotations in specific NT books, especially in the Pauline letters (Michel), in Acts (Cerfaux, Clarke), in Hebrews (Harder; van der Ploeg, *RB*, 54 [1947], 187-228; Vis; cf. M. Barth, p. 264), as well as in the sayings of Jesus (Kähler, Oepke; cf. T. W. Manson, *BJRL*, 34 [1952], 312-332).

1. Hypotheses of a Testimony Book and of Greek Targums. The investigation of textual variations continued (e.g., B. F. C. Atkinson, *Journal of Transactions of the Victoria Institute*, 79 [1947], 39-70; Howard). But it found new directions through two independent developments — the hypothesis of a "testimony book," and the supposition that Greek (as well as Aramaic) Targums were the literary form of the earliest Bible translations (cf. Ellis, *Paul's Use*, pp. 16-20, 98-107). Some recurring NT and patristic quotations agree with one another in contrast to any extant OT texts. At times they represent a combination of the same OT texts, grouped around some key word (e.g., "stone" in 1 Pet. 2:6-8) and supporting the same argument. It is not always feasible that the documents in which the quotations occurred had a direct relationship (e.g., Rom. 9:25, 33 and 1 Pet. 2:6-10). Building upon these data and the suggestion of Hatch, J. R. Harris concluded that the source of such quotations was a precanonical Christian collection of anti-Judaic OT texts, a "testimony book." T. W. Manson (*JTS*, 46 [1945], 132) and C. H. Dodd (p. 26) cast doubt upon Harris's idea of a full-scale book of purely anti-Jewish polemic. The presence, however, of testimonies among the Dead Sea Scrolls (4QTestim; cf. 4QFlor) gave striking support to his thesis of primitive written testimonia.

The earliest translations of the OT appear to have been the Targums. These interpretative and sometimes contemporizing paraphrases in Aramaic, the common lan-

QUOTATIONS IN THE NT

guage in postexilic Judaism, were rendered orally in the synagogue services (Mish. *Megillah* iv.4; cf. M. McNamara, *Targum and Testament* [1972], pp. 48ff.). The Palestinian Targum in many sections developed from simple translation and paraphrase to more elaborate paraphrase and commentary; but midrashic (i.e., commentary-type) elaboration sometimes was more extensive in its earlier than in its later recensions (A. Diez Macho, "The recently discovered Palestinian Targum," in *SVT*, 7 [1960], 237, 244; *CG*, p. 197).

In a radical revision of traditional opinion P. Kahle argued that the variant LXX textual traditions also did not derive from one archtype but instead originated from a number of written Greek Targums used in the synagogues of the Diaspora (pp. 236, 247). The later LXX, then, was an imperfect unity that was imposed upon an original diversity of texts. Although disputed (e.g., by F. M. Cross, *Ancient Library of Qumran* [rev. ed. 1961], pp. 169-181; cf. E. Ulrich, *CBQ*, 46 [1984], 619-624), the targumic character of at least some Greek OT textual traditions is probable. If so, the phenomena of textual variation and theological application were from earliest times aspects of one "targumizing" process. Both Greek and Aramaic textual variations, then, represented not only scribal errors or different text-types but sometimes, more significantly, theological design. The interpretative function is elaborated in the early Bible commentaries, the midrashim. The relationship of midrash and Targum and its bearing on the nature of NT quotations thus became important questions that subsequent research could not avoid (cf. Ellis, *Prophecy*, pp. 188-197).

2. Typological Exegesis. "The Scripture is not a textbook of conceptual truths but a document of an historical process." Building upon this salvation-history principle of J. C. K. von Hofmann (*Interpreting the Bible* [Eng. tr. 1959], p. 204), L. Goppelt sought to establish the definitive marks of typological exegesis. (1) Viewing the words or concepts of Scripture as metaphors hiding a "deeper" meaning (*hypónoia*), allegorical exegesis regards the historicity and literal sense as matters of indifference. But for typological exegesis historicity and literal sense are the foundation of the meaning of the text (pp. 12, 17f., 201ff.). (2) In contrast to the history-of-religions school, typology seeks to understand NT situations through a particular history, the salvation-history of Israel. Thus the NT writer viewed his time situation as a midline segment in the continuing historical unfolding of God's purpose. From OT events he discovered the meaning of the contemporary time of salvation, his primary interest. Similarly, present events became a typological prophecy of the future development and consummation of salvation-history (pp. 195-97, 200, 205; cf. von Hofmann, pp. 169-180; 223-236). (3) Like typology, haggadic midrash (see II.F below) also brings the text into the present, but it does so by symbolic and homiletic explanations and lacks the prophetic and representational character of typology (pp. 30f.). Typology is not a systematic hermeneutical method but a "spiritual approach" (*Betrachtungsweise;* pp. 152, 201f.). As the predominant manner of NT biblical interpretation it appears not only in OT citations but in the Christian community's total representation of itself and of its mission (p. 198). Each typology is constituted by two characteristics — historical correspondence and escalation or "heightening" (*Steigerung;* p. 202) — by which the divinely ordered prefigurement finds a complement in the subsequent and greater event.

In a masterful essay R. Bultmann distinguished the origin of typology in a cyclical-repetition view of history (cf. Barn. 6:13) from the salvation-history, promise-fulfillment foundation of OT prophecy. The two already were combined in Judaism. But some NT typology, e.g., Adam/Christ, was not, according to Bultmann, a heightening of salvation-history but cyclical repetitions, parallels and contrasts between the primal time and the end time. Bultmann therefore rejected Goppelt's conclusion that salvation-history is constitutive for NT typology. Contra Bultmann, however, the recapitulation element in NT typology never is mere repetition and always is combined with a change of key in which some aspects of the type are not carried over and some are intensified (see III.F below). Exegetically Goppelt made the better case and provided an important frame of reference for the subsequent interpretation of many NT quotations.

F. Current Issues. Since the middle of the 20th cent. studies in general (Dodd; Ellis, "Conception"; Longenecker; H. M. Shires, *Finding the OT in the New* [1974]) and in specific books have continued (e.g., Gospels [Doeve, France], Matthew [Gundry, Prabhu, Sigal, Stendahl], Mark [Kee, Suhl], Luke [Holtz], John [Reim], Paulines [Ellis, *Paul's Use*; Hanson], Hebrews [Howard, McCullough, Schröeger], 1 Peter [Schutter]). Research has concentrated on three topics: the relation of NT quotations to midrash, the use of OT testimonia, and the nature of NT typology. Each topic has contributed to the solution of the two perennial problems of NT quotations — their textual nature and their exegetical application — by revealing that in many instances the two problems really are one: the textual question becomes itself a hermeneutical question.

1. Relation of NT Quotations to Midrash. A. Robert (*DBSup.*, V, 411-421) noted that OT writers utilized the language of prior Scriptures in citations and allusions (Pss. 78, 105–106; cf. Hos. 12; Mal. 2:10-17) and also in the successive employment of the same themes, e.g., Israel as the unfaithful wife, the unproductive vine, and the rescued flock. Sometimes biblical phraseology (cf. Jer. 32:18 with Ex. 20:5f.; Dnl. 11:30 with Nu. 24:24) or ideas (cf. Jer. 7:21f. with Am. 5:25f.) were updated for or reapplied to a current situation (cf. Jer. 48:45 and Nu. 21:28; 24:17).

Incorporating his insights, R. Bloch argued that the two traits, reference to Scripture and contemporization, were the very soul of the midrashic procedure (*DBSup.*, V, 1266; cf. Doeve, p. 116). Such contemporizing and interpretative glossing appear in OT writers' (and later writers') employment of earlier Scriptures as well as in the LXX, in the Targums, and in the successive redactions of the Hebrew text. Thus in Isa. 9:12 (LXX 11) "Aramaeans and Philistines" became in the LXX the contemporary "Syrians and Greeks." In Ex. 4:24-26 "Lord" became in the LXX and Tg. Onk. "angel of the Lord," and "the blood" was given an explicit sacrificial merit. G. Vermes, elaborating Bloch's thesis, characterized the LXX and Targums as a "re-writing of the Bible," because they introduced contemporary exegetical traditions into the translations (p. 179).

M. Gertner (*JSS*, 7 [1962], 268-271) distinguished such implicit or "covert" midrash, i.e., interpretative paraphrase of the OT text, from explicit midrash, i.e., the cited OT text plus commentary. Implicit midrash also resulted when an explicit midrash was disassembled in transmission, leaving only the commentary. Like G. Klein (*ZNW*, 5 [1904], 144-153), Gertner sought examples of this procedure in the NT, e.g., Lk. 1:76-79 on Nu. 6:24-26. L. Hartman (pp. 172-77, 235-242) and H. Sahlin (*ST*, 18 [1964], 159-172), posited, respectively, similar developments behind Mk. 13 (on Dnl. 7–9, 11–12) and Mk. 5:1-20 (on Isa. 65:1-5). (Cf. Bowman, pp. 172f.; Doeve, pp. 98f.) P. Borgen investigated an explicit midrashic pattern: (1) an OT lemma

QUOTATIONS IN THE NT

text followed by a paraphrastic exposition, (2) a subordinate quotation with exposition, and (3) a concluding repetition of the lemma (pp. 33ff., 51-54). This sequence, e.g., in Jn. 6:31-58; Rom. 4:3-22, has parallels in Philo, e.g., in *Legum allegoriae* iii.162-68, and in Palestinian midrashim. Ellis found explicit midrash patterns in most NT books (*Prophecy,* pp. 154-59; 213-236; 247-253; cf. also He. 10:5-39; Jas. 2:21-26; 1 Pet. 1:14–2:10; see III.D.3, 4 below). Subsuming explicit and implicit types under her definition, Bloch detected midrashic procedures in most NT quotations and allusions (pp. 1279f.).

In an instructive summary of recent developments A. G. Wright argued against such a broad definition (*CBQ,* 28 [1966], 105-138, 417-457). As a literary genre, the midrash, whether explicit or implicit, should not be identified solely from the presence of midrashic procedures (contra Vermes, p. 176). Identification as a midrash requires also a textually manifest intention to illumine the cited text, as in, e.g., Jn. 6:30-58; Rom. 4; and the Dead Sea Scrolls pesher. Reapplications of biblical language, e.g., Lk. 1–2, and contemporizing redactions, e.g., the LXX, are not midrashic (pp. 451f.). As Wright admitted, however, the term midrash designates an activity as well as a genre (p. 456; cf. W. Bacher, *Die exegetische Terminologie der jüdischen Traditionsliteratur* [repr. 1965], I, 103; Sir. 51:23; CD 20:6; 4QFlor 1:14). And his restricted definition of the genre may reflect more a current and practical interest than a historical distinction present in prerabbinic usage (cf. Ellis, *Prophecy,* pp. 188-192).

Much attention has been given to biblical exegesis in the DSS and to its relationship to the NT. Cf. Betz, *Offenbarung*; Bruce; J. A. Fitzmyer (*NTS,* 7 [1960/61], 297-333); B. J. Roberts (*BJRL,* 36 [1953/54], 77ff.); Yadin; J. Carmignac (*RB,* 63 [1956], 234ff.; *RQ,* 2 [1959/60], 357-394). In CD 4:14; 4QpNah; 4QpPs37; 1QpHab, etc., the explanation of an OT text is preceded by the phrase "its interpretation [Heb. *pišrô*] concerns. . . ." The term *pēšer* is used in conjunction with *miḏraš* (4QFlor 1:14, 19), and the literary structure has formal parallels with some rabbinic midrashim (e.g., *Eccl. Rabbah* xii.1; cf. L. H. Silberman, *RQ,* 3 [1961/62], 328), with the Gnostic *Pistis Sophia* (e.g., 120a; cf. J. Carmignac, *RQ,* 4 [1963/64], 497-522) and more loosely with the lemma-plus-commentary pattern in Jn. 6:31-58; He. 2:5-10; 10:5-10, etc. (cf. Borgen; Ellis, *Prophecy,* pp. 201-205 *passim*; Gärtner, *ST,* 8 [1954], 13f.).

In the OT Heb. *pēšer* (Aram. *pᵉšar*) introduces the explanation of a revelatory dream or writing (Dnl. 2–7) and of any difficult matter (Eccl. 8:1). Following the clue in Daniel, Elliger (p. 157) and Silberman defined pesher etymologically, i.e., as an interpretative procedure that seeks to explain the (original) meaning of dreams and visions. The DSS also, however, use this term of Moses' interpretation of the law (1Q22 1:3f.; cf. Nu. 12:6-8; Betz, *Offenbarung,* pp. 40-45, 80ff.). Probably one should define pesher not in terms of structure (or of specific subject matter) but, more usefully, in terms of methodology and of eschatological perspective. Thus Stendahl (pp. 183-202), following Brownlee (*Midrash,* p. 25), noted that DSS pesher texts reflect procedures in which the OT text undergoes an interpretative molding, *ad hoc* or with reference to selected OT textual traditions, so that present events are an eschatological fulfillment of the text. He saw similar procedures in Matthew, Ellis (*Paul's Use,* pp. 139-147) in Paul, and Freed (pp. 129f.) in John.

Contemporizing and interpretative alterations are a general characteristic of haggadic, i.e., nonlegal, midrash. In distinction from rabbinic midrash, the DSS and the NT have a common eschatological perspective. For the writers of both (cf. 1QpHab 7:1-13; Mt. 4:14-17; Lk. 16:16) the end time is impending. Their time is the "last generation" to which the OT prophecies referred (CD 1:12; 1QpHab 2:7; 7:2; Mk. 13:30; Acts 2:17; 3:24; 1 Cor. 10:11; 1 Jn. 2:18). Their groups are the elect company out of which God's final redemptive and judging action was now proceeding. It is therefore justifiable to define pesher as a kind of haggadic midrash in which the midrashic procedures are coupled to this perspective of eschatological fulfillment (cf. Betz, *Offenbarung,* pp. 79, 169; Grelot, in A. Robert, ed., *Intro. to the OT* [Eng. tr. 1968], pp. 590, 596f.; A. G. Wright, *CBQ,* 28 [1966], 422). Such pesher-type exegesis is rather widespread in NT quotations (cf. Smits, IV, 599; Lindars, p. 16).

2. Use of OT Testimonia. J. R. Harris (e.g., II, 16f., 21-28, on Rom. 4, 9–11) and L. Cerfaux (*Revue d'histoire ecclésiastique,* 27 [1931], 525ff., on 1 Cor. 1:18–3:23) derived citations in midrashic NT contexts from testimony collections. J. W. Doeve (p. 116) suggested that on the contrary testimony collections arose out of Christian midrashim; "Words lifted from their scriptural context can never be a *testimonium* to the Jewish mind." For gentile Christians unschooled in midrashic techniques, however, lemma (and subordinate) quotations may have been extracted from the fuller midrashim to form testimonia. The results of the midrashic alterations remained in the testimonia (e.g., Mk. 1:2f.), although the methodology by which they were obtained no longer was apparent.

This view may serve at times to define Dodd's hypothesis that before testimonia collections were formed, citations from selected OT "text-plots" were contextually interpreted and sometimes textually altered (pp. 57ff., 108f.; cf. B. Lindars, *Expos.T.,* 75 [1963/64], 174; Ellis, *Paul's Use,* pp. 98-107). In any case, the collecting of testimonia was already a practice of first-century Judaism (e.g., 4QTestim) and of pre-Pauline Christianity (cf. Ellis, *Paul's Use,* pp. 89-91, 106) even if not on the scale that J. R. Harris supposed. Where testimonies are derivative from Christian misrashim, therefore, they must be regarded as virtually immediate complements to them and the continuation of a midrashim-to-testimonia process already being used in Judaism. Of course, testimonia achieved greater variety in the patristic period.

Observing that the same OT testimonia were used to refer to the Messiah's resurrection, to His passion, and to His origins (cf. Acts 13:33 with Mk. 1:11; Acts 2:34 with Mk. 12:36; He. 1:13), B. Lindars (pp. 252-59) sought to establish their use in that sequence in the developing Christian apologetic. But in all likelihood some of these issues already were present in Jesus' preresurrection mission and, indeed, in pre-Christian Judaism (cf. CD 7:16f.; 4QFlor 1:12f. with Acts 15:16; 4QTestim 7f. with Acts 3:20ff.; 4QFlor 1:10f. with He. 1:5; 2 Cor. 6:18). The resurrection of Jesus did not begin a controversy but rather shifted the focus of a number of long-standing controversies. The Christian apologetic use of the OT therefore must have been many faceted from the beginning, and, as Lindars admitted (p. 29), its development is hardly subject to chronological reconstruction by stages.

3. Nature of NT Typology. The historical and eschatological dimension of NT typology sets it apart from the philosophical framework of Philonic allegory (cf. Lampe and Woolcombe, pp. 26-30, 50-60; for Paul, see Ellis, *Paul's Use,* pp. 126-135; for Hebrews, Barrett, pp. 388-393; M. Barth, pp. 65-71; G. B. Caird, *Canadian Journal of Theology,* 5 [1959], 44-51; S. G. Sowers, *Hermeneutics of Philo and Hebrews* [1965], pp. 92-97, 139f.). This dimension determines "the fuller sense" given to OT passages by the NT (so Grelot, pp. 180f.; Smits, IV, 658-677)

and finds parallels in the DSS (CD 4:10f.; cf. T. Levi 15:1f.; 17:8f.; T. Jud. 23:5; B. Gärtner, *ST*, 8 [1954], 8). Alternative approaches, however, have been argued by some Roman Catholic scholars in *sensus plenior* ("fuller sense") studies (see R. E. Brown, *Sensus Plenior of Sacred Scripture* [1955]; cf. W. S. LaSor, "*Sensus Plenior* and Biblical Interpretation," in W. W. Gasque and W. S. LaSor, eds., *Scripture, Tradition, and Interpretation* [1978], pp. 260-277), by existentialist theologians (H. Braun, *ZTK*, 59 [1962], 30f.; Suhl), and by A. T. Hanson (*Jesus Christ and the OT* [1965], pp. 6f.), who believed that "the real presence of the pre-existent Jesus" best explains this area of NT exegesis.

As defined by R. E. Brown, *sensus plenior*, unlike typology, "deals on the plane of the abstract values of language and the typical sense with concrete realities of person, thing, and event" (*CBQ*, 25 [1963], 269; cf. *Sensus Plenior*, p. 149). For example, in its "fuller sense" the language of Gen. 1:26; 3:22; Isa. 6:3 refers to the trinity; Gen. 1:2 to the Holy Spirit; Pss. 8, 69, 98 to the Messiah; Canticles to Christ and the Church. B. Vawter (*CBQ*, 26 [1964], 89) objected that such a verbal approach "may have implications for abstract semantics or for depth psychology; it can hardly shed any light on the art of communication." The location of the fuller sense in the language is reminiscent of wordplay in rabbinic exegesis, which has a few counterparts in the NT (e.g., Mt. 2:23; cf. He. 7:2). It also appears to have affinities with the *hypónoia* of older hermeneutics and, as J. M. Robinson noted (*CBQ*, 27 [1965], 18f.), with "the new hermeneutic" of some Protestant theologians. Whether *sensus plenior* shades off into a new form of allegorical interpretation (so J. L. McKenzie, *JBL*, 77 [1958], 202f.) depends upon the criteria established for determining it (cf. R. E. Brown, *CBQ*, 25 [1963], 274ff.; J. Schmid, *BZ*, 3 [1959], 161-173). A historical-eschatological framework governs the "fuller sense" of NT quotations, including the occasional wordplay and "allegory" (Gal. 4:24; see III.F, G below).

III. Nature and Presuppositions of NT Usage.–*A. Introductory Formulas.* The introductory formulas were classified by Turpie (*NT View*) according to the NT speaker, the book or writer cited, and the verb used (most often forms of Gk. *graphō*, "write"; *légō*, "say"; *plēróō*, "fulfil"). Generally the NT formulas correspond to those in the OT (e.g., 1 K. 2:27; 2 Ch. 35:12; cf. R. Gordis, *HUCA*, 22 [1949], 157-219), to those — mainly "sayings formulas" — in the rabbinical writings (e.g., Mish. *Aboth* iii.7; T.B. *Pesahim* 81b) and the Philonic writings (e.g., *De migratione Abrahami* 118), and to those in the DSS (e.g., 1QS 5:15; 8:14; 4QFlor 1:2, 15f.; cf. Ryle, *Philo and Holy Scripture* [1895], p. xlv; Ellis, *Paul's Use*, pp. 48f.; J. A. Fitzmyer, *NTS*, 7 [1960/61], 299-305; de Waard, pp. 16, 31ff., 72).

Many quotations have no formula of introduction, and a few formulas occur without an explicit quotation (e.g., Mt. 26:56; Lk. 24:46). The prophetic agency presumably is indicated by the terms "through" or "by" — e.g., messages were sent "through" Isaiah (Acts 28:25), "by" the prophets (Mt. 2:23; Acts 3:18), and "by" Jeremiah (Mt. 2:17). Occasionally an introductory formula is important for the teaching involved (Mk. 12:36; Acts 2:25, 30f.). Ordinarily the OT writer, the book, or other details are mentioned to locate the passage; cf. "the passage about the bush" (Mk. 12:26) and references to Elijah (Rom. 11:2), David (He. 4:7), and Hosea (Rom. 9:25). "The law," however, may specify the Decalogue (Rom. 7:7), the Pentateuch (1 Cor. 9:9), or the OT generally (Jn. 10:34; 1 Cor. 14:21).

Sometimes one OT book is named and another cited. Zec. 11:12f. might have been regarded by Matthew (27:9, "spoken by Jeremiah") or by his (testimonia?) source as an elaboration or interpretation of Jeremiah (18:2-12; 19:1-15). Mal. 3:1 was perhaps seen by Mark (1:2, "written in Isaiah") as an elaboration of Isa. 40:3 (cf. Ellis, *Paul's Use*, p. 40 n.2). In 4QTestim 21-24, Josh. 6:26 plus (apparently) 4QPssJosh are cited under the latter title.

Greek *graphḗ* ("scripture") may refer to an individual OT passage or to the OT viewed as a whole (2 Tim. 3:16; 2 Pet. 1:20; cf. Warfield, pp. 237f.). More significantly, it may include a Christian summation (Jn. 7:38) or elaboration of OT passages (Gal. 4:30; 1 Cor. 15:54f.; cf. 2:9), words of Jesus (1 Tim. 5:18b), or Christian prophetic writings (2 Pet. 3:16; cf. Eph. 5:14). The citation as Scripture of the OT plus a Christian writing (1 Tim. 5:18; Jas. 5:4f.; cf. 1 Cor. 15:45; 2 Tim. 2:19) reflects a procedure similar to that noted above in Mt. 27:9; Mk. 1:2. It also has implications for the concept of the canon in early Christian circles.

In such usages *graphḗ* represents an appeal to an interpreted divine authority, distinct from traditional interpretations (cf. Mt. 5:21f.; 22:29; Mk. 7:9-13). As was the case in some elements of rabbinic Judaism (SB, II, 127ff., 135ff.; Doeve, p. 56 n.), the revelational character of Scripture is bound together with the presence of the Spirit (2 Cor. 3:6, 15ff.). This revelational character is present and alive in the current interpretation ("Scripture *says*") as much as in the original proclamation of the prophecy (cf. Gal. 3:8; Ellis, *EQ*, 39 [1967], 201; contrast Kaiser, pp. 27f.).

These observations apply equally well to other formulas. "Scripture says," "God said," "Moses said" (Mt. 15:4 par. Mk. 7:10), and "it is written" are different ways of expressing the same thing. Unlike the rabbis, the NT authors often equate what "is written" with the right interpretation (Rom. 2:24; 9:33; 11:26f.; 12:19; but cf. Lk. 4:17, 21f. with Acts 8:32, 35). Like them, however, the exceptional formula "have you not read," found only on the lips of Jesus and usually in His midrashic exposition (cf. Doeve, pp. 105f., 163f.), reflects a distinction between reading Scripture and knowing or hearing it (cf., e.g., Mt. 12:3, 5; 22:29, 31; cf. Mk. 8:18; 13:14; Acts 8:30; 13:27; 2 Cor. 3:14; Rev. 1:3; Daube, *Judaism*, pp. 422-436).

Greek *légei kýrios* ("says the Lord"), embedded in nine quotations, none in the Gospels, probably marks the activity of Christian prophets who reshaped OT passages for testimonia purposes (Ellis, *Paul's Use*, pp. 107-112). It and Gk. *hína plērōthḗ* ("that it might be fulfilled") usually (but not in Jas. 2:23) signal an altered text-form and an eschatological reapplication of the cited texts in the manner of Qumrân pesher (see III.D below). *Hína plērōthḗ*, found especially in Matthew and John, is also used of sayings of Jesus (Jn. 18:9) and of direct prediction (Mt. 21:4; cf. 2 Ch. 36:21).

B. Combined Quotations. Combined quotations of two or more OT texts are widespread. They occur as a chain coupled, e.g., by Gk. *kaí* (Mk. 7:10; 12:32f.; Acts 1:20; Rom. 9:33; 15:10ff.; He. 1; cf. Mk. 12:29ff.; Rom. 12:19f.; Philo *De migratione Abrahami* 157) or by longer midrashic interjection (Jn. 12:38-40; Rom. 9–11; He. 4:3ff.). Less frequently, combined quotations are merged texts (Acts 13:22; 15:16-18; Rom. 3:10-18; 2 Cor. 6:16ff.; He. 10:37f.; cf. Mt. 21:13; Mk. 12:32f.; 4QTestim 3-7). They may illustrate a theme, sometimes gathered around a catchword (Gk. *hodón*, Mk. 1:2f.; *hósia*, Acts 13:34f.; *líthos, eklektós*, 1 Pet. 2:6-9; *éthnē*, Rom. 15:9-12). They are in general use in classical (cf. Johnson, pp. 92-102), rabbinic (cf. Ellis, *Paul's Use*, pp. 50f.), and Qumrân literature (cf. H. Bardtke, *RB*, 63 [1956], 220ff.; J. Carmignac, *RB*, 63 [1956], 234ff.).

Chain quotations sometimes join, in rabbinic fashion, citations from the Law, the Prophets, and/or the Hagio-

QUOTATIONS IN THE NT

grapha (Jn. 19:36f.; Rom. 10:18-21). This linkage may reflect the principle of twofold witness (Dt. 19:15; cf. van Vliet, *No Single Testimony* [1958]). More likely it is reiteration, which Hatch (p. 203) thought represented the "relics" of testimonia collections (cf. Cerfaux, pp. 50f.).

C. Testimonies. Some writers have continued to discern anti-Jewish or anticultic testimonies behind patristic citations (on Irenaeus *Adv. haer.* iv.17.1-5 [Ps. 50:19 plus (?) Apoc. Adam], cf. P. Benoit, *TU,* 79 [1961], 20-27; on Barnabas, cf. Prigent [1961], pp. 29-83; Daniélou, pp. 99-107; L. W. Barnard, *Apostolic Fathers and Their Background* [1967], pp. 109-135). Despite its (later?) title, however, Cyprian's third-century *Ad Quirinius* or *Testimonies Against the Jews* (*Works,* ed. N. Marshall [London, 1717], pp. 18-81) appears to have an instructive rather than apologetic intent. It represents a thematic (although not always a catchword) collection of OT and NT texts on, e.g., the messianic stone, Christ the King, the Judge, the Exalted One (2:16-30; cf. J. P. Audet, *RB,* 70 [1963], 382-396, 404f.). J. R. Harris's view (II, 1f.) that earlier Christian testimonia were primarily or solely anti-Jewish apologies probably is too strictly conceived. Like later rabbinic midrashim, the DSS reveal thematic combinations for instructional purposes. In 4QTestim several messianic OT texts are followed by a pesher midrash on the final text; the form is like Rom. 15:9b-13. In 4QFlor each of the collected texts is followed by a pesher elaboration (cf. Rom. 9:6-18).

Some NT testimonia may derive from Jesus' own OT usage (Lk. 4:18f.; cf. Mt. 5:3; Lk. 7:21f.; Acts 10:38; Dodd, pp. 52f.). Compare (1) the "unseeing eyes" testimonium in Mt. 13:14f.; Jn. 12:40; Acts 28:26f. with Lk. 8:10; Mk. 8:18; (2) the stone-temple testimonia in Acts 4:11; 15:16-18; Rom. 9:33; 2 Cor. 6:16; 1 Pet. 2:4-8 (Eph. 2:19-22; He. 9:11; Rev. 21:3) with Mk. 12:10-12 (*anégnōte*); 14:58; 15:29; Jn. 2:19; (3) the "third day" testimonium in 1 Cor. 15:4; Mt. 12:40 with Mt. 12:39; Mk. 14:58; 15:29; Lk. 13:32; 18:33; 24:6f., 46 (but see Lindars, pp. 59-72).

It is not always easy to determine whether the midrash or the testimony collection was prior. Thus the common source behind Rom. 9:33; 10:11; 1 Pet. 2:6ff. may have been a testimony (so Dodd, p. 43; Ellis, *Paul's Use,* p. 89; cf. Longenecker, p. 203), or an earlier midrash similarly reemployed in Romans and 1 Peter (cf. also Lindars, p. 37, on Acts 2:16ff., 25ff.). Some independent quotations, e.g., Mt. 27:9f.; 4:15f., also may have been extracted from earlier midrashic contexts (cf. Ellis, "Conception").

D. Quotations and Midrash. 1. Wordplay. The midrashic play on words, found in rabbinic and in Qumrân writings (e.g., CD 7:9-20; 1QpHab; cf. J. G. Harris, pp. 28-35), appears occasionally in the NT. Mt. 2:23 may reflect a play on Heb. *nēṣer,* "branch" (Isa. 11:1) and/or *nāzîr,* "Nazirite" (Jgs. 13:5; cf. Black, pp. 82f.). Possibly the double meaning of "lift up" in Jn. 3:14; 12:32ff., i.e., "exalt" and "hang," alludes to an Aramaic text of Isa. 52:13 using *z^{e}qap,* which carries both meanings. In Mk. 8:31 ("be killed and . . . rise") both meanings are made explicit (cf. M. Black, *BJRL,* 45 [1963], 315ff.; cf. *anairéō,* Acts 2:23f.; 10:39f.). Behind Jn. 12:32ff. M. McNamara (*NT,* pp. 147ff.) suggested Aram. *s^{e}lēq.* There may be a similar double entendre in Acts 3:22, 26 ("raise up"). Doeve (p. 99) supposed that "turns to" (2 Cor. 3:16) is the result of reading Heb. *bō'* in Ex. 34:34 as *šûḇ* in analogy with their equivalent usage in 1 K. 22:27f.

2. Midrashic Exposition. In midrashic synagogue homilies OT passages are sometimes selected on the basis of a catchword (J. Mann, *Bible as Read and Preached in the Old Synagogue,* I [1940, repr. 1971], 12f., 23-26; cf. A. Guilding, *Fourth Gospel and Jewish Worship* [1960], pp. 36f., 39ff.). This pattern may be observed in NT expositions. For example, Gk. *prosphorán, perí hamartías,* and *eudókēsas* in He. 10:5f. (Ps. 40:6-8 [MT 7-9]) not only are taken up in the exposition (10:8, 26) but appear in the subsequent citations (vv. 18, 38). The LXX variant *sṓma* (v. 5) is important for the exposition (v. 10), as is *ho erchómenos* (v. 37; cf. v. 30). The (created?) variant *eudókēsas* (v. 6) is important for a verbal tally with Hab. 2:4 (v. 38). Compare also in Acts 2:14-36 *ekchéō* (vv. 17, 33), *ek dexiṓn* (vv. 25, 34), and *kathízō* (v. 30; cf. v. 35); in Acts 13:16-41 *Dauid* (vv. 22, 34ff.), *egeírō* (vv. 22f., 30, 37), and perhaps *hypsóō* (v. 17), which might have equalled *anístēmi* (vv. 33f.) in an underlying Semitic text form.

Acts 2 and 13 illustrate other features of midrashic exposition. The midrash at Acts 2:14-36 begins with the Pentecost event, which is interpreted as a fulfillment of Joel 2:28-32 (vv. 16-21; *toútó estin = pēšer*). The commentary is furthered by citations of Ps. 16:8-11 (vv. 25-28) and Ps. 132:11 (v. 30), allusions to Ps. 116:3 (v. 24) and Ps. 68:19 (v. 33), and is concluded by a citation of Ps. 110:1 (vv. 34f.). The texts and commentary are bound together by a number of recurring catchwords. Somewhat differently, a synagogue midrash at Acts 13:16-41 opens with an allusion to Dt. 4:34, 37f. (vv. 17ff.) and is furthered by allusions to 1 S. 13:14 and Jer. 30:9 (v. 22). The application of these texts to the mission and resurrection of Jesus (vv. 23-39) is supported by citations of Ps. 2:7; 16:10; Isa. 53:3 (vv. 33f.) and an allusion to 2 S. 7:6-16 (vv. 22f.). The commentary is concluded by a citation of Hab. 1:5 (v. 41). Cf. Ellis, *Prophecy,* pp. 133ff., 194, 199, 204f.

Both in the catchword arrangement and in the techniques, Doeve (pp. 168-176) and J. W. Bowker (*NTS,* 14 [1967/68], 96-111) found in Acts 2:14-36; 13:16-41 common features of the rabbinic exegesis. Bowker compared the form with that of the "proem" and "yelammedenu-rabbenu" midrashim. Following the freely chosen proem ("opening") text the exposition cites or alludes to other texts and couples the proem to the set readings from the Law (the Seder) and from the Prophets (the Haphtarah; cf. W. Bacher, *Proöemium der alten jüdischen Homilie* [repr. 1970], p. 7; Borgen, p. 52; Guilding, *Fourth Gospel and Jewish Worship,* pp. 20-78; Mann, *Bible as Read and Preached,* I, 12). In Acts 13 Bowker took the Seder and Haphtarah readings to be Dt. 4:37f. and 2 S. 7:6-16 (on 2 S. 7 see Doeve, p. 172; cf. "Egypt" [v. 17], "judges" [v. 20], "Saul" [v. 21], "David" [v. 22], "raise up" [v. 22], "my son" [v. 33]). Similarly, in 1 Cor. 1:18–3:23 and other texts cf. V. P. Branick, *JBL,* 101 (1982), 251-269; Ellis, *Prophecy,* pp. 154-162 *passim*.

3. Midrash Pesher. In such passages as these the OT text-form sometimes was shaped for the sake of exposition. Cf. *sēmeía,* Acts 2:19-22; *kathízō,* vv. 30, 35; *dídōmi,* 13:34f.; Dt. 4:38. Elsewhere cf. *proskyneín, Babylōnos,* Acts 7:43; *eleuthéras,* Gal. 4:30, cf. vv. 22f.; *pás,* Rom. 10:11f., cf. 9:33; *ánthrōpos,* 1 Cor. 2:9, 11; *sophón,* 1 Cor. 3:20 (cf. v. 19); *paideúei,* He. 12:6 (cf. vv. 7-10); *allá kaí tón ouranón,* He. 12:26 (cf. vv. 22f.); cf. also Gal. 3:6-29; He. 2:5-18; 3:7–4:13; 12:5-29. In the DSS cf. the omission of "Jericho" in 4QTestim 22, 29f.; in 1QpHab the interpretative variants depend largely on wordplay; cf. Stendahl, p. 189; B. Gärtner, *ST,* 8 (1954), 1-5. At times the writer accomplished his exegetical purpose by using his customary LXX text (e.g., He. 2:7: "angels" interpreting Heb. *'ĕlōhîm;* Acts 2:27: "corruption" interpreting *šaḥaṯ*) or by changing word order (He. 10:38; cf. T. W. Manson, *JTS,* 46 [1945], 135). At times he selected a different textual source (He. 10:30; Rom. 12:19).

The NT is more radically creative in shaping the text than either Qumrânian or rabbinic midrash. But its special

QUOTATIONS IN THE NT

affinity with the DSS pesher midrash (see II.F above) is further illustrated by its eschatological use of a common introductory formula. In the NT *houtós estin* or *toút' éstin* ("this is") introduces a current event that explains a biblical passage (cf. Jn. 6:31, 50; Rom. 9:7f.; 10:6, 8; He. 13:15 with 1QpHab 12:3ff., 7-9; 4QpIsa^b 2:6f., 10; 4QpNah 1:11; 4QPBless 2; 4QFlor 1:2f.; CD 6:4, 7; 7:16ff., 20; contrast Philo *De migratione Abrahami* 67). Or the usage is reversed: the formula introduces a biblical passage that explains a current event (cf. Mt. 3:3; 11:10; Acts 2:16 with 1QpHab 3:2, 4; 4QpIsa^b 2:7). Equivalent terms, e.g., *hû', zeh, dēn* ("that," "this" = LXX *houtos*) are used in the OT, especially in the later strata. They introduce explanations of divine revelation through prophetic oracle (Isa. 9:14f.), parable (Ezk. 5:5), vision (Zec. 1:10, 19; 5:3, 6), dream (Dnl. 4:24 [MT 21]), and strange writing (Dnl. 5:25f.). In Daniel and in the DSS (4QFlor 1:1, 11, 14) the expressions are used in conjunction with or as an equivalent of pesher (for rabbinic usage cf. Bonsirven, pp. 42-46).

Similar alterations appear in NT passages that are not formally expositions of Scripture. They adapt the OT citation to the NT narrative or situation and, as above, they may represent a change by the author (e.g., *basileús*, Lk. 19:38; cf. vv. 11, 15; *kathémenos*, Jn. 12:15; cf. v. 14; *hón*, Jn. 19:37) or by his selected source (e.g., *parthénos*, Mt. 1:22f.; *hymín, hymeís*, 2 Cor. 6:18).

4. Disassembled Midrash. Luke 20:9; 21:20 (cf. 12:53) when compared with the Markan parallels illustrate how OT allusions may fade in transmission. If some NT testimonia represent excerpted lemma texts of original midrashim, possibly the complementary midrashic commentary with or without its OT allusions is similarly employed. But to establish this use is more difficult. M. Gertner (*JSS*, 7 [1962], 267-292) and others identified as such commentary Mk. 4:1-22 (on Jer. 4:3); 7:31-37 (on Isa. 35:5); Jn. 10 (on Ezk. 34); Jn. 15 (on Ezk. 19:10-14); 2 Cor. 3 (on Ex. 34); James (on Ps. 12; cf. also Mt. 10:35 [on Mic. 7:6?]; Mk. 12:1f. [on Isa. 5:1?]; see II.F above).

E. Textual Sources. Variations from the OT text may reflect only the NT writers' textual source and not their interpretative intention (cf. Bratcher; Ellis, *Paul's Use*, pp. 150ff.; Swete, pp. 391-404). The use of the LXX has long been noted, and minor departures from it may derive from a Hebrew text underlying the LXX (Brownlee, *Meaning*, p. 89). Less frequently the Targums may explain the variation (cf. McNamara, *NT*, pp. 254-59). Textual solutions, however, no longer can be assumed and must be established in the light of the proven midrashic character of many NT quotations.

F. Typological Interpretation. NT typological interpretation presupposes a two-stage division of Israel's history, the old and new covenants, and of universal history, this age and the age to come. The new covenant includes an escalated recurrence of events in the old (see II.E.2 above). Thus the Scriptures were "written for" and "serve" Jesus and His messianic community. Upon them the "end of the ages," the "fulness of time," and "the last days" had come (Rom. 15:4; 1 Cor. 9:10, 14; 10:11; Gal. 4:4; He. 1:1f.; 1 Pet. 1:12).

Since Israel viewed all God's redemptive acts according to the pattern of the Exodus (Daube, *Exodus;* cf. von Rad, *OT Theology*, II [Eng. tr. 1965], 272); it is not surprising that Jesus and the NT understood the decisive messianic redemption in the same way. More broadly, covenant typology envisions the whole OT history as prophetic. Its institutions were a shadow of the good things to come, or of the "true" (He. 9:9; 10:1; Col. 2:17; cf. Mt. 7:11; Jn. 6:32). Its events were a "type" or "parable" of corresponding events in the messianic time (1 Cor. 10:6, 11; He. 9:9; 11:19; cf. Gal. 4:21-31).

Reflecting on Ex. 25:40, He. 8:5 (cf. 9:24; Acts 7:44) reverses the imagery, though not the meaning, and identifies "type" with the heavenly model to which the OT institutions were "antitypes." Like John (6:31-39; 14:1-3) and contra Philo, Hebrews converts the vertical typology to the horizontal, eschatological schema by identifying the heavenly with the new age, i.e., with the ascended and coming Jesus (cf. He. 9:24-28; 10:37; *TDNT*, VIII, pp. 257f. [Goppelt]).

The new not only corresponds with but also supersedes the old and is, therefore, truly a new thing. Jesus, the prophet like Moses (Dt. 18:15; Acts 3:22f.; 7:37; cf. Jn. 7:40), fulfills the new covenant of Jer. 31 in the events of His infancy (Mt. 2:18), passion (Lk. 22:20, 29), and exaltation (He. 8:8-12; 10:16f.; cf. Isa. 61:1-8; Mal. 3:1; 4:5 [MT 3:23] with Mt. 11:2-15). In Jesus, the son of David (= the Son of God), the promises and ascriptions to the Davidic kings in 2 S. 7:12ff.; Pss. 2, 16, 110; Am. 9:11f. find their eschatological actualization (cf. Jn. 7:42; Acts 3:25-36; 13:33ff.; 15:16ff.; 1 Cor. 15:25; He. 1:5).

Because the new covenant is the occasion of the new creation, a cosmic or creation typology can be distinguished. Jesus is the "eschatological Adam" and the Son of man or son of Adam (Ps. 8; 1 Cor. 15:27, 45; Eph. 1:21f.; He. 2:5-10; cf. Lk. 3:38; Acts 6:14; 7:44, 48). The combination of covenant and creation typology in 1 Corinthians and Hebrews has its immediate background in the resurrection of Jesus (cf. also 1 Pet. 3:21f.; Rev. 2:7, 26f.). But the linkage is implicit in Jesus' temple saying (Mk. 14:58; 15:29; *acheiropoiētos*), His promise to the robber (Lk. 23:42f.), His divorce saying (Mt. 19:4-9; cf. Lk. 16:16-18), and probably His self-designation as Son of man (cf. "dominion," "glory" in Ps. 8:5f. [MT 6f.]; Dnl. 7:13f.; cf. Mk. 13:26; 14:62). Indeed, the OT and pre-Christian apocalyptic Judaism already had associated Israel with Adam, and the new covenant with a renewed creation (Dnl. 7:13f., 27; T. Levi 18; 2 Bar. 72–74; 1QS 4:22f.; CD 3:13-20; 4:20; 1QH 6:7f., 15f.; 17:12-15; 1Q34; cf. Isa. 43; 65:22; M. Hooker, *Son of Man in Mark* [1967], pp. 17, 24-30, 71, but see S. Kim, *"The 'Son of Man'" as the Son of God* [1983], pp. 36f., 99f.). Jesus and His followers shared these convictions and explained them in terms of His mission and person.

In a judgment typology the flood and the destruction of Sodom become types of the eschatological destruction (Lk. 17:26-30; 2 Pet. 2:6; *deígma*, Jude 7). Similarly, the faithless Israelite typifies the faithless participant in the new covenant (1 Cor. 10:6-11; He. 4:5f., 11), and the enemies of Israel typify the (Jewish) enemies of the Church (Rev. 11:8; 17:5; 18:9-19; cf. Rom. 2:24; Gal. 4:29) and perhaps antichrist (cf. B. Rigaux, *L'Antichrist* [1932]; 2 Thess. 2:3f.; Rev. 13:1-10). More problematic is a future typology (see II.E.2 above) that treats current NT events as types of future events, e.g., Nero as a type of a Nero *redivivus*, and the destruction of Jerusalem as a type of final judgment.

G. Presuppositions of NT Use of the OT. These presuppositions are important for both the rationale and problems of NT exegesis (cf. Ellis, *Paul's Use*, pp. 135-149). Most often they must be inferred or indirectly derived.

(1) A large proportion of NT quotations are apologetic in origin and reveal the concerted effort of the earliest community (and of Jesus) to establish its legitimacy and continuity with the prophets in accordance with the principle of Dt. 13:1-5. The NT, therefore, never puts in opposition Jesus and the OT (not even in Mt. 5), but rather Jesus' interpretation of the OT and alternative interpretations. The hermeneutical question arises especially in the debates of Jesus and certain Jewish leaders (Mt. 19:3-9;

Mk. 12:10, 26, 35ff.; Lk. 10:25-37; 20:9-17; cf. Jn. 5:46), the Evangelists' commentary (e.g., Mt. 12:18-21; Mk. 1:2), the speeches in Acts, and the exegesis of Paul and the author of Hebrews (e.g., Rom. 2–4; 9–11; He. 1–2; 8–10).

(2) This question underlies the unswerving NT conviction that Jesus' followers constitute the true Israel (cf. Lk. 19:9; Acts 3:23; 15:14ff.; Rom. 9:6; Gal. 6:16; Phil. 3:3; He. 4:9; Rev. 2:14; cf. 1 Cor. 10:18, AV). Thus the NT can apply to unbelieving Jews OT passages originally directed at the Gentiles (Acts 4:25ff.; Rom. 8:36; 9:25; 10:13) and to the Church OT passages originally directed at the Jewish nation (2 Cor. 6:16ff.; He. 8:8-12; 1 Pet. 2:9f.). For the similar self-estimate of the Qumrân community, see 1QM 1:2, which lists Jewish blasphemers with Israel's pagan enemies; 1QpHab 2:1-4, which equates faithless Israelites with current Jewish rejecters of the "new covenant" (cf. Acts 13:41); 4QTestim 22; 29f., where faithless Jerusalem fulfils the OT role of pagan Jericho.

(3) The Church is not just the true Israel but the new Israel, the Israel of the new covenant. This eschatological understanding of history is fundamental to NT exegesis (see III.F above). Its exegetical application is often facilitated by a pesher methodology (see III.D above) and by the concept of corporate personality, in which the group is viewed as an extension of the leader's person. Thus equally applicable to Messiah and to His body (i.e., the Christian community) are the royal son of 2 S. 7 (cf. He. 1:5 with 2 Cor. 6:18); the seed of Abraham in Gen. 12:7; 22:18, AV (cf. Acts 3:25f.; Gal. 3:16, 29); the tent (Am. 9:11; cf. Acts 15:16f. with He. 9:11), house (1 K. 6:1; cf. 2 Cor. 5:1 with Acts 7:44, 47ff.; He. 3:6; 1 Pet. 2:5), or temple (Lev. 26:11f.; cf. Ps. 118:22; Isa. 8:14; 28:16; cf. Mk. 14:58; Jn. 2:19ff.; 1 Cor. 6:19 with Lk. 22:17; 1 Cor. 3:9, 16; 2 Cor. 6:16; Eph. 2:21; 1 Pet. 2:6ff.), all three of which are "not made with hands"; the Son of man of Ps. 8:4 (MT 5); Dnl. 7:13, 27 (cf. Eph. 1:22f.; He. 2:6, 8f.; Mk. 2:27f.; see Manson), and the servant of Isa. 40–55 (cf. Jn. 12:38 with Rom. 10:16; Lk. 2:32 with Acts 13:47; Lk. 1:54 = Isa. 41:8 with Mt. 8:17; 12:18-21; Lk. 22:37; Acts 8:32f.).

(4) Finally, the NT views its understanding of the OT as resting on a charismatic exegesis or, in the words of L. Cerfaux (in Auvray, pp. 132-148), on a "spiritual interpretation." The Word-of-God aspect of the OT never can be comprehended by human reason alone. The contemporary Jewish theologians failed to "know" the Scripture not because their rules or methods were inadequate but because it was not revealed (Mt. 22:29; 2 Cor. 3:14-16). Conversely, the disciples grasped the truth of the OT because it was revealed to them (cf. Mk. 4:11f.; 8:17f.; Mt. 16:17). The choice of a NT interpretation of Scripture over against, e.g., a Jewish interpretation will, then, rest ultimately on the conviction of the NT's prophetic character rather than on its superior exegetical methods. Thus modern scientific tools of exegesis also are not competent to master the message of Scripture, i.e., the Word of God. They can only help one to listen better.

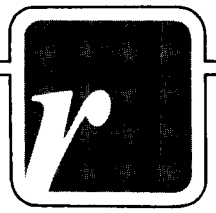
E. E. ELLIS



RAAMA rā'ə-mə [Heb. *raʿmâ*'] (1 Ch. 1:9); AV RAAMAH; **RAAMAH** [Heb. *raʿmâ*] (Gen. 10:7; 1 Ch. 1:9; Ezk. 27:22); NEB also RAAMA. Son of Cush and father of Sheba and Dedan (Gen. 10:7; 1 Ch. 1:9). In Ezk. 27:22 Raamah is mentioned along with Sheba as a tribe or country whose merchants brought spices, precious stones, and gold to Tyre in exchange for the latter's merchandise. The location of Raamah is disputed. Based on the LXX rendering *Rhegma,* some have identified the place with the city of that name mentioned by Ptolemy, located in east Arabia on the Persian Gulf. (The LXX *gamma* often indicates *ghayin* [*ġ*], represented by *ʿayin* in Hebrew.) A second alternative, proposed by von Wissmann, associates the name with Ragmat (*rgmt*), a city appearing in South Arabian inscriptions from the 5th-4th cents. B.C. (*Répertoire d'epigraphie sémitique,* §§ 3022, 3943). This was a central town of the Nejran region in northern Yemen whose ruins may be near Uhdud, S of Wâdī Nejran. The problem with this identification is that South Arabic *g* does not correspond to Heb. *ʿayin* (either palatal or guttural), so that the two names do not appear to be related. More likely is a connection with Sabean *rġm,* located near Maʿîn in southwest Arabia. Another possibility is that Raamah was in northern Arabia, which appears to be the location of two places named in association with Raama: Dedan may be identified with el-ʿUla in northern Arabia, and the people of Sheba were located in northern Arabia according to eighth- and seventh-century B.C. Assyrian sources (*See also* DEDAN; SABEANS).

D. A. DORSEY

RAAMIAH rā-ə-mī'ə [Heb. *raʿamyâ*–'Yahweh has thundered' (?); Gk. B *Naamia,* A *Rheelma*]. A leading Israelite who returned from Babylon with Zerubbabel (Neh. 7:7). The name appears as "Reelaiah" in Ezr. 2:2 and as Resaiah in 1 Esd. 5:8. The correct spelling of the name is uncertain.

RAAMSES rā-am'sēz (Ex. 1:11, AV, RSV). *See* RAMESES.

RABBAH rab'ə.

1. [Heb. *rabbâ*; LXX usually *Rhabba* or *Rhabbath*] (Josh. 13:25; 2 S. 11:1; 12:27, 29; 1 Ch. 20:1; Jer. 49:3; Ezk. 25:5; Am. 1:4); **RABBAH OF THE AMMONITES** [Heb. *rabbaṯ bᵉnê ʿammôn*; LXX usually *Rhabbath huiōn Ammōn*–'Rabbah of the sons of Ammon'] (Dt. 3:11; 2 S. 12:26; 17:27; Jer. 49:2; Ezk. 21:25); AV RABBAH (RABBATH) OF THE CHILDREN OF AMMON; NEB also AMMONITE CITY (TOWN) OF RABBAH, RABBATH AMMON. The capital of Ammon.

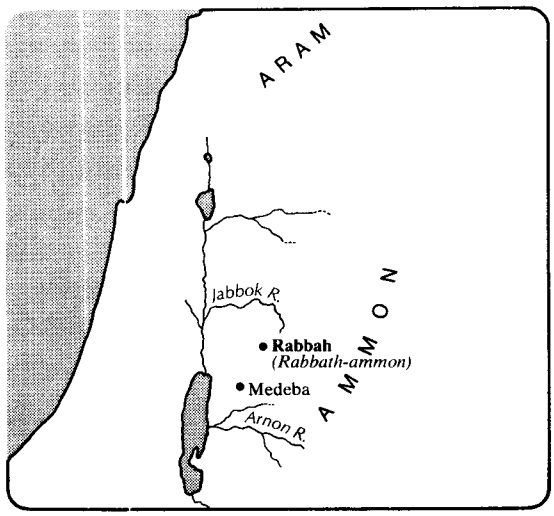
I. Name and Identification
II. OT Period
III. Greco-Roman Period
IV. Archeological Investigations

I. Name and Identification.–*Rabbah* in Hebrew means "great" (fem.). Although it can be used attributively to describe a town, e.g., Heb. *ḥᵃmaṯ rabbâ,* "great Hamath" (Am. 6:2), it is used substantively with regard to the capital of the Ammonites and should most likely be taken as a divine epithet, "the Lady," in accordance with widespread northwest Semitic practice. The city was evidently named after the chief female deity of the Ammonite pantheon.

Rabbah was located on the same site as modern ʿAmmân (see IV below). In the 3rd cent. B.C. the place was hellenized and named (Gk.) *Philadelpheia* after Ptolemy II Philadelphus (285-247 B.C.), although Zenon, a Ptolemaic agent, still referred to it in his official records as Rhabbatamana. Eusebius (*Onom.* 16.15; 24.1f.) knew the Semitic name as simply (Gk.) *Amman* but was aware of its former name, *Rhabbath* (146.6f.). Moslem writers all referred to the town as *ʿAmmân* (*Ahamant* in Crusader sources), which is its name today.

II. OT Period.–The allusion in Dt. 3:11 to the iron bedstead of Og, Amorite king of Bashan, which was evidently preserved as a trophy (dedicated to a temple?) at Rabbah of the Ammonites, suggests some connection of the city with the pre-Israelite (and pre-Ammonite?) culture of the 2nd millennium B.C. As capital of the Ammonite territory Rabbah controlled a considerable surrounding area, whose boundaries were recognized by the Israelites (cf. Josh. 13:25, where the proper rendering should be "Aroer, which is in front of [facing] Rabbah," contra RSV "east of"). The history of the city can be deduced to some degree from what is known about the people of AMMON.

If the text of 2 S. 10:6-8 is taken alone, it appears that the first open clash between David's forces and the Ammonite-Aramean alliance took place near the Ammonite capital (cf. v. 3), but v. 8 with its reference to a city gate is quite abrupt. 1 Ch. 19:7b supplies the additional detail that the allies encamped initially near Medeba;



this remark can hardly be an attempt to smooth out the text because a later editor would have had no reason to move the battlefield SW of Rabbah to a site really not part of its territory. Thus the Israelites' siege of Rabbah (2 S. 11:1) actually began after David's decisive victory over the Arameans at Helam (10:15-19). During the fighting at Rabbah, Uriah the Hittite was sent to his death (11:14-25). Eventually the siege was sucessful, and Joab invited David to come and accept the final surrender of Rabbah. David placed the Ammonite crown on his own head, took great spoil, and set the populace to various kinds of forced labor (12:26-31; 1 Ch. 20:1-3). But he treated the Ammonites well enough that when he was later forced to reside in Transjordan, Shobi son of Nahash from Rabbah was among those who gave him supplies (2 S. 17:27-29).

During this period Rabbah appears to have comprised two or more parts, including the "royal city" (Heb. *'îr hamm^{e}lûḵâ*; 2 S. 12:26; NEB "King's Pool"), perhaps the main fortress or citadel, and the "city of waters" (Heb. *'îr hammayim*; v. 27; NEB "pool"), apparently the settlement s fortified water source in the Jabbok Valley.

Although the Ammonites continued to play a role in regional affairs, their capital is not mentioned specifically again until the mid-8th cent. B.C., when Amos proclaimed an oracle against it (Am. 1:14f.). Toward the end of the Judean monarchy, the Ammonites and their city were the object of further prophetic condemnations because of their rivalry with Judah and evident satisfaction over the destruction of Jerusalem (Jer. 49:2f.; Ezk. 21:20 [MT 25]; 25:5).

III. Greco-Roman Period.–Rabbah came under Ptolemaic rule in the 3rd cent. B.C. and was transformed into a Hellenistic city, Philadelphia (Gk. *Philadelpheia*; see I above). As a subject province it was visited by the Egyptian official Zenon (*ca.* 259-258 B.C.). Antiochus III captured it in 218 B.C. (Polybius v. 71), but did not firmly control the entire area until his final victory over the Ptolemaic forces at Panion (198). By 135 B.C. Philadelphia was ruled by a "tyrant" (local dynast) named Zenon Cotylus (Josephus *BJ* i.2.4 [60]; *Ant.* xiii.8.1 [235]). Thus it remained outside the sphere of Hasmonean rule, and in the territorial arrangements made by Pompey and Gabinius it was assigned to the Decapolis (Pliny *Nat. hist.* v. 15 [74]). Herod decisively defeated the Nabateans in 31 B.C. near Philadelphia (*BJ* i.19.5f. [380-385]; *Ant.* xv.5.4f. [147-160]). The Jews of Perea and the Philadelphians clashed bitterly (*Ant.* xx.1.1 [1-5]) in the reign of Claudius, while Fadus was procurator (A.D. 43-44). During the first revolt of the Jews, Philadelphia was hostile to the rebels (*BJ* ii.18.1 [458]).

In A.D. 106 Rabbah was detached from Syria and assigned to the new Roman province of Arabia; henceforth it benefited from extensive Roman construction. It became the seat of a Christian bishop subject to Bosra. In the reign of Diocletian (284-305) several Christian martyrs suffered there: Theodore, Julian, Eubulus, Malkamon, Mokimos, and Salomon. Various churches later preserved their memory as well as that of other martyrs. With the ascendance of Christianity, Philadelphia was represented by its bishops at various councils of the Church: Nicea (325), the Synod of Antioch (341), and Chalcedon (451). In A.D. 635 the city was taken by Yezid and thus came under Moslem rule. It became the leading city of the district known as Belqā, from the Arnon to the Jabbok. Jewish sources testify to a community of Jews there during the 11th and 12th centuries. Its position on the fringe of the desert made it a prominent trade center, but the gradual weakening of central control left it open to bedouin depredations that finally reduced it to an insignificant village. In 1878 the Turkish government settled a colony of Circassians there to serve as a local constabulary. Under the British Mandate 'Ammân became the capital of the Emirate of Transjordan, and in April, 1950, it was made the capital of the Hashemite Kingdom of Jordan. Today it has a population of over 250,000.

IV. Archeological Investigations.–The focal point of the ancient site was the imposing citadel that rises above three terraces beside the Wâdī 'Ammân. The Roman city was in the valley below, as is the modern town (which has spread to the surrounding hills). Ancient cemeteries were especially concentrated on the south side of the wadi. Archeological research has been conducted mainly by an Italian expedition under the leadership of G. Guidi (1927) and R. Bartocinni (1929-1933) followed by occasional excavations by the Department of Antiquities of Jordan, particularly under the direction of G. L. Harding; these have usually been prompted by the extensive building operations as the city expanded after 1945.

Though Rabbath-ammon has not been found in the historical texts from the 2nd millennium B.C., there is archeological evidence of the town's existence. Middle Bronze tombs have been discovered on Jebel Qal'ah and beside the summit of the acropolis. The Italian archeologists dated the upper walls of the acropolis to the mid-17th cent. B.C. Expansion work on the 'Ammân airfield in 1955 led to the discovery of a Late Bronze temple, which was probably built in the latter half of the 15th cent. B.C. and went out of use in the 13th cent. B.C. The fill under the floor included many pockets of ash and the bones of offerings. A rich hoard of votive objects was

The citadel walls of ancient Rabbah, overlooking modern 'Ammân (L. K. Smith)

also found: gold ornaments, cylinder seals, scarabs, and other objects of Egyptian and Mesopotamian origin. Cypriot and Aegean pottery was especially abundant.

The temple seems to have stood in an isolated position, 275 m. (300 yds.) from the settlement. It has been aptly compared with a very similar shrine on the lower slopes of Mt. Gerizim, that was about the same distance from the nearest settlement. Recent attempts to interpret both temples as amphictyonic cult centers lack documentary support. They stem from the indefensible assumption that evidence from surface surveys in Transjordan precludes M.B. and L.B. settlement at ʿAmmân. On the contrary, an urban center at such a well-watered and easily fortified site as ʿAmmân is highly likely, and the material evidence of broad international contacts cannot be credited to nomads.

Evidence for the Iron Age is extensive, particularly from 8th and 7th cents. B.C. Structures of that age are concentrated on the upper terrace of the acropolis. Two tombs from *ca.* 800 B.C. produced, besides typical pottery, some pins and a red-faced androgynous figurine that may, as Harding suggested, represent the deity Ashtar-Chemosh. Another tomb contained 150 pottery vessels, and two other seventh-century burials yielded pottery with strong affinities to types known from Edom. Some stone figurines and fragments have also been found, among them the statue of "Yeraḥ-ʿezer" (*ANEP,* no. 64). On the middle terrace of the upper city (in the foundations of the Hadrianic temple) the Italians found an outcrop of rock with traces of a canal and steps on one side, which they interpreted to be a high place of Milcom.

Undoubtedly the most important Iron Age discovery from ʿAmmân is the fragment of a major building inscription written in the Ammonite language (very similar to Hebrew) in a script of Aramaic origin. Found in 1961 and published in 1969, the text's fragmentary contents have been interpreted in various ways (cf. Horn, Cross [1969]).

The Hellenistic remains include the citadel wall built of multiribbed blocks of dry masonry and an underground water reservoir at the northern end of the citadel. The marketplace yielded two reliefs (of Osiris and Bastet) that dated to the 4th-3rd cents. B.C. and had been reused. In one Nabatean tomb were Late Hellenistic lamps, one Herodian lamp, small egg-shaped jars, Eastern terra-sigillata ware, glass bottles, and two decorated Nabatean bowls.

Most of the remains date to the later Roman — especially the Antonine — period. They include the Nympheon, the Odeon, and the theater in Wâdī ʿAmmân (*see* picture in AMMON), the propylea and the steps to the citadel, the temple to Zeus on the second terrace of the citadel, another shrine on its summit, and the marketplace. Tombs from the 2nd and 3rd cents. A.D. have also come to light, some with rich finds. Four ancient churches have been excavated.

2. [Heb. *hārabbâ*; LXX A *Arebba,* B *Sōthēba*] (Josh. 15:60). A town in Judah.

I. Name.–The MT prefixes the definite article and is supported by LXX A, which gives the same reading as that preserved by Eusebius (*Onom.* 26.17). The place names in LXX B are generally somewhat garbled in Josh. 15:59 and 59a, providing no reason to take *Sōthēba* as anything but a corruption; it is certainly not an error for *Sōba(tha)* and does not represent a later name for the same site (contra F. M. Abel, *GP*). The Hebrew form means "the Great One" (fem.) and is probably the epithet of a goddess (see above **1.** I).

II. Location.–This Rabbah is coupled with Kiriath-baal (= Kiriath-jearim) to form the last district in the roster of Judean settlements. There is no need to enlarge this district by adding the towns from Benjamin in Josh. 18:25 (contra Alt, Noth, Cross, and Wright). Rabbah and Kiriath-baal with their village settlements evidently guarded the opposite ends of a western approach to Jerusalem. A reference in the Taanach letters (1:26) is probably to another town, perhaps Rabbith (Josh. 19:20; not Arubboth, contra Albright). Two Amarna letters (14th cent. B.C.) indicate that **Robbôtu* was the cause of a dispute between the ruler of Jerusalem and his coastal rivals Gezer, Gath, and Keilah, which had taken **Robbôtu* by force (Am.Tab., 289:13; 290:11). Since this town follows Gezer in the topographical lists of Thutmose III and Shishak (Sheshonq), it probably lay between Kiriath-jearim and Gezer. If Mazar is correct in reading the Shishak list *boustrophedon,* then **Robbôtu* is followed by Aijalon (no. 26).

Aharoni gave up his earlier suggestion that *Rabbâ/*Robbôt* was another name for Beth-shemesh in favor of an identification with Khirbet Ḥamîdeh (which he had called provisionally Khirbet Bîr el-Ḥilū, after the nearby well). This site occupies a low spur on the north side of the Lāṭrûn-Jerusalem road (in Wâdī ʿAlī = Naḥal Naḥshon), 3.5 km. (2.3 mi.) W of Bâb el-Wâd (Shaʿar Ha-Gai). The surface of the tell is a rectangle about 119 by 91 m. (130 by 100 yds.). M.B. II, L.B., E.I. and L.I., and Persian-age sherds have been collected from the surface, suggesting that this mound was inhabited during the very periods in which *Rabbâ/*Robbôt* is mentioned in written sources.

The records of the Shishak campaign provide valuable evidence for comparing the significance of the two northern approaches from the coast to Jerusalem. From Gezer (Shishak no. 12) one unit may have pushed west via *Rabbâ/*Robbôt* (no. 13) and up Wâdī ʿAlī to Kir(!)iathaim (no. 25, apparently for Kiriath-jearim according to Mazar and Grdseloff), while the main body of troops took Aijalon (no. 26) and ascended via Beth-horon (no. 24) to Gibeon (no. 23). From this position Shishak was poised to attack Jerusalem if necessary but was evidently dissuaded by the large indemnity paid by Rehoboam (1 K. 14:25-28; 2 Ch. 12:2-12).

An objection to Aharoni's new identification is that Khirbet Ḥamîdeh is not quite in the hill country as suggested by the place of Rabbah in Josh. 15. Until the area N of Bâb el-Wâd and W of Abū Ghôsh is thoroughly surveyed, however, Khirbet Ḥamîdeh is a reasonable candidate.

RABBI rab bī, **RABBONI** rab-bō'nī, rə-bō'nī [Gk. *rhabbí* and *rhabbouní* < Heb. *rabbî*, "my lord," "my master," "my great one"; cf. Heb. *raḇ*, "great," hence one in a "high" or "distinguished" position]; AV also MASTER; NEB also RABBUNI, MASTER. In OT times *raḇ* was used as a term of respect for an officer, captain, or chief by those under his authority (e.g., Jer. 39:13; Dnl. 1:3; Jonah 1:6). In Mishnaic Hebrew *raḇ* was used by a servant of his master and especially by a student (*talmîd*) of his MASTER or teacher. Variant spellings in early Hebrew literature include *rabbān, rabbôn,* and *ribbôn*. Gradually the Hebrew pronominal suffix *-î* (meaning "my") on *rabbí* lost its possessive meaning (see G. Vermes, *Jesus the Jew* [1973], p. 115).

"Rabbi" developed from a popular term of honor into a more formal title. After the NT era it was used of one officially recognized as an authoritative teacher and judge in the realm of Jewish law (see G. Moore, *Judaism*, III [1930], 15-17). Today the title "Rabbi" is properly reserved for one who has received ordination (*s*ᵉ*mîḵâ*) from the hands of other recognized scholar-teachers.

In a variety of contexts the Gospels use "Rabbi" as an esteemed form of address rather than an official title. John uses the Greek term *didáskalos*, "teacher," to explain the meaning of *rhabbí* (Jn. 1:38; cf. 20:16; Mt. 23:8). Teachers of Jewish law were customarily addressed as "Rabbi," though Jesus is critical of their desire to be greeted as such (Mt. 23:7f.). John the Baptist is also called "Rabbi" by his disciples (Jn. 3:26). The remaining NT uses of the term refer to Jesus (see RSV mg. in Mt. 26:25, 49; Mk. 9:5; 11:21; 14:45; inexplicably the RSV uses 'Master" in the Synoptics, but "Rabbi" in Jn. 1:49; 3:2; 4:31; 6:25; 9:2; 11:8). Furthermore, on two occasions Jesus is called "Rabboni," a heightened form of "Rabbi" (Mk. 10:51 [cf. RSV mg.]; Jn. 20:16). Luke avoids both of the above Hebraic titles, however, since they may have been unfamiliar to his Hellenistic readership (thus Luke uses *epistátēs*, "Master," in 9:33 par. Mk. 9:5, and *Kýrios*, "Lord," in 18:41 par. Mk. 10:51).

RABBITH rab'ith [Heb. *rabbîṯ*; LXX B *Dabeirōn*, A *Rhabbōth*]. A border town in Issachar (Josh. 19:20). The term is possibly an error for DABERATH, mentioned in Josh. 21:28 and 1 Ch. 6:72 [MT 57], since the latter does not appear in the list in Josh. 19:17-23. LXX B also supports this reading. B. R. AND P. C. PATTEN

RABBLE [Heb. *ʾᵃsapsup*] (Nu. 11:4); AV MIXT MULTITUDE; NEB MIXED COMPANY OF STRANGERS; [*pirḥaḥ*] (Job 30:12); AV YOUTH; NEB MOB; [Gk. *agoraíoi*] (Acts 17:5); AV BASER SORT; NEB DREGS OF THE POPULACE. In Nu. 11:4 the Hebrew noun, a hapax legomenon, comes from the root *ʾsp*, "gather, assemble," and might refer either to the non-Israelite people who came out of Egypt with the Israelites (cf. Ex. 12:38; *see* MIXED MULTITUDE) or simply to an "assembling" of Israelites against Moses. Heb. *pirḥaḥ* referring to Job's enemies, is also a hapax legomenon, and its meaning is disputed. It may be related to the root *prḥ*, "sprout, bud, break out," with a resultant meaning of "a breaking out in opposition" (cf. comms.). In Acts 17:5 Gk. *agoraíoi* refers to the "market crowd" (cf. *agorá*, "market place") from which the envious Jews secured some evil men to oppose Paul. D. A. DORSEY

RABMAG rab'mag [Heb. *raḇ-māg*]; NEB "commander of the frontier troops." The official title ascribed to Nergal-sharezer, one of the Babylonian officers present at the sack of Jerusalem in 586 B.C. (Jer. 39:3, 13). While the precise nature of this court office is unknown, it is likely the same as the Assyrian and Bab. *rab mu(n)gi*, used of a high military official who occasionally served as a special envoy to foreign rulers (*CAD*, X/2 [1977], 171). The title is used in Jeremiah to distinguish this Nergal-sharezer (Akk. *Nergal-šarra-uṣur*) from another of the same name heading the list. D. J. WISEMAN

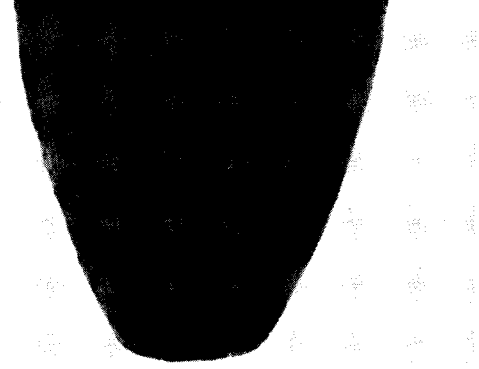
RABSARIS rab'sâr-is [Heb. *raḇ-sārîs*]; NEB "chief eunuch." An official title often left untranslated (but cf. NEB; cf. also NIV "chief officer"). It is used of one of the three Assyrian officials sent by Sennacherib to challenge Hezekiah to surrender Jerusalem (2 K. 18:17; omitted in Isa. 36:3) and of the Babylonian Nabushazban who took Jeremiah from prison (Jer. 39:13). It is almost certainly the official position of the Babylonian senior official (Nebo) Sarsechim, who sat as a judge in Jerusalem after its capture in 586 B.C. (v 3).

Hebrew *raḇ-sārîs* is an accurate representation of Bab. *rab ša rēš* (*šarri*), "chief of the (royal) attendants," used in Assyrian and Babylonian texts of a senior administrative and court official close to the king. This official was not necessarily a eunuch, as was long supposed. The same title occurs in the Aramaic gloss *rbsrs* on the title of an Assyrian district governor and eponym and also on a docket from Nineveh dated 682 B.C.

Bibliography.–R. A. Henshaw, *JAOS*, 87 (1967), 523; A. L. Oppenheim, *Journal of the Ancient Near Eastern Society of Columbia University*, 5 (1973), 325-334. D. J. WISEMAN

RABSHAKEH rab'shə-kə, rab-shā'kə [Heb. *raḇ-šāqēh*]; NEB "chief officer." The title of a high Assyrian official. He came to Jerusalem from Sennacherib at Lachish with two other high officials (the Tartan and the Rabsaris) to

A clay docket inscribed in alphabetic Aramaic (and cuneiform Assyrian on the reverse) describing a grain transaction, and ending with "Eponymy of the Rabsaris Nabu-shar-uṣur" (*l'm rbsrs nbsrṣr*) and the date. From Nineveh, 682 B.C (courtesy of the Trustees of the British Museum)



demand the surrender of Judah in 701 B.C. (2 K. 18:17, 19, 26-28, 37; 19:4-8; Isa. 36:2, 4, 11:13, 22; 37:4, 8). His prominence as spokesman was due to his ability to speak both Judean Hebrew and Aramaic, and from this some surmise that he was a former exile from Israel. The well-attested Assyr. *rab šāqē* was the title of a senior court official and provincial governor, though its precise meaning (possibly "chief cupbearer") is uncertain.

D. J. WISEMAN

RACA rā'kä (Mt. 5:22, AV). *See* INSULT II.

RACAL rā'kal, rā'käl [Heb. *rāḵāl*; LXX B *Karmēlos*, A *Rhachēl*; Eusebius (*Onom.* 146.2) *Rhachel*]; AV, NEB, RACHAL. According to the MT, one of the towns in southern Judah to which David sent booty taken from the Amalekites (1 S. 30:29). Most scholars agree that the LXX B reading, "Carmel," is to be preferred for several reasons: (1) a town in Judah named Racal is otherwise unknown; (2) the omission of the important Judean town of Carmel in this list would be surprising; and (3) the mention of "Racal" (*rkl*) with Eshtemoa, a town near Carmel, suggests that the original reading was in fact "Carmel" (*krml*).

RACHEL rā'chəl [Heb. *rāḥēl*–'ewe'; Gk. *Rhachel*]. The daughter of Laban, wife of Jacob, and mother of Joseph and Benjamin. Rachel's father Laban and Jacob's mother Rebekah were brother and sister (Gen. 29:10); thus Rachel was Jacob's cousin (*see* JACOB II). By marrying Rachel and her sister Leah, Jacob followed the practice of Abraham and Isaac, who also took wives from their extended family.

Jacob loved Rachel, but there were several obstacles to overcome before they could marry. Jacob came to Haran as a fugitive from Canaan (Gen. 27:42-45) with no home and no gifts to offer as a bride-price (cf. Isaac's situation in ch. 24). LABAN welcomed Jacob into his household and accepted Jacob's offer to work for him for seven years in order to gain Rachel as his wife (29:15-20). Because Jacob loved her so much, the seven years passed very quickly (v. 20). On the wedding night, however, Laban gave him Leah, Rachel's older, lackluster sister, instead of Rachel. When the deception was discovered the next morning, Jacob had to negotiate for Rachel again. Laban allowed Jacob to marry Rachel after the week of celebrating Leah's wedding, but he required him to serve seven more years in return for her (vv. 21-35).

Leah was the first wife and fertile while Rachel was the secondary wife and barren, but Jacob continued to prefer Rachel. Leah hoped in vain that her sons would win Jacob's love for her (29:32). Rachel, for her part, despaired because of her barrenness (30:1). Unable to conceive herself, she gave her personal maid Bilhah to Jacob, just as Sarah had earlier given Hagar to Abraham (Gen. 16). According to law and custom the children born to Jacob and Bilhah could be counted as Rachel's offspring (30:3). By the act of naming Bilhah's two sons, Dan and Naphtali, Rachel declared her acceptance of them as her own children (vv. 5-8). Leah, who had stopped having children, also gave her maid Zilpah to Jacob in order to have more sons. On one occasion Rachel offered Leah a night with Jacob in return for some mandrakes collected by Leah's oldest son (vv. 14-16). Leah conceived again, but the mandrakes failed to cure Rachel's infertility. At last, however, God cured Rachel's barrenness (v. 22) and removed from her the stigma of childlessness (v. 23). The name she gave to her first son, Joseph, expressed her wish for another (v. 24). Even Jacob's preferential love had not made up for her lack of children.

The rivalry between Leah and Rachel, described in terms of personal need in Gen. 29–30, had broader implications for Jacob's family and for God's plan. The women's individual needs for affection and security, and the necessity of fulfilling the only role available to them in the family and in society, created tension between them and was expressed in the names given to their sons (e.g., 29:32; 30:6, 8, 18, 20, 24). Through their competition to bear children, Rachel and Leah made Jacob the father of a large, powerful family. The man who had arrived in Haran empty-handed was able to leave as the head of a prosperous household. In the previous generations of Israel's ancestors, only one man and one wife had been chosen to receive the Lord's promises and to produce the elect son: Sarah and Abraham's son Isaac was chosen, while Hagar and Ishmael were excluded from the line of promise; Rebekah and Isaac had twins, but only Jacob was chosen. But all of Jacob's sons, born of four different mothers, belonged to the chosen people of Israel. In them God's promise of innumerable descendants, made to Abraham, Isaac, and Jacob (15:5; 17:16, 19; 22:17; 28:14), began to be fulfilled.

Jacob's special love for Rachel and his preference for her sons provide the necessary setting for the events described in chs. 37, 39–50. The brothers' attempt to eliminate Joseph, their father's favorite, put him in a position to save the whole family. Joseph was not chosen to carry on the family line alone but to preserve the nation that God had begun to create (50:20f.).

After twenty years of service to Laban, Jacob decided to return to Canaan. Laban and his sons had turned against Jacob (Gen. 31:1f.), and God had commanded him to go (v. 3). Rachel and Leah were willing to go with Jacob because they felt that by cheating their husband their father had cheated them. They considered the wealth that Jacob had earned from Laban's flocks to be their rightful dowries and the inheritance that they could pass on to their children (vv. 14-16). When Laban caught up with Jacob's fleeing entourage, he reproached Jacob for cheating him, kidnapping his daughters, and stealing his household gods (vv. 17-30). Rachel had taken the gods, perhaps to compensate for the fact that nothing had been given to her; but Jacob did not know this, and he unwittingly put Rachel's life in jeopardy by promising to have the thief executed (v. 32). Rachel saved herself by hiding the gods in a camel saddle, sitting on it, and telling her father that she could not get up because she was menstruating (vv. 33-35). By the theft of the gods Rachel accomplished symbolically what Jacob effected in actuality — the break-up and weakening of Laban's household.

Rachel died in childbirth in the land of Canaan (Gen. 35:16-21). The caravan paused only long enough for her to deliver, die, and be buried. Rachel named her son

Ben-oni ("son of my sorrow"), but Jacob changed his name to Benjamin ("son of the right hand"). Jacob buried Rachel where she had died and set up a stone as a grave marker (either near Bethlehem [vv. 19f.] or near Ramah [1 S. 10:2]).

At the time of the Exile Jer. 31:15 states that Rachel's voice was heard mourning her "children," i.e., the dead and exiled inhabitants of the northern kingdom. Because the most prominent of the northern tribes were the tribes of Joseph's sons, Ephraim and Manasseh (Gen. 48:8-20), and that of Benjamin, Rachel was in a special sense the mother of that kingdom. Mt. 2:16-18 interprets Jer. 31:15 as a prophecy of Herod's slaughter of male infants in Bethlehem following Jesus' birth.

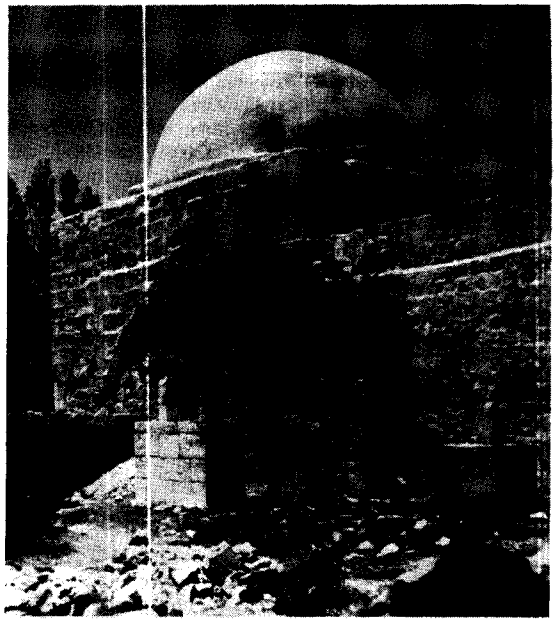
P. J. SCALISE

RACHEL'S TOMB [Heb. *maṣṣeḇeṯ qᵉḇuraṯ rāḥēl*]; AV, NEB, RACHEL'S GRAVE. The tomb mentioned in Gen. 35:20: "Jacob set up a pillar upon her grave; it is the pillar of Rachel's grave, which is there to this day." It is identified with the tomb, not older than the 12th cent. A.D., that is located about 1½ km. (1 mi.) N of Bethlehem on the west side of the Jerusalem road. The mosquelike structure has four walls, each about 7 m. (23 ft.) long and 6 m. (20 ft.) high, and a dome rising about 3 m. (10 ft.) higher. The dome is used by the Moslems for prayer; its holy character has hindered them from removing the Hebrew letters from its walls.

Whether this is the actual burial place of Rachel remains open to question. According to the biblical account Jacob and his household were traveling from Bethel to Ephrath when his wife Rachel gave birth to Benjamin and died. Jacob buried her "on the way to Ephrath (that is, Bethlehem)" and put a pillar on her grave (Gen. 35:16-20; cf. 48:7). Some commentators have suggested that the phrase "that is, Bethlehem" is an incorrect gloss.

A tomb erected by twelfth-century Crusaders at the traditional site of Rachel's burial place near Bethlehem (J. DeCaro)



Another tradition, based on 1 S. 10:2, is that Rachel was buried in Benjamin at Zelzah, near Bethel and about 16 km. (10 mi.) N of Jerusalem. This location is corroborated by Jer. 31:15, where the people of Ramah, which is in the district of Benjamin, are said to hear the voice of Rachel as she weeps over the destiny of her descendants.

Matthew obviously favored the first tradition, for in reporting the slaughter of the innocents at Bethlehem he represented Rachel as weeping for her children from her neighboring grave (2:18). Interestingly, the bedouin use the area around the tomb as a burial place for their children. The pseudepigraphical Book of Jubilees indicates that Ephrath, where Rachel was buried, is the same as Bethlehem (32:34). Although these references do not determine the original location of the grave, they do point out that the Church very early accepted the present tomb as authentic.

K. G. JUNG

RADDAI rad'ī [Heb. *radday*] (1 Ch. 2:14). The fifth son of Jesse; an elder brother of David.

RADIANCE [Gk. *phōstḗr*] (Rev. 21:11); AV LIGHT; **RADIANT** [Heb. *nāhar* (Ps. 34:5 [MT 6]; Isa. 60:5; Jer. 31:12), *ṣaḥ* < *ṣāḥaḥ*–'be white, clear' (Cant. 5:10), *hôḏ*–'splendor' (Dnl. 10:8)]; AV BE LIGHTENED, BE WHITE, "flow together," NEB also SHINE, "fair."

Several of these texts and terms are problematic. Heb. *nāhar* (root II), which occurs only in the above texts, apparently refers to the positive reaction reflected in the appearance of one who experiences the salvation of the Lord. Although some scholars still translate *nāhar* in these passages (esp. in Jer. 31:12) as deriving from the other root, which means "flow, stream" (so NAB "come streaming"; JB "throng"; cf. AV; KD), most scholars now agree that there are two different roots, the second related to *nwr*, "light" (see W. Vischer, *Etudes théologiques et religieuses*, 41 [1969], 251). Thus in Ps. 34:5 the psalmist encourages his listeners to rejoice because the Lord saves (cf. vv. 4, 6); in Isa. 60:5 the prophet exhorts his audience to rejoice at their eschatological rewards (note the context of light in vv. 1, 4); and in Jer. 31:12 the prophet proclaims redemption as the cause for rejoicing (see vv. 10-14).

In Cant. 5:10 the meaning of *ṣaḥ* is unclear. The poet begins the description of the beloved with "(he) is all radiant [*ṣaḥ*] and ruddy." In its other three occurrences *ṣaḥ* describes "hot" wind (Jer. 4:11), "clear" heat (Isa. 18:4), and "distinct" speech (Isa. 32:4). The related verb *ṣḥḥ* means "be white, clear," and although such a meaning hardly seems to fit the context here, since *ṣaḥ* is paired with *'āḏôm*, "ruddy," M. Pope (*Song of Songs* [*AB*, 1977], pp. 531-34) has pointed out that many Jewish and Christian scholars have argued for just such a meaning. Apparently the predominance of jewel imagery in vv. 11-16 has colored the RSV translation.

In Dnl. 10:8 the visionary, exhausted by his experience, apparently lost his "radiant" appearance. According to *TDOT*, III, 353, 355, *hôḏ* here refers to "a person's complexion" or appearance; cf. commentators, e.g., J. Montgomery (*ICC*, 1927, p. 409), who says it "means the natural beauty of a living thing, its appropriate strength and grace," and S. R. Driver (*CBSC*, repr. 1905, p. 155), who describes it as "dignity of countenance. Majesty, glory, is the idea."

Finally, Rev. 21:11 describes the descent of the heavenly Jerusalem, which shines like a jewel. According to Bauer, rev., p. 872, Gk. *phōstḗr* means a "light-giving body"; its only other NT occurrence is Phil. 2:15, where Paul says that the Philippians shine as "lights" in the world (several times in the LXX it refers to stars).

See also SHINE.

G. A. L.

RAFTER A translation used by the RSV in four places. In Cant. 1:17 it renders Heb. (*Q*) *rāhîṭ* (NEB "ceilings"), which is of uncertain meaning but from the context appears to refer to the woodwork of a roof. The RSV and NEB also read "rafters" in three texts where the MT is believed to have suffered corruption from an original *qôrôṭ*, "beams," "rafters" (cf. RSV "roof," Gen. 19:8; "log" 2 K. 6:2, 5; "beams," Cant. 1:17). In 1 K. 6:15f. the MT reads *qîrôṭ* (lit. "walls"; so AV), but the emended text is supported by the LXX; the reference is to the ceiling of Solomon's temple in v. 15 and, more specifically, of its inner sanctuary in v. 16. In 7:7 the MT reads *qarqaʿ* (lit. "floor"; AV), but the emendation is supported by the Syr. and Vulg. texts; here the ceiling of Solomon's "Hall of Judgment" is meant. S. WESTERHOLM

RAFTS [Heb. *dōḇᵉrôṭ* < *dbr*–'follow behind' (1 K. 5:9 [MT 23]), *rapsōḏôṭ* (2 Ch. 2:16 [MT 15])]; AV FLOATS. The method used by HIRAM (1) to transport cedar and cypress timber by sea from Lebanon to Joppa. The logs were apparently fastened together into rafts that were towed behind boats.

RAGAU rā'gô (Lk. 3:35, AV). *See* REU.

RAGES rā'jēz [Gk. *Rhagai, Rhaga, Rhagē*]; **RAGAE** rā'jē [Gk. *Rhagau*] (Jth. 1:5, 15; AV, NEB, RAGAU. An ancient city in northeastern Media, now identified with the modern Ray (Rai, Rhay, Rhey), about 8 km. (5 mi.) S of modern Teheran. Rages is mentioned six times in Tobit (1:14; 4:1, 20; 5:5; 6:12; 9:2), generally as Rages in Media. Ragae, mentioned twice in Judith (1:5, 15), is probably a territory, as in Darius's Behistun Inscription; (cf. also *Avesta* Vendidad 1.15). Commanding the approach to the Caspian Gates (which were at a distance of one forced march), Rages was a strongly fortified site on an important route that ran from Sardis through Ecbatana to Rages and E to Bactria.

Archeological evidence shows that the site was one of the oldest centers of civilization in Iran, dating from *ca.* 5000 B.C. An old tradition makes it the birthplace of Zoroaster. A large colony of captive Israelites was settled there. Its strategic location gave it an important role in the wars of Media and Alexander the Great. The city was apparently destroyed in Alexander's time but rebuilt or enlarged by Seleucus I Nicator (*ca.* 300 B.C.), who renamed it Europus. After the Parthian invasion, Arsaces restored it and called it Arsacia. In the time of Isidorus it was still "the greatest city in Media."

The city continued to flourish, with a few interruptions, down to the end of the 14th cent. A.D. It became known as a center of Zoroastrianism. It was plundered by Sultan Maḥmūd (A.D. 1029) and by the Mongols (A.D. 1220), and was destroyed under Ghāzān Khān *ca.* 1295. The present ruins cover an area of about 13 sq. km. (5 sq. mi.). R. E. HAYDEN

RAGS [Heb. *qᵉrāʿîm* (Prov. 23:21), *bᵉlôyē* (*bᵉlôʾê*) *hassᵉḥāḇôṭ* (Jer. e8:12; "old rags," v. 11)]; AV also OLD CAST CLOUTS; NEB also TATTERED, OLD. Hebrew *qᵉrāʿîm* is derived from *qāraʿ* ("tear") and thus denotes torn pieces of clothing. *Bᵉlôy* (from *bālâ*, "be worn out") represents something worn out, while *sᵉḥāḇôṭ* (from *sāḥaḇ*, "drag about") signifies garments that have been dragged about (see KoB, pp. 128f., 654). The terms rendered "old rotten rags" by the AV (Jer. 38:11) are *bᵉlôyē mᵉlāḥîm* (lit. "worn-out, torn clothing"; RSV "worn-out clothes"; NEB "cast-off clothes"). In Isa. 64:6 (MT 5) the AV and NEB use "filthy rag(s)" to render *beged ʿiddîm*, which denotes clothing stained during menstruation (RSV "polluted garment"; cf. Ad. Est. 14:16; *see* CLEAN AND UNCLEAN II.B).

RAGUEL rə-gū'əl, rag'ū-əl [Heb. *rᵉʿûʾēl*; Gk. *Rhagouēl*].

1. (Nu. 10:29, AV). *See* REUEL 2.

2. A Jew who lived in Ecbatana in Media; husband of Edna; father of Sarah; cousin of TOBIT; father-in-law of Tobias (Tob. 3:7, 17; 6:10, 12; 7:1-3, 6, 9, 12, 16; etc.).

3. An archangel "who takes vengeance on the world of the luminaries" (1 En. 20:4; cf. 23:4).

RAHAB rā'hab.

1. [Heb. *rāḥāḇ*; Gk. *Rhaab, Rhachab*] (Josh. 2:1, 3; 6:17, 23, 25; Mt. 1:5; He. 11:31; Jas. 2:25); AV also RACHAB (Mt. 1:5). The prostitute in Jericho who sheltered Israelite spies.

Rahab is featured in the initial episode of Israel's conquest of Jericho (Josh. 2–6). In this story (2:1-24) Joshua dispatches to Jericho two spies who spend the night at Rahab's establishment. When the king of Jericho demands that she hand them over, Rahab lies about their whereabouts and sends the posse on a false trail (2:1-7). Then, showing an awareness of Yahweh's previous demonstrations of power, she asks the spies to show mercy to her family when Jericho is besieged (vv. 8-13). They accede on condition of her continuing silence, and instruct her to mark her house with the scarlet cord she used to lower them through the window as they were escaping (vv. 14-21). Joshua later accepts the deal the spies had made, so that Rahab and her family are spared (Josh. 6:17, 22f., 25).

The narrative does not say how Rahab learned of Israel's and Yahweh's earlier victories (2:9-11), but clearly this knowledge was behind her fear of the Israelites. More than fright was involved, however, for Rahab actually made a confession of faith (v. 11). (Whether this was original to the narrative is less important than the fact that it is included in the final canonical form; cf. Soggin, pp. 37f.; Polzin, pp. 1-24; Butler, p. 31). Perhaps most striking is that her conviction appears to exceed Joshua's, whose sending of the spies seems inappropriate in the light of God's promises and encouragement (cf. Josh. 1:2-9; see Polzin, p. 86). Also, the fact that the spies were forced to promise mercy to Rahab necessitated that they compromise God's commandment against sparing inhabitants of the Promised Land (Dt. 20:15-18). In this instance Israel clearly subordinated strict adherence to Torah to their commitment to the agreement with Rahab.

It is unclear whether Rahab afterward merely lived in Israelite territory as a sojourner or actually converted, but the prominence of her confession, as well as NT and extrabiblical references, suggest that she became a proselyte. Jas. 2:25 states that she was justified by works, and He. 11:31 says that she was saved by faith. A positive valuation is also suggested by her inclusion in the genealogy of Jesus (Mt. 1:5). Although there is no way to be sure that this is the OT Rahab, the presence in this genealogy of other "questionable" or non-Israelite personnel (e.g., Tamar [Gen. 38] and Ruth; cf. Mt. 1:3, 5) strengthens the likelihood of this possibility.

Jewish tradition also viewed Rahab as more than a sojourner. She was believed to have married Joshua himself, thereby becoming the ancestress of priests and prophets, including Jeremiah and Huldah. Some tried to change her image by depicting her as simply an innkeeper rather than a prostitute (T. B. Megillah 14b, 15a; Rashi on Josh. 2:1). But others glorified even her secular virtues: the Haggadah mentions her as one of the four most beautiful

women in the world, who had slept with most of the great men of her day (*Encyclopedia Judaica,* XIII, 1515); this is what made her so well informed and the best potential source of information for the spies.

In fact, there was no insurmountable obstacle to Rahab's joining Israel, for Israel's ethnic homogeneity was perhaps more of a theological construct, underscoring its socio-religious unity, than a biological reality. Judah, Joseph, and Moses all married "outsiders" without divine censure (Gen. 38:2; 41:45; Ex. 2:21). Solomon was condemned for marrying foreign wives, but this may have had more to do with his erecting shrines to their gods than with miscegenation *per se* (1 K. 11:1-8); David apparently married Jebusite wives without condemnation (cf. 2 S. 5:13-16). Rehab's profession of faith apparently outweighed her status as an "outsider."

The detail about the scarlet cord (*tiqwaṭ ḥûṭ haššānî,* v. 18) is intriguing. Elsewhere this item seems to have erotic connotations. In Cant. 4:3 the bride is said to have lips like a "scarlet thread" (*ḥûṭ haššānî*); Jeremiah associated scarlet with Israel's vain beautification (Jer. 4:30); the midwife of Tamar (who had conceived while pretending to be a prostitute; cf. Gen. 38:12-26) used a scarlet thread (*[haš]šānî,*38:28, 30) to distinguish the newborn twins; and Isaiah linked the color with sin (Isa. 1:18). S. D. Walters has suggested that the scarlet rope may have been the mark of a prostitute — i.e., that she lived in the "red rope" district! Also, since *tiqwâh* more commonly means "hope" than "rope," there may be a conscious pun here: the "rope" is the prostitute's "hope" (i.e., for customers); but now, having confessed Yahweh as God, her "rope" betokens a new kind of "hope." Of course, many early exegetes interpreted the cord typologically (see M. H. Woudstra, p. 75).

Various scholars have raised questions about the historical basis of this story. They have observed that the sending of spies seems more appropriate as preparation for a pitched battle, echoes of which may occur in Josh. 2:18 (LXX); 24:11. In the light of Israel's cultic behavior before the destruction (ch. 3–5) and the miraculous way the destruction was carried out (ch. 6), however, spying appears to have been superfluous. Some have therefore suggested that there were originally two accounts of Jericho's defeat, one that was completely miraculous and another that emphasized the sort of military campaign that is found in the rest of Joshua (see Soggin, p. 38). On the other hand, it should be noted that Israelite soldiers did enter the city and attack the exposed citizens *after* the walls were felled supernaturally (Josh. 6:20f.).

2. [Heb. *raḥaḇ* (Job 9:13; 26:12; Ps. 87:4; 89:10 [MT 11]; Isa. 30:7; 51:9); AV also "(the) proud," "strength"; NEB also EGYPT. An OT poetic name for a powerful enemy of Yahweh; in some passages it refers to a historical empire hostile to Israel, in others to a demonic monster of some kind.

In three passages (Ps. 87:4; Isa. 30:7; 51:9) Rahab refers to Egypt, one of Israel's traditional enemies. Although the reference is not explicit in Ps. 87:4, Egypt is the most likely candidate in the light of the clear identification in the Isaiah passages; also, since the psalm mentions the less well-known Ethiopia (Heb. *kûš*) as well as Babylon, Philistia, and Tyre, it would seem strange for Egypt to be omitted. In Isa. 30:7 Egypt's bankruptcy as a political ally (cf. vv. 1-5) occasions Yahweh's characterization of the country as "the silenced Rahab" (reading *raḥaḇ hammošbāṯ* for MT *raḥaḇ hēm šāḇeṯ* [RSV "Rahab who sits still"]; see Day, p. 89). The allusion to the Exodus in Isa. 51:10 — Yahweh's drying up the sea and making in its depths a way for the redeemed to pass through — makes the identification of Rahab with Egypt unmistakable in v. 9.

Elsewhere the term indicates a demonic monster. Even in Isa. 51:9, where a historical entity is in view, Rahab seems to be more than an epithet for a foreign nation, since *raḥaḇ* here parallels *tannîn* (RSV "dragon"), a sea creature of such extraordinary capability that Yahweh's victory over it is noteworthy. Likewise, in Ps. 89:10 [MT 11]) Rahab (LXX *hyperḗphanon,* "arrogant one") appears to be a beast that is subdued in the creative process (cf. Gen. 1:2) along with other "natural" forces like the sea (*yām*; cf. Isa. 51:10 where both *yām* and *mê ṯ^ehôm rabbâ* ["waters of the great deep"] appear). In Job 9:13 Yahweh's quelling of the helpers of Rahab (LXX *kḗtos,* "sea monster") underscores His absolute sovereignty (cf. vv. 1-13). Similarly, 26:12 emphasizes Yahweh's power by noting His subjugation of Rahab (LXX *kḗtos*). Here again *raḥaḇ* parallels *yām* ("sea") and, in v. 13, *nāḥāš bārî[a]ḥ* (RSV "fleeing serpent"; for the possible translation "twisting serpent," see Day, p. 5 n. 8). Based on these descriptions, scholars have concluded that Rahab is another name for the better-known monster LEVIATHAN; but others think that separate beings are involved.

Scholars once tended to view Rahab, Leviathan, Behemoth, and personified natural forces as deities that Yahweh had to overcome to bring about the created order, analagous to the role played by such deities in certain Mesopotamian creation myths (see Gunkel). More recently scholars have concluded that if indeed these creatures reflect extrabiblical sources, the parallels are to be sought in Canaanite (Ugaritic) literature. Attempts to view these creatures as ordinary animals have been less than convincing, primarily because that theory would blunt the contention that only Yahweh can conquer them (see Day, pp. 62-87). The name Rahab has not been attested with certainty in any extrabiblical source. But even if it does have its conceptual roots in Canaanite mythology, the OT has completely "demythologized" it, for it always refers either to a historical enemy or to a demonic being that Yahweh easily overcomes. Never is Rahab a full-fledged deity on a par with Yahweh.

See also DRAGON; SEA MONSTER.

F. A. SPINA

RAHAM rā'həm [Heb. *raḥam*–'compassion, love']. A descendant of Judah; son of Shema and father of Jorkeam (1 Ch. 2:44).

RAHEL rā'hel (Jer. 31:15, AV). *See* RACHEL.

RAID; RAIDER; RAIDING [Heb. *g^eḏûḏ* (2 S. 3:22; 4:2; 2 K. 5:2; 16:23), *mašḥîṯ*–'destroyer' (1 S. 13:17; 14:15)]; AV TROOP, BAND, SPOILER, "go out by companies"; (verb) [*gûḏ* (Gen. 49:19), *lāqaḥ*–'take' (1 Ch. 7:21), *pāšaṭ* (Hos. 7:1), *yāṣā'*–'go out' (Jgs. 11:3)]; AV also OVERCOME, SPOIL, "take away"; NEB also STRIP, "to lift"; **MAKE A RAID** [Heb. *pāšaṭ* (1 S. 23:37; 27:8, 10;

30:1, 14, etc.), niphal of *nāṭaš*–'abandon,' 'fail' (Jgs. 15:9)]; AV INVADE, MAKE AN INVASION, FALL, etc.; NEB also OVERRUN, STRIP, etc.

In the OT raids could be either military or criminal, i.e., nations at war frequently made raids on their enemies (1 S. 23:27; 27:8, 10; etc.), and bandits raided travelers and farmers (Jgs. 11:3; 1 Ch. 7:21; Job 1:17; Hos. 7:1; cf. Ezr. 8:22; Hos. 6:9). Sometimes the distinction between military and criminal raids was blurred (Jgs. 15:9; 1 S. 30:1, 14).

The ancient poem in Gen. 49:19 is dominated by wordplay on the name Gad, as the RSV brings out: "Raiders [*gᵉḏûḏ*] shall raid [*yᵉgûḏennû*] Gad [*gāḏ*], but he shall raid [*yāguḏ*] . . . ." As commentators note, Gad's location in east Jordan S of the Jabbok made it easy prey for marauding bands of bedouin or other neighboring folk. Thus the Gadites had to be skilled fighters (cf. 1 Ch. 5:18-26; 12:8-15). G. A. L.

RAIL. To use insolent or abusive language toward someone. It is the RSV translation of Heb. *'îṭ* (lit. "rush upon shrieking"; NEB "fly at") in 1 S. 25:14, of *pāṣâ peh* (lit. "open the mouth" [so AV]; NEB "make mouths") in Lam. 2:16; 3:46; and of Gk. *blasphēméō* (lit. "revile"; NEB "taunt") in Lk. 23:39 (cf. also Mk. 15:29, AV). The AV also translates "rail" for Heb. piel of *ḥārap* (2 Ch. 32:17; RSV "cast contempt"); "railing" for Gk. *blasphēmía* (1 Tim. 6:4; Jude 9), *blásphēmos* (2 Pet. 2:11), and *loidoría* (1 Pet. 3:9); and "railer" for *loídoros* (1 Cor. 5:11); *see* REVILE.

RAIMENT. An RSV translation of several general terms for clothing: Heb. *beged* (Gen. 24:53), *lᵉḇûš* (Ps. 22:18 [MT 19]; 102:26 [MT 27]; Dnl. 7:9), *malbûš* (Isa. 63:3; Ezk. 16:13); Gk. *éndyma* (Mt. 28:3), and *himatismós* (Lk. 9:29). The AV uses "raiment" more frequently as a translation of these terms and also of Heb. *śalmâ* (e.g., Ex. 22:9 [MT 8]), *śimlâ* (e.g., Gen. 41:14), etc.; Gk. *himátion* (e.g., Mt. 17:2), etc. *See* GARMENTS II.B; III.B.

RAIMENT, SOFT. The RSV translation of Gk. *malakoí* (pl. substantive, lit. "soft things") in Mt. 11:8 par. (in some editions) Lk. 7:25. The contrast between John the Baptist's austere garb of camel's hair and the luxurious clothing worn by King Herod's courtiers pointed to John's vocation as a prophet who answered to God rather than to an earthly king.

RAIN [(nouns) Heb. *gešem* (Gen. 7:12; 8:2; Ps. 68:9 [MT 10]; 105:32; Jer. 5:24; etc.), *māṭār*–'rain, downpour' (Ex. 9:33f.; Dt. 11:11, 14, 17; 32:2; 1 K. 8:35f.; Isa. 5:6; 30:23; etc.), *malqôš* ("latter rain," Dt. 11:14; "spring rain," Job 29:23; Jer. 3:3; 5:24; Zec. 10:1; etc.), *môreh* ("early rain," Ps. 84:6 [MT 7]; Joel 2:23), *delep*–'roof letting in water' ("dripping of rain," Prov. 19:13), *zerem*–'heavy shower' (Job 24:8), *yôreh* ("early rain," Dt. 11:14; "autumn rain," Jer. 5:24), *mayim*–'waters' (2 S. 21:10), *šᵉʿîrîm*–'showers of rain' (Dt. 32:2), *rᵉḇîḇîm* (Dt. 32:2), *šeṭep*–'flood' ("torrents of rain," Job 38:25); Gk. *hyetós* (Acts 14:17; 28:2; He. 6:7; Jas. 5:18), *brochḗ* (Mt. 7:25, 27), *próïmos*–'early rain' ("early . . rain," Jas. 5:7), *ópsimos*–'late rain' ("late rain," Jas. 5:7)]; AV also SHOWER, GREAT RAIN, LATTER RAIN, FORMER RAIN, DROPPING, etc.; NEB also DOWNPOUR, AUTUMN RAIN, SPRING RAIN, RAINSTORM, WATER DRIPPING, etc.; [(verbs) Heb. hiphil of *māṭar* (Gen. 2:5; 19:4; Ex. 9:23; Isa. 5:6; Am. 4:7; etc.), niphal of *māṭar* (Am. 4:7), hiphil part. of *gāšam*–'send rain' ("bring rain," Jer. 14:22), pual of *gāšam*–'be rained upon' (Ezk. 22:24), hiphil of *yārâ*–'cause to rain' (Hos. 10:12), *nāzal*–'trickle, flow' ("rain down," Isa. 45:8), *nāṭap*–'drop, drip' ("poured down rain," Ps. 68:8 [MT 9]); Gk. *bréchō*–'send rain' ("send rain," Mt. 5:45; Lk. 17:29; Jas. 5:17)]; AV also POUR DOWN, DROPPED, etc.; NEB also RAIN DOWN, POUR DOWN, etc.; **RAINY** [Heb. *sagrîr*–'heavy shower' (Prov. 27:15)]. In Rev. 11:6 the phrase *hyetós bréchō* literally means to "rain rain" (RSV, NEB, "rain may fall').

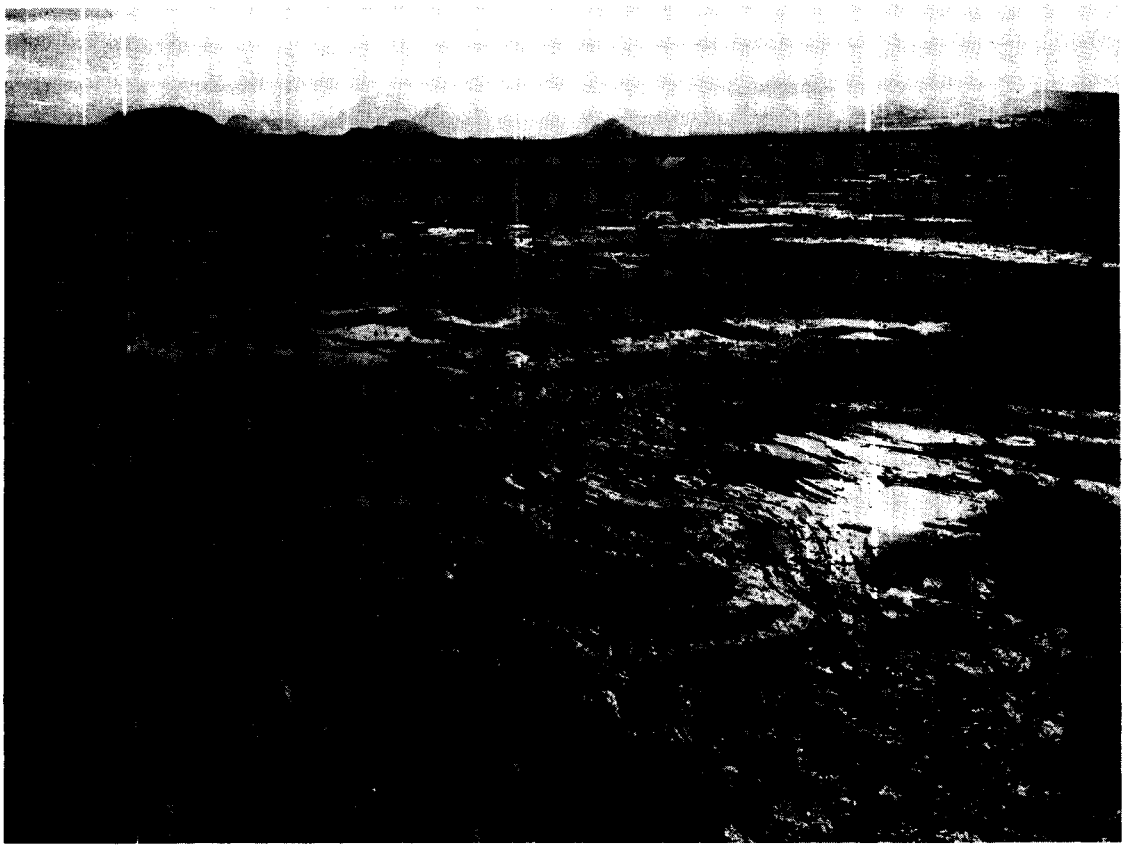
I. Biblical Terms.–By far the most common Hebrew words are *gešem* and *māṭār,* both of which are used in a very general sense. *Môreh* and *yôreh* seem to indicate the essential first rainfall of the season, and *malqôš* the often lighter, but also important, April rainfall that helps to swell the grain (AV "former" and "latter rain"; RSV "early" and "later rain"; NEB "autumn" and "spring rains"). Both Gk. *brochḗ* and *hyetós* mean "rain" in general, which is sometimes torrential (Mt. 7:25, 27); but Jas. 5:7 has *próïmos* and *ópsimos* for the early (fall) and latter (spring) rains.

II. Figurative Uses.–Since the Bible understands God to "give" (Heb. *nāṯan*; NEB "send") the rain to His people on earth (Dt. 11:14; 1 S. 12:17; 1 K. 8:36; Job 5:10), it can also refer to other gifts as having "rained down" from heaven, e.g., bread (Ex. 16:4), manna (Ps. 78:24) and meat (Ps. 28:7). But disaster could also "rain down" from heaven, e.g., the fire and brimstone upon Sodom (Gen. 19:24); a similar fate is said to be stored up for the wicked of later times (cf. Ps. 11:6; Lk. 17:19).

III. Patterns of Rainfall in Palestine.–Palestine lies on the edge of the Mediterranean rain system, with rain generally decreasing from north to south and west to east. Further south and east lies the desert. The rain-bearing winds come from the west, rise over the central mountains of Palestine, descend suddenly into the deep rift valley, and then climb the precipitous slopes of the Transjordan plateau. Ascending air is cooled and deposits its moisture, but descending air is warmed and consequently dry. This effect is intensified by evaporation from the heat of the sun; therefore, the western and northern slopes of even a small hill in Palestine are always greener and more productive than the eastern and southern slopes.

Rain is confined to the winter months and is exceedingly erratic. In an unusually good year it starts early in October and continues regularly until April, so that "the valleys deck themselves with grain, they shout and sing together for joy" (Ps. 65:13 [MT 14]). But in a very bad year the desired rain may not come until after Christmas and may even then be insufficient, so that men "are ashamed and confounded and cover their heads, because of the ground which is dismayed, since there is no rain on the land" (Jer. 14:3f.). In other years, however, even a very late start of the rainy season may be redeemed by plentiful rainfall between January and April, leading to an excellent harvest.

At the beginning of October people look longingly to the west in hope of rain, but the signs are often deceptive: "nlouds and wind without rain" (Prov. 25:14), mere "waterless clouds, carried along by winds" (Jude 12). Sometimes the October rains are plentiful and widespread, but frequently they occur in scattered showers and thunderstorms, causing "rain upon one city and . . . no rain upon another city" (Am. 4:7). In such cases unhappy villagers, whose cisterns are dry and fields are barren, may see others ploughing only two or three miles away and may have to go and beg for water. Even more serious is heavy early rain followed by many weeks of drought, for then the planted seed dies and the farmer has no more grain to plant, except that which he has kept to feed his family. This situation can lead to starvation.



The Sinai Desert after heavy winter rains (W. Braun)

Occasionally the utterly unexpected happens, e.g., a heavy thunderstorm in May (1 S. 12:16-18), or snow in Jericho, or a savage flash flood caused by a fierce thunderstorm in the distant eastern desert (2 K. 3:20-22).

Whether the climate, and consequently the nature of the rainy season, has changed over the centuries is a matter of much dispute. Climate does in fact fluctuate, but the evidence for the nature of such fluctuation in Palestine is still scanty. It seems at present that throughout the biblical period the rainfall pattern was very similar to that of today, although there were probably periods of more assured, and perhaps more extended, rainfall, and periods when the average rainfall was somewhat less.

IV. Average Rainfall–The average annual rainfall varies from north to south as follows: along the Palestinian coast, 650 mm. (26 in.) in Haifa and 400 mm. (16 in.) in Gaza; in the Palestinian hills, 650 mm. (26 in.) in Nazareth, 555 mm. (22.5 in.) in Jerusalem, and 487.5 mm. (19.5 in.) in Hebron; along the central rift valley, 600 mm. (24 in.) in Dan, 400 mm. (16 in.) in Tiberias, 300 mm. (12 in.) in Beth-shean, 125 mm. (5 in.) in Jericho, and 50 mm. (2 in.) from the Dead Sea to the Red Sea; along the edge of the Transjordanian plateau: 600 mm. (24 in.) in Ajlun, 500 mm. (20 in.) in Salt, 300 mm. (12 in.) in Amman, 350 mm. (13 in.) in Kerak, and 100 mm. (4 in.) in southern Edom. Rainfed agriculture requires a minimum rainfall of 100 mm. (4 in.).

V. Significance in the Bible.–Since all Israelites were conscious that the precarious rain was the basis of life, and that without rain they would die, they understood it to be a gift entirely under the control of God, who is Himself the source of all life. "He draws up the drops of water, he distills his mist in which the skies pour down, and drop upon man abundantly" (Job 36:26f.). God could grant or withhold this precious gift according to whether people were obedient or disobedient to His will (Dt. 11:13-17). To attempt to comprehend the process and distribution of the life-giving rain was to "darken counsel by words without knowledge" (Job 38:1f., 25-28).

See also SHOWER; STORM; NATURAL FEATURES VII; PALESTINE V.B. D. BALY

RAINBOW [Gk. *íris*] (Rev. 4:3; 10:1); **BOW** [Heb. *qešeṯ*] (Gen. 9:13f., 16; Ezk. 1:28). An arch of the prismatic colors (violet, indigo, blue, green, yellow, orange, red) caused by the reflection and refraction of sunlight through raindrops, as seen by persons facing away from the sun. This phenomenon occurs most often as a rainstorm gives way to sunshine. Hence in Gen. 9:13-16 it signifies the end of the torrential rain that brought about the flood, and it is a sign of God's promise to Noah that He would never again destroy all life on earth. Elsewhere it symbolizes the majesty of God (Ezk. 1:28; Rev. 4:3; cf. Sir. 43:11) or the glory of the divine messengers (Rev. 10:1).

See *TDNT*, *s.v.* Ἶρις (Rengstorf). D. BALY

RAISE; RAISE UP; BE RAISED [Heb. usually hiphil of *qûm*–'set up, raise up, provide' (e.g., Gen. 38:8; Ex. 40:18; Dt. 18:15, 18; Josh. 5:7; 7:26; 1 S. 2:8), also *nāśā'*– 'lift' (e.g., Gen. 33:5; Nu. 14:1; 2 S. 18:28; Job 2:12; Ps. 83:2

[MT 3]; 106:26; Isa. 5:26; Jer. 4:6; Ezk. 26:17), hiphil of *rûm* (2 K. 19:22; 2 Ch. 5:13; Ps. 148:14; Isa. 37:23; 49:22; Dnl. 5:19), pilel of *qûm* (Isa. 44:26; 58:12; 61:4), hiphil of *'ālâ*–'bring up,' 'make high' (1 K. 5:13 [MT 27]; 2 Ch. 32:5; Ezk. 37:13), hiphil of *'āmaḏ*–'set, station' (Ps. 107:25; Dnl. 11:11, 13), etc.; Gk. usually *egeírō* (e.g., Mt. 3:9; 10:8; 11:5; Mk. 6:14, 16; Lk. 1:69; Jn. 2:19f.), also *amístēmi* (Mt. 17:9; 20:19; 22:24; Jn. 6:39f., 44, 54; Acts 2:24, 32; 3:22, 26; 7:37; 13:34), *exanístēmi* (Mk. 12:19; Lk. 20:28), *synegeírō* (Eph. 2:6; Col. 2:12; 3:1), *exegeírō* (Rom. 9:17), *epaírō*–'lift up' (Lk. 11:27; 21:28); *karpós* ("what has been raised," Rom. 15:28)]; AV also RISE, BE RISEN, LIFT UP, SET UP, EXALT, TAKE UP, FRUIT (Rom. 15:28), etc.; NEB also SET UP, BRING, APPOINT, MAKE, HOLD HIGH, etc.

"Raise" is used by the RSV in several different senses. Depending on the context, it may mean: (1) to LIFT something, e.g., one's hand(s) (e.g., 2 S. 18:28; Job 31:21; Ps. 106:26; Dnl. 12:7; *see* GESTURE I) or one's head (e.g., Ps. 83:2 [MT 3]; Zec. 1:21 [MT 2:4]; Lk. 21:28; *see* GESTURE V); (2) to look upward (e.g., Gen. 33:5; Dnl. 8:3); (3) to use the voice in shouting (e.g., Josh. 6:20), weeping (e.g., 1 S. 30:4), song (e.g., 2 Ch. 5:13), lamentation (e.g., Jer. 7:29; Ezk. 26:17), etc.; (4) to set something up, e.g., a signal (e.g., Isa. 5:26; 13:2; 49:22), pillars of the tabernacle (Ex. 40:18); (5) to erect or build something, e.g., a mound of stones (e.g., Josh. 7:26; 8:29; 2 S. 18:17), walls and towers (2 Ch. 32:5; 33:14), siege works (Isa. 29:3); (6) to collect money (Rom. 15:28).

The term occurs in three additional senses that are used only of God and demonstrate His sovereignty: (7) God elevates to a position of honor the humble, the poor, and the oppressed (1 S. 2:8; 2 S. 23:1; Ps. 113:7; cf. Jer. 50:32; Am. 5:2); (8) God can "raise up" (i.e., cause to appear in history) offspring (e.g., Gen. 38:8; 1 Ch. 17:11; Mt. 3:9 par.), judges (Jgs. 2:16, 18; cf. 3:9, 15), a prophet (e.g., Dt. 18:15, 18; cf. Acts 7:37), a king (e.g., 1 K. 14:14; cf. Jer. 23:5), an adversary (1 K. 11:14, 23; cf. Isa. 9:11; Am. 6:14), etc.; (9) and only God has the power to restore life to those who have died (1 S. 2:6; Ezk. 37:12f.; very frequently in the NT, e.g., Jn. 6:39f., 44, 54; 1 Cor. 15:4, 12ff.). *See also* RESURRECTION II.A; RESURRECTION OF JESUS CHRIST. N. J. O.

RAISINS [Heb. *ṣimûqîm* (1 S. 25:18; etc.), *'ᵃšîšôṯ* (Cant. 2:5)]; **CAKE OF RAISINS**; **RAISIN-CAKE** [Heb. *'ᵃšîšâ*] (2 S. 6:19; 1 Ch. 16:3; Isa. 16:7; Hos. 3:1); AV FLAGON (OF WINE), FOUNDATION (Isa. 16:7); NEB also "prosperous farmers" (Isa. 16:7).

Grapes were dried in the sun in order to provide portable food for a journey or march (1 S. 25:18; 30:12; 2 S. 16:1; 1 Ch. 12:40 [MT 41]). Sometimes dried grapes were pressed together to form a "raisin-cake" (*'ᵃšîšâ*, perhaps from *'āšaš*, "become firm" — i.e., solid from being pressed together; AV "flagon" is based on a rabbinical explanation of the term). Such "cakes" were among the foods distributed to the people for the cultic meal celebrating the return of the ark (2 S. 6:19; 1 Ch. 16:3). In Hos. 3:1 the Israelites are said to "love cakes of raisins" in connection with their turning to other gods. Very likely these were the same type of "cakes" (called *kawwānîm* in Jer. 7:18; 44:19) that Israelite women offered to the QUEEN OF HEAVEN as part of a fertility cult. On this basis, M. Pope (*Song of Songs* [*AB*, 1977], pp. 378-380) has suggested that raisins were believed to be effective as aphrodisiacs (Cant. 2:5; see also *IB*, V, 114).

The MT *'ᵃšîšê* in Isa. 16:7 has been interpreted in various ways. Most scholars have rendered it "raisin-cakes" (e.g., RSV); This is supported by the use of the same term in other passages and also by the mention of Moab's famous vineyards in vv. 8-10. The AV interprets it as a reference to the devastated "foundations" (from *'āšaš*) of Kir-hareseth, the chief fortress of Moab. On the other hand, the NEB's translation ("prosperous farmers") finds strong support in other early versions (Symm., Vulg., LXX; cf. also Jer. 48:31; see G. R. Driver, "Notes on Isaiah," in J. Hempel, *et al.*, eds., *Von Ugarit nach Qumran* [*BZAW*, 77, 1961], p. 43]).

R. K. H. N. J. O.

RAKEM rā'kəm [Heb. *rāqem*, the pausal form of *reqem* (Rekem)]. Son of Sheresh and great-grandson of Manasseh (1 Ch. 7:16).

RAKKATH rāk'əth [Heb. *raqqaṯ*; Gk. B *Ōmathadaketh*, A *Rhekkath*]. One of the fortified cities in Naphtali (Josh. 19:35), named between Hammath and Chinnereth. The Greek is probably the result of confusing the two names Rakkath and Hammath, with the *r* in the former taken for a *d*. The Talmud suggests that Tiberias was built on the site of Rakkath, although current scholarship tends to identify the town with modern Tell Eqlāṭîyeh, a small site near the Sea of Galilee about 2.5 km. (1½ mi.) N of Tiberias. W. W. BUEHLER

RAKKON rak'on (Josh. 19:46). *See* ME-JARKON.

RAM ram [Heb. *rām*–'lofty, exalted'; Gk. *Aram*]; AV NT ARAM.

1. Son of Hezron and brother of Jerahmeel (1 Ch. 2:9); an ancestor of King David (Ruth 4:19) and of Jesus (Mt. 1:3f.; but called Arni in Lk. 3:33).

2. Firstborn son of Jerahmeel and grandson of Hezron (1 Ch. 2:25, 27; cf. **1** above).

3. Head of the family of Elihu the son of Barachel the Buzite (Job 32:2). Like the names Elihu and Barachel, Ram is Hebrew in origin (see **1** and **2** above; Buz may be Aramean; cf. Gen. 22:21). By contrast, no genealogies are given for Job's three friends (Eliphaz, Bildad, and Zophar), whose names appear to be of Edomite or South Semitic origin. (See R. Gordis, *Book of God and Man: A Study of Job* [repr. 1978], p. 115.)

RAM. A mature male sheep. Heb. *'ayil* occurs more than 150 times, while Aram. *dᵉḵar* occurs only in Ezr. 6:9, 17; 7:17. In Gen. 31:10, 12 Heb. *'attûḏ* is a male goat rather than a ram as the AV translates.

Rams had various uses. They were used for meat (Gen. 31:38) and for wool (2 K. 3:4). Rams' skins were part of the offerings that were used to cover the tabernacle (e.g., Ex. 25:5; *see* SHEEPSKIN). Their horns were used as trumpets (e.g., Josh. 6:4-13; *see* MUSIC II.A). But the majority of references are in ritual contexts. Male animals were more valuable for sacrifice than females according to OT law. *See* SACRIFICES AND OFFERINGS IN THE OT.

In several passages the term "ram" is used to create vivid imagery. In Ps. 114:4, 6 the psalmist describes the mountains as jumping like rams (in terror) at the presence of God; the reference is probably to the quaking of Mt. Sinai (cf. Ex. 19:18) when Yahweh made covenant with Israel there (see comms.). Several prophets condemned the sacrifice of rams as part of the hypocritical use of rituals in place of obedience, justice, and righteousness (1 S. 15:22; Isa. 1:11; Mic. 6:7). Ezekiel condemned the "rams" and "he-goats" who pushed the weaker sheep

Three standing rams in a statuette from Larsa (2nd millennium B.C.) made of bronze with gold and silver plating (CNMHS/ARS, NY/SPADEM)

aside in order to gain the best pasture and water for themselves (Ezk. 34:17; cf. vv. 18-22); the reference is apparently to the rich and powerful in society who took care of themselves but oppressed the weak and poor. Finally, in Dnl. 8:3-7, 20 the ram with two horns symbolizes the kings of Media and Persia, who captured the whole Near East but were in turn vanquished by Greece (symbolized by the male goat).

RAMA rā'mə (Mt. 2:18, AV, NEB). *See* RAMAH **1.**

RAMAH rā'mə [Heb. *rāmâ*–'height'; Gk. *Rhama, Kiramas* (1 Esd. 5:20)]; AV also RAMA, CIRAMA (1 Esd. 5:20); NEB also RAMA, KIRAMA (1 Esd. 5:20).

1. A Benjaminite city at the border of Judah and Israel near Gibeah, Geba, and Bethel (Josh. 18:25; Jgs. 4:5; 19:13f.; Isa. 10:29).

Ramah was a stopping-place on the road to the north from Jerusalem. Near it was the palm under which the prophetess Deborah sat to judge the people (Jgs. 4:5). King Baasha of Israel fortified Ramah to prevent the people of Judah from making raids to the north; when Syrian forces invaded Israel, King Asa of Judah destroyed the city and built (fortified?) Geba and Mizpah with its stones and timber (1 K. 15:17, 21f.; 2 Ch. 16:1, 5f.). Near Ramah Nebuzaradan gathered the Jews and transported them to Babylon but freed Jeremiah (Jer. 40:1-4). Among the returning exiles were families from Ramah, who reoccupied their town (Ezr. 2:1, 26; Neh. 7:6, 30; 11:33; 1 Esd. 5:7f., 20). Proclamations of some of the prophets mention Ramah (Hos. 5:8; Isa. 10:29; Jer. 31:15; cf. Mt. 2:18).

According to Josephus (*Ant.* viii.12.3 [303]) Ramah was 40 stadia (8 km., 5 mi.) N of Jerusalem. It is identified with the small Arab village of er-Râm on a hill 790 m. (2600 ft.) high. In er-Râm are columns and other ruins of ancient buildings.

2. The hometown of Samuel's parents, where Samuel was born, lived, and was buried (1 S. 1:19; 2:11; 7:17; 8:4; 15:34; 16:13; 20:1; 25:1; 28:3). To differentiate this town from others it is also called Ramathaim-zophim (1 S. 1:1; but *see* ZUPH [place]). From Ramah Samuel made his annual tour to inspect the towns and sit for judgment (7:16f.). The elders of Israel came there to ask for a king over the country (8:4f.); Saul, whom he would anoint as king, met him there (9:6, 10). David fled from Saul to Ramah and then went with Samuel to Naioth (19:18; 20:1).

This Ramah may be identified with NT Arimathea, the hometown of Joseph, whom Pilate permitted to bury Jesus (Mt. 27:57-60; Mk. 15:43-46; Lk. 23:50-53; Jn. 19:38).

The Bible (Jgs. 4:5) says that Ramah was situated in Mt. Ephraim, but the actual place has not been identified. Four places have been suggested: Ramallah, about 13 or 14 km. (8 or 9 mi.) N of Jerusalem; Beth-ramah, about 21 or 22 km. (13 or 14 mi.) NW of Bethel; er-Râm, the Ramah of Benjamin; and Nebi Samwil.

3. A city on the border of the tribe of Asher (Josh. 19:24, 29). The place is possibly er-Râmeh, about 21 or 22 km. (13 or 14 mi.) SE of Tyre.

4. A city in Naphtali, fortified by walls (Josh. 19:32, 36), a different place from that of v. 29; cf. 3 above). The modern village is er-Râmeh, some 8 or 9 km. (5 or 6 mi.) SW of Safed and 29 km. (18 mi.) E of Acco.

5. RAMAH OF THE NEGEB [Heb. *rā'mat negeb*] (Josh. 19:8); AV RAMATH OF THE SOUTH; NEB RAMATH-NEGEB; also **RAMOTH OF THE NEGEB** [Heb. *rāmôṯ-negeb*] (1 S. 30:27); AV SOUTH RAMOTH; NEB RAMOTH-NEGEB. A city of the tribe of Simeon, possibly the same place as BAALATH-BEER, near Rehoboth in the Negeb.

6. A short form of RAMOTH-GILEAD (2 K. 8:28f.; 2 Ch. 22:6). A. A. SAARISALO

RAMATH OF THE SOUTH (Josh. 19:8, AV). *See* RAMAH 5.

RAMATHAIM rā-mə-thā'əm (1 Macc. 11:34, NEB); **RAMATHAIM-ZOPHIM** rā-mə-thā'əm zō'fəm [Heb. *rāmāthayim ṣôphîm*] (1 S. 1:1); NEB RAMATHAIM . . . ZUPHITE; **RAMATHEM** ram'ə-them (1 Macc. 11:34, AV). *See* RAMAH **2.**

RAMATHITE ra'mə-thīt [Heb. *hārāmāṯî*; LXX A *ho rhamathaíos*, B *ho ek rhaēl*, a few MSS, *ek rhamath*]; NEB OF RAMAH. One who resides in Ramath; a designation of a certain Shimei (1 Ch. 27:27; *see* SHIMEI **13**). Which Ramath he was from cannot be determined from the context.

RAMATH-LEHI rā'math-lē'hī [Heb. *rāmaṯ leḥî*–'the high place of Lehi'; Gk. *Anairesis siagonos*–'the hill of the jawbone' (cf. *BDB* p. 534]. A town in the Shephelah named in the story of Samson's killing of a thousand Philistines with the jawbone of an ass because of a dispute with his father-in-law (Jgs. 15:17; called simply Lehi in vv. 9, 14, and 19; 2 S. 23:11). During this period the

Philistines and the Israelites fought for control of the towns in the Shephelah. The Samson story indicates that Lehi belonged to the tribe of Judah (Jgs. 15:9) and was located near the hill country.

Modern efforts to identify the site are inconclusive. It may be connected with Wâdī es-Ṣarâr, not far from Philistine Timnah and Zorah, in the northern Shephelah (cf. *LBHG* p. 274). It has been suggested that Khirbet es-Ṣuyag, 2.5 km. (1.5 mi.) S of Eshtaol, may preserve the Gk. *Siagōn*; but this suggestion is weak (cf. *GTTOT*, § 610).

J. E. MCKENNA

RAMATH-MIZPEH rā'məth-miz-pə [Heb. *rāmaṯ hammiṣpeh*; Gk. B *Arabōth katá tḗn Massēpha*, A *Rhamōth . . . Maspha*]. A border town in Gad, named between Heshbon and Betonim (Josh. 13:24, 26). P. W. Lapp has identified it with 'Iraq el-Emir, 29 km. (18 mi.) E of Jericho and 17 km. (10.5 mi.) W of 'Ammân (*EAEHL*, II, *s.v.* "'Iraq el-Emir").

See MIZPAH 2.

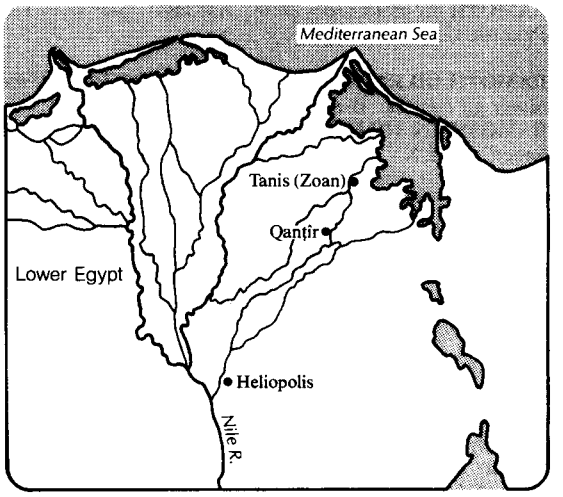
RAMESES ram'ə-sēz [Heb. *ra'm^{e}sēs*; Gk. *Rhamessē* < Egyp. *ri'amses*–'Re created him/it'; called *(pr)-r'-ms-sw*–'domain of Rameses'] (Gen. 47:11; Ex. 12:37; Nu. 33:3, 5); **RAAMSES** ram'sēz [Heb. *ra'amsēs*] (Ex. 1:11); NEB RAMESES. The royal residence city of the Ramesside kings in the Egyptian Delta.

I. Biblical References.–The name occurs four times in the OT in reference to a famous treasury city of the Pharaohs at the time of the Hebrews' enslavement in Egypt. In Gen. 47:11 it is a synonym for Goshen, the land where Joseph settled his father and brothers when they migrated to Egypt to escape the famine in Canaan. Because this event occurred several hundred years before the Ramesside kings of the 19th Dynasty made the city the center of royal activities (during the Late New Kingdom period, *ca.* 1300-1100 B.C.; *see* RAMSES), most scholars have concluded that the writer of Genesis used a name given to the city at a later date (one that would have been familiar to his contemporaries) instead of the original name. It is not impossible, however, that the city bore the name before the time of the Ramesside Dynasty, its name thus being interpreted "Re has created it."

The name is also mentioned in Ex. 1:11 with Pithom, the other of the two "store-cities" (Heb. *misk^{e}nôṯ*) that Pharaoh forced the Hebrews to build. The LXX adds here a third, Heliopolis (a city just N of Cairo). The name also occurs in Ex. 12:37 and Nu. 33:3, 5, with Succoth, as the place of departure for the Exodus.

II. Location.–Although it is generally agreed that Rameses is located in the northeastern Nile Delta region of Lower Egypt, identification of the site has long been a subject of debate among archeologists and Egyptologists. Current discussions have focused on two sites: (1) Tanis (modern Ṣân el-Ḥagar; biblical Zoan [cf. Nu. 13:22]), and (2) Qanṭîr (also referred to as Tell el-Dab'a, about 20 km. [12 mi.] S of Tanis and 100 km. [62 mi.] NE of Heliopolis and modern Cairo).

The present debate began in 1918 with Gardiner's mistaken association of Rameses with Pelusium (*JEA*, 5). In 1933 he retracted this view (*JEA*, 19) in favor of an identification with Tanis. In this he concurred with Montet, who followed the earlier work of Brugsch. In 1930 at the same time that Montet had proposed his theory, Hamza published a response suggesting Qanṭîr as the site of biblical Rameses. This theory was later supported by Habachi, and more recently by Kitchen (*Bible in Its World*, pp. 76-79), Baines and Málek (pp. 166, 175f.), and Aling (p. 129). Although no conclusive evidence for either site



has yet been produced, the weight of scholarship clearly favors an identification with the Qanṭîr site. For a comparison of the main arguments, see van Seters (pp. 127-51) and Uphill (*JNES*, 27).

RAMIAH rə-mī'ə [Heb. *ramyâ*–'Yahweh is high'; Gk. *Hiermas*]; AV Apoc. HIERMAS; NEB Apoc. JERMAS. A son of Parosh; one of the Israelites who had married foreign women (Ezr. 10:25; 1 Esd. 9:26).

RAMOTH rā'moth [Heb. *rā'môṯ*].

1. A Levitical town in the tribal territory of Issachar (1 Ch. 6:73 [MT 58]). It appears to be the same as JARMUTH (2.), which occupies the same position in the list of Levitical cities in Josh. 21:29, and is also possibly a variation of REMETH (19:21). The LXX readings support the probability that "Ramoth" is the preferred reading.

The exact location of Ramoth is uncertain, but W. F. Albright suggested a connection with Kawkab el-Hawa, located 11 km. (7 mi.) N of Beth-shean, an attractive region of springs situated on a plateau about 305 m. (1000 ft.) above sea level. An archeological find supports a location near Beth-shean. A stele of Seti I (date uncertain) relates several incidents that took place on a Mt. Yarumta near Beth-shean; Mt. Yarumta is most reasonably to be associated with the Jarmuth-Ramoth of Issachar (see *LBHG*).

Bibliography.–W. F. Albright, *ZAW*, 44 (1926), 231; *LBHG*, p. 179.

2. Ramoth in Gilead (Dt. 4:23; Josh. 20:8; 21:38; 1 Ch. 6:80 [MT 65]). *See* RAMOTH-GILEAD.

3. Ramoth of the Negeb (1 S. 30:27). *See* RAMAH 5.

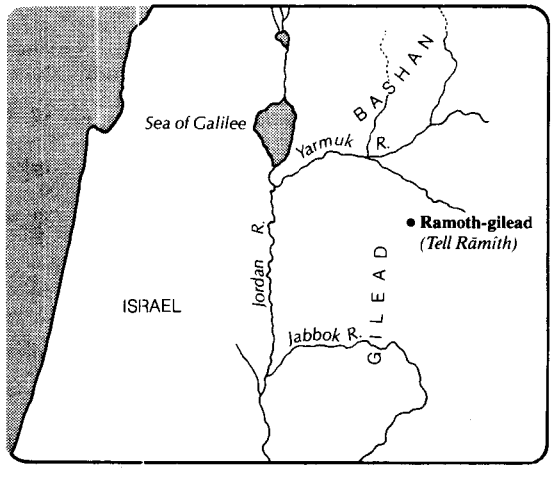
RAMOTH rā'moth (Job 28:18, AV mg.). *See* STONES, PRECIOUS.

RAMOTH-GILEAD rā'məth gil'ē-əd [Heb. *rāmōṯ gil'āḏ rāmôṯ gil'āḏ*; Gk. B *Rhemmath Galaad,* A *Rhammoth*]; **RAMOTH IN GILEAD** [Heb. *rā'mōṯ baggil'āḏ, rāmōṯ baggil'āḏ*; LXX *Rhamōth en Galaad, Arēmōth en tē Galaad,* etc.]. One of the cities of refuge established by Moses for the tribe of Gad (Dt. 4:43); later an important fortified city on the Israelite-Syrian border (2 K. 9:14).

I. Name.–Hebrew *rāmōṯ* (pl. of *rāmâ*) means "heights, high places," and modified by "Gilead" the name indicates prominent or well-known heights in the region of GILEAD. The name appears without the modifier as "Ramah" in 2 K. 8:29; 2 Ch. 22:6. The form "Ramoth in the Gilead" occurs in Dt. 4:43; Josh. 20:8; 21:38; 1 Ch. 6:80.

II. Location.–Since "Gilead" is used in the OT to represent both a smaller and a larger region, the location of Ramoth-gilead has been disputed. In the smaller — supposedly earlier — sense, Gilead lay S of the Jabbok, and Ramoth-gilead has been variously identified with es-Salṭ, Qal'at er-Rabaḍ, etc., all S of the Jabbok. G. A. Smith, referring to these identifications, added with unerring instinct, "though I feel it necessary, from what the OT says of the frequency with which Ramoth-gilead was contested by Aram and Israel, to put it further north on or near the Yarmuk" (*HGHL,* p. 394). For the same reason, F.-M. Abel sought a location in the north of 'Ajlûn and suggested that Ḥoṣn 'Ajlûn, 676 m. (2217 ft.) in altitude, 16 km. (10 mi.) SW of Ramtha, met the required conditions (*GP,* II, 430). Following N. Glueck, scholarly consensus has identified Ramoth-gilead with Tell Rāmîth (Tell er-Rumeith), 7 km. (4½ mi.) S of Ramtha, near the present border between Syria and Jordan. The location was almost certainly on the main road S from Damascus (the King's Highway), where it was joined by a road leading to Jezreel (cf. 2 K. 8:28f.; 9:1f., 14-16), in an area where battles could be fought with chariots (cf. 1 K. 22:29-36; 2 Ch. 18:28-34), near a landmark that could be identified as "heights."

III. History.–The first reference in the Bible is in connection with three cities of refuge that Moses set apart "in the east beyond Jordan": "Bezer . . . for the Reubenites, and Ramoth in Gilead for the Gadites, and Golan in Bashan for the Manassites" (Dt. 4:43; cf. Nu. 35:6, 14; Josh. 20:7f.). Ramoth-gilead was also one of the forty-eight cities set aside for the Levites, who had no tribal allotment (Josh. 21:38; 1 Ch. 6:80 [MT 65]; *see* LEVITICAL CITIES). Whether the allocation of these cities to the Levites actually took place at the time indicated in the scriptural accounts has been questioned (cf. R. de Vaux, *Ancient Israel* [Eng. tr. 1961], pp. 366f.). A comparison of the passages cited raises questions concerning the origin of cities of refuge and Levitical cities, their number, their purpose, etc. (cf. Aharoni and Avi-Yonah, p. 70 and map 108); in general, however, it appears that the provision for both cities of refuge and for Levitical cities goes back to early Israelite times.



When Solomon divided his kingdom into twelve administrative districts (1 K. 4:7-19), Ben-geber was the official in Ramoth-gilead (v. 13). His district included "the villages of Jair the son of Manasseh . . . in Gilead, and . . . the region of Argob, which is in Bashan, sixty great cities with walls and bronze bars." This district stretched N of the Yarmuk. (See Aharoni and Avi-Yonah, map 113.)

When the kingdom divided, the northern kingdom included the portions that had been given to Reuben, Gad, and the half-tribe of Manasseh, i.e., the Transjordanian regions (cf. 1 K. 11:31-35). That these regions experienced turmoil cannot be doubted: Israel had problems with the Midianites, Moabites, Ammonites, Syrians, and Edomites, as well as intermittent war with the southern kingdom of Judah. Early in the 9th cent. B.C. Asa of Judah (910-870) made a league with the Syrian king, Ben-hadad I of Damascus (900-860?), against Baasha of Israel (900-886). Ben-hadad conquered much of Naphtali in northern Galilee (1 K. 15:20). The formation of a federation of Aramean city-states under Damascus (cf 1 K. 20:1; Josephus *Ant.* viii.14.1 [363]) prompted Assyria to increase its pressure on the Arameans. Ben-hadad (perhaps II, *ca.* 860-843) besieged Samaria but was turned back (1 K. 20:1-21). Later he fought Israel near Aphek, on the Golan heights E of the Sea of Galilee (vv. 26-30). At some time during this period the Syrians took control of Ramoth-gilead.

Israel and Judah made peace through a marriage alliance between Jehoram (Joram) the son of Jehoshaphat of Judah and Athaliah the daughter of Ahab of Israel (2 K. 8:18), and when Jehoshaphat visited Ahab (*ca.* 853), the latter suggested that they combine forces and retake Ramoth-gilead (1 K. 22:3). Despite the prophecy of Micaiah (v. 17) they advanced on the city. Ahab was fatally wounded and was taken to Samaria for burial (v. 37).

Ben-hadad was succeeded by HAZAEL (*ca.* 843). In 841 Joram the son of Ahab of Israel and Ahaziah the son of Jehoram of Judah united in war against Hazael, who was in Ramoth-gilead (2 K. 8:28). Joram was wounded and returned to Jezreel to be healed. Elisha, who at the Lord's command had anointed Hazael to be king of Damascus (v. 13), now sent a prophet to anoint Jehu, commander of Joram's army at Ramoth-gilead, to be king of Israel (9:1-6). Jehu raced to Jezreel, where Ahaziah was visiting Joram (v. 16); he killed Joram and gave orders that Ahaziah also be killed (vv. 24, 27). The scriptural account adds this summary: "In those days the Lord began to cut off parts of Israel. Hazael defeated them throughout the territory of Israel: from the Jordan eastward, all the land of Gilead, the Gadites, and the Reubenites, and the Manassites, from Aroer, which is by the valley of the Arnon, that is, Gilead and Bashan" (10:32f.). Later in 841 Shalmaneser III and his forces swept from Hermon to Hauran to Carmel and forced Jehu to pay tribute, but apparently Assyria was not strong enough to control the area.

Hazael and his son Ben-hadad (III or II; 796-770 B.C.) continually oppressed Israel during the reign of Jehu's son Jehoahaz (13:3), and the cities that Hazael had taken (presumably including Ramoth-gilead) changed hands sev-

eral times during the reign of Jehoahaz's son Jehoash (Joash, vv. 24f.). Amos referred to the Syrian attacks against this region in his prophecy against Damascus: "they threshed Gilead with threshing sledges of iron" (Am. 1:3; cf. 2 K. 13:7). Under Joash's son Jereboam II (*ca.* 786-746) Israel temporarily regained control of the Transjordan, including even Damascus (14:25, 28). Damascus fell to Tiglath-pileser III in 732 B.C. Ramoth-gilead is not mentioned again.

RAM'S HORN [Heb. *(qeren) yôḇēl*] (Josh. 6:4-6, 8, 13). *See* HORN; MUSIC.

Relief of an Assyrian attack on a city protected by a rampart and probably a moat (the gap between the rampart and the wall). From the central palace at Nimrûd, 745-727 B.C. (courtesy of the Trustees of the British Museum)

RAMSES ram'zēz; **RAMESES; RAMESSES** ram'sēz [Egyp. *rᶜ ms.sw*,–'Re begat him'; to be distinguished from the city Raamses (Ex. 1:12) and the land of Rameses (Gen. 47:11; Ex. 12:37; Nu. 33:3, 5)]. The name of eleven kings of Egypt in the 19th and 20th Dynasties.

I. Background and Name.–The name occurs for the first time in Egyptian texts in the 19th Dynasty. Reᶜ (or Raᶜ; cf. Copt. *ra*), or Amon-Reᶜ, was the solar-disc deity, whose cult-center was at Thebes. But a religious revolution was led by Akhenaten (Amenhotep IV) who exalted the solar deity under the name Aten, turned against the Amon priesthood, and moved the capital to Akhetaten ([Tell] el-Amarna). The Amon priesthood, however, had not been destroyed, and it became strong enough to cause Tutankhaten to change his name to Tutankhamen and relocate the capital at Thebes. The dynasty had grown feeble, and power gradually shifted to the military commander Haremhab, later to become the Great Commander of the Army. When Ay (Eye) died without leaving progeny Haremhab became king. He was a strong ruler, who reigned twenty-seven years (disputed by some). He did not found a dynasty, and his reign should be considered more as an interregnum than as the end of the 18th Dynasty.

Haremhab had elevated to the rank of vizier one of his military men, Pe-raᶜmesse, whose father's name was Seti. Subsequently Haremhab named Pe-raᶜmesse to succeed him, and when the latter became king he dropped the definite article *(p-)* and called himself Raᶜmesse, inaugurating the 19th Dynasty. Two kings of the dynasty would bear the name Ramses, and the name would become so eminent that nine kings of the 20th Dynasty would adopt it as part of their *nomina* and *praenomina*. Two other kings of the 19th Dynasty would take the name Seti.

II. Dates.–The dates for the Ramesside period are somewhat uncertain. The "high" dates for Ramses I are 1320-1318; the "low" dates are 1303-1302. According to Gardiner, Seti I came to the throne shortly after the new Sothic Cycle began ca. 1321-1317 B.C. (p. 249; cf. EGYPT VI). Partly on this basis the dates adopted here for Seti I are ca. 1317-1304 (*ISBE*, II [1982], 43), and other dates are adjusted accordingly. Synchronisms with Hittite kings must be taken into consideration, but Hittite chronology is largely dependent on Egyptian records, hence an element of circular reasoning may easily be introduced.

***III. Ramses I* (1318-1317).**–Pe-raᶜmesse was one of the generals instrumental in the overthrow of the Atenist movement established by Akhenaten. He came originally from the northeastern Delta, where Seth (Egyp. *sth*, read by some as Sutekh, but *h* probably was not pronounced like *ḫ*) was the honored deity. The family devotion to Seth is seen in the name Seti (or Sethos; Greek *sethōsis*, Egyp. *sthy*, "Sethian"). His loyalty to Amon and Thebes was not compromised, however. When Ramses came to the throne he was already an old man, and his reign was very short. According to Josephus, Manetho credited him with but 1 year 4 months (*CAp* 1.15 [97]), closely agreeing with a stele erected by his son Seti I at Buhen (Wādî Halfa) which mentions Ramses' second year. Seti I may have become co-regent at that time (Breasted, *Ancient Records*, III, § 157ff.; *CAH*, II/2 [3rd ed. 1975], 217); however, the events recorded are apparently the same as those of Seti's first year. In such a short period of time Ramses could not have done much, but he apparently planned the Hypostyle Hall and perhaps the Avenue of the Sphinxes at Karnak as well as an elaborate tomb complex in the Valley of the Kings. The reopening of the turquoise mines at Serābîṭ el-Khādim in the Sinai is indicated by the presence of two stelae of Ramses I at that site.

***IV. Ramses II* (ca. 1304-1227).**–Since Ramses I was old

when he came to the throne, we may assume that his son Seti I was in his middle years at his accession. This assumption may be confirmed by the fact that his son, Ramses II, became co-regent for an undisclosed number of years (K. C. Seele, *Coregency of Ramses II and Seti I* [1940]). Since Ramses' sixty-seven-year reign does not include the years of his co-regency, the co-regency must have begun at an early age. The statement that Ramses was but a babe in his father's lap when he was proclaimed king (wall inscription on temple of Seti I at Abydos; cf. Gardiner, p. 257), however, is quite incredible.

This dynasty preferred northern Egypt for its home. Ramses I had his administrative capital at Memphis, and Seti I had his at Avaris. Both, however, continued to use Thebes as the center of state and cultic activity. Ramses II followed this practice, building his capital at Per-Ra'messe ("House of Ramses") in the eastern Delta (cf. Ex. 1:11). (The location of Per-Ra'messe is disputed; *see* RAMESES.) His first recorded act, however, was to travel over 700 km. (450 mi.) south to Thebes for a religious festival.

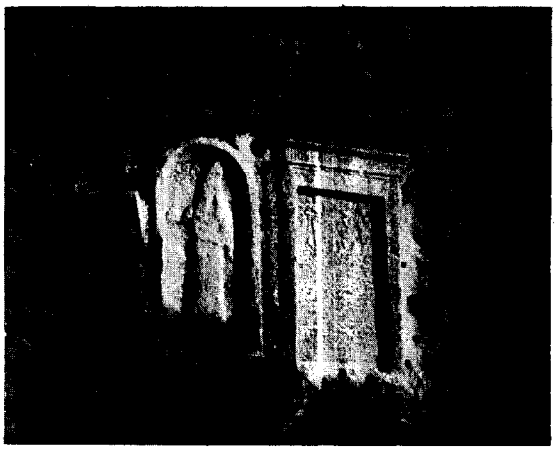
Ramses II is widely acclaimed as a builder. His monuments, buildings, inscriptions, etc., are found throughout Egypt and beyond its borders. Among the most impressive are the Hypostyle Hall at Karnak (begun by Seti I on plans made by Ramses I); the Ramesseum; the temple complex at Abu Simbel; and colossal statues at Tanis, Memphis, Karnak, the Ramasseum, and Abu Simbel. Not everything with Ramses' cartouche can be attributed to him, however. Like many other pharaohs, Ramses frequently carved his cartouche on a building or a monument which had been erected by a predecessor, often obliterating the original name. Cf. W. S. Smith, *Art and Architecture of Ancient Egypt* (1958), pp. 216-226; I. Woldering, *Art of Egypt* (1963), pp. 189-209, plates 41, 42, 44.

Ramses II in full regalia. This depiction is unusual because he is red-faced and needs a shave. Wall painting from the tomb of Nakht-amun (no. 341) at Thebes, 1292-1225 B.C. (courtesy of the Oriental Institute, University of Chicago)

Of importance for biblical studies are Ramses' wars with the Hittites. In year 4 of his reign he advanced at least to Nahr el-Kelb (Dog River), N of Beirut, where he set up an inscription marking his first campaign in Asia. In year 5 he made a major move against the Hittites. The story is recorded in both Hittite and Egyptian records (at Boghazköy and Karnak, respectively), with somewhat differing details. The overall account, however, is the same: the Hittites under Muwatallis ambushed the Egyptians near Qadesh-on-the-Orontes; by sheer heroism Ramses broke out of the ambush; he retreated to Egypt claiming victory, and the Hittites did not pursue him; they also claimed victory. The story is told in eight accounts (cf. *ANET*, pp. 255f., 319; cf. also the extensive bibliography in *CAH*, II/2 [3rd ed. 1975], 952f.). A graphic battle-scene is carved on a wall of the Ramasseum, showing many details of the battle.

Ramses continued to invade Palestine and Syria, with campaigns in years 6-8 in Palestine, in year 10 in Syria (another inscription at the Dog River), and in year 11 as far as Tunip and Qatna. But there were not any recorded campaigns with the Hittites, so it seems that both powers had suffered from the battle at Qadesh and were not anxious to repeat the act. In year 21 Ramses II concluded a treaty with Ḫattusilis king of the Hittites which defined

A stone inscription at Nahr el-Kelb (Dog River) in Phoenicia describing the first Asian campaign of Ramses II (W. S. LaSor)



The eastern gateway of the great temple of Ramses III at Medinet Habu; this is the last monumental temple to have been built in the New Kingdom (20th Dynasty, 1198-1167 B.C.). Although it resembles a fortress, its primary purpose was to house the royal harem. The small temple of Ramses III is also visible at right (courtesy of the Oriental Institute, University of Chicago)

their respective spheres of influence. The Hittite territory included northern Syria and the kingdom of the Amurru; the Egyptian territory, southern Syria and all Palestine. Copies are extant in both Egyptian and Hittite (cf. *ANET,* pp. 199-203). In year 34 Ramses arranged a marriage alliance with the daughter of Ḫattusilis (cf. *ANET,* pp. 257f.). The peace treaty was observed as long as the Hittite empire continued to exist. During this period Israel lived in the power vacuum between Egypt and the Hittites, which gave the young tribal federation an opportunity to become more firmly established.

Ramses' building activities in the eastern Delta are also of significance for biblical studies. From the available records we may conclude that from ca. 1700 to 1318 B.C. no Egyptian pharaoh was located in the eastern Delta. Ramses I and Seti I had residences there, but Ramses II appears to have been the first to build his palace at a place he called Ramsesburg (Per-raʿmesse). The account of the Hebrew slaves in Egypt, told briefly at the beginning of Exodus, would seem to fit best into this period. For this reason Ramses II is considered by some Bible students to have been the pharaoh of the oppression, and his successor Merneptah the pharaoh of the Exodus. The theory, however, is not without its difficulties. *See* EXODUS, DATE OF THE.

Ramses celebrated a Sed-Festival in year 30, then eleven or twelve more, approximately at intervals of three years (his fifth Heb-Śed was celebrated in year 42). In year 55 Ramses named his thirteenth son MERNEPTAH (Mer-en-ptaḥ) as co-regent (the other heirs presumptive had predeceased the king); in year 67 Ramses died and Merneptah became king at an advaned age. For Merneptah's Hymn of Victory (the Israel stele), cf. *ANET,* pp. 376-78.

V. Ramses III **(ca. 1194-1163).**–The first king of the 20th Dynasty, Sethnakhte, reigned but two years and was succeeded by his son, who took the name Ramses (III). The rest of the kings of this dynasty also took the name Ramses (IV-XI). Of these, only Ramses III can be considered as noteworthy for this article. Merneptah had driven off an attack of the sea-peoples, but the great thrust was still under way. Ramses III had three major wars in his fifth to eleventh years, principally against the Libyans and other peoples from the west, and then from the sea-peoples — a name which obscures the fact that the migration included also a movement by land through Syria with women, children, ox-carts, and other elements of a population shift (cf. *ANET,* pp. 262f.; Breasted, IV §§ 59-82).

Of importance for the Bible student is that this vast movement of peoples included the *Prst (Plst)* or PHILISTINES, who occupied the coastal region of Palestine (cf. *CAH,* II/2 [3rd ed. 1975], 359-378, and bibliography, pp. 968-972). After year 11 Ramses III entered a period of peace during which he built his great funerary temple at Medinet Habu, conducted an expedition to Punt, and repaired many temples throughout the land. Ramses III celebrated a Śed-Festival at the beginning of year 30 and died the following year. He has been described as "the last of the great warrior kings of Egypt" (*CAH,* II/2 [3rd ed. 1975], 241). "With the death of Ramesses III the glory departed, and Egypt was never again an imperial power" (*CAH,* II/2 [3rd ed. 1975], 247).

Many details of the Ramesside period can be found in the Great Harris Papyrus, which dates from the end of the reign of Ramses III, described in *ANET* (p. 260) as "a kind of last will and testament for him" (cf. Gardiner,

pp. 292-94). Glimpses of life in Syro-Palestine in the 11th cent. B.C. can be found in the Journey of Wen-Amon (cf. *ANET,* pp. 25-29; Gardiner, pp. 306-313).

RAM'S SKINS. *See* SHEEPSKIN.

RANGE. For AV 2 K. 11:8, 15; 2 Ch. 23:14, *see* RANK. For Lev. 11:35, AV, *see* STOVE.

RANK; RANKS.

(1) [Heb. *ma'ᵃrāḵâ*–'row, battle line'] (1 S. 17:8, 10, 22f.); AV ARMIES; NEB also LINE; [*śᵉḏērôṯ*] (2 K. 11:8, 15; 2 Ch. 23:14); AV RANGES; NEB also PRECINCTS; [part. of *ḥāṣaṣ*–'divided in groups'] (Prov. 30:27); AV BANDS; NEB DETACHMENTS; [*mô'āḏ*] (Isa. 14:31); AV APPOINTED TIMES; [Gk. *diatássō*] ("form ranks, Jth. 1:4); AV "set in array"; NEB "in formation"; [*táxis*] (2 Macc. 13:21); AV HOST. Soldiers arranged in battle formation. The meaning of Heb. *śᵉḏērôṯ* is uncertain. For the view that it is an architectural term, see KoB, p. 916; for the interpretation of the AV, RSV, and NEB (2 K. 11:8) that the term refers to the ranks of the guardsmen, see J. Gray, *I & II Kings* (*OTL,* rev. ed. 1972), p. 572.

(2) [Heb. *mišneh*–'second'] ("next in rank," Est. 10:3); AV NEXT; NEB SECOND; [pass. part. of *nāśā'* + *pānîm* –'one whose face is lifted up,' i.e., 'esteemed, distinguished'] ("man of rank," Isa. 3:3); AV HONOURABLE MAN; [Gk. *gínomai*] (Jn. 1:15, 30); AV BE PREFERRED; [*axíōma*] (2 Macc. 4:31); AV AUTHORITY; NEB MINISTER. A grade of official standing; to take a position in relation to others. In Jn. 1:15, 30 *emprosthén gégonen* (lit. "who existed in front of me") refers first to Jesus' temporal precedence (i.e., His pre-existence) and second — based on the belief that priority indicates superiority — to His precedence in rank (see R. E. Brown, *Gospel According to John,* I [*AB,* 1966], 63-65).

(3) [Gk. *perisseía*] ("rank growth," Jas. 1:21); AV SUPERFLUITY; NEB "that hurries to excess." An adjective denoting excessive growth. Gk. *perisseía* generally means "abundance"; cf. its use in a positive sense in Rom. 5:17; 2 Cor. 8:2. N. J. O.

RANSOM [Heb. *kōp̱er, pāḏâ, piḏyôn, gā'al*; Gk. *lýtron, antílytron, lytróō, agorázō*]; AV also REDEEM, REDEMPTION, RESCUE, SATISFACTION; NEB also PAYMENT, "price of release," etc. Ransom is the price paid to redeem someone or something. Thus, though the word does not occur very frequently, it is reinforced by all the words for redemption and introduces a concept of great biblical importance, particularly for understanding the work of Christ.

I. In the OT.–Hebrew *kōp̱er* in the OT is the price paid for release from a death sentence. Ex. 21:29 stipulates that if a man owning a dangerous ox lets the animal get out and it kills someone, "the ox shall be stoned, and its owner also shall be put to death." But the killing was not wilful murder and provision is made for the man to escape execution: "If a ransom [*kōp̱er*] is laid on him, then he shall give for the redemption of his life whatever is laid upon him" (v. 30). The *kōp̱er* is thus the price paid to redeem a forfeited life.

The same idea is in the provision that when a census is taken, "then each shall give a ransom for himself to the Lord . . . that there be no plague among them . . ." (Ex. 30:12). On this basis a man's riches can be the "ransom" of his life (Prov. 13:8), and the wicked may be called "a ransom for the righteous" (21:18). It is a mark of the seriousness of some crimes, e.g., murder (Nu. 35:31) and adultery (Prov. 6:32-35), that no ransom can be paid. In the light of all this, the two passages in which *kōp̱er* is rendered "bribe" (1 S. 12:3; Am. 5:12) probably indicate not bribery in general but the acceptance of bribes from one whose life is forfeit.

Sometimes ransom refers to human dealings with God. Thus the psalmist says that no matter how rich people may be, "Truly no man can ransom himself, or give to God the price of his life" (Ps. 49:7). There are mysteries about "the greatness of the ransom" that Job must not allow to turn him aside (Job 36:18). Perhaps this verse means that the patriarch is not to be repelled because a ransom in God's sight is so vast. When a ransom is found, it is due to God who can say, "Deliver him from going down into the Pit, I have found a ransom" (Job 33:24; cf. also Ps. 49:15 [MT 16], which asserts that God will find the ransom that men cannot find [49:7 (MT 8)]). The essentially substitutionary connotation of *kōp̱er* is seen very clearly in Isa. 43:3: "I give Egypt as your ransom, Ethiopia and Seba in exchange for you."

Kōp̱er is cognate with Heb. *kipper,* the usual word for "atone." It is generally held that *kipper* basically means "to cover" and that it is used of covering sin and thus atoning; the derivative *kōp̱er* then denotes primarily a "covering" of the particular offense and leads to the idea of a ransom. But this connection does not seem particularly obvious, and it is at least possible that the dependence is the other way around. If *kōp̱er* is the primary word, then the derivative *kipper* basically signifies "to ransom." The thought is that sinners are subject to the wrath and condemnation of God. Their lives are forfeit. But God graciously gives them the rite of sacrifice as a means of atonement, of ransom (Lev. 17:11). Whether or not *kipper* derives from *kōp̱er,* the connection of the two terms is not to be overlooked. Sinners must be delivered by a divine action, whether this be interpreted in terms of sacrifice (as Lev. 17:11) or more generally (as Job 33:24).

Hebrew *piḏyôn* adds little new information, for it occurs only twice and in connection with *kōp̱er* (Ex. 21:30; Ps. 49:8). It simply refers to the whole process of redemption, in which *kōp̱er* denotes the price paid. These passages do, however, introduce us to the word-group, of which the Hebrew verb *pāḏâ* is the most prominent member, that refers to redemption over a wide range and not simply to a death sentence, as does *kōp̱er.* Goods or slaves can be redeemed, but there is no compulsion to do so (e.g, the firstling of an ass may or may not be redeemed, Ex. 34:20). If the redemption is carried out for others, it is a sheer act of grace. All this is important for an understanding of passages where the verb is applied to God's gracious dealings with His people. They are called "the ransomed of the Lord" (Isa. 35:10). Hosea looks to the Lord to ransom them "from the power of Sheol" (Hos. 13:14). Redemption in the last resort is something that one must look to the Lord to carry out.

In the third word-group represented, the Hebrew verb *gā'al* is the most important word. Isaiah knew a God who made "the depths of the sea a way for the redeemed (AV "ransomed") to pass over" (Isa. 51:10). Similarly

Jeremiah spoke of God as having redeemed and ransomed Jacob (Jer. 31:11). Since *gā'al* is a "term of (civil) family-law" (KoB, p. 162), passages that use it have at base the thought of Yahweh as Israel's great Kinsman. He is to them a Father and acts to maintain their rights. So He delivers them and brings them salvation.

From all this it is plain that ransom is a many-sided concept in the OT. Basic to all its uses, though, is the idea that ransom is a price paid for release from something or someone. The most significant passages speak of ransom from death or of Yahweh as the ransomer. They prepare the way for the NT application of the concept to the work of Christ.

II. In the NT.–The important NT word for ransom is Gk. *lýtron,* which occurs only in Mt. 20:28 and Mk. 10:45, but is the basic word in the family that includes "redeem," "redeemer," and "redemption. The very formation of *lýtron* shows its connection with payment of a price. The verb *lýō,* generally "to loose," could from early times also mean "release." The suffix *-tron* denotes the means of performing an action. It is thus used for implements (as *métron,* an implement for measuring) and for places (e.g., *théatron,* a place for seeing). But in late times the common use was for a price, as *tá thréptra,* "the wages for rearing." The late word *lýtron* comes under this head, basically meaning the price of releasing. Another verb formed from it *lytróō,* essentially means not simply "release" but "release on payment of a price." The price-paying idea is built into the *lýtron* word-group.

The words were commonly used in the Greek world of the 1st cent. A.D. for the release of those in captivity, e.g., prisoners of war or slaves. The ransoming of prisoners of war is a well-known process. Slaves, too, sometimes bought their freedom by saving the considerable sum required and then paying it into the temple treasury of some god. The owner sold the slaves to the god "for freedom." Sometimes it was provided that they might never henceforth be enslaved. Technically the slaves became slaves of the god and could have some religious duties. But in actual fact they were free and moved in society as free persons. The price that was paid for the release of prisoners of war and the price that the slaves paid into the temple treasury for their release were both called *lýtron* or (pl.) *lýtra,* "ransom."

Thus NT writers, whether they were thinking of the OT meaning of release from a death sentence or of the contemporary meaning of release from captivity, used "ransom" to indicate a price paid to secure release. The occasional metaphorical usages only serve to underline the recognized meaning of the word-group.

Greek *lýtron* occurs in Mt. 20:28 par. Mk. 10:45, "The Son of man came not to be served but to serve, and to give his life as a ransom for many." This is a key passage for understanding the Atonement. Its genuineness has sometimes been assailed on the grounds that the words do not fit the context and thus are no part of Jesus' teaching, and that they have all the appearance of being a Paulinist's doctrinal gloss.

The first point of this argument is that the context is lowly service. Jesus rebukes the disciples for self-seeking and tells them that the highest place is for the lowliest person. He then says that His death is a piece of service and not of self-assertion; His followers must heed His example. But even if all this is granted, it does not follow that the words must be rejected. If Jesus is speaking of His death as an act of service, it is reasonable that He states, even if very briefly, in what the service consists. His was not to be the aimless, tragic death of One who was rejected and misunderstood. It was to be a ransom, a price paid to release people. So far from seeking His own comfort or eminence, the Ransomer of His people took the way that led to the cross.

The objection that the verse is a piece of Paulinism is likewise difficult to sustain. Paul never used the word *lýtron.* Although he did use the concept of redemption, it is by no means all-pervasive. It was not a favorite concept of his, like justification. Moreover, it is a concept that he shared with other writers (cf. He. 9:15; 1 Pet. 1:18f.; Rev. 5:9).

It remains to ask what the saying signifies as part of Jesus' discourse. Gk. *lýtron,* as has been shown, points to the payment of a price, and in this case the price is specified, namely the giving of Christ's life in place of the lives of sinners. Christ liberates people from sin and its penalty by dying in their stead. The saying points to substitution. Also significant in Mt. 20:28 is the preposition *anti,* which signifies "in the stead of, in the place of." A number of scholars have also pointed out that the passage contains several echoes of Isa. 53 (e.g., W. F. Howard, *Expos.T.,* 1 [1889], 107-110). If it is thus intended to evoke memories of the Suffering Servant, then the view that the words mean substitution is reinforced, for the Servant clearly suffered in the place of others.

The remaining passage is 1 Tim. 2:6, in which Christ Jesus "gave himself as a ransom [*antílytron*] for all." If *lýtron* signifies substitution, how much more will the compound noun *antílytron*! Paul is saying that Christ gave Himself in the place of all people and so ransomed them from death.

Ransom, then, is a way of understanding the death of Christ. Sinners are the slaves of sin and are condemned to death. But Christ the Savior paid the price of release by taking their place. He suffered, and they go free.

RAPHA rā'fə.

1. [Heb. *rāpā'*–'he has healed']. The fifth son of Benjamin (1 Ch. 8:2; but not mentioned in Gen. 46:21).

2. (1 Ch. 8:37, AV). *See* RAPHAH.

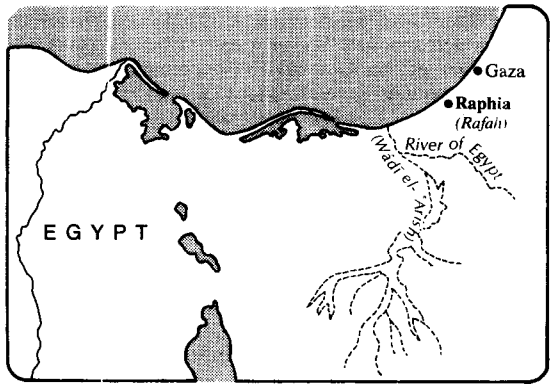
RAPHAEL raf'i-el, rā'fi-el [Gk. *Raphaël,* prob. < Heb./Aram. *rᵉpā'ēl*–'God heals/has healed' or 'God is fearsome']. An archangel in apocryphal and pseudepigraphic literature (e.g., 3 Bar. 4:7; Sib. Or. 2:215). He is not mentioned in the canonical Scriptures. In the fanciful apocryphal book of Tobit, Raphael takes the form of Azariah (Tob. 5:1-21), traveling companion to Tobit's son Tobias, and teaches him how to free his betrothed, Sarah, from a haunting demon (ch. 6), and how to heal his father, Tobit, of blindness (6:8; 11:1-15). The book states that he was sent from God "to heal the two of them" (3:17; cf. 12:14), an apparent reference to one of the meanings of his name. *See* TOBIT.

In 1 Enoch, a pseudepigraphic work composed in Greek, Raphael is named second among the seven archangels (cf. Tob. 12:15) and is "over the spirits of men" (20:3, *APOT*), and "set over all disease and every wound of the children of the people" (40:9). In 9:3f. (Greek recension) he is described as helping relay to God in heaven the cries of human beings; and in 10:4-6 God tells him to bind

and blindfold the demon Azazel in a dark desert pit until the judgment. Raphael teaches Enoch about Sheol (22:3-13) and the tree of wisdom (32:6). As a leader of the countless angels (71:9) he punishes those who follow Satan by destruction in the valley of fire (54:1-6; cf. 68:1-5). These latter passages may reflect the "fearsome" aspect of his name. D. K. STUART

RAPHAH rā'fə [Heb. *rāpâ*]; AV RAPHA. Son of Binea and father of Eleasah; a descendant of Saul (1 Ch. 8:37). He is called Rephaiah in 9:43.

RAPHAIM rə-fā'əm [Gk. *Rhaphain*; Lat. *Raphaim*]; NEB omits, following B. An ancestor of Judith, listed in her genealogy as the son of Ahitub and father of Gideon (Jth. 8:1).



RAPHIA rə-fē'ə, rə-fī-ə [Gk. *Rhaphia, Rhapheia*]. A location on the "ways of Horus," the route of the Pharaohs to Palestine and beyond, 48 km. (30 mi.) N of the river of Egypt (Wâdī el-'Arish). The name does not occur in the Hebrew Bible but is mentioned in 3 Macc. 1:1 (*APOT*, 2, 163) as the location of the battle between Antiochus III the Great and Ptolemy IV Philopator. According to some interpreters this battle is referred to in Dnl. 11:11f., but this depends on the date of Daniel.

Seti I listed the stations on the "ways of Horus" between Sile and Gaza (the southern end of the *Via Maris*); no. 20 is "the town of [. . .]," following "*N-ḫ-s*." In the parallel list in Papyrus Anastasi I, "*r-pḥ*" (Raphia) follows "*N-ḫ-s*" and precedes Gaza (cf. *LBHG*, pp. 46f.) In a topographical list, Seti named *r-p-ḥ* after Hazor, obviously a place further north (*LBHG*, p. 178). Ramses II mentions Raphia before Sharu[hen] (Tell el-Far'ah), S of Gaza. A. Alt identified it tentatively with Sheikh Zuweid (F.-M. Abel, *GP*, 2, 172).

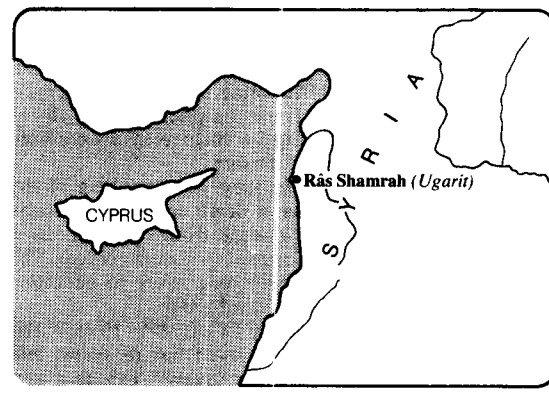
In his second year (721 B.C.) Sargon II was faced with a revolt of his western provinces. One of the rebels was Hanno of Gaza, who apparently had sought the aid of Egypt and Sib'u sent his *turtan* (second in command) to go to Hanno's aid. Sargon records the defeat of Sib'u (obviously meaning his *turtan; see* TARTAN), and adds: "Ḫanûni [Hanno] I seized with my own hand and took him to my city, Assur, in chains. The city of Rapiḫu I destroyed, I devastated, I burned with fire; 9,033 people, together with their many possessions, I carried off" (*ARAB*, II, § 5; see also §§ 55, 80, 92, 118). Esarhaddon passed through Raphia ("the city of Rapiki by the side of the Brook of Egypt, where there is no river") on his invasion of Egypt in 671 B.C. (cf. *ARAB*, II, § 557), although he put this event on his way from Egypt to Meluḫḫa (Nubia). In addition to the battle between Antiochus III and Ptolemy IV (217 B.C.), Raphia was the scene of a battle in which Alexander Janneus captured the city (97 B.C.; cf. Josephus *Ant.* xiii.13.3 [357]). Gabinius rebuilt Raphia and several other cities (Josephus *Ant.* xiv.5.3 [88]; *War* i.8.4 [166]). Describing the advance of Titus and his army from Nicopolis to Jerusalem, Josephus named the fourth station as Raphia, "at which city Syria begins" (*War* iv.11.5 [662]). In the Talmud (Tosephta), Raphiah deHagra (Aram. *d'ḥagrâ*, "of the wall, boundary," name of a province in the desert of Shur) was located on the frontiers between Israel and Egypt. On the modern road from Israel to Egypt, Raphia (mod. Rafeh) is the border control.

See *GP*, II, 431f. W. S. LASOR

RAPHON rā'fən [Gk. *Rhapheiōn*] (1 Macc. 5:37). A town in Gilead, near Carnaim (Ashteroth-karnaim or Karnaim), where Judas Maccabeus defeated Timothy the leader of the Ammonite forces (1 Macc. 5:37-43; cf. Josephus *Ant.* xii.8.4 [342], Romphon). Raphon is probably to be identified with er-Râfeh, about 13 km. (8 mi.) NE of Sheikh Sa'd (thought to be the site of Ashteroth-karnaim), and possibly with *nw-r-p-ỉ* in the list of Thutmose III (*LBHG*, p. 148). See Y. Aharoni and M. Avi-Yonah, *Macmillan Bible Atlas* (rev. ed. 1977), map 189. W. S. L. S.

RAPHU rā'fū [Heb. *rāpû'*–'one healed']. A Benjaminite; father of Palti, one of those sent by Moses to spy out the land of Canaan (Nu. 13:9).

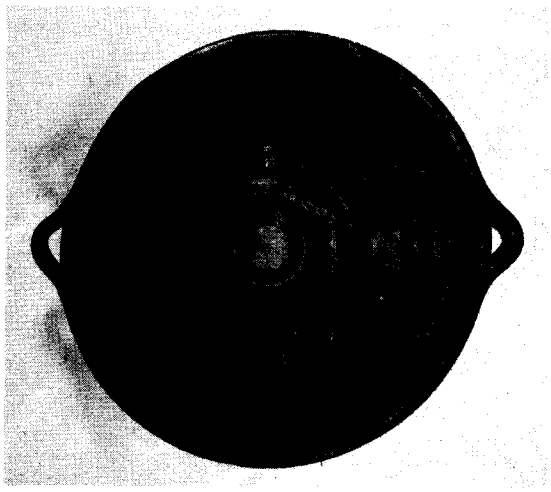
RÂS SHAMRAH rās shām'rə [Arab. *ra's eš-šamra*–'cape (head) of fennel']. A promontory on the Syrian coast, 10 km. (6 mi.) N of Latakiya, on a bay now called *Mînet el-Beiḍâ* ("White Bay," very probably the ancient *Leukas Limēn* of the Greeks), site of the ancient city-state of Ugarit.



The port city, possibly ancient *Ma'ḥāzu*, and the tell, about 36 hectares (90 acres) in size, located 1 km. (0.6 mi.) from the sea, were intensively excavated beginning in 1929 by the French mission directed by C. F. A. Schaeffer, and continuing (with interruption during World War II) until the time of writing (1984). Thanks to its position as a Mediterranean terminus of Asiatic commerical routes it was an important port and the meeting-point of diverse cultures.

The exploration of the deepest strata, so far completed in limited measure, revealed the occupation of the site from the 7th millennium B.C. (Prepottery Neolithic), and preserved remains of dwellings and ceramic materials of various phases of Neolithic (Stratum V), of Chalcolithic (Stratum IV, contemporary with the Mesopotamian cul-

RÂS SHAMRAH



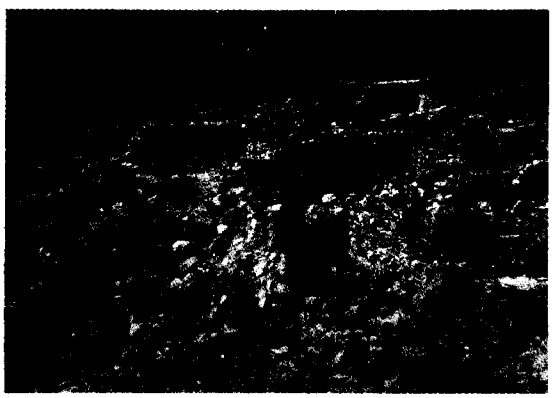
Two examples of Mycenaean pottery (Late Bronze Age) found in tombs at Râs Shamrah. The tombs were possibly those of Mycenaean merchants living in Ugarit (Louvre photo M. Chuzeville)

The library of Stratum I, Râs Shamrah (Late Bronze Age) (W. S. LaSor)

ture of Tell Ḫalaf; Stratum IIIb, contemporary with that of el-'Ubaid), and of Early Bronze (Stratum IIIa; pottery of Khirbet Kerak). This phase was abruptly interrupted by an invasion (from the north?) of the *porteurs de torques* — as Schaeffer described them, from a peculiar twisted collar or torc — skillful workers in bronze, who were rapidly absorbed into the local population, certainly speaking Semitic languages for a considerable period of time. With the beginning of the 2nd millennium, the remains were more consistent. The second stratum of the city (Middle Bronze, *ca.* 2000-1500) preserved among other things monuments which show strong relationship with Middle Kingdom Egypt.

But it was with Stratum I (Late Bronze, *ca.* 1500-1200) that the excavations, conducted extensively, have made possible the reconstruction of the topography and the life of the city, and furnished (together with the monuments and the texts) the most detailed picture available for the knowledge of "Canaanite" culture (i.e., Syro-Palestinian of Late Bronze) at the time of the formation of the Israelite federation. In the port city tombs and ceramic of imported or imitation Cypriot and Mycenaean style and texts in Cypro-Minoan script indicate strong commercial contacts with the Mediterranean. In the city proper the royal palace (and two other minor palaces), temples, private houses, tombs, and part of the fortifications were excavated. The two temples (of Baal and Dagan), whose establishment can be traced perhaps to Middle Bronze, had a ground plan of two parts arranged along the axis, with a courtyard in front where part of the cultic ceremonies took place. Near the temples rich furnishings were recovered (two gold cups) and mythological texts belonging to the library of the priests. The palace was vast (one hectare, 2½ acres) and of a complex plan that revealed phases and additions, with two columns at the entrance, a large courtyard (with well) near the entrance and other smaller courtyards about which appeared to be rooms, divided into different functional groups: a guard post, archives (five different), artisans' shops and stores, living quarters, surroundings for official activity, etc. Noteworthy is the architectural care (with copious use of stone and wood-panelled walls, and the canalization of drainage waters). Most notable was the furnishing: remains of furniture with inlaid ivory, of plates of bronze, stone, and terra-cotta (also imported), utensils, etc., give the impression of a quite luxurious living, into which flowed substantial resources both of internal taxation and of international commerce. The contacts with Egypt (for the

The palace at Râs Shamrah. Its extensive size and luxurious furnishings attest to the status and wealth of the king during this period (Late Bronze Age) (W. S. LaSor)



A hunter shoots at wild bulls (lower left) in a detail from a gold patera found at Râs Shamrah (ca 1400 B.C.). He rides in a two-horsed chariot and is accompanied by a mastiff (RMN/ARS, NY/SPADEM)

most part commercial) and with the Hittites (mostly political), well documented by the texts, have also left notable archeological tracks (imported or imitated objects). Private houses, two-story with tombs underneath, demonstrate by their size, architectural stability, accuracy of planning, and wealth of furnishing that around the king gravitated a rich class of palace functionaries, merchants, and priests. The agreement of the texts of various kinds (administrative and juridic, literary and epistolary) and of the rich archeological material makes it possible to reconstruct in a satisfactory manner the life of Ugarit in the 14th and 13th cents. B.C. (but unfortunately the publication of the archeological material is delayed and faulty).

Shortly after 1200 the city was destroyed forever. Few remains of the 1st millennium have been recovered from installations of poor durability. For the history, language, writing, literature, and mythology, *see* UGARIT.

M. LIVERANI
tr. W. S. L. S.

RASH [Heb. *bāṭā'*–'speak rashly'] (Lev. 5:4; Ps. 106:33; Prov. 12:18); AV "speak unadvisedly," SPEAK, omits in Lev. 5:4; NEB also GOSSIP; [*lā'a'*–'speak wildly'] (Job 6:3; Prov. 20:25); AV SWALLOW UP, DEVOUR; NEB also WILD; [*bāhal*–'be hasty'] (Eccl. 5:2 [MT 1]); NEB RUSH INTO; [*māhar*–'hasten'] (Isa. 32:4); NEB ANXIOUS; [Gk. *propetés*] (Acts 19:36). The AV renders *lā'a'* in Job and Proverbs in its other sense of "swallow," but the RSV and NEB rendering is more likely, warning that a person should consider carefully before he makes a vow. G. WYPER

RASSIS ras'is [Gk. *Rhassis*]; AV RASSES ras'ēz. A city or region whose inhabitants were defeated by Holofernes on his march from Nineveh to Cilicia (Jth. 2:23). The place was apparently located in northern Mesopotamia or eastern Asia Minor. Some have considered the name a corruption of "Tarsus" (cf. Vulg. *Tharsis*; Old Lat. *Thiras*). Others, following Strabo and Ptolemy, have identified it with Rossos (modern Arsus), a mountain range and city in Cilicia near Issus, where Alexander the Great defeated the Persians in 333 B.C. (see Stummer).

RATHAMIN rath'ə-min (1 Macc. 11:34). *See* RAMAH 2.

RATHUMUS rə-thōō'məs (1 Esd. 2:16f., 25, 30, AV). *See* REHUM 2.

RAVEN [Heb. *'ōrēḇ*] (e.g., Gen. 8:7); NEB also CROW, MAGPIE, omits (Cant. 5:11); [*ḥōreḇ* (emended to *'ōrēḇ*)] (Zeph. 2:14); AV DESOLATION; NEB BUSTARD; [Gk. *kórax*] (Lk. 12:24). The largest and most powerful member of the crow family (Corvidae), other birds of the group being the jay, rook, jackdaw, fantailed raven, and hooded crow. Biblical citations may refer to the raven (*Corvus*

corax) in particular (Cant. 5:11) or to the crow family in general ("every raven according to its kind," Lev. 11:15; also Dt. 14:14).

The raven is first mentioned in the Flood narrative, where Noah releases one from the ark (Gen. 8:7), presumably to determine the extent to which the flood waters had receded. Being a scavenger, the raven could survive without returning to the ark for food. Many scholars have cited the raven's eating habits (as a scavenger and bird of prey) as the reason for its inclusion on the list of unclean birds (Lev. 11:15; Dt. 14:14), although this does not sufficiently explain the inclusion of non-predatory animals on the list of those that were unclean. *See* ABOMINATION, BIRDS OF; BIRDS OF PREY; BIRDS, UNCLEAN.

Both the OT and Jesus Himself found in the raven an example of God's providential care for His creation (Job 38:41; Ps. 147:9; Lk. 12:24). The raven's impressive size (about 55-65 cm. [22-25 in.] in length) and strength (including a powerful 8-cm. [3-in.] beak) were well known in the ancient world. The bird became a symbol of judgment and desolation: "The eye that mocks a father and scorns to obey a mother will be picked out by the ravens" (Prov. 30:17); "From generation to generation it [Edom] shall lie waste; . . . the owl and the raven shall dwell in it" (Isa. 34:10f.); "the vulture and the hedgehog shall lodge in her [Nineveh's] capitals . . . the raven croak on the threshold" (Zeph. 2:14). In the last passage the RSV follows the LXX (*kórax*) and Vulgate (*corvus*) in reading "raven"; the AV follows the MT (*ḥōreḇ*, "desolation"), while the NEB follows Driver (p. 137), who reads Heb. *ḥaraḇ* ("male bustard").

Some commentators have proposed that *ʿōrᵉḇîm* in 1 K. 17:4, 6 be emended to read *ʿᵃrāḇîm*, "Arabs." Gray (pp. 378-380) defended this emendation despite its lack of versional support, as more congruous with the following episode in which Elijah is fed by the widow of Sidonian Zarephath (vv. 8-24). More recently, Jones (p. 304) has defended the traditional reading on the grounds that it better suits the overall "high miraculous content" of the narratives (cf. also the earlier discussion in Tristram [p. 200] and *EB* [col. 4017]).

RAVEN; RAVENING; RAVENOUS; RAVIN. The verb "raven" and noun "ravin" (both < Middle French *raviner*, "to rush, seize by force") do not occur in the RSV. But the RSV does use the part. "ravening" to render Heb. *ṭōrēp* (part. of *ṭārap*, "tear in pieces") in Ps. 22:13 (MT 14; cf. Ezk. 22:25, 27, AV) and *maśḥîṯ* ("destroyer") in Jer. 2:30; and it uses the adj. "ravenous" to render *ṭārap* in Gen. 49:27 (the AV incorrectly uses "ravin" as a verb), *pārîṣ* ("robber," "rapacious one") in Isa. 35:9, and Gk. *hárpax* ("robbing") in Mt. 7:15. The AV also uses "ravenous bird" for Heb. *ʿayiṭ* ("bird of prey") in Isa. 46:11; Ezk. 39:4 and "ravening" as a noun for Gk. *harpagḗ* ("robbery," "greediness"; cf. RSV "extortion") in Lk. 11:35. The noun "ravin" (object ravened) occurs in the AV of Nah. 2:12, representing Heb. *ṭᵉrēpâ* ("prey torn in pieces"; cf. RSV "torn flesh").

The Scriptures frequently use the imagery of predatory animals to describe persons who are wantonly destructive of human lives. *See also* PREY. N. J. O.

RAVINE [Heb. *gay*'] (Josh. 8:11); AV, NEB, VALLEY; [*nāḥal*] (Isa. 7:19); AV VALLEY; [*ʾāpîq*] (Ezk. 6:3; 35:8; 36:4, 6); AV RIVERS; NEB WATER COURSES, VALLEYS, STREAMS. Ravines or wadis are often torrent beds for seasonal streams in Palestine.

RAVISH [Heb. piel of *ʿānâ*] (Jgs. 19:24; 20:5; Lam. 5:11); AV also HUMBLE, FORCE; NEB RAPE; [niphal of *šāḵaḇ*–'be lain with'] (Isa. 13:16; Zec. 14:2); NEB also RAPE; [piel of *lāḥaḇ*] (Cant. 4:9); NEB STEAL. A verb used by the AV and RSV in two different senses: (1) to rape, violate; (2) to overcome with delight.

The general meaning of the Heb. piel of *ʿānâ* is "humble" or "force into submission." In other passages where it denotes forcing sexual relations upon a woman the RSV renders it "humble" (Gen. 34:2; Ezk. 22:10), "humiliate" (Dt. 21:14), "violate" (22:24, 29), or "force" (2 S. 13:12, 14, 22, 32). Dt. 22:25-29 prescribes the punishment for rape: if a man raped a betrothed woman he was put to death; but if he raped an unbetrothed virgin he was required to marry her and prohibited from ever divorcing her. The rape of a Levite's concubine (Jgs. 19:24; 20:5) and the ensuing civil war (cf. also its resolution: the rape of the virgins of Shiloh, 21:16-23) illustrate a chaotic period in Israel's history (cf. v. 25). An inevitable part of war is the widespread raping of women by the invading army (Isa. 13:16; Lam. 5:11; Zec. 14:2).

The piel of *lāḥāḇ*, (cf. *lēḇāḇ*, "heart") has been interpreted in two different ways: privatively ("steal or ravish the heart") and causatively ("hearten") (see comms.). N. J. O.

RAZIS rā'zis [Gk. *Razis*]. An elder of Jerusalem of esteemed reputation, called "father of the Jews" because of his good will toward his fellow Jews (2 Macc. 14:37). A martyrology in 2 Macc. 14:37-46 (cf. 6:18–7:42) relates how Nicanor, a Syrian general hostile toward the Jews, denounced the Jewish patriot Razis and attempted to arrest him. Trapped by Nicanor's troops but determined to avoid ignominious treatment, Razis committed suicide by falling on his own sword, leaping from a wall, and eviscerating himself.

RAZOR [Heb. *taʿar môrâ*]; AV also RASOR, SHAVE (Nu. 8:7); NEB also SHAVE. A sharp implement used for shaving or cutting HAIR.

There seems to be no semantic difference between the two Hebrew words translated "razor." Both are used in contexts describing the Nazirite vow (*taʿar*, Nu. 6:5; *môrâ*, Jgs. 13:5; 16:17; 1 S. 1:11); it was commanded that no razor should touch a Nazirite's head. *Taʿar* is also used figuratively by the prophets to signify destruction (Isa. 7:20; Ezk. 5:1), and by the psalmist to indicate the destructive power of an evil tongue (Ps. 52:2 [MT 4]). Ancient razors seem to have been shaped like knives, usually made of bronze, with a rounded, sometimes decorated, end.

See also BALDNESS; SHAVE.

Bibliography.–W. M. F. Petrie, *Tools and Weapons* (1917), pp. 49f., plates 60f.; W. F. Albright, *Tell Beit Mirsim, AASOR*, 21-22 (1941-43), 78, plate 61.17. L. G. HERR

READ [Heb. *qārāʾ*–'call,' 'proclaim,' 'read aloud,' also *lēʾmōr* (2 K. 5:6), *lōʾ yāḏaʿ sēper* ("cannot read," Isa. 29:12); Aram. *qᵉraʿ* (Ezr. 4:18, 23; Dnl. 5:7f., 15-17); Gk. *anaginṓskō*–'recognize again,' also pass. of *gráphō* (Mt. 27:37; Jn. 19:19), pass. of *epigráphō* (Mk. 15:26)]; AV also SAYING (2 K. 5:6), BE UNLEARNED (Isa. 29:12), BE WRITTEN (Mt. 27:37; Mk. 15:26), WRITING (Jn. 19:19); NEB also READ ALOUD, READ PUBLICLY,

etc., **READING** [Heb. *migrā'* (Neh. 8:8); Gk. *anágnōsis* (Acts 13:15; 1 Tim. 4:13)]; NEB also WHAT IS READ.

It is difficult to estimate the extent of literacy in the ancient world. Professional scribes passed on their knowledge within their families, and their services were available to those who were illiterate. A peasant's grievance letter from the 7th cent. B.C. uncovered at Meṣad Ḥashavyahu indicates that he made use of a scribe to write his complaint. Most officials were probably literate. One of the LACHISH LETTERS (no. 3) has an official angrily respond to the question, "Can't you read a letter?" with "as Yahweh lives, no man has dared to read a letter for me ever before." At the time of Christ literacy was widespread. With its educational institutions designed to prepare persons for citizenship, Hellenism significantly increased interest in the ability to read. The literacy of Jesus' opponents can be assumed from His frequent counter question to clinch an argument: "Have you not read . . . ?" (Mt. 12:3, 5; 19:4; 21:16, 42; 22:31; Mk. 2:25; 12:10, 26; Lk. 6:3; cf. Lk. 10:26). This question implied that they had a thorough knowledge of the Scripture but had not interpreted it correctly.

The rabbis deemed it a primary duty to teach a son Hebrew so that he might study Torah (Tos. *Hagigah* i.2), and the synagogue developed into an education-centered institution. It was considered shameful for a man to have to be prompted by a slave, woman, or minor in the saying of the Hallel because he had not learned to read (Mish. *Sukkah* iii.10). The Babylonian Talmud claims that schools existed in nearly every town for the education of children (T.B. *Baba Bathra* 21a). If the Talmudic claim may be applied to first-century Palestine, most men would have been able to read the inscription on the cross (Jn. 19:20). Nevertheless, the Dead Sea Scrolls indicate that some persons required a scribe to sign for them.

As a religion of the book, Judaism placed considerable importance on private reading and study (2 Tim. 4:13). Philip was able to overhear the Ethiopian eunuch reading (Acts 8:28, 30) because in ancient times people read to themselves aloud rather than silently. Since the words were not separated from each other in an ancient MS, reading aloud helped to distinguish the words. Some rabbis strongly recommended studying (reading) with a loud voice (T.B. *Erubin* 54a). Augustine thought it noteworthy that Ambrose read to himself silently (*Conf.* vi.3).

Israel had a long history of publicly reading their sacred writings (Ex. 24:7; Dt. 31:11; Josh. 8:34f.; 2 K. 23:2; 2 Ch. 34:30; Neh. 8:3, 18; 9:3; Jer. 36:6, 10, etc.; cf. 2 Macc. 8:23). At the center of synagogue worship was the reading of the Scriptures; lessons were read from the Law, possibly according to some fixed scheme of lections, and from the prophets (Acts 13:15, 27; 15:21; 2 Cor. 3:15). The reading was done by ordinary members of the congregation who were chosen beforehand (Lk. 4:16). An Aramaic paraphrase followed the reading (cf. Neh. 8:3, 8). This custom of reading Scripture aloud in public worship was adopted by the Church (1 Tim. 4:13). In addition to the OT, specifically Christian documents such as the letters of Paul (Col. 4:16; 1 Thess. 5:27; 2 Cor. 1:13; Eph. 3:4) or the work of a prophet (Rev. 1:3) were read in worship so that they came to be equally revered. In the 2nd cent. A.D. this function was delegated to an official reader (Tertullian *De praescr. haer.* xli).

REAIAH rē-ā'yə [Heb. *rᵉ'āyá*–'Yahweh has seen'; Gk. Apoc. *Iaïros*]; AV also REAIA (1 Ch. 5:5), AIRUS (1 Esd. 5:31); RSV Apoc. mg., NEB Apoc., JAIRUS (1 Esd. 5:31).

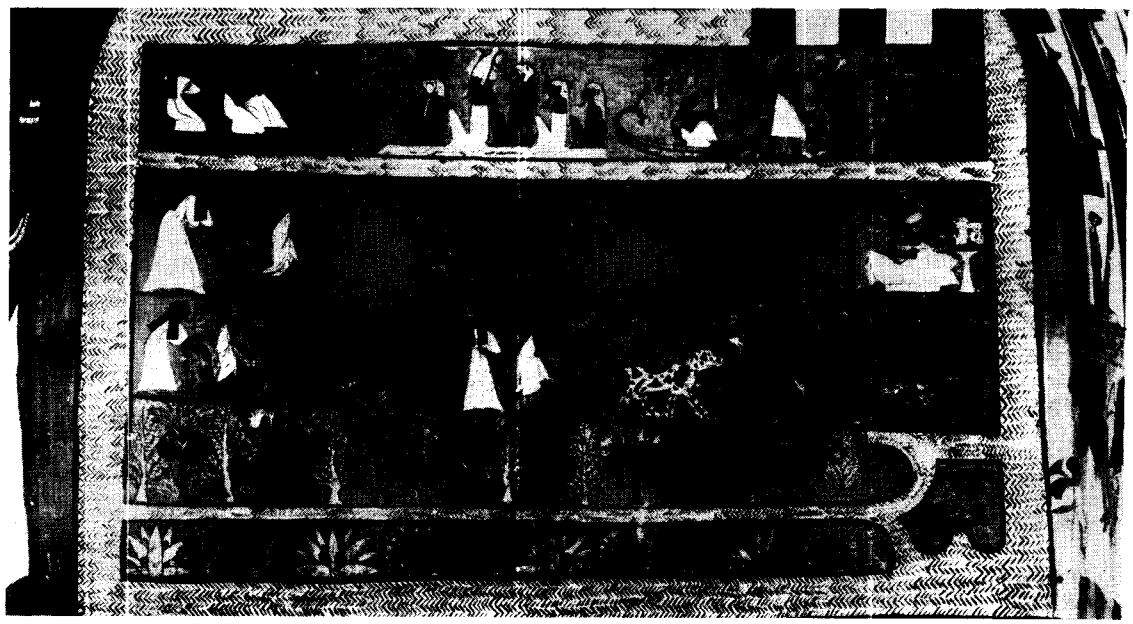
1. A Judahite; son of Shobal and father of Jahath (1 Ch. 4:2; called Haroeh in 2:52).

2. A Reubenite; son of Micah and father of Baal (1 Ch. 5:5).

3. The head of a family of temple servants who returned from Babylonia with Zerubbabel (Ezr. 2:47 par. Neh. 7:50; 1 Esd. 5:31).

REAP [Heb. *qāṣar*] (e.g., Lev. 19:9; 23:10, 22; Dt. 24:19; Ruth 2:9; 1 S. 8:12; Prov. 22:8); AV also CUT DOWN, HARVEST, MOW; NEB also MOW; [*kālâ*–'finish'] (Lev. 19:9); [Gk. *therízō*] (e.g., Mt. 6:26; Jn. 4:36; 1 Cor. 9:11;

Well painting from the tomb of Sennedjem (no. 1) at Thebes (19th Dynasty). He and his wife are doing various tasks in the afterlife, including reaping in the Yaru Fields (second panel) (Service des Musées, Cairo)



Rev. 14:15); NEB also HARVEST; [*échō*–'have'] (Rom. 1:13); AV HAVE; NEB ACHIEVE. To harvest crops, usually by hand.

Reaping processes in modern villages of the Middle East probably illustrate well the methods used during the biblical period: the harvesters draw a handful of grain stalks together with their SICKLE (sometimes made of flint blades set in wood or bone hafts), grasp the stalks in the other hand, and cut them with the sickle. The handfuls of grain are dropped and picked up by others who gather them into sheaves for transport to the threshing floor. In biblical times GLEANING took place after the removal of the sheaves. Reaping occurred when the grain harvest was ripe, usually in May for barley and June/July for wheat.

The word most frequently translated "reap" in the RSV OT is the verb *qāṣar*. The part. *qôṣēr* is usually rendered "reaper" (Ruth 2:3-7, 14; 2 K. 4:18; Ps. 129:7; etc.). Although *qāṣar* most often refers literally to the harvesting of a crop, in several passages it is used figuratively to express the idea that what one sows one will reap, i.e., there is a correlation between one's deeds and the rewards or punishments that one receives in life (Job 4:8; Prov. 22:8; Hos. 8:7; 10:12f.; cf. Ps. 126:5). In Jer. 9:22 (MT 21) the prophet compares unburied corpses of those slain in war to sheaves left in the fields by reapers.

Harvest imagery is plentiful in the NT. Gk. *therízō*, translated "reap" in all instances except Jas. 5:4 (RSV "harvest"), is seldom used to indicate a literal harvesting of crops (cf. Mt. 6:26 par. Lk. 12:26). It is used frequently, however, in the figurative sense of enjoying the fruits of one's own (or someone else's) labor (e.g., reaping what one has sown, Gal. 6:7-9; 2 Cor. 9:6; cf. Mt. 25:24, 26 par.; Jn. 4:36-38; 1 Cor. 9:11). In Rev. 14:15f. reaping is a metaphor for divine judgment.

L. G. HERR

REAR GUARD [Heb. piel of *'āsap*] (Nu. 10:25; Josh. 6:9, 13; Isa. 52:12; 58:8); AV REREWARD; [*'āqēḇ*] (Josh. 8:13); AV "liers in wait"; NEB omits. A military detachment assigned to protect the rear of the main body. The tribe of Dan acted as rear guard for all the tribes of Israel on their journey through the wilderness (Nu. 10:25; *see* WANDERINGS OF ISRAEL). "Deutero-Isaiah" envisions the return of the exiles from Babylonia in language that recalls the first Exodus, when Yahweh protected Israel from the Egyptians by a pillar of cloud (Isa. 52:12; cf. Nu. 14:19f.).

REASON; REASONING; REASONABLE. Terms used by the English versions with a variety of meanings.

(1) The most common meaning of the noun "reason" is "cause," i.e., something that explains a fact or event. In the RSV OT "by reason of" translates Heb. *lipnê* (Gen. 41:31; Ex. 8:24), *mipp^{e}nê* (Gen. 47:13), and various prepositions (e.g., *'al, min, b^{e}*). "The reason why" represents *dāḇār* ("matter"; AV "cause") in Josh. 5:4; 1 K. 11:27 (cf. 9:15, AV). In the RSV NT "for this reason" and "the reason why" render Greek expressions such as *diá toúto* (e.g., Jn. 8:47; 10:17; 12:18; Rom. 1:26; Eph. 1:15; etc.), *héneken toútou* (Mt. 19:5; Mk. 10:7; Acts 26:21), *toútou chárin* (Eph. 3:1, 14), and *antí toútou* (5:31). "Reason" has the sense of "motive" in Acts 10:21; 28:20 (Gk. *aitía*; AV "cause"), while in 22:30 "the real reason" represents *tó asphalés* (lit. "certainty" [so AV], "truth").

(2) Another meaning is "sufficient ground (for something)." "Reason" in this sense translates Heb. *ḥinnām* (lit. "undeservedly"; RSV "for no reason," Prov. 3:30); Gk. *aitía* (used as a legal term in Acts 28:18; cf. RSV "charge" in 23:28; "crime" in Jn. 18:38; 19:4, 6), *eikḗ* (lit. "without basis"; RSV "without reason," Col. 2:18), *lógos* (1 Pet. 3:15, AV; RSV, NEB, "to account"), *katá lógon* (Acts 18:14), *arestós* (Acts 6:2, AV; lit. "desirable"; RSV "right"), *kaúchēsis* (lit. "boasting"; RSV "reason to be proud," Rom. 15:17), *kaúchēma* (lit. "object of boasting"; RSV "reason to boast," Gal. 6:4), and *pepoíthēsis* (lit. "confidence, trust"; RSV "reason for confidence," Phil. 3:4).

(3) In the RSV and NEB of Jas. 3:17, "open to reason" (Gk. *eupeithḗs*) means "capable of being persuaded" (cf. AV "easy to be intreated"). True wisdom from above is not obstinate and opinionated but tractable; thus it promotes peace rather than discord (vv. 13-18).

(4) In the RSV of Dnl. 4:34, 36 (MT 31, 33), "reason" renders Aram. *manda^{ʿ}* (lit. "understanding" [so AV v. 34]) and denotes the power to think rationally (cf. NEB "right mind"). It has a similar sense in Wisd. 17:12 (Gk. *logismós*), while in Sir. 37:16 it denotes an abstract quality (*lógos*).

(5) As a verb "reason" can mean simply "think" (e.g., 1 Cor. 13:11, RSV; Gk. *logízomai*, lit. "think" [so AV], "consider"), but more often it means "argue." In the latter sense it is the RSV translation of various forms of Heb. *yāḵaḥ*: the hiphil in Lev. 19:17 (lit. "go to law with," "reprove" [so NEB]; cf. AV Job 13:3; 15:3), the niphal in Job 23:7; Isa. 1:18 (lit. "argue in a legal dispute"; NEB "be vindicated," "argue it out"), and the cognate noun *tôḵaḥaṯ* in Job 13:6 (lit. "protest," "contradiction"; AV, RSV, "reasoning"; NEB "arguments"); *see also* REBUKE. The AV renders "reason" for the niphal of *šāp̄aṭ* in 1 S. 12:7 (RSV "plead"; NEB "put the case") and "reasoning" for Gk. *dialogismós* in Lk. 9:46 (RSV "argument"; NEB "dispute"). In the AV "reason" also renders *dialogízomai, dialégomai, syzētéō*, and *syllogízomai* (Lk. 20:5); *see* ARGUE; DISCUSSION; DISPUTE; QUESTION.

(6) In Rom. 12:1, AV, the phrase "reasonable service" renders Gk. *logikḗ latreía*. *Logikós*, a familiar term in Greek philosophy and mysticism, means "that which conforms to the *lógos*." It is more correctly rendered "spiritual" by the RSV (cf. 1 Pet. 2:2, where *logikós* [AV "of the word"; RSV "spiritual"] parallels *pneumatikós*, "spiritual," in v. 5). *See TDNT*, IV, *s.v.* λέγω; λογικός G. Kittel); E. Käsemann, *Comm. on Romans* (Eng. tr. 1980), pp. 326-29. *See also* SPIRITUAL.

N. J. O.

REBA rē'bə [Heb. *reḇa^{ʿ}*–'fourth part']. One of the five Midianite chieftains slain by the Israelites under Moses. In Nu. 31:8 the five are called "kings" (Heb. *m^{e}lāḵîm*); in Josh. 13:21 they are called "leaders" (*n^{e}śî'îm*, "tribal chiefs") and are associated with Sihon king of the Amorites, who was slain at a different time.

REBECCA rə-bek'ə. *See* REBEKAH.

REBEKAH rə-bek'ə [Heb. *riḇqâ*] (Gen. 22:23; 24:15, etc.); NEB REBECCA; **REBECCA** [Gk. *Rhebekka*] (Rom. 9:10); NEB REBEKAH. The daughter of Bethuel, wife of Isaac, and mother of Jacob and Esau. The meaning of her name is uncertain. It may derive from the root *rbq*, "bind," or, with the consonants reversed, from *bqr*, "cattle."

Rebekah's grandfather Nahor was Abraham's brother (Gen. 22:23; 24:15). When Abraham commissioned his chief servant to find a wife for Isaac, he sent him to his family in upper Mesopotamia (24:1-9). The servant took a solemn oath not to arrange a marriage with a Canaanite woman, nor to bring Isaac back to Abraham's

former home. Isaac's wife, like the other mothers of Israel, was to be a relative rather than a foreigner.

Through prayer Abraham's servant was guided to discover Rebekah among the many women at the well of Nahor's city (24:11-15). He had prayed for a sign, and Rebekah performed the sign. When the servant asked her for a sip of water for himself, she generously offered to water his ten camels as well (vv. 17-21). Her genealogy and her hospitality provided further assurance of the Lord's guidance (vv. 24-27). Furthermore, Rebekah was willing to leave for her new home without delay (vv. 54-61). Her graceful and proper behavior upon meeting Isaac, and his love for her, confirmed the choice (vv. 64-67).

When famine drove Isaac and Rebekah from their own land, they settled in Gerar (26:1, 6). Because of Rebekah's beauty (26:7; cf. 24:16), Isaac feared that the men of Gerar would kill him in order to take her. Thus he adopted Abraham's stratagem and introduced Rebekah as his sister (v. 7; cf. 12:10-20; 20:1-18). This plan exposed Rebekah to the possibility of adultery with the men of Gerar, who would treat her as an unattached maiden (26:10; cf. Ex. 22:16f.); nevertheless, she remained unmolested. The ruse was finally exposed by King Abimelech, who happened to observe Isaac fondling Rebekah (Gen. 26:8). Abimelech reproached Isaac for endangering his subjects through the possibility of inadvertent adultery, but he issued an edict protecting Rebekah and Isaac from all physical attacks (vv. 9-11).

Rebekah was barren for twenty years (cf. 25:20f., 26), but in answer to Isaac's prayer for her she finally conceived (v. 21). The usual discomforts of pregnancy were compounded by the apparent struggle of the twins in her womb, causing her to cry to God in anguish (v. 22). The Lord revealed to her that both of her sons would become ancestors of great nations, but that the descendants of the older son would serve the descendants of the younger (v. 23). This was the first declaration of Jacob's election as the father of God's people Israel (cf. 28:13f.; Rom. 9:10-13). Jacob grew up to be Rebekah's favorite, while Isaac preferred Esau (Gen. 25:28).

As Isaac, dying, prepared to bless the firstborn Esau, Rebekah produced a plan and the means by which Jacob could obtain the blessing for himself by impersonating his brother (27:1-29). She then acted to save Jacob's life and preserve the family by arranging Jacob's flight to her brother Laban in order to escape Esau's murderous hatred (vv. 41-46). She persuaded Isaac that this journey was necessary to prevent Jacob from making the same mistake that Esau had in taking Hittite wives from Canaan (28:15). Jacob, the third generation in the line of God's promise, was to marry within the extended family as Abraham and Isaac had done.

Rebekah was buried in the cave of Machpelah with Sarah and Abraham (49:31; cf. 23:17-20; 25:8-10).

P. J. SCALISE

REBUKE [vbs.: Heb. *gāʿar*, hiphil of *yāḵaḥ*; Gk. *epitimáō*, *elénchō* (1 Tim. 5:20; Tit. 1:13), *échō élenxin* (2 Pet. 2:16), *epiplḗssō* (1 Tim. 5:1)]; AV, NEB, also REPROVE, etc.; [nouns: Heb. *gᵉʿārâ*, *tôḵēḥâ* (2 K. 19:3; Ps. 39:11 [MT 12]; Isa. 37:3), *tôḵaḥaṯ* (Ps. 38:14 [MT 15]; Prov. 27:5)]; AV, NEB, also REPROOF, etc.

In the RSV "rebuke" is nineteen times the translation of the Hebrew hiphil of *yaḵaḥ* ("decide," "judge," "reprove," "correct") or one of the cognate nouns, *tôḵēḥâ* ("correction") and *tôḵaḥaṯ* ("argument," "reproof"). The terms frequently have a juridical significance (e.g., Gen. 31:42 [cf. v. 37, RSV "decide"]; 1 Ch. 12:17 [MT 18]; Prov. 24:25). This significance is especially clear in figurative descriptions of Yahweh bringing a lawsuit against His covenant-breaking people (e.g., Ps. 50:21 [cf. v. 8, RSV "reprove"]; cf. also Isa. 1:18, niphal of *yāḵaḥ* [RSV "reason"; NEB "argue it out"]; Mic. 6:2, hithpael of *yāḵaḥ* [RSV "contend"]). But because He is Lord and Judge of creation, all of His rebukes — including His corrective discipline — have judicial overtones (cf. Job 13:10; Ps. 6:1 [MT 2]; 38:1 [MT 2]; 39:11 [MT 12]; Prov. 30:6). *See also* DISCIPLINE I.

All fourteen occurrences of Heb. *gāʿar* and most instances of the cognate noun *gᵉʿārâ* are rendered "rebuke" by the RSV. Where the subject is human, rebuking is generally shown to be unjustified (cf. Gen. 37:10; Ruth 2:16; Jer. 29:27) except when it is given by the wise as correction (cf. Prov. 13:1; 17:10; 28:23; Eccl. 7:5). Most often, however, the subject is God, who always has the prerogative to rebuke. In OT poetic and prophetic literature these terms frequently represent His efficacious word of threat or rebuke, through which He displays His power over nature (e.g., shaking the heavens [Job 26:11], drying up the sea [Isa. 50:2; Nah. 1:4], bringing order from watery chaos [Ps. 18:15 (MT 16) par. 2 S. 22:16; Ps. 104:6f.], driving back the locusts [Mal. 3:11]) and over the disobedient (Ps. 119:21; Isa. 51:20; Mal. 2:3), the enemies of Israel (e.g., Ps. 9:5 [MT 6]; 76:6 [MT 7]; 80:16 [MT 17]), and Satan the accuser (Zec. 3:2; cf. Jude 9 [Gk. *epitimáō*]; cf. also Heb. *gāʿar* and Aram. *gᵉʿar* in exorcism formulas in the Qumrân texts, e.g., 1QM 14:10; 1QH 9:11; 1QapGen 20:28).

In the NT "rebuke" is usually the translation of Gk. *epitimáō* (which is a common LXX rendering of Heb. *gāʿar*). As in the OT, most instances of humans rebuking one another are shown to be unjustified (e.g., Mk. 10:13 par., 48 par.; Lk. 19:39), although brotherly correction and congregational discipline are sometimes necessary (Lk. 17:3; 2 Tim. 4:2; cf. 1 Tim. 5:1, 20; Tit. 1:13). Jesus, however, has the divine prerogative to rebuke (cf. Mk. 8:32f. par., where Peter presumptuously rebukes Jesus and is rebuked by Him) and manifests His lordship through His efficacious rebuking of nature (stilling the storm, Mt. 8:26f. par.), sickness (e.g., Lk. 4:39), and evil spirits (e.g., Mt. 17:18 par.; Mk. 1:25-27 par.; cf. Jude 9).

RECAH rē′kə [Heb. *rēḵâ*; Gk. B *Rhēchab*, A *Rhēpha*] (1 Ch. 4:12); AV, NEB, RECHAH. A place in Judah that has not yet been identified. Some have suggested that it should be read "Rechab" with LXX B, which would provide a link with 2:55; but the suggestion remains very uncertain.

RECEIPT OF CUSTOM (Lk. 5:27, AV). *See* TAX OFFICE.

