a) עדה, from the root יעד, "to appoint," designates a company assembled by appointment. The idea of appointment, however, is not always apparent in the uses of the word; it is used, e.g., of a swarm of bees (Judg. 14:8) or a herd of bulls (Ps. 68:30). The word may be applied to any gathering, group, or class viewed collectively, especially the wicked—e.g., in Job 15:34 KJV ("congregation of hypocrites"; RSV "company of the godless"); Ps. 22:16 KJV ("assembly of the wicked"; RSV "company of evildoers"); Ps. 86:14 KJV ("assemblies of violent men"; RSV "band of ruthless men"); Ecclus. 16:6 ("assembly of sinners"). In Ecclus. 7:7; 42:11, עדת שער designates the town gossips who meet at the city gate. The partisans of Korah are referred to as "his company" (עדתו; Num. 16:5); and the same term is applied to Job's household (Job 16:7), if the text is not corrupt. The "congregation of the righteous" (Ps. 1:5) refers, perhaps, to a legal or judicial assembly rather than to the righteous in general. In Ps. 7:7—H 7:8 the "assembly of the peoples" (עדת לאמים; KJV wrongly "congregation of the people") applies to all the peoples of the earth, who are summoned for judgment before the Lord. In Ps. 82:1 the expression עדת אל ("divine council"; KJV "congregation of the mighty") is nearly identical with Ugaritic *'dt ilm*, which is one of several designations of the pantheon in the Ugaritic texts.

The term עדה is frequently used as a designation of the body politic of Israel, especially Mosaic Israel encamped in the wilderness. The name Israel may be added to make explicit the identification of the community as the "congregation of Israel" (עדת ישראל; Exod. 12:3, 6, 19, 47; Lev. 4:13; Num. 32:4; Josh. 22:18, 20; I Kings 8:5) or "all the congregation of the people of Israel" (כל עדת בני ישראל; Exod. 16:1-2, 9-10). Or the community may be identified by the addition of the divine name (the "assembly of Yahweh," עדת יהוה), the "congregation of the LORD" (Num. 27:17; 31:16; Josh. 22:16); or by a possessive suffix referring to the Lord (Ps. 74:2). Frequently the word is simply determined by the article, "the congregation" (העדה; Lev. 4:15; 8:4-5; 10:17; Judg. 20:1; 21:10, 13, 16; "the assembly" in I Kings 12:20) or amplified by the adjective "all" (Lev. 8:3, and some thirty times in the rest of the Hexateuch).

The word עדה as a technical term applied to the nation Israel is characteristic of the P Document; it is not used in D or JE and is rare in other historical books; Judg. 20:1; 21:10, 13, 16; I Kings 8:5 (=II Chr. 5:6); 12:12 are the only other instances of such usage. As used in P, the term appears to designate the responsible element of the nation, the full citizens who have the rights and duties of looking after the affairs of the nation. At the head of the עדה is Moses, and the tribes are represented by leaders or chiefs (נשיאי העדה; Exod. 16:22; Num. 4:34; 31:13; 32:2; Josh. 9:15, 18; 22:30), or elders (זקני העדה). Another term for these "leaders of their ancestral tribes, the heads of the clans of Israel," is קרואי העדה (Num. 1:16; 26:9; "[ones] chosen from the congregation"; KJV "renowned of the congregation," "famous in the congregation"). Males of the community twenty years of age and over who were fit for military service (Num. 1:20) are called פקודי העדה (Exod. 38:25), "those of the congregation who were numbered." The signal for the summoning of the whole community was the blowing of two silver trumpets; and for the leaders only to meet with Moses, a single trumpet (Num. 10:2-4).

b) The term קהל, possibly derived from קול, "speak," hence "convocation," is used to designate various sorts of human gatherings. It is not applied to animals, as is עדה. Perhaps the oldest use of the word is in Num. 22:4, where it is applied to the numerous camp of Israel and is appropriately rendered "horde" by the RSV. In the Blessing of Jacob (Gen. 49:6) the word, in parallelism with סוד, "council" (*see below*), refers to the collusion of the tribes of Simeon and Levi in the treacherous attack on the Shechemites (34:25 ff), and is rendered as "company." In Ezekiel the term is applied to foreign military and naval forces and is variously rendered "host(s)," "company," "crew" (Ezek. 17:17; 23:46; 27:27, 34; 32:22; 38:4, 7, 13, 15). Apart from its use in the general sense of "multitude," the term, like עדה, is rare in pre-Deuteronomic literature. While in P עדה predominates (*ca.* one hundred occurrences) and קהל is used relatively infrequently (*ca.* twenty-five times), in Deuteronomistic literature the latter term is the regular designation of the theocratic convocation of Israel, the gathering of the nation for reli-

gious purposes, and עדה is not used. The term קהל is especially frequent in Deuteronomy, Chronicles, Ezra, Nehemiah, and Psalms. The use of the term is virtually identical with that of עדה: the name Israel may be added (קהל ישראל, the "assembly of Israel"; Deut. 31:30), or the divine name (קהל יהוה, the "assembly of the LORD" [Num. 16:3; 20:4]; or קהל אלהים, the "assembly of God" [Neh. 13:1]); or the word may be determined by the definite article and/or the demonstrative pronoun (Exod. 16:3; Lev. 4:13). A derived form, קהלה, occurs in Deut. 33:4; Neh. 5:7.

The distinction, if any, between עדה and קהל is difficult to determine. In Lev. 4:13 there appears to be a differentiation between עדה as the entire body politic, the community at large, and קהל as a select group, a judicial body, composed of elders. In Deut. 23:1-2 certain classes of people are excluded from the assembly קהל of the Lord; but since the term עדה is not used, there is no evidence here for the relation of the two terms. In general, the terms are used synonymously, without perceptible difference, to designate the cult community of Israel. In Num. 20 the terms are used interchangeably. The LXX generally translates עדה as συναγωγή and קהל as ἐκκλησία, uniformly so in Deuteronomy (except 5:22, where קהל is rendered συναγωγή), Joshua, Judges, Samuel, Kings, Ezra, and Nehemiah. In Exodus, Leviticus, and Numbers both terms are rendered συναγωγή, apparently for the sake of uniformity. In Psalms קהל is once rendered συναγωγή (40:10) and once συνέδριον (26:5), but otherwise ἐκκλησία. It appears that the words συναγωγή and ἐκκλησία are virtually synonymous and that the difference in usage is due to differences in time, place, and person of the various translators. In the OT Apoc. ἐκκλησία is used in the sense of a popular assembly (Jth. 6:16; 14:6; Ecclus. 15:5), but only rarely for a people as a whole (I Macc. 4:59). In the NT, ἐκκλησία is applied to the community of Israel in Stephen's speech (Acts 7:38), but συναγωγή became the normal term to distinguish Israel from other nations. An assembly of Jewish Christians is designated as συναγωγή in Jas. 2:2 and similarly ἐπισυναγωγή in Heb. 10:25 (though in II Thess. 2:1 the term has a different meaning). It was only natural that the Christian movement dispensed with the term συναγωγή, because of its Jewish associations, in favor of the term ἐκκλησία, although occasionally the early fathers used συναγωγή of the church. The developing opposition between church and synagogue is reflected in the reference to the Jewish community as the "synagogue of Satan" (Rev. 3:9). Augustine sought to establish a distinction between the Latin equivalents of συναγωγή and ἐκκλησία, *congregatio* and *convocatio*, the latter being, as he thought, the nobler term, since it is used only of men, while the former might also designate a herd of cattle. This distinction is certainly not true of the Hebrew word which the LXX usually translates συναγωγή, since עדה, while used of insects and cattle, also is applied to the assembly of the gods!

c) Other terms denoting a gathering are sometimes rendered "assembly." The term מועד, from the same root as עדה, means "appointed time" (καιρός), or "appointed place" (ἑορτή), and hence is used of sacred seasons and appointed feasts, probably set by the moon—the times at which all males had to present themselves at Yahweh's sanctuary (Lev. 23:2, 4, 37, 44; Hos. 9:5; 12:9). By extension, the term may also designate the assembly that celebrates the festival, the place of assembly, or any assembly. In Job 30:23 the nether world is called the "house appointed [בית מועד] for all living." Zion is called the "city of our appointed feasts" (Isa. 33:20), and the synagogues are termed מועדי אל, the "meeting places of God" (Ps. 74:8). The temple is designated by the term מועד (Ps. 74:4; Lam. 2:6). In Isa. 14:13 the "mount of assembly" (הר מועד) is an allusion to the holy mountain Zaphon of the Ugaritic myths. The use of מועד for the assembly of the gods, as with its cognate עדה, is attested also in the Ugaritic myths, where a plenary session of the pantheon is termed *phr m'd*. On the "tent of meeting" (אהל מועד), *see* TABERNACLE.

d) The term עצרה or עצרת, apart from Jer. 9:2, is a technical term for certain cultic assemblies. It is applied to an assembly for the worship of Baal (II Kings 10:20). In Joel 1:14; 2:15, the term is parallel to צום, "fast" (perhaps Isa. 1:13 should be emended to read "fast and solemn assembly"), but whether the parallelism is synonymous or antithetical is not clear. In Amos 5:21 the word is parallel to חג (*see* FEASTS AND FASTS), and the LXX renders πανήγυρις, which is used once in the NT (Heb. 12:23). In Isa. 1:13 the parallel is מקרא, "convocation" (RSV "assembly"). The term is applied specifically to the assembly of the seventh day of the Feast of Unleavened Bread (Deut. 16:8) and the eighth or supernumerary day of the Feast of Booths (Lev. 23:36; Num. 29:35; Neh. 8:18) and of Solomon's dedication of the temple (II Chr. 7:9).

e) The term מקרא, "convocation" (RSV "assembly"), is also used of a cultic assembly (Isa. 1:13) or the place(s) of assembly (Isa. 4:5). In P the term is מקרא קדש (LXX κλητή or ἐπίκλητος), "holy assembly" (Exod. 12:16) or "holy convocation" (Lev. 23; Num. 28:18, 25; 29:7).

f) The word סוד, "intimate, friendly conversation" (cf. Arabic *sāwada*, "speak in secret"), is applied to friendly or intimate gatherings of various sorts—a "gathering of young men" (Jer. 6:11), a "company of merrymakers" (Jer. 15:17), a "band of drunkards" (Hos. 4:18, as emended), a secret meeting of evil plotters (Ps. 64:2), the assembly of the upright (Ps. 111:1), and the privy council of God (Job 15:8; Ps. 89:7; Jer. 23:18).

g) The word מושב, "seat" (Ps. 1:1), is translated "assembly" in Ps. 107:32, where it is parallel to קהל, "congregation."

***CONSCIENCE** [ἡ συνείδησις, τὸ συνειδότος, ἡ συνέσις, τὸ συνειδός]. Roughly, and mainly, a witness within man which condemns his sin. Other nuances in its meaning, such as "consciousness," will appear below.

1. Background of the term
   a. Not derived from the OT
   b. Hellenistic origin
   c. In Latin writers
2. Meaning in general use
3. In the NT
   a. Pauline usage
   b. In non-Pauline letters

Bibliography

1. Background of the term. ***a. Not derived from the OT.*** In the LXX, συνείδησις, "conscience," occurs once only (Eccl. 10:20). The underlying Hebrew term is מדע, rendered in the RSV by "thought" (elsewhere the Hebrew word occurs in II Chr. 1:10-12; Dan. 1:17, is translated by συνέσις, and simply means "knowledge"). Conscience, as the whole context shows, here merely means "the mind" or "the inner, secret place of thought." Codex Sinaiticus reads συνείδησιν instead of εἴδησιν at Ecclus. 42:18. But since we do not know the underlying Hebrew, the reading of Sinaiticus cannot safely be regarded as pertinent. Most significant is Wisd. Sol. 17:10. Here conscience emerges with a moral connotation, as a witness within man, which condemns his sin. This approximates to what we find later in the NT. At this point, it should be emphasized that the Wisdom of Solomon shows marked Hellenistic influences, and that the emergence of the term "conscience," with a moral significance, points to the Hellenistic world as its source. This is not surprising. Hebrew thinking is theocentric, not introspective. It emphasizes God as King, and man as his obedient servant. The obedience demanded by God has been revealed to man from a source outside him in the Law and the Prophets. Not knowledge of the self (including the conscience), but the fear of the Lord, was the beginning of wisdom (Prov. 1:7; 9:10). Hence, there was no urge to examine the inner motives of man's behavior, or to concentrate on what might be called subjective psychological phenomena. In such a soil, the development of an examined theory of conscience was not to be expected. Similarly in rabbinic Judaism, where again the law given on Sinai was the light of men, the absence of any term corresponding to "conscience" is natural. The concept of the "good impulse" (יצר טוב) affords no real parallel to conscience; in any case, this was far less developed than that of the "evil impulse" (יצר רע). This is not to assert that the OT and Judaism were unaware of the phenomena which gave rise to the idea of "conscience," but that they lacked the theoretical interest to interpret them psychologically or anthropologically.

b. Hellenistic origin. The Hellenistic world, then, seems to be suggested as the background of the term "conscience" (συνείδησις); and it has been customary to connect it specifically with Stoicism (*see* STOICS). Does the evidence support the Stoic derivation of "conscience," which most NT exegetes seem to assume without question? Stobaeus, who noted down, in the sixth century A.D., the most interesting passages that he had ever read, including those dealing with conscience (though the term he used was τὸ συνειδότος), refers to Periander (625-585 B.C.) and Bias (550 B.C.) as having used the term "conscience." But there is little doubt that he was mistaken in this. The term first occurs in a passage in Democritus (460-361 B.C.), whose philosophy was akin to that of Epicurus (342-270 B.C.) and whose works were praised by Cicero. The passage reads: "Some men, not knowing the dissolution of mortal nature, suffer wretchedly throughout their lifetime from distress and fear because of their consciousness of the evildoing in their lives, making false speculations about the time after death" (Democritus 297, in Diels, *Fragmente der Vorsokratiker,* II [1952], 206-7). Here "conscience" (συνείδησις) has a moral connotation: it consists of the consciousness of wrongdoing, which causes man to spend his days in fears and anxieties, and leads him to form false ideas of the time after death, since man does not know that dissolution awaits him. The usage, however, is not precisely defined. The term next appears in Chrysippus, a celebrated Stoic philosopher born *ca.* 280 B.C. Words of his are cited by Diogenes Laërtius (240 B.C.) VII.85: "It is suitable [or fitting] for every living thing to be *aware of* its own structure and of itself." "Conscience" is here predicated of all living creatures and not only of man: it seems merely to designate a creature's self-awareness, and is without moral connotation. After Chrysippus we again note the appearance of "conscience" (συνείδησις) with moral significance in Wisd. Sol. 17:10 (*see above*), and in Philodemus (50 B.C.) *Rhetoric* II.40, and in Dionysius of Halicarnassus (died 7 B.C.) *Antiquities* VIII.1.3, where conscience disturbs Coriolanus in his approach to the Volsci, whom he had often treated brutally in battle. In Diodorus Siculus (a contemporary of Julius Caesar and Augustus) we find the term at IV.65.7, but here also it may mean "consciousness." In all these passages, with the exception of that by Chrysippus, the Stoic, συνείδησις has a moral reference.

Another Stoic, Epictetus (first century A.D.), is supposed to have employed the term in a famous passage which reads: "When we were children our parents handed us over to a nursery slave who should watch over us everywhere lest harm befall us. But when we were grown up, God hands us over to the conscience [συνειδήσει] implanted in us, to protect us. Let us not in any way despise its protection for should we do so we shall be both ill-pleasing to God and have our own conscience [συνείδοτι] as an enemy" (cited by Pierce [*see bibliography*]). This is the only passage in Epictetus, as far as is known, where συνείδησις occurs, and its ascription to him rests on the slenderest grounds, so that most scholars do not now regard the passage as authentic (*see bibliography*). But the ascription to Stoics of the term "conscience" has become very fashionable, as we saw. Stoics are said to have coined the term. Never-

theless, apart from its use by Chrysippus (and he used it without a moral connotation), there is no reason at all, to judge from the Greek sources, for regarding the term as peculiarly Stoic. Must we conclude that the Stoic origin of the term must be rejected? Not only do the Greek lexicographical data lead to this, but it is what we should expect. The term "conscience" (συνείδησις), as the passages cited already reveal, and as subsequent treatment will confirm, has undertones of emotion, anxiety, or concern, which little comport with the Stoic ideal of self-sufficiency (ἀπάθεια). Moreover, not only is "conscience" not a Stoic term, but some claim that there is no evidence that it was significant in Greek philosophy outside Stoicism. Thus it does not occur in Aristotle's *Ethics*. Consequently, they turn to popular Hellenistic thought for the origin of the term (e.g., E. Schwartz [*see bibliography*]).

c. Usage in Latin writers. The term is found in writers of Greek, such as Philo and Josephus, with a developed moral connotation, as in Paul, so that in Hellenistic circles, strictly so-called, it was in literary circulation in the time of the apostle. Latin authors, however, use it far more frequently than do the Greek. Cicero (106 B.C.), who used the term *conscientia* seventy-five times, and Seneca (born a few years before Christ) connect "conscience" with Epicureanism, which counseled the avoidance of wrongdoing for fear of the reproaches of conscience (Cicero *De Finibus* I.45; I.51; II.53-54; Seneca *Epistles* XLIII.5; CV.7-9), which had the role of accuser (Seneca *Epistles* XLIII.5; XXVIII.9-10), and the cultivation of a "good conscience" (Seneca *On a Happy Life* XIX.1; XX.5). Moreover, a connection has been traced between the idea of conscience in Epicurus and Euripides, on the one hand, and in Philo, on the other (*see bibliography*). As in Epicureanism, so in Cynicism, the Latin authors find conscience emphasized. It, rather than fear of men or of gods, is the rule and motive for conduct (Cicero *On the Nature of the Gods* III.85): it is not only punitive but also directive (Horace [65 B.C.] *Epodes* V.29; *Epistle* 1.61). It is his conscience that also gives to the Cynic his authority: he aims so to live that his conscience itself has become his public: he lives under his conscience always as in the public eye (Seneca *Epistle* XLIII.5; *On a Happy Life* XX.3-5; Epictetus III.22.94 [τὸ συνειδός]).

When we ask whether the Latin writers reveal in Stoicism an emphasis on conscience, the answer is in the negative. Seneca shows that Athenodorus, a Stoic teacher of Augustus, used the term "a good conscience" (*On Tranquility of Mind* III.4); he also ascribes the use of "conscience" to Musonius, the teacher of Epictetus, the Stoic (*Epistle* LII.9). Seneca himself uses the term in *On Benefits* IV.34.3, where the necessity of arriving at a strong conscience is urged. This enables a person to overcome all timidity, so that he is no longer at the mercy of the opinions of others. But the use of "conscience" in Stoicism cannot have been central, and whenever the term does occur in Stoic connections, it undergoes modification. Thus the strong conscience, desiderated by Seneca, really signifies strong character. The Latin writers, therefore, lend no support to the view that conscience was a peculiarly Stoic doctrine, while they suggest that, in its Latin form at least, conscience was a concept much employed in literary circles. Two explanations of this are possible: (*a*) that Latin writers were closer to popular usage than the Greek, and had borrowed a popular term; (*b*) that many Greek documents from the Hellenistic period have been lost to us, so that we should be prepared to find in Latin writers much that had already appeared in Greek sources that are no longer extant. These Latin writers reveal that the term "conscience" was known to Epicureanism, Cynicism, and—although not native or even congenial to it—to Stoicism. The use of "conscience" by Stoic writers suggests that the needs of moral guidance overrode the niceties of philosophy. Thus Seneca, who deplored making the fear of conscience the motive for conduct, yet, inconsistently, in his instruction of Nero himself appealed to it (*De Clementiae* I.1.1). Probably in the teaching of popular moralists the term "conscience" was familiar. While it was not in use in the technical language of the "schools" of philosophy, it was well established perhaps in more popular, philosophic-moralistic teaching among Epicureans, Cynics, and even, at times, Stoics. This view, while it rests mainly on the assumption that Latin authors do reflect Greek usage, finds some support, at least, in the first century from Philo and Josephus, who can hardly be claimed to have been influenced by Paul (this although Philo prefers the term τὸ συνειδός to ἡ συνείδησις).

2. Meaning in general use. The term "conscience" (συνείδησις) is to be understood in conjunction with a number of similar words and phrases, which are sometimes used interchangeably. These are τὸ συνειδότος, τὸ συνειδός, συνέσις, αὐτῷ συνιστορεῖν τι, αὐτῷ συνειδέναι τι. All these stem from the verb σύνοιδα, which means "I know in common with." It usually implies knowledge about another person, which can be used in witness for or against him. Hence σύνοιδα came to mean "I bear witness." Of particular importance is the phrase αὐτῷ συνειδέναι τι, which means "to share knowledge with oneself," "to know with oneself," "to be a witness for or against oneself," because συνείδησις (like τὸ συνειδός and συνέσις) is its substantival equivalent. The necessity for finding a single substantive to convey the meaning of a phrase would be natural. It is also easy to see why συνείδησις and συνειδός, because of their greater similarity in form and sound to αὐτῷ συνειδέναι τι, would be more likely to be chosen for this than συνέσις. It is more difficult to understand why συνείδησις should have been preferred to συνειδός. Possibly συνείδησις is the wider term, including all senses of the verb σύνοιδα, while συνειδός was restricted to ἐμαυτῷ σύνοιδα. But this is uncertain. By the time of the NT, in any case, συνείδησις was the most popular term to express what was conveyed by the phrase αὐτῷ συνειδέναι τι.

An examination of the pertinent passages suggests the following connotations for the term:

a) Conscience is a faculty implanted in man, as part of his very nature, so that it functions by necessity, as an expression of his very constitution. Thus in Xenophon's account of the trial of Socrates, the latter believes that those induced to bear false witness against him will, *of necessity*, suffer the pangs of

conscience ("It is necessary that they should be conscience stricken about much impiety and wickedness" [*Apology* 24]).

b) This faculty is a necessary characteristic of every man. Thus Polybius (204 B.C.—), using the term συνέσις, which is the equivalent of συνείδησις, claims that there is "no witness so fearful nor accuser so terrible as that conscience which dwells in the soul of every man" (XVIII.xliii.13).

c) Often the implanting of conscience is, by implication, if not explicitly, traced to God. Thus Xenophon *Cyropaedia* I.vi.4 connects it with prayer: "Owing to that very regard do you not come to the gods with a better heart to pray, and do you not expect more confidently to obtain what you pray for, because you feel conscious of never having neglected them?" Democritus asserts that, in the popular mind, conscience is connected with punishment, presumably at the hands of the gods after death. Euripides (480 B.C.—), using the term συνέσις, gives to conscience the function of the Eumenides or Erinyes, the avenging deities of Greek mythology. (These were concerned to punish the wicked both in this world and after death, those who had been disobedient to parents, disrespectful toward the aged, guilty of perjury, murder, etc. The Eumenides were consequently dreaded by gods and men.) Menelaus: "What aileth thee? What sickness ruineth thee?" Orestes: "Conscience [ἡ συνέσις]—to know I have wrought a fearful deed." (*Orestes* 395-96.) The equation of conscience with these figures is, therefore, highly significant. The same equation probably occurs in Diodorus Siculus (IV.65.7), who uses the phrase "on account of conscience" (διὰ τὴν συνείδησιν). Menander (342-291 B.C.) called "conscience" a god, but we cannot gather from his words what he meant by the term: "To all mortals conscience is a god" (*Gnomai Monostichoi* 654). Philo does not make explicit the divine origin of conscience but probably assumes it (*On the Decalogue* 87; *see below*).

d) As the above references reveal, conscience comes into activity in connection with a person's deeds, and particularly his bad deeds (as in Xenophon *Apology* 24).

e) Primarily, if not exclusively, it is a person's own acts that concern the conscience. In agreement with the verbal form αὑτῷ συνειδέναι τι, which it represents, conscience, immediately on the commission of a wrong, comes to know something, if we may so express it, with the person himself, and bears witness against him. The operation of conscience is, so to speak, "automatic."

f) While it is conceivable that conscience could denote a constant state of criticism of a person's character (this is especially suggested perhaps by the identification of conscience with the Eumenides, although they too become avengers of particular acts of wrong), nevertheless, it is specific acts of wrongdoing, not so much a continued or habitual condition of character, that call forth conscience. And, usually, since conscience has been "called forth," it follows naturally that it has reference most frequently to past acts.

g) Stirred into activity, of necessity, by wrongdoing, conscience emerges as a pain. Philo reveals this: "For every soul has for its birth-fellow and house-mate a monitor [ἔλεγχος] whose way is to admit nothing that calls for censure, whose nature is ever to hate evil and love virtue, who is its accuser [κατήγορος] and its judge in one. If he be once roused as accuser he censures, accuses and puts the soul to shame, and again as judge, he instructs, admonishes and exhorts it to change its ways. And if he has the strength to persuade, he rejoices and makes peace. But if he cannot, he makes war to the bitter end, never leaving it alone by day or night, but plying it with stabs and deadly wounds until he breaks the thread of its miserable and ill-starved life" (*On the Decalogue* 87; Loeb translation).[1] The term used is ἔλεγχος, but it is to be identified here with συνείδησις. Here conscience (the convictor) appears as a pain. Similarly, Plutarch describes conscience (τὸ συνειδός=συνείδησις). He quotes first Euripides *Orestes* 396: "My conscience [συνέσις], since I know I've done a dreadful deed, like an ulcer in the flesh, leaves behind it in the soul regret which ever continues to wound and prick it. For the other pangs reason does away with, but regret is caused by reason itself, since the soul, together with its feeling of shame, is stung and chastised by itself. For as those who shiver with ague or burn with fevers are more distressed and pained than those who suffer the same discomforts through heat or cold from a source outside the body, so the pangs which Fortune brings, coming as it were, from a source without, are lighter to bear; but that lament, None is to blame for this but me myself, which is chanted over one's errors, coming as it does from within, makes the pain even heavier by reason of the disgrace one feels" (*On Tranquility of Mind* 476F-477A; Loeb translation).[2] Xenophon asserted that no one who suffered the pangs of conscience could again be accounted happy (*Anabasis* II.v.7).

h) The passage from Philo depicts conscience also as an agent of pain—i.e., to inflict pain—as, by implication, do other sections by the same author (e.g., *Frag.* ed. Mang. 11. p. 652; *QDSI* I.128 (τὸ συνειδός); and possibly *QDPIS*.27). Plutarch refers to the chastising and gnawing of conscience in *Poblicola* IV.99B. That it could be equated with the dread Eumenides, speaks for itself.

i) Conscience is said to suffer pain (*The Orphic Hymn* LXIII.3-5 [τὸ συνειδός]; Dionysius of Halicarnassus in *On Thucydides* VIII.4; μηδὲ μιαίνειν τὴν αὐτου συνείδησιν—of Thucydides' care and conscientiousness as a historian; he refused to pollute his conscience). Perhaps the most widespread concept of conscience in the Hellenistic period can best be gleaned from the fragment wrongly attributed to Epictetus already cited above. There συνείδησις, "conscience," implanted by God, is by implication compared to the nursery slave (παιδαγωγός): its function was, not so much to teach morals, as to protest against immorality by inflicting pain designed to safeguard good conduct. With this concept, we must assume that the writers of the NT, who had connections with the Hellenistic world, at least would be familiar. But, before we turn to the NT, we must notice certain issues not yet faced—namely, whether

[1] Reprinted by permission of the publishers and of The Loeb Classical Library from Loeb Classical Library volume Philo, *Decalogue*.
[2] Reprinted by permission of the publishers and of The Loeb Classical Library from Loeb Classical Library volume Philo, *On Tranquility of Mind*.

the activity of conscience is concerned with the acts of others, as well as of its subject; whether it is a guide for the future, as well as a judge of the past; and, finally, whether any positive connotation can be given to the concept of a "good conscience"—in fact, whether such a thing exists at all, or whether the phrase merely signifies the absence of "conscience." Since we are dealing with a concept noted in popular, Greco-Roman philosophy, not with that of the schools, no "scientific" or philosophical accuracy and refinement in the use of the term should be expected.

3. In the NT. The NT usage further attests the Hellenistic derivation and affinities of συνείδησις. On the one hand, in the four gospels, which are concerned with a tradition which, however much under Hellenistic influences, was primarily Hebraic or Palestinian, the term does not occur. But perhaps we are to see synonyms of it in the term "heart" in Mark 3:5, and, more doubtfully, in Mark 6:52; Matt. 15:10-20 (here "heart" seems, in accordance with much Semitic usage, to be the equivalent of "mind," because it is the source of "thoughts," although in I John 3:20-21 "heart" seems to be identical with "conscience"). Again, we may have circumlocutions for συνείδησις: in Matt. 6:23: the "light within"; and in Luke 12:57 the reference may be to "conscience," although the appeal here too may be to the rational faculty in man. On the other hand, συνείδησις appears thirty times in the rest of the NT, always in documents which were wide open to the influences of the Hellenistic world. There are fourteen occurrences in Paul, six in the Pastorals, five in Hebrews, three in I Peter, two in Acts. Thus, among NT writers, Paul first used the term, and most frequently; and perhaps it was he who gave it prominence in Christian usage.

a. Pauline usage. The term occurs first in I Cor. 8, a chapter dealing with the eating of food offered to idols. On the ground of their superior knowledge that idols, to which the food had been dedicated, were literally nonentities, so that the dedication of food to them was without significance, "strong" Christians were tempted to ignore the scruples of their weaker brethren, and override their objections. But Paul insists that for them to do so would submit the weak to pains of conscience, and actually injure or wound that faculty in them. To avoid this pain and injury to the weak, the strong should forever avoid eating meat sacrificed to idols. But in I Cor. 10, more cautious than in I Cor. 8, Paul recognizes that the strong are not to be fettered in their freedom by the weak. As a general rule, a man should be guided by freedom; but he should pay respect, however, not to the weak brother's opinions, but to his pains of conscience. This means that, while the bludgeoning of the strong by the weak is not to be countenanced, because this would be tyranny, nevertheless, consideration for the pain of the weak becomes a principle of conduct.

I Cor. 8; 10 reveal, first, that Paul recognizes a variety in conscience. The weak conscience may be due to lack of knowledge (I Cor. 8:7), force of habit (I Cor. 8:7), or lack of ability to withstand the example of others (I Cor. 8:10); it is not merely feeble and vulnerable, but has a stronger connotation: the weak conscience does not have the force necessary to act according to knowledge. (The concept has been claimed to be original with Paul, but we meet the contrast between the strong and the weak in Latin authors. The sage is strong; in his strength, he is tempted to become presumptuous, puffed up. And the origin of the Pauline contrast between the strong and the weak in Corinth has been found in Stoicism. Others prefer to find a parallel to the Pauline contrast in such passages as Matt. 18:1 ff.)

The discussion raises the question whether conscience, in these passages, has a future reference. At least at first glance, in I Cor. 8:10; 10:25 ff, "conscience" seems to be a regulative principle. The weak brother, contemplating the strong brother in I Cor. 8:10, must have been cogitating over the problem of eating food offered to idols and is dissuaded from this by his "conscience"; so too in I Cor. 10:28. The translation of 10:25 is difficult: how are we to understand the phrase διὰ τὴν συνείδησιν, "on the ground of conscience"? It is possible to take this verse to mean: Eat any food that is sold in the meat market without letting scruples of conscience induce you to ask questions about it—i.e., avoid deliberating over the act beforehand in terms of your conscience. This implies that conscience has a future reference. But I Cor. 10:25 may merely mean: Because of conscience avoid asking questions; because, as long as you do not know the source of the meat, you can eat without suffering pangs of conscience afterward. Nevertheless, unless we are to draw a very rigid distinction between the scruples, at least discomforting, if not painful, which a man has before doing wrong, and the pain which follows his act, it is exceedingly difficult to exclude all future reference from conscience in both these sections. Rom. 13:5 may be adduced in support of this: "Therefore one must be subject [to the state], not only to avoid God's wrath but also for the sake of conscience." Submission to the state, Paul has argued, is a necessity, not merely because the state has power to enforce its demands. This power is derived from God (Paul is not here dealing with evil governments as such), and, therefore, commands a rightful obedience. To obey the state, therefore, will not bring on the pangs of conscience. For the sake of conscience, therefore, it should be obeyed. But it is difficult not to understand that the conscience has been informed about the nature of the state before obedience to it can be "according to conscience" or "on the ground of conscience"; the future reference can hardly be ruled out completely. Conscience in Paul, therefore, is at least on the way to becoming a regulative principle.

This raises the question of the relation between "the conscience" and "the mind" or "reason." Perhaps the difficulty of deciding whether conscience in Paul has a future reference arises from his failure to clarify the distinction between these. That he does distinguish them appears from Rom 2:14-15. Here three things are distinguished: all men are presumed to have (*a*) a law written on the heart, a moral awareness (here Paul may be influenced by Stoic concepts, although he would not subscribe to the Stoic view that for those who recognized the "natural law" it was possible to fulfil it); (*b*) the conscience; (*c*) reason or thought. But in Rom. 14:5 the "mind" (νοῦς) seems

to have taken the place of what in I Cor. 8:10 is the "conscience." And in I Corinthians, Paul has not been careful at all to distinguish between reason and conscience; hence the problems of exegesis. It cannot be sufficiently emphasized that "conscience" was not a fully examined concept in Paul's day, and that he did not introduce scientific consistency into his use of it, although he did refine it.

I Cor. 8; 10 show the seriousness of ignoring the claims of conscience, be they regarded as prevenient scruples or as posterior pain. The effect of the inconsiderate conduct of the strong is to defile the conscience of the weak (I Cor. 8:7), so that he is destroyed; i.e., led to emulate the strong, and to ignore his own awareness of what is right, the weak Christian is likely, later, to lose his faith and relapse into pagan ways. To ignore conscience—i.e., to lay oneself open deliberately to its pains, and not to escape from them as frequently as possible—is to develop a resistance to them; to wound the conscience so as to blunt its attacks, to become "acclimatized" to conscience, so that its impact becomes dulled—this is to be destroyed. This raises the question as to the exact meaning of the phrase "a good conscience." Is its significance merely negative—i.e., does it simply denote absence of pain—or has it a positive sense?

In I Cor. 10:28-29, the implication is that conscience passes judgment, not on the subject's own acts only, but on those of others also. This is a meaning not to be ruled out in II Cor. 4:2; 5:11, although here the term συνείδησις may merely signify "consciousness" or "awareness." In II Cor. 4:2 every man, Jew and Gentile, is credited with a moral discernment, which assesses the conduct of others "in the sight of God"—i.e., the assessment is analogous to that of God himself. Thus there should be no criticism of Paul's exercise of his ministry. That the gospel does not find acceptance with some is due to the fact that their minds (τὰ νοήματα) have been blinded by the god of this world; these are the perishing (οἱ ἀπολλυμένοι). The same verb is used of what happens to the weak Christians in I Cor. 8:11. The blinded minds of unbelievers (νοήματα τῶν ἀπίστων) might be a synonym for the "perished consciences," as if νοήματα and συνείδησις were equivalent: in this case συνείδησις in II Cor. 4:2 should be rendered by something like "thoughts" (*see above* on the lack of precision in Paul's usage). The same applies to II Cor. 5:11: here "conscience" is the subject of "knowledge" or "awareness." Nevertheless, it is possible that in II Cor. 4:2 the reference is to conscience in all its forms, and that in II Cor. 5:11 the reference is specifically to the individual consciences of men, not to their intellects (the plural "consciences" occurs only here).

The other places where Paul uses συνείδησις may be claimed to fall well within the Hellenistic usage traced in § 1*b above*. But certain associations are noteworthy: (*a*) In Rom. 2:14-15; 13:5, conscience is associated both with necessity (ἀνάγκη) and with "the wrath" (ἡ ὀργή). In Rom. 2:14-15 "conscience" is a property of man by nature or necessity, and its operation, in part at least, insofar as it is a pain following upon acts of wrongdoing, may be regarded as the inner counterpart of the process of "wrath" which Paul found at work in the natural order and in society (Rom. 1:18). (In II Cor. 1:12 "conscience" is used somewhat absolutely and calls for no comment.) (*b*) In Rom. 9:1 the witness of conscience is conjoined with that of the Holy Spirit and Christ. This is of the utmost importance for Paul's estimate of "conscience." There can be little doubt that Paul derived the term "conscience" from his opponents at Corinth. It was no favorite of his, and in Rom. 14:15, when he is dealing with precisely the same problem as in I Cor. 8:10, he avoids the term. In I Corinthians, following his policy of being all things to all men, he had used his opponents' term. But that he did not give to "conscience" the overriding significance in ethics that they did, appears in I Cor. 4:4. There, although he uses the verbal form (ἐμαυτῷ σύνοιδα), not the substantival (συνείδησις), he makes it clear that conscience is not his ultimate court of appeal. This is Christ himself. Open to corrupting influences, as it is, conscience is to be quickened by the Spirit and itself enlightened by Christ.

b. In non-Pauline letters. Outside the Pauline letters, "conscience" emerges in I Peter, the Pastorals, Hebrews, all of which probably reflect late Hellenistic literary usage. In I Pet. 2:19, συνείδησις probably simply means "consciousness"; the RSV is right (over against Selwyn) in rendering "mindful of God." So in 3:16, "conscience" refers to a consciousness of innocence of any misconduct which might justify the criticism of outsiders. The occurrence in 3:21 is difficult. The RSV (so also Moffatt), which takes baptism to signify, on its manward side, the prayer for a clean conscience, is probably to be rejected, the correct translation being that "baptism is the appeal made to God by a good conscience." The context does not allow us to define precisely what this means. Significant is the emergence here of the phrase "a good conscience." This is a mark of the Pastorals, and of the literature of the end of the first century and the beginning of the second (I Tim. 1:5, 19 ["good conscience"]; 3:9; II Tim. 1:3 ["clear conscience"]; I Tim. 4:2 and Tit. 1:15 refer to the corruption or searing of conscience). See also, e.g., Acts 23:1; I Clem. 41.1; Polyc. 5.3; II Clem. 16.4.

Noteworthy in the Pastorals are: (*a*) The close relation between conscience and loyalty to the faith (I Tim. 1:5, 19; 3:9; 4:2; less clearly, II Tim. 1:13). This association of conscience and loyalty to the gospel had already been prepared for by Paul (II Cor. 4:2). But here it is carried further. In I Tim. 1:19-20, in particular, the conduct of the Christian life is dependent upon having faith and a good conscience. To cast away the latter is to make shipwreck of the faith, which, a quasi-technical term in the Pastorals, here means right belief. (*b*) The concept of conscience emerges over questions concerning foods (I Tim. 4:1 ff; Tit. 1:13 ff). Those who make distinctions in this matter are "unbelieving" (Tit. 1:15), their mind and conscience corrupted, whereas a sound faith demands a conscience undefiled. While in Paul a tolerant attitude toward "the weak" is advised on the ground of their conscience (Rom. 14:14; I Cor. 8:10; Col. 2:20-23), in the Pastorals the attitude of "the weak" is condemned outright. It has become more of a menace and has to be openly opposed: under the influence of developing Gnosticism "the weak" have become diabolic and anti-

Christian (I Tim. 4:1-5). As there are degrees of enlightenment in conscience, so in the Pastorals there are degrees in the toleration of the dictates of the same. In both I Tim. 1:19-20; Tit. 1:13 ff, a "good conscience" implies a positive loyalty to the truth. The verb tenses are here significant. In I Tim. 1:19-20 the act by which the "good conscience"—which is not merely the absence of pain following evil deeds, but a determination to "wage the good warfare" (I Tim. 1:18)—is rejected, is in the aorist tense (i.e., it consists of a single, decisive event [ἀπωσάμενοι; I Tim. 1:19]), but the process whereby the conscience has been deadened is in other passages in the perfect tense (I Tim. 4:12; Tit. 1:15). This last regards the corruption of the mind (νοῦς) and conscience (συνείδησις) as a process, and sharply distinguishes the two concepts. The Greek perhaps suggests that the corruption of the faculty of remorse for sin (συνείδησις) is a worse calamity than the corruption of the rational faculty which enables us to distinguish sin. This should not be pressed. But the clear distinction between mind and conscience at this point should warn us against overemphasizing what directive function conscience may have had.

c) It has been urged that in the Pastorals the "conscience" has become domesticated in this world. Unlike Paul, who urged that our citizenship is in heaven, the Pastorals are concerned to develop an ethic for citizenship on earth. For them the "good conscience" signifies the soft pillow of the man who has not disturbed his society: it is a mark of the static conception of Christianity found in the Pastorals. But caution is necessary here. In the Pastorals also the Christian life is a battle and conscience is tied to the faith. But even more important is the usage of the phrase "a good conscience," and of conscience itself, in the Letter to the Hebrews, associated here with the literature to which the Pastorals belong. In Heb. 10:2 "conscience" again merely means "consciousness" (so RSV); in Heb. 9:14 it has an accusing function, where the dead works are not the works of the law, but works of sin, which are to be forgiven by God through the sacrifice of his Son. So in Heb. 10:22 we have a wicked conscience—i.e., an accusing conscience. From Heb. 9:9 we gather that the old sacrificial system cannot deal with that where man confronts God's holiness—i.e., his conscience. Throughout Hebrews, conscience is directed toward God—it is not primarily a moralistic, but a theological, concept. Here Hebrews differs from Paul, where conscience is not primarily oriented to God but to man; and if in the Pastorals conscience is domesticated, Hebrews differs from them also. In Hebrews the "clear conscience" occurs only once, in 13:18, and has reference to a concrete situation in a dynamic context. The author is sure that, in the particular situation confronting him, he is not at fault. But he is faced with the necessity to act honorably in all things, as befits a Christian—i.e., in response to God's truth. There is no suggestion of a "soft pillow" in this world, no bourgeois complacency, but the desire for that purity which comes from doing God's will, which is possible only through the blood of the eternal covenant.

W. D. Davies

CONSECRATE, CONSECRATION. To set apart, dedicate, or sanctify a person or thing to some sacred purpose related to the service and worship of God, and so, often, to give the person or object itself a character of holiness. "Consecration" is therefore used as the proper word for the ordination and hallowing of persons to sacred offices or to sacred service (Exod. 29:9; Lev. 8:33; I Chr. 29:5; II Chr. 29:31), and the setting apart and dedication through religious rites of things from common to sacred uses (Josh. 6:19; II Chr. 31:6).

"Consecrate" and derived words are the usual, though not always exclusive, rendering of the following words:

a) קדש, "to separate or set apart," the most prominent of the Hebrew words which convey the idea of "cleanliness" or "holiness" (Exod. 13:2; 19:10, 14, 22-23; 22:31—H 22:30; 28:3, 41; 29:1, 27, 33, 36-37, 44; 30:29-30; 40:9-11, 13; Lev. 8:10-12, 15, 30; 11:44; 16:32; 20:7; 21:8, 10; Num. 3:13; 6:11; 7:1; 8:17; 11:18; 18:8; Deut. 15:19; 33:3; Judg. 17:3; I Sam. 7:1; 16:5; I Kings 8:64; 9:3, 7; I Chr. 23:13; II Chr. 7:7, 16, 20; 26:18; 29:33; 31:6; Neh. 3:1; Isa. 13:3; Jer. 1:5; Ezek. 48:11; Zeph. 1:7). The original meaning of the word is not clear, though Baudissin's view that the fundamental idea is one of "separation" is still widely held. In usage the term "holy" came to express the general notion of the godhead and in an early, though perhaps secondary sense, was applied to that which belonged to the sphere of deity, which lay near or had come into his presence (Exod. 3:5; Num. 16:37-38), or which belonged to him. "Consecrate" is therefore the correct rendering of this Hebrew word denoting "to be holy"—i.e., "to be separate from the common and the profane."

b) מלא יד, literally "to fill the hand" (Exod. 28:41; Lev. 16:32; 21:10; I Kings 13:33; I Chr. 29:5; II Chr. 13:9; 29:31; Ezek. 43:26). The same term is sometimes rendered "ordain" or "install" (Exod. 29:9, 29, 33, 35; 32:29; Lev. 8:33; Judg. 17:5, 12). Note such passages as Exod. 29:34; Lev. 7:37, where "hand" is simply understood. In these and other passages (Lev. 8:28, 31) the plural form מלאים is rendered "consecrations" in the KJV (but singular, "ordination," in the RSV). In the majority of instances where "consecrate" and "consecration" occur, they are the rendering of this idiomatic expression, and it is the only characteristic expression for "consecrate" in the OT.

The origins of this phrase are somewhat obscure. It is generally used of the consecration of priests (except in Ezek. 43:26, where the altar is consecrated).

In the most ancient practice the offerings were placed in the hands of the priest; by this symbolic act, involving contact with the holy offering, the priest was consecrated. Evidently the person who wished to make a sacrifice or offering could install a priest simply by "filling his hand" (Judg. 17:5; I Kings 13:33; II Chr. 13:9; cf. Exod. 32:29). A suggestion of an early instance, if not the origin, of this practice in Israel is contained in the account of the ordination of the priests by Moses in Exod. 29. Deut. 26:13 ("I have removed the sacred portion out of my house") would seem to suggest that that part of one's produce or revenue which belonged to the deity and was therefore to be offered to him was infused with a quality of holiness which made it undesirable, perhaps dangerous, for the householder to retain such a portion in his possession. These goods were therefore passed into the hands of the priest, who had not only the right but also the risk of approaching the altar of the deity. The priest's hands were filled with the offerings, and by this very rite he was consecrated; from these offerings, once they had been presented to the deity and had proved acceptable, the priest derived his income.

c) נזר, "to separate, dedicate" (whence "separation," "dedication," or "consecration," and one "consecrated" or "devoted"), occasionally translated "consecrate" (Lev. 21:12; Num. 6:9, 18-19; Hos. 9:10) but more commonly "separate" and its derivatives (see, e.g., Num. 6:2-21). *See* NAZIRITE.

d) Ἁγιάζω, "to separate, set apart, sanctify, be sanctified," in a few instances translated "consecrate" (John 10:36; 17:19; I Cor. 7:14; I Tim. 4:5; II Tim. 2:21) but generally "sanctify" (John 17:17; Acts 20:32; 26:18; Rom. 15:16; I Cor. 1:2; 6:11; Eph. 5:26; I Thess. 5:23; Heb. 2:11; 9:13; 10:10, 14, 29; 13:12; note also the differences in the translations of Matt. 23:17, 19; I Pet. 3:15; Jude 1).

H. F. BECK

CONSOLATION [παράκλησις]. A synonym of COMFORT. In Luke 2:25 the "consolation of Israel" coincides with the advent of the "Lord's Christ." When Acts 4:36 KJV explains BARNABAS as the "son of consolation" (RSV "encouragement"; ERV-ASV "exhortation"), the underlying Hebrew-Aramaic term may be נוח ("refreshment") or נביא ("prophet"; cf. Palmyrene *Bar-Nebo*).

F. F. BRUCE

CONSTELLATIONS. *See* SCIENCE § C2*d*.

CONSUL [ὕπατος]. The title of the two chief military and political magistrates in the Roman Republic. They were of senatorial rank and served a year's term of office. According to I Macc. 15:16 a certain consul named Lucius (probably Lucius Calpurnius Piso, 140-139 B.C.) was the author of a circular letter addressed to the Egyptian king Ptolemy (Euergetes II, 146-116 B.C.) and sent to neighboring states, declaring the friendship between the Roman Senate and the Jews. The identification of Lucius and the authenticity of the letter are disputed. Josephus mentions a similar letter sent by the praetor (*strategos*) Lucius Valerius in 54 B.C. (Antiq. XIV. viii.5).

Bibliography. F.-M. Abel, *Les livres des Maccabées* (1949), pp. 275-76; S. Tedesche and S. Zeitlin, *The First Book of Maccabees* (1950), pp. 40-43.

E. W. SAUNDERS

CONSUMPTION. 1. The translation of שחפת (Lev. 26:16; Deut. 28:22; LXX ἀπορία), which originated from a root meaning "thinness" or "attenuation." From the context febrile disease, probably undulant fever, seems to be implied, although phthisis or even cancer may be indicated.

2. KJV translation in Isa. 10:22 (כליון); 28:22 (כלה). In both passages widespread "destruction," rather than specific pathology, is envisaged.

R. K. HARRISON

CONTENTMENT [αὐτάρκεια]. The acceptance of "things as they are" as the wise and loving providence of a God who knows what is good for us, who so loves us as always to seek our good, and whose power is adequate to his love.

In the OT contentment is of this godly sort. Moses was "content" (יאל) to dwell with Reuel (Exod. 2:21) because he knew his stay was divinely ordained. Even his disappointing inability to enter Canaan became, in God's overruling, something that "sufficed" him (Deut. 3:26). The spirit of contentment finds expression even in the absence of the word—e.g., in Ps. 23, where the devout soul is content even in the "valley of the shadow of death," provided God is present.

Occasionally such contentment may appear reactionary to modern social reformers, as when John the Baptist told some Roman soldiers: "Be content with your wages" (Luke 3:14). Yet neither in the OT nor in the NT does the proper contentment of godly men preclude the divine discontent with injustice and wrong which is the true source of social reform. The social teaching of the OT prophets, and the transcendence of the barriers of class, race, and sex in the NT church (Gal. 3:28) testify eloquently to this.

Jesus himself enjoins contentment in the Sermon on the Mount (Matt. 5–7, especially 6:19-34). In the Letter to the Hebrews (13:5), Christians are exhorted to "keep your life free from love of money, and be content with what you have." A Stoic could have said this much, but the NT writer gives a more-than-Stoic reason for Christian contentment, for he continues: "He has said, 'I will never fail you nor forsake you.' " The Sermon on the Mount also sees the love of money as a great enemy of true contentment, as does I Tim. 6:6-8: "There is great gain in godliness with contentment; for we brought nothing into the world, and we cannot take anything out of the world; but if we have food and clothing, with these we shall be content. But those who desire to be rich fall into temptation."

For the Christian, however, contentment is not self-regarding. Paul asked alms for the saints in Jerusalem from the church in Corinth. He told the Corinthians that "he who sows sparingly will also reap sparingly." And lest self-regard should make the Corinthians chary of generous giving, he assured them that "God is able to provide you with every blessing in abundance, so that you may always have

enough of everything and may provide in abundance for every good work. . . . He . . . will supply and multiply your resources." (II Cor. 9:6-10.)

The innermost secret of this carefree, generous contentment lies in the Christian's life with God. This is the all-satisfying good. Paul writes (Phil. 4:11-13: "I have learned, in whatever state I am, to be content. I know how to be abased, and I know how to abound; in any and all circumstances I have learned the secret of facing plenty and hunger, abundance and want. I can do all things in him who strengthens me." The Christian's all-conquering contentment comes from his knowledge of Christ and his communion with him. Paul once more states it clearly: "I count everything as loss because of the surpassing worth of knowing Christ Jesus my Lord. For his sake I have suffered the loss of all things, and count them as refuse, in order that I may gain Christ and be found in him" (Phil. 3:8-9). J. MARSH

CONTRIBUTION FOR THE SAINTS. *See* OFFERING FOR THE SAINTS.

CONTRITE. The translation of a form of the root דכא or דכה, "to crush" (Pss. 34:18 KJV [RSV "crushed"]); 51:17; Isa. 57:15), and of a form of נכה, "to smite" (Isa. 66:2). The religious sense of the word is indicated by the words or phrases with which it appears in parallel: "broken heart" (Ps. 34:18 KJV); a "broken spirit" (Ps. 51:17); "humble" (שפל; Isa. 57:15); "humble" (ענו; Isa. 66:2). It belongs to the vocabulary of later, postexilic Israel, for which, as a result of the humiliating experiences of the Babylonian Exile, such qualities as humility, lowliness, meekness, had come to seem essential marks of the truly religious man—a point of view notably represented in the NT by the Beatitudes and the Magnificat (Luke 1:46-55). R. C. DENTAN

CONVERSATION [דרך; ἀναστροφή, πολίτευμα, τρόπος]. Used in the KJV in its older sense of "way of life," "behavior" (cf. Latin *conversari*). In ethical injunctions ἀναστροφή is used at times in a context which contrasts the old, Jewish or pagan manner of life with the new, Christian one (cf., e.g., I Pet. 1:15, 18). In Phil. 3:20 KJV "conversation" represents πολίτευμα—i.e., civic life, constitution (cf. RSV "commonwealth"; ERV-ASV "citizenship")—a specially apt term in an admonition to inhabitants of a Roman colony.

In its modern sense of "speech," "talking," this word is not used in standard versions of the English Bible.

Bibliography. L. A. Weigle, *Bible Words in Living Language* (1957), pp. 8-10. F. F. BRUCE

CONVERSION [שוב; ἐπιστρέφειν, ἐπιστροφή]. In biblical usage, a turning or a returning. The OT uses the term frequently; but the noun is found only once in the NT (Acts 15:3), to refer to the "conversion of the Gentiles." The verbal forms are used both transitively and intransitively in both the OT and the NT.

In the OT nouns and verbs are found with the physical meaning of "turn" or "return" (Judg. 8:13), though the action can be given added significance by association with some person (Jephthah [Judg. 11:8]; Rehoboam [I Kings 12:27]) or purpose (Josh. 8:21). The most characteristic use is to describe God's "turning" in respect of man, whether favorably (Deut. 13:17) or unfavorably (Josh. 24:20); and man's turning in respect of God, either to him (Jer. 3:14) or from him (Jer. 8:4-6; Ezek. 33:18). God's turning is not fickleness, but part of his unchanging pursuit of man's salvation. Man's turning from God is rebellion (Josh. 22:16); and his turning to God, though his own submission, is the work of God's grace (Ps. 85:3—H 85:4; Lam. 5:21). Turning to God, or "conversion," is thus more than a change of mind, more than undergoing some experience; it is a concrete change to a new way of life, as the word "turn" suggests—a turning in one's tracks and going in a new direction. Such views found heightened expression in the prophets of the Exile, who spoke of "returning" to God at the same time as they foretold a "return" to Jerusalem (Isa. 44:22; 51:11; 55:7), an act of man which was possible only by the previous act of God.

In the NT the literal meaning of "turning" is found (Luke 2:39), and as in the OT the physical act sometimes gains significance by association with a person or action (Mark 5:30) or purpose (Acts 15:36). The NT does not speak of God's "turning" to man; the Incarnation is the fulfilment of all such "turning." Though the word can be used of turning away from God (Gal. 4:9), its most characteristic use is of man's turning to him (Acts 9:35; 15:19). It is often associated with "repent" (Acts 3:19; 26:20), "believe" (11:21), or with some expression indicating the nature of the "turning"—from darkness to light (26:18), from idols to God (I Thess. 1:9), from vain things to a living God (Acts 14:15)—and Paul can say that "when a man turns to the Lord the veil is removed" (II Cor. 3:16).

The biblical emphasis is thus not upon a subjective psychological experience, but upon an objective change in man. But the change is not simply to be achieved by outward deed, for it was this conception which Jesus repudiated in Pharisaic teaching (Mark 7:6-23). True turning to God follows upon repentance and belief, and it leads not only to an observable new way of life, but to a spiritual transformation as well: "And we all, with unveiled face, beholding the glory of the Lord, are being changed into his likeness from one degree of glory to another; for this comes from the Lord who is the Spirit" (II Cor. 3:18). J. MARSH

CONVICTION [πληροφορία (I Thess. 1:5), full assurance, certainty, *from verb* to bring to full measure or certainty; ἔλεγχος (Heb. 11:1), proof, evidence]. Strong persuasion, certainty, or proof.

CONVOCATION, HOLY [מקרא קדוש, holy summons; LXX κλητή ἁγιά] (Lev. 23:2-4, 7-8, 21, 24, 27, 35-37; Num. 28:18). A term which refers to the SOLEMN ASSEMBLY and is virtually interchangeable with it (cf. Exod. 12:16; Isa. 1:13; 4:5). It stresses the summons to an assembly where Israel, in a state of special holiness, is called to fulfil its sacred functions. Holy convocations were central aspects of each of the three great FEASTS and of the Day of Atonement (*see* ATONEMENT, DAY OF). They were days of rest, like the sabbath, and in later times were known as

sabbaths (*cf.* PENTECOST and Lev. 23:11). In Isa. 4:5 the eschatological hope of Israel is portrayed in a vision of great convocations. In Neh. 8:8 the Hebrew term is used of "the reading" of the Law; and thus it became the technical term for "holy scripture" in Judaism.

J. C. RYLAARSDAM

COOK [טבח]. One who prepares and serves food. Usually the women in the family were the cooks (Gen. 18:6; 27:9; II Sam. 13:8). Men could also cook (Judg. 6:19). Male or female servants could also be ordered to cook (Luke 17:8). The cook often had to butcher and boil (the Hebrew root meaning is "to boil") the meat (Gen. 18:7). Professional cooks were not unknown (I Sam. 9:23-24; cf. I Sam. 8:13).

See also COOKING AND COOKING UTENSILS; FOOD; SERVANT.

C. U. WOLF

COOKING AND COOKING UTENSILS. The women of the house did the cooking except in the palace (I Sam. 8:13) or in wealthy homes, where servants were employed. Baking of bread was often done during the day, but most of the cooking was done for the evening meal. This was the important meal, and for the poor it was often the only one. This last point is the key to the interpretation of the laborers in the vineyard (Matt. 20:1-16). A common laborer needed a whole day's wages in order to feed his family that evening.

1. Cooking. In the average home the courtyard served as the kitchen except in inclement weather, when the inhabitants had to stay indoors.

a. Grains. In Bible times bread was the most important food. The major grains used were wheat and barley, but their flour could be mixed with less desirable grains such as millet and spelt (Ezek. 4:9). The rich used wheat, the poor used barley. Bread was often dipped in olive oil and then in some ground spice or herb, thus giving various flavors to the bread and counteracting the monotony of the diet. Cakes were often coated with honey and sprinkled with a variety of seeds and nuts. Cakes were not only baked in the oven but were also made by frying in deep fat. The fats most commonly used were olive oil and sesame. The nomads, however, used boiled butter. *See* BREAD.

A second common method of eating grain was to make it into porridge. For the best results the wheat was first steeped in water and then dried, and before cooking the grain was ground to about the consistency of our cracked wheat. There were a variety of ways to season it—with salt, honey, olive oil, condiments, etc. Prov. 27:22 alludes to another method of cooking grain, a sort of hash; cracked wheat and meat were pounded together in a mortar and then spread out in a shallow pan for baking.* In the Proverbs passage the meat is the fool, and nothing else can ever be made of him, no matter how long he is worked over. Fig. VES 14.

The first opportunity for cooking grain came in the harvest field itself, where the grain was being reaped. It was bound into small sheaves and then roasted or parched over an open fire (Ruth 2:14). Indeed, grain was an item of food so appreciated that it appears in the Levitical law of first fruits (Lev. 2:14-16). Only one who has lived on a bread diet all winter can appreciate this first taste of the new grain.

b. Vegetables and fruits. The poor man's variant for bread and porridge had to be vegetables and fruits, since he could seldom afford meat. Various kinds of lentils and beans were especially valuable, as they could be used the year around. The Esau story (Gen. 25:29-34) shows that even the most influential members of society appreciated these lentils and beans. These dishes were often flavored with onions and garlic.

c. Meats. The Hebrews were not great meat eaters. Indeed, the use of meat was a sign of wealth. This shows up well in the food budget of Solomon (I Kings 4:23), where we have both stall-fed and pasture-fed animals, as well as wild game and fatted fowl. For the poor man, meat was a rare item of diet reserved for religious occasions, family gatherings, and meals for special guests. The favorite meats were lamb and goat, with the rich adding veal. There was no easy way to preserve meat, so the whole animal had to be consumed the same day it was killed.

Meat had a wide variety of cooking possibilities. It was roasted in an oven, boiled in water, cooked in oil, or used on spit or griddle. When the meat was roasted in an oven, it was often the whole animal. It was always well cooked so that it could easily be pulled off the bone. Boiling was the most common method of cooking. Mic. 3:2-3 shows how stew was prepared: the meat was cut off the bones and then the bones crushed for the marrow. In this passage we have strong figurative language in which the rich are spoken of as cannibals making stew out of the poor. Broth from the meat was boiled down and served in a separate dish from the meat (Judg. 6:19). Fowl was cooked the same way as meat; fish was probably most commonly broiled over coals (John 21:9). An item of diet unusual to us but common to the Near East was cooked locusts (Lev. 11:22; Matt. 3:4; Mark 1:6). For cooking of sacrifices, *see* SACRIFICE AND OFFERINGS.

d. Seasonings. Food was made more palatable by the addition of salt; and with the heavy vegetarian diet of the common man, salt was an absolute necessity (see Job 6:6; Matt. 5:13; Col. 4:6). Common flavoring agents were onions, leeks, and garlic; and the Israelites in the wilderness missed these greatly (Num. 11:5). Condiments were whole or ground seeds such as anise, coriander, cummin, dill. Herbs such as thyme and mint were also used. Nuts of all kinds also added their flavor as well as their nutrient oils. The place of these flavoring agents in the ancient diet cannot be overemphasized, for these gave the common man the variety in his menu. Honey was the sugar of antiquity.

2. *Cooking utensils.* The Hebrews used several varieties of cooking pots (*see* POTTERY).* The most common form was wide and shallow. In early Israelite times it was without handles, but later it had two handles. There was also a two-handled small-mouth cooking pot almost spherical in shape and probably used for heating water. There was also a one-handled cooking pot. Two special vessels were used for deep-fat frying, and there was also a griddle. In the days of Isaiah and Jeremiah, potters were so proud of their cooking pots that they used trade-marks just as we do today. Furthermore, their vessels were made in standard sizes as ours are. Copper kettles and pans were much more efficient, but they were

also very expensive. Both the tabernacle and Solomon's temple list a goodly number of cooking vessels. Fig. COO 40.

40. Cooking and other utensils from Palestine. From left to right: Basalt mortar and pestle (Middle Bronze Age II); two-handled mixing bowl (Iron Age); small bowl (Iron Age); pitcher (Iron Age); one-handled cooking pot (Iron Age); two-handled cooking pot (Iron Age)

The oven for baking bread looked like a large inverted bowl with the bottom missing. It was often a yard in width. At times it was built over a small hole in the ground, thus giving extra volume to the oven. The fire was built inside the oven; then, when only the embers were left, the thin bread was placed inside on the walls of the oven. If the oven had a plain exterior and was heavily heated, bread could also be placed on the outside. In the large cities there were public bakeries (Jer. 37:21) to which the housewives brought their bread for baking. J. L. KELSO

COOS. KJV form of Cos.

COPING [טפח, handbreadth] (I Kings 7:9). The meaning of this architectural term is obscure.

COPPER [נחשת, החוש, נחשה; Aram. נחש (Dan. 2:32, *etc.*); χαλκός; χαλκίον; χάλκεος; λεπτόν, a small coin (KJV MITE)]; COPPERSMITH [χαλκεύς] (II Tim. 4:14). The usual RSV translation of these words is "bronze," although the same Hebrew word may mean either "copper" or "bronze." The KJV uses "copper" only in Ezra 8:27 (RSV "bronze"), "steel" in four passages, but otherwise "brass," a term which in Tudor English could include any alloy of copper, such as copper and tin (bronze) or copper and zinc (brass). Brass was unknown in biblical days.

With the exception of gold and meteoric iron, copper was the first metal used by man (*see* METALLURGY). At first it was made into simple ornaments and then into tools; this development altered the whole course of human history, since it vastly increased man's power over his environment and made possible, among other things, the development of an architecture in cut stone.

In Palestine copper adzes dating from the thirty-fourth or thirty-third century B.C. (Late Chalcolithic) have been found at Meser. Similar adzes of about the same date have been found at Teleilat el-Ghassul and in Level XVI at Beth-shean. From Tell Abu Matar near Beer-sheba come four pear-shaped maceheads, some rings, and other copper objects. On the archaeological finds mentioned above, *see bibliography.*

From the Early Bronze Age (3000-2000 B.C.) come a few daggers and one axhead found at Jericho, but the impression gained from archaeological reports is that copper remained very scarce all through the Early Bronze period.

With the dawn of the Middle Bronze Age *ca.* 2000 B.C. copper became much more abundant; BRONZE also made its appearance. This greater abundance of metal seems connected with the arrival of invaders from the N, probably Amorites. The pottery which these newcomers have left at Jericho is frequently modeled on metal forms found in Syria. Tell el-'Ajjul has been rich in metal remains. *See bibliography.*

Copper continued to be used extensively even after the introduction of bronze, especially for objects which did not require to be cast (*see* BRONZE). During the second millennium B.C. the copper mines of Cyprus were an important source of supply for the countries of the Near East, although Egypt during the Eighteenth Dynasty drew her supply from a variety of sources, as Egyptian inscriptions attest. Much later, at the time of Ezekiel (sixth century B.C.), Tyre was importing copper from Tarshish, Javan, Tubal, and Meshech (Ezek. 27:12-13).

The idea that the ancients possessed the secret (later lost) of tempering copper has been shown by modern investigation to be completely without foundation. What they did discover was that copper can be given a reasonably hard cutting edge by cold hammering.

F. V. WINNETT

COPPERSMITH [χαλκεύς]. A worker in bronze, then generally a (black)smith, a brazier.

The only NT use of χαλκεύς (II Tim. 4:14) indicates the occupation of a certain Alexander, from whom the author claims to have received great harm. Metalworkers or smiths (*see* CAIN) were the earliest full-time industrial specialists (cf. Gen. 4:22, with mention of TUBAL-CAIN). Etymologically the tribal name KENITES means "smiths." An Egyptian impression of such a traveling band of tinkers is given in a wall painting at Beni-hasan (*ca.* 1890 B.C.; Fig. OCC 3). The name Bezalel (Exod. 31:2; 35:30; etc.) has now good parallels from old Amorite usage. Alexander, like Solomon's χαλκεύς, Hiram of Tyre, before him, was one of an ancient and useful union of workmen; he apparently failed to uphold the honor of his craft in his Christian profession. P. L. GARBER

B. M. METZGER

COR kōr [כר; Sumer. *GUR*]. A large measure of uncertain quantity. *See* WEIGHTS AND MEASURES § C4*b*.

CORAL. The red coral of the Mediterranean area, used for jewelry. It is the calcareous skeleton of one of the Actinozoa. "Coral" is the translation of two Hebrew words:

a) ראמות, *râmoth* (cf. Arabic *ra'mat*, "sea shell"). The LXX and the Vulg. read the word as a plural feminine participle in Job 28:18 (cf. Prov. 24:7). The LXX transliterates λαμώθ in Ezek. 27:16, and the Vulg. reads *sericum*. This is evidence that the ancient versions were uncertain of the meaning of the word. In Job 28:18 the word is used with "crystal" and "pearls"(?) in the evaluation of wisdom. In Ezek. 27:16 coral is an article of trade between Edom and Tyre.

b) פנינים, *pᵉnînîm* (alternately JEWELS; COSTLY STONES; PEARLS; cf. Arabic *fananun*, a branch of a tree, and so an indication of the character of coral). In describing the princes of Zion, Lam. 4:7 notes that "their bodies were more ruddy than coral" (KJV "rubies"; LXX λίθος, "stone"; Vulg. *ebur*, "ivory").

See also JEWELS AND PRECIOUS STONES IN THE OT § 2; PEARL. W. E. STAPLES

CORBAN [קרבן, offering *or* oblation; κορβᾶν] (Mark 7:11). The term, in postexilic Judaism, for a gift consecrated to God for religious purposes. The Hebrew term is used in Ezekiel, the HOLINESS CODE, and the PRIESTLY CODE to designate any kind or class of "offering" (Lev. 1:2; 22:27; 23:14; Num. 7:25; Ezek. 20:28; 40:43). The absence of the word in any earlier writings indicates that it was not widely used until later times, and, probably, that its use originated in circles having to do with the Jerusalem cultus. The Mishna (*see* TALMUD) shows how, in later Judaism, anything set apart by the use of the term, even rashly, could not thereafter be used for any other purpose (Ned. III.6; IX). It is to this strict use of the word that the saying of Jesus in Mark refers.

H. H. GUTHRIE, JR.

CORBE. KJV Apoc. form of CHORBE; same as ZACCAI.

CORD, ROPE. In antiquity a great many fibers were used in the manufacture of rope. The Bible mentions flax (Esth. 1:6), silver (Eccl. 12:6), and gold (Exod. 28:24-25); Pliny speaks of hemp, esparto grass, papyrus, and palm leaves (Nat. Hist. XIII.72; XIX.29-31, 173). Goat's hair, wool, and later camel's hair were doubtless also employed for this purpose.

Some of the more common words translated "cord" or "rope" are:

a) חבל, a general term, used on the one hand of a rope strong enough to support a man's weight (Josh. 2:15; Jer. 38:6) or to drag stones (II Sam. 17:13), and on the other of cords which tie back curtains (Esth. 1:6) or suspend a lamp (Eccl. 12:6). It is employed figuratively of a trap by (Ps. 119:61) or for (Job 18:10) the wicked, and of a snare set by Sheol or death (Ps. 18:4-5—H 18:5-6). The word is also used of a measuring line (Mic. 2:5; Zech. 2:1—H 2:5).

b) מיתר, the cords of a tent (Isa. 54:2; Jer. 10:20), of the court of the tabernacle (Exod. 35:18; Num. 3:37); and the strings of a bow (Ps. 21:12 KJV—H 21:13; cf. יתר in Job 30:11).

c) עבת, from a root meaning "to wind, weave," hence probably "braided rope." In the majority of cases the word refers to bonds (Judg. 15:13; Ps. 2:3; Ezek. 4:8). Captives would be secured by binding the elbows or hands behind the back or over the head, and they could be led by ropes around the waist (cf. נקפה in Isa. 3:24) or neck. This word is also used of the gold braid on the high priest's garment. *See* EPHOD 2.

d) Σχοινίον, a rope made of rushes; possibly of esparto grass (John 2:15; Acts 27:32).

e) Ζευκτηρίας, the crossbar of a double rudder (Acts 27:40; cf. Euripides *Helena* 1556).

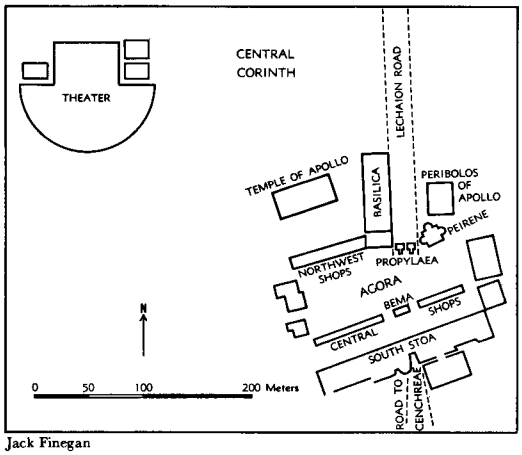
J. C. TREVER

***CORINTH** kôr'ĭnth, kŏr'— [ἡ Κόρινθος] (Acts 18:1; 19:1; I Cor. 1:2; II Cor. 1:1, 23; II Tim. 4:20). The chief commercial city on the Isthmus of Corinth and the capital of the Roman province of ACHAIA.

Descriptions of Corinth are given by Strabo (VII. 378-82), who visited the city soon after its restoration by the Romans in 44 B.C., and by Pausanias, who wrote his *Description of Greece* (see book II) *ca.* A.D. 174. The excavation of the ancient city was begun by the American School of Classical Studies in Athens in 1896, and the work and the publication of the results have continued.



The site of the city was *ca.* two miles inland from the Gulf of Corinth on an elevated terrace at the foot of Acrocorinth, a rocky hill rising to 1,886 feet above sea level. Stone implements and pottery vessels attest the life of man here in the Neolithic period, while tools of metal show the transition to the Early Bronze Age *ca.* 3000 B.C. *Ca.* 2000 B.C. the settlement seems to have been devastated, and then at the beginning of the first millennium B.C. was occupied by the Dorian Greeks. By the eighth century B.C., Corinth had founded colonies at Corfu and Syracuse. In the seventh century Cypselus made himself tyrant of the city, and was followed by his famed son, Periander (*ca.* 625–*ca.* 583 B.C.), under whom Corinth reached great power and prosperity. The city was famed for pottery and bronze work, and its products were carried far and wide by extensive shipping.

Corinth survived the vicissitudes of the Peloponnesian War (431-404 B.C.) and the Corinthian War (395-387 B.C.), but in the third century B.C. as the leader of the Achaian League it came into conflict with Rome. In 146 B.C. the Roman consul L. Mummius captured, burned, and razed the city, slaying its men and selling into slavery its women and children. Corinth lay desolate for a century, then was refounded as a Roman colony in accordance with a decree which Julius Caesar issued in 44 B.C., not long before his death. The city was known earlier as Ephyra (Ἐφύρα), meaning "lookout" or "guard," but now in honor of its new founder was called Colonia Laus Julia Corinthiensis, a name which has been found in an inscription at Corinth (*see bibliography*). The colonists seem to have been freedmen from Italy, with whom soon Greeks and Orientals, including many Jews, were mingled.

Prosperity returned to the revived city. Corinth was strategically located on its isthmus and controlled the ports of Lechaion on the Gulf of Corinth and Cenchreae on the Saronic Gulf. The goods of East and West were shipped across the isthmus, and at its narrowest point the smaller vessels were themselves dragged over bodily on a sort of shipway of which some vestiges have probably been identified and which Strabo (VIII.335, 369, 380) called a δίολκος, or "haul-across." The isthmus was only 3½ miles across, and it occurred to Periander and others to cut a canal through it. This project was seriously undertaken by Nero upon his visit to Greece in A.D. 66 or 67, but abandoned when exigencies elsewhere proved more pressing. The same emperor was generous in restorations in Corinth when the city was shaken by an earthquake, and Vespasian and Hadrian also built there. By the second century A.D., Corinth was probably the finest city in Greece.

Strabo (VIII.379) states that Corinth was surrounded by a wall except where it was protected by Acrocorinth, and that this wall extended for as much as forty stadia. Modern exploration has found and traced the ancient wall in a circuit of more than six miles, which is actually in excess of Strabo's figure, since it amounts to some fifty-five Greek stadia. It would appear that the city did not need all this space, and the excavations which have laid bare many of the chief buildings have touched less than the hundredth part of the entire area.

Since Mummius conducted so thorough a destruction, relatively few remains of the ancient Greek city

Jack Finegan

42. City plan of Corinth

have been found, and it is for the most part the ruins of Roman Corinth which have been brought to light. In the identification of the different structures the detailed itinerary and descriptions of Pausanias have been of the utmost value. In what follows, some of the chief features of Corinth will be noted which existed in the middle of the first century A.D.—i.e., at the time of Paul. Fig. COR 42.

Coming from the port of Lechaion to the N, a road led directly to the central area of Corinth. Where this road approached the agora, it was twenty to twenty-five feet in width and flanked by raised sidewalks on either side, both road and sidewalks being paved with hard limestone. Steps built into the road make it evident that it was not intended for wheeled traffic, and it was lined with colonnades and shops on each side.* Above these shops on the W side of the road was a large basilica, a great rectangular hall divided by two rows of columns, with rooms at each end. Beyond the basilica to the W on a separate eminence stood the great Temple of Apollo.* Built in the sixth century B.C., seven of its original thirty-eight columns still stand, nearly twenty-four feet tall and

44. Temple of Apollo at Corinth

six feet in diameter. Behind the shops on the E side of the Lechaion Road was a large open court, probably the peribolos or sacred enclosure mentioned by Pausanias (II.iii.3) as also dedicated to Apollo. S of the peribolos was an enclosure around a copious natural spring, the famous Fountain of Peirene. Figs. COR 43-44.

At the head of the Lechaion Road, splendid propylaea gave access to the agora.* This large, generally rectangular area was divided into two parts, the N or lower, and the S or upper part. Colonnades, shops, basilicas, and other monuments surrounded the agora. The dividing line between the lower and upper areas was marked by a long row of central shops, in the midst of which was found the bema (*see below*). The S edge of the agora was adorned by the colonnades of the S stoa, which gave access to another row of shops and buildings. Many of these shops were provided with deep wells connected with the Peirene water system. The pottery found here included many drinking vessels inscribed with such names and words as Dionysus, Zeus, Health, Security, and Love, which suggest that these shops served chiefly as taverns. Fig. COR 45.

From the S edge of the agora, the road departed which led to Cenchreae. On a sloping hill NW of the agora was the theater. Consisting fundamentally of a semicircle of seats facing a large stage building, the theater originated in the fifth century B.C. and was rebuilt several times in the Greek and Roman periods. Farther N, adjacent to the city wall and beside the spring Lerna, was the sanctuary of Asclepius, the god of healing. The patients who came here often expressed their gratitude for healings received by leaving votive offerings in the form of representations of their afflicted parts; a vast number of terra-cotta replicas of hands, feet, and other members of the body were found in the ruins. *Ca.* a mile W of the agora was the potters' quarter, where the ancient craftsmen produced the wares which added to the fame of their city. On the summit of Acrocorinth was a temple of Aphrodite, the goddess whose worship Strabo (VIII.378) said brought so many people and so much wealth to Corinth; and this temple too has been identified with probability in the excavations.

In connection with the work of Paul at Corinth the bema is of special interest.* As indicated above, this structure was found near the center of the agora. It consisted of a high, broad platform raised on two

steps and carrying a superstructure, with benches, on the back and part way along the sides. Below, on either side, were rectangular enclosures with benches, and beside these, passageways gave access from the lower to the upper areas of the agora. Built of white and blue marble, the bema must have presented an

46. The bema at Corinth, with Acrocorinth in the background

impressive appearance, and it served very well for the function of a public-speaking platform with the possibility of a large crowd assembled in front of it. The date of the construction is believed to be in the first half of the first century A.D., perhaps *ca.* A.D. 44. A Corinth inscription which states that a certain text had been read "from the rostra" probably refers to this structure and accords perfectly with the idea of a speaking platform in a public place. The Greek word *bema* (βῆμα), translated "tribunal" in the NT, corresponds to the Latin *rostrum,* and there can be little doubt that this is the very place where Paul was brought "before the tribunal" (ἐπὶ τὸ βῆμα), as recorded in Acts 18:12-17. Fig. COR 46.

In the vicinity of the theater at Corinth was a plaza, some sixty feet square, paved with limestone blocks, dating probably in the middle of the first century A.D. On one of the blocks was the inscription ERASTVS·PRO·AED / S·P·STRAVIT. This is probably to be read, *Erastus pro aedilitate sua pecunia stravit,* and means that in return for his aedileship, Erastus had laid the pavement at his own expense. "Aedile" (Latin *aedilis*) was the title of a Roman city official who was in charge of various public works. In Rom. 16:23, written doubtless in Corinth, Paul mentions an Erastus, whom he calls the "city treasurer" (ὁ οἰκονόμος τῆς πόλεως). It has been held that the Erastus of the paving inscription and the Erastus of Rom. 16:23 could not be the same, because "aedile" is usually ἀγορανόμος in Greek. However, since οἰκονόμος means, not only "treasurer" (Latin *arcarius*), but also more broadly "steward, manager, administrator," it seems that this word might easily be used as the equivalent of *aedilis,* and so it may well be held that we have here an inscription of the very man who later became a Christian and a friend of Paul.

Another inscription found in fragments in the vicinity of the Lechaion Road near the agora, dating probably in the last years of Augustus or the reign of Tiberius, mentions a shop or market with the same word in Latin, *macellum,* which Paul uses in Greek, μάκελλον (RSV "meat market"), in I Cor. 10:25. A similar fragmentary inscription contains a word restored as *piscario,* which suggests that in this case a fish market, or fish and meat market, is involved.

Yet another inscription was found on a block of white marble on the Lechaion Road near the propylaea. Rather roughly cut and now partially destroyed, it reads ΓΩΓΗΕΒΡ—i.e., [Συνα]γωγὴ Ἑβρ[αίων], "Synagogue of the Hebrews." The block probably formed the lintel over a doorway of a Jewish synagogue, which must have stood in that vicinity. While the style of lettering indicates a date later than the time of Paul, this synagogue may have been the successor to the very one in which, according to Acts 18:4, the apostle preached.

*CORINTHIANS, FIRST LETTER TO THE

kə rĭn′thĭ ənz [Κορίνθιους, *see* CORINTH]. A letter written by the apostle Paul to the church at Corinth; now found as the seventh book of the NT canon. Because of the variety of matters with which it is concerned, it is one of the most illuminating documents in all Christian literature. It casts a flood of light, not only on many aspects of Paul's thought, but also on typical problems that arose in early Gentile churches. 11:23-26 preserves the earliest account of the church's celebration of the Lord's Supper and of the words that Jesus used at the Last Supper. 15:3-11 has the earliest account of the origin of the faith in the Resurrection. The hymn about love in ch. 13 is perhaps the most familiar and most beloved chapter in all Paul's writings, but the entire letter is replete with spiritual depth and lyrical cadence.

1. Destination. The letter that was entitled I Corinthians when it was included in the collected letters of Paul was written by the apostle from Ephesus (I Cor. 16:8) to the church at Corinth, a city situated at the S end of the narrow isthmus that connects Greece with the Peloponnesus. Although the site had been inhabited as early as Neolithic times and ancient Corinth had played an important role in early city-state politics, the city in Paul's day was a new and burgeoning metropolis, more nearly comparable to Houston, Texas, than to Boston, Massachusetts. In 146 B.C. the old city had joined in an Achaean revolt against Rome and had been destroyed by the Roman general Mummius, about the same time and almost as thoroughly as Scipio had laid waste the city of Carthage. Then, in 46 B.C., it was refounded as a Roman colony by Julius Caesar and repopulated with Italian freedmen and dispossessed Greeks as *Laus Julia Corinthiensis*. It rapidly recovered its former commercial prosperity as a center of import and transit trade and grew in size and influence to become in Paul's day, after Rome, Alexandria, and Ephesus, the largest and most important city in the Empire. In 27 B.C., Augustus made it the capital of the province of Achaia and the residence of the Roman proconsul. The holder of that office in A.D. 51-52 was Gallio (Acts 18:12-17), an elder brother of the Stoic philosopher Seneca.

In the first century of the Christian era Corinth was a city to which immigrants had been attracted from all parts of the Mediterranean world. Egyptians, Syrians, Jews, and Orientals of other races had settled among the earlier Italian and Greek colonists and had brought with them their diverse cultural heritage, their distinctive social customs, and their differing religious beliefs and practices. Modern archaeological research at Corinth, carried out by the American School for Classical Studies at Athens, has identified the remains of temples to the Egyptian divinities Isis and Serapis, to the Phrygian goddess Magna Mater, to the Syrian deity Astarte and the Ephesian Artemis, as well as to Helios, Aphrodite, and others.

Even at a time when public morality everywhere in the Empire was at a low ebb, Corinth in Paul's day was notorious for its lax morals. From the time of the poet Aristophanes (*ca.* 400 B.C.), "to live like a Corinthian" or "to Corinthianize" was a proverbial expression for dissolute living. To some extent this immorality was a consequence of pagan religious rites. Many of the religions that flourished in the Near East and that had been introduced into Corinth were fertility cults, and their ritual of worship often included gross forms of imitative magic. According to Strabo (a Greek historian and geographer who died *ca.* A.D. 24), the cult of Aphrodite early in the first century of our era had a thousand priestess-prostitutes attached to its Corinthian temple.

2. Paul's first contact with Corinth. Jews in some numbers had settled at Corinth, as at every other center in the Mediterranean world. In 1898 a stone inscription was discovered that had stood in the first century over the doorway of a building not far from the agora, or market place, on the fringe of the residential area to the W of the city and near the road that leads to the nearby port of Lechaem. The inscription bears the legend "synagogue of the Jews." In this synagogue Jews who had been born at Corinth, Jews who had immigrated from Rome or Naples or Alexandria or Antioch, Jews of wealth and Jews of abject poverty, gathered each sabbath to express their group solidarity, to be reminded of the traditions, beliefs, and practices of their religion, and to be encouraged with the assurance of the glorious future in store for the people of God. There were some proselytes among them, men and women of non-Jewish birth who had identified themselves ritually and by formal initiation with the Jewish community; but there were not many of these, for to become a Jew involved a radical break with the Gentile environment of that day, as of ours. Far more numerous than the proselytes were the so-called "God-fearers," Gentiles who had informed themselves about the history and tradition of the Jewish people, who had undertaken to govern their lives by the regulations of the Mosaic law, and who had accepted the monotheism of Jewish theology, but who had not taken the final step of ceremonial identification with the Jewish group. In Corinth, as elsewhere in the Empire, this fringe of interested people, the majority of whom were women, was very large. In every respect save that of ceremonial and ritual adherence to the Jewish faith, they thought and acted as Jews, but hesitated to pass over as recognized converts for two reasons: the anti-Semitic prejudice of the day that made formal identification with the Jewish community a matter of some social consequence in Gentile circles; and—almost as important a barrier—the fact that even within the Jewish community a proselyte remained for his lifetime a second-class Jew. Only his children were admitted to the full rights and privileges of the religious group.

The first acquaintance of the Corinthian Jewish community with the troublesome Christian sect dated from A.D. 49, according to the usual reckoning (*see* CHRONOLOGY OF THE NT). Late that year a man and wife, Aquila and Prisca ("Priscilla" in Acts), had come to the city after an edict of the Emperor Claudius had expelled them from Rome (Acts 18:2), where, together with other Jews, they had been charged (according to Suetonius) with stirring up riots over a certain "Chrestos." In Corinth, Aquila and Prisca associated themselves with the synagogue, but, busy with their trade as leather-workers, they apparently made little attempt to debate their Christian faith or to make converts.

Early in A.D. 50 Aquila and Prisca opened their home to an itinerant Christian evangelist of the same trade, a Tarsian Jew by the name of Paul. On the sabbath their guest accompanied them to the synagogue and was invited as a distinguished visitor to address the congregation. Paul took aggressive advantage of the opportunity. On this and later occasions he attempted with enthusiasm and persistence to convince his hearers that a certain Jesus was the Messiah of Jewish expectation and the Lord of life. This "Christ" had been crucified in Palestine under Pontius Pilate but had been raised by God from the dead and waited now at God's right hand in heaven, from whence he would shortly return to inaugurate a new and eternal kingdom for all who by their faith would be qualified to enter it.

Although tolerant to the extreme, the rulers of the

synagogue found Paul an exasperating and contentious exponent of what seemed to them a dangerous heresy. After two assistants arrived from Macedonia to join him, Silvanus ("Silas" in Acts) and Timothy (Acts 18:5), the Jewish leaders feared a serious rift in their community and ordered Paul to withdraw. This the apostle did, but not without taking with him a number of Jewish converts, including Crispus, the president of the synagogue (Acts 18:8), and a following of non-Jews who had been frequenting the Jewish place of worship. These "God-fearers" found Paul's presentation of the new faith of Christianity an attractive substitute for the Judaism in which they had been interested. It seemed to offer all the values of the Jewish religion—a high monotheism, a high morality, and a claim as the true Israel to the sacred literature and divine prerogatives of the Jews—without requiring circumcision or obedience to Jewish dietary regulations as conditions of admittance and membership.

Paul chose to carry on his mission from the home of one such "God-fearer," a man named Titius Justus (Acts 18:7). The location was a strategic one, for it adjoined the synagogue, but its choice was scarcely calculated to make for good relations with the Corinthian community of Jews.

Converts to Christianity, both from Judaism and from paganism, submitted to the rite of baptism. Jews were familiar with the practice of ritual washing by which proselytes were admitted to the community of Israel. No doubt some had heard of John the Baptizer, the desert prophet who had baptized fellow Jews in the Jordan as a sign that they were ready for the advent of the Messiah and the new age, and whose followers still practiced the rite. Some may even have had knowledge of the repeated lustral washings of the monastic sect at Qumran. Non-Jews would think of the blood bath of Mithraism, by which the initiate shared in the life-giving power of the animal sacred to the solar deity, as its blood poured down upon him from the jugular vein of the slaughtered bull. Paul personally baptized only a few of the Corinthian converts—Crispus, Gaius, and the household of Stephanas (I Cor. 1:14-16). In the main he left this function of the missionary to his associates. Nevertheless, he thought of the rite as more than a symbol—as a sacrament. Writing to Roman Christians at a later time from Corinth, he implies that the convert when immersed shares Christ's experience of death, and when raised from the water enters in some fashion into the experience of his resurrection (Rom. 6:1-5). No doubt many Corinthian converts, familiar with analogous initiation ceremonies in pagan mystery cults, accepted an even more realistically sacramental interpretation of the rite by which they were admitted to the Christian fellowship.

Paul's Corinthian converts were drawn generally from the city's lower economic and social groups. In I Cor. 1:26-29 the apostle reminds his readers of their status when they had received their call: "Not many of you were wise according to worldly standards, not many were powerful, not many were of noble birth; but God chose what is foolish in the world to shame the wise, God chose what is weak in the world to shame the strong, God chose what is low and despised in the world, even things that are not, to bring to nothing things that are, so that no human being might boast in the presence of God." Some converts were slaves. Others were poverty-stricken wage earners. Yet there were also some people of leisure, wealth, and social influence in the new church. In a later letter the apostle mentions a certain Erastus, whom he describes as the "city treasurer" (Rom. 16:23) and who presumably was a civic official of some importance. (A tablet with his name inscribed on it is among the interesting finds of a recent archaeological excavation at Corinth.) Gaius, who could serve as host to Paul and "to the whole church" (Rom. 16:23); Chloe, who appears to have been a woman of means who maintained establishments both in Corinth and Ephesus (I Cor. 1:11); Crispus, who had been president of the synagogue (cf. I Cor. 1:14 and Acts 18:8); Sosthenes, who may also have been synagogue president before he became a Christian (cf. I Cor. 1:1 and Acts 18:17); and possibly others whom we can no longer identify belonged to the so-called higher social and economic strata of the times.

Paul as a Christian missionary followed the rabbinical practice of supporting himself by his own labor. He worked at Corinth at his trade as a leatherworker and later boasted of his financial independence of the Corinthian congregation. He had "preached God's gospel without cost" to them (II Cor. 11:7). He had "robbed other churches" (to use his own phrase [II Cor. 11:8]) by accepting financial support from them in order to serve his converts at Corinth without becoming in any way a burden to them. Macedonian Christians (II Cor. 11:9)—more specifically, Philippian Christians (Phil. 4:15)—had supplied his most pressing needs. In one rather involved argument (I Cor. 9:6-18), he defends the right of a Christian missionary to receive support from those to whom he ministers, and at the same time his own refusal to make use of this right. He wished to make the gospel "free of charge" (I Cor. 9:18), to put no hindrance in the way of its acceptance.

The earliest historian of Christianity estimates that Paul spent eighteen months in Corinth during the course of his first visit (Acts 18:11). Toward the end of his stay, probably late in the summer of A.D. 51, GALLIO assumed office as Roman proconsul of Achaia. Corinthian Jews, who had been growing more and more indignant at the inroads that Christians had made on their following, charged Paul before the proconsul with "persuading men to worship God contrary to the law" (Acts 18:13)—presumably the Jewish rather than the Roman law. Gallio refused to intervene, contemptuously dismissed the case, and took no notice when the mob turned on Sosthenes, the president of the synagogue, and manhandled him (Acts 18:14-17).

Shortly after this incident, probably early in the autumn of 51, Paul took his leave of the congregation he had established in Corinth and sailed from Cenchreae on a ship bound for Syria (Acts 18:18).

3. Developments subsequent to Paul's departure. Paul took Prisca and Aquila with him as far as Ephesus (Acts 18:18), and this much-traveled married couple now became residents of the sprawling

capital of the province of Asia. According to the account in Acts, the apostle himself stayed only briefly in Ephesus after leaving Corinth. However, impressed by the reception given him, he promised his newfound friends to return (Acts 18:19-21).

During Paul's absence a Jew by the name of Apollos arrived in Ephesus. He is described in Acts 18:24 as a native of Alexandria and an "eloquent" man; the adjective could also be translated "learned." It is a plausible inference from the closing verses of Acts 18 that the Alexandrian newcomer had heretofore been a follower of John the Baptist. (The alternative is to regard him as one whom Prisca and Aquila, as disciples of Paul, regarded as an inadequately instructed Christian, one familiar with "water" but not with "spirit" baptism.) Prisca and Aquila heard him speak in the Jewish synagogue, took him aside, and "expounded to him the way of God more accurately" (18:26)—i.e., converted him to the Christian faith (or to a Pauline interpretation of Christianity).

Armed with a letter of introduction and commendation from Ephesian Christians, Apollos journeyed to Corinth and proved of great service to the congregation of brethren at the Achaean crossroads (Acts 18:27-28). Paul later recognized this service when, in I Cor. 3:5, he ranked Apollos with himself as "servants through whom you believed, as the Lord assigned to each." Paul had sown the seed and Apollos had watered it (I Cor. 3:6).

Apollos had come back to Ephesus after Paul's return there from his journey to Syria (Acts 19:1) and before the writing of I Corinthians. (In I Cor. 16:12 Paul refers to Apollos' inability to pay a return visit to Corinth.) At Corinth, Apollos had impressed many of the new converts with his "wisdom." On his departure many of them claimed a position of preeminence in the Christian community as his personal followers, and "I belong to Apollos" became their watchword (I Cor. 1:12; 3:4).

It is possible that Cephas had also paid a visit to Corinth after Paul's departure and before the composition of I Corinthians. At any rate, a group of Corinthian Christians came to refer proudly to him as their personal apostle, rivaling the followers of Apollos with the party slogan "I belong to Cephas" (I Cor. 1:12).

The emergence in the Corinthian church of Apollos' and Cephas' cliques led to the formation of still others. Converts who remembered Paul affectionately as the "father," "planter," and "architect" of their faith, prided themselves on their superiority to the rest with the words: "I belong to Paul" (I Cor. 1:12; 3:4). Still others cried in effect: "A plague on all your houses! I belong to Christ!" (I Cor. 1:12; it used occasionally to be urged that the words were not originally a part of the text; that they were a marginal gloss by some pious reader. It is now widely believed that the "Christ party" were Christians at Corinth influenced by current Gnostic beliefs, and that ideas they held are frequently the subject of Paul's criticism in I Corinthians).

After developments such as these at Corinth, Paul came back to Ephesus in the course of what traditionally is called his "third missionary journey." Despite a busy and successful mission in Ephesus and contiguous areas, a mission that the author of Acts tells us extended over the greater part of three years, the apostle contrived to keep in touch by correspondence and by direct inquiry with the turbulent little Christian community which he addresses in the letter we have under discussion. In his own words, his "anxiety for all the churches" was a concern that burdened him every day (II Cor. 11:28).

In I Cor. 5:9-11 Paul refers to a letter he had written shortly before the letter that is called I Corinthians in the NT canon. In it he had warned the Corinthian Christians against association with people guilty of sex immorality or greed, or who were idolaters, revilers, drunkards, or robbers. This advice had been regarded by its recipients as impossible in view of the conditions that prevailed at Corinth. In his later letter Paul himself admits that if they had taken his warning strictly, they would have had to "go out of the world." He had not meant to prohibit association with immoral people in general. He had meant only that Christians should have nothing to do with so-called "brothers" who were guilty of immorality. With such a one, he adds sternly, they "were not even to eat."

This "first" letter has not been preserved, but there is a possibility that a fragment of it is now embedded in II Cor. 6:14–7:1. Although there is no MS evidence to support the hypothesis, there are certain observations that lend the supposition a measure of plausibility. The passage breaks the continuity between II Cor. 6:13 and 7:2, which certainly would read more smoothly without this interruption (or digression). It differs in style and content from what precedes and follows it. And its categorical imperatives, its rhetorical questions, and its angry tenor are such as might have been characteristic of Paul's first, lost letter. *See* § 5 *below*.

4. Occasion. Our canonical I Corinthians is in part an answer to a letter that Paul had received at Ephesus from the church at Corinth (I Cor. 7:1). It is possible that this letter had been personally delivered by the Corinthian delegation of Stephanas, Fortunatus, and Achaicus. At any rate, they had arrived at Ephesus before Paul undertook to answer it, and their presence had greatly cheered him (I Cor. 16:17-18). The Corinthian letter had assured the apostle that he was always remembered and that the traditions were maintained as he had delivered them (I Cor. 11:2). It had expressed complacent satisfaction with conditions at Corinth (I Cor. 4:7-8) and the hope that Apollos might shortly return to resume his ministry (I Cor. 16:12). But in the main it appears to have consisted of a series of questions concerning which the Corinthian congregation desired the apostle's judgment: questions about sexual intercourse, about marriage, and, in particular, about a sort of "spiritual" marriage that had become a vogue in Corinth (ch. 7); questions about the propriety of eating the flesh of animals that had been sacrificed to pagan gods and then sold in the market place (ch. 8); and questions about the authentication of spirit possession, the relative worth of "spiritual gifts," and the proper ordering of public worship (chs. 12–14).

Paul might have contented himself with a series of verbal instructions to be delivered by the members of the deputation that had waited on him, but, fortunately for the later church, he felt the occasion im-

portant enough to warrant a lengthy letter. In our canonical I Corinthians he not only answered the questions that had been asked, but also made observations and issued instructions on a variety of other matters that needed correction: the existence of cliques in the church at Corinth (1:10–4:21); a case of flagrant immorality on the part of a member of the Corinthian congregation (5:1-8); litigation by Christians in pagan courts (6:1-11); loose sex mores (6:12-20); modernistic tendencies among women (11:2-16); the proper observance of the Lord's Supper (11:17-34); the meaning of the resurrection faith (ch. 15); and the proposed collection for the needy saints in Jerusalem (16:1-4).

5. Unity. The many different matters mentioned or discussed by Paul in what we call I Corinthians have encouraged some interpreters to regard the canonical document as a composite of several originally separate writings, and it is suggested that the abrupt transitions in our present letter from one issue to another help to support this hypothesis. In addition to II Cor. 6:14–7:1 (*see* § 3 *above*), it is held that the following passages in I Corinthians can be ascribed to the first or precanonical letter which Paul mentions in I Cor. 5:9-11: I Cor. 10:1-23 (attack on idolatry); 6:12-20 (attack on fornication); and (possibly) 11:2-34 (criticism of improper behavior at the Lord's Supper). The remainder is distributed between two hypothetical letters: (*a*) an answer to questions the Corinthians themselves had asked (in the letter to which Paul refers in I Cor. 7:1): I Cor. 7–9; 10:24–11:1; 12:1–16:6; and (possibly) 16:7, 15-19; (*b*) a letter written after Paul had heard from members of the household of Chloe (1:11) of the growth of factions in the church at Corinth: I Cor. 1:1–6:11; 16:10-14; and (possibly) 16:22-24.

There is nothing inherently improbable about such a partition hypothesis. The earliest recoverable text of I Corinthians is its text in the collected letters of Paul. It may be taken for granted that some editorial recasting of Pauline material available at Corinth was involved in publishing it as part of a message to be read by the whole church. Certain catholicizing phrases, as in 1:2; 4:17; 7:17; 11:16; 14:33, may have been added at that time. It is quite conceivable that much of Paul's first "lost" letter has actually been incorporated in our I and II Corinthians. However, it is a different matter to assume that passages from this "lost" letter can now be recognized with any confidence in their present context. And the theory of two later letters combined with these fragments to constitute our present letter is not demanded by any real difference in the situation that the material presupposes. I Corinthians can be readily understood as a letter composed at one time, and it may even be argued that Paul's admonitions in 13:4-7 are best understood in the light of the situation at Corinth as described in 1:10–4:21.

6. Authenticity. The authenticity of I Corinthians was never questioned in ancient times, was challenged in the late nineteenth century only by a few Dutch and German scholars, and is assumed in our day by every responsible interpreter. Its style, vocabulary, and ideas are indubitably Paul's. I Clement, a letter of the church at Rome to the church at Corinth *ca.* A.D. 96, contains a number of quotations from it and allusions to it, and in one passage (I Clem. 47.1) exhorts its readers to "take up the epistle of the blessed Paul the apostle." Ignatius' letters, from the early second century, often echo the language of I Corinthians and support the hypothesis that their author was familiar with it (as with other parts of the Pauline collection). The possibility that a few comments by early readers of the letter have been transferred by later copyists from the margin of their exemplar to the text (e.g., 1:12*d;* 4:6*b;* 14:34-35; 15:56) is still occasionally entertained.

7. Outline. The letter may be outlined as follows:

I. Introduction, 1:1-9
II. The problem of factions, 1:10–4:21
III. Problems of immorality, chs. 5–6
  A. A case of incest, 5:1-8
  B. Correction of a misunderstanding, 5:9-13
  C. Litigation in pagan courts, 6:1-11
  D. Sex immorality, 6:12-20
IV. Answers to questions, 7–14
  A. Marriage and celibacy, 7:1-40
  B. Food sacrificed to idols, 8:1–11:1
  C. The veiling of women in public worship, 11:2-16
  D. The celebration of the Lord's Supper, 11:17-34
  E. Spiritual gifts and the conduct of worship, chs. 12–14
V. The resurrection, ch. 15
VI. Conclusion, ch. 16

8. Contents. ***a. Introduction.*** Paul's introduction follows the pattern evident in his other letters: the address, a greeting, and a paragraph of praise and thanksgiving. The "Sosthenes" whom he associates with himself in the address is probably to be identified with the "ruler of the synagogue" mentioned in Acts 18:17, who must then have been converted to Christianity at some point after the incident narrated by Luke. It is unlikely that he was in any sense a co-author of the letter. Since Paul customarily made use of an amanuensis (Rom. 16:22), it is possible that Sosthenes served as his scribe. More probably Paul mentions him only as a matter of courtesy, as one of his companions at Ephesus well known to the congregation at Corinth. It is interesting to note that Paul refers to the Corinthian congregation as the "church of God which is at Corinth." The whole church was mirrored in the local church—one church with local manifestations rather than an agglomeration of separate churches. Some of the phrases Paul uses in his prayer of thanksgiving seem rather extravagant in view of the evils he is shortly to denounce.

b. The problem of factions. From members of the household of Chloe (*see* § 2 *above*), probably slaves, Paul had learned of the growth of cliques in the congregation at Corinth. The apostle knew of at least four that were competing for primacy—people who claimed to have an advantage over others because of a bond—in some instances that of baptism—that attached them to Paul, to Apollos, to Cephas, or to Christ. Some interpreters believe that the phrase "I belong to Christ" was not in the original text. They hold that it was a comment by some pious reader on the various party slogans, a gloss that some later scribe transferred to his copy from the margin of his exemplar. Others interpret the reference as one to

people who prided themselves on being superior to others at Corinth on the grounds that they had received their call, not by any human mediation, but directly from the risen Christ. Still others regard the "Christ party" as Corinthian Christians influenced by current Gnostic ideas, folk who distinguished between the man Jesus and the divine Christ, and they believe that the apostle had this group in mind in such passages as I Cor. 12:3 (*see* § 3 *above*).

Paul protested that these various factions gave to individual apostles a place that belonged only to Christ. In particular he addressed himself to those who took pleasure and found confidence in a gospel phrased as a system of "eloquent wisdom." (It is possible that Paul had the "Apollos party" in mind.) Instead of the wisdom of the world, God had offered men the "foolishness" of the message of the Cross as a means of salvation. His very choice of members of the church at Corinth shows how little he values the wisdom of the world. Not many were powerful or of noble birth. God had chosen those who were regarded by the standards of the world outside the church as foolish and socially unimportant, as low and despised, those whom Platonic philosophers described as "things that are not," to bring to nothing "things that are." As a consequence no member of the church had any right to pride himself on any natural endowment, intellectual or other, for the wisdom and righteousness and sanctification and redemption that were his in his new life as a Christian were gifts of God "in Christ."

As a further demonstration that the gospel is not a philosophy related to other human systems, Paul reminds his readers that, when he had first come to Corinth, he had deliberately chosen to avoid lofty rhetoric and persuasive words of wisdom in his proclamation. "For I decided to know nothing among you except Jesus Christ and him crucified." Paul at Corinth had been no peripatetic philosopher or rhetorician. The Corinthians did not accept his message because of its impressive phrasing or logical demonstration, but because they saw in it a manifestation of the supernatural power of God.

This contrast between the "wisdom" of the world and the "foolishness" of the message of the Cross prompts Paul to a new train of thought. The proclamation of the gospel at times, and among people prepared to receive it, did include a "wisdom"—an esoteric system of thought which, like various forms of Gnosticism, sought to explain the riddle of existence and the inner meaning of history. But this divine wisdom could be presented only among the "mature," by whom Paul apparently means the "fully initiate," those who had been spiritually endowed to receive and understand what was spiritually imparted. It could not be understood by the "unspiritual" or "natural" man, the non-Christian, nor could Paul have preached it among his Corinthian converts. They were "babes in Christ," not yet ready for "solid food." And the emergence of factions among them was evidence that they had still not achieved the status of "spiritual men."

After this digression, Paul returns to the main theme, his criticism of the factions at Corinth. He and Apollos had been nothing but fellow workmen in the service of God, laboring in the field that God was cultivating and on the building God was erecting, completely subordinate to and dependent on God. How foolish, then, were the party slogans!

But now Paul's words undergo a sharp change of tone. Like a "skilled master builder," he himself had laid the foundation well and true—the gospel about Jesus Christ—but the structure that had been erected on this foundation might not be above criticism. The events of the "last days" (Paul here uses conventional ideas of current eschatology) would reveal what sort of work had been done and would destroy the shoddy. The poor workman himself would share in the blessedness of the new age, but only as one had passed "through fire." With a final stern warning to those who would defile the temple of God (the church), Paul reiterates that the wisdom of this world is folly with God and that no one should boast of men, and ends with a psalm of praise about the glorious inheritance of the Christian.

In the final chapter of this section Paul enters a brief in his own defense. He had been a steward of the gospel, and whether or not he had been faithful was for God alone to judge. (It would almost appear from this passage that Paul's opponents at Corinth had summoned him to give an acount of his apostleship before some church court.) In words of wounded love, touched on occasion with bitterness, Paul rebukes the troublemakers at Corinth and pleads with his readers as his "beloved children" to mend their ways, that he may come to them in a "spirit of gentleness" rather than "with a rod."

c. Problems of immorality. The apostle now proceeds to abrupt and angry comment on the tolerance shown by the Corinthian congregation to a member guilty of incest. Apparently the case was one of marital cohabitation of a man with his stepmother, a relationship condemned both by Jewish and by Roman law. (There was no necessary association in Greco-Roman paganism between religion and morality, and Gentile converts to Christianity, as Paul frequently intimates, sometimes offended in this respect also as Christians.) Paul would have the church meet in solemn assembly, at which he himself, he says, would be present in spirit, and issue an edict of excommunication. He expects such action to be followed by the offender's death, but hopes that his spirit, because of its previous association with the spirit of Christ, may be saved in the "day of the Lord." Allegorizing the Jewish Passover festival, Paul finds in it a type of Christianity in which the "yeast" of pagan vice has no more place. "Let us, therefore, celebrate the festival," he exhorts his readers, "with the unleavened bread of sincerity and truth."

This brings to the apostle's mind an earlier letter that he had written on such matters (*see* §§ 3, 5 *above*) and that the Corinthian Christians had misunderstood. In warning them against association with immoral men, he had not meant those outside the church—it was God's task to judge such people—but those inside. The Corinthians were not only to avoid associating or even eating with such a one; they were also to excommunicate him.

Paul now turns to the problem raised by litigation in pagan courts. He regards the fact that Christians have differences at all as in itself a moral defeat. But how much worse, having differences, to drag them for settlement before pagans? Why not settle these matters among themselves? (Dispersion Jews often

had their own civil courts.) All of which leads him, as in Gal. 5:19-21, to give a list of moral evils that shut a man out of the kingdom of God. (The list is modeled on similar ones in the Stoic literature of the time.) All such sins of the flesh ought to have ended among Christians at baptism, but continued to manifest themselves within the Corinthian congregation, and Paul calls upon his readers to become in fact what they already are in principle: people who are sanctified and justified "in the name of the Lord Jesus Christ and in the Spirit of our God."