RECEIVER. The AV translation of Heb. *šōqēl* (part. of *šāqal*, "weigh" in Isa. 33:18 (cf. RSV "he who weighed the tribute"; NEB "he that weighed").

RECHAB rē′kab [Heb. *rēḵāḇ*; Gk. *Rēchab*].

1. A son of Rimmon the Beerothite (2 S. 4:2). Rechab and his brother Baanah were officers in the army of Saul's son Ishbaal (Ishbosheth), who ruled Israel briefly after his father's death (cf. 2:8f.). At this time David was king

of Judah, and the royal houses of the two kingdoms were engaged in a protracted conflict (cf. 3:1). Hoping to ingratiate themselves with David, Rechab and Baanah stole into Ishbaal's house and murdered him in his bed (4:5-8). When presented with his rival's head, however, David expressed outrage at the crime. He ordered Rechab and Baanah executed and had their bodies publicly displayed (vv. 9-12).

2. The ancestor of a group of zealous worshipers of Yahweh known as the RECHABITES, who were committed to a nomadic way of life. According to Jer. 35:11 they sought refuge in Jerusalem during Nebuchadnezzar's invasion of Judah. They claimed descent from Jehonadab (or Jonadab, vv. 6, 8, 10), a fervent supporter of Jehu's revolt against the Omride dynasty in the mid-9th cent. B.C. (2 K. 10:15, 23). Jehonadab is called "the son of Rechab" in 2 K. 10 and Jer. 35, but it is not certain whether this means that Rechab was his father or that he was a more distant ancestor. In the Chronicler's genealogy of Judah, Rechab is associated with the Kenites, a group whose life-style was similar to that of the Rechabites. Thus in 1 Ch. 2:55 three Kenite families from Jabez are identified as being "from Hammath, the father of the house of Rechab." If Hammath is here a personal name, it was most likely derived from the name of the city assigned to Naphtali in Josh. 19:35. Kedesh, another Naphtalite town in the same general vicinity (cf. v. 37), was the home of the Kenite family of Heber (Jgs. 4:11). It has been suggested, however, that *ḥammaṭ* in 1 Ch. 2:55 belongs to a group of kinship terms denoting relationship by marriage (cf. NEB; see S. Talmon, *IEJ, 10* [1960], 410-16). If this is correct, the statement that the three Kenite families were "frtm the *ḥammaṭ*-group of the father of the house of Rechab" indicates that they were among those related to Rechab's father by marriage.

3. Father or ancestor of Malchijah (Neh. 3:14). It is possible that "Malchijah the son of Rechab," who helped Nehemiah rebuild the walls of Jerusalem, was a Rechabite (see **2** above). But it is also possible that he was a non-zrechabite whose father coincidentally had the name Rechab. P. K. MCCARTER, JR.

RECHABITES rek'ə-bīts [Heb. *rēḵāḇîm*] (Jer. 35:2f., 5, 18); **HOUSE OF RECHAB** rē'kab [Heb. *bêṯ rēḵāḇ*] (1 Ch. 2:55); NEB RECHABITES. A clan of Israelites known for their devotion to Yahweh, expressed through adherence to a vow to abstain from wine and maintain a nomadic way of life (Jer. 35:5-10).

In 1 Ch. 2:55 the Chronicler traces the origins of the "house of Rechab" to the KENITES who joined with Israel duringthe wilderness wanderings (cf. Nu. 10:29-32; Jgs. 1:16; 4:17). The interpretation of 1 Ch. 2:55 involves several difficulties, however. First, it is not altogether certain that MT *bêṯ rēḵāḇ* refers to a clan called "Rechabites" (cf. AV, RSV); possibly it should be translated as a place name, "Beth-rechab." Similar expressions in the preceding context suggest this possibility (cf. Beth-zur [v. 45] and Beth-gader [v. 51]). Nevertheless, the translation "Rechabites" cannot be entirely excluded, for the Judahite genealogy of 2:1–4:23 contains several place names that suggest persons as well. Second, in the same verse "Hammath" may also be a place, person, or both (cf. NEB "connected by marriage with"; *see* RECHAB **2**). Elsewhere in the OT, however, the name is used only for a location. The use of the preposition "from" also suggests that it was to be understood as a place. If it refers to the geographical site, it is interesting that in Jgs. 4:11 Heber the Kenite is said to have dwelt in Kedesh of Naphtali, which is in the general vicinity of Hammath (cf. Josh. 19:35-37). Third, the term "father" does not necessarily imply a familial relationship in the strictest sense of the term. It may indicate a guild or professional association, as in other ancient Near Eastern sources (cf., e.g., "son" in 1 K. 20:35; 1 Ch. 9:30; Ezr. 2:42). This interpretation would fit well with the meaning of "Rechab" ("rider" or "charioteer"). Familial connotations cannot, however, be ruled out entirely. The Chronicler's enigmatic statement is best understood as a reference to a group of people who were largely descendants of the Kenites living in Hammath.

Two texts associate the Rechabites with Jehonadab (2 K. 10:15-23; Jer. 35:1-19). In both passages the latter is identified as the "son of Rechab," but this may simply imply membership in the group rather than strict ancestry. Jehonadab belonged to the nobility in Israel (the element *n-d-b* added to the theophoric portion of his name was common for the ruling class during the monarchical period); accordingly, he joined with Jehu in the latter's bloody reform (2 K. 10:15-23). The description of this alliance emphasizes chariotry, subtly conforming to the etymology of "Rechab." Jer. 35 mentions Jehonadab in connection with the Rechabites who had remained faithful to a vow of abstinence from alcohol and from owning permanent dwellings. The prophet Jeremiah commended them for their fidelity and set them in sharp contrast with the rest of the nation (v. 16): the Israelites' disobedience condemned them to exile, but the Rechabites' obedience secured them a permanent place of service (vv. 18f.).

Jeremiah's prophecy does not lack confirmation. The superscription of Ps. 71 in the LXX refers to the descendants of Jehonadab. Moreover, Neh. 3:14 lists one "Malchijah the son of Rechab" as one of the returnees who played a significant role in rebuilding Jerusalem.

RECHAH rē'kə (1 Ch. 4:12, AV, NEB). *See* RECAH.

RECITE [Heb. *śûm*] (Ex. 17:14); AV REHEARSE; NEB TELL [*dāḇar*] (Dt. 32:44); AV SPEAK; [*sāpar*] (Ps. 50:16); AV DECLARE. In the RSV "recite" refers to recounting in great detail the acts and laws of God. Heb. *śûm* in Ex. 17:14 literally means "put" or "set" the account of the war with Amalek in the ears of Joshua. G. WYPER

RECKLESS [Heb. *pāḥaz*] (Jgs. 9:4); AV "light"; [Gk. *thrasýs*–'arrogant'] (Sir. 4:29); AV HASTY; NEB FORWARD; [*propetés*–'rash'] (Sir. 9:18; 2 Tim. 3:4; AV ILL, HEADY; NEB ADVENTURER, "gossip"; [*tolmērós*–'bold, audacious'] (Sir. 19:3); AV BOLD; [*tolmēpóteros*–'boldly, audaciously'] (Sir. 19:2); AV IMPUDENT; **RECKLESSNESS** [Heb. *paḥᵃzûṯ*] (Jer. 23:32); AV "lightness."

All the RSV uses of "reckless(ness)" describe evil behavior. In Jgs. 9:4 Abimelech hired "worthless and reckless fellows" to help him kill his "brothers" (all seventy of them!), who were his rivals for the "kingship" of Shechem. Jer. 23:32 condemns false prophets who lead the people astray (the only other occurrence of *pāḥaz* is in Zeph. 3:4 [RSV "wanton"], where it is also used of prophets). Both Sir. 4:29 and 9:18 focus on "reckless speech"; the former is an admonition (notice that the second part of the verse concerns deeds) and the latter relates the consequences of such speech — such a one "will be hated." Sir. 19:2f. describe the consequences of consorting with harlots: "Decay and worms will inherit

him, and the reckless soul will be snatched away." Finally, 2 Tim. 3:4 is part of a list of the evil behaviors that will characterize the last times. G. A. L.

RECKON [Heb. *ḥāšaḇ* (qal, Gen. 15:6; niphal, Lev. 25:31; Nu. 18:27, 30; etc.; piel, Lev. 25:27, 50; hithpael, Nu. 23:9), hiphil of *tāmam* ("reckon the amount," 2 K. 22:4), hithpael of *yāḥaš*–'have oneself registered by descent' (1 Ch. 5:7); Gk. *logízomai* (Lk. 22:37; etc.), *psēphízō* (Rev. 13:18)]; AV also COUNT, SUM (2 K. 22:4), IMPUTE, ACCOUNT, etc.; NEB also COUNT, "take into account," TREAT, NUMBER, etc. In Nu. 3:47, 50 the RSV uses "reckon by" to render the Hebrew preposition *bᵉ*, while in Prov. 23:7 it offers the conjectural translation "he is like one who is inwardly reckoning" for Heb. *libbô bal-ʾinmāḵ* (lit. "his heart is not with you"; so AV, NEB).

Hebrew *ḥāšaḇ* denotes thinking that involves both the will and feeling. It can mean "think out," "devise," "invent," or it can refer to making a subjective judgment about something. Only rarely does the OT use it in the commercial sense of counting, valuing (e.g., Nu. 3:50), or settling accounts (e.g., Lev. 25:27, 50; Nu. 18:27, 30).

Secular Greek used *logízomai* in a commercial sense ("put something down to one's account") and also for rational thought ("consider," "draw a logical conclusion"). Thirty-four of the forty NT uses of the verb are in Paul's letters. It occurs eleven times in Rom. 4, where Paul begins his argument in v. 3 by quoting Gen. 15:6: "Abraham believed God, and it was reckoned to him as righteousness" (cf. Gal. 3:6). Here Paul is using the commercial aspect of the verb to portray a kind of divine bookkeeping whereby faith is entered into the heavenly ledger as righteousness. Abraham is credited, however, for something that he did not actually possess. Paul emphasizes the paradox that God does not credit Abraham for something done (works), but for trust without any accomplishments. Paul equates this with forgiving sins (Rom. 4:6-8). In His grace, God chooses to treat faith as righteousness and so save Abraham and others who believe as he did (vv. 22:25). Jas. 2:23 uses Gen. 15:6 to make a different point, namely, that both faith and works were credited by God to Abraham's account. *See also* IMPUTATION.

In Lk. 22:37 Jesus states that Isa. 53:12, "he was reckoned with transgressors," must be fulfilled in Him. This statement has been interpreted in various ways: as an ironic reference to the disciples with their smuggled swords at the last supper, or as a prediction of the human judgment to be passed on Jesus and His disciples in the near future, or as an allusion to His crucifixion between two brigands (cf. Lk. 23:33; see comms.).

D. E. GARLAND

RECLINE [Gk. *anákeimai*] (Mt. 9:10 mg.; Jn. 13:23, NEB, ASV). *See* MEAL I; TABLE.

RECOMPENSE [Heb. *gāmal*] (2 S. 19:36 [MT 37]); NEB REWARD; [*gᵉmûl*] (Isa. 35:4; 66:6; Jer. 51:56); NEB RETRIBUTION; [*pᵉʿullâ*] (Isa. 40:10; 49:4; 61:8; Ezk. 29:20); AV REWARD, WORK, LABOR; NEB REWARD, WAGES; [*pallēṭ*–'deliverance'] (Ps. 56:7 [MT 8]); AV, NEB, ESCAPE; [*šûḇ*–'turn'] (2 S. 22:21, 25; Ps. 18:20, 24 [MT 21, 25]); NEB REWARD; [*šālēm*–'be complete'] (piel, Ruth 2:12; Job 21:19; Jer. 16:18; 25:14; pual, 18:20); AV REWARD; NEB REPAY, PAY; [*šillēm*] (Dt. 32:35); NEB VENGEANCE; [*šillûm*] (Isa. 34:8; Hos. 9:7); NEB VENGEANCE; [*šillumâ*] (Ps. 91:8); NEB PUNISHMENT; [*tᵉmûrâ*] (Job 15:31); [Gk. *misthós*] (Rev. 22:12). Thus *diallássō* means "change, exchange," also "surpass," connection between deeds and the consequences that flow from them, that deeds carry the seed of their own outcome.

At times recompense is expressed as the wages one has earned. Jer. 18:20 states this view clearly: "Is evil a recompense [i.e., earned wage] for good?" The implied answer is negative; Jeremiah feels unfairly treated by his enemies, who have tried to kill him for preaching God's message. In Ezk. 29:20 God says that He has given Egypt to Nebuchadnezzar as his wages, so the Babylonians would capture and despoil Egypt. In 2 S. 22 (par. Ps. 18) Heb. *šûḇ*, which basically means "turn (around)" or "return," refers to the wages one's deeds will "return," namely, deliverance from one's enemies.

Several texts view recompense negatively (Hos. 9:7; Job 21:19; Ps. 56:7; 91:10; Jer. 16:18; 25:4). Hos. 9:7 parallels Heb. *šillûm* with *piqquḏâ* ("punishment"), interpreting an attack of the Assyrians as God's punishment upon northern Israel for its iniquity. The force of *šillûm* shows that the punishment was not arbitrary, but the outcome of Israel's own deeds. Similarly, Dt. 32:35; Isa. 34:8; and 35:4 parallel recompense (*šillēm, šillûm, gᵉmûl*) with vengeance (*nāqām*). In Dt. 32:35 the connection between Israel's deeds and its coming destruction is clear; God's role is to facilitate the consequences inherent in Israel's wayward, destructive behavior. Jer. 51:56 calls the Lord a God of recompense, in that case the one who would see to it that Babylon was punished for its wanton destructiveness. Both Isa. 34:8 and 35:4 speak of God's vengeance upon Edom, but here the misdeeds of the enemy are less emphasized than the devastation of its land and the concomitant salvation of Israel. God's recompense involves the earned destruction of the wicked and the salvation of the righteous.

These texts suggest that consequences lie inherent in deeds, and God's role was to initiate or facilitate the deserved consequences. The Bible moved beyond this starting point through two developments: a growing awareness of the nature of God and a rising skepticism about the old idea of recompense. Hosea had already distinguished between divine and human nature with regard to covenant fidelity and love (11:1-11), and text such as Isa. 43:10-13 depicted pure monotheism. Mic. 6:8, if not the Decalogue, had already defined ethical behavior in theological terms, and Hab. 2:4 had introduced the faith or faithfulness of the individual into the relationship with God: "The righteous shall live by his faith." The consequence of this development was a growing sense of both the justice and mercy of God.

The books of Ecclesiastes and Job challenged the notion that good deeds result in good fortune for oneself or for one's descendants. In Job 15:31 Eliphaz the Temanite repeats the old wisdom that evil persons will receive bad recompense in this life, and implies that since Job was suffering he must have been guilty. But the book of Job shows that Eliphaz was mistaken. Job was guilty of nothing that would justify his reversals of fortune, his loss of family, and his failing health. The old idea of recompense did not fit his situation.

These two developments came together in the NT, which advanced the doctrine of the afterlife, where one would receive retribution not received in one's lifetime. In Rev. 22:12 *misthós* refers to an everlasting "recompense" one receives from God, which ultimately settles accounts justly. The NT goes even farther by lifting God above the constraints of mere recompense and seeing that He can

move in grace to forgive the penitent sinner. Thus the NT does not surrender the justice of God but allows for His mercy to interact with it.

RECONCILE; RECONCILIATION.

I. Terms
II. OT Background
III. NT Usage
  A. Human Relations
  B. Divine-human Relations
  C. Cosmic Relations
IV. Historical Note

I. Terms.–To the extent that one distinguishes it from atonement, reconciliation is predominantly a NT concept. Four Greek verbs and one Greek noun are used for it: *diallássō, synallássō, katallássō, apokatallássō,* and *katallagḗ.* The first of these occurs in Mt. 5:24, which urges reconciliation with one's brother before one makes an offering on an altar. The second term, found in Acts 7:26, refers to Moses's attempt to resolve a dispute between two Hebrews (cf. Ex. 2:11-15). The third term is a more important word, occurring in crucial passages such as Rom. 5:10 and 2 Cor. 5:18-20, as well as in 1 Cor. 7:11. The strengthened form *apokatallássō* occurs in Eph. 2:16 and Col. 1:20, 22. The Greek noun *katallagḗ* occurs in the great reconciliation passages in Rom. 5 (v. 11) and 2 Cor. (vv. 18f.). Romans 11:15 also uses this noun for the reconciliation of the world effected by the divine rejection of Paul's fellow Jews.

Common to the *allássō* word-group is the sense of "change," "alter," or "exchange" (< *állos,* "another"). Thus *diallássō* means "change, exchange," also "surpass," and then "reconcile". The idea of change or exchange predominates for *katallássō* and *katallagḗ,* although "reconcile (oneself)" and "reconciliation" also occur. The form *apokatallássō* carries no essential difference of sense. Examples of the use of these terms for the concept of reconciliation may be found in classical Greek and the papyri (see *DNTT,* III, 166). These terms can have here a religious bearing (e.g., Sophocles, *Ajax* 744), but play no essential role in the accounts of sacrificial rites (*TDNT,* I, 254), since ancient paganism did not conceive the relation between human beings and deity to be a deeply personal thing, as is the case in the Bible (C. E. B. Cranfield, *Romans,* I [*ICC,* 1975], 267). Occasionally the LXX uses the word-group to refer to God's renunciation of wrath or becoming gracious again, as, e.g., *katallássō* in 2 Macc. 1:5; 7:33 (cf. Josephus *Ant.* vi.7.4 [143]; cf. also vii.7.3 [153]; for rabbinic terminology, see SB, III, 519f.). On the other hand, *apokatallássō* is never found prior to Paul, who possibly coined the term and who alone uses *katallagḗ* in the NT.

II. OT Background.–The OT concepts corresponding to reconciliation are discussed under ATONE; thus, a brief summary will suffice here. The problem of a broken relationship between God and the human race raises the need for reconciliation. This is not presented merely as a psychological difficulty, either on the divine side or the human. All that the Bible describes by its many expressions for sin — transgressing the divine command, breaking the covenant, missing the mark, falling away from God — has brought about an objective guilt and alienation which must be covered or removed if fellowship is to be restored. The initiative in this removal and restoration belongs to God. Insofar as persons are the objects of reconciliation, God Himself does not need to be reconciled. Instead those who have revolted against Him and who are thus responsible for their hostility and estrangement must be reconciled to Him. God's wrath may indeed give way to His grace, as 2 Macc. 1:5 suggests, yet this may happen only because His grace does persist. For God Himself in His persistent grace sets aside the cause of alienation, makes provision for forgiveness of the offence, wins the grateful love of those who have broken the relationship, and enables sinners who were at odds with Him to become "at one" with Him again.

III. NT Usage.–A. Human Relations. Three times in the NT reconciliation refers to interpersonal relations. The first is in Mt. 5:24, which imposes upon the guilty party a responsibility to restore the broken relationship with another before coming to God with an offering — something which guilty sinners cannot do in relation to God. The message of 1 Cor. 7:10f. contains a similar obligation, which enjoins wives not to separate from their husbands, but, if they do, to remain single or else to be reconciled to their husbands. In this case, even though the wife may not be guilty, she must take the initiative toward reconciliation; Paul was not merely suggesting that there be a passive readiness for reconciliation. In Acts 7:26 Stephen recounts Moses's attempt to reconcile two quarreling Hebrews (see Ex. 2:11-15). Finally, in Eph. 2:14-16 a person's reconciliation with God carries with it, by implication, the reconciliation of Jews and Gentiles, for the dividing wall of hostility between them has been broken down; consequently, one new person has been created in place of the two persons, and both are now reconciled to God in one body through the cross. The lesson in all these passages is that in virtue of God's own reconciling work in Christ, we sinners who accept God's reconciliation should realize that this implies reconciliation with one another in all the estrangements of human life. We are thus to devote ourselves actively to the task of mutual reconciliation.

B. Divine-human Relations. The first and primary reconciliation, however, takes place between humans and God, and in this respect the word-group finds its most important use. Five points come out strongly in the classical passages in Rom. 5 and 2 Cor. 5.

1. God Himself as the Reconciler. God is neither reconciled to the world, nor does He reconcile Himself to it. He reconciles the world to Himself (2 Cor. 5:19). He loves us even while we are sinners, offering His Son so that we might be forgiven and saved from His wrath (Rom. 5:8-10). But God Himself does not change. While He remains implacably opposed to sin, nevertheless, He does not abandon His love for sinners. Instead, He acts to bring about their reconciliation according to an eternal purpose.

2. Restoration of Fellowship with God. The divine work of reconciliation removes a real obstacle and thus causes a real change in the situation. Like the OT, the NT shows that the problem is more than psychological. Sin has incurred guilt and exposed us to judgment. It produces an alienation that cannot be set aside by mere sentiment. The reconciling grace of God is thus an active grace, which remedies the situation by bearing the judgment and setting aside the guilt, by no longer counting the trespasses, and thus by changing the hostility into fellowship (Rom. 5:6-11; 2 Cor. 5:18-21).

3. Reconciliation to God through Jesus Christ. God performed this work of reconciliation particularly through Christ's vicarious sin-bearing on the cross. Christ died

for us and we are now justified by His blood (Rom. 8:5f.). The link with justification is important here, for what takes place is an exchange whereby our sins are imputed to Christ and His righteousness is imputed to us (*see* IMPUTATION). By this exchange the ground of alienation is set aside. That Paul had the meaning "exchange" in mind seems more evident in 2 Cor. 5:18-21, where he says not merely that God reconciled us to Himself through Christ, but quite expressly that God "made him [Christ] to be sin who knew no sin, so that in him we might become the righteousness of God" (v. 20). This vicarious operation lies at the very heart of biblical reconciliation.

4. Change within the Reconciled Person. The work of reconciliation is not just an external transaction whereby sin is pardoned and the reason for hostility removed. For by this action God simultaneously effects a change in sinners so that they no longer desire alienation from God but, rather, reconciliation with God. This aspect comes out in Rom. 5:11, where Paul says, "we also rejoice in God through our Lord Jesus Christ, through whom we have now received our reconciliation." 2 Cor. 5:14-21 expresses this even more clearly when it states that those for whom Christ died can no longer live for themselves, for they are a new creation, controlled now by the love of God.

This gospel of reconciliation has a double thrust. First, God has already made reconciliation for us (2 Cor. 5:18). Second, as we receive this message and respond to it, we are reconciled to God (2 Cor. 5:20). Obviously this implies neither that we must make reconciliation for ourselves, nor that the final initiative lies with us. Only on the basis of what God has done, and in entrance into it, can we answer the evangelical summons. Nevertheless, God treats us as persons, not as passive objects. Activating us by the Holy Spirit (cf. Rom. 5:5), He calls for our acceptance of reconciliation. Hence the person is changed as well as the situation, and a personal relationship is again established. Since we are thus made active in reconciliation we can now initiate reconciliation in our relations with others, either seeking forgiveness or extending it.

5. Ministry of Reconciliation. Believers who respond to the call for reconciliation are enlisted into God's reconciling work in what Paul regards as the divinely given "ministry of reconciliation" (2 Cor. 5:18). He does not imply, of course, that we can in any sense continue, let alone augment, God's own reconciling work through Christ. Paul's use of the aorist tense to describe this work in Rom. 5 and 2 Cor. brings out strongly its character as a once-for-all and finished work. "Reconciling" (aorist part. of *katallássō* in 2 Cor. 5:18) does not mean that reconciliation as the divine exchange, or the divine changing of a hostile situation, is an incomplete and ongoing work to which we can add or in which we can share. Nevertheless, at the personal level, where it involves the changing of sinners into believers through God's word and Spirit, reconciliation does still continue as a divine ministry — the ministry of the Holy Spirit — in which believers themselves both can and should participate. At this point God Himself gives to those who receive His work the ambassadorial privilege (v. 20) of representing Him as He appeals everywhere to sinners to enter into His reconciliation. The ministry is ultimately God's, discharged by the Holy Spirit, who alone can pour God's love into the heart and make us new creatures. Yet God chooses and calls the reconciled to be His agents in this ministry. Thus believers work not only for reconciliation in interpersonal relations, but they also bear responsibility as subsidiary "reconcilers" — through the ministry of the gospel — in the divine-human relationship.

C. Cosmic Relations. A question arises whether reconciliation does not have a wider than human reach, especially in Col. 1:20. While *apokatallássō* bears essentially the same sense as *katallássō*, its use in Ephesians and Colossians does have distinctive features. Thus Christ, as well as God or the fulness of God, is the subject of reconciliation (Eph. 2:14, 16; Col. 1:22). Eph. 2:12-16 demonstrates more clearly than any other NT passage the human implications of reconciliation by applying it to the Gentile alienation from Israel and estrangement from the promise. It concludes that reconciliation in Christ has ended the hostility between Jews and Gentiles. Perhaps a special use of "all things" in Col. 1:20 goes beyond the (human) world of 2 Cor. 5:19 and Rom. 11:15 and embraces all creation, thus exhibiting God's reconciliation as a total cosmic restoration. Many commentators suggest this because of the cosmic position assigned to Christ in Col. 1:15-17, 20, the cosmological expectation of Rom. 8:19-23, the promise in 1 Cor. 15:24-28 of God's universal reign, and the visions in Rev. 21 of a new heaven and a new earth; however, equating reconciliation with the making of peace through the blood of Christ and the reconciling to God of those "who once were estranged and hostile in mind" (vv. 21f.), should prevent a hasty identifying of reconciliation (at least in the narrow sense) with God's certain establishment of order or harmony throughout the cosmos. At the most, Col. 1:20 seems to imply not that Christ's vicarious work has accomplished universal reconciliation, but that because of His work harmony will be restored to the whole creation, with Christ, the One for and to whom it was created, being its firstborn. The key to this restoration is the reconciliation of sinners by Christ's substitutionary, vicarious death.

IV. Historical Note.—For a full discussion of the history of the doctrine of reconciliation *see* ATONE III. The discussion below focuses upon the concept of "change" or "exchange" in reconciliation.

A. Early Church. In the first Christian writings the plainest exposition of reconciliation as an exchange occurs in the apologetic *Epistle to Diognetus*. This work points out that we merited only punishment and death, but God Himself took the burden of our sins and gave His Son as a ransom — "the holy for the unholy, the innocent for the guilty, the righteous for the unrighteous, the incorruptible for the corruptible, the immortal for the mortal" — in the "sweet exchange," so that our sinfulness might be hidden in Him, and His righteousness might justify us (9:1-5). Toward the end of the 2nd cent. Irenaeus developed a similar thought under the rubric of recapitulation. Having described Christ as a ransom wherewith God justly rescues us from alien bondage, he showed that Christ representatively reversed Adam's disobedience: "the sin of the first-formed" being "amended by the chastisement of the First-begotten" (*Adv. haer.* i.20.2f.). Informing this presentation was a concept of incarnational exchange: the Mediator, being God and man, established concord by presenting man to God while revealing God to man (iii.18.7).

An important line of patristic thinking was thus established which is readily summarized in the thesis that God became human so that we might become divine. Athanasius, e.g., viewed reconciliation in this way when he showed how God, fulfilling His original purpose in spite of human sin, met the apparently conflicting claims of His justice and goodness by sending the incarnate Word to identify Himself with us, and us with Him, and hence vicariously to carry our sin on the cross and with His resurrection to restore to us the forfeited incorruption (*De Incarnatione Verbi Dei* 5-9). Augustine in the West repeated the common slogan "God became man that man might become God"

(*Sermon* 13), but he also brought out a different aspect when he considered the exchange in relation to justification, in which "God's righteousness is that wherewith he clothes man when he justifies him" (*De Spiritu et Littera* 15). Augustine also had a keen sense of God's power to change sinners: "The gift of the Holy Spirit confers a delight in God's law which makes its fulfillment possible" (22ff.).

B. Middle Ages. In general, medieval theology retained a strong sense of the element of exchange in reconciliation in virtue of Christ's mediatorial office. This thought underlay Anselm's careful study of the rationale of the atonement in *Cur deus homo?* It also came to expression in the discussions of Aquinas, who based his whole interpretation of Christ's work as merit, satisfaction, sacrifice, and redemption on the fact that Christ as both God and man could and did take our place in vicarious death and resurrection (*Summa Theol.* 3 qu.1 art.2; qu.48 art.1-4). Duns Scotus provided a useful summary of what took place when he referred to a "real exchange" consisting of the expulsion of sin and the infusion of grace (*Sententiarum* 4 dist. 16 qu.2 n.6).

The change in sinners, of course, found an ardent advocate in Abelard. Other theologians made a place for this aspect, e.g., Aquinas, who quoted Augustine to the effect that one aim of the incarnation was to arouse our love in the highest degree (*Summa Theol.* 3 qu.1 art.2). Abelard, however, argued that this change to grateful love in us, stimulated by the display of God's love in the work of Christ, constitutes the heart of reconciliation. The hostility of sinners, rather than Satan's rule or God's justice, was for him the real obstacle to fellowship with God. Expectation of the gift of grace in Christ had already removed this obstacle in OT believers, and the reality of the grace kindled a love in believers which in and of itself meant reconciliation (*On Romans* 3:19ff.).

C. Reformation. The emergence of justification by faith as a basic principle of the Reformation necessarily carried with it an emphasis upon the element of exchange in reconciliation. The very word "imputation" suggests exchange, e.g., the imputing of our sins to Christ and of Christ's righteousness to us. The idea of exchange also influenced Luther's conviction that believers are both righteous and sinful simultaneously, sinful in their own actuality but righteous by the imputation of a merciful God (*Luther's Works* (55 vols., 1955-), XXV, 258). This imputation is not merely verbal, of course, for it rests on Christ's vicarious work whereby sin is covered and all of our good is "outside us" in Christ (p. 267). Not surprisingly, then, Luther could quote with approval Scotus's reference to "one exchange" (p. 284). Elsewhere in his discussion of the Lord's Supper Luther used similar terminology when he spoke about the "interchange of Christ's blessings and our misfortunes" (*Luther's Works*, XXXV, 58), and the "exchange or blending of our sin and suffering with the righteousness of Christ and His saints" (p. 60).

Calvin displayed a similar appreciation of the element of exchange when he equated the righteousness of faith with our reconciliation to God. Sin constituted a division between us and God, but Christ's expiatory life and death restored us to grace, and reunited us to God through the imputation of Christ's righteousness to us (*Inst.* 2, 11, 21ff.). Commenting on 2 Cor. 5:18ff., Calvin stressed God's merciful removal through Christ's mediation of the hostility between God and us. The idea of a change of place influenced the confessional statements in the Belgic Confession Art. 20 and Scots Confession Art. 17f.

D. Modern Period. During the post-reformation era five trends may be discerned relative to the concept of reconciliatory change or exchange.

1. Traditional View. The established view of Christ's vicarious work continued to be taught in both Protestant and Roman Catholic orthodoxy. The exchange element came to clear expression in a statement like that of Bernard of Clairvaux (in the hymn "O Sacred Head, Now Wounded"): "Mine, mine was the transgression, But thine the deadly pain."

2. Placation View. A tendency developed in some circles to see a change in God. Already the Thirty-Nine Articles had spoken rather loosely of Christ dying to reconcile His Father to us (Art.2) (cf. Augsburg Confession Art.3; Second Helvetic Art. 11). In the 17th cent. Heidegger noted, "from a condemning Judge God has become a Judge who pardons" (*Corp Theol.* XIX,22). The idea thus crept in that the angry Father is placated by the merciful Son according to an intertrinitarian pact. In general, however, a strong sense remained that the initiative in reconciliation lay with the whole trinity and not just with a single person.

3. Arminian View. Arminian theology severed the objective side of rconciliation (the exchange) from its psychological side (the change in us). In this view the former, as God's work, forms the necessary precondition, but reconciliation itself comes only with the latter, which is our own work in response to the gospel ministry. G. Thomasius took a similar line in his *Christi Person und Werk* (III, p. 206) when he differentiated the restoration of fellowship in Christ, which creates the possibility, from the ongoing mediation, which effects the actuality.

4. Abelard's View Reconsidered. The theory of Abelard found new champions, notably H. Rashdall in *Idea of Atonement in Christian Theology* (1920). Rashdall sternly rejected the whole concept of exchange and argued for a loving and exemplary obedience in life and death.

5. Barth's View. In contrast, Karl Barth offered perhaps the most sustained and systematic exposition in all theological history for reconciliation as exchange (*CD*, IV, 1-3). Christ as Son of God and Priest took our place: the just Judge judged for us, securing our justification (IV, 1). Christ as Son of Man and King, the Royal Man, lived a holy life for us awakening us in Himself to santification (IV, 2). Christ as God-man and Prophet pursues the ministry of reconciliation by the Holy Spirit, the true Witness, summoning us to our vocation (IV, 3). By this comprehensive vicarious work our relationship to God undergoes a great change — a change within us — our conversion. As Barth said in *Learning Christ through the Heidelberg Catechism* (Eng. tr., repr. 1981), p. 68: "The *work of Jesus Christ* [is] redemption through righteousness . . ., reconciliation, *katallagē*, exchange." Similarly he said in exposition of 2 Cor. 5:19-21 (*CD*, IV, 1, 75): "I do not see how in this context we can avoid going back to the basic meaning of *katallassein*. The conversion of the world to God . . . took place in the form of an exchange, a substitution . . . This exchange is what happened in Christ (v. 21)."

G. W. BROMILEY

RECORD [(verbs) Heb. *kāṯaḇ*–'write' (Dt. 28:61; 1 Ch. 24:6; Neh. 12:22; Est. 9:20; Isa. 4:3), niphal of *kāṯaḇ*– 'be written' (Ezr. 8:34; Est. 2:23; 9:32; Ps. 102:18 [MT 19]), hithpael infinitive of *yāḥaś*–'be enrolled, have oneself enrolled in a genealogy' (1 Ch. 4:33), hophal of *ʿālâ*–'be inserted in a book' (2 Ch. 20:34), *sāpar*–'write up' (Ps. 87:6)]; AV also WRITE, GENEALOGY (1 Ch. 4:33), MENTION (2 Ch. 20:34), COUNT (Ps. 87:6), etc.; NEB also REGISTER (1 Ch. 4:33), WRITE, INCLUDE (2 Ch.

20:34), PRESERVE (Est. 9:32), ENROLL (Isa. 4:3), etc.; [(nouns) Heb. *dāḇār* (1 Ch. 4:22); Aram. *diḵrôn* (Ezr. 6:2), *doḵān* (Ezr. 4:15)]; AV also THING (1 Ch. 4:22); NEB also MEMORANDUM (Ezr. 6:2), etc.

The recording and preserving of documents — political, economic, religious, etc. — was basic to all ancient Near Eastern cultures (*see* LIBRARY; SCRIBES). Among the records kept by the Israelites were the important OT accounts of Yahweh's covenant dealings with His people (Dt. 4:13; 5:22; 10:4; 28:61; 31:9; etc.). Other documents or memoranda include the annals or chronicles of the kings (1 Ch. 24:6; 2 Ch. 20:34; Ezr. 2:23), genealogical lists (1 Ch. 4:22, 33; Ezr. 4:15; 6:2), inventories of temple treasure (Ezr. 8:34), and historical traditions giving rise to religious practice (Est. 9:20, 32).

The use of the phrase "now the records are ancient" in 1 Ch. 4:22 calls attention to the antiquity of the genealogical traditions. This particular catalog of names proves interesting because it provides background information about the vocation and geographical locations of the descendants of Shelah (4:22f.). The translation "genealogical record" is appropriate in 4:33, since the verse conveys the idea that the descendants of Simeon preserved an official genealogy (cf. J. M. Myers, *I Chronicles* [*AB*, 1965], p. 25). Elsewhere the RSV often translates this hithpael infinitive of *yāḥaś* as "enrolled by [or in the] genealogy" (cf. 1 Ch. 5:1; 7:5, 7, 9, 40; 9:22; etc.).

According to Ps. 87:6 Yahweh's interest in Zion is such that He keeps a careful register of all its inhabitants, enrolling all those who profess Him (see A. Weiser, *Psalms* [Eng. tr., *OTL*, 1962], p. 582). This verse calls to mind several OT passages that mention the "book of life" in which Yahweh has recorded the living or righteous ones (cf. Ex. 32:32f.; Ps. 69:28; 139:16; Isa. 4:3; Dnl. 12:1).

The "book of the records of your fathers" (Ezr. 4:15) probably refers to official archival memoranda from the Babylonian kings that contained the history of Jerusalem (although records of a Judahite rebellion against Persia cannot be ruled out here; cf. J. Morgenstern, *HUCA*, 27 [1956], 101-179). Since the Persian kings considered themselves the legitimate heirs of the Babylonian regime, they would have had access to these records in tablet or scroll form in the royal archives (see D. J. A. Clines, *Ezra, Nehemiah, Esther* [*NCBC*, 1984], p. 81). In Ezr. 6:2 Aram. *diḵrôn* (cf. 4:15) is regarded by many scholars as the first word of the document itself and is often translated "memorandum" (so NEB) because of its connection with Heb. *zkr*, "remember," although the nature of the document is more official than the term suggests (cf. F. C. Fensham, *Ezra and Nehemiah* [*NICOT*, 1982], p. 86).

See also RECORDER. A. E. HILL

RECORDER [Heb. *mazkîr* (2 S. 8:16; 20:24; etc.)]; NEB SECRETARY OF STATE; [Gk. *(ho) tá prospíptonta*–'one (with) the news' (1 Esd. 2:17 [LXX 13]), *(ho) gráphōn tá prospíptonta*–'one who writes the news' (2:25 [LXX 19])]; AV STORYWRITER. A high-ranking official in the royal court or satrap's office.

Various suggestions have been made about the meaning of Heb. *mazkîr* (e.g., see *TDOT*, IV, 75f.). The term is the hiphil part. of *zāḵar*, which in the causative can mean "call to mind." "report," or "proclaim." Most likely *mazkîr* does not denote the king's archivist, since most of the passages in which it occurs mention also a *sōpēr* ("scribe"). Some scholars have suggested "herald" as a better translation than "recorder." De Vaux observed that an exact equivalent of the Hebrew term is found in the Egyptian title *whm.w* ("he who repeats, calls, announces"), which designated the pharaoh's official spokesman or herald, i.e., the officer who reported to the pharaoh on the people's concerns, communicated the pharaoh's commands to the people, was in charge of palace ceremonies, etc. In Israel, likewise, the *mazkîr* was one of the king's highest ranking officials. The office was held by Jehoshaphat during the reigns of David and Solomon (2 S. 8:16; 20:24; 1 K. 4:3; 1 Ch. 18:15). Joah the son of Asaph, *mazkîr* under King Hezekiah, was one of three officials who represented the king in meetings with the envoys of King Sennacherib of Assyria (2 K. 18:18, 37; Isa. 36:3, 22). And Joah the son of Joahaz was one of three officials sent by King Josiah to supervise payment of those who repaired the temple (2 Ch. 34:8).

In 1 Esd. 2:17, 25 (LXX 13, 19) Gk. *ho (gráphōn) tá prospíptonta* is the LXX translation of Aram. *bᵉʿēl-ṭᵉʿēm* (Ezr. 4:8f., 17), which is rendered "commander" by the RSV (but cf. AV "chancellor" and NEB "high commissioner"). The Greek rendering (followed by Josephus in *Ant.* xi.2.1f. [22, 26]) seems to indicate one who chronicles events. Rehum appears to have been a high official who was responsible for the correspondence of the satrapy.

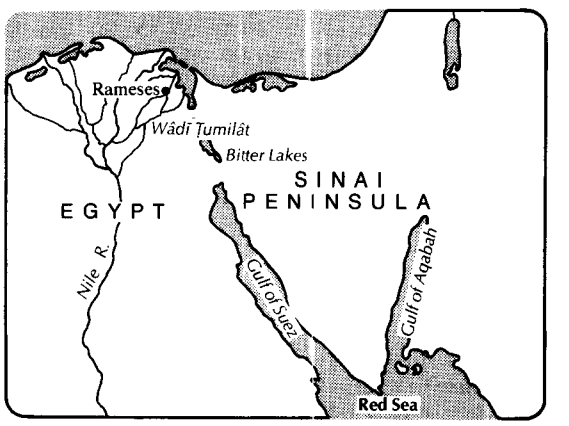
RED SEA [Heb. *yam sûp*; Gk. *hē erythrá thálassa* or *thálassa erythrá*, also *eschátē thálassa*–'farthest sea' (1 K. 9:26)]; NEB also SEA (Ps. 136:15), NEB mg. SEA OF REEDS. The body of salt water between Northeast Africa and the Arabian peninsula whose northern end, according to the OT, the Israelites crossed en route from Egypt to Mt. Sinai.

I. Meaning of the Designation
  A. Three Locations
  B. Two Problems
II. Crossing of the Sea
  A. Its Location: "Red" or "Reed" Sea?
  B. Its Nature
III. In Extra-Biblical History
IV. Description



I. Meaning of the Designation.–A. Three Locations. In the OT the name "Red Sea" is applied to three bodies of water. First, it refers to the Gulf of Aqabah, the northeast arm of the modern Red Sea, which separates the Sinei peninsula from Saudi Arabia. In antiquity this gulf formed the southeast border of Israel (Ex. 23:31) and the southwest border of Edom (Jer. 49:21). The "route of the Red Sea" evidently was a well-known highway that passed just N of the gulf en route from Kadesh-barnea to Edom (Nu. 14:25; 21:4; Dt. 1:40; 2:1). From the gulf port of Ezion-geber (modern Elat) Solomon, with the help of King Hiram of Tyre, launched a fleet of merchant ships whose three-year voyages along the African and Arabian coasts brought back gold, silver, ivory, almug wood, precious stones, and even apes and peacocks (1 K. 9:26ff.; 10:11f., 22).

The term also describes the Gulf of Suez, the northwest arm of the Red Sea between the Sinai peninsula and Egypt. Into its waters Yahweh swept the locust plague from Egypt (Ex. 10:19), and along its eastern shore Israel traveled toward Mt. Sinai after leaving Egypt (Nu. 33:10f.). The Biblical writers probably used the same term for both these gulfs because they knew them to be branches of the same body of water.

Most importantly, the term designates the body of water that the Israelites miraculously crossed on dry land and in which the pursuing Egyptians drowned (Ex. 13:18; 15:4, 22; Dt. 11:4; Josh. 2:10; 4:23; 24:6; Neh. 9:9; Ps. 106:7, 9, 22; 136:13, 15; Acts 7:36; He. 11:29). The precise location of this body of water is disputed and requires some discussion below (II.A). For a description of the possible route followed by the Israelites after the crossing, *see* EXODUS, ROUTE OF THE.

B. Two Problems. 1. Terminology. Since the Bible uses the same term for all three locations, one might conclude that the Israelites crossed one of the two gulfs. The Gulf of Aqabah is excluded from consideration, however, because the biblical data clearly locate the crossing somewhere between Egypt and the Sinai peninsula. The traditional site was the north end of the Gulf of the Suez, despite the great distance from Israel's starting point and the likelihood, therefore, of its being overtaken by Pharaoh. The LXX implies acceptance of this view by its choice of *erythrá thálassa,* the same term that classical writers like Herodotus used for the Red Sea, the Persian Gulf, and the Indian Ocean. English translations apparently base their rendering of Heb. *yam sûp* on the LXX and Latin versions.

In the last century, however, Heb. *yam sûp* has been understood literally as "sea of reeds" ("sea" connoting any body of water, e.g., lake, river, marsh; *see* SEA). This view became popular with the discovery among Egyptian papyri of a word *twf* ("papyrus"), thought to be cognate to Heb. *sûp* (cf. "reed" in Ex. 2:3, 5; Isa. 19:6), and the term *pa-twf* ("land of marshes"), used in reference to the northeast Nile Delta. Many scholars concluded that the writer of Exodus borrowed a well-known Egyptian geographical term to describe the crossing point and that a location at the Gulf of Suez was automatically excluded since reeds grow only in fresh water. Scholars have therefore sought to locate the "Sea of Reeds" among one of the several lakes that dot the Isthmus of Suez from the gulf to the Mediterranean.

This view, however, is not as certain as its popularity would indicate. First, the Egyptian term has the linguistic determinative sign for "land" or "region" but not "lake" or "sea." This casts grave doubt on the assumption that the Egyptian "*land* of marshes" equals the Hebrew "*Sea* of Reeds," and it eliminates the necessity of locating *yam sûp* in the northeast Delta. Second, *sûp* seems to mean "seaweed" in Jonah 2:5 (MT 6) (cf. most recent translations), and this suggests the possibility that *sûp* is a generic term ("underwater plant growth") including both marine and freshwater vegetation. This removes the necessity of limiting *yam sûp* to bodies of fresh water. Third, the use of *yam sûp* to refer to three bodies of water seems to imply a geographical connection between them. Nothing could account for the transference of the name *yam sûp* from a lake to the Red Sea unless that lake originally joined the latter.

Two recent alternative explanations take *sûp* to mean "extinction" (Batto, appealing to Jonah 2:5 [MT 6]) or "end" (Snaith, repointing it to *sôp*). In the former case the term would signify "sea of extinction" (i.e., the distant sea fraught with mythological connotations of chaos), in the latter, "sea of unknown extent" (cf. LXX of 1 K. 9:26, "farthest sea"). There is, however, no certain Hebrew use of *sûp* as "end," although the cognate verb does mean "come to an end, cease" (*BDB,* p. 692f.). Further, *sôp* is an Aramaic word introduced into Hebrew at a very late date and hence is unlikely to have been used in the Exodus passages. Also, it probably means "seaweed" (not "extinction") in Jonah 2:5 (MT 6), whatever the mythological background of the passage.

In sum, the meaning and location of *yam sûp* are unclear. The term may mean "sea of reeds," "farthest sea," or another meaning unknown to us. It may refer to different branches of a single, connected body of water or to two separate bodies. Only the consideration of other biblical geographical information below will clarify the matter.

2. Literary Sources. Scholars have long observed that the prose account of the Red Sea episode (Ex. 14) consistently speaks only of the "sea," while "Red Sea" occurs only in an alleged editorial addition (13:18), the poetic Song of Moses (15:4), and a prose postscript to the Song of Miriam (15:22). Although they disagree about details, many scholars agree that Ex. 13–15 may be divided up among the J, E, and P sources. Using this source division in an approach called "tradition history," some scholars have claimed that the escape from Egypt and the sea crossing were originally independent traditions that were brought together later to form the present text. The motive for joining them was either the popular influence of the postexilic passover service (Childs; cf. Coats) or the desire to attribute to Yahweh the same mastery over the sea (i.e., mythological chaos) that the Canaanite myth attributed to Baal (Eakin). This approach implies that the present text reflects not real historical events but editorial activity that either combined different reports of the same event or arbitrarily linked unrelated theological traditions. Such an approach places in doubt the accuracy of the geographical terms in Ex. 13–15, making futile any attempt to locate the Red Sea.

Such views, however, have weaknesses that render them unnecessary. First, the escape from Egypt and the sea crossing are so inextricably dependent upon each other (i.e., each must presuppose the other's existence to make any sense) as to make any assumption of independent circulation improbable (see Patrick). Second, the lack of a consensus concerning the literary sources behind the present text calls into question the validity of the whole attempt to isolate sources. Finally, to imply, as these views do, that the biblical writers suffered from geographical ignorance and a somewhat cavalier disregard for accuracy is open to serious question. It seems better to reckon with the biblical data under the assumption that the writers knew their geography.

II. Crossing of the Sea. A. Its Location: "Red" or "Reed" Sea? Exodus 13:17f. provides the first clue to the sea's location. It quickly eliminates one alternative by reporting that God did not lead Israel by "the way of the land of the Philistines," despite its nearness (v. 17). This road, no doubt, was the heavily traveled and highly fortified highway that ran from the Egyptian border fortress at Sile (near modern Qantarah) along the southern shore of Lake Sirbonis and the Mediterranean coast to Gaza. God purposely forbade that route to avoid an almost certain military skirmish that might send the fearful Israelites scurrying back to Egypt. Instead God chose a more roundabout route, "the way of the wilderness, the *yam sûp*" (v. 18). The last two words are appositional; rather than being an editorial addition, they probably specify which direction the people were to head once they reached the wilderness (i.e., south rather than north).

According to Ex. 12:37 the Israelites first went "from Rameses to Succoth." Scholarly consensus identifies Rameses with Qanṭîr in the northeast Delta, although Tanis is also a possibility. Scholars also agree that SUCCOTH (Heb. "booths"?) lies somewhere in the region of Wâdī Ṭumilât SE of Qanṭîr, perhaps modern Tell el-Maskhûṭah since its ancient Egyptian name *tkw* resembles Succoth. This was, indeed, the doorway to the desert through which, according to Egyptian sources, slaves escaped (*ANET*, p. 259). Jacob and his sons may have originally entered Egypt this way also. From here the people camped at ETHAM "on the edge of the wilderness" (13:20), a place of unknown location but no doubt at the east end of the Wâdī Ṭumilât near Lake Timsâḥ.

Finally, God surprisingly ordered Israel to "turn back" and camp "in front of Pihahiroth, between Migdol and the sea, in front of Baal-zephon" (Ex. 14:2). The purpose was to deceive Pharaoh into thinking that they were either lost or unknowingly on a dead-end course and thereby to entice him to meet defeat in chasing them (vv. 3f.). The question is, did the Israelites turn N or S? Some scholars favor a turn N, identifying Migdol (Heb. "tower") with modern Tell el-Ḥeir 13 km. (8 mi.) S of Pelusium near the Mediterranean (cf. the same site in Jer. 44:1; 46:14; Ezk. 29:10; 30:6), and identifying Baal-zephon with Tell Defneh near the southwest side of Lake Menzaleh (since Baal was worshiped there in antiquity). This results in a northern location of the crossing, somewhere along the southern end of Lake Menzaleh or a marshy extension of it (Hyatt). A more extreme form of this "northern theory" identifies Baal-zephon with Ras Kasrun, *ca.* 40 km. (25 mi.) E of modern Mohammediyeh and places the crossing on the slender sandy strip that separates Lake Sirbonis from the Mediterranean (Eissfeldt, Cazelles).

Though an attractive possibility, this theory suffers from several weaknesses. First, to head this far N would take the Israelites not only close to the "way of the land of the Philistines" but also into the most heavily fortified area of Egypt's eastern border — in conflict with the biblical statement that both that way and warfare were to be avoided. Further, the distances from Succoth to the other sites are too great to accord with the picture of reasonable proximity in Ex. 14:2 and Nu. 33:7. Finally, the fact that Baal was also worshiped at Memphis, further S along the Nile, suggests that he may have been worshiped elsewhere in Egypt and undercuts the argument that a site bearing his name must have been located near the sea.

The "central theory" offered by other scholars (Cole, Haran) locates the crossing at some part of either Lake Timsâḥ, just NE of the eastern mouth of Wâdī Ṭumilât, or *ca.* 24 km. (15 mi.) N at Lake Balaḥ. This theory is certainly a possibility, since it avoids the drawbacks of the northern one, but it suffers from an imprecise identification of Migdol, PI-HAHIROTH, and Baal-zephon.

On the other hand, several things favor the probability of the "southern theory," that Israel turned S from Etham. First, an Egyptian papyrus mentions "Migdol of Seti-Merneptah" S of Wâdī Ṭumilât, and this may be the Migdol of Ex. 14:2. Second, another papyrus lists four places called Migdol near the same wadi (not the Mediterranean coast) and possibly calls one "of Baal-zaphon." Third, a model letter from *ca.* 1200 B.C. written probably by a border official at *Ṯeku* (i.e., Succoth) for the instruction of schoolboys, tells of his pursuit of two runaway slaves in a southerly direction past places with names similar to and in the same order as Succoth, Etham, and Migdol. Finally, since the Bitter Lakes (*ca.* 48 km. [30 mi.] S of Wâdī Ṭumilât) were in antiquity joined to the Gulf of Suez (i.e., the Red Sea), they also could rightly be called Red Sea. This would resolve the terminological difficulty discussed above. In sum, it is likely that the Israelites crossed not the "Reed" Sea but the "Red" Sea, specifically the southern end of the Bitter Lakes or the northern end of the Gulf of Suez. To the objection that such locations are too far S for the Israelites to have avoided Egyptian pursuit successfully, it can be pointed out that the biblical account gives no time frame between Pharaoh's granting them permission to leave and his attempt to recapture them.

B. Its Nature. According to the OT, Yahweh drove the sea back with a strong east wind so that the Israelites walked through a dry strip lined with walls of water (Ex. 14:21f.). Panicked somehow by Yahweh and having difficulty maneuvering their chariots, the Egyptians fled, only to be drowned when Yahweh returned the waters to their original state (vv. 23-28). The problem this account poses is two-fold: first, to determine how the waters separated, and second, to explain how the spot was deep enough to drown the Egyptians yet shallow enough to be easily parted.

Some scholars believe the miraculous sea crossing to be an embellishment of an Israelite military victory won by tricking the Egyptians into a muddy flat at night and then mowing down the bogged-down charioteers with arrows (Hay). The biblical account knows nothing of such archers, however, and it seems unlikely that the experienced Egyptians would fall for such a ruse in territory well-known to them. Others who retain the sea crossing as original attribute it to a tidal wave caused either by the eruption of a volcano or the impact of a comet hitting the earth. While certainty eludes us, God likely used natural means — perhaps a combination of tidal activity and the well-known phenomenon of strong winds temporarily rearranging bodies of water (Dayan, Horn) — but with miraculous timing and intensity.

III. In Extra-Biblical History.-The Red Sea played a significant role in history long before the Exodus. From *ca.* 2800 B.C. onward an Egyptian fleet, homeported along its western shores, sailed its waters to the land of Punt, an area probably along the Somali coast at the sea's south end. One such voyage is recalled in a popular Egyptian tale, "Story of the Shipwrecked Sailor" (*ca.* 1900 B.C.). Normally trade passed between the sea and inland cities overland through the Wâdī Ḥammâmât to Coptos, a five-day trip, then by boat on the Nile. As early as *ca.* 1900 B.C. a canal may have connected the Bitter Lakes (and hence, the Red Sea) with the Nile through the Wâdī Ṭumilât. It had fallen into disuse by *ca.* 1150 B.C., and Neco's failed attempt to reopen it (*ca.* 600 B.C.) was completed by Darius more than a century later.

The Red Sea also offered Egypt nautical access to her

turquoise and copper mines in southern Sinai — access that avoided the sweltering heat of the desert route. About 600 B.C. the Phoenicians explored the Red Sea during a voyage around Africa from the Mediterranean.

IV. Description.–The sea extends S *ca.* 2100 km. (1300 mi.) from the two gulfs to the Straits of Bâb el-Mandeb and the Gulf of Aden. It is 210 km. (130 mi.) wide at the tip of Sinai. The Gulf of Suez measures 210 km. (130 mi.) in length, 29 km. (18 mi.) in width, and about 55 m.-64 m. (180-210 ft.) in depth. The Gulf of Aqabah is smaller (*ca.* 145 km. [90 mi.] by 24 km. [15 mi.]) but much deeper (*ca.* 1675 m. [5500 ft.]), giving modern Israel and Jordan an excellent deep-water port. The Red Sea lies along a large rift valley that extends S from Sinai 3500 km. (2200 mi.) to Tanzania, and N 450 km. (280 mi.) through the Dead Sea-Jordan Rift Valley.

The Red Sea has some distinctive features. It contains some of the earth's hottest (*ca.* 25° C [77° F] in the two gulfs) and saltiest waters (40 parts per 1000). Despite scant rain-fall, no replenishment from rivers, and extreme evaporation loss, the sea maintains its level by a remarkable circulatory system. The denser, saltier water of the north sinks and flows S along the bottom while winds drive less dense water above it N from the Straits, thus replacing the sea's water every twenty years. The sea's high temperature and purity are very favorable to all kinds of marine life.

How a normally blue-green sea came to be called "red" is a matter of dispute. Some trace the name to the color of the reflections on the water of the scorched mountains along its banks, others to the reddish skin-color of the peoples living beside it. Still others derive the name from the reddish cast that certain organisms, present in abundance, give its waters.

REDEEMER; REDEMPTION.

I. In the OT.–The main OT terms associated with redemption include Heb. *gā'al* ("redeem," "act as kinsman), *pādâ* ("buy [off], ransom," "redeem"), and their cognates. Both terms occur frequently; hence, the evidence bearing upon their meaning is copious.

Although both verbs may be used in the sense of deliverance without any necessary reference to the mode (cf. for *gā'al*, Gen. 48:16; for *pāḏhâ*, 1 K. 1:29; Isa. 29:22), yet each, pervasively, has the differentiated meaning "release by the payment of a price" or "buy back". In Exodus and Leviticus this meaning becomes patent.

One aspect of redemption pertained to the sanctifying of the firstborn males of humans and animals (Ex. 13:2, 12; 22:29f.; cf. Lk. 2:23). The firstborn male was to be devoted or set apart to the Lord. Firstborn clean animals were to be sacrificed on the altar; however, the firstborn of humans and of unclean animals could not be sacrificed. A clean lamb, e.g., redeemed (i.e., was substituted for) an ass, which was an unclean animal (Ex. 13:13; 34:20). If the ass was not redeemed its neck was broken, rendering it useless to its owner. Likewise the firstborn of humans was to be redeemed (Ex. 13:13b, 15). The specified price was five shekels, which was given to the priests (Nu. 18:15f.; cf. 3:44-51). In both cases, therefore, there was the provision of redemption. The idea expressed by these provisions is that a person or an animal set apart to the Lord, and therefore withdrawn from ordinary activity or use because of that consecration, may be recovered or restored by the payment of compensation. In the case of the redemption of the Israelite children whose numbers exceeded that of the Levites, the monetary compensation was called "redemption money" (Heb. *kesep happᵉḏuyyim*, Nu. 3:51).

Another aspect of redemption pertained to special provisions for the redemption of land or other property. The background of these laws was the prohibition against selling the land in perpetuity (Lev. 25:23). Hence a redemption (Heb. *gᵉ'ullâ*, "redemption," < *gā'al*) was to be granted for the land that might pass out of the possession of its owner (v. 24). If a man by reason of poverty sold part of his possession, there were three ways of restoration: (1) a kinsman (*gō'ēl*, qal act. part. of *gā'al*) could redeem or buy back (*gā'al*) what had been sold (v. 25; cf. *gō'ēl* in Ruth 2:20; 3:9, 12f.; 4:1, 3, 6, 8, 14; *see* KIN I.C); (2) if there was no kinsman to redeem it, the seller himself could redeem the land, provided he was financially able to do so (Lev. 25:26f.); (3) if neither of these options was possible, then the land remained the buyer's possession until the Year of Jubilee, when it was returned to the original owner's possession (vv. 10, 28).

There were also provisions for the redemption of a dwelling. For homes within the walls of a city this right extended for only one year from the date of sale; for a house outside the city walls redemption was possible at any time, and the home was to be returned in the Year of Jubilee. Levites could redeem their houses at any time (Lev. 25:29-34). A house or land that had been set apart to the Lord could be redeemed as well (27:14-25).

Several conclusions derive from this usage. (1) Redemption refers to the recovery of persons or things. (2) A redemption price was necessary for this recovery or restoration. (3) A human intermediary, the *gō'ēl*, acted to secure the redemption. Summarily speaking, redemption involved the securing of release or recovery by the payment of a price.

In the OT the concept of redemption occurs frequently in reference to the salvation wrought by God for His people. Both Heb. *gā'al* and *pāḏâ* appear in this connection (cf. *gā'al* in Ex. 6:6; 15:13; Ps. 107:2; 130:8; Isa. 43:1; 44:22; 63:9; Jer. 31:11; Mic. 4:10; and *pāḏâ* in Dt. 7:8; 9:26; 13:5 [MT 6]; 15:15; 24:18; 2 S. 7:23; Ps. 49:7, 15 [MT 8, 16]; Hos. 13:14; Mic. 6:4). These references show that the redemption from Egypt occupies a central place; therefore, the import of OT redemption must be derived from this event.

But "redemption" is not merely deliverance; it also reflects on the mode of deliverance. The Exodus was deliverance from foreign bondage. The OT emphasizes

this repeatedly. This deliverance was wrought by God's great power and outstretched arm. It is not feasible to suppress the thought of the price paid for this deliverance. The idea of recovery by purchase, which is integral to the Mosaic legislation for the redemption of persons and things, must have influenced the soteric uses of the terms. The stress frequently falls upon the power exerted by God in accomplishing deliverance and on the gratitude and devotion consequently owed by Israel (cf. Ex. 6:6f.; 10:1f.; 13:3, 14f.; 19:4-6; 20:22; Dt. 5:6). On several occasions the thought of purchase appears in contexts that are either reminiscent of redemption or expressly allude to it (cf. Ex. 15:16; Dt. 32:6; Ps. 74:2; Isa. 11:11). Isa. 43:3f. states that Egypt, Ethiopia, and Seba have been the substitutionary ransom (Heb. *kōper,* "ransom"; cf. Ps. 49:7 [MT 8]) for Israel. Thus the salvation of the Lord, when conceived of as redemption, is release from bondage by ransom and reflects not merely upon the result but also upon the mode by which the deliverance is wrought.

As observed above, the intermediary who secures the redemption is called the *gō'ēl.* This title is frequently ascribed to the Lord in the OT, especially in Isaiah (cf. Job 19:25; Ps. 19:14 [MT 15]; Isa. 41:14; 43:14; 44:6, 24; 47:4; 48:17; 49:7, 26; 54:5, 8; 60:16; 63:16; Jer. 50:34). The merciful provisions associated with the term in the ordinary life of Israel are here carried to the highest level in the relation of God to His people, and the kinsman's action in recovering possession is likened to God's action in salvation. The Isaianic contexts are replete with references to God's tender care for His heritage, to the almighty power by which He has wrought salvation, and to the security against all adversaries guaranteed by the redemptive relation. Messianic prophecy takes the form of the promise that a Redeemer will come to Zion (Isa. 59:20; cf. Rom. 11:26); thus the coming salvation mentioned repeatedly in redemptive terms, is conjoined with the coming of One whose specific role is that of Redeemer.

II. In the NT.–The NT terms related to redemption include Gk. *lýtron,* "price of release, ransom," (Mt. 20:28; Mk. 10:45), *lytróō,* "set free, redeem," "free by paying a ransom," (Lk. 24:21; Tit. 2:14; 1 Pet. 1:18), *lýtrōsis,* "ransoming, releasing, redemption," (Lk. 1:68; 2:38; He. 9:12), *lytrōtḗs,* "redeemer," (Acts 7:35), *apolýtrōsis,* "release, redemption," "state of being redeemed," (Lk. 21:28; Rom. 3:24; 8 23; 1 Cor. 1:30; Eph. 1:7, 14; 4:30; Col. 1:14; He. 9:15; 11:35), *exagorázō,* "buy, buy up, redeem," (Gal. 3:13; 4:5), *agorázō,* "buy, purchase," (1 Cor. 6:20; 7:23; 2 Pet. 2:1; Rev. 5:9; 14:3f.). The central notion of ransom is apparent in *lýtron* and its derivatives, and that of purchase in *agorázō* and *exagorázō.*

The NT language of redemption, with few exceptions (cf. Acts 7:35; Eph. 5:16; Col. 4:5), refers to the salvific work of Christ and to its effect for humanity. The word of Our Lord places beyond question three facts: (1) the work He came to accomplish was one of ransom, (2) the giving of His life was the ransom price, and (3) the ransom was substitutionary in character. As B. B. Warfield said, "This could not fail to determine for His followers their whole conception of the nature of His redemptive work. We cannot be surprised, therefore, to find one of them, echoing His very words, describing His work as a giving of Himself as a ransom (ἀντιλύτρον) for all (1 Tim. ii.6)" (*Biblical Doctrines* [1929], p. 361). Tit. 2:14 similarly represents Christ's self-giving as having the twofold design of ransom from all iniquity and the sanctification of the ransomed possession. Peter, with perhaps clearer allusion to the specific character of redemption as ransom by price, writes, "You know that you were ransomed from the futile ways inherited from your fathers, not with perishable things such as silver or gold, but with the precious blood of Christ, like that of a lamb without blemish or spot" (1 Pet. 1:18f.). The redemptive price here is plainly the blood of Christ. When Paul spoke of redemption through Jesus' blood (Eph. 1:7), the same concept was without doubt in his mind. When he spoke of being "justified . . . through the redemption which is in Christ Jesus" (Rom. 3:24) and then specified the propitiation in Jesus' blood (v. 25), the associations of ransom must be regarded as defining the contemplated redemption.

Although the terminology changes in Gal. 3:13; 4:5, the notion of purchase from bondage by the humiliation of Christ is patent, and the redemptive signification is not toned down. Gal. 3:13 states that the enslavement that supplies the need for redemption is "the curse of the law," and in Gal. 4:5 the tutelary bondage of the ceremonial law is in view. The cost to Christ of deliverance is "having become a curse for us" and "made under the law," respectively. The effect is deliverance from both aspects of bondage into the liberty of adoption.

In 1 Cor. 6:20; 7:23 the thought is the simple one of purchase by price without mention of the specific price itself. But the context of Paul's teaching leaves no doubt that the price in view is the blood of the Savior. Rev. 5:9 expressly states this, and in order to bring out the verse's full force, Gk. *agorázō* must be rendered "redeem." The clarity with which redemption by Jesus' blood appears in 5:9 determines the import of the same term in 14:3f. Greek *despótēs* in 2 Pet. 2:1 causes denotative difficulties, but if this title refers to Christ, as the evidence suggests, then the concept of deliverance by purchase is again present. Hebrews 9:12, 15 have the associations that are present in other NT passages, namely, the blood of Christ as the way of securing redemption, and the efficacy of redemption for the forgiveness of sins; thus "redemption" here conveys the same meaning.

It is significant that the earliest NT expression of the redemptive hope (Lk. 1:68; 2:38) is construed as deliverance from oppression by alien powers. The faith in Jesus that these earliest witnesses reflect is framed in terms of what was central in OT religion. It is not surprising, therefore, that when the death of Christ comes to be presented as the ransom price by which redemption is secured, this death should be presented as the way of deliverance from the power of the archenemy of God and His people (cf. Jn. 12:31-33; He. 2:14f.).

Redemption is redemption from sin, in each of its various aspects. At times one aspect of sin may be in the forefront, coloring the grace of redemption in that instance, but redemption contemplates all phases of the bondage to which sin consigns people. It means deliverance from sin in its guilt, defilement, power, and liability. The comprehensiveness of the deliverance that redemption procures and bestows comes to expression in the eschatological use of the term to designate the consummation of the saving process (Lk. 21:28; Rom. 8:23; Eph. 1:14; 4:30; perhaps 1 Cor. 1:30). The basic idea of ransom is not, however, lost in this eschatological use, which serves only to show how closely related to redemption by Jesus' blood is the final fruition of redeeming grace. The glory that awaits the redeemed, the adoption in the consummation of its privileges, and the liberty of the glory of the children of God are ever reminiscent of the purchase price by which they were procured. The efficacy of Christ's precious blood is ever certified in that the attainment of this glory is the day of redemption.

J. MURRAY

REDNESS OF EYES. *See* COLOR V.G; DRUNKENNESS II.

REDOUND. An English verb derived from Lat. *redundo*, "overflow" (from *re-*, "back," and *undo*, "surge as a wave"). It has the archaic sense of "overflow" in the AV of 2 Cor. 4:15, where it renders Gk. *perisseúō* (lit. "cause to abound"; RSV "increase"). In modern English it generally means "lead inevitably to an (often unplanned) end." For example, in Ezk. 39:13, RSV, "it will redound to their honor" renders Heb. *hāyâ lāhem l*^{e}*šēm* (cf. AV, lit., "it shall be to them a renown"); i.e., the people's zeal to cleanse the land will in the end bring them honor. In 1 Pet. 1:7, RSV, "may redound" renders the aorist pass. subjunctive of Gk. *heurískō* (cf. AV, lit., "might be found"; NEB "may prove itself worthy"). Those whose faith has proved genuine will receive the reward of sharing in the divine "praise and glory and honor" on the day of Christ's final revelation.

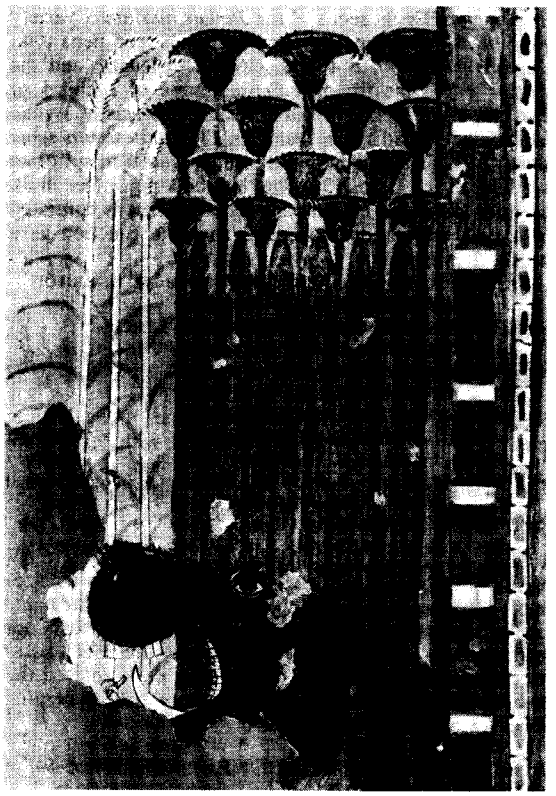
N. J. O.

REED [Heb. *qāneh*, *'ēḇeh*, *'āgmôn*, *'āḥû*, *sûp*; Gk. *kálamos*]; AV also RUSH (*'āgmôn*, Isa. 9:14; 19:15), FLAG (*'āḥû*, *Job 8:11*; *sûp*, Ex. 2:3, 5), "brethren" (Hos. 13:15), "spearmen" (Ps. 68:30 [MT 31]), "swift" (*'ēḇeh*, Job 9:26); NEB also RUSH (Isa. 19:15), MEASURING-ROD, ROD (Ezk. 40–42), CANE (Mt. 27:29 par.), REED-BED (Mt. 11:7 par.). Any of various tall grasses, often with segmented stalks, that grow especially in marshy areas.

The most common term is Heb. *qāneh* (1 K. 14:15; 2 K. 18:21; Job 40:21; Ps. 68:30 [MT 31]; Isa. 19:6; 35:7; 36:6; 42:3; Ezk. 29:6; 40–42). The term came originally from Sum. GI-NA, which signified a reed (cf. Job 40:21). Other Near Eastern languages borrowed the term and put it to numerous additional uses, e.g., to designate the measuring rod used by builders and carpenters (*see* MEASURING LINE, MEASURING REED).

Qāneh could denote any of several varieties of reed that grow in the Levant. The most imposing is the common *Arundo donax* L., which flourishes in the dense thickets of the Jordan Valley and attains a maximum height of 6 m. (20 ft.). It maintains a fresh, green appearance when all other vegetation has dried up, and in spring its massive blooms are very impressive. At its base the stem can be as much as 7 cm. (3 in.) thick, and hence these sturdy canes were used in construction and also as walking-sticks (cf. 2 K. 18:21; Ezk. 29:6f.). The reed can sometimes break under pressure, however, and if slivers penetrate the skin they can be painful and a potential source of infection. Such a "covert of the reeds" (Job 40:21) can shelter much small animal and bird life. In Ps. 68:30 (MT 31) *ḥayyaṯ qāneh* is correctly rendered "beasts of reeds" in most modern English versions (cf. AV "company of spearmen").

Hebrew *'āḥû* occurs in Gen. 41:2, 18 (RSV "reed grass"; AV "meadow"); Job 8:11. The RSV and NEB read *'āḥû* also in Hos. 13:15, by emendation of MT *'aḥîm* (AV "brethren"). Several species of rush and bulrush may be implied, possibly including *Scirpus lacustris* L., an inland species sometimes known as clubrush; a related sedge grass, *S. maritimus* L., which grows on the seacoast; and *Juncus maritimus* L., which grows in damp places.



A hippopotamus at bay in papyrus reeds and flowering rushes. Wall painting from the tomb of Amenemhet (no. 82) at Thebes (1448 B.C.) (courtesy of the Oriental Institute, University of Chicago)

While the RSV has "reeds" for Heb. *sûp* in Ex. 2:3, 5, it renders it elsewhere as "rushes" (Isa. 19:6) and "weeds" (Jonah 2:5). This plant has been identified with the cattail *Typha angustata* Bory et Choub, a tall grassy perennial that is still used in wickerwork; but probably other plants were also included under the designation *sûp*, e.g., the *Phragmites communis* Trin., a common reed that can grow as high as 3.6 m. (12 ft.). The Red Sea (as well as some other bodies of water) was known as *yam sûp*, "reed sea" (e.g., Ex. 10:19).

Hebrew *'ēḇeh* occurs only in Job 9:26 in connection with *'oniyyâ*, a small ship. The RSV translates the phrase "skiffs of reed" (cf. AV "swift ships"; NEB "reed-built skiffs"). It apparently denotes the very light skiff built of papyrus that was used on the Nile (cf. Isa. 18:2; *see* illustration in PAPYRUS).

The rare plural *'agammîm* (Jer. 51:32) may refer to swamp reeds that have been set ablaze (so AV; cf. RSV Job 41:20 [MT 12]), but the RSV (with "bulwarks") and NEB ("guard-towers") follow the LXX. The singular fom *'agmôn* in Job 41:2 (MT 40:26) may describe a "rope" made from a reed such as the *Scirpus* or *Juncus*.

The LXX and NT terms is Gk. *kálamos* (Mt. 11:7; 12:20; 27:29f., 48; Mk. 15:19, 36; Lk. 7:24). In Rev. 11:1; 21:15f. "measuring rod" translates the same term. The rod is unlikely to have been of standard length, but it may have been either 3 or 6 cubits long for normal construction purposes. The rod of Ezk. 40:3, 5 was "six long cubits," i.e., a little over 3 m. (10 ft.). The length of the rod used to administer vinegar to the crucified Christ (Mt. 27:48 par.) would depend upon the height of the cross from the ground; it need not have required the lengthy *Arundo donax*, as some writers have maintained.

In ancient Egypt reeds of the *Juncus maritimus* variety were used for writing on papyrus. Such reed pens (Gk. *kálamos*) were up to 40 cm. (16 in.) in length, and the writing edge was trimmed in the shape of a chisel so that narrow or broad strokes could be made easily. By the Hellenistic period reeds from the *Phragmites communis* were cut with a narrow point, which was then split like a quill pen (cf. 3 Jn. 13). The "scribe's pen" (Jer. 8:8), used for writing in ink on papyrus or potsherds consisted of a rush feathered at one end so as to function as a brush. *See* PEN.

REED, MEASURING. *See* MEASURING LINE.

REEDS, SEA OF. *See* RED SEA.

REELAIAH rē-ə-lī'ə [Heb. *r'ēlyâ*]. One of the leading men of Israel who returned from Babylon with Zerubbabel (Ezr. 2:2). The name appears as Raamiah in Neh. 7:7 and as Resaiah in 1 Esd. 5:8. The correct spelling of the name is uncertain.

REELIAH rē-ə-lī'ə [Gk. A *Rheelias*, B *Boroleias*]; AV REELIUS; NEB REELIAS. One of the leaders who returned from exile with Zerubbabel (1 Esd. 5:8). The name appears to have been inserted into the text, for it is not paralleled in Ezr. 2:2 and Neh. 7:7. Its similarity to REELAIAH (Ezr. 2:2) suggests that it may have entered the text through a copyist's attempt to correct the preceding form Resaiah.

REELIAS rē-ə-lī'əs (1 Esd. 5:8, NEB); **REELIUS** rē-ə-lī'əs (AV). *See* REELIAH.

REESAIAS rē-ə-sī'əs (1 Esd. 5:8, AV). *See* RESAIAH.

REFINE [Heb. qal, piel, and pual of *zāqaq*, qal and niphal of *ṣārap*; Gk. *pyróō* (Rev. 1:15; 3:18)]; AV also FINE, MELT, TRY, PURGE, etc.; NEB also FINE, STRAIN, etc.; **REFINER** [Heb. piel part. of *ṣārap*] (Mal. 3:2f.); NEB also REFINING.

I. Definitions.–The term refers to a large number of processes from historical periods of varying technological skill. In general it means removing impurities or altering the composition of a material such as a metallic ore, in order to obtain a desired product in a reasonably pure form. In short, it means bringing to a fine or pure state.

II. Biblical Terms.–Several Hebrew and Greek roots refer to purification, either by filtering or washing, or by burning or smelting.

Hebrew *zāqaq* is used variously to refer to refined gold (1 Ch. 28:18) or silver (29:4), the washing of gold (Job 28:1), or the straining of wine (Isa. 25:6). The term is also used for the process of melting a solid metal in order to remove the dross (Mal. 3:3).

The root *ṣārap* mainly refers to the use of fire to enhance chemical reactions in the extraction of metal from ore (Ps. 12:6 [MT 7]; Isa. 48:10; Jer. 6:29; 9:7 [MT 6]; Zec. 13:9). Jer. 6:29f. reflects the practice of refining silver with lead: silver and lead were placed in a crucible and heated, and as the lead oxidized it carried off the alloy, leaving the pure silver. The words for CRUCIBLE (Heb. *maṣrēp*, used only in Prov. 17:3; 27:2) and GOLDSMITH (*ṣōrēp*, Isa. 40:19; 41:7; 46:6; Jer. 10:9, 14; 51:17; cf. Jgs. 17:4; Prov. 25:4) come from the same root. *See also* SMITH; SILVERSMITH.

Several other terms are used with reference to the refining process, although they are not rendered "refine" by the RSV. As Van Leeuwen has demonstrated, the verb *yāṣā'* bears a technical metallurgical meaning in Prov. 25:4b, where it describes the refined product of a smelting process (pp. 112f.).

Most often "refine" is used figuratively to refer to the purifying of God's people, as Zec. 13:9 illustrates: "I will . . . refine them as one refines silver" (cf. Mal. 3:2f.; Ps. 12:6 [MT 7]); or it is used oppositely but with the same figurative force: "Behold, I have refined you, but not like silver; I have tried you in the furnace of affliction" (Isa. 48:10).

The verb *bāḥan*, "test," is used in parallel to *ṣārap* in several passages (e.g., Isa. 48:10, as emended by the RSV ["try"; MT *bāḥar*, "choose"]; cf. Jer. 9:7 [MT 6]; Zec. 13:9; Ps. 17:3; 26:2; 66:10); and *ḥāqar*, "search" (the heart), occasionally parallels *bāḥan* (e.g., Jer. 17:10; Ps. 139:2f.).

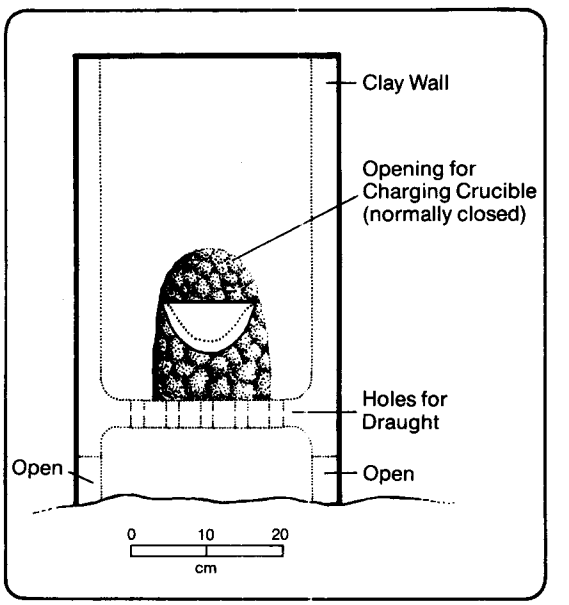
III. A Refining Process.–Selecting from the multitude of possible processes and historical periods, we will describe iron-making in the Early Iron Age in order to illustrate in some detail (but still with obvious simplification) the way that a mined ore was refined.

How did the smith, the metalworker (*ṣōrēp*), go about turning iron ore into metallic iron and then into a usable product? He first had to concentrate the ore by separating it from the gangue; i.e., using his knowledge of the specific gravity of certain elements, he separated the non-valuable materials from the raw ore, probably by washing. Later he roasted the ore in an oven not unlike an ancient bread oven to burn off some of the less important materials. Some gangue remained to be removed in the smelting process.

He now had to remove the oxygen from the mineral compound (iron ore is an oxide of iron and oxygen) by chemical reduction, commonly known as SMELTING, the second stage of the refining process.

Since iron and oxygen have an affinity for each other, the smelting process requires an agent that has an even stronger affinity for oxygen. When iron ore is treated with carbon in a suitable environment, the carbon unites with the oxygen and exits in the form of a gas, leaving

A reconstruction of a Chalcolithic crucible furnace from remains found at Abu Mater in Palestine (after R. F. Tylecote, *History of Metallurgy*)



the iron behind in a purer state; thus iron ore is reduced by reaction with carbon to a metal and a gas. In simple chemical terms the reactions in smelting a hematite ore are: $Fe_2O_3 + 3C \rightarrow 2Fe + 3CO$; i.e., iron ore plus carbon yields metallic iron plus carbon monoxide gas.

As the verb *ṣārap* indicates, "burning" is associated with iron-making, for in practice the chemical reaction takes place hot. A furnace is required, and the heat is supplied by the very chemical agent necessary for the reduction process, i.e., carbon in the form of charcoal.

The most primitive type of FURNACE used for iron-making was the "bowl" furnace, simply a hole in the ground or in rock Later a more developed bowl was used, with a hole for the removal of slag and gangue. (Ores have major and minor mineral components that must be separated in the smelting process, and slag is the material formed by the fusing together of some of the components of a charge, or by reactions with the materials of the furnace, or in later periods by reaction with material added to aid the reduction [a flux].) Another early furnace was the shaft furnace, simply a mud or stone enclosure less than a meter wide and just a bit over a meter high. It was used in much the same way as the early bowl type of furnace.

The metalworker "charged" the furnace with charcoal, set it alight, kept it burning with a bellows (probably of goatskin) perhaps attached to a tuyere (a ceramic or clay tube between the bellows and the fire pit), and then fed it with a little iron ore at a time. The temperature had to be 1150° C for the best smelting (i.e., resulting in the fewest possible impurities in the product). The furnaces of antiquity were hardly more than 50 cm. (20 in.) in diameter and less than that in depth. The amounts of iron made at one time were small indeed. The iron-worker had to learn through trial and error how much time to allow for the process. Waiting too long or using too much charcoal or too little ore resulted in an inferior product, i.e., cast iron rather than the more pure wrought iron. Cast iron is iron that has been reduced but has absorbed some of the carbon in the process, producing a brittle, porous metal that is not as usable for tools or weapons. The product of the smelting process, called the "bloom," settled at the bottom of the bowl, a relatively pure iron that needed further handling.

The third stage of the refining process involved the use of a smithing furnace. Not much was required beyond a charcoal fire, a bellows to enhance the burning, sufficiently long tuyeres to keep the bellows from burning and to direct the blast of air, and the tools to handle hot metal. The smith took a piece of the bloom, placed it in the charcoal fire near the air source, and made the fire hot enough (i.e., 700° C) to work the piece by hammering.

R. A. COUGHENOUR

REFORM; REFORMATION. "Be reformed" is once the AV rendering of the Hebrew niphal of *yāsar,* literally "let oneself be instructed" (Lev. 26:23; RSV "be turned"; NEB "learn discipline"; *see* DISCIPLINE I). The noun "reform" (Gk. *diórthōma*) refers to administrative improvements in Acts 24:2, RSV (cf. NEB "improvement"; the AV "very worthy deeds" is based on the TR, which reads *katórthōma* in place of *diórthōma*). "The time of reformation" (AV, RSV, NEB, He. 9:10) translates *kairós diorthṓseōs.* A better translation of *diórthōsis* may be "the new order" (cf. NIV; Bauer, rev., p. 199), since "the coming of Christ involved a complete reshaping of the structure of Israel's religion" (F. F. Bruce, *Epistle to the Hebrews* [*NICNT,* repr. 1981], p. 197). The AV also uses "reform(ed)" for the cognate verb *diorthóō* (RSV, lit., "be set right") in Wisd. 9:18 and for Lat. *corripio* (RSV, lit., "reprove") in 2 Esd. 8:12.

In church history the Reformation designates a series of reform movements that began in the late 14th cent. to criticize certain aspects of Roman Catholic doctrine and practice and culminated in the 16th cent. with the establishment of the Protestant Churches. The term "Reformed" is applied to churches and doctrines that have come out of the Calvinist Reformation. N. J. O.

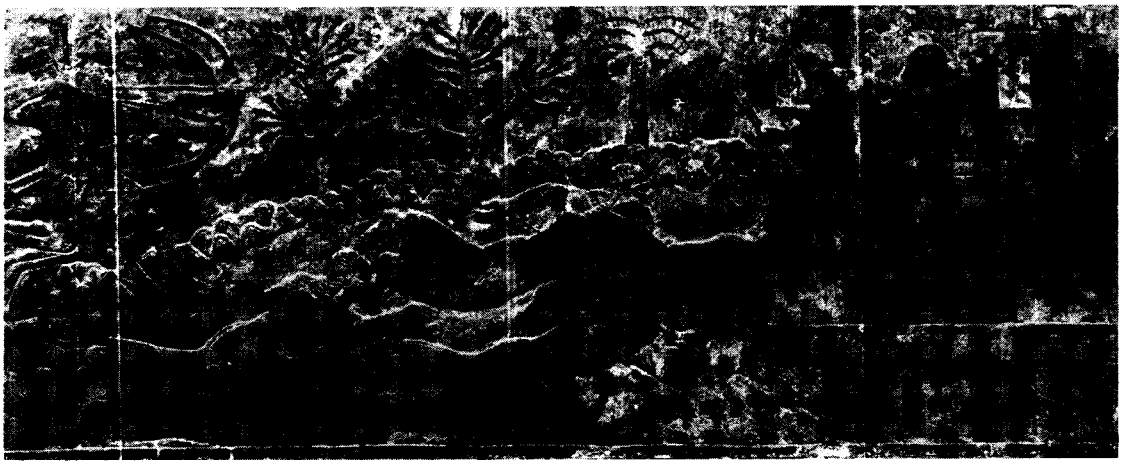
REFRESH [Heb. *sā'aḏ*–'strengthen' (Gen. 18:5; 1 K. 13:7), niphal of *nāpaš*–'catch one's breath' (Ex. 23:12; 31:17; 2 S. 16:14), piel of *rāpaḏ*–'support' (Cant. 2:5), *rāwaḥ*–'be wide,' 'find relief' (1 S. 16:23), piel of *dāšēn*–'make fat' (Prov. 15:30), hiphil of *šûḇ*–'bring back, restore' (25:13); Gk. *anapaúō*–'give rest' (1 Cor. 16:18; Philem. 7, 20), *synanapaúomai*–'find rest with (someone)' (Rom. 15:32), *anapsýchō*–'give a breathing space,' 'revive' (2 Tim. 1:16)]; AV also COMFORT; AV, RSV mg., MAKE FAT (Prov. 15:30); NEB also FIND RELIEF, WARM, etc.; **REFRESHING** [Gk. *anápsyxis*–'breathing space,' 'relief'] (Acts 3:19); NEB RECOVERY; **REFRESHMENT** [Heb. *šiqqûy*–'drink'] (Prov. 3:8); AV MARROW; RSV mg. MEDICINE; NEB LINIMENT. To restore strength and vitality.

Sometimes the reference is primarily to physical refreshment obtained through food and drink (Gen. 18:5; 1 K. 13:7; Cant. 2:5) or rest from work or travel (Ex. 23:12; 31:17; 2 S. 16:14). Other passages refer to emotional or spiritual refreshment, which can be achieved through relief from evil spirits (1 S. 16:23; cf. use of *rāwaḥ* [RSV "find relief"] in Job 32:20, where Job seeks relief from pent-up emotions), through a faithful messenger (Prov. 25:13), or through the loving encouragement of other believers (e.g., Rom. 15:32; 1 Cor. 16:18; Philem. 7, 20). In general, however, physical and spiritual refreshment are not separable; thus trusting in God (Prov. 3:8) and receiving good news (15:30) strengthen both spirit and body (cf. the parallelism in Sir. 26:13; *see also* BONE). The refreshment Paul received from Onesiphorus may have included material support as well as fellowship (2 Tim. 1:16).

Greek *anápsyxis* occurs once in the LXX (RSV "respite," Ex. 8:15 [MT, LXX, 11]) as a translation of Heb. *rᵉwāḥâ* (substantive form of *rāwaḥ*). Its meaning in Acts 3:19 (*kairós anapsýxeōs*; RSV "times of refreshing"), its only NT occurrence, is disputed. Peter may be referring to the physical and spiritual restoration that the Jewish people will enjoy at the consummation of the messianic age if they will repent and acknowledge Jesus as the Messiah (cf. comms.; *TDNT,* IX, *s.v.* ψυχή κτλ.: ἀνάψυξις [E. Schweizer]; *see also* REGENERATION; cf. ESCHATOLOGY III.D).

See also REST; REVIVE. N. J. O.

REFUGE [(nouns) Heb. *maḥseh* or *maḥᵃseh* (Ps. 14:6; 46:1 [MT 2]; 104:18; Prov. 14:26; Isa. 4:6; 28:15, 17; Jer. 17:17; Joel 3:16 [MT 4:16]; etc.), *mā'ôz*–'place of safety,' 'mountain fort' (2 S. 22:33; Ps. 28:8; 37:39; 43:2; Isa. 17:10; Nah. 3:11), *mānôs*–'place of escape' (2 S. 22:3; Ps. 59:16



An alabaster relief from Nimrûd showing Elamites fleeing for refuge in a fortress. They are swimming with the aid of skin floats. From the palace of Ashurnasirpal II, ca. 883-859 B.C. (courtesy of the Trustees of the British Museum)

[MT 17]; 142:4 [MT 5]; Jer. 16:19; 25:35), *sēṯer*–'hiding place' (Isa. 16:4), *māʿôn* (Ps. 71:3), *miśgāḇ* (Ps. 46:7, 11 [MT 8, 12])]; AV also SHELTER, TRUST, HOPE, HABITATION, etc.; NEB also SHELTER, STRONGHOLD, etc.; [(verbs) Heb. *ḥāsâ* ("take refuge," Dt. 32:37; Jgs. 9:15; Ruth 2:12; 2 S. 22:3, 31; Ps. 2:12; 16:1; etc.; "seek refuge," Ps. 17:7; 31:1 [MT 2]; 141:8; Zeph. 3:12; "find refuge," Ps. 91:4; Isa. 14:32), *ôz* ("seek refuge," Ps. 52:7 [MT 9]), piel of *kāsâ*–'cover' ("flee for refuge," Ps. 143:9; Gk. *katapheúgō* ("flee for refuge," He. 6:18)]; AV also (PUT) TRUST (IN), HIDE, etc.; NEB also SEEK SHELTER, FIND SAFETY, SEEK SANCTUARY; CLAIM PROTECTION. *See also* REFUGE, CITIES OF.

The most common words for "refuge" are the Hebrew verb *ḥāsâ* and the derived noun *maḥseh*, which together occur thirty-four times in the Psalms. The AV appropriately translates the verb as "trust," which certainly is its underlying sense in the prayers of the Psalms. Because both the verb and the noun occur so often in poetry, it is hard to tell if they have such a concrete referent as, e.g., *miśgāḇ*, which literally means "fortified tower." *Ḥāsâ* may be no more restricted than our words "protection" and "security." The psalmists often simply reiterate their need to commit their destiny to God and to allow the divine will to govern them, confident that God's love and justice will determine every outcome. The sheer repetition of this need indicates that they knew such trust to be difficult. Repeatedly their prayer is that God will not abandon or shame those who do make Him their refuge (e.g., Ps. 25:20).

The other terms, which are far rarer, are metaphors whose underlying image can be identified. In addition to *miśgāḇ*, "tower," *sēṯer* is related to a verb meaning "hide, conceal," *māʿôz* implies strength or power, *kāsâ* means "cover, clothe," and *mānôs* is derived from a verb that means "flee" (prob. similar in basic concept to Eng. "refugee"). Gk. *katapheúgō* also literally means "flee" (Acts 14:6) and is used metaphorically in He. 6:18.

Hebrew *māʿôn* does not mean "refuge," but "den, lair," or, more generally, "dwelling place." At Ps. 71:3 the RSV follows the LXX, Targum, and other ancient versions, which apparently were based on Hebrew texts that read *māʿôz*; Heb. *z* is nearly identical to final *n*, which accounts for the variants.

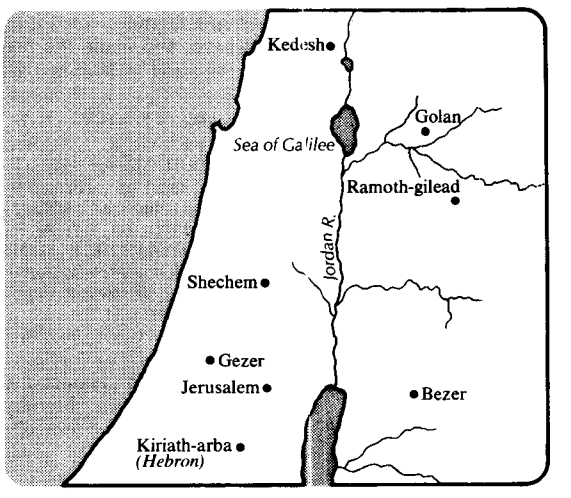
Bibliography.–*TDOT*, V, *s.v.* "ḥāsâ" (Gamberoni).

G. CHAMBERLAIN

REFUGE, CITIES OF [Heb. *ʿārê hammiqlāṭ*]. Certain of the LEVITICAL CITIES (Nu. 35:6; Josh. 21:13, 21, 27, 32, 38; 1 Ch. 6:57, 67 [MT 42, 52]) that were set apart to serve as places of asylum for the accidental manslayer; mentioned principally in Nu. 35:9-34; and Josh. 20:1-9 (cf. Ex. 21:12-14; Dt. 4:41-43; 19:1-10). According to Josh. 20:7f., the six cities designated for this purpose in Joshua's lifetime were Kedesh, Shechem, Kiriath-arba (Hebron), Bezer, Ramoth-gilead, and Golan.

After each tribe had been assigned its territorial allotment (Josh. 13–19), Joshua, at the command of God, designated the cities of refuge. They were fairly evenly distributed throughout Israel. West of the Jordan were Kedesh (Tell Qades), about 24 km. (15 mi.) N of the Sea of Galilee in the land of Naphtali; Shechem (Tell Balâṭah), 32 km. (20 mi.) W of the Jordan in the range called the hills of Ephraim (tribe of Ephraim); and Hebron (el-Khalîl), about 30 km. (19 mi.) S of Jerusalem (tribe of Judah). East of the Jordan were Bezer (Umm el-ʿAmad?), 13 km. (8 mi) NE of Medeba (tribe of Reuben); Ramoth-gilead (Tell Rāmîth), 40 km. (25 mi.) ESE of the Sea of Galilee (tribe of Gad); and Golan (Saḥem el-Jōlân?) in the highlands 32 km. (20 mi) E of the Sea of Galilee (tribe of Manasseh).

Many peoples of the ancient Near East maintained certain places as asylums for fugitives accused of crimes;



once the fugitive was within the sanctuary he could not be apprehended or punished, whether guilty or innocent. Israel also had places of asylum, but in the strict laws of the Pentateuch (cf. esp. Ex. 21:23-25) murder had to be punished by the death of the murderer (vv. 12, 14; Nu. 35:16-21). One who intentionally killed another person was to be put to death by the "avenger of blood" (*see* AVENGER), the nearest male relative of the deceased. Such retribution could not be negated by the payment of "blood money" to the relatives of the deceased in compensation for the murder (v. 31). A distinction was made, however, between the person who killed someone accidentally and the one who did so wilfully. The cities of refuge were established for unintentional manslayers. To prevent the "avenger of blood" from taking vengeance upon the accused before the nature of the homicide could be established, the Israelites were commanded to give every assistance to the fugitive in his flight to one of the designated cities (v. 25). Roads to these cities were to be properly maintained and signposted, and the location of each city was such that none was more than one day's journey from any point in the land of Israel (Dt. 19:3; cf. v. 6).

Apparently the altar of Yahweh was a place of asylum even before the establishment of the cities of refuge (Ex. 21:13f.). Cities were needed, however, as permanent places of refuge. In later times it appears that the fugitive was permitted to grasp the horns of the altar, and if the homicide was accidental he was granted safe passage to the nearest city of refuge (cf. 1 K. 1:50; 2:28-30). According to Nu. 35:24 the manslayer was then judged by the "congregation"; i.e., he was returned, under a protective escort provided by the city, to the place from which he came, and tribal elders unrelated to either the deceased or the accused were to set up an investigative tribunal to establish the nature of the homicide. The intentional murderer was to be delivered into the hands of the "avenger of blood," even from the altar itself (Ex. 21:14; cf. 1 K. 2:28-34), but if the death was accidental, the accused was to be returned to one of the cities of refuge (Nu. 35:25). The manslayer had to reside in that city until the natural death of the high priest (v. 28; it is unclear whether this refers to the leading priest of Israel or merely of the city), which was possibly viewed as expiation for the accidental death (cf. T.B. *Makkoth* 11b). If the manslayer went beyond the city's boundary before the high priest's death, the avenger of blood could kill him without being guilty of murder (vv. 26f.). (*See also* PRIEST, HIGH III.)

This system was designed to avoid the possiblity of an endless "blood feud" between families after someone was killed. It was only during the united kingdom period that all six cities were under Israelite control. Only Shechem and Hebron had continuous Hebrew control until their destruction in 722 and 587 B.C. respectively.

S. G. DECLAISSÉ-WALFORD

REFUSE. A term used by the RSV as both a verb and a noun. In the OT the verb usually translates the Hebrew piel of *mā'an*, "refuse" (e.g., Gen. 37:35; Ex. 4:23; Prov. 21:7, 25). Other terms include *mā'as*, "reject" (Isa. 7:15f.; 8:6; cf. AV 1 S. 16:7; Job 34:33; Ps. 78:67; 118:22; Ezk. 5:6; *see also* REJECT), *ḥādal*, "cease" (Ezk. 2:5, 7; 3:11, 27), *hēšîḇ* (hiphil of *šûḇ*) *pānîm*, "turn away from" (1 K. 2:16f., 20), and the hiphil of *qāšâ*, "make hard" (RSV "stubbornly refuse," Ex. 13:15; AV "would hardly"). In the NT the verb represents a variety of terms, including Gk. *arnéomai*, "deny" (Acts 7:35; He. 11:24), *aposteréō*, "rob," "defraud" (1 Cor. 7:5), *apostréphō*, "turn away" (Mt. 5:42), *paraitéomai*, "decline" (1 Tim. 5:11; He. 12:25), and *parakoúō*, "take no heed of" (RSV "refuse to listen," Mt. 18:17). Frequently it represents the negative particle (*ou* or *mē*) either alone or with a verb such as *thélō*, "wish"(e.g., Mt. 2:18), *aphíēmi*, "let go" (Mk. 5:19), *boúlomai*, "wish" (Acts 18:15), or *déchomai*, "accept" (2 Thess. 2:10).

As a noun (or adjective, Jer. 6:30) "refuse" is the RSV translation of the Hebrew infinitive (Lam. 3:45) or niphal part. (Jer. 6:30) of *mā'as* (see above), *sûḥâ*, "trash, garbage" (Isa. 5:25), *mappāl*, "waste" (Am. 8:6); Gk. *perikátharma*, "off-scouring," "what is removed in cleansing" (1 Cor. 4:13), and *skýbalon*, "dung" (Phil. 3:8).

N. J. O.

REGEM rē'gəm [Heb. *regem*–'friend' (?)]. Son of Jahdai; head of a Calebite family (1 Ch. 2:47).

REGEM-MELECH rē'gəm-mel'ək [Heb. *regem meleḵ*]. A member of the deputation sent by the people of Bethel to ask the priests about the propriety of continuing to observe a fast in commemoration of the destruction of the temple (Zec. 7:2). The MT of the passage is badly preserved. Heb. *wᵉregem meleḵ* should probably be emended to read *raḇ-mag hammeleḵ* (supported by the Syr.), which would produce the following translation: "Now the people of Bethel had sent Sharezer the Rab-mag [i.e., chief officer] of the king and his men . . . ." The title RAB-MAG may be a gloss that was introduced because of its application to Nergal-sharezer in Jer. 39:3, 13.

N. J. O.

REGENERATION rē-jen-er-ā'shən [Gk. *palingenesía*–'rebirth, regeneration'] (Tit. 3:5); NEB REBIRTH. The AV also has "regeneration" for the same Greek term in Mt. 19:28 (RSV "new world"; NEB "the world that is to be").

I. Definition
  A. Eschatological
  B. Spiritual
II. Biblical Doctrine
  A. In the OT
  B. In the Teaching of Jesus
  C. In Apostolic Teaching
III. Later Development of the Doctrine

I. Definition.–A. Eschatological. In Mt. 19:28 the RSV translates Gk. *palingenesía* by "new world", which is synonymous with *apokatastásis pántōn*, "establishing all" (Acts 3:21; the vb. occurs in Mt. 17:11, *apokatastḗsei pánta*, "is to restore all things"), and with *anápsyxis*, "refreshing" (Acts 3:19; Gk. text, v. 20). It is supposed that regeneration in this sense denotes the final stage of development of all creation, when God's purposes are fully realized and "all things are put in subjection under him" (1 Cor. 15:27). This is a regeneration in the proper meaning of the word, for it signifies a renovation of all visible things; the old has passed away, and heaven and earth have become new (cf. Rev. 21:1). To the Jew the regeneration thus prophesied was inseparably connected with the reign of the messiah.

Palingenesía occurs in the same or very similar senses in nonbiblical literature. In Stoic philosophy it is used of the renewal of the world (Chrysippus, *Stoic.* 2.191; Boethus Sidonius, *Stoic.* 3.265). Josephus (*Ant.* xi.3.9

66], however, spoke of Israel's *anákatēsis kaí palingenesía tḗs patrídos*, "recovery and rebirth of their native land," after their return from Babylonian captivity. Philo (*De Vita Mosis* i.12) used the word in referring to the post-diluvial epoch of the earth as a new world (cf. 1 Clem. 9:4). Marcus Aurelius (xi.1) spoke of a periodic restoration of all things, stressing the constant recurrence and uniformity of all happenings (cf. Eccl. 1:9). But usually philosophical writings use the term of the reincarnation or subsequent birth of the individual, as in the Buddhist and Pythagorean doctrine of the transmigration of souls (Plutarch, *De Ei apud Delphos* 9; *De Iside et Osiride* 35; Clement of Alexandria, ed. Potter, 539) or else of a revival of life (e.g., Philo. *De Cherubim* 114; *De Posteritate Caini* 124; *De Legatione ad Gaium* 325). Cicero in his letters to Atticus (*Ad Atticum* vi.6) called his return from exile a regeneration, a grant of a new lease on life.

B. Spiritual. The full biblical conception of eschatological regeneration undoubtedly includes a spiritual sense, for it is unthinkable that the eschatological regeneration can exist without a spiritual regeneration of humanity or the individual. An analysis of eschatological regeneration shows, however, that the spiritual conception arose rather late. *Palingenesía* is found in Tit. 3:5, and although its meaning is not absolutely certain, it is generally interpreted in agreement with the numerous nouns and verbs that have given the dogmatic setting to the doctrine of regeneration in Christian theology. Clement of Alexandria was the first to differentiate this meaning from the eschatological one by adding the adjective *pneumatikḗ*, "spiritual" (cf. *anápsyxis*, Acts 3:20 [AV, RSV, v. 19]; *see* REFRESH). In this spiritual sense the word regeneration is typically Christian, although the OT contains many adumbrations of the spiritual process.

II. Biblical Doctrine.–A. In the OT. It is well known that in the earlier portions of the OT, and to a certain degree throughout it, religion is generally understood as a national possession whose blessings are largely visible and tangible. Thus regeneration — although no technical expression had yet been coined for the process — is an eschatological idea in the OT. Whether the divine promises refer to the messianic age or are to be realized earlier, they all refer to the nation of Israel as such and to individuals only so far as they partake of the nation's blessings. This is true even where the prophesied blessings are only spiritual (e.g., Isa. 60:21f.). Most people of Israel therefore were scarcely aware that the conditions for attaining these divine promises were more than ceremonial and ritual. Soon, however, great disasters, which threatened to overthrow the national entity, and the captivity and dispersion, which caused national functions to be almost if not altogether discontinued, assisted in the growth of a sense of individual or personal responsibility before God. The sin of Israel was recognized as the sin of the individual, which could be removed only by individual repentance and cleansing. This is best seen in the stirring appeals ofthe exilic prophets, who frequently preached that a change of attitude toward God is necessary for such regeneration. This attitudinal change can only be understood as a turning of the individual to the Lord.

Here, too, no ceremony or sacrifice is sufficient, but only an interposition of divine grace, which is described as a washing and sprinkling from all iniquity and sin (Isa. 1:16; Jer. 13:23). Already in Isa. 52:15, AV, RV (but cf. RSV, NEB) the sprinkling of many nations is mentioned; it was soon understood as the "baptism" that proselytes had to undergo before their reception into the covenant of Israel. It was the symbol of a radical cleansing like that of a "new-born babe," which was one of the designations of the proselyte (cf. Ps. 87:5; see also the tractate *Yebamoth* 62a). Would it be surprising that Israel, which had been guilty of many sins of the Gentiles, needed a similar baptism and sprinkling? This is what Ezk. 36:25 suggests: "I will sprinkle clean water upon you, and you shall be clean from all your uncleannesses, and from all your idols I will cleanse you." Other passages allude to the cleansing and refining power of fire (e.g., Mal. 3:2f.); there is little doubt that John the Baptist found in such passages the ground for his practice of baptizing the Jews who came to him (Mt. 3:1-12; Lk. 3:2-9; Jn. 1:25-28).

Israel's turning to God was meant to be an inward change of attitude toward Him. Isaiah and Jeremiah drew attention to this (Isa. 57:15; Jer. 24:7; 31:33-35; 32:38-40). Here again reference is made to individuals, not just to the people in general (Jer. 31:34). The promised regeneration lovingly offered by God is to be the token of a new covenant between Him and His people (Jer. 31:31; Ezk. 11:9-21; 18:31f.; 37:23f.).

Such a renewing and cleansing are actuallz what Dt. 30:6 promises, a circumcision of the heart rather than of the flesh, the token of the former (Abrahamic) covenant (Jer. 4:4). As God takes the initiative in making the covenant, the conviction takes root that human sin and depravity can be effectually eliminated only by His act of renewing and transforming the human heart (Hos. 14:4). The classical expression of this conviction is found in the prayer of David: "Create in me a clean heart, O God, and put a new and right spirit within me. Cast me not away from thy presence, and take not thy holy Spirit from me. Restore to me the joy of thy salvation, and uphold me with a willing spirit" (Ps. 51:10-12 [MT 12-14]). Jeremiah put the following words into the mouth of Ephraim: "Thou hast chastened me, and I was chastened" (Jer. 31:18). Speaking more clearly than any OT passages, John the Baptist, forerunner of Christ and last flaming torch of the time of the earlier covenant, told of a baptism not of water but of the Holy Spirit and of fire (Mt. 3:11; Lk. 3:16; Jn. 1:33), leading thus to the realization of OT foreshadowings that became possible by faith in Christ.

B. In the Teaching of Jesus. In the teaching of Jesus the need of regeneration has a prominent place. The OT had succeeded — and even the gentile conscience agreed with it — in convincing the people of this need. The clearest assertion of this need and the explanation of the doctrine of regeneration are found in Jesus' conversation with Nicodemus (Jn. 3). The need is based upon (1) the observation that people, even the most punctilious observers of the law, are dead and therefore unable to meet the demands of God. Only He who gave life at the beginning can give the (spiritual) life necessary to do His will. (2) Humanity has fallen from its divinely appointed sphere, the realm of the spiit, the Kingdom of God, and now lives the perishing earthly life. People can live the spiritual life that God requires only by having a new spiritual nature imparted to them, by being "born anew" (Jn. 3:3, RSV mg. "from above"; Gk. *ánōthen*), "of the Spirit" (vv. 6, 8).

These words are a NT exegesis of Ezekiel's vision of the dead bones (37:1-10). The "breath" or "spirit" of God alone can give life to the the spiritually dead.

But regeneration, according to Jesus, is more than life; it is also purity. Since God is pure and sinless, none but the pure in heart can see Him (Mt. 5:8). This was always recognized as impossible to mere human endeavor.

Bildad the Shuhite and each of his friends expressed such thoughts: "Can mortal man be righteous before God? Can a man be pure before his Maker?" (Job 4:17). "Who can bring a clean thing out of an unclean?" (14:4). "Behold, even the moon is not bright and the stars are not clean in his sight; how much less man, who is a maggot, and the son of man, who is a worm!" (25:5f.).

To change this lost condition and to impart this new life were what Jesus claimed as His God-appointed task: "For the Son of man came to seek and to save the lost" (Lk. 19:10); "I came that they may have life, and have it abundantly" (Jn. 10:10). This new life is eternal and imperishable (v. 10:28) and is imparted by Jesus Himself: "It is the spirit that gives life, the flesh is of no avail; the words that I have spoken to you are spirit and life" (6:63). This life can be received by believing in Christ or by coming to Him (14:6). By faith sinners receive power that enables them to overcome sin (8:11).

The parables of Jesus further illustrate this doctrine. The prodigal son is declared to have been "dead" and to be "alive again" (Lk. 15:24). The new life from God is compared to a wedding garment, the gift of the inviting king to a guest, who refused it and in consequence is "cast into the outer darkness" (Mt. 22:11-13).

Finally this regeneration, this new life, is explained as the knowledge of God and His Christ: "And this is eternal life, that they know thee the only true God, and Jesus Christ whom thou hast sent" (Jn. 17:3). This seems to be an allusion to Hos. 4:6: "My people are destroyed for lack of knowledge; because you have rejected knowledge, I reject you from being a priest to me."

C. In Apostolic Teaching. In general the apostles' teaching on regeneration is a development of Jesus' teaching on the lines of the OT adumbrations. Since the personal character of these OT writers differed considerably, it is remarkable that their views show such concord. Although Paul put more emphasis on the specific facts of santification and justification by faith than on the more comprehensive head of regeneration, he did plainly state the need for the latter. Regeneration is necessary to salvation for all mankind. The body is dead because of sin (Rom. 8:3-11; Eph. 2:1); the flesh is at enmity with God (Eph. 2:15). Paul thus distinctly taught that a new life is in store for those who have been spiritually dead. To the Ephesians he wrote, "And you he made alive, when you were dead through the trespasses and sins in which you once walked" (2:1f.), and later, "God, who is rich in mercy, . . . made us alive together with Christ" (vv. 4f.). A spiritual resurrection has taken place. This regeneration causes a complete revolution in the believers, by which they pass from under the law of sin and death to come under "the law of the Spirit of life in Christ Jesus" (Rom. 8:2). The change is so radical that it is possible to speak of a "new creation" (2 Cor. 5:17; Gal. 6:15), of a "new nature created after the likeness of God in true righteousness and holiness" (Eph. 4:24), "which is being renewed in knowledge after the image of its creator" (Col. 3:10).

Paul was equally explicit regarding the agent of this change: the "Spirit of God" or "of Christ" (Rom. 8). By Him believers are assured of their new status (Gal. 4:6), and are adopted into the family of God (*huiothesía*, Rom. 8:15; Gal. 4:5). Thus Paul contrasted the "first man Adam," who became the leader in transgression, with the "last Adam," the giver of the life of righteousness (1 Cor. 15:45). Paul himself experienced this change and henceforth exhibited the powers of the unseen world in his life of service. "It is no longer I who live," he exclaimed, "but Christ who lives in me; and the life I now live in the flesh I live by faith in the Son of God, who loved me and gave himself for me" (Gal. 2:20).

Regeneration for Paul, no less than for Jesus, is connected with the conception of purity and knowledge. Paul stated in Tit. 3:5, "He saved us . . . by the washing of regeneration and renewal in the Holy Spirit." 1 Cor. 12:13 calls such cleansing the baptism by the Holy Spirit in agreement with the oft-repeated promise (Joel 2:28 [MT 3:1]; Mt. 3:11; Mk. 1:8; Lk. 3:16; Acts 1:5; 11:16). Of course these passages do not refer to mere water baptism any more than Ezk. 36:25 does. As water cleanses the outer body, so the spirit purifies the inner person (cf. 1 Cor. 6:11; 1 Pet. 3:21).

The doctrine that regeneration results in true knowledge of Christ is seen in Eph. 3:15-19 and 4:17-24, where the darkened understanding and ignorance of natural man are placed in contradistinction to the enlightenment of the new life (see also Col. 3:10). The Church redeemed and regenerated is to be an "inheritance," a special "possession" of the Lord (Eph. 1:11-14), and the whole creation is to participate in the final redemption and adoption (Rom. 8:21-23).

James found less occasion to touch this subject than the other NT writers. His Epistle is more ethical than dogmatic; yet his ethics are based on dogmatic presuppositions that fully agree with the teaching of other apostles. Faith to him is the human response to God's desire to impart His nature to humanity, and therefore the indispensable means of securing the full benefits of the new life, i.e., the sin-conquering power (1:2-4), spiritual enlightenment (v. 5), and purity (v. 27). But James doubtlessly referred to regeneration in v. 18: "Of his own will he brought us forth by the word of truth that we should be a kind of first fruits of his creatures." Some have supposed that these words, which are addressed "to the twelve tribes in the Dispersion" (v. 1), refer not to individual regeneration but to an election of Israel as a nation and so to a Christian Israel. In this case the aftermath would be the redemption of the Gentiles. One may understand the expression "first fruits" in the sense of Rom. 8:21-32, where Paul saw the regeneration of the believing people of God (regardless of nationality) as the first stage in the restoration of all creation. The "implanted word" (Jas. 1:21; cf. 1 Pet.1:23) parallels the Pauline expression "law of the Spirit" (Rom. 8:2).

Peter in his Pentecost sermon used the words "refreshing" (Acts 3:19) and "establishing all that God spoke . . ." (v. 21) of the completion of His plans for the whole creation. Peter accordingly looked here at God's people as a whole. In a similar sense he said in 2 Pet. 3:13, after mentioning "the day of God" (v. 12): "we wait for new heavens and a new earth in which righteousness dwells." He also alluded very plainly to the regeneration of individuals (1 Pet. 1:3, 23). The idea of a second birth of the believers is clearly suggested in the expression "newborn babes" (1 Pet. 2:2) and in the explicit statement of 1:23: "You have been born anew, not of perishable seed but of imperishable, through the living and abiding word of God." It is in this sense that the apostle calls God "Father" (v. 17) and the believers "obedient children" (v. 14). As shown above, the agent of regeneration, the incorruptible seed of the word of God, finds a parallel in Paul's and James's theology. All these expressions probably go back to a word of the Master in Jn. 15:3, that His disciples are made partakers of the word by having received the

spirit. This spirit (cf. 1 Cor. 15:45, "life-giving spirit") is the power of the resurrected Christ active in the life of the believer. By regeneration believers become "a chosen race, a royal priesthood, a holy nation, God's own people" (1 Pet. 2:9). Here the apostle used well-known OT expressions foreshadowing NT graces (Ex. 19:6; Dt. 7:6; Isa. 61:6; 66:21), but he individualized the process of regeneration in full agreement with the increased light that the teaching of Jesus brings.

The theology of Peter also points out the contact of regeneration with purity and holiness (1 Pet. 1:15f.) and true knowledge or obedience (v.. 14; 3:16). It is not surprising that the idea of purity invites the OT parallel of "cleansing by water." The flood washed away the iniquity of the world "in the days of Noah," when "eight persons were saved through water. Baptism, which corresponds to this, now saves you, not as a removal of dirt from the body but as an appeal to God for a clear conscience, through the resurrection of Jesus Christ" (3:20f.).

The teaching of John is very closely allied with that of Jesus, as already shown by the multitude of quotations selected from John's Gospel to illustrate the teaching of the Master. It is especially interesting to note the cases where the apostle didactically elucidated pronouncements of Jesus. In Jn. 7:38f., e.g., Jesus had told how faith in Him would change the lives of His disciples and how "rivers of living water" would issue from their hearts." The evangelist continued in explanation, "Now this he said about the Spirit, which those who believed in him were to receive; for as yet the Spirit had not been given, because Jesus was not yet glorified." This recognition of a special manifestation of divine power, transcending the experience of OT believers, was based on Christ's declaration that He would send "another Counselor [Gk. *paráklētos*], to be with you for ever, even the Spirit of truth" (14:16f.).

In his Epistles John showed that this Spirit bestows a godlike character, which makes "children of God" of those who before were "children of the devil" (1 Jn. 3:10, 24; 4:13, etc.). This regeneration is "eternal life" (5:13) and moral similarity with God, the very character of God in mankind. Since "God is love," the children of God will love (v. 2). Regeneration is also the life of God in mankind, also called fellowship with Christ, victorious life that overcomes the world (v. 4); it is purity (3:3-6) and knowledge (2:20).

The subject of regeneration lies outside the scope of the Epistle to the Hebrews. But the dogma is nowhere contradicted in this Epistle and indeed underlies many of its statements. Christ, the mediator of a better covenant which is "enacted on better promises" (8:6), has made "purification for sins" (1:3). In contradistinction to the first covenant, in which the people approached God by outward forms and ordinances, the "new covenant" (8:13) brings "eternal redemption" (9:12) by a divine purification (4. 14). Christ brings "many sons to glory" and is "the pioneer of their salvation" (2:10). Immature Christians are spoken of (as were the proselytes of the OT) as children, who are to attain the stature, character, and knowledge of the mature. (5:13f.).

J. L. NUELSEN

III. Later Development of the Doctrine.–In the fathers there is no very precise discussion of regeneration, and at a time when conversion from paganism meant a drastic reorientation of life the tendency was natural to see it in close connection with baptism (cf. Jn. 3:5; Tit. 3:5). One does not find here the developed sacramentalism of a later period but rather the sacramental theology that speaks indiscriminately of sign and thing signified. Yet pagan conceptions had a certain influence, so that the fathers may have tended to equate regeneration not merely with the inner grace of baptism but also with its operation.

Examples of patristic language may be found in such varied documents as the Didache, the *Oratio* of Gregory of Nazianzus, and the *Catecheses* of Cyril of Jerusalem. Gregory, e.g., speaks of three births: the natural, the baptismal, and the final birth of resurrection. If Gregory was thinking in terms of inward signification, as seems likely, there is nothing basically wrong in his comparison. In the light of later teachings, however, it has a dangerous implication. Cyril similarly described baptism as an absolution from sin and endowment with heavenly virtues. The thought is surely falsified if it is interpreted along the lines of sacramental mediation. Yet pressure in this direction can hardly be denied.

It is of interest that in Western theology from the time of Augustine baptismal regeneration seems to become increasingly negative as compared with the great NT signification. It meant little more than remission of original and all previous sin, and a new start in life with the help of habitual grace. Yet if the regeneration meant less, the baptismal operation became increasingly important, especially in infants. Augustine did not deny that martyrdom or a perfect conversion could bring regeneration. But neither of these is likely in infants, who thus have absolute need of baptismal mediation. Leo's comparison of the Spirit-filled water of baptism with the Spirit-filled womb of the Virgin helped to foster a more pagan conception of regeneration through the actual water, although the analogy between the Virgin Birth and regeneration is not invalid in itself (cf. Jn. 1:13f.). In medieval Christendom the infant became the normal recipient of baptism; it was thus assumed that baptism confers regeneration, which, however, is simply the cleansng and new beginning. To claim more is to claim too much. It should be noted, however, that there was hesitation to make a clear connection between the Spirit and the water, and that in adults the possibility of regeneration without baptism, or baptism without regeneration, was still accepted (cf. Peter Lombard's *Sentences* iv; Thomas Aquinas *Summa Theol.* iii).

Reformation theology rejected sacramentalist conceptions, and Calvin in particular gave to regeneration a new fulness, equating it with the total renewal of the person by the work of the Spirit through the means of grace. Yet not all non-Roman Catholic theologians followed this understanding. High Church Anglicans of the Waterland tradition inclined to make regeneration a beginning that might or might not be followed by full renovation. The 17th cent. Reformed scholars also equated regeneration with the implanting of a seed from which repentance and faith would spring; they described this process as the effectual calling of the person. In Arminianism a subjective trend manifested itself, regeneration being understood synergistically as the result of faith cooperating with the Spirit in His gracious operation. This might be cautiously stated as follows: Conversion is the human response to God's offer of salvation. This response gives occasion to and is synchronous with the divine act of renewal (regeneration).

In the modern period liberalism has increasingly stressed the subjective element, as though regeneration were no more than a moral (or intellectual) change or religious experience largely explicable in psychological categories. Evangelicalism of the more Arminian type has not basically

resisted this undersanding but even welcomed and adopted it, as though the human movement of repentance and faith were identical with the work of regeneration, the difference being that a supernatural origin in the work of the Spirit has been steadfastly upheld. Thus the distorted objectivism of medieval sacramentalism has been brought almost to its complete opposite. It is interesting to note, however, that the final result is very much the same, namely, a naturalizing of the work of the Spirit and a restricting or psychologizing of its miraculous content.

Four points are necessary to a satisfactory understanding and statement of the biblical doctrine. First, regeneration is to be seen as indeed the work of the Holy Spirit, who is sovereign in His operation and whose initiative need not wait on human response. Second, the Holy Spirit does indeed use the means of grace in His operation, yet not in such a way that an automatic efficacy on the one side or a naturalistic explanation on the other may be assumed. Third, regeneration is not necessarily the same as repentance, faith, and practical conversion, although these are its inseparable manifestations in those who are capable of them. Fourth, regeneration as a birth is obviously initiation to the new life in Christ, but also supremely positive, carrying with it the implication of the whole.

Insofar as regeneration takes place in mankind and finds expression in human forms and consequences, it is naturally open to investigation in human categories and may be compared with analogous phenomena. Nevertheless, like the Virgin Birth (Lk. 1:35), the new birth of the Christian is first and finally the miracle and mystery of the Holy Spirit (Jn. 3:1-8).

REGENERATION, BAPTISMAL. *See* BAPTISMAL REGENERATION.

REGION. The RSV translation of a variety of OT and NT terms, including Heb. *śāḏeh*, "open country, field" (Nu. 21:20; Jgs. 5:4; Neh. 12:29), *ḥeḇel*, "region, land" (Dt. 3:4, 13f.; 1 K. 4:13), *gᵉḇûl*, "boundary" (Josh. 13:11, 30), *gᵉlîlâ*, "district" (Josh. 13:2; 22:10f.; Ezk. 47:8; Joel 3:4); Gk. *chóra*, "district, place" (Mt. 4:16; Lk. 2:8; etc.), pl. of *hórion*, "boundaries, district" (Mt. 2:16; 15:22; etc.), *klíma*, "district, region" (Rom. 15:23; 2 Cor. 11:10; Gal. 1:21), and *perichōros*, "neighboring region" (RSV "region about," "surrounding region," etc.; Mt. 3:5; 14:35; etc.). The RSV has frequently substituted "region" for AV "country," "border," "coast," "field," etc. *See also* BORDER; COUNTRY; DISTRICT.

N. J. O.

REGISTER; REGISTRATION [Heb. *yālaḏ*] (Nu. 1:18); AV "declare their pedigrees"; [*kāṯaḇ*] (Nu. 11:26; 1 Ch. 4:41; Ezr. 2:62; Neh. 7:64; Ps. 87:6; Ezk. 13:9); AV also WRITE; NEB ENROL, ENTER, NAMES, ROLL; [*pāqaḏ*] (1 Ch. 23:24); AV COUNT; NEB ENTER; [*yāḥaś*] (Ezr. 8:3); AV "reckon by genealogy." An official record of tribes, families, or individuals for genealogical purposes or for a particular situation (1 Ch. 4:41). In Ps. 87:6 (cf. 69:28) the Lord registers His worshipers in a metaphor.

See also CENSUS; GENEALOGY.

G. WYPER

REGULATIONS [Heb. *dāṯ*] (Est. 2:12); AV MANNER; NEB PRESCRIBED; [Gk. *dogmatízomai*] ("submit to regulations," Col. 2:20); AV ORDINANCES; NEB DICTATE; [*dikaíōma*] (He. 9:1, 10); AV, NEB, ORDINANCES. Authoritative rules governing conduct or procedures of one sort or another, e.g., the beautification regimen of the Persian harem (Est. 2:12), the cultic legislation of the old covenant (He. 9:1, 10), and legalistic prohibitions imposed on the Christians at Colossae by the "elemental spirits of the universe" (Col. 2:20; *see* ELEMENT).

REHABIAH rē-hə-bī′ə [Heb. *rᵉḥaḇyâ*, *rᵉḥaḇyāhû*–'Yahweh has made wide']. Son of Eliezer and grandson of Moses; head of a Levitical family (1 Ch. 23:17; 24:21; 26:25).

REHEARSE. As used by the AV the term usually means "tell aloud, narrate" (on Ex. 17:14, *see* RECITE) or "repeat" (so RSV in Jgs. 5:11; 1 S. 8:21; 17:31; Sir. 19:7). In Acts 11:4, AV, "rehearsed from the beginning" renders the aorist part. of Gk. *árchomai*, "begin" (cf. RSV, NEB), here used pleonastically with the imperfect of *ektíthēmi*, "explain" (see BDF § 419 [3]; *see also* BEGIN).

REHOB rē′hob [Heb. *rᵉḥôḇ*–'broad place'; Gk. *Roōb*, *Raab*]. The name of at least three different places in northern Palestine.

1. A city "near the entrance of Hamath" (Nu. 13:21). It is probably to be identified with BETH-REHOB (2 S. 10:6, 8), the location of Syrians hired by the Ammonites in their struggle against David. Laish (Dan) was located "in the valley which belongs to Beth-rehob" (Jgs. 18:28). Y. Aharoni identified the *rḥb* in Thutmose III's list as Rehob (Tell el-Balâṭ) (*LBHG*, rev., p. 162). But according to the coordinates he listed (p. 441), this site is in the mountainous region just N of the present Israel-Lebanon border, 16.5 km. (10 mi.) E of Râs en-Nakûrah and about 30 km. (19 mi.) W of the Huleh valley, and this can hardly be described as the valley in which Dan was located.

2. A place mentioned in the Execration Texts (*LBHG*, rev., p. 96; Aharoni and Avi-Yonah, p. 27, map 23), identified with Tell eṣ-Ṣârem, 5.5 km. (3 mi.) SSW of Beth-shean. Aharoni identified this site with the "Valley" in Thutmose III's list (*LBHG*, rev., p. 157 and map 9; cf. Aharoni and Avi-Yonah, map 34) and with the Rehob of Shishak's list (*LBHG*, rev., p. 325 and map 24). This location does not fit the description of any of the biblical villages named Rehob (see *GP*, II, 20).

3. A village of Asher (Josh. 19:28, 30) granted to the Levites (21:31). This Rehob has been identified with Tell el-Gharbī (Tel Bîrâ) in the plain of Acco, about 9 km. (5½ mi.) ESE of Acco. Lying on the eastern edge of the plain, near the Shephelah of Galilee, Tell el-Gharbī could be described by the phrase "with its pasture lands" (21:31). Rehob is also named among the cities from which Asher "did not drive out the [Canaanite] inhabitants" (Jgs. 1:31). This list groups Rehob with other cities that stretch from Aphek (about 10 km. [6 mi.] SSE of Acco) to Sidon; Y. Aharoni noted that the mention of Rehob beside Dor in a list of Ramses II would favor a location in the southern plain of Acco (*LBHG*, rev., pp. 235, 281 n. 135). In the description of the territory allotted to Asher (Josh. 19:24-31) the name Rehob appears twice: once grouped with Cabul, Ebron, Hammon, and Kanah (v. 28), and once grouped with Mahalab, Achzib, Ummah, and

Aphek (v. 30). The identifiable locations in these groups make it difficult to conclude that there were two different villages in Asher named Rehob. But if there were two cities of this name in Asher, possibly the one named in v. 28 is the same as 1 above, since Hammon, Kanah, and Sidon are all in the northern part of Asher (see *WHAB*, plate IV; *GP*, II, 65-67).

Bibliography.–Y. Aharoni and M. Avi-Yonah, *Macmillan Bible Atlas* (rev. ed. 1977), maps 34, 70, 71; *Student Map Manual*, section 6-5. W. S. L. S.

REHOBOAMrē-ə-bō′əm [Heb. *rᵉḥaḇʿām*–possibly 'the divine kinsman has enlarged,' but more probably < *yirḥaḇ ʿām*–'may the people expand'; Gk. *Rhoboam* (Mt. 1:7)]; AV NT ROBOAM. The son and successor of Solomon, the last king to claim the throne of old Israel and the first king of Judah after the division of the kingdom. His mother was Naamah, an Ammonitess. The account of his reign is contained in 1 K. 12:1-24; 14:21-31; 2 Ch. 10–12.

I. Length of His Reign.–According to 1 K. 14:21 par. 2 Ch. 12:13 Rehoboam was forty-nine years old when he began to reign, and his reign lasted for seventeen years; but the LXX states in 1 K. 12:24a (in an extended passage not found in the MT) that he was sixteen years of age at the start of his reign, which lasted twelve years. W. F. Albright (*BASOR*, 100 [Dec. 1945], 20 n.4) gave his dates as 922-915 B.C., E. R. Thiele (*MNHK*, pp. 55f.) as 931-913 B.C. He ascended the throne at Jerusalem immediately upon his father's death, apparently with no opposition -- even from the northern tribes — at first.

II. Disruption of the Kingdom.–Rehoboam went to Shechem, where the northern tribes assembled to ratify his royal position. There is no record of such a ceremony for David or Solomon; but Saul's right to the throne had been ratified at Gilgal after he had defeated the Ammonites (1 S. 11:14f.), so such a ceremony may well have become the normal pattern. At Shechem JEROBOAM, who had previously tried to rebel against Solomon and had fled to the Egyptian court, returned and acted as adviser to the tribesmen. They accordingly agreed to accept Rehoboam as their king if he would lighten the harsh forced service and burdensome taxes of his father. Rehoboam asked for three days to consider the request. He disregarded the advice of men of riper judgment, to win the people by becoming their servant, and followed the counsel of the men of his own age, to rule by sternness rather than by kindness. Thus he told the people, "My father made your yoke heavy, but I will add to your yoke; my father chastised you with whips, but I will chastise you with scorpions" (1 K. 12:14 par.).

Rehoboam, however, had misjudged the temper of the people as well as his own ability. They were ready for rebellion and met his threat with their own slogan: "What portion have we in David? We have no inheritance in the son of Jesse. To your tents, O Israel! Look now to your own house, David" (1 K. 12:16 par.). Thus the ten tribes rejected Rehoboam and chose Jeroboam, their spokesman and able leader, as their king.

Rehoboam, believing in his ability to carry out his threat, sent Adoram his taskmaster (Hadoram, 2 Ch. 10:18), who no doubt had quelled other disturbances, to subdue the people. They, however, enraged by Rehoboam's renewed insolence, stoned this messenger to death (1 K. 12:18). Realizing for the first time the seriousness of the revolt, Rehoboam fled ignominiously back to Jerusalem, king only of Judah and of the adjacent territory of Benjamin, which, 1 K. 12:20 suggests, did not adhere to him very willingly. A small tribe bordering on Jerusalem itself, Benjamin was virtually forced to be loyal to Judah.

III. Underlying Causes of Disruption.–It is a mistake, however, to see in this disruption the shattering of a harmoniously unified kingdom. From the earliest times the confederation of tribes was imperfectly cemented. They seldom united against a common foe. A chain of cities held by the Canaanites, stretching across the country from E to W, kept the north and the south apart. Different geographical characteristics produced different types of life in the two sections. Old jealousies, repeatedly fanned into new flame, intensified the divisions due to natural and artificial causes. David labored hard to break down the old antagonisms, but even in his reign there were two rebellions. Northern Israel had produced many of the strongest leaders of the nation and did not easily submit to a ruler from a Judean dynasty. Solomon, following David's policy of unification, drew the tribes more closely together through the centralization of worship at Jerusalem and through the general splendor of his reign. But he finally widened the gulf between the north and the south through his unjust discriminations, heavy taxes, forced labor, and the general extravagance of his reign. The religion of Yahweh was the only bond capable of holding the nation together, and Solomon's apostasy severed this bond. The prophets, with their profound knowledge of religious and political values, saw less danger to the true worship of Yahweh in a divided kingdom than in a united nation ruled by Rehoboam, who had neither political sagacity nor an adequate conception of the greatness of the religion of Yahweh. Accordingly, Ahijah openly encouraged the revolution (1 K. 11:29-39), while Shemaiah gave it passive support.

IV. Shemaiah Forbids Civil War.–As soon as Rehoboam returned to Jerusalem he collected a large army of 180,000 men (120,000 in LXX B) to bring against Israel. Shemaiah the prophet forbade the expedition, however, on the ground that they should not fight against their brethren and that the division of the kingdom was from God (1 K. 12:22-24 par. 2 Ch. 11:2-4). The army dispersed; nevertheless, "there was war between Rehoboam and Jeroboam continually (1 K. 14:30 par. 2 Ch. 12:15). Many scholars have therefore tended to reject the historicity of 1 K. 12:22-24 par., but there is no necessity to see a discrepancy. This passage clearly speaks of a large campaign, whereas the continual warfare mentioned in 14:30 par. may signify nothing more than border skirmishes that persisted through the reigns of Abijah and Asa, the successors of Rehoboam.

V. Rehoboam's Prosperity.–Rehoboam next strengthened his remaining territory by fortifying a number of cities, doubtless against Egyptian attack, since they were on the roads to Egypt or on the western hills of the Judean Shephelah (2 Ch. 11:5-12). According to vv. 13-17 Rehoboam's kingdom was strengthened by the immigration to Jerusalem of priests and Levites from Israel, who were opposed to the idolatrous worship instituted by Jeroboam. All who were loyal to Yahweh in the northern kingdom followed their priests and Levites to Jerusalem to sacrifice, further strengthening Rehoboam's kingdom. But inasmuch as Rehoboam added to the innovations of his father, erecting pillars of Baal in Jerusalem long before they were common in Israel and permitting other heathen abominations and immoralities (cf. 1 K. 14:21-24), it seems that the true worship of Yahweh received little encouragement from the king himself. A further evidence of Rehoboam's luxurious habits is his possession of a considerable harem, like his father's (2 Ch. 11:18-23).

VI. Sheshonq's Invasion.–The disruption of the monarchy

meant the immediate loss of the empire built up by David and Solomon, although Rehoboam kept control of Edom. Both Hebrew states were much weakened and totally unable to withstand the invasion of Shishak king of Egypt in the fifth year of Rehoboam. Shishak is Sheshonq I, the first king of the 22nd or Bubastite Dynasty, who doubtless hoped to recreate an Asiatic empire for Egypt. According to 2 Ch. 12:3 he had a force of 1200 chariots and 60,000 horsemen, to which Josephus (*Ant.* viii.x.2 [253f.]) added 400,000 foot soldiers, composed of Libyans, Ethiopians, and Sukkiim.

Sheshonq had granted asylum to Jeroboam when he had fled from Solomon (1 K. 11:40; cf. 2 Ch. 10:2, where no Egyptian ruler is named , The LXX (in its addition at 1 K. 12:24e) states that Jeroboam married Ano, the sister of Shishak's wife, thus becoming brother-in-law to the king of Egypt. It is therefore easy to suppose that Jeroboam, finding difficulty in holding his own against his rival Rehoboam, called in the aid of his former protector. But the more than 150 captured towns that are inscribed on the temple at Karnak in Upper Egypt include some belonging to Israel as well as Judah; thus Sheshonq could hardly have invaded Palestine as Jeroboam's ally. It is more probable that Sheshonq found Jeroboam to be a rebellious vassal rather than an ally, and that the historicity of the LXX details may be doubted. T. H. Robinson's suggestion (Robinson and W. O. E. Oesterley, *History of Israel* [1932], I, 275) that Rehoboam had conquered all the northern cities named and that Sheshonq restored them to Jeroboam is most improbable; it flatly contradicts 1 K. 12:22-24 par., and in any case it is extremely unlikely that Rehoboam could have penetrated as far N as Megiddo (where Sheshonq left a triumphal stele).

The Chronicler saw Sheshonq as God's instrument for punishing Rehoboam and the people for national apostasy. Jerusalem was not likely captured (neither the Bible nor Sheshonq claims that it was), but Rehoboam had to yield a vast tribute: all the palace and temple treasures, including the shields of gold made by Solomon. For these Rehoboam later substituted shields of brass (1 K. 14:26f. par.).

Fortunately the Egyptians soon withdrew, and Judah gradually recovered before the death of Rehoboam (2 Ch. 12:12). His son Abijah succeeded him as king of Judah.

S. K. MOSIMAN
D. F. PAYNE

REHOBOTH rə-hō'bəth [Heb. *rᵉḥôḇôṯ*–'broad places']. A well mentioned in Gen. 26:22, dug by Isaac's servants after two previous sites had been abandoned to the shepherds of Gerar, who laid claim to the waters (vv. 19-22). The LXX translates the Hebrew word with Gk. *eurychōría*, "open spaces." The name signifies God's having provided "room" for Abraham's descendants among the inhabitants of Canaan.

The location seems to be in the valley of Gerar, in the vicinity of Esek and Sitnah and probably not far from Beer-sheba (Gen. 26:19-23). A suggested site is Ruḥaibeh, which appears to preserve the name, on Wâdī Ruḥaibeh about 35 km. (22 mi.) SW of Beer-sheba (Palmer, cited in BDB, p. 932). Simons (*GTTOT*, § 174, p. 66) located Raḥeibah, probably the same site, on a Nabatean trade route in the Negeb.

W. S. L. S. G. H. WILSON

REHOBOTH ON THE EUPHRATES [Heb. *rᵉ hōḇôṯ hannāhār*–'Rehoboth by the river'; Gk. *Rhoōbōth* or *Rhōbōth hē pará potamón*]; AV REHOBOTH BY THE RIVER; NEB REHOBOTH ON THE RIVER. A city, the home of Shaul king of Edom (Gen. 36:37; 1 Ch. 1:48). The RSV translation reflects the general use of Heb. *nāhār* for large rivers, specifically the Euphrates and the Nile. But *nāhār* is also used of smaller streams and canals (see BDB, pp. 625f.), and the king of Edom almost certainly had his residence in Edom and not on the Euphrates; thus the RSV rendering is to be rejected.

The river has been identified as Wâdī er-Riḥāb, a tributary of Seil el-Qeraḥi, just S of Wâdī el-Ḥesā (Brook Zered), the boundary between Edom and Moab. Rehoboth has been identified as Khirbet ʿAin Riḥāb, by the source of Wâdī er-Riḥāb, but Abel suggested as possibly preferable Khirbet Musrab, 5 km. (3 mi.) farther W (*GP*, II, 434f.). Simons thought "the River" here refers to Wâdī el-Ḥesā, which was the border river (*GTTOT*, § 391).

W. S. L. S.

REHOBOTH-IR rə-hō'bəth-ēr' [Heb. *rᵉḥōḇōṯ-ʿîr*; LXX *hē Rhoōbōs (Rhoōbōth) pólis*]. The second of the places named in connection with Nimrod in Gen. 10:11, mentioned between Nineveh and Calah. No such place is known from extrabiblical sources. The Hebrew literally means "the wide spaces of the city." The name has been connected with a suburb of Nineveh known from Neo-Assyrian times (Esarhaddon) as *Rêbīt Ninua*, literally, "the squares and environs of Nineveh" (cf. *rêbīt āli*, a collective term for the "open spaces" or "unbuilt areas" on the outskirts of a city). Rehoboth-Ir may therefore refer to a suburb on the outskirts of the great city of Nineveh (cf. Jonah 3:3).

F. W. BUSH

REHUM rē'həm [Heb. *rᵉḥûm*, *rᵉḥum*–'(the deity) has been merciful'; Gk. *Rheoum*].

1. One of the twelve leaders of the Jewish community returning with Zerubbabel from exile (Ezr. 2:2). See also 1 Esd. 5:8 (Gk. *Rhoïmos*) and Neh. 7:7, which reads (Heb. *nᵉḥûm*) by orthographic confusion in transmission.

2. An official of high rank in the Persian government who co-authored a letter to King Artaxerxes opposing and eventually halting the rebuilding of the walls of Jerusalem (Ezr. 4:8f., 17, 23). See also 1 Esd. 2:16-30 (LXX 12-26; Gk. *Rhaoumos*).

3. A Levite, a son of Bani, who served under Nehemiah during the rebuilding of the walls of Jerusalem (Neh. 3:17).

4. One of the "leaders of the people" who signed the covenant of Ezra (Neh. 10:25). His identity is uncertain. He may have been the same man as **3** above or related to **1** above.

5. Possibly another priest who returned with Zerubbabel (Neh. 12:3). This passage is problematic (the name is omitted in LXX), however. A comparison with Neh. 12:15 and 1 Ch. 24:8 makes it likely that the text originally read Harim (Heb. *ḥārim*) which was corrupted in transmission (see *BHS*).

See *IP*, pp. 38, 187.

R. L. PRATT, JR.

REI rē, rē'ī [Heb. *rēʿî*–'friendly'; LXX *Rhēsei*]. A royal officer listed among those who did not support Adonijah in his bid for succession to the throne of David (1 K. 1:8). The lack of reference to the function of Shimei and Rei

(cf. Zadok and Nathan, mentioned earlier) has raised doubts about the text, and some ancient versions offer variant readings. Instead of "Shimei and Rei," Lucian reads "Shimei and his friends," and Josephus has "Shimei the friend of David." J. Gray (*I & II Kings* [*OTL*, 2nd ed. 1970], p. 79 note a) followed Josephus, suggesting that Shimei held the office of "friend of the king" referred to in 4:5. This reading is doubtful, however, because it involves too wide a variant from the MT (reading *wᵉšimᵉʿî rēʿeh dāwîḏ* in place of *šimᵉʿî wᵉrēʿî*). It is probably best to read "Shimei and Rei" with the MT. N. J. O.

REIGN [(verbs) Heb. *mālaḵ*–'be king, reign' (Gen. 37:8; 1 S. 11:12; Ps. 146:10; Prov. 8:15; etc.), *yāšaḇ*–'sit (enthroned)' (Lam. 5:19); Gk. *basileúō*–'be king, rule' (Mt. 2:22; Lk. 1:33; Rom. 5:14, 17, 21; Rev. 5:10; etc.), *symbasileúō*–'rule with' ("reign with," 2 Tim. 2:12)]; AV also REMAIN (Lam. 5:19); NEB also ENTHRONED (Lam. 5:19), RULE, SUCCEED, COME TO (USURP, etc.) THE THRONE, BE KING, GOVERN, etc.; [(nouns) Heb. *malḵûṯ*–'royal power, dominion' (1 Ch. 26:31; 2 Ch. 3:2; Ezr. 4:5f.; Neh. 12:22; etc.), *mamlāḵâ*–'royal sovereignty' (Jer. 27:1; 28:1), *mamlāḵûṯ*–'royal dominion' (Jer. 26:1); Aram. *malḵû* (Ezr. 4:24; 6:15; Dnl. 6:28 [MT 29]); Gk. *hēgemonía*–'chief command' (Lk. 3:1)]; NEB also EMPEROR (Lk. 3:1). In several passages the RSV supplies "reign" from the context (1 K. 15:33; 16:8, 23; 2 K. 13:1, 10; 14:23; 15:17, 23, 27; 17:1; in 1 S. 10:1 it follows the LXX). Likewise, in 1 Tim. 5:21 the RSV and NEB supply "rule" (Gk. *taúta*, lit. "things"; so AV) from the context.

In the RSV OT "reign" as a verb occurs over 280 times, in all instances but one representing Heb. *mālaḵ*, derived from *melek*, "king." It refers most frequently to the reigns of the kings of Judah and Israel. The term also appears in the angry question of Joseph's brothers, "Are you indeed to reign over us?" and in the fable of Jgs. 9:8-15, as well as in references to the reigning of Yahweh (Ex. 15:18; 1 Ch. 16:31; Ps. 146:10) and the Messiah (Isa. 32:1; Jer. 23:5).

The noun "reign" occurs nearly forty times, almost always in a date-formula, e.g., "in the fourth year of Solomon's reign" (1 K. 6:1), or "in the second month of the fourth year of his reign" (2 Ch. 3:2). Ezra, Nehemiah, Esther, and Daniel refer to the reigns of pagan rulers, namely, Darius, Ahasuerus, Artaxerxes, Nebuchadnezzar, Cyrus, and Belshazzar. The nine uses of the noun not found in date-formulas all refer to an undesignated period of time when a particular king was in power, e.g., "Daniel prospered during the reign of Darius" (Dnl. 6:28; cf. 2 Ch. 29:19; Ezr. 4:5f.; 7:1; 8:1; Neh. 12:22). The OT nouns for "reign" are also frequently rendered "kingdom."

In the NT the verb "reign" represents Gk. *basileúō* nineteen times and *symbasileúō* once. It is used most frequently in the literal sense, e.g., in reference to the civil rule of Archelaus (Mt. 2:22), to the sovereign power of God (Rev. 11:17; 19:6), to the messianic kingship of Christ (Lk. 1:33; 1 Cor. 15:25), and to the reign of God and Christ together (Rev. 11:15). In several passages it refers to the future glorious state of believers (2 Tim. 2:12; Rev. 5:10; 20:4, 6; 22:5); cf. 1 Cor. 4:8, where Paul with great irony expresses the wish that the Corinthian Christians were already reigning as some seemed to think they were. In Romans Paul uses the word six times in a figurative sense to emphasize the power of death (Rom. 5:14, 17), sin (5:21; 6:12), and grace (5:21). The Roman Christians are urged to cooperate with grace in refusing to allow sin to have any continuing dominance over them (6:12-14).

REINS. An AV term derived from Lat. *renes*, "kidneys." *See* HEART; KIDNEYS (Job 16:13); SOUL (Prov. 23:16); LOINS (Isa. 11:5); MIND (Rev. 2:23).

REJECT [Heb. *māʾas* (Nu. 11:20; 1 S. 8:7; 10:19; 2 K. 17:20; Job 8:20; Ps. 118:22; Isa. 5:24; Jer. 33:24, 26; Hos. 4:6; etc.), *zānaḥ* (Ps. 60:1, 10 [MT 3, 12]; 108:11 [MT 12]; Zec. 10:6), *nāṭaš*–'leave unheeded,' 'abandon' (Prov. 1:8; Isa. 2:6; Jer. 15:6), *ʿāzaḇ*–'leave, abandon, forsake' (Prov. 10:17), *ḥāḏēl*–'inconsequential, rejected' (Isa. 53:3), hiphil of *sûr*– 'deflect, turn aside, repudiate' (Ps. 66:20); Gk. *apodokimázō*–'declare useless' (Mt. 21:42; Mk. 8:31; 12:10; Lk. 9:22; He. 12:17; 1 Pet. 2:4, 7; etc.), *athetéō*–'declare invalid, nullify,' 'reject, not recognize' (Mk. 7:9; Lk. 7:30; 10:16; Jude 8), *apostréphō*–'repudiate' (Tit. 1:14; He. 12:25), *exouthenéō*–'reject with contempt' (Acts 4:11), *apōthéō*–'push aside' (Rom. 11:1f.; 1 Tim. 1:19), *apóblētos*–'rejected' (1 Tim. 4:4)]; AV also DESPISE, REFUSE, ABHOR, FORSAKE, CAST OFF, etc.; NEB also CAST OFF, ABANDON, REPUDIATE, SET ASIDE, etc.; **REJECTION** [Gk. *apobolḗ* (Rom. 11:15)]; AV CASTING AWAY.

Most of the OT instances reflect Heb. *māʾas*, which seems to carry a connotation of treating something with disdain. Outside of its use in Ps. 118:22, it occurs primarily in the historical and the prophetical books. In 1 S. 8:7 and 10:19 it refers to the rejection of God implied by Israel's demand for a king. It occurs four more times (1 S. 15:23, 26; 16:1, 7) in reference to God's rejection of Saul, the king that Israel desired. Finally, it appears in 2 K. 17:20, a Deuteronomic summary of the theological reasons for Israel's destruction by Assyria in 722 B.C. Thus the word constitutes a leitmotif that ties together the whole history of Israel's incomprehensible self-destruction (cf. also Ps. 78:59, 67). In the prophets the word predominantly refers either to Israel's rejection of God and His teaching (e.g., Jer. 6:19) or, correspondingly, to God's rejection of a disobedient people (e.g., 7:29).

Isaiah 53:3 is the well-known verse describing the Suffering Servant as one who is "despised and rejected [*ḥāḏēl*] of men." *Ḥdl* the verbal root of *ḥāḏēl*, is not rare, but has a variety of meanings, ranging from "cease (doing something)" to "ignore." The derived adjective can mean "transitory" or "insubstantial" (RSV "fleeting" [Ps. 39:4 (MT 5)]), and in Isaiah might simply mean "inconsequential, easily overlooked." The NEB "shrink from sight" is most unlikely.

In the NT several occurrences of "reject" appear in references made to Ps. 118:22 -- "the very stone which the builders rejected" (Gk. *apodokimázō* in Mt. 21:42; Mk. 12:10; Lk. 20:17; 1 Pet. 2:7; cf. Acts 4:11). Just as God's rejection of Israel and its king is the mystery that pervades the theme of rejection in the OT (cf. also Rom. 11:1f.), so the mystery of the disgraceful death of the Messiah dominates the NT. Several NT texts refer to the attempts Jesus made to teach His disciples that the Son of man must be rejected (Mk. 8:31; Lk. 9:22; 17:25). Other NT instances are largely warnings against the rejection of God's wisdom and grace. Thus for both testaments "rejection" is a most mysterious and troubling theme — our rejection of God, and the apparent divine rejection of those chosen to bring salvation.

G. CHAMBERLAIN

REKEM rē'kəm [Heb. *reqem*–'friendship'].

1. One of the five Midianite chieftains slain by the

Israelites under Moses. In Nu. 31:8 they are called "kings" (Heb. *mᵉlāḵîm*); in Josh. 13:21 they are called "leaders" (*nᵉśî'îm*, "tribal chiefs") and are associated with Sihon king of the Amorites, who was slain at a different time.

2. Head of a Calebite family; son of Hebron and father of Shammai (1 Ch. 2:43f.).

REKEM rē'kəm [Heb. *reqem*–'friendship']. A city within the territory allotted to the tribe of Benjamin (Josh. 18:27); its location is unknown.

  C. Brothers and Sisters
  D. Uncles, Aunts, Cousins, Kinsmen
II. Affinity
  A. Husband and Wife
  B. Parents-in-law and Children-in-law
  C. Brother-in-law
III. Other Domestic Relations
  A. Foster Parents
  B. Servants
  C. Guests
  D. Sojourners

The family or domestic relations of the Bible include those of (1) consanguinity or blood relationship, (2) affinity or marriage relationship, and (3) legal convention. Those of consanguinity may be divided into lineal and collateral groups; the former are those of parents and children, grandparents and grandchildren, and ancestors and descendants in general; the latter are those of brothers and sisters, uncles and aunts in relation to nephews and nieces, cousins of various degrees, including mere tribesmen and even remoter kinsfolk. The relations of affinity include, besides that of husband and wife or concubine, the relations among wives of the same husband and their children, those of father-in-law and mother-in-law in relation to son-in-law and daughter-in-law, and those of brothers-in-law and sisters-in-law. The domestic relations based on legal convention are either legal fictions or the results of agreement. Among the former we must include those of foster-father or -mother and foster-children; among the latter the relations between master and the various classes of servants and slaves held by the ancient Hebrews, those between host and guest, especially where they became covenant brothers, and those between the citizen and the stranger who had attached himself to him for protection. *See also* HOUSEHOLD.

I. Consanguinity. A. In General.–Genealogies were carefully kept by the ancient Hebrews (cf. those of Genesis, Numbers, Chronicles, Ezra, Nehemiah, Matthew, Luke, not only because they formed the basis of a person's title to property (Nu. 27:8-11; cf. 36:1-12), but also because the right of one's family to intermarry with the priestly caste depended on one's pedigree. Descent was traced through the father; a person's closest association was therefore with the father's family and one was ordinarily referred to as the son or daughter of one's father, e.g., Rebekah the daughter of Bethuel (Gen. 24:24), Isaac the son of Abraham (25:19), Joshua the son of Nun, and Caleb the son of Jephunneh (Nu. 14:6). Still, there are instances of persons named for their mothers (e.g., Bethuel the son of Milcah [Gen. 24:24], Joab the son of Zeruiah [2 S. 2:13]), and one's relation with one's mother's family was fully recognized in the laws forbidding incest. No lineal relatives were permitted to intermarry (Lev. 18:7, 10). The relations of ancestors and descendants were considered so close that the ordinary terms of relationship between children and parents were also used consistently in relation to grandparents and remoter ancestors. The wishes of a great-grandfather were respected long after his death as the wishes of a father (Jer. 35:16).

B. Parents and Children. The FATHER (Heb. *'āḇ*; Gk. *patḗr*) was the head of the family (Heb. *mišpāḥâ*) or household (*bayiṯ*), which was a religious (1 S. 20:6, 29; Ex. 12:3; Job 1:5) as well as a social and political unit, consisting usually of more than one nuclear family in the modern sense. As long as polygamy prevailed, a family would include at least the several groups of children of the wives and concubines. The Bible represents the Hebrew father as commanding (Gen. 50:16; Jer. 35:6f.; Prov. 6:20), instructing (Prov. 1:8; 4:1), and rebuking (Gen. 37:10; Nu. 12:14), but at the same time as loving (Gen. 25:28; 37:4; 44:20), pitying (Ps. 103:13), and blessing his household (Gen. 27:41), rejoicing over its triumphs (Prov. 10:1; 15:20) or grieving over its misfortunes (Gen. 37:35).

The MOTHER (Heb. *'ēm*; Gk. *mḗtēr*), too, is represented as displaying love and care (Gen. 25:23; Prov. 4:3; Isa. 49:15; 66:13). To the Hebrew woman childlessness was considered the greatest of misfortunes (e.g., 1 S. 1:2-11,

A family scene from an Egyptian wall painting. At left the priest Nakht and his wife survey the estate. At right they hunt birds and fish in the rushes: Nakht's son hands him sticks for fowling; his daughter draws his attention to a cat (now removed from the picture) that was after birds' eggs or fish (Tomb 52, Thebes, 18th Dynasty) (The Metropolitan Museum of Art)

of Hannah; Gen. 30:1, 23, of Rachel). Children were looked upon as a blessing from God (Ps. 127:3) and as the defenders of the home (vv. 4f.).

In early life a CHILD (Gk. *paidíon, téknon*) was more directly under the control of the mother than of the father; the mother was its first teacher (e.g., Prov. 1:8; 31:1). Thereafter the father was expected to direct the training of the son (Heb. *bēn*; Gk. *huiós*) (Gen. 18:19; Ex. 12:26; 13:8, 14f.; Dt. 6:7), while the daughter (Heb. *baṯ*; Gk. *thygátēr*) probably remained with the mother until her marriage (cf. Mic. 7:6). (*See also* EDUCATION.) The Law required that both parents be treated with honor (Ex. 20:12 par. Dt. 5:16 [the Fifth Commandment]; Ex. 21:15; Lev. 20:9; Dt. 27:16; Prov. 20:20; Ezk. 22:7; Mic. 7:6), obedience (Gen. 28:7; Lev. 19:3; Dt. 21:18-21; Prov. 1:8; 30:17), and love (1 K. 19:20; Prov. 28:24; 30:11). The parents had the right to sell daughters in marriage or into a restricted form of slavery (Ex. 21:7-11; cf. 22:16f.; Neh. 5:5), but never into a life of shame (Lev. 19:29). They were expected to discipline their children (Dt. 8:5; 21:18; Prov. 13:24; cf. Sir. 30:1-13), and in the early days they even exerted the power of life and death over them (Gen. 22; Jgs. 11:39; cf. Mt. 15:4). The Law, however, denied the parents the right to sacrifice their children to Molech (Lev. 18:21; 20:2-5; 2 K. 23:10), and it limited the parents' rights in the case of a rebellious son to a mere right of complaint to the proper authorities (Dt. 21:18-21), who were to put him to death. Infanticide by exposure, such as was common among other ancient peoples, seems never to have been practiced by the Hebrews. That the children were nevertheless considered chattels of the parents seems to be attested from the fact that they could be seized for the debts of the father (2 K. 4:1).

The father could annul the vows of his daughter (Nu. 30:3-5). He was entitled to a bridal sum from the man who married his daughter (Gen. 34:11f.; Dt. 22:29); if his daughter was raped and he did not wish to give her in marriage to the man who raped her, the father was to be compensated by an amount equivalent to the bridal sum (Ex. 22:16f.). A widowed or divorced daughter could return to her father (Gen. 38:11; Lev. 22:13; Ruth 1:15).

At the father's death the mother would become the actual, if not the legal, head of the household (e.g., 2 K. 8:1-6; Tob. 1:8; *see* WIDOW). This was especially true of the queen mother (Heb. *gᵉḇîrâ*), whose name is usually given in the accounts of the kings of Judah (see 1 K. 1:11; 2:19; 11:26; 14:21, 31; 15:2, 10, 13; 22:42; 2 K. 8:26; 10:13; 14:2; 15:2, 33; 18:2; 21:1, 19; 22:1; 23:31, 36; 24:8, 12, 15, 18; 2 Ch. 22:2; Jer. 13:18; 22:26; *see* QUEEN MOTHER). While it is true that the position of the widowed mother depended to some extent on the will of her son (cf. 1 K. 2:18-25), it must be remembered that the sense of filial duty was highly developed among all the classes in Palestine (Josh. 2:13, 18; 6:23; 1 S. 22:3; 2 S. 19:37; 1 K. 19:20). The rebellion of children marked the acme of social degeneration (Mic. 7:6; Prov. 30:11); on the other hand, the "great day of the Lord," according to Malachi (4:5f. [MT 3:23f.]), is one of conciliation of parents and children.

C. Brothers and Sisters. The terms "brother" (Heb. *'āḥ*; Gk. *adelphós*) and "sister" (Heb. *'āḥôṯ*; Gk. *adelphḗ*) apply to children of the same father and mother (Gen. 4:2) and also to children of one father (Gen. 20:12) or of one mother (Gen. 43:7; Lev. 18:9; 20:17). The brother as well as the father had the duty to protect the honor of his sister; thus the sons of Jacob spoke of Dinah as "our daughter" (Gen. 34:17), and Absalom felt more deeply aggrieved over the crime against Tamar than did David himself (2 S. 13:21). The brother's other duties toward a sister were very much like those of a father (cf. Gen. 24:50f.; Cant. 8:8). The Law strictly forbade the intermarriage of brother and sister, whether of the same father and mother or not, whether born at home or born abroad, as a "shameful thing" (Heb. *ḥeseḏ*, to be distinguished from *ḥeseḏ*, "kindness"; Lev. 18:9, 11; 20:17). In earlier times marriage between half-brother and sister had apparently been allowed (Gen. 20:12; cf. 2 S. 13:13). In fact, the OT states that the laws against incest were not obeyed by the Egyptians or the Canaanites (Lev. 18:3; 20:23).

Relationships between full brothers were generally very strong (cf. Gen. 43:34; 45:13; Prov. 17:17); the dwelling of brothers together in unity was considered good and pleasant (Ps. 133:1). Brothers were always ready to protect or avenge each other (2 S. 3:27); indeed the brother or next of kin (the *gō'ēl*) was expected to avenge a death (Nu. 35:19-21; Dt. 19:6; Josh. 20:3; 2 S. 14:11; *see* AVENGER). A brother was also expected to ransom a captive or slave (Lev. 25:48; cf. Ps. 49:7, RSV mg., AV). Half-brothers were of course not as close as full brothers (cf. Joseph and his brothers), and it is not surprising to find the sons of a wife despising and driving out the son of a harlot (Jgs. 11:1, Jephthah).

The words "brother" and "sister" are also used frequently of more distant relationships (see D below; *see also* BROTHER; SISTER).

D. Uncles, Aunts, Cousins, Kinsmen. Hebrew *dôḏ* means both "uncle" and "beloved" (cf. "uncle" in Lev. 10:4; 1 S. 14:50; 2 K. 24:17). It is used of the father's and also of the mother's brother, and the corresponding feminine form (*dôḏâ*) is used of the father's sister (Ex. 6:20) and even of the father's brother's wife (Lev. 18:14; 20:20). Intermarriage between nephew and aunt (i.e., father's sister, mother's sister, or father's brother's wife, or, in general, uncle's wife) was prohibited (Lev. 18:12-14; 20:19f.), although intermarriage between uncle and niece or between cousins was permitted (cf. Nu. 36:11). On the relations between uncle and nephew, compare the biblical accounts of Jacob and Laban, Abraham and Lot, David and Joab, etc. In a more general sense *dôḏ* can denote a "kinsman" (cf. Am. 6:10; see comms.). *Ben dôḏ* is used of a cousin and *baṯ dôḏ* of a female cousin. For other relations of this and remoter degrees, the word for "brother" (Heb. *'āḥ*) is loosely used (e.g., of uncle and nephew, Gen. 13:8; 14:14; etc.; of tribesmen, Lev. 21:10; and of more distant relatives, Dt. 2:4, 8; 23:7). *See also* KIN.

II. Affinity.–A. Husband and Wife. The husband (Heb. *'îš*; cf. *baʿal*, Hos. 2:16; Gk. *anḗr*), though in a sense leaving father and mother for his wife (Heb. *'iššâ*; Gk. *gynḗ*) (Gen. 2:24), under normal conditions remained a member of his father's family. If such passages as Gen. 2:24; 24:5, 67; 30:3; 31:31; Jgs. 8:19; 9:3; etc., indicate the existence in prebiblical times of a matriarchate, the allusions are certainly too vague to justify the predication of its persistence in biblical times. The wife was "taken" by her husband or "given" by her father or, in the case of a servant, by her master or mistress (Gen. 2:22; 16:3; 34:9, 21; etc.), and although the contract was between the men (Gen. 29; 34:16; Ex. 22:16; Dt. 22:29; Ruth 4:10) or the parents (e.g., Gen. 21:21), it is probable that the girl's consent was usually asked (24:58). Love between the young people was given due consideration (cf. the examples of Samson, Shechem, Jacob and Rachel [Gen. 29:18], David and Michal [1 S. 18:20]); in any case, it was known to develop among married people, so that Hosea could compare the attitude of husband toward his wife to that of Yahweh toward Israel.

As a matter of legal right, it is probable that throughout

RELATIONSHIPS, FAMILY

the ancient Near East, long before the events narrated in the book of Esther, every man was "lord in his own house" (Est. 1:22). In fact a precedent for the Persian decree can be traced as far back as the curse that followed the fall (Gen. 3:16). Nevertheless, the biblical record contains many instances in which the wife seems to take the lead in the affairs of the household, as in the case of Samson's parents (Jgs. 13:23), of the Shunammite woman (2 K. 4), of Jael (Jgs. 4:18-22; 5:24-27), of Achsah (Josh. 15:18f.; Jgs. 1:12-15), of Jezebel (1 K. 18:4; ch. 21), of Sapphira (Acts 5:2), and of Zeresh (Est. 5:14), who were at least consulted in the affairs of their several households. Abraham was even commanded by God, "whatever Sarah says to you, do as she tells you" (Gen. 21:12). That most women were not so fortunate is probably best attested by the fact that at least in the earlier times the best of them had to resort to stratagem to accomplish their purposes (as in the cases of Rebekah [Gen. 27:6-17], Rachel [31:34], Leah [30:16], and Abigail [1 S. 25:18-35]) or even to get information as to their husband's affairs (Sarah, Gen. 18:10; Rebekah, 27:5). Perhaps their sisters in later days accomplished their ends by being so contentious as to attract the notice of proverb-collectors (Prov. 21:9; 25:24).

Although there is no evidence that the Hebrew husband exercised the right of life and death or the power of sale over his wife (cf. Ex. 21:8), it is frequently pointed out that the Hebrew wife ordinarily occupied a very subordinate position in the home. This generalization is based on the one-sided divorce doctrine of the OT (Dt. 24:1), on analogy with other ancient laws, on the fact that the wife is often spoken of in conjunction with property (e.g., Ex. 20:17), and on the husband's right to annul the wife's vows (Nu. 30:6). It must not be forgotten, however, that the husband also owed duties to the wife (Ex. 21:10). It must also be kept in mind that great divergence existed at different times and places and in different stations of society. Most of the OT evidence pertains to the wealthier classes. The two extremes of the women who are "at ease" (Isa. 32:9-20; cf. Am. 4:1 6:1-10) and the enterprising "good wife" described in Prov. 31:10-31 are hardly exceeded in the most complex society today. The latter probably gives the fairer picture of the functions of the Hebrew wife in the home, and it is significant that her husband and sons are expected to call her blessed (v. 28). *See also* WOMAN.

It is difficult to estimate the extent to which POLYGAMY and concubinage (*see* CONCUBINE) were practiced in ancient Palestine; probably they were largely confined to the wealthier classes. Polygamy was discouraged even among kings (Dt. 17:17), and concubinage, an outgrowth of slavery, seems not to have been held in high repute (cf. 21:10-14). The position of a less-favored wife (21:15) was naturally unpleasant, and her relations with her husband's "rival" wife were decidedly bitter (Lev. 18:18; 1 S. 1:6; cf. Sir. 37:11) — even when they were sisters (cf. Rachel and Leah, Gen. 30:1). Hence the Law forbade the marrying of two sisters (Lev. 18:18). On the other hand, so strong was the Hebrew woman's desire for children that the childless wife welcomed as her own the children of a maidservant born to her husband (Gen. 30:1-12; etc.). *See also* MARRIAGE; SEX.

B. Parents-in-law and Children-in-law. In Hebrew society, for reasons already explained, a family generally had closer relations with the husband's parents (Heb. masc. *ḥām*, fem. *ḥāmôṯ*) than with the wife's parents (masc. *ḥōṯēn*, fem. *ḥōṯenet*; Gk. *pentherós, pentherá*). Where under special conditions a man remained with his wife's tribe after marriage, as in the case of Jacob serving out his bridal sum (Heb. *mōhar*), or Moses fleeing from the wrath of Pharaoh, or the sons of Elimelech sojourning in Moab because of the famine in Palestine, he maintained his identity with his own tribe and at the first opportunity returned to his own country. The bride, on the other hand, left her people and became a member of her husband's family, with all the rights and duties of a daughter (cf. Mic. 7:6). Thus Judah could order Tamar burned for violation of the obligations of a widow (Gen. 38:24). No doubt the position of the daughter-in-law varied in the Hebrew home. Some, like Esau's foreign wives, were extremely vexing to their parents-in-law (Gen. 26:35; 27:46; 28:8); others were very devoted to them, like Ruth, who said to her mother-in-law, "May the Lord do so to me and more also if even death parts me from you" (Ruth 1:17). Parents-in-law and children-in-law were considered too closely related to intermarry (Lev. 18:15; 20:12, 14).

C. Brother-in-law. A woman's brother, acting *in loco parentis*, might perform all the offices of a father-in-law (Gen. 24:50, 55; 34:11-17). Under normal circumstances brothers-in-law and sisters-in-law were considered too closely related to intermarry (Lev. 18:16, 18; 20:21). But if a man died without a male heir, his brother (Heb. *yāḇām*; *see* HUSBAND'S BROTHER) was expected to marry the childless widow to establish the name of the deceased on his inheritance (Dt. 25:5-10; cf. Gen. 38:8; Ruth 4:1-12). In practice the levirate was probably considered more in the nature of a moral duty than a privilege (Dt. 25:7; Ruth 4:6), and it devolved not only on the brother but on other members of a deceased husband's family in the order of the nearness of their relationship to him (Ruth 3:12; *see also* BROTHER'S WIFE; MARRIAGE IV.A.2). In the Hebrew family brothers-in-law and sisters-in-law would form part of the same household. This relationship, like others, could be characterized by either ideal friendship (e.g., David and Jonathan, 1 S. 18:3; 2 S. 1:26) or petty jealousies (e.g., in the matter of Moses' wife, Nu. 12:1).

III. Other Domestic Relations.–A. Foster Parents. Although the custom of legal adoption was known among the Hurrians (*see* ABRAHAM III), Greeks, Romans, and other ancient peoples, Hebrew law does not mention it. Usually the purpose for legal adoption lay in a childless man's desire to perpetuate his lineage, and in a polygamous society like that of the Hebrews a childless man could remarry instead of resorting to adoption. Nevertheless, examples of adoption do appear in the OT. While still childless, Abraham adopted Eliezer as his heir (Gen. 15:2; according to Josephus *Ant.* i.7.1 [154], Abraham adopted Lot); Jacob adopted his grandsons Manasseh and Ephraim, thereby making them the fathers of tribes (Gen. 48:5); the daughter of Pharaoh adopted Moses (Ex. 2:10; cf. *Ant.* ii.9.7 [232]); and Mordecai adopted his niece Esther (Est. 2:17, 15).

The OT also refers to persons who filled the role of foster parents. The qal part. of Heb. *'āman* (masc. *'ōmēn*, fem. *'ōmenet*) is used of men and women entrusted with the responsibility of caring for dependent children (see *TDOT*, I, 294), e.g., Naomi the "nurse" of Obed (Ruth 4:16), the "nurse" of Mephibosheth (2 S. 4:4), the "guardians" of Ahab's orphaned sons (2 K. 10:1, 5), and Mordecai who "brought up" Esther (Est. 2:7); the term is also used figuratively in Nu. 11:12 ("nurse") and Isa. 49:23 ("foster fathers," "nursing mothers"). Under such conditions foster children obeyed their foster parents as they would their natural parents (Est. 2:20).

In NT times the notion of adoption (Gk. *huiothesía*) was so familiar that Paul used the term figuratively of conversion (Rom. 8:15; 9:4; Gal. 4:5; Eph. 1:5); *see* ADOPTION.

B. Servants. The "family," as the word is used of

ancient peoples, included servants. Heb. *šipḥâ*, "maid-servant," is related to the term *mišpāḥâ*, "family," as Lat. *famulus*, "servant," is related to *familia*, "family." For a discussion of the various classes of servants and slaves in Hebrew society, *see* SERVANT; SLAVE.

C. Guests. When Lot protested against betraying his visitors to the men of Sodom and preferred even to give his daughters to the mob rather than fail in his duties as a host (Gen. 19:8), he was acting on the ancient principle of guest-friendship (cf. Gk. *xenía*), which bound host and guest by sacred ties. In the light of this principle the act of Jael, who received Sisera as a guest and then betrayed him, becomes capable of explanation only on the basis of the intense hatred existing at the time, and justifiable — if at all — only on the theory that all is fair in war (Jgs. 4:18-21; 5:24-27). The nomads of ancient times and even the postexilic Hebrews, like the Arabs of today, were bound by a temporary covenant whenever there was "salt between them," i.e., in the relation of host and guest (Ezr. 4:14; cf. the expression "covenant of salt," 2 Ch. 13:5; Nu. 18:19). In the early Christian Church breaking bread together served as a sort of a *bᵉrîṯ 'aḥîm*, or of covenant brothers. In large households such as that of a king, those who ate at the table were considered members of the household (2 S. 9:11; cf. also 9:7, 10, 13; 19:28; 1 K. 2:7; 4:27; 18:19). *See* ENTERTAIN; GUEST.

D. Sojourners. The Heb. *gēr* ("sojourner" or "alien") was a person who was attached to the household of an influential Hebrew for protection; often he was an employee of the household (Ex. 20:10; Lev. 25:6; Dt. 5:14; 29:11; 31:12). In many respects he was a dependent, but he was distinguished from a slave (Lev. 22:10f.; 25:6). The Mosaic law commands that such aliens be treated with consideration (Ex. 12:49; 20:10; 22:21; 23:9; Lev. 19:33; Dt. 10:18; etc.; cf. Ps. 146:9) and even with love (Lev. 19:34; Dt. 16:14). *See* SOJOURNER.

N. ISAACS E. D. ISAACS

RELAYS [Heb. *ḥᵃlîpâ*] (1 K. 5:14 [MT 28]); AV COURSES. Solomon supplied thirty thousand laborers for Hiram in companies of ten thousand each month. The Israelites spent one month in Lebanon and two months at home.

RELEASE [nouns: Heb. *šᵉmiṭṭâ*–'remission (of a debt)' (Dt. 15:1f., 9; 31:10), *mimkār*–'selling' (Lev. 25:50), *ḥᵃlîpâ*–'change, relief' (Job 14:14); Gk. *áphesis*–'release' (Lk. 4:18), *apolýtrōsis*–'redemption, deliverance' (He. 11:35)]; AV also SALE, CHANGE, DELIVERANCE; NEB also REMISSION, RELIEF, etc.; [verbs: Heb. *yāṣā'*–'go out, become free, revert' (Lev. 25:28, 30f., 33, 54; 27:21; hiphil, Jer. 20:3), *šāmaṭ*–'let fall,' 'remit' (Dt. 15:2; hiphil, v. 3), *pāṭaḥ*–'open, loose' (niphal, Isa. 51:14; piel, Jer. 40:4), hiphil of *nāṭar*–'cause to leap' (Ps. 105:20); Gk. *lýō*–'loose, untie' (Mk. 7:35; Rev. 9:14f.), *apolýō*–'set free, pardon' (Mt. 18:27; 27:15, etc. par.; Acts 3:13; 4:23; He. 13:23)]; AV also GO OUT, LOOSE, LET GO, etc.; NEB also REVERT, REMIT, SET FREE, etc.

Old Testament law provided that every fiftieth year was to be a Year of Jubilee (*see* JUBILEE, YEAR OF) during which every Jewish person was free to return to his own family and his family's property (Lev. 25:10). At this time all Jews who had sold themselves into slavery to fellow Jews were to be set free (vv. 39-55), and all property that had been sold was to revert to its original owner (vv. 13-34). Deuteronomic legislation provided further for a "year of release" (Dt. 15:1-3, 9; lit. "year of remission") every seven years, at which time Jewish creditors were to forgive all debts owed to them by fellow Jews (*see* SABBATICAL YEAR).

The Gospels of Matthew (27:15), Mark (15:6), and John (18:39; the MS support for Lk. 23:17 is weak) all witness to a Roman custom of granting amnesty to a Jewish prisoner on the eve of Passover. The lack of corroborating testimony to this practice in extrabiblical sources has led to a hot debate regarding its historicity (see comms.). Accounts of historical parallels do, however, support the probability that such a custom existed (e.g., cf. Josephus *Ant.* xx.9.3 [208-210]; see C. B. Cheval, *JBL*, 60 [1941], 273-78; W. L. Lane, comm. on Mark [*NICNT*, 1974], pp. 552f.).

RELIGION [Gk. *eusébeia* (1 Tim. 3:16; 2 Tim. 3:5), *theosébeia* (1 Tim. 2:10), *thrēskeía* (Acts 26:5; Jas. 1:26f.)]; AV also GODLINESS; **RELIGIOUS** [*thrēskós*] (Jas. 1:26); **VERY RELIGIOUS** [comparative of *deisidaímōn*] (Acts 17:22); AV TOO SUPERSTITIOUS; NEB "[in everything] that concerns religion . . . uncommonly scrupulous"; **RELIGIOUS DUTY** [infinitive of *eusebéō*] (1 Tim. 5:4); AV "to show piety"; NEB "to show loyalty."

Although Gk. *eusébeia* (and cognates) and *thrēskeía* (and cognates) are common in Greek literature, they occur only rarely in the LXX and NT (almost exclusively in wisdom literature, the Apocrypha, and later NT Epistles — all of which show Hellenistic influence). This is not surprising, since the Greek concept of religion, with its emphasis on intellectual understanding and cultic duties, is basically foreign to the biblical focus on God's calling humanity to live in a personal relationship of wholehearted faith and obedience to Him, the Creator and Lord of history (*see also* PIETY). Early Christians may have used *eusébeia* and its cognates first for pagan or Jewish religion (cf. Acts 3:12 [RSV "piety"]; 10:2, 7 ["devout"]; 17:23 ["worship"]) and only later in reference to Christian faith (*see* GODLINESS). Showing respect to one's parents was considered a religious duty not only by the Greeks but also by the early Church (1 Tim. 5:4; cf. Ex. 20:12).

As used by Herodotus (ii.37) and other Greek writers, *thrēskeía* means "'religious conduct or practice' in general, with particular emphasis on the zealousness of such practice" (*TDNT*, III, 156). In Jas. 1:26f. it denotes "the scrupulous observance of religious exercises — in action or words" (Adamson, p. 85); cf. Acts 26:5; Col. 2:18 (RSV "worship"; cf. *ethelothrēskeía*, v. 23; RSV "rigor of devotion").

Deisidaimonía (from *deídō*, "fear," + *daímōn*, "supernatural power"), another Greek term for religion, can be used in a positive, neutral, or pejorative sense. The noun in Acts 25:19 (NEB "religion"; cf. AV, RSV, "superstition") and adjective in 17:22 (see heading) are probably employed in a neutral rather than disrespectful sense (see Bruce; Haenchen; *TDNT*, II, 20; *see also* SUPERSTITION).

"Jews' religion" (Gal. 1:13f., AV) is a translation of Gk. *Ioudaïmós* (cf. RSV "Judaism"; NEB "practising Jew," "our national religion"), which denotes the Jewish faith and way of life (cf. 2 Macc. 2:21; 8:1; 14:38). *See* JUDAISM. In 2 Macc. 6:24 "an alien religion" (RSV; cf. AV "a strange religion"; NEB "apostate") renders *allophylismós* (lit. "foreign").

On Acts 13:43, AV, *see* DEVOUT.

RELIGION OF ISRAEL. *See* ISRAEL, RELIGION OF.

RELIGIONS OF THE BIBLICAL WORLD. Religion may be defined as a relationship to the holy. To one who has been influenced by the Judeo-Christian belief system, religion is specifically the relationship of the human being to the God of the Bible: the Yahweh of the Hebrew Bible and the God and Father of Jesus Christ in the NT. But there are polytheistic religions with many gods, and there are atheistic religions with no god (e.g., Buddhism — although the intrusion of Hindu thought into Buddhism often creates the impression that Buddhists worship many gods). Animistic religions likewise are difficult to categorize, since everything in nature is seen as the manifestation — or perhaps the actual presence — of deity.

The etymology of "religion" has come into question. Previously it was commonly taken as a derivative of Lat. *religare*, "to bind," thus referring to the beliefs, actions, and emotions that bind a person to his or her god. But others have suggested a derivation (less likely, in my opinion) from Lat. *relegere*, "to read again," placing more stress on the repetition of prayers, hymns, and scriptures.

Because of the ambiguity of the term, there is a basic question whether the Judeo-Christian system is properly a religion. According to the strictest view, either it is the only religion or it is no religion at all. Such a position, of course, immediately ends all discussion. If, on the other hand, religion is defined to include one's beliefs about God and His revelation to mankind, one's ways and means of worshiping that God, and one's moral and ethical behavior as derived from that faith, then Judaism and Christianity can certainly be described as religion(s). A Jew or a Christian may indeed declare that the God of Abraham, the God of Jesus, is the only God, and that the gods of the Gentiles are nothing; that is a statement of faith. The Jew or Christian may also accept as fact that the Moslem believes that Allah is the only God (even if denying that Allah and Yahweh are the same God). Accordingly, the Jew or Christian may profitably study other religious systems, whether from simple curiosity or from a belief that the one true God has not left Himself without witness anywhere. The practice of studying comparative religions over the past several centuries, however, has introduced complicating elements into the faith of Jews and Christians. Some have attempted to see an evolutionary development from animism to polytheism to henotheism to monotheism. Some have stressed the similarities of the various religious systems, ignoring those elements that others would claim to be important distinctives of biblical religion.

More recently, the disciplines of anthropology, psychology, and sociology have become significant — sometimes even dominant — in the study of religion. Thus a scholar may present a psychoanalytical study of Jeremiah or a sociological study of Amos. Or the religious system of a people living in the Paleolithic era might be reconstructed from a few drawings on the wall of a cave. The result has sometimes been a further blurring of the concept of religion.

Turning to the Bible itself, one notices two important facts. (1) The term "religion" does not occur in the English versions of the OT, and it occurs but rarely in the NT. Gk. *thrēskeía* is religion in the sense of religious service (Acts 26:5; Jas. 1:26f.; cf. 4 Macc. 5:7; Josephus *Ant.* xii.5.4 [253]). But if this is "pure" religion (cf. Jas. 1:27), it is certainly found in the OT (cf. Mic. 6:6-8). If one looks for a Hebrew word for "religion," perhaps *'ĕmûnâ*, "faithfulness," comes closest.

(2) The Bible contains a considerable amount of material concerning the religions of the nations (Heb. *gôyîm*; Gk. *éthnoi*). Various pagan deities are mentioned by name (Marduk [Heb. *mᵉrōḏāḵ*, Jer. 50:2], Baal [Jgs. 2:13; 2 K. 10:18-28], Molech [23:10], Artemis [Acts 19:24], etc.). Pagan religious practices are described (and condemned), e.g., worshiping on high hills, under trees (cf. 2 K. 16:4; Hos. 4:13), or causing a child to pass through fire (2 K. 16:3). There are references to the "other gods" that the ancestors of Abraham worshiped "beyond the river" (Josh. 24:2) and to "all the gods of Egypt" (Ex. 12:12), as well as to the "idols" that the Thessalonians once worshiped (1 Thess. 1:10).

It is therefore proper, and even incumbent upon all who study the Bible, to know something about the religions of the various peoples of the biblical world. The following articles under the general heading RELIGIONS OF THE BIBLICAL WORLD are intended to sketch this material.

I. Pantheon.—*A. Old Hittite Period.* During this period the pantheon of the Hittites was a mixture of Hattian and Anatolian deities. Names of deities in the original Old Hittite festival descriptions can be found in the indexes of Neu. The Old Hittite laws (see Friedrich) allude to religious matters, but mention by name only the sun-god (Ištanu) and storm-god (law 169). In the Old Hittite historical text by Anitta(s), king of Kuššara (see Neu), the goddess Halmašuit, the sun-god (Ištanu), and the storm-god are named. Although original Old Hittite sources are scarce, later copies exist in sufficient numbers to provide a large list of divine names. But there is always the possibility that in the process of recopying Old Hittite texts scribes inserted later divine names or used them to replace earlier names. No original Old Hittite mythological texts have been recovered to date. Of Old Hittite myths whose earliest copies are post-Old Hittite we may mention the Vanishing Deity type (often called "Telipinu [or Telepinus] Myth"; see *ANET*, pp. 126-28), the Storm-god and the Serpent (often called "Illuyanka[s]"; see *ANET*, pp. 125f.), and the bilingual Hattic-Hittite "Moon that Fell from Heaven" (see *ANET*, p. 120). The only deities mentioned in the narrative portions of the Illuyanka Myth are the storm-god and the goddess Inara. In a cultic appendix concerning the Purulli Festival other deities are mentioned: Zalanu(iša[s]), his wife Zašhapuna(s), his concubine Tazzuwaši(s), and the storm-god of Nerik. Their relationship to the story of the serpent is not specified.

The best attested of the Vanishing Deity myths is that

RELIGIONS: ASIA MINOR

Basalt stele relief of the storm-god Teshub from upper Syria. He wears Hittite clothing and carries lightning and an axe (end of the 2nd millennium B.C.) (CNMHS/ARS, NY/SPADEM)

whose central character is the god Telipinu. Although his role in promoting the proliferation of vegetation and livestock is clear from the narrative, he is not a special "vegetation-god" but rather one of a large number of Hittite "storm-gods." Other vanishing deities in myths of this type are: the principal storm-god (the father of Telipinu in these tales), the sun-god, ZABABA, the mother-goddess NIN.TU (= Hannahanna), also called DINGIR.MAḪ, the goddess of magic Kamrušepa (= Hattic Katahziwuri), Papaya, Ištuštaya, the fate deities (Gulšeš), the DINGIR.MAḪ deities, the grain-goddess Halki (= Hattic Kait), Miyatanzipa, Hapantaliya, the goddess Inara (sometimes written ^{d}LAMMA), Anzili, and Zukki. Related to the "Telipinu Myth" type are fragments of myths telling of the abduction of the sun-god by the sea-god (Hitt. *arunaš*) (Laroche, *Catalogue*, no. 323; *Textes mythologiques*, pp. 21ff.).

B. Middle and New Hittite Periods. In addition to deities of the Hattian and Asianic strata, Hurrian deities begin to appear first in the Middle Hittite period. Among these the main deities are the storm-god Tešup and his consort Hebat. Both written and nonwritten sources from the New Hittite period reveal a mix of deities from the Hattic, Asianic, and Hurrian spheres, often showing a sophisticated syncretism by which gods of similar nature are identified. Deities are often portrayed on monumental *rock reliefs* (examples in Bittel, *Hethiter*, pp. 173-234). The best and most comprehensive of these is the outdoor sanctuary of Yazilikaya N of Hattuša (Hattusas). Its reliefs depict the state pantheon of the Hittites during the reign of King Tudḫaliya(s) IV. Although all deities bear Hurrian names, the deities represented are the product of a syncretism by which older Hattian and Asianic deities were equated with and viewed under the names of their closest Hurrian equivalents. Thus the storm-god is Tarhunta and Tešub; his consort is both the sun-goddess of Arinna and Hebat. The "vegetation-deity" is equally Telipinu and Kumarbi. The male sun-god is at once Ištanu and Šimike. And so forth. Yazilikaya serves to supplement what can be gathered from the idol description texts as to the appearance and iconography of individual deities. Its pantheon represents the point of view of the Hittite court during the last fifty to seventy-five years of the empire.

II. Mythology.–A. Old Hittite. *1. The Storm-god and the Serpent.* The narrator of the two versions of this tale was a certain Kella, a GUDU priest (see IV below) of the storm-god of Nerik. Goetze's (*ANET*, p. 125) interpretation of the opening lines (that the first of the two versions narrated was that "which they no longer tell") has been refuted by Güterbock and Hoffner. It is still possible, of course, that the existence of two versions indicates that one was an earlier, discontinued one. But without the supposed statement that the first one was "no longer told" we cannot claim this as certain. Perhaps the two stories circulated simultaneously in different regions. Both stories share a single theme: the storm-god has been defeated by the serpent and needs help to trick and disable his opponent. Like the more widely used Old Hittite story of the Vanishing Deity, the Storm-god and the Serpent story stresses the following points: (1) The deity most responsible for the welfare of the human community (in this case the storm-god) can be disabled and rendered incapable of performing his essential duties. (2) In such cases mortals must assist in restoring him. In the Serpent stories the mortal helps in a non-ritualistic way; in the Vanishing Deity stories he helps by performing a ritual. In this sense the Serpent stories offer no concrete way apparent to us for members of the worshiping community to effect the storm-god's recovery, unless it is by acting out the narrative in a sacred drama. Perhaps the bas-relief from Malatya (see Gurney, *Hittites*, p. 183) represents a scene from such a reenactment of the serpent killing. But since the Serpent stories, unlike the Vanishing Deity stories, do not claim that the defeat and disabling of the storm-god has evil effects upon nature or the human community, it is by no means clear that the stories were used to counter disasters in nature such as drought, famine, etc. On the contrary, the Serpent stories are connected with the Purulli Festival performed annually at the same time. We have no evidence that Purulli was a New Year Festival, but since it was performed at the same time each year it was not designed to counter unexpected natural catastrophes. The appendix to the Serpent stories refers to a casting of lots during this festival. Because the appendix mentions the ranking of certain deities, it is possible that the lot-casting established a new hierarchy in the Hattian pantheon for the coming year. Although one cannot assume that in all cultures the serpent is a symbol of evil, we can see from these stories that among the Hattians and Hittites (as in ancient Israel) it had precisely that function.

2. The Vanishing Deity. a. Sources. More examples of texts containing variants of this story are known than for the Storm-god and Serpent. In addition to the "Telipinu Myth" proper, of which parts of three distinct versions are known (Laroche, *Catalogue*, no. 324), the Disappearance and Return of the Sun-god (no. 323), the Disappearance of

the Storm-god (no. 325), the God of Queen Ašmunikal (no. 326), the God of Harapšili (no. 327), the God of the Scribe Pirwa (no. 328), the Storm-god of the City of Kuliwišna (no. 329), the Storm-god at the City of Lihzina (no. 331), Anzili and Zukki (no. 333), DINGIR.MAḪ (no. 334), Inara (no. 336), and other large fragments tell of the disappearance of some deity, who must then be brought back by the performing of the appropriate ritual. This kind of ritual is called a *mugawar* in Hittite. A similar Canaanite ritual is described in the account of the contest of the Israelite prophet with the prophets of Baal on Mt. Carmel (1 K. 18). The deity whose return is desired may be sleeping, may have gone away on a journey, may have rejected his land and people, or may have been abducted. While the Canaanite sacrifice on Mt. Carmel to bring back the god Baal was a bloody animal sacrifice, those of the Hattian-Hittite *mugawar*s were both meat and vegetable offerings. The presentation of offerings was accompanied by the recitation of appropriate spells. For example, the presentation of figs was accompanied by the words: "Here are figs! Just as a fig is sweet, let your soul, Telipinu, in the same way be sweet!" When olives and wine were presented: "Just as the olive holds its oil in its heart, and the grape holds wine in its heart, you, Telipinu, hold goodness in your soul and heart!"

b. The Telipinu Version. The myth tells how Telipinu becomes irritated and flies into an uncontrollable rage, which brings about disastrous effects on nature. Fog and smoke envelop the houses, so that no fresh air can enter through the windows to allow living beings to breathe or fire to burn in the fireplaces. Among the livestock the mothers reject their young. Angry Telipinu runs away to hide in the wild country. With him he takes the fertility of the land's crops. Behind him he leaves the land in complete economic collapse. Plants do not grow, livestock and human beings do not breed, the water sources dry up. A famine arises that is so severe that both gods and men are starving. Greatly concerned, the gods organize a search for Telipinu. Although the great and powerful gods fail, and the sharp-eyed eagle as well, a tiny bee sent forth by the mother-goddess finds Telipinu and stings him awake. The angry god is pacified by a ritual performed by Kamrušepa, the goddess of magic, and brought back. Kamrušepa's effective magic consists of a series of analogic spells: "When Telipinu was angry, his heart and soul were a burning fire. Just as this fire is quenched, even so let his rage, anger and fury be quenched also!" A final section describes how the god's return restores nature to harmony and productiveness. It appears that the role played by Telipinu in this version could be filled by any other deity, as the occasion required.

B. Middle Hittite and New Hittite. 1. The Kumarbi Cycle. A number of the best-known myths circulating during the New Hittite period belong to a cycle of stories whose central character was the god Kumarbi (Güterbock, "Kumarbi"; "Hethitische Literatur"). Among these were the Song of Kumarbi (Laroche, *Catalogue,* no. 344, often called "Kingship in Heaven" [so *ANET,* pp. 120f.] or "The Theogony"), the Kingship of the God KAL (Laroche, *Catalogue,* no. 343), the Song of Ullikummi (Laroche, *Catalogue,* no. 345; *ANET,* pp. 21-25), the Myth of the Dragon Hedammu (Laroche, *Catalogue,* no. 348), and the Song of Silver (Laroche, *Catalogue,* no. 364; cf. Hoffner, "Song of Silver"). It is not yet possible to set the various mythological "events" of these stories in sequence, but it is usually thought that the Song of Kumarbi starts the series and sets the stage for the episodes which follow in the other "songs."

a. The Song of Kumarbi. This myth tells how kingship over the gods descended from the god Alalu through the god Anu to Kumarbi. Both Alalu and Anu are driven from their thrones by their successors. As he puts Anu to flight, Kumarbi emasculates Anu and swallows his semen, thus attempting symbolically to leave his rival childless. But instead he makes himself the womb of his foe's offspring, who will eventually displace him. Our Hittite text is a translation and perhaps adaptation of a Hurrian myth, which could have been based upon a Mesopotamian prototype. The story strikingly resembles parts of Hesiod's *Theogony,* and various theories have been advanced to explain how Mesopotamian antecedents, the Hurro-Hittite myth, Canaanite echoes, and Hesiod's material relate to each other (Hoffner, "Survey"). In Hesiod's version the members of the chain of divine rulers are father, son, grandson, i.e., descendants of each other, while in the Hurro-Hittite myth Alalu (no. 1) and Kumarbi (no. 3) are father and son, as are Anu (no. 2) and Tešub (no. 4) (Hoffner, "Survey"). This arrangement means that two family lines are in competition for the kingship and hold it alternately. The rivalry continues into the Song of Ullikummi, where Kumarbi's son Ullikummi seeks to wrest the kingship of his father from Tešub, the son of Anu. Other myths in the cycle are too poorly preserved to determine if the two-family struggle is alive in them.

b. The Song of Ullikummi. This myth concerns the struggle of Tešub, son of Anu, to retain kingship over the gods against the threat of Ullikummi, son of Kumarbi. Ullikummi is a stone monster whose mother is a huge cliff with which Kumarbi has intercourse. His name resembles the Hurrian word for "enemy" and Kummiya, the name of Tešub's home city. The name incorporates the prediction made at his name-giving that he would defeat Tešub and destroy his city Kummiya (Hoffner, "Birth"). Placed as an infant for protection under the sea on the shoulder of Ubelluri, a Hurrian Atlas, Ullikummi grows until his head reaches the sky and threatens the gods in heaven. In their first encounter Ullikummi defeats Tešub and sends him into exile, where he plans a counterattack. The myth's end is not preserved. Because during the historical period Tešub is the chief male deity of the Hurrian pantheon, it is likely that Tešub finally defeats his enemy. But because we do not know if the Song of Ullikummi was the final myth in the cycle, we cannot assume that matters were finally resolved in it instead of being carried over to the next myth, as was the case in the Song of Kumarbi.

c. The Kingship of the God KAL (Laroche, *Catalogue,* no. 343; Güterbock, "Hittite Mythology," pp. 161-64). This fragmentarily preserved myth describes a period when a rather unruly and evil male deity is king of the gods. Although Güterbock ("Hittite Mythology") tentatively placed the myth between the Song of Kumarbi and the Song of Ullikummi, Laroche placed it in his *Catalogue* sequence and in his transliteration ahead of both of them (*Textes mythologiques,* pp. 145ff.). There is no way at present to determine its place.

d. The Song of Silver (Laroche, *Catalogue,* no. 364). For a long time it was not recognized that this myth formed a part of the cycle of "songs" about Kumarbi. Its central character is a young man named Silver. He grows to young manhood believing himself to be an orphan, since he has never known his father. During his adolescence he is quite a bully, picking on other children. On one occasion when he is about to strike an orphan child, the child reminds him that he too is an orphan. Disturbed, Silver goes home and begs his mother to reveal his father's identity. She discloses that his father was Kumarbi, and that his (step-?) brother is Tešub and his (step-?) sister Ishtar. Silver determines to find his father and so sets out

RELIGIONS: ASIA MINOR

for Kumarbi's city of Urkiš, but he does not find Kumarbi there. The story's continuation is not preserved intact. The opening lines of the myth reveal that it was a "song," and the prominent role played by Kumarbi makes it indisputable that it belongs to his cycle. In the other Kumarbi myths Tešub is the son of Anu, but since Kumarbi's body served as the womb from which he emerged, it might be possible to consider him also to be the "son" of Kumarbi. This would make Silver a step-brother to Tešub.

e. The Hedammu Myth (Laroche, *Catalogue,* no. 348). To judge from its contents this myth also formed a part of the Kumarbi cycle. Kumarbi contracts with the sea-god to take his daughter Šertapšuruḫi in marriage. From this union is apparently born the sea serpent Hedammu. With its voracious appetite Hedammu threatens all of the animals even of the dry land: cattle, sheep, goats, horses, as well as frogs, lizards, and the like. Thus the whole world of living things is threatened. Ea, the wise king of the subterranean waters, calls Kumarbi to his throne and asks him why he is behind an attempt to destroy mankind, since the human beings have not neglected to sacrifice to and serve the gods. The text breaks off before we can hear Kumarbi's reply. The world-ruler Tešub must find a way to cope with this monster. One attempt is made through exposing the male Hedammu to the erotic charms of Tešub's sister Ishtar. At first this seems to fail, but in a second attempt Ishtar apparently changes the water Hedammu lives in to a sleeping potion which confuses him. Ishtar lures him erotically from his throne and from the sea. The continuation of the story is lost. The similarities to the Song of Ullikummi are obvious: Kumarbi works through his monstrous progeny to dethrone Tešub, who together with his sister must thwart the attempt. The physical dimensions of Hedammu's mother, like those of Ullikummi's, are enormous, given in DANNAs (miles).

2. The Appu Story. Although the geographical setting of the story is eastern Mesopotamia, it is not accompanied by the same Hurrian divine and personal names as the myths of the Kumarbi cycle or the Kešši story. It is impossible to reconstruct with certainty the chronological sequence of the events related in the various fragments of text. But the usual arrangement of the story runs as follows. Appu is a very rich man who has a wife but no son. The all-knowing sun-god advises him how to impregnate his wife successfully. Appu names the first son Idalu, "evil one." Shortly afterward he sires a second son, whom he names Handanza, "just one." When the boys reach adulthood, they acquire their father's inheritance, and Idalu persuades Handanza to divide the estate, so that they can live separately. During the division Idalu seeks to cheat Handanza, but the sun-god, the god of justice, thwarts Idalu's plan by causing the apparently inferior livestock of Handanza to thrive. There follows a gap in the narrative, after which Idalu seems to take Handanza to court before the sun-god at Sippar. When the sun-god rules in favor of Handanza, Idalu curses, so that the sun-god refuses to conclude the case and requires them both to proceed to Nineveh where Ishtar will continue the judgment. Here the fragments give out. On the basis of a short prologue to the story, which seems to state the theme that someone (perhaps the sun-god) will repeatedly exonerate just men but will repeatedly strike evil men on the head until he has destroyed them, it seems that the case is referred to further deities until Idalu's suit has been struck down many times.

3. The Gilgamesh Epic. Fragments of stories about the Mesopotamian hero-king Gilgamesh have been known since the earliest days of Hittitology and were edited and organized as best as could be with the aid of the Akkadian exemplars (J. Friedrich, *Zeitschrift für Assyriologie,* 39 [1930], 3-5; H. Otten, "Zur Überlieferung des Gilgames-Epos nach den Bogazköy-Texten," in P. Garelli, ed., *Gilgames et sa légende* [1960], pp. 139-143; A. Kammenhuber, *Münchener Studien zur Sprachwissenschaft,* 21 [1966], 45-58). The Gilgamesh myths are examples of foreign literature in Hittite translation. Unlike myths about Telipinu, Inara, Kamrušepa, or Kumarbi, the Gilgamesh materials do not seem to have any relevance to the Hittite cult.

4. The Elkunirša and Ashertu Myth. These fragments of a Canaanite myth in Hittite translation contribute more to West Semitic studies than to Hittite. The *dramatis personae* are El (= Elkunirša, "El, Creator/Owner of the Earth"; cf. Gen. 14:22), Elkunirša's wife and consort Asherah/Ashertu, Baal/Haddu (written with the storm-god logogram), and Baal's sister-ally ʿAnat (Anath) (written with the Ishtar logogram). Since none of these deities occurs by name in the Hittite cult records, we conclude that like the Gilgamesh fragments they are foreign literature and contribute nothing to our understanding of Hittite religion. See *ANET,* p. 519.

III. Visual Representation of the Gods.—*A. Types of Representation and Their Appearance. 1. Cult Statues or Idols.* Photographs of many cult statues of Hittite and Hurrian deities can be consulted in Bittel (*Die Hethiter,* pp. 146ff., 159, 161-66) and in Akurgal. Although these examples are suggestive of the variety which once existed, it must be understood that the finest examples, being made of precious materials, undoubtedly fell prey to the looters of Hattuša and other Hittite cult centers when they were captured or destroyed *ca.* 1150 B.C. What remains for us is a mere afterglow. Even so, there are preserved examples of sculpture in the round ranging in size from portable household miniatures to lifesize. In addition we find representations in gold (Akurgal, plates 21 [above], 53), statuettes of lead and carved ivory (Akurgal, plate 35 [above]), of bronze (Akurgal, plates 43f., 50f.), lapis lazuli, steatite, and rock crystal (Akurgal, plate 53). These statue(tte)s were used for private devotions in the temples, palaces, and homes.

2. Rock Reliefs. Adapted to public display were the representations of deities, kings, queens, and princes on rock reliefs (Akurgal, plates 64f., 71, 75-88, 92f., 98-102). Additional reliefs depicted humans in cultic activities, such as in the reliefs from Alaca Hüyük (Akurgal, plates 92f.). The most important single group of rock reliefs depicting Hittite and Hurrian gods is the group on the walls of the outdoor sanctuary of Yazilikaya (Laroche, *Revue Hittite et Asiatique,* 27 [1969], 61-109; Bittel, *Boğazköy-Hattuša;* Masson).

3. Ḫuwaši Stones. The texts mention a kind of stone that figures in the worship of the gods and that may have borne a representation in relief of the deity (Goetze, pp. 163, 168; Gurney, *Hittites,* pp. 149, 153, 155; *Aspects,* pp. 25ff., 36ff.). Following this interpretation Goetze and Gurney have compared it with the biblical *maṣṣēḇâ,* which was a standing stone or stele. Such a stele bearing a hieroglyphic Luwian inscription and found with a trough for offerings in front of it was excavated in 1947 by T. Özgüç at Karahöyük in Elbistan (Gurney, *Aspects,* pp. 37f.).

B. The Treatment of the Cult Statue. The Hittites did not confuse these statues with the deities they represented, but they treated them with respect and awe befitting these deities. Cult statues were housed in the temples and served by priests and temple servants much as the

RELIGIONS: ASIA MINOR

Gold Hittite god found in Anatolia, mid-2nd millennium B.C. This statuette is only about 3 cm. (1¼ in.) high (RMN/ARS, NY/SPADEM)

master of a grand manor might be served by his domestics. The image could be put in bed at night, awakened in the morning, served meals, bathed, dressed, entertained with music, dancing, acrobatics, and occasional athletic contests. It could be placed on a litter and carried in procession to some quiet grove for outdoor entertainment and to be seen by worshipers as the procession passed. In prayers and compendiums of instructions for priests the relationship of god and worshiper is compared to that of master and slave and conclusions about conduct are drawn from it. If the clothing of the image became threadbare or its plating of precious metal wore off, the god showed his displeasure to his temple and its community. Discovering the problem through divination (see IX below), the priests would inform the king or his local representative and secure personnel and materials to repair the image.

IV. Cult Personnel.–Among the personnel of the Hittite temple were priests (Hitt. *šankunniš*), LÚ.MES GUDU$_4$, "anointed ones," *šiwanzannis* ("god's mothers"), as well as a variety of skilled persons who provided entertainment (musicians, singers, acrobats) or food and drink (kitchen personnel, food servers, table attendants) for the god, artisans (smiths, weavers, carpenters, potters), and temple guards. Small temples in the outlying areas had much smaller staffs. The minimum was the priest, the "anointed one," and the "god's mother." The king served as the honorary chief priest of the realm, and the queen at some periods was the chief "god's mother."

The Hittite priest (*šankunniš*) could be male or female, although males predominated. He could be married, but his wife and family lived away from the temple premises. Strict purity rules regulated his life. Nothing was allowed to defile the temple or food of the gods. The commission of certain particularly defiling acts such as sexual concourse with animals disqualified persons from ever serving as priests (law 200). There seems to have been no age limit for priestly service. Like the boy Samuel (1 S. 1–2) the young prince Hattušili III served the goddess Šauška of Šamuha as a priest. Kings exercised their priestly roles until they died.

The king in his role as high priest wore a special skull cap like the sun-god, a long flowing robe reaching to the ankles, and carried a crooked staff resembling the Roman *lituus*. Kings in priestly dress (Akurgal, plates 53 [top], 71, 78, 84f., 92 [top]) and ordinary priests (Akurgal, plate 92 [below]) are depicted on Hittite reliefs, from which it is possible to determine their dress.

V. Sacred Buildings and Architecture.–*A. Temples.* The Hittites called the temple "the house of the god." They employed no special term for "temple." Before 1983 only five temples had been found in the excavations of Hattuša. The discussions of Goetze (pp. 166f.), Gurney (*Hittites,* pp. 145-150), Güterbock ("Hittite temple"), and S. Alp (*Beiträge zur Erforschung des hethitischen Tempels* [1983]) are based on that state of knowledge. The excavations since 1983 have revealed that from *ca.* 1250-1150 B.C. the upper city to the S of the acropolis area was thickly settled with temples. All Hittite temples found to date seem to share a similar ground plan. All have a cella in the rear for the deity's statue, and storage rooms surrounding a central courtyard. The largest temple in Hattuša, Temple I in the lower city, was dedicated to the great storm-god and his consort. Temples not only served as the residence of the deity and his personnel but as the repository of clay tablets containing documents that must be watched over and enforced by the deity.

The temple was guarded twenty-four hours a day against defilement and fire damage. Detachments of priests and temple guards observed a regular rotation of night guard duty. If a fire broke out and did damage, the persons in whose watch it occurred were put to death. No ordinary foreigner was allowed to enter the temples. But certain privileged foreigners (ambassadors and the like) could enter accompanied by an escort. Cows, sheep, and goats were brought into the temple area to be sacrificed, but impure animals such as dogs and pigs were excluded. Worshipers washed themselves at the entrance to the temple area. Several texts preserve for us the ritual procedure for the dedication of a new temple (Laroche, *Catalogue,* nos. 413-15; *ANET,* pp. 356-58). Other texts describe the procedure for transferring a deity to a new temple (Laroche, *Catalogue,* nos. 481f.).

B. Outdoor Shrines. As the Canaanites worshiped on the "high places" under green trees, so too the Hittites regarded certain springs, groves, mountains, and rivers as sacred and erected stelae there. Each such place was to be regularly visited and supplied with offerings (*ANET,* pp. 210f.). Unlike the temples, the outdoor shrines had no priestly staff in residence, so far as we know. But if they were neglected, the gods would become angry with the country and bring disaster. Not only were the divine beings who inhabited the spring or grove worshiped there

RELIGIONS: ASIA MINOR

with sacrifices, but the cult statues kept in the temples were occasionally taken to such places for outdoor entertainment and worship.

VI. Sacred Times and Seasons.–The Hittites observed a wide variety of festivals. For some of them texts are preserved that describe the proceedings. For a few of these we possess outline texts that summarize the activities of each day. No text has been recovered that contains a formal calendar for the Hittite festivals, as Lev. 23 provides for the Israelite festivals. But the cult inventories (Laroche. *Catalogue,* nos. 501-530) enumerated for each temple its deity, personnel, cult image, and whether a fall and/or spring festival is celebrated there. Festivals seem to have been of two types: those with a fixed time for celebration (*ukturi-,* "regular") and those without.

The Instructions for Temple Officials (Laroche, *Catalogue,* no. 264) mentions "the monthly festival, the festival of the year," and "the festivals of fall and spring" among the important cult dates. The monthly festival would have been something like the festival of the new moon in ancient Israel. It is not yet clear whether the "festival of the year" in Ḫatti marked the New Year, but it is generally thought unlikely.

Laroche (*Catalogue,* nos. 591-724) lists texts describing the activities of festivals. The major ones were the Monthly Festival, the spring, fall, and winter festivals at various cities, the New Year Festival (no. 600), the ANTAḪŠUM festival, the Festival of Haste (*nuntarriyašḫaš*), the KI.LAM festival and the *ḫišuwaš* festival. Some of these lasted for many days. The ANTAḪŠUM festival lasted for at least 38 days, with activities in different cities on different days.

The festivals served to honor and entertain the deity or deities involved, to express the worshipers' thanksgiving for the harvest, to mark the transition points in the yearly cycle, to provide entertainment for the people, and to allow the king to travel among the cities of his land and be recognized as their ruler and highest priest. Festivals that were not regularly scheduled could be performed by a wealthy individual in fulfillment of a vow to a deity.

VII. Offerings to the Gods.–Most offerings in Hittite worship were simple gifts to the gods: food, drink, and valuable objects. Food offerings consisted primarily of types of bread or cake. Supplementing the bread offerings were fruits, honey, cheese, and the meat of sacrificial animals (usually cooked, but occasionally raw). Stews could be with or without meat. Drink was offered in the form of libations poured from a pitcher into a receptacle in the immediate presence of the cult image of the deity. See the depictions of this act on the reliefs in Akurgal (plates 100f., 104f.).

Some offerings were propitiatory, but these were not a part of the regular scheduled cult calendar, as the Day of Atonement was in ancient Israel. Rather such sacrifices arose in the course of the discovery of some great sin or negligence on the part of the king. An example is the ritual of propitiation performed to relieve the speech loss of Muršili II. On such occasions an animal would serve as the king's substitute. There is a distinction to be drawn between the animal that is truly a substitute (*tarpali-*) and a scapegoat that carries away contamination and guilt (*nakkušša/i-*) (Gurney, *Aspects*).

Human sacrifice is rarely mentioned. In the detailed Annals of Muršili it is described how Aitakkama, king of Kadesh, under siege and threatened with defeat and death, sacrificed his son "Gift-of-the-storm-god." But this was an act performed by a non-Hittite. In a few Hittite rituals to remove defilement from a defeated army they "cut through" a man, a goat, a puppy, and a little pig (Gurney, *Hittites,* pp. 154, 155). But human sacrifice played no significant role in Hittite worship.

VIII. Prayers and Hymns.–All prayer compositions are royal, composed for the king, the queen, or a prince or princess. The occasions and purposes of these prayers vary. Some were for the daily praise of the god (*ANET,* pp. 396f.). Others were penitential, confessing some sin discovered by divination in order to induce the deity to remove the punishment being suffered (*ANET,* pp. 394-96).

IX. Divination.–The Hittite gods "spoke" to their worshipers in a variety of ways: through dreams, omens, answers to oracle inquiry, and rarely through persons called *šiuniyanza,* "god-possessed(?)" (translated "prophet" in *ANET,* p. 396). Some examples of Hittite message dreams are examined by Oppenheim (pp. 193, 195, 197ff., 227, 254f.). Types of oracles included the examination of the entrails of sacrificed animals (extispicy), the flight of birds observed under controlled conditions (augury), the behavior of snakes in a basin, and the behavior of tokens (sometimes called "lots," Sumerogram KIN) bearing symbolic names.

A rare funerary stele from Marash, Syria, commemorating a boy's death. The young Tarhunpiyas (spelled in Hittite above) stands on his mother's lap. He could write, as the stylus in his right hand indicates, and apparently liked to catch birds (8th cent. B.C.) (RMN/ARS, NY/SPADEM)

X. Ethics.–Like other peoples the Hittites conceived of "sin" (*waštul*) as an offense against a deity, a disregard of his wishes. But Hittite deities' desires for their worshipers were largely unconcerned for what in the Bible is termed "righteousness" or "justice." The sun-god was indeed the patron of justice. But there is no evidence that other deities were offended by a worshiper who lied, stole, murdered, or raped. These were matters for the human legal system, not the concerns of religion. When a Hittite king confessed sin in prayer, he had in mind the failure to give an offering, fulfil a vow, or keep a treaty oath sworn by that deity (*ANET*, pp. 395, 400). In this respect the Hittites differed sharply from the Israelites, whose sins often consisted of observing the ritual forms without showing obedience to the ethical norms of the law.

XI. Death and Afterlife.–The Hittites believed in a conscious existence after physical death, but the happiness of the individual in his afterlife did not depend upon his religious behavior prior to death. The deceased (*akkanza*, Sumerogram GIDIM) received offerings from family members in a domestic cult. The cult of dead kings was much more elaborate, involving a mortuary temple ("stone house") with a large permanent staff. The spirits of deceased persons wronged during their lifetime might haunt their offenders. Rituals were designed to settle these matters and pacify the dead.

H. A. HOFFNER, JR.

RELIGIONS OF THE BIBLICAL WORLD: ASSYRIA AND BABYLONIA. Assyro-Babylonian religion developed in ancient Mesopotamia. It was essentially Semitic, overlaid on a substratum of Sumerian religion. Some argue that Sumerian culture and religion hint of a prehistoric, non-Semitic, non-Sumerian, Asianic religious stratum. The Asianic stratum need not concern us here. This article will concentrate on Babylonian religion, referring to Sumerian religion when appropriate to elucidate Babylonian religion (*see also* SUMER VIII). Since Assyrian religion shares much with Babylonian religion, its special features will be dealt with against the background of Babylonian religion.