Sexual immorality to Paul the Jew and Paul the Christian was a particularly offensive manifestation of moral evil, and he pleads with his Corinthian converts to shun it. In an argument that is not always easy to follow, he disputes the claim that evidently had been made by some at Corinth that sexual intercourse outside the marriage bond was no more a matter of consequence than partaking of food. Two factors are involved in the act of eating—food and the stomach—and both will pass away. Two factors are also involved in immoral sex intercourse—the harlot and one's own body. The latter is part of the body of Christ and is destined for resurrection. Since God has declared (Gen. 2:24) that sexual intercourse makes man and woman one body, he who makes Christ's body one with that of a harlot is guilty of an intolerable act of desecration. The Christian is no longer his own property. He has been bought and paid for. As the temple of the Holy Spirit, he should now glorify God in his body.

d. Answers to questions. The Corinthian church had sent Paul a letter in which they had requested his opinion on a number of matters (*see* § 4 *above*). Ch. 7 is a reply to some such question as, "Should believers marry, in view of the imminence of the end of this age?" Paul's answer is a classical example of what has been termed an "interim" ethic—an ethic for the interim between the end of one age and the advent of another and conditioned by such historical presuppositions. Marriage is a desirable state only for those who cannot sublimate the sex instinct. It has no value in itself, and, since the end of this age is at hand, it is not even necessary as a means of procreation. In principle marriage is religiously and ethically indifferent, but in practice it can easily interfere with an individual's dedication of himself to God.

Although Paul believed in celibacy as the ethical ideal, he disagreed with some in Corinth who apparently held that married people ought to practice rigorous continence. Continence in the married relationship was impossible except by mutual consent and for limited periods, and then only for cultic ends.

By appealing to a command of the Lord (possibly the tradition preserved in Mark 10:2-9), the apostle repudiated divorce but acknowledged that, in extending the prohibition to include the divorce of an unbelieving partner, he spoke on his own authority. His advice to unmarried persons to remain as they were was given likewise on his own initiative and "in view of the impending distress."

Toward the end of the chapter Paul discusses an experiment at Corinth in what later came to be called "spiritual" marriage. Convinced that celibacy was the religious and moral ideal, some men and women had undertaken to live together in spiritual fellowship but without sex intercourse. Paul indicates a measure of sympathy with this procedure, but counsels that it should not be continued if it subjects the natural passions to too great a strain.

In the Greco-Roman world, meat sold on the market had been obtained by the vendors in most instances from a pagan temple. Ch. 8 is in answer to a question from Paul's correspondents that may have run something like this: "What is wrong with eating food that has been sacrificed to idols? It can do us no harm. We have 'knowledge.' We know that there is but one God and that there is no such thing as an idol!"

Paul agrees that for Christians there is but one God and one Lord. Nevertheless, out of consideration for those brethren who, by long habituation to the idea of the reality of idols, have not been emancipated from such belief, he urges his readers to refrain from sitting at table in an idol's temple. An act that involved no problem of conscience for the individual concerned might encourage others to act similarly, but in defiance of conscientious scruples. Unless one is governed in all his doings by the principle of consideration for others, declares the apostle, he may be led by his thoughtlessness to sin against Christ.

In ch. 9 Paul cites his own example in support of this principle of the renunciation of rights. The rhetorical questions with which the apostle begins may have been induced by some disparagement at Corinth of his apostolic credentials. He had waived two rights, that of support at the expense of the community and that of marriage, but in what follows he defends only his practice in the former instance. The right of the apostle to be supported by the community is established by four arguments: (*a*) a comparable principle is taken for granted in secular occupations; (*b*) there is scriptural authority for it (Paul discovers this authority by allegory); (*c*) temple procedure sets a precedent; and (*d*) a word of the Lord enjoins it (Paul's reference here may be to the saying of Jesus preserved in Luke 10:7). In a sentence that is grammatically almost incoherent in the Greek text, Paul protests that he had not written as he had in order to lay claim to such privileges in the future. He had deliberately waived his rights in order that his reward in preaching the gospel might be his pride in preaching it without reward.

As a final illustration from his own example in support of the principle of accommodation as set forth in ch. 8, Paul refers to his practice of becoming "all things to all men" for the sake of the gospel. This willingness was open to misunderstanding then and now, and Paul (according to both the account in Acts and references in his own letters) had often to defend himself against charges of inconsistency.

In the concluding paragraph of the chapter, which leads into his discussion in the next section of the need for self-discipline on the part of the community, Paul uses metaphors drawn from the language of athletic contests to describe his own practice of self-denial in view of a heavenly reward.

In ch. 10 Paul returns to a discussion of the matter of eating meat that had been sacrificed to idols. He deals in the first instance with the question of whether one who participates in the LORD'S SUPPER could also take part in a sacrificial meal celebrated in a pagan

temple, and to this query he gives an emphatic and categorical "No!" The one rules out the other. Whether Paul in this passage is thinking in realistically sacramental terms, or whether he holds only that the risen Christ presides as host at the sacred meal, is still a matter of exegesis about which honest interpreters have differences of opinion. But there can be no doubt about the seriousness with which the apostle views the issue. "You cannot partake of the table of the Lord and the table of demons." And to drive home his warning, he cites illustrations from traditional embellishments of the OT story about the wanderings of Israel. Though the fathers had prototypes of the Christian sacraments of baptism and the Eucharist, they were overthrown in the wilderness. The Corinthians are in similar deadly peril if they "put the Lord to the test."

Toward the end of the chapter, Paul deals with the other aspect of the issue that had already been raised in ch. 8, the propriety at a private meal of eating food that originally had been offered as a pagan sacrifice. Anxious questions about where the host had obtained the meat need not be asked. However, if some scrupulous companion at the meal should point out that it is sacrificial meat, the apostle's advice again is to refrain from eating it, on the principle of consideration for the conscience of him who is troubled.

In the first paragraph of ch. 11 Paul criticizes the participation of some women at Corinth in public worship without wearing veils. In the first place, he declares, it is a breach of accepted social custom. Only prostitutes go about with shorn or shaven heads! Secondly, the veil is a symbol of woman's subordination to man, a status implied in the creation story. (The argument in 11:7-10 raises problems of exegesis about which competent interpreters have not been able to reach agreement.) Finally, the appearance of women at public worship without veils is an improper innovation that the apostle declares he is not prepared to tolerate.

In 11:17-34 the apostle condemns developments at Corinth in the celebration of the Lord's Supper that he regards as perversions of its true character and origin. In Paul's day, as we learn from this passage, it was the custom of Christians to gather as a congregation for a common meal with which the Eucharist was then associated. At Corinth the well-to-do often arrived early and ate and drank without waiting for the wage earners and slaves, who had little to contribute to the common pool and who found most of the food consumed before they could partake. As a consequence, Paul declares with emphasis: "When you meet together, it is not the Lord's supper that you eat." He then proceeds to recall the words with which the Lord Jesus had instituted the rite.

Paul's account of the Last Supper has marked variations in order, phraseology, and emphasis from the so-called "short text" of Luke; and the relative value of the one or the other for a reconstruction of the original words of Jesus is not to be settled on the basis of chronological priority alone. Nevertheless, Paul's account is much the earliest we possess, and the close agreement of Paul's account with Mark's cannot be ignored. The only really significant variation is in Paul's addition (or Mark's omission) of the command: "Do this in remembrance of me." In the parts of the church that Paul and Mark knew, the Last Supper was believed to have been much more than a feast anticipating God's triumph in the new age. It was already an interpretation by Jesus of his anticipated death as a sacrifice inaugurating a new covenant. And the rite in which the Last Supper was recalled had become a sacrament by which those who participated shared in some realistic way in the triumph of the Cross and the Resurrection. "Whoever, therefore, eats the bread or drinks the cup of the Lord in an unworthy manner," the apostle warns, "will be guilty of profaning the body and blood of the Lord."

Chs. 12–14 are in answer to some such question as: "Which spiritual gift is the more important, 'prophecy' or 'speaking with tongues'?" To begin with, the apostle offers a rough test by which inspiration "by the Spirit of God" might be distinguished from demonic inspiration. (It is possible that Docetists, who denied that the man Jesus was the divine Christ, are meant by the somewhat astonishing reference in 12:3 to those who could say, "Jesus be cursed!") He then goes on to insist that the varieties of gifts manifest in the life of the church are all from the same Spirit, as the varieties of service they make possible are from the same Lord and the varieties of forms they take are from the same God. Each is indispensable to the welfare of the whole, as each organ contributes to the proper functioning of the entire body. The church constitutes the body of Christ, and its individual members, whether apostles, prophets, teachers, social workers, administrators, or "speakers with tongues," are all endowed by the same Spirit for the good of all.

In what we call the "thirteenth chapter of I Corinthians," Paul interrupts his argument to assert, in rhythmic prose of a beauty and a cadence rarely approached in any literature, that no gift of the Spirit has any value except as it is exercised in love. The love of which he speaks is not the erotic attraction of an individual to a member of the other sex or the affection that characterizes family or group relationships at their best, but the discovery that believers have made of God's grace in Jesus Christ. It can be recognized both by what it is and by what it is not. And, unlike other gifts that are restricted to this age and are imperfect and incomplete, it will never come to an end. In what may be a quotation from some primitive Christian oracle, Paul concludes with the declaration that "faith, hope, love abide, these three." To which he adds: "but the greatest of these is love." (For the same triad of gifts in the order "faith, love, hope," see I Thess. 1:3; 5:8.)

Finally, in ch. 14, Paul comes to the relative value of "prophecy" and "speaking with tongues." By the former he means the intelligible proclamation of the purposes of God; by the latter, the unintelligible utterance of meaningless sounds under the stress of unrestrained emotion. Both are gifts of the Spirit, but the one edifies and encourages and consoles the church, while the other (unless its significance can be interpreted) has value only to the speaker himself. In public worship there is to be freedom of inspired utterance, but it is important that "all things be done for edification." No one should "speak in a tongue" unless there is someone present to interpret; and

prophets, too, should be governed by considerations of moderation and of courtesy.

Vss. 33-34, which forbid women to participate in public worship, are in contradiction to the practice assumed in I Cor. 11:5, 13, are textually insecure (they appear at the end of the chapter in one important group of MSS), seem to be dependent on I Tim. 2:11-12 (the work of a later Paulinist), and should probably be regarded as an interpolation.

e. The resurrection. Ch. 15 is frequently but improperly called "Paul's great argument for immortality." It is, rather, Paul's argument for the Jewish (originally Iranian) doctrine of the resurrection, with modifications that he (or the church of his day) had introduced. The problem is stated in 15:12: "Now if Christ is preached as raised from the dead, how can some of you say that there is no resurrection of the dead?" It is improbable that there were any in the apostle's congregation at Corinth who were denying the hope of immortality. Both Jewish and Gentile converts would take this hope for granted. But, whereas Christian Jews would associate the life after death with the expectation of the resurrection of the body at the Last Judgment, former Gentiles would think in terms of their inheritance in this respect from Greek thought, which conceived of immortality in terms of the release of the spirit from the prison of this flesh and its return to the divine world from whence originally it had come. For the Jew there could be no real life in the coming age without a body; for the Greek there could be no true immortality with a body! In his discussion, Paul reveals both the Jewish and the Greek influences on his thinking.

In vss. 1-19 Paul begins by establishing the historical fact of Christ's resurrection. He reminds his readers that the proclamation of this was the heart of the gospel he had preached to them at the first, and that it was also the message he himself had received from the church before him. In what is the earliest account of the resurrection faith in Christian literature, and one of the greatest importance to our understanding of Christian beginnings, the apostle declares that faith in the resurrection of Christ rests on visions of the risen Lord, beginning with one to Cephas and including that to himself "as to one untimely born."

Having established the fact of Christ's resurrection and having asserted (in vss. 20-34) that it is the promise of the resurrection of believers, Paul in vss. 35-50 discusses the nature of the body that the Christian will possess when he is raised from the dead (cf. II Cor. 5:1-10). It will not be the body that clothed his spirit while in this life. It will be an ethereal, spiritual body, as different from the one that we now have as the plant is from the seed that was sown in the earth. "Just as we have borne the image of the man of dust [Adam], we shall also bear the image of the man of heaven [Jesus Christ]."

Paul brings the chapter to an end (vss. 51-58) with a forecast of the manner in which the resurrection will take place. It will be the first event in the new age. It will take place suddenly and dramatically. And it will involve the overthrow of death.

f. Conclusion. In the final chapter Paul first gives instructions for assembling the contribution at Corinth toward the collection being made in various Pauline churches for "the saints"—i.e., the congregation at Jerusalem (cf. Gal. 2:10; Rom. 15:25-28; II Cor. 8:9). He then discusses his own travel plans (*see* CORINTHIANS, SECOND LETTER TO THE, § 1) and adds some brief notices. Presumably Timothy (cf. 4:17) and his unnamed companions had left by the longer land route and would not arrive at Corinth until after the receipt of the letter. Paul regrets that Apollos could not accompany them. After a few brief exhortations, the apostle urges his readers to show due obedience to the household of Stephanas (the first converts in Achaia) and others who had assumed administrative responsibilities, and refers to his pleasure at the coming to him of Stephanas, Fortunatus, and Achaicus. Greetings from the churches of Asia and from Prisca and Aquila (cf. Acts 18:1-3, 26; Rom. 16:3) and others are appended, and the letter ends with Paul's personal signature (cf. Gal. 6:11; II Thess. 3:17), a malediction, a traditional Aramaic prayer, a benediction, and an expression of love.

9. Date. In I Cor. 16:8 Paul declares that his intention is to "stay in Ephesus until Pentecost." Those who accept the estimate in Acts of an Ephesian ministry covering a period of from two to three years (Acts 19:8, 10) believe Paul's reference here to be to the late spring of A.D. 55. (For other calculations *see* CHRONOLOGY OF THE NT.) Paul's allegory of the Passover festival in 5:7-8 may have been suggested by the fact that the apostle was observing the Jewish feast at the time of writing. However that may be, it is reasonable to assume that I Corinthians is to be dated not long before the time of Paul's announced departure. On the basis of the chronology most commonly assumed, this would locate the composition of the letter in the late winter or the early spring of A.D. 55.

10. Text. Ordinarily I Corinthians was copied by early scribes as part of the Pauline collection, but occasionally also on papyrus rolls or in codices that included Acts as well as the letters (so-called *Praxapostoloi*). Therefore, problems of recovering the original text of the letter are problems related to those of the *corpus Paulinum* as a whole (*see* TEXT, NT). Except in a few instances, these affect matters of relatively unimportant detail rather than of substance.

*CORINTHIANS, SECOND LETTER TO THE.

A letter written by the apostle Paul to the church at Corinth; now found as the eighth book of the NT canon. One of the more personal (as contrasted with doctrinal), of the apostle's letters, II Corinthians gives us a wealth of information about Paul's movements, experiences, and states of mind during a period that the author of Acts passes over almost without comment (Acts 20:1-3). Together with I Corinthians, Acts 18, and I Clement (*see* CLEMENT, EPISTLE OF), it provides incomparable source material for a study of a first-century church and first-century Christianity.

1. Background of the letter
2. Unity
3. Authenticity
4. Date
5. Paul's opponents in Corinth
6. A warning against fellowship with unbelievers
7. Paul's vindication of his apostleship

Bibliography

1. Background of the letter. For any reconstruction of events in the life of Paul during the six months or more that followed the dispatch of I Corinthians, we are dependent wholly on hints in the apostle's own writings. At this point in its narrative the book of Acts leaves us entirely in the lurch.

Timothy's departure from Ephesus to Corinth to remind Paul's converts of his "ways in Christ" had been announced in I Cor. 4:17. From I Cor. 16:10 we may assume that he was to travel by the land route through Macedonia and would not arrive until after the receipt of the letter that we know as I Corinthians. From I Cor. 16:10-11 it would appear that Paul feared an unfriendly reception for him. Presumably Timothy paid the projected visit and, with the otherwise unidentified "brethren," rejoined the apostle at Ephesus, for Paul associates him with himself in the salutation with which II Corinthians opens. From the fact that he was replaced as an envoy in Paul's later dealings with the Corinthian church, it has been inferred that the apostle's fears were well grounded and that Timothy's mission proved unsuccessful.

Paul's next emissaries were his young friend Titus and an unnamed "brother" whose visit to Corinth is mentioned without elaboration in II Cor. 12:17-18. In all likelihood their mission was to further the collection of the offering for the church at Jerusalem (I Cor. 16:1-4)—the "gracious work" in which, according to II Cor. 8:6, Titus had "made a beginning" at Corinth. The mission (which may have included the delivery of I Corinthians) was a brief one, and Titus and his companion soon rejoined Paul at his Ephesian headquarters.

In the late winter or early spring of the year 55, Paul had informed his Corinthian readers of his travel plans (*see* CORINTHIANS, FIRST LETTER TO THE, § 9). He proposed to stay in Ephesus until Pentecost and then to journey to Corinth by land through Macedonia, with the intention of remaining at the Achaean capital for a considerable period—perhaps the whole winter. "For," said he, "I do not want to see you now just in passing; I hope to spend more time with you, if the Lord permits" (I Cor. 16:5-9; there are other references to this projected visit in I Cor. 4:18-21; 11:34).

There is reason to believe that these travel plans were abandoned and that Paul made a hasty trip to Corinth during the late spring or early summer of 55, traveling probably by the direct sea route. Two passages in II Corinthians (12:14; 13:1) refer to the visit he proposed to pay at the time these chapters were written as "the third," and in 13:2 reference is made to an earlier "second visit." No doubt this latter is to be identified with the "painful visit" mentioned in II Cor. 2:1, where the adjective was suggested to the apostle by the recollection of unhappy experiences during that second stay.

It was probably word of new developments in the turbulent little Christian community at Corinth that compelled Paul to revise his earlier plans and to pay it this second, precipitous visit. Certain Jewish Christians (II Cor. 11:22-23) to whom Paul later gave the sarcastic title of "superlative apostles" (II Cor. 11:5; 12:11) had arrived at the Achaean capital and by accusation and insinuation had attempted to undermine the apostle's influence with his converts. One influential member of the Corinthian congregation had lent himself to their program of disparagement and insult and had inflicted on Paul what the apostle considered a grievous wrong (2:5; 7:12).

On his return to Ephesus, Paul wrote a letter to the church at Corinth in the hope of correcting the situation there and of avoiding a repetition of his "painful" visit. "And I wrote as I did," he told his readers later, "so that when I came I might not be pained by those who should have made me rejoice, for I felt sure of all of you, that my joy would be the joy of you all" (II Cor. 2:3). Reflecting on the burden of the letter, he recalled his state of mind at the time of writing. "For I wrote you out of much affliction and anguish of heart and with many tears, not to cause you pain but to let you know the abundant love that I have for you" (2:4). From various references in chs. 2 and 7 it is apparent that Paul commissioned Titus to deliver the letter and to report back to him on its reception.

The author of the book of Acts refers to Paul's departure from Ephesus (Acts 20:1) as though it were a normal and uneventful episode in his ministry. (He makes it clear that the riot he describes in Acts 19 presented no threat to Paul's personal safety.) But there are indications in the opening chapter of II Corinthians that the apostle underwent some nerve-racking experience late in his stay at Ephesus which seemed at one time to threaten his very life and from which he felt he had been delivered only by the direct intervention of God. "For we do not want you to be ignorant, brethren, of the affliction we experienced in Asia [the Roman province of which Ephesus was the capital]; for we were so utterly, unbearably crushed that we despaired of life itself. Why, we felt that we had received the sentence of death; but that was to make us rely not on ourselves but on God who raises the dead; he delivered us from so deadly a peril, and he will deliver us; on him we have set our hope that he will deliver us again" (II Cor. 1:8-10).

Some have found support in the paragraph quoted above for a hypothesis of an Ephesian imprisonment,

during which the so-called "Imprisonment letters" were written, and have seen in Paul's remarks in I Cor. 15:32 that he had "fought with beasts at Ephesus" an oblique reference to an actual ordeal as a prisoner. The latter observation is more plausibly understood as metaphorical, and the Ephesian imprisonment hypothesis, while attractive at many points, is frequently buttressed by a type of circular reasoning: The Corinthian "evidence" of an Ephesian imprisonment is supported by deductions from the Imprisonment letters, and the Ephesian origin of the letters is "established" by the Corinthian "evidence." (The argument that Rom. 16 is a letter by Paul from Corinth to the church at Ephesus and that vss. 3-4 remind Ephesian readers of the danger that threatened the apostle's life while he was with them is also an instance of supporting one hypothesis by another.)

Paul's original plan while at Ephesus had been to visit Corinth after passing through Macedonia (I Cor. 16:5). While at Corinth on his second, "painful" visit, he had apparently told the Corinthian Christians that he would come to them again before going on to Macedonia and returning en route to Judea (II Cor. 1:16). Back at Ephesus he once more changed his mind, wishing to spare the Corinthians a further personal reprimand and hesitating to repeat his previous "painful" visit (II Cor. 1:23–2:1). Reverting to his original plan, he left Ephesus and proceeded to Troas, a seaport on the NW tip of Asia Minor, intending to preach the gospel there and hoping to find Titus and get word of the success of the Corinthian mission. (Titus had apparently prearranged his return route.) Worried about affairs at Corinth and fearful of the reaction to his letter, the apostle was unable to make full use of his opportunities as an evangelist, and, when Titus failed to arrive, he left Troas for Macedonia (II Cor. 2:12-13).

In Macedonia, as at Troas, Paul was torn with anxiety, "afflicted at every turn—fighting without and fear within" (II Cor. 7:5). Then Titus rejoined him, and his whole mental attitude was transformed. "But God, who comforts the downcast, comforted us by the coming of Titus, and not only by his coming but also by the comfort with which he was comforted in you, as he told us of your longing, your mourning, your zeal for me, so that I rejoiced still more" (vss. 6-7). Titus' appeal and the apostle's letter had brought about a radical change of heart in Paul's beloved Corinthians. They had received the emissary with deference, heeded the spoken and written word, and acted to punish the offender and to demonstrate their zealous obedience (II Cor. 7:11, 15). They had been "grieved into repenting" and had now proved themselves "at every point . . . guiltless in the matter" (II Cor. 7:8-11).

Now that the crisis was over, Paul wrote again to the Corinthian church, partly to express his relief and reassurance at recent developments, partly to plead for lenient treatment of the offender, and partly to further the collection at Corinth of the "offering for the saints."

The apostle had written the "severe" letter, he told his readers, not to cause them pain but to let them know the abundant love he had for them (II Cor. 2:4). "For even if I made you sorry with my letter," he declares, "I do not regret it (though I did regret it), for I see that that letter grieved you, though only for a while. As it is, I rejoice, not because you were grieved, but because you were grieved into repenting" (7:8-9).

The "majority" had inflicted some form of punishment on the ringleader of the revolt against Paul, and the apostle now set himself against a minority that apparently favored imposing an even heavier penalty. With the resolution of the crisis, the duty of the Christian community was to turn to forgive and comfort him who had been punished (2:7).

While in Macedonia, Paul had assembled the collection from Christians in that area, to which he makes grateful reference in II Cor. 8:1-5. Since the situation at Corinth had changed so much for the better, he now pleads with the Corinthians (in chs. 8–9) to exhibit a similar generosity. He announces plans to come to Corinth soon, probably accompanied by "some Macedonians," and asserts his confidence that the collection will be ready on his arrival. To make sure that this will be the case, he once more introduces Titus, whom he had charged with completing the arrangements for the collection that had been begun a year before, and commends him to the respect and affection of the congregation. (No doubt Titus was also the bearer of the letter.) "Titus . . . is my partner and fellow worker in your service" (8:23). Accompanying Titus were two unnamed brothers: one "who is famous among all the churches for his preaching of the gospel" and who had been "appointed by the churches [probably Macedonian, but possibly Galatian (I Cor. 16:1)] to travel with us in this gracious work" (II Cor. 8:18-19); and one who had been "often tested and found earnest in many matters" (8:22). They are recommended to the Corinthians as "messengers of the churches, the glory of Christ" (vs. 23). By associating them with himself in this ministry, Paul was protecting himself against the possibility of being charged with misappropriation of funds. "We intend that no one should blame us about this liberal gift which we are administering" (8:20). For another instance of Paul's sensitiveness in money matters, see I Cor. 9:1-18.

Paul was confident that the Corinthians would respond to his appeal, but this advance party was to ensure that there would be no failure. "I know your readiness, of which I boast about you to the people of Macedonia, saying that Achaia has been ready since last year; and your zeal has stirred up most of them. But I am sending the brethren so that our boasting about you may not prove vain in this case, so that you may be ready, as I said you would be; lest if some Macedonians come with me and find that you are not ready, we be humiliated—to say nothing of you—for being so confident. So I thought it necessary to urge the brethren to go on to you before me, and arrange in advance for this gift you have promised, so that it may be ready not as an exaction but as a willing gift" (II Cor. 9:2-5). Rom. 15:26-27, written after Paul's arrival at Corinth, is evidence that his confidence on this occasion was well founded.

2. Unity. II Cor. 6:14–7:1 interrupts the connection between 6:13 and 7:2, differs in theme and temper from what precedes and follows, and is probably out of place in its present context. The suggestion that it is a fragment of the letter Paul wrote to the church at Corinth prior to our I Corinthians (I

Cor. 5:9-11)—the letter that warned its readers "not to associate with immoral men"—is attractive (*see* CORINTHIANS, FIRST LETTER TO THE, § 3). Some interpreters believe that certain passages in our canonical I Corinthians were also taken by the editor of the Pauline corpus from this "first" letter (*see* CORINTHIANS, FIRST LETTER TO THE, § 5). Pauline authorship of the material has not been called into question.

The hypothesis that II Cor. 10–13 is part of the "severe" letter Paul mentions in II Cor. 2:3-4; 7:12, was advanced as early as 1870 and has commended itself to many. On this assumption the last four chapters of our canonical letter were written some weeks earlier than the first nine and were addressed to a radically different situation.

The strongest argument for this hypothesis is the remarkable difference in tone between chs. 10–13 and the preceding section. Chs. 1–9 breathe a spirit of relief and gratitude as a result of the good news brought by Titus from Corinth. The storm had passed and the sky had cleared. Then, with the beginning of ch. 10, there is an abrupt change. Ch. 9 ends with the doxology: "Thanks be to God for his inexpressible gift!" In what follows, Paul's attitude is one of sharp defense, his words are charged with reproach and a sense of injustice, and there is a cascade of protest, threat, and appeal. To say that such a sudden change in tone could have been caused by a pause in dictation followed by a sleepless night, an attack of indigestion, or the receipt of fresh and disturbing information from Corinth, is not enough to account for the phenomenon and would leave us puzzled as to why Paul did not redraft the first section or omit it altogether.

If II Cor. 10–13 is earlier than II Cor. 1–9, passages in the former may account for and illuminate references in the latter. Most of chs. 10–13 is Paul's reluctant but vigorous defense of his apostolic authority, while in 5:12 the apostle protests that "we are not commending ourselves to you again," and in 3:1 he asks: "Are we beginning to commend ourselves again?" In 13:1 Paul refers to his forthcoming visit as his "third" (cf. 12:14) and warns his readers in what follows that, if he should come, he would not spare them. In 2:1 he says that he had made up his mind not to pay the Corinthians "another painful visit" (apparently a reference to the postponement of the visit he had had in mind when he wrote 13:1; 12:14). In 1:23 he calls upon God to witness that it was to spare them that he had refrained from coming to Corinth, and in this way defends himself against any charge of irresponsible vacillation (1:15-17). In 10:6 Paul declares that he is "ready to punish every disobedience," while in 2:9 he says that the purpose of the "severe" letter was to discover whether his Corinthian readers would be "obedient in everything."

The case for regarding II Cor. 10–13 as originally part of the "severe" letter is, therefore, a strong one, but the letter undoubtedly contained more than we now have in these four chapters. In 7:12 Paul declares that he had not written on account of the one who had done the wrong or on account of him who had suffered the wrong, but in order to bring his Corinthian readers to realize their devotion to him, and in 2:5-7 he makes further reference to one who "has caused pain." From this it would appear that the case of some offender who had wronged Paul and, in some measure, the whole congregation at Corinth occupied part of the "severe" letter. No specific "offender" is the subject of discussion in chs. 10–13. Furthermore, while the "severe" letter could have ended with 13:11-13, 13:14 (the famous benediction) would be more appropriate at the end of chs. 1–9, and 10:1 ff must have been preceded by an address and other customary preamble.

A certain parallelism in the appeals in chs. 8–9 for a generous offering to the fund for the saints has persuaded some interpreters that the latter chapter is a note to the Corinthian church from a somewhat earlier period than the former. Others also claim to discover in II Cor. 1–8 evidence of a mildly polemical letter (II Cor. 2:14–6:13; 7:2-4), written by Paul after his second, painful visit but before the events that gave rise to the "severe" letter, embodied in another that expressed his thankfulness that happy relationships with the Corinthian community had been restored, repeated his urgent appeal for generosity in the matter of the collection, and commended Titus and his associates to the affection and obedience of the church (II Cor. 1:1–2:13; 7:5–8:24). There are some fine distinctions in emphasis between chs. 9 and 8, and one might have expected 7:5 ff to have followed immediately on 2:13. (As it stands, the intervening material has the appearance of an extended digression.) Nevertheless, all this, while lending impressive support to these more elaborate partition hypotheses, falls far short of demonstrating them. Chs. 1–9 can be readily understood in their entirety as the thankful letter Paul wrote and dispatched from Macedonia shortly before his own departure for Corinth on what was to prove his final visit.

3. Authenticity. Every test of style, vocabulary, and doctrine combines with the tradition of the church and the evidence of textual history to vouch for the authenticity of II Corinthians. While the author of I Clement (*ca.* A.D. 96) appears to have been unacquainted with this letter (although using and referring to I Corinthians), the author of the Letter to the Ephesians (assuming that he was someone other than Paul himself) shows unmistakable indications of familiarity with it. The letter was probably known to Polycarp early in the second century, and Marcion (*see* MARCION, GOSPEL OF) included it in his canon *ca.* 140. If our present II Corinthians is a patchwork of material from several originally separate letters (*see* § 2 *above*), the work of redaction was completed—probably by the original editor of the Pauline collection—before any portion of it was put into independent circulation.

4. Date. The dating of any letter written by Paul depends on conclusions that the interpreter has reached with respect to the absolute and relative chronology of the apostle's life and work; and for a discussion of the various problems and possibilities involved, *see* CHRONOLOGY OF THE NT. If our canonical I Corinthians was composed at Ephesus early in 55, as is often maintained (*see* CORINTHIANS, FIRST LETTER TO THE, § 9), the earlier letter referred to in I Cor. 5:9-11, of which II Cor. 6:14–7:1 may be a fragment, must have been written, likewise at Ephesus, late in 54. The "severe" letter, of which II Cor.

10–13 may be a part, is also a letter of Ephesian origin and, in light of the events discussed in § 1 *above*, probably dates from the summer of 55. The "thankful" letter, now found in whole or in part in II Cor. 1:1-6:13; 7:2-9:15; 13:14, would then have been dictated and dispatched shortly after Paul's reunion with Titus in Macedonia, probably late in the autumn or early in the winter of 55.

5. Paul's opponents in Corinth. Sometime between the writing of I Corinthians and the time of the "severe" letter, a band of teachers came to Corinth, boasting of their pure Jewish descent, stressing that they were Palestinian rather than Hellenistic Jews, claiming to be Christians (II Cor. 11:22-23), and flourishing letters of commendation from Christian communities they had already visited (II Cor. 3:1). Representing themselves as true apostles and as "servants of righteousness" (II Cor. 12:15), they made a bitter attack on Paul's person, reputation, and apostolic credentials. He could write threatening letters, they said, but he was unprepossessing in appearance and an ineffective speaker (10:10; 11:6). He was a rank coward (10:1). He was unreliable and could say "Yes" and "No" in the same breath (1:17-18). He refused to accept any money from the Corinthian church for his support, either because he was not sure of his apostolate (11:7-9), or because he was a crafty and dishonest embezzler of the funds being collected for the poor Christians in Jerusalem (12:16-17; 8:20-21). He had an exaggerated opinion of himself (10:8) and liked to parade it (3:1), but he was really not an apostle at all, for his ministry had not been marked by "signs and wonders and mighty works" (12:1-12). His behavior indicated that he was mentally unbalanced (5:13).

Paul counterattacked vigorously and in kind. These "superlative apostles," as he caustically described them (11:5; 12:11), were actually spurious—false workmen who were only masquerading as apostles of Christ (11:13); ministers of Satan who had disguised themselves as "servants of righteousness," as their master on occasion could disguise himself as an angel of light (11:14-15). Their gospel was not his gospel, for they preached another Jesus and tendered the Corinthians another spirit (11:4). They loved to praise themselves rather than to await God's commendation (10:12, 18). Instead of pioneering as missionaries in new fields, they invaded communities other men had evangelized and took credit as parasites for work others had accomplished (10:15-16). Contrary to his own practice, they not only claimed and accepted remuneration (11:12), but actually tyrannized and exploited the congregation (11:20).

It has often been assumed that these "false apostles," as Paul terms them, were "Judaizers" such as he attacks in the Letter to the Galatians (*see* GALATIANS, LETTER TO THE)—Christian Jews who wished to impose the rite of circumcision and obedience to the Jewish law on Gentile converts to Christianity. But this assumption is surely incorrect. Such issues did not arise at Corinth. Nor is there any suggestion in our sources that Paul's opponents in this instance were emissaries of James and his associates in Jerusalem.

While Paul's references are often tantalizingly obscure to us, there is reason to believe that the heresy he had to combat at Corinth was related to the one that occasioned his concern (perhaps about the same time) at Colossae—a type of Christian GNOSTICISM that adapted the Christian gospel of the risen Christ to the Gnostic myth of the "Redeemed-Redeemer" and took over the Gnostic views of the world and of man. The fact that his opponents were Palestinian, rather than Hellenistic, Jews does not rule out such a possibility, for it is now evident from much of the literature discovered since 1949 at Qumran (the DEAD SEA SCROLLS) that a form of Jewish Gnosticism flourished in Judea in pre-Christian times. It is probable that Jewish Christian Gnostics were a third force very early in Christian history along with "Judaizers" (e.g., James of Jerusalem) and HELLENISTS (e.g., Stephen and Paul). If the "Christ party" at Corinth that had troubled Paul when he wrote our canonical I Corinthians was composed of Christians with Gnostic tendencies (*see* CORINTHIANS, FIRST LETTER TO THE, §§ 3, 8*b*), then the visiting missionaries who caused him such acute concern at a later date were able to cultivate a fertile field.

6. A warning against fellowship with unbelievers. It has been suggested above (*see* § 2) that II Cor. 6:14–7:1 is a fragment of the first letter Paul wrote to the church at Corinth (I Cor. 5:9). Not only does the passage appear as an awkward digression in its present context, but its categorical imperatives, rhetorical questions, and appeals to OT scripture could have supported the apostle's warning "not to associate with immoral men" and caused the misunderstanding he later sought to correct.

7. Paul's vindication of his apostleship. The reasons for assuming that II Cor. 10:1–13:13 is part of the "severe" letter to which Paul refers in II Cor. 2:3-4; 7:12, have been given above (*see* § 2). This section of our canonical letter may be outlined as follows:

I. Introduction, 10:1-6
II. Refutation of malicious slander, 10:7–11:15
III. Reluctant self-defense, 11:16–12:13
IV. Projected third visit, 12:14–13:10
V. Conclusion, 13:11-13

8. Contents of chs. 10–13. The chapters in which Paul vindicates his apostolic authority are comparable in the intensity of their passion only to parts of his Letter to the Galatians. Their content may be summarized as follows:

a. Introduction. In words that alternately plead and threaten, words of a hurt, indignant, and an angry man, Paul seeks to re-establish his authority in the church at Corinth as the first and necessary step in dealing with the troublemakers.

b. Refutation of malicious slander. The agitators had implied that Paul did not belong to Christ, had charged him with being a weakling who could only frighten men by his letters, had attacked his infelicity as a speaker, and had hinted at unworthy motives in his refusal to accept support. Paul lays emphatic claim to be Christ's, denies the charges of cowardice, reminds his readers that his knowledge makes up for any inadequacies in rhetoric, and explains once again that he had refused to accept remuneration out of motives of love and consideration and so that he might be able to preach "God's gospel without cost" to the congregation (cf. I Cor. 9:15-18). Interwoven with this is a vigorous counterattack. The troublemakers are conceited, invade areas God had assigned to

others, pervert a pure and sincere devotion to Christ by another gospel, and, themselves a burden on the church, wish to deprive him of his singular independence. In short, they are false apostles doomed to certain destruction.

*c. **Reluctant self-defense.*** Paul compares the achievements of these "false apostles" with his own. Despite an intense dislike of self-commendation, he cannot allow false modesty to prejudice his interests. His Jewish descent was as pure as theirs. His sufferings in Christ's service far exceed any that they can boast. (II Cor. 11:24-27 reminds us of how little we know of Paul from the account in Acts. Cf. also 6:4-10; I Cor. 4:9-13.) Although the signs of a true apostle were repeatedly exhibited in his ministry, his experience at Damascus (with the danger to himself from the Nabatean governor rather than from Jews as in Acts 9:23-25), an early ecstatic experience (occasionally regarded as that of his conversion), and some recurring physical ailment were evidence that even his weaknesses could make manifest the power of Christ.

*d. **Projected third visit.*** With greater restraint Paul now seeks to correct some serious moral defects of the Corinthian Christians in advance of his forthcoming visit. (The "third" visit of II Cor. 12:14; 13:1-2 implies a second not mentioned in Acts—presumably the "painful" one referred to in 2:1. *See* § 1 *above*.) They themselves could witness that neither he nor Titus had taken any advantage of them, despite ugly insinuations to the contrary. His earlier defense of himself had been made in the hope that a renewed respect for his authority might lead his readers to repent of individual and social sins and make it unnecessary for him to take disciplinary action on his arrival. But if that should not be the case, he warns them that he would not hesitate to resort to the extreme measures he had threatened when he had last been with them. Pleading with them to "test themselves," he expresses the hope that such self-examination will lead to repentance and reformation, for the Lord had given him his authority for purposes of building up rather than of tearing down.

*e. **Conclusion.*** A farewell and a final series of brief exhortations precede final greetings.

9. A letter of reconciliation. The last of Paul's letters to the church at Corinth of which we have any record appears to have been preserved, probably in its entirety, in II Cor. 1:1–6:13; 7:2–9:15; 13:14. It may be outlined as follows:

I. Introduction, 1:1-11
II. Explanation of a change in travel plans, 1:12–2:13
III. Paul's message and mission, 2:14–6:13; 7:2-4
IV. Restoration of confidence, 7:5-16
V. The offering for the saints in Jerusalem, 8:1–9:15
VI. Benediction, 13:14

10. Contents of chs. 1–9. *a. **Introduction.*** After the normal preamble of a letter, the apostle gives thanks to God for deliverance from deadly peril in Asia (*see* § 1 *above*) and asks for the supplications of the Corinthians on his behalf.

*b. **Explanation of a change in travel plans.*** Paul defends himself against reproaches of fickleness and insincerity (*see* § 5 *above*). Just as the promises of God in Jesus Christ were trustworthy, so he whom God had commissioned to preach to them was trustworthy. He had refrained from coming again to Corinth, not as a wanton breach of promise, but to spare the congregation a repetition of his earlier, painful visit. Instead, he had written them a letter out of "anguish of heart and many tears." This had had the desired result, for the ringleader of the revolt had been punished. Now that the crisis had been surmounted, it was the duty of all to forgive and comfort the offender. Awaiting the return of Titus with a report on the response of the congregation to his letter, Paul had gone to Troas and then, plagued with anxiety when he still did not meet his emissary and unable to take advantage of his missionary opportunities, to Macedonia. For this section, *see* § 1 *above*.

*c. **Paul's message and mission.*** The apostle postpones his account of his reunion with Titus and of his relief at the good news from Corinth until later (7:5-7), for reflection on the happy ending prompts a cry of thankfulness to God and leads him to undertake a general vindication of his ministry. For reference to another point of view on this apparent digression, *see* § 2 *above*.

As one divinely commissioned, Paul declares, his task has been to spread the fragrance of the knowledge of God in Christ. For this he needs no letters of commendation, as do his opponents, for the Corinthian Christians themselves are a letter of Christ that he has delivered. He is a minister of a new covenant —not of a written code that brings only condemnation and death, but of a life-giving Spirit. The glory that shone from Moses' face when he delivered the tablets of stone (Exod. 34:29-35) soon disappeared, but the surpassing splendor of the new covenant will never fade. The veil with which Moses hid the fading brightness of his face has been a veil that has hidden the truth of scripture from the Israelites to this day, and one that is lifted only by Christ. God shone in his apostle's heart at the time of his conversion to give him the light of the knowledge of his glory, and throughout his ministry he has never veiled that divine light.

Like treasure in an earthen vessel, this glorious gospel is entrusted to a frail and suffering minister to show that God is the only source of its transcendent power. Afflicted, perplexed, persecuted, and laid low by men, the apostle is always sustained by the knowledge that at the resurrection he who raised the Lord Jesus will also bring him and his beloved Corinthians with Jesus into his presence. Therefore, in his earthly body of flesh he waits longingly and confidently for the body God has prepared for him in heaven.

Once again Paul asserts his sincerity, not (he protests) to commend himself, but to enable his readers to answer those who had questioned it. He is controlled wholly by the love of Christ, who died that men might no longer live for themselves but for him. In Christ, God was restoring men who had been estranged by sin to fellowship with himself. As he does for all believers, he had made the apostle a new creature in Christ. Having been entrusted with the ministry of reconciliation, Paul's one aim had been to be an ambassador on Christ's behalf, one whom God could use as a spokesman. Reconciliation had been made possible by Christ's vicarious suffering

and death. Entreating his readers to appropriate this gift of God's grace, Paul reminds them of the hardships he had endured, the ill-treatment he had suffered, the labors he had performed, and the evidences of possession by the Holy Spirit he had made manifest as God's minister. The section ends with the apostle's reiterated appeal to the Corinthian Christians to open their hearts to him. Any barrier that still separates them from him is not of his making, for he has wronged none of them, corrupted none of them, and taken advantage of none of them.

d. Restoration of confidence. Paul now resumes the thread of thought that he had interrupted at 2:14 with his reflections on his apostolic ministry. While in Macedonia he had been harassed without and distraught within, but all this had changed with the coming of Titus and the good news that his "severe" letter had effected a radical transformation in the situation at Corinth. Grief on the part of the Corinthians had led to repentance and reformation, and this, with the joy of Titus at being able to bring such good news, had gladdened him and renewed his perfect confidence in the congregation. *See also* § 1 *above.*

e. The offering for the saints in Jerusalem. Now that relationships of mutual confidence had been reestablished, Paul feels free to urge his readers to complete the offering for the saints in Jerusalem that they had begun to collect more than a year before. (For other references to this first Christian benevolence fund, see I Cor. 16:1-3; Rom. 15:25-28; and [possibly] Acts 24:17.) As they excel in all other spiritual gifts, so the Corinthian Christians ought also to excel in the grace of sacrificial generosity, the grace that has already been so abundantly exhibited by the churches of Macedonia. In this they will demonstrate the sincerity of their love and will be acting under the constraint of Christ's own example. (With II Cor. 8:9, cf. Phil. 2:5-8.) To carry the matter through to a successful conclusion and to guard against any charge that he is diverting church funds to his own use, he is sending Titus and two other trusted brothers to Corinth. He hopes the offering will all be in hand in advance of his own arrival. He has already boasted to people in Macedonia that "Achaia has been ready since last year," and he is confident that the Corinthian church would not wish him to be humiliated by their failure. Furthermore, he assures his readers, God rewards generosity by providing the wherewithal to display it, and in practicing it the donors not only will help to supply the needs of the saints in Jerusalem, but also will fill those whom they aid with gratitude to God.

f. Benediction. This benediction is in a more elaborate form than Paul uses at the end of any other letter. May the saving grace that is mediated by the Lord Jesus Christ, the love that God has shown to his children, and the fellowship that is the work of the Holy Spirit in the church be the rich possession of all in the congregation at Corinth!

10. Text. The entire text of II Corinthians is found in the great uncials Vaticanus and Sinaiticus, but large portions are now missing from Alexandrinus and Ephraemi Rescriptus. Many fragments, some of considerable extent, have been preserved in the third century papyri known as P^{46}. In its rendering of II Corinthians the RSV is based (as elsewhere) on an eclectic Greek text, but it is unlikely that any future research will require much serious departure from the readings its translators adopted.

***CORINTHIANS, THIRD EPISTLE TO THE.** A part of the apocryphal Acts of Paul (*see* PAUL, ACTS OF), long regarded as authentic in the Syriac and Armenian churches. M. S. ENSLIN

CORMORANT kôr'mə rənt [שָׁלָךְ (Lev. 11:17; Deut. 14:17), *cf.* LXX καταρράκτης, swooper (*a sea bird*), *and* Vulg. *mergulus,* diver (*a kind of bird*), in Lev. 11:17; LXX νυκτικόραξ *and* Vulg. *nycticorax,* long-eared owl, *in* Deut. 14:17; Targ. (Onq.) שלינונא, a puller out of fish; KJV קָאַת (Isa. 34:11; Zeph. 2:14), *see* PELICAN]. Any one of a family of large sea birds (Phalacrocoracidae) which includes cormorants (of which there are *ca.* thirty species), darters, and gannets. The common cormorant (*Phalacrocorax carbo carbo*), which feeds almost exclusively on fish, was reported by Tristram to be found on Palestine's coast and also on the Sea of Galilee and the Jordan River. It would be natural for such a bird to be included in a biblical bird list, but whether שָׁלָךְ was the term used to designate it we do not know. G. R. Driver (*see bibliography*) proposes the identification "fisher-owl." The Indian Fish-owl (*Ketupa zeylonensis semenowi*), a large bird twenty-five inches in length, feeds on fish, crabs, and small mammals. It was found in Palestine by Tristram, who, however, noted that it was not at all abundant.

CORN. A general term used in the KJV for many different food-producing grasses. *See* GRAIN.

CORNELIUS kôr nēl'yəs [Κορνήλιος] (Acts 10:1, 3, 17, 22, 24-25, 30-31). A CENTURION of the Italian Cohort (*see* COHORT; ITALIAN COHORT), stationed in Caesarea. Acts describes him as a "devout man," who, with "all his household," "feared God" (φοβούμενος τὸν Θεόν, probably a technical term indicating a Gentile who worshiped the God of the Hebrews, but who was not a proselyte—i.e., who remained uncircumcised, and who did not observe the food laws or other separatist cult ordinances). Like the centurion at Capernaum who "loved" the Jewish people and "built us our synagogue" (Luke 7:5), Cornelius, too, "gave alms liberally to the [Jewish] people." In addition he "prayed constantly to God."

Obviously, Cornelius is here described as the type of Gentile ideally suited to bridge the gap between Judaism and Christianity: to show that Judaism is the proper preparation for the gospel; that the logic of belief in the God of Abraham, Isaac, and Jacob leads to belief in the God and Father of our Lord Jesus Christ; and that God has appointed that Gentiles shall receive "repentance unto life" (11:18) on the same terms as the Jews—namely, through faith in the Lord Jesus Christ and not by works of the law.

I.e., Gentiles are under no necessity of becoming Jews first.

Fully acceptable to Jews ("well spoken of by the whole Jewish nation"; 10:22), Cornelius was ripe for the church. As one who feared God, gave alms to God's people, and prayed constantly, Cornelius was ready for revelation. And that God should choose such a Gentile—a Roman, a soldier, an officer of centurion rank—is regarded as in itself sufficient to convince Peter and the church at Jerusalem—indeed, Judaism and the whole church of Luke's time—that "every one who believes in him [Jesus] receives forgiveness of sins through his name." When Peter and the "believers from among the circumcised" saw that "the gift of the Holy Spirit had been poured out" (10:45) on Cornelius, "his kinsmen and close friends" (vs. 24)—all uncircumcised men—they were amazed, and could not forbid baptism. I.e., since God publicly validated his call to Cornelius by the outpouring of the Holy Spirit, for Peter to reject Cornelius meant to "withstand God" (11:17).

Although Acts is not concerned to tell us what happened to Cornelius after his conversion—whether, e.g., he established a church in Caesarea, or what his career as a Christian may have been—it is obvious that the incident is set forth as the high point in the first half of Acts. Not only is the narrative made up of a double vision, a double miracle, but both are twice repeated and with great circumstantiality. Such a repetition of a conversion story in Acts is matched only by that of Paul's conversion, which Luke honors with a threefold repetition.

The importance of the conversion of Cornelius in the plan of Acts is: (*a*) it provides the occasion whereby Luke can put into Peter's mouth one of the most succinct and epigrammatic summaries of the primitive Christian proclamation; (*b*) it provides the event-datum by which in ch. 15 Peter is made to defend (in Pauline language) the Pauline mission to the Gentiles when Paul and Barnabas are under investigation before "the apostles and the elders" in Jerusalem; and (*c*) perhaps most important of all, Luke will show that Paul's mission to the Gentiles was preceded by Peter's mission to the Gentiles, and that in both cases it was not man's choice but God's call in which the mission was grounded. The two chief apostles here fully agreed (Acts contains no hint that Peter was "entrusted with the gospel to the circumcised"; cf. Gal. 2:7). And it was Peter who first stood trial before the circumcision party in Jerusalem (11:2), who silenced them (vs. 18) and won from the authentic apostolic church, the mother church, the definitive recognition: "They glorified God, saying, 'Then to the Gentiles also God has granted repentance unto life.' " In this way Peter definitively established the universal church before Paul began his Gentile work.

If the *intent* of Luke in chs. 10–11 is clear, nothing else is. It is generally conceded that Luke's narrative rests on some sort of event- and source-data, but beyond this there is no agreement. Although we have no information about Cornelius except what Acts gives us, the existence of such a person need not be contested. He may or may not have been the first Gentile convert; his importance for Luke is that he was the first Gentile convert of sufficient eminence for use in challenging and overcoming Jewish particularism in the church. He may or may not have been the first Gentile to whom Peter preached; nor need we suppose that Peter refused to preach to Gentiles until Paul had radically settled the issue; in any case, Cornelius is made by Luke the decisive figure for Peter and the Jerusalem church in the pre-Pauline period. This may in some sense have been the case, although in what sense it now seems impossible to say. The historian's problem is set for him by the fact that as a sheer act of God both on Cornelius and on Peter, chs. 10–11 are a surd (*a*) in the book of Acts itself (although decisively settled here, the problem comes up again in ch. 15 for decisive settlement); (*b*) in the life of Peter as reflected in Galatians; (*c*) in Paul's struggles with the church in Jerusalem over his Gentile mission, as reflected in Acts and in Galatians; and (*d*) in the early church itself as it worked with the two problems: Should Gentiles be circumcised before becoming Christians? And, conceding that uncircumcised Gentiles might become Christians, should Jewish Christians, who had never eaten anything but kosher, join them in table fellowship?

One widespread attempt to save the narrative for history is to suggest chronological misplacement. It belongs, it is urged, after 12:1-18—i.e., after Peter's release from prison. It was then that Peter went to Caesarea (12:19), Lydda (9:32), Joppa (9:36), and Caesarea (again? 10:24). This has the advantage of placing Peter's preaching mission at the time of the earlier mission of Paul and Barnabas (11:19-26; 12:25), and subsequent to the "preaching [of] the Lord Jesus" to "the Greeks" in Antioch (11:20). Also, putting the incident after the death of Herod Agrippa (12:20-23; A.D. 44) makes the presence of a Roman garrison in Caesarea more credible, since Roman troops seem not to have been stationed in Caesarea while it was under the rule of Agrippa.

Perhaps the chief merit of such attempts at reconstruction of the order of events is that they call attention to the difficulty of the accounts as they stand. Rather than to place confidence in a sequence of events arrived at by juggling Luke's data, scant as they are and unverifiable in detail, and obviously tendentious, it seems better to recognize that here the establishment of the historic facts—i.e., of events in their initial context, sequence, and meaning—is beyond any certain recovery. The sources are too few and fragmentary, corroborative evidence is lacking, and Acts and the Pauline letters offer varying and not easily reconcilable accounts.

Success in analyzing and identifying the sources of Acts 10–11 has not been achieved. It is hard to escape the conclusion that Luke has here jumbled confusedly the two questions about admitting uncircumcised Gentiles into the church, and the propriety of table fellowship with such, although in the end the two were to find the identical solution.

Out of chs. 10–11, we cannot clearly determine the significance of the conversion of Cornelius in the establishment of the universal church, nor the contribution which Peter and the Jerusalem church made toward the work mainly accomplished by Paul in establishing a church in which the principle of salvation of all men by faith was fully accepted, and

Gentiles admitted to the fellowship apart from the "works of the law." Luke has here used history, but he has not written history; he has turned a faith-principle into historical form, in which faith both creates history and is created by it.

CORNER, UPPER CHAMBER OF [עלית הפנה]; KJV GOING UP OF THE CORNER; ERV-ASV ASCENT OF THE CORNER. The last item of Nehemiah's description of the restoration of the walls of Jerusalem (Neh. 3:31). The "corner" is the NE corner of the city. The translations "going up," "ascent," presuppose a reading עלות, easily confused with עלית, the actual Hebrew spelling, correctly interpreted in the RSV. *See* map under NEHEMIAH. *See also* JERUSALEM § 7*b*. G. A. BARROIS

CORNER GATE [שער הפנה; *also* שער הפונה (II Chr. 25:23)]; KJV GATE OF THE CORNER in Jer. 31:38. A gate of Jerusalem, close to the NW angle of the city, four hundred cubits E from the (old) EPHRAIM GATE (II Kings 14:13; II Chr. 25:23). Its towers had been built by Uzziah (II Chr. 26:9). It is not mentioned in the restoration of Jerusalem by Nehemiah. *See* map under NEHEMIAH. *See also* JERUSALEM § 6*b*. G. A. BARROIS

CORNERSTONE [פנה, corner; זויות (Ps. 144:12 KJV; RSV "corner pillar"), corners, *perhaps from* Aram. זויתא; אבן פנה, stone of a corner; ἀκρογωνιαῖος, cornerstone, *from* ἄκρος, top, *and* γωνία, corner; κεφαλὴ γωνίας, head of a corner]. Normally the large stone placed at the foundation of a wall angle to bind two walls together (*see* ARCHITECTURE). In some passages it may refer to a topstone in a defense tower. "Cornerstone" is used in the OT as a symbol of stability and faith, interpreted in the NT almost entirely of CHRIST.

1. In the OT. In the OT "cornerstone" usually means the foundation stone (Job 38:6, the cornerstone of the world). Its most striking use is in Isa. 28:16. Though the MT clearly contains some doublets (e.g., doubled אבן, doubled מוסד), the passage contrasts the "shelter" of falsehood, which the wicked have built, and Yahweh's true building of the community of faith. The meaning of "cornerstone" in this passage has been variously explained as Yahweh, as the Solomonic temple, as the renewed community, as a messianic figure, and as the faith of a renewed Israel (*see bibliography*). The inscription on the stone: "He who believes will not be in haste," suggests that Isaiah is comparing the life of the covenant people to the steadfast strength of the well-built temple.

In Isa. 19:13 פנות denotes chieftains who keep tribes firm (cf. Judg. 20:2). The "chief cornerstone" in Ps. 118:22 is properly the "head of the corner" (ראש פנה; LXX κεφαλὴ γωνίας), perhaps the "top of the battlement" (cf. Zeph. 3:6; Zech. 4:7). The reference is probably to vindication of a king against internal dissension. Yahweh has made him the chief defense for whom malcontents (the "builders") had contempt.

The word in Ps. 144:12 may be best translated "corner pillars" (RSV), because of the parallel to זויות of "plants full grown," suggesting vertical pillars.

"Cornerstone" (פנה) in Zech. 10:4 is extremely enigmatic, and most commentators consider the whole verse a gloss. It may be a piling up of similes for a vaguely messianic implication of vs. 3, perhaps garnered from Isa. 19:13; 22:2; 41:2.

2. In the NT. All NT references to "cornerstone" are either quotations of or echoes from the OT. Ps. 118:22 is quoted from the LXX in Matt. 21:42; Mark 12:10; Luke 20:17; I Pet. 2:7; and in a non-LXX form in Acts 4:11. The Synoptic quotations follow the parable of the wicked husbandmen and show the rejection and triumph of Christ as the "head of the corner" (κεφαλὴ γωνίας). I Pet. 2:7 implies that the faithful, like Christ, are "living stones" (vss. 4-5). Isa. 28:16 is quoted in a form similar to but not identical with the LXX in I Pet. 2:6, where the "cornerstone" (ἀκρογωνιαῖος) is Christ.

Eph. 2:20 echoes Isa. 28:16, though here the "foundation" (θεμελιός) is the apostles and prophets and the "cornerstone" (ἀκρογωνιαῖος, "capstone"[?]) is Christ. A similarity to the metaphor of Christ as head of the body may exist in this passage.

Like Jewish tradition, the NT writers interpret these OT verses messianically (cf. Targ. Ps. 118:22; Isa. 28:16). The symbol shows Christ as the foundation on which the faith of the church rests, a foundation rejected by Judaism but the only stable basis.

On Rom. 9:33, partially quoting Isa. 28:16, *see* STONE.

CORNET. *See* MUSICAL INSTRUMENTS § B5*b*.

CORRECTIONS OF THE SCRIBES [נקודות; *puncta extraordinaria*]. Dots placed over letters, or even words, in fifteen places to indicate the doubts of the scribes about the text. They are probably the earliest instances of scribal influence upon the text. Cf. Siphre on Num. 9:10. *See* TEXT, OT; MASORETIC ACCENTS.

Bibliography. C. D. Ginsburg, *Introduction to the Massoretico-Critical Edition of the Hebrew Bible* (1897), pp. 318-34; P. Kahle in H. Bauer and P. Leander, *Historische Grammatik der Hebräische Sprache* (1922), pp. 79-80. B. J. ROBERTS

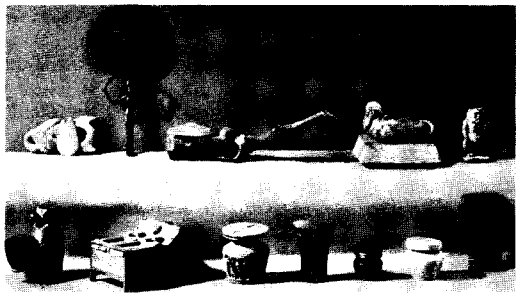
CORRUPTION [φθορά, διαφθορά, *from* φθείρω, destroy]. While this term is used in modern English

with special reference to the decomposition of organic matter or to moral depravity, its chief biblical connotation (particularly in the KJV) is the transience of the present world order with all that belongs to it.

In Rom. 8:21, φθορά ("decay") refers to the liability of the material universe to change and decay; contrast the "incorruptible" (ἄφθαρτος) inheritance reserved for believers (I Pet. 1:4 KJV; RSV "imperishable"). In I Cor. 15:42 ff it denotes the liability of the "natural" body to death and dissolution; "corruptible" (φθαρτός; RSV "perishable") is practically equivalent to "mortal" (θνητός), as "incorruption" (ἀφθαρσία; RSV "the imperishable"), predicated of the "spiritual" body, is a synonym for "immortality" (ἀθανασία). In Acts 2:27 ff; 13:35 ff, "corruption" (in the sense of "decomposition") represents διαφθορά, from Ps. 16:10 LXX, where the MT has שחת (RSV "the Pit," in parallelism with "Sheol"). As a messianic "testimony," the LXX form of Ps. 16:10 lends itself even better than the MT form to the case of Jesus, whose body, being raised from death, "saw no corruption" (Acts 13:37). *See* DEATH; IMMORTALITY; PIT; SHEOL.

Bibliography. E. F. Sutcliffe, *The OT and the Future Life* (1946), pp. 76-81. F. F. BRUCE

* **CORRUPTION, MOUNT OF** [הר המשחית, *har ham mashhîth*]. A hilltop E of Jerusalem, presumably the S end of the Mount of Olives, where Solomon had built a high place to the gods of his foreign wives (I Kings 11:7). The high place, together with other illicit centers of worship, was destroyed by Josiah. Its name (II Kings 23:13) may well be a derisive corruption of הר־המשחה, *har hammishḥâ,* "Mount of the Ointment," an extrabiblical synonym for "Mount of Olives." *See* map in MOUNT OF OLIVES. *See also* JERUSALEM. G. A. BARROIS



COS kŏs, kŏs [Κῶς]; KJV COOS kō′ŏs. An island with a city of the same name, in the Aegean Sea, off the coast of Caria. It was wealthy because it lay on an important shipping route. It was famous for wines and silk. It was known as one of the Isles of the Blessed. It became a great Jewish center in the Aegean. According to I Macc. 15:23, Lucius the Roman consul required the local authorities not to fight against the Jews (138 B.C.). One of the pursuits of the Jews here was banking. Herod the Great favored the island, and a statue to his son has been found there. Paul called here on his voyage from Miletus at the close of his third missionary journey.

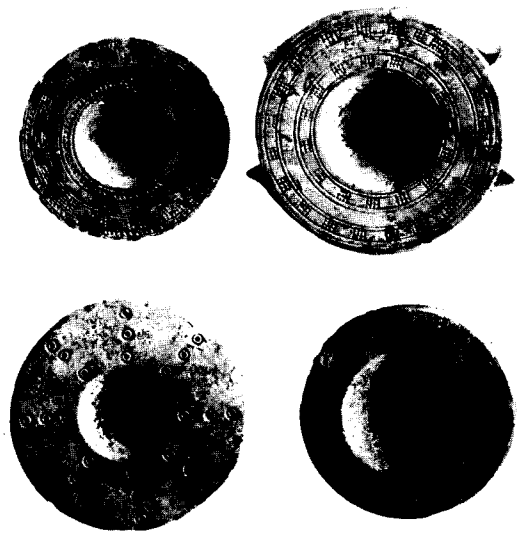
COSAM kō′səm [Κωσάμ=קסם, diviner] (Luke 3:28). An ancestor of Jesus.

COSMETICS. The cosmetics mentioned in the Bible include ointment, perfume, eye paint, and possibly henna.

1. Ointment and perfume
2. Eye paint
3. Henna
4. Cosmetic palettes
5. Cosmetics in Egypt and Babylonia
6. Cosmetics among the Jews
Bibliography

Courtesy of the University Museum of the University of Pennsylvania



47. A variety of Egyptian toilet articles: The ivory duck is of the First Dynasty from Abydos; the bronze mirror and the ointment containers are from the New Kingdom; the small monkey is from the Middle Kingdom.

1. Ointment and perfume. Perhaps the most common cosmetic of the Bible is OINTMENT (*see* § 6*a*), which was often perfumed (*see* PERFUME § 5*a*). In the dry, hot climate of the Middle East ointment is necessary to keep the skin and hair from desiccation, and perfume counteracts body odors. Fig. COS 47.

2. Eye paint. A paste, usually black, was sometimes painted around the eyes for beautification; its recorded use in Israel was chiefly by women of evil reputation. *See* EYE PAINT.

3. Henna. HENNA is a cosmetic applied to hands, feet, nails, and hair, as an orange stain and perfume, in the modern Middle East. It is not clearly referred to as a cosmetic in the Bible. Song of S. 1:14; 4:13 mention the fragrant flowers of henna, and it may be significant that here it is associated with plants from which perfumes were derived. Some have found a reference to dyeing the hair with henna in Song of S. 7:5, but this is doubtful. Fig. HEN 14.

4. Cosmetic palettes. From the Iron II period in Palestine (*ca.* 800-600 B.C.) come cosmetic palettes of limestone in the form of small bowls about four inches in diameter with a flat base and a small round hole

Courtesy of the Oriental Institute, the University of Chicago

48. Palettes from Megiddo

surrounded by a broad, flat rim often decorated in geometric design. They were used in preparing colors for the face, probably by means of a type of bone spatula also frequently found (Fig. COS 48). Ivory and metal kohl sticks and unguent spoons are also found.

5. Cosmetics in Egypt and Babylonia. Rouge for the face was used in Babylonia and in Egypt. An Egyptian sketch of the New Kingdom shows a woman holding a mirror as her hair is dressed (Fig. COS 49).

Courtesy of the Metropolitan Museum of Art

49. Hairdressing scene from the sarcophagus of Princess Kawit; as she holds a mirror in her hand, she is given milk by an attendant; from Deir el-Bahri (*ca.* 2000 B.C.)

The tombs of Egypt have yielded many cosmetic receptacles, ointment spoons, rods for eye paint, and metal hand mirrors. In Ur of the twenty-fifth century B.C. sets of toilet instruments were discovered, including tweezers, ear picks, stilettos, and paint sticks.

6. Cosmetics among the Jews. Some cosmetics used by the Jews in antiquity but not mentioned in the Bible are rouge, powder, and hair dye. The Mishna forbids the use of rouge on the sabbath (Shab. 10.6; also interpreted as parting the hair). Women's powder made of flour is to be removed from the house before the Passover (M. Pes. 3.1). Hair dyeing is said to have been practiced by Herod the Great (Jos. War I.xxiv.7).

Bibliography

A. ***IN THE OT.*** **1. Cosmos and creation.** To the ancient Hebrews, the world was not an organic unity, but a collection of disparate phenomena individually controlled and collectively disposed at the will and pleasure of their common Creator. This is shown most clearly by the fact that there is no word in biblical Hebrew corresponding to the notion of "universe" or "cosmos." The word עולם, which came later to be employed in that sense, bears in the OT the exclusive meaning of "eternity" or "indefinite time"; while תבל, which is often rendered "world," really means no more than "terra firma" (cf. Akkadian *tābalu, nābalu*). The nearest approach to the idea of universality which the Hebrews could achieve was to speak of "the all" (הכל; I Chr. 29:12, 24; Ps. 103:19; Jer. 10:16; 51:19), but this referred, of course, to the totality or aggregation, rather than to any overarching unity, of existent things.

To the Hebrews, therefore, cosmogony was not—as it was to the Greeks—the search for the physical origin or central organic principle of the universe, but simply the account of how the various natural phenomena within it had come to acquire their respective roles and been assigned their functions vis-à-vis the life of man on earth. This, too, is clearly demonstrated by the evidence of language. The Hebrew words conventionally rendered "create" (viz., ברא, connected with Arabic *b-r-y,* "cut out, pare, leather"; יצר, properly "mold"; and קנה [Gen. 4:1; 14:19, 22; Deut. 32:6; Ps. 139:13], related to Arabic *q-n-w/y,* "fabricate"), though they came eventually to be used in an extended, metaphorical sense, are derived from handicrafts and plastic arts, and refer primarily to the mechanical fashioning of shapes, not to biological processes or metaphysical bringing into existence. *See bibliography* § 1.

Furthermore, Hebrew thinking on the subject was mythopoeic rather than intellectual, issuing more out of imaginative fancy than out of logical inference or disciplined inquiry. Accordingly, all efforts to reconcile biblical cosmogony with modern science rest, in the last analysis, on a fundamental misunderstanding of its purport and intent and on a naïve confusion between two distinct forms of mental activity. Fig. COS 50.

2. Creation stories. There are in the OT four principal accounts of creation: two in the book of Genesis (chs. 1–2); a third in Prov. 8:22-31; and a fourth, which has to be pieced together from stray allusions in the prophetic and poetic books. However late be their literary redaction, all these accounts are

50. OT conception of the world: (1) waters above the firmament; (2) storehouses of snows; (3) storehouses for hail; (4) chambers of winds; (5) firmament; (6) sluice; (7) pillars of the sky; (8) pillars of the earth; (9) fountain of the deep; (10) navel of the earth; (11) waters under the earth; (12) rivers of the nether world

based upon traditional ancient Near Eastern lore. Each of them, however, accommodates and adapts the ancient material to a distinctive Hebrew viewpoint, breathing the Spirit of God into the rude clay. *See* CREATION; DEEP; WATER.

a. Gen. 1:1–2:4. This passage (commonly assigned to the P document, redacted in the sixth century B.C.) offers an account of creation in terms of a six-day process. The scheme is given in Table 1.

Table 1

Day	Phenomenon	Function
1	Light	to distinguish day from night
2	Firmament	to divide the primordial waters into an upper and lower register
3	Earth and seas; vegetation	
4	Luminaries	to give light and regulate seasons
5	Animal life in sea and sky; sea monsters	
6	Animal life on earth; man, created in the image of God	to "subdue" the earth and rule the animal kingdom
7	Sabbath: Day of Rest	

All things are represented as coming into being solely by the fiat of God. It is nowhere stated out of what substances they were composed, for the central theme is not the physical origin of phenomena but their role in human existence and the orchestration of their several functions, what John Donne called the "concinnity of parts."

There are several features of this account:

a) Monotheistic orientation. In the earlier Mesopotamian cosmogonies, the phenomena of nature are represented as being directed by the distribution of their controlling "norms" (Sumerian *me;* Akkadian *parṣê*) among a host of gods, who severally assume government over them (cf. Enuma Êliš 6.39-46). Here, however, such powers are assigned to the phenomena themselves, which thus become the direct, unmediated exponents of their creator's will and pleasure. The firmament is ordered of itself to serve as the divider between the upper and lower waters of the primordial ocean; the earth is commanded of itself to produce self-germinating vegetation; etc. From the standpoint of the history of religion, this represents a significant transition from daemonism to dynamism. Phenomena, though primarily disposed by a supreme creator, are essentially self-determinant, and their functions and operations are no longer conceived as being due to the manipulations of external agents—i.e., spirits or daemons.

b) Light. The prescientific distinction between daylight and the sun is made also in the Mesopotamian Epic of Creation (Enuma Êliš 1.38), where, even before the creation of the luminaries, Apsu complains to Tiamat that he cannot rest by day nor sleep by night. *See bibliography* § 2.

c) The priority of water. The account is premised on the assumption that originally there was nothing but water pervaded by wind (vs. 2). This concept of the priority of WATER obtains also in the Mesopotamian Epic (Enuma Êliš 1.1-3), and it has been suggested by some scholars that it originated in the fact that the earliest cities of Babylonia (e.g., Eridu on the Persian Gulf) were built on lagoons; or that it was inspired by the seeming emergence of the earth, each spring, out of the waters of the winter floods. The truth is, however, that this concept figures equally in the cosmogonies of many peoples who do not happen to live under such geographical and climatic conditions. It appears, e.g., in ancient Indic lore (Rig Veda I.xiii.19; X.xix.1; Taithriya Samhita V.vi.4); in Homer (*Iliad* XIV.201, 246); in the Finnish Kalevala (Rune 1); among the Mexicans, the pygmies of Gabon, the Yoruba of the Sudan, and the Crow Indians, Iroquois, and Creeks of North America, not to speak of innumerable other primitive societies. It may therefore be explained far more naturally from the fact that water, having no fixed shape and appearing to be ungenerated, comes perforce to be regarded by the primitive mind as something that must have existed before all other things were created—i.e., given their specific and distinctive forms. It is to be observed especially in this connection that the scriptural account nowhere implies, in the manner of Thales, that all things actually issued out of water; it says only that water preceded them in point of time, but insists that they themselves were each created independently by successive fiats of God.

d) The priority of wind. Because it is likewise unrestricted by form and likewise seemingly ungenerated, the primordial quality of water is shared by

wind. The latter is described poetically as the "breath of God" (רוח אלהים), just as thunder is regarded as his voice. This characterization recurs elsewhere in the OT (e.g., Exod. 15:8, 10) and possesses abundant parallels in the mythopoeic fancies of other cultures. Thus, in an Egyptian hymn from Hibeh, the four winds are said to issue from the mouth of the god Amon, while in Chinese mythology wind is likewise regarded as divine breath. It is therefore somewhat idle to speculate whether the Hebrew expression used in Gen. 1:2 means the "spirit of God" or the "breath of God" or "a mighty (divine) wind"; for the probability is that these notions were not differentiated. (For varying viewpoints, *see bibliography* § 3.) Moreover, in the Phoenician cosmogony recorded by Sanchuniathon (in Eusebius *Praeparatio evangelica* I.10), the divine wind is a primal force, and so it is also in a cosmogonic hymn of the Rig Veda.

The wind is said to have hovered, or fluttered, over the surface of the waters. The Hebrew word (רחף; LXX ἐπεφέρετο; Vulg. *ferebatur*) recurs in Deut. 32:11—its only other appearance in the OT—to describe the action of an eagle which hovers solicitously over its young, and it came to be used in Aramaic and Syriac in the sense of "brood." This has suggested that the scriptural expression may contain a faded reminiscence of the ancient conception that the world was hatched out of an egg—a notion which obtains alike in Egyptian, Greek, Phoenician, Indic, Iranian, and Polynesian mythology. The fact is, however, that the word in question has now turned up in the Ugaritic Poem of Aqhat (III.i.20, 31), where it is applied to the coasting of eagles in flight. Hence, all that the scriptural passage really implies is that the wind swept the waters as a coasting bird sweeps the air; and this metaphor is adequately explained by the fact that the wind was commonly regarded in the ancient Near East as possessing wings (cf. II Sam. 22:11; the Mesopotamian Story of Adapa in *ANET* 101).

e) The sky. The Hebrews distinguished clearly between the "great blue yonder" in general and the immediate ceiling or canopy of the earth, though the distinction is often obscured in the OT by the fact that the same word (שמים) tends to be used for both. The former was simply the upper part of the great cosmic ocean; the latter was conceived as a layer stretched across it to prevent its waters from overflowing. This finds an arresting parallel in ancient Mesopotamian lore, where the nethermost register of heaven is often styled the "celestial bulwark" (*šupuk šamê*). The author of our scriptural account pictures it as a strip of metal, for the word by which he designates it (viz., רקיע)—usually rendered "firmament" (after LXX στερέωμα; Vulg. *firmamentum*)—really has that meaning (cf. רקע [Exod. 39:3; Num. 17:3-4; Jer. 10:9]; Phoenician מרקע). In the Babylonian Epic of Creation (Enuma Êliš 4.137-45), on the other hand, the firmament is made out of the upper part of the body of Tiamat, which is slit lengthwise by the victorious Marduk, the lower half making the earth. In the Hittite myth of Ullikummi (*ANET* 124), heaven is said to have been sundered from earth by a cleaver or (magic?) knife.

f) Man. The scriptural writer is quite prepared to take over from the older, pagan mythology the idea that man was created in the divine image. Nor—though he incongruously suppresses the background—does he object to including in his "purified" version so blatantly polytheistic a trait of the original myth as the phrase: "Let us make man in our image" (vs. 26), with its implication that this had been effected at a meeting of the gods in common. But when it comes to defining the purpose of man's creation, he makes a supremely significant advance upon the time-honored pagan view. In contrast to the doctrine enunciated in the Mesopotamian myths and retained in Gen. 2 (*see below*), man is here represented, not as the menial of the gods, but as the ruler of the animal and vegetable kingdoms (1:28)—an idea which was eventually to be developed into the notion that he was, in fact, God's viceroy on earth (cf. Koran, Sura 2.28). *See bibliography* § 4.

No sooner is man fashioned than he is bidden "subdue the earth" (vs. 28). This is usually taken to refer to agriculture. It is equally possible, however, that the words are intended simply as a parallel to "having dominion" over the animal world, in the sense that man is enjoined to exploit the vegetable world for his sustenance and enjoyment. In that case, the writer's view would mark another break with the older tradition, for, as we shall see presently, in the Mesopotamian myths and in Gen. 2, the function of man is to till the soil *for the benefit of the gods*. Our author's view would also find a striking parallel in the concept of the Roman poets that in the primeval Golden Age man enjoyed the fruits of the earth without having to toil for them (cf. Tibullus I.3.41; 9.7; II.1.4; Ovid *Metamorphoses* I.104; *Amores* III.8.41). It is significant also in this connection that it is the fruits of earth and trees, not animal flesh, that is said to have been given to man for food (vs. 29), for this chimes with a widespread ancient notion that primeval man subsisted on an exclusively vegetarian diet (cf. Porphyry *De Abstinentia* II.5-7, 20-22, 27-31; Ovid *Fasti* I.347 ff)—sometimes, indeed, represented as consisting of acorns!

g) The six-day scheme. This is, in all probability, simply a device on the part of the priestly compilers whereby the ancient myth might be accommodated to the Israelitic institution of the seven-day week and at the same time provide validation for the seventh-day sabbath. Indeed, it has been suggested that since, according to one method of reckoning, ten separate acts of creation may be recognized, the story may have originated in an area and at a time when a ten-day week obtained. Such a system seems, in fact, to have left traces in the OT itself (Gen. 24:35; Exod. 12:3), and it is paralleled in ancient Egypt, among the pre-Islamic Arabs, in Greece (Hesiod *Theogony* 765-77) and among many primitive peoples of the present day. *See bibliography* § 5.

b. Gen. 2:5-25. Although, for logical reasons, it was placed second in the final edition of the Pentateuch (or Hexateuch), this account is, in fact, earlier in point of redaction and more archaic in point of view than Gen. 1. In its present form, it is assigned by modern critics to the J document, compiled in the tenth century B.C. The features of this account are:

a) The watering of the earth. This account is really an anthropogony rather than a cosmogony.

The only cosmogonic detail in it is the statement that the earth was at first watered, not by rains, but by a subterranean flood (אד = Akkadian *edu*), and this is introduced only by way of background and setting for the creation of man. The most natural explanation of this detail is that the story pictures primordial conditions after the pattern of what actually takes place annually prior to the "regeneration" of the earth in autumn. Just before the agricultural cycle begins—i.e., in the early days of October—the soil of Palestine depends for its moisture more on subterranean springs than on rain, which only commences to fall to any appreciable degree about a month later. An excellent illustration of this concept is afforded by the Ugaritic Poem of Baal, where dominion over the earth is first awarded to Yammu (alias Naharu), god of the sea and subterranean waters, and is subsequently wrested from him by Baal, lord of the rains. (Moreover, as soon as Baal has vanquished his rival, arrangements are made to secure the precipitation of his rains in due season: II AB,6-7: *'dn mṯrh B'l y'dn.*) *See bibliography* § 6.

b) The function of man. In contrast to the more exalted outlook of Gen. 1-2:4, this account retains the primitive view that the function of man was to tend and till the garden of God (2:15). The Mesopotamians likewise held that man was created to perform chores for the gods. In KARI I, no. 4, the divine Anunnaki recommend the creation of man so that he might "do the chores of the gods, fix bounds, carry basket and seed-bag, direct the course of canals, water the soil, cause plants and shrubs to grow." So, too, in Enuma Êliš 6.7-9, Marduk orders the creation of man that he might perform chores (*dullu*) for the gods and thus give them a chance to relax; while in another account (CT XIII.35-37) he creates man out of dirt to maintain earthly abodes for the gods. In yet a further version (*ANET* 99-100), man is formed out of clay, animated with blood, in order to "bear the yoke."

Since the function of man is thus to serve the gods rather than to rule the animal kingdom (as in Gen. 1), the latter has no organic place in the story. The creation of animals has therefore to be introduced solely as an afterthought, something done only for man's diversion (vss. 18-19). The same sequence obtains, for the same reason, in the Mesopotamian myth about the creation of man as the caretaker of shrines.

c) Man from dust. Nothing is said in Gen. 1 concerning the substance out of which man was made, nor is any reference made to a single primal pair. In Gen. 2, however, it is stated expressly that man was molded out of dust and animated by the divine breath (vs. 7).

The former idea recurs in Job 33:6 (lit., "I too was pinched out of clay") and is commonplace on Mesopotamian mythology (e.g., Epic of Gilgamesh I.2.34-38; Ea and Atraḫasis, IV.4-10). It was likewise familiar to the Egyptians, among whom the god Khnum was said to have molded man on a potter's wheel. Nor is it unattested in classical sources. Similar stories are told also among several primitive peoples. *See bibliography* § 7.

As for the notion that man was animated by the divine breath, it should be observed that, in accordance with the belief that blood, as well as breath, is the seat of life (cf. Lev. 17:10), it is often the divine blood, rather than the divine breath, that is said in ancient anthropogonic myths to have been intermingled with the primal clay (cf. Enuma Êliš VI.5-6, 32-33; KARI I, no. 4).

d) Woman. Woman is said, in Gen. 2, to have been created out of man's rib (vs. 21). It has been suggested that this legend derives from a Sumerian source and was inspired by the fact that in Sumerian script the sign "TI" stands both for "rib" and for "life," so that "NIN.TI" (a goddess), the primal mother of man, could be explained both as "Rib-lady" and as "Lady of Life." The latter explanation, it is added, is reflected in the Hebrew name Ḥawwah (Eve), which is, indeed, fancifully connected by the scriptural writer (Gen. 3:20) with the verb חיה (חוה), "to live"! The fact is, however, that the story of woman's origin from the flesh of man is common to many primitive peoples—e.g., the Tahitians, the Maoris, the Karens of Burma, and the Bedil Tartars of Siberia—where no such philological basis for it exists and where biblical influence (through missionaries) can be reasonably discounted. It is therefore far more natural to assume that the story has a social and biological, rather than a linguistic, basis! *See bibliography* § 8.

c. Prov. 8:22-31. Unacquainted as they were with physical laws and organic processes, the Hebrews were all the more impelled to find some mythopoeic explanation for that logic and reason of the natural order upon which they ever insisted (cf. Ps. 104:24; Prov. 3:19; Jer. 10:21; 51:15; Ecclus. 42:21; Wisd. Sol. 7:22; 9:9). This is the theme of Prov. 8:22-31, where Wisdom (חכמה) is introduced as an expert technician (אומן [so LXX, Vulg., Syr., for MT אמן, "nursling"; cf. Akkadian *ummanu*]) who attended upon Yahweh during the process of creation (vs. 30). The successive stages of this process are enumerated in six couplets, each relating two complementary acts, viz.:

a) The creation of the oceans (תהמות)—i.e., the partition of the primordial waters into an upper and lower register; matched by the filling of the subterranean springs (מעינות) with water (vs. 24).

b) The sinking of the mountains (הרים הטבעו)—i.e., the lowering of their roots over the nether ocean, to prevent its waters from rising and flooding the earth; matched by the raising of their summits (גבעות) above the level of the earth (vs. 25).

c) The exposure of the earth and open tracts (חוצות); matched by the production of vegetation (reading ודשא עפרות תבל for the obscure וראש עפרות תבל of the MT and versions; cf. Akkadian *dušše;* vs. 26).

d) The stabilization of the sky (שמים)—i.e., the firmament—designed to keep the upper waters from flooding the earth; matched by the prescription of an encircling bound (חוג)—evidently a range of mountains, like the Qaf of Arabic folklore—to prevent the flooding of the earth from the sides (vs. 27).

e) The condensation of the thin vapors into clouds (באמצו שחקים), to provide moisture from above: matched by the release of the subterranean waters

through gushing springs (בעזזו עינות [so versions] תהום; cf. מים עזים and Arabic *'azza*, in the specific sense of "produce a gush"; vs. 28).

f) The bounding of the main (בשומו לים חקו); matched by the steadying of the bases of the earth (so versions; בחזקו מוסדי ארץ; vs. 29).

Although Wisdom is here regarded as older than all *created* things, it is not to be inferred that it was deemed older than the cosmic ocean. This would run counter to a well-established tradition of Semitic mythology, which insisted that Wisdom in fact dwelt (i.e., was inherent) in that primordial substance. In Mesopotamia, e.g., the word *abzu*, which denotes that ocean, was popularly interpreted as *ab-zu*, "abode of wisdom," and regarded as the seat of Ea, god of arts and crafts and of intellectual creativity. It was, indeed, largely by virtue of the "wisdom" latent in that ocean that magicians were able to operate; and it was from that ocean that the seven primeval masters (*apkallê*) of arts and sciences—or, according to Berosus, the culture hero, Oannes—were believed to have sprung. Moreover, in Ecclus. 24:5-6, it is stated explicitly that the deep was one of the original abodes of Wisdom. All that the scriptural writer really says is that Wisdom preceded the oceans (תהמות; the plural is significant)—i.e., the division of the primordial stream into the ocean above the earth and the ocean beneath it. *See* DEEP.

d. The myth of the primordial combat. Of quite a different order is a cosmogonic myth to which allusion is made in several poetic passages of the OT (viz., Job 3:8; Pss. 74:13-14; 89:10-11; 93; Isa. 27:1; 30:7; 51:9-10; Hab. 3:8). The essence of this myth is that at the beginning of the present world era, the supreme God (Yahweh) did battle with a draconic monster, whom he subdued either by slaying him or by keeping him in bonds. The monster is variously named: Leviathan (לויתן, "Coiled One"); Yam ("Sir Sea"); Nahar ("Sir Stream, River"); Tannin ("Dragon"); and Rahab ("Rager"; cf. Akkadian *ra'ābu*). Less frequent designations are: "Evasive[?] Serpent" (נחש ברח; Isa. 27:1); "Tortuous Serpent" (נחש עקלתון; Isa. 27:1); and "Dragon-monster" (בשן; Ps. 68:22; cf. Ugaritic *bṯn;* Akkadian *bašmu* [ancient and English versions wrongly "Bashan"]).

This myth represents a Syro-Palestinian version of one found throughout the literature of the ancient Near East. *See bibliography* § 9.

The closest parallel is afforded by the Ugaritic Poem of Baal (fourteenth century B.C.), which relates how that god of rainfall engaged the draconic monster Yammu ("Sir Sea"), *alias* Naharu ("Sir Stream"), Tannin, or Baṯhan, and subdued him as a necessary preliminary to securing his own dominion over gods, men, and earth. In one passage the antagonist is actually styled "Evasive[?] Serpent" (*bṯn brḥ*) and "Tortuous Serpent" (*bṯn 'qltn*), as in Isa. 27:1, showing the direct indebtedness of the biblical version to this Canaanite source.

The same story occurs also on Mesopotamian soil in the Babylonian "Epic of Creation" (Enuma Êliš), which relates the successful combat of Marduk (or, in the Assyrian version, Aššur) against the monstrous Tiamat and her confederates; and there is also a second version, in which the antagonists are respectively the god Tišpak and the dragon Labbu, although there it is not said explicitly that the combat was primordial.

In Hittite, the battle royal between a mortal hero Hupasiyas, acting in behalf of the gods, and the serpent Illuyankas forms the cult myth recited annually at the festival of Puruli, in late summer.

Lastly, there is an older Sumerian version narrating how the god Ninurta subjugated the demonic Asag (cf. Akkadian *ašakku*, "demon") and kept him confined between the banks of the Euphrates.

The myth is frequently represented on Mesopotamian cylinder seals, and it is likewise portrayed on reliefs from Malatya and Karatepe. In both the latter cases, the dragon is shown with many heads, consonant with the description in Ps. 74:13. Fig. LEV 27.

More remote affinities may be recognized in the Greek myth of the fight between Zeus and Typhon, in the Indic story of the conflict between Indra and Vṛtra, and even in the much later legend of Saint George and the dragon (actually located in N Syria!).

All these stories are mere retrojections into cosmogony of the annual subjugation of the waters (personified as a draconic marplot), which, when the snow melts on the mountains, indeed rush down in fury, and which also well up, toward the end of summer, from subterranean springs. (It is significant in this connection that, in Chinese folklore, when an overflowing river is confined, it is said that "the dragon has been caged"). What has to be done at the beginning of each year is conceived as having been done at the beginning of the present era, when the earth was first called into being.

B. *IN THE APOC. AND THE PSEUDEP.*

1. Foreign influences. During the intertestamental period the Jews were increasingly exposed to foreign philosophies and religious doctrines, and an important element of these was speculation about the origins of the world. Normative Judaism tended, on the whole, to deprecate such mental flights, on the grounds that they might lead to apostasy. Man, it was asserted, should not explore what was beyond his powers, but should occupy himself only with performance of what God had enjoined upon him (cf. Ecclus. 3:21-22; M. Ḥag. 2.1). Accordingly, formal accounts of creation (e.g., Ecclus. 43-44; II Esd. 6:1-6, 38-54) hew close to the descriptions contained in the OT, though there seems to have been a certain amount of ambivalence regarding the doctrine of *creatio ex nihilo*, this being emphatically affirmed in some places (e.g., II Macc. 7:28) but denied in others (Wisd. Sol. 11:17). *See bibliography* § 10.

Yet, with all this fidelity to tradition, in an increasingly cosmopolitan atmosphere intellectual isolation was obviously impossible, and in the interpretation of the sacred texts bearing on cosmogony the subtle influence of Greek ideas may indeed be detected, especially in such more philosophical works as the Wisdom of Solomon and II Esdras. The following are the more arresting instances of this development:

a. The "goodness" of creation. The scriptural statement that "God saw everything that he had made, and behold, it was very good" (Gen. 1:31), is de-

veloped into the notion that, since God is himself intrinsically good, nothing that comes from him can be other than "healthsome" (σωτήριος) and free from the "poison of destruction" (Wisd. Sol. 1:14; cf. Shab. 77*a*). This reproduces a familiar teaching of Plato (*Timaeus* 30).

Closely related is the concept that the scheme of things is necessarily beneficial to man, because it is the product of God's inherent love (Wisd. Sol. 11: 24). This in turn is subjected to an interesting development. Offsetting the popular Greek doctrine that the primal creative force was "sexual passion" (ἔρως) or "desire" (πόθος), which swept the chaotic abyss, the Palestinian Targum to Gen. 1:2 identifies the hovering "spirit of God" as the "spirit of love that proceeded from God" (רוח רחמין מן קדם אלקים).

b. The creative Word. The word wherewith God called phenomena into being (Gen. 1: Ps. 33:6) tends to become hypostatized as an ergative force (Ecclus. 42:15; Wisd. Sol. 18:15 [ὁ παντοδύναμος λόγος]; II Esd. 6:38; Targ. Isa. 45:12; 48:13). Indeed, in the Targums, "Word" (מימרא) is frequently employed as a pious circumlocution for "God." It is true that this concept may be traced ultimately to ancient oriental prototypes (*see bibliography*). Its increased articulation at this period, however, may well have been influenced by Greek philosophical ideas about the λόγοι as intermediate agents of God's creativity and about the Logos itself as the ergative force of deity (*see bibliography* § 11). *See* LOGOS.

c. Wisdom as creative agent. On the basis of Prov. 8:30, Wisdom was hypostatized as the "craftsman" (τεχνῖτις) who attended upon God during the process of creation (Wisd. Sol. 7:22; 9:4, 9-10; Enoch 42:1). Here again, an oriental background has been claimed on the strength of a passage in the Aramaic text of the Romance of Aḥiqar (lines 94-95; *see bibliography* § 12); but here, too, the rearticulation of the ancient concept—if such, indeed, it is—may well have been influenced by contemporary Greek notions about the creative role of Sophia, or "Wisdom"—ideas subsequently elaborated in Gnosticism. That this concept was, indeed, very much in the air and that it was even thought necessary by the more "orthodox" to combat it, is perhaps to be deduced from the pointed statement in Ecclus. 42:21 (text corrected after the Hebrew version) that God, "unique [read εἷς; *vulgo* ἕως] from everlasting unto everlasting, (himself) disposed the powers of his own wisdom . . . and needed no counselor." In the same vein, too, Philo makes a point of affirming (*Exposition of the Law* I.8) that God was the only "craftsman" (τεχνίτης).

d. The doctrine of spirits. Another favorite notion at this period was that God had activated phenomena by informing them with inherent spirits that controlled them. The most explicit statement of this view is to be found in the first of the Dead Sea Hymns of Thanksgiving (I.5-39), where it is said that all natural phenomena were at first parceled out among spirits, each assigned to a respective domain of authority (ממשלה), and that these spirits were subsequently turned into angels. Further expression of the same idea occurs in Ecclus. 16:27, which should be rendered: "He disposed [ἐκόσμησεν; RSV 'arranged'] his works for ever [RSV 'in an eternal order'], and their spheres of authority [ἀρχάς; RSV 'dominion'] for their generations"; while, according to II Esd. 6:41, what God created on the second day was not the firmament *tout court*, but rather the "spirit" of it.

This, too, may betray the influence of Greek cosmogonic ideas, for Plato likewise speaks of intermediate "gods" (θεοί) as instruments of the creative process (cf. *Timaeus* 41); while Philo identifies the ἰδέαι or λόγοι of the Stoic cosmogony with angels or demons. On the other hand, it must be conceded that the idea may just as well have come from Iran and reflect the Mazdean notion of the *yazatas*. *See* ANGEL.

e. Motion as a primal force. Yet a further trace of Greek influence may be recognized in the statement of II Esd. 6:3 that God conceived the course of existence before the phenomena of nature were made and *antequam . . . confirmarentur motu virtutes* (so also Syr.). This is often rendered "or ever the powers *of the earthquake* were established"; but it may be suggested that the reference is really to the Greek idea, enunciated alike by Anaximander (cf. Simplicius *In Aristotelis Physica* f. 6*a* Aldine) and Plato (*Timaeus* 36D; *Phaedrus* 246C), that motion was a primal force. The correct translation would then be: "or ever the inherent qualities of things were reinforced by movement."

f. The doctrine of opposites. In Ecclus. 33:15; 42: 24, it is stated that all things were created "twofold [δισσά], one opposite the other." It is not difficult to recognize in these words an allusion to the doctrine of "opposites" taught by Anaximander (cf. Simplicius), Pythagoras (quoted by Alexander Polyhistor, in Diogenes Laertius, VIII.24), and Aristotle (*Physica* I.4), as part of their cosmogonic systems.

2. The purpose of creation. Quite apart from these foreign influences, there was in this period a certain amount of speculation concerning the purpose of creation. Two main theories appear to have been prevalent. According to the one—developed from the Scriptures themselves (e.g., Gen. 1:26, 28; Ps. 8:5-9) —the world had been brought into being for the sake of man (cf. II Esd. 6:46; II Bar. 15:7). According to the other, all things had been created solely for God's glory (cf. 1QH I; VI; VII.6-7; X.12; XIII.4; XVIII; M. Ab. 6.11). This did not mean, however, that the world was simply God's plaything—a view seemingly entertained by the cynical glossator who wrote Prov. 8:31—but that it was the inevitable self-expression of God's inherent nature, the realization of his being in a concrete medium.

C. *IN THE NT.* The NT offers no original view of cosmogony. The doctrine of *creatio ex nihilo* is reiterated in Rom. 4:17; Heb. 11:3; and the concept of the ergative Word in Heb. 11:3; I Pet. 3:5. The latter, however, is identified in John 1:14; Heb. 1:3 with the incarnate godhead of Jesus Christ.

The cyclic character of creation influenced the author of II Pet. 3:5-13, where it is pointed out that just as in the past the world was destroyed by the Flood and then renewed, so in the future the dissolution of all things in a cosmic conflagration (ἐκπύρωσις) will be succeeded by "new heavens and a new earth, in which righteousness dwells." In some-

what similar vein, the new dispensation ushered in by the triumph of Christ is regarded, in II Cor. 5:17; Gal. 6:15, as itself the "new creation."

Again, in Rev. 12:7-10; 20:2-3, the primordial battle against the dragon and his confederates (*see* § A2*d above*) is conceived as an event which must necessarily be repeated as a prelude to the new era.

Finally, attention may be drawn to the fact that the familiar portrayal of the Holy Spirit as a dove (Matt. 3:16) represents, in the last analysis, an interpretation of the cosmogonic "spirit of God hovering on the face of the waters" (*see* § A2*a above*). This interpretation, it may be added, is to be found also in early rabbinic sources (e.g., J.T. Ḥag. II.77*a;* B.T. Ḥag. 15*a;* Toseft. Ḥag. II.5).

D. ***COSMOGONY AND ESCHATOLOGY.*** **1. Cosmogony as a cyclic process.** It was a widespread notion in antiquity that time was a cycle rather than a linear progression; and, in accordance with this idea, creation was necessarily envisaged as a recurrent, rather than a unique and punctual event. The cycle could be conceived as one that revolved over centuries or even millenniums, or as one that revolved annually. In the former case, a repetition of the primordial, archetypal process was to be expected at the end of the present era. Eschatology, or the lore of the last things, thus became, in effect, cosmogony in the future tense. In the latter case, on the other hand, every New Year was in fact a new creation; and this was expressed by a formal re-enactment of the cosmogonic process in the New Year ritual, albeit only in the attenuated form of a liturgical recitation. The latter form of articulation, moreover, worked both ways, for it led also (in reverse) to the projection of cosmogonic myths out of conditions which actually obtained at the beginning of the year. *See bibliography* § 13.

In Judaism, a radical transformation of this concept of cyclic creation found its most articulate and vivid expression during the postexilic and intertestamental periods, when it provided a ray of consolation and hope to a people whose light seemed to have passed into eclipse. The development and elaboration of it probably owed much to the infiltration of Iranian ideas, for the future "re-establishment" (*vidāiti*) and "wondrous re-ordering" (*frašo-kereti*) of the world is a cardinal tenet of Mazdean and Zoroastrian teaching, and all the concomitants of this doctrine—the final conflagration, the war against the Evil One, the trial in molten metal, the reward of the righteous, and the requital of the wicked—likewise find place in the Jewish presentations.

2. The first and the last. In accordance with this basic concept, almost every element of the traditional creation myths is duly reproduced in the apocalyptic visions of the last things.

a. The new creation. The world will be renewed (חדוש העולם; παλινγενεσία; Enoch 72:1; 91:16; Jub. 1:29; II Esd. 5:45; 7:75; II Bar. 32:6; 44:12; 57:2; 1QS IV.25; 1QH XI.13-14; XIII.11-14; Matt. 19:28).

The doctrine is well attested also in early rabbinic literature. In the Mekilta on Exod. 16:25, e.g., Eleazar of Modim (*ca.* A.D. 100) speaks of the "new world" (עולם חדש); while reference to the "world which will be renewed" (עלמא דהוא עתיד לאתחדתא) is likewise made in Targ. Mic. 7:14; Hab. 3:2; and in Palestinian Targ. Deut. 32:1, as well as in the form of the Ḳaddish prayer recited at funerals.

Nor will this renewal be solely a matter of moral regeneration. A new heaven and a new earth will be brought into being (cf. Isa. 65:17; 66:2; II Pet. 3:13; Rev. 22:1).

b. The renewed combat. The dragon which God defeated and chained at the beginning of the present era will burst his bonds and offer a new challenge, and again be vanquished in combat.

This idea appears already in Isa. 27:1, where the future discomfiture of the monster is portrayed in terms borrowed from the account of his primordial defeat by Baal in the mythological poem from Ras Shamra (Ugarit; I* AB, i.1-2). Similarly, in Job 3:8—a passage commonly misunderstood—one of the curses which Job invokes upon his birthday is that the future rousing of Leviathan may take place on that date—i.e., that "all hell may break loose" upon it. The notion of the future battle with the dragon is further elaborated in II Esd. 6:52; II Bar. 29:3-8; B.B. 74*a*-75*a;* Shab. 30*b;* Keth. 11*b;* Palestinian Targ. Num. 9:26-27. The Iranian counterpart is the myth of Aži Dahak, the primordial serpent confined beneath a mountain, who will burst forth in the last days, eventually to suffer defeat at the hands of the hero, Keresaspa (cf. Yasht 13.62).

Moreover, just as in the ancient myths (e.g., the Mesopotamian Enuma Êliš and the Greek Titanomachia) the gods had to defeat a cabal of rebellious powers before the several phenomena of the world could be set in order, so will God again march forth with his hosts to do battle against the forces of evil (Zech. 14:2-5; Test. Levi 5:27; Test. Dan 2:10-11; Sibylline Oracles III.319, 519, 632, 663; II Bar. 70:7-10; Enoch 56; II Esd. 5:6; 14:33; Asmp. Moses 8:1-2; 1QH III.35; VI.29; X.34-35; 1QM, *passim;* Palestinian Targ. Gen. 49:11; Num. 9:6; 24:17-20, 24; M. 'Eduyôth 2.10; Rev. 20:8). Here again, Iranian influence may be suspected; for much the same description of this conflict is given in the Zend Avesta—e.g., in Yasna 30.3; Yasht 19.11; 44.15; etc. Moreover, the specification, in the Jewish accounts, of the "outlandish" nations, Gog and Magog, as earthly representatives of the evil powers finds its exact counterpart in that of the wild tribes of Gilan and Mazanderan in Iranian sources (cf. Yasna 57.17; 77.1; Yasht 5.22; 9.4; 10.17; Vendidad 10.14, 16).

Finally, just as in the traditional cosmogonic myths (e.g., Enuma Êliš IV.14; the Ugaritic Poem of Baal III AB, A 9-10; Ps. 93:1-4) the issue of the combat is the assumption of sovereignty by the victorious god, so, in the apocalyptic vision, the result of God's combat against the heathen will be that "on that day . . . Yahweh will become king over all the earth" (Zech. 14:1-3, 9).

c. The renewal of fertility. Just as in the traditional myth God sent his special waters to moisten the earth (Gen. 2:6), so, at the future "re-creation" of the world a special stream of living waters will be released (Zech. 14:8). And just as in the Canaanite myth the reappearance of Baal is presaged by the fact that "the skies rain oil, the wadies run with honey" (I AB, ii.6), so, at the renewal of the world, precisely the same phenomenon will occur (cf. Joel

3:18; Amos 9:13; Sibylline Oracles III.774-77; II Enoch 8:5).

d. The new light. Just as in the traditional myth God sent light to inaugurate the process of creation, so light will again burst forth upon a world shrouded in darkness (cf. Enoch 5:6; 38:4; 45:4; 48:3, 6; 92:4; 1QH VII 24-25; the nucleus of this idea may be found already in Isa. 30:26).

e. The new man. The crowning point of the new creation will be the emergence of the new man (the "Son of man"; cf. בן אדם; Aramaic בר אנש), to whom —as at the former creation (Gen. 1:26-28)—all things will be subject (cf. Dan. 7:13; Enoch 46:1-4; 48:2-10; II Esd. 13:3-13). In the Christian development of this doctrine, the new man is identified, of course, with the divine man, Jesus Christ.

Moreover, the righteous, who will be spared for this consummation, will enjoy once more the bliss of the primeval age. They will again dwell—and not necessarily after death!—in the garden of God (Enoch 61:12) and eat freely of the fruit of the paradisal tree (24:4-5), and they will live as long as did the antediluvians (25:6). *Magnus ab integro saeclorum nascitur ordo.* The cosmogonic cycle completes its revolution. Once again, the creative breath of God moves in the darkness over the troubled waters of the world, and once again the sudden burst of his light heralds a new day.

The Bible opens with the story of creation, not because this is the beginning of all things, but because it wishes to proclaim at the outset that the world is under God. It is the breath of the eternal God that stirs the primordial waters, and it is the same breath that turns the dull clod into a living soul. All the subsequent narratives and chronicles of the OT are but a reaffirmation of this truth in terms of history, and therefore, in the last analysis, an epic of continuous creation: the divine breath is still hovering over the turbulent deep, still being breathed into rude clay. And it is in line with this tremendous concept that the NT ends with the vision of a new creation, or rather a completion of the continuous process, when God who at the first was all in nothing shall at the last be all in all.

T. H. GASTER

***COTTON** [כרפס, *karpas;* κάρπᾶσος; Heb. *and* Gr. *borrowed from* Sanskrit *karpasa, perhaps through* Pers.; חורי, *ḥôrāi*(?)]. The fibers from the fruit of a plant, *Gossypium herbaceum* L., which have been woven into thread and cloth from very early times. כרפס in Esth. 1:6 refers to hangings of cotton in the palace of Susa, while Isa. 19:9 mentions weavers of cotton in Egypt. In the latter passage the context and parallelism seem to favor the translation "cotton" for חורי (RSV "white cotton"; KJV "networks"), even though the word may mean just "white" (cf. Esth. 8:15, where חור may refer to cloth).

See also FLORA § A5; CLOTH; WHITE.

J. C. TREVER

COUCH [מסבּ (Song of S. 1:12), *from* סבב, go around; *also* יצוע, מטה, משכב, ערשׂ, *see* BED]. Something upon which to recline or sleep, but there is no clear distinction between the five Hebrew words cited above. The RSV uses "couch" thirteen times, either when the context favors a more elegant term than "bed," or to avoid the repetition of "bed" in successive clauses or verses. *See* BED; FURNITURE; HOUSE.

W. S. McCULLOUGH

COULTER. KJV alternate form of MATTOCK; PLOWSHARE.

COUNCIL, THE COUNCIL, COUNCIL HOUSE, COUNSEL. Words used to translate numerous Hebrew, Aramaic, and Greek terms. A council is a deliberative body charged with civic, legal, and religious responsibilities.

In the OT the term סוד refers to confidential discourse or secrets (Prov. 3:32; 11:13); frequently, however, it designates the council of Yahweh, his deliberation in the heavenly assembly with the host of heaven gathered about him (Ps. 89:7—H 89:8; Job 15:8; Jer. 23:18, 22; Amos 3:7; note also Ps. 82:1, where the Hebrew word translated "council" in the RSV is עדה, usually rendered "congregation"). The king's council is represented by those who "see the face of the king" (ראה פני המלך; II Kings 25:19; Jer. 52:25). The commanders of armies also "sit" in council (II Kings 9:5: ישב).

The NT refers only to human councils. The term συνέδριον may refer to local councils of particular cities (Matt. 10:17; Mark 13:9) or to the high council, the SANHEDRIN (Matt. 5:22; 26:59; etc.). *The* council generally means the Sanhedrin (τὸ συνέδριον).

The most common term for "counsel" is עצה, in reference both to counsel given by God and to that given by men. The wise men (חכמים) and elders (זקנים) of Israel have particular responsibility for counsel (Jer. 18:18; II Sam. 15:31, 34; Prov. 1:25, 30; 8:14). Yahweh's counsel is also provided through kings and prophets, and through participation in the worship of the community (I Kings 1:12; Jer. 19:7 [RSV "plans"]; Ps. 73:24). The verb יעץ is used with the meaning "to give or receive counsel," in reference to human and divine counsel. In postexilic times, under Persian influence, a number of terms for "counsel" and "counselor" appear (מלך [Dan. 4:24—A 4:27]; יעט, variant of יעץ [Dan. 6:7—H 6:8]; דתבר [Dan. 3:2-3]; עמא or עמה [Dan. 2:14]; הדבר [Dan. 3:24, 27, etc.]). These terms refer primarily to the giving of advice on state matters, rather than to the counsel of God.

Although the OT does not directly connect the possession of sound counsel with the entrance of prophet, king, or worshiper into the council of Yahweh, it is clear that true counsel has its source in Yahweh and in him alone. One of the endowments of the eschatological king-savior of Isa. 11:1-9 is that of a "spirit of counsel and might" (רוח עצה וגבורה [vs. 2]).

To take or give counsel in the NT is expressed by the verbs συμβουλεύω and βουλεύομαι, or by a verb plus the noun συμβούλιον. The majority of occurrences have reference to the enemies of Jesus who take counsel on how to destroy him (Matt. 12:14; 22:15; 26:4; etc.). It is remarkable that the NT assigns little specific place to the wisdom tradition of Israel or to wise counselors. The role of the elders (πρεσβύτεροι) in the early church may, however, have continued this tradition in part. The "secret and hidden wisdom of God" referred to by Paul (σοφίαν ἐν μυστηρίῳ, τὴν ἀποκεκρυμμένην [I Cor. 2:7]) has its closest connection in the OT with the heavenly council (סוד), where the determinations and decrees of God are first promulgated. The NT use of the term μυστήριον, "mystery," may also have behind it this Hebrew term סוד (note that the LXX translates the comparable Aramaic word רז by μυστήριον [Dan. 2:18, etc.]; παιδέια is apparently intended by the LXX to render סוד in Amos 3:7). Thus the sacraments of the church (*sacramentum* becomes the standard term for the translation of the NT word μυστήριον) may be understood in part as dramatic enactments or representations of the secret counsel of God which has been revealed in Jesus Christ.

W. J. HARRELSON

COUNCIL, HEAVENLY. *See* GOD, OT; HOST OF HEAVEN.

COUNCIL OF JERUSALEM jĭ rōō′sə ləm. The name given to a conference at Jerusalem to determine the terms on which Gentiles would be received into the church. According to Acts, the issue became acute, not when one God-fearing household previously sympathetic with Judaism became Christians (ch. 10), nor when some Gentiles at Antioch believed the gospel (11:19-26), but only when a widespread mission in Cyprus and central Asia Minor won numerous Gentiles and showed that the church could easily become largely Gentile (chs. 13-14).

Both Acts 15:1-29; Gal. 2:1-10 report such a council. But the two accounts differ in important respects. In Galatians the council occurs during Paul's second visit to Jerusalem after his conversion; in Acts, during his third visit. In Galatians, Paul says he went to Jerusalem by divine direction; in Acts the Antioch church sends Paul and others to Jerusalem. In Galatians, Paul pictures his negotiations with Jerusalem leaders as a conference between equals, and states that his independent leadership of the mission to Gentiles was fully recognized; in Acts the Jerusalem leaders and church appear to hold superior authority over the entire church. In Galatians, Paul says he agreed to a request that he provide relief funds for the needy Jerusalem Christians; Acts says nothing of this. In Galatians, Paul asserts that the Jerusalem leaders "added nothing" to the gospel he had been preaching; in Acts the Jerusalem leaders, supported by the Jerusalem church, formulate a letter which requires Gentile Christians to abstain from meat sacrificed to idols, from blood, from meat of strangled animals, and from unchastity (15:29).

Of proposals made to provide a solution to this problem, five must be mentioned: (*a*) The visit of Gal. 2:1-10 is the one reported in Acts 11:27-30. This is Paul's second visit to Jerusalem in each writing; both passages refer to a collection; both say Paul and Barnabas came together to Jerusalem. But Acts 11:27-30 says nothing of a conference of any kind; Paul and Barnabas do not see the apostles; and the

council of Acts 15 implies that no previous conference on Gentile Christians had been held.

b) Acts 11:27-30; 15:1-29 are two accounts of the same conference, wrongly described as two separate meetings. On this view, the date is usually thought to be that of Acts 11:27-30. But neither account resembles the other. If Acts is so confused on this crucial point, we can hardly hope to reconstruct a convincing history of the apostolic age.

c) Acts 15:1-29 combines two sources, one dealing with circumcision of Gentiles and the other with rules governing fellowship, especially at meals, between Jewish and Gentile Christians. There is no linguistic basis for distinguishing two sources, and the hypothesis wrongly assumes that a conference which rejected circumcision for Gentiles would not discuss the basis of Jewish-Gentile table fellowship.

d) Acts 15:1-29 is not historical material; the author, having expanded the Cornelius story to serve his favorite ideas, freely composes the council narrative for the same reason, using in the decree (vs. 29) a decision derived from another occasion. This radical denial of historical basis fits poorly the general historical value of Luke and the latter half of Acts.

e) The "apostolic decree" (Acts 15:28-29) is wrongly placed here; it was really issued at another time, probably later than the Council, and when Paul was not present. Acts 21:25 is thought to imply that James is here telling Paul about a decision previously unknown to him. This view is possible, to say the least, but not necessary.

Of these varied views, none has won general support, and none is so convincing as the view that Gal. 2:1-10; Acts 15:1-29 describe the same conference. Both deal with the place of the Gentiles in the church and face the question of circumcision. In both, this question had come up at Antioch and at Jerusalem. In both, Paul, Barnabas, and another or others went to Jerusalem to confer. In both, Paul won a sweeping victory: the Jerusalem apostles rejected circumcision for Gentiles. The two accounts are independent—Paul writes with the aim of vindicating his independent apostleship—but there is broad agreement.

The two most serious differences are: (*a*) Acts appears to assume that the Jerusalem leaders had supreme authority; Paul claims equal, independent authority. Certainly the decision of the Jerusalem leaders was crucial for Paul's work; he recognized this by going to seek their agreement with his gospel. Both sides had a sense of the unity of the church; but Paul is never given one-sided directives in Acts or treated as an inferior.

b) The "decree" in Acts seems to contradict Paul's claim that the Jerusalem leaders "added nothing" to his message and practice. If the decree was a later action of the Jerusalem leaders, Paul's statement clearly holds true. But as Acts stands, the "decree" is not impossible. By it Gentiles were excused from circumcision and from the great mass of Levitical ceremonial regulations; keeping the law was not necessary to salvation. If Paul accepted the decree, not as giving items essential to salvation, but as facilitating mutual friendship and social fellowship between Jewish and Gentile Christians, he won as great a victory as church history can show, with a minimum of pacifying concession to the opposing side. (The Western text of the decree, which omits "strangled things" and sometimes adds the Golden Rule, leaves a moral code, opposing idolatry, murder, and immorality. This is a later moralizing of an earlier concern for ceremonial rules.) Paul would oppose idolatry and fornication in any case; respect for Jewish aversion to meat containing blood and taken from strangled animals is as intelligible as not serving pork at a modern conference of Jews and Christians. If Paul did accept the decree, however, he later saw it used to support the binding character of the Mosaic ceremonial law for all Christians, and refused to continue his support of the decree. This could explain why he makes no reference to it in I Cor. 8–10.

Uncertainty over details should not obscure the broad-minded courage of the Jerusalem leaders in supporting Paul, and the magnitude of the victory which Paul won in this council.

F. V. Filson

COUNSELOR [יועץ; *alternately* עצתו (Ps. 119:24; Isa. 40:13); דתבר (Dan. 3:2-3); הדבר (Dan. 3:24, 27; 4:36; 6:7); σύμβουλος (Rom. 11:34); παράκλητος (John 14:16, 26; 15:26; 16:7)]. One who counsels or advises.

Counselors seem to have been customary court officials of the Israelite kings (II Chr. 25:16; Isa. 1:26; 3:3; *see also* Government § C2*a*). In fact, it may be that the counselor was next in power to the ruler himself (Mic. 4:9; cf. Job 3:14; 12:17; *but see* Chancellor; Cupbearer). David's counselor Ahithophel had an outstanding reputation (II Sam. 16:23). After his defection and suicide he was succeeded by Jehoiada and Abiathar (I Chr. 27:34). Zechariah son of Shelemiah, and Jonathan, a relative of David, are also named as counselors of this period (I Chr. 26:14; 27:32). The schism between Israel and Judah is attributed to Rehoboam's heeding the wrong counselors (I Kings 12:6-14). Counselors are mentioned as serving the rulers of surrounding nations: the pharaoh of Egypt (Isa. 19:11), Nebuchadnezzar in Babylon (Dan. 3:2, etc.), and the Persian Artaxerxes, whose seven counselors (Ezra 7:14) no doubt correspond to the "seven princes of Persia and Media" consulted by Ahasuerus (Esth. 1:14).

In a general sense, parents (Prov. 1:8, etc.), elders (Ezek. 7:26), prophets (II Chr. 25:16; Jer. 38:15), and wise men (Jer. 18:18; 49:7; *see also* Wisdom) characteristically act as counselors. A prudent person consults an abundance of counselors before taking an important step (Prov. 11:14; 15:22; 20:18; 24:6), whereas the fool ignores counsel (Prov. 1:25, 30). Job recalls that in his happier days he was the sort of upright and substantial citizen whose counsel was respected (Job 29:21). On the other hand, some are misled by evil counselors (II Chr. 22:3; Ps. 1:1; Prov. 12:5; Nah. 1:11).

God himself is a counselor (Pss. 16:7; 32:8; 33:11;

73:24), and no one can counsel him (Isa. 40:13; Rom. 11:34). His law and his testimony are the people's counselor (Ps. 119:24). His Messiah is an ideal king, who can bring to pass the wondrous deeds he counsels (Isa. 9:6; 11:2). He is not an advice-giver, but his power is the strength of the community. So also the Holy Spirit is the Counselor (John 14:16, etc.; *see* PARACLETE). C. U. WOLF

*COURAGE. Across the races and generations of men courage has been a widely celebrated virtue. The Greeks had a word for it (ἀνδρεία), and they ranked it among the four cardinal virtues. The Bible has its roll call of heroes who were courageous in battle and in martyrdom. But courage in the Bible does not usually stand as an independent virtue; it is generally found in a religious context, it is inspired by God, and it is exhibited in the service of God. The words "courage" and "courageous" were used infrequently in the KJV (fourteen times), but there are some fifty occurrences in the RSV. *See also* BOLDNESS.

1. Terminology of courage in the Bible. The spirit of courage and bravery pervades the Bible and should be recognized far beyond the actual vocabulary. The action of inspired men and groups of men assumes that strength of mind and determination which are the essence of courage.

a. In biblical Hebrew. Strength and courage are intimately related in OT usage, as in the expression so often used: "Be strong and of good courage." חזק means "to bind fast, to make firm," and so it is used in the sense "to show oneself strong, courageous" (II Sam. 10:12). So also אמץ means "to be alert, to strengthen," and so "to be of good courage." Deut. 31:7 combines both terms: חזק ואמץ, "Be strong and of good courage." By common transference the seat of feeling and emotion was used to connote the feeling or emotion; so "the heart," לבב, comes to stand for courage (Dan. 11:25; I Sam. 17:32). The word "spirit," רוח, is used in a similar sense in Josh. 2:11.

The expression "mighty men of valor" is used frequently in the battle chapters of the OT. Once again, the term used, גבור, has as its first meaning "strong, mighty, valiant," and it becomes the common term for a warrior or war chief (Josh. 1:14; II Kings 5:1).

b. In LXX Greek. The usual Greek words, ἀνδρεία (noun), ἀνδρειος (adjective), ἀνδρίζομαι (verb), carry an original force of the masculine quality of aggressive courage, but this significance is so far lost that in Prov. 12:4 we read: "A good [ἀνδρεία, "courageous"] wife is the crown of her husband," and in Prov. 31:10: "A good [ἀνδρειαν, KJV "virtuous"] wife who can find?"

The Wisdom of Solomon lists courage (ἀνδρεία) among the four cardinal virtues. The adverb, ἀνδρείως, is used in the incident of Eleazar (II Macc. 6:27).

The verb, ἀνδρίζομαι, is often coupled with words for strength, as in Josh. 10:25: "Play the man and be strong" (ἀνδρίζεσθε καὶ ἰσχύετε; cf. II Kings 10:12). Mattathias on his deathbed challenges his sons: "Be courageous and grow strong in the law" (I Macc. 2:64 orig. tr.: ἀνδρίζεσθε καὶ ἰσχύσατε ἐν τῷ νόμῳ).

The noun, θάρσος, and the verb, θαρσέω (Attic θαρρέω), convey the sense of confidence, fearlessness, courage of spirit. Most often the imperative of the verb is employed to rally men: "Take heart, be of good courage" (orig. tr.).

c. In NT Greek. As noted *above,* the usual word for "courage," ἀνδρεία, is not found in the NT, but the verb, ἀνδρίζομαι, appears in I Cor. 16:13: "Be watchful, stand firm in your faith, be courageous [KJV "quit you like men"], be strong."

The noun, θάρσος, "confidence, courage," is found only in Acts 28:15, but the verb, θαρρέω, is used of the stout heart (II Cor. 5:6, 8), confidence in men (II Cor. 7:16), and boldness in human relations (II Cor. 10:1-2). The verb, θαρσέω, in the imperative is placed on the lips of Jesus: "Be of good courage" (θάρσει, θαρσεῖτε: Matt. 9:2; 14:27; John 16:33).

The sense of courage in free utterance is conveyed by παρρησία, παρρησιάζομαι, but these words are also used for confident assurance in the religious context.

A more reckless spirit of daring is suggested by the word τολμάω (Mark 12:34; Rom. 5:7).

2. Courage in the OT. Implicit in the action and movement of the patriarchs is a strong, even an adventurous, spirit, as when Terah left Ur of the Chaldees. But the accounts leave it to God to supply the initiative and provide the way. Similarly it is God who leads the Israelites out of Egypt, and their safety rests, not in their own military prowess, but in the pillar of cloud and the pillar of fire. When Israel goes in to possess the land, the Lord gives their enemies into their hand, and their confidence rests in God: "One man of you puts to flight a thousand, since it is the LORD your God who fights for you" (Josh. 23:10; cf. I Sam. 14:6).

There are cases of individual courage, but even David's victory over Goliath is credited to God (I Sam. 17:37). The strength of Israel's armies rests in the "mighty men of valor." No one would doubt the courage of the prophets in proclaiming God's message. In the OT in general, the loss of courage and faintness of heart come from sin and evil (Ps. 107:26; Jer. 4:9), but God supplies the stout heart and the courageous spirit (Pss. 27:14; 31:24).

3. Courage in the Apoc. and the Pseudep. The success of the Maccabean struggle is due, among other things, to the strong courage of leaders and men in the cause of the nation. From his deathbed Mattathias commits the struggle to his sons: "Be courageous and grow strong in the law" (I Macc. 2:64). Judas calls for courage in the face of impossible odds: "If our time has come, let us die bravely [ἐν ἀνδρείᾳ] for our brethren" (I Macc. 9:10). Eleazar is broken on the wheel, giving a courageous example of patient endurance (II Macc. 6:27).

Courage sometimes shows up as a more individual virtue, but it is still called forth in the cause of religion (the law and the nation). In the Wisdom of Solomon the Greek spirit is apparent, and courage

stands on its own feet as one of the cardinal virtues (8:7), a gift of God's WISDOM. In the Letter of Aristeas the question is asked: "What is the true aim of courage [ἀνδρεία]?" The answer follows: "To execute in the hour of danger, in accordance with one's plans, resolutions that have been rightly formed."

4. Courage in the NT. The Greek word for "courage" (ἀνδρεία) does not occur in the NT, and the verb, ἀνδρίζομαι, appears once (I Cor. 16:13). But the NT breathes the spirit of courage in its fullest strength—no longer the fighting spirit of the warrior in the emergency, but now the strong moral temper that rises above unpopularity, abuse, and hostility to take its stand on the unseen, spiritual realities. This spirit is shown in steadfast endurance (ὑπομονή), boldness of speech (παρρησία), undaunted faith (πίστις). Jesus' own example of courage in his ministry and passion is the inspiration of his followers (Heb. 12:2). Peter and John bravely face their accusers. Stephen goes to his death with words of forgiveness on his lips. Paul carries the gospel confidently to the great metropolitan centers; presents his gospel to the Areopagus; stands bravely before his judges. Heb. 11 is a tribute to faith and courage. The martyrs of the church demonstrate a brave endurance unto death (Rev. 7:14; 14:1).

COURIER [רץ] (II Chr. 30:6, 10; Esth. 3:13); KJV POST. A royal MESSENGER who traveled overland and by sea. Ancient Persians and Romans, as well as other civilized peoples, had well-organized carrier service to take swiftly messages from the king or emperor to all parts of the land. C. U. WOLF

COURT OF BUILDING [חצר, enclosure, court]. An area enclosed by walls before a building, but without roof. *See* TEMPLE, JERUSALEM.

COURT OF LAW. Legal proceedings in the Bible are marked by considerable development throughout the centuries. During the period of the patriarchs, legal questions were decided between families and tribes (Gen. 31:37; 34:4-24), on the basis of legal precedents and tribal traditions. With the organization of the tribal system under Joshua (or perhaps under Moses), more difficult cases were settled "before God"—i.e., at the central sanctuary of the tribes (Exod. 21:6; 22:8—H 22:7; *see* LAW [IN THE OT]). The earliest court of law attested in the OT is the palm tree of Deborah, to which all Israel is reported to have come for judgment (Judg. 4:5). Generally, the city gate served as the place of judgment for local cases (Amos 5:10; Ruth 4:1).

With the establishment of the kingship, the king assumed the function formerly exercised by the judges (שפטים; *see* JUDGE) of Israel at the central sanctuary or in their circuits throughout the land (I Sam. 7:16-17). The king served as a kind of supreme court, settling the more difficult cases or those in which one of the parties sought appeal to higher authority (I Kings 3:16-28; II Sam. 15:2-6). The city gate continued to be the gathering place for judgment. The king, or his representative (II Sam. 15:3), heard the case, including the testimony of witnesses, and rendered judgment.

In the case of acts of apostasy, the elders and leading citizens of the city placed the accused "on high" before all the people and heard the testimony of his accusers. If the accused were found guilty, all the people executed the punishment of death (I Kings 21:9-13).

The OT has no specific term for "court of law." The nearest equivalent is provided by the term שער, the "gate of the city" (cf. תרע, the gate or courtyard of the king [Dan. 2:49]). In later Hebrew and Aramaic usage the expression בית דין, "house of judgment," sometimes refers to the judgment seat, the court of judgment (cf. Dan. 7:10, 26 [דינא]). Where the term "court" is found in the English versions, the translation is generally not a literal one. Deut. 25:1 reads literally: "They draw near for judgment"; Prov. 25:8 would be translated literally: "Do not go forth quickly for contention." The same is true of NT passages in which "court" appears (Matt. 5:25: "on the way"; Acts 13:1: "an intimate friend of Herod"; etc.). Only in I Cor. 4:3 (ἡμέρα) and Acts 19:38 (ἀγοραῖοι) do we have precise terms for courts of law.

W. J. HARRELSON

COURT OF THE GUARD. *See* GUARD, COURT OF THE.

COUSIN. There is no word for "cousin" in the Bible. The OT has such expressions as "son of your uncle" or "son of your father's brother." The cousin has certain obligations and rights pertaining to economic transactions and especially to marriage. Hanamel the cousin of Jeremiah requested him to exercise his right to purchase a parcel of land at Anathoth. So he bought the field from his cousin (Jer. 32:7-9, 12). The marriage of cousins was common, particularly of first cousins (Gen. 24:15; 28:2; 29:10, 19; 36:3). We may observe in this practice the effect of both exogamous and endogamous forces. The daughters of Zelophehad married the sons of their father's brothers in order to keep the inheritance in the tribe of their father (Num. 36:11). The daughters of Eleazar, who had no sons, married their kinsmen (cousins), the sons of Kish (I Chr. 23:21-22). Significantly, the laws governing incest, although listing women to whom a man is closely related, omit the category of cousin (Lev. 18:6-18).

The KJV translates συγγενίς as "cousin" when used of Mary's relation to Elizabeth (Luke 1:36), but the Greek term requires the translation "kinswoman" (so RSV). The συγγενίς of Luke 1:36 is held to be a peculiar form of the word that is more generally used, συγγενής, variously translated "kin," "kinsfolk," "kinsmen" (cf. Mark 6:4; Luke 1:58; 2:44; 14:12).

COUTHA. KJV form of CUTHA.

*COVENANT. A solemn promise made binding by an oath, which may be either a verbal formula or a symbolic action. Such an action or formula is recognized by both parties as the formal act which binds the actor to fulfil his promise. Covenants may be between parties of different socio-political groups, in which case the covenant creates a relationship between them regulated by the terms of the covenant; or a covenant may take place within a legal community, in which case obligations are assumed which the law does not provide for—i.e., it makes new obligations binding.

Since the covenant usually had sanctions of a religious nature (an appeal to the gods to punish any breach of covenant), it was closely connected with religion. It also had close connections with law, since the obligations assumed by covenant tended to become legal obligations enforced by political means, and there is some reason to believe that, in late times at least, the covenant was simply a form of legislation.

A. *COVENANTS IN THE ANCIENT WORLD.* In the long time span covered by ancient history there is a great variety of forms and situations in which covenants appear, and much is yet to be learned of the history of covenants. It may be an exaggeration to speak of every relationship other than kinship as a covenant relationship, but it is nevertheless true that covenants were an exceedingly important means for the regulation of behavior, so that some measure of trust and predictability could be introduced into social and political life. The oath (verbal or symbolic) seems to have been the constitutive element which made covenants binding, though it is possible that other formal actions, such as a common meal, did not involve an appeal to the divine world to punish violation of the promise. Not every oath, however, was a covenant, for not all oaths in ancient law involved promises concerning future action. Ancient terminology clearly designated covenants as "oaths and stipulations" in international relationships, and this gives a working definition of ancient covenants. *See* OATH.

The covenants which are of greatest importance for OT history are those which regulate relationships between two distinct social or political units, international treaties. Evidence for the existence of such treaties goes back to the mid-third millennium B.C. in Sumerian sources, and to Old Akkadian texts two centuries later. Though too fragmentary for a satisfactory juristic analysis, they nevertheless prove that there were already at that time well-formed patterns for the regulation of international affairs, usually associated with the subjection of the party which was defeated in war. Though the Mari archives (*ca.* 1700 B.C.) contain very frequent references to covenants, they do not describe the content and procedure in sufficient detail to be entirely satisfactory. By far the most useful and extensive body of material comes from the Hittite Empire of the Late Bronze Age (*ca.* 1400-1200 B.C.), which had far-flung relations from Mesopotamia to Egypt, as well as suzerainty over various city-states of N Syria.

The Hittite suzerainty treaties have been preserved in abundance, and can be taken as an illustration of a highly developed form known throughout the ancient Near East. These covenants were the formal basis of the Empire; it was on them that depended the relationship between the Hittite state and the vassals which owed it allegiance. They placed the vassal state under the protection of the Hittites, and at the same time placed the military resources of the vassal state at the disposal of the suzerain. There can be little doubt that the military alliance so formed was a primary intent of the treaties, but in addition, they were a means of preserving the peace within the Empire by regulating in advance the obligations of the vassal. Since it was the suzerain who stipulated the obligations of the vassal, the latter was, in effect, protected from arbitrary action on the part of the vastly more powerful overlord. The form of these treaties has been carefully analyzed, and the following characteristic elements of a treaty in this period may be isolated.

a) The preamble. The treaty text frequently opens with the statement: "These are the words of . . . ," followed by the identification of the king who gives the treaty, his titles, appellatives, and genealogy. The treaty is thus a message from the suzerain to the vassal.

b) The historical prologue. This consists of a description of the previous relationships between the two parties, frequently in the "I-Thou" form of address, emphasizing particularly the acts of benevolence which the suzerain has performed for the good of the vassal. Often it is actually the Hittite power which placed the vassal on his throne. These preceding acts of the suzerain are evidently regarded as the foundation of the vassal's obligation, and therefore the historical prologue seems to be carefully composed; these prologues are actually most important sources for the history of the Hittite Empire.

c) The stipulations. This section contains the obligations to which the vassal binds himself in accepting the covenant, defined by the suzerain. The content varies widely, but military obligations are, as expected, treated in detail. First, the vassal must not enter into alliances with other independent kings, and he must be a friend to the suzerain's friends and an enemy to his enemies. The vassal must answer any summons for military forces, and

engage wholeheartedly in any military campaign commanded by the suzerain. Second, regulations for the treatment of refugees are so frequent that it is necessary to conclude that this was an important issue during this period. Third, war booty is often regulated in advance; this also was evidently a fertile source of discord. In addition to these most common stipulations, many other types of actions are prescribed or prohibited. Most interesting is the frequent prohibition of "murmuring," the utterance of "unfriendly words," against the suzerain, and the obligation to report such words uttered by others. With this is often combined an exhortation to trust the suzerain, even in spite of appearances to the contrary. Finally, a stipulated tribute is imposed.

d) The deposit and public reading. Typically there is a provision for the deposit of the treaty document in the sanctuary of the vassal, and a requirement that it be read in public at stipulated intervals, from one to four times a year.

e) The list of witnesses. Ancient legal documents normally ended with a list of witnesses, and the international treaties are no exception. Here however, the gods of both states are named—in fact, some of the lists seem to attempt exhaustiveness in making all known gods of the cultural area witnesses to the covenant. In addition, however, important features of the natural world are included, such as mountains, rivers, springs, the great sea, heaven and earth, winds and clouds. It seems reasonably certain that the gods as witnesses were expected to punish breach of contract, and thus religious awe was appealed to as a ground for future obedience. Though the Hittite king certainly did act against a rebellious vassal with military force, the treaties mention only religious sanctions.

f) The blessings and curses. This consists of a list of goods and calamities which the divine witnesses were called upon to bring upon the vassal for obedience and disobedience respectively. The curses usually precede, and consist of the misfortunes usually attributed to the wrath of the gods in antiquity: destruction, sterility, misery, poverty, plague, famine. The blessings, conversely, are divine protection, continuity of the vassal's line, health, prosperity, and peace.

The foregoing analysis of the treaty form is schematic, more so perhaps than the treaties themselves, but is useful as a description of that which was evidently felt to be important in a valid treaty. This written document is, however, not all that is involved in a covenant. The text of the treaty frequently refers to the oath of the vassal, but the description of the words or forms by which the oath was sworn seems to be completely lacking and unknown. It is conceivable, but unlikely, that the mere existence of a written document was sufficient to put the covenant into effect. The description of the "soldiers' oath" in Hittite texts points to the probability of some formal ceremony for the ratification of the covenants as well.

So far as the validity of the covenant is concerned, it seems clear that the oath was binding only upon the one who swore, and therefore the death of the vassal and accession of his heir required the drawing up of a new covenant. The same was true evidently in the case of the death of the suzerain. It is true, of course, that the terms of a previous treaty were generally respected by a new king of a vassal state, but it is difficult to say whether or not changes of ruler tended to result in rebellion because the old covenant was no longer regarded as valid. There seems to be no evidence of any concept of a covenant binding in perpetuity.

The normal form of covenants was thus a treaty in which only the vassal is bound by oath. Parity treaties existed at this time, but are best regarded as the same form in which both parties are bound to identical obligations.

In comparison with the material from the Hittite Empire, relatively little is known of covenants from the Assyro-Babylonian periods. Enough treaties have been recovered to indicate that considerable change had taken place in the intervening dark ages. In contrast to the Hittite covenants which gave in the historical prologue the grounds upon which the vassal should willingly give up his freedom to become an ally of the Hittite king, so far nothing analogous has been found in these later treaties, but the fragmentary state of the later treaties warns against much confidence in this argument. So far it would be rather difficult to describe any consistent pattern to which all these later treaties conform, and there are very numerous differences (as well as similarities) between the two groups.

It is not only empires which produced treaties in the ancient world. Perhaps equally important were covenant alliances for the purpose of obtaining a concerted action against empires. There is unfortunately very little direct evidence of the form and content of such alliances, but a respectable body of material to prove that they existed. Already in the Mari period, there were several kings each of whom had ten to fifteen kings in his following, but in addition there were smaller social, tribal, or political groups which joined forces to resist their more powerful neighbors. The Egyptian kings of the New Empire had to fight coalitions of Syro-Palestinian kings, and one of the Amarna Letters (Knudtzon, No. 74) quotes what purports to be the message of an alleged rebel to other dissident groups, exhorting them to gather in a temple (or city containing a temple) to form a defensive coalition by covenant, so that they might drive out the (Egyptian) regents and establish peace in perpetuity. In the Iron Age as well, such coalitions were standard forms of organizing resistance to the Assyrian Empire, the most famous being that which fought Shalmaneser III at Qarqar in 853 B.C. We have no direct evidence that this or other coalitions condemned by the Hebrew prophets were bound together by a covenant, but it is difficult to see any other basis for them.

B. *COVENANT TERMINOLOGY IN THE BIBLE.* 1. In the OT. The most frequent word for "covenant" (286 occurrences) is ברית, but there are numerous references to covenants and covenant relationships where this term does not occur. The etymology of the term is uncertain. Most generally accepted is the derivation from Akkadian *birîtu,* "fetter," or a cognate root. The word is used as a direct object of a number of verbs to designate the establishment or breach of covenant. The phrase

כרת ברית ל (lit., "cut a covenant with [or for]") is by far the most frequent. Though the origin of this phrase has been the object of much speculation, it seems most likely that the original meaning was lost in antiquity before the time of Moses, and had simply become a technical term. Other verbs include הקים, "establish"; בוא ב, "enter a covenant"; and נתן, צוה, העבר, and שים: "give," "command," "cause to enter," "issue," respectively.

In view of the fact that the term for "covenant" is quite rare in the earliest sections of the OT, the tradition of the covenant with Yahweh must have been designated by other words than ברית. It seems quite likely that the oldest designation of the Decalogue as the עשרת דברים, "the ten words," rests on this early tradition, since covenants were regarded and called the "words" of the suzerain. The theological usage of the "word" of God may therefore be very closely bound up in its very origin with the covenant, though, of course, much expanded in scope with the passage of time.

In addition, the term עדות, "testimony" (in the usual Bible translations), almost certainly was an alternate designation for the covenant (Exod. 31:18), since the cognate Akkadian and Aramaic words were in common usage as terms for "covenant." The original meaning of this word would consequently have been "obligations sworn to" by the religious community.

Occasionally, the word אלה, "oath," may for all practical purposes be a synonym of "covenant," for it was the act which formally constituted a binding contract. It is difficult to say whether in Gen. 26:28 there is any real distinction between the oath and the covenant. "Oath" (שבועה) is occasionally used in similar fashion (Gen. 26:3; Josh. 9:20; II Chr. 15:15; Neh. 6:18).

2. In the LXX. In the vast majority of occurrences of ברית (270 out of 286), the LXX renders it with διαθήκη, which in Greek ordinarily (and very frequently) meant "last will and testament" (*see* TESTAMENT). One passage in Aristophanes (*Birds* 440 ff) shows, however, that the Greek language could use the word in other contexts. Here Peisthetairos demands that the birds enter into an oath to do him no harm, and that the covenant be written upon tablets before he will lay down his arms.

The same Greek word is used also to translate Hebrew אחוה, "brotherhood"; דבר, "word"; חוק, "statute"; and תורה, "law." Very rarely is the usual Greek word for "contract" used, but never (except in Aq.) as a translation of ברית (cf. Isa. 28:15; 30:1).

3. In the NT. The only word which has demonstrable connections with covenant concepts is the same one, διαθήκη, so frequently used by the LXX. It is entirely possible that μαρτυρεῖν, "to witness," may have grown out of covenant patterns, since it is known that elsewhere "witnesses" to a covenant were essential, and even more important after the oath as the binding element fell out of use. This, however, needs further investigation.

C. *OT COVENANT TRADITIONS.* In antiquity, covenants were a most frequent basis for human relationships which were not kinship ties. It is not surprising, therefore, that covenants are of great importance in OT history and religion. The classification here followed is based on an analysis of their content, so far as it is possible to draw conclusions from the narratives which describe them. It is not possible to classify them merely by appealing to the terminology (ברית כרת, עם, את, or ל) used in the narrative to indicate that a covenant was made.

1. Secular covenants. This term designates those covenants to which Yahweh is not one of the parties involved, even though all covenants were normally sworn by appeal to deity as witness. Such covenants may be conveniently grouped into four classes as follows:

a. Suzerainty. In suzerainty covenants a superior binds an inferior to obligations defined by the superior. Typical illustrations are I Sam. 11:1, in which Jabesh-gilead offers to "serve" Nahash in a covenant relationship. In this case, as elsewhere, some prior inducement is necessary before the one in superior power is willing to give up his freedom of action in a covenant relationship. Ezek. 17:13 refers to a standard type of suzerainty treaty between Babylon and Zedekiah. Probably Hos. 12:1—H 12:2 (the "bargain with Assyria") belongs here, though the terminology used does not point in this direction. The question of Yahweh to Job (Job 41:4—H 40:28) ironically inquires whether Leviathan will bind himself to serve Job as a vassal. Similarly, Job 5:23 implies such a relationship to the stones and beasts of the fields. Though suzerainty treaties bound only the one inferior in power, the superior nevertheless gave up some degree of freedom of action. His relationship to the vassal was not based on force alone, once a covenant had been established; he had stipulated what he required of the vassal, and further arbitrary exercise of his superior power was not expected of him.

b. Parity. In parity covenants both parties are bound by oath. These may be further subdivided, as it was done by Thucydides long ago, into two classes: those in which specific obligations are imposed, and those which impose no obligation but to preserve the peace between the two parties. The treaty between Jacob and Laban (Gen. 31:44-50) is most likely of the latter type, though somewhat more complex, since Jacob can be guilty of a breach of the peace by ill-treatment of Laban's daughters. The covenant of Abraham with Abimelech (21:25-32) seems to be a peace covenant. The parallel account of Isaac's covenant with Abimelech (26:27-31) seems certainly to be of this type, since no further obligations are stated. On the other hand, the description in Gen. 14:13 ff implies military obligations of Abraham's allies, but it is not possible to say definitely that this is a parity covenant. The covenant with the Gibeonites (Josh. 9:3-27) is certainly a parity peace treaty, which was subsequently changed by the consent of the Gibeonites to a suzerainty treaty, since the oath of the Israelites was obtained by misrepresentation. The frequent warnings against treaties with the Canaanites (Exod. 23:32; 34:12; Deut. 7:2; Judg. 2:2) presumably refer to both kinds of treaties, parity peace treaties, alliances, as well as suzerainty treaties. Any relationship regulated by covenant would ordinarily have been sworn to by Canaanite deities as well as by Yahweh; such recognition of Canaanite gods, many

of whom must have had considerable local prestige, would have opened the way (as subsequently was the case) to reception of their cult and religious values by Israelite towns and villages.

It is difficult to interpret the covenant between David and Jonathan (I Sam. 18:3), since no stipulations and no oaths are mentioned in detail. No conclusions at all can be drawn from the mere fact of difference in social status between the two, nor from the fact that Jonathan is said to have made a covenant with David (this may indicate simply that the initiative appropriately came from Jonathan). Presumably this was simply an oath of undying friendship and loyalty, the establishment of a permanent relationship with no stipulated obligations. It is hard to imagine that only one party was bound by this covenant, and therefore this would seem to be a parity covenant, in which the difference in social status became irrelevant.

It is likewise impossible to analyze satisfactorily the narratives concerning the covenant(s) by which David became king. We are not told whether it was David or the elders of Israel (or both) who swore the oath (II Sam. 5:3). Since the kingship meant the conferring of sovereignty, it seems most probable that the elders must have sworn allegiance to the king "before the Lord," but there is no hint that David was bound by oath to any specific obligations.

The same difficulties are inherent in the narrative about David's covenant with Abner (II Sam. 3:12). David's statement of the conditions under which he would enter a covenant with Abner, as well as Abner's promise to "bring over all Israel," seem to imply obligation only on the part of Abner, but this may well have been a two-sided bargain in which David was bound to some promise as well.

At least from Solomon on, the kings had little hesitation in entering into treaties with foreign lands (I Kings 5:12). Asa bribed Ben-hadad to break a treaty with Baasha in order to form an alliance with Judah like that which had existed in the preceding generation (15:19). There is no indication that this was a suzerainty treaty which subjected Judah to Damascus. In I Kings 20:34, Ben-hadad offered concessions of territory and commercial rights as inducement to Ahab's entering into a treaty with him, but the specific terms are not given.

The prophetic indictments of foreign alliances indicate how frequent and commonly accepted such policies were in the later monarchy. It can be assumed that the foundation of such alliances was a covenant, but in the absence of further details, no further discussion is necessary here.

c. Patron. This is a type in which the party in superior position binds himself to some obligation for the benefit of an inferior. Surprisingly little evidence exists for this type other than the covenant traditions which bound Yahweh (*see* § C2 *below*). The curious and difficult passage of Isa. 28:15 (the covenant with death) seems to fall into this category, for only "death" seems to be bound not to touch those in the covenant; one suspects that this is a prophetic satire of some sort, ridiculing religious covenant concepts derived from the Abraham-David tradition.

d. Promissory. This type, which is extremely important in secular as well as religious tradition, shows a considerable change from older patterns of behavior and thought, and may well have derived from age-old legal practices. A promissory oath is not primarily intended to establish a new relationship between two parties, but simply guarantees future performance of stipulated obligations. There is thus really one party to this type of covenant, which differs from a vow only in that the vow conditions future stipulated action upon action of deity, whereas the type here termed "promissory oath" is unconditioned. The narrative of II Kings 11:4-12, 17, involves several covenants; first, the "conspiracy" of Jehoiada bound the military leaders to a course of action which would re-establish the Davidic dynasty upon the throne. When this was successfully accomplished, the tokens of kingship (including the עדות, which may have had something to do with the older religious covenant; it is included here simply as one of several acts which established Joash as legitimate king) were given to the king's son. Next, Jehoiada acted as intermediary in establishing a covenant between Yahweh, king, and people, the only stipulation of which is that they "should be the Lord's people." Finally, a covenant between king and people is mentioned with no further detail. The complexity of this procedure is a good indication of the deep crisis which had preceded in the reign of Athaliah. It is an open question whether this covenant established a new relation between the Judeans and Yahweh. Certainly the main import of the covenant was to establish Yahwism as the religion of the state, but the older pattern in which Yahweh was regarded as the initiator, speaking in the first person, cannot be either affirmed or denied from this narrative.

Promissory oaths are more frequent in later narratives. Jer. 34:8 gives an excellent example, in which slaveowners covenant to free their slaves in time of siege—an oath conveniently forgotten when the siege was later, temporarily, lifted. In very similar fashion, Josiah made a covenant, joined in by the people, to obey the commands found in the Book of the Law found in the temple (II Kings 23:3); and in the same way the postexilic community bound itself by a curse and an oath to obey the laws of the Pentateuch (Neh. 10:28-29), to put away foreign wives (Ezra 10:3), and to refrain from foreclosing on real property taken as security for loans, and from taking interest on loans (Neh. 5:11-13). These are all essentially one-party covenants. No new relationship between parties is created by them; they are essentially legislation established by contract between political authority and people, the content of which is derived from religious tradition and regarded as religious obligation, the purpose being to avoid future calamities (Neh. 9:38).

2. Covenants in which God is bound. The classical and probably original covenant of this type is the Abrahamic covenant preserved in two forms coming from J (Gen. 15) and P (17:1-14). In the earlier version, Yahweh's covenant is specifically stated to be in response to Abraham's request for certainty of the promise which Yahweh had made. This covenant tradition is of considerable historical importance if, as is here proposed, it became the model for later covenant traditions (Davidic and Noachite). This covenant is attributed by J to pre-

Mosaic times, and is to be accepted as such for the following reasons:

a) The narrative of the means by which the covenant is formally established gives every indication of being a very archaic form. The cutting of sacrificial animals into two parts, followed by the promisor's passing between the parts, is paralleled only by Jer. 34 (much later than J, and probably a deliberate archaism there), and a possible parallel in Herodotus coming from Asia Minor. The "smoking fire pot and flaming torch" certainly are a symbolic (and unique) representation of the deity who thus binds himself. It still seems most likely that the passing between the parts is a symbolic identification of the promisor with the animal which was slaughtered —a graphic way of proclaiming the fate of the promisor if he violates the covenant.

b) It is known from extrabiblical sources that covenants between the head of a family and a particular deity were customary in pre-Mosaic times.

c) It is difficult, if not impossible, to account for the invention of this narrative in post-Mosaic times, or for the peculiar type of covenant involved, for which we have no really good parallel except in those covenant traditions which are here held to be dependent upon the Abrahamic tradition. It may be freely granted that the narrative of Gen. 15 has been colored somewhat by post-Mosaic Israelite tradition, but it can hardly be denied now that some kind of tradition of a covenant between a deity and the patriarchs was an important element in the pre-Mosaic heritage of ancient Israel. The important fact of this covenant in both versions, J and P, is that no obligations are sworn to by Abraham by oath or other formal act, and other later traditions are equally insistent that it is Yahweh who swore the oath to create of Abraham a nation and give to his seed the land. The connection of the covenant with circumcision in P is by no means to be taken as an obligation made binding by the covenant. Rather, it is the "sign" of the covenant, a guarantee through time of the validity of Yahweh's oath, and no more an obligation than it was Noah's obligation to put a rainbow in the sky as a sign of Yahweh's covenant with him. It tied deity and people together by serving simultaneously as a guarantee and as an identifying marker of those in later generations who should become the beneficiaries of Yahweh's promise. The connection of covenant with a "sign" in such fashion seems to be very late in OT history.

Of subsequent covenants in which Yahweh bound himself, the Davidic covenant is by far the most important. This is attested in several sources, from the "last words" of David (II Sam. 23:5) to the words of Abner (3:9) in a somewhat different context, and in various psalms (Pss. 89:3, 28-29; 110:4). In every form of this tradition it is Yahweh alone who is bound to a promise, and it is impossible to make out of this a bilateral covenant by appealing to the traditions (mostly, if not entirely, Deuteronomic) which emphasize the king's obligation to obey the Mosaic law, for there is never any reference to a king's oath until possibly Josiah. It is true that we have no narrative which states how this oath of Yahweh was formally established, that the Davidic dynasty should remain on the throne in perpetuity; and it is completely unclear how this covenant was promulgated so that it became evidently unquestioned religious conviction on the part of Judah (in sharp contrast to the situation in the N tribes). There can be little doubt that the effect of this covenant tradition, and probably the intention behind it, was to establish a stable state and dynasty to obviate the danger of constant revolution and struggle for power at the death of each king. It is generally accepted that this covenant was promulgated through a "court prophet"; II Sam. 7 (the oracle of Nathan) says nothing about an oath or other symbolic action, and is usually regarded by scholars as a late addition to the narrative of David. The similarity to the covenant with Abraham is formally most impressive, and it seems most likely that the two traditions have influenced each other, so that the promise to Abraham of the land is described in terms reflecting the Davidic empire (Gen. 15:18), as the kingship of the Davidic dynasty is described in terms of the Abrahamic tradition (Ps. 110:4), where, curiously enough, it is Melchizedek (to whom Abraham paid tribute) who is the predecessor of the Davidides (who collected taxes from the descendants of Abraham). In David, the promise to the patriarchs is fulfilled, and renewed.

Finally, in Num. 25:10-13, the same type of covenant is applied to the priestly line of Phinehas, in a passage which seems to be very late in its present form. It shows a complete reversal of the Mosaic covenant tradition, in that Yahweh binds himself in response to something done for his benefit by Phinehas. It establishes a legitimate priestly line, just as the Davidic covenant established the royal line. *See also* ELECTION.

The covenant with Noah is the third of this type, and certainly inspired by the Abraham-David covenant tradition. Again, only Yahweh is bound in a covenant in perpetuity, exactly as in P's account in Gen. 17; Num. 25:12, the benefits of which extend to the lineal descendants, and are guaranteed by a sign (cf. Num. 17:10).

3. Covenants in which Israel is bound. In contrast to the Abraham-David-Phinehas-Noah covenant traditions, there is another persistent complex of narratives which is almost directly opposite, and which is in origin almost completely unrelated to them. There can be little doubt that this covenant pattern derives ultimately from Moses and is to be identified with the original, short form of the Decalogue.

a. The Mosaic covenant. The OT criticism stemming from Wellhausen maintained that the relation between Yahweh and Israel was a "natural" one; it was a "tribal" religion in which Yahweh was little more than a symbol of the tribe, whose interests were identical to those of the deity, and consequently there could be no conditions attached to this relationship. According to this view, the prophets from Amos on were the first to maintain that the relationship had conditions of an ethical nature attached, and eventually the relationship was conceived of as a covenant in late pre-exilic times. Thus the covenant, from this point of view, was simply a theological idea, a concept for conveying religious truth.

It now seems much more likely that the covenant tradition stemmed rather from events in the time of Moses—the formation of a religious community by covenant, which took place by utilizing forms of action and organization as well as thought, which were widespread in the Late Bronze Age. Thus the covenant is not merely a theological concept, but is rather the original form of social and religious organization which tied together religious experience and conviction, the religious awe and gratitude of the Hebrews of Moses' time with religious obligations which preserved the peace (*see* PEACE IN THE OT) within the group. Thus the covenant, though a religious rather than a political structure, was no more a mere theological concept than politics is a purely philosophical concept today. It seems probable, on the other hand, that the covenant, which originally gave form and structure to the social life of the community, eventually became more of a symbol than a real foundation of the community, in that law in a political structure took the place of the older covenant community. Though religious convictions were held with no less fervor, the concepts and forms of action associated with covenant changed radically in the course of the centuries from Moses to Ezra. Stagnation is not necessarily a religious virtue.

Any comparison of the traditions associated with Moses and the international treaty forms of that time will reveal such striking similarities that the coincidence can hardly be held to be accidental. To a large extent this is true regardless of the particular source of the Pentateuch in which the traditions are preserved, though it is only to be expected that later sources refract and reinterpret older traditions in the light of experience and of other concerns. It is most striking that nearly all the characteristics of the old covenant form described above (§ A) are to be found in the narratives of the formative period of early Israel. Furthermore, it is possible to identify the Decalogue (the "ten words"; *see* TEN COMMANDMENTS) as the original text of the covenant between Yahweh and Israel, though in its present form it has undergone some expansion and interpretation. Early Israel emerged as a religious community on the foundation of this covenant, in which the relation to Yahweh was established in a fashion analogous to that between a suzerain of the Late Bronze Age empires and his vassals. Yahweh was not conceived of as a king, but as a king of kings, who had numerous semi-independent peoples under his control, but who entered into a covenant only with Israel. Since such relationships were inevitably involved with military alliances, it is not surprising that the military obligations of Israel, and reciprocally the features of Yahweh as a "god of war," are strongly emphasized in the narratives of the period from Moses to David. This transference of suzerainty from a flesh-and-blood emperor to a supreme and unique deity was not only a religious revolution; it was simultaneously a protest against the feudalistic imperialisms of that time, a religious expression of the human striving for freedom from an oppressive external political control and exploitation. It was also a development of utmost importance for the history of religion, for it placed moral obligations above political and economic interests in the scale of religious values. The continued existence of any political and economic institutions was thus conditional upon obedience to the ethical norms stipulated in advance by deity. At the same time, it placed the religious-ethical obligations above institutions and political structures in the scale of human values. The history of the OT is the history of the attempt to harmonize or identify these two.

If the Hittite treaty form is used as the model by which the OT covenant is analyzed, the following features of the narratives about the period of Moses fall into place:

a) The preamble is in the Decalogue reduced simply to the words: "I am the LORD your God." No further identification of this suzerain is necessary or possible, except in terms which have to do with his action in history—the historical prologue. The biblical sources are insistent upon the fact that it is Yahweh who gave, commanded, or established the covenant. The exception in Deut. 29:1—H 28:69 is explicitly aware of the fact that what follows is a different covenant tradition.

b) The historical prologue is, like all other parts of the Decalogue, extremely brief in comparison with the Hittite treaties, but it has the essentials. The phrase "who brought you out of the land of Egypt" is inseparable grammatically from the identification of the covenant-giver, so that the revelation of the deity is inseparable from the historical events which are the foundation of the covenant itself, and the obligations which it stipulates. In view of the great importance of the historical prologue in covenant forms of this period, it is almost impossible to separate this from the fact that ancient Israel had unique and (from the point of view of ancient times) peculiar historical sense, from which Israelite history-writing ultimately sprang; though certainly the first elaboration of historical narrative, appropriately enough, took the form of poetry (Exod. 15; Judg. 5). Since the covenant itself combined HISTORY and LAW, there can be little doubt that it is this which explains the fact that narrative and law codes are so curiously interwoven in the present form of the PENTATEUCH, at least better than any alternative explanation.

c) The stipulations begin with the very same obligation so frequent in the Hittite treaties—the exclusion of relationships to other sovereign powers. Since a deity with whom one has no relationship is unreal and irrelevant (in contrast to a mighty ruler of an empire on one's borders), the beginning of monotheism is to be found here. This exclusive relation to a single god carried with it the obligation to engage in and refrain from war at his command. Little is known for certain of the means by which those commands were communicated, but human "charismatic" leadership certainly had much to do with it. Failure to wage war was breach of covenant among the Hittite vassals, and the same is repeatedly stated or implied in the early narratives (Num. 14; Judg. 5; 21:5). Unwavering trust in the suzerain was also mandatory, and murmuring against him was always regarded as violation of obligation. The narratives of the murmurings in the wilderness (e.g., Num. 11) also treat these actions as punishable. It may be coincidence, but the murmurings which precede the Sinai covenant in the narratives are not punished (cf. Exod. 17:2-7 J). Evil talk has so con-

tinuously been regarded as semicriminal that it is hardly safe to draw conclusions from this alone, but the contrast in the treatment of pre- and post-Sinai murmurings can hardly be dismissed with no further consideration.

The so-called "apodictic" form of the Decalogue stipulations ("You shall not . . .") cannot any longer be taken to be proof of a specific *Sitz im Leben* distinct from the "case law" form ("if . . . , then . . ."; Exod. 21:1–22:25 *passim*), for both the Hittite treaties and laws, and the "Covenant Code" of Exod. 21–23 include laws of both types.

The stipulations define the interests of the suzerain which the vassal is bound to protect, and to considerable extent have to do with regulations which preserve the peace within the domain of the suzerain. There can be little doubt that the content of the Decalogue, as well as its predominantly negative stipulations, points in the same direction. By placing the people under oath to refrain from the acts prescribed by these stipulations, there is a horror in the community of the sort of acts which are precisely those most likely to disrupt the peace. Murder, theft, adultery, false oaths, false accusation, insubordination of children, and religious schism are certainly among the most common sources of internal conflict, and all were actionable in ancient law outside Israel. Except for the SABBATH observance (even the prohibition of coveting has a partial parallel in Hittite sources), the content of the Decalogue was not so different from the customary law of the pagan nations of antiquity. It was the religious conception of God and the relation of man to God in the covenant that sharply distinguished Israel from ancient pagan peoples; above all it was the fact that obedience to the commands of God took precedence over other concerns, by making temporal blessing and calamity dependent upon ethical or moral norms, which law had to serve, not create.

d) The traditional text of the Decalogue ends with the stipulations, but in the narratives of the Pentateuch the other elements of the Hittite treaty form appear, and survive into the books of JOSHUA; JUDGES. The provision for deposit of the written covenant and its periodic public reading is found repeatedly, though in the later sources. Deut. 10:5 (and elsewhere in the Deuteronomic history) states that the tables of stone were placed in the ARK OF THE COVENANT, as does the Priestly source (here called the עדות as in Exod. 31:18) in Exod. 40:20. Since the ark was almost certainly a portable sanctuary, this tradition is exactly in keeping with customary procedure in pre-Mosaic times, and the fact that it is attested only in later sources proves nothing unless it can be shown that the later tradition contrasts with some more likely earlier narrative with regard to the disposition of the stone tables, unless a flat denial of the historical possibility of the existence of the stone tablets be regarded as the better solution of the problem. The provision for public reading of the stipulations is preserved in one form in Deut. 31:10-11, but there are frequent references to the public recitation both of historical traditions and of the "laws" (Deut. 26:1-11; 27; 31:9-13, 22; Josh. 4:6-7; 8:30-35; private, family recitation is especially emphasized also in Deut. 6:20-25 and elsewhere). The 2½ centuries of history from Moses to David must have seen a variety of customs, covenant formulations, and the like which make it impossible for us to distinguish sharply between the Mosaic or post-conquest patterns of covenant and cultic celebrations (which certainly were closely connected). If the covenant patterns of the Late Bronze Age were followed, a new covenant should have been established with (perhaps) new stipulations every generation for some ten generations before the time of David. The personal appearance of every male Israelite before the Lord (Exod. 34:23; Deut. 16:16) three times a year corresponds to a similar requirement of the Hittite vassals that they appear before the Hittite king at stipulated intervals.

e) The list of witnesses (*see* WITNESS), so characteristic of Hittite treaties and necessary for binding legal documents in ancient law, could not have a parallel in the exclusive covenant between Yahweh and Israel. Yet there exists a persistent search for adequate witnesses until the NT martyrs. It has been pointed out above that witnesses to the Hittite treaties, in addition to the gods, included features of the natural world. These appear also with regularity in biblical sources in a similar role, from Deut. 32 to the Prophets (Isa. 1:2; Mic. 6:1-2). Beyond this, other narratives appeal as witnesses to the people (Josh. 24:22), a stone (vs. 27; and cf. Gen. 31:47).

f) The BLESSINGS AND CURSINGS appear in such variety that little need be said of this as a part of the Israelite covenant traditions. The list of Deut. 27–28 is most detailed, but it is not only in the Pentateuch that the blessings and cursings appear. The entire prophetic tradition of pre-exilic times is tied to this aspect of the covenant. Both are predominantly natural phenomena (in extrabiblical covenants as well): fertility and famine, health and disease, victory and defeat in war, peace and utter destruction.

g) The OATH itself is lacking in both the Israelite and the Hittite covenants, though there is no doubt that this was the formality which made the covenant valid. There seems little reason to doubt that the oath was frequently a symbolic action, which took many forms in antiquity: it was that act or verbal statement which distinguished a most solemn, binding promise from any casual or even rash promise made on the spur of the moment. Frequently in antiquity this involved the slaughter of an animal. Almost any action recognized by both parties to a covenant as such might serve to make a promise one which could not, on pain of catastrophe, be violated. The OT alone gives a surprising number of such forms, from the purely verbal oaths of I Sam. 3:17; 25:34 to the symbolic actions of Gen. 15; Jer. 34; the covenant meals of Gen. 26:30 (where the oath-taking is distinguished from the feast, however); 31:54; the "covenant of salt" (Num. 18:19); and the ritual of Exod. 24:5-8, which is preceded by the words: "All the words which the LORD has spoken we will do." For this action of sprinkling blood upon altar and people there is no extrabiblical source which aids in interpretation; it is simply that which formally placed the covenant in effect, like the signing of a legal contract.

b. The covenant of Joshua. The narrative in Josh. 24 preserves almost all the features of the covenant

as just described, but differs so radically in detail that it must be regarded as an independent narrative. In addition to the characteristic address in which Yahweh speaks in the first person, the historical content of the prologue contains unique features. Where the stipulations are expected, the narrative breaks off, and Joshua begins to speak. The break has already been noticed on other grounds by scholars; it is possible that the missing stipulations are to be sought somewhere in the Pentateuch (Deut. 27 has been suggested), but there is little use in speculating about this. Only the blessings and cursings are absent, and this would tend to reinforce the connection of Deut. 27 with Josh. 24. Whether this narrative preserves some historical connection with the formation of the federation of twelve tribes is uncertain, but it is still impossible to find any basis for the unity and yet diversity of these groups other than a covenant, which bound them to religious, ethical, and military obligations and yet left a very considerable degree of local self-determination and independence.

c. The reform of Josiah. After the long period of the monarchy, in which the old covenant traditions gave way to new social, legal, and religious patterns of thought and organization, there was a resurgence of the older traditions, initiated by the discovery of a lawbook in the Jerusalem temple. According to the narrative of II Kings 23, King Josiah made a covenant, joined in by all the people, to follow the "words of this covenant that were written in this book" (vs. 3). This event furnished in many important respects the foundations of the Judaism which arose after the Exile, for the action of Josiah was essentially a legislation by covenant, in which the accumulated body of legal customs and norms derived from the past (reflected fairly adequately in the present book of Deuteronomy) was identified with the covenant obligations to Yahweh. The prestige and coercive power of the state were put at the disposal of this tradition of religious law. Though this reform did not succeed, it established a pattern which held until the destruction of Jerusalem in A.D. 70, and after, in that it completely identified covenant obligations with a law code (or rather, collection of laws), and attempted to enforce them by political means. This covenant, however, was not one which established a relationship; it established a pattern of legal norms, and was more like a promissory oath than a covenant between two parties. If there were two parties in this covenant, it was king and people, not Yahweh and people. Though the broader aspects of religion as a personal relationship between deity and the individual were by no means lost, still this relationship could henceforth find legitimate expression only within the framework of the accumulated ethnic, cultural, and legal traditions of the Jews.

d. The covenant of Ezra. A century and more after the return of some exiles to Jerusalem and environs, initiative from the community still in exile resulted in action dedicated to bring the life of the Jerusalem community more into harmony with the demands of the religious legal traditions. A solemn convocation took place in which the law of God was formally enacted as binding upon the community with "a curse and an oath" (Neh. 10:29). Neh. 9–10 still preserves a historical narrative, but in the form of a prayer of Ezra, with emphasis upon the sins of Israel and the consequent punishment. In sharp contrast to the book of Job, the poverty, distress, and political subjection of the postexilic community are attributed to the failure of the Jews to obey the law, and "because of this" the princes, Levites, and priests make a firm covenant and set a seal to it (Neh. 9:38). From this time on, there is an official orthodoxy, in which the covenant is primarily the oath to obey the accumulated traditions as collected, interpreted, and preserved in the canonized Torah. Two traditions have fallen together. Yahweh is bound by the covenant with Abraham; and Israel is bound by the Sinai covenant as expanded in the collected law codes, now enforced by the political authority of the Jewish state. Henceforth, the primary problem is that of hermeneutics, of interpreting the Scriptures, which are final authority. History itself comes to an end with the Chronicler; no further historical work became canonical. The law was final; all that remained was securing obedience to it, and its adaptation to changes in outward circumstances.

D. ***COVENANT IN POSTBIBLICAL JUDAISM.*** The reform of Ezra was eminently successful, for covenant and law were entirely identified with each other during this period. Every Jew was presumed to be bound by the covenant at Sinai, but the problem of interpretation, of applying old legal norms to the contemporary world, remained. CIRCUMCISION (the covenant with Abraham) was the basis of obligation to Torah (cf. Gal. 5:3).

In the Qumran community, however, the covenant plays a more functional role in religious life, as a means for the accession of new members. The community regarded itself as that of the "new covenant" (Jer. 31:31), and in the description of the provisions for reception of new members there is a surprisingly close adherence to the old biblical traditions. The Manual of Discipline provides for a recitation of all the gracious acts of God, followed by a recitation of the sins of Israel and a confession of sin by those who are about to enter the community. There follows the priestly blessing, and the Levitical curse on those who "have cast their lot with Belial"; those who are entering the covenant respond: "Amen, amen." There is little room for doubt that the rules of discipline of the community are regarded as the authoritative, normative interpretation of Mosaic law, and the purpose of the initiatory rite is to bind every member to obedience to that discipline: "Everyone who is admitted to the council of the community shall enter into a covenant . . . and bind himself by an oath to abide with all his heart and soul by the commandments of the Law of Moses, as that Law is revealed to the sons of Zadok—that is, to the priests who still keep the covenant and seek God's will." As elsewhere in Judaism, the covenant is completely identified with the biblical law, but the community interpretation thereof is the only true one. In this respect, the most important fact about the Qumran community is that it is based, not on nationhood or statehood, but upon a solemn oath. It was a secret-covenant community whose members had a relationship to God and to one another based upon this solemn oath to obey the community interpretation of divine law. It is not surprising that the cove-

nant is that symbol which sums up in one word the whole content of Qumran religious life and faith. The covenant is truth, everlasting, the source of joy, strength, and enlightenment; it is also Torah, the statutes of God, the law of Moses. Particularly interesting is the fact that even this solemn oath is not to be sworn by a divine name, for subsequent violation of the oath would require a penalty of death. Rather, the oath is sworn by the curses (a distinction impossible in earlier times), so that disobedience is punishable by "guilt-offering, confession, and restitution."

E. ***COVENANT IN THE NT.*** The surprising infrequency of references to covenant in the NT raises great difficulties, even though it is understandable. The covenant for Judaism meant the Mosaic law, and for the Roman Empire a covenant meant an illegal secret society. This two-sided conflict made it nearly impossible for early Christianity to use the term meaningfully. Of the thirty-three occurrences of διαθήκη, nearly half are either quotations from the OT or references to the OT covenants; hence it is very difficult to decide whether the covenant in the NT is a theological concept inherited from Judaism, or was taken seriously as the formal basis of the relation of the early Christians to one another and to Christ. On the basis of the little evidence available, one may conclude that, for a time at least, the early Christians did regard themselves as a community bound together by covenant, but that this covenant is a most free, creative reinterpretation of the older traditions.

The primary source for this conclusion is, of course, to be found in the narratives of the LAST SUPPER (Matt. 26:28; Mark 14:24; Luke 22:20; I Cor. 11:25). In every source the blood is very specifically stated to be related to the (new) covenant, with obvious reference to the blood of the old covenant in Exod. 24:8. In the light of covenant forms, there seems to be no reason to doubt that this act was intended as the formal rite which established a covenant relationship. Since Homer, libations involving a cup of wine were so normal a form of sealing treaties that σπονδαί ("libations") became the term for "treaty." Libations are frequently referred to (and condemned by the prophets; e.g., Jer. 7:18) in the OT, but never demonstrably as a form connected with the establishment of a covenant.

Is it possible to connect the Last Supper with OT covenant traditions, beyond the reference to the "blood of the covenant"? The very brief account yields little, but conjecture points to numerous possibilities. The tie between historical events and covenant relationship, so characteristic of the OT Mosaic tradition, may have its parallel in the generally accepted view that Jesus' reference to his blood was a deliberate reference to his anticipated death, and there can be no doubt that the church connected the two. The establishment of the covenant thus anticipated the historical event upon which the covenant was based. Furthermore, the absence of any obligations stipulated in the covenant can be treated in two ways. First, there can be no doubt that the covenant was one which, above all, created a personal relationship—a community of interest, so to speak—in which the stipulation of obligations of one party to the other was superfluous. Second, the Gospel of John, which preserves no historical narrative of the Last Supper, but which contains much interpretation of it, has a reference to a "new commandment" appropriate to a "new covenant" (John 13:34). The commandment of love (*see* LOVE IN THE NT) thus corresponds to the very nature of the covenant itself. There is nothing new about this command except its place in the covenant relationship, as the stipulated obligation assumed by those who enter the covenant community, if this interpretation is correct. The other usual elements in a binding covenant are not present in this narrative, but there are hints here and there in Paul and Hebrews (*see below*) that certain patterns of thought derived from them may be present in NT sources. As pointed out above, the very purpose of a covenant was to bind together the two parties in a firm relationship; this becomes the whole of the covenant in the NT, centering on Christ, for nothing is more strongly emphasized in the NT than this relationship between Christ and the NT church. It is not accidental, moreover, that the relationship finds its deepest expression in the Eucharist. Unfortunately, the clearest description of the NT church as a covenant-bound community comes from Pliny the Younger (*ca.* 112). In his famous Letter to Trajan he describes how the Christians "come together to bind themselves by an oath." It is easy to see why he would, in the light of Greek σπονδαί, interpret the Eucharist as an oath, but it is by no means clear that he can be trusted as an early witness to what the early Christians believed concerning the Eucharist. All that can be concluded here is the fact that both the words of institution at the Last Supper and the letter of Pliny point in the same direction: namely, that the Eucharist was regarded as the formal act which established a lasting relationship between the community and Christ, in analogy to the Mosaic covenant, but combining with it a number of motifs from OT sources, including the sacrificial animal, the Suffering Servant (Isa. 53:11-12; Matt. 26:28), and the new covenant of Jer. 31:31-34.

With this thesis several facts harmonize. The stern warning of Paul in I Cor. 11:27 that those who eat the bread or drink the cup of the Lord in an unworthy manner are guilty of "profaning" the body and blood of the Lord and bring condemnation upon themselves, can well be brought into the general context of patterns of thought involving breach of covenant; but, characteristically enough, it is not breach of a legal form, but an offense against the body of the living Lord which brings illness and death—and this is evidently regarded as the judgment of the Lord, as vss. 31-32 indicate. We find a very similar point of view in Heb. 10:26-31. In contrast to the Qumran oath, "there no longer remains a sacrifice for sins," and an even greater punishment than that provided for by the Mosaic covenant awaits him who has "spurned the Son of God, and profaned the blood of the covenant by which he was sanctified, and outraged the Spirit of grace." This is followed again by the reference to the judgment of God (vs. 30), but even more significant is the fact that in vs. 19 it is explicitly stated that entrance to the sanctuary is "by the blood of Jesus." All this again points to a pattern of thought inherited from the older covenant tradition, in which the cup takes the place of

an oath by which a relationship is permanently established and cannot be broken without incurring a fearful judgment at the hands of God himself.

Since the relationship to Christ is both the content and the obligation (as well as the form, in the body and blood of Christ) of the covenant, all the detailed prescriptions of Jewish law are both unnecessary and (for Paul) inimical to Christianity. In Eph. 2:12-13 the Gentiles, once "strangers to the covenants of promise," and "far off," have been "brought near in the blood of Christ." Whether this refers to the Crucifixion or to the Eucharist is probably immaterial, for they are inseparable, and the latter is historically an anticipation of the former.

In Gal. 4:21-28 the old and new covenants are contrasted as the children of slavery and those born free. In II Cor. 3:6 also, the new covenant, of which Paul is a "minister," is a covenant in the Spirit, in contrast to the written code. There can be no doubt that Paul continues and expresses in detail that which is present in the Synoptic tradition—namely, that the new covenant rejected the detailed stipulation of religious obligation characteristic of the Jewish identification of covenant with law. This must go back to Jesus himself, for only John (and by implication only) connects any obligation of the Christian community with covenant—the obligation of love.

In Gal. 3:16, Paul applies the covenant of Abraham to Christ. It is ironical that the blessing of the nations takes the form of delivering them from the curse of the law which came after Abraham, in addition to the "promise of the Spirit through faith."

The Letter to the Hebrews utilizes much more frequently the covenant tradition, but in almost exactly the same way as Paul. Every possible argument is drawn on to show that the new covenant both fulfils and abrogates the old. In 7:1-22 the passage of Ps. 110:4 is applied to Jesus, with the conclusion that Jesus is the "surety" (or "mediator") of a better covenant. Ch. 8 strongly argues that the old covenant is obsolete, drawing on Jer. 31:31-34; and in the subsequent chapter (9), the concern for Levitical purity is contrasted with the purifying of the conscience by the blood of Christ. The regular, repeated sacrifices of OT law are contrasted sharply with the once-for-all sacrifice in which Christ gave his own blood to put away sin. There is an incidental argument drawn from the Greek usage of διαθήκη to refer to a "last will and testament." There can be no doubt, however, that this is simply an apologetical argument, and cannot be taken seriously as the framework of the author's conception of the covenant, which is entirely within the OT pattern of thought. This great emphasis on covenant in the Letter to the Hebrews, which argues for the substitution of the new covenant for the old, is itself a strong indication that the early church did take the covenant seriously. The old religious security of the Jewish covenant traditions would not likely have been used as the point of attack were it not for the fact that Christianity also had a covenant regarded as just as real as those of the OT.

In spite of all that has been proposed above, it is difficult to avoid the conclusion that for Western Christianity at least, both the astounding creativity of the early church and the radical break with Jewish forms and associated patterns of thought very soon produced a structure of religious thought and life in which the old covenant patterns were not really useful as a means of communication, and may have been dangerous in view of the Roman prohibition of secret societies.

All we can conclude is that the Last Supper is certainly the central feature of early Christian life, in which the community was bound together with Christ; but the important features of the Mosaic covenant, the stipulations, are absent. On the other hand, the history of God's act in Christ, the exclusive relationship to God through Christ, the curse done away with by the Cross, the blessings of freedom in Christ and life here and hereafter, and even the judgment of God for rejection of the covenant relationship—all so important and constant features bound up with covenant traditions in the OT—are taken up in the NT and are inseparable both from the person of Jesus and from the sacrament of the Eucharist.

The NT experience of Christ was one which could not be contained within the framework of a quasi-legal terminology or pattern of thought and action. Neither the act of God in Christ nor the religious obligation of man to God could be adequately expressed in language. Therefore the Word became flesh. The letters of man's poor alphabet had to take second rank behind the person of a living being, the Christ, as the means of communicating the message of God. And yet the Sinai covenant of the OT and the NT covenant in Christ's blood are one: each created a people of God out of those who were no people, demanded the complete self-surrender to God as a joyful response to the love of God which preceded. The simple stipulations of the Decalogue were summed up in the yet simpler obligation of love at Jesus' command—but this is no command; it is rather the very nature of the relationship between God and the community.

COVENANT, BOOK OF THE [ספר ברית]. In Exod. 24:7, Moses is reported to have read from the "book of the covenant" in connection with the ceremony of covenant-making at Mount Sinai. The expression is frequently taken to refer to the collection of laws found in Exod. 20:23-23:33. More probably, however, it refers to the written stipulations of the covenant between Yahweh and Israel which developed throughout the course of Israelite history. See II Kings 23:2-3, 21; II Chr. 34:30-31.

COVERINGS [מרבדים, *from* רבד, to bespread, deck]; KJV COVERINGS OF TAPESTRY. Fabric goods, used as bedspreads (Prov. 7:16, where the cognate verb occurs) or, apparently, as clothing (31:22).

COVERLET [מכבר] (II Kings 8:15); KJV THICK CLOTH. Apparently a cloth of some sort which Hazael dipped in water and spread upon the face of Ben-hadad until he smothered. From the cognates כברה, "sieve" (Amos 9:9), and מכבר, "grating" (Exod. 27:4, etc.), the suggestion is sometimes made that this is a netted cloth. E. M. GOOD

COVETOUSNESS [אוה, חמד, בצע (Isa. 57:17), *more often* UNJUST GAIN; πλεονεξία]. Throughout the Bible, the desire to have something for oneself or to have more than one already possesses. The object of such desire is always material, even in Deut. 5:21; Exod. 20:17, where the neighbor's wife and servants are regarded as material possessions.

Covetousness is always considered in the Bible as sinful, for a variety of reasons. Its prohibition in the two forms of the Decalogue is based upon the promise of land and heirs to Israel, a promise in which every Israelite is entitled to share. To deprive a man of his property is thus to deprive him of his God-given inheritance (cf. Mic. 2:2; Rom. 7:7; 13:9). The sin of Achan, however (Josh. 7:21), is his failure to obey the ancient law of *hérem,* to devote to the Lord that which is his. In Prov. 21:26, the whole background of the wisdom teaching is present: the care of the righteous for the needy, the faith that God's gifts will suffice for the good man, the divine reward for liberality. (In later Jewish literature almsgiving becomes synonymous with righteousness.) However, usually and especially in the NT covetousness is considered a hindrance to true worship and faith in God. Where a man's treasure is, there is his heart; he who loves material possessions cannot truly love God (Mark 7:22; Luke 12:15; cf. Rom. 1:29). Thus in some passages covetousness is identified with idolatry (Eph. 5:3, 5; Col. 3:5); recognition of this fact helps in interpreting the difficult text of Isa. 57:17.

51. Cow with calf tied to her leg, from sarcophagus of Princess Kawit at Deir el-Bahri

COW [עגלה (Isa. 7:21), *see* CALF; *for* פרה, בקר, ארף (*feminine of* פר), שור, *see* OX]; KJV KINE as the plural. The basic function of the cow, the reproduction of its kind, is referred to in Lev. 22:27-28; Deut. 7:13; 28:4, 18, 51; Job 21:10; and its suckling of calves in I Sam. 6:7. In one instance a milch cow is put to work drawing a wagon (I Sam. 6:7-8). Forty cows constituted part of the cattle gift to Esau (Gen. 32:15—H 32:16). CURDS were produced from cows' milk (Deut. 32:14; Isa. 7:21-22; the meaning of שפות [RSV "cheese"] in II Sam. 17:29 is uncertain), but such a product was incidental to breeding calves, and there is no evidence that cows were exploited for dairy purposes; moreover, the pasturage for milch cows in Palestine was much scarcer than that for goats. The MILK in Ezek. 25:4 would include that from cows, camels, and goats; the ten cheeses (lit., "cuts of milk") sent by Jesse in I Sam. 17:18 may have been made of goats' milk.

The only figurative uses of "cow" occur in the imagery of Joseph's dream (Gen. 41) and in Amos. In Amos 4:1 the luxury-loving women of Samaria, who condone the rampant injustice, are likened to the cattle for which Bashan was well known (cf. Deut. 32:14; Ps. 22:12—H 22:13; Ezek. 39:18).

COZ. KJV form of KOZ.

COZBI kŏz'bī [כזבי; Akkad. *kuẓbu,* voluptuousness]. Daughter of ZUR, one of the chiefs of MIDIAN. Zimri took her to his family's house, and as a result both were slain by Phinehas, thus averting a plague (Num. 25:6-15). The Talmud (Sanh. 82*a*) also implies that Cozbi succeeded in seducing Moses himself.

J. F. ROSS

COZEBA kō zē'bə [כזבה, falsehood] (I Chr. 4:22); KJV CHOZEBA. A village in the Judean highlands, possibly to be identified with Khirbet ed-Dilb (where there is Early Iron pottery) near el-'Arrub, W of Tekoa. Many writers identify Cozeba with ACHZIB (Josh. 15:44) and CHEZIB (Gen. 38:5).

V. R. GOLD

CRACKNELS. The KJV translation of קדים (from נקד, to prick; RSV "some cakes") in I Kings 14:3. *See* BAKING; BREAD § 1*d.*

CRAFTS. The manual arts requiring special skill. Those engaged in the crafts are called artisans, skilled workers, craftsmen, etc. In the Bible translations, "craftsmen" is usually reserved for those who work in wood. *See* CARPENTER; CARVING; WOOD.

Many of the crafts were performed in the home by both men and women. There were probably no smiths in Israel until the time of David (*see* METALLURGY; I Sam. 13:19 ff). Contact with developed Canaanite civilization after the Conquest, and later with the Babylonians during the Exile, increased the number of craftsmen in Israel. Until after the Exile, it is thought, skilled workers were illiterate. After the Exile and in NT times the rabbis were often independent by virtue of their skill in some craft (*see* PAUL). In Talmudic times rabbis would not take money for their teaching but would take the exchange of skilled services from their students. Labor was honorable.

The craftsman was usually a free artisan. In the

ancient Near East only a small number of slaves were trained in these skills. There were guilds of craftsmen in Palestine after the Exile (Neh. 3:8). Goldsmiths helped rebuild the walls of Jerusalem. Synagogue reports from Alexandria refer to smiths in gold and silver and to weavers. A second-century-A.D. inscription in Asia Minor refers to a Jewish guild of dyers and weavers.

Shops were kept by craftsmen (Jer. 18:2), but business and much of the work was conducted out of doors (I Kings 20:34). The people of a single craft often occupied a special quarter in an Israelite town (Neh. 11:35; Isa. 7:3; Jer. 37:21). The list of craftsmen is great, including: carpenters; furniture makers; boatbuilders; wood carvers; carvers in ivory, ebony, and alabaster; smiths in gold, silver, and bronze; weavers; tanners; leatherworkers; tentmakers; carpetmakers; ropemakers; basket weavers; fullers; dyers; sculptors; jewelers; glassworkers; potters; lampmakers etc. *See* OCCUPATIONS.

God is described as the greatest artisan of all (Heb. 11:10).

C. U. WOLF

CRAFTSMEN, VALLEY OF. *See* GE-HARASHIM.

CRANE [עָגוּר (KJV SWALLOW), *cf.* Akkad. *egerū;* KJV סוּס, סִיס (RSV "swallow")]. Any of a class of tall wading birds with long bills, necks, and legs, of the order *Gruiformes,* of the family *Gruidae.* Tristram noted the large number of these rather noisy birds which passed over Palestine in their spring migration to more northerly lands (*NHB* 239-41).

The meaning of עָגוּר is uncertain. The LXX omits it in Isa. 38:14, and in Jer. 8:7 renders it as "small birds of the field." It is generally agreed that the verb צָפַף, "to chirp, peep," used in Isa. 38:14 (RSV "clamor"), can hardly describe the trumpeting or bellowing of the crane. G. R. Driver (*see bibliography*) notes various alternative identifications; his own preference is for the wryneck (of the genus *Jynx*). R. B. Y. Scott (*see bibliography*), on Isa. 38:14, favors an emendation to read עוֹרֵג (cf. Dead Sea Scroll 1QIs^{a}: עוגר), and obtains the phrase "like an unhappy swallow."

CRAWLING THINGS [זְחָלִים (Deut. 32:24; Mic. 7:17), crawlers, *from* זָחַל, to crawl away; רֶמֶשׂ (Hab. 1:14), creeper, *from* רָמַשׂ, to creep]; KJV SERPENTS (Deut. 32:24), WORMS (Mic. 7:17), CREEPING THINGS (Hab. 1:14). In Deut. 32:24 the reference is to poisonous snakes (cf. the same threat in Jer. 8:17); in Mic. 7:17 to reptiles generally, whose lowly life serves to symbolize the abasement of the Gentiles; in Hab. 1:14 to water creatures, seemingly other than fish, taken in a net.

W. S. MCCULLOUGH

CREATION. In the Bible (with the possible exception of wisdom literature) the doctrine of creation does not stand by itself but depends upon and elaborates the redemptive activity of God in history. In the OT, creation is viewed in the light of Israel's covenant faith, of which it is both the presupposition and the fulfilment; and in the NT creation is viewed christologically—i.e., in the light of God's revelation in Jesus Christ and the "new creation" which through him has already become a historical reality. In both Testaments, the doctrine stresses the complete dependence of the whole creation upon the Creator, the supreme position of honor and responsibility which God has given man, and the divine purpose which undergirds and controls the historical drama from its beginning to its consummation.

1. History and creation. The NT inherits and transforms the OT faith that God created all things (Acts 4:24; 14:15; 17:24; Eph. 3:9; Rev. 4:11; 10:6); and likewise the OT creation faith, as expressed consummately in the creation stories of Genesis, the message of Second Isaiah, and various psalms (e.g., Pss. 8; 19; 104), both presupposes and radically transforms the cosmological views of antiquity (*see* COSMOGONY; WORLD, NATURE OF THE). The OT affirms that Yahweh, the God of Israel, is the creator of heaven and earth. And since the meaning of the special divine name was given to Israel in her historical experiences, as interpreted by a series of prophetic figures beginning with Moses (*see* GOD, NAMES OF, § B), Yahweh's creative work was understood in a completely different sense from the prevalent creation beliefs among Babylonians, Egyptians, or Canaanites.

a. Ancient cosmology and mythology. In a formal sense there are numerous points of contact between Israel's creation faith and the cosmological views of antiquity. The Bible takes for granted a three-storied structure of the universe: heaven, earth, and underworld (Exod. 20:4). According to this *Weltbild,* the

earth is a flat surface, corrugated by mountains and divided by rivers and lakes. Above the earth—like a huge dome—is spread the firmament, which holds back the heavenly ocean and supports the dwelling place of the gods (Gen. 1:8; Ps. 148:4). The earth itself is founded upon pillars which are sunk into the subterranean waters (Pss. 24:2; 104:5), in the depths of which is located Sheol. In this view, the habitable world is surrounded by the waters of chaos, which, unless held back, would engulf the world in chaos (Gen. 7:11; cf. 1:6).

In various ways ancient peoples affirmed that the world emerged out of primordial chaos. In Babylonian mythology the origin of the three-storied universe was traced to a fierce struggle between divine powers that emerged from uncreated chaos—Marduk the god of order and Tiamat the goddess of chaos. Victorious in the struggle, Marduk split the fishlike body of the monster down the middle, thus making a separation between the upper and lower parts of her body (cf. Gen. 1:6). The OT contains reminiscences of this creation myth, for we hear of Yahweh's primordial battle with sea monsters named Rahab or Leviathan (Job 9:13; Pss. 74:13-14; 89:10; Isa. 27:1; 51:9), and of his action in setting bounds for the sea (Ps. 104:7-9; Prov. 8:27-29; *see* WATER). Moreover, the Hebrew word for "Deep, Abyss" (תהום), is linguistically related to the Tiamat of the Babylonian myth (*see* DEEP, THE). But these are very distant echoes. Although the Bible takes for granted the contours of ancient cosmology, it has demythologized the ancient understanding of existence. The OT contains no theogony, no myth which traces the creation to a primordial battle between divine powers, no ritual which enabled men to repeat the mythological drama and thereby ensure the supremacy of the national god. Mythological allusions have been torn out of their ancient context of polytheism and nature religion, and have acquired a completely new meaning within the historical syntax of Israel's faith. The pagan language survives only as poetic speech for the adoration of Yahweh, the Lord of history.

b. The origin of Israel's creation faith. The earliest cultic summaries of Israel's faith did not refer to Yahweh as creator but concentrated, rather, on his mighty deeds of history by which he made himself known and constituted Israel as his people. To be sure, the Israelite knew and confessed that the God who was mighty in history could also make the forces of nature serve his purpose. He prepared a path for his people through the Red Sea (Exod. 15:21), preserved them in the wilderness by performing SIGNS AND WONDERS, and rescued their army at the Battle of Megiddo by causing the stars to fight on their side and the River Kishon to overflow its banks (Judg. 5:20-21). Nevertheless, reference to the Creation is conspicuously absent in the early summary of *Heilsgeschichte* in Deut. 26:5-10, and this is the more striking when one compares the late summary found in Neh. 9:6-31, which begins with the Creation.

It is doubtful whether this silence necessarily argues that the creation faith was either unknown or unimportant in the early period of Israel. It would be strange indeed if Israel had taken no account of a belief which figured prominently in the religions of the cultural environment. Although the date of Gen. 14 is uncertain, it is noteworthy that in this passage the title of El Elyon (*see* GOD, NAMES OF, § C2*b*), "Maker [קנה] of heaven and earth," is applied to Yahweh (vss. 19, 22). The title has been appropriated from Canaanite religion, as evidenced by the occurrence of the verb in the Ras Shamra mythological texts and the expression *El qn 'rṣ* in the Phoenician inscription of Karatepe. Furthermore, an old poetic fragment found in Solomon's temple address affirms that "Yahweh has set the sun in the heavens" (I Kings 8:12; text reconstructed on the basis of the LXX). Also, a number of scholars hold that in the pre-exilic period Yahweh's creative work was celebrated at the fall New Year's Festival, just as Marduk's victory over Tiamat was celebrated in the liturgy of the Babylonian New Year's Festival, and that several psalms have come out of that cultic situation (Pss. 24; 47; 93-100). Finally, the creation stories of Gen. 1-2 must be considered, not only in terms of their date of literary composition, but also in terms of the age of the tradition they preserve. The Yahwist's story (Gen. 2:4*b*-25; cf. 6:6-7; 7:4; *see* J), although it actually does not deal with creation in its broadest sense, dates back to the time of the early monarchy, probably Solomon's reign; and it is not impossible that its terse reference to the "day that Yahweh God made the earth and the heavens" implies a longer account of the creation of the earth which has been superseded by the priestly account (*see* P). Creation is dealt with most comprehensively and intensively in the latter (Gen. 1:1-2:4*a*). The P account is usually dated in the time of the Exile or later, but careful study of its form and content indicates that the present version is the end result of tradition, whose development extended over a considerable period of time.

Nevertheless, it is a striking fact that in the early period of Israel's history the creation faith did not have the prominence that was given it in later times. The first prophet to reckon seriously with the doctrine was Jeremiah, who declared that Yahweh's sovereignty over history is underscored by the fact that he is Creator (Jer. 27:5; cf. 32:17), and who perceived in the constancy of nature a pledge of Yahweh's covenant faithfulness (5:22-24; 31:35-36). Aside from the P account, the doctrine of creation comes to its deepest expression in the message of Second Isaiah during the Exile (*see below*). And, as is evident from the devotional, apocalyptic, and wisdom literature of the postexilic period, the doctrine came to be a cardinal tenet of Judaism.

The reason for the slow movement of this doctrine from the periphery to the center of Israel's faith is to be found in the nature of the Israelite faith itself. In contrast to other religions, which viewed man as living in a state of nature, Israel's faith insisted upon the radically historical character of human existence. The meaning of life was not to be found in the rhythms and cycles of nature, as, e.g., in the Canaanite mythology of Ras Shamra, but in decisive historical events in which men of faith perceived the revelation of God and heard his call to take part in his historical plan (*see* GOD, OT VIEW OF, § 1). The primary testimony of Israel's faith is that Yahweh is the Lord of history. He is the God of Abraham, Isaac, and Jacob; the God who brought

his people up out of the land of Egypt; the God who disclosed his power and purpose historically, as at the crossing of the Red Sea, the Battle of Megiddo, or subsequent critical moments in Israel's historical pilgrimage. Thus Israel's faith was first confessed in the form of *Heilsgeschichte*—the story of Yahweh's mighty acts of salvation (Deut. 26:5-10). The conflict between Israel's historical faith and the nature religions of the Fertile Crescent continued right to the fall of the nation and the exile of the people, events which disclosed the futility of Baalism and confirmed the truth of the prophetic message.

During these years of conflict, creation was associated with the world view of the nature religions. Creation belonged to the mythology of Babylonia, Egypt, and Canaan—not primarily to the realm of history, which prophets interpreted as the sphere of Yahweh's saving activity. The nature gods had a mythology but not a history, and therefore they could not declare the divine purpose "from days of old" (cf. Isa. 37:26) and bring it to pass. Within this framework of understanding, creation is a timeless event—timeless in the sense that it belongs within a cyclical pattern of mythology, which must be repeated and re-enacted each year, as was the case with the Ras Shamra mythology or the Babylonian New Year ritual. So pervasive and appealing was this nature mythology that it was no simple task for Israel's interpreters to demythologize the doctrine of creation and to bring it into theological relationship with the sacred history of Yahweh's mighty deeds. When this was accomplished, however, the foundations of the ancient mythological world view were shaken. No longer was creation a myth to be repeated; but, incorporated into Israel's *Heilsgeschichte,* it was a history to be remembered and retold.

c. Creation as the beginning of history. In the Bible the story of creation does not stand by itself as though it were a prescientific attempt to explain the origin or evolution of nature. Rather, as indicated by the position of the creation stories at the very beginning of the Bible, creation is the starting point of history. It sets the stage for the unfolding of the divine purpose and inaugurates a historical drama within which first Israel and, in the fulness of time, the church were destined to play a key role. Thus the Creation stands in an inseparable historical relation to the narratives that follow, particularly those that span the generations from Abraham to Joshua. In the Yahwist's epic the story of man's creation, together with other stories of primeval time (*Urgeschichte*), is the prologue to the sacred history that unfolds with the call of Abraham, the deliverance from Egypt, the guidance through the wilderness, and the inheritance of the Promised Land. The priestly creation story, too, does not stand in isolation but prepares the way for a series of historical covenants and the climactic revelation of Yahweh to Israel in the Mosaic period. Moreover, it is significant that the Creation is embraced within the time scheme (תולדות) which P traces through succeeding "generations" (Gen. 2:4*a*). In this view, creation is a temporal event, the beginning of a movement of history.

Just as the Creation points forward to the Exodus and the making of the covenant, so the covenant faith reaches backward and includes the Creation. The theological movement of Israel's thought is not from the confession "God is the Creator" to "Yahweh, the God of Israel, is the Redeemer," but in just the opposite direction. In the formulation of the traditions now included in the Hexateuch, the Exodus, together with historical events immediately associated with it, had decisive significance for the historical interpreter. This is evident, above all, in the epic of the Yahwist (*see* J). From the standpoint of faith provided by Israel's ancient confession (Deut. 26:5-10), he essayed the task of interpreting the whole human drama, right from the beginning. His unique contribution was the manner in which he prefaced a series of stories dealing with primeval time (Gen. 2–11) to the sacred history which begins with the call of Abraham. Thus a historical line was traced from the faith situation of Israel to the remotest historical beginnings imaginable, with the result that all human history was seen in the light of the revelation given to Israel and was embraced within the saving activity of Yahweh. In a similar manner the NT church, convinced of the decisive character of God's revelation in Jesus Christ, understood the whole sweep of historical time and the whole creation in a christological perspective (Eph. 1:9-10; *see* § 4 *below*).

In Israel's understanding, then, creation and history are inseparably related. Creation is the foundation of the covenant; it provides the setting within which Yahweh's saving work takes place. But it is equally true that creation is embraced within the theological meaning of the covenant and therefore is the first of his saving deeds (Ps. 74:12-17). In view of the inseparable connection between creation and history, it is not surprising to find that Yahweh's subsequent historical deeds are regarded as creative acts and, indeed, may be described by the same verbs as are applied to the original creation (יצר, ברא, עשה); and this is true, above all, of Yahweh's creation of Israel (Isa. 43:1, 7, 15, 21; 44:2, 21, 24; 45:11) or the Servant (49:5). No prophet grasps as profoundly as Second Isaiah the soteriological meaning of creation and the creative significance of redemption. He appeals to faith in Yahweh's wisdom and power as Creator in order to demonstrate to despairing exiles that Israel's God is sovereign over the whole course of history and that he therefore can and will redeem his people (Isa. 40:12-31; 43:1-7; 45:9-13; 48:12-13). Furthermore, he declares that Yahweh's imminent coming to redeem his people will result in nothing less than a new act of creation. *See* § 3*b below.*

2. The sovereignty of the Creator. The Bible does not have the equivalent of the Greek term κόσμος, which suggests the view of the universe as a rationally constituted and self-sustaining structure of reality. Instead, it speaks of the relationship between the Creator and his creation, a relationship which is essentially that of the covenant. For the belief that "heaven and earth" or "everything" (כל; Ps. 8:6—H 8:7; Isa. 44:24) is dependent upon Yahweh the Creator is a derivative from Israel's covenant understanding that her whole life is dependent upon the God who delivered his people and bound them to himself. The covenant, rather than

a rational principle, is the ground of the unity of creation.

The doctrine of creation, then, is pre-eminently a religious affirmation about the sovereignty of God and the absolute dependence of the creature. To say that Yahweh made the earth is to confess that it belongs to him; he is its Lord (Pss. 24:1-2; 89:11—H 89:12; 95:5). Nothing in the realm of creation should be glorified, for the meaning of the Creation is that it points beyond itself to Him who is high and lifted up and therefore is worthy of the praise of man and all other creatures. Thus the proclamation that Yahweh is creator is a summons to worship, for the Creation testifies to his wisdom and power (Ps. 104:24; Prov. 3:19-20; Jer. 10:12-13), his steadfast love (Ps. 136:4-9), and his incomparable majesty, which he shares with no other (II Kings 19:15; Neh. 9:6; Isa. 40:25-26). To be sure, the Creation does not witness to the Creator so clearly that faith is unnecessary. In the wisdom books Ecclesiastes and Job, the rational mysteries of the Creation witness to a divine sovereignty which is beyond man's understanding; and even in other contexts, where Yahweh's historical revelation provides the standpoint of faith, the Israelite is aware of the hiddenness of God (*see* GOD, OT VIEW OF, § 2*a*). Although the language of creation was often mysterious, it was nevertheless sufficiently intelligible to the man who stood within the covenant so that he could exclaim that the heavens declare the glory of God (Ps. 19:1-4—H 19:2-5). Thus the sovereignty of God, manifest in his works of creation, is the basis for adoring, trusting, fearing, and obeying him (Ps. 95; Isa. 40: 27-31).

a. Creation by the Word. Despite differences between the creation stories of Gen. 1–2, they agree in ascribing creation to the free and spontaneous initiative of God. The personal relation between Yahweh and his creation is vividly portrayed in the J account, according to which Yahweh "forms" man (יצר suggests the image of the potter molding clay) from the ground and provides him with an environment suitable for his welfare. The strong anthropomorphism of the story, however, does not reduce the Creator to the level of man or exalt the creature to a plane of equality with God (cf. Gen. 3:22). Elsewhere the image of the divine Potter expresses the sovereignty of God over his creatures (Isa. 29:15-16; 45:9-13; Jer. 18:1-6; Rom. 9:20-21).

The sovereignty of God is expressed more forcefully in the P account, which bears the marks of greater theological reflection about the creation in its widest sense. In this account, God is exalted and transcendent. His only point of contact with the Creation is his uttered command, which punctuates the creative drama with the refrain: "And God said. . . . And it was so." The same thought is echoed by a psalmist:

> He spoke, and it came to be;
> he commanded, and it stood forth
> (Ps. 33:9; cf. vs. 6).

and in other OT passages (Ps. 148:5; cf. Isa. 45:12). Creation by the Word came to be the normative expression of the mode of God's creative work (Ecclus. 42:15; Syr. Apocalypse of Bar. 21:4 ff; John 1:1-3; Heb. 11:3; II Pet. 3:5-6).

As Israel learned in her historical experience, the WORD of God is the sovereign power which shapes men's lives and controls the course of history. His word is active and dynamic; it is the means by which he accomplishes his will. The "word of the LORD," when put in the mouth of the prophet, makes the prophetic spokesman sovereign over nations and releases a divine power which both overthrows and builds (Jer. 1:9-10). As the rain and the snow descend from heaven and do not return thither until they have made the earth fertile, so the word that goes forth from Yahweh's mouth does not return empty, but accomplishes his purpose and effects his will (Isa. 55:10-11). His word is "living and active, sharper than any two-edged sword" (Heb. 4:12; cf. Rev. 19:13-15). In these instances, it is clear that the Word is not a sound or even an idea. God's word is an act, an event, a sovereign command, which accomplishes a result. The creation story affirms that God's word, mighty in history, is also the very power which brought the creation into being. Since the creative Word establishes a personal relationship between the Creator and his creation, the Christian faith affirms with theological consistency that the Logos became flesh in a person (John 1:1-18).

b. Creation ex nihilo. In later theological reflection upon the meaning of creation, the sovereignty of the Creator was further emphasized by the doctrine that the world was created out of nothing (II Macc. 7:28; cf. Rom. 4:17; Heb. 11:3). It is doubtful, however, whether this teaching is found explicitly in Gen. 1 or anywhere else in the OT. As suggested in the footnote of the RSV, it is grammatically possible to treat Gen. 1:1 as a temporal clause which introduces a main sentence beginning with vs. 2 or even vs. 3. It is probable, however, that vs. 1 should be construed as an independent sentence which serves as a preface to the entire creation account. On this view, the story actually begins in vs. 2 with a portrayal of uncreated chaos as the presupposition and background of God's creative work. The notion of creation out of nothing was undoubtedly too abstract for the Hebraic mind, and, in any case, the idea of a created chaos would have been strange to a narrative which is governed by the view that creation is the antithesis of chaos.

The main intention of the writer is to emphasize the absolute sovereignty of God. There is not the slightest hint that God is bound or conditioned by chaos, as in the Babylonian Enuma Êliš, which portrays the birth of the gods out of the waters of chaos. Nor does God have the character of a demiurge who works with material which offers some resistance or places limitations upon his will (*see* § 4 *below*). On the contrary, he creates with perfect freedom by his word—a view which is underscored by the use of the verb ברא. In the OT this verb is used exclusively of God's action and expresses the effortless divine creation which surpasses any human analogy such as the potter or the architect (cf. Pss. 51:10—H 51:12; 104: 30; Isa. 43:1, 7, 15; 48:7). Since, however, this verb is used in connection with the verb עשה in Gen. 1: 26-27 and elsewhere is linked with יצר, "mold" (Isa. 43:1; 45:18), it was undoubtedly employed to support the view of creation by the Word, rather than creation *ex nihilo*.

c. The harmony and goodness of the creation. God's creation is characterized by order. This order, how-

ever, is not that of Greek κόσμος, harmonized by reason, but rather a divinely decreed order within which each creature fulfils the Creator's will. The Creator commands, and thereby not only brings a creature into being but also designates its peculiar nature and assigns to it a specific task. The heavenly bodies, e.g., are not independent deities who control man's life, as was supposed in antiquity, but are servants of God whose appointed function is to designate the seasons and to separate the day and the night (Gen. 1:14-19). Earth is not just the fertile "mother," from whose womb all life proceeds and to which it returns (Job 1:21; Ecclus. 40:1), but is God's creature who produces vegetation and animals at his command (Gen. 1:11-12, 24-25). The idea of "nature" as an autonomous sphere governed by natural law or set in motion by a First Cause is not found in the OT. The Creator stands in personal relationship to his creation. It is the divine decree (חק) that determines order (Job. 38:33; Pss. 104:9; 148:6; Jer. 5:24; 31:35-36), and it can even be said that Yahweh has made a covenant with the day and the night (Jer. 33:20). At any moment the Creator could allow the creation to fall back into chaos, for his continuing power is necessary to uphold and renew the creatures (Ps. 104:29-30). The regularities of nature, as expressed in the promise to Noah (Gen. 8:22; cf. 9:13-17), are based upon Yahweh's covenant faithfulness.

When God looks upon his works, seeing that each creature corresponds to his intention and fulfils its assigned function, he pronounces the verdict: "Very good" (Gen. 1:31). Yahweh's name is majestic throughout all the earth (Ps. 8:1—H 8:2), for those who have eyes to see may behold his glory in all his works, and those who have ears to hear may listen to an anthem of praise sung by all creatures (Ps. 19:1-4—H 19:2-5; Rom. 1:20). The creation faith represents a repudiation of all metaphysical dualism which leads men to suppose that the created world is evil and to seek a pathway of escape into the higher realm of pure Being. Likewise it means the surrender of ascetic practices, "for everything created by God is good, and nothing is to be rejected if it is received with thanksgiving" (I Tim. 4:4). The positive view of man's life on earth, including bodily pleasures, is expressed admirably in Ps. 104, which climaxes with the prayer that God may "rejoice" in all his works even as the psalmist, contemplating the wonderful character of the creation, rejoices in the Lord.

Most striking, however, is the anthropocentric meaning of creation. Yahweh did not create the earth as a chaos, but he formed it to be man's dwelling place (Isa. 45:18); this idea is expressed in both creation stories, particularly that of P. In the deepest sense, God's creation was for the covenant—i.e., it provided both the setting and the foundation for the relationship between God and man which alone gives meaning to man's life (cf. Ps. 73:23-26). The works of God's creation are chiefly for the benefit of man (Syr. Apocalypse of Bar. 14:18), although they are intended to remind him constantly of the goodness of God and to awaken within him the impulse to praise his Creator. The natural world is man's God-given habitat, wherein he is to find joy in the service of God. Thus the doctrine of creation frees man from the alternatives between which human thought often moves: either the materialistic enjoyment of the natural world for its own sake, or the verdict that the world of change and death is essentially meaningless.

d. Man's position of honor. Both creation stories affirm, in different ways, that man is assigned the highest place of all God's creatures (*see* MAN, NATURE OF, OT). In the J story the man (האדם) is formed from the ground (האדמה), to which he must return at death. But his special status is symbolized by saying that he is created first (contrary to the P account), that a portion of the earth-wilderness is converted into a garden for his sake, and that the animals are created with the thought of finding a companion for him. His special relationship to God is symbolized by the animation of his body by the divine breath (Gen. 2:7), and his dominion over the animals is indicated by his authority to give them names (2:20; *see* CREATURES, LIVING). Above all, he is the creature who lives vis-à-vis God, and whose life is incomplete apart from the woman, the person who "corresponds to him" (2:18, 21-24; cf. the "male and female" of Gen. 1:27; 5:2).

In the P account the creation of man occurs at the climax of the creative drama. The plants and the animals stand in only an intermediate relation to God, for they are brought forth by the earth in response to his command (Gen. 1:11, 24). But the immediate relation of man to God is symbolized by a solemn decision, announced in the heavenly council: "Let us make man in our image, after our likeness" (1:26-27; cf. 5:1; 9:6). The anthropomorphism (*see* GOD, OT VIEW OF, § 3*a*) of this statement should not be toned down by attempting to define the IMAGE OF GOD as man's "spiritual nature," "soul," "freedom," "self-transcendence," etc. The application of the same language to Seth, a son in Adam's image (5:3; cf. vs. 1), indicates that man, in his total bodily existence, was made in the image of God, although the immediate reference is probably to the divine beings who surround God (cf. Ps. 8:5—H 8:6).

In Gen. 1, however, the intention is not to define man's essence or God's nature, but rather to indicate man's task and his relationship to God. As God's living image on earth, man is to act as his representative. He is the administrator of God's works. Hence the thought quickly moves from the "image" to the announcement that God has given man a special blessing and has commanded him to exercise dominion over the earth (1:28). Likewise in Ps. 8 the thought that man has been made but a little less than God (or the angels) is quickly followed by the thought that Yahweh has put all things under his feet (Ps. 8:6-8—H 8:7-9). Man is to exercise sovereignty within God's sovereignty, so that all earthly creatures may be related to God through him.

God crowns man with glory and honor, not only by making him a king within his empire, but also by singling him out for his special concern. To the psalmist, the greatness of God's creation prompts the wondering query as to why God chooses to notice and care for man (Ps. 8:3-4—H 8:4-5). Man is made to have fellowship with God. He is the only creature who can answer God, either in defiance or in trust. Although all God's creatures are summoned to praise

him, man is the only creature in whom praise can become articulate. His life is made for conversation with God, for a dialogue in an I-and-thou relation. Thus it is said of Israel that Yahweh has formed a people for himself that they may declare his praise (Isa. 43:21) and thus fulfil the vocation of every man.

3. Beginning and end. Just as Israel traced a historical line back to the Creation, so it looked forward in hope toward the end when the Creator's purpose would be finally realized. The purpose of history is grounded in the will of the Creator, who, in the language of Second Isaiah, is "the First and . . . the Last" (Isa. 44:6; 48:12; *see* GOD, NAMES OF, § D4*b*). Creation is fundamentally an eschatological doctrine. The opening words of Genesis: "In the beginning God," correspond to the prophetic expectation: "In the end God."

a. Threats to God's creation. Although the Creator's work was finished in the beginning (Gen. 2:1), the Bible also speaks of threats to God's creation which he must overcome before his purpose is finally realized. The first threat is that of chaos. The priestly creation story, which is influenced by the mythopoeic thought of ancient man (*see* §1*a above*), portrays a creation out of chaos—the primeval waste and void (תהו ובהו) and the darkness of the Deep (תהום; Gen. 1:2). God's work of creation did not destroy the chaos and darkness but pushed them back, so to speak. Light was separated from the primeval darkness (vss. 3-5), a firmament separated the upper and lower waters (vss. 6-8), and the waters under the heaven were gathered together in one place so that dry land might appear (vss. 9-10). According to this view, chaos surrounds the habitable world on every hand. We can best understand this portrayal as one which comes out of experience, rather than objective, rationalistic inquiry. Ancient man knew existentially that his life was suspended above the formless Abyss and hemmed in by the waters of chaos (*see* WATERS, MANY), which threatened to engulf his world.

Chaos imagery recurs throughout the OT, especially in poetic contexts. A psalmist affirms that the earth belongs to Yahweh,

> for he has founded it upon the seas,
> and established it upon the rivers
> (Ps. 24:2; cf. 136:6).

God has made the firmament strong and assigned boundaries to the primeval sea (Job 38:8-11; Pss. 33:7; 104:7-9; Prov. 8:27-31; Jer. 5:22). Indeed, God watches over chaos (Job 7:12), and if the rebellious waters lift up, he rebukes them and they flee (Pss. 18:15—H 18:16; 77:16).

He was victorious over the chaos monster, Rahab or Leviathan (Job 9:13; Pss. 74:13-14; 89:9-10—H 89:10-11), and he commands the serpent that still lurks at the subterranean basis of the earth (Amos 9:3). In the NT a seer declares that in the end time, when God's redemptive work is complete, the sea will be no more (Rev. 21:1), and there will be no more night (22:5). In the meantime, the Creator's work must continue. For unless he upholds the creation by his power, the waters of chaos would sweep in and the earth would return to the pre-creation void, as at the time of the Flood (Gen. 7:11; 8:2). In a time when the foundations of the earth shake and the waters roar and foam, the man of faith confesses that God alone is his refuge and strength (Ps. 46:1-3—H 46:2-4).

To the prophets, the work of God was threatened even more by man's sin. Admittedly, the idea of a fallen creation seems not to have been expressed in the OT. In the J epic, the story of man's banishment from the Garden of Eden (Gen. 3) is intended as a background and preparation for the call of Israel, as personified in Abraham (Gen. 12:1-3), and otherwise had little influence upon OT tradition. Neither the priestly account of the Creation nor the creation psalms (Pss. 8; 104) contain the somber note that "every imagination of the thoughts of [man's] heart was only evil continually" (Gen. 6:5). Although the priestly account of the Flood portrays almost complete divine judgment upon the creation, the creation still bears the signature of God, and the divine image is not effaced (cf. Gen. 9:6). But if the OT does not speak of a fallen creation, some of its prophets speak of Israel's fallen or perverted history, whether the tragedy is traced to the entrance into Canaan (Hosea) or to the time of the people's beginning in Egypt (Ezekiel). Their diagnosis of Israel's sickness is not based upon a general teaching about man's sinfulness, but upon the empirical reality of Israel's persistent blindness and rebellion. Sin, it was said, is "unnatural," a mysterious fault which characterizes man alone (cf. Jer. 17:9). The animal knows his master, but Israel does not acknowledge her Lord (Isa. 1:3)! The birds follow their homing instincts, but Israel does not know Yahweh's ordinance (Jer. 8:7)! With something other than poetic exaggeration, Hosea declares that even nature has been affected by the corruption of Israel's sin (Hos. 4:3), and Jeremiah envisions Yahweh's judgment falling so heavily upon his people that the earth returned to pre-creation chaos (Jer. 4:23-26; the language in vs. 23 echoes Gen. 1:2).

From Jewish scripture the rabbis derived the view that man's heart is the arena of conflict and decision between two tendencies, the "evil impulse" and the "good impulse" (cf. Ecclus. 15:14-15; *see* FALL). It remained for Christian interpreters to view historical tragedy in the dimension of a fallen creation. The way was prepared, however, especially in the apocalyptic circles of Judaism, by the story of Satan's rebellion against the Creator and his fall from status within the heavenly council (*see* SATAN). According to this view, history is the scene of God's struggle with Satan, the ruler of the present age, who seeks to establish a rival kingdom and to seduce men into his service. But even this view presupposes a historical, rather than a metaphysical dualism. Satan is not coeternal with God, but is a parasite on God's creation. His rule lasts only as long as men are deceived by him; and in the last day, when God's victory is complete, he will be destroyed.

b. The new creation. According to Israel's prophets, when once the judgment of God has been accomplished, he will make a new beginning, giving man a new heart (Ezek. 36:26-28) and bringing him into a new covenant relationship (Jer. 31:31-34; cf. Hos. 2:18-23—H 2:20-25). Not only will man enter a new history, but the nonhuman creatures will be quick-

ened and transformed (Isa. 11:6-9; Hos. 2:18—H 2:20). Thus prophetic eschatology moves toward the vision of the new creation—"the new heaven and the new earth" (Isa. 66:22)—which figured prominently in exilic and postexilic prophecy.

The theme of the new creation dominates the message of Second Isaiah, who grasps profoundly the interrelation of creation and history (*see* § 1*c above*). At one level of thought, Yahweh's power and wisdom in creating heaven and earth is the ground of assurance that he will redeem his people (Isa. 40:12-31; 42:5-9); but at a deeper level the prophet perceives that the new beginning in history will be God's new act of creation. In a striking passage, he interprets the old myth about the chaos monster in historical terms (51:9-11). Yahweh's victory over Rahab occurred at the beginning of Israel's history, when he created (ברא) Israel to be his people (cf. 43:1). At that time Yahweh dried up the waters of the "great deep" (תהום רבה)—i.e., the Red Sea—so that his redeemed people could pass over (cf. Ps. 77:16-20—H 77:17-21). To the prophet, this creative event guarantees that the Creator-Redeemer is about to make all things new. The God who is Lord over the Deep (Isa. 44:27) summons Cyrus to be his agent of deliverance and the herald of a new day, not only for Israel but for the benefit of all mankind. Moreover, nature will be marvelously transformed (41:17-20; 43:18-21) as it is taken up into the new history (cf. Rom. 8:19-23).

It is characteristic of eschatology that the visions of the end time are drawn in terms of the pictures of the first things. Creation anticipates the consummation; and the consummation is the fulfilment of the beginning. The goal of history will be a return to the beginning, not in the sense of a historical cycle which repeats itself, but in the sense that the original intention of the Creator, frustrated by creaturely rebellion and threatened by the surging powers of chaos, will be fulfilled.