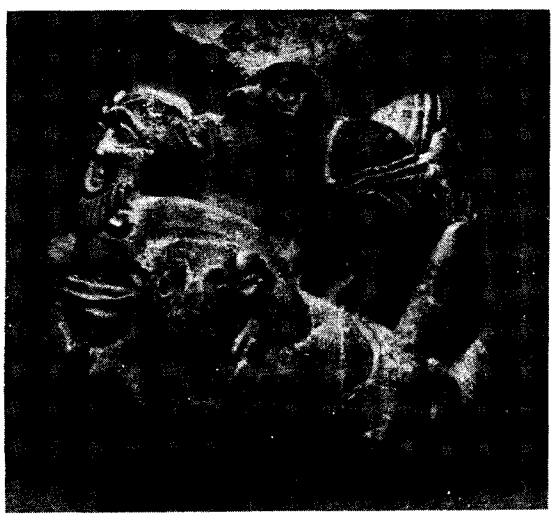
V. Comparative Religion: Israelite and Ancient Mesopotamian Religion

I. Sources.–Prior to the mid-nineteenth cent. the principal sources of information about Assyrian and Babylonian religion were the ancient writings of the Babylonian priest Berossus (ca. 340-275 B.C., who wrote in Greek a treatise preserved only in fragments quoted by other ancient authors) and the Greek historian Herodotus (484-425 B.C. [?]), supplemented by a few OT references. Modern archeology has unearthed numerous cuneiform inscriptions and tablets, many of which have significance for understanding Mesopotamian religion. These materials include:

A limestone libation vase from Uruk showing a bearded man (represented twice) wrestling with two bulls. He may represent the Sumerian mythic hero Gilgamesh (3rd millennium B.C.) (courtesy of the Trustees of the British Museum)



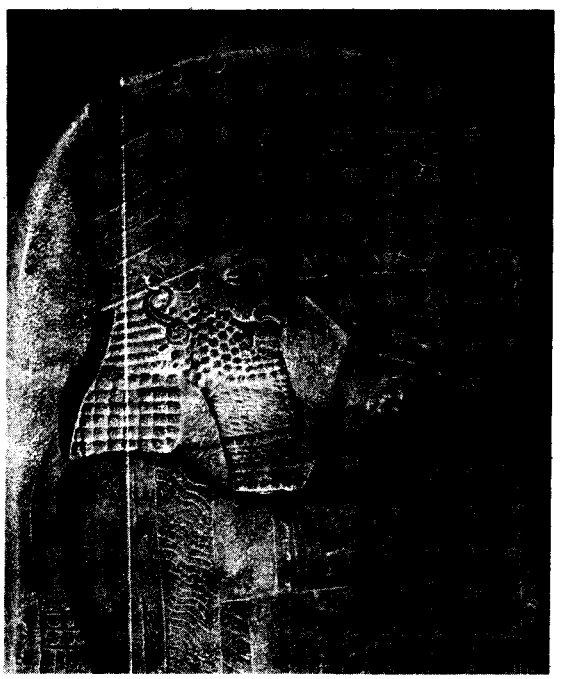
myths (e.g., of Creation and the Flood, epics (e.g., the Epic of Gi gamesh), psalms (including hymns and prayers of lament), incantations, ritual texts, descriptions of festivals, omen texts, astrological tablets, lists of deities, and wisdom literature.

Besides specifically religious texts there are lists of personal names containing theophoric elements, thousands of legal documents, business texts, and letters containing theophoric personal names, oaths sworn in the name of deities, and references to religious matters. In fact, all Mesopotamian written materials are a potential source of religious information since the ancient Mesopotamians perceived the whole of life as religious.

Other important sources of religious information are architecture, especially temples; sculpture in the round; figurines; amulets; stelae; reliefs; boundary stones (*kudurrū*); and numerous cylinder seals. A number of these works of art bear inscriptions as well as religious scenes.

II. Pantheon.–The Assyro-Babylonian religion adopted the Sumerian pantheon with modifications and often with new names. But the essential character of the deities remained the same. Among the most important were three cosmic deities (Anu, Enlil, and Ea) and three astral deities (Sin, Šamaš, and Ishtar). Anu (Sumerian An), meaning "heaven," was the father and king of the gods. In theory he was the highest deity, but practically he was rather passive. His consort was variously Antu or Ishtar, and his city was Uruk. Enlil (same name as Sumerian counterpart; also called Ellil), meaning "lord wind," represented the atmosphere, wind, and storm. Practically he often functioned as the principal deity and as executor of the divine assembly. He could be both beneficent and terrifying. He posessed the tablets of destiny, which determined the world's destiny. His consort was Ninlil (a Sumerian name) and his city was NIPPUR. Ea (Sumerian Enki, meaning "lord earth," or, according to Saggs, possibly "lord of the subterranean region") was lord of the subterranean sweet-water ocean (Sum. ab-zu; Akk. *apsû*). Ea may be Sumerian for "house of water," although Kramer considered it Semitic. Ea was god of wisdom, sorcery, arts, crafts, and culture. His consort was Ninki, also called Damgalnunna or Damkina (all Sumerian names), and his city was Eridu. Sin (Sumerian Nanna; however, the name Sin appears to have a Sumerian etymology, su-en) represented the moon. His sphere of activity seemed to overlap that of other deities, such as wisdom (Ea), judgment (Šamaš), and determination of destinies (Enlil). This tendency toward henotheism was unsuccessfully promoted in the 6th cent. B.C. by Nabonidus, last king of the Neo-Babylonian empire, who attempted to make Sin the highest god. Sin's consort was Ningal (a Sumerian name; cf. West Semitic Nikkal). His principal city was UR, but he was also worshiped at Harran in northern Mesopotamia. Šamaš (Sumerian Utu) represented the sun (cf. Heb. *šemeš*, Akk. *šamšu*). He was god of justice and equity, as well as judge of the gods. He appears carved in relief at the top of King Hammurabi's law-code stele presenting a sceptre to Hammurabi (*see* picture in HAMMURABI). His consort was Aia and his cities were Sippar and Larsa.

A stele showing the Assyrian King Esarhaddon (680-669 B.C.) next to some symbols of the Assyrian pantheon. Some of the representations include: Ishtar sitting on a throne and riding on a lion; Adad, holding lightning and standing on a bull; Sin and Ashur, shown by the crescent and winged disk, respectively; Marduk, symbolized by the spear-point (below left); and Ea, symbolized by the ram-headed scepter (Staatliche Museen zu Berlin, DDR, Vorderasiatisches Museum 2135)



Ishtar (Sumerian Inanna) was the most important female deity, assimilating functions and characteristics of many other goddesses. Her name, in the form *ištaru*, came to mean "goddess." She was the morning and evening star (Venus), goddess of sexual love and fertility, and, surprisingly, also of war (esp. in Assyria). The latter is understandable if she is viewed as goddess of passions. Her city was Uruk; thus she is sometimes seen as the consort of Anu. She was also worshiped under local manifestations as Ishtar of Nineveh, of Arbela, and of Bitkitmuri. Tammuz or Ta'ūzu (Sumerian Dumuzi) was also considered her spouse.

Other prominent deities were Adad, Dagan, Ninurta, Nergal, Marduk, and Ashur. Adad (associated with the less important Sumerian Ishkur), whose prominent West Semitic counterpart was Hadad, was god of thunder and rainstorm. He could be both beneficent, enabling vegetation and life to flourish, and destructive through flooding. Adad functioned as a god of high rank at Mari. Another West Semitic god also prominent at Mari was Dagan, apparently a fertility-god (*see* DAGON). Ninurta (a Sumerian name) was another storm-god, as well as god of war and hunting. He functioned as the key figure in a cycle of myths. He had no special city, although in the Middle Assyrian period (ca. 1370-910 B.C.) he was worshiped as god of hunting at CALAH (modern Nimrud; cf. Gen. 10:8f.). Ninurta's spouse was Gula, goddess of healing. A hymn praising Ninurta associates a number of deities with parts of his body, i.e., a henotheistic attempt to see Ninurta embodying many divine powers. Nergal (a Sumerian name) was god of plague and lord of the underworld, where his consort was Ereshkigal (a Sumerian name; called Allatu in Akkadian). He was worshiped in many places, but especially at the city of Cutha (cf. 2 K. 17:30), where his spouse was Laz.

Tammuz or Ta'ūzu was the counterpart of the Sumerian Dumuzi, the fertility-god associated with shepherding and vegetation. In Assyro-Babylonian religion Tammuz was not as prominent as Dumuzi was in earlier Sumerian religion. In the Assyro-Babylonian sacred marriage rite the two national gods, Marduk and Ashur, usurped the role of

Dumuzi/Tammuz. The Tammuz cult annually mourned the seasonal death of Tammuz and the cessation of the natural powers of fertility. Some have argued that in mythical and ritual celebration Tammuz was perceived to die with the heat of summer but to rise to life with the autumn rains. Kramer has denied that Tammuz was seen as returning to life. Ringgren suggested caution on this matter since there are hints that the Sumerian Dumuzi not only died and went to the underworld but was allowed to live for half of the year. But the Tammuz cult emphasized the god's death and the consequent mourning, rather than his renewal of life.

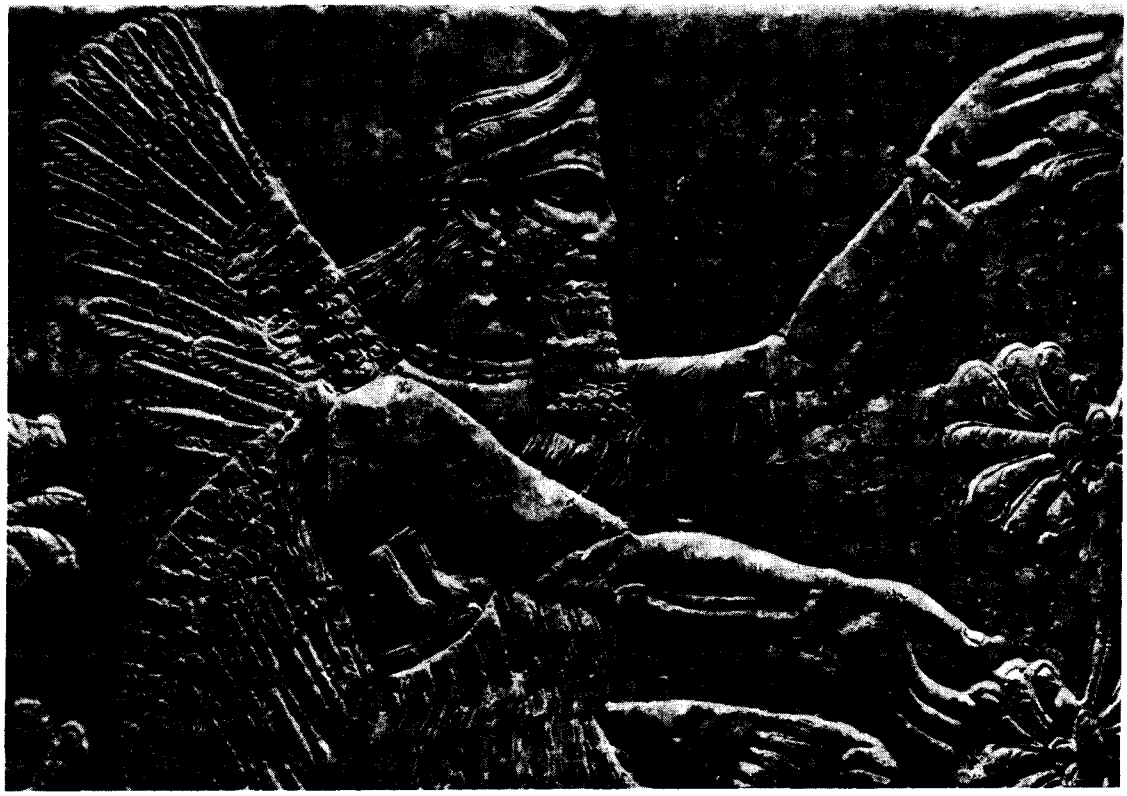
During the latter half of the 1st millennium, following the fall of the First Dynasty of Babylon (Hammurabi's dynasty) in 1595 B.C., Marduk and Ashur became the national gods of Babylonia and Assyria respectively, occupying a supreme place in the respective pantheons. Marduk's origin is unclear. His name appears to have a Sumerian etymology (amar-utu-k) and may mean "young calf of the sun." Some have suggested Marduk was originally a sun-god. As national god of Babylonia, however, solar features do not constitute his identity. As son of Ea he was god of magic and incantation. Marduk's city was BABYLON and his temple there was called Esagila. His consort was Ṣarpanitu. His original city may have been Eridu since (1) he was the son of Ea (Enki) whose city was Eridu, (2) Esagila was originally the name of a temple in Eridu, and (3) the Eridu cosmogony is reflected in the Babylonian creation myth, *Enuma Elish* (see IV.6.1 below).

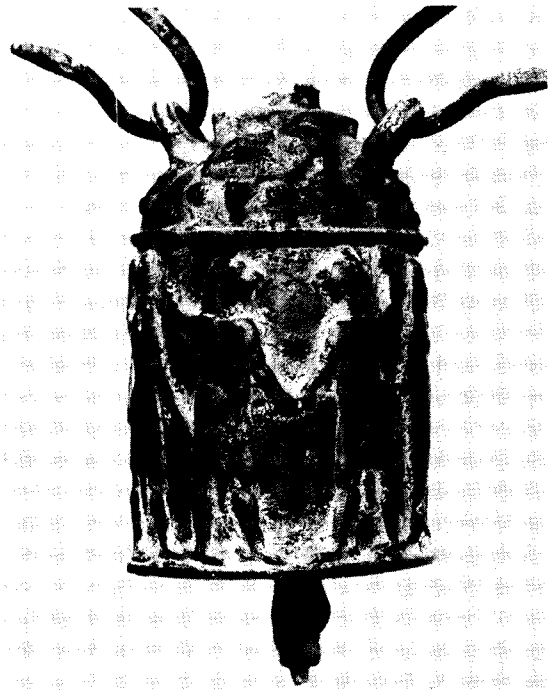
Ashur was the name of the national god of the capital city and of the land of Assyria (though the latter is spelled Asshur in this encyclopedia). As the city of Asshur's imperial power grew in importance so did the god Ashur. Like Marduk in Babylonia, Ashur in Assyria took over the functions of many other deities. Ashur functioned for Šamaš as judge and god of justice. As giver of kingship he functioned for Anu and Enlil. He was father of the gods, their creator and begetter. He was also god of war, providing victory to the Assyrian armies. This henotheistic tendency is reflected in the preserved fragments of the Assyrian version of *Enuma Elish* in which Ashur replaces Marduk. His temple in the city of Asshur was called Esharra and his consort was Ninlil (originally the spouse of Enlil).

Over three thousand deities are known altogether, many only by name from god-lists or from theophoric personal names. Most are of minor importance compared to the ones outlined above. We should mention, however, the fire-gods Gibil and Girra, destroyers of black magic, and Nusku, overseer of the sacrificial flame.

The Assyrians and Babylonians, as well as the Sumerians, believed that numerous demons attacked people with distress and diseases. They also believed in good, protective spirits, among whom were the personal tutelary deities of individuals and families. With the development of universal, political imperialism in the Babylonian and Assyrian periods and the consequent distancing from the people of the major deities of the pantheon, who were largely reserved for the official cult and seen only on official festival occasions, personal tutelary deities and daily, private, family, cultic activities became more important.

A winged, human-headed spirit, wearing a miter with two pairs of horns, raises his hands toward a stylized tree of life. Detail from an alabaster palace relief at Calah (Ashurbanipal II, 883-859 B.C.) (Staatliche Museen zu Berlin, DDR, Vorderasiatisches Museum 8857)





A bronze bell probably used to drive out evil spirits by sound. It depicts two lion-headed demons and a priest wearing a fish skin (far right) (Staatliche Museen zu Berlin, DDR, Vorderasiatisches Museum 2517)

III. The Cult.*—*A. Priesthood. The ruler of the local city-state (Sum. ensí; Akk. *iššakku*) or, when many local states were combined into kingdoms and empires, the king (Sum. lugal; Akk. *šarru*) was head of the cult. In practice the various functions of the cult were obviously delegated to others. The terms *ēnu* and *šangu* were often borne by the priest-king. Oppenheim has suggested that the *ēnu* was a high-priestly figure who functioned to relate temple and community to the deity, whereas the *šangu* was chief administrator of the temple. *Ērib bīti*, "one entering a temple," was at times used as a general term for any priest but later came to refer to lower classes of priests. Another priest, the *šeš̄gallu*, was a supervisor in the priesthood. The *āšipu-*, *mašmaššu-*, and *kalû-* priests were exorcists concerned with incantations and purification rituals (see G below). The *kalû*-priest had special functions in appeasing the deity's wrath through music and lamentations. The *bārû*-priest, whose name means "observer," and the *šā'ilu*-priest whose name means "one who asks, questions, ascertains," were engaged in the arts of divination (see F below). Their functions overlapped, although the *šā'ilu*-priest seems to have had a special interest in dream interpretation. The *nāš paṭri*, "sword bearer," was involved in slaughtering animal sacrifices. The *mārī ummāni* were craftsmen, one of whose tasks was crafting images. The *ramku*-priest functioned in washing rituals and the *pašīšu*-priest in anointing ceremonies.

Several terms for female functionaries are known but their exact functions are not always clear. Some were priestesses; others were temple prostitutes. The highest class of priestess was the *entu* (Sum. nin-dingir), "high priestess"; another class was the *nadītu*; a lower class was the *ugbabtu*; these three classes were usually unmarried and expected to live in chastity. Other terms referring to women of special status and devoted to a deity include: *ištarītu*, "one belonging to Ishtar"; *ḫarimtu*, "prostitute"; *šamḫatu*, "prostitute"; *qadištu* and *kulmašītu*. Some were clearly cult prostitutes (*ḫarimtu* and *šamḫatu*); some could marry and have children; that the others were cult prostitutes is not clear (but cf. Dt. 23:17 [MT 18] where *qᵉḏēšâ*, the Hebrew cognate of *qadištu*, is rendered "cult prostitute" apparently due to the context, which uses *zônâ*, "prostitute" in v. 18 [MT 19]).

Three classes of male functionaries associated with the cult of Ishtar were the *assinnu*, the *kurgarrû*, and the *kulu'u*; they were involved in cultic games, plays, dances, singing, and music as part of the great festivals. A few texts suggest that they played the role of women in female attire, but there is no evidence they were eunuchs or homosexuals (*CAD*, I/2, 341f.; VIII, 558f.).

Another religious functionary was the *maḫḫû* (also *muḫḫû*; fem. *muḫḫūtu*, also *maḫḫūtu*/*maḫḫītu*), an ecstatic, prophet-like figure who declared oracles received from the deity while in a trance. They were prominent at Mari and had influence at the royal court in state affairs. Study of the *maḫḫû*/*maḫḫūtu* has often been used for elucidating the ancient Near Eastern background of ecstatic and court prophecy in Israel. *See* PROPHET II.C.

Singers and musicians also functioned in the cult.

B. Sacral Kingship. The ancient Babylonians believed that kingship came down from heaven and was bestowed by the gods. Thus the king ruled by divine sanction. In Sumerian times the king was viewed as divine (indicated by his titles and by the use of the divine determinative with his name), but he was not worshiped as a god. In Babylonian times he ceased to be viewed as divine, though he was considered symbolically son of a god or goddess. He was the head of the cult, the foremost servant of the gods, bearing the ultimate responsibility for correctly perpetuating the cult and for building and restoring the temples of his realm. He was commander of his army with military functions on behalf of the gods. He was shepherd of his people and as such a channel through whom justice, righteousness, prosperity, blessing, and fertility flowed from the gods to his people and land. He was maintainer of harmony between society and nature, between society and the gods. The New Year *akītu* Festival, especially in the sacred marriage ritual in which he played the role of the deity, constituted an annual demonstration of the sacred nature of the king's person as supreme representative of the gods on behalf of his people and land (see D below).

Similar views were held in Assyria, but there the king was even more closely tied to the cult, playing a more prominent priestly role (cf. Ringgren, *Religions of the Ancient World*, pp. 88, 105f.). Probably the Assyrian king's military functions were emphasized, since Ashur was the god of war. Thus it may also be that Assyrian military campaigns, which became an annual enterprise, were thought of as wars on behalf of the god Ashur to subjugate all peoples under Ashur's sovereignty.

C. Sacred Places. The ordinary person could worship the gods and goddesses at various places in ancient Mesopotamia: open-air sanctuaries, chapels in private homes, and small chapels in residential parts of town. Temples were the most important places of worship, which focused almost entirely on the official cults of the most important deities on behalf of city or nation. General public involvement was limited to access to the large outer-temple courtyard, public events, situations of crisis, and annual festivals, when the god's image and the priesthood moved outside the usual isolation of the temple. A city often had more than one temple, honoring different deities, of which one was the city's tutelary deity. A temple estate could

RELIGIONS: ASSYRIA AND BABYLONIA

amount to thousands of acres involving thousands of personnel and workers.

Typical of a major temple complex was the ziggurat, a great, man-made, multistaged mountain of earth and brick up to 90 m. (300 ft.) square and 45 m. (150 ft.) high (cf. Gen. 11:1-11, "the tower of Babel"). On its top, approached by long stairways (cf. the ladder in Jacob's dream in Gen. 28:12), was the "high temple." At the bottom was the "low temple." The significance of the ziggurat is unclear but it may have been perceived as a giant altar that provided a link between earth and heaven (cf. Ezk. 43:13-17, which describes an altar like a miniature stepped ziggurat). Others have seen it as the throne of the deity (cf. Isa. 14:13).

A major temple had a large outer courtyard (*kisalmāḫu*) surrounded by rooms used as storerooms, workshops, kitchens, lodgings, libraries, stables, and scribal school. Another, smaller courtyard lay beyond the *kisalmāḫu* and contained an altar. Here also was the temple (Akk. *bītim,* "house," or *aširtu,* "sanctuary") itself. The temple comprised a cella ("holy of holies"), with a niche for the statue of the deity, separated by a curtain from an ante-cella. In Babylonia the latter was entered through one of the long walls but in later Assyria through the short wall opposite the cella. *See also* TEMPLES IN THE ANCIENT NEAR EAST.

The temple was the deity's dwelling place, where he was present on earth to provide blessing for city and people and to be approached by the priesthood and rulers. Here many of the cultic rituals, and especially the daily service (Akk. *dullu*), were carried out. The temple estate played a prominent economic role in the city's life but vied with private and royal estates. The temple estate also had a sociological function, absorbing many otherwise destitute elements of society, such as widows, the homeless, and captives.

D. Sacred Times and Festivals. The daily service (Akk. *dullu*) of the deity, who was represented by an image, provided for his material needs. The deity was bathed, suitably attired, and ornamented. At night the deity was escorted to bed. Meals were provided twice a day, morning and evening, and at some places three or four times. Provisions were placed before the deity on a table, and a curtain drawn for privacy as he ate. The various foods could be animals (bulls, goats, deer, sheep), fish, poultry, vegetables, fruit, dates, figs, cereals, bread, cakes, oil, milk, honey, wine, or beer. Some foods, such as birds, sheep, beef, and poultry, were taboo for different deities (cf. Lev. 11; Dt. 13:3-21). Dishes of food from the deity's table may on occasion have been sent to the king so that he could share in the blessing of the deity.

The priests and temple staff shared in many other daily offerings and animal sacrifices that were rendered. Oppenheim believed that the blood of the animal sacrifices had no ritual significance. It is generally assumed, however, that the slaughtered animal's blood was poured out as a libation before the deity. There is no evidence that animal sacrifices were burnt, as they were in Hebrew religion.

On special days of the month extra service was accorded the deity (cf. Nu. 28:9f.). The seventh, fourteenth, nineteenth, twenty-first, and twenty-eighth days were considered dangerous and unlucky (Ringgren, *Religions,* p. 82), and so special rituals were carried out to appease the evil powers. Some have suggested that we see here the beginning of the seven-day week. The first and fifteenth days (new moon and full moon) were also days of special service (Ringgren, *Religions,* p. 83; cf. *CAD,* IV, 373). The new moon was called *bubbulu* (cf. Nu. 10:10; 28:11-16), the full moon *šapattu* (Heb. *šabbāṯ*; cf. 2 K. 4:23 and Isa. 1:13, where "new moon" and "sabbath" are mentioned together, suggesting *šabbāṯ* may originally have meant "full moon"; but cf. Akk. *šbt,* Arab. *sbt,* "rest"). Also, every local sanctuary had its own special days of service.

In the hot midsummer month of Tammuz the festival of the god Tammuz (Sumerian Dumuzi) was held. On the second day there was lamentation. On the ninth, sixteenth, and seventeenth days there were torch-lit processions. During the three last days an image of Tammuz was buried. In this festival Tammuz's death was lamented and possibly his return to life celebrated. (See also above.)

The most important Assyro-Babylonian festival was the New Year Festival, which is attested from early Sumerian to late Babylonian and Assyrian times and was celebrated in various cities. The form of this festival most notably attested (from a fairly detailed, but incompletely preserved, text of Seleucid times) was the *akītu* (Sum. zà-muuk, "beginning of the year," or á-ki-ti) festival celebrated annually at Babylon in the spring, during the first eleven days of the month Nisan. The first day's ritual is unpreserved. On the second day the *šešgallu*-priest prayed to Marduk, extolling the god's victories and seeking his favor for Babylon, its people, and the temple Esagila. On the third day two images were made of wood, gold, and precious stones, and clothed in red, to be used in the sixth day's rituals. On the fourth day the *šešgallu*-priest greeted the early morning rising of a particular constellation of stars. In the evening the epic of creation, *Enuma Elish,* was recited. On the fifth day Marduk's temple Esagila was purified. A sacrificial sheep was decapitated, its bleeding body rubbed around the temple walls to take upon itself all uncleanness, and finally the head and body cast into the river which carried away the uncleanness (cf. the scapegoat ceremony performed on the Israelite Day of Atonement, Lev. 16:15-22). The god Nabû, Marduk's son, arrived from neighboring Borsippa. The king of

Babylon entered before Marduk and was subjected to a ritual humiliation in which the *šešgallu*-priest removed his royal insignia and placed them before Marduk. The priest struck the king's face and pulled his ears. The king knelt before Marduk declaring he was innocent of neglecting his duties. The priest struck the king again; it was considered a favorable omen for the future if this brought tears to his eyes. His insignia were now returned. The significance of this ceremony was to show that the king was responsible to Marduk, who renewed his kingship each year. The text does not preserve the ceremonies for the remaining days; these have been reconstructed from allusions in other texts. On the sixth day deities from other cities arrived in procession at Esagila. Marduk made two determinations of destinies, one on the eighth and one on the eleventh day. On the tenth day the king, "taking the hand of Marduk," led a procession from Esagila, through Babylon, across the Euphrates on boats, to the *bīt akīti*, "house of *akītu*," where Marduk's victory over Tiâmat, the primordial chaos monster, was celebrated in cultic drama, the king playing the role of Marduk. A banquet followed. The king and Marduk hastened from the *akītu*-house back to Esagila, where a sacred marriage ritual was consummated, with the king representing Marduk and a high priestess the god's consort, Ṣarpanitu. On the twelfth day the festival ended as the various deities returned to their own cities.

The Assyrian *akītu*-festival is not so well attested. It differed from the festival at Babylon in various ways. At Asshur it also occurred in Nisan but lasted twenty-one days. The Assyrian king took the lead the whole time and was not subjected to a cultic humiliation. Instead, his kingship was renewed in a coronation ceremony at which his officials laid down their insignia of office to have them restored by the king.

See also NEW YEAR I.B, C.

E. Other Rituals. There were also periodic rituals for special occasions. Rituals for purifying the king were carried out when he was endangered by omens. If the situation was serious enough a substitute king could be ritually installed to undergo the dangers. Other substitution rituals were used in expiation incantations. An animal could be put in the place of a human being and an incantation used calling for the anger of the gods or demons to fall on the animal rather than the person. At times the king or others could have an audience with the deity, to present offerings and make supplications. There were rituals for restoration of temples and for purification of temples.

F. Divination. It was important to know the will of the gods and the destinies they had determined for people. Divination developed to determine these often mysterious things in order to avoid disasters and choose more favorable circumstances. Although divination existed in Sumerian times its systematic development came about only in Assyro-Babylonian times. Numerous manuals were compiled to assist the divination specialists. Various methods of divining the will of the gods and the fate of individuals and social groups existed, as follows:

(1) The throwing of lots or dice These were rare and had no cultic status (cf. Nu. 26:55; 33:54; 34:13; etc.; Josh. 7:16-18; 1 S. 10:20f.; Est. 3:7; Ezk. 21:21f.; Acts 1:26).

(2) Libanomancy, the observation of the movement and shape of smoke arising from burning incense.

(3) Lecanomancy (cup divination; cf. Gen. 44:4f.), observation of the shape of drops of oil allowed to fall into a cup of water.

(4) Extispicy, the observation of the form and shape of the entrails, most often of the liver (hepatoscopy), of a sacrificial animal (cf. Ezk. 21:21 [MT 26]).

(5) Dream divination, interpreting the content of dreams. A special kind was incubation, known from Sumerian times, in which an individual slept in a temple and received an enlightening dream from the deity (cf. Gen. 20:3, 6f.; 28:12-15; 31:11-13; Nu. 12:6; Dt. 13:1, 3, 5; 1 K. 3:5ff.; Dnl. 1:17; 2:19; 7:1ff.; 8:1ff.; 9:21ff.).

(6) Unusual happenings. For instance, a desert plant growing in a city could indicate that the city would be laid waste. Augury involved the observation of birds. Animals and even malformed children could be observed for their behavior or malformation.

(7) Physiognomic divination, in which the form and features of a person's body were interpreted as omens of his fate. Sometimes, as in the case of a pregnant woman, the bodily omens could refer to the fate of another, i.e., the unborn child.

(8) Astrology, the observation of celestial phenomena. Usually these were interpreted as omens affecting the nation, but by the end of the 5th cent. B.C. horoscopes for individuals are known to have existed.

(9) Oracle divination, in which a "prophet" delivered an oracle received from a deity to the ruler; known in Mari and in late Assyria.

Of the above methods only three (lots, dreams, and oracles) were accepted practice in ancient Israel. *See* DIVINATION.

G. Magic. Magic and divination were closely related. Divination sought to know the will of the gods and the fate of people through the interpretation of omens, while the art of magic (conjuration or exorcism) sought to ward off

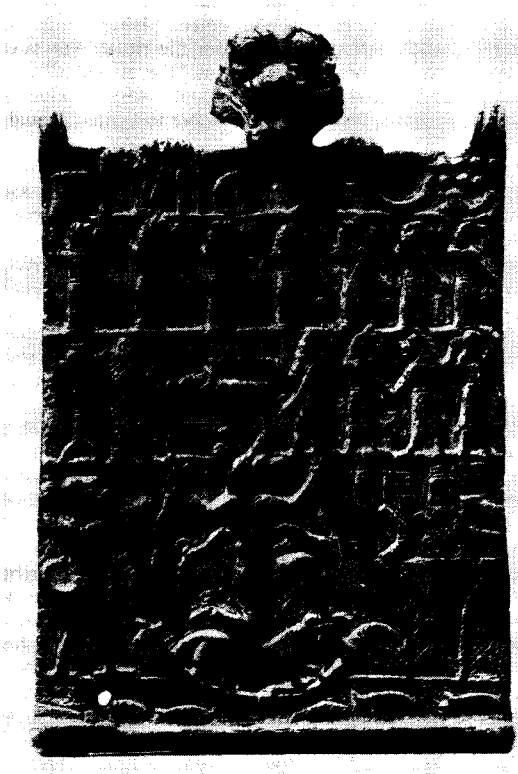
evil forces that unfavorable omens indicated were about to invade people's lives with sickness and disasters. The evil forces might be due to: (1) the invasion of demons; (2) the invasion of spirits of human beings who had died violently or as a result of transgressing a taboo, or who had received improper burial; (3) the anger of the gods resulting from offenses against ethical standards or taboos; (4) black magic, in which a person's enemies unleashed evil against him through magic. Black magic usually entailed the death penalty; nevertheless, it was widespread and feared by the average person.

Exorcisms involved rituals (acts) and incantations (words). Handbooks of exorcisms assisted the specialists in their conjurations. Both the *šurpu* and *maqlû* compilations mean "burning." *Šurpu* incantations were used against black magic. *Maqlû* incantations were used to expiate offenses against the gods. The *utukkī lemnūti* ("evil spirits") series was used to exorcise particular evil spirits. The *bīt rimki* ("house of washing") series contained exorcisms for the king in repelling demons and disasters, apparently in a special sanctuary, "the house of washing." The *namburbi* rituals were used to repel evil predicted by various omens. Many other series were compiled.

In theory an incantation could appeal to any deity for assistance in making the exorcism effective. In practice the chief deities appealed to were Marduk, Ea, and the fire-gods, Gibil, Girra, and Nusku.

Specialists in exorcism were the *āšipu-*, *mašmaššu-*, and *kalû*-priests. Exorcisms could be performed in a special sanctuary (cf. *bīt rimki* above), in a private home, by a river, in the open country, or in any place needed.

A demon plaque depicting an exorcism. A sick man lies on a bed between two priests, surrounded by demons (above) and three contending genii (right). Below is the winged demon Pazuzu, the demon Lamashtu riding an ass in a boat, and ritual objects used in the incantation (right) (8th [?] cent. B.C.) (RMN/ARS, NY/SPADEM)



Prophylactic amulets were worn as protection against evil powers. An amulet would contain a religious scene, or a representation of the demon concerned, and an inscribed incantation against the threatened evil. If, in spite of the amulet, the evil power came upon a person, then one of the various methods of exorcisms was used:

(1) Sympathetic (symbolic) magic. A symbolic ritual was performed, analogous to the exorcism needed. For example, a text describes a man cursed by a *gallu*-demon, which resulted in him suffering from "dazed silence, . . . an evil curse, a spell, a headache" as well as in his being abandoned by his god and his goddess. The ritual involved the peeling of an onion, the wrenching apart of a date, and the untwining of a wick. The incantation reads: "Let the curse be peeled off like this onion,/Let it be wrenched apart like this date,/Let it be untwined like this wick" (cf. Saggs, *The Greatness that was Babylon,* pp. 306f.).

(2) Substitution. For example, a text describes a man wanted by the goddess of death (Saggs, *Greatness,* pp. 307f.). A young goat is made to lie with him in bed from sunset to dawn. At dawn he carries the kid to a special house. They both lie down on the ground and a priest touches the sick man's throat with a dagger and then cuts the kid's throat. The kid is dressed and laid out like a dead man. The sick man leaves and the kid is buried with mourning. The kid is thus given to the goddess of death as a substitute for the man.

(3) Entrapment. The demon was trapped in an object and the object disposed of. Special rituals were performed to trap the demon.

Medicine, magic, and prayers were not kept separate. Sometimes a sick person was treated by rational medicine, including medications and even surgery. At other times magic and prayer were used, often along with medications.

Magic was probably widespread in ancient Israel but it was usually strongly disapproved of. The OT has one example of exorcism (1 S. 16:14-23). Jesus, His disciples, and other followers function as exorcists in the Synoptic Gospels and in Acts. *See* MAGIC; EXORCISM.

IV. World View: Cosmogony, Theogony, Anthropology.–*A. World View.* To the Sumerians, the original prime mover, which was eternal, was the primeval ocean in the midst of which was engendered the universe (an-ki, "heaven-earth"). Earth (ki) was a flat disk enclosed above by a hemispherical vault, the heaven (an). The atmosphere (líl) separated earth and heaven. Below the earth was the realm of the dead, the underworld (kur-nu-gi_4-a, "the land of no return"; Akk. *erṣet lā târi*). The primeval waters surrounded heaven, atmosphere, earth, and underworld. The astral bodies (sun, moon, planets, stars, etc.) were formed from the atmosphere and provided with luminosity.

The Sumerians viewed the universe as analogous to human society; the cosmic state comprised a divine state (or society) and a human state (or society). The divine state consisted of a pantheon of deities (personifications of natural forces and entities), which functioned as a divine assembly, organized democratically as the highest authority in the cosmos. In the assembly the deities made decisions concerning the affairs of the universe and the destinies of human beings. The deities also had charge of particular entities and functions in the universe. For example, Utu was the sun personified, judge of the gods, and god of justice and equity. The major deities were like a landed nobility, each owning a temple estate, through which he/she owned and controlled the city-state where

RELIGIONS: ASSYRIA AND BABYLONIA

The two gods nearest him are probably Ishtar and Ea (surrounded by water and holding the Anzû-bird). In the field are Ninurta-Nimrod, god of the hunt (left), and the two-faced god. The inscription reads: "Adda, the scribe" (*ca.* 2300 B.C.) (Trustees of the British Museum, photo D. J. Wiseman)

the temple was located. Since humanity was created to serve the gods, the citizens of the city-state had to maintain the temple estate and serve the deity through the cult, thereby gratifying the deity so that his/her blessing flowed to the city-state and its people. By Babylonian and Assyrian times a more complex situation developed in which a city contained more than one temple estate.

Mesopotamian religion was animistic, i.e., the entire universe pulsated with life and every phenomenon was imbued with living power, its numen (Sum. me; Akk. *parṣu*). Various numena were worshiped as divine and eventually personified as anthropomorphic, superhuman, immortal beings, resulting in a naturalistic polytheism. Certain personified numena were accorded supreme status, especially those associated with the cosmos, the astral bodies, and fertility. Beneficial but lesser numena were personified as good protective spirits. Harmful numena were personified as demons against which one had to be constantly on guard.

Assyro-Babylonian culture adopted the Sumerian world view with minor changes and superimposed Semitic concepts on it. A major development in Assyro-Babylonian religion was the strong tendency to henotheism in which Marduk and Ashur finally became the supreme gods of Babylonia and Assyria respectively, the other gods being subsumed under them as aspects of them or as their agents.

One of the chief forms through which the Mesopotamians expressed their world view was mythology. Mythology was an instrument of intuitive thought that transcended rational thought and sought to proclaim truth about existence. It was rooted in experience rather than intellect: through a direct intuitive experience of the numinous it sought to represent truth and reality concerning cosmic forces and entities, and to do so in picturesque symbols. *See* MYTH, MYTHOLOGY.

B. Cosmology: Cosmogony and Theogony. Since Mesopotamian thought had no concept of a distinction between an inanimate physical realm and a living realm of deities, we shall discuss cosmogony and theogony together as cosmology.

Mesopotamian thought provides no uniform concept concerning the origin and organization of the cosmos or of the gods. The diversity of views is best understood by considering a number of Assyro-Babylonian myths, supplemented by some allusions in other literature, as well as by considering some earlier Sumerian myths.

1. Origin and Ordering of the Universe. In a "Ritual for the Repair of a Temple" (*ANET*, p. 344; Heidel, pp. 65f.) Anu is creator of the heaven and Nudimmud (an epithet of Ea) creator of the primordial *apsû*-ocean. Clay apparently existed within the *apsû* since Ea pinched off a piece from which to create the brick-god Kulla. The ritual describes Ea as creator of the various phenomena (deities, building materials, and workers) required for the ritual. The text breaks off as Ea creates the king as "the provider" and humanity as "the makers"; i.e., humanity, with the king as its representative, was created to serve the gods through the cult.

An "Incantation to the Tooth-Worm" (*ANET*, pp. 100f.; Beyerlin, pp. 77f.; Heidel, pp. 72f.), intended as a cure for toothache, contains a mythological introduction with cosmological material. As reconstructed, the text describes a process of cause and effect in which Anu created heaven, heaven created earth, earth created rivers, rivers created canals, canals created marsh, and marsh created the worm which the gods permitted to inhabit the teeth and gums. The creation of humanity is assumed. The incantation petitions Ea to destroy the worm, but Ea plays no role in creation.

"The Chaldaean Cosmology" (Gressman, pp. 130f.; Heidel, pp. 61-63) speaks of a time when no temple, reed, tree, brick, house, city, human being, or *apsû* had been made and all the lands were sea. Then in the middle of *apsû* the Anunnaki-gods created the city Eridu and its temple Esagila, as well as Marduk and Babylon. Marduk created earth and then humanity so that the gods might live in ease and delight, clearly implying that humanity was created to serve the gods. Aruru (a goddess) created seed of men with him. Marduk proceeded to create cattle and other animals, the Tigris and Euphrates, meadows and fields, woods and forests, reeds and trees. The badly preserved text appears to have then described Marduk as making the various cities and temples of ancient Sumer.

Enuma Elish, the "Babylonian Creation Epic" (*ANET*, pp. 60-72, 501-503; Beyerlin, pp. 80-84; Heidel, pp. 1-60),

An impression from a Neo-Assyrian seal that may depict a section of the *Enuma Elish*. Marduk (or Ashur) battles with the goddess Tiâmat, whose body he will split to form the heaven and the earth (*ca.* 8th cent. B.C.) (courtesy of the Trustees of the British Museum)

of which an Assyrian version also existed, is the most important cosmological text. It was compiled from earlier sources during the second half of the 2nd millennium B.C. as propaganda for use in the New Year *akītu*-Festival at Babylon to demonstrate Marduk's henotheistic superiority. The myth describes how in the beginning there was nothing but primordial masculine Apsû (fresh waters) and feminine Tiâmat (salt waters), who stand for inertia and rest (Jacobsen, *Enc. Brit.*, XI, 1004) and whose waters commingled (with sexual overtones). (Alongside Apsû and Tiâmat was Mummu, a secondary figure; Mummu may be an epithet of Tiâmat meaning "mother" [*ANET*, p. 61 n. 2], or he may represent the mist arising from Apsû and Tiâmat [Heidel, p. 3]). Then the gods were engendered in their midst. The first pair formed was Laḫmu and Laḫamu, the powers in silt (Jacobsen, *Enc.Brit.*, XI, 1003). The next pair was Anshar and Kishar, the powers in the horizon (Jacobsen, *Enc.Brit.*, XI, 1003) or "heaven's totality" (*an-šár*) and "earth's totality" (*ki-šár*). Anshar and Kishar engendered Anu, who begat the wise and strong Nudimmud (epithet of Ea, lord of fresh water). Ea was supreme among the other gods who by implication had by now been engendered, most likely by Laḫmu and Laḫamu. This younger generation of gods was dynamic in contrast to the staticity of the older generation, especially Apsû and Tiâmat. Conflict resulted since the younger gods disturbed Apsû and Tiâmat with their commotion. Against Tiâmat's protest but encouraged by Mummu, Apsû, decided to destroy them. However, Ea killed Apsû and bound Mummu. Then he established his abode on the slain Apsû and dwelt there in peace with his spouse, Damkina, as lord of fresh waters.

Marduk was born in the heart of Apsû as the offspring of Ea and Damkina. He is described superlatively as surpassing all the deities. Tiâmat decided to avenge Apsû's death and planned for battle. Eventually, Ea and Anu having failed to defeat Tiâmat, Anshar commissioned Marduk to carry out the task. He agreed on condition he

RELIGIONS: ASSYRIA AND BABYLONIA

mankind "for the service of the gods that they might be at ease." As instigator of Tiâmat's rebellion, Kingu was slain and Ea (not Marduk) fashioned mankind from Kingu's blood. Marduk organized the gods into those above and those below. The gods built Babylon and Marduk's temple, Esagila, with its ziggurat as a thanksgiving to Marduk for their release from servitude. A banquet followed at which Marduk was again proclaimed supreme and his fifty names were declared by all the gods present. The epic closes by exhorting that the names of Marduk be remembered (recited) and explained by the leader. They are to be discussed and the father is to recite them to his son, so that fertility and prosperity may ensue (cf. Ex. 13:14f.; Dt. 11:18-21; 26:5-10).

A bilingual Sumero-Akkadian myth concerning the "Creation of Mankind" (Heidel, pp. 68-71) describes how, after heaven and earth had been separated, the mother of the goddesses had been brought into being and the earth brought forth, the destinies of heaven and earth fixed, and the Tigris and Euphrates established, then Anu, Enlil, Šamaš, Ea, and the great gods, the Anunnaki, wondered what else to create. They decided to slay two gods and create mankind from their blood to serve the gods, work the land, and raise livestock. The first two human beings were thus brought forth and named Ulligarra and Zalgarra.

In ancient Sumerian literature the idea that heaven and earth were once close together and then separated occurs a few times. The myth "Gilgamesh, Enkidu, and the Underworld" (Beyerlin, p. 74) tells of the separation of heaven from earth and of earth from heaven, of the establishing of the seed of mankind, of Anu choosing heaven and Enlil earth as their realms of authority, and of the underworld being assigned to the goddess Ereshkigal. In a poem concerning "The Creation of the First Mattock" (Beyerlin, pp. 75f.) Enlil separated heaven from earth. He then created the mattock with which he struck something called the *uzu-e* ("bringer forth of the flesh") and from the hollow the first human beings grew up from the earth.

In the myth "Enki and the World Order" (Beyerlin, pp. 78-80) Enlil functions as ruler and creator-god. He provided Enki with the *mes* (divine powers) enabling Enki to organize the world, construct human civilization, and found its various occupations, putting each into the charge of a particular deity.

The Sumerian "Deluge Myth" (*ANET*, pp. 42-44; Beyerlin, pp. 89f.; Heidel, pp. 71f.) opens with a cosmological section, the first part of which is not preserved. The preserved part speaks of the creation of mankind by Anu, Enlil, Enki, and Ninhursag, the bringing into being of veg-

etation and animals, the lowering of kingship from heaven, and the founding of five antediluvian cities, namely, Eridu, Badtibira, Larak, Sippar, and Shuruppak.

2. *Paradise Themes.* Two Sumerian paradise myths are worth mentioning. First, "Enki and Ninhursag" (*ANET,* pp. 37-41; Beyerlin, pp. 85f.) which begins with a description of Dilmun, both a "land" and a "city," the setting for the subsequent story. Dilmun was a pure, clean, and bright place, without violence, suffering, sickness, or death, a place of peace, blessing, and fertility. Here Enki impregnated the goddess Ninhursag, who bore Ninmu. Enki impregnated Ninmu, who bore Ninkurra. In the same way Ninkurra bore Uttu. Enki cohabited with Uttu but no new goddess was produced. Instead his semen was used to cause eight different plants to grow. Enki ate them one by one and Ninhursag angrily cursed him and he began to die. The fox intervened; Ninhursag recanted and healed Enki, causing eight deities to be born from different parts of his body that pained him. The eight deities were assigned functions; the last, Enshag, was to be the lord of Dilmun.

A second Sumerian paradise myth is "Enmerka and the Lord of Aratta" (Beyerlin, pp. 86f.). Aratta was a rich land in Iran with gold, silver, and precious stones. Enmerka of Uruk quarreled with the ruler of Aratta. Enmerka sent a message to the ruler of Aratta describing a paradisaical future with no harmful wild animals, no fear or anxiety, and no more enemies, if he submitted to Enmerka.

C. Mankind: Origin, Nature, Destiny. 1. Origin. As indicated in the previous section the ancient Mesopotamians had various ideas concerning the origin of mankind. A few other texts should be mentioned. The "Myth of the Creation of Man by the Mother-goddess" (*ANET,* pp. 99f.; Heidel, pp. 66f.) tells how the goddess Mami (Ninhursag) created mankind (from clay mixed with the flesh and blood of a slain god) in order to bear the yoke of creation and serve the gods.

The "Myth of Atra-ḫasis" (*ANET,* pp. 104-106; Beyerlin, pp. 90-93; p. 77, n. k; Lambert and Millard, pp. 43-65) tells how the gods complained of the work they had to do and asked the mother-goddess Mami (Nintu) to create mankind (*lullû*) to bear their toil. Enki advised killing one god with whose flesh and blood Nintu should mix clay, "that god and man may be thoroughly mixed in the clay" (Lambert and Millard, p. 59). Nintu pinched off fourteen pieces of this clay mixture and fourteen birth-goddesses gestated them, producing seven male and seven female human beings.

The Sumerian myth "Enki and Ninmah" (Beyerlin, pp. 76f.) tells how clay above the apsû-ocean was shaped into a model and life given to it by the mother-goddess Ninmah (cf. Gen. 2:7). The result was mankind, which was to serve the gods.

2. Nature. In Babylonian mythological thought human nature contained an element of the divine. In *Enuma Elish* and in the bilingual myth of the "Creation of Mankind" mankind was made from the blood of a slain god or gods. In the "*Atra-ḫasis* Myth" mankind was made from a mixture of clay (the earthly part) and the flesh and blood of a god (the divine part); also, the *eṭemmu* ("spirit, ghost") of the slain god remained as the part of man that survived death and had a shadowy existence in the underworld. Mankind was not on a par with the gods, since the divine part was that of a slain god, not a living god. Furthermore, it had not been granted immortality.

The biblical concepts of mankind made in the image and likeness of God (Gen. 1:26f.) and of mankind formed from the dust of the ground into which God breathed the breath of life (Gen. 2:7) may be tenuously compared with the Babylonian ideas of a divine part in humanity as well as an earthly part. But neither the biblical nor the Babylonian concepts presents mankind as divine in the sense of being a god. For both religions mankind is powerless before the divine realm.

3. Destiny. Mankind was to maintain the comfort and ease of the gods through cultic worship and through toil to keep the earth fertile. Mankind's ultimate destiny was death, for it was mortal, and beyond death lay the netherworld (*erṣet lā târi,* "land of no return"). The god Nergal and his consort Ereshkigal ruled the netherworld, which was inhabited by the disembodied spirits or ghosts (*eṭemmū*) of dead persons. Each *eṭemmu* experienced a shadowy, dismal, unpleasant existence. Various myths speak of the netherworld as dark and as a place where dust and clay are food. The twelfth tablet of the Gilgamesh epic suggests differing fates for different people, but none of these fates is desirable. There was no concept of an afterlife of bliss and happiness.

The OT also conceives the underworld as a subterranean region (Prov. 2:18; Jonah 2:6), as an unpleasant place of gloom and darkness (Job 10:21f.; Ps. 23:4; 143:3; Lam. 3:6) associated with dust (Job 17:16; 21:26; Ps. 7:5). Alongside such pessimistic concepts, however, are more positive views (Gen. 15:15; 25:8; Ps. 49:14f. [MT 15f.]; 73:24; 139:8), and the concept of resurrection to eternal life eventually arose (Dnl. 12:1-3).

V. Comparative Religion: Israelite and Ancient Mesopotamian Religion.—Assyro-Babylonian religion and ancient Israelite religion have many parallels. Generally these parallels result from a common cultural milieu. But, only a few instances of direct contact can be adduced. Alongside the parallels are many important differences. The parallels and differences indicate that Israelite religion arose out of an ancient Near Eastern milieu by a twofold process of adaptation and rejection. This is not to deny God's involvement but to assert that in His providential ordering of Israelite religion He worked in and through the religious cultural forms that existed at the time.

The radically different theology of Yahwistic faith transformed ancient Near Eastern religious forms and concepts. (1) Nature was not experienced as personal; it was inanimate. (2) Yahwistic faith was strongly opposed to polytheistic and fertility religion. (3) Yahwistic faith maintained a strong antimythological tendency. (4) Yahwistic faith had a high view of deity. (a) Its strong monolatrous and monotheistic tendency contrasts to the polytheism and henotheism of the ancient Near East. (b) Yahweh was transcendent; He was not tied to the forces of nature and fertility. (c) Yahweh had a high moral character; His judgments were not arbitrary or capricious. (d) He was a God of grace who acted with a view to human redemption and reconciliation.

RELIGIONS OF THE BIBLICAL WORLD: CANAANITE (SYRIA AND PALESTINE). The general geographical limitations of the area covered in this article are the territories of the modern states of Syria, Lebanon, Israel, and Jordan. For further perspectives on this region, see ARCHEOLOGY OF SYRIA AND PALESTINE. The region is approximately contiguous with that described by the ancient term CANAAN, though it extends further northward, including most of northern Syria, which would not have been encompassed by the designation *Canaan.*

V. Interaction with the Hebrews
  A. General Relationships
  B. Hebrew Reactions
  C. Positive Areas of Relationship

I. General Remarks.–*A. The Geographical Region.* The region of Syria and Palestine is determined principally by virtue of its location at the center of various other distinct regions and cultures in the ancient world. To the south lay Egypt, with its own original culture and religious traditions. To the northeast lay Mesopotamia, with its successive empires (Sumer, Akkad, Assyria and Babylonia) and their respective religious traditions. To the north lay the Hittite empire, until the Late Bronze Age (ca. 11th cent. B.C.). And to the west lay the Mycenaean, and later the Greek, regions with their own civilization and culture. While each of the surrounding regions had a degree of cultural homogeneity and its own indigenous religious traditions, the region of Syria and Palestine, while not without its indigenous elements, was to a large extent a melting pot in which the various traditions of the other regions were fused together. Thus in the Late Bronze Age archives of Ugarit, located at Râs Shamrah in modern Syria, may be found dedicatory inscriptions to Egyptian deities, Akkadian wisdom texts, Hurrian and Hittite texts, Cypro-Minoan inscriptions, all set alongside native Ugaritic (Semitic) religious texts. This example of international and intercultural archives is typical of a general situation of "internationalism" in Syria and Palestine, although it was most dominant in large cosmopolitan cities. Throughout the OT period the region of Palestine and Syria provided the battlefields for international power struggles of the age, particularly those between Egypt and the successive Mesopotamian regions; these international struggles exerted an influence on the religions of the region, for each religion was related to a local state or kingdom, which in turn became involved in the international conflicts. Thus any detailed study of the religions of Syria and Palestine presupposes some knowledge of the religions of the surrounding regions. In the analysis of religions in Syria and Palestine three general categories may be recognized: (1) indigenous religious traditions; (2) syncretistic forms of religion, in which foreign and native elements have fused to create a new entity, and (3) foreign religions, adopted for use by people in the region, often concurrently with a form of indigenous religion.

B. Commonality and Diversity. The principal ethnic population of the region comprised Semitic peoples, whose religion, along with language and culture, was a distinctive and indigenous form of the Northwest Semitic traditions. The commonality of the native Semitic religions extends to such matters as deities, temple types, and emphases in belief and worship. The diversity is provided both by regional, chronological, and ethnic variations.

(1) Regional variations have produced a great variety of religious traditions, though with a common Semitic substratum. Thus the varieties of religion in coastal locations (with an emphasis on seagoing activities) differ markedly from the agricultural emphases of religious traditions located inland. Again, the identification of a religion with a particular state often meant that a superficial commonality would in practice have been markedly different. The city states of Tyre and Sidon each had their own religions, not unsimilar, but distinguished by national and political boundaries. Again, the religions of the Transjordanian states of Ammon and Moab, though not well known, had a degree of similarity that was overshadowed by national and political differences.

(2) Chronological variations introduce a further difficulty in the study of the religions of Syria and Palestine. Thus we are currently learning more and more about the religion of the northern part of the region in the 3rd millennium B.C. from the study of Eblaite texts and physical remains excavated at Tell Mardikh. From the 2nd-millennium texts and physical remains we can learn a good deal about religion at Ugarit and Byblos on the western coast of the region. From the 1st millennium B.C., physical and textual evidence becomes more abundant, providing some information on Phoenician religion, Aramean religion, Moabite religion, and other regional religions. But when the variety of religions associated with different regions is conjoined with the further variety associated with differ-

RELIGIONS: CANAANITE

ent chronological periods, the difficulty of reconstructing the character of religion in Syria and Palestine can be appreciated.

(3) A final difficulty is that posed by the variety of ethnic groups in the regions. In general terms the principal group is that of the Semitic peoples, whose religions have an underlying commonality of theme and character. From the beginning of the 1st millennium B.C. we must also account for the Arameans and their religion; while still in the Semitic tradition, these people do not appear to be indigenous to the area. Of the many non-Semitic foreign groups that became influential in the area, the two most important are the Hurrians and the Philistines. The Hurrians are known to have been present in the region from the 2nd millennium B.C. and continued into the 1st millennium B.C.; while their original religion appears to have had Indo-Aryan characteristics, it was a highly syncretistic system and absorbed many features of the native Semitic religions. The religion of the Philistines, also a non-Semitic people, is less well known; their location on Israel's southern borders created a degree of interaction in common with the other areas of interchange.

C. Limitations of the Evidence. Ideally, in order to reconstruct the religion of a given people in a particular place, one would require extensive evidence: written texts of various kinds, iconographic evidence, physical evidence (objects, buildings, tombs, etc.), together with other data that would provide the cultural and chronological framework within which to reconstruct the ancient religion. Unfortunately the evidence for religion in Syria and Palestine is fairly limited and may be summarized as follows. (1) Religious texts (see further III below). Here the evidence is good from two archeological sites: UGARIT (late 2nd millennium B.C.) and Ebla (TELL MARDIKH; 3rd millennium B.C.). Other archives produce at best indirect evidence, either because the texts are principally Mesopotamian in substance (e.g., Mari) or because the substance is not specifically religious (e.g., the letters from Palestine in the Egyptian Amarna archives). (2) Iconographic evidence is fairly extensive from most regions and periods, though the interpretation of the evidence is often difficult in the absence of textual records. (3) Extensive physical evidence has survived from numerous excavations: the remains of shrines and temples, altars, cult lamps and related objects, stelae, etc. Again, this type of evidence has limited value for understanding religion when not accompanied by written texts. (4) A vital category of evidence, which was frequently the only evidence prior to the birth of modern archeology, is the biblical text as such. Frequent references are made to the religions of Israel's neighbors; they are given usually in the context of religious polemic, but are invaluable nevertheless in trying to patch together a picture of the religions of Syria and Palestine.

II. The Gods and Theology.–A. Principal Deities. So far as we can determine, all the religions in the regions were *theistic*, and all, to a greater or lesser extent, were *polytheistic*. The coexistence of a variety of religions in one location may imply either religious pluralism or more commonly syncretism, sometimes in theory but more commonly simply in practice (viz., a citizen of a particular state might worship [a] the principal deity of that state, [b] a fertility deity, [c] a deity associated with the dead, and [d] a personal or familial deity). Although in theory separate beliefs and distinct cults or forms of worship might be associated with each of these deities, in practice there must have been a degree of syncretism in the faith and worship of the ordinary person. In this general context the principal deities of Syria and Palestine (excluding local variations) can be summarized as follows: El (*see* GOD, NAMES OF II.A.1), BAAL, Dagan (biblical DAGON), Anat (ANATH), ASHTORETH (Astarte). The Bible refers to all these deities.

A bronze figurine of a standing male deity, either Baal or Resheph, found at Shechem. Silver foil once overlaid the tunic and silver filet covered the forehead. He probably once held a staff, dagger, or spear (Joint Expedition to Shechem; photo L. Ellenberger)

B. Minor Deities. The deities referred to here are "minor" in the context of Syria and Palestine as a whole, though some are important deities in particular regions and particular cults. Knowledge of these deities comes from the Ugaritic texts (which include "pantheon lists"), Phoenician, Aramaic, and Canaanite inscriptions; in addition to explicit mention of the deities in the texts, additional information is provided by the theophoric elements in personal and place names referred to in the texts. The following list is selective.

(1) *Ilib.* A notable god in Ugarit, whose name apparently means "god of the father," Ilib was patron of ancestor worship, for which ample physical evidence has survived at Râs Shamrah, Tell Mardikh, and other sites. There may be an allusion to this deity in Isa. 14:9, with its reference to the "shades" of Sheol.

(2) *Hadd* (or Hadad). A god of storm (sometimes associated with Baal), referred to frequently in Ugaritic and in later Aramaic texts. The name survives in the biblical texts in various names, e.g., Hadad (Gen. 25:15), Hadadrimmon (Zec. 12:11).

(3) *Yam.* The god's name means "sea"; in Ugarit he is a

son of El. There are frequent allusions to this deity in biblical texts, where the Hebrew word *yam* ("sea") is employed to indicate "sea's" subservience to the Lord (e.g., Ex. 15:4-10; Ezk. 28:1-8, where the prince of Tyre, thinking himself to be a god like Baal, would die "in the heart of the *sea*," an allusion to *Yam*, who in Ugaritic mythology engaged in conflict with Baal.)

(4) *Mot*, in the Ugaritic texts, is "Death." Biblical allusions in Hab. 2:5 ("like *Death* he has never enough"); Ps. 49:14 (MT 15); and elsewhere.

(5) *Resheph*, essentially a god of pestilence, but paradoxically associated with health, is referred to in Ugaritic, Phoenician, Egyptian, and other inscriptions. A local variation of Resheph (Mekal) was god of Beth-shean in the biblical area, of which evidence survives on an excavated stele. A possible biblical allusion may be seen in Hab. 3:5 ("Pestilence").

(6) *Šapaš* (sometimes Šemeš). Known at Ebla, Ugarit, and elsewhere, Šapaš was a Canaanite form of the sun-god. Biblical references to this god survive in place names (e.g., En-shemesh, Josh. 15:7) and in references to sun-images and the like (e.g., 2 Ch. 14:5; Isa. 27:9).

The above is only a brief sample of the multiplicity of deities worshiped in Syria and Palestine. What is notable about the majority of such deities is the fluidity of their attributes; a particular god with specific attributes and functions in one location may have quite different attributes and functions in another place.

C. Regional Deities. In addition to the major and minor deities mentioned above, there is evidence that certain other gods served as more limited regional deities. In some instances the regional deity may be the local manifestation of one of the more widely recognized deities (e.g., *Baal* has many regional manifestations). In other cases the regional deity is truly local, peculiar to a particular place or people. It is not always easy to determine which of these circumstances applies in a particular case. CHEMOSH of Moab and Milkom of Ammon are often considered independent, local deities. But some interpreters have suggested that Milkom is not a divine name, but a title of the Ammonite god meaning "the King" (from *melek* + *-m*, the definite article in South Arabian dialects). According to Fohrer (p. 53) the term *mōlek*, often taken as a divine name (MOLECH, Moloch), is in reality another epithet from *melek*, "king," which has been vocalized following the pattern of *bōšet*, "shame," as a sign of disapproval. Others reject the likelihood of such a hybrid form (known as *dysphemism*) and trace *mōlek* to the divine name *mālik* "king," "ruler") known at Ebla (Heider, p. 401). It remains likely that a single deity lies behind both epithets, while the presumption in Judges (11:24) that Chemosh is the god of Ammon indicates the probable identification of Chemosh, Milkom, and Molech. Further evidence — that human sacrifice is associated with the worship of Chemosh (2 K. 3:26f.) and Milkom/Molech (Lev. 18:21; 20:2-5; 2 K. 23:10; Jer. 32:35) along with the appearance in the Mesha inscription from Moab (line 17) of the conflated divine name Ashtar-Chemosh — suggests Chemosh/Milkom/Molech may be local manifestations of the more widely disseminated Ashtar (known at Ugarit) to whom human sacrifice is also thought to have been offered (Fohrer, p. 50; but see also Heider).

Melqart (of Tyre) is another divine epithet, meaning "King of the city" (from *melek* + *qeret*), for the local manifestation of Baal. Eshmun of Sidon is perhaps an independent local god although there is some indication of syncretism with other deities, at least in certain periods (Albright, pp. 150, 227f.).

D. Theology. The Canaanite texts have almost no overt discussion of theology. A brief resume of what can be inferred, primarily from the Ugaritic religious texts, follows. The gods are called *qdš*, "holy," stressing their "otherness" in relation to human beings. They are both terrible and fascinating. The gods together make up the "assembly of the gods" (*phr 'ilm*) and are thought to dwell in the north on Mt. Ṣaphon (Mt. Cassios). Possessing the gift of long life, the gods give it to whom they will. But, as Aqhat knows in his contest with Anath (*UT*, 1-3 Aqht), only the gods are immortal, all human beings die. Mankind serves the gods through the temple sacrificial system. In return they trust in divine retribution in which righteousness receives reward and sin involves punishment. While the gods are exalted lords of life, personal names link human beings and gods together in familial relationships (Abibaal, "my father is Baal"; Aḥibaal, "my brother is Baal"). Prayer to the gods is common, with long life a priority request. Guidance for the future is provided through various forms of divination, including liver extispicy, oracles, ritual incubation, astrology, and direct prophecy. While worship of the dead among the Canaanites indicates some concept of life after death, the extent and nature of that belief remains unclear.

III. Religious Texts.—Religious texts recovered through archeological excavation are an invaluable source of information concerning the religions of Syria and Palestine. Some texts are explicitly religious; others may be administrative or political and contain only indirect religious information.

A tablet (reverse side) from Ugarit that tells of the Canaanite myth of Shaḥar and Shalim, the twins "Dawn" and "Dusk." Part of this section (lines 52-59) reads, "Word was carried to El: 'Two have been born, Shaḥar and Shalim. . . .' Both of them travailed and gave birth, they gave birth to the gracious [gods], 'cleavers' of the sea, children of the sea" (tr. J. C. L. Gibson, *Canaanite Myths and Legends* [2nd ed. 1978], p. 126) (Louvre, photo M. Chuzeville)

A. Texts from Ugarit (Râs Shamrah). The greatest variety of religious texts comes from the archives of Ugarit. These texts include: (1) *mythological texts* important for their testimony to the substance of Canaanite belief. Certainly the chief of these is the cycle of fertility texts revolving around the exploits of Baal and Anath (see IV.E below). While interpretation of these texts remains obscure at points due to the fragmentary nature of the tablets and the lack of agreement regarding their arrangement, scholars generally agree on the structure of the myth and its relation to the fertility cycle. The myth affords a brief but contemporary glance at the fertility cult known otherwise only from biblical polemic or late texts of limited value. The myth of the "Gracious and Beautiful Gods" (*UT*, 52) recounts the birth of the gods Shaḥr ("Dawn") and Shalim ("Dusk") following the sexual encounter of 'El with two female consorts. M. Pope suggests a connection between this text and the cult of the dead ("Cult," p. 165).

(2) *Ritual texts* describing religious rites, the offering of sacrifices, etc.

(3) *Pantheon lists* enumerating the gods.

(4) *Literary texts (legends)* providing indirect religious information. Among these pride of place belongs to the legend of King Krt (sometimes Keret), which describes his campaign against Pabil of Udum (identified by some with Edom) to secure the hand of Lady Hurai in marriage following the tragic deaths of his first wife and progeny. Of special interest are the sections detailing Krt's vision of 'El that sets him on his journey and the description of Krt's sacrifice that follows. The Aqhat text shows distinct connections with the common structure of the fertility myth (see IV.E below). The legend begins with the plea of Danel (perhaps to be identified with the figure mentioned in Ezek. 14:14) for a son. His request is answered through the intercession of Baal and Aqhat is born. As a gift from the craftsman deity Kothar-wa-Ḥasis Aqhat receives a composite bow, which incites the envy of Anath. When Aqhat refuses all Anath's offers (including immortality), she plots and accomplishes his murder. At this point the fertility connections become obvious, since vegetation withers as a consequence of Aqhat's demise. His sister Pughat searches for her brother and vows to avenge him. The text ends abruptly and fragmentarily just as Anath's assassin, in a state of inebriation, reveals his role to the vengeful Pughat.

(5) *Political texts (treaties)* specifying names of gods.

(6) *Administrative texts* listing various classes of religious personnel (see IV.B below). Scholars have drawn extensively on these Ugaritic texts to illuminate the background of biblical literature (see G. D. Young, ed., *Ugarit in Retrospect* [1981]). Certain limitations in the use of these texts for comparative biblical studies must be recognized, partly because of their geographical distance from Israel (they come from the Mediterranean coast in northern Syria), and partly because of the temporal distance between their date in the Late Bronze Age (*ca.* 1400-1200 B.C.) and that of the central OT period.

B. Secondary Texts. Numerous Aramaic and Phoenician inscriptions have survived from the 1st millennium B.C. For the most part, however, these INSCRIPTIONS are not primarily religious and contain only incidental information of value to the study of the religions of Syria and Palestine. (For the texts see J. C. L. Gibson, *Syrian Semitic Inscriptions* [3 vols., 1971, 1975, 1982]).

IV. Worship and Practice. *–A. Open-air Sites.* One of the most important cultic installations among the Canaanites is the *bāmâ* or "HIGH PLACE" frequently mentioned in the OT. The name designates the normal setting for these sites on a high hill. Usually associated with the *bāmâ* are the cult objects known as *maṣṣēḇâ* and *'ᵃšērâ*. The former (*maṣṣēḇâ*) is a stone pillar erected as a symbol of the male deity. Sacrifices of oil and blood were apparently smeared on the stones as part of worship. The *'ᵃšērâ*, representing the female counterpart, was some sort of wooden pole or image of the goddess. It is unclear whether the gods were thought to indwell these objects or whether they were symbolic representations of the deity. In addition to these items, a sacrificial altar completed the cultic facilities. Open-air *bāmôṯ* (pl. of *bāmâ*) were legitimate places of Israelite worship in the periods of the patriarchs and judges (Gen. 28:18-22; 1 S. 9:11-14). It is not until the monarchy that worship at *bāmôṯ* became suspect, partly because of growing tensions between Yahwism and the Canaanite fertility cults associated with the sites, partly because of the desire of later Judahite monarchs to centralize Yahweh worship in Jerusalem. In the books of Kings and Chronicles, positive or negative evaluation of individual monarchs is often connected with whether they permitted or attempted to eradicate these open-air shrines (cf. 2 K. 18:1-4; 2 Ch. 33:1-3). *Bāmâ* worship remained a continuing problem for the Israelites as late as the reign of Josiah (*ca.* 621 B.C.), who is said to have torn down the *bāmôṯ* throughout Judah (2 K. 22–23).

B. Religious Buildings. The principal religious buildings in the religions of Syria and Palestine were TEMPLES. Although the temples that have been excavated reveal varieties of architectural form, there appears to have been a general similarity of function. A temple was usually dedicated to the cult of a particular deity, normally a high god in the city or state. The worship at the temple was a regular and large undertaking, involving sacrifices and offerings. The temple may also have served as the focal point of a local religious cult, having numerous regional shrines reporting to it and belonging to its organizational structure. Many cities in the region had several temples, sometimes situated alongside each other, indicating the co-existence or integration of the worship of various deities. The general structure and function of the Jerusalem temple had many parallels to other temples in Syria and Palestine (see C. J. Davey, *Tyndale Bulletin*, 31 [1980], 107-146), though of course the focus of worship was entirely different.

Other buildings and structures with a religious function include the following. (1) Sanctuaries: various kinds are known, some being public buildings for the gathering of people to worship in a city, but without the religious establishment of the temples, others being smaller outdoor shrines situated in the countryside. (2) Mortuary palaces (e.g., at Râs Shamrah and Tell Mardikh), associated with the cult of dead kings, but perhaps also locations of worship. (3) Fertility shrines (e.g., at Minet el-Beida, near Râs Shamrah), with numerous small rooms for the undertaking of sexual practices associated with the fertility cult. (4) Family tombs, located in Râs Shamrah underneath private dwellings, for the care and worship of deceased ancestors.

C. Religious Functionaries. The principal evidence for religious functionaries comes from Ugaritic administrative and economic texts; the parallel evidence from the OT, however, suggests that the information may be considered typical for the region as a whole. In ancient Ugarit the following categories are known (though the list is not comprehensive). (1) *Chief priest (rb Khnm)*: he served as head of the temple establishment, which might also include a library, scribal school, and various other divisions. He was a leading citizen in the community as a whole (*see* PRIEST, HIGH). (2) *Priests (Khnm)*: the staff, often large, of the temple establishment (*see* PRIESTS AND LEVITES). (3) *Scribes (sprm)*: perhaps priests, but persons

RELIGIONS: CANAANITE

to whom had been delegated not only secretarial matters but also the preservation and continuation of the great religious texts (*see* SCRIBES). (4) "*Holy ones*" (*qdšm*), apparently the so-called sacred prostitutes who participated in the fertility rites at the shrines. (5) *Temple servitors* (*ytnm*): the general support staff of the temple establishment, to whom general work and maintenance duties were assigned (*see* SERVANT).

D. Music and Song. The Ugaritic texts also indicate the temple was served by musicians, both singers and instrumentalists; the worship of the temple thus included some form of liturgical music. One Hurrian text was found at Râs Shamrah which contained the words of a hymn, together with a musical score, and a colophon containing the kind of information that may be found in Psalms which have titles. (See/hear, A. D. Kilmer, R. L. Crocker, R. R. Brown, *Sounds from Silence: Recent Discoveries in Ancient Near Eastern Music* [record and booklet; 1977]; *see also* MUSIC.)

E. Sacrifices and Worship. The religious texts from Ugarit, containing lists of offerings and animals, indicate that large quantities of material were contributed to the temples and indeed provided the basis of the temple's economy. The discovery of numerous stone altars at various temple sites throughout the region confirms the sacrifice of various animals and other objects. In some instances sacrificial terms show a marked similarity to those employed in Israel (*dbḥ, ʿlh, šlmm, mnḥh*) although observance may have diverged. The two major types of sacrifices among the Canaanites — the holocaust (*šrp*), offered exclusively to the god, and the communion offering (*šlmm*), with its characteristic shared meal — are important parts of Israel's cult as well. Human sacrifice was clearly practiced among the Canaanites, though it may have been irregular in nature (the late evidence from Punic Carthage notwithstanding), for the most part restricted to times of extreme peril or need (2 K. 3:26f.). Libations were poured out to various deities: at several sites, vessels have been found, set in the ground with their base knocked out, through which libations have been poured "into" the earth in the hope of securing the fertility of the soil. *See also* SACRIFICES AND OFFERINGS IN THE OT.

Despite the diversity in the various religions of Syria and Palestine, some general and common themes of worship may be determined. (1) *Fertility.* The chief religious concern is to maintain the fertility of crops and animals as well as that of the human beings who both cultivated and depended upon them. The rather limited arable land, reliant on such natural water sources as rivers and rainfall (both of a seasonal nature), were under constant attack by the hostile elements, drought and desert. Such crops as survived to maturity must then face the locust. The development among the Canaanites of the extended city-state depending on the produce of the surrounding area to support the nonagricultural city populace heightened the role of agricultural fertility in the stability of society. The importance of human fertility is well attested in the biblical narratives. Infertility (barrenness), miscarriage, high infant mortality, and the decimation of war reduced the average life expectancy in good times to around thirty-five years of age. During times of famine and plague, this average may have dipped as low as eighteen (Myers). The desire for offspring is not limited to the patriarchal narratives of Genesis, but plays an important role in the KRT text from Ugarit as well.

Religious concerns with fertility found expression in myths of dying and rising deities related to the seasonal agricultural cycle. These myths are widely distributed in the ancient Near East and conform to a similar structure in most cases. The fertility-deity comes into conflict with the power(s) of infertility and death and is overpowered with the resultant subjection of the human world to infertility. A search for the missing deity (usually by a female counterpart) results ultimately in the revivication of the god and the restoration of fertility to the world. This motif is clearly present in the Canaanite myth of Baal and Anath from Ugarit. Following victorious combat with the chaotic water-god Yamm Nahar, Baal (the storm-god) is granted a house as indication of his preeminent role among the gods of Ugarit. At a banquet in his honor, Baal refuses to submit to the demands of the god Mot (Death),

RELIGIONS: CANAANITE

and in the resulting struggle he goes down to death through the gullet of his opponent. The goddess Anath searches for the deceased Baal and finally attacks Mot himself to secure his release. The restored Baal is then able to confront and defeat Mot decisively, thereby ensuring the stability of the fertility cycle. Similar myths are known in Greece (Persephone), Egypt (Osiris), and Mesopotamia (Inanna/Ishtar; Dumuzi/Tammuz). Ritual reenactment of the conflict and resolution of the fertility myth, involving sexual intercourse between the king and the high priestess of the fertility-goddess, occupied a prominent place in the New Year Festival in Mesopotamia and is thought to have occurred in Canaan as well (Ringgren, pp. 163-65).

Also characteristic of Canaanite fertility ritual is the association of male (*qᵉḏēšîm*) and female (*qᵉḏēšôṯ*) "holy ones" (cult prostitutes) with the temples and shrines of the fertility deities. By joining in the activities of cultic sexuality, common people could participate in "stockpiling" fertility energy, which ensured the continuing stability of agricultural as well as human and animal productivity. Archeological excavations in Canaanite locations have uncovered temples with chambers where sexual activity took place. Also, many iconographic representations of the fertility-goddess with exaggerated sexual features have been discovered. The influence of the fertility cult was widespread; it was combatted fiercely in Israel as alien to the covenant faith (e.g., Hos. 1–3).

(2) *Death.* The theme of death reflected in worship represents partly a concern for the welfare of the departed (illustrated by tomb deposits, the provision of food and drink for the dead, etc.) and partly a form of ancestor cult in which the shades of the departed become the objects of worship. Cultic feasts (sg. *marzē[a]ḥ*) were celebrated in the family tomb or at burial mounds with ritual drunkenness and sexuality (possibly involving incest) in which the deceased were thought to participate. Some suggest the biblical injunction against swines' flesh is related to the use of this animal in the cult of the dead (Pope, "Cult").

(3) *Nationalism.* The identification of particular deities with particular places (see II.C above) indicates the role of certain gods as national gods, providing protection for the city or state.

(4) *Ocean.* At some sites (e.g., Byblos and Râs Shamrah) the ocean or sea was in some sense a focal point of religious activity. At both Byblos and Râs Shamrah stone ship-anchors are found in temples, both as votive offerings and built into the symbolism of the temple architecture. This emphasis in religion is essentially a maritime variation of the more common agricultural emphasis of the fertility cult.

V. Interactions with the Hebrews. *–A. General Relationships.* The Hebrews were closely related to their neighbors by ties of geography, language, culture, and political environment. Some elements of religious similarity may be the result of their common Semitic heritage. In this category would fall the creation and flood narratives (which at points bear remarkable similarity to the Mesopotamian account of Atra-ḫasis *see* FLOOD [GENESIS] VI) as well as references to struggle with chaotic waters or the sea beasts RAHAB and LEVIATHAN. From time to time in OT history direct contacts between Israel and Canaan (including war, treaties, and various colonial relationships) provided ample opportunity for influence and reaction. It is inevitable that a knowledge of the religions of Syria, and especially of Palestine, would have been fairly widespread among the Hebrew populace throughout the OT period.

Evaluation of the nature and extent of Canaanite influence on Israel is dependent in part on one's reconstruction of the circumstances of Israel's entry into the land. Traditional acceptance of a unified and complete conquest of the land assumed a distinct Yahwistic faith for nomadic Israel that gradually adopted Canaanite fertility religion as it became increasingly settled and dependent on crop production. In this view, the fertility cult of Baal and Anath was intrinsically alien to the cult of Yahweh. Others suggest that such a view fails to explain the continuing hold of fertility religion on Israel throughout its history. Models of Israelite origins relying heavily on sociological theory suggest that Israel is a complex combination of disaffected Canaanite peasants and social outcasts (*'apiru*) who joined together with a small group of invading Yahwists to form a potent coalition that was able to topple the ruling Canaanite aristocracy (Gottwald, *Hebrew Bible,* pp. 261-288). As a result fertility religion would have been firmly entrenched in the formerly Canaanite segment of the Israelite population while faith in Yahweh would have formed the unifying element of society at the national level.

B. Hebrew Reactions. The principal reactions of the Hebrews, especially the Major Prophets, were focused against the insidious influences of the fertility cult. The restriction of priesthood to males stands counter to the whole thrust of ancient Near Eastern religion in which the interaction of male and female principals was an absolute

necessity. The rejection of cult prostitution shifted hopes for productivity to the gracious will of Yahweh rather than the manipulation of fertility powers. Confrontation of syncretistic movements to worship Baal alongside Yahweh or to conflate the two was a chief priority of the prophets and led them into conflict with the royal establishment on numerous occasions (e.g., Elijah's conflict with Jezebel and the 400 priests of Baal on Mt. Carmel in 1 K. 18–19). Following the division of the kingdom, charges of Baal worship at Dan and Bethel were leveled against Jeroboam (1 K. 12). Even Solomon, who saw Yahweh's temple through to completion, was not immune as evidenced by the condemnation of his worship of Ashtoreth and Milkom under the inducement of his foreign wives (1 K. 11:1-8). The eradication of the open-air *bāmôṯ* fertility shrines was still incomplete at the conclusion of the monarchical period and human sacrifice to Molek continued to plague Israel up to the Exile and beyond (see II.C above). The very vehemence of the prophetic reaction, in both the northern (e.g., Hosea) and southern (e.g., Jeremiah) kingdoms, indicates how strongly the Hebrew population as a whole embraced the appealing and comforting aspects of fertility worship (esp. of Baal). Apart from its appeal at the level of human sexuality, the fertility cult, by virtue of its focus on the fertility of land and beasts, must always have had an attraction in a society such as ancient Israel where economy was based primarily on agriculture.

C. Positive Areas of Relationship. Some suggest that important structures in Israelite religion owe much to Canaanite agricultural temple religion. Chief among these are the sacrificial system and the dominant religious festivals of the year. We have already noted similarities in the form and substance of Israelite sacrifice as compared with Canaanite (see IV.E above). A number of the important festivals (e.g., Unleavened Bread, Weeks, Tabernacles; *see* FEASTS) reflect settled agricultural celebrations that have been associated with important religious events in the historical life of Israel. Influence of a different kind may be seen in Hebrew literature, where some of the great themes of the mythology of neighboring religions (notably the mythology of Baal) have been adapted and "demythologized" to give expression to the Hebrew faith. Yahweh is occasionally depicted as storm-god (Ps. 18:7-15 [MT 8-16]; 29:1-11; 144:5f.). Elsewhere Yahweh defeats the chaotic sea beasts Leviathan (Ps. 74:14; Job 3:8; 40:25; Isa. 27:1) and Rahab (Job 9:13; 26:12; Ps. 89:10 [MT 11]). By the adaptation of themes pertaining to Baal and in the attribution of Baal's characteristics to the Lord of Israel, the Hebrew poets engaged in a fruitful critique of Canaanite religion.

I. Introduction.–The religion of Egypt, like its culture, was of long duration and relatively little influenced by outside elements. It did, however, undergo changes, for the most part gradual, while at the same time maintaining many of the original features. The observation that "Egypt could learn but it could not forget" (cf. H. Frankfort, *Before Philosophy*, p. 41; cf. also J. Černý, *Ancient Egyptian Religion*, p. 87) pertains to its religious as well as to its other cultural elements. The one break in this continuity occurred in the Amarna Age (*ca.* 1379-1300; *see* EGYPT VIII.G), when Amenhotep IV (Akhenaten) tried to suppress the religious system which was largely dominated by the Amon priesthood (see II.C below). The religious revolution, however, was short-lived, and the Amon priesthood regained control under Tutankhamen (*ca.* 1330) or even earlier.

The first observation of a person coming to the study of Egyptian religion is the large number of deities, many of them in animal form, or human form with animal heads. (For representations, cf. J. Baines and J. Málek, *Atlas of Ancient Egypt*, pp. 212-14.) It is possible to list at least thirty-nine gods and goddesses (see tables in *Enc.Brit.*, VI [15th ed. 1983], 505, 507), although there is considerable overlapping of their individual offices and attributes, as well as the use of two or more names apparently representing the same deity. Some of the gods or goddesses are natural elements, e.g., the sun (Aten, Re), the sky (Nut), the earth (Geb), the Nile (Hapi); others are abstractions, e.g., the dynamic force of air in motion (Amon), the com-

The god Horus brings a soul into the judgment hall of Osiris in this depiction from the "Ani Papyrus" of the Book of the Dead. The man in front of the throne kneels with offerings (*ca.* 1300 B.C.) (courtesy of the Trustees of the British Museum)

plete one (Aten), the throne (Isis), fertility (Osiris), the goddess of war (Sekhmet), the god of mathematics, speech, etc. (Thoth or Djehuty).

The Egyptians tended to regard all nature about them as basically personal rather than impersonal. Behind all the powers of wind, rain, fire, and plague there were numinous agents with whom the human beings had to reckon. Even the fiercest and most deadly of animals, e.g., the cobra, the scorpion, the crocodile, and the hippopotamus, were creatures connected with some king or god, and therefore they had to be respected as individuals in their own right and not simply as brute beasts.

II. Sources.–A. Literary. Knowledge about the religion of Egypt is based on literary and nonliterary sources. For each of these categories there are quantities of material, but there are no theological works to help with the synthesis of the data until late in the New Kingdom, and these are of limited help.

1. Pyramid and Coffin Texts. Literary sources include the Pyramid Texts for the Old Kingdom (cf. K. Sethe, *Die altägyptischen Pyramidentexte*), inscriptions on the walls of rooms under the pyramids of the kings and queens of the late 5th and the 6th Dynasties. Similar are the Coffin Texts, writings on papyrus placed in the coffins or inscriptions on coffins of the First Intermediate Period and the Middle Kingdom (cf. A. de Buck, *Egyptian Coffin Texts,* for the Middle Kingdom).

2. The Book of the Dead. The so-called Book of the Dead is an assortment of texts from various times, beginning with portions of Coffin Texts of the Old Kingdom, to which the Egyptians of a later time gave the name "The Chapters of Going Forth by Day" (cf. K. Sethe, *Zeitschrift für ägyptische Sprache und Altertumskunde,* 58 [1923] 1ff.; 59 [1924], 73ff.; E. A. W. Budge, ed., *Papyrus of Ani* [1913], iii, sheet 29; *Book of the Dead* [1898]; and numerous inscriptional references to various deities. For selections, cf. *ANET,* pp. 3-18. For a large-scale reproduction of a portion of the Book of the Dead, cf. Baines and Málek, *Atlas of Ancient Egypt,* pp. 218f. *See also* pictures in DEATH; EGYPT.

For the large part the literary materials consist of spells for funerary rites, magical texts, and texts concerning the afterlife existence of the king. Some texts throw light on the temple cult, and there are hymns and prayers on temple walls and on papyri, mostly from the 18th Dynasty and later.

B. Nonliterary. 1. Funerary Items. Because of the importance to the Egyptian of belief in the continuity of life after death, elaborate burials were customary, especially for the kings and the nobles. Here can be seen the relationship of the life after death to this life. Since the dead have the same appetites, needs, and hopes as the living, many of the items of this life, either full-size or in miniature representations, were buried with the dead. (*See* Vol. I, plate 8). Most of these items are more useful in giving a picture of every-day life in ancient Egypt, but some (perhaps many, depending on the interpretation placed on them) preserve details of religious beliefs. Cf. P. Montet, *Eternal Egypt,* pp. 136-199; A. Erman and H. Ranke, *La civilisation égyptienne,* pp. 385-418.

2. Paintings. From the 4th Dynasty on, the walls of tombs were covered with paintings depicting various deities or symbolic representations, burial rites, and pictorial and symbolic representations of various theological concepts. Since the interpretation of such presentations has a considerable degree of subjectivity, scholars differ in explaining the meaning of these paintings. For discussion and a selection of places, cf. W. S. Smith, *Art and Architecture of Ancient Egypt* (1958); W. B. Emery, *Archaic Egypt,* pp. 128-164; R. Patrick, *All Color Book of Egyptian Mythology* (1972).

3. Temples, Images. Temples of the gods from the 18th Dynasty to the Roman period have been found. The image of the god was kept in a chamber of the cultic image, and was carried in certain processions either for the public or to visit other temples. Images of certain gods date back to Predynastic times. *See also* TEMPLES.

III. History.–A. Predynastic. Egypt is often considered as a monolithic entity, but this was a later development. In its Predynastic stage it consisted of nomes, small city-states or tribal groups, which later associated to form Lower Egypt (the Delta region), composed of twenty

A wall painting from the tomb of Ra'Mose (Thebes, no. 55) showing a procession to the tomb. Servants carry furniture, clothing, and food for the vizier's afterlife (1411-1375 B.C.) (courtesy of the Oriental Institute, University of Chicago)

nomes, and Upper Egypt (the region S of Memphis), composed of twenty-two (cf. Baines and Málek, *Atlas of Ancient Egypt,* pp. 34f. with maps and ensigns of the individual nomes). These nomes at their earliest stage must be thought of as separate regions, probably with local dialects such as are reflected in the dialects of Coptic. Indeed, it is quite likely that Egyptians from the Delta could not understand the speech of those from Elephantine. The apparent homogeneity of early hieroglyphic inscriptions (like modern Chinese) is due to the orthography; we do not know how the various words were pronounced in the different regions.

At least four racial types have been identified in the tomb paintings of the New Kingdom (cf. Erman and Ranke, *La civilisation égyptienne,* pp. 45-49; Montet, *Eternal Egypt,* pp. 20f.). In addition to the indigenous people, there were migrations at various times. The obvious places of entrance were: (a) from the western Delta (Libyans), (b) from the eastern Delta (Asiatics), (c) from Arabia, via Wâdī Ḥammâmât (Semites), (d) from the Blue Nile (Abyssinian or Ethiopic peoples), and (e) from the White Nile (sub-Saharan Africans). Likewise, the religion was diverse, with local deities and local pantheons. Elements of animism are probably to be traced to a Nilotic or sub-Saharan source.

According to one theory, the god of the indigenes was Seth (Sutekh), later considered an evil son of Geb and Nut. He was represented by a figure having a body like a wolf and a head described either as pig-like or with a long snout like an anteater. His cult center was at Ombos in Upper Egypt.

The unification of the nomes into the two larger regions, Upper Egypt and Lower Egypt, took place probably in the early Chalcolithic. At that time there were local deities: "He of Ombos," "He of Edfu," "She of Bast," etc. Aten was the god of Heliopolis, Horus the god of Edfu, Amon the god of Thebes; the goddess Hathor was worshiped at Dendera, Bastet at Bubastis (whence its name), Neith at Sais (Erman and Ranke, pp. 329f.). As nomes grew powerful or important, so did their deities, sometimes being joined in a kind of hierarchy, sometimes being merged. One might find a suggestion of conquests and alliances in the myths that developed concerning the struggles and the marriages of the several deities.

B. To the Amarna Age. 1. Indigenes and Invaders. The unification of Egypt took place *ca.* 3400-3200 B.C. (cf. Emery, *Archaic Egypt,* pp. 29f.). This probably resulted from the influx of a people of superior civilization, as attested by the sudden cultural advance. According to one theory, they entered by Wâdī Ḥammâmât, the trade route that connects the Red Sea with Coptos on the bend of the Nile between Thebes and Thinis (Abydos), and their principal deity was Horus. More likely would be the route via Wâdī Ṭumilât in the eastern Delta. The mythological struggle between Horus and Seth (cf. *ANET,* pp. 14-17) may reflect this early conquest, first of Lower Egypt, and then Upper Egypt in the unification; the myth, however, is of a later time.

Since kings of the 1st Dynasty used the Horus name, it has been conjectured that the idea that the king was an embodiment of Horus was predynastic. Horus was a solar deity, possibly imported by the early invaders of the Nile valley, but the concept was enlarged (he was called "Horus the lord of the Two Lands") and he was considered to be the son of Aten or Re, or even Re himself (Re-Harakhty, "Horus of the two horizons"). To varying degrees the king was ever after considered to be either a god or an incarnation of a god. When Alexander the Great invaded Egypt (332 B.C.), his expedition to the oracle of Amon (Amon-Re ?) at the oasis of Siwah was probably his way of laying claim to the kingship of Egypt by becoming a son of the god.

2. Theological Centers. If they may indeed be called such, these centers developed in several locations, notably Heliopolis and Memphis in Lower Egypt, Hermopolis in central Egypt (not a generally recognized but a convenient division of Egypt), and Thebes and Elephantine in Upper Egypt. Actually these were strongholds of various priesthoods, dedicated to the gods and goddesses of those centers. As political power shifted from one region to

RELIGIONS: EGYPT

The statue was dedicated by Sheshonq, a high official at Thebes, to the goddess Isis. From the temple of Osiris at Karnak, ca. 590-580 B.C. (courtesy of the Trustees of the British Museum)

another, the priestly power did also, with the result that there was considerable religious syncretism. It would be a mistake, however, to think of these priestly centers as producing a theology. A systematized theology, to the best of our knowledge, never existed in Egyptian religion.

3. Cosmogonies. a. Heliopolitan. At Heliopolis (now a suburb of Cairo), the primal god Aten emerged out of the waters of Nun the primeval ocean. Whether begotten by Nun or self-begotten is a matter of conflicting statements in the literature. By spitting he produced Shu the god of atmosphere, and by masturbation he produced Tefnut, goddess of moisture and dew. Shu and Tefnut produced Geb the earth-god and Nut the sky-goddess, and they in turn produced Osiris, Isis, Seth, and Nephthys. These nine gods are sometimes referred to as the *Ennead*. A characteristic that continued for generations was the marrige of brother and sister.

b. Memphite. According to the Memphites, Ptah was the creator, who operated through thought and will (or word). In the form of Nun, Ptah had the goddess Naunet (fem. of Nun) for his consort.

c. Hermopolitan. The creator-god at Hermopolis, 260 km. (160 mi.) S of Memphis, was Thoth, who first created himself and then the *Ogdoad* (eight gods), consisting of four pairs: Nun and Naunet, Huh and Hauhet, Kuk and Kauket, Amon and Amaunet. There are variant traditions about the creative process: (1) The world originated from a great egg laid by a huge bird, the "Great Cackler." Within the egg was Re who, after hatching, proceeded to create the world. (2) Thoth created himself and produced the cosmic egg as the primeval Ibis; later he was thought to have created the entire Ogdoad. (3) A lotus flower gave rise to Re from its petals, and he continued the creative process.

d. Theban. At Thebes, Amon, an unseen dynamic force, was regarded as the original author of creation. Self-created, he is said to have created all the gods and mankind and to have organized the Ennead and the Ogdoad of the Heliopolitan pantheons as manifestations of his own nature. Then he ascended to heaven and became associated with Re as Amon-Re, the main deity of the 18th and 19th Dynasties. In this system Osiris was believed to have been born at Thebes, and with his wife-sister Isis he begot Horus, the founder of the Egyptian monarchy.

e. Elephantine. A variation is found at Elephantine, although there is no evidence of a fully worked-out system. Khnum, the god of fertility and of ceramic arts, fashioned human beings on his potter's wheel. He presided over the First Cataract, where, according to a popular legend, the Nile arose from a subterranean channel and divided into two parts, the one going north to the Mediterranean, and the other south to the borders of Ethiopia.

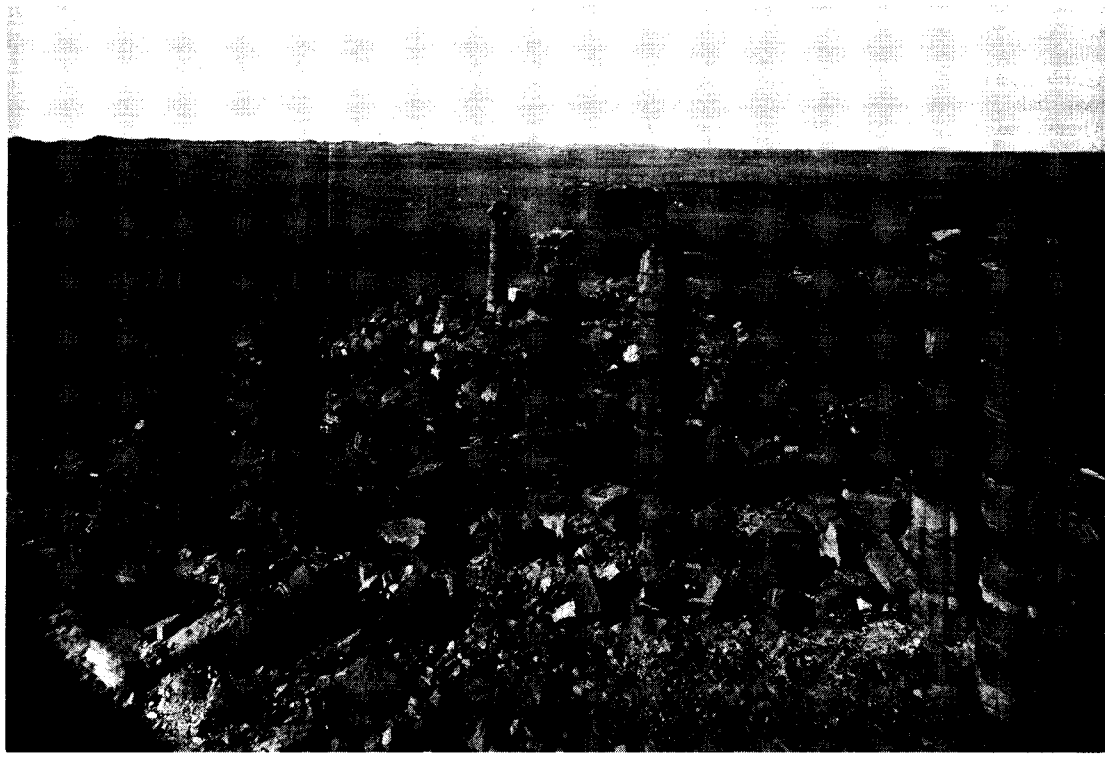
4. Pairing of Deities. A characteristic of Egyptian religion is the pairing of deities, sometimes obvious in the use of masculine and feminine forms of the same word for their names. It is to be noted, however, that a pair does not always consist of the same two members. Thus Bastet may be the wife of Ptah in one text, and in another text Sekhet may be the wife of Ptah. This is partly to be explained by the fact that the original deities of some nomes were incorporated to those of other nomes, or were given the same attributes as the other deities.

C. The Aten Revolution. According to Černý the Egyptians had arrived at the idea of a universal god but were unable to rid themselves of the multitude of deities that they had inherited (*Ancient Egyptian Religion*, p. 61). This statement is subject to interpretation, for the universality that Černý finds is, according to his description, achieved by combining other deities with the deity of a dominant capital (pp. 59f.).

Amenhotep IV (2nd quarter of the 14th cent.) is recognized as a religious reformer, sometimes looked upon as the first monotheist — but this again is a matter of interpretation, since he spoke of himself as divine. The dominant god at that time was Amon-Re, who combined the concept of Amen, the local god of Thebes, with the Heliopolitan sun-god Re. Amenhotep IV introduced or stressed the god Aten (Aton), the solar disk, and omitted the element Amon from the deity's name. To the Amon priesthood who dominated Thebes, this was, of course, a source of irritation. When Amenhotep began preparations for his Sed-Festival (in his fifth or sixth year, not his thirtieth, which is the general meaning of the *Heb-Sed*), he celebrated it with the name Aten, then built a new royal residence near what is now the village of Amarna, called it Akhetaten, and took the name Akhenaten for himself.

The religious revolution hardly outlived Akhenaten's seventeen-year reign. His second successor, Tutankhaten, changed his name to Tutankhamen, and returned to Thebes. The Theban Amon priesthood returned to power, and the religion of Egypt was essentially where it had been prior to Amenhotep IV.

D. Post-Amarna. With the establishment of the empire (18th Dynasty) Egypt became acquainted with numerous Semitic deities, and with the importing of prisoners came their gods and goddesses. Mikal, Resheph, Astarte, Anath, and others were now Egyptianized. Ramses II named his favorite daughter Bint-Anat ("daughter of Anath") and introduced the worship of Anath in his new capital at Tanis, erecting a temple to the goddess. But there is no evidence that Egyptian deities were exported to Syria and Palestine except to the Egyptians who were officials or soldiers in those lands. When the empire disintegrated,



The ruins of a temple of Amon built by Amenhotep III (1416-1379 B.C.) in Soleb. Tutankhamen restored the monuments to Amon even as far south as this Nubian city after Akhenaten's reforms (courtesy of the Oriental Institute, University of Chicago)

the Semitic influence all but disappeared in Egyptian religion. With the shifting fortunes of the various political centers — the vestiges of the ancient nomes — the various local deities would come into dominant positions and later fall again after the Greek conquest.

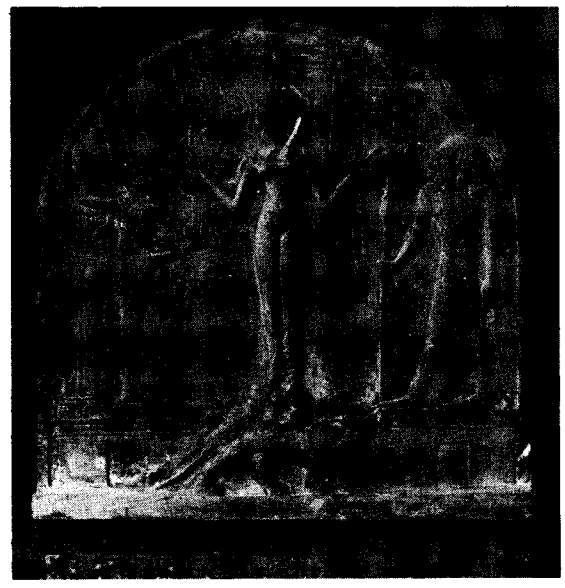
E. Later Developments. The Jewish colony at Elephantine was permitted to build a temple to Yahweh in the Persian period, but it was destroyed in 410 B.C. and probably not rebuilt, although permission had been given by the Persian authorities (*see* ELEPHANTINE PAPYRI). Likewise the Greeks built temples for their deities in Egypt. The Greeks also imported Egyptian deities to areas held by them. Under the Romans, all of Greece came under the influence of the cult of Serapis and Isis, and after the time of Caligula, this cult was found in Rome.

With the spread of Christianity, Christian centers developed in Egypt; the language used, a late form of Egyptian, is known as Coptic, and the church as the Coptic Church. When Islam spread across Africa, Egypt became almost totally Moslem, and only islands of Coptic Christianity were left. The ancient religion of Egypt had disappeared.

IV. Religious Beliefs.–A. Divine Kingship. The use of the Horus name by kings of the earliest dynastic or even predynastic time (see III.A above) suggests that the king was already considered to be an embodiment of Horus. From the 4th Dynasty on, it is clear that the king considered himself to be either a son of Re or even the sun-god Re himself. With the spread of the cult of Osiris, toward the end of the 5th Dynasty, the dead king was considered to be Osiris and the new, living king, Horus (cf. *ANET*, pp. 32f.).

B. Embalming and Burial. The divinity of the king required that his body be given proper care for entering into

On this limestone stele, the Syrian goddess Kadesh stands on a lion and holds snakes in one hand and lotus blossoms in the other. The ithyphallic god Min, wearing the feathered headdress of Amon, stands on a pylon on her right, and the (Canaanite) god Resheph, carrying a spear and the ankh symbol, faces her left. These gods were probably brought to Egypt by Syrian workmen (New Kingdom, 1350-1200 B.C.) (courtesy of the Trustees of the British Museum)

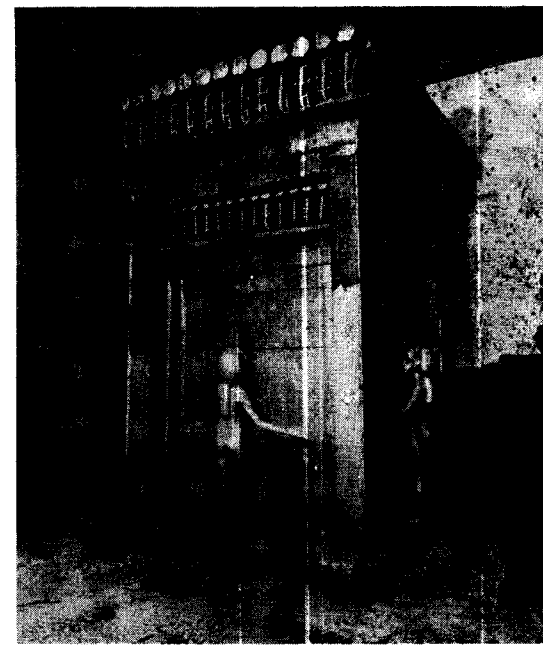


RELIGIONS: EGYPT

the afterlife. The body was washed and given treatment like that which, according to legend, Osiris himself received. The chief embalmer was dressed as the god Anubis. The intestines of the dead king were removed, the body soaked in salt, covered with oils and resins, wrapped in linen, and placed in a coffin. The organs which had been taken out of the body (except the heart) were placed in four "canopic" jars (*see* picture in JAR). The process usually lasted seventy days. The deceased made journeys to Busiris in Lower Egypt and to Abydos in Upper Egypt (the pictorial representations may be only symbolic).

The coffin was placed in a bark which was towed to the burial place. The body was placed underground, over which was at first a tumulus of sand or stones. Later this gave place to the mastaba, then the step Pyramid of Djoser, the pyramids of the kings of the 4th to 18th Dynasties, then to underground tombs in the Valley of the Kings. The living and the dead were all of a kind, as were the gods (cf. *ANET*, pp. 33f.). What the living needed or enjoyed, the same should be provided for the gods and for the dead. Accordingly, many items of daily life were buried with the dead king. For service in the afterlife, *Shawabti* (servant-substitute) figures, in some cases as many as 365 of them, were placed with the dead king.

C. Afterlife. As the sun dies each evening and comes to life again in the morning, so the king as an embodiment of the sun must have an afterlife. Later this belief was extended to nobles and probably to all human beings. Theological explanations are, of course, nonexistent. There is no word in Egyptian for "immortality"; the word "life" is used for existence in this life and after death. At death the "soul" (to use our term) flew away from the body (Egyp. *ht*) like a bird (Egyp. *ikh*, "ibis," or *ba*, "stork"). Some scholars therefore hold that the Egyptian considered the human being to consist of body, soul (*ba*), and spirit or the essential person (*ka*); cf. Erman and Ranke, *La civilisation égyptienne*, p. 386. But this is to impose a Western theology; Egyptians do not seem to have systematized their beliefs to this extent. After death the *ka* continues to exist as the true person. There is no suggestion of resurrection of the body; yet the body was preserved carefully and buried with things that would be needed in the afterlife (cf. Montet, *Eternal Egypt*, pp. 168-170; Černý, *Ancient Egyptian Religion*, pp. 79-83). The Egyptians seemed to think that, if the proper incantations were recited, there could be a spiritual counterpart in the world beyond for any three-dimensional object in this life.



The guardian goddesses Isis, Nephthys, Neith, and Selkin keeping watch over a gold-plated shrine as it was found in the tomb of Tutankhamen. Inside the chest is the canopic box with the king's viscera (New Kingdom, *ca.* 1340 B.C.) (The Griffith Institute of the Ashmolean Museum, Oxford)

The kneeling figure of Montuemhat holding a stele inscribed with a hymn to the setting sun (*ca.* 600 B.C.) (courtesy of the Trustees of the British Museum)

D. Temple Cult. Temples in ancient Egypt were more houses for the gods than places of worship for the people. In an inner chamber — called "Holy of Holies" by imposing biblical terminology (Erman and Ranke, p. 350) — the god dwelt in darkness. He was awakened daily at sunrise by the "high priest," who had first purified himself and then incensed the temple, then bathed the god, dressed him, and provided food and drink. On certain festivals the god was taken in his bark on a procession or even across the Nile. Otherwise the god was returned to his holy place and the door sealed until the next morning (Černý, p. 101; Montet, pp. 143-150; Erman and Ranke, pp. 349-358).

E. Festivals. There were numerous festivals, held on birthdays of gods, on New Year's Day and the first days of the months, at harvest, coronations, victory celebra-

tions, etc. On such occasions the god or gods were taken out of the temple(s) and appeared to the people. There were musicians, dancers, and a large priestly caste. The welfare of the state (including the people) was thought to be dependent on proper performance of the ritual.

F. Magic. The line between ritual and magic is never very clear. Knowledge of the divine name, use of amulets, and other means were supposed to gain desired ends. Oracles were used from the earliest known period for political decisions (choice of the king) and for personal (favorable days for beginning certain projects). Images of the gods or kings, certain places or objects, and certain actions were part of the popular religion to achieve desired ends.

G. Ethics. At the basis of life was the concept of *ma'at*, a term almost impossible to define. It is commonly translated "truth," but this is not limited to the avoiding of falsehood; rather it suggests the ideal order that should obtain throughout the land, in political, economic, religious, and personal life. *Ma'at* was the goddess of justice, the personification of the idea — but justice is probably to be thought of as similar to "righteousness" in the Bible: it is the "right" or correct behavior in every circumstance. The word *nfr* means both "good" and "beautiful." In the Book of the Dead, the judgment of the dead is portrayed as taking place before Osiris and his forty-two assessors (cf. *ANET*, pp. 34-37). In front of Osiris is a balance with the dead man's heart on one pan and the goddess *Ma'at* with an ostrich feather in the other. If the weighing of the heart was satisfactory, the dead person was declared "true of voice" and entitled to life in Osiris's realm.

  E. Conclusion

I. Greek Religion.–*A. Pantheon.* The Greeks evidently conceived of the gods as much like themselves. Although superhuman, the gods were not all-powerful, all-knowing, or everywhere present. Humans could hide themselves, their motives, and their plans from the gods. The will of one god could be frustrated by the other gods, and all of them had very limited perceptions of the future.

Like other ancient Near Eastern and Mediterranean peoples, the Greeks considered natural forces external to themselves to be divine. But, unlike many of those peoples, they came to conceive of natural powers in human form, with passions and experiences much like their own. They reduced their gods to a manageable number and pictured them as an extended family living on Mt. Olympus in northeastern Greece. Like the inhabitants of a Greek city-state, the gods engaged in interminable petty quarrels and infidelities. Although they had no real concern for humanity, occasionally some came down from their lofty home because of jealousy or fear of what human beings were doing or because of a petition expressed by someone on earth.

1. Gods on Olympus. Twelve gods made up the main divine family on Olympus. Zeus was the king of the gods and god of the sky, the rain-god, cloud-gatherer, and lord of thunder. Hera, his wife and sister, especially provided aid to married women in their need (her daughter Ilithyia helped women in childbirth). Poseidon, brother of Zeus, was god of the sea, the controller of both storm and calm on the waters. A third brother was Hades, god of the underworld; he was also known as Pluto, god of wealth. He spent most of his time in the underworld and rarely

A bone carving depicting the Greek mythical character Prometheus, who gave fire to man and was punished by having vultures eternally peck at his liver. Found on the steps leading to the acropolis at Roman Heshbon (A.D. 283-363) (Andrews University, Heshbon Expedition)

visited Olympus. Athena, who sprang full-grown from the head of Zeus, was a battle-goddess especially concerned with defending the city and civilized life; in time she became known as the goddess of wisdom and reason.

Apollo, the son of Zeus and Leto, was the master musician who played the lyre; he was lord of the bow, the healer, and god of light and truth. Though he was born on the island of Delos, his oracle was located at Delphi, where he killed the serpent Python in a fierce contest. Artemis, Apollo's twin sister, was goddess of the hunt and the moon goddess. In later poets she was identified with Hecate in the lower world — the goddess of the black nights when the moon is hidden. Thus she became an awful divinity associated with ghostly places and evil magic.

Aphrodite, the goddess of love and beauty, was commonly viewed as born at sea and blown ashore on Cyprus; a great temple to her honor was built at Paphos near her landing site. In many of the myths she appears as wife of the lame Hephaestus.

Hephaestus, son of Zeus and Hera, or of Hera alone, was the god of fire and the forge. Along with Athena he was a patron of handicrafts and the arts.

Zeus' sister Hestia was goddess of the hearth and symbol of the home. Each city had a public hearth sacred to Hestia, where an eternal fire was maintained.

The battle between the gods and the giants on the north frieze of the Syphnian Treasury at Delphi (*ca.* 525 B.C.). In this section, Apollo and Artemis stride together in the forefront; Cybele (protectress in war) rides in a chariot drawn by lions; and at far left is a god (possibly Herakles) wearing an animal skin (Delphi Museum, photo D. Baly)

Hermes, son of Zeus and Maia, was the messenger of Zeus; he is pictured with winged sandals, with wings on his hat, and with a magic wand. He was the god of commerce and protector of traders (*see* HERMES 1).

Ares, god of war, was a son of Zeus and Hera. The Greeks tended to detest him and even to view him as a coward. They never gave him the great honor that the Romans did.

There were, of course, lesser gods on Olympus, such as Eros, the god of love, and there were important gods on earth, especially Demeter, the grain goddess, and Dionysus, god of wine. Drama originated in honor of Dionysus, and around him a belief in immortality especially developed.

Human dealings with the gods primarily concerned special needs: protection for a soldier going off to battle, rain for drought-stricken crops, fertility for a barren wife, success in a business venture. People would sacrifice to the gods and promise votive offerings if such needs were met.

Belief in the gods and service to them usually did not

greatly affect daily conduct. Occasionally the gods seemed to demand improvement in lifestyle; e.g., the Greek army at Troy was told, "Father Zeus never helps liars." But normally, clan or community mores, rather than gods, seem to have dictated ethics, and in later times at least some elements in society took their ethical cues from the philosophers.

The truth is that the myths present Greek gods in many immoral or compromising situations. Zeus, e.g., is portrayed falling in love with numerous women and then resorting to a variety of tricks to hide his extramarital activities from his wife. Scholars commonly have explained such involvements by the fragmentation and fusion of Greek polytheism. Geographical and economic conditions tended to divide the Greeks into divergent cultural and religious groupings with slightly variant myths. When the worship of Zeus spread to a town where there was a well-entrenched divine ruler, the two cults eventually fused into one. The wife of the local god became the wife of Zeus. The variant myths were combined into one account, so that eventually Zeus was linked with a number of women (see Guthrie, pp. 53-65).

The result proved to be an embarrassment to later Greek philosophers and poets. As early as the 6th cent. B.C. philosophers began to repudiate the gods as the myths represented them and to become atheists. The dramatists and other poets tended to remove or forget what they did not like in the myths and use the rest creatively.

2. City-State Religion. Religion was bound up with the life of the city-states early in Greek history. Although each city-state worshiped the whole pantheon, each tended to venerate a particular patron deity. Thus Argos worshiped Hera (Guthrie, p. 72), Miletus and Delos especially revered Apollo, and Athens was devoted to Athena. State cults were established, so that religion became a social cement that bound the community together. Public officials led the ceremonies honoring the patron deity. The atheism of the philosophers and similar threats to the established religion were not tolerated because if they became widespread, they would break the bond that held society together.

3. Oracles. Oracles were an important feature of Greek religion; about 250 oracular seats have been identified. The most ancient was that of Zeus at Dodona in Epirus, where priests interpreted the rustling of the oak leaves in the god's sacred grove. But the most universally significant was the oracle of Apollo at Delphi. There a priestess sat on the great cauldron of the oracular tripod in an underground chamber of the temple of Apollo and was in some way thrown into a trance. The incomprehensible jargon she uttered was rendered by canny listening priests into poetic form.

Often the reply was deliberately ambiguous. When King Croesus of Lydia consulted the oracle in 546 B.C. during his war with the Persians, he was told that if he advanced across the Halys River (central Asia Minor) he would destroy a great power. He went confidently to battle believing the Persians would be defeated; but he was the one who lost. Early in the 3rd cent. B.C. the oracle declared to Pyrrhus of Epirus, "I declare that you the Romans may conquer," leaving the petitioner to decide who was the object and who the subject in the sentence. When the Persians threatened Athens early in the 5th cent. B.C., the Athenians were counseled to trust in the "wooden walls." They interpreted this to mean the fleet, and the population was evacuated to other friendly states on board ship.

Generally the oracle at Delphi was impartial or neutral. But at times it seemed to favor the Peloponnesus over Athens, and during the Persian wars the priests were accused of having been bribed by the Persians to deliver oracles unfavorable to the Greeks in order to demoralize them. But the oracle acquired a spiritual dominion of sorts over all Greece. Prospective bands of colonists regularly consulted the oracle, and Apollo's blessing was viewed as bestowing possession of the land to which they were going. The oracle also arbitrated moral questions that perplexed the Greek world. Thus it was a unifying bond among the diverse Greek states.

4. Athletic Games and Festivals. Another religious bond among the early Greeks was the athletic games and festivals in honor of the gods. Pride of place went to the games at Olympia in the western Peloponnesus. Held every four years in honor of Zeus, these games included sacrifices to Zeus, sports events for men and boys, and victory banquets. The Pythian games at Delphi were held in honor of Apollo every four years, in the year before each Olympiad. In addition to the expected athletic and equestrian events, musical events were always prominent; and during the 5th cent. B.C. there was even a competition in painting. The Isthmian games were convened at the Isthmus of Corinth in honor of Poseidon every two years, in the first and third years of each Olympiad (see 1 Cor. 9:24-27). Here too there were musical contests in addition to gymnastic and equestrian competitions. The Nemean games in honor of Zeus took place every two years near Argos; there were athletic events similar to those conducted elsewhere but probably no chariot race.

B. Hellenistic Developments. The Greek world could never be quite the same after Alexander and his successors. In the classical period the city-state was predominant; individuals were expected to devote their energies to serving their community. During the Hellenistic era an autocratic king of a large nation state — first Philip of Macedon, and then the Ptolemies and Seleucids — demanded an allegiance that transcended local loyalties. In-

The second-century athletic stadium in Aphrodisias, Asia Minor, has survived nearly intact. One of the most impressive of the ancient world, it seated 20,000 to 30,000 people (B. K. Condit)

dividuals were no longer so closely tied to the obligations of the city-state, and their energies were allowed freer range. Increasingly the established cult of the city-state held less attraction for them, and they sought a more personalized religion with a greater emotional content. In the first Christian centuries when Rome ruled the east, many were attracted to the mystery religions (see II.D.3 below).

Others sought the answer to their needs in philosophy. Earlier philosophers such as Plato and Aristotle believed that humans could manipulate their environment; Hellenistic philosophers were not as confident. Their attitude seemed to be, "Make the best of your environment, or withdraw" — an individualistic solution to the challenge of life. Two major philosophic schools, the Stoic and the Epicurean, came to the fore in the 3rd and 2nd cents. B.C. and continued in modified form under the Roman empire.

1. Stoicism. Zeno came to Athens from Cyprus in the late 4th cent. B.C. and set up his own school initially in the Stoa ("porch" or "hall") Poecile at the north end of the Agora — hence the name Stoics. The general thrust of Stoicism was that one could best obtain happiness by discovering and then living according to the laws of nature. Stoics believed in an impersonal deity, inherent in all matter, which guides the universe with a kindly providence. All that befalls human beings is intended for their education. Thus one can be happy if one wants what one gets; the Stoics exhorted, "Play your allotted part like a good actor." The system drew out the moral reserves of persons with innate strength of character as did no other philosophy. Stoicism encouraged active citizenship as good moral discipline and taught a universal kinship of humanity, but it often failed to attack major social evils. The buffeting of the world could never quite destroy the true Stoic; he could self-sufficiently withdraw into his soul and there find peace. *See* STOICS.

2. Epicureanism. About the same time that Zeno arrived in Athens, Epicurus came from Samos. He taught that the supreme good in life is pleasure or happiness, which would not come from physical pleasure, however, but essentially in freedom from pain and fear. Thus Epicureans were largely characterized by abstemiousness and commonly did not seek greater pleasure if it led to greater pain. They did not deny the existence of the gods but taught that they live in a remote heaven and are not concerned with human affairs; therefore people need not fear them. To emancipate people from the fear of death, Epicurus utilized the atomic theory of Democritus: birth results from a combination of atoms and death results from their separation. Thus death merely brings the end of sensation and involves no succeeding pain. *See* EPICUREANS.

3. Ruler Cult. The deification of kings was the chief innovation in public worship during the decades after the death of Alexander. Behind this institution were the hero cults in which Greeks from early times had enrolled men of great merit after their death — e.g., Theseus, Asclepius, and Herakles — and the Egyptian practice of attributing divinity to pharaohs. Native priests had thus honored Alexander when he conquered Egypt. After his death his general Ptolemy stole his remains and by A.D. 285 had set up a cult of the divine Alexander at Alexandria. Ptolemy II instituted a joint cult of his father and mother, raising them to the status of deity; his successors enrolled all the later Ptolemies in the cult when they died. In 273 he started a Greek cult of the living Ptolemy. Beginning with Ptolemy IV all Greek kings of Egypt sought the trappings of divinity for the benefit of their native subjects.

The rulers of Syria (Seleucids) and of Pergamum (Attalids) followed the lead of Ptolemy in deifying their predecessors; the kings of Macedonia did not. Ptolemy's con-

temporary Antiochus II of Syria initiated the living-ruler cult for the benefit of his Greek subjects. Thereafter new settlements in the Near East regularly established a cult of the monarch to whom they owed their existence. In the 2nd cent. B.C., as Rome extended its influence, eastern cities spontaneously began to introduce the cult of the goddess Roma. Sometimes they attached to that cult the worship of some great Roman who was their benefactor.

The ruler cult did provide some additional sanction for the ruler and further unified the society, but it may easily be overrated. It was not much more than a polite convention and demonstrates how rapidly religion had been reduced to a mere formality.

4. Trends of the Times. As people were exposed to the turmoil of new ideas in art, religion, philosophy, and other fields during the Hellenistic era, they were threatened with mental confusion. To avoid such an experience, they turned to syncretism: a search for common denominators for seemingly diverse things and the resultant combination or reconciliation of ideas and materials. For example, they recognized the Egyptian god Amon-Re, Hebrew Yahweh, Persian Ahuramazda,and Roman Jupiter as counterparts of the Greek Zeus. Greeks living in Egypt made numerous equations of gods: e.g., Horus with Apollo and Thoth with Hermes. When syncretism proved to be inadequate, some turned to eclecticism: the selection and combination of desirable elements from several systems into a new pattern of beliefs.

In spite of the internationalism of the Hellenistic period with its syncretism and eclecticism, the official religion survived in the city-states of Greece. The Greeks were only partly conscious of the political decline of the cities and clung to local traditions and worship of patron deities.

An example of Hellenistic syncretism was the representation in Baalbek of the god Jupiter Heliopolitanus, originally the Syrian god Baal Shamem (2nd cent. B.C.) (CNMHS/ARS, NY/SPADEM)

The Panhellenic sanctuaries at Delos, Corinth, Olympia, Delphi, and elsewhere continued to draw substantial crowds. Cities of Asia Minor such as Miletus (and nearby Didyma with its temple of Apollo), Ephesus, and Magnesia on the Maeander also sought to maintain the prestige of their great sanctuaries. New Greek cities of the Near East set up municipal cults modeled on those of the old country; e.g., Apollo became the patron deity of Syrian Antioch, and Dionysus of Alexandria. But many people of the eastern Mediterranean sought a more individual religious experience in the mystery religions, magic, or astrology (see II.D below).

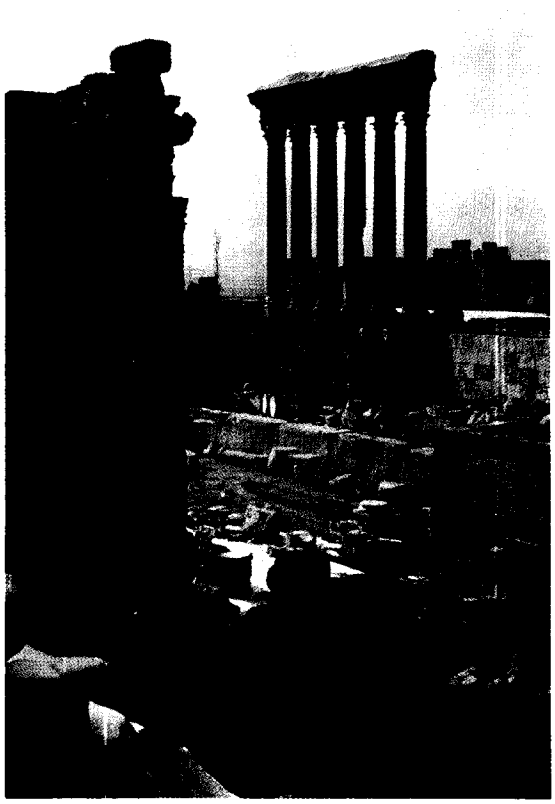
II. Roman Religion.–A. Beginnings. *1. Spirit Worship.* The earliest Roman religion was little more than magic or spirit worship. Believers in magic attributed to certain objects or actions the power to control nature or the actions of others. For example, they might wear amulets to protect against the evil eye. Spirit worship or animism involved the effort to placate evil spirits or, more often, to obtain the aid of friendly or neutral spirits that supposedly could influence a variety of personal and social functions. The approach to these spirits was commonly contractual. Good will was obtained by prayers and offerings. Proper ritual was especially important in worship, for it obligated the god to act favorably. If he responded as asked, the worshiper had to reciprocate with an offering or risk punishment by the god. If the god did not perform, the person was not bound to continue to worship him. Among the spirits frequently worshiped were Vesta, spirit of the fire on the hearth; the Penates, spirits of the pantry; the Lares, protecting spirits of the household; and the Genius, guardian spirit of the life of the family. Many other spirits were thought to control aspects of the life of the household, including birth, marriage, death, and farming operations.

2. Anthropomorphic Gods. With the passage of time, personal attributes became attached to the many spirits, and a few anthropomorphic gods emerged. The Etruscans evidently were the first to teach the Romans to envision their gods in human form. Chief place among the gods during Etruscan domination of Rome (6th cent. B.C.) was held by the triad of Jupiter (chief protecting deity), Juno (patron goddess of women), and Minerva (patroness of craftsmen). Since humanized gods required houses, the Etruscans built temples, normally on high platforms with deep porches.

But the Greeks were more responsible for this anthropomorphizing process. Some of their influence came indirectly from cities near Rome that had adopted gods of Greek origin. But some of it came directly from Greek cities of southern Italy; e.g., the worship of Apollo as god of healing spread from Cumae in the 5th cent. B.C. Apparently during the same century Rome acquired from Cumae a collection of oracles of its Sibyl. These oracles did not predict the future but showed how to avert the anger of the gods. Since they commonly advised special devotion to some Greek divinities, they helped to advance Greek influences.

Over the centuries Roman deities were changed to resemble corresponding Greek gods and were represented by Greek cult statues; Greek mythology was grafted onto Roman religion. The date at which this process was complete is uncertain, but surely it had occurred before 200 B.C. Thus Jupiter became Zeus; Juno, Hera; Neptune, Poseidon; Pluto, Hades; Vesta, Hestia; Mars, Ares; Minerva, Athena; Venus, Aphrodite; Mercury, Hermes; Diana, Artemis; Vulcan, Hephaestus; and Ceres, Demeter. But the equation was not always exact or complete. For example, Mars was not merely a god of war but also a

RELIGIONS: GRECO-ROMAN



The first-century temples of Jupiter and Bacchus (foreground) in Roman Baalbek, Lebanon (R. H. Smith)

god of agriculture; thus he protected the whole people, both in farming and in fighting.

B. State Cult. 1. Establishment of Official Religion. At an early date, when Rome was still an agricultural community, official religious observances began to develop. These were usually festivals of sowing, harvest, and the like. With urbanization and industrialization, worship of these agricultural deities was adapted to city life and gradually lost all meaning. But new gods were introduced from neighboring Italian cities and from Greek contacts. Thus Minerva, goddess of handicraft, became patroness of the nascent industry of the city; Hercules became the god of trade and travel; Mars was renowned more as the patron deity of warlike activities then as the god of agriculture. Jupiter Capitolinus, thus named from his chief place of worship on the Capitoline Hill, was worshiped as the chief protecting god of Rome.

Since the welfare of the state became one of the chief objects of worship, the state had to ensure that worship was properly maintained. In the early days the king was the chief religious as well as political functionary. But after 500 B.C. the consul took over political leadership, and the *rex sacrorum* (the king during the republic) retained religious power in the state. But priests of the temples of Jupiter, Mars, and other gods wielded considerable power. During the latter centuries of the republic, the college of pontiffs, led by the pontifex maximus, gained control of official religion at the expense of the *rex sacrorum*. The college drew up regulations governing all acts of public worship.

Augurs were also important during the republic. These persons interpreted signs reported by the magistrates; signs of ill omen could result in temporary termination of a variety of designated activites. When greatly abused by the opposition during the days of Julius Caesar, augury fell into disrepute.

2. Decline of Official Religion. Ancient Roman priesthoods were neither highly organized nor numerous. The college of pontiffs, who controlled the state religion, tended to use their position for personal advancement. The priests conducted the state cult on the state's behalf, while the public had no part in it. Agricultural cults lost all real meaning for urban dwellers. Religion offered little emotional satisfaction; it lacked moral teaching, and its hope in a life after death was vague and impersonal. For these and other reasons Roman religion lost its grip on the populace. The religious sense of duty to state and one's family that had earlier unified society was being lost in the variegated and individualistic life of the large and populous city. People no longer could believe that their conduct mattered much or could change the welfare of the body politic.

In the dark days of the Second Punic War (late 3rd cent. B.C.) the strength of the official cult was especially low. The forces noted above had considerable impact, and Rome suffered recurrent defeat at the hands of Hannibal. Destruction was extensive; life in Italy would never be quite the same. Many believed that the Roman gods had deserted them. Two opposing tendencies developed: skeptics refused to believe in any divine power, and the superstitious were willing to believe anything. The skeptics tended to turn to Greek philosophies, and the superstitious to oriental religion or to magic and astrology.

3. Domestic Religion. But one must not assume that the average Roman, especially in the smaller towns and rural areas, felt compelled to abandon or change religious beliefs. Presumably the domestic cult continued to play a considerable part in daily life, as it had for centuries and as it would continue to do under the empire. Vesta, the Lar of the family, the Genius of the head of the family, and the gods of the fields were worshiped daily, often at meals. The average citizen valued the spirits thought to control fertility, prosperity, and good fortune more than any of the gods of the official cult. Each family had its god shelf, and the head of the family (*pater familias*) was the family priest. Piety within the family continued not only among the poor but even among the more wealthy and sophisticated, who were thought to be heavily tainted with skepticism. The god shelf was a normal feature of even the most wealthy homes at Pompeii during the 1st cent. A.D.

4. Local Cults. In addition to relatively private religious exercises, Italians also continued to participate in numerous local cults that had been maintained for hundreds of years. The field brethren, e.g., at their sacred grove 8 km. (5 mi.) from Rome on the road to Campania, celebrated a three-day festival every May in honor of Dea Dia, an earth goddess who gave her blessing to the grain. The cult of Nortia, goddess of destiny, was maintained at Volsinii (Bolsena). She was the patron goddess of Sejanus, the leading figure in the administration of Tiberius Caesar. The cult of Delventinus was maintained at Casinum, of Numiternus at Atina, of Visidianus at Narnia, of Ancharia at Asculum, and of Hostia at Sutrium. Local cult worship also continued in Greece during the imperial period.

5. Secularism. One should not claim too much for the religiosity of the city of Rome, however. Individuals from Italy and the empire were lost in the city mob, cut off from the traditions and inhibitions of family and clan, and an increasing percentage of the population consisted of freed slaves who were not adherents of the Roman cults. Rome

RELIGIONS: GRECO-ROMAN

was thus a purely secular society with ever-declining moral restraints.

6. Augustus's Restoration Efforts. Augustus Caesar, the inaugurator of the Roman imperial period, became quite concerned about the religious and moral decline of Rome. He sought to reinstitute morality as a basis of his new era of peace and prosperity. Thus he revived rites, ceremonies, and priestly colleges that had ceased or fallen into decline; he himself was elected pontifex maximus, head of the state religion, in 12 B.C. He also set about to repair over eighty-five temples and shrines and to build several new ones.

7. Cult of the Emperor. Augustus had an ulterior motive for this religious refurbishing: to use religion as a political prop. Julius Caesar was deified and a temple built to him in the Forum where his funeral pyre had been. Augustus did not seek full deity for himself in Rome, but he called himself *divi filius,* son of the deified one. In each of the 265 precincts of Rome he established a shrine to the Genius of Augustus, the divine spirit that watched over his fortunes.

In the empire the cult of Roma and Augustus sprang up voluntarily and rapidly. The worship of the goddess Roma, the personification of the Roman state, voluntarily began in Greece and Asia Minor early in the 2nd cent. B.C. as the Romans took over territory previously held by the Hellenistic monarchies. Subsequently individual Romans (e.g., Julius Caesar and Mark Antony) had been deified and joined to the imperial cult. In 29 B.C. Pergamum and Nicomedia in Asia Minor built temples dedicated to Roma and Augustus. Other cities followed suit until shrines to Augustus stood in all the Eastern provinces. Not to be outdone by his gentile neighbors, Herod the Great erected temples to Augustus at his new port of Caesarea and at Sebaste, his rebuilt Samaria (both named in honor of Augustus). In the West an altar of Roma and Augustus was built near modern Lyons (12 B.C.) and at modern Cologne a few years later. The imperial cult symbolized the unity of the empire and the loyalty of its subjects.

After Augustus the Senate deified posthumously the emperors that it had liked and added them to the imperial cult. Generally emperors of the first Christian centuries did not demand worship while they were alive. Exceptions were Gaius Caligula (37-41), who ordered that all inhabitants of the empire acknowledge his divinity, and Domitian (81-96), who required that his household officials address him as "Lord and God" but did not make official use of the title for the populace.

Of course Judaism and Christianity were the two faiths of the empire that were most likely to incur displeasure for failure to worship the emperor or Roma. Judaism had a favored status that generally made it immune from requirements to participate in the imperial cult. Brief scuffles with Gaius and Domitian do not reflect a termination of that privileged position. Although Christianity initially enjoyed freedom from Roman proscription because it grew up in the cradle of Judaism, it lost that protection when it came of age. Thus Christians could be charged with atheism because of their refusal to accept the imperial cult. Roman officials also persecuted Christians for fear that they would engage in some insurrectionary action to set up the kingdom of Christ. Christians were persecuted periodically until Constantine became ruler of the entire Mediterranean world in 324.

C. Philosophy. 1. Epicureanism. Augustus's effort to restore the old state worship and his institution of a new imperial cult proved no more satisfying than previous official efforts. Many among the upper classes turned to philosophy — Epicureanism and Stoicism — as a guide to life. Epicurus's teaching was essentially and initially lofty: only the virtuous person can find happiness, and then only in the pursuit of intellectual rather than sensual pleasure. But Epicureanism became a selfish and easily perverted creed due to its emphasis on withdrawal from the annoyances of political life and a search for personal satisfaction. The Romans commonly used it as an excuse for a life of sensual self-indulgence and debased Epicurus's teaching on pleasure to the familiar "eat, drink, and be merry" formula (*see* EPICUREANS).

2. Stoicism. Stoicism found ready acceptance among Rome's noblest families during the first Christian centuries and made a great impact on Roman life. The Stoics believed that there is a divine mind, a god, which is coextensive with nature. Human souls as parts of nature are parts of this pantheistic god; thus human souls are divine, and all men are brothers. The Stoics also taught that the state cult gods were special forms of the pantheistic god, and in worshiping them people could worship the true god. Thus they provided a bulwark for the official religion and reconciled their practices with their beliefs. Roman Stoics were unconcerned with the doctrines and metaphysics of earlier Stoics and concentrated on ethics instead. Seneca, Lucan, Epictetus, and the emperor Marcus Aurelius are among the great Stoic writers of the first and second centuries. Seneca's philosophical works are really moral essays on practical conduct with some similarities to Pauline ethics. In fact, the so-called "Letters of Paul and Seneca" (forgeries of the 3rd or 4th cent.) were long accepted as genuine correspondence between the two. The ideal Stoic resembled the Roman heroes. Stoicism demands fulfillment of duty to one's fellows and to the state, and many of the most patriotic Romans of the early empire based their conduct on Stoic teachings (*see* STOICS).

D. Mystery Religions. The official cults, Epicureanism, and Stoicism touched only a minority of Romans or Italians. Oriental religions had a much wider appeal, initially to the lower classes of the cities, which were increasingly Greek and Oriental in composition, but ultimately to all strata of society. These religions are commonly known as mystery religions because they had a secret initiatory ritual into the cult (*mystérion* comes from a root meaning "initiate") and because in some mysterious way the initiate established communion with a god or goddess and obtained a promise of living in bliss with the deity beyond the grave. The special appeal of the mystery religions was a threefold provision: a personal involvement, an emotional stimulation, and a promise of a future life — none of which the official cults could offer (*see* MYSTERY II).

Members of these secret societies are commonly called "Orphics," named for the bard Orpheus, who was believed to have visited the underworld and to have introduced the rites of initiation. These rites began to appear as early as *ca.* 600 B.C. and became common throughout the Greek world, including Greek settlements of southern Italy. Mystery religions were even adopted in the official calendar of the state festivals, e.g., the Eleusinian Mysteries at Eleusis, 22.5 km. (14 mi.) W of Athens. After initial success during the 6th cent. B.C. mystery religions declined in importance in the next two centuries, when the city-states were stronger and devotion to their gods was highest. But in the 3rd cent. B.C. and following, the decline of the city-state and local patriotism opened the door for a new emphasis on personal religion, especially the mysteries. Mysteries that gained numerous devotees in the Greek East during the last cents. B.C. spread to the Roman West during the first three Christian centuries.

Although some of the mystery religions had Oriental and some Greek origins, they had many similarities.

RELIGIONS: GRECO-ROMAN

The ruins at Eleusis, center of the mystery cult that worshiped Demeter and Persephone. The Telestrion (shown) or large sanctuary hall (5th cent. B.C.) was used for initiation ceremonies (B. K. Condit)

These, scholars have agreed, resulted from their long sojourn in Greece or at least under Hellenistic tutelage before they passed to Rome and the West. Rome readily adopted them because it had been greatly influenced by the Hellenistic civilization that had molded these religions of the East.

The mystery religions all had at their base a divinity whose annual death and resurrection corresponded to the rhythm of the seasons. As plants died in the fall and were reborn in the spring, the vegetation spirits were thought to have gone to the underworld and to have returned from it. Raised from death, they could bestow immortality on mankind. The initiate believed that communion or even union with the god or goddess was established in an emotional and sometimes orgiastic way; this assured the initiate of eternal bliss in companionship with the deity. Initiates commonly grouped themselves together into local organizations or fellowships, which had great social and psychological value for the individual in an increasingly uncertain world.

Because Christianity shares some of these elements, at least to one viewing it superficially, many have classified Christianity as a mystery religion. But the differences greatly exceed the similarities. Christianity is based on a historical rather than a mythological person, on a being who died and rose once purposefully in a substitutionary atonement for mankind, rather than repeatedly in some rhythm of the seasons. Normally the mystery religions did not put specific demands on an individual to live a new life-style; nor did they offer a supernatural enablement for living, as Christianity did. While the rites of initiation in the mystery religions were secret and were never fully revealed even by initiates who defected, the means of becoming a Christian have been almost literally shouted from the housetops and have been published in detail in the Scriptures — available in over a thousand languages.

1. Cybele-Attis. From Phrygia in central Asia Minor came the worship of Cybele or the Great Mother (Magna Mater). It was the first Oriental religion to come to Rome, introduced in obedience to the Sibylline Oracles during the dark days of the Second Punic War in 204 B.C. Though greatly restricted during the republic, this religion was freed from all controls under the empire. Cybele was associated with a young male deity, Attis. The mother, the nature-goddess of life and fertility, mourned the death (or mutilation) of Attis until he rose to life (or was restored) in the spring. Cult members celebrated his triumph over death in a spring festival. Initiates evidently believed that attachment to the resurrected deity would guarantee them a similar triumph. The initiate partook of a sacramental meal that early Christians viewed as a counterfeit of the Eucharist. Though particularly popular in Asia Minor, the Cybele-Attis cult spread extensively in the Mediterranean world.

2. Egyptian Cults. Egyptian traders brought the Isis-Osiris cult to Campania about 150 B.C., but Rome excluded it until the last decades before Christ. Tiberius banished the Egyptian cults early in the 1st cent. A.D. But later in the century Domitian lavished great wealth on the Temple of Isis in Rome, and thereafter the cult was firmly

established. The Egyptian mysteries spread widely in the Greco-Roman world.

According to this mystery, Isis the mother-goddess suffered the loss of her consort Osiris, whose body was dismembered by Typhon. Ultimately she recovered the parts of his dismembered body, restored him to life, and installed him as king of the netherworld. An annual festival commemorated the goddess's quest for Osiris; there was passionate mourning for the dead god and great joy over his restoration. Initiates into this cult celebrated their achievement of eternal life at a banquet. In addition to being the giver of immortality, Isis became a great mother-goddess who was a tender and sympathetic friend, especially to women. When Christianity became the religion of the empire, many of its adherents passed over quietly to the worship of the Virgin Mary; in a few places Isis statues were used as images of the Madonna.

Similar to the Isis-Osiris cult was that of Sarapis or Serapis, produced artificially by Ptolemy I of Egypt *ca.* 300 B.C. Serapis was the spirit that supposedly animated the Apis bulls of Memphis. He was fused with Osiris to produce Osorapis. Ptolemy brought a great statue for this cult from Sinope on the Black Sea and allegedly imported a religious leader from Athens to inaugurate Serapis's mysteries on the order of those at Eleusis. Serapis was sometimes identified with Zeus, Asclepius (the god of healing), or Osiris. He was viewed as the master of fertility, like Dionysus and Osiris, and as the god who received souls after death and promised them immortality, like Pluto. The cult became popular in the Greek world before Christ and spread widely in the Roman world during the first Christian centuries. As protector of seamen, Serapis had a missionary force that readily spread his worship. As protector of the poor, he had wide appeal.

3. Eleusinian Mysteries. The Eleusinian Mysteries were the most famous among the Greeks. Essentially an Athenian cult, they attracted devotees from all parts of Greece and later from Rome and the West. Outstanding Romans initiated into them included Sulla, Cicero, Mark Antony, Augustus, Hadrian, and Gallienus.

The cult taught that Hades, god of the underworld, had snatched away Persephone (Kore). Her sorrowing mother, Demeter, goddess of agriculture and sister of Zeus, searched for her daughter. In return for the special hospitality received at Eleusis during her search, she revealed her secret rites to its inhabitants. In her grief Demeter had neglected the maintenance of crops, and faced humanity with starvation. Zeus intervened and arranged that Persephone should be restored to her mother eight months of the year; Demeter thereafter mourned for only the four months of winter.

Initiation (an autumnal event) included a type of passion play, probably centering on the sufferings of the goddess, a revelation of sacred cult objects, and a communion celebration consisting of a barley drink and certain foods. In this service the initiate supposedly established mystic contact with the mother and daughter. By an act of faith the initiate believed in the certainty of blessing from Demeter and Persephone in the next life because of the establishment of a friendship with the pair in this life. The main part of the initiation ceremony took place in the Telesterion, the large sanctuary hall, 51.2 by 53.9 m. (168 by 177 ft.), which has been excavated at Eleusis.

4. Dionysus. Although originally from Thrace, the cult of Dionysus was perhaps the most important of the Hellenistic world. He was identified with many deities, e.g., in Egypt with Serapis, and in Phrygia with Sabazios. A fertility god, who attracted many female devotees, the vine was his emblem and the phallus significant to his cult.

RELIGIONS: GRECO-ROMAN

A painting from the Villa of the Mysteries at Pompeii showing initiation rights into the cult of Dionysus (1st cent. A.D.) (Alinari/Art Resource, NY)

The ritual dramas held in his honor gave rise to the golden age of classical drama in fifth-century Athens, to the tragedies of Sophocles, Euripides, and Aeschylus, and the comedies of Aristophanes. Dionysus thus was the god of theater; all performances of tragedy and comedy were dedicated to him. Initiates into the Dionysian cult received a promise of immortality and passwords that would secure a happy entrance into Hades. According to one tradition, Dionysus while a child had been torn apart by the Titans, and his body had been reconstituted by Zeus. Thus the beliefs and practices surrounding the other gods who had died and resurrected were attached to him.

Originally Dionysian ceremonies were highly orgiastic in nature. After initiates drank the sacred wine, ate the raw flesh of the sacrificial animal, and drank its blood, they went into a frenzy inspired, they believed, by the presence of the deity within them. In the 2nd cent. B.C., the Roman senate tried to restrain Dionysian orgies, as they threatened public order and decency. Later the mysteries seem to have taken on a more subdued character. The cult was apparently most popular in the 2nd and 3rd cents. A.D. The best portrayal of a Dionysiac initiation is found in the wall paintings in the Villa of the Mysteries at Pompeii; they date to the early part of the 1st cent. A.D. and comprise twenty-nine figures.

5. Cabeiri or Cabiri. A lesser-known mystery religion is the Cabeiri, thought to be the oldest of the mysteries after those of Eleusis. It apparently originated in Samothrace and maintained its greatest center there. But the cult had centers in Pergamum, Thebes, and elsewhere. It evidently was a religion of a dead and resurrected divinity that had been fused with the cult of the mother. Initiates, largely sailors and other travelers, claimed protection against shipwreck and other dangers of journeys by wearing iron ring and purple scarf charms. This cult was very popular in the Hellenistic period and remained important until the 3rd cent. A.D.

6. Aphrodite-Adonis. The spread of the Aphrodite-Adonis cult is indebted in part to Syrian influence, but it had as many devotees in Alexandria and Asia Minor during the Hellenistic period and was widespread in the Roman empire. Aphrodite personified mother-life in nature; Adonis, her lover, represented the dying and awakening vitality in vegetation. Adonis was killed by a boar sent against him by Ares. When Adonis descended into Hades, Persephone fell in love with him. Subsequently Aphrodite won her plea that Adonis be restored to her, but Persephone retained some right to his presence. Thus the cycle of death and rebirth of Adonis parallels the rhythm of nature. In mystic drama Adonis's devotees lamented his decease and rejoiced over his return to life. They expected to enjoy the favor of the risen god in life on earth and evidently in the hereafter.

7. Mithras. The last mystery religion to become popular in the Roman empire, and the most widespread of the mystery religions, was Persian Mithraism, a cult that forbade female participation in its mysteries. During the 2nd and 3rd cents. it became Christianity's most popular rival. In the Zoroastrianism of ancient Persia, Mithras was the chief agent of the supreme god of light, Ormuzd, in his struggle against the god of darkness; people obtained immortality through Mithras. Under Babylonian influence Mithraism took on elements of astrology, and Mithras was identified with the sun-god; he appeared in Rome with the title Unconquered Sun-god Mithras. As god of battles and as god of light waging constant war with the spirit of darkness, Mithras was a patron deity of the soldiers, who spread his worship everywhere from the Euphrates to Hadrian's wall in distant Britain.

Mithraism had an influence on Christianity. December 25 was the birthday of Mithras; Sunday, the first day of the week, was his holy day. Mithraics practiced baptism, confirmation, and a eucharistic supper. Mithraic ethics were ascetic. The priests were set apart from common worshipers by special knowledge and consecration, and worshipers entered different grades by ceremonial initiation.

Mithraic chapels, whether in Britain, in Rome, or in Palestinian Caesarea, were oblong caves with a vault representing the sky and a relief at one end of Mithras slaying a bull. The initiates sat on benches in costumes depicting their several grades, which were seven — associated with the seven planets. Initiation involved real or symbolic tests of endurance. The well-known slaying of the bull in Mithraism perhaps represents the struggle of the human soul against the powers of darkness and evil, a struggle in which the followers of Mithras could expect the help of their god.

The central teaching of Mithraism is the descent of the immortal soul at birth from the home of light through the seven planetary spheres, being tainted by each one. On earth the initiate may eliminate these impurities by moral effort and spiritual knowledge obtained in the mysteries. At death the soul of the faithful and good initiate rises through the planetary spheres, gradually shedding all taint of impurity.

8. Astrology and Magic. The Greeks attained knowledge of Babylonian astrology by the 3rd cent. B.C., but it became especially widespread in the Hellenistic East in the 2nd cent. B.C. Alexandria was its great center. The details of astrology evidently were further elaborated throughout the Roman period, and aspects became enmeshed in various religious cults, e.g., Mithraism. More than one astrological system existed, but planetary astrology was dominant. The seven planets — sun, moon, Mercury, Venus, Mars, Jupiter, Saturn — were the interpreters of fate. The zodiac signs were thought to govern the destinies of peoples, cities, and individuals. Throughout the first two or three centuries A.D. all classes were deeply impressed with the efficacy of astrology. Although emperors frequently banished the Chaldean and Egyptian astrologers from Rome, the decrees never remained in force very long, and the emperors themselves kept astrologers in their service (*see* ASTROLOGY).

Of course many did not accept the determinism or fate said to order all lives. Two of the main ways of escaping from the stars were magic and the mystery religions. In the 2nd cent. B.C. a new influx of magic poured from Asia into the Greek world and continued to engulf the Greco-Roman world for several centuries. Again Egypt was a main center. Although some saw magic as freeing them from the determinism of the stars, many merely used it to obtain some personal advantage, e.g., economic prosperity, physical health, or defeat of demons. All kinds of potions, charms, and formulas were employed to achieve such ends. *See* MAGIC.

People often sought to influence demons in order to destroy their opponents or to prevent misfortune. The way to control a demon was to utter his true name. To ensure that the right name was uttered, people would string together many names, including a host of meaningless vocables, as some Egyptian papyri attest. Exorcism of demons occurred in Ephesus during Paul's ministry there (Acts 19:13-16), and the quantity of magical books possessed by the gullible public is illustrated by the value of the scrolls burned by Ephesians after their conversion: 50,000 pieces of silver (v. 19).

But more important than magic for conquering the stars were the mystery religions. Magic might alter fate, but an initiate into a cult might some day soar above the spheres and dwell with the gods and thus be guaranteed salvation.

E. Conclusion. As the centuries of the Roman empire passed, the pagan world presented a great turmoil of religious beliefs and practices. Many of the unsophisticated sincerely followed the old established worship of the official cults or quietly continued to venerate the more personal divinities of hearth and home. Others who lost their faith in the old ways followed the secular paths of philosophy, astrology, or magic, or they sought the ways of faith and "conversion" offered by the mystery religions. While these various pagan cults and practices generally tolerated one another, adherents of Judaism and Christianity refused to recognize the pagan gods and therefore stood in irreconcilable opposition to the whole pagan world. But when Christianity ultimately became the official faith of the Roman empire, it had, by a strange irony, absorbed numerous elements of paganism.

I. Background.–A. Abraham and His Faith. The Jews trace their faith (as do Christians) to Abraham. They believe that Abraham and his descendants were called by God to be a blessing to all the nations of the earth (Gen. 12:3). This call involved (1) the promise of a land (2:1), (2) the establishment of a people (v. 2), and (3) a universal purpose (v. 3). This revelation from God to Abraham is regarded as an everlasting covenant (15:18), i.e., an agreement between God on the one part and Abraham and his descendants "throughout all generations" (17:7) on the other, and which the Jews believe is still in effect. The sign of this covenant is circumcision (17:9-13). Abraham's response to this call was to act in faith (12:4; 15:6) and

A panel from the Beth Alpha synagogue floor (6th cent. A.D.) depicting the sacrifice of Isaac. Abraham stands near an altar of fire holding the bound Isaac in his left hand and a long knife in his right. The hand of God appears at left above Abraham's head, and the inscription reads "Thou shalt not stretch forth." A ram is tied to a tree, and the inscription above it reads "And behold . . . a ram." To the right is an attendant with a donkey (D. Harris)

RELIGIONS: JUDAISM

obedience (22:2, 12, 16-20), hence he is called "our father" (*'abînû*).

The election of Abraham continued through Isaac his son (Gen. 21:12) and Jacob his grandson (26:3, 24; 28:13-15; 35:12). At Peniel Jacob's name was changed by God to Israel (32:28), hence his sons were called "sons of Israel" or "Israelites" (32:32). The other descendants of Abraham through Ishmael and of Isaac through Esau were not forgotten by God, but they received promises distinct from the covenant promises that the Lord made to Abraham, Isaac, and Jacob (cf. 21:13; 27:39-40).

B. Torah of Moses. The stories of Joseph and his brothers, of the sojourn of the Hebrews in Egypt, and of the Exodus are well known (Gen. 37:1–Ex. 1:7). The exodus from Egypt is a central point in the Jewish faith, being commemorated annually in the Passover (*pesaḥ*). The existential reality of the event is stressed in the words of the Passover Seder: "*We* were slaves in Egypt, and with an outstretched hand and a strong arm, the Lord brought *us* out." A nation was born in that event, though it would be centuries before it was recognized as such. The Jew believes that this great event, the exodus from Egypt, was a demonstration that Israel was indeed the people of God (Ex. 7:14), whose name YHWH was too holy to be spoken (3:13-15).

Fifty days later the Torah was revealed to Moses on Mt. Sinai, commemorated by the Feast of Weeks (*šābûʿôṯ*, Pentecost). The basic meaning of the Heb. *tôrâ* is not "law," as that term is usually understood, but rather "instruction." To the Jew, God's Torah is His revealed will concerning how His people are to live (cf. Ps. 119:1-8). He is a holy God, and His people are to be holy (Lev. 19:1). The cultic system incorporated in the tabernacle ritual (Ex. 25–30) and explained more fully in Leviticus was the basis for the Jewish sacrificial system as long as the temple stood. The Jews also believe that God revealed an oral law, an explanation of the written Torah, at Sinai (see III.A below).

C. Religion of the Prophets. The Torah is the basis of the Jewish religion, but the Prophets (*nᵉḇîʾîm*) are also considered to speak for God, and selections of the Prophets (*haptārôṯ*) are read along with the readings of the Law. In essence the prophetic writings may be looked upon as applications of the Law (*halākôṯ*).

D. Exile. In 722 B.C. the northern kingdom (Israel) was taken into captivity by Sargon II. The prophets saw this as a warning from God because of Israel's apostate and sinful behavior (cf. 2 K. 17:7-18; Ezk. 23:4-35). The warning went unheeded, however, and after a series of exiles (608-586) the southern kingdom (Judah) was no more. The temple that Solomon had built was destroyed by the Babylonians (for a detailed chronology, *see* JERUSALEM III.E). The nation, except for the poorest and weakest persons (2 K. 25:12), was taken into exile (although some have challenged the historical accuracy of this statement, it accords well with what we know of Assyrian and Babylonian policies concerning conquered lands).

II. Rise of Judaism. *–A. Nomenclature.* Correctly speaking, Abraham and the patriarchs were Semites, or more specifically Hebrews, and the tribes in Egypt were called Hebrews (Ex. 1:15, 22). The descendants of Jacob were called the people of Israel (1:9) or Israelites (9:7). After the division of the monarchy following the reign of Solomon (931 B.C.), the people of the northern kingdom were called by the name Israel (Am. 2:4; 7:9) while the people of the southern kingdom were called Judeans (2:6; Mic. 1:9). The name Israel was also used, however, for both peoples (Ezk. 37:22; Isa. 54:5; Ezr. 5:1).

B. Ezra and the Great Synagogue. The exiles of Judah, who were now called Jews (for *yᵉhûḏîm*, "Judeans"), were allowed by Cyrus the Great (*ca.* 538 B.C.) to return to their land and to rebuild the temple (Ezr. 1:1-4); this postexilic temple was known as "the second temple," a name also applied by Jews to the temple that Herod beautified and enlarged. Ezra was responsible also for a new emphasis on the Law (Neh. 8:1-8). According to Jewish tradition, Neh. 8:8 refers to an Aramaic translation or Targum. Tradition also records that Ezra and the men of the Great Synagogue were responsible for writing the Law "in Assyrian letters" (T. P. *Sanhedrin* 21b-22a), probably meaning that the ancient Torah was copied in the Aramaic system of writing, or the square letters with which we are familiar today. Although recent scholars have questioned whether there was a "Great Synagogue" (*see* SYNAGOGUE, THE GREAT), Jewish tradition states that "Moses received the Law from Sinai and committed it to Joshua, and Joshua to the elders, and the elders to the Prophets, and the Prophets committed it to the men of the Great Synagogue" (Mish. *Aboth* i.1). This reference is to the *oral* law, which later became the basis of the Talmud.

C. Rabbinic Tradition. Scribes and rabbinic scholars are credited with handing down the oral law, or ordinances (*taqqānôṯ*) and decrees (*gᵉzērôṯ*), which are always considered distinct from the biblical Torah. Many of the sayings can be found in C. G. Montefiore and H. Loewe, eds., *Rabbinic Anthology* (1974); see also G. F. Moore, *Judaism* (1927), I, 29-36. Simeon the Righteous is named as one of the last survivors of the Great Synagogue; he is possibly to be identified with Simeon the son of Onias, a contemporary of Jesus Ben Sira (*ca.* 200 B.C.) and the first of a new succession of teachers who are known by name. The earlier period (*ca.* 200 B.C.-A.D. 10) ended with five "pairs" (*zûgôṯ*) of teachers, the last of which were Hillel and Shammai. The grandson of Hillel was Gamaliel I (Acts 5:34), and the sixth descendant of Hillel was Judah the Prince. Emphasis on the law, beginning with Ezra, is often viewed by Christians as the beginnings of a legalistic system. In reality it was this emphasis that preserved the Jews as a people of the Torah.

D. Struggle Against Hellenism. When the Ptolemies were succeeded by the Seleucids in Palestine, an enthusiasm for things Hellenistic swept the nation. Jason, who was made high priest in 175 B.C., had worked his way into favor with Antiochus III (cf. 1 Macc. 1:1-40). The crisis came when Antiochus IV converted the temple into a place of worship for Olympian Zeus. This was followed by the Macabbean (Hasmonean) revolt, which won for the Jews about a century of limited freedom.

1. The Sects. a. Pharisees. There is uncertainty about the origin of the PHARISEES and even about their name. According to Josephus (*Vita* 1.2 [10]; *Ant.* xiii.5.9 [171-73]), there were three sects (Gk. *haíreseis*) — the Pharisees, the Sadducees, and the Essenes — in existence *ca.* 139 B.C.; but the Pharisees probably antedate that time as the successors of the Hasidim (the HASIDEANS described in 1 Macc. 2:29-38; cf. v. 42). The name Pharisee is probably derived from the Hebrew root *pršʿ*, which primarily means "separate" (i.e., "the separated"), with a secondary meaning "distinguish, express, interpret" (i.e., "the interpreter, exegete"). The Pharisees were the interpreters of the Law (*BJ* ii.8.24 [162]), the guardians of the faith. Judging from His teachings, Jesus was likely a Pharisee, and Paul certainly was (Acts 22:3; 26:5; Phil. 3:5). If Jesus was a Pharisee Himself, why was He so critical of them? The answer must lie in the fact that some Pharisees were overly zealous for the (oral) law, i.e., the traditions that

RELIGIONS: JUDAISM

A silver menorah used in the celebration of Hanukkah, which commemorates the rededication of the Jerusalem temple after its defilement by Antiochus of Syria (German, 1759) (Israel Museum)

made the Torah (of Moses) of no effect (Mt. 23:23-26; 15:2-6); see Moore, I, 56-71; R. T. Herford, *The Pharisees* [1924]; J. Neusner, *Rabbinic Traditions about the Pharisees before 70* [3 vols., 1971]; *The Pharisees: Rabbinic Perspectives* [1985]). That there were such zealous Pharisees is indicated in Acts 15:1-3; Gal. 2:4. It is also a psychological reality that one is most demanding of those with whom one has the most in common.

b. Sadducees. Still less is known of the SADDUCEES. One theory is that they were descendants of Zadok (cf. Sir. 51:12, Hebrew text), the chief priest in the days of David (1 K. 1:34; 2:35), whence their name. It seems likely, however, that the Sadducees came into being at the time of the Macabbees, starting a new high-priestly line in reaction against the appointment of Jason. In terms of belief they differed from the Pharisees in one main area: the Sadducees believed only in the Torah (possibly meaning just the five books of Moses, but perhaps including the Prophets also); they rejected the traditions or the concept of the oral law (*Ant.* xiii.10.6 [297]). According to the NT they did not believe in resurrection (Mk. 12:12) or angels or demons (Acts 23:8). According to Josephus, who was himself of a Sadducean family (Vita i.1 [1-5]), they were the rich and powerful priestly aristocracy, rather boorish in their behavior (*BJ* ii.8.14 [166]; *Ant.* xiii.10.6 [298]). With the destruction of Herod's temple the Sadducees disappeared from history, many of them doubtless killed in the carnage.

c. Essenes. The third sect mentioned by Josephus was the ESSENES (*Ant.* xviii.1.5 [18-22]), an ascetic, communal group, possibly an offshoot of the Hasidim. The meaning of the name is uncertain. They are often identified with the Qumrânians (but see W. S. LaSor, *Dead Sea Scrolls and the NT* [1972], pp. 131-141), and they stressed details of the Law in a manner akin to Pharisee teachings. The view that Jesus was an Essene was thoroughly discussed and rejected by J. B. Lightfoot (*St. Paul's Epistles to the Colossians and to Philemon* [1875], pp. 82-95, 114-179), and more recent works have not refuted his conclusion.

d. Qumrânians. With the discovery of the DEAD SEA SCROLLS a new window on Jewish sectarian movements was opened. This group repudiated the Jerusalem priesthood and the cultic place of the temple and relocated "in the desert" at a site located about 12 km. (7 mi.) S of Jericho on the west shore of the Dead Sea. They studied the Scriptures day and night, and their library contained copies of all the books of the Hebrew Bible except Esther. They were an apocalyptic sect that believed they were the last generation. *See also* QUMRÂN.

e. Other Jewish Sects. Epiphanius (*ca.* A.D. 375) listed seven Jewish sects and added four Samaritan sects to this list (R. H. Pfeiffer, *HNTT*, p. 53 n. 8; cf. *ERE*, V, 139-145, 267f.). The *Zealots* are mentioned in the NT (Lk. 6:15). Attempts to identify them with the Boethusians have not succeeded. Their origin may be traced to the time of the Macabbees (1 Macc. 2:27). They are identified with the last defenders of Masada (cf. Y. Yadin, *Masada* [1966]). *See* ZEALOT.

The *Ebionites*, also known as Nazarenes, arose in the late 1st or early 2nd cent. A.D. Mentioned by Irenaeus and described more fully by Epiphanius, they were a Jewish-Christian sect (*see* EBIONITES). The *Dositheans*, followers of a self-styled messiah Dositheus, appeared in the 1st cent. A.D. and continued into the 6th cent.; like the Samaritans they accepted only the five books of Moses as canonical. The *Therapeutae* were an Egyptian sect with colonies in other places. The *Disciples of John the Baptist*, later known as *Sabeans* and *Mandeans*, had penetrated as far as Ephesus in NT times (Acts 19:1-7) and can be found in Iraq and elsewhere at the present time.

The *Samaritans* are usually traced to the Israelites who were left in the northern kingdom at the time of the Assyrian invasion (2 K. 17:24-34), and who intermarried with the exiles imported by the Assyrians. Hostility between the Jews and the Samaritans is alluded to in Nehemiah (Neh. 4–6). Holding that Mt. Gerizim was the place chosen by God, they built a temple overlooking the ancient city of Shechem, probably in the 4th cent. B.C. This was desecrated by Antiochus IV Epiphanes and subsequently destroyed by John Hyrcanus (128 B.C.). In A.D. 70 the Romans massacred 11,600 Samaritans (*BJ* iii.7.32 [307, 315]). A small number of Samaritans continue to live in Nâblus and to hold a Passover service, with animal sacrifices, annually on Mt. Gerizim. *See* GERIZIM, MOUNT; SAMARITANS.

The *Herodians* (Mt. 14:3-12) may have been a Jewish sect, identified with the Boethusians and similar to the Sadducees. On the other hand, they may have been largely a political movement. *See* HERODIANS.

2. Christianity as a Sect. In Acts (24:5; 28:22) the followers of Jesus are described as a "sect" (Gk. *haíresis*), the same word used for the Sadducees (5:17) and the Pharisees (15:5) and used by Josephus in his descriptions of the Pharisees, Sadducees, and Essenes (*Ant.* xiii.5.9 [171]).

At its outset the Christian movement was entirely Jewish. Jesus was a Jewish rabbi (Jn. 1:38; 3:2), although He spoke against using the title, which literally means "my great [one]" (Mt. 23:7f.). John the Baptist was a Jew who proclaimed the coming of the Jewish Messiah (Jn. 1:19-34). Jesus' first disciples were disciples of John who had been brought to Jesus by John (1:35-42). The first Gentiles to become followers of Jesus, to the best of our knowledge, were those in the house of Cornelius (Acts 10:1-45), and news of this event caused consternation among the Jewish followers of Jesus (11:1-3). When Paul, a strict

RELIGIONS: JUDAISM

Pharisee, became a follower of Jesus and went into Asia Minor preaching the good news that Messiah had come, many Gentiles came into the young Church. This led to the great debate at Jerusalem, described in Acts 15. Conflict between the young Church and the Judaizers continued for decades (cf. Rev. 2:9).

Because the Christian movement was considered a Jewish sect it received the same treatment as Judaism at the hand of Rome, namely, it was tolerated and not banned as a new religion would have been. Later, when it became obvious that Christianity had become a separate religion, Christians underwent a series of persecutions by the Romans. The question as to when Christianity became an independent religion is moot; some trace it to the action of a council called by Rabbi Gamaliel II (*ca.* A.D. 90; cf. Moore, I, 90f.). It is certain that Christians met on the temple mount to worship (Acts 5:12; "Solomon's Portico" was the colonnade along the eastern side of the temple area). James the brother of Jesus, who was probably the person mentioned in Acts 15:13 sometimes referred to as the "bishop of Jerusalem," was held in high repute by some of the leading Jews as late as the time of Josephus, as indicated by the reference to James's death at the hands of the Sanhedrin in *Ant.* xx.9.1 (200f.). After the destruction of the temple (A.D. 70) there was, of course, no further opportunity for Christians to gather on the temple mount; but by this time the Church was widely spread over much of the Roman empire.

It must be added that as the Christian movement became increasingly gentile and hellenized, many of the doctrines — and indeed the very terms used (terms originally found in the LXX) — took on meanings that were foreign to the Jews. Even the term "Christ," which is a translation of Heb. *māšî(a)ḥ*, "Messiah," incorporated several ideas that were never part of the Jewish concept of "Messiah." To the Jew the Messiah was a king of David's line who was to come and rule from Jerusalem. The Christ of the Christians included also the concepts of a high priest, an atoning Savior, sonship in a special sense that included deity, and other doctrines. As a result, the Christ of the Christians is no longer accepted by the majority of Jews as the Jewish Messiah.

A Jew blowing the shofar at the Western Wall of the temple ruin in Jerusalem. He wears the *tallît* (four-cornered prayer shawl) with *ṣîṣît* (fringes), which are to remind the wearer of the commandments (W. Braun)

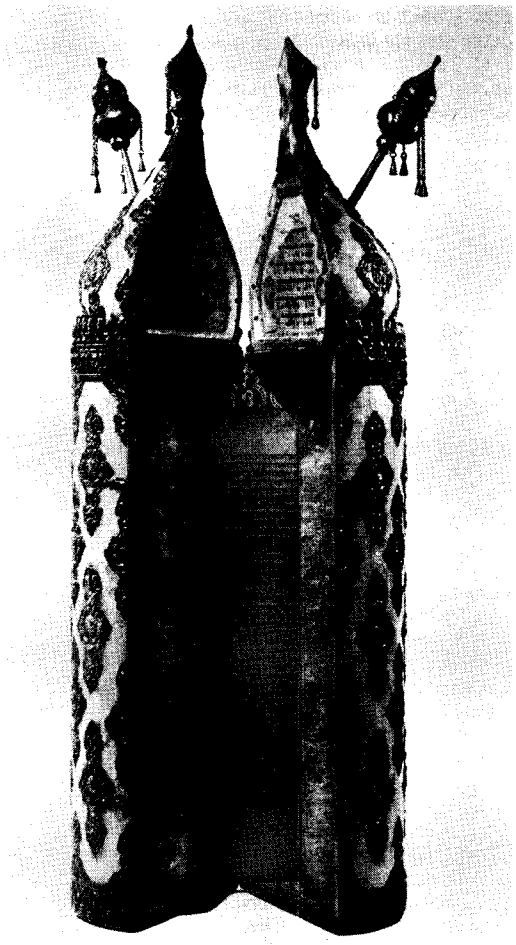
D. After the Fall of Jerusalem. 1. End of the Temple Cultus. With the destruction of the temple by the Romans in A.D. 70 the sacrificial system, which was limited to the altar in the temple complex, ceased. The structure of the cultus, with the orders of priestly service, likewise ended. If the exile to Babylon led the Israelites to lament, "How shall we sing the Lord's song in a strange land?" (Ps. 137:4), if the profaning of the temple by Antiochus IV led to revolt, what would the destruction of the temple lead to? It could have been the end of Judaism. That it was not was due to several factors, one of the most important being the realization that good deeds are as valuable as sacrifice. This thought was expressed by Johanan ben Zakkai after the destruction of the temple: "Grieve not, we have an atonement equal to the Temple, the doing of loving deeds" (*Aboth de Rabbi Nathan* iv.11a).

2. Predominance of the Synagogue. When and where the synagogue first appeared is not known. G. F. Moore wrote, "it may be reasonably surmised that it had its antecedents in spontaneous gatherings of Jews in Babylonia and other lands of their exile on the sabbaths and at the times of the old seasonal feasts or on fast days" (I, 283; cf. Zec. 7:5, which refers to the time of the Exile). According to one tradition there were 480 synagogues in Jerusalem when the city fell (A.D. 70; cf. T. P. *Megillah* 73d). Some were doubtless intended for Jews who had returned from the Diaspora (e.g., the synagogue of the Freedmen, Acts 6:9). Synagogues are also mentioned in the accounts of Jesus (at Nazareth, Lk. 4:16, and at Capernaum, 4:31), as well as in the accounts of Paul's activities (Antioch, Acts 13:14; Iconium, 14:1; Thessalonica, 17:1; Beroea, 17:10; Corinth, 18:4; Ephesus, 18:26). As few as ten male Jews over the age of thirteen could form a minyan or quorum for a synagogue. The synagogue was not only a house of assembly (Heb. *bêṯ kᵉneseṯ*, of which Gk. *synagōgē* is a translation), but it was more especially a house of prayer (Heb. *bêṯ tᵉpillîn*) and a house of study (*bêṯ miḏrāš*). It served not only to hold the Jewish people together but also to preserve their sense of union with their God and their Scriptures.

3. Preservation of the Scriptures. A rabbi named Johanan ben Zakkai, foreseeing the destruction of Jerusalem, had himself carried out of Jerusalem in a coffin and taken to the camp of Vespasian the Roman general. When his prediction that Vespasian would become emperor came true, Johanan was granted the town of Jamnia (Yavne) and given permission to take to that place the academy that he had headed in Jerusalem (*Aboth de Rabbi Nathan* iv.11b-12a; for the text, see Montefiore and Loewe, p. 266); parts of the story are questioned by some, however (cf. Moore, II, 116 n. 1). The sacred scrolls were saved from destruction. There is confusion over the extent of the activities of the *Bêṯ Dîn* at Jamnia, but the canonization of the Scriptures and the editing of the text from at least three recensions are often attributed to this period.

4. Halakah, Haggadah, Midrash, and Other Terms. Among the rabbinic sayings are many that are described by these terms. Discussions of canon law, particularly as it has to do with behavior, constitute Halakah. C. G. Montefiore, in his introduction to *Rabbinic Anthology* (p. xvi), explains the reason for the almost total exclusion of Halakah from this work. Such matters can be found in H. Danby, *Mishnah* (1933). On the other hand, Haggadah is more homiletical. If Halakah is likened to the disputes

RELIGIONS: JUDAISM



An ornately decorated Persian case with Torah scroll, 19th cent. (Israel Museum, photo D. Harris)

of scholars over the precise interpretation of passages of Scripture, Haggadah can be likened to the free and often unscholarly way in which the preacher may use the text for illustration and application. Midrash is interpretation of Scripture; to the modern exegete, however, rabbinic midrashim are sometimes fanciful. Midrash is based more on a biblical passage; Mishnah is based on a particular subject. The term is also used as a title for specific works, e.g., Midrash Rabbah.

The Midrash to Exodus is called *Mekilta* ("measure"), that to Leviticus is called *Siphra* ("the book"), and that to Numbers and Deuteronomy is called *Siphre* ("the books"). A collection of homilies is known as *Pesikta* "section, chapter") or *Tanhuma* (after Rabbi Tanhuma). The Great Midrash (Midrash *Rabbah*) is largely composed of haggadic material on certain books (e.g., *Gen. Rabbah* (See S. Sandmel, pp. 121-26).

III. "Normative" Judaism.–The phrase "normative Judaism" is attributed to G. F. Moore (I, 3) and is objectionable to some more recent scholars (e.g., M. Smith and J. Neusner), who contend that the term better describes Judaism after the 3rd cent. A.D. The phrase is used here to describe nascent Judaism from the time of the rabbis to the conclusion of the Talmud.

A. Formation of the Talmud. The Talmud is a collection of sayings of rabbis dating from *ca.* 200 B.C. to *ca.* the mid-6th cent. A.D. It is concerned with the oral law, i.e., the instruction that (according to tradition) was given to Moses on Sinai and transmitted orally until the time of the Mishnah. The Talmud is composed of two bodies of tradition: the Mishnah and the Gemara. (*See also* TALMUD).

1. Mishnah. Hebrew *mišnâ* means "repetition" (from *šānâ*, "repeat"). After the Great Synagogue and prior to the Tannaim ("teachers"), *ca.* 200 B.C. to A.D. 10, the oral law was transmitted by learned men (not yet called "rabbis"), beginning with Simeon the Just and ending with the "pairs," the last being Hillel and Shammai. The Tannaitic period is divided into five stages extending from A.D. 10 to 220 (see Moore, II, 481-83; J. Neusner, *Essentials; Description*), during the first of which Johanan ben Zakkai founded his academy at Jamnia. After the defeat of Bar Cochba (A.D. 135) the academy moved north, finally settling in Galilee. By careful study the *Bêṯ Dîn* went through the written and unwritten law. Rabbi Akiba had begun the codification of the oral law (at the end of the 1st cent. A.D.), and this was completed by Rabbi Meir. When no authority is specified in the Mishnah, it is understood to be Rabbi Meir (see A. L. Sachar, *History of the Jews* [5th ed. 1965], pp. 146f.). Judah ha-Naśi', president of the *Bêṯ Dîn*, and his disciples, working from the redaction of Meir, succeeded in collecting the decisions and opinions of 148 tannaim into six Orders (*sᵉḏārîm*), each of which contains several Tractates (*massᵉḵtôṯ*). (For a convenient resumé, see A. Cohen, pp. xxvii-xxx; the best-known English translation of the Mishnah is H. Danby, *Mishnah* [1933]).

2. Gemara. The Aramaic word *gᵉmārā'* means "completion." The Mishnah (not yet in written form) was not intended to be definitive — that would have been contrary to the spirit of the rabbis. So scholars, the Amoraim ("expounders") who succeeded the Tannaim, studied the Mishnah and recalled other sayings that were in their oral tradition. This continued for three centuries at centers in Jerusalem and in Babylon. The additional teachings were the Gemara.

3. Talmud. The Talmud (Heb. *talmûḏ*, "study") consists of Mishnah and Gemara. There are two Talmuds, the Palestinian Talmud (often called *Yerushalmi*, "Jerusalem"), completed *ca.* 499, and the Babylonian Talmud, completed about a half-century later. Both were committed to written form.

Neither Talmud is complete. The Palestinian, written in Palestinian Aramaic, covers thirty-nine tractates; the Babylonian, written in Eastern Aramaic, covers thirty-seven but is seven to eight times the size of the Palestinian. Traditional material was still being collected, and the *Tosefta* ("addition"), which is about four times the size of the Mishnah, is a parallel work, divided into the same orders and tractates. There are also apocryphal tractates (see A. Cohen, p. xxx).

The Talmud is designed to guide people in their daily life; therefore it contains many things having to do with home, work, festivals, legal rights, and the like. It is to be understood not as replacing God's revelation but as interpreting it. Its peculiar genius is the ability to hold different opinions, sometimes conflicting, without being self-destructive.

B. Religious Ideas. The religion of the Jews is based on the revelation of God in the Hebrew Bible and in the oral law. In many respects therefore, Judaism is quite similar to basic Christianity.

1. God. Judaism is vigorously monotheistic. The Shema (so called from Heb. *šᵉmaʿ*, "hear," the first word of Dt. 6:4f.) is the basic creed. Early conflict with Christianity

RELIGIONS: JUDAISM

(possibly defined at Jamnia) stressed Christianity's polytheism, since the Jews saw the notion of trinity as tritheism (three gods). To the Jews, God is eternal, all-powerful, all-knowing, all-seeing. He is a God of justice and requires justice of His people. He is also a God of mercy. Above all, He has entered into a covenant with His people, a covenant that requires trust and obedience on their part.

2. Mankind. The human race is both human and divine, being so created. Human beings are "made for two worlds: the world that is now, and the world to come" (Midr. *Gen. Rabbah* viii). Mankind was born into this world basically good, but with both an inclination to do good (*yēṣer haṭṭôḇ*) and an inclination to do evil (*yēṣer hāraʿ*), hence with freedom of will.

3. Sin. Sin is a violation of the revealed will of God, whether by omission or by commission. Yet the grace of God is dominant. In modern Judaism the Day of Atonement, Yom Kippur, is the time when each person takes account of what he or she has done in the past year, genuinely repents of the sin, and believes that God is also taking such accounting. But the scales that for every person tip to the sinful side are balanced by the grace of God, so that the Jew can continue for another year to walk in the way that God has ordained.

4. Kingdom. The God of the Jew is the creator of this world and its ruler. He rules in the lives of those who trust in Him, and He wills, through their actions, to rule over all mankind. His kingdom eventually will extend to the ends of the earth. God is made known through deeds of righteousness (Heb. *ṣᵉḏāqôṯ*) — a view that is often misunderstood by Christians as a legalistic way of earning salvation. The Jew does not look for salvation, as understood by the Christian, for he or she is already one of God's people. Still there is need of repentance. "Rabbi Levi said: If the Israelites would but repent for one day, they would be redeemed, and the son of David would come straight away" (Midr. *Cant. Rabbah* v.2.2).

The Rabbi, a painting by the Jewish artist Marc Chagall. He depicts a man praying in the traditional fringed prayer shawl and wearing *tefillin*—small black boxes on the forehead and arm containing scrolls with brief Torah passages (oil on canvas, 1914) (SCALA/Art Resource, NY/ARS, NY/ADAGP)

C. Cultus. 1. Prayer. With the destruction of the temple animal sacrifice ceased. Prayer was considered a suitable substitute. Therefore prayer is part of daily life and part of public worship. There are prayer books (*sîḏûrîm*) with prayers for all occasions.

2. Study of the Law. This includes both the Torah and the Talmud. In formal worship a passage from the Torah (*pārāša* or *sēḏer*), based on a division that covers the Torah in a year, and a passage from the Prophets (*haṗṭārâ*) are read. On feast days the five Megilloth are read: Canticles on the eighth day of Passover, Ruth on the second day of The Feast of Weeks (*šāḇûʿôṯ*) or Pentecost, Lamentations on the ninth day of Ab commemorating the destruction of both the first temple and Herod's temple, Ecclesiastes on the third day of the Feast of Tabernacles (*sûkkôṯ*) and Esther on Purim.

3. Charity. "Almsgiving and loving deeds weigh as heavily as all the other commandments of the law" (T. P. *Peah* 1.1). Deeds of righteousness (*ṣᵉḏāqôṯ*; cf Gk. *dikaiosyńē,* Mt. 6:1) are of great importance to the Jew. One example of this may be seen in the protest that was raised by pious Jews when the state of Israel tried to abolish begging; this, they protested, would deprive them of opportunities to do deeds of charity.

4. Social Conscience. The efforts of Jews on behalf of the underprivileged, the minorities, and the persecuted are also an important expression of their faith. Their example should spur Christians, Moslems, and others to greater efforts in these problem areas.

E. Home and Dietary Laws. The word "kosher" (Heb. *kāšēr,* "fit, proper") applies to anything that is proper according to Halakah, including the Torah, the tallit, even a person who is correct or proper. More commonly it applies to food that accords with Jewish religious law. To the strict Jew, this means that it has been prepared in strict observance of the law, i.e., slaughtered, dressed, cooked, and eaten on dishes and utensils that are kosher (there is no such thing as "kosher style" or "mostly kosher"). According to the Talmud the table has replaced the temple altar (T. B. *Hagigah* 27a).

When God chose Israel, He declared that they were to be a "separate" people ("holy" means "separated, set apart"). The dietary laws were part of the means by which this separation was effected. According to Rabbi H. H. Donin, kash-rut (the Jewish dietary laws) is not an ethnic menu. There are no such things as "Jewish" foods; most Jewish dishes have been appropriated from nations among whom Jews have dwelt. Proscribed foods were not forbidden because they were unhealthy, although that factor might have been part of the divine proscription. They were forbidden because Israel was a people set apart from the secular, the unholy, from everything which did not conform to God's revealed will (*To Be a Jew* [1972], pp. 97-126). The difference between man and beast, between living like one of God's people and living like an animal, is made clear in kashrut, not only as it applies to food but as it applies to all of life.

IV. Modern Developments.—*A. Geographical.* Jews who settled in Spain and those who were driven from there to other regions as a result of the Inquisition are known as Sephardic Jews (< Heb. *sᵉp̄āraḏ,* "Spain"). Those who settled in Eastern Europe are known as Ashkenazic Jews (< Heb. *ʾašᵏᵉnaz,* "Germany"). Sephardic Jews spoke a dialect of Spanish, written in Hebrew characters, called Ladino. Ashkenazic Jews spoke a dialect of German, also written in Hebrew characters, known as Yiddish. Both dialects were strongly invaded by Hebrew, Aramaic, and

other elements. There are also other groups, such as those in North Africa who spoke a dialect of Arabic written in Hebrew characters ("Judeo-Arabic"). Each of these geographical groups developed an individual liturgy, including the cantillation of the Hebrew Scriptures.

B. Religious. Modern Jews are sometimes described in three categories, depending on their adherence to the law. (1) Orthodox Jews observe the law rather strictly, including the regulations concerning sabbath observance, dietary laws, mingling with Gentiles, etc. The more extreme Orthodox Jews, called "religious" (*dāṯîm*) or "Hasidic," preserve the sixteenth-century Eastern European style of dress. (2) Conservative Jews observe the law but with some latitude. They do not always insist on strict kashrut (i.e., kosher foods prepared according to strict rabbinic regulation) and are more liberal in their interpretation of sabbath observance. (3) Reform Judaism is a product of the Enlightenment and the impact of modern science on the Bible. The German scholar A. Geiger held that Judaism was not fixed and unchangeable but continuously developing. The stress was put on the ethical rather than the ritualistic, on social justice rather than dietary laws. Reform Jews may be deeply religious, or they may be Jews only in their decision to hold on to the name (cf. S. Wine, *Judaism beyond God* [1986]), but they are Jews nevertheless, and are considered as such by all except the most extreme Orthodox.

RELIGIONS OF THE BIBLICAL WORLD: PERSIA.

I. Sources
II. Zoroastrian Sacred Texts
III. Pre-Zoroastrian Religion
IV. Zoroaster
V. Medes and the Magi
VI. Achaemenids
VII. Zoroastrian Doctrines and Practices
VIII. Relations with Judaism and Christianity

I. Sources.–A. Sanskrit. Comparative linguistic studies reveal that the earliest Iranians must have held beliefs and customs similar to those contained in the *Rig-Veda,* the earliest of the Hindu Scriptures. This includes traditions of the Indo-Aryan invaders who migrated into the Indus River Valley from southern Russia *ca.* 1500 B.C.

B. Old Persian. We have some important royal inscriptions in three cuneiform versions (Old Persian, Elamite, and Akkadian) from the Achaemenids. The most extensive text is Darius's famous inscription carved on a cliff at Behistun (modern Bisitun; see photo in PERSIA). Also significant is the *Daiva* inscription of Xerxes. (See Kent.)

C. Elamite. Tablets from the "Treasury" and the "Fortification" of PERSEPOLIS, the capital built by Darius and Xerxes, deal mainly with provisions for workers but include some incidental information on religion. These texts are dated from the thirtieth year of Darius I to the seventh year of Artaxerxes I (492-458 B.C.).

D. Greek. Our main Greek source is Herodotus. Though he does not mention Zoroaster, he does tell about the customs of the Persians and especially of the Magi (see V below). The Persians offered sacrifices to Zeus (Ahura-Mazda), the sun, moon, earth, fire, water, winds, and a goddess called Mitra (i.131). Herodotus confused the god Mithra with the goddess Anahita. The Persians denounced lying and would not pollute water (i.138).

Later Greek sources do mention Zoroaster, but many of their traditions are unhistorical (e.g., they date the prophet 6,000 years before Plato).

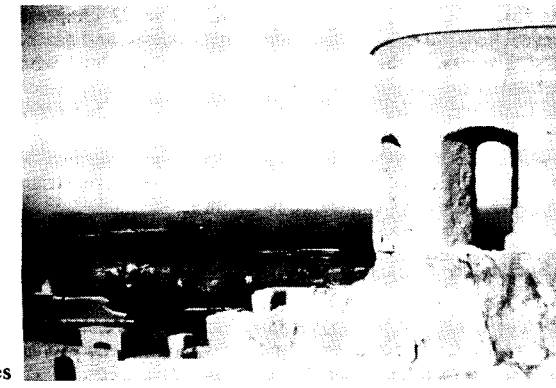
E. Other Texts. Parthian ostraca found at Nisa in southern Turkmenistan (100-29 B.C.) document the use of the Zoroastrian calendar. Armenian sources inform us about Zurvanism, the Zoroastrian heresy. Arabic sources preserve various traditions about Zoroaster.

F. Archeological. Until the 1960s we had no archeological information on the Medes except for a few rock-cut tombs (see Von Gall). Excavations by D. Stronach, begun in 1967 at Tepe Nush-i Jan, 64 km. (40 mi.) S of Hamadan, revealed a Median temple with a fire altar. As the ash indicates that the fire consumed more than fat or special woods, this altar was not similar to that used by the Zoroastrians (see Boyce, I [1975], 191).

Excavations have been conducted at SUSA since the late 19th cent., at Persepolis by the University of Chicago from 1931 to 1939, and at Pasargadae by Stronach from 1961 to 1963. Objects of religious significance include altars, tombs, reliefs, and pestles and mortars.

In 1962-65 U. Scerrato excavated an extraordinary Achaemenian temple at Dahan-i Ghulman (ancient Zarin) in the province of Drangiana of eastern Iran near its borders with Afghanistan and Pakistan. He found a square

The remains of a Zoroastrian fire temple at Isfahan, Iran (D. H. Condit)



RELIGIONS: PERSIA

building (53 by 54 m., 175 by 178 ft.) equipped with ovens and in its second phase with three central altars. There was evidence of animal sacrifices. Scerrato believed that the altars were dedicated to the triad of gods — Ahura-Mazda, Mithra, and Anahita — honored by Artaxerxes II.

See also ARCHEOLOGY OF IRAN.

II. Zoroastrian Sacred Texts.–A. Gathas. Our oldest and most important texts are the sixteen Gathas of Zoroaster himself now incorporated in the *Yasna* (chs. 28–34, 43–51), the main Zoroastrian liturgy (see Duchesne-Guillemin [1963]; Insler). One other text, the *Yasna Haptanghati,* "Yasna of Seven Chapters," (chs. 35–41), is nearly as old.

B. Younger Avesta. The main body of Zoroastrian Scriptures is known as the Avesta (Middle Pers. *awastag,* "tradition"). These texts have come to be known as the Younger Avesta since they were composed a long time after Zoroaster, probably in eastern Iran. This collection of numerous works was never combined in a single book. Of the 21 *naskas* or volumes known from the Denkard (see II. C. 2 below), we have but one entire *naska,* the Vendidad, and portions of others preserved, i.e., no more than one-fourth of the original Avesta. No doubt much was destroyed with the Islamic conquest of Iran in A.D. 651.

From the Achaemenian era the various traditions of the Avesta circulated orally for centuries. Some have suggested that the texts the Magi recited (see V below) were parts of the Avesta. We are not sure when these texts were put into writing. It is possible that the Avesta was not written down until as late as the reign of Khusrau I (531-579).

The Avesta was translated into a Middle Iranian dialect in a script known as Book Pahlavi (= Parthian). This was a very confusing script, which reduced the 22 letters of the Aramaic alphabet to 14 resulting in many ambiguous readings, particularly of ligatures. This was replaced by a special alphabet with 48 signs developed from the Pahlavi script of the late Sassanid era under Khusrau I. By the Sassanid era Avestan was known only imperfectly as a learned language. Commentaries on the Avesta known as the *Zend* were composed in the 9th cent. A.D. Our oldest manuscript of the Avesta, which comes from India, is dated to 1323.

1. Yasna. These comprise in 72 chapters the texts which priests recite in the ritual of the pressing of the *haoma* plant (Pahlavi *hom*; cf. Vedic *soma*). Zoroaster denounced the abuse of the haoma. The original plant may have had intoxicating or hallucinogenic effects but was later replaced by the ephedra.

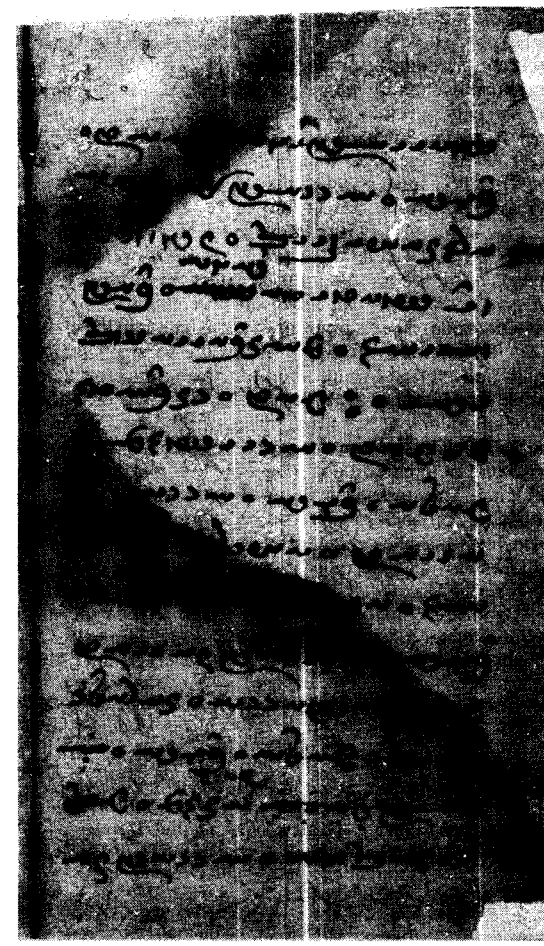
2. Visparad. "All Protective Powers" are a collection of invocations to protectors of various classes of living beings that are recited at the end of the Yasna especially during the feasts for the various seasons.

3. Vendidad (< Avestan *vidaevo data,* "the law directed against demons"; Pahlavi *Videvdad*). The 22 chapters reveal how the Evil Spirit created sins, plagues, and death. Ch. 2 contains the myth of Yima, the good lord who sinned. Ceremonies and formulae deal with repentance and purification for sins and protection against the 99,999 diseases created by the Evil Spirit.

4. Yashts (Avestan *Yashti,* "prayer" or "sacrifice"). These are 21 ritual hymns in honor of the pre-Zoroastrian *yazatas,* beings who deserve reverence.

5. Khorda Avesta ("little Avesta"). This collection of hymns was compiled by Aderpad Marespand in the reign of Shapur II (309-379).

C. Pahlavi Texts. In addition to translations and commentaries on the Avesta, we have Zoroastrian texts dealing with such important themes as cosmology and eschatology which were not composed until the 9th-10th cent. A.D. The two most important Pahlavi texts are:



A manuscript page of the Pahlavi V spered (xi.19) that says in part: "we make that known which is lifted up in offering, and which is the Avesta as the holy Ahura-Mazda directed that it should be said" (The Royal Library, Copenhagen, K7)

1. Bundahishn ("creation"). This important treatise relates how Ormazd and Ahriman, the Good and Evil Spirits, came into being and narrates their 9,000-year long conflict.

2. Denkard ("acts of religion"). This is an encyclopedia of nine books, which include summaries of the Avestan books and a biography of Zoroaster. Some authorities place its composition at the end of the Sassanid era, others in the post-Islamic period.

III. Pre-Zoroastrian Religion.–Though the Medes and Persians are not mentioned until Assyrian texts of the 9th cent. B.C. and though we have no Persian texts prior to the 6th cent. B.C., we can reconstruct the earliest Iranian religion through an analysis of the parallel Vedic texts from India and from pre-Zoroastrian elements preserved especially in the Yashts.

Early Iranian religion was very similar to Indo-Aryan religion. Both were polytheistic. The earliest written attestation of the Indo-Aryan gods is found in a treaty between the Hittite king Šuppiluliuma and Mattiwaza of Mitanni (1380 B.C.). This text mentions the important Vedic gods Indra and Nasatya, who were demoted to the demons

Indra and Naghathya in the Vendidad. Mitra (Avestan Mithra), who also appears in this text, was worshiped by both the Iranians and Indians.

From the Yashts we learn that the Iranians honored the following yazatas: Anahita, the goddess of water and fertility (Yasht 5); the star Tishtrya Sirius (8); Mithra (10); the Fravashis, protective spirits of the pious (13); Verethraghna, the god of victory (14); Vayu, the wind god (15); Ashi, the goddess of luck (17); Khvarenah, the godly charisma (19); the sun and moon (6–7); Sraosha, obedience to divine law (11); and the haoma plant (20). This list corresponds in part with Herodotus i.131. With the exception of Mithra and Anahita most of these deities played a minor role after the appearance of Zoroaster. They are insignificant in the late Pahlavi texts.

Mithra is absent from the Gathas and from the published Persepolis tablets except in the onomastica, i.e., in names like *Data-Mithra* (cf. Mithradates), "the gift of Mithra." Both he and Anahita appear prominently in the texts of Artaxerxes II. Later in the Roman empire (2nd cent. A.D.) Mithra became the center of a mystery religion (*see* RELIGIONS OF THE BIBLICAL WORLD: GRECO-ROMAN).

IV. Zoroaster.–The English spelling, Zoroaster, is derived from the Greek spelling, which incorporates the word *astér,* "star," probably because of the later association of the prophet as the source of astrological knowledge. His original name, Zarathuštra, may have meant "camel driver." The Sassanian form of his name was Zarduš.

A. Date and Place of Birth. Avestan and Arabic traditions (Mas'udi and al-Biruni), which place Zoroaster 258 years before Alexander, have yielded a rather precise date for Zoroaster in the Achaemenid era (569-492 B.C.). Numerous scholars (e.g., Herzfeld, Hinz, Tisdall) have adopted this "late" date, identifying Vishtaspa, the ruler Zoroaster converted, with Hystaspes, the father of Darius I.

Other scholars (e.g., Gnoli) argue for a date not later than *ca.* 1000 B.C. (see also Shahbazi [1977]). Boyce has adopted the earliest possible date of *ca.* 1400 B.C. on the basis of linguistic and sociological data. This would place the prophet in Turkestan even before the migration of the Iranian tribes into northeastern Iran.

The evidence of the Avestan dialect of the Gathas places the prophet in the area of Afghanistan, Chorasmia, Hilmand, and Seistan. The late Arabic traditions which placed the prophet in Azerbaijan in northwestern Iran were probably due to the magi, who "adopted" the prophet.

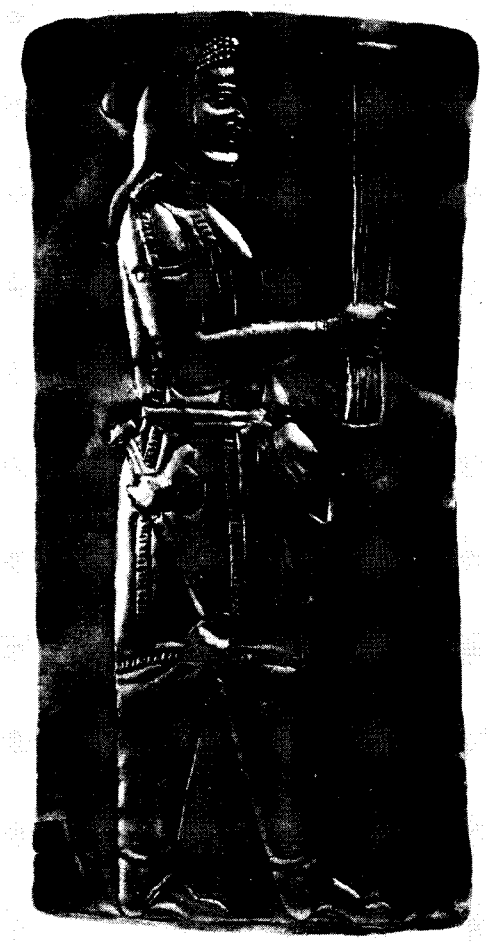
B. Family and Converts. According to the Denkard at the age of thirty Zoroaster converted to the sole worship of the god Ahura-Mazda ("the wise Lord," esp. in opposition to Angra Mainyu, "the Evil Spirit"). For ten years he had no converts, but two years after his first convert he gained his most notable one, the ruler Vishtaspa.

C. Teachings. Whether Zoroaster's theology was dualistic (two co-eternal spirits), henotheistic (the exaltation of one god over all the others), or truly monotheistic is disputed (see Boyd and Crosby).

Scholars disagree also about how to interpret the numerous references to reverence for the *gav,* "cow," in the Gathas. Are these to be taken literally as an indication of the pastoral concerns of Zoroaster against raiding nomads (so Duchesne-Guillemin, Herzfeld, Moulton)? Or, as a number of scholars (Cameron, Hinz, Insler, Schmidt [1975]) have argued, as metaphors for the righteous vision of the prophet?

D. Death. According to the Arabic writer al-Biruni (A.D. 973-1048) Zoroaster was killed at the age of 77 by invading Turanians (see the Persian national epic, *Shah Namah* [*ca.* A.D. 1000], which describes the event).

RELIGIONS: PERSIA



One of a number of gold plaquettes (possibly votive offerings) from the Oxus Treasure. It represents a Mede with a barsom or bundle of rods used in Zoroastrian ritual (Achaemenid period) (courtesy of the Trustees of the British Museum)

V. Medes and the Magi.–According to Herodotus the Magi (sing. *mágos*) were originally a priestly tribe of the MEDES (i.101). The Magi chanted a sacred text (i.132), killed noxious creatures like ants and snakes, and exposed their corpses to be mangled by "bird or dog" (i.140). Many of these practices correspond to those found in later Zoroastrian texts (see Molé, p. 78.).

Their relationship to Zoroaster and his doctrines is not entirely clear. There is some reason to believe that they may have initially resisted these teachings as they came from the east, perhaps as early as the 7th cent. B.C. (so Boyce, *History of Zoroastrianism II,* pp. 21, 40). But eventually the Magi seem to have adapted (some would say corrupted) Zoroaster's teachings. Later Greek traditions even went so far as to identify Zoroaster as a *mágos*.

The Greeks were fascinated with the Magi, who traveled to Turkey with the Persian conquest of that region under Cyrus in 546 B.C. (see Benveniste). In the Hellenistic and Roman periods those called Magi were associated with astrology and with "magic." A number of rock-cut tombs and reliefs depict the Magi. Among these is a relief

RELIGIONS: PERSIA

of a tomb at Dukkan-i Daud, which depicts a *mágos* holding the *barsom*, a bundle of sacred twigs. Ghirshman dated these as pre-Achaemenid, i.e., to the 7th-6th cent. B.C., but Von Gall would date them to the reign of Darius I at the earliest. A relief at Eshqavand depicts a man in a Persian garment praying before an incense vessel and a smaller figure in a Median garment, perhaps a *mágos*, before a fire altar.

The small size of tombs such as the one at Eshqavand led Von Gall to interpret them as repositories for the bones of the corpses of Magi. A Lycian rock-cut tomb (*ca.* 400 B.C.) was made apparently for a Persian, who followed the magian custom of excarnation. The Aramaic inscription indicates that it was an *astodana*, "ossuary," meant to preserve the disarticulated bones after the corpse had been exposed.

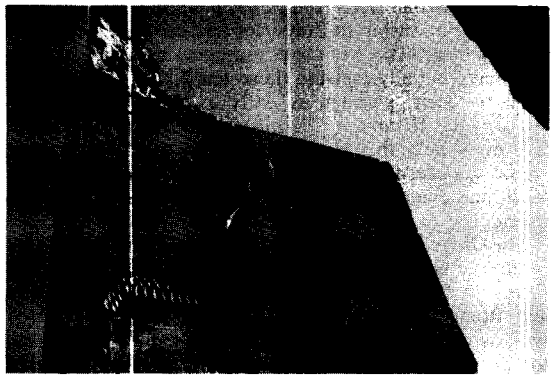
VI. Achaemenids. Whether the Achaemenids were Zoroastrians is much debated (see Dandamaev, Duchesne-Guillemin [1971], Herrenschmidt, Nigosian, Strouve). The Achaemenid texts do not mention Zoroaster but do exalt Ahura-Mazda. They have no reference to the *Amesha Spentas* or "Bounteous Immortals" associated with Zoroaster. On the other hand, the Zoroastrian texts do not seem to recall the Achaemenids except in a most garbled fashion. Different vocabularies are used: e.g., Darius uses the word *baga* for "god" instead of the Avestan *yazata*, the word *magu* for "priest" instead of the Avestan *aethrapiti*. The Achaemenids buried their kings instead of exposing them as did the ancient magi (and the modern Parsees). Therefore some scholars point to discrepancies between the Achaemenid inscriptions and later Zoroastrian traditions (e.g., Benveniste, Duchesne-Guillemin).

Other scholars, however, find echoes of Zoroastrian teachings and practices in these inscriptions and in the descriptions of Herodotus. Boyce believed that the custom of exposure was adopted only gradually and that in any case the Achaemenid kings sought to avoid contaminating the sacred elements in their burials. See also Koch, Molé, and Wiesehöfer.

A. Cyrus. While we have no certain Old Persian texts from Cyrus (those from Pasargadae his capital are attributed by some scholars to Darius I), Akkadian and Hebrew texts indicate that he acknowledged non-Persian deities such as Marduk and Yahweh.

Door jambs of the Audience Palace at Pasargadae have varied reliefs including a man clad in a fish garment of an Assyrian type. Barnett suggested that these reliefs may represent iconographically Cyrus's religious toleration. On the jamb from the Gatehouse is a winged figure with an Egyptian crown, whom Barnett identified with the Phoenician Baal. Classical sources inform us that Cyrus's tomb was surrounded by a wooded paradise and that the magi offered daily sacrifices of sheep and monthly sacrifices of horses. A faint rosette on Cyrus's tomb at Pasargadae has been interpreted by Stronach as the symbol of Ahura-Mazda; others take it to be a symbol of Mithra. Dandamaev and Duchesne-Guillemin believed that Mithra was Cyrus's god.

The winged figure on the eastern doorway in the main hall of the Tripylon at Persepolis, in this case carved above King Darius and his son Xerxes (not shown). It is commonly believed that this figure represents Ahura-Mazda, although the crown variations have provoked controversy (W. S. LaSor)



B. Cambyses. In contradiction to Herodotus's account of Cambyses's desecration of the Egyptian Apis bull, Egyptian texts themselves reveal that Cambyses honored the Apis, the incarnation of the god Ptah, and also the god Neith of Sais. (See A. Klasens, *Ex Oriente Lux*, 10 [1945-48], 339-349.)

C. Darius. In his own extensive inscriptions Darius mentions by name only Ahura-Mazda (e.g., the Behistun Inscription mentions the god 69 times in 420 lines). He does not mention the great adversary Angra Mainyu but condemns *Drauga* ("the Lie"). In his tomb relief the king is shown before the sacred fire.

The Elamite tablets from Persepolis develop a view of religion which differs from that presented in the royal inscriptions. These texts mention Elamite gods, e.g., Ḫumban, served by Elamite priests, but do not exalt Ahura-Mazda. Nor do they shed much light on the worship of Anahita and Mithra or the role of the magi (see Koch).

D. Xerxes. In his famous "Daiva" text Xerxes condemned the daivas, who were associated with the Lie. Exactly who these daivas were is a matter of controversy. In the Gathas the word daiva can designate gods as opposed to human beings, or it can mean spirits who incite people to violence and oppose prosperity. Duchesne-Guillemin suggested that Xerxes was referring to the gods of Babylon, who were punished after the revolt of Babylonia. Herzfeld thought that these were the gods of rebellious Media. Bianchi believed that the daivas were the gods displaced by the rise of Ahura-Mazda to supreme prominence.

E. Artaxerxes I. Some 80 pestles and 97 mortars found at Persepolis bear Aramaic inscriptions which date them from the 7th year of Xerxes to the 29th of Artaxerxes I. Bowman's translations of these inscriptions attempted to interpret them as directions for the haoma ritual in a Mithraic cult. Almost all other scholars who have translated the texts interpret them as simple dedications (P. Bernard, *Studia Iranica*, 1 [1972], 165-176; B. Levine, *JAOS*, 92 [1972], 70-79; J. Naveh and S. Shaked, *Orientalia*, 42 [1973], 445-457). It has been argued that the so-called Zoroastrian calendar was adopted in 441 B.C. during the reign of this king.

F. Artaxerxes II. This king adopted the Zoroastrian calendar according to other scholars. He was the first to mention gods other than Ahura-Mazda, setting up divine statues of Aphrodite (i.e., Anahita) at Babylon, Susa, Ecbatana, Persepolis, Bactra, Damascus, and Sardis. Gnoli has argued that the Iranian triad of Ahura-Mazda, Anahita, and Mithra has been influenced by the Mesopotamian triad of Anu, Ishtar, and Nebo.

G. The Winged Figure. Hovering over the king in many Achaemenid reliefs is a winged figure inside a circle (*see* picture in PERSIA). Though many have identified this figure as Ahura-Mazda, Shahbazi and Calmeyer by noting the variations on the figure's crown argue that it cannot represent Ahura-Mazda. Shahbazi thinks that it represents the divine *Khvarenah* (Median *Farnah*), the grace granted

to the king, and Calmyer his *Fravashi* or his "soul."

VII. Zoroastrian Doctrines and Practices.–*A. Monotheism and Dualism.* Some interpreters and modern Parsees maintain that Zoroastrianism preached the monotheistic worship of Ahura-Mazda, citing, e.g., Yasna 32:3-5, "But you gods all are a manifestation of evil thinking, and he who so much as worships you (is a manifestation) of falsehood and dissent." That is, in this view the *daevas* or other gods have no ontological reality. On the other hand, the Achaemenian kings refer to "great Ahura-Mazda, the greatest of the gods," i.e., not a monotheistic but a henotheistic view of a supreme god over all other gods.

Associated with Ahura-Mazda were six *Amesha Spentas*, "bounty immortals," who are conceived as semi-personal manifestations of the supreme god: (1) *Asha* = Righteousness, (2) *Vohu Manah* = Good Mind, (3) *Khshathra* = Power, (4) *Armaiti* = Suitable Disposition, (5) *Haurvatat* = Health, and (6) *Ameretat* = Immortality.

Some scholars believe that Zoroaster preached an original dualism, between a primordial *Spenta Mainyu*, "Good Spirit," and *Angra Mainyu*, "Evil Spirit." This later became a conflict between *Ahura-Mazda* (Pahlavi *Ohrmazd*, Greek *Oromasdes*) and *Angra Mainyu* (Pahlavi *Ahriman*, Gk. *Areimanios*). This was also a conflict between *Arta*, "Truth," and *Drug*, "Lie." A key text is Yasna 30:3: "Now these two spirits, which are twins, revealed themselves at first in a vision." All things in creation belong either to one sphere or another: aligned with the Good Spirit are light, fire, summer, water, fertile land, domestic animals (esp. the dog), health, and growth. Aligned with the Evil Spirit are darkness, night, winter, drought, infertile land, vermin, sickness, and death. Zoroastrians also distinguish between a *menog* ("spiritual") world and a *getig* ("physical") world. Only the Good Spirit has a menog and getig nature; the Evil Spirit parasitically attacks the getig world. (See Boyd and Crosby.)

Zurvanism, a monotheistic heresy which flourished in the Sassanian era, exalted *Zurvan*, impersonal "Infinite Time," as the supreme god from whom the twin spirits of good and evil were born. The nature of this movement is controverted since we are dependent upon late foreign sources such as the 5th-cent. Armenian writer Eznik and the 12th-cent. Moslem Shahristani (see Boyce [1957], Frye [1959], Zaehner [1955]). It was probably an intellectual movement rather than a separate sect. In contrast to orthodox Zoroastrianism it was fatalistic.

B. Soteriology, Ritual, and Ethics. Human beings have free will and have to make a choice between good and evil. They are their own saviors. Ahura-Mazda's eventual victory is aided by faithful Zoroastrians. They are to propagate everything which is good (e.g., agriculture) and destroy everything which is evil (e.g., noxious insects).

A strong emphasis on carefully observing various rituals developed in the centuries after Zoroaster. As fire is considered the symbol of Ahura-Mazda it is protected from even the rays of the sun and from the gaze of unbelievers. *Atharvans*, "fire priests," reciting from memory verses of the Avesta, carefully feed the perpetual fire with sandalwood. They have their mouths covered with the *paitidhana*, a cloth to prevent polluting the fire. They carefully press the haoma (ephedra) plant. As young Parsees come of age they are invested in a *naojote* or initiation rite with the *sudreh*, a special shirt, and the *kushti*, a sacred thread. The latter is to be tied and retied several times a day during prayers, before meals, etc.

Ritual pollutions are purified by the application of *gomez* or urine from a sacred white bull. Part of this *bareshnum* ritual involves the touching of a dog, the creature considered closest to human beings. The Parsee dead are neither buried nor cremated but are exposed in *dakhmas*, "towers of silence," where vultures strip the flesh from the bones in an hour or two. The bones are then deposited in a well.

C. Eschatology. The dead have to cross the *Chinvat Peretu* or Bridge of the Separator, which spans the abyss of Hell to reach Paradise. The bridge expands for the righteous but contracts to a razor's edge for the wicked. According to the Denkard the righteous are met by a beautiful female figure, the wicked by a hideous hag. An intermediate place called *Misvana Gatu*, "place of the mixed," is reserved for those whose merits and demerits balance.

An eschatological periodization of twelve millennia was projected in the Bundahishn. The first three millennia were the period of the original creation, the next three millennia were associated with the primeval Gayomard, the seventh millennium was marked by the appearance of humanity and the assault of Ahriman. The reception of Zoroaster's vision came at the beginning of the tenth millennium. The final three millennia will see the defeat of evil and the triumph of Ahura-Mazda.

Zoroaster taught that a *saošyant* or "benefactor" would come after him. Much later (perhaps in the 3rd cent. B.C., according to Boyce [1984]), the coming of three saviors was predicted, alternating with periods of evil. These were to be born of virgins from the seed of Zoroaster preserved in Lake Kasaoya. The first savior was named Aushedar, the second Aushedarmah, the third Asvatereta. The last would accomplish the final overthrow of evil, the resurrection of the dead, and the coming of God's kingdom on earth.

VIII. Relations with Judaism and Christianity.–*A. Relations with Judaism.* Since the late 18th cent. many scholars have concluded from certain biblical parallels that Judaism was indebted to Zoroastrianism. M. Smith (*JAOS*, 83 [1963], 415-421) compared Isa. 45:7, "I form the light and create the darkness, I make peace and create evil," with Zoroastrian texts. Many have attributed the development of Satan and demons to Iranian influence (e.g., Masani, Widengren, Winston, Zaehner). The one indisputable derivation is that of the demon Asmodeus (in Tobit) from the Iranian demon Aeshma (see W. Davies and L. Finkelstein, eds., *Cambridge History of Judaism, I: Persian Period* [1984]).

Since the discovery of the Dead Sea Scrolls a number of scholars have compared the dualism of these documents with that of Iran, especially with Zurvanism. (See Shaked [1972], but note the reservations of Frye [1962].)

On the other hand, the lack of evidence from the Parthian era and the late nature of the cosmological and demonological texts raise doubts about any such alleged borrowings (see Frye [1967, 1975], Moulton [1913], J. Neusner, *History of Religions*, 8 [1968], 159-177).

B. Relations with Christianity. Not many scholars since C. Autran (*Mithra, Zoroastre et la préhistoire aryenne du Christianisme* [1935]) have attempted to derive Christian doctrines directly from Zoroastrianism rather than indirectly through a Judaism which had been influenced by Zoroastrianism. Hinnells has argued for such a connection by attempting to show that certain Iranian concepts existed prior to Christianity.

Mithraism, a mystery religion centered on Mithra, became very popular especially among Roman soldiers in the 2nd cent. A.D. His cult was later associated with *sol invictus*, "the unconquerable sun." In the 4th cent. the church's appropriation of December 25, the day cele-

A painting of the god Mithra hunting, from the "Mithraeum" (or Mithraic "cave") at Dura-Europos (ca. 240 B.C.) (Yale University Art Gallery, Dura-Europos Collection)

brated by this cult, as the birthday of Christ was no doubt an action designed to counteract this movement. (See F. Cumont, *Mysteries of Mithra* [1903, repr. 1956]; J. Hinnells, ed., *Mithraic Studies* [2 vols., 1975]; M. Vermaseren, *Mithras, the Secret God* [1963].)