4. Creation viewed christologically. During the Hellenistic period the doctrine of creation was a cardinal tenet of faith which distinguished Judaism from other religions or philosophies. The LXX translators avoided using the Greek verb δημιουργέω with respect to God's creative action, owing to its association with the idea of a worker who manufactures or produces things out of previously existing material. The Creator is not the demiurge of Gnostic thought. They chose instead other verbs, especially κτίζω, which express the absolute sovereignty of God. The NT likewise avoids using δημιουργέω (although the substantive form occurs in Heb. 11:10) and prefers κτίζω and its derivatives. The Christian faith is at one with Judaism in affirming that God alone and by his word created the world and determines its purpose from beginning to end. Frequent reference is made to the original creation (Mark 10:6 = Matt. 19:4; Mark 13:19 = Matt. 24:21; Rom. 1:20; II Pet. 3:4) or to that which happened "from the foundation of the world" (Matt. 25:34; Luke 11:50; John 17:24; Eph. 1:4; Heb. 4:3; I Pet. 1:20; etc.). The apocalyptic vision of the Creator enthroned in glory, while his many creatures praise him (Rev. 4–5), vividly expresses God's sovereignty over the whole course of history.

a. Christ and creation. Just as in the OT creation is viewed in the perspective of the Yahweh's mighty acts of history, so in the NT the church understands creation christologically—i.e., in the light of God's action in Jesus Christ, who is the fulfilment of Israel's sacred history and the inaugurator of the New Covenant. Since Christ is the center of history, he is also the revelation of God's purpose, which undergirds the whole creation. The unity of creation is not disclosed in a rational principle but in God's purpose "which he set forth in Christ as a plan for the fulness of time, to unite all things in him, things in heaven and things on earth" (Eph. 1:9-10). In him all things cohere or "hold together" (Col. 1:17), and, indeed, he "upholds" the universe by his word of power (Heb. 1:3). He is the bearer of the meaning of history and creation. Therefore, men of faith, confessing the decisive character of God's action in Jesus Christ, could say that man's salvation was predestined in Christ before the foundation of the world (Matt. 25:34; Eph. 1:4; I Pet. 1:20; Rev. 13:8; 17:8). *See* PREDESTINATION; ELECTION.

By making use of the conception of pre-existence, an important further step was taken in Pauline and Johannine circles: God created the world through Christ. The OT background for this view is the conception of WISDOM as the first product of God's creative work. Israel's sages not only declared that wisdom is the supreme trait of God, but they also regarded "her" as the form of God's creative activity and, indeed, the personal agent of his creation (Job 28:12-27; Prov. 8:12-36). Thus their thought moved in the direction of hypostatizing Wisdom (Wisd. Sol. 7:22–8:1). Furthermore, the doctrine of creation by the Word (*see* § 2*a above*) was the decisive line of theological thought in the OT. These two views—pre-existent and creative Wisdom and creation by the Word—converge in the Prologue to the Fourth Gospel, which declares that the redeeming Christ is none other than the Logos of creation (John 1:1-18; cf. I John 1:1-3; 2:13-14).

By his juxtaposition of the prepositions "from" and "through," Paul makes a similar affirmation. There is one God "*from* whom are all things and for whom we exist," even as there is one Lord, Jesus Christ, "*through* whom are all things and *through* whom we exist" (I Cor. 8:6). A deutero-Pauline writer says of Christ that "in him all things were created, in heaven and on earth," for he is "the image of the invisible God, the first-born of all creation" (Col. 1:15-17; and similar language is found in Heb. 1:2-3). Everything has its center in Christ, through whom God creates, upholds, and redeems the world.

The doctrine of creation, then, underlines and validates the truth that history, from beginning to end, is under the sovereign purpose of God as revealed in Jesus Christ. The Fourth Gospel begins by echoing the opening words of Genesis: "In the beginning" and speaks about the light shining in the darkness (cf. II Cor. 4:6). And even as Christ was in the beginning, so he will triumph at the end (I Cor. 15:24-28; Revelation). Indeed, the very title which Second Isaiah had applied to God is applied in the book of Revelation to Christ: he is "the Alpha and the Omega," "the first and the last," "the beginning

and the end" (Rev. 1:17; 22:13; cf. 3:14). The whole sweep of history, from creation to the new heaven and the new earth, has its fulcrum in him.

b. The new creation in Christ. The heart of the NT gospel is the proclamation that in Christ, God has already inaugurated his kingdom, has already introduced the new history for which prophets of the OT hoped. Echoing the message of Second Isaiah, the NT declares that the new creation has already come. At the same time, however, the new creation is a promise and foretaste of the end time, when there will be a new heaven and a new earth, free from the corruption of evil and death (Rev. 21:1-4), and when all creatures in heaven and earth will join in an anthem of praise to the Creator (Rev. 4:8-11; 5:13). Wherever God's action in Christ is effective for man's salvation, he is creatively at work, after the manner of the original creation. Thus Paul, commenting on the transformed life of the man of faith, exclaims that God's redemptive deed is nothing less than a new act of creation: "For it is the God who said [at the dawn of history], 'Let light shine out of darkness,' who has shone in our hearts to give the light of the knowledge of the glory of God in the face of Christ" (II Cor. 4:6). In another context he declares that the new life of faith has its source in the sovereignty of God, who creates *ex nihilo* by calling into existence the things that do not exist (Rom. 4: 17).

The light of God's new creation, however, breaks forth in the darkness, which is the essence of the "world" (John 1:5, 10; 3:19; 8:12; 12:35-36, 46; I John 1:5-6; 2:8-9, 11). In both Pauline and Johannine writings κόσμος (*see* WORLD, NATURE OF THE) occasionally designates the world as God's creation (e.g., John 17:4; Rom. 1:20; Phil. 2:15), but usually it means man's historical sphere—not only the earthly stage of history, but the context of social relationships in which he lives. In the latter sense, the κόσμος is a fallen world, for it is characterized by enmity to God and lies under the dominion of evil powers (John 12:31; 16:11; I Cor. 1:21; Gal. 4:9; I John 5:19; etc.). Moreover, Paul goes so far as to say that the whole created order, affected by the sin of man, groans under the bondage of corruption, waiting eagerly for the creative and redemptive act that will reveal the sons of God (Rom. 8:19-25). But the promise of the coming redemption, not only of man in the fullest sense but of the whole creation as well, has already been given to those who receive the "first fruits of the Spirit." Through Christ, God has already won the decisive victory over the world, and thereby has initiated a new history, a new humanity. "Therefore," says Paul, "if any one is in Christ, he is a new creation; the old has passed away, behold, the new has come" (II Cor. 5:17; cf. Gal. 6:15).

In Jesus Christ, God has restored the human pattern intended at the original creation. He is the New Man, of whom Adam was a foreshadowing type (Rom. 5:12-14; cf. I Cor. 15:21-22). He is the "likeness of God" (II Cor. 4:4) and the "image of the invisible God, the first-born of all creation" (Col. 1: 15)—this language recalls the "image of God" of Gen. 1:26, just as Heb. 2:5-9 interprets the man "crowned with glory and honor" (Ps. 8:4-6) christologically. He is the beginning of the new humanity into which any man may be born, not through biological parentage, but by his decision in response to divine grace. To be sure, the old Adam lives on, the flesh wars against the Spirit, the world presents its temptations and frustrations; but the new has come and the old is passing away, for "we all, with unveiled face, beholding the glory of the Lord, are being changed into his likeness from one degree of glory to another" (II Cor. 3:18). Through Christ, says a deutero-Pauline writer, men may put on the "new nature, which is being renewed in knowledge after the image of its creator" (Col. 3:10; cf. Eph. 4:24). The new man, "created in Christ" (Eph. 2:10, 15), lives in a new relation to God and therefore in a new relation to his fellow man. Mankind, separated by a dividing wall of hostility, is reunited by God's reconciling action in Christ (Eph. 2:11-22), and men begin to walk in "newness of life" (Rom. 6:4).

Thus the Christian community, from the standpoint of faith given by God's revelation in Christ, looks both backward and forward. It traces God's purpose to the first creation, saying: "In Christ all things were created"; and it lives toward the future, saying: "God will sum up all things in Christ." The full disclosure of the new creation lies in God's future, when his kingdom will fully come and the new heaven and the new earth will appear. Even as the dramatic story of Gen. 1 is not a scientific account of the origin of the universe, so the poetic visions of Revelation are not a speculative projection into the future. The truth of both is perceived by the person who participates in the new creation in Christ and who knows in faith that the whole span of history, from beginning to end, is embraced within the sovereign purpose of the Creator and Redeemer.

CREATURE(S), LIVING [חיה(ה) נפש, ψυχή ξῶσα, a living being]; LIVING BEING (Gen. 2:7). In the Yahwist creation story it is said that Yahweh breathed the "breath of life" into man he had formed from the ground, and that he became a נפש חיה (Gen. 2:7); and it is implied that the animals became "living creatures" in a similar manner (2:19-20; cf. Ps. 104:29-30). Elsewhere, however, the expression is always applied to animals or water creatures (Gen. 1: 20-21, 24, 30; 9:10, 12, 15-16 [all P]; Lev. 11:10, 46; Ezek. 47:9).

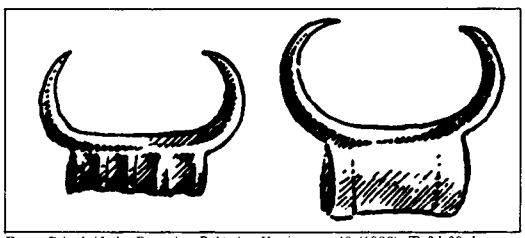
See also CREATION § 2*d;* LIFE; SOUL.

B. W. ANDERSON

CREDIT, CREDITOR. *See* DEBT.

CREEPING THING(S) [רמש, *from* רמש, to creep; שרץ (*usually* SWARMING CREATURES *or* SWARMING THINGS), *from* שרץ, to swarm, teem; KJV ἑρπετόν (*alternately* SERPENT; RSV REPTILE), *from* ἕρπω, to move slowly]. A term referring to reptiles, insects, or some other animals.

While רמש, *remeś*, designates all animals in Gen. 9:3 ("moving thing") and water animals in Ps. 104: 25 ("living thing"), its usual sense is "reptiles," which are distinguished from the wild beasts, the domesticated beasts, the birds, and the fish (Gen. 1:24, 26; 7:14; I Kings 4:33; Ps. 148:10; etc.).



שרץ, *sheres*, refers to water creatures in Gen. 1:20 ("living creatures"); Lev. 11:10, and to certain flying "insects" in Lev. 11:21; Deut. 14:19; it more commonly serves as a general term for various creatures that appear in large numbers, small quadrupeds, reptiles, and insects (Gen. 7:21; Lev. 5:2; 11:29, 41, 44; 22:5; etc.). W. S. McCULLOUGH

CREMATION. *See* BURIAL.

CRESCENS krĕs'ənz [Κρήσκης] (II Tim. 4:10). A companion of Paul. If this passage may be taken as a genuine Pauline fragment, it indicates that Crescens had been with Paul at the place of one of the imprisonments but had left for Galatia. The reason for his going is not indicated, and the time cannot be determined. Some MSS read "Gaul" instead of "Galatia," but the latter is better attested.

J. M. NORRIS

CRESCENT [שהרנים] (Judg. 8:21, 26 [KJV ORNAMENT]; Isa. 3:18 [KJV ROUND TIRE LIKE THE MOON]). A new-moon-shaped decorative pendant or AMULET worn around the neck or sometimes sewed on garments. Crescents were of gold, silver, or bronze. Fig. CRE 52. J. M. MYERS

From *Zeitschrift des Deutschen Palästina-Vereins*, no. 49 (1926), Tafel 30; by permission of Otto Harrassowitz

52. Gold crescents, from Shechem

CRETE krēt [Κρήτη]; CRETANS krē'tənz. A large island in the Mediterranean SE of Greece. The highly advanced Minoan civilization flourished there during the first half of the second millennium B.C. Crete was known as Kaptara to the Akkadians, Keftiu to the Egyptians, and CAPHTOR to the Hebrews. Jews were settled on the island by the second century B.C., if not earlier. Gortyna, on Crete, is one of the cities to which the Roman consul Lucius addressed a letter urging that the Jewish inhabitants be well treated (I Macc. 15:23). Crete is listed in Acts 2:11 as one of the places whence Jews came to Jerusalem. Paul sailed along the coast of Crete on his voyage to Rome (Acts 27:7-21). Christianity was introduced early into the island, despite the low moral conditions there. Titus was appointed to supervise the work of the churches and to counteract Judaizing tendencies (Tit. 1:5-14).

J. C. GREENFIELD

CRIB [אבוס, feeding trough, *from* אבס, to feed]. The receptacle for fodder; at times the stall or MANGER for the ox (Prov. 14:4 KJV) or the ass (Isa. 1:3). The wild ass will hardly use a crib (Job 39:9).

CRICKET [חרגל] (Lev. 11:22); KJV BEETLE. Any of several dark-colored insects of the family *Gryllidae*.

The identification of the edible creature designated by חרגל (*hargōl*) is uncertain, though it may be doubted if it is a cricket. The LXX takes it as ἀκρίς, "grasshopper, locust" (cf. Aristotle *History of Animals* V.28 [555*b*, 18]), and this is also the Jewish interpretation. Whether it is a long-horned grasshopper (*Tettigoniidae*), as in modern Jewish usage, or one with short antennae (*Acrididae*), cannot be determined. *See* FAUNA § F2. W. S. McCULLOUGH

CRIMES AND PUNISHMENTS. A crime is an act in violation of a penal law prohibiting such an act and imposing a penalty for the commission of it. The term "crime" refers properly to offenses of a public nature, to wrongs committed against society and punished by society in its own name. Biblical LAW, however, does not, save for a few cases, place the responsibility of prosecuting offenses upon a public body. As in ancient law generally, it is the person injured who initiates action in biblical law, though there is the recognition—particularly in the case of capital crimes—that the private prosecutor acts in the general interest as well as his own. This expresses itself in the execution of judgments, where often the entire community participates in punishing the offender.

The fundamental biblical conceptions of crime and punishment are set forth in the law corpora of the OT. Their development and modification during the period of the second temple can be seen in the NT, in which Roman penal law is also reflected.

A. *THE OT CONCEPT OF CRIME AND PUNISHMENT.* 1. The nature of crime. The criminal law of the Bible differs from that of the other legal traditions of the ancient Near East in being pervaded by religious conceptions. In the biblical view, the law is the command of God; hence violation of it is rebellion against God's will—i.e., crime is sin. Moreover, biblical tradition holds that the law was communicated to the Israelite people as a whole, and that responsibility for fulfilling it rests on the entire community. If the community does not punish offenders, God will punish the community. This idea dominates the epilogues of several law corpora, which condition the welfare of Israel upon observance of the laws (cf. Lev. 18:26-28; 26:3-45; Deut. 28). Worship of other gods, sexual offenses, and homicide are singled out as involving the entire community in guilt (cf. the above passages and Deut. 19:10; 21:1-9). Hence the tendency of the laws to punish these offenses by public actions.

The notion of objective guilt, which still operates in the realm of cult and taboo, has but faint echoes in the penal laws of the Bible. As a rule it is the subjective factor, the mind of the doer, which is determinant in evaluating the nature of the offense. The laws distinguish clearly between murder, on the one hand, and homicide through negligence or accident, on the other. Bodily injuries inflicted deliberately and with premeditation are treated differently from those inflicted in sudden heat of passion. However, in the case of homicide, bloodguilt—a religiously grounded concept—is so far considered an objective condition that (*a*) the slaying of the accidental homicide by the "redeemer of blood," while wrong, is not actionable; and (*b*) a homicidal beast must be put to death. In the cultic sphere, penal law recognizes the objectivity of the *ḥérem* status: whoever has incurred it, whether wittingly or not, must be punished. The religion of Israel heightened both the awesome sanctity of all that touched upon God—an objective datum—and the importance of the individual's moral choice—a subjective datum; these laws illustrate the dilemma that may arise out of the clash of the two.

2. The nature of punishment. Punishment of wrongdoers is an attribute of divine justice. "Condemning the guilty by bringing his conduct upon his own head" (I Kings 8:32) is the way of God; in the penal laws, man is commanded to follow it, for "when the wicked perish there are shouts of gladness" (Prov. 11:10).

Capital crimes are a blot upon the whole community. When the law decrees that the capital offender must die, it is not merely to punish him but to "purge the evil from Israel" (Deut. 17:12; cf. 13:5—H 13:6; 17:7; 19:19; 21:21; 22:21-22, 24; 24:7; Judg. 20:13; II Sam. 4:11). Murder lays the "guilt of innocent blood" on the whole community; the murderer must be executed "so that it may be well with you" (Deut. 19:13). Sexual crimes "defile" the land and the people; such crimes too must be purged lest "the land vomit you out, when you defile it" (Lev. 18:24-28).

The deterrent value of the public execution of criminals is also recognized: "And the rest shall hear, and fear, and shall never again commit any such evil among you" (Deut. 19:20; cf. 17:13; 21:21).

Noncapital punishments aim at a correspondence with the offense. Crimes against property are punished in the property of the offender, with multiple damages in cases of theft and fraud. Wilful injuries to the person are governed by the rule of talion: "You shall give life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burn for burn, wound for wound, stripe for stripe" (Exod. 21:23-25; cf. Lev. 24:19-20; Deut. 19:21), whose object is to limit retaliation to the exact measure of the injury. Biblical law diverges from other law systems of the ancient Near East in not regarding any offense against property as a capital crime, and in restricting talion to the person of the offender. *See* §§ C7*b*, D2, *below*.

Despite the religious cast of biblical law, ritual expiation plays a negligible part in punishment. Intentional violations of the law do not, as a rule, entail expiatory offerings (for the exceptions, *see* §§ C3*a*, 7*c*, *below*). Except insofar as capital punishment itself is colored by the idea of expiation (*see* § D1 *below*), the penalties of all deliberate offenses are purely civil. The elaborate system of sin and guilt offerings in Lev. 4-5 is designed exclusively for unwitting violations of the law.

The priestly laws punish some three dozen religious and sexual offenses by the offender's being "cut off from [the midst of] his people" (e.g., Gen. 17:14; Exod. 31:14; Lev. 18:7-29; the complete list is in M. Ker. 1.1). The nature of this punishment, called *kareth*, "excising," by later jurists, is not clear. Many offenses punished by *kareth* are elsewhere in the priestly law punished by death (cf. Lev. 18:8, 29, with 20:11; 18:17 with 20:14; 18:23 with 20:15). In Exod. 31:14-15 *kareth* and death are found together as the penalty for violating the sabbath. It thus appears that a death penalty, rather than banishment or excommunication as has been supposed, is involved. Lev. 20:4-5, in which God threatens to "cut off" the Molech-worshiper himself if the people fail to do so, suggests that it is a divine rather than a human punishment. Specifically, it is punishment by God of an offender whom men have failed to punish,

whether through dereliction or inability (cf. Mekilta at Exod. 31:14). This will answer for the cases which are punished both by *kareth* and by death. For the rest, in which *kareth* alone appears, a kind of penalty *in terrorem* seems to be intended (later law punished these by scourging; cf. M. Mak. 3.1-2). According to Num. 15:30 all violations of the law committed wilfully ("with a high hand") incur the penalty of *kareth*.

3. Terminology. The commonest expressions for criminal offenses are derivatives of חטא, "act amiss," and עוה, "do wrong" (Deut. 19:15; I Sam. 20:1). פשע, "transgression," also serves as "crime," "offense" (Gen. 31:36; 50:17; Exod. 22:8; I Sam. 24:11). Since these terms may also be rendered by "sin," it is not always clear whether a wrong is being considered as an offense against God or against man. The priestly writers call various dishonest acts מעל ביהוה, "trespass against the LORD" (Lev. 6:2—H 5:21; RSV "breach of faith against the LORD"). Particularly scandalous crimes are called נבלה, "base deed," "shameless act" (Deut. 22:21; Josh. 7:15).

The offender is a רשע, "criminal," "guilty man" (Exod. 23:1; Deut. 25:2), or a חטא, "offender" (I Kings 1:21). A capital sentence is משפט מות (Deut. 19:6), a capital crime, חטא משפט מות (Deut. 21:22). One guilty of a capital offense is רשע למות, "guilty of [i.e., justly liable to] death" (Num. 35:31), or בן־מות, "liable to death" (I Sam. 26:16; II Sam. 12:5). If the offense is punished by scourging, he is בן־הכות, "liable to be beaten" (Deut. 25:2). עון, "wrongdoing," may also serve as "punishment" (Gen. 4:13; I Sam. 28:10). "To fine" is ענש (Exod. 21:22; Deut. 22:19), which later comes to mean "punish" in general (so in Mishnaic Hebrew, and perhaps in Prov. 17:26). The penalty later called *kareth* is expressed by the sentence: "That person shall be cut off from his people" (e.g., Lev. 7:20), with slight variations.

The terminology of particular crimes is given in § C *below*.

B. *THE SOURCES.* The law corpora and narratives of the Bible are our chief sources of information. Later Jewish literature, particularly the juristic writings of the Tannaim, contains valuable supplemental and interpretative material. Other law collections of the ancient Near East provide instructive parallels and contrasts.

1. Law corpora. Because the three major law corpora—the laws of JE (in Exodus), P (including H; chiefly in Leviticus and Numbers), and D(euteronomy)—have each a history and style of their own (*see* PENTATEUCH), it is the more notable that, so far as rules of crime and punishment are concerned, there is agreement between them on matters of principle. One may discern degrees of development in the details of a law (e.g., the increasing detail in the law of accidental homicide from JE, to D, to P; *see* §§ C2*a-b below*). A given principle may stand out more clearly in one corpus than in another (e.g., the ban on vicarious punishment: explicit in D, implicit in JE; *see* § C2*c below*). Furthermore, the disparate origins and interests of the corpora are reflected in the selection of offenses with which they deal. The law corpus of JE, the biblical casebook par excellence, contains nearly all the rules concerning corporal and property injuries—rules for which the casuistic formulation is most suitable. P deals most fully with incest, because of its bearing on impurity. In matters of principle, however, no change is evident.

The following characteristics are common to the criminal law of all the law corpora, and distinguish it as a whole from that of the other law collections of the ancient Near East:

a) All the law corpora regard God as lawgiver and as the ultimate sanction of the law.

b) All treat of religious as well as secular crimes.

c) All explicitly and consistently distinguish accidental homicide from murder.

d) None imposes a death penalty for violating a property right.

e) All iterate the principle of talion in such a way as to exclude vicarious punishment.

f) None recognizes class differences among Israelites in fixing penalties.

It must also be noted that the societal framework of all the law corpora is a nonmonarchic, tribal polity. Laws punishing offenses between man and man address themselves in the first instance to the injured man or his kin, rather than to a court; the right of self-help is recognized. Neither the judicial system of the monarchy nor the new categories of crime that came into being with the rise of a monarchic state are reflected in the laws.

This is not to say that the criminal law of the Hebrews had no history. Stages in the development of certain concepts are visible in the conflicts between law and practice as reflected in the narratives, and these will be discussed below. Our present data, however, are hardly adequate to speak of an evolution of criminal law during the biblical period. The inadequacy is twofold:

a) Even assuming the conventional critical dating of the law corpora, it is still not permissible mechanically to date a given law by the assumed date of the corpus as a whole. This is especially true of the criminal law, for rarely are the rules of one corpus taken up and revised by its supposed successor. The fact is rather that each corpus has some rules in common with the others, and some that are either ignored or only slightly touched upon by the others. More disturbing to the historian is the fact that the rules under one heading are commonly scattered through two or more of the corpora. Thus JE, which deals extensively with injuries to person and property, includes only one offense against chastity: seduction. D treats at length of crimes upon women, married and unmarried, but omits the case of seduction; at the same time, its one law concerning bodily injury fits best with the cases of JE. P, though frequently admonishing against idol-worship, contains but one penal law on the subject: the case of Molech-worship; the detailed laws of Deuteronomy are entirely missing. On the other hand, P's one law is not found in D (cf. Deut. 18:10—an admonition, not a penal law). Whatever be the cause of these omissions, it can hardly be the date of the law in question. Offenses against chastity other than seduction were surely known in JE's time, and they cannot have differed much from those enumerated in D. D's one law of bodily injury has its closest analogue in the Middle Assyrian Laws, and can scarcely be consid-

ered a Deuteronomic innovation. Nor is the punishment of Molech-worship likely to have been a fresh creation of P (or H), inasmuch as the offense is noted as early as the time of Ahaz (mid-eighth century).

In these, as in many other matters, it is necessary to combine the data of the various corpora in order to gain a view of Hebrew criminal law of the pre-exilic period. This doubtless involves the risk of obscuring a possible evolution of the law. But, when evidence of such an evolution is lacking, the agreement of the corpora when they do overlap gives grounds for this procedure forced upon us by the meagerness of the data. In these circumstances it is, of course, impossible to treat the laws historically save for a few exceptional cases.

b) The second obstacle in the way of writing a history of Hebrew criminal law is our ignorance of the extent to which biblical law was considered binding in the pre-exilic period. The laws of all societies contain ideal norms that are not actually enforced in life. This appears to be the case of a considerable number of biblical laws, whose ideal and reforming character is patent. The potential value of the historical narrative for dating laws is thus gravely impaired. Had only the account of Jer. 34:8-22 been preserved, it would hardly have been believed that the slave law in question was in fact part of Israel's earliest legislation (Exod. 21:2). But the amount of information available outside the laws concerning the criminal law of Israel is, at best, quite small. Records of criminal cases, court documents, and memoranda such as are found in profusion in Mesopotamia are altogether lacking. The occasional references to crimes in the nonlegal literature of the Bible either involve some unusual circumstance or are too brief to make up this lack. The ideal character of much of biblical legislation, together with our ignorance of the actual disposition of criminal cases in biblical times, makes highly problematic the attempt to date laws by reference to the nonlegal literature.

2. Nonlegal literature. Allusions to points of criminal law outside the legal corpora sometimes agree with the pertinent rule of law, sometimes do not. In the latter case it must be determined whether an evolution in law, or a gap between the ideal rule and actual practice, is involved. This cannot always be done.

Some allusions are of questionable relevance: Jacob's condemnation to death of whoever stole Laban's gods tells more of the power of the family head in a patriarchal society than of the legal penalty for theft at that time. David's impassioned declaration that the rich man of Nathan's parable deserved to die for robbing the poor man of his lamb (II Sam. 12:5) gives no firm basis for assuming that robbery was then a capital crime (note the soberer verdict of vs. 6, which coincides with the penalty—for theft—of Exod. 22:1—H 21:37). Nor does the warning of Prov. 6:31 that the thief "will pay sevenfold; he will give all the goods of his house," sound like more than a hyperbolic expression of multiple penalties.

A significant divergence between law and narrative appears in the attitude taken toward marriage of a paternal sister. Accepted in the patriarchal narratives (Gen. 20:12), condoned as late as the time of David (II Sam. 13:13), it is banned in Lev. 18:9; 20:17 (on pain of *kareth*); Deut. 27:22. Marriage to two sisters, accepted in the Jacob narrative (Gen. 29:21 ff), is banned in Lev. 18:18. The laws reflect the later tendency to broaden the concept of incest. (The prohibited relations continued to increase as time went on; cf. Tosef. Yeb. 3.1.)

Vicarious punishment is prohibited in Deut. 24:16: "The fathers shall not be put to death for the children, nor shall the children be put to death for the fathers; every man shall be put to death for his own crime" (חטא; RSV "sin"). The observance of this prohibition is noted for the first and only time in the narrative of Amaziah's reign (beginning of eighth century; II Kings 14:6). Prior to this several instances of vicarious or collective punishment occur: the household of Achan (Josh. 7:24-26), the population of Jabesh-gilead (Judg. 21:10-11), the priestly clan at Nob (I Sam. 22:19), the sons of Saul (II Sam. 21), and the sons of Naboth (II Kings 9:26). Accordingly the Deuteronomic law has been assumed to be a later development. It is a question, however, whether the evidence warrants the assumption. The instances of Achan and the people of Jabesh come under the special law of the *ḥērem,* which, belonging to the realm of sacred and taboo, operates in accord with divine rather than legal principles (*see below; see also* § C1*a below;* BLOODGUILT; CURSES). The executions of the priestly clan at Nob and the sons of Naboth are nowhere represented as legally justified (the formally correct trial of Naboth in I Kings 21:8-19 results only in his execution). Both cases involve treason, for which it appears to have been customary to execute the whole household of the offender. This custom, by no means confined to ancient Israel, is not to be assumed to have had legal sanction, though it was so common that Amaziah's restraint deserved to be singled out for praise. Saul's sons were executed in extraordinary circumstances: their father had violated a sacred national oath, for which divine wrath had later struck at Israel; Saul was already dead, and the Gibeonites expressly rejected composition. The case is altogether too unusual to serve as a basis for generalization as to the procedure in ordinary crimes. Outside the realm of sacred and taboo, then, there is no evidence whatever of the legal infliction of vicarious or collective punishment. So far as the principle of Deut. 24:16 is concerned, it is already reflected in the early laws of JE: Exod. 21:31 forbids the vicarious punishment of children (*see* § C2*c below*). It can only be said, then, that before—and, one may add, after (cf. Jos. Antiq. XIII.xiv.2)—Amaziah there is evidence that Israelite extralegal practice fell behind a demand of Israelite law that is as old as the earliest law corpus. This is hardly decisive for the dating of that law.

To be sure, Exod. 20:5 represents God as holding children to account for the sins of their fathers "to the third and the fourth generation of those who hate me." This divine prerogative, however, has nothing to do with the legal penalty prohibited in Deut. 24:16, which is imposed and executed by men. (When later prophets transposed the legal formula of Deuteronomy into a theological one, they replaced יומתו, "shall be put to death"—i.e., legally—with ימות, "shall die"—i.e., by divine decree [Jer. 31:30;

Ezek. 18:4 and *passim*].) Far from demonstrating a progression in the conception of punishment, the two passages refer to entirely separate domains, and it is the biblical view that both are concurrently valid. Deuteronomy is so unaware of a clash between the two principles that in 5:9 it reproduces the old formula of Exodus without demurrer. Their simultaneous application in a single law actually appears in Lev. 20:2-5: the people of the land must stone the Molech-worshiper—him alone; if they fail to do so, however, God "will set [his] face against that man and against his family, and will cut them off from among their people." As well consider the first clause of this law a repeal of the second as consider Deut. 24:16 a repeal of Exod. 20:5; Deut. 5:9. God's ways are not man's; a divine prerogative cannot be utilized as a source for penal law.

The nonlegal literature does furnish several examples of the operation of the laws: the redeemer of blood (II Sam. 3:27, 30; 14:6-11); the altar asylum (I Kings 1:51; 2:28 ff); the crime of "cursing" God (and king) and its punishment (I Kings 21:10—the fullest account we possess of a criminal process); the burning of a harlot (Gen. 38:24); the suppression of mediums (I Sam. 28:9); the false prophet (Jer. 26:7-24); and various instances of actions against the worship of other gods.

As a source for the law of the monarchy—virtually ignored by the law corpora—the nonlegal literature is particularly valuable. Whatever we know of crimes against the king and state is derived from it.

3. Extrabiblical Jewish writings. Philo (*On the Special Laws*) and Josephus (Antiq. IV.viii), and, to a lesser extent, the Apoc. and the Pseudep. (e.g., JUBILEES, BOOK OF), are valuable witnesses for the views on biblical law held in various quarters during the last half of the second-temple period. The earliest sources for normative Jewish jurisprudence, the legal writings of the Tannaim (rabbinic jurists of the first century B.C. to the third Christian century), contain much that illuminates biblical law. Of primary interest are the Tannaitic commentaries on the laws: the Mekilta on Exodus; Sifra on Leviticus; Sifre on Numbers and Deuteronomy; and the great codification of Tannaitic law, the Mishna. All were compiled in the third Christian century.

The Jews regarded biblical law as a harmonious whole, and in their disregard of historical considerations, employed exegetical methods that the modern critic must abandon. Yet to the extent that biblical law does share common principles, a synoptic view is an advantage rather than a hindrance. Judiciously utilized, these writings are richly suggestive for the exegesis of the laws.

4. Ancient Near Eastern law. Indispensable for the understanding of biblical law are the other law collections of the ancient Near East. In contrast to the laws of the Bible, the latter are the product of a secular jurisprudence which recognized the state and the king as the promulgators and ultimate sanction of law. To make just laws was considered by the king a divinely imposed duty, but the religious motive rarely enters the laws themselves. The primary concern of the penal law is economic: to safeguard property and make losses good. In the case of murder this may involve a monetary composition, or the replacement of the slain by another person. Life may be sacrificed to protect property. Social status is decisive in evaluating harms and assessing penalties. Sexual crimes, not having the nature of sins against God, are less severely punished. Inasmuch as biblical law is evidently an adaptation of a common law of the ancient Near East, the divergences between it and other representatives of that law are instructive even in details. The following law collections are pertinent to the discussion of the criminal law of the OT: the Laws of Eshnunna (LE), from the first half of the nineteenth century B.C.; the Code of Hammurabi (CH), from the beginning of the eighteenth century; the Middle Assyrian Laws (MAL), from between the fifteenth and thirteenth centuries; and the Hittite Laws (HL), from the fourteenth century(?).

C. *THE CRIMINAL LAW OF THE OT.* The following classification of crimes is based chiefly on the nature of the penalty—on whether the crimes involve capital, corporal, or property punishments.

1. Crimes against God and religion. While all violations of the law offend God as lawgiver (cf. the priestly formulation: the wilful offender "reviles the LORD . . . , has despised the word of the LORD" [Num. 15:30-31]), the following are direct affronts to the majesty and sovereignty of God, and subject the offender to the death penalty.

a. Foreign cults and usages. Having and serving other gods is forbidden in the Decalogue (Exod. 20:3-5). The offense, and incitement to it as well—a form of treason against the theocracy—is punished by stoning (Deut. 13:6-10—H 13:7-11; 17:2-7). The worship of Molech by child-sacrifice is singled out by P and punished in the same way (Lev. 20:2-5). One who prophesies in the name of another god is to be put to death (Deut. 13:1-5—H 13:2-6). A foreign cult pollutes the community; until it is extirpated, all will suffer God's wrath. Hence Num. 25:1-9 recommends the summary slaying of the offender caught in the act (cf. I Macc. 2:24-26; Philo *On the Special Laws* I.54-57).

All that relates to foreign cults is *ḥérem,* "object devoted to destruction": the idols and their decorations (Deut. 7:25), a person who sacrifices to them (Exod. 22:20—H 22:19), even a city that has apostatized (Deut. 13:12-18—H 13:13-19). Persons in *ḥérem* status are to be slain, and things are to be burned (cf. Deut. 7:25), with no possibility of ransom (Lev. 27:29). The *ḥérem* status is contagious: one who appropriates a *ḥérem* object himself becomes *ḥérem;* if he brings it into his house, all in his household become contaminated and must be destroyed (Deut. 7:26; cf. Josh. 6:18; 7:20-26). The effect is thus analogous to the contagious impurity of a corpse (cf. Num. 19:14). The slaying of Achan's household is not, then, an example of "putting sons to death for the sins of their father"; the contagiousness of a taboo status is not subject to limitations by a court.

MAGIC and DIVINATION of every kind—not merely antisocial sorcery (as in CH 2; MAL A 47; H L 9-10, 170)—are banned (Lev. 19:26*b*, 31; Deut. 18:10). One who consults a practitioner of these forbidden arts is subject to *kareth* (Lev. 20:6). A sorceress must not be permitted to live (Exod. 22:18—H 22:17); mediums must be stoned (Lev. 20:27).

Since these offenses are regarded as endangering

the public good, the obligation to prosecute them falls on the witnesses and the community (Lev. 20:2; Deut. 13:6-18—H 13:7-19). Execution usually takes the public form of stoning. The nonlegal literature affords abundant examples of these crimes and their punishment. Here it may be noted that in the monarchy it fell to the king to prosecute them (I Sam. 28:3, 9; I Kings 15:11-13; II Kings 10:18-28; 23).

b. Blasphemy. "Cursing" God is banned in Exod. 22:28—H 22:27, and punished by stoning in Lev. 24:15-16. The verb in question, קלל, means "to contemn," whether by words (cf. II Sam. 16:5-12) or by deeds (I Sam. 3:13; cf. 2:17, 29-30; the RSV "blaspheming" is inept). Later law uses the term נדף, which has the same range of meaning (cf. II Kings 19:22, referring to the speech of 18:33-35; 19:12; and Num. 15:30, where, since a deed is involved, the RSV "reviles" is inept). The euphemism ברך of I Kings 21:10 indicates that קלל of the Exodus law, which appears to have been the basis of the indictment of Naboth, was referred to verbal contempt. This is clearly the meaning of the law of Leviticus, which further restricts the death penalty to the case in which the Tetragrammaton has been uttered (נקב, "pronounce," "designate," as in Num. 1:17; Isa. 62:2; so M. Sanh. 7.5: "The blasphemer is not culpable unless he expressly utters the Name"). This restrictive tendency reaches its culmination in the gloss "unless he abuses the Name by the Name" (Gemara).

The narratives of Lev. 24:10-23; I Kings 21:8-14 illustrate the operation of the law, and show that it fell upon the witnesses to prosecute the offender.

c. Violations of religious institutions. The prohibition of labor on the sabbath (Exod. 20:8-11; 23:12; 34:21; Lev. 23:3; Deut. 5:12-15) is enforced in the priestly writings by the death penalty (Exod. 31:14-15; 35:2), specified as stoning in the exemplary story of Num. 15:32-36. From this story it appears that prosecution of sabbath-breakers was regarded as a duty of the witnesses. There is no other evidence for the enforcement of the death penalty. In Israel of the eighth century it was the custom to suspend all commerce on the sabbath (Amos 8:5); later, however, the ban was not observed (Jer. 17:19-27), and had to be harshly enforced by Nehemiah (Neh. 13:15-22).

The false prophet, who "presumes to speak a word in my name which I have not commanded him to speak, or who speaks in the name of other gods," must die (Deut. 18:20-22). The law is alluded to in several passages of Jeremiah (26:9, 15-16; 28:5-9); the issue is as old as the reign of Ahab (I Kings 22:19-28).

2. Homicide. In the biblical view human life is invaluable. Criminal homicide imposes a culpability that can be expunged only by the killer's life: "Whoever sheds the blood of man, by man shall his blood be shed; for God made man in his own image" (Gen. 9:6). The guilt of bloodshed is so far objective that it extends even to beasts: "For your lifeblood I will surely require a reckoning; of every beast will I require it" (vs. 5). Prosecuting the homicide is the duty of the AVENGER OF BLOOD, but the law holds the community responsible for keeping the redeemer's activity within legal bounds.

Biblical law distinguishes the following types of homicide: murder, accidental homicide, the goring ox, and justifiable homicide.

a. Murder. When a homicide was committed personally and with intent to harm, the killer was a murderer (רוצח) and must be put to death. Intent was presumed if (*a*) the killer lay in wait (Exod. 21:13; Num. 35:20, 22; Deut. 19:11); (*b*) there was enmity between the parties (Num. 35:20-21; Deut. 19:11); (*c*) a murderous implement was used (Num. 35:16-18; note the increase in the detail of the law from JE to D to P). The presumption established by *c*—and surely that of *b* as well—could be defeated by proof of accident.

The murderer was not permitted to ransom his life: "You shall accept no ransom for the life of a murderer who is guilty of death; but he shall be put to death . . . ; for blood pollutes the land, and no expiation can be made for the land, for the blood that is shed in it, except by the blood of him who shed it" (Num. 35:31-33). This prohibition of composition for murder is unparalleled among the laws of the ancient Near East (contrast, e.g., MAL A 10; HL 1-5; CH knows of talion but not of a ban on composition); it is the legal expression of the sanctity of human life expressed in Gen. 9:6*b*. That capital punishment is a paradoxical consequence of this view was recognized by later jurists, and believed by them to have been sensed already by Deut. 19:13*a*: "Lest you think, 'Since one man has already died why should we be guilty of another's death?' Scripture says, 'Your eye shall not pity him' " (Sifre).

It was the privilege of the redeemer of blood to slay the murderer (Num. 35:19; Deut. 19:12), but if he did not, others appear to have had the right to do so, to cleanse the land of evil (II Sam. 4:11).

Homicide resulting from an act committed with a purpose to harm is not distinguished from murder: death caused by a blow struck in a sudden heat of passion (by inference from Exod. 21:18-19; this case is excluded from talion by CH 206-7); death of a pregnant woman who miscarried after having been struck by fighting men (Exod. 21:22-23; cf. CH 210, where also talion is applied, but to the daughter of the killer); death of a slave under the rod (Exod. 21:20). The last law is unparalleled for its interest in the slave as human being rather than chattel: because he has no kin to avenge him—a foreign slave is intended—the law demands that he "be avenged" (ינקם) by Israelite justice. To this extent only does the law take the slave's status into account: since the owner of the slave is privileged to beat him (he is "his money"), death ensuing a day or two after the beating is not punishable. Contrast vss. 18-19, where one who strikes a freeman so that he is confined to bed is not cleared until his victim recovers sufficiently to walk about.

b. Accidental homicide. When the homicide was unintentional, the laws provide an asylum for the killer (Exod. 21:13; Num. 35:9-15, 22-28; Deut. 19:1-10; note that in Numbers and Deuteronomy the killer is still called רוצח, "manslayer"). The examples given are of accidental homicide: while a man is chopping wood, the head of his ax flies off and kills his companion (Deuteronomy); a man involuntarily (בפתע, "of a sudden") pushes another to his death, or, with-

out seeing him, throws a stone or an implement that kills him (Numbers). Exodus characterizes the slaying as occasioned by God. Establishment of the asylums is a communal responsibility: if the manslayer is slain by the redeemer of blood before he can reach the asylum, there is bloodguilt on the community—though the redeemer is not accountable (Deut. 19:10). *See also* CITY OF REFUGE.

c. The goring ox. When a man's beast—the law speaks of an ox—commits homicide, two legal personalities are involved: the beast, upon which an objective bloodguilt lies, and the owner, whose degree of responsibility is the subject of the law of Exod. 21:28-32. If the ox was not known for goring, it is stoned, and its carcass is taboo and may not be eaten; the owner is innocent. But if the ox was known to gore, and its owner, despite notice thereof, neglected to keep his ox in, and it gored someone to death, both ox and owner must die. However, since the owner neither purposed harm nor committed it personally, the law permits him to ransom himself, with the consent of, and by the sum fixed by, the victim's kin. The law is the same if the victim was another's son or daughter: then too it is the owner—not his son or daughter—who must suffer punishment. Should the habitual gorer kill a slave, it must be stoned, and, kin being absent, the slave's owner receives his value.

These laws are illuminated by comparison with the corresponding Babylonian laws (LE 54-55; CH 250-1). While in language and style there is a striking resemblance, the latter know nothing of the one constant factor in all the clauses of the biblical law: the stoning of the ox and its taboo status. The religiously grounded notion of bloodguilt has no echo in these laws, whose sole interest is to compensate the victim's party for their loss. The Babylonian laws are silent concerning the goring of a son or daughter, but in other cases of criminal negligence (CH 116; 229-30) it is laid down that if the victims are children, the child of the offender is put to death. Such a conception appears to underlie, and to be repudiated by, Exod. 21:31, which thus anticipates the principle expressed in Deut. 24:16. The Babylonian laws make it possible to appreciate the distinctively Israelite cast of the biblical laws on the goring ox.

d. Justifiable homicide. Slaying in self-defense entails no bloodguilt. A householder is privileged to slay a burglar breaking into his house, the presumption being that the night housebreaker would not shrink from murder. (Presumption of thievery alone does not justify killing in Hebrew law, since even the convicted thief is punished only in his property, not his life; cf. Mekilta at Exod. 22:1.) The daytime housebreaker, against whom there is no such presumption, may not be slain, but is subject to multiple damages (H Exod. 22:1-2; the RSV has transposed the verses). Comparison with Babylonian law is instructive: LE 12-13 subjects daytime trespass to fine, nighttime trespass to death. However, since CH 21 makes every housebreaking, regardless of whether by day or by night, liable to summary slaying, it is clear that presumption of theft is sufficient to warrant killing the culprit in Babylonian law. LE's distinction between day and night is to be understood in this light: the night trespasser is presumed a thief and may therefore be put to death.

The narratives furnish one other type of justifiable homicide: slaying in battle, which does not privilege the redemption of blood (II Sam. 2:18-23; cf. 3:26-30; I Kings 2:5).

3. Sexual crimes. Sexual offenses cause "impurity" (טמאה) and "defile" (חלל, טמא) the victim (Gen. 34:5, 13, 27; 49:4; Lev. 19:29; 21:9; Num. 5:29; Deut. 24:4; Hos. 5:3; 6:10). Except for cases in which amends can be made (viz., the rape or seduction of an unmarried woman), the legal penalty for such offenses is death. The guilt and pollution they bring on lies upon the whole community (Gen. 20:9; 26:10; Deut. 24:4).

a. Violations of marriage. While the Israelite conception of marriage had, in common with the rest of antiquity, a secular, economic aspect, it went its own way in considering the marriage bond as divinely sanctioned. Later texts speak of a sacred covenant (Prov. 2:17; Mal. 2:14), but the idea is as old as the parable of Hos. 1–3, which presupposes it (cf. also Ezek. 16, especially vs. 8). Hence ADULTERY is conceived of, not merely as a violation of the husband's rights, but as a sin against God (Gen. 20:6; 39:9; Ps. 51:1, 4). This accounts for the salient difference between biblical and Near Eastern law on this head: the latter, regarding adultery as a wrong against the husband alone, gives him the right to pardon his wife (and her paramour) if he wishes (CH 129; MAL A 14-16; HL 198).

The laws define as adultery the voluntary cohabitation of a married woman—biblical, like Babylonian law (CH 130), does not distinguish the betrothed from the married woman in this respect—with a man other than her husband. Both the woman and the man are put to death (Lev. 20:10; Deut. 22:22-24, where stoning is specified; cf. John 8:3-7). The presumption of consent is the subject of Deut. 22:23-27: when the offense was committed in open country, where no help was available to the woman, she is presumed to have been forced, and the man alone is executed; when it occurred in the city, she is presumed to have been willing, and is stoned too (cf. HL 197). What constitutes a marriage tie requisite for adultery is treated in Lev. 19:20-22: the violation of a slave woman who has been designated (יעד=חרף of Exod. 21:8) to marry a man, but has not yet been freed or redeemed, is not considered adultery. "Designation" of a slave woman, unlike betrothal (which is possible only with a freewoman), does not create a tie constitutive of adultery. The violator must indemnify the injured man (cf. LE 31; בקרת is best taken as related to Akkadian *baqāru,* "have a claim"), and bring a guilt offering.

Prosecution of the adulteress (and her paramour) was the duty of the husband (cf. Num. 5:11-31; *see* JEALOUSY, ORDEAL OF; Prov. 6:32-35). The law does not recognize the wife's right to proceed against her husband in case of infidelity.

b. Violations of chastity. From the law of the seducer (*see below*) it appears that ordinary fornication —in polygamous Israel the nonmarital union of any man with an unmarried woman—was not punishable. Hence it is that harlotry (זנות) is prohibited (Lev. 19:29; Deut. 23:17—H 23:18) but not penalized. From Lev. 21:7 it is clear that a nonpriest could marry a harlot, and this is borne out by the narra-

tive of Judg. 11:1. An exception is the case of the priest's daughter, whose harlotry profanes her father; she must be burned (Lev. 21:9; cf. CH 110). The law of the newlywed wife who is discovered to be non-virgin and is stoned (Deut. 22:20-21) leaves it uncertain when defloration occurred. That she was still "in her father's house" is consistent with an interpretation that she was violated after betrothal (cf. CH 130), making her an adulteress (so Sifre). But it is equally possible to take it as having occurred before, in which case the law of Deuteronomy will be more severe than the others (Philo *On the Special Laws* III. 81 so interprets, in accord with his view that fornication is a capital crime [51]; so too Jos. Antiq. IV.viii. 23). Judah condemns Tamar to burning (Gen. 38:24) because she was considered inchoately married to her levir, Shelah (she is still Judah's "daughter-in-law"); her harlotry was therefore adulterous. *See* MARRIAGE.

Rape and seduction of an unbetrothed virgin are distinguished. A man who has seized (תפש) a maiden and forced her must pay her father fifty shekels (her marriage present) and take her to wife; he may never divorce her (Deut. 22:28-29). If he has seduced (פתה) her, he must also pay her marriage present, but her father may refuse to give her in marriage. If the seducer marries her, she is not guaranteed against subsequent divorce, presumably because she was a willing partner in the offense (Exod. 22:16-17—H 22:15-16).

c. Incest. The idea of what constituted a prohibited degree of kinship for sexual relations appears to have broadened during the course of biblical times (*see* § B2 *above*). Deut. 27:20, 22-23, curses the man who cohabits with his father's wife (=23:1), his paternal or maternal sister, or his mother-in-law. This list is obviously incomplete, and even the fuller enumeration of P (Lev. 18:6-18; 20:11-21) omits the union of father and daughter (CH 154; HL 189). The priestly law penalizes by the death of both parties (*a*) union with father's wife (Lev. 20:11), (*b*) with daughter-in-law—called תבל, "mismating" (vs. 12; RSV "incest")—and (*c*) with a woman and her mother—called זמה, "depravity" (RSV "wickedness"), and punished by burning (vs. 14). Other cases carry no legal penalty. Later law prescribed scourging for incest not punished by death, but imported several more relations into those laws applying the death penalty (see M. Mak. 3.1; Sanh. 9.1; *see* INCEST).

d. Unnatural connection. Sodomy and BESTIALITY, respectively termed תועבה, "abomination," and תבל, are punished by the death of both parties—including, in the latter case, the beast (Lev. 18:22-23; 20:13, 15-16). Contrast other Near Eastern laws: MAL A 20 punishes sodomy with sodomy and castration; HL punishes relations between father and son with death (189); it distinguishes bestiality with cattle, sheep, and pigs—which is subject to death (pardonable by the king)—from bestiality with horses and mules, which entails no punishment (187-88, 199; 200).

4. Insubordination and treason. The authority of parents has divine sanction (Exod. 20:12; Lev. 19:3). Striking them (Exod. 21:15) or contemning them (Exod. 21:17; Lev. 20:9; for the meaning of קלל, cf. the parallel Deut. 27:16) is punishable by death (CH 195 penalizes striking one's father by loss of the hand; note that in every biblical law both father and mother are expressly mentioned). A son who defies his parents' discipline in pursuit of a dissolute life may be haled by them before the city elders; after being charged formally, he is stoned by the people (Deut. 21:18-21).

The authority of the supreme court of appeal that Deuteronomy establishes at the central sanctuary is enforced by the death penalty for all who disobey its decisions (17:8-13).

Exod. 22:28—H 22:27 forbids contemning a tribal chief. From the later application of the law to the king it may be inferred that the penalty for so doing was death (I Kings 21:10; cf. also Josh. 1:18).

Since the law corpora do not anticipate the new social and legal arrangements arising out of the establishment of the monarchy, crimes against the king—treason in the English sense—are not dealt with by them. The narratives, however, furnish valuable information regarding the Israelite concept of treason. It consists in: (*a*) "compassing or imagining the death of the king" (Amos 7:9-10; cf. I Kings 22:18-27; Jer. 32:1-5). Rival claimants to the throne seem to have been regarded as offenders under this head and automatically put to death, at least in the early monarchy (I Kings 1:21, 50; cf. Judg. 9:5; I Sam. 20:31; II Sam. 13:30). (*b*) Violating the king's wives: since the harem of a deceased king passed to his successor (II Sam. 12:8), cohabiting with a king's wives was *ipso facto* usurpation (II Sam. 16:21; I Kings 2:22). (*c*) Levying war against the king in his realm (II Sam. 15:12). (*d*) Adhering to the king's enemies and giving them aid and comfort (I Sam. 22:7-19). (*e*) Slaying the king's officer during the performance of his duty (I Kings 12:18-19). Contemning or reviling the king was a capital offense (II Sam. 16:5-9; I Kings 21:10).

5. Perjury and defamation. The law forbids bearing false reports and false witness (Exod. 20:16; 23:1), and punishes the malicious witness with that penalty he had schemed to inflict upon his fellow (Deut. 19:16-21; cf. CH 1, 3-4). By later interpretation this form of talion applied only when the case had already been decided on the basis of the false testimony (Jos. Antiq. IV.viii.15; M. Mak. 1.6).

A husband who falsely alleges that his newlywed wife was not, as represented to him, a virgin (whose marriage present is fifty shekels [Deut. 22:29]) is whipped by the court of elders before whom the bride's father prosecutes him, and fined a hundred shekels—twice the amount he had sought to recover by his fraud. He may not divorce the woman thereafter (Deut. 22:13-19).

6. Crimes against person. ***a. Kidnaping.*** Practiced chiefly for sale into slavery (cf. Gen. 37:28; 40:15), the stealing of an Israelite for sale, even if the victim is still in the possession of the kidnaper, is punishable by death (Exod. 21:16; Deut. 24:7; cf. CH 14).

b. Bodily injury. For injury inflicted unpremeditatedly, upon a sudden heat of the passions, as when in a quarrel one man suddenly strikes the other with a stone or with his fist, indemnification for any resulting loss of income and physician's costs must be made (Exod. 21:18-19; cf. CH 206). The rule of talion in Lev. 24:19 ("When a man causes a disfigurement in his neighbor, as he has done it shall be done to him") refers to injuries inflicted maliciously and with premeditation, as is clear from the context

(cf. vss. 17, 21) and from its application in Exod. 21: 23-25; Deut. 19:19-21. On the possibility of composition, *see* § D2 *below*.

A woman who comes to the aid of her husband who is being beaten in a fight, and seizes the privy parts of his opponent, loses her hand (Deut. 25:11-12; cf. MAL A 8).

A man who, while fighting another, strikes a pregnant woman and causes her to miscarry, but without further harm to herself, must indemnify the husband for the fetus, paying a sum fixed by him and approved by judges (Exod. 21:22; cf. CH 209, 211, 213; HL 17, 18; for the curious LXX version of Exod. 21: 22-23, making the culprit liable to death if the fetus was fully formed, cf. Philo *On the Special Laws* III. 108-9).

A slaveowner who injures the eye or tooth of his slave must set him free (Exod. 21:26-27). This law has no parallel in Near Eastern law for its humane interest in the slave as a person in his own right; contrast the interest of CH 199.

7. Crimes against property. ***a. Damage.*** One who authors or permits damage to property is at fault and must make full reparation if he personally did the damage (Lev. 24:18, 21*a*), or permitted it to occur through negligence (Exod. 21:33-34, 36; 22:5-6—H 22:4-5). When an ox causes damage through no fault of its owner—e.g., if it was not known to gore—the law divides the loss equally between the owner and the injured party (21:35; cf. LE 53).

b. Theft and misappropriation. Whoever has acquired the property of another without his consent and knowledge is considered a thief. It is immaterial to biblical law whether the property came into the culprit's possession legally or not (not so in Babylonia; contrast CH 6-13, 25, with 112, 120, 265). A bailee who has misappropriated goods entrusted to him is treated the same as the burglar and housebreaker: all pay double damages (Exod. 22:4, 7, 9—H 22:3, 6, 8). Theft of beasts is aggravated by subsequent slaughter or sale; in that case there is a fourfold penalty for sheep, and a fivefold for oxen, whose absence prevented the farmer from plowing (Exod. 22:1—H 21:37). If the thief cannot pay, he is sold into slavery, his price going to the injured party (22: 1*b*—H 22:2). On housebreaking and burglary, *see* § C2*d above*.

Here biblical law departs markedly from that of Babylonia and Assyria, where life and property are commensurable. The counterpart to the idea that life can be compensated for in pecuniary terms (*see* § C2*a above*) is capital punishment for theft (CH 9; MAL A 3). The exception of CH 8, punishing with ten- and thirtyfold damages, is perhaps only apparent since it adds: "If the thief does not have sufficient to make restitution, he shall be put to death."

c. Robbery. Taking property by force or intimidation (גזל; cf. Gen. 31:31; II Sam. 23:21) and withholding from another his rightful due (עשק; e.g., Mal. 3:5) are forbidden in the laws (Lev. 19:13; Deut. 24: 14-15). It is remarkable, however, that no penalty is prescribed for convicted offenders (CH 22 punishes robbery by death). Lev. 6:1-7—H 5:20-26; Num. 5: 5-8 deal with the voluntary restitution of property taken by robbery or fraud: it must be returned with the addition of a fifth of its value to its rightful owner, and a guilt offering brought for atonement. The smallness of the penalty is probably to encourage voluntary surrender in these cases, where, owing to lack of evidence, or to the impotence of the victims—the victims of robbery and oppression are almost invariably poor and defenseless (Ps. 35:10; Isa. 3:14; Jer. 7:6; Amos 4:1)—legal means of recovery were of little avail. Later law required no more of the convicted robber than to make full restitution, the severer law of theft being explained thus: "While the robber treated man and God equally, the thief regarded man more than God, acting [in stealth] as if no heavenly eye saw, or heavenly ear heard" (Tosef. B. K. 7.1).

D. *MODES OF PUNISHMENT.* **1. Capital.** The commonest form of capital punishment specified by the laws is stoning, whereby the whole community participated in "purging the evil out of Israel." It took place outside the city (Lev. 24:14; Deut. 22:24; I Kings 21:13; but cf. Deut. 22:21: "the door of her father's house"). The witnesses placed their hands on the head of the offender (Lev. 24:14; cf. Sus. 34), as it were transferring the guilt which lay on the whole community to the criminal, who thus partook of the nature of an expiatory offering (cf. Lev. 4:15; 16:21). They then cast the first stone, followed by the rest of the people (Deut. 17:7).

Death by burning is prescribed for two sexual offenses (Lev. 20:14; 21:9); in the story of Gen. 38:24 it is for harlotry. The latter passage indicates that execution took place outside the city. Later sources show that the victim was surrounded by fagots and burned alive (Jos. Antiq. IV.viii.23; M. Sanh. 7.2—the "inexpert court"). Persons slain as *ḥérem* were afterward burned (Josh. 7:25)—another echo of the cult (cf. Deut. 13:16—H 13:17).

Death by the sword is prescribed for the population of the apostate city (Deut. 13:15—H 13:16; cf. Exod. 32:27). Execution of idolatrous persons in the narratives takes the same form, its sacrificial or purgative character often explicit in the terminology (e.g., I Kings 18:40 [cf. Deut. 9:21]; II Kings 23:20). Presumably the sword was also the favored weapon of private execution (e.g., by the redeemer of blood [II Sam. 3:27]).

Beheading appears to have been the royal mode of executing persons offensive to the king (II Kings 6:31-32; cf. II Sam. 16:9). Later law prescribed it for the judicial execution of murderers (M. Sanh. 7.3; 9.1).

Shooting (with arrows) is mentioned once as a means of punishing those who trespassed on a sacred area (Exod. 19:13).

HANGING was not a form of execution, but a means of exposing the body of an executed criminal as a public warning (Deut. 21:22-23).

Mutilation of the body of an executed criminal was sometimes practiced (II Sam. 4:12).

Such unusual modes of execution as dismemberment (Dan. 2:5; cf. HL 166) and being thrown to beasts (Dan. 6:7—A 6:8) were not practiced in Israel.

2. Corporal. There are few specific corporal penalties prescribed in biblical law. Mutilation, various sorts of which are prescribed in Babylonian and Assyrian law (CH 192 [tongue]; 193 [eye]; 194 [breast]; 205 [ear]; MAL A 4 [nose and ears]; 9

[finger, lip]; 15 [castration and mutilation of whole face]), is specified once: the hand of a woman who has committed an indecent assault is cut off (Deut. 25:11-12).

For bodily injuries inflicted wilfully and with premeditation, talion is prescribed (*see* §C6 *above*). In the premonarchic, decentralized tribal polity which is presupposed by the laws, the duty of prosecuting personal injuries fell first upon the injured party or his kin. The talion rule of the Bible is directed to the private prosecutor, and aims at restricting his privilege to an exactly corresponding punishment. While talion is a principle common to Babylonian and Assyrian law as well, its application in the Bible differs in one respect: the idea of vicarious punishment, which was the outcome, in Babylonia and Assyria, of a rigorous legal logic, is rejected. Thus, in CH, a creditor who has so maltreated the distrained son of his debtor that he dies, must lose his own son (116); if a man struck the pregnant daughter of another so that she miscarried and died, his own daughter must be put to death (209-10); if through faulty construction a house collapses, killing the householder's son, the son of the builder who built that house must die (230). MAL A 50 prescribes that a man who has caused the wife of another to miscarry must surrender his wife to suffer correspondingly, and MAL A 55 penalizes the seducer by requiring him to deliver his wife to the seduced girl's father for prostitution. Biblical law rejects this mode of talion tacitly in Exod. 21:22-23, expressly in 21:31, eventually formulating its rejection in the generalized principle of Deut. 24:16.

Whether talion was ever a judicial penalty may be doubted. Even in the biblically revised form many cases suggest themselves in which the object of the rule—the infliction of an exactly equivalent punishment upon the wrongdoer—can scarcely have been attained by its literal application; as, e.g., the case of a man blind in one eye who either destroyed one eye of a man of sound vision, or had his sound eye destroyed by the latter. In other cases the difficulty of inflicting an equivalent harm must have been great—as, e.g., if the injury only partially incapacitated an organ of the victim, or if it was located close to a vital spot. In Assyria, where mutilation appears to have been commonly practiced, expert officials were attached to the courts to supervise it (MAL A 58), so that the latter obstacle to inflicting talion, at least, was not present. It is interesting, therefore, to note that MAL A 55 provides as well for the case where a literal vicarious talion cannot be carried out, substituting for it a pecuniary penalty. Since biblical law neither provides for a court executioner or mutilator, nor ever suggests a pecuniary substitute for cases in which literal talion is inapplicable, it does not seem seriously to contemplate the infliction of talion as a judicial punishment.

The three passages in the laws which speak of ransom indicate that, except for homicides, it was the practice to offer and accept a monetary composition in lieu of talion. These three passages in effect license composition for every injury short of homicide committed by a human being. Exod. 21:30 permits the negligent owner of a vicious, homicidal ox to ransom himself. Num. 35:32 forbids allowing the accidental homicide to ransom himself from banishment to the city of refuge, and vs. 31 forbids accepting ransom from a murderer in lieu of his life. The necessity for such limiting laws speaks for the common practice of composition, which the laws seek to check only in the area of homicide, and therefore treat of it only in this connection. That composition was permitted for crimes involving no bloodguilt appears to be self-understood, and was apparently widely practiced. Cf. Josephus' formulation of talion: "He that maims anyone, let him undergo the like himself . . . unless he that is maimed will accept money instead; for the law makes the sufferer the judge of the value of what he has suffered, and permits him to estimate it, unless he would be too severe" (Antiq. IV.viii.35; cf. Sifra at Lev. 20:7).

It remains to be said that, since biblical law recognizes self-help, an injured party that inflicted talion on its own was within its rights.

Scourging was a judicial penalty, the severity of which varied with the gravity of the offense. The maximum number of strokes is set by the law at forty (Deut. 25:1-3; for details *see* SCOURGING).

Imprisonment is not found as a punishment in biblical or early Near Eastern law. Accused persons were sometimes detained in custody pending clarification of their case (e.g., Lev. 24:12). Later, however, imprisonment was employed by the state to dispose of persons who were regarded as dangerous (Jer. 32:2-3; for further details *see* PRISON).

Sale into slavery is prescribed by the laws only for the thief who cannot pay multiple penalties (Exod. 22:1*b*—H 22:2*b*), though debt slavery was also known in Israel (II Kings 4:1; Neh. 5:5; cf. Lev. 25:39; and *see* DEBT; SLAVERY).

3. Pecuniary. Pecuniary penalties in biblical law are indemnificatory and exemplary; they are paid in every case to the injured party. Fines paid to the court or state are unknown. Indemnification must be made (*a*) for causing a miscarriage—assessed by the husband and approved by judges (Exod. 21:22); (*b*) for deflowering a virgin—her marriage present (fifty shekels of silver, to judge from Deut. 22:29), paid to her father (Exod. 22:16-17—H 22:15-16); (*c*) for violating a slave woman designated to marry a man—unspecified (Lev. 19:20); (*d*) for death caused by a vicious ox—a ransom paid in lieu of life by the negligent owner of the ox to the kin of the deceased at their determination (Exod. 21:30). Exemplary damages are the double, fourfold, and fivefold penalties for theft (Exod. 22:1-4, 9—H 21:37–22:3, 8), and the double amount of the marriage present paid to the father of the falsely defamed bride (Deut. 22:19).

E. *CRIME AND PUNISHMENT IN THE NT.*

1. General considerations. The NT does not contain a corpus of criminal laws. While several sayings of Jesus touch upon points of biblical law, they do not themselves take the form of law, but of exhortation to saintly behavior (e.g., Matt. 5:21-32; note vs. 20). Jesus' pronouncement on talion is a case in point: what is rejected is far more than the literal application of "an eye for an eye and a tooth for a tooth," which, as suggested above, can hardly have been a judicial penalty even in ancient Israel. The Tannaitic understanding that monetary compensation alone is im-

plied (Mekilta at Exod. 21:23; M. B. K. 8.1) would be no less repugnant to Matt. 5:38-41. For the demand here is that the injured waive his rights to sue for reparations of any sort whatever. This saintly teaching is, of course, the very antithesis of a legal prescription. What substantive criminal and penal law appears in the NT is, then, a reflex of contemporary Jewish and Roman practice. Particularly the collisions of the central figures of the NT with Jewish and Roman authorities provide the materials with which we must deal.

To determine the legal situation reflected in these materials is at times a desperate task. The authors of the NT narratives were no more concerned than their OT counterparts with furnishing precise and comprehensive legal information. Not even the TRIAL OF JESUS and the multistaged trial of Paul, about which we seem to be relatively well informed, are free from obscurities at crucial moments of legal interest. Nevertheless, the stock of information on Jewish and Roman criminal law and procedure does illuminate the general background, if not all details, of the NT data on crime and punishment.

2. Jewish criminal law in the NT. Judea, since the year 6 under Roman procurators, continued to enjoy, as under Persian and Greek rule (cf. Ezra 7:25-26; Jos. Antiq. XII.iii.3), a considerable internal autonomy. Following the Herodian tyranny, "the government became an aristocracy, and the high priests were intrusted with a dominion over the nation" (Antiq. XX.x). Local jurisdiction was recognized over all matters involving Jewish law and custom. The authority of the high priest extended to the Jewish Dispersion as well (cf. Caesar's edict to the Sidonians [Antiq. XIV.x.2])—the presupposition of Acts 9:1-2. The extraordinary privilege granted to the communities of the Dispersion of exclusive competence in religious matters (cf. Acts 18:12-17) was probably conceived of as a delegation of high-priestly jurisdiction.

a. Capital punishment. The competence of Jewish authority to deal with capital offenses against Jewish law is a vexed question. Against John 18:31 (cf. Jos. Antiq. XX.ix.1) and a rabbinic tradition to the effect that *ca.* forty years before the destruction of the temple capital jurisdiction was taken from Jewish courts (cf. T.B. Abodah Zarah 8*b* and parallels), several instances of capital trials and executions by Jews without the intervention of Roman authority are on record: Peter's second trial (Acts 5:27 ff [note especially vs. 33]); Paul's attestation of the high priest's authority to execute (Acts 26:10); Tannaitic records of executions by stoning and burning (Tosef. Sanh. 10.11; M. Sanh. 7.2). From the account of Stephen's stoning (Acts 7:57-60) it is difficult to decide whether a lynching or a judicial execution took place. *See* STONING.

Lynching was recognized as a legitimate mode of punishing gross religious offenses (Philo *On the Special Laws* I.54-57; III.94-98; M. Sanh. 9.6), and was tolerated even in the Dispersion (III Macc. 7:10-14). Hence the legality, from the Jewish viewpoint, of the plots to slay Paul in Damascus (Acts 9:23-24) and Jerusalem (23:12-15), and the stoning at Lystra (14:19).

An unusual privilege gave the Jews the right to slay any foreigner, not excluding Roman citizens, who trespassed on the temple precinct (Jos. War VI.ii.4; for the Greek inscriptions to this effect, *see bibliography*). Whether a judicial execution or a lynching by outraged bystanders (cf. Acts 21:28-29) is meant cannot be determined.

The religious offenses for which the Jewish authorities prosecuted Jesus and his followers are not clearly defined. The "blasphemy" of which Jesus and Stephen are accused (Matt. 9:3; 26:65; John 10:33 ff; Acts 6:11), like that which Jesus imputes to his antagonists (Matt. 12:22-32), covers a far greater area of insult to God and religion than the concept of the Mishna (Sanh. 7.5; *see* § C1*b above; see also* BLASPHEMY). Christian belief is alleged by Paul to be the basis of his persecution by the Jews (Acts 26:19-23). On the basis of Tannaitic law it is not possible to account for the death penalty here involved.

b. Corporal punishment. The violation of biblical prohibitions not provided with a specific penalty was punished by Jewish law with thirty-nine stripes (Jos. Antiq. IV.viii.21; M. Mak. 3). To judge from the freedom with which flogging was dealt out, however, it appears to have served the Jewish authorities, as it did the Roman, as a general coercive measure (Matt. 10:17; Acts 5:40; 22:19; II Cor. 11:24; *see* SCOURGE).

Pending trial or execution, an offender might be detained in PRISON (cf. Acts 4:3; 5:18).

For various religious delicts the synagogal authorities had at their disposal the penalty of EXCOMMUNICATION (cf. Luke 6:22; John 9:22; 12:42; 16:2).

3. Roman criminal law in the NT. The procurator reserved jurisdiction in cases touching the public peace and order. His authority enters the scene when sedition, riot, or brigandage is involved. Theudas and Judas the Galilean (Acts 5:36-37) were prosecuted as inciting sedition (Jos. Antiq. XX.v.1; War II.viii.1), and Jos. Antiq. XVIII.v.2 gives a similar ground for Herod Antipas' execution of John the Baptist. Jesus was crucified by Pilate as "King of the Jews" (*see* INSCRIPTION ON THE CROSS), and his followers were viewed by the Jews also as belonging to the line of rebels against Rome (Acts 5:35-39). Cf. the ground of the tribune's arrest of Paul in Acts 21:38. While the procurator reserved the right to sentence and execute in such cases, it was up to the Jewish authorities to arrest, examine, and deliver to him persons dangerous to public order (Mark 14:43 ff; cf. Jos. War. II.xii.2; VI.v.3).

a. Punishments. The cruelest and most degrading form of capital punishment, applied by the Romans to slaves and the lower classes, was CRUCIFIXION, regularly aggravated by prior scourging. Beheading was done with the sword (Matt. 14:10), though the older, republican use of the ax persisted in the early empire (Rev. 20:4; cf. M. Sanh. 7.3). Next to death, the severest punishment was condemnation to life-long work in the mines; since this involved being kept in fetters, it was often called *vincula*—the δεσμοί, "bonds" (RSV "imprisonment"), of Acts 23:29; 26:31. Municipal magistrates were empowered to scourge as a coercive measure in punishing minor disorders (Acts 16:22). Scourging was also employed to elicit information from noncitizens (Jos. Antiq. XV.viii.4; XVI.viii.1, 4; cf. Acts 22:24). Imprison-

ment, primarily employed for the detention of culprits pending trial or execution, served also as a coercive measure; it was aggravated by stocks and fetters (Acts 16:23-24).

b. The importance of Roman citizenship. Under the *lex Julia de vi publica*, enacted by Augustus, it was a crime to order that a Roman citizen be scourged or placed in prison. Being a Roman citizen, Paul enjoyed this immunity (Acts 22:25-29; cf. 16:37), though it was not always respected (cf. II Cor. 11:25; Jos. War II.xiv.9) and seems not at all to have inhibited Jewish authorities from scourging coreligionists for offenses under their jurisdiction (II Cor. 11:24). In capital cases, a Roman citizen had the right to be tried, in the provinces, by the governor *in consilium* (cf. Acts 25:12; the council is composed of those listed in vs. 23). But he was privileged also to refuse this court and to appeal directly to the emperor in Rome. The precise application of the right of appeal to the case of Paul (25:11-12) is a complex legal problem. *See bibliography.*

M. GREENBERG

CRIMSON [תולע, *lit.* worm *or* insect; שני; כרמיל, *a* Pers. *loan word,* worm; LXX κόκκινος]. A red color of varying hues, extracted for dyeing from the bodies of female kermes or cochineal insects.

See also SCARLET; COLORS. C. L. WICKWIRE

CRIPPLE. *See* DISEASE.

CRISPING PIN. KJV translation of חריט (RSV HANDBAG) in Isa. 3:22. *See* BAG.

CRISPUS krĭs'pəs [Κρίσπος, *from* Lat., curly]. A Jew residing in Corinth (Acts 18:8); leader of the synagogue, who with all his household was baptized into the Christian faith, having been convinced by Paul's preaching that Jesus was the Christ. His was one of the few cases in which Paul personally baptized new believers (I Cor. 1:14). Tradition claims that he afterward became bishop of Aegina (Apostolic Constitutions, VII.46). J. M. NORRIS

CRITICISM. *See* BIBLICAL CRITICISM.

CROCODILE [לויתן] (Job. 41:1—H 40:25 RSV mg.); KJV-RSV LEVIATHAN. Any of various species of large carnivorous aquatic reptiles (of the order *Crocodilia*), with a long, pointed head, a lizardlike body, a long and powerful tail, and short legs.

The animal described in Job 41—H 40:25–41:26 is now commonly thought to be a crocodile. Actually vss. 1-11 contain little to identify the subject as a crocodile, and they could apply to any large sea animal, real or mythical. Vss. 12-34, however, reflect some knowledge of a crocodile's body, habits, and powers, though vss. 18-21 are hyperbolic and may represent local folklore. The crocodile is the largest of the extant reptiles, and it would certainly be the longest animal known to the Hebrews (Herodotus records [II.68] a length of seventeen cubits for the Egyptian species), which may explain vss. 33-34.

The author of Job must have heard of the crocodiles of Egypt (*Crocodilus niloticus*), and doubtless some of this hearsay would be similar to what is found in Herodotus (II.68-70). But much of his information on crocodiles probably came from Palestine itself. Strabo (XVI.27) refers to the town of Crocodeilopolis (S of Mount Carmel), which presumably owed its name to its crocodiles; and Pliny (V.17) mentions apparently the same place, as Crocodilon, while Tristram also records the capture of crocodiles in this area in the nineteenth century.

W. S. MCCULLOUGH

CROCODILE, LAND. *See* LAND CROCODILE.

CROCUS [חבצלת *ḥᵃbhaṣṣéleth;* Akkad. *ḫabaṣillatu*]. A plant which blossoms abundantly. The true rose is clearly not intended. The Hebrew word appears in Isa. 35:1 in a figure of the blossoming desert (KJV

ROSE) and in a description of the bride in Song of S. 2:1 (ROSE; RSV mg. "crocus").

Several species of crocus are found in Bible lands, but the identification is widely disputed. Many scholars favor the narcissus (*N. tazetta*) on the basis of the Targ. The Akkadian cognate implies that the meadow saffron, genus *Colchicum,* also called "autumn crocus," may have been meant.

See also FLORA § A10; ROSE; SAFFRON.

CROSS [σταυρός]. Literally an upright stake, pale, or pole; in the plural, a palisade or stockade. When Paul writes of his "thorn in the flesh" (II Cor. 12:7), the word for "thorn" (σκόλοψ) is almost identical with σταυρός in meaning; but the latter is always the NT word for the cross of Christ.

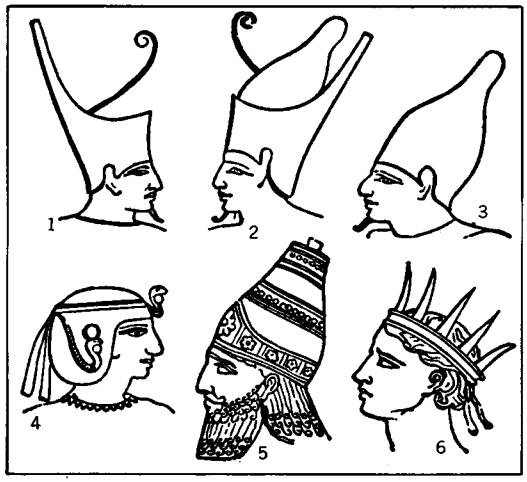
As an instrument of execution, the cross was a stake sunk vertically in the ground. Often, but by no means always, a horizontal piece was attached to the vertical portion, sometimes at the top to give the shape of a "T"; sometimes just below the top, producing the form most familiar in Christian symbolism. Generally the condemned man was forced to bear his own cross, or the transverse part, to the place of execution. According to the Synoptic gospels, Simon of Cyrene was compelled to carry Jesus' cross for him. If Jesus was at this point too exhausted to bear his own load, this was from the merciless flogging he had received. Frequently an inscription was attached to a cross, to indicate the nature of the crime. *See* INSCRIPTION ON THE CROSS; CRUCIFIXION.

As a physical object, Jesus' cross is, of course, mentioned in all four gospels (Matt. 27:32 ff; Mark 15:21 ff; Luke 23:26; John 19:17 ff), and also at Phil. 2:8; Heb. 12:2. To the orthodox Jew it was inevitably a stumbling block or scandal (Gal. 5:11), for Christians declared that Israel's long-hoped-for Messiah had indeed come, only to be thus ignominiously executed at Roman hands. To Gentile pagans, likewise, such a proposition was foolishness. As Paul acknowledged, it could not be understood by worldly wisdom (I Cor. 1:17-18). So it became the occasion for persecuting the followers of Christ (Gal. 6:12). Precisely here, however, lay the paradox of Christian belief. Christ's death on the cross brought salvation (Col. 2:14; cf. Eph. 2:16), and hence was the basis for Christian hope (Col. 1:20). Therefore, it was, for Paul, the only ground on which he might boast (Gal. 6:14). Thus the cross, with all its offensiveness, became the supreme symbol of the new faith.

In the NT, as among later writers, this symbolic or metaphorical use of "cross" is far more frequent than are references to the physical instrument. Jesus himself seems to have been responsible for one metaphorical extension, using "the cross" to signify the suffering and death that his followers must be prepared to undergo (Matt. 10:38; 16:24; Mark 8:34; Luke 14:27; cf. also Mark 10:21; Luke 9:23). NT writers did not follow him in this particular usage, however. So starkly did Jesus' death loom in their minds that they seem to have shrunk from calling their own sufferings "crosses" (but see Gal. 2:20). This may be why, as noted above, Paul called his suffering, not a σταυρός, but a σκόλοψ. The σταυρός, "cross," was peculiarly Jesus' own, and stood for the divine act which he alone had accomplished. Then if baptized Christians lived immoral lives, they became "enemies of the cross of Christ" (Phil. 3:18). Should they desert the faith, they would "crucify the Son of God on their own account and hold him up to contempt" (Heb. 6:6).

Of writers after the NT period, two deserve particular mention. Ignatius of Antioch (*ca.* A.D. 115) sought to refute two contemporary enemies of the Christian faith—viz., orthodox Judaism, and the so-called Docetism (δοκέω, "seem"), which asserted that Christ had not really come in the flesh but had only seemed to do so. Both groups, Ignatius maintained, were refuted by the facts of Jesus' life and passion. In particular, Docetism was, he held, disproved by the fact of Jesus' death on the cross.

In what is known as the Epistle of Barnabas (A.D. 130-60), it is noted that Abraham had 318 servants (Gen. 14:14). In the Greek alphabet, where letters also represented numbers, 318 is expressed as IHT. Here, said the author of the epistle, is a matter of inexhaustible import: "IH" are the first two letters of Jesus' name (ΙΗΣΟΥΣ), while "T" is a picture of the cross. Therefore, Gen. 14:14 is, in reality, a prefiguring of Christ's death (Barn. 9.8). Such bizarre exegesis is, of course, unacceptable today. The conviction underlying it, however, has remained essential to Christianity since its inception—viz., that the cross of Christ was, in fact, the climax and fulfilment of all that OT religion had stood for.



See also CRUCIFIXION; TRIAL OF JESUS; DEATH OF CHRIST. PIERSON PARKER

CROW. *See* RAVEN.

CROWN [נזר, *reserved for the royal and priestly crowns;* עטרה, *a general word, mainly poetic;* כתר (Esther *only, for the Persian royal crown*); קדקד, *see below;* כתרת, *usually* CAPITAL; KJV זר, *see* MOLDING; στέφανος (*alternately* WREATH)]. Apart from the architectural features mentioned above and the English idiom "crown of the head" (קדקד; Deut. 28:35; 33:16, 20; II Sam. 14:25; etc.), "crown" is reserved for the headdress symbolic of royal rank or of special merit or achievement. The OT refers mainly to the princely crown (*see* KING), the NT to the wreath given as a prize to a victorious athlete (*see* GAMES IN THE NT). *See also* DIADEM.

Two common headdresses, the cap or turban and the cloth band worn around the temples, evolved into crowns. Near Eastern art depicts a great variety of caplike crowns (*see* TURBAN), one of the most common being the conical headdress of Assyrian monarchs, a band of cloth wrapped repeatedly around the head in the manner of the modern turban. The headband developed in two directions. On the one hand it gave rise to the metal diadem, either simple in shape and without ornamentation, or more ornately formed, embossed with floral or geometric designs and set with precious stones. The great antiquity of this type of crown is attested by the discovery in a tomb at Jericho dating from *ca.* 2000 B.C. of a copper headband apparently belonging to an Amorite chieftain. Later examples have been discovered at numerous Palestinian sites. The turban

and diadem were frequently combined into a composite crown. Persian kings followed this practice, and the blue cloth band of the Persian crown was adopted by the Hellenistic kings and called "diadem." The Ptolemaic and Seleucid kings wore a diadem with spikes (the radiant crown), of which the CROWN OF THORNS may have been an imitation.* The headband is the ancestor also of the garland of leaves or flowers given by the sports-minded Greeks and Romans to victorious athletes and sometimes to citizens of special note. Fig. CRO 53.

53. Royal crowns and headdresses: (1) red crown of Lower Egypt; (2) crown of Upper and Lower Egypt; (3) white crown of Upper Egypt; (4) Egyptian; (5) Assyrian; (6) Ptolemaic and Seleucid

The royal and priestly crowns of Israel are described by a word which means "dedication," "consecration" (נזר; used in this sense in Lev. 21:12; Num. 6:4, 9; etc.). They therefore signify not only the rank and authority of the wearer, but also the sacred nature of his office. In both cases the giving of the crown is associated with anointing (Exod. 29:6-7; II Kings 11:12). The priestly crown, called the holy crown and engraved with the words "Holy to the LORD," was a plate of pure gold worn on the forehead and bound to the turban (KJV MITRE) by a blue lace (Exod. 28:36-37). Josephus (Antiq. III. vii.6) adds to this description of the priest's crown a three-tiered diadem worn over the turban around the nape of the neck and extending to the temples, with an elaborate floral decoration upon it. The crown, worn by the high priest only, symbolized his authority to intercede for the nation and to offer sacrifices in the Holy Place (Exod. 28:38).

It may be inferred from Ps. 21:3—H 21:4; Ezek. 21:26 that the royal crown was also a golden diadem, possibly worn over a turban. It was probably set with precious stones (Zech. 9:16; cf. the crown of Milcom [II Sam. 12:30], "their king"; cf. also Rev. 12:1). The crown symbolized the king's royal authority and special election to his office, and was accordingly worn by him when he sat on his throne and when he went to war (II Sam. 1:10). In the original form of the text the royal and high-priestly crowns were mentioned together in Zech. 6:11, but editing has made the passage in its present form refer only to the high priest's crown.

In more general usage the crown (עטרה) may be worn by the queen (Jer. 13:18), nobles (Esth. 8:15), or the bridegroom at his wedding (Song of S. 3:11). The last reference is probably to a garland of flowers worn on festive occasions (Ezek. 23:42). This word occurs often in poetic books as a metaphor for anything which confers honor or authority: gray hairs (Prov. 16:31), grandchildren (Prov. 17:6), a large and prosperous city (Isa. 28:1), a bountiful harvest (Ps. 65:11—H 65:12), wisdom or, ironically, folly (Prov. 14:24), the steadfast love of God, or even God himself (Ps. 103:4; Isa. 28:5).

The "crown royal" set upon the head of the king's horse in Esth. 6:8 KJV has been compared to the tall, crownlike head ornaments of horses depicted on Assyrian monuments, but the reference may be to the king's own crown (so RSV).

In the NT outside the book of Revelation "crown" (στέφανος) almost invariably refers to the garland, metaphorically used of eternal life as the prize for patient endurance (I Cor. 9:25; II Tim. 2:5); its wreathlike nature is clearly indicated in such phrases as *"unfading* crown of glory" (I Pet. 5:4). The golden royal crown of princely authority returns in Revelation as a possession of the elders (4:10), the rider of the white horse (6:2), the woman clothed with the sun (12:1), and the Son of man (14:14).

L. E. TOOMBS

CROWN OF THORNS [στέφανον ἐξ ἀκανθῶν *or* ἀκάνθινον στέφανον]. The circlet fashioned by Roman soldiers and forced down on Jesus' head as part of their derisive treatment, after Pilate had sentenced him to death. Officially Jesus was guilty of treason or rebellion, having claimed to be a king (*see* TRIAL OF JESUS). This act of the soldiers was only what might have been accorded anyone caught similarly in the toils of the Roman law. Luke, who consistently minimizes harshness toward both Jesus and his followers, does not mention it.

The word for "thorns," ἄκανθαι, means "briers." It is used figuratively in Jesus' teaching, always in a bad sense (Matt. 7:16; Mark 4:7, 18; cf. Heb. 6:8). *See* THISTLES.

PIERSON PARKER

CRUCIBLE [מצרף, *from root* to refine]; KJV FINING POT. A melting pot, probably made of pottery, for refining silver. It is mentioned in parallel passages in Prov. 17:3; 27:21 ("The crucible is for silver, and the furnace is for gold"), in contexts alluding to the testing or judging of a man.

See also POTTERY § 3; SILVER § 2.

H. G. MAY

***CRUCIFIXION.** The act of putting to death by nailing or binding the victim to a CROSS or, sometimes, to a tree. The noun "crucifixion" does not occur in the NT, but the corresponding verb, "to crucify" (σταυρόω), appears frequently.

1. Crucifixion in general
   a. The public shame
   b. The torture

2. Jesus' crucifixion
3. The Crucifixion as a symbol

1. Crucifixion in general. The cruelty of this form of capital punishment lay in the public shame that was involved and in its slow physical torture.

a. The public shame. Partly as a warning to other potential offenders, the condemned man was made to carry his cross, or the transverse part, along the public roads and to the execution ground, which itself was nearly always in a public place. There he was stripped of all his clothing. Affixed to the cross, he could not care for his bodily needs, and was the object of taunts and indignities from passers-by.

b. The torture. Crucifixion damaged no vital part of the body. The victim, set astride a peg in the upright beam, was fastened to the cross by nails through the hands or wrists, and through the feet or above the heels. Ropes bound the shoulders or torso to the wooden frame. He was thus held immobile, unable to cope with heat or cold or insects. Death came slowly —often after many days—as the result of fatigue, cramped muscles, hunger, and thirst. Sometimes the victim was offered a drug to deaden the pain (Matt. 27:34; Mark 15:23).

Crucifixion had been practiced by the Phoenicians and Persians, and from them was taken over by Rome. Rome reserved the punishment for slaves and foreigners. Hence Jesus could be crucified, whereas Paul, who had Roman citizenship, would not have been. (When on rare occasions citizens were crucified—as by Verres in Sicily and by Galla in Spain—great indignation was felt among the Roman people.) In Palestine, crucifixion was used to punish robbery, tumult, and sedition. In the latter cases especially, it served as a public reminder of the Jews' servitude to the foreign power. Crosses were a familiar sight in Galilee and hence provided a poignant metaphor for Christian discipleship (Matt. 16:24; Mark 10:21; Luke 9:23).

2. Jesus' crucifixion. All four gospels record that Jesus foretold his own death, but only Matthew says that he knew it would be by crucifixion (Matt. 20:19; 26:2), and that he foresaw the same fate for some of his followers (Matt. 23:34).

Jesus' crucifixion is recounted in Matt. 27; Mark 15; Luke 23; John 19, and is many times referred to elsewhere in the NT (e.g., Acts 2:36; 4:10; I Cor. 2:8; II Cor. 13:4; Gal. 3:1; Rev. 11:8). None of these dwells, however, on the physical details that interest a modern. Even the statements that Jesus died on a tree (Acts 5:30; 10:39) should probably be taken figuratively, a tree being roughly suggested by the cross's shape. The exact spot of the execution is not known (*see* GOLGOTHA), though it was evidently beside one of the main roads leading into Jerusalem. Jesus refused the drink offered to deaden his pain. Two other men were put to death at the same time. These, or at least one of them, joined in the derision heaped on Jesus (Matt. 27:44; Mark 15:32; Luke 23:39)—perhaps in the forlorn hope of gaining some favor by siding at last with the rulers. A sign, indicating the crime for which he was condemned, was placed on Jesus' cross (*see* INSCRIPTION ON THE CROSS), but nothing is said of similar signs on the other two.

The next day was a Jewish holy day. So, the Fourth Gospel says, the Roman authorities permitted the victims to be removed from the crosses at evening, their legs being first broken to assure that they did not escape. When the executioners came to Jesus, they saw that he was already dead. This raises the question, How did he die so quickly? The spear thrust, which only John records, is there said to have been made after he died. The familiar suggestion that he died of a broken heart depends on a medically dubious explanation of the "blood and water" of John 19:34—and the latter was written, not with a physiological, but with a theological purpose. Far more probably, Jesus' end had been hastened by the scourging. Roman scourging was so severe that victims often died under it. For one charged, as Jesus was, with sedition, it would have been merciless.

The Synoptics say that at Jesus' death there was a supernatural darkness, and that the temple veil was rent in two. Matthew adds an earthquake and bursting rocks, and corpses walking about Jerusalem. John says nothing of any of this.

3. The Crucifixion as a symbol. Death by crucifixion brought Jesus into public disrepute. It placed him under an ancient curse, "for it is written, 'Cursed be every one who hangs on a tree' " (Gal. 3:13; cf. Deut. 21:23). This provided the greatest obstacle in the subsequent effort to convert Jews to the new faith. Nothing in the OT or in Jewish lore had prepared them for the thought that the Messiah should be thus handled. To many Jews, the Christian claim was a shocking blasphemy.

To Christians, however, the Crucifixion was the most intense demonstration of Christ's love and power, and the symbol of the Christian's own union with his Lord. To become his follower meant to crucify one's old and sinful self (Rom. 6:6; Gal. 2:20; 5:24). Or, with a changed figure, ungodliness itself had been put to death by the Crucifixion (Gal. 6:14), so that the Christian was now free to live in Christ alone. *See also* TRIAL OF JESUS.

PIERSON PARKER

CRUSE. A small, elongated pottery jug *ca.* four to six inches tall, used to hold olive oil. It is referred to in the episode of Elijah's visit to the widow of Zarephath, when he asks for food (צפחת, I Kings 17: 12-16). In the KJV of I Sam. 26:11-16 (צפחת, RSV "jar") the reference is to a pottery canteen. In II Kings 2:20 (צלחית), the RSV "bowl" is a better translation.

J. L. KELSO

CRYPTOGRAPHY krĭp tŏg'rə fĭ. *See* ATHBASH.

CRYSTAL. A quartz, nearly transparent, either colorless or slightly tinged. "Crystal" is the translation of the following terms:

a) גביש, *gābhîsh* (cf. אלגביש, "hail"; Arabic *gibs,* "gypsum"; Akkadian *gibšu,* "a mass"; LXX γαβείς); KJV PEARLS. It is mentioned with coral and pearls(?) in the evaluation of wisdom (Job 28:18).

b) קרח (cf. Akkad. *qarḫu,* "ice"; LXX κρύσταλλος; Vulg. *crystallus*). It is used to describe the clearness of the sky (Ezek. 1:22, where the RSV, with the LXX, omits "terrible"; cf. KJV). It is elsewhere translated "the cold," "frost," "ice."

c) Κρύσταλλος, a simile for "clearness." It is used

to describe the sea of glass (Rev. 4:6) and the river of life (Rev. 22:1).

d) Κρυσταλλίζω, "to be as crystal." A participle form, translated "clear as crystal," describes the jasper-like radiance of the New Jerusalem (Rev. 21:11).

See also JEWELS AND PRECIOUS STONES § 2.

W. E. STAPLES

CUB kŭb [כוב] (Ezek. 30:5 RSV mg.); KJV CHUB. A place mentioned in connection with Cush, Libya, and Lydia, and generally regarded as an error for לוב, LIBYA (so RSV). The LXX, whose rendering of this verse differs from the Hebrew in several particulars, mentions the Libyans at this point.

T. O. LAMBDIN

CUBIT kū'bĭt. A unit of measurement based on the length from elbow to tip of middle finger, eighteen inches or a little more. *See* WEIGHTS AND MEASURES § D4*a*.

CUCKOO. KJV translation of שחף (RSV SEA GULL). "Cuckoo" refers to any of a family (Cuculidae) of mostly small birds, of which two species, according to Tristram, visit Palestine in the summer, the Common Cuckoo (*Cuculus canorus canorus*) and the Great Spotted Cuckoo (*Clamator glandarius*). שחף, however, is deemed unclean in the OT presumably because it is either raptorial or carrion-eating; and as the cuckoo is an insect-eater, this would appear to eliminate "cuckoo" as a possible meaning for שחף.

W. S. MCCULLOUGH

CUCUMBER [קשאה, *qiššū'â;* מקשה, *miqšâ;* Akkad. *qiššu;* Arab. *qiṭṭa;* Punic κισσου]. A vegetable or fruit of the genus *Cucumis*. During the wilderness wanderings the Israelites longed for the fish, *qiššū'îm,* melons, leeks, onions, and garlic they had eaten in Egypt (Num. 11:5). Zohary (*see* FLORA § 3*e*) claims that קשאה referred to the muskmelon (*Cucumis melo* L.) rather than the cucumber. The long list of linguistic evidences, beginning with the LXX (σικύος) would tend to argue for the cucumber (*Cucumis sativus* L., or *Cucumis chate* L., the hairy, elongated variety), despite the absence of early Egyptian references to it.

The noun of place, based on the same word, is found in Isa. 1:8 in a vision of destroyed Jerusalem, "like a lodge in a cucumber field [מקשה]." It is also used in Jer. 10:5 depicting the worthlessness of idols, "like scarecrows in a cucumber field" (KJV "They are upright as the palm tree"; cf. Bar. 6:70—G 6:69; *see* PALM TREE).

CULT. *See* WORSHIP.

CUMMIN [כמן, *kammōn;* κύμινον; Ugar. *kmn, and most Semitic languages*]. The caraway-like seed of the *Cuminum cyminum* L., an herb of the carrot family mentioned with DILL.* Though not common in Bible lands today, the seed was apparently much used in ancient times as a condiment for seasoning foods. Isaiah portrays (28:23-29) in vivid poetry the work of the farmer, including planting and threshing cummin (vss. 25, 27). In Matt. 23:23 (cf. Luke 11:42) cummin is included with MINT and dill in Jesus' criticism of the particularism of the Pharisees, who fail to show adequate concern for the more important matters in human behavior (cf. Mic. 6:8). Deut. 14: 22-23 (cf. Lev. 27:30) prescribes the tithing of grain, wine, oil, and firstlings of the flock, and the Pharisaic Mishna (Ma'as. IV.5) defines "grain" to include dill and cummin. Fig. CUM 54.

54. Cummin

CUN kŭn [כון; Lat. *Cunnae*] (I Chr. 18:8); KJV CHUN. A Syrian town from which David took much bronze. The parallel in II Sam. 8:8 has BEROTHAI.

CUNEIFORM kū nē'ə fôrm [Lat. *cuneus,* wedge]. The wedge-shaped syllabic signs impressed on CLAY TABLETS with a stylus or carved on stone.* Originally pictographic, the signs soon were simplified and stylized. Invented by the Sumerians, the script passed to the Akkadians, Hurrians, Hittites, and Elamites. Other cuneiform scripts were developed for Old Persian and Ugaritic. Fig. UGA 3.

R. J. WILLIAMS

CUP [אגן, גביע, כום, כיס, סף; ποτήριον]. The cup of Bible times ran in two general forms. One was similar to our cup and was made both with and without a handle. The handled cup also served as a dipper (Fig. POT 63, no. 3*a*). The more common cup, however, was a shallow bowl which came in various forms and sizes. Joseph possessed a silver cup used for DIVINATION (Gen. 44:2-5). The LAMPSTAND had in its

branches "cups" made like almonds, each with "capital" and flower (Exod. 25:31-35).

The cup was widely used in figurative language. It was symbolic of the kind of life experience which God the Host pours out for his world. For the saints there was the cup of the blessings of God (Pss. 23:5; 116:13). For the wicked there was the wine cup of the wrath of God (Pss. 11:6; 75:8—H 75:9; Isa. 51: 17, 22; Jer. 25:15; 49:12; Hab. 2:15-16). Babylon was the golden wine cup in the Lord's hand from which all the nations drank (Jer. 51:7). Samaria's cup of horror and desolation was her fate, and Jerusalem must drink of it (Ezek. 23:31-33). Similarly, Jerusalem might be pictured as a cup of reeling to all its enemies (Zech. 12:2). The cup of Jesus was the cup of suffering (Matt. 20:22-23). The cup of the wrath of God appears also in Rev. 14:10; 16:19; 17: 4; 18:6. The unique use of "cup" is in connection with the LORD'S SUPPER.

The Lord might be spoken of as the cup of the faithful (Ps. 16:5). The "cup of salvation" (Ps. 116: 13) may be the libation of wine in the temple rites, symbolic of the Lord's saving help. In Jer. 16:7 the "cup of consolation" is perhaps the cup of wine presented to the mourner at the completion of the fast. The cup of the Lord's Supper is called the "cup of blessing," a term used for the third of the cups drunk at the Passover, and is contrasted with the "cup of demons" (I Cor. 10:16-21). J. L. KELSO

CUPBEARER [משקה, one who gives drink; LXX οἰνοχόος]. An official who serves the king wine and enjoys his confidence. Pharaoh's cupbearer is called a BUTLER.

Fear of intrigue made this a position of peculiar trust. Loyalty was a prime requisite. Solomon's cupbearers were part of the entourage which amazed the Queen of Sheba (I Kings 10:5; II Chr. 9:4). They may be the messengers of Assyria called RAB-SHAKEH who stood before Hezekiah to challenge Israel. Palace reliefs of Assyria show the importance of the cupbearer in relation to other retainers of the king.* Nehemiah was a cupbearer to the Persian king (Neh. 1:11; 2:1). That a foreigner could attain such a high place is testimony both to the freedom of Persia and to the astuteness of Nehemiah. Herod the great had a EUNUCH as his cupbearer (Jos. Antiq. XV.vii.4; XVI.viii.1). Fig. CUP 55. C. U. WOLF

55. An Assyrian cupbearer

CURDS; KJV BUTTER. The usual translation of חמאה and its variants. The modern equivalent is leban, prepared by churning fresh milk in a goatskin containing leftover clots from the previous supply. Thus in Prov. 30:33 we read that "pressing milk produces curds."

Curds are a part of the ordinary diet of the Near East. Abraham offers them to the three men (Gen. 18:8); Sisera receives them from Jael (Judg. 5:25); and they are brought to David at Mahanaim (II Sam. 17:29). Similarly, Jeshurun will receive from Yahweh all manner of good things, including "curds from the herd" (Deut. 32:14). And Zophar notes that the wicked man

> will not look upon the rivers,
> the streams flowing with honey and curds
> (Job 20:17).

In Isa. 7:15 the honey and curds to be eaten by the child Immanuel probably represent, not the food of the gods, but the food of poverty—a nomadic diet. Vs. 22, however, which is probably not a part of the original oracle, returns to the use of curds as figurative for material abundance.

J. F. ROSS

CURSE [אלה, מארה, קללה; ἀρά, κατάρα]. The expression of a wish that evil may befall another; a malediction. It found a wide variety of uses in Israelite society and was a phenomenon universal in Israel's contemporary world.

Among those cultural institutions exhibiting the use of malediction as a protective device may be noted the contractual agreement, most notably the international agreement or treaty (e.g., *ANET* 203-5). The curses were designed to protect the terms of contract by being directed at the future violator of the treaty. In the OT this appears in two forms: (*a*) following the election of a sovereign, reflected in Israel's acceptance of the suzerainty of Yahweh (Deut. 27:15-26; 28:15-19, 20-36), and in the trees' acceptance of the suzerainty of the bramble (Judg. 9:15); and (*b*) the agreement among the independent tribes of Israel, gathered in amphictyonic assembly, to bar intermarriage with the tribe of Benjamin (Judg. 21:18). Also displaying such security measures was the class of texts known as royal inscriptions (e.g., *ANET* 267*b*), to which were appended maledictions leveled at any who should alter or destroy the inscription. Though no Hebrew royal inscription bearing maledictions has been recovered, the OT has preserved an edict of Darius the Persian monarch, ending with a curse similar in style and purport to those known from elsewhere (Ezra 6:12; cf. Saul's

prohibition to his troops in the midst of his military victory: I Sam. 14:24, 28). Tombs also, on occasion, were protected by means of curses aimed at any who might violate or desecrate them (e.g., *ANET* 504-5). That this curse type found employment in Israel is now affirmed by the discovery of an inscription on the tomb of an Israelite royal officer containing a curse (*IEJ*, III [1953], 137-52). Joshua hoped to prevent the rebuilding of Jericho by laying a curse upon its future founder (Josh. 6:26). Curses were further pronounced upon oneself in an effort to protect or ensure the truth and reliability of assertions concerning actions in the past or the present (Num. 5:19-22; Job 31:7-8, 9-10, 19-22, 38-40; Ps. 7:4-6), or promises regarding the future (Ps. 137:5-6). *See* OATH.

As a retributive or punitive measure, curses are found to have been leveled against murderers (Gen. 4:11-12; 49:7; II Sam. 3:29) or against the land, the scene of the homicide (II Sam. 1:21); against sons by their fathers for sexual offenses (Gen. 9:25-27; 49:4); and served, furthermore, as explanation for enigmatic physiological or environmental peculiarities: the ancestor or prototype of those exhibiting such abnormalities was reckoned as having been cursed by God (e.g., the serpent, which, unlike all other creatures, must crawl on its belly [Gen. 3:14]; woman, who experiences pain in childbirth [vs. 16]; and man, who must exert himself to wring sustenance from the earth [vss. 17-19]), or by some ancient hero (Josh. 9:23). In utter depression and despair the Hebrew poet could give vent to his feelings in a curse against his day of birth (Job 3:3-10; Jer. 20:14-18). Lastly, curses were employed against enemies who might in the future harm one (e.g., II Sam. 18:32; Job 27:7; Dan. 4:16), had already hurt, or were currently discomfiting one (e.g., Pss. 35:4-8, 26; 40:15-16; 109:6-15, 17-19, 29; Jer. 11:20; 12:3; 17:18), or who threatened the national safety (e.g., Pss. 79:6-12; 83:10-18; 129:5-7; Jer. 10:25). Curses thus served to castigate and chastise, to protect, and to punish, and were employed in all situations for which other protective or punitive measures were either lacking or inadequate. This is confirmed, in part, by David, who, having cursed Joab for his murder of Abner, confessed his inability to deal with the murderer in any other way (II Sam. 3:39).

The distinctive and distinguishing trait of Hebrew maledictions lies in the manner of curse formulation. In general, a clear difference may be remarked between "East" and "West" (including Hebrew) Semitic curses. Whereas East Semitic (Akkadian) maledictions were formulated in a religio-literary tradition which sought divine approval and execution, importuning a god or gods through imprecation, West Semitic curses were composed in a tradition which relied, primarily, not upon deity, but upon the power of the word. Hebrew shared the general West Semitic preference for constructions in which the agent of the curse remained undesignated, and for verbs in passive forms. Characteristically and specifically Hebraic is the use of the *Qal* passive participle ארור, "Cursed be . . . !" The significance of this distinction between East and West Semitic curse formulations is that in the former, reliance is placed upon deity for the execution of the desired effect, whereas in the latter, in the absence of any indication of curse agency, the reliance is upon the power inherent within the curse itself.

Against two in the OT curses are never cited: God and David. That God *might* be cursed appears evident from Exod. 22:28—H 22:27; Isa. 8:21 (cf. Job 2:9), and was grounds for capital punishment (I Kings 21:13). Though David is twice said to have been cursed (by Goliath in I Sam. 17:43; by Shimei in II Sam. 16:5-7), the words of the curses are not quoted (Shimei's "Begone, begone, you man of blood . . . ," may not be construed as a curse, since it would hardly deserve David's description of it as a "grievous curse" [I Kings 2:8], and is moreover comparable to no known biblical or extrabiblical curse, either in form or in content). The concern in refraining from quoting these was the protection of the Davidic dynasty; for a curse, it was feared, might come to fruition in future generations (I Kings 2:8-9).

All the more remarkable, therefore, is the occasional disregard shown this device: Ezekiel rebuked the "rebellious house" for Zedekiah's having "despised the oath and broke[n] his covenant" with the king of Babylon (Ezek. 17:11-21); Hiel of Bethel, in the days of Ahab, rebuilt Jericho and suffered the consequences of Joshua's curse (I Kings 16:34); and one need only recall the general prophetic criticism of Israel for breaking its covenant with the Lord (e.g., Jer. 34:8 ff; Amos 2:6-8). It may be that under pressure political or other necessities might well outweigh religious niceties. Nevertheless, the reluctance evident in Hebrew literature to permit a curse to be leveled at God or at David, the necessary circumlocution designed and made available to the ostracized tribe of Benjamin whereby it might procure wives from its fellow tribes of Israel without, thereby, having the latter suffer the effects of their curse (Judg. 21:16-23), and the frequent abbreviation of the OATH from an original self-curse to an oath formula in which all but the most meager traces of the curse have been excised, constitute eloquent testimony to the fear and veneration accorded malediction.

CURTAIN [יריעה (*alternately* TENT), *from* ירע, to quiver; דק (Isa. 40:22), *probably* a thin veil; KJV מסך (Num. 3:26; RSV SCREEN); καταπέτασμα]. Normally the fabric of which tents were made. In most instances "curtain" appears in parallel with "tent"

and is synonymous with it (Song of S. 1:5; Isa. 54:2; Jer. 4:20; 10:20; 49:29; Hab. 3:7). The tabernacle in which the ark was to be carried was made of ten curtains measuring twenty-eight by four cubits (Exod. 26:2; etc.; *see* TABERNACLE). This tradition may be mirrored in the tent (KJV "curtains") in which the ark of God was kept (II Sam. 7:2; I Chr. 17:1). The tent curtain is a figurative description of the sky in Isa. 40:22, where Yahweh "stretches out the heavens like a curtain" (cf. Ps. 104:2). In the NT the "curtain" is always the curtain of the temple, which covered the MOST HOLY PLACE (*see also* VEIL OF THE TEMPLE). In Hebrews the curtain which covered the inner shrine is a figure of Christ's flesh (10:20), which is the way by which Christians enter the sanctuary of faith (6:19). E. M. GOOD

CURTAIN OF THE TEMPLE [καταπέτασμα]. The curtain which separated the Most Holy Place from the rest of the temple. The curtain of the temple was torn in two, from top to bottom, at the moment of Jesus' death (Matt. 27:51; Mark 15:38; Luke 23:45).