C. Relations with Gnosticism. The history of religions scholars W. Bousset (*Hauptprobleme der Gnosis* [1907]; "Gnosticism," *Enc. Brit.* [1910], XII, 155) and R. Reitzenstein (*Das iranische Erlösungsmysterium* [1921]) derived the myth of the Gnostic "redeemed redeemer" from Iranian sources, e.g., Manichaeism, which they felt preserved pre-Christian traditions. With the exception of G. Widengren, scholars have abandoned this view especially in the light of the publication of the Mani Cologne Codex in 1970, which has confirmed Arabic reports that Mani came out of Jewish-Christian Elchasaite circles. Unlike GNOSTICISM Zoroastrianism taught that the material world as the creation of Ahura-Mazda was good and not evil. (See E. Yamauchi, *Pre-Christian Gnosticism* [2nd ed. 1983].)

REMAIN. *See* REMNANT.

REMALIAH rem-ə-lī'ə [Heb. *rᵉmalyāhû*]. The father of Pekah (2 K. 15:25, etc.; 2 Ch. 28:6; Isa. 7:1, 4f., 9; 8:6). The reference to Pekah as "the son of Remaliah" in Isa. 7:4f., 9; 8:6 may be a contemptuous allusion to Pekah's ignoble descent — i.e., his lack of the rightful claim to the throne that the descendant of David (Ahaz) possessed (see E. J. Young, *Book of Isaiah,* I [2nd ed. 1972], 273).

REMEMBER; REMEMBRANCE. A discussion of this group of words may conveniently be considered in terms of those usages where both God and human beings are the subjects.

I. Terminology.–A. In the OT. In the RSV the words "remember," "remembrance," and "reminder" translate verbal forms of Heb. *zāḵar,* "remember" (e.g., Gen. 8:1; 40:23; Dt. 5:15; 7:18; Isa. 47:7; etc.) and its cognates, including *zēḵer,* "mention" (e.g., Ex. 17:14; Dt. 25:19; 32:26; Ps. 34:16 [MT 17]; 111:4; Isa. 26:14; etc., and *zikkārôn,* "mention, remembrance" (e.g., Ex. 28:12, 29; Nu. 5:15, 18; 10:10; Eccl. 1:11; 2:16; Zec. 6:14; Mal. 3:16; etc.).

B. In the NT. In the RSV the words "remember," "remembrance," "remind," and "reminder" translate the following Greek terms: (1) *mimnḗskomai,* "remind oneself" (e.g., Mt. 5:23; 26:75; Lk. 24:8; 1 Cor. 11:2; 2 Tim. 1:4; He. 13:3; etc.), or "be called to remembrance" (Acts 10:31; Rev. 16:19); (2) *mnēmoneúō,* "remember, keep in mind, mention" (e.g., Mt. 16:9; Lk. 17:32; Jn. 15:20; Acts 20:35; Col. 4:18; 2 Tim. 2:8; etc.); (3) *anamimnḗskō,* "remind" (Mk. 11:21; 14:72; 1 Cor. 4:17; 2 Cor. 7:15; 2 Tim. 1:6); (4) *hypomimnḗskō,* "remind" (Lk. 22:61; 2 Tim. 2:14; Tit. 3:1; 2 Pet. 1:12; Jude 5); (5) *mneía,* "mention, remembrance" (Eph. 1:16; Phil. 1:3; 1 Thess. 3:6; 2 Tim. 1:3; Philem. 4); (5) *anámnēsis,* "calling to mind" (Lk. 22:19; 1 Cor. 11:24f.; He. 10:3); (6) *hypómnēsis,* "recollection" (2 Pet. 1:13; 3:1).

See also MEMORIAL; MIND I.A.

II. God Remembers.–God remembers or is asked in prayer to remember His covenant (Gen. 9:15f.; Ex. 2:24; 6:5; Ps. 105:8; 106:45; Ezk. 16:60; Lk. 1:72) or His promise (Ps. 105:42). The covenant closely relates to "the fundamental bond of mutual remembrance that unites God and man" (*TDOT,* IV, 70). In prayer Jeremiah calls upon God to remember and not to break the covenant (14:21). God will remember the land in this covenant context (Lev. 26:42).

God remembers individuals: He remembered Noah (Gen. 8:1) and Abraham (19:29) by making His covenant with them. He remembered Rachel (30:22) and Hanna (1 S. 1:19) in their barrenness by giving them a child.

God remembers sin and iniquity (Hos. 7:2; 8:13; 9:9), but He also remembers His mercy and truth (Ps. 98:3).

Since to remember is to act, prayers often ask God to remember. In fact, Eising (p. 66) noted that verbs used in parallel with *zāḵar* do not refer to the past only; thus remembering is not merely a recalling of the past but is also a call to action (see also Schottroff, pp. 4, 339). When God remembered Samson, his strength returned (Jgs. 16:28). Hanna prayed that God would remember her (1 S. 1:11), and He did when she conceived a son (1:19). In 2 Ch. 6:42 Solomon asked God to remember His steadfast love. Nehemiah prayed that God would remember His word to Moses that He would gather His scattered people (Neh. 1:8f.). Job prayed for God to remember him (Job 14:13; cf. Ps. 106:4; Isa. 38:3). God is asked to remember how the petitioner is scorned (Ps. 89:50 [MT 51]) and persecuted by enemies (74:2, 18, 22). Some prayers remind God that human life is short (Ps. 89:47 [MT 48]) and human beings are frail (Job 10:9; Ps. 78:39). Jer. 14:10 says that God will remember (i.e., punish) the sins of the people. In other passages the petitioner asks God not to remember the sins of the petitioner (Ps. 25:7; 79:8; Hab. 3:2; cf. Isa. 43:25), since not to remember sins is to forgive them (Jer. 31:34 [a mark of the new covenant]; cf. He. 8:12; 10:17). Cornelius's prayers and alms were remembered before God (Acts 10:3; cf. v. 4). Thus for God to "remember" may be positive (to remember His covenant is to show His steadfast love) or negative (to remember sins is to punish them).

III. People of God Remember God and His Works.–God commanded Israel to remember the day of the Exodus (Ex. 13:3; Dt. 5:15; 15:15; 16:3), their condition in Egypt (16:12), what He did to Pharaoh (7:18), His leading for forty years (8:2), and His provision for prosperity (Dt. 8:18). Both tassels on their garments (Nu. 15:39f.) and phylacteries (Ex. 13:1-16) reminded God's people to keep His commandments. The people were to remember how they provoked God to wrath by their rebelliousness (Dt. 9:7) and thereby to know that they possessed the good land not because of their righteousness (9:4f.). The eastern tribes were to remember Moses' words about the settlement of the land and so to assist the other tribes in the conquest (Josh. 1:13). Belief in God sometimes meant remembering (e.g., how God rescued them under Gideon. Jgs. 8:34; "Remember now thy Creator in the days of thy youth," Eccl. 12:1; "Remember the former things", Isa. 46:8f.). But sometimes it meant not remembering (had they believed God they would not have remembered the fish of Egypt, Nu. 11:5; cf. Ezk. 23:27; "remember not the former things" because God will do a new thing, Isa. 43:18f.). Remembering God's character encourages trust in Him when in danger (Neh. 4:14). God comforts His people by assuring them that they will not remember their former reproaches (Isa. 54:4), and that He will meet those who remember His ways (64:5).

Remembering is an important act of worship. God's works and wonders are remembered in song (Ps. 42:4, 6 [MT 5, 7]; 77:11 [MT 12]; 105:5; etc.). Even to pronounce God's name is an act of worship (Childs, pp. 12f.). All the ends of the earth are to remember God (Ps. 22:27 [MT 28]) and the psalmist remembers His name (119:55).

Remembering is also proclamation in the NT. In 2 Pet. 1:12 the author states his intention of reminding readers of the gospel truth they already know. This remembering proclamation is the work of the Holy Spirit (Jn. 14:26). Proclamation may be by a symbolic act of remembering, even unwittingly as in the case of the woman who remembered Jesus' death by anointing Him (Mk. 14:9). Furthermore, remembering can mean believing, as expressed in credal form (2 Tim. 2:8).

IV. Remembering Jesus.–An important but small group of passages refers to remembering Jesus' words, e.g., His predictions about His death and resurrection (Lk. 24:6), His words of comfort in persecution (Jn. 15:20; (Jn. 15:20; 16:4), and His words of inspiration (Acts 20:35; cf. v. 31). In remembering Jesus' miracle of the loaves,

the troubled disciples were to gain trust in Jesus' ability to provide for them (Mt. 16:9).

V. The Lord's Supper–The accounts of the LORD'S SUPPER in Luke and Paul include the word "remembrance" in reference to this act of worship. One tradition of understanding Gk. *anámnēsis*, "reminder, remembrance," in the words of the institution (Lk. 22:19; 1 Cor. 11:24f.) holds that Jesus ordained the Supper as the means whereby He might be present in the hearts and minds of believers. Zwingli saw the remembering more as an act of mental recollection of Jesus' atonement (*DNTT*, III, 244). But other traditions (mutatis mutandis Roman Catholic, Lutheran, Anglican, Orthodox) interpret the eucharistic remembering in terms of the real presence of Christ's body and blood in the elements (and some hold in the rite as a whole; cf. the discussion of these views in *TDNT*). Studies by both Dix (Roman Catholic) and Thurian (Protestant) have emphasized the godward reference of the act "which recalls as a memorial before the Father the unique sacrifice of the Son, and this makes Him present in His memorial" (Thurian, quoted in *DNTT*, III, 244). Jeremias's view sees the Godward reference but without suggesting a doctrine of the real presence: the memorial is that God may remember Jesus the Messiah and usher in the Kingdom by the Second Coming. The contribution of Chenderlin emphasizes the memorial as actualization: this involves a type of prayer, often associated with physical gestures, which is "a linguistic person to person expression of reminding-God memorial thinking" (p. 264). Like OT memorials such as the showbread (for which the LXX uses the relatively rare Gk. *anámnēsis*) the memorial of the Lord's Supper combines ideas of feast and sacrifice (p. 217). As cult the Supper combines both linguistic and gesticulatory elements of reminding-man (proclamation) and reminding-God (memorial) (p. 265).

VI. Non-religious Uses of the Word-group.–Abigail asked David to remember her, which he did by marrying her (1 S. 25:31)! For persons (or their names) not to be remembered was a punishment (Job 24:20) or a terrible fate (Jer. 11:19).

Occasionally remembering denotes thinking or pondering. In Job 4:7 Eliphaz posed a rhetorical question for Job to "think" on (so RSV; AV "remember". In Job 21:6 Job thinks about (AV "remembers") the prosperity of the wicked. In Job 41:8 God asked Job to imagine catching Leviathan with a fish hook: "think of [AV "remember"] the battle; you will not do it again!" According to Bartels (*DNTT*, III, 240) about three-fourths of the NT uses of words for remembering reflect normal Greek usage (i.e., non-religious), contrasting sharply with the OT situation. These NT usages include (1) recall, as Peter recalled Jesus' prediction of his denial (Mk. 14:72 par.), (2) consider (e.g., Lk. 17:32), (3) remember for good (e.g., Lk. 23:42; 1 Cor. 2:10; He. 13:3, cf. 1 Cor. 11:2; Col. 4:8), (4) be mindful of (2 Pet. 3:2; Jude 17), and (5) mention (2 Cor. 7:15). Also remembering may signify obedience: the Corinthians are commended for remembering and keeping the traditions (1 Cor. 11:2); the recipients of Hebrews are to remember those who rule over them (He. 13:7); the church at Sardis is to remember and keep what it has received (Rev. 3:3); and the church at Ephesus is to remember from where it has fallen and return to its first love (Rev. 2:5). But one may question to what extent these uses are "non-religious."

VII. Scholarly Discussions.–J. Barr (pp. 41ff. *et passim*) has criticized Pedersen's theory of memory (*ILC*, I-II, 106f.) for confusing semantic problems with a theory of differing mentalities, a critique shared by Childs (pp. 18-30). B. Gerhardsson (*Memory and Manuscript*) dealt with the role of memory in the transmission of tradition: in Judaism written Torah (Scripture which is read) is committed to memory, learned by heart, whereas with oral Torah (oral tradition which is repeated) written notes assist the transmission process (p. 29). Childs sees remembering as interaction with the past, something like an encounter: "The biblical events have the dynamic characteristic of refusing to be relegated to the past" (p. 88).

REMETH rē'məth [Heb. *remet*]. A city in the territory that Joshua allotted to the tribe of Issachar (Josh. 19:21). It may be identifiable with a city in Issachar, called Ramoth in 1 Ch. 6:73 and Jarmuth in Josh. 21:29, that was given to the Gershonite Levites. The location of Remeth is unknown; one suggestion locates it E of Jezreel on the heights overlooking the Jordan Valley. Such a site is favored by the name's probable meaning, "a height." D. H. MADVIG

REMISSION OF SINS. *See* FORGIVENESS; PASS.

REMMON rem'ən (Josh. 19:7, AV). *See* RIMMON 2.

REMMON-METHOAR rem'ən-mə-thō'är. The AV translation of Heb. *rimmôn hamm^etō'ār* in Josh. 19:13. The RSV correctly renders "Rimmon it bends toward." *See* RIMMON 3.

REMNANT. An important concept in biblical theology; applied to three types of groups. The first is simply a *historical* remnant made up of survivors of a catastrophe. The second consists of the *faithful* remnant, distinguished from the former group by their genuine spirituality and true faith relationship with God; this remnant is the carrier of all divine election promises. The third is most appropriately designated the *eschatological* remnant, consisting of those of the faithful remnant who go through the cleansing judgments and apocalyptic woes of the end time and emerge victoriously after the Day of Yahweh as the recipients of the everlasting kingdom.

I. Terminology
  A. Hebrew and Aramaic Terms
  B. Greek Terms
II. Origin
  A. Ancient Near Eastern Literature
  B. Hebrew Literature
III. History and Theology
  A. In the OT
  B. In Late Judaism
  C. In the NT

I. Terminology.–The remnant idea is expressed explicitly by a significant number of terms. In addition, some passages that lack specific remnant terminology reveal remnant theology through related concepts. The explicit remnant terminology clusters around several Hebrew, Aramaic, and Greek terms.

A. Hebrew and Aramaic Terms. The OT remnant idea is represented by numerous derivatives of six different stems.

1. The Stem š'r. The most prominent of all these stems is *š'r*. Its Semitic cognates indicate that it is of common West Semitic origin. Derivatives of this root appear 226 times in Hebrew and ten times in Aramaic. In verbal forms *š'r* means "remain, be left over" (qal and niphal) and "leave (over, behind), have left" (hiphil). The masculine noun *še'ār* and feminine noun *še'ērîṯ* both denote "remnant, remainder"; these are especially prominent in the prophetic writings.

The verbal forms of *š'r* (usually translated "be left," "remain," etc.) appear first in the OT flood account (Gen. 7:23) and thereafter in connection with other human survivors (Gen. 14:10; 42:38; Dt. 3:11; Josh. 13:12). Verbal forms can designate a single person (2 S. 14:7), two men (Nu. 11:26), the poor (2 K. 25:12), a tribe (17:18), an army (13:7; cf. Ex. 14:28), inhabitants of a city (Jer. 39:9; Am. 5:3, etc.). The noun *še'ār* (RSV often "rest") is employed only for a group (e.g., 1 Ch. 16:41), usually for the remaining portion of Israel (Isa. 10:20-22; 11:11, 16; etc.) or another nation (14:22; 16:14; etc.). *Še'ērîṯ* denotes a group (Jer. 39:3), the remaining part of a foreign nation or its territory (e.g., Isa. 15:9; Jer. 25:20; Ezk. 25:16), or the persons returning from exile (Hag. 1:12, 14; 2:2; Zec. 8:6, 11f.).

Derivatives of *š'r* may emphasize the remnant's insignificance (Dt. 3:11; Josh. 13:12), smallness (Isa. 17:6), meaninglessness (Gen. 47:18), or total loss (Ex. 8:31). Most of the usages, however, have a positive, forward-looking emphasis: the escape of a remnant from a mortal threat reveals the immense future potentiality for life and continued existence, regardless of the size of that surviving remnant.

2. The Stem plṭ. The stem *plṭ*, which appears eighty times in the OT, is of common Semitic origin and is attested in several Semitic languages. Verbal Hebrew derivatives occur twenty-seven times and denote "escape, get away" (qal only in Ezk. 7:16), "bring to safety" (hiphil), and "bring to safety, deliver" (piel). The masculine nouns *pālîṭ* and *pālêt* refer to one who escapes: a fugitive from war (e.g., Gen. 14:13) and from announced doom (e.g., Isa. 45:20). In parallel with *śārîḏ* these nouns may refer to the fugitive who is now safe, i.e., a refugee (e.g., Jer. 42:17; 44:14). The feminine noun *pᵉlêṭâ* often appears parallel to a noun from the stem *š'r*. It commonly refers to a remnant that has escaped (Gen. 32:8 [MT 9]; 2 K. 19:30; Isa. 4:2f.; 15:9; etc.).

Plṭ is used sometimes to indicate decimation or total loss (Jer. 42:17; Joel 2:3; Am. 9:1; etc.), but more frequently it stresses survival and salvation. An "escaped remnant" that has survived a mortal threat from sword or famine (cf. Gen. 45:7) may be pronounced holy (Isa. 4:2f.; cf. Ob. 17). It is called to turn to Yahweh (2 Ch. 30:6; Jer. 51:50; Ezk. 6:8f.), to have a fruitful destiny (Isa. 37:32), and to be a nucleus of life (Ezr. 9:8).

3. The Stem mlṭ. The stem *mlṭ*, which developed from *plṭ*, appears eighty-nine times with verbal derivatives that express aspects of the OT remnant theme. Over two-thirds of these verbal forms mean "escape, make for safety" (niphal); the rest mean "deliver, save, let escape" (piel). Again, safety is reached by escaping a mortal threat. Sometimes it is impossible to escape (cf. Isa. 20:6), and the result is total destruction (e.g., Jgs. 3:29; 1 K. 18:40; 19:17). But those who do escape have saved their lives (e.g., 1 K. 1:12; Jer. 48:6; 51:6, 45). Given to the remnant is the eschatological promise (cf. Isa. 49:14-20): Yahweh will be the savior and redeemer of those who have escaped (vv. 24-26) and who call upon His name (Joel 2:32 [MT 3:5]). At the apocalyptic time of trouble God's faithful people will be rescued by Michael (Dnl. 12:1).

4. The Stem ytr. The remnant idea is clearly present in about 110 of the 248 derivatives of the stem *ytr*, which is attested in Amorite, Akkadian, Yaudian, and Imperial Aramaic in the forms *wtr* and *ytr*. Verbal forms in Hebrew mean "be left over, remain" (niphal) and "leave (over, behind), have remaining, have left" (hiphil). The noun *yeṯer* sometimes denotes the "remainder, rest" of progressively smaller parts (Joel 1:4; cf. Ex. 10:5; 23:11). *Yeṯer* is often used synonymously and interchangeably with *še'ērîṯ* (e.g., Zeph. 2:7, 9; Hag. 1:12, 14) and *še'ār* (e.g., Neh. 4:14, 19 [MT 8, 13]).

Referring to persons, verbal forms of *ytr* can be applied to one individual (e.g., Gen. 44:20 [cf. 42:38 with a form of *š'r*]; 1 K. 18:22) or to several (Lev. 10:12). Substantival participles refer to Israelite (Jgs. 21:16) or gentile survivors (1 K. 20:30). *Yeṯer* may refer to a remnant of other nations; (e.g., Josh. 12:4; 13:12; 23:12 [cf. Ezk. 36:3 with *še'ērîṯ*]). In the phrase *yeṯer hā'ām* it may refer to the undeported Jerusalemites (Zec. 14:2; cf. Jer. 39:9 par. 2 K. 25:11) as well as to the prophetic "remnant" that is victorious over its enemies.

5. The Noun śārîḏ. *Śārîḏ*, which has Semitic cognates in Arabic and Syriac, means "survivor" in its twenty-eight OT occurrences. The "survivor" is one who was able to "run away" (*śrd* only in Josh. 10:20) from mortal threat of war (e.g., Josh 10:20; Jgs. 5:13). Sometimes in warfare there are no survivors (e.g., Dt. 3:3; Josh. 8:22; 10:28-40; cf. Jer. 42:17; 44:14). At the eschatological Day of Yahweh the "survivors" will be those called by Yahweh (Joel 2:32 [MT 3:5]).

6. The Noun 'āḥᵃrîṯ. Hebrew *'āḥᵃrîṯ*, a derivative of *'ḥr*, has a frequently used Akkadian cognate *aḫirtu*, "rest, remainder, balance" (*CAD*, I/1, 188). In some OT passages this noun clearly means "remnant" (Nu. 24:20; Am. 4:2; 9:1; Ezk. 23:25) — in each text a remnant that is without future hope or experiences total destruction (with the possible exception of Jer. 31:17).

B. Greek Terms. The verb *leípō* in classical Greek forms the basic stem of a constellation of terms that express the concept of remnant. In Greek literature this stem never reveals a religious tendency.

1. In the LXX. In translating forms and derivatives of the Hebrew stems *š'r* and *ytr* (also, rarely, *plṭ* and *śrd*), the LXX primarily employs the Greek verb *leípō* and a variety of derivatives: verbs *kataloípō, hypoleípō, perileípō,* and *epileípō,* and cognate nouns and adjectives. But in translating derivatives of the stems *plṭ* and *mlṭ*, as well as the noun *śariḏ* (and *yeṯer* five times), the LXX most often employs the Greek stem *sṓzō* or the noun *sōtería*, indicating that the LXX translators frequently associated the remnant theme with the idea of salvation.

2. In the NT. The verb *leípō*, which is infrequent in the NT, means "fall short, lack, be in need" (e.g., Lk. 18:22; Tit. 1:5); but the adjective *loipós* designates "the rest" (e.g., Lk. 24:9; Rom. 1:13) or negatively "the others" (e.g., Lk. 8:10; Rom. 11:7). The "remnant" are the *katáloipoi* (RSV "rest," Acts 15:17; cf. Am. 9:12), the *leímma* (Rom. 11:5), and the *hypoleímma* (Rom. 9:27, quoting Isa. 10:22). For other NT terms related to the remnant idea, see III.C.1 below.

II. Origin.–Scholarly opinion has fluctuated regarding the origin of the biblical concept of the remnant. J. Meinhold (1903) linked the origin of the remnant idea to the rise of ethical monotheism. H. Gressmann (1905) was the first to suggest an extra-Israelite origin, namely, a Babylonian nature myth. S. Mowinckel (1922) demonstrated the inadequacy of these hypotheses, however, and suggested that the remnant idea arose from the Babylonian enthronement myth, which was supposedly the nexus of Israelite eschatology. V. Herntrich (1942) rejected a Babylonian

origin, arguing that the remnant motif was grounded in the activity of God. W. E. Müller (1939) suggested that in the OT the idea had a socio-political origin, namely, the breakdown of the Assyrian principle of warfare. S. Garofalo (1942) and O. Schilling (1942) argued for an Israelite origin arising from the idea of God's choice of His people. The problem with the last suggestion is that the remnant idea is older than the biblical election traditions. D. M. Warne (1958) connected the origin of the remnant motif with the rise of eschatology. The question of the origin of this idea can be resolved only by a careful analysis of extra-biblical and biblical materials.

A. Ancient Near Eastern Literature. The idea that the future of the human race (or of a nation, tribe, dynasty, etc.) resides in a small surviving remnant appears throughout the ancient Near East.

1. Mesopotamia. In the earliest documented reference to the motif, the Sumerian flood story (late 3rd millennium B.C.) tells of a flood that destroys mankind but leaves a remnant; this theme recurs in the Sumerian King List (*ANET,* pp. 265f.), "Lamentation over the Destruction of Ur" (*ANET,* pp. 455-463), "Hymn to Enlil," and historical texts. The remnant motif occurs also in several Akkadian texts: *Enuma Elish* (*ANET,* pp. 66-68), the Atraḫasis Epic (III. vi. 9f.; viii. 9f.; etc.), Gilgamesh Epic (XI), Erra Epic (I and IV-V), prophecy texts (Vorderasiatische Abteilung, Thontafsammlung, Staatliches Museum, Berlin, no. 10179), diplomatic letters, and annalistic records.

2. Anatolia. In Hittite literature the idea of a surviving remnant is present in "The Song of Ullikummi," the "Plague Prayers of Mursili II," and various preserved parts of Hittite royal annals.

3. Syria-Palestine. In Ugaritic literature the theme appears in the "Legend of King Keret" (the sole surviving ruler preserves the future of his dynasty; *ANET,* pp. 142-49), the Baal and Anath cycle (a remnant of mankind is saved through life-giving rain), and a fragmentary flood story.

4. Egypt. The remnant idea is prominent in texts of various genres from Egypt; e.g., in the "Book of the Divine Cow" a small remnant of the human race survives to replenish the world, and in several "prophetic" texts a remnant of Egypt survives and guarantees further national existence.

The fact that many of these documents antedate biblical texts shows that the basic remnant idea is older than the written documents of the OT. These Egyptian texts also seem to indicate that the motif did not originate in the socio-political sphere of warfare. The large variety of mortal threats, both natural (flood, famine, drought, plague, pestilence, natural death) and socio-political (rebellion and war), accounts for the diffusion of the idea. The remnant idea is also connected with various human communities such as family, clan, tribe, army, city, nation, and humanity. All these considerations must be taken into account, but to complete the search for the origin of the remnant idea one must investigate the idea's oldest appearances in biblical texts.

B. Hebrew Literature. Many of the earliest Hebrew traditions are expressed in Genesis. The first *implicit* reference to the remnant is in the narrative of Cain's murder of Abel, which left only Cain as the progenitor of the human race (4:1-15) until Adam and Eve had other "sons and daughters" (5:4). The earliest *explicit* reference appears in the Flood story: "Only Noah was left [*yiššā'ēr*], and those that were with him in the ark" (Gen. 7:23). As survivors of the Flood, Noah and his family represented a righteous remnant (Gen. 6:8f.; 7:1) and were the nucleus of a new, postdiluvian humanity.

Other Genesis texts relate how God preserved a remnant of His people through various threats to their existence: the destruction of Sodom and Gomorrah (18:22-33; 19:15-29), the feud between Esau and Jacob (32:8-32), and the famine in Egypt (45:7).

Common to biblical and extra-biblical appearances of the remnant idea is the concern with the problem of life and death. This constant emphasis provides the clue to the origin of the idea. Any mortal threat raises the immediate question of whether life will be wiped out or whether a remnant will survive to preserve human existence. While the remnant idea is as old as threats to human life and humanity's concern to survive, the earliest biblical remnant texts also place it in the theological framework of salvation-history. Biblical thought presents an overarching correlation between the salvation of a remnant and the nucleus of the true people of God. God's saving activity in creating faith and preparing a faithful remnant succeeds in defiance of all mortal threats and human fears.

III. History and Theology.–The biblical remnant idea has a long history reaching from the fall to the eschatological return of Jesus Christ.

A. In the OT. Only the highlights of the OT remnant idea can be outlined because the remnant terminology is used no less than 540 times (see I.A above).

1. Pentateuch. The five books of Moses contain many aspects of the remnant idea. The appearance of the motif in Genesis has been summarized above (II.B). Yahweh's great saving act occurred at the Exodus, when Pharaoh's entire army was drowned in the sea so that "not so much as one of them remained" (Ex. 14:28). But God did not guarantee Israel's protection unconditionally; Israel's rejection of the Sinai covenant would arouse Yahweh to send national disasters, reducing His people to an insignificant minority among the nations (Dt. 4:27) or destroying them completely (Lev. 26:36, 39; Dt. 28:54f., 62). The survival of only two Israelites from the entire wilderness generation witnessed to the disasters that would result from disbelief and disobedience (Nu. 26:65).

In response to God's command to exterminate the whole Canaanite population, lest a remnant should become a source of constant trouble later (Nu. 33:5; cf. Jgs. 3:1), Israel destroyed the inhabitants of the Transjordanian kingdoms of Sihon the Amorite (Nu. 21:35; Dt. 2:34) and Og of Bashan (Dt. 3:3, 11; cf. Josh. 12:1-5; 13:10-13), leaving no survivor.

2. Historical Writings. The defeated Canaanites were not always totally destroyed, however. Accounts mentioning remnants of the Amalekites (Jgs. 6:1-6; cf. 1 S. 15; 30:17; 1 Ch. 4:43) and the Anakim (Josh. 11:21f.; cf. 1 S. 17:4-58) indicate the potential influence that these nations could have over Israel. The book of Judges explains that the nations left in Canaan after Joshua's death were used to test whether the Israelites would walk in the way of Yahweh (Jgs. 2:21-23; 3:1-7; etc.). In a lengthy narrative of intertribal warfare, Judges reports the near extinction of the tribe of Benjamin (chs. 20–21) and actions taken by the victorious Israelite tribes to ensure the survival of a remnant of that tribe (21:16-18).

The mid 9th cent. B.C. witnessed one of the great crises in Israel, a life-and-death struggle between Yahwism and the religion of Canaan (1 K. 16:30–18:19). Following his valiant confrontation with this paganism on Mt. Carmel (18:20-40), Elijah despairingly concluded that he was the only prophet loyal to Yahweh within an apostate Israel (19:14). But in a majestic theophany Yahweh assured him that seven thousand in Israel were still loyal to the covenant (v. 18). The Elijah narrative introduces for the first time the promise of a faithful remnant from Israel, a remnant loyal to Yahwistic covenant faith. This theme is further developed in the prophetic writings.

The Chronicler employs remnant terminology to designate both the repatriated exiles (Ezr. 9:8-15) and those remaining in the land who were not exiled (Neh. 1:2f.). The terms here designate all the Israelites who survived national catastrophe — i.e., a historical remnant — without distinguishing between faithful and faithless escapees.

3. Prophets. The remnant idea is most pronounced among the prophets of the 8th cent. B.C. The earliest writing prophet with a fully developed remnant theology is Amos. Rejecting the false security built on the popular identification of remnant hopes with Israel as a whole, Amos proclaimed that only a small historical remnant — meaningless for Israel's national existence — would remain from the Assyrian crisis (Am. 3:2, 12; 4:1-3; 5:3; 6:9f.; 9:1, 9f.). The "remnant of Joseph," on the other hand, would be a faithful remnant from Israel (5:15).

The remnant idea is central in the theology of Isaiah. The call vision clearly shows the connection between the remnant idea and the themes of judgment, salvation, and holiness. The judgment aspect is expressed in the survival of only a small historical remnant (Isa. 6:11-13; cf. 1:4-9; 10:22f.), but it is a remnant that has positive future possibilities (11:11-16; 37:30-32). A "holy seed" (6:13), a "holy" remnant "recorded for life" (4:3), will emerge from the divine fire of purification in Zion (4:2-4; cf. 1:24-26). This remnant will inherit the election promises and form the nucleus of a new faith community (10:20f.; 28:5f.; 30:15-17).

The notions of remnant and faith are inseparable in Isaiah. The confrontation of Isaiah and his son Shear-jashub ("A-Remnant-Shall-Return,") with King Ahaz (7:3) is intended to teach that an attitude of faith, confidence, and trust in Yahweh is essential to the emergence of a remnant (7:2-9). The prophet, his children, and his disciples (8:16-18) are proleptic representatives of the future remnant of faith. Immanuel is part of the holy remnant, if not its actual ruler (7:10-17).

The second part of Isaiah gives a saving message to "all the remnant of the house of Israel" (46:3) who are left from the political catastrophe. They are promised that God will still "carry and save" them (46:4). The eschatological hope includes a remnant of the non-Israelites, "the survivors of the nations" (45:20) who recognize Yahweh as the true God. During the end-time gathering God "will send survivors [from them] to the nations" in order to "declare my glory among the nations" (66:19). Here universal missionary activity is linked with the eschatological remnant of faith (cf. 66:18; Dnl. 3:4, 7, 29; 6:25; Zec. 8:23; Rev. 14:6).

The book of Micah speaks of a historical remnant of Israel that is helplessly scattered among the nations (cf. 5:7f. [MT 6f.]). Israel's only hope is with Yahweh, who will be their leader (2:13; 4:7), "gather the remnant of Israel" (2:12; cf. 4:6f.), and make them into a new "strong nation" (4:7). Remnant here means the nucleus of a new people of God whose transgressions have been graciously forgiven (7:18) and who will be a source of life ("like dew") and strength ("like a lion") among the nations (5:7f. [MT 6f.]). The rest of Israel will return to the Israel of faith when the Messiah is born (5:2 [MT 1f.]). Here the concepts of the remnant, the new people of God, and the Messiah are joined.

Other Minor Prophets dwell on the idea of an eschatological remnant. In Joel the escapees from the Day of Yahweh are those who call on the name of the Lord (2:32). The idea that life and salvation are with God alone is expressed also in Ob. 17. God promises in Zeph. 3:12f. to leave a humble remnant that will "do no wrong" and will take refuge in the name of the Lord.

Jeremiah speaks frequently of a historical remnant of Israel that will be insignificant or totally destroyed (Jer. 6:9, 29f.; 8:3; 21:8-10; 24:8-10). The Israelites who have not been exiled but flee to Egypt after the murder of Gedaliah are not the carriers of the promise (42:13-22). But the Lord will gather from the remote parts of the earth (31:7-9; cf. 23:3) a remnant comprising those with a "new heart," who live on the basis of the "new covenant" (31:31-34).

Ezekiel pleads with God to mix mercy with well-deserved judgment so that some Israelites might survive (Ezk. 9:8; 17:13). Indeed, a historical remnant will survive national destruction (6:7-9; 7:16; 14:22f.; 24:26f.) and be scattered among the nations (5:10-12; 12:15f.; 17:21). From these Yahweh will gather those who by His grace will receive a "new heart" and a "new spirit" (11:16-21; cf. 36:26) so that He can call them "my people" (11:20). This faithful remnant will constitute the nucleus of a religious rather than political community.

In postexilic prophecy "the remnant of the people" is the samll group of repatriated Jews who obey Yahweh, work on rebuilding the temple, and receive the divine promise, "I am with you" (Hag. 1:12-14; cf. Isa. 43:5). Since they "fear before Yahweh" (Hag. 1:12), they are the carriers of the ancient covenant blessings (Zec. 8:12; cf. Lev. 26:3-13; Dt. 28:11). The metaphor of shepherd and sheep appears in the second part of Zechariah, where the remnant goes through a cleansing judgment to emerge as "my [Yahweh's] people" (13:7-9).

Prophetic literature also speaks repeatedly of the remnant of the nations (Ezk. 36:3-5). There will be no remnant of the Philistines (Isa. 14:30; Jer. 47:4f.; Ezk. 25:16) or of Babylon (Isa. 14:22; Jer, 50:26-32; cf. Hab. 2:8). An insignificant remnant is all that will remain of Moab (Isa. 15:9; 16:13f.; Jer. 48:45-47), Amon (Jer. 49:36), Edom (49:7-11), Elam (49:35-39), the Arabian Kedarites (Isa. 21:16f.), and Syria (17:1-3), but some are promised a share in certain aspects of salvation history. Survivors from pagan nations will "worship the King, the Lord of hosts" (Zec. 14:16), and declare God's glory among the nations (Isa. 66:19). The faithful remnant of the end time will be God's instrument for gathering others into the community of faithful worshipers.

The remnant idea is significantly developed in Daniel. Chs. 7 and 12 describe the persecution of "the saints of the Most High" (7:25, 27; i.e., "the holy people," 12:7), and the final consummation of all things. The persecuting power, symbolized by the little horn (7:8), wages war against these "saints" (v. 21), wearing them out (v. 25) and shattering them (12:7), thus showing that only a decimated remnant will survive the period of persecution. All the "saints" whose names are written in the book (12:1) — including the faithful dead, who will be raised (12:2) — will receive the everlasting kingdom (7:18, 27) through the Son of man (v. 14). This apocalyptic vision brings together the concepts of a "holy people" of the Mosaic age (Ex. 19:6; Dt. 7:6; 14:2; 26:19) and the "holy remnant" of the end time (Isa. 4:2f.; 6:13).

B. In Early Judaism. The remnant idea gained in intensity among Palestinian Jews but developed along eccentric lines.

1. Apocryphal Apocalypses. These sources contain references to a remnant consisting of the faithful "few" (cf. 2 Esd. 7:47; cf. 8:26-28) who have earned their salvation through faith and good works (9:7f.). During the woes of the end time (cf. 1 En. 83:8) the Messiah will save the faithful remnant (12:34; 2 Bar. 40:2f.; Apocalypse of Abraham 29:17-20).

2. Qumrân. The Qumrân community developed a strongly particularist remnant theology in which they viewed themselves alone as the "remnant" (Heb. *še'ērîṯ*) of God's

people (1QM 14:8; cf. CD 2:11; 1QH 6:8). Their salvation is based on God's promise to their forefathers (1QM 14:9; CD 1:4), which they have inherited by keeping the whole law of God (CD 3:12; 4QFlor 2:2). By preserving this remnant God keeps His covenant with Israel (1QM 13:8) and establishes it forever (CD 3:13). God is a constant help to this remnant of the "poor" (1QH 5:18; 1QM 11:9), but those who depart from God's way and abhor His ordinances will be without remnant (*šᵉʾērîṯ*) or escape (*pᵉlêṭâ*) (CD 2:6f.; cf. 1QS 5:13; 1QH 6:32), sharing the fate of "the sons of darkness" (1QM 1:6; cf. 4:2; 1QS 4:14).

3. Rabbinic Tradition. The Pharisees (Heb. *pᵉrûšîm*) considered themselves "holy ones" (*Siehra* on Lev. 11:44f. and claimed to be the "remnant" (SB II, 170, 469, 617; IV, 1075). They attempted to realize the OT promise of the "holy remnant" (Isa. 6:13; 4:2f.) by faithful adherence to the *torâ* (cf. Tg. Isa. 4:3; 10:22f.) and by meticulous separation from the unclean "people of the land" (*ʿamhāʾāreṣ*).

In later rabbinic thought the remnant idea recedes, and all Israel is said to have a part in the future world (Mish. *Sanhedrin* X.1).

C. In the NT. 1. Gospels. John the Baptist's message of judgment and repentance, resembling that of the OT prophets, resulted in the gathering of a penitent remnant (Mt. 3:1-12; par.). Contrary to the separatist and particularist groups of his time, however, John spoke a universalistic message: all who would "bear fruit that befits repentance" (Mt. 3:8) were invited to be baptized. Yet John prophesied that a greater one would come after him, who would clear the threshing floor and separate the chaff from the wheat (Mt. 3:12).

Jesus' mission was universalistic in that His appeal went to the whole of Israel (Mt. 22:14; Mk. 14:24) and to the entire world (Mt. 28:18-20; cf. Acts 1:8). He called for a decision of repentance and faith to enter the kingdom of God (Mk. 1:15), the new community of faith. Jesus wished to gather all into the community of faith (Mt. 23:37-39; Lk. 13:34f.), but only a *few* responded and formed the faithful remnant. Contrary to the claims of the Pharisees, the Qumrân covenanters, and other separatist groups who identified themselves with the holy remnant, Jesus taught that even the remnant of faith will be sifted at the last day, when the wheat and the tares will be separated (Mt. 13:24-30; cf. vv. 47-50). At that time the holy remnant will emerge from the community of faith, whose feigned confessors will be purged in the eschatological judgment (Mt. 7:21-27; 22:11-14; 25:1-13).

Though the noun "remnant" is absent from the Gospels, the concept has a prominent place. Gk. *loipoí* is used in the sense of "the others" to distinguish from the disciples those who have hardened their hearts (Lk. 8:10; cf. Rom. 11:7) or do not believe (Mk. 16:13; cf. 1 Thess. 4:3). Especially significant is the frequent use of imagery associated with OT remnant terminology, e.g., metaphors using "shepherd" (Mt. 26:31; Jn. 10:16), "sheep" (Mt. 10:6; 15:24; Lk. 12:32; cf. Acts 20:28f.; 1 Pet. 5:3), and "sheep" and "goats" (Mt. 25:32). The constant emphasis on the "few" (*olígoi*, Mt. 7:14; 22:14; Lk. 13:23) the "chosen" (*eklektoí*, Mt. 20:16; 22:14; 24:22; etc.), the "poor" (*ptōchoí*, Mt. 11:5; Lk. 4:18; 7:22), and the "little ones" (*mikroí*, Mt. 10:42; Mk. 9:42; Lk. 17:2) also shows that the idea of the remnant of faith was present in Jesus' preaching. He may have avoided the use of explicit remnant terms because they had become overloaded with false particularistic connotations (see III.B.2-3 above).

2. Epistles. Paul interweaves the remnant theme into his arguments in Rom. 9–11, where he deals with the problem that the literal, physical Israel has not as a whole manifested faith in Christ, but many Gentiles have. Citing Isa. 10:22f. and 1:9, Paul insists that only a "remnant" (*hypóleimma*) of Israel will be saved (Rom. 9:27). He develops a sharp distinction between the Israel of the "flesh" (9:8; cf. 1 Cor. 10:18) and the Israel of the "promise," namely, the spiritual, faithful Israel that is not restricted to physical lineage (Rom. 9:6-27). The new community of faith (the Church), made up of all who have faith in Christ (10:4, 9-13), includes Gentiles as well as Jews (9:24; 10:12).

Paul's metaphor of the olive tree draws attention to this true Israel (Rom. 11:17-24). From the trunk of (physical) Israel branches of unbelieving Jews are broken off, and wild branches of believing Gentiles are grafted in, leaving a tree of believers in Jesus Christ. God has not rejected His people Israel (v. 1): "at the present time there is a remnant [*leímma*], chosen by grace" (v. 5); and the natural branches that have been cut off can again "be grafted back into their own olive tree" (v. 24). The final goal is readoption of physical Israelites into the new community of faith, so that "all Israel" will be saved (v. 26).

3. Revelation. The book of Revelation employs the adjective *loipoí* eight times. The "remnant" in the church of Thyatira are those who have remained faithful (2:19) and have not fallen into "the deep things of Satan" (v. 24). The church in Sardis is virtually dead, but "what remains" is to be strengthened (3:2) because there are still a "few" (v. 4) who are unsoiled. Rev. 11:13 speaks of the destruction of a tenth of the city but also of the "rest" who survive the earthquake and glorify God.

In apocalyptic imagery the dragon (called the devil and Satan) makes war against the "rest" of the woman's offspring (12:17). This faithful remnant of the end time manifests preserving faith through fierce persecution (13:11-18) and is saved at last through Christ, while the "rest" of mankind is destroyed (19:21). Thus final, apocalyptic victory belongs to the last remnant of faith who keep God's commandments and have the testimony of Jesus (12:17; 14:12; 19:10).

See BUILD; JERUSALEM III.F.1-2.

REPENT [Heb. niphal of *nāḥam* (hithpael in Nu. 23:19)]; NEB also CHANGE ONE'S MIND, THINK BETTER, etc.; [*šûḇ*] (1 K. 8:47f. par. 2 Ch. 6:37f.; Ps. 7:12 [MT 13]; 78:34; Isa. 1:27; Jer. 5:3; 9:5 [MT 4]; 34:15; Ezk. 14:6; 18:30; Zec. 1:6); NEB also TURN (BACK, AWAY), LEARN ONE'S LESSON, COME BACK, etc.; [Gk. *metanoéō, metamélomai* (Mt. 21:29, 32; 27:3), *metánoia* (2 Tim. 2:25; He. 12:17)]; AV also REPENTANCE (*metánoia*); NEB also BE SORRY, CHANGE ONE'S MIND, BE SEIZED WITH REMORSE, etc.; **REPENTANCE; REPENTING** [Gk. *metánoia*]; NEB also CHANGE OF HEART.

"Repent" in contemporary English means either (1) to regret (a thought, attitude, or act) or, (2) much more frequently, to regret and change from one attitude or allegiance to another. To get an accurate idea of the precise meaning of this highly important word in the Bible, it is necessary to consider the original Hebrew and Greek terms that it translates. The psychological elements of repentance should be considered in the light of the general teaching of Scripture.

I. OT Terms
II. NT Terms
III. Psychological Elements
  A. Intellect
  B. Emotions
  C. Will
IV. Relation to Salvation

I. OT Terms.–All uses of "repent" in the RSV OT except the thirteen verses listed above after *šûḇ* represent Heb. *nāḥam*, an onomatopoeic term that implies difficulty in breathing, hence "pant," "sigh," "groan." Naturally it came to signify "lament" or "grieve"; when the emotion was produced by the desire of good for others it merged into compassion and sympathy, and when incited by a consideration of one's own character and deeds it came to mean "rue," "repent." This word is translated "repent" about twenty-seven times in the RSV OT (about forty times in the AV OT; the RSV sometimes substitutes "be sorry" [Gen. 6:6f.], "be moved to pity" [Jgs. 2:18], "have compassion" [21:6, 15], "relent" [e.g., Ps. 106:45; Jer. 4:28], "change one's mind" [Ps. 110:4], etc.). In nearly all cases the subject of *nāḥam* is God; conversely, wherever God is the subject of "repent" in the RSV OT, the Hebrew term thus translated is *nāḥam* (a possible exception is Jonah 3:9, where both *šûḇ* [twice] and *nāḥam* occur). The verb indicates the aroused emotions of God, which prompt Him to a different course of dealing with the people. Most such uses refer to God's change of mind about intended punishment ("evil"). Jer. 18:10, however, refers to His change of mind about intended good, and 1 S. 15:11, 39 report His change of mind about making Saul king (cf. Gen. 6:6).

The idea that God will change His mind about intended punishment occurs especially in the prophetic books. It is first mentioned, however, in Ex. 32:11-14, which narrates a prayer in which Moses reasons with God about destroying the people for making a golden calf. It occurs also in 2 S. 24:16 par. 1 Ch. 21:15, where God stays the hand of the destroying angel before the punishment affects Jerusalem. Am. 7:3, 6 tell of two punishments about which God "repents," apparently in response to Amos's plea for the people. According to Jer. 18:8; 26:3, 13, 19, it is the people's changing of their evil ways that leads God to "repent" of intended punishment (cf. Joel 2:13f.; Jonah 3:9f.; 4:2). In Jer. 42:10 God says "I repent" of evil that He had already inflicted, probably meaning that the process of punishment had ended. The idea that the people's evil ways have continued so long that God is past the point of changing His mind about punishment is expressed in Ezk. 24:14. The idea that God changes His mind does not fit easily with concepts of His perfection and power, and Nu. 23:19 and 1 S. 15:29 reflect an awareness that, in spite of appearances and the anthropomorphic manner in which the divine will must sometimes be communicated to human beings, God is true to Himself and does not change His mind in the way that people do.

When human beings are its subject in the RSV OT, "repent" represents *nāḥam* only in Ex. 13:17; Job 42:6; Jer. 8:6; 31:19. In Ex. 13:17 the meaning is non-religious, simply "regret" or "have second thoughts." In the other passages, however, it clearly indicates a consciousness of personal sin.

All other uses of "repent" in the RSV OT represent Heb. *šûḇ*, a common verb with the basic meaning "(re)turn." Along with its several non-religious meanings, *šûḇ* came to have a religious sense, indicating a (re)turn to God, or to His ways, will, law, etc. (most often the RSV translates it "turn [again]" or "return"; *see* RETURN). In this sense, *šûḇ* expresses the scriptural idea of genuine repentance. The prophets use it extensively to make prominent the idea of a radical change in one's attitude toward sin and God. The term implies a conscious, moral separation and a personal decision to forsake sin and enter into fellowship with God. Very frequently it is employed to describe a turning away from sin to righteousness (e.g., Dt. 4:30; Neh. 1:9; Ps. 7:12 [MT 13]; Jer. 3:14), the thorough spiritual change that God alone can effect (Ps. 85:4 [MT 5]). But it also refers quite often to God in His relation to people (Ex. 32:12; Josh. 7:26). When the term is translated "return" it has reference either to human

beings, to God, or to God and human beings (1 S. 7:3; Ps. 90:13 [both terms, *nāḥam* and *šûḇ*]; Isa. 21:12; 55:7). Both terms are also sometimes employed when the twofold idea of grief and altered relation is expressed, and are translated by "repent" and "(re)turn" (Ezk. 14:6; Hos. 12:6 [MT 7]; Jonah 3:9).

II. NT Terms.–In secular Greek the terms *metánoia* and *metanoéō* originally referred to knowledge acquired later, then to the change of mind to which such knowledge could lead. Since a change of mind implies a recognition that an earlier opinion was wrong, the terms acquired the sense of regret or remorse. Thus the terms came to have an emotional as well as an intellectual sense, although not necessarily an ethical sense. Even when used in ethical contexts, they tended to refer to individual acts or thoughts, not to the course of a person's whole life (cf. *TDNT*, IV, 976-980). With the development of meaning of this word-group, it was eventually seen as similar in meaning to the *metamel-* word-group, or even synonymous with it.

In the LXX both *metanoéō* and the *metamel-* word-group are used to translate Heb. *nāḥam* (e.g., 1 S. 15:35). They are never used, however, to translate Heb. *šûḇ* (which is always rendered by Gk. *epistréphō* or *apostréphō*). Thus it appears that in the LXX these two word-groups continue to be associated with the idea of "regret" or "remorse." Nonetheless, just as Heb. *nāḥam* and *šûḇ* can be used in apparent parallelism in some texts, so *metanoéō* and *epi/apostréphō* can be used together in apparent synonymity. In fact, in LXX Jer. 8:6; 38:19 (MT 31:19); Isa. 46:8 *metanoéō* refers to a complete change of attitude, not just a change of mind about specific acts, thus taking on a meaning that is not found in secular Greek and anticipating its use in the NT. Such usage appears to have increased in other Greek translations of the OT (see *TDNT*, IV, 990).

The writings in the Apocrypha and Pseudepigrapha also make frequent use of *metanoéō* and *metánoia* in the sense of a complete change of one's way of life, a complete turning from sin and to (the ways or laws of) God. In other Hellenistic Jewish literature (e.g., Philo *De virtutibus* 175-186; Joseph and Asenath 15) *metánoia* is used for the conversion of Gentiles to the ways of God.

In the NT itself *metánoia* and *metanoéō* occur fifty-six times, most frequently in the Lukan literature (twenty-four times in Luke, eleven times in Acts) and Revelation (twelve times, eight of them in the letters to the seven churches, chs. 2–3). The terms are rare in the Pauline literature (five times) and do not occur at all in the Gospel or Epistles of John. Usually these terms express repentance in the full sense of a complete change of one's way of life (although the sense of regret is operative in Lk. 17:3f.), the spiritual change implied in a sinner's return to God. Thus *metanoéō* is used as an equivalent to Heb. *šûḇ*, "turn," in the OT. It is employed in this sense by John the Baptist, Jesus, and the apostles (Mt. 3:2; Mk. 1:15; Acts 2:38). The idea of repentance expressed by this word-group is intimately associated with different aspects of spiritual transformation and Christian life. It is associated with processes in which human agency is prominent, such as conversion (Acts 3:19) and faith (20:21), and also with those experiences and blessings of which God alone is the author, such as remission and forgiveness of sin (Lk. 24:47; Acts 5:31). It is sometimes conjoined with baptism, an overt public act that proclaims a changed relation to sin and to God (Mk. 1:4; Lk. 3:3; Acts 13:24; 19:4). Repentance manifests its reality by producing good fruits appropriate to the new spiritual life (Mt. 3:8).

The NT sometimes uses the verb *epistréphō* (usually translated "turn" in the AV and RSV NT) to bring out more clearly the distinct change wrought in repentance. In Acts this verb is used frequently to express the positive side of the change involved in repentance, i.e., to indicate the return to God of which the turning from sin is the negative aspect (e.g., Acts 9:35; 11:21; 26:20; cf. 1 Thess. 1:9).

The true NT idea of repentance is very difficult to express in other languages. The Latin version renders *metanoéō* by *poenitentiam agere* ("exercise penitence"). But "penitence" etymologically signifies "pain, grief, distress," rather than a change of thought and purpose. Thus there developed in Latin Christianity a tendency to present grief over sin rather than abandonment of sin as the primary idea of NT repentance. Since it was easy to make the transition from penitence to penance, Jesus and the apostles were represented as urging people to "do penance" (Lat. *poenitentiam agite*). Eng. "repent" is derived from Lat. *repoenitere* and inherits the problem of the Latin, making grief the principal idea and keeping in the background the fundamental NT conception of a change of mind (i.e., purpose) with reference to sin. But the exhortations of the ancient prophets, of Jesus, and of the apostles show that the change of mind is the dominant idea of the words employed, while the accompanying grief and reform of life are necessary consequences.

III. Psychological Elements.–Psychology shows repentance to be profound, personal, and all-pervasive. The change wrought in repentance is so deep and radical as to affect the whole spiritual nature and involve the entire personality, including the intellect, the emotions, and the will.

A. Intellect. Repentance is that change of a sinner's mind that leads him or her to turn from evil ways and live. Intellectually, human beings must apprehend sin as unutterably heinous, the divine law as perfect and binding, and themselves as falling short of the requirements of a holy God (cf. Job 42:5f.; Ps. 51:3f. [MT 5f.]; Rom. 3:20).

B. Emotions. It is possible to have a knowledge of sin without abhorring it as something that dishonors God and ruins humanity: the change of view may lead only to a dread of punishment and not to the hatred and abandonment of sin (cf. Ex. 9:27; Nu. 22:34; 1 S. 15:24f.; Mt. 27:4). A change in emotional attitude is necessarily involved in genuine repentance. A penitent cannot be emotionally indifferent to sin. Before there can be a hearty turning away from unrighteousness, there must be a consciousness of sin's effect on humanity and its offensiveness to God. While sorrow for sin is not the equivalent of repentance, it may be a powerful impulse to a genuine turning from sin. But the type of grief that issues in repentance must be distinguished from that which simply plunges into remorse. There is a godly sorrow and a worldly sorrow: the former brings life, the latter death (cf. Mt. 27:3-5; Lk. 18:23; 2 Cor. 7:9f.). True repentance involves not only a conviction of personal sinfulness but also an earnest appeal to God to forgive according to His mercy (Ps. 51:1f., 10-14 [MT 3f., 12-16]).

C. Will. The most prominent element in the psychology of repentance is the volitional. This aspect of the penitent's experience is expressed in the OT by Heb. *šûḇ* (usually translated "turn" or "return") and in the NT by Gk. *metanoéō* ("repent") or *epistréphō* ("turn"). These terms chiefly emphasize the will, the change of mind or of purpose (cf. Jer. 25:5; Mk. 1:15, Acts 2:38; 2 Cor. 7:9f.). The demand for repentance clearly implies human free will and individual responsibility, but it is equally clear that God is represented as taking the initiative in repentance. This paradox reflects the mysterious relationship between the human and the divine personalities. God will

accept no external substitute for the necessary internal change. Sackcloth for the body and remorse for the soul are not to be confused with a determined abandonment of sin and a return to God. Not material sacrifice, but a spiritual change, is the inexorable demand of God (cf. Ps. 51:17 [MT 19]; Isa. 1:11; Jer. 6:20; Hos. 6:6).

IV. Relation to Salvation.–Repentance is only a condition of salvation and not its meritorious ground. The motives for repentance are found chiefly in the sinner's experience of God's kindness (Rom. 2:4), love (Jn. 3:16), and earnest desire that sinners be saved (Ezk. 33:11; 1 Tim. 2:4), of the inevitable consequences of sin (Lk. 13:1-5), of the universal demands of the gospel (Acts 17:30), and of the hope of spiritual life (Jn. 3:16) and membership in the kingdom of heaven (Mk. 1:15). The first four Beatitudes (Mt. 5:3-6) describe the steps by which penitent souls pass from the dominion of Satan into the kingdom of God. A consciousness of spiritual poverty dethroning pride, a sense of personal unworthiness producing grief, a willingness to surrender to God in genuine humility, and a strong desire developing into spiritual hunger and thirst, are all part of the experience of one who wholly abandons sin and heartily turns to the God who is able to grant eternal life.

REPETITIONS, VAIN (Mt. 6:7, AV). *See* EMPTY; HEAP; PRAYER.

REPHAEL ref'ə-el [Heb. *rᵉpā'ēl*–'God has restored'; Gk. *Rhaphaēl*]. Son of Shemaiah; a gatekeeper in the temple (1 Ch. 26:7), described as a man "of great ability" (v. 6).

REPHAH rē'fə [Heb. *repaḥ*–'rich']. An Ephraimite (1 Ch. 7:25). His father's name is uncertain, due to apparent dislocations in the Hebrew text.

REPHAIAH rə-fā'ə [Heb. *rᵉpāyâ*–'Yahweh has restored'].

1. Son of Jeshaiah and father of Arnan; a descendant of David (1 Ch. 3:21).

2. One of the leaders of five hundred Simeonites who settled in the region of Mt. Seir after destroying the Amalekites who lived there (1 Ch. 4:42).

3. A son of Tola and grandson of Issachar; head of a family of mighty warriors (1 Ch. 7:2).

4. Son of Binea and father of Eleasah; a descendant of Saul (1 Ch. 9:43). He is called Raphah in 8:37.

5. Son of Hur; one who helped to repair the wall of Jerusalem in Nehemiah's time (Neh. 3:9). He is called "ruler of half the district of Jerusalem"; this probably means that he was the foreman responsible for half the assignment of the city (see *IB*, III, 687f.).

N. J. O.

REPHAIM re'fā-im, ref'i-əm [Heb. *rᵉp̄ā'îm*]; AV also GIANTS. A part of the original population of the Promised Land (Gen. 15:20). Most precisely, Rephaim seems to be a designation for the pre-Israelite inhabitants of the "the whole of that Bashan," the northernmost part of Transjordan, which was known as "the land of Rephaim" in biblical times (Dt. 3:13). In particular this included the early inhabitants of the district later called Havvoth-jair (3:14), S of the land of Geshur and the region known today as the Golan Heights. By extension the name is applied to the whole aboriginal population of Transjordan. Thus the pre-Moabite inhabitants of Moab and the pre-Ammonite inhabitants of Ammon are said to have been Rephaim (2:10f.). Yet these peoples were also called EMIM by the Moabites (2:11) and ZAMZUMMIM by the Ammonites (2:20).

According to Gen. 14:5 Chedorlaomer of Elam and four other eastern kings invaded Transjordan in the time of Abraham to suppress a revolt against their sovereignty there. The peoples they subdued included the Rephaim, the Zuzim (Zamzummim), the Emim, and the Horites of Mt. Seir — in short, the primordial inhabitants of Transjordan according to Israelite tradition. The city mentioned in connection with the Rephaim in this account is Ashteroth-karnaim, which lay about 32 km. (20 mi.) E of the Sea of Galilee. This city, now called Ashtaroth, and nearby Edrei were the royal cities of Og, the king of Bashan defeated by Joshua (Josh. 12:4; 13:12). Og himself descended from the Rephaim (Dt. 3:11; Josh. 12:4; 13:12); according to Dt. 3:11 he was their only surviving descendant at the time of the arrival of the Israelites. After the conquest Joshua assigned the land of the Rephaim to the tribe of Joseph (Josh. 17:15), and, more specifically, to the half-tribe of Manasseh (cf. 13:11f., 29f.).

The Rephaim seem to have been the Transjordanian equivalent of the Anakim of Cisjordan (*see* ANAK). Israelite tradition held that both peoples had been giants (Dt. 2:10, 20f.). Thus Og's bedstead (or perhaps sarcophagus), which could still be seen in Rabbah of the Ammonites in biblical times, was nine cubits long and four cubits wide — about 4 m. (13 ft.) long and 2 m. (6 ft.) wide (Dt. 3:11)! The gigantic Philistine warriors of the time of David were perhaps the "descendants of the Rephaim" (Heb. *yᵉlîḏê hārāpā'*; cf. 2 S. 21:16, 18, 20, 22; 1 Ch. 20:4, 6, 8; RSV "descendants of the giants," "descended from the giants"). But their relationship to the Rephaim of Transjordan is unclear. It has been suggested that they were members of an aristocratic military guild. Thus they were not "the descendants of the Rephaim," but "the votaries of Rapha," a god worshiped in the Philistine city of Gath (cf. 2 S. 21:22) and probably elsewhere, or even "the corps of the scimitar," an association of warriors that traced its origin to the Philistines' ancestry among the sea-peoples of the Aegean and eastern Mediterranean (see P. K. McCarter, Jr., *II Samuel* [*AB*, 1984], pp. 449f.).

For *rᵉp̄ā'îm* as a designation for the inhabitants of the netherworld, *see* SHADES.

P. K. MCCARTER, JR.

REPHAIM, VALLEY OF ref'ə-im [Heb. *ʿēmeq rᵉp̄ā'îm*; Gk. *gḗ Rhaphaín, koilás Rhaphaéim, koilás tṓn titánōn*–'valley of the Titans,' *koilás tṓn gigántōn*–'valley of the giants']. A plain immediately SW of Jerusalem, called Baqa' by the Arabs; now a quarter of modern Jerusalem, where a street leading from the railway station to the south perpetuates the ancient name. The plain, which narrows to the valley used by the railway to reach Jerusalem (Wâdī Ṣarâr), measures about 3 km. (2 mi.) E-W and 5 km. (3 mi.) N-S. The name REPHAIM alludes to the pre-Israelite inhabitants of Palestine, who according to tradition were of gigantic stature. Paleolithic instruments have been found in great numbers here, as well as a few Neolithic dolmens, now destroyed or disappeared.

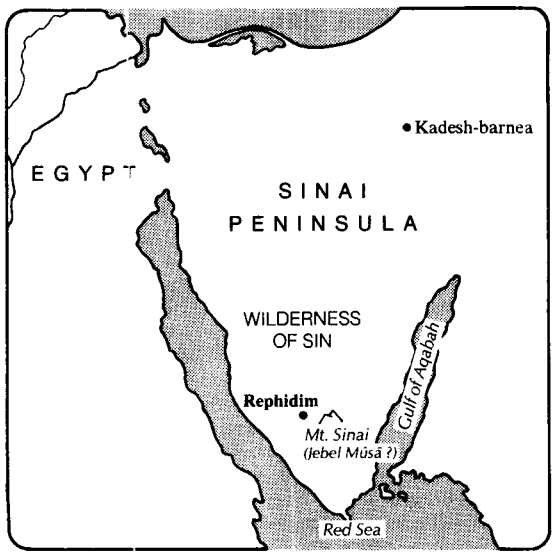
Rephaim was the main agricultural region of Jerusalem (cf. Isa. 17:5). At one time it belonged to the Jebusites (Josh. 15:8; 18:16). On several occasions the Philistines approached the highlands through the wadi and encamped or staged an attack in the valley of Rephaim (2 S. 5:18, 22 par. 1 Ch. 14:9, 13; 2 S. 23:13 par. 1 Ch. 11:15). In this way they could cut off communication between Judah and the other tribes.

Bibliography.–P. Karge, *Rephaim* (1925), pp. 44f., 51-56, 633-36; G. Dalman, *Jerusalem und sein Gelände* (1930), pp. 211ff.

A. VAN SELMS

REPHAN rē'fan [Gk. *Rhaiphan, Rhemphan, Rhompha,* etc.; Lat. *Rempham*] (Acts 7:43); AV REMPHAN. The Babylonian name for the god of the planet Saturn. Acts 7:42f. quotes from the LXX of Am. 5:25-27, which erroneously renders MT *kîyûn* by Gk. *Rhaiphan* (see comms.). *See* KAIWAN.

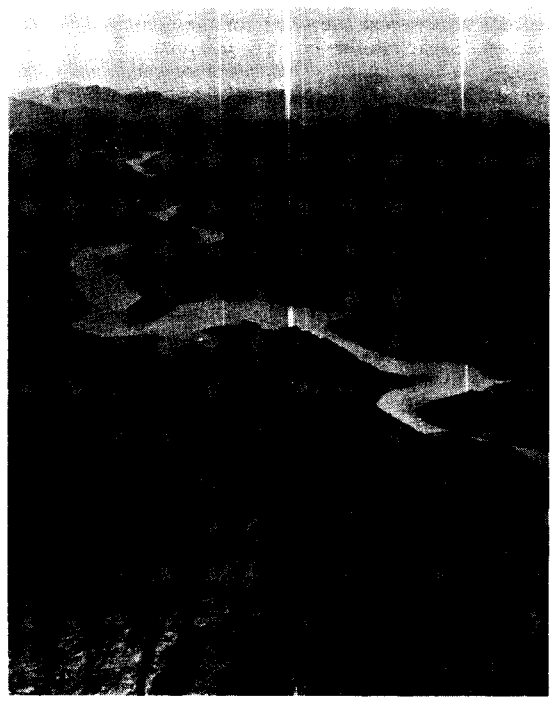
REPHIDIM ref'ə-dim [Heb. *rᵉpîḏîm*; Gk. *Rhaphidin*]. A stopping-place in the Israelite wanderings, located between the Wilderness of Sin and the Wilderness of Sinai (Ex. 17:1, 8; 19:2; Nu. 33:14). Nu. 33:12-15 mentions two additional encampments, Dophkah and Alush, made between Sin and Rephidim.



At Rephidim the Israelites complained about the inability of Moses to provide water; thus they put God to the test (Ex. 17:1f.). These events gave to the location the commemorative names of Massah, "testing," and Meribah, "contention" (*see* MASSAH AND MERIBAH). Whereas Massah seems to refer only to events at Rephidim, the name Meribah is also associated with an incident at Kadesh-barnea (Nu. 20:13, 24; 27:14; etc.) and might have been applied to any locality where the people expressed dissatisfaction with God or Moses.

At Rephidim Joshua was able to defeat Amalek because of the prolonged intercession of Moses and Aaron (Ex. 17:8-13). An altar was subsequently erected and dedicated to Yahweh-nissi.

Shortly thereafter Moses heeded the counsel of his father-in-law Jethro to delegate his authority as judge of the people to deputies appointed for that purpose (Ex. 18:5, 13-26). From the position of the visit in the narrative, it most probably occurred at Rephidim, although some scholars have placed it at Mt. Sinai.



Aerial of Wâdī Feiran in the Sinai Peninsula, a possible location of Rephidim (W. Braun)

The location of the last-named event determines that of Rephidim. Mt. Sinai has been associated variously with the southern tip of the Sinai Peninsula, with Kadesh-barnea, and with Midian. The latter two sites present difficult problems; although they favor the account of Ex. 17:8-13, since the Amalekites are not known to have penetrated into southern Sinai or Arabia, they conflict with fifteen centuries of tradition that located Mt. Sinai in the peninsula proper. Moreover, the limestone of the Sinai Peninsula manifests water-bearing properties equal to those of Kadesh limestone. The traditional southern route of the Exodus is eminently feasible, although few stopping-places have been identified with absolute certainty (*see* EXODUS, ROUTE OF THE). It seems best to locate Rephidim in the southern tip of the Sinai Peninsula, in the general area of the modern Jebel Mûsā at either Wâdī Feiran or Wâdī Refâyid. *See* Vol. II, Plate 7.

See also WANDERINGS OF ISRAEL III.B. R. K. H.

REPRESENT. The Hebrew preposition *lᵉ*, "for," sometimes conveys the notion of a person's being a representative. In Ex. 18:19, e.g., Heb. *hᵉyēh 'attâ lā'ām* is rendered by the RSV "you shall represent the people" (AV "be thou for the people"). Following the advice of his father-in-law, Moses remained the intermediary between God and the Israelites in settling major disputes, but he appointed other men to handle the less serious cases. In Nu. 1:44 *lᵉḇêṯ-'ᵃḇōṯāyw* is rendered by the RSV "representing his fathers' house" (AV "for the house of his fathers"); it refers to tribal leaders.

In Acts 17:29 Gk. *charagma* is translated "representation" (AV "graven"; NEB "image"). It denotes something that is engraved, etched, or stamped, in this case an idol produced by human artwork. The same word is used in Rev. 13:16; 14:9; 20:4, etc., for the "mark" of the antichrist.

REPROACH [(nouns and adj.) Heb. *ḥerpâ, kᵉlimmâ, ḥeseḏ*; Gk. *óneidos*–'disgrace, insult,' *oneidismós*–'reviling, disgrace, insult' (Rom. 15:3; 1 Tim. 3:7), *anepílēmptos*]; AV also REBUKE, SHAME, BLAMELESS, etc.; NEB also HUMILIATION, DISGRACE, TAUNT, FAULT (1 Tim. 6:14), etc.; [(verbs) Heb. *ḥārap*–'say sharp things, taunt,' hiphil of *kālam*–'insult' (Ruth 2:15; Job 19:3), hiphil of *ḥāpēr*–'act shamefully' (Prov. 19:26); Gk. *oneidízō*–'revile, heap insults upon' (Rom. 15:3; etc.), *embrimáomai*–'scold, censure' (Mk. 14:5), *hybrízō*–'insult' (Lk. 11:45)]; AV also MURMUR AGAINST (Mk. 14:5), UPBRAID (Jas. 1:5); NEB also SCOLD, INSULT, DISGRACE, etc.

In the RSV OT "reproach" usually translates Heb. *ḥerpâ* or the cognate verb *ḥārap* (Job 27:6; Prov. 27:11). *Ḥerpâ* has various senses, including (1) "slander" (Isa. 51:7), or disgrace that rests upon a person (Gen. 30:23; Ps. 69:7 [MT 8]; Jer. 15:15), a group (Isa. 4:1), or a nation (1 S. 17:26; Isa. 25:8; Zeph. 3:18); (2) reproachful behavior (Hos. 12:14 [MT 15]); (3) the state of being scorned (Jer. 20:8; 24:9; 29:18; Ezk. 5:15f.; 22:4; Joel 2:17). Situations considered a reproach included childlessness (Gen. 30:23; cf. Lk. 1:25), Israel's slavery in Egypt (Josh. 5:9), celibacy (Isa. 4:1), and widowhood (Isa. 54:5; *TDOT*, V, 213f.). In Prov. 14:34 *ḥeseḏ*, "shame" (< *ḥāsaḏ*, "be ashamed"), is not the common word *ḥeseḏ*, "steadfast love" (or "covenant loyalty"), but a rare homograph from a different root. The verb *kālam* denotes "the sense of disgrace that attends public humiliation" (*TWOT*, I, 443). Thus in Ruth 2:15 Boaz told his workers not to "reproach" Ruth for her gleaning — she was entitled to what she gathered on account of both her need as a poor person and the explicit permission of the landowner. Ezekiel uses the cognate noun *kᵉlimmâ*, "reproach," in Ezk. 36:6f., 15 to describe the fate that awaits the nations that reproached Israel (cf. 34:29). Prov. 19:26 applies *ḥāper* to a son who does not heed his parents' guidance but leaves them with a sense of inner humiliation and shame.

The RSV NT frequently uses "reproach" for Gk. *óneidos* and the related terms *oneidismós* and *oneidízō*. *Óneidos* occurs in the NT only in Lk. 1:25, where Elizabeth felt her barrenness to be a disgrace. According to 1 Tim. 3:7 a bishop must receive a good report from those outside the Christian community lest he fall victim to slander or reviling (*oneidismós*). Jas. 1:5 states that God generously gives His gifts without criticizing or scolding (*oneidízō*). Yet Christians who separate themselves from the world and seek to live the will of God can expect to be insulted and reviled (*oneidízō*) by the world (1 Pet. 4:14; cf. *TDNT*, V, 240). To encourage an attitude of selflessness among the Roman Christians, Paul reminded them of the life of Jesus Christ, who bore incalculable insults and revilings from contemptuous, hateful people (Rom. 15:3).

In 1 Timothy Gk. *anepílēmptos* (lit. "unable to take hold of, grasp, catch") describes a requisite characteristic of bishops (3:2), widows (5:7), and Timothy himself (6:14). Their character and demeanor must be free from defects that might give others reason to question their integrity. In Mk. 14:5 some individuals expressed strong feelings (Gk. *embrimáomai*) toward a woman for lavishing expensive ointment on Jesus, but He defended her generous act of love. In Lk. 11:45 Jesus' piercing remarks prompted the religious authorities to accuse Jesus of acting arrogantly or insultingly (Gk. *hybrízō*) toward them.

G. CHAMBERLAIN G. L. KNAPP

REPROBATE [Heb. niphal part. of *mā'as*] (Ps. 15:4); AV VILE PERSON; NEB WORTHLESS. A noun or adjective used in the AV and RSV to describe a person or thing that is rejected because of not having stood the test. In Ps. 15:4, the only RSV use, the word refers to a person who is morally depraved (cf. Jer. 6:30, where the same Hebrew term is applied to silver [AV "reprobate"; RSV "refuse"]). Heb. *mā'as* is used elsewhere in the OT in the sense of "spurn" (Lev. 26:43f.), "reject" (Nu. 11:20; 1 S. 10:19, Ps. 118:22), "refuse" (Isa. 7:15f.), and "despise" (Nu. 14:31).

In the NT the AV uses "reprobate" six times to translate Gk. *adókimos* (RSV "base," "counterfeit," "fail to meet the test," "unfit," etc.). The root meaning of *adókimos* is to have been tested and found wanting. Paul urges the Corinthians to examine and test (*dokimázō*) themselves to see if they are still in the faith (2 Cor. 13:5): Christ is no longer in them if they have abandoned their faith and thus "fail to meet the test" (*adókimos*). Paul also realizes that they have been testing him in comparison to the "false apostles" (cf. 11:13); therefore he hopes the Corinthians will discover that he has not "failed" (*adókimos*, 13:6) but "met the test" (*dókimos*, v. 7). Yet, as long as the Corinthians do what is right, Paul is even willing to appear "to have failed" (*adókimos*).

In Rom. 1:28, at the end of a passage documenting human ungodliness (vv. 18-27), Paul uses a wordplay to sum up his indictment. Since humanity tested and rejected (*ou dokimázō*, lit. "not accept as proved" the knowledge of God, God gave them over to an *adókimos* mind, i.e., a way of thinking that, having been tested and found wanting, is rejected as base and worthless.

In 2 Tim. 3:8 Paul warns against corrupt people who, with respect to the faith, fail to meet the test of genuineness and so are "counterfeit" (*adókimos*). In Tit. 1:16 he issues a similar warning, but this time it is the test of good works that counterfeit Chrisitans fail to meet. They deny God by their deeds and prove themselves "unfit" (*adókimos*) for any good work.

Greek *adókimos* occurs in two other passages. In 1 Cor. 9:24-27, a paragraph abounding with athletic imagery, Paul compares himself to a runner, a boxer, and an announcer. He says he practices rigorous self-discipline lest, having called others to the games (*kērýssō*, the same word used for preaching the gospel), he himself should be 'disqualified" (*adókimos*, v. 27; AV "castaway"). The writer of He. 6:7f. compares professing Christians to well-watered land. If it brings forth useful vegetation it is blessed by God (v. 7); but if it fails the test of genuine productivity and bears weeds instead, it is "worthless" (*adókimos*; AV "rejected") and is near to being cursed and burned (v. 8).

T. F. JOHNSON

REPROOF; REPROVE [Heb. hiphil of *yāḵaḥ*, *tôḵaḥaṯ*; Gk. *elénchō*]; AV, NEB also REBUKE, CORRECT, etc. To reprove is to correct or criticize someone with the intent of amending some fault. God as the one who reproves is portrayed as being in a parental role in relation to His people, as one who reproves because He loves (Prov. 3:12; Rev. 3:19). The withdrawal of God's reproof from His people is an indication that the extent of their sin has become grave (Ezk. 3:26). Reproof is a basic function of the Scriptures (2 Tim. 3:16; NEB "refuting error") and is expected to be one of the functions of a person who proclaims the word of God (Lk. 3:19; Tit. 2:15).

Much of what is said about reproof is concerned with the human response to it. In Proverbs Heb. *tôḵaḥaṯ* is linked with *mûsār* (RSV "discipline, instruction," 3:11; 5:12; 6:23; 10:17; 12:1; 13:18; 15:10; cf. 9:7; Rev. 3:19); much is said to hinge on the decision to accept or to reject

these two things (cf. Job 5:17; Prov. 1:24-31; 29:1). In Proverbs a line is not always drawn between divine reproof and reproof from parents, teachers, and society's leaders, and the latter is always considered of value to those who receive it (9:7f.; 10:10 [RSV and some other modern translations follow LXX *elénchō*; MT differs]; 15:12; 19:25; 25:12; 29:15; personified Wisdom gives reproof in 1:23). On the other hand, Job's rejection of the reproof of his "friends" (Job 6:25f.) is part of the critical attitude toward conventional human wisdom found in the book of Job.

"He who reproves in the gate" (Isa. 29:21; Am. 5:10) is a respected member of a community who publicly rebukes disorderly members of the community. Here the judicial use (as opposed to the pedagogical use) of *yāḵaḥ* is reflected (see *TDOT*, VI, *s.v.* "yāḵaḥ"[Mayer]).

J. W. SIMPSON, JR.

REPTILE [Heb. *remeś* (1 K. 4:33 [MT 5:13]); Gk. *herpetón* (Acts 10:12; 11:6; Rom. 1:23; Jas. 3:7)]; AV CREEPING THING, SERPENT (Jas. 3:7); NEB also THING THAT CRAWLS, CREEPING THING. Both *remeś* and *herpetón* derive from cognate verbs with the general sense of "creep" or "crawl" (Heb. *rāmaś* [e.g., Gen. 1:26, 30; Dt. 4:18; Ezk. 38:20]; Gk. *hérpō*, "move slowly"); thus more recent translations have retained the older "creeping things" (but cf. the NIV, which follows the RSV in the above passages). While these terms may include members of the reptile family, they are probably not limited to members of this family; cf. the RSV elsewhere (*see* CREEPING THINGS; CRAWLING THINGS).

In the NT the threefold division of birds, beasts, and creeping things (with the addition of sea creatures in Jas. 3:7, reflecting Gen. 1) represents for the ancient authors the whole of the created animal world. (The AV rendering "serpents" in Jas. 3:7 may derive from the Vulgate's use of *serpentium*; cf. vb. *serpo*, "creep," "crawl.") Paul's description of the wicked as those who worship "images resembling mortal man or birds or animals or reptiles" reflects the subdivisions of creation (Gen. 1:26). This type of worship was also prohibited by Moses (Dt. 4:16-18).

See G. Cansdale, *Animals of Bible Lands* (1970).

J. HUDDLESTUN

REPUTATION; REPUTE. The AV employs "reputation" to connote "prominence" or "esteem," where modern English would use "repute." Thus "had in reputation" (Acts 5:34) renders Gk. *tímios* ("held in honor" [so RSV]; NEB "held in high regard") and "hold in reputation" (Phil. 2:29) renders *échō éntimon* (lit. "hold in esteem"; RSV, NEB, "honor"). In 2:7 "made himself of no reputation" is the AV interpretation of *heautōn ekénōsen* (lit. "emptied himself" [so RSV]; NEB "made himself nothing"; *see* KENOSIS). In Eccl. 10:1, AV, "him that is in reputation for" is a mistranslation of Heb. *yāqār min* (lit. "more weighty than"); the sense of the proverb is better conveyed by the RSV ("outweigh") and NEB ("make lose its worth").

The RSV does not use the term "reputation." It substitutes "repute" for AV "reputation" in Gal. 2:2 (Gk. part. of *dokéō*, "seem" [so AV in vv. 6, 9]) and elsewhere uses "repute" to translate Heb. *śeḵel* ("understanding" [so AV, RSV mg.], Prov. 3:4; cf. NEB "success") and the piel of *gāḏal* ("make greater"; RSV "give repute," 1 Ch. 29:25; cf. AV "magnify"; NEB "make stand high"). "Good repute" translates Gk. *euphēmía* (lit. "good report" [so AV], 2 Cor. 6:8; cf. NEB "praise") and the pass. part. of *martyréō* ("well spoken of," Acts 6:3; cf. 10:22; Prov. 25:10; cf. AV "infamy"; NEB "indiscretion") and Gk. *dysphēmía* ("slander," 2 Cor. 6:8; cf. AV "evil report"; NEB "blame"); "of no repute" represents the Heb. niphal part. of *qālâ* ("lightly esteemed" [so AV], 1 S. 18:23; cf. NEB "of no consequence"). *See also* DISREPUTE.

A good reputation is valued highly by wisdom literature (e.g., Prov. 3:4; cf. 22:1; Eccl. 7:1), and the prospect of its loss (being brought into disrepute) is dreadful (Prov. 25:10; cf. Acts 19:27). A reputation for integrity and spiritual maturity is an important qualification for those who hold office in the church (Acts 6:3; cf. 1 Tim. 3:7, Gk. *martyrían kalén échein*; RSV "be well thought of"; NEB "have a good reputation"). But although the ESTEEM of others can be a great gift from God (1 Ch. 29:25), it does not necessarily coincide with God's estimation of a person (cf. 1 S. 16:7). Valuing human approval more than God's is a serious temptation for religious people as well as irreligious (Jn. 12:43, NEB; cf. Gal. 1:10). Being defamed is a form of suffering that Christians, following their Master, must be prepared to endure (cf. 1 Cor. 4:10; 2 Cor. 6:8; etc.).

There seems to be an ironic twist in Paul's reference in Gal. 2:2, 6, 9 to the leaders of the Jerusalem church (James, Peter, and John, v. 9) as *hoi dokoúntes*, "those who are of repute." Most likely Paul is borrowing the phrase from his opponents, the "false brethren" (v. 4). His intention is not to disparage the Jerusalem leaders but to criticize his opponents' attempts to play off these leaders' status against him (see comms., esp. H. Ridderbos, comm. on Galatians [*NICNT*, repr. 1981], pp. 80-90).

See also HONOR; NAME.

N. J. O.

REQUIRE. A term used by the RSV in two different senses. (1) In the OT it frequently means "demand or claim by authority," usually translating Heb. *biqqēš* (piel of *bāqaš*, "seek"), *dāraš* ("seek"), or *šā'al* ("ask"). Yahweh has the supreme right and power to set requirements for His people (e.g., Dt. 10:12; Mic. 6:8); earthly rulers and authorities also have some of this power (e.g., Gen. 43:9; 1 Ch. 21:3; 2 Ch. 24:6; Ps. 137:3). In juridical contexts *biqqēš* and *dāraš* often mean "make a legal claim" (e.g., Gen. 9:5; Dt. 18:19; 23:21; Ezk. 3:18, 20; 33:6, 8; see *TDOT*, II, 235f.; III, 296-98; *see also* AVENGE I; VENGEANCE). For the RSV NT use of "require" in this sense, cf. Gk. *zētéō* ("seek") in Lk. 12:48; 1 Cor. 4:2; *ekzētéō* ("seek out") in Lk. 11:50f.; *apaitéō* ("demand back") in Lk. 12:20. The AV occasionally uses "require" in the archaic sense of "ask" where the petitioner lacks authority (e.g., Ezr. 8:22; Lk. 23:23f.).

(2) A second meaning is "have a compelling need of something." The terms rendered in this sense include Heb. *bᵉyômô* (lit. "in its day"; RSV "as each day requires," 1 Ch. 16:37; 2 Ch. 8:14; etc.); Aram. *ḥašḥâ* ("what is needed"; Ezr. 6:9); Gk. *chrḗzō* ("have need of"; Rom. 16:2) and *chreía* ("need, necessity"; 1 Cor. 12:24).

Bibliography.—*TDOT*, II, *s.v.* "biqqēš" (S. Wagner); III, *s.v.* "dārash" (S. Wagner).

N. J. O.

REREWARD rēr'wôrd. An obsolete term meaning REAR GUARD.

RESAIAH rə-sā'yə [Gk. *Rhēsaias*]; AV REESAIAS; NEB RESAEAS. One of the leading men of Israel who returned from exile with Zerubbabel (1 Esd. 5:8). He is called Reelaiah in Ezr. 2:2 and Raamiah in Neh. 7:7.

RESCUE [Heb. hiphil of *nāṣal* (Gen. 37:22; Nu. 35:25; Dt. 25:11; Jgs. 8:34; 9:17; 1 S. 7:14; 30:8, 18; etc.), niphal of *nāṣal* (Am. 3:12; Mic. 4:10), hiphil of *yāšaʿ* (Dt. 22:27;

2 K. 16:7), piel of *ḥālaṣ* (Ps. 91:15), niphal of *mālaṭ* (Isa. 49:24f.), piel of *pālaṭ* (Ps. 71:2, 4; 82:4), *pāḏâ* (71:23), *pāṣâ* (144:7, 10f.), *pāraq* (136:24), hiphil of *šûḇ* (35:17), hophal of *yāḇal* (Job 21:30); Aram. haphel of *nᵉṣal* (Dnl. 6:14, 27 [MT 15, 28]; 8:4, 7); Gk. *exairéō* (Acts 7:10; 12:11; 23:27), *rhýomai* (2 Tim. 3:11; 4:17f.; 2 Pet. 2:7, 9)]; AV also DELIVER, RID, SAVE, RECOVER, TAKE OUT, etc.; NEB also SAVE, DELIVER PROTECT, KEEP SAFE, SNATCH, etc.

See DELIVER.

RESEN rē'zən [Heb. *resen*; Gk. *Dasem*]. A city mentioned in Gen. 10:12 in connection with Nimrod. The RSV translates vv. 11f.: "From that land he went into Assyria, and built Nineveh, Rehoboth-Ir, Calah, and Resen between Nineveh and Calah; that is the great city."

Several things are ambiguous in the passage. The main problem is that the subject of *yāṣā'*, "came (or went) forth," in v. 11 is not fully clear. The transition from the previous clause is much smoother as the RSV translates it, but the most natural reading of the Hebrew is "from that land Assyria came forth." If Nimrod is the subject of "came [or went] forth" in v. 11a, then he is also patently the subject of the verb *wayyiḇen*, "and he built," in v. 11b. If, however, Assyria is the subject of "came forth" in v. 11a, then the subject of "he built" in v. 11b is ambiguous, although Nimrod is most likely meant. The text probably does not intend to personify Assyria as it does Nimrod. Thus it clearly indicates Assyria's origin from and indebtedness to southern Mesopotamia, a fact now well known from cultural history.

Another problem is identifying "the great city" of v. 12. The phrase has been thought to refer to Resen (so, e.g., NEB, Smith-Goodspeed). This view, however, requires that the phrase be understood as misplaced, properly coming immediately after Resen. Resen then would need to be obviously larger and more important than both Nineveh and Calah. Archeological and textural evidence points to exactly the opposite, however. Thus the phrase must refer to either Nineveh or Calah, the latter being more likely both because of word order and because Calah clearly outranked Nineveh in political importance in the earlier centuries of Assyrian history.

The site of Resen is unknown. The only plausible suggestion has been to interpret Heb. *resen* as a rendering of Assyr. *rēš ēni*, "fountain head," referring to a location established to provide water. Several such places were so named in Assyria, e.g., the one established by Sennacherib from which he cut a canal to the Khoser River, a tributary of the Tigris flowing through the heart of Nineveh. The site probably formed part of the water supply of the city (see E. Schrader, *Cuneiform Inscriptions and the OT*, I [1885], 83f.). No such site is known between Nineveh and Calah, where the biblical text places Resen. It is plausible and entirely possible, however, that the text refers to a large water installation (see E. Speiser, *Genesis* [*AB*, 2nd ed. 1978], p. 68).

Another proposal, that the site be identified with Selamiyeh, about 5 km (3 mi.) N of Calah, is based upon the equation of Selamiyeh with the Larissa of Xenophon (*Anabasis* iii.4). It is now known, however, that Larissa was the Greek name of Calah itself (see M. E. L. Mallowan, *Nimrud and Its Remains* [1966], I, 322 n.6).

F. W. BUSH

RESERVOIR [Heb. *miqwâ* <*qāwâ*–'collect'] (Isa. 22:11); AV DITCH; NEB CISTERN. A CISTERN or POOL used for collecting and storing water. *See* JERUSALEM III.C.2.g; D.2.e-f; SILOAM.

RESH resh, rāsh [ר]. The twentieth letter of the Hebrew alphabet, transliterated in this encyclopedia as *r*. It came also to be used for the number two hundred. It is used to designate the twentieth section of Ps. 119 (cf. AV). *See* WRITING.

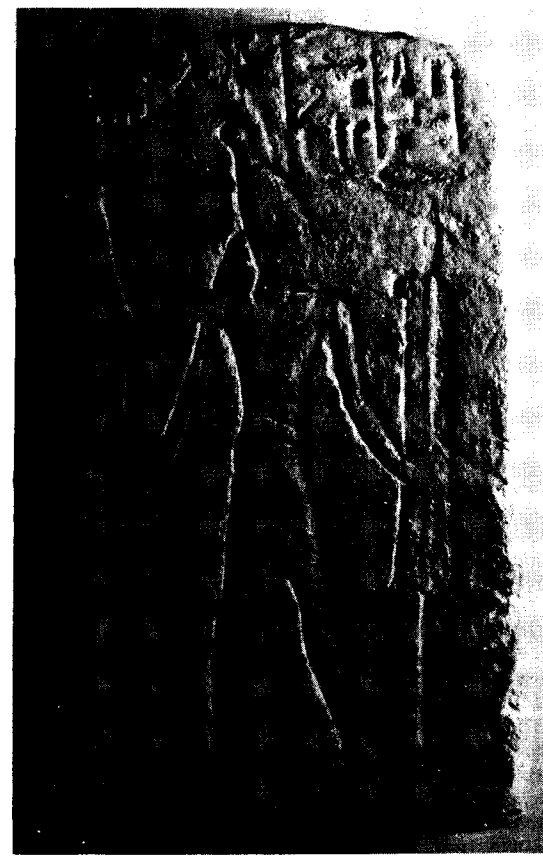
RESHEPH re'shef [Heb. *rešep*–'flame, firebolt,' 'pestilence'].

1. An Ephraimite; son of Rephah and father of Telah (1 Ch. 7:25).

2. A god worshiped by the Northwestern Semites. The name appears for the first time in discovered texts at Ebla in 2400 B.C. Resheph was worshipped up to Roman times, e.g., at Carthage. He was also worshiped in Egypt, where the only iconographic representations of him have been discovered.

The etymology of the name is still an enigma. Meanings like "pestilence," "flame," etc., are derived from the name of the god (see below). Available texts and iconographic material clearly show that he was regarded in Egypt as a warrior god but was also seen in a benevolent role. In Northwest Semitic material he is associated, as Albright and Fulco have pointed out, with the underworld. In the Ugaritic texts he is equated with the Mesopotamian Nergal, the god of the underworld. In the Ugaritic epic of Keret *ršp* is associated with the death of part of Keret's offspring. In this epic a process of demythologizing the

A relief on a limestone stele of the war-god Resheph with a Hittite-style crown. He holds a spear in his upraised right hand and a spear and shield in his left; next to him hangs a club with straps. The inscription reads: "a royal offering to Resheph, the great god, who gives a favorable hearing to petitioners." Nile Delta (Horbet), *ca.* 1350-1205 B.C. (Hildesheim, Pelizäus Museum)



name may have set in, so that *rŝp* may simply mean "pestilence." Another Ugarit text mentions the sungoddess Šapš and Resheph in connection with a total eclipse of the sun. This might have Mesopotamian roots, because in Mesopotamian mythology the sungod Šamaš descends at night to the underworld to feed the shades of the dead, and Nergal is in command of the underworld. A total eclipse points, thus, to an untimely visit of Šapš to the realm of Resheph.

The name Resheph is connected to certain concepts, e.g., *rŝp ṣbi* "Resheph of the army." Most of these connections we now know are to be associated with place names, e.g., *rŝp bbt,* "Resheph at the city *bbt,*" *rŝp ṣpr,* "Resheph of Ṣipiru," and even *rŝp gn* (according to the Ebla texts), "Resheph of Gunu." An interesting combination is *rŝp ḥṣ,* "Resheph of the arrow." His association with war is well attested in inscriptions and in the Egyptian iconography, where he wears a quiver full of arrows. There is no indication that he was worshiped as a fertility god among the Northwestern Semites.

In the OT *rešeṗ* is to some degree demythologized. It occurs seven times in the OT, mostly in the sense of "pestilence" or "plague." In Dt. 32:24 *rešeṗ* (RSV "burning heat") is associated with an enigmatic *qeṭeḇ* (RSV "pestilence"), and in Hab. 3:5 *rešeṗ* (RSV "plague") is associated with *deḇer* (RSV "pestilence"). In Ps. 78:48 *rešeṗ* (RSV "thunderbolt") is used in parallelism with another enigmatic term *brd* (RSV "hail"; possibly a scribal error for *dbr*). In Cant. 8:6, the clearest example of demythologizing, the stem *rŝp* denotes "the spark of love." Clearly, in each case *rešeṗ* is used in a poetic context that makes mythological allusion to Resheph's destructive nature.

F. C. FENSHAM

RESIDUE [Heb. *šᵉʾērîṯ* (Ps. 76:10 [MT 11]), *yeṯer* (Isa. 44:19); Aram. *šᵉʾār* (Dnl. 7:7, 19)]; AV also REMAINDER; NEB REMNANT, REST, "what was left." *See* REMNANT.

RESPECT; RESPECTFUL. In the RSV "respect" usually refers to the deference that one owes to those in authority. To "respect" (Heb. *yārēʾ,* lit. "fear," Prov. 13:13) God's commandment means to obey it (*see* FEAR II.B.1-2). An appalling lack of respect (niphal of *hāḏar,* lit. "honor") for Judah's princes and elders is a sign of the havoc wrought on the fabric of that society by the Babylonians (Lam. 5:12). Jesus' parable about the wicked tenants who lacked respect (Gk. *entrépomai,* mid. "have respect to"; cf. pass. "be ashamed") for their master's son points to the ultimate rejection of God's authority enacted in the crucifixion of His Son (Mt. 21:37 par.). (Cf. the use of *entrépomai* in Lk. 18:2, 4 [RSV "regard"]; Wisd. 2:10 [RSV "regard"]; 6:7 [RSV "show deference to"].)

The authors of the NT Epistles have no patience with the enthusiasts who are contemptuous of structures of earthly authority and whose demands for personal freedom threaten the fledgling community's unity and witness (see E. Käsemann, *Comm. on Romans* [Eng. tr. 1980], pp. 350-59). They exhort their readers to be SUBJECT to authority, showing REVERENCE not only to God (cf. He. 12:9; Gk. *entrépomai*) but also to those who occupy positions of authority in the existing social order, including rulers (*phóbos,* lit. "fear," Rom. 13:7; cf. vv. 1-6), husbands (*phobéomai,* lit. "fear," Eph. 5:33; cf. vv. 21-24), and masters (*phóbos,* 1 Pet. 2:18; cf. 1 Tim. 6:2). Likewise, Christians are to "give recognition to" (*oída,* lit. "know" [so AV], 1 Thess. 5:12) those who minister on their behalf.

Some of the Epistles impress on their readers the importance of living in a dignified manner that will earn the respect of others, both outside of and within the community of believers. Paul exhorts the Thessalonian Christians to conduct themselves honorably so that they may "command the respect of outsiders" (Gk. *peripatéō euschēmónōs prós toús éxō,* lit. "walk becomingly toward them that are without" [so AV mg., ASV], 1 Thess. 4:12). In 1 Tim. 2:2 "respectful" represents *semnótēs,* a common Hellenistic term denoting "an ethical and aesthetic outlook resulting in decency and orderliness" (*DNTT,* II, 93; cf. AV "honesty"; NEB "high standards of morality"). In 3:4 the same term probably refers not to the children's behavior but to the father's (cf. AV "with all gravity"; NEB "a man of the highest principles"; see comms.).

In Nu. 16:15 "respect" renders Heb. *pānâ* (lit. "turn toward," i.e., "pay attention to"); thus Moses intreats Yahweh to reject the offerings of those who have opposed him (cf. AV "respect" in Lev. 26:9; 1 K. 8:28; 2 K. 13:23; 2 Ch. 6:19; Ps. 40:4; RSV "have regard for," etc.). The AV also translates "respect" for several verbs with the literal meaning "look at": the hiphil of *nāḇaṭ* (Ps. 74:20; 119:6, 15), *rāʾâ* (Job 37:24; etc.), *šāʿâ* (Gen. 4:4f.; Ps. 119:117); Gk. *apoblépō* (He. 11:26) and *epiblépō* (Jas. 2:3). In Ex. 2:25, AV, "respect" represents Heb. *yādāʿ* (lit. "know" [so RSV]). N. J. O.

RESPECT OF PERSONS. *See* PARTIALITY.

RESPONSIVE SINGING [Heb. *ʿānâ*–'respond'] ("sing responsively," Ezr. 3:11); AV "sing together by course"; NEB CHANT. The NEB rendering probably more closely approximates the activity of praise in the postexilic temple. The manner of chanting or singing is, however, not certain.

REST; RESTING PLACE [Heb. *dᵉmî* (Isa. 62:6f.), *dûmîyâ* (Ps. 22:2 [MT 3]), *yāšaḇ*–'sit down' (Ruth 2:7; Ps. 127:2), *kāḇēḏ* ("rest heavily," Jgs. 1:35), niphal of *kûn*–'stand firm' (Jgs. 16:29), *māqôm*–'(resting) place' (Job 16:18), *nû(a)ḥ* (qal, e.g., Gen. 8:4; hiphil, e.g., Ex. 33:14), *mᵉnûḥâ* (Gen. 49:15), *mānô(a)ḥ* (Dt. 28:65; 1 Ch. 6:31 [MT 16]; Lam. 1:3), *naḥaṭ* (Eccl. 6:5; Isa. 30:15), *pûgâ*–'relaxation' (Lam. 2:18), hiphil part. of *rāḇaṣ*–'let lie down' (Jer. 33:12), hiphil of *rāgaʿ* (Isa. 34:14; Jer. 31:2; 50:34), *margô(a)ʿ* (Jer. 6:16), *šāḇaṭ*–'cease,' 'stop working' (Gen. 2:2f.; etc.); *šabbāṯôn*–'sabbath rest' ("solemn rest," Ex. 16:23; etc.), hiphil of *šûḇ*–'turn back' (Ex. 5:5), *šāḵaḇ*–'lie down' (2 K. 4:11; Job 30:17; Prov. 6:10; Eccl. 2:23), *šāḵan*–'stay, settle' (Nu. 9:18; Ps. 55:6 [MT 7]), *šālôm* ("rest assured," Gen. 43:23); *šālēw*–'ease' (Job 20:20), *šāmaṭ*–'leave untilled, remit' (Ex. 23:11), niphal of *šāʾan* (Gen. 18:4; Jgs. 16:26), *šāqaṭ*–'be at peace' (qal, e.g., Josh. 11:23; Jgs. 3:11, 30; hiphil, Isa. 57:20); Gk. *ánesis*–'relief' (2 Cor. 2:13; 7:5; 2 Thess. 1:7), *eimí*–'be' (1 Cor. 2:5; Gal. 3:12), *hēsycházō*–'be quiet' (Lk. 23:56), *hístēmi*–'stand' (Mt. 2:9), *episkēnóō*–'dwell upon' (2 Cor. 12:9), *kathízō*–'sit down' (Acts 2:3), *koímēsis*–'lying down to sleep' (Jn. 11:13), *anapaúō*–'cause to rest' (Mt. 11:28; mid., Mk. 6:31; etc.), *anápausis* (Mt. 11:29; 12:43 par. Lk. 11:24; Rev. 14:11), *epanapaúomai* (Lk. 10:6), *katapaúō* (He. 4:4, 8), *katápausis* (Acts 7:49; He. 3:11, 18), *sabbatismós* ("sab-

bath rest," He. 4:9), *ménō*–'stay' (Jn. 3:36)]; AV also SABBATH (Lev. 23:24, 39), (BE) QUIET, QUIETNESS, SLEEP, SILENT, STAND, PEACE (Gen. 43:23), PREVAIL (Jgs. 1:35), etc; NEB also PEACE, SECURITY, RESPITE, etc. In Rom. 4:16 the RSV uses "rest on" to translate the preposition *katá* (AV "be by"; NEB "be a matter of"); cf. Gal. 3:12. In Ps. 37:7 (Heb. *dôm lyhwh*) the RSV "Be still before the Lord" is to be preferred to the AV "Rest in the Lord." For "rest" in the sense of "remaining," *see* REMNANT.

I. General.–In both Testaments the noun "rest" most often connotes a physical location free from strife and anxiety. This is sometimes extended to refer to the state of body and/or mind that one experiences in such a place. Rarely (perhaps only in Mt. 11:28-30) does "rest" connote inward peace in either testament. The various verbs for "rest" tend to be either intransitive ("rest, come to rest") or stative ("be at rest"). The causative constructions take one of two forms: "cause (someone/something) to rest" (e.g., Zec. 6:8) and "give rest (to someone/something)" (Ex. 33:14; Dt. 3:20; Josh. 1:15).

II. In the OT.–A. Rest as Settlement in the Promised Land. The root *nwḥ* in both its nominal and verbal forms plays an important role in the historical literature of the OT, especially in Deuteronomy and Joshua–2 Kings. In these writings *nû(a)ḥ/mᵉnûḥâ* generally refers to Israel's successful conquest of and settlement in Palestine. As such, it is also related to the promises to the patriarchs. It is to be noted that the view that "*Deuteronomy* understands the oath to the patriarchs only as a promise of the land" (von Rad, p. 80) is not correct. The phrase "and to their descendants" (11:9; cf. 34:4) brings the promise of progeny explicitly into view (cf. also 1:9-11), and Israel is pictured as a great nation at Mt. Horeb/Sinai. Thus the only part of the promise that remained to be fulfilled was the possession of the land. (*See* LAND II.)

According to one plausible interpretation of the canonical shape of Deuteronomy and Joshua–2 Kings, Deuteronomy represents the prophecy that receives its exact fulfillment in Joshua–2 Kings (Polzin, pp. 18-24). This is analogous to the prophecy/fulfillment motif of 1-2 Kings (von Rad, pp. 205-221). The theological equation of "rest" with the secured settlement of the Promised Land is first introduced in Deuteronomy (3:20; 12:9f.; 25:19; 28:65; cf. also the numerous references to "the land" in Deuteronomy). In Joshua–2 Kings one finds the narrative of the completion of the settlement and the subsequent history of Israel in Palestine. Josh. 21:43-45 asserts that Yahweh had completely fulfilled the promised giving of the land to Israel (cf. also 1:13, 15; 22:4; 23:1, 15), though Josh. 13:1 and Jgs. 1:1–2:5 present a conflicting tradition (see R. de Vaux, *Early History of Israel* [Eng. tr. 1978], pp. 475-680; J. A. Soggin, *History of Ancient Israel* [Eng. tr. 1984], pp. 138-171, 357-367).

"Rest" is also said to have been given by Yahweh to David (2 S. 7:1, 11), but v. 1 fits badly into the context and may be a later insertion; cf. 1 Ch. 17:1 (see P. K. McCarter, Jr., *II Samuel* [*AB*, 1984], p. 191). "Rest" is also associated with the reign of Solomon (1 K. 5:4 [MT 18]; 8:56). The Chronicler attributes rest to Abijah (2 Ch. 16:4 [MT 5]), Asa (15:15), Jehoshaphat (20:30), Hezekiah (32:22), and — perhaps — Solomon (1 Ch. 22:9). In all these places "rest" refers to the safe, secure existence of Israel in Palestine. Echoes of this concept appear also in the prophetic literature; cf. Isa. 14:3; 32:9-20; 63:14; Jer. 31:2; 50:34.

B. The Land's Rest. Characteristic of the redactional framework of the book of Judges is the Hebrew formula *wattišqōṭ hā'āreṣ*, "and the land had rest [for X years]" (3:11, 30; 5:31; 8:28; cf. S. R. Driver, *Intro. to Literature of the OT* [repr. 1972], pp. 163-65). "Rest" here means something different from the *nû(a)ḥ/mᵉnûḥâ* of Josh. 21:43-45; 2 S. 7:1, 11; 1 K. 8:56. Heb. *šāqaṭ* connotes temporary peace and security in this context; cf. also Josh. 11:23; 14:15; 2 Ch. 14:1, 5f. (MT 13:23; 14:4f.).

C. Sabbath Rest. According to Gen. 1:1–2:3 (thought by many to belong to "P"), God "rested" (*šāḇaṭ*, 2:2f.; lit. "celebrate a sabbath") on the seventh day of creation. This tradition is also reflected in certain of the sabbath laws. The Decalogue of Ex. 20 (thought by many to reflect "P" editing) uses this tradition as the motivation for "remembering" (*zāḵôr*, v. 8) the sabbath; cf. also 31:12-17. In contrast, the Decalogue of Dt. 5 (thought by many to reflect "D" editing) uses the tradition of the Exodus as the motivation for "keeping" (*šāmôr*, v. 12) the sabbath. (The other sabbath prescriptions [Ex. 23:12; 34:21; 35:2f.; Lev. 19:3, 30; 23:3] are not formulated with motive clauses.) Israel's sabbath rest is then extended to include resting on special festival days (Lev. 16:31; 23:23-43). Finally, Israel's sabbath rest becomes the analogue for the land's sabbath rest (Ex. 23:10-12; Lev. 25:1-7; cf. Neh. 10:31; 1 Macc. 6:49, 53), the year of release (Dt. 15:1-11), and the year of jubilee (Lev. 25:8-55; cf. Isa. 61:1-3 [par. Lk. 4:16-30]; Jer. 34:8-22; Ezk. 46:17; cf. also Jer. 25:9-12 and its subsequent interpretation in 2 Ch. 36:21 and Dnl. 9:1-27). *See also* JUBILEE; SABBATH; SABBATICAL YEAR.

D. Rest as Death. In Job 3:13, 17 "rest" is used as a metaphor for death (N. Habel, *Book of Job* [*OTL*, 1985], pp. 110-12). This can be compared with other Hebrew formulas that are circumlocutions for death, e.g., "be gathered [niphal of *'āsap*] to one's people/father/grave" (e.g., Gen. 25:8, and 15 times in the OT) and "sleep [*šāḵaḇ*] with one's fathers" (1 K. 2:10; etc. [41 times in the OT]).

E. The Resting of the Holy Spirit. In Nu. 11:24-31 the "resting" (*nû[a]ḥ*) of the Spirit of Yahweh (vv. 25f.) upon seventy of Israel's elders results in ecstatic prophetic utterances. Similarly, Isa. 11:2 predicts that the Spirit of Yahweh will "rest" (*nû[a]ḥ*) upon "a shoot from the stump of Jesse"; here the reference is to the charismatic empowering by Yahweh of an individual Israelite for the purpose of liberating captive Israel. This use of *nû(a)ḥ* should be compared with other verbs used similarly, namely, *hāyâ* (Nu. 24:2; RSV "come upon"; cf. the verbless construction *rû[a]ḥ 'al* [Isa. 61:1; RSV "be upon"]), *lāḇaš* (Jgs. 6:34; RSV "take possession of"), *nāpal* (Ezk. 11:5; RSV "fall [upon]"), and *ṣālaḥ* (Jgs. 14:6; RSV "come mightily [upon]").

III. In the NT.–Few of the references to "rest" in the NT diverge significantly from the OT picture.

A. Hebrews 3:7–4:12 and Psalm 95:7b-11. Psalm 95 is viewed by many scholars as a call to worship or an entrance liturgy connected with the Jerusalem temple (G. H. Davies, *ZAW*, 85 [1973], 183-195). It has two parts. Vv. 1-7a contain the call to worship proper, perhaps spoken responsively by the priest and the congregation. Vv. 7b-11 constitute a "prophetic" admonition, probably spoken by either the priest or a cultic prophet, who introduces in v. 7b a direct quotation from Yahweh (vv. 8-11). It is significant that Heb. *hayyôm*, "today," refers to the day on which this liturgy is spoken. The quotation combines the originally separate traditions of the murmuring in the wilderness (cf. Ex. 17:1-7; Nu. 13–14; Dt. 1:19-46) with the forty years of wandering in the wilderness, which in the Pentateuch results from the Israelites' failure to capture Palestine due to their fear, rather than from the testing of Yahweh at Meribah and Massah. In this context

the phrase "my rest" (Heb. *mᵉnûḥāṯî*) refers to the theological equation of "rest" with secure settlement in the Promised Land.

Hebrews 3:7-11 quotes closely, though not exactly, the LXX version of Ps. 95:7b-11. It is uncertain whether these differences reflect variant textual traditions or deliberate alteration. The quotation is followed by an exhortation in He. 3:12–4:13. 3:12-15 turns the cultic "today" of the psalm into the present historical existence of the Church (Hebrews was written approximately thirty-five years after Jesus' death and resurrection). 3:16-19 establishes the issue at hand as that of belief versus unbelief. 4:1-10 argues that the promise of rest is still available (v. 1) to the Christian community (v. 3). Here the author equates "my rest" (Gk. *tḗn katápausín mou* [LXX Ps. 94:11]) with God's resting (*katépausen,* LXX Gen. 2:2f.) at the end of creation. Consequently, "rest" becomes something spiritual and eschatological. This becomes explicit with the use of *sabbatismós,* "sabbath rest," in He. 4:9. The pericope concludes with an exhortation to enter this rest (vv. 11-13). (*See also* LAND III.)

B. Matthew 11:28-30. In this text Jesus is quoted as promising "rest" (*anápausis*) to those who come to Him (v. 28; cf. Jer. 6:16; Sir. 51:23-27). This "rest" is different from the eschatological "rest" of He. 3–4. It begins immediately after an individual comes to Jesus, and it refers to the Christian's subsequent experience of "peace, contentment and security in God" (*DNTT,* III, 257).

C. 1 Peter 4:14. The "resting" of the Spirit of Yahweh as charismatic empowering (see II. E above) is alluded to in this verse. Although the syntax of the text is disputed, v. 14 does mention the "resting" (*anapaúetai*) of the Spirit of God upon the "beloved" (v. 12), i.e., the Christian community. Cf. also Acts 2:3, where the tongues of fire "rest" (*ekáthisen*) upon the twelve apostles.

RESTITUTION, MAKE [Heb. piel of *šālam*–'make whole, complete'] (Ex. 22:1, 5f., 11-15 [MT 21:37; 22:4f., 10-14]; Lev. 5:16); AV also RESTORE, MAKE GOOD, MAKE AMENDS; NEB also REPAY, MAKE GOOD; [hiphil and hophal of *šûḇ*–'give(n) back, restore(d)'] (Nu. 5:7f.); AV RECOMPENSE; NEB also PAY COMPENSATION. Certain crimes, including theft and negligence that results in loss to a neighbor, were punishable by paying compensation to the wronged party. On Lev. 5:16, *see* SACRIFICES AND OFFERINGS IN THE OT V.H.

See PUNISHMENTS.

RESTORE [Heb. usually hiphil or (less often) qal of *šûḇ,* also hiphil of *ḥāyâ* ("restore to life," 2 K. 8:1, 5), piel of *šālam*–'repay, make amends' (Lev. 6:5; 2 S. 12:6), etc.; Gk. usually *apokathístēmi*–'reestablish, restore,' also *anakaínō*–'renew' (He. 6:6), *apodídōmi*–'give back' (Lk. 19:8), *halízō*–'salt, make salty' ("saltness be restored," Mt. 5:13), *artýō*–'season' ("saltness be restored," Lk. 14:34), *katartízō*–'restore,' 'make complete' (Gal. 6:1; 1 Pet. 5:10)]; AV also DELIVER, BRING AGAIN, BRING BACK, CAUSE TO RETURN, etc.; NEB also GIVE BACK, SEND BACK, RETURN, REPAY, BE MADE SOUND AGAIN, etc. A term used more than 120 times in the RSV. Nearly 90 percent of these occurrences are in the OT, where it translates the hiphil of *šûḇ* (lit. "cause to return") in the vast majority of cases.

The principal meanings in the OT are: (1) to renew the fortunes of God's people Israel after the experiences of devastation and exile (see below); (2) to give back a possession (e.g. Gen. 20:7; Ex. 22:26 [MT 25]; Lev. 6:4f. [MT 5:23f.]; Dt. 22:2; Jgs. 11:13; 2 S. 9:7; 1 K. 20:34; 2 K. 8:6; Ezk. 18:7, 12); (3) to rebuild something, e.g., the house of the Lord (2 Ch. 24:4, 12f.; 29:35; 34:10), an altar (2 Ch. 33:16), a wall (Neh. 3:8), a city (Neh. 4:2 [MT 3:33]; Dnl. 9:25), a border (2 K. 14:25), streets (Isa. 58:12); (4) to recoup one's life or health (Ex. 4:7; Ruth 4:15; 1 K. 13:6; 2 K. 5:10, 14; 8:1, 5; Ps. 30:3 [MT 4]; Isa. 38:16; Jer. 15:19); (5) to regain one's spiritual well-being (Ps. 23:3; 51:12 [MT 14]; Lam. 5:21); (6) to recover one's previous office (Gen. 40:13, 21; 41:13; Isa. 1:26).

Four of the fourteen RSV NT uses of "restore" refer to physical healing (Mk. 8:25; Mt. 12:13 par. Mk. 3:5; Lk. 6:10), three to spiritual renewal (Gal. 6:1; 1 Pet. 5:10 [AV "make perfect"]; He. 6:4), two to restoring saltness (Mt. 5:13; Lk. 14:34), two to "restoring all things" (Mt. 17:11 par. Mk. 9:12), and one each to returning something owed (Lk. 19:8), restoring the kingdom to Israel (Acts 1:6), and renewing a personal acquaintance (He. 13:19).

Theological interest focuses on the OT passages that promised the restoration of Israel's fortunes (e.g., Dt. 30:3; Ps. 85:1, 4 [MT 2, 5]; Jer. 29:14; 30:3; 31:23; 32:44; 33:7; Ezk. 39:25; Hos. 6:11; Joel 3:1 [MT 2:28]; Am. 9:14; Zeph. 2:7). The ideal terms in which these prophecies were expressed led many to hope for a glorious, national messianic age in which the prophets' glowing hopes would be realized. During the intertestamental period such hopes became attached to the return of the prophet Elijah. In Mal. 4:6 (MT 3:24) it had been prophesied that Elijah would come before the day of the Lord and "restore" (LXX *apokathístēmi*; RSV "turn") the hearts of the fathers and children to each other, symbolizing a spiritual and moral restoration of the nation.

In Mt. 17:11 par. Mk. 9:12 the disciples asked Jesus about this coming of Elijah, and He responded that "Elijah does come first to restore all things" (9:12); indeed Elijah had come in the person of John the Baptist (v. 13; Mt. 17:12f.). John was rejected, just as Jesus would be. Nevertheless, John's work began the promised messianic restoration, the foundation for which was completed in Jesus' life, death, and resurrection. The consummation of this hope is yet future.

In Acts 1:6 the disciples, still thinking in limited national, ethnic, and material terms, asked Jesus if the immediate postresurrection period would witness the restoration (*apokathístēmi*) of the Kingdom to Israel. Jesus did not deny that such a time would come for God's people, but He set before them a task of worldwide witness that would greatly enlarge their vision of the Kingdom's nature and participants.

In Acts 3:21 the NEB uses the phrase "the time of universal restoration [*apokatástasis*]" (RSV "the time for establishing all"; AV "the times of restitution of all things"). The hope that Peter here expresses looks forward to "times of refreshing . . . from the presence of the Lord" (Acts 3:19), when Christ returns to reign in power. Then the hopes of the prophets will receive their final fulfill-

ment in the kingdom of God. For the content of this "restoration," *see* ESCHATOLOGY. T. F. JOHNSON

RESTRAINT [Heb. *resen*–'bridle'] (Job 30:11); AV BRIDLE; [*'āḇar*] ("throw off restraint," Prov. 14:16); AV RAGE; NEB HEEDLESS; [*pāra'*] ("cast off restraint," Prov. 29:18); AV PERISH; NEB BREAK LOOSE; [*mēzaḥ*–'girdle'] (Isa. 23:10); AV STRENGTH; NEB MARKET; [Gk. *bróchos*] (1 Cor. 7:35); AV SNARE; NEB TIGHT REIN; [*synkleiō*] (Gal. 3:23); AV SHUT UP; NEB CLOSE PRISONERS. The restraining influence of the Lord is for the benefit of His creatures, and they cast if off to their own peril (Prov. 29:18). For example, His law controlled people to bring them to Christ (Gal. 3:23). The MT of Isa. 23:10 should probably be emended to read *māḥōz,* "harbor," "market-place," as in the NEB.

RESURRECTION.

The doctrine of resurrection from the dead as an eschatological phenomenon appeared late in the history of Israelite religion and developed fully in NT times. But the OT provides the context of belief from which the idea of resurrection comes and according to which it must be understood. The roots of the concept are there, both positively and negatively, although the terminological apparatus is not. Upon subsequent reflection various OT texts have provided a basis for the concept, although the texts in their original settings did not necessarily indicate resurrection.

I. In the OT
  A. Absence of a Doctrine of Resurrection
  B. Sheol and the Fate of the Individual
  C. Resurrection and National Hope
II. In the Intertestamental Literature
III. In the NT
  A. Terms
  B. In the Gospels
  C. In Apostolic Teaching
IV. In the Early Church

I. In the OT.–A. Absence of a Doctrine of Resurrection. Israelite religion had two profound ethical foci: individual and corporate. Individuals lived out their lives under the law, in faith, seeking the guidance and protection of Yahweh, conducting their households and rearing their children with the promise and the law of Yahweh closely in view (Dt. 6:4-15). Promises that referred to the future were generally applied to the descendants of the righteous (threats were applied to the descendants of the wicked) or to the corporate destiny of the Israelite nation. The profound emphasis upon Yahweh as the God of life and upon the perishing existence of the wicked before the power of Yahweh (Pss. 1, 73; Prov. 14–15) tended to make Judaism a this-worldly religion and to suppress speculation concerning the realm of the dead. The future was interpreted as a national future, under the guidance of Yahweh.

Even from preexilic times there are occasional biblical references to revivification. Three occur in Kings (1 K. 17:17-24; 2 K. 4:18-37; 13:20f.). The "Song of Hannah" (1 S. 2:1-10) contains the statement "The Lord kills and brings to life; he brings down to Sheol and rises up" (v. 6). Moreover, two OT figures experienced translation (i.e., assumption into heaven before death): Enoch (Gen. 5:24) and Elijah (2 K. 2:9–11). But the paucity of statements and the lack of theological reflection indicate an absence of doctrine: translation from this life to another realm is an exception, not applicable to people in general, and revivification implies no more than a temporary release from the inevitable. The "Song of Hannah," according to R. Martin-Achard (*From Death to Life* [1960], p. 57), only indicates Yahweh's power to intervene victoriously, and it should not be seen as an adumbration of resurrection.

In addition, the repugnance of Israel to religious syncretism made virtually impossible an easy acceptance of the beliefs concerning an afterlife that were found in other ancient Near Eastern religions. Egyptian religion centered on the passage from this life to the next, and Zoroastrianism, the religion of ancient Persia, taught a doctrine of resurrection (*see* RELIGIONS OF THE BIBLICAL WORLD: EGYPT; PERSIA). When the OT indicates a conception of immortality, it studiously avoids the Egyptian doctrine. Death is not celebrated, and the occasional OT references to offerings made to the dead (Dt. 26:14; Ps. 106:28f.) and to oracular consultation of the dead (1 S. 28:3-19; Isa. 8:19) are entirely negative. Israel probably encountered the Persian belief in resurrection during the Exile, when national hopes were lowest and the eschatological dimension of prophecy was strong. Yet even then there was no wholesale appropriation of foreign belief, only a reinforcement of elements already in Israelite religion that pointed toward an eschatological culmination of the divine plan in a renewed Israel.

Neither does OT religion derive a doctrine of the afterlife from a theory of rewards and punishments. The Kantian notion of eternal life as a hypothesis that gives a ground to morality and coherence to ethical norms is not supported by Scripture. Ethics, for Israel, related to this life. Promises of blessing to the righteous and punishment to the wicked almost invariably relate to the present. This is true both in the wisdom literature (Prov. 3:5-8; 10:2f., 22-25, 27f. 30; 13:6-9, 21; etc.) and in the prophets (Isa. 10:1-4, 18-31; Hos. 6:1-6; Mic. 2:1-13; etc.). Future reward or restoration of the nation is expressed in this-worldly language, even when the thrust is eschatological. Moreover, when the ethic of reward and punishment begins to break down for lack of evidence, and the ethic itself is treated with skepticism, the result is not a hope of ethical resolution in an afterlife but an admission of the weakness of human perception and of the unfathomable will of God (cf. Job 40:1-9; 42:1-6; Eccl. 3:16–4:4).

B. Sheol and the Fate of the Individual. OT religion, nevertheless, does not teach an extinction of the human being at death but a passage from this life into a shadowy, underworld existence in *šᵉ'ôl,* the place of the dead. In Ecclesiastes the gloomy portrait of Sheol states the problem well: "For there is no work or thought or knowledge or wisdom in Sheol, to which you are going" (9:10). Such a place is viewed with terror: it represents a severance not only from life but also from the praise of Yahweh (Ps. 6:5; 115:17; Isa. 38:18f.). Sheol is, then, virtually synonymous with the grave.

Although the OT affirms that the dead go down to Sheol, it has little discussion about the nature of existence there. Heb. *nepeš,* "breath," frequently understood as the life-principle and translated as "soul," can also indicate the corpse (Lev. 19:28; Nu. 5:2; Hag. 2:13); thus one is not dealing with a doctrine of disembodied souls descending to the underworld. The dead are described as "shades," *rᵉp̄ā'im* (e.g., Job 26:5; Ps. 88:11 [MT 12]; Isa. 26:14), and their existence is at best a half-life, a shadowlike silent drifting totally unlike life in the world. For the most part, OT religion took little interest in the SHADES: they had passed beyond ethics, covenant, and promise.

Against this fate, the psalmist protests to Yahweh: may his enemies go down to Sheol in terror (Ps. 55:15 [MT 16]),

and may the Lord preserve him from the same end (16:10; 86:13). In these prayers lies a first hope of life in the divine presence beyond the grave. The Psalms do not speculate in such a way that Sheol is turned into a place of life and hope; instead, the strength of God stands proof against death itself. Even Sheol is not hidden from Yahweh (139:8; cf. Prov. 15:11). God does have the power to vindicate the faithful in the face of death (Job 19:25-27; 33:18-28; Ps. 30:3 [MT 4]; 49:14f. [MT 15f.]; 55:15f. [MT 16f.]; Prov. 15:24-26; Jonah 2:1-9 [MT 2-10]). Still, this expectation is not a doctrine of resurrection: in most cases (cf. Ps. 68:20 [MT 21]) it merely suggests a temporary deliverance from death and offers a direction in thought upon which later doctrine will build.

See HADES; SHEOL.

C. Resurrection and National Hope. The psalmist's struggle with the great tension between the doctrine of the underworld and the belief in the life-giving presence of Yahweh yields a primary OT basis for later doctrines of the resurrection. The hope for deliverance expressed in Ps. 16:10 is associated in the NT with the resurrection of Christ (Acts 2:27, 30f.). The stronger impulse in the OT, however, is to interpret Yahweh's power over death in national rather than in individual terms. The promise made by God to the descendants of the righteous, the covenant with the nation, would stand. As the dire prophecies of doom to unrighteous Israel began to be fulfilled, the prophets viewed the promises as a future renewal beyond the present disaster. The return to the true worship of Yahweh by faithful survivors of the national disaster would fulfil, on the human side, the conditions necessary for renewal of the covenant and rebirth of the Israelite nation.

Several passages radically state this hope of national rebirth as a resurrection from the dead: "Come, let us return to the Lord. . . . After two days he will revive us; on the third day he will raise us up, that we may live before him" (Hos. 6:1f.). Ezk. 37:1-14 also belongs to this category: into the valley of dry bones the breath of the Lord comes with new life. The prophecy does not deal with a literal resurrection but with the national hopes of Israel. Some scholars have found similar implications in the last Isaianic "Servant Song" (53:10-12), where the personified nation is offered unto death and subsequently rewarded. Here in particular the theme of national suffering leading toward future reward and new life moves easily toward a theme of an individual representative of the nation who suffers and is resurrected.

At a later stage of the development of OT prophecy, the hope of national renewal becomes a fully eschatological hope, associated with the "Last Day" (*see* DAY, LAST) or DAY OF THE LORD, when the Lord will wreak vengeance upon the idolatrous world and vindicate His people. Isa. 26 is usually viewed as belonging to this category: here the prophet contrasts the shades of departed idolaters, who have passed out of memory (vv. 13f.), with the dead of chastened Israel, who "shall live, their bodies shall rise" (v. 19). The life-giving power of Yahweh is like "the dew" which will fall "on the land of the shades" (v. 19). Probably this refers to the resurrection of individuals and begins the association of resurrection with right worship, if not with a theory of ethical reward. The one undisputed reference to a final resurrection of individuals in the eschatological revivification of the nation is Dnl. 12:1f. The great prince Michael will lead the nation, the people will be delivered, "and many of those who sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt." This reference, however, remains bound to the national hope and does not yet refer to a final ethical separation of all the righteous from all the unrighteous.

II. In the Intertestamental Literature–The theme of life after death, only vaguely present in the OT, comes to full expression in the Apocrypha and Pseudepigrapha. Moreover, both aspects of OT meditation are elaborated: the problem of the individual's communion with God beyond the threat of Sheol, and the association between national and individual resurrection. Also, it is in this literature that the ethical issue of reward and punishment begins to coalesce with the teaching concerning resurrection, not as a cause but as a natural corollary. Sirach (*ca.* 180 B.C.), which might be of earlier origin than Daniel and which predates both Wisdom and 2 Maccabees, is ambivalent on the question of immortality. Like the psalmist, Sirach states that the shades no longer praise the Lord; this teaching, in turn, relates to an explicit denial of individual immortality (17:28-30). What remains of the individual after death is the memory of a good name and honorable life (37:26; 46:11; 49:13). Nevertheless, Sirach can speak of a national immortality (37:25) and, in poetic language, of the revival of the bones of dead judges and patriarchs (46:11f.; 49:10). There is also a promise of immortality to those who please God by obeying the law (19:19), but this is probably an interpolation.

The issue of individual immortality finds positive treatment in the Wisdom of Solomon. There are two probable sources for the doctrine: Hellenistic teaching concerning the preexistence and immortality of souls (cf. Wisd. 8:19f.; 9:15), and the ethical quandary of earlier wisdom literature over the common fate of the righteous and the wicked after death (Eccl. 9:3-6, 9f.). The theological basis for Wisdom's doctrine, moreover, is the doctrine of creation in the divine image: human beings were made for incorruptibility (Wisd. 2:23). God "did not make death" but "created all things that they might exist" (1:13f.). It is therefore an error to think that the souls of the righteous die and go to affliction and destruction: they suffer in this life but after death have peace with God (3:1-9). This doctrine appears subsequently in the thought of Philo, in Jubilees (23:31), and in 4 Maccabees (5:37; 9:8; 13:17), and it was attributed by Josephus to the Essenes (*BJ* ii.8.11 [154-58]).

In 2 Maccabees one encounters a fully developed doctrine of bodily resurrection. This is no longer a theological speculation but a firmly held belief sufficient to support allegiance to the law under the threat of painful death. The martyrs tell the tyrant Antiochus of their hoped-for resurrection and pronounce him liable to divine punishment (7:9, 11, 14); thus resurrection is viewed as a reward for obedience under the life-giving covenant of God (v. 36). Prayers and sin offerings are offered for the dead in the hope of resurrection (12:43-45). This resurrection, moreover, is physical and implies the restoration of the mutilated bodies of the righteous (14:46). In these passages (7:14; 12:43) Gk. *anástasis* first appears as a term for resurrection of the dead, but it is applied only to the righteous. Since 2 Maccabees does not contain an eschatological statement, the relation of its doctrine of resurrection to national hopes can only be assumed. The historical situation is, of course, analogous to that of Daniel.

As the above discussion of 2 Maccabees indicates, there is disagreement in the intertestamental literature over the extent of the resurrection. The "Ethiopic Enoch" (1 Enoch) contains virtually all the options in its collection of prophecies. Its "Similitudes" (chs. 37–71), which comprise a separate document, teach the resurrection of all Israel. The first section (chs. 1–36) of the remainder of Enoch indicates a resurrection of the righteous only, while

a later section (chs. 91–104) indicates a future immortality for the soul only (cf. 103:3f.). Another section (chs. 83–90) mirrors the theology of Daniel in its vision of a final defeat of unrighteousness, and the reestablishment of Israel. The resurrection is of the righteous only (90:33); the wicked and apostate, however, are cast into an eternal fire, which implies some doctrine of eternal torment (vv. 20-25). This picture of the end time significantly includes the conversion of the Gentiles (90:30) and their participation in the kingdom.

The idea of a resurrection of all humanity to a double judgment and double recompense occurs in three of the pseudepigraphal books. The Testaments of the Twelve Patriarchs (*ca.* 135-100 B.C.) mentions the resurrection of the patriarchs and heroes of the OT and a subsequent double resurrection, with the righteous going to the right hand of God and the wicked to the left (T. Benj. 10:6-8; cf. T. Jud. 25:4). The other two works, the Syriac Apocalypse of Baruch (early 2nd cent. A.D.) and 4 Ezra. (*ca.* 100 A.D.) are Jewish works, but the latter has strong theological affinities with Christian teaching and was preserved and used by the Church.

Baruch contains an extremely important description of the final resurrection that sheds some light on Paul's very difficult statements in 1 Cor. 15. Baruch the scribe inquires of God whether the resurrected will again receive their corruptible bodies which have been involved in evil or whether their bodies will be changed in the same manner that God will change the world (49:2f.). God answers that the earth will give back the dead just as it received them, so that they may recognize one another. The righteous will then be glorified and "receive the world which does not die." They will be unaffected by time and age and made more glorious than the angels (51:2-12). The wicked (probably without any transformation) will be consigned to the fires of Gehenna (85:13).

4 Ezra details even more clearly the separation of the righteous from the wicked (7:32-38), but it adds two unique features to the doctrine of resurrection. First, the time between the death of an individual and the final resurrection is explained by an elaborate doctrine of an intermediate state of torment for wicked souls and joy for the righteous (7:75-101). Second, the final resurrection of all mankind occurs after the death of "all who draw human breath," including the Messiah, and after seven days of "primeval silence" (7:29-31).

It may be observed that the Apocrypha and Pseudepigrapha contain no single doctrine of resurrection but manifest several distinct tendencies. The general development must be explained as an increasing desire to answer the great question of individual and national destiny and, if one assumes that the question is answered in an eschatological manner, the question of the relation of ethical religion to the final judgment. It is also apparent, from late developments in Jewish teaching (Syriac Apocalypse Baruch and 4 Ezra), that the NT expectation is not unique but fits into the broader context of late Jewish meditation on the last things. Josephus testified (*BJ* ii.8.14 [763]) to the pharisaic belief that the righteous will rise from the intermediate state and receive other bodies.

III. In the NT.–A. Terms. The NT employs two pairs of Greek terms with reference to Christ's resurrection: the verb *anístēmi* and the derivative noun, *anástasis*; and the verb *egeírō* with its noun form, *égersis*. Of the two verbs, *anístēmi* has a more general significance. It can refer to rising up in rebellion (Mk. 3:26; Acts 5:36), to rising or standing to read, pray, or speak (Lk. 4:16; Lk. 22:45), and even to raising children (Mt. 22:24). In fact, in the NT *anístēmi* usually does not refer to the Resurrection. *Egeírō* can also have the general sense of stand (Mt. 2:13f.), appear (24:11, 24), or awaken (Lk. 13:25) but Paul uses *egeírō*, with only one exception (Phil. 1:17), for the divine work of raising Christ from the dead (Rom. 4:24f.; 6:4, 9; 7:4; 8:11; 10:9; 1 Cor. 15:4, 12, 15; Gal. 1:1; Eph. 1:20; etc.), for the raising of other believers (1 Cor. 6:14; 2 Cor. 4:14; Eph. 5:14; Col. 2:12), or for the resurrection of the dead (1 Cor. 15 passim; 2 Cor. 1:9).

The noun *égersis* occurs only once, in a reference to the Resurrection (Mt. 27:53). *Anástasis* is used, almost universally, as the noun for "resurrection of the dead." Coenen (*DNTT*, III, 276) may be correct in the contention that *egeírō* indicates "the action of God on and through Christ," while *anístēmi* generally refers to "that which happens in the realm of human experience." This certainly could be the implication of 1 Cor. 15:12-21, where Paul used *egeírō* exclusively in reference to Christ and the dead being raised by God, but employed *anístēmi*, not *égersis* (which might have been expected), for the resurrection of the dead. *See* RAISE.

B. In the Gospels. Jesus' preaching as recorded by the Gospel writers presupposes a doctrine of resurrection. In this belief the NT stands on the side of Jewish religion as found in the more apocalyptic of the apocryphal and pseudepigraphal writings, in the teachings of the Pharisees, and, indeed, in the development of the OT hope. The most bitter opponents of a doctrine of resurrection were the Sadducees, who chose to accept only the literal view of the OT canon and go no farther.

This opposition provided Jesus with the opportunity to propound His own view of resurrection explicitly (Mk. 12:18-27 par. Mt. 22:23-33; Lk. 20:27-38). The Sadducees argued that by law a man must marry the wife of a deceased brother (Dt. 25:5-10); if seven brothers die in succession, each marrying in turn the widow of the first, to whom does the wife belong in the resurrection? Jesus refused to answer the question on the mocking level on which it was posed. Instead, He spoke of the difference between this life and the resurrected life: here marriage exists, but not there. The primary purpose for the levirate marriage described by the Sadducees was that a former brother's hope for children by his wife might be realized by a latter brother (*see* HUSBAND'S BROTHER). But in the resurrection, Jesus argued, "They cannot die any more, because they are equal to angels and are sons of God" (Lk. 20:36). The primary reason for marriage ceases because human nature has changed. Jesus' doctrine has affinity with that of 1 Enoch, and the Syriac Apocalypse of Baruch in its assertion of an angelic, spiritualized nature.

Following this basic refutation, Jesus added a second, theological consideration: the Sadducees, who held fast to Torah, confessed the "the God of Abraham and the God of Isaac and the God of Jacob" and also believed this God to be the "God . . . of the living" (Lk. 20:37f. par.). They, not Jesus, were in contradiction, for the resurrection teaching alone can show the patriarchs to be alive, "for all live to him" (20:38; cf. Mt. 22:32 par. Mk. 12:26f.). The resurrection of the patriarchs is taught in Sirach, 4 Maccabees, and the Testament of Benjamin (see II above); again Jesus stands in remarkable continuity with earlier meditation. It is impossible to say, however, if His teaching implies an intermediate state in which the souls of the patriarchs await final resurrection. The Lukan conclusion, "for all live to him," extrapolates from the life of the patriarchs to the resurrection of all. In the immediate context this might imply a resurrection of the righteous only, but the teaching of Jesus elsewhere indicates a full resurrection of the righteous to bliss and of the wicked to torment (Mt. 8:11f.; 25:31-46; Lk. 13:28f.;

14:14; cf. Acts 24:15). The idea of a final judgment also implies the resurrection of all (Mt. 25:31-46; cf. 11:22-24).

In John's Gospel the theological implications of Jesus' teaching are further elaborated. Jesus' discourses in John manifest Him, the Son of man, as the agent in resurrection who bestows upon His people the life given Him by the Father (Jn. 6:53-58). Not only did John, like 1 Enoch, connect the coming of the Son of man with the resurrection (cf. 1 En. 51:1; 61:5), but he also emphasized the ethical ground for the resurrection in and through Christ: one must believe, hear the voice of the Son, and experience spiritual renewal (Jn. 5:25f.; 6:40, 52-58). In this Gospel Jesus' miraculous acts of raising the dead (acts that are not in themselves factors in the doctrine of the resurrection, except insofar as they have eschatological significance) manifest the power of life in Him, the power of resurrection, which even in this life defeats death. Jesus Himself is the resurrection and the life (Jn. 11:24-26). Moreover, the Johannine narrative of Jesus' postresurrection appearances evinces that Jesus' postresurrection body had both a spiritual nature (20:19, 26) and a physical nature (20:20, 27; 21:13, 15).

C. In Apostolic Teaching. The most obvious differences between Jesus' and the apostles' teaching on the resurrection are that the latter rests not only on earlier doctrine (including Jesus') but also and primarily upon the fact of Jesus' resurrection as it defines the life of faith and the preaching of the Gospel. In addition, the attempt to find the roots even of Paul's thought in Greek ideas of the soul and its immortality ought to be rejected (cf. Salmond, pp. 405f.; also note Charles, pp. 80, 155f.; Russell, pp. 19f., 387f.). This rejection does not mean that Greek language had no impact on the transmission of Jewish thought or that the entire NT did not arise out of a Hellenistic-Jewish milieu, but only that Hebrew religion was the origin for NT views on resurrection, not Platonism, and that the apostolic witness gives no inkling of real "body-soul dualism." In the NT the soul is not by nature immortal, but immortal only by the will of God; nor is soul a pure intelligence almost accidentally united with body (as in Platonism), but rather the center of individual identity and moral consciousness (cf. Ridderbos, pp. 544-49).

1. Non-Pauline. The few references to resurrection in non-Pauline apostolic writings occur in 1 Peter, Hebrews, and Revelation. Hebrews considers the resurrection of the dead to be one of the most basic doctrines for the new convert (6:1f.). The author views Abraham's willingness to sacrifice Isaac as an act of faith resting on Abraham's belief in God's power to raise the dead (11:19). Even more significant as a development in doctrine and a utilization of tradition is the interpretation of the two OT revivifications as resurrections grounded in faith (11:35; cf. 1 K. 17:17-23; 2 K. 4:18-36)). Although Hebrews does not discuss the final resurrection, it has a well-developed teaching concerning Christ's second coming to save His people at the final judgment (9:27f.; 10:37). They will be brought to glory through Christ and will have the vision of God (2:10; 12:14).

First Peter sets forth even more briefly the promise of a heavenly inheritance, "imperishable, undefiled, and unfading," (1:4). It is given to those born again "to a living hope through the resurrection of Jesus Christ" (1:3). The fact of Christ's resurrection gives confidence to believers (1:21) who have been born again "of imperishable seed" (1:23). Jewish eschatology and its view of the resurrected life accord with this view very closely. In addition, two extremely difficult passages in 1 Peter (3:19f.; 4:5-6f.; cf. 2 Pet. 3:4) may refer to an intermediate state during which moral progress may take place — as adumbrated in 2 Macc. 12:43-45.

Likewise Revelation speaks cryptically of the "first resurrection" (20:5f.) that precedes the final resurrection to judgment. This "first resurrection" may refer to a populating of the millennial kingdom or it may refer to the new birth of believers during the age of the Church preceding the end.

2. Pauline. For the sake of convenience, the Pauline doctrine of resurrection can be divided into two sections: teaching about the future resurrection of believers to salvation, which is intimately related to Paul's expectation of the coming kingdom and the eschatological appearance of Christ; and the elaborate representation of the resurrection itself as a transformation of the individual believer.

In portraying resurrection as a future event, Paul contrasted the lowly, crucified existence of Christians in the present age with the glory that will be bestowed upon them in the second coming of Christ (Phil. 3:20f.). Christians know the power of Christ's resurrection and share in Christ's sufferings in the hope of the future resurrection from the dead (vv. 10f.). Faith in the past event of Christ's resurrection as the basis of future hope is the foundation of Paul's preaching (1 Cor. 15:12-20). Christ's victory over death is the first fruit, to be followed by the new life of those who belong to Him (v. 23); destruction awaits those who do not follow Christ (Phil 3:18f.). This latter point seems to refer to a future resurrection of the wicked to judgment, but Paul only hinted at that event (2 Cor. 5:10). Like John, he so intimately linked resurrection with life in Christ that the resurrection of the wicked is left undescribed, as of a different order (cf. Jn. 5:25-29).

The doctrine of a double resurrection — of the righteous and of the wicked — leads naturally to the question whether an interval of time separates the two. Support for this view is frequently drawn from 1 Cor. 15:23-26 and 1 Thess. 4:16f. Such an interpretation of the first passage rests upon the assumption of a final battle involving Christ (1 Cor. 15:25), after believers are resurrected at His second coming (v. 23). But this assumption is negated by the identification of the final enemy as death (v. 26), which is defeated in the fact of the resurrection of the dead. The resurrection of the wicked is not mentioned at all here. A similar view results from careful examination of 1 Thess. 4:16f. Here the statement that the dead in Christ will rise first simply places this resurrection before the reunion of the resurrected believers with those alive at the time of the second coming (v. 17). In order for this text to indicate a resurrection of believers before the final resurrection, the text must refer to events before the end time and to Christ's coming from heaven prior to His final coming. But the text will not bear such interpretation. The most likely reading of these texts, in the light of resurrection in the Gospels, suggests one final resurrection at the time of the second coming, judgment, and dawn of the kingdom. This reading accords with the teachings of 2 Tim. 4:1 and the doctrine of Paul as recorded in Acts 24:15. (For a presentation of the two-resurrection interpretation see W. S. LaSor, *The Truth about Armageddon* [1972], pp. 171-175.)

Paul's discussion of the nature of the resurrected body is bound up with the development of NT doctrine away from the older assumption that resurrection belongs to the restoration of Israel toward the wider sense of resurrection's cosmic significance Those who live not for themselves but for the sake of Christ, who died and rose for them, are in Christ and belong to "the new creation" (2 Cor. 5:15, 17). "The redemption of our bodies" belongs to "the revealing of the sons of God," the event for

which the entire creation waits and in which it will be freed from "bondage to decay" (Rom. 8:19-23). The event toward which Paul pointed is a transformation of all things, a reconcilliation made possible by the blood of the Christ by whom and for whom all things have been created (Col. 1:15-20). At the center of this creative work is the ultimate future of those who have been set free from sin and death in Christ. The transformation of humanity in the resurrection is the focal point of the transformation of all things — much as humanity, created in the image of God, is the focal point of the Genesis creation narratives.

In Paul's vision of the resurrected body, conquered death plays a role. The body's death and burial is like a seed planted in the earth. Death becomes not a terror but a transition (1 Cor. 15:35f.). For Paul the transition itself and the seed image imply a difference as well as a continuity between the present body and the resurrected body. The "sown" body is only the "kernel" of what will be. God bestows the new body and determines its character (vv. 38-41). The thought here may be similar to that in 2 Cor. 5:1-4, where Paul spoke more radically of the destruction of the present human body and viewed the resurrected body as a "heavenly dwelling" which is "put on," as new clothing that brings life. The present body is "terrestrial," the future body "celestial" (1 Cor. 15:40).

In the resurrection of the dead the perishable becomes imperishable, the weak and the dishonored become powerful and glorious: "It is sown a physical body, it is raised a spiritual body" (1 Cor. 15:44). Here Paul gave a clue to his meaning. The present body is *psychikón,* animated by *psyché,* whereas the resurrected body is *pneumatikón,* animated by *pneúma.* Since it is God's power in Christ that raises up the dead, a power quite beyond the natural capabilities of humanity, it is also the divine and heavenly power of spirit, *pneúma* that continues to vivify the renewed body. There is a new life but a continuity of human identity; those made in the image of the first Adam, "the man of dust," are drawn toward the image of the last Adam, the Christ. This is a new creation, but it depends on the first which necessarily preceded it (vv. 45-49). Since perishable flesh and blood do not inherit the kingdom, the perishable must "put on" the imperishable, the mortal must "put on" the immortal (vv. 50-53; cf. 2 Cor. 5:1-4). Paul's doctrine has much in common with the Apocalypse of Baruch and probably with the pharisaic doctrine in which he had been trained, but it also accords with the Gospel accounts of the resurrection body of Jesus and must be seen as dependent on the earliest Christian community's sense of the reality of the risen Lord.

3. Conclusion. The apostolic teaching, as a whole, represents a development of teaching in strong continuity with the OT faith as mediated through the intertestamental literature. On the one hand, the incipient universalism of OT monotheism, together with the growing belief of the prophets that the final kingdom would encompass all the earth (Hag. 2:6f.; Zec. 14:16f. Dnl. 7:14, 27; etc.), reaches fruition in the doctrine of a general resurrection for the establishment of God's kingdom. On the other hand, the OT concern over the relation of Yahweh, the giver of life, to the shades in Sheol develops in the direction seen in the Psalms, toward a doctrine of God's power over Hades itself (cf. Acts 2:27, 31 with Ps. 16:8-11). Even Hades must give up its dead before the power of God (Rev. 20:13f.). In this teaching the individual and the corporate elements of OT teaching conjoin: the general resurrection implies a corporate destiny that encompasses all human beings, that pays just recompense to all the righteous and to all the wicked (Acts 24:15; Rev. 20:11-15), and that establishes the kingdom of God for the resurrected righteous, although this kingdom, in contrast to Israel, is spiritual and incorruptible, as are its human inhabitants (cf. Rev. 21:1-4).

IV. In the Early Church.–The early Church's doctrine of the resurrection maintains the balance of the NT doctrine by emphasizing both individual and corporate resurrection. Among the Apostolic Fathers, Ignatius gave the clearest statement of the hope in individual resurrection. Just as in the Pauline corpus, individual resurrection is seen as intimately related to the resurrection of Christ and the believer's present life in Christ. What is distinctive in Ignatius's teaching is the relationship established between present cross-bearing under persecution, in imitation of Christ, and the hope of resurrection as the reward given those who persevere in Christ (cf. Ign. Rom. 5:3–6:3; Smyrn. 4:2).

A less personal and more broadly eschatological view appears in the Didache and Epistle of Barnabas. The Didache (ch. 16) describes the impending tribulation, the rise of false prophets, and then Parousia, when the general resurrection of the dead will occur. The Epistle of Barnabas sees the course of history mirrored in the six days of creation and expects the final judgment, the resurrection of the righteous to bliss and of the wicked to torment, to inaugurate the millennial seventh day (15:1-9; 21:1). All the Apostolic Fathers placed a strong emphasis on the Christ-like ethical righteousness of believers, so that they inherit the resurrection instead of the judgment inherited by the world.

The Apologists added a theoretical dimension to the doctrine of resurrection. Several separate treatises, one attributed to Justin and one that unquestionably comes from Athenagoras, address this doctrine. Both writers assumed that the resurrection assures the eternal integrity of the person. Athenagoras argued that soul and body are a unity: the soul does not do good apart from the body, nor is the body sinful without the will of the soul. If the soul deserves punishment for sin, so does the body — but if the soul is worthy of preservation by God, the body also receives the gift (*De resurrectione mortuorum* xviii-xxiii). Death, which severs body and soul, appears as unnatural, the result of sin, whereas resurrection affirms the purpose of humanity, which is eternal life with God (xii-xvii). This doctrine stands in harmony with the power of God (i-x). While desiring to present Christianity in a manner intelligible to classical culture, the Apologists demonstrated, however, that they were intent upon preserving a biblical view of human nature and human destiny against Platonism and Gnostic dualism.

These teachings carried over into the next generation, as shown by the centrality of the doctrine of resurrection of the dead in the earliest credal statements of the Church and by the almost strident anti-Gnostic statements of Irenaeus and Tertullian affirming the resurrection of the body. Like the book of Hebrews, the Church of the 2nd and 3rd cents. viewed resurrection as a basic teaching and included it, as of equal weight with forgiveness of sins and the Last Judgment, in the baptismal formulas (cf. Irenaeus *Adv. haer.* 1.9.3f.; see also the Apostle's Creed). Tertullian in polemics strongly linked the reality of Christ's body to the hope of salvation, insisted upon Christ's resurrection, and viewed it as the paradigm for the resurrection of believers (*De carne Christi* 3, 5, 11-13; *De res.* 38).

Throughout patristic teaching the identity of the resurrected body with the earthly body is affirmed. Indeed, most of the biblical teaching is reproduced and developed in a broad synthesis: the dignity of the human being as

a creature of God, the ethical end of humanity under the divine pledge of reward for obedience, the unity of the human being in body and soul, and above all the power of God that is as capable of resurrecting the body as it was capable of creating the world out of nothing (cf. Tertullian *De res.* 11-15; Irenaeus *Adv. haer.* v. 4.1–7.2).

Although the Fathers' millennial interpretations differed, they uniformly taught a general resurrection to life and glory for the righteous and to eternal death and punishment for the wicked. Their source of doctrine was both the NT and the OT, including such texts as Isa. 26:19 and Ezk. 37, the latter having become in the history of interpretation a prophecy of resurrection (cf. Irenaeus *Adv. haer.* v. 15.1-4; 27. 1–28.4; Tertullian *De res.* 14, 17. 29).

I. Importance of the Resurrection
II. Resurrection Proofs
  A. Empty Tomb
  B. Post-resurrection Appearances
  C. Experience of the Christian Church
  D. Absence of Satisfactory Alternative Explanations
III. Modern Understandings
IV. Theological Significance

I. The Importance of the Resurrection.–Jesus' resurrection has always been understood as something unique; it was the defeat of death, not a return to life like Lazarus's raising. It followed a unique life and an atoning death, and thus it means more to say that Jesus rose from the dead than it would to say that anyone else did so. Significantly Jesus predicted several times that He would rise (Gk. *egeírō* in Mt. 16:21; 17:9, 23; 20:19; 26:32; 27:63f.; 28:6f.; Mk. 14:28; Lk. 9:22; Gk. *anístēmi* in Mk. 8:31; 9:9, 31; 10:34; Lk. 18:33; 24:7, 46; etc.). To see all these repeated and confident predictions as the creation of the early Church is difficult. If the Gospel records are trustworthy, then Jesus did predict that He would rise. His veracity is involved.

Also the Christians emphasized the Resurrection when they first set about preaching in Jerusalem (Acts 1:22; 2:24, 32; 3:15; etc.). That Jesus rose from the dead after He had been killed gripped them and became the main point in their proclamation. Certainly the early Church was built on the preaching of the Resurrection. If there had been no Resurrection there could have been no preaching; the Resurrection was central for the believers and gave them their message. If there was no Resurrection Christianity was built on a foundation of sand. Paul in particular saw the Resurrection as fundamentally important; without it Christian preaching and faith were vain and empty (1 Cor. 15:14). He affirmed confidently that Christ had risen and that this is the assurance that redemption has been accomplished and that believers will one day rise. He saw the Resurrection as closely linked to the divine power in the believer's life (Rom. 6:9-11; Eph. 1:19f.; Phil. 3:10).

II. Resurrection Proofs.–Matthew Arnold called Jesus' resurrection "the best-attested fact in human history," and judged by traditional historical criteria it certainly comes out well. Some historians object since the Resurrection is unique: we have nothing with which to compare it, no class in which to put it. Traditionally three main lines of evidence attest it.

A. Empty Tomb. The four Gospels agree that Jesus' body was placed in a tomb after His crucifixion and that two days later the tomb was empty. There are differences in the accounts but impressive agreement on the main fact. K. Lake suggested that the women came to the wrong tomb and when they were told "He is not here" (Mk. 16:6), meaning "He is in another tomb," they misunderstood and spread the story of a resurrection. Such an explanation raises more questions than it answers. Why did the women experience "trembling and astonishment" and fear (Mk. 16:8)? These are not normal responses to the suggestion that one is looking in the wrong place. And did no one ever find the right tomb? Improbabilities abound, so that Lake's idea is seldom advanced today.

Significantly no one in NT times seems to have disputed the point. W. Pannenberg points out that Jewish polemic "shared the conviction with its Christian opponents that Jesus' grave was empty" (*Jesus—God and Man* [Eng. tr. 1968], p. 101). All known traditions agree that the tomb was empty (though disagreement exists as to whether the body was raised or removed). Paul does not specifically say that the tomb was empty. Consequently some scholars have argued that he knew nothing of the empty grave, but relied wholly on the appearances. But the vanished body is clearly in mind when Paul says that Jesus "was buried, that he was raised on the third day . . . "(1 Cor. 15:4); these words mean that if a physical body was buried, then a physical body was raised. In fact Paul's treatment of the resurrection of believers clearly implies this. "We shall all be changed," he writes, and then explains that "this perishable nature must put on the imperishable, and this mortal nature must put on immortality" (1 Cor. 15:52f.). Paul does not refer to the survival of an immortal soul but to a change in this mortal body, and integral to his whole argument is that Jesus has undergone this change. The speeches in Acts also imply an empty tomb. For example, "he was not abandoned to Hades, nor did his flesh see corruption" (Acts 2:31), and "they . . . laid him in a tomb. But God raised him from the dead" (Acts 13:29f.).

Some argue that the earliest resurrection stories concern appearances of the Risen One and that the empty tomb is a later invention. But this thesis overlooks the Pauline evidence and fails to notice that the initial emphasis upon the appearances does not preclude knowledge of the empty tomb. Perhaps the empty tomb, though known from the beginning, was not talked about much while people preferred the exciting stories of personal meetings with Jesus. Attention was drawn to the tomb when it was seen to be important.

Now if the tomb was empty the question of how this came about confronts us. Apart from the Resurrection itself the only explanation is that friends or foes removed the body. But friends would not have done this. Although

citing no evidence Joseph Klausner held Joseph of Arimathea responsible for the deed. Klausner's reasoning has convinced few. The disciples did not expect a resurrection and no evidence exists of a conspiracy to steal the body as the chief priests and Pharisees feared (Mt. 27:64). Moreover, these enemies of Jesus secured a guard over the tomb to prevent any grave robbing (27:65f.). The conclusive objection, however, is that the early disciples suffered for preaching the Resurrection, as the early chapters of Acts clearly show. If they had stolen the body they would not have been ready to suffer for saying that Jesus rose. And if the sect was troublesome enough to be persecuted, the Jewish leaders would have been eager to purchase information about the theft and the location of the body. The whole suggestion is improbable.

The idea that Jesus' enemies removed the body is no better. They would have had even less motive than His friends. By taking the body Jesus' enemies would have ironically encouraged resurrection stories to arise. And, of course, the guard would have presented as big a difficulty to them as to the Christians. But what is conclusive is the enemies' failure to produce the body when Jesus' followers began to make converts. Producing the body would have disproven the Resurrection once and for all. It would have dealt a death blow to the new sect. That the Jewish leaders did not do so evinces that they did not have the body. W. H. Griffith Thomas, quoting Fairbairn, stated, "The silence of the Jews is as significant as the speech of the Christians" (*ISBE* [1929], IV, 2566).

Significantly the grave clothes were undisturbed (Lk. 24:12; Jn. 20:6f.). Long ago Chrysostom pointed out that grave robbers would not have stolen the body naked because of time restraints and other difficulties ("it was buried with much myrrh, which glues linen to the body not less firmly than lead" [*Hom. 85 on Jn. 4*]). The Gospels describe an orderly scene, not one of confusion that would have resulted had the grave clothes been torn from the body. That something extraordinary had taken place is shown by the fact that the beloved disciple "saw and believed" (Jn. 20:8).

B. Post-resurrection Appearances. The five written accounts (the four Gospels and 1 Cor. 15) tell of ten different appearances by Jesus after the Resurrection, five on the first day, five more spread over forty days, then an abrupt cessation. Although it is not easy to fit together the events of the first Easter morning, it is not impossible. Westcott (see *Gospel According to St. John* [1954], pp. 335f.) and others have done it. Knowing which, if any, is the correct reconstruction is impossible, but each certainly shows a possible arrangement of the information in a credible sequence. Moreover, the problem of varying accounts is not confined to the Resurrection; problems arising from differences in details in the sources attend almost every event in history, but this does not shake our certainty about the main events. Differences in the scriptural records only indicate accounts from independent witnesses, not the repetition of an official tale.

Significantly great variety exists among the witnesses. The first to see Jesus were women, which is an incidental note of veracity. A manufactured story would have indicated only men, for the Jews did not accept the testimony of women (Josephus gave the rule, "From women let no evidence be accepted, because of the levity and temerity of their sex;" *Ant.* iv.8.15 [219]). But Jesus also appeared to one person (e.g., Cephas, 1 Cor. 15:5), to two on the way to Emmaus (Lk. 24:13–15), to the Eleven (Jn. 20:24-28), and on one occasion to more than five hundred (1 Cor. 15:6). Especially important is Paul, an intelligent and well-educated man and one with a bias against the Christians. But he is emphatic that he saw the risen Jesus, and this certainty altered the whole course of his subsequent life. This must have occurred within a very few years of the crucifixion (cf. the time notes in Gal. 1:18; 2:1), and perhaps as little as one year as H. C. Kee and F. W. Young suggested (*Living World of the NT* [1971], p. 215). Importantly Paul made the claim early, for his letters, the oldest available documents that record this claim, were written within twenty or thirty years of Jesus' death. Paul says that "most" of the five hundred to whom Jesus appeared were still alive (1 Cor. 15:6); thus they could be interrogated. That there is no evidence of any serious attempt to refute the testimony to the Resurrection is significant.

Objections raised in regard to the appearance narratives include that they are not coherent, and that they give contradictory accounts for the locations of the appearances; e.g., Matthew, Mark, and Jn. 21 point to Galilee as the location, while Luke and Jn. 20 indicate Jerusalem as the place. But appearances in one locality do not rule out appearances in another. Moreover there may well be a quite natural explanation; C. F. D. Moule suggested that the movements of pilgrims to Jerusalem for the great feasts and their homeward return accounted for the difference (*NTS*, 4 [1957-58], 58-61). Also, "Galilee" might be a name applied to a place on the Mt. of Olives (*see* JERUSALEM III.H.16).

C. Experience of the Christian Church. The conviction that Jesus had risen from the dead transformed the first disciples. Belief in the Resurrection took place in spite of them rather than because of them. At the time of the crucifixion "they all forsook him, and fled" (Mk. 14:50). When the women told the eleven that they had seen Jesus alive "these words seemed to them an idle tale, and they did not believe them" (Lk. 24:11). The two on the way to Emmaus were clearly without hope, even though they had heard the women's report (24:13-24). Yet these same people shortly afterward risked imprisonment and even death as they preached "Jesus and the resurrection." What caused this astounding transformation? It must have taken hard evidence to convince people like Peter, Thomas, and Paul. Yet they were convinced that Jesus had risen. That people were imprisoned and that Stephen and James suffered death is significant. People do not usually run such risks unless they are very sure of themselves. When confronted with such great perils they are apt to look for an alternative explanation of that for which they may be put to death. But the disciples were quite firm. They were sure of the Resurrection.

It is important to realize the depths out of which faith came. The crucifixion had crushed the disciples. One may argue that the appearances engendered a contagious and growing enthusiasm. But how did it start? Apparently no follower of Jesus retained faith and optimism after the crucifixion. Only gloom and emptiness prevailed, and these elements did not produce a contagious faith. But what happened on Easter morning made the difference.

Enshrined at the heart of Christian worship is this Resurrection certainty, and people do not put what is uncertain or unimportant in the forefront of their approach to God. The first believers were all Jews, and the Jews held tenaciously to their ancient customs. But these new believers replaced the Sabbath as the day of worship with the Lord's day, a weekly reminder of the Resurrection. Regarding their rite of initiation it could be said, "you were buried with him in baptism, in which you were also raised with him" (Col. 2:12). Similarly the Lord's Supper was a thanksgiving for the presence and blessings

of the living Lord, not a commemoration of a dead martyr. The believer's whole worshiping life revolved around the Resurrection.

Further, the Christian Church is not an obscure sect that made a brief appearance on the stage of history and quickly passed away. Instead, it is a living body that is a reality after more than nineteen centuries, marked by diverse troubles, by opposition from different enemies, and by frequent, internal unspirituality and sloth. Its enemies have always been prophesying its speedy demise, but this has not occurred. Indeed, the Church has never had as many adherents as today, and, despite coldness in some of its members, there is still an astonishing vitality about the Church. And the Church's risen and ascended Lord supplies the spiritual power that makes all this possible. If Christ did not rise then the Church's continuing existence is a first-class enigma.

C. F. D. Moule argued this convincingly. He pointed to the fact that the Church was created by the preaching that the Messiah Jesus had been crucified but had risen from the dead. Moule asked, "If the coming into existence of the Nazarenes, a phenomenon undeniably attested by the NT, rips a great hole in history, a hole of the size and shape of Resurrection, what does the secular historian propose to stop it up with?" (*Phenomenon of the NT* [1967], p. 3). Moule did not, of course, argue that the existence of any movement proves the veracity of its teachings. He argued that any great movement flourishes not because its errors but despite them; the dynamic of a movement is the element of truth in it. Moule also said that the one factor characteristic of the Christians, which was the reason for their existence, one which separated them from the Jews, was their conviction that Jesus had risen from the dead. If that was mistaken, how can one account for the appearance and the continuing existence of the Church?

D. Absence of Satisfactory Alternative Explanations. The empty tomb is a fact, as is the continuing existence of the Church that preaches the Resurrection. But are there other explanations than the traditional doctrine of the Resurrection?

Some have suggested that the facts are better explained if one holds that Jesus did not die on the cross. The argument runs that Jesus, overcome by pain and physical exhaustion, fainted and was mistakenly taken down as dead. In the coolness of the tomb He revived and later the women found it empty. They concluded that He was alive and wonderful stories began to circulate. But such an explanation bristles with difficulties. The skilled Roman executioners were not likely to have allowed burial before Jesus was really dead. And how did He get out of the tomb? How could this weak, wounded person stimulate the disciples into the vigorous life of the early chapters of Acts? What became of Jesus? Where did He live and how and where did He finally die? Questions multiply and answers do not appear. Theories like this are untenable and are seldom advanced today.

Others think the explanation is to be found in hallucinations. The disciples were in earnest and really believed that Jesus had risen, but it was all illusion; there was nothing real to correspond to their "visions." At first sight plausible, all such theories ignore what is known about hallucinations. These happen to people more or less expecting them, but the disciples (especially Thomas) never imagined seeing Jesus again. Hallucinations tend to continue once started, but the appearances were mostly on the first day and they ceased abruptly after forty days. Hallucinations are personal, but Paul said that more than five hundred people saw the risen Jesus at one time. The resurrection appearances simply do not conform to the best knowledge about hallucinations.

III. Modern Understanding.—Since the resurrection of Jesus best explains a solid body of evidence, most Christians have always accepted it. But in recent times much discussion has questioned the meaning of "resurrection."

Some draw attention to the problem that attends the meanings of "history" and "historical," which makes the use of these terms with respect to the Resurrection a dubious procedure. By definition, the historical limits historians. They proceed by studying documents, artifacts, etc., and by applying human reasoning to their interpretation. They cannot arrive at any conclusion that does not accord with human precedents and human reason. But no parallels exist for the resurrection of Jesus, and it does not result from a chain of human reasoning. So historians may say that the Resurrection is not to be included among "historical facts."

This often leads to a reverent agnosticism. Thus Günther Bornkamm sees the Resurrection as one of the things "removed from historical scholarship. History cannot ascertain and establish conclusively the facts about" it. Indeed, "The last historical fact available . . . is the Easter faith of the first disciples" (*Jesus of Nazareth* [Eng. tr. 1960], p. 180). He cannot say what did happen on that Easter day, although he sees it as very important. It is "above all else God's acknowledgment of this Jesus," and it is an "event *in* this time and this world, and yet at the same time an event which puts an end and a limit to this time and this world" (p. 184).

Sometimes this kind of agnosticism about the event on Easter day leads to radical conclusions. Thus Rudolph Bultmann accepted the proposition that "Jesus has risen in the kerygma" (see his essay in C. E. Braaten and R. A. Harrisville, eds., *Historical Jesus and the Kerygmatic Christ* [1964], pp. 15-42). "To believe in the Christ present in the kerygma is the meaning of the Easter faith" (p. 42). Similarly Paul van Buren prefers "not to speak of the Easter event as a 'fact' at all . . . We can say something about the situation before Easter, and we can say other things about the consequences of the Easter event, but the resurrection does not lend itself to being spoken of as a 'fact,' for it cannot be described" (*Secular Meaning of the Gospel* [1963], p. 128). Jesus was "a free man" put to death because his freedom was a threat to "insecure and bound men." At Easter Peter and others "experienced a discernment situation;" they then told the story of Jesus "as the story of the free man who had set them free" (p. 134).

W. Marxsen has also found it hard to believe the resurrection stories. He finds Paul the "only direct witness to whom we could appeal" (p. 112), and even Paul must be interpreted very carefully. In the end for Marxsen, "'Jesus is risen' simply means: today the crucified Jesus is calling us to believe" (p. 128). Yet another radical way of viewing Easter is to say with J. A. T. Robinson, that the only way of making the Resurrection intelligible is to see it cosmically, "primarily as a statement about the world;" "The gospel of the Resurrection is the gospel of a new world" (*Christian Freedom in a Permissive Society* [1970], p. 137).

One must always remember that nowhere does the NT say that anyone saw Jesus rise, and nowhere does it describe precisely what happened. There is room for reverent reserve. But certainly the historian can say more than the aforementioned theologians will allow. For although they seem to deny the possibility of a miracle on the physical level, they are prepared to settle for a change in the disciples. They do not seem to reckon with

RESURRECTION OF JESUS CHRIST

the fact that this does not get rid of the miracle. It does not even get rid of the physical, for such a "change" means a mental process and this involves the brain. As F. G. Downing put it, "it would have to have been a 'physical' event of some order to have been an *event* at all. A human 'mental' change is as physical as resurrection" (*Has Christianity a Revelation?* [1964], p. 81 n.1). One is left inquiring what it was that caused the mental change. Little point exists in exchanging the question, "What happened to the body of Jesus?" for "What happened to the brains of the disciples?" If Jesus was not raised in the way the disciples said He was, then a miracle caused them to think that it had happened. But whatever God did on that Easter convinced the disciples of Jesus' resurrection and this formed the basis of their preaching. This, of course, introduces a moral question. Must one believe that God made the disciples believe something that was not true?

Historians agree that the early disciples believed that a resurrection had taken place, but find themselves unable to say more. A. Richardson quotes Bornkamm's words about "the Easter faith" as being "the last historical fact," and says, "But such an attitude involves the abandoning of historical method altogether, for the historian cannot admit that there are any 'last facts' in history, for they would be causeless events" (*History, Sacred and Profane* [1964], p. 196). Something caused the faith of the disciples and a refusal to discover the cause is poor historical procedure. Was it possibly caused by Jesus' resurrection from the dead, or were the disciples mistaken or deluded? Few today would espouse either of the last two options, for "historical research has not produced any convincing evidence that the event of Jesus' resurrection fits the model of myth, pure legend or delusion" (T. Peters, *CBQ*, 35 [1973], 481). The idea that God intervened and raised Jesus at least covers the facts; nothing else suggested so far does. Admittedly the strict application of the historical method does not "prove" the Resurrection. Yet the facts do point to this.

Those who make a somewhat more cautious assessment of the evidence often suggest keeping open the possibility that Jesus' bones still rest in the soil of Palestine. But is this being fair to the evidence? In the end it means that Jesus' body remained dead; all that happened in the Resurrection was that the disciples somehow received the assurance that Jesus still lived. But, as S. Neill says, "the disciples were *not* stating that Jesus continued somehow to survive in the unseen world. They affirmed that death had been conquered; that by a tremendous manifestation of his power God had raised Jesus out of Sheôl." They did not say simply that God had vindicated Jesus, but that "the whole universe had become a new place" *Interpretation of the NT: 1861-1961* [1964], p. 288). These cautious people do well to remind us not to make too much of the evidence. But they must be reminded not to make too little of it either. Specifically that aspect of the NT that emphasizes the defeat of death must receive serious attention. This has always been an important part of the authentic Christian message, and the defeat of death does not mean the decaying of a dead body in the grave.

IV. Theological Significance.–Certainly the NT writers attach theological importance to the Resurrection. They keep returning to it and find in it a rich mine of spiritual truth. It is a vindication of Jesus. People had rejected Him and had cruelly put Him to death, but God reversed this. Christ died for our sins and the Resurrection is the assurance that His death is effective (1 Cor. 15:14-17, 22). "God has made him both Lord and Christ, this Jesus whom you crucified" (Acts 2:36; cf. 2:23f.; 3:15; Rom. 1:4; 4:24f.; He. 13:20; etc.). While the NT writers occasionally say that Jesus rose from the dead, mostly they say that God raised Him (or similarly that He "was raised"). This resurrection triumph includes a victory over "the principalities and powers," a victory God won in Christ (Col. 2:13-15).

The Resurrection means the union of believers with Christ; His people are no longer separated from Him. Christ explicitly promised "I am with you always, to the close of the age" (Mt. 28:20; cf. "I go away, and I will come to you," Jn. 14:28). He has opened up for us "the new and living way" whereby we approach God (He. 10:20). God has "made us alive together with Christ . . . and raised us up with him, and made us sit with him in the heavenly places in Christ Jesus" (Eph. 2:5f.). The Resurrection has released a new power for Christian living (Phil. 3:10). For the early Christians the Resurrection was not simply a fact of past history. It affected their daily living and a "walk with Christ" was for them a vital reality.

But the Resurrection means more than individual salvation for it inaugurated the new age. Christ has delivered us from "the present evil age" (Gal. 1:4; cf. Eph. 2:2). In Him there is a "new creation; the old has passed away, behold the new has come" (2 Cor. 5:17). The Jews looked forward to the resurrection of the dead at the end of this age. God would raise the dead and the new order would appear. The Christians held that Jesus' resurrection had already inaugurated the new age, so that believers experience now a foretaste of the age to come. Christ is "the beginning, the firstborn from the dead" (Col. 1:18; cf. Rev. 1:5); He is "the first fruits of those who have fallen asleep" (1 Cor. 15:20); "we have been born anew to a living hope through the resurrection of Jesus Christ from the dead" (1 Pet. 1:3). Believers can proclaim "in Jesus the resurrection from the dead" (Acts 4:2). This is linked with the gift of the Spirit (Rom. 8:11).

This does not mean that the coming age has arrived in all its fulness. In Christ is the assurance of our future resurrection. Paul is confident that "God raised the Lord" and that He "will also raise us up by his power" (1 Cor. 6:14). The Savior "will change our lowly body to be like his glorious body" (Phil. 3:21). Since "we have been united with him in a death like his, we shall certainly be united with him in a resurrection like his" (Rom. 6:5). Christ's resurrection assures us that we have received much here and now. But it also points to a glorious future.

Further it gives us a place at the Parousia, Christ's return at the end of the age. For "God will bring with him those who have fallen asleep" (1 Thess 4:14), and "he who raised the Lord Jesus will raise us also with Jesus" (2 Cor. 4:14).

The resurrection of Jesus Christ is thus the decisive happening. It set the seal of God on the atoning work of the Savior, it inaugurated the new age, it sent the early preachers out with renewed vitality and a message worth taking to the ends of the earth. It is the hope of God's people still.

RESURRECTION OF JESUS CHRIST, BOOK OF THE, BY BARTHOLOMEW THE APOSTLE. An apocryphal work that purports to have been written by Bartholomew and given to his son Thaddeus. The work was probably composed in Egypt during the 5th or 6th cent. and is extant only in Coptic. See *ANT,* pp. 181-87; H-S, I, 485, 503-508.

See also APOCRYPHAL GOSPELS V.D.

RETAIN. The RSV translation of several OT verbs: Heb. *kālā'* (lit. "restrain" [so NEB], "keep back") in Eccl. 8:8; *'āṣar* (lit. "keep") in Dnl. 10:8, 16; 11:6; the piel of *'āmaṣ* (lit. "strengthen" [so AV]) in Am. 2:14; and the hiphil of *ḥāzaq* (lit. "keep hold of") in Jgs. 7:8; Mic. 7:18 (cf. also AV Jgs. 19:4; Job 2:9). On Jn. 20:23, *see* RETENTION OF SINS.

The AV also uses "retain" to render Heb. *tāmaḵ* (lit. "lay hold of," "hold fast") in Prov. 3:18; 4:4; 11:16 (RSV "hold fast," "get"); Gk. *échō* (in the phrase *échein en epignōsei,* lit. "have in knowledge"; RSV "acknowledge") in Rom. 1:28; and *katéchō* (lit. "hold back, keep") in Philem. 13 (RSV "keep").

N. J. O.

RETENTION OF SINS. The opposite of forgiveness of sins. In Jn. 20:23b the RSV twice renders Gk. *kratéō* ("hold fast, keep hold of") by "retain" in the phrase, "if you retain the sins of any, they are retained" (cf. NEB "if you pronounce them unforgiven, unforgiven they remain"). This contrasts with the preceding clause, in which Jesus says, "If you forgive the sins of any, they are forgiven" (v. 23a). In the Gospel and Epistles of John, forgiveness (or remaining unforgiven) is directly connected with one's believing (or unbelieving) response to Jesus and the confession (or denial) of one's sin (Jn. 1:29; 8:24; 9:41; 15:22, 24; 16:8f.; 1 Jn. 1:9f.; 2:12). Apart from repentance and faith, one's sins are retained. Thus as Jesus' disciples proclaim the gospel, the sins of those who hear it are either forgiven or retained, depending on their response.

RETRIBUTION [Gk. *antapódoma*–'repayment, reward, recompense'] (Rom. 11:9); AV RECOMPENCE; [*misthapodosía*–'reward'] (He. 2:2); AV RECOMPENCE OF REWARD. Deserved punishment for evil, but also deserved reward for good.

It is impossible to document in detail the biblical idea of retribution since it underlies countless passages in both Testaments. Only a brief treatment is attempted here, and the reader is encouraged to consult the bibliography.

IV. Retribution, Salvation, and Love

I. Terms and Concepts.–A. Modern. Many people view the concepts of retribution and vengeance negatively as a petty returning of injury for injury. Even some Christians since the days of Marcion have had trouble reconciling the God of the OT — a "God of vengeance" (Ps. 94) whose law occasionally commands a primitive and pitiless returning of injury for injury (Lev. 24:17-21; Dt. 19:21) — with the God of the NT, who is merciful and forgiving (Rom. 3:25). Indeed, the notion of retribution has become increasingly unacceptable to dogmatic theology (see Martin). The typical way of resolving the tension is to emphasize one of God's attributes at the expense of the other, either to view God uncompromisingly as a wrathful God who condemns the reprobate or apologetically as a gracious God who ultimately pardons all. The disposition of believers often colors their choice of approach.

B. Biblical. Nevertheless, the idea of retribution cannot be viewed apart from the idea of grace. Indeed, the Hebrew and Greek words for "vengeance" generally refer to a legitimate exercise of sovereignty that simultaneously overpowers the guilty offender (punishment) and rescues the innocent victim (mercy). *See* VENGEANCE; VINDICATE. Thus the Hebrew roots *ysr,* "reprimand," and *ykḥ,* "rebuke," refer to retributive acts that are simultaneously punitive and salvific. The crucial issue is how God's retribution and wrath relate to His grace and mercy (see IV below).

II. Human Retribution.–The most common experiences of retribution are those of rewards and punishments meted out by fellow human beings. These play important roles in inducing conformity to expected norms, whether personal or civil.

A. Personal Retribution. 1. Private Dealings with Dependents. In the most basic of all private spheres, the family, parental retribution is essential to child-rearing (cf. Prov. 13:24; 22:15; 29:15). Similarly, employers can promote or demote employees (this idea surely lies behind many of Jesus' parables, e.g., Mt. 20:1-16; 25:14-30), and masters can reward and punish slaves (Eph. 6:5-9; Col. 3:22-25).

Of course, abuse of such retributive power pressures the community to intervene. The Bible consistently maintains that God's people are to exercise love, justice, and

fairness in all their private dealings with others, especially dependents (cf. Ex. 22:21-27; 23:9). They should never provoke the legitimate indignation of the larger community (Rom. 13:3).

2. Private Dealings with Others. a. Positive Retribution. Since the receipt of a reward or benefit places the recipient under obligation to the donor, reciprocity has always been an effective way of securing friendships and interdependencies. But in the kingdom of God all benefits are seen to come from God; thus, no believers who benefit others can claim obligations due, since in God's kingdom they are merely acting as agents of the King, i.e., God (Lk. 14:12-14; cf. also 17:7-10).

b. Negative Retribution. Private individuals (or groups) taking it upon themselves to punish non-dependents (e.g., taking revenge against others for wrongs done) is almost never viewed favorably. Even in ancient Israel those who acted as "avengers of blood" had to defer to some expression of public sentiment. *See* AVENGER; REFUGE, CITIES OF. Private blood feuds, vendettas, and vigilantism herald uncontrolled and escalating violence, until one party is either destroyed or grows weary of violence. Significantly the first clear biblical reference to such vendettas appears only twenty-three verses after the expulsion from Eden (Gen. 4:23f.), for they are an expression of the fall.

God's people are to repudiate the desire for private revenge and self-vindication (Prov. 24:29). Instead of responding to others destructively, they are commanded to take constructive initiatives (Mt. 5:38ff.; Rom. 12:14ff.). For them, the *lex talionis* ("What people do to you, do back to them") is inverted into the "Golden rule" ("Do to people what you desire them to do back to you"). While the value of this rule on earth is obvious, too often its reward is not.

B. Civil Retribution. 1. Prescribed by Civil Law. Given the fallen nature of humanity, collective bodies must go to great lengths to delineate contexts where private redress through force is permitted (e.g., self-defense against an unprovoked attack). Community life is possible only when some operative ethical values limit the use of personal force and satisfactorily substitute other mechanisms for resolving grievances (e.g., adjudication, arbitration, reconciliation) in the hope that offenders can be led to conform to the accepted moral virtues.

Inducing such conformity is the purpose of law. Law is the political monopoly of force that rewards good citizens and punishes criminals. Even OT "Israel," as a political state, must be viewed in this context, inasmuch as the dissolution of private virtue — the rejection of God's direct rule — led to the collective desire (and need) for a political state to govern the Israelites (cf. 1 S. 8:7).

2. Ordained by God. Martin Luther noted that while the Church and the gospel it preaches are God's spiritual instruments for saving souls, the state and the legal power it wields are His physical instruments for preserving the world (*On Temporal Authority* [1523]). (Since the NT understands "Israel" now in terms of its ruling Messiah [Jesus], the Christian naturally views God's "Israel" not as another political state ruled through coercive laws but as a unique religious community ruled by Christ through the uncoerced acceptance of the gospel [Jn. 18:36ff.].)

a. For Punishing the Wicked. Scripture declares that secular authorities are ordained precisely to control private vice and self-centeredness, as well as the chaos they would bring (Rom. 13:1ff.; 1 Pet. 2:13ff.). Thus, there is nothing wrong per se when a community, to preserve civil order by means of the political monopoly of force, punishes those who violate civil norms. But God's people, while working and praying for the welfare of their community (Jer. 29:7), must not appeal to the civil authority for personal restitution when unlawfully wronged. Following Christ's example, they are to suffer the wrong (Mt. 5:38-42; 1 Cor. 6:1-8). Nevertheless, God works beneath the human manipulation of civil power, for without the coercive power of law restraining the wicked, creation would turn into chaos.

b. For Benefiting the Good. Also, there is nothing wrong per se when a community enhances social solidarity by rewarding those who conform to the expected norm. The most common rewards are those of prestige (e.g., the reputation of being a "good citizen"). In the Sermon on the Mount (Mt. 5:46–6:18) Christ does not condemn this; He merely states that conformity motivated by a desire for these things is self-rewarding and therefore has nothing to do with God's kingdom and reward (cf. also Jer. 9:23f. and Lk. 6:26).

Thus, while the civil authority is ordained (i.e., "established") by God for His specific purposes (Rom. 13:1), it is not sanctified by God (i.e., made sinless). Our fallen nature means that human norms and expectations, whether individual or collective, are fallible. Therefore even the retributive acts of civil governments are always finally self-serving and often unjust. Once they have ceased to be responsible either to God or to those who most need protection, civil governments inevitably die. Rev. 18 gives apocalyptic significance to this fact.

III. Divine Retribution.—The realization that human retribution (personal and civil) is imperfect and unjust leads believers to hope for a "supreme court," which can overturn human injustices (cf. the biblical references to "innocent blood" and to "blood crying out from the ground" for justice). Scripture, of course, declares God to be such a court (Dt. 32:35). Since His retributive justice is reflected partially in concrete historical experiences, it will be definitively revealed at the close of history.

A. Retribution in History. 1. OT Views. The Bible portrays historical events and persons as instruments for God's retribution (cf. Isa. 10:5-11). It is not that God manipulates events like a puppeteer to reward or to punish petty individuals for their petty conduct. The real point is that in some way events underscore God's fundamental moral concerns. Thus believers must discern and identify those concerns instead of making judgments about whether the affected individuals receive what they deserved. (Even 1 Cor. 11:29f. must be read in this light, since the sickness and death of some in Corinth points to the sanctity of the sacrament, not to the personal enmity of God.) See III.A.3 below.

a. The Mosaic Covenant and the Origins of the OT View. An earlier view was that the OT concept of historical retribution originated in primitive superstition (*TDNT,* IV, 706f.). But later studies confirm that Israel's origins at the time of Moses were not primitive. The well-known similarities between the "Mosaic" type of covenant in early Israel (e.g., Josh. 24:1-28) and Late Bronze Age suzerainty treaties suggest that from the outset Israel had a fairly sophisticated sense of divine activity. These treaties contain (1) a historical prologue recounting the grace and favor of a lord on behalf of an undeserving vassal; (2) a list of obligations the vassal is expected to meet in gratitude for the favor received; and (3) a list of blessings and curses that will befall the vassal as a consequence of obedience or disobedience. *See* COVENANT (OT). These blessings and curses will happen in history, and the Israelite view that God acts retributively in history probably has its origins here.

In this context, OT law is analogous to the obligations imposed on the vassal. Thus the three great law codes of

the OT (Covenant, Priestly, Deuteronomic) all appear in the Pentateuch right after the Exodus narrative recounting God's paramount OT act of favor. Significantly, two collections of blessings and curses also appear in the Pentateuch: one appended to the Priestly Code (Lev. 26), the other to the Deuteronomic (Dt. 28). Undoubtedly these lists anticipate the historical experiences associated with God's retribution (cf. Lev. 26:3, 14; Dt. 28:1, 15). The blessings tend to be brief and the curses lengthy; indeed, the OT (and the NT) place much more emphasis on God's punitive than on His benevolent retribution in history. This seems to indicate not that God delights in cursing, but that the Israelites (and the early Church) had more difficulty identifying God's "rewards" in history than locating His "punishments." Priestly tradition appended a ritual scheme wherein the covenant curse (of death) could be diverted from the sinner and transferred to a substitute (usually a lamb; Lev. 1–6). *See* ATONEMENT, DAY OF.

b. Prophetic View. (1) On Present Adversity. The warnings of the OT prophets to the sinful Israelites drew upon the covenant curses. The prophets viewed the historical adversities that afflicted the covenant people (the conquests by the Assyrians and Babylonians) as God's punitive retribution, which sacrifice alone could not assuage (Isa. 28:14-22; Jer. 7:1-20; Am. 2:4f.; Mic. 3:9-12). The positive purpose of this retribution was to draw the people back to faithful obedience to God (Am. 4:6-11). As J. Levenson observed, "The curses and blessings of the covenant formulary enables [sic] the prophets of Israel to provide a theology of history. Adversity — drought, famine, epidemic, defeat or whatever — could be accounted for by reference to a violation of covenant obligations. Conversely, the prosperity of either the past or the coming age could be seen as a consequence of faithful partnership with God (prophets did not see the present as blessed)" (p. 55).

(2) On Past Benevolence. Levenson's suggestion that past prosperity could be seen as a reward for past faithful partnership with God has some merit (cf. Jer. 22:15), but we must not press this too far. Most prophetic references to God's past benevolence seem to point, not to deserved rewards but to undeserved good fortune (Jer. 2:6f.; Hos. 11:1; Am. 2:9-11; Mic. 6:4f; cf. also Dt. 32:7-14; Isa. 5:2). This suggests that past prosperity is not to be linked with covenant *blessings* (whereby the faithful vassal is rewarded) but rather with covenant *prologue* (where the receipt of an undeserved favor is recounted). Thus the basic thrust of the prophetic appeal to the past is to entice obedience, not by dangling the precedent (and incentive) of historical reward, but by reminding the Israelites of the debt they owe to God for so much undeserved favor.

(3) On Future Benevolence. Similarly, the prosperity of the future is rarely tied to the idea of reward. It is rather something unearned that God graciously showers on an undeserving people, usually after a time of hardship. Sometimes it is even portrayed as a fresh exodus, a new prologue to a new (or renewed) covenant (Isa. 40; 43; Jer. 31:31-34; Ezk. 36:22-32). While future prosperity is often depicted in concrete historical images (e.g., Am. 9:11-15), the future world is also portrayed in terms contrary to "natural" historical experience (e.g., Isa. 2:2-4; 11:6-9). Thus the ubiquitous prophetic phrase "on that day" has a strongly eschatological ring that points the hearer away from the idea that God rewards faithfulness in history. (All these references can be viewed as typological intimations of the resurrection of the dead [cf. Ezk. 37:1-14], which is not "earned" by faithful obedience but is God's free gift to His people [Rom. 6:20-23].)

(4) The Meaning of Present Benevolence. Just as past and future prosperity should be linked to the covenant prologue, so should present prosperity; in no way can it be viewed as a deserved reward for righteousness since, (a) it is God's free gift soliciting a grateful response, and (b) no one is truly righteous (Job 4:17-19; 15:14f.; Eccl. 7:20; Rom. 3:10, 23). The prophets did not view the present as a time to enjoy reward ("Woe to those who are at ease"); they viciously ridiculed the "triumphalism" that interpreted the prosperity and comfort of the moment as God's reward for righteousness (Jer. 7:4; Mic. 2:6; 3:11). For them the present was always the time to respond dutifully in grateful obedience (cf. Lk. 17:7-10). This involved a call for social justice. Those who have been blessed with the means must care for the less fortunate (cf. 12:48). Hence much of the prophetic word was addressed to the wealthy, and one need hardly be reminded of Christ's injunctions to feed the hungry, clothe the naked, etc. If God is benevolent in giving good things to His people, they also ought to be benevolent in giving good things to those in need (1 Pet. 4:10).

A life without adversity must be viewed, then, not as a summary statement about a person's status in God's eyes, but as an introductory statement soliciting a grateful response to the favor received. Good fortune in history is not God's reward for righteousness, it is God's invitation to serve Him. It is to be associated not with the blessings that conclude the covenant, but with the prologue of grace that initiates it.

c. The View in Proverbs. In some respects, the view of God's historical retribution in Proverbs (Prov. 10:1ff.; 25:1ff.) differs from that of the prophets. God is more closely tied to principles of retribution. Human actions determine the future. Historical reward for obedience is a clear possibility. These proverbs seem inordinately concerned with how to secure a prosperous life, and, while the view of retribution is not triumphalistic, it does suggest (contrary to the prophets) that history is preprogrammed to favor the wise and righteous (cf. 11:31; 13:21). The wisdom tradition behind Job (ch. 21) and Ecclesiastes (chs. 3–7) is not so optimistic. Nevertheless, proverbial wisdom states that "a good way will lead to a good end," and this is typologically meaningful to Christians only in the light of the gospel, where Christ (not etiquette) is seen as the way and God's kingdom (not social status) is the end (Jn. 14:6).

d. The Deuteronomistic View. The Deuteronomistic History (Joshua–2 Kings) seems to blend prophetic and proverbial views of divine retribution. On the one hand, it consciously drew upon the idea of covenant blessings and curses (esp. Dt. 28); on the other hand, it viewed God's punitive and benevolent retribution in history as being almost mechanical. The Israelites can guarantee adversity for themselves by sinning or benefit themselves by repenting. In fact, scholars commonly refer to this as the "Deuteronomistic theme," since all the vagaries and uncertainties of history are reduced to this simple pattern (cf. Jgs. 2:11-23; 2 K. 17; 21:10-15).

On the one hand, then, the Mosaic covenant and its emphasis on obedience to God's law reminded the Israelites of their dependence on the grace of God and the moral dimension of their relationship with Him. On the other hand, it presented them with the harsh reality that, being sinful by nature, they could neither evade the covenant's curses nor earn for themselves its blessings.

e. The Davidic Covenant and the Modification of the OT View. The rise of human kingship in Israel brought a new and different type of covenant idea. God no longer judged His people solely by their common obedience to the law. Instead, He judged the anointed kings' obedience

(2 S. 7:14; Ps. 89:30-32). Thus, the fortunes of God's people rested in large part on their king's obedience to God. If the king sinned, his punishment (the curse) would befall him and his people in history, as the Deuteronomistic historian noted (2 K. 21:10-15; 23:26f.). If the king was righteous, his due reward (the blessing) would also be shared by his subjects.

f. The View in Psalms. Many of the Psalms presuppose the idea of God's covenant with David. Yet some of the most disturbing references to divine retribution are found in that corpus. In the so-called individual laments (or imprecatory Psalms; e.g., Pss. 7, 28, 35, 69, 109) a persecuted psalmist prays for God to destroy his oppressors. Indeed, the whole community has a stake in the welfare of the psalmist (28:8f.; 35:27; 69:6 [MT 7]; etc.), who must be a royal figure (80% of these Psalms have a superscript relating them to "David"). One may suspect that here the psalmist dares to ask God to honor his human desire for revenge. Historically, these Psalms of vengeance may well have been composed as prayers that God would assist the Davidic ruler against his political foes. But theologically they lay bare the soul of Christ — the only truly righteous Davidic king (cf. Ps. 22:1 with Mt. 27:46). Thus the Psalms of vengeance become, not the petty request of one imperfect mortal that God destroy other imperfect mortals in punitive retribution, but the deep yearnings of the truest Christian spirit that God will demonstrate in a definitive way His support of righteousness and His opposition to evil.

2. NT Views. a. Gospels. Jesus' teachings stand in the Mosaic covenant tradition of the OT. He seems to have tied divine retribution to covenant obligation (Mt. 24:45-51; Mk. 12:1-9). Like the prophets, He apparently used the notion of covenant obligations, curses and blessings, but with a more clearly eschatological ring. Preisker notes: "If Jesus still retains the concept of reward (and punishment), this is to express the obligation of man to the holy will of God. In relation to God, man stands in responsibility and obedience, and God recognizes this attitude and action to be either good or bad" (*TDNT,* IV, 717). The covenant blessing of life depends upon obedience to the law (Mt. 19:17), but Jesus interpreted the Mosaic law so stringently that no mortal could possibly obey it (Mt. 19:26, and Sermon on the Mount), implying that under such law God can only recognize human attitude and action to be bad, warranting punishment (Paul developed this implication more fully than Jesus did; see below).

Thus Jesus accepted the view that God's punitive retribution for sin is experienced in history. But He was careful to qualify this. For example, when some sought to attribute a man's blindness to his (or his parents') sin, Jesus disagreed, preferring to view it as part of God's mysterious way of working (Jn. 9:2f.). The real issue for Jesus seems to have been whether the sin warranting punishment is defined as overt act (specific disobedience to the law) or latent condition (general inability to obey it). Thus, when reminded of some Galileans who had been butchered by Pilate, and of eighteen persons who were killed accidentally when the tower of Siloam collapsed, Jesus said these were no worse sinners than anyone else; then He went on to pronounce to His audience, "Unless you repent you will all likewise perish" (Lk. 13:5). This can make sense only if Jesus viewed sin not as overt act but as the latent human condition that His audience, the Galileans, and the eighteen of Siloam all had in common, and that made all of them liable in history to the curse of death.

Like the OT writers, Jesus discounted the idea that God's benevolent retribution (reward for righteousness) is experienced in history. Instead He focused on a future benevolence that is unmerited (Lk. 17:7-10), emphasizing the surprise that results from grace. Two of Jesus' most famous parables illustrate this: the laborers in the vineyard (Mt. 20:1-16) and the prodigal son (Lk. 15:11-32). The parables do not focus on what the early workers or the obedient son deserved but on what the late workers and the prodigal son clearly did not. Their reward cannot be tied to their achievement, but only to the grace of the employer and father. Also, Jesus characteristically referred to future "rewards in heaven" (Mt. 5:12) and "treasures in heaven" (Lk. 12:33; Mk. 10:21), which, like the prophetic allusions to the future, deliberately point away from the idea of historical reward on earth. In Mk. 10:29f. Jesus speaks of tangible rewards "now in this time," but they are accompanied by persecution (cf. also the problematic Mt. 6:33). While Christians may pray for a comfortable life in this world (Mt. 6:13), like the Suffering Servant of Isaiah they are to expect suffering ("take up your cross and follow"), and indeed to view it as a sign of an obedience that will be rewarded later (Mt. 5:11f.; also 2 Tim. 3:12).

Thus Jesus' teachings on divine retribution stand clearly in the Mosaic covenant tradition of the OT. This suggests that during much of His career He was more concerned to be a "reformer" of the old (Mosaic) covenant than the (Davidic) "messiah" of the new. Not surprisingly, then, many of His contemporaries regarded Him as a prophet.

b. Epistles. Paul's view of retribution has a clearly Hebraic background (Rom. 2:1-11; 2 Cor. 5:10). Like Jesus, he recognized that God's righteous law is so stringent that no mortal can obey it; therefore the law serves only to condemn humanity, not save it (Rom. 5:13; 7:7-10; Gal. 3:10). Some of Paul's remarks suggest that he too accepted the OT view that God's punitive retribution is experienced in history. He considered the sickness and death of some members of the Corinthian church to be God's punishment for profaning the sacrament (1 Cor. 11:27-30). (Similarly the stories of the deaths of Ananias and Sapphira [Acts 5:1-11], of Herod Agrippa [12:20-23], and of the blindness of Elymas the magician [13:8ff.] all reflect the OT view that sin is punished in history.) Paul's statement that "the wages of sin is death" (Rom. 6:23) demonstrates that he too regarded sin as general human condition, not specific human act (3:23).

Paul (and the Evangelists), writing in the light of Christ's resurrection, circumvented the dilemma posed by the covenant law of Moses by focusing upon the Davidic covenant tradition. Here the welfare of God's people was no longer seen to be contingent upon their own obedience to the law but upon their Messiah's righteousness (see above). In demonstrating complete righteousness, Christ truly earned the covenant blessing of life that, as Messiah, He shares with His subjects (Rom. 5:18f; 6:4; Eph. 1:3-8). The paradox was His death on the cross, which is a covenant curse (Dt. 21:23). Paul (and other NT writers) resolved this by appealing to the OT priestly notion of vicarious atonement: Christ, like the sacrificial lamb, died for the sinfulness of others, assuming the curse that they justly deserved (cf. Rom. 3:25; Gal. 3:13; 1 Tim. 2:6; Tit. 3:5-7; He. 9).

In Rom. 11:9 "retribution" occurs in an OT citation (Ps. 69:22 [MT 23] = LXX 68:23) applied by Paul to unbelieving Israel; the psalmist had applied the words to his own enemies. C. E. B. Cranfield has stated that the general sense of Rom. 11:9 constitutes a wish that "even the good things which these enemies enjoy may prove to be a cause of disaster to them" (*Epistle to the Romans* [*ICC,* 1979], II, 551).

In He. 2:2 the author warns his readers that while transgressors of the law incurred penalties (RSV "just retribution") for their infractions of the message mediated by angels, far more serious consequences await those who neglect the gospel proclaimed by the Son.

3. Summary: God's Punitive Retribution in History.

a. Theological Significance. Since all humanity is sinful in God's eyes, there is good reason to understand historical adversity in terms of God's punitive retribution. The point of such adversity is not to torment human beings but to lead them to an awareness of their mortal frailty and their consequent need for God's healing assistance (cf. "repentance" in the OT prophets). Adversity is a painful reminder that all people stand before God as miserable sinners. God's righteous law must be obeyed, but no one is capable of obeying it; therefore, by definition, everyone lives under the curse of death (Gal. 3:10-14). Death is the guilty sentence our human condition deserves (Gen. 3:19; 1 Cor. 15:22); indeed, it is the only thing certain about mortal life. Thus the expected norm in history must not be the experience of good fortune but rather the experience of adversity, since we are born and entitled to adversity (Job 14:1f.). Adversity does not disrupt a naturally carefree life; rather, good fortune intrudes into a naturally troubled life (cf. Ecclesiastes).

b. Pastoral Application. This perspective is difficult to grasp, since many people assume it their "right" either to avoid adversity or to triumph over it. Hence many familiar problems result when the concept of God's historical retribution is applied pastorally to individual suffering. Undoubtedly psychological and spiritual damage may occur when suffering comes to be viewed, not as endemic to human existence but as personally meted out by God. Instead of leading sufferers to an awareness of general mortal frailty and liability (which can be spiritually constructive), this leads to an agonizing and fruitless search for specific explanations (which can be spiritually destructive). It also leads to the mistaken view that sin is overt act instead of human condition. Historical adversity is then understood not in terms of its transcendent revelation and meaning, but in the mistaken terms of God's manipulation of events to inflict pain upon weaker mortals. Grief-stricken persons agonize like Job, over why God has punished them; "What did I (or someone else) do to deserve this?" The answer may be quite simply, "Nothing, other than being born into the sinful human condition" (Job 5:7; 14:1ff.).

c. Inequity, Caprice, and Unpredictability. But the notion of God's retribution in history is not without problems. The most obvious of these is its apparent inequity: all of us, though equally born into sin, do not equally suffer (e.g., Am. 4:7), although no one can avoid the grave. Thus no apparent justice exists in the seemingly arbitrary dispensing of suffering in history (cf. Job 21). This sometimes leads to the cynical conclusion that God is capricious, weak, or even "dead." But a common purpose underlies both good fortune and adversity, ruling out caprice. Good fortune (as covenant prologue) invites those who experience it to enter into a covenant relationship with the God who bestows it; adversity (as covenant curse) is a summons to repudiate a life alienated from God and His covenant blessings. The purpose of both is ultimately to lead us to repentance and salvation (cf. Am. 4:6-13). Of course, if the choice were ours, we would all choose good fortune, believing ourselves to be the best judge of what our truest needs are. But faith declares God to be a far better judge of this than we are. Faith is undoubtedly tested whenever history presents us with adversities not of our choosing. The consequent unpredictability in history is indeed frustrating, but it is also a necessary safeguard against the human temptation to believe that God's retributive acts in history are final verdicts that either justify or condemn us irrevocably.

In this life, sin and righteousness are so entangled (Rom. 7:13-20; Gal. 5:17) that it is impossible justly to condemn to death the indwelling sin without simultaneously punishing whatever good may also dwell within (Mk. 9:43-48). It is equally impossible justly to reward that righteousness without simultaneously rewarding the sin (Ezk. 33:10-20). A God who desires absolute justice cannot finally punish righteousness nor reward sin in history. Hence history, with all its vagaries, cannot be the stage for God's ultimate retributive acts.

B. Eschatological Retribution. Significantly, God's eschatological retribution is often depicted as a "disentangling" of sin and righteousness. The former is to be discarded, the latter preserved. God will "refine" His people, separating what is precious and desirable in them from what is not (Dnl. 11:35; Zec. 13:9; Mal. 3:3). As John the Baptist said of the coming Messiah, "His winnowing fork is in his hand, and he will clear his threshing floor and gather his wheat into the granary, but the chaff he will burn with unquenchable fire" (Mt. 3:12). Jesus' parable of the dragnet also depicts an eschatological "sorting" of the good from the bad (13:47), as does His famous description of the final judgment wherein the coming Son of Man will separate the nations "as a shepherd separates the sheep from the goats" (Mt. 25:32). *See* APOCALYPTIC LITERATURE; ESCHATOLOGY; JUDGMENT, LAST.

Superficially, such a separation is easily made. Christ, who alone was righteous, received the covenant blessings of everlasting life; all the rest of us, being sinful, must accept the covenant curse of death. But the matter cannot be that simple. In such a scheme sin would succeed in thwarting God's creative plan. But God did not in abstract justice create us to die. He lovingly created us in His own image to have dominion over creation (Gen. 1). God's justice might be fulfilled with all but Christ buried in the grave, but His love is not.

Christ, the second and sinless Adam (1 Cor. 15:45ff.), fulfilled God's plan. Claiming His rightful dominion over creation, He reconciled all of it — even us sinners — with God (Col. 1:15-20). Therefore, all who are claimed by Christ — all in whom His Spirit dwells — have hope beyond the grave (Rom. 8:10f.). Death merely becomes the necessary verdict on the old Adam. Only those who do not possess the indwelling Spirit of Christ have no hope beyond the grave (cf. Rom. 8:9). God's final retributive act awaits the end of history when righteousness will be rewarded in the resurrection and sin will lie buried forever.

IV. Retribution, Salvation, and Love.—The fundamental character of God is LOVE (1 Jn. 4:8). This love, manifested first at creation, is endless. Significantly, there was no need either for God's retributive justice or for His merciful salvation until after the fall; with creation's redemption that need no longer exists, and God's love again rules exclusively.

God's retribution, then, is part and parcel of His salvation, so that *as such* its value should be neither discounted in favor of a benign God who tolerates sin nor inflated to promote the image of a petty and vindictive God. For sin, God's retribution is the verdict of "guilty" and the sentence of death; for righteousness, it is the verdict of "innocent" and acquittal to life. The unifying *theme* is salvation, for nothing can be saved as long as it is in the grip of sin. The OT provides a wealth of analogies:

God's people are not delivered until Pharaoh's hosts are drowned; the Promised Land is not possessed until the heathen nations are driven out; the Jews are not restored until Babylon is defeated. Thus the prophetic DAY OF THE LORD simultaneously signals the destruction of all ungodly powers and the deliverance of God's holy people (Mal. 4:1-3 [MT 3:19-21]; Joel). Similarly, in the NT the grave clearly becomes the place where the grip of sin and death is broken, so that it is simultaneously a conclusive punishment for sin and a portal to salvation and endless life (Rom. 6:7; 8:28-39). As Martin Luther said, "even death itself is compelled to serve the faithful and to work for their salvation" (*The Freedom of a Christian* [1520]).

God in His love seeks to save and redeem His fallen creation. To do so He must destroy the sin that stands opposed to salvation. His retribution is His definitive rejection and destruction of sin. As such, it is an integral part of His love.

G. A. HERION

RETURN [Heb. *šûḇ* (Gen. 3:19; Dt. 3:20; 1 S. 5:11; Job 1:21; Ps. 51:13 [MT 15]; Isa. 10:21; etc.; hiphil, Dt. 17:16; 1 S. 6:3f.; 25:39; etc.), also piel of *šālam*–'repay' (Gen. 44:4), niphal of *'āsap*–'be gathered' (Nu. 11:30), *sûr*–'turn aside' (Jgs. 20:8), *hālaḵ*–'go' (1 S. 2:20); Aram. *tûḇ* (Dnl. 4:34, 36 [MT 31, 33]; haphel, Ezr. 5:5); Gk. *anastréphō*–'come back, return' (Acts 5:22; 15:16), *epistréphō*–'turn around' (Mt. 10:13; 12:44; Lk. 2:39; 8:55; Acts 15:36; 1 Pet. 2:25), *hypostréphō*–'turn away' (Lk. 1:56; 2:20, 43, 45; 4:1, 14; etc.), *anakámptō*–'bend back' (Mt. 2:12; Lk. 10:6; Acts 18:21; He. 11:15), *apodídōmi*–'give back' (1 Pet. 3:9), *epanágō*–'turn back' (Mt. 21:18), *érchomai*–'come,' 'go' (Rom. 9:9; 1 Cor. 16:11), *epanérchomai*–'go back' (Lk. 19:15), *eisérchomai pálin*–'go in again' (Mk. 2:1), *pálin exérchomai*–'go out again' (Mk. 7:31), *synágomai*–'bring together' (Mk. 6:30), *apelpízō*–'hope to receive back' ("expect in return," Lk. 6:35), *antikaléō* ("invite in return," Lk. 14:12), *antiloidoréō* ("revile in return," 1 Pet. 2:23), *karpós*– 'fruit' (Rom. 6:21f.), *antallágma* ("What . . . [is given] in return," Mt. 16:26; Mk. 8:37), *tḗn dé autḗn antimisthían* ("in return," 2 Cor. 6:13), pl. of *amoibḗ*–'recompense' ("some return," 1 Tim. 5:4)]; AV also COME AGAIN, TURN, REWARD, BE CONVERTED, TURN AGAIN, RENDER, etc.; NEB also GO BACK, TURN BACK, COME BACK, REPAY, REJOIN, etc.; **RETURNED EXILES** [Heb. *bᵉnê haggôlâ* = Aram. *bᵉnê gālûṯā*'–'offspring of the exile'] (Ezr. 4:1; 6:16, 19f.; 8:35; 9:4; 10:7, 16); AV CHILDREN OF THE CAPTIVITY, THOSE THAT HAD BEEN CARRIED AWAY; NEB also EXILES. The RSV also used the phrase "in return for" to render Hebrew prepositions such as *bᵉ* (Gen. 29:27), *ḥēlep* (Nu. 18:21, 31), *lᵉ* (Jgs. 8:35), and *taḥaṯ* (Ps. 109:4; Isa. 43:4; Zeph. 2:10). In several passages the RSV follows the versions, reading Heb. *šûḇ* in place of *yāšaḇ* (e.g., 1 K. 12:2 [NEB "remain"]; Hos. 11:11 [NEB "settle"]).

In the RSV OT the verb "return" most often represents a form of Heb. *šûḇ*. In the qal stem *šûḇ* is intransitive, expressing motion back toward a previous location (e.g., the dove returning to the ark in Gen. 8:12) or transition back toward a previous condition (e.g., humanity reverting to dust, 3:19). In the hiphil it is transitive, with a subject causing a direct object to move or revert (e.g., 1 S. 6:3; Neh. 5:11; Ps. 79:12); this construction is more often translated "bring back" or "restore" (*see* RESTORE).

A theologically significant use of *šûḇ* occurs in references to the process of repentance, i.e., the turning of God's sinful people away from evil (e.g., Jer. 18:11; Zec. 1:4; cf. Jer. 25:5; 35:15 [RSV "turn"]; Ezk. 14:6; 18:30 ["repent," "turn (away)"]; 33:11 ["turn back"]) and back to the Lord (Dt. 4:30; 30:2; Job 22:23; Ps. 51:13 [MT 15]; Isa. 55:7; Jer. 4:1; 24:7; Lam. 3:40; Hos. 3:5; 14:1ff. [MT 2f.]; Am. 4:6, 8-11; Zec. 1:3; etc.). The OT prophets repeatedly called on Yahweh's people to turn back to their God, assuring them of His mercy and faithfulness despite their own unfaithfulness (e.g., Joel 2:12f.). Clearly, the OT views repentance not merely as feelings of regret for past sins but as a fundamental reorientation to God, a concrete change in one's allegiance and conduct.

Šuḇ can also be used to denote apostasy, i.e., a turning away from God and toward evil (e.g., Jer. 11:10; RSV "turn back"). In Jer. 3:12, 14, 22 Yahweh calls His apostate people to come back to Him, using a wordplay on two forms of *šûḇ*. The RSV renders the imperative by "return" (in the sense of turning away from evil and back to God) and the participle by "faithless" (a better translation might be "apostate" or "backslidden"; see J. Bright, p. 22).

The verb also occurs in appeals to Yahweh to return to His people (and to the city of Zion) at times when it appears that He has abandoned them (e.g., Ps. 6:4 [MT 5; RSV "turn"]; 80:14 [MT 15; RSV "turn again"]; 90:13; Isa. 63:17; cf. 52:8; Zec. 8:3). Zec. 1:3 and Mal. 3:7 state clearly that Yahweh's return to His people depends on their return to Him.

In several passages *šûḇ* means "return from exile" Ezr. 2:1; Neh. 7:6; Isa. 10:22; 30:10; 31:8, 21; Zec. 10:9; etc.). The prophet Isaiah had a son whom he named Shear-jashub (*šᵉ'ār-yašûḇ*, "a remnant shall return"). The phrase clearly implies both the judgment of exile (only a "remnant" will survive) and the promise of restoration (they "shall return"). *See* REMNANT.

The most common NT verbs for "return" are the compounds with Gk. *stréphō* ("turn, bend") — *anastréphō, epistréphō,* and *hypostréphō* — which are used in the LXX as translations of Heb. *šûḇ*. Where the RSV has rendered "return," these verbs generally refer simply to physical movement back toward a previous location (but cf. RSV "turn" for Gk. *epistréphō* in Mt. 13:15; Lk. 1:16f.; Acts 9:35; etc.).

Two Greek nouns also merit comment. In Rom. 6:21f. "return" represents *karpós,* lit. "fruit"; a better translation here might be "outcome." In Mt. 16:26 "in return for" translates *antallágma,* which means "compensation, something given in exchange."

G. CHAMBERLAIN N. J. O.

REU rē'ū, rōō [Heb. *rᵉ'û*; Gk. *Rhagau*]; AV NT RAGAU. A descendant of Shem; son of Peleg and father of Serug (Gen. 11:18-21; 1 Ch. 1:25; Lk. 3:35).

REUBEN rōō'bən [Heb. *rᵉ'ûbēn*]. The eldest son of Jacob, born to him by Leah in Paddan-aram (Gen. 29:32; 35:23, 26; 46:8f.; Ex. 1:2; 1 Ch. 2:1); and the tribe named for him. Gen. 29:32 seems to suggest two derivations of the name. In the MT it means "behold a son," but the reason given for so calling him is "the Lord has

looked upon my affliction" (Heb. *rā'â bᵉ'onyî*, lit. "he has seen my affliction").

Of Reuben's boyhood there is only the story of his discovery of the mandrakes (Gen. 30:14-17). As the firstborn he should have been leader among his father's sons, but he forfeited his birthright by lying with his father's concubine (35:22). Therefore his tribe apparently never took the lead in Israel; it is named first in Nu. 1:5, 20, but thereafter it falls to the fourth place, Judah taking the first (2:3-9; etc.; cf. 1 Ch. 5:1f.).

Reuben does, however, play a role of leader in the story of Joseph. To Reuben's intervention Joseph owed his escape from the fate of death proposed by his other brothers (Gen. 37:19-22). Although it may be suggested that Reuben's intention to free Joseph was motivated by a desire to rehabilitate himself with his father, there is no need to deny to Reuben certain noble qualities. Jacob seems to have appreciated these and perhaps, therefore, lamented all the more deeply the lapse that spoiled his son's life (49:3f.). It was Reuben who stated that the brothers' trials in Egypt were a fit punishment for their treatment of Joseph (42:22). To assure his father of Benjamin's safe return from Egypt, Reuben was ready to pledge his own two sons (v. 37). Four sons born to Reuben in Canaan went down with him to Egypt (46:8f.).

At the first census in the wilderness Reuben numbered 46,500 men of war (Nu. 1:21; 2:11); at the second they had fallen to 43,730 (26:7). The standard of the camp of Reuben was on the south side of the tabernacle, along with Simeon's and Gad's. With Reuben as leader, these three tribes formed the second division on the march (2:10-16). The leader of the Reubenites was Elizur son of Shedeur (v. 10), whose offering is described in 7:30-35. The Reubenite among the spies was Shammua son of Zaccur (13:4). The revolt against Moses organized by the Reubenites Dathan and Abiram, with the assistance of Korah the Levite (Nu. 16), may have been a Reubenite attempt to assert the rights of the firstborn.

When the Israelite invaders took control of the high plateau E of the Dead Sea and the Jordan, Reuben and Gad requested that they be given this land as their tribal possessions. Moses granted their request, subject to one condition: their men of war must join in the campaign of conquest W of the Jordan until all the Israelites had gained their inheritance in Canaan (Nu. 32:1-31). There is no record of the part that Reuben and Gad actually took in that warfare, but perhaps "the stone of Bohan the son of Reuben," located on the northern boundary of Judah's territory (Josh. 15:6), marked some memorable deed of valor by a Reubenite.

Along with Gad and half of Manasseh, Reuben felt the dangers of being cut off from the rest of their people by the great cleft of the Jordan Valley. Therefore they built a massive altar in the valley, so that in the very gorge that separated them there might be a perpetual witness to the essential unity of Israel. The western tribes misunderstood this action as apostasy and gathered in force to eradicate it. But the explanations of the eastern tribes were entirely satisfactory, and war was averted (Josh. 22:10-34).

The land given by Moses to the tribe of Reuben reached from the Arnon (Wâdī el-Môjib) in the south to the border of Gad in the north. The Dead Sea formed the western boundary and the desert the eastern. The attempt to describe the tribe's boundaries is based on two lists of cities, Nu. 32:37f. and Josh. 13:15-23. Nu. 32:34 lists cities of Gad that lay far S, Aroer being on the very lip of the Arnon; but these may have been an enclave in the territory of Reuben. Josh. 13:15-23 makes clear that the northern border ran from some point N of the Dead Sea ENE and passed to the north of Heshbon. Many scholars (e.g., see *LBHG*, p. 89) have concluded that the list in Nu. 32:37f. is earlier than that in Josh. 13:15-23, which is more detailed. J. Simons regarded the Joshua list as taken out of a context that included a large part of the plateau (the Mishor). Some scholars have maintained that the territories of GAD and Reuben cannot be clearly differentiated, since it seems probable that the cities changed hands when Gad was powerful and Reuben declined, or that Reuben from the beginning settled within the territory of Gad. The most important Reubenite settlements in the lists are Heshbon (identified with Tell Ḥesbân), Elealeh (el-'Al), Baal-meon (Ma'în), and Mephaath (Khirbet Nefa'a S of 'Ammân), and Beth-jeshimoth (Tell el-'Azeimeh in the Jordan Valley N of the Dead Sea). 1 Ch. 5:6-9 states that at the invasion of Tiglath-pileser (Pul) of Assyria, the Reubenites possessed Aroer, and their territory extended "east as far as the entrance of the desert this side of the Euphrates."