See also VEIL OF THE TEMPLE. E. M. GOOD

***CUSH** kŏŏsh [כוש; LXX, Aq., Symm., *and* Theod. Χουσὶ υἱοῦ Ιεμενί]. **1.** A Benjaminite whose solitary reference in the title of Ps. 7 permits us at least to infer that he was a calumnious foe of David and that his slanderous words were considered by the later liturgists, who attached the superscription to the psalm, to form the setting of the composition. E. R. DALGLISH

2. An ancient name of the territory S of Egypt, corresponding roughly to the present Sudan; more often called ETHIOPIA.

CUSHAN kŏŏ'shăn [כושן] (Hab. 3:7). A name used as a parallel to Midian. It may be an older and poetical name of Midian, based on the presence of tribes descended from CUSH. It is probable, therefore, that the word כשית ("Cushite"), applied to the wife of Moses (Num. 12:1), does not mean "Ethiopian," but rather refers to the Midianitess, Zipporah. S. COHEN

CUSHAN-RISHATHAIM kŏŏ'shăn rĭsh'ə thā'əm [כושן רשעתים, Cushan of double wickedness(?)]; KJV CHUSHAN-RISHATHAIM. The name—or possibly a disfigurement of the name—of the king of ARAM-NAHARAIM who was the first oppressor of the Israelites mentioned in the book of Judges (3:8-10). His eight-year oppression was ended by the military victory of the first judge, OTHNIEL.

The meaning of the unusual form of this name has received no satisfactory solution. CUSHAN, although by some scholars understood as referring either to the Cushites in Ethiopia or to the Kassites of Babylonia, is most likely related to a Midianite tribe near Edom (Hab. 3:7). The *an* ending is like that of a number of Edomite tribal names (Gen. 36:26-28). It may be that by an oblique reference to both Cush, son of Ham, and the hated Edomites and Midianites, the Deuteronomic editor, from whom this story probably comes, means to debase the unknown real name. The dual form *Rishathaim,* deliberately rhyming with *Naharaim,* and meaning "double wickedness," is an epithet denouncing this foreign conqueror. This play on words is similar to the "shame" intended to be cast by the names Ishbosheth for ISHBAAL and Mephibosheth for MERIBAAL.

The identity of this king is uncertain. Because he was defeated by a S Palestinian hero, Othniel, some have understood Cushan-rishathaim to have been an Edomite chieftain, assuming "Aram" as an error for "Edom" and Rishathaim as perhaps "chief of the Temanites." Others have identified him with a fourteenth-century-B.C. Mitannian ruler or with a Hittite king or his Syrian vassal. His name may be reflected in a N Syrian district called Qusana-ruma, mentioned in a list of Ramses III. Possibly he was a powerful foreign ruler named Irsu from the Upper Euphrates region, who invaded Egypt shortly before 1200 B.C. and was expelled by Ramses III's father, Set-nakht, founder of the Twentieth Dynasty.

Bibliography. E. Taeubler, "Cushan-Rishathaim," *HUCA,* XX (1947), 137-42; R. T. O'Callaghan, *Aram Naharaim* (1948), pp. 122-23, 139-42; W. F. Albright, *Archaeology and the Religion of Israel* (1953), pp. 110-11, 205; A. Malamat, "Cushan Rishathaim and the Decline of the Near East Around 1200 B.C.," *JNES,* XIII (1954), 231-42; J. Bright, *A History of Israel* (1959), pp. 156-57. C. F. KRAFT

CUSHI kŏŏsh'ī [כושי, Cushite]. **1.** Great-grandfather of Jehudi, a prince in Jehoiakim's court (Jer. 36:14).

2. The father of the prophet Zephaniah (Zeph. 1:1).

3. KJV translation in II Sam. 18:21-32 (RSV THE CUSHITE) of the name of the man who carried the news of Absalom's defeat and death from Joab to David. He was perhaps a Negro slave or a mercenary, and, as an alien, preferable to Ahimaaz as the bearer of the tragic news. J. M. WARD

CUSHION [προσκεφάλαιον] (Mark 4:38); KJV PILLOW. A regular part of the furnishings of a boat. S. A. CARTLEDGE

CUSTODIAN [παιδαγωγός, boy guider]; KJV INSTRUCTOR (I Cor. 4:15); SCHOOLMASTER (Gal. 3:24-25). A slave who attended a boy, took him to school, etc., until he was of age—i.e., sixteen years old. This meaning has been shown to be the common one in koine Greek and is found in classical Greek, where the term might also refer to the slave's function as a tutor. The word does not occur in the LXX.

Paul in Gal. 3:24-25 uses the term figuratively of the law (*see* LAW IN THE NT) to imply the inferior status of those living under it. The figure is introduced in vs. 23 by the related idea of guardianship (cf. Gal. 4:2 ff; *see* GUARDIAN): "We were confined [ἐφρουρούμεθα, 'guarded'] under the law, . . . so that the law was our custodian until Christ came . . . . But now that faith has come, we are no longer under a custodian." While this rendering achieves consistency and gives the general sense of the passage, it may lose the full force of εἰς Χριστόν, which probably has here something more than only temporal

force ("until Christ came"). The custodian would seem not only to guard, but also in a sense to guide, "to Christ." In spite of the negative and temporary function assigned to it in Pauline thought, the law is in itself holy and good (Rom. 7:12, 16), as such serving to convict men of sin and to bring them to Christ. There is here doubtless also some lingering influence of the Jewish conception of Torah as a mediator between man and God.

In Jewish sources the term παιδαγωγός is found as a loan word in rabbinic literature (פדגוג or פדגוגא), but is apparently never applied to the law. In IV Macc. 5:34, however, the law is addressed by Eleazar as παιδευτὰ νόμε ("teacher-law"). One may here compare references to Moses as a teacher par excellence.

In I Cor. 4:15, Paul somewhat differently uses the same Greek word to contrast himself as the spiritual father of the Corinthian Christians with the many other "guides" (KJV "instructors") which they have "in Christ."

Calloway, "Paul's Letter to the Galatians and Plato's *Lysis,*" *JBL,* LXVII (1948), 353-55; S. Sandmel, *A Jewish Understanding of the NT* (1956), ch. VIII. A. WIKGREN

CUTH, CUTHAH kōōth, —ə [כות, כותה; Assyrian-Babylonian *Kūtuna, Kūtû*]. An ancient N Babylonian city the ruins of which are located at Tell Ibrahim NE of Babylon. It was famous as a center for the cult of Nergal, king of the underworld. According to II Kings 17:24, 30, Sargon II of Assyria, after taking Samaria and leading its inhabitants off in captivity (721 B.C.), repopulated the city with foreigners. Among these was a contingent from Cuthah, who brought the cult of Nergal with them to their new home. T. JACOBSEN

CUTHA kōōth'ə [Κουθα (A); B *omits*] (I Esd. 5:32); KJV COUTHA kōō'thə. Head of a family of temple servants who returned with Zerubbabel. The name is omitted in the parallels Ezra 2:52; Neh. 7:54. C. T. FRITSCH

CUTTING LOCUST; KJV PALMERWORM. *See* LOCUST § 1*d*.

CUTTINGS IN THE FLESH. *See* MUTILATION.

CYAMON sī'ə mən [Κυαμών] (Jth. 7:3). An area "which faces Esdraelon"; possibly a corruption of "JOKNEAM." C. T. FRITSCH

CYMBAL. *See* MUSICAL INSTRUMENTS § B1*b*.

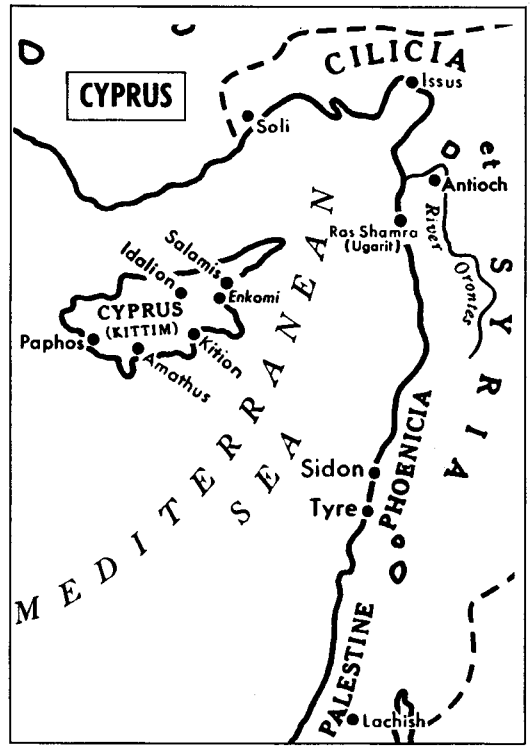
CYPRESS [תאשור, *te'aššûr* (*alternately* PINE), Ugar. *tišrm;* ברוש, *bᵉrôš* (*alternately* PINE); KJV תרזה, *tirzâ* (RSV "holm tree"), *see below;* κυπάρισσος]. The earliest occurrence of this word is on a fourteenth-century tablet at Ugarit (120:7) in an inventory list along with ALMUG.

The תאשור is mentioned in Isa. 41:19; 60:13 with other trees in figures of God's transformation of Palestine. The KJV translates this word "box tree"; the Amer. Trans. and the AJA use "larch"; the RSV translates "pine" (also in the emended Ezek. 27:6). Moffatt uses "cypress" (*Cupressus sempervirens* var. *horizontalis* Mill., Gord.), along with several others (*see* FLORA § A9*e*), for linguistic and other reasons. A final solution seems remote.

ברוש is usually translated "cypress," but *see* PINE.

In Ezek. 27:6 בת אשרים (KJV "company of the ASHURITES") is generally recognized as incorrectly divided for בתאשרים, "with cypress wood" (RSV "of pines").

The KJV OT uses "cypress" only for תרזה in Isa. 44:14. This reference might be to the slender cypress, *Cupressus sempervirens* var. *pyramidalis* (but *see* HOLM TREE). The KJV, with the RSV, uses "cypress" in Ecclus. 24:13; 50:10 (*see* OIL TREE).



Many consider the עצי גפר, *'aṣê gōpher* ("gopher wood") of Noah's ark (Gen. 6:14) to refer to cypress wood, since it was used extensively in shipbuilding in ancient times (*cf.* FLORA § A8*b*), but the word remains obscure.

See also BOX TREE; FIR; ASSYRIA AND BABYLONIA.

***CYPRUS** sī'prəs [כתים, *kittîm* (Isa. 23:1, 12; Jer. 2:10; Ezek. 27:6; *elsewhere* KITTIM kĭt'ĭm [*see also* KITTIM]; KJV CHITTIM); κύπρος]. A Mediterranean island situated *ca.* forty-one miles from the coast of Asia Minor and sixty miles from Syria. In both prehistoric and historic times Cyprus was in close relationship with Syria and Palestine.

The oldest attested name for Cyprus is Alashia,

which occurs in cuneiform texts from Mari (eighteenth century B.C.), Khattushash, Ugarit, and Tell el-Amarna (fourteenth-thirteenth centuries B.C.), in Egyptian sources as *A-ra-sa*, and in the OT as ELISHA. The name κύπρος occurs in the *Iliad* (XI.21) and the *Odyssey* (IV.83; VIII.362; XVII.442; etc.). The name Iadnan/Iatnan is used in the Assyrian inscriptions from the late eighth and seventh centuries B.C. Kittim, a name based on Kition (Citium), a city colonized by the Phoenicians, is used for the whole island in the OT.

Archaeological finds and textual references make it apparent that already in the Middle Bronze Age (*ca.* 1800) trade between Cyprus (Alashia) and the mainland—Syria and Palestine—and Egypt flourished. Evidence for this trade during the Late Bronze Age on Cyprus (1500-1100) has increased with the excavations at Ras Shamra (Syria) and Enkomi (Cyprus). Cypriote white ware (milk bowl) has been found as imports in many parts of the Levant and the Aegean world. It has been found at Lachish, Tell el-Amarna, Atchana, Troy, etc. Cyprus also was in close contact with the Mycenean world. Mycenean pottery has been found in abundance on Cyprus, and there is considerable proof of Mycenean colonization of Cyprus during this period. Cyprus in turn became the base for export of Cypro-Mycenean (Late Helladic III) wares to Syria and Palestine. Such imports—based-ring ware and wishbone-handled bowls are the main types—and locally made imitations are found at many Late Bronze Age sites in Palestine (LB II A, B, 1300-1200). UGARIT was under strong Cypriote influence and served as a port of entry for Cypriote imports. It is most probable that there was a colony of Cypriote merchants at Minet el-Beida, Ugarit's harbor town. Tablets in a variety of the Cypro-Minoan script have been found there. Similar tablets, as yet undeciphered, and in an unknown language, have also been found on Cyprus, especially at Enkomi. They date from *ca.* 1500-1100. From *ca.* 700-200 a modified offshoot of the same type of script—called the "Cypriote syllabary" (deciphered in the 1870's)—is used to write both Greek and the Eteocypriote language. The latter, found especially at Amathus, can be read, but not understood.

It was as a source for copper that Cyprus was famous in the ancient world. Legend made Cinyras of Cyprus father of coppermining; and to Pliny, Cyprus is "where there was the first invention of copper." The Mari economic archives have affirmed the importation of copper from Cyprus (Alashia) already in the eighteenth century. Both the Egyptians and the Hittites imported Cypriote copper (Tell el-Amarna letters; Boghazköy archives), and copper ingots from Enkomi have been found at Ugarit. In the *Odyssey*, Cyprus is the source of copper (I.184).

During the Amarna Age, Cyprus was raided by Lukku (Lycians?), as the king of Cyprus complained in a letter to Pharaoh. Hittite rulers like Hattusilis exiled dissident subjects there. Cyprus was spared the ravages of the Dorian invasion that destroyed Mycenae and strongly affected nearby Rhodes. The Cypriote Greeks spoke an Achaean pre-Doric Greek. It has been claimed, on the basis of the excavations at Enkomi, that Cyprus was invaded by the "People of the Sea" (*see* PHILISTINES) before their unsuccessful assault upon Egypt, but proof for this is lacking. Few facts concerning the island are available for the next three hundred years, the "Cypriote dark ages."

During the eleventh century, it may be garnered from the Wen-Amon report, Cyprus was independent. The tenth brought the Phoenicians, who colonized Cyprus and spread from there to the shores of the W Mediterranean. Testimony of Phoenician rule at this early period is limited. A Phoenician funerary inscription from the ninth century has been found; and Hiram, king of Tyre in 738, is known from the dedication on bowls from Monti Sinoas. Phoenician inscriptions first become plentiful in the fourth and third centuries. The Phoenicians founded strong outposts at first in seacoast ports on the E side of the island, like Kition (modern Larnaka), which remained until the fourth century the strongest Phoenician post in the island. OT passages such as Isa. 23:1, 12; Ezek. 27:6 attest the close connection of the Tyrians and Sidonians with Kittim. To Jeremiah it was a familiar designation for the West (2:10).

During the late eighth century and the seventh century the Assyrians, under Sargon, Sennacherib, and Esarhaddon, controlled most of Cyprus. Sargon boasted of the seven rulers from whom he collected tribute and had an inscribed statue of himself, which was found in 1845, set up in Kition. Sennacherib maintained his rule over the area; Luli, king of Sidon, did not find it a safe refuge from Assyrian might. His successor, Esarhaddon, provided us, in his prism, with a list of ten of the important cities of Cyprus and their kings. Among those cities known from the historic period whose identification seems positive are Idalion, Khytroi, Soli, Paphos, Salamis, Kurion, Tamassos, Ledron. The names of the kings have not been as positively identified. Two—Eteander and Pylagoras/Pythagoras—are probably Greek, the other Eteocypriote. None of the names is Semitic. Kition, missing on this list, was probably once again under the rule of Tyre, hence already vassal to Assyria.

With the decline of Assyria, Egyptian influence grew in Cyprus. Apries and Amasis attacked Cyprus, according to the Greek historians, and archaeology has borne out the rule of the latter on the island. The Cypriotes aided Cyrus in his expedition against Babylon and were rewarded with the right to be ruled by their own kings rather than by Persian governors as were the other parts of the fifth satrapy of *ebir nari*, "across the river."

Cyprus was the W seaward limit of Persian expansion. The Cypriotes participated in the Ionian revolt against Persia but were defeated (499-498). The high point of Greek influence in Cyprus during this period is the reign of Euagoras I of Salamis (*ca.* 411-373). The Phoenicians, whose main center was Kition, conquered or colonized various other cities such as Idalion and Tamassos. In some cities like Amathus the native "Eteocypriote" element was strong.

After the Battle of Issus (333), the kings of the city-states joined Alexander, and Cyprus became part of the Hellenistic world. After some dispute as to the fate of the island among Alexander's successors, it was from 294 to 58 B.C. under Egyptian rule and

supplied silver, wood for shipbuilding, and grain to the Ptolemides. There were Jews on the island from the time of Ptolemy I, if not earlier. According to I Macc. 15:23, Cyprus was one of the many lands to which were sent copies of the letter which the Roman consul in 139-138 wrote to Ptolemy Euergetes II, urging that the Jewish settlers should be well treated. At the time of John Hyrcanus, as we are informed by Josephus, the Jews living in Egypt and Cyprus were in a flourishing state (Antiq. XIV.x.4). In 58 B.C., Cyprus was annexed by Rome and was joined with Cilicia for administrative purposes. From a remark of Philo's (*Legatio ad Gaium* 28) and the references to Cyprus in Acts, it is clear that there was a large community spread throughout the island in the first century A.D. Joseph surnamed Barnabas was a native of Cyprus and an early convert to Christianity (Acts 4:36). After the persecution which followed the martyrdom of Stephen, some of the dispersed traveled as far as Cyprus, preaching to the Jews, and some converts from Cyprus preached to Greeks at Antioch (11:19-20). Paul and Barnabas preached together in Cyprus and visited such leading cities as Salamis and Paphos while traversing the whole island. It was at Paphos that they encountered the magician Bar-Jesus (13:4-12). Barnabas visited Cyprus again for missionary work, accompanied this time by Mark (15: 39). Paul, although he passed the island twice again, is not reported to have revisited it (21:3; 27:4).

The Jews on the island rebelled against the Romans in A.D. 116-17. This revolt led to their massacre and banishment from the island. It is possible that these events affected the growth of Christianity on Cyprus, since only after Constantine did it become the religion of a majority of Cypriotes.

CYRENE sī rē′nī [Κυρήνη]; CYRENIANS —ənz. A Greek city on the N coast of Africa; capital of Cyrenaica.

Cyrene was founded *ca.* 630 B.C. by Dorian Greeks from the islands Thera and Crete (Herodotus IV. 150 ff). It received reinforcements of Peloponnesian settlers and became a prosperous city of Greeks living among the Libyans. Cyrene was ruled by a dynasty of kings, the Battiads, until the middle of the fifth century B.C. Its wealth was mostly based on agriculture. Herodotus records that three crops were gathered in one year (IV.199). The export of silphium, a plant in high demand as spice and medicine, was a royal monopoly. This plant occurs as the badge of Cyrene on its coins.

In the fourth century B.C., Cyrene was a democracy and acquired fame as the seat of a school of philosophers. The city submitted to Alexander in 331, and thus later became part of Ptolemy's kingdom. Bequeathed to Rome in 96 B.C., it was declared free; but after some local strife Cyrenaica became a Roman province and was united with Crete.

In Hellenistic and Roman times a large part of the population of Cyrene consisted of Greek-speaking Jews who were sent as settlers by the Ptolemies and enjoyed equal rights. Simon (Matt. 27:32; Mark 15: 21) was a member of this group; so were Lucius the prophet of Antioch (Acts 13:1) and possibly Stephen, who was attacked in the synagogue to which Cyrenians and Alexandrians belonged (Acts 6:9). Cyrenians were prominent among the Jews in Jerusalem and elsewhere abroad (Acts 2:10).

The Jewish revolt under Vespasian had its repercussions in Cyrene, but the major outbreak occurred in A.D. 115-16, when the pagan monuments of the city were burned and smashed, and over 200,000 inhabitants reputedly were killed in the rioting (Dio Cassius 68.32). Hadrian restored the buildings of the city, as is recorded in many inscriptions. The prosperity of Cyrene was declining rapidly, however, as a result of careless exploitation of the soil. The silphium supply was exhausted by Nero's time.

The monuments of Cyrene were explored in the nineteenth century and again by the Italians before the Second World War. The major shrine is the archaic temple of Apollo, rebuilt several times and transformed into a Christian church in the fourth century A.D. Many other temples, as well as a building for the cult of the Roman emperors, baths, and a theater, have been identified.

CYRUS sī′rəs [Heb.-Aram. כורש; Old Pers. *kūruš;* Elam. *ku-ruš;* Akkad. *ku-ra-aš;* κῦρος]. A Persian king, founder of the Achaemenian dynasty and the Persian Empire. Fig. CYR 56.

According to Herodotus (I.107), Cyrus (II) was the son of Cambyses (I), ruler of the unified territories of Paršumaš-Anšan and Pārsa, and Mandane, daughter of the Median king Astyages. The ancestor of Cyrus' house is Achaimenes (Achaemenes; Old Persian *haxāmaniš,* Greek Ἀχαιμένης; *see* PERSIA § D3), as stated in a short inscription from Pasargadae: "I am Cyrus, the king, an Achaemenian."

Several years after succeeding his father, Cyrus turned against Astyages (550). Deserted by his own vassals, Astyages was defeated, and Cyrus entered Ecbatana. The leadership over the possessions of the Median kings (Assyria, Mesopotamia, Syria, Armenia, Cappadocia) now passed to Cyrus "the Great." In the following years he marched against and defeated Croesus, king of Lydia, and captured Sardes, Lydia, and the Greek cities on the coast of Asia Minor. The precise extent of his conquests in the East can only be guessed, but it is certain that he was in control of the vast area between the Oxus River in the E and the Aegean Sea in the W at

Courtesy of the Oriental Institute, the University of Chicago

56. Tomb of Cyrus at Pasargadae in Iran, built of limestone blocks united by iron ties

the time of his attack against NABONIDUS and Babylon in 539. The Nabonidus Chronicle tells the story as follows: "In the month of Tashritu, when Cyrus attacked the army of Akkad in Opis on the Tigris, the inhabitants of Akkad revolted, but he (Nabonidus) massacred the confused inhabitants. The 14th day, Sippar was seized without battle. Nabonidus fled. The 16th day . . . the army of Cyrus entered Babylon without battle. Afterwards Nabonidus was arrested in Babylon when he returned (there)" (*ANET* 306).[1]

Cyrus, then, proclaimed himself "king of the world, great king, legitimate king, king of Babylon, king of Sumer and Akkad, king of the four rims (of the earth), son of Cambyses, great king, king of Anshan, grandson of Cyrus, great king, king of Anshan, descendant of Teispes, great king, king of Anshan, of a family (which) always (exercised) kingship" (*ANET* 316),[1] and, cast in the role of a merciful liberator, he restored Marduk to his former position of eminence and dignity. He also "returned to [the] sacred cities on the other side of the Tigris, the sanctuaries of which have been ruins for a long time, the images which (used) to live therein and established for them permanent sanctuaries, . . . gathered all their (former) inhabitants and returned (to them) their habitations" (*ANET* 316).[1]

By the fall of Babylon the awareness of the Hebrews of the political and military power of Cyrus, the "Lord's anointed" (Isa. 45:1), within the framework of the prophetic tradition of the coming of God's empire and the expected restoration of Israel (Isa. 44:28; see in general chs. 35; 40–55), was alerted and got a partial confirmation. The Aramaic decree (Ezra 6:3-5) on the rebuilding of the temple in Jerusalem (still controversial in details), issued in the first year of King Cyrus (538), fits into the general picture of a policy of tolerance and wisdom practiced by Cyrus. The context in which the decree occurs is an exchange of correspondence between King Darius and the satrap of Syria-Palestine on the permissibility of the reconstruction of the temple (Ezra 5:6–6:12). Darius quoted the Cyrus document, which was found in the archives of Achmetha-Ecbatana (*see* ECBATANA) and granted the permission on its strength. It seems the decree was incorporated considerably later in the Chronicler's account of the repatriation (Ezra 1:2-4). According to Ezra 6:15, the temple was actually finished on the third day of Adar in the sixth year of King Darius (spring of 515).

A tendency toward idealization of Cyrus' portrait is manifest in Herodotus' qualification of him as a "father" to his people (III.89), his statement that nobody would have dared to compare himself with Cyrus (III.160); and Aeschylus' picture of Cyrus as an ideal monarch (*Persae* 768-69).

Before leaving on his campaign against Queen Tomyris and the Massagetae (Herodotus I.201-4), which resulted in his death (529), Cyrus designated his son Cambyses as his successor. Of this last campaign Herodotus writes: "The reasons which drove and urged him were of more than one kind, first his birth, the belief that he was more than a man, secondly the good fortune which had been his in his campaigns" (I.204).

In the book of Daniel, Daniel is pictured as retaining his official position until the first year of Cyrus (1:21), and the final vision of Daniel is dated to the third year of Cyrus (10:1). Cyrus is perhaps the "anointed one" of Dan. 9:26.

M. J. DRESDEN

[1] From James B. Pritchard, *Ancient Near Eastern Texts* (Princeton University Press; rev. ed., 1955).

D. A symbol used to designate two biblical MSS, BEZAE and CLAROMONTANUS. *See* TEXT, NT.

D (DEUTERONOMIST) dōō'tə rŏn'ə mĭst, dū'—. The designation of one of the principal literary sources or strata of the PENTATEUCH. The Deuteronomist was the editor or compiler of this source, which is roughly coextensive with the book of DEUTERONOMY.

DABAREH. KJV form of DABERATH in Josh. 21:28.

DABBESHETH dăb'ə shĕth [דבשת, hump] (Josh. 19:11); KJV DABBASHETH. A border town in Zebulun. Although its exact location is unknown, the context suggests that it should probably be identified with one of the sites near Jokneam, perhaps Tell esh-Shemman.

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938), 301.

G. W. VAN BEEK

DABERATH dăb'ə răth [דברת]; KJV DABAREH —rə in Josh. 21:28. A Levitical town in Issachar (Josh. 21:28; I Chr. 6:72—H 6:57), situated on the border between Issachar and Zebulun (Josh. 19:13—H 19:12). "Daberath" should be read also for MT "Rabbith," with LXX B, in the list of towns in Issachar (Josh. 19:20).

It is located at Deburiyeh, W of Mount Tabor.

Bibliography. W. F. Albright, "The Topography of the Tribe of Issachar," *ZAW* (1926), pp. 230-31; F.-M. Abel, *Géographie de la Palestine,* II (1938), 301.

G. W. VAN BEEK

DABRIA dăb'rĭ ə [Lat.] (II Esd. 14:24). One of five scribes whom Ezra was bidden to take with him, "because they are trained to write rapidly."

J. C. SWAIM

DACOBI. KJV Apoc. form of AKKUB 2.

DAGGER. *See* WEAPONS AND IMPLEMENTS OF WAR.

DAGON dā'gŏn [דגון, corn]. A god associated with the Philistines (I Sam. 31:10; see I Chr. 10:10) in Gaza (Judg. 16:23) and in Ashdod (I Sam. 5:2-7), where he had a temple in which the Philistines deposited the ark after its capture, and which was still used in the Hasmonean period, being destroyed by Jonathan, the brother of Judas Maccabeus in 147 B.C. (I Macc. 10:83-84).

The cult of Dagon is attested among the Semites of the Near East long before the Philistine invasion —Dagon occurs as an element in theophoric names from the Amorite period in Mesopotamia a millennium before (cf. Dagan-takala, the chief of an unknown locality in Palestine in the Amarna Tablets). His cult was well established at Ras Shamra, where his temple rivaled that of Baal. It is the opinion of C. F. A. Schaeffer that both temples date from *ca.* 2000 B.C.

In the mythological texts from Ras Shamra describing the vicissitudes of BAAL as a dying and rising vegetation-deity, Baal is termed the "son of Dagon." This title may reflect a certain stage in the development of the conception of Baal—i.e., Hadad (*see* HADADRIMMON), the Amorite god of winter storms and rain—to that of the vegetation he stimulates. The name Dagon is almost certainly connected with the Semitic common noun for corn (דגון), as Philo of Byblos in his work on Phoenician religion implies. The relative seniority of Dagon is implied in Philo's statement that he was with El, who is the senior god in the Ras Shamra texts, the son of heaven and earth. His functions as a vegetation-god, however, appear to have been transferred to Baal by the middle of the second millennium. Dagon, however, continued to be worshiped independently at Ras Shamra, and provision for his cult is attested in offering lists, where he appears with—but generally after—El, the senior god of the Canaanite pantheon, and Baal, the most active deity, and in two *ex voto* inscriptions—neither of which, however, gives any indication of the nature of the god or his cult.

In the obviously corrupt passage I Sam. 5:4, רק נשאר דגון עליו ("only the trunk of Dagon was left to him"), Wellhausen proposed to read רק נשאר דגו עליו ("only his fishy part was left on him"). The association of Dagon with a fish goes back at least as early as Jerome (*ca.* A.D. 400), and the conception of the god as half fish goes back to David Kimchi (*ca.* A.D. 1200), both reflecting popular etymology unsupported by any known facts. The passage in I Sam. 5:4 may be emended on the basis of the LXX to רק נשאר גוו עליו ("only his back was left on him").

Other centers of the cult of Dagon in Palestine may have been at Beth-dagon, mentioned in Josh. 15:41 in the orbit of Judah; possibly Bit-Daganna (modern Beit Dajan five miles SE of Jaffa), mentioned with Jaffa in Sennacherib's annals; Beth-dagon in Asher (Josh. 19:27); and Beit Dajan on the E edge of the Mukhneh plain just E of Nablus.

J. GRAY

DAISAN. KJV Apoc. form of REZIN.

DALAIAH. KJV form of DELAIAH in I Chr. 3:24.

DALETH dä'lĭth (Heb. dä'lĕth) [ד, *d* (*Dāleth*)]. The fourth letter of the Hebrew ALPHABET as placed in the KJV at the head of the fourth section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

DALILA də lī'lə. Douay Version form of DELILAH.

DALMANUTHA dăl'mə nōō'thə [Δαλμανουθά] (Mark 8:10). A place of uncertain location along the W shore of the Sea of Galilee.

The word occurs in the best Greek MSS. Following the feeding of the four thousand, it is said that Jesus embarked with his disciples and crossed to the "district of Dalmanutha." Since there is some acceptable MS evidence for MAGADAN or MAGDALA at this point, and since these two names also appear as variants in the parallel passage in Matt. 15:39, but Dalmanutha does not, there is great difficulty in establishing the name of the place in the original text. The word is not found in other ancient sources and may be a textual error, even though it is read in the best MSS.

Dalmanutha and Magdala (or Magadan) may have been names for the same place or names of two places in the same area, but Dalmanutha was so little known or used that only this reference to it has survived.

Bibliography. G. Dalman, *Die Worte Jesu* (1930), I, 52-53. B. Hjerl-Hansen, "Dalmanutha," *RB*, LIII (1946), 372-84.

D. C. PELLETT

DALMATIA dăl mā'shə, —shĭ ə [ἡ Δαλματία] (II Tim. 4:10). The S part of ILLYRICUM.

In the long process of the establishment of their authority over Illyria the Romans found the Dalmatians among their most stubborn opponents. A Roman embassy under Gaius Fannius (157/156 B.C.) was mistreated by them (Polybius XXXII.13), and in the subsequent war Marcius Figulus burned the Dalmatian capital, Delminium. In 119 B.C., Caecilius Metellus marched against the Dalmatians and wintered among them at Salona; in 50 and 48 B.C., armies of Caesar and of Gabinius were defeated; by 33 B.C., Octavian completed a subjugation of the Dalmatians which required several years (Appian *Illyrian Wars* 11-12, 28). Again in A.D. 6-8 a Dalmatian revolt, led by a certain Bato, was put down by Tiberius (Dio LV.xxix-xxxiv). According to Strabo (VII.315), the Dalmatians redistributed their land every seven years, and made no use of coined money.

J. FINEGAN

DALPHON dăl'fŏn [דלפון] (Esth. 9:7). One of the ten sons of Haman who were put to death by the Jews.

DAMARIS dăm'ə rĭs [Δάμαρις] (Acts 17:34). A woman of Athens who heard Paul's speech before the AREOPAGUS and believed, along with DIONYSIUS and some others. The name Damaris, hitherto unknown, may be a variant for Damalis ("heifer"), a fairly common name; but Damarion is also known. Codex D (fifth century) omits reference to Damaris, while E (seventh century) applies "esteemed" (τιμία) to her. Luke knew of honorable women (Acts 13:50; 17:12) but makes no claim about Damaris. Chrysostom mistakenly names her as the wife of Dionysius (*On the Priesthood* IV.7).

D. M. BECK

DAMASCENE dăm'ə sēn. The region of Damascus famous for its fertility, which is caused by the River Barada. The Ghuta is the name of the real oasis, and the district stretching toward the semiarid steppe is called Merj. In the region there are a number of ancient mounds showing its importance in ancient times.

A. HALDAR

DAMASCUS də măs'kəs [דמשק, דומשק (II Kings 16:10), דרמשק (II Chr. 16:2; 24:23; 28:5, 23); Akkad. *Dimišqi;* Amarna *Dimašqa, Dumašqa, Timašgi;* Arab. *Dimišq, Dimašq, Dimišq aš-Šām*]. A city of SYRIA (Aram). The present city, capital of modern Syria, is situated under the E slopes of Anti-lebanon, with the Mount of Hermon in the SW.

The region of Damascus is an oasis watered by a system of rivers and canals. Damascus itself is situated on the Nahr Barada (River Abana) coming from Anti-lebanon, and S of the town the Nahr el-A'waj (River Pharpar) flows eastward. Both these rivers disappear in the semiarid country to the E (*see* DAMASCENE). Damascus has always played an important role as a center of commerce and religion because of its situation where, since time immemorial, the most important military and commercial routes have met.

Damascus is mentioned several times in the OT; at that time the town was the capital of the Aramean (Syrian) kingdom (cf. Gen. 14:15; 15:2; I Kings 11:24; 15:18; 19:15; 20:34; II Kings 8:7, 9; 14:28; 16:10-12; Isa. 7:8).

The earliest occurrence of the name of Damascus is found in an inscription of Thut-mose III (sixteenth century). In the vicinity of Damascus there are a number of important tells—i.e., mounds—in which the remains of ancient towns are buried. This shows that in the early periods there were several centers of settlement, and it is not certain that the present town was the main center—e.g., in the first half of the second millennium. Since the region of Damascus is the fertile valley of Nahr Barada, opening eastward toward the semiarid country, from which enemies have come more than once, it was necessary to have defense against them. *Ca.* nine miles E of Damascus one fortified town was situated on the Nahr Barada (its remains are now hidden in Tell es-Salihiyeh; *see* HOBAH, where a large town was situated in the Old Babylonian period, *ca.* eighteenth-seventeenth centuries). *Ca.* nine miles SW of Damascus another big mound (Deir Habiyeh) is witness of another center of habitation in the Old Babylonian period.

In the Amarna age (*see* TELL EL-AMARNA) Damascus was the center of an important Amorite kingdom, whose ruler seems to have played a leading role in the efforts to get rid of the Egyptian domination. During that period there were apparently connections between the region of Damascus and the

Mycenean world, to judge from the discovery of pieces of Mycenean pottery at Tell es-Salihiyeh (in the Museum of Damascus). At the end of the second millennium, Damascus was the capital of the important Aramean kingdom, which for some time was powerful enough to compete with the Assyrians. The Arameans conquered the town after the downfall of the Hittite kingdom *ca.* 1200 B.C., and during the united and divided Hebrew monarchies Damascus was the rival of Jerusalem and Samaria (i.e., Judah and Israel). In II Kings 5:12 we are reminded of this fact, when Naaman was told to wash himself in Jordan and answered Elisha that the rivers of Damascus were "better than all the waters of Israel." King David was victorious in his war against Damascus and made it tributary (II Sam. 8:5-6; I Chr. 18:5 ff). During the reign of Solomon, Damascus was conquered by Reson of Aram-Zobah, and he made himself independent of the Israelites (I Kings 11:23 ff). Tabrimmon of Damascus was the ally of Abijam of Judah against Israel (see I Kings 15:19). His son Ben-hadad I (900-875) was allied to Baasha of Israel, but afterward made a league with Asa of Judah (I Kings 15:18 ff). Ben-hadad II and his son Hadadezer made war against Ahab of Israel, who was killed in the battle at Ramoth-gilead (853; I Kings 22). Ben-hadad III ruled for two years and was then killed by Hazael (843-797; II Kings 8:7-15), who was followed by Ben-hadad IV. This king was victorious against Israel, conquered almost the whole territory of Israel, and besieged Samaria (II Kings 6:24 ff). Through the intervening of Elisha, we are told, the siege was raised. Jeroboam II of Israel restored the power of his country (II Kings 14:28).

In the meantime, Damascus had to fight also against Assyria. If the kingdom of Damascus was to keep its position, it was necessary to prevent the Assyrians from being successful in their efforts in the W. Of importance in this connection is the Syro-Ephraimite War (734), when Rezin of Damascus and Pekah of Israel made war against Ahaz of Judah to force him to join them in the war against Assyria. Isaiah warned King Ahaz, but in spite of the warning he relied upon Assyria. The outcome of the war was that Assyria under Tiglath-pileser conquered Damascus in the year of 733/32 (*ANET* 282-83). Rezin himself was killed (II Kings 16:9), as the prophet Isaiah had prophesied (Isa. 7:4 ff; 8:1 ff; 17:1 ff). Because of these events, Damascus lost its position as the capital of a flourishing kingdom and after that was merely the center of a province under foreign rulers. Afterward the Assyrians, the Babylonians, the Persians, and finally Alexander conquered the town (*see* ASSYRIA AND BABYLONIA). Through Roman policy, Damascus became the capital of an independent Nabatean kingdom (85 B.C.). The ruler was Aretas III. In 65 B.C. the Romans conquered Syria, and Damascus came under a Nabatean governor. When Paul came to Damascus (Acts 9:2 ff), Damascus was ruled by Aretas IV. At that time there were numerous Jews and also a Christian group (Acts 9:2; 22:5-6, 10-11; 26:12; cf. Josephus). The Roman emperor Trajan joined the town to the Roman province of Syria.

During the development of the following centuries, the population of Damascus was Christianized. The famous Church of Saint John Baptist was begun by the Emperor Theodosius and completed by Arcadius. It was built on the site of an earlier temple of Hadad, the ancient West Semitic storm-god.

A. HALDAR

DAMASCUS, COVENANT OF. The abbreviated title of a sectarian Jewish community known from remains of its writings, which are usually called "ZADOKITE FRAGMENTS." In them the community calls itself the "New Covenant in the Land of Damascus" (6:19; 8:21; cf. 20:12). It flourished in the time of Jesus and belonged to the ESSENES, as has been proved by the fact that fragments of this writing have been found in caves IV and VI near Khirbet Qumran and from the content of the DEAD SEA SCROLLS themselves.

O. BETZ

DAMN, DAMNABLE, DAMNATION. *See* CONDEMNATION.

DAN dăn [דָּן (God) judges; *originally a proper name, a shortened perf ct (verbal) form*]; DANITE dăn'īt [דָּנִי]. **1.** The fifth son of Jacob, and the *heros eponymos* of the tribe of Dan. Born of Rachel's personal maid Bilhah (Gen. 30:1-6), Dan was the full brother of Naphtali, therefore always named along with him in the lists (Gen. 35:25; 46:23; Exod. 1:4; separated by mistake in I Chr. 2:2).

Dan's inferior reputation as half-caste, as well as the special relationship to Rachel, is explained by the history of the tribe. At first Dan attempted to settle in the area W of Benjamin. In Judg. 1, an old reliable source, named by Alt the "negative inventory of possessions," vss. 34-35 list as cities which the Danites could not conquer Aijalon (Yalo), Harheres (probably = Beth-shemesh Tell er-Rumeileh), and Shaalbim. The Danites attempted, therefore, to establish themselves in the Shephelah, but they could not hold out. The "Amorites" not only did not permit them to come down into the plain, but even forced them up into the mountains. Obviously the Danites had entered too far into what was really Canaanite-settled territory. What is related about the Danite Samson (Judg. 13:2 ff) fits in with this. The point of departure for his ventures, which also led him down into the plain of the Philistines, was Mahaneh-dan (vs. 25). The Danites, therefore, had only a fortified camp, not a settlement at all; and this camp lay between Zorah and Eshtaol, thus between two more Canaanite cities. The list of towns in Josh. 19:40-46, which extends the Danite settlement area in this region far into the maritime plain, is taken from a larger list, from an inventory of the kingdom of Judah at the time of Josiah, and it contributes nothing to the history of the tribe of Dan. In the system of border descriptions which originated in

the period of the judges itself and was worked into the book of Joshua, Dan is significantly missing.

Therefore, the tradition in Judg. 17–18, which shows Dan in search of a new opportunity for settlement, is to be given credence. The Danite scouts traversed the country as far as the source of the Jordan. There they found a city, Laish, whose area was well suited to their purposes. It was connected neither with the Sidonians in the W nor with the Arameans (read ארם) in the E (18:7, 28). They succeeded in conquering the isolated city. It was renamed Dan after the ancestral Dan (Josh. 19:47; Judg. 18:29). It is explicitly reported that the tribe set forth with six hundred men (Judg. 18:11); apparently this was the entire levy. Dan was a small tribe. But now Dan grew into the character of a Canaanite city-state; the tribe became half-caste. If one considers in addition its fringe location in the extreme N, one understands why it no longer played a role in the history of Israel. But it furnishes an interesting example of the fact that everything was by no means finished with the first settlement, but that the process of taking possession of the land was of longer duration and of varying fortune.

The course of Dan's history, as outlined above, is also reflected in the oldest poetry. In the Song of Deborah, Dan is reprimanded because it did not show an interest in the common Israelite cause, but lingered with the ships as a stranger (Judg. 5:17). Are the ships of the inhabitants of Tyre or those of Joppa meant? In the Blessing of Jacob we read:

> Dan shall judge [judges] his people
> as one of the tribes of Israel
> (Gen. 49:16).

This could be correctly interpreted as a wish—in analogy with what follows. But even if one does not transform the indicative into a jussive, the verse seems to reveal the fact that the autonomy of Dan was, nevertheless, felt to be a problem in the circle of the amphictyony. This points to the period of residence in the S. The saying in the Blessing of Moses (Deut. 33:22), on the other hand, clearly assumes that Dan is in the N, for Dan is compared to the young lion which leaps forth from Bashan—i.e., probably, who attacks the trade caravans to and from Damascus.

In the more recent literature Dan appears primarily in lists. In this connection the sequence in which Dan appears is interesting. In the Priestly Code, Dan is usually the third from the last, before the Zilpah tribe of Asher and Naphtali, the other Bilhah tribe (Num. 1:38-39; 2:25-26; 7:66-71; 10:25; 26:42-43); in the list of the scouts (13:12) Gad, the other Zilpah tribe, is added; in the list of the leaders of the tribes (1:12) the same Gad is even inserted ahead of Naphtali. A geographical principle is discernible only in Num. 34:22, where of the 9½ W tribes in the commission for the division of the land, the fourth place, immediately after Benjamin, is allotted to Dan. For the same reason Dan always appears in the fifth place after Benjamin and Ephraim (Josh. 21:5, 23-24; I Chr. 6:61, 69—H 6:46, 54) in the lists of the Levite cities. In Deut. 27:13, Dan—with his brother—belongs, as the final pair, to the group which must speak the curse from Mount Ebal. In Ezek. 48:1, Dan, in remembrance of its previous geographical situation, has allotted to it the most northerly strip; in vs. 32 the third E gate is called the "gate of Dan," so that Dan appears as the sixth directly after the Rachel group and far removed from Naphtali as the twelfth, but—with regard to the position of the gates—diagonally across from Naphtali. In the two lists of Chronicles, which show a peculiar structure (cf. I Chr. 2:1 ff), Dan ranks, in one instance, between Naphtali and Asher at the end of an exclusively W Jordan series of twelve (12:36); in the other instance it is at the end of another series of twelve, but separated from Naphtali by the Rachel group (similar to 2:2).

Individuals who belonged to the tribe of Dan were Oholiab, Bezelel's co-worker in the construction of the tabernacle (Exod. 31:6; 35:34; 38:23); also Huramabi, likewise an artist, from Tyre but the son of a Danite woman (II Chr. 2:13; according to I Kings 7:13-14 his mother stemmed from Naphtali); and, finally, the blasphemer of Lev. 24:11, who, at least on his mother's side, had Danite blood in his veins. The last two are probably not chance examples of the fact that the Danites were susceptible to the intermingling of blood. In the case of the Egyptian father of the one, the S sojourn of the tribe of Dan is thought of; in the case of the Phoenician father of the other, the later residence in the N.

For the territory of Dan, *see* TRIBES, TERRITORIES OF, § D9*a*. *See* the bibliography under ASHER.

K. ELLIGER

* **2.** A city in the extreme N of Palestine to which the Danites migrated (Judg. 18).

Dan is identified with Tell el-Qadi (the "mound of the judge"), a site located at the S foot of Mount Hermon, at the source of the Nahr Leddan, one of the major headwaters of the Jordan River. It overlooks the Huleh Plain several hundred feet below, and guards the important trade route which links Tyre with Damascus.

The mound itself is quadrangular and measures 500-600 yards in length. Its E end is higher than the W, and perhaps marks the location of the original town. Although the mound has not been excavated, surface explorations have shown that it was occupied throughout the Bronze Age (*ca.* 3000-1200) and in Iron II (*ca.* 900-600).

During the Canaanite period, the city was known as Laish, according to Judg. 18:7, 14, 27, 29, and to the list of towns conquered by Thut-mose III of Egypt (fifteenth century B.C.), in which it is spelled *Ra-wi-sa* (no. 31 in the list). A variant name, Leshem, is also preserved in Josh. 19:47. After the Danites abandoned their original territorial allotment—probably as a result of Philistine pressure—they migrated to the N and captured Laish, renaming it Dan (Judg. 18). Dan was one of the two cities in Israel in which Jeroboam established a Yahweh sanctuary complete with a golden calf, following the division of the kingdom (I Kings 12:29); the sanctuary survived the thorough religious revolution of Jehu (II Kings 10:29). Early in the ninth century, it was one of the N Israelite cities taken by Ben-hadad of Damascus at the instigation of Asa of Judah (I Kings 15:20=II Chr. 16:4). Elsewhere in the OT, the city is frequently mentioned in the phrase "from Dan to Beer-

sheba" as the northernmost point of Israelite territory.

G. W. Van Beek

DANCING. The harmonious and rhythmic movement of the body in sheer exuberance of spirit and bodily health, in practiced mime, or in conscious devoted joy before God. As in all religions of antiquity, the dance has its place in Israelite life and worship.

Different types of movement seem to be represented by the principal words used to describe dancing in the OT. רקד means "skip about," and the verb is used in three separate tenses of gay and merry movement—e.g., of children (Job 21:11). כרר in the participle, *Pilpel*, מכרכר, "dancing, whirling about" (II Sam. 6:14, 16), is used of David's long and whirling dance before the ark. In II Sam. 6:16 the word is used synonymously with the *Pi'el* of פזז, which means "to show agility" and "to leap in dancing." חול (חיל) denotes "whirl, dance, writhe"; the nouns, masculine and feminine, from this root describe the dance as the joyous opposite of mourning (Ps. 30:12), as an act of praise to Yahweh (149:3; 150:4), and as accompanied by timbrel and other instruments and by singing. It is graceful and beautiful (Song of S. 7:1) and can be idolatrous (Exod. 32:19). Occasionally שחק, "laugh, make sport, jest," is used of singing and dancing (Judg. 16:25; I Sam. 18:7), and these performed before the Lord as in II Sam. 6:5 = I Chr. 13:8; II Sam. 6:21; I Chr. 15:29.

In the NT ὀρχέομαι is used of Herodias' daughter's dancing (Mark 6:22; Matt. 14:6) and of innocent dancing (Matt. 11:17; Luke 7:32). The prodigal son heard a company of dancers, on his return (Luke 15:25). Herodias' daughter's artistic dancing is, of course, another matter, for it was designed to captivate and further the ends of the dancer. Of such dancing there is little in the Bible (but cf. Eccl. 3:4).

It is clear that dancing was a prominent feature

1. Girls perform with acrobatic dancing; from a necropolis of Memphis at Saqqarah

Courtesy of Foto Marburg

2. Dancing-scene relief from a tomb at Saqqarah: nude girls beat clappers, women beat drums, and men march with raised arms (Sixth Dynasty, 2350-2200 B.C.)

Courtesy of the Trustees of the British Museum

3. Wall painting from a tomb at Thebes: two nude girls dance to music, musicians have ointment jars on their heads (fifteenth century B.C.).

in religious Feasts, and may be implicit in the meaning of חג, "festival, pilgrimage." At times it is specifically mentioned. Ancient religion was joyous, and the sanctuaries were the scenes and the festivals the occasions of rejoicing before God, so that dancing would be an inevitable and normal part of worship. There is little reference to dancing in the Bible, but the references that occur show that it was virtually as frequent as mourning and that it was an activity so common as not to require special mention.

Yet certain dances are mentioned, and these obviously are mentioned for important reasons. Israel's deliverance at the Sea of Reeds is celebrated by dancing with singing and instruments (Exod. 15:20; cf. Isa. 30:29). For other occasions see I Sam. 18:6; 21:11; 29:5; 30:16. Cf. Abel-meholah—"dancing meadow" (Judg. 7:22; I Kings 4:12; etc.). Perhaps Passover included a limping dance connected with the threshold. Yahweh's annual feast at Shiloh featured vineyard dancing by the maidens (Judg. 21:16-24). David, dressed as a priest, danced before the ark (II Sam. 6). Idolatrous dancing is mentioned in the golden-calf story (Exod. 32:19), and at Carmel (I Kings 18:26); in the latter passage calling on the name of Baal is linked with a limping dance (cf. Pss. 149:3; 150:4). Similarly, evidence of dancing on the fifteenth of Abib, on the Day of Atonement, on the day before and during the Feast of Tabernacles, in post-OT times may preserve practices from OT times.

There is comparatively little mention of dancing in the Psalms, but enough to show that it was a legitimate part of the worship. There is, however, some reference to processions (e.g., Ps. 68:24-27, where the order of the procession is also described; cf. "thy goings," or "thy processions," in vs. 24). Other psalms also make reference to or imply processions. Thus Pss. 24 (especially vss. 7-10); 26:6-7; 29:2; 42:4; 45:14-15; 47:5; 48:12-14; 84:5-7; 87:7; 89:15; 95:

1-2; 100:2, 4; 109:30; 110:3; 118:19-29 (cf. "festal procession" in vs. 27); 122:1-5; 132:8-10; 149:1-4; 150 include the most obvious passages, though by no means exhaust the possible references. Such processions, being mainly occasions of triumph and of joy, would inevitably include acts of dancing or rhythmic religious movement. It is generally accepted that II Sam. 6; Ps. 132 are closely related, the history as the founding legend, and the psalm as the liturgical celebration, probably of annual occurrence. If this relation be true, then the dance of II Sam. 6:14-15 may be implied in vss. 8-10 of the psalm. In that event the procession of Ps. 132:8-10 would include a dance.

G. HENTON DAVIES

***DANIEL** dăn'yəl [דניאל]. The book now appearing in English versions as the fourth of the prophetic writings contained in the OT; also, the man of the same name, with whom the book is mostly concerned; also, the name of an ancient figure referred to in Ezek. 14:14; 28:3, where the *Kethibh* is דנאל, Dan'el, but *Qere* is דניאל, Daniel. Other occurrences of the name are for a son of David (I Chr. 3:1—text dubious) and for a priest of the house of Ithamar (Ezra 8:2; Neh. 10:6). The last two occurrences attest the fact that the name was current among the Jews in the postexilic period.

1. The man. The Ugaritic literature (*see* UGARIT) has provided in the *Aqht* legend* the story of a King Dnil, which name may be vocalized as Danel or Daniel. He is said as king to dispense justice:

> He judges the case of the widow,
> And judicates the cause of the fatherless.

His name means "God has judged," so that wisdom would appear to be a significant element in the character, though the *Aqht* legend does not itself draw this out. Ezek. 14:14 links a man Daniel with Noah and Job, and the reference is obviously to an ancient figure considered to be, like the other two, prediluvian. Daniel is cited here for his righteousness, rather than his wisdom. But in Ezek. 28:3 Tyre is mocked because she thought herself "wiser than Daniel." Thus we may take it that there was a Phoenician-Canaanite tradition concerning a king who in some stories not preserved for us had a reputation for uprightness of character and surpassing wisdom. This tradition presumably accounts for the occurrence of the name as Enoch's father-in-law (Jub. 4:20). Fig. UGA 11.

The relation of this legendary figure to the central figure of the book of Daniel is not certain, but the probability is that the author was acquainted with a number of stories about him, which had already shifted their location in space and time to Babylon and the Neo-Babylonian period, and the new home of wisdom (*see* CHALDEA). For a similar shift of period and location, cf. the British cycle concerning King Arthur. The occurrence of the name Daniel in I Enoch 6:7 suggests a variant development whereby the original wisdom figure became angelic, first

doubtless in a good sense, and then later in a bad sense. In our author's hands (*see* § 2*f below*), Daniel becomes a young Jew, who is loyal to his ancestral religion and who is made by divine inspiration wiser than all the sages of Mesopotamia. This combination of wisdom and righteousness enables him to receive the visionary revelations which form the latter part of the book. The older traditions make no reference to the other outstanding characteristics of the hero of the book Daniel, which are his unshakable faith in God and courage of the highest order in the face of persecution. These we may consider to be bestowed upon the character by the author of our present book.

2. The book. ***a. Contents.*** The book divides into two parts. Chs. 1–6 contain six stories, five of which concern Daniel, and one his three friends Shadrach, Meshach, and Abednego. In these stories Daniel is introduced in the third person. The stories are: (*a*) Daniel and his friends loyal to their religion in matters of food; (*b*) the King's dream concerning an image interpreted by Daniel; (*c*) the three friends cast into the furnace for refusing to worship an image: (*d*) Nebuchadnezzar's madness prophesied by Daniel; (*e*) the writing on the wall at Belshazzar's feast interpreted by Daniel (*see* MENE, MENE, TEKEL, AND PARSIN); (*f*) Daniel cast into a lions' den for refusing to recognize Darius the Mede as a god.

In the second part Daniel receives four visions. In the first of these visions Daniel is introduced in the third person (7:1) and tells of his experience in the first (7:2-28); in the other three he writes in the first person (chs. 8–12), but at the beginning of the third vision he is briefly mentioned in the third person again (10:1). Thus the change from third person to first is unobtrusively effected with great skill. We shall consider the implication of this fact in § 2*d below*.

The first vision is of the four beasts. Daniel sees four beasts arise from the sea (i.e., the nations of mankind) in turn. They typify four world empires. On the fourth beast arises a horn which represents a monarch who makes large boasts; but then follows a judgment-theophany, the beast is destroyed, and a fifth kingdom typified by a human figure (*see* SON OF MAN) is established by God as an everlasting dominion. This last is the kingdom of God incorporated in the people of Israel. In the exposition of the vision it is said that the saints will be delivered into the hand of the last king of the fourth beast for "a time, times [a plural but traditionally taken as dual; see Rev. 11:2-3; 13:5], and half a time"—which apparently means three and a half years.

The second vision is of the ram and the he-goat. A ram with two horns is destroyed by a furious he-goat, which then sprouts four horns, from one of which a little horn sprouts. This again is the blasphemous and persecuting monarch, who intermits the daily sacrifice in the temple for a period of 2,300 mornings and evenings (i.e., 1,150 days), but it is foretold that he will be broken "by no human hand."

The third vision is of the seventy weeks. Daniel is let into the secret that the seventy years which Jeremiah prophesied as the duration of the Exile actually means seventy weeks of years (i.e., 490), and the history of Israel from the rebuilding of Jerusalem onward is sketched in terms of an initial period of seven weeks, a further period of sixty-two weeks, and then the last week, which is ushered in by the death of "an anointed one." During this last week the "prince who is to come" shall cause sacrifice and oblation to cease for half a week (i.e., three and a half years), until the decreed end comes upon him.

The final vision is of the revelation of the angel. Daniel is told by an angelic being what the history of Israel is to be from the time of the Persian Empire to the rise of the Greek Empire under Alexander and his successors, and the rivalries of the "king of the south" and the "king of the north" are detailed in cryptic terms until the current king of the north succeeds in conquering Egypt. Hearing of trouble in the East, he turns to march thither, but as he comes up again through the Holy Land, he meets his end there. The time until the end of these wonders is solemnly asseverated as a time, times, and half a time.

We may note here that the image of the King's dream has four component metals which accord with the four beasts of ch. 7, and typify four empires. During the time of the last empire, a stone not cut by human hand smites the image and destroys it, and then itself becomes a mountain and fills the whole earth. This is explained by Daniel as an everlasting kingdom which God himself will establish.

The usual explanation is that the four kingdoms of these visions are the four world empires of Babylon, Media, Persia, and Greece. The he-goat of the second vision is Alexander, and the "king of the south" and the "king of the north" in the fourth vision are the Ptolemaic and Seleucid dynasties of Egypt and Syria, while the boasting horn of the first vision, the blasphemous little horn of the second, the "prince who shall come" of the third, and the furious "king of the north" of the fourth vision all typify Antiochus Epiphanes, who persecuted the Jews from 168 onward and sought to destroy Judaism in its ancestral home. For further discussion, however, *see below*.

Stories 1-4 are set in the reign of Nebuchadnezzar, story 5 in the reign of Belshazzar, story 6 in the reign of Darius the Mede. Vision 1 is set in the first year of the reign of Belshazzar, vision 2 in his third year, vision 3 in the first year of Darius the Mede, and vision 4 in the third year of Cyrus. Thus the stories and visions are in a chronological order, but the visions commence before the stories end.

b. Place in canon. When the OT canon was fixed at the Synod of Jamnia, *ca.* A.D. 90, Daniel was included in the Writings or third section—not in the Prophets or second section. The reason for this was that the second section had come to be regarded as closed since *ca.* 200 B.C., and the Synod was only concerned to adjudicate on the contents of the still fluid third section. The attempt to show that Daniel was originally among the Prophets fails on the evidence of the Talmud (B.B. 15*a*). That Daniel was widely recognized as scripture from the second and first centuries B.C. onward can be in no doubt. Ecclesiasticus (*ca.* 180 B.C.) omits Daniel from its list of Israel's great men, but there is a clear relationship between passages in Daniel and I Enoch (e.g., I Enoch 14:18-22; Dan. 7:9-10), and while both may be dependent on a common source (in this case in

part Ezek. 1), the strong likelihood is that I Enoch is borrowing from Daniel. Since I Enoch (*see* ENOCH, BOOK OF) is basically a pre-Christian book, this would argue for the popularity of Daniel and in some degree for its authority in the pre-Christian period. I Macc. 2:59-60 (after 135 B.C.) refers to Daniel and his three friends by name, and a florilegium of passages and commentary from Qumran (Q4) refers, like Matt. 24:15, to "Daniel the prophet." Josephus retells the story of Daniel at length in Antiq. X.x-xi. Thus the evidence is that the book was not known or quoted before 160 B.C. but was known and revered from the middle of the second century B.C. onward and was regarded as scripture at least by the second half of the first century A.D. Those who have tried to prove the existence of the book before the beginning of the second century B.C. have not succeeded in gaining widespread support for their views. Its late emergence alone can explain why in the Hebrew Bible the book is in the Writings and not among the Prophets.

Orthodox Judaism has evinced only a moderate enthusiasm for the book, partly because of its attempt to calculate the time of the end, and partly because of the general Jewish reaction against apocalyptic; but the Christian church has never been in any doubt as to its prophetic character and value. When the Greek-speaking Jews responsible for the LXX rearranged the order of the books, from the Hebrew tripartite division (Law, Prophecy, Writings), they placed Daniel among the prophets—after Ezekiel and before the Twelve; this position the book has retained in English versions and Christian versions generally. *See* CANON OF THE OT.

c. Language, text, and versions. 1:1–2:4*a* is in Hebrew; 2:4*b*–7:28 is in Aramaic; and chs. 8–12 are in Hebrew. Whether the whole book was originally in one language or the other has been strongly disputed. The views most canvassed are (*a*) that of Dalman, Torrey, Montgomery, and others—that the stories existed first as a complete work on their own, written in Aramaic, and the visions were written later in Hebrew; a redactor brought the two halves together by translating the first story into Hebrew and the first vision into Aramaic; (*b*) that of Lenormant, Bevan, and others—that the whole book was written in Hebrew but chs. 2–7 were lost and the lacuna made up from an Aramaic translation; (*c*) that of Charles—that the book was written in Aramaic and the first chapter and the last four were done into Hebrew with the idea of commending the work to Jewish piety. Rowley suggests that the stories were issued first as separate pieces in the popular language and that the author changed to Hebrew when he began to issue other pieces of less popular interest and designed for more distinctively religious groups. This change may, however, be linked to a noticeable growth in apocalyptic interest as the book progresses. The first chapter was translated into Hebrew when the pieces were collected to form a book.

The Greek translation called the SEPTUAGINT has come down to us in one MS only, that of Codex Chisianus, copied perhaps in the eleventh century (so Swete; Pfeiffer says ninth). It was displaced in the affections of the Christian church by Theodotion's translation, and the two texts are now often printed together. The LXX is more periphrastic and contains numerous expansions apart from the Additions (*see* § 2*g below*), and this was doubtless the cause of its rejection in favor of Theod. But pre-Theod. readings occur in the NT and the early fathers which have led to the theory that side by side with the LXX there existed another translation more faithful to the Hebrew, and that Theod. is a revision of this text rather than a new version (but cf. Montgomery [*bibliography*], p. 46; Roberts [*bibliography*], p. 123). The other important witnesses to the LXX text are the Chester-Beatty Papyri (second-fourth centuries A.D.; 3:72–6:18; 7:1–8:27) and the Syro-Hexaplaric version (*see* TEXT, OT). For the value of OL, Syr., and Vulg. versions, cf. Montgomery (*bibliography*), pp. 43-44, 55-56. As a general judgment drawn in broad terms, it may be said that the Hebrew-Aramaic text (MT) is in good condition and that the LXX and other versions do not lead us to think that it has been gravely corrupted. We may add to this the testimony of the Qumran MSS. The following portions have been reported: (1Q) 1:10-17; 2:2-6; 3:22-30; (6Q) 10:8-16; 11:33-36; and (4Q) "a sizeable proportion of the book of Daniel . . . in three relatively well-preserved MSS." F. M. Cross comments: "The text of Daniel in these [4Q] scrolls conforms closely to later Massoretic tradition; there are to be found, however, some rare variants which side with the Alexandrian Greek against MT and Theod." (cf. *BA* cited below).

When we turn to consider the character of the Hebrew and Aramaic, the question arises whether the language can give any clue to the date of composition. In this connection we must also note the significant presence of a number of Persian and Greek loan-words (*see* MUSICAL INSTRUMENTS for "bagpipe"). S. R. Driver (*see bibliography*) puts his conclusions very succinctly: "The verdict of the language of Daniel is thus clear. The *Persian* words presuppose a period after the Persian empire had been well established; the Greek words *demand,* the Hebrew *supports* and the Aramaic *permits,* a date *after the conquest of Palestine by Alexander the Great* (B.C. 332)." Rowley's careful study of OT Aramaic sought to substantiate that part of the claim, but Bentzen rightly says that since later studies have cast serious doubts on the possibility of distinguishing in the older manner between Eastern and Western branches of the language, the Aramaic had better be left out of the discussion. H. L. Ginsberg's theory of Court Aramaic as the universal and dateless super dialect of that language and the one in which Daniel was written, certainly makes this the wiser course to adopt. As far as the Greek is concerned, Montgomery points out that we must allow for the influence of cultures being more widespread and at an earlier date than we would at first presume, and that Driver lacks his usual caution in saying that the Greek words "demand" a date later than Alexander. Nevertheless, Driver was sufficiently cautious about the Aramaic if not about the Greek, and Montgomery, as well as Bentzen, supports his general conclusion. A further small point is that the term "Chaldean" (*see* CHALDEA) is used in this book as a synonym for "soothsayers"; it had acquired this meaning by the second century B.C., but such usage was foreign to it

in the sixth. We may sum the matter up by saying that while the linguistic evidence is not strong enough to rule out the bare possibility of the book's being a product of sixth-century Babylon, nevertheless it does make it extremely unlikely.

d. Unity. The book divides itself into two halves, stories (chs. 1–6) and visions (chs. 7–12). The vivid simplicity of the first part considered over against the complicated obscurity of the second, together with the human interest of the one and the apocalyptic character of the other, has led many scholars to see the book as a composite work. Further, part of the book is in the third person and part in the first, and part is in Aramaic and part in Hebrew. It is not surprising, therefore, that theories of composite authorship have arisen, but what is significant is that there is no agreement as to how the book should be divided. We are confronted with a bewildering variety of partitions, which range from Spinoza in the seventeenth century (1–7; 8–12) and Isaac Newton in the eighteenth century (1–6; 7–12) to Bertholdt at the beginning of the nineteenth century (nine authors!), to Barton at its close (three authors and two other contributors), and in the twentieth to Torrey (1–6 third century B.C.; 7–12 Maccabean) and to Hölscher (1–6 third century B.C.; 7 a later appendix; 8–12 Maccabean). Montgomery and Bentzen both hold to the prior origin of the stories, and both assign them to the third century approximately, though the latter suggests that they may have had only an oral, not a literary, pre-existence. Rowley ("Unity of Daniel"), on the other hand, vigorously repudiates all divisive theories, pointing to the lack of agreement among the dividers as a significant consideration—they cannot find the lines of demarcation because no such lines exist. The fact that the division between stories and visions, the division between Aramaic and Hebrew, and the division between third- and first-person passages do not coincide, calls for the recognition that the book is the work of one man, who changed his method and style of working but who, nevertheless, produced a literary unity. Rowley stresses the significance of the stories with regard to the second-century persecution of the Jews, showing that they are so pertinent to that situation that they must have been constructed with it in view. When we add to this that the message of the second story is ackowledged by almost all authorities to be in essence the same as that of the first of the visions, so that stories and visions are securely tied together, and when we note that the visions also clearly relate to the time of the Antiochene persecutions, the case for the unity of the book becomes overwhelming. Some traditional material was probably available centering around the name Daniel, and having its milieu in Babylon, whence it acquired a certain Babylonian coloring, but the stories were evidently selected and thoroughly reshaped by one author with a very definite purpose in mind, and he was responsible for the visions also.

e. Historical problems. Certain sections of Daniel are carefully dated by regnal years as follows: third Jehoiakim, the siege of Jerusalem (1:1); second Nebuchadnezzar, the dream of the great image (2:1); first Belshazzar, the vision of the four beasts (7:1); third Belshazzar, the vision of the ram and the he-goat (8:1); first Darius the Mede, the vision concerning the seventy weeks (9:1); third Cyrus, the vision concerning the "king of the north" (10:1). Thus the succession of regnal authority in Babylon is detailed as Nebuchadnezzar, Belshazzar, Darius the Mede, Cyrus. It is stated that Nebuchadnezzar was Belshazzar's father and that Darius the Mede received the kingdom from Belshazzar (5:2, 31). 6:29 LXX states that Darius died and that Cyrus took "his kingdom." Further, in third Cyrus, the angel can refer to first Darius as in the past (11:1). There can then be no doubt that this is the succession of kings the author accepted.

But these statements do not accord with our own knowledge of the history of this period. The publication of fresh Babylonian material by Wiseman makes it quite clear that Nebuchadnezzar could not have visited Jerusalem at the very earliest until after the Battle of Carchemish in 605 and almost certainly not until 597. Even if we allow an earlier, unrecorded visit, the siege of Jerusalem is definitely dated as having ended on 2 Adar (March 16), 597, after a siege of less than three months. Jehoiakim had then reigned eleven years (II Kings 23:36). How then can Dan. 1:1 say the siege was in his third year? Our author evidently thought that Jehoiakim had been Nebuchadnezzar's vassal from the beginning of his reign, so that a rebellion "after three years" (II Kings 24:1) could have been in his third year, but we know that he had previously been Pharaoh Neco's vassal (II Kings 23:34). Further, Jehoiakim was not given into Nebuchadnezzar's hand as 1:2 states; he died in Palestine, and it was his son Jehoiachin whom Nebuchadnezzar took to Babylon (II Kings 24:12). The author of Daniel appears to have followed the untrustworthy account of II Chr. 36:6. Another difficulty arises in that we are told that Nebuchadnezzar deported certain Judeans and commanded that some, among whom were Daniel and his friends, were to be trained in the wisdom of the "Chaldeans" for three years (1:5). At the end of that time (1:18) Daniel and his friends graduated at the top of the class; yet in 2:1 ff we find Daniel fully operative "in the second year" of Nebuchadnezzar's reign. As a result of his prowess he is made ruler over the whole province of Babylon (2:48), yet a year later he graduates. Still another difficulty is that in ch. 4 Nebuchadnezzar is said to have suffered banishment from Babylon because of madness, apparently for seven years. We can find no trace of this extraordinary event in any other record, though the argument from silence is, of course, never very strong. It now appears probable that in the original tradition the king in question was Nabonidus.

But the major problems of the book center around three other matters: the kingship of Belshazzar, the identity of Darius the Mede, and the succession of empires. The historicity of Belshazzar is no longer in doubt: he was the son of Nabonidus, the last of the neo-Babylonian monarchs. He was not, it is true, Nebuchadnezzar's son (5:2). The succession ran: Nabopolassar (626-605), Nebuchadnezzar (605-562), Amel-Marduk (562-559), Neriglissar (559-555), Labashi-Marduk (556), Nabonidus (556-539); and since Nabonidus was a Babylonian and not a Chaldean, who came to the throne as a result of a palace revolution, Belshazzar's descent from Nebuchadnez-

zar even through his mother (as has been suggested) is unlikely, quite apart from actual sonship. On the other hand, it is now established that he was coregnant with his father and could be properly termed king (*ANET* 313*b*). But it must be remarked that Dan. 5 gives no hint that he is not the supreme and sole monarch, for the term "third" in vs. 7 must mean after King Belshazzar and his queen mother, mentioned in vs. 10. The capture of Babylon by Cyrus' troops is an event so overlaid with legend that it is fruitless to argue for or against the historicity of the assertion that "that very night [he] was slain" (5:30; for details see Cyrus Cylinder, *ANET* 315*b*; Nabonidus Chronicle, Barton [*bibliography*], p. 482; Herod. I.191; Xenophon *Cyropaedia* VII.5; and discussion in Montgomery [*bibliography*], pp. 68-69. Also note Dougherty [*bibliography*], p. 180). The *Nabonidus Chronicle* and the *Cyrus Cylinder* are Persian interpretations of the fall of Babylon which glorify Cyrus and vilify Nabonidus.

The identity of Darius the Mede is the crucial problem. History tells of Darius I (Hystaspes) and of Darius II and III, but they were very decidedly Persians, not Medes, and in any case came after Cyrus, not before him. The only possibility is that Darius the Mede is known to history by some other name. Rowley in *Darius the Mede* has patiently explored the various identifications which have been proposed: Astyages, the Median king whom Cyrus overthrew about the same time that Nabonidus came to the throne (and who therefore antedates Belshazzar considerably); Cambyses, who was coregnant with his father for a brief period after the fall of Babylon (but who was certainly not a Mede, nor sixty-two years of age in 539); Gobryas, Cyrus' general who took command of Babylon before his master arrived (but he was either an Assyrian, which probably means Babylonian, or a Persian; the one thing he could not have been was a Mede, since Herodotus records his indignation that "we Persians" should be ruled by a Mede in the person of pseudo-Merdis; and he was never a king); Cyaxares, son of Astyages according to Xenophon (but he was certainly never king of Babylon, and the inscriptions show that Astyages was the last Median king and that Cyaxares is in fact a figment of Herodotus' imagination). In any case, there remains the simple fact that none of these men was ever called Darius. Rowley also shows that the biblical spelling of the name (*see* DARIUS THE MEDE) is not significant, since it merely perpetuates the spelling used in Aramaic during the reign of Darius Hystaspes, though other spellings became current in reigns of the two later kings of that name. The really conclusive fact, however, is that Dougherty gives two series of dated Babylonian tablets, the one referring to Nabonidus' last (seventeenth) regnal year and the other to Cyrus' first year, and the two series overlap by two months. This definitely rules out any possibility that "Darius the Mede" can have succeeded Belshazzar and preceded Cyrus.

The third problem has now to be considered: the existence of a Median Empire. Both the dream of Nebuchadnezzar in ch. 2 and the vision of the four beasts in ch. 7 purport to give a prediction by Daniel of the history of the Near East following the times of Nebuchadnezzar, and it is foretold that four world empires will arise successively. The fourth is clearly the Greek Empire of Alexander and the Successors, and the little horn is Antiochus Epiphanes. Then the one before the Greek must be the Persian, and the first is, of course, the Neo-Babylonian, and the second can only be the empire of "Darius the Mede." But as this Darius never existed, so, too, no Median Empire interposed its control over Babylon between the Neo-Babylonian and the Persian hegemonies. For the Median Empire had become the Medo-Persian Empire by the act of Cyrus himself at least sixteen years before he displaced Nabonidus as king in Babylon. It is, however, possible to interpret the succession of empires as "Neo-Babylonia, Persia, Greece, Rome," and this view is as old as II Esd. 12:10 ff, but, as Rowley points out, the author is aware that to make the fourth kingdom the Roman is not true to the original scheme (cf. II Esd. 12:12: "But it was not expounded unto [Daniel] as I now expound it unto thee"). The reason for so reading the succession is plain—Daniel lists four kingdoms following which the kingdom of God is to come. But the Greek hegemony passed away and the promised kingdom had not come, so the fourth was then reinterpreted as the Roman, to buoy up deferred hopes. But when that also passed and still the kingdom did not come, there was no longer any point in suppressing the fact that for the author the fourth kingdom was the Greek Empire. Nevertheless, the fourth kingdom has been interpreted as the Greco-Roman Empire, or the Holy Roman Empire, and even the Papacy, in attempts to avoid the recognition that the book prophesies the coming of God's kingdom following on the demise of the Greek power. But the twin stumbling blocks upon which all other interpretations trip are that the four kingdoms cannot be made to stretch from Neo-Babylonian times until now, even though the kingdom has not yet come in the sense the book requires, and that no other historical person fits the character of the little horn as does Antiochus Epiphanes, of whom the characterization is singularly apt. Therefore, the fourth empire is the Greek, and this means the second is the Median. For the fifth kingdom *see* SON OF MAN; KINGDOM OF GOD.

Thus we are left with a siege of Jerusalem by Nebuchadnezzar in Jehoiakim's third year; with a strange discrepancy in the career of Daniel during Nebuchadnezzar's reign, and an unlikely seven-year banishment of that monarch; with Belshazzar portrayed as absolute monarch when at best he was only coregnant; with Darius the Mede, who never existed; and with a Median Empire which passed away sixteen or so years before our author chronicles its overthrow.

f. Date and style of composition. The historical problems thus presented by the book raise the questions, What manner or style of book is this and when was it composed? Since the book is written in part in the first person, the composition purports to be contemporary with the events narrated, or at least not later in origin by more than the human life span. Further, if we accept the book as a unity, this is true of the parts written in the third person. Yet the book is not known until the middle of the second century B.C. The author is apparently aware that his work

will not circulate until long after the times of which he is writing, for in 12:9 an angel commands that the revelation to Daniel is to be kept secret until the "time of the end." This means that the period at which the book was allowed to circulate was evidently thought by someone to be the "time of the end." The possibilities are therefore two: (*a*) that the composition of the book is contemporary with the events it narrates and has been hidden away in some esoteric group and that under the impression that the time of the second century B.C. was the decisive period with which the book is concerned; it was published in the first half of that century; (*b*) that it was written in the second century B.C. under the guise of being composed some four hundred years earlier. We may note that if *a* is the right view, then the peculiar pertinence of the book to the second century B.C. was recognized at that time, so that by far the oldest testimony we have to the significance of the book relates it firmly to the events of the second century; and that if, on the other hand, *b* is correct, then again we are led to the second century B.C. as the period against which the book is to be set if its significance is to be grasped. Either way, the events of Jewish history from 180 B.C. onward are of the greatest importance for the understanding of the book.

In support of the first view, there is the clear testimony of the book—its use of the first person, its elaborate system of dating the events, the provision for its late appearance. Further, there is tradition—Daniel was accepted, as we have seen, at Qumran and by the NT writers as "the prophet" and by the rabbis at Jamnia as a sixth-century work; and, apart from the neo-Platonist Porphyry (third century A.D.), tradition in both its Jewish and its Christian streams unhesitatingly testifies to the book as contemporary with its chief character and written by him. This unanimity of acceptance was not broken until the first criticisms arose from Spinoza and Sir Isaac Newton in the seventeenth and eighteenth centuries, and these were followed by others until the late eighteenth and early nineteenth centuries, when the modern pseudepigraphical view of the book emerged in the work of Eichhorn (*Einleitung* [1783]) and Bertholdt (*Commentary* [1806]). For many, however, the main argument for accepting the sixth-century origin of the book is what seems to them the disastrous results of accepting the other alternative—that the book is a dishonest production which, although in the Bible, claims to be what in fact it is not, and at the best can only be described as a "pious fraud." To this conclusion we must return later (*see* § 2*h below*). Nevertheless, the evidence must be fairly weighed, not ruled out of court, and we must consider what are the arguments for the second view.

At once there arise the discrepancies within the book itself. Daniel becomes "ruler over the whole province of Babylon" (2:48) a year before he graduates. Also it is said in 1:21 that he continued until the first year of Cyrus; but in fact he is recorded as having a vision in Cyrus' third year. Further, in 8:14 the cessation of daily sacrifice is to last 2,300 mornings and evenings (i.e., 1,150 days=3 solar years and 35 days, or 3 lunar years and 88 days), but in 7:25 the estimate is 3½ years, and in 9:27 it is half a week of years, which is again 3½ years. In 12:11 the estimated period is 1,290 days and in the next verse 1,335 days. These variations are hard to explain if the book is an inerrantly inspired prophecy by Daniel of the events far ahead of his time. They become more understandable if the author is writing a number of separate pieces in the midst of Antiochus' persecution, and is making his estimate after the setting up of the altar to Zeus Olympios (*see* ABOMINATION THAT MAKES DESOLATE) and is thus operating with an advancing *terminus a quo* and a fixed *terminus ad quem.* Even so, it indicates a change of estimate at least once in the process. (Interpolation must also be reckoned with.) The other discrepancies are also easily explained if the writer sent out his pieces at differing times—serial-writers like Charles Dickens have been known to fall into similar errors. But if the book is the inerrant record of historic fact, they are quite inexplicable.

Turning to the discrepancies between the historical record in Daniel and our own knowledge of history, we need to note that when ordinary bills of sale such as Dougherty records were being dated as "seventeenth Nabonidus" or "first Cyrus," or when the Chaldean Chronicle was being composed as an official document, there could be no possible reason for using false dates. The evidence of bills of sale and royal annals and inscriptions on such matters as dates of accession are as nearly unimpeachable witnesses as this world is likely to afford. Yet it is just these which wreck any attempt to find room for Darius the Mede and a Median Empire between the reigns of Nabonidus and Cyrus. To these we must add that Jehoiakim was not besieged in his third year according to biblical evidence, and that we cannot credit a high Babylonian official (such as Daniel is depicted to be) with ignorance of Belshazzar's true status as his father's representative. Further, it is at least difficult to believe that Nebuchadnezzar could have been absent from his throne for seven years without our having some knowledge of it. Moreover, Nebuchadnezzar is represented as converted to faith in Daniel's God, and Darius issues a decree "to all the peoples, nations, and languages that dwell in all the earth" that all men are to fear Daniel's God as the living God, and yet we have no other echo of these momentous conversions. But the decisive point is that if the book was written by Daniel in the sixth century, he must have known the true succession of power in Babylon, and he must have falsified it for his own purposes; if, on the other hand, it is a second-century product, all these mistakes could at least have been due to honest error. We do not save Daniel's veracity by confining him to the sixth century. But if we accept the work as a second-century production, consisting of pieces issued at first separately and later gathered (whether by the original writer or by another) into a book, the change of language can be accounted for (*see* § 2*c above*) as can also change of person from third to first, while the discrepancies between one story and another and the variance of the estimated length of cessation of sacrifice become intelligible, and the errors in historical record may be seen as the mistakes of a man who has a faulty knowledge of events which took place some four hundred years before his own time.

It has also been suggested that he did know the facts but deliberately departed from them because the idea of four kingdoms was traditional and the Assyrian Empire was unsuitable for his schematic purpose. The other major testimony is that of the linguists. The implication of S. R. Driver's judgment in this matter is inescapable. Thus the weight of evidence—internal, historical, and linguistic—forces us to the conclusion that the book of Daniel was not merely published, but was also written, fairly late in the Greek period.

But once we have reached this conclusion, further data become available. The author knows about the "abomination that makes desolate," and if the book is not prophecy, then his knowledge must arise from the fact that the setting up of the altar has already taken place; but he makes several estimates of the duration of the cessation of sacrifice, which therefore has not yet been resumed. Therefore, he wrote between December 17(?), 167 (I Macc. 1:54), and the corresponding date in 164 (I Macc. 4:52). Further, in 11:22-45 he records the history of Antiochus' reign, including the persecution, and the revolt of Judas (the "little help" of vs. 34), but at vs. 40 a third and successful campaign by Antiochus Epiphanes against Egypt is recorded and then his death in the Holy Land itself. As there was no third such campaign, and as Antiochus died in the East, we may take it that history passes into prophecy at vs. 40 and that this point is the moment of the writer's own date—after Judas' revolt and before Antiochus' death (i.e., between 166 and 163), and nearer the former terminus. Thus we can determine the date of the book as *ca.* 166-165 B.C.

This conclusion forces us to face the charge that the book, in that it purports to be written in the sixth century B.C., is nothing more nor less than a "pious fraud." Before doing so, we deal with the one outstanding literary question.

g. The Additions. The Greek versions (both LXX and Theod.) and the versions derived from the Greek (notably the Vulg.) contain material not found in the Hebrew-Aramaic MT. They are: (*a*) The Prayer of Azariah and the Song of the Three Children. This is inserted after 3:23 and records the prayer and praise of the Hebrews while they were in the furnace. The Song contains the familiar Benedicite of the Christian church. (*b*) The Story of Susanna, which tells how a young Jewish matron was falsely accused of adultery and cleared by Daniel's intervention. (*c*) The stories concerning Bel and the Dragon; in these Daniel shows the false character of the gods which Cyrus worshiped and is instrumental in their destruction. The latter two Additions (*b* and *c*) follow at the end of canonical Daniel. In the English Apoc., all three are printed as separate compositions, each of one chapter. There has been much discussion whether these Additions were originally written in Greek or in either Hebrew or Aramaic. With regard to *a* we must differentiate between 3:24-25 (vss. 1-2) and 3:46-51 (vss. 23-28), which are prose introductory narratives, and 3:26-45 (vss. 3-22) and 3:52-90 (vss. 29-68), which are liturgical compositions in verse. The probability is that the Addition had a Semitic original and that the prose was in Aramaic to conform with the rest of the story, but if, as is likely, the liturgical passages had a previous separate existence, they were probably in Hebrew. With regard to *b* and *c*, it is unlikely that they were first written in Greek, but the literary evidence (despite the presence of a pun, which has been held since the third century A.D. to require a Greek original, but which could, of course, have been an apt introduction of a translator) does not allow of any clear decision. We may regard all three as expansions of the original book rather than as legitimate parts of it. If, however, some of the stories of Dan. 1-6 were circulating in an amorphous oral state around the ancient name Daniel, then these stories may well be part of that tradition and may represent some of the material our author rejected as not particularly suited to his purpose. This is particularly likely of Susanna and of Bel, in which Daniel is shown as resourceful and shrewd, quite in the tradition of the ancient wisdom figure. Once our author circulated his own new-fashioned stories, some of the floating tradition might well appeal to some of his readers as too good to be left out, and in Egyptian-Jewish circles, if not elsewhere, they were added to the book. The liturgical compositions were doubtless added from the same pious motives as were responsible for the psalms in Jonah and in Habakkuk and Isa. 38 (cf. II Kings 20). They were felt to be good compositions and not inappropriate to the occasion and therefore were included. (We may note that some scholars have been inclined to take the same view of the prayer in 9:4-19, but there is no evidence to support this suggestion.) We need not seek for esoteric meanings in these Additions; they are simple folk tales which rejoice in the victory of virtue over deceit and in Jewish shrewdness over Gentile stupidity. J. T. Milik has reported from Qumran Cave IV three MSS in Aramaic in which Daniel is recounting Hebrew history before a king, but their fragmentary character allows little to be said at this stage, other than that they are another witness to the popularity of the figure of Daniel in eschatologically minded groups. Milik tentatively names them Pseudo-Daniel (*a*, *b*, and *c*).

h. Purpose of composition and abiding worth. When the book is read against the background of the persecution instituted by Antiochus Epiphanes (*see* ANTIOCHUS 4), the purpose of both parts, stories and visions, becomes clear. Whatever was the nature of the traditional material he took over, the author evidently reshaped the stories to have a relevance for his own day. Antiochus was trying to stamp out all distinctively Jewish practices and as a test required the Jews to eat the nonkosher pork; Daniel and his friends refused to defile themselves with nonkosher food, and they prospered greatly. Antiochus set up an altar and commanded the worship of Zeus; the Three Children refused to worship just such an image, were thrown into the fire, and yet emerged triumphant. Antiochus thought himself a god but was thought by others to be a little mad, and Nebuchadnezzar was brought down by madness from just such heights of *hubris* to a God-fearing humility. Antiochus despoiled the temple; Belshazzar, who also desecrated the temple vessels, was summarily destroyed. Antiochus claimed to be divine, and Daniel, who refused to recognize similar claims made on behalf of

Darius, was flung into the den of lions and yet was kept safe by God. The parallels are too many and too exact to be fortuitous, and the message for the writer's contemporaries was too clear to be overlooked by them—be courageous and remain loyal, and God will deliver you also!

But the persecution was intense, and many had to pay the price of martyrdom. Some further message than a mere exhortation to courage and loyalty was necessary. Our writer found it in the new teaching of apocalyptic (*see* APOCALYPTICISM). It offered two immense boons. First, a deterministic development of the prophetic idea that history is controlled by God. There is a fixed span of time allotted by him to the powers of evil, and the initiated have been let into the secret as to when this time will be fulfilled. Our writer believes that he has this secret and that therefore he can foretell the time of the End. In his visions he communicates his conviction that it will not be long delayed—in fact, it is to come 3½ years from the date of the cessation of temple sacrifice. Using the apocalyptic device of history disguised as prophecy, he puts into Daniel's mouth an account of the period between his lifetime and the writer's own, and then continues it to cover the next two or three years —which continuation is the writer's actual prophecy of events shortly to take place. This prophecy must have come to the Jews of the day as a message of glorious reassurance and of hope. That it was clothed in the weird dress of apocalyptic vision was the mere accident of the writer's times, and in any case gave his words the authority which, in an age in which inspiration was held to have ceased, it alone could give. *See* INSPIRATION AND REVELATION.

The second great boon was that apocalyptic held out to men brought up on the grim Sheol doctrine (*see* SHEOL) the prize of a life in a world to come (12: 2-3, 13). Armed with this, a man could face martyrdom not only with courage but also with triumphant hope (II Macc. 7:9). The purpose of the book, then, is clear: it was to meet the urgent need of the Jewish people in the face of the Antiochene persecution.

But if a writing is to be regarded as scripture, it must have a relevance not only for its own age but also for every age. The book of Daniel needs none to plead its cause on this count. It speaks for itself and has done so for two thousand years and will continue to do so as long as there are men to read it. Its noble call for the oft-forgotten virtue of courage will meet with a response wherever men are faced with the final challenge—disloyalty or death. But courage in the decisive hour can come only to those who have practiced loyalty in the smaller choices of life. Daniel is a book for character-training as well as for crisis. Further, its insistence that time too is the creature of God, and that all history is under his sovereign will, is a lesson that mankind can never be allowed to forget. It is a magnificent exposition of what faith in God means. And again, if we find Daniel's promise of eternal life only a first meager adumbration of the fuller doctrine of the Christian gospel, nevertheless no book in the whole of scripture reveals so clearly the truth of Paul's words: "If in this life only we have hoped in Christ, we are of all men most to be pitied" (I Cor. 15:19 RSV mg.). For in Daniel we are reminded how grim is man's situation when he thinks that his brief life span here must encompass his whole destiny.

Even in that matter where Daniel is so grievously in error, the book serves us most usefully, for it is of the very greatest importance to the church that the whole wearisome business of "biblical arithmetic" and eschatological calculation should have been tried so sincerely and found to be a false path. The author of Daniel tried to calculate the time of the end and failed, and his failure is part of holy scripture to remind all lesser men to heed the warning of Jesus: "Of that day or that hour no one knows, not even the angels in heaven, nor the Son, but only the Father" (Mark 13:32).

Nor is the book rightly to be accused of being merely a "pious fraud." We forget that our standards of judgment in matters of authorship, plagiarism, pseudonymity, and interpolation are not those of the ancient world, but are largely the creation of the printing press, which fixes a text unalterably, and the necessary economics of the publishing trade, which can be carried on only if copyright is respected; our standards on these matters are not absolute ethical criteria. Our author played fair by the standards of his day, for he did not create his message, but received it from the tradition of the apocalyptic movement. This tradition he handed on through the medium of the character he had created, Daniel, and, unhampered by our ideas of identity and authorship, gave his message in all good faith to those who stood in sore need of it. He little guessed that this same message would feed the faith of the people of God in many an age until the Eschaton which he foretold should at last come.

DANITES. *See* DAN 1.

DAN-JAAN dăn jā'ən. KJV translation of דנה יען, the name of a town in N Palestine visited by David's census takers (II Sam. 24:6). The town referred to

here is almost certainly DAN (2), but textual corruption (cf. the unintelligible reading of LXX B) precludes a satisfactory reading. The RSV follows one widely accepted emendation: "They came to Dan, and from Dan they went . . . ." Others prefer to read: "They came to Dan and to Ijon."

G. W. VAN BEEK

DANNAH dăn'ə [דנה, stronghold; LXX Εννα] (Josh. 15:49). A village of Judah in the hill-country district of Debir; possibly to be identified with Deir esh-Shemsh or Simya.

DAPHNE dăf'nĭ [Δάφνη] (II Macc. 4:33). A magnificent place near ANTIOCH; famous for its temple of Apollo and right of asylum. The former high priest ONIAS in the Maccabean period came here for refuge, and from here was enticed to his doom.

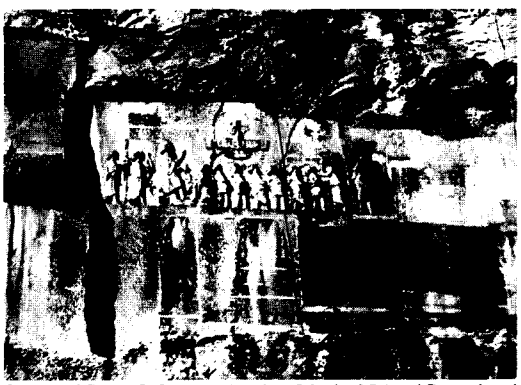
See also MENELAUS. N. TURNER

DAPPLED [ברדים, *plural adjective, related to* ברד, *hail*]; KJV GRISLED. A term referring to the color of certain horses mentioned in Zech. 6:3, 6. It indicates "mottled," "spotted," or perhaps "dappled gray" (vs. 3) horses. Cf. Gen. 31:10, 12.

See also COLORS. C. L. WICKWIRE

DARDA där'də [דרדע] (I Kings 4:31—H 5:11). Alternately: DARA dâr'ə [דרע] (I Chr. 2:6, where, however, some Hebrew MSS and some MSS of the LXX, Syr., and Targ. read דרדע). One of the sons of Zerah, son of Judah. He was proverbial for his wisdom, which was surpassed only by Solomon's, and he is also included among the ancient musicians as one of the "sons of Mahol"—i.e., "members of the orchestral guild."

Bibliography. W. F. Albright, *Archaeology and the Religion of Israel* (3rd ed., 1953), pp. 127-28, 210. E. R. DALGLISH



DARIC dăr'ĭk [אדרכן, דרכמון; LXX δαρεικός] (I Chr. 29:7; Ezra 2:69; 8:27; Neh. 7:70-72); KJV DRAM drăm. A Persian gold coin of 8.424 grams. It is the first coin mentioned in the Bible. The name "daric" is presumably derived from "Darius"—i.e., the Persian king DARIUS (1) the Great. But it is possible that it is of a much older source and comes from the Assyrian *darag mana* (=1/60 of the mina). It seems that in the Persian period each gold coin was called a daric, as this name is already used in the Bible in connection with Cyrus (Ezra 2:69) and with King David (I Chr. 29:7), which is an anachronism. *See also* MONEY. H. HAMBURGER

DARIUS də rī'əs [Heb.-Aram. דריוהוש, דריוש, דריהוש; Old Pers. *dārayava(h)uš,* he who upholds the good; Elam. *da-ri-ia-ma-u-iš;* Akkad. *da-ri-ia-muš;* Δαρεῖος]. **1.** Darius I, the Great (522-486 B.C.).* Cambyses II (529-522) died during a period of political unrest in Persia which had resulted from the fact that the "Magian" (Old Persian *maguš*) Gaumāta, who claimed to be Bardiya (Σμέρδις), the murdered brother of Cambyses, had made a strong bid for the throne. Darius (born in 550), son of Hystaspes (Old Persian *vištāspa;* Ὑστάσπης), gives an account of his fight for the succession in the famous Inscription of Behistun, which appears on the surface of a gorge in the cliff which rises on the left side of the main caravan route leading from Baghdad to Teheran, *ca.* sixty-five miles from Hamadan.* His struggle, with the help of his six companions (Behistun Inscription IV, ll. 80-86), against Gaumata and leaders of revolts in other parts of the Empire ended in the consolidation of his possessions, which, after further campaigns extended from Sogdiana in the NE to Libya in the W and from Thracia in the NW to India (Old Persian *hi(n)du;* modern Sind) in the E. In 513(?) Darius embarked upon an unsuccessful campaign against the Scythians and crossed the Danube, with the intention to turn around the Black Sea and, perhaps, the Caspian Sea as well. The close contact between Persia and continental Greece led to the Ionian Revolt (499-493),

5. Relief and inscription of Darius on the cliff at Behistun in Iran, in three languages—Old Persian, Elamite, and Akkadian

which in its turn resulted in the expedition against Greece and the defeat of the Persian army at Marathon (490). Several years before his death (486) Darius designated his son XERXES as his successor. Figs. DAR 4; XER 1; DAR 5; AHU 6; INS 10.

A glimpse at Darius' conviction in matters of religion and ethics is provided by the still rather puzzling contents of the Naqš-i Rustam B inscription. His policy on the same subject with regard to the peoples of his empire is shown by two of his decrees. The first is a royal decree, which was later inscribed on stone, to the official Gadatas in the region of Magnesia on the River Maeander in Asia Minor. In it Gadatas is urged not to levy taxes from the of-

ficials of the Apollo temple nor to force them to cultivate profane soil. The other is his decree to cease obstruction and to promote the reconstruction of the temple in Jerusalem (Ezra 6:6-12; cf. Hag. 1:1-2).

"Darius king of Persia" (Ezra 4:5, 24; 6:1) and "Darius the Persian" (Neh. 12:22), whose reign is mentioned in connection with the registration of certain priests, both seem to refer to Darius I.

"Darius the Mede," however, who is mentioned in Dan. 5:31 (see also Dan. 6:1, 25; 11:1) as the successor to Belshazzar, and "Darius, the son of Ahasuerus, by birth a Mede, who became king over the realm of the Chaldeans" (Dan. 9:1), are most likely the result of wrong or wrongly interpreted information. *See* DANIEL.

2. Darius II (423-404 B.C.), son of Artaxerxes I (*see* ARTAXERXES), known as Nothus. His position in the W part of his empire was strengthened by the Peloponnesian War (431-404), which tied the hands of Athens and induced Sparta to solicit Persian help. The disastrous Athenian expedition against Sicily (413) provided Tissaphernes, satrap of Lydia, with the opportunity to reoccupy Lydia. Court intrigues inspired by Parysatis, the wife of Darius, in favor of her son Cyrus, caused Tissaphernes to be relieved from his post and nullified the results of his policy.

Frequent references to Darius II, mostly in the dates of the documents, occur in the Aramaic Papyri. The so-called Passover Papyrus is one of them. In it Arsames (ארשם), satrap of Egypt, is ordered as follows: ["'*Authorize a festival of unleavened bread for the* Jew]ish [garrison].' So do you count fou[rteen days of the month of Nisan and] obs[erve *the passover*], and from the 15th to the 21st day of [Nisan observe the festival of unleavened bread]" (*ANET* 491).

3. Darius III (336-330 B.C.), known as Codomannus, according to Justinus (X.3.3 ff). He suffered repeated defeats against Alexander's Macedonian armies (Granicus [334], Issus [333], Gaugamela [331]) and was finally murdered by Bessus, satrap of Bactria.

The desperate struggle of the last Achaemenian king against the Macedonian conqueror is referred to in I Macc. 1:1-8; see also the "fourth" king of Persia in Dan. 11:2. *See* ALEXANDER 1.

DARIUS THE MEDE [דריוש, Old Pers. *Darayva'ush;* דריהוש *and* דריהוש, *later forms attested by papyri from reigns of Darius II and III;* ד'המדי, *D. ham-mādhî* (Dan. 11:1); Aram. ד'מדיא, *D' mādhāy'a,* (Dan. 6:1), *some MSS give* (*kethibh*) *mādhāyâ',* (*qere*) *mādhā'â*]. A king of Babylon mentioned in the book of Daniel only, who is said to have followed Belshazzar and preceded Cyrus (LXX 6:29), being then sixty-two years old. He had at least a "first year," and divided the kingdom into 120 satrapies, over which he appointed three presidents, of whom Daniel was one. On historical difficulties arising and for bibliography, *see* DANIEL. S. B. FROST

DARKNESS. *See* LIGHT.

DARKON där'kŏn [דרקון, rough, *or* stern(?)] (Ezra 2:56; Neh. 7:58). Head of a family of "sons of Solomon's servants" (*see* NETHINIM) returning from exile with Zerubbabel. *Cf.* LOZON (I Esd. 5:33).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 225. H. H. GUTHRIE, JR.

DART [שבט, מסע; KJV חץ (Prov. 7:23; RSV *more correctly* "arrow"), שלח (II Chr. 32:5; RSV *better* "weapon"), תח (Job 41:29—H 41:21; RSV *better* "club"); βέλος; KJV βολίς (Heb. 12:20), *see below*)]. A short pointed weapon used for thrusting.

Joab used three darts (שבטים, lit. "rods"; II Sam. 18:14), probably better "pointed rods," to kill Absalom.

In Heb. 12:20 the phrase "or thrust through with a dart" is rightly omitted in the RSV as being a textual gloss.

According to I Macc. 6:51, darts (RSV "arrows") were mechanically hurled. These may well have been wrapped in inflammable materials and ignited (cf. Eph. 6:16). J. W. WEVERS

DATES. The fruit of the palm tree, *Phoenix dactylifera* L. The only biblical reference to dates is in a metaphor extolling the bride in Song of S. 7:7—H 7:8, where אשכלות, "clusters," refers to the manner in which the dates grow. The following verse reflects the method of picking dates. The KJV mg. of II Chr. 31:5 suggests "dates" instead of "honey" for דבש, *dᵉbhaš* (Arabic *dibsh* refers to date honey).

That dates formed a staple food in ancient times there is no question, for the palm tree is frequently mentioned. The absence of references to the fruit in the Bible must be pure coincidence.

DATHAN dā'thən [דתן; *cf.* Akkad. *datnu,* strong]. Leader, with his brother ABIRAM (1), of a revolt against the authority of Moses; son of Eliab, a Reubenite (Num. 16:1, 12, 24-25, 27; 26:9; Deut. 11:6; Ps. 106:17; Ecclus. 45:18).

The accounts of two revolts against Mosaic leadership of the wandering Israelite tribes have been woven together in Num. 16. One account deals with a protest led by Korah against the religious prerogatives of Moses and Aaron; the other, with a protest voiced by Dathan and Abiram against Moses' alleged usurpation of princely authority over the community (vss. 1*b*-2*a,* 12-15, 25-26, 27*b*-34). This allegation against Moses is joined with disenchantment that he has been able to secure only the wilderness and not an "inheritance of fields and vineyards" for those who fled Egypt with him. The vindication of Moses' commission as one sent by Yahweh "to do all these works" is obtained by appeal to Yahweh.

As a result of divine action Dathan, Abiram, their families and goods are swallowed up by the earth. Thus the narrative assumes that the challenge to the structure of authority within the Israelite community is of direct concern to Yahweh, who "creates something new" (vs. 30) in order to meet the challenge.

DATHEMA dăth'ə mə [Δάθεμα] (I Macc. 5:9). A fortress in Gilead to which the Jews repaired and in which they were besieged by the Syrians and relieved by JUDAS MACCABEUS. It may be the modern Remtheh (for the Syr. of I Macc. 5:9 reads "Rametha"), or Dameh (for some think that the Syr. may be an error for "Damtha").

DAUGHTER-IN-LAW. An alternate translation of כלה and νύμφη, both of which are used also for "bride."

Incestuous relations with a man's daughter-in-law are forbidden (Lev. 18:15); death is the penalty for both if this law is broken (20:12). The daughter-in-law belonged to the family group and migrated with it to a new land (Gen. 11:31). The meaning "bride" identifies the status of daughter-in-law during the period of the betrothal and marriage transaction.

Bibliography

1. Sources. The main sources are the books of SAMUEL and I Kings 1-2 (*see* KINGS, I AND II, § 1), paralleled, with significant omissions and additions, in I Chr. 11-29 (*see* CHRONICLES, I AND II). Many of the materials of Samuel and Kings are contemporary, or nearly so, with the times of David—notably the court records of II Sam. 9-20—and are manifestly some of the most authentic historical writings of the OT.

2. Name and family. The name David occurs nearly eight hundred times in the OT, *ca.* sixty times in the NT. The term *dawidum* occurs more than a score of times in the Mari Texts, but it probably has nothing to do with the name of David, as formerly thought. The Alalakh Tablet (6.37) is not clear. The only unequivocal parallel is found in the archives of Khafajah. For studies of the Mari Texts, *see bibliography*.

Tradition is unanimous in attesting David's Judean origin. He was a member of the Bethlehemite family of Jesse, who was himself reckoned in the late genealogy of Ruth as the grandson of Boaz and Ruth (Ruth 4:18-22). Hence Moabite blood flowed in his veins, and this fact was apparently not forgotten in later days (I Sam. 22:3-4), though afterward David dealt severely with the Moabites (II Sam. 8:2). David had at least six brothers and two sisters (I Chr. 2:13-16). I Sam. 16:10-11; 17:12 report eight sons for Jesse. The family tree of Jesse (Diagram 1) illustrates the situation (the sources are the relevant passages of I Samuel and I Chronicles as indicated).

David's family is far more complicated, as may be understood from the circumstances of his life and the customs of the age. Diagrams 2-3 attempt to present the facts as gathered from the several narratives of the Bible.

3. Early stories. The stories of David's growing fame are in some respects embellished by later, idealizing elements, but there is no reason to doubt their

essential correctness. David was a gifted and many-sided personality. In fact, there are many indications that he possessed charismatic qualities.

He comes to the attention of the biblical narrator first in connection with Saul's disobedience during the Amalekite campaign, when Saul was rejected in favor of a "neighbor of yours, who is better than you" (I Sam. 15:28). Samuel went to Bethlehem to carry out his commission to select Saul's successor. There he was directed to the family of Jesse, whom he invited to a sacrifice. After the purification and sacrifice Samuel requested an introduction to the sons of Jesse. One, however—David—happened not to be present, because he was tending the flock that day.

This was the one whom the Lord had chosen to be king. When he arrived, Samuel "anointed him in the midst of his brothers" (I Sam. 16:13), whereupon "the Spirit of the LORD came mightily upon David." This particular story is generally regarded as legendary and centers in Samuel rather than David. The connection of David with the family of Jesse, the anointing by Samuel, and the reference to the Spirit of the Lord are certainly authentic.

I Sam. 16:14-23 follows logically and most naturally on the Amalekite episode of I Sam. 15. Because of Samuel's rejection, Saul became melancholy. To soothe the troubled mind of the king, a skilful player on lyre or harp was suggested. Saul assented to the proposal, and one of his servants forthwith recommended the son of Jesse. Evidently David's ability as a gifted musician was well known at the royal court. He is depicted as one "skilful in playing, a man of valor, a man of war, prudent in speech, and a man of good presence" (I Sam. 16:18), which pretty well sums up the character of David at this time. Arriving at court, he at once became the personal attendant of the king, who thought very highly of him. In fact, he made him one of his armor-bearers. By virtue of its position and its tenor, this appears the most likely story of David's introduction to royal circles.

The Goliath tale is probably secondary. It has David coming to the notice of Saul through the heroic feat of the slaying of the Philistine giant.* The Philistines and Israelites were encamped *ca.* eighteen miles SW of Jerusalem, between Azekah and Soco, at a place called Ephes-dammim, the location of which is unknown today. On the side of the enemy was a giant from Gath, the place of giants (I Chr. 20:4-8), who was dressed like a Homeric warrior. Each day he challenged the army of Israel to send one of its men to fight him in single combat. The boldness of the challenge threw Saul and his followers into panic. In the meantime, David was sent across the hills by his father to bring provisions for his three older brothers who had taken service in the army of Saul. Soon after arriving at the battle scene, he heard the taunt of the Philistine and offered to accept his challenge, to the disgust of Eliab, his oldest brother. Others of the army also ridiculed David's offer. Finally, someone brought word to Saul. Again David repeated his willingness to fight the giant. The king reminded him of his lack of experience as against that of Goliath, who had been a "man of war from his youth" (I Sam. 17:33). David replied that he, as a shepherd, had often contended with lions and bears which tried to molest the flock. At last Saul was persuaded and permitted him to proceed. David could not bear the armor Saul wanted to provide for him, choosing instead to fight in his own way. The Philistine was insulted when he saw the Bethlehem youth with his staff and sling, but he soon felt the sting of the pebble so accurately delivered by David. The shepherd was champion; Goliath lay dead. In the ensuing battle the Philistines were routed. David was not known by name, according to our story (I Sam. 17:53-58). Fig. SLI 68.

See map "Palestine: I Samuel 16–31, Saul and David," under SAUL.

Again, there may be legendary elements in this narrative, but there can be no doubt about the Philistine struggle and the service of David's brothers in Saul's army. Nor can there be any inherent improbability that the daring youth from Bethlehem performed some heroic exploit. But whether this was how he came to the attention of Saul is another matter. One thing is certain, however: that the two stories of his coming to the notice of Saul were so firmly established in the tradition that neither could be suppressed in favor of the other.

In any case, David's rise to fame was extraordinary. He was so successful in his service and so discreet in his actions that the king soon put him in charge of a group of soldiers, to the complete satisfaction of the people and the officials of the court. On their return from a campaign against the old enemy, they were welcomed home by a group of women celebrating their victory with the fateful song:

> Saul has slain his thousands,
> And David his ten thousands (I Sam. 18:7; cf. 21:11; 29:5).