Reuben and Gad, occupying contiruous and even to some extent overlapping districts, are closely associated in the history of Israel. Neither took part in the struggle against Sisera led by Deborah and Barak (Jgs. 5:15-17); the text suggests that Reuben may have been absorbed by anxieties concerning its relations with neighboring peoples. Reubenites and Gadites were included, however, among "all the tribes of Israel" who sent contingents for the war against Benjamin (Jgs. 20:10; 21:5).

The need to guard their numerous flocks against attacks from the south and from the desert caused these eastern tribes to develop a warlike spirit and martial prowess. They were "valiant men, who carried shield and sword, and drew the bow, expert in war" (1 Ch. 5:18). Reuben, Gad, and the eastern half of Manasseh overwhelmed the Hagrites, Jetur, Naphish, and Nodab, and greatly enriched themselves with the spoil (vv. 19-22). The Chronicler attributes their victory to their strong trust in God: "they cried to God in the battle, and he granted their entreaty because they trusted in him" (v. 20). These tribes were supporters of David's kingship. David's mighty men included Adina, "a leader of the Reubenites, and thirty with him" (11:42). The eastern tribes sent a contingent of 120,000 men "armed with all the weapons of war" to Hebron in order to make David king (12:37f.). David set overseers over these tribes "for everything pertaining to God and for the affairs of the king" (26:32). Despite their loyalty to David, however, these tribes were among the ten that joined the northern kingdom when disruption came (cf. 1 K. 11:31).

The subsequent history of Reuben is very obscure. Exposed as the eastern tribes were to the hostile influences of Moab and the east, and cut off from worshiping with the other tribes, they probably found the descent into idolatry all too easy. The once powerful tribe of Reuben apparently sank into comparative insignificance; the immediate causes of this decline are unknown. Moab established its authority over the land that had belonged to Reuben. The Moabite Stone (*ca.* 830 B.C.) speaks of Gad but does not even mention Reuben, which had probably become largely absorbed in the northern tribe. Reubenites are named as having suffered in the invasion of Hazael during the reign of Jehu (2 K. 10:32f.). Along with Gad and Manasseh, Reuben "trespassed against the God of their fathers, and played the harlot after the gods of the peoples of the land" (1 Ch. 5:25). This is given as the reason for their being taken into exile by Pul king of Assyria, who "brought them to Halah, Habor, Hara, and the river of Gozan" (v. 26).

The fate of Reuben bears striking resemblance to that of Simeon, for Simeon appears to have been practically absorbed by the tribe of Judah. The prestige that should have been Reuben's in virtue of his birthright is said to have passed to Joseph (1 Ch. 5:1). And Gen. 48:5 refers to Reuben and Simeon being replaced in Israel by the sons of Joseph. Ezekiel finds a place for Reuben in his picture of restored Israel (48:6), however. And Reuben appears also — in this case preceded only by Judah — in Rev. 7:5.

REUBENITES rōō'bən-īts [Heb. *hār^{e}'ûḇēnî*; Gk. *dḗmoi* Rhoubēn]. Members of the tribe of Reuben (Nu. 26:7; Dt. 3:12, 16; 29:8 [MT 7]; Josh. 1:12; 12:6; etc.).

REUEL rōō'əl [Heb. *r^{e}'û'ēl*–'friend of God'; Gk. *Rhagouēl*].

1. Son of Esau and Basemath (Gen. 36:4, 10; 1 Ch. 1:35); the father of four Edomite clan chiefs: Nahath, Zerah, Shammah, and Mizzah (Gen. 36:13, 17; 1 Ch. 1:37).

2. AV also RAGUEL (Nu. 10:29). According to Ex. 2:18, a priest of Midian (vv. 15f.) who became the father-in-law of Moses. Other passages, however, read JETHRO (3:1; 4:18; 18:1-12) or HOBAB (Nu. 10:29; Jgs. 4:11) as the name of Moses' father-in-law. Nu. 10:29 refers to Reuel as the father of Hobab the father-in-law (*ḥōṯēn*) of Moses. W. F. Albright (*CBQ,* 25 [1963], 1-11) attempted to resolve these textual difficulties by proposing that Reuel is the name of the clan to which both Jethro and Hobab (Moses' "son-in-law," emending Heb. *ḥōṯēn* to *ḥāṯān*; cf. NEB "brother-in-law," another translation of *ḥāṯān*) belonged; other scholars have argued that the diversity of names has resulted from a variety of traditions (see comms.).

3. Father of the Gadite leader Eliasaph (Nu. 2:14); called DEUEL in 1:14; 7:42, 47; 10:20.

4. A Benjaminite; son of Ibnijah and father of Shephatiah (1 Ch. 9:8). N. J. O.

REUMAH rōō'mə [Heb. *r^{e}'ûmâ*]. Concubine of Nahor the brother of Abraham; mother of the eponymous ancestors of four Aramean tribes: Tebah, Gaham, Tahash, and Maacah (Gen. 22:24).

REVEAL; REVELATION [Heb. *gālâ*–'uncovered'; Gk. *apokalýptō*–'reveal, disclose,' *apokálypsis*–'revelation, disclosure'].

I. Terminology.–The Hebrew term denoting revelation is the verb *gālâ,* which means "uncover." This word often has a literal and purely secular sense, as in Ex. 20:26. It takes on theological significance when God is the subject, as in 1 S. 2:27, or when the object uncovered is religious or moral, as in 3:7. The OT has no fixed term embracing all that revelation involves. The various verbs for showing, seeing, and appearing, along with the nouns for word and vision, all help to convey the fuller OT understanding. In the NT the verb *apokalýptō* and the noun *apokálypsis* carry the main sense. Here again, however, many materially associated words round out the picture. These include *dēlóō* "declare," *exēgéomai* "expound," *chrēmatízō* "impart," *gnōrízō* "make known," *deíknymi* "point out," or *phaneróō* "show," along with the nouns for manifestation and, of course, word. Naturally these terms find a mixed secular and religious use, and their distribution varies in different parts of the NT. The primary word *apokalýptō,* however, is more exclusively theological in the NT, and, in contrast to some of the other concepts, e.g., "make known" or "declare," it has more of an intuitive than a narrower intellectual emphasis. Corresponding more closely to what the NT means by revelation, it tends to absorb the synonyms and provides the context in which we are to understand their theological use.

II. General Concept.–In a general sense the concept of revelation occurs in many cultures and religions. Its presupposition is an awareness of suprasensory reality. Whether this reality be that of deity, of the future, or of a secret wisdom, it lies outside the normal possibilities of cognition. Nevertheless, confidence exists that there either is or may be a definite knowledge of this concealed reality. The knowledge may come in different ways, but in every case it entails a disclosure of what is at first hidden or secret. The fact that this knowledge arises means necessarily that some type of revelation, whether initiated from the far side, or induced from this side, has had to take place. In more primitive societies, sacred objects and persons held out the possibility of experiencing revelation. In the Greek sphere, dreams formed a common mode for the receiving of supposed revelations, and oracles, astrology, and mantic prophecy promised information, however cryptic, on matters otherwise hidden and unknowable. In the mystery religions, which held out the hope of revelation to initiates, the cultus and its formulas and mystagogues claimed a revelatory function. Mysticism followed the path of revelation by outward or inward vision, often assisted by specific rites, e.g., of purification. Even ancient philosophy, although it might have rejected the idea of transcendent revelation, could discern in the world of phenomena a manifestation of the higher world of ideas. It thus offered a metaphysical version of what religion might describe as natural revelation. Revelation could be sought, then, in many different ways. It might presuppose some outside initiative, it might depend on the proper use of techniques, or it might involve a discerning or disclosure of the hidden meaning of things. For all the differences, however, a common factor exists, namely, that reality embraces a hidden component or components, inaccessible to ordinary cognition, which may be known by a lifting of the concealing veil.

III. OT.–A. Nature. The OT plainly assumes that, in

spite of the sharp distinction between Creator and creature, humanity originally enjoyed an intimate knowledge of God, and fellowship with Him, in virtue of its creation in the divine image (Gen. 1:26; 2:7-25). This experience might still come within the category of knowledge and fellowship by revelation, since God obviously took the initiative in giving the possibility of knowledge and establishing the fellowship. Indeed, an element of command entered into the relationship, i.e., a disclosure of the divine will (cf. 3:3). All the same, the element of human disobedience and sin had not yet had the disruptive effect that would later make necessary the special process of revelation that constitutes the main subject of both OT and NT. What the OT says about the declaration of God in nature and its providential ordering might well be a reflection of the primal revelation. Even if natural revelation forms only a secondary theme in the OT, it obviously has its own importance, especially as we find it in the so-called Nature Psalms. Thus in Ps. 19:1 (MT 2), "the heavens are telling the glory of God; and the firmament proclaims his handiwork." A graphic description of the voice of the Lord in the storm occurs in Ps. 29, and Ps. 104 traces the majesty of God in the heavens and His loving care for all His creatures, animal as well as human. Along similar lines, God's startling reply to Job in Job 38–41 deduces His transcendent power from the mysteries of creation, so that even what is hidden from human eyes points plainly to the sovereign wisdom of the Creator. Similarly, Isa. 40:26 finds abundant evidence of the divine lordship through contemplation of the starry heavens: "Lift up your eyes on high and see: who created these? He who brings out their host by number, calling them all by name." The OT does not draw any particular conclusions from these references to God's manifestation in nature. It does not argue that, by reason of this revelation, all peoples have some knowledge of God, or that many gentile religions contain relics of an original knowledge of God from nature, or even that all human beings ought to know God because He shows Himself so plainly in the wonders of creation (although there are perhaps hints of this in Isa. 40). Nor does the OT specifically try to integrate this aspect of revelation with its primary motif, the special revelation of God as the covenant God of Israel. It neither fashions an independent theology out of natural revelation nor makes this revelation a foundation on which it may erect the theology of special revelation. Instead, it very simply accepts as obvious and incontestable the fact that the works of creation and providence bear witness to the Creator God whom Israel comes to know by His special revelation. It thus finds in natural revelation, not so much the starting-point for an argument in proof of God, but rather an occasion for the praise of God (Ps. 104), for humble self-abasement before Him (Job 42), and for confidence in His sovereign sway over all events and processes as the Creator of the cosmos who is also the Lord of its history (Isa. 40:25-31).

B. History. The reason why God's revelation in nature forms only a subsidiary theme in the OT is that the fall brought with it a more drastic differentiation of humanity from God than that of Creator and creature. In the Bible the problem of knowing God goes far beyond the epistemological difficulty that the Creator does not fall among sensory phenomena as His creatures do. Had it not been for human rebellion, this technical problem would have found an easy solution, as God made Himself known through His handiwork in the world of sense. The fall, however, brought a failure of spiritual perception, which turned the revealing of God in creaturely objects into a concealing. Fallen humanity neither recognized nor acknowledged God in His works but substituted creaturely divinities of its own imagining. It is not that people do not know God at all or have no inkling of His will and commandment. They see God, but they do not really see Him. They know His will, but they pervert it or blatantly defy it. What Isa. 6:10 says about eyes that see not, ears that hear not, and hearts that do not understand might well serve as a commentary on the whole predicament of sinful humanity. Those who put their own imaginings for God and their own codes for His commandments can neither discern God in His works nor His movement in natural and historical processes. He is for them the God of Isa. 45:15: "Truly, thou art a God who hidest thyself." He is the God whose footprints are unseen even though His "way was through the sea" and His "path through the great waters" (Ps. 77:19). As Eccl. 3:11 realistically observes, even though God "has put eternity into man's mind," nevertheless "he canot find out what God has done from the beginning to the end." The problem finds succinct expression in Eccl. 7:29: "God made man upright, but they have sought out many devices."

God's answer to the human plight takes the form of new revelation in His history with Israel. In its many aspects and phases, this revelation covers the whole of the OT. A comprehensive presentation of it is thus impossible in this article. Certain general features, however, call for special attention. The first is that God Himself takes the initiative in this revelatory history. To be sure, the OT carries a frequent summons to people to seek God (1 Ch. 28:9; Isa. 55:6; Jer. 29:13), but it also shows plainly that this seeking is possible only because of God's prior seeking. When human beings go astray, it is God who seeks the lost (Ezk. 34:16). At the very beginning, when Adam and Eve were hiding from God, God "called to the man" in the garden and thereby initiated His revealing and reconciling work (Gen. 3:8f.). Similarly, God called Abram from Haran (12:1-3), made Himself known to Moses at the bush (Ex. 3:1-6), gave Samuel his commission in the temple (1 S. 3:1-14), had David anointed king (16:12f.), and gave the prophets their specific tasks (Isa. 6; Jer. 1:4-19; Hos. 1:1f.; Am. 7:14f.). Authentic knowledge of God and observing of His command do not derive from human effort to think about God and His will but from God's own action in declaring Himself and His will and purpose.

Second, God's revelation has primarily and intrinsically a personal character. God does, of course, reveal many things about Himself. One cannot isolate the person of God from His perfections, works, ways, and will. On the other hand, one cannot make the perfections, works, ways, and will into abstract facts or truths divorced from God's living person. Revelation could not attain its true end if it did no more than convey facts or truths about God as the basis of corresponding beliefs, if it did not bring its recipients into a relationship with God Himself in person. The facts and truths and related beliefs are all important. They undoubtedly come within the sphere of revelation. God would not be known at all did we not also know things about Him. Nevertheless, the goal of God's revealing word and work is not just the imparting of correct information. It is the reconstitution of the fellowship with God that human sin disrupted. For this reason, God's revelation is His personal self-revelation. He Himself came to Abram, spoke to him (Gen. 12:1-3), and made him His friend (Jas. 2:23). He "used to speak to Moses face to face, as a man speaks to his friend" (Ex. 33:11). He knew Moses by name and gave him His own

covenant name (Ex. 33:17; 3:13-15). Here was no impersonal disclosing of new facts or teachings, but the self-revealing of God in person.

Third, God's revelation is a reconciling revelation. God deals not merely with the ignorance of the fallen creature but at the same time with its sin and guilt. The living God makes Himself known as the merciful covenant God who purposes blessing for His people and for all peoples (Gen. 17:1-7). Indeed, at the very point when Israel resists His purpose (Ex. 32), the God of the thunderings of Sinai displays Himself the more fully as the God of grace and pardon: "The Lord, the Lord, a God merciful and gracious . . . keeping steadfast love for thousands, forgiving iniquity" (Ex. 34:6f.; cf. Ps. 103:8-14; Jonah 4:2). The divine words and acts comprise both revelation and reconciliation. Taking away the veil that hides Creator from creature, God removes the obstacle of sin that blocks their fellowship. Related to this aspect are two important factors in God's dealings with His people: (1) the very real but also richly symbolical deliverance from Egypt, and (2) the establishment of the sacrificial cultus as an integral part of what God wills from His people both in the desert and in the land of promise.

Fourth, God's revelation, precisely as the revelation of His person, is a revelation of His will for His people. God reveals Himself as the holy and righteous God (Lev. 19:2; Ps. 11:7; Isa. 6:3). He demands that those made in His image be also holy (Lev. 11:44). He loves righteous deeds (Ps. 11:7). No one, of course, can claim to be fully righteous before God (Ps. 143:2). Hence arises the need for reconciliation. Nevertheless, God's revelation carries with it the revealing of His holy and righteous will that sinful humanity distorts and resists. It is the revelation of the law, of what it means to live a godly life, to "let justice roll down like waters, and righteousness like an ever-flowing stream" (Am. 5:24). Self-revealed as the covenant God, God is the God of command as well as promise: "I will be their God, and they shall be my people" (Jer. 31:33; Ezk. 36:28). He is the God who Himself has given the law, written first on tablets of stone (Ex. 31:18), and finally to be written on His people's hearts (Jer. 31:33; cf. Ezk. 36:26f.).

Fifth, the revelation of God takes written form by God's own self-revealing action. While revelation consists first of living words and acts of God, the words and acts themselves include the inscribing of what God says and does in the permanent record, which becomes the OT. As already noted, God issued the Ten Commandments in written form (Ex. 24:12; 32:15f.; 34:1). All the words of the law are written in the book (Dt. 28:58). Joshua wrote the words of the Shechem covenant in "the book of the law of God" (Josh. 24:26). The Lord told Jeremiah: "Write in a book all the words that I have spoken to you" (Jer. 30:2), and again: "Take a scroll, and write on it all the words that I have spoken to you" (36:2; cf. v. 28). Committed to writing, the story of God's revealing words and works takes the propositional form of transmitted facts and teachings. Yet in this form the story is still the ongoing revelation of the living God. The OT does not support the common antithesis perceived between the propositional and the personal. Later ages know the personal revelation by way of the propositional. The propositional revelation — the record of God's word and work — serves the personal. Merely to know the facts and teachings, of course, is not to know God, but God continually makes Himself known by way of the facts and teachings that record His word and work. God included the composition of the OT in His original self-revealing in order that He might constantly make Himself known in person through this record. To set proposition and person in opposition is just as misleading and unnecessary as to set divine word and act in opposition, as though God's saving revelation could consist only of the one without the other, as though God's word were not also act and His act word. In His revelatory dealings with Israel God both said things and did things, and He caused a record of His words and deeds to be compiled in order that by its statements He might reveal Himself in person to all future generations.

C. Eschatology. Like the wider world outside, the OT recognized that the future, too, falls outside the range of normal possibilities of knowledge. The hiddenness of the future forms a basis for the challenge that Isa. 41:22 issues to the nations and their gods: "Let them . . . tell us what is to happen . . . or declare to us the things to come." Only by revelation can we know the future, and only the true God, the Lord of time, who knows things from the beginning (v. 26), can give this revelation. The revelation, of course, is not just a revelation of the future. It is a revelation of God's sovereign deity: "I am the first and I am the last . . . have I not told you from of old and declared it? . . . Is there a God besides me?" (44:6-8). But the revelation of His sovereign deity is also a revelation of the future. As such it has an eschatological dimension.

In many cases, of course, the reference might be to the more immediate future. Thus God told Moses at the bush that He would use him to bring His people out of bondage (Ex. 3:1-10). He gave Gideon an implicit assurance that through him Israel would find deliverance from Midian (Jgs. 6:14). He used a man of God to announce to Eli the fall of his house and the death of his sons (1 S. 2:27-36). He intimated through Elijah the grisly end of Jezebel at Jezreel (1 K. 21:23). He enabled Isaiah to proclaim the unlikely deliverance of Jerusalem from the Assyrians (Isa. 37:21-35), the future subjugation of Judah to Babylon (39:5-7), and the final overthrow of Babylon itself (14:22f.). As Amos put it in a famous saying: "Surely the Lord does nothing, without revealing his secret to his servants the prophets" (Am. 3:7). This revealing of the future did not mean, of course, that prophecy was mere prediction or that the events foretold constituted an ineluctable destiny. If God revealed things to come, He did so in the exercise of His moral sovereignty as the God of grace and judgment. He did so, therefore, with an accompanying summons to repentance, faith, and obedient action. The prophets did not act merely as oracles or soothsayers. In and through the revelation of the future they revealed the character of God, and as a result even the imminent future that they disclosed carried with it some indication of the ultimate future when God would bring His overriding purpose to fulfillment in judgment and salvation.

In other cases the reference might be a more direct one to the salvation and judgment that God would bring in that fulfillment of His purpose. Castigating sin and summoning the people to repentance, the prophets could proclaim with all severity the wrath and judgment of God, and they perceived and proclaimed plainly that the rule of God meant the ultimate exclusion of all sin and sinners from God's kingdom. Yet even prophets like Hosea, Micah, and Amos, who announced a revealing of corruption (Hos. 7:1), saw no hope for Samaria and Judah (Mic. 1:6; 3:12), and painted a dark picture of the day of the Lord (Am. 5:18), could still find a place for the declaration of final restoration (cf. Hos. 14:4-7; Mic. 4:1-13; Am. 9:11-15).

Similarly Jeremiah and Ezekiel, for whom the time had come when nothing could arrest the merited overthrow of Jerusalem and Judah (Jer. 25:8f.; Ezk. 9), looked beyond the catastrophe of judgment to a future of renewal, grace, and glory (Jer. 31:23-34; Ezk. 11:16-21; 36:22-32). These declarations had nothing whatever to do with optimistic or utopian hopes predicated on human progress or perfectibility. They came within the revelation of the future because eschatological deliverance, prefigured in temporal deliverances, belonged to the sovereign purpose of God that He Himself would fulfil in spite of human revolt and resistance. Here again the revelation of the future, which increasingly took messianic shape (cf. Isa. 9:1-7; 11:1-9. Jer. 23:5-8; Ezk. 34:23f.; Mic. 5:2), comprised much more than a mere lifting of the veil that lies over things to come. It was a revelation of the God who, knowing the end from the beginning, would not let His will be frustrated but would intervene Himself to bring it to fulfillment in an age of salvation and peace. "My counsel shall stand . . . I have purposed, and I will do it" (Isa. 46:10f.). On this basis and with this confidence, prophetic revelation had an integral eschatological component.

In keeping with its rootage in the divine purpose, the final deliverance has a universal and not just a national reference. God's revelation of the future is the revelation of a saving knowledge of God among all peoples according to the covenant promise to Abraham that in his offspring all nations would find blessing (Gen. 22:18). The prophetic vision of the future sees many peoples going up to the mountain of the Lord to learn His ways and walk in His paths (Isa. 2:2f.). It looks ahead to a time when peace shall reign and "the earth shall be full of the knowledge of the Lord as the waters cover the sea" (Isa. 11:9). The various aspects of OT revelation converge here. Revelation of the future is revelation of the day when all nations have the knowledge of God that comes only by divine self-revealing. Yet it is also itself a self-revealing of God, for with the insight that it gives into God's purpose and its fulfillment, it reveals the God of sovereign goodness and love who wills to establish the fellowship of Creator and creature that the fall might disrupt but could not finally impede or negate. The fulfillment of God's purpose certainly has to mean the condemnation and exclusion of evil. The God of eschatological revelation is the God of omnipotent justice and judgment. Yet even as the God of omnipotent justice and judgment, He is also the God of omnipotent love and salvation whose goal is the positive one of blessing for people of any age, race, or class. The OT, of course, reveals the fulfillment of the divine purpose only as future and not yet as present. To that extent it points beyond itself. Even as a revelation of the future, however, it is a revelation of the God of the last things who, as the God of final judgment that salvation entails, is also and primarily the God of grace and glory (Ps. 86:8-10; Isa. 40:5f.).

D. Authenticity. A problem that troubled the general world of antiquity arose unavoidably in the OT sphere as well. How can there be any real assurance that God does in fact reveal Himself, or, even if He does, that this or that supposed revelation from God is indeed authentic when the ordinary criteria of verifiability do not apply? The OT prophets constantly ran up against this question, especially when, as so often, they had to deliver an unpopular message as God's word. At various points, then, the OT found it necessary to suggest criteria whereby to adjudge the truth or falsity of any given claim to revelation.

An extraordinary mode of revelation could be a partial help. God did at times reveal Himself and His purposes in dreams and visions. Jacob's dream at Bethel is an example (Gen. 28:10-17; cf. 35:7). One might also cite Joseph's dreams (37:5-11), or Daniel's dreams and visions (Dnl. 7–12), or the visions of Isaiah and Ezekiel (Isa. 6; Ezk. 1; cf. also Joel 2:28). Nevertheless, dreams as such are commonplace, and reading divine messages into them requires only a little ingenuity, as the dream-books of the ancient world plainly show. Mere appeal to a dream offers no binding guarantee of authentic revelation. For "when dreams increase, empty words grow many" (Eccl. 5:7). Prophets can "speak visions of their own minds, not from the mouth of the Lord" (Jer. 23:16).

In the same way prophetic signs are no infallible mark of true revelation. Signs are common enough in the OT. Gideon requested and received a sign in Jgs. 6:17-22. The earlier and later prophets made considerable use of signs to support their proclamation. Ahijah tore his garment into twelve pieces in 1 K. 11:29-39. The man of God gave the sign of the shattered altar in 1 K. 13:1-5. Isaiah offered the sign of the child in Isa. 8:1-4. Jeremiah used the sign of the yoke in Jer. 27:2-11 and Ezekiel the sign of siege diet in Ezk. 4:9-17. Yet who was to say that Gideon's sign was not a mere coincidence, or that the prophets were not just imagining or inventing signs instead of receiving them from God? False prophets could also use signs, as did the prophets who gave Jehoshaphat the sign of iron horns (1 K. 22:11) or Hananiah when he broke Jeremiah's yoke (Jer. 28:10). Only if true signs could be differentiated with certainty from false signs could signs alone serve as a mark of genuine revelation.

Again, the mere claim to have a word from God did not suffice to establish true revelation. The prophets undoubtedly made this claim. They could tell about God and the things of God only as God told them about Himself. The most common form of revelation involved a word that God spoke to His servants and that they would then speak to others in His name. God "said" something to Noah (Gen. 6:13), and then again to Abram (12:1) and Moses (Ex. 3:4). He revealed His word to Samuel (1 S. 3:1-11). His word came to Elijah (1 K. 21:17), to Jeremiah (Jer. 1:2-4, 11, 13), to Ezekiel (Ezk. 6:1), and to Joel (Joel 1:1). Yet false prophets could also claim to have a word from God. Hananiah did so when he used the common prophetic formula: "Thus says the Lord of hosts, the God of Israel" (Jer. 28:2). So did the prophets of whom Jeremiah complained that they "use their tongues and say, 'Says the Lord'" (23:31). When both true and false prophets assert that they have a word from God, who can say where real revelation lies?

When the future is at issue, the test of fulfillment can often be useful. Jeremiah advanced this criterion in Jer. 28:9: "When the word of that prophet comes to pass, then it will be known that the Lord has truly sent the prophet." Micaiah had already made a similar appeal to the test of events in 1 K. 22:25: "Behold, you shall see on that day." The same principle seems to lie behind the statement about Samuel in 1 S. 3:19 that the Lord "let none of his words fall to the ground." Nevertheless, this criterion cannot have absolute validity. Skeptics might dismiss any fulfillment as coincidence, and in any case many prophetic judgments depend on whether the people repent. Should the people repent, no one can tell whether the disaster would have come had they not repented, and those who had prophesied smooth things would seem to be justified.

The final criterion, and the most dependable, is ethical. Taking a twofold form, it relates first to the motivation of those who claim revelation. Are they simply telling princes and people what they want to know, speaking for acclaim or reward (Mic. 3:5)? Or are they risking

unpopularity, persecution, and even martyrdom for their message (cf. Am. 7:10-17)? Are they professionals, or do they prophesy under the constraint of God's word (cf. Jer. 20:7-18; Ezk. 2:2-7)? It then relates to the message itself. Thus in Dt. 13:1-5 a prophet or dreamer who advocates idolatry cannot be a bearer of true revelation. Similarly, the prophet who simply grants reassurance irrespective of the moral condition of the hearers does not bring authentic revelation from God. True revelation of the future must also be revelation of the will and character of the God of revelation, of the God who loves righteousness and requires it from His elect people (Dt. 10:12f.; Am. 5:24; Mic. 6:8). Many may prophesy even though God has not spoken to them, but if they had truly stood in God's council and proclaimed His word to the people "they would have turned them from their evil way, and from the evil of their doings" (Jer. 23:22). Mere appeal to a dream or word or burden does not suffice if the net result is to strengthen the hearts of evildoers and fill them with vain hopes. Where there is true revelation, even the righteous may have to suffer temporary affliction at God's hand, for they do not serve God simply for the blessings this service may bring (cf. Hab. 3:17f.). Nevertheless, authentic revelation is always revelation of the righteous God. It will thus be the revelation of judgment on impenitent sinners who resist the divine summons. In and through the judgment, however, it will also be the revelation of grace that welcomes the penitent and establishes the righteous. For the ultimate purpose of God is the positive one of salvation that does not let human rebellion prevail. The final vision will always be a vision of the reconciliation of righteousness and peace (Ps. 85:10). The ethical way that leads to righteous judgment leads on through judgment or affliction to the salvation that God Himself accomplishes by the power of His pardoning and renewing grace (cf. Jer. 23:5-8; Am. 9:11-15; Mic. 4:1-8; Zeph. 3:11-13).

IV. Judaism.–A. Scripture. The intertestamental period brought an end to the first stage of saving revelation. It thus saw an increasing focus on the past revelation in its ongoing form as Scripture. The books of the OT, which themselves belonged to the initial process, preserved the record of God's revealing words and works for all generations. For this reason they became the subject of codification and intensive study. New revelation might be expected with the coming of the Messiah, the giving of the new law, and the public manifestation of the divine rule. In the present, however, canonized Scripture served as the main locus of revelation. As a result, revelation came to be viewed in a more legal and intellectual way. Tradition also developed with biblical study. It made no claim itself to be revelation, but it attempted a more specific application of the will of God revealed already in the Law and the Prophets. In so doing, of course, it might easily usurp the function of revelation by imposing an interpretative shackle. Fortunately expository differences helped to safeguard against the obvious tendency in this direction.

B. Apocalyptic. In the post-OT age a certain substitute arose for ongoing revelation in the works that take their name from the NT apocalypse (Rev. 1:1). The authors of these writings tried to give authenticity to their productions by attributing them pseudonymously to great figures of the past. These past heroes of the faith had supposedly received sealed revelations that they were now disclosing in the last days. The revelations entailed glimpses of the upper world and took the form of powerful visions and apocalyptic calculations. Apocalyptic added nothing essentially new to the prophetic revelation of the canonical OT. But at least it reinforced the message of the divine sovereignty over history, it gave a cosmic sweep to the understanding of God's purpose and work, and it provided encouragement to the servants of God in times of considerable pressure, conflict and persecution.

C. Hellenism. With the Dispersion, educated Jews came into closer contact with the thinkers of pagan antiquity. This contact led in some circles to a greater stress on natural revelation, not in opposition to the historical revelation of the OT, but in concert with it. For example, Philo appealed to the general principle that anything that is made points clearly to its maker. Thus the order and design that one sees so plainly in the universe bear witness to a Creator of supreme wisdom and power (*De praemiis et poenis* 41f.). Wisd. 13:3-5 argues similarly that from creation pagans ought to have been led, not to idolatry, but to worship of the true God. This development does not represent a complete divergence from the OT, for the OT, too, finds the God of Israel in the works of creation (Ps. 19:1). Nevertheless, it does mark a certain shift of emphasis. Evident now is a movement more from below (i.e., from creation to the unknown God), than from above (i.e., from the known God of Israel to creation). Thus natural revelation tends to become the basis of a natural theology whereby thoughtful people may find their way to the true God without any prior need for His special self-revelation according to the OT record. Josephus made a parallel move in the moral sphere when he equated the revealed law of the OT with the natural law of the Stoics (*CAp* ii.17ff. [173ff.]). On this view, all people have by nature some knowledge of the will of God. God's special revelation of the law simply confirms, purifies, and amplifies this basic knowledge.

V. NT.–A. Synoptists. The declaration of John the Baptist (Mt. 3:2) implies that God is now about to manifest His kingdom in fulfillment of the eschatological expectation of the OT. Jesus then brings this kingdom in a disclosure of its mystery. Indeed, He is Himself the kingdom, present already within the world as an eschatological reality (Lk. 17:21). With Jesus, however, an integral feature of divine revelation becomes particularly evident. God's self-unveiling in creaturely form, whether as word, act, sign, or now as person, entails at the same time a measure of veiling. As God makes Himself known through creaturely phenomena, thus achieving accessibility to the senses, the recipients may perceive only the creaturely phenomena and miss the divine reality. When God speaks His word in the OT, they may hear only the opinions of the prophets and not the message from God. When revelation comes by way of the biblical record, they may accept the record only as a human writing and not as God's written word. When Jesus Himself comes as God's kingdom, as the King Himself in person, they may see only a human teacher, a prophet, or even an impostor, not the messianic Son of God. The disclosure of God in human form demands, therefore, a revealing to the recipient, i.e., an inward enlightenment to the true meaning of what is perceived with the instruments of human cognition.

These aspects of revelation, which surely lie behind the mystery of the kingdom, the ambivalence of the parables, and the so-called messianic secret, come plainly into view in two sayings of Jesus. In Mt. 11:27 Jesus tells His disciples that knowledge of the Father lies with the Son, but then only with those to whom the Son chooses to reveal it. Similarly in 16:16, when Peter rises above inadequate views of Jesus to the confession that He is the Christ, the Son of the living God, Jesus tells him that he could not have reached this conclusion by a simple

contemplation of Jesus along ordinary epistemological lines. The heavenly Father revealed it to him. Objectively, indeed, Jesus is Himself the full revelation of God. But He is so in veiled form. A further act of divine revealing is needed if the revelation is to be a subjective reality. The making known of revelation is an intrinsic part of revelation.

This subjective revealing stands in no necessary correlation to human qualifications, e.g., ability or learning. In Mt. 11:25 Jesus thanks God for hiding these things from the wise and understanding and revealing them to babes. The gospel is not a difficult philosophy that only the highly gifted or educated can grasp. Human wisdom avails neither to reach God without revelation nor to penetrate the mystery of revelation when God gives it. Indeed, it may prove to be an obstacle by complicating divine simplicities, taking offense at divine wisdom, or substituting pride for humble receptivity. This does not mean, of course, that revelation has no intellectual content or that entry into it is a mystical, esoteric or irrational experience. Revelation has to do with ultimate reality. With great simplicity, if also with great profundity, Jesus represents this reality when human ingenuity obscures it. Jesus teaches and exemplifies with refreshing directness both God's fatherly rule (Mt. 6:26-33) and His commanding will (Mk. 12:28-34). By means of illustrations from everyday life He presents the truths of the kingdom (Mt. 13). Yet He does this, not in order to instruct in a human system, but in order to set forth the living God whom He represents in His own person, expectant that God will in fact reveal Himself thereby to all who humbly and penitently seek Him (Mt. 6:7-13). To see God in Jesus is to see Him in the fulness of His being and work and all that this implies for His will and purpose.

If the revelation of God in Jesus has already an eschatological dimension, this does not exclude a future component. Jesus had for the moment a hidden glory (Mk. 9:2f.), that only enlightened eyes could perceive. At the end of the age, however, He will come in direct manifestation with all the Father's glory (Mk. 8:38). This will be the day of the direct revelation of the Son when He visibly takes up His rule as King and Judge. It will also be the day of the revelation of all secrets when the thoughts of many hearts shall be revealed (Lk. 2:35), when nothing that is covered will not be revealed and nothing hidden will not be made known (Mt. 10:26). The final manifestation of Jesus does not imply that He is any less the revelation of God when He comes in servant form. In His self-identification with fallen humanity even to the point of vicarious sin-bearing on the cross, Jesus displays the fulness of God's purposeful and powerful love. Nor does the present concealment mean any inadequacy in God's ability to make Himself known. Christ has indeed been given as a light for revelation to the Gentiles (Lk. 2:32). The eyes of seekers like Simeon will always see in Him the salvation of God. In its veiled form the revelation of God in Christ effects already the sifting of humanity that the last judgment will finally disclose. The proud, the ungodly, and the obstinately wicked have God's revelation before them but do not see it. Only at the end of the age, when Christ returns in a direct appearing to judge and rule, will they see things as they really are. Those who are ready to receive Christ, and to learn from Him, already see Him in faith through the servant veil. But then they will see Him in His manifest glory, and will enter with Him into the visible consummation of His kingdom of salvation and peace.

B. Acts. With the ascension of Jesus and the outpouring of the Spirit, the emphasis in the primitive church tended to fall on the work of revelation in the apostolic mission and on the future revelation at Christ's return in glory. God had undoubtedly manifested Himself in the life and death and especially the rising again of Christ (Acts 2:22-32). He had specifically manifested Jesus to the disciples with the resurrection appearances and the commissioning for apostolic ministry (10:40, 42). He had manifested Himself, too, in the descent of the Spirit and the associated dreams, visions, and prophesyings (2:17-21). The present age, then, is the age of revelatory proclamation when "whoever calls on the name of the Lord shall be saved" (2:21) and the Lord daily increases the number of those whose hearts the Spirit opens to receive the word (2:41, 47). The revelation that took place in Jesus continued in the ongoing form of the apostolic message about Him, available as yet only orally, but later receiving a more enduring written expression. The Spirit uses this message to do the work of inner revealing whereby individuals come to a saving knowledge of God in Christ. For the moment Christ Himself is concealed at the right hand of the Father. At the end, however, will come the "great and manifest day" of the Lord's coming in glory (2:20). God will then establish all that He spoke by the prophets (3:21). He has ordained Jesus "to be judge of the living and the dead" (10:42) in a visible declaration of His sovereign rule. Penitent believers will then enjoy the fulness of salvation, and wickedness will suffer definitive expulsion. Revelation always focuses on Christ, whether in His incarnate person and work, His proclamation by the apostles, or His final, open manifestation. The Spirit gives the apostolic word its revealing force. The same Spirit also gives special revelations in the process of apostolic ministry, whether by dreams and visions (9:3; 10:3, 10-16; 16:9; 18:9f.), deliverances (5:19), direction (15:28), guidance (8:29; 16:6f.), or prophecy (21:10ff.). Nevertheless, revelation never becomes a purely subjective or ecstatic phenomenon divorced from the solid reality of Christ's own work, of the ministry of the apostles, or indeed of the preceding OT revelation (cf. 2:17-21, 25-28, 34f.; 3:20-26; 4:11, 25f.; 13:33-35, 47; 17:2ff.). The Spirit came upon the disciples, not to make them the agents of new revelation, but to empower them as witnesses of Jesus (1:8), and by their witness to open blind eyes to the light of God's reconciling revelation in Him.

C. Epistles. The NT Epistles develop the various aspects of revelation that feature already in the Synoptists and Acts. The first and focal concept is christological. God has brought His revealing and reconciling activity to a climax in the person and work of Christ (He. 1:1-4). This revelation did not take place without an element of concealment. Christ was "manifested in the flesh" (1 Tim. 3:16). In solidarity with the sinful race He took a servant form (Phil. 2:7). He came "in the likeness of sinful flesh" (Rom. 8:3). He was made like His brethen in every respect (He. 2:17) apart from sin (4:15). Nevertheless, "through faith for faith" God has revealed His righteousness in Him (Rom. 1:17). Implicitly He has also revealed His wrath, which finds expression in the abandoning of the wicked to their evil desires and courses. Yet where sin increased, God's grace in Christ "abounded all the more" (Rom. 5:20). In Christ, therefore, the emphasis falls on the righteousness of God, not in condemning the wicked, but in justly justifying believers for whom Christ bore the condemnation.

Second, the revelation that God has given in Christ comes to individuals through the apostolic ministry of the gospel. In this ministry one sees two facets of revelation. The first is that Christ manifests Himself to the apostles, disclosing to them the mystery of the divine

purpose in the gospel, and enabling them to proclaim it in exposition of the prophetic writings (Rom. 16:25f.). Thus Paul could specifically attribute his apostleship to "a revelation of Jesus Christ" (Gal. 1:12), to God's good pleasure "to reveal his Son to me" (v. 16). He could also derive his whole understanding of the gospel, and especially its universality, from the revealing ministry of the Spirit (Eph. 3:5; cf. Col. 1:25, 27). The second facet is that the Spirit uses the apostolic word to make Christ known as hearers respond in faith. Because of the blindness due to sin, human intelligence alone cannot penetrate God's secret in Christ. But "what no eye has seen, nor ear heard . . . God has revealed to us through the Spirit . . . that we might understand the gifts bestowed on us by God" (1 Cor. 2:9-12). This revelation relates, of course, to the life, teaching, death, and resurrection of Christ as the apostles proclaim it (15:1-4). It always has, then, an objective component. Yet people cannot learn it as they learn things belonging to the created world. The Spirit reveals the facts of revelation to those to whom they would otherwise be offense or folly (1:18). In so doing, He enlists them, too, in the ministry of revelation, so that the work of proclamation will continue by which He then does a revealing work in others.

Third, the fact that many who now live in unbelief have not yet heard God's revelation in the OT and Christ does not excuse them, for "what can be known about God" is really plain; God has shown it to them in creation (Rom. 1:19f.) and conscience (2:14-16). Paul obviously did not advance this truth as a basis for natural theology, as though there had been no fall. (It is interesting and possibly important that he did not use the terms "reveal" or "revelation" in this context.) Similarly, he did not engage in a rational argument that would lead by logical steps to the truths of special revelation (see Acts 14:15-17; 17:22). In Romans the point is that sinners pervert the knowledge of God from creation into an idolatrous worship of the creature, and distort the knowledge of His will by conscience into guilty disobedience. The statements in Acts 14 and 17 occur in a similar context of ignorance and idolatry (14:11-18; 17:22-34); Paul boldly proclaimed the God who ought to be known (14:17) and who may now be known again through the crucified and risen Lord of the gospel (14:7; 17:31). If an ambivalent perception of God remains from the primal revelation of the Creator and His will, it constitutes a crushing indictment of what the human race has made of the revelation: "They are without excuse" (Rom. 1:20).

Fourth, particular revelations accompany the ministry of the Spirit. Paul went to Jerusalem by revelation in Gal. 2:2 (cf. Acts 16:6, 9). He quoted "visions and revelations of the Lord" that God had given him (2 Cor. 12:1-7). Among spiritual gifts he mentioned revelations along with knowledge, prophecy, and teaching (1 Cor. 14:6; cf. vv. 26, 30). He desired that the Philippians might, if necessary, be corrected by revelation (Phil. 3:15; cf. Eph. 1:17). The precise nature of the various revelations is uncertain. Sometimes they are plainly visionary or ecstatic, but sometimes they seem closer to NT prophecy and have more of the character of biblical insights or directions for particular needs or situations. They obviously form a special category of revelation, not wholly unlike the visions or instructions given to OT leaders and prophets, yet in many cases lacking their definitive nature.

Fifth, revelation has a teleological dimension. In Christ God has worked out His saving purpose. Christ was already active in the OT (1 Cor. 10:4; 1 Pet. 1:11f.). But His coming in the incarnation brought the decisive revealing of faith, i.e., the disclosure that faith, not the law, is the way of justification (Gal. 3:28). This is why the gospel reveals the righteousness of God. It shows that God is both just and the justifier, the executor of righteousness and also its giver. Revealed along with faith, then, is the mystery of reconciliation in Christ. Believers are reconciled to God, and therewith also to one another. By their common faith the Gentiles are now fellow heirs and members of the same body (Eph. 3:5-7). The mystery that previous ages did not understand is now made known to the saints, to whom "God chose to make known how great among the Gentiles are the riches of the glory of this mystery, which is Christ in you, the hope of glory" (Col. 1:26f.).

Finally, the teleology carries an element of future eschatology. Christ has come as God's revelation, yet concealment lies over His incarnate person and work and over His church and its ministry apart from the Spirit's revealing. One day, however, Christ who is now our life shall appear (Col. 3:4). At this appearing sin and its judgment will also reach an open climax with the revelation and destruction of the man of lawlessness (2 Thess. 2:3-8). God's righteous judgment will then be revealed (Rom. 2:5) in a revealing of human works by fire (1 Cor. 3:13). Yet the day of Christ's appearing will primarily be a day of the revealing of divine glory (1 Pet. 5:1). The glory is Christ's, but with the revelation of their salvation in Him (1 Pet. 1:5) believers will share this glory: "You also will appear with him in glory" (Col. 3:4). The last day reveals the true status both of Christ and of His people. As Christ suffered, so His people now suffer, but "the sufferings of this present time are not worth comparing with the glory that is to be revealed to us" (Rom. 8:18). Creation too, which suffers under concealment of the divine rule, moves towards this day, waiting "with eager longing for the revealing of the sons of God" (v. 19). The manifesting of the chief Shepherd will fulfil the promise of an "unfading crown of glory" for those who, suffering a little while, are called to "eternal glory in Christ" (1 Pet. 5:4, 10). When the day dawns, the Lord Jesus will be "revealed from heaven with his mighty angels in flaming fire, inflicting vengeance upon those who do not know God and upon those who do not obey the gospel," and coming "to be glorified in his saints, and to be marveled at in all who have believed" (2 Thess. 1:7f., 10). Present resistance to Christ will then give place to subjection (1 Cor. 15:24), present affliction with Him to rejoicing at the revealing of His glory (1 Pet. 4:13), and the present concealment of His kingdom to the full manifestation of the all-embracing rule of the Father (1 Cor. 15:24-28).

D. John. 1. Gospel and Epistles. The terms "reveal" and "revelation" are not Johannine, yet the theology of the Gospel and Epistles "is a theology of revelation to the supreme degree, though in a different sense" (*TDNT*, III, 587; *see* JOHANNINE THEOLOGY III). The equation of Jesus with the Logos, i.e., the understanding of the Logos in terms of Jesus, attributes to Jesus a unique absoluteness as God's revelation both historically and cosmically (Jn. 1:3). Jesus, however, does not merge into a principle of revelation. On the contrary, revelation finds personal focus in the incarnate Word, Jesus of Nazareth (1:14; 1 Jn. 1:1). Nor does Jesus function only as the revealer. At once He is both the revealer who makes known the Father (Jn. 1:18) and the revelation whom to know is to know the Father (14:7). As the incarnate Logos, the manifested life (1 Jn. 1:2) that is the true light shining in the darkness (Jn. 1:4-6), Jesus brings fulfillment both to the messianic hopes of Judaism (4:25f.) and to the desires and longings of the Gentiles (12:20ff.). He does so, not as the climax of natural revelation, but as

the incarnate Son who by a ministry of teaching, living, loving, dying, and rising again achieves not only illumination but also forgiveness and renewal for those who, believing and receiving, find the person and work of God in Him and become God's children themselves (1:12).

The reality of Jesus is both concealed and revealed. The world knew Him not (Jn. 1:10). Many did not confess Him (1 Jn. 4:3). He constantly ran into misunderstanding (Jn. 3:4, 9; 5:41ff., 52f.). Opponents accused Him of illegitimacy (8:41) and of being a Samaritan and having a demon (8:48). His Galilean origins aroused objections (7:27, 41). His signs provoked controversy (ch. 9), and even open hostility (11:46-53). Nevertheless, the unveiling of His glory does not have to await His return. He manifested His name already to those whom God gave Him (17:6). They "beheld his glory, glory as of the only Son from the Father" (1:14). The Son had given them understanding "to know him who is true" (1 Jn. 5:20). As He glorified the Father by doing His work (17:3f.), He could pray that the Father would glorify Him with His preexistent glory (v. 5). Paradoxically, glorifying came with His passion (13:31ff.), with His lifting up (12:32), as the glory of the resurrection would plainly demonstrate (20:26-29). His glorifying meant glory for His disciples too: "The glory which thou hast given me I have given to them" (17:22). This again would be a glory unperceived by the world, for it would not have the form of outward glory. But believers themselves may know it, for they have the witness that God has given them the eternal life that is in His Son (1 Jn. 5:10f.).

The present revealing of Christ does not rule out a future revealing in John. If the light of Christ shines already in the sinful world, both saving and judging (Jn. 3:19, 21), the open manifesting of salvation and judgment has yet to come (5:19-29, esp. 25-29). A day of judgment will dawn. Believers may have confidence on that day (1 Jn. 4:17), for they are not condemned (Jn. 3:18). Having already seen Christ's glory, they move toward the consummation when they shall see Him as He is (1 Jn. 3:2). They shall then behold the glory that God gave the Son in His love for Him before the foundation of the world (Jn. 17:24). At the same time, the reality of their own new being as God's children will come to full manifestation: "We know that when he appears we shall be like him" (1 Jn. 3:2). With the strong emphasis on the present eschatological significance of Christ in John, the future element does not play so important a role as in some other parts of the NT. The present tension of revealing and concealing, however, gives it a necessary place. In His revelation as the incarnate Son, Jesus has inaugurated the age of judgment and salvation that is now the age of eschatological decision when people either see Him in faith or fail to do so in unbelief. The time must come, however, when the reality will be open to all eyes, the decision will be manifested, and God will bring His purpose to the fulfillment of eternal judgment and salvation.

2. Revelation. Unlike the Gospel and Epistles, the Apocalypse focuses on the future. The opening verse states its point: Jesus is giving the author a revelation of "what must soon take place" (1:1). The upshot of the revelation is the glorifying of God, whose "judgments have been revealed" (15:4), but whose definitive salvation is similarly manifested with the imminent coming of the glorified Lord (1:7; 20:12; 21:7). Revelatory visions convey the substance of the author's message. Notwithstanding their resemblance to what one finds in apocalyptic literature, these visions approximate more closely to the prophetic visions of the OT and may perhaps be compared to the visions granted to Paul in 2 Cor. 12:1. They are a representation of the prophetic expectation of the OT along christological lines. As such they carry to the church an authentic message, to which the author attaches solemn importance when he gives it its written form (1:3; 22:18; cf. Jn. 20:31; 21:24).

As regards the concept of revelation, the largely symbolical details are secondary to the larger lesson that they help to convey with vividness and force. This is the lesson that Christ will shortly come in the glory and majesty of the Father, that He will definitively execute the divine judgment that rests already on secular powers, and that He will manifest the reality of salvation for His persecuted people, who with eager expectation may thus endure transitory affliction, confident that with the Lord God as their light, they, too "shall reign for ever and ever" (22:3, 5). Revelation, then, is not primarily an unveiling of the detailed future but a revelation of the God of the future who has achieved His purpose for creation in the death and resurrection of the Lamb and who will bring it to a mighty consummation of judgment and salvation with the coming of the Lord Jesus and the establishment of the new heaven, the new earth, and the new Jerusalem, where God dwells with those whom He names His people. Revelation, then, takes up the eschatological revelation of the OT and gives it the added NT element of christological fulfillment.

E. Criteria. The problem of false revelation arises in the NT as well as the OT, and distinguishing between true and false revelation can often be difficult. Miracles and signs undoubtedly give some evidence of authenticity (Mt. 11:5f.), but Jesus refused to provide signs on demand (16:4; cf. 4:3-11) and false christs and false prophets could also "show signs and wonders, to lead astray, if possible, the elect" (Mk. 13:22; cf. Rev. 13:13-17). Again, revelations often came through angels (Mt. 1:20; Lk. 1:11, 26; Rev. 22:8), but supposed angelic revelation necessitated cautious treatment, for "even Satan disguises himself as an angel of light" (2 Cor. 11:14; cf. Gal. 1:8). Fruits offer another important test: "You will know them by their fruits" (Mt. 7:20). Yet even here caution is needed, e.g., in distinguishing between a true doing of God's will and rendering a service of what seem to be mighty works but without the crucial element of obedience to the words of Jesus (cf. 11:21ff., 24ff.). Among the fruits, love has a place of preeminence (cf. Gal. 5:22). It thus ranks as one of the essential criteria of valid revelation. Without it those who might excel in tongues or prophecies or knowledge or faith or liberality or self-sacrifice are nothing and gain nothing (1 Cor. 13:1-3). In the exercise of spiritual gifts, the distinguishing of spirits is obviously important (1 Cor. 12:10; cf. 14:26ff.; 1 Jn. 4:1). In summary form, the confession of Jesus as the incarnate Lord (1 Cor. 12:3; 1 Jn. 4:2ff.) will be a distinguishing mark of the Holy Spirit, for it is the Spirit who enables a person to say that Jesus is Lord. Jesus Himself is the heart and center of all authentic revelation. As the NT sees it, the prophetic OT revelation focuses on Jesus no less than the apostolic NT revelation, and individual revelations must all have a biblically christological orientation. In the ongoing discernment of spirits, conformity to the prophetic and apostolic revelation offers a permanent criterion whereby to decide whether a supposed message comes from God. In this regard the NT itself endorses the role of the OT (2 Tim. 3:16; 2 Pet. 1:21). It also ascribes a similar authority to the apostolic writings (cf. 2 Pet. 3:15f.; Rev. 22:18f.), not least of all by the authority both claimed and exercised in their composition (Rom. 1:1; 1 Cor. 1:1; etc.). All authentic revelation will set forth the Christ of the normative OT and NT testimony.

VI. Historical Survey.–A. Early Church. In the first Christian centuries the words "reveal" and "revelation" are common in the Shepherd of Hermas. The author used them to denote visions and their interpretation rather along the lines of 1 Cor. 14. The visions have their own interest but the church judged rightly (cf. the Muratorian Canon) when it found in them no valid addition to the essential deposit of revelation. Montanism took up this visionary aspect with its distinctive style of prophesying, which to its critics seemed to be claiming an ongoing process of divine disclosure. The rejection of Montanism helped to restrict revelation as a spiritual charism in orthodox circles, but it did not squeeze it out entirely (cf. Cyprian).

Among the Apologists Justin Martyr related revelation to the special revelations given to Joseph and the Magi in Mt. 1–2 (*Dial.* 78.2ff.). He came closer to the central NT use when he quoted Mt. 11:27, though he gave it a more intellectualized sense (*Apol.* i.63.3ff.). This intellectualizing accorded well with Justin's broader equating of Jesus with the Hellenistic *logos* in a general attempt to harmonize biblical revelation with philosophy (though not without presupposing philosophical borrowing from the OT). The Alexandrians Clement and Origen moved in a similar direction in their desire to win the more highly educated to Christ. For Clement, Jesus took a body so as to make the necessary contact with a race that suffers from the infirmity of the flesh (*Misc.* vii.2.8). The goal of revelation by incarnation is a knowledge that builds on faith and issues in a love that is the friendship of knower and known (vii.10.55ff.). Plain proof from Scripture will coincide with a rational training controlled by faith and fear (vii.16.102). Origen, too, found in the incarnation a solution to the epistemological gulf between the corruptible and the transcendent. By taking a corruptible body, the Son of God made the impossible possible (*On Prayer* 9.2). In Origen, as in Clement, revealed truth formed the necessary basis for knowledge, although when Origen moved on from faith his theology often took a highly speculative turn with only the slenderest support in the original revelation.

For a more centrally biblical view of revelation one must turn to Ignatius of Antioch, who related revelation to the divine economy in Christ (Ign. Eph. 20.1). The Epistle to Diognetus (7–10) offered an even fuller understanding of God's work of revelation and reconciliation. By sending the Word, God gave a true knowledge of Himself in place of the nonsense of plausible philosophers. He graciously manifested Himself through His Son to faith, and in so doing He gave His Son as a ransom, the righteous for the unrighteous, in a "sweet exchange" (9.1-5). Irenaeus gave fuller and more systematic form to this concept, and it then found classical expression in Athanasius's *Incarnation of the Word* in which the revelation that culminates in the Word provided God's answer to human ignorance, and the reconciliation simultaneously effected in the crucifixion and resurrection provided His answer to human sin and guilt. With His mighty deeds in the body Christ manifested the invisible God and thus brought a new possibility of knowledge to those who failed to see Him in creation (18). Athanasius did not achieve total clarity on revelation. He seemed to see in natural revelation only a first remedy for the loss of knowledge of God from the divine image. He also seemed to put OT revelation in much the same category as natural revelation apart from its christological references (33-40). Nevertheless, he grasped firmly the revelatory significance of the incarnation and avoided the mistake of isolating the work of revelation from the equally necessary work of reconciliation. He also incorporated both into a fulfillment of the eternal purpose of God that human disobedience might hamper but could not finally overthrow.

B. Middle Ages. With Scholastic theology, more directly biblical aspects of revelation became less important and the relation between reason and revelation took a central position. Revelation might be defined as that which believers know about God from God's own supernatural impartation, specifically in Scripture and church dogma. In contrast, the knowledge of reason covers what any people may know by ordinary cognitive processes. Anselm made a valuable contribution to the discussion when he adopted and applied Augustine's concept of faith seeking understanding. On this view revelation supplies the matter of Christian knowledge, faith accepts it, and reason tries to grasp and show its rationality (*Proslogion* 1). Revelation thus retains its primacy, but reason finds a valid function in its service. Unsatisfied with this solution, the rebel Abelard gave reason a more elevated position as an autonomous authority that questions traditional verities and impartially considers the arguments and counterarguments. He thus tended to give reason the final priority in the relation.

Aquinas found Anselm too conservative and Abelard too radical. He attempted a balanced assessment which would reserve the full rights of revelation and yet allow reason its own autonomy. With some difficulty, he thought even unaided reason might find its way to preliminary truths about God. Yet only the few could achieve these, and even they not without errors. True knowledge comes more fittingly and certainly by revelation, which alone can unfold the most important things about God and His nature and work. A theology based on Scripture has its place alongside a theology that is part of philosophy (*Summa Theol.* i.1.1). In this theology the task of reason will be to give it rational form, expounding truth by way of thesis and antithesis.

What exactly the view of Aquinas entails has engendered much debate. Did he mean that reason provides a foundation on which the superstructure of revelation rests, e.g., the doctrine of the trinity on God's demonstrated existence, or the theological virtues on the generally accepted cardinal virtues? Or did he mean that the ways of reason and revelation run parallel at first, but then the former breaks off, and those who follow it must take to the latter, which they might have traveled from the outset? However that may be, later theologians like Scotus and Occam, with their stress on God's sovereign and inscrutable will, tended to reduce the role of reason, except as a scholarly tool. Revealed truths, belonging to the transcendent world, defy rational attainment or explanation, and thus demand acceptance in faith.

In medieval theology, revelation took on a strongly intellectual character. It consisted predominantly of revealed truth. It thus came to be equated, first with the propositional content of Scripture, then with creedal affirmations, and finally with the defined dogmas of the church. In the definition of dogmas the tradition of apostolic churches like Rome increasingly secured recognition as an additional source of revelation. A more dynamic but no less hazardous concept underlay the rising authority of the teaching office, which claimed the guidance of the Spirit in the correct exposition of Scripture and the normative defining of dogma. It may be noted, too, that notwithstanding the strong intellectualizing of revelation the Middle Ages never abandoned the possibility of direct revelations of the Spirit along more mystical lines. The authenticity of such revelations might come into question

(as with Joan of Arc) but they could also achieve a favorable assessment (as in the case of Catherine of Sienna). Revelations of this kind did not add to the ongoing deposit of the faith but applied only to particular situations and had only a relative or transitory validity.

C. Reformation. The early days of the Reformation brought a new christological emphasis. Luther did not deny a knowledge of divinity in the human heart (*Luther's Works,* 25 [1972], 157), but this simply left people without excuse for their ignorance. To fallen humanity God in Himself is now the hidden God (*Deus absconditus*; cf. *WA,* XLII, 11, 19ff.). But in His grace He has become in Christ the revealed God (*Deus revelatus*). To know God, to know Him as the gracious God, one must turn always to Christ. Zwingli thought similarly. Creation in God's image gave humanity a natural desire for fellowship with God. The fall made fulfillment of this desire impossible apart from divine renewing by the word, which in its final manifestation is Christ Himself, the incarnate Son (*LCC,* XXIV, 59ff.). For both Luther and Zwingli the Bible had a significant revelatory role, for only through the Bible does one know Christ. First and last the Bible is a christological book. The Spirit, too, has an essential revelatory function, for it is in the Spirit's power that the biblical word shines with its true light, opening up the true meaning which unaided and arrogant human reason or wisdom can only pervert or reject.

In a difficult initial discussion in his *Institutes,* Calvin considered the possibility of a philosophical knowledge of God. In itself, God's divinity escapes human perception. Yet God has engraved the marks of His glory on creation, so that even the most ignorant ought to see Him (*Inst.* i.5.1ff.). If people conceal these marks, substituting nature for God, ingratitude is the cause (i.5.4f.). Speculative reason is more of a hindrance than a help at this point (i.5.9). It leads philosophers into stupidity and silliness (i.5.11). Human eyes cannot see God's invisible divinity in His works unless they be illumined by God's inner revelation through faith (i.5.14). This illumination comes through the "better help" (or spectacles) that God has given in Scripture, which gives focus to the confused knowledge of God, dispels human dullness, and clearly displays the true God (vi.1). Does Calvin mean that Scripture first gives us a knowledge of God the Creator and only then leads on to God the Mediator? If this be true, reason could have a place, not apart from natural or biblical revelation, but prior to the fulness of saving revelation in Christ. If not, Calvin's contention is that God's revelation in Christ takes precedence of all demonstrations of God in creation. One cannot move by way of the biblically illumined evidence to the full knowledge of God in the gospel. One must know God in the gospel if one is to know Him at all.

Like Luther and Zwingli, Calvin attached high importance to Scripture as the normative written form of revelation whereby one may know the original forms both in nature and in the history of God's words and works that came to fulfillment in Christ. In this respect, both Roman Catholics and the more influential radical reformers agreed. In answer to Reformation criticisms, however, Roman Catholics cautiously continued to promote tradition as another source of revelation alongside Scripture. Like the mainline reformers, Roman Catholics and radicals also perceived a revealing ministry of the Spirit. The former identified this ministry more closely with the teaching hierarchy, the latter related it to the illumination that the Spirit brings to all believers in the reading and hearing of Scripture. Roman Catholics still found a place for private revelations, but not to the extent of the wilder radicals, who claimed that their revelations, e.g., the prophesyings of the Zwickau and Münster groups or the mystical reflections of the Schwenkfeldians, either supplemented or superseded Scripture. To this conception the main reformers and the more sober radicals maintained the staunchest opposition. As Calvin put it, the Spirit does not invent new revelations but seals our minds with the doctrine commended by the gospel (*Inst.* i.9.1). He is always the same as He once revealed Himself to be in Scripture (i.9.2).

D. Modern Period. After the Reformation the systematized theology of Protestant orthodoxy, while recognizing that revelation covers more than the Bible, tended toward a closer equation inasmuch as it is only by Scripture that revelation may be known. The reduction to intellectual propositions almost necessarily followed, although not to the exclusions of the illuminating function of the Spirit and the demand for personal faith. With the strong academic thrust of this theology it is no surprise to find at times a fresh resort to natural preambles to revelation in the form either of classical philosophy or of Cartesian apologetics.

Partly in reaction against dogmatic rigidity, groups like the Quakers took up the theme of the inner light that gives specific revelation to individuals. In Fox the revelations stayed close to Scripture and accompanied a focus on Christ. Much too easily, however, the Bible might seem to be only a lifeless letter compared to the living voice of the Spirit. The detaching of revelation from the Bible could then follow and revelation could take on a highly subjective character in a fusion of revelation and revelations.

Also in reaction against orthodoxy, Deism and the Enlightenment reopened the question of reason and revelation. M. Tindal stated a common conclusion when he called revelation "a republication of the religion of nature" (*Christianity as Old as Creation* [repr. 1978], ch. 12). More sharply, J. Toland argued that the appeal to divine revelation for incomprehensible truth is the source of all the absurdities vented among Christians (*Christianity not Mysterious* [repr. 1978]). Lessing in his important *Education of the Human Race* found in revelation a temporary but necessary crutch to help people to attain to the eternal truth of reason which in the last age of the Spirit everyone will know without such a crutch. Kant attempted a sketch of religion within purely rational limits, although not entirely ruling out the possibility of a very different kind of theology. In the ensuing period mediating theologians who wanted to retain revelation either tried to reinterpret it in rational, moral, social, experiential, or existential forms, or sought an apologetic basis for it in natural revelation or a type of natural theology.

The Princetonian orthodoxy, of course, attempted a defense against reductionist views by a stress on biblical infallibility. At the same time Roman Catholicism strengthened its own position by relating doctrinal development to the ministry of the Spirit through the teaching office and finally an infallible papacy. As Vatican II would show, however, it did not wholly solve the problem of the sources of revelation. Unlike much Protestant orthodoxy, Roman Catholicism continued to recognize private revelations so long as they claim only restricted applicability. Pentecostalism, too, found it easy to talk about special revelations, e.g., the revelations given to Luther, or Wesley, or Pentecostalism itself. One may see some parallel here to the Roman concept of dogmatic development, although with a closer adherence to the biblical base.

Barth's protest on behalf of a theology of revelation gave the issue a new urgency in twentieth-century dis-

cussion. Barth attempted four things: the expulsion of natural theology; a differentiation of revelation and Scripture (the written word as its witness); the closer identifying of revelation with God Himself as Father, Son, and Spirit; and a stress on the Spirit's ministry as revelation's subjective possibility. Positively, this approach regained for revelation its threatened authenticity, protected it against overintellectualizing, restored its personal character as God's self-revealing, retained the focus on Christ, combined the two aspects of revelation as word and act, and opened the door to a fresh treatment of the Bible's own doctrine of revelation. Negatively, it failed to distinguish between natural theology and the natural revelation that many scholars upheld (e.g., Althaus), mounted an exaggerated polemic against propositional revelation, unnecessarily refused for the most part to include Scripture in revelation, and tended to overstress the present revealing of the Spirit at the expense of His past revealing to others, especially the biblical prophets and apostles.

On balance the new discussion that Barth initiated proved helpful. It shifted the focus away from the mere issue of revelation and reason. It showed that the Bible hardly uses natural revelation as a preamble to authentic knowledge of God. It brought out the element of God's personal self-revealing, so that, although the divine revelation comes to us in the form of statements, faith is not just an acceptance of facts or beliefs about God. It helped to bring the two aspects of word and act into a closer relation and hence to defuse the potential rivalry between them. It showed finally that even if a full equation of revelation and Scripture goes too far, a separation of the two also goes too far, for Scripture belongs to the word-act of divine revelation, being itself inspired and used by the Spirit as an ongoing revealing to all generations.

REVEL; REVELING; REVELRY [Heb. *marzē(a)ḥ* (Am. 6:7); Gk. pl. of *kṓmos* (Rom. 13:13; 1 Pet. 4:3), *tryphḗ*, *entrypháō* (2 Pet. 2:13)]; AV also BANQUET, RIOT(ING), SPORTING; NEB also CAROUSE. "Revelry," meaning "wild and noisy partying," is an appropriate translation of Heb. *marzē(a)ḥ* (lit. "loud shouting") in Am. 6:7. The revelers' behavior is described in vv. 4-6: lounging on luxurious furniture, feasting on the finest meats, making music, drinking intemperately, and anointing with perfumes (see H. W. Wolff, *Joel and Amos* [Eng. tr., *Hermeneia*, 1977], pp. 276f.).

Greek *kṓmoi* ("excessive feasting"; see Bauer, rev., p. 461) occurs in lists of vices in Rom. 13:13, where it is coupled with *méthai* (RSV "drunkenness"); in Gal. 5:21 (RSV "carousing"; cf. AV), where it follows *méthai*; and in 1 Pet. 4:3, where it appears between *oinophlygíai* (RSV "drunkenness") and *pótoi* (RSV "carousing"; lit. "drinking party"). Originally *kṓmos* meant simply "festal gathering." But because of the debauchery associated with the cults of certain gods (especially DIONYSUS), the term had by intertestamental times taken on negative connotations (cf. 2 Macc. 6:4). In Wisd. 14:23 it is named as one of the evils of idolatry. (See E. G. Selwyn, *First Epistle of Peter* [2nd ed. 1947], p. 211; *see also* CAROUSING; DRUNKENNESS).

Greek *tryphḗ* (cf. cognate verb *entrypháō*) can be used in a positive sense of "enjoyment, delight" (see Bauer, rev., p. 828), but in the NT it means "sensual indulgence" (cf. RSV "luxury," Lk. 7:25). 2 Pet. 2:13 probably refers to the abuses of the "love feast" (*agapḗ*; cf. Jude 12) by the "false prophets," who made this celebration into an occasion for gluttony (cf. 1 Cor. 11:20-22, 27-34; see *IB*, XII, 192f.).

N. J. O.

REVELATION, BOOK OF [Gk. *Apokálypsis Iōannou*]. The last book of the NT, also known as the Apocalypse; it professes to be the record of prophetic visions given by Jesus Christ to John, who was a prisoner "on account of God and the testimony of Jesus" (1:9) on PATMOS, a small rocky island in the Aegean about 24 km. (15 mi.) W of Ephesus. The book's OT precursor is Daniel, which similarly contains symbolic visions and mystical numbers. The peculiar form of Revelation, its relation to other apocalyptic writings and to the Fourth Gospel (also attributed to John), the ambiquity of its symbols, and the controverted questions of its date, unity, and relation to contemporary history have made it one of the most difficult NT books to explain.

I. Authorship and Date
II. Nature of Apocalyptic

An altarpiece painting by Hans Burgkmair of John on Patmos receiving the Revelation. The imaginative sixteenth-century interpretation includes exotic birds, animals, and plants unknown to the island (SCALA/Art Resource, NY)

III. Approaches
A. Preterist
B. Historical
C. Symbolic or Spiritual
D. Extreme Futurist or Dispensational
E. Moderate Futurist
IV. An Interpretation and Exposition
A. Structure
B. Problem of Evil
C. Visitation of Wrath
D. Coming of the Kingdom

I. Authorship and Date.–The book apparently circulated in Asia Minor shortly after its composition and was widely accepted as the work of the apostle John. The first opposition to its apostolicity came from the Alogi (*ca.* A.D. 170), who opposed the Logos doctrine of the Fourth Gospel and therefore rejected all Johannine literature. The Alogi therefore testify indirectly to the Johannine tradition and to the tradition that the Gospel and Revelation came from the same hand. Caius of Rome (3rd cent.) rejected the book because he opposed the Montanists, for whom Revelation was the prime source of their chiliastic ideas. The first "literary critic" of Revelation, Dionysius of Alexandria (d. *ca.* 267), was offended by its millennial teaching and rejected it, pointing out differences of language, style, and grammar between it and the Gospel. He cited the tradition that there were two monuments to John in Ephesus and therefore probably two Johns (cf. Papias in Eusebius *HE* iii.39.5ff.).

The external tradition places the composition of the book in the time of Domitian (A.D. 81-96). Some scholars, e.g., Lightfoot, Westcott, and Hort, dated the book earlier, arguing that it reflects the persecution under Nero rather than Domitian. They also point to 11:1, where the temple and Jerusalem appear still to be standing. The earlier date would have allowed time for John's rough Greek in Revelation to become the polished Greek of the Fourth Gospel. Recent criticism has tended toward the later date, appealing to the Nero *redivivus* theory (see M. Rist in *IB*, XII, 461; *see also* NERO).

As Dionysius pointed out, the language of Revelation differs so markedly from the Fourth Gospel's that common authorship is difficult to uphold. In spite of certain distinct resemblances between the two books (see E. F. Harrison, *Intro. to the NT* [1964], pp. 441-43), the Greek of the Gospel is smooth and idiomatic, while the Greek of Revelation is studded with so many irregularities and solecisms that R. H. Charles devoted a chapter of forty-two pages to "A Short Grammar of the Apocalypse." Many scholars, following Westcott, have concluded that the author had not mastered Greek but instead thought in Aramaic. Undoubtedly the book reflects Semitic influences, but some of its solecisms appear to be deliberate, and possibly the writer's emotional state accounts for others. Some later scholars have attributed both the Gospel and Revelation to the apostle John (e.g., Stauffer). But it should be pointed out that while the author designated himself simply as John (1:1, 4, 9; 22:8), he did not claim apostolic authority; and other NT books were written by persons who were not apostles. The question of common authorship cannot be decided with any certainty.

The island of Patmos (L. K. Smith)

II. Nature of Apocalyptic.–The introductory word of the book, Gk. *apokálypsis*, "apocalypse," has been applied by modern scholars to an entire genre of literature, consisting of Daniel and Revelation and also of a group of noncanonical apocalypses produced between 200 B.C. and A.D. 100. The latter were written in imitation of Daniel, and the assumption has usually prevailed that the entire genre must embody certain common characteristics. But Zahn insisted, "common sense and an uncorrupted taste rebel at placing in the same literary group [as that of the Jewish apocalyptic writings] the Revelation of John, although it be the one from which the group has been named" (*Intro. to the NT* [Eng. tr. 1909], III, 387). Revelation therefore must be both compared and contrasted with the noncanonical apocalypses.

Symbolism is the primary characteristic of all apocalypses. It has its roots in OT prophecy (Zec. 6:1-8), but Daniel was the first book to use symbols to represent historical events. The apocalypses (see esp. 1 En. 85–90; 2 Esd. 11; Assumption of Moses) and Revelation similarly use historical symbols, which make purely symbolical or spiritual interpretation difficult.

All apocalypses are revelatory, i.e., they contain real or alleged disclosures from God of the secrets of the heavenly world and of the denouement of history and the coming of the kingdom of God. Determination of the reality of the visions is difficult and involves theological as well as historical judgments. Many OT prophets experienced ecstatic states; in fact, many critics have considered ecstasy to be the prophetic stock-in-trade. Other prophets, however, showed no traces of the ecstatic. They experienced the word of God as an inward power gripping them and compelling them to speak. Most of the noncanonical apocalypses use visions as a literary technique, as a substitute for the living word of God which was no longer experienced in Israel. Scholars generally have recognized that apocalyptic visions are usually imitative and artificial. 2 Esdras is far more sensitive than the other apocalypses, and its author, brooding after A.D. 70 over the fate of Jerusalem, may well have experienced genuine subjective visionary states. John apparently had similar experiences. That God imparted revelation through such experiences is a theological judgment, not a historical one.

At one important point, Revelation stands quite apart from other apocalypses. John styled his work a prophecy (1:3; 22:7, 10, 18f.), thus intending to classify it with the OT prophetic writings. Jewish apocalypses do not regard themselves as prophetic; indeed, they were written because the voice of living prophecy had been stilled (1 Macc. 4:46; 14:41). The NT apocalypse shares the revival of the prophetic spirit in the NT Church. That Revelation stands with the canonical books rather than with the Jewish apocalypses is supported by its frequent allusions to and brief citations of the OT prophets but lack of clear references to the apocalyptic writings.

Jewish apocalypses are pseudonymous, using the names of OT worthies to help authenticate the written message. Revelation bears the name of its author, John, who was

so well known in the churches to which he wrote that he needed no further self-designation. The seven churches were historical communities known to the author; here again Revelation stands apart from the apocalypses, which do not have an explicit historical setting.

All apocalypses are concerned with the end of the age and the coming of God's kingdom. The apocalyptists, however, often traced the course of history from ancient times down to their own day, and the modern interpreter can follow the outline of history until the author's own time, when the narrative becomes confused and the end is immediately expected. John, by contrast, did not reach into the past to retell the story of God's dealings with Israel or the rise of the Church. He took his stand among his contemporaries and without reconstructing history in the guise of prophecy outlined the consummation of God's redemptive purposes — events that are thrown almost exclusively into the future. While employing the symbolism of apocalyptic, John used the prophetic rather than the apocalyptic view of the future.

The theologies of John and of the Jewish apocalypses also show similarities and differences. The most important similarity is the common conviction that the kingdom of God cannot be achieved by powers immanent within history but only by an inbreaking of God. This idea is rooted in the OT prophets. While the catastrophic event of the coming of God to establish His kingdom is described in diverse forms, "there is no eschatology without rupture" (E. Jacob, *Theology of the OT* [Eng. tr. 1958], p. 318).

The basic problem of Jewish eschatology is theodicy. How could a just God allow His people, who were loyal to the law, to suffer evils at the hands of the Seleucids? Why did He not intervene to deliver His people, who were willing to die rather than break the law? Apocalypses have been called "tracts for bad times"; they offer a theological solution to the enigma of the sufferings of a righteous people. The solution is that God is presently no longer active in history; evil is regnant, and suffering must be endured (1 En. 9:11; 42:3; 89:58-75). God, however, will soon intervene to destroy evil and bring the eschatological salvation. The apocalyptists despaired for history; salvation for them was altogether eschatological.

Although Revelation also has the idea of eschatological salvation, it does not imply that God's people suffer because He is no longer redemptively active in history or has abandoned His people to evil. The basic theological motif is instead that eschatological salvation rests directly upon what God has done in history. The lion who will conquer is the lamb who has been slain (5:5f.); i.e., the Christ who comes conquering on His white horse (6:2) is the Jesus who died on the cross. Eschatology is dependent upon history, as is never true in Jewish apocalyptic; thus Revelation is in the stream of redemptive history, while Jewish apocalypses stand outside of it. This is why Revelation belongs in the canon. Furthermore, God has not abandoned history to evil; for if, as seems likely, the white horse (6:2) symbolizes the gospel, God is still active in history, working for both salvation and judgment to further His redemptive purposes. Salvation is both historical and eschatological.

The nature of salvation allows a different explanation for the sufferings of God's people; they share the sufferings of Christ. Behind the scene of history is a spiritual struggle, which involves both the one destined to rule and those who "bear testimony to Jesus" (12:4, 17). Evil, however, is already a defeated foe (vv. 9f.), and God's people are therefore able to conquer this foe, even if their martyrdom is their victory (v. 11; 15:2).

Revelation is not, therefore, a tract for bad times — the reflex of Christian thought to martyrdom and persecution — as were the Jewish apocalypses. Rather, it is the denouement of redemptive history, reflecting the same struggle between the kingdom of God and satanic evil that underlay Jesus' ministry (Mt. 12:29; Lk. 10:18). This theology is supported by the Church's response to severe persecution and martyrdom: it did not produce further apocalypses to explain the fierce evils, as did Judaism. Furthermore, the view that Revelation was evoked by savage persecution of the Church in Asia rests upon inferences drawn from the book itself rather than from extrabiblical sources; and the persecution by Domitian does not appear to have been severe or universal.

III. Approaches.–Out of the history of interpretation have emerged five distinct approaches to the book.

A. Preterist. The prevailing approach in contemporary criticism is the *preterist,* which views Revelation, like the Jewish apocalypses, as a product of its times. It thus should be interpreted in its own historical setting. The Ephesian church faced severe persecution at the hands of Rome; Revelation was written to encourage believers with the hope that God would shortly intervene, destroy the beast (Rome), and bring salvation (see comms. by A. S. Peake, C. A. A. Scott, R. H. Charles, J. Moffatt, I. T. Beckwith, H. B. Swete; see also the conservative writers A. Pieters and R. Summers). This approach contains an element of truth, for Revelation must have had a message for the 1st century. Since historical events reflect the struggle going on in the spiritual world, eschatological events can be anticipated by historical events manifesting the same struggle. Thus the desolating abomination in the Olivet discourse is both Rome (Lk. 21:5-37) and an eschatological antichrist (Mt. 24, esp. v. 15; Mk. 13, esp. v. 14). The beast of Rev. 13 is the eschatological antichrist whose demonic working is foreshadowed in the Roman emperor (Beasley-Murray), both of whom demanded worship of their subjects. The believers of Ephesus would naturally have applied the book to their own historical situation, and the interpreter must try to understand it as they did. But immediately behind these experiences is the eschatological consummation, the ultimate fulfillment of the message of Revelation.

B. Historical. In this view, which originated with Joachim of Floris (d. 1201), Revelation is a symbolically expressed prophecy of the history of the Church. The most commonly held interpretation in this approach is that the beast is the Roman papacy. Some have seen Revelation as a continuous symbolic portrayal of church history (Luther, Hengstenberg); others have used the principle of recapitulation — the retelling of the Church's history from two or more points of view. Some have interpreted Rev. 20 chiliastically (Newton, Whiston, Bengel, Alford); others, with a "postmillennial" perspective, have seen in the millennial reign of Christ the complete triumph of the Church in the world of history (Vitringa, D. Brown). But this view is inadequate because it does not do justice to the eschatological character of Revelation.

C. Symbolic or Spiritual. This method of interpretation finds in the symbolic language not historical events but principles and powers that work themselves out in all of history (W. Milligan, W. Hendriksen, P. Mauro). Attractive as this approach is, it ignores the basic fact that apocalyptic literature is concerned with the events attending the denouement of history and the coming of the kingdom of God.

D. Extreme Futurist or Dispensational. A dispensational scheme of redemptive history posits two different peoples of God — Israel and the Church — and therefore two programs of prophecy. Accordingly, in Revelation the seven

letters to the seven churches (1:10f; etc.) have usually been seen as an outline of a seven-stage church era. Rev. 4:1 is seen as the rapture of the Church (the raising of all believers to heaven before the great tribulation), and the twenty-four elders are the Church raptured, enthroned, and crowned (v. 4). The rest of the book is seen as concerned exclusively with the great tribulation and the fate of Israel (7:1-8) at the hands of the antichrist (J. A. Seiss, W. Kelly, W. Scott). This view is based not on an inductive study of Revelation but on a system of theology drawn largely from the OT, literally interpreted.

E. Moderate Futurist. In this interpretation Revelation is a prophecy of the denouement of history as it concerns the Church in the world. The view has few modern representatives. The remainder of this article will be devoted to an exposition of it. The other approaches are not rejected *in toto,* for the book portrays spiritual principles, particularly the struggle between the kingdom of God and satanic evil (ch. 12), that are reflected not only in the eschatological consummation but also in the 1st cent. and throughout history.

IV. An Interpretation and Exposition.–A. Structure. One should attempt to derive one's method of interpretation from the structure of the book itself. Revelation claims to depict the consummation of God's redemptive purpose, involving both judgment and salvation. A major problem in the interpretation of the book is the relationship of the seals, trumpets, and bowls; in the solution of this problem may lie the key to the interpretation of Revelation. John saw a book in the form of a scroll, sealed with seven seals along its outer edge, resting in the hand of God. Only the Lion of the tribe of Judah, who is the slain Lamb, could open the book. Here is the key note: the conquering Lion, who alone can disclose the hidden purposes of God, is the Jesus who died on the cross.

The little book is in the form of an ancient will, which was usually sealed with the seals of the seven witnesses. It contains God's inheritance for His people, which is founded upon the death of His Son (see He. 9). The saints' inheritance is the kingdom of God; but the blessings of God's kingdom cannot be bestowed apart from the destruction of evil. In fact, the very destruction of all evil powers is one of the blessings of God's kingly rule. Here is the twofold theme of Revelation: the judgment of evil and the coming of the kingdom.

The successive breaking of the seals does not gradually open the book; its contents cannot be disclosed until the last seal is broken. But as each seal is broken, something happens. After the first seal, conquest rides forth over the earth; after the second, war; then famine, death, and martyrdom. The sixth seal brings the end of the age, and the great Day of the Lord, and the wrath of the Lamb (6:16f.). Thus the events attending the breaking of the seals may not constitute the end itself but instead events leading up to the end. This structure is paralleled in Mt. 24, where wars, famines, and other evils are but the "beginning of woes," not the end itself (v. 8). Furthermore, the conquering white horse (Rev. 6:2) parallels Mt. 24 and pictures the victories to be won by the preaching of the gospel in the world. Many commentators have thought that the four horsemen (Rev. 6:1-8) must be alike in kind and that the white horse must therefore represent some evil power. No woe, however, is mentioned as with the other horsemen, and white in Revelation is always associated with Christ or with spiritual victory. The association of the preaching of the gospel with plagues is no more incongruous in ch. 6 than in Mt. 24:1-14. Both the sword (He. 4:12; Rev. 2:12) and the bow (Isa. 49:2f.) are symbols of God's working among mankind (see T. Zahn, H. Alford, J. Schneider). In the breaking of the five seals are disclosed the agencies by which God leads up to the consummation of salvation and judgment: the preaching of the gospel and the evils of war, death, famine, and martyrdom. These are, as it were, anticipations of the consummated salvation and judgment that are contained within the sealed book.

The sixth seal brings one to the end; but when the seventh seal is broken, when the book itself can at last be opened and its contents disclosed, nothing happens (8:1). There is no woe. While it is in accordance with the flexibility of apocalyptic symbolism that the actual book drops out of sight and its contents are never explicitly mentioned, the seventh seal's being given no specific content suggests that all that follows, beginning with the seven trumpets, makes up the contents of the book. Here begins the actual unfolding of the judicial and redemptive events that constitute the consummation.

One may conclude that in a moderate futurist interpretation the seven letters are addressed to seven historical churches that are representative of the entire Church. The seals represent the forces in history, however long it lasts, by which God works out His redemptive and judicial purposes leading up to the end. The events beginning with ch. 7 lie in the future and will attend the final disposition of the divine will for human history.

B. Problem of Evil. Revelation foresees a short period of terrible evil at the end time. Like Mt. 24:15 and 2 Thess. 2:3-10, it tells of an evil personage who will be satanically inspired and empowered, who openly defies God and demands that mankind worship him rather than God. He will be permitted to wage effective war against the Church and will exercise a worldwide rule (Rev. 13:1-10). His purposes will be reinforced by a false prophet who successfully prostitutes religion to direct worship of the beast. The false prophet is able to combine the powers of religion and economic exchange so that he controls the entire social order in the interests of worshiping the beast (13:11-18). Here is a satanically inspired deification of the state, which dictates even the worship of its subjects. The apostate civilization is portrayed as Babylon, the great whore, who has beguiled the kings of the earth by her evil allures of a luxurious but godless materialism (chs. 17–18) so that they too have turned against Christ (17:14) to worship the beast. The number three and one-half (11:2; 12:6, 14; 13:5) is probably symbolic of a very short period of time.

This brief interval will witness terrible martyrdom, for a person will have to choose between denying Christ and dying, and a vast number from many nations will remain loyal to the Lamb (7:9-17). John saw "those who had conquered the beast and its image" standing beside the sea of glass before God's throne (14:6) singing a hymn of victory (15:1-4). Their martyrdom will be their victory.

But this struggle between the beast and the Lamb for the loyalty of mankind is nothing new; nor is the last manifestation of satanic hatred for the Church limited to the end time. The vision in Rev. 12 of the last terrible persecution is one of the most important in the book. John saw the powers that operate in the spiritual world behind the scene of human history. The Church is pictured as a gloriously adorned woman (v. 1). She is not the historical Church on earth but the Church in heaven; as such, she is to be identified with neither Israel nor the Church, but she includes both. As the heavenly people of God, represented on earth first by Israel, then by the Church, she gives birth both to the Messiah (vv. 2, 5) and to the empirical Church in history (v. 17). The idea of a heavenly

people of God is not unique to John. Paul spoke of the Jerusalem above who is the mother of all believers on earth (Gal. 4:26; see also He. 12:22). Furthermore, the last vision in Revelation is of the heavenly Jerusalem descending to earth; but she is the Bride of Christ, the wife of the Lamb, the people of God (Rev. 21:9f.). The efforts of the red dragon (Satan) to destroy the woman represent in vivid terms an agelong battle between Satan and the people of God.

It is important to note that ch. 12 does not purport to represent earthly events in chronological sequence, but the conflict of suprahistorical powers that show themselves in history. The woman gives birth to the male child (Christ), who is immediately caught up into heaven (v. 5). This passage may refer to the birth of Christ and His ascension, but it does not mention His life, ministry, death, and resurrection. It is surrealistic art, a dramatic depiction of Satan's enmity to the kingdom of God and relentless efforts to frustrate the work of God's Messiah. This provides the key to the subsequent efforts of the dragon to destroy the people of God, for the effort is not limited to a single event but is manifested throughout the entire history of the Church. The eschatological persecution is only the final and most intense manifestation of a hostility that the Church has endured throughout its entire history.

Satan's effort to destroy the Messiah is frustrated (12:4f.). Instead, he is himself cast down from his place of power as a result of a spiritual conflict, which is pictured as a battle between the dragon and Michael. The language in which this victory over Satan is described (vv. 10-12) suggests not an eschatological event but rather Christ's victory over satanic evil. When Jesus said, "I saw Satan fall like lightning from heaven" (Lk. 10:18), He was referring in symbolical terms to Satan's defeat, effected by His own presence among men and the powers of the kingdom of God brought to them (Lk. 10:17; cf. Mt. 12:28f.). The dragon because of his defeat is more infuriated and tries even harder to destroy the woman.

In this vision Satan's unrelenting enmity against the people of God bursts out in historical expression. For example, in 12:17 the dragon goes off to make war with "the rest of her offspring," i.e., the Church on earth. This conflict in heaven between the dragon and the woman explains the evil and persecution that the Church has always experienced (v. 11). It is the dragon who stands on the seashore to call for the beast in his last effort to destroy God's people. The beast, the final embodiment of satanic evil (13:2), is a composite of the four beasts of Dnl. 7; this suggests that the persecution has occurred throughout history, not just in the end times. Therefore the final tribulation is unique only in its intensity; Jesus spoke of the same evil (Mt. 24:21f.). The true victory consists of conquering the beast by being loyal to Christ to the death (Rev. 15:2).

C. Visitation of Wrath. Revelation pictures something that is taught nowhere else in the Bible: that at the same time as the great tribulation God will pass anticipatory judgments upon humanity. The seven trumpets and seven bowls are symbolic representations of these divine judgments or woes, which are poured out in the last climactic hour of the struggle between the Lamb and the dragon. These plagues cannot be identified, for the descriptions are highly symbolic. They are an anticipation of the wrath of God (16:1), which will be consummated with the return of Christ.

Three aspects of the woes are to be noted. First, they are directed against those who bear the mark of the beast and worship its image (16:2). In the terrible hour people will have to stand on one side or the other. Martyrdom may await the followers of the Lamb, but the wrath of a holy God awaits those who submit to the beast.

Second, the plagues have a merciful purpose. They are designed to drive people to their knees, as it were, in repentance before it is irrevocably too late. This merciful purpose in God's judgments is clearly suggested in such verses as 9:20; 16:9, 11, which reiterate that sinners, in spite of God's hand falling heavy in wrath upon them, do not repent and give God glory. Even the fearfulness of God's wrath in these last awful moments before the dawn of the new age has a merciful objective.

Third, twelve thousand from each of the twelve tribes of Israel are marked with the protective seal of God (7:1-8). They suffer neither the plagues that He is about to pour out upon the beast and his followers (v. 3; 9:4) nor His wrath. The seal of God or the mark of the beast will distinguish people in this last hour, whether they are on God's side or Satan's.

Many commentators have seen in this sealed host the final salvation of Israel, which Paul anticipated in Rom. 11 (see also Mt. 10:23; 23:29). So it might seem, except for one fact: these twelve tribes cannot be literal Israel, because they are not the twelve tribes of OT Israel. The list here appears nowhere else in the Bible. It has three irregularities: it names Judah first, thus ignoring the OT order of the tribes; it omits Dan with no explanation (see Ezk. 48:1); it mentions Joseph instead of Ephraim. Perhaps John meant by this irregular listing of the twelve tribes to designate the Israel that is not the literal Israel.

That John conceived of a spiritual Israel is shown by other references. Twice he spoke of those "who say that they are Jews and are not, but are a synagogue of Satan" (2:9; 3:9), meaning that some who are Jews by race are not spiritually Jews, being rather dupes of Satan. A real Jew, then, is not one who is racially or religiously a Jew, but one who acknowledges the claims of Christ and therefore recognizes the Church as the true people of God.

With this clue, one may understand the twelve tribes in Rev. 7 as the true Israel, the elect of God whether Jew or Gentile. The twelve tribes were irregularly listed to show that true Israel is not literal Israel, but the Church. On the threshold of the last day, God's people are sealed on their foreheads so that they do not suffer the wrath poured out upon the beast and his followers. Undoubtedly John recalled the mark of blood over the doors of every Israelite house in Egypt; the plague of death visited every household with an unmarked door. Here is a company who pass through the tribulation but do not suffer the wrath of God.

The two groups in Rev. 7 are the same people of God seen from different perspectives. From the divine perspective the twelve thousand of each of twelve tribes is an ideal number. God's people will be complete and will safely be preserved in this terrible time of wrath. From the human perspective, however, the Church is a great unnumbered throng from all nations, who will suffer martyrdom but will emerge from the tribulation triumphant and stand victorious before the throne of God because they have washed their robes in the blood of the Lamb (v. 14).

D. Coming of the Kingdom. The coming of God's kingdom is pictured in two colors: the destruction of evil and the blessing of eternal life. The destruction of evil occurs in several stages. The second coming of Christ, pictured in 19:11-16, has as its primary purpose the destruction of evil. His coming is a scene of ancient warfare: He rides a battle horse and wears garments bloodstained from battle. He is accompanied by the armies of heaven, apparently

angels, but they do not join in the conflict. The one weapon with which He wages war is a sharp sword proceeding out of His mouth — His naked word. No military conquest is this. His victory over evil is in the power of His word. He shall speak and the victory will be His.

He first conquers the beast, the false prophet, and their followers (19:17-21). This victory is pictured as carnage, but the picture is obviously symbolic. The enemy's doom is not to be slain in battle but to be cast into the lake of fire and brimstone.

Attention is now turned to the dragon, who is the devil and who inspired the beast. The Conqueror surprisingly disappears from the scene, and in His place appears an angel who descends from heaven to overcome the dragon. One would expect the dragon to be thrown at once into the lake of fire, but this doom is delayed. First he is bound and thrown into a "bottomless pit" for a thousand years. Only when he is released and again able to entice rebellion against Christ and the saints is he finally destroyed by being cast into the lake of fire along with the beast and the false prophet.

The positive aspect of the coming of God's kingdom also occurs in stages, not in a single great event. First is a temporal kingdom of a thousand years when the resurrected saints reign with Christ (20:4); it is followed by what may be called the eternal kingdom, with its new heaven and new earth. Each of these aspects of God's kingdom is preceded by a resurrection.

Some commentators have thought that the resurrection before the millennial kingdom, "the first resurrection" (20:5), is limited to the martyrs of the tribulation. These martyrs are indeed given special mention among "the souls of those who had been beheaded for their testimony to Jesus and for the word of God" (v. 4b). But the rather rough language of the Greek in v. 4a is well rendered in the RSV: "Then I saw thrones, and seated on them were those to whom judgment was committed"; this distinct group is all the saints of God who are now raised up and share Christ's reign. The promise that the saints will share Christ's rule and judgment is one that occurs often in Scripture (Dnl. 7:9, 22; Mt. 19:28; 1 Cor. 4:8; 6:2f.; 2 Tim. 2:12; Rev. 2:26f.; 3:12, 21; 5:9f.). A third group, mentioned after the martyrs and the saints, consists of those "who had not worshiped the beast or its image and had not received its mark on their foreheads or their hands" (v. 4c). Most English translations do not make clear that this is indeed a third group, but the syntax of the Greek sentence does change at this point. In this group are those who have survived the persecution of the tribulation and are living when Christ returns. All three groups "came to life" and reign with Christ during the millennium. If the third group designates the living saints (as Simcox, Beasley-Murray, Rissi and have thought), Gk. *ézēsan* includes both the resurrection of dead saints and the rapture of the living, as in 1 Thess. 4:16f. and 1 Cor. 15:51f.

The interpretation of Rev. 20 given above is the natural exegesis of the passage (see Alford, Beasley-Murray, Bietenhard, Cullmann, LaSor, Rissi). It would be very unnatural for one word, *ézēsan* ("they came to life"), to be used in the same context with completely different meanings unless some hint of wordplay is given. Inasmuch as the NT usually views the parousia of Christ as the consummation and the introduction of the age to come (Mt. 24:3, etc.), however, many scholars have interpreted ch. 20 to agree with the usual NT perspective. In their view the reign of Christ and His saints cannot refer to a millennial period after the Parousia but must designate either the present reign of Christ through His church (so Augustine, Allo, Bonsirven) or, as is more often felt, the martyrs' present blessedness in heaven with Christ (so Warfield, H. B. Swete, W. Hendriksen, Sickenberger). Dispensationalists view the millennium as the time when the Jewish theocracy is restored and the OT prophecies of Israel's future triumph over the Gentiles are literally fulfilled. The Jewish sacrificial system and the law of Moses will be included in the restoration. In any case, the final destiny of God's people is the same; only in the new heaven and the new earth are death abolished and evil destroyed. *See also* MILLENNIUM.

The final state of God's kingdom in the new heaven and new earth (21:1ff.) expresses a theology of creation that runs throughout the Bible. The OT prophets pictured the kingdom of God in terms of a redeemed earth (Isa. 11:6-9; Joel 3:18 [MT 4:18]; Am. 9:13-15), which Isa. 65:17; 66:22 even describe as a new heaven and new earth. But the prophets saw the new order as less than perfect; Isaiah still spoke of sin and death in the new earth (Isa. 65:20). Yet a fundamental theology underlies these expectations, even though they must be clarified by progressive revelation: that mankind's ultimate destiny is an earthly one. Man is a creature, and God created the earth to be the scene of his creaturely existence. Thus even as the redemption of man demands the resurrection of the body, so the redemption of the very physical creation requires a renewed earth as the scene of his perfected existence. Man never ceases to be God's creature. The NT does not outstrip this theology, although the eternal order in the NT vision is much more radically new than in God's revelation to the prophets. Jesus spoke of the regeneration of the world (Mt. 19:28), and Paul spoke of the redemption of the created order (Rom. 8:20f.). The new heavens and new earth, and the resurrection of the body, are correlatives.

The new earth is the final scene of redemption: "Behold, the dwelling of God is with men. He will dwell with them, and they shall be His people, and God Himself will be with them" (Rev. 21:3). This feature — that God will be God to His people — is the central element of His covenant with His people throughout the entire course of redemptive history. Yahweh's being God to His people was the continuing element in the covenant made with Abraham (Gen. 17:7), with Moses (Ex. 6:7; Dt. 29:13), and with David (2 S. 7:24f.), and it is the abiding feature of the new covenant that God promised to make in the future kingdom (Jer. 31:1, 33; Ezk. 36:28; 37:23). Now at last, this covenant promise is perfectly fulfilled in the new earth of the future age.

The center of the new earth is the Holy City, the new Jerusalem, which is pictured as the Bride of the Lamb, magnificently arrayed (21:9-11). The description of the city is highly symbolic. Its inhabitants include the redeemed from both OT (v. 12) and NT (v. 14) times. It will have no temple, for there will be immediate fellowship between God and His people, unmediated by cult or ritual (v. 22). Death and disease are banished (22:1f.). The most important promise of all, containing every other blessing of the new order, is: "They shall see His face" (22:4). This is the goal of redemption. No one has seen God at any time; the only Son is the sole mediator bringing us the knowledge of God (Jn. 1:18). When Christ's redeeming mission is completed, the redeemed will enjoy the glory of the beatific vision. They will see God's face.

And so the Bible ends, with a redeemed society dwelling on a new earth that has been purged of all evil, with God dwelling in the midst of His people. This is the goal of the long course of redemptive history.

REVELRY. *See* REVEL.

REVENGE; REVENGEFULLY. *See* VENGEANCE.

REVENUE [Heb. *t^ebû'â*–'yield, increase' (Prov. 16:8; Isa. 23:3), Aram. *'app^etōm*–'treasury'(?) (Ezr. 4:13), *middâ*–'tax' (6:8); Gk. *télos*–'customs duties' (Rom. 13:7; 1 Macc. 10:3), *phóros*–'tribute' (1 Macc. 3:29, 31), *diáphoron*–'sum of money' (2 Macc. 4:28), *prósodos*–'public revenue' (3:3; 4:8; 9:16), *lógos*–'public accounts, treasury' (1 Macc. 10:40, 44f.)]; AV also TRIBUTE, CUSTOM, ACCOUNTS; NEB also GAIN (Prov. 16:8), HARVEST, "in the end" (Ezr. 4:13, mg. "certainly"), FUNDS, TOLL, TRIBUTE, etc. A term designating the money collected by a government (through taxes, tributes, etc.) and deposited in the treasury. In Prov. 16:8, however, it simply denotes the income returned by a private investment.

See TAX.

REVERENCE; REVERE; REVERENT. An attitude of deep respect, honor, and deference. In the RSV OT "revere" and "reverence" usually represent Heb. *yārē'* (lit. "fear"). The truly devout person is typically described as one who "fears the Lord" (*yārē' YHWH*). Implied are not only a reverent attitude but also the obedient actions that naturally flow from it (*see* FEAR II.B). Thus Obadiah's reverence for Yahweh (1 K. 18:3, 12; AV "fear") was demonstrated by his protection of one hundred prophets of Yahweh (v. 4).

Yahweh's HOLINESS demands that His people pay reverence to no other gods (*yārē'*, Jgs. 6:10; cf. 2 K. 17:35-39; RSV "fear") and that they reflect His holiness in a lifestyle obedient to His commandments. This lifestyle includes showing reverence (*yārē'*) toward parents (Lev. 19:3; AV "fear"; cf. Ex. 20:12; Dt. 5:16, which use *kābēḏ,* "honor") and toward the sanctuary, which represents God's holy presence (Lev. 19:30; 26:2). Because of his failure to "revere [Yahweh] as holy" (piel of *qāḏaš,* lit. "treat as holy," "sanctify" [so AV], Dt. 32:51) at Meribath-kadesh (Nu. 20:10-13; cf. RSV "sanctify," v. 12; *qdš* may be a wordplay on the place name *qāḏēš* [Kadesh]), Moses was prohibited from entering the Promised Land.

For the author of Ps. 119, love for God is virtually equated with devotion to His commandments. In v. 48 the RSV uses "revere" to render *nāśā' kappîm 'el* (lit. "lift up palms to"; cf. AV "lift up hands to"; NEB "welcome"). Lifting the hands was a common gesture of prayer and adoration (*see* GESTURE I). Another gesture of reverence was doing OBEISANCE, or prostrating oneself at the feet of a superior (cf. AV "do reverence" for *hištaḥ^awâ,* "bow down," "prostrate oneself," in 2 S. 9:6; 1 K. 1:31; Est. 3:2, 5; *see also* GESTURE IV).

In Eph. 5:21 the common phrase Gk. *phóbos toú kyríou* ("fear of the Lord," Acts 9:31; etc.; cf. also *phóbos théou,* "fear of God," Rom. 13:18; etc.) is replaced by *phóbos Chrístou* (lit. "fear of Christ" [so AV]), indicating how closely the author associates Christ with God. This "reverence for Christ" (RSV, NEB) provides the basis and motive for the mutual subjection of Christians to one another. Reverencing Christ as the holy Lord (*hagiázō,* lit. "treat as holy," "sanctify" [so AV], 1 Pet. 3:15a; cf. RSV "hallow" in Mt. 6:9 par.) can also provide courage in times of persecution (cf. Isa. 8:12f.). The Christian's respectful behavior toward God and others (*phóbos,* vv. 2, 15b; AV "fear"; NEB also "respect") can be a powerful witness to unbelievers; cf. Tit. 3:2, where older women are instructed to be "reverent" (*hieroprepḗs,* lit. "befitting one who is holy," "worthy of respect") in behavior, "that the word of God may not be discredited." *See also* RESPECT.

"Reverence" (*eulábeia*) is closer in meaning to "anxiety" in He. 12:28, where it is linked with AWE (*déos*); cf. the phrase *phóbos kaí trómos* ("fear and trembling," Phil. 2:12; etc.). True and acceptable worship must always be marked by a recognition of God's majesty and holiness, "for our God is a consuming fire" (v. 29; see F. F. Bruce, *Epistle to the Hebrews* [*NICNT,* 1964], pp. 383-85; *TDNT,* II, *s.v.* εὐλαβής κτλ. [R. Bultmann]).

"Reverend" ("worthy of reverence") is the AV translation of the Hebrew niphal part. of *yārē'* in Ps. 111:9 (lit. "to be feared, fearful"; cf. RSV "terrible"; NEB "inspiring awe"), describing the name of Yahweh. In the description of Onias (2 Macc. 15:12, AV) it represents Gk. *aidḗmōn* (lit. "modest" [so RSV, NEB]).

See also FEAR IV. N. J. O.

REVILE [Heb. piel of *qāḏap*–'slander,' 'blaspheme' (Nu. 15:30; 2 K. 19:6, 22; Isa. 37:6, 23; Ps. 44:16 [MT 17]), piel of *qālal*–'declare cursed' (Ex. 22:28; Jgs. 9:27), piel of *nā'aṣ*–'treat disrespectfully' (Ps. 74:10, 18), piel of *ḥārap*–'scoff' (Isa. 65:7); Gk. *blasphēméō*–'slander,' 'blaspheme' (Lk. 22:65; Acts 13:45; 18:6; 2 Pet. 2:2; etc.), *loidoréō*–'insult, abuse' (Jn. 9:28; Acts 23:4; 1 Cor. 4:14; 1 Pet. 2:23), *antiloidoréō* ("revile in return," 1 Pet. 2:23), *loidoría*–'verbal abuse' (1 Tim. 5:14), *oneidízō*–'reproach' (Mt. 5:11; 27:44; Mk. 15:32; Lk. 6:22), *epēreázō*–'abuse' (1 Pet. 3:16)]; AV also BLASPHEME, REPROACH, CURSE, SPEAK EVIL OF, "cast out as evil," etc.; NEB ABUSE, INSULT, DEFY, TAUNT, CURSE, SLANDER, etc.; **REVILER** [Heb. piel part. of *gāḏap* (Ps. 44:16 [MT 17]); Gk. *loídoros* (1 Cor. 5:11; 6:10)]; AV also HE THAT . . . BLASPHEMETH, RAILER; NEB THOSE WHO . . . ABUSE, SLANDERER; **REVILING** [Heb. *giddûp* (Isa. 43:28; 51:7; Zeph. 2:8), *ne'āṣâ* (Ezk. 35:12); Gk. *blasphēmía* (Jude 9), *blásphēmos* (2 Pet. 2:11), *loidoría* (1 Pet. 3:9)] AV also REPROACH, RAILING, BLASPHEMY; NEB EXECRATION, REPROACH, BLASPHEMY, INSULT, etc. To subject to verbal abuse.

The biblical terms convey a range of meanings, but they all have to do with slandering, insulting, or in some other manner showing contempt for an opponent. The object of reviling can be either God or another human being.

Reviling becomes blasphemy when it involves showing contempt for God's name (Ex. 22:28; Ps. 74:10; 18) or injuring God's glory and majesty (Isa. 65:7), e.g., by dishonoring His people (Ezk. 35:12) or wilfully defying His commands (Nu. 15:30). The mocking of Jesus' messianic claims (Lk. 22:65) and the opposition to Paul's preaching about the Messiah (Acts 13:45; 18:6) also constitute blasphemy. Jude 8-10 (par. 2 Pet. 2:10f.) refers to heretics who revile "the glorious ones" (prob. angels who function as mediators of the law and guardians of the moral order) and presume to set themselves up as a law unto themselves. 2 Pet. 2:2 alludes to Isa. 52:5 in a warning against false prophets and teachers whose immoral behavior causes others to revile the truth.

Reviling is rooted in human arrogance (cf. 2 K. 19:22 par. Isa. 37:23), and it is included in lists of vices that characterize those outside of the kingdom of heaven (1 Cor. 5:11; 6:10). But just as Jesus Himself was insulted and mocked (Mt. 27:44 par. Mk. 15:32), so also His followers must not expect to escape slander and defamation (Mt. 5:11; Lk. 6:22; cf. 1 Tim. 5:14). Christians have Jesus' example to follow in responding to such abuse; like Him, they are to respond to reviling with a blessing (1 Pet. 2:23; 3:9, 16; cf. 1 Cor. 4:12).

REVIVE [Heb. qal, piel, and hiphil of *ḥāyâ*, qal and hiphil of *šûḇ*; Gk. *anazáō*–'become alive,' 'spring to life' (Rom. 7:9), *amathállō*–'bloom again' (Phil. 4:10)]; AV also LIVE, QUICKEN, RELIEVE (Lam. 1:11, etc.), CONVERT (Ps. 19:7 [MT 8]), FLOURISH AGAIN, etc.; NEB also GIVE NEW LIFE, RENEW, RESTORE, GIVE AGAIN, SPRING TO LIFE, BLOSSOM AGAIN, etc.; **REVIVING** [Heb. *miḥyâ*] (Ezr. 9:8f.); NEB "chance to renew our lives," "means of renewal." To return to life or vitality; or, transitively, to restore to life or vitality.

In OT thought "life" and "death" are viewed as opposite poles, but not necessarily as totally disparate realities. LIFE in its fullest sense includes health, prosperity, and happiness. On the other hand, to suffer adversity or sickness is to experience the power of death (see Johnson). Thus, while Heb. *ḥāyâ* can mean simply "be alive" (cf. 2 K. 13:21, where a dead man "revives" when his body touches Elisha's bones), it can also mean "recover" (cf. 2 K. 1:2; 8:8-10, 14; etc.) from any form of weakness; and in the piel (*ḥîyâ*) it can mean not only "preserve life" (e.g., Ps. 119:149, 159; 138:7; 143:11) from adversity, but also "restore vitality" (cf. "revive," Hos. 6:2).

Death is thought of as the departure of the *nepeš* ("breath," "soul"; cf. Gen. 35:18) or the absence of *rû(a)ḥ* ("wind," "breath," "spirit"). Thus the restoration of life or vitality can be described as the *nepeš* or *rû(a)ḥ* "returning" (*šûḇ*; cf. hiphil, *hēšîḇ*, "restore") or "reviving" (*ḥāyâ*). 1 K. 17:22 describes a raising from physical death: "the child's soul [*nepeš*] came into him again, and he revived [*ḥāyâ*]" (cf. v. 17, "there was no breath left in him"; for the view that the child was sick but not dead, cf. J. Gray, *I & II Kings* [*OTL*, 2nd ed. 1970], pp. 382f.). The people in famine-stricken Jerusalem sought food and a comforter to "revive" (*hēšîḇ*) their "strength" (*nepeš*, Lam. 1:11, 19) and "courage" (*nepeš*, v. 16). When Samson, almost dying of thirst, was given water to drink, his "spirit returned" (*hēšîḇ rû[a]ḥ*) and "he revived" (*ḥāyâ*, Jgs. 15:19); cf. 1 S. 30:12, where the Egyptian's "spirit revived" (*šûḇ rû[a]ḥ*) after he ate. Gen. 45:27 describes Jacob's recovery from shock as his spirit revived (*ḥāyâ rû[a]ḥ*; cf. v. 26, "his heart fainted").

Devout Israelites recognized Yahweh as the giver of all life and health (cf. Dt. 32:39; 1 S. 2:6). Only God can "revive again" (*šûḇ ḥîyâ*, lit. "return, restore life") those who are in distress (Ps. 71:20; 85:6 [MT 7]). True life is found only in communion with the Holy God, who revives (hiphil of *ḥāyâ*) the "spirit [*rû(a)ḥ*] of the humble" and the "heart of the contrite" (Isa. 57:15). Therefore the psalmists can speak of God's law as a means of "reviving the soul" (*hēšîḇ nepeš*, Ps. 19:7 [MT 8]; cf. *ḥîyâ*, 119:25; rendered "give life" in vv. 37, 40, 93, 107, etc.).

Figuratively, a city in ruins is dead; thus to rebuild the wall of Jerusalem is to restore life to ("revive," *ḥîyâ*) the city (Neh. 4:2 [MT 3:34]; cf. 1 Ch. 11:8; RSV "repair"). In Ezr. 9:8f. "reviving" (*miḥyâ*, subst. of *ḥāyâ*) apparently refers to the restoration of the Jewish people through their return from exile and reestablishment in Jerusalem (cf. NEB interpretation).

In Rom. 7:9 Paul describes his own experience of sin's destructive power. Before he knew the Torah, he was able to live without restraint (v. 9a). But when he became aware of the (tenth) commandment (probably beginning at the age of thirteen, when he was made a *bar-miṣwâ*, "son of the commandment"), sin "sprang to life" (Gk. *anazáō*); i.e., the commandment gave not only an awareness of sin but an impetus to it, on account of the rebellious instinct to desire what is prohibited (see Davies, Dodd).

REVOLT [Heb. *sārâ*–'revolt, apostasy'] (Isa. 31:6; 59:13); NEB OFFEND, "treacherous words"; [*qešer*–'conspiracy'] (Jer. 11:9); AV, NEB, CONSPIRACY; [*pāšaʿ*–'revolt, rebel'] (2 K. 8:20, 22; 2 Ch. 21:8, 10); [Gk. *anastatóō*–'disturb the peace'] (Acts 21:38); AV "make an uproar." Rebellion against the ruling authority. The Bible describes both spiritual revolt against God and His revealed will (Jer. 11:9; Isa. 31:6; 59:13) and political revolt against human government (2 K. 8:20, 22 par.; Acts 21:38).

Spiritual revolt against Yahweh the God of Israel is a major topic in the OT prophetic literature. Jeremiah lamented the "conspiracy" (AV, NEB; Heb. *qešer*, Jer. 11:9) of Israel, i.e., its continuation of the idolatrous practices of preceding generations. Baal worship was at the center of this open rebellion (vv. 9-13). Isaiah, similarly, in an oracle of national confession, described Israel as "speaking oppression and revolt." This poetic expression is parallel with "denying the Lord" and "turning away from following our God" (Isa. 59:13). Thus "revolt" in the spiritual sense is a refusal to obey the commands of Yahweh, most specifically those in the Decalogue (cf. Ex. 20:1-17; Dt. 5:6-21; cf. 6:4f.). The rebel actively and wilfully does what is prohibited.

Political rebellions are mentioned frequently in the Bible. For example, Moses had to contend with a revolt led by Korah, Dathan, and Abiram (Nu. 16). King David's reign was threatened by two revolts, the first by his son Absalom (2 S. 15–18) and the second by Sheba (ch. 20). Rehoboam's foolish, heavy-handed policies provoked the ten northern tribes to revolt and establish Jeroboam as their king (1 K. 12:16-20). The northern kingdom never gained the dynastic stability of Judah, and its kings frequently lost their lives in coups (e.g., 1 K. 15:27f.; 16:8-10,

17f.; 2 K. 9:23f.; 15:10, 13f., 25, 30). 2 K. 11:14 records the cry of Queen Athaliah of Judah when she realized that she was being overthrown: *qešer qešer* (RSV "Treason! Treason!"). Many vassal states also revolted against the nations that ruled over them. The revolts of Edom and Libnah against Israel's rule are noted in 2 K. 8:20-22 par. 2 Ch. 21:8-10.

Various Jewish political and religious groups revolted — with varying degrees of success — against their foreign rulers during the intertestamental and NT periods. Paul was mistakenly identified with an Egyptian false prophet who had gathered a large band of Jewish followers with the intention of overthrowing Jerusalem (Acts 21:38); the revolt was put down and the followers killed or imprisoned, but the Egyptian escaped (Josephus *Ant.* xx.8.6 [169-173]). In his warning to the council that they not execute the apostles, Gamaliel mentioned two revolts that failed because they were not of God: one led by a certain THEUDAS (Acts 5:36) and another led by Judas the Galilean (v. 37; *see* JUDAS 8).

R. J. WYATT N. J. O.

REWARD [(nouns) Heb. *śāḵār*–'hire, wages' (Gen. 15:1; Nu. 18:31; Ps. 127:3; Eccl. 4:9; 9:5; Isa. 40:10; 62:11), *śeḵer*–'hire' (Prov. 11:18), *ʿēqeḇ*–'result, reward' (Ps. 19:11 [MT 12]; Prov. 22:4), *gᵉmûl*–'recompense' (Ps. 28:4), *gᵉmûlâ*–'recompense' (2 S. 19:36 [MT 37]), *ḥēleq*–'profit' (Eccl. 2:10), *maśkōret*–'wages' (Ruth 2:12), *mattaṯ*–'gift' (1 K. 13:7), *pᵉʿullâ*–'reward (of sin), punishment' (Ps. 109:20), *pᵉrî*–'fruit' (Ps. 58:11 [MT 12]), *šōḥaḏ*–'present' (Isa. 45:13); Aram. *nᵉḫizbâ*–'present' (Dnl. 2:6; 5:17); Gk. *misthós*–'pay, wages' (Mt. 5:12; 6:1f.; Mk. 9:41; Lk. 6:23; Acts 1:18; 1 Cor. 3:14; etc.), *misthapodosía* (He. 10:35; 11:26), *antapódosis*–'repaying, reward' (Col. 3:24)]; AV also DESERT, PORTION, etc.; NEB also PAYMENT, DESERT, PRESENT, BRIBE (Isa. 45:13), etc.; [(verbs) Heb. *gāmal*–'render, do (good, evil) to' (2 S. 22:21; 2 Ch. 20:11; Ps. 18:20 [MT 21]), piel of *šālam*–'recompense,' 'complete,' 'finish' (1 S. 24:19 [MT 20]; Job 8:6; Prov. 13:21; 25:22), pual of *šālam*–'be requited' (Prov. 13:13), *nāṯan*–'give' (1 K. 8:32; 2 Ch. 6:23; Jer. 32:19), *śîm*–'put' (Ps. 109:5), hiphil of *šûḇ*–'cause to return' (1 S. 26:23); Gk. *apodídōmi*–'render, recompense' (Mt. 6:4, 6, 18)]; AV also REPAY, GIVE, RENDER, etc.; NEB also REPAY, etc.; [(adj.) Gk. *áxios*–'worthy' (Lk. 23:41)]; AV DUE REWARD; NEB PRICE. In 2 Ch. 15:7; Jer. 31:16 "rewarded" translates the phrase *yēš śāḵār* (lit. "there is reward"). In 2 S. 4:10; 18:22 the RSV supplies "reward" from the context. In He. 11:6 "rewards" (AV "rewarder") translates Gk. *misthapodótēs gínetai* (lit. "be one who pays wages"), while in Rev. 11:18 "rewarding" (NEB "recompense") renders *doúnai tón misthón* (lit. "to give the reward").

The Hebrew noun *śāḵār* and Greek noun *misthós* are the terms most frequently translated "reward" in the RSV. As the lexical summary indicates, however, several additional Hebrew and Greek words can also carry this meaning. Central to the notion of reward in the Bible is a belief in the inherent relationship between an action and its outcome. Two Hebrew words that can acquire the meaning "reward" illustrate this central idea. First, the noun *pᵉrî* ("fruit"), which literally means the end of a natural growth, can be used to indicate the natural outcome of a certain kind of action. Thus the psalmist confesses in Ps. 127:11 (MT 12): "Men will say, 'Surely there is fruit [*pᵉrî*; RSV "a reward"] for the righteous.'" Second, the verb *šālam*, which frequently indicates the bringing to completion of an action, can convey the idea of a "reward" as part of the wholeness of an action — its natural completion. Thus, when Saul realizes that David did not kill him even though he had the opportunity, he says to David: "So may the Lord bring you to completion [*šālam*; RSV "reward you"] with good for what you have done to me this day" (1 S. 24:19).

I. In Commercial Contexts.–In contexts of commerce "reward" frequently means wages or payment for services rendered. For example, the Levites' reward for their sanctuary service was that they were allowed to eat a portion of the sacrifice (Nu. 18:31). Messengers were rewarded (i.e., paid) for bringing good news (cf. 2 S. 4:10; 18:22). Interpreters of dreams also earned rewards (Dnl. 2:6; cf. 5:17). Acts 1:18 states that Judas Iscariot "bought a field with the reward [i.e., money] of his wickedness." In these and other examples (e.g., Eccl. 2:10; 4:9) the wages received represent the completion of the action itself.

See also HIRE.

II. In Ethical and Theological Contexts.–The most important uses of "reward" in the Bible occur not in commercial but in ethical and theological contexts (cf. the ethical dimension even in Acts 1:18; see I above). One reason for this is that the biblical writers viewed human life itself as inherently ethical; i.e., they saw an intrinsic correspondence between actions and their consequences, whether good or evil. Prov. 13:21 illustrates an ethic of reward: "He who despises the word brings destruction upon himself, but he who respects the commandment will be rewarded"; cf. 11:18: "A wicked man earns deceptive wages, but one who sows righteousness gets a sure reward." These examples illustrate how biblical writers in the wisdom tradition viewed life as a dynamic process in which good actions lead inevitably to happy outcomes and sinful actions lead to evil outcomes. The cessation of this dynamic process is death. According to the author of Ecclesiastes, "the dead have no more reward," since all of their actions — love, hate, envy — have perished (Eccl. 9:5f.).

Israelite belief in the inherently ethical nature of life and in the righteous character of Yahweh provided the basis for a developed theology of rewards. As a righteous God, Yahweh metes out justice, thereby ensuring the appropriate correspondence between conduct and destiny (1 S. 26:23; 1 K. 8:32 par. 2 Ch. 6:23; Jer. 32:19). Thus, e.g., faith (Gen. 15:1), righteousness (2 S. 22:21; Ps. 18:20; 58:11), the study of Torah (19:11), keeping the commandments (Prov. 13:13), humility (22:4), kindness to enemies (25:22), and faithfulness (Ruth 2:12; 2 Ch. 15:7) lead to positive rewards from God, while false accusations (Ps. 109:20) and false piety (Mt. 6:2, 5, 16) lead to negative rewards. Ps. 28:3f. illustrates this theology of rewards: "Take me not off with the wicked, with those who are workers of evil, who speak peace with their neighbors, while mischief is in their hearts. Requite them according to their work, and according to the evil of their deeds; requite them according to the work of their hands; render them their due reward." In this lament the psalmist petitions God not only to distinguish between the righteous and the wicked but also to reward the wicked with an appropriate punishment.

Although a theology of rewards remains a central theme throughout the Bible, several passages discuss problems that result from an overly mechanical view of divine retribution or blessing in this lifetime. The book of Job probes the problem of the righteous sufferer. Bildad, one of Job's friends and comforters, represents an overly mechanical theology of rewards when he confidently encourages Job to repent, using the following logic: "if you are pure and upright, surely then he [God] will rouse himself for you

and reward you with a rightful habitation" (Job 8:6). Job's response is that Bildad is simply wrong, because Job himself is innocent (9:15, 20). Thus the book shows that the world's ethical structure must be more complex than Bildad supposes. Job concludes that neither Bildad nor anyone else is an adequate umpire to referee between himself and God (9:33). Isa. 62:11 (cf. also 40:10) also qualifies an overly mechanical theology of rewards, but from a different perspective than the book of Job. The prophet proclaims: "Behold, your salvation comes; behold, his reward is with him." "Reward" here signifies Yahweh's victory spoils, i.e., His people, whom He has rescued from exile and redeemed from their sin (cf. 62:12). Thus the simple correspondence between human conduct and destiny is also qualified by God's salvation, which carries its own rewards. The passages from Job and Isaiah complement each other in probing a theology of rewards, for they both show that the rewards that a person experiences in this life are not an adequate basis for evaluating the ethical quality of that life. The righteous may suffer in this life, and the sinful may receive reward.

In the Judaism of intertestamental times the concept of reward was combined with eschatological expectation. Where there seemed to be no strict correspondence between conduct and destiny in this life, belief in rewards was transferred to the next life and connected with the ideas of resurrection and judgment. Thus injustices in this life will be reversed in the life to come, in which the righteous will be rewarded with eternal life and the wicked with eternal damnation (e.g., see 2 Esd. 2:35; 7:35f.; cf. Ps. Sol. 3:11f.; 9:5; 13:11; etc.).

In the NT the theology of rewards remains an important theme. In the Synoptics Jesus speaks often of the reward that awaits those who do God's will (e.g., Mt. 5:46; 6:1, 4, 6, 18; 10:41f.; Mk. 9:41; Lk. 6:35). The problem of the righteous sufferer is now viewed in the light of the crucifixion of Jesus, who suffered torture and death though He had done no wrong (cf. Lk. 23:41). Jesus' disciples are also to expect suffering in this life, but they are promised great reward in the life to come (Mt. 5:12 par. Lk. 6:23).

Paul also developed the concept that God rewards those who serve Him faithfully (e.g., 1 Cor. 3:14; 9:17f.). Col. 3:24 urges slaves to serve the Lord rather than their human master, "knowing that from the Lord you will receive the inheritance as your reward." Thus Paul developed the idea expressed in Isa. 40:10; 62:11 — that God's people will receive the reward He has obtained for them by the salvation He has accomplished.

The theology of rewards is also evident in the book of Hebrews, which characterizes proper faith as belief that God rewards those who seek Him (He. 11:6). Christians suffering persecution are exhorted to persevere in order that they may obtain their reward (10:35f.), as Moses did (11:26). The reward awaiting those who endure is mentioned also in 2 Jn. 8 and Rev. 11:18.

T. B. DOZEMAN

REZEPH rē'zef [Heb. *reṣep*]. A town mentioned in Sennacherib's message to Hezekiah demanding Jerusalem's surrender (2 K. 19:12; Isa. 37:12). It is cited, together with Gozan and Haran, as an example of a city whose local deities were unable to preserve it from Assyrian conquest. It has been identified with the *Ra-ṣap-pa* (the spelling varies) known from Neo-Assyrian inscriptions and tablets (see S. Parpola).

Identifying its location is complicated by the fact that there were at least two sites known as *Raṣappa*: one in the central Syrian plain about 20 km. (13 mi.) S of the Euphrates River near Sura, and a second in the northern Mesopotamian region SW of the Tigris River near Jebel Sinjar. The Syrian *Raṣappa* (modern Risāfe), identified by Ptolemy as *Rhēsapha* (*Geog.* 5:16), was an important caravan center for several centuries; during the Byzantine period its name was changed to Sergiopolis (in honor of St. Sergius). The second *Raṣappa*, mentioned in several Neo-Assyrian texts, was the capital of Assyrian governors during the time of Adadnirari III and Šamši-Adad VI. Its exact location is open to question.

A Syrian identification is suggested by the greater geographical proximity of the Syrian *Raṣappa* to Haran and Gozan; all three were Aramean city-states on the western edge of the Assyrian empire. The cities that can be identified were located in a similarly proximal area in western Syria. On the other hand, Heb. *reṣep* in Isaiah and Kings represents an Assyrian source, and the extant Neo-Assyrian references to *Raṣappa* seem on the whole to signify the Mesopotamian town. Also, Sennacherib's statement that his forefathers (Heb. *'aḥôṭay*) destroyed these cities may be a reference to the campaigns of Shalmaneser III and Adadnirari III, which brought the Mesopotamian *Raṣappa*, as well as Haran and Gozan, under Assyrian rule. The evidence is as yet insufficient to allow an unqualified identification.

REZIA rə-zī'ə (1 Ch. 7:39, AV, NEB). *See* RIZIA.

REZIN rē'zin, re'zən [Heb. *reṣîn*].

1. Late eighth-century-B.C. king of the Aramean state centered at Damascus. He became king of Damascus probably *ca.* 740 B.C. Chafing under the severe tribute imposed in 738 by the imperialistic Assyrian king Tiglath-pileser III (2 K. 15:19) on all states in the area, he helped organize an alliance against Assyria that included (northern) Israel, Arab states, Phoenicia, and Philistia. When King Ahaz of Judah refused to join, Rezin and King Pekah of Israel attacked Judah in 734 and besieged Jerusalem with the object of placing a king in Zion who would support them (2 K. 15:37; 16:5; Isa. 7:1-6). This attack and Judah's later successful counterattack (Hos. 5:8-10) constituted the Syro-Ephraimite war. Ahaz responded by appealing to Assyria for help (2 K. 16:7f.), and in 733/32 B.C. Tiglath-pileser's forces defeated the coalition, as Isaiah had prophesied (Isa. 8:3f.). Aram-Damascus and much of Israel were incorporated into the Assyrian empire as provinces, never again to be independent (2 K. 15:29; Isa. 9:1; *ANET*, pp. 283f.).

As a result of Israel's defeat the Assyrian sympathizer Hoshea, who seized power in Samaria, assassinated Pekah (2 K. 15:30). The Assyrians executed Rezin (16:9) after they successfully completed the siege of Damascus in 732 B.C. Much of the population of Damascus was deported and other states in the original anti-Assyrian coalition were treated roughly after their defeat, most being annexed into the Assyrian empire. Rezin thus played an unwitting role in the fulfillment of the anti-Aramean prophecies of Isaiah (Isa. 7–8, 10, 17) and Amos (Am. 1:3-5). Amos had predicted the Damascus exile to Kir (1:5; cf. 2 K. 16:9).

2. The head of a family of temple servants who returned from the exile with Zerubbabel (Ezr. 2:48 par. Neh. 7:50).

D. K. STUART

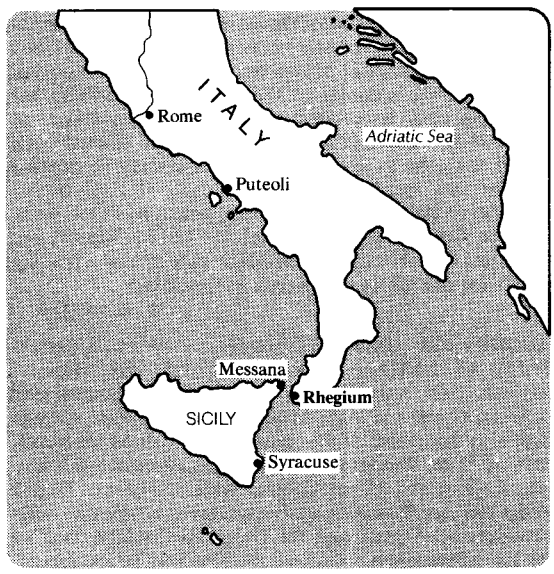
REZON rē′zən, re′zon [Heb. *rᵉzôn*; LXX Esrōm]. An Aramean, son of Eliada, and foe of Solomon (1 K. 11:23). After Aram-zobah had fallen to David, Rezon, an underling of defeated King Hadadezer of Zobah, established himself with a small army in the Aramean city of Damascus (11:24). Rezon is often identified with HEZION, grandfather of Ben-hadad I of Damascus (1 K. 15:18).

The political tension between Israel and Aram-Damascus persisted into the period of the divided monarchy, long after the era of Solomon and Rezon (1 K. 11:25). The dynasty of Rezon was stable and maintained its adversarial disposition toward Israel, the northern kingdom, during the reigns of the Omride and Jehu dynasties. The conflict ceased briefly when Assyria under Shalmaneser III threatened the kingdoms of the western side of the Fertile Crescent (*ca.* 853 B.C.), but later the Aramean-Israelite wars resumed.

See M. F. Unger, *Israel and the Aramaeans of Damascus* (repr. 1980), pp. 51-58. G. D. JORDAN

RHEGIUM rē′jē-əm [Gk. *Rhēgion*] (Acts 28:13). A city on the east side of the Sicilian Straits, the modern Reggio di Calabria, where Paul's ship stopped on the way to Rome. Ancient authorities were divided as to whether Rhegium meant "royal [town]" (Lat. *regium*) or "rent [town]" (Gk. *rhēgnymi*, i.e., where Sicily was rent apart from Italy). Rhegium was about 10 km. (6 mi.) S of a point opposite Messina (ancient Messana), near the rock Scylla and the whirlpool Charybdis, long known as hazards to ships.

Originally a colony of Chalcidian Greeks (Strabo *Geog.* vi.1.6), Rhegium enjoyed great prosperity under tyrants in the 5th cent. B.C. (Herodotus vii.165) but was captured and destroyed by Dionysius tyrant of Syracuse in 387 B.C. All the surviving inhabitants were sold into slavery (Diodorus xiv.106-108, 111f.). The city never entirely recovered from this blow, although it was partially restored by the younger Dionysius. When the Greek general Pyrrhus invaded Italy, the people of Rhegium made an alliance with Rome (280 B.C.) and received four thousand Campanian troops within their walls. The Campanians turned out to be very unruly guests, for, in imitation of a band of mercenaries across the strait in Messina, they expelled or massacred the men and enslaved the women and children (Polybius i.7; cf. Orosius iv.3). The mercenaries were not punished by the Romans until 270 B.C., when the town was restored to the former inhabitants who had survived. The people of Rhegium were faithful to their alliance with Rome during the Second Punic War (Livy xxiii.30.5-9; xxiv.1; xxvi.12.1-14; xxix.6.3-10). During the Social War (91-87) Rhegium became a Roman municipality (Cicero *In Verrem* v.61 [158-160]; *Pro Archia poeta* iii.5). Some of Augustus's veterans were settled there.



The ship on which Paul sailed from Melita to Puteoli encountered unfavorable winds after leaving Syracuse, and it reached Rhegium by means of tacking. It waited at Rhegium a day for a south wind, which bore it to Puteoli (Acts 28:13), about 290 km. (180 mi.) away, probably in about twenty-six hours. G. H. ALLEN

RHESA rē′sə [Gk. *Rhesa*] (Lk. 3:27). A son of Zerubbabel in the genealogy of Jesus.

RHETORICAL CRITICISM. The analysis of a text or entire book of the Bible according to the patterns and systems of speaking and writing both in the period in which it was written and according to more modern literary and rhetorical theories. It is an attempt to understand better the author's thinking and message, how he or she intended the text or book to function, and how the readers were likely to perceive and react to its content.

I. Origins.–Rhetorical criticism of the Bible has many precursors. St. Augustine's *De doctrina Christiana*, Book IV (5th cent.) discusses the rhetorical style of the biblical authors, especially Paul. The Venerable Bede analyzed figures and tropes used in the Bible in his *De schematibus et tropis* (8th cent.). Philip Melancthon relied heavily upon inventional theory in his NT commentaries (16th cent.). It was not until the late 19th cent., however, that the rhetorical features of the Bible were systematically studied. Some of the best representatives of these initial studies are the works of Johannes Weiss ("Beiträge zur Paulinischen Rhetorik," in *Theologische Studien Bernhard Weiss dargebracht* [1897] pp. 165-247), E. W. Bullinger (*Figures of Speech Used in the Bible* [1898]), Eduard König (*Stilistik, Rhetorik, und Poetik in Bezug auf die biblische Literatur* [1900]), Rudolf Bultmann (*Der Stil der paulinischen Predigt und die kynisch-stoische Diatribe* [1910]), and Eduard Norden (*Agnostos Theos* [1913]). These studies concentrated on individual rhetorical features, such as figures of speech and thought, but did not develop a systematic rhetorical analysis.

II. OT Rhetorical Criticism.–The designation "rhetorical criticism" and the proposal to establish rhetorical criticism as a discipline were first made by James Muilenburg in his 1968 Presidential Address to the Annual Meeting of the Society of Biblical Literature (*JBL*, 88 [1969], 1-18). Muilenburg called upon biblical scholars to supplement form criticism and to compensate for its inadequacies. These inadequacies include the assumption that a given genre exhibits similar structural forms, terminology, style, and setting; and a corresponding emphasis upon

what is typical and representative in a given genre. To the contrary, Muilenburg urged that attention fall upon the individual, personal, unique, and unrepeatable features of a given text. The patterns of words, motifs, literary devices, and the structure in part and in whole need careful examination so as "to think the thoughts of the biblical writer after him."

Rhetorical criticism of the OT seeks a knowledge of the forms, genres, structures, stylistic devices, and rhetorical techniques common to the literature of the ancient Near East to understand better how these can contribute to our interpretation of the OT. A basic methodology includes first defining the literary unit, looking for repeated motifs, opening and closure formulas, and *inclusio* (the repetition of exact, very similar, or complementary words and phrases at the beginning and ending of a unit). Second, both the overall structure (macro-structure) and the structure of individual components (micro-structure) of the literary unit are determined and the relationship between all components defined. At every step, close attention is given to repetition, parallelism, strophic structure, motifs, climax, chiasm, and numerous other literary devices. Such close examination of composition is an attempt to achieve a better understanding of the movement of the author's thought, intent, and message, and to determine how the rhetoric would be experienced by the audience.

III. NT Rhetorical Criticism.–Rhetorical criticism of the NT has prominent forerunners in the work of Amos Wilder (*Early Christian Rhetoric: The Language of the Gospel* [1964]) and Robert Funk (*Language, Hermeneutic, and Word of God* [1966]). Wilder's work led to the appreciation of the rhetorical quality of biblical forms and their role in determining the social-historical setting, patterns of belief, and the exigence of the author. Funk's work led to the recognition that literary forms, genres, style, and sequence give insights into the author's thought.

Rhetorical criticism of the NT has blossomed since the mid-1970's. Such criticism uses numerous Greco-Roman rhetorical handbooks, which give detailed instruction on the proper procedure to use in order to be persuasive in both oral and written speech. These handbooks include, among others, those of Aristotle (*Rhetorica*), Cicero (*De Oratore, De Inventione*), Cornificius (*Rhetorica ad Herennium*), and Quintilian (*Institutio Oratoria*). The rhetorical critic analyzes the NT to determine how the NT authors have used the Greco-Roman rhetorical conventions described in these ancient rhetorical handbooks and other classical sources.

The rhetorical analysis of the NT focuses on three major categories in ancient rhetoric: invention, arrangement, and style. Invention is the construction of proofs and refutations. Arrangement is the ordering of the proofs and the main elements of composition. These compositional elements include the *exordium* (introduction), *narratio* (statement of the case), *probatio* (body), and *peroratio* (conclusion). Style is the use of language to meet the needs of invention and includes such things as word selection, sentence construction, and the use of figures of speech and thought. The rhetorical critic attempts to determine how the biblical author used invention, arrangement, and style to expound the gospel and/or convince his audience of the legitimacy of his interpretation of the gospel.

Rhetorical criticism of the Gospels has taken an approach slightly different from that of the Epistles. Although the method discussed above is applicable to all of the NT, it is especially applicable to the Epistles. For the rhetorical analysis of the Gospels, a slightly different focus has proved fruitful. This focus is upon the ancient *chreiai*. A chreia is a saying, description of an action, or both that is concise, attributed to a person or group, appropriate to the situation it is used to address, and considered to improve life. The chreia was a common feature of oral and written communication in the ancient world for discussing philosophy and the words and deeds of both the famous and ordinary person.

Chreiai and elaborations of chreiai are basic literary units of the Gospels. These chreia naturally pertain in the main to the words and deeds of Jesus (e.g., Mt. 8:18-20). By analyzing the chreiai of the Gospels, rhetorical criticism seeks to understand better the oral and written transmission of Gospel tradition and the manner in which the Gospel writers used this tradition to construct their respective Gospels.

The methodologies described above are the most commonly used and are rooted in the rhetorical conventions of history. Both the rhetorical criticism of the OT and of the NT, however, also use the methodologies and reconceptualization of ancient rhetoric in what is now called the "new rhetoric." They also employ many of the approaches and contributions of literary criticism, hermeneutics, structuralism, semantics, and linguistics in what is a highly fluid and ever-growing interdisciplinary movement whose frontiers have yet to be charted.

It is apparent that rhetorical criticism is a very useful tool for exegesis and for enabling the Bible to speak to ever-changing situations. By providing knowledge of how a text was composed in order to be persuasive in its own period, rhetorical criticism enables the interpreter to understand better how a text functioned in its historical context and how it currently functions in its literary context. By providing knowledge of the role of rhetoric gleaned from linguistics, semantics, and the new rhetoric, rhetorical criticism enables the interpreter better to express the message of a text so that it can be persuasive to its contemporary audience.

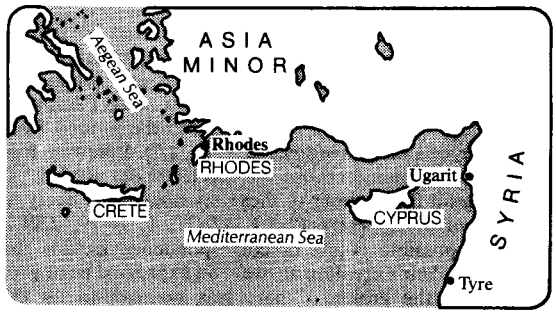
D. F. WATSON

RHODA rō'də [Gk. *Rhodē*–'Rose' (Acts 12:13). Either a slave in the house of John Mark's mother, or a member of the household, or one of the assembly that had gathered there. She had apparently been praying for Peter when he was released from prison by the angel. The account lends a human element to the story by describing her as having been so excited about Peter's appearance at the door that she left the door locked and rushed back to tell the others. The incredulous assembly responded that she was "mad."

Tradition claims that the house in which this took place was the site of the institution of the Lord's Supper, but this lacks corroboration. This house was indeed a leading center for the life of the church in Jerusalem.

B. R. PATTEN

RHODES rōdz [Heb. *dᵉḏān* (emended to *rōḏān*)] (Ezk. 27:15); AV DEDAN; NEB RHODIANS; [Gk. *Rhodos*] (1 Macc. 15:23; Acts 21:1); AV RHODUS. An island located between Crete and Asia Minor in the southeast Aegean Sea; also the capital of the island, a port city on the northeastern shore. Rhodes is a mountainous island about 72 km. (45 mi.) long and 35 km. (22 mi.) wide, the second largest in the Aegean. It was a major commercial center for traffic between the Aegean and the Orient in the latter half of the 1st millennium B.C. Indeed, the island's size and natural



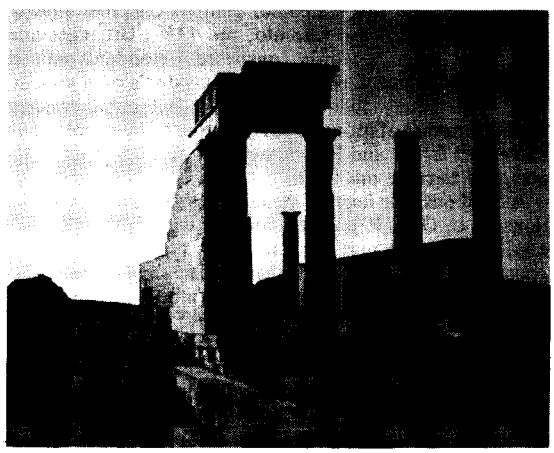
resources are so limited that it was only the extensive trade of products native to other regions that enabled Rhodes to support a large population and attain political significance.

I. History.–Toward the end of the Middle Bronze Age a Minoan merchant colony was established on Rhodes at Ialysus. As early as the 16th cent. B.C. Rhodians engaged in commerce with some of the coastal cities of Syria-Palestine, notably Ugarit. It was primarily the Dorians, however, who developed the island into a commercial center. Lindus, located on the southeast shore, became an important port for traffic from the east.

After the Persian wars the island became a member of the Delian Confederacy and had substantial commercial relationships. Yet it was only after the founding of the city of Rhodes that the island became a formidable commercial and political power. In 408 B.C. the communities of Ialysus, Lindus, and Camirus combined their efforts to construct a new capital city at Rhodes. Trade through this port with Egypt, Syria, Cyprus, and the Aegean states brought great wealth and power. Throughout the 4th and 3rd cents. B.C. Rhodes remained the preeminent center of trade and international banking in the Aegean. Its strong navy protected Rhodian interests abroad and combatted piracy. The renowned symbol of the city's wealth and prestige was the Colossus of Rhodes, a 32-m. (105-ft.) high bronze statue of the sun-god erected at the mouth of the harbor to commemorate a victory over Demetrius, who had attempted to invade Rhodes in 304/3 B.C. The Colossus, one of the seven wonders of the ancient world, was destroyed by an earthquake *ca.* 227 B.C.

Rome's declaration of Delos as a free harbor in 167 B.C. marked the turning point for the fortunes of Rhodes.

The Doric temple (*ca.* 330 B.C.) that overlooks the sheer seaward drop at Lindus on Rhodes (W. S. LaSor)



Rome's move, in retaliation for Rhodian participation in the Third Macedonian War, caused a marked decline in the commercial volume passing through Rhodes. Rome's reduction of Rhodes's mainland possessions also caused a significant drop in the Rhodian economy. Finally, in 43 B.C. Cassius plundered Rhodes of all its material wealth, reducing the island virtually to destitution. By the beginning of the Christian era Rhodian glory was gone. In the late Roman period Rhodes was known only as a cultural center and a resort city.

II. Biblical References.–Rhodes is mentioned in the OT only in Ezk. 27, a lament concerning Tyre. In a description of Tyre's wealth and extensive influence the prophet names many nations and peoples who trade with Tyre. Verse 15 says that Tyre had a special arrangement with Rhodes regarding trade in ivory and ebony. The MT (followed by the AV) reads *bᵉnê dᵉdān*, "the sons of Dedan" (cf. also Vulg. *filii Dedan*), referring to an important commercial people from northwest Arabia. The RSV's and NEB's textual emendation, suggested by the LXX (*huoí Rhodiōn*) and Syriac (*bny rdn*), is confirmed by the structure of the oracle. As the prophet lists the countries that trade with Tyre, he begins in v. 12 in the extreme west (Tarshish) and moves through Greece and Asia to Palestine and Arabia, finally ending with Tarshish once more. Rhodes occurs in the proper place in the sequence (v. 15), and DEDAN is mentioned later, also in its proper place (v. 20), as a source of saddlecloths.

The capital city of Rhodes is mentioned in Acts 21:1 as one of Paul's stopping places on his final journey to Jerusalem. Though the port city had once been one of the most powerful commercial centers of the Mediterranean, by the time of Paul's visit it was little more than a beautiful city with a glorious past.

In 1 Macc. 15:13 the city is mentioned as the destination of a letter sent by Lucius, the Roman consul, concerning an alliance between the Romans and the Maccabean state.

Bibliography.–M. Rostovtzeff, *CAH*, VIII (repr. 1965), 619-642; R. Matton, *Rhodes* (1954). A. J. COUCH

RHODOCUS rod′ə-kəs [Gk. *Rhodokos*]. A Jewish traitor who disclosed to Eupator the secret plans of Judas Maccabeus regarding the Jewish defense of Beth-zur (2 Macc. 13:21). His treachery was discovered, and he was imprisoned.

RIB [Heb. *ṣēlāʿ* (Gen. 2:21f.); Aram. *ʿalaʿ* (Dnl. 7:5)].

In Daniel's vision of four beasts coming out of the sea (Dnl. 7), the second beast is a bear, with "three ribs in its mouth." Scholars vary widely in their interpretation of this vision (see comms.).

Scholars have generally explained the significance of the creation of Eve from Adam's rib (Gen. 2:18-25) in one of three ways: as underlying pun, as an aetiology, or as a symbolism related to Adam's affirmation concerning Eve in Gen. 2:23.

Two interpretations relate the rib to a hypothesized pun. Assuming that an earlier Sumerian version underlies the OT account, the first view notes that the Hebrew words for "Eve" and "rib" could be related to each other in terms of an ambiguity in Sumerian (see Gaster, p. 330 n. 1; cf. Pritchard, Kramer).

In the Sumerian paradise myth of Enki and Ninhursag, the goddess Ninhursag created the goddess Nin-ti in order to heal the god Enki's afflicted rib. Reflecting this healing purpose, the name "Nin-ti" can mean both "lady of the rib" and "lady who makes live." Similarly, the Genesis account associates Eve both with a rib and with life (see Gen. 3:20).

This explanation fails to commend itself not only be-

cause of the superficial character of the alleged parallels (cf. Renié Kidner, pp. 65f. n. 3) but also because it commits the genetic fallacy — it is doubtful that "J," or any other presumed editor/author, would have been aware of the mentioned Sumerian ideograms (so Landy, p. 350 n. 135).

Graves and Patai (p. 69) also relate the "rib" to a pun: Eve, Adam's would-be helpmate built from his *ṣēlāʿ*, "rib," proved in fact to be a *ṣelaʿ*, i.e., a "stumbling" or "misfortune." But since the text nowhere uses this latter term, and since the immediate purpose of Gen. 2:21f. is, if anything, to stress the supreme adequacy of woman as a suitable helper, it appears more likely that the existence of this homonym is merely coincidental.

Many modern scholars favor an aetiological explanation for the formation of the woman from a rib — though, unhappily, with no unanimity concerning precisely what aetiology is in view (see Westermann, p. 230).

Von Rad is typical of these scholars in frankly acknowledging that the text as it stands shows little awareness of any aetiological purpose. So von Rad suggested (reflecting a questionable interpretation of Gen. 2:24) that the Yahwist's own purpose in reiterating the older tradition may have been to answer whence comes that "powerful drive of the sexes to each other . . . which does not rest until it becomes one flesh in the child? It comes from the fact that God took woman from man, and they actually were originally one flesh. Therefore they must come together again and thus by destiny they belong to each other."

The symbolical approach sees symbolism behind the creation of Eve without precluding the possibility that the author intends the reader to take this account quite literally. The pervasive use of symbolism elsewhere in Gen. 1–3 and Adam's own reflection on Eve in 2:23 ("This at last is bone of my bones and flesh of my flesh") support this view.

The symbolism of Eve's creation specifically from Adam's rib tended most to exercise the imaginations of earlier commentators (cf. Midr. *Gen. Rabbah* xviii.2). Modern commentators tend to be modest in any implications they would derive from the rib (cf. Cahill, p. 54); e.g., S. Clark (p. 18) suggests that it "certainly indicates closeness of relationship, and calls to mind the saying that woman stands at man's side." Clark stresses the rib as an emblem of woman's equality with man: "The clearest point to be drawn from the building of woman from man's rib is not any inferiority on woman's part but quite the contrary. The 'rib' indicates the sameness of nature between man and woman" (p. 85).

As attractive and plausible as these implications seem, it is surprisingly difficult to establish them with any certainty from the biblical text. Clark draws attention to the fact that the Heb. *ṣēlāʿ* can also mean "side" (so Rashi; cf. Trible, p. 140 n. 16). Certainly, had the intention of Gen. 2 been to reaffirm woman's equality with man, it could hardly have done better than to describe Eve's creation as from the "side of Adam." But unhappily for this line of interpretation, the text says that the Lord God took "one of his ribs," *ʾaḥaṯ miṣṣalʿōṯāw*. Such an expression does not favor the rendering "side" for *ṣēlāʿ* (so KD, following LXX and Tg.), and the resulting state of Adam, lacking "one of his sides," rather taxes one's imagination.

While the text may not permit a definitive implication for Eve's creation specifically from Adam's rib, nevertheless it may suggest implications for the more fundamental fact that Eve was created from Adam rather than *ex nihilo* (even if still subsequently). At least three levels of meaning suggest themselves.

The first is based on the observation that Gen. 2–3 offers an extensive parallel between Adam and his derivation from the ground and Eve and her derivation from Adam. This correspondence is perhaps most obvious in the naming of Adam and Eve. Adam's name (*ʾādām*) is related, at least by folk etymology, to the ground from which he was made (*ʾᵃḏāmâ*; cf. Gen. 2:7). Likewise Eve is named "Woman, because she was taken out of Man." It is irrelevant that neither of these etymologies is likely to be "linguistically correct" (cf. *TDOT*, I, 75-79, 222f.).

Other possible points of correspondence include the fact that Adam's creation answers an expressed need with respect to the ground ("there was no man to till the ground," Gen. 2:5), just as Eve's creation answers a prior need in Adam: "The Lord God said, 'It is not good that the man should be alone; I will make him a helper fit for him'" (Gen. 2:18). A further correspondence is that God specifically places Adam in the garden, thereby underscoring Adam's calling to serve and to guard it, and God likewise placed Eve before Adam, thereby underscoring her wifely calling (Gen. 2:22).

Finally, the curse on Adam in Gen. 3:17-19 revolves entirely around his relationship to the ground, just as God's curse on Eve in Gen. 3:16 focuses exclusively on her wifely role.

Such pervasive parallelism clearly suggests that the meaning of Adam's creation from the ground is analogous to the meaning of Eve's creation from Adam's rib. Most scholars acknowledge that Adam's derivation from the ground implies not that he would be in any way inferior to that from which he derived, but that here was to be the focus of his ministrations. Similarly, that the woman was created from Adam's rib ought to be construed as a vivid reminder to her that here was to be the focus of her wifely ministrations. Not that Eve's calling was exhausted in her ministry to Adam, anymore than Adam's was exhausted in his serving and guarding the garden. The text is exclusively concerned with Eve in her capacity as Adam's wife and simply does not address her as a woman per se. Presumably her calling as a woman would be the same as her calling simply as a person and so in this respect would be no different from Adam's. Perhaps the implication of the text that Eve should have guarded the garden from the serpent supports this inference.

The second level of meaning concerns Adam. Already Calvin observed "something was taken from Adam, in order that he might embrace, with greater benevolence, a part of himself" (*Genesis* [Eng. tr. repr. 1948], p. 133; cf. Eph. 5:28ff.). Certainly Adam says of Eve, "This at last is bone of my bones and flesh of my flesh" (Gen. 2:23), and it seems clear that this statement finds its concrete antecedent in Gen. 2:21 (so Cassuto, pp. 135f.; Brueggemann notes that Adam's words constitute a standard oath of covenant fidelity; cf. Wifall). The narrator's own conclusion immediately following Adam's statement concurs with this notion of intimate bondedness: "Therefore a man leaves his father and his mother and cleaves to his wife, and they become one flesh."

A third possible level of meaning concerns Adam's relationship to God. If that relationship was covenantal (so, e.g., Kline), one may explain Eve's creation as the expected "cutting" ceremony that ratified the covenant. As so often with such ratifying ceremonies, not only may there be a symbolic depiction of death (the "deep sleep" that overtakes Adam) that was threatened in the covenant curse, but also a depiction of the covenant blessing. Here, on the other side of Adam's passive consecration to God in the ratifying ceremony of the deep sleep and excision of a rib, is the provision of his bride Eve; and symbolized in

her is a glorious reminder of the blessings of obedience to the covenant, wherein Adam's faithful Lord will meet every need of His vassal.

Since Tertullian (*De anima* xliii.10) typology has drawn parallels between the creation of Eve out of Adam's side following his covenant ratifying death-like experience, and the presentation of the Church to Christ, the second Adam, as a bride following His covenant-ratifying death on the cross (cf. Calvin, *Genesis*, p. 133; Barth, *CD*, III/1, 321; O'Rourke, pp. 427-435; and Gage, p. 90).

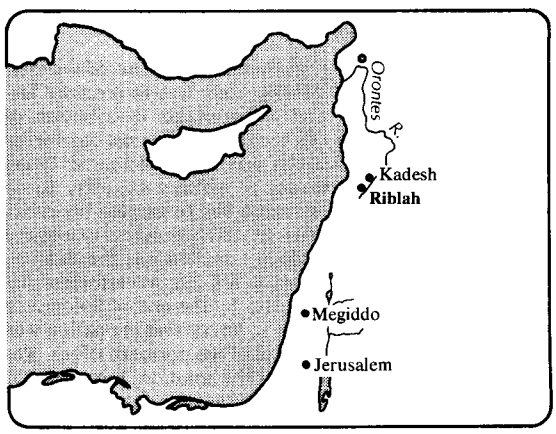
G. P. HUGENBERGER

RIBAI rī'bī [Heb. *rîbay*]. A Benjaminite from Gibeah whose son Ittai (Ithai) was among David's thirty mighty men (2 S. 23:29 par. 1 Ch. 11:31).

RIBBAND. An archaic form of "ribbon" used by the AV in Nu. 15:38. *See* CORD (9).

RIBLAH rib'lə [Heb. *riḇlâ*]. A city on the banks of the Orontes River about 16 km. (10 mi.) S of Kadesh. The ruins of the ancient city have been identified. The modern village of Ribleh is on the west bank of the Orontes 56 km. (35 mi.) NE of Baalbek. Since in Hebrew *d* (ד) and *r* (ר) are easily confused, "Diblah" (AV DIBLATH) in Ezk. 6:14 is probably an error for Riblah. The same confusion of consonants is found in the LXX reading *Deblatha*.

Riblah was strategically located at the crossroads of the military highways to Egypt and Mesopotamia. In 609 B.C. Pharaoh Neco had his military headquarters there. After Josiah's death at Megiddo, his younger son Jehoahaz was made king of Judah, much to the displeasure of Neco. Neco favored the oldest son, Eliakim, who was pro-Egyptian; he therefore made Eliakim king and imprisoned Jehoahaz, first at Riblah and then in Egypt, where he died (2 K. 23:29-34).



In 588 Nebuchadrezzar set up his headquarters at Riblah in his campaign against Egypt and the countries along the Syrian coast. Jerusalem, which under King Zedekiah had revolted against Babylonia, was besieged. As the city began to fall Zedekiah attempted to escape but was captured at Jericho and brought to Riblah. At the command of Nebuchadrezzar, the king was forced to watch as his sons were slain. Then his eyes were put out and he was taken captive to Babylon (25:1-6; Jer. 39:1-7). When Jerusalem was captured the chief priest and the rest of the nobility of Judah were taken to Nebuchadrezzar in Riblah and executed (vv. 18-21; Jer. 39:9f.). An inscription of Nebuchadrezzar at Wâdī Brissa contains an allusion to the time when he directed his operations from Riblah.

Riblah is named in a description of the boundaries of the land of Canaan in Nu. 34:11. The location of the other cities — Hazar-enan, Shepham, and Ain — is uncertain, but the mention of the Sea of Chinnereth and the context point to the area N of that lake. Since this passage is the only one in which Riblah has an article (*hāriḇlâ*), some scholars have suggested that the Hebrew should be read "Harbela" (cf. Gk. *Arbēla*) and the site identified with Hermel in the Beqaʿ at the source of the Orontes.

D. H. MADVIG

RICHES; WEALTH. Terms referring to an abundance of material possessions, but also designating spiritual, psychological, and social qualities. All are gifts of God but are frequently misused by human beings. The proper use of all gifts constitutes an essential aspect of the soteriological message of the Bible.

IV. In Church History

I. In the OT.–A. Terms. The OT uses a variety of terms to describe the rich or wealthy person. Some of these terms may also be used to describe powerful nations and fertile fields. The major Hebrew terms are:

(1) *ʿĀšar* ("be/become rich"), *ʿōšer* ("riches"), *ʿāšîr* ("rich"). These related terms are all used to describe persons gaining or possessing wealth (e.g., Gen. 14:23; 26:13; Ps. 49:2 [MT 3]; Prov. 18:11; 22:7). They sometimes describe wealth that is the result of God's blessing (e.g., Prov. 10:22) or of industrious efforts (e.g., 10:4); in other

instances they are used of riches resulting from ill-gotten gain (e.g., Jer. 17:11; Mic. 6:12).

(2) *Ḥayil* ("power," "capacity," "wealth"). Since power is often related to wealth, *ḥayil* is used about thirty times to refer to the wealth of an individual (e.g., Job 5:5; 31:25) or of a city or nation (e.g., Gen. 34:29; Isa. 8:4; Ezk. 26:12; 28:4f.).

(3) *Hôn* ("wealth," "rich," "riches"). This term is used frequently in poetic passages. Sometimes it designates legitimate wealth (e.g., Ps. 112:3; 119:14; cf. Prov. 8:18), at other times wealth improperly gained (e.g., Prov. 13:11).

(4) *Šāmēn* ("rich"). This term is used often of fields or food; the AV renders it "fat," while the NEB often uses "fertile" (e.g., Gen. 49:20; Nu. 13:20; Neh. 9:25, 35; Isa. 28:1, 4; 30:23). Cf. Ugar. *smn(t)* and Akk. *samanu,* which are frequently used for fertile fields or well-fed cattle.

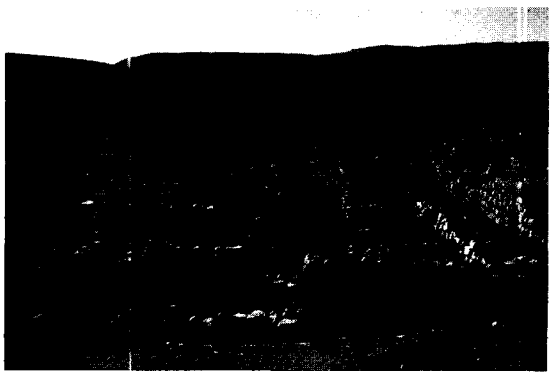
(5) *Gādal* ("become great," "become rich," "become wealthy"), *gādôl* ("great," "rich," "wealthy"). These terms literally mean "(become) great" and are so rendered by the AV (e.g., Gen. 26:13 [NEB "become powerful"]; 1 S. 25:2 [NEB "great influence"]).

B. Teaching. The OT describes God as the creator and giver of all gifts. All His gifts are good (cf. Gen. 1:31), but human beings often pervert their use. After commissioning Adam and Eve as His vassals (1:28), God immediately bestowed on them the things necessary to make vassalhood a rich and meaningful experience. Likewise, God promised Abraham that He would bless him (12:2), and Genesis states that Abraham was "very rich in cattle" (13:2). In turn, Abraham seems to have recognized that the Lord was the source of his riches, for he refused to accept the booty he captured in rescuing Lot and the citizens of Sodom (14:23). The land was a central element in God's covenant promise to Abraham (17:8). The Promised Land was likewise central to the Mosaic covenant. This land was described as being very rich (Ex. 3:8f.). (*See also* LAND II.)

The fair and proper distribution of wealth was an essential feature of the theocratic kingdom established by the Mosaic legal code. Slavery, although not eliminated, was controlled and tempered (Lev. 25:39-46). (*See* SLAVE.) The code prescribed means to curb the accumulation of extreme wealth by some with resulting poverty for others (Lev. 25:35f.). (*See* SABBATICAL YEAR.) An individual's spiritual stature was measured in terms of that person's beneficence to the poor (Prov. 14:31). (*See* POOR I.B.)

1. Inherent Goodness of Created Things. The OT doctrine of creation provides the necessary antidote to the "world denying" or ascetic movements that have arisen in history. God created the human body, and therefore it has valid creaturely needs; moreover, it possesses a vast capacity for enjoying sensations and for achievements with the use of material things. The Bible seems to take for granted and to approve of the building of houses, the herding of cattle, the making of musical instruments, etc. — all of which make use of the material elements of the creation (cf. Gen. 4:17-22). God's blessing makes these materials available so that human life can rise to its fullest potential (cf. 1:26-28).

The ruins of a typical upper-class Hebrew house (ca. 900 B.C.) at Tell el-Fâr'ah (N) (R. H. Smith)



2. The Fall and the Misuse of Gifts. With the advent of sin, human need was changed to lust and the proper provision of food was turned into hoarding at the expense of others. Gen. 6:11, 13 describes the socio-economic conditions prior to the Flood in terms of the earth being "filled with violence." The word rendered "violence" (Heb. *ḥāmās*) was used by the prophets to describe the exploitation of the poor by the rich (Am. 3:10; Mic. 6:12). Thus it appears that exploitation was a major reason for God's destroying the earth with a flood. It is noteworthy that similar exploitation existed in Israel shortly before the Exile.

3. Material Goods in the Theocratic Kingdom. The positive religious importance of material goods is again highlighted in God's promise of the land of Canaan to Abraham. As the bridge to three continents, Canaan was a station through which merchants and armies often passed; thus it was a prize over which the superpowers had battled for centuries. Of particular importance was Megiddo, for here caravans were taxed, and whoever possessed this city controlled the commercial wealth of the ancient Near East (as Pharaoh Thutmose III said in the 15th cent. B.C.: "He who has conquered Megiddo has conquered a thousand towns" [*ANET,* p. 237]). This was the land that God chose as the place for His people to set up a kingdom in which justice would prevail. Thus as soon as God had redeemed the Israelites from Egypt, He gave them a charter at Mt. Sinai instructing them on how to structure a kingdom of peace established on justice. Israel inherited the land with the clear understanding that only the Lord had ultimate ownership of the land (Ps. 24:1). The genius of the kingdom (God's rule through His laws) was that each tribe, each clan, and each family was apportioned a parcel of land (Josh. 13–22), and this parcel was viewed as a trust. Each person was given the opportunity to express faith in God by dealing responsibly and justly with the material goods entrusted to him or her. The laws were designed to prevent the possibility of wealth breeding wealth and poverty breeding poverty. For example, every forty-ninth year was to be a year of Jubilee in which the land was to be returned to the original inheritor (Lev. 25). Israel's challenge was to establish this theocratic kingdom in Canaan, a land whose geography made it a stage for all the world to see.

4. Intensified Misuse of Goods under the Monarchy. While the intent of the Mosaic code was to promote justice through equality and an equitable distribution of goods, the monarchy by its very nature was not conducive to these ends. The monarchy was a human choice: Israel demanded a king for reasons of military security. To be effective, however, the monarch had to surpass his rivals in pomp and power, and this inevitably required extremely heavy taxation. Samuel clearly spelled out the dangers and the price of monarchy (1 S. 8:4-22); nevertheless, Israel insisted on this choice. But by the end of Solomon's reign the burden had become so heavy that the nation was divided through the withdrawal of the northern tribes. Rebellion and secession were not the solution, however, for the prophetic literature seems to indicate that oppression developed in the northern kingdom to an even greater degree than in the southern kingdom.

5. The Prophetic Protest. Elijah's ministry attempted to keep the vision of the Mosaic code alive in northern Israel in opposition to the influences of the fertility cult, which was concerned only with richer harvests, greater fecundity in the flock, and the fertility of the human womb. The Israelite prophets assumed that the king too was under the law, whereas in other countries the king determined the law; this explains Jezebel's impatience with Ahab's indecision in dealing with Naboth's vineyard. Whatever vestiges of the Mosaic tradition remained in northern Israel were steadily eroded. Israel's demise demonstrated the final destiny of a kingdom patterned after the kingdoms of this world.

The prophets proclaimed the mind of Yahweh by promoting a justice that had special concern for the poor. The principle of justice was widely recognized, though obviously not always practiced, in the ancient Near East. Hammurabi (*ca.* 1750 B.C.) claimed that Marduk had appointed him to "promote the welfare of the people . . . to cause justice to prevail in the land, to destroy the wicked and the evil, that the strong might not oppress the weak" (*ANET,* p. 164). The Ugaritic literature likewise indicates that the king was expected to act as judge on behalf of the widow and plead the cause of the fatherless (*ANET,* pp. 149, 151). But while the call for justice is not unique to Scripture, no literature from the ancient world matches the ire of the OT prophets as they decried the injustice present in Israel and elsewhere.

It is natural that the preexilic prophets spoke more explicitly about justice than the later prophets. Amos, Isaiah, and Micah spoke to a nation that had sufficient automony left to do something about a just distribution of wealth. Amos warned that his people would be destroyed "because they sell the righteous for silver, and the needy for a pair of shoes — they that trample the heads of the poor into the dust of the earth, and turn aside the way of the afflicted" (2:6f.). This passage may be suggesting a causal relationship between oppression and the fertility cult alluded to in v. 7; the implication would then be that in the fertility cult riches had the highest priority, while in the Yahweh faith the highest priority was justice. Micah resonated a similar theme as he described the leaders of Judah as those "who abhor justice and pervert all equity, who build Zion with blood and Jerusalem with wrong.... Therefore because of you Zion shall be plowed as a field" (3:9-12). Micah stated clearly what Yahweh desired: "and what does the Lord require of you but to do justice, and to love kindness, and to walk humbly with your God?" (6:8).

Sadly, neither Israel nor Judah obeyed the prophets' "heavenly vision." Northern Israel disappeared; though Judah survived the Exile and was permitted to return to the land, it remained a puppet state throughout the rest of OT history, with little opportunity to form a nation that would display for all the world to see how God wished material things to be used. The prophetic spirit, however, refused to succumb to defeat. The prophets proclaimed that the messianic kingdom would be realized, for the day was coming when the Lord "will raise up the booth [dynasty] of David that is fallen" (Am. 9:11). Isaiah proclaimed that "righteousness [NEB "justice"] shall be the girdle of [the Messiah's] waist" (Isa. 11:5). The Spirit of the Lord would give Him power to so transform humanity's avaricious heart that "the wolf will lie down with the lamb and . . . they shall not hurt or destroy in all my holy mountain" (vv. 6, 9). The Messiah's uniqueness is accented in His Servant role: "He will bring forth justice to the nations" (42:1).

The importance that the Bible ascribes to material possessions is reaffirmed in Ezekiel's vision of the new temple and a new order in which "[the Lord's] princes shall no more oppress [His] people" (Ezk. 45:8). The ultimate consecration of all physical things comes to climactic expression in Zechariah, which states that the (ill-gotten) silver and gold of the nations will be swept away (14:14, NEB) and no (avaricious) merchant will be found in the house of the Lord (v. 21); yet the bells of the horses will have "Holy to the Lord" inscribed on them, and every vessel will be sacred to the Lord (vv. 20f.).

6. Proper Use of Wealth in the Wisdom Literature. Our main source for Israel's practical wisdom is the book of Proverbs. Many passages exhort the reader to an industrious pursuit of wealth, for wealth diligently achieved brings security (e.g., Prov. 10:15). But wealth is not the highest goal: "A good name is to be chosen rather than great riches" (22:1); nor does wealth change one's basic position before God: "The rich and poor meet together; the Lord is the maker of them all" (v. 2). Wealth may have grave liabilities if it results in pride and thus deprives one of wisdom (28:11). The ideal according to Wisdom is sufficiency: not too little, not too much (30:8f.). Job, Ecclesiastes, and some of the Psalms warn against assuming that poverty and suffering are a sure indication of one's lack of virtue or of having incurred divine displeasure; conversely, riches are unambiguous evidence neither of a person's virtue nor of divine favor (e.g., Ps. 73).

II. In the Intertestamental Period.—*A. Greek Influences.* Although Persian thought influenced Jewish thinking in other areas (e.g., angelology), there is little or no evidence that it affected Jewish views of wealth. Greek thought, on the other hand, and particularly Platonism, offered a dynamic potentially influential perspective on material things. Plato saw all forms of being as arranged on a scale with pure form at the top (the Good) and formless matter on the bottom (non-being, Evil). This scheme was a serious threat to the biblical doctrine of creation, which accepted the inherent goodness of all created things. The extent to which Greek philosophy influenced Jewish thinking in the early period (under the Ptolemies and Seleucids) is difficult to document. That many Jews resisted Greek culture is demonstrated by the Maccabean revolt; but the revolt did not purge Jewish thought and culture of Hellenic influence.

B. Apocryphal Literature. The Wisdom of Jesus Ben Sirach seems not to be influenced by Platonic thinking. Sirach was faithful to the OT in his ringing testimony to the duty of the rich to give to the poor (e.g., Sir. 4:1-3). He showed a keen sense of how riches erode the character of the wealthy (13:3-5). He also described the rich and poor as mortal enemies (13:18) and delivered a thundering rebuke to those who did not pay proper wages (34:22).

In the book of Tobit the poor and blind Tobit instructs his son that if only he fears God he will be wealthy (Tob. 4:21). It is not clear whether the wealth referred to here is material or spiritual. It is clear, however, that the use of material goods for spiritual and eschatological ends did develop in this period. In v. 9 Tobit says that almsgiving is "laying up a good treasure for yourself against the day of necessity" (cf. 2 Esd. 7:77). This eschatological emphasis is further developed in the NT.

C. Various Political/Religious Groups. 1. Sadducees. The Sadducees were the priestly and aristocratic segment of Jewish society. Wealth was important to them for maintaining their position of power in the Jewish community. Since they believed strongly in free will, they viewed personal successes as the results of diligence and acumen (Josephus *Ant.* xiii.5.9 [173]); and since they believed in no judgment in the hereafter (*Ant.* xviii.1.4 [16]; *BJ* ii.8.14 [165]), it was natural to conclude that wealth was the ultimate good. Some scholars have averred that the Sadducees used their priestly prerogatives for material gain

(see J. Z. Lauterbach, *Rabbinical Essays* [1951], p. 30); this would in part account for their unpopularity with the masses.

2. Pharisees. The Pharisees advocated a simple life and thereby implicitly rejected material luxury (*Ant.* xviii.1.3 [12]), but Jesus' criticism of their use of Corban (Mk. 7:1-13) indicates that they did not escape the sin of avarice. They viewed the material world as temporary and to some extent unreal. The kingdom of God was to be realized by internalizing the law in one's heart. (Ironically, this is precisely what Jesus accused them of failing to do in Mt. 23:25f.). That they were meticulous tithers is borne out by Jesus' words in 23:23. The reason for the Pharisees' tendency to discount material things is not clear: Was it Platonic influence? Or was it the political reality that the Jews were subject to a foreign power and had little hope of establishing a realm of justice?

3. Essenes and Qumrân. The Essenes had their own distinctive life-style: they organized communal societies, many of which were celibate, in which the rich enjoyed no more wealth than the poor. Josephus described them as follows: "Riches they despise, and their community of goods is truly admirable; you will not find one among them distinguished by greater opulence than another. They have a law that new members on admission to the sect shall confiscate their property to the order" (*BJ* ii.8.3[122]). Their negative attitude toward possessions and marriage led some scholars to posit that they of all the groups in Judaism were the most influenced by Greek thought (E. Zeller, *Outlines of the History of Greek Philosophy* [1931; repr. 1969], pp. 258f.). In the final analysis, however, the Essenes were more biblical than Hellenic if the hymns of the Qumrân community are an accurate indication of their piety. In these hymns one finds ringing testimony to the doctrine of creation and yet a rejection of trusting in riches. Not the gift but the Giver was the object of their trust (1QH 10:20-23).

4. Zealots. Usually considered an offshoot from the Pharisees, the Zealots were apparently polygenetic (originating in both Egypt and Palestine) and were therefore not uniform in thought or practice. They left no writings describing their stance on riches. They did have one thing in common, however; their zeal to purge the nation and land of foreign rule. Josephus, the main source of information about them, was probably biased and unfair. Nevertheless, the Zealots' concern to bring in the kingdom in the here and now implies that they took this life and its concomitants seriously. It is one of the ironies of history that this group, which took the nation and the land so seriously, was probably a major cause for the Jews being banished from the land in A.D. 135.

III. In the NT. *–A. Terms.* Several Greek terms denote riches, wealth, and prosperity.

(1) *Ploútos* ("riches," "wealth"; e.g., Mt. 13:22; Rom. 11:12; Eph. 2:7; 3:16; 1 Tim. 6:17), *ploúsios* ("rich"; e.g., Mt. 27:57; Jas. 1:10; 5:1), *plousíōs* ("richly"; Col. 3:16; 1 Tim. 6:17; Tit. 3:6; 2 Pet. 1:11), *ploutéō* ("be/become rich," "gain wealth"; e.g., 1 Cor. 4:8; Rev. 18:15), *ploutízō* ("make rich"; 2 Cor. 6:10). This is the most common word-group for riches and wealth. It derives from the root *pel,* "flow," hence "be filled, satiated."

(2) *Chrêma* ("riches"; Mk. 10:23; Lk. 18:24). This term is used in the NT exclusively for material possessions.

(3) *Thesaurós* ("treasure"). This term is used in the sense of a deposit (e.g., Mt. 2:11; 6:19-21; 19:21).

(4) *Mammônás* ("mammon"; Mt. 6:24; Lk. 16:9, 11, 13). *See* MAMMON.

(5) *Euporía* ("wealth"; Acts 19:25). This term denotes prosperity (cf. NEB "high standard of living").

(6) *Piótēs* ("riches"; Rom. 11:17). The term refers to fatness or wealth.

(7) *Dýnamis* ("wealth"; Rev. 18:3). The term literally denotes power.

(8) *Timiótēs* ("wealth"; Rev. 18:19). This term signifies costliness.

(9) *Hypárchō* ("possession"; Mt. 24:47; Lk. 12:15, 33f.), *hýparxis* ("possession"; He. 10:34). Both the substantive part. of *hypárchō* ("exist," "be at one's disposal") and the cognate noun *hýparxis* denote that which belongs to someone, i.e., property.

(10) *Ktêma* ("possession"; Mt. 19:22; Mk. 10:22; Acts 2:45), *ktétōr* ("possesor"; Acts 4:34). *See* POSSESS.

B. Teaching. In interpreting the NT passages on wealth, one must keep in mind that God's people were living at that time under foreign domination. It is assumed that the OT ideals of justice and equality are in no way abrogated in the NT.

1. The Incarnation. The incarnation of Christ, the central theme of the NT, is an implicit reafffirmation of the physical creation. While it is true that the kingdom that Jesus came to establish is spiritual in nature, this does not exlude it from influencing human use of the material world. Jewish expectation concerning the kingdom was wrong not because it was material, but because it was carnal and nationalistic. Furthermore, Jesus' resurrection and ascension indicate that the physical world will have a place in the age to come. The structure and the order of this age will pass away, but not the physical aspect.

2. Jesus' Concern for Rich and Poor. Jesus showed profound concern for both the poor and the wealthy. His teaching on wealth is in harmony with that of the OT, but it is not identical to it. Jesus' emphasis was not on economic reform but on spiritual renewal as the need of the hour. While He never hinted that wealth per se was evil and poverty virtuous, He was emphatic about the danger of wealth for both the rich and the poor. Wealth steals the heart's affection and weans one away from God. One "cannot serve God and Mammon" (Mt. 6:24; Lk. 16:13). "It is easier for a camel to go through the eye of a needle than for a rich man to enter the kingdom of God" (Mt. 19:24 par. Mk. 10:25; Lk. 18:25). Jesus' disciples' response reflects the universality of this trust in riches: "Who then can be saved?" (Mt. 19:25; cf. Mk. 10:26; Lk. 18:26); Jesus in turn made it clear that divine aid is required to free one from the grip of wealth:"With men this is impossible, but with God all things are possible" (Mt. 19:26; cf. Mk. 10:27; Lk. 18:27). While Jesus' compassion for the poor is evident throughout the Gospels, these words indicate His concern about the plight of the rich. Although He warned both rich and poor about the dangers of wealth, the story of the rich young man illustrates that the rich found it particularly difficult to surrender their wealth (Mt. 19:16-22). Zacchaeus's ability to renounce his riches was termed "salvation" by Jesus (Lk. 19:9). It must be noted that Jesus did not reject the rich; He accepted persons such as Nicodemus and Joseph of Arimathea.

3. Apostolic Teaching. After Pentecost the apostles established a community of believers who "had all things in common" (Acts 2:44). There is no record that Jesus or any of the apostles explicitly prescribed this economic system; rather it developed spontaneously from the teaching and example of Jesus. In this manner the Christians in Jerusalem demonstrated that they loved the Lord and His people more than their own possessions. Paul instructed believers in Corinth to work to meet not only their own needs but the needs of others as well (2 Cor. 8:13-15). This admonition may have been a conscious rebuttal of the Greek and Roman notion that work was dishonorable (cf.

2 Thess. 3:6-13). In any case, Paul taught that believers must exhibit detachment from possessions, since such things belong to an order that is passing away (1 Cor. 7:30f.). James was upset that the Church was following the standards of the world by honoring the rich and denigrating the poor (Jas. 2:1-7). He cautioned against the arrogance of thinking that prosperity was within one's grasp (4:13-16). He echoed the tone of the eighth-century prophets as he predicted the miseries that would come upon the rich, particularly those who "kept back by fraud" the wages of their laborers (5:4).

While the NT Church was made up primarily of the poor (1 Cor. 1:26f.), it also included some who were of considerable wealth and status in their society, e.g., Erastus the city treasurer (Rom. 16:23); Gaius, whose house appears to have been large enough for him to host a church (16:23); Crispus, who was a ruler of the synagogue (Acts 18:8); and other persons whose influence and support seem to have been accepted and appreciated.

4. The Apocalypse. In the Apocalypse believers are called to forsake the order of a corrupt and persecuting world with all its wealth, so that they as the redeemed may be faithful to God. That corrupt society is described as conforming to the exploitative "beast" that seeks to control people and monopolize commodities "so that no one can buy or sell unless he has the mark of the beast" (Rev. 13:17). God's judgment upon this economic order is depicted as the fall of mercantile Babylon (Rome). Babylon symbolizes debauching wealth, for it so lusted after luxury that it made merchandise of "human souls" (18:13); but "in one hour has all this wealth been laid waste" (v. 17). The old carnal order is replaced by a new one, but this new order is not an ethereal world. John sees a new heaven and a new earth (21:1). In this earth is a city of "pure gold" (21:18). The foundations of its wall were adorned with all kinds of jewels, and its twelve gates were twelve pearls (vv. 18-21). Finally the tension between the inherent goodness of riches and human abuse of them is resolved: in this city riches will come into their own. Riches will not be abused here, for "nothing unclean will enter [the city], nor anyone who practices abomination or falsehood" (v. 27). Thus the Bible closes with the ringing affirmation that the splendor of God's material creation will be perfected as evil is destroyed and the human heart is reborn.

IV. In Church History.–The struggle for a correct understanding and application of Scripture's teaching on wealth emerged early in the Church in two or three schools of thought. There were those who renounced earthly possessions and took the vow of poverty, finding their fellowship in a group of like-minded believers who took their necessities from a common store. While the communal model of Jerusalem (Acts 2) seems not to have been exactly duplicated elsewhere, its influence was not lost on Christians in other areas. Such a communal arrangement was not novel to either the Jews or the Gentiles. The Jews were familiar with Essene communal life; according to Josephus the Essenes had adapted it from the Pythagorean model (*Ant.* xv.10.4 [371]). The Cynics and Stoics also tended to disapprove of private property. These Greek traditions no doubt influenced the way that gentile Christians understood Jesus' teachings on wealth. An anthropocentric perspective on equality is noticeable in the *Sentences of Sextus,* a collection of moral maxims blending Christian and Pythagorean thought. Clement of Alexandria took a more moderating view in his treatise, *Who is the Rich Man Who is Being Saved?* in which he defended wealth by allegorizing Jesus's command "to sell all and give to the poor." But Origen, the prince of allegorizers, insisted that the command must be taken literally. Chrysostom, whose teacher Libanius strongly disapproved of private property, used the Jerusalem model to Christianize the pagan model and pleaded eloquently (if tactlessly) for a return to the Jerusalem pattern. After his conversion Augustine established a monastic community. Although he was taken from this community to become the bishop of Hippo, he remained enthusiastic about monastic life to the end. Yet he did not censure the holding of private property.

The Scholastics opted for private ownership as the most efficient management of material goods, although they thought that some goods were best held as common property. Aquinas believed that the incentive to be industrious and judicious was greater when property was individually owned (*Summa Theol.* ii/2.66.2). Later Roman Catholic thought emphasized the value of private property for enhancing human dignity and avoiding the encroachments of the state; but these principles were held to be relative — not absolute — norms of natural law. More recent Roman Catholic thought has shown concern for abuses of private property by large impersonal institutions that exploit the individual. (See Pope John XXIII, *Mater et Magistra* [1961], esp. §§ 30-43, 75-81, 108-121.)

Of the Reformers, Calvin wrote the most explicitly about the nature and purpose of wealth. He not only wrote about it, but he sought to make Geneva a model city demonstrating the principles of the kingdom of God. For Calvin both riches and poverty were an opportunity for service. The wealthy *gave on behalf of God,* and the poor *received on behalf of God.* Deacons were appointed for the sole task of relief. They were to provide relief to the rich by helping them discharge their obligations to God and their neighbors, and to the poor by providing material assistance and the comforting knowledge that God and His people cared for them. Jesus' command to "sell all and give to the poor" was not to be taken literally. Christ's message was that one must not be satisfied with giving to the poor what one can easily spare (Comm. on Mt. 6:20). Incensed as Calvin was at the rich who "eat up the poor," he did not countenance open rebellion. The poor must exercise faith and allow God to be their avenger (Comm. on Jas. 5:4). Calvin saw it as the government's duty to ensure that all persons "breathe, eat, drink, and are kept warm . . . and that humanity be maintained among men" (*Inst.* iv.20.3). Calvin's formula, "from each according to his ability, to each according to his need," was later taken up by Marx, who applied it quite differently.

Protestantism has made little if any progress on this subject since Calvin's time. Liberation theology (*see* POVERTY III) has brought an increased awareness of the problems related to inequality in the distribution of wealth. Most proponents support their cause with the story of the Exodus and other passages of Scripture. Frequently, however, this movement has been criticized for being anthropocentric and reducing Christianity to economic reform. However valid these criticisms may be, the fact remains that the Western Church has not produced a convincing "theology of substance" or a "theology of stewardship."

RID; RIDDANCE. "Rid" is used by the AV in the archaic sense of "rescue" or "deliver" to render Heb. *pāṣâ* in Ps. 144:7, 11 and the hiphil of *nāṣal* in Gen. 37:22; Ex. 6:6; Ps. 82:4 (*see* DELIVER). In Lev. 26:6 (AV, NEB) it is used in the usual sense of "remove" (RSV), rendering the hiphil of *šābaṭ*. "Make riddance" is the AV translation of the qal (Zeph. 1:18) and piel (Lev. 23:22) of *kālâ* (lit. "complete, finish").

RIDDLE [Heb. *ḥîḏâ*(Jgs. 14:12-19; Ps. 49:4 [MT 5]; Prov. 1:6; Ezk. 17:2; Dnl. 8:23); Aram. *ʾaḥîḏâ* (Dnl. 5:12)]; AV also DARK SAYING, DARK SENTENCE, HARD SENTENCE; NEB also ALLEGORY (Ezk. 17:2), STRATAGEM (Dnl. 8:23). A puzzling or enigmatic saying whose baffling quality derives from the skillful manipulation of the inherent ambiguity of language. The noun *ḥîḏâ* occurs seventeen times in the MT, and the (denominative) verb *ḥûḏ* occurs four times, always in the cognated accusative construction *ḥûḏ ḥîḏâ* (lit. "riddle a riddle"). In addition to the passages where it is translated "riddle" in the RSV, *ḥîḏâ* also occurs at Nu. 12:8 (RSV "dark speech"); 1 K. 10:1 par. 2 Ch. 9:1 (RSV "hard question"); Ps. 78:2 (RSV "dark saying"); Hab. 2:6 (RSV "derision"). The technical term for solving a riddle is the hiphil of *nāgaḏ*. The hiphil of *bîn* is used for understanding a riddle (Prov. 1:6; Dnl. 8:23).

The classical biblical example of a riddle occurs in Jgs. 14 (*ḥîḏâ* occurs eight times and *ḥûḏ* three times), the narrative of Samson's wedding to a Philistine woman from Timnah. Vv. 5-9 narrate the personal experiences that formed the basis of Samson's riddle. The riddle in narrative form appears in v. 14: "Out of the eater [*hāʾōḵēl*] came something to eat [*maʾaḵāl*]. Out of the strong came something sweet." The riddle thus implies the question: "What is it?" Some have suggested that the narrative preserves an independently existing riddle whose answer is "vomit." Somewhat more likely is the view that at an earlier stage of the riddle the word used for "something sweet" was *ʿrî*, homophonous with the word *ʾaryê*, "lion" (see Porter, Torczyner). According to this view the riddle reflects a popular folk etymology; the verb *yāṣāʾ* (RSV "comes") would then mean "derives from," and the riddle would express the view that *maʾaḵāl* is derived from *ʾāḵal* as *ʾaryê*, "honey," is derived from *ʾaryê*, "lion." Whether this is correct etymologically is beside the point, for the riddle reflects a *folk* etymology.

After a period of time Samson's wife drags the answer to the riddle out of him (Jgs. 14:17). In v. 18 the Philistines answer Samson's riddle with a riddle of their own. V. 18a likely preserves an independent riddle whose answer is "love." Some, e.g., J. A. Soggin (*Judges* [Eng. tr., *OTL*, 1981], p. 242) and J. Crenshaw (*Samson*, pp. 118f.), have suggested that v. 18b preserves a third riddle, but this is doubtful for the present form of the text; it is possible, however, that the narrative hides a riddle: "What fertile field is ploughed, but not with oxen?"

The other references to riddles are less explicit. In Nu. 12:6-8 Yahweh contrasts Moses with other prophets and specifies the means of revelation to the latter as "in a vision," "in a dream," and "in *ḥîḏōṯ*" (RSV "dark speech"). (For the textual problem in v. 6, see *BHS*; G. B. Gray, comm. on Numbers [*ICC*, 1903], p. 126; cf. GKC, §124d.) This suggests that certain of the prophets' symbolic dreams and enigmatic oracles were also considered riddles (see Torczyner, pp. 138-141; Müller, pp. 471-77), though only Ezk. 17 is thus labeled.

1 Kings 10:1 (par. 2 Ch. 9:1) tells of Solomon's ability to solve the riddles of the Queen of Sheba (cf. Josephus *Ant.* 6.5f. [165-175]; also 5.3 [143]). Ps. 49:4 (MT 5) places *ḥîḏâ* in parallel with *māšāl*, "proverb" (see on Ezk. 17 below), and Prov. 1:6 places it in parallel with *māšāl*, *mᵉlîṣâ* ("figure") and *diḇrê ḥᵃḵāmîm* ("the words of the wise"); cf. Hab. 2:6 for a similar grouping of wisdom terms. Dnl. 5:12 describes Daniel as one who has the ability to "interpret dreams, explain riddles, and solve problems"; cf. the apocalyptic description of Antiochus IV in 8:23 (see J. Collins, *Daniel* [*Forms of the OT Literature*, 1985], pp. 86-88). It is also possible that the LXX of 12:8 preserves a textual variant containing *ʾᵃḥidôṯ* (Müller, p. 475; cf. J. A. Montgomery, comm. on Daniel [*ICC*, 1927], p. 478). In Wisd. 8:8 the solving of riddles (Gk. *ainígmata*) is attributed to (personified) Wisdom. Sir. 47:15 praises Solomon as one whose riddles (*ainígmata*) have filled the earth (cf. 39:3, where *ainígmata* is translated "obscurities"). It is evident that whatever the original sociological setting of the riddle (wedding, contest, etc.), it came to be above all else a wisdom genre. The relationship between this wisdom setting and the prophetic setting presupposed in Nu. 12:8 is uncertain, however; it is not known whether these were parallel traditio-historical developments, or whether one was secondary to the other in a linear history of tradition. Many attempts have been made to discern older riddles that have been embedded in the wisdom literature in disintegrated form, especially the so-called numerical saying, which Torczyner suggested was the answer to a riddle.

Psalm 78 and Ezk. 17 merit special mention. Ps. 78:1f. places *ḥîḏâ* in parallel with *tôrâ* (RSV "teaching"), *ʾimrê pî* ("words of [my] mouth"), and *māšāl* ("parable"). In the context of the entire psalm, vv. 1f. appear to be a heading for the recital of the history of salvation, which in this psalm culminates with David (vv. 67-72). Neither the genre nor the intention of the psalm is self-evident, but H.-J. Kraus was probably correct to identify it as a didactic poem (*Psalmen* [1970], II, 703; also I, 63-66); see vv. 7f. Ps. 78 appears to provide an example of what *not* to do. Ezk. 17:1-10 is explicitly designated a *ḥîḏâ* and a *māšāl* (v. 2), but *ḥîḏâ* here probably means "fable" rather than "riddle" (W. Zimmerli, *Ezekiel 1* [Eng. tr., *Hermeneia*, 1979], pp. 360f.; cf. M. Greenberg, *Ezekiel 1–20* [*AB*, 1983], pp. 307, 309, 317-323).

Finally, the only extrabiblical attestation of a word for "riddle" in ancient Near Eastern literature is found in Ahikar 99 (*ʾḥdy pmk*, "the riddle/saying of your mouth"). Although the secondary literature has frequently made reference to riddles in ancient Near Eastern literature, to date there has been no comprehensive study of this genre in Egyptian, Mesopotamian, or Northwest Semitic literatures.

H. T. C. SUN

RIDGE OF JUDEA [Gk. *ho príōn . . . tḗs Ioudaias*–'the serrated (mountain) of Judea']. A place "on the edge of Esdraelon, near Dothan," where Holofernes camped for "a whole month" (Jth. 3:9). From the description — "near Dothan, fronting the great ridge of Judea . . . between Geba and Scythopolis" (vv. 9f.) — this phrase would appear to refer to the mountains S of the plain of Esdraelon, but the description is faulty. The only Geba known in the vicinity of Esdraelon lies at the western end of the plain (Y. Aharoni and M. Avi-Yonah, *Macmillan Bible Atlas* [rev. ed. 1977], maps 211, 216, 222). There is another Geba 10 km. (6 mi.) S. of Dothan, but this is not near the plain of Esdraelon. A camp "between Geba and Scythopolis" would cover the entire valley of Esdraelon or Jezreel, but "near Dothan" appears to limit it to an area N of the "ascent of Gur" (2 K. 9:27), which leads to Ibleam and Dothan (*GB*, rev., p. 149). The reference then would be to the mountains of Samaria, and the name "ridge of Judea" would be inaccurate and, indeed, of questionable usage by anyone familiar with Palestine. Gk. *príōn* indicates a serrated (saw-like) range, hardly descriptive of the mountains of Samaria. Some have suggested that Heb. *māśôr*, "saw," which supposedly lies behind Gk. *príōn*, was misread for Heb. *mîšôr*, "plain"; but this is open to two objections: the words are completely different in sound (Hebrew was not an entirely dead language at that time), and Esdraelon is always called an *ʿemeq*, not a *mîšôr* (cf. *APOT*, I, 250, note on 3:9).

On the other hand, the Geba located 6.5 km. (4 mi.) N. of Samaria is "near Dothan," and the plain in that region would offer a satisfactory encampment. But Charles's suggestion (*APOT, ibid.*) that Gk. *apénanti*, "over against," is a "vague expression, which may only mean that you can see the ridge [on which Jerusalem stands] from Dothan," makes no sense to anyone who has been to Dothan or the heights of Samaria. Perhaps historical and geographical accuracy should not be expected in a work as highly imaginative and figurative as the book of Judith.

W. S. L. S.

RIE. An archaic spelling of "rye" used by the AV in Ex. 9:32; Isa. 28:25. *See* SPELT.

RIGHT (HAND) [Heb. *yāmîn*–'right side' (Gen. 13:9; 24:49; Ps. 18:35 [MT 36]; 45:4 [MT 5]; 110:1; etc.), *yāḏôl/yāḏām hayᵉmānîṯ*–'his/their hand, the right (one)' (Ex. 29:20; Lev. 8:23f.; 14:14, 17, 25, 28), hiphil of *yāman*–'go to the right' (2 S. 14:19); Gk. *dexiós* (Mt. 6:3; 20:21, 23; Mk. 10:37; Lk. 20:42; Acts 2:25; Rom. 8:34; etc.), *dexiós cheír* (Mt. 5:30; Lk. 6:6; Acts 3:7; Rev. 1:16; 10:5; 13:16)]; NEB also RIGHT ARM, RIGHT FLANK, "to right," DOMINION, POWER, etc.

The right hand is used either purely descriptively or with positive connotations. It is the hand of action, especially in combat; a left-handed soldier was unusual (Jgs. 3:15-21; 20:15f.; 1 Ch. 12:2). Together, the right and left hands may complement one another (Prov. 3:16), contrast one another (Eccl. 10:2), or describe all-inclusiveness (Gen. 24:49). The thumb of the right hand is singled out for special ceremonial gestures: the consecration ritual for Aaron and his sons (Ex. 29:20; Lev. 8:23f.) and the cleansing ritual for lepers (Lev. 14:14, 17, 25, 28). The right hand is the appropriate hand for gesturing; in fact the Qumranians imposed a ten-day penalty for gesturing with the left hand (1QS 7:15).

Metaphorically the right hand is the hand of power; it is most often the power of God, a patriarch, a king or a warrior. This is exhibited in preferential blessing (Gen. 48:14), support (Ps. 18:35 [MT 36]), victory (20:6 [MT 7]), instruction (45:4 [MT 5]), deliverance (138:7), etc.

Three idioms are of particular note. To sit at the right hand is the place of honor (accorded to the king by Yahweh in Ps. 110:1). Not to turn to the right or left is used to denote obedience to Yahweh (e.g., Josh. 1:7). Standing on the right also indicates the place of the accuser in judicial settings (Ps. 109:6 [RSV mg.]; Zec. 3:1).

Employing the imagery of Ps. 110:1, the NT emphasizes Jesus as sitting, standing, or having been exalted "at the right hand of God," indicating His royal status (e.g., Acts 2:33; Rom. 8:34). The right hand is used as a sign of fellowship (Gal. 2:9), to comfort (Rev. 1:17), in oath-taking (10:5), and bearing marks (13:16). The drastic or hyperbolic character of Jesus' saying concerning cutting off the offending right hand (Mt. 5:30) is made clear by the other passages that emphasize that appendage's importance.

The common Semitic mode of indicating directions is based on orientation to the rising sun in the east; thus the right hand signified the south (*see* SOUTH). Note too that the name Benjamin literally means "son of the right hand" and designates the tribe furthest south among the so-called Joseph tribes.

See also HAND; LEFT (HAND).

RIGHT; RIGHTS [Heb. *yāšār* (Ex. 15:26; Dt. 6:18; Josh. 9:25; Jgs. 17:6; 1 S. 12:23; 1 K. 11:33, 38; etc.), *yāšar* (1 Ch. 13:4; 2 Ch. 31:20; etc.), *yōšer* ("what is right," Job 33:23), *mêšārîm* ("what is right," Ps. 17:2; Prov. 8:6; 23:16; Isa. 45:19), *ṣeḏeq* (Dt. 33:19; Job 8:3; Ps. 4:1, 5 [MT 2, 6]; etc.), *ṣaddîq* (Ex. 9:27; 23:8; Prov. 18:17; etc.), *ṣᵉḏāqâ* (2 S. 19:28 [MT 29]; Neh. 2:20; etc.), *ṣāḏaq* (Job 27:5; Isa. 43:26; etc.), *mišpāṭ* (Gen. 18:25; 1 K. 3:11; Job 27:2; etc.), niphal part. of *kûn*–'be reliable, true, legitimate' (Ex. 8:26 [MT 22]; Job 42:7f.; Ps. 51:10 [MT 12]), *kēn* (Nu. 27:7; 2 K. 7:9; Jer. 23:10; etc.), *gᵉʾullâ* ("right of redemption," Lev. 25:29; Ruth 4:6), *gāʾal*–'redeem' ("exercise the right of redemption," Lev. 25:33), *nāḳō(a)ḥ* (e.g., Isa. 30:10), *dîn* (Dt. 17:8; etc.), hiphil of *yāḳaḥ* ("maintain the right," Job 16:21), *ʾᵉmeṯ*–'truth,' 'reliability' (Gen. 24:48), *kāšēr*–'please' (Est. 8:5), *ṭôḇ*–'good' (1 S. 29:6; Zec. 11:12), *mahᵃlāḵ*–'passageway' ("right of access," Zec. 3:7), *qōšṭ*–'truth' (Prov. 22:21), etc.; Aram. *qᵉšôṭ*–'truth' (Dnl. 4:37 [MT 34]); Gk. *díkaios* (Jn. 7:24; Acts 4:19; etc.), *dikaiosýnē* (Acts 10:35; Eph. 5:9; 1 Jn. 2:29; etc.), *exousía* (He. 13:10; Rev. 22:14; etc.), *kalós* (e.g., Mk. 7:27), *kalṓs*–'well,' 'correctly' (Mk. 12:32; Jn. 4:17; etc.), *agathós* (1 Pet. 3:11, 13), *agathopoiéō* ("do right," 1 Pet. 2:15, 20; 3:6, 17), *agathopoiía* ("do right," 4:19), *agathopoiós* ("one who does right," 2:14), *euthýs*–'straight' (Acts 8:21; 2 Pet. 2:15), *orthṓs*–'rightly' (Lk. 10:28), *alḗtheia*–'truth' (1 Cor. 13:6), *arestós*–'pleasing' (Acts 6:2), *deí*–'one must' ("have a right," Tit. 1:11), *kairós*–'time,' 'opportunity' ("right time," Rom. 5:6), *sophrōnéō*–'be of sound mind' ("[be] in one's right mind," 2 Cor. 5:13; pass. part., Mk. 5:15; Lk. 8:35), etc.]; AV also RIGHTEOUS, RIGHTEOUSNESS, JUDGMENT, JUSTICE, JUST, UPRIGHT, MEET, WELL, GOOD, TRUTH, etc.; NEB also JUST, TRUE, GOOD, FAVOUR, CLAIM, OUGHT, DUE, JUST JUDGEMENT, STEADFAST, PLAIN, STRAIGHTFORWARD, etc. For the use of "right" in the directional sense, *see* RIGHT HAND.

I. In the OT.–The Hebrew root most commonly rendered "right" is *yšr*. The verb *yāšar* literally means "go straight" but in ethical contexts means "be upright." Derivatives include the adjective *yāšār* ("upright") and the nouns

yōšer and *mêšārîm*, both of which denote "straightness" or "uprightness." *Yāšār* is used to describe God's ways (Dt. 32:4; Hos. 14:9 [MT 10]), His precepts (Ps. 19:8 [MT 9]), His judgments (119:137), and His ordinances (Neh. 9:13). It is also applied to human conduct that is honest and straightforward (e.g., Prov. 16:13; 20:11; 21:8). It occurs most often in the phrase "did what was right in the eyes of the Lord," which is linked with obeying God's commandments (e.g., Ex. 15:26; Dt. 13:18). This expression appears frequently in the summaries of the reigns of the God-fearing kings of Israel and Judah (1 K. 15:5, 11; 22:43; 2 K. 12:2; 14:3; 15:3, 34; etc.; cf. 16:2; 2 Ch. 28:1). Moses warned the Israelites against "every man doing whatever is right in his own eyes" (Dt. 12:8; cf. vv. 25, 28). But the period of the judges, when there was no central ruling authority, is characterized as a time when "every man did what was right in his own eyes" (Jgs. 17:6; 21:25).

The noun *nāḵō(a)ḥ* likewise denotes what is "straight" or "upright" (cf. Prov. 8:8f.: the words of personified Wisdom are not "twisted or crooked"; rather "they are all straight [*nāḵō(a)ḥ*] to him who understands"). The term is sometimes used in forensic contexts. A "right" answer is an honest or straightforward reply (Prov. 24:26). Absalom cunningly assured all who brought legal cases to King David that their claims were "good and right" (2 S. 15:3). Referring to the social injustices of the people of Samaria, the prophet Amos lamented, "They do not know how to do right" (Am. 3:10).

Another common Hebrew root is *ṣdq*. The nouns *ṣeḏeq* ("what is right," "justice") and *ṣᵉḏāqâ* ("righteousness," "justice") and the adjective *ṣaddîq* ("righteous," "just") are derived from the verb *ṣāḏaq* ("be in the right," "be just"). These terms are more often translated "righteous" or "righteousness" in the RSV. Most basically the root *ṣdq* connotes behavior that is in keeping with the covenant relationship between God and His people; thus the righteous person (*ṣaddîq*) fulfils the covenant law in regard to God and others. Yahweh Himself is faithful to the covenant relationship; thus His judgments and commandments are always just (*ṣeḏeq*, Ps. 119:75, 172; cf. Job 8:3; cf. also *ṣaddîq* in Lam. 1:18). God delights in "right sacrifices" (lit. "sacrifices of righteousness [*ṣeḏeq*]," Dt. 33:19; Ps. 4:5 [MT 6]; 51:19 [MT 21]; Mal. 3:3; cf. AV), i.e., sacrifices that are "offered properly, not only in a ritual sense, but also in a spiritual sense . . . accompanied by genuine repentance and true trust" (P. C. Craigie, *Psalms 1–50* [*Word Biblical Comm.*, 1983], p. 81). God warned through the prophet Ezekiel that the wicked would die for their sins, but He also promised that those who turned from their wickedness and did what was "lawful and right [*ṣᵉḏāqâ*]" would live (Ezk. 18:5, 19, 21, 27; 33:14, 16, 19). *See also* RIGHTEOUSNESS.

In some passages "right" is used in a juridical sense to denote something to which a person has a just claim (e.g., *māšal*, "have a right," Ex. 21:8; *ṣᵉḏāqâ*, Isa. 5:2; hiphil of *ṣāḏaq*, "maintain the right," Ps. 82:3; hiphil of *yāḵaḥ*, "maintain the right," Job 16:21). This is sometimes the meaning of *mišpāṭ* ("justice"), which is derived from the verb *šāp̄aṭ* ("judge," "govern"). For example, the FIRST-BORN son had certain rights that could not be denied him because of favoritism (Dt. 21:17); God's people looked to Him to defend their rights and complained to Him when they felt that they had been wronged (e.g., Job 27:2; 34:5f.; 35:2; Ps. 35:23; 37:6; Isa. 40:27; 49:4); the prophets castigated those who deprived the poor of their rights (e.g., Isa. 10:2; Jer. 5:28; cf. Lam. 3:35). Likewise, the noun *dîn* often signifies a legal claim (e.g., Dt. 17:8). The righteous person is concerned about the rights of the poor (Prov. 29:7), and it is the responsibility of rulers to see that those rights are maintained (31:5, 8f.). On the "right of redemption" (Lev. 25:29, 33; Ruth 4:6; Jer. 32:7f.), *see* REDEEMER I; KIN I. On Ex. 21:10, *see* MARITAL RIGHTS. On the rights of the poor, *see* POOR I.B.1.

II. In the NT.–In the RSV NT "right" frequently renders Gk. *díkaios* and *dikaiosýnē*, the most common LXX renderings of Heb. *ṣeḏeq* and its cognates. Like *ṣeḏeq*, etc., these Greek terms are usually rendered by "righteousness" in the RSV. In some passages *díkaios* is used in an everyday manner that reflects conventional morality (e.g., Mt. 20:4; Lk. 12:57; Phil. 1:7; 2 Pet. 1:13). In general, however, the NT use of *díkaios* and *dikaiosýnē* is shaped by its OT usage rather than by classical Greek usage. The standard for what is "right" is not simply social obligation or an ideal of virtue but the will of God (cf. Acts 4:19; Eph. 6:1; 1 Jn. 2:29; 3:7, 10; Rev. 22:11). *See also* RIGHTEOUSNESS.

In the NT Gk. *kalós* (lit. "beautiful," "good") signifies not an abstract ideal of beauty (as in Greek classical literature) but that which is pleasing to God (Mk. 7:27; Rom. 14:21; Jas. 4:17; etc.). Paul describes the internal struggle of a Christian who desires to do God's will but continually falls short (Rom. 7:18, 21); nonetheless, through God's help it becomes possible to do "what is right" (2 Cor. 13:7). 1 Peter uses *agathós* (lit. "good") and the compounds *agathopoiéō* ("do good"), *agathopoiós* ("one who does good"), and *agathopoiía* ("good action") in a similar manner. The idea of what is "good" is always connected with the God who is the source of all goodness. Those who have experienced God's saving goodness are called upon to glorify Him (1 Pet. 2:14f.) by practicing goodness wholeheartedly (3:11), even if this brings them persecution, for God blesses those who suffer for righteousness's sake (3:13; 4:19). *See also* GOOD.

Where it translates Gk. *exousía* (lit. "authority," "power"), "right" signifies a divinely given authority and freedom to act. God's own authority is based on His role as Creator and sustainer of the universe. Describing God's absolute freedom to act as He wills with His creatures, Paul uses the figure of a potter who can do what he wants with the clay (Rom. 9:21). In 1 Cor. 9 Paul explains to the Christians at Corinth that his own God-given authority as an apostle gives him a valid claim to be supported by them (and to receive support for a wife as well, vv. 4-6), but that he has freely renounced this right for the sake of the gospel (vv. 12, 15, 18); cf. 2 Thess. 3:9. *See also* AUTHORITY I.

On "conjugal rights" (1 Cor. 7:3), *see* MARITAL RIGHTS.

III. Righteousness of God
A. Introduction
B. Paul's Teaching
C. Luther's Contribution
D. Historical Development

The concept of righteousness, especially the "righteousness of God," is crucial to the understanding of biblical theology and the theology of the Protestant Reformation.

I. In the OT and Judaism.–A. In the OT. In the OT righteousness involves the fulfillment of the demands of a relationship, either with God or with other human beings, although the OT usually has the covenant with Yahweh in view (e.g., Isa. 51:7; Ezk. 18:19, 21). It does not normally indicate behavior in accordance with some norm external to a covenant, nor does it indicate an abstract legal concept of justice. Righteousness is justice within the context of a covenant relationship. When a person fulfils the obligation of a relationship, that person is said to be righteous. Ethical and legal demands are the demands of covenant and community. In general, before the Exile righteousness is seen in corporate or national terms, and after the Exile individual righteousness comes to the fore.

People are said to be righteous when they are deprived of what is due them in a relationship and trust in God for vindication. Thus Israel was righteous over against Egypt because it was forced into Egyptian slavery and then cried to Yahweh for release. Within the nation of Israel the poor, widows, and orphans were righteous over against both the wealthy who oppressed them and the evil rulers who denied them justice. They trusted the Lord to judge in their favor (Ps. 37:12; Isa. 26:2f; Jer. 20:12).

In the latter category the connection of righteousness with faith becomes more evident. Israel's righteousness lies not merely in the oppression, and the nation is certainly not assumed to be sinless. Rather, Israel is righteous when the people repent of their sins and put their hope and trust in Yahweh. The same can generally be said of the poor and the oppressed. In this sense, righteousness is faith, i.e., complete trust in and dependence on the Lord.

A third way in which a peron can be considered righteous in the OT is when that person is declared so by Yahweh (see esp. Isa. 40ff.). The poor are righteous because God judges in their favor. Even after Israel has placed its trust in kings and false gods and can claim no intrinsic righteousness of its own, Yahweh maintains the covenant and declares Israel righteous in order to save and rescue the people from captivity.

In the OT Yahweh's righteousness is based on His covenant with Israel and in His saving acts (Isa. 41:2, 10; 42:6; 45:8; Jer. 50:7). Yahweh is recognized as the source of righteousness because He maintains His covenant with Israel against all odds. He chose this poor people to be His own and, out of His grace, established a covenant with them. Even when they were apostate He was constant; although He sent them into exile, He did not desert them, and He called them back to the land. Finally, He promised a new covenant, in which sins would be remembered no more (Jer. 31:31-34).

Even apart from His specific covenant with Israel, Yahweh is a God who saves. It is in His righteousness that He judges in favor of the poor and against the oppressor (Dt.32:4; Hos. 2:19; Mic. 7:9). Yahweh saves those who trust in Him for deliverance. He preserves those whom He has declared righteous. Yahweh is faithful in all relationships and keeps all promises; thus His people can trust that His word stands and base their own lives on his faithfulness.

B. In the LXX. The LXX primarily translates words from the Hebrew root *ṣdq* with Greek derivatives of *díkē*. Thus Gk. *díkaios* occurs for Heb. *ṣaddîq* and Gk. *dikaiosýne* for Heb. *ṣeḏeq*. Other translations include Gk. *alēthés* (lit. "true," Isa. 41:26) and *pistós* (lit. "faithful," Job 17:9) for Heb. *ṣaddîq* and Gk. *eleēmosýne* (lit. "pity," Ps. 34:24 [MT 35:24]) and *krísis* (lit. "judgment," Isa. 51:7) for Heb. *ṣeḏeq* (see Zeisler, pp. 18-36).

The LXX use of Gk. *díkaios* and *dikaiosýne* to express OT thought patterns marks a change from the terms' prior use for Hellenistic concepts of righteousness (see D. Hill, pp. 108f.). Thus "righteousness" does not label an abstract virtue or collection of virtues (see below), but instead expresses the will of God in relationship. Righteous people are those who fulfil their duties toward God and other people in the context of the covenant.

C. Intertestamental Literature. In Judaism of the Hellenistic period and 1st cent. A.D., "righteousness" generally refers to approved conduct and ethical qualities, with some retention of the OT concern for covenant relationship. The qualities associated with righteousness include mercy, generosity, honesty, moderation, and active concern for the poor and oppressed; qualities of unrighteousness include greed, violence, and oppression. In order to be considered righteous a person must also recognize God's righteousness. Righteous persons generally are those whose merits outweigh their transgressions. Models of righteousness include such OT heroes as Abraham, David, and Elijah. This literature is basically optimistic about human ability to attain righteousness before God.

Although there is some recognition of the trials and persecutions of the righteous, much of the literature of this period takes the view that the righteous will be rewarded and the wicked punished. The rewards are seen first of all in a temporal, and often material, sense; God will reward the righteous with prosperity and success. In addition to earthly rewards, the righteous can also anticipate the eternal rewards of a heavenly paradise. Even if some of the righteous suffer now, the Messiah's advent will bring an end to their oppression. At that time the wicked will be defeated and the righteous vindicated.

God is seen to be righteous because of His mercy and justice. He is merciful in that He chooses and protects Israel, gives His law so that people might learn righteousness, and forgives the sins of the righteous. He is just in that He rewards the good and punishes the evil. The source of all human righteousness is this divine righteousness. Under the influence of the OT (via the LXX in Hellenistic Judaism), the righteous person is one who fulfils duties toward God as stated in His law.

This literature makes a special connection of righteousness with the poor, often using or interpreting the words for "righteousness" to indicate charity toward the poor. The wealthy and powerful who oppress the poor are singled out for special punishments by God, and an important part of His righteousness is His concern for and vindication of the poor and oppressed.

II. In the NT.–A. Introduction. In the NT one finds again the primacy of the relational aspect of righteousness. The righteous are those who participate in and preserve a covenant relationship with God or other persons. God's righteousness is shown in that He has saved humanity in Christ, instituting a "new covenant" with Jew and Gentile alike. Human righteousness is found in faith, i.e., in God's salvation in Christ and participation in the community of faith.

B. Secular Greek Background. The dependence of NT thought on OT antecedents can be seen from an examination of pre-NT Greek uses of the *díkē* word-group. With the personification of legal justice in the goddess Dike, daughter of Zeus and Themis, as background, legal con-

notations dominate the definitions of righteousness, with both ethical and religious use showing the influence of the legal and political. What is right is not a god-given mandate but instead an element of the cosmos, inherent in the nature of being and human life. Thus righteousness is the just will of the community expressed in laws and customs; the righteous person is the one who conforms to them. In ethico-religious thinking, righteousness is the quality of harmony exhibited by one whose spiritual house is in order. Righteousness can be used either as one virtue in a list of virtues or as a summary of all virtues. Because of the legal influence, a connection exists between righteousness and justice, both legal and distributive.

C. In the Non-Pauline NT. In considering the meaning of "righteousness" in any portion of the NT, one must always keep in mind the total NT view of salvation and human relationship with God through and in Christ. God established an exclusive covenant with Israel through Moses for which single-minded loyalty to Yahweh and obedience to His law were crucial; Israel, however, lusted after other gods and broke the covenant. Yet God remained faithful and has established a new covenant in Jesus Christ and reconciled humanity to Himself, thus both superseding and fulfilling the old covenant. People are brought into this new covenant by God's calling and through repentance and faith in Christ, which results in a level of obedience not previously possible.

Within this framework, righteousness in the NT (outside of the Pauline corpus) generally refers to conduct within the new covenant between God and His people, (Mt. 5:20). One continuing and important example of this usage is the view of Christ Himself as righteous. By presenting Himself for baptism, Jesus showed His obedience to the will of God (Mt. 3:15). Jesus' actions were pleasing to God and thus righteous. In Hebrews, Jesus' exaltation is linked to His righteousness. The Johannine literature says that the source of all righteousness is the righteousness of Christ.

Similarly, the discussion of human righteousness generally refers obedience to the will of God and actions that are pleasing to Him. In the Synoptics righteousness is a characteristic of the members of God's kingdom. John (e.g., ch. 15) specifically states that the content of righteousness is love that finds its source in the love of Christ. Whenever human righteousness is mentioned, the NT assumes that God is its source.

Throughout the NT also runs the assumption that God both demands the righteousness of His people and grants them such righteousness as a gift. Like every aspect of His grace, righteousness is a pure gift. The righteous person is one whose life has been freed from the power of sin by the cross of Jesus Christ. Thus true righteousness can only be linked to God's revelation in Christ. Even in the face of the existence of sin, the members of the community of faith can be said to be righteous before God because He has granted them righteousness in Christ. It is in this sense that the NT speaks of human righteousness.

James followed this general sense in his argument against antinomianism, although in a less sophisticated and nontheological fashion. In spite of the problematic statement of 2:23, he apparently did not adopt the idea that righteous behavior produces merit before God. His emphasis seems rather to be that true faith produces the fruit of righteousness. Of all the NT writers, James is probably most influenced by the categories of the intertestamental view of righteousness. In this Epistle, "righteousness" primarily refers to the works of right conduct. God is said to be righteous in that His works are uniquely right. Human righteousness is behavior within the will and command of God (cf. 1:20; 3:18).

III. Righteousness of God.—*A. Introduction.* The most important meanings of righteousness in NT theology and Reformation theology lie in the pregnant phrase "the righteousness of God." This phrase is crucial to the understanding of Paul's doctrine of reconciliation and the renaissance of Pauline theology in Martin Luther's gospel of justification by faith apart from the works of the law. The continuing debate over the meaning of this phrase exemplifies the crucial role that it plays in theology.

B. Paul's Teaching. For Paul the center of any concept of righteousness had to be the cross of Jesus Christ. It is in the cross and Resurrection that God reveals and accomplishes His righteousness, and that human righteousness finds its source. Thus righteousness cannot be a mere property, ethical attribute, or quality. The righteousness of God in the cross is the saving link between God and sinful humanity; no ethical attribute can ever endure the stress of being such a connection. In Pauline thought the righteousness of God is the whole of His salvation of people in Christ.

Paul presupposed the OT view that God is righteous and that righteousness finds its expression within covenant relationship. The distinctive feature of his teaching is that God's righteousness is made available in Christ through the cross by faith. True righteousness, whether divine or human, must be understood as the righteousness of God in Christ. Moral or external goodness cannot be the way of salvation, for it cannot stand before the holiness of God. Only the righteousness of God revealed in the cross and granted to the believer through faith in Christ can defeat death and reconcile a person to God.

It is specifically as God justifies the ungodly through faith in Christ that He demonstrates His righteousness. Because of God's act of justification, He makes righteousness available. In Christ righteousness can be predicated of both God and the person while remaining the righteousness of God: God pronounces and makes sinners righteous, while believers are pronounced and made righteous — note the change from active to passive voice. Lost sinners may be reconciled with God because God proclaims His righteousness in the cross of Christ (*see* RECONCILIATION).

C. Luther's Contribution. Luther's intent in the 16th cent. was to recover the Pauline teaching of the righteousness of God in the cross of Christ from the false teaching of late medieval semi-Pelagianism. Luther himself dated the beginning of the Reformation from the point when he recognized that in Paul the "righteousness of God" does not refer to God's wrathful justice whereby He punishes sinners, but to the righteousness whereby He justifies sinners through faith in Christ.

This realization must have come to him before Oct. 31, 1517, for already in 1515 in his lectures on Rom. 1:17 he contrasted his own teaching with the idea that righteousness rests on human achievement, or that the righteousness of God refers to God's own righteousness. Instead, said Luther, the righteousness of God is that by which He makes people righteous through faith in Christ. This righteousness is revealed only in the gospel and is the sole cause of human salvation.

In 1519 Luther introduced the terms "alien righteousness" and "proper righteousness" in order to clarify his thinking on the matter. Alien righteousness is the righteousness of Christ by which He justifies sinners through faith. In faith Christ's people have community with Him; i.e., all that He has, His people have as a gift of grace. As Christ Himself becomes theirs by faith, His righteous-

ness becomes theirs and swallows up their sin. It is instilled in them by grace daily as Christ wars against the old Adam. This alien righteousness is the basis of all other Christian righteousness.

Proper righteousness results from alien righteousness, not from human efforts. It is life in Christ spent profitably in good works. Luther recognized three categories of good works: those that crucify the old nature, those that express love for one's neighbor, and those that show humility before God. He excluded piety practiced for its own sake. Alien righteousness is Christ saying, "I am for you." Proper righteousness is the believer saying, "I am for you." Because believers are righteous in Christ — both declared righteous and made righteous by Christ's real presence within them — they no longer need to attempt self-justification and can concentrate on the welfare of others.

D. Historical Development. After Luther's death the Osiandrian controversy broke the close connection between alien and proper righteousness and the idea that both were rooted in the cross of Christ. A merely forensic view of justification, the introduction of human achievement into sanctification, and the resultant — and, in the circumstances, necessary — separation of justification and sanctification were introduced as a defense against Osiander's reversion from the concept of Christ's real presence in the believer to a form of late medieval mysticism. The anti-Osiandrian view, rather than Luther's own, became the basis for Protestant thought on the righteousness of God. The burden of modern scholarship has been to restore the relationship broken in the 1550's and to overcome the nineteenth-century view, held in reaction to orthodoxy, that the righteousness of God is a divine quality.

A new discussion of the righteousness of God can be traced to the work of E. Käsemann. In "Gottesgerechtigkeit bei Paulus," a lecture delivered at Oxford in 1961, Käsemann maintained that the righteousness of God must be seen as both the gift of individual justification and the power of God that accomplishes universal salvation (tr. in his *NT Questions of Today* [1969], pp. 167-182). Later, in his Romans commentary, Käsemann stated that the phrase "righteousness of God" indicates God's gift of bringing the fallen world back under His legitimate sovereignty.

These assertions have caused much discussion, both in support and in opposition. Käsemann's students and supporters have downplayed the gift quality of the righteousness of God. Many of their arguments rest on a "history of concepts" method that has been taken to task by J. Barr's reaction to the methodology of certain articles in *TDNT.* Critics such as Bultmann, Lohse, and Klein have attacked the exegesis of specific Pauline passages. It seems that Käsemann had some justification for reminding the Church that the righteousness of God revealed in the cross is a power as well as a gift, but the gift must not be lost, or else the power will fade as well. For Paul, as for Luther, that which we label justification and that which we label sanctification are not to be divided, yet they are not to be confused. The initiative in both belong to God: the source is the crucified and risen Christ, and both gift and power are in faith. This faith is both a gift given through the gospel and new life in the gospel.

In the 1970's attention to the meaning of righteousness was expanded through the contribution of Liberation Theology. Theologians such as J. Segundo, G. Gutierrez, and L. Boff challenged definitions of the gift nature of God's righteousness and extended its power from personal justification to historical liberation. In addition Liberation Theology has reinforced justice as the primary meaning of righteousness, pointing to God's liberation of Israel from Egypt as the paradigm. With these changes of definition, Liberation Theology has raised a significant biblical and theological challenge to traditional concepts of church and morality, including the ideology that connects Christianity and capitalism in North America. While it seems for the moment that Luther remains Paul's best disciple, new and serious questions have been raised in the Third World, which European and North American theology have yet to answer.

R. A. KELLY

RIGOR OF DEVOTION [Gk. *ethelothrēskía*] (Col. 2:23); AV "will worship"; NEB "forced piety." A term apparently of Paul's own coinage (MM, p. 181), unless he borrowed it from the sect that he was combatting. It is reminiscent of "self-abasement" (Gk. *thélōn en tapeinophrosýnē,* lit. "willing with humility") in v. 18, a term that seems to originate in Heb. *ḥāpēṣ bᵉ* ("rejoice in"). In the present case the verbal element *ethelo-* governs the noun element *-thrēskía* (BDF, § 118), giving the sense of "worship springing from the will."

Paul's opponents must have delighted in their own peculiar piety, described and refuted in Colossians. It was a proud, self-produced, self-made religion, which Paul believed served only the lower nature (v. 23b). There is an element of sarcasm in the term. (A similar word, *ethelodidáskalos,* means "one who *alleges* to be a teacher.") This devotion was not authorized or commanded by Jesus Christ but was stimulated by the dictates of an unregenerate heart. Cremer called it "voluntarily adopted, unbidden or forbidden worship" (*Biblico-Theological Lexicon of NT Greek* [Eng. tr., 4th ed. 1895]). This worship of angels (v. 18) had only an appearance of genuine piety and had its source in an inflated egotistical will. Paul would have no one strutting in the presence of God and therefore denounced this show of false humility.

C. H. PINNOCK

RIMMON rim'ən [Heb. *rimmôn*; Gk. *Remman*].

1. A god worshiped in the 10th and 9th cent. B.C. by the Arameans, who probably pronounced his name Ramman. His temple in Damascus is mentioned in 2 K. 5:18, where we are told that Naaman, commander of the army of the king of Syria or Aram (Damascus), after he was cured of leprosy by Elisha, vowed to sacrifice to no god but Yahweh, asking to be forgiven when he would have to prostrate himself in "the house of Rimmon." According to 1 K. 15:18, Ben-hadad, the Syrian king contemporary with Baasha of Israel and Asa of Judah, was the son of a

king named Tabrimmon (Aram. *ṭāb rammān*, "Ramman is pleased").

The name Rimmon or Ramman means "thunderer" or "thunder-god" (cf. Akk. *ramāmu*, "to roar," which is used of thunder); it seems to have been an epithet of HADAD, the chief god of the Arameans. The god Rimmon, however, is also known from Mesopotamian sources, in which he is called Rammanu, and it is disputed whether he was Aramean or Mesopotamian in origin.

The coincidence of the divine name Rimmon with the Hebrew noun *rimmôn*, "pomegranate," is accidental. The various biblical place names in which *rimmôn* appears (Rimmon, Rimmon-perez, En-rimmon, Gath-rimmon) refer to the pomegranate, not the Aramean deity. A possible exception is the obscure HADAD-RIMMON of Zec. 12:11.

2. A Benjaminite of Beeroth, whose sons Baanah and Rechab assassinated Ish-baal ("Ish-bosheth," 2 S. 4:2, 5, 9).

P. K. MCCARTER, JR.

RIMMON rim'ən.

1. [Heb. *sela' (hā)rimmôn*; Gk. *hē pétra hē Rhemmōn, hē pétra tou Rhemmōn, hē pétra Rhemmōn*]. The rock of Rimmon; the place of refuge of the six hundred surviving Benjaminites of Gibeah who "fled toward the wilderness" (Jgs. 20:45, 47; 21:13).

Robinson identified this place with the site of the Arabic village Rammûn, 6 km. (4 mi.) E. of Bethel on a high isolated hill, and this proposal is rather generally accepted. But Rammûn, known as Remmon to Eusebius and Jerome, is not situated in the wilderness but in fact has extensive olive groves; moreover, the hill is no rock. Rawnsley and Birch proposed a cave in Wâdī eṣ-Ṣuweinîṭ S of Michmas, but this site belongs to the grazing region of Geba. As some of the LXX renderings make clear, the rock should not be identified with Rimmon itself but as a rock belonging to Rimmon's grazing domain. Although the picture of the battles in Jgs. 20–21 is far from clear, it is obvious that the Benjaminites fled to the east. About 6 km. (4 mi.) E of Rammûn is a small plateau with a steep declivity to the east and unscalable rocks to the south and north; the western access is only about 200 m. (660 ft.) wide and could be easily defended by six hundred men. An ancient track from Rammûn to Jericho passes to the south. This site might be considered as the rock of Rimmon. Saul's pomegranate (Heb. *rimmôn*) mentioned in 1 S. 14:2 has nothing to do with Rimmon; there are no pomegranates in the wilderness.

Bibliography.—E. Robinson, *Biblical Researches*, I (1841), 440; W. F. Birch, *PEQ*, 3, 137-148; Y. Aharoni, *Carta's Atlas* (1964), map 81.

2. [Heb. *rimmôn*–'pomegranate'; Gk. B *Erōmōth, Eremmōn*, A *Rhemmōn*]; AV also REMMON. A town in Simeon (1 Ch. 4:32; cf. Josh. 19:7) reckoned as part of the kingdom of Judah (Josh. 15:32); Zec. 14:10 locates it S of Jerusalem. Since the place name EN-RIMMON occurs in Neh. 11:29 and (if *'ayin* is emended to the construct form *'ên*) Josh. 19:7, and since in the texts cited the name Ain (*'ayin*, "source") always precedes Rimmon, separated from it by "and" only in Josh. 15:32, it is frequently thought that in all instances we should read En-rimmon. It is possible, however, to distinguish two localities; Rimmon itself, situated at present Khirbet Umm er-Ramāmîn, about 14 km. (9 mi.) NNE from the center of present-day Beersheba; and the water source 3 km. (2 mi.) W of it. Cf. A. Alt, *PJ*, 29 [1933], 14f.

3. [Heb. *rimmôn*; Gk. B *Rhemmōna*, A *Rhemmōn*]; AV REMMON-METHOAR (for RSV "Rimmon it bends toward"). A town in Zebulon (Josh. 19:13), called Rimmono in 1 Ch. 6:77 (MT 62); a Levitical city, the same as Dimnah in Josh. 21:35. It is generally identified with the Arabic village Rummâneh, 10 km. (6 mi.) N of Nazareth at the border of the plain of Beth-netophah. There are numerous rock tombs and cisterns in the neighborhood.

A. VAN SELMS

RIMMONAH rim-mō'nə. *See* RIMMON 3.

RIMMON-PEREZ rim-ən-per'ez [Heb. *rimmōn pereṣ*]; AV, NEB, RIMMON-PAREZ. An Israelite encampment on the wilderness journey, between Rithmah and Libnah (Nu. 33:19f.). The name probably means "pomegranate of the pass (breach)" (perhaps the "pomegranate pass"), which may suggest a place where pomegranates were abundant. The site has been identified with modern Naqb el-Biyar, W of 'Aqabah, but this is uncertain. *See* WANDERINGS OF ISRAEL.

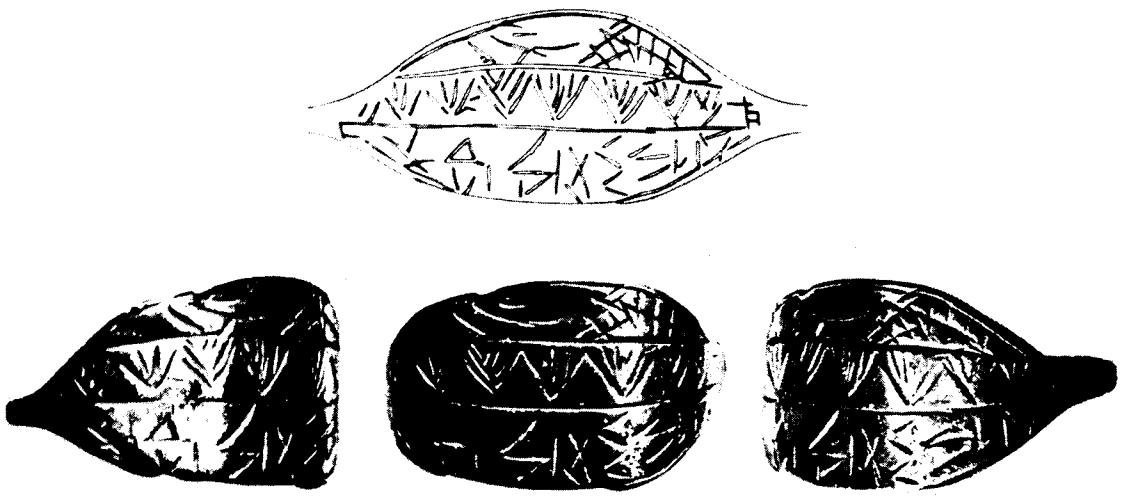
RING [Heb. *ṭabba'aṭ*] (Ex. 25:12, 14f., 26f.; 26:24, 29; 27:4, 7; 28:23-28; etc. Est. 3:12; 8:8, 10); NEB also SIGNET; [*nezem*] (Gen. 24:22, 30, 47; 35:4; Ex. 32:2f.; Job 42:11; Prov. 11:22; etc.); AV EARRING, JEWEL; NEB also NOSE-RING, EARRING; [*gālîl*] (Est. 1:6); [Gk. *daktýlios*] (Lk. 15:22); GOLD RING [Gk. *chrysodaktýlios*] (Jas. 2:2); **SIGNET RING** [Heb. *ṭabba'aṭ*] (Gen. 41:42; Ex. 35:22; Est. 3:10; 8:2; Isa. 3:21); AV RING; NEB also FINGER-RING, SIGNET; [*ḥôṭām*] (Jer. 22:24; Hag. 2:23); AV SIGNET. A circular object worn as jewelry (on the finger, ear, or nose) or used to fasten together pieces of furniture, wall hangings, or clothing.

Of the RSV OT terms translated "ring," *ṭabba'aṭ* seems to be the least specific. Sometimes it refers to a SIGNET ring, which gave the wearer the authority of the seal (e.g., Gen. 41:42; Est. 3:10). *Ṭabba'aṭ* is derived from the root *ṭb'*, "sink," probably because the design of the signet was "sunk" into the wax or clay sealing a document (much as the stone from David's sling "sank" into Goliath's forehead, 1 S. 17:49). Signet rings were worn most frequently by men, but the inscriptions on a few seals indicate that women also owned them. *Ṭabba'aṭ* is also applied to rings that were attached to the ark of the covenant and other tabernacle furniture in order to hold the carrying poles (Ex. 25:12, etc.), to rings on the prefabricated sections of the tabernacle frame that fastened them together (26:24), and to rings that supported the breastpiece on the high priest's ephod (*see* GARMENTS VIII.B). The contexts of all the uses of *ṭabba'aṭ* suggest fine jewelry of luxurious ornamentation, often made of gold.

The term *ḥôṭām*, denoting a "seal" (so, usually, RSV), is translated "signet ring" twice in the RSV in contexts that clearly associate it with hand jewelry. The oldest signet ring found in Palestine has come from Megiddo and dates to the 14th or 13th cent. B.C., but most such rings have come from the time of the Israelite monarchy. These rings were worn by citizens of the nations surrounding Israel. In Egypt the most popular form was the scarab, which contained an inscription of the king's name embedded in a ring. Such a ring was given to Joseph by Pharaoh (Gen. 41:42). *See also* SEAL.

Hebrew *nezem* refers to either a NOSE RING (e.g., Prov. 11:22; Ezk. 16:12) or an EARRING (e.g., Gen. 35:4; Ex. 32:2); these were frequently made of gold. Gk. *daktýlios* and the compound *chrysodaktýlios* (lit. "with a gold ring on one's finger") signified finger rings that indicated wealth or position.

In Est. 1:6 *gālîl* seems to indicate circular decorations or parts of wall hangings (curtain rings?), although the



A gold ring from Megiddo with an Old Canaanite inscription (L.B. II, 14th or 13th cent. B.C.). It may read: "A ring belonging to Nišitrabiya" (courtesy of the Oriental Institute, University of Chicago)

RSV mg. notes that it could also mean "rod." In its three other occurrences *gālîl* is translated "rounded" (1 K. 6:34) or "folding" (Cant. 5:14).

Bibliography.–E. E. Platt, *Andrews University Seminary Studies*, 17 (1979), 71-84, 189-202. L. G. HERR

RINGLEADER. The AV, RSV, and NEB translation of Gk. *prōtostátēs* (lit. "one who stands first") in Acts 24:5. The term denotes the leader of a group.

RINGSTRAKED. An archaic term meaning "marked with circular stripes," used by the AV to translate Heb. *ʿāqōḏ* (Gen. 30:35, 39f.; 31:8, 10, 12; RSV, NEB, "striped"). The precise meaning of *ʿāqōḏ* is uncertain. The AV translation is based on the assumption that *ʿāqōḏ* comes from the root *ʿāqaḏ*, "bind." Most interpreters agree that it denotes some sort of defective coloring (but cf. KoB [p. 730]: "with twisted tail"). *See* STRIPED.

RINNAH rin'ə [Heb. *rinnâ*–'cry of joy']. A Judahite; one of the sons of Shimon (1 Ch. 4:20). The LXX makes him a "son of Hanan" by translating the next name (MT *ben-ḥānān*) by Gk. *huiós Hanan*.

RIOT; RIOTING; RIOTOUS. In modern English these terms generally connote a violent public disorder; it is in this sense that the RSV and NEB render Gk. *thórybos* by "riot" in Mt. 27:24 (AV "tumult") and *stásis* by "rioting" in Acts 19:40 (AV "uproar"). The AV, however, uses these terms in their original sense of "(any) unrestrained behavior" to render Heb. *zālal* (Prov. 23:20; 28:7; *see* GLUTTON); Gk. *asōtía* (Tit. 1:6; 1 Pet. 4:1; RSV "profligate," "profligacy"), *asṓtōs* (Lk. 15:13; RSV "loose"), *kṓmos* (Rom. 13:13), and *typhḗ* (2 Pet. 2:13); *see also* REVEL.

RIPHATH rī'fəth [Heb. *rîp̱aṯ*]. The second son of Gomer; grandson of Japheth (Gen. 10:3). The RSV and NEB follow the MT in reading "Diphath" in place of "Riphath" in 1 Ch. 1:6; but the LXX, Vulg., and several Hebrew MSS read "Riphath," suggesting that this is the correct form. *See also* TABLE OF NATIONS.

RISING (AV Lev. 13:2, 10, 19, 28, 43; 14:56). *See* SWELL; LEPER III.

RISSAH ris'ə [Heb. *rissâ*–'dew']. An Israelite encampment during the wilderness wanderings, between Libnah and Kehelathah (Nu. 33:21f.). The location has been identified with modern Kuntilet el-Jerafi, but this is uncertain. *See* WANDERINGS OF ISRAEL.

RITHMAH rith'mə [Heb. *riṯmâ*–'broom,' i.e., the white desert broom plant]. An Israelite encampment during the wilderness wanderings, between Hazeroth and Rimmonperez (Nu. 33:18f.). The location is unknown. *See* WANDERINGS OF ISRAEL.

RIVER; BROOK; STREAM; FLOOD, etc.

I. Terms.–The several words for waterways in the Bible are not rendered uniformly in the English versions, partly because of lack of precision in the original terms and partly because of special contexts. Thus Heb. *naḥal* is rendered in the RSV "river," "brook," "stream," "torrent," "valley," "ravine," "channel," and in the AV "river," "brook," "stream," "valley"; *yᵉʿôr* in the RSV is "river," "stream," "Nile," "canal," "channel," in the AV "river," "brook," "stream," "flood"; *ʾāpîq* is RSV "brook," "stream," "ravine," "fountain," "watercourse," "channel," AV "river," "brook," "stream," "channel"; *peleg* is RSV "brook," "stream," AV "river," "stream"; *nāhār* is RSV and AV "river," "stream," "flood," RSV "Nile," "Euphrates," "canal"; *nāzal* is RSV and AV "stream," "flood"; Aram. *nᵉhar* is RSV and AV "river," "stream"; Gk. *potamós* is RSV and AV "river," "stream," "flood," AV "water."

In addition, the RSV uses "stream" to translate Heb. *yuḇāl, yāḇāl, teʿālâ*, "river" for Heb. *ʾûḇāl, pᵉlaggâ, rōʾš* (Gen. 2:10), "brook" for Heb. *miḵāl*, and *mayim*, and "flood" for several Hebrew and Greek words (*see* FLOOD). "Torrent" once renders *šeṭep*, and "channel" translates *teʿālâ*.

The NEB seldom conforms in its renderings with the AV or RSV and more frequently uses such terms as "gorge," "torrent," and "ravine."

II. Designations of the Biblical Waterways.–*A. Kinds.* The Bible mentions numerous waterways; the confusion of terminology outlined above indicates the wider scholarly confusion about the identification and nature of many. It is frequently unclear whether a passage intends a river or its valley or whether the waterway is a large,

Aerial photo of the Jordan River at Kinnereth where it flows into Lake Tiberias (W. Braun)

surging stream, a gorge that is usually dry but fills with water in sudden rainstorms, or a narrow trickle scarcely deserving a name. Even if a waterway can with fair certainty be identified with an extant stream or gulch, it may differ considerably from the waterway of Bible times in course and dimension, seasonal flow, or windings.

The present Arabic names normally distinguish between the *nahr* or river and the *wâdī*, which is usually a valley or gorge that may always be dry or fill with water in rainstorms. The English versions, especially the NEB, often designate wadis by "gorge," "ravine," "torrent," or, for a dry wadi, "valley." But in all the versions the terms are generally more descriptive than precisely technical. For example, it is difficult to distinguish a "brook" from a "stream." Such waterways may be tributaries of the larger waterways (i.e., rivers), they may be spring-fed, or they may derive from snowcapped mountains.

B. Named Rivers. The RSV names the following rivers: Abana, Ahava, Chebar, Euphrates, Gihon, Gozan, Hiddekel (Tigris), Jabbok, Jordan, Kishon, Nile, Pharpar, Pishon, river of Egypt, Ulai.

C. Named Brooks. The RSV names the following brooks: Arabah, Besor, Cherith, Brook of Egypt, Kanah, Kidron, Kishon, Willows, Zered. In addition, 2 S. 23:30 and 1 Ch. 11:32 refer to the "brooks [NEB "ravines"] of Gaash," a mountain (Jgs. 2:9).

D. Other Named Waterways. The Arnon (Nu. 21:13, etc.) is evidently a river (so AV; NEB "gorge"). The Valley (NEB "gorge") of Eshcol is called a "brook" (Nu. 13:23, AV). In Jgs. 5:21 the Kishon is a "torrent" (AV "river"). Me-jarkon seems to be regarded as a city in the AV and RSV, but the NEB renders "the west Jarkon" (Josh. 19:46), and *WHAB* identifies it with Nahr el-ʿAujā, the Yarkon River N of Joppa.

Nahaliel, a stopping place in the Exodus (Nu. 21:19), is considered a stream in *WHAB*. The Shihor (Josh. 13:3; 1 Ch. 13:5) is probably a tributary of the Nile, and Shihor-libnath in Josh. 19:26 also is probably a waterway. In Jer. 2:18 the AV has "Sihor," RSV "the Nile," NEB "the Shihor."

For fuller information on the waterways mentioned above, see separate articles. Waters not named in the Bible are mentioned in the articles on major regions (e.g., ASIA MINOR) and in NEGEB; SHEPHELAH. J. W. D. H.

III. Figurative Uses.–As one would expect in the dry climate of the Near East, a water source is a common image of abundance and blessing, and a lack of water is a common image of curse or devastation.

Most frequent are the positive figurative uses. Thus God's care for His people is depicted as His giving them "drink from the river of thy [God's] delights" (Ps. 36:8 [MT 9]; see also 65:9 [MT 10]), and "a river whose streams make glad the city of God" (46:4 [MT 5]; many commentators see here a comparison of Jerusalem and Eden; see also Ezk. 47). God "turns rivers into a desert, springs of water into thirsty ground" (Ps. 107:33). Similarly, Isaiah recounts God's promise to care for the poor by providing water for them in the dry land (Isa. 41:18; 43:19f.; cf. 30:25). In 48:18 God says that if the people had hearkened to His commandments, then their "peace would have been like a river, and [their] righteousness like the waves of the sea"; and in 66:12 God promises that He "will extend prosperity [Heb. *šālôm*; cf. AV, NEB "peace"] to her [Jerusalem] like a river, and the wealth of the nations like an overflowing stream" (cf. 33:21).

In contexts of judgment the above image is reversed. Thus in Isa. 42:15 and 50:2 God dries up the pools and turns the rivers into deserts (see also 44:27; Joel 1:20; Nah. 1:4). God's "breath" (Heb. *rû[a]ḥ*) is likened to "an overflowing stream," "a stream of brimstone" (Isa. 30:28, 33).

Other negative contexts include passages that speak of being overwhelmed as if by a flood of waters (Job 22:11; 27:20; 38:34; Ps. 69:2, 15 [MT 3, 16]; 88:17; 124:4; Jonah 2:3 [MT 4]).

Various other images also occur in the OT. Prov. 18:4 states that "the fountain of wisdom is a gushing stream." But offerings like "ten thousands of rivers of oil" will not please the Lord (Mic. 6:7; cf. Ezk. 32:14); rather, God says, "let justice roll down like waters, and righteousness like an everflowing stream" (Am. 5:24). Zophar states that the evil person "will not look upon the rivers, the streams flowing with honey and curds" (Job 20:17). Prov. 21:1 states God's sovereignty: "The king's heart is a stream of water in the hand of the Lord; he turns it wherever he will." When he is persecuted, Jeremiah expresses his anguish at feeling God has abandoned him: "Wilt thou be to me as a deceitful brook, like waters that fail?" (Jer. 15:18); but later he conveys God's promise of consolation: "I will make them walk by brooks of water" (31:9). God's (eschatological) coming is likened to "a rushing stream" in Isa. 59:19. In Ps. 119:136 the psalmist laments: "My eyes shed streams of tears, because men do not keep thy law" (see also 6:6; Lam. 2:18; 3:48).

According to many scholars the personification of the rivers as God's enemy in Hab. 3:8f. reflects the ancient Near Eastern myth of a cosmic battle (see, e.g., U. Cassuto, "Chapter III of Habakkuk and the Ras Shamra Texts," in *Biblical and Oriental Studies*, 2 [Eng. tr. 1975], 3-15; W. F. Albright, "The Psalm of Habakkuk," in H. H. Rowley, ed., *Studies in OT Prophecy* [*Festschrift* T. H. Robinson; repr. 1957], pp. 1-18; F. M. Cross, *Canaanite Myth and Hebrew Epic* [1973], pp. 70f., 140; P. D. Miller, *Divine Warrior in Early Israel* [1973], pp. 118-121). See also Ps. 89:25 (MT 26).

In the NT perhaps the best-known text using "river" is Jn. 7:38: "He who believes in me, as the scripture has said, 'Out of his heart shall flow rivers of living water.'" Unfortunately, this text is problematic, especially because nowhere in the OT may such a text be found, although many texts convey a similar sense (see comms. for extensive discussions). Another well-known text is Lk. 6:48f., the parable contrasting one house built on a rock and another built on sand; the latter fell immediately when the flood came, whereas the former stood firm. Finally, in Rev. 12:15f. the serpent/dragon "poured water like a river out of his mouth" to destroy "the woman" (true Israel? see comms.). That destructive river contrasts vividly with "the river of the water of life" flowing from the throne of God in the New Jerusalem (Rev. 22:1; see J. Ellul, *Apocalypse* [Eng. tr. 1977], pp. 228f.).

RIVER OF EGYPT. *See* BROOK OF EGYPT.

RIVER, THE (GREAT). *See* EUPHRATES.

RIVERS OF EDEN. *See* EDEN 1.

RIZIA ri-zi'ə [Heb. *riṣyâ*']; AV, NEB, REZIA. An Asherite warrior; son of Ulla (1 Ch. 7:39).

RIZPAH riz'pə, riz'pä [Heb. *riṣpâ*– 'live coal']. Daughter of Aiah and concubine of King Saul (2 S. 3:7; 21:8, 10f.). After Saul's death his son Ishbosheth established a brief provisional government in Transjordan supported by Saul's military commander, Abner (2:8-10). A conflict over authority surfaced when Ishbosheth accused Abner of taking Rizpah as his wife or concubine (3:7). Taking the king's concubine would constitute a claim to the throne and was considered an act of treason (cf. 16:21; 1 K. 2:17-25). It is unclear whether Abner was actually guilty of this act, but Ishbosheth's accusation led to Abner's defection to David, and this event began the chain of events that eventually brought the entire nation of Israel to recognize David as king.

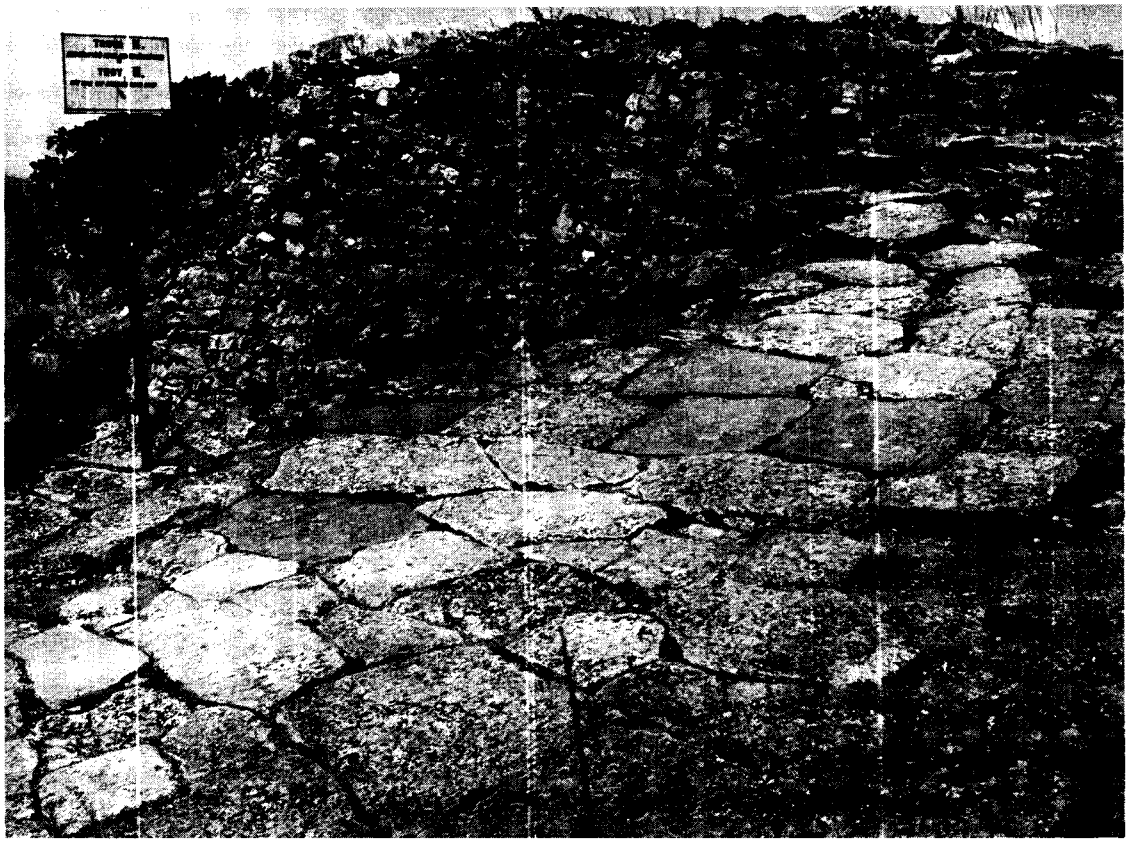
During David's reign there was a three-year famine, and David was informed by the Lord that its cause was Saul's attempted genocide of the Gibeonites (2 S. 21:1f.). In restitution for these slayings, David handed over to the Gibeonites seven of Saul's sons to be executed and exposed, apparently until the Lord responded with rain. Two of Rizpah's sons were among those so executed (v. 8). After the execution, which took place at the beginning of the barley harvest, Rizpah stood guard over the exposed corpses, chasing away scavengers, until the rain fell. She thus procured for her sons, as provided for by David, an honorable burial along with the recovered bones of Saul and Jonathan (vv. 10-14). J. H. WALTON

ROADS; HIGHWAYS [Heb. *dereḵ, m^esillâ, maslûl;* Gk. *hodós*].

I. In the OT.–The general OT term for road is Heb. *dereḵ*, from the root "to tread." It sometimes indicates the usual ungraded roadway, with surface merely packed down by the passing of vehicles, animals, and pedestrians, and sometimes an improved highway.

The regular term for an artificially constructed roadway is Heb. *m^esillâ*, "that which is cast up." To make such a road the center surface was built up, with ditches left at the sides for drainage. Some highways were paved, particularly during the Roman period. The work of preparation included removing stones or other obstructions, leveling rough surfaces, building up low areas, cutting through high places, and at times setting up waymarks or guideposts (Isa. 40:3f.; 57:14; 62:10; Jer. 31:21).

The distinction between *dereḵ* and *m^esillâ* is not always clear in OT usage. Job 19:12 refers to the casting up of a *dereḵ* (RSV "siegeworks" is an interpretative rendering based on the context), Jer. 18:15 to a *derek* (RSV "highway") "not cast up." At the time of the Exodus a *m^esillâ*,



One of the earliest roads discovered was the paved ramp of Troy II (dating to the 3rd millennium B.C.) that led to the city gate (B. K. Condit)

called the *derek* of the king (Nu. 20:17), ran through Edom.

Israel's cities of refuge were to be connected by a system of roads to facilitate the flight of accused slayers (Dt. 19:3). In the period of the judges highways led to the places of worship (Jgs. 20:31; 21:19). The Philistines returned the ark along a highway from Ekron to Beth-shemesh (1 S. 5:10; 6:12).

II. Early Highways.—Evidence of improved roads and extensive systems of highways in the Near East dates from very early times. A number of stone roads were found at Arpachiya, a prehistoric mound of the Chalcolithic age 6.5 km. (4 mi.) from Nineveh. The roads were surfaced with pebbles and were suitable for pedestrian and mule traffic.

Excavations at Troy II revealed a paved ramp leading to the gateway of the city dating from the 3rd millennium B.C. Remains of a road on Crete date to the middle of the 2nd millennium.

The stonemasons of ancient Babylonia before the 2nd millennium laid parallel rows of stones to provide an all-weather track for carts. Geographic texts from this period mention chariot routes with caravansaries from the Persian Gulf to the Mediterranean. Carts and chariots were known in Mesopotamia in the Uruk period (*ca.* 3500-3200 B.C.).

The Assyrians maintained an extensive system of roads to facilitate their widespread trade and military campaigns. Some roads were paved and had milestones. In Babylon paving bricks were found bearing the name of Sennacherib, who did much to beautify the city before he destroyed it in 689 B.C. The famous Processional Way in Babylon was paved with bricks set in asphalt; the upper layers bear the name of Nebuchadrezzar (605-562 B.C.). Herodotus mentioned a bridge across the Euphrates at Babylon, and the piers of such a bridge still exist.

The Persians maintained an extensive system of highways, which enabled them to keep in touch with every part of their empire. Couriers were dispatched by horses, riding day and night and in all kinds of weather. Messages could thus be carried 2500 km. (1500 mi.) in ten days. There were frequent stopping-places for rest and changes of horses. Herodotus mentioned a bridge across the Halys River in Asia Minor.

Although the Romans did not introduce roads in the ancient world, they must be given credit for developing the best system of highways before modern times. This truly remarkable achievement played a vital part in building up the empire and keeping it intact. Many remains of Roman pavements, milestones, and bridges still exist today, not only in Italy but also in Germany, France, Britain, Greece, Asia Minor, Syria, and Palestine. These roads served the imperial interests and also helped the rapid and wide promulgation of early Christianity.

Archeological research has revealed that early paved roads were common in Palestine. At Lachish a number of cobblestone roads were uncovered. In Sennacherib's reliefs of his siege of Lachish, soldiers fight on a steep paved roadway (*see* picture in LACHISH). Wheeled battering rams employed in the siege were brought from Assyria,

ROADS

A Hellenistic (*ca.* 2nd cent. B.C.) road to Pergamum (W. S. LaSor)

Excavations of the west end of the Persian Royal Road at Sardis (W. S. LaSor)

probably on the horse-and-chariot road to Lachish that is mentioned in the OT (2 K. 14:19f.; Mic. 1:13). At Libnah an ancient roadway was cut in the rock.

Certain Babylonian tablets show that Nebuchadrezzar repeatedly left Babylon for Palestine in December and did much of his campaigning there in the wet winter months. This implies the existence of all-weather highways.

III. Location of Ancient Roads.—The natural features of the land largely determined the sites of ancient roads. Roads usually ran through level areas but also followed river valleys or highland ridges. Barriers such as marshes, rivers, lakes, deserts, gorges, and precipitous heights were avoided as much as possible. Most modern Near Eastern roads follow the topographically determined courses of the ancient ones.

Because Palestine links the vast landmasses of Eurasia and Africa, some of the most important ancient intercontinental routes passed through it. The material remains left by merchants and soldiers who were constantly crossing this region are important clues to the specific location of ancient highways. The routes traveled by the ancient Egyptians, e.g., can be quite accurately determined by connecting with lines the sites where Egyptian objects have been found.

Egyptian and Assyrian invaders recorded the names of many Palestinian sites. Monuments frequently were erected at sites where ancient armies once made their way. Nowhere else is this so strikingly true as along the rocks lining the Dog River Valley leading from the interior to the Phoenician coast. Here are inscriptions carved by Ramses II of Egypt, by the Assyrians Shalmaneser III, Esarhaddon, and Ashurbanipal, by Nebuchadrezzar II of Babylon, and by Napoleon III and General Allenby of modern times. The Roman road through this pass was built A.D. 177-180, during the reign of Marcus Aurelius, and was located 30 m. (100 ft.) above the modern highway.

No extant ancient maps show the exact location of early Mesopotamian roads, but a number of so-called itineraries from Neo-Assyrian times give the distances between major stopping places. A text from the Old Babylonian period provides the names of stopping-places along a very early route that traversed much of what is now Iraq, northern Syria, and southern Turkey. Most of the places mentioned cannot be located with certainty, but others at strategic places are definitely known, beginning with Larsa, Babilim, and Sippar in southern Babylonia, and up through Asshur and Urkish into Turkey, or through Haran (Harran) and down to Emar in northern Syria.

At the time of Persian supremacy at least two great roads connected the Mediterranean with the Persian Gulf. One began at Sardis, near Smyrna, and passed through Lydia and Phrygia past Ankara and Hattusas, the ancient Hittite capital; it traversed Cappadocia by a great loop, crossed the Halys by bridge, and went east from Cilicia across the Euphrates to Nineveh, Babylon, and Susa. Herodotus, who traveled this famous Royal Road of the Persians, vividly described its way stations, fortified hostels, garrison posts, toll gates, and services. A shorter, more southern road led from Smyrna and Ephesus through Laodicea and Colossae, S of the salt desert, through Pisidia and Lycaonia, into Cilicia, and then east by the Euphrates and Tigris valleys. This was the great highway to the East in the Greco-Roman period.

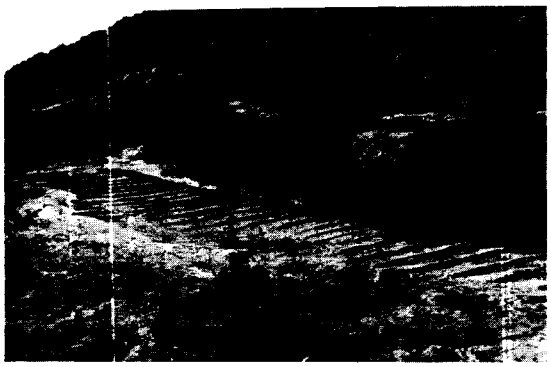
The longest known highway of ancient times was the famous Silk Road, by which the treasures of China were carried to Rome. Its exact location is not known, but the occurrence of Chinese jades and other treasures at various places in central Asia indicates the existence of at least three alternate routes. The two northerly ones traversed Russia; the southern passed through Burma, northern India, Tehran, Baghdad, and Asia Minor and went on to Rome. By such roads the Nestorian Christians made their way to China, the Jews traveled to establish their colony at Kaifengu, and Marco Polo made his way to Peking (Beijing).

The specific roads from Mesopotamia to Palestine and Egypt can be determined with a high degree of accuracy. There were many local variations, but the usual route led NW from the Persian Gulf by the fertile Euphrates Valley to Haran and Carchemish, then SW to Aleppo, and down through Syria along the Orontes. Another road left the Euphrates at Mari, crossed the desert by the oasis of Tadmor (built by Solomon "in the wilderness" according to 2 Ch. 8:4), and then went SW to Damascus. A still more direct route led across the desert from Babylon, touching a series of oases on the way. This was the route taken by Nebuchadrezzar, after his father's death, on his hurried return to his capital in 605 B.C. from his conquest of the "Hatti Land."

The physical features of Palestine as well as the location of the great nations of the Middle East required that Palestine's chief trunk lines run N-S. One went south from Aleppo through Hamath to Kadesh, west to the coast, and south through Acco. Skirting the Carmel ridge, it passed through the Sharon and Philistia to Gaza and then crossed the desert to Egypt. An alternate route went southeast from Kadesh to Damascus.

From Damascus there were a number of alternate routes. One went southwest, crossing the Jordan above

ROADS



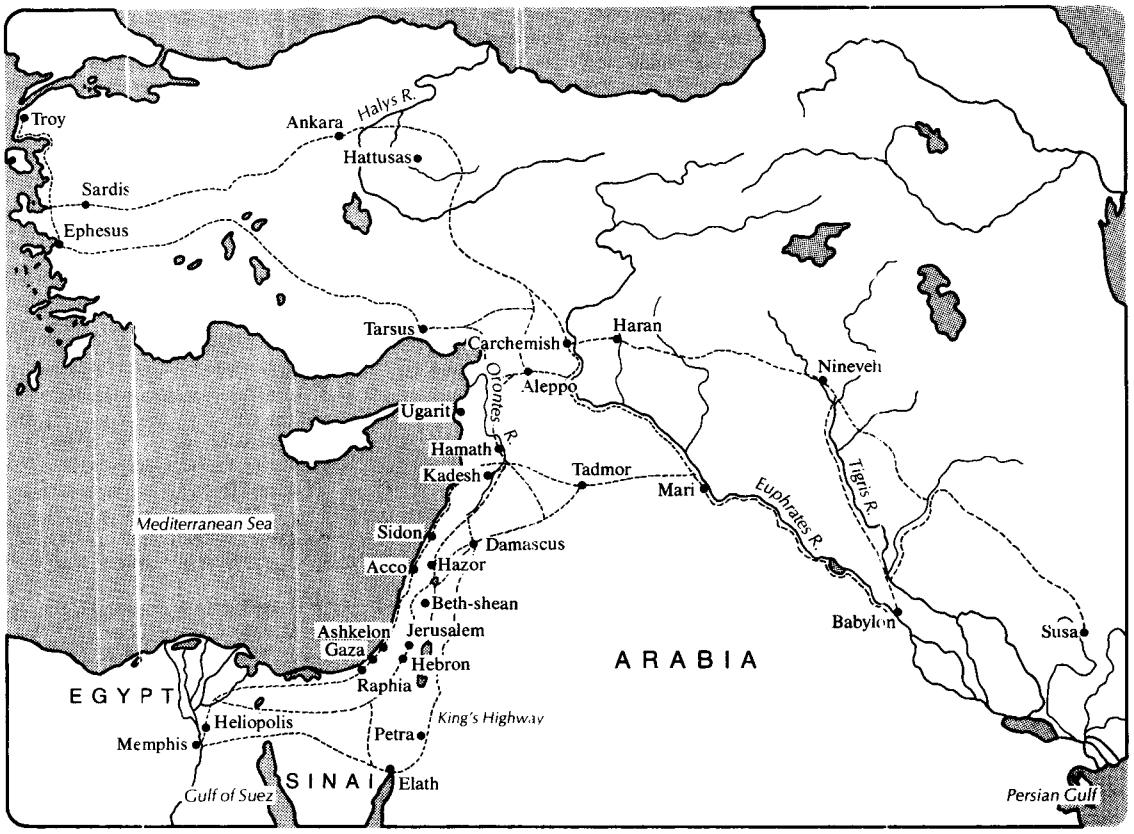
A section of a Roman road between Jerusalem and Gaza. Steps were cut into the rock to provide footing on the steep hillside (R. H. Smith)

the Sea of Galilee, passing through Hazor to Megiddo and eventually joining the coastal road. Another went farther south, crossed the Jordan below the Sea of Galilee, and then went to Beth-shean and Megiddo. These two roads have often been identified as the "way of the sea" (Isa. 9:1), but the identification is not certain. A less frequented road to the south led over the central highlands of Samaria and Judea, touching such well-known places as Shechem, Bethel, Jerusalem, Bethlehem, Hebron, and Beer-sheba. A main highway might have been expected along the Jordan from the Sea of Galilee to the Dead Sea, but the river was too winding, the heat too intense, and the terrain too difficult.

From Damascus the famous KING'S HIGHWAY went south over the highlands of Transjordan to the Gulf of Aqabah. Along its southern portion Israel had hoped to travel through Edom, Moab, and the country of the Amorites to the Promised Land (Nu. 20:17-19; 21:21f.).

Since the main international trunklines were located along the Palestinian coast or in Transjordan, Judah in its isolated position atop the central ridge was largely spared from the depredations of passing armies and the adverse effects of foreign influences on its distinctive religious culture. But the crossing international highways in Galilee and northern Samaria made Israel a constant prey to foreign invaders and left it always exposed to the cultural influences of all the East. Because Jesus largely centered His ministry in Galilee, His teaching could be carried far and wide without His engaging in extensive foreign travel.

Numerous roads linked the interior eastern areas with the Mediterranean coast and Egypt. The southernmost of these left the Gulf of Aqabah at Elath and struck west across Sinai to the head of the Gulf of Suez and then on to the vicinity of Memphis in Egypt. Another road went northwest from Elath over the plateau of Tih to Gaza. At Succoth a road known as the "way of Shur" (Gen. 16:7; cf. 25:18) left Egypt and went northeast to Beer-sheba and Hebron. This was the route by which Israel left Egypt at the Exodus (Ex. 15:22; cf. Nu. 33:8; *see* Vol. I, map IV). A southeast extension of this road across Sinai to the gulf of Aqabah was known as the "way to the Red Sea" and was followed by Israel on its approach to the Promised Land (Nu. 14:25; 21:4; cf. Ex. 13:18; Dt. 1:40; 2:1). The most direct road from Egypt to Palestine, the "way of the land of the Philistines," lay still farther north, along the Mediterranean coast from the northern delta to Raphia



and Gaza. It was the route usually taken by Egyptian armies on their invasions of Asia and although the most direct, was avoided by Israel at the Exodus since it would have involved the people in almost immediate war (Ex. 13:17).

From Gaza a road went southeast through Beer-sheba to Petra (cf. the "ascent of Akrabbim," Nu. 34:4; Josh. 15:3), and another went northeast to Jerusalem. Farther north a road led from Ashkelon east, via Gath and Hebron, to Engedi on the Dead Sea; it then went either north or south and on to the east. From Joppa an important road went southeast by Lydda and the Valley of Ajalon (the "way of the ascent of Beth-horon," Josh. 10:10) to Jerusalem and Jericho and then across the Jordan. Another road led northeast from Joppa to Shechem, crossed the Jordan at Adam, and ended at Gilead. North of Carmel a road went from Acco, across the plain of Esdraelon, and southeast through "Harrosheth of the Gentiles" (Jgs. 4:2, 13, 16), Jokneam, and Megiddo. At Ibleam it joined the N-S highway to Jezreel, then went east to Beth-shean, and crossed the Jordan. Another road from Acco went southeast, skirting southern Galilee, crossed the Jordan south of the Sea of Galilee, and went northeast to Damascus.

ROAST; ROASTED [Heb. *ṣālâ* (1 S. 2:15; Isa. 44:16, 19), *ṣālî* (Ex. 12:8f.), piel of *bāšal* (2 Ch. 35:13), *qālâ* (Jer. 29:22)]; NEB also COOK. *See* FOOD IV.

ROB; ROBBERY [Heb. *gāzal*, also *gāzēl* (e.g., Ps. 62:10 [MT 11]), *gᵉzēlâ* (Ezk. 33:15), piel of *šāḵal*–'bereave of children' (Lev. 26:22; Ezk. 5:17), *šākkûl*–'bereaved' (2 S. 17:8; Prov. 17:12; Hos. 13:8), *bāzaz*–'plunder' (Isa. 10:2; 42:22), *šōḏ*–'destruction' (Am. 3:10), *qāḇaʿ*–'deceive,' 'rob' (Mal. 3:8f.), *šāsâ*–'plunder' (1 S. 23:1); Gk. *diaseíō* ("rob by violence," Lk. 3:14), *syláō* (2 Cor. 11:8), *hierosyléō* ("rob temples," Rom. 2:22)]; AV also SPOIL, TAKE AWAY, BEREAVE, etc.; NEB also DEFRAUD, EXTORTION, BULLYING, etc.; **ROBBER** [Heb. part. of *šāḏaḏ* (Job 12:6), *bāzaz* (Isa. 42:24), *ḥeṭep* (Prov. 23:28), piel part. of *hālaḵ* (24:34), *pārîṣ* (Jer. 7:11; Ezk. 7:22; 18:10), *gᵉḏûḏ* (Hos. 6:9); Gk. *lēstēs*, also *hárpax* (1 Cor. 5:10f.; 6:10)]; AV also THIEF, EXTORTIONER, etc.; NEB also BANDIT, SWINDLER, etc. The act of taking something violently from its rightful owner; differing from "stealing" or "theft" in that the latter terms connote a taking by stealth or deception instead of by force.

I. In the OT.–Many OT passages illustrate the basic meaning of robbery. Robbers are described as lying in wait, ready to ambush the innocent and unsuspecting (Hos. 6:9). In this way the Shechemites robbed travelers during the judgeship of Abimelech (Jgs. 9:25). Three passages use the metaphor "a bear robbed of her cubs" to describe anger (2 S. 17:8; Prov. 17:12; Hos. 13:8).

The OT states clearly that God hates robbery (Isa. 61:8) and prohibits it among His people (against neighbors, Lev. 19:13 [cf. 6:2, 4 (MT 5:21, 23), which require restoration and a penalty]; against the poor, Prov. 22:22; against mother and father, 28:24; cf. Ps. 62:10 [MT 11]). Job protests that God allows injustice to continue: "the tents of robbers are at peace" (Job 12:6). In Ezk. 18 robbery is listed as one of the sins characterizing the unrighteous person who deserves to die (18:10, 12, 18; cf. vv. 7, 16). But God will forgive the person who repents and gives back what was taken in robbery (33:14-16; cf. 18:21-23).

The crime of robbery is an important part of God's indictment of His people in the prophets (Ezk. 22:29; Am. 3:10). His people oppress and rob the poor (Isa. 10:2), even though He has commanded them to deliver from their oppressors those who have been robbed (Jer. 21:12; 22:3). They even rob God of tithes and offerings (Mal. 3:8f.). The temple in Jerusalem has become "a den of robbers" (Jer. 7:11). For its many sins Israel will be punished; as one form of that historical judgment, they will now become the victims of robbery (prophesied in Lev. 26:22; Dt. 28:29; Ezk. 5:17; 7:22; fulfilled in Isa. 42:22, 24).

The book of Proverbs sometimes uses robbery as a metaphor. The wicked are "robbed of sleep" unless they have succeeded in harming someone (Prov. 4:16). The harlot lies in wait to rob men of their faithfulness (23:28). If one is lazy and indulges in "a little sleep, a little slumber, a little folding of the hands to rest," "poverty will come upon you like a robber" (24:33f.).

II. In the NT.–Robbery remained a familiar crime in the NT times. When Roman soldiers came to John the Baptist and asked what they should do, he told them, "Rob no one by violence or by false accusations, and be content with your wages" (Lk. 3:14). Some of Jesus' sayings allude to the problem of robbery in everyday life. In the parable of the Good Samaritan the victim is a traveler who "fell among robbers" on the dangerous, lonely road between Jerusalem and Jericho (Lk. 10:30, 36). In Jn. 10 Jesus contrasts Himself as the Good Shepherd with the "thief and robber" who do not enter the sheepfold by the door but sneak in by another way (vv. 1f.). He states that "all who came before me" (probably false messiahs and false religious and political leaders) were "thieves and robbers" (v. 8) whose intentions were to "steal and kill and destroy" (v. 10) rather than to protect and care for those who followed them.

At the end of His ministry Jesus cleansed the temple in Jerusalem because it had become "a den of robbers" (Mt. 21:13 par.; cf. Jer. 7:11); He was probably referring to the dishonest practices of the money-changers and animal-sellers as well as to their usurpation of the court of the Gentiles. When Judas, the Jewish authorities, and an armed crowd came to arrest Jesus by night, He pointed out the irony of their action: "Have you come out as against a robber, with swords and clubs to capture me, when I was with you daily, teaching in the temple, and you did not seize me?" (Mt. 26:55 par.; cf. Jn. 18:20). The irony was heightened by the crowd's request that Barabbas, who actually was a robber (Jn. 18:40) — possibly a Zealot (cf. Mk. 15:7) — be released instead of Jesus. Jesus was finally crucified between two robbers — probably not Zealots, since Luke merely calls them criminals (*kakoúrgoi*) in 23:32f., 39-43 (cf. Mt. 27:38, 44; Mk. 15:27).

During his apostolic travels Paul was often set upon by robbers (2 Cor. 11:26). In 1 Cor. 5 he corrects a misunderstanding that had arisen concerning a previous letter (cf. 5:9) in which he had said that the Corinthian Christians were not to associate with immoral people. Here he explains that he did not mean that they should separate themselves from non-Christians (including robbers, v. 10); rather, they are to disassociate themselves from those who call themselves Christians and yet engage in immoral acts such as robbery (v. 11).

ROBBERS OF CHURCHES. *See* ROBBING OF TEMPLES.

ROBBING OF TEMPLES. The robbery of a temple or a sacred site was considered a particularly heinous crime

in the Greco-Roman world. It was usually thought to be as serious as murder or treason (cf. Philo *De confusione linguarum* 163). Interestingly enough, even though the rabbis did not approve of temple robbery, they did not classify it with murder or treason (cf. T.B. *Sanhedrin* 84a), concluding that it deserved merely a whipping. In Mish. *Abodah Zarah* iv.2 "coins, clothing, or [other] objects" removed from an idol could be used by the Jews. Permission to use such objects is quite surprising because Dt. 7:25f. forbids the removal of silver or gold from an idol. Moreover, the author of Deuteronomy stated that an idol is detestable to God, and that one should not bring it into one's house because the idol was under God's curse.

Although the word for robbing a temple (Gk. *hierosyléō*) can have a figurative meaning (Josephus *Ant.* xvi.2.4 [45]), it is normally used in a literal sense (cf. *syláō* in *Ant.* iv.8.10 [207]; see also viii.10.3 [258]; *CAp* i.1.34 [310]). Menelaus, who had already paid a bribe to become high priest, stole some gold vessels out of the Jerusalem temple, using them to win Andronicus's favor (2 Macc. 4:32). Lysimachus, the brother of Menelaus, enraged the people in Jerusalem by his habitual pilfering (RSV "acts of sacrilege"; AV "sacrileges"; Gk. *hierosylēmátoi*) from the temple (4:39f.). Such behavior finally resulted in a battle in which "the temple robber" (AV "church robber"; NEB "the sacrilegious man"; Gk. *tón hierósylon*), namely Lysimachus, was killed in Jerusalem (4:42). The despicable crimes of Menelaus against the temple were also eventually punished (13:6-8). He died in dishonor and disgrace because he was "guilty of sacrilege" (*tón hierosylías énochon*), i.e., "he had committed many sins against the altar" by taking precious objects from the temple (13:8). Robbing a temple could clearly be a great benefit to one's treasury, and thus it is not surprising that Antiochus IV "attempted to rob the temples" in Persepolis (9:2). Josephus vigorously defended the Jews against charges of temple robbery (*CAp* i.1.26 [249]; i.1.34 [310]), and he ridiculed the charge (*CAp* i.1.34 [311]; i.1.35 [318f.]) that the city of Jerusalem received its name from the word meaning "temple robbery" (*hierósyla*).

In Rom. 2:17-24 Paul charges the Jews with hypocrisy because they do not observe the very law that they proclaim as the truth. For instance, they congratulate themselves for despising idols even though they rob temples (2:22). Some scholars have maintained that Paul is speaking figuratively in this context. He is not accusing the Jews of literal temple robbery, stealing, or adultery (vv. 21f.). Instead, Paul is claiming that even though the Jews keep the law externally, they do not possess genuine righteousness in the heart. The Jews do not actually rob temples, but in the inner recesses of their heart they are not devoted to the one true God. Other scholars understand Paul to be speaking literally. The secular literature shows that the word is usually used literally, and sufficient evidence suggests that some Jews practiced temple robbery (CD 16:13-16; T.Levi 14:5; Ps.Sol. 8:11; see also references to Menelaus above). Thus the latter view seems to be the more convincing. Paul's discussion on circumcision in the same context suggests that he would have made it evident if he were speaking figuratively of robbing temples. But if Paul is speaking literally of robbing temples (and stealing and adultery as well), then another problem arises. Paul's accusations against the Jews seem ludicrous since it is obvious that all Jews (not even most Jews!) do not rob temples. But such an objection misses the point of Paul's polemic. Paul is not charging all Jews with stealing, adultery, and robbing temples. Instead he is using rhetorically colorful examples to illustrate a principle. The principle that lies behind the illustrations is that the Jews are hypocritical, i.e., they violate the very law they treasure and teach. Paul is not indulging in anti-semitism here; after all, he himself was a Jew. He is merely pointing out that even the people who try to live in a morally upright manner find themselves falling short.

Acts 19:37 presents the question of whether the word "sacrilegious" (Gk. *hierósylos*) is figurative or literal. The RSV and the NEB ("sacrilege") take it figuratively, while the AV ("robbers of churches") is plainly anachronistic. The context suggests that the town clerk is not literally speaking of stealing something from the temple of Artemis. Rather the riot started from the fear that Artemis was not getting the honor she deserved (19:26-29, 34). The town clerk rebuked the multitudes because they lacked evidence with which to support their complaint.

In 2 Cor. 11:8 Paul is obviously speaking hyperbolically when he says "I robbed [*esýlēsa*] other churches" (NEB "I took toll of other congregations.") Paul did not want to be a financial burden to the Corinthians. The point is merely that the churches in Macedonia supplied his needs (11:9), stretching their already limited funds.

See *TDNT*, III, *s.v.* ἱερός κτλ.: ἱεροσυλέω, ἱερόσυλος (Schrenk). T. R. SCHREINER

ROBE [Heb. *mᵉʿîl, kuttōnet* (Gen. 37:3, 23, 31f.; 2 S. 13:18f.; Isa. 22:21), *lᵉḇûš* (Est. 6:8-11; 8:15; Ps. 45:13 [MT 14]), *beged* (1 K. 22:10, 30; 2 Ch. 18:9, 29; Ps. 45:8 [MT 9]), *ʾeḏer* (Mic. 2:8), *ʾaddereṯ* (Jonah 3:6), *riqmâ* (Ps. 45:13 [MT 14]), *middâ* (Ps. 133:2), *maḥᵃlāṣâ* (Isa. 3:22), *pᵉṯîgîl* (Isa. 3:24), *šōḇel* (Isa. 47:2), *kānāp* (Ezk. 5:3; Zec. 8:23); Gk. *himátion, stolḗ, chlamýs* (Mt. 27:28, 31), *esthḗs* (Acts 1:10; 12:21), *podērēs* (Rev. 1:13)]; AV also APPAREL, CLOTHES, CLOTHING, COAT, GARMENT, MANTLE, RAIMENT, VESTURE; NEB also CLOAK, GARMENT, MANTLE, ROBES OF STATE, VESTMENT. A garment of various types, generally a long, flowing outer garment.

The *mᵉʿîl*, a sleeveless exterior garment drawn over the head (Ex. 39:23; cf. 28:32;) and worn over the tunic, was worn by people of rank (1 S. 18:4; 24:4, 11 [MT 5, 12]; 2 S. 13:18; Ezk. 26:16). Often of fine linen (1 Ch. 15:27), it apparently could be short (1 S. 2:19) or have a skirt (1 S. 15:27). The high priest's blue robe of the ephod had a skirt decorated alternately with golden bells and blue, purple, and scarlet pomegranates (Ex. 28:31-34; 39:22-26).

The *kuttōnet*, a long, shirtlike tunic, could be a symbol of authority or status. Yahweh endowed Eliakim, as majordomo to Hezekiah, with his predecessor's robe (Isa. 22:21), and strengthened Aaron with emblems of power including the "long robe" (Sir. 45:8). The "long robe with sleeves" (Heb. *kᵉṯōnet happassîm*; AV "coat of many colors"), worn by Joseph (Gen. 37:3, 23, 31f.) and by kings' virgin daughters (2 S. 13:18f.), may have been constructed of variegated pieces of cloth (cf. Heb. *pas*, "piece"; *KoB*, p. 768; AV mg., Gen. 37). Cuneiform inventories list ceremonial robes (Akk. *kitû* [or *kitinnu*] *pišannu*) that were draped around statues of goddesses and bore gold ornaments. E. A. Speiser translated the term "ornamented tunic" (*Genesis* [*AB*, 3rd ed. 1979], pp. 289f.; cf. NIV).

A broad term for many types of clothing, *beged* designates the robes of kings in 1 K. 22:10 (NEB "shining armor"), 30; 2 Ch. 18:9, 29. As the garb of a royal bridegroom (Ps. 45:8 [MT 9]), it was fragrant with myrrh, aloes, and cassia. Another general term, *lᵉḇûš*, represents the Persian royal apparel in Est. 6:8-11 (cf. 5:1); in 8:15 the robes are blue and white (NEB "violet and white"). The royal bride in Ps. 45:13 (MT 14) wears gold-woven robes, as well as those of variegated material (*riqmâ*, v. 14 [MT 15]).

Listed in a catalog of women's clothing and accessories, the *maḥᵃlāṣâ* (Isa. 3:22; AV "changeable suits of apparel"; NEB "fine dresses") may have been wrapped around the tunic for special occasions (*ḥālaṣ* I, "draw off"; cf. *ḥālāṣ*, "loins"; BDB, p. 323); *pᵉṯîgîl*, a probable loanword, indicates a luxurious garment as contrasted with sackcloth (v. 24; AV "stomacher"; NEB "mantle").

Aaron's *middâ* (Ps. 133:2) was a priestly garment with a collar. The robe of state worn by the king of Nineveh (Jonah 3:6) was the *'addereṯ*, probably the same as the *'eḏer* (Mic. 2:8).

A person could bind items in the skirts of the robe (Heb. *kānāp*; Ezk. 5:3; NEB "fold") or grasp another's robe in supplication (Zec. 8:23). Figuratively, Yahweh strips defeated Babylon of the *šōḇel*, a flowing train that covered the legs (Isa. 47:2).

The Gk. *stolḗ* was a long robe of rank worn by the scribes (Mk. 12:38; Lk. 20:46). It was the "best robe" given to the returned prodigal (Lk. 15:22). White robes of this sort were worn by angels (Mk. 16:5), martyrs, and the redeemed (Rev. 6:11; 7:9, 13f.).

The *himátion* was an outer cloak worn over the tunic. The Roman soldiers dressed Jesus in a purple *himátion* when they mocked Him (Jn. 19:2, 5), and He wore such a robe in His victory over the Beast (Rev. 19:13, 16 [AV "vesture"]). Caiaphas tore his *himátion* at Jesus' "blasphemy" (Mt. 26:65). In Matthew's account the Roman soldiers dressed Jesus in a scarlet *chlamýs*, a mantle or cloak worn by travelers and the military (Mt. 27:28, 31). The exalted Christ is depicted as wearing the *podḗrēs* (lit. "reaching to the feet"; Rev. 1:13).

A general word for clothing, *esthḗs*, is used for the white robe worn by angels (Acts 1:10) and for Herod's royal robe (12:21). Herod sends Jesus to Pilate arrayed in "gorgeous robes" (Lk. 23:11, AV, NEB; RSV "apparel").

In figurative use, Job put on justice like a robe (*mᵉʿîl*) and turban (Job 29:14); salvation is the "robe of righteousness" (Isa. 61:10). 1 Pet. 3:3 cautions wives that their behavior not be "outward adornment" like the wearing of robes (*himátion*). Washing the robe (*stolḗ*) could symbolize cleansing from sin (Rev. 22:14; cf. AV "do his commandments").

A. C. MYERS

ROBOAM rō-bō'əm (Mt. 1:7, AV). *See* REHOBOAM.

ROCK [Heb. *selaʿ* (Nu. 20:8, 10f.; 24:21; etc.), *ṣûr* (Ex. 17:6; 33:21; etc.), *'eḇen-* 'stone' (Gen. 49:24; Job 8:17), *ḥallāmîš-* 'flint' ("flinty rock," Dt. 8:15; Job 28:9), *kēp* (Job 30:6; Jer. 4:29), *ḥeseḏ*–'faithfulness' (emended to *selaʿ* by RSV, Ps. 144:2)]; AV also STRENGTH, GOD (Isa. 44:8), MIGHTY ONE, STONE, "goodness" (Ps. 144:2), etc.; NEB also CLIFF, CRAG, CREATOR (Dt. 32:4, 18; etc.), STRONGHOLD, etc.; [Gk. *pétra* (Mt. 7:24f.; 16:18; 27:51, 60; Mk. 15:46; Lk. 6:48; etc.), *trachýs tópos*–'rough place' (Acts 27:29), *laxeutós*–'hewn in the rock' ("rock-hewn," Lk. 23:53), *petrṓdēs*–'rocky' ("rocky ground," Mt. 13:5, 20 par. Mk. 4:5, 16)]; AV also HEWN IN STONE, STONY PLACE; NEB also MOUNTAIN CRAG (Rev. 6:15f.), RUGGED COAST (Acts 27:29), CUT OUT OF ROCK (Lk. 23:53).

Hebrew *selaʿ* and *ṣûr*, the two most common OT terms for "rock," generally denote a large solitary rock, a CRAG, or a rocky mountain chain. There is no well-defined distinction between the two terms; they are frequently used as parallels in Hebrew poetry (e.g., Dt. 32:13; Ps. 18:2 [MT 3]; 78:15f.).

The long, complex geological history of Palestine produced four distinct geographic divisions. Three different types of rock are found extensively on the coastal plain of western Palestine: Eocene limestone (a limestone and chalk mixture), Mousterian red sandstone, and Cenomanian limestone. In the central hill country the predominant rock formations are of Eocene and Cenomanian limestone, Senonian chert, and chalk, along with outcroppings of igneous rock in the northern areas near Mt. Hermon. The Jordan rift-valley consists primarily of sand and alluvial deposits. In addition to the ubiquitous limestone, chalk, and chert, one finds in southern Palestine and in the Transjordan Nubian sandstone, granite mountain outcroppings, and volcanic basalt. (For a more detailed geological survey, *see* PALESTINE III.)

Rocks were often named for an event that took place at the site or for a village in the vicinity (e.g., Jgs. 7:25; 15:8, 11; 20:45, 47; 1 S. 23:28; 24:2). Boulders and rocky terrain were used for various purposes. Sometimes a rock served as an appropriate place for sacrifice (Jgs. 6:20; 13:19). Frequently tombs were carved out of the limestone bedrock (cf. 1 S. 13:6), including the borrowed tomb in which Jesus was buried (Lk. 23:53). The rocky wilderness of eastern Palestine was the habitat for certain animals (e.g., the ROCK BADGER, Lev. 11:5; Dt. 14:7; Ps. 104:18). Caves and holes in the porous limestone also provided a refuge for the Israelites fleeing the Philistines (1 S. 13:6) and for David and his band in flight from King Saul (23:25, 28). In the Day of the Lord, however, such hiding places will not provide sufficient shelter for those who attempt to flee from the wrath of the Lamb (Rev. 6:15f.; cf. Isa. 2:10; Jer. 23:29; Nah. 1:6).

During the Israelites' trek through the desert after the Exodus, their thirst was quenched on several occasions when Moses brought forth water from a rock (e.g., Ex. 17:6; Nu. 20:8, 10f.; Dt. 8:15; Ps. 78:16, 20; 105:41). The account in Nu. 20:2-13 has prompted considerable debate about the precise nature of Moses' sin (cf. v. 12). Although he struck the rock instead of speaking to it as God had commanded, the important issue was not his striking of the rock (since he had done this in the past, Ex. 17:6; Ps. 78:20) but his anger and disobedience (Nu. 20:8-11; cf. the words, "shall *we* bring forth water . . . ?" [v. 10], implying that Moses and Aaron had the power to provide the water themselves), which compromised Yahweh's holiness before the entire congregation and constituted an intolerable act of insubordination (cf. v. 12; see P. J. Budd, *Numbers* [*Word Biblical Comm.*, 1984], pp. 218f.).

Rocks furnished images for many figurative uses. The hardness of rock afforded an image for one whose mind was set (Jer. 5:3; cf. Isa. 50:7), and the shattering of rocks exemplified Yahweh's tremendous power (Jer. 23:29; Nah. 1:6). God's power is also shown by His ability to provide refreshment and sustenance from barren rocks (Dt. 32:13; Ps. 81:16 [MT 17]; 114:8; Isa. 48:21; see also above). Its enduring quality (cf. Job 19:24) made rock an apt epithet for Yahweh, depicting the permanence and stability of the Creator God who had made covenant with His people at Sinai (Isa. 26:4; cf. Dt. 32:4, 18; Hab. 1:12). In OT poetry this epithet frequently reflects the common use of crags as places of refuge (cf. Ps. 27:5; 40:2 [MT 3]); Yahweh is a mighty Rock who protects and saves His people (Dt. 32:15, 30; 2 S. 22:2f., 47; Ps. 18:2 [MT 3]; 19:14 [MT 15]; 31:2f. [MT 3f.]; 61:2f. [MT 3f.]; 62:2, 6f. [MT 3, 7f.]; 71:3; 94:22; 95:1; 144:1f.; Isa. 17:10). In His saving power Israel's Rock is unique among all the gods of the nations (Dt. 32:31; 1 S. 2:2; Ps. 18:31 [MT 32]; Isa. 44:8; cf. 30:29).

In the NT Paul identifies the rock that quenched the Israelites' thirst in the desert (cf. Ex. 17:6; Nu. 20:8, 10f.)

as a pre-incarnate manifestation of Jesus Christ (1 Cor. 10:4). Elsewhere both Paul (Rom. 9:33) and Peter (1 Pet. 2:8) describe Christ as a stumbling stone to those who do not believe in Him, "a rock that will make them fall" (cf. Isa. 8:14). Because the majority of the Jews rejected faith in Christ as the way to salvation and relied instead on their own righteousness, Jesus — who died the death of a common criminal under the curse of God (cf. Dt. 21:22f.) — became a rock of offense to them.

John 1:42 states that Jesus changed Simon's name to "Cephas," the Aramaic form of "Peter" (Gk. *Petros*, "rock"). After Simon Peter's well-known confession of Jesus as the Christ, Jesus said to him: "And I tell you, you are Peter, and on this rock will I build my church" (Mt. 16:18). By this Jesus was signifying that the foundation of the Church was to be the affirmation of Him as the Christ. The Church was founded, established, and continues to prevail because of the impelling faith of saints past and present who, like Peter, have confessed Jesus as the Christ.

ROCK BADGER; BADGER [Heb. *šāpān*; LXX *choirogrýllios*–'hedgehog,' *lagōós*–'hare' (Ps. 104:18 [LXX 103:18])] (Lev. 11:5; Dt. 14:7; Ps. 104:18; Prov. 30:26); AV CONEY.

The animal referred to in the above passages is probably the traditional "coney" (< Lat. *cuniculus*, "rabbit"), otherwise termed a hyrax (order *Hyracoidea*). Of this particular order no more than ten species are known, with habitats in Southwest Asia and Africa. The hyrax is a small ungulate mammal, similar in size to the rabbit, but more closely resembling the guinea pig in appearance with its smaller ears, shorter legs, and nearly invisible tail. The majority of species live among the rocks; the flat, bare soles of their feet provide secure maneuverability in such terrain (Ps. 104:18; Prov. 30:26). The species of the Bible is the Syrian hyrax (*Heterohyrax*) or *Procavia capensis syriacus*, an animal found in many parts of Palestine and especially plentiful in the Galilee area.

The reason for including the hyrax among the unclean animals that "chew the cud" (lit. "bring up the cud") is not entirely clear, since it does not actually "chew the cud" (i.e., it does not possess a ruminant stomach). It may be (as suggested by Tristram, p. 76) that the animal's constant chewing motion as it sat outside its hole gave the appearance of one with ruminant eating habits.

Bibliography.–F. S. Bodenheimer, *Animal Life in Palestine* (1935); *Animal and Man in Bible Lands* (1960); G. Candale, *Animals of Bible Lands* (1970); H. B. Tristram, *Natural History of the Bible* (1898).

ROCK OF AGES. The AV mg. translation of Heb. *ṣûr ʿôlāmîm* (AV "everlasting strength"; RSV, NEB, "everlasting rock") in Isa. 26:4. The prophet uses this image to describe God's enduring solidness as a foundation for trust. (For the imagery of the hymn, cf. also Ex. 17:6; Nu. 20:11; Ps. 78:15f.; 1 Cor. 10:4.)

ROCK OF ESCAPE. *See* ESCAPE, ROCK OF.

ROD [Heb. *ḥōṭer*] (Prov. 14:3); [*maṭṭeh*] (Ex. 4:2; Ps. 110:2; Ezk. 7:11; etc.); NEB STAFF, "injustice"; [*maqqēl*] (Gen. 30:37; Jer. 1:11; etc.); NEB also "in early bloom"; [*šēḇeṭ*] (Ex. 21:20; Ps. 2:9; 23:4; Prov. 10:13; Isa. 9:4; Ezk. 20:37;

A Babylonian god or king figure (ceramic) carrying a mace-like rod (ca. 2000 B.C.). Ancient Near Eastern kings were frequently depicted with some type of rod (The Metropolitan Museum of Art, Rogers Fund, 1932)

etc.); NEB STAFF, STICK, SCEPTRE, BEATING, GOAD, FLAIL, CLUB; [Gk. *kálamos*] (Rev. 21:16); AV REED; [*rhábdos*] (1 Cor. 4:21; He. 9:4; Rev. 2:27; etc.). A long straight stick, usually made of wood, used for a variety of purposes. Technically "rod" should not be used for a walking stick (i.e., a staff), but usage in the RSV and other versions is not consistent.

In Prov. 14:3 *ḥōṭer* is an instrument of punishment, but the context of its other occurrence in Isa. 11:1 (RSV "shoot") implies a young sprout of a tree. In Proverbs it thus denotes a supple green branch used as a whip.

Maṭṭeh is translated "rod" primarily in references to the miraculous rods of Moses and Aaron in Exodus (4:2, 4, 17, 20; 7:9-20; etc.) and Numbers (17:2-10 [MT 17-25]). It is clear, however, that this implement had in both cases been used as a simple staff or walking stick before it took on its miraculous nature. The word is also used for the staffs of the Egyptian magicians in the story of the ten plagues (Ex. 7:12, etc.). In Ps. 110:2 *maṭṭeh* designates the royal scepter and in Gen. 38:18 the everyday walking stick (RSV "staff"). In Ezk. 7:11 a small plant grows up to a "rod," indicating a small tree. Here the prophet is combining the metaphor of plant growth with the idea of punishment, for which the rod was frequently used. Because Aaron's rod had once blossomed (Nu. 17:8 [MT 23]), this word was ideal for such a *double entendre*. In the majority of its occurrences *maṭṭeh* is correctly translated "tribe," its other major meaning.

"Rod" translates *maqqēl* primarily in references to the peeled sticks that Jacob used to influence the makeup of Laban's herds (Gen. 30:37-41). In other contexts, how-

ever, this word can designate a staff (e.g., Gen. 32:10 [MT 11]).

When *šēḇeṭ* is translated "rod" it usually indicates an instrument of punishment, e.g., in Ex. 21:20 and Job 9:34. It can thereby give wisdom (Prov. 29:15), judgment (Isa. 30:31), or comfort by its protection (Ps. 23:4). It can also be a symbol of economic and political oppression (Isa. 9:4 [MT 3]; 14:29). More mundane uses included threshing herbs (Isa. 28:27) and counting sheep (Ezk. 20:37). Most often, however, *šēḇeṭ* is correctly translated "tribe." Gen. 49:16 uses a specialized type of wordplay (antanaclasis) in which two distinct meanings of one Hebrew word are intended: Dan could judge his people either as one of the "tribes" of Israel or as one of the "rods" (instruments of punishment) of Israel. Although *maṭṭeh* and *šēḇeṭ* occur with apparently the same scope of meanings, the words very rarely occur parallel to each other in Hebrew poetry (Isa. 10:24; 30:31f.).

While *kálamos* is normally translated "reed," in Rev. 21:15f. it is translated "rod" because it was used as a measuring device (*See* REED; MEASURING LINE).

Greek *rhábdos* is used very similarly to the Hebrew words discussed above. It is used in reference to Aaron's rod (He. 9:4) and as a symbol of punishment or judgment (1 Cor. 4:21; Rev. 2:27; 12:5; 19:15).

RODANIM rō'də-nim [Heb. *rôḏānîm*; Gk. *Rhodioi*]; AV DODANIM. Descendants or people of Rhodes (1 Ch. 1:7). Gen. 10:4, the parallel passage, reads Heb. *dôḏānîm*, as does a MS of 1 Ch. 1:7. But the LXX of Gen. 10:4 reads *Rhodioi* ("Rhodians"). In other words, there are two choices: DODANIM and Rodanim, each having textual support in Hebrew, but only Rodanim is supported by LXX. In both the ancient (Phoenician) and the later (Aramaic "square letters") forms of Hebrew writing, *d* and *r* are quite similar and sometimes one is mistaken for the other. 1 Ch. 1:7 names the "sons of Javan" (Ionia): Elishah, Tarshish, Kittim, and R/Dodanim. Elishah is generally identified with a portion of Cyprus (Alašia in cuneiform texts), an exporter of copper (C. F. A. Schaeffer, *Enkomi-Alasia* [1952], pp. 1-10). Kittim is also identified with Cyprus, the name perhaps preserved in Kition (modern Larnaka), although by the time of the DSS the name was used for Rome. Tarshish is more difficult to identify. It was on or near the Mediterranean (cf. Ezk. 27:12). Some locate it at Tartessus in Spain; others on Sardinia; Tarsus has also been suggested. The evidence drawn from these three names seems to require that R/Dodanim also be in the general area, quite likely an island or a seaport, and favors the identification as Rodanim, "Rhodes." But the canon of *lectio difficilior* (the more difficult reading) would support the form Dodanim. W. S. LASOR

ROEBUCK [Heb. *yaḥmûr*] (Dt. 14:5; 1 K. 4:23); AV FALLOW DEER. *See* DEER. For AV ROE and ROEBUCK *see also* GAZELLE; DOE (Prov. 5:19).

ROGELIM rō'gə-lim, rō-gə-lēm' [Heb. *rōgᵉlîm*]. A city in Gilead and home of Barzillai, a wealthy Gileadite who brought provisions to David and his army at Mahanaim during Absalom's re olt (2 S. 17:27; 19:31 [MT 32]). The identification of the city is uncertain. Abel (*GP*, II, 437f.) located it at Tell Bersînyā, *ca.* 7.5 km. (4½ m.) WSW of Irbid, arguing that the ruin's name derives from "Barzillai" and that the name of the nearby Wadi er-Rujaili preserves the city's ancient name. But Glueck (*AASOR*, 25-28 [1951], 176f.) failed to find Iron Age pottery there and tentatively suggested the nearby prominent Iron I-II tell of Dhaharat Soqʿa, 2 km. (1½ mi.) SE of Tell Bersînyā, as the ancient site. D. A. DORSEY

ROHGAH rō'gə [Heb. *K rôhᵃgâ, Q rohgâ*]. An Asherite; first son of Shemer (1 Ch. 7:34).

ROIMUS rō'i-məs (1 Esd. 5:8, AV). *See* REHUM 1.

ROLL. *See* SCROLL.

ROLLER. The AV translation of Heb. *ḥittûl* in Ezk. 30:21. "Roller" was formerly a technical term for a wide BANDAGE.

ROLLING THING. The AV's noncommittal translation of Heb. *galgāl* (lit. "wheel"; cf. Ps. 83:13 [MT 14], AV) in Isa. 17:13. The two most common interpretations are offered by the RSV ("whirling dust") and NEB ("thistledown"). KoB (p. 181) suggests: "the wheel-shaped dryed [sic] calix of the thistle Gundelia Tournefortii which borne by the wind causes the shying of horses." *See also* DUST.

ROMAMTI-EZER rō-mam'ti-ē'zər [Heb. *rōmamtî ʿezer*– 'I will exalt (my) helper' (?)]. Son of Heman, appointed chief of the twenty-fourth division of temple singers in David's time (1 Ch. 25:4, 31). *See* JOSHBEKASHAH.

ROMAN ARMY. *See* ARMY, ROMAN.

ROMAN EMPIRE AND CHRISTIANITY

VI. Victory of Christianity and Conversion of the Roman Empire
  A. Negative Causes
  B. Positive Causes

I. Survey of the Roman Empire.—The founding of the Roman Empire was one of the greatest political achievements ever. The conquests of Alexander the Great, Charlemagne, and Napoleon seem small compared with those of Julius Caesar and his successor Augustus. In one sense Julius Caesar was the founder of the empire, and Augustus the founder of the principate. But the empire was the culmination of a long, complex process of political, military, constitutional, cultural, and social development that gives a lasting significance to Roman history.

The Roman empire was the resolution of the seven-hundred-year struggle of various social classes and competing political systems. Roman history recounts the gradual triumph of democracy and popular government over an exclusive governing caste. Against heavy odds the plebeians asserted their rights until they secured a measure of social, political, and legal equality with their superiors (*see* ROME). But in the long conflict both militant democracy and despotic oligarchy degenerated until neither could hold the balance with justice. Democracy had won in the uphill fight but was obliged to accept a common master with aristocracy.

It was no small matter in the history of Christianity that the Roman empire, with its vast dominions, had been converging both from internal and external causes toward a one-man government.

A. Julius Caesar. Because of the growing political degeneracy, leaders had foreseen for several generations the coming of supreme power, and some had tried to seize it. But it was Julius Caesar who best exploited democracy for his own aggrandizement. He proved the potent factor in the first triumvirate, composed of himself, Pompey, and Crassus (60 B.C.), and his consulship (59) was truly kingly. In 49 B.C. he crossed the Rubicon and thus declared war upon his country, but in the same year was appointed dictator, thus securing supreme power. He vanquished the Pompeians — senatorial and republican — at Pharsalia in 48 B.C., at Thapsus in 46, and at Munda in 45 B.C.

Between 46 and his death on the Ides of March, 44, Caesar, although not an emperor, was more imperial than any ruler before Diocletian. He was recognized officially as "demigod"; temples were dedicatd to his "clemency." He encouraged the people to relinquish to him their privileges of self-government and right of election, and he became both chief (*princeps*) of the senate and high priest (*pontifex maximus*), so that he could manipulate even the will of the gods to his own purposes.

His plans were equally great and beneficent. He saw the importance of blending the heterogeneous populations into one people and extending Roman citizenship. His outlook was larger and more favorable to the coming of Christianity than that of his successor Augustus. Caesar's assassination taught Augustus that he should not advance too rapidly along the path to imperial splendor.

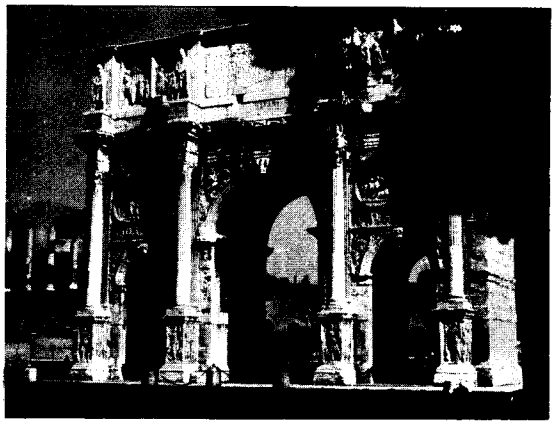
B. Augustus. Octavian (AUGUSTUS) proved the potent factor of the second triumvirate (43 B.C.) — Mark Antony, Octavian, and Lepidus. The battle between Octavian and Antony with Cleopatra of Egypt on the field of Actium on Sept. 2, 31 B.C., decided the fate of the old Roman republic. The commonwealth sank in exhaustion after the protracted civil and internecine strife. Octavian realized that supreme power was the only possible solution for surviving the crisis. On his return to Rome he began to do what Caesar had done — gather the reins of government into his own hands. He succeeded with more caution and shrewdness, and became the founder of the Roman empire, which formally began Jan. 16, 27 B.C., and was signalized by the bestowal of the title Augustus. With a great show of maintaining republican forms, he ruled as virtually an absolute monarch, having complete control of the legislature, the administration, and the armies. The Julio-Claudian line, the last of which was Nero (d. A.D. 68), basically adhered to Augustus's policy.

C. Flavian Dynasty. In A.D. 68 a new "secret of empire" was discovered, namely, that the principate was not necessarily hereditary, and that emperors could be nominated by the armies. After the bloody civil wars of 68, following the death of Nero, Vespasian founded the 2nd Dynasty, and dynastic succession was again adopted. With the Flavians began a new epoch in Roman history, which had pronounced importance for Christianity. The exclusive Roman ideas were on the wane. Vespasian was of plebeian and Sabine rank and thus non-Roman, the first of many non-Roman emperors. His ideas were favorable to the amalgamation of classes, and the leveling process was now steadily in motion. Though he accepted the Augustan "diarchy," he began to curtail the powers of the senate. His son Titus died young (A.D. 81) after a reign of two years. Domitian's reign (81-96) marked a new epoch in imperialism. His autocratic spirit even led him to take the title of Lord and God, thereby approaching the absolute monarchy of Diocletian. He was assassinated, however, and the senate exerted its power and nominated the next series of emperors — on the whole the best that ever wore the purple.

D. Adoptive or Antonine Emperors. Ability, justice, humane government, and recognition of the rights of the provinces marked the Antonines. Under Trajan (A.D. 98-117) the empire was greatly extended to the east — farther than was wise. Under Hadrian (117-138) the Roman armies were withdrawn to the old line of the Euphrates. Henceforth Rome was never aggressive, but always on the defensive against restless barbarians. Signs of weakness and decay manifested themselves under Antoninus Pius (138-161) and Marcus Aurelius (161-180) in spite of their high character. This, the best and happiest period of Roman imperial government (A.D. 98-180), was the beginning of the end. A growing centralization of authority developed in this era. The senate became almost a tool of the emperor. Bureaucracy became marked in the civil service in the reign of Hadrian.

E. Changing Dynasties (A.D. 193-284). On the death of Commodus (180-192), whose reign had been a calamity for the empire, a time of confusion ensued. The military, which had been pampered by Commodus, brought Rome to a state of infamy in which the praetorians put up the post of emperor to public auction. The military basis of the empire was emphasized. A rapid succession of rulers followed. Disintegrating forces set in. The *pax romana* had passed; civil unrest increased the threat of invading barbarians. Plague and famine depopulated rich provinces. Rome itself dropped into the background and the provincial spirit asserted itself proportionately. The year A.D. 212 is memorable for the edict of Caracalla converting all the free population into Roman citizens.

F. From Diocletian to Partition. In the next period Diocletian, an able ruler, established absolute monarchy of pure oriental type. He inaugurated the system of division and subdivision of imperial power, with new courts presided over by two joint emperors and a "Caesar" under each. The inevitable separation of West and East, with the growing predominance of the East, was apparent. Rome and Italy were reduced to the rank of provinces. The division of power led to civil strife until Constantine again



The Arch of Constantine at Rome (R. H. Smith)

united the whole empire under his sway. Constantinople in the East became the capital. The empire was once again parcelled out under the sons of Constantine, but was reunited by Constantius in A.D. 350. In 364 it was again divided, Valentinian receiving the West and Valens the East.

G. Final Partition. On the death of the great ruler Theodosius I (395), the West fell to his son Honorius and the East to Arcadius. The empire was never united again. The western portion rapidly degenerated before barbaric hordes and under weak rulers. Independent barbaric kingdoms were erected in the West. Burgundians settled in Gaul, Visigoths in Gaul and Spain. Under Genseric the Vandals settled first in southern Spain and then in North Africa. The barbarians came into the empire like a flood. Although Alaric and his Goths spared Rome in 408 for a ransom, he finally captured and sacked the city in 410. It was again sacked by Genseric and the Vandals in 462, and fell finally before Odoacer, leader of the Herculians and other Germans, in 476. The rule of Rome, "the mistress of the world," had ceased. The empire of the East continued with checkered experiences and losses until its final capture by the Turks in 1453, when its spiritual and intellectual treasures were scattered about in the West and helped to promote the Renaissance in the 16th century. The East conquered the West intellectually and spiritually.

***II. Factors Leading to Monarchy.**–A. Exhaustion of Parties.* For at least two generations the Roman world had been drifting steadily toward monarchy. Clear minds saw in advance the inevitability of one-man government. The civil wars ceased for a century with the death of Antony, but the struggles of political parties from Tiberius Gracchus and Scipio Aemilianus down to Pompey and Caesar had exhausted the state, and this exhaustion of the parties opened the way for monarchy. It became necessary that one should be elevated who could fairly hold the balance between oligarchy and the common people and duly recognize the claims of all parties. Even an earnest republican like Cato admitted it would be better to choose a master than to wait for a tyrant. The free political institutions of Rome could no longer work under the armed oppression of factions. Only supreme power could prove effectual amid an enfeebled, unpopular senate, a corrupt and idle commons, and ambitious individuals.

B. Inability of either aristocracy or democracy to hold equilibrium. Previous events had proved that a narrow, exclusive aristocracy was incapable of good government because of its selfishness and disregard for the rights of lower classes. The heterogeneous population of later

ROMAN EMPIRE AND CHRISTIANITY

Rome was not disciplined to obey or to initiate just government when it seized power. This anarchy in the body politic opened the way to usurpation by individuals. No form of free popular government could live under such conditions. Caesar said of the republic that it was "a name without any substance." The law courts shared in the general corruption. The *judicia* became a prey to party interests. It succumbed to bribery and became the agent of oppression and injustice. Justice for all, and especially for conquered peoples, was impossible. Bribery and candidates in arms prevented the proper functioning of elective assemblies. The whole people had become incapable of self-government and were willing — almost glad — to be relieved of the necessity, even though this favored despotic authority.

C. Precedents. Precedents for the concentration of supreme power had been rapidly multiplying toward the end of the republic. The seven consulships of Marius, the four of Cinna, the three extraordinary commissions of Pompey and his sole consulship, the dictatorship of Sulla without time limit, the two five-year-period military commands of Caesar, the final dictatorship, which was to extend for ten years — all these were pointing directly toward Caesarism.

D. Withdrawal from public life: individualism. The increasing number of noble-minded and intellectual men who withdrew from public life opened the way to supreme power for ambitious demagogues. Philosophy had abandoned the civic, political, or city-state point of view, and had become moral and individual. Stoicism, influenced by Platonism, preached that man must work out his salvation, not publicly in political life, but secretly in his own soul. Stoicism took hold of the noblest Romans who, being conscious of life's weariness, felt the desire for spiritual fellowship and comfort. These people abandoned public life for private speculation and meditation. Those who did remain in public life were too often pure idealists living in the past or in an imaginary ideal Platonic republic. They were unequal to the practical demagogues living very much in the present. Also, many in the moderate party, who normally would have furnished leaders to the state, were so offended with the universal corruption and the hopeless state of social strife that they held aloof and must have welcomed a paramount authority to give stability to social life. Monarchy was in the air; and it was felt that government must be restored and the state reorganized.

E. Industrial. The industrial and middle class also must have welcomed the monarchy. They were supporters neither of aristocracy nor of the idle commonalty. But they did desire stable government under which they could carry on their trades uninterruptedly, instead of civil wars and party strife that greatly hindered their trade and commerce.

F. Military. Military conditions favored supreme power. The old republican safeguards against ambition had been removed. The armies now were full of provincials and non-Romans who had little sentiment for republican forms. Military power was constantly growing. But a monarchy that held all the military, legislative, and administrative functions of the state in due proportion could avert a military despotism.

G. Imperial interests. The conquests of the republic had placed many provinces and heterogeneous populations in East and West under Roman control. The plundering and oppression of these peoples had to cease. The *jus civile* (civil law) of Rome must learn also the *jus naturale* (natural law) and the *jus gentium* (international law). An exclusive, senatorial clique proved incapable of doing justice to

the conquered peoples, and besides, monarchy was more congenial to the provincials than a republic, which they could not comprehend.

H. Influence of the Orient. The Orientals were accustomed to living under imperial and absolutist rulers. Residence in the Orient had given military leaders a thirst for absolute power. Further, when the old city-state system had broken down, and vast and dissimilar masses of people lived in the Roman dominions, no other form was possible, for federal government had not yet been conceived. A king or emperor could hold together the very diverse ethnic elements more easily than ever changing administrations.

III. Preparation of the Roman Empire for Christianity.– About the middle of the reign of Augustus a Jewish child was born who was destined to rule a far more extensive and lasting empire than that of the Caesars. It is striking that Christianity appeared in the world almost simultaneously with the beginning of the Roman empire. Although on a superficial glance the Roman empire may seem the greatest enemy of early Christianity, it was in some ways a grand preparation for, and in some ways the best ally of, Christianity. It ushered in politically "the fulness of the time." The Caesars — whatever they may have been or done — unconsciously prepared the way of the Lord. Among the services rendered by the Roman empire to the kingdom of God were the following.

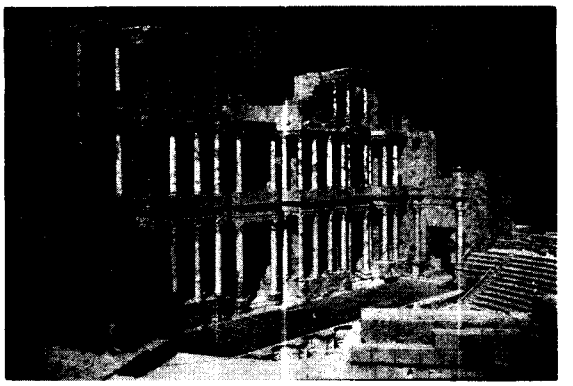
A. Pax Romana *and Unification of the World.* The world had not been at peace since the days of Alexander the Great. The quarrels of the Diadochi (successors of Alexander) and the aggressions of the Roman republic kept the nations in constant turmoil. Universal peace was first established with the beginning of the reign of Augustus. In all the countries around the Mediterranean, and from Britain to the Euphrates, the world was at rest. Rome had ended her internal conflicts, stopped the wars of nations, and cleared the menace of piracy from the Mediterranean. The constant quarrels of the Diadochi in the East were now at an end and their vast territories were under the sway of Rome. The empire united Greeks, Romans, and Jews under one government. This blending of the nations prepared for Christianity.

B. Cosmopolitanism. This state of affairs contributed largely to the spread of cosmopolitanism that had set in with Alexander the Great. All national barriers were now removed. The great cities became meeting places of all races and languages. Romans, Greeks, Orientals, all mingled together in the course of their business. Their ideas, aims, and even their religions were thrown into the melting pot. In the Roman armies soldiers from all quarters of the empire became companions. Many slaves were cultured men and became the teachers of their masters. In every large city, East or West, large bodies of the Jewish Diaspora were settled.

C. Eclecticism. Out of this cosmopolitanism grew eclecticism. Each people sought out the best elements in the thought of the others. This gave a great opportunity to Christianity. Since the 3rd cent. B.C., Stoicism had been preaching a civic and ethical brotherhood of humanity. Their thought was not now of nations and their gods but of human duty. The emphasis had shifted from what was political or national to the moral and human point of view. Formerly the good citizen was automatically regarded as the good man. Now all men were regarded as the good man. Now all men were regarded as equal before the One; only virtue and vice were the differentiating factors. (*See also* STOICS.)

The way was still further prepared for Christianity by the Jewish Diaspora. Large numbers of Jews were settled

ROMAN EMPIRE AND CHRISTIANITY

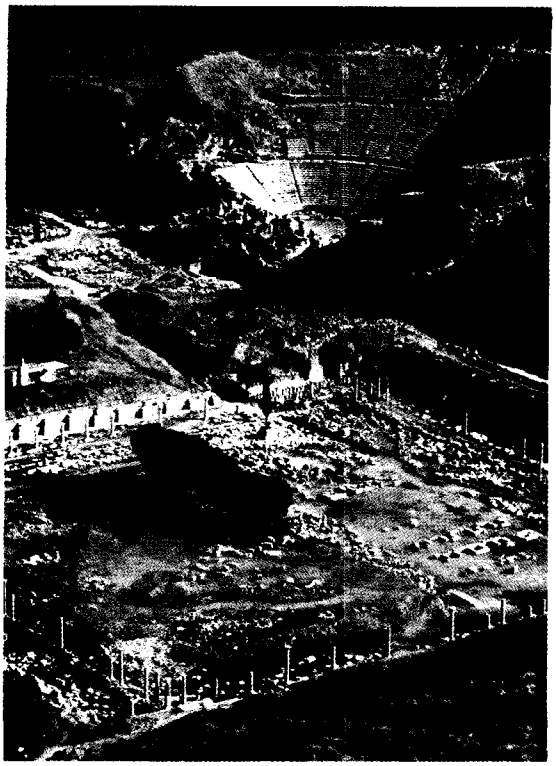


A Roman theater in Sabratha, North Africa, one of the best preserved ground-level theaters (2nd cent. A.D.). The Romans developed this structure after the Greek theaters, which were built into hills (R. H. Smith)

in all the great cities of East and West. With the decay of pagan religion, their spiritual monotheism was welcomed by many. Jews affected Greeks and Romans and Jews themselves were affected by their neighbors. The Holy Scriptures were translated into Greek in Egypt in the 2nd cent. B.C., and this Septuagint version, as it is called, helped prepare the way for the gospel of Christ. Cosmopolitanism strongly affected the Roman mind, hitherto exclusive and narrow. The gods of the conquered peoples were spared and admitted into the pantheon as guardians of Rome. This made for tolerance. The Jewish synagogues throughout the empire proved invaluable to Paul, and to other missionaries, as starting places for reaching the Gentiles with Christian truth, as recorded in the Acts of the Apostles (*see* DISPERSION).

D. Protection for Greek Culture. The Romans at first were only conquering barbarians who had little respect for culture but idealized power. Already they had wiped out two ancient and superior civilizations — Carthage and Etruria. Had the Roman Mars not been educated by Pallas Athene, the Romans would have proved Vandals and Tartars in blotting out civilization and arresting human progress. The intellectual life of Greece prevailed among the Romans, and in turn Roman power protected Greek culture and speculation and contributed to the uplifting and enlightenment of subsequent ages by both preserving and opening up to the world the spiritual qualities of Greece. The teachings of Socrates, Plato, and Aristotle went forth on their wide mission. Greek philosophy and theology trained many of the greatest leaders of the Church, and since Greek was the language of scholars, the preachers of the Church used that language very frequently, particularly in the first two centuries.

E. Language. Through the enterprise, superior genius, and commercial ability of the Greek republics, the Greek language spread to the Rhone Valley, Sicily, southern Italy, and the coasts of Asia Minor and Syria, and it became predominant in Egypt. The conquests of Alexander gave Greek an important place in all the great centers of the Middle East, and to some extent it was known in northern India, Parthia, around the Black Sea, and among the Jews of Palestine. There were in Jerusalem itself Hellenistic bodies of devout Jews. Greek was recognized by the Jews as the universal language, as is shown by many ancient inscriptions. A popular form of Greek evolved from the various dialects, the Koine, which is the Greek of the NT. The history of the Maccabean struggle affords ample evidence of the extent to which Greek culture, and



Greek language, were familiar to the Jews. They used it as the language of commerce, of culture, and of religious propaganda. Through the LXX and other Greek versions they commended their Scriptures to the Greco-Roman world. The OT was now beginning to become the Bible not only of the Jews but also of a great many Gentiles as well. When the Romans took over the East they found Greek so widely known they could not supplant it. They gladly accepted it as the one common language among the peoples of their eastern dominions (*see* GREEK LANGUAGE OF THE NT).

Though Latin was, of course, the official language of the conquerors, the decrees of governors generally appeared with a Greek translation. Greek overcame Latin, just as English drove out the French of the Norman invaders. Latin poets and historians often complained that "conquered Greece vanquished its stern conqueror." With the spread of Latin there were two world languages side by side for the empire. But Greek prevailed in the eastern half of the Roman empire, which was the first soil for Christian churches and the first part to be Christianized. Later, Christianity found Latin ready in the West as the common means of communication there and used it. Rome respected Greek, and this had an important influence on Christianity, for Greek was better adapted to express theological and philosophical ideas. The gospel was early circulated in Greek, the early Christain missionaries most frequently preached in Greek, and Greek was the medium of expression even in the Church at Rome for two centuries. Meanwhile, however, the Romans in the West were Romanizing and leveling everywhere in preparation for Latin Christianity.

F. Travel. The marvelous system of Roman roads, which knitted the civilized world together, not only served the legions but was of immense service to the early missionaries. Travel was safer and easier than ever be-

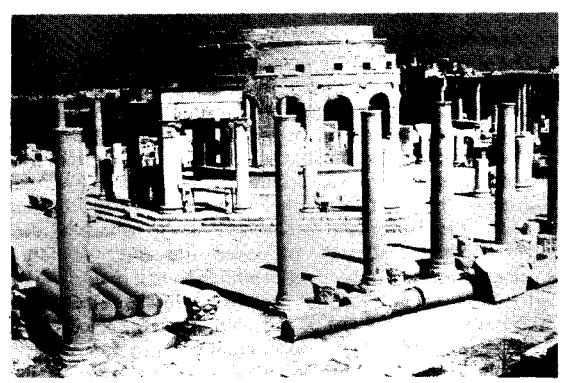
fore. The gospel was carried along the trade routes. Many Christian businessmen and artisans used their opportunity to spread their faith. The excellent roads greatly facilitated church organization and brotherhood, strengthening the church to overcome the Roman empire. The sea also was now an important and safe means of communication. With the overthrow of the pirates and the mastery of hostile maritime forces, the Mediterranean was now safer than ever before. Travel by sea was usually regular and easy, and Paul was able to draw up itineraries for his travels according to fixed timetables. In that epoch new ideas, including the truths of the Christian faith, spread with astonishing rapidity from country to country.

G. Tolerance. The Roman authorities granted a large measure of freedom to the religions of all nations, greatly favoring the growth of infant Christianity as long as it was officially viewed as part of Judaism, a licensed religion. The Roman empire was never in principle a persecutor with a permanent court of Inquisition. Even strange cults from the East were allowed to spread unchecked unless they came to be considered a danger to public morality (IV.B below).

H. Pattern for a Universal Church. Some have argued that the Roman empire afforded Christianity an outward symbol for its spiritual ambition and that only a citizen (Paul) of such a world empire could dream of a religion for all humanity. As a matter of fact the Hebrew prophets had repeatedly dreamed of such a religion ages before Paul. God had shown by revelation what His Church ought to be. Doubtless Paul and other apostles felt that if the Ro-

The market place in the forum of Leptis Magna, a Mediterranean port city in Roman Africa (R. H. Smith)



ROMAN EMPIRE AND CHRISTIANITY

man sword could conquer the known world, the Church could conquer in the religious sphere through the sword of the Spirit.

I. Roman Jurisprudence. Roman law in its origins was characterized by the narrowest exclusiveness; but as province after province was added to the empire a rough average of the customs of the various nations was struck, and this was denoted by the word *equitas,* "leveling." This became the *jus gentium.* It extended gradually into the empire, and the Romans became masters of jurisprudence. The Roman laws were a great boon to the world. People were taught to obey and respect authority and the stern application of justice proved an effective leveling and civilizing influence. The universal law of Rome helped to prepare the way for the universal law of the gospel.

J. Negative Preparation. The Romans could offer their subjects good laws, uniform government, and military protection but not a satisfactory religion. A universal empire called for a universal religion, which Christianity alone could offer. Finally, the way of the Lord was prepared not only by what Rome had accomplished but also by what she proved incapable of accomplishing. The old national religions and systems of belief had proved unable to meet the increasing moral and spiritual demands of man's nature. Moral bankruptcy was imminent. The old Roman religion of abstract virtues had degenerated into pure formalism; it was too cold for human hearts. People were no longer atoms in society performing religious rites, not for their own souls but for the good of the commonwealth. The new schools of philosophy called people away from the state to seek peace with God in the solitude of their own souls first of all. But even the best of these schools felt the need of a positive not a negative religion, the need for a perfect ideal life as a dynamic over ordinary human lives. Thus arose an imperious demand for a new revelation, for a fresh vision or knowledge of God.

In earlier days people believed that God had revealed Himself to primitive wise men or heroes and that subsequent generations must accept with faith what these seers had taught. Later, people lost this attitude; but Plato, after soaring to the greatest heights of philosophy, admitted the need for a daemon or superman to tell us the secrets of eternity. With the early Roman empire began tremendous religious unrest. People sought a sure place of rest in many ways — in philosophy, magic, astrology, foreign rites. This explains the rapid diffusion of oriental mystery religions, promising to the initiated communion with God here and immortality hereafter. This was welcomed by the more serious souls, who would have gladly accepted the consolations of Jesus had they known of them. Others, losing all faith in any form of religion, gave themselves up to blank despair and accepted Epicureanism with its message of annihilation and its doctrine of *carpe diem* — snatching the pleasures of each day. It had a terrible fascination for many.

The sore need of the new gospel of life and immortality can be seen clearly from the Greek and Roman sepulchral inscriptions. Even Seneca, who was much like a Christian in some respects, spoke of immortality as a "beautiful dream." Some of the noblest souls could only cherish the vaguest hope of an immortal life. Sallust records (*Bellum Catilinae* 51f.) that when the punishment of the Catilinarian conspirators was discussed, Caesar, who held the Roman high-priesthood, proposed life imprisonment, since death would only bring annihilation and rest to those villains. This was typical of the higher classes. There was no hereafter, no reward or punishment. Even Cicero (*In L. Catilinam oratio* iv.4) was content to leave immortality an open question. The philosophers of Athens at the AREOPAGUS mocked Paul when he spoke of a resurrection. Yet there was a pathetically strong desire for continued existence. The other classes were either perfunctorily performing the rites of a dead national religion, or seeking excitement or aesthetic worship or even scope for their baser passions, or peace or promise for the future, in the eastern mystery religions. "The throne of the human mind" was declared vacant, and Christianity was at hand as the best claimant.

IV. Attitude of the Roman Empire to Religions. *–A. Roman or State Religion.* The long history of Roman religion reveals a continuous penetration by Italian, Etruscan, Greek, Egyptian, and oriental worship and rites. The old Roman religion became almost unrecognizable, and even the antiquarian learning of a Varro could scarcely discover the original meaning or use of many Roman deities. Both the Roman elements and the foreign rites with which they were overloaded retreated until finally overcome by Christianity. During the regal period Roman religion was that of a simple agricultural community. In the period before the Second Punic War Roman religion became more complicated, with large additions to the Roman Pantheon from Etruria, Latium, and Magna Crecia. The mysterious religion of Etruria first impressed the Roman mind, probably giving them the trinity of the Capitol (Jupiter, Juno, Minerva), which had come from Greece, showing that the Romans were not the first in Italy to be influenced by the religion of Greece. The Etruscans provided elements non-Roman in spirit, and Latium contributed the worship of Diana (from Aricia) and a Latin Jupiter. Two Latium cults, Hercules and Castor, penetrated even within the *pomoerium,* the area supposed to be free from buildings.

The Greek influences from southern Italy (Magna Grecia) were strong. From there came the Sibylline Books

The temple to Apollo at Pompeii in southern Italy (ca. 1st cent. A.D. (courtesy of the Italian Government Travel Office [ENIT])

ROMAN EMPIRE AND CHRISTIANITY

(Cumae) as sacred scriptures for the Romans. Soon a multitude of Greek deities entered Rome. In 493 B.C., a time of famine, came the Greek trinity Demeter, Dionysus, and Persephone under the Latin names of Ceres, Liber, and Libera. Like some other foreign gods, they came to help in time of distress — revealing a dwindling confidence in the Roman gods. In 433 came Apollo and in the 3rd cent. B.C. followed Mercury, Asclepius, Dis, and Proserpina. A taste for dramatic and more aesthetic forms of worship developed.

During the Second Punic War the faith of the Romans waned seriously before growing unbelief. The educated classes sank into skepticism and the populace into superstition. The educated put philosophy in the place of religion, and the common people followed the more sensuous cults of the Orient. The Romans went abroad again to borrow deities — this time to Greece, Asia, and Egypt. The aim was to satisfy the craving for more sensuous worship. Greek deities entered wholesale and were readily assimilated — in the 2nd cent. B.C. Hebe entered as Juventas, Artemis as Diana, Ares as Mars. It was the Orient, however, that supplied what they really wanted. In 204 B.C. Cybele — known as the Great Mother — came from Pessinus. Her coming gave an impetus to the wilder and more orgiastic cults and the mysterious glamor that captivated the common mind. It struck a fatal blow at the old Roman religion. Bacchus with his gross immorality soon followed. Sulla introduced Mâ from Phrygia as the counterpart of the Roman Bellona, and Egypt gave Isis. In the wars of Pompey against the pirates, Mithra — the greatest rival of Christianity — was brought to Rome. At the close of the republic, religion had become largely an affair of politicians. Worship degenerated first into formalism then into disuse, and yet oriental rites were in high favor.

Under the empire philosophic systems and oriental rites continued to replace the older religion. Augustus attempted to breathe life into the dry bones, but his plan was too political and was lacking in real religious spirit. He aimed at an imperial and popular religion similar to what had long prevailed in the East, where kings were often regarded as divine by their subjects. Alexander the Great and the Diadochian rulers, especially in Egypt and Syria, recognized the value of this system as a bond of union in wide dominions. When Augustus brought peace to the world, the Orient was ready to hail him as a god. Out of this evolved the cult of the reigning emperor and of Roma personified. This worship may have given a semblance of religious unity to the empire, and it magnified the emperor, but it became a deadly engine of persecution when Christians refused to worship the emperor and were treated as traitors. The old Roman religion was now dead, and philosophy took its place along with the mysteries, which promised immortality. The emperor worship itself declined steadily and became a matter of jest even to some of the emperors themselves. In the 3rd and 4th cents. oriental worship became supreme, and the religion of the empire soon became cosmopolitan and eclectic, according to the spirit of the new era.

B. Non-Roman Religions. The non-Roman religions were divided into *religiones licitae* ("licensed worships") and *religiones illicitae* ("unlicensed"). The Romans at different times, on account of earthquakes, famine, or military disasters, introduced non-Roman cults as a means of appeasing the gods. This generally meant that the cults in question could be performed with impunity by their foreign adherents. Generally speaking, any people settling in Rome were permitted the liberty of their own native worship, provided it did not interfere with the peace or corrupt the morals of the state. In 186 B.C. by decree of the senate a severe inquisition was instituted against the Bacchanalian rite, which had caused flagrant immorality among its adherents. But Rome was seldom a systematic persecutor. Even when the adherents of foreign rites and superstitions were driven from the city, they always returned stronger than ever. Roman citizens soon discovered the fascination of oriental and Greek mysteries, and devoted themselves to foreign gods while maintaining the necessary formal observance of the religion of the state. The original moral elements had fallen out of Roman religion, and it had become simply a political and military religion for the welfare of the state, not for the salvation of the individual. All that was required was the performance of certain prescribed rites to avert calamity from the state. This done, the individual could freely seek excitement or aesthetic pleasure in the warm and more sociable foreign mysteries.

Thus, while the Romans retained the distinction of *religiones licitae* and *illicitae,* they seldom used severity against the latter. The very idea of empire rendered toleration of non-Roman religions a necessity. Practically, the empire abandoned the idea of *religiones illicitae* while retaining it upon the statute book to use in case of such an emergency as the Christian religion involved. Not only the government was tolerant, but the different varieties of religions also were tolerant and on good terms with each other. The same person might be initiated into the mysteries of half a dozen pagan divinities and also be a priest of two or more gods. Some had not the slightest objection to worshiping Christ along with Mithra, Isis, and Adonis. People were growing conscious of the oneness of the divine, and credited their neighbors with worshiping the

The triumphal Arch of Titus in Rome that celebrates the destruction of Jerusalem (A.D. 70) (R. H. Smith)

One Unknown under different names and forms. Hadrian is said to have considered erecting temples throughout the empire to the Unknown God.

1. Judaism a "religio licita." An interesting and, for the history of Christianity, important example of a *religio licita* is Judaism. No more exclusive and determined a people could have been found upon whom to bestow the favor. Yet from the days of Julius Caesar the imperial policy toward the Jews and their religion was uniformly favorable, with the brief exception of the mad attempt of Gaius. The government often protected them against the hatred of other people. Up to A.D. 70 they were allowed to send freely their contribution to the temple; they were even allowed self-governing privileges and legislative powers among themselves, and thus formed an exclusive community in the midst of Roman society. Even the disastrous war of 68-70 and the fall of Jerusalem did not bring persecution upon the Jews, though most of the self-governing and self-legislating powers were withdrawn and the Jews were compelled to pay a poll tax to the temple of the Capitoline Jupiter. Still their religion remained licensed, tolerated, protected. They were excused from duties impossible for their religion, such as military service. This tolerance of the Jewish religion was of incalculable importance to infant Christianity, which at first was taken to be no more than a kind of Judaism.

2. Christianity Alone Proscribed. The question next arises: If it was the universally mild and tolerant policy of the empire to find room for all gods and cults, and to respect the beliefs of all the subject peoples, what explains the anomaly that Christianity alone was proscribed and persecuted? Christianity was indeed an unlicensed religion, but this is no answer. Other *religiones illicitae* grew apace. Neither was it because of Christian agressiveness and proselytism, for Mithraism and Isis worship were militant and aggressive but were tolerated. Nor was it because of popular hatred; the Christians were not hated above the Jews. Other reasons must explain the anomaly.

The fact was that two empires were born at about the same time, so alike and yet so unlike as to render a conflict and struggle to the death inevitable. The Christians were unequivocal in asserting that the society for which they were waiting and laboring was a "kingdom."

a. Confusion of spiritual and temporal. The Romans could not understand a kingdom of God upon earth. They confused Christian ambition with political ambition. It was soon discovered that the Christians were undermining the religion of the state, which was pledged to maintain its ancient worships. The early Christian use of the term "kingdom" was provoking. Many of the Christians were looking for a kingdom on earth to be set up by Christ as king. This did harm even though Christians had no political ambitions. Both the Roman empire and Christianity were aiming at a worldwide social organization. Although the one had done much to help the other, the contrast was too great to allow conciliation. Christianity aimed at universalism along the path of individualism — giving new value to human personality.

b. Unique claims of Christianity. These apparently absurd claims provoked Roman pride — that the world would be destroyed by fire to bring in new heavens and a new earth, that the eternal city (Rome) was destined to fall, that a king would come from heaven and be obeyed.

c. Novelty of Christianity. The sudden emergence of this new and unlicensed religion from Judaism must have surprised the government. This latest and most virile religion came suddenly upon the stage with apparently no past. It was not apparent to the Romans that Christianity had been spreading for a generation under the tolerance granted to Judaism. The Romans were conservative and disliked innovations. The greatest statesman of the Augustan era, Maecenas, advised the emperor to extend no tolerance to new religions, since they would be subversive of monarchy (Dio Cassius lii.36).

d. Intolerance and exclusiveness of Christian religion and society. The Christians contravened the tolerant eclectic spirit of the empire by the absoluteness of their religion and the exclusiveness of their society. Christianity admitted no compromise, and was intolerant to all other systems. The Christians could not deviate from the teachings and commands of their Master, the Lord Jesus. To maintain their own life and mission they had to be intolerant. Many would gladly have accepted Christ along with Mithra and Isis and Serapis, but Christianity demanded complete separation. Christ could have no rival, His religion claimed to be absolute, and worshipers of Jesus had to be separate from the world. This spirit was at enmity with that of the day, which enabled rival cults to coexist with the greatest indifference. Add to this the exclusive state of Christian society. Even the ethically sound and earnest heathen who had practiced severe asceticism and performed many rites could not be admitted unless he renounced many things dear to him. In every sphere of public life this exclusiveness made itself felt. For safety, Christians often met at night in secret assemblies. Their exclusiveness provoked charges of scandalous activities in such gatherings.

e. Obstinatio. The sullen obstinacy with which Christians met the demands of the imperial power was very offensive to Roman authorities. If only they had rendered a purely formal obedience to the religion of the state they would have been left undisturbed, but they would not compromise with another religion. Roman clemency and respect for law were baffled. The martyrs' courage appeared as sheer fanaticism. Even Marcus Aurelius could see nothing in the Christians but "sheer obstinacy" (*see* PERSECUTION).

f. Aggressiveness against pagan faith. Not content with abstaining from other worship, the Christians attacked severely the pagan cults, which to them were based on the doctrines of demons. Emperor worship was blasphemous to the Christians, and they were charged with disloyalty and could be proved guilty of *majestas* (treason). They treated with contempt the claim that the greatness of Rome was due to her reverence for the gods. To the Romans they were atheists, and the politicians feared that this atheism might call down the wrath of the gods.

g. Christians to the lion. Very soon, when disasters began to fall thickly upon the empire, the blame was laid upon the Christians. They were made the scapegoats for every calamity. If famine, drought, pestilence, earthquake, or any other public calamity threatened, the cry was raised "the Christians to the lion." Tertullian with his sardonic invective showed up the absurdity of such accusations (*see also* NERO; PERSECUTION). It was forgotten, as the Apologists showed, that Rome had been visited by the greatest calamities before the Christian era, and that the Christians were the most self-sacrificing in times of distress, giving succor to Christians and pagans alike.

h. Odium generis humani. All prejudices were summed up in the phrase "hatred for the human race," and this was reciprocated by "hatred of the human race toward them." They were in mockery called "Christiani" by the Antiochians (a name they soon accepted as an honor), and "Nazarenes" by the Jews. No nicknames were too vile to attach to them — Asinarii (the sect that worshiped the ass's head), Sarmenticii, or Semaxii. Tacitus reckoned the

Christian faith among the "atrocious and abominable things" that flooded Rome, and further designated it as "baneful superstition" (*Ann.* xv.44). Suetonius regarded it as "novel and malefic" (*Nero* 16), and the gentle Pliny called it "vile and indecent" (*Exp.* x.97). This opprobrium was general and was accentuated by the attacks of philosophers as they scorned this new religion. This attitude of heathen philosophy is best understood by reading Celsus and the Christian apologists.

i. Other Disturbing Factors. Philosophy long maintained its aloofness from the religion of a crucified Galilean; the "wise" were the last to enter the kingdom of God. When later Christianity had established itself as a permanent force in human thought, philosophy deigned to consider its claims. But it was too late; the new faith was already on the offensive. Philosophy discovered its own weakness and began to reform itself by aiming at being both a philosophy and a religion. This is particularly the case in Neoplatonism (in Plotinus), in which reason breaks down before revelation and mysticism.

Another force disturbing the peace of the Christian Church was the enemy within the fold. Large numbers of heathen had entered the church, bringing with them their oriental or Greek ideas, just as Jewish Christians also brought certain misconceptions. This led to grave heresies, each system of thought distorting in its own way the orthodox faith. Later another ally joined the forces against Christianity — reformed paganism led by an injured priesthood. At first the cause of Christianity was greatly aided by the absence of an exclusive and jealous priesthood at the head of the Greek-Roman religion, as in the Jewish and oriental religions. There was thus no dogma and no class interested in maintaining a dogma. Religious persecution is invariably instituted by the priesthood, but in the Roman world it was not till late in the day, when the temples and sacrifices were falling into disuse, that a priesthood constituted a body in opposition. Thus the Roman imperial power stood not alone in antagonism to Christianity, but was whetted and often provoked to action by popular hate, philosophy, a pagan priesthood, and heresies within the Church.

V. Relations Between the Roman Empire and Christianity.– We have here to explain how the attitude of the Roman empire, at first friendly or indifferent, developed into one of fierce conflict, the different stages in the policy — if we can speak of any uniform policy — of the Roman government toward Christianity, the charges or mode of procedure on which Christians were condemned, and when and how the mere profession of Christianity became a crime. We shall see the Roman empire progressively weakening and Christianity gaining ground. For the sake of clearness we shall divide the history of the Roman empire into six periods; the first of these is from the commencement of the Christian era to the end of the Julio-Claudian dynasty.

A. Beginning of Christianity to Death of Nero (A.D. 68). At first the presence of the Christian faith was scarcely noticed by Roman authorities. It appeared first merely as a reformed and more spiritual Judaism; its earliest preachers and adherents alike never dreamed of severing from the synagogue. Christians seemed to be only another of the Jewish sects to which a Jew might belong while adhering to Mosaism and Judaism. But soon this friendly relationship became strained on account of the claims of Christian preachers, and from the introduction of gentile proselytes. The first persecutions for the infant Church came entirely from exclusive Judaism, and it was the Jews who first accused Christians before the Roman courts. Even so, the Roman government refused to turn persecutor, and protected the new faith both against Jewish accusations and against the violence of other members of the populace (Acts 21:31f.). And the Christian missionaries — especially Paul — soon recognized in the Roman empire an ally and a power for good. Writing to the Romans, Paul counseled them to submit in obedience to the governmental powers as "ordained of God." His favorable impression must have been greatly enhanced by his mild captivity at Rome (although it lasted two years). The Roman soldiers had rescued him from the fanaticism of the Jews in Jerusalem to save his life. Toward the accusations of the Jews against their rivals the Romans were either indifferent, like Gallio, or recognized the innocence of the accused, as did Felix and Porcius Festus (cf. Acts 18:12-17; 24-25). But the Jews proceeded to formulate a charge of disloyalty (begun before Pilate) that the new sect was acting "against the decrees of Caesar, saying that there is another king, Jesus" (17:7; 25:8). Thus early Christianity was disowned by Judaism and cast upon its own resources. The increasing numbers of Christians would confirm to the Roman government the independence of Christianity, and the trial of a Roman citizen, Paul, at Rome would further enlighten the authorities.

The first heathen persecution of Christianity resulted from no definite policy, and no definite charges, but from an accidental spark that kindled the conflagration of Rome (July, A.D. 64). Till then no emperor had taken much notice of Christianity. Only in the middle of the reign of Augustus was Jesus born. Jesus' public ministry, crucifixion, and resurrection belong to the reign of Tiberius, but this emperor died too early (A.D. 37) to allow any prominence to the new faith, although he was credited by legend with the intention of receiving Christ into the Roman pantheon. At the end of the reign of the mad Gaius (A.D. 37-41) the "new way" was not yet divorced from the parent faith. Gaius caused a diversion in favor of the Christians by his persecution of the Jews and the command to set up his own statue in the temple. In the next reign (Claudius, A.D. 41-45), the Jews were again harshly treated, and thousands were banished from Rome (Suetonius *Claudius* 25). Some hold that it was because of riots between Jews and Christians, but Dio Cassius (lx.6) implies that it was a police regulation to restrain the spread of Jewish worship. It was in the reign of NERO, after the fire of A.D. 64, that the first hostile step was taken by the government against the Christians, the earliest account of which is given by Tacitus (*Ann.* xv.44). Nero's reckless career had given rise to the rumor that he was the incendiary in order that he might build the city on more magnificent plans. Though he did everything possible to arrest the flames, even exposing his own life, though he took every means of alleviating the destitution of the sufferers, and performed religious rites to appease the gods, the suspicion still clung to him. "Accordingly in order to dissipate the rumor, he put forward as guilty (*subdidit reos*) and inflicted the most cruel punishments on those who were hated for their abominations (*flagitia*) and called *Christians*, by the populace. The originator of that name, Christus, had been executed by the procurator Pontius Pilatus in the reign of Tiberius, and the baneful superstition, put down for the time being, broke out again . . . Those, therefore, who confessed (i.e., to being Christians) were first arrested, and then by the information gained from them a large number were implicated, not so much on the charge of incendiarism as for hatred of mankind. The victims perished amid mockery; some clothed in the skins of wild beasts were torn to pieces by dogs. . . . Whence (after these cruelties) commiseration began to be felt for them, though guilty and deserving the severest

ROMAN EMPIRE AND CHRISTIANITY

penalties, for men felt their destruction was not from considerations of public welfare but to gratify the cruelty of one person (Nero)."

This passage — the earliest classical account of the crucifixion and the only mention of Pilate in a heathen author — offers some difficulties that need explanation. It is clear that Tacitus, while he believed the Christians innocent of incendiarism, considered them guilty from the point of view of the populace and deserving of the severest punishment because of their *flagitia* and "hatred of the human race," although not for arson. *Qui fatebantur* means most naturally "those who confessed to being Christians," although Arnold argued against this. Some Christians boldly asserted their religion; others no doubt, as in Bithynia, recanted before tribulation. By *indicio eorum* Ramsay (*CRE*, p. 233) understood "on the information elicited at their trial," i.e., from information gathered by the inquisitors in the course of the proceedings. This incidental information implicated a large number of others, hence Ramsay preferred the MS reading *coniuncti* to the correction *conuicti*. This is in order to explain the difficulty that the noblest Christians who boldly confessed their faith would seek to implicate brethren. Hardy, however, preferred the more usual rendering of *indicio eorum* as "on information received from them" (p. 67). *Some* may have consented to give the names of co-religionists to the Roman courts through torture, or for promised immunity, or through local jealousies. Party strife was not unknown in the early Church, as at Corinth; and in a cosmopolitan church like that at Rome, with converts from Judaism and paganism, a bitter sectarian spirit is easy to understand. Clement of Rome, writing from there a generation after the persecution, said that "a huge multitude" of Christians suffered "through jealousy or strife." The most natural and obvious meaning is "mutual or sectarian jealousy." Some explain this unpleasant fact by saying it was "by the jealousy of the Jews." If it were so, Clement would certainly have said so. A "huge multitude" need not cause us any trouble. It is a relative term; it was a considerable number that were inhumanly butchered.

Some have impugned the veracity of Tacitus in this important passage, alleging that he had read back the feelings and state of affairs in his own time (50 years later) into the days of Nero. They have questioned whether Christianity was then so independent of the Jews and whether there could be "a huge multitude" of Christians. Schiller went so far as to maintain that it was a persecution of the Jews and that the Christians only suffered as a sect of Judaism. Such a position is quite untenable, for Tacitus was too trustworthy a historian to fall into such confusion, and he knew the origin of the Christians. Besides, the influence of Nero's mistress Poppaea, who favored Judaism (Josephus *Ant.* xx.8.11), at that time would have prevented such a slaughter of the Jews.

The next question is, why were the Christians alone selected for persecution? That they were so singled out we know, but exactly for what reason is hard to say with certainty. A number of reasons may be mentioned (see also IV.B.2 above). (1) Farrar (I, ch. 4) and Lightfoot blamed Poppaea and Jewish malice for the first Christian persecution. This reason is inadequate, although the Jews were certainly bitter. (2) Christians were already recognized by the Roman authorities as a distinct sect, either from the reports of eastern provincial governors where Christianity was increasing fast or from the attention focused on Paul's first trial. As the newest sect they would serve as victims to appease deity and the populace. (3) The number of Christians was already considerable at Rome, and their aggressiveness and active proselytism made them even more formidable and produced dislike. (4) They were uncompromising in the expression of their beliefs. They looked for the burning of the earth by fire and were eagerly expecting the return of Christ, their King, to reconstitute society. (5) Trade jealousy produced hatred on the part of the heathen, e.g., Ephesian silversmiths, Bithynian graziers who sold annually many animals for sacrifice, procurers, fortune-tellers. Such people saw their livings affected by Christianity. (6) Family dissensions were caused when Christians forbade their converts to have a plurality of wives or concubines. (7) The Christians were undermining the religion of the state, which was pledged to maintain the ancient forms of worship. (8) The churches seemed to be secret societies and appeared to worship one Jesus as their king. Because they were increasing, this seemed a political danger. (9) Christianity was unpopular because it originated among the unpopular Jews, and in itself it seemed to be worse still. It had no official recognition and appeared to be simply private self-will.

For such reasons the Christians had earned the hatred of the populace, and a sect so detested must have fallen under the surveillance of the city police administration. They were chosen by Nero as scapegoats to serve his purposes. The origin of the first persecution was thus purely accidental — in order to remove suspicion from the emperor. It was not because of any already formulated policy, nor through apprehension of any danger to the state, nor because the Christians were guilty of any crimes. But accidental as this persecution was in origin, its consequences were of far-reaching importance.

There are now only two principal views about the date of the policy of proscription of the new faith by the Roman government: (1) the view of Ramsay (*CRE*, pp. 242ff.), who held that this development from punishment for definite crimes (*flagitia*) to proscription for the mere profession of Christianity took place between 68 and 96; and (2) that of Hardy (p. 77) and also Mommsen (*Expos.* [1893], 1-7) and Sanday (*Expos.* [1894], 406ff.) that the trial of the Christians under Nero resulted in the declaration of the mere profession, *the Name*, as a crime punishable by death. Tacitus apparently represented the persecution of the Christians as accidental, isolated, and of brief duration, while Suetonius (*Nero* 16) mentioned the punishment of Christians in a list of permanent police regulations for the maintenance of good order, into which it would be inconsistent to introduce an isolated case of procedure against the "baneful superstition" (Ramsay, p. 230). The two accounts are not contradictory. Tacitus gave the initial stage and Suetonius "a brief statement of the permanent administrative principle into which Nero's action ultimately resolved itself" (p. 232). But as yet, according to Ramsay, Christians were not condemned *as Christians*, but on account of *flagitia* attaching to the profession, and because the Roman police authorities had learned enough about the Christians to regard them as hostile to society. A trial still had to be held and condemnation pronounced "in respect not of the Name but of serious offences naturally connected with the name," first, incendiarism, a charge that broke down, and second, hostility to civilized society and charges of magic. The others agreed so far with Ramsay, concerning the first stages, but asserted that though initially a trial was needed, soon it could be dispensed with, the Christians being recognized as a society whose principles might be summarized as "hatred to the human race." The religion itself involved the crimes, and as a religion it was henceforth proscribed. The surveillance over Christians and their punishment was left to the police administration, which would step in

ROMAN EMPIRE AND CHRISTIANITY

at any time with severe measures or remain remiss, according to circumstances.

Christianity was henceforth a *religio illicita*. Persecution or its absence depended henceforth on the mood of the reigning emperor, the character of his administration, the activity of provincial governors, the state of popular feeling against the new faith, and other local circumstances. There is no early evidence that the Neronian persecution extended beyond Rome, though, of course, the "example set by the emperor necessarily guided the action of all Roman officials" and soon the trouble spread from the capital to the East, to Africa, and to the West. The stormy close of Nero's reign and the troubled days that followed created a short diversion in favor of Christianity. This Neronian persecution is important for the history of Christianity: Nero commenced the principle of punishing Christians, and thus made a precedent for future rulers. Nero was the first of the Roman persecutors who, like Herod Agrippa, came to a miserable end — a fact much dwelt on by Lactantius and other Christian writers.

B. Flavian Period (A.D. 68-96). In the Flavian period no uniform imperial *policy* against Christianity can be discovered. As we have seen, the Neronian persecution settled the future attitude of the Roman state toward the new faith. The Flavians could not avoid following the precedent set by Nero. Christianity was spreading — especially in the East and at Rome. We have no account of any persecution under Vespasian but it does not follow that none such took place. As the whole matter was left to the police administration, severity would be spasmodic and called forth by local circumstances. The fall of Jerusalem must have had profound influence both on Judaism and on Christianity. For the former it did what the fall of Rome under Goths, Vandals, and Franks did for the old Roman religion — it weakened the idea of a national god bound up with a political religion. The cleft between Judaism and its rival now became greater. Christianity was relieved from the overpowering influence of a national center, and those Jews who now recognized the futility of political dreams would more readily join the Christian faith. Not only the distinction but the opposition and hostility would now be more apparent to outsiders, though Vespasian imposed the poll tax on Jewish Christians and Jews alike. No memory of harshness against Christianity under Vespasian has survived. Ramsay (257) would interpret a mutilated passage of Suetonius (*Vespasian* 15) as implying Vespasian's reluctance to carry out *justa supplicia* against Christians.

Titus, "the darling of the human race," is not recorded as a persecutor, but his opinion of Judaism and Christianity as stated in the council of war before Jerusalem in A.D. 70 and recorded by Sulpicius Severus (*Chronicorum* ii.30.6-8) is interesting as an approval of the policy of Nero. Severus's authority is undoubtedly Tacitus (Bernays and Mommsen). The authenticity of the speech as nullifying the account of Josephus has been impugned; at any rate it represents the point of view of Tacitus. Titus then advocated the destruction of the temple in order that the religion of the Jews and the Christians might be more thoroughly extirpated, since these religions, though opposed to one another, were of the same origin, the Christians having sprung from the Jews. If the root were removed the stem would readily perish. There is no record in the short reign of Titus of any action against either party.

Domitian stands out as the arch persecutor of this period, as Nero was of the first period. His procedure against Christians was not an isolated act, but part of a general policy under which others suffered. His reign was a return to ancient principles. He attempted to reform morals, suppress luxury and vice, and banish immoral oriental rites, actors, astrologers, and philosophers. It was in his attempt to revive the national religion that he came in conflict with Christianity. His own cousin, Flavius Clemens, was condemned apparently for Christianity (atheism), and his wife Domitilla was banished.

The profession of Christianity in itself was not sufficient for the condemnation of Roman citizens of high standing; hence the charges of atheism or *majestas* were put forward. But for ordinary Roman citizens and for provincials the profession of Christianity merited death. No definite edict or general prescription was enacted; only the principle instituted by Nero was allowed to be carried out. There was, as Mommsen remarked, a standing proscription against Christians as against brigands, but harsh procedure against both was spasmodic and depended on the caprice or character of provincial governors.

Domitian took one definite step against Christianity in establishing an easy test by which to detect those who were Christians, namely, the demand to worship the *genius* of the emperor. This too was only part of Domitian's general policy of asserting his own *dominus et deus* (Lord and God) title and emphasizing the imperial cult as a bond of political union. Many Christians were martyred in succeeding reigns because they refused to worship the emperor. The Apocalypse probably reflects the sufferings of the Church in the reign of Domitian.

C. Antonine Period (A.D. 96-192). *1. Nerva and Trajan.* On the death of Domitian, peace prevailed for the Christians during the reign of Nerva and the first thirteen years of Trajan. It is curious that some of the best Roman emperors were harsh to the Christians (e.g., Trajan, Marcus Aurelius, Decius, Diocletian), while some of the worst (Commodus, Caracalla, Heliogabalus) left them in peace (*see* PERSECUTION). Pliny became governor of Bithynia in A.D. 111 and found, especially in the eastern part of his province, the temples almost deserted. Some Christians were brought before him and on established precedents were ordered to be executed for their religion. The Roman citizens he sent to Rome for trial; but being a humane man he shrank from carrying out the wholesale execution required by a consistent policy.

Pliny wrote to Trajan asking, Should no distinction be made between old and young? Should pardon not be extended to those who recanted and worshiped the emperor's image? Should mere profession (*nomen ipsum*) be a capital offense if no crimes could be proved? He explained his procedure: he gave those who were accused abundant opportunity to recant; those who persisted in this faith were executed. He considered their "stubbornness and inflexible obstinacy" as in itself deserving punishment. He was troubled by those who, through jealousy or dislike, anonymously handed in lists of Christians who denied belonging to the faith. He gave a most interesting description of Christian worship and Christian character — very creditable to them. Pliny was convinced their meetings were harmless and the Christian faith was nothing but a perverse and extravagant superstition.

On the whole, Trajan approved the lines suggested by Pliny. He replied that no definite or universal rule could be laid down but he ordered that (1) the Christians were not to be sought out by the authorities, but if they were accused and convicted they must be punished; (2) anonymous information against them was not to be accepted; (3) even those suspected in the past were to be pardoned on renouncing Christianity or proving they were not Christians. This rescript of Trajan did not alter the law in regard to Christianity but it made for tolerance and minimized

ROMAN EMPIRE AND CHRISTIANITY

greatly the dangers to which Christians were exposed from informers. The Christians regarded Trajan as a benefactor, for his lieutenants were encouraged to close their eyes to Christian offenders. The rescript, it is said, "marks the end of the old system of uncompromising hostility."

2. Hadrian. The reign of Hadrian (117-138) was a period of toleration for the Christians. He was greatly interested in all religions and was initiated into several mysteries. In Asia, where Christianity was making most progress, a state of terrorism was imminent; informers brought charges even against non-Christians so that they might receive bribes for withdrawing the accusations. The governor, Granianus, found himself in difficulties and wrote to Hadrian for advice. The emperor's reply was addressed to his successor Minucius Fundanus, *ca.* A.D. 124. Hadrian went much farther than Trajan in granting protection to the Christians. (1) Information is not to be passed over, lest the innocent suffer (as was the case under Trajan) and informers make a trade of lodging accusations; (2) provincials accusing Christians must give proof that the accused have committed something illegal; (3) mere petitions and outcries against the Christians are not to be admitted; (4) a prosecutor on failing to make good his case is to be punished. The Christians were very much helped, as informers became afraid to make charges. The laws against Christians, however, remained on the statute book, basically the same as before.

3. Antoninus Pius. Although a devout follower of the ancient Roman religion, Antoninus (138-161) continued the liberal policy of Trajan and Hadrian, for this just and gentle aristocrat liked to keep things nearly as he found them, although he could be strong and fearless when necessary. In his reign Ptolemaeus and Lucius were executed at Rome, and Polycarp at Smyrna, probably more through the actions of subordinates than his own. He strongly confirmed Hadrian's policy of protecting the uncondemned Christians against mob violence. He also repressed the iniquitous work of anonymous informers. There were cases, however, where public feeling was so high that his rescripts were disregarded.

4. Marcus Aurelius. Under Aurelius (161-180) a strong reaction set in affecting the Christians. This was caused partly by frontier disasters and devastating pestilence — regarded as punishments from the gods because of the growth of Christianity. The policy of Aurelius was to return to ancient principles and revive the Roman national religion. The leniency toward Christians of the last three reigns now ceased, and severe persecution extended to Gaul and to Africa. Aurelius, as a proud Stoic philosopher, could not understand the humility of the Christians nor their loyalty to one who had been crucified. For him their devotion seemed "sheer obstinacy" and this itself deserved punishment. While there was no direct edict for persecution, Christianity itself still constituted a crime. The Christians had a pathetic desire to look upon Aurelius as a friend because of his moral excellence; but, while there was no systematic attempt to extirpate Christianity, and he rebuked too much severity to the Christians at Lugdunum, he was far from being favorable to the Christian faith, which he never really understood.

5. Commodus. Under the rule of the pleasure-loving Commodus (180-192) Christians again enjoyed a respite, for he was too engrossed with his own petty concerns to persecute Christians. Ramsay and Hardy estimated somewhat differently the net results of the collisions between the new faith and the government in this period. Hardy thought that the Christian organization was never suspected as more than an abstract danger during the first two centuries. The danger, however, was a spiritual danger — a danger to the old gods in the main. Wise, broad-minded rulers like the Antonines must have felt that in the highest sense this was not a real danger from a moral point of view. As Christianity went on ever increasing in strength, these rulers must have realized at least partially that here was a potential power which could produce vast effects. When in the 3rd cent. the emperors Severus, Decius, and Valerian sought to stamp it out, Christianity was already too strong to be overcome. In about half a century more the empire had to offer terms and Christianity was triumphant.

D. Changing Dynasties (A.D. 192-284). In this period the insecurity of the throne (twenty emperors in ninety-two years) enabled Christianity to spread practically untroubled. The fierce barbarian wars on the frontiers absorbed attention and caused diversions in favor of Christianity. The Christians' aloofness from political strife helped them in this time of changing dynasties. Many of these emperors were non-Roman provincials, who were eclectic in their sympathies and had no special attachment to the old Roman faith. Some emperors were actually friendly to Christianity. Apart from the persecutions under Decius and Valerian, it was a time of remarkable peace for the Church, which now became strong and united, organized on the principle of the imperial government. In 202 Septimius Severus started a cruel persecution in Africa that claimed many victims, but it was stopped by Caracalla, though he was no pattern of virtue. Helio-

gabalus, a Syrian priest, indirectly aided Christianity through his degradation of Roman religion and his syncretistic tolerance of other religions.

Alexander Severus had high ideals and was tolerant. In his private chapel he had images of Orpheus, Apollonius, Abraham, and Christ, and the golden rule was engraved on the walls of the palace. The persecution under Decius was serious. The misfortunes on the frontiers were ascribed to the wrath of the gods. To appease them, and to restore the old Roman virtues, Decius decreed in A.D. 250 that all Christians must perform the ceremonies of the state religion. The same policy continued under Valerian (253-260). His efforts were directed especially against the officers of the church. Bishops and all kinds of clergymen were banished or cast into prison. Then the death penalty was imposed, and among those who perished were Bishop Sixtus of Rome and Cyprian of Carthage. Large numbers of fair-weather Christians abjured the faith, causing great problems in regard to discipline in the Church. Then Gallienus issued a decree of toleration and forty years of peace ensued for the Christians.

E. Diocletian to First General Edict of Toleration (A.D. 284-311). As dangers decreased, less desirable converts came into the Church and the flood of worldliness that ensued was stayed only by the persecution under Diocletian, which began in 303. This emperor was one of the wisest and ablest Roman rulers. For almost twenty years he had not persecuted the Christians, being indeed somewhat favorable to them. But, urged on by the evil counsel

ROMAN EMPIRE AND CHRISTIANITY

of his son-in-law Galerius, he gave an edict against Bibles, Christian assemblies, and churches. A second edict attacked church organization, a third sought to compel submission by torture. This was really a confession of failure; and a fourth edict was issued by Maximin, joint emperor ruling the west, which imposed the death penalty and ordered sacrifice to the gods. The persecution thus begun was the last and greatest of all the persecutions. Diocletian, convinced of the uselessness of these measures, abdicated in 305; but the persecution raged until 311 and two years longer in local persecutions. On April 30, 311, Galerius (stricken with a loathsome disease) issued from Nicomedia with Constantine and Licinius the first general edict of toleration. Christianity was now acknowledged as a *religio licita*, and very soon was to have a place superior to paganism in the empire.

F. First General Edict of Toleration to Extinction of Western Empire (A.D. 311-476). Constantine, having defeated Maxentius at the Milvian Bridge (Oct. 27, 312), became sole ruler of the West, and, in conjunction with his eastern colleague Licinius, issued the famous edict of toleration from Milan, March 30, 313, by which all religions were granted equal tolerance, and Christianity was thus placed on equal footing with paganism. It was enacted further that all places of worship taken from the Christians should be restored without delay and that all losses suffered in the persecutions be made good. After some years there came a clash between Constantine and Licinius, and the latter was defeated at Hadrianople in

ROMAN EMPIRE AND CHRISTIANITY

323, leaving Constantine as sole emperor. His marks of favor and donations to the Church had increased year by year, and with the founding of Constantinople Christianity became practically the state religion, while toleration was still extended to the pagans.

It has been alleged that Constantine became a Christian to be on the winning side and that his assistance to the Church was based on political considerations. This is scarcely fair. He became a Christian before there was any certainty that the faith would triumph over paganism. He had inherited from his father a strong spirit of toleration with considerable admiration for the Christian religion. We consider that he believed strongly in toleration for Christians and pagans alike. In this he was quite unlike his successors on the throne of the empire.

His sons departed almost completely from their father's ideas of toleration and sought to exterminate paganism by violence. When Constantius became sole ruler, after the deaths of his brothers, he proceeded to close down heathen temples and prohibited sacrifices to the gods, on pain of death. It was in vain. The emperor favored Arianism (which denied the true deity of Jesus) and thus heterodoxy tried to banish orthodoxy. Arianism being now in the ascendancy, place-seekers pretended to be Christians. This produced evil consequences. The emperor ignorantly interfered in church affairs. Corruption abounded, and if matters had continued thus the Church might well have perished.

The persecution under Julian the Apostate saved the Church from this. Julian, a near relative, narrowly escaped murder at the hands of Constantine's sons. The abominable treatment received drove him back into paganism. When, on the death of Constantius, he became emperor, he strove with all his might to restore paganism to its place of privilege and power. He proceeded against Christianity with rigor, rescinding the privileges of the clergy, forbidding bequests to the Church, removing Christians from public positions. He sought to establish a reformed paganism and endeavored to increase its splendor as a counterattraction. Paganism, however, was too corrupt to be revived, and the moral power of Christianity prevailed. Dying on a battlefield on the Persian frontier in 363, Julian is supposed to have acknowledged the victory of Christ, but this is not certain.

For a brief period there was religious neutrality, but Gratian, the new emperor, departed from this neutrality at the instigation of Ambrose bishop of Milan. He removed the statue of victory from the senate-house, refused the titles and robes of *pontifex maximus*, prohibited bloody sacrifices, and dealt a severe blow to the old faith by withdrawing some of the treasury grants, thereby making it dependent on the voluntary system.

Theodosius I (the Great) adopted a strenuous religious policy against both heresy and paganism. Under the influence of Ambrose of Milan, a man of strong personality and outstanding spiritual and intellectual power, the emperor began a systematic proscription of paganism. In various edicts between 381 and 392 Theodosius and Ambrose showed themselves intolerant — denying apostates from Christianity the right to make a will and the right of inheritance, interdicting heathen public worship and even some acts of private worship, and imposing heavier penalties for the performance of sacrifice. Christian vandalism became rampant, especially in the East, monks often leading the mobs to commit grave acts of violence.

The sons of Theodosius steadily pursued the suppression of paganism. Honorius in the West excluded pagans from civil and military offices (A.D. 408). That heathenism was still an attraction, however, is proved by the repeated laws against apostasy. Under Valentinian III (423-455) and Theodosius II, laws were enacted for the destruction of temples or their conversion into Christian churches. Valentinian strongly backed up the claims of Pope Leo I to be universal bishop, and made it an offense against the state to resist the dictates of the pontiff. In the Western empire heathenism was persecuted till the end, and its complete overthrow was hastened by the final fall of Rome (476). In the East Justinian closed the heathen schools of philosophy at Athens (529), and even prohibited pagan worship in private under pain of death.

VI. Victory of Christianity and Conversion of the Roman Empire.—Christianity was now acknowledged as the religion of both East and West. It had also grown strong enough to convert the barbarians who overran the West. It restrained and educated them under the lead of the Papacy, so that its conquests now extended beyond the Roman empire.

C. Merivale (preface to *Conversion of Roman Empire* [1864]) attributed the conversion of the Roman empire to four causes: (1) the external evidence of apparent fulfilment of prophecy and the evidence of miracles; (2) internal evidence as satisfying the spiritual wants of the empire and offering a Redeemer; (3) the example of the pure lives and heroic deaths of the early Christians; and (4) the success that attended the Christian cause under Constantine. Gibbon (ch. 15) sought to account for the phenomenal success of Christianity in the empire by (1) the zeal and enthusiasm of the early Christians, (2) the belief of Christianity in immortality with both future rewards and future retributions, (3) miracles, (4) the high ethical code and pure morals of professing Christians, and (5) strong ecclesiastical organization on imperial patterns. But these reasons do not account entirely for the success of the religion of Jesus.

A. Negative Causes. Among these were the moral and spiritual bankruptcy of the old world, the internal rottenness and decay of heathen systems. All ancient national religions had failed. Worship had degenerated into pure formalism that brought no comfort to the heart. Only the revelation contained in the gospel could satisfy the needs of the human heart.

B. Positive Causes. These were the most important causes — zeal, enthusiasm, and moral earnestness. Christianity showed its sterling qualities under persecution. Paganism with all its ancient prestige could not stand persecution. When state aid was withdrawn paganism could not prosper as the Christians did with their ideals of self-sacrifice. The belief in the early second coming of Christ raised Christians to a high pitch of earnestness. The exemplary lives of the Christians provided admirable propaganda. The moral and spiritual power of Christianity could withstand aggression. When once studied, Christian principles were found by thinkers to be in accord with the highest principles of reason and nature. But "the chief cause of its success was the congruity of its teaching with the spiritual nature of mankind" (Lecky). Christianity brought peace, comfort, and strength to earnest seekers in the ancient world.

It was adapted to all classes and conditions and to all changes — an immense advantage over all competitors. It gave the grandest expression to the contemporary ideal of brotherhood. Its respect for womanhood gained it many excellent converts. In this respect it was very superior to Mithraism, its most serious rival. Its ethical code was superior to any other. It could point to the charm and power of an ideal life in Jesus of Nazareth, and this provided a moral dynamic for both the philosopher and the common person, far above any abstract virtue. "It was

because it corresponded with the religious wants, aims and emotions of men, because the whole spiritual being could then expand and expatiate under its influence that it planted its roots so deeply in the hearts of men" (Lecky). Add to this the favorable circumstances of the time (see III above) and we can understand how the Roman empire finally accepted Christianity as the state religion.

  F. Right of Trial at Rome

In this article the discussion of private law is confined to its external history. In the treatment of criminal law attention is directed chiefly to the important constitutional guarantees intended to protect Roman citizens against arbitrary and unjust punishments.

I. Introduction.–The source of Roman law is the family or *gens*. The proprietary rights of the *pater familias* as head of this primitive unit of organization are fundamental in private law, and the scope of the criminal jurisdiction of the state was limited by the power of life and death exercised by the head of the family over those under his authority. Their transgressions were tried before the domestic tribunal.

At one time many different classes of crime must have been punished by the priests as sacrilege, in accordance with the divine law (*fas*); the offender would have been put to death as a sacrifice to the offended deity. Restitution for private violence or injustice would have been left to private initiative. Thus avenging the death of a kinsman was more than a right; it was a religious duty.

The law of the Twelve Tables that allowed the nocturnal thief and the adulterer caught in the act to be killed was a survival of primitive private vengeance. Survivals of the old religious rules demanded condemnation to death for sacrilegious acts. The secular conception of crime as an offense against the welfare of the state gradually superseded the older conception. Private law arose when the community eliminated an individual's or a family's right directly to seek justice, which caused societal disorder. The parties to a disagreement were compelled to submit their claims to an arbitrator.

II. Roman Private Law.–*A. The Twelve Tables.* Roman private law was at first a body of unwritten usages handed down by tradition in the patrician families. The demands of the plebeians to know the laws by which they were governed and taxed resulted in the publication of the famous Twelve Tables (449 B.C.), which were later regarded as the source of all public and private law (Livy iii.34.6). But the code was not scientific or comprehensive. To meet the growing requirements of the republican community, its primitive form was expanded, chiefly by interpretation and the *jus honorarium*.

B. Civil Procedure. The *praetor*, or magistrate, listened to the claims of the litigants and prepared an outline (*formula*) of the disputed issues. He submitted it to a *judex*, or arbitrator, a one-man jury, who decided the questions of fact involved. Neither *praetor* nor *judex* had special legal training. The court therefore had recourse to authorities on the law (*jurisprudentes*), whose opinions (*responsa*) formed a valuable commentary on the legal institutions of the time. The body of rules amassed by such interpretative adaptation would never have been recognized by the authors of the Twelve Tables.

C. Jus Honorarium. *Jus honorarium* was so named because this law rested upon the authority of magistrates (*honor* = magistracy). It was composed of orders that had been issued in cases for which the existing law did not make adequate provision. This second agency for legal expansion may be compared with English equity (chancery-court legal and procedural rulings that enforce common and statute law by supplementing or overriding it). These orders were issued by the praetors and had legal force during only the tenure of their office. But succeeding praetors usually reissued the ones that had proved just and expedient, and in time there arose a large and uniform body of rules which praetors issued in an edict before beginning their term of office. Thus Roman law maintained a proper balance between elasticity and rigidity.

D. Praetor Peregrinus. The institution of the *praetor peregrinus* (241 B.C.) to hear cases in which parties were foreigners led to a series of similar edicts. Since most of the foreigners were Greeks from southern Italy, these edicts formulated principles based on the spirit of Greek law, which became an important means for gradually broadening Roman law.

E. Imperial Ordinances. Under the empire direct legislation superseded the other sources of law — enactments of the senate (*senatus consulta*), imperial ordinances, and occasional bills ratified by the people (*leges*). Imperial ordinances eventually superseded all other types; they consisted of *edicta* (issued by the emperor as orders, similar to those of the republican magistrates), *decreta* (decisions of the imperial tribunal, of force as precedents), and *rescripta* (replies by the emperor to requests for interpretation of the law). All these imperial acts were known as *constitutiones*.

F. Golden Age of Juristic Literature. In the 2nd cent. A.D. Salvius Julianus was commissioned to invest the praetorian edict with definite form. The Institutes of Gaius that appeared around the same time became a model for subsequent textbooks on jurisprudence. This was the Golden Age of juristic literature. A succession of able thinkers, such as Papinian, Paulus, Ulpian, Modestinus, and Gaius (cf. Codex Theodosianus ii.4.3), applied to the incoherent mass of legal materials the methods of scien-

tific investigation, developing a system of Roman law and establishing a science of jurisprudence.

G. Codification in the Later Empire. The emperor Justinian (A.D. 527-565) finally codified the immense body of Roman law. The board of eminent jurists engaged in the great work published (1) the *Code* in twelve books, a selection of imperial enactments from Hadrian onward; (2) the *Digest* or *Pandects* in fifty books, extracts from the juristic literature; and (3) the *Institutes,* a textbook in four books. Most Roman private law has come down to modern times in this form. Next to the Christian religion, it is the most plentiful source of the rules governing actual conduct in Western Europe (J. Bryce, *Studies in History and Jurisprudence* [1901]).

***III. Roman Criminal Law.**–A. Jurisdiction in the Royal Period.* In the royal period criminal jurisdiction, insofar as it was a function of secular administration, was the right of the king. The titles *quaestores parricidii* ("prosecutors of murderers" [lit. "parent-murderers"]) and *duumviri perduellionis* (lit. "two-man commission for treason") indicate the kind of crimes first brought under secular jurisdiction. The republican magistrates inherited the royal right to punish crimes and the power to compel obedience to their own decrees by means of penalties (*coercitio*).

B. Right of Appeal. The right of the people to final jurisdiction in cases involving the life or civil status of citizens was established by an enactment (perhaps 509 B.C.) granting the right of appeal to the assembly (*provocatio*) against a capital or other serious sentence pronounced by a magistrate (Cicero *De re publica* ii.31 [54]; Livy ii.8.2). This right of appeal was extended by subsequent enactments (*leges Valeriae,* Valerian laws) in 449 and 299 B.C. Generally the magistrates made no provisional sentence of their own but brought their charges directly before the people.

1. Penalties. The death penalty was practically abrogated in republican times, for the accused was allowed to go into voluntary exile. The Romans rarely imposed imprisonment and granted the right to appeal heavy fines. A right of appeal was granted *ca.* 300 B.C. against decisions of the dictator, who previously had held the power of life and death over the citizens (Livy xxvii.6.5).

2. Porcian Law. The right of appeal to the people was valid in Rome and as far as the first milestone from the city. The Porcian Law virtually secured this protection for all Roman citizens, wherever they might be, by establishing their right to a trial at Rome. Thus Roman citizens in the provinces, in all serious cases, were sent to Rome for trial; other persons were subject to the criminal jurisdiction of the municipalities unless the governor summoned them before his own tribunal.

C. Popular Jurisdiction Curtailed. The exercise of this popular jurisdiction was gradually curtailed by the establishment of permanent courts. The people delegated their authority to judge certain classes of cases. The first of these courts (149 B.C.) was authorized for the trial of charges of extortion against provincial governors. Compensation was the main purpose of accusers in bringing charges before this and later permanent courts. The procedure was similar to that in civil cases. A praetor presided over the tribunal; a number of *judices* replaced the single juror. Sulla provided seven courts — each dealing exclusively with extortion, treason, embezzlement, corrupt electioneering, murder, fraud, or assault.

D. Jurors. Jurors were originally chosen from the senate, but C. Gracchus transferred membership in all the juries to the equestrian class. Sulla admitted three hundred members of the equestrian class to the senate, to which he then restored the exclusive control of the juries. In 70 B.C. a judicial law gave equal representation in the courts to all three classes of the people; 1080 names were then on the list of jurors (Cicero *In Pisonem* xl). Caesar abolished the plebeian jurors. Augustus restored them but confined their action to civil cases of minor importance (Suetonius *Caesar* 41; *Augustus* 32). He excused senators from service as jurors.

E. Disappearance of Criminal Courts. The system of criminal courts diminished in importance under the empire and disappeared in the 2nd century. They were replaced by the senate, over which a consul presided, then by the emperor, and later by officials delegated by the emperor. At first the senate functioned as had the jurors in the permanent courts to the praetor. Then the emperor and imperial officials decided without a jury, and the judicial competence of the senate was gradually lost. After the 3rd cent. trial by jury ceased to exist.

An important innovation was the right to appeal the decisions of lower courts to higher tribunals. The emperors and eventually their delegates (usually the two prefects) heard appeals from Roman and Italian magistrates and provincial governors.

F. Right of Trial at Rome. Under the early empire provincial governors were generally obligated to grant Roman citizens' demand to be tried at Rome (*Digest* xlviii.6f.), although this rule apparently had exceptions (Pliny *Ep.* ii.11; *Digest* xlviii.8, 16). Lysias, tribune of the cohort at Jerusalem, sent Paul as a prisoner to Caesarea, the capital of the province, so that Felix the procurator might determine what to do since Paul was a Roman citizen (Acts 23:27). Two years later Paul asserted his privilege of being tried at Rome by the emperor (25:11-21). Roman citizens who were sent to Rome might be brought before the senate or the emperor, but usually the imperial tribunal handled these cases and eventually supplanted senatorial jurisdiction over them. The formula of appeal became proverbial: "I am a Roman citizen, I appeal unto Caesar" (cf. 25:11).

As Roman citizenship became more and more widely extended to people throughout the empire, its relative value diminished. Many of its special privileges, such as the right of trial at Rome, must have been gradually lost. It became customary for the emperors to delegate their power of final jurisdiction over the lives of the citizens (*jus gladii,* "right of the sword") to the provincial governors. After Caracalla had conferred Roman citizenship upon the inhabitants of the empire generally, the right of appeal to Rome remained the privilege of certain classes, such as senators, municipal decurions (*Digest* xlviii.19, 27), officers of equestrian rank in the army, and centurions (Dio Cassius lii.22, 33).

VIII. Literary Problems

I. Significance.–The Epistle to the Romans is widely regarded as the most significant of Paul's letters. Some passages in his other writings may reach higher emotional heights or contain momentary flashes of deeper intuitive insight into the wonder of the gospel, or even, as Ephesians, set forth the cosmic grandeur of the gospel in more profound terms. In its totality, however, Romans stands alone in the massiveness of its thought and the power it has released in history through its testimony to the gospel as "the power of God for salvation to every one who has faith" (1:16). The Church instinctively testified to this in placing Romans first in the arrangement of the Pauline corpus, though it was not the earliest of Paul's writings.

The letter marks a most decisive moment in Paul's own career. Luke caught the significance of this when he organized the book of the Acts around the shift from the Jews to the Gentiles as a crucial scene of God's action in history. The center of the Church moved from Jerusalem to Rome. This had more a theological than a geographical significance. The overtones of it were heard in almost every local congregation that Paul founded. He first preached in a synagogue. A few Jews believed his gospel, but the majority disbelieved and drove him out. Then came the necessity to create a new Christian community distinct from the synagogue. Four times Luke describes Paul as definitely turning from the Jews to the Gentiles (13:44-47; 18:5-7; 19:8f.; 28:23-28), the last forming the climax of the book of the Acts. The Church is Israel, the people of God, and includes "every one who has faith, ... the Jew first and also . . . the Greek" (Rom. 1:16; cf. also Eph. 2:11-22).

When Paul wrote Romans, it was this decisive turning point that dominated his thinking. He had completed his missionary work in the East. His purpose of proclaiming the gospel to the entire gentile world now made him turn his attention to the West. His goal was Spain (Rom. 15:24). Though he loved his own people ("For I could wish that I myself were accursed and cut off from Christ for the sake of my brethren, my kinsmen by race" — 9:3; cf. also 10:1), his experience with them through years of missionary toil and the fear of what awaited him when he returned to Jerusalem — even that he might not "be acceptable to the saints," the Jerusalem Christians (15:31) — convinced him that Jerusalem could not remain the permanent center of a worldwide missionary movement. Many Jews were succumbing to an apocalyptic frenzy and were headed toward a messianic war which they thought would establish the "sons of light" as victors over the gentile "sons of darkness" (1QM 12:10-15), but which turned out quite the opposite within a decade in the Jewish war of A.D. 66-70. Even the Jewish Christians in Jerusalem may have been patriotically goaded by Jewish rigorists in their midst to look upon Jesus as a Jewish Messiah who was about to destroy all the gentile enemies of God. So Paul sensed that a new center of operations was necessary for a gospel that proclaimed salvation to all people — Jews and Gentiles alike — on the basis of grace through faith. As Antioch had become the point from which the Church's mission spread throughout the East, so Rome must become the heart of the missionary movement of the West. The offering Paul had collected for the Jerusalem Christians in Macedonia and Achaia, and his insistence on delivering it in person, even at the risk of his life (cf. Acts 20:22-24; 23:21), indicate in his thinking both the Gentile Church's indebtedness to the Mother church at Jerusalem and the oneness of the Jewish and Gentile Christians. But the center of gravity had to shift to the capital of the empire, where the Lordship of Christ over the whole world could best be promulgated. With this decisive move in mind, Paul wrote to the Romans to give a full statement of the universal gospel that he preached. Behind the letter lies the living decision of a man "whom Christ had saved and who believed that he would likewise save the world" (E. F. Scott, p. 14).

The significance of the letter to the whole Church is to be seen in the central role it has played in decisive movements of spiritual renewal. The quickening of the Church's life under Augustine, the reforming of the Church under Luther, the burst of new life under Wesley, and the theological revival prompted by Barth, are all intimately related to the Epistle to the Romans. Furthermore, since there has never been any serious questioning of Pauline authorship, and because the letter is not highly polemic, it depicts clearly the essence of the Christian faith according to its greatest exponent in the 6th decade of the 1st century. Since the gospel here written is what Paul had preached earlier, either Paul very early hopelessly distorted the faith promulgated by Jesus and persuaded the majority of the first-century Christian Church to join him in this distortion, or he understood it profoundly and drew out its full significance in the light of the Resurrection. Critical study has increasi ly found not a hiatus but a clear line of connection between Jesus and Paul. Hence, this fullest statement of his gospel stands as a bulwark against all efforts to distort Christianity into just another religion instead of God's unique mighty action of grace in Jesus Christ. From this standpoint, it is one of the most significant writings in the NT canon.

II. Literary Type.–Because Romans is the longest of Paul's letters and the most formal in structure, it has often been considered a formal theological treatise, intended as a compendium of Paul's theology to be preserved for posterity. For this reason, also, it has at times been neglected as a theoretical, impractical work, devoid of any relation to life and, in fact, a diversion from and an impediment to ethical action by reason of its "religious theorizing." A. Deissmann, however, made a strong case for this writing as a nonliterary letter rather than "a compendium of Paulinism." Paul "does not think of the literary public of his time, or of Christians in general, as his readers; he appeals to a little company of men whose very existence, one may say, was unknown to the public at large . . . It is not theological paragraphs which Paul is writing here, but his confessions" (*Bible Studies* [2nd ed., Eng. tr. 1909], pp. 48f.). This judgment seems confirmed by the absence of a discussion of some of the major aspects of the faith, such as the Lord's supper, the Church, and the Resurrection. Furthermore, the personal references, to both writer and readers, indicate that the letter was written to a specific group in a specific situation (1:6; 8-15; esp. 7:1, 4; 8:12; 10:1; 11:13; 15:14f., 22-32).

On the other hand, Deissmann may have overstated the case, inasmuch as Romans is more formal than the other known letters of Paul. "Paul obviously does not wish to give a summary of his whole teaching, as was often thought at the time of the Reformation (P. Melancthon); he does not, however, allow himself simply to be driven by the flow of his thought, although digressions are occasionally possible. The concern is more with a conscious carrying forward of a very definite train of thought, which is characterized by the idea of the eschatological 'righteousness' (Rom. 1:17)" (Michel, pp. 5f.). The plan of the letter, nevertheless, was dictated not by a desire to give a definitive statement of Paul's total theology, but by

ROMANS, EPISTLE TO

the immediate necessities of the situation in Paul's coming relations to the church at Rome.

As for the bearing of the letter on the practical realities of life, if it is devoid of such we are faced with the inexplicable contradiction of a purely theoretical work coming up out of the life of one of the world's most practical men, at a time in his life when he was plotting the most magnificent practical task ever conceived by the human mind — to claim the entire world for Jesus Christ. Paul had just concluded nearly three years of arduous toil in Ephesus, where as a man of action he had founded churches throughout the province of Asia, had induced the superstitious multitude to make a public bonfire of their books of magic, had produced a city-wide riot, and had been thrown to the lions (Acts 19; 1 Cor. 15:32). He was now waiting for three months in Corinth (Acts 20:3), preparing to take a large sum of money raised by his efforts to the underprivileged in Jerusalem (Rom. 15:25ff.). After that, he planned to go via Rome to Spain to complete his magnificent plan to set the banner of the cross in every corner of the then known world (Rom. 15:22-24). The immediate goal of the Roman letter was practical, in that he hoped to solicit the support and cooperation of the Christians at Rome in completing his evangelization of the West. His letter, then, far from being impractical, is less an exposition of doctrine than "an inspiring call to Christian action" (Scott, p. 23).

III. Occasion.–It is almost universally accepted that Romans was written near the close of the so-called third missionary journey, after an extended ministry of between two and three years at Ephesus (Acts 19:8, 10). At the conclusion of this ministry, during which time he had kept in close touch with the church at Corinth by writing and a hurried visit (see 2 Cor. 2:1), he journeyed to Macedonia (Acts 20:1) and spent three months in Greece (Acts 20:2f.) before setting out for Jerusalem to deliver the collection he had gathered for the poor there. This three-month stay in Greece was likely at Corinth (see 1 Cor. 16:5f.).

Romans gives every evidence of belonging to this period in Paul's career. He had been in Macedonia and Achaia collecting contributions for Jerusalem (Rom. 15:25-28). After delivering these, he hoped to visit Rome on his way to Spain (Rom. 15:24, 28). He requested the prayers of the Roman Christians that he might escape trouble in Jerusalem (Rom. 15:30f.). These facts square with Paul's situation at the close of his Ephesus ministry. Romans was, therefore, probably written from Corinth during Paul's three-month visit there prior to leaving for Jerusalem.

IV. Date.–The uncertainties of Pauline chronology make it impossible to date the letter with precision. The two limits of a date are provided by the proconsulship of Gallio at Corinth and the replacement of Felix by Festus as procurator in Palestine. An inscription at Delphi indicates that Gallio was proconsul in A.D. 52. Proconsuls in senatorial provinces were appointed for either one or two years. Depending on whether the inscription was made early or late in Gallio's proconsulship, and on whether he was in office for one or two years, the date of his regime must have fallen between 50 and 53. Since Acts 18:11 indicates the total stay of Paul in Corinth as eighteen months, and Acts 18:18 suggests that after his appearance before Gallio he stayed only "many days longer," it is quite likely that Paul left Corinth rather early in Gallio's proconsulship. Events between Paul's departure from Corinth, after his earlier eighteen-month ministry there, and his three-month visit at the conclusion of his Ephesian ministry, would seem to demand an interval of approximately four years between the two visits. If, therefore, Gallio took office in 50/51, Romans may be dated 54/55. On the other hand, if Acts 24:27 means that Paul had been imprisoned for two years when Festus succeeded Felix, and if Felix, as seems likely, was recalled in 55, this would mean that Paul had been arrested in 53, a date inconsistent with the suggestions made above. If, however, the "two years" of Acts 24:27 may be construed to refer solely to the period of Felix's procuratorship rather than to Paul's stay in prison, then a date of 55 would be more plausible. Paul, then, could have written the letter in the early spring of 55, and have been arrested in Jerusalem a few weeks later. On the other hand, the recall of Felix may have been later than 55, and the beginning of the proconsulship of Gallio cannot be precisely fixed, so Romans might have been written as late as 58/59.

The impossibility of giving a precise date to Romans, however, is inconsequential in determining its place in the development of early Christian thought. Whether written in 55 or 58, the letter falls within a period of approximately twenty-five years of the death of Jesus, when the memory of His days on earth was still fresh in the minds of many. Hence the understanding of Jesus' significance set forth in Romans was not a docetic reinterpretation lacking any historic connection with Jesus Himself. Today, "we do not have to choose between Paul and the Gospels . . . the continuity between Jesus and Paul is essentially unbroken." "Paul's view of the gospel . . . has both its origin and its anchor in Jesus' proclamation about the Kingdom of God" (Nygren, pp. 3, 9).

V. Recipients.–A variety of views has surfaced regarding the recipients of this letter. Was it aimed at a specific, concrete situation in the church at Rome, as has been customarily proposed, or was it directed elsewhere? Among those who suggest the latter, Bornkamm (pp. 88ff.) thinks of it as Paul's "last will and testament" written in the light of the danger awaiting him in Jerusalem. Fuchs (p. 191) suggests that it was a "secret letter" written to Jerusalem. Manson (pp. 225ff.) and others argue that it was a circular letter sent to several churches, accompanied in each case by a covering letter. Chs. 1–15, therefore, are the "Roman edition" of the letter, while ch. 16 is the covering letter of the "Ephesian edition." These suggestions raise more problems than they solve. Because Paul's intention to visit Rome shortly after the letter was written (Acts 19:21) would make it perfectly natural for him to want to establish a relationship with believers there before arriving, and because possible reasons for the circulation in the early Church of shorter forms of a larger letter appear plausible (see Gamble), wisdom seems to lie with the judgment that the entire letter was originally intended for the Roman church (see VIII below).

The circumstances of the founding of the church at Rome are unknown. Negatively, it is clear that Paul did not participate in it (1:13; 15:22-24), and there is no evidence connecting Peter with the church at Rome, at least until his martyrdom. Since the name of no outstanding person is connected with it by any objective historical evidence, it seems quite likely that the congregation at Rome came into being "without the agency of a specific missionary" (G. Friedrich, *RGG*, 3rd ed.)

Several conjectures about the origin of the Roman church have been made. It may have arisen through converts among the visitors from Rome, both Jews and proselytes, who were present at Pentecost (Acts 2:10). The close connection between the Jews of Palestine and those of Rome has also been suggested as the historic root from which the church grew (cf. Hort, pp. 8f.). A third suggestion is that the church at Rome may have been the

result of a missionary thrust by the Hellenistic Christians at Antioch (H. Lietzmann, *Beginnings of the Christian Church* [Eng. tr. 1937], pp. 144f.). A more widely held view (and, to this writer, the most probable) is that the church at Rome had its origin in the mixed multitude of travelers to Rome (officials, civil servants, soldiers, merchants) who brought the gospel with them from the East (see Tacitus *Ann.* xv.44).

Were the Roman Christians mainly Jews or Gentiles? Theodore Zahn argued that they were mainly Jewish. The weight of evidence seems, however, to force an opposite conclusion. A part of the congregation was most certainly of Jewish origin (see 2:17-24; 3:1-9; 4:1-22; 7:1); and if, as seems likely, the remark of Suetonius about the Jews being excluded from Rome by Claudius in the year 47 because of strife over one named *Chresto* (*Claudius* 25) refers to conflict over the Messiah (*Christo*), then the Christian church at Rome arose out of the synagogue, as did most of Paul's churches (see Acts 13:14, 43; 14:1; 17:1f., 10; 18:4; etc.). The synagogues themselves, however, contained many gentile proselytes, and Jewish opposition to the gospel progressively drove a wedge between synagogue and church, transforming the Christian fellowship into a predominantly gentile body (see Acts 18:5-7; 28:17-28). Both specific references and the tone of the Roman letter seem to demand a gentile majority in the Roman church (see 1:5f., 13; 9:3-5; 10:1f.; 11:13-32; 15:15f.). Although the Jewish problem looms large in the thought of the letter (see chs. 2–4, 7, 9–11), it is not discussed in the heat of a conflict wherein the church was in danger of capitulating to the Judaizers (as in Galatians), but from the standpoint of the whole theological problem of the relation of Israel to the Church and the relation of the strange fact of the temporary bypassing of Israel to the purpose of God in her election. The saving work of God for humanity — both Jew and Gentile — is the focus of thought throughout.

But, although the church at Rome was made up mainly of Gentiles, with an intermixture of Jewish Christians, what groups were represented in its fellowship? It is difficult to determine this with precision, yet certain clues may be found in the letter itself. Three general groups seem to be in Paul's mind. (Paul Minear [pp. 8ff.] has detected five factions, but some have questioned whether the personnel of the Roman church can be refined that precisely.) There were legalists, or "moralizers," who thought that righteousness was a human achievement attained by keeping the law and ordering life by rules and regulations. There seems to have been no large group of "Judaizers" such as those who plagued Paul so constantly elsewhere, for the characteristic problems of circumcision and table fellowship with non-Jews do not appear. The legalism took the form rather of asceticism, wherein some were vegetarians (14:2) and others observed certain special days for fasting and religious observances (14:5). These became victims of the sins of judging others (14:10) and of spiritual pride, boasting that their asceticism made them stronger than their brothers, whereas they were in reality the "weak" (14:1; 15:1). The whole emphasis of the Epistle against any human effort to attain righteousness before God is directed at this group.

An opposite group were the "libertines" or "antinomians," who sought to exalt the worth of God's grace by deliberately ignoring the demands of the law. They abandoned the law not only as a means of justification, but also as a guide to the response of faith in obedience. They did "evil that good may come" (3:8) and continued "in sin that grace may abound" (6:1). These Paul countered by his doctrines of "death" to sin and "newness of life"

A page from $\mathfrak{p}^{30}$ (3rd cent.) showing Rom. 11:36–12:8 (The Department of Rare Books and Special Collections, The University of Michigan Library)

in the risen Christ (ch. 6), which summon believers to "make no provision for the flesh, to gratify its desires" (13:14).

A third group were the "spiritualists" whose spiritual "gifts" led them into spiritual pride and destroyed the true sense of community in the church (12:3-8), besides making them indifferent to the demands of the civic order (13:1-7). These Paul corrected with his doctrine of the oneness of the body of Christ and the responsibility of all its members to use their gifts for the good of the whole (12:6-8), and with his grand conception of the divine origin of all forms of authority in the universe (13:1).

VI. Theme.–The theme of Romans has been variously stated, with "justification by faith" perhaps leading the field. If this were in fact the theme, the letter might well have ended with ch. 5. Some have argued, therefore, that Romans is a "general treatise on systematic theology." The omission of several of Paul's theological emphases, however, and the tone of the immediacy which ties it to a specific historical situation, make this view highly questionable (see III above).

A theme broader than "justification by faith" and narrower than a total statement of Paul's theology is demanded. It would seem that Paul himself furnishes us with his theme in 1:16f. — the "good news" of God's righteousness by which all people, both Jews and Gentiles, are brought under judgment for their unrighteousness and, even more, for their futile attempts to make themselves righteous, yet at the same time are freely offered in Jesus Christ the gift of a "righteousness from God" which has "power" both to restore them to a right relationship with God and to free them for a life lived by the dynamic of the indwelling Spirit of God. The apostle to all the nations

here sets forth the good news of the gift of God's righteousness to all the nations.

From this center radiate the major emphases of the letter. Christology runs like a golden thread through the entire work, since it is in Christ that God offers His gift of righteousness (3:21-26; 5:1f., 6-11; 8:1-4) and through Him that Paul was commissioned to preach to the nations (1:1-5). In the risen Christ God had confronted all of Paul's efforts at righteousness, condemned them, and offered him the free gift of His own righteousness. God's gift of righteousness in Christ is received through faith rather than as a reward merited by keeping the law (3:20-24; 4:1-25; 5:1f.). The law as the Jews understood it had condemned Jesus as accursed. But the resurrection had vindicated Jesus and demonstrated that the law was not a means of righteousness but a tutor unto Christ (Gal. 3:24f.), in whom people are to believe. An emphasis on providence is dealt with in relation to God's election, the temporary bypassing of the Jewish people, and the offering of His gift of righteousness to the whole world (ch. 9–11). Ethics finds its place in the Epistle as the response of faith in obedience, since, although good works are never the condition of God's gift of righteousness, they are the expected fruit of it.

VII. Development of Thought.–After a prologue (1:1-7) and an initial greeting in which Paul gives thanks for the church at Rome and states his hopes for a visit (1:8-15), he sets forth his theme — the recovery of right relations with God through His gift of Jesus Christ (1:16f.).

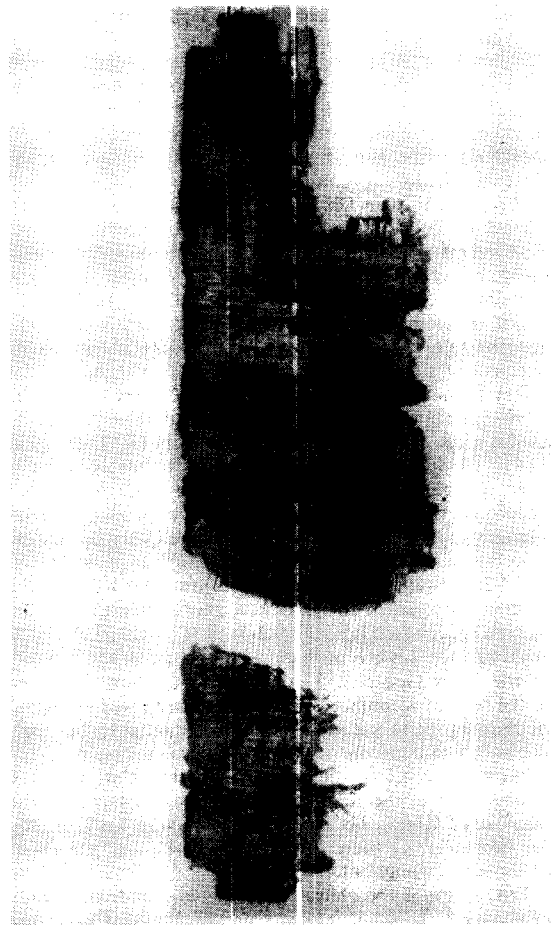
The human predicament making God's gift necessary is that both Gentile (1:18-32) and Jew (2:1–3:20) have forfeited their standing with God and can only appear before His bar of judgment to hear the verdict — guilty!

God can now freely acquit the guilty without violating His own righteousness since He has wrought redemption through His gracious gift of Jesus Christ. This excludes all human boasting about achievment or merit, for God's grace is given only to those who believe, of whom Abraham is the prime example (3:21–4:25).

Believers now experience peace, joy, and hope amid the trials of life, inasmuch as they know that finally the mark of Adam — death — which rests on everyone will be overcome by Christ, whose grace reigns "through righteousness to eternal life" (ch. 5). Grace, however, does not make believers morally or ethically irresponsible, because they have died to sin in Christ and have been raised with Him to a new life of obedience (ch. 6). The failure of the law to achieve righteousness does not suggest that the law is faulty, but that human beings are too weak and sinful to keep it (ch. 7). What the law was powerless to do, however, God has done in Christ by the gift of His Spirit, who makes believers triumphant over the onslaughts of evil from their lower nature and from outer enemies, both historic and cosmic, whether in the present or in the future (ch. 8).

But how is Israel's rejection of God's gift of righteousness to be interpreted? It clearly indicates that they had followed the wrong path in trying to establish their own status before God by keeping the law (chs. 9f.). Yet a remnant of Israel has accepted God's righteousness, and God has used the rejection of the others to bring salvation to the Gentiles. There is, too, the never-dying hope that all Jews will yet accept God's gift of righteousness (ch. 11).

Sharp debate has arisen over the view of K. Stendahl and others that in Rom. 11 Paul drew back from the exclusive claim that the salvation of "all Israel" (11:26) depends on their faith in Christ, and took the position that although Gentiles must be saved by faith in Christ, the Jews will be saved by faith in God apart from Christ.



Fragments of Rom. 8:34–9:3 (top) and 9:6-8 (bottom) from $\mathfrak{p}^{27}$ (3rd cent.) (by permission of the Syndics of Cambridge University Library)

Others, reflecting the current sensitivity to anti-Semitism, hold that although Paul thought faith in Christ was necessary for Jews as well as Gentiles, we must differ with him in this regard and accept the Jewish covenant as sufficient for the Jew apart from Christ. Bornkamm (pp. 228ff.), Käsemann (*Perspectives*, pp. 60ff.), and others have challenged this view. It would seem difficult to square it with Paul's total thought. On this hypothesis Paul himself, being a Jew, would have found Christ irrelevant to his own salvation — a case difficult, if not impossible, to make. Whether we agree or disagree with Paul on this matter is less a question of anti-Semitism than of one's view of the authority of Scripture and the universal efficacy of Christ's redemptive deed. The "Judaizers" with whom Paul argued had already accepted Christ. The issue was not, then, over whether Jews should accept Christ, which the "Judaizers" had already done, but whether Gentiles, in order to be Christian, must first become Jews. The gospel presented by Paul in Romans, which God "promised beforehand through the prophets in the holy Scriptures," was "the gospel concerning his Son," which is "the power of God for salvation . . . to the Jew first and also to the Greek" (1:2, 3, 16).

The mercy of God in restoring humanity to right relations with Himself lays upon believers the obligation to respond gratefully in ethical behavior in every aspect of personal life as well as in concern for weaker Christians

ROMANS, EPISTLE TO

Fragments from Rom. 8:12-26 from p^{27} (3rd cent.) (by permission of the Syndics of Cambridge University Library)

and the strengthening of the whole community of faith (12:1–15:13).

The letter closes with Paul's personal plans (15:14-33), a series of greetings to friends (with a brief warning against false teachers), and a doxology (ch. 16).

VIII. Literary Problems.–The letter to the Romans seems to have circulated in three different recensions. One was the longer recension, including the whole of the letter as it now stands. A second was a shorter recension, with chs. 15f. omitted save for the doxology in 16:25-27. The third was the form contained in the Chester Beatty Papyrus p^{46}, in which the doxology is placed at the end of ch. 15. Did the original letter contain only chs. 1–14, to which chs. 15f. were added later? Or, do both shorter forms represent editorial reduction of the original sixteen chapters? The problem is complicated in that some MSS (among them the best) place the doxology at the end of ch. 16, many place it at the end of ch. 14, p^{46} places it at the end of ch. 15, a few place it at the end of both chs. 14 and 16, and two or three omit it altogether. Furthermore, the words "in Rome" are omitted at 1:7 and 1:15 in a few MSS.

It is possible that Paul wrote a general letter to his churches composed of chs. 1–14, then later added special materials to it and directed the enlarged copy to the church at Rome. But this leaves the direct personal address to a specific church in 1:8-13 unexplained, and has the additional disadvantage that 14:23 would be a very unlikely close to the letter. Even with the addition of the doxology, it does not end naturally; furthermore, the thought of ch. 14 runs right on into ch. 15.

A second possibility is that Paul wrote chs. 1–15 to the church at Rome, while ch. 16 represents a brief letter to another church which by editorial accident was bound with the Roman letter. This could account for the recension found in p^{46}. If so, the omission of ch. 15 in the shorter recension may have been due to Marcion, who was offended by its Jewish and OT references, or it could be the result of accidental mutilation of the end of the papyrus roll on which it was written. The longer form of the letter seems the more likely.

Did Romans end, however, with ch. 15? Or was ch. 16 a part of the original letter? Many omit ch. 16 for the following reasons: (1) Paul probably would not have sent so many personal greetings — twenty-six or more — to a church he had never visited. (2) Rom. 16:3-5 greets Prisca and Aquila and speaks of "the church that is in their house," whereas 1 Cor. 16:19 indicates that there was a church "in their house" at Ephesus not many months before Romans was written. Furthermore, 2 Tim. 4:19 suggests that they are residing in Ephesus at a later time. It appears unlikely, therefore, that they would have been dwelling in Rome. (3) The false teachers alluded to in 16:17f. seem to represent a viewpoint nowhere else alluded to in the Epistle, and one that might more naturally be expected in Ephesus. (4) The greeting to Epaenetus, who is described as "the first convert in Asia" (16:5), would be more natural in writing to Ephesus than to Rome. (5) The tone of the exhortation in 16:17-20 seems to be more pastoral than the address of the rest of the letter and more befitting a congregation that Paul had founded.

To attribute ch. 16 to another destination, however, is equally beset with difficulties. A long series of personal greetings in the letters to the churches where Paul was known is without parallel. There is none in the Thessalonian, Corinthian, Galatian, or Philippian letters. The only parallel is to be found in the Epistle to the Colossians, whose church had been indirectly founded by the labors of Paul but among whom he was personally a stranger. He seemed to prefer not to single out individuals for greeting in the churches where he was known, perhaps because he did not want to be accused of favoritism. A letter to Rome, which he had never visited, would permit him the privilege of this sort of personal greeting. Furthermore, he had good reason for establishing all possible personal relationships in Rome in the light of his planned future missionary activity with Rome as its center. Then, too, the greeting of "all the churches of Christ" in 16:16 would be more natural to Rome than to Ephesus. He has just been in touch with the delegates of the gentile churches, whose greetings to the church in the capital city would be most fitting.

We do not know enough about Prisca and Aquila to deny with finality that they may have had a period of residence in Rome between two sojourns in the East. And as for the false teachers of 16:17-20, Paul could well mention them briefly here even though he had given no attention to them earlier in the letter. Finally, it is easy to see how, if ch. 16 were an original part of the letter, it could have been omitted in some copies because the contents, being of a personal nature, would not be relevant when the letter was circulated to other churches. No final judgment is possible. It seems quite likely, however, that some form of the longer recension is preferable to the shorter one. The original letter probably ended

with either ch. 15 or ch. 16 — hardly with ch. 14. Since the reasons proposed for detaching ch. 16 are not convincing, it seems preferable to include it as a part of the original letter.

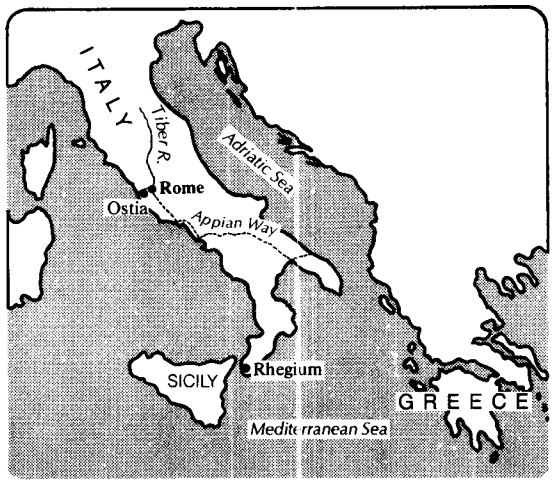
III. Persecution and the Tombs of Paul and Peter

Rome was built on seven hills — the Capitoline, Palatine, Aventine, Caelian, Esquiline, Viminal, and Quirinal. Eventually it expanded onto other hills, including the Pincio and Janiculum. None of these exceeded 60 m. (200 ft.) above sea level, but they rose for the most part in steep slopes above the surrounding valleys and at some points formed sheer cliffs towering over these valleys. The Tiber flowed past, and later through, the city as it grew and was navigable for the 24 km. (15 mi.) between the coast and Rome.

The saying "All roads lead to Rome" was almost literally true at the height of imperial glory. The Romans began their famous highway system in 312 B.C. with the construction of the first section of the Appian Way, "Queen of Roads." They continued their road-building until, in the 2nd cent. B.C., they had completed communication arteries to every part of the empire, for a total of 80,000 km. (50,000 mi.) of first-class highways and 320,000 km. (200,000 mi.) of lesser roads.



Travel by land was slow and expensive for bulky commodities, so Rome depended on the sea for the transport of most goods. Mediterranean ports were the chief cities of the Roman world. The imperial navy guaranteed the safety of the Mediterranean, which the Romans called Mare Nostrum, "our sea."

Italy is strategically located for control of the Mediterranean and Rome was well located for controlling the peninsula of Italy. Situated at the lowest point on the Tiber River where firm abutments for a bridge could be found, Rome controlled the main line of communication along the western and more populous side of the peninsula.

With a communication network that kept it in touch with every part of the Mediterranean world, Rome also dominated every part of that world and fed off it economically and culturally. Rome did not have native economic resources to maintain its prosperity but depended on income from the empire. When the city's indispensability disappeared in A.D. 330, with Constantine's move of the capital to Constantinople, rapid decline set in.

I. History.—A. Beginnings. The traditional date of the founding of Rome is 753 B.C., a date that became official in the 1st cent., but archeological discoveries on the Palatine hill push Latin origins there back to the 9th cent. B.C. Rome was then governed by kings in conjunction with a council (the Senate) until *ca.* 509 B.C. Apparently these were Latin kings until *ca.* 600 B.C. During the fol-

The Castel Sant' Angelo, built as the mausoleum of Hadrian on the Tiber River at Rome (ca. A.D. 130) (W. S. LaSor)

lowing century Etruscan monarchs ruled the city and were responsible for its urbanization. The Etruscans seem also to have introduced numerous crafts to the Latins and to have greatly improved their economic posture.

B. Republic. About 509 B.C. the Latins revolted against the Etruscans and established the Republic, which was destined to last until Augustus brought it to an end in 27 B.C. Under the Republic the chief executive officers were the Consuls; two of them were elected annually. These men were supported by an increasing number of officials elected to administrative tasks.

Between 509 and 265 Rome contested with the Etruscans, Italic tribes, Celts or Gauls, and Greek colonists in Italy for domination of the peninsula. When the process was complete Rome had not annexed all of Italy but controlled it through a network of alliances.

Rome next became fearful over possible Carthaginian control of Sicily. Thus it entered rather recklessly upon the Punic Wars (264-241 B.C., 218-202, 149-146). In the first of these wars Rome developed its famous naval power, and by the end of the second war had come to dominate the entire western basin of the Mediterranean. During the third Rome razed the city of Carthage.

With the defeat of Carthage and its great general Hannibal in 202 B.C., Rome turned its attention eastward, for Philip V of Macedonia had allied with Hannibal during the Second Punic War. Rome fought a series of wars with Macedonia and the Seleucids of Syria during the first half of the 2nd cent. B.C. By the end of that time it dominated the eastern basin of the Mediterranean, just as it had asserted authority over the western basin during the previous fifty years.

A century of warfare abroad led to a century of political instability at home, sometimes with open warfare. This began with the reform efforts of the Gracchi in 133 B.C. and ended with the victory of Octavian (Augustus) over Mark Antony at the Battle of Actium in 31 B.C. Revolution came in part for the following reasons: oppression of subjects in the provinces, unfair treatment of allies in Italy, introduction of slavery on a large scale, ruin of many of the operators of small farms in Italy during Hannibal's campaigns, the rise of an army more loyal to generals than to the state, and the failure of the senatorial class to provide good government for the state.

With Octavian (Augustus), savior of the empire, came a bright new day of peace and prosperity and a new political order: the Empire period or the Principate (rule of the princeps — first citizen or emperor).

C. Empire. Augustus took herculean steps to rehabilitate a Rome that for long had been sadly neglected. Though he had risen to power through military action, he chose to implement a civilian government and cooperated with the Senate in the rule of both Rome and the empire. But this outward show of constitutionalism should not obscure the fact that the princeps (with his military support) was the real ruler of the state, and during the next two centuries there was a steady erosion of civilian power until a full-fledged military monarchy was established.

ROME

A marble statue of Augustus Caesar erected shortly after his death (A.D. 14). The reliefs on his armor, his bare feet, and the cupid on a dolphin (symbol of Apollo) indicate his divine status (Vatican Museum, photo Philip Gendreau, NY)

Augustus divided Rome into fourteen districts and in turn subdivided these into 265 precincts. Each precinct had its own political organization and its own set of officials. Augustus also organized a corps of 7,000 men to serve as a fire brigade and night police. This force was divided into 1,000-man cohorts, each serving two of the fourteen districts.

Augustus created boards or commissions to dispense governmental functions and organized a sort of cabinet or council to aid him in shaping policies. Gradually the basic functions of government were institutionalized in a well-entrenched bureaucracy. Thus, even though some emperors of the 1st cent. A.D. proved incapable or found themselves embroiled in controversy with the Senate or various segments of the populace, Rome and the empire generally enjoyed peace, security, prosperity, and reasonably good government.

Augustus sought to gain support for his regime through the ruler cult, a concept that had for its background the god-king ideal of the ancient Near East and the efforts of successors of Alexander the Great to link worship of the ruler with loyalty to the state. During his rise to power Augustus had arranged the deification of Julius Caesar in an effort to win the loyalty of his troops, and he erected a temple to the divine Julius in the Forum. And in each of the 265 precincts of Rome he set up shrines dedicated to the genius of Augustus — the divine spirit that watched over his fortunes. Gradually the ruler cult became entrenched; by A.D. 100 the whole empire had ruler-cult establishments.

Emperors encouraged this worship but did not demand it until the days of Domitian, at the end of the 1st century. Refusal to worship the emperor and goddess Roma constituted treason, so such refusal resulted in the persecution of Christians, which waxed and waned until Constantine declared Christianity a legal religion early in the 4th century.

II. First-Century Rome.–A. Socio-Economic Aspects. Rome was the largest city of the empire, with a population approaching a million by the end of the 1st cent. A.D. The city limits had a circumference of slightly over 21 km. (13 mi.) by the time of the destruction of Jerusalem in A.D. 70.

1. The Rich. Economically and socially there was a great cleavage between the rich and the poor. The rich lived in sumptuous villas. The front part of a villa usually followed the Italian house plan, consisting of rooms grouped about an atrium, which was a sort of a reception room with an opening in the roof below which lay a small pool. The rear of the house consisted of an open pillared courtyard surrounded by rooms, on the pattern of Eastern Mediterranean house plans. Often the households consisted of scores of slaves. Women enjoyed a great deal of freedom and moved freely in society, commonly in the company of a slave, who helped with shopping and other activities.

2. The Poor. The poor usually lived in great tenements or *insulae*, apartment buildings made of wood and brick that might rise four or more stories with only a few feet between them. These must have been oppressively hot in August. These *insulae* had no sanitary facilities nor water above the first floor. The Romans had only terracotta and lead pipes, and neither was capable of withstanding pressure necessary to bring water to a second or third floor. Life expectancy probably was not over about thirty-five, and lead poisoning might have been one of the contributing factors to early death.

3. Economy. The economy of the city of Rome was extremely poor throughout the late Republic and under the Empire. From the late 3rd cent. B.C., when the ravages of Hannibal sent many ruined farmers to swell the unemployed in Rome, the masses were always in dire straits, for Rome had little basic commerce or industry to provide employment. To complicate matters, slavery increased dramatically during the 1st cents. B.C. and A.D. The tendency was to employ increasing numbers of slaves in all kinds of production, from publishing to baking and shoe manufacture. This excluded many free persons from

The house of Livia and Augustus on the Palatine Hill above the Roman forum (1st cent. A.D.) (B. K. Condit)

ROME

Housing for common people was built close together as on this street in Pompeii (*ca.* 1st cent. A.D.) (B. K. Condit)

the job market altogether, and those who could find employment or set up in business for themselves could expect to earn no more than it cost entrepreneurs to own and maintain slaves to produce comparable commodities.

High unemployment brings welfare. It is estimated that over 200,000 were on the grain dole in the capital in Augustus's day, and the numbers certainly did not diminish. It became a regular practice for the emperors to provide "bread and circuses," free food and free entertainment for the unemployed masses of the capital.

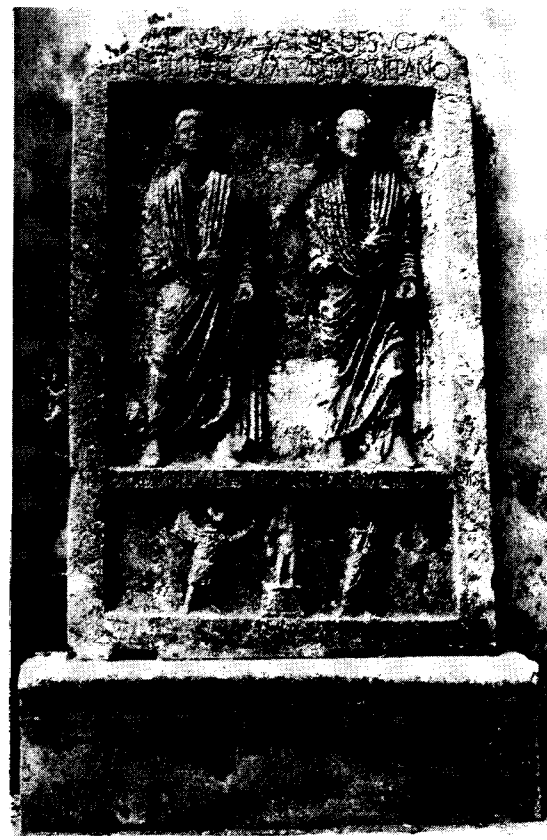
4. Slavery. The increase of slavery changed the character of the city fundamentally — morally, politically, and ethnically. Slaves were supposed to have no moral judgment of their own but to obey blindly the wishes of their masters. Because manumission was easy, large numbers of slaves became free and attained Roman citizenship. The amoral obedience that had made them good slaves now made them poor citizens. Political effects of the substantial infusion of non-Romans were also great. These persons, largely from the East, had little familiarity with, or affinity for, Roman institutions. Especially, they would be amenable to demagoguery. Political stability and self-government began to break down under the influence of this foreign infusion as early as the late 2nd cent. B.C. Finally, the whole racial complexion of Rome changed radically. Under the early Empire, freedmen and their descendants outnumbered the citizens of Roman and Italian stock perhaps four to one. The natives went off to military service and either were killed in battle or as veterans were settled in military colonies overseas.

5. Jews. When Jews first came to Rome is not known, but a few of them probably arrived in the 2nd cent. B.C. It is thought that about 20,000 of them lived in the capital during the first half of the 1st cent. A.D. A total of thirteen synagogues are known to have existed in Rome, but not all of them may have functioned during the 1st century. A half-dozen Jewish catacombs have been discovered in Rome. Jews enjoyed a favored status in the Roman Empire and were not required to participate in the imperial or state cult. As long as Christianity was viewed as part of Judaism, it too enjoyed freedom from emperor worship. Expulsions of Jews from Rome during the days of Tiberius and Claudius were not religious persecutions but police measures taken for the maintenance of good order within the city. They did not terminate the favorable status of Judaism in the capital. Many Jews flooded the Roman slave market just before and after the destruction of Jerusalem in A.D. 70.

6. Christians. The origin of Christianity in Rome, like that of Judaism, cannot be determined with certainty. Roman Jews were in Jerusalem on the day of Pentecost (Acts 2:10), and they may have returned to the capital to found a church. But perhaps the nucleus of this fellowship consisted of Paul's converts in other spheres of missionary activity, such as Corinth and Ephesus. In this connection it is interesting to note the large number of individuals he was able to call by name in Rom. 16. Thus he was able to establish contact with a congregation otherwise unknown to him. Romans was written to instruct a church that the great apostle had not founded and to prepare the way for his coming to visit it (Rom. 15:24-32). Apparently he sent this letter to the church at Rome by the hand of Phoebe, the deaconess of Cenchrea (eastern seaport of Corinth), who was on her way to Rome (Rom. 16:1f.).

Christianity grew rapidly at Rome. At least thirty-five Christian catacombs are known there, the earliest dating to the middle of the 2nd cent. These were designed for burial of the dead, not as meeting places for harried Christians. Early in the 4th cent. there were at least forty churches

A tombstone from Capua describes a slave auction. The bottom panel depicts the slave standing on a block between the Greek auctioneer (left) and possibly a Roman buyer (right) (Museo Nazionale, Naples)



in Rome, the three most important built by Constantine: St. Peter's in the Vatican, St. Paul's Outside the Walls, and St. John Lateran.

B. Physical Aspects. It remains to ask what the city of Rome looked like during the 1st cent. A.D., or, more particularly, when the apostle Paul arrived to appear before Caesar, perhaps in A.D. 59. The city sprawled primarily to the east of the Tiber; only one of the fourteen districts lay west of the river. And the urban area extended well beyond the 4th-century B.C. Servian Wall, which enclosed the earlier city of the seven hills. Though the great fire of A.D. 64 in Nero's day and the subsequent fire of A.D. 80 during Titus's administration would result in extensive rebuilding, observations may be made that are descriptive for the century generally.

1. Circuses. As Paul and his company moved north along the Appian Way, they entered Rome through the Porta Capena, a major gate in the Servian Wall. Before them would have stood the Circus Maximus, greatest of the recreational structures of Rome in Paul's day. Between the parallel slopes of the Aventine and Palatine lay a valley some 550 m. (600 yds.) long and 140 m. (150 yds.) broad. The great circus had evolved through a process of repeated destruction and rebuilding, and was destined to be almost completely rebuilt by Nero after the fire of 64.

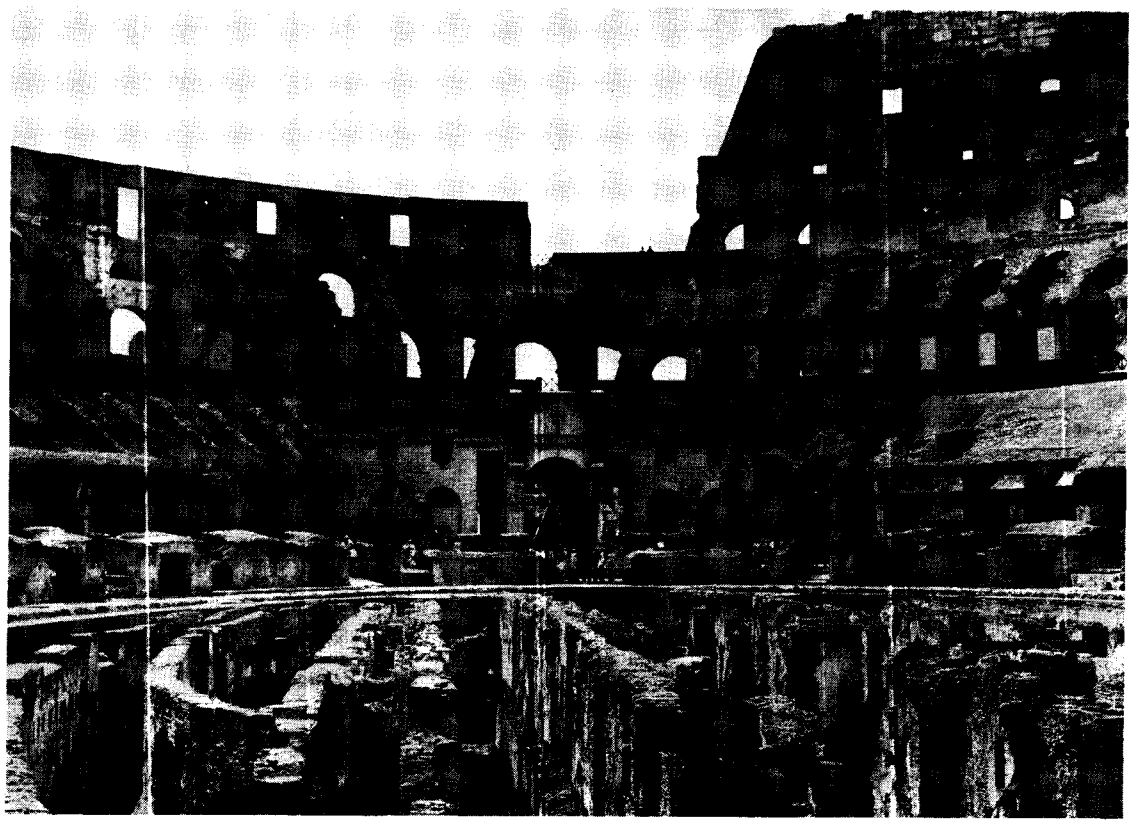
In Paul's day the total length of the circus was about 550 m. (600 yds.) and the total width not over 183 m. (200 yds.). The width was achieved by building out over the streets on the north and south sides. The arena was about 520 m. (570 yds.) long by about 78 m. (85 yds.) wide. In the middle stood the spina (the central barrier around which chariots raced), 315 m. (345 yds.) in length.

At the west end were the eight *carceres* or starting places for chariots, set on a curve so the distance was the same from each to the starting line. The east end of the circus was also curved, with a gate in the center. A raised platform surrounded the arena, on which chairs of high officials were placed. From this platform rose three tiers of seats, the lower of stone and the upper and perhaps the middle of wood, seating probably 200,000. The exterior consisted of a three-story arcade with engaged columns, like the Colosseum, and all was covered with Travertine limestone.

There were two other circuses in Rome in Paul's day. C. Flaminius Nepos in 221 B.C. built one N. of the Capitoline Hill with dimensions of about 240 by 90 m. (260 by 100 yds.). Caligula began a circus that Nero finished on the site where St. Peter's Cathedral now stands. Its size is uncertain. In all these structures chariot races were commonly held, wild beast hunts or games might occur, and Christians might be martyred.

2. Palaces. If Paul stood looking at the Circus Maximus, the palaces of the Caesars towered over him on his right, crowning the Palatine Hill. During the late Republic the Palatine had been an exclusive residential district, but with Augustus (27 B.C.-A.D. 14) it became the residence of the emperors. In addition to his house Augustus built a

The interior of the Colosseum built by Vespasian. The floor has crumbled, leaving visible the lower level passages and stalls for wild animals. The Colosseum was planned by Augustus and brought to its height of about 50 m. (160 ft.) under Titus and Domitian. It could seat around 45,000 people on three tiers (Philip Gendreau, NY)



magnificent temple to Apollo there. Tiberius (14-37) built a new palace on the northwest part of the hill, covered almost completely today by the beautiful Farnese Gardens and therefore not excavated. Caligula (37-41) extended Tiberius's palace in the direction of the Forum and joined it by a bridge to the Capitoline Hill. Claudius (41-54) probably began the palace used by Nero (54-68) in the years before the fire (64). This palace in the central and southern part of the hill would have been visible to Paul as he glanced up at the Palatine, and it probably would have been a charred mass of ruins when Paul returned for his second Roman imprisonment (assuming that he was acquitted during his first appearance before Caesar). Later Domitian (81-96) changed the configuration of the hill and covered many of the older structures with grandiose new buildings: an official palace, a residence, and a small stadium (about 143 m., 470 ft., long).

After the great fire of A.D. 64 Nero created a grand new palace in the center of the city. This would have been under construction when Paul returned to Rome. The grounds covered the area between the Esquiline, Palatine, and Caelian hills. Known as the Golden House or Domus Aurea, this complex of palaces, parks, a pool, and a zoo encompassed 50 ha. (125 acres). Later emperors did their best to blot out the memory of this monstrosity. Vespasian filled in the lake and built the Colosseum on it. Trajan built his baths on top of the palace on the Oppian Hill. The palace on the Oppian is now extensively known through archeological effort.

3. Forum. The center of Roman life throughout ancient history was the Forum, located in a declivity between the Palatine, Capitoline, and Caelian hills. As the religious, political, and economic, and social hub of Rome, the Forum changed as the needs of the people changed and as the population grew. Gradually the more objectionable features of commerce (such as selling of meat, poultry, and vegetables) were forced out to other locations, and growth of population and personal ambition led rulers to build new forums or extensions of the Forum area. Julius Caesar built the first addition with its shops and its temple to Venus. Augustus built the next extension with its temple to Mars and adjacent shops. After Paul's day Domitian, Nerva, and Trajan built new forums next to the main forum. And the Forum itself became increasingly formalized as the result of imperial building programs designed to enhance the area.

On the supposition that Paul's case was adjudicated by one of Nero's lieutenants in the Forum, it might be useful to take an imaginary walk with the apostle through this center to see what it was like then. Probably he would have entered from the east. It is necessary to think away the Colosseum (completed in A.D. 80), the Arch of Constantine, the Basilica of Constantine and the Arch of Titus (built to commemorate his destruction of Jerusalem in A.D. 70).