These lines attest the popularity of David, whether it was achieved by some heroic deed or in the ordinary course of resistance against the foe. The disturbed mind of Saul could not bear such extravagant praise for the man who had so recently come to his court. With the virtual curse of Samuel resting upon him, he now felt himself slipping and, as we learn later (I Sam. 19:22), must have sensed somehow an alliance between the old prophet and the young man who was succeeding all too well. Henceforth he tried his best to put David out of the way.

Saul's attempt to pin David to the wall with his spear is explained as a seizure of an "evil spirit from God" (I Sam. 18:10). Twice David is reported to have escaped (18:11); this made the king even more suspicious and probably envious. The more successful David was, the more frustrated Saul became (18:15). He thought of giving his older daughter, Merab, to David as wife, then changed his mind (18:17, 19). But when Michal fell in love with David, Saul took advantage of the situation by requiring a dowry of a hundred Philistine foreskins—hoping that this once he might succeed in confronting the young upstart with an impossible task or that David might be killed by the Philistines (18:21; cf. vs. 17*b*). Again success crowned David's efforts, only to fan to white heat the persecution complex of the king. Every time David went out against the enemy, he returned in triumph (18:30).

At the request of David, Jonathan pleaded with his father on his behalf. Saul promised by oath that David should not be put to death, but the very sight of the man of success impelled the king to violate his vow, so that he sent his police to take David from his quarters. David might have met his doom then and there had not Michal plotted his escape. The partisanship of his own children for David so enraged Saul that he pursued him to Naioth in Ramah (19:22), seeking his life. But David fled from Ramah before he arrived. David now saw, after another demonstration of the king's attitude (ch. 20), that life at the court was impossible, and so he left Gibeah permanently.

There is no reason to doubt the general sequence of events related in chs. 18–20. So far David's con-

duct remained beyond reproach. That he conducted local skirmishes with the Philistines cannot be questioned; neither can the growing deterioration of the relationship between him and Saul. His marriage to Michal also appears quite certain.

Before we follow David's career as an outlaw, it is necessary to pause a moment over his relations with the crown prince, Jonathan. There are numerous references to their friendship in the books of Samuel. From their first meeting they developed a relationship which was to last beyond the death of Jonathan. They entered into a covenant of friendship (18:1-5) ratified by Jonathan's gift of personal military equipment. This covenant was further strengthened by Jonathan's plea for David (19:2-10), his assistance in ascertaining the mind of his father toward David and informing him accordingly (ch. 20), and the renewal of the covenant between them at Horesh (23:16-18). For the most part, the initiative appears to have been taken by Jonathan, perhaps because of his position as son of the king. That their friendship was more than fictional may be seen from David's lament (II Sam. 1:17-27) and his concern later for Mephibosheth, Jonathan's son (II Sam. 9).

4. The fugitive (I Sam. 21-27; 30). The only avenue of escape from the clutches of Saul was to seek refuge with the Philistines, who were powerful enough to protect him. On the way he stopped at Nob, where, by his clever deception of Ahimelech the priest, he acquired provisions for the flight (I Sam. 21:1-9), which ended with his taking refuge with Achish, the tyrant of Gath. The Philistines, including Achish, were suspicious of David and possibly a bit resentful because of his success against them. Feigning madness, David contrived to get himself out of what might at the moment have proved an untoward incident.

From Gath, David fled to Adullam, present Tell esh-Sheikh Madhkur, some dozen miles NE of Gath, where he gathered about him "everyone who was in distress, and every one who was in debt, and every one who was discontented" (22:2). He became their *condottiere* and advocate, and they in turn formed the nucleus of his later troop of professional soldiers. From Adullam he went to Mizpeh in Moab to entrust his aged parents into the hands of the king of Moab (22:3-4), where they were out of reach of Saul. At the word of God he returned to the forest of Hereth (unknown, but somewhere in S Judah).

While there, David was informed of a Philistine raid against Keilah *ca.* fourteen miles E of Gath. After some hesitation (23:3), he and his men drove the Philistines away and took a quantity of booty. Saul soon heard about David's adventure at Keilah and set out to find him. In the meantime David, having discovered that the citizens would not protect him from Saul, fled to the desert of Ziph, some ten miles S of Keilah (23:13-23). Informers from Ziph told Saul of David's whereabouts, and he was once more compelled to flee, this time to the desert around Maon, S of Ziph, where he was almost trapped by the forces of the king (23:26-28). From there David withdrew to Engedi (24:1 ff), midway down the W shore of the Dead Sea.* Again loyalists were not slow in bringing the news of David's new hide-out to Saul, who at once went in search of him. On this campaign the king fell into the hands of the fugitive, who spared his life because he had sworn he would not lay hands on the Lord's anointed one. Fig. ENG 28.

After Saul's departure David again turned westward to the desert of Maon. At the sheep-shearing festival he sent messengers to a rich man named Nabal at Carmel (ch. 25), a city *ca.* five miles S of Ziph (cf. Josh. 15:55), requesting a gift in return for his protection of his interests. When Nabal refused, David prepared for action. Dire consequences for Nabal were averted only by the swift action of his servants and his wife, Abigail (25:18-19). After Nabal's death David married Abigail (25:40-42). He also married another wife, whose name was Ahinoam, from Jezreel, whose location is uncertain, but which was near Ziph. In the meantime, Saul had married David's wife Michal to Palti (25:44).

Once more Saul is said to have pursued David in the region of Ziph, only to fall into the power of the latter, who again spared his life. Most scholars regard this story (ch. 26) as parallel with that related in ch. 24. In any case, David could no longer feel secure among his own people and so sought protection from the Philistines at Gath.

David had by this time quite a coterie of followers, which might have become burdensome to Achish had he not, at David's request, given David a place where he might fend for himself. Ziklag, which was to be his center of operations until he took up residence at Hebron, was *ca.* fifteen miles SW of Hebron and seventeen miles SE of Gath, possibly to be identified with the present Tell el-Khuweilfeh. This was one of the most significant steps in David's whole outlaw life. The gathering of a host of followers owing allegiance to no one but himself now was about to pay off, for at Ziklag he became the founder of a small dynasty which served to launch him on his further efforts to procure the throne of Israel. But more than that, he utilized the time to root out opposing elements in the S area of Judah and thus consolidated a large portion of Judah itself under himself (I Sam. 27:8). With the booty he enriched and equipped himself and his followers for the next adventure, which had to wait until the death of Saul. By his movements against the dissidents on the borders of Judah he hoodwinked Achish (27:12).

Matters went on in this fashion for two years (29:3), when the Philistines decided to strike another blow against Israel, this time with David's help or at least with him in inactive status. Had it not been for the concerted opposition of the other Philistine kings, David might have found himself in a precarious position. But by their opposition they unwittingly played into his hands. As things stood, he was permitted to continue his activity around Ziklag, notably a punitive raid against the Amalekites (ch. 30), who had taken advantage of David's absence and had themselves victimized the chief and his followers by a destructive foray. After his return with much booty, he distributed some to the elders of Judah, in whose territory he had operated before. This was an astute move designed to win them over and possibly to quell criticism of him for having gone over to the Philistines.

David's Ziklag period, therefore, enabled him to gain supplies for the next step, to wipe out opponents on the borders of Judah, to organize his forces for action when the time was propitious, and to

strengthen his hand with his Judean brethren. The "kingdom" of Ziklag marked the second stage on his way to the throne of Judah, the first being his collection of personal followers. The important fact in these stages was the personal position occupied by David. The conquered areas owed allegiance to no one but David. His followers were also bound to him personally, not to a place or to a group of elders or even to a religious institution.

5. King at Hebron (II Sam. 1:1-5:5). Soon after his return from his punitive expedition against the Amalekites, news reached David of the defeat of Israel at Gilboa and the death of Saul and Jonathan. Curiously enough, the very one who brought the news to him was the one who had obeyed the last command of his sovereign to slay him in his confused state before he could fall into the hands of his enemies. While David could not really have been surprised at the news, he acted very diplomatically by immediately going into mourning and dispatching the Amalekite messenger who was responsible for relieving the king. In addition he composed one of the finest odes on friendship that has ever been written (II Sam. 1:17-27). It celebrated the virtues of Saul and extolled the prowess of both Saul and Jonathan. This composition doubtless had much to do with the tradition which ascribes many psalms to David. That he was a gifted musician and a composer of songs can hardly be questioned. I Sam. 16:18 describes him as ידע נגן and נבון דבר—i.e., one who knows how to play instruments and who is clever with words. This tradition is supported by the lamentation which is almost universally conceded to have been composed by David. But he hardly wrote all the seventy-three psalms which are ascribed to him in the titles thereto.

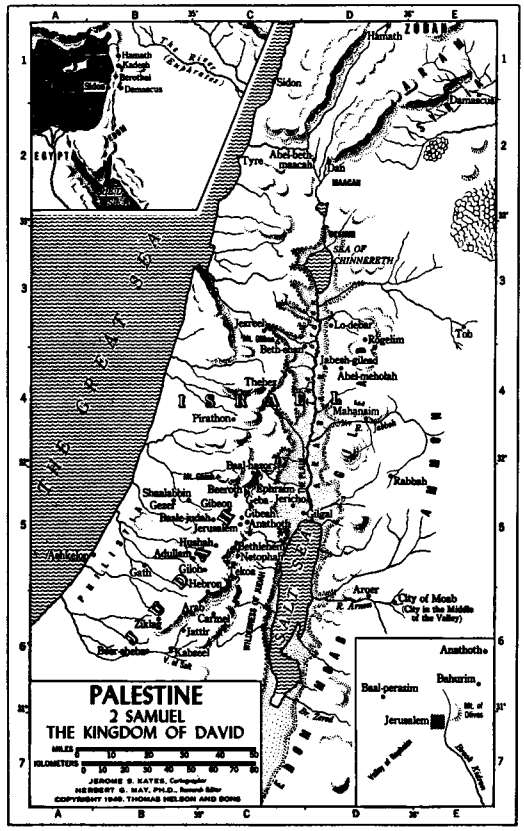
David lost no time in marching northward in Judah after an inquiry of the oracle of the Lord. He took up residence in the old center at Hebron,* where the men of Judah anointed him king over their territory (II Sam. 2:4). This evidently marked simply the formalization of a relation which already existed. David had proved himself by his exploits in the desert, and while he was resident at Ziklag, the Lord had approved him by directing him to go to Hebron (2:1), where the elders of Judah entered into a virtual covenant with him. Here were all the fundamentals required for establishing David in office—demonstration of prowess, divine approval, and popular assent represented by the act of the people of Judah. Fig. HEB 12.

His first act as king of Judah was to send a congratulatory message to Jabesh-gilead for performing funeral rites for Saul and to inform them that he had been anointed king of Judah, suggesting between the lines that, since their king was no longer alive, they follow suit. But Abner, Saul's field marshal, had to be reckoned with. He had set up Ish-bosheth, Saul's son, as successor to his father at Mahanaim (2:8-10). This was a purely arbitrary act without divine sanction, but since it was the custom in surrounding nations and since no one else was available, the Israelites probably assented. Sooner or later the forces of Ish-bosheth and David were bound to come into collision. They met in the border area at Gibeon, and Abner and his army were routed by Joab (2:12-17) after a bitter battle. Abner himself was chased from the field by Joab's brother Asahel, whom he struck down with his spear (2:18-23); thus began a blood feud between Joab and Abner, which finally ended in Abner's paying the penalty (3:27). Though this battle was brought to an end by mutual agreement, border troubles continued (3:1). David's position became stronger, while that of Ish-bosheth was gradually losing strength and face.

Just then there was a serious altercation between Abner and the man he had placed on Saul's throne. The difficulty ostensibly was occasioned by Abner's dealings with one of Saul's concubines, which pointed up Abner's ambitions: "Abner was making himself strong in the house of Saul" (3:6). The position of Abner is clearly reflected by the fact that Ish-bosheth could do nothing when Abner threatened to deliver the kingdom to David. Abner was the *de facto* executor of Saul's kingdom and as such immediately undertook arrangements with David to deliver to him the political estate of his former king. Here again the Davidic genius displayed itself, and circumstances played into his hands. He did not make overtures to Abner but allowed him to initiate proceedings which led to the transfer of the throne to David. Moreover, David, having been approached by Abner, was in position to lay down certain terms favorable to himself which at the same time were not detrimental to the pride of Abner or Israel.

Ish-bosheth had by now demonstrated his incapacity to maintain Israel against the rising star of David, while David had definitely shown his ability by uniting all Judah under his rule. The further link in the chain which David was forging, therefore, was the demand for the return of Michal. As the king's son-in-law he was in a better situation to press his rights or at least to present a more convincing front. Abner had already persuaded the elders of Israel, especially those from Benjamin, to agree to his proposed action, on the grounds of David's being the Lord's choice to deliver them from the Philistines and of previous proposals made by some of the Israel tribes (3:17-19). So he was well prepared to negotiate with David at Hebron. But just when the stipulations agreed upon were about to be consummated, Joab carried out his revenge upon Abner for the slaying of his brother Asahel (3:27), and David's well-laid plans were placed in jeopardy. Had he not taken decisive measures to display his innocence, the whole plan might have fallen through. All the movements of David so far show clearly that he had thought out well his course of action and would permit nothing to interfere with its realization.

Again circumstances intervened to overcome the obstacles placed in his way by the rash act of Joab. When news of Abner's death reached Ish-bosheth, both he and his followers, realizing the extent of their loss, were utterly disheartened. Ish-bosheth was helpless. David waited. Then two leaders of guerrilla bands from Beeroth murdered Ish-bosheth during his noonday siesta. The basis for their deed is not clear, but it can be said with considerable certainty that David had nothing to do with it, for when they brought Ish-bosheth's head to him, he rewarded them with death (4:9-12), just as he had done with the Amalekite who brought him news of Saul's death, and he gave honorable burial to Ish-bosheth's head in the grave of Abner at Hebron.



There remained now no legitimate successor of

Saul except the lame and therefore impossible Mephibosheth, the son of Jonathan. David's claim as son-in-law of the king was thus unimpeachable, though there is no indication that he pressed it openly. The elders of Israel did the only thing possible under the circumstances. They made their way to Hebron and formally carried through the agreement made by Abner. By his adroit conduct in connection with the deaths of Saul, Jonathan, Abner, and Ish-bosheth, David won the approbation of Israel. By his skilful diplomacy at Ziklag, recognized by the people of Judah in making him king, he had shown his fitness to rule over Israel also; the Spirit of the Lord was with him. This was sufficient: "Then all the tribes of Israel came to David at Hebron, and said, 'Behold, we are your bone and flesh. In times past, when Saul was king over us, it was you that led out and brought in Israel; and the LORD said to you, "You shall be shepherd of my people Israel, and you shall be prince over Israel" '" (5:1-2: cf. I Chr. 11:1-2). A covenant was made, and David was forthwith anointed king over Israel.

It is to be observed that the people of Judah had no part in this transaction. They had already acted (2:4), and there was no need to repeat this act in conjunction with Israel. David was now king of Judah and king of Israel, but not of a so-called united kingdom. David's rule was paratactic—i.e., he in his person became ruler over both kingdoms. He was the only uniting principle; the kingdoms themselves were not united into a superstate; they remained as they had been before.

For 7½ years David remained at Hebron, at first as king of Judah and then as king of Israel, for Ish-bosheth reigned for only two years (2:10). He had now achieved apparently the major points of his plan, though there was yet much to be done by way of consolidation of his gains and establishment of his personal position. He was possessed by the genius of doing one thing at a time, and he held steadfastly to this course. Complications were bound to arise, but at each stage he was prepared and capable of dealing with them by virtue of his increasing power and prestige.

6. King at Jerusalem (II Sam. 5:6–I Kings 2:11). David's first step after becoming king of Israel was to move his residence from the capital of Judah to the extraterritorial city of Jerusalem, which up until now had remained in the hands of the Jebusites. Its location on the borders of the two kingdoms made it ideal for David's purposes. Moreover, it was neutral ground and so would not arouse jealousy on the part of either Judah or Israel. The fortress could be entered only through the water shaft (II Sam. 5:8), which was scaled by Joab (I Chr. 11:6); after this the inhabitants capitulated. The capture of Jerusalem added one more precious jewel to David's diadem. He never incorporated the city into either kingdom; it remained outside the regal system apparently throughout the period of the kingdom of Judah. David was now not only king of Judah and Israel, but also master of Jerusalem by right of conquest. He fortified the city and took up residence in the citadel. He built up the city "from the Millo inward" (II Sam. 5:9; I Chr. 11:8; *see* MILLO 1). He further contracted with Hiram, king of Tyre, with whom he

entered into a treaty, for cedar wood, carpenters, and stonecutters to construct a palace for himself and probably quarters for his coterie. This activity was not accomplished at one stroke; it doubtless took some time to finish the building project as planned.

Evidently the Philistines were slow in reacting against the rapidly expanding power of David; at least, this is the conclusion indicated when the venture against Jerusalem is put after the Philistine uprising. It may be also that they had no objection to his moves so long as he did not engage in any militant forays against them or attempt to fortify his seat of government. It must be remembered that he was still regarded as a vassal of the Philistines, and they probably maintained their confidence in him at the behest of Achish (I Sam. 27:12), believing him to be still basically unacceptable to Israel because of his earlier defection. Consequently, since his operations were limited to the territory of Israel and Judah, they let him alone. On the other hand, it is possible that they took action against David as soon as they learned of his anointing by the elders of Israel, which made him the successor of Saul, their old enemy, and obligated him to carry on the program of defense and expansion of Israel to their disadvantage.

However this may be, David was compelled to deal with them on two, apparently not too widely separated, occasions. His rule over both Judah and Israel was bound to hamper their trade routes into the central highland, which they now undertook to defend. The first battle took place in the Valley of Rephaim just to the SW of Jerusalem at Baqa, which

lies across the Bethlehem road. The new king defeated them at a place called Baal-perazim (II Sam. 5:20-21). Perhaps the Philistines had misjudged the strength of David or their forces had been mustered too hastily and improperly deployed. But David knew every inch of the land and was perfectly acquainted with the Philistine tactics, having lived among them and having fought them earlier under Saul. Experience had shown that the Philistines would not give up with one attempt. Once more they appeared in the Valley of Rephaim (II Sam. 5:22-25), this time better prepared to checkmate the army of David. The latter attacked them from the rear and not only drove them away from Jerusalem but pursued them northwestward by the way of Gibeon, down the Valley of Aijalon as far as Gezer, *ca.* twenty miles W of his capital.

This defeat ended his major open conflict with the Philistines and turned the tables on them. David now changed positions with them, and they became his vassals, though there is no indication that he disrupted their internal organization. He did not even add their city-states to Judah or Israel; he simply permitted their tyrants to govern them as vassals so long as they did not attempt hostile acts outside their boundaries. The areas which originally belonged to Israel or Judah were doubtless taken over and incorporated in the respective territories. Thus the king bound the Philistine city-states to himself in a personal union, as he did those other small states in the coastal plain ruled over by them.

The next major diplomatic stroke was David's handling of the religious problem, which, so far as Israel was concerned, was a sore spot during most of the time Saul was king. Saul had paid no attention whatever to the old national-religious symbol of the ark, which after its return by the Philistines was housed at Kiriath-jearim (I Sam. 7:1-2). He had also laid violent hands on the priests at Nob after they had unwittingly offended him by assisting David in his escape (I Sam. 21:1-9; 22:9-19). David resolved to make amends by bringing the ark to Jerusalem, thereby strengthening his bonds with the priesthood and at the same time keeping them near enough to be under constant surveillance. He thus returned to the primitive religious tradition of the twelve tribes—the only move so far made by him toward unity of the two kingdoms. The first attempt to bring the ark into Jerusalem had been unsuccessful (II Sam. 6:3-11), and it was placed in the house of Obed-edom, where it remained for a time. But later it was successfully brought into the city and placed in a tent especially constructed for it. David's conduct (II Sam. 6:16) during the ceremony of transferring it to Jerusalem is characteristic of his enthusiasm for the Lord, and it reflects his charismatic qualities. Michal's attitude (6:20) indicates either lack of respect for the ark in the royal family of Saul, because of its neglect, or progression away from conservative tradition.

Not only did David thus bring to his capital the sacred symbol of Israel and combine the religious with the political elements there, but he went even further. He included the priests in his official family (II Sam. 8:17-18; 20:25-26). Henceforth Davidsburg became the holy city, the city of the Lord. So well was David's plan conceived and carried out that he ever after retained the support of the religious authorities.

Many regard all of II Sam. 7 as a later midrash. But there is undoubtedly some early material in it. That David should have desired to build a house for the ark is what might be expected. Just why his plan was not carried through is unknown. It may have been because he was too busy with wars (I Kings 5:3; I Chr. 28:3), or because his plans were too elaborate for immediate execution, or because he felt the time was not ripe to break with the old tabernacle tradition which he had just employed with the Israelite priesthood to win the support of the religious elements of his kingdoms. The prayer of David (II Sam. 7:18-29) is also early, for the most part, and has to do with the perpetuation of his dynasty. The chapter combines two elements, the desire to build the house of the Lord and the promise of the continuity of the Davidic dynasty. But the chief significance of the chapter in connection with David is its emphasis on the traditional combination of the religion and politics in his kingdom.

See map "Palestine: I Chronicles, the Kingdom of David," under CHRONICLES, I AND II.

The main conquests of David fell in the early period of his reign. The chief sources are II Sam. 8:1-14; 10; 11:1; and the parallels in I Chr. 18–20. The order in which his wars took place is uncertain. The reference to the Philistines in I Chr. 18:1 must be to his two battles with them in the Valley of Rephaim (II Sam. 5:17-25; *see above*). Moab was the next to feel the thrust of his power. Nothing specific is known about this war, apart from the fact that David was probably more ruthless in his punishment of the Moabites than in punishing any other people (II Sam. 8:2). No reason is given for his cruelty, but it may be that the Moabites took advantage of some occasion when David was occupied elsewhere to further their interests. After punishing their army, he laid them under tribute and became their overlord. Otherwise their kingdom remained as it had been before.

The Aramean wars are associated, at least in part, with the campaign against Ammon. Saul's expedition succeeded for a time in holding the Ammonites in check. David now sent a delegation of his men to Hanun, son of Nahash, king of Ammon, to bear his condolence on the death of his father. The men were taken as spies and humiliated (II Sam. 10:3-5). This precipitated a crisis, and preparations were speedily made on both sides for a showdown. The Ammonites called in their Aramean allies to assist them. Four separate Aramean states are mentioned: Zobah, the largest of these, was located in the Antilibanus region N of Damascus; Rehob was somewhere near Dan; (Ish)tob near Lake Huleh; and Maacah to the NE of Lake Huleh.

The genius of Joab asserted itself, with the result that the Arameans fled and the Ammonites retired to their stronghold. Hadadezer, king of Zobah, however, summoned his allies in another challenge to David (10:15-19). The battle took place at Helam (vs. 16) N of Gilead. The Arameans were roundly defeated, their chariots captured, their horses hamstrung, and their commander, Shobach, mortally wounded. The result was a treaty of peace under

which they became subjects of David, whose governing officials were domiciled at Damascus. It is likely that these Aramean states were drawn together into a kind of province whose administrative seat was Damascus. In addition to this more or less organized group of states, the kingdom of Hamath under King Toi (תעי; תעו; I Chr. 18:9-10) concluded a treaty of friendship with David, whom he evidently regarded as his savior (II Sam. 8:10). In the defeat of Hadadezer and by the treaty with Toi, David derived much booty (II Sam. 8:7-8, 10), which he brought to Jerusalem.

David's rule now extended as far N as Hamath and in an eastwardly direction to the Euphrates, though the borders between Zobah and the great river were indefinite. The Aramean states were under David directly but were in charge of one of his officials.

The Ammonite campaign continued, perhaps on a lesser scale, for a time, with Joab engaged in marauding activity. Finally Joab laid the capital under siege. When it was about to capitulate, David himself was called to the scene (II Sam. 12:26-31), so that he might have the prestige of victory. Hence Ammon became Davidic territory with David ostensibly as king.

Edom was attacked after the Aramean campaign —for what reason, is not stated (II Sam. 8:13-14; I Kings 11:15-16), but possibly because the Edomites took advantage of David's engagements elsewhere to carry on razzias against Israelite towns in the border regions. The battle took place in the Valley of Salt and ended as all the other battles of David, in complete victory. Joab spent six months in further ravaging the country and visiting dreadful cruelty upon its male population. Edom then was taken over and garrisoned by David.

David was now the undisputed master from Egypt to the Euphrates. He was king of Judah, king of Israel, king of Jerusalem, king of Ammon, king of the Canaanite states incorporated into Judah and Israel, the ruler by governors over the Aramean states and Edom, and chief of Moab. He was bound by treaty with Tyre and Hamath. Thus he was the most powerful ruler in the world of his day. His success was due in large part to the fact that there was no formidable power elsewhere in the world in the early tenth century. The twenty-first Egyptian dynasty (1085-945) was ruled by priest kings; in Mesopotamia there was also no strong power (Tiglath-pileser II, 966-935, was a weakling), though the Assyrians were pushing the Arameans out of Aram Naharaim into the W desert of Syria, whence David came into collision with them. Nor was there a strong state in Asia Minor comparable to that of the Neo-Hittite Empire two centuries earlier.

David's affair with Bathsheba (II Sam. 11:1–12:25), one of the best known incidents in his life, occurred during the last phase of the Ammonite campaign. For some reason the king did not accompany the army to Rabbath Ammon but remained at Jerusalem. One evening while he was walking about on the roof of his palace, his passions were aroused when he saw Bathsheba bathing. He immediately sent for her. Presently she found herself with child. Her husband, Uriah the Hittite, one of David's mercenaries, was with Joab at Rabbah. He was summoned home at once in the hope that scandal might be averted. But Uriah was too much a man of conscience to enjoy himself at home while his associates were in the field. When David saw that his plans were thus thwarted, he sent Uriah back to Joab with his own death warrant. Joab carried out the orders of the king, and so Uriah was slain and David was free to marry his widow. If David had hoped thereby to avoid censure, he was mistaken, for his court prophet Nathan (*see* NATHAN 2) was aware of the situation. He did not hesitate to bring the word of the Lord to the king, and it was not a pleasant one. According to the writer of II Sam. 12:7-10, David's sin did not consist of adultery but of appropriating the wife of another man after having had him murdered. David's reaction to the stern word of the prophet was one of repentance and submission to the judgment of the Lord. The child died, but sometime later another was born to Bathsheba. His name was Jedidiah, better known as Solomon (II Sam. 12:24-25). The affair with Bathsheba marked the beginning of the decline of David, the zenith of whose power and success was reached in the capture of Rabbath Ammon.

The conquests of David brought immense wealth and luxury to Jerusalem. Moreover, they kept David away from his family much of the time. It has been said that the man who knew all the arts of war and diplomacy could not control his own family. But this was, in all probability, due more to circumstances than to inability. The family feud between Amnon and Absalom over the latter's sister, Tamar, originated in uncontrolled passion and ended in tragedy (II Sam. 13:1-14, 29). David was deeply troubled, but it was too late (vss. 30-36). Absalom was exiled for three years to Geshur (vss. 37-38), W of the Sea of Galilee, to live with Talmai, his grandfather (I Chr. 3:2). Absalom was the beloved son (II Sam. 13:39; 18:33–19:4), perhaps because he was the crown prince, and his father longed for his return but could not see his way clear to recall him. Joab, sensing the desire of David, contrived a way to get him back (II Sam. 14:1-20). But for two years (14:28) Absalom lived apart and did not come into the presence of the king, until he himself took the initiative by inducing Joab to intercede for him. The result was a happy reunion (14:33).

This rather lengthy story of Absalom's return and reconciliation is used by the narrator as an introduction to Absalom's revolt (II Sam. 15:1–19:8). David was, no doubt, immersed in other affairs of state, and he was growing old, so that he could no longer attend to local matters. Absalom, being quite aggressive, gathered a group of sympathizers, provided for himself a bodyguard, and began to capitalize on the manifest discontent of dissident individuals. He may also have been aware of the promise of the kingdom to Solomon, and so he may have planned to usurp what was rightfully his as crown prince. He carried on in this way for some time (15:7). Finally, under the pretense of going to fulfil a vow made during his exile at Geshur, he obtained permission from David to proceed to Hebron (vss. 7-9), where he had himself proclaimed king (vss. 10 ff).

News of the revolt stunned the king, who gave orders to his officials to prepare posthaste for evacua-

tion of the city. The fact that David saw the seriousness of the uprising so quickly may point to some knowledge of the strength of his opponents. Just how formidable it was may be judged from the fact that David could count only on his "servants"—i.e., his officials and his standing army (15:18). While many of the people were sympathetic to David, they were, for the most part, unable to do anything effective, perhaps because Absalom had lured their leaders to Hebron with him (15:11). The religious officials did remain loyal but were sent back, in all likelihood because they could aid him better there than in his immediate company. At the last moment, David had enough of his old sagacity left to plot subversion against Absalom from within the city. This is shown by his urging Hushai to remain to nullify the counsel of Ahithophel and by his suggestion that he had the support of the priests (15:34-36). Ziba's message about Mephibosheth (16:1-4) may have more in it than appears on the surface. It may indicate that Israel was backing Absalom and that in so doing Mephibosheth had hoped to gain something for himself. The Shimei incident (16:5-14) points up the fact that not all the people of Israel wholeheartedly supported David, even during the early portion of his reign.

Within the city Absalom seems to have been in undisputed control, and to attest it publicly, he openly entered the harem. Meanwhile, Hushai succeeded in defeating the counsel of Ahithophel with respect to the rapid pursuit of David, so that David was able to get across the Jordan before Absalom had time to collect his forces (17:1-23). But Absalom took up the pursuit, with Amasa as his commander (vs. 25).

David had taken up residence at Mahanaim, the old seat of Ish-bosheth, where he was supplied amply by his friends who remained loyal. When the forces of Absalom appeared, David took charge of the strategy to be employed by Joab, though he did not participate personally in the ensuing battle (18:3). His orders to the army were to spare Absalom; but this was not to be, for Joab saw to it, when the opportunity came, that the rebel was punished. The battle went against Absalom, and his army was cut to shreds. "All Israel fled every one to his own home" (18:17; 19:8). Tradition has perhaps inflated the king's grief over the death of his son, but it certainly rings true to his character as portrayed elsewhere. At the insistence of Joab, David was at last persuaded to accept the situation and show his gratitude to those who had so loyally supported him and saved his kingdom (19:5-8).

Here it is necessary to consider briefly the political implications of Absalom's uprising. Alt is of the opinion that only Israel was involved on the side of the rebel and that Judah remained neutral. The term "all Israel" (17:11; 18:17; 19:8; etc.) is taken as an exaggeration, as may be seen from 20:2, where a clear distinction is drawn between "all the men of Israel" and "the men of Judah." Furthermore, there are the summons sent by David to the "elders of Judah" to welcome him back to Jerusalem (19:11-16) and the loud protestations of support on the part of the "men of Israel" and the "men of Judah" (19:40-43). On the whole, these deductions appear to be correct. Israel was conscious of its identity; so was Judah. And, on a broad basis, they continued to maintain their independent loyalties. But several other factors are to be taken into account:

Absalom made Amasa, David's nephew (I Chr. 2:17), his commander, though in this act he may merely have imitated his father, who had made Joab, his nephew and Amasa's cousin, the commander-in-chief. The reticence of the people of Judah in welcoming David back to Jerusalem is susceptible of another interpretation. Then there is the statement in II Sam. 19:40 that "all the people of Judah, and also half the people of Israel, brought the king on his way," which would seem to indicate that not all Israel was in rebellion against David. Again, there is the welcome the king received from Barzillai in Transjordan in the most crucial stage of the rebellion. The whole episode clearly demonstrates one of the weaknesses of David's empire—i.e., the lack of effective organization (*see below*). It also illustrates the fact that local loyalties cannot usually be overcome by the kind of personal union exemplified in the Davidic pattern. Actually David divided the kingdom instead of uniting it firmly.

Among the first to beg forgiveness of David was Shimei (19:16-23), who had cursed him and his servants as they fled from Jerusalem before Absalom (16:5-14). David's characteristic magnanimity displayed itself in the pardon granted Shimei, though Abishai wanted to put the scoundrel to death. Next came Mephibosheth with the excuse that he had been deceived by his servant (19:24-30). The king was apparently not quite sure of Mephibosheth, since he commanded that Saul's patrimony be divided with Ziba. The attitude of Barzillai was a welcome contrast (17:27-29; 19:31-39); he was one of those who provided for David and his men at Mahanaim and who now came to bid him farewell as he was about to recross the Jordan on his way back to Jerusalem.

That the state of affairs did not return to "normalcy" after the Absalom fiasco is shown by the abortive move of Sheba the Benjamite, who tried to rally Israel against David (20:1-22). David really compromised with the followers of Absalom by appointing Amasa as commander of the army in place of Joab. So Amasa was delegated to put down the uprising of Sheba, but since his heart was not in the project—another instance of the growing disunity—Joab seized the initiative, treacherously stabbed Amasa, and with the assistance of the wise woman of Abel-beth-maacah, brought back victory.

David, who had learned something in the course of all the hard and bitter struggle to retain his kingdom, now took steps toward a better organization of the territories of Israel and Judah. The appendix of II Samuel (chs. 21–24) is devoted, for the most part, to this problem. Much of the early period of his reign was occupied with war and conquest, which sapped his vigor to such an extent that not much thought could be devoted to matters of building for the future. Discontent and rebellion and the complex question of succession accentuated the necessity for a more stable order. David probably came to realize that personal union was not enough to hold together his vast empire. It will be recalled that after he became king of Judah and king of Israel, he did not add subsequently conquered territory to either of these kingdoms, except such cities or areas as traditionally were included in their respective borders. Rather, he main-

tained each unit separately by binding it to himself as king or by ruling it through governors. The lists show beyond doubt that his officials were not bound to either kingdom but to him personally and that in the early period their duty was to assist him in war and in the maintenance of his military establishment.

Among his men of war were the four who slew giants (21:15-22); the famous three who also performed mighty deeds (23:8-17), especially slipping through the Philistine lines to bring water from the well at Bethlehem to David at Adullam; and the Thirty (23:18-39), who were modeled after Egyptian parallels. The age of the list of the Thirty is shown by the presence of the name of Asahel, brother of Joab, who was slain by Abner in the first collision between the armies of David and Ish-bosheth (2:23). Then there were the Cherethites and the Pelethites (II Sam. 8:18; 15:18; 20:7, 23; I Kings 1:38, 44), probably Cretans and Philistines, who formed the bodyguard of the king. Joab was the commander of the army, and Benaiah was in charge of the bodyguard (II Sam. 8:18; 20:23). Thus David had a well-organized fighting force developed over a long period of time, and its effectiveness may be judged by the results of his conquests.

But there were other officials (see lists in II Sam. 8:16-18; 20:23-25) in David's governing body. The *corvée*, or forced labor, was introduced again under David. II Samuel lists Adoram as the chief of the tribute bureau, which probably has nothing to do with forced labor (cf. LXX φόρος). But in II Sam. 12:31 = I Chr. 20:3, we read that David "brought forth the people who were in it [the Ammonites in Rabbah], and set them to labor with saws and iron picks and iron axes, and made them toil at the brick-kilns; and thus he did to all the cities of the Ammonites." The Edomites became David's slaves (II Sam. 8:14) and were doubtless included in the forced-labor battalions of the king and his officials. Glueck calls attention to the huge copper and iron smelting furnaces and refineries at Ezion-geber (present Elath at the head of the Gulf of Aqabah), which were manned by slaves. It is quite possible that Ezion-geber fell into the hands of David in the campaign against Edom and that it was merely transmitted to Solomon in the normal course of inheritance. There is thus ample evidence for some forced labor under David.

The fact that there was an official over the tribute points to some organization also along this line. Then there were the recorder or remembrancer (מזכיר) and the scribe (סֹפֵר), both of whom belonged to the most important segment of the officialdom of David. In addition to these civil officers were the priests, Zadok and Abiathar, who were over the state cult, while the king himself had a private confessor (II Sam. 20:25-26). There were also the prophets, Nathan and Gad, who were more or less attached to the court. All these officials and others with other functions show that there was a growing body of high-ranking officers which was necessitated by the expanding power and interests of the king. That it was more than haphazard is shown by the Egyptian pattern followed by David.

That the situation demanded still further consolidation is shown by the two rebellions with which he had to cope. It is possible that these uprisings were the result of an attempt to restrict tribal autonomy, since they were instigated solely by groups within the kingdoms of Judah and Israel. On the other hand, it may be that they compelled a rethinking of the relatively loose organization prevalent before it was impressed upon the king and his near associates that something more had to be done either to satisfy or to obviate the discontent, or to hold the dissidents in check.

However this may be, the beginnings of a tighter organization are evident in the decision to take a census (II Sam. 24; I Chr. 21). Joab was the chief of the census takers. The outline of territory covered (II Sam. 24:5-7) is significant. They began in Transjordan at Aroer on the Arnon River, then moved N to Jazer in the tribal territory of Gad and on into Gilead. From there they went N as far as Kadesh (on the Orontes), then S to Dan and across to Sidon and Tyre and the neighboring Canaanite and Hivvite (Hurrian) centers. To the S they went as far as Beer-sheba and its surroundings. Since Adoram was the chief of the tax bureau (II Sam. 20:24), it is likely that the census was undertaken for fiscal as well as for administrative purposes. The list of David's officials in II Sam. 8:15-18 does not include the officer in charge of the tribute.

Two misfortunes occurred at the time of the census. One has to do with famine (II Sam. 21:1-14) and the other with pestilence (24:15 ff). The former is connected with the complaint of the Gibeonites whom Saul had put to death and whose blood had not been avenged. For the purpose of vengeance David handed over to them two sons and five grandsons of Saul, thus sparing Mephibosheth, Jonathan's son. To atone in part for this act, he brought the remains of Saul and Jonathan from Jabesh in Gilead, reclaimed the bodies of those who had been hanged by the Gibeonites, and accorded all of them an honorable burial "in the tomb of Kish" (21:14). The second misfortune occurred in the wake of the census. It consisted of a devastating pestilence which was finally stayed at the threshing floor of Araunah. The conservatives attributed the plague to the "sin" of the census. Both stories are somehow related, but the details escape us at the present. In any event, here is a definite conflict between the older Yahwists and the innovation introduced by the king.

The last days of David were beset with further difficulties in relation to the succession. This time the trouble was caused by Adonijah (I Kings 1:5 ff), the next in line (II Sam. 3:4) for the throne after the death of Absalom. Aware of the promise made by David to Bathsheba that her son should be his successor, Adonijah thus took steps prematurely to secure his rights. He followed the pattern of Absalom by providing for himself the accouterments of a crown prince and then by entering into negotiations with Joab, David's commander, and Abiathar, one of the priests. But he had not reckoned with the most powerful forces behind the scenes at the time—with Zadok, Nathan, Benaiah, and David's mercenaries; and Joab had lost too much favor to make up for such a formidable opposition. Nevertheless, at the appointed time, probably a New Year's festival, Adonijah had himself proclaimed king at En-rogel. Only

his partisans had been invited, which included "all his brothers, the king's sons, and all the royal officials of Judah" (I Kings 1:9). Absalom's followers were mostly Israelites; Adonijah, on the other hand, drew upon the people of Judah and upon those who were closest to his father (e.g., Joab).

The chief opponent of Adonijah's move was evidently the prophet Nathan, who, with the connivance of Bathsheba, set in motion the movement to have Solomon anointed (I Kings 1:11-40). He sent Bathsheba to the sickbed of the king to remind him of his promise (vs. 17) and plead her case for her son. When she left the presence of the king, Nathan, by previous arrangement, appeared to tell the king of the usurpation of Adonijah and to inquire whether this was really his will (vss. 24, 27). The fact that Nathan, Zadok, Benaiah, and Solomon had, for obvious reasons, not been invited, rightly seemed ominous in the sight of both Bathsheba and Nathan. The arguments of the prophet and of the favored wife won the day; for the king vowed that he would fulfil his promise with respect to Solomon that very day (vss. 29-30). Immediate arrangements were made for the ceremony of investiture, which David was too ill and feeble to witness. So Solomon was anointed officially by Zadok and Nathan and set on David's mule, the sign of royalty. The royal bodyguard was there to take over. When the trumpet sounded, the people acclaimed Solomon the new king. The word of David had thus settled the problem of succession at one stroke.

Adonijah saw at once that his cause was lost, for the word of the king was too strong for him to resist. He was granted his life by Solomon but kept under constant surveillance. Not until he asked for Abishag did he forfeit his life. With Adonijah went Joab and Abiathar. David's last will called for the avenging of Abner and Amasa (I Kings 2:5) by the death of Joab. Shimei, who had so violently cursed David in his flight from Absalom but was judiciously spared by the king at the time, also was marked for death. Hence there would be removed any possible revolt at the beginning of Solomon's reign. David's experience stood him in good stead, or perhaps it was the prudence of his advisers.

After a forty-year reign over Judah and a thirty-three-year reign over Israel, David died. The Chronicler says: "He died in a good old age, full of days, riches, and honor" (I Chr. 29:28), which is literally true, with the exception of honor.

7. Estimate. David's early life had certainly been filled with honor. His dignified demeanor at the court of Saul is beyond reproach. The way he handled himself when his life was in grave danger could win him nothing but praise, though there may be some editorial embellishment or idealization in some of the material. But there is enough truth elsewhere in the tradition to substantiate these claims. Not once did David attempt reprisal against Saul or indirectly against his house. He was consistently loyal to his king, even when he sought refuge with the Philistines, whom he endeavored to curb at every opportunity in favor of his own people. So long as he remained with Saul, he faithfully fulfilled his obligations, though fortune more than once smiled upon him. On at least one occasion, perhaps two, he could have slain his master. The weight (honor) of his actions won him respect on all sides.

With this honor he combined a rare quality of diplomacy. His sojourn with the Philistines was directed in such a way as to aid himself and his people rather than the enemy. In so doing he reflected a keen perception of destiny for himself and Israel as a whole, and thereby he revealed a kind of charismatic quality, which tended to increase as time progressed. While the enemy was busy elsewhere, David gradually subdued the border areas of S Judah and attached to his little kingdom at Ziklag a growing array of subject cities and territories in the guise of putting down marauders and winning material support for himself and his followers. When the time came for him to proceed to Hebron, most of Judah was strongly united behind him.

Then there was the way in which he dealt with his brethren from the N. His lament over the death of Saul and Jonathan and his treatment of the messenger who brought him word of their death set the standard for his subsequent relations with Abner and Ish-bosheth, which cannot have been altogether deceptive. Again, there was his provision for Mephibosheth, Jonathan's son, which was not withdrawn after Absalom's rebellion, in which he participated, possibly unwittingly. The selection of Jerusalem, a Jebusite city, which belonged neither to Judah nor to Israel, as his capital and the way he administered it was another master stroke of diplomacy. Such acts show David's cleverness and astuteness in handling difficult situations.

That David was a great warrior is shown not only by his numerous conquests but also in the way he organized and deployed his forces. Some of his methods he undoubtedly learned from the Philistines; others he derived from his own ingenuity—e.g., the attack on the Philistines from the rear (II Sam. 5:23), the management of the campaign against Ammon, the defeat of the Arameans under Hadadezer and his allies, and the arrangement of his forces against the army of Absalom (18:2). These all portray the excellence of his generalship. The Chronicler rightly says: "The fame of David went out into all lands, and the LORD brought the fear of him upon all nations" (I Chr. 14:17).

David's shrewdness as a politician is demonstrated by the personal unions he formed with Judah, Israel, Jerusalem, and Ammon and by the personal allegiance he demanded of the other territories he conquered. In his own nations he maintained tribal autonomy throughout most of his reign; in the latter period he attempted to check tribal extravagances by planning a better organization, which was carried out under Solomon. In all his specifically political moves he did not neglect the religious authorities, as Saul had done. He restored the ancient symbol of the ark, the darling of the conservative groups, and brought into play once more the virtually abandoned Israelite priesthood. Henceforth religion played a vital role in every major move made by the king.

That David was a deeply religious man is confirmed by every stratum of the tradition of his kingdom. Nothing was undertaken without inquiring of the Lord, and the priests or prophets crop up everywhere. The external display of emotion on the re-

moval of the ark to Jerusalem, which disgusted Michal, is indicative of his personal devotion and furnishes a fine insight into the psychological aspects of his personality. The story of his ready repentance when confronted by the prophet Nathan in connection with the Bathsheba affair fits in quite well with this incident, although it may have been somewhat expanded by the narrator. His reaction to the remonstrance of God concerning the sin of the census follows the same pattern.

Over and over again the stories of David tell us that he was a poet and musician of note. It is certain that he was the author of the lament over Saul and Jonathan (II Sam. 1:19-27) and a priori there is no reason why II Sam. 23:1-7 (his last words) should not be attributed to him. II Sam. 22 is more doubtful, but the arguments in favor of Davidic authorship outweigh those against it. And since there was no clear differentiation between poet and musician, there can be no valid objection to ascribing to David poetic pieces. That he was a musician is well established. He was brought to the court of Saul because he could play instruments (I Sam. 16:23), and when the ark was taken to Jerusalem, he was among those who were "making merry before the Lord with all their might, with songs and lyres and harps and tambourines and castanets and cymbals" (II Sam. 6:5). The text of Amos 6:5 is not beyond dispute, but the words "like David" do reflect the tradition current when Amos was edited. Then there is the tradition of the Chronicler that David not only planned and made preparations for the construction of the temple (I Chr. 22–23) but that he was responsible for the organization of the staff of temple personnel, including the musical guilds (I Chr. 24–26). This tradition no longer appears so impossible as it was once thought.

Finally, David was a great organizer. This is demonstrated in the development of his military machine and in his plan for the reorganization of his vast territories in line with needs revealed by the several rebellions toward the end of his reign. He was responsible for the allotment of the Levitical cities in Josh. 21=I Chr. 6:54-81, and probably for the six cities of asylum included among them, which were intended to alleviate the problem of tribal feuds and make for a more orderly system of administration.

J. M. MYERS

***DAVID, CITY OF** [עיר דוד]. The name given to the fortified city of the Jebusites (*see* JEBUS), after the capture by David. Hence "city of David" is used as a synonym for the stronghold of ZION (II Sam. 5:7, 9; I Chr. 11:5, 7; I Kings 8:1; II Chr. 5:2). There is no longer any doubt concerning the identification of the city of David with the triangular hill wedged between the valleys of the TYROPOEON and the KIDRON, and overlooking the gardens and pools of SILOAM (II Chr. 32:30). The narrative of the conquest suggests that David entered the town by surprise, presumably by climbing through the water shaft by means of which the inhabitants drew the water from the underground spring of GIHON (II Sam. 5:7-8; *cf.* WATERWORKS). David established his residence within the perimeter of the city. Some additional fortifications were built under his reign and the reign of his successors, particularly to the N. *See* MILLO § 1; OPHEL.

The city of David retained its distinct identity after Jerusalem had outgrown its original boundaries. Nehemiah's account of the postexilic restoration and dedication of the walls mentions a few well-known monuments or features of the city—e.g., the FOUNTAIN GATE (Neh. 2:14; 3:15; 12:37); the STAIRS OF THE CITY OF DAVID (Neh. 3:15; 12:37); the sepulchres of David (Neh. 3:16; *see* TOMBS OF THE KINGS); the house of David (Neh. 12:37); the house of the mighty men (Neh. 3:16); and eventually the WATER GATE (Neh. 3:26; 12:37). Several of these landmarks have been identified with various degrees of probability in the course of excavations conducted by R. Weill in 1913-14 and 1923-24. The excavations conducted by G. Duncan and S. Macalister in 1923-25 have failed to fix with certainty the N boundary of the city of David. The existence of a fortified gate opening to the W into the Tyropoeon has been ascertained by J. W. Crowfoot in 1927. *See* JERUSALEM.

Josephus, failing to visualize the growth of Jerusalem through the centuries of its history, generally identified the city of David with the whole of Jerusalem as he knew it, with the confusing result that he localized the "Castle" (φρούριον) of David (War V.iv.1), with the higher hill to the W of the Tyropoeon. This hill, partly for reasons of religious symbolism, has become the Christian Zion. *See* map under JERUSALEM.

DAWN, THE [שחר; ἀνατολή (Luke 1:78)]. A common noun usually rendered in the KJV as MORNING, and occasionally as DAYSPRING (e.g., Job 38:12; Luke 1:78). This is a secondary usage, as שחר is primarily the name of the Amorite god manifest in

the Venus Star at dawn (*see* SHAHAR). The references to the "eyelids of the morning dawn" in Job 3:9; 41:18 reflect this primary sense of שחר.

For bibliography, *see* SHAHAR. J. GRAY

DAY [יום; ἡμέρα, *adverbially* σήμερον, this day; KJV *inexactly* אור (Judg. 16:2; Job 26:10), light; KJV *incorrectly* תמול (I Sam. 21:5)].

A division of time. There are three principal uses of the term:

a) The time of daylight, from sunrise to sunset, as contrasted to NIGHT (Gen. 1:5; 8:22; Acts 20:31; etc). The day in this sense was divided into morning, noon, and evening (cf. Ps. 55:17). Before the NT era there was no division of the day into hours, although Neh. 9:3 speaks of fourths of a day. Usual designations of periods in the day were sunrise, the heat of the day, the cool of the day, sunset, etc. In the NT the day as the period of light (*see* LIGHT AND DARKNESS) becomes symbolic of salvation and righteousness (John 11:9; Rom. 13:12-13). In I Thess. 5:5, 8, Christians are called sons of the day, and in II Pet. 1:19 faith is likened to the coming of the day. Apocalyptic writings such as Rev. 21:25 envisage perpetual day in the state of perfection (cf. I Enoch 58:6).

b) The civil day, a space of twenty-four hours, extending from sunrise to sunrise or from sunset to sunset (Gen. 7:24; Job 3:6; Luke 9:37; Acts 21:26; etc.; as opposed to an hour, Matt. 25:13; as opposed to hours, months, seasons, and years, Gal. 4:10; Rev. 9:15). It would appear that the early Hebrews reckoned the civil day from one dawn to the next, as would naturally follow from its simplest meaning (*see above;* cf. Num. 11:32; Judg. 19:5-9; also the common expression "day(s) and night(s)," in Exod. 24:18, etc.). Gradually, however, they began to count from sunset to sunset, in accordance with the rising importance of their lunar festivals (cf. Gen. 1:5 ff; Exod. 12:18; Lev. 23:32; Esth. 4:16; Isa. 27:3; Dan. 8:14; II Cor. 11:25; Jos. War IV.ix.12). Among the Hebrews none of the days of the week except the sabbath was named. In the NT the weekdays have numbers (cf. Luke 24:1). Because parts of days could be counted as wholes, "after three days" (Mark 8:31) refers to the entire period of Jesus' burial.

c) Loosely, the period of an action or state of being. Thus "in the day that" means "when" in Gen. 2:4; Lev. 14:2; etc. One's lifetime or reign is his "days" (Gen. 26:1; I Kings 10:21; cf. Heb. 5:7). There is a "day of trouble" (Ps. 20:1), a "day of God's wrath" (Job 20:28), the messianic day (John 8:56), a "day of salvation" (II Cor. 6:2), and an "evil day" (Eph. 6:13). A day in this sense can be the time of a notable battle, judgment, disaster, or deliverance (Deut. 16:3; Ps. 137:7; Isa. 9:4; Ezek. 30:9; etc.). Similar is the diverse terminology of eschatology, such as "in that day," "in the latter days," the "day of the Lord," etc. *See* DAY OF CHRIST; DAY OF JUDGMENT; DAY OF THE LORD.

In addition to these uses of "day," the term is employed inexactly in such expressions as "dawn of day," "break of day," "a great while before day" (Mark 1:35), "when the day was now far spent" (Mark 6:35 KJV), "the next day," "four days" (John 11:39), none of which involves יום or ἡμέρα.

S. J. DE VRIES

DAY OF ATONEMENT. *See* ATONEMENT, DAY OF.

DAY OF CHRIST [ἡμέρα Χριστοῦ]. In certain OT prophetic passages the "Day of Yahweh" is mentioned (e.g., Isa. 2:12; 13:6 ff; Joel 1:15; 2:31 [quoted in Acts 2:20]; Amos 5:18; Zeph. 1:7 ff; Zech. 14:1; Mal. 4:5). This will, as a rule, be an awful day of divine retribution, vengeance, destruction, and judgment. This prophetic concept was taken over into Jewish APOCALYPTICISM: God would bring this evil age to a catastrophic end involving a final divine judgment. In a few instances the Messiah, not God, would be the judge. *See* DAY OF JUDGMENT.

The phrase "Day of God" (ἡμέρα τοῦ Θεοῦ) appears but twice in the NT, each time in an apocalyptic framework. In II Pet. 3:12 the fiery destruction of heaven and earth at the end of this age is called the Day of God. In Rev. 16:14 the "great day of God the Almighty" is the time set for the Battle of Armageddon, shortly before the end of this present age.

When the SEPTUAGINT translation of the OT into Greek was made, the Hebrew word for "Yahweh" was not transliterated; instead, the Greek word for "Lord" (κύριος) was substituted. Hence, in the LXX the "Day of Yahweh" becomes the DAY OF THE LORD.

Since the early Christians called Jesus, as well as God, "Lord," it was but natural that the "Day of the Lord" (as they found the phrase in their Greek Scriptures) came to be understood as Christ's day. E.g., in I Cor. 5:5 Paul handed a sinful man over to Satan for the destruction of his flesh, that he might be saved on the Day of the Lord. For Paul the Day of the Lord is the second coming of Jesus Christ from heaven with destructive power, as is stated in I Thess. 5:2-3. Actually, this identification is specific in II Thess. 2:1-2, where the second advent of the Lord Jesus Christ is called the Day of the Lord, as is true of II Pet. 3:10 (cf. vs. 4).

In I Cor. 1:8 the coming of Jesus Christ, which was so ardently hoped for, is explicitly called the "day of our Lord Jesus Christ"; in II Cor. 1:14 it is the "day of the Lord Jesus," and in Phil. 1:6 it is termed the "day of Jesus Christ." In but two places (Phil. 1:10; 2:16) do we find the shorter term, the "day of Christ."

An analogous phrase is the day when the Son of man will be revealed and the wicked destroyed (Luke 17:30; cf. vs. 24)—i.e., the day when Jesus Christ will appear in his second advent as the heavenly Son of man. Elsewhere in the NT the Day of Christ is referred to as "the Day" (II Tim. 1:12, 18; 4:8; Heb. 10:25), as the "day of visitation" (I Pet. 2:12), and as the "day of judgment" (II Pet. 2:9; I John 4:17).

The Day of God and the Day of the Lord (i.e., of Jesus) were not always clearly differentiated; in II Pet. 3:10, 12, they are practically equated. Similarly, in Rom. 2:16 Paul refers to the day when God will judge the secrets of men through the agency of Jesus Christ. M. RIST

DAY OF JUDGMENT. In late Judaism and in the NT, the dividing act of the final drama between the old and the new aeon, bringing God's just judgment upon all men. As distinguished from the natural

events or historical developments considered now and then in earthly life as divine punishment or deliverance which may be regarded as preliminary stages of the final judgment, the eschatological day of judgment denotes a universal forensic act of God or of a representative authorized by him for that purpose, which concerns both the living and the dead (who have been resurrected to be judged).

This highly developed apocalyptic expectation does not appear in the OT, or only in hints at the fringe. God's final intervention is, to be sure, often described here and there in forensic categories in order to explain the justice of his action. God has a legal contest with the nations or with Israel: he is accuser, witness, and judge in one person (Isa. 1:2, 18; 3:13 ff; 51:5; 66:15-16; Jer. 2; Hos. 4:1 ff; 5:1, 5, 9; 12:3; Mic. 1:2 ff; 6:1 ff; Zeph. 3:8; Mal. 3:5; cf. also Pss. 50; 76; 82; 96; 98). Nevertheless, in the descriptions of the impending decisive "day" (*see* DAY OF THE LORD) the natural catastrophes and the horrors of war, which Yahweh (for the deliverance of his own) brings upon his enemies, predominate throughout. Most heavily interspersed with forensic concepts is the description of the eschatological argument of Yahweh with the nations in Joel 3—H 4; cf. vs. 12:

> Let the nations bestir themselves,
> and come up to the valley of Jehoshaphat
> [i.e., "Yahweh judges"];
> for there I will sit to judge
> all the nations round about.

(*See* JEHOSHAPHAT, VALLEY OF.) Cf. also vs. 14:

> Multitudes, multitudes,
> in the valley of decision!
> For the day of the LORD is near
> in the valley of decision.

(*See* DECISION, VALLEY OF.) The idea of individual judgment of each single human being, which also presupposes the idea of resurrection of the dead, is still lacking. This concept appears for the first time in Dan. 12:1-3 (cf. also the court scene of Dan. 7:9 ff): "Many of those who sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt" (vs. 2).

E. JENNI

***DAY OF THE LORD** [יום יהוה; ἡμέρα κυρίου]; DAY OF GOD [ἡ τοῦ θεοῦ ἡμέρα] (II Pet. 3:10, 12). One of the designations of the impending decisive intervention of God in the prophetic anticipation of the future (*see* ESCHATOLOGY OF THE OT). The expression יום יהוה ("day of Yahweh," more frequently with a mark of characterization as to purport, such as "day of the wrath of Yahweh," sometimes also simply "that day") probably finds its explanation in the Hebrew practice of designating decisive events of history as "days" (e.g., Isa. 9:4—H 9:3: "day of Midian"; cf. Judg. 7:25). *See* TIME § A1*a*. For the early Christian way of understanding this OT expression, *see* DAY OF CHRIST.

The oldest passage in the OT in which the "day of the LORD" occurs is Amos 5:18-20:

> Woe to you who desire the day of the LORD!
> Why would you have the day of the LORD?
> It is darkness, and not light;
> . . . . . .
> Is not the day of the LORD darkness, and not light,
> and gloom with no brightness in it?

It follows from this passage that Amos did not originate the concept of the Day of the Lord, but rather found it already in the popular belief. But he definitely opposes the idea that this day, for which they were longing as a day of light, would mean salvation for Israel. According to his prophecy, it will be a day of misfortune and darkness for Israel. This does not in itself constitute a decisive change in the concept of the Day of the Lord; for the coming of the Lord on his day includes both, from the start: disaster and judgment for the enemies of the Lord, but salvation and deliverance for the remnant faithful to the Lord (*see* REMNANT; ESCHATOLOGY OF THE OT § 1*b*). Amos opposes his contemporaries only with regard to the question as to which aspect of the Day of the Lord would really come to pass for them. Because of their apostasy they have become enemies of the Lord and therefore are now in the same rank with the other enemies of the Lord (Amos 1–2), whereas at other times they expected the judgment of the Lord to fall only upon the foreign nations. Thus the prophecy of Amos (cf. also 6:3; 8:9) makes a break with the average piety in Israel, which in its self-assurance imagined it had the Lord on its side. That he too knew, in addition, a meaning of salvation in "that day" is probably indicated by Amos 9:11.

In the pre-exilic prophecy the proclamation of the Day of the Lord occurs, furthermore, in the prophecy of disaster. Isa. 2:9 ff reveals the universal character of the terrible Day of the Lord:

> The LORD of hosts has a day
> against all that is proud and lofty.
> . . . . . .
> And the haughtiness of man shall be humbled.
> . . . . . .
> And men shall enter the caves of the rocks
> and the holes of the ground,
> from before the terror of the LORD,
> and from the glory of his majesty,
> when he rises to terrify the earth (vss. 12, 17, 19; cf. 22:5).

The description of the universal and oppressively near Day of the Lord is most detailed with Zephaniah, who for this very reason has been called the prophet of the Day of the Lord (1:7 ff, 14 ff; 2:2-3; 3:8). Cosmic and political terrors, natural catastrophes, and events of war are here united into the impressive picture which has furnished the model for the medieval sentence: *Dies irae dies illa:*

> The great day of the LORD is near,
> near and hastening fast;
> the sound of the day of the LORD is bitter,
> the mighty man cries aloud there.
> A day of wrath is that day,
> a day of distress and anguish,
> a day of ruin and devastation,
> a day of darkness and gloom,
> a day of clouds and thick darkness,
> a day of trumpet blast and battle cry

against the fortified cities
and against the lofty battlements (1:14-16).

The dull monotony of these sentences, with their uncanny repetition, has an even more immediate effect in the original text.

In the prophecy of doom directed against Israel before the catastrophe of 587 the conceptual complex of the Day of the Lord—disregarding less clear allusions—occurs once more in Ezek. 7:7, 10, 12. Here it is combined with the proclamation of the "end."

Looking back upon the catastrophe of 587, one can speak of the Day of the Lord as having arrived (Lam. 1:21; Ezek. 34:12). But soon "Day of the Lord" is again used in the eschatological sense; though now, in harmony with the general trend of prophecy, it turns again from the prophecy of doom to the prophecy of salvation. The transition is brought about with regard to both matter and time in the passages in which the universal threats of the Day of the Lord are directed specifically against individual hostile nations—e.g., Isa. 13:6, 9, 13 (Babylon); 34:8; 63:4 (Edom); Jer. 46:10 (Egypt); 47:4 (the Philistines); Ezek. 30:3 (Egypt and its allies); Obad. 15 (Edom). The "day of vengeance of our God" will "comfort all who mourn" (Isa. 61:2). It brings the destruction of the Godless, but purification and salvation for those who fear God, who are prepared for the "great and terrible day of the LORD" by the sending of the prophet Elijah (Mal. 3:2; 4:1, 5—H 3:19, 23). In Joel 1-2 a plague of grasshoppers is considered as a sign of the nearness of the Day of the Lord, which calls for repentance (1:15; 2:1-2, 11). The eschatological descriptions become more and more detailed. The heavenly bodies are darkened when the time for final judgment comes upon the nations (3:14-15—H 4:14-15); but in Jerusalem there is salvation for those who call upon the name of the Lord (2:32—H 3:4; 3:18—H 4:18). Similar, but even more comprehensive, is the picture painted in Zech. 12-14. More than a dozen times we find the stereotyped phrase "on that day"; once, "a day of the LORD" (14:1).

In the late Jewish literature, which no longer uses the name Yahweh, the expression "day of the LORD" disappears, but not the idea it expresses—the day of the great last judgment at the end of this aeon. Only rarely is there any mention of the Day of God in continuation of the old terminology (II Bar. 48:47; 49:2: "Thy day"; 55:6: "day of the Mighty One"); also, expressions such as "day of the Messiah" and the like have scarcely come into use.

In the NT, on the other hand, the linguistic usage of the OT has a more pronounced aftereffect. The end of the world is called "day of the Lord" and "day of God"; and the final battle in Rev. 16:14 is called the "great day of God the Almighty." The day is carried over to the parousia of the Messiah in Luke 17:24: "For as the lightning flashes and lights up the sky from one side to the other, so will the Son of man be in his day" (cf. also John 8:56: "my day"). In the case of Paul the day of the last judgment is, in harmony with the eschatology of the NT (*see* ESCHATOLOGY OF THE NT), in closest association with the parousia of Christ. He speaks of the "day of the Lord" (I Thess. 5:2; II Thess. 2:2), of the "day of our Lord Jesus Christ" (I Cor. 1:8; 5:5; II Cor. 1:14), or simply of the "day of Jesus Christ" (Phil. 1:6, 10; 2:16).

DAY'S JOURNEY [מהלך יום, דרך יום; ἡμέρας ὁδός]. The Bible mentions a day's journey (Num. 11:31; I Kings 19:4; Jonah 3:4; Luke 2:44), three days' journey (Gen. 30:36; Exod. 3:18; 5:3; 8:27; Num. 10:33; Jonah 3:3), and seven days' journey (Gen. 31:23; II Kings 3:9). Evidently the distance was not exact; it would depend on the nature of the ground traversed and the kind of person making the journey. Presumably a day's journey was between eighteen and twenty-five miles. *See* WEIGHTS AND MEASURES § 4*d*.
O. R. SELLERS

DAYSMAN dāz'mən. KJV translation of מוכיח (RSV UMPIRE).

DAY STAR [הילל, bright one]; KJV LUCIFER lōō'sə fər. A designation of the king of Babylon in the taunt song in Isa. 14:12, where the pretensions of the bright Day Star to rise higher than all the stars, "to sit on the mount of assembly," to "ascend above the heights of the clouds," are disappointed, and the "bright one," who is obviously a deity, is obliged to come down to earth. This passage seems to reflect an episode in the Baal myth known from the Ras Shamra Texts. There, when Baal, whose seat is Mount Sapon, is in eclipse in the dry summer season, the question of a substitute on his vacant throne is raised, and Athtar, the Venus-star, is proposed. He is, however, too small to fill the throne and must come down to the earth and reign "god of it all."

DAY-STAR. KJV translation of φωσφόρος (RSV MORNING STAR) in II Pet. 1:19.

DEACON [διάκονος, servant, attendant, minister]. A title, since apostolic times, of one of the major orders of ministers in the church (*see* MINISTRY, CHRISTIAN). Its institution is commonly related to the account in Acts 6:1-6 of the selection and ordination of the SEVEN, to assist the Twelve in the distribution of charitable provisions to the Hellenist widows. But the author of Acts does not use the noun "deacon" of these men, but rather the verb διακονεῖν to describe their function of "serving tables." The word "deacon" does not occur in Acts; but one of the Seven, Philip, is called an EVANGELIST in Acts 21:8.

A more likely indication of the office is in Phil. 1:1, where Paul addresses the "bishops and deacons" with

the whole church in Philippi. Since this letter was a note of thanks for material assistance sent to Paul by the Philippians, it is reasonable to suppose that he mentions in the address those ministers who were particularly responsible for collecting and sending the offering for his needs. Otherwise, the word διάκονος is used by Paul to describe his fellow workers and assistants in evangelizing—of Timothy (I Thess. 3:2; cf. I Tim. 4:6), Tychicus (Col. 4:7; cf. Eph. 6:21), and Epaphras (Col. 1:7). Paul also uses the term in describing his own ministry (I Cor. 3:5; II Cor. 3:6; 6:4; 11:15, 23; Col. 1:23, 25; cf. Eph. 3:7), or the ministry of Christ (Rom. 15:8; Gal. 2:17), or even that of civil magistrates (Rom. 13:4). For the meaning of the feminine use of the word (Rom. 16:1), *see* DEACONESS.

References to deacons in the literature of the post-apostolic age are abundant, and afford clear and precise indications of their rank and duties within the hierarchy of the church's ministry: I Tim. 3:8-13; I Clem. 42; Did. 15.1; Ign. Eph. 2.1; Ign. Magn. 2.1; 6.1; 13.1; Ign. Trall. 2.3; 3.1; 7.2; Ign. Phila. pref.; 4.1; 7.1; 10.1-2; 11.1; Ign. Smyr. 8.1; 10.1; 12.2; Ign. Polyc. 6.1; Polyc. Phil. 5.2-3; Herm. Vis. III.5.1; Herm. Sim. XXVI.2. In addition to these notices, one should consult the directions for the ordination of deacons in Hippolytus' *Apostolic Tradition* 9, and other regulations concerning their duties (21, 23-25, 30), for these also represent ancient custom. The deacon ranked third, after bishops and elders, in the ordained ministry. He was distinctly the bishop's assistant, being ordained by the bishop alone and serving him in his liturgical and pastoral duties.

At the Eucharist, the deacons received the offerings of the people and assisted in the administration of the elements of communion. At a later time the deacons had the exclusive right of reading the gospel lection at the Eucharistic assembly. They sought out and visited the sick, the poor and indigent—especially widows and orphans and prisoners, informed the bishop of their needs, and carried to them the alms of the church. According to Justin Martyr (Apol. I.67) they took the consecrated sacrament to those who were unavoidably absent from the Eucharistic celebration. In the light of these duties, the qualifications of character for the deacon's office, outlined in I Tim. 3:8-13, are pertinent, since his constant visitations among the people and his responsibilities with the church's material offerings provided many temptations to himself and his family for gossip, greed, slander, and intemperance.

Attempts to find prototypes of the diaconate in Jewish or pagan sources are but partially successful. There is some analogy in liturgical, though not in pastoral, functions, between the Christian deacon and the *ḥazzan* (ὑπερέτης) who assisted the ruler of a Jewish synagogue. Both in the LXX and in classical Greek writers, the word "deacon" has a secular sense—of servants, messengers, and civil officials. Josephus and Epictetus, however, sometimes employ the word in reference to a "servant" of God. Numerous pagan cult inscriptions list "deacons" among their officers, but without a fixed technical meaning. In most cases the close association of the term with "boys" and "cooks" suggests the functions of waiters or menial servants.

Without doubt, the church's diaconate was developed in response to specific needs within the corporate life of the church itself. But its inspiration was no less the example of Christ himself, who "came not to be served but to serve" (Mark 10:45 and parallels). The idea of service (διακονία) and serving (διακονεῖν), with particular illustration from service at table, underlies all of Jesus' teaching about his own ministry and that of his disciples after him (cf. Matt. 25:44; Luke 12:37; John 12:26; and esp. Matt. 20:26-28; 23:11; Mark 9:35; 10:43; Luke 22:26-27). In this sense, the diaconate is the foundation of all ministry in the church.

DEACONESS; KJV SERVANT. The word used to translate διάκονος in Rom. 16:1, where Paul mentions Phoebe as a διάκονος of the church at Cenchreae. In no place does the NT describe a ministerial order of deaconesses, but because of this reference it is commonly assumed that such an order existed from apostolic times. Whether the term bears in this instance a technical sense, or only a more general meaning of service, cannot be certainly determined. The problem is similar to Paul's mention of "deacons" in Phil. 1:1 (*see* DEACON). Greater ambiguity surrounds the mention of women in I Tim. 3:11 within a context describing a deacon's qualifications. The passage may refer merely to the wives of deacons (so KJV); but some interpreters take it as a reference to deaconesses. Also obscure is the relation of deaconesses to the order of widows (*see* WIDOW), as denoted in I Tim. 5:9-10.

A clearer indication of the existence of the office in the early years of the second century is provided by the report of Pliny the Younger, governor of Bithynia in 112, to the Emperor Trajan with respect to his investigation of the Christians. Pliny says that he had put to torture two Christian handmaidens who are called deaconesses (*ancillis quae ministrae dicebantur;* Epistle X.97). References to deaconesses in Christian literature of the second and third centuries are remarkably rare. The Syrian *Didascalia* (ch. 16, ed. Connolly, pp. 146-48) of the late third century gives an excellent summary of their functions: (*a*) to assist at the baptism of women, especially in the act of anointing, and (*b*) "to go into the houses of the heathen where there are believing women, and to visit those who are sick, and to minister to them in that of which they have need, and to bathe those who have begun to recover from sickness."

Our chief sources about the order of deaconesses derive from the Church Orders and conciliar decrees of the fourth-fifth centuries. The order does not appear to have been in existence in the church at Rome.

DEAD, ABODE OF THE. The teachers and prophets of Israel discountenanced necromancy and occult speculation (Deut. 18:11; Ps. 106:28; Isa. 8:19). "The secret things," says the Law, "belong to the LORD our God; [only] the things that are revealed belong to us" (Deut. 29:29). Consequently the OT offers no formal doctrine concerning the destination and fate of the dead; all that it says on the subject belongs to the domain of popular lore. The NT, though more specific about rewards and punishments in the ultimate Day of Judgment, is likewise vague and undogmatic about the preliminary abode of the dead in general.

Bibliography

1. The Hebrew concept. Like all other ancient peoples, the Hebrews believed that the dead, though ending earthly life, did not relinquish existence per se. Somewhere, in a region outside the earth but accessible to God (Job 26:6; Ps. 139:8; Amos 9:2), they lingered on, oblivious of their former lives (Ps. 88:12—H 88:13), bereft of all mundane pleasures (Ecclus. 14:16), freed at last from the "sick fatigue" of the flesh (Job 3:17), yet at the same time divorced from empirical experience of God's presence (Ps. 88:6), and hence with nothing for which to thank or praise him (Pss. 6:5; 30:9; 88:12-13; 115:17; Isa. 38:18; Ecclus. 17:27-28). This region was usually located under the earth (Num. 16:30), in the lower part of the cosmic ocean (Job 26:7), beneath the roots of the mountains (Jonah 2:6); but there was also an alternative view (Enoch 22:1-5) which placed it in the W, where the sun goes down. Described as the final "synagogue of all living" (Job 30:23; cf. Enoch 22:3), it is variously depicted as a dark, chaotic realm (Job 10:20-21), characterized by a grim silence (Pss. 94:17; 115:17), or as a city with gates (Job 38:17; Isa. 38:10; cf. Wisd. Sol. 16:13; Ecclus. 51:9; Matt. 16:18).

The denizens of this realm are usually styled REPHAIM, a term which recurs in Ugaritic and Phoenician texts, but which is of quite uncertain etymology and meaning. They apparently retain their earthly ranks (Isa. 14:9-10; Ezek. 32:21, 24), but are described as "weary" (Job 3:17) and "without strength" (Ps. 88:4—H 88:5)—expressions comparable with the Egyptian "weary of heart" (*wrḏ 'ib*) as a euphemism for "the dead" and with Homer's description of the infernal phantoms in *Odyssey* XI. 474-75. A particular feature of their plight is that they suffer constant thirst (Isa. 5:13).

Although the way to the abode of the dead was a one-way street (Job 16:22), individual spirits could be evoked for consultation (I Sam. 28:13). In this aspect, they were termed *'ĕlōhîm,* "numina," an infernal visitor to the earth being known as *'ôbh,* "revenant" (cf. Arabic *āba,* "return").

2. Parallels in ancient Near Eastern cultures. Almost every detail of the foregoing picture can be paralleled from Mesopotamian and Canaanite literature, showing that the biblical writers were simply drawing on traditional Semitic folklore and not inventing any new and original conceptions. *See bibliography* § 2.

Likewise in Akkadian texts, the abode of the dead is portrayed as a subterranean realm (*erṣitu,* "earth"), sometimes also located under the waters or in the W, and regarded as a city with gates. There too it is represented as a region of darkness (*bît ikliti,* "house of darkness"), and the way thither admits of no return. And there too, as in many ancient and primitive cultures, its inhabitants are characterized as suffering constant thirst—dwelling, as the expression goes, in a "field of thirst." *See bibliography* § 3.

Similarly, in the mythological poems from Ras Shamra Ugarit, the domain of death (*Môt*) lies under the earth, beneath the mountains (II AB, viii, 1-7), and it is described as a city (*qrt;* ib., 11; I* AB, ii, 15), whose lord is obliged to feed on mud and to drink it "by cupful and barrel-full" (I* AB, i, 19-22).

3. OT terminology. The realm of the dead is designated in the OT by several names. Most of them, however, are simply special applications of common nouns, and these too can be exactly paralleled in Mesopotamian texts:

a) שחת, "the Ditch" (RSV "the Pit"; Job 33:18; Pss. 16:10; 30:9—H 30:10; Isa. 38:17; 51:14; Jonah 2:6—H 2:7; cf. Akkadian *šuttu*). The ancient versions, however, prefer to derive this name from שחת, "corrupt" (cf. LXX διαφθορά, φθορά; Vulg. *corruptio, interitus;* Syr. חבלא).

b) בור, "the Pit" (Pss. 28:1; 88:4, 6—H 88:5, 7; Isa. 14:15; 38:18; Ezek. 32:18; etc.; cf. Akkadian *būru*).

c) מות, "(realm of) Death" (Job 28:22; 30:23; 38:17; Pss. 6:5—H 6:6; 9:13—H 9:14; Prov. 7:27; cf. Akkadian *bît mûti,* "house of death"; CT XVIII, 30, rev. 28-30). In Ps. 22:15—H 22:16 this is styled more precisely עפר מות, "the dust of death," and this expression too finds an exact parallel in Akkadian (*eprat mûti*).

d) ארץ, "the earth" (Exod. 15:12; Ps. 71:20; Jonah 2:6—H 2:7; etc.; cf. Akkadian *erṣitu* in this sense and Ugaritic *'rṣ* [e.g., II AB, viii, 9]). Sometimes the more precise expression ארץ תחתית, "the nethermost earth" (RSV "the nether world") is employed (e.g., Ezek. 31:14), and to this corresponds the Akkadian *erṣitu šaplitu,* the lowest of the three layers of the EARTH, regarded as that in which the dead dwelt.

e) אבדון, "Perdition" (RSV "Abaddon"; Job 26:6; 28:22; Ps. 88:11—H 88:12; Prov. 15:11; 27:20; cf. Rev. 9:1).

There is, however, one special term which has the full force of a proper name—viz., "Sheol" (שאול). It is used sixty-six times, but it does not occur (except as a loan word from Hebrew) in any other Semitic language. Its etymology, and hence its precise meaning, is disputed. The most plausible view is that it derives from the root שאל, "ask, inquire," and was originally applied to the realm of the dead as the

place whence oracles were sought from them. In support of this is the fact that the verb in question is, indeed, used in the OT in connection with (forbidden) necromantic practices (Deut. 18:11; I Chr. 10:13), while the cognate Akkadian *ša'ilu* denotes "one who consults spirits," and South Arabic *m-s-'-l* sometimes means "oracle." The term would, of course, have been a survival from pagan antiquity. (Older attempts to connect "Sheol" with שָׁעַל, "be concave"—i.e., the Hollow—or with Arabic *sahal,* "soft ground," are philologically precarious.) The LXX usually renders ᾅδης, "Hades." *See bibliography* § 4.

4. In the NT. In the NT the abode of the dead is invariably called "Hades" (ᾅδης; Matt. 11:23; 16:18; Luke 10:15; 16:23; Acts 2:27, 31; Rev. 1:18; 20:13-14), and nothing is added to the OT descriptions of it.

5. Personification. The abode of the dead (Sheol) is sometimes personified as an insatiable demon with wide-open throat or gaping jaws (Prov. 1:12; Isa. 5:14; Hab. 2:5). This picture recurs in the mythological texts from Ras Shamra-Ugarit (I* AB, i, 1-3), and is common also to many other cultures. It survives also in medieval pictures of hell. *See bibliography* § 5.

In Canaanite mythology, the nether pit (*ḥ-r;* cf. חוּר, Arabic *ḥaur,* and Akkadian *ḫurru* as a name of the nether world) was personified as the god Ḥaurân, who is known to us from the Ugaritic texts, from several references in Egyptian literature, and from a Canaanite incantation of the eighth century B.C. from Arslan Tash. This name survives in the OT in Beth-horon (Josh. 16:5). *See bibliography* § 6.

6. The abode of the dead and hell. Nowhere in the OT is the abode of the dead regarded as a place of punishment or torment. The concept of an infernal "hell" developed in Israel only during the Hellenistic period, probably under the influence of Iranian ideas (*see* ABYSS; GEHENNA). It first appears in Enoch, but even in this compilation there are several passages (e.g., 10:2; 22; 102:5) in which a clear distinction is drawn between the abode of the dead in general and the place of damnation, to which the wicked among them will be eventually consigned; while Jesus ben Sirach finds it necessary to protest explicitly that "there is no [correction of life] in Hades" (Ecclus. 41:4). The same distinction is preserved in the NT (cf. especially Rev. 20:13-14), except only in Luke 16:23, where the rich man of the parable is depicted as being in torment "in Hades." Here, however, the use of the word "Hades" may reflect contemporary Greek idiom, rather than be a rendering of "Sheol" or represent an evolution of Semitic ideas. Indeed, it is to be observed that in II Pet. 2:4 the verb ταρταρόω, "send to Tartarus," is deliberately coined to denote the dispatch of the rebel angels to the infernal realm of punishment. At the same time, it cannot be denied that this differentiation did, indeed, tend to become blurred (cf. Wisd. Sol. 3:10-14; 4:10-19; 5:1; Jos. War II.viii.11, 14), in much the same way that the Greek "Hades" ended up as a virtual synonym of the originally distinct "Tartarus." This, however, should be regarded as a confusion, rather than an evolutionary coalescence, of two distinct concepts, for even in later Jewish thought the abode of the dead and the place of torment are clearly differentiated.

Bibliography

1. Name. The most frequent and probably the most ancient biblical term for the lake is "Salt Sea" (Gen. 14:3; Num. 34:3, 12; Deut. 3:17; Josh. 3:16; 12:3; 15:2, 5; 18:19). This name appears only in the Hexateuch; and, although the additional designation "Sea of the Arabah" (KJV "Plain") appears several times in this section of biblical literature (Deut. 3:17; 4:49; Josh. 3:16; 12:3), in all but one such passage (Deut. 4:49) the previous name accompanies it in an explanatory equation. In II Kings 14:25, also, the latter name appears independently and without such an explanation. The "Eastern Sea" is a third biblical designation which appears in certain rather late prophetic passages (Ezek. 47:18; Joel 2:20; Zech. 14:8) by way of indicating the lake's position on the E boundary of the territory of ancient Israel.

The NT makes no reference to the Dead Sea under any of its various designations. Extrabiblical literature of approximately the same period, however, supplements the multiplicity of the lake's various names. II Esd. 5:7 and Jos. Antiq. V.i.22 refer to it as the "Sea (or Lake) of Sodom"; Pliny (Nat. Hist. V.15.15), Diodorus Siculus (*Bibliotheke* II.48; XIX.98) and Josephus (War IV.vii.2) employ the term "Sea of Asphalt" or "Asphaltitis." The name "Dead Sea" seems to have been introduced into Greek and Latin usage in the second century A.D. by Pausanias and Justin. Modern Arabic ascribes to the lake the name *Bahr Lut,* "Sea of Lot."

2. Physical features. The Dead Sea begins at the mouth of the Jordan River and extends southward—occupying fifty-three miles of the deepest part of a great rift-valley and constituting a natural reservoir

Courtesy of Denis Baly

6. Ghor 'Asal, the narrow plain at the foot of the Moabite mountains on the E side of the Dead Sea

Courtesy of the Israel Office of Information, New York

7. The Dead Sea, with the Negeb mountains in the foreground

for the reception of the Jordan's waters. It is oblong in general outline, the regularity of its contour being interrupted only by a large peninsula two thirds of the way down the E shore. At its widest point it reaches approximately ten miles and is enclosed on both E and W by steep, rocky cliffs. Occasional terraces of marl and ancient, eroded beaches serve as reminders of the sea's Pleistocene precursor. This great reservoir is open at the ends—the rift-valley of which it is a part ascending gradually both N and S from the level of the lake in its depths. The surface of the sea is 1,292 feet below the level of the Mediterranean, making it the lowest region of the earth's surface, and soundings of the water's depth indicate that in its NE section the lake floor plunges yet another 1,300 feet and more into the bosom of the earth. Figs. DEA 6-7.

a. Nature of the water. Though the Dead Sea receives the waters of the Jordan, and of several small streams entering along its E shore, it has no outlet. Such is the heat and aridity of its sub-sea-level situation, however, that evaporation of the captive waters keeps pace with its intake—resulting in an ever-increasing concentration of solid materials. Though this evaporation is the responsible agent in the action, the volcanic origin of elements of the sea's drainage basin, salt and sulphur deposits near its shores, mineral-laden springs in its vicinity, and the fact that the present Dead Sea is the residue of a mid-Pleistocene salt lake of much greater proportions—all have contributed to a degree of salinity that is no less amazing than its geographical situation. Its being twenty-five per cent solids gives it approximately five times the concentration of the ocean and makes it the world's densest large body of water. The principal mineral compounds involved are the chlorides of magnesium, sodium, calcium, and potassium, plus magnesium bromide. These salts constitute the chief mineral resource of the region round about and, to some extent, have been commercially extracted at both the N and the S end of the lake. Since the specific gravity of the water exceeds that of the human body, attempts at swimming in it can be both amazing and amusing experiences. One bobs about on its surface like a cork and, standing erect, will hardly sink to the shoulders. The water is bitter and distasteful to the mouth, disconcertingly painful to the eyes, oily to the touch, and a certain and speedy reminder of all abrasions of the skin. Bathing in its waters should be followed by a fresh-water rinse to remove the irritating salt film deposited on the body. The oily sheen of its salinity is even visible when viewed close at hand and in the proper angle of the sun's rays. From the surrounding hills, however, with the rising or setting sun over one's shoulder, it takes on a deep and beautiful blue, deceptively suggestive of refreshment which it does not afford.

All forms of marine life find it impossible to exist in the Dead Sea's briny depths. Though fish are occasionally found in brackish pools a few feet from the shore line or at the mouths of incoming streams of fresh water, even salt-water varieties quickly succumb when exposed to the lethal concentration of the lake's main body. Because of this the notion has been prevalent in the past that the surrounding land area was also incapable of supporting life. This is quite incorrect. Both vegetation and animal life are found near its shores, especially near valley mouths and springs of fresh water, and in the plain along the SE shore vegetation is both abundant and luxuriant.

b. E and W shores. Steep, barren hills enclose the sea on either side, rising to a maximum of approximately 2,500 feet above the shore line on the W and as much as 500 feet higher on the E. The E mountain wall is often precipitous, plunging directly into the sea and permitting of no passage along its forbidding foot. This compact face of Moab is seamed by several gorges—the most spectacular being the Arnon—through which plateau streams plunge downward to debouch into the sea. Callirhoe and Machaerus are sites of interest near the NE shore. In the mineral-laden hot waters of the former, Herod vainly sought relief from his fatal malady; and in the remote and isolated fortress of the latter, Antipas had John the Baptist beheaded.

The broken Judean hills on the W are more terraced and receding, generally permitting a track to parallel the shore line between cliff base and gravel beach. This shore of the lake, with the Judean wilderness at its back, has not a single stream coursing through it to the sea. However, two copious springs beside this W shore form oases of green along a brown and barren strand. One of these, 'Ain Feshkha, near the NW corner of the sea, adjoined the Qumran community which produced the Dead Sea Scrolls. The second, about midway of the W shore, was Engedi, near which David fled for refuge from the jealous hand of Saul (I Sam. 23:29) and whose pleasant vineyards are mentioned in an ancient canticle of love (Song of S. 1:14).

Ten miles farther S, on a commanding crag rising

two thousand feet above the sea, is the site of the incredibly strong Maccabean-Herodian fortress of Masada. Here, following the Roman destruction of Jerusalem, the Jews staged their last desperate resistance—finally, in A.D. 73, taking their own lives in preference to surrender (Jos. War VII.ix.1).

c. Lisan. Directly across from Masada and two thirds of the way down the E coast of the sea a broad peninsula juts outward—at one point reaching within two miles of the W shore. The course of an ancient road across the peninsula suggests that a ford crossed the adjacent strait in the Roman period, and both travelers' observations and recent Arab tradition indicate that fordings were still possible in the first half of the nineteenth century. This peninsula, though called El-Lisan ("the tongue"), is shaped like a boot with the toe pointed northward. The forty- to sixty-foot cliffs of this nine-mile plateau of gray-white marl rise sheer like a glacier advancing into the sea.

d. S embayment. S of Lisan is a large, shallow embayment having a maximum depth of only fifteen feet and becoming progressively shallower as one proceeds southward or toward the E or W shores.

Bordering this embayment all along its E shore is a broad, fertile plain watered by five small streams (the southernmost being the biblical Zered) cascading out of the adjacent hills. That the level of the sea has been steadily increasing and the area of this plain correspondingly diminishing is indicated by the statements of classical writers, the Roman ford from Lisan to the W shore, recent observations of submerged trees extending on the E as much as one mile from the present coast of the embayment, and various published observations and measurements made since the early part of the nineteenth century. In this connection, it has been maintained on the basis of competent authority that the area of the S embayment increased by fully one third in the hundred-year span between the first quarters of the nineteenth and twentieth centuries. It is probable, therefore, that all or most of the sea S of Lisan was once a plain and that here were located the five CITIES OF THE PLAIN and the nearby Vale of Siddim, which is characterized as containing bitumen pits (Gen. 14: 10). The presence of bituminous materials in and about the sea has been known since ancient times, and both classical and modern writers speak of the rising of chunks of the material to the surface of the lake. It is particularly in the area now occupied by the S embayment that this phenomenon—usually associated with an earthquake—occurs.

e. Jebel Usdum. Extending for more than five miles along the SW shore of the embayment is a hundred-foot stratum of crystalline salt surmounted by layers of marly clay and limestone cap rock—the entire mass being known as Jebel Usdum ("Mount of Sodom"). Not only is the name associated with the Cities of the Plain, but the caverned and creviced salt stratum seems to have repeatedly produced a pinnacle to which tradition has pointed when relating the story of Lot's wife and the pillar of salt (Gen. 19:26).

f. Es-Sebkha. At its S extremity the Dead Sea slopes almost imperceptibly into a flat and barren plain of white and glistening salt marsh known as es-Sebkha. During periods of flood the lake encroaches upon it, then receding, leaves it an impassable sea of mud. This land, "possessed by nettles and salt pits, and a waste for ever" (Zeph. 2:9), extends some eight miles southward until terminated by the cliffs of 'Ain Khaneizir. From this point onward the great rift-valley is known as the Arabah.

g. General effect. The otherworldly appearance of the Dead Sea's deep and barren basin often inspires awe and wonder in the minds of those who view it. It did the same for biblical writers, for both its history and its appearance made of it an apt symbol of the devastation and barrenness visited upon those who despised the law of God. On the other hand, such was the prophetic understanding of God's creative and redemptive care that Ezekiel could envision even such a region refreshed and recreated by the life-giving stream issuing forth from beneath the temple (Ezek. 47:1-12). As an inspiration to meditation on the relation of the present to the future life, this otherworldly setting was unexcelled. It is not surprising, therefore, that a company of Essenes chose a site on its shores to establish a community of contemplation.

Bibliography

1. The discoveries of the MSS. The exact date and circumstances of the famous find are uncertain. In February or March, 1947, Muhammad adh-Dhib (i.e., "the Wolf"), a young Bedouin fellow of the Ta'amireh tribe, searching for a lost goat, entered one of the caves in the cliffs of the W coast of the Dead Sea, 8½ miles S of Jericho.* There he discovered jars, mostly 25.5-29.5 inches high and almost 10 inches wide, which contained leather scrolls wrapped in linen cloth. First they were offered at Bethlehem for twenty pounds to a dealer who refused to pay this price. After some time, five of these scrolls were bought by the archbishop of the Syrian Orthodox Monastery at Jerusalem, Mar Athanasius Samuel,

and three by E. Sukenik at the Hebrew University at Jerusalem. In 1954 Sukenik's son, Y. Yadin, bought the five scrolls from the archbishop for $250,000, so that all these scrolls are now in the possession of the state of Israel. Fig. DEA 9.

Early in 1948, by the time the high age and value of the scrolls had been recognized, the war between the Arabs and the Israelis made a scientific investigation of the cave impossible. Such an investigation was later carried out from February 15 to March 5, 1949,

8. The Qumran area, showing caves wherein pottery and MSS have been found

by Lankester Harding of the Department of Antiquities in Jordan and R. de Vaux of the Ecole Biblique. Several hundred fragments of biblical books, apocrypha, and unknown writings were found. The amount of jar sherds indicated that the cave had been used to conceal a library of about two hundred scrolls. This library may have been discovered previously. Eusebius reports that Origenes (A.D. 185-254) had used a Greek translation of the Psalms which was found in a jar near Jericho (Euseb. Hist. 6.16). In the year 800 the Nestorian patriarch Timothy I tells in a letter that a shepherd found a "little house of books" near Jericho. The Karaite Ḳirḳisani, in a work on Jewish sects (973), mentions the Magharites, whose books had been found in a cave (*maghar*).

On account of the war in Palestine, Archbishop Athanasius brought his five scrolls to the United States (1948). They were published by M. Burrows with the assistance of J. C. Trever and W. H.

9. A Ta'amireh Bedouin in the wilderness of Judah

Brownlee. The first volume (1950) contains the plates and the transcription of two scrolls, one a complete book of the prophet Isaiah (1QIs^{a})* and the other a commentary on the first chapters of Habakkuk (1QpHab). The second volume (1951) reproduces two smaller scrolls which formed a "Manual of Discipline" (1QS). The last of the five scrolls, believed to be an apocalypse of Lamech, could not be opened at that time. Fig. DEA 10.

In September, 1948, E. Sukenik published his first volume on the MSS and followed it in 1950 by a second one. Both, however, contain only some of the well-preserved portions in his scrolls. After Sukenik's death his son Y. Yadin finished the edition of the complete scrolls in 1954 under the title *Osar Hamegilloth Hagenusoth* ("the treasury of the hidden scrolls"). It includes another Isaiah scroll (1QIs^{b}), a scroll which describes the eschatological War of the Children of Light and the Children of Darkness (1QM), and four parts of a collection of thanksgiving psalms (1QH). In 1956, together with N. Avigad, Y. Yadin published the so-called Lamech apocalypse, which meanwhile had been opened in the Hebrew University and turned out to be a midrash on some chapters in Genesis. Therefore, it was entitled *A*

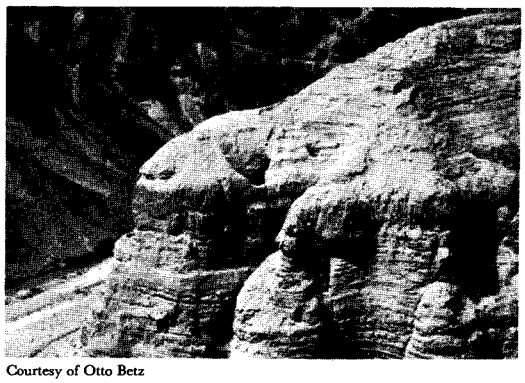
10. Scroll of Isaiah (1QIs^a), from Cave I in the vicinity of Khirbet Qumran

Genesis-apocryphon. The fragments of Cave I were published in 1955 by D. Barthélemy and J. T. Milik in a volume entitled *Qumran Cave I.*

At the end of the summer of 1951 some Ta'amireh tribesmen offered new fragments which they had found in two caves of the Wadi Murabba'at,* *ca.* eleven miles S of the famous Qumran cave and two miles W of the Dead Sea.* Early in 1952 an expedition excavated these caves, which had also been used for hiding places in different ages. They contained biblical MSS of a strictly Masoretic type, among them a scroll of the minor prophets and a papyrus palimpsest of the eighth century B.C. Most revealing for the conditions during the Second Jewish Revolt against Rome (A.D. 132-35), to which most of these writings belong, are some letters on papyrus in Hebrew. Two of them are signed by Simon Bar Cocheba, the leader of this revolt, and others are dated at the time "of the deliverance of Israel by the ministry of Simon Bar Cocheba, the prince of Israel." Pl. XXX*c;* Figs. DEA 11; CAV 20.

Other fragments, which were discovered at Khirbet Mird, 2½ miles NE of the famous monastery Mar Saba, belong to a later date. The biblical documents, written in Greek and in Palestinian Aramaic, come from the fifth-eighth centuries A.D. At a place still unknown were found in July, 1952, Nabatean and Jewish papyri and a fragmentary Greek text of the minor prophets.



While the documents of Wadi Murabba'at and Khirbet Mird are not directly related to those from the cave near Qumran, other caves in the Qumran region supplied the Bedouins with new MSS. An expedition in March, 1952, found remains of pottery in

thirty-seven caves, some of which also yielded MSS. Cave II (2Q), situated a short distance S of Cave I, contained biblical and apocryphal fragments, among them a portion of the book of Jubilees and an Aramaic document describing the New Jerusalem; and Cave III (3Q), *ca.* a mile N of Cave I, besides 274 frag-

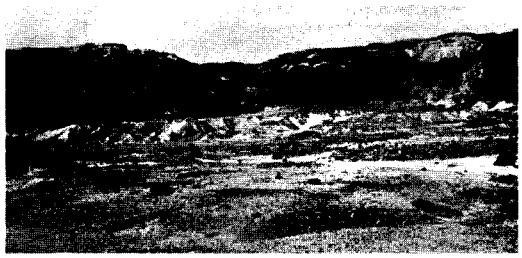
ments in Aramaic and Hebrew, contained two copper scrolls. Cave IV (4Q),* located just opposite and W of Khirbet Qumran, was discovered by the Bedouins in September, 1952.* It offered by far the greatest wealth of fragments: of all biblical books except Esther, of many apocryphal writings, both known and unknown, of commentaries, liturgical texts, and other writings of the sect. Caves V (5Q) and VI (6Q), both in the vicinity of Qumran, yielded smaller finds, as did Caves VII-X, which were discovered during 1955 in the sides of the marl terrace of Khirbet Qumran. All these fragments have been gathered in the Palestine Museum of Jerusalem, where they are being cleaned, ordered, and edited by an international group of scholars.* Later, Cave XI, not far from Cave III, was found, containing several relatively complete scrolls. Pl. XXXII*c;* Figs. DEA 12-13; Pl. XXXI*b*.

The most mysterious among these finds were the two copper scrolls. Originally they were three strips of copper, riveted together and measuring as a whole 7.8 feet. The material was so much oxidized that the scrolls could not be unrolled but had to be cut into strips. This was done at the Manchester College of Technology (1956-57) under the guidance of J. M. Allegro. Both scrolls together have twelve columns. As K. G. Kuhn had suggested after an examination of the letters which stood out in relief on the back, the scrolls give a list of treasures and the places where they were hidden. In view of the enormous quantity of precious metals, Kuhn thinks of the temple treasury.

2. The external dating of the MSS. The language of most of these writings is the OT Hebrew. Only a few terms of the Mishnaic Hebrew are used; however, four fragments found in Cave IV show eleents of the Mishnaic grammar, like frequent participles or the relative particle *sh*.



The MSS were written in a beautiful hand by learned scribes. They used the hairside of the animal skins and ruled them with horizontal lines for writing and with vertical lines to fix the margins. The script closely resembles that of the Nash Papyrus (second century B.C.) or of inscriptions on ossuaries found near Jerusalem. To fix the date of the scrolls, Albright, Trever, Birnbaum, Sukenik, and others used paleographical evidence, which pointed to the second or first century B.C. The sherds of the jars belong to the end of the Hellenistic period, which is about the same time. The carboactivity of the flaxen covers of the scrolls converged on A.D. 33 and, with a margin of two hundred years more or less, to the time between 168 B.C. and A.D. 233.

3. The excavations at Khirbet Qumran. But all these observations are not sufficient for an exact dating of the scrolls. More determining for it were the excavations at Khirbet Qumran.* The *khirbet* ("ruin"), situated on a terrace at the foot of the mountain *ca.* two miles N of the 'Ain Feshkha* and a half mile S of Cave I, was erroneously held to be the ancient site of Gomorrah or a military outpost of the Romans.* The findings at the caves drew more attention to the site until it was excavated in different campaigns by R. de Vaux and L. Harding: (*a*) November 24-December 12, 1951; (*b*) February 9-April 24, 1953; (*c*) February 13-April 14, 1954; (*d*) February 2-April 6, 1955; (*e*) February 18-March 28, 1956. These excavations disclosed the ruins of a large fortified monastery, which served as the center of the sect. The following periods of settlement can be distinguished:

a) The site was a rather large city in the eighth-seventh centuries B.C. M. Noth has identified it with *'îr hammélaḥ* ("city of the salt [sea]"), mentioned in Josh. 15:62, in a list from the time of King Josiah (639-609 B.C.).

b) This OT city was abandoned at the end of the sixth century and used again under the Hasmonean high priest John Hyrcanus (134-104 B.C.).

c) During the first century B.C. the site was rebuilt and enlarged by the sectarians. In the winter an impressive water system conducted the water from a waterfall in the W by a stone aqueduct into channels and large cisterns. In some of them large steps were railed off for the different classes of the sect to use in the ritual of purification.* A large rectangular hall at the S, measuring approximately 73.8 by 14.7 feet, was used for the holy assemblies and the common prayers and sessions, and also must have been the refectory,* since a chamber connected with it contained several hundred bowls, plates, and also cups and jars. Remarkable signs of the life within these walls are the remains of the workshops for the craftsmen:* the pottery, the forge, the grain mill, the bakery,

15. Khirbet Qumran; the arrow points to the excavated site.

and the laundry. The monastery was fortified by walls and a strong tower in the NW. S of the tower was the scriptorium, indicated by a long, narrow table, a bench, and two inkwells. These remains illustrate the wealth of activity among the sectarians.* They were holy men and holy warriors, industrious workers and writers. S of the monastery was their cemetery, with more than a thousand graves.* The dead were buried without any ornamental objects. Among the skeletons were several female ones.

d) The monastery was considerably destroyed by an earthquake, no doubt in 31 B.C. (Jos. War I.xix.3; Antiq. XV.v.2). The place must have been abandoned until the death of Herod the Great (4 B.C.).

e) Then the sect rebuilt and used the site again. Their flourishing life came to an end under military impact. The sect probably defended the monastery bravely, so that the enemy set fire to it. No doubt, this took place in A.D. 68, when the Tenth Roman Legion marched against Jericho (Jos. War IV.viii.1-2; II.viii.10).

f) After the destruction the site was used partially by Roman troops and afterward by Jewish revolutionaries.

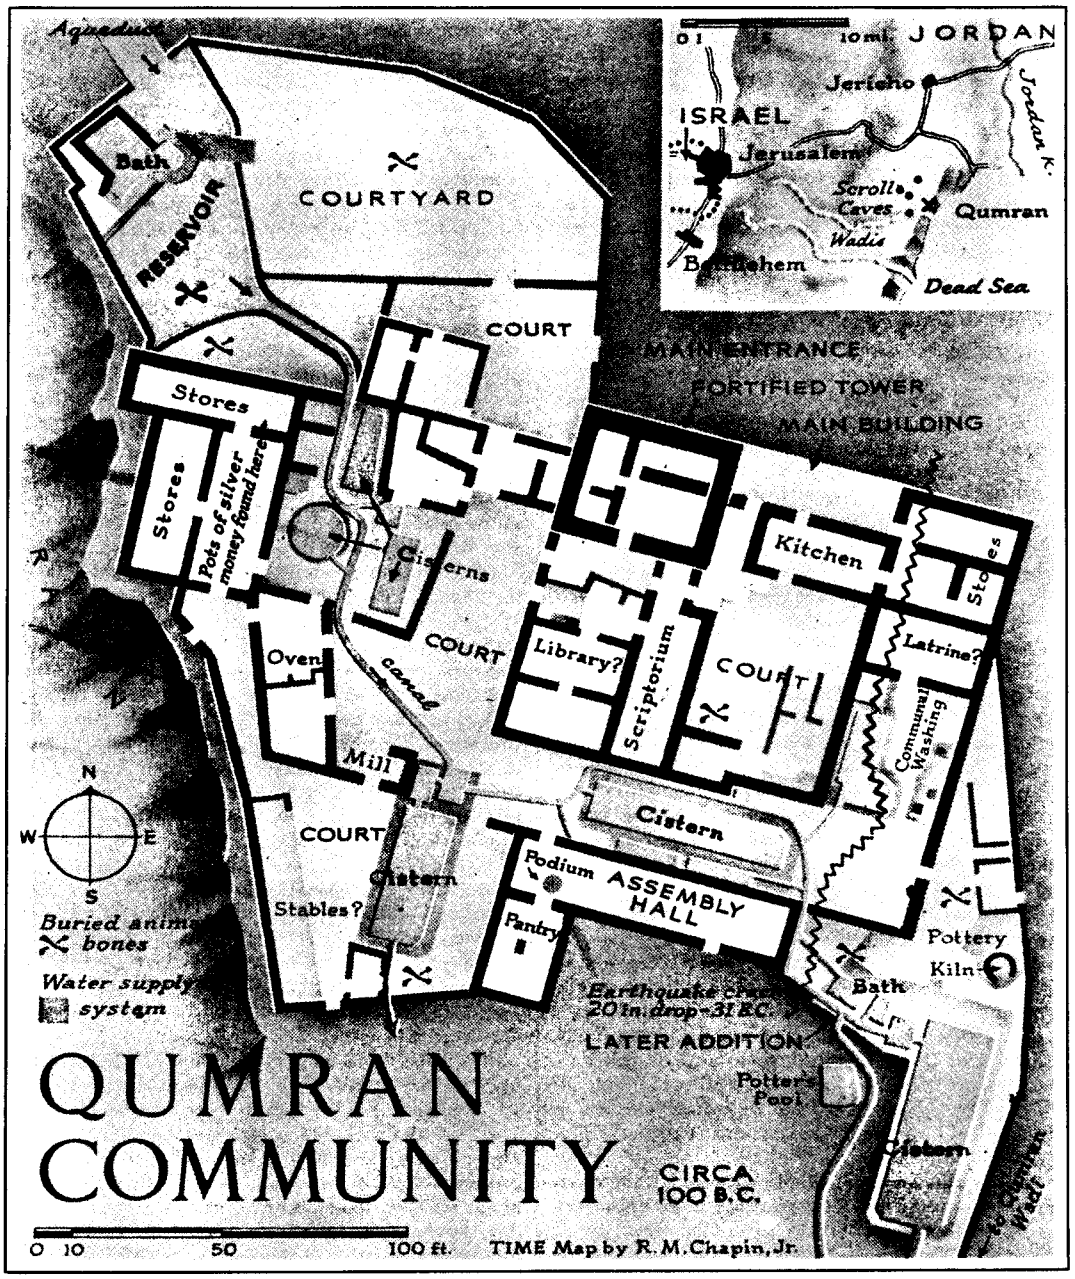
18. Workshops of the community at Khirbet Qumran



This entire sequence of occupation is verified by the series of coins found there, dating from Hyrcanus I (135-104 B.C.) until the Second Jewish Revolt (A.D. 132-35). The pottery of the monastery is of the same type as that in the caves, and the content of the

scrolls points to a community whose way of living fits a monastery of that kind.

An auxiliary of the monastery existed at 'Ain Feshkha, where a large wall enclosed buildings of the same date as in Qumran. They comprised the agricultural center from which the sect worked an irrigated strip of farm and orchard along the Dead Sea; herded its cattle; and stored, manufactured, and distributed their produce for its own use.

Pls. XXVIII*c*; XXXII*b*; Figs. DEA 14-19; BUR 57.

4. Biblical and apocryphal writings. The largest copies of OT MSS are the two Isaiah scrolls of Cave I (1QIs[a] and 1QIs[b]). 1QIs[a] contains the complete Hebrew text of Isaiah and 1QIs[b] about one third of it. The first of these scrolls, with fifty-four columns on seventeen sheets, is 24 feet long and 10.2 inches high. It is the largest and best preserved of all, and was written in the second-first century B.C. Much older are fragments of Leviticus in the same Old Hebrew script in which the other Dead Sea Scrolls sometimes express the holy name of God. They are followed by fragments of Samuel (third century B.C.). From the distribution of the fragments, it is clear that the favorite biblical books of the sect were Deuteronomy, the Psalms, Isaiah, and Genesis. These fragments also give a very complicated picture of the

Time map by R. M. Chapin, Jr.; copyright Time Inc., 1957

19. Plan of the settlement at Khirbet Qumran

text tradition. A diversity of text forms appears. Some of the MSS are close to the MT, as 1QIs^b, while the fragments of I and II Samuel (4Q) are much closer to the Hebrew original of the LXX. There must also have been MSS at Qumran which were more in accordance with the Samar. and those of a mixed type (*see* VERSIONS, ANCIENT). However, a trend toward a standard form of the text is noticeable, and the MSS of the Wadi Murabba'at, which belong to the first half of the second century A.D., all represent the MT and show that at this time the development had come to an end. *See* TEXT, OT.