As Paul came down the Sacred Way, the first building he would have passed was the house of the Vestal virgins, adjacent to which was the round Temple of Vesta, the goddess of the hearth. It was the responsibility of the Vestal virgins to maintain the sacred fire, which symbolized the perpetuity of the state, and to renew it each year on March 1, the first day of the Roman year. In front of the Temple of Vesta was the Regia or office of the Pontifex Maximus, head of the religion of the state.

As Paul continued westward, he would have passed the Temple of the Divine Julius, which stood on the very spot where the body of Julius Caesar had been burned on a pyre improvised by the crowds after Mark Antony's famous speech. The Sacred Way turned left in front of the Temple of Julius and led directly into the Temple of Castor and Pollux, the sanctuary of horsemen. This structure presented an impressive sight with its porch of eleven graceful Corinthian columns 11.5 m. (38 ft.) high.

The Roman forum as viewed from the Basilica Aemelia (foreground). The pillars of the Temple of Julius are on the left and the Arch of Titus is in the distance (K. Adams)

Now the roadway turned again and ran along the face of the Basilica Julia. This structure, rebuilt and enlarged and dedicated by Augustus in A.D. 12, was 95 m. (312 ft.) long by 47.5 m. (156 ft.) wide. It was the seat of the tribunal of the *Centumviri,* who judged civil cases; and many believe that Paul may have appeared before Nero's tribunal here.

Next to the Basilica Julia stood the great temple of Saturn, rebuilt in 42 B.C. This was the center of popular festivities of the Saturnalia, celebrated for seven days in the middle of December and involving an exchange of gifts. The treasury of the state was also kept here. At the west end of the Forum stood the Rostra, where speakers might address a crowd gathered in the Forum. At one corner of the Rostra was the golden milestone (set up by Augustus in 20 B.C.), a marble column covered with gilt bronze, on which distances from Rome to principal towns of Italy and the Empire were recorded. This tended to give rise to the claim that "All roads lead to Rome."

Directly across the Forum from the Basilica Julia stood the Basilica Aemilia, a great commercial center especially used for money changing. This structure, about 90 by 25 m. (300 by 80 ft.), originally was erected in 179 B.C. and was rebuilt in A.D. 22. Next to the Basilica Aemilia on the west was the Senate, which Julius Caesar completely rebuilt. Its height was over 18 m. (60 ft.) and the hall about 25 by 17 m. (82 by 55 ft.). Next to the Senate chamber was the Senate office building. At the foot of the Capitol adjacent to the Forum was the Mamertine Prison, where noted prisoners were kept before execution. It is thought that Paul was here during his second Roman imprisonment (see 2 Timothy) and from here was taken away to be executed.

4. Temples. Numerous other fine structures dotted the Roman skyline in the middle of the 1st cent. A.D. The Pantheon, built by Augustus, still stood proudly in the Campus Martius west of the Servian Wall. Struck down by the fire of A.D. 80, it was rebuilt by Hadrian, presumably on much the same plan as originally conceived by Augustus. In 28 B.C. the Senate had authorized Augustus to rebuild or restore eighty-two temples in need of repair. Nearly all of these were still serviceable.

5. Mausoleum. Also in 28 B.C. Augustus began in northwest Rome near the Tiber a huge mausoleum that was to serve as a burial place for members of the Julio-Claudian family. Designed to resemble an Etruscan burial mound, it consisted of a concrete substructure heaped with earth and planted with cypresses and surmounted with a huge statue of the emperor. Before the entrance stood bronze tablets inscribed with Augustus's political biography. The concrete substructure consisted of a huge outer wall within which rose to a height of 43.5 m. (143 ft.) a series of concentric vaulted corridors surrounding a hollow cylinder intended to hold the emperor's ashes.

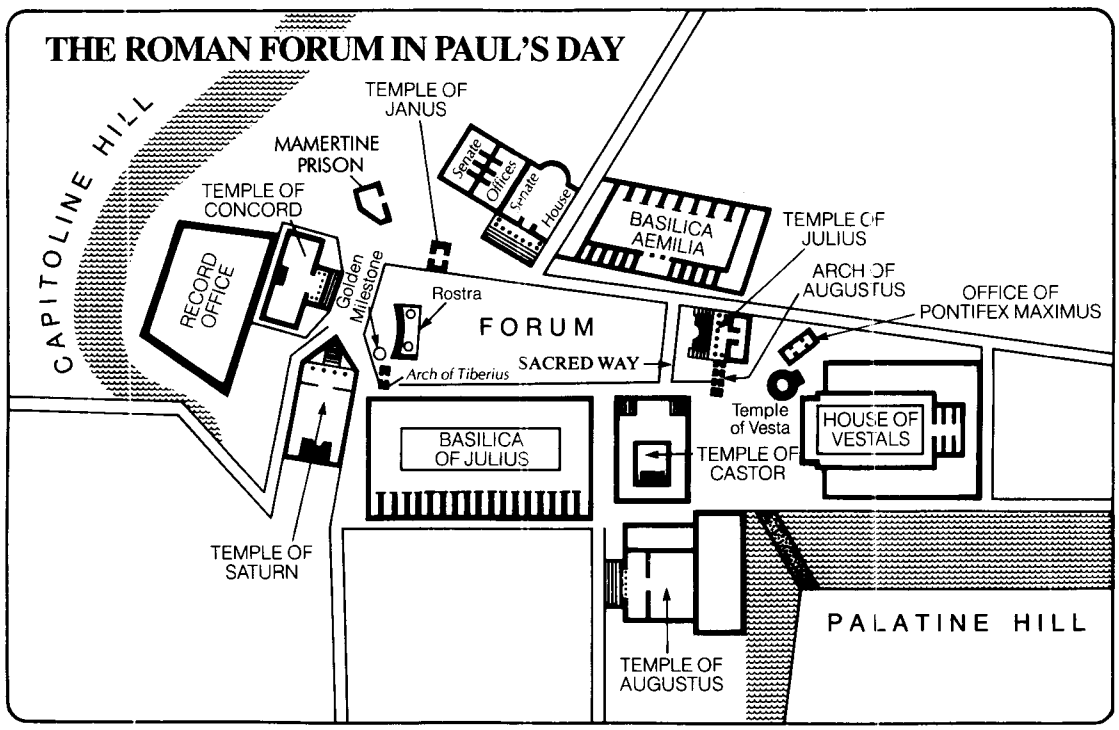
6. Altar of Peace. Adjacent to the mausoleum Augustus erected in 9 B.C. his famous Altar of Peace, designed to celebrate the peace he had established within the empire. The altar itself, raised on four steps, is surrounded by an almost square walled enclosure, measuring about 10.7 m. (35 ft.) on the lateral walls and 11.6 m. (38 ft.) on the entrance walls. Life-sized figures in bas relief appear in procession on the sides of the enclosure wall; they include Augustus and members of the royal family. On the ends of the enclosure appear representations of Tellus and Roma, designed to depict the prosperity of Italy now at peace. Aeneas, progenitor of the Romans, is portrayed as offering a sacrifice.

7. Baths and Aqueducts. Under the Empire it was a part of every self-respecting Roman's daily routine to go to the bath. During Augustus' reign occurred the transition from the small simple public baths designed for bathing only to the massive imperial structures that served as social centers for the whole populace. With Nero the baths assumed their common form, including dressing rooms, the warm bath, the hot bath, the cold plunge, exercise rooms, and social areas where poets and philosophers might hold forth.

These large baths required increasing quantities of water, as did the basic needs of a growing population. The first aqueduct built to Rome was completed *ca.* 312 B.C., a covered tunnel from springs 16 km. (10 mi.) E. of the city. In Paul's day eight aqueducts served the needs of Rome. The most famous was built by Claudius (41-54), and its channel was carried for part of its course on great arches 33.5 m. (110 ft.) high. In the 3rd cent. Rome had eleven aqueducts, providing some 950 million l. (250 million gals.) of water per day.

III. Persecution and the Tombs of Paul and Peter.—Though there were great public baths, scores of beautifully constructed temples, ostentatious villas of the wealthy, palaces of the emperors, fine public buildings in the forums, and other structures of note, most Romans were condemned to live in the miserable tenements that crowded together in nearly all residential districts of the city. These buildings grew increasingly ramshackle and were parched under the hot Italian sun. Thus they were tinder boxes waiting for a catastrophe of the magnitude of the great fire of A.D. 64. One hot night in July fire broke out in the slums east of the Circus Maximus and burned unabated for nine days, gutting more than half the city. Only four of the fourteen districts of Rome escaped entirely unscathed. No effort to check the conflagration succeeded. Even Nero's palace lay a charred mass.

Though Nero suffered personal loss in the fire, and though he launched a major effort to alleviate the sufferings of the homeless, there was a popular suspicion that Nero had started the fire in order to have the glory of rebuilding Rome along grander lines. According to the Roman historian Tacitus, Nero tried to divert suspicion from himself by laying blame for the holocaust on the Christians (*Ann.* xv.44). This view has been generally accepted (see esp. W. M. Ramsay, *CRE*, pp. 226-251). Making Christians the scapegoat was possible for at least two reasons. First, Christians increasingly were classed as antisocial because of their refusal to participate in aspects of public life connected with pagan rituals. Second, the brutality of



the Roman populace as evidenced in gladiatorial combats, wild beast hunts, and other entertainments of the arena is well known.

Especially, but not exclusively, the crime of arson was to be expiated by the criminal's being placed on a cross and set afire or being burned at the stake. Much of this punishment of Christians occurred in the gardens near Nero's circus in the Vaticanus section of Rome, W of the Tiber. The most intense period of the persecution lasted from late 64 to early 66, when Nero departed for Greece. Tradition has it that both Paul and Peter were martyred in Rome near the end of Nero's reign, perhaps in A.D. 67, and that the remains of both lie buried under great churches that serve as martyr memorials: the former under St. Paul's Outside the Walls, and the latter under St. Peter's in the Vatican.

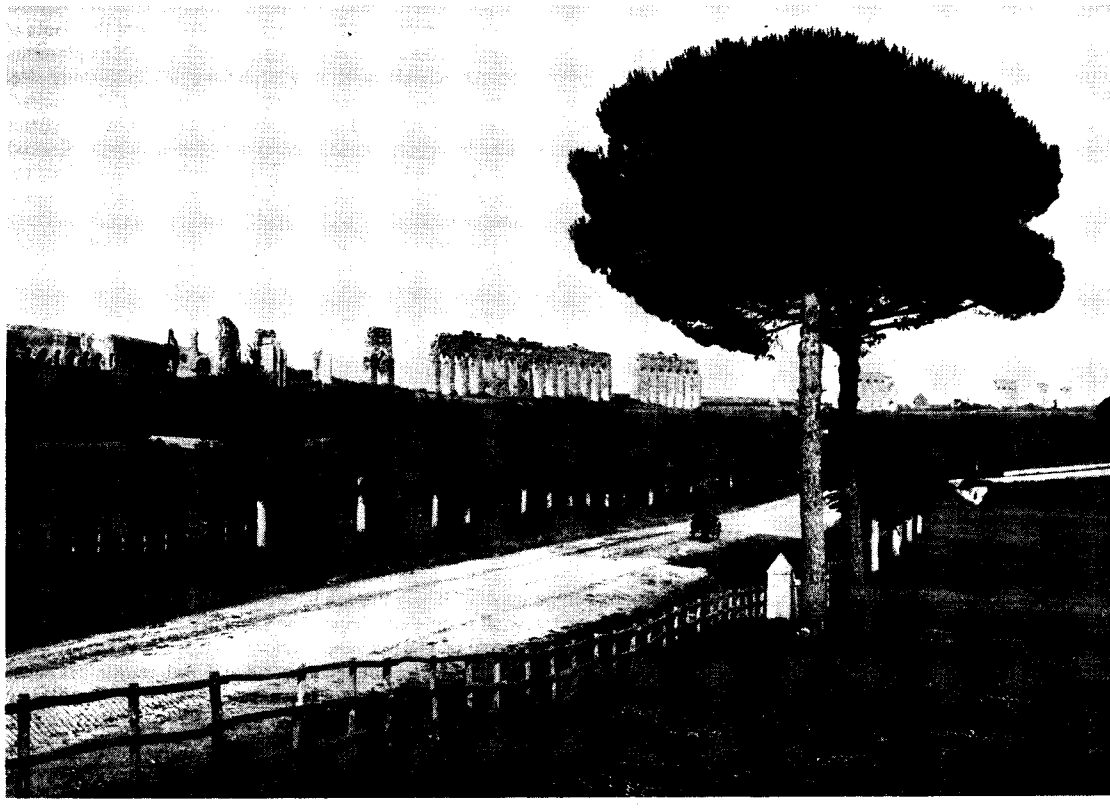
Establishing certainty about the tombs of the two great apostles is difficult. To begin with, it must be asked whether they were martyred in Rome. As far as Paul is concerned, 2 Timothy implies that martyrdom in Rome was expected momentarily. Scripture indicates nothing about Peter. Among extrabiblical sources, Clement of Rome in his first epistle, written in 95 or 96, indicates that Paul and Peter had been martyred in Rome. Ignatius of Antioch, writing a decade or two later, in his Rom. 4:2f. is testimony to the same effect. It is probable that both were martyred in Rome during Nero's reign.

As for the graves of Peter and Paul, it must be asked first whether authorities would have permitted believers to get hold of their remains and give them a decent burial. Next it must be asked whether authorities would have left the graves undisturbed if they had known their location. Then it must be asked whether believers could have retained knowledge of the location of the tombs if they remained unmarked. Possibly all these questions can be answered in the affirmative, but one cannot be sure.

At any rate, Gaius of Rome wrote *ca.* A.D. 200 that well-known martyr memorials (evidently tombs) of Peter and Paul could then be seen in Rome. The former was in the Vatican near Nero's Circus and the latter along the ancient Ostian Way. The best that can be said is that Christians in Rome believed they knew where the tombs of the apostles were in 200. It is to be noted that these tombs were in pagan areas far removed from Christian catacombs then in common use. Such a fact is thought to give some credence to the validity of the sites. Then in the 3rd cent. there is an indication that the bones of both Peter and Paul were located in the Catacombs of St. Sebastian on the Appian Way. The view of some is that they were transferred there for safe keeping in 258, during the particularly violent persecution of Valerian, and that they were later returned to their well-known resting places (cf. *LAP,* pp. 382-84, 471-74, 510-18). Then early in the 4th cent. Constantine built churches over the traditional burial places of Paul and Peter, and modern churches simply perpetuate the traditions that go back to A.D. 200 or before.

To deal with the continuing question of whether Peter's tomb was actually located under the high altar of St. Peter's Basilica, Pope Pius XII permitted excavations under the Vatican (1940-1949). What was found was an early pagan cemetery in which was a simple shrine believed to be that mentioned by Gaius about A.D. 200. Evidence also came to light that Nero's Circus was located nearby. Some bones were found but they could not certainly be identified as Peter's. The official reports published in 1951 set forth

The Claudian aqueduct (mid-1st cent.) along the Via Appia Nuova outside Rome (Ewing Galloway, NY)



the view that the tomb of Peter had indeed been found, but even many very partial Roman Catholic scholars are not so sure. Perhaps the best that can be said is that the evidence does not seem to demonstrate conclusively that Peter's tomb has been found; nor does it close the door on the possibility that he was buried there.

ROMELIUS rō-mē'li-əs (1 Esd. 5:8, NEB). *See* REHUM 1.

ROOF. *See* HOUSE III.E.

ROOF CHAMBER. *See* HOUSE III.E, V; UPPER CHAMBER.

ROOM. The term is used by the RSV most often in the sense of a chamber of a building. *See* CHAMBER; ENTERTAIN; GUEST ROOM; HOUSE; INN; INNER ROOM; MANSION (Jn. 14:2); PICTURES, ROOM OF (Ezk. 8:12); TEMPLE (1 K. 6:29f.; 1 Ch. 28:11; Ezk. 40–41; etc.); UPPER CHAMBER.

The RSV also uses "room" in the sense of "space" to translate Heb. *māqôm* (Gen. 24:23, 25; Isa. 5:8; Jer. 7:32; supplied in Zec. 10:10) and Gk. *tópos* (Lk. 14:22; Rom. 15:23), both of which mean "place." "Make room" and "give room" render Heb. *nāgaš* (Isa. 49:20) and the hiphil of *rāḥaḇ* (Gen. 26:22; Ps. 4:1 [MT 2]; Prov. 18:16; *see also* BROAD PLACE), while in Mk. 2:2 "there is room" represents Gk. *chōréō*. N. J. O.

ROOM OF PICTURES. *See* PICTURES, ROOM OF.

ROOT [(verb) Heb. piel and hiphil of *šāraš* (Job 31:12; "take root," Job 5:3; Ps. 80:9 [MT 10]; Isa. 27:6; 40:24; Jer. 12:2; "root out," Job 31:8), *nāṯaš*–'uproot' ("root up," 1 K. 14:15; "root out," Ps. 9:6 [MT 7]; Mic. 5:14 [MT 13], *nāsaḥ*–'tear down' ("be rooted out," Prov. 2:22); Aram. ithpeel of *ʿaqar* ("be plucked up by the roots," Dnl. 7:8); Gk. *ekrizóō* ("root up," Mt. 13:29; 15:13; Lk. 17:6), pass. part. of *rhizóō* ("rooted," Eph. 3:17; Col. 2:7)]; AV also DESTROY, PLUCK UP; NEB also PULL UP, etc.; [(noun) Heb. *šōreš* (Dt. 29:18 [MT 17]; 2 K. 19:30; Job 8:17; Prov. 12:3, 12; Isa. 11:1, 10; 37:31; Hos. 9:16; Dnl. 11:7; etc.), *qeṣeḇ* (Jonah 2:6 [MT 7]), *minlām* (Job 15:29); Aram. *šᵉrōš* (Dnl. 4:15, 23, 26 [MT 12, 20, 23]); Gk. *rhíza* (Mt. 3:10 par.; 13:6, 21 par.; Mk. 11:20; Rom. 11:16, 18; 15:12; 1 Tim. 6:10; He. 12:15; Rev. 5:5; 22:16)]; AV also BOTTOM, "perfection" (Job 15:29); NEB also TROUGH (Jonah 2:6 [MT 7]), SCION FROM THE ROOT, etc.

The primary biblical terms for "root" are Heb. *šōreš* and Gk. *rhíza* and the cognate verbs (which can mean either "take root" or "root up," depending on the stem or prefix). The range in meaning is so similar that the LXX almost always uses *rhíza* and its cognates to render *šōreš* and its derivatives. Heb. *qeṣeḇ* is a rare term of uncertain meaning, and the translation "root" is a conjecture from the context. Since the verb *qāṣaḇ* means "cut," a better translation might be "cleft" (cf. LXX *schísma;* NEB "trough"). The MT of Job 15:29 is obscure, and the RSV rendering is based on the Vulgate. Many different translations and emendations have been proposed for the hapax legomenon *minlām*, including *mᵉnōlām* ("their possessions"), based on a possible cognate in Arabic, and *millām* ("their words"), following the Syriac.

In the Bible "root" is almost always used figuratively. Sometimes "roots" simply symbolize the lower parts of something, e.g., of mountains (Job 28:9; Jonah 2:6) or the sea (Job 36:30). Since roots give plants their stability, Prov. 12:3 can state that the "root of the righteous will never be moved" (cf. v. 12). "Root" can also be used in an abstract sense to designate "source of existence." Thus it appears in expressions such as "the root of the matter" (Job 19:28) and "the love of money is the root of all evils" (1 Tim. 6:10).

Since in Palestine vegetation is often threatened by drought, much attention is given to the root upon which the plant's existence depends. Roots need good soil and water to survive and flourish (cf. the parable of the Sower, Mt. 13:6, 21 par. Mk. 4:6, 17). Well-watered roots can therefore symbolize prosperity (Job 29:19; Jer. 17:8; Ezk. 31:7).

Judgment is sometimes depicted in terms of destroying the whole plant from the roots on up. To "root out" a family or nation is to annihilate it so that all hope for a posterity is cut off (Am. 2:9; Mal. 4:1 [MT 3:19]). In the background of Mt. 3:10 par. Lk. 3:9 is the common metaphor of Israel as God's PLANT. John the Baptist warned that Israel was threatened with complete destruction if it did not repent.

The author of Hebrews borrowed the language of Dt. 29:18 in warning against allowing a "root of bitterness" to spring up and defile the community (He. 12:15). Moses had warned that if the evil acts of one individual or family or tribe were tolerated, this evil would contaminate the entire community and expose all Israel to God's judgment.

On the other hand, several passages refer to the natural phenomenon of new branches sprouting from the roots of a tree that has been felled (e.g., Job 14:7-9). This phenomenon served as a symbol of hope for a new beginning after a catastrophic destruction (cf. Isa. 14:29f.). Nebuchadnezzar was assured that although he would be struck down, his root would remain so that he could flourish again (Dnl. 4:15, 23, 26 [MT 12, 20, 23]). Likewise, the judgment that felled Israel was not to be final, for a new branch would grow out of the "root" of Jesse (Isa. 11:1). In v. 10 Heb. *šōreš* should be translated "shoot" instead of "root," since the context indicates that Jesse is the root and David's successor is the "shoot." This should also be the translation of Gk. *rhíza* in Rev. 5:5; 22:16. Although *rhíza* never means "shoot" outside the Bible, the usage here is clearly influenced by the LXX. John the seer was referring to the messianic hopes he found in Isaiah — hopes that went back to Yahweh's promise to David through Nathan (2 S. 7). This promise was recalled in hope whenever Judah faced a crisis, and it shaped the lives of OT "messiahs" (i.e., anointed kings) such as Josiah and Zerubbabel. For Christians the coming of Jesus is the final blooming of that promise.

In Rom. 11:16-18 Paul argues that gentile Christians should not look down on the Jews, for the root's holiness means that the branches are also holy (v. 16), i.e., the Jewish people continue to be specially consecrated to God because of the patriarchs (cf. v. 28). Even if some of the Jewish branches have been cut off and gentile branches have been grafted in, this is no ground for Gentiles to boast, since they too depend upon the root of Israel (vv. 17f.).

ROOT OF DAVID. *See* STUMP; ROOT; DAVID, ROOT OF.

ROPE [Heb. *ḥeḇel*–'cord, rope' (Josh. 2:15; 2 S. 17:13; 1 K. 20:31f.; Job 18:10; Jer. 38:6, 11-13)]; AV also CORD, SNARE; NEB also CORD, ROUGH CORD; [*ʿaḇōṯ* (Jgs. 15:13f.; 16:11f.; Job 39:10; Isa. 5:18)]; AV also CORD, BAND; [*'agmôn*–'rush' (Job 41:2 [MT 40:26])]; AV HOOK; NEB CORD; [*niqpâ* (Isa. 3:24)]; AV RENT; [Gk. *schoinion* (Acts 27:32)]; [*zeuktēria* (Acts 27:40)]; AV BAND; NEB LASHING. A cord made by twisting various materials such as plant fibers, leather, or hair.

Both Heb. *ḥeḇel* and *ʿaḇōṯ* seem to be used interchangeably; neither seems to indicate a specific meaning regarding either length, thickness, or strength; both seem to be used for any kind of cord or rope. *Ḥeḇel* can be used figuratively to indicate death (i.e., "snare" or "binding"; cf. Job 18:10). The usual meaning of *'agmôn* is "bulrush," but ropes may or may not have been made of bulrush fibers. Perhaps it appears in Job 41:2 because of Leviathan's relationship to watery places. In Isa. 3:24 "rope" may either represent poverty or captivity. In 1 K. 20:31f. it may symbolize captivity or subjection.

The Greek term *schoinion* occurs only twice in the NT. In Acts 27:32 it refers to a mooring line and in Jn. 2:15 to the materials used in a whip made by Jesus (RSV "cords").

Ropes were used for many types of applications, including those concerned with domestic life, agriculture, the military (2 S. 17:13), shipping (Acts 27:32, 40), hunting (Job 18:10), lifting and lowering weights (Jer. 38:6, 11-13), and restraining people (Jgs. 15:13f.; 16:11f.; *see* pictures in ESARHADDON; PRISONER) or animals (Job 39:10). A common rope material was flax (note that Rahab, who delivered the spies with a rope, also had a heap of flax on her roof [Josh. 2:6]).

ROSE. *See* FLORA IV.A.

ROSETTA STONE rō-zet'ə. The monument bearing the inscription that provided the key for deciphering Egyptian hieroglyphs. This broken stele was found accidentally in August, 1799, by French soldiers from Napoleon's army who were strengthening the foundations of Fort St. Julien near the town of Rosetta (Rashid) in the western delta of Egypt.

The inscription was written by the priests of Egypt in 196 B.C. to honor Ptolemy V Epiphanes, who had made certain benefactions to the temples of Egypt. The stele contains the same text in hieroglyphic Egyptian ("sacred writing"), in demotic Egyptian ("popular" writing, a later, more rapidly written form of Egyptian; *see* EGYPT V.C), and in Greek. The royal names, which in the hieroglyphic version were enclosed in cartouches, provided the basic clue for identifying the phonetic values of many of the signs. Though a number of scholars (e.g., S. deSacy, J. D. Åkerblad, T. Young) worked on the text, the credit for deciphering the hieroglyphs is given to J. F. Champollion, who announced his results in a paper he presented in September, 1822, entitled *Lettre à M. Dacier relative à l'alphabet des hiéroglyphes phonétiques*.

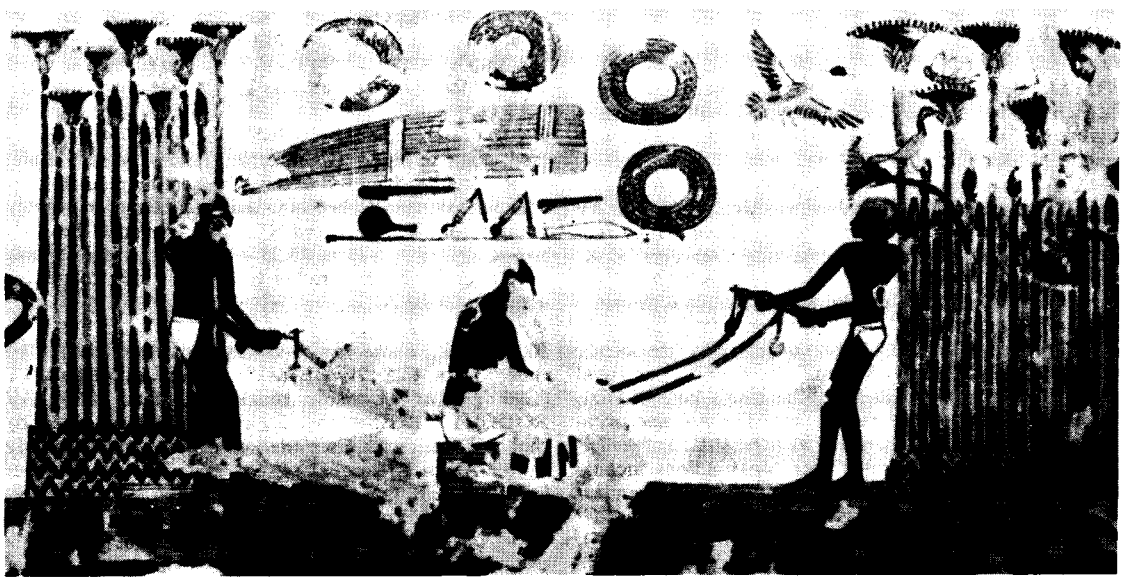
ROSH rosh, rōsh [Heb. *rō'š*–'head']. According to the MT of Gen. 46:21 (cf. AV, RSV), the seventh son of Benjamin. The LXX, however, lists him as the son of Bela (cf. NEB) and grandson of Benjamin. The list in Gen. 46:21 differs significantly from those in Nu. 26:38-40 and 1 Ch. 8:1-7, where Rosh is not mentioned. Most scholars agree that the text of Gen. 46:21 is corrupt.

ROSH rosh, rōsh (NEB Ezk. 38:2f.; 39:1). Scholars are divided on the interpretation of Heb. *rō'š* in these verses.

An Egyptian wall painting from the tomb of Khaemwēse (?) (no. 261, Thebes) showing ropemakers twisting rope out of reeds. Above the workers are tools and finished coils (18th Dynasty) (courtesy of the Oriental Institute, University of Chicago)



Some read it as a place name (so NEB), while others render it "chief" (so AV, RSV). (See comms.; *see also* PRINCE.)

ROT [Heb. *rāqaḇ*] (Prov. 10:7; Isa. 40:20); NEB also TURN ROTTEN; [*rāqāḇ*] (Prov. 14:30); AV ROTTENNESS; [*māqaq*] (Isa. 34:4; Zec. 14:12); AV BE DISSOLVED, CONSUME AWAY; NEB also CRUMBLE INTO NOTHING; [*qāmēl*] (Isa. 19:6); AV WITHER; NEB WITHER AWAY; [Gk. *sēpō*] (Jas. 5:2); AV CORRUPTED; NEB also CANKER; **ROTTEN** [Heb. *rāqāḇ*] ("rotten thing," Job 13:28); NEB WINE-SKIN (transposed to 14:2); [*riqqāḇôn*] (41:27 [MT 19]); NEB ROTTING; **ROTTENNESS** [Heb. *rāqāḇ*] (Prov. 12:4; Hab. 3:16); NEB ROT, TREMBLING; [*maq*] (Isa. 3:24; 5:24); AV also STINK; NEB STENCH OF DECAY, MOULDER AWAY.

In the OT "rot," etc., most often translate the Hebrew root *rqb*, which refers to the deterioration and decay of organic matter such as wood (Job 41:27 [MT 19]; Hos. 5:12), cloth (Job 13:28), or bones (Prov. 12:4; 14:30; Hab. 3:16). According to the sarcastic description of idol manufacturing in Isa. 40, one chooses for an idol wood "that will not rot" (v. 20). Figuratively, the name (i.e., reputation) of a wicked person will "rot" (Prov. 10:7).

In later Hebrew as well as in the OT, the root *mqq* refers not to rotting but to the process of shriveling, pining, or wasting away to nothing. In the day of judgment all the host of heaven will "rot away," i.e., wane and disappear (Isa. 34:4). The flesh, eyes, and tongues of Judah's enemies will shrivel and dry up while they are still alive (Zec. 14:12). The well-oiled bodies of the wealthy women of Judah will waste away (Isa. 3:24), and Judah's root will shrivel up (5:24). The LXX used Gk. *sēpō* to render Heb. *mqq*. According to Jas. 5:2, the riches of the wealthy will "rot" (RSV), i.e., waste away to nothing.

D. A. DORSEY

ROTE. In Isa. 29:13 the RSV and NEB render the Heb. pual part. of *lāmaḏ* (lit. "taught, trained") by "learned by rote" (AV "taught"). The translation is appropriate, because the passage criticizes a religion that involves the MOUTH (I) but not the HEART (II, III).

ROWER; ROWING. *See* SHIPS.

ROYAL. Belonging to, relating to, or subject to a KING. In Hebrew and Aramaic this concept is usually expressed by use of the construct state (a genitive construction with one of four nouns: Heb. or Aram. *meleḵ* ("king"), Heb. *malḵûṯ* ("sovereign power or majesty"), *mᵉlûḵâ* ("kingship"), and *mamlāḵâ* ("kingdom, sovereignty"). The AV frequently translates the terms literally. Thus the AV renders Heb. *ʿaḇḏé hammeleḵ* as "the king's servants" (1 K. 1:9; RSV "the royal officials"), *kissēʾ hammᵉlûḵâ* as "the throne of the kingdom" (v. 46; RSV "the royal throne"; cf. *kissēʾ mamlaḵtᵉḵā*, 9:5; AV "the throne of thy kingdom"; RSV "your royal throne"), *šēḇeṭ malḵûṯeḵā* as "the sceptre of thy kingdom" (Ps. 45:6 [MT 7]; RSV "your royal scepter"); Aram *bêṯ malkā* as "the king's house" (Ezr. 6:4; RSV "the royal treasury"), etc. The AV also occasionally uses "royal," especially as a translation of *malḵûṯ* in Esther (1:7, 9, 11; etc.). Other constructions include the use of a preposition or particle; e.g., the RSV renders Heb. *bayiṯ lᵉmalḵûṯô* as "a royal palace for himself" (2 Ch. 2:1 [MT 1:18]; AV, lit., "an house for his kingdom"), *ʿōśê hamnᵉlāʾḵâ ʾᵃšer lammeleḵ* as "the royal officers" (Est. 9:3; AV "officers of the king"), and Aram. *bêṯ ginzayyāʾ dî-malkā'* as "the royal archives" (Ezr. 5:17; AV "the king's treasure house").

On "royal stud" (Est. 8:10, RSV), *see* STUD, ROYAL. On "royal canopy" (Jer. 43:10, RSV), *see* CANOPY.

In Acts 12:21 "royal" represents Gk. *basilikós* (referring to a king's official robes). The meaning of *nómos basilikós* (AV, RSV, "royal law"; NEB "sovereign law") in Jas. 2:8 is debated, but it probably refers to God or Christ as the King (*basileús*) who gives the law (see J. Adamson, *Epistle of James* [*NICNT*, 1976], pp. 113-16; P. Davids, *Comm. on James* [*NIGTC*, 1982], p. 114; *TDNT*, I, 591; but see other comms. on James, e.g., M. Dibelius [*Hermeneia*, Eng. tr. 1976]). The phrase *basíleion hiéráteuma* in 1 Pet. 2:9 (quoted from the LXX of Heb. *mamleḵeṯ kōhᵃnîm*, Ex. 19:6) also admits of several interpretations, depending on whether it is read as an adjective or a noun. If the AV, RSV, and NEB are correct in translating it as an adjective ("royal priesthood"), then it denotes a "priesthood in service to a king" (see Bauer, rev., p. 136; *TDNT*, I, 591; but cf. comms. on 1 Peter by E. Best [*NCBC*, 2nd ed. 1982], E. G. Selwyn [2nd ed. 1947, repr. 1972], etc.). In Rev. 17:12, 17 the RSV uses "royal power" rather than the usual translation "kingdom" to render Gk. *basileía* (cf. AV "kingdom"; NEB "to reign," "sovereignty"), indicating that the emphasis is on "kingly power" or "sovereignty" rather than on a territory (see Bauer, rev., p. 134; *TDNT*, I, 579f.).

See *TDNT*, I, *s.v.* βασιλεύς κτλ.: βασιλεία, βασίλειος, βασιλικός (K. L. Schmidt). N. J. O.

ROYAL CITY [Heb. *ʿîr hammamlāḵā'*–'city of the kingdom' (Josh. 10:2; 1 S. 27:5). *ʿîr hammᵉlûḵâ*–'city of the kingship' (2 S. 12:26)]; NEB also KING'S POOL (2 S. 12:26). A city in which a king resides. Gibeon had no king (it was probably ruled by feudal lords or "elders"; cf. Josh. 9:11), but it was as great as the cities with kings (10:2). Gath was the capital city of the Philistines; for a time David was a vassal to its king, Achish (1 S. 27:5f.). Rabbah was the capital city of the Ammonites (2 S. 12:26).

RUDDER [Gk. *pēdálion*] (Acts 27:40; Jas. 3:4); AV also HELM; NEB also STEERING-PADDLE. Ships of the type on which Paul traveled generally had two large steering paddles, one on each side of the stern, connected by a crossbar and operated by a steersman (see Bauer, rev., p. 656). These rudders would be raised and lashed while the ship was at anchor; they would be loosed in order to steer the ship ashore (Acts 27:40). *See also* SHIPS III.

RUDDY [Heb. *ʾaḏmônî*–'reddish' (1 S. 16:12; 17:42), *ʾāḏōm*–'red, color of blood' (Cant. 5:10), *ʾāḏam*–'be red' (Lam. 4:7)]. An adjective used to describe healthy reddish skin. The dark-skinned Hebrews found great beauty in a ruddy complexion. The RSV and NEB have replaced the AV's use of "ruddy" in Gen. 25:25 with "red"; the reference here is to Esau's hair rather than to his skin color. *See also* COLOR III.A.

RUDE [Gk. *aschēmonéō*–'behave disgracefully'] ("be rude," 1 Cor. 13:5); AV BEHAVE UNSEEMLY; **RUDELY** [Gk. *ágroikōs*–'boorishly, rudely'] (2 Macc 14:30); AV ROUGHLY; NEB "no . . . civility." Terms used by the RSV to describe discourteous behavior; used similarly by the AV in 2 Macc. 12:14 (Gk. *anágōgōs*; RSV "insolently"; NEB "provocatively"). In the AV of 2 Cor. 11:6, however, "rude" simply means "untrained" (*idiṓtēs*; RSV "unskilled"). Both meanings are present in the AV's use of "rudeness" in Sir. 21:24 (*apaideusía*, lit. "lack of education"; RSV "ill-mannered"; NEB "bad manners").

RUDIMENTS. *See* ELEMENT.

RUE [Gk. *pēganon*]. An herb that, according to Lk. 11:42, was tithed by the Pharisees. The species of rue is perhaps *Ruta latifolia* Salisb. or *R. graveolens* L. These shrubs grow to 1.2 m. (4 ft.) in height and bear grey-green leaves and yellow flowers. The rue has a heavy odor and was used as a condiment, as a stomachic, and as a charm. The parallel in Mt. 23:23 reads "dill" (Gk. *ánēthon*) in place of "rue," and one early MS (p^{45}) has "dill" in Lk. 11:42. Although there is clear rabbinic evidence that dill was tithed (Mish. *Maaseroth* iv.5) and that rue was not (*Shebiith* ix.1), this does not prove that "dill" was the original word in this saying, since Jesus may have been criticizing the Pharisees for going beyond the law.

R. K. H.

RUFUS rōō'fəs [Gk. *Rhouphos*–'red, reddish']. A name that appears twice in the NT. (1) In Mk. 15:21, Rufus and Alexander are named as the sons of Simon of Cyrene, who, according to the Synoptic tradition, was compelled to bear the cross of Jesus (*see* SIMON 7). This uniquely Markan reference probably indicates that, in the community that the Gospel of Mark addressed, the brothers were well known, either by personal association or by tradition. (2) In Rom. 16:13 the name appears in Paul's request to "Greet Rufus, eminent in the Lord, also his mother and mine." The descriptive title may express some special distinction.

If the Gospel of Mark was written in Rome, as tradition asserts, and if Rom. 16 is to be considered an integral part of Paul's original letter to the Roman Christian community, it is possible that both references are to the same person. Since the name appears commonly in Greco-Roman society, however, such a conclusion can be only tentative. Later Christian legend refers to Rufus often (e.g., the Acts of Andrew and The Acts of Peter), placing him as bishop in Thebes, Capua, and Avignon. He was commemorated by the Church on the 12th, 14th, and 21st of November.

See also ALEXANDER 1. C. N. JEFFORD

RUG [Heb. *śᵉmîḵâ*] (Jgs. 4:18); AV MANTLE; [*śāpîṯ*] (Isa. 21:5); AV "watch tower." Hebrew *śᵉmîḵâ* occurs only once in the OT, and its exact meaning is uncertain. LXX A renders it by Gk. *epibólaion* ("covering," "garment"), while LXX B uses *dérris* ("tent curtain"). The context indicates something with which Jael "covered" or "concealed" Sisera so that he could sleep (Heb. piel of *kāsâ*, Jgs. 4:19). J. Gray suggested that "the reference is probably to the screened quarter of the women, which would give Sisera a sense of false security and . . . hide an embarrassing guest" (*Joshua, Judges, Ruth* [*NCBC*, 1986], p. 260; see also KoB, p. 925).

The Hebrew phrase *śāpōh ḥaśśāpîṯ* (RSV "they spread the rugs," Isa. 21:5) is difficult. The LXX omits the phrase, while the Vulgate (*speculare speculam*), Targum, and Syriac interpret it as based on the root *śāpâ* ("keep guard, watch"; thus AV "watch in the watchtower"). Most scholars, however, understand it in terms of a second root *śāpâ* ("overlay" in the piel), therefore as a reference to the carpets that were spread out for Babylonian feasts (so RSV, NEB). N. J. O.

RUHAMAH rōō-hā'mə [Heb. *ruḥāmâ*–'shown compassion'; Gk. *Ēleēménē*, translation rather than transliteration]. The AV transliteration of the new name by which Hosea's daughter LO-RUHAMAH is to be called (Hos. 2:1 [MT 3]). The new name (RSV "She has obtained pity"; NEB "You are loved") is a confession of faith in a future day of salvation when the judgment symbolized by the original name (RSV "Not pitied," v. 6) will be reversed.

RUIN; BRING TO RUIN; HEAP OF RUINS; etc. [(verbs) Heb. niphal, piel, and hiphil of *šāḥaṯ* (Ex. 8:24 [MT 20]; 2 Ch. 34:11; Lam. 2:5f., 8; Nah. 2:2 [MT 3]), qal, piel, and hiphil of *ʾāḇaḏ* (Ex. 10:7; Dt. 28:63; Jer. 9:12 [MT 11]; Lam. 2:9; Ob. 12), pual of *nāḵâ* (Ex. 9:31f.), qal and niphal of *šāmam*–'be (made) deserted' (Ezk. 6:6; Am. 9:14; Zeph. 3:6), qal and niphal of *nāṣâ*–'fall in ruins' (part., 2 K. 19:25 par. Isa. 37:26; Jer. 2:15; 4:7; 9:11; 46:19), niphal of *nāṯaṣ*–'be torn down' (Jer. 4:26), qal infinitive, niphal, and pual of *šāḏad*–'devastate' (Jer. 4:13; 9:19 [MT 18]; Mic. 2:4; Zec. 11:2), qal and niphal of *hāras* (Prov. 29:4; Ezk. 36:35f.; Joel 1:17), niphal of *lāḇaṭ* (Prov. 10:8; Hos. 4:14), hiphil of *kāšal* (2 Ch. 28:23; Ps. 64:8 [MT 9]), *ḥāraḇ* (Neh. 2:17; Hag. 1:4, 9), piel of *sālap* (Prov. 19:3), piel of *ḥāḇal* (Isa. 32:7), hiphil of *kāʾaḇ* (2 K. 3:19), piel of *ʾāwaṯ* (Ps. 146:9); Gk. *apóllymi* (Rom. 14:15), *phtheírō* (1 Cor. 15:33), part. of *katastréphō* (Acts 15:16)]; AV also CORRUPT, DESTROY, PERISH, OVERTHROW, etc.; NEB also FORFEIT, CORRUPT, DESPISE, SPOIL, etc.; [(substantives) Heb. *ʿî*–'heap of rubble' (1 K. 9:8 [emended from *ʿelyôn*]; Job 30:24; Ps. 79:1; Jer. 26:18; Mic. 3:12), *ʾêḏ*–'disaster' (Prov. 13:15 [emended from *ʾêṯan*]), *pîḏ* (Job 31:29; Prov. 24:22), *ḥōreḇ* (2 Ch. 34:6 [emended from *bᵉḥar ḇōṯêhem*]; Isa. 61:4), *ḥorbâ* (Ezr. 9:9; Job 3:14; Ps. 9:6 [MT 7]; Isa. 5:17; Jer. 25:11; etc.), *gal* (Job 15:28; Jer. 51:37), *mappālâ* (Isa. 17:1; 23:13; 25:2; Ezk. 27:27; 31:13), *hawwâ* (Ps. 38:12 [MT 13]; 55:11 [MT 12]; Prov. 19:13), *raʿ*–'evil' (Prov. 5:14; 21:12), *rāʿâ*–'evil, harm' (2 S. 16:8), *šeḇer*–'collapse' (Lam. 2:13), *šôʾâ* (Ps. 35:8; Prov. 3:25; Isa. 47:11; Zeph. 1:15), *šᵉʾîyâ* (Isa. 24:12), *maššûʾâ* (Ps. 73:18; 74:3), *mᵉḥittâ*–'destruction' (Ps. 89:40 [MT 41]; Prov. 10:14f.; 13:3; 14:28; 18:7), *miḵšôl*–'stumbling block' (Ezk. 18:30), *maḵšēlâ* (Isa. 3:6), *šᵉmānâ*–'deserted area' (Josh. 8:28), *ʿawwâ* (Ezk. 21:27 [MT 32]), *mᵉḇullāqâ* (Nah. 2:10 [MT 11]), *miḏḥeh* (Prov. 26:28), *hᵃrîsâ* (Am. 9:11); Aram. *nᵉwālû* (Dnl. 2:5; 3:29); Gk. *rhḗgma*–'breakage' (Lk. 6:49), *sýntrimma*–'fracture' (Rom. 3:16), *ólethros*–'destruction, death' (1 Tim. 6:9), *katastrophḗ* (2 Tim. 2:14)]; AV also DESTRUCTION, DESOLATE (PLACE), WASTE (PLACE), etc.; NEB also DISTRESS, DISASTER, CALAMITY, RUINED MOUND, etc.

The sheer variety of the Hebrew and Greek terms, as well as the range of alternate translations in the NEB and AV, indicates that in the RSV "ruin" does not carry any very specific force. The verb generally refers to events bringing disaster, while the noun usually indicates a condition of total collapse or destruction.

The most common word group rendered "ruin" consists of the Hebrew verb *ḥāraḇ* and the nouns *ḥōreḇ* and *ḥorbâ*. These terms refer originally to dryness and desolation and then to the ruin and waste areas caused by abandonment or the devastations of war. Heb. *šāḥaṯ*, like Gk. *phtheírō*, means "ruin" in the sense of "spoil, corrupt," while Heb. *kāšal* means "twist, pervert." Heb. *nāḵâ*, "batter down," is the word commonly translated "smite." Heb. *ʾāḇaḏ* and Gk. *apóllymi* are both generally translated "perish" or, when transitive, "destroy." Heb. *mappālâ*, "heap of rubble," is related to the verb *nāpal*, "fall." Gk. *katastréphō* and the related noun *katastrophḗ* (cf. Eng. "catastrophe") mean "overturning"; the most recent editions of the Greek NT read *kataskáptō*, "dig up," at Acts 15:16 (following p^{74}, A, and other early MSS) in place of *katastréphō* (א, B, etc.). Heb. *šôʾâ*, "storm" or "utter devastation," is the word used by modern Jews for the

Nazi holocaust. Heb. *ʾî* specifically denotes the barren mound left after an ancient city has been destroyed: it is the equivalent of the modern Arab. *tell*. The only name by which the Israelites ever knew the city "Ai" (Josh. 8) was "Ruin" (*see* AI 1).

Wisdom literature teaches that "ruin" is the judgment that awaits the FOOL. The foolish (wicked) bring about their own destruction (cf. Prov. 19:3) by their susceptibility to temptation (5:14), their insolence (10:8), their rash and senseless talk (10:14; 13:3; 18:7), their laziness (10:15), their faithlessness (13:15), their wickedness (12:12; 21:12), and their flattery (26:28).

The psalmists confessed that God preserves the righteous but brings the wicked to ruin (Ps. 9:6 [MT 7]; 64:8 [MT 9]; 73:18; 146:9; cf. 35:8; 109:10). Likewise, the Lord repeatedly warned His people that if they forsook His covenant, breaking His commandments and serving other gods, He would bring ruin upon their land (e.g., Dt. 28:63; 1 K. 9:8; Isa. 5:17; 47:11; Jer. 2:15; 4:7, 13, 26; 9:11f., 19; 25:11; 26:18; Ezk. 6:6; 18:30; 21:27; Am. 6:6; Mic. 3:12). Israel's prophets also told of the destruction that awaited Israel's neighbors and enemies: Damascus (Isa. 17:1), Tyre (23:13; Ezk. 26:20), Egypt (Jer. 46:19; Ezk. 31:13), Babylon (Jer. 51:37), and Nineveh (Nah. 2:10 [MT 11]).

Because of the apostasy of both Israel and Judah, such devastation did come upon both nations (Isa. 64:11 [MT 10]; Lam. 2:5f., 8f., 13; cf. Ps. 74:3; 79:1; 89:40 [MT 41]). But through the prophets Yahweh promised His people that the time would come when He would restore their fortunes and rebuild their ruined cities (Isa. 44:26; 58:12; 61:4; Ezk. 36:35f.; Am. 9:11, 14; cf. Acts 15:16).

The NT authors also warn against sins that can lead to personal ruin. Jesus taught His disciples that wisdom involves both hearing and doing His words; those who hear His words but do not do them are headed for destruction (Lk. 6:46-49). The epistles to Timothy warn that believers can be destroyed by desire for riches (1 Tim. 6:9) and by disputes about words (2 Tim. 2:14).

RULE. As a noun, "rule" occurs fourteen times in the sense of "reign, exercise of power." Four times it is stated that Edom revolted "from the rule of" (Heb. *mittaḥaṯ yaḏ*, lit. "from under the hand of"; so AV) Jehoram king of Judah (2 K. 8:20, 22; 2 Ch. 21:8, 10), and once the same thing is said of Libnah (2 Ch. 21:10); cf. Isa. 3:6, where the RSV renders the expression *taḥaṯ yāḏeḵā* by "under your rule" (AV "under thy hand"). In 1 Ch. 29:30; 2 Ch. 12:1; Dnl. 8:23 "rule" represents Heb. *malḵûṯ*, which is rendered "reign" and "kingdom" by the AV and NEB (and also by the RSV in other passages). Heb. *mišṭār* occurs only in Job 38:33, and its meaning is uncertain (cf. AV "dominion"; NEB "laws of nature"); the previous line seems to be saying, however, that the heavenly bodies determine what happens on earth, and Job is here asked whether he can influence this in any way (see H. H. Rowley, *Job* [*NCBC*, 2nd ed. repr. 1980], p. 245). In several NT passages Gk. *archē* refers to the hostile and evil natural forces over which Christ is Lord and which He will subdue (1 Cor. 15:24; Eph. 1:21; Col. 2:10; AV also "principality"; NEB "domination," "government," "power"). In 1 Cor. 4:8 Paul expresses the wish that the Corinthians were in fact reigning as kings so that he might "share the rule" (Gk. *symbasileúō*) with them (*see also* REIGN).

In several passages "rule" is used in the sense of a standard or measure. Ex. 21:31 states that "the same rule" (Heb. *mišpāṭ*; AV "judgment") applies if an ox gores a man's son or daughter as when it is a "free" man or woman who is gored. The RSV supplies "rules" in 2 Ch. 30:19, where the text reads *kᵉṭohᵒraṯ haqqōḏeš* (AV lit. "according to the purification of the sanctuary"). Paul's "rule" (Gk. *diatássō*, "order," "direct," "command") was that one should continue to live out the position he had in life when he became a Christian, whether circumcised or uncircumcised, slave or free (1 Cor. 7:17; AV "ordain"; NEB "teach"). The "rule" (*kanṓn*) to which he refers in Gal. 6:16 is that "neither circumcision counts for anything, nor uncircumcision, but a new creation" (v. 15). In 1 Tim. 5:21 he refers to "rules" (*taúta*; AV "things") he has given Timothy with respect to his pastoral duties toward elders, widows, etc. In 2 Tim. 2:5 he uses the analogy of an athlete who must compete "according to the rules" (*nomímōs*; AV "lawfully") in order to receive the crown.

The verb "rule" is used about eighty times in the RSV OT to translate many Hebrew terms. The most common is Heb. *māšal*, "have dominion over," which occurs in Gen. 1:18; 3:16; Dt. 15:6; 2 Ch. 20:6; etc. (AV "reign," "be governor," "be ruler"; NEB also "dominion," "be master," "bring to power," "hold office," "lord it over," etc.). The verb is used of the rule of human beings (Josh. 12:2, 5; 2 S. 23:3; 2 Ch. 9:26), of natural bodies (the sun and moon, Gen. 1:18), or God (1 Ch. 29:12; Ps. 89:9 [MT 10]).

The verb *rāḏâ* connotes the idea of heavy-handed control, i.e., domination or oppression. It is used to describe what will happen to the Israelites if they disobey the commandments (Lev. 26:17), how one is not to treat a fellow Israelite who becomes one's slave (25:43, 46, 53), the harsh treatment of the weak by the "shepherds" of Israel (Ezk. 34:4), Babylon's oppressive domination of the nations (Isa. 14:6), etc. (cf. also v. 2; Ps. 110:2; Jer. 5:31; Ezk. 29:15).

The verb *šāpaṭ*, "judge" or "govern," is rendered "rule" by the RSV in Ruth 1:1; 2 Ch. 1:10f.; Isa. 51:5, Dnl. 9:12; Ob. 21. Less common verbs are Heb. *śārar*, "act as prince" (Jgs. 9:22; Prov. 8:16; Isa. 32:1), *ʿāṣar*, "restrain, keep within bounds" (1 S. 9:17; 2 Ch. 22:9), *rāʿâ*, "tend, shepherd" (Mic. 5:6 [MT 5]), *dîn*, "bring justice" (Zec. 3:7), *bāʿal*, "own, rule over" (1 Ch. 4:22; Isa. 26:13); and Aram. *šᵉlēṭ*, "have power" (haphel, Dnl. 2:38; peal, v. 39). The verbal idea is also used to translate the Hebrew noun *memšālâ*, referring to the "rule" or "dominion" of the sun and moon in Gen. 1:16 and Ps. 136:8f., and the Aramaic adjective *šallîṭ* ("having mastery, ruling"), which refers to the mighty kings who once ruled Jerusalem (Ezr. 4:20) and to the sovereignty of the Most High (Dnl. 4:17, 25, 32 [MT 14, 22, 29]; 5:21).

The verb "rule" occurs ten times in the NT and translates six Greek terms. The verb *archō* refers in Mk. 10:42 to the conduct of gentile rulers; Rom. 15:12 cites OT prophecy about the coming of the Messiah, who will rule the Gentiles (cf. Isa. 11:10). *Exousiázō* ("have the right," "exercise authority over") occurs twice in 1 Cor. 7:4, where Paul teaches that neither the husband nor the wife has sole "lordship" over his or her own body; by the marriage vow each has given the other a claim to one's body. In Col. 3:15 "rule" represents *brabeúō*, which originally meant to "award prizes" in contests, then generally "be judge," "arbitrate" (cf. NEB "be arbiter"); Christ's peace is to be the arbiter in all disputes that threaten to destroy the harmony of the Christian community. In 1 Tim. 5:14 Paul instructs young widows to "rule their households" (*oikodespotéō*; AV "guide the house"; NEB

"preside over a home"). In v. 17 he says that elders "who rule [part. of *proîstêmi,* "be at the head," "direct"] well" should receive special honor. In Rev. 2:27; 12:5; 19:15 the RSV uses "rule" to translate *poimaínō,* a verb meaning "tend," "shepherd," "(lead to) pasture." Christ is depicted as wielding the shepherd's club (possibly a wooden club capped with iron) to ward off attacks against His flock.

N. J. O.

RULER. The translation of a variety of Hebrew and Greek terms designating leaders and officials of various sorts (*see also* CHIEF; COMMANDER; GOVERNOR; LEADER; OFFICER; PRINCE). Although the terms generally denote a person with a high position and the authority to govern, they are rarely used of kings.

I. In the OT.–The following Hebrew (and one Aramaic) terms are rendered "ruler" in the RSV OT.

Most common is the Hebrew verb *māšal* ("rule, have dominion"), especially the substantive part. *mōšēl* (AV also "rule," "governor," etc.; NEB also "governor," "master," "lord," "prince," "commander," etc.). This term is applied to Joseph in Egypt (Gen. 45:8, 26), to Pharaoh (Ps. 105:20), to the Philistines (Jgs. 15:11), to the promised ruler upon the return from exile (Jer. 30:21), to the "king of the north" (Dnl. 11:43; cf. v. 39), to a tyrant (Prov. 28:15), to the promised Messiah (Mic. 5:2 [MT 1]), etc. It is often used in a general sense of those who exercise the power to govern (e.g., Prov. 6:7; 23:1; 29:12; Eccl. 9:17; 10:4; Jer. 51:46).

Nāgîḏ ("leader, prince, ruler") is rendered "ruler" in four passages (AV also "prince"; NEB "prince," "supervisor," "overseer," "man"). In 1 K. 1:35 David applies the term to Solomon, who was to succeed him. Neh. 11:11 appears to name Seraiah as "ruler of the house of God" (but cf. NEB; cf. also 1 Ch. 9:11, where "Azariah" replaces "Seraiah"), i.e., the leader of a division of priests. In 2 Ch. 35:8 the RSV renders the same term "chief officer" (AV "ruler"; here three names are given: Hilkiah, Zechariah, and Jehiel). 1 Ch. 9:20 states that Phinehas the son of Eleazar was in charge of various temple ministers. The term is used in a general sense, however, in Prov. 28:16: "A ruler who lacks understanding is a cruel oppressor."

Nāśî means literally "one lifted up," thus a "chief" (AV also "prince"; NEB "chief," "man of standing," "rule"). It is applied to leaders of God's people (Ex. 22:28 [MT 27]; Lev. 4:22), including King Solomon (1 K. 11:34).

Śar, a common OT term for leaders of various sorts, is frequently rendered "prince" by the AV (NEB also "officer," "governor," etc.). It is applied to the men appointed to assist Moses in judicial matters (Ex. 18:21, 25), to the "rulers" of cities (Shechem, Jgs. 9:30; Samaria [following LXX, Vulg.; MT has "Jezreel"], 2 K. 10:1), to officials in charge of districts of cities (Neh. 3:9, 12, 14-19), and to "rulers" of the Philistines (1 Ch. 12:19 [MT 20]; AV "lords"). The term is used in a general sense in Prov. 28:2 and Lam. 2:2.

Rōzᵉnîm, the plural part. of *rāzan* ("be weighty, judicious"), signifies a dignitary or potentate (AV also "princes"; NEB also "governors," "princes"). It is used in parallel with "kings" in Ps. 2:2 (Acts 4:26 follows the LXX in rendering *rōzᵉnîm* by Gk. *árchontes*); Prov. 8:15; 31:4; Hab. 1:10. The RSV translates it "princes" in Jgs. 5:3; Isa. 40:23.

The term *qāṣîn* ("leader, chief"; AV also "prince"; NEB also "prince," "commander") is used of military and political leaders (e.g., Prov. 25:15; Isa. 1:10; 22:3). Mic. 3:1, 9 pronounces judgment on the "rulers" (parallel to "heads") of Israel because they have forsaken their responsibility to pursue justice and have pursued injustice instead.

Šōpēṭ, the part. of *šāpaṭ* ("judge, govern"), is most often translated "judge." But since the ancient Hebrews did not distinguish between the executive, legislative, and judicial functions of government, the more general translation "ruler" is frequently more appropriate (Ps. 2:10; 148:11; Isa. 40:23; Dnl. 9:12; Hos. 7:7; Am. 2:3; Mic. 5:1; AV "judge"; NEB also "prince," "judge").

Several terms are used only once or twice. *Mᵉḥōqēq,* the poel part. of *ḥāqaq* ("inscribe, decree"), denotes a "prescriber" of laws; the RSV renders it "ruler" in Isa. 33:22 (AV, NEB, "lawgiver") and "ruler's staff" in Gen. 49:10 (AV "lawgiver"; NEB "staff"). In Jer. 2:8, RSV, "rulers" represents *rō'îm* ("shepherds"; so RSV mg., NEB; AV "pastors"), the plural part. of *rā'â* ("feed, tend, shepherd"); along with the priests and prophets, the rulers who were responsible for "shepherding" Israel have led the people in defiling God's land. Josh. 13:3 refers to the five "rulers" (*sᵉrānîm,* pl. of *seren*; AV, NEB, "lords") of the Philistines; in Jgs. 3:3; etc. the RSV renders the same term "lords" (*see* LORDS OF THE PHILISTINES). In Isa. 41:25 "ruler" represents *sāgān* (AV "prince"; NEB "viceroy"), a loanword from Akkadian denoting a provincial governor. In Zec. 10:4 *nōgēś* (part. of *nāgaś,* "drive," "exact," "oppress"), denotes a ruler in a negative sense, i.e., an "oppressor" (so AV; cf. RSV 9:8; Isa. 3:12; 14:2, 4) or "despot" (NEB "commander"). The RSV uses "wicked rulers" to render Heb. *kissē' hawwōṯ* (lit. "throne of destructions") in Ps. 94:20 (AV "throne of iniquity" [following LXX]; NEB "sanctimonious calumny"); *kissē'* here refers by synecdoche to the person who occupies the throne, probably a judge who wreaks destruction by the abuse of his office (see A. A. Anderson, *Book of Psalms,* II [*NCBC,* repr. 1981], 675).

Hebrew *šallîṭ* (from the vb. *šlṭ,* "have power over") is rendered "ruler" by the RSV only in Eccl. 7:19 (AV "mighty man") and 10:5; the RSV renders *šallîṭ* by "governor" in Gen. 42:6, referring to Joseph's position as regent over the land of Egypt. The same term appears in Aramaic in Dnl. 5:29, where Daniel is proclaimed the third ruler in the kingdom of Babylon; the verb *šᵉlēṭ* is rendered "be ruler" (peal) in 5:7, 16, and "make ruler" (haphel) in 2:48 (NEB "make regent").

II. In the NT.–In the RSV NT "ruler" most often represents Gk. *árchōn,* a general term for someone in a prominent position in which he exercises authority, i.e., a high official (AV also "prince," "chief"; NEB also "magistrate," "councillor," "leading," "prince," "governing power," "city authority," etc.). Various types of officials are referred to in the NT, and it is not always clear which particular office is being designated (see *TDNT,* I, 488f.). (1) In some passages *árchōn* denotes a Jewish leader. In Acts 23:5 the "ruler" is Ananias the high priest (cf. Ex. 22:28). Jairus, referred to only as an *árchōn* in Mt. 9:18, 23, was a member of the governing board of the synagogue (cf. Mk. 5:22, 35f.; Lk. 8:41; see also Acts 14:5). (On the expressions *árchōn tēs synagōgēs* and *archisynágōgos, see* RULER OF THE SYNAGOGUE.) The term can also denote a member of the Sanhedrin, the highest governing body of the Jewish people, composed primarily of Sadducees and Pharisees (cf. e.g., Lk. 23:13, 35; 24:20; Acts 3:17; 4:5, 8; 13:27). Nicodemus (Jn. 3:1), the Pharisee in whose home Jesus healed a man with dropsy on the sabbath (Lk. 14:1), and the rich young "ruler" (Lk. 18:18; cf. Mt. 19:16-22; Mk. 10:17-22) may also have been members of the Sanhedrin, although it is possible that one or more of them were leaders in the synagogue or simply prominent men (cf. NEB "leading," Lk. 14:1) in the Jew-

ish community. (2) In other passages *árchōn* denotes gentile officials, e.g., the Roman magistrates before whom Paul and Silas were dragged in Philippi (Acts 16:19). In Mt. 20:25 Jesus contrasts the imperious leadership style of gentile rulers with the servanthood that is to mark the Christian style of leadership. Paul urges obedience to the Roman civil authorities in Rom. 13:3. Acts 4:26 quotes from Ps. 2:2, where the Hebrew term is *śar* (see I above). (3) In one passage the term is applied to Christ, "the ruler of kings on earth" (Rev. 1:5). (4) In a few instances *árchōn* refers to a demonic power. In Jn. 12:31; 14:30; 16:11 Jesus refers to His adversary as "the *árchōn* of this world," who is judged and dethroned through Christ's death and resurrection. Similarly, Paul in 1 Cor. 2:6, 8 speaks of the "*árchontes* of this age" (the powers that dominate secular wisdom), who are "doomed to pass away" because they "crucified the Lord of glory" (cf. the reference to "the god of this world" in 2 Cor. 4:4).

In two passages the RSV uses "rulers" to translate Gk. *archaí* (pl. of *archē*). In Lk. 12:11 it probably refers to leaders in the synagogue, since these were the Jewish courts before which the disciples would be called (but cf. AV "magistrates"; NEB "state authorities"). In Tit. 3:1, however, believers are instructed to be submissive to secular rulers (AV "principalities"; NEB "government").

Matthew 2:6 says of Bethlehem, "And you . . . are by no means least among the rulers [pl. of Gk. *hēgemōn*; AV "princes"] of Judah; for from you shall come a ruler [part. of *hēgéomai*; AV "Governor"; NEB "leader"] who will govern my people Israel" (cf. Mic. 5:2 [MT 1]). The verb *hēgéomai* means "lead," and the derived noun and substantive part. signify a national leader.

Finally, in Eph. 6:12 "world rulers" is the RSV translation of Gk *kosmokrátores*, a term used in astrology for the planets and in magical texts for gods. In Eph. 6:12 it suggests the enormous power of the demonic forces against which believers must contend.

N. J. O.

RULER OF THE FEAST. *See* STEWARD OF THE FEAST.

RULER OF THE SYNAGOGUE [Gk. *archisynágōgos* (Mk. 5:22, 36, 38; Acts 13:15; 18:8, 17), *árchōn tḗs synagōgḗs* (Lk. 8:41; 13:14)]; AV also CHIEF RULER OF THE SYNAGOGUE; NEB PRESIDENT OF THE SYNAGOGUE, PRESIDENT (Mk. 5:38), OFFICIAL OF THE SYNAGOGUE (Acts 13:15), "who held office in the synagogue" (18:8, 17). In Mk. 5:35; Lk. 8:49 the RSV has "ruler" for *archisynágōgos* (AV "ruler of the synagogue"; NEB "president"), and in Mt. 9:18 (par. Mk. 5:22; Lk. 8:41); 9:23 (par. Mk. 5:38) the AV and RSV use "ruler" to translate Gk. *árchōn*.

This official functioned as the presiding officer (Heb. *rō'š hakk'nēseṯ*; see *HJP*², II, 433-36) of a board of elders who had charge of a synagogue. The plural usage (Mk. 5:22; Acts 13:15) designates the whole board, a deliberative body that was also responsible for maintaining good order in the synagogue and the orthodoxy of the synagogue's members. Having the authority to exercise discipline, it could reprimand and even excommunicate "guilty" individuals (cf. Jn. 9:22; 12:42; 16:2).

The NT refers to five different individuals who held this office: (1) Jairus, the father of a young girl whom Jesus raised from death (Mk. 5:22-43 par.); (2) an unnamed official who became indignant after Jesus healed a crippled woman on the sabbath (Lk. 13:10-17); (3) the officials who permitted Paul and Barnabas to teach in the synagogue in Pisidian Antioch (Acts 13:15); (4) Crispus, who became a believer as a result of Paul's preaching in the synagogue at Corinth — probably the same Crispus whom Paul baptized at Corinth (1 Cor. 1:14); (5) Sosthenes, who either replaced Crispus as ruler of the synagogue at Corinth when the latter became a Christian, or was one of several rulers in it (Acts 18:17). Although Acts gives no clear reason why it happened, the crowd beat Sosthenes when the proconsul Gallio refused to hear the charges brought against Paul. If he is the same Sosthenes mentioned in 1 Cor. 1:1, he also became a believer.

D. B. PECOTA

RUMAH rōō'mə [Heb. *rûmâ*; Gk. B *Krouma*, A *Ruma*]. The home of Pedaiah and his daughter Zebidah, the mother of Jehoiakim (2 K. 23:36). Three possible locations have been suggested. The most probable is Khirbet Rûmeh, 9 km. (5.6 mi.) N of Nazareth, near Rummâneh (Rimmon in Galilee). Josephus, however, mentions a place called "Abouma" as the home of Zebidah (*Ant.* x.5.2 [83]), and "Abouma" has usually been taken as a scribal error for "Arouma." This reading has led some to equate Rumah with the Arumah of Jgs. 9:41, an Ephraimite town 8.1 km. (5 mi.) SE of Shechem. Josephus does not locate "Abouma," but he does refer to a Rumah in Galilee (*BJ* iii.7.21 [233]). The Annals of Tiglath-pileser III also mention Rumah in a series of conquered Palestinian towns (*ANET*, p. 283) of which all the identifiable sites are located in Galilee (*LBHG*, rev., p. 372). This also would support the identification of Rumah with the Galilean Khirbet Rûmeh, and suggests that even after the deportations of Tiglath-pileser III an Israelite population still existed and apparently revived rapidly (*LBHG*, rev., p. 403).

Others have proposed a location in Judah, assuming that Jehoiakim's mother would not have come from northern Israel. Noting the frequency of the scribal error that confuses *r* and *d*, Rumah has been identified with the Dumah of Josh. 15:52, possibly represented by the modern Khirbet ed-Dômeh near Hebron (*GTTOT*, § 963).

D. E. WARING

RUMP. The AV translation of Heb. *'alyâ* "fat tail" (so RSV) in Ex. 29:22; Lev. 3:9; 7:3; 8:25; 9:19. It denotes one of the portions of the peace and trespass offering, which were not eaten by the priest or sacrificer but waved before the Lord and burned on the altar. *See* SACRIFICES AND OFFERINGS IN THE OT.

RUN; RUNNER. Biblical references to human running usually represent a form of Heb. *rûṣ* or Gk. *trécho*. Occasions for running included greeting a loved one or showing hospitality to a guest (e.g., Gen. 18:2, 7; 24:20, 28f.; 29:13; Lk. 15:20), bringing important news (e.g., Jgs. 13:10; Mt. 28:8; cf. Jer. 23:21), fleeing an enemy (e.g., Jgs. 7:21; cf. Heb. *nûs*, 9:21; Gk. *pheúgō*, Mk. 14:52), etc. The Israelite kings followed the custom of having their chariots escorted by a corps of specially trained runners (1 S. 8:11; 2 S. 15:1; 1 K. 1:5); These *rāṣîm* (part. of *rûṣ*) also served as messengers who brought news from the battle front to the king (e.g., 2 S. 18:19-32; Jer. 51:31; cf. 1 S. 4:12; Job 9:25; *see also* COURIER; GUARD). The prophet Habakkuk (2:2) was commanded to write his vision on tablets so plainly that anyone passing by could read it "fluently" (KoB, p. 882; for other interpretations, see *IB*, VI, 987 ["on the run"], and *TDNT*, VIII, 229, which connects it with the spreading of the prophetic message). The expression "run to and fro" is used by the AV and RSV

to translate the polel of *šût* (lit. "roam around") in 2 Ch. 16:9; Jer. 5:1; 49:3 (hithpolel); Dnl. 12:4; Am. 8:12 (cf. qal in Job 1:7; 2:2; AV, RSV, "go to and fro").

The verb *rûṣ* also has several figurative or symbolic uses. Like WALK, it can denote an entire manner of life, e.g., one marked by eagerness either to obey God's commandments (Ps. 119:32) or to pursue evil (Prov. 1:16; 6:18; Isa. 59:7). The person who chooses the path of wisdom and uprightness can run without fear of stumbling (Prov. 4:11f.). Those who wait upon the Lord are promised new strength that will enable them to "run and not be weary" (Isa. 40:31; cf. 1 K. 18:46).

See also GAMES.

See *TDNT*, VIII, *s.v.* τρέχω (O. Bauernfeind).

N. J. O.

RUNNEL [Heb. *raha*ṭ] (Gen. 30:38, 41); AV GUTTER; NEB TROUGH. A receptacle from which cattle could drink water. Cf. Ex. 2:16, where the AV, RSV, and NEB render "trough."

RUNNING WATER. *See* WATER.

RUSH [Heb. *'agmôn*] (Isa. 58:5; "burning rush," Job 41:20 [MT 12]); AV, NEB, BULRUSH, CAULDRON; [*sûp*] (Isa. 19:6); AV FLAG; [*gōme'*] (Isa. 35:7); **BULRUSH** [Heb. *gōme'*] (Ex. 2:3); NEB RUSH. Any of a variety of reedlike plants (genera *Juncus* and *Scirpus*) that grow on river banks, seacoasts, and in marshy areas. Translators confuse reeds and rushes, which is unfortunate, since the Middle East has about twenty varieties of *Juncus* and almost as many of *Scirpus* (the bulrush or clubrush).

The Egyptian bulrush or papyrus-reed (*Cyperus papyrus* L) grew abundantly along the Nile: it is the *gōme'* of Ex. 2:3; Job 8:11 (RSV "papyrus"); Isa. 35:7; etc. It grew thick, long horizontal roots from which the papyrus shoots sprang. The inner pith of the reeds was cut into strips to make PAPYRUS. But the pith could also be eaten raw or cooked as food (cf. Ezk. 3:1-3), which added to the plant's value among poorer people. While similar in nature to the *Arundo donax* L., the Egyptian bulrush was less versatile in use.

See REED.

R. K. H.

RUST [Heb. *ḥel'â*–'disease'] (Ezk. 24:6, 11-13); AV SCUM; NEB CORROSION; [Gk. *brōsis*–'consuming' (Mt. 5:19f.), *iós* (Jas. 5:3)]; [*katióō*–'become corroded'] (Jas. 5:3); AV BE CANKERED. The corrosion of metals. The only OT references to rust are in Ezekiel's parable of the caldron, in which the rust (lit. "diseased metal") symbolizes the "filthy lewdness" of the people of Jerusalem (Ezk. 24:6-13). J. L. Kelso identified the term with "copper disease" in modern metallurgy: "The oxide of copper is green or gray-green, the color of death."

The Apocrypha has several references to rust. Sirach warns against trusting an enemy whose wickedness is "like the rusting [Gk. *ióomai*] of copper" (12:10) and recommends using silver for almsgiving rather than letting it rust (*ióomai*, 29:10). The Letter of Jeremiah ridicules the worship of man-made idols that cannot even save themselves from rust (*íos*, 6:12 [LXX 10], 24 [LXX 23]).

The NT contains two references to the perishability of precious metals. In Mt. 6:19f. Jesus warns that "earthly" treasures (presumably metal objects) are open to disease of metal (*brōsis*) while "heavenly" treasures are not (cf. Sir. 29:10-12). Jas. 5:3 uses Jesus' warning as a wisdom saying, adding that the corroded treasures witness against those rich persons who trust in them.

Bibliography.–J. L. Kelso, JBL, 44 (1945), 391-93; W. H. Brownlee, "Ezekiel's Copper Cauldron and Blood on the Rock," in R. A. Coughenour, ed., *For Me to Live* (1972), pp. 21-43.

R. A. COUGHENOUR

RUTH rōōth [Heb. *rût*–'companion, friend,' or 'satiated, satisfied']. The title of one of the five *Megilloth* (scrolls) within the hagiography of the OT (the order of the OT books in English versions follows the LXX, which placed Ruth after Judges, apparently on the basis of Ruth 1:1; see Childs, p. 564) and the name of one of the principal female characters within the book. This book was read at the Feast of Weeks, which took place at the end of the grain harvest (fifty days after Passover).

  B. Unity and Structure
  C. Problems of Interpretation
III. Theological Significance

I. Contents.–A summary of the contents of Ruth will provide a general introduction to the book and aid discussion of its composition and theological significance.

Ruth can be divided into five major sections, which narrate God's guidance and care for a family that had experienced great losses.

A. Loss of Food and Family (1:1-22). During the period of the judges the family of Elimelech left Bethlehem for Moab because of a severe famine in Judah (vv. 1f.). Within ten years Elimelech and both his sons died, all leaving widows (vv. 3-5). Because Elimelech's widow Naomi was old and had lost all hope of providing more sons for Orphah and Ruth to marry, Orphah left Naomi and returned to her family (vv. 6-14), but Ruth swore to stay with Naomi and accept her God. Thus Naomi returned to Bethlehem with only Ruth left of her family (vv. 15-22).

B. Reward of Favor at Harvest Time (2:1-23). Because the women had no food and it was harvest time, Ruth went to a field hoping to glean (vv. 1f.). By chance she came to the field of Boaz, a kinsman of Elimelech (vv. 3-7). She found favor in the eyes of Boaz, even though she was a stranger in Judah, because of her faithfulness to her relatives, her trust in God, and Boaz's desire to see God reward her (vv. 8-13). Because Boaz granted her special gleaning privileges, she was richly blessed with a great deal of grain from his field (vv. 14-20).

C. Search for Security Through a Kinsman-Redeemer (3:1-18). Naomi instructed Ruth to prepare herself and meet Boaz at the threshing floor so that she could ask him to be her redeemer (Heb. *gō'ēl*, vv. 1-5). Boaz promised to fulfil his responsibility if a nearer kinsman refused (vv. 6-13), and he sent Ruth home in the morning loaded with barley (vv. 14-18).

D. Redemption and Blessing of the Family (4:1-17). Boaz met with the elders and nearer kinsman at the city gate to decide who would redeem the field of Naomi and raise up family seed through Ruth (vv. 1-5). The closer redeemer was unable to pay the redemption costs, so Boaz acquired the field and the hand of Ruth (vv. 6-10). The people of the city pronounced God's blessing on the couple and their seed (vv. 11f.), and on Naomi when Ruth had given birth to a son (vv. 13-17).

E. Genealogy of Obed (4:18-22). The generations are traced from Perez, through Obed, and on to David to show how God blessed this family.

II. Composition–A. Date. The date and author of Ruth are not mentioned in the book. The Babylonian Talmud (*Baba Bathra* 14b) attributes authorship to Samuel, but nothing within the book confirms this opinion. The refer-

ence to David in 4:17, 22 indicates that the present form of the book was written after his time; thus dates ranging from the time of David to the postexilic era have been proposed. Several factors (customs, language, place in the canon) are open to various interpretations.

1. Early Monarchy. Some scholars (e.g., KD and Young) date the book early because the setting and customs are preexilic, the genealogy does not list Solomon, and they view the language as early classical Hebrew. According to this view the place of the book in the canon (hagiography) does not reflect its original date.

2. Preexilic Period. Other scholars (e.g., Gerleman, Hals) support the period of Solomon, the 9th or 8th cent. (e.g., Campbell, Sasson), or more generally any time in the preexilic period (e.g., Rudolph). These scholars find the postexilic evidence and setting for Ruth unproven and the early monarchy date too early for the sandal gesture (4:7) to have been forgotten. Most place the book in the Solomonic and post-Solomonic era, when the radical cultural transformation of the nation led to a loss of God-consciousness (cf. Hals, who follows G. von Rad, *OT Theology,* I [Eng. tr. 1962], 46-52).

3. Postexilic Period. Many scholars (e.g., Joüon, Myers, Weiser) believe Ruth is a reaction against Ezra's nationalistic exclusivism regarding mixed marriages. Some (e.g., Eissfeldt, Fohrer) reject this view but still date the book in the postexilic period. A few are of the opinion that the book is exilic but believe it is based on a preexilic story (e.g., Glanzman, Myers, Weiser). The placement of Ruth in the hagiography, rather than in the Former Prophets, and its supposedly late language and legal customs add support to this dating of the book.

4. Conclusions. Since early material (e.g., Psalms) is included in the hagiography, since the few peculiarities of language are probably archaic and dialectic (Campbell), and since nothing in Ruth suggests that it is a polemic against Ezra's reform movement, the postexilic date is not particularly convincing. A preexilic date seems preferable because the customs fit an early period and the language is classical with some archaic features. A setting within the "humanism" of the Solomonic era remains unproven; therefore an exact date within the preexilic era cannot be specified. The prophets' strong condemnations of Moab favor an early preexilic date, before this negative sentiment arose.

B. Unity and Structure. Scholars have raised numerous questions about the connection between the genealogical appendix in 4:18-22 and the rest of the book. Most (e.g., Campbell, Eissfeldt, Rudolph) conclude that 4:18-22 is not a part of the original story because the genealogy is foreign to the narrative content of the rest of the story, the style of this appendix is based on the late text of 1 Ch. 2:4-15, and the child is said to be the son of Boaz (4:21) rather than Mahlon (Ruth's late husband, v. 10) through levirate marriage. But the force of these observations is weakened by the reference in 4:12 and 17 to Perez and David, which connects the genealogy to the rest of the story. In addition, Campbell and Myers have shown that 4:18-22 is not dependent on 1 Chronicles but that both rely on an independent third source. Sasson and Rowley have used the testimony of the people of Bethlehem in 4:11f. to show that Obed rightfully belonged to the "house of Boaz" and therefore was the son of Boaz. Boaz not only played the part of a kinsman but legally married Ruth.

Others (Childs, Eissfeldt) suggest that part of 4:17 is a later addition. Although the Hebrew syntax of this verse is unusual and one would expect the son's name to be more closely related to Naomi's, these factors in themselves do not point to a late date. The real problem is the reference to David in the second half of the verse. The acceptance of 4:17b into the book at any time implies a solid tradition about David's Moabite ancestry. Moreover, this tradition is firmly imbedded in the canonical form of the book, and the verse fits into the overall structure; thus it is more fruitful to treat 4:17 as original rather than as an addition from a later period when the Moabites were despised (cf. the prophetic war oracles against Moab).

Ruth's structure has been examined in detail (see Bertman, Campbell, Sacon, Murphy). The book's design is found in the many counterbalanced topics (cf. Bertman) and the repetition of key words and phrases, which form *inclusios* and provide thematic emphasis. One can break down the structure into units simply on the basis of the dramatic scenes, but an analysis of the theme of each scene allows a more significant synthesis of the structure.

The first unit includes all of ch. 1 and emphasizes the theme of the loss of food, family, hope, and fulness. The inclusion of Naomi's wish that her daughters-in-law find "rest," Ruth's declaration of devotion to Naomi and her God, and the transitional sentence about the beginning of harvest (1:22) set the plot for the possible resolution of these losses.

The second major unit (ch. 2) is structured around a series of dialogues (see Sacon) about the desire of a stranger (Ruth) to find favor (vv. 2, 10, 13; cf. Dommershausen). Boaz's central speech (vv. 11f.) relates the piety of Ruth (ch. 1) to the solution to the food shortage, and it points forward to Ruth's reward under God's wings. The discovery that Boaz is a kinsman (vv. 20-23) creates a transition to the next unit's theme.

The third unit (ch. 3) begins and ends with a search for "rest, security" (vv. 1, 18; cf. 1:9) through the intervention of the kinsman-redeemer. He provides refuge for Ruth (3:9) and food (and later family) for Naomi, who was empty (v. 17; cf. 1:21).

The fourth unit (4:1-17) is constructed around the idea of Boaz's buying Naomi's field, acquiring Ruth, and raising up heirs to continue the name of the deceased (vv. 5, 10).

The final unit (4:18-22) indicates that the blessings in 4:11f. and 4:14f. were fulfilled.

C. Problems of Interpretation. The form-critical analysis of Ruth has resulted in a diversity of opinions concerning the genre (see the survey in Witzenrath, pp. 362-65; cf. Murphy) and pre-history of Ruth. Ruth is frequently classified as a novella or short story, which some consider fictional (Gunkel and Beattie emphasize the symbolic meaning of the names), but most believe the story has historical roots. Myers attempted to show that Ruth was based on a preexilic, orally transmitted poem that was put into prose during the exilic period (see also Glanzman). Gunkel derived the basic plot from comparable Egyptian fables and then traced the book's development through an early stage when Naomi was the heroine to the final stage when Ruth's role was added. W. E. Staples (*AJSL,* 53 [1936], 145-157) suggested a most unlikely origin for the book — a Bethlehem fertility-cult myth (cf. H. G. May, *Journal of the Royal Asiatic Society* [1939], 75-78). Sasson was more helpful, using a structural and folklorist approach in understanding the various components within the plot.

Some problems of interpretation are related to our incomplete understanding of some of the legal and social practices that are central to the action. The levirate-marriage institution, laws of redemption of property, and court customs are complexly and uniquely intertwined in

Ruth (cf. D. R. G. Beattie, *VT*, 24 [1974], 252-267; Leggett; Davies). Gen. 38 and Dt. 25 require levirate marriage only of a brother-in-law, but in Ruth a twice-removed kinsman fulfils this duty. Lev. 25 explains the redemption of a near kinsman's property but does not connect this custom to any marriage requirement. A solution that brings these two customs together may lie in the statement that the purpose of the levirate marriage, and of Boaz in his performance of the role as kinsman-redeemer (Ruth 4:10), was to continue the "name" of the deceased (Dt. 25:6). Leggett and Davies have shown that the preservation of the name involved not only the raising up of a son but also the perpetuation of the deceased's name on the family's property (cf. the use of name in Dt. 25:6; Nu. 27:4).

The rather strained court proceedings and the mystery of the sandal gesture add to the difficulty of understanding ch. 4 (see Carmichael). Although some suggest that Boaz used trickery to get the nearer kinsman to back out on his original plan to fulfil the duties of a kinsman-redeemer (vv. 4-6), his actions were in defense of his own financial position (v. 6). The refusal to fulfil this role was probably not uncommon, for it had a negative rather than a positive effect on the redeemer's share of the inheritance (Gen. 38). Consequently legal statutes were given to put pressure on a brother-in-law to raise up seed to continue the name and inheritance of a brother (Dt. 25:7-10). Davies suggested that the nearer redeemer may have assumed that he would have to redeem Naomi, who was too old to have an heir, and thus agreed to the arrangement. But when he discovered that he had to marry Ruth, who could bear children, he realized that her child would eventually inherit the family property, and thus he changed his mind.

III. Theological Significance.–The multiple approaches and diverse understandings of Ruth have produced a number of opinions concerning the purpose of the book. Some (e.g. Weiser) believe the book intended to protest the ruthless attitude of Ezra and Nehemiah toward mixed marriages. This position is weak because Ruth was a convert, not a heathen, and because the approval of a levirate marriage to a foreigner is quite different from approving all marriages to foreigners. A few think that Ruth was written just to entertain (Pfeiffer), while others suggest that its purpose was to revive the custom of levirate marriage (see H. A. Brongers *Norsk Teologische Tijdschrift* 2 [1947-48], 1-7). But most identify three prime purposes (see Murphy for a summary): (1) to bear witness to God's direct and indirect control of history. God brings famine and emptiness (1:1-5, 17, 20f.) as well as food, rest, and reward (1:6, 8f.; 2:3, 12, 20; 3:10, 17; 4:11-13); (2) to instruct concerning the virtues of devotion to family, duty, and God. The characters act with kindness and devotion (1:14, 16; 2:2, 8-11, 13, 14-16, 23; 3:1, 9f., 17; 4:4, 15) and God acts in lovingkindness (1:7f.; 2:12, 20; 3:10; 4:11f., 14); and (3) to trace the ancestry of David (4:18-22; cf. Gerleman, Loretz).

SABBATH [Heb. *šabbāṯ*] (Ex. 16:23; 20:8; Lev. 16:31; 23:3; Dt. 5:12; 2 K. 11:5; Neh. 13:5; Ps. 92:1 [MT 2]; Isa. 1:13; 56:2; Jer. 17:21; Ezk. 20:12; 46:1; Am. 8:5; etc.); [*šāḇaṯ*] ("keep sabbath," Lev. 23:32; 2 Ch. 36:21); [Gk. *sábbaton, (tá) sábbata*] (Mt. 12:1f., 5; Mk. 2:23f., 27f.; Lk. 4:16; 6:1, 5; Jn. 5:9f.; Acts 1:12; etc.); [*prosábbaton*] ("day before the sabbath," Mk. 15:42); [*sabbatismós*] ("sabbath rest," He. 4:9); AV REST. The seventh day of the week (Ex. 16:26; 20:10; etc.), as well as certain feast days (Lev. 16:31; 23:32; etc.), marked in ancient Israel, Judaism, and early Christianity by cessation of work and ceremonial observance.

  A. Jesus in the Gospels
  B. Paul and the Church: From Sabbath to Lord's Day
  C. Eschatological Sabbath

I. Etymology and Meaning of the Term.–The derivation and exact meaning of Heb. *šabbāṯ* are uncertain. Among the numerous proposals, the most likely are the following. (1) The noun *šabbāṯ* may be derived from Akk. *šabattu*, which also referred to a specific day (see II.A below). Despite the remarkable similarity between the two words, they do differ. Akk. *šabattu* doubles the final radical, while Heb. *šabbāṯ* doubles the middle radical. This difference is difficult to explain etymologically; but it is at least possible that the two words are related, perhaps sharing a common ancestor. (2) Since "sabbath" refers most often to the seventh day of the week, and since the Hebrew word for seven is *šeḇa'*, there have been frequent attempts to derive *šabbāṯ* from *šeḇ'*. The difficulty lies in explaining how the final consonants came to differ. Such a shift is unlikely, and it is probably coincidental that the two words begin with the same two consonants. (3) The most likely possibility is that *šabbāṯ* is derived from the Hebrew verb *šāḇaṯ*, "cease," since the most ancient characteristic of seventh-day observance is that all work ceased. Thus sabbath would mean something like "cessation day," the day on which all work stops. If in fact the noun was derived from the verb, it appears that the noun then influenced the verb as well. In a few instances *šāḇaṯ* has become a denominative, losing its basic sense of "cease" and acquiring the sense of "keep sabbath" (Lev. 23:32; 2 Ch. 36:21).

The noun *šabbāṯôn* also apparently arose from the influence of *šabbāṯ*. The RSV renders all eleven occur-

rences as "solemn rest" or "day of solemn rest." Like *šabbāṯ, šabbāṯôn* refers both to the observance of the seventh day (Ex. 16:23; 31:15; 35:2; Lev. 16:23) and to feast days (Lev. 16:31; 23:24, 32, 39). In three instances the AV renders *šabbāṯôn* as "sabbath" (Lev. 23:24, 39 [bis]).

Because the observance of the seventh day served to mark the passage of the seven-day week, the word *šabbāṯ* in some contexts means "week" and is so translated by the RSV (Lev. 23:15; 25:8; cf. Acts 17:2).

II. Origin.--Scholars in the late 19th and early 20th cent. proposed several theories about the origin of the sabbath, based upon apparently similar practices in other ancient cultures (for bibliography see Andreason, pp. 1-5). Interest in this endeavor has waned, since it has become clear that no alleged parallel or similarity can conclusively account for the origin of the sabbath. The major theories can be categorized as follows.

A. Lunar. The above-mentioned Akk. *šabattu* has been described as the Mesopotamian forerunner of the sabbath. Not only are the two words similar, but *šabattu* also refers to a specific day, i.e., the day of the full moon, the fifteenth day of the month. The day also had religious significance; it is described as a "day of pacification of the heart [i.e., of the gods]" (*TDNT*, VII, 2). Despite these tantalizing hints, major differences exist between the Babylonian *šabattu* and the Hebrew sabbath: the etymological link is not secure; the *šabattu* was a monthly rather than a weekly day; and it apparently had nothing to do with the cessation of work.

A related theory proposes an ancient Arabic origin (see D. Nielsen, *Die altarabische Mondreligion und die mosaïsche Überlieferung* [1904]). In their worship of the moon the ancient Arabs supposedly paid particular attention to the four monthly phases of the moon, i.e., where the moon "sat." The Arabic word for "sit," *ṯabat*, supposedly became Akk. *šabattu* and later Heb. *šabbāṯ*. Regular human rest at approximately seven day intervals thus would be patterned after the moon's rest. Again, the etymology is suspect. Moreover, this theory shares the same weakness as any lunar theory, namely, that a regularly recurring seventh-day sabbath will almost always be out of phase with the moon, since the lunar month contains twenty-nine days instead of twenty-eight.

B. Taboo Day. In addition to the *šabattu* day, ancient Mesopotamian sources also mention "evil days" on which the king, cultic officials, and physicians observed various taboos or prohibitions. On such days, e.g., the king was not to eat certain foods, put on clean clothes, travel by chariot, or speak in an official capacity; at night he was to offer a sacrifice to the gods, after which normal activities could be resumed. The "evil days" occurred at approximately seven-day intervals: the seventh, fourteenth, nineteenth, twenty-first, and twenty-eighth days of certain months. This fact, plus the fact that some of Israel's sabbath legislation includes certain prohibitions (Ex.16:29; 35:3), has led some scholars to conclude that the sabbath developed from these "evil days" (G. Smith, *Assyrian Discoveries* [1875]). There are major differences, however. The "evil days" did not fall exactly every seven days, nor did they involve a general cessation of work.

C. Socioeconomic. From the discipline of comparative anthropology has come the observation that various ancient societies engaged in cessation of agricultural work on regularly recurring market days. In Rome, for instance, every eighth day was a market day. The economic function of these days is obvious, but they also seem to have served as opportunities for social and religious gatherings (see H. Webster, *Rest Days* [1916]; M. P. Nilsson, *Primitive Time-Reckoning* [1920]). Whether they provide a plausible explanation of the origin of the sabbath, however, is doubtful: Israelite law seems to have prohibited marketing on the sabbath (Am. 8:5; Neh. 13:15-22); there are no known seven-day market cycles from other societies; and the strongest comparative evidence does not include other ancient Near Eastern cultures that may have had a realistic chance of influencing Israel.

A very different sort of socioeconomic theory suggests that the KENITES, the tribe of Moses' father-in-law (Jgs. 4:11, 17), originated the worship of Yahweh as well as the sabbath and taught these to Israel as Moses was leading the people from Egypt to Sinai (Ex. 18). Proponents of this theory argue that the name "Kenite" means "smith," and that if indeed the Kenites were smiths, they would have had to use fire in making metals. Moreover, if the Kenites originated the sabbath, fires would have been prohibited one day a week. If in turn the Kenites taught Yahwism and sabbath observance to the Israelites, this would explain why one of the very few specific prohibitions in the OT involves the making of fires (Ex. 35:3). (See K. Budde, *JTS*, 30 [1929], 1-15.) Unfortunately, this ingenious theory rests entirely upon circumstantial evidence and must be considered little more than pure speculation.

D. Calendrical. Proponents of the pentecontad calendar find the origin of the seven-day week and the sabbath in this manner of reckoning time (see, e.g., J. and H. Lewy, *HUCA*, 17 [1942/43], 1-152). According to them the Semitic year was divided into seven periods of fifty days. Each fifty-day period (pentecontad) contained seven weeks of seven days, plus one concluding festival day. The remaining fifteen days needed to complete a solar year of 365 days consisted of two seven-day festivals, one in the spring and one in the fall, plus a New Year's Day. Clearly, the number seven dominates this system, and proponents of this theory have proposed that the pentecontad calendar is the common ancestor of both the Mesopotamian *šabattu* and the Hebrew sabbath. The problem is that there is no solid evidence for the existence of the pentecontad calendar. Although the numbers seven and fifty do figure in the OT reckoning of time (Lev. 23:15-44), there is no justification for hypothesizing such an elaborate system as the pentecontad calendar.

A related but more modest proposal begins with the observation that two of the major feasts in the OT, those of Unleavened Bread and of Booths, lasted seven days. It is suggested that such observances gave rise to the practice of counting days in cycles of seven (see, e.g., H. J. Kraus, *Worship in Israel* [1966], pp. 81-86). The OT testifies to the importance of the number seven in calculating cycles of days (Gen. 1:1–2:3; etc.), weeks (Lev. 23:15f.), and years (Lev. 25:3-24). Furthermore, other ancient Near Eastern texts attest the importance of seven-day periods; e.g., in the Gilgamesh Epic the hero Gilgamesh mourns the death of his friend Enkidu for seven days; Utnapishtim, the Babylonian flood hero, finishes his ship in seven days, and he sends forth a dove, a swallow, and a raven on the seventh day after his ship has lodged on Mt. Nisir. The number seven functioned throughout the ancient Near East as a symbol of wholeness and completion. Thus the significance of this number in biblical and other ancient Near Eastern accounts suggests that it may have influenced the origin of the seven-day week and the sabbath. It is just as possible, however, that the seven-day week originated first and that its prior existence explains the occurrence of seven-day festival periods in the OT and the repeated references to seven-day periods in other texts. In short, the evidence is again inconclusive.

E. Conclusion. The preceding discussion allows the

conclusion that the Israelite sabbath was a unique institution in the ancient Near East; this does not mean, however, that it arose in a vacuum. The OT testifies to the relationship between Israel and other ancient Near Eastern peoples, and this relationship clearly influenced Israel. While no particular parallel or similarity conclusively or directly accounts for the origin of the sabbath, the similarities and parallels are striking enough to be more than coincidental. The biblical sabbath may have been an Israelite adaptation of a lunar reckoning of time; it may have been related indirectly to Mesopotamian taboo days; its origin may have been influenced by economic and social realities or by calendrical methods. We simply do not know. What we do know is that the OT is not primarily concerned with the historical, socioeconomic, or calendrical origin of the sabbath. Instead it focuses upon Israel's theological conviction that the sabbath originated with God at creation (Gen. 2:1-3; Ex. 20:8-11; 31:17), that its observance was commanded by God at Sinai (Ex. 20:8-11; Dt. 5:12-15), and that its existence testifies to the ongoing relationship between God and His covenant people (Ex. 31:12-17; Jer. 17:19-27; Ezk. 20:12, 20; etc.).

III. Sabbath in the OT.–A. *Use of the Term.* The word *šabbāṯ* is used most frequently to designate observance of the seventh day by cessation of work and by cultic activity (Ex. 16:29; 20:8-11; 31:15; Lev. 23:3; etc.). Two older texts command observance of the seventh day without explicitly identifying it as the sabbath (Ex. 23:12, part of the Covenant Code, which has been associated by many scholars with the "E" source and thought to preserve premonarchial legislation; and 34:21, part of the so-called Cultic Decalogue, generally associated with the "J" source; *see* CRITICISM II.D.5). Thus it is possible that the OT preserves the memory of a time when the seventh day was observed but not known as the sabbath. Even so, the verb *šāḇaṯ* is present in Ex. 23:12 and 34:21, and it is likely that the seventh day became known as the sabbath very early in Israel's history.

While "sabbath" denotes primarily and originally the observance of the seventh day, it came to be used secondarily to denote certain feast days. The noun *šabbāṯ* is used to identify the Day of Atonement (Lev. 16:31; 23:32), and the related term *šabbāṯôn* is used to describe the first day of the seventh month (the Feast of Trumpets, 23:24) and the first and last days of the Feast of Booths (v. 39). That this development is secondary is suggested by the fact that such usage occurs only in "P" and the Holiness Code (Lev. 17–26).

In a similar development, *šabbāṯ* is also used for the SABBATICAL YEAR in the Holiness Code (Lev. 25:2, 4, 6), whereas other descriptions of this institution (Ex. 21:2-6; 23:10f.; Dt. 15:1-8) do not use sabbath terminology. This concept of a "sabbath of the land" (Lev. 25:6) is given an ironic twist in Lev. 26:34f., 43 and 2 Ch. 36:21, where the Exile is described as the sabbath rest that the land had failed to receive earlier because of the people's disobedience.

In the festal calendar of Lev. 23 is found the phrase *moḥᵒraṯ haššabbāṯ*, "morrow after the sabbath" (vv. 11, 15f.). This day is designated as the day for waving a sheaf as part of the Feast of Unleavened Bread. It is unclear whether *šabbāṯ* in this phrase refers to one of the days of the feast (perhaps the first or last; see Lev. 23:8) or to a seventh-day sabbath within the festival period; but since "sabbath" is not explicitly applied to the first or last day of the feast, the "morrow after the sabbath" most likely refers to the first day of the week following a seventh-day sabbath that fell within the week of the feast.

B. History and Development. Most references to the sabbath are found in what many writers identify as exilic or postexilic sources: "P" and the Holiness code in the Pentateuch, 1 and 2 Chronicles, Nehemiah, and Ezekiel. For this reason, it was popular at one time to conclude that the sabbath came into prominence, or even into existence, in the exilic or postexilic eras. This conclusion is now suspect for several reasons. First, the command to observe the seventh day is found in all the Pentateuchal sources (Ex. 34:21 [J]; Ex. 23:12 [E]; Ex. 31:12-17 and 35:1-3 [P]; Lev. 23:1-3 [Holiness Code]; Dt. 5:12-15 [D]). Even though source criticism of the Pentateuch has come under attack in the last part of the 20th cent., it is likely that Ex. 23:12 and 34:21 in particular preserve ancient material. There are also preexilic references indicating that the sabbath was known and observed well before the Exile (2 K. 4:23; 11:5-9; Isa. 1:13; Hos. 2:11; Am. 8:5). Furthermore, it is very likely that "P" and the Holiness Code preserve traditions and legislation that are older than the exilic era. In short, the sabbath has the marks of being an ancient institution. As far as the biblical period is concerned, the sabbath more likely achieved the height of its prominence in the late preexilic era than in the exilic or postexilic eras. Any account of the history and development of the sabbath must be tentative, however, due to the uncertainty involved in dating sources and to the sparse information contained in many references to the sabbath.

1. Premonarchial Period. The ancient commandments in Ex. 23:12; 34:21 indicate that observance of the seventh day was practiced in premonarchial times. The observance consisted of the cessation of work and the stated motivation was the humanitarian concern "that your ox and your ass may rest, and the son of your handmaid, and the alien, may be refreshed" (Ex. 23:12). Religious conviction certainly lay behind this humanitarian concern, but it is not explicit. There is no indication of cultic observance of the sabbath during the early period. *See also* HEAL II.A; LABOR II.

The fourth commandment (Ex. 20:8-11; Dt. 5:12-15), or an original version of it without the explanatory clauses, may also date from the premonarchial era (although many scholars have concluded that the Decalogue is a postexilic summary rather than a Mosaic formulation; *see* TEN COMMANDMENTS). The story of the manna in Ex. 16:22-30 may preserve the memory of seventh-day observance in presettlement times. It also contains one of the few specific sabbath prohibitions found in the OT: "let no man go out of his place on the seventh day" (Ex. 16:29).

2. Early Monarchy. Evidence from the 9th and 8th cent. B.C. indicates that the term *šabbāṯ* was in existence by this time. Actually, none of the texts from this period explicitly identifies the sabbath with the seventh day, but this can be assumed. The texts indicate that the sabbath had by this time become a day for cultic celebration as well as cessation of work. Am. 8:5 implies that buying and selling were prohibited on the sabbath, and the parallelism between "new moon" and "sabbath" suggests the cultic observance of the sabbath in the northern kingdom by the mid-8th cent. (see also Hos. 2:11). Isa. 1:13 suggests the same for the southern kingdom with its mention of "assemblies" that include "offerings" and "incense."

The exact nature of sabbath observance in this period is difficult to specify. Cessation of work did not apply to guard duty (see 2 K. 11:4-12), and travel seems to have taken place (4:23f.). As for cultic observance, the description in Nu. 28:9f. may indicate what went on in the temple during this time. The Chronicler's descriptions of sabbath observance may also reflect cultic practice from the early monarchy (1 Ch. 23:31; 2 Ch. 2:4; 8:13; 31:3).

3. Late Monarchy. The period between the destruction of Samaria in 721 B.C. and the destruction of Jerusalem in 587 apparently witnessed a growing emphasis on the sabbath. Cessation of work and cultic observance continued, but they were accompanied by explicit and extensive theological reflection on the sabbath. Toward the end of the monarchy the prophet Jeremiah proclaimed that the future of Judah depended on whether the people "keep the sabbath day holy" (Jer. 17:27; even if this passage was edited in the exilic or postexilic eras, it almost certainly preserves a preexilic nucleus). Also in the last days of the monarchy the prophet Ezekiel emphasized proper observance of the sabbath. Among the statutes and ordinances of God, the sabbath commandment is singled out (Ezk. 20:12f., 16, 19-21, 24). Hallowing of the sabbath will be a "sign" that the people know God (vv. 12, 20; *see also* HALLOW). Ezekiel was a priest (Ezk. 1:3), and the language of this book is similar to that of "P," which (as suggested above) embodies legislation and traditions from the preexilic era. Ex. 31:12-17 summarizes the understanding of the sabbath in "P." The sabbath is "holy" (Ex. 31:14f.; cf. Jer. 17:22, 24, 27; Ezk. 20:20; 22:26). It is to be a "sign" of the relationship between Israel and God (v. 16) and of God's creative work for six days and God's rest on the seventh (v. 17). The seriousness of sabbath observance is indicated by the punishment prescribed for sabbath breaking: "whoever does any work on the sabbath day shall be put to death" (Ex. 31:15; see also v. 14; 35:2).

The association of sabbath and creation is also found in Gen. 2:1-3 and in Ex. 20:11, which is part of the expansion of the fourth commandment. One theory is that the expansions of the fourth commandment are to be dated to the late preexilic era, when theological reflection about the sabbath was apparently occurring among priests and prophets. In Deuteronomy (the core of which is believed by many to have originated in the late monarchial period) the fourth commandment is expanded differently. Here the sabbath is to be a reminder of the deliverance from Egypt (Dt. 5:15). The different expansions of the fourth commandment in Ex. 20 and Dt. 5 are complementary rather than contradictory. The sabbath is to be positively observed, remembered, hallowed as a witness to God's saving activity both in creation and in deliverance from captivity.

What can account for the extensive theological reflection on the sabbath in the late monarchial period? We cannot be sure, but it is likely that the new emphasis on the sabbath should be understood as part of the larger effort made by priestly, Levitical, and prophetic circles to maintain a uniquely Yahwistic identity in a period of strong Assyrian and later Babylonian influence.

4. Exile and Postexilic Era. Although it can no longer be maintained that the Exile is the crucial period for understanding the sabbath, it is true that the sabbath remained important, due to Ezekiel's application of the priestly laws (see Ezk. 44:24; 45:17; 46:1, 3f., 12). In the period of restoration, sabbath observance was equated with keeping the covenant; eunuchs and foreigners were commended for keeping the sabbath (Isa. 56:2, 4, 6; cf. 58:13). In the 5th cent. B.C., however, it seems that sabbath observance was lax. Nehemiah was forced to remind the people of its importance (Neh. 9:14), and he took extraordinary measures to insure that the production, transportation, and marketing of goods would not occur on the sabbath (13:15-22; cf. 10:31 [MT 32]). Along with cessation of work, cultic observance of the sabbath continued. The Chronicler's work from *ca.* 400 B.C. emphasizes the cultic dimension, and his description of preexilic times probably also reflects postexilic practice.

At the end of the OT period, then, the sabbath was being observed by cessation of work and cultic activity. It was also the subject of a body of theological reflection. Thus it was in a position to become in the interestamental period the distinctive mark of Judaism.

IV. In Judaism.—In the period between 400 B.C. and the 1st cent. A.D. the sabbath became more fully than in the OT period the distinctive mark of God's people, rivaled only by practice of circumcision. This development occurred largely as a result of the Jews' attempt to preserve the distinctive identity of their faith, as those Jews living in Palestine remained subjects of foreign empires and those living in dispersion continued to confront people of other faiths and practices. The sabbath was admirably suited for this task: it was a distinctively Israelite institution, its observance was commanded by the Torah, it was observed weekly, and its focus was on sacred time rather than sacred space — allowing it to be observed anywhere, even in dispersion.

Because the sabbath became the central institution of Judaism, there was a pressing need to define exactly how it should be observed. The OT commanded cessation of work, but it provided few specifics, aside from the stipulations that people should remain "in [their] place" (Ex. 16:29), should "kindle no fire in all your habitations" (35:3), and should "not bear a burden" or "carry a burden out of your houses" (Jer. 17:22). It was implied that both agricultural work (Ex. 34:21) and commercial activity (Am. 8:5; Neh. 13:15-22) should cease, but the specific definition of all these activities was lacking, as was any provision for exceptions or emergencies. Much room was left for interpretation, and the interpretation could be a matter of life or death. For instance, during the Maccabean era the Jews who were resisting Antiochus IV would not fight on the sabbath, and thus they were massacred in a sabbath attack (1 Macc. 2:29-38; see also Jub. 50:12). Subsequently, Mattathias and his followers decided that they would fight on the sabbath if attacked (1 Macc. 2:39-41). This adjustment indicates that definition of proper sabbath observance was a continuing process. Different views were held at various times among different elements within Judaism.

A. Jubilees and the Damascus Document. The book of Jubilees, dated between 161 and 140 B.C., holds the sabbath in high esteem. Even God keeps the sabbath (Jub. 2:18), and God is joined by angels (vv. 18, 30) and by Israel (vv. 21, 31-33). Jubilees also provides the first known list of sabbath Halakoth (2:29f.; 50:6-13). The regulations prohibit food preparation, drawing water, carrying objects into or out of one's house, sexual intercourse, kindling a fire, riding an animal, sailing on a boat, plowing, fasting, and killing of any kind. The only lawful work is that done to provide for the sabbath sacrifices in the temple (50:10f.). The penalty for violations is death (vv. 8, 13).

In the compiling of Halakoth the author of Jubilees was a forerunner of the Pharisees; the strictness of the regulations and the failure to mention exceptions also suggest, however, that the author was a spiritual ancestor of the conservative Jewish group that withdrew to Qumrân. Fragments of Jubilees have been found at Qumrân, and the Damascus Document apparently quotes Jubilees (CD 16:2-4). The Damascus Document also calls for strict observance of the sabbath. Like Jubilees, it prohibits food preparation (CD 10:22) and the carrying of objects into or out of one's house (11:7-9). It also provides several regulations not found in Jubilees and allows for the saving of human life in emergencies (11:16f.). The death penalty for profaning the sabbath is not prescribed; rather, a seven-year period of probation is required (12:4-6).

B. Pharisees and the Rabbinic Tradition. The Pharisees

were the most prominent Jewish party by the 1st cent. A.D., and theirs was the only party to survive the destruction of the temple in A.D. 70. The pharisaic tradition survived as Rabbinic Judaism, and the teaching of the rabbis is embodied in the Mishnah. The tractates that deal most extensively with the sabbath are entitled Shabbath, Erubin, and Betzah.

Contrary to a widespread modern opinion, the Pharisees were not the strictest of the Jewish parties. Their intent was to interpret the law so that it could be obeyed by ordinary persons under the conditions of daily existence. Pharisaic Halakah concerning the sabbath tended to be more humane and easier to obey than that of a cloistered community such as Qumrân. It is not possible to summarize *the* pharisaic view of the sabbath, because the tradition was not monolithic. Generally, however, the Pharisees attempted to define precisely what could and could not be done on the sabbath. Mish. *Shabbath* vii.2 provides a list of thirty-nine "main tasks" prohibited on the sabbath, including sowing, ploughing, reaping, binding, threshing, winnowing, grinding, sifting, kneading, baking, shearing wool, bleaching or dyeing wool, spinning, weaving, tying or untying a knot, sewing or tearing two stitches, hunting, writing or erasing two letters, building, demolishing, kindling or extinguishing a fire, hammering, carrying objects from one place to another, and several more. This list was not complete by any means. The thirty-nine "main tasks" were further defined elsewhere; other lists were developed (see Mish. *Betzah* v.2); and the individual judgments of rabbis covered still more cases.

In addition to specifying prohibited sabbath activities, the pharisaic tradition also defined various exceptions to the prohibitions. For instance, circumcision was allowed on the sabbath, and sabbath regulations could be disobeyed if one's life was in danger. Furthermore, probably starting in the 1st cent. A.D., there developed a body of *'êrûḇîn* (lit. "mingling"; see Mish. *Erubin*), which allowed several of the more inconvenient sabbath prohibitions to be circumvented or extended; e.g., by depositing food for two meals at a distance equal to the normal sabbath travel limit (2,000 cubits), one could extend the distance that could legally be traveled on the sabbath. Despite the attempt to make sabbath law easier to obey, the Pharisees and rabbis were very strict in one important respect: the death penalty was demanded in cases of intentional violation of the sabbath.

V. In the NT.–A. Jesus in the Gospels. On the one hand, it appears that Jesus kept the sabbath faithfully by attending the synagogue and by teaching (Mk. 1:21; 6:2; Lk. 4:16, 31). On the other hand, Jesus was involved in sabbath conflicts with the Pharisees. Mark recounts two such incidents. In the first (Mk. 2:23-38) Jesus defends His disciples for plucking grain on the sabbath (cf. Mt. 12:1-8; Lk. 6:1-5). The Pharisees apparently interpreted this activity as reaping, which was one of the thirty-nine "main tasks" prohibited on the sabbath. In good pharisaic fashion, Jesus responds by citing Scripture. He recalls that David broke the law by eating the bread of the presence (1 S. 21:1-6), and He concludes that the "sabbath was made for man" (Mk. 2:27) and that the "Son of man is lord even of the sabbath" (v. 28). The parallel in Matthew is an expanded version. Here Jesus reminds the Pharisees that the priests in the temple regularly work on the sabbath, and He tells them that "something greater than the temple is here" (Mt. 12:6). A further allusion to Hos. 6:6 suggests that mercy shown on the sabbath outweighs sacrifice (Mt. 12:7). In a second Markan episode Jesus heals a man with a withered hand on the sabbath (Mk. 3:1-6; cf. Mt. 12:9-14; Lk. 6:6-11). The pharisaic tradition generally permitted healing on the sabbath only in cases where life was in danger. The question that Jesus posed to the Pharisees effectively broadened this principle by permitting the doing of any good act on the sabbath (Mk. 3:4). Again, the parallel in Matthew is expanded by a typical rabbinic argument "from lesser to greater"; if a sheep can be rescued from a pit on the sabbath (an act permitted by at least some witnesses to the pharisaic tradition), then it should be lawful to do good to human beings (Mt. 12:11f.).

Luke includes two additional instances of Jesus healing on the sabbath (Lk. 13:10-17; 14:1-6). In both cases Jesus again argues "from lesser to greater": if animals can be tended and rescued, then human beings can lawfully be healed (Lk. 13:5f.; 14:5). John also offers two additional sabbath healing episodes (Jn. 5:2-19; 9:1-41). The sabbath controversy is almost incidental in Jn. 9 (vv. 14, 16), but it is central in ch. 5. The attention of the Pharisees ("the Jews," vv. 10, 15, 18) is attracted by a man carrying a pallet, an act in violation of the prohibition of carrying objects. The healed man informs the Pharisees that Jesus had commanded him to carry his pallet and walk. This offended the Pharisees, as did the healing itself, since the man had been lame for thirty-eight years and no mortal danger was involved. Jesus' response touches upon an issue debated in the pharisaic tradition, the question of whether God observes the sabbath. Contrary to the book of Jubilees, Jesus affirms the pharisaic view and then goes beyond it by saying, "My Father is working still, and I am working" (Jn. 5:17). In short, Jesus claims the prerogative of working on the sabbath by claiming identity with God. In a continuation of the healing episode in ch. 5, Jesus reminds the Pharisees that they permit circumcision on the sabbath and then argues that He should thus lawfully be permitted to heal the whole body (7:22f.).

The sabbath conflicts are difficult to evaluate. Jesus observed the sabbath. He never broke any regulations found in the Torah. He used pharisaic methods of argument, and He agreed with the Pharisees on several points. Considering that the pharisaic tradition itself was diverse and was still developing in the early 1st cent A.D., it seems unlikely to some scholars that Jesus' view of the sabbath would have provoked from the Pharisees the vehement hostility described in the Gospels. Thus, some have suggested that the sabbath conflict accounts may reflect the growing rift between Church and synagogue that occurred after A.D. 70, during the time in which the Gospels were written. The final form of the conflict accounts thus presents Jesus as "lord even of the sabbath" (Mk. 2:28). This view does not necessarily imply that the Church had stopped observing the seventh day by the end of the 1st cent. A.D., but it suggests that the Church had begun to view the sabbath christologically and to observe it in ways that departed from the practice of emerging Rabbinic Judaism.

B. Paul and the Church: From Sabbath to Lord's Day. According to the testimony of Acts, Paul continued to observe the sabbath by preaching in synagogues (Acts 13:14, 42, 44; 17:2; 18:14). The only explicit Pauline reference to the sabbath is Col. 2:16, which urges the Colossians to "let no one pass judgment on you . . . with regard to a festival or a new moon or a sabbath." This text, along with implicit references to the sabbath in Rom. 14:5 and Gal. 4:10, is often cited to support the conclusion that at least the gentile churches had abandoned sabbath observance by the mid- to late 1st cent. in favor of worship on the Lord's Day, the first day of the week (Sunday). Further evidence for this conclusion is provided by Acts 20:7, which mentions a gathering for the breaking of bread on the first day of the week; by 1 Cor. 16:2, where Paul urges the people to set aside contributions for the saints in Jerusalem on the first day of the week; by Rev. 1:10, where

John has his vision "on the Lord's Day," apparently Sunday; and by the Gospels, which recount that Jesus arose on the first day of the week. Even the combined testimony of these texts, however, does not demonstrate conclusively that sabbath observance had been widely replaced by observance of the Lord's Day by the end of the 1st century. What the texts do demonstrate is that a prescribed observance of the sabbath was no longer required for righteousness in God's eyes. They also suggest the probability that Sunday observance has its roots in the NT, although conclusive evidence for widespread Sunday observance is not found until the 2nd century. Given the traces of Sunday observance in the NT, it is not likely that this practice was simply a sudden innovation of the Roman church in the early 2nd cent., as some scholars have maintained. *See* LORD'S DAY.

It was not until the 4th cent. that Sunday began to take on sabbath characteristics, when Constantine decreed that certain types of work should not be done on Sunday. This sabbatarian tendency continued over the next several centuries until the Decretals of Gregory IX (A.D. 1234) officially mandated Sunday rest. The Protestant Reformation represented a reversal, with the Reformers tending to spiritualize the sabbath commandments and to argue that any day of the week could be set aside for worship and rest. The inheritors of the Reformation tradition generally returned to a sabbatarian position, due in part to the prevalence of biblical literalism in the 17th through 19th centuries. The most literal interpreters advocated a seventh-day sabbatarianism. A return to seventh-day sabbatarianism had begun among some sixteenth-century Anabaptists, and this tradition has been carried into the present by English and American Seventh-Day Baptists and by Seventh-Day Adventism, which arose in America in the 19th century.

C. Eschatological Sabbath. In several Jewish and Christian apocalyptic works as well as in Rabbinic Judaism the age to come is sometimes described as a perpetual sabbath. A similar notion occurs in the NT in He. 4:9, which mentions "a sabbath rest [*sabbatismós*] for the people of God." While this passage looks to the future, it also suggests that sabbath rest is a present reality through faith and obedience to Jesus Christ. Here the concept of a sabbath observed by physical rest has been transformed into a perpetual rest that is entered by faith (4:2f.) and involves the believer's cessation of his or her own works in obedience to God (4:6, 10f.). *See also* REST III.A.

SABBATH, COVERT FOR THE (2 K. 16:18, AV). *See* COVERED WAY.

SABBATH, DAY BEFORE THE. *See* DAY OF PREPARATION.

SABBATH DAY'S JOURNEY [Gk. *sabbátou hodós*]. The distance the rabbis allowed a Jew to travel on the sabbath without breaking the law. The phrase occurs only in Acts 1:12, where it describes the distance the disciples traveled when they returned from the Mt. of Olives to Jerusalem after the Ascension. Defining travel as work proscribed on the sabbath (cf. Ex. 16:27-30), the rabbis limited such travel to 2000 cubits (3000 ft. [914 m.] by Hellenistic measure, 3600 ft. [1097 m.] by Roman measure) from one's domicile. The figure seems to have been based on Josh. 3:4, which says that the distance between the ark and the people during the wilderness sojourn was 2000 cubits. Hence it was assumed that this was the distance necessary to attend worship in the tabernacle, and that such necessity legitimated the distance involved. We do not know when this interpretation was finalized, but it seems to have been accepted by the time of Christ. Later Jerome (*Ep. to Algarsiam* x) stated that a sabbath day's journey was 2000 ft. (610 m.); according to the Egyptian measure it was 1000 double-steps.

In any case the scribes invented ways to increase a sabbath day's journey up to a distance of 4000 cubits. One could deposit food at the 2000-cubit limit before the sabbath began and declare that spot a temporary home, or one could select a tree or a wall 2000 cubits from one's true residence and declare this one's home; thus one could travel an added 2000 cubits on the sabbath. Again, one could declare the whole town in which one dwelt one's domicile, and so journey 2000 cubits beyond the town limits from any point in the town. Boundary stones, supposedly marking such village limits, have been found near Gaza. Rabbinical interpretation sometimes understood Nu. 35:5, which measured the suburbs of Levitical cities as 2000 cubits, as also bearing on a sabbath day's journey.

See SB, II, 590-94. P. K. JEWETT

SABBATH, MORROW AFTER THE. *See* SABBATH.

SABBATH, SECOND AFTER THE FIRST. The AV translation of the Gk. *sabbátō deuteroprṓtō,* an expression occurring only in certain MSS of Lk. 6:1 (cf. RSV mg.). Most of the earliest MSS omit *deuteroprṓtō* (e.g., p^4, p^{75}, ℵ, B); thus the RSV reads simply "on a sabbath" (cf. NEB). Although alternative explanations have been proposed (see comms.), most scholars think that *deuteroprṓtō* is a non-word created by a scribal mistake. Some copyist may have introduced the word *prṓtō* ("first") to distinguish the incident reported in 6:1 from that in 6:6. A second copyist, in the light of 4:31, thought the text should read *deutérō* ("second") instead. Therefore he deleted *prṓtō* by placing dots over the letters (as was the custom) and wrote *deutérō*. Subsequently a third copyist, not noticing the dots, combined the two words into one, and thus the puzzling expression "second sabbath after the first" came into the text. P. K. JEWETT

SABBATHEUS sab-ə-thē'əs (1 Esd. 9:14, AV). *See* SHABBETHAI.

SABBATHS OF YEARS (Lev. 25:8, AV). *See* JUBILEE, YEAR OF.

SABBATICAL YEAR [Heb. *šᵉnaṯ šabbāṯôn*–'a year of solemn rest' (Lev. 25:5), *šabbaṯ šabbāṯôn*–'a sabbath of solemn rest' (25:4), or *šᵉnaṯ haššᵉmiṭṭâ*–'the year of release' (Dt. 15:9)]. An ancient Israelite institution designating every seventh year as a fallow year for the land and a year for remission of debts.

1. Legal Enactment.–The institution first appears in Ex. 23:10f. in the Book of the Covenant or Covenant Code.

Greater detail is provided in Lev. 25:1-7, with further observations appearing in the Deuteronomic legislation (Dt. 15:1-11; 31:10-13). The sabbatical law provided that after Israel's entrance into Canaan (Lev. 25:2) every seventh year the land would "rest and lie fallow" (Ex. 23:11); the people would, literally, "let [the land] drop" (*šāmaṭ*, Lev. 25:4). What grew of itself in the untended fields and vineyards was to serve as food for all classes of society, "for yourself and for your male and female slaves . . . and the sojourner who lives with you" (v. 6). The Sabbatical Year also constituted a "year of release": every creditor was to forgo repayment of whatever he had loaned his Hebrew neighbor (Dt. 15:2, 9). Furthermore, during the Feast of Tabernacles (Sept./Oct.) the Mosaic law was to be read "before all Israel in their hearing" (Dt. 31:10f.).

II. Significance.–Observance of the Sabbatical Year possessed agricultural and economic value, for it prevented continuous tilling of the land (Lev. 25:4). It thus corresponded to the weekly sabbath rest after six days of labor. But a more important feature, and one that is more stressed by Scripture, is the Sabbatical Year's social function of aiding the poor; it specifically designated to them whatever happened to grow during the seventh season (Ex. 23:10f.). In Exodus the law of the Sabbatical Year appears immediately after God's reference to the oppression in Egypt (v. 9); it is mentioned even before the weekly sabbath (v. 12). Forty years later this humanitarian factor received further emphasis in the suspension, or cancellation (Heb. *šᵉmiṭṭâ*, "dropping"), of loans on the Sabbatical Year (Dt. 15:1-11, presumably identical with the agricultural Sabbatical Year, since it was inaugurated by the general proclamation, v. 2; cf. 31:10, "the set time"). Israel was admonished not to "harden your heart or shut your hand against your poor brother" in anticipation of an approaching seventh year, when debts would be remitted (15:7-11).

The basic reason for the Sabbatical Year was religious, however: to demonstrate that the land, and indeed all creation, is ultimately subject to God's law, not to human desires. The Sabbatical Year is repeatedly designated as "to the Lord" (Lev. 25:2, 4). It is "the Lord's release" (Dt. 15:2); cf. the seventh-year emphasis upon the reading of the law, that the people "may hear and learn to fear the Lord your God, as long as you live in the land" (Dt. 31:12f.; cf. Lev. 25:17, 23). Indeed, the year of release was enforced only for God's people, the Hebrews, not for foreigners (Dt. 15:1-3). The natural increase of the untilled land is assigned not simply to the poor but also to the wild beasts (Ex. 23:10f.; cf. the biblical "humanitarianism" for animals in Dt. 25:4; Prov. 12:10; Jonah 4:11). The very prohibition against human sowing and pruning was to show that God was the one who really provided (Lev. 25:18-22; cf. Dt. 15:4-6, 10).

III. Observance.–The first historical observance of a Sabbatical Year may have occurred with the termination of Joshua's conquest and his final distribution of the land among the Hebrew tribes (Josh. 13:1, 7), although no such observance is mentioned. In fact, for almost five hundred years before the exile of Judah in 587 B.C. the sabbatical regulation seems to have been widely disregarded (cf. Lev. 26:34f., 43; 2 Ch. 36:20f.). Liberal critics thus have generally denied the Mosaic origin of the Sabbatical Year as it is described in the Pentateuch, regarding it instead as a late humanitarianization of some primitive rite (cf. *IB*, I, 1011f.).

Israel demonstrated a similar disregard of the corresponding law requiring the release of Hebrew indentured servants in the seventh year after their purchase (Ex. 21:2-4; Dt. 15:12-15; Jer. 34:8-17). This latter ordinance is not to be confused with that of the Sabbatical Year, which concerned the release of debts; but the events of Jer. 34 may indeed have coincided with the appearance of a regular Sabbatical Year.

The seventh year was observed in the later postexilic restoration (Neh. 10:31; cf. Ezra's reading of the law in 444 B.C. [Neh. 8:1-3, 8], with the sabbatical injunction of Dt. 31:10f.), under Alexander the Great (Josephus *Ant.* xi.8.6 [344]) and the Maccabees (1 Macc. 6:49, 52f., and frequently in Josephus), and in NT times (*Ant.* xiv.16.2 [475]; Tacitus *Hist.* v. 4; Talmud). The Sabbatical regulations, however, were increasingly circumvented and are not widely observed in modern Judaism.

SABBEUS sə-bē'əs (1 Esd. 9:32, AV). *See* SABBAIAS.

SABEANS sə-bē'ənz [Heb. *šᵉḇā'* (Job 1:15), *sᵉḇā'îm* (Isa. 45:14), *šᵉḇā'îm* (Joel 3:8 [MT 4:8])]; NEB SABAEANS; **SEBA** sē'bə [*sᵉḇā'*] (Gen. 10:7; 1 Ch. 1:9; Ps. 72:10; Isa. 43:3); **SHEBA** shē'bə [Heb. *šᵉḇā'*] (Gen. 10:7, 28; 25:3; 1 K. 1:10, etc.; 1 Ch. 1:9; etc.). A Semitic tribe who, it is generally believed, lived in South Arabia; also the name of one or more places.

In Isa. 45:15 the Sabeans are described as "men of stature" and named in connection with "the wealth of Egypt and the merchandise of Ethiopia." They would appear to be in the south, perhaps Africa. In Job 1:15 the RSV translates "Sabeans," but the MT reads "Sheba" (Heb. *šᵉḇā'*; cf. 6:19). In Gen. 10:7 Seba is the first-named son of Cush, and Sheba is a grandson of Cush through Raamah; both of them are descendants of Ham. But in v. 28 Sheba is a descendant of Shem. In Ps. 72:10 Sheba and Seba are named side by side.

If the biblical text is taken seriously, these names must refer to at least two persons with their tribal descendants. The milieu of the Job story is north Arabia. The Sabeans of the Isaiah passage seem to be in Ethiopia, i.e., that portion of Africa that stretches from the Blue Ni (Nubia) to the Indian Ocean and the Gulf of Aden. If we add to this the account of the queen of Sheba (1 K. 10:1-13), there is also an identification with south Arabia.

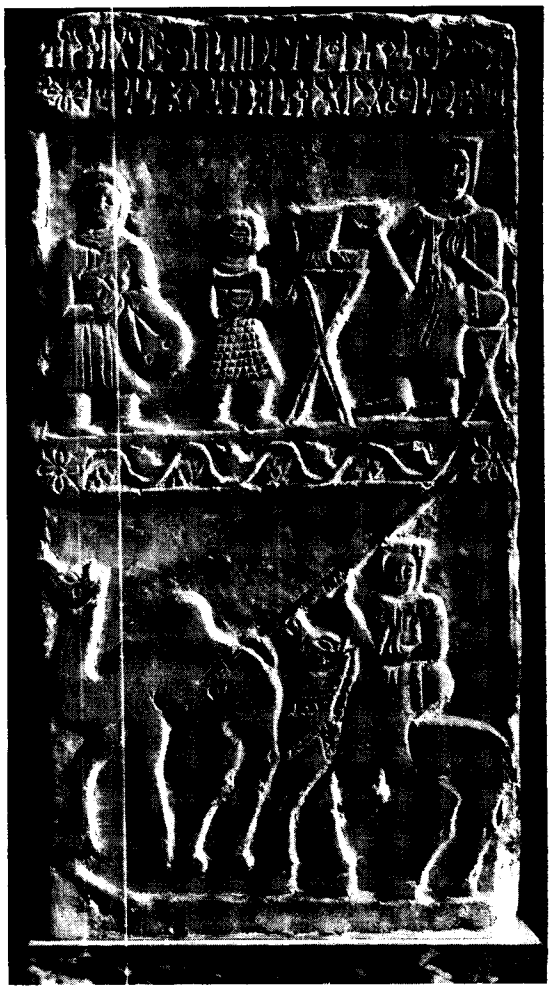
Part of the confusion is linguistic. In Old (Epigraphic) South Arabic there are three phonemes (basic sounds) that are represented by s_1, s_2, s_3 (voiceless sibilants). These merge to two in Arabic, *š* and *s*. They also merge in Hebrew, but not the same way. As a result, Arab.

Old South Arabic	s_3	s_2	s_1
Arabic	*s*	*š*	*s*
Hebrew	*š*	*ś*	*s*

šîn is *śîn* in Hebrew (cf. SHIBBOLETH in Jgs. 12:6). The Old South Arabic *sb'* (Saba or Seba) becomes *šᵉḇā'* (Sheba) in Hebrew. But to try to force the Hebrew Seba into the same equation ignores the phonetic relationships in the two languages. It therefore is preferable to treat the names Sheba and Seba individually. (See W. S. LaSor, *JQR*, 48 [1957], 161-173.)

The Sabeans of Isa. 45:14 were apparently located in Africa. But it is historically demonstrable that there was a close connection between peoples of south Arabia and northeast Africa. The Ethiopian kings claimed descent from the QUEEN OF SHEBA through her union with Solomon. Although this may be a tradition without basis in

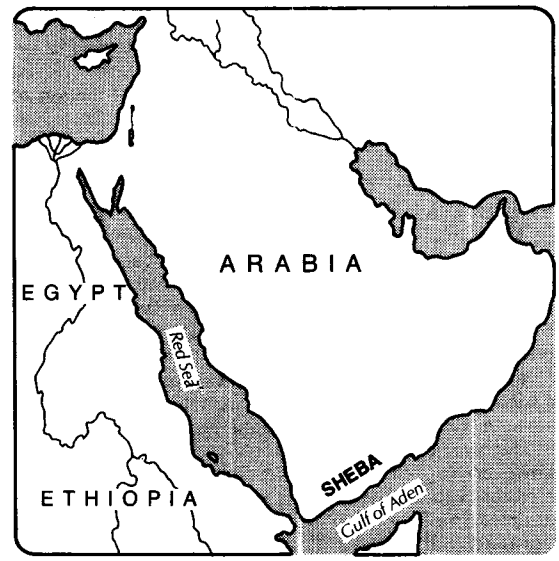
SABEANS



An alabaster grave stele (2nd cent. A.D.) found in South Arabia. A figure seated at a table holds a cup taken from the offering; below are a camel and rider. The decorative detail is typical of Sabean lettering (CNMHS/ARS, NY/SPADEM)

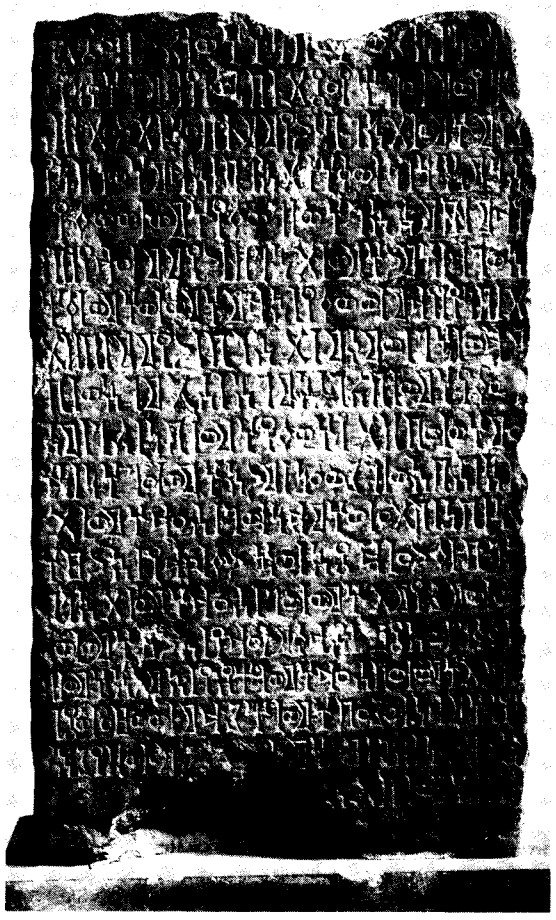
fact, the language of Ethiopia is closely related to that of southwest Arabia; in fact, the language and even the forms of letters in inscriptions at Axum (Aksum), Ethiopia, are identical with those found in inscriptions in southwest Arabia (*see also* ARABIA IV; ETHIOPIC). Precisely when the migration took place, and indeed in which direction it took place, are not certain. The phonemic and phonetic developments in the Semitic languages suggest that at a very early date there may have been a migration from the horn of Africa across Bab el-Mandeb into Arabia. It is almost certain that by the 3rd cent. A.D. there was a migration from southwest Arabia into the adjacent region of Africa. Thus it may tentatively be assumed that the Sabeans of Africa and the Sabeans of Saba were closely related. Strabo knew of a Lake Saba (*límēn Saba*) in the Adulic Gulf on the west coast of the Red Sea (*Geog.* xvi.4.8) and also of a "good-sized city" of Saba (xvi.4.10), although it is unclear whether the latter was on the African or Arabian side of the Red Sea. The work of Pseudo-scylax, *Periplus Maris Erythraei* ("Circumnavigation of the Red Sea," *ca.* 1st cent. A.D.), describes ports, cargoes, etc., of the sea-routes of south Arabia (for excerpts from the Latin text, see K. Conti Rossini, *Chrestomathia arabica meridionalis epigraphica* [1931], pp. 24-30). Josephus knew a tradition of an Ethiopian capital named Saba, later called Meroë by Cambyses (*Ant.* ii.10.2 [249]).

Saba (or Sheba) was located in the southwestern part of the Arabian peninsula, approximately where Yemen is today (for the geography of Arabia, *see* ARABIA II, III). A narrow coastal plain, which is hot, humid, and saline, is backed up by mountains that parallel the coast and reach heights of 1600 m. (5200 ft.). The interior of the peninsula is a desert. Between the mountain ranges are valleys that are watered by monsoon rains in spring and early summer. These valleys, with numerous wadis and controlled irrigation, provided the living-space for the tribes of this part of Arabia. Sheba's isolation protected it against the armies that ranged over much of the ancient Near East.



The civilization of the Sabeans in southwest Arabia can be traced back at least to the 8th-7th cents. B.C., at which time it was well advanced, particularly in hydraulic engineering, the building of great dams and the channeling of flood waters. The alphabet, which some hold to be the original form of Semitic writing while others believe it to have developed from a form used in north Arabia, has a beauty of form and care in stone carvings that is well in advance of that of, e.g., the Sinai inscriptions, the Gezer Calendar, or the Moabite Stone.

In the view of some scholars the biblical story of the queen of Sheba rests on historical facts, for Sheba traded in frankincense, myrrh, spices, aromatic wood, and gold, from the earliest known times (cf. 1 K. 10:2, 10; Isa. 60:6; Jer. 6:20; Ezk. 27:22) and controlled caravan routes as well as sea lanes from southwest Arabia to the north, the east, and the west (see G. W. van Beek, "Land of Sheba," in J. B. Pritchard, pp. 40-63). That queens ruled the region at certain periods is documented by references in Assyrian records (Zabibe queen of Arabia and Samai queen of Arabia are mentioned by Tiglath-pileser III [*ARAB*, I, §§ 772, 817]; Samai queen of Arabia and It'amra the Sabean are mentioned by Sargon II [*ARAB*, II, § 18]; Esarhaddon also mentions a queen of Arabia [II, § 569]). Assyrian records mention kings, too, and Sabean inscriptions speak of a ruler called *mkrb* (probably *mukarrib*, a word meaning "priest," hence a priest-king; cf. K. Conti Rossini, *s.v. "krb"* [p. 170]; J. C. Biella,



A symmetrically carved Sabean inscription dedicated to the god Ta'lab of Riyâm. It describes wars at the time of 'Alhān Nahfān (ca. 2nd cent. A.D., from Ṣan'â) (Louvre, photo M. Chuzeville)

Dictionary of Old South Arabic; Sabaean Dialect [1982], *s.v.* "krb" [p. 215]).

Archeological work in Sheba had been limited primarily to surface explorations until 1928, 1947, and 1951-1952. A great number of inscriptions were copied, but because many of them were dedications of something (e.g., a dam or a statue) by someone to some deity, the vocabulary is rather limited, and the grammar and syntax are hardly known. The ancient capital of Sheba was Mârib, near which were a large temple (Haram Bilqis) and a great dam. Evidence from the excavations at Hajr Koḥlân (Timnaʿ, one-time capital of Qataban) proves that Sheba was the earliest of the south Arabian states (Maʿîn, Qataban, Hadramaut, Awsan, etc.).

There remains the question of a northern Sheba. According to Gen. 25:1-3 and 1 Ch. 1:32 Sheba was a descendant of Abraham by his union with Keturah. DEDAN, named in the same passages, seems to be in north Arabia according to Jer. 49:8. In Job 6:19 Sheba is in parallel with TEMA, who is listed as a descendant of Abraham through Hagar and is hence an Ishmaelite (Gen. 25:15; 1 Ch. 1:30). Nabonidus king of Babylon (556-539 B.C.) moved his capital for four or possibly ten years to Tema, an oasis in north Arabia approximately halfway between Damascus and Mecca (*see* Map in ARABIA). Sargon recorded receiving tribute from Ithamar the Sabean (*ARAB*, II, § 55); it is unlikely that this refers to Sheba in south Arabia. Esarhaddon and Ashurbanipal referred to a king of Arabia named Hazael (*ARAB*, II, §§ 551, 821) — a name that occurs among the rulers of Damascus. Aretas king of the Nabateans (cf. 2 Cor. 11:32) controlled caravan routes from south Arabia to Gaza and to Damascus in the closing centuries B.C. and the first centuries A.D. It is clear that there were Arabic tribes in north Arabia with the same names, the same occupation (using or controlling the caravan routes), and a closely related language as those found in south Arabia.

Two solutions are possible: either there was a single progenitor of places named Sheba in both north and south Arabia; or there were two different persons, one Semitic who settled in north Arabia and the other Hamitic who settled in Ethiopia or south Arabia. Biblical evidence tends to favor the latter solution.

SACHAR sā'kär [Heb. *śāḵār*]; AV, NEB, SACAR.

1. A Hararite; father of Ahiam, one of David's mighty men known as the "thirty' (1 Ch. 11:35). In 2 S. 23:33 he is called "Sharar the Hararite." The original spelling of the proper name is uncertain.
2. A Korahite; son of Obed-edom; eponymous ancestor of a division of gatekeepers (1 Ch. 26:4; cf. v. 15).

SACHIA sə-kī'ə [Heb. *śāḵᵉyâ*, other editions *šāḇᵉyâ*, *šāḵᵉyâ*, etc.]; AV, NEB, SHACHIA. A Benjaminite; son of Shaharaim and Hodesh (1 Ch. 8:10).

SACK [Heb. *śaq*] (Gen. 42:25, 27, 35; Lev. 11:32; Josh. 9:4); NEB also SACKING; [*ʾamtaḥaṯ*] (Gen. 42:27f.; 43:12, 18, 21-23; 44:1f., 8, 11f.); NEB PACK; [*kᵉlî*] (1 S. 9:7); AV VESSEL; NEB PACK; [*ṣiqqālôn*] (2 K. 4:42); AV HUSK. A bag usually made of coarse, black, goats'-hair

cloth, used by Joseph's brothers to carry grain. *K^{e}lî* is a general term for "vessel" or "receptacle."

SACKBUT. A medieval instrument similar to the trombone. The term is used by the AV to translate Aram. *śabb^{e}kā'* and *sabb^{e}kî* (Dnl. 3:5, 7, 10, 15). The RSV ("trigon") and NEB ("triangle") offer different interpretations. *See* MUSIC II.G.4.

SACKCLOTH [Heb. *śaq*] (Gen. 37:34; 2 S. 21:10; 1 K. 20:31; Job 16:15; Jonah 3:5f.; etc.); NEB also SACKING (Isa. 3:24); [Gk. *sákkos*] (Mt. 11:21; Lk. 10:13; Rev. 6:12; 11:3); NEB also FUNERAL PALL (Rev. 6:12). The RSV supplies "sackcloth" in Isa. 32:11 (NEB "cloth") and Joel 1:13a. Sacking material (cf. Josh. 9:4) made of goat or camel hair and worn especially during times of mourning or social protest.

The modern Eng. "sack" is ultimately derived from the Semitic word rendered in Hebrew as *śaq* (Akk. *šaqqu*), mediated through Gk. *sákkos*, Lat. *saccus*, and Old Eng. *sacc*. There can be little doubt that both the Hebrew and Greek words refer to the same item; its usage is strikingly similar in both languages, reflecting a common and continuous cultural heritage.

It most frequently refers to a garment worn during times of mourning or sorrow (e.g., Gen. 37:34; Ps. 30:11 [MT 12]; etc.), perhaps because, when made of goat hair, it was black in color (Isa. 50:3; Rev. 6:12). In most cases it seems to have been worn when the wearer wished to publicize his or her sorrow. Saul's concubine Rizpah used it to protest the lack of a proper burial for Saul; David reacted by promptly ordering the burial (2 S. 21:10). Syrian captives wore it to evoke mercy from Ahab (1 K. 20:31f.). During the siege of Samaria King Jehoram wore it beneath his robes, which he rent as he made a vow to kill Elisha (2 K. 6:30). Hezekiah wore it in response to the Assyrian threat to Jerusalem (2 K. 19:1). Mordecai wore it publicly in Susa to protest the decree ordering the destruction of the Jews (Est. 4:1-4). Sackcloth was frequently worn at times of repentance (Neh. 9:1; Jonah 3:5f., 8; etc.). The prophets often warned that sackcloth would or should be worn in the face of God's approaching judgment (Isa. 3:24; Jer. 4:8; Ezk. 7:18; etc.); but Isa. 58:5f. points out that the true repentance that pleases God is evidenced more by doing justice than by the wearing of sackcloth. Daniel wore it as a sign of repentance when he prayed that God would fulfil His promise to restore Jerusalem after the seventy years of desolation were over (Dnl. 9:3).

In several of these contexts the public wearing of sackcloth clearly involves an element of protest (2 S. 21:10; Est. 4:1; Dnl. 9:3; perhaps 2 K. 6:30). It is also possible that the statement prohibiting its use in proper worship (Isa. 58:5) has its context in the origin of the practice in protest. Historians of antiquity have recognized that ancient society viewed itself as ordered in a delicate balance that could be thrown off by a communal or individual misdeed, and that in such a case something had to be done to right the imbalance. By wearing sackcloth publicly, a person suggested that society was out of balance and had to be righted. Thus the Syrians wore it (prophylactically) to warn Ahab not to destroy the balance of society by a violent act against them (1 K. 20:31f.). The use of sackcloth as a mourning garment or as the outward sign of repentance was a symbolic adaptation of this practice; it protested that death, potential death, or sin was an act that disrupted the balance of society and needed righting.

Sackcloth seems to have been worn next to the skin (2 K. 6:30; Job 16:15), either as a loincloth (Gen. 37:34) or as a robe (2 K. 19:1). According to the Talmud shepherds wore it because it was cheap and durable (T.B. *Shabbath* 64a).

SACRAMENTS.

I. Etymology of the Term
II. Biblical Material
  A. Place of Signs and Sacraments in the OT
  B. Incarnate Word
  C. Apostolic Church
  D. Sacraments and the Incarnation
III. Historical Survey
  A. Early Church
  B. Middle Ages
  C. Reformation
  D. Modern Period

I. Etymology of the Term.–The word "sacrament" does not occur in the English Bible. It derives, however, from Lat. *sacramentum*, which the Latin Bible selected as a rendering of Gk. *mystérion* (*see* MYSTERY). In itself *sacramentum* had the sense of something sacred. In secular Latin it commonly denoted a deposit, and very frequently it stood for an oath, particularly the military pledge of allegiance. In the latter sense the early Church used it sometimes for the creed and associated it with baptism. The word also found a wider ecclesiastical use for signs of sacred things, whether in the more general sense of any earthly sign with a heavenly meaning or in the more specific sense of divinely given covenant signs, i.e., circumcision and the Passover in the OT and baptism and the Lord's Supper in the NT. This usage explains why *sacramentum* commended itself as an equivalent of Gk. *mystérion*, which generally refers to the hidden things of God that cannot be known except as God discloses them. Conversely, *mystérion* itself forms the background for a proper understanding of the sacraments. The NT uses *mystérion* in contexts dealing with the embodiment of God's revelatory word in Christ (the Incarnation) and with the embodiment and growth of that word in believers (the Church).

II. Biblical Material.–A. Place of Signs and Sacraments in the OT. Signs accompanied the word of God as it entered history to initiate the fulfillment of God's redeeming and renewing purpose (Isa. 9:8; Ps. 107:20; 147:15). These signs could take many forms: dreams and visions (Isa. 6; Jer. 1:11-13; Ezk. 1:3-28), unique occurrences (Isa. 38:8), historical events fulfilling the spoken word (Isa. 36:10; 2 K. 1:17), sacramental rites, and miracles that testified to the presence in Israel of a new, divine power and reality, to God's own coming to His creation, to His performing a saving work in human history. These signs demonstrated that God's word really embodies itself in the concrete life situation of God's people and that ultimately, as the purpose of God unfolds, it will radically alter the history of the race as a whole (Isa. 55:10-13; 45:23).

B. Incarnate Word. In the NT God's coming into history took on a new, fuller form and reality as "the Word became flesh and dwelt among us" (Jn. 1:14). This embodiment of the Word in the person, life, and work of the man Jesus is what the NT calls the "mystery" (*mystérion*) of God manifest in the flesh (1 Tim. 3:16). In Jesus the kingdom of God is present (Lk. 17:21). This is the "mystery" of the kingdom (Mk. 4:11 par.; Mt. 13:11) that will be generally disclosed only with the final resurrection (1 Cor. 15:51f.). The mighty works that Jesus did in concert with His preaching and teaching served as signs that the mystery

of the kingdom was indeed present in Him as a powerful and creative reality (Mt. 11:2-6; 12:28). He fulfilled in Himself the kingdom promises that God had already given and begun to fulfil in the OT (Lk. 4:17-21; cf. Isa. 61:1f.). This fulfillment implied both the renewal of creation (Eph. 1:9f.; 2 Cor. 5:17) and the regeneration of individuals (2 Cor. 5:17; 1 Pet. 1:3, 23; Jn. 3:3). Jesus brought this work to completion in His death and resurrection, and He will manifest and consummate it at His coming again (cf. 1 Pet. 1:13; 1 Cor. 1:7; Mt. 13:43).

C. Apostolic Church. The Church received from Jesus the task of embodying the word and thereby directing history secretly to its consummation. It discharged this task not merely by recounting the story of the life, death, and resurrection of Christ but by so re-presenting these events that hearers might relate to them personally through faith. Through the proclamation of the gospel, the once-for-all event in Jesus continued to be effective for salvation (1 Cor. 1:21). This proclamation claimed preachers of the gospel as stewards of its mystery (1 Cor. 4:1; cf. Col. 1:25f.) and gave its recipients a share in the mystery of the Kingdom (Mt. 13:11 par. Mk. 4:11), i.e., in the mystery of the relation between Christ and the Church that He cleanses and nourishes (cf. Eph. 5:25-32). As the apostolic proclamation went out, it was accompanied by signs and miracles that made visible the living power of that word. Jesus had also established two new signs of covenant promise parallel to the OT signs of circumcision and the Passover. The new signs of baptism and the Lord's Supper would bear ongoing testimony to the mystery of the Kingdom that was present in Jesus, and to the Church's reconciling and renewing fellowship with its crucified, risen, and returning Lord.

D. Sacraments and the Incarnation. To call baptism and the Lord's Supper sacraments is thus to identify them as the divinely instituted signs that continuously accompany the word in the re-presentation of Christ as the fulfillment of God's renewing and restoring purpose. These sacraments derive their force and meaning only from the reconciliation that Christ, the true sacrament, achieved once and for all in His own person and work. They thus bear the name of sacrament only in a secondary sense, i.e., in their relation to this one, unique *sacramentum* ("mystery") of the incarnate, crucified, risen, and returning Lord. "They would not have existed apart from the historical incarnation" (Baillie, p. 66). The administration of baptism and the Lord's Supper can be only "a giving and receiving of this one sacrament" (Barth, *CD*, II/2, p. 55). Although the NT (even in Latin) does not use the term "sacrament" for these significatory actions, the term is nevertheless not inappropriate, since Christ Himself instituted these signs and uses them to meet His people in historical actualizations of what He accomplished in His life and ministry. Through them the one great sacrament of the incarnate Word re-presents Himself in every age, granting participation in the here and now of the realized Kingdom and pointing forward in hope to His return and His final manifestation in triumph (cf. Rom. 6:5; 1 Cor. 11:26).

III. Historical Survey.—*A. Early Church.* Apart from offering a suitable equivalent for the Greek *mystérion*, the word *sacramentum* commended itself to the early Church both subjectively to denote the witness that Christians bear to the world and objectively to describe the signs of the divine working, specifically the ecclesiastical ceremonies of baptism and the eucharist. In a general sense the fathers regarded many things as sacraments, but they always accorded special significance to the two ordinances that Christ Himself appointed. Augustine brought the sacraments into close association with the word when he defined them as "visible words." He also started a momentous line of thinking when he related them to grace as the outward signs of inward and spiritual grace. On the basis of this definition a tendency developed to think that each sacrament itself conveyed a specific grace, instead of stressing the necessary link of the sacraments to Christ Himself as the source and center of all grace. The patristic practice of speaking of the signs in terms of what they signified also contributed to the growing sense of an automatic connection between sign and grace (the *ex opere operato* effect) in virtue of the divine institution and use of the signs. In this equation grace would later come to be presented as a quasi-material substance that pours into the soul with the act of sacramental administration.

B. Middle Ages. Peter Lombard made a decisive impact on sacramental thinking when he interposed an intermediate class between signs in general and the admittedly pre-eminent signs of baptism and the Lord's Supper. He thus arrived at the sacred number of seven sacraments conveying grace: penance, confirmation, marriage, orders, and extreme unction, in addition to baptism and the eucharist. Lombard also quoted Augustine's statement that whereas the OT sacraments only promised and signified salvation, those of the NT give it (*Sentences* iv.1f.) — the only qualification being that participants might interpose an obstacle to the saving operation, e.g., unbelief or insincerity. In the case of the eucharist, the direct presence of Christ's own body and blood by what came to be known as "transubstantiation" meant that all who partook of the elements partook of Christ, the only difference being that those who received in unbelief or impenitence would do so to perdition and not to salvation. The Councils of Florence (1439) and Trent (1547) incorporated these theses into the official dogma of the Western Church, thus providing a cradle-to-grave coverage of sacramental grace. The possibility of an obstacle of unbelief posed little problem, for even the most ignorant or nominal of members, so long as they had the implicit faith of believing what the Church believed, could enjoy the assurance of more or less mechanical sacramental efficacy.

C. Reformation. The main-line Reformers devoted much time and thought to the sacraments. They allowed that the word "sacrament" might bear a general sense, but they reserved its specific use for the ongoing signs which Christ had clearly ordained and to which He had annexed the gospel promises. According to this definition Luther could find a place for penance (as a renewal of baptism), but the Reformed and finally the Anglicans proposed a clear restriction to baptism (Mt. 28:19f.) and the Lord's Supper (1 Cor. 11:23, 26). These traditions have taught that while the sacraments might also function as badges or pledges of Christian profession, primarily they serve as witnesses to the divine covenant and promises. They are thus visible words which, as adjuncts and seals of the preached word, confirm and stimulate the faith of participants. They do not take effect by their mere administration but only as God works in and through them by the Holy Spirit to bring believers into living fellowship with the incarnate, crucified, and risen Christ who is their proper substance, and as these believers receive them with the saving and justifying faith that finds its focus in Christ. Since Christ instituted the sacraments, the Church can only harm itself either by neglecting them or by augmenting or corrupting what Christ Himself appointed. When properly used, the sacraments discharge the same important function as biblical signs. Taking a more concrete form than the preached word, they make a wider appeal to the senses. Hence they set forth Christ and

His promises with a new vividness and clarity, taking up the recipients themselves into an enactment of the word. In this way they enable believers, in the power of the Spirit, to grasp Christ and His promises with a greater assurance and a fuller and more personal understanding. (For brief summaries of the teaching of the main Reformers, see the relevant Reformation Confessions in Schaff.)

D. Modern Period. Sacramental theology has developed along various lines in the modern period. Roman Catholicism has retained the formulations of Trent, but individual theologians have introduced modifications that qualify the more rigorous sacramentalism. The Anglican Church's adherence to the Thirty-Nine Articles has not prevented some Episcopal groups (e.g., the Oxford Movement) from enhancing the role of the sacraments and approximating Roman Catholic positions. John Wesley, however, took over the Anglican Article XXV, which endorsed the Reformation view of the sacraments, in his original Methodist Articles of 1784 (Art. XVI). The Lutheran and Reformed Churches have generally endorsed the Reformation teachings, but with tendencies toward psychologizing where Liberal opinions have prevailed.

The Free Churches have predominantly followed the insights of the "Radical Reformers" of the 16th century. Thus the Baptist Confession of 1688, rejecting the word "sacraments," described baptism and the Lord's Supper as "ordinances of perpetual and sovereign institution," and found in baptism a "sign of fellowship with Christ" and commitment "to love and walk in newness of life." The New Hampshire Baptist Confession of 1833 and the Free-Will Baptist Confession of 1834 used such terms as "emblem," "representation," and "commemoration" to characterize the two signs, and the Congregational Union (1833) saw in the Lord's Supper "a token of faith in the Saviour" and "the expression of love." The Quakers took the extreme radical position of so focusing on the spiritual meaning that they dispensed with the external signs altogether, holding that Christ had instituted these signs only as temporary measures to enable the first believers to grasp the inner realities (cf. The Friends' Confession of 1675, 12f.).

Among twentieth-century theologians, Barth emphasized that biblically Christ Himself is the only true sacrament. He thus tried to incorporate a view of the sacraments as ecclesiastical ordinances into his version of Reformed theology.

G. W. BROMILEY

SACRED [Heb. *qōḏeš*] (Ex. 30:25; Dt. 26:13; Josh 6:19; Jer. 31:40; Ezk. 20:40; 44:13); AV HOLY, HALLOWED, CONSECRATED; [*miqḏâš*] ("sacred area," Ezk. 43:21); AV SANCTUARY; NEB HOLY PLACE; [Gk. *hierós*] (2 Tim. 3:15); AV HOLY; [*hagiázo*] ("make holy," Mt. 23:17, 19); AV, NEB SANCTIFY. The RSV also has j"sacred" three times for Heb. *YHWH* (AV lit. "of the Lord," 1 S. 20:8) and *(hā)'ᵉlōhîm* (AV lit. "of God," 1 Ch. 16:42; Eccl. 8:2).

A special status pertaining to certain objects, persons, and events that stand in an exclusive relationship to God because of their use in religious ceremonies.

In the RSV both "holy" and "sacred" render the Hebrew root *qdš*. "Sacred" is used only to describe persons or things that have been made holy; the character of God is always described as "holy." A "sacred" object is one separated from common use by cultic sanctions. Thus the sacred anointing oil used in the temple was to be made to Yahweh's explicit specifications; it was not to be used for other purposes or by ordinary laypersons (Ex. 30:22-33). Because Yahweh is the source of all holiness (Lev. 11:44; Isa. 6:3; etc.), sacred objects or persons are found close to Him, e.g., the ground upon which Moses approached God (Ex. 3:5), and Mt. Zion and Jerusalem, the site of the temple (Isa. 11:9).

Objects in their natural condition are either clean or unclean (Lev. 20:25), but they are not inherently sacred They become sacred by being used in the cult or by Yahweh's special decree (e.g., Josh. 6:19; cf. Mt. 23:17, 19). Objects declared sacred remain so, and judgment is pronounced upon those who disregard regulations concerning their usage, thereby profaning what is sacred (cf. Zeph. 3:4).

The relationship of sacred objects to Yahweh is made clear in several futuristic passages in the prophets. Zechariah envisions a restored Jerusalem in which the demarcation between sacred and profane has been obliterated (ch. 14). Then the bells on the harnesses of the horses will be inscribed "Sacred to Yahweh" (v. 20, JB), and every pot in Jerusalem and Judah will be "sacred to the Lord of hosts" (vv. 20f.)

Hebrew *qōḏeš* is almost always rendered Gk. *hágios* in the LXX. The NT shows the influence of the LXX by most often using *hágios* to denote "holy" and "sacred." 2 Tim. 3:15 is an exception. Here the author speaks of the "sacred writings" (*hierá grámmata*), which are "inspired by God" (*theópneustos*, v. 16).

R. J. WYATT

SACRED STONE. Greek *diopetḗs* (lit. "fallen from heaven"; see Bauer, rev., p. 199) is rendered by the RSV "sacred stone that fell from the sky" (cf. AV "image which fell down from Jupiter"; NEB "symbol . . . which fell from heaven"). It probably denotes a meteorite that was worshiped as an image of Artemis. For other examples of meteorites that were worshiped as images of gods or goddesses, see F. F. Bruce, *Acts of the Apostles* (2nd. ed. 1952, repr. 1970), p. 367.

SACRIFICE, HUMAN. Several phrases are used by the Hebrew Bible to refer to the practice of human sacrifice. The hiphil of *'āḇar* (lit. "cause to pass over") is used in combination with the following phrases: *lammōleḵ* ("to Molech," Jer. 32:35), *bā'ēš* (lit. "in the fire," 2 K. 16:3; 17:17; 21:6; Ezk. 20:31), *bā'ēš lammōleḵ* (2 K. 23:10), *'ōlâ* ("whole burnt offering," Jgs. 11:31; 2 K. 3:27), *le'ăḵᵉlâ* (RSV "for food," Ezk. 23:37). In Ezk. 16:21; 20:26 the verb occurs alone, but the meaning is clear. Other phrases are *śārap bā'ēš lᵉ-* (lit. "burn in the fire to," Dt. 12:31; 2 K. 17:31; Jer. 7:31; 19:5) and the hiphil of *'ālâ* with *'ōlâ* (lit. "offer up as a whole burnt offering," Jgs. 11:31; 2 K. 3:27). The verb *zāḇaḥ* ("sacrifice") is used with *laššēḏîm* ("to demons") in Ps. 106:37 and with *le'ĕḵôl* ("to devour" [by fire], Ezk. 16:20). In Ezk. 23:39 the phrase *šāḥaṭ lᵉgillûlêhem* is rendered "slaughter in sacrifice to their idols."

Several of the passages listed above assert that some Israelites sacrificed their sons and/or daughters to the

Ammonite deity Molech, to demons, and possibly even to Yahweh (cf. Jgs. 11:29-40). The Torah proscribed this pagan practice, and the prophets denounced it as one of the heinous sins that contributed to the fall of Israel and Judah. The historical books record incidents of human sacrifice, but they always state or imply a strong denunciation of the practice. These passages clearly show that the practice did occur and that it was denounced; nonetheless, some scholars dismiss the OT references to human sacrifice as empty rhetoric (see Weinfeld).

I. In the Ancient Near East.–Human sacrifice was practiced in various ancient cultures and even in more recent cultures. Stager and Wolff have convincingly demonstrated that child sacrifice was practiced in Phoenecian Carthage (*Biblical Archaeology Review,* 10 [1984], 30-51). At the sanctuary called Tophet, children were sacrificed to the goddess Tanit and her consort Baal Hammon (*see* PHOENICIA VII). A pillar (*maṣṣēḇâ*) 0.5 m. (1¾ ft.) high with upraised hands and a disk and crescent has been discovered at Hazor in northern Israel. These symbols seem to indicate the same deities found in Carthage. Their presence in Hazor suggests the possibility that children were sacrificed there also, although the Hazor site predates the Tophet in Carthage by a thousand years (see Green, pp. 183f.). Several ancient writers reported incidences of child/human sacrifice (Diodorus xx.14.4-7; Porphyry *De Abstinentia* ii.56, etc.). Eliade reported its occurrence among the Chinese and Celts (pp. 8f., 151f.). It was also a feature of Aztec religion, and women were sacrificed among the Mayas. Stager and Wolff mentioned Sardinia, Sicily, and Tunisia as other places where the practice occurred.

A. R. W. Green summarized his exhaustive study of human sacrifice in the ancient Near East with the general statement that "human sacrifice can be traced throughout this region," i.e., throughout Mesopotamia, the Indus Vally, Egypt, and Syro-Palestine (p. 201). He concluded that it was practiced in the following settings, outlined in a roughly chronological order: (1) the ritual killing of attendants in Mesopotamia and Egypt (E.B. I–M.B. I), (2) child foundation sacrifices in northeastern Mesopotamia (during the Uruk-Larsa period in southern Mesopotamia), (3) the sacrifice of adult substitutes for kings in Mesopotamia and India (L.B.-Iron II), (4) expiatory sacrifices of children during national crises in the northern Syro-Palestinian area (Iron Age-6th cent. B.C.); (5) in all these regions human beings were sacrificed on special occasions in propitiatory, dedicatory, and expiatory rites. Green also posited a cultural connection among all the various areas that practiced this rite. Interestingly, law and war were always contributing factors where such sacrifices occurred. Given the monolithic nature of these cultures, in which the religious and the secular were fused, this is not surprising. The fact that human sacrifice did occur in the ancient Near East means that what the Torah legislated against (e.g., Dt. 12:30) was a reality in Israel's world. Some in Israel may have practiced it as a part of their Yahwistic beliefs, though not with the approval of the central authorities of Yahwism (Green, pp. 199, 201). "In so doing, the people [of early Israel] may have been consciously carrying out a ritual which was common to most groups in the region of whose cultural background they were a part" (Green, p. 199).

II. In the OT.–The biblical references to human sacrifice are reported here in their canonical order.

The first mention of child sacrifice occurs in Gen. 22. This passage seems to imply that Abraham was indeed startled by Yahweh's demand but not unfamiliar with the requirement. The sacrifice does not occur, and the story as it stands rejects the sacrifice of Isaac, stresses Abraham's faith, and demonstrates Yahweh's ability to provide and approve of a substitute sacrifice. Gen. 22 thus indicates that human sacrifice was not approved in the time of Abraham, Israel's most remote ancestor.

Other pentateuchal references to human sacrifice are found in Lev. 18:21; 20:25; Dt. 12:31. Lev. 18:21 prohibits "devoting by fire" (hiphil of *ʿāḇar*) any of one's children (lit. "seed") to Molech. Lev. 20:2-5 prescribes the death penalty for anyone who does give his children ("seed") to Molech, and the same penalty against anyone who does not carry out the prescribed penalty against the offender. The fact that offering one's seed to Molech is called "harlotry" (20:5) indicates that it involves apostasy from Yahweh. Dt. 12:31 warns the Israelites against becoming ensnared by the practices of the people of the land, who had gone so far as to burn their sons and their daughters in the fire to their gods."

The historical books record several incidents of human sacrifice. Jephthah, a judge of Israel, made a rash vow that if he was victorious over the Ammonites he would offer up as a "whole burnt offering" the first person who came out to meet him. When he returned home victorious his daughter was the first to meet him, and he offered her up "according to his vow" (Jgs. 11:29-40). The expression *wᵉhaʿᵃlîṯihû ʿôlâ* ("and I will offer him up for a burnt offering," v. 31) is technical, and its meaning cannot be mitigated. The general evaluation of the time of the judges (21:25), as well as the account in 13:37-40, indicates the author's negative evaluation of Jephthah's vow and actions. 1 K. 16:34 mentions Hiel's founding of Jericho and its gates at the cost of his first-born and his youngest sons. There is no conclusive evidence from this text or Josh. 6:26, the curse that it fulfils, that this is a case of foundation sacrifice (see Green, p. 169). (*See also* CORNERSTONE.)

A clear instance of human sacrifice is found in 2 K. 3:26f., where MESHA king of Moab sacrifices his son to Chemosh (hiphil of *ʿālâ* with *ʿôlâ*; cf. Jgs. 11:31) in a desperate attempt to avert sure defeat by the Israelites and their allies. Israel and its allies retreat because of *qeṣep-gāḏôl*. Although the term's significance is unclear, it seems that they retreated in fearful consternation over what Mesha had done. King Ahaz of Judah is condemned in 2 K. 16:3 (par. 2 Ch. 28:3) for "causing his son to pass through the fire," and in 2 K. 21:3 King Manasseh is condemned for sacrificing his son. Stager and Wolff observed that high officials or nobles were the ones who engaged in child sacrifice in Carthage, and that child sacrifices became more numerous near the height of Carthage's military and political power. The biblical evidence suggests that this pattern was also operative in Israel. A large population, wealth, and a sophisticated upper sociological stratum all seemed to increase this particular debasement of human life. 2 K. 17:17 lists the sacrifice of children among the reasons for Israel's downfall; and v. 31 records the continuance of this dismal practice by some of those who were resettled in Samaria by the Assyrians at the time of the Exile. Josiah's reform sounded a joyous note for Judah: he removed the TOPHETH to stop the practice of child sacrifice in the Valley of Hinnom (23:10); unfortunately, the reform came too late.

The references to human sacrifice in Jer. 7:31f.; 19:3-6; 32:35 also condemn the Israelites for burning their sons and daughters. In 19:5; 32:35 the word Topheth is changed to Baal to deprecate that god; these references explicitly deny that this practice was a legitimate part of Yahweh

The Valley of Hinnom, where the Israelites apparently sacrificed children (see 2 K. 23:10) (W. S. LaSor)

worship. Although human sacrifice did take place in Israel, it was considered an execrable sin and was never an approved aspect of Yahweh worship.

The prophet Ezekiel likewise condemned the sacrificing of children as one of the abominations practiced by the Israelites (16:20f.; 20:31; 23:37-39). 20:25f is unique in that it refers to the Israelites' apostasy and corrupt worship practices as a punishment that Yahweh brought upon them in order to horrify them and shock them into returning to Him.

Micah 6:6f. asks what kind of sacrifice will be acceptable to Yahweh. The list of possible sacrifices escalates until it climaxes with the question: "Shall I give my firstborn for my transgression, the fruit of my body for the sin of my soul?" The answer to this rhetorical question is a resounding "No!" — as v. 8 makes clear. What Yahweh requires is not such sacrifices but "to do justice, and to love kindess, and to walk humbly with your God."

III. Molech.–There has been much discussion about the meaning of *mlk* (usually rendered "Molech") in many of the passages mentioned above. Eissfeldt and others have contended that the term may not be the name of a deity but may instead designate a type of sacrifice. Stager and Woff (pp. 45-48), e.g., suggested that *mlk* be read as *mulk*, and that *mulk* denotes a sacrifice of a young child or a young animal. Green (pp. 181f.) concluded that there is evidence for the use of *mlk* both for an offering and as the apellative of a deity (*see* MOLECH).

I. Introduction.–Sacrifice and offering are activities and concepts endemic to the human race. The first act of worship outside the Garden of Eden was the presentation of offerings and sacrifices to Yahweh (Gen. 4:1-4a). Noah's first act of worship after the great flood subsided was the presentation of "burnt offerings on the altar" (Gen. 8:20). Before his call Abram was acquainted with sacrifice and offering. Soon after obeying the Lord's command, he built an altar at the oak of Moreh (12:6) where the Lord had revealed Himself. He built another altar between Bethel and Ai and called upon the name of Yahweh (12:8; 13:3f.), and another at Hebron by the oaks of Mamre (13:18). Three months after the Israelites came out of Egypt, God called them together at Sinai. There He gave them the Torah, which included instructions for worshiping Him by presenting sacrifices and offerings (Ex. 19–Nu. 10:10).

For God's new people, as well as for the ancestors of Israel and for primeval humankind, sacrifice and offering restored broken relationships between God and mankind and between men and women. The close relationship between this healing function of sacrifice and offering and the violent expulsion and separation of human beings from their Creator (Gen. 3:24) is emphasized by the writer's close placement of Gen. 3:22-24 and 4:1-4a. Radical rejection is pictured in 3:22-24; some kind of reconciliation and gesture of good will through the offering of sacrifice (4:1-4a) indicates a major function and meaning of sacrifice for the author of Genesis. This early introduction of the institution of sacrifice and offering must be kept in mind. More extensive references to sacrifice and offering in the Pentateuch are illuminated by this primeval picture of worship. Sacrifice and offering are as old as religion, and it appears that religion is as old as humankind (Gen. 4:26).

An understanding of sacrifice and offering in the OT is a prelude needed to grasp the significance of Christ's supreme sacrifice and offering of Himself in the NT. His sacrifice and offering was eternally efficacious for all mankind and brought an end to the official Levitical sacrificial institution of the OT. Paradoxically, it accomplished everything that institution had pointed toward and striven

for — reconciliation of humankind to God and the true worship of God from the heart, along with all which that entailed. *See also* SACRIFICES AND OFFERINGS IN THE NT.

This article will deal with sacrifices and offerings in the OT. As R. J. Thompson (among others) has noted (p. 249), "It is with the rites of Israel as they appear in the OT, rather than with their origin, or the original meaning of their terms that the study of OT sacrifice must chiefly deal."

The origin of much of the material in the OT that deals with sacrifice and offering is highly controversial. The relevant critical issues can be discussed only briefly below, as part of the background to the OT material. This discussion will also include modern attempts at the historical reconstruction of the development of the OT institutions of sacrifice and offering as well as the meaning and significance of sacrifice and offering. Then the basic concepts and activities surrounding sacrifice and offering in the OT will be presented in their canonical order (which is clearly the form in which the final editors of the OT canon intended for us to encounter it). Finally, special problems encountered in the study of these issues will be presented. For more detailed information, see the bibliography. *See also* SACRIFICE, HUMAN; MOLECH; TITHE.

II. Terminology.—The terms for sacrifices and offerings are numerous. One term for an offering in general is Heb. *qorbān* (lit. "thing brought"; e.g., Lev. 2:1; LXX *korbán, dóron*). The general term for the burnt offering is *'ōlâ* (perhaps from *'ālâ*, "go up"; LXX *holokaútōma, kárpōma*); related terms are *kālîl*, whole burnt offering (LXX *holokútōma, hápas*, etc.), and *tāmîḏ*, daily burnt offering (LXX *endelichismós, diá pantós*). The general term for the peace offering is *šelem* (pl. *šᵉlāmîm*) or *zeḇaḥ šᵉlāmîm* (LXX *thysía sōtēríou, eirēnikḗ*). Subcategories of the peace offering include the thank offering, *zeḇaḥ hattôḏâ* (LXX *thysía tḗs ainéseōs*); the freewill offering, *zeḇaḥ nᵉḏāḇâ* (LXX *hekoúsios*); the votive offering, *zeḇaḥ neḏer* (LXX *euxḗ*); the heave offering, *tᵉrûmâ* (LXX *eisphorá*) and the wave offering, *tᵉnûpâ* (LXX *aphórisma, epíthema*). The general term for a sacrifice (animal offering) is *zeḇaḥ* (LXX *thysía*). The sin offering is *ḥaṭṭā't* (LXX *hamartía*). The guilt offering is *'āšām* (LXX *plēmmélia*). *Minḥâ* (LXX *dóron*) is the meal offering, and *nesek* (LXX *spondḗ*) is the drink offering. The fire offering or offering by fire is *'iššeh* (LXX *kárpōma thysía*). The ordination or consecration offering is *millu'îm* (LXX *teleíōsis*). The general term for altar is *mizbē(a)ḥ* (LXX *bōmós, thysiastḗrion*).

It should be noted here that the LXX is not entirely consistent in its use of Greek equivalents for the Hebrew sacrificial terms. Some modern scholars have tried to establish a rationale for the inconsistency of the LXX's handling of these words for sacrifice. S. Daniel has offered some convincing arguments (*Recherches sur le vocabulaire du culte dans la Septante* [1966]).

Several words are used to describe the presentation of the various offerings. The ones found most often are the hiphil of *bô'*, "bring"; the hiphil of *nāgaš*, "present, bring near"; the hiphil of *qāraḇ*, "bring near"; *'āśâ*, "make"; the hiphil of *kûn*, "prepare"; the hiphil of *'ālâ*, "cause to go up, take up"; the hiphil of *qāṭar*, "send up in vapor"; *zāḇaḥ, šāḥaṭ, ṭāḇaḥ*, "slaughter" (*zāḇaḥ* is used only for sacrificial slaying). A few other technical terms will be discussed below.

In addition to the words listed above, several other key words appear in the texts dealing with sacrifice and offering. Among the most important terms are *kipper* (piel of *kāpar*), "make atonement"; *rāṣâ*, "please, be pleasing"; and *rē(a)ḥ niḥô(a)ḥ*, "pleasing odor."

In Leviticus the verb *kipper* (LXX *hiláskesthai*) often describes the purpose and result of sacrifices and offerings. In fact, all the major sacrifices (burnt, cereal, peace, sin, guilt) are specifically said to atone (*kipper*, Ex. 29:33). Rendtorff has pointed out that although there is a close relationship between the blood rites of sacrifice and *kipper*, "atonement," it is also true that the same can be posited, although less clearly, for other aspects and materials of the sacrificial ritual: laying on of hands, meal, oil, and incense. All parts of the sacrificial ritual had to go according to the prescribed ritual. If not, the Lord was not pleased and the priest could not "make atonement" (Lev. 1:4; 5:13).

The meaning of *kipper* itself has been difficult to ascertain. It may mean simply "to cover" (cf. Arab. *kafara*), "to wipe away" (cf. Akk. *kuppuru*), "to ransom by substitution" (cf. the Hebrew noun *kōper*). The last meaning seems to suit the biblical context best. The LXX used *hiláskomai* (sometimes *exiláskomai*), which translates as "atone," "expiate," or "propitiate." Whatever meaning is

SACRIFICES AND OFFERINGS IN THE OT

understood, it appears that *the entire ritual* had to be pleasing to Yahweh before atonement occurred. All of it together resulted in *kipper* for the offerer by the priest and forgiveness (*sālaḥ*) by Yahweh.

All kinds of offerings were recognized as a "sweet/pleasant aroma" (LXX *osmḗ euōdías*) to the Lord (Lev. 1:9, 13, 17; 2:2, 9, 12; 3:5, 16; 4:31; cf. Gen. 8:21; etc.). The exact significance of this term is uncertain, but it seems to refer to the ritual surrounding the sacrifice as well as the materials offered. The form, the content, and the attitude of the person involved in the sacrificial process were satisfactory when the offering was "a pleasing odor" to the Lord. The idea of feeding Yahweh is not an aspect of Israel's worship. The term rather implies approval and acceptance par excellence before God (see Daly, pp. 70ff.).

The words *rāṣôn* and *rāṣâ*, "please, be pleasing, be acceptable," are often found in the sacrificial sections of Leviticus and elsewhere (e.g., Lev. 1:4, "and it shall be accepted for him to make atonement for him," *wᵉnirṣâ lô lᵉkappēr ʿālāyw*). A sacrifice not cared for properly is *lōʾ yērāṣeh*, "it will not be acceptable" (e.g., Lev. 7:18; 19:7). The sacrificial process as a whole was to be pleasing and acceptable to God (cf. Lev. 22; Ps. 19:14 [MT 15]; Rendtorff, pp. 250-260); no aspect could be unacceptable.

The term *ʾiššeh*, "(by) fire," was rich in meaning for the sacrificial cult. It could represent God's presence, but it could also represent divine chastisement, a theophany, or simply the approved means of sanctifying and purifying something to be given to the Lord.

The word *sāmaḵ* signifies the laying on of hands by the offerer. But nowhere in the OT is the meaning or significance of the act explained. The act seems to symbolize some kind of relationship established between the offerer and his sacrifice. The act seems to be a necessary prelude to the Lord's acceptance of the offerer and his sacrifice (Lev. 1:4). The victim is then accepted to make atonement for the sacrificer. Certain passages (Lev. 10:16-20; 16:21ff.) may suggest that the laying on of hands (surmised only for 10:16-20) meant the transfer of the sin of the offerer on to the sacrificial animals. But it must be noted that the scapegoat (Lev. 16:20-22) is not a sacrificial animal (see Daly, pp. 100-106).

III. Nature, Origin, Background.—*A. Nature.* The descriptive and prescriptive texts dealing wth sacrifice and offering in the OT nowhere define the meaning of the rituals involved. The authors seem to assume that the various readers for which the different texts were originally intended knew why they were to do a certain thing a certain way. It is doubtful that the meaning of OT sacrifice and offering can ever be fully recovered, or even if the earliest people involved in the cult grasped it. The esoteric instructions of the cult were intended only for the priests. But the broad meaning of some of those instructions does seem accessible.

Various theories have arisen to try to deal with some of the key issues. Feuillet and Cazelles (*DBSup.*) listed three principal hypotheses to explain sacrifice. The first considers the sacrifice to be the food of the god(s) (Jgs. 6:19-24; Lev. 3:11; Nu. 28:2; Gen. 8:20f.; etc.). But the OT seems rather to mock at such an idea (Ps. 50:13f.), and such passages as Gen. 8:20f. stress the fact that God accepts the offering as pleasing to Him.

The second theory was championed by W. Robertson Smith. He held that through the participation of the god and his worshipers, communion was established between/among those sacrificing. His proof from the OT is not convincing. J. W. Rogerson noted that Smith was swayed by the anthropological theories of his day which held that "when a totemic group ate the totem object after which it was named, communion was established with the totem god" (Rogerson, p. 26). Smith applied this framework to the OT. But both Thompson and *DBSup.* agreed that the communion theory (fellowship theory) does not sufficiently treat the solemnity involved in the early sacrifices of the Israelites and non-Israelites found in the OT.

The third concept of sacrifice delineates it as a gift to the deity (E. B. Tylor; G. B. Gray). Undoubtedly this is a part of the total meaning of sacrifice in Israel, but only a part. Some of the terms indicate that what was brought was a gift (e.g., *qorbān, mattān*). But H. H. Rowley was certainly correct when he asserted that no single theory accounts for or defines the total meaning and significance of OT sacrifice and offering (*Worship*, pp. 112f.). M. J. Lagrange's statement is broad but helpful: sacrifice is "The expression made through a solemn act that everything belongs to God, and the recognition of this right at the same time as the expression of a desire to approach the deity, this desire being the very base for religious feeling. Thereby understood, the act of sacrifice is the religious act par excellence" (Lagrange, *Études sur les religions sémitiques* [1903], p. 274).

Other attempts to describe or define the significance or meaning of sacrifice and offering have become more specific and nuanced. A. Green listed seven definitions of sacrifice, including those just noted. He also mentioned other ideas, such as J. G. Frazer's emphasis on magic and rejuvenation (Green, pp. 6-9); that of Hubert and Mauss (Green, pp. 9f.) — "a religious act, which, through the consecration of a victim, modifies the condition of the moral person who accomplishes it or that of certain objects with which he is concerned"; Westermarck's concept of expiation as the original goal and purpose of all sacrifices (Green, pp. 10-12); and Freud's argument that sacrifice was a repetition and commemoration of a memorable and criminal act (Green, pp. 14f.). Green's conclusion regarding the ritual of sacrifice is helpful. "The many theories with their supporting arguments and counterarguments serve to bring out all too clearly the complexities of the ritual called sacrifice. This rite is a universal phenomenon, and, as such, rightly belongs to many departments of research. In order to uncover the inner significance of such a fundamental institution, all these rituals should be studied anthropologically, historically, sociologically and, if possible, psychologically, in terms of an attitude toward life and a conception of reality" (p. 17).

With respect to sacrifice and offering in the OT, a canonical perspective, along with theological study, will be vital in order to determine all of the above among the ancient Israelites. Whatever else may be said, Rowley, using a sound marshaling of the OT evidence, showed that in Israel the OT teaches that "the ritual was believed to be effective only when it was the organ of the spirit" (*Worship*, p. 113). But as R. J. Thompson noted (pp. 7-10), the sacrificial system in Israel operated for both the nation and the individual within the covenant. It received its effectiveness before God and His worshipers by virtue of that fact. God gave the covenant, which required sacrifices, but He also demanded that they be presented with clean hands and a pure heart; if the first could not be given, the second would suffice.

B. Origin. The canonical record of sacrifice and offering in the OT follows the chronological framework implied or stated in the texts themselves. This textual framework was challenged by critical scholarship in the 19th cent. and even before. As a result the "critical history" of the cult is often set over against its canonical presentation. It is standard practice to treat the priestly (P) materials first,

SACRIFICES AND OFFERINGS IN THE OT

since these materials came last. Priestly additions and editorial activity to the earlier materials are further reason that "P" is treated first (see Daly, p. 12).

Various perspectives arose, however, to question seriously some of the original critical presuppositions used to evaluate the OT materials. More recently, efforts have been directed at identifying the "kind of historiography" that the ancient writers employed in order to give us the theological history that is evident. Also, efforts to appreciate the literary genre of these materials within a canonical context have emphasized the theological-literary aspect of these texts. Some brief comments on these issues are offered below.

1. Early Theories. R. J. Thompson noted one of J. Wellhausen's major arguments for a reconstruction of the religion of Israel: "an evolution in Hebrew sacrifice, similar to that in the centralization of the place of worship, the growth of the festal calendar, the distinction of the priests and Levites, and the increase in the endowment of the clergy was to be traced. The association of sacrifice with a sense of sin was a late development. It followed that sin offering, guilt offering and the Day of Atonement had no existence before the exile, and the Priestly Code, which gave evidence of a more sombre view, was to be dated late. Many recent lines of enquiry suggest the need of a re-examination of this position" (p. 1).

Central to scholars like Wellhausen and W. Robertson Smith (*Religion of the Semites*, p. 76) was the claim that Israel's early worship involved joyous sacrificial celebrations and meals; there was no place for atoning sacrifices (Smith, p. 360) except as incorporated in the sacrificial meal of communion with the deity. No atoning significance was attributed to the death of a sacrificial victim. Rather, the rise of expiatory rites was located at the fall of the united monarchy and later. At that time a sense of sin pressed itself upon the nation and the individual. This somewhat simplistic view of the origin and development of sacrifice and offering takes too lightly the fact that a universal sense of guilt and fear is depicted in Gen. 1–11. That human situation suggests that universal sacrifice is the result of a universal sense of sin (cf. Thompson, p. 7; Gen. 3; 4; 6; 8; 12). According to Gen. 3 the fact of sin is also a fact of the human condition.

2. Contemporary Critical Theories. More recent critical scrutiny of some of the evolutionary types of theories about the origins of sacrifice have helped us grasp the need to take seriously the canonical "theory of sacrifice." According to the OT canon, sacrifice permeates all eras of mankind with the activity and attitude of solemn sacrifice before God.

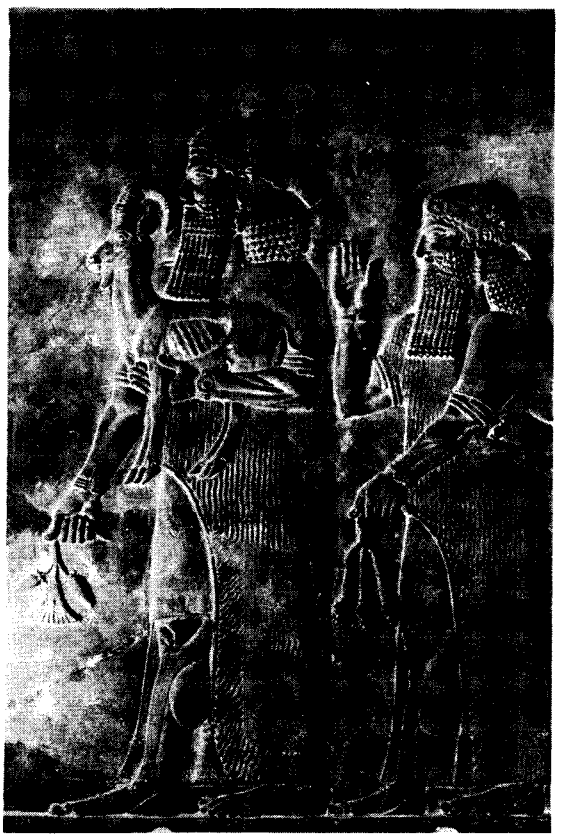
R. J. Thompson proposed and sustained the thesis "that the fellowship theory of Wellhausen and Robertson Smith does not allow sufficiently for the element of solemnity [and hence a sense of guilt and sin] in the early cult" (p. 12). According to Rendtorff the sacrificial practices and theory of the preexilic era that are imbedded in those materials again and again show a remarkable agreement with the ideas of sacrifice and offering found in the priestly texts (P). After a study of the terms *rāṣôn/rāṣâ* and *ḥepeṣ* in the "P" materials, Rendtorff concluded that it is not justifiable to consider these kinds of terms and concepts in the priestly document as late without careful scrutiny of all relevant materials. For him many of the key sacrificial terms in "P" go back far into the preexilic era (p. 260; cf. R. J. Thompson, p. 249). That much of the material in "P" is ancient has caused some scholars to reevaluate the date of "P" (Kaufmann, *et al.*). That the canonical writers used later terminology to depict the ancient sacrifices in the legal sections of the Pentateuch is to be expected. Wendel's study allows the element of expiation in Israel's early cultic history to exist side by side with that of joy and sharing (*Das Opfer*, pp. 105f.). Kaufmann's early dating of much of the sacrificial materials in "P" indicates ancient practices.

It is simply inadequate on the basis of our current knowledge of the ancient Near East to think of a straight-line evolutionary approach to the understanding of sacrifice and offering that rejects a plausible canonical picture of the development of the cult. It does not seem to be merely a literary construct from the 7th-4th cents. B.C. This is especially true after allowance is made for the leveling of nomenclature and for the types of literary genre involved.

But many questions are still far from answered. The canonical development of sacrifice and offering appears to have a greater degree of viability now than ever before. At any rate, the literary genre of the Pentateuch, its historiography, its canonical framework, and above all its theological nature must be understood better before a thorough reconstruction of Israel's sacrificial cult can be achieved. Telescoping, proleptic use of terms, a leveling of terms, and a unifying of all the nomenclature are undoubtedly aspects of the problem that will be useful. As it stands now, the canonical picture of Israel's sacrificial cult is vital to understanding the OT's ethical-religious message about God, creation, salvation, and His people.

C. Background. Since the turn of the 20th cent. various parallels between the cult and ritual of the OT and other

An alabaster relief showing Sargon II and an attendant bringing an ibex for sacrifice. From the Assyrian palace at Khorsabad, 8th cent. B.C. (RMN/ARS, NY/SPADEM)



SACRIFICES AND OFFERINGS IN THE OT

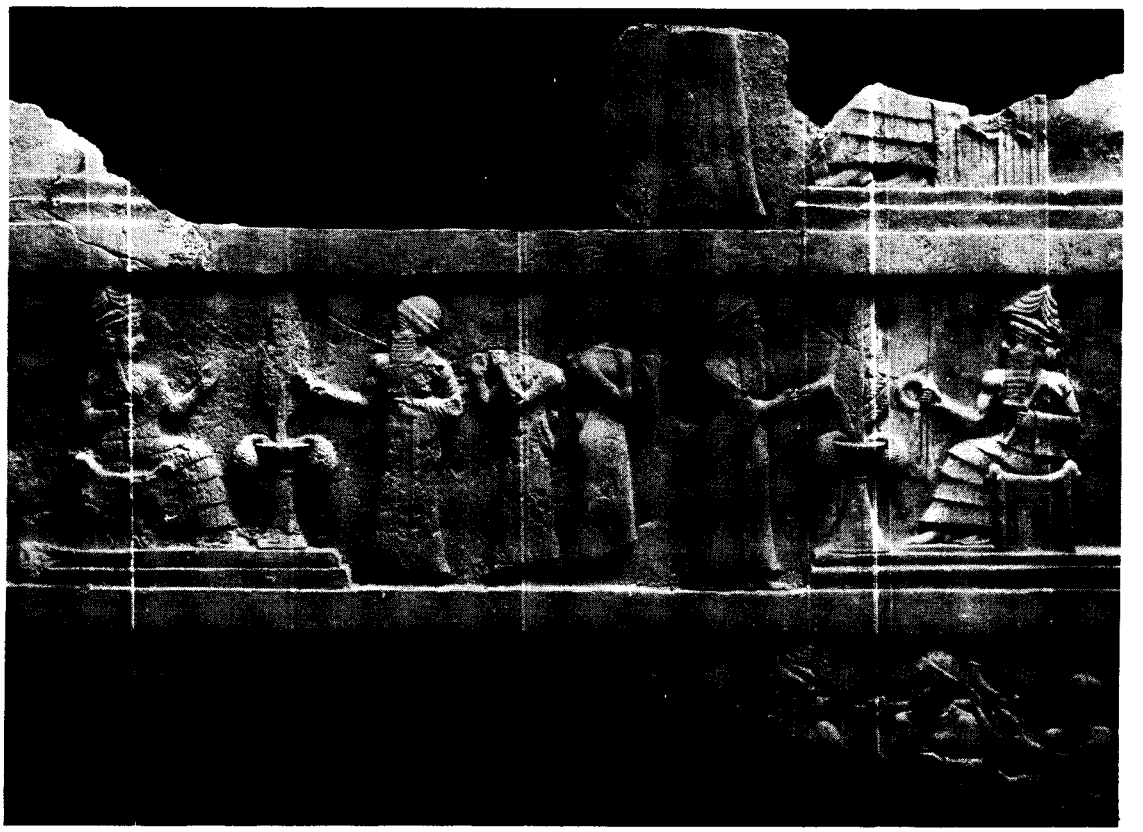
areas in the ancient Near East have been pointed out. Some have proven to be inaccurate; others have illuminated, illustrated, and confirmed certain aspects of the OT sacrificial cult; and some have hindered our understanding of the OT itself.

The land of Mesopotamia was the home of ancient Babylon. Among others, H. Winckler generated the Pan-Babylonian school, which held that most of Israel's religious ideas had stemmed from ancient Mesopotamian influences (Winckler, *Religionsgeschichtler und geschichtlicher Orient* [1906]). Other scholars claimed to see the sources of Israel's sacrificial practices in these materials (A. Jeremias, *OT in the Light of the Ancient East* [Eng. tr., 2 vols., 1911]; M. Jastrow, *Aspects of Religious Belief and Practice in Babylonia and Assyria* [Eng. tr. 1911, repr. 1971]; cf. also contributions in *BA*, 7/3f. [1944]). But the true heart of Israel's sacrificial system was to foster spiritual worship, praise, thanksgiving, communion, and, above all, atonement for sin, and these things seemed to be missing in the Mesopotamian sacrificial cult, according to some investigators (L. Moraldi, *Espiazioni;* K. Galling). P. Haupt established some reasonable parameters within which Israelite sacrifice might be seen as dependent upon the Mesopotamian (*JBL*, 19 [1900], 61f.).

But the particular blood rites that are central to Israelite sacrifice are not paralleled in Mesopotamian religion. Magic, rather than the will of the deity, pervades the pagan cults (cf. *DBSup.*, cols. 1493ff.; Oppenheim, pp. 183-198). In the Creation Epic (*ANET*, pp. 68a, 95a) the dependence of the gods upon food and upon mankind to feed them by sacrifices and offerings is pathetically evident. This mainstay of the Mesopotamian cult is entirely lacking in the OT. The entrails of the sacrificed animals in Mesopotamia were used for oracular determinations. By withholding his libations and food, the sufferer in the *Dialogue of Pessimism* hoped to make his god feel his dependence upon him (see T. Jacobsen, "Mesopotamia," in H. Frankfort, *et al.*, *Before Philosophy: The Intellectual Adventure of Ancient Man* [repr. 1973], pp. 216-234).

The "myth and ritual" movement found significant parallels between the OT and ancient Mesopotamian sources (see S. Hooke, ed., *Myth and Ritual* [1933]; see also the work of I. Engnell, e.g., *Rigid Scrutiny: Critical Essays on the OT* [Eng. tr. 1969]), particularly substitution, placation, and purification. But the meaning of these terms was necessarily different in Israel because the concepts of sin, human nature, and God's nature were not the same (*DBSup.*, cols. 1498f.). These ancient polytheists had no sense of sin comparable to that found in the OT. Sin in Mesopotamia was such that it could be dealt with through exorcism by the priest (*'asipu*), who pronounced an incantation. Sin and impurity were conceived of in a physical way and were dealt with by rites of expulsion (which Cazelles and Feuillet, *DBSup.*, refused to call sacrifices; cf. also *ANET*, pp. 334a, 338b). The Akaddian terms *šulmānu* and *kuppuru*, which are equivalent to Heb. *šᵉlāmîm* and *kipper* respectively, do not have the same significance among the Babylonians that they have in Israel (cf. *DBSup.*, cols. 1499f.). *Šulmānu* is not employed in a sacrificial sense, and *kuppuru* is a special rite carried out by the

A stele from Ur III (ca. 2060-1955 B.C.) showing King Ur-Nammu making offerings to a god and goddess; the king pours a libation into a vase from which grow palms and dates (courtesy of the University Museum, University of Pennsylvania)



Babylonian exorcist. B. A. Levine noted that the Akk. *kapāru* (*kuppuru*) seems to mean to remove by "rubbing" (*Presence*, p. 132).

In short, Israelite and Babylonian sacrifice and worship do have some helpful resemblances, but the differences are decisive for defining Israel's own concept of the process of atonement.

R. Dussaud produced a strong argument for an intimate correlation between Israel's sacrificial system and Canaanite religion. The well-known Marseilles and Carthage tariffs were his main sources at the time. Though the two texts differ, the words *zbḥ* and *mnḥḥ* occur in both. But the distribution of the sacrifices mentioned there, Dussaud claimed, made it possible to identify the Phoenician *kll* with Heb. *ḥaṭṭ'āṯ* and *'āšām*, the *ṣw't* with the *zeḇaḥ šᵉlāmîm*, and the *šlm kll* with Heb. *'ōlâ*. These were largely conjectures, however.

The discoveries at Râs Shamrah in 1929 led to new claims for Canaanite influence upon Israelite worship. The great significance of this material was that sacrificial terms dated very late by Wellhausen were found in materials coming from before Moses' time. Thus these discoveries seemed to overthrow Wellhausen's position. Early studies claimed many intimate parallels (e.g., Dussaud, *RHR*, 105-106 [1932], 285f.; Hooke). It was thought that the items found in the text matched with sacrifices in the OT; e.g., *mtn tm* = OT complete offering; *dbḥ bšt* = *ḥaṭṭ'āṯ; šlm* = communion offering; *šrp* = *'ōlâ;* and especially *'ṯm* = *'āšām*. The material does indicate that Israel could chronologically have had a developed cult. Whether Israel was sociologically capable of having one could still be argued. Part of the problem is the uncertain nature of Israel in its early years as well as the uncertainty about patriarchal times (see esp. A. Millard and D. J. Wiseman, eds., *Essays on the Patriarchal Narratives* [1980], for a discussion of this subject; see also Thompson, pp. 30-33; J. Gray, *ZAW*, 62 [1949-50], 207-220). *DBSup.*'s more recent review of the Ugaritic evidence is helpful.

In addition to comparable terms mentioned above, there are the following: *dbḥ* = *zeḇaḥ; ndr* = *neḏer; nsk* = *nāsaḵ; šlm(m)* (conjecture) may = *šᵉlāmîm*. C. H. Gordon's *UT* is still very helpful (see *UT*, 1:4; 3:52; 5:7; 9:7; etc.). It is unlikely, however, that the ritual of Keret washing his hands (to his elbows) is to be taken as a rite of expiation by means of blood. Ugar. *'iṯ(t)* may have some relationship to Heb. *'ēš* or *'iššeh*, but it is not clear (cf. *TḎOT*, I, 429). Guglielmo's review of the Ugaritic evidence concluded that significant parallels of meaning and even form in the sacrificial activities recorded in the texts were lacking. On the other hand, K. Aartun demonstrated some significant ritual parallels between Ugarit and Israel (*Bibliotheca Orientalis*, 33 [1979], 285-89). But similar forms do not prove similar meaning of these rites and rituals, as Guglielmo's work showed.

Parallels that are less likely to be of help in explaining the meaning of Israelite sacrifice come from Hittite materials (*ANET*, pp. 346ff.; cf. Gen. 15:10f., 17; Jer. 34:18-20; Ezk. 16:3, 45) and Amorite texts (*ARM*, II, no. 37, 11.5-14) that describe a peace ritual consummated by slaying a donkey (in the Hittite materials a dog is divided for the ritual).

Parallels between Israelite sacrifice and sacrifice in the Hellenic world serve to show the fact of the universal need for humankind to sacrifice, for whatever reasons, to the gods. It is unlikely that these materials will offer any significant insight into the *unique* OT conception of sacrifice (see Yerkes).

D. Anthropological Studies. J. W. Rogerson showed how past scholars have sometimes used current anthropological theories to interpret the biblical materials. Often the OT was made to conform to the procrustean bed of the anthropological theory the OT scholar happened to employ. Especially since the 1970's scholars have renewed interest in applying (more cautiously) anthropological and sociological insights to the OT (see R. Wilson; B. Lang, esp. pp. 136-162).

Edmund Leach has offered models for the logic of sacrifice ("Logic of Sacrifice," in Lang, ed., *Anthropological Approaches to the OT*, pp. 136-150) and applied these models to the consecration of Aaron as high priest recorded in Exodus and Leviticus. His models hold that the logic of sacrifice deals with the question "What has the killing of animals got to do with communication between man and deity or with changing the social status of individuals?" (p. 136). His two models speak of sacred space (Model 1) and sacred time (Model 2). According to his position sacrificial ritual is geared to enable the worshiper to reach the "other world" of sacred space (Model 1) in which health, life, fertility, wealth, etc. reside. The sacred world is reached by means of a middle ground of sacred space (liminal zone), the sacred area where the field of ritual activity takes place. The liminal zone is filled with those to whom the ritual is directed (deceased ancestors, saints, incarnate deities, who are now immortal gods). It is special people such as priests, shamans, etc. who perform the rituals and are part of both worlds and can function in the liminal zone as well.

The sacred time of Model 2 complements the sacred space of Model 1 by moving the sacrificer or worshiper or initiate from one time in space (normal) to a new "normal" condition. The movement across the marginal state takes place as the ritual is performed. The goal is "to bring about a transition from normal to abnormal time at the beginning of the ceremony and another transition from abnormal to normal time at the end of it" (p. 139). The sacrifice of an animal enables the presentation of the soul of the victim to the deity on the analogy of a dead person's soul that passes through the liminal zone to the other world at death. The gift aspect is an expression of "reciprocal relationship rather than material exchange" (p. 139). The potency of the gods can flow to the donor (Model 1). In the second model the victim is identified with the sacrificer (donor), and as the victim is separated into two parts, pure and impure, the initiate also goes through this phase vicariously. The donor enters metaphorically but also really in his/her culture into a new social and ritual status of purity — "Sacrifices are markers of boundaries in social time" (p. 140).

This analysis is anthropologically sophisticated, but its biblical-theological application is relatively naive (p. 150). The application of this general theory helps to explain the movements of the sacred in time/space that take place in the initiation and consecration of Aaron as high priest. Although the historical aspects of the ritual and the specific Israelite aspects of the ceremony are not sufficiently perceived, Leach's essay is helpful. But the models are superimposed upon the texts too forcefully without proper modification in the light of the passages themselves. And the possibility that to interpret these texts we still need to regain something we have lost since the time the texts were produced is not carefully entertained. At any rate, according to Leach, Aaron is separated step by step from the secular contaminations of the congregation and his own imperfections and he ends up pure and holy at the center of the camp. The opposite result and procedure is vouched for the scapegoat, which "ends up impure and unholy (but nevertheless 'sacred') far out in the wilderness" (p. 149).

Several other essays have attempted modern anthropological analyses. Relevant chapters from Lang's anthology include D. Davies, "An Interpretation of Sacrifice in Leviticus," pp. 151-161; M. Douglas, "The Abominations of Leviticus," pp. 100-116; M. Carroll, "One More Time: Leviticus Revisited," pp. 117-126. These are helpful articles, but not always cogent. It is necessary that both biblical scholars and anthropologists work together; the expertise of both is needed to produce studies of integrity. M. Douglas's studies are especially helpful since these try to deal with the canonical information in a way that allows it to set parameters and to challenge any general anthropological theory being tested.

All these studies help us see the need for both theological and anthropological approaches to the enigmas surrounding sacrifice and offering in the OT. R. Wilson's studies from the sociological perspective also help us see the role that sociological placement played in ancient Israelite society (see his *Prophecy and Society in Ancient Israel* [1980]). Both the anthropological and the sociological perspectives have demonstrated that, much more than previously thought, ancient cultic ritual gave identity to the people who used it. It was not a useless appendage to society, for an understanding of ancient cultic ritual reveals the conception that the community had of itself. Studies by G. Mendenhall (*Tenth Generation* [1973]) and N. Gottwald (*Tribes of Yahweh* [1979]; *The Hebrew Bible: A Socio-Literary Intro.* [1985]) also help provide broader contexts within which sacrifice and offering will need to be interpreted in the future. Still, a canonical approach that does not deconstruct the unique body of unified literature in the OT will need to determine the parameters within which these varied approaches may operate.

IV. Pre-Mosaic. *–A. Primeval.* The uniformity of the sacrificial terminology indicates that the terms probably mean the same thing within the Pentateuch (cf. Sailhamer, pp. 78-80), although historical periods greatly separated in the chronology of the Pentateuch are understood. Probably the earlier accounts in Genesis-Exodus were modernized on the basis of the Mosaic nomenclature. The occurrence of sacrifices in other places of the Pentateuch can be annotated only briefly here. Cain and Abel brought *minḥâ* offerings — Cain's was a cereal offering and Abel's was an offering from the flock with its fat portions (Gen. 4:1-16). Normal sacrificial terminology is used (hiphil of *bô'*, *minḥâ*, *ḳeleḇ*). Abel brought from the firstlings of the flock (*beḵôrôṯ ṣô'nô*), in accordance with later Mosaic stipulations (Ex. 13:11-16). Noah offered up an *'ōlâ*. The exact meaning of the offering in this context is not clear; it seems to have been given for thanks. Though neither propitiation nor expiation is mentioned, in the context of the Pentateuch these aspects are probably implied. Assigning only one "meaning" for the *'ōlâ* in this setting is inadequate. Clean animals and birds alone are employed by Noah as victims.

B. Patriarchal. Altars were an important part of patriarchal religion, and undoubtedly the patriarchs offered sacrifices, but little is found in the extant patriarchal narratives to inform us about their nature (see ***BHI***, p. 102). The motives the patriarchs had in giving sacrifices are not indicated, but it should be noted that all the Semites sacrificed. The building of the altars and the sacrifices by the patriarchs imply that for the biblical writer sacrifice and offering was a common approach to God among Israel's ancestors.

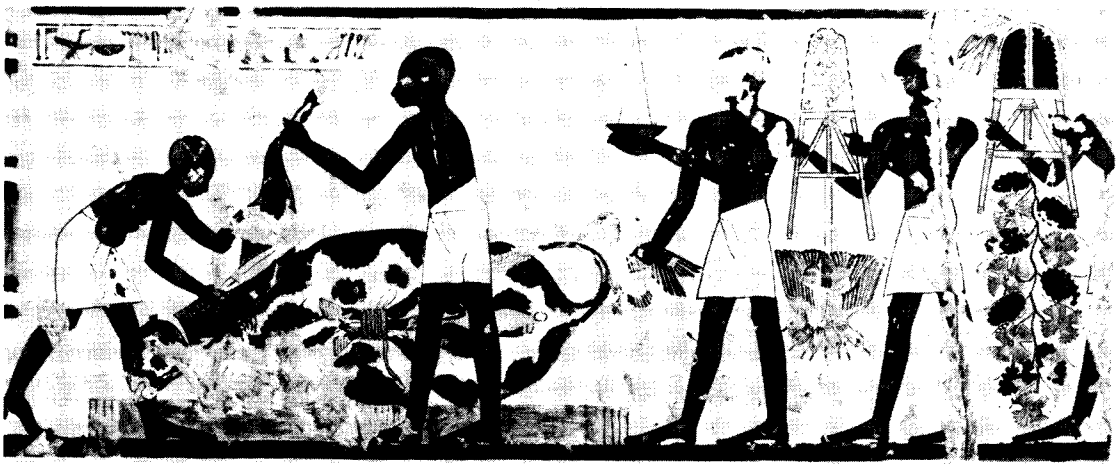
Other references to sacrifice can only be listed here with little comment (see further Rendtorff, pp. 27-73; R. J. Thompson, pp. 49-78). In some of these references sacrifice is only probable, since it is not specifically described: Abraham builds altars at Shechem (12:6f.), Bethel (12:8; 13:4), and Hebron (13:18); he is involved in a covenant ceremony (Gen. 15:8-12, correct Levitical animals are used!); Ex. 12:21-28 describes the Passover; Ex. 32:6 records sacrifices made to the molten calf (burnt and peace offerings). Gen. 22:1-14 records Abraham's near sacrifice of Isaac (*see* SACRIFICE, HUMAN) as a burnt offering, but instead a ram without blemish was sacrificed (v. 13) to the Lord; Gen. 46:1 Jacob sacrificed to the God of Isaac; Ex. 18:12 records Jethro's sacrifices to Israel's God; Nu. 23:1-6, 13-17, 27-30 record sacrifices by Balaam and Barak to God (burnt offerings). The references in Deuteronomy stress the common terminology and understanding of sacrifice found in the rest of the Pentateuch. Chapter 12 emphasizes the importance of sacrificing in the right place. Ex. 24:3-8 is especially important because of the deposition of the blood of the covenant that made the Mosaic laws of sacrifice and offering effective. The specific procedures in Ex. 24:3-8 are not prescribed in the Mosaic rituals, but peace and burnt offerings were presented (24:5, *'ôlôṯ, zeḇāḥîm šᵉlāmîm*). One half of the blood was thrown against the altar, while the other half was first stored in jars (*bᵉ'agṣānôṯ*), while the covenant was read; then the blood was cast (*zāraq*) upon the people. Henceforth all the sacrificial instructions were binding upon the priesthood, the Levites, and the people.

V. Mosaic.–The instructions for sacrifice and offering in the OT are found in the Pentateuch, mainly in the books of Exodus, Leviticus, and Numbers. Other important passages appear in Genesis and Deuteronomy.

A. Materials. Some general prohibitions are listed in Lev. 3:16f.; 7:22-27. They forbid the fat or blood of any sacrificial animal to be eaten (cf. comments on Gen. 9:4 below). Fat was always burned on the altar. Wild animals could not be offered (cf. the practices at Mari, *ARM*, 11, no. 37, 11.5–12.4) to the Lord, and the animal or other item had to belong to the person offering it (Lev. 1:2). Except for minor (but important) stated exceptions, the animals offered had to be perfect, without blemishes (*mûm, mᵉ'um;* cf. Lev. 22:17-25). Finally, the animal had to be at least eight days old (Lev. 22:26-30), and an ancient tradition stated that only clean animals, according to ancient Israelite ritual taxonomy, could be offered (cf. Gen. 6:19–7:4). Certain vegetable or grain items were used regularly, but animals were the most prominent aspect of Israel's sacrificial system.

Animal offerings were used exclusively in the *'ōlâ*, including occasionally birds (*'ôp*). Specifically mentioned are lambs (*keḇeś;* see esp. Nu. 28), cattle (*par, ben-bāqār, bāqār, 'ēgel, bᵉhēmâ*), rams (*'ayil*), and goats (*'ēz*). For the *zeḇaḥ* sacrifice an ox (*šôr*) and a sheep (*śeh*) are listed in Dt. 18:3. Animals from the flock (*ṣō'n*) or herd (*bāqār*) are approved of in Nu. 15:3; lamb (*śeh*) is listed in v. 11. The *zeḇaḥ-šᵉlāmîm* sacrifices, of course, mention the same animals (*pārîm*, bulls). The *minḥâ* offering was a vegetable offering, but the chief material used in the offering was flour (*sōleṯ*), although the cereal offering of jealousy in Nu. 5:15 requires "flour of barley" (*qemaḥ śᵉ'ōrâ;* RSV "barley meal"). The material offered in the sin offering (*ḥaṭṭā't*, Lev. 4:1f.) is graded according to the person who sacrifices: if the anointed priest sins, he offers a young bull (4:3); for the ruler who sins, a male goat (4:23, *śᵉ'îr 'izzîm*); for the whole congregation (4:14) the stipulation is the same as for the priest; for a common person, a female goat (4:28, *śᵉ'îraṯ 'izzîm*) or a female lamb (4:32, *keḇeś nᵉqēḇâ*) is required. For the poor an offering of flour, birds, or turtle doves was permitted (Lev. 5:7, 11). For the whole congregation on the Day of Atonement, he-goats were required (Lev. 16).

SACRIFICES AND OFFERINGS IN THE OT



Egyptians bringing birds and vegetation offerings and slaughtering a cow. The inscription reads "Take ... and sustain the health of the priest (Nebseny)" (tomb painting from Thebes, possibly from the time of Thutmose IV) (courtesy of the Oriental Institute, University of Chicago)

The guilt offering (*'āšām*) normally prescribed a ram for its offering (*'ayil*). Some purification ceremonies required a male lamb(s) as the guilt offering (Lev. 14:10, 12; Nu. 6:12). The prescription of a female lamb or goat from the flock in Lev. 5:6 appears to be oriented more to the sin offering, along with the concessions noted above. By and large the references in other parts of the Pentateuch and in the other canonical writings reflect and confirm this picture. But it appears that greater flexibility may have been possible in certain circumstances (e.g., 1 S. 6:14; see Rendtorff and *DBSup.* for additional information; *see also* SACRIFICE, HUMAN; TITHE).

B. Ritual Stipulations. Certain precise rules were promulgated by the Mosaic legislation in the Pentateuch that carefully and meticulously regulated sacrificial ritual. Nothing was left to caprice or arbitrariness. Mish. *Zebahim* elaborates these rules as later tradition reports them. Only the basic ritual commands are noted in this section (see Rendtorff and *DBSup.* for further details).

The rites of the *'ōlâ* and *zeḇaḥ-šᵉlāmîm* offerings included the following items (cf. Rendtorff, pp. 89-111; Lev. 1ff., esp. ch. 3): (1) the presentation of the animal (hiphil of *qāraḇ;* chs. 1 and 3, *passim*); (2) the laying on of hands (*sāmaḵ;* Lev. 1; 3); (3) the slaughtering of the beast (*šāḥaṭ;* Lev. 1; 3); (4) the sprinkling/scattering of the blood of the sacrifice (*zāraq;* Lev. 1; 3); (5) miscellaneous preparations taken with the animal; and (6) the complete burning of the animal (hiphil of *qāṭar;* Lev. 1; 3). As Rendtorff noted, the ritual procedures are the same for these two sacrifices up to step five (p. 89). The offerer brings his offering to the door of the tent of meeting (1:3; 3:2), where he lays his hands upon its head. Thereby he identifies himself with the offering.

After ritual cleansing the *'ōlâ* was entirely burned upon the altar. In the *zeḇaḥ-šᵉlāmîm* sacrifice only the fat and kidneys were burned upon the altar to God. Fat was holy unto the Lord (Lev. 3:16). The flesh of the peace offering that was not burned was eaten by the offerer and the priests before the Lord (7:11-36). The flesh of the thank offering had to be eaten on the first day, while the flesh of the votive or freewill offering could still be eaten on the second day (7:11-18). The breast (*ḥāzeh*) of the peace offering went to Aaron and his sons along with the right thigh (*šôq*) as contribution offerings (7:31-33). The rest of the sacrificial animal was eaten by the offerer, his family, and his relatives. A cereal offering would accompany the peace offering; the priest who threw the blood around received a cake of leavened bread from each offering (7:11-14).

Rendtorff noted the steps in the presentation of the cereal offerings: (1) preparation of the materials, (2) presentation, (3) removal of a memorial portion, and (4) burning of the offering. The cereal offering was to have oil poured on it and frankincense placed on it (Lev. 2:1). The memorial portion (*'azkārâ*) of the fine flour and oil was burned (hiphil of *qāṭar*) upon the altar, presented as a sweet smelling odor to the Lord. That which was left went to Aaron and his sons (Lev. 2:3). They could eat it in the holy place of the court of the tent of meeting.

In the case of the sin offering, the ritual is more completely described in Lev. 4:1–5:13; 6:24-30 (MT 17-23). The steps involve: (1) The presentation of the animal or other materials at the door of the tent of meeting (4:4, 14, 24, 29, 33), or small birds to the priest if he is poor (Lev. 5:1-14). (2) The laying on of hands by the offerer (4:4f.). (3) The slaying of the sacrificial animal (4:4f.). (4) The performance of the blood rite (4:5f.), in which the priest presented some of the blood at the tent of meeting, dipped his finger in the blood, and sprinkled it seven times in front of the veil before (*lipnê*) the Lord. Some blood was put on the horns of the altar of fragrant incense in the tent of meeting. The remaining blood was poured at the base of the altar of burnt offering. This altar was located at the door of the tent of meeting. (5) Removal of the fat (4:8f.). (6) The burning of the fat. (7) The disposition of the rest of the items (4:11f., 20).

The apparently shorter guilt offering ritual is found in Lev. 7:1-6 (cf. Rendtorff, pp. 212-228, for a full discussion). The dependence of the ritual of the guilt offering is evident from vv. 2 and 7, which explicitly refer to the regulations of the *'ōlâ* and the *ḥaṭṭā't* as valid for the guilt offering also. The steps in the guilt offering involve (1) the slaughtering of the animal, (2) the deposition of the blood (very much like the sin offering and the peace offering), (3) the presentation of the fat, (4) the consumption by fire of the fat, and (5) the deposition of the priests' portion in a holy place. As noted above, the purpose of both the guilt and sin offerings was to achieve atonement (*kipper*) for the offerer (Lev. 7:7).

C. Occasions. The sacrifices described above were of-

SACRIFICES AND OFFERINGS IN THE OT

fered according to the calendar of offerings given in Nu. 28–29. But many special rites and circumstances (e.g., Lev. 12:1-8; 14:1-32) demanded the use of these sacrifices. The most important occasions calling for various sacrifices or offerings of some kind were: (1) The daily sacrifice (Nu. 28:3-8; Ex. 29:38-42), in which a male lamb and a cereal offering with oil added were offered daily, morning and evening. It appears that this procedure could vary somewhat (cf. 1 K. 18:29; 2 K. 3:20; Ezk. 46:13f.; etc.). (2) The sabbath sacrifice doubled the daily sacrificial materials (Nu. 28:9f., found only here in the Pentateuch). (3) The offerings of the new moon (Nu. 28:11-15), which called for an *ʿôlâ* of two bulls, one ram, seven male lambs, and one goat, and a specified cereal offering with oil added for each bull, ram, and lamb respectively. Drink offerings (*nesek*) were included for each bull, lamb, and ram. A male goat was offered also for a sin offering in addition to the continual daily *ʿôlâ*.

The following occasions indicate the major events that called for sacrifices and offerings in a manner similar to items 1-3 above: the Feast of Unleavened Bread (Passover) (Nu. 28:16-25; Ex. 12:1-27; Lev. 23:5-8), the Feast of Weeks (Pentecost) (Nu. 28:26-31; Ex. 23:16; Lev. 23:15-21), the Feast of First Fruits (Lev. 23:9-14; Nu. 28:26; Dt. 26:5-10), the New Year (trumpets) sacrifices (Nu. 29:1-6; Lev. 23:23-25), the Day of Atonement (Nu. 29:7-11; Lev. 16:29-34; 23:26-32), at which there was a holy assembly and the following was offered: an *ʿôlâ* of one young bull, one ram, seven male lambs; cereal offerings mixed with oil for each; a sin offering of a male goat along with the daily *ʿôlâ* sacrifices and the sin offering of atonement for the priest (Lev. 16:6-14); finally a goat for Azazel (Lev. 16:6-10) was designated; the Feast of Booths (Nu. 28:12-38; Lev. 23:33-36), whose offerings exceeded that of any other holy assembly (71 bulls, 15 rams, 105 lambs, and 8 goats over an eight-day period).

Other situations calling for sacrifice are noted in the Mosaic sections of the Pentateuch as the purification of women (Lev. 12:1-8), the cleansing of a leper (Lev. 14:1-32), the ritual of the red heifer (Nu. 19), priestly consecration offerings (Lev. 8, 9), and also Levitical consecration offerings (Nu. 8), the release of a man from his Nazirite vows, ceremonial uncleanness (Lev. 15:13-15), bodily uncleanness of women (Lev. 15:29f.), the celebration of firstlings and first fruits (Ex. 13; 23:19; Dt. 15:19; 18:4; 26:1-19; Nu. 18), tithes (Lev. 27:30-33; Nu. 18:25-32; Dt. 14:22-29). *See* TITHE. When unwitting sin drew guilt upon the whole congregation or upon an individual, burnt offerings, cereal offerings, and sin offerings were employed to atone for the congregation/person so that it/he was forgiven (Nu. 15:22-31).

D. Burnt Offering. The *ʿôlâ*, or burnt offering, is described in Lev. 1; 6:8-13 (MT 1-6). The term seems to mean "that which goes up" (*ʿôlâ*). In this case it goes up, literally "is vaporized" (hiphil of *qāṭar*), by means of burning (*ʾēš, ʾiššēh*) to Yahweh. Its purpose is to be a pleasing odor (*rē[a]ḥ niḥō[a]ḥ*) before the Lord. Whatever animal or bird was used was entirely burned up, including its entrails and legs (1:9), on the altar (*mizbē[a]ḥ*) by the priest. The offering makes atonement for the offerer (v. 4, *lᵉkappēr ʿālāyw*). The offerer first laid his hands upon the head of the animal (see vv. 14-17 for a bird) so that its acceptance in his place was symbolically assured. The active participation of God in the process is indicated by the throwing (*zārqû*) of the blood against the altar at the door of the tent of meeting (v. 11). The complete consecration of the offerer and his gift is intended by this symbolical ritual.

Two terms in this pericope indicate that (1) the offering will be a pleasant odor before Yahweh when carried out correctly (*rē[a]ḥ niḥō[a]ḥ*), and (2) the entire ritual is a process that makes the offerer and his sacrifice acceptable (v. 3, *lirṣônô;* v. 4, *nirṣâ lô*) before God and pleasing to Him. It seems that both expiation and propitiation are involved (Lev. 1:3f., 9, 13, 17). The altar for the burnt offering burned continually day and night and was a symbol of God's character and constant presence among His people. The ashes of the burnt offering were allowed to accumulate all night. They were disposed of in a clean place outside the camp by the priest (6:9-13) the next morning.

E. Cereal Offering. The cereal offering (*minḥâ*) that was presented to the Lord as an offering (*qorbān*) is described in Lev. 2; 6:14-18 (MT 7-11; cf. the meal offering in Ezk. 46:15). It was burned in part on the altar. The part burned memorialized the worshiper before the Lord; the part that remained was eaten by the priests and, therefore, considered the "most holy part" (*qôḏeš qoḏāšîm*) of this offering by fire (*mē'iššê*) to the Lord. No honey or leaven could be used in this offering by fire, but all these offerings were to be salted. Cereal offerings accompanied animal sacrifices, but mostly in the case of the *ʿôlâ*.

F. Peace Offering. The sacrifice of "peace offerings" (*zeḇaḥ šᵉlāmîm*) is recorded in Lev. 3; 7:11-36. It was an offering by fire to the Lord. It is a pleasing odor to the Lord as is the *ʿôlâ* (3:5). Certain parts of the animal were burned on the altar to the Lord, while the rest was consumed by the priests and the offerers in a common meal. The fat was burned unto the Lord. Israel could eat neither blood nor fat in its sacrificial ceremonies before the Lord (Lev. 1:5; 3:16f.). The real meaning and effect of their sacrifice and its attendant ritual is now uncertain. The meaning of the term *šelem* (pl. *šᵉlāmîm*) is debated. It appears, however, that the ritual implies that the joy of fellowship with one another before the Lord was the main thrust of the ceremony. "Paying back" to Him what was given by Him seems to be part of the meaning of the ritual also (see Gerleman).

Three subcategories, or three kinds, of this sacrifice are noted in Lev. 7:11-36. The thank offering (*zeḇaḥ hattôḏâ*) called for a cereal offering to accompany the animal sacrifice. Its purpose was to render an expression of thanks for deliverance or blessings granted. No previous promise or vow was involved in the thank offering. The flesh of the sacrifice was eaten that day. The votive sacrifice (*zeḇaḥ neḏer*) and the freewill offering (*zeḇaḥ nᵉḏāḇâ*) were to be eaten on the day of sacrifice, but what remained could be eaten on the next day. After the prescribed time had passed for consuming the sacrificial food, what was left over had to be burned upon the altar. No one could eat it; if any did eat it they were not accepted before the Lord. The votive offering was presented when a blessing or deliverance had been granted after a vow (*neḏer*) had been made concerning a petition. The freewill offering was joyously and willingly presented to express a general thankfulness toward God. No specific deliverance or blessing had to be mentioned. An interesting aspect of the freewill offering is the stipulation that minor imperfections in the animals offered was permissible, unlike the case in the votive or thank offerings. Emphasis was thereby given to God's acceptance of the worshiper with a right attitude.

G. Sin Offering. The sin offering (*ḥaṭṭāʾṯ, ḥᵃṭāʾâ*) is delineated in Lev. 4:1–5:13; 6:24-30 (MT 17-23). It is very nearly the same as the guilt offering, and in fact it is difficult to define the differences between these two offerings (Snaith, *VT,* 15). It is difficult even to identify the texts which deal with one or the other (cf. Lev. 5:1-13 — sin or guilt offering?). The sin offering was "graded" somewhat

according to who sinned. The anointed priest (4:3ff.), the whole congregation (*kol-ʿadaṯ yiśrāʾēl*, vv. 13ff.), a ruler (*nāśîʾ*, vv. 22ff.), and one of the common people (*nepeš ʾaḥaṯ*, vv. 27ff.) are all singled out for special consideration in the case of the requirements for the sin offering.

The sin is specifically stated to be one committed unwittingly (*bišᵉgāgâ*, v. 2). The fat was cut away from the inner vital organs, which were burned on the altar, while the rest of the bull was burned outside the camp in a ceremonially clean place. At least this was done in the case of the ordination of Aaron and in the case of the bull for the priest or the people (Lev. 8:14-17; Ex. 29:10-14). In the other cases, the officiating priest for the sin offering could eat the flesh of the victim in a holy place (sacred precincts).

The ritual, when properly carried out, resulted in atonement for the persons involved; forgiveness was granted to the worshiper (Lev. 4:20, 26, 31, 34). The sacrifice became a pleasing odor to the Lord (v. 31). In 5:1-5 various cases are cited that require the presentation of a sin offering. This offering effects atonement; the one who sacrifices is forgiven (5:6, 10). In the procedural order (see below) of the sacrifices, the sin offering came first. Lev. 5:7-13 prescribes a ritual to be followed by those not able to afford a lamb or a goat. In all these situations it is constantly reiterated that atonement is made for the offerer and he is forgiven.

H. Guilt Offering. The guilt offering (*ʾāšām*; AV "trespass-offering") is described in Lev. 5:14–6:7 (MT 5:14-26); 7:1-7. It is different from the sin offering chiefly in the restitution requirement. The offerer has to make good on any loss that he has made in the holy things of the Lord and pay an additional fifth of its cost to the priest (5:16). Damages against another person are also dealt with in 6:1-7 (MT 5:20-26), where the one-fifth restitution clause is also in effect. This offering also atones for the sacrificer and he is forgiven. The sin offering deals with sins against God that also threaten the community. The guilt offering deals more with sins that require restitution to God or man (cf. Morris; Saydon).

I. Consecration Offering. The consecration offering performed at the installation of the Aaronite priesthood is recorded in Ex. 29:4-28; Lev. 6:19-23 (MT 12-16); 8–9; Nu. 8. The basic description is in Ex. 29, supplemented by Lev. 6:19-23. The prescriptive instructions of Ex. 29 are carried out in the descriptive text of Lev. 8. This offering was a special type of peace offering. The purpose of the consecration offering was to make it possible for the priests to serve before the Lord (Ex. 29:1, *lᵉqaddēš ʾôṯām lᵉḵahēn lî*). This whole process included a sin offering for the priests (Ex. 19:14), a whole burnt offering (v. 18), and the ritual concerning the ordination ram proper (Ex. 29:22-28, 34), to which a cereal offering was added (Ex. 29:23; Lev. 6:19-23) and was wholly burned. The consecration/ordination process was carried out over a period of seven days (Ex. 29:35-37). The cereal offering of Ex. 29:23f. was waved as a "wave offering" (*tᵉnûpâ*; AV heave offering) before the Lord, as was the breast of the ordination ram (Ex. 29:26-28). By this process Aaron and his sons were rendered holy unto the Lord for service at the tabernacle.

Many passages in the Pentateuch employ these sacrifices and offerings in various kinds of settings and for different reasons. The "mix" of sacrifices or offerings that were to be performed publicly, privately, and for all types of reasons is interesting to observe, but *why* a certain one of these basic sacrifices was used at a given time in a certain situation is often not clear to us today. The material used, the usual ritual procedures, the occasions for these sacrifices, and some key sacrificial terminology are discussed above.

VI. In the Rest of the OT.–A. Former Prophets. The following comments highlight most of the more significant occurrences of sacrifice in the Former Prophets. A Passover was held in Gilgal (Josh. 5:10-12), burnt offerings and peace offerings were presented at the covenant ceremony at Shechem (Josh. 8:30-35; 24:1-33), sacrifice was performed at Bochim (Jgs. 2:1-5), Jephthah offered his daughter as an *ʿôlâ* (Jgs. 11:29-40), Gideon (Jgs. 6:11-32) and Manoah (13:15-23) offered cereal (*minḥâ*) and burnt offerings (*ʿôlâ*, a bull and a kid), the Philistines sacrificed (*zeḇaḥ*, Jgs. 16:23), and, finally, the Israelites offered *ʿôlôṯ* and *šᵉlāmîm* in the Benjaminite war (Jgs. 20:26).

In the other books of the Former Prophets sacrifices and offerings continued to play an important part in Israel's life. In the days of Eli the priest, sacrifices were offered at Shiloh (1 S. 1:3; 2:13-17), sacrifices were also held in Beth-shemesh (cows as a burnt offering, 6:14f.), Mizpah (a lamb as a whole burnt offering, 7:9), Ramah (7:17; 9:11-24), Gilgal (burnt offerings, peace offerings, 10:8; 11:15; 13:9-13), and among families and clans (heifer, 16:2-5; 20:29). Sacrifice was certainly performed at Nob during Saul's reign (21:1-9 [MT 2-10]). David held sacrifices at Jerusalem (burnt offerings, peace offerings, 2 S. 6:17f.). David also set up a new cult center at the threshing floor of Araunah the Jebusite and offered burnt offerings and peace offerings there (24:24f.).

At the dedication of Solomon's temple a great sacrificial ritual was performed (peace offerings of sheep and oxen, burnt offering, cereal offering, and fat pieces of the peace offerings, 1 K. 8:5, 62-66). The high places were in common use before the dedication of the temple (3:2), and Solomon held a great sacrifice there before he built the temple ("a thousand burnt offerings," 3:3-6). 1 K. 3:3 indicates that sacrifice at the high places was a fault that plagued Solomon before he built the temple. Shrines for sacrifice in Dan and Bethel were constructed after the united kingdom split (12:27f.). Elijah sacrificed to the Lord on a reconstructed high place (oblation, burnt offering of a bull, 18:23, 33-40). King Jehoash of Judah repaired the temple, where evidently guilt offerings and sin offerings had continued (2 K. 12:15f.). Ahaz had a new altar made, based on an altar he saw in Damascus, and he presented burnt, cereal, drink, and peace offerings upon it (16:10-16). Hezekiah abolished the high places (18:4) and sacrificed in Jerusalem (cf. v. 22). But Manasseh not only rebuilt the high places but also built altars to Baal and even sacrificed his son (21:1-9). Josiah removed all of Manasseh's abominations (23:4-25) and held a magnificent Passover according to the stipulations he read in the book of the covenant (vv. 21-23).

Thus the *ʿôlâ*, *zeḇaḥ*, *minḥâ*, *ḥaṭṭāʾṯ*, and *ʾāšām* are found in the Former Prophets ("Deuteronomistic History"). *Šᵉlāmîm* is found, but never standing alone (cf. 2 S. 6:17f.; 1 K. 3:15; 9:25). The joyous nature of the *ʿôlâ* is evident in the passages where peace and burnt offerings are presented together (Rendtorff, pp. 56f.).

B. Latter Prophets. Not all of the references to sacrifice and offering in the prophetic books are polemical. The terms for the various offerings mentioned in the prophets include *ʿôlâ*, *zeḇaḥ*, and *minḥâ*. The term *ḥaṭṭāʾṯ* in Hos. 4:8 and Mic. 6:7 is not to be understood as a reference to the sin offering. The terms *yazzeh* (Isa. 52:15), *śeh* (Isa. 53:7), and *ʾāšām* (53:10) appear to be used as sacrificial terms in the context (cf. Rendtorff, pp. 62f.; R. J. Thompson, p. 224 n. 1).

The terms for sacrifice and offering occur in the preexilic, exilic, and postexilic prophetic literature, but in a

SACRIFICES AND OFFERINGS IN THE OT

haphazard way. The significance of the sacrificial passages can be categorized as follows:

(1) Passages that indicate the rejection, condemnation, or fate of a corrupt Israelite system of sacrifices and offerings. Both the officiants and the worshipers themselves are involved in guilt (Am. 4:4; 5:21-25; Hos. 8:11-13; 12:12 [MT 13]; 13:2; Isa. 1:10-15; 43:23-25; 57:6; 65:3f., 11; 66:3, 17; Jer. 6:20; 7:21ff., 31; 11:15; 14:12; 19:5; 32:25; Hab. 1:16; Ezk. 16:15-21; 20:25-31; 23:36-39; Mal. 1:7f.; 3:8f.).

(2) Passages that describe false cultic activities or apostate sacrifices and offerings, such as sacrifices to Baal or to idols (Hos. 4:13-19; 11:2; Jer. 7:18; 44:15-19; 48:35).

(3) Passages that note the fact of current sacrificial activity without approving or disapproving of it. Also those which speak of a future sacrificial activity with approval (Isa. 19:19-21; 29:1; 40:16; 52:13–53:12; 56:7; 60:7; 62:9; 66:20; Jer. 17:24-27; 33:11, 18; 41:5; Ezk. 20:40f.; 40–48; Jonah 1:16; 2:9 [MT 10]; Nah. 2:1 [MT 2]; Zeph. 3:10; Zec. 9:11, 15; 14:21; Mal. 3:3f.). The use of *'āšām* in Isa. 53:10 is probably a sacrificial use (cf. Daly; R. J. Thompson, p. 224 n.1).

(4) Passages that see the loss of the sacrificial ritual as a calamity (Joel 1:9, 13; 2:14).

(5) Passages that describe a time when there will be no sacrificial cult because of exile or because the Lord withdraws (Hos. 3:4; 5:6; 9:4-6).

(6) Passages that describe the Lord's future sacrifice (slaughter?) of people in the exercise of His judgmental power (Isa. 34:6; Ezk. 39:17-20; Zeph. 1:7f.).

(7) Passages that clarify what God was really looking for in His people vis-à-vis sacrifices and offerings (Isa. 29:13; Ezk. 33:31; Hos. 6:6; Mic. 6:6-8).

Thus the prophets' attitude toward sacrifice and offering is not unswervingly negative at all. It is clear from the above that it is far from a rejection of the sacrificial cult in toto.

C. Writings. The Psalms are sprinkled lightly with specific sacrificial terminology. The various references are:

(1) Passages that present sacrifice as an approved way to *worship* God in a proper attitude (20:4 [MT 5]; 76:12 [MT 13]; 96:8).

(2) Passages that depreciate sacrifices per se, usually emphasizing the fact that the victim/subject in the sacrificial ritual is not the object of God's desire or approval (40:7-9 [MT 8-10]; see also points 4-5 below).

(3) Passages that condemn apostate sacrifices (16:4; 106:28, 37f.).

(4) Passages that compare and contrast spiritual sacrifices with material sacrifices, and approve of the former strongly over the latter (50:8-14; 51:18f. [MT 20f.]; 69:32 [MT 33]).

(5) Passages that wholly point to and approve of spiritual sacrifices by the worshiper as the true pleasing sacrifice before the Lord (4:6 [MT 7]; 26:6f.; 107:22; 116:17; 119:108; 141:2).

Of course, the historical location of the above psalms is important, and many more psalms are dated earlier than used to be the case, but the overall message is very cogent and clear. The various terms for sacrifice are found in the above references: *'ōlâ, zeḇaḥ* (50:8; 51:16 [MT 18]); *zeḇaḥ, minḥâ* (40:7 [MT 8]). *Zeḇaḥ* is used to refer to the entire cult in general (4:5 [MT 6]; 50:5; 51: 17, 19 [MT 19, 21]). *Zeḇaḥ* is found often as equivalent to a thank offering (107:22; 116:17; etc.). *Minḥâ* is found only once (96:8). But by far the most important contribution to the concept of sacrifice and offerings is found in the *spiritualizing* of the concept of an acceptable sacrifice before the Lord.

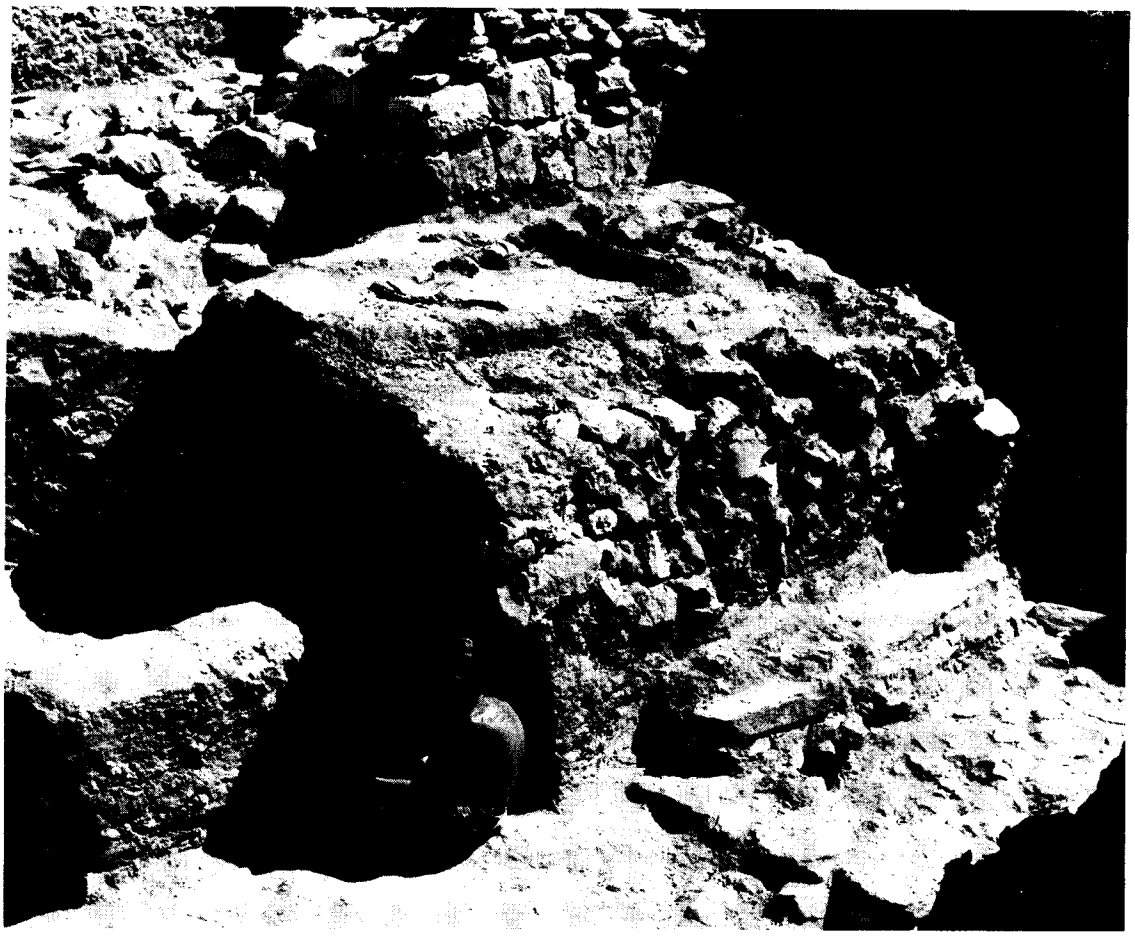
The religious historiography of the Chronicler and the writer of Ezra-Nehemiah places a great emphasis upon the importance of the sacrificial cult in Israel's history. Much of it parallels material reported in 1 Samuel-2 Kings, not only because the Chronicler utilized those books as sources but also because his historiographical method called for that material. Only the most important items will be listed here because of space limitations (for more detail see esp. Rendtorff, pp. 67-73; also Thompson, pp. 228-235). But, as Thompson noted, the peculiar interest is revealed: "The writer's interest in sacrifice is indicated by his introduction of sacrificial references [i.e. identifying the cultic significance], where they are missing in the books of Samuel and Kings" (p. 231), such as 2 Ch. 2:4-6 (MT 3-5); 7:12 (Rendtorff, p. 72). One can assume that the final canonical form of 1-2 Chronicles omits certain earlier references in Samuel and Kings because this was not important to his particular goals.

One of the chief emphases of the Chronicler's history was clearly the primacy of the temple and cult (Daly, p. 28). In the Chronicler's history the Levites were appointed for all the services of the tabernacle of the house of God (1 Ch. 6:48 [MT 33]). Aaron and his sons performed offering and sacrifice "upon the altar of burnt offering and upon the altar of incense for all the work of the most holy place, and to make atonement [*kappēr*] for Israel, according to all that Moses the Servant of God had commanded" (1 Ch. 6:49 [MT 34]).

The references to sacrifice and offering found only in the Chronicler are as follows: 1 Ch. 6:49 (MT 34), where "to make atonement" is found; Hezekiah was a favorite of the Chronicler and his atonement offerings are emphasized (2 Ch. 29, esp. vv. 20-36) and his great Passover festival (30:1-27); chs. 20–22 record burnt offerings, drink offerings, sacrifices (*zᵉḇāḥîm*), and a joyful celebration at the designation of Solomon as king by David; 23:18 records Joash's reestablishment of the Mosaic sacrificial system; 24:8-14 omits guilt and sin offering references found in Kings; 5:6 records Solomon's and the congregations sacrifices; 13:9-11 records Abijah's condemnation of Israel's sacrificial cult and approval of the sacrificial cult in Jerusalem; Asa showed great faithfulness to sacrifice and offering (15:10, 17-19). 2 Ch. 26:16-19 records Uzziah's presumptuous offering; 13:14-17, Manasseh's "reform." The Passover of Josiah in 2 Ch. 35 is a much fuller delineation of the same event in Kings. For references that show the importance and the continuation of sacrifice and offering throughout Israel's history, see also 1 Ch. 9:28-32; 16:29 = Ps. 96:8; 1 Ch. 16:31f. (sacrifice at the high place in Gibeon); 22:1; 23:13, 27; 2 Ch. 2:4-6 (MT 3-5); 4:6; 7:1, 12; 13:8-12; 31:2-4; 33:6 (human sacrifice); 34:4. After a review of this evidence it is clear that for the Chronicler the sacrificial cult was a source of true worship and joy (cf. R. J. Thompson, pp. 231f.).

Whether the same author penned Ezra-Nehemiah that penned 1-2 Chronicles has long been debated, but the relevant passages for our purposes are as follows: Ezr. 6:6-12, 15-18, 19-22; 10:19-22; Neh. 10:28-39 (MT 29-40); 12:30-43. The passage in Ezr. 3:1-6 records the reestablishment of the Levitical sacrificial system according to the law of Moses. The Feast of Tabernacles was held at that time and burnt and freewill (*nᵉḏāḇâ*) offerings were presented. Ezr. 8:35f. records the presentation of sin offerings and burnt offerings. Thompson again concluded his survey of these offerings with the observation that the note of joy at the sacrificial events prevailed even in this late era of Israel, as it had in 1-2 Chronicles. Rendtorff asserted that a major point to be observed, after his overview of the Chronicler (1 Chronicles-Nehemiah), is that the *'ōlâ* dominates in the Chronicler's sacrificial theology, while the other offerings recede (pp. 72f.). As he noted,

SACRIFICES AND OFFERINGS IN THE OT



The altar from the Israelite sanctuary at Arad. The runnels around the center were used to drain off sacrificial blood (9th cent. B.C.) (courtesy of Tel Aviv University, Department of Archaeology)

more work needs to be done on the theological conception that the Chronicler has of the place of sacrifice and offering (cf. Rendtorff, p. 72). Rendtorff's negative assessment of the possibility of discovering this theological framework seems overstated ("Nevertheless, no clear picture of the Chronicler's idea of sacrifice can be obtained," p. 72).

The other writings of the OT do not include extensive references to sacrifice and offering. This is the case mostly because of the perspective of the materials themselves. Thompson listed twelve passages dealing with sacrifice found in Job, Proverbs, and Ecclesiastes. Job 1:5 and 42:8 mention *ʿōlôṯ* that expiate for sin according to Job's explicit confession. Both sins of action and sins of attitude are in view. Prov. 7:14-21 deals with the adulterous woman; 15:8; 21:3, 27; and 27:27 stress the superiority of ethical conduct and attitude to sacrifice per se. Eccl. 5:1 (MT 2) and 9:2 indicate the ongoing function of the cult even in these texts, which deal mainly with the attitudes of the individual and the action based on attitudes. This explains the basically negative focus upon the concept of sacrifice and offering found in these materials. Only *zeḇaḥ* is found in this literature, since it was the major offering of the individual (cf. Rendtorff, p. 66).

VII. Special Issues.–A. Meaning and Significance of Blood. This issue has always provoked interest and controversy. Nearly everyone agrees that the blood ritual in Israelite sacrifice is unique. There has been nothing found to date that parallels, in any significant way, the treatment of blood in Israel, neither in the ancient Near East nor elsewhere (the blood was purposely soaked into the ground in sacrifice to the Olympian gods). (See D. J. McCarthy, *JBL*, 88 [1969], 166-176; 92 [1973], 205-210.) The meticulous attention paid to the disposal of blood in various types of OT sacrifices meant that blood was at least part of the atonement process in all Israelite sacrifices; it was a unifying feature of the cult (see de Vaux, *Ancient Israel*, p. 453). The people were forbidden to eat the blood (Lev. 17:10f.; Gen. 9:4; Lev. 3:17; 7:26; Dt. 12:16, 23; 15:23), since life (*nepeš*) was in the blood, and life belonged to God alone (see de Vaux, *Ancient Israel*, pp. 416, 449).

The meaning, therefore, of Lev. 17:11, 14 has been researched diligently. Verse 11 reads, "For the life of the flesh is in the blood; and I have given it for you upon the altar to make atonement for your souls; for it is the blood that makes atonement, by reason of the life [*bannepeš*]"; and v. 14a, "For the life of every creature is the blood of it." So atonement is made by the blood to the extent that "life" is in it or because "life" is in it. This idea is not found outside Israel (see McCarthy's articles noted above; cf. Lyonnet and Sabourin, pp. 175-181; and more recently *DBSup.*, cols. 1494-97). Furthermore, the blood makes atonement because God has designated it to make atonement, by reason of the life (*nepeš*) which is in it,

within the covenant community. Blood does not make atonement because of some magical quality in it. The *divine will* itself made the blood the means of expiation, consecrated in the service of the altar; it was the mysterious element that the ancients considered a vital force (*DBSup.*, col. 1497). The sacrificial victim, slaughtered in the course of a symbolic action *prescribed by God* (Lev. 17:1; cf. H. W. Robinson, p. 135), having entered the divine sphere, procures the blood of expiation *appointed by God Himself*. No magic is involved — *God's will chooses* and *approves* the prescribed sacrificial ritual.

B. Ritual Order of the Sacrifices. The sacrifices and their rituals are enumerated in various ways in the OT. A. Rainey and B. A. Levine (*Presence*) have done detailed studies about the significance of the sequence of rituals. *DBSup.* summarizes these studies well (col. 1492). Lev. 8–9, *descriptive* or narrative texts, give the order for the sacrifices as sin offering (*ḥaṭṭā't*), burnt offering (*'ōlâ*), communion (*šelāmîm*). But in Nu. 7:28f., *prescriptive administration* texts, the order of the sacrificial list is burnt offering (with needed cereal and drink offerings), sin offering, communion offering. A similar situation follows in the analogous logic of the order used in the ritual of the sacrifices. Lev. 1:1–6:7 (MT 5:26) is *didactic-descriptive* in character and lists the sacrifices of "a pleasing odor," burnt offering, cereal offering, and the sacrifice of communion, then the expiatory sacrifices (sin and guilt offerings). This list is to help train sacerdotal personnel. The offerings are grouped in agreement with their logical/conceptual association (Rainey, p. 486). Lev. 6:1 (MT 5:20)–7:38 of an *administrative-descriptive* character, arranges the sacrifices in a different way: burnt offering, cereal offering, expiatory sacrifices, and then communion sacrifice.

Other texts give the following order of the presentation of the offerings that reflects the procedural sequence of presenting sacrifices: expiatory sacrifice, burnt offering, communion sacrifice (Nu. 6:16f.). It appears that before entering into communion with the Lord, sin had to be dealt with, then the burnt offering indicated the total consecration of the offerer to the Lord, and finally, communion was possible. Levine differs by calling the burnt offering the first sacrifice proper even when preceded by a preliminary sin offering in certain cases.

Levine was the first to establish the differentiation between the OT ritual texts as *prescriptive* (how the rite was to be performed) and *descriptive* (how the rite was performed; what happened) (B. A. Levine, *JCS*, 17 [1963], 105-111; *JAOS*, 85 [1965], 312ff.). Rainey's demonstration of *didactic (descriptive)* ritual lists for training sacerdotal specialists (Lev. 1:1–6:7 [MT 5:29]), *administrative* ("bookkeeping," descriptive) lists (6:8 [MT 1]–7:28), and *procedural* (*prescriptive*) lists of sacrificial presentation are very helpful. His argument seems cogent. The administrative type of sacrificial list follows the basic sequence of burnt, cereal, drink, sin offerings. The fixed feature of this is especially the order of the burnt and sin offerings. The basic procedural list (how the ritual is to be carried out) was sin offering, burnt offering, peace offering. Here the fixed unchangeable aspect of the sacrificial order was sin offering-burnt offering. The difference between the two ritual lists is perfectly demonstrated in the case of the Nazirite vow (Nu. 6:14-17). A prescriptive text could follow the administrative order if it was merely stating the type and number of offerings to be brought (e.g., Nu. 15:24f.; Rainey, pp. 491-98). And the narrative descriptive account of the consecration of Aaron and his sons in Lev. 8 follows the same *procedural* order of the prescriptive account of this same event in Ex. 29. Procedural practices are found in Lev. 9 also (cf. above).

C. Order of Development of the Sacrifices. R. J. Thompson concluded that the *'ōlâ* was the most widely used and the most typical of the Israelite sacrifices (p. 245). It arose and was used very early (contra Robertson Smith). Similarly, Rendtorff held that the *'ōlâ* played the most important part in the Israelite cult (pp. 232-241, 251f.). According to the OT, it seems that the *minḥâ*, *'āšām*, *ḥaṭṭā't*, and *šelāmîm* likely arose from the *'ōlâ*. Rendtorff lists the probable historical development of the offerings as *'ōlâ*, *šelāmîm*, *zebaḥ*, *minḥâ*, *ḥaṭṭā't*, *'āšām*. The Wellhausen school had preferred the *zebaḥ* as the typical Hebrew sacrifice. The nature of the *ḥaṭṭā't* and the *'āšām* probably accounts for their sparse occurrences in the Former Prophets. They are possibly mentioned only twice in the postexilic literature. The difference between these two sacrifices is minimal. The guilt offering dealt more with sins toward human beings, and the sin offering more with sins against God.

D. Efficacy of the OT Sacrifices. Both Abba and Saydon pointed out shortcomings of the OT sacrificial system. It was not meant to be final; it had a limited range of effectiveness, operating only within the covenant. Only sins of ignorance or of human frailty were forgiven within this cultic system. No sacrifice could atone for deliberate, rebellious acts against God that were adamantly continued (Abba, p. 137).

Saydon analyzed sins into three classes: (1) high-handed sins for which there was no atonement; (2) "ordinary" sins committed with at best some degree of consciousness; these were due to human weakness and atoned for by the sin offering (*sacrificium pro peccate*); (3) unintentional sins that were to be atoned for by the guilt offering (*sacrificium pro delicto*). These observations are helpful and true. But the appropriateness of the conclusions drawn from them is questionable. They do not circumscribe the total revelation of God in relationship to His people. It is true that no specific rite was available for one who committed adultery or sinned with a high hand. But God's fuller revelation of Himself in the OT included His readiness to forgive all kinds of sins against Him, when a spirit of humility and repentance was present (Ps. 51; Mic. 6:8).

The purpose and efficacy of the Levitical system was misunderstood and abused, but the shedding of blood was continued into the New Covenant. In both covenants the ultimate requirement is a total sacrifice of one's self in humility before God's great work of objective atonement through the life that is in the sacrificial blood. Both a perfect blood sacrifice and a perfect sacrifice of love and allegiance to God were found in Christ, bringing an end to the forward look of the Levitical system.

SACRIFICES AND OFFERINGS IN THE NT.

SACRIFICE [Gk. *thysía*–'sacrifice, offering' (Mt. 9:13; Mk. 12:33; Acts 7:41f.; Rom. 12:1; 1 Cor. 10:18; He. 13:15f.; etc.)]; NEB also OFFERING, SACRIFICIAL MEAL; **SACRIFICIAL** [*thysía*–'the act of offering' (Phil. 2:17)]; **SACRIFICIAL OFFERING** [*thysiatḗrion*–'altar' (1 Cor. 9:13)]; AV "with the altar"; **(FOOD) SACRIFICED TO AN IDOL** [*eidōlóthytos*–'meat offered to an idol' (Acts 15:29; 21:25; Rev. 2:14, 20)]; AV "meat offered to idols," etc.; NEB "meat that has been offered to idols," etc.; **GIFT** [*dṓron* (Mt. 5:23f.; 8:4; 23:18f.; Lk. 21:1; He. 5:1; 8:3f.; 9:9; 11:4)]; NEB also OFFERING, etc.; **INCENSE** [*thymíama* (Lk. 1:10f.; Rev. 5:8; 8:3f.; 18:13)]; AV also ODOURS; NEB also INCENSE-OFFERING; **OFFERING** [*prosphorá*–'the act of bringing,' 'that which is brought' (Acts 21:26; 24:17; Rom. 15:16; He. 10:5, 8, 10, 14, 18)]; NEB also SACRIFICE; [*anáthēma*–'votive offering' (Lk. 21:5)]; AV GIFT; NEB VOTIVE OFFERING; [*leitourgía*–'service, ministry' (Phil. 2:17)] AV SERVICE; NEB "which is the offering up"; [*osmḗ*–'smell, scent' (Phil. 4:18)]; AV SMELL **(WHOLE) BURNT OFFERING** [*holokaútōma*–'whole burnt offering' (Mk. 12:33; He. 10:6, 8)]; NEB also WHOLE OFFERING; **OFFER** [*prosphérō* (Mt. 5:23f.; 8:4; Acts 7:42; He. 5:1; etc.)]; AV also BRING, etc.; NEB also BRING, etc.; [*anaphérō*–'bring or take up' (He. 7:27; Jas. 2:21; 1 Pet. 2:5)]; AV also OFFER UP; [*anágō*–'lead or bring up' (Acts 7:41)]; [*dídōmi*–'give' (Lk. 2:24)]; NEB MAKE; **OFFER UP** [*prosphérō* (He. 11:17)]; [*anaphérō* (He. 7:27; 13:15)]; AV also OFFER; **(OFFER) SACRIFICE** [*thýō*–'sacrifice, kill' (Mk. 14:12; Lk. 22:7; Acts 14:13, 18; 1 Cor. 5:7; 10:20)]; AV also KILL; NEB also SLAUGHTER, etc.; **POUR AS A LIBATION** [*spéndō*–'offer a libation or a drink offering' (Phil. 2:17)]; AV BE OFFERED; NEB etc.; **SACRIFICE** [*spéndō* (2 Tim. 4:6)]; NEB "being poured out on the altar." The RSV translates the idiom *perí hamartías* with "for sin" (Rom. 8:3 [RSV mg. "as a sin offering"]; He. 5:3), "sin offering" (He. 10:6, 8), and "sacrifice for sin" (He. 13:11).

VI. The Eucharist as a Sacrifice

I. Introduction.–The concept of sacrifice in the NT is profoundly influenced by the concept of sacrifice in the OT. Of course, the NT displays both continuity and discontinuity with the OT notion of sacrifice. To understand sacrifice in the NT one must see the thread that ties together the two Testaments, and yet one must also perceive the newness of the revelation that Christ inaugurated.

II. Continuity with OT Sacrifices.–A. In the Ministry of Jesus. During His earthly ministry Jesus never contended that the OT sacrificial system was outmoded or that it should be abrogated. At Jesus' birth Joseph and Mary in accordance with OT law offered the prescribed sacrifice of "a pair of turtledoves or two young pigeons" (Lk. 2:24; cf. Lev. 12:8). In Mt. 5:23f. Jesus assumed the legitimacy of OT sacrifices. He said that one should be reconciled to one's brother before offering a sacrifice, indicating that sacrifice is inadequate without a corresponding righteousness in one's social relationships. But He did not speak against offering the sacrifice as such, for He explicitly said that after restoration between brothers has occurred, "then come and offer your gift" (Mt. 5:24; cf. Mk. 1:44 par.; Mt. 23:16-20).

Twice in Matthew Jesus cited Hos. 6:6 — "I desire mercy and not sacrifice" (Mt. 9:13; 12:7). Both of these sayings stemmed from controversies with the religious leaders. In the first instance (9:9-13) Jesus defended His table fellowship with tax collectors and sinners, and in the second pericope (12:1-8) He justified the eating of grain by the disciples on the sabbath. Jesus also commended the scribe who exalted love of God and neighbor over the offering of sacrifices (Mk. 12:32-34). All these texts, however, are misunderstood if they are interpreted to say that Jesus rejected the sacrificial cultus. Instead, He simply followed the prophetic tradition that did not reject sacrifices but emphasized that sacrifices without righteousness in the heart are meaningless, and that internal righteousness is more important than ritual conformity. Indeed, such sentiments were common in the Judaism of Jesus' day. Ben Sira emphasized that only the sacrifices of the righteous were acceptable to God (Sir. 35:6f.).

B. In the Early Church. It is also apparent that Jesus' disciples did not think that He rejected the OT sacrificial cultus. After His ascension they "were continually in the temple blessing God" (Lk. 24:53). Luke does not say that the disciples offered sacrifices, but this is probably a fair assumption for four reasons. (1) Acts 2:46 indicates that the disciples attended the temple "day by day." It is quite probable that consistent participation in temple worship would have included the sacrificial cultus. (2) Acts 3:1 says that "Peter and John were going up to the temple at the hour of prayer, the ninth hour." The ninth hour would be around 3 P.M., and this was

SACRIFICES AND OFFERINGS IN THE NT

The high priest at the sacrificial altar with bulls and a ram. From a wall painting in the Dura-Europos synagogue showing the consecration of the tabernacle (Yale University Art Gallery, Dura-Europos Collection)

the time that the burnt offering would be sacrificed every evening (Ex. 29:39; Lev. 6:20; Josephus *Ant.* xiv.4.3 [65]). Obviously, Luke does not tell us that Peter and John were going to participate in the sacrifice, but the specification of the time seems to imply that such participation was probably the reason for their attendance. (3) The persecution of Stephen stemmed, at least partially, from charges that he spoke against the temple (Acts 6:13f.). Until this point Acts does not indicate that the disciples voiced any criticism of the temple, and the previous persecutions (Acts 4–5) had nothing to do with the temple. (4) Paul's return to Jerusalem for Pentecost presumably included sacrifices, for he was paying the expenses of four men who had taken a vow (Acts 21:20-26; cf. Nu. 6:9-21). Thus it is safe to infer that for the earliest disciples faith in Jesus did not rule out participation in the sacrificial cultus.

III. Early Indications of Discontinuity with OT Sacrifices.– The above discussion clearly indicates that Jesus did not reject the sacrificial cultus. Nevertheless, there are a few hints of the later stance of the Church on this issue. The prediction that the temple would be destroyed (Mk. 13:2 par.) necessarily included the abolition of sacrifices. That Jesus' words on the temple upset His contemporaries is clear from the Gospel traditions (Mk. 14:57-59 par.; Jn. 2:19-21), which indicate the presence of some uncertainty and confusion among the populace over what Jesus meant and even said about the temple. In short, Jesus assumed the validity of the sacrificial cultus, but His statements on the temple also implied that He foresaw a time when sacrifices would cease.

The much disputed saying in Mk. 10:45 is also relevant. Here Jesus says that "the Son of Man . . . came . . . to give his life as a ransom for many." The associations with Isa. 53, esp. vv. 10-12, although disputed, are probable. In this case Jesus viewed His own death as sacrificial. But the Markan text is not a detailed explanation of the atonement such as that in Hebrews. One should not infer from this statement alone that other sacrifices were unnecessary. Indeed, the expiatory function of the death of martyrs was not an unusual thought in Judaism (2 Macc. 7:30-38; 4 Macc. 6:28f.; 17:21f.). Such expiatory deaths did not abolish the need for the sacrificial cultus. Jesus' attitude toward sacrifices was characteristic of His stance toward the OT law (cf. Mt. 5:17-20; 17:24-27). He affirmed the validity and legitimacy of the sacrificial cult. Yet the newness of His message and person prepared one for discontinuity as well; His death and resurrection (although this is not explicitly stated by Jesus) would ultimately cancel the need for animal sacrifices. The Synoptic Gospels make this evident in the story of the temple curtain being torn in two (Mk. 15:38 par.). With symbolism that is remarkably similar to Hebrews, the Synoptics indicate that access to God is now available on a new and permanent basis because of Jesus' death.

Stephen's speech in Acts 7 contains the first hint in Acts that the temple cultus will be temporary. Luke tells us that the charges against Stephen were false (Acts 6:13f.), but a careful analysis of Stephen's speech suggests that he did criticize Jewish devotion to and preoccupation with the temple. He is not implying in vv. 42-50 that the temple cultus was idolatrous per se nor is he saying that it was built contrary to God's will. He is simply pointing out that the OT Scriptures do not support the excessive importance that his contemporaries attached to the temple. Previously the people of God (Abraham, Moses, and the era before Solomon) had functioned adequately without the temple, and Stephen may be suggesting that they will again function without the temple. Yet he never explicitly says that the temple cultus will be abolished or that it is inherently evil. Some scholars have read too much into Stephen's words here.

IV. Metaphorical Uses of Sacrificial Language.–A. In the

SACRIFICES AND OFFERINGS IN THE NT

NT. The NT writers also used sacrificial language in a metaphorical way. Several times Paul depicted his ministry in sacrificial terms. He used OT imagery when he described himself as conducting priestly service (Gk. *hierourgoúnta*) in the proclamation of the gospel (Rom. 15:16). His offering, however, did not consist of bulls, sheep, or goats. Instead, his offering (*prosphorá*) was the Gentiles, i.e., the conversion of the Gentiles was Paul's priestly offering to God. A similar thought occurs in Phil. 2:17. Paul may be "poured as a libation upon the sacrificial offering of your faith." The idea of being poured out as a drink offering ("libation") refers to the possibility that Paul may die for the sake of the Philippians' faith. Their faith is described in terms of "sacrificial offering" (*thysía kaí leitourgía*). Once again we see that Paul is describing his ministry in priestly terms and with sacrificial imagery. In 2 Tim. 4:6 Paul says, "I am already on the point of being sacrificed." Gk. *spéndomai* is the same verb used in Phil. 2:17 where Paul spoke of being poured out as a drink offering. The point is clearly the same. Paul's death is a sacrifice to God. No thought of atonement is present in this context; Paul merely uses sacrificial language to describe his imminent death.

The Christian life is also portrayed by using sacrificial imagery. In Rom. 12:1 Paul implores: "present your bodies as a living sacrifice." In the OT priests offered the slain beasts to God on the altar, but in the NT sacrificial imagery describes the nature of the commitment that is demanded of believers. In Phil. 4:18 Paul describes the generous gifts sent to him by the Philippians as "a fragrant offering, a sacrifice acceptable and pleasing to God." The spiritualization of the OT cultus is notably evident in 1 Pet. 2:5. The stones of God's house are no longer literal stones; rather, Christians are "living stones" and make up a "spiritual house," which obviously eliminates the need for a physical temple. Believers also constitute a "holy priesthood" that offers "spiritual sacrifices acceptable to God through Jesus Christ." The word "spiritual" (*pneumatikás*) before "sacrifices" (*thysías*) clearly shows that literal animal sacrifices are not in view. The new people of God now offer up sacrifices of a different nature and character (cf. 1 Pet. 2:9f.). Indeed, the book of Revelation identifies the offering of incense as the prayers of the saints (Rev. 5:8; 8:3f.; cf. Ps. 141:2). The author of Hebrews also emphasizes the spiritual nature of sacrifice. In Hebrews (see below) occurs the most detailed and definitive explanation of the sacrifice of Christ, and the superiority of His sacrifice over those of the old covenant. The sacrifices that are appropriate for believers are no longer bulls and goats, but praise, doing good, and sharing (He. 13:15f.).

B. In the Intertestamental Period. It is important to realize once again that the use of sacrificial language in a metaphorical way was common in the OT and Judaism. Ps. 51:17 (MT 19) is a typical OT example: "The sacrifice acceptable to God is a broken spirit; a broken and contrite heart, O God, thou wilt not despise." (*See* SACRIFICE AND OFFERINGS IN THE OT for further examples.) Sir. 35:1f. is an interesting example from the interestamental period: "He who keeps the law makes many offerings; he who heeds the commandments sacrifices a peace offering. He who returns a kindness offers fine flour, and he who gives alms sacrifices a thank offering" (cf. T. Levi 3:6; Philo *De somniis* ii.183). The Qumrân community also stressed the importance of spiritual sacrifices. "They shall atone for guilty rebellion and for the sins of unfaithfulness that they may obtain lovingkindness for the Land without the flesh of holocausts and the fat of sacrifice. And prayer rightly offered shall be as an acceptable fragrance of righteousness, and perfection of way as a delectable free-will offering" (1QS 9:3-4; G. Vermes, *DSS in English* [2nd ed. 1975], p. 87; cf. also 1QS 10:6, 14). Both the psalmist and Ben Sira, of course, believed in the validity of literal animal sacrifices, while the Qumrân community refused to participate in the sacrificial cultus. But this refusal to participate was not due to a rejection of literal sacrifices. The Qumrân community thought that the priesthood in Jerusalem was wicked and illegitimate, and looked forward to the day when a legitimate priesthood would be installed, and the sacrificial system would be practiced with integrity and propriety (1QM 2:5f.).

After the fall of Jerusalem and the destruction of the temple there was obviously no possibility to offer sacrifices. The adequacy of "spiritual sacrifices" was accordingly promulgated. When the temple was destroyed Rabbi Joshua said: "Woe to us! for this house that lies in ruins, the place where atonement was made for the sins of Israel!" But Rabbi Johanan ben Zakkai replied, "My son, be not grieved, for we have another means of atonement which is as effective, and that is, the practice of lovingkindness, as it is stated, 'For I desire lovingkindness and not sacrifice'" (T.B. *Aboth de Rabbi Nathan* 20a). The sufficiency of repentance, prayer, fasting, and the study of the Torah instead of sacrifice became customary after A.D. 70 (T.B. *Berakoth* 15a-b; 17a; *Sukkah* 49b; *Baba Bathra* 9a; *Menahoth* 110a; *Aboth de Rabbi Nathan* 19a). The rabbinic view with all its similarities to the later Christian view has a profound difference. The spiritualization of sacrifices by the rabbis was a necessary conclusion if Judaism was to survive. But the Christian rejection of the sacrificial system sprang from the conviction that Christ's sacrifice rendered the OT sacrifices unnecessary. All the different varieties of Jewish belief (including the rabbis, the Qumrân community, Ben Sira, apocalyptic circles, Christians, etc.) spiritualized sacrificial language, but Christianity came to differ from all of these other groups because it rejected continuing the OT sacrifices in principle. Every group used sacrificial language in a metaphorical way, but only the Christian movement argued that Christ's sacrifice on the cross abrogated animal sacrifices.

V. The Sacrifice of Christ.–A. Pauline Writings. Paul does not explicitly use the word "sacrifice" (Gk. *thysía*) or "offering" (*prosphorá*) much in describing Christ's death (cf. Eph. 5:2), but the concept extends beyond this specific terminology. The atoning significance of Christ's "blood" is clearly related to sacrifice (Rom. 3:25; 5:9; 1 Cor. 11:25; Eph. 1:7; 2:13; Col. 1:20). Christ's death is also described as a sin offering (*perí hamartías* in Rom. 8:3; cf. Lev. 5:6f., 11; and 9:2f. in the LXX). Paul clearly implies that Christ's death has replaced the OT sacrifices when he says "if justification were through the law, then Christ died to no purpose" (Gal. 2:21). And here "law" (*nómos*) for Paul would include OT sacrifices. If atonement and forgiveness were available through OT sacrifices, then it is obvious that Christ's death would be completely unnecessary. The same kind of argument appears in Gal. 3:10-13. Those who do not obey the law perfectly are under the curse of the law (3:10). Now the OT presupposes that people will sin and provides through the cultus a way of atonement and forgiveness. But Paul sees only one way of being delivered from the curse of the law, viz., the redemption that Christ provided by becoming a curse for us (cf. 2 Cor. 5:21). The OT sacrifices did not actually remove the curse; only the death of Christ was sufficient to do that.

A similar argument appears in Rom. 3:21-26. In 1:28–3:20 Paul established his thesis that no one is righteous, that all are sinful, and that all are guilty before God. Now

if the animal sacrifices could really atone for sin, then Paul would merely point out that one should offer the prescribed sacrifices. Instead, Paul emphasizes that justification comes only through the redemption that Jesus Christ accomplished (3:24). God's wrath was not propitiated through the blood of animals but only through the blood of Christ. Indeed, Paul says that God "in his divine forbearance . . . passed over former sins" (3:25). This probably means that the sins committed under the old covenant were not really forgiven, and sins previously committed were "put on hold" until the atoning death of Christ.

B. Johannine Writings. These writings reveal a similar understanding of Christ's death. In Jn. 1:29 John says, "Behold, the Lamb of God, who takes away the sin of the world" (cf. also v. 36). Scholars debate over whether John had the idea of a passover sacrifice in mind or whether he was thinking of Isa. 53:7, and perhaps he had both in mind. He may have also been thinking of the ordinary sacrifices of lambs (cf. Lev. 4:32; 5:6). (For the idea that Jesus' death is understood from the background of Isa. 53, see Acts 8:32-35; 1 Pet. 2:21-25.) In any case John is thinking of Jesus' death in sacrificial terms since His death is atoning. The universal significance of Christ's death is also a Johannine theme; the sacrifice of the lamb removed the sins of the entire world. Also the death of Jesus is the propitiation (*hilasmós*) "for our sins, and not for ours only but also for the sins of the whole world" (1 Jn. 2:2). The implication of these texts for our subject is clear. If Jesus' death atones for the sins of the entire world, then the OT sacrifices are now redundant and therefore superfluous. John never says this explicitly, but his very lack of interest in the sacrificial system makes it evident. Clearly Jesus' death is the true sacrifice because His blood "cleanses us from all sin" (1 Jn. 1:7). Revelation also refers quite often to the slaying of the lamb (Rev. 5:6, 12; 7:14; 12:11; 13:8), and the redemptive result of Christ's blood (Rev. 1:5; 5:9; 7:14; 12:11).

C. Hebrews. The most elaborate and theologically complete exposition of the superiority of Christ's sacrifice is found in the epistle to the Hebrews. The sacrifices of the old covenant are inferior because they stem from an inferior priesthood. The Levitical priests were sinful and thus they needed to offer sacrifices for their "own sins and then for those of the people" (He. 7:27). They were also mortal and thus could not serve as priests forever (7:23). But the priesthood of Christ is eternal and perfect, eternal because He lives forever and perfect because He was without sin (7:26-28). Indeed, the priesthood of Christ is superior because He is a priest of a superior order, viz., that of Melchizedek (7:1-22). God swore that the priesthood of Melchizedek would last forever, but He never made any such promise about the Levitical priesthood (7:20f.).

The inferiority of OT sacrifices is also due to the limitation of the old covenant. Indeed, God's promise to make a new covenant shows that He viewed the former one as inadequate and temporary (8:1-13). The author of Hebrews then proceeds to explain the inadequacy of the sacrifices of the old covenant, and the superiority of the sacrifice of Jesus. (1) OT sacrifices merely dealt with external reality. They focused on food, drink, ritual washings, and other regulations (9:10), but they did not "perfect the conscience of the worshiper" (9:9), i.e., they did not really purify one from sin (10:2f.). They merely cleansed the flesh (9:13), but Christ's death cleansed the conscience (9:14). (2) OT sacrifices were symbolic of a deeper reality. They were only copies and shadows, not the very substance of what God had promised (10:1). The entire ritual of the Day of Atonement (Lev. 16) was a picture that access to God had not yet been gained on a permanent and effective basis (9:7f.). The earthly tent and animal sacrifices were pictures of a heavenly tent and a more effective sacrifice. The author made it clear that the "heavenly sanctuary" was not a literal place, but he used symbolic language from the OT to portray entrance into God's very presence (9:23f.). Animal sacrifices conveyed the truth that blood was needed to effect forgiveness (9:22), but they themselves did not accomplish that forgiveness, "for it is impossible that the blood of bulls and goats should take away sins" (10:4). These sacrifices pointed forward to the sacrifice of Christ, and once His sacrifice had been accomplished the former ritual became unnecessary (10:5-9). (3) The repetition of OT sacrifices showed their inferiority. If they were really effective, then they would not need to be offered again and again. Indeed, the constant repetition of such sacrifices served as a reminder of sin (10:2-4). If they really removed sins they would not need to be offered again. In contrast, the superiority of Christ's sacrifice was indicated by its definitive and effective nature. His one sacrifice was effective for all sins (9:26-28), and never needs to be repeated. (4) The sacrifice of animals was by necessity forced upon the creature. But the sacrifice of Christ was personal and voluntary (10:5-10), indicating that the new covenant is founded upon a more satisfactory and personal basis.

The difference between OT sacrifices and Christ's sacrifice is portrayed in a striking series of contrasts by the author. The priest continued to stand, offering the same sacrifices day by day (10:11), but Christ "sat down at the right hand of God" (10:12) because His work was finished (1:3). The priest offered many sacrifices, but Christ offered only one (10:11f.). The work of the priest was never done, but the work of Christ is complete and final (10:11f.). The priest offered animals (10:4) but Christ offered Himself (10:5-10).

Thus the author of Hebrews gave us the fullest exposition of what other NT writers implied. He reflected on the significance of Christ's sacrifice in light of the old covenant, and effectively saw the difference between the old and new covenant. He did not denigrate the sacrifices of the old covenant. It is illuminating to see how the author of the Epistle of Barnabas made this very mistake when writing about the old covenant (cf. 2:4-10). He so wanted to emphasize the superiority of the new that he came close to saying that the old covenant, particularly circumcision, was a mistake from the very beginning (cf. 9:4). The author of Hebrews did not fall into such an obvious, and yet attractively simple, error. Instead, he saw the complexity of the relation between the two covenants. The old covenant really was from God, but the death and resurrection of Christ have inaugurated the new covenant, and this means that the old covenant must be interpreted in the light of the Christ event. Continuity exists between the two eras, namely, God still requires a sacrifice. The difference, however, is that Christ's sacrifice cancelled out the need for any more animal sacrifices. His self-offering is definitive, efficacious, final, and complete.

VI. The Eucharist as a Sacrifice.—One last topic needs to be considered briefly. Did the NT writers think the eucharist was a sacrifice? Paul's discussion in 1 Cor. 10:14-22 is relevant here, and it is clear that Paul spoke in sacrificial terms. But Paul did not say here that the eucharist is a perpetual sacrifice or a repetition of Christ's sacrifice (cf. He. 9:25-28). The subject of Paul's discussion was the participation in the benefits of that which is sacrificed. Those who offered the sacrifices in the OT ate that which was left over from the sacrifices (1 Cor. 10:18;

cf. Lev. 7:6, 15). Paul's thesis was that those who participate in the eucharist participate in the benefits of Christ's death. But how can they sit at the Lord's table and participate in the benefits of the Lord's death and at the same time sit down in an idol's temple and participate in the benefits of that which was sacrificed to idols? Obviously, such behavior is completely incongruous and inappropriate. One cannot have it both ways, gaining the benefits of Christ's death and at the same time expose oneself to demonic influences (1 Cor. 10:20-22). In short, Paul did not say that the celebration of the eucharist "is" a sacrifice; he said that when Christians celebrate the eucharist they participate in the benefits of Christ's once-for-all sacrifice (cf. 1 Cor. 11:23-26). The passages in the Synoptics on the institution of the eucharist (Mk. 14:22 par.) undoubtedly indicate that Jesus' death contains sacrificial significance; it is also clearly associated with the Passover meal (cf. 1 Cor. 5:7). But they do not imply that the eucharist itself is a repetition of that sacrifice. Instead, believers recall and participate in the significance of Christ's once-for-all death during the eucharist.

SADDLE [Heb. *ḥāḇaš* (Gen. 22:3; Nu. 22:21; Jgs. 19:10; 2 S. 16:1; 26; 1 K. 13:13, 23, 27; etc.), *kar* (Gen. 31:34), *merkāḇ* (Lev. 15:9)]; AV also FURNITURE (Gen. 31:34); NEB also BAG (Gen. 31:34), HARNESS, LADEN, etc.

A saddle was a rider's seat that was strapped to the back of an animal. A rigid saddle is thought to have been developed by the Scythians *ca.* 700 B.C. Throughout most of the biblical period, however, a saddle probably consisted only of a piece of cloth or leather.

In the RSV OT the verb *ḥāḇaš*, "saddle," always refers to the saddling of asses, which were used to transport both goods (2 S. 16:1) and persons (1 K. 13:13). The noun *merkāḇ* (< *rāḵaḇ*, "ride") refers literally to something for riding, but in Lev. 15:9 it may refer to an article other than a saddle, e.g., a cart or part of it (G. J. Wenham, *Leviticus* [*NICOT*, 1979], p. 218 n. 5). In Gen. 31:34 Rachel concealed the teraphim from Laban in some kind of saddlebag or basket.

G. WYPER

SADDLECLOTHS [Heb. *bigdê-ḥōpeš*] (Ezk. 27:20); AV PRECIOUS CLOTHES. Decorative riding cloths imported by the city of Tyre from Dedan in Arabia.

SADDUC sad'ək (1 Esd. 8:2, AV). *See* ZADOK **1.**

SADDUCEES [Gk. *Saddoukaioi*]. Members of a Jewish politico-religious party dating from the Maccabean period through the late 1st century.

I. Name
II. History
III. Character
IV. Doctrines
V. Sadducees in the NT

I. Name.—The origin of the name of this Jewish sect has apparently been lost. None of the following suggested etymologies is entirely satisfactory. (1) One suggestion is that Sadducees means "righteous ones," the Hebrew name for the Sadducees being formed from the same root (Heb. *ṣdq*) as the word for righteousness. But no explanation can be given for the vowel change from the *î* in "righteous ones" (*ṣaddîqîm*) to the *û* in "Sadducees" (*ṣᵉdûqîm*). This explanation of the name was posited by some of the Church Fathers (Epiphanius *Haer.* xiv.2.1; Jerome *In Mt.* 22:13). It is doubtful, however, that either the Sadducees themselves or others would have chosen "righteousness" as their distinctive trait (although the Pharisees acknowledged the priests' greater holiness and rank in the theocracy; see *HJP*², II, 404).

(2) An explanation more widely accepted by modern scholars (but as old as the early 2nd cent. B.C.; cf. comments on Hebrew text of Sir. 51:12 below) is that the name is derived from "Zadok" (Heb. *ṣāḏôq*; LXX *Saddouk*), making "Sadducee" equivalent to "Zadokite" or "son of Zadok." The Zadok in mind is probably Aaron's descendant by that name, who with Abiathar served David as priest (2 S. 8:17; 15:24-29) and then under Solomon was appointed chief priest in Abiathar's stead after Abiathar supported Adonijah rather than Solomon as king (1 K. 1:8, 32-39, 44f.; 2:26f., 35). Zadok's line served as priests until the Babylonian Captivity; after the Exile Zadok's line was restored to the priesthood in the person of Joshua the son of Jehozadok (Hag. 1:1). Ezra also claimed descent from Zadok (Ezr. 7:2). The official status of the Zadokite priests ended abruptly when Antiochus IV deposed the Zadokite Onias III and made Menelaus high priest in 171 B.C.; but unofficially the Zadokites continued to serve as priests at a rival sanctuary at Leontopolis in Egypt until *ca.* A.D. 70 (Josephus *BJ* vii.10.2f. [421-432]; *Ant.* xiii.3.1-3 [62-73]; see also *TDNT*, VII, 38). The esteem in which this priestly line was held is evident in Ezk. 40:45f. (cf. 43:19; 44:15; 48:11), where only "the sons of Zadok" can "come near to the Lord to minister to him," and in the special blessing given these priests in the Hebrew text of Sir. 51:12 ("Give thanks to him who chose the sons of Zadok to be the priests"); see *HJP*², II, 407; *TDNT*, VII, 37; cf. also 1QS 5:2, 9). Perhaps the Sadducees' association with the Zadokite line was an attempt to lend validity to their priestly status (they are closely linked to the high priesthood in both Josephus and the NT). This explanation is problematic, however, in that the Sadducean priesthood was generally not of Zadokite lineage (see Reicke, p. 153).

On the other hand, a late rabbinic tradition (*Aboth de Rabbi Nathan* 5) traced the name to another Zadok, a second-century B.C. follower of Antigonus Soko; Antigonus's teaching, namely that one should not look for a reward in the future life for service to God, was thus linked to the Sadducees' denial of life after death. But this rabbinic tradition is unreliable, since it is late (*ca.* 9th cent. A.D.) and mistakenly places the origin of the Boethusian party at the same time as that of the Sadducees, tracing the parties to two different disciples of Antigonus. Other sources indicate that the Boethusians derived their name from the high-priestly family of Boethus in the time of Herod (e.g., *Ant.* xviii.1.1 [3]; xix.6.2 [297]; see *HJP*², II, 406 n. 16; *TDNT*, VII, 42; Jeremias, p. 230).

(3) The non-Zadokite lineage of many of the Sadducees led T. W. Manson to offer another explanation: "Sadducee" is a transliteration of Gk. *sýndikoi*, "syndics" or "judges." The Greek word denoted officials who had functions similar to those of the Sadducees. It was used for members of the Sanhedrin, and it fits the status of the many Sadducees who were laymen. Like the derivation from *ṣaddîqîm*, however, this etymology fails to offer a satisfactory explanation of the vowel changes.

It is impossible to say with certainty which if any of these explanations is correct. The real etymology may have been lost and others created to fill the gap.

II. History.—A. Earliest Mention. The earliest period with which the Sadducees are associated is the time of Jonathan the brother of Judas Maccabeus (160-143 B.C.). (*See* INTERTESTAMENTAL PERIOD; MACCABEES.) Josephus stated (*BJ* ii.8.2-14 [119-166]; *Ant.* xiii.5.9 [171-73]) that there were three schools at this time: the PHARISEES, the Sadducees, and the Essenes; he described each briefly but without indicating their origins. The Sadducees may have comprised most of the senate (predecessor of the Sanhedrin) when it began prior to the Maccabean rebellion; on the other hand, they may have developed after the rebellion, since they were closely associated with the new Hasmonean high-priestly line begun by Jonathan's brother Simon (142-134 B.C.), which replaced the old high-priestly line destroyed in the revolt (cf. 1 Macc. 14:41-49). During this period of Jewish history the priestly upper classes (with which the Sadducees were largely identified) were in charge of political as well as religious affairs (*HJP*², II, 412). (*See* PRIEST, HIGH V, VI; PRIESTHOOD IN THE NT I.)

B. Hasmonean Period. Simon's successor as high priest and ethnarch was John Hyrcanus (134-104 B.C.). Hyrcanus was originally a disciple of the Pharisees, but during his rule he transferred his allegiance to the Sadducees (see *Ant.* xiii.10.5f. [288-296]). This was the beginning of the close association between the Sadducees and the Hasmonean high priests; the Sadducees became the real ruling party (*HJP*², II, 413). Aristobulus I (104-103 B.C.), successor of John Hyrcanus, was the first ruler to assume the title "king." Sadducean power and influence were temporarily reduced, however, when Salome Alexandra (76-67 B.C.), who succeeded her husband Alexander Janneus (103-76 B.C.) to the throne, came under the influence of the Pharisees (her brother was a famous Pharisee, Simon ben Shetech). She appointed her son Hyrcanus II as high priest but without civil authority and reinstated the Pharisees' regulations that Hyrcanus had abolished; thus she granted considerable power for the first time to the Pharisees, who were popular among the masses (*BJ* i.5.1f. [107-112]; *Ant.* xiii.16.1f. [405-409]). At Alexandra's death her two sons quarrelled over the succession. Hyrcanus II (supported by the Pharisees) for a brief time abdicated the throne to Aristobulus II (whom the Sadducees supported); but with encouragement from Antipater, Hyrcanus fought back (*BJ* i.6.1f. [120-27]). The struggle ended only with Pompey's invasion in 63 B.C. (*See also* HASMONEANS.)

C. Roman Period. Hyrcanus II was reinstated as high priest by Pompey as a reward for supporting the Romans during their siege of Jerusalem (*BJ* i.7.6 [153]; *Ant.* xiv.4.4 [73]). But Sadducean power suffered when Herod became king (37-4 B.C.; *see* HEROD II) and put to death many of the Sadducees for urging Hyrcanus to bring him to trial (*BJ* i.18.4 [358]; *Ant.* xiv.9.3-4 [165-69, 175]) and for supporting Antigonus (40-37 B.C.) the son of Aristobulus II,

who had succeeded in taking the high priesthood from Hyrcanus II (xv.1.2 [5]; 6.4 [181]). Herod's appointment of puppet high priests (Josephus listed twenty-eight high priests in the 107 years before the fall of Jerusalem, Ant. xx.10.5 [247-250]) in place of the Hasmonean high priests with whom the Sadducees had been associated also reduced their influence, as did the decline in the power of the Sanhedrin. The Sanhedrin (and hence the Sadducees) regained some governing control when Judea became a Roman province in A.D. 6. Until the fall of Jerusalem in A.D. 70 the Sadducees remained in the majority in the Sanhedrin, and the high priests were Sadducees. Their power was limited, nonetheless, by the necessity of accommodating themselves to the views of the Pharisees, who, although a minority in the Sanhedrin, were much more popular with the people (*Ant.* xviii.1.4 [17]; see also *HJP*², II, 413f.). With the destruction of the temple and of the Jewish state in A.D. 70 the Sadducees lost their function and disappeared from history.

III. Character.–The Sadducees were essentially aristocrats. They virtually dominated the higher echelon of the priesthood, and many Sadducees who were not priests held positions of authority as lay elders in the Sanhedrin. Thus the difference between the Sadducees and the Pharisees was not a simple one of priests versus laymen (many Pharisees were also priests — mostly of the lower ranks, but probably some even in the upper levels). Rather, the Sadducees derived their power from their class, while the Pharisees derived theirs from learning (*HJP*², II, 404). Indeed, Josephus characterized the Sadducees as "men of the highest standing" (*Ant.* xviii.1.4 [17]). As a result of their high social status the Sadducees were dominated by political interests, and in these areas they were rigidly conservative, it naturally being in their best interest to maintain the status quo. Maintaining the status quo necessarily entailed collaboration with the Roman occupiers, by whom their power was delegated, and for this self-serving policy the masses despised the Sadducees. The Sadducees' strict policies of law and order, described as "heartless" or "savage" (*Ant.* xx.9.1 [199] in contrast to the "leniency" of the Pharisees (xiii.10.6 [294]), appeased the Romans and kept the Sadducees in power. Understandably they found any popular movement threatening, especially if it had political overtones as in the frequent messianic uprisings. In this light Jesus' statements about a Kingdom (and Himself as king *in any sense*) would have been alarming to the Sadducees (cf. the exchange between the chief priests and Caiaphas the high priest in 11:48-50). On the other hand, if Jesus' teaching was understood as a call for radical changes in life-style and for justice in the public arena (see Cassidy, pp. 52-54, 114-121), His claims could hardly have been less acceptable to the Sadducees.

The Sadducees' concern to maintain their position of power may in part explain their rejection of oral tradition. As priests they insisted on exercising their prerogative of interpreting the Torah, and they accepted as binding only the laws and regulations recorded in Scripture. Thus they did not accept as authoritative the Pharisees' oral law (*Ant.* xiii.10.6 [296f.]). In fact, students were even encouraged to dispute with their own Sadducean teachers about the interpretation of the law (*Ant.* xviii.1.6 [167]).

Their aristocratic status notwithstanding, Josephus described the Sadducees as lacking in social graces (*BJ* ii.8.14 [166]). Essentially rural landowners, they were characterized by crudity, coarseness, loudness, quarrelsomeness, vulgarity, and violence (cf. Mt. 26:67f.; Acts 23:2f.). By contrast the Pharisees, as their urban merchant position required, are depicted as refined, urbane, harmonious, and affectionate.

IV. Doctrines.–What is known about the teaching of the Sadducees comes entirely through secondary sources, particularly Josephus, the NT, and the Mishnah. All of these portray the Sadducees in a negative light and especially contrast their doctrines with those of the Pharisees. Josephus was by no means an objective observer. Although he was of priestly descent, he adopted the Pharisaic way of life when he was nineteen (*Vita* 38) and generally showed a hostile attitude toward the Sadducees. Talmudic accounts are late (written long after the disappearance of the Sadducees from history) and Pharisaic; thus they too are unreliable.

Josephus indicated that the Sadducees did not give binding authority to oral law because it is "not recorded in the Laws of Moses" (*Ant.* xiii.10.6 [297]). The Pharisees, by contrast, claimed that the Gk. *paradósis tōn presbytérōn* ("traditions of the elders") went back to Moses himself and were therefore obligatory. Whether the Sadducees' rejection of oral tradition extended to the denial of canonical status for the OT Prophets and Writings (as claimed by some of the Church Fathers; e.g., Hippolytus *Ref.* ix.29; Origen *Contra Celsum* i.49; Jerome *In Mt.* 22:31f.; see *HJP*², II, 408 n. 24) is another question, however, since during the intertestamental period these writings were regarded as Scripture by all Jews. Since Josephus and the NT said nothing about the Sadducees rejecting these portions of Scripture, most modern scholars believe that the Church Fathers were in error. It is possible, however, that the Sadducees did not accept even these Scriptures as binding interpretation of the Torah, which for them stood as authoritative in a unique sense.

Josephus also noted that the Sadducees denied the resurrection of the body, probably because it is not explicitly mentioned in the Torah; in fact, he stated that they did not believe in any existence after death (the soul perishes with the body, *Ant.* xviii.1.4 [16]) and consequently denied future rewards or punishments in a life to come (*BJ* ii.8.14 [165]). The NT also mentions the Sadducees' rejecton of belief in a resurrection of the body (Mk. 12:18 par.; Acts 4:12; 23:80). The consequent emphasis on life in this world was consistent with the Sadducees' concern with their position of power, status, and wealth, and it left no room for messianic hopes and a coming kingdom of God.

Acts 2:38 states that the Sadducees rejected belief in angels and spirits. Speculation about angels and demons was rampant in the intertestamental period (e.g., cf. 1 En. 10–16 *et passim*; 2 En. 7), and it was probably in reaction to these metaphysical fantasies that the Sadducees denied spirits despite their presence in the Torah.

The Sadducees' this-worldly perspective and political power may have led to an arrogant self-sufficiency that put little emphasis on God's providence. According to Josephus the Sadducees emphasized the freedom of the human will to the disparagement of a doctrine of election, predestination, or fate (the Hellenistic term for "providence," which they denied altogether, *Ant.* xiii.5.9 [173]; *BJ* ii.8.14 [164f.]). In this respect they were the opposite of the Essenes, who relegated everything to fate, while the Pharisees tried to balance the two notions (*Ant.* xiii.5.9 [172]).

The rabbinic writings record many differences between the Sadducees and Pharisees on questions of a ceremonial nature, e.g., the date of the celebration of Pentecost (Mish. *Hagigah* ii.4), the ritual purity required of the priest who burned the red heifer (*Parah* iii.3, 7), laws of contamination (*Yadaim* iv.6f.), etc. Likewise, there were differences of legal practice on such matters as when false witnesses were given the death penalty (Mish. *Makkoth*

i.6), whether masters were responsible for damages done by their slaves (*Yadaim* iv.7), the proper formula for dating divorce documents (iv.8), etc. Because of the late date of the rabbinic literature, however, these distinctions may not be historically reliable. The main difference was that the Sadducees refused to recognize the Pharisaic regulations as binding.

V. Sadducees in the NT.—The Sadducees are referred to by name only fourteen times in the NT. In Mt. 3:7 John the Baptist greets the Sadducees and Pharisees who had joined the crowds coming for baptism with the unflattering epithet "brood of vipers." According to R. H. Gundry (*Matthew* [1982], p. 46), these leaders came "to the baptism" [Gk. *epí tó báptisma*] for critical observation, rather than "for baptism" (RSV). If John's assessment of their character was correct, the Sadducees were an arrogant lot who based their status (even with God!) on their ancestry rather than on their character (cf. vv. 9f.).

The Gospels record two occasions on which Jesus interacted with the Sadducees. On the first occasion (Mt. 16:1-12) the Pharisees and Sadducees tested Jesus, asking Him for a sign from heaven. Jesus' criticism of their inability to interpret "the signs of the times," even though on a natural level they could read the signs of the weather in the sky, suggests that the Sadducees were more worldly-wise than spiritually discerning. He castigated them as an "evil" and "adulterous" (the common OT metaphor for unfaithfulness to God) generation because they sought a sign to test Him, rather than sincerely seeking after God; He stated rather enigmatically they would receive only the sign of Jonah. Later Jesus warned His disciples against the "leaven" of the Pharisees and Sadducees, i.e., their "teaching" (vv. 6-12). The Marcan parallel does not mention the Sadducees here but warns of the "leaven of Herod" [Mk. 8:15], probably meaning the Herodians, who were comparable to the Sadducees in their political opportunism.

On the second occasion (Mk. 12:18-27 par.) the bone of contention was the resurrection, which Mark says the Sadducees denied. They attempted to show the absurdity of belief in the resurrection through a hypothetical case involving multiple levirate marriages of a woman widowed by seven brothers. They asked Him whose wife she would be in the resurrection. Jesus dismissed their question by pointing out their ignorance, for there will be no marriage in the resurrection. Furthermore, he observed that the Torah itself (which the Sadducees viewed as authoritative) points to the resurrection in the account of the burning bush (Ex. 3:6); here God says to Moses that He is the God of Abraham, Isaac, and Jacob, and (Jesus asserted) God is "not God of the dead, but of the living."

The infrequency of the Sadducees' encounters with Jesus in the early part of His ministry suggests that they were initially unconcerned by His activity. This indifference turned to hostility, however, as they began to see Jesus as a threat to their position. The cleansing of the temple (Mk. 11:18), their stronghold, doubtless alarmed them. A shared antagonism toward Jesus brought the Sadducees and Pharisees together in a plan to bring about His arrest, trial, and execution (Mk. 14–15).

The apostles, like their Master, incurred conflict with the ruling Sadducees. After healing a lame man in Jesus' name, Peter and John were arrested for proclaiming in Jesus the resurrection of the dead (Acts 4:1) on the very steps of the temple (Solomon's Portico, 3:11). The Sadducees' animosity was probably based not only on doctrinal considerations (the Resurrection) but also on the fear that a popular uprising might alarm the Romans or weaken the Sadducees' power. Indeed, Acts 5:17 specifically mentions jealousy as a motive when the Sadducees (associated with the high priest) arrested the apostles a second time for preaching and healing in Solomon's Portico and throughout Jerusalem (vv. 12-16).

After Paul had been arrested by the Roman authorities in the midst of a riot (Acts 22), the Roman tribune brought before him the Sanhedrin (composed of Sadducees and Pharisees) to investigate the cause of Jewish hostility to Paul (22:30). Recognizing the doctrinal issues that divided the Sadducees and the Pharisees (23:6-8), Paul played the two parties off against each other by appealing to his identity as a Pharisee, his hope in the Resurrection, and apparently his vision on the road to Damascus (the latter is suggested by the surprising reversal of opinion by some of the Pharisees, who defended Paul's claim to have seen an angel or spirit).

Although explicit references to the Sadducees by name are relatively rare in the NT, the Sadducees' control of the high priesthood and the upper levels of the priesthood (chief priests) means that references to these officeholders involved the Sadducees and reflected their viewpoints and character (cf. Acts 5:17: "the high priest . . . and all who were with him, that is, the party of the Sadducees").

Apart from their involvement in Jesus' arrest and crucifixion, the chief priests and high priest are seldom mentioned in the Gospels (cf. Mt. 2:4; Lk. 3:2). In the Fourth Gospel the growing opposition to Jesus by the chief priests and high priest is expressed by Caiaphas, whose words reveal the cold expediency of the Sadducees in power: "It is expedient for you that one man [even if He is innocent!] should die for the people" (Jn. 11:49f.; cf. 18:14). The Evangelist recognized a profound theological truth revealed, ironically, in Caiaphas's words by virtue of his sacerdotal position, the significance of his office transcending his personal character (11:51).

When crowds were drawn to Jesus after His raising of Lazarus, the chief priests were prepared to kill Lazarus as well as Jesus (Jn. 12:10). Jesus was not unaware of the hatred brewing against Him, and He repeatedly predicted His arrest by the chief priests, His trial, and His execution (Mk. 8:31; 10:33f.).

The Evangelists' narratives of the chief priests' and scribes' plotting to arrest Jesus indicate the Sadducees' cunning as well as their alienation from the populace: they sought to arrest him "by stealth" because they feared the people's reaction (Mk. 14:1f.). Their opportunity came when Judas Iscariot went to the chief priests with an offer to betray Jesus (v. 10). Not above paying for Judas's treachery, they promised money, and he sought a private occasion when they could arrest Jesus (v. 12).

Jesus' retreat to Gethsemane for prayer provided the privacy the Sadducees sought. As if their use of such an occasion were not bad enough, the chief priests sent their henchmen armed with swords and clubs (Mk. 14:43; cf. v. 48) to take a man who disavowed violence, even in His own defense (Mt. 26:52).

The chief priests' actions in the course of Jesus' "trial" indicate the character of Sadducean realpolitik: concern for ceremonial law, ritual purity, preservation of their status, "keeping the peace," etc., yet complicity with the Roman overlords. They paid blood money but would not use it in the temple treasury (Mt. 27:6). They would not defile themselves with Gentiles by entering the praetorium (Jn. 18:28), but they would hand over a fellow Jew to be tried by Gentiles (v. 35). They seem not to have cared that Jesus might be innocent (Mt. 27:3f.). They condemned Jesus to death by their interpretation of Jewish law (Jn. 19:7), yet demanded from Pilate a Roman form of execution (vv. 6, 15). They charged Jesus with stirring up the

people (Lk. 23:5), while they themselves stirred up the people against Jesus (Mk. 15:11). They distorted His metaphorical prediction of His death and resurrection (Jn. 2:19-22) to charge Him with threatening violence against the temple (Mk. 14:58); possibly they were so blinded by their power and materialism that they could only understand Jesus' words literally, but clearly they were not beyond using false testimony (Mt. 26:59). They preferred to have Pilate free Barabbas, an insurrectionist (ironically this was their charge against Jesus, Mk. 15:11; Lk. 23:2; Jn. 19:12) and murderer, rather than Jesus. Even Pilate could see that they were motivated by envy (Mk. 15:10). In declaring Caesar to be their king (in response to Pilate's mocking insult that the peasant preacher Jesus was their king), they showed themselves to be accommodationists to the Romans (Jn. 19:12; Lk. 23:2), who were so hated by most Jews. Their physical and emotional abuse of Jesus (hitting and spitting, Mk. 14:65) during His trial and even while He was dying ("he saved others, let him save himself," Mk. 15:31f.) ill befitted the religious leaders of a nation whose Messiah was to proclaim release to captives. Even faced with evidence of the Resurrection from the tomb guards they had stationed to watch Jesus' body, they paid off the soldiers (as they had Judas) and concocted the lie of a stolen body (Mt. 28:11-15).

The same Sadducean characteristics are visible in the interactions of the chief priests and high priest with the apostles in Acts. They were preoccupied with power; e.g., they asked Peter and John by what power they had healed the lame man (Acts 4:1-7). The preaching of the Resurrection (by Peter and John, Acts 4:2, 10-12; later by Paul before the council, 23:6-8) was a thorn in their flesh. They were anxious to prevent the spread of this new teaching among the people (4:17), but their fear of the people (4:21; 5:26, 40) limited their ability to harm Peter and John. Their trumped-up charge against Stephen was that he had spoken against the temple (6:14; 7:1), the seat of Sadducean power. Before his conversion Saul had commissions from the high priest to bring Christians bound to Jerusalem to be tried by the high priest (9:1, 14, 21; cf. 22:5; 26:10, 12). After Paul turned Christian missionary, the high priest accused him first before the Roman tribunal (22:30) and later before Felix the governor (24:1) and his successor Porcius Festus (25:2). The high priest was willing to cooperate with forty conspirators who banded together in a plot to kill Paul (23:14). Yet, despite the unworthy character of Ananias the high priest, Paul respected the high priest because of the office itself (23:2-5).

SAFE; SAFELY; SAFETY [Heb. *šālôm, bᵉšālôm, lᵉšālôm, šālēm* (Gen. 33:18)] (Dt. 29:19; 1 S. 20:13; 20:21; 2 S. 19:30; 2 Ch. 19:1; Job 21:9; Ps. 55:18 [MT 19]; etc.); AV also PEACE, SHALEM (Gen. 33:18); NEB also BE WELL, EASY (Jer. 12:5), VICTORIOUS, UNSCATHED (Isa. 41:3), etc.; [*beṭaḥ, lāḇeṭaḥ*] (Dt. 12:10; 33:12; 33:28; 1 S. 12:11; Ps. 4:8 [MT 9]; etc.); NEB SECURITY, PEACE AND QUIET, PEACE, etc.; [*bāṭaḥ*–'trust'] (Job 11:18; hiphil part., Ps. 22:9 [MT 10]); AV also HOPE; NEB CONFIDENCE, LAY; [*ṭôḇâ*–'good'] (1 S. 24:19 [MT 20]); AV WELL; [*tāmîm*–'complete' (2 S. 22:33; Ps. 18:32 [MT 33]); AV PERFECT; NEB BLAMELESS; [*ṣāpan*–'hide'] (Ps. 31:20 [MT 21]); AV SECRETLY; [*ḥāsâ*–'seek refuge'] (Ps. 61:4 [MT 5]); AV TRUST; NEB SHELTER; [*yᵉšaʿ*–'welfare, prosperity'] (Job 5:4, 11; Ps. 12:5 [MT 6]); NEB also PAST HELP, VICTORY; [niphal of *yāšaʿ*–'receive help'] (Ps. 119:117; AV SEE DELIVERANCE; [*tᵉšûʿâ*–'deliverance'] (Prov. 11:14); NEB VICTORY; [*śāgaḇ*–'be high'] (niphal, Prov. 18:10; pual, 29:25); NEB REFUGE; [niphal infinitive of *nāṣal*] (Hab. 2:9); AV DELIVERED; NEB SAVE; [hiphil of *ʿāwaz*] ("flee for safety," Isa. 10:31; Jer. 4:6; 6:1); AV GATHER THEM/YOURSELVES, RETIRE; NEB also TAKE REFUGE, SAVE YOURSELVES; [Gk. *syntēréō*] ("keep safe," Mk. 6:20); AV OBSERVE; NEB CUSTODY; [part. of *hygiaínō*] ("safe and sound," Lk. 15:27); [*asphalḗs*] (Phil. 3:10); NEB SAFEGUARD; [*asphalṓs*] (Acts 16:23); NEB UNDER CLOSE GUARD; [*diasṓzō*–'save'] ("bring safely," Acts 23:24); **SAFEKEEPING** [Heb. *mišmereṯ*] (1 S. 22:23); AV SAFEGUARD; NEB SAFE.

Three major Hebrew words are translated by this English word-group in the RSV OT. The word most often represented is *šālôm*, which is most frequently translated by this word-group when it occurs in the context of battle or conflict. According to J. I. Durham, *šālôm* in these instances signifies "a condition or state from which conflict, either physical or mental, is absent" (p. 276). Some passages speak of individuals reaching *šālôm* by either avoiding or resolving a conflict on their own (e.g., David escaping from Saul [1 S. 20:13, 21] and from Absalom [2 S. 19:24, 30]); but many other passages refer to safety as the result of God's protection. God is the one who resolves conflicts and guards His people, who delivers a person to "safety" (Ps. 55:18 [MT 19]). God gives the gift of protection to His covenant people when they are obedient to His commandments (see T. C. Butler, p. 118). When the Israelites obeyed God's command to go to battle against the Amorite kings, they returned "safe" (Josh. 10:21). In Job 5:24 Eliphaz suggests to Job that if he would trust in God he could be sure that his tent would be "safe." On the other hand, a disobedient people could not count on God's protection. When the Israelites turned to worship other gods, they could not expect Yahweh, the true God, to answer their cry of distress (Dt. 29:19). Likewise, when Ahab went into battle against God's will he was outside the realm of God's protection; but Jehoshaphat returned "in safety" even though he wore King Ahab's robes (2 Ch. 19:1; cf. 18:28-34). (*See also* PEACE.)

A very similar meaning is conveyed by the second most frequent Hebrew word-group rendered by "safe," etc., the verb *bāṭaḥ* and cognate noun *beṭaḥ*. This root signifies a "state of security" or a "feeling of assurance" (*TDNT*, VI, 191f.; see also *TDOT*, II, 88-94); and is most often associated with dwelling or living in safety. The Israelites looked forward to a time when they could dwell in the safety of God's protection (Dt. 12:10; cf. 33:12, 28). They "dwelt in safety" when God delivered them out of the hands of their enemies (1 S. 12:11). Under Solomon's rule Israel and Judah both "dwelt in safety" (1 K. 4:25). The

eschatological hope for Israel was also to "lie down" or "dwell" in safety or security (Hos. 2:18; Isa. 14:30). (*See also* TRUST.)

Several other Hebrew words also speak of dwelling safely under God's protection. God keeps His people safe by sheltering them (*sāpan*, Ps. 31:20; *ḥāsâ*, 61:4). His name is a place of refuge, and those who trust Him are safe (*śāgaḇ*, Prov. 18:10; 29:25). God is the one who makes a person's way safe or "complete" (*tāmîm*, 2 S. 22:33; Ps. 18:32 [MT 33]).

The verb *yāšaʿ* and related nouns *yēšaʿ* and *tᵉšûʿâ* form the third largest word-group translated by "safe," etc. These terms connote "salvation," "liberation," or "victory." As Pedersen observed, they signify a momentary acquisition of peace or safety rather than the lasting state of peace and harmony represented by *šālôm* (*ILC*, I-II, 332). The sons of the fool cannot count on God's deliverance (Job 5:4); but God does save those who mourn (v. 11), the oppressed (Ps. 12:5 [MT 6]), and those who seek to keep God's commandments (119:117).

In the NT "safe" can refer to physical health (*hygiaínō*, Lk. 15:27) or to the protection of a physical life (*syntēréō*, Mk. 6:20; *asphalós*, Acts 16:23; *diasṓzō*, 23:24). Clearly another meaning is intended in Phil. 3:1, where Paul states that his command to rejoice is *asphalés* for the Philippians. Paul seems to be saying that rejoicing in the Lord can be a "safeguard" against the spiritual ills (e.g., dissensions) that plague the Philippian church (see Hawthorne, p. 124).

P. F. PAAS

SAFFRON [Heb. *karkōm*; Gk. *krókos*] (Cant. 4:14). A substance derived from several species of *Crocus*, particularly *C. sativus* L., native to Greece and Asia Minor. The styles and stigmas yield a yellow dye used in antiquity for coloring cloth and also food and wine. It had a limited use as a perfume. Bastard saffron (*Carthamus tinctorius* L.), which yields a similar dye, is a thistle and entirely unrelated to true saffron. It may have been used in Egypt for coloring the grave clothes of mummies.

R. K. H.

SAGA. An episodic story that contains principles fundamental to the history of a people. This narrative literary type is common in the OT. Israel cultivated such materials from various sources, often non-Israelite in origin, to explain the origin or cause of natural phenomena (Gen. 19:1-29), geographical and personal names (Gen. 21:22-33), cultic ritual (Nu. 21:4-9), and characteristics of tribes and nations (Gen. 9:24-27). Though apparently revised continually during transmission to heighten their personal and religious significance, OT sagas embody in detail much of the oral history of the people of Israel.

C. N. JEFFORD

SAHIDIC sə-hid'ik **VERSION.** *See* VERSIONS III.A.

SAIL [Heb. *nēs*] (Isa. 33:23; Ezk. 27:7); [Gk. *anágomai* ("set sail," Acts 13:13; 16:11; etc.), *pléō* (Lk. 8:23; Acts 21:3; etc.), *epopléō* (Acts 13:4; 14:26; etc.), *ekpléō* ("sail away," 15:39; etc.), *diapléō* ("sail across," 27:5), *parapléō* ("sail past," 20:16), *hypopléō* ("sail under the lee of," 27:4, 7), *bradyploéō* ("sail slowly," v. 7), *paralégomai* (v. 13)]; AV also LOOSE, LAUNCH, DEPART; NEB also SET OUT, EMBARK, etc.; **SAILOR** [Gk. *naútēs*] (Acts 27:27, 30; Rev. 18:17); AV also SHIPMAN. *See* SHIPS.

SAINTS [Heb. *ḥᵃsîḏîm*, *qᵉḏôšîm*; Aram. *qaddîšîn*; Gk. *hágioi*]; NEB also LOYAL SERVANTS, GOD'S PEOPLE, HOLY PEOPLE, etc. A descriptive noun for the people of God in the OT and especially the NT.

The affirmation of God's HOLINESS (Heb. *qdš* and Gk. *hágios* word groups) permeates the biblical testimony to His character. The root meaning of the *qdš* word group is "separated from, set apart." God's holiness refers to His separation from creation as sovereign, eternal Creator, and especially to His ethical difference from created beings with respect to His justice, righteousness, mercy, and love.

The people of Israel from the time of the Exodus, came to be called *qᵉḏôšîm* (lit. "holy ones") because they were set apart for God. Their consecration to God meant that they were expected to be different from the rest of humanity. When God covenanted with them at Sinai He proclaimed, "You shall be to me a kingdom of priests and a holy [*qāḏôš*] nation" (Ex. 19:6; cf. Dt. 7:6). And in the holiness code God commanded Israel, "You shall be holy [*qāḏôš*]; for I the Lord your God am holy" (Lev. 19:2; cf. Ex. 22:31; Lev. 11:44f; 18:1-5; 20:7, 22-26; 22:31-33; 1 Pet. 1:16). Israel was God's special people — His "saints" — because of His gracious choice and action.

The term *qᵉḏôšîm* is less specific than *ḥᵃsîḏîm*. Sometimes *qᵉḏôšîm* refers to Israel as the people of God (Ps. 16:3; 34:9 [MT 10]; cf. sing. in 106:16), and sometimes it refers to angelic beings who worship and serve God (Zec. 14:5; cf. Dnl. 8:13). It is unclear which is meant in Dt. 33:3 (RSV "those consecrated"); Job 5:1; 15:15; Ps. 89:5, 7 (MT 6, 8); but most modern commentators see these as references to heavenly beings. The use of *qᵉḏôšîm* in Hos. 11:12 is problematic. Most scholars understand it as referring not to the people of God (so AV), but rather to Yahweh (so RSV) or, most likely, to pagan gods (so NEB). In Dt. 33:2 the noun *qōḏeš* (lit. "holiness") refers to the heavenly beings who attend Yahweh in heaven (RSV "holy ones"; AV "saints"). It is not clear whether the six occurrences of Aram. *qaddîšîn* in Dnl. 7:18-27 refer to heavenly beings, a special group of God's people, or all of God's people in general (see J. G. Baldwin, *Daniel* [*Tyndale OT Comm.*, 1978], pp. 144-154, for an excellent discussion). It seems best, however, to interpret the term as a reference to at least a portion of the faithful who will receive the Kingdom at the future Day of the Lord. (*See also* REMNANT III.A.3.)

Ḥᵃsîḏîm is rendered "saints" thirteen times in the RSV (nineteen times in the AV). Unlike *qᵉḏôšîm*, *ḥᵃsîḏîm* ("pious, godly ones") always refers to the people of God. In the Psalms it is used frequently (rendered "saints" eleven times in the RSV) to describe God's people as those who are truly devoted to Him. God "will speak peace to his people, to his saints, to those who turn to him in their hearts" (Ps. 85:8 [MT 9]). In the Maccabean period a group of pious Israelites who staunchly defended the law called themselves the Hasidim (Gk. *hasidaíoi*, 1 Macc. 2:42; 7:13; 2 Macc. 14:6; *see* HASIDEANS). Some scholars have suggested that all the Psalms using the term *ḥᵃsîḏîm* must come from the Maccabean period; this theory is unlikely, however. It seems that the term originally designated the whole cultic community of Israel and came to be used for an especially devout party within Israel only in the intertestamental period.

Greek *hágios* is the primary term used in the LXX to translate *qāḏôš*, and it has essentially the same meaning,

i.e., "holy." (The LXX used Gk. *hósios* to translate *ḥāsîḏ*.) In the NT *hágioi* always refers to a holy people, set apart by God to Himself. The major difference from the OT concept of "saints" is the new role played by Jesus Christ.

In Mt. 27:52 *hágioi* refers to the godly who had already died, i.e., the pre-Christian believers; in Eph. 2:19 it may carry a similar meaning. But usually in the NT "saints" refers to the corporate Church. Significantly, all of the term's NT occurrences are plural except Phil. 4:21, and even there many persons are in view ("Greet every saint in Christ Jesus"). The term is used four times in Acts (9:13, 32, 41; 26:10) and frequently in Paul's Epistles (e.g., Rom. 1:7; 15:25f.; Phil. 1:1; 4:21; Col. 1:2; cf. He. 13:24) to designate the Christians living in a certain city or town. Most often, however, the word designates all Christians in the entire world (e.g., Rom. 8:27; 1 Cor. 6:2; 14:33; Eph. 1:15, 18). The idea of only certain Christians being lifted up as saints is not taught by the NT. A term that in the OT was reserved for Israel or for the angels is now applied to the entire church, i.e., all Jews and Gentiles who follow Jesus Christ.

In 1 Cor. 1:2 Paul writes: "To the church of God which is at Corinth, to those sanctified in Christ Jesus, called to be saints together with all those who in every place call on the name of our Lord Jesus Christ, both their Lord and ours . . ." In this typical statement at the beginning of an Epistle, Paul brings together many of the central NT elements regarding the saints. Clearly all believers in Christ are saints. "Saints" (*hágioi*) here refers to both the local church and the universal Church. The saints are God's possession (cf. Acts 9:13), His beloved (Rom. 1:7). They are saints because God has called them: they owe their impressive status to no one but God. It is in and through Jesus Christ that God has "sanctified" (*hagiázō*) them (cf. 1 Cor. 1:30; 6:11; 1 Thess. 5:23), i.e., "made them holy" or "made them saints." Their holiness thus rests completely on the work of God "in Christ Jesus" (cf. Phil. 1:1; 4:21; Eph. 1:1).

As the holy people of God, the saints have a special relationship with the Holy Spirit (e.g., Rom. 8, esp. vv. 14-16, 27), who is involved in their sanctification (cf. 1 Cor. 6:11; 2 Thess. 2:13; Tit. 3:5; 1 Pet. 1:1f.). This relationship is most poignantly depicted in 1 Cor. 6:19f., which pictures the Christian as the temple of God indwelt by the Holy Spirit — an allusion to the holy God's special presence in the holy of holies in the OT temple.

The saints are characterized by faithfulness to their Lord (Eph. 1:1; Col. 1:2); they are called to endurance in their faith (Rev. 13:10; 14:12). To them has been revealed the mystery of the gospel of Christ (Col. 1:26; Jude 3). They are called to conform their lives to God's holy character, i.e., to live a life that is consistent with their status as saints (Eph. 5:3; cf. 1 Pet. 1:15f.). God ministers to the saints (Rom. 8:27) and intends that they minister to one another's needs (Rom. 12:13; 2 Cor. 8:4; 9:1, 12; Eph. 1:15; 4:12; 6:18; Col 1:4; 1 Tim. 5:10). The saints will receive a glorious inheritance at Christ's return (Eph. 1:18; Col 1:12; 1 Thess. 3:13; 2 Thess. 1:10; cf. Acts 20:32). Then they will judge the world (1 Cor. 6:1f.).

The saints play a prominent role in the Apocalypse. Satan and his evil powers make war upon the saints, persecute them (Rev. 13:7, 10; 14:12), and martyr some of them (16:6; 17:6; 18:24). These passages, with their emphasis on the saints' proximity to God, are adduced by Roman Catholics in support of the veneration of saints after their death (cf. Rev. 11:18; 19:8).

In conclusion, it is important to stress once again that all believers are saints because of the sanctifying work of Jesus Christ. Indeed, while the Church is made up of "holy ones," Christ is "*the* Holy One of God" (Mk. 1:24, par. Lk. 4:34; Jn. 6:69; Acts 2:27; 3:14). All creaturely claims to holiness are based on His gracious gift.

V. R. GORDON

SAKKUTH sak-kōōth', sak'əth [Heb. *sikkûṯ*; Gk. *skēnḗn*– 'tent'; Am. 5:26]; AV TABERNACLE; NEB SHRINE. The vocalization and hence the meaning of *skt* are uncertain. The MT *sikkûṯ* may reflect the vowels of *šiqqûṣ*, "detestable thing" (see *CHAL*, p. 256, and comms.), but this vocalization does not clarify the meaning of the word. Two interpretations of *skt* have been offered. One reflects a reading *sukkaṯ*, "shrine, tent, booth" (LXX, Vulg., Syr., Symm., CD 7:13-19; Acts 7:43; see KD, AV, NEB), i.e., Amos is describing the tent where the Ammonite god MOLECH was worshiped (1 K. 11:33; 2 K. 23:10-14). The other posits a connection with Akk. *SAK-KUT*, the ideogram for the Assyrian god Ninib or Ninurta, who was associated with the planet Saturn (see Mays, pp. 112f.; Wolff, pp. 260, 266). Since Am. 5:26 also refers to "a star (to be) your god" and KAIWAN, the Babylonian god name for Saturn, it appears that Amos is describing the Israelite worship of an Assyrian astral deity.

Because there is little indication of worship of astral deities in Israel before the defeat of Israel (722/21 B.C.) and the importation of foreigners and their gods into the northern kingdom (2 K. 17:24-33), some do not believe that Amos is describing astral deities in this verse. Gevirtz avoids all astral associations by translating *kôḵaḇ* ("star") as "host" (cf. Arab. *kaukabun*), Kaiwan as "place, abode," and Sakkuth as "shrine." Others accept this word as a name of an astral deity but assign the verse to a later editor after 722/21 B.C. Cogan argues that the Assyrians did not force their vassals to worship their deities. He thinks that Jeroboam II's conquest of Syrian territory to the east and Hamath to the north exposed Israelites to an Aramean form of Assyrian astral worship which was gradually accepted (M. Cogan, *Imperialism and Religion: Assyria, Judah and Israel in the Eighth and Seventh Centuries B. C. E.* [1974], pp. 103-106). If the worship of the "hosts of heaven" (2 K. 17:16) was part of Baal religion (cf. Zeph. 1:4f.) and the Ammonite Molech was connected with the astral god *ʿaṯtr*, then the acceptance of astral deities of Assyrian origin before the destruction of Israel was not a particularly big step (J. McKay, *Religion in Judah under the Assyrians* [1973], p. 30). S. Langdon (*Babylonian Liturgies* [1913], pp. 124-130) reproduced some ancient prayers to Sakkuth.

In this paragraph (5:21-27) Amos condemns Israel for worship which is devoid of justice and righteousness (vv. 21-24) and then contrasts the nation's past worship in the wilderness with its present worship of astral deities (v. 26). God's judgment for these sins will be exile beyond Damascus (5:27).

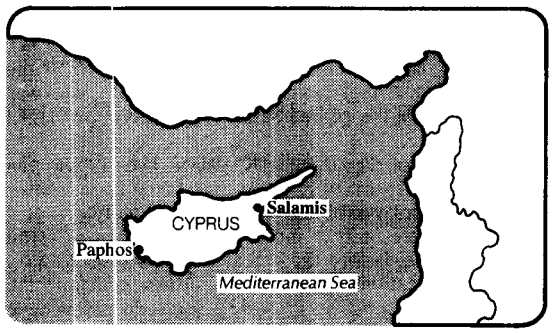
SALAH sā'lə (AV Gen. 10:24; 11:12-15). *See* SHELAH 1.

SALAMIEL sə-lā'mi-əl [Gk. *Salamieēl*]; AV SAMAEL. An ancestor of Judith; son of Sarasadai and father of Nathanael (Jth. 8:1). The name is identical to the LXX form of SHELUMIEL and probably refers to the same person.

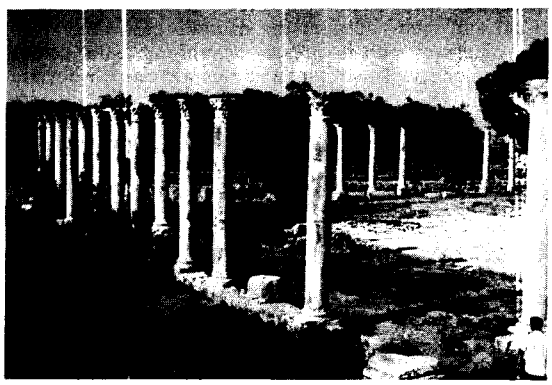
SALAMIS sal'ə-mis [Gk. *Salamis*]. A city on the eastern coast of the island of Cyprus, S of the Karpass Peninsula (the long tongue of Cyprus that stretches out to the northeast) and just N of the modern port of Famagusta. Salamis is sometimes confused with the Greek island of the same name, which is about 16 km. (10 mi.) from Athens. This confusion is heightened because both the island and the Cypriote city were involved in important battles between the Greeks and the Persians in the 5th cent. B.C.



Salamis was the most important city on Cyprus in ancient days, even under Roman rule, when Paphos was made the administrative center for the island (*ca.* 200 B.C.). According to tradition it was founded by the Homeric Teucer (Horace *Carmina* i.7.27ff.) after his banishment from the island of Salamis; but a Mycenaean colony existed there before this time. It seems to have been the first city on Cyprus to strike coins; from the inscriptions on them a list of its kings, beginning in the late 6th cent. B.C., can be made. It was apparently a center of Hellenic influence on the island, and several of its Greek kings led revolts against the Persians (*see* CYPRUS IV).

Acts 13:5 attests a sizable Jewish population on Cyprus; this population sharply increased as a result of the Jewish-Roman war of A.D. 66-70 in Palestine. When the Jews on Cyprus revolted in A.D. 115, Salamis was partially destroyed and many Cypriotes were slaughtered — some reports putting the figure at 250,000. All Jews were expelled from the island in 117.

Corinthian columns surrounding a gymnasium courtyard at Salamis (2nd cent. A.D.) (W. S. LaSor)



Salamis was again destroyed by the two earthquakes of A.D. 334 and 345. The city was rebuilt by the emperor Constantius (337-361) and renamed Constantia. It was totally destroyed by the Arab invasion in 647, and the site has been abandoned since then.

Barnabas, one of the important leaders in the early Church, was a native of Cyprus (Acts 4:36). When he and Paul were sent out on the Church's first missionary outreach, their first stop was Cyprus, and Salamis was the starting point on Cyprus (13:4f.). An early tradition states that Barnabas was martyred in Salamis in A.D. 61 (*ODCC, s.v.* "Barnabas, St."). A tomb reputed to be his was discovered there in 477. Another famous Cypriote church leader, Epiphanius, was archbishop at Salamis from 367 until his death *ca.* 403.

SALASADAI sal-ə-sad'ī (Jth. 8:1, AV). *See* SARASADAI.

SALATHIEL sə-lā'the-əl.

1. (AV, NEB, 1 Esd. 5:5, 48, 56; 6:2; AV also 1 Ch. 3:17; Mt. 1:12; Lk. 3:27). *See* SHEALTIEL.

2. [Lat. *Salathihel*]. The name of the author of the Jewish Apocalypse (4 Ezra) contained in 2 Esdras, who is identified as "I Salathiel, who am also called Ezra" (2 Esd. 3:1). The reference is apparently to SHEALTIEL the father of Zerubbabel, but the identification of Ezra with Shealtiel is historically impossible. For a discussion of this problem, see *APOT,* II, 549, 561. *See also* ESDRAS, BOOKS OF III.

3. (2 Esd. 5:16, AV). *See* PHALTIEL.

SALCAH; SALCHAH sal'kə (AV, NEB, Dt. 3:10; Josh. 12:5; 13:11; 1 Ch. 5:11). *See* SALECAH.

SALE [Heb. *mimkār* (Lev. 25:29; Dt. 18:8), hithpael of *māḵar* (Dt. 28:68), hiphil of *šāḇar* (Am. 8:5)]; AV also SELL; NEB also "inherit" (Dt. 18:8), SELL. A transaction involving buying and selling. Heb. *mimkār* (from vb. *māḵar,* "sell") is also rendered "sale" by the AV in Lev. 25:27, 50 (RSV "sell," "release"). *See* BUYING; RELEASE.

SALECAH sal'ə-kə [Heb. *salkâ*]; AV SALCAH SALCHAH (Dt. 3:10); NEB SALCAH. A city marking the eastern boundary of Bashan, at one time belonging to the kingdom of Og (Dt. 3:10; Josh. 12:5). After the Conquest it was on the eastern boundary of Gad (1 Ch. 5:11). Scholars have almost unanimously identified it with Salkhad, a citadel built on a lava plug in Jebel ed-Druze (the mountain of Bashan). No explanation has been given, however, for the shift from *k* to *ḫ* and the addition of *d* — linguistic facts that should not be ignored in making geographical identifications.

See *GP,* II, 440f., with extensive bibliography.

W. S. L. S.

SALEM sā'ləm [Heb. *šālēm*—"complete, secure, peaceful"; Gk. *Salēm*]. The name of the city of which Melchizedek was king (Gen. 14:18; He. 7:1f.). In view of the parallelism of Salem and Zion in Ps. 76:2 (MT 3), there can be little doubt that at the time this psalm was composed Jewish tradition identified Salem with Jerusalem. Jose-

phus followed the same tradition (*Ant.* i.10.2 [180] and added that it was afterwards called *Hierosolyma,* i.e., "Sacred Salem." In another place Josephus identified Salem (*Solyma*) with Jerusalem (*Hierosolyma*) and the City of David (*Ant.* vii.3.2 [65-68]). (*See* JERUSALEM I.A, B for a discussion of the problems involved in attempting to connect it with *Urusalim* of the Amarna Tablets, etc.)

Nevertheless there have been dissident identifications. (1) Some have identified it with the *šālēm* of Gen. 33:18 (cf. AV, lit., "And Jacob came to Shalem, a city of the Shechem"). The term can also be translated as an appositive genitive, "Salem, the city of Shechem"; this was the rendering of Tg. Onkelos and Tg. Pseudo-Jonathan. The RSV and NEB translation of *šālēm* as "safely" is another possibility. For a location of Salem near Shechem, *see* SALIM. (2) Jerome at one time identified Melchizedek's city with the SALIM of Jn. 3:23, located by Eusebius (*Onom.* 152) at Salumias, 8 Roman mi. (12 km.) S of Scythopolis (ancient Beth-shean). (3) From the 10th to 15th cents. some Christians attempted to locate the meeting-place of Abraham and Melchizedek at Mt. Tabor, possibly using Dt. 33:19, "there they offer right sacrifices [*zibḥê ṣeḏeq*]." This suggestion puts excessive weight on the single word *ṣeḏeq,* and it has no followers today.

F.-M. Abel (*GP,* II, 441f.) favored the identification of Salem with Jerusalem (at least in Gen. 14) on two grounds: (1) in v. 17 the Valley of Shaveh is identified with "the King's Valley," and there was a "King's Valley" at Jerusalem (2 S. 18:18); (2) Abraham, returning from Damascus en route to Hebron, would have passed through Jerusalem. The latter argument is not particularly convincing, since one route from Damascus would cross the Jordan at Beth-shean, and two or three different routes from Damascus would pass through Shechem. More worthy of consideration is his suggestion that Salem was not the proper name of Jerusalem, but rather a symbolic and religious designation of the holy city. This, indeed, is what the author of the Epistle to the Hebrews has done with the name (He. 7:2).

All things considered, the identification of Salem with Jerusalem is to be preferred. W. S. L. S.

SALEMUS sal'ə-məs (1 Esd. 8:1, NEB). *See* SHALLUM 6.

SALIM sā'lim [Gk. *Salim*]. A place near Aenon, where John the Baptist baptized during a second phase of his ministry (Jn. 3:23). Comparison with 1:28; 3:26; 10:40 leads to the conclusion that it was W of the Jordan. Several locations for this site have been suggested, but only two seem plausible. Some modern scholars, including W. F. Albright (*HTR,* 17 [1924], 193f.; *AP,* p. 247), have identified Salim with the ancient town of Sâlim, about 6.5 km. (4 m.) SE of Nâblus (adjacent to Shechem), and Aenon with ʿAinûn in the Wâdī Fâr'ah, about 10 km. (6 mi.) from Sâlim. This location, however, is in the heart of Samaritan territory, and it is almost unthinkable that a strict Jew would conduct his ministry there. Even Jesus' interaction with the woman at Jacob's well in Samaria (Jn. 4) must be viewed as a mere interlude. Moreover, a high ridge separated Sâlim and ʿAinûn, hardly making them adjacent.

In the 4th cent. Eusebius (*Onom.*) and Jerome identified it with the village Salumias, 8 Roman mi. (12 km.) S of Scythopolis (ancient Beth-shean); the name may be preserved in Tell Sheikh Salim, which is in this area. Nearby is a place with seven springs that may represent AENON ("place of springs"); the sixth-century Madeba Map has an Aenon in this vicinity. Apparently the area did not belong to Samaria in John's day but was subject to Scythopolis, one of the cities of the Decapolis. While this identification cannot be asserted dogmatically, it is probably the best made to date. H. F. VOS

SALLAI sal'ī [Heb. *sallay*].

1. A leading Benjaminite who lived in Jerusalem after the return from exile (Neh. 11:8). The MT appears corrupt, however, and some have suggested emending *gabbay sallay* ("Gabbai, Sallai") to read *gibbōrê ḥayil* ("mighty men"; cf. v. 14; see *BHS*; *IB,* III, 773; L. H. Brockington, *Ezra, Nehemiah, Esther* [*NCBC,* repr. 1977], pp. 148f.; for another view, cf. J. M. Myers, *Ezra. Nehemiah* [*AB,* 1965], p. 184).

2. NEB SALLU. A Levitical family in the postexilic period (Neh. 12:20). In v. 7, however, the name is given as "Sallu," and the latter is probably the correct form (cf. *BHS*). *See* SALLU 2. N. J. O.

SALLU sal'o͞o.

1. [Heb. *sallû', sallu'*]. Son of Meshullam; a Benjaminite of the postexilic period (1 Ch. 9:7; Neh. 11:7).

2. [Heb. *sallû*]. A priest who returned from exile with Zerubbabel (Neh. 12:7); called "Sallai" in v. 20 (*see* SALLAI 2).

SALLUMUS sal'ə-məs (1 Esd. 9:25, AV, NEB). *See* SHALLUM 12.

SALMA sal'mə. *See* SALMON.

SALMANASAR sal-mə-nā'sər (2 Esd. 13:40, AV). *See* SHALMANESER.

SALMON sal'mən [Heb. *śalmôn* (Ruth 4:21), *śalmâ* (v. 20); Gk. *Salmōn* (Mt. 1:4f.)]; NEB NT SALMA; **SALMA** sal'mə [Heb. *śalmâ'*] (1 Ch. 2:11, 51, 54); **SALA** sā'lə [Gk. *Sala*] (Lk. 3:32); AV, NEB, SALMON.

1. Son of Nahshon and father of Boaz the husband of Ruth (Ruth 4:20f.; 1 Ch. 2:11); thus an ancestor of David and also of Joseph the father of Jesus (Mt. 1:4f.; Lk. 3:32). According to Matthew's genealogy Salmon married Rahab and became the father of Boaz by her (Mt. 1:5).

2. A Calebite; the ancestor of (the residents of) Bethlehem, the Netophathites, (the residents of) Atroth-beth-joab, the Zorite half of the Manahathites, and several families of Heb. *sōp^{e}rîm* (AV, RSV, "scribes"; NEB "sophrites"; 1 Ch. 2:51, 54f.). The text of vv. 54f. is very obscure, and various attempts at reconstruction have been proposed (see comms.).

3. (Ps. 68:14, AV). *See* ZALMON 2. N. J. O.

SALMONE sal-mō'nē [Gk. *Salmōnē*] (Acts 27:7). A promontory forming the eastern extremity of Crete, now called Cape Sidero. Salmone was important as a landmark in Luke's record of Paul's journey to Rome (Acts 27–28). Sailing S from Cnidus of Caria, the navigators of the ship carrying Paul and his companions chose to sail by the southern side of this promontory, thus avoiding difficult westerly head winds (27:7). After passing Salmone the ship followed the southern shore of Crete, sailing W in the shelter of the island. (See Map XXI in Vol. I.)

SALOME sə-lō'mē [Gk. *Salōmē* < Heb. *šālôm*–'peace'].

1. One of the female disciples of Jesus. Salome is mentioned by name only in the Gospel of Mark, which names her with other women who were present at the crucifixion (Mk. 15:40) and at the empty tomb (16:1). By inference from the other Gospel accounts, Salome is also identified with the mother of the sons of Zebedee (Mt. 27:56) and with the sister of Mary the mother of Jesus, who is sometimes called Mary Clopas (Jn. 19:25); hence Salome is often referred to as "Mary Salome." If these identifications are valid, Salome was Jesus' aunt and James and John were His cousins. This would help to explain her request that Jesus give them preferential treatment (Mt. 20:20-24; Mk. 10:35-40), as well as Jesus' request of John at the cross (Jn. 19:26f.) and the immediate response of James and John to Jesus' call (Mk. 1:19f.).

Like Mary Magdalene, Salome is a prominent disciple of Jesus in other apocryphal texts. In the Secret Gospel of Mark (*see* APOCRYPHAL GOSPELS VI) Salome, along with Mary His mother and the "youth whom Jesus loved," is refused an audience with Jesus (2r:16). She is named in various Gnostic documents, particularly the Gospel of Thomas, where she carries on a dialogue with the risen Savior (saying 61; *see* APOCRYPHAL GOSPELS V.J.1). Almost all of Clement of Alexandria's quotations from the Gospel of the Egyptians are dialogues between Salome and Jesus (*Misc.* iii.45, 64, 66, 68, 91f., 97; *Excerpta ex Theodoti* 67; *see also* APOCRYPHAL GOSPELS V.E). Salome is listed among the disciples in various Coptic Manichaean psalms, in one of which she figures prominently, and she appears also in the apocryphal Gospel of Mani. Moreover, as happened with other disciples of Jesus, various apocryphal legends became associated with her, particularly stories connecting her with the infancy narratives as a midwife (*Protevangelium of James* 20). A "Life" of Salome conflated the midwife tale with a popular legend of Mary (or Thais) the niece of the hermit Abraham.

2. The daughter of Herodias by her first husband Herod Philip; identified by Josephus as Salome (*Ant.* xviii.5.4 [136f.]). Although unnamed in the gospels, Salome is commonly identified with the young woman who gave her stepfather Herod Antipas pleasure by her dancing, and who upon her mother's advice requested and received the head of John the Baptist as a boon (Mt. 14:3-11 par. Mk. 6:17-28). Josephus reported that she was married twice, first to Philip tetrarch of Trachontis, son of Herod the Great, and upon his death to Aristobulus the son of Agrippa's brother Herod.

K. E. CORLEY

SALT [Heb. *melaḥ*] (Gen. 19:26; Lev. 2:13; Nu. 18:19; Jgs. 9:45; etc.); NEB also SALTPAN; [*mᵉlēḥâ*] (Job 39:6; Ps. 107:34; Jer. 17:6); AV BARREN LAND; BARRENNESS; NEB SALTING, SALT WASTE; [*mālaḥ*] (pual, Ex. 30:35; hophal, Ezk. 16:4); AV TEMPER; [*ḥāmîṣ*] (Isa. 30:24); AV CLEAN; NEB WELL-SEASONED; [Aram. *mᵉlaḥ*] (Ezr. 4:14; 6:9; 7:22); AV also MAINTENANCE; [Gk. *hálas*] (Mt. 5:13; Col. 4:6; etc.); [*halykós*] (Jas. 3:12); [*halízomai*] ("saltness be restored," Mt. 5:13; "be salted," Mk. 9:49); [*gínomai ánalos*] ("lose its saltness," Mk. 9:50); [*artýō*] ("saltness be restored," Lk. 14:34); AV BE SEASONED. A chemical (normally sodium chloride) used in its crystalline form for seasoning and preserving food. In the hot, dry, and windy climate of the Near East, body salts (electrolytes) are quickly lost with perspiration and need to be maintained orally lest dehydration occur. Thus in biblical times salt was recognized as a necessity of life (cf. Sir. 39:26).

With one exception (Isa. 30:24), "salt" in the OT always renders *melaḥ* or one of its cognates. Probably because of its seasoning qualities with ordinary food (Job 6:6), salt was also used to flavor sacrifices (cf. 1 Esd. 6:30; 8:20), both cereal (Lev. 2:13) and bloody (Ezk. 43:24). Because salt was a necessary ingredient in any meal, it could symbolize the hospitality that cemented friendships (cf. the Arab expression "There is salt between us"; cf. also the phrase "eat the salt of the palace," Ezr. 4:14). The phrase COVENANT OF SALT probably arose from the use of salt in covenantal sacrifices (which were eaten by the people as well as being offered to God), and also from its use as a preservative (cf. Ep. Jer. 6:28); thus a covenant of salt was an enduring covenant (Nu. 18:19; 2 Ch. 13:5). Herod's temple had a special "salt chamber" for the ceremonial use of salt (Mish. *Middoth,* v. 3).

Salt could also be a symbol of desolation and barrenness (Dt. 29:23; Ps. 107:34; Jer. 17:6; Zeph. 2:9), due to the custom of sowing the earth of a conquered city with salt (Jgs. 9:45). Such a practice was not limited to the OT world; the Romans also did it when they destroyed Carthage. J. Gray (*I & II Kings* [*OTL,* 2nd ed. 1970], pp. 478f.) suggested that this practice was connected with the ritual use of salt to symbolize a "complete break with the past": when a city was sown with salt it was separated from its past and from common use (see A. Honeyman, *VT,* 3 [1953], 192-95). Gray suggested that Elisha's use of salt to purify the water of Jericho (2 K. 2:20f.) was likewise a ritual of separation: it separated the city from the curse of Joshua (Josh. 6:26).

The normal procedures for childbirth in biblical times apparently included rubbing the newborn with salt as well as cutting the umbilical cord, washing with water, and wrapping in blankets (Ezk. 16:4). Although Arab peasants have followed a similar practice until recently, there is no known biological reason for it. Drying the skin with salt is of no advantage and could even be detrimental in a desert climate. Apparently it was done for symbolic reasons, e.g., because of the relationship between salt and the covenant, or because long life was associated with salt's preservative and medicinal properties, or perhaps because the salt separated the infant from it previous "unclean" state (see Gray, p. 478).

Hebrew *ḥāmîṣ* is used in Isa. 30:24 for a seasoning used with the fodder of cattle. It may or may not refer to salt.

The difficult saying of Mk. 9:49 has been interpreted in various ways. Many commentators have seen an allusion to the use of salt in sacrifices (see above); perhaps, then, the saying refers to the future persecutions in which Jesus' disciples will become sacrifices for God (see comms.). Col. 4:6 uses salt to symbolize speech that is not dull but seasoned with wise and interesting words.

The Synoptics all record sayings in which Jesus compares His disciples to salt and refers to the uselessness of salt that has lost its salinity. Mt. 5:13 emphasizes that Jesus' disciples must be a blessing and preservative in the world; Mk. 9:50 emphasizes that they must be faithful to their covenant relationship with one another; and Lk.

14:34 emphasizes that they must maintain their allegiance to Christ.

Although sodium chloride is a stable compound that does not disintegrate, it should be noted that the salt from the Dead Sea region was generally contaminated with other minerals; thus the salt could be dissolved out of this mixture, leaving a tasteless substance. It was important to take rock salt from the inner layers of mines, since the outer layers could lose their salinity with exposure. Although its impurity made the salt from the DEAD SEA inferior to most sea salts, its accessibility (it could simply be picked up along the shore) made it the main source of salt for Palestine. The region of Jebel Usdum, a mountain of rock salt just S of the Dead Sea, is probably where the "salt pits" (possibly salt mines) of Zeph. 2:9 were located. In Ezekiel's prophecy concerning the freshening of the Dead Sea in the new age, salt swamps will remain so that salt can still be obtained (Ezk. 47:11).

On the account of Lot's wife becoming a "pillar of salt" (Gen. 19:26), *see* LOT II.B.

SALT, COVENANT OF. *See* COVENANT OF SALT.

SALT, PILLAR OF. *See* LOT II.B.

SALT SEA. *See* DEAD SEA.

SALT, VALLEY OF [Heb. *gê' hammelaḥ*]. A valley near the Dead Sea where David and his lieutenant Abishai scored notable successes over the Edomites (2 S. 8:13, where RSV, NEB, "Edomites" [LXX] should be read instead of AV "Syrians" [MT]; 1 Ch. 18:12; title of Ps. 60, which attributes the victory to Joab); later King Amaziah was victorious there (2 K. 14:7; 2 Ch. 25:11).

Desert and steppe lands frequently exhibit saline encrustations, which may be of either climatic or geologic origin. In an area such as that S of the Dead Sea, which has great deposits of rock or fossil salt, any prominent defile might receive the designation "Salt Valley." Thus it is impossible to identify one topographical location from the biblical references.

The traditional view envisaged a level area SSW of the Dead Sea opposite the oasis of the Zered delta, where a plain about 13 km. (8 mi.) long lies adjacent to the salt range of Jebel Usdum, itself 8 km. (5 mi.) long and 200 m. (650 ft.) high. This plain merges into the marshy, salt-impregnated lowlands of es-Sebkah to the SE, but in its present condition it is an almost impossible site for any kind of battle. Quite possibly in earlier days at least part of this area was covered by the Dead Sea.

A more plausible identification is with the Wâdī el-Milḥ, situated E of Beer-sheba and overlooked by a rocky hill, Tell el-Milḥ. This wadi is one of three valleys uniting at Beer-sheba to form the Wâdī es-Seba', which with the Wâdī el-Milḥ would form a natural frontier for Canaan. R. K. H.

SALTWORT solt' wûrt (Job 30:4, NEB). *See* MALLOW.

SALU sā'lo͞o [Heb. *sālû'*–'restored'; Gk. Apoc. *Salōm*]; AV Apoc. SALOM. A Simeonite; father of the Zimri who was slain along with his Midianite consort by Phinehas (Nu. 25:14; 1 Macc. 2:26).

SALUM sā'ləm.

1. (1 Esd. 5:28, AV, NEB). *See* SHALLUM **11.**
2. (1 Esd. 8:1, AV). *See* SHALLUM **6.**

SALUTE; SALUTATION [Heb. *bāraḵ*–'bless'] (1 S. 13:10; 25:14; 2 K. 4:29); NEB GREET; "ask . . . politely for a present"; ['*āmar*–'say'] (1 S. 25:6); AV, NEB, SAY; [*šā'al lᵉšālôm*] (1 S. 30:21); NEB GREET; [Gk. *aspázomai*] (Mt. 5:47; 10:12; Mk. 15:18; Lk. 10:4); NEB also GREET, "wish (the house) peace," "exchange greetings"; [*aspasmós*] (Mt. 23:7; Mk. 12:38; Lk. 11:43; 20:46); AV also GREETING; NEB also "be greeted," RESPECTFUL GREETINGS. To greet. In the OT the salutation is commonly associated with the invocation of blessing (1 S. 13:10) or peace (30:21; cf. the modern Hebrew greeting *šālôm*).

The pharisaic Jews of the NT loved salutations in public places. Often these salutations were very elaborate, involving much time in prostrations, embracings, etc. When Jesus sent out the Seventy, He forbade salutation on the way (Lk. 10:4), although He ordinarily encouraged proper civilities of this sort (Mt. 5:47; 10:12).

In the Epistles the RSV generally renders *aspázomai*, "greet," and *aspasmós*, "greeting." E. B. POLLARD

SALVATION. The act or state of deliverance from danger, especially deliverance by God from the penalty and power of sin.

VI. Theological Significance

I. General Significance of the Terms.–The biblical terms that refer to salvation were used in many areas of life. The idea of preservation, both of people and of things, was common. The terms were frequently applied to rescue from danger, safe travel, and healing of disease, as well as security in general. Words pertaining to salvation are found in both secular and religious contexts.

The various threats posed by neighboring nations resulted in Israel turning repeatedly to God for protection or deliverance from defeat and bondage. Individuals also called on God for personal salvation from enemies and from various threats to safety and health. The greatest demonstration of God's salvation in the OT was the Exodus from Egypt. Moses told the people to stand firm and see God's deliverance (Ex. 14:13), and on that day "the Lord saved Israel from the hands of the Egyptians" (v. 30). But OT history showed that deliverance from physical bondage was not enough. Ultimately, messianic deliverance would be needed to restore the religious purity and integrity of God's people. In the NT the idea of salvation is somewhat different, with less emphasis on the national and political dimensions that were so prominent during the exilic and preexilic periods in Jewish history. Personal salvation comes to the fore, with a new emphasis on personal wholeness, including freedom from disease

and from demon possession, along with spiritual redemption from sin.

The broad use of salvation terminology is seen not only in the variety of general circumstances in which it is used, but also in the specific aspects of spiritual salvation that are indicated. OT believers knew that they could find safety in the "strong tower" of the "name of the Lord" (Prov. 18:10). The book of Acts attributes saving power specifically to the "name" of Jesus Christ, both for physical healing (Acts 3:6, 16; 4:10) and for spiritual redemption (4:12). Beginning with the initial point of conversion, salvation terminology is applied to a full range of blessings, including forgiveness, justification, redemption, sanctification, and glorification. The salvation of God affects the entire person in all dimensions of life.

The temporal aspects of salvation are also broadly viewed in Scripture. The OT conception of messianic deliverance is by nature eschatological, i.e., to be consummated in the future. That future dimension of salvation continues to be present in NT thought. Paul wrote, "our salvation is nearer now than when we first believed" (Rom. 13:11), and 1 Pet. 1:5 refers to "the salvation that is ready to be revealed in the last time." But salvation is not narrowly applied to the future, for it can be affirmed that God has already "saved us and called us" (1 Tim. 1:9; cf. Tit. 3:4f.). Future and past are joined in Rom. 8:24: "For in this hope we were saved." The effects of salvation are also experienced in the present. Paul mentioned "those who are being saved" in 1 Cor. 1:18 and 2 Cor. 1:15; and he admonished, "now is the day of salvation" (2 Cor. 6:2). 1 Pet. 3:21 has the phrase "now saves you" (cf. 1:9). Past and present are blended in Eph. 2:8, where "have been saved" actually represents an expanded verbal construction that emphasizes the present experience of a past act.

Above all, salvation in the Bible is the result of a saving act of God. This is true in both Testaments and in all aspects of salvation, from national deliverance, as at the Exodus, to personal redemption. Personal salvation is realized only through the death of Christ, which is often referred to as His "saving work" on the cross.

II. OT.–A. Vocabulary. Several key Hebrew verbs have traditionally been identified as the core of the evidence concerning the meaning of salvation in the OT. More recently, some scholars (e.g., Sawyer) have employed contemporary semantic methodology, which focuses attention on the broad semantic field, the phraseology that accompanies the words in this field, and the contexts in which the terms occur. This synchronic approach tends to minimize the older emphasis on comparative grammar and etymology (e.g., seeking meanings from cognate languages). While the validity of specific semantic reconstructions may vary, the approach has rightly drawn attention to the need for comprehensive analysis. Such studies, however, need to be supplemented by consideration of the larger historical and theological matrix of God's saving work in both Testaments.

1. Yāša'. This Hebrew verb and its derivatives are the most common OT terms for the basic idea of salvation (some 353 occurrences). The name Jesus derives from this verb. Whereas other terms describe specific aspects of salvation (e.g., redemption), *yāša'* is a general term and the one to which Gk. *sōzō* most closely corresponds. The root idea seems to be that of enlargement, providing space, or, conversely, removing that which restricts. Isa. 45:15-25 illustrates its use. After addressing God as "Savior," the prophet states, "Israel shall be saved by the Lord with an everlasting salvation," adding that (in contrast to makers of idols) Israel will never be put to shame throughout the ages. Verse 21 picks up the theme of v. 15, now adding a twofold statement that God is the *only* Savior. Verse 22 repeats this affirmation and couples it with a call to the "ends of the earth" to be saved. The blessings of salvation promised in v. 17b are restated in reverse terminology in v. 25 (no shame to Israel in v. 17b; shame to others in v. 24, while Israel exults in v. 25). This cluster of salvation words emphasizes the uniqueness of God as Savior.

God saves from (the hand of) the enemy (Jgs. 2:18; 6:14; 1 S. 7:8; cf. the similar phrase in Lk. 1:71, 74); salvation may also be from various troubles of life (Ps. 34:6 [MT 7]), as well as from sinful acts and attitudes (Ezk. 36:29; 37:23). Military "salvation" is ascribed also to human leaders (Jgs. 8:22; 1 S. 9:16). Ultimately, however, salvation is from God alone, as He makes His power known on His people's behalf, in contrast to the helplessness of the enemies' pagan gods. There is no Savior besides God (Isa. 43:11; cf. v. 3; 45:15, 21; 49:26; etc.).

The spiritual or theological aspect of *yāša'* comes through clearly in Ps. 51, where David requests the restoration of the joy of salvation and asks God to save him from bloodguilt (vv. 12, 14 [MT 14, 16]). Salvation is connected both with God's love and with His righteousness. The psalmists request salvation because of God's love (Ps. 6:4 [MT 5]; 109:26; 119:41). Isa. 51:8b parallels salvation with righteousness (cf. above on Isa. 45:21, which describes God as a "righteous God and Savior"). Often the verb is used absolutely, with the reference to be understood from the context (e.g., Ps. 6:4 [MT 5]; 12:1 ["Help"; MT 2]; 106:47; 118:25). It is rendered "Hosanna" in the triumphal entry passages (Mt. 21:9, 15; Mk. 11:9f.; Jn. 12:13). Such use of salvation terminology in the NT builds on the OT. Even the extension of salvation to the Gentiles was already described in the OT by the use of *yāša'* (cf. Ps. 67:2 [MT 3]; Isa. 45:22); it was to be accomplished through the witness of Israel (Isa. 49:6).

The hiphil participle is used of both human and divine saviors (e.g., 2 K. 13:5; but cf. Isa. 43:3; etc.). Like other forms of *yāša'*, this form occurs in verses emphasizing that there is no Savior besides the Lord (Isa. 43:11; etc.).

The derived nouns are used in much the same way as the verbal forms. Thus Samson's victory, in which he used the jawbone of an ass as a weapon, is described as a "great deliverance" (Jgs. 15:18). The same noun, *tᵉšûʿâ*, is used to describe other military victories in 1 S. 11:9, 13; 19:5; 2 S. 19:2 (MT 3); 23:10, 12; etc. This noun can also refer to individual salvation, as in Ps. 37:39; 38:22 (MT 23).

A more common noun is *yᵉšûʿâ*. It is notably used in connection with the Exodus. Ex. 14:13, cited above, states that God's people can take their stand, expecting that God will bring salvation; this fundamental theme is repeated in 2 Ch. 20:17. The Song of Moses states, "God has become my salvation" (Ex. 15:2), and 1 Ch. 16:23 says that God's salvation should be proclaimed daily (cf. par. in Ps. 96:2). This noun is found more than fifty times in the Psalms and Isaiah. God's great salvation brings much joy (Ps. 9:14 [MT 15]; 13:5 [MT 6]; 35:9; Isa. 25:9; etc.). The "cup of salvation" is to be received as God's gift (Ps. 116:12f.). Salvation "belongs" to the Lord (Ps. 3:8 [MT 9]). Ps. 62 twice asserts emphatically that God is the only source of salvation (vv. 1f. [MT 2f.]). God's salvation is an object of hope and longing (Ps. 69:29 [MT 30]; 88:1 [MT 2]; 119:123, 166, 174; etc.). Instances in Isaiah include the well-known reference to the beautiful feet of those who bring good news of salvation (52:7), and the promise that the "ends of the earth" will see God's salvation (v. 10; cf. Ps. 98:3).

Yet another noun is *yēša'*. It is typically used in reference to God as "horn," "rock," or "shield" of "my/our

salvation," or even to God *as* salvation (e.g., 2 S. 22:1-4 par. Ps. 18:2f. [MT 3f.]; also Ps. 65:5 [MT 6]; 79:9; 85:4 [MT 5]; 95:1; Isa. 17:10; Mic. 7:7).

2. Nāṣal. The basic idea of this verb is to pull out, hence to deliver or free someone. It can have the sense of stripping off, and is especially so used in the piel. By far the greatest usage is in the hiphil, with the sense of causing to be separate, usually translated "deliver." It is typically followed by a reference to that from which one is delivered. Ex. 18:9-11 demonstrates that construction and also shows its use in reference to the Exodus: "the Lord . . . had delivered them out of the hand of the Egyptians. . . . Blessed be the Lord, who has delivered you out of the hand of the Egyptians. . . . Now I know that the Lord is greater than all gods, because he delivered the people from under the hand of the Egyptians." This was in accordance with God's word to Moses that He had "come down to deliver them" (Ex. 3:8). The memory of the Exodus is recalled later to emphasize the power of God on behalf of His people (e.g., Jgs. 6:9). The idea that a strong God can deliver His people from the enemy occurs in the taunt hurled at Hezekiah by the besieging Assyrians, who claimed that no god had been able to deliver his people from the Assyrians (2 K. 18:33-35; 19:12; 2 Ch. 32:17). The narrative goes on to relate that the Lord did indeed "save" His people in answer to Hezekiah's prayer (now using *yāšaʿ* rather than *nāṣal*). As with *yāšaʿ*, *nāṣal* frequently describes rescue from enemy attack (1 S. 12:11; 14:48; Jgs. 8:34; 9:17; etc.). While the verb occurs frequently, the noun form occurs only in Est. 4:14, which plainly alludes to divine deliverance even though, like the book as a whole, it does not mention the name of God.

Nāṣal is also used often to describe an act of individual salvation by God. God delivered David "out of the hand of Saul" (2 S. 12:7; 22:18, 49; cf. Ps. 18:17, 45 [MT 18, 46]). The Psalms speak of deliverance from fears (Ps. 34:4 [MT 5]), troubles (34:17 [MT 18]; 54:7 [MT 9]), death (56:13 [MT 14]), Sheol (86:13). The word is also used absolutely (40:13 [MT 14]; 70:1 [MT 2]). Like *yāšaʿ*, *nāṣal* is used to describe spiritual salvation, e.g., "from transgressions" (Ps. 39:8 [MT 9]), "from bloodguiltiness" (51:14 [MT 16]); cf. "deliver us, and forgive our sins" (79:9). Ezekiel uses it in connection with the warning passages (3:19, 21; 33:9), where *mālaṭ* and *ḥāyâ* are also used. The term in the Greek NT that is closest in meaning to *nāṣal* is *rhýomai.*

3. Pālaṭ. This verb likewise carries the sense of deliverance. It is used mainly in the Psalms. Derived forms carry the meaning of escaping, surviving, or being a fugitive (e.g., Josh. 8:22; Isa. 66:19; Jer. 42:17; 44:14, 28; etc.). Ps. 37:39f. contains a cluster of terms referring to God's salvation of those who take refuge in Him to escape the wicked, including two uses of *pālaṭ*. In Ps. 22, the psalm that begins with the cry of dereliction uttered by Jesus, *pālaṭ* occurs with *nāṣal* in v. 8: "He committed his cause to the Lord; let him deliver [*pālaṭ*] him, let him rescue [*nāṣal*] him, for he delights in him!" Like other words for salvation, *pālaṭ* often occurs with a prepositional phrase indicating the one from whom deliverance is needed (Ps. 17:13; 18:48 [MT 49]; 43:1; etc).

4. ʿÁzar. The cluster of salvation terms just cited in Ps. 37:39f. includes this verb, which is usually translated "help." Although it does not have the specific meaning "save," it is part of the same semantic field. This is seen not only in Ps. 37, but also in 79:9 ("Help us, O God of our salvation . . . and forgive our sins"); Isa. 49:8 ("in a day of salvation I have helped you"); etc.

5. Mālaṭ. The idea here is of escape by slipping away, with God often the cause of this deliverance. Unlike *pālaṭ*, the uses of *mālaṭ* are distributed fairly evenly among several OT books, including 2 Samuel, Job, Psalms, Ecclesiastes, and several of the prophets. Typical uses include the deliverance of the poor (Ps. 41:1 [MT 2]), of the soul from the power of Sheol (89:48 [MT 49]), and of Israel (Isa. 46:4; etc.). It is used in the warning passage of Ezk. 33:5; *nāṣal* and *ḥāyâ* occur with somewhat similar meanings in vv. 9, 16. Of special significance is Joel 2:32 ("And . . . all who call upon the name of the Lord shall be delivered"), which is quoted by Peter on the day of Pentecost (here *mālaṭ* is translated by Gk. *sṓzō*; cf. LXX).

6. Ḥāyâ. A different aspect of salvation is introduced by this verb, which basically means to live. When the verb form expresses the causative idea of keeping alive or reviving someone, the element of salvation is clearly present. It is this verb that is used in the biblical expression "God save the king!" (RSV "Long live the king," 1 S. 10:24; 2 S. 16:16; 1 K. 1:25; etc.). The verb occurs in various contexts, but of special interest is its use in the Ezekiel passages mentioned above, referring to the preservation of the life of the wicked through timely warning (Ezk. 3:18) and through his turning from sin (18:27).

7. Gāʾal and Pāḏâ. Both these terms carry the idea of redeeming someone through the payment of a ransom. They are almost the same in meaning, the former term emphasizing a near relative's role in the act. Although closer to the idea of redemption than of salvation, they are mentioned here because of clear parallels in their use, e.g., "redeemed" from the hand of the enemy (Ps. 106:10), from trouble (107:2) and from iniquities (130:8). There is little concern in these passages with payment of ransom and even less with a payee. The focus is rather on the fact that divine action is needed to obtain freedom for God's people.

B. Distinctive Aspects. These examples show the varied use of the terminology, sometimes in vivid situations of warfare or other distress, sometimes in personal need. Theologically, the desperation of the human condition is stated in contrast to the powerful gracious acts of God. Some terms, e.g., *yāšaʿ* and *pālaṭ*, tend to be used in a religious context more than others.

Divine deliverance is an important theme in OT history. The multiplication of seemingly mundane or insignificant stories of deliverance emphasizes human helplessness and divine power. Although military leaders and others bring salvation in specific circumstances, ultimately it is God alone who is the true Savior. Israel had to learn not to trust human wisdom or military strength but to recognize God as the only source of deliverance.

As is seen in the citations above, there are certain passages, especially in the Psalms, that contain clusters of salvation terminology. Among the most notable clusters are those occurring in Ps. 18:1-3, 16-19 (MT 2-4, 17-20); 34:4-7, 19-22 (MT 5-8, 20-23); 68:19f. (MT 20f.).

Sometimes the idea of separation is prominent, i.e., the person or situation *from* which one is saved is emphasized. When the terms are used theologically, this separation is often from sin or its consequences. A reference to God's righteousness may be expressed or implied, and the idea of divine grace is certainly implicit.

The Exodus stands as the prominent example of God's saving power, somewhat analogous to the Resurrection in the NT. God's saving acts in the OT are not merely a foreshadowing of NT salvation; they have reality and validity in themselves. At the same time they are not merely for the benefit of Israel, for the ideal is that the "ends of the earth" also know God's salvation. The incorporation of the vocabulary of salvation, notably *yāšaʿ*, in proper names testifies to the importance of the concept. This is evident in the name of Joshua, the leader who emerged

from the period of the Exodus, and much more so in the Greek form of that name, Jesus.

The words cited above do not exhaust the field (*pāraq*, for example, is used once each in Ps. 136:24 and Lam. 5:8, where the RSV translates it "rescue" and "deliver" respectively), but they are the main terms. Other associated terms could be cited, which have to do with helping, keeping, etc., but essentially the distinctive ideas associated with salvation are rescue, setting free, deliverance, redemption, and preservation of life.

III. Greco-Roman World.—While historians have differed somewhat in their assessment of the religious climate of the Hellenistic period, certain trends are clear.The old Olympian gods had long since faded as vital forces in religion. The sense of a cosmic unity that developed following the conquests of Alexander spawned an interest not only in such concepts as a world soul, but also in astrology, which functioned on the assumption of a connection between the planets and events on earth. This alleged science was also fostered by a decline in self-confidence and a decline in popular confidence in the ability of superior beings to come to the rescue of their devotees. Fate and luck held humans in their grip. One famous description of the Hellenistic period, offered earlier in the 20th cent. by the classicist G. Murray, was "failure of nerve." Astrology could, it was thought, predict the future, but it could not save. Magic offered some hope for those who learned the formulas, providing mastery of present situations and a key to a better life above.

In the eyes of many inhabitants of the Greco-Roman world, the greatest promise of salvation was offered by the mystery religions. These cults expressed fertility motifs and the vegetation cycles of life, death, and rebirth. The kind of salvation they offered was not comparable to the biblical concept: it was not a deliverance from a hell to a heaven, nor, apart from the idea that lustrations cleansed one of pollution, was it forgiveness of sin. In a world where chance and, even worse, fate seemed to dominate, and where some felt that the body was the prison of the soul, the mysteries offered both help in the present life and eventual release. Through initiation and other rites, and by means of the reenactment of ancient myths, one could identify with cultic figures such as Isis or Mithras. The former was celebrated in beautiful, heart-stirring pageantry. The latter offered a series of steps, somewhat like military promotions, toward a higher calling. Ultimately the devotees hoped for a better hereafter, in which the griefs and limitations of this present life would receive compensation.

One of the most vivid illustrations of the idea of pagan salvation is provided in the *Metamorphosis* or *Golden Ass* of Apuleius (2nd cent. A.D.). In this parabolic, autobiographical story, Apuleius is transformed into an ass. After many cruel and shameful experiences he finally observes a procession in honor of the Egyptian goddess Isis and is released from his captivity. Apuleius uses the Lat. *salus*, a near equivalent to Gk. *sōtēría*, to describe his release from his terrible condition as an ass. In the same work (Book xi) he refers to Isis as a *sospitatrix* (fem. of *sospitator*, "savior").

This and other evidence shows that the gods of the mysteries were at least sometimes thought of as savior gods or deliverers. This is especially true of the god of healing, Asclepius, whose shrine at Epidaurus was the scene of secret rites attended by many who had faith that Asclepius could heal them. Several cautions must be observed lest a too facile correspondence be made between the savior aspect of these gods and that of Jesus Christ. One is that the terminology is not completely equivalent. (This is the case with respect to other words as well, including "mystery.") Mithras, e.g., may be called *salutaris*, an adjective related to *salus*, "salvation," but this terminology was broad, and it related largely to the general idea of well-being. (Our word "salutation" reflects the very general idea of wishing one well, a common use of *salus*.) This word-group, as well as the *sospes/sospito* group, could indeed be used for salvation in our sense of the term, but this must be determined by context.

Another caution is the need to observe carefully the date of the literature in question. Much of the evidence for the mystery religions is later than the NT period. The phrase "reborn for eternity," e.g., used in connection with Mithraism, is quite late. A third caveat to keep in mind is that, while the experiences of help and healing were very real to the initiates, their gods and goddesses belonged to the world of mythology. For example, the experience of Osiris, the consort of Isis, who is said to have died and been reborn, is sometimes compared to the death and resurrection of Christ; but it must be kept in mind that this is part of a myth. Osiris was killed by his enemy Seth. No saving effect was attributed to his death. Isis is said to have brought him back to life, although the myth varies in its details. This is in strong contrast to the historical existence and death of Jesus Christ, and the claim that His tomb was found empty and that He was seen alive. While salvation seemed real to the initiates of the mysteries, it was not based on an objective work of God in human history.

The term "savior" (*sōtḗr*) has a long history in Greek thought. Some of the gods had that epithet attached to their name, e.g., Zeus *sōtḗr*. But the term was also applied to human beings early in Greek history. Initially it described significant actions (e.g., military and political) that brought benefit to others, but it then became more general in application. A. D. Nock has shown that, while it may appear to have been an honorific title, yet "at all times it denoted the performance of a function and not membership of a class in the hierarchy of beings" (pp. 129f.). In the earlier Greek period it was used of private as well as public persons. The philosopher Epicurus was called a *sōtḗr*, and Josephus recorded (*BJ* iii.9.8 [459]) that Vespasian received the designation *sōtḗr* and *euergétēs* ("benefactor"). This latter term was often used in conjunction with *sōtḗr*. Neither term necessarily connoted deity. The emperors were thought of as saviors and benefactors. Augustus, who brought peace to the world, was honored as a *sōtḗr*, sometimes with the addition of *euergétēs*. These terms were commonly and often pompously assumed by political leaders. Jesus warned His disciples not to seek the prerogatives of the Gentiles, who liked to be called benefactors (Lk. 22:25). During the succession of leaders following Alexander the Great, especially in the eastern part of his empire, terms of deity came to be applied to the ruler (e.g., the well-known Antiochus "Epiphanes"). This ruler cult spread from such roots into the Roman empire. This development added a deeper dimension to the more perfunctory use of titles. The increasing insistence that citizens give reverence to the emperors made it difficult for Christians to maintain publicly that Christ, not the emperor, was the true savior.

The uses of the noun *sōtēría* and the verb *sṓzō* in the Greek world are helpfully classified in *TDNT* under the headings "Saving," "Keeping," "Benefitting," and "Preserving the Inner Being," in addition to the specifically religious uses. These categories are not mutually exclusive, and the number of different settings in which the

words are used is striking. There are far more settings for these terms than for the OT terms for salvation. This is natural, considering the scope of the Greek literature in comparison with the national, historical, and religious focus of the OT. Both the OT and Greek literature speak commonly of being saved from illness, disaster, and military loss. Whereas the OT often stresses the subject of the act of saving, frequently God Himself, this is relatively unimportant in Greek literature. Here the circumstances and the act of saving may be quite commonplace rather than spectacular, especially when the meaning is "keeping." Thus money or wine may be "saved," i.e., retrieved or preserved. The terminology may refer simply to the maintenance of a person's well-being. In no sense do these ideas of salvation refer implicitly to divine providence, as in the OT. Rather, these uses are completely secular, whereas in the OT saving acts — even, e.g., by a military leader — are considered ultimately due to the hand of God.

IV. Intertestamental Literature.–While the use of salvation terminology in the Greco-Roman world differed significantly from its use in the OT, this is not the case with most of the intertestamental literature. Thus in the Apocrypha it is God who saves His people from enemies and physical threats. In the Greek portions of the Apocrypha, as in the NT, *sṓzō* and *sōtēría* are the customary terms. The verb *sṓzō* usually has God rather than a human being as subject, but some figures, notably Judas Maccabeus, do receive the appellation *sōtḗr* (1 Macc. 9:21).

The LXX uses *sṓzō* comprehensively for the various Hebrew words. This makes it difficult to discern how Jewish scholars in the intertestamental period distinguished between the various Hebrew terms. On occasion, however, a distinctive term is used, such as *ho rhyómenos,* "the deliverer," for *gō'ēl,* "redeemer."

It has been suggested that the Christian idea of Jesus' death as a "saving event" derived from the idea in 4 Maccabees of an "effective death" on the part of the martyrs (see Williams). Their sacrifices are described as "a ransom for the sin of our nation" and an "expiation" that brought deliverance (4 Macc. 17:21f.). Also, Eleazar expressed the hope that his death would purify and ransom his people (6:29). It would be difficult to maintain, however, that the martyrs were saving figures in the strong biblical sense that Jesus was.

The Dead Sea Scrolls teach that people are trapped by carnality and sin, with many doomed to the destiny of the wicked. The teachings of Moses, Zadok, and especially the Teacher of Righteousness can lead one to salvation. This salvation is largely thought of in terms of rescue and redemption. God reveals His salvation and directs the individual in the way of righteousness. The Thanksgiving Psalms provide many examples, although specific salvation terminology is minimal in contrast to the general emphasis on God's mercy and blessings. God is righteous, and it is only by His grace and will that individuals are saved. The community looked forward to God's salvation in the end time.

V. NT.–A. Vocabulary. 1. Sṓzō. The main terms for salvation in the NT are *sṓzō* and its derivatives. *Sṓzō* occurs 107 times, *diasṓzō* eight times, *sōtḗr* twenty-four times (esp. in Titus and 2 Peter), *sōtēría* forty-six times (esp. in Acts and Hebrews), *sōtḗrion* four times, and *sōtḗrios* once.

The verb *sṓzō* ranges from secular meanings, as in Peter's cry to Jesus when he began to sink in the Sea of Galilee (Mt. 14:30) and the taunts to Jesus to save Himself from the cross (27:40, 42, 49), to religious meanings, e.g., being saved by God's grace (Eph. 2:8; 2 Tim. 1:9). This verb is the NT equivalent of Heb. *yāša'* and carries the meanings of some of the other OT words signifying deliverance. One particular application is to physical health, e.g., Jairus's daughter and the woman with a hemorrhage (Mk. 5:23, 28), and the blind Bartimaeus (10:52). Luke especially uses the verb in this sense (Lk. 8:36, 48; 17:19; 18:42; Acts 4:9; 14:9).

Diasṓzō has approximately the same meaning as *sṓzō.* There seems to be no special significance added by the prefix, except possibly in the description of the safe passage of Noah's family *through* the Flood (1 Pet. 3:20) — a type of Christian baptism. This verb also describes Jesus' healing of crowds (Mt. 14:36) and, in Luke's account (Lk. 7:3), the healing requested by the centurion. Luke also uses the term five times in Acts to describe physical safety (23:24; 27:43f.; 28:1, 4).

The adjective *sōtḗrios* describes that which saves; in Tit. 2:11, e.g., the grace of God is described as "bringing salvation" (RSV "for the salvation"). In its neuter use as a substantive it signifies a means of deliverance ("helmet of salvation," Eph. 6:17). Abstractly it can mean salvation itself, as when Simeon looked at the baby Jesus and said that his eyes had seen God's salvation (Lk. 2:30). In Lk. 3:6 ("and all flesh shall see the salvation of God") its use derives from the LXX of Isa. 52:10. Acts closes with Paul's statement that salvation (*sōtḗrion*) has been sent to the Gentiles (28:28).

2. Rhýomai. This verb occurs seventeen times and shares with *sṓzō* the basic idea of rescue and preservation, but it does not have the same broad semantic range. It is more prosaic and, except for such passages as 1 Clem. 18:14 and 2 Clem. 6:7, does not refer to deliverance from guilt and punishment.

3. Lytróō. This verb (occurring only in the middle and passive in the NT) is used three times. Several derivatives are also significant: *lýtron* occurs twice, *antílytron* once, *lýtrōsis* three times, *apolýtrōsis* ten times, and *lytrōtḗs* once. The idea of redemption conveyed by these terms is similar to the meaning of *sṓzō* in that someone is rescued and brought into freedom. Thus the noun *lytrōtḗs,* used once to describe Moses as a deliverer of his people at the Exodus (Acts 7:35), may be compared to *sōtḗr.* The word *apolýtrōsis,* "redemption," occurs in 1 Cor. 1:30 as a concrete term signifying Christ as Redeemer. The verb diverges somewhat from these salvific ideas when it focuses on the payment of a ransom (Mt. 20:28 par. Mk. 10:45). When it is used more generally, however, it is close to *sṓzō,* as in Lk. 24:21; Tit. 2:14. The other derivatives describe the ransom paid for redemption.

B. Distinctive Aspects. 1. Lukan Writings. It is customary to point out the prominence of the theme of salvation in Luke and Acts. This generalization is based partly on the frequency of salvific terms in these writings. Actually, Luke uses *sṓzō* only twice more (seventeen times) than Matthew or Mark (fifteen times each). In Acts the verb occurs thirteen times in seven different chapters. Without a similar literary work in the NT with which to compare Acts, it is difficult to assess the significance of this frequency and spread; but the figure is perhaps noteworthy in comparison with Romans, which, for all its stress on soteriology, uses the verb only eight times. *Sōtḗr* occurs twice in Luke's Gospel and twice in Acts, but not in the other Synoptics or, for that matter, in Romans. An even greater difference is seen in the use of *sōtēría,* which occurs four times in Luke, twice in Mark, and not at all in Matthew; it occurs six times in Acts and five times in Romans. *Sōtḗrion* is not found in Matthew or Mark but

appears twice in Luke and once in Acts; it appears only once in all the Epistles (Eph. 6:17). Since the importance of the theme of salvation in Romans is unquestionable, this relative frequency of salvific terms in the Lukan writings calls for attention.

It is not merely the terminology that is significant, however. As always in discerning the theology of the Gospels, it is important to note the specific context in which a given word is present (or missing). Only Matthew uses *sṓzō* in connection with the naming of Jesus (Mt. 1:21). But since the dialogue with Joseph is not included in either Mark or Luke, the omission from Luke loses some (though not all) significance. In some cases *sṓzō* is used with reference to healing, and the choice to use this term or not use it seems to be theologically significant. Luke alone uses *sṓzō* with reference to the healing of the Gerasene demoniac (8:36), but in the accounts of the healings of the woman with a hemorrhage and of Jairus's daughter *sṓzō* appears in all three Synoptics but at different places in the narrative (Mt. 9:21f.; Mk. 5:23, 28, 34; Lk. 8:48, 50).

In five instances *sṓzō* appears in Luke alone. (1) The first is in Jesus' statement to the sinful woman, "Your faith has saved you" (7:50), which stresses the reception of God's saving grace by faith. (2) Another occurs in the parable of the Sower: "that they may not believe and be saved" (8:12). (3) In 13:23-30 Jesus answers a question about whether only a few would be saved (v. 23). This occurs within a section of special Lukan material (9:51–18:14), so there is no parallel. (4) The same is true of the healing (*sṓzō*) of the Samaritan leper (17:19). (5) Perhaps the most significant of these instances is in Lk. 19:10, "For the Son of man came to seek and to save the lost." Its significance lies not only in the statement itself but in its occurrence in a passage that contains a cluster of characteristic Lukan terms, e.g., "today" (vv. 5, 9), "must" (v. 5), "sinner" (v. 7), "Abraham" (v. 9), as well as the general theme of poverty and wealth. The noun *sōtēría* occurs in v. 9, emphasizing the theme. It is this kind of cluster and emphasis, and not merely a word count, that indicates thematic elements.

On the other hand, there are a few instances in which *sṓzō* occurs in Matthew or Mark but is lacking in Luke. It is present in the story of Peter walking on the water, which occurs only in Matthew (14:30). Both Matthew and Mark use *sṓzō* in a section of the eschatological discourse not found in Luke (Mt. 24:22; Mk. 13:20); and Matthew includes it in the discourse of ch. 10 (v. 22), which in part parallels the Olivet discourse. The only other example is in the longer ending of Mark (16:16).

As for the noun forms, there are several significant occurrences in the opening songs of Luke. In the Magnificat (Lk. 1:46-55) Mary calls God her "Savior" (1:47). *Sōtēría* is found three times in the theologically rich Benedictus of Zacharias, a song that uses several OT expressions: "horn of salvation" (1:69), "salvation [RSV "saved"] from our enemies" (v. 71), and "knowledge of salvation" (v. 77); the ideas of covenant and oath (vv. 72f.) and the clear linking of salvation to forgiveness of sins (v. 77) are themes common to both Testaments. The angel's song announcing Christ's birth calls Him a "Savior" (Lk. 2:11). Simeon's prayer (the Nunc Dimittis, 2:29-32) contains the concrete use of *sōtḗrion* in the clause "mine eyes have seen thy salvation" (v. 30).

This cluster of salvation terminology in the two opening chapters of Luke is quickly followed by the use of *sōtḗrion* in a quotation from the LXX of Isa. 40:5: "all flesh shall see the salvation of God" (Lk. 3:6). This eschatological tone is heard also in 21:28 in connection with the coming of the Son of man; His appearance will mean that "redemption" (*apolýtrōsis*) is drawing near. This is the only occurrence of *apolýtrōsis* in the Gospels.

The theme established by these passages is present throughout Luke, even where the specific vocabulary of salvation is not used. For example, the term "salvation" does not occur in ch. 15, but the idea is present in the repeated pattern of "lost" and "found" in the three parables.

Acts likewise opens with strong affirmations of God's salvation. Peter's quotation from Joel on the day of Pentecost ("And . . . whoever calls on the name of the Lord shall be saved") employs *sṓzō* as a translation of Heb. *mālaṭ* (following the LXX). The Church grew as people "were being saved" (2:47). The man at the temple gate was "healed" (*sṓzō*, 4:9; cf. *hygiḗs*, "healthy," v. 10) by the name of Jesus Christ, and it is only by the same name that people can be "saved" (*sṓzō*, v. 12). Peter's message "saved" Cornelius and his household (11:14). The Jerusalem Council was held to deal with the claim that one could not be "saved" without circumcision (15:1); Peter's response was, "We shall be saved through the grace of the Lord Jesus" (v. 11).

It is not certain just what was in the Philippian jailer's mind when he asked what to he had to do to "be saved" (Acts 16:30). He may have had a limited concept of salvation based on his exposure to Hellenistic religions, or he may have heard Paul and Silas using salvation terminology in their prayers and hymns (v. 25). Possibly he was only thinking of his own safety, and Paul capitalized on the term. Other uses of *sṓzō* in Acts are secular.

In Acts 5:31 Peter employs *sōtḗr* in a highly significant way in speaking of Christ's exaltation of as "Leader and Savior" (*archēgós kaí sōtḗr*). The term is clearly used as a title of honor, as part of the vindication motif in Acts (cf. 2:24, 32-36; 3:13-15). It does not occur again until 13:23, where it is linked with OT messianic predictions.

The term *sōtēría* is used in both a spiritual and a secular sense in Acts 4:12; 7:25; 13:26, 47; 27:34. In 16:17 it is on the lips of the demon-possessed slave girl, who says that Paul and his associates are proclaiming the "way of salvation." Just as her terminology for God as the "most high God" was used beyond Christian and even Jewish circles, so the term "salvation" could have had a broader meaning in her mind. Alternatively, she may have had knowledge of the Christian message either from the demons or from hearsay.

Salvation is thus a major element in Luke's theology. It has been customary since Conzelmann to view the special contribution of Luke's Gospel in terms of salvation history (see H. Conzelmann, *Theology of St. Luke* [Eng. tr. 1960]). Marshall cogently argued that, while this theme is discernible in Luke as elsewhere (though not necessarily in the form Conzelmann suggested), it is not Luke's major contribution. Rather, the major theme is "that Jesus offers salvation to men" (p. 116). One might add that Acts supports this statement, although an expanded summary for both books might be that Jesus is the only Savior, the main object of OT prophecy, and the true source of assurance (cf. Acts 4:12; 13:23; Lk. 1:4). But for Luke salvation is not limited to the spiritual realm. His works frequently employ salvation terminology in a secular sense, specifically with reference to healing. There is thus a strong holistic emphasis in Luke. For him salvation carried somewhat the same encompassing meaning as did the familiar Hebrew term *šālôm*. God not only rescues people out of a predicament (e.g., sin or illness), but He brings them into a new state of wholeness or peace (e.g., forgiveness or health). (See also the occurrences of *diasṓzō* listed in IV.A.1 above).

2. Pauline Corpus. The frequency of the terms for salvation in this literature does not need to be demonstrated. If we include the Pastorals, *sṓzō* occurs twenty-nine times, *sōtēría* eighteen times, *sōtḗrion* once, and the adjective *sōtḗrios* once.

While it would be precarious to isolate salvation or any other single theological element as the center of Paul's thought, the theme of salvation certainly is of great importance. Rom. 1:16 describes the gospel as "the power of God for salvation." In 1 Cor. 15:1 the gospel, specifically the death, burial, and resurrection of Christ according to the OT Scriptures, is the basis for salvation. The Thessalonian believers were called to be saved through the gospel (2 Thess. 2:13f.). In Rom. 5:9f. salvation is for the individual the culmination of both justification and reconciliation. This points up the eschatological dimension of salvation. As noted above, the Bible describes salvation in past, present, and future terms. Rom. 8:24 telescopes the tenses: "in this hope we were saved." The terminology for salvation, so broad in its tense relationships, so all-encompassing (as will be seen) in its conceptual relationships to other aspects of God's work, and so clearly at the heart of the gospel, is at the same time both immensely significant and difficult to isolate as a single strand.

It could be argued that "salvation" expresses the single goal that Paul desired for all who were not yet believers. This is especially clear in Rom. 9–11. Paul strongly desired the salvation (*sōtēría*) of Israel (10:1), and it is significant that of the eight occurrences of *sṓzō* in Romans, five are in this passage relating to Israel, as are two of the four appearances of *sōtēría*. It is also in this section that Paul's important formula for salvation appears (10:9f.), in which he states (using both the verb and the noun) that salvation is only through confession of Jesus as Lord and through confidence in His resurrection (cf. Dt. 30:14).

Given the undoubtedly important place that salvation has in Romans, it is perhaps surprising that the specific terms for salvation occur so infrequently (see the comparison with Luke in V.B.1 above). The reason for this is probably that Paul's concern in Romans is to show the means to the generally accepted goal of salvation. He therefore proclaims God's newly revealed righteousness (1:17) and explains that justification is by grace through faith (3:21-26). *Sṓzō* and its derivatives do not occur at all in the entire passage of 3:21–4:25. *Apolýtrōsis* ("redemption") does occur, however, in 3:24.

In the rest of the Pauline corpus, salvation terminology generally (though not always) refers to God's rescue of the individual from sin and judgment. It is the polar opposite of *apóllymi* ("perish," 1 Cor. 1:18; 2 Cor. 2:15; 2 Thess. 2:10) or *apóleia* ("destruction," Phil. 1:28). In Eph. 2:1-10 both salvation and life are the antithesis of spiritual death. Twice being "saved" refers to the survival of a person whose works (1 Cor. 3:15) or flesh (5:5) are destroyed. The quotation of Isa. 49:8 ("the day of salvation," Heb. *yᵉšûʿâ*) shows the OT basis for Paul's salvation terminology.

Apolýtrōsis ("redemption") occurs in several passages in addition to Rom. 3:24. Rom. 8:23 speaks of the redemption of the body, 1 Cor. 1:30 of Christ being made redemption to us, and Eph. 1:7 of having redemption through His blood (cf. the use of this term also in 1:14; 4:30). Both the noun and the verb occur in Col. 1:13f., describing Christ's rescue of believers from the power of evil. With the exception of Eph. 1:7, these passages make no mention of a price paid for redemption; in these instances, therefore, we have the equivalent of salvation terminology.

Although God is the only ultimate Savior, Paul sometimes described human beings as instruments of salvation (cf. the military leaders of the OT). He ascribed this role to a Christian spouse (1 Cor. 7:16) and also to himself (9:22; cf. 10:33; 1 Thess. 2:16).

Paul did not confine his use of the salvation terminology to matters of sin and judgment. 1 Cor. 1:6 semantically links salvation to *paráklēsis* (here "comfort" or "encouragement"). In 2 Cor. 7:10, which calls for corporate repentance over the Corinthians' treatment of Paul, salvation is semantically opposed to death. In this corporate context Paul may have had in view physical or metaphorical rather than spiritual death. Clearly in Phil. 1:19 *sōtēría* is used in a secular sense, referring to Paul's rescue from imprisonment and other consequences (cf. 2 Tim. 4:18). In Phil. 2:12 ("work out your own salvation") it probably has a non-theological sense, namely, the working out of a situation; alternatively, it may mean that the Philippians should "work out" (i.e., apply) their spiritual salvation in personal relationships.

The Pastorals state that the OT Scriptures instruct a person for salvation (2 Tim. 3:15), that Christ came to save sinners (1 Tim. 1:15), that God wants all to be saved (1 Tim. 2:4), that God's grace brings salvation (Tit. 2:11), that salvation comes through holding to the apostolic teaching (1 Tim. 4:16), and that Paul endures everything in order to bring salvation to the elect (2 Tim. 2:10). Salvation is the result of God's antecedent purpose and grace (2 Tim. 1:9). It is His mercy, not human works, that produces salvation (Tit. 3:5-7). The difficult use of *sṓzō* in 1 Tim. 2:15 ("Yet woman will be saved through bearing children") probably does not refer to ultimate salvation from judgment, since this would make salvation dependent on "works," in contradiction to the non-negotiable Pauline stand on salvation through grace by faith; the reference to Gen. 3 suggests that it refers to the restoration of a pre-fall position for women. Tit. 2:14 has *lytróō*, "redeem," where the context has to do with purification from sin. On the use of *sōtḗr*, see V.B.3 below.

In the Pauline corpus, therefore, salvation is more of a comprehensive than a central theme. As in the OT, it is a dynamic act rather than a logical category or symbol. Contemporary works on biblical theology vary in their consideration of salvation as a distinctive topic in Paul. Beker, e.g., has a significant section on "The Gift and Demand of Salvation," whereas "salvation" does not even appear in the index to Ridderbos's *Paul: An Outline of His Theology* (Eng. tr. 1975). While some scholars (notably Bultmann) have seen anthropology as a starting-point in Paul's thought, Pauline soteriology by nature draws attention to the acts of God. But salvation, far from being a *deus ex machina* used to salvage an occasional bad situation, is God's eternal plan, extending, through Christ, to the entire range of human need. Christians are saved from the old aeon, the old state, the old fears, and the old habits, and are empowered and protected until the future hope of salvation is realized (Green, pp. 152-189). Nevertheless, it must also be observed that salvation terminology, except for *apolýtrōsis*, is absent not only from the key Romans passage on justification (3:21–4:25), as noted above, but also from the entire letter to the Galatians. Although this letter speaks of being free or redeemed from the law, it does not use *sṓzō*, *lytróō*, or their derivatives. The redemptive language used in Galatians (*exagorázō*, 3:13; 4:5) is more specific than either of these word-groups.

3. Sōtḗr in Titus and 2 Peter. The most striking use of salvation terminology in the Pastorals is the repeated use in Titus of *sōtḗr* ("savior") as a title of God (1:3; 2:10; 3:4) or of Christ (1:4; 2:13; 3:6). The grammatical construction

of 2:13 seems to apply the terms "God" and "Savior" to Jesus Christ. The use of these terms in 2 Pet. 1:1 bears grammatical resemblance to that in Tit. 2:13, linking Christ with God as Savior. In all the other cases in 2 Peter the term applies to Christ (1:11; 2:20; 3:2, 18). Both Titus and 2 Peter contain allusions to God as benefactor (see *euergétēs* in III above). The use of *sōtḗr* is in accordance with this. It appears in Titus and 2 Peter alone as often as in the rest of the NT (Lk. 1:47; 2:11; Acts 5:31; 13:23; Jn. 4:42; Eph. 5:23; Phil. 3:20; 1 Tim. 1:1; 2:3; 4:10; 2 Tim. 1:10; 1 Jn. 4:14; Jude 25.)

4. Hebrews, General Epistles, Johannine Writings. Hebrews has two interesting uses of *sṓzō*. Jesus prayed to the One who was able to save Him from death (5:7); and now in His eternal heavenly state He intercedes for those who believe in Him and is able to save them "for all time" (RSV, 7:25) or "completely" (NIV). In the former instance Jesus was "saved" not in that He did not die but in that He was preserved through the experience of death. In the latter instance, in turn, He is able to preserve or "keep safe" those who depend on Him (cf. *DNTT*, III, 203f.). It is striking that Christ's roles as pioneer (2:10) and as source (5:9) of salvation are both connected with Jesus' suffering during His earthly life.

Hebrews warns that salvation must not be neglected (2:3). While the author says he has confidence, with respect to his readers, of "better things that belong to salvation" (6:9), both 6:4-8 and 10:26-39 contain warnings. The latter passage concludes with another assurance that author and readers are not heading for destruction (*apṓleia*) but, through faith, for the preservation (here *peripoíēsis* rather than *sōtēría*) of their souls. *Sōtēría* is used in 9:28, in connection with the second coming of Christ, and in 11:7 for Noah's preservation through the Flood. Some of the OT heroes and heroines of the faith refused "release" (*apolýtrōsis*) from torture, "that they might rise again to a better life" (11:35). The noun *apolýtrōsis* appears also in 9:12, 15 in the sense of redemption.

James uses *sṓzō* to mean salvation from judgment in 1:21; 2:14; 5:20. God is able both to save and to destroy (*apóllymi*, 4:12; cf. the contrast in Paul; see V.B.2 above). In 5:15 it probably refers to physical healing — as it often does, especially in Luke — though the following reference to forgiveness of sins might suggest spiritual salvation as well.

1 Peter uses OT imagery in its discussion of salvation concepts. Just as the Israelites were rescued from Egypt and given an inheritance, so through Christ's blood Christians are redeemed (*lytróō*, 1:18) and have become God's special people (2:9, echoing Ex. 19:5f.), and because of Christ's resurrection they are guaranteed an inheritance and await the full revelation of salvation (*sōtēría*, 1 Pet. 1:3-5). While salvation is future in this sense, it is also described in terms of present experience (1:9, using a present part. following a clause with *artí*, "now," v. 8). Furthermore, salvation (*sōtēría*) is something into which one grows (2:2). Thus the noun *sōtēría* has a temporal elasticity. The OT prophets had at least a partial understanding of this salvation (1:10). The verb *sṓzō* occurs twice in 1 Peter. One use (3:21) is in the complex "spirits in prison" passage (cf. v. 19): baptism saves as a "pledge of" (NIV) or "appeal for" (RSV) a good conscience. The antitype is the Flood, through which Noah's family was saved (*diasṓzō*, v. 20). *Sṓzō* also occurs in 4:18.

Apart from the frequent use of *sōtḗr* noted above (V.B.3), the only salvation terminology in 2 Peter occurs in 3:15, which states that the delay in God's judgment means that salvation is still available. Jude has two references to salvation (vv. 5, 23); both portray salvation against a dark background of destruction (*apóllymi* in v. 5, fire in v. 23).

The Johannine writings generally use "eternal life" rather than "salvation" as the major category to express God's gift. Nevertheless, a number of significant texts employ salvation terminology One is in connection with the important Johannine theme of judgment, in the programmatic passage Jn. 3:16-21: God did not send His son to condemn but to save the world (v. 17; cf. 12:47). In Jesus' conversation with the Samaritan woman (ch. 4) He affirms that "salvation is from the Jews" (v. 22); later the Johannine themes of witness (4:39, 41f.), belief (vv. 39, 41f.), and knowledge (v. 42) provide the context for the expression "Savior of the world." Significantly, the same title occurs in 1 Jn. 4:14, where witness (v. 14), belief (v. 16), and knowledge (vv. 13, 16) are also clustered. This passage, which has the only occurrence of salvation terminology in the Johannine Epistles, also includes the idea of the Father sending the Son, a significant theme in the Fourth Gospel.

Jesus speaks of His own witness to Himself in Jn. 5:31-47, in which context He also points to John as a witness, "that you may be saved" (*sṓzō*, v. 34). In the Good Shepherd discourse, the one entering the door by Christ will be saved (10:9). In 11:12 the verb means to recover from illness. Finally, Jesus rejects the idea of being "saved" from the hour of trouble in 12:27.

Under the influence of R. Bultmann in the mid-20th cent., Johannine theology was reinterpreted as an early expression of Gnostic ideas. One element in this reconstruction was the idea that John's picture of Jesus exhibited characteristics of the Gnostic redeemer myth. Although various Gnostic writings contain references to the earthly Jesus, they relate salvation not to an objective atonement that Jesus achieved on the cross, but rather to a new knowledge made possible by revelation brought by the heavenly Savior. While revelation and knowledge are significant in John, the essential differences between Johannine and Gnostic thought, along with the anachronism involved in postulating a Gnostic background, make this hypothesis untenable.

VI. Theological Significance.—Because salvation is a comprehensive term, it inevitably involves many aspects of God's gracious work. The associated terms reflect the fact that salvation is often *from* something. Thus forgiveness is involved, as salvation is from judgment. In turn, the idea of judgment introduces forensic imagery, bringing into focus the doctrines of justification and righteousness. In that salvation is also from sin, sanctification is brought into the picture. Since salvation is often *to* or *for* something, it is also connected with reconciliation, which in turn brings us to union, both with God and within the body of believers. The fact that salvation is by grace and through faith connects it with these two important biblical doctrines. Since it cost the life of God's Son, it involves redemption. The question of whether salvation can be "lost" requires a consideration of perseverance. So it is that the circle of biblical concepts widens. In the OT something of the richness of salvation is conveyed by a variety of terms. In the NT the *sṓzō* group carries most of the weight, with specialized terminology used sparingly for the associated doctrines.

While the NT is clear that salvation is possible only through the death of Christ, the Church's understanding of the purpose of the atonement is not uniform. In the 20th cent. attention has been redirected, especially under the influence of R. Bultmann, to the effect of the cross in one's existential experience. Earlier formulations of this type spoke of the moral influence of Jesus' death. In such

views the meaning of salvation is changed from its dominant biblical sense of rescue by one beyond oneself. The classical view saw Christ's death as a victory over Satan. This view does indeed stress a definite saving work of God, but it is incomplete, failing to bring together all the biblical elements of salvation terminology. The so-called penal view, which takes various sub-forms (some entailing theological difficulties), stresses the holiness of God, who took direct action to deal with the sin that required judgment in order to make salvation available to guilty people. The term "substitutionary atonement" is important to this view of the saving work of Christ. The way in which salvation is made effective in the individual is viewed differently in Roman Catholicism, Eastern Orthodoxy, and Protestantism. Roman Catholicism, e.g., sees salvation as mediated through the sacraments.

Another issue regarding salvation is the so-called *ordo salutis*, the order of salvation. The term was coined by a Lutheran, J. Carpov, in 1737. He proposed the following order: illumination, repentance, saving faith, regeneration, conversion, justification, mystical union, sanctification, conservation and perseverance, various degrees of grace. From the perspective of biblical theology it is difficult to establish any clear "order." The concept of order is more logical than chronological, but even so the Scriptures are sometimes ambiguous. The preference for subordination in Greek sometimes contributes to this ambiguity, as in Eph. 1:13, where the aorist participle in "having believed, you were sealed" probably conveys not chronology but either grounds or simply parallel experiences.

The *ordo salutis* is related to, but distinct from, the "decrees" of God. The latter category is more comprehensive, having to do with the logical sequence in which God determined or permitted the course of human guilt and salvation. It includes election, permission for the fall, the gift of Christ for salvation, and sanctification, and it especially focuses on the issue of when election enters into this sequence. The *ordo salutis*, on the other hand, involves the actual divine work and human response in the process of salvation. The typical Lutheran order has been: vocation, illumination, conversion, regeneration, justification, mystical union, renovation, conservation. A Reformed construction would be something like: calling, regeneration, faith, justification, sanctification, glorification.

The interrelationship of OT and NT is an essential part of any study of the biblical view of salvation. Dispensational approaches have tended to stress discontinuity, while covenantal approaches stress continuity in the way God's saving grace is bestowed. Dispensationalism, especially in its earlier forms, has distinguished sharply between the gospel of grace preached in the present age and the gospel that characterized other dispensations, such as the "gospel of the kingdom." Covenant theology stresses the continuity of the Testaments, focusing not only on the covenantal theme but also on such themes as promise and fulfillment or the people of God.

A significant approach to both the doctrine of salvation and biblical theology as a whole uses the term "salvation-history" (*Heilsgeschichte*). The term had been used before the 20th cent., but it resurfaced, especially in the work of O. Cullmann, as an alternative to Bultmann's existential theology. The term receives different meanings and content from different scholars. Basically it refers to the ongoing work of God in (some would say alongside of) the progress of human history. For some scholars this approach transcends questions of biblical criticism, while for others the two are methodologically interrelated. Salvation-history claimed attention, especially in the 1960's and 1970's, as a major theme or even as a unifying center of NT theology. Some OT theologians as well found it useful in synthesizing OT thought. But it no longer occupies the place in theological discussion that it once did.

Among the questions raised by modern theologians is that of how salvation is applied to the human situation. K. Rahner is among several post-Vatican II Roman Catholic theologians who have discussed the application of salvation to those beyond the bounds of the Church. For Rahner there is a sacramental causality in the cross and Resurrection that affects even those who are not consciously Christian. In quite a different direction, the liberation theologian G. Gutiérrez sees salvation as worked out on several levels, including that of political process. Other theologians, such as E. Schillebeeckx and J. Moltmann, have sought ways to apply salvation to human suffering. Such efforts draw on the biblical texts regarding salvation and the cross of Christ but employ these in new theological formulations.

Modern discussion has emphasized on all sides the premise that, however mediated, salvation is by grace and only on the basis of the saving work of Christ. God's declarations of forgiveness in the OT, along with predictions and genuine "types," anticipate the salvation to be accomplished by the Messiah. Thus "salvation" is a term essential to both Testaments. Formulas, contexts, and emphases differ, but the core is the same: God is the only Savior, and human beings depend on Him both for spiritual salvation and for daily welfare. The circumstances in and from which God delivers His people may be extreme, but God is able to save.

SALVE [Gk. *kollýrion*] (Rev. 3:18); AV EYE SALVE; NEB OINTMENT. A medical compound applied to the eyes (cf. Lat. *collyrium* in Horace *Satires* i.5.30 and Heb. *qîlûrîṯ* in rabbinic literature). Rev. 3:18 may be alluding figuratively to the Phrygian powder that was used by Laodicea's famous medical school for making an eye salve (see *LSC*, comms.). The Laodiceans need a salve for their spiritual blindness.

SAMAEL sam'ə-el (Jth. 8:1, AV). *See* SALAMIEL.

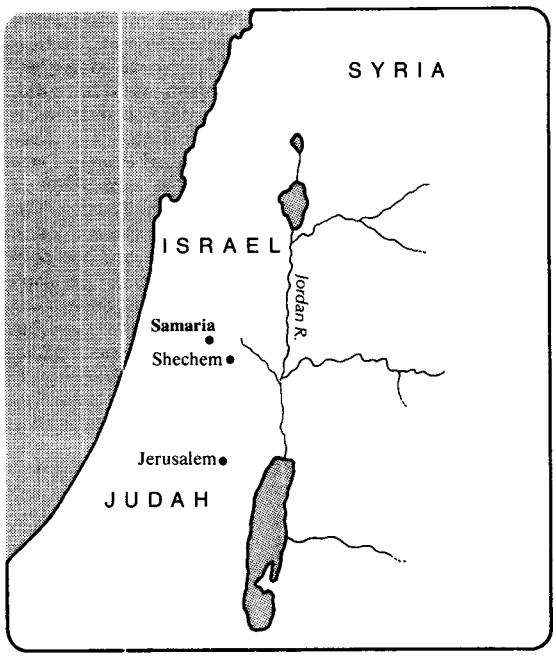
SAMAEAS sə-mā'əs (NEB 1 Esd. 1:9; 8:39, 44; 9:21). *See* SHEMAIAH **10, 18-20.**

SAMAIAS sə-mā'əs (AV 1 Esd. 1:9; 8:39; Tob. 5:13). *See* SHEMAIAH **10, 18, 28.**

SAMARIA sə-mâr'ē-ə [Heb. *šōm^{e}rôn*; Aram. *šām^{e}rayin* (Ezr. 4:10, 17); Gk. *Samareia, Somorōn* (Ezra); other forms in 1 K. 16:24 only].

1. A residence of the rulers of Israel during the divided kingdom. It is mentioned 190 times in the OT and frequently in Assyrian records (as "Samerina") and Aramaic, Greek, and Latin literature.

The oldest excavated remains of Samaria, located on a hill about 68 km. (42 mi.) N of Jerusalem, are Early



Bronze IV potsherds (late 3rd millennium B.C.). A few Early Iron potsherds (1200-900 B.C.) may point to a small settlement on the hill in the days of the judges and first kings. They may also support the identification, made by LXX Alexandrinus and other MSS, of Samaria with "Shamir in the hill country of Ephraim," the dwelling place of the judge Tola (Jgs. 10:1f.).

In any case, Samaria was of slight importance before the reorganizer of the northern kingdom, Omri, decided in his seventh year (*ca.* 880 B.C.) to make it his residence. The spot was well chosen: a nearly isolated hill surrounded by a fertile valley (Isa. 28:1, 4) and connected with the surrounding hill country only by a saddle in the east. The location justifies the name *šōmᵉrôn*, which can be rendered "watching point." A stronghold on the top of the hill could be easily defended, and it controlled the whole surrounding area, including caravan roads to the north, west, and south.

According to 1 K. 16:24 Omri bought the hill for the rather large sum of two silver talents (60 kgs., 132 lbs.); thus the city that he built was the private property of Omri and his descendants and technically not the capital of the northern kingdom, just as Jerusalem belonged to David and his descendants. Samaria was subject not to the decisions of the tribes and their popular gatherings, but to the king and local authorities only. A personal union existed between the city-kingdom of Samaria and the tribal kingdom of Israel in the same way that Jerusalem and Judah were united only through the person of the Davidic king.

The name of the former owner of the hill, Shemer, might originate, at least in its vocalization, from a malevolent pun by the Judean biblical author: *šemer* means "dregs"; cf. how Shechem in NT times was called Sychar, "strong drink."

Excavations have uncovered substantial parts of Omri's buildings, including his royal palace with adjacent town wall, gate, and watchtower. A large water basin inside Omri's northern wall might be "the pool of Samaria" mentioned in 1 K. 22:38. Even more conspicuous are the results of Ahab's building activities. On the western side he added a strip 30 m. by 100 m. (100 ft. by 330 ft.) to Omri's city, and between the older and the newer wall a large storehouse was erected. Moreover, the simple wall of Omri was supplanted by a casemate wall that is the best extant example of Israelite stone technique. The sites of the temple of Baal and Ahab's "ivory palace" are unknown. But many ivory plaques, excellent pieces of decorative art, partly in Egyptian and partly in north Syrian style, have been discovered near and inside the middle part of the northern casemate wall; these plaques, often inlaid with semiprecious stones or covered with gold, were used to decorate furniture.

It was probably Ahab who enlarged Omri's town to the east with a new quarter as large as the royal precinct, perhaps to find space for commoners who wanted to settle near the royal court. The town then covered about 4.8 ha. (12 acres), an area larger than pre-Davidic Jerusalem but smaller than the same city after Solomon's additions. A second gate at Samaria gave access to the quarter of the commoners. The "bazaars" — trading posts with extraterritorial privileges — that the kings of Damascus had in Samaria (1 K. 20:34) probably were built outside the city wall, as was done elsewhere. The sieges of Samaria by the Syrian king Ben-hadad (1 K. 20; 2 K. 6:24–7:20) have left no trace in the archeological remains. An alabaster jar fragment inscribed with the name of the Egyptian pharaoh Osorkon II (870-847) dates from the time of Ahab. After Jehu's revolution (2 K. 9) the courtiers and commoners delivered the town to the new dynasty (2 K. 10); on this occasion the temple of Baal, of which no remains have been discovered, was destroyed. The sixty-five ostraca found in the storehouse between Omri's and Ahab's western walls date from the time of Jehu's great-grandson Jeroboam II (786-746) or even more probably from the reign of Menahem (746-736). They contain invoices of quantities of oil and wine delivered by the stewards of royal olive gardens and vineyards to the officials of the royal court. The proper names attest to the worship of both Baal and Israel's God.

The last king of Samaria, Hoshea, first submitted to Assyria but later, under Egyptian influence, tried to restore Israel's independence. The Assyrian king Shalmaneser V (727-722) besieged the city, which held out for three years. During the siege Shalmaneser died; but his general Sargon II, founder of the last Assyrian dynasty, conquered Samaria, as related in his annals and in 2 K. 17:1-6 (which does not name Sargon; *see* SARGON III). The inhabitants of the town and the rest of the population of the northern kingdom were carried into exile. Since Sargon's annals give the number of displaced persons as 27,280, this number must include not only Samaria but also Hoshea's subjects in the rest of his greatly reduced kingdom; but one may assume that in this case, as often, only the leading classes of society were exiled. The Assyrians replaced the exiles with groups from Babylon, Cuthah (32 km., 20 mi. NW of Babylon), Avva (unknown), and Hamath and Sepharvaim (two towns in Syria). The second of these place names gave the Jews of later times occasion to refer to the mixed population of Samaria and its surrounding as Cutheans; 2 K. 17:24-41 describes this cultural and religious mixture.

Samaria, which had become the capital of the Assyrian province of this name, participated in a new revolt involving Syrian and Philistine rulers assisted by Egypt (721); but this was soon quenched by Sargon (*ANET*, p. 285). According to Ezr. 4:2, 10 new deportations to Samaria took place under Esarhaddon (681-669) and Ashurbanipal (669-627); cuneiform fragments give the names of

One of the ivories found in Samaria, possibly from the Royal Palace. On this piece the god Hah, seated with his legs folded, holds two palm branches from which hang *ankh* signs (Israel Department of Antiquities and Museums, photo H. Burber)

three governors of this period. An Israelite core remained faithful to the ancestral religion and made pilgrimages to the temple of Jerusalem, even after its destruction (Jer. 41:5). Some Samaritans offered to help with the reconstruction of the Jerusalem sanctuary in 537 but were refused (Ezr. 4:1-3).

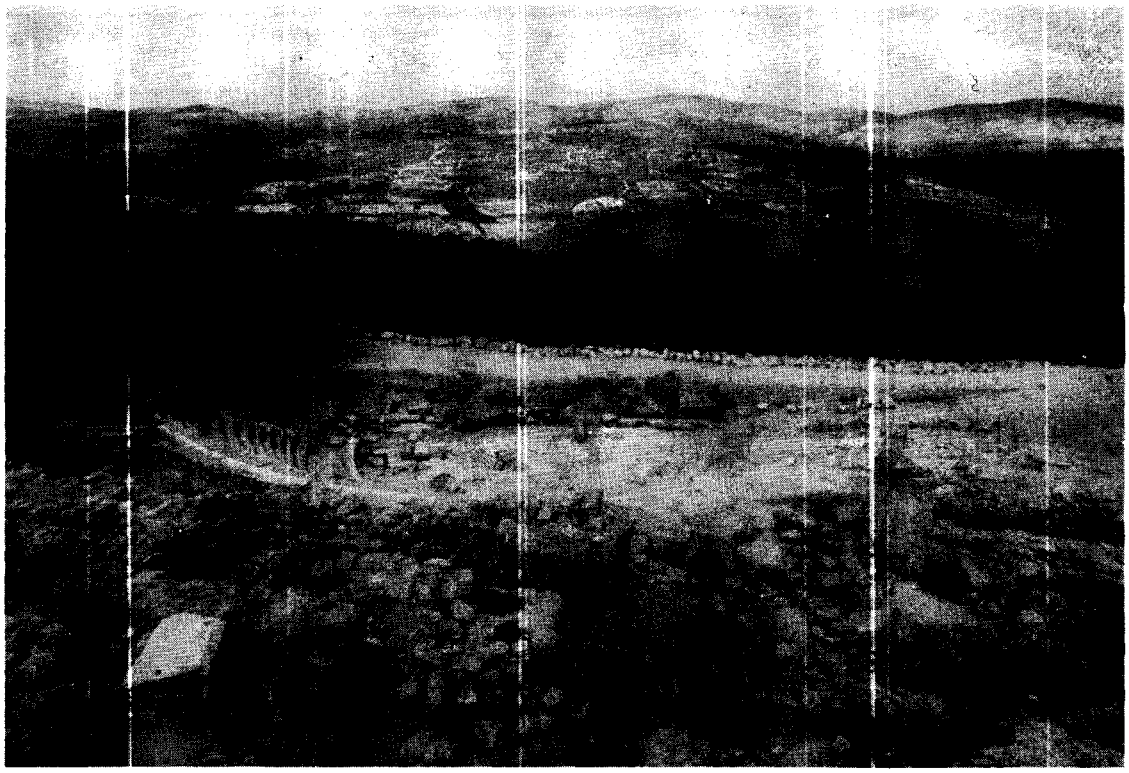
This marked the beginning of antagonistic relations between Samaria and Jerusalem — although the sect of the Samaritans had its center not in Samaria but in Shechem. The antagonism is clearly seen in the machinations of Sanballat, governor of Samaria in the second half of the 5th cent. B.C. (Neh. 2:10, etc.). The names that Sanballat gave his two sons, Delaiah and Shelemiah (mentioned in the Elephantine Papyri), show that he paid worship to Yahweh despite his own pagan name. From papyri it is now known that during the 4th cent. B.C. Samaria had two other governors named Sanballat; it was probably the third one who obtained permission from Alexander the Great to build a sanctuary on Mt. Gerizim near Shechem (Josephus *Ant.* xiii.9.1 [255f.]).

In 331 B.C. Alexander the Great severely punished Samaria when its inhabitants burned alive Andromachos, his governor in Syria; many of its inhabitants were deported, and a colony of Macedonians was installed there. The town took on a Hellenistic appearance, especially when shortly after 300 it was fortified anew following the ravages in the wars between the Diadochi. From this time date three circular towers. The prosperity of the next two centuries is attested by numerous coins and Rhodian stamped jug handles. John Hyrcanus entrusted an expedition against the town to his two sons, who succeeded after a one-year siege (108 B.C.).

After Pompey's annexation of Palestine in 63 B.C. the proconsul Gabinius restored the city of Samaria, which had grown to about 12 ha. (30 acres). Herod the Great surrounded the whole hill with a fortified wall, thus enlarging the town to about 80 ha. (200 acres). Most imposing were the western gate with its two large circular towers, the temple of Augustus with its terraces and monumental staircase, and the stadium. The town was called Sebaste (Greek for "Augustus") after the Roman emperor. From the times of Septimius Severus (A.D. 193-211) and his immediate successors date the colonnaded street, the theater, a temple of Kore, and the basilica with adjoining forum.

In Byzantine times a church was erected immediately S of the acropolis in honor of John the Baptist. The Crusaders built a church near the eastern gate of Herod's wall on the foundations of a Byzantine church; it is now the mosque of the Arab village Sebaṣṭiyeh, which has

The Hellenistic round tower at Samaria. It is built on an Israelite wall breached for insertion and connects with a Hellenistic wall (D. Blatt)



The ruins of Samaria showing the top of the Hellenistic tower (in the foreground), the Roman theater (center), and the Nablus area in the distance (D. Blatt)

preserved the name but none of the glory of Herod's Sebaste.

"Samaria" in NT times means not the town but the middle region of Palestine.

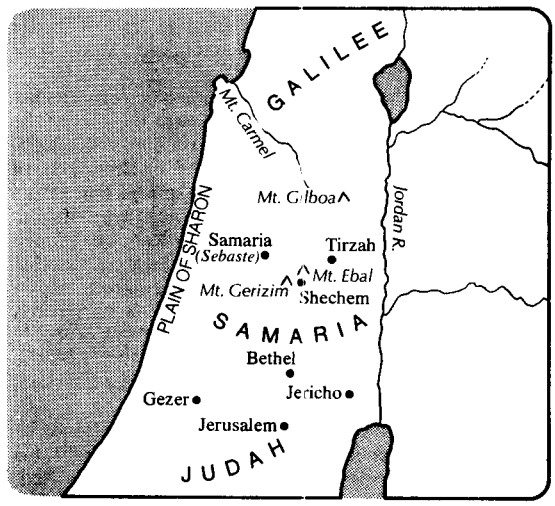
2. (1 Macc 5:66 AV). With the Latin version and Josephus (*Ant.* xii.8.6 [353]) this should be read "Marisa." *See* MARESHAH.

3. A locality in Egypt mentioned in papyri from the 3rd cent. A.D. It probably originated from the transfer of Samaritans to Egypt by Alexander the Great and Ptolemy I.

A. VAN SELMS

SAMARIA sə-mâr'ē-ə, **COUNTRY OF** [Heb. *šōm^{e}rôn*; Aram. *šām^{e}rayin*; Akk. *Samerina*; Gk. *Samareia*; traditionally derived from the tribe or clan name Shemer, but more likely from *šōmēr*, "watchman"; cf. Isa. 21:11]. A region in Palestine located between Galilee (N) and Judah/Judea (S) and between the Jordan Ghor (E) and the Sharon plain (W).



I. Name
  A. (Mountain of) Ephraim
  B. Israel, Samaria
II. Physical Description
  A. Size and Location
  B. Physical Features
III. History
  A. OT
  B. Between the Testaments
  C. NT
  D. To the Destruction of Jerusalem

I. Name–The name "Samaria" was given to the region after the hill of Samaria was selected by Omri to become the capital of the northern kingdom (1 K. 16:24), *ca.* 879 B.C., so that earlier references (e.g., 1 K. 13:32) may be considered as later interpolations.

A. (Mountain of) Ephraim. Following the tribal allot-

The foothills of the "hill country of Ephraim" in Samaria (W. Braun)

ments, the name "Mountain of Ephraim" (*har 'eprayim*, more realistically translated "hill country of Ephraim" [RSV]) was used for the central mountain ridge and adjacent territory (Josh. 17:15; Jgs. 3:27; 1 S. 1:1). In the patriarchal narrative, the region was included in "the land of Canaan" (Gen. 12:5f.). When Moses sent the twelve to spy out the land (Nu. 13:1ff.), the name used for the region north of the Negeb was simply "the hill country" (Heb. *hāhār*, "the mountain"), which included the mountain of Judah (Josh. 21:11) and the mountain of Ephraim. In their report the spies described the hill country as the place where the Hittites, the Jebusites, and the Amorites dwelt (Nu. 13:29). The Cisjordanian region was simply divided into "the hill country" and "the lowland all along the coast" (9:1). The "mountain of Judah" and the "mountain of Israel" are mentioned together in Josh. 11:21 — again, using terminology of a later period. Further north, in the vicinity of the Sea of Galilee, the region was "the northern hill country" (Josh. 11:2). In Josh. 20:7, the terms "the mountain of Naphtali," "the mountain of Ephraim," and "the mountain of Judah" reflect the territories more commonly known as Galilee, Samaria, and Judah.

B. Israel, Samaria. With the schism, the northern tribes were called "all Israel," excepting the tribe of Judah (1 K. 12:20). In the prophets, Ephraim is a surrogate for Israel (Hos. 5:3; 11:8) and for Samaria (7:1). Amos uses the term "mountains of Samaria" for the northern kingdom (Amos 3:9; 4:1), as well as "the house of Joseph" (5:6) and "house of Israel" (5:25; 7:10). In Micah the two kingdoms are designated as "Samaria" and "Jerusalem" (Mic. 1:1, 8). Under the figure of Oholah and Oholibah Ezekiel likewise used "Samaria" and "Jerusalem" as names for the two kingdoms (Ezk. 23:4); the judgment on Ohlolah was to serve as a warning to Oholibah (23:11ff.).

Isaiah called the territory "Ephraim" and its capital "Samaria" (Isa. 7:9). "The mountains of Samaria" appears

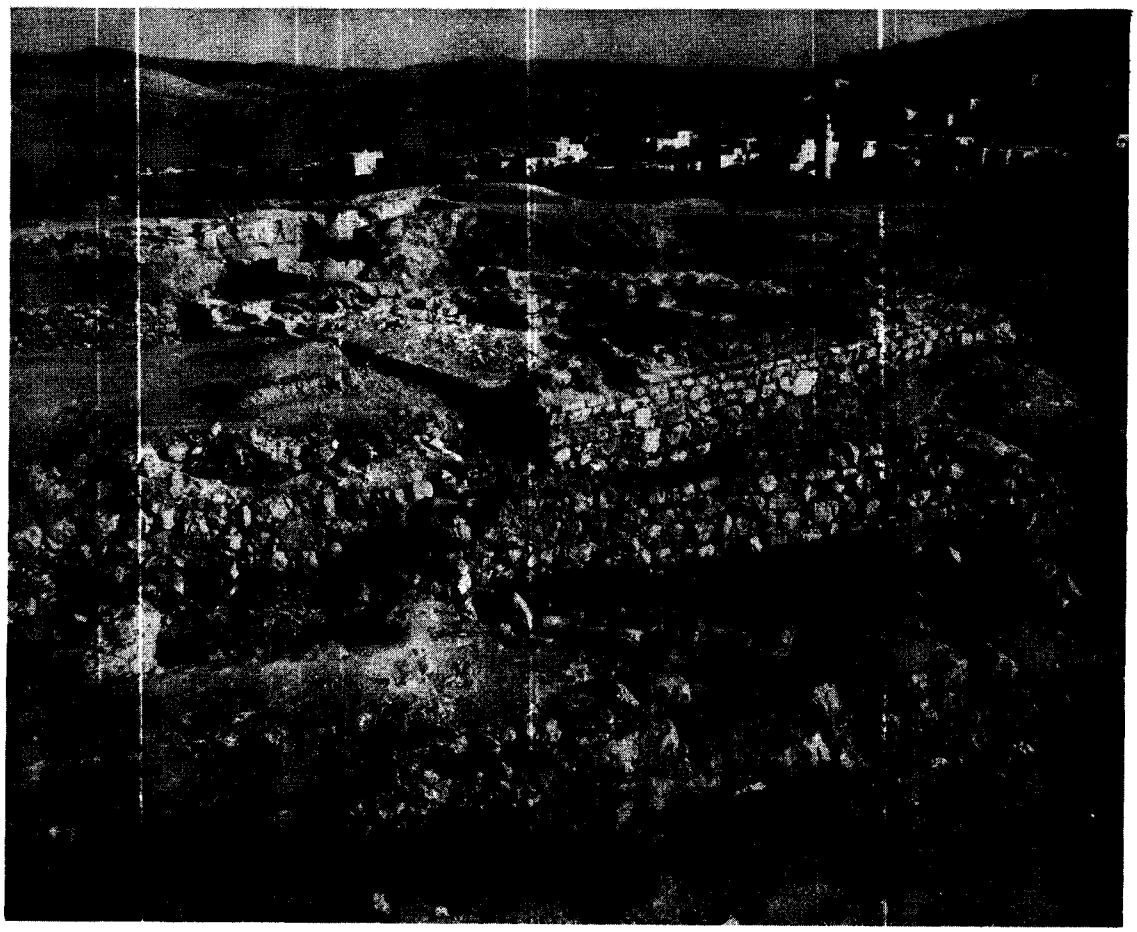
to be synonymous with "the mountains of Ephraim" (Am. 3:9; Jer. 31:5f.). The Assyrians made the country part of the empire as the province of Samerina (*ARAB*, I, § 772 [Tiglath-pileser III]); on the other hand, Sargon referred to the city as Samerina and the country as Bit Ḫumria ("the house of Omri"; *ARAB*, II, § 80). After the return from exile Samaria was part of the Persian province "Beyond the River" (i.e., the Euphrates [Aram. *ʿabar nahʿrê*]; cf. Ezr. 4:17; 5:3; etc.), as was Jerusalem (Neh. 2:9). With the Samaritan-Jewish schism, Samaria became a geographical entity that continued through several political ramifications.

II. Physical Description.–A. Size and Location. Because "Samaria" included different areas at different times, it is necessary to define the period to which the discussion applies, e.g., OT, Assyrian, Persian, etc. In the present work we are principally interested in the biblical usages of the term. Accordingly, Samaria is used of the region S of Galilee and N of Judah (Judea). The northern boundary in general is the hills that form the southern edge of the plain of Esdraelon. The southern boundary is less definite, but it approximately follows the southern boundary of Ephraim (Josh. 16:5-9), i.e., from Jericho on the east to the sea on the west, including Bethel, Beth-horon, and Gezer. As indicated in the biblical text, there were Canaanite enclaves (Gezer is specified, v. 10), and it is unlikely that the coastal plain was part of Samaria in OT times. From north to south Samaria was about 65 km. (40 mi.) and from east to west about 56 km. (35 mi.). Cf. *LBHG*, p. 257.

B. Physical Features. G. A. Smith describes Samaria as "fair and open" (*HGHL*, p. 216). Actually, Samaria has two natures: the southern (Ephraim) is less open than the northern (Manasseh), although both are more open and fertile than Judah. D. Baly speaks of "the Dome of Ephraim" and "the Basin of Samaria" (*GB*, p. 164), which is not only geologically accurate but also reasonably descriptive. The Dome of Ephraim is formed of Cenomanian limestone, whereas the Basin of Samaria may be characterized as a center of hard Eocene limestone (the mountains Ebal and Gerizim) surrounded by softer Eocene chalks and marls and Senonian chalk. The casual visitor to northern Samaria may not notice its basin-like character, because the high peaks of Gerizim (881 m., 2890 ft.) and Ebal (940 m., 3083 ft.), as well as other mountains rising above 750 m. (2475 ft.), interrupt the general structure. On the eastern side (toward the Jordan) the land falls rapidly to the Jordan Ghor. On the west the land drops gradually by a series of hills (Shephelah of Israel, Josh. 11:16) to the Sharon Plain. The Shephelah of Samaria, however, is not nearly so wide as that of Judah.

1. Rivers. There are no major rivers (the Yarkon comes closest), only wadis (valleys with seasonal rivers, some of which have water year around). To the east Wâdī Mâliḥ

The temple ruins and countryside around Shechem, the central city of Samaria (Joint Expedition to Shechem, photo L. C. Ellenberger)



descends from Ṭūbâṣ (Thebez, 2 S. 11:21) to the Jordan Ghor at Abel-meholah (1 K. 19:16), about 15 km. (9 mi.) S of Beth-shean; Wâdī Fār'ah (Nahal Tirzah) descends from Tirzah to the Jordan near Adam (Josh. 3:16); and there are lesser wadis.

To the west Nahal Daliyyah (just S of Dor), Nahal Tanninim (Wâdī ez-Zerqā, Crocodile River) N of Caesarea, Nahal Aleksander N of Netanya, and the Yarkon (Nahr el-'Aujā) N of Tel Aviv, may be mentioned. The Yarkon, which rises from the copious springs at Ras el-'Ayin, is believed to be the site of the port (Tell Abū Huwam) from which cedars of Lebanon were offloaded to be taken to Jerusalem (cf. 1 K. 6:9; 7:2).

2. Roads. Shechem was the central point, where the main north-south road and an east-west road met. The north-south road generally followed the water-parting, much as the modern road does. However, it possibly went E of Jebel Battin and Lubban, passing near Shiloh, and from Shechem it probably went E of Mt. Ebal via Tirzah and Thebez to Dothan (Gen. 37:17), then to En-gannim (Josh. 19:21; Jenin), Ibleam (17:11), and the plain of Esdraelon. Later the main road was routed between Mt. Gerizim and Mt. Ebal, then W of Samaria, to Dothan.

The east-west roads followed the valleys, as they do today except where major engineering has been done. From Shechem a road led west by Wâdī Shechem to the Via Maris at Socoh (Soco, 1 K. 4:10), modern Shuweikah 2 km. (1 mi.) N of Tulkarm; Wâdī Shechem feeds into Wâdī Aleksander. This road approximates the modern road from Nâblus to Tulkarm. A road east from Shechem led via Tirzah and the Wâdī el-Far'a (Nahal Tirzah) to the Jordan Valley at Adam, providing an almost direct route from the Via Maris to Ammon and Gilead. Jacob almost certainly took this route from Succoth to Shechem (Gen. 33:17f.). Another road led from Gath(-padalla), modern Jett (*see* GATH III; 1 Ch. 7:21) by Nahal Hadera (Wâdī Mifjir) to Dothan, thence forking to either Tirzah or En-gannim (Jenin). A branch from this road led north by Wâdī Abdullah to the pass into the Valley of Esdraelon at Taanach (Josh. 12:21). Thutmose III mentioned Taanach (cf. *ANET,* p. 235). From Thebez a road led to the Jordan Valley at Abel-meholah (1 K. 19:16) by way of Wâdī Mâliḥ. The Via Maris continued north from Gath to Nahal 'Irôn (Wâdī 'Ara), then by the pass leading to the Valley of Esdraelon at Megiddo (Josh. 12:21); Thutmose III left several records of his battles (*ANET,* pp. 234-37). Both Thutmose III and Ramses II left descriptions of the pass (*LBHG,* p. 51). Of lesser importance were branches, one leading by a pass to Jokneam (Josh. 21:31), and the other around the "antelope's nose" of Mt. Carmel to Acco.

In the south of Samaria, a major road led from Bethel to Jericho by way of Wâdī es-Ṣuweinîṭ and Wâdī Qelt. A road of lesser importance led from Shiloh by way of Ophrah and Wâdī 'Aujā to Jericho. From Bethel to the west, one road led to the Via Maris at Aphek (Antipatris), thence to Joppa, by way of Gophna, and Beth-laban; another led to the Via Maris at Gittaim via Gibeon, Beth-horon, and the Valley of Aijalon; an alternate road went from Gibeon to Aijalon by way of Kiriath-jearim (Josh. 9:17). The Via Maris ("way of the sea"; cf. Isa. 9:1) was located along the eastern side of the Sharon Plain, about 12 km. (8 mi.) from the shoreline, at the foot of the mountain of Samaria. *See* PALESTINE IV.D.

3. Mountains. The mountains of Ebal and Gerizim have been mentioned. At the northern edge of Samaria was the Carmel (530 m., 1742 ft.) at the northwest (but some would include the Carmel in the territory of Asher; cf. *IDB,* I, 707; Josh. 19:26) and the mountains of Gilboa (520 m., 1696 ft.) at the northeast. These serve as the rim of the Basin of Samaria. There were passes leading to the Valley of Esdraelon at Jokneam, Megiddo, Taanach, and Ibleam. *See* PALESTINE IV.B.

4. Cities. Because the names, in many cases, were changed from period to period, the use of the *Student Map Manual* (1979) or a similar publication is recommended, where each map is limited to a specific period and the names of that period are used.

For climate and biota, *see* PALESTINE V, VI.

III. History.–A. OT. The Bible indicates that there were inhabitants in the land before the Israelite conquest, and archeological excavations confirm this (at both Ai and Shiloh finds are dated to Middle Bronze, *ca.* 2000 B.C., while at Shechem the remains date back to Chalcolithic, *ca.* 4000 B.C.). (The discoveries from Mesolithic and early Neolithic in the Carmel caves at Mughâret el-Wâd lie beyond our present study.) Their identity is covered by the general term "Canaanites" (Gen. 12:5f.; 34:30), but other names appear at various points in the record: Perizzites (Gen. 34:30), Amorites (Josh. 7:7; 10:5), Hivites (Josh. 9:3, 7), etc.

Because of the importance of Jerusalem as the cultic and political center, it is sometimes forgotten that the northern portion was also the scene of significant events. Abram built an altar at Shechem, and another at Bethel (Gen. 12:7f.). Jacob received a revelation from God at Bethel (28:10-22), and later erected an altar at Shechem (33:20) and a second time at Bethel (35:7). The bones of Joseph, which had been brought from Egypt, were buried at Shechem (Josh. 24:32). Joshua's charge to Israel, just before his death, was given at Shechem (24:25), and he was buried at Timnath-serah in the hill country of Ephraim (24:30; Jgs. 2:9). Shechem was one of the cities of refuge (Josh. 21:21).