The caves also presented fragments in Hebrew and Aramaic of apocryphal and pseudepigraphal writings, which until now were known only in translations—Latin, Greek, Syriac, Ethiopic, and others (*see* APOCRYPHA). One fragment of 6Q corresponds to the text of the Hebrew book of Ecclesiasticus found sixty years ago in the Synagogue of Old Cairo, and this cave also offered fragments from the book of Tobit in Hebrew and Aramaic. The book of Jubilees was used by the sect in several copies; parts I and III-V of the book of Enoch (*see* ENOCH, BOOK OF); the Testament of Levi; and the Rule of the New Covenant in the Land of Damascus (*see* ZADOKITE FRAGMENTS). But there are other fragments of apocryphal writings which are unknown to us. This leads to the following suggestions: (*a*) some of the Apoc., which until now could not be related to a distinct religious group, must be attributed to the Essenes of Qumran; (*b*) the book of Enoch is a collection of writings which were used separately; the sect probably did not know the famous second part of this book, which contains the visions of the Son of man; (*c*) except for the Testament of Levi, the Testaments of the Twelve Patriarchs were not found either; they were written afterward by another author; (*d*) there must have existed a lot of other apocryphal writings centered around figures like Noah, the patriarchs, and Moses.

The sect also produced commentaries on books or passages of the Bible. Among them were midrashim like Jubilees, which paraphrase the text, and besides them *Pesharim,* a type of commentary peculiar to the sect. In the latter the text of the prophets like Isaiah, Micah, Nahum, Habakkuk, and Zephaniah is written phrase by phrase, whereby each phrase is followed by an explanation of "its meaning" (*pᵉshārô*) and referred to the history of the sect. The outstanding example of the midrashim is the Genesis Apocryphon, of the *Pesharim* the Habakkuk commentary.

A new literary form appears in the florilegia—i.e., collections of biblical texts—and in the testimonia, proof texts for a distinct idea. 4Q offers a florilegium with passages from Exodus, II Samuel, Isaiah, Amos, Psalms, and Daniel, and a testimonium of messianic texts (Deut. 5:28-29 with Deut. 18:18-19; Num. 24: 15-17; Deut. 33:8-11). The phylacteries found in 4Q contain larger biblical portions than those prescribed by the rabbis.

Among the writings which characterize the order and represent the life of the sect may be distinguished the following groups: (*a*) the rules (*Serakhim*), as the Manual of Discipline and the War Scroll; (*b*) the hymns, among which the *Hodayoth* (Thanksgiving Psalms) are the most notable; (*c*) liturgical writings, as the Blessings (1QSb); (*d*) sapiental writings and books for esoteric teaching. Some of these literary forms can be found together in one book, as in the Manual of Discipline, which has a dogmatical section and ends with a long hymn.

5. The writings of the sect. ***a. The Pesharim: the history.*** The Habakkuk *Pesher* has thirteen columns of eighteen lines each and is now 4.6 feet long and 5.1 inches high. Its biblical passages differ from the MT in about sixty cases.

The *Pesher* throws light on the history of the sect, since important events and problems of it are related to Habakkuk's prophecies. They can be summarized in the following groups: (*a*) the controversy between the "Right-Teacher" and the "Wicked Priest" (1.1-2, 10; 6.12–12.10); (*b*) God's judgment upon the people (2.10*b*–6.12); (*c*) God's judgment upon the nations (12.10–13.4).

Hab. 1:4, where the wicked and the righteous are mentioned, is used to introduce the two opponents. The Right-Teacher, a priest (2.8), who is sent by God to tell the future to this last generation (2.7)—i.e., the impending judgment of God upon his people (2.10). This prophetic message comes from God himself (2.2-3), but is mediated through the Scriptures—i.e., the prophecy of Habakkuk (2.9-10; 7.1-5). The Right-Teacher understands even more of it than the prophet (7.2). He knows the coming of the end and also that this coming tarries (7.7). He has found men who believed him (8.1-3) and with them established a community (9.10), which represents a new covenant (2.3, if the lacuna may be thus restored). Its members will survive the imminent catastrophe safely because of their loyalty to the Torah (7.10-12) and their faith in the Right-Teacher (8.1-3).

However, his message and claims are rejected by the Wicked Priest and his followers (2.6-7). This Wicked Priest must be the high priest at Jerusalem, for he carries the "true name" and is ruling in Israel (8.8-10). But he became haughty, forsook God's commandments out of his lust for wealth and booty, and defiled his holy service (8.10-13). He also persecuted the Right-Teacher and violated him "at the body of his flesh" (9.1-2). The conflict, in which a party called the "House of Absalom" was neutral (5.9-11), reached its height at the Day of Atonement, when the Wicked Priest proceeded to "swallow up" and to banish(?) the Right-Teacher and to cause his followers to stumble (11.4). But God's judgment will reach all the evildoers: the Wicked Priest (10.3-5) must have already fallen into the hands of his enemies (9.9-11), the priests of Jerusalem will lose all their unjust wealth at the hand of the "Kittim" (9.6), and the whole nation will be devastated by the same Kittim (2.10–6.12).

Who are these Kittim? In the OT the name is used for the people of Cyprus (Gen. 10:4; Isa. 23:1, 12; Jer. 2:10; Ezek. 27:6), for the Greeks (I Macc. 1:1; 8:5), and probably for the Romans (Num. 24:24; Dan. 11:30). The Kittim of the *Pesher* are mighty conquerors (2.12-15; 3.4-6), coming "from the coasts of the sea" (3.10-11). Their rulers follow each other "by the counsel of a guilty house" (4.11), and they themselves sacrifice to their standards (6.3-5).

There are only two possibilities: the Kittim of this

Pesher are the Greeks—i.e., the Seleucids—or they are the Romans. The description of the power and the military success of this terrible foe fits the Romans better. Their army was well known to the sect, as the War Scroll implies. The worship of the standards applies to Roman soldiers (Jos. War VI.vi.1), and the "guilty house" probably means the Roman Senate.

Many theories have been suggested for the identification of the Right-Teacher and the Wicked Priest. Since the excavations at Qumran, post-Christian theories cannot be defended any longer. If we look for such a conflict in the middle of the second century B.C., the invasion of Antiochus IV and his Hellenizing zeal suggests itself; if in the middle of the first century, the decline of the Hasmonean dynasty and Pompey's conquest of Jerusalem stand out. The first period, chosen by Reicke, Rowley, Stauffer, Bardtke, *et al.*, offers more suitable names for the two opponents: the orthodox high priest Onias III for the Right-Teacher; the Hellenizers Jason, Menelaus, Alcimus, for the Wicked Priest; and the Tobiads for the House of Absalom. The second, vouchsafed by Dupont-Sommer and followed by Gossens, Dhorme, Kahle, and to some extent by Elliger, does not provide a name for the Right-Teacher but suggests men like Hyrcanus II or his brother Aristobulus II as wicked priests. It is also difficult to decide whether the Right-Teacher was killed by the Wicked Priest or only tortured and exiled, and also whether he was regarded as a divine being and expected to rise again.

Fragments of other *Pesharim* mention the struggle of these two opponents. According to the *Pesher* of Ps. 37, the Right-Teacher was instituted by God to build up his congregation (2.15-16), which will inherit the Mount of the Height of Israel—i.e., occupy the holy city and its temple (2.10-11). If the lacuna is filled out correctly, the Wicked Priest was sent to kill the Right-Teacher and to slay the upright of the Way (vss. 32-33). In fragments of a Nahum *Pesher* appear for the first time the proper names of men who are known to us from secular history. Demetrius, "king of Javan," tried to enter Jerusalem on behalf of the council of the "Seekers-after-Smooth-Things." Besides him is mentioned an Antiochus, who is most probably Antiochus Epiphanes. Demetrius seems to be the Syrian king Demetrius III (Eucaerus), who reigned at Damascus and was called upon for help by the Pharisees against their despotic king Alexander Janneus (103-76 B.C.). Demetrius defeated Janneus but was suddenly deserted by most of the rebels and withdrew from the country (1QM 1.95). Janneus took a terrible revenge on the remaining enemies, crucifying eight hundred of them at Jerusalem (Jos. War. I.iv.6). The *Pesher* probably refers to this awful deed when it tells that the "Lion of Wrath" hung up men alive and remarks that such a thing had never been done before in Israel. The Nahum *Pesher* describes the priests of Jerusalem gathering wealth as in the Habakkuk *Pesher*, where they appear in the company of the Wicked Priest. Thus one can draw the conclusion that the high priest and king, Alexander Janneus, is meant as the Wicked Priest.

b. The Manual of Discipline: the holy life. This scroll, measuring 6.1 feet by 9.4 inches, has eleven columns of twenty-six lines each. The beginning of this writing is missing, and therefore its true title is unknown. It probably was *Sérekh Hayyaḥadh*, "Rule of the Community." M. Burrows has called it "Manual of Discipline." The importance of this scroll is shown by the fact that fragments of eleven MSS have been found. The oldest of them, which presents a rather archaic script, should be dated, according to F. M. Cross, at the very beginning of the first century B.C. The scroll prescribes: (*a*) the rules and the liturgy of the covenant (1.1–3.12); (*b*) the doctrine of the community (3.13–4.26); (*c*) the admission (5.1–6.23); (*d*) the penal code (6.24–7.25); (*e*) the holy life in the world of evil (8.1–9.26); (*f*) the praise of God (10.1–11.22). The community claims to represent the true covenant of God. Everyone who joined the sect had to enter the covenant with all the members who renewed their obligation to it. This ceremony, held probably every year at Pentecost (cf. Jub. 6:17), follows the pattern of the covenant ceremonies in the OT (cols. 1-2). The basic rules of the community, given in the introduction of the Manual (1.1-15), were accepted as the foundation of the covenant. Most characteristic are the blessings and the curses. The blessing takes its form from the Aaronitic blessing (Num. 6:24-26), and the curse against the hypocrite from Deut. 29:18-19. But these passages are interpreted according to the eschatology of the sect.

With this first section should be connected the order for those "who are willing to return from sin" —i.e., to enter the sect (5.1). They have to bind themselves by an oath to the Torah as it is interpreted by the chief authorities of the sect, the Zadokite priests and the laymen (5.7-10). Only the sect's interpretation of the Law, which was acquired after strenuous research (5.11-12), is true. This form of obedience made it impossible to share a common life with the Jews. Therefore, the members of this covenant had to separate themselves into the wilderness, where they prepared the way of God by searching in the Law and living according to the new revelation (8.12-16). No other scroll emphasizes so strongly the necessity of separation. The Manual discloses the strictest form of Essene life, since it was written for the close brotherhood at Qumran.

Its life was a holy one, whose holiness was expressed by: (*a*) obedient fulfilment of the laws of the brotherhood; (*b*) holy ceremonies such as ritual baths and the common meals; (*c*) economic purity; and (*d*) chastity.

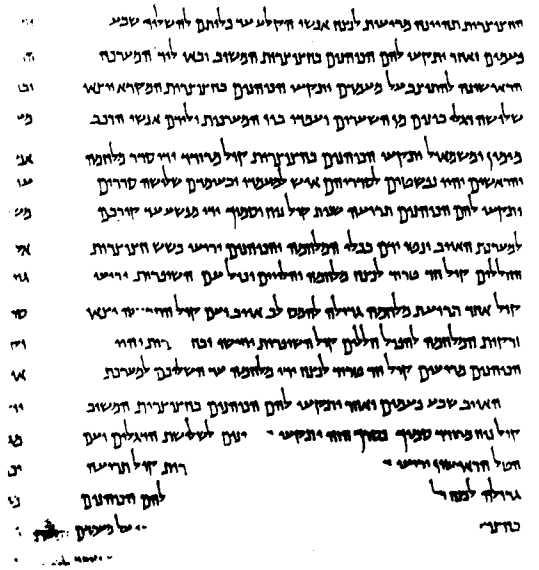
Everyone who entered the sect was considered to be unclean in regard to his knowledge, strength, and property (*see* CLEAN AND UNCLEAN). All these capacities and resources had to be purified by the truth of God's commandments so that one could lead a perfect life (1.11-13). It was only gradually that one could reach this goal, by going from one degree of purity to the other after severe examinations. For two to three years one was a novitiate (cf. Jos. War II.vii.7). After a first examination by the overseer (6.14) and a period of instruction, the novitiate was admitted to the covenant (6.15). In it he had to live according to the law of this covenant—i.e., the Torah and the rules which the sect derived from it. Obedience to the law purifies the conduct of life, and the

penal code of the sect condemns both moral and ritual transgressions as defiling the holy community (6.24–7.25). After one year of probation he was examined by the general assembly and allowed to participate in the "purification of the Many" (6.16-17). This rite, which was performed daily in one of the large cisterns at Qumran, foreshadowed the great and final lustration of the elect by God himself (4.20-22). It had two aspects: through it the body is washed by water and the heart cleansed by the Holy Spirit (3.2-9). Ritual purity was completed by economic purity in that the property of the proselyte was taken over and his work devoted to the sect (6.19). Its communistic order must be derived from priestly zeal: just as the priestly tribe of Levi had no share in the promised land, because God himself was their "inheritance" (Ezek. 44:28), so every member of the community lived from the holy property of God and did his work under an overseer (6.20). After a third year of perfect life the novitiate was admitted to the most sacred rite, the "drink," which probably was followed by the general assembly (6.22-23). From then on, he took his seat in the sessions of the sect and voted on all affairs of the community. The procedure of these sessions is given in 6.8-13, whereby the hierarchical order of the sect (priests, Levites or elders, and laymen) is highly respected. Within his order every man received an annual rank according to his knowledge and practice of the Torah. It fixed his place in the holy army (2.22-23) and also in the sacred meals. These meals can be compared to the offerings and the sacrificial meals in the sanctuary, for the table of the community (6.4) was at the same time the table of the Lord. The sect did not reject animal sacrifice in general, but prayers and a perfect life were regarded as suitable substitutes (9.4-5).

The life of the sect is marked by the prayers. They were held every day in the morning and in the evening (10.1, 10), before and after work, and in battle array (10.13-14); and the Manual closes with a long hymn. The times of worship differed from those of the Jews outside. This can be seen from the calendar, which indicates the pattern of holy times during the course of the day and the year (10.1-8).

The agencies of administration are quite the same as those in the ZADOKITE FRAGMENTS. Besides the general assembly there was a council of twelve laymen and three priests which represented the perfect nucleus of the holy community (8.1-4).

The zeal for a holy and separate life was reinforced by eschatological expectations and a dualistic world view. Both belong together. They are described in the first section "for the wise man" (3.13–4.26). In order to explain the existence of evil, the sect teaches that the world is dominated by two spirits, the spirit of light and the spirit of darkness (3.20-25). Both are created by God (3.25) and act according to his plan; but each of them represents the head of a realm of angels and men, and also a moral power struggling in every man's heart (4.23). By predestination of God each man belongs to one of these dominions (3.15-17). In spite of this, the moral struggle goes on until the forces of evil will be extinguished in God's final judgment, and the elect will be unified with the angels in one perfect community (4.20-22). Since the Children of Light too will be tempted by sin and plagues until that date (3.21-24), the theory of predestination does not exclude an appeal for moral struggle. Therefore, the dogmatical section contains a catalogue of virtues and vices and the rewards and punishments corresponding to them (4.2-14). In view of the problem of living a holy life in the midst of unclean men, some regulations are given in the second section "for the wise man" (9.12-26).



In 1950 some large fragments were bought which belonged to the end of the Manual, although they differ in content. The first part (1QSa) is a rule (*sérekh*) for the "congregation of Israel at the end of days" (1.1), called *'ēdhâ* instead of *yáḥadh*. The rule mentions wives and children (1.4); it prescribes the age of marrying for a man, the rights of his wife (1.9-11), and also the education of the children and young people (1.6-16). This indicates that the rule was written mainly for the second order of the sect. Quite unique is the eschatological outlook. Thus the assemblies, described in the second part of the rule, point to the messianic age. The first begins mobilization for the holy war, which requires three days of purification and chastity (1.25-26) and a clean and perfect body (2.5-9; cf. 1QM 7.5-7; Deut. 23:9-15). The second assembly is the holy meal (2.11-22). The Messiah of Israel participates in it, seated, however, after the priests and their head, who is probably to be identified with the Messiah of Aaron (2.12, 19). Every meal of the sect gave a foretaste of the messianic banquet. Even the group of ten follows this pattern (2.21-22).

The second part is a collection of blessings (1QSb). It consists of six columns which are in a very fragmentary condition. These blessings were probably not performed in a ritual but were written to illustrate the eschatological reward as an encouragement to the "wise man." Each of them describes the receiver and his dignity before it gives the blessing for his faithfulness. The messianic banquet order is retained also: the invocation blesses the faithful ones in general (1.1 ff); then follow the blessings for the high priest (1.21 ff), the priests (3.22 ff), and the "prince of the congregation" (5.20 ff)—i.e., the Messiah of Israel. This collection of benedictions seems to have a counterpart in maledictions whose fragments were found in Cave IV.

c. The War Scroll: the holy war. The scroll in its present state is 9.5 feet long and 6.2 inches high. It contains 18½ columns of 16-18 lines each. 4Q has yielded four fragmentary copies of this scroll. Fig. DEA 20.

The War Scroll gives the plan for the final war between the Children of Light and the Children of Darkness, who represent the forces of good and evil. This holy war ends with God's final judgment and has two aspects, a moral and a national one. The description is strongly influenced by the traditions of the holy war in the OT and of the Maccabean uprising against the Seleucids, by apocalyptic visions like the war against Gog and Magog (Ezek. 38–39), and by the pattern of contemporaneous Roman warfare.

The scroll is a collection of rather different materials. The first part (cols. 1-9) gives the rules for equipment and tactics; the second contains mostly

Courtesy of the Israel Office of Information, New York

20. Parchment of scroll 1QM, "War of the Sons of Light and the Sons of Darkness"

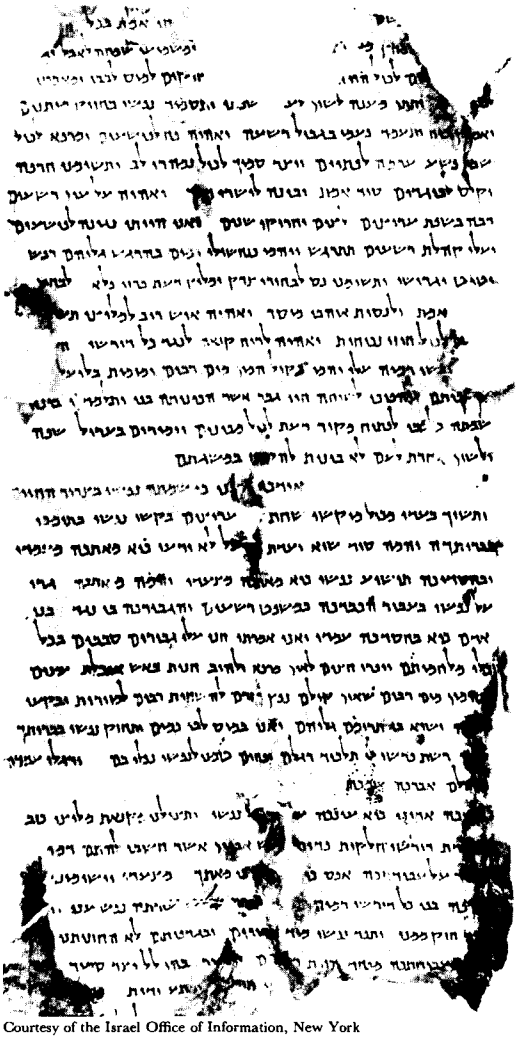
exhortations and prayers (cols. 10-19). After a prologue which provides a survey on the whole war (col. 1), there follow the order for the service at the sanctuary (2.1-6) and a time table for the different campaigns of this war (2.6-14). The next chapter is concerned with the use of the trumpets (3.1-11) and standards (3.12-4.14), 5.3-6.6 give a detailed description of the weapons for the heavy-armed soldiers of the phalanx (5.3-16) and the troops fighting between them (6.1-6). 6.7-16 prescribes equipment and age of the cavalry, 6.17-7.7 ability and purity of the army in general. In 7.9-9.9 the duties during the battle itself are told: the functions of the priests and Levites who lead the war, and the movements of the troops according to the signals of the trumpets. 9.10-15 describes special formations for crushing and pursuing the enemy.

9.17-14.15 presents the exhortations and prayers for the different stages of the war, pointing to God's promises—Deut. 20:2-4 (10.3-5) and Num. 10:9 (10.6-8) are quoted—to his might in creation and in Israel's history (11.1-17), and to the heavenly army which will bring help (12.1-10). A battle song (12.10-17), a benediction and curse (13.1-5), and a hymn of victory (14.2-17) conclude this part.

Cols. 15-19 delineate the different stages of the war against the Kittim. Each stage is characterized by an admonition. In the first round the Children of Light are the victors (15.1-16.9), in the second they are defeated (16.10-17.9), in the third they are finally triumphant (17.10-18.9). The end of the scroll is missing; col. 19 is parallel to 12.7-16.

The sect already lives in holy camps, which must be free from any kind of sexual impurity and human excrements (1QM7.6-7; cf. Deut. 23:14; Jos. War II.vii.9). The war, which lasts forty years, is directed against all the nations of the biblical world. Six years are spent against Israel's enemies in the neighborhood: Edom, Moab, Ammon, the Philistines, and above all the "Kittim of Assur" (1.1-2; 2.9; cf. Ps. 83:6-9), and twenty-nine years are needed for the remote nations the "Kittim of Egypt" and the "kings of the North" (1.4; cf. Dan. 11:41-44); these are listed separately according to Gen. 10:22-23 (2.10-14). Five years are sabbatical years, in which any kind of mobilization of warfare is forbidden (2.8-9). The strong sabbatical discipline even in wartime reminds us of the Maccabees (cf. I Macc. 6:53-54; Jos. Antiq. XIII.vii.1), as also the solemn ceremony held at the sanctuary (2.1-6; cf. I Macc. 3:46-60) and the confident awaiting of help from heaven (I Macc. 3: 18-22; cf. also the list of OT victories in 1QM 11 with I Macc. 4:9, 30; 7:41; II Macc. 12:15). The Children of Light, represented by the tribes of Levi, Judah, and Benjamin (1.2), are "God's people" (3: 13), his elect (3.2), and holy warriors (4.9-11), who win by God's help alone (3.5, 9). This conviction is strongly expressed in the signals and the inscription on the trumpets (3-4).

On the other hand, the equipment and tactics of this army are realistic and modern. The weapons like shield, sword, and javelin correspond to the Roman *scutum, gladius, hasta,* and the Qumran phalanx to the Roman legion. The formations of Roman tactics like the *cuneus* (wedge formation), the *forfax* (scissors formation), and the *testudo* (tortoise) are used (9.10-15). The total army has 28,000 men of infantry and 6,000 men of cavalry (9.4; 6.10-11). It has three kinds of participants: (*a*) the line troops, (*b*) the camp troops, (*c*) the priests and Levites. The phalanx is arranged in three columns of heavy-armed infantry, each of which forms seven lines of 1,000 men (5.3). Between the seven lines of the middle column stand seven other lines of special infantry which fight from the vacant spaces ("battle doors") in the front line, shooting war darts and using their spears (6.1-6). The cavalry attacks on the wings of the phalanx, 1,400 mixed among the infantry (6.9) and 1,400 fighting as pure cavalry units (6.10-11); 3,200 are stationed at the camp (6.9).



It is remarkable that there are no polemics against Israel in general or distinct groups in this scroll. This is due to the fact that the sect uses the tradition of Israel's holy war in the OT. But "Israel" here too means the elect of this nation—i.e., the Children of Light, who live now in the "exile of the wilderness" (1.2), partially dispersed in the "wilderness of the nations" (1.3), and partially in the "wilderness of Jerusalem" (1.3)—i.e., at Qumran.

The use of the sanctuary reveals the sectarian calendar, since the twenty-six offices of the priests (2.2) correspond to the fifty-two weeks of the solar system, while the Jews had only twenty-four offices.

The scroll was written in the second half of the first century B.C., as it shows a comparison of the military data given in it with the nature of the Roman army at that time. A possible influence of the scroll is to be seen in Josephus' report on the mobilization of a Jewish army in Galilee (War II.xx.6-8), whereby OT traditions and the Roman example are combined in a similar way.

d. The Hodayoth: the praise of God. The scroll 1QH was found in two separate parts: the first contains three sheets of four columns each; the second amounts to about twenty detached fragments.* The

sheets of the scroll, which are badly damaged, are unusually high, having thirty-five to forty-one lines each. The collection was written by two scribes. Cave IV contained fragments of five MSS of Hodayoth, which help to fill up some lacunas in the scroll and also show that the order of the psalms was variable. Fig. DEA 21.

Courtesy of the Israel Office of Information, New York

21. Column from scroll 1QH (*Hodayoth*), a collection of thanksgiving psalms, from Cave I

Almost every one of these psalms is introduced by the formula "I shall praise Thee, my Lord," which is quite typical for a thanksgiving hymn.

A clear order or progress of thought is hard to discern. By way of introduction the first hymn describes the overwhelming power of the almighty God which is manifest in his creation, and in contrast the weakness and impurity of man. This is also the general theme of these hymns. It depicts the affliction which the force of evil instigates against the people of God. The psalms of cols. 2-6 describe these terrible attacks in various pictures. The psalmist compares himself to a banner in the midst of battle (2.11-13), a fortress surrounded and assaulted by enemies (2.20-30; 3.7), a wife in her birth pangs (3.7-12), a ship in the depth (3.6), and a man threatened by lions (5.7). All these dramatic scenes refer to the controversy of the pious members of the sect with their Jewish opponents. These are wrong teachers (4.9-10) and creatures of Belial, while the speaker himself is an exponent of God's truth and power. He seems to be persecuted, driven out from his country like a bird from his nest; even his friends and relatives have rejected and insulted him (4.8-9). He also is afflicted by troubles unloosed by former followers, for he tells that strife and discord, murmuring and complaint, arose from those who had eaten his bread and adhered to his council (5.22-26).

The speaker must be a teacher of the sect. He is not only the representative of God but also of his community, and the attacks of the satanic powers are directed against it in a similar way. The community too is compared to a fortress which God himself has built upon a rock, impregnable against attacking warriors of evil (6.25-39). It originated with the teacher. The members of the community are his spiritual children, whom he brings to light out of the eschatological woes (1QH 3.7-12) and feeds as a nurse does her babes (7.20-22). As God is his father, in place of his parents according to the flesh (9.29-32), so the teacher becomes a father of the faithful ones (7.20). The creative power is God's holy spirit, which changes man completely. While the speaker in these psalms is weak and sinful in his physical nature (1QH 1.21-22), he appears as a strong fortress when he is endowed with the holy spirit (7.6-10). This miracle which he has experienced in his own existence leads him again and again to express his joy and thankfulness.

The eschatological hope is strong in these psalms. The community can be seen already as a segment of paradise, as trees of life standing by living waters (8.5-7). At the same time the catastrophe at the end of days is vividly portrayed (3.26-36).

e. The apocryphal writings: the hope. The Genesis Apocryphon, written in Aramaic, was held to be an apocalypse of Lamech until it was opened at the Hebrew University. It was severely damaged, most probably because it was not put in a jar. The scroll consists of four sheets with a total length of 9.28 feet and a height of approximately 1 foot. It has twenty-two columns of thirty-four to thirty-seven lines each. However, most of these columns are in a very fragmentary condition. The apocryphon represents a type of free and speculative exegesis of a biblical text. Its style resembles that of the book of Jubilees and of Daniel. The scroll is composed of several apocalypses. In the first (cols. 1-5) Lamech is the central figure, in the second (cols. 6-15) Noah. After a report on the division of the world (cols. 16-17) there follows an apocalypse of Abraham (cols. 18-22). The heroes of these apocalypses speak themselves. They usually paraphrase the biblical text. At some points they tell new legendary stories which explain the motives of their actions in the Bible. The patriarchs live rather close to the sphere of God. This is certainly the reason for the sect's speculative research in their lives. Since the *eschaton* goes back to the glory of the primeval age, the righteous of the remote past

become great examples for the righteous of the last generation—i.e., the members of the sect. Thus the angelic beauty and splendor of the young Noah—col. 2 is to be connected with Enoch 106:7—is an image of the glory of the reborn righteous in the messianic age. For the women of the sect the ideal is Sarah, whose beauty is highly praised by Pharaoh's courtiers (20:1-7; cf. Joseph and Asenath 14, 18-19). Eschatological significance is given to Abraham's dream of the two trees, which are symbols for Abraham and Sarah (col. 19; cf. 1QH 8.4-15, where the members of the sect are compared to trees standing in the Paradise). Besides Ps. 92:13, both Ezek. 31 and Dan. 4 have influenced this story. Dan. 4 provides the background for a story in which the Babylonian king Nabonidus tells his sickness, his dream, and his conversion and healing by Daniel. Fragments of it were found in 4Q. All these apocalyptic stories are written to encourage the afflicted pious ones, that they might remain faithful while awaiting the wonderful life in the messianic age.

This age brings the fulfilment of history. The sect's concept of history is more fully described in the ZADOKITE FRAGMENTS.* God himself carries on the work of salvation, but he uses chosen instruments: (*a*) the prophet who prepares the way as a second Moses and Elijah; (*b*) the Messiah from Aaron, the Right-Teacher of the last period of revelation; (*c*) the Messiah of Israel, the victorious fighter (1QS 9.11). The twofold messianic office was certainly derived from the concept of the two anointed in Zech. 4:14. It developed out of heated protest against the usurpation of both titles, that of king and that of high priest, by the Hasmoneans. This trinity of saviors is depicted by a group of messianic testimonia in which Deut. 18:18 refers to the prophet, Num. 24:15-17 to the Messiah from Israel-Judah, and Deut. 33:8-11 to the Messiah from Aaron. The function of the prophet and forerunner was probably fulfilled by the Right-Teacher, since the Zadokite Fragments, after the teacher's death, only wait for the coming of the two Messiahs (cf. CDC 20.14). The task of the Messiah from Israel is best described in 1QSb 5, according to which he fulfils the prophecies of Num. 24:17; Gen. 49:8-10; Isa. 11. But he will obey the spiritual guide—i.e., the Messiah of Aaron, whose mission is told in Test. Levi 18. When the Messiah of Israel has defeated God's enemies on earth, the Messiah of Aaron will establish his holy community. This takes place in a New Jerusalem, which is described in several fragments (2Q; 5Q). The messianic functions are already taken over, to some extent, by the members of the sect. They all study the Law like the Right-Teacher; they are all holy warriors like the Messiah of Israel; they all perform the holy service for God as the Messiah of Aaron will do. But they have to do this during the continuous attacks of Belial in the time of evil. Fig. ZAD 1.

The figure of the Son of man, which contradicts the messianic hope of the sect, seemingly was not used, as is indicated by the fact that section II of Enoch is missing. Probably the sect interpreted Dan. 7 in a collective way, regarding itself as those who shall judge and rule the world after the final victory (cf. Dan. 7:18-27 with 1QS 8.5-6; 9.6-7).

6. Conclusions. The history of the sect can be sketched only with great caution. It has its religious origin in the HASIDIM, the pious ones, an orthodox group which successfully opposed the Hellenizing tendencies in Judaism. The conflict reached its height under Antiochus Epiphanes (175-163 B.C.) and was ended by the victory of the orthodox party in the Maccabean wars (*see* MACCABEES). But in the second half of the second century B.C. the coalition between the Maccabean-Hasmonean rulers and the pious ones broke up, and the latter split off into different groups. Josephus mentions three religious parties under John Hyrcanus (134-103 B.C.; Antiq. XIII.x.6) and an Essene prophet with his disciples under Aristobulus I (104-103 B.C.; War I.iii.5). Their criticism was directed against the connection of high priesthood and political power in the hands of the Hasmoneans (Antiq. XIII.x.5). Moreover, the Zadokite priesthood could not regard them as legitimate high priests. These tensions led to a revolt of the pious ones against King Alexander Janneus (103-76 B.C.). If Janneus was the Wicked Priest who persecuted the Right-Teacher, the exodus of the sect can be connected with the flight of eight thousand men under his reign (War I.iv.6). Some of them probably went to the "Land of Damascus"—i.e., the Hauran region—others settled at Qumran. There they could survive the conquest of Jerusalem by Pompey (63 B.C.) and the end of the Hasmonean dynasty. HEROD the Great is reported to have held the Essenes in high esteem, and this, no doubt, was because of their anti-Hasmonean attitude. The Essene sympathies for Herod can be seen in the story of the Essene Manaemos, who prophesied to the young boy Herod that he would become king of the Jews (Antiq. XV. x.4-5). Since the monastery at Qumran was destroyed by an earthquake in 31 B.C., the Essenes probably dispersed throughout the country and may have lived also in Jerusalem under Herod's protection. But they were certainly hated by the Pharisees, who disliked the Idumean Herod and differed in their interpretation of the Scriptures. After Herod's death the Essenes withdrew to Qumran again and lived there until A.D. 68, when the monastery was destroyed. After this catastrophe some of the Essenes became Jewish Christians, who were later called Ebionites.

There is no doubt that the community of the scrolls formed a part of the ESSENES. This is proved by a comparison of the scrolls with the reports on the Essenes given by Philo, Josephus, and Pliny, of which the best is Jos. War II.viii.12-13. The main difference between the authentic writings of this religious group and the description of these historians is that while the first reveal the religious motives and feelings of the sect, the latter mainly tell its structural system to the Hellenistic reader. From this outline its main features, like the eschatology, the holy war, and the roots of the holy life, cannot be recognized.

The relations between the scrolls and the NT writings will emerge within the next few years. This will be a very fruitful task. John the Baptist, e.g., was certainly a kind of Essene, and since Jesus was baptized by John and took over his mission, he too must have been closely related with this group. This can be seen in certain striking features of his life: the fact

that he was unmarried, his sharp attitude toward money and the rich, his conflict with the Pharisees and the Sadducees over against the silence of the gospels on the Essenes. Some of his words can be better understood from the writings of Qumran, and in his mission traces of the three eschatological offices of the sect can be seen. It is highly probable that some of his disciples came from the Essenes, more likely from those living outside Qumran. The early Christian community at Jerusalem shows Essene features which were afterward preserved by the Ebionites. The Dositheans at Samaria are probably to be related with the Essenes. Eventually the Karaites in the Middle Ages were influenced by their writings.

***DEATH.** The teaching of the Bible on the subject of death assumes various aspects, because beliefs have changed in the course of history.

1. As the normal end of life
2. The opposite of life
3. A force of destruction
4. Death and Yahweh
Bibliography

1. As the normal end of life. This view is found in both the ancient and more recent portions of the OT. A human life, arrived at its full maturity, is plucked like a ripe stalk at harvest time (Job 5:26). After a happy old age, man, "full of years," is "gathered to his people" (Gen. 15:15; 28:8; 35:29; Judg. 8:32; I Chr. 23:1; 29:28; II Chr. 24:15; Job 42:17). Arrived at the end of his life, man goes the way of all earthly creatures (Josh. 23:14; I Kings 2:2; Job 30:23).

Viewed in this perspective, what follows death is scarcely important. According to certain texts, it even seems that the end of life was thought to mean the end of all existence (II Sam. 14:14; Job 7:21; Ps. 39:13—H 39:14). It was most commonly believed that the dead continued to exist in Sheol or in the family sepulchre, but that this was a nondynamic existence, destined to end in a relatively brief period of time. However, certain conditions had to be fulfilled if death were to be thought of as the end of existence: (*a*) The normal life span must be attained—120 years, according to Gen. 6:3; 70 years, according to Ps. 90:10. (*b*) The deceased must leave children to perpetuate his name and on whom he perhaps bestows a testament or words of blessing. This, however, does not imply ancestor worship. (*c*) The dead person must be buried in a sepulchre, for it is necessary to avoid any possibility of his taking revenge and upsetting the equilibrium between the world of the living and that of the dead. The absence of one of these conditions—e.g., when one died in the prime of life (Isa. 38:10), or childless (II Sam. 18:18)—made death a problem which Israelitic faith endeavored to resolve.

2. The opposite of life. Since life is characterized by the נפש, it is natural that death should sometimes be represented as the disappearance of this *nephesh* (Gen. 35:18; I Kings 17:21; Jer. 15:9; Jonah 4:3). The "departure" of the *nephesh* must be viewed as a figure of speech, for it does not continue to exist independently of the body, but dies with it (Num. 31:19; Judg. 16:30; Ezek. 13:19). No biblical text authorizes the statement that the "soul" is separated from the body at the moment of death. The רוח, "spirit," which makes man a living being (cf. Gen. 2:7), and which he loses at death, is not, properly speaking, an anthropological reality, but a gift of God which returns to him at the time of death (Eccl. 12:7). The stoppage of breath, the loss of all movement and of all capacity for relations with others, all make death appear to be the opposite of life. Deprived of life and separated from the world of the living, the dead person becomes impure (Num. 9:6; 19:11, 16, 18; 31:19), and contact with him must be avoided. The deceased and all things related to him consequently took on an aspect of mystery. In general, this mystery was shunned, but it was also the source of certain popular beliefs attributing superior power and knowledge to the dead.

3. A force of destruction. As faith meditated on the problem of death, its destructive aspect became dominant. A premature death was thought to be a punishment meted out by a hostile power. This was not at first considered to be the power of Yahweh, since he is at various times asked to snatch his followers from the hand, the prison, or the net of death (Pss. 18:6; 116:3). Such images may be reminiscent of a time when the kingdom of the dead had its own divinities, perhaps Sheol or Mot, the latter being clearly associated with death in the Ugaritic texts. In the OT these divinities are reduced to the rank of images (Jer. 9:21—H 9:20; Hos. 13:7), or inferior powers, angels of death (Exod. 12:23; II Sam. 24:16; Job 33:22), or demons (Ps. 91:5 ff).

Never in biblical texts is the power of death exercised without the control of God. If he permits and uses this power, he does so because the sin of man has rendered death inevitable and has given it its "sting" (I Cor. 15:56). The apostle Paul sums this up: "The wages of sin is death" (Rom. 6:23). The Yahwist narrator of Gen. 2-3 attempts to resolve the problem of the relationship of sin and death, and

does so in a way which makes it necessary to modify Paul's categorical statement: since man is created of perishable matter, his natural condition is mortality (Gen. 3:19). Israel shares this belief with all the Semitic peoples. It is expressed, e.g., in the declaration of Siduri to Gilgamesh: "When the gods created humanity, they established death for mankind; they kept life in their own hands" (Tablet X,iii,3-4; *ANET* 90). The myth of the tree of life indicates, however, that the boundary between the two domains was not an absolute one. Had man persevered in obedience to God by respecting the divine commands, God would have reserved the right to change man's condition and to grant him immortality as a favor. Man's disobedience irremediably destroyed this possibility, and thenceforth death, which until that time had been virtual, became an actuality for him.

It may therefore be said that the change brought about by sin has less bearing on the nature of man than on the altered perspective of his existence. Prior to his fall, man does not think of death, either because he is unaware of its existence or because he is not affected by it. Afterward, on the contrary, his entire existence is placed under the sign of death. Thus man's labor and woman's childbearing carry with them an odor of death. However, the OT never expresses the idea that the Fall had irremediably corrupted human nature. Sin is not viewed as a fatality hanging over mankind; man remains free and capable of choice. If he chooses disobedience, he takes the way leading to death (Deut. 30:19). On the other hand, the mortal nature of man creates in him a propensity for evil (Pss. 78:39; 103:10; 143:2; Isa. 57:16), so that death may be called at once a consequence and a cause of sin.

In thus defining the domain of death, one sees that the power of death is further manifested in all lessening of the vital force. The most important example of this is illness, for to be ill is to be in the hold of death and already really in Sheol. The psalms celebrating recovery from illness as a victory over death must be interpreted in a realistic rather than a symbolic sense (Pss. 9:13—H 9:14; 30:3—H 30:4; etc.; Luke 15:24). Illness and other calamities, such as war, are thought to be, like death, a consequence of sin. This concept, however, was shown to be unduly rigid (cf. Job and Jesus). Falling into the power of death does not mean passing beyond the limits of Yahweh's authority; he employs the forces of death to punish those who have voluntarily turned from him. All tendency toward dualism has been overcome. At the most, one might speak of a dualist monism by virtue of which Yahweh dispenses the opposing powers of life and death (Deut. 32:39; I Sam. 2:6; Isa. 45:7).

4. Death and Yahweh. In certain texts which apparently reflect the oldest concept of death, existence in the dwelling place of the dead is represented as entirely independent of Yahweh. Sheol is the region where praise of God is impossible (Isa. 38:18), where even the recollection of God has been annihilated (Pss. 6:5—H 6:6; 28:1; 30:9—H 30:10; 88:12; 115:17), and where one falls into the hands of other powers than Yahweh. Amos already affirms, however, that the power of Yahweh extends to Sheol (Amos 9:2; cf. Ps. 139:7 ff). He controls the forces of death and uses them to serve his holy will (Hos. 13:14). The entry of Yahweh into the domain of death not only allowed him to dispose of the power of death, but ultimately led to conflict between him and death. Death could not exist as a destructive force beside the living God without raising the question of his omnipotence. Life had to absorb death (cf. II Cor. 5:4).

The descriptions of the realm of the dead and existence there feel the repercussion of this extension of power to Yahweh. The ancient belief in the end of all existence at death or in a miserable afterlife in Sheol gives way to an increased interest in the status of the dead. The belief in the impurity of the dead does not prevent the living from taking pains with sepulchres, as is shown by the great hypogeums cut out of the rock, beginning with the postexilic period. Here the dead are no longer treated as anonymous—their individuality is kept. References are no longer made to the wretchedness of the inhabitants of the realm of the dead, doomed to nourish themselves on dust. Instead, texts refer to the sleep of the dead (Job 14:10-12; Pss. 3:5—H 3:4; 4:8—H 4:9; 13:3—H 13:4; 22:29—H 22:30 [reading ישני for דשני]; 90:5; Isa. 26:19; Jer. 51:39, 57; Dan. 12:2; John 11:11; Acts 7:60; I Thess. 5:10).

It was not always concluded by analogy that death is a provisional state of being, for certain texts consider the sleep of death to be eternal (Jer. 51:39, 57). At least the idea had begun to develop, and in Dan. 12:2 the text shifts easily from the mention of sleep to that of resurrection. This image at all events proves an attenuation of the horror inspired by death, and it is not forbidden to suppose that the sleep of death may have been considered, like the sleep of dreams, to be the occasion of a more intimate communion with God.

The hope of a lessening of the power of death and even of its disappearance (mention of this is first made in Isa. 25:8), develops toward a resurrection of the dead rather than toward a superhuman or divine power of the dead. The two passages in the OT where the designation אלהים is given to the dead (I Sam. 28:13; Isa. 8:19), do not express an authentically Yahwist belief. Similarly, attributing to the dead superior knowledge or the power to cure illness (Lev. 19:31; 20:6; Deut. 18:11; I Sam. 28:3, 9) is not in line with true Israelitic doctrine, even if this idea was much in favor at certain periods. General opinion held that "a living dog is better than a dead lion" (Eccl. 9:4), and the hope of RESURRECTION had as a corollary the horror inspired by death. The affirmation of the triumph of life over death represents the main line of thought of the OT as well as of the NT, and the resurrection of Jesus Christ is the definitive manifestation of the power of the living God (Mark 12:24 ff). *See also* IMMORTALITY; PEACE IN THE OT.

DEATH, SECOND [ὁ δεύτερος θάνατος]. This expression—limited to Revelation—is defined by John in symbolic terms as the "lake that burns with fire and brimstone" (Rev. 21:8; cf. 20:14). But its clearer definition in John's usage appears from its being set over against the "crown of life" promised to those who suffer the physical death of martyrdom (2:10-11), and further from the suggestion that he who is "holy" or truly sanctified, having shared in the "first resurrection" to newness of life, will not experience it (20:6). *See* HOLINESS.

Second death is, therefore, the opposite of that life lived in the presence of God which is promised believers in Rev. 21:3-4; 22:3-5. "Death and Hades" experience this second death (20:14), along with those whose names are not "found written in the book of life" (vs. 15). The expression is rabbinic (cf. Jer. Targ., Deut. 33:6; Jer. 51:39) and in Philo (cf. *On Rewards and Punishments* II.419). J. W. BOWMAN

DEATH OF CHRIST. The central event in the history of redemption.

   e. Victory over death
   f. A call for discipleship in suffering

Bibliography

1. The historicity of the saving event. From the very beginning, the unanimous conviction of the Christian church has been that the death of Jesus Christ is the center of the whole history of redemption. The godly Jew awaited, and is still today awaiting, the central event in the history of redemption from the future. On the other hand, the Christian knows that God has definitively spoken in an event of the past, specifically in the death of Jesus, which took place at a definite time and a definite place. A historically verifiable event stands at the beginning of Christianity, not just a "doctrine" for which some confirmation must be sought belatedly in history. According to the NT, the way a person thinks about the death of Jesus of Nazareth determines salvation and distinguishes faith from unbelief. But this faith has also its own history. Only the experience of the resurrected one, the Lord whom God had exalted above all powers and authorities (Phil. 2:9 ff), opened the eyes of the profoundly disillusioned disciples. Without Easter, Jesus' death would be no more than one among many deaths, and would soon have ceased to be discussed. It was the RESURRECTION which was the point of departure for real reflection on the meaning of Jesus' death. Therefore, in the NT, Jesus' death and resurrection belong closely together, and we do well not to lose sight of this connection as the presupposition of Christian thought.

2. The sources as interpretation and history. This is already true with regard to the sources which report Jesus' death. The detailed presentations of the Synoptic gospels (Mark 14–15; Matt. 26–27; Luke 22–23) and the Gospel of John (chs. 18–19) show quite clearly that the Easter faith participated heavily in the formation of the tradition. The evangelists do not describe situations of the past as historians; rather, they desire to pass on the message of salvation as preachers who themselves have experienced salvation. However, this in no way hinders one from using their reports also as sources for reconstructing the historical event. The death of Jesus is an event within the sphere of verifiable history, and therefore accessible to the observation of historians.

3. The facts of Jesus' execution. Jesus died a criminal's death on the cross, the gallows of that time. Even non-Christian sources know about it (Tac. Ann. XV.44; Jos. Antiq. XVIII.iii.3). The Jewish aristocracy bears the main moral responsibility for his end, and the Christians have always made a point of accentuating strongly this guilt of the Jews—this tendency is noticeable in the Synoptic gospels, especially Matthew and Mark, just as it is in Paul (I Thess. 2:14-15), in the Petrine sermons of Acts (2:23; 3:14; 4:10), in the Epistle of Barnabas, etc., on down to the time of the Jewish persecutions in the Middle Ages. Yet the juristic responsibility is borne by the Roman occupation forces: the trial, death sentence, and execution are based on Roman procedure. Jesus was condemned by the Romans as a ZEALOT, a political agitator. The denunciation before the governor Pontius Pilate (A.D. 26-36) was, of course, made by the highest Jewish authorities, who saw themselves challenged by Jesus' "signs and mighty deeds" (Mark 11:15 ff and parallels; John 11:47 ff). It was this body which first examined the dangerous *mesith*, or "misleader," before he was turned over to the Roman court, in order to establish the accusation, not to carry out the juristic condemnation (so Luke and especially John, who perhaps had at his disposal especially good sources for the passion narrative).

According to Luke 23:2, the Jewish leaders accused him before Pilate of instigating tax evasion (cf. Mark 12:13-17 and parallels). This must have sufficed for the Romans, for it was precisely this which they regarded as characteristic of the Zealot movement. Similarly the titulus, the official explanation placed at the top of the cross (Mark 15:26 and parallels; John 19:19 ff), says nothing other than that the person crucified was a political criminal, a Zealot, like many others executed before and after him (cf. Luke 13:1; Jos. Antiq. XVIII; XX; etc.). However, Jesus was no Zealot. To be sure, he was obliged during his whole ministry to deal with the Zealot movement; indeed, Zealots were among his disciples, as can be deduced from the names: Simon "the Cananaean" means Simon "the Zealot" (cf. Mark 3:18; Luke 6:15); Judas "Iscariot" probably comes from "sicarius," meaning "Zealot" (cf. Acts

21:38); Simon Peter "Bar-Jona" probably means Simon Peter "the Terrorist"; perhaps the two sons of Zebedee were also Zealots. But Jesus' rejection of the Zealots' program is only too clearly attested (Mark 12:17 and parallels; Matt. 11:12; John 10:8 ff). It was precisely he who had occasion again and again to reject the Zealots' messianic ideal for himself as *the* satanic temptation (Matt. 4:9-10; 26:53; Mark 8:33), who was condemned and crucified as a Zealot.

The date of this execution can no longer be established historically with any certainty. The only point of certainty is that it took place on a Friday at the time of Passover. For the date it is better to assume, with the Gospel of John (19:14), the fourteenth of Nisan, the day before the first main feast day of Passover week, rather than the feast day itself. The year of Jesus' death is most likely 33, for in that year the first day of Passover coincided with a sabbath. (But *see* CHRONOLOGY OF THE NT for other opinions.)

4. The meaning of his death to himself. Jesus accepted this death quite intentionally. He knew nothing about "life ending in failure." For him, the death he anticipated stood at the center of his sense of vocation. The voice from heaven at the Baptism (Mark 1:11 and parallels = Isa. 42:1) designates the moment when it became clear to him that his task was to accept the office of the *Ebed Jahwe* of Isa. 52–53: As the Suffering Servant (*see* SERVANT OF THE LORD) of God he should expiate by his death the sins of Israel and, in addition, the sins of all men. From now on, he sees his path set out before him: he who calls himself SON OF MAN and thus applies to himself one of the loftiest Jewish honorific titles will have to "suffer." Consequently, when Jesus speaks of his baptism, the idea of suffering always lurks in the background (Mark 10:38; Luke 12:50). His teaching always circles around this point (Mark 8:31 and parallels; 9:31; 10:33-34, 45), although he is not even understood by his disciples (Mark 8:33; Luke 24:31).

Outwardly it was the "turn toward Jerusalem" (Mark 10:32 and parallels) which brought about the decision. It was a decision especially because death, which thereby became certain for Jesus, did not at all come as a friend: he saw in it really the "last enemy" (I Cor. 15:26), which he must fight strenuously (Mark 14:32 ff and parallels; 15:34 = Matt. 27:46; Heb. 5:7). But it happened as a consequence of his vocation, to which he chose to be obedient. He was led by the plan of salvation of the Father, with whom he knew himself to be united as "Son of God" in a unique way. His death was to be the climax to which all God's saving action led. This is the meaning of the Johannine Christ's saying on the cross: "It is finished" (John 19:30).

5. Interpretations from within Judaism. For Jesus' disciples the end of the Master meant at first the factual collapse of all hope. The more they saw in him the Messiah of Israel, the more his infamous death must have appeared a *scandalon* to them as Jews (cf. I Cor. 1:18), for the concept of a suffering Messiah is foreign to Jewish thinking. Of course, there was still the possibility of understanding Jesus' death in analogy to the usual fate of the prophet, who is despised and killed (cf. Matt. 13:57; 23:37; I Thess. 2:15). Traces of this interpretation are found in Luke 24:19, and then especially in heretical Jewish Christianity, where Jesus was regarded as the prophet of the end of time. They could also look upon the crucified as one of the many suffering righteous ones of Israel, who in every age are led by God in the path of humiliation, and whose death effects expiation in God's sight (cf. IV Macc. 6:29). Actually there was in the earliest community such an interpretation of the death of Christ: In old traditions he is designated, in view of his path of suffering, the "Righteous One" (Acts 3:14; 7:52; 22:14; I Pet. 3:18), and the strong connection of the passion narrative to the OT psalms portraying the suffering of the righteous one points in the same direction. Finally, the responsible Jewish leaders seem to have feared a third possibility—namely, that Jesus could have been venerated by his followers on the basis of his crucifixion as a martyr to the national cause, a Zealot witnessing in his blood (Matt. 27:64). Yet the reaction of the disciples to the occurrence (Mark 14:50 = Matt. 26:56; Mark 14:66 ff and parallels), their at least partial dispersion into Galilee (Mark 14:28; 16:7), show that they at first stood helpless before the event of Jesus' death. This confirms again the fact that Jesus' position between the fronts did not make it possible for him during his lifetime to eliminate in the circle of his followers (and much less among his opponents and the Romans!) the Zealots' false messianic concepts.

6. Interpretations from the Resurrection. ***a. The center of the history of redemption.*** Only the appearances of the resurrected one opened the way for a "Christian" interpretation of the death of Jesus. We must again emphasize that reflection developed here along with the occurrence, that it had its point of departure wholly in the experience—not the other way around. Jesus resurrected, living, and clearly leading his community as the exalted Lord, placed his death in a new light when seen in retrospect. God had publicly taken sides with the crucified (cf. Acts 2:24; 3:15; 4:10; 5:31)! Consequently, Jesus' death had to be evaluated as an act in God's history of redemption. Of course, the joy of Easter dominated completely the thinking of the earliest community, but such a statement is to a certain extent one-sided, for in the thinking of the first Christians the Easter faith had its effect precisely with regard to the understanding of Jesus' death. Only in this way is it comprehensible that from the very beginning the Christian community saw the death of Jesus located at the center of the history of redemption. This did not become an emphasis first with Paul. To be sure, Paul presents the first comprehensive orientation of all of theological thought toward the death of Jesus and its saving significance; the "word of the cross" is for him a technical term for Christian preaching as a whole (cf. I Cor. 1:18). Yet the same tendency can already be noted in the early Synoptic tradition. The passion narrative is the oldest formulated portion of the tradition, and the whole composition of the gospels is oriented to the Passion. The Cross is from the very beginning the goal and climax (cf. Mark 3:6; Matt. 1:21); and the "hour" of which John is always talking and toward which the life of Jesus moves (John 2:4; 7:6; 8:20; 12:23; 13:1; 17:1) is the hour of the Cross.

b. The fulfilment of the OT. According to Luke

24:25 ff, 44 ff, the resurrected one opened the eyes of his disciples to the significance of his passion by pointing to the OT. In any case, it is certain that the holy scripture of the Old Covenant contributed decisively to the interpretation of Jesus' death in the early Christian community. OT history, which was understood completely as prophetic history (cf. Rom. 15:4; I Cor. 10:6, 11), supplied to a large extent the categories under which one could understand Jesus' death. The insistence that he "must" die is based on the conviction that the ancient promises must have eschatological fulfilment (cf. Matt. 26:31; Luke 22: 37; 24:7, 26-27, 44-45; John 3:14). Such "theology of the early community" does not, to be sure, float in the air. The earthly Jesus had already carried through the appeal to the OT to interpret his death, and the community after Easter could here connect itself directly with his thought. The Gospel of John points explicitly to this connection by speaking of the disciples' "recollection," which opened to them in retrospect the meaning of Jesus' discourses (John 12:16), and which is brought about by the Spirit in them (John 14:26; 15:25-26). We must always take into consideration this double root of the early Christian interpretation of Jesus' death: the OT and the preaching of the earthly Jesus, who himself appealed to the OT. This is true in exemplary fashion with regard to what was doubtless one of the earliest christological explanations, perhaps circulating in Petrine circles, in terms of the "Suffering Servant" (Acts 3:13, 26; 4:25, 30; 8:26 ff). If the early community saw in Jesus' death the fulfilment of the saving action of the OT Servant of God from Isa. 53, as we can assume with certainty, then the community was at the same time taking over Jesus' own interpretation (*see* § 4 *above*).

c. Expiation for sin. Then the community also shared Jesus' view of the decisive significance of this death: He, the Son of man, who dies on the cross in fulfilling the function of the Servant of God, effects vicariously EXPIATION for the sins of men (cf. Mark 10: 45). He effects expiation for sins, since only because of sin is the history of redemption necessary at all. Paul was not the first to introduce the connection of Jesus' death for sin into the theological thinking of primitive Christianity, as is demonstrated by the ancient kerygma of the community quoted in I Cor. 15:3: Jesus Christ died "for our sins in accordance with the scriptures" (cf. Acts 10:43). But precisely in this brief formula the other root of primitive Christian thought becomes visible again: faith in the expiatory death of Jesus for sins has its basis in scripture. In fact, the appeal to OT thinking has profoundly molded this most important aspect in the interpretation of Jesus' death. The term "for" in I Cor. 15:3, which recalls quite strongly the term "for" in Isa. 53, is the key word for the interpretation of Jesus' death as vicarious expiatory suffering, a key word which runs through all of primitive Christian preaching. It occurs already in the primitive Christian Eucharistic liturgy, which is built upon Jesus' last meal ("for you" [I Cor. 11:24; Luke 22:19]; "for many" [Mark 14:24; Matt. 26:28]). Then it occurs especially in Paul (Rom. 4:25; 5:8; 8:34; II Cor. 5:14-15, 21; Gal. 1:4; 2:20; 3:13; Eph. 5:2; I Thess. 5:10; etc.), in the Pastorals (I Tim. 2:6; Tit. 2:14), the Catholic letters (I Pet. 2:21; 3:18), and the Johannine literature (John 10:11; 11:50 ff; 15:13; I John 2:2; 3:16*a;* 4:10). But in addition, a quantity of OT and Jewish terms and concepts present themselves, to illuminate anew again and again the interpretation of Jesus' death as an expiatory act for the sins of the world.

"Juristic" terminology in the stricter sense emphasizes with regard to Jesus' death the legal act through which the situation of the sinful creature before God was basically reordered. Here belong the interpretations of Jesus' death as "ransom" (Rom. 3:24-25; I Cor. 6:20; 7:23; I Tim. 2:6; I Pet. 1:18; Rev. 1:5; cf. Mark 10:45), and also the whole complex of concepts forming the Pauline doctrine of JUSTIFICATION, which is rooted in the event of the Cross (Rom. 3:24-25; 4:24-25; 5:9-10; II Cor. 5:21).

Closely related to this is the cultic terminology which describes the legal act of expiation in OT sacrificial concepts. Jesus' death appears as an expiatory sacrifice (Rom. 3:25), a Passover sacrifice (I Cor. 5:7), or in general as a "sacrifice" (Eph. 5:2) for sins. Especially the Letter to the Hebrews makes the sacrificial idea fruitful as an interpretation of Jesus' death. Jesus is here both sacrificer and sacrifice; his sacrifice is valid once for all (Heb. 7:27; 9:12, 25 ff; 10:10 ff).

The idea of the sacrifice offered to expiate sins is also the basis of the picture of the lamb, which is clearly oriented to Isa. 53:7 (cf. Acts 8:32; I Pet. 1: 19). It plays an especially large role in the Johannine literature. In the Gospel of John, Jesus dies in the moment when the Passover lambs are slaughtered in the temple (John 19:14): he himself is the true Passover lamb who bears the sins of the world (John 1:29; 19:36). Also, in Revelation the crucified is mentioned again and again as the Lamb.

OT sacrificial language is also the origin of speaking of Christ's blood, which, like the OT expiatory rites, is poured out for the forgiveness of sins (cf. Acts 20:29; Rom. 3:25; 5:9; Eph. 1:7; 2:13; Col. 1:20; I Pet. 1:2, 19; I John 1:7; Rev. 1:5). The interpretation of Jesus' death as an expiatory death has found here a visible expression which later had a strong influence, especially in the various forms of mystical union with Christ. This usage could build on the fact that, according to the tradition, Jesus himself used the same expression with the cup at the Last Supper in interpreting his death (Mark 14:24: "blood of the covenant," based upon Exod. 24:8). Paul was therefore right in carrying through the consistent anchoring of the Eucharist in the death of Christ (I Cor. 10:16; 11:23 ff), perhaps as a protection against all too excessive and fanatical practices at the primitive Christian Lord's Supper, just as he also united primitive Christian baptism with the Cross (Rom. 6:4 ff), in dependence upon Jesus' own understanding.

d. A cosmic event. The interpretation of Jesus' death attained a further dimension in the post-Easter community, which prayed to the exalted Lord (I Cor. 16:22; Rev. 22:20; cf. II Cor. 12:8): this death is also the decisive act of a cosmic event. The Cross signifies victory over the powers hostile to God. Jesus had already taken up very early the struggle with them (cf. Mark 1:12 and parallels; 1:34; etc.), and his "mighty acts"—exorcisms, healings, and raising the

dead—were held by the primitive community to be anticipatory signs of his victory on the cross, although according to Gnostic Hellenistic speculation the powers did not recognize him (Ign. Eph. 19.1; cf. I Cor. 2:6 ff). The statement about the victory over the powers, which left its imprint especially through the numerous quotations of Ps. 110 (e.g., I Cor. 15: 25; Heb. 10:13; Acts 2:34; Mark 12:36; Matt. 22:44; Luke 20:42), appears, indeed, to have had a firm place in the confession (Phil. 2:10; I Pet. 3:22; Mark 16:19). In the confessionlike psalm quoted in Phil. 2:6 ff, this victory of Jesus is put in direct causal relation to his death: "*Therefore* [because he humbled himself even unto the death on the cross] God has highly exalted him."

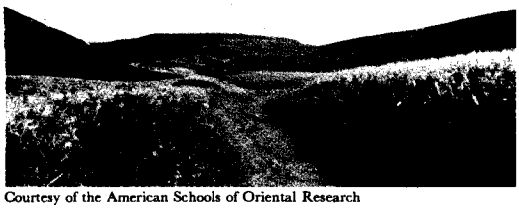
Jesus' death is the turning point also of the whole cosmic process. The passion narrative in the Synoptics suggests this by presenting the whole of nature as affected by Jesus' death (Mark 15:33 and parallels; Matt. 27:51), and Col. 1:20 provides the theological explanation: through the blood of Christ's cross the universe is reconciled with God. Nothing is excepted from the saving effect of Christ's death. According to the common primitive Christian viewpoint, the Cross opens the way for the history of redemption to move from the "one" to the "many," from limited applicability to universality (Mark 10:45=Matt. 20:28; Mark 14:24 and parallels). Paul provided the most closely reasoned basis for the universality of the Cross. It is revealed to him in view of the universality of sin, under which all have fallen (Rom. 3:6, 19; I Cor. 6:2; 11:32); accordingly Christ died for all (Rom. 8:32; II Cor. 5:14). Limitations which were formerly valid must now fall away: Jews and Gentiles share in redemption (Rom. 11:32; Gal. 3:27; cf. Luke 24:47). Christ is the end of the law, which belongs on the side of sin and death (Rom. 7:5-6; 10:4). The ingenious presentation in Rom. 5:12 ff is here especially full of significance: as in Adam all men stand under God's judgment, so in Christ, the second Adam, all are included in the saving will of God (Rom. 5:15).

e. Victory over death. It is especially death which is included among the subjugated powers (cf. Rom. 8: 38). It is a central affirmation of the NT that Christ took away the power of death. His death is generally understood as the victorious struggle against the demonic power of death, which is often personified (cf. Acts 2:24; I Cor. 15:45-46; Rev. 6:8), against the "last enemy" (I Cor. 15:26; Rev. 20:14), whose power, however, is already broken (II Tim. 1:10). The NT knows of no optimistic view of death as a "friend" which frees the soul from the bonds of the body. Such an understanding is excluded by the view of death as the terrible consequence of sin (so already in Judaism; then especially in Paul [Rom. 1:32; 6: 7 ff, 16]; also Jas. 1:15; John 8:24). Here is the connection, for primitive Christian thinking, between Jesus' expiatory death and his victory over death. If death is the consequence of sin, then expiation for sin is needed to break death's power at the roots. Jesus' entrance into the sphere of sin's curse (II Cor. 5:21; Gal. 3:13-14; Rom. 8:3) was the presupposition of his victory. Once sin is overcome, then death has lost the basis of its power (Rom. 6:7 ff). The Son of man has from now on the keys of death and Hades (Rev. 1:18).

All believers are drawn into Jesus' victory over death; since the triumph of the "first fruits of those who have fallen asleep" (I Cor. 15:20), death has lost its sting (I Cor. 15:55). John can speak in strong words of "eternal life," which is already assured the believers here on earth since Christ's death and resurrection (John 3:36; 5:24; 6:47). Paul likes to use for baptism the figure of "dying and rising with Christ" (Rom. 6:3; Gal. 6:14; Col. 2:20; II Tim. 2:11), to describe the Christian's participation in the central saving event. And also in this context the idea of the first and second Adam plays a role, for Paul uses this idea to anchor his interpretation of death very firmly in the saving occurrence of the old covenant and its fulfilment (I Cor. 15:45 ff).

f. A call for discipleship in suffering. The individual Christian who believes in the expiatory death of Jesus Christ sees himself in the NT constantly called upon to "follow" Jesus. This call to discipleship means, first of all, discipleship in suffering. Jesus himself already prepared his disciples for sharing with him the fate of being persecuted and suffering. The meaning of the well-known saying about bearing one's cross (Mark 8:34-35 and parallels; similarly Matt. 10:38; John 12:25-26) seems to have been originally that the disciple is to accept for himself the same fate of death as did the master (Mark 10:38-39; Luke 14:26-27; John 15:20). The early church sometimes made a one-sided principle out of it: only the "martyr" who gives his life for Christ's name (cf. Mark 13:13; Acts 15:26; 21:13) can really count as a disciple of Jesus. The tendency to reserve the concept of "witness" for the witness in one's blood is already noticeable in the NT (Acts 22:20; Rev. 2:13; 12:11). Jesus' death is the prototype and model for the death of his disciples, even down to the details. The martyrdom of Stephen in Acts 6–7 reveals clearly the influence of the passion narrative, and traces of the assimilation of the disciple's suffering to the form of the Lord's suffering are often detected elsewhere (cf. Luke 23:26 with Mark 15:21; further Matt. 10:17 ff; John 15:18 ff; 21:18-19; Acts 21:13; II Cor. 12:7-8).

To be sure, the way in which, e.g., Paul speaks of showing the suffering of Christ in his body (I Cor. 15:31; II Cor. 4:10; Gal. 6:17) suggests that the saying about bearing one's cross has a much broader significance for the Christian: his whole life is discipleship in suffering. The Lukan form of the saying (Luke 9:23), which speaks of bearing one's cross *daily*, is already guided by this idea (cf. further Acts 9:16; I Pet. 4:13; for Paul also I Thess. 1:6). Here is where Christian parenesis begins, for which purposes the suffering and dying Christ is the great example one is to emulate: in humility (Phil. 2:5 ff), selflessness (Rom. 15:3), endurance (Heb. 12:1 ff), patience (I Pet. 2:20 ff), love (John 15:13). Even the exhortations of the Pauline "mysticism of suffering," which play a large role in later asceticism, are fed from the idea of Christ's death: e.g., the call to put to death the flesh (Rom. 8:13), to crucify the old self (Rom. 6: 6; Gal. 5:24; Col. 3:5). In hard times the thought of the Lord's death has again and again been the source of comfort for Christians of all generations: "A disciple is not above his teacher, nor a servant above his master" (Matt. 10:24; cf. Luke 6:40; John 13:16).



On this subject, *see also* CHRIST, CHRISTOLOGY.

DEATH OF JOSEPH. *See* JOSEPH THE CARPENTER, HISTORY OF.

DEBIR dē′bər [דביר, back part(?); דבר, remote village(?)]. Alternately (3 *below*): LO-DEBAR lō dē′bər [לא דבר (II Sam. 17:27; Amos 6:13), לו דבר (II Sam. 9:4-5)]. **1.** A king of Eglon, SW of Jerusalem (Josh. 10:3). He was one of five confederate kings in the Amorite coalition that attempted to halt Joshua's invasion. R. F. JOHNSON

* **2.** A Canaanite royal city in the S Judean hill country, in the Negeb (Josh. 10:38; 12:13). Though the topographically satisfactory sites of Zahariyeh (twelve miles S of Hebron), Khirbet Rabud, Khirbet Zanuta, and Khirbet Tarrameh (all in the same vicinity) have been proposed, until suitable archaeological evidence to the contrary appears, the preferred location for Debir is Tell Beit Mirsim, *ca.* eleven miles SW of Hebron. Fig. DEB 22.

22. Debir (modern Tell Beit Mirsim) from the N

The Canaanite city was sacked by Joshua. At the time it was occupied by the Anakim (Josh. 11:21). It was either initially captured by the Calebites under Joshua or recaptured by them after only a temporary conquest by Joshua's forces (Josh. 15:15-17; Judg. 1:11-15).

In the administrative reorganization of Judah, it became the district capital of the southernmost hill-country district (Josh. 15:49); it was also one of the Levitical cities (Josh. 21:15; I Chr. 6:58—H 6:43). The earlier name for Debir was Kiriath-sepher, "city of the scribe" (Josh. 15:15, 49, where it is incorrectly copied as "Kiriath-sannah" [cf. LXX]; Judg. 1:11-12).

The site of Tell Beit Mirsim was partially excavated in four campaigns by W. F. Albright (1926-32). Like BETH-SHEMESH, Debir was first settled in Early Bronze IV (or IIIB, twenty-third to twenty-first centuries B.C.) and was finally destroyed in 587 B.C. The Middle Bronze I city, set in a sparsely populated countryside, was possibly visited by Abraham as one of the nomadic and seminomadic groups common in this period. During this and the subsequent (Middle Bronze II) period, Egypt dominated the land. The city was destroyed when the Hyksos assumed the rule (during the early stages of which, Jacob and his family may have migrated to Egypt) and when the Hyksos were overthrown. A typical *terre pisée* (beaten earth) wall (built early in the period) protected the prosperous Hyksos city. Well-built houses, metalwork, ivory and bone inlays, and stonework, all of excellent quality, attest to the prosperity resulting from its location on busy trade routes.

This and the following Late Bronze occupation (after a lag of several generations following the destruction of the Hyksos city) were marked by great unrest. The latter city, a poor relation of its prosperous predecessor, was probably the Canaanite royal city captured by Joshua in the late thirteenth century and destroyed in a holocaust so violent that it left ashes three feet thick in some places (cf. Josh. 10:38).

After being almost immediately rebuilt by the Israelites, it came under Philistine influence in the mid-twelfth century and was destroyed by them *ca.* a century later after the Battle of Ebenezer (I Sam. 4). Shortly after his defeat of the Philistines and as a measure against further invasion, David strengthened Debir's fortifications with a typical casemate wall and gateway, as at Beth-shemesh. Shishak destroyed this city in 918 B.C. (I Kings 14:25-28; II Chr. 12:9 ff).

The fortifications were probably not rebuilt until the time of Asa (*ca.* 913-873; cf. I Kings 15:23; II Chr. 14:6-7). The city, a center for a textile dyeing industry (Fig. DYE 39), flourished, reaching the height of its prosperity during the eighth century. It was probably attacked by Sennacherib in 701 B.C. and in the next century suffered two more partial destructions. The city began to decline sharply in the closing decades of the seventh century and was destroyed by Nebuchadnezzar in 587 B.C. in a violent conflagration. It was not rebuilt.

XXI-XXII (1941-43); *The Archaeology of Palestine* (1954). K. Galling, "Zur Lokalisierung von Debir," *ZDPV*, 70 (1954), 135-41.

3. A place on Judah's N boundary (Josh. 15:7), possibly Togheret ed-Debr, the "pass of Debir," near Tal'at ed-Damm (*see* ADUMMIM) between Jerusalem and Jericho. The Wadi Dabr is the NE boundary of the Buqe'ah (Valley of Achor); the Joshua reference may well refer to this wadi. V. R. GOLD

4. A city of Gad, located in the E part of Gilead (Josh. 13:26). Mephibosheth, the lame son of Jonathan, lived there after the royal family fled to Gilead on the defeat of Israel at Mount Gilboa, and was the guest of Machir, the son of Amiel; David recalled him from there and made him his pensioner (II Sam. 9:4-13). Later on, when David himself was a fugitive, the same Machir was one of those who furnished his troops with provisions (II Sam. 17:27). Apparently Debir (Lo-debar) fell into the hands of the Arameans during their wars with Israel and was recovered by Jeroboam II, for Amos has a sarcastic reference to "you who rejoice in Lo-debar [*lô' dh'bhār*]" (Amos 6:13), in which the vowels are deliberately altered to read "a thing of nought" (*lô' dhābhār*). The site has not been identified.

S. COHEN

DEBORAH dĕb′ə rə [דבורה, bee]; KJV Apoc. DEBORA. **1.** Rebekah's nurse and lifelong companion (Gen. 35:8; cf. 24:59).

2. One of the early "judges" or charismatic leaders

of ancient Israel. The title "prophetess" (Judg. 4:4) probably refers to this quality of inspiration by the Spirit of God (cf. 6:34; 11:29; 14:6). She was an outstanding person, able to arouse the scattered tribes of Israel to a sense of unity and loyalty to Yahweh in their early struggles against the Canaanites. This sense of religious unity was of crucial importance for the establishment and continuing life of the nation Israel.

The Song of Deborah (Judg. 5:2-31), which celebrates her achievement, is one of the oldest examples of Hebrew literature still in existence. It is the one contemporary source of any length from this period (twelfth century B.C.), and is therefore of unparalleled importance for the study of early Hebrew literature, history, and religion. It is a magnificent poem, containing some of the same forms of poetic parallelism that are found in the ancient Canaanite texts from Ugarit (cf. Judg. 5:3, 7; C. H. Gordon, *Ugaritic Handbook* [1947], Baal and Anat 51, V.94-97; 76, II.26-28). It shows the Hebrews still isolated in the hill country of Palestine, not yet united in any lasting tribal organization, and just now able to challenge Canaanite control of the fertile plains and trade routes (Judg. 5:6, 13-18). Itself a song of victory in war, it brings alive the ancient attitudes toward God, the war God of Israel, coming to fight against his enemies with storm and torrent (vss. 4, 20-21). Judg. 4:2-24 gives a later, prose account of these same events.

3. The grandmother of TOBIT, and the one who brought him up after the death of his father (Tob. 1:8). She must have instructed the boy with conspicuous success, to judge from Tobit's later piety.

D. HARVEY

DEBT, DEBTOR. Rules and customs relative to debts and credit in ancient Palestine are known to us through anecdotes or proverbs recorded in the Bible, and through the legislative sections of the Pentateuch, which aim at codifying usages common among the Semites, or at condemning practices deemed contrary to the spirit of the religion of Yahweh. These condemnations were never fully effective, and they rather testify to the continuance of the abuses they strived to eradicate.

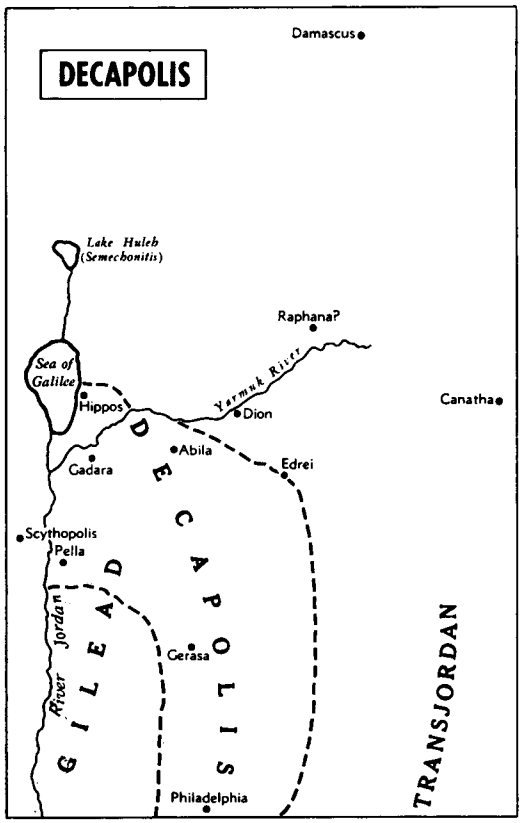
1. Loans the common cause of debts. The imposition of a considerable INTEREST added or to be added to the principal to be repaid, which had become common practice among the Semites since the beginning of the second millennium, was discouraged and even condemned by the earliest legislative sections of the Pentateuch, possibly in accordance with the older tribal customs of the nomads; fellow members of the clan ought to be helped free of interest, and without regard for personal profit; hence their debt remains a simple one (Exod. 22:25). Later sections condemned anew the taking of interest (Lev. 25:36-37; Deut. 23:19-20). The lending of silver, chattel, or produce may not give occasion to charging interest, unless the borrower is a non-Israelite.

Violations of the law in these matters, however, were frequent, and the practice of lending to Israelites at rates of interest which we would regard as exorbitant had become a social plague, by making the situation of debtors practically hopeless. Such violations were vehemently condemned by the prophets. Ezekiel and Nehemiah call their contemporaries back to a strict observance of the law (Ezek. 18:8, 13, 17; 22:12; Neh. 5:6-13), while the author of Proverbs remarks wryly that riches acquired by usury are essentially unstable, and shall not profit their owner in the long run (Prov. 28:8).

The etymology of the common Hebrew word for "interest," נשך (*neshek*), from a verb meaning "to bite," seems to imply a manner of imposing the interest in advance, as if the borrower agreed to repay, e.g., sixty shekels, while receiving only forty shekels from the lender. נשך is consistently used in Exodus and Deuteronomy, while Leviticus and Ezekiel use תרבית or מרבית (lit. "increase"), whereby the borrower pledged himself to repay the loan integrally, plus the interest as agreed. The Hebrew תרבית is generally rendered both in the KJV and the RSV by "increase," while נשך is interpreted by the RSV as "interest" and by the KJV as "usury." It should be remembered here that the English term "usury," in the language of early English translators, was not so pejorative as it sounds today. The translators, however, were perfectly aware of the prohibitions formally expressed in the Law and the Prophets, and of the sad fact that moneylenders of all times had been charging interest at abusive rates, so that some medieval theologians had condemned, at least in theory, the practice of lending money for interest. In Babylon a common rate of interest for loans of produce was one third of the loan—i.e., 33 1/3 per cent per annum—whereas the interest on money was only one fifth—i.e., 20 per cent. Neo-Babylonian contracts show that the rate had been subsequently reduced uniformly to one fifth. The documents of Nuzi often fail to specify the rate of interest; some tablets, however, mention an interest rate as high as one half of the loan—i.e., 50 per cent. Interest rates were not expressed on a percentage basis, but by an absolute indication of value, or by a numerical fraction of the capital.

2. Pledges and sureties. Lenders and creditors were protected against the failure of debtors to repay by a system of guaranties which had developed spontaneously throughout Western Asia, and which the Israelites adopted in its broad outline, with a few modifications required by the moral ideal of Yahwism. At the time of taking the loan, or of contracting a debt, the borrower or debtor surrendered a piece of movable property into the hands of the creditor or lender (נשא, *nôshê*). The Hebrew language uses the following terms for various kinds of pledges: usually חבל (*ḥ^{a}bhôl*) *and* עבוט (*^{a}bhôṭ*); *once* עבטיט (*'abhṭîṭ;* Hab. 2:6); also ערבון (*'ērābhôn;* Gen. 38:17-18, 20). In the majority of cases, the PLEDGE is to be considered as an objective token of the debtor's intention to pay off his debt, capital and interest. According to Deut. 24:10-11, the creditor is not permitted to enter the house of the debtor to take the pledge, but he must receive it at the door, before witnesses, from the debtor's hand. Objects indispensable for daily living may not be taken as pledges (Deut. 24:6). Similarly, a cloak or garment temporarily offered as pledge has to be returned before nightfall, probably until a definitive arrangement is agreed upon (Exod. 22:26-27; Deut. 24:12-13).

It is possible and even likely that the חבל or עבוט pledges, which seem to have but a token value, were at first complementary of a more primitive type of contract, of which Yahwistic ethics generally disapproved. The debtor pledged to place his son, daughter, or slave at the disposal of the creditor, in case of insolvency. The value of the labor performed by the person thus engaged would be credited against the interest, and perhaps the principal, of the debt. This was tantamount to slavery for debts, and the law strived at reducing the evils of the system by prescribing the periodical liberation of Hebrew slaves or of persons held on account of unsatisfied debts (*see* SLAVERY; SABBATICAL YEAR; JUBILEE, YEAR OF). In spite of the legal restrictions, the entire system of pledges and sureties was recklessly abused by the Israelites. In the time of Nehemiah, some Jews whose lands and vineyards were heavily mortgaged had to give away their sons and daughters as sureties (Neh. 5:2-3).



A borrower or debtor could also have a third party, usually a rich or generous friend, assume responsibility for him and become his SURETY. The book of Proverbs cautions Israelites against the imprudence of standing surety for others, especially strangers (Prov. 6:1; 11:15; 17:18; 20:16; 22:26; 27:13).

3. Debts and debtors in the NT. There are in the teachings of Jesus references to debts, pledges, loans, and the like, given for the sake of illustration, and which ought not to be interpreted always as rigorously as paragraphs of law. The parable of the wicked servant (Matt. 18:23-35) mentions the jailing of an insolvent debtor (cf. Matt. 5:25-26; Luke 12:58-59). This is to be understood against the background of Hellenistic jurisprudence and of Roman law, rather than of the Semitic practice of holding a person as surety. Hellenistic papyri contain several cases of men thrown in jail for debts. In Rome, the creditor could be authorized by the magistrate to seize an insolvent debtor and set him to work or keep him in chains. The idea was to force the debtor to sell out whatever property he might have secretly retained, that he might pay off, or to have the debtor's relatives or friends acquit the debt, or to apply the value of the labor furnished under compulsion against the debt. The practice of jailing an insolvent debtor, however, had been abolished, at least officially, in Roman Egypt, except in the case of debts to the king or the state. Legal expressions for debts, sureties, etc., are used figuratively in the NT, as, e.g., the debt contracted by one who has offended his neighbor and "sinned" against him; hence, in the Lord's Prayer, "debts" (τὰ ὀφειλήματα; Matt. 6:12) are synonymous with "sins" (τὰς ἁμαρτίας; Luke 11:4). The theological statement in Heb. 7:22, that Jesus was made the "surety [ἔγγυος] of a better covenant," ought to be understood against the background of Israelite and Jewish usage (*see* § 2 *above*).

DECALOGUE. *See* TEN COMMANDMENTS.

DECAPOLIS dĭ kăp'ə lĭs [Δεκάπολις, ten cities]. A federation of Greek cities in Palestine, originally ten in number, mentioned in the Bible only in the gospels (Matt. 4:25; Mark 5:20; 7:31).

1. Origin. After the death of Alexander the Great (323 B.C.) and following his example, his successors established many Greek cities in the Near East. Some were apparently established in Palestine by the veterans of Alexander's army, for two of the cities, Pella and Dion, bear Macedonian names. After Alexander, the Seleucids of Syria and the Ptolemies of Egypt continued to found and rebuild Greek cities in Palestine. Some of these were on the sites of older Semitic cities, but many were new foundations. These were typical of the Greek cities in the East and attracted many Greek-speaking immigrants. They were striking examples and centers of Greek culture and so became strongholds for the pagans against the indigenous Semitic peoples, such as the Jews. Four cities of the Decapolis—Gadara, Scythopolis, Pella, and Abila—were already important in 218 B.C. (Polybius V.70-71; Jos. Antiq. XII.iii.3). These Greek cities formed the heart of the opposition to the Maccabean Revolt and to the later Hasmonean rulers (168-164). The Jews had captured and controlled many of them when the Romans arrived in Palestine.

Jewish independence ended with the appearance of the Roman army led by Pompey (64-63), which brought a new era to Palestine and its Greek cities. In his reorganization Pompey recognized the vigorous part which these Greek cities could play in Rome's plans to stabilize the East. They could provide ready-built fortresses against the various Semitic tribes which constantly threatened any alien rule. At the same time, they would provide centers for the spread of Greco-Roman culture, and so strengthen the Roman position. These cities were filled with people who welcomed the coming of Rome and who could be trusted to further her interests. Pompey's reorganization also severely restricted Jewish rule in Transjordan.

Josephus summarizes this by saying that Pompey removed these cities from Jewish rule and restored them to their own citizens under the province of Syria (Jos. Antiq. XIV.iv.4; War I.vii.7). The importance of this for these cities is indicated by the fact that many of them promptly issued coins which dated a new era with the coming of Pompey. The Greek cities were free, provided they remained loyal to Rome, paid the required taxes, and supplied the needed military service. Since these cities were on the frontier and must provide their own defenses, it was natural that they should band together in a league for mutual protection and profit, a practice permitted elsewhere in the Roman Empire.

The "Decapolis" or "Ten Cities" was the name given to this loose federation which was founded to protect themselves, the trade routes, and the interests of Rome. There is no specific mention of the origin of the league, but the term "Decapolis" does not appear until the first century A.D. The formation of it certainly took place no earlier than the reorganization of Pompey (64-63 B.C.), and possibly not until the death of Herod the Great (4 B.C.), for some of these cities had been transferred to his rule. By the time of Jesus, "Decapolis" was a well-known term and indicated a specific region. Josephus (*ca.* A.D. 75) also provides evidence that the term was in common use in his day (War III.ix.7).

2. In the first century A.D. The earliest list of the Decapolis is that provided by Pliny (*ca.* 75), who states that most agree on these ten: Scythopolis, Hippo, Gadara, Pella, Philadelphia, Galasa (Gerasa), Dion, Canatha, Damascus, and Raphana (Nat. Hist. V.xvi.74). Josephus gives no list, but he seems to exclude Damascus when he speaks of Scythopolis as the greatest city of the Decapolis (War III.ix.7).

Even though the location of some of these cities is uncertain, there can be little doubt as to the extent of the "region of the Decapolis" (τὰ ὅρια Δεκαπόλεως; Mark 7:31; cf. Pliny Nat. Hist. V.xvi.74: *decapolitana regio*). At its greatest extent the region formed a rough triangle with the W apex at Scythopolis, the N at Damascus, and the S at Philadelphia. The heart of the region was thus the Gilead of the OT. Although a distinct territory, it was not necessarily solid, for Pliny speaks of it as interpenetrated by tetrarchies.

The location of all these indicates their strategic importance, for they were along or near the chief trade routes and military highways which fanned out from Scythopolis eastward toward the desert.

Each of these cities was independent and bound to the others only in a loose federation. Each had its own council, controlled its surrounding territory and villages, and possessed the right of coinage and asylum. They could negotiate relations with one another, yet all were regarded as part of the province of Syria.

In the first century A.D. they were thriving cities; each was equipped with the usual buildings of a Greek city in the Roman Empire: a colonnaded street, a forum, baths, an amphitheater and at least one theater, temples, an aqueduct, and tombs. At a later date some of these cities had Christian basilicas. Each would have its own colorful festivals and games. The high degree of culture is indicated by the literary figures who came from this area, such as Theodorus, Menippus, Meleager, and Philodemus, who were all from Gadara.

3. Location of sites. Scythopolis is the Beth-shan of the OT and the modern Beisan. It was the only one of the cities W of the Jordan, but it was in a strategic position to guard the main highway which came down through the Plain of Esdraelon to cross the Jordan at the fords S of the Sea of Galilee. Josephus calls Scythopolis the largest of the Decapolis, perhaps indicating that it was the capital (War III.ix.7). The site was excavated by the University of Pennsylvania in 1921-33.

Across the Jordan and seven miles to the SE is the site of Pella, now known as Khirbet Fahil. The site has not been excavated except for soundings in 1933 and 1958. Gadara was *ca.* fifteen miles N-NE of Pella. Extensive remains are visible on the site, which is now called Um Qeis. Eight miles farther N and *ca.* four miles from the Sea of Galilee is the probable site of Hippo or Hippos, also called Susitha, the modern Qal'at el-Husn, which is near Fiq. Hippos guarded the road to Damascus. These three were all in strategic positions and so important that Eusebius could speak of the Decapolis as the territory around them (Jerome *De Situ et Nom. Loc. Hebr.* 199).

Deep in the mountains of Gilead and twenty-one miles SE of Pella was Gerasa.* The extensive ruins of this city, now called Jerash, are the best preserved and the most impressive in all Transjordan. The site has been partially excavated and restored in seasons from 1925 to 1935. Twenty-four miles S of Gerasa was Philadelphia, the modern Amman and the Rab-

Copyright: The Matson Photo Service

23. Theater and forum at Jerash, city of the Decapolis

bah of the OT. Some ruins are visible.* Philadelphia was at the extreme S limit of the Decapolis. Figs. DEC 23; RAB 2.

The location of Dion is uncertain. It may be Tell el-Ash'ari, *ca.* twenty miles NE of Gadara and N of the Yarmuk River. An alternate site is Tell el-Husn, twenty miles SE of Gadara and S of the Yarmuk. Raphana was *ca.* thirty miles NE from Tell el-Husn, a site now called er-Rafeh. This is probably the Raphon of I Macc. 5:37. Canatha, now called Qanawat or Qanat, but in OT times called Kenath (Num. 32:42), was the most easterly city and lay *ca.* thirty miles SE of Raphana and at the edge of the desert. *Ca.* fifty miles to the N of Raphana and beyond the Decapolis proper was the most N member of the league, Damascus. Its inclusion is a witness to its importance as a military and commercial center.

The most important of the later lists is that of the geographer Ptolemy of the second century A.D. He replaces Raphana with Abila, probably Tell Abil, S of the Yarmuk, and adds the following eight cities, most of which lay to the N toward Damascus: Kanata (to be distinguished from Canatha), Kapitolias, Edrei, Bosra, Abila Lysanius, Heliopolis, Hina, and Saana. It was in the second century during the reign of the Antonines (138-93) that the cities of the Decapolis reached their peak.

Richardson, "The 1958 Sounding at Pella," *BA,* XXI (1958), 82-96. D. C. Pellett

DECISION, VALLEY OF [עמק החרוץ; κοιλὰς τῆς δίκης]. The name given in the book of Joel (3:14—H 4:14) to the place where Yahweh's judgment or decision falls upon the heathen nations assembled for the eschatological assault on Jerusalem (cf. Ezek. 38–39; Zeph. 3:8). It is synonymous with the Valley of Jehoshaphat—i.e., "Yahweh judges" (Joel 3:2, 12—H 4:2, 12; *see* Jehoshaphat, Valley of) and has been traditionally identified with the valley of the Kidron. Some, following Calvin, connect vs. 14 with vs. 13 and translate "valley of threshing" (cf. חרוץ in Isa. 28:27; Amos 1:3). W. Neil

DECK [קרש] (Ezek. 27:6); KJV BENCHES; in Gen. 6:16 תחתים שנים שלשים is translated "lower, second, and third decks" (KJV "stories"). A platform extending from side to side on a ship, serving as a covering for the space below and as a floor. Decks on early ships were often only fore and aft, because of the necessity of accommodating rowers, but a merchant ship equipped with sails might have a full-length deck.

The meaning of Ezek. 27:6*b* is not clear, one of the doubtful words being קרש. This noun, which occurs in the description of the tabernacle (Exod. 26:15, etc.), seems to mean "board" or "frame," and it is only the nautical context of Ezek. 27:1-9 which supports the meaning "deck" in vs. 6: "deck . . . inlaid with ivory" (*see* Inlay: Ships and Sailing). "Prow" has also been suggested for this word.

Noah's ark had three decks (Gen. 6:16). For a three-decked ship (a warship), see *ANEP* 106.

W. S. McCullough

DECREE [אסר, גזרה, דת, חק, חקק, טעם; δόγμα]. A public declaration or proclamation, normally set up in writing. In Isa. 10:1 the prophet refers to unjust laws, probably inscribed on stone by command of the Judean king. In later OT books (Daniel, Esther, Ezra) decrees are frequently referred to, no doubt as a result of their widespread use under the Persian Empire.

See also Law in the OT; Law in the NT.

W. J. Harrelson

***DEDAN** dē'dən [דדן]; DEDANITES —də nīts. An important commercial people which lived in NW Arabia, probably in the neighborhood of Khaibar, el-Ula, and el-Hijr (Medain Salih), not far from Teima, W of which are ruins called Daidan. Their derivation is variously given in the Bible, either as descendants of Raamah son of Cush (Gen. 10:7; I Chr. 1:9) or as the offspring of Jokshan son of Abraham and Keturah (Gen. 25:3; I Chr. 1:32). In both these cases Dedan and Sheba are regarded as brothers. This would indicate a mixed origin, as well as a wide-ranging activity along the length and breadth of the Arabian Peninsula.

The caravans of Dedan are mentioned in the Prophets (Isa. 21:13; Ezek. 38:13); in the former passage they and the caravans of Tema are warned to come to the aid of the fugitives from Kedar, a country N of them. They are reported as supplying Tyre with saddlecloths for riding (Ezek. 27:20; KJV "precious clothes for chariots"). The mention of the "sons of Dedan" in vs. 15 of the same chapter is obviously superfluous, and this should be emended to "Rhodians" (LXX, followed by RSV, "men of Rhodes"). There are also two references to a Dedan in connection with oracles against Edom (Jer. 49:8; Ezek. 25:13). Since it does not appear that Edom ever extended its territory so far to the SE, this was apparently a settlement of Dedanites in that country.

S. Cohen

DEDICATION, FEAST OF [חנכה (*hanukkah*), dedication, consecration; ὁ ἐγκαινισμός (I Macc. 4:56); ὁ καθαρισμός (II Macc. 10:5)]. A general term for a dedicatory celebration (Num. 7:10, of an offering; II Chr. 7:9, of the altar in Solomon's temple; Neh. 12:27, of the wall of Jerusalem; Ps. 30:1, of the temple); specifically, the feast of rededication of the temple, inaugurated by Judas Maccabeus (I Macc. 4:56; II Macc. 10:5; cf. φῶτα in Jos. War XII.vii.7).

Festive celebrations of dedication in Israel, especially in relation to the temple, probably date back to the era of Solomon (I Kings 8). However, it was the reconsecration of the temple in 165 B.C. by Judas the Maccabee, following its desecration by the Greeks, and particularly the dedication of the new altar (I Macc. 4:53), that occasioned the establishment of the annual Feast of Dedication, commonly known today as Hanukkah (I Macc. 4:59).

The feast lasts eight days, a fact sometimes associated with Hezekiah's purification of the temple (II Chr. 29:17). It is celebrated in winter, beginning on

the twenty-fifth of the month Chislev (John 10:22-23). Its proximity to the winter solstice has figured prominently in discussions about its possible pagan origins; but Jewish tradition rather emphatically associates the date with the precise anniversary of the dedication (I Macc. 4:54; II Macc. 10:3; Jos. Antiq. XII.vii.6).

The feast is alternately known as Lights, since the ceremonial lighting of eight candles, an additional one on each day of the feast, has figured prominently in the observance, especially since the destruction of the temple. In the Babylonian Talmud a legend about a very small quantity of temple oil that burned miraculously long, until new oil could be consecrated, serves as a warrant for the practice. In the days of the temple the joyous celebration featured the singing of the Hallel and was in some ways modeled on Booths (II Macc. 1:9; 10:6 ff). Though not a feast prescribed by the law, Hanukkah has been observed without interruption and in very recent times has come to exert a greater religious influence.

Bibliography. O. S. Rankin, *The Origins of the Festival of Hanukkah* (1930); S. Zeitlin, "Hanukkah; Origin and Its Significance," *JQR*, 29 (1938-39), 1-31. J. C. RYLAARSDAM

DEEP, THE [תהום; LXX ἄβυσσος, abyss; *alternately* πόντος, sea (Exod. 15:5); κύματα, billows (Exod. 15:8)]. A term which refers chiefly to the primeval ocean or to the waters of the Exodus (*see* WATER). The myth of CREATION is always in the background (Gen. 49:25; Deut. 33:13; Hab. 3:10).

1. In Mesopotamian literature. The Hebrew word is related to the Akkadian TIAMAT, the name of the goddess who was the dragon of the deep slain by MARDUK in the creation epic Enuma Êliš (*see* COSMOGONY). This theogony, which was apparently recited at the New Year's Festival at Babylon, began:

> When on high the heaven had not been named,
> Firm ground below had not been called by name,
> Naught but primordial Apsu, their begetter,
> (And) Mummu-Tiamat, she who bore them all
> (*ANET* 60 ff).[1]

Soon a bitter strife arose between Apsu (fresh water), Tiamat (the salt waters), and the gods their descendants. The god Ea managed to overthrow and slay Apsu, whereupon Tiamat spawned a brood of monsters to help her (cf. Job 9:13), gave the tablets of fate to Kingu her lover (cf. Enoch 81:1-3; 103:2; Rev. 5:1-8), and prepared for battle with the gods. They were dismayed, until Marduk, son of Ea, was found willing to fight her. When Tiamat opened her mouth to consume him, Marduk drove in the four winds to distend her belly, and slew her with an arrow. He split the huge body like a shellfish (flatfish?) and used half to create the sky, ordering the stars and moon. As a reward, the other gods gave him the tablets of destiny and built Babylon and the temple for Marduk, Esagila.

2. In the Ugaritic literature. The term is used:

a) Of El's dwelling place, to which various gods go

> Towards El of the Sources of the Two Floods [*nhrm*]
> In the midst of the headwaters of the Two Oceans [*thmtm*]
> (*ANET* 133; Gordon 51:IV;22, 2 Aqht:VI;48, 49:16, 2 Aqht:VI;12, 129:4, p. 166; translations in *ANET* 133, 152, 140, 152, 129, respectively).[1]

b) Of the secret love message which Baal sends to Anath:

> Message of Puissant Baal,
> . . . . . .
> Speech of tree and whisper of stone,
> Converse of heaven with earth,
> E'en of the deeps [*thmt*] with the stars
> (*ANET* 136; Gordon 'nt:III:22, 'nt:IV:61).[1]

c) Simply of the ocean, beside which El lives, "edge of the sea [*yam*] and . . . edge of the ocean [*thm*]" (Gordon 52:30; translation from T. H. Gaster, *Thespis*, p. 249: "The Poem of Dawn and Sunset," B III).

d) Most interestingly in Daniel's prediction of drought:

> Seven years shall Baal fail,
> Eight the Rider of the Clouds.
> No dew,
> No rain;
> No welling-up of the deep [*šr'. thmtm*],
> No sweetness of Baal's voice
> (*ANET* 153; Gordon 1 Aqht: 45; and note the suggested emendation on II Sam. 1:21, which the RSV has adopted).[1]

3. In the OT. The word תהום designates:

a) Most frequently, the primeval waters of Creation, in which the mythical background has been suppressed, or at least in which it is not prominent (see Gen. 1:2, the basic text). Note especially the use in Job 38:16, 30; Ps. 104:6; Prov. 8:24, 27-28. Less clear are Pss. 33:7; 36:6; 78:15 (in the wider context of the Exodus); Amos 7:4.

b) The waters of the Exodus, which God controls for Israel (Exod. 15:5, 8 [note the unusual phrase: "The deeps congealed in the heart of the sea"]; Ps. 106:9; Isa. 63:13).

c) The FLOOD, a reversal of Creation (Gen. 7:11; 8:2; Prov. 3:20).

d) Sometimes simply deep waters, normally impassable to men and horses (Ps. 135:6); in a good sense, waters which irrigate the land (Deut. 8:7 [note RSV "springs"!]; Ezek. 31:4; cf. 34:18); storms at sea (Ps. 107:26; cf. vs. 24); the deep and the great waters which are to cover the island of Tyre (Ezek. 26:19; cf. 27:34).

e) The depths of the earth, apparently without reference to water (Ps. 71:20; cf. 95:4); related is the use in the individual laments of the psalmists (Ps. 42:7; Jonah 2:5; cf. Pss. 69:2, 14-15; 88:6; 130:1; Jonah 2:3 of the waters through which one must pass to arrive at the underworld).

f) Survivals of the myth of a primeval struggle between Yahweh and the forces of chaos—though in such passages other terms are preferred, like "Rahab," "Leviathan," and "Dragon," to refer to the sea monster which is subdued (Gen. 49:25; Deut. 33:13: "the deep that couches beneath"; Ps. 77:16; Hab. 3:10: the mountains and the deep are terrified at the approach of God; Job 28:14; neither Sea [ים] nor Deep [תהום] acknowledges the presence of Wisdom; Ps. 148:7: the Dragons [תנינים] and all deeps are exhorted to praise Yahweh; Leviathan makes the deep to boil like a pot [Job 41:31], so that one would

[1] J. B. Pritchard, ed., *Ancient Near Eastern Texts* (Princeton University Press; rev. ed., 1955).

think it to be hoary [vs. 32], in the long description of that monster; and finally, much of the myth terminology is used in Isa. 51:9-10:

Was it not thou that didst cut Rahab in pieces,
that didst pierce the dragon?
Was it not thou that didst dry up the sea [יָם, without the article],
the waters of the great deep [מֵי תְהוֹם רַבָּה];
that didst make the depths of the sea [מַעֲמַקֵּי־יָם] a way
for the redeemed to pass over?—

the myth has been placed in the context of the Exodus).

It is likely that the TEMPLE at Jerusalem was related closely to the creation myth, as were similar temples of chief gods of pantheons at the key cities of Eridu and Babylon (*see* BRAZEN SEA). It is well known that the temple on Mount Zion was thought to be the summit and center of the earth. Moreover, the rock on which the temple was founded is related to the Deep. The Mishna (Parah III.3) states that the temple stood over against (מִפְנֵי) the תְּהוֹם, whereas a Targ. (Ps.-Jon. to Exod. 28:30) says that the temple rock closes the "mouth of the תְּהוֹם." It is possible that the victory of Yahweh over the primeval waters and his subjugation of them under the temple rock at the time of Creation may be referred to in Ps. 29 and elsewhere.

DEER. Among the true ruminants (*pecora*) is the deer family (Cervidae), distinguished outwardly by the peculiar horns or antlers, borne only by the males (except in reindeer) and shed annually. The family consists of two subfamilies, the Moschinae and the Cervinae, the latter having no fewer than nineteen subgroups. It is claimed (*see* FAUNA § A2*eiv*) that at least three of these subgroups were known in biblical Palestine—viz., the Red Deer (*cervus elaphus*), the Fallow Deer (*dama*), and the Roe Deer (*capreolus*). It is, however, impossible to determine precisely the meanings of the various Hebrews words in the OT which appear to refer to deer; the OT writers themselves may have been rather casual in their use of such terms. Possibly אַיָּל ("hart") was the general name for any kind of deer, and it may have been applied more particularly to the Red Deer. *See* DOE; FALLOW DEER; FAWN; HART; HIND; ROE; ROEBUCK.

W. S. MCCULLOUGH

DEFILE [*Pi'el and Niph'al of* טָמֵא, make unclean, make oneself unclean (Lev. 11:43; Num. 5:3); *of* גָּאַל, pollute (Dan. 1:8); *and of* חָלַל, *properly* PROFANE, *in* Ezek. 28:7; κοινόω, *make* COMMON (Mark 7:15, 18); μιαίνω, stain (Jude 1:8); μολύνω, make filthy (Rev. 14:4)]. Literally and precisely, to make ethically or ritually unclean. *See* CLEAN AND UNCLEAN.

L. E. TOOMBS

DEGREES, SONG OF. KJV translation of the title of Pss. 120–34, שִׁיר הַמַּעֲלוֹת RSV ASCENTS, SONG OF; cf. LXX ᾠδὴ τῶν ἀναβαθμῶν). The degrees were understood to be the steps leading from the women's to the men's court in the Second Temple; on these steps the Levites sang these psalms, according to M. Middoth 2.5. J. HEMPEL

DEHAVITES dĭ hā'vīts. KJV translation of דְּהָוֵא in Ezra 4:9. According to this interpretation, the word refers to one of the groups which signed the letter sent by the inhabitants of Samaria to Artaxerxes to protest the rebuilding of Jerusalem. They have been identified with the Daoi (Herodotus I.125), a Persian tribe whose original home was near the Caspian Sea (Strabo XI.7). Probably, however, this verse should be read: "the men of Susa, that is [pointing דְּהָוֵא as *dihû'*], the Elamites" (so RSV, with the LXX). A glossator's identification of the men of Susa was later mispointed, creating a new "tribe."

R. W. CORNEY

DEKAR. KJV form of Deker. *See* BEN-DEKER.

DELAIAH dĭ lā'yə [דְּלָיָה, דְּלָיָהוּ, Y draws up (*i.e.*, saves)]; KJV DALAIAH də— in I Chr. 3:24; LADAN lā'dən [Λαδαν, Δαλαν] in I Esd. 5:37. **1.** A priest under David (I Chr. 24:18).

2. One of Jehoiakim's officers (Jer. 36:12, 25).

3. Head of a family which returned with Zerubbabel (Ezra 2:60; Neh. 7:62; I Esd. 5:37).

4. A descendant of David through Zerubbabel (I Chr. 3:24).

5. Father of a contemporary of Nehemiah (Neh. 6:10).

Bibliography. M. Noth, *Die Israelitische Personennamen* (1928), p. 180. H. H. GUTHRIE, JR.

DELILAH dĭ lī'lə [דְּלִילָה; *from* דלל, *cf.* Arab. *dallatum*, flirt]. A woman of Sorek, probably a Philistine, beloved by Samson (Judg. 16:4-22). When Samson, the hero of the tribe of Dan, repeatedly worsted the Philistines, they offered Delilah a large sum of money to "entice him, and see wherein his great strength" lay (vs. 5). After putting her off three times, Samson finally told Delilah the secret of his strength—his hair, which had never been cut (vs. 7; cf. 13:2-5). She then betrayed him to the Philistines, so that they were able to seize and imprison him. D. HARVEY

DELIVERER, THE. The principal theme of the Bible is God's deliverance of mankind from the power of sin, death, and Satan through his action in Jesus Christ; and this mighty deliverance is foreshadowed in the history of God's people Israel by his deliverance of them from such disasters as Egyptian bondage or Babylonian exile. But the English words "deliverer" and "deliverance" are not very frequent in our English versions of the Bible, the idea of deliverance being more usually expressed by other words, particularly "salvation," "redemption," and their cognates. *See* REDEEM; SALVATION.

The word "deliverer" occurs nine times in the OT. The three occurrences in Judges (3:9, 15; 18:28) refer to human deliverers sent by God, such as the "judges" themselves; the other OT passages (II Sam. 22:2; Pss. 18:2; 40:17; 70:5; 140:7; 144:2) refer to God as Deliverer. The basic idea is that of the *go'el*

or "next of kin," whose duty it is to succor his kinsman in distress, to redeem him from slavery, etc. Thus, God raises up deliverers from his people when they suffer oppression or stand in danger (Judg. 3:9, 15); but, far more daringly than this, the Israelites advanced to a conception of God as not merely sending, but actually himself becoming, their Deliverer: "I have seen the affliction of my people . . . ; and I have come down to deliver them out of the hand of the Egyptians" (Exod. 3:7-8). It is in this sense that the psalmist (in the passages cited above) thinks of God as himself the Deliverer of Israel.

In the NT, Jesus is never called "deliverer" or "redeemer." In Acts 7:35, Moses is called "deliverer." The Greek word is λυτρωτής ("ransomer," "redeemer," "liberator"), and this is its only occurrence in the NT. In Rom. 11:26, Paul quotes from Isa. 59:20: "The Deliverer will come from Zion"; the Greek is ὁ ῥυόμενος, as in the LXX.

The idea of deliverance is, of course, central to the proclamation of the NT, but the actual word is found only twice in the English versions of the NT. At Luke 4:18 the KJV has "to preach deliverance to the captives" (ἄφεσις); at Heb. 11:35 the ERV and the ASV have "others were tortured, not accepting their deliverance" (ἀπολύτρωσις); in both cases the RSV has "release." The rarity of the English word is, however, of no particular significance, because by means of a variety of synonyms the Bible teaches that God is a God of deliverance; in the words of the ERV-ASV of Ps. 68:20: "God is unto us a God of deliverances." We acknowledge this truth every time we pray: "Deliver us from evil" (Matt. 6:13).

ALAN RICHARDSON

DELOS dē'lŏs [Δῆλος]; KJV DELUS dē'ləs. A small Greek island in the Aegean Sea, three miles long and one mile wide, sacred to the god Apollo. It was important enough in ancient times to have become the rival of Athens, and during the last two centuries B.C. it became a great harbor and center of trade in the Mediterranean. It became a Roman possession, part of the province of ACHAIA, peopled largely with Roman traders after the Greek inhabitants fled to the mainland *ca.* 167, when the island was punished by Rome. After that, Rome made Delos a free port, and RHODES and CORINTH, the commercial rivals, suffered in consequence.

When SIMON MACCABEUS sent envoys to Rome in 138-137 B.C., the consul Lucius is said to have sent

25. General view of the synagogue at Delos

letters to various states, including Delos, with instructions not to fight against or injure the Jews (I Macc. 15:16-23). Probably there were a great number of Jews settled there. In the next century Delos largely lost its wealth and power when it was captured by Mithridates in his war against Rome. Even after its restoration to Rome the island did not recover its former prosperity; Rome preferred to trade directly with the East for her slaves and other merchandise, and not, as formerly, through Delos.

DELUS. KJV form of DELOS.

DEMAS dē'məs [Δημᾶς, *a shortened form of* Δημήτριος(?) *or* Δήμαρχος(?) *or* Δημάρατος(?)]. **1.** A coworker of Paul. In Philem. 24, Paul refers to Demas and others as "fellow workers" who send greetings. Demas is also mentioned in Col. 4:14 as sending greetings. In II Tim. 4:10 Timothy is asked to come to Paul because Demas, "in love with this present world," has deserted him and gone to Thessalonica. Demas has been identified by some with Demetrius of III John 12.

Bibliography. J. Chapman, *JTS,* V (1904), 357-68, 517-34.

B. H. THROCKMORTON, JR.

2. Alternate name of DYSMAS.

DEMETRIUS dĭ mē'trĭ əs [Δημήτριος; דמיטרום]. **1.** Demetrius Poliorcetes (died 283), son of Antigonus. He was defeated by Ptolemy I at Gaza in 312 B.C.

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), pp. 8, 129.

2. Demetrius I, Soter, Syrian king *ca.* 162-151 B.C. When Seleucus IV succeeded to the Syrian throne of his brother Antiochus III, the Great, his son Demetrius I was sent to Rome as a hostage (in place of Antiochus IV). Seleucus was assassinated, and Antiochus IV, Epiphanes, became the ruler. Nevertheless, Demetrius was not released. Learning of the death of Antiochus IV, Demetrius asked for his freedom, but the Roman Senate refused. He then

escaped, with the aid of Polybius, in the early summer of 162 B.C. (Polybius 31). He had learned that the people were not favorable toward Lysias, Antiochus' general. Demetrius proclaimed himself king of Syria and killed Antiochus V, Eupator, the young son of Antiochus Epiphanes, and also the general Lysias, in the late summer (I Macc. 7:1-4). Alcimus, the incumbent high priest, accused Judas Maccabeus before Demetrius, who thereupon sent Bacchides with armed expeditions to take revenge upon the Judeans.

Judas Maccabeus then made a treaty with Rome, and Demetrius was warned about the atrocities he perpetrated on the Jews. A second time Demetrius sent General Nicanor to exterminate the people, but on the thirteenth day of Adar (152 B.C.) Nicanor's army was routed (I Macc. 7:26 ff). When Demetrius heard that Nicanor had fallen, he again sent Bacchides and Alcimus the high priest to rout the Jews. In this battle Judas Maccabeus fell (9:1 ff).

When Alexander Balas was battling Demetrius, the latter sent a letter to Jonathan (the Hasmonean) seeking peace with him and giving him authority. But Alexander Balas, hearing of this, appointed Jonathan high priest. Demetrius was distressed in this anticipation and wrote to Jonathan, asking for continued friendship, freeing the people from poll and crown taxes. He promised them many concessions, to obey their own laws, granting them immunity on the holidays. He even suggested giving Ptolemais (Acra) to the sanctuary of Jerusalem as a gift—but this was in the hands of Alexander Balas. He also declared that the citadel in Jerusalem and three districts from Samaria be given over to the high priest and that the temple be regarded as an asylum. But Jonathan did not trust him; he rather favored Alexander Balas. The latter fought with Demetrius and finally prevailed over him. Demetrius' horse fell in a swamp, and there Demetrius was killed in 151 B.C. (I Macc. 10:50; Jos. Antiq. XIII.iii.4).

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), pp. 16 ff; S. Tedesche and S. Zeitlin, *The First Book of Maccabees* (1950), pp. 173-77, 261.

3. Demetrius II, Nicator (146-139 B.C.), son of Demetrius I. He came from Crete to Syria, and Alexander Balas was disturbed. Demetrius appointed Apollonius as governor of Syria to subject Judea, and the latter provoked Jonathan to battle with him. But the Judeans—Jonathan and Simon—defeated him. Meanwhile Alexander Balas had become the son-in-law of Ptolemy Philometor VI of Egypt. The latter discovered that his son-in-law plotted against him, and, accordingly, he sent envoys to King Demetrius asking for a pact and promising him that he would reign over his father's kingdom. Demetrius II made an alliance with Ptolemy and received Cleopatra as wife. In 147-146 B.C., Demetrius became king of Syria (I Macc. 11 ff).

Hearing of Jonathan's siege of Jerusalem, Demetrius II asked him to meet him at Ptolemais and confirmed upon him the high priesthood. Jonathan did not lift the siege; however, instead of punishing him, Demetrius II conferred upon him the title "friend of the king." In a letter Demetrius II reaffirmed the privileges granted by his father, Demetrius I, and exempted from dues all Jews who sent sacrifices to Jerusalem.

Seeing that the land was at peace, Demetrius released his soldiers, except the mercenaries, but the people turned against him. (Justin says they had contempt because of his slothfulness. Livy speaks of Demetrius' cruelty.) Seeing the helpless situation of Demetrius II, Jonathan asked that he remove the Syrian garrison in Jerusalem. Demetrius agreed and asked for Jewish troops to help fight Trypho of Syria.

Thus it came about that the Jews aided Demetrius II in Syria. But Demetrius II again proved false; he did not keep his promises and became estranged from Jonathan. Demetrius sent an army against Jonathan, but Jonathan became master of the entire country, including Damascus. Meanwhile, Trypho, by ensnaring Jonathan, killed him. Thereafter Trypho, knowing of Demetrius' cruelty, proclaimed, as his guardian, the infant son of Alexander Balas, Antiochus VI, as king.

While Trypho and Demetrius were battling, Simon the Hasmonean appealed to Demetrius II to make peace and recognize Judea as an independent state. Demetrius sent a letter confirming independence. Later Demetrius marched to Media to persuade them to help him make war against Trypho. There he was captured, exhibited as a warning, but later kindly treated by King Arsaces of Persia (Mithradates I), founder of the Persian army; and he married his sister.

While Demetrius II was in captivity in Persia, the Romans did not recognize Trypho. They also delayed recognition of Antiochus VI, brother of Demetrius, as king of Syria, thus bringing confusion into the Seleucid Dynasty.

Bibliography. E. Schürer, *History of the Jewish People in the Time of Jesus Christ* (1891), div. 1, vol. I, pp. 244 ff. R. H. Pfeiffer, *History of NT Times* (1949), pp. 17 ff.

4. Demetrius III, Eucerus, son of Antiochus Grypos. He came to the aid of the Pharisees against Alexander Janneus (88 B.C.). The Pharisees turned from him later, however, out of sentiment, to aid their own Jewish king. Some scholars see a historic allusion to him in the Dead Sea Scroll commentary on Nahum, referring to him as "[Deme]trius, the Greek king who attempted to enter Jerusalem at the advice of 'those who seek flattery.'" The first part of the name is missing.

Bibliography. Jos. Antiq. XIII.xiii.5. For Nahum text, see J. M. Allegro, *JBL*, LXXV (1956), 90.

5. An Alexandrian Jewish historian who deals with biblical chronology, seeking to show the antiquity of Israel. Josephus regards him as a pagan. Only fragments of his work remain, quoted by Josephus.

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), p. 200.

6. Demetrius of Phalerum. He was head of the library at Alexandria, according to the Letter of Aristeas. He induced Ptolemy II to obtain the translation of the Bible for the museum.

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), p. 224. S. B. HOENIG

7. A Christian leader who enjoyed the full confidence of John the Elder and was recommended by him in III John 12.

8. A silversmith at Ephesus who provoked a riot

against Paul on the ground that his Christian preaching was interfering with the sale of silver shrines of Artemis, the patron goddess of the city (Acts 19:24, 38). Any attempts to show that this Demetrius and 7 *above* are the same person, or to equate them with DEMAS, are based purely on conjecture.

F. W. GINGRICH

***DEMON, DEMONOLOGY.** In considering the question of demonology in the Bible, it must be borne in mind at the outset that the modern definition of a demon as a devil, or malign spirit, is the result only of a long development. As used by ancient writers, the word often means something far different; while, on the other hand, many of the figures of ancient belief that are today blanketed by this general designation actually bore quite distinctive names and were of a quite different character.

In the original sense, a demon may be defined broadly as an anonymous god—i.e., as a personification of one or another of those vaguer, less identifiable powers and influences that were believed to operate alongside the major deities and to condition particular circumstances and experiences. In Homer, e.g., "demon" (δαίμων) and "god" (θεός) are virtually interchangeable (*see bibliography* § 3); while the Iranian term *daeva,* which came to be appropriated to evil spirits, meant properly "spirit" in general. Such demons can be beneficent as well as harmful; indeed, where they are the latter, Homer often characterizes them expressly as noxious or bad (e.g., *Odyssey* V.396; X.64; XXIV.129); while the Babylonians and Assyrians speak similarly of both good and evil "demons" (*šēdu damqu* and *šēdu limnu; see bibliography* § 4).

To preserve the essential distinction between the original and the later meanings of the term, the Greek spelling, *daimon,* will herein be used for the original meaning.

A. In the OT
1. Daimonism
a. Daimon
b. Spirit
2. Demoniacal possession
3. "Demons" as a generic term
4. Specific demons
a. Lilith
b. Resheph
c. The midday demon
d. The vampire
e. The "faery arrow"
f. The "terror in the night"
g. Catastrophe (*Dĕbher*)
h. Qeṭeb
i. The seven evil spirits
j. The "king of terrors"
k. Azazel
5. The habitat of demons
6. Aversion of demons
B. In the Apoc. and the Pseudep.
C. In the NT
1. Pagan deities as demons
2. Demons as noxious spirits
3. Expulsion of demons
4. Names of demons
Bibliography

A. *IN THE OT.* 1. Daimonism. *a. Daimon.* The Hebrew equivalent of "demon" (*daimon*) in the original sense is simply אל or אלהים (*'ĕlōhîm*), commonly rendered "god." Thus, when an inspired man is termed "a man of *ĕlōhîm* (e.g., Deut. 33:1; I Sam. 2:27; 9:6; I Kings 13:1; 17:18; II Kings 4:7; Ps. 90:1), the meaning is virtually the same as when a Greek says that a sudden flash of insight or the recognition of an omen, or the like, is due to a θεός (god) or a *daimon* (e.g., *Odyssey* IX.339; XV.172; XIX.10, 138). The Hebrew turn of expression is, in fact, paralleled exactly in Hittite, where "man of the gods" (*siunan antuhsas*) means something like "seer," and where a verb formed from the noun "god" (viz., *siuniyant-*) means "inspire" (*see bibliography* § 5; and cf. Greek ἔνθεος). Similarly, when Rachel declares, at the birth of Naphtali, that she has been wrestling with her sister Leah "with the wrestlings of *'ĕlōhîm*" (נפתולי אלהים; Gen. 30:8), what she means is that she has been struggling with her as if possessed by a daimon. And when Balaam makes his ability to prophesy dependent on an encounter with an *'ĕlōhîm* (Num. 22:38; 23:3 [LXX, Samar.], 4), what he envisages is likewise possession by such a being (*see bibliography* § 6). By the same token, the use, in the Mari and Amarna texts and in other documents of the second millennium B.C., of the plural *ilāni,* "gods," as an alternative to the singular *ilu,* "god," reflects, *au fond,* the primitive notion that "the divine" may be conceived as a congress of daimons ("they," "the powers that be") no less than as a single cosmic entity.

b. Spirit. The power that is thus represented as a personal being can be represented also as an impersonal "influence," or spirit; for this reason daimons and spirits usually exist side by side in the primitive mind as alternative expressions of the same thing. In the OT, however—standing, as it does, at a considerable distance from the primitive—a certain fusion of the two concepts has already been effected, the spirit (רוח) being always regarded as itself emanating from a daimon (אלהים). Thus if, in one idiom, the impulse to prophesy is attributed to encounter with an *'ĕlōhîm,* or daimon (Num. 23:4), in another it is ascribed to the spirit of such a daimon, which besets, or alights upon (צלח) an individual (Num. 24:2; I Sam. 10:10; 19:23). Similarly, sickness or indisposition, which in one idiom is described as "seizure" (אחז) by a daimon (II Sam. 1:9), is said in another to be produced by an evil "spirit of a daimon" (רוח אלהים רעה), sent by Yahweh (I Sam. 16:15-16, 23). Again, guidance through danger, which, in one idiom, is portrayed as the work of a personal angel—i.e., a daimon (Exod. 23:23; 32:23)—is envisaged in another as that of a spirit (Isa. 63:14; cf. Ps. 143:10). And a "gifted" man, such as would be described by Homer as "daimonic" (δαιμόνιος), is a man "filled with the spirit of an *'ĕlōhîm*" (cf. Exod. 31:3; 35:31).

It must be recognized, however, that the word "spirit" is used in two senses. On the one hand stands the notion of spirit as identical with breath. Since the breath escapes from the body at death, the primitive mind concludes that it is but the physical manifestation of something that can exist independently of it and that simply takes up temporary lodging within it as its vital principle and the determinant of its personality. This in turn breeds the notion of

"unembodied personalities," which spirits, as alternatives to daimons, really are.

On the other hand, however, the word "spirit" also carries the meaning of "wind"; and the notion of spirits that operate on human affairs arises also from the analogy of winds that blow where they list and that can waft either good or evil toward men. The idea is well illustrated by our own phrase "the winds of fortune," but it is attested specifically in the ancient Near East by the Akkadian expressions "good wind" (*šarku ṭabu*) and "bad wind" (*šarku limnu*) in the sense respectively of "blessing" and "misfortune" (*see bibliography* § 7), and by the widespread oriental belief that diseases are borne by the winds (*see bibliography* § 8).

With the development of monotheism—i.e., when the idea of a single cosmic deity supersedes that of a congress of controlling powers—daimons and spirits tend to become subordinated to that central figure and regarded as his ministers or "angels" (envoys); or else they coalesce into a single "holy spirit" which emanates from him, represents the totality of his ergative powers, and serves to diffuse his personality throughout the world of his creation.

2. Demoniacal possession. From the standpoint of religious psychology, daimonism represents an externalization of human experiences. Feelings and sensations, moods and impulses, even physical conditions, which might otherwise be described as obtaining autonomously *within* a man, are portrayed, on this basis, as outer forces working *upon* him. Aspiration becomes inspiration; ecstasy, rapture (i.e., a state of being "seized"); insight, revelation. Emotion becomes, so to speak, *im*motion; that which is *pro*jected out of the self, that which is *in*jected into it; the flight of imagination, a flight inward, not outward, an invasion rather than an escape. In the language of daimonism, therefore, all such experiences are represented as visitations—i.e., as actions of an external power, rather than as internal psychic states. In this idiom, e.g., an ecstatic is not a man who leaps (lit., "stands") outside his normalcy, but one upon whom a spirit has leapt (צלח; e.g., Judg. 14:6; I Sam. 10:6; 11:6). Terror is not something that issues out of a man's inner self, but something by which that inner self is seized or gripped (אחז; e.g., Exod. 15:14; Job 21:6; Ps. 48:7; Isa. 33:14). Excitement is not a spontaneous psychic spasm, but a blow from an external spirit (פעם; Judg. 13:25; Ps. 77:5). Disease is not an organic disorder but is due to the bearing down of a daimonic hand (יד יהוה; Exod. 9:3; cf. Sumerian ŠU DINGIR.RA; Akkadian *qât ili*, in the sense of "demonic assault"), or again to "seizure" (II Sam. 1:9; cf. also Talmud Shab. 151*b;* Yom. 83*a*, 84*a;* Akkadian demon *Aḫḫazu*).

A particularly arresting illustration of this concept is afforded by the description, in Isa. 53:4, of the diseased and disfigured "suffering servant" as "one struck by an *'elōhîm* [מכה אלהים; RSV 'smitten by God'] and afflicted." The expression finds a perfect parallel in Hittite, where the term *siuniyahh-*, formed from the noun *siunas*, "god," means "to be visited with sickness"; and likewise in the Arabic *majnun* (lit., "jinn-struck"), in the sense of "demented." Indeed, when we ourselves speak of a man as stricken by disease or as awe-struck or love-struck, we are employing, albeit unconsciously, the essential language of daimonism; the daimon is the assumed striker.

Basically, of course, this distinction between the objective and the subjective approaches to experience amounts only to looking at the same thing from opposite ends of the mental telescope. It is a formal, rather than a substantive, distinction; and the primitive mind is, indeed, by no means unable to turn the telescope the other way around. Accordingly, there is often a perceptible undercurrent of ambiguity in speaking of spirits, and, with the progressive refinement of religious thought and psychological insight, these tend more and more to be transformed from outright external agents to mere personifications of inward psychic states. In other words, men begin to speak of the troubled spirit rather than of the spirit that troubles. This ambiguity, or rather ambivalence of expression, is especially evident in the Bible, where it is not always absolutely clear whether the spirit is envisaged as that which operates or that which is operated upon.

3. "Demons" as a generic term. In the LXX and the Vulg., and hence in our English versions, the term "demons" (δαιμόνια, *daemonia, daemones*) is used to render the Hebrew words שדים (Deut. 32:17; Ps. 106:37) and שעירים (Lev. 17:7; II Chr. 11:15 [Vulg.; but LXX μάταια]), which denote objects of pagan worship. In all cases, these are mentioned as being actually cultivated by recalcitrant Israelites. It is probable, therefore, that to the translators the term δαιμόνια ("demons") meant in such contexts more than merely "heathen deities," and was intended to convey at the same time the opprobrious nuance of "bogeys." The Hebrew words, however, possess a specific rather than a generic sense.

a) שד, though it became in postbiblical Hebrew a common term for "malign spirit," is simply the Akkadian *šêdu*, "protective (or adverse) daimon," usually represented as a winged bull or colossus.

b) שעירים means properly "hairy ones" and refers to a particular class of genies or sprites, analogous to the hirsute demons with which Arabic popular fancy peoples desert places and ruins (*see bibliography* § 9)—a notion which finds a further parallel in the Teutonic *scrat* (*see bibliography* § 9*a*).

(The ancient versions see a further reference to these demonic beings in Isa. 13:21; 34:14, where they are said to gambol in desolate cities; while KJV-RSV even go so far as there to render "satyrs." Since, however, the word is conjoined with "ostriches," "wild beasts" and "hyenas" [if also with LILITH], it is at least equally probable that the prophet was using it in the normal sense of "wild goats" or "he-goats," as rendered by some translators.)

4. Specific demons. Concerning demons in the modern sense—viz., as malign spiritual beings—two fundamental considerations must first be mentioned:

a) Demons often survive as figures of speech (e.g., "gremlins") long after they have ceased to be figures of belief. Accordingly, the mention of a demon's name in a scriptural text is no automatic testimony to living belief in him.

b) Although demons are not in themselves personifications of evils, but only of the forces supposed to cause them, they tend often to be named for those

evils (e.g., the Mesopotamian *Ṭîû*, "Headache"), and this renders it difficult to determine in particular contexts whether a word is being used as a common noun or as the name of a corresponding demon. In such an expression, e.g., as "Cramp has seized me" (אחזני השבץ; II Sam. 1:9; RSV "Anguish has seized me"), it is a delicate matter to decide whether "cramp" is to be understood physically or as the name of a demon, albeit attenuated to a mere figure of speech.

A number of specific demons known from other ancient Near Eastern sources or identifiable from parallels in other cultures are, indeed, mentioned in the OT. All the references to them occur, however, in poetic passages, and it is therefore open to question whether they are really anything more than mere figures of speech—traditional *façons de parler*.

a. Lilith (לילית; LXX ὀνοκένταυρος; Vulg. *Lamia;* "the night hag"; Isa. 34:14). Lilith is the Akkadian *lilîtu*, female counterpart of a type of demon called *lilû*. In Mesopotamian texts she appears primarily as the *succuba*, who tempts men in sexual dreams, and she is quite distinct from the child-stealing hag, who is known as Lamashtu. As early, however, as the eighth century B.C.—as attested by a Canaanite magical plaque from Arslan Tash in the Plain of Seruj—the two tended to be confused in the popular mind; and Lilith became, as in later Jewish folklore, an analogue of the classical Lamia, Empousa, and Gello, and of such figures of European belief as Frau Holle, Berchta, and the like (*see bibliography* § 10). She is depicted by Isaiah as haunting desolate places in company with such unclean birds as the kite, pelican, and owl, and with such ghoulish beasts as wildcats and jackals. The association with winged creatures finds a parallel in the widespread identification of the child-stealing beldam with the screech owl (Latin *strix;* cf. Ovid *Fasti* VI.131-36). In the Arslan Tash Inscription she is styled "the flying one" (עפתא), and in later Jewish folklore is known also as Broxa, which is the Portuguese *broxa*, "nightjar," and as P-ṭ-r-ô-t-â (פטרותא), which is the Greek πτερωτή, "winged." Similarly, her association with ghoulish beasts is well illustrated by the fact that on the aforementioned plaque from Arslan Tash she is, indeed, portrayed also as a wolf swallowing a child, while in Akkadian texts the analogous Lamashtu is called "she-wolf" (*barbarat*), and in ancient Greece the child-stealing witch was sometimes known as Mormolukeion—i.e., "Bogey-*wolf*" (Aristophanes *Thesmophoriazusae* 417; Plato *Phaedo* 77E).

The name derives from the Sumerian *lil*, "wind" (cf. "spirit"), and has no connection with לִיל, "night," as was formerly supposed.

b. Resheph (רשף; Deut. 32:24; Pss. 76:3—H 76:4; 78:48; Song of S. 8:6; Hab. 3:5). Resheph (Rašāp[?]) was the Canaanite god of plague and pestilence, and is attested in native documents from Mari, Ugarit, Zenjirli, Karatepe, Cyprus, and Carthage from *ca.* 1800 B.C. until 350 B.C., and in Egyptian sources dating back to the Late Middle Kingdom. In the Ugaritic Poem of K-r-t (A i, 18-19), a violent death is described as "being ingathered by Rašap" (*yitsp Ršp*); while in a description of one of his campaigns, Amen-hotep II boasts that he "strode across the stream with the fury of a Rašap" (*ANET* 245*b*). The god is associated both on Egyptian stele (*ANEP* 473) and in the Ugaritic texts (*RŠ* 1929, i.7; iii.6; Krt B, ii.6) with the war-goddess 'Anat, and in late Phoenician-Greek bilingual inscriptions from Cyprus is equated with Apollo, doubtless in the latter's role as a plague-god (cf. *Iliad* I.43-54).

In Hab. 3:5 Resheph is paired with *Débher*, "Catastrophe" (*see* § A4*g below*), as an attendant upon Yahweh when the latter takes to the warpath. The picture is based on the ancient notion that major gods are escorted by two divine bodyguards. Homer, e.g., describes both Arês and Phoibos as being flanked by the demons Deimos, "Dread," and Phobos, "Fear" (*Iliad* IV.440; XV.119); while in the Babylonian story of the Flood (Gilgamesh 11.100), Adad is similarly attended by Šullat and Ḫaniš (*see bibliography* § 11). Analogous also are the pair Tras ("tremor") and Strakh ("terror") of modern Bohemian folklore (*see bibliography* § 12).

The name Resheph seems sometimes to be used by metonymy in the sense of "searing flame." In Ps. 78:48, Yahweh is said to have delivered the livestock of the Egyptians to hail and their cattle to "the Reshephs" (LXX τῷ πυρί; Vulg. *igni;* cf. Egyptian *ršpw*); and in Song of S. 8:6 the flames of love are described as "fiery Reshephs" (Vulg. *lampades*). By similar metonymy, whizzing arrows are pictured in Ps. 76:3—H 76:4 as "Reshephs of the bow"—i.e., virtually, "demon shafts." This is perhaps illustrated by the Egyptian expression *ḫpš bn ršf* ("spear, son of Resheph"), denoting a lance (G. Michaelidis, *ASAE* 47 [1947], 47-73).

Lastly, in Job 5:7 occurs the statement that man is born to trouble, "and the sons of Resheph fly aloft" (ובני רשף יגביהו עוף). This is commonly rendered: "as the sparks fly upward," but the rendering distorts the true sense. What the poet is really saying, in the language of a traditional proverb, is that man is beset with trouble from all quarters; not only does it seem to spring from the very dust and sprout from the very soil (vs. 6: יצא מעפר און [cf. Amarna *kî lâ*] כי לא יצמח עמל [=כולא]מאדמה ומ), but over his head the demonic coterie of Resheph seems ever to be hovering. The reference is to the fact that plague-gods are often represented as birds of carrion. Nergal, the Mesopotamian counterpart of Resheph, e.g., is portrayed with a vulture's head. (It is such a concept that the LXX evidently had in mind when they rendered "sons of Resheph" as "fledglings of the vulture" [νεοσσοὶ γυπός]—an interpretation adopted substantially by Aq., Symm., Vulg., Syr., and Targ. The same notion also underlies the translation of Resheph [רשף] by "birds," which is adopted by LXX, Vulg., and Targ. Jon. in Deut. 32:24.)

The name Resheph is best explained by the Akkadian *rašbu* and *rašubbu*, "frightful," an epithet applied to several gods, including (significantly) Girra, the god of fire and pestilence (Maqlu, II.109; III. 182). It is believed that the word meant originally "glowing," or perhaps "flickering" (*see bibliography* § 13), and this would readily account for the use of the name as a synonym for "fire."

The versions represent variant traditions concerning the interpretation of the term, adhering in some cases to the association of Resheph with winged creatures, in others with fire, and in yet others resorting to mere paraphrase. Especially curious is the LXX rendering of Hab. 3:5: ויצא רשף לרגליו ("and Resheph

went forth at his feet") as: "and he will go forth with his feet in fetters" (καὶ ἐξελεύσετοι ἐν πεδίλοις οἱ πόδες αὐτοῦ). This, it may be suggested, is due to fanciful combination of the word with the verbal root represented by Arabic *rasāfa*, "to walk with hobbled feet."

Besides these clear cases there are several passages of the OT which may likewise contain references to demons but where the possibility can less certainly be eliminated that the relevant terms are not simply common nouns, without personification. Such more "ambiguous" demons are the following:

c. The midday demon (קטב ישוד צהרים; LXX δαιμόνιον μεσήμβρινον [reading ושד צהרים]; Vulg. *daemonium meridianum;* "the destruction that wastes at noonday"; Ps. 91:6). This is the demon responsible for the overpowering noonday heat, which can cause sunstroke or dizzy spells. Such a demon was recognized also in ancient Greece, where it was popularly identified with Pan (Theocritus I.15) or with Artemis-Hecate (Lucian *Philopseudês* 22). It is likewise recognized in modern Greece, in Italy, among Slavonic peoples, in Teutonic folklore, and in many other parts of the world. *See bibliography* § 14.

d. The vampire (עלוקה; Prov. 30:15). The Hebrew original of Prov. 30:15 speaks of a creature who has two (LXX; Syr. three) greedy and insatiable daughters. The cognate Arabic, Aramaic, and Syriac words mean "leech, limpet" (from עלק, "cling"), and this rendering is adopted by the LXX (βδέλλη), the Vulg. (*Sanguisugae*), and the English versions. In Arabic, however, the word *'Aulaq* also bears the specific meaning of "vampire, ghoul"; and the reference to the two (or three) greedy daughters enhances the probability that there is here an allusion to such a demon.

port with the fairly universal custom of regarding the escorts of bride and groom as a bodyguard against hovering demons. Often, in fact, they shoot arrows, fire shots, or crack whips to keep the fell spirits at bay (*see bibliography* § 17). In this case, the allusion might be to a kind of kobold or hobgoblin.

g. Catastrophe (דבר, *Débher*). In accordance with what has been said above (§ A4*b*) about the belief that divine attendants accompany major gods on their expeditions, it is probable that when Habakkuk speaks (3:5) of *Débher's* marching along with Resheph at the side of Yahweh, he is not using the word as a common noun but in a personified sense, as the name of a demon. Similarly, when *Débher* that "stalks in darkness" is associated, in Ps. 91:5-6, with the "faery arrow" and the midday demon, it is probable that it is again personified.

The name *Débher* derives from a root meaning properly "cast prone" (cf. Pss. 18:48; 47:4; cf. also Akkadian *duppuru,* "thrust forward"), and is thus an approximate parallel to Greek καταστροφή, "catastrophe." (The conventional rendering, "pestilence," is inaccurate.)

h. Qeṭeb (קטב). This demon is conjoined in Deut. 32:24 (LXX ὀπισθότων) with Resheph; while in both Ps. 91:6 (LXX σύμπτωμα); Hos. 13:14 (LXX κέντρον) the word stands parallel, as a common noun, to *débher,* "catastrophe." The name derives from the root קטב (cognate, קטף), "cut off," and thus finds an interesting parallel in that of Namtar—from Sumerian *tar,* "cut"—the Mesopotamian demon of plague and henchman of Nergal.

In Isa. 28:2 the champion (or, with LXX, the wrath) of Yahweh is likened to a "storm of hail, a *qeṭeb*-like [RSV 'destroying'] tempest," whence it may perhaps be concluded that the demon was regarded

best understood as a folkloristic allusion to the demonic king of the nether world. This may be pertinently illustrated by the fact that Nergal, the lord of that realm in Babylonian mythology, is indeed styled "King of the Terrible Place" (*Lugal-ḫus-ki-a*), and the realm itself "the terrible house" (*eš ḫuluḫ; see bibliography* § 20). Comparable also is the description of Pluto (Dis) as *rex tremendus* in Vergil *Georgica* IV.469. By this interpretation, it may be added, the real point of the verse becomes clear; the word rendered "is brought" (lit., "Thou mayest as well bring him") properly refers to solemn and ceremonious procession (cf. II Sam. 6:13; cf. especially Jer. 10:5); hence, what is implied is that the wicked man, hoping ever for social advancement, finds himself in the end indeed "presented at court"—but at the court of Hades!

k. Azazel. In Lev. 16:8, 10, 26, the scapegoat dispatched on the Day of Atonement is said to be consigned "to עזאזל." Most modern commentators, and a few medieval ones (e.g., Menahem ibn Saruk) take this to be the name of a demon inhabiting the desert. This interpretation, however, is open to question. On the whole subject, *see* AZAZEL.

5. The habitat of demons. Demons inhabit waste places and ruins. One of their favorite haunts is the desert (Lev. 16:10; Isa. 13:21; 33:14; *see bibliography*). The idea recurs in Mesopotamian sources (e.g., Utukkê Limnûti Tablets, III.29, 36), and likewise in pre-Islamic Arabic folklore. In the Ugaritic texts, demonic animals appointed by El to lure Baal to his doom are born in the desert (Ras Shamra 75, i.20-32), and in Iranian belief, the evil spirits (*daevas*) are sometimes said to haunt the wild regions of Gilan and Mazanderan (*Vendidad* VIII.31-32). Similarly, in the NT (Matt. 12:43; Luke 4:1-2), Satan tempts Jesus in the wilderness; and the basic notion is, in fact, fairly universal (*see bibliography* § 21). The idea is rooted, of course, in the peril, eeriness, and unpredictability of life in the wilderness—a situation which, in terms of daimonism, makes it the natural abode of the powers that harass mankind. But there is also another factor: in ancient Semitic folklore, desert and sea were regarded as symbols of primordial chaos (*see bibliography* § 22). Accordingly, since daimons necessarily existed before the present cosmos was organized, desert and sea were commonly regarded as their natural habitat.

In accordance with this widespread belief, it has been suggested (*see bibliography* § 23) that in Job 5:23:

> You shall be in league with the stones of the field,
> and the beasts of the field shall be at peace with you,

the Hebrew words for "stones of the field"—viz., אבני השדה—should be emended to the very similar אדני השדה, "*lords* of the field," in reference to the demonic spirits of the wild.

6. Aversion of demons. Certain of the cultic usages of the Hebrews seem to go back to primitive measures for averting demons. Thus, the bells on the robe of the high priest, the tinkling of which prevented his death when he entered the holy of holies (Exod. 28:35), have been plausibly explained as a relic of the world-wide practice of forefending evil spirits by means of noise, especially the ringing of bells (*see bibliography* § 24). Analogous would be the blowing of the ram's horn at the beginning of the month and on sacred occasions (*see bibliography* § 25).

The fumigation performed by the high priest on the Day of Atonement (Lev. 16:12-13) was probably also, in origin, an apotropaic device to expel demons at the beginning of the agricultural year; for this is the standard procedure in many parts of the world (*see bibliography* § 26). Note especially that it is by such means that the demon Asmodeus is exorcised in the book of Tobit (6:7).

To the same order, too, belongs the practice of smearing doorpost and lintel with sacrificial blood at the beginning of the barley harvest in spring (Exod. 12:7). To be sure, the practice was rationalized by the Israelites (or by the codifiers of their law) on historical lines, but even in this later rationalization it was still remembered that the primary purpose was to avert the entry of the demon of plague into the home (vs. 13). The sacrificial blood was, in all probability, a token of the commensal bond which united god and community and the display of which therefore served to guarantee his protection and scare away hostile spirits. The usage has extensive parallels among modern Bedouin tribes, as also among the Druzes and Nosairis and among the Kurds living near Ain Kalife. It likewise forms part of the statutory New Year rites in Madagascar (*see bibliography* § 27).

Again, the practice of wearing a blue cord on the hem of one's garment (Num. 15:38), though reinterpreted in the Israelitic legislation, was, in all likelihood, originally an apotropaic device against demons; for blue is credited with this power in many parts of the world. In the Hittite-Hurrian story of Kessi (*KUB* XVII.1; XXXIII.121), that hero's mother gives him blue wool to carry as an amulet on a hunting expedition (III.25). Similarly, in some parts of Germany, the lock of the door is bound with blue threads after the birth of a child, to prevent the entry of evil spirits. *See bibliography* § 28.

Lastly, the commandment to bind the words of God upon the hand, and to let them be as "frontlets" (טוטפות) between the eyes, and to place them also on the doorposts (מזוזות) of houses and on gates (Deut. 6:8; 11:19), doubtless alludes—if only figuratively (cf. Exod. 13:16; Prov. 7:3)—to the widespread custom of wearing amuletic fillets (cf. Aramaic טוטפתא, "bracelet") and of affixing inscriptions against demons at the entrances of houses (see Driver, ICC, on Deut. 6:8), The LXX, conscious of this reference, significantly renders טוטפות ("frontlets") by φυλακτήρια—i.e., amulets.

B. ***IN THE APOC. AND THE PSEUDEP.*** During the postexilic and intertestamental periods, the conception of demons, as of angels (*see* ANGEL), was greatly influenced by the infiltration of Iranian ideas. The principal effect of this was to turn the daimons into devils—i.e., to transform them from anonymous gods into distinctive forces of evil, whose function was not only to inflict misfortune and disaster but also deliberately to seduce mankind from an ordered and profitable mode of life. In classic Mazdean doctrine, the world, though ultimately subject to the supreme god, Ahura-Mazda, is in actual fact a battleground between the adherents of the Good Mind and those of his rival, the Spirit of Perversity and Deception; and for all practical purposes, demons (*daevas*) are the spiritual legions and ministers of the latter. They

are said, in fact, to be the offspring of the Evil Mind (Yasna 30.5; 32.3) and to be in compact with the archfiend, Angra Mainyu (30.6).

Popular Judaism adopted this picture by thinking of daimons as a distinct order of malign spirits, subject to SATAN, or BELIAL, and destined ultimately to be overthrown by Yahweh and his partisans as a prelude to the "renewal of the world," or the new creation. The idea is articulated most clearly in the Testaments of the Twelve Patriarchs (Test. Asher 1:9; 6:2; Test. Benj. 5:2; Test. Dan 1:6-7; Test. Iss. 4:4; Test. Judah 13:3; 14:2; Test. Levi 19:1; Test. Naph. 2:6; 3:1; Test. Reuben 4:7; Test. Simeon 5:3; Test. Zeb. 9:8) and in the Dead Sea Scrolls. A passage in the Manual of Discipline (III.22-24), e.g., states explicitly that all mortal plagues and tribulations stem from the Spirit of Perversity (רוח העול=the Iranian Druj), and that the "spirits in his lot" (רוחי גורלו=the Iranian *daevas*) are bent ever on causing the sons of light and righteousness (בני אור and בני צדק=the Iranian *ashavanō*) to stumble (cf. also 1QS IV.12-13). In similar vein, the book of Jubilees speaks (10:1-14; 11:1-5; 19:28) of the power of Mastemah, the genius of hostility, and likewise (1:20) of the archfiend Beliar (i.e., Belial), who dominates men and seeks ever to "obstruct" them. Elsewhere—e.g., in the Dead Sea Hymns (fragments IV.6; XLV.3)—these fell beings are designated "satans"—i.e., obstructors (שטן), or "corruptors" (משחית); and in the War of the Sons of Light and the Sons of Darkness their final discomfiture, along with that of their overlord and of their earthly confederates (=the Iranian *dregvanots*), is luridly described.

This popular conception had, however, to face competition at the hands of the "orthodox" tradition, which saw in even such qualified dualism a challenge to the monotheistic supremacy of Yahweh. Orthodoxy, for its part, felt obliged to furnish an alternative explanation of the ills to which flesh and spirit are heirs; and this it did by means of two variant theories. The one theory substituted for the distinct and rival hosts of Satan (or Belial) a special order of "angels of destruction" (מלאכי חבלה), who were themselves the emissaries of Yahweh, appointed by him to execute condign punishment on sinners and heathen. They were known also as "agents of vengeance," and were identified with the controlling genii of adverse natural phenomena. Ecclus. 39:28-31 depicts them, e.g., as the agents of fire, hail, famine, and death (or plague; cf. Aramaic מותנא), and, according to the Genizah Hebrew and the Syriac versions, as stored by God in promptuaries "against the time when they are needed." So, too, in Test. Levi 3:2, fire, snow, and ice are described as "spirits of retribution, for vengeance upon men."

The other theory, presented most fully in Enoch, turned the devils into apostatic angels, ministers of Yahweh who had rebelled against him, descended to earth, and wrought mischief among men (cf. Gen. 6:1-4; Ezek. 28:13-17) and who, by reason at once of their disobedience and of the pollution which they had encountered, had disqualified themselves from restoration to the courts of heaven. Their ultimate fate, it was said, would be destruction in fire.

Moreover, in order more closely to align the concept with traditional, "normative" teaching, the ringleader of the demons was identified explicitly with an OT character. The favorite candidates for this role were: (*a*) SATAN, "the Obstructor," already familiar from the book of Job and the prophecies of Zechariah, and a neat Jewish substitute for the Iranian Druj; (*b*) Mastemah (משטמה), a personification of the Hebrew term for "hostility, obstruction," employed in Hos. 9:7; (*c*) BELIAL, a word which occurs frequently in OT in the sense of "worthless"; and (*d*) AZAZEL (variously transmogrified), the desert demon—as the name was interpreted—of the Atonement ritual (Lev. 16:8, 10, 23).

In the book of Tobit (3:8, 17), a specific demon named Asmodeus is named as a kind of male counterpart of the *succuba*. This name recurs in the Babylonian Talmud (Pes. 110*a*) and in later Jewish literature, but it is uncertain whether it is simply a concoction from the Hebrew *sh-m-d*, "destroy, blight," and thus a mere variant of the demonic name Shamedon, which appears in Palestinian *midrashim*, or whether it represents an Iranian **Aeshma daeva*—i.e., the well-known Iranian demon Aeshma.

C. *IN THE NT.* The NT conception of demons is, in general, identical with that which obtains in the apocryphal and pseudepigraphic literature, the Dead Sea Scrolls, and the earlier strata of the Talmud. The existence of demons, as agents of all manner of ills, is taken for granted. They continue to be regarded as the ministers of Satan or Belial (also called BEELZEBUL [Matt. 10:25; 12:24, 27; Mark 3:22; Luke 11:15, 18-19]), and they are destined, as in Enoch, to discomfiture in a final conflict with the forces of righteousness, and thereafter to punishment in eternal fire. There is, however, an important advance on earlier ideas concerning man's relations with them. As in Iranian teaching and in the Dead Sea Scrolls, the faithful, it is held, belong necessarily to the "children of light" and are thus part of the army of God, supported by him and his angels against the princes of darkness. But they are armed also by the special redemptive power communicated to his apostles by the incarnate God. The authority of the Godhead, with which he was himself invested when he walked among them as the Son of man, is transmitted by grace to those diffusers of his message; and the unclean spirits must needs obey it, once it is invoked against them. Moreover, the subjection of men to demons is itself merely the result of their own refusal to accept such redemption and of their own obstinate disobedience of God's law.

The term δαιμόνια ("demons"), it should be added, is employed in the NT in all the various senses discussed above.

1. Pagan deities as demons. In a few passages (Acts 17:18; I Cor. 10:20; Rev. 9:20), δαιμόνια means simply "pagan deities." A particularly interesting example of this usage occurs in I Cor. 10:20, where the faithful are admonished that they who partake of the Lord's table cannot also partake of the "table of demons." That the word here means "pagan deities," rather than "devils," is shown clearly by the fact that the expression is simply an extension in a general sense of the prophet Isaiah's more specific allusion (65:11) to apostates who "forsake the LORD" and "set a table for Gad" (RSV "Fortune"), the Canaanite god of fortune. The word "Gad," it may be added, is actually rendered δαιμόνιον by the LXX.

Nevertheless, the question may be raised—even if it cannot be answered—whether in such contexts δαιμόνια is merely a pejorative term ("bogeys") or indeed implies—as the church tended subsequently to interpret it—a distinct order of suprahuman beings, opposed to the rule of God, but courted and cultivated by the heathen.

2. Demons as noxious spirits. More commonly, the term δαιμόνια is used to denote "unclean spirits" (πνεύματα ἀκάθαρτα; cf. Luke 8:29; Acts 5:16; 8:7; etc.)—analogous to the Talmudic "spirit of catalepsy" (רוח צרדה; Pes. 111*b*), "spirit of delirium" (רוח חזזית; J.T. Yom. 45*b*), or "spirit of melancholy" (רוח קרדיקום [καρδιακός]; J.T. Giṭ. 48*c*)—which "enter into" a man (Luke 8:30; cf. Jos. War VIII.vi.3), "trouble" (ὀχλεῖν; Acts 5:16) or "overtake" him (καταλαμβάνειν; Mark 9:18), or which a man "possesses" (ἔχειν; Luke 4:33), and which produce in him disorders either physical (Matt. 4:24; 8:16, 28; 9:32; 12:22; Mark 9:18; Luke 11:14; 13:11) or psychic (Matt. 11:18; Luke 4:33; John 10:19-21). No very clear distinction is drawn between the "demoniac" (δαιμονιζόμενος) and the diseased, though it is perhaps significant that in some passages (Matt. 4:24; Mark 1:32; Acts 5:16; 8:7; 10:38) the former is, indeed, specified *in addition to* the latter. (In Matt. 4:24; 17:15, an epileptic is described as "moon-struck, lunatic" [σεληνιαζόμενος], but this harks back to ancient notions concerning the physical influence of the moon, and, though usually so classified, does not really belong within the category of demonology.)

3. Expulsion of demons. Demons are expelled primarily by invoking against them the superior name of God (Matt. 7:22). This, of course, is standard practice everywhere and is rooted in the notion that the name is not simply a verbal appellation but an integral part of the personality, and hence of the power and "virtue," of him who bears it (*see bibliography* § 29). It is particularly well illustrated in our field by the Jewish popular practice of beginning magical incantations against demons with the words: "I conjure you by the Name" (אשביע עליך בשם) and of wearing amulets inscribed therewith. The idea is anticipated in Ps. 118:12, where the loyal Israelite "mows down" his enemies by the name of Yahweh (בשם יהוה כי אמילם), and in Ps. 20:7—H 20:6, where he is said, on going into battle, to employ that name as a figurative banner (ובשם אלהינו נדגול—a passage misread and misinterpreted in both LXX and RSV!). Moreover, the words of the priestly benediction (Num. 6:27): "They [shall] put my name upon the people of Israel, and I will bless them," were anciently interpreted—as they still are by the Samaritans (*see bibliography* § 30)—as referring to its amuletic properties.

On the other hand, it should be noted—though the fact may be purely accidental—that the verb "exorcise" (ἐξορκίζειν)—i.e., "expel by conjuration"—is itself nowhere employed in the NT to describe Jesus' casting out of demons; and the corresponding noun (ἐξορκισταί) is applied only in an opprobrious sense to certain itinerant shamans who attempted to do so by invoking his name (Acts 19:13).

4. Names of demons. The only names of demons mentioned in the NT are those of the "prince of the devils" himself—viz., SATAN; BELIAL; BEELZEBUL. The Destroyer (ὁ ὀλοθρευτής), to whom allusion is made in I Cor. 10:10, is an avenging angel, not a malign spirit. The name is an exact rendering of the המשחית of II Sam. 24:16 ("the angel who was working destruction"), the corresponding verb שחת being commonly so translated by the LXX. Similarly, APOLLYON or ABADDON, the prince of the abyss (Rev. 8:11), is an angel, not a demon; the distinction is that an angel is an agent of, not a rebel against, the power of God.

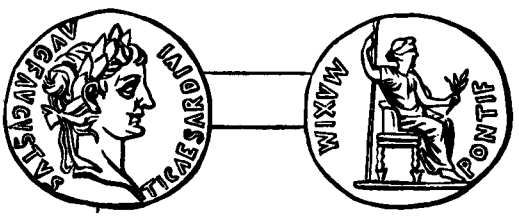
DEMONIAC dĭ mō′nĭ ăk [δαιμονιζόμενος]. One possessed by a DEMON. The term does not appear in the LXX, Josephus uses it only once (Antiq. VIII. ii.5), and rabbinism knows no corresponding expression. The term appears thirteen times in the NT (two additional times in MS D, in Luke 8:35; Acts 19:14), and it is translated "demoniac" seven times (Matt. 4:24; 8:28, 33; 9:32; 12:22; Mark 5:15-16), "possessed with/by a demon" five times (Matt. 8:16; 15:22; Mark 1:32; 5:18; Luke 8:36), and "one who has a demon" once (John 10:21).

Such a condition may be associated with a form of mental sickness (cf. Mark 5:15; Luke 8:35). Demoniacs were a class of persons healed by Jesus. They are to be distinguished from the physically ill (Matt. 4:24; 8:16; Mark 1:32), although the condition sometimes influenced such physical ailments as dumbness and blindness (Matt. 9:32; 12:22).

The most important NT reference is to the Gerasene demoniac (Matt. 8:28-34; Mark 5:1-20; Luke 8:26-39). Mark and Luke refer to a single demoniac; Matthew refers to two. The pericope especially serves to show the power of Jesus over all uncleanness and demonic might. In the Orient knowing the name of a person meant power over him, but for the demons such recognition of Jesus was their doom. Thus a demoniac is made to testify to Jesus as the Son of God. P. L. HAMMER

DEMOPHON dĕm′ə fŏn [Δημοφών] (II Macc. 12:2). One of the Palestinian district governors (στρατηγοί) in Maccabean times. He and his fellow governors, Timothy, Apollonius, and Hieronymus, "would not let [the citizens] live quietly and in peace." J. C. SWAIM



DEN OF LIONS [גב אריותא]. A term used several times in Dan. 6, with variant forms of גב and often with the word for "lions" understood. Cf. . . . כפיר ממענתו, "a young lion [cry out] from his den" (Amos 3:4); מעון אריות, "the lions' den" (KJV "dwelling"; Nah. 2:11—H 2:12); also Job 37:8; 38:40; Ps. 104: 22; Song of S. 4:8; Nah. 2:12—H 2:13.

The most famous OT story of a den of lions is in Dan. 6. In keeping with a favorite notion of ancient justice, Daniel's accusers and their families were cast into the pit once Daniel had been removed alive (vs. 24).

The lions' den, particularly in a more natural setting, was used metaphorically to represent Nineveh (Nah. 2:11-12), to suggest the grandeur and power of God's creation (Job 38:39-41), and to remind man that even such beasts are fed by God and live in ways which he has established (Ps. 104:21-22).

See also LION. H. F. BECK

DENARIUS dĭ nâr′ĭ əs [δηνάριον]; KJV PENNY. A Roman silver coin, 3.8 grams, coined from 268

26. A denarius, showing the head of Tiberius

B.C. until the time of Septimius Severus; the most frequently mentioned coin in the NT. It was a day's pay for a laborer (Matt. 20:2, 9-10, 13). Fig. DEN 26.

See also MONEY.

DENY [ἀρνέομαι, ἀπαρνέομαι, ἀντιλέγω]. In addition to its general sense (cf. Acts 4:16), "deny" has these special uses: **1.** Denying Christ, in contrast to

confessing him (Matt. 10:32-33). The Jerusalemites "denied the Holy and Righteous One" before Pilate (Acts 3:13-14). Peter was guilty of lip-denial when he declared he did not know him (Mark 14:66 ff and parallels), but his heart remained unsworn and his situation was retrievable, whereas those who deny Christ in heart will be disowned by the Son of man (Matt. 10:33=Luke 12:9; cf. II Tim. 2:12; Tit. 1:16; Jude 4=II Pet. 2:1). In I Tim. 5:8 KJV a Christian who fails to maintain his dependents has "denied the faith"; the same phrase in Rev. 2:13 denotes wavering under persecution (cf. Rev. 3:8). To deny the power of godliness (II Tim. 3:5) is to make a lip-profession of Christianity with no corresponding reality. In I John 2:22-23 denying the Father and the Son implies a denial of Christ's real humanity (cf. I John 4:2-3).

2. Denying oneself (Matt. 16:24=Mark 8:34=Luke 9:23) means the renunciation of all self-interest and personal ambition in unreserved commitment to Christ, just as he "emptied himself" in his incarnation and crucifixion (Phil. 2:7-8). But note: God "cannot deny himself" (II Tim. 2:13)—i.e., he is always true to his character and promise.

F. F. Bruce

DEPOSIT. Something committed to the charge of another. It may be for safekeeping (cf. Isa. 10:28), or it may be as a guarantee of security against a Debt.

The law of deposit in the OT is in Exod. 22:7-13 (cf. Jos. Antiq. IV.viii.38). The laws are classified by the kind of deposit left: either money and goods or animals. The Oath and Sin Offering are involved in the deposit (Lev. 6:2-4). The deposit may be stored in a Treasury, as in II Macc. 3:10-15. The Greek of the LXX emphasizes a special trust in which honesty is primary (II Macc. 9:25). So the gospel is a special deposit or "trust" granted to the disciples (I Tim. 6:20; II Tim. 1:12, 14).

C. U. Wolf

DEPTHS. The translation of three distinct Hebrew words:

a) מצולה, the depths of the sea (Exod. 15:5; Neh. 9:11; Ps. 68:22—H 68:23; Mic. 7:19) or the bed of a river (Zech. 10:11). The word has been variously combined with צלל II (Exod. 15:10; cf. Akkadian *ṣalālu;* Arabic *ṣalla*), "sink"; צלל I (I Sam. 3:11; Jer. 19:3; etc.; cf. Arabic *ṣalla*), "tingle, ring, gurgle(?)," *sensu,* "swirling waters"; and Syrian Arabic *miṣwal,* "deep basin, trough." In Ps. 88:6—H 88:7, where the term stands parallel to "depths of the Pit," the LXX and the Syr. read, by transposition of letters, בצלמות, "in deep darkness," but the following: "Thou dost overwhelm me with all thy waves" (vs. 7—H vs. 8) supports the MT.

b) תחתיות, "the lowest parts"—i.e., of the earth (Pss. 63:9—H 63:10; 139:15; Isa. 44:23). The term has been compared with the Akkadian *šaplāti,* "nether regions," similarly employed. *See* Dead, Abode of the.

c) ירכה (Isa. 14:15; Ezek. 32:23). The term often means "the uttermost reaches" (e.g., Ps. 48:2—H 48:3; Isa. 14:13; Jer. 6:22; Ezek. 38:6). However, in Akkadian, the corresponding *arkatu* is, indeed, sometimes synonymous with *išdu,* "foundation," being written with the same ideogram (ÚR); and it is probable that in the passages cited this is the meaning.

In Rom. 8:39 ("Nor height, nor depth, nor anything else in all creation, will be able to separate us from the love of God in Christ Jesus our Lord"), it has been suggested that both "depth" (βάθος) and "height" (ὕψωμα) are astronomical terms, denoting respectively the celestial space beneath the horizon when the stars ascend, and the closest approximation of a star to the zenith (*see bibliography*). There is, however, no exact parallel to the use of the Greek word βάθος in this sense.

DEPUTY [נצב (I Kings 22:48); סגן, פחה (Jer. 51:28; CAPTAIN *in* II Kings 18:24; GOVERNOR *in* Esth. 8:9; 9:3); KJV ἀνθύπατος (RSV PROCONSUL)]. A person appointed to act for another; a viceregent.

DERBE dûr'bĭ [Δέρβη]. A city in the central part of S Asia Minor.

Derbe is a town in the district of Lycaonia, a plateau in the central part of S Anatolia, of which Iconium is the leading city. Iconium, however, was a Phrygian center, whereas Derbe and Lystra were inhabited by a population speaking a separate language, Lycaonian (Acts 14:11).

Little specific history is known for the town of Derbe. It must have been somewhat Hellenized in the time of Hellenistic penetration in Asia Minor. In the first century B.C. it acquired a certain fame as the residence of Antipater, a chieftain who ruled a small principality which included Lystra and Laranda. He was on good terms with Cicero (*Ad Familiares* XIII.73), but others refer to him as a brigand (Strabo XI.535). Antipater was defeated and ousted from his land by Amyntas, king of Galatia, after whose death in 25 B.C. the political allegiance of Derbe shifted several times. At first it was part of the Roman province of Galatia; but in the first century A.D. the city belonged temporarily to the Cilician kingdom of Antiochus IV of Commagene, who seems to have given the city a special epithet in honor of the Emperor Claudius. On second-century coins the name of the city appears as Clau(dia) Derb(e) (or Claudioderbe).

Derbe acquired its present fame as a place twice

visited by Paul, who on his first journey (Acts 14:6, 20) made many disciples at Derbe, and on his second journey passed through Derbe (16:1) on his way from Cilicia to Lystra. One of Paul's disciples from Derbe was Gaius, who accompanied him on the journey from Corinth to Macedonia and Asia (20:4).

The exact location of Derbe was long a matter of dispute. It now seems to have been settled in favor of the site of Kerti Hüyük, a medium-sized habitation mound *ca.* fifteen miles to the N-NE of Laranda-Karaman. At Kerti Hüyük a dedicatory inscription by the council and people of Derbe was found, honoring Antoninus Pius in A.D. 157. This site was inhabited in the Iron Age and during the Hellenistic and Roman periods, but apparently was entirely abandoned and forgotten in medieval times.

M. J. MELLINK

DESCENT. **1.** Ancestry, lineage. In this sense the following words are used:

a) זרע (Ezra 2:59; Neh. 7:61; elsewhere "children," "offspring," "race," "seed").

b) ערב, "mixed company," translated "of foreign descent" in Neh. 13:3.

c) Ἀγενεαλόγητος, "without descent" (Heb. 7:3 KJV; RSV "without GENEALOGY").

In Heb. 7:16 the RSV supplies "descent" where there is no corresponding word in the Greek.

2. A mountain pass (מורד; κατάβασις). *See* ASCENT.

L. E. TOOMBS

DESCENT INTO HADES hā'dēz [ירד שאולה; LXX καταβαίνειν εἰς ᾅδου]. The traditional biblical view of the experience of one's "shade" at death and burial (*see* SHEOL); also, the depth of Christ's humiliation, the turning point to his exaltation. The creedal phrase (*descendit ad inferna* [*inferos*]; κατελθόντα εἰς τὰ κατώτατα [καταχθόνια]) is not used of Christ in the NT, but the idea develops out of the proclamation of his death and his resurrection "from the dead." This derivation from the kerygma is the basis of the idea's "apostolicity" and the key to its theologically valid meaning.

1. In the history of religion. A descent into Hades by a divinity or hero is in antiquity a common myth of solar origin. It is recounted of the Sumerian divinity Inanna early in the second millennium B.C.; is taken over into Semitic lore in the Akkadian descent of Ishtar; comprises the last of the labors of Hercules; recurs in the Hellenistic mystery religions—e.g., of Persephone and Orpheus; has a classical literary heritage from Homer via Vergil to Dante; provides the pattern for the Gnostic redeemer's victory over the world of darkness; takes on Jewish garb in the apocryphal book of ENOCH; and pours into apocryphal Christian literature, as Peter's vision of the tortures of hell in the Apocalypse of Peter, and as Christ's harrowing of hell in the Gospel of Nicodemus (*see* NICODEMUS, GOSPEL OF). This broad tradition of mythology provides less the origin and meaning of the NT idea of Christ's descent into Hades than the vehicle of its development and the cause of its degeneration.

2. In the NT. ***a. As the resurrection "from the dead."*** In NT times the OT view that all the dead go to Sheol had only begun to be replaced by the view that the righteous go to PARADISE. Those holding the older view could assume that a descent into Hades was implied in the reality of Christ's death. A deliverance from Hades was for them latent in the kerygma's standard assertion that he rose "from the dead" (ἐκ νεκρῶν; Acts 3:15; 4:2, 10; 10:41; 13:30, 34; 17:31; Rom. [1:4]; 4:24; 6:4, 9; 10:7, 9; I Cor. 15:12, 20; Gal. 1:1; Eph. 1:20; Col. 1:18; 2:12; I Thess. 1:10; II Tim. 2:8; Heb. 13:20; I Pet. 1:3, 21). The original idea of rising from among the dead (see Ps. 88:5, 10, LXX)—i.e., from their abode—was usually dormant in the NT, until some stimulus focused attention upon it and thereby determined the direction of its interpretation. Often the stimulus was the conviction that Christ's resurrection "from the dead" was "according to the scriptures" (Luke 24:46; John 2:22; 20:9; Acts 17:2-3; I Cor. 15:4; etc.). Since "from the dead" does not occur in the LXX, the connection was established by appeal to the OT category of a deliverance from Sheol. These OT proof texts are the origin of the explicit idea of Christ's descent into Hades.

In Rom. 10:6-10, Paul uses Ps. 71 to interpret Deut. 30:11-14 in terms of the kerygma. When Deuteronomy uses two rhetorical questions merely to express the impossible, Paul goes to considerable effort to show that they are literally answered by the proclamation of Christ's incarnation and resurrection from the dead. He associates "Thou broughtest me up again from the abyss of the earth" in Ps. 71:20 (LXX) with the kerygma's "resurrection from the dead" (Rom. 10:9) to produce the expression "to bring Christ up from the dead" (vs. 7)—i.e., from the "abyss." This rephrasing of the kerygma answers the second rhetorical question of Deuteronomy: "Who will go over to the other side of the sea?" (LXX). The latter is rephrased in terms of another idiom for the impossible: "Who will descend into the abyss?" This substitution would seem justified by the close association of the sea with the abyss (cf. in the NT: Luke 8:31 with 8:33; Rev. 11:7 with 13:1; and Rom. 10:7 with Matt. 12:40). The ABYSS designated the waters below, and soon led to an association of baptism's "descent into the water" with the descent into Hades (I Pet. 3:19-21; Barn. 11; Shepherd of Hermas, Sim. IX.16; Odes of Solomon).

Jesus' original saying in Matt. 12:40 did not clarify the "sign of Jonah," but Q associated this saying with another dealing with Jonah's "kerygma." Matthew's customary effort to show the explicit reference of scripture to Jesus was guided by the fact that the early church interpreted Jesus and his kerygma (Mark 8:31; 9:31; 10:33-34 and parallels) in terms of his death and resurrection "from the dead" as a sign (Luke 2:34-35; John 2:18-22), while Judaism associated Jonah and his message with his deliverance from the fish as a sign. Since Sheol was sometimes represented as a sea monster (III Bar. 5: "His belly is Hades"), and this association had already been carried through in the case of Jonah by the insertion of a psalm describing a descent into Sheol (Jonah 2:2-9), Matthew simply completed the parallel to Jonah by stating in the case of Jesus the

sojourn in Hades implicit in the kerygma. (Cf. Odes of Solomon 42: "Hades saw me and became ill, death spit me up and many with me.") The word "Hades" is replaced by the designation of its location, "the heart of the earth," language adapted from the psalm to express formally the parallel to "the belly of the whale."

From Luke 24:46 it is apparent that behind Luke there stood a tradition of Christian exegesis to support the "resurrection from the dead." The direction which this research took is visible in Acts 2:24, where "from the dead" is replaced by "having loosed the pangs of death." This expression is from the LXX of Pss. 18:4; 116:3, where it is parallel to "pangs of Hades" and "dangers of Hades," and from II Sam. 22:6, where it is the LXX translation of "cords of Sheol." This allusion to Hades is explicit in the other occurrence of this exegetical tradition in Polyc. Phil. 1.2 ("Whom God raised, having loosed the pangs of Hades"); as well as in the early textual variant to Acts 2:24, reading "pangs of Hades." Now when Acts 2:24 uses this motif to introduce Ps. 16, and in the application of the psalm points to the phrase "Thou wilt not abandon my soul to [in?] Hades," it is clear that the allusion to Hades is the common factor in the testimonia underlying Acts 2:24-32, in which context Ps. 16 could have been interpreted as a deliverance from within Hades, rather than as an avoidance of Hades (the rabbinic exegesis). Luke has partially obscured all this by reading only "pangs of death," for his own view is that Jesus was not "abandoned" by God (Luke 23:46 replaces Mark 15:34), but went to Paradise (Luke 23:43; 16:19-31). In Acts 13:34-37 Luke obscures completely the exegetical tradition by returning "having loosed the pangs of death" to "from the dead," and finding the point of contact with Ps. 16 exclusively in terms of "corruption," so as to associate "from the dead" with the tomb (vss. 29-30; cf. Luke 24:5; Acts 2:29). Yet the meaning of Christ's deliverance from Hades (in the exegetical tradition), from the personified power of death (in Acts 2:24*b*), and from the corruption of the tomb (in Acts 13:29-37) is the same: he overcame death.

b. The beginnings of further development. The paradox of Christ's victory in death was early interpreted as a conflict with the hostile spirit-world forces, who in their ignorance (I Cor. 2:6-8; I Pet. 1:12) dug their own graves by putting him to death. Thus Christ's victory could be expressed either as their subjugation (Eph. 1:21-22; Phil. 2:10; Col. 1:20; 2:15; I Pet. 3:22) or as their awful enlightenment (I Tim. 3:16; Ign. Eph. 19; Trall. 9.1; Just. Dial. 36, 85; Ascension of Isa. 9–11; Iren. Demon. of Ap. Teaching 84; Pistis Sophia 7 ff; etc.). When the universality of Christ's victory was not expressed by the listing of the various designations for the spirits he overcame, it could be indicated spatially, in terms of a three-story cosmos (which might suggest a descent into Hades; see Phil. 2:10; Ign. Trall. 9 [cf. the two recensions]), or in terms of a two-story cosmos (which might associate his victory with his ascension; see Col. 1:20; Polyc. Phil. 2.1; Matt. 28:18). Even the latter alternative would not exclude the motif of Christ's visit to Hades (Eph. 4:8), since Hades, Gehenna, the prison of fallen angels, or the abode of evil spirits was often located in one of the lower of the seven heavens (Isa. 24:21-22; II Enoch 7, 10, 18, 29; III Bar. 4-5; Ascension of Isa. 10–11; Acts of John 114; Acts of Thomas 148; Acts of Philip 144). In I Pet. 3:19-20 Christ's victorious revelation before the spirit world is expanded beyond the cryptic phrase "seen by angels" (I Tim. 3:16), when the author applies to Christ the idea of I Enoch 12 ff, where Enoch goes to Hades and proclaims final judgment to the fallen angels who married the daughters of men and produced not only the godless generation destroyed by the flood, but also the evil spirit world of paganism.

Since Jesus' victory over death in its original eschatological setting was seen as the "first fruits of those who have fallen asleep" (I Cor. 15:20), he was brought into direct relation with the fate of the dead (Rom. 14:9), and received the title "judge of the living and the dead" (Acts 10:42; II Tim. 4:1; I Pet. 4:5; Barn. 7.2; Polyc. Phil. 2.1; II Clem. 1.1). The same idea finds expression with direct reference to Hades: "I died, and behold I am alive for evermore, and I have the keys of Death and Hades" (Rev. 1:18; cf. Matt. 16:18). The future destruction of personified Death (I Cor. 15:26, 54) is held by Heb. 2:14; II Tim. 1:10; Barn. 5.6; Justin I.63.16 to have been already realized by Christ. It is this background which leads I Pet. 4:6 to shift slightly the motif of a revelation before the spirit world to a "preaching of the gospel to the dead, that though judged according to men in the flesh, they might live according to God in the spirit" (orig. tr.; cf. Matt. 27:51-53; John 5:19-29; Heb. 12:23). From the second century onward, the primary purpose seen in Christ's descent was to rescue the pre-Christian saints from Hades into heaven (Ign. Magn. 9.2; Justin I.72; Odes of Solomon; etc.). This secondary view of Christ's descent made it no longer possible for Christians to conceive of the godly as going to Hades, and thus removed from Western thought the OT view of the afterlife out of which the idea of Christ's descent originally arose (see Tertullian *On the Soul* 55).

Just as the Hades motif could occur apart from the descent motif, the descent itself could also be connected with the earth rather than with Hades, by the application to Christ of the current Hellenistic terminology (in the NT: Acts 14:11) of a savior's descent from heaven and ASCENSION back to heaven (John 3:13, etc.). This is the meaning of Eph. 4:8-10, where the argument to prove that Jesus (not Moses) is the one who "ascended on high" in Ps. 68:19 consists in declaring that the one ascending to heaven must previously have descended from heaven to earth; since Christ's descent is conceded, the ascent of the psalm should be attributed to him. The descent here is not to Hades, for the Incarnation is meant, and Ephesians presupposes a two-story cosmos of heaven and earth; the passage through Hades is part of the ascent (Eph. 4:8; cf. 2:2; 6:12). "The lower parts of the earth," formed in parallelism to "far above all the heavens" to express the depth of the humiliation, would in a Gnostic environment be an intelligible allusion to the earth (Iren. Her. V.31.2), where Hades motifs occur in designating the earth (cf. John 3:31; 8:23; Acts 2:19).

3. In creedal formulations. The descent motif is preserved in creedal formulations, first, as the descent from heaven at the Incarnation. Apelles' creed began: "[We believe] that Christ descended from the power above . . . ," and this was typical of Gnostic systems (see Iren. Her. III.11.3). But the motif recurs also in creedal formulations by Tertullian, Bishop Hymenaeus of Jerusalem, Lucian of Antioch, etc., finally attaining permanent status in the Nicene

27. Descent into Hades; from an early painting in a Roman catacomb

Creed: "He descended from heaven and became flesh." The motif occurs as the descent into Hades first at the somewhat Arian synods of Sirmium, Niké, and Constantinople in A.D. 359-60. It was introduced into the old Roman creed at Aquileia by the time of Rufinus (*ca.* 400), whence it moved into France and Spain. Consequently the "descent into Hades" entered into the Athanasian and Apostles' creeds codified in this period, and shared in the general acceptance which these creeds attained under Carolingian auspices. Fig. DES 27.

J. M. ROBINSON

***DESERT.** The translation of several different words (*see below*), often used interchangeably with "WILDERNESS." As can frequently be determined by a study of the context of scriptural references containing these terms, in the light of geographical data, "desert" is more descriptive than "wilderness." In the following passages, the KJV uses "wilderness" and the RSV "desert": I Chr. 5:9; Job 38:26; Pss. 78:17; 106:9; 107:33; Isa. 42:11; 50:2; Matt. 15:33; Luke 8:29; etc. However, archaeological exploration has demonstrated that so-called desert regions were not entirely uncultivated or uninhabited. They included pasture lands, plains, and oases where springs and occasional rains plus careful water conservation made possible the building of villages and the maintaining of important caravan routes. The great deserts of Syria and Arabia were not unknown to biblical men, but those in the Transjordan Plateau, near the Dead Sea, and in the Sinai Peninsula are the ones most frequently mentioned.

The following words are translated "desert" or "wilderness":

a) מדבר (LXX usually ἔρημος; cf. Ugaritic *mdbr;* Akkadian *madbaru, mudbaru*) occurs 270 times in the OT. The etymology is uncertain; a root meaning "to drive" cattle has been proposed.

OT usage indicates several facts about מדבר. It was a place of pastures (Ps. 65:13; Jer. 23:10; Joel 2:22) and flocks (I Sam. 17:28). It was frequently a term designating large, defined areas such as the Arabian or the Sinai deserts (Gen. 14:6; Num. 14:16; Judg. 11:22). מדבר also indicated barren or uncultivated regions near such places as EDOM (II Kings 3:8); MOAB (Num. 21:11); BEER-SHEBA (Gen. 21:14), GIBEON (II Sam. 2:24); ENGEDI (I Sam. 24:1); DAMASCUS (I Kings 19:15); and several places in the Sinai Desert (*see* WILDERNESS). Cities in the מדבר are named (Josh. 15:61-62) and also resting places (Jer. 9:2—H 9:1; a "wayfarers' lodging place"). Among the creatures living in the מדבר are wild asses (Job 24:5), jackals (Mal. 1:3; KJV "dragons"), vultures (Ps. 102:6—H 102:7; KJV "pelican"), and ostriches (Lam. 4:3). It was also a place of thorns (Judg. 8:7) and pits (Gen. 37:22).

The barren character of the מדבר is further illustrated by its use with such expressions as a "land not sown" (Jer. 2:2) and a place "in which there is no man" (Job. 38:26), and in parallelism with the "howling waste of the wilderness" (Deut. 32:10).

מדבר is also used in a figurative sense. In the MT of Isa. 21:1 the expression "the oracle concerning the wilderness of the sea" (משא מדבר ים) is usually interpreted to mean that the desert is like a stormy and desolate sea. However, the LXX omits "sea," and the Dead Sea Scroll Isaiah (1QIs^a) omits both מדבר and "sea," and reads דברים ("words"). Although the title of the oracle is enigmatic, the mention of מדבר later in vs. 1 implies that it is a place of whirlwinds and a terrible land. Hence, the term is used to describe the desolate state of a nation defeated by her enemies (Jer. 22:6; Hos. 2:3—H 2:5). But the Lord's power extends over the desert (Ps. 107:35), and prophets found in it places of theophany (I Kings 19:4).

b) ערבה, an arid or remote region, is translated variously as "wilderness" and "desert" (Isa. 33:9; 35:1, 6; 40:3; 51:3), often paralleled with מדבר. ערבה with the article is rendered by the RSV as a place name (*see* ARABAH) designating the region of the Jordan Valley N of the Dead Sea and the depression extending to the Gulf of Aqabah (Deut. 1:1, 7; 3:17; Josh. 11:16; etc.). When the term is used with Jericho and Moab, it refers to the desertlike plains in the region (Num. 22:1; 26:3; Josh. 4:13; II Kings 25:5; etc.). The phrase "wolf from the desert" in Jer. 5:6 (KJV "wolf of the evenings") alludes to the destruction in store for those who disobey the Lord.

c) ישימון, ישימן, is a desert region (Deut. 32:10; Ps. 68:7—H 68:8), and often appears also in parallel with מדבר (Pss. 78:40; 106:14; 107:4; Isa. 43:19-20). When used with the article, it is a place name (*see* JESHIMON) mentioned in connection with Ziph and Maon (I Sam. 23:19, 24; 26:1, 3) and possibly referring also to the region in the Jordan Valley N of the Dead Sea (Num. 21:20; 23:28; KJV "Jeshimon," mg. "wilderness"; RSV "desert," mg. "Jeshimon").

d) חרבה has been translated "desert" (KJV: Ps. 102:6—H 102:7; Isa. 48:21; Ezek. 13:4; RSV: Isa. 48:21 only). Because the term refers to places of desolation or ruins, waste places, it is usually so rendered (Lev. 26:33; Isa. 5:17; Ezek. 36:10, 33; etc.), and as such had nothing to do with desert regions but with ruined cities or places which had been destroyed and could be rebuilt.

e) ציה is translated "desert" in Ps. 78:17 (KJV "wilderness"); although when used with "land" (ארץ), it is usually rendered "dry" or "parched" (Isa. 41:18; Jer. 51:43; Ezek. 19:13; Hos. 2:3—H 2:5). The term is used with מדבר and ערבה (Jer. 50:12) and with מדבר (Isa. 35:1), and is descriptive of waterless regions.

f) תהו, meaning "empty" or "vain" (I Sam. 12:21), is sometimes rendered "waste" (Deut. 32:10; Job 6:18; 12:24; Ps. 107:40) and as such denotes an empty or trackless area like the desert.

g) Ἔρημος, ἐρημία, are terms used in the NT and the LXX (Gen. 14:6; Judg. 11:22; II Sam. 2:24; cf. IV Macc. 18:8 for reference to demons of the desert) for "wilderness," "desert," or "lonely place." In the NT, except in the case of the "wilderness of Judea" (Matt. 3:1), particular desert regions are not identified. The RSV translates "lonely place" (ἔρημον τόπον; Matt. 14:13, 15; Mark 1:35; 6:31-32, 35; Luke 4:42; 9:12; KJV usually "desert place"), thus taking account of the geographical setting, which did not necessarily involve a desert region. Elsewhere the terms are translated variously "wilderness" and "desert" by both KJV and RSV (Matt. 15:33; 24:26; Mark 8:4; Luke 5:16; 8:29; John 6:31; Acts 8:26: "desert road"; Heb. 11:38) where the terms refer to lonely regions visited as places of retreat and prayer.

W. L. Reed

DESIGN. 1. מעשה חשב (Exod. 39:3; KJV WORK). The work of a technician.

2. לחשב כלי־מחשבת (II Chr. 2:14—H 2:13; KJV DEVICE). The verb means "to plan, contrive, create, a work requiring skill." The noun, which is used in this passage, indicates "skilled work."

3. את־רעת המן (Esth. 8:3; KJV MISCHIEF). An evil scheme.

See also Crafts; Metallurgy; Embroidery and Needlework.

J. M. Myers

DESIRE. A word used in the Bible to cover a wide range of human wants, emotions, and cravings. It can describe everything from simple requests to sexual longing, from hunger for God to craving for gold. Occasionally desires are ascribed to God. Usually man's desires stand under the scrutiny of the Lord.

1. Terminology of desire in the Bible. The OT uses several words for desire: שאל, "to request" (Deut. 18:16); בקש, "to seek" (Exod. 10:11); even the simple אמר, "to say" (Esth. 2:13). Usually the verb is חמד, אוה, or חפץ, with an infrequent use of חשק (Deut. 21:11). Acute longing is described as נשא נפש, a lifting up of the self (Jer. 44:14). The nouns are formed from the same roots, although אביונה (Eccl. 12:5), רצון (II Chr. 15:15; Ps. 145:16, 19), and תשוקה (Gen. 3:16; 4:7; Song of S. 7:10) are also nominally employed.

In the NT, ἐπιθυμέω is the common verb, ἐπιθυμία the noun, for "desire." However, θέλω, "to wish," with its noun, θέλημα, is also so translated, as are ζηλόω, "to desire earnestly," "to pursue"; ὀρέγομαι, "to reach after"; and ἱμείρομαι, "to long for." Once (Rom. 10:1) εὐδοκία is used nominally.

2. In the OT. There are human desires which are treated in the OT as natural to man's being (Deut. 18:6; I Kings 10:13; Ps. 107:30). Included among these are hunger (Ps. 145:16; Mic. 7:1), sexual desire (Deut. 21:11; Ps. 45:11; Song of S. 7:10; Gen. 3:16), and delight in the beautiful and the good (I Sam. 9:20; Prov. 3:15; 8:11; 19:22; Isa. 53:2; Ezek. 23:6, 12, 23). The Hebrew never saw asceticism as a part of the good life. He enjoyed life in all its fulness. He reveled in the beautiful, in long life (Ps. 34:12), in friends (Ps. 133; Prov. 19:22), in prosperity (Ps. 19:10), in the love of a good wife (Ps. 128; Ezek. 24:16), in a house full of children (Ps. 128). For him, God had created a world which was "very good" (Gen. 1:31), and the Hebrew took advantage of it (Eccl. 2:10).

Nevertheless, the desires of the Hebrew stood under the judgment of his God. From the first, desire was to be subject to obedience—obedience to the will of Yahweh (Gen. 3; cf. vs. 6). And he who knew the true fulfilment of his desires was he who relied on the Lord (II Sam. 23:5; II Chr. 15:15; Pss. 21:2; 34:12 ff; 37:4; 145:19; Prov. 10:24; 11:23; 13:12, 19). To him the meek could turn for justice (Ps. 10:17). Only in him could one like Job find satisfaction (Job 13:3). Thus the final object of the desire of the pious Hebrew was Yahweh himself (Isa. 26:9). The temple on Zion was the delight of Israel's eyes (Ezek. 24:21, 25). Yahweh's name was the desire of her soul (Isa. 26:8; cf. Neh. 1:11). His commandments were better than gold (Ps. 19:10). Communion with him was the ultimate good (Ps. 73:25). Wisdom was better than all desire (Prov. 3:15; 8:11), and the beginning of wisdom was the fear of the Lord (Prov. 1:7).

Over against the desire of the pious stood the desire of the wicked, whose object was, not God, but evil (Prov. 21:10; Mic. 7:3). The desires of the wicked were ungoverned, covetous, lustful (Deut. 5:21; 7:25). He cursed Yahweh (Ps. 10:3) and shunned knowledge of him (Job 21:14). He preyed on the pious (Ps. 140:8) and sought only self (Prov. 13:4; 21:25; 23:6-8). His companionship was to be avoided (Prov. 24:1). His desires would come to nought (Ps. 112:10). Indeed, he was destined to lose even desire and life itself (Eccl. 12:5).

Yet seemingly religious desires had their limits. Those who piously looked forward to the day of the Lord's final triumph and judgment were warned that their self-righteous security would be destroyed by Yahweh (Amos 5:18; cf. Jer. 17:16). For Yahweh, too, had desires—not for outward religiosity (Pss. 40:6; 51:16; Hos. 6:6), but for inner obedience to his will, for steadfast love (Hos. 6:6), for truth (Ps. 51:6), for loyalty to his covenant. This one thought, obedience, with its concomitants of thankfulness and praise, formed the context of Hebrew desire.

3. In the NT. The situation is similar in the NT. Rarely (Luke 5:39; 8:20; 15:16; 16:21; 23:8; Gal. 4:20; 6:13; I Tim. 1:7) is any human desire treated as morally indifferent. Rather, most desires fall into one of two categories: those which are evil, lustful, covet-

ous, ungoverned, and those which are commensurate with the new life in Christ. Among the former we find the desire for material possessions (Jas. 4:2), for wealth (Acts 20:33), for licentious sexual practices (Matt. 5:28; Rom. 1:24; Gal. 5:24; I Thess. 4:5; II Pet. 2:10). However, not all evil desires are catalogued. The NT speaks, not so much of sins, but of sin, of the nature of the old life apart from Christ, of life lived outside the Spirit and therefore contrary to the will of God (Rom. 6:12; 13:14; Gal. 5:16; Eph. 4:22; I Pet. 1:14; 4:2). Such a life, which is ruled totally by the desires of the flesh, of the old Adam (Rom. 6:12; Eph. 2:3; 4:22; Tit. 3:3), is to be put aside when the Christian enters into the new life in Christ (Rom. 13:14; Gal. 5:24; Col. 3:5; Tit. 2:12; I Pet. 2:11; I John 2:16). By the grace of God in Christ, the Christian is made a new being (Tit. 2:12). The desires of the world no longer hold him in bondage (II Pet. 1:4). He becomes a slave, not to passion, but to the Lord.

The Christian, then, is to take on new desires—desires commensurate with his new life. He is to "earnestly desire the higher gifts" (I Cor. 12:31) of prophecy, of teaching, of healing, but above all of faith, of hope (cf. Heb. 6:11), and of love (I Cor. 13). His desire is to be for full Christian fellowship (I Thess. 2:8, 17; cf. Luke 22:15) and for Christ. Indeed, his true home is not earth but heaven (Heb. 11:16; cf. I Pet. 2:11), and his ultimate desire is to be with his Lord (Phil. 1:23), who is the perfecter and end of all desire. E. R. ACHTEMEIER

DESOLATING SACRILEGE. *See* ABOMINATION THAT MAKES DESOLATE.

DESSAU dĕs'ô [Λεσσαού (A), Δεεσαου (V^{vid})] (II Macc. 14:16). A town in Judea where Nicanor and the Jews met in battle. C. T. FRITSCH

DESTINY. 1. The translation of מני, the name of a pagan deity (Isa. 65:11). *See* MENI.

2. One's lot, appointed end, or FATE. Among the ancient Hebrews the destiny of the individual was bound up with that of the group, whether clan, tribe, or nation. There was no clear-cut conception of life after death. Hence one fulfilled his destiny by maintaining a right relation with, and furthering the interests and fate of, the social unit to which he belonged, which included a right relation and obedience to its God. Chief among the OT emphases were keeping covenant and obedience to the divine law (cf. Exod. 19:5; Deut. 4:1-8; 5:28-33; Ps. 25:10).

Israel's destiny was to be the people of God, to tell of his mighty acts (Pss. 96:3; 106:8; 145:4, 11-12), and to be a blessing to the nations (Gen. 12:2; Zech. 8:23; cf. Isa. 43:21). Beginning with the exilic period, there was an increasing emphasis on the individual's responsibility for his own destiny (cf. Ezek. 18). However, the Jews tenaciously relied upon Abrahamic descent to guarantee their future (cf. Luke 3:8; John 8:33, 39).

During the intertestamental period a more elaborate eschatology was developed, including a doctrine of individual resurrection, and one's destiny became determined by good works according to a system of merits and demerits. In the NT the destiny of the individual depends on his relationship to Jesus Christ and adherence to his teaching (Acts 16:31; I John 2:3; 3:21-24).

DESTROY NOT. *See* MUSIC.

DESTROYER, THE [המשחית; ὁ ὀλοθρεύων, ὁ ὀλοθρευτής, ὀλεθρεύων, ὀλεθρευτής]. A term used in Exod. 12:23 (cf. Heb. 11:28); I Cor. 10:10 to designate a superhuman agent of destruction. In the Exodus passage the reference is clearly to an angelic agent of Yahweh (*see* ANGEL). The meaning in I Cor. 10:10 is less clear. Is Paul referring to such an angel or to SATAN? (*See also* DEMON.) If the reference is to a destroying angel, is the designation a general term or a specific title? The rabbis sometimes used משחית as the title for a single angel of destruction among others similarly named. They also thought of God's mercy and wrath as being put into effect by opposing groups of angels (cf. II Sam. 24:16; I Chr. 21:15; II Cor. 12:7). On the other hand, the role of Satan was enlarged by postexilic Judaism (*see* DUALISM), and he was presented as an agent of destruction under God's control (Wisd. Sol. 2:24; John 8:44; Heb. 2:14). Paul speaks in similar vein (II Cor. 12:7; I Thess. 2:18), and in I Cor. 5:5 combines σατανᾶς with ὄλεθρος (cf. I Thess. 5:3; II Thess. 1:9; I Tim. 6:9).

Apart from this special usage, "destroyer" as commonly understood appears in Job 15:21; Isa. 49:17; Jer. 4:7; 22:7 (שחת). It also appears five times in the KJV alone, and sixteen times in the RSV alone, thirteen of the latter as a translation of שדד (cf. Isa. 16:4; 21:2; Jer. 6:26; 48:8; 51:53). The LXX exhibits great variety but uses most often some form of ὄλεθρος or ταλαιπωρία.

DESTRUCTION, CITY OF. KJV translation of עיר החרס (RSV "city of the sun") in Isa. 19:18. *See* HELIOPOLIS.

DESTRUCTION, DEVOTED TO. *See* DEVOTED.

DETAINED BEFORE THE LORD [נעצר לפני יהוה]. Confined at the sanctuary, in custody of the priests(?), for some religious purpose.

The exact meaning of this phrase is uncertain. The biblical reference (I Sam. 21:7) is to DOEG the Edomite, whom David, in his flight from Saul, met at the sanctuary at Nob. The phrase is from the same religious terminology and root as the word "taboo" (עצר; cf. Neh. 6:10; Jer. 36:5). It probably signifies "under a taboo," or "excluded from the cult." It is possible Doeg was undergoing some rite of purification, or fulfilling some vow. (Men were also detained at the sanctuary for suspected leprosy; cf. Lev. 13:4, 11, 31.) However, he may have been simply a visitor

at the sanctuary, sitting in a consecrated position, so as to be strengthened by its holiness.

DEUEL dōō′əl [דְּעוּאֵל, *see below*]. The father of Eliasaph, who was the leader of Gad in the wilderness (Num. 1:14; 7:42, 47; 10:20). In Num. 2:14 the father of Eliasaph is named REUEL, although some MSS read "Deuel." The LXX Ραγουηλ and the Syr. rendering both support a spelling with an initial letter "r." It has been suggested that the obscure first syllable of the name Deuel may be a derivative of the verb ידע, "know."

R. F. JOHNSON

***DEUTERONOMY** dōō′tə rŏn′ə mĭ, dū′— [δευτερονόμιον]. The fifth book in the OT canon. It has no name in the MT. The Hebrew Bibles named it after its first clause: אֵלֶּה הַדְּבָרִים, "These are the words . . . ." The name which has now become universal has come into use since the time of the LXX—on the basis of a misunderstanding, to be sure, for the Hebrew text of Deut. 17:18, to which the translation δευτερονόμιον goes back, speaks, not of a "repetition of the law," but of a "copy," a "duplicate," of the Torah. *See* LAW IN THE OT. *See* map "Egypt and Sinai: Exodus to Deuteronomy," under EXODUS, BOOK OF.

1. Contents. Deuteronomy is a farewell address by Moses. After an introduction (1:1-5), which endeavors to fix the time and the place of this great address, the first part begins in 1:6. Moses recapitulates the events between the departure from Sinai and the arrival in the land E of the Jordan (spies, defeat at Hormah, the conquering of Sihon of Heshbon and of Og of Bashan, the occupation of the whole territory E of the Jordan). Beginning with 4:1, the subject of the address changes: Moses admonishes obedience to the "statutes and the ordinances." Titles are brought in once more in 4:44-49; and after a new beginning in 5:1, Moses relates the events on Sinai, especially how Israel was unable to listen to the voice of Yahweh and how Moses received the revelation of Yahweh's will instead. Now, however, he passes on the message he received at that time (5:29–6:3). The great exhortation follows. It is an urgent appeal for loyalty, for gratitude, and for obedience in view of the imminent settlement in Canaan and its dangers (6:4–11:32). Beginning with ch. 12, the form and the content of the address change: Moses turns to the communication of individual legal regulations. The long series of these transmittals begins with rules for worship (altar law, apostasy, unclean animals; chs. 12–14). It continues with other legal prescriptions (the Year of Release, the bondage of debtors, feasts; 15:1–16:17) and the regulation of the offices (judges, king, priests, prophets; 16:18–18:22). From ch. 19 on, no plan can be distinguished in the arrangement. Regulations concerning cities of refuge, laws of war, statements of family rights and of a general humanitarian nature, follow one another in indiscriminate succession (chs. 19–25). The series ends with a formula of commitment to the covenant (26:16-19). Ch. 27 breaks with the scheme somewhat, for it gives directions for the building of an altar on Mount Ebal and for a ceremonial of blessing and cursing between Mount Ebal and Mount Gerizim. The thread of ch. 26 is continued in the great proclamation of blessings and curses in chs. 28–30. Ch. 31 reports the appointment of Joshua and the writing down of "this law." Then follows the Song of Moses (ch. 32) and Moses' blessing of the people of Israel (ch. 33); in conclusion, ch. 34 gives an account of his death on Mount Nebo.

2. Critical literary analysis. The knowledge that Deuteronomy is, generally speaking, not to be equated with a Hexateuch source document—i.e., that it is to be considered an independent literary document—goes back to De Wette's *Dissertatio critica* of 1805. This knowledge was, to be sure, even at that time not absolutely new; but De Wette is the pioneer in methodical-scientific analysis of Deuteronomy. This analysis has the advantage over that of the sources JE and P insofar as source D is present exclusively in the book of Deuteronomy and did not have to be

separated first from the entanglement of other source documents (*see* BIBLICAL CRITICISM, HISTORY OF; PENTATEUCH). The portion of other sources in the book of Deuteronomy is minimal (4:41-43; 32:38-52; 34:1*a*, 7-9=P; 34:1*b*-6=JE). It was also soon evident that the two poetic texts, the Song of Moses (ch. 32) and Moses' blessing (ch. 33), have nothing to do with source D. On the other hand, the text which is to be ascribed to source D makes a very irregular impression (cf. the "titles" in 1:1; 4:44 ff; 6:1; 12:1), so that the assumption of a not uncomplicated process of development suggests itself immediately in the case of this source document. Nevertheless, analysis from a literary standpoint has not as yet succeeded in drawing a generally convincing picture of the literary structure of source D. Without doubt, it was a great step forward when, around the beginning of the twentieth century, Steuernagel and Staerk, independently of each other, could point out the constant change in the form of address and separate an older stratum which used the singular pronoun from a later one which used the plural. Actually this change is striking, and there are not a few instances in which one can say with certainty that the plural passage was inserted later into the singular context (e.g., 9:7-10:11; 20:2-4; 29:1-29—H 28:69-29:28). On the other hand, this analysis, which Steuernagel presented later in his *Kommentar* (2nd ed., 1923), found few followers, because it led to superfine and artificial distinctions. This was, of course, connected with the fact that Steuernagel was guided by no means solely by the change in number, but also started at the same time from the assumption that our present-day Deuteronomy is composed of several formerly independent "editions" of the original Deuteronomy, each of which was already provided with a parenetic introduction. But the plural edition, which Steuernagel extracted, probably never existed by itself. The assumption of several parallel editions is altogether improbable; one would probably do better to explain the composite nature of Deuteronomy from the point of view of a completion hypothesis—hence, in the sense of a subsequent gradual expansion and elaboration of an original Deuteronomy. One scholar believes, to be sure, on the basis of a penetrating analysis, that Deut. 12-18 must be interpreted as a combination of two codices. Moreover, if the assertion should be correct that Deut. 1-3(4) is to be regarded as the beginning of the Deuteronomic historical work and has nothing at all to do with source D, then the theory of the various editions of Deuteronomy would be completely without foundation; for Deut. 1-3 was still regarded by Steuernagel as the introductory address of one edition of Deuteronomy.

Still another lesson from the history of the Deuteronomic investigation is that in the search for the original Deuteronomy one must disregard the account in II Kings 22-23 completely. One scholar attempted in an exaggerated fashion to determine the content and scope of the original Deuteronomy from the point of view of the events related there. However, even if Deuteronomy did influence history at the time of Josiah, it is, nevertheless, not to be assumed that it had achieved its full effect; moreover, Josiah may have gone beyond Deuteronomy in his measures (*see* § 6 *below*). Finally, also, the view, which seems obvious at first glance and has been advocated often—from J. Wellhausen to R. Pfeiffer—that the original Deuteronomy is to be sought only within chs. 12-26, must be termed unsatisfactory; for the section chs. 12-26 cannot be designated as the real "codex" as opposed to the "introduction" (chs. 6-11), since the characteristic signs (change of number, parenetic style) are to be found in chs. 6-11 as well as in chs. 12-26; and, besides, chs. 12-26 are something quite different from a "codex." *See* § 5 *below*.

Obviously the zeal for literary analysis has flagged for a long time. The realization is growing that with the aid of the purely literary critical method one can get at the actual complexity of Deuteronomy only to a limited extent because the strata which are present, without a doubt, point, not to literary processes, but to a preliterary process of slow enrichment of the original mass of tradition. Thus the oft-repeated laborious attempt to untangle the original Deuteronomy (which was at the same time, possibly, considered to be identical with the Josiah Codex) by literary analysis was the pursuit of a phantom. Therefore investigation—apart from that concerned with the final literary form which Deuteronomy eventually assumed, which has not yet been satisfactorily solved—has recently turned to examination of the many individual traditional materials, which have been collected in Deuteronomy, with regard to their characteristic features of form and content and especially as to their particular place in life. This task is by no means finished even today. *See* § 3 *below*.

3. The Book of the Covenant and Deuteronomy. Even if Moses could be regarded as the author of Deuteronomy, this analytical work on Deuteronomy would still have to be done. However, since Deuteronomy—from the first sentence on ("beyond the Jordan")—shows that the position of the speaker is the Palestine W of the Jordan, and since, in point of time, many of the arrangements provided for in Deuteronomy suggest composition after the time of Moses, the time in which and for which Deuteronomy was produced must be determined first of all with the aid of this analysis. The first point of refer-

ence in establishing Deuteronomy with regard to time —but also theologically—is afforded by a comparison with the Book of the Covenant (*see* COVENANT, BOOK OF THE), for a great number of the legal materials in the Book of the Covenant reappear in Deuteronomy, frequently, to be sure, in a characteristically changed form. *See* Table 1.

One can conceive of this circle of mutually corresponding passages as being smaller; one can also conceive of it as being still larger. In either case it becomes clear how great the stock of legal materials is which Deuteronomy has in common with the Book of the Covenant. Whether one must draw from this the conclusion that Deuteronomy wanted to take the place of the Book of the Covenant and wished itself —no longer the Book of the Covenant—to be looked upon as the authentic revelation of Sinai, is not so certain: for if Deuteronomy were traced back to the Book of the Covenant so directly, the question would still remain as to why it then passed over and omitted so large a portion of the regulations of the Book of the Covenant—it is a matter of about fifty per cent, after all. It would also be conceivable, indeed, that Deuteronomy was derived from a legal collection unknown to us, which in its turn had many materials in common with the Book of the Covenant. In such a collection also, however, many of those things would possibly be contained which are now found in Deuteronomy only and not in the Book of the Covenant (concerning this special material, *see* § 4 *below*). It is easy to see that in the majority of the cases in which a comparison of the versions is possible at all, that of Deuteronomy proves to be definitely the younger, and that of the Book of the Covenant the older.

The "Hebrew law" in Exod. 21:1 ff had assumed the case of the purchase of a Hebrew slave (עבד עברי) and fixed the duration of his service; Deut. 15:12 ff, on the other hand, deals with the enslavement of a man who was formerly free and probably also was a landowner himself, who had been forced to give himself up to debtor's bondage for economic reasons. In this case the initiative comes from him and not, as in Exod. 21:1, from the master of the slave. A further difference lies in the fact that, according to Deut. 15: 12 ff, it is also possible for a woman to enter into debtor's bondage. This must be connected with a change in the conditions of holding property; in the meantime, women had also acquired the right to inherit property (cf. II Kings 8:3) and could get into the same situation as a male landowner (*see* SLAVERY). In the Book of the Covenant the law of the Year of Release (שמשה; *see* RELEASE, YEAR OF) is a religious regulation which applies exclusively to agrarian life (Exod. 23:10-11). There it is a question of letting the fields lie fallow temporarily, not for economic or social-charitable reasons, but for religious reasons; it was a matter of demonstrating by the practice Yahweh's original ownership of the soil (cf. Lev. 25:23). Such a custom could be practiced particularly in the old days of Israel, when agriculture was not yet the only source of income but was only carried on as a supplement to the raising of stock. Deut. 15:1 ff is different. The old religious terminology is retained, to be sure (שמשה ליהוה), but the custom has changed decidedly in that the legal effectiveness of the "release" has been extended to debtor's law; by this time it is financial values which are subject to the law of release—thus, perhaps, loans which someone had to assume in order to save his economic position. In the case of the Hebrew law, as also in the law of the Year of Release, it is perfectly clear that, compared with the Book of the Covenant, Deuteronomy reflects a considerably advanced stage with respect to economic history. The use of money—which was still in its primitive beginnings in the earlier days of Israel—has in the meantime become more complex. If one is to assign the Book of the Covenant to the period between the immigration and the organization of the states, then this means that one must surely go down as far as the period of the kings with Deuteronomy.

4. Materials peculiar to Deuteronomy. The materials in Deuteronomy for which there is no equivalent of any kind to be found in the Book of the Covenant are very diverse and also obviously date from various periods. The stipulation as to how to proceed in the case of a murder (*see* CRIMES AND PUNISHMENTS § C2*a*), the perpetrator of which is unknown (Deut. 21:1-9), bears all the marks of an early age. Just as the קהל or Assembly law (23:2-9) in its original form, it must go back to the time before Israel was organized as a state. However, viewed as a whole—only the more important can be mentioned here—these materials cannot be very old. In Deut. 13 three regulations directed against cases of deliberate apostasy from the belief in Yahweh (vss. 1-5—H 2-6, 6-11—H 7-12, 12-18—H 13-19) are grouped together. The first assumes that the initiative for this came from a "prophet." Such a proposal, however, can only have emanated from a prophetic class which was already badly demoralized by the Canaanitic syncretism; moreover, the נביאים at the time of Samuel did not yet generally have such a prominent position in the life of the people, at all (*see* PROPHET). The third provision is revealing, for it assumes that the initiative for apostasy came from a city. Such a thing actually lay within the realm of possibility, but again, to be sure, not before the period of the kings; for one would, in this case, necessarily think first of all such towns as those which lay outside the old colonial domain of the former tribal confederacy and which were incorporated into the kingdom of Israel only in the course of intermittent extension of the boundaries under David. In these cities, which during the long period of their Canaanitic history were politically independent and in which the belief in Yahweh had probably never really taken root, it was possible for the old feeling of independence to awaken even during the time of the Israelitic kings, especially in a period in which the Yahweh cult itself was already undermined and lacking in vigor. An especially characteristic kind of material peculiar to Deuteronomy is the so-called "laws of war"—namely, a regulation concerning exemption from military service (20:1-9), two laws concerning the besieging of cities (vss. 10-18, 19-20), and one concerning camp sanitation (23:9-14—H 23:10-15). It is difficult to date the last one: probably it is the oldest of this group. Deut. 20:1-9 has obviously been revised (vss. 2-4 constitute the most recent stratum); its basic element is found in the words of the officers in vss. 5-7 (*see* WAR, IDEAS OF). These officers

(שטרים; *see* OFFICER), however, were royal officials who were responsible for military affairs and recruitment for military service. As certainly as the particular regulations according to which individuals were excluded from military service date from a very early period in the waging of war, just as certainly does even the oldest stratum in Deuteronomy not date from before the period of the kings (Deut. 20:1-9). The same applies to the laws concerning the besieging of cities, which certainly presuppose an advanced technique of siege (20:20). Deuteronomy also contains a law pertaining to the KING (17:14-20). The most striking thing about this is the almost exclusively negative tendency, for the law is concerned primarily with restricting the power and functions of the king. It does not give a picture of the office of a king in Israel, but merely a picture of the king as he should not be, for which the picture of King Solomon in Deuteronomy probably served as a model.

The demand for centralization of worship (*see* WORSHIP IN THE OT) in the "place which the LORD your God will choose" has always been regarded as the most important peculiarity of Deuteronomy as compared with the Book of the Covenant; and this demand was certainly new at the time of Deuteronomy. On the other hand, however, it is not true that all parts of Deuteronomy take this demand, which was revolutionary for its time, for granted. There are not a few laws in Deuteronomy which seem to be completely unaware of this demand for centralization. There are only six larger units which were enacted explicitly on this assumption: the altar law (ch. 12); the law on tithing (14:22-29; *see* TITHE); the law of the FIRST-BORN, (15:19-23); the law of the feasts (ch. 16; *see* FEASTS AND FASTS); the law of the court in Jerusalem (17:8-13); and the law of the priests (18: 1-8; *see* PRIESTS AND LEVITES). There is, in addition, the law of ASYLUM (19:1-13), which makes new arrangements for the system of sanctuary after the abolition of the many shrines. The altar law is divided into three decrees, each of which independently adds to the demand for centralization (12:1-7, 8-12, 13-19 [20-29]); only the third is written in the singular, and it is probably the oldest. The first one contrasts the new demand for *one* altar with the custom of the neighboring Canaanites; the second contrasts it with the custom heretofore practiced by Israel itself. The lawgiver, therefore, is aware that he is demanding something utterly new in his time. Nevertheless, one must question whether the centralization of worship was something so completely new in the religious history of Israel. In the time of the judges, when Israel was a sacred alliance of tribes, the ARK OF THE COVENANT—ultimately in Shiloh—was, after all, the religious center to which the tribes traveled on the great pilgrimages. In the extreme manner in which Deuteronomy demands centralization, so that no sacrifices whatever are permitted except those which are made in places chosen by Yahweh, and so that even the firstlings and the tithes can be offered only at Yahweh's one place of worship, it was, to be sure, unknown in that earlier period. But that early period was also not in the utmost danger of losing the special character of its worship of Yahweh, as was the Israel of Deuteronomy. The immediate consequence of this demand of Deuteronomy naturally had to be a great purging of the popular religious life; but the lawgiver faces up to this secularization. He even strives to give a helping hand to the people in this secular life of every day and to keep Yahweh before their eyes even there. Especially drastic was the new regulation for the prevailing custom of the PASSOVER, which was celebrated as a feast by local family units. Deuteronomy breaks with it also in that it transforms the Passover into a pilgrimage feast which is to be celebrated at the common place of worship by the slaughter of cattle and sheep. This regulation of the Passover is, to be sure, complicated still more by the fact that the old Israelitic Feast of the Passover was combined with the Feast of Unleavened Bread, which was originally Canaanitic (16:1 ff).

5. A collection of sermons. The analysis of the individual materials contained in Deuteronomy must now be supplemented by an investigation of their peculiarity with regard to form. In the Book of the Covenant the two basic forms of the old Israelitic legal maxims may be found, the conditional and the apodictic, usually still in classic purity (*see* LAW IN THE OT). The conditional legal maxims—introduced by "assuming that," and continued by "if"—belong in the local courts at the gate where justice was administered by the elders in all disputes such as might come up in peasant and petty bourgeois circles (cf. Ruth 4:1). The statements in apodictic form, on the other hand, are derived from the cult. They are, in a much more literal sense, the law of God, because they were proclaimed to the congregation in a setting of the observance of divine worship and were acknowledged by the acclamation of the congregation (cf. Deut. 27:14 ff). This liturgical origin also explains the fact that the apodictic statements, as a rule, do not appear singly but rather in the form of series of prohibitions (Exod. 20:2 ff; 21:12, 15-17; Lev. 19:9-10, 11-12, 13-18). Such series of commandments or fragments of series are also found in Deuteronomy. Deut. 23:2-8 deals with membership in or exclusion from the religious congregation. In 16:21–17:1 there are three apodictic prohibitions of a religious nature; in 16:19, also three prohibitions which forbid any partiality in the administration of justice. Above all, however, the Decalogue (*see* TEN COMMANDMENTS) and the Dodecalogue of Shechem must be mentioned (Deut. 5:6-18; 27:15-26). The number of conditional legal maxims in Deuteronomy is likewise large (e.g., 21:15-17, 18-22; 22:13-29; 24:1-4; 25:1-3, 5-10).

But the characteristic feature of Deuteronomy is not these two forms of law in their original form, but larger and more complex units which, in each instance, first require a special analysis. The law on the firstlings (15:19-22) begins with a sentence which can be recognized without difficulty as an old apodictic commandment; vss. 20-22, on the other hand, are an interpretation of the regulation by which the old legal maxim is explained in the light of the demand for centralization. This interpretation does not, however, proceed in technical legal terms; it is, rather, a personal address; it is a sort of sermon, in any case, information for the layman. Similar, but still more complicated in structure, is the unit on the Year of Release (15:1-11). Here, too, a statement of apodictic divine law, on which everything which fol-

lows is based, stands at the beginning. In vss. 2 ff ("This is the manner of the release . . .") an explanation is offered; this time it is an exact legal interpretation. But from here on to the end the preacher again has the floor, for these words of admonition, of warning, of promise, which lay this commandment very personally on the conscience of the hearer, can only be labeled a sermon. This structure is also found in the decree concerning debtor's bondage (vss. 12-18), except that here the old legal maxim, which is then expanded homiletically, is not a statement of apodictic law but of conditional law. Here, too, it is not simply a matter of obeying the commandments; but time and again there is an appeal to sentiment (cf. vs. 18: "It shall not seem hard to you, when you let him go free from you"). The preacher tries to arouse the right spirit, in which the old laws are to be observed. In the case of the Passover decree it is again an old apodictic statement from which the explanation proceeds (16:1). However, in addition to these parenetic elaborations which refer to an old statement of sacred tradition, there are others, in which there is no old legal maxim discernible from which the exhortation might proceed. To these belong, e.g., the law concerning the king (17: 14-20) or the prohibition of Canaanitic prophecy and the promise of a prophet like Moses (18:9-22) and the regulation concerning the CITY OF REFUGE (19: 1 ff). In these cases the lack of old legal maxims is not surprising, since no regulations concerning kings, prophets, or cities of refuge could be found in the old religious tradition of the period before Israel became a state. These broadly expansive parenetic units are, therefore, the characteristic feature of the Deuteronomic presentation of the law, and for this reason it would be an improper designation if one were to call Deut. 12–26 a "corpus" (or body of laws), for what is genuinely juridical is completely absorbed into the parenetic material. It would be better to speak of "preached commandments." Anyone who speaks of a "codex" would, therefore, only mean the old legal materials which were developed by Deuteronomy in the form of sermons. But is it certain, then, that they ever did constitute a complete codex? To be sure, the degree of this homiletic expansion in Deut. 12–26 is not uniform. Beginning with ch. 23, this parenetic permeation diminishes perceptibly, and the material changes more and more into a succession of many minor individual regulations, which by this time have little or nothing of the parenetic style. This suggests the possibility that Deuteronomy was expanded at an early stage by all kinds of legal materials which, however, were no longer homiletically reshaped in the same fashion.

Analysis of the history of the form of Deut. 6–11 yields another result. Here, too, we find a number of parenetic units hung together which can usually be separated from one another relatively easily. They are not, however, as in chs. 12–26, exhortatory compositions which each make a certain religious or legal regulation binding; instead, they are exhortatory compositions which, in a very general way, call for obedience to the "statutes and the ordinances which I set before you this day." It has long since been surmised that these parenetic compositions were connected with a proclamation of the law so that they should be considered as speeches which preceded a liturgical recitation of the divine commandments or formed a setting for them (*see* the work of A. Klostermann in the *bibliography*). Thus the section 7:1-15 clearly falls into two parts. In the first part, vss. 1-11, with an eye on Canaanitic religious practices and on the danger of intermingling, a call is issued for obedience to the commandments "which I command you this day." The second part, on the other hand, speaks of the blessing which Yahweh will bestow upon men, animals, and fields if Israel continues to be obedient to these commandments. This section, by the way, is closely related to the promise of blessing in 28:3-6, which is essentially much more strictly liturgical in style. Thus it is very obvious that 7:1-15 was originally something like a liturgical formula for exhortation and the promise of blessing which made a setting for a liturgical proclamation of the law: vss. 1-11 introduce it; vss. 12-15 conclude it. This liturgical sequence (exhortation, commandments, blessing and curse) is repeated, indeed, on a larger scale in the arrangement of the book of Deuteronomy. The sequence of its individual sections (exhortation: chs. 6-11; statement of the law: 12–26:15; commitment to the covenant: 26:16-19; blessing and curse: chs. 28–30) can surely not be considered an arbitrarily selected literary arrangement. Here, too, there is reflected a liturgical ceremony, the framework of a religious celebration in the center of which was the proclamation of the commandments and the commitment of Israel to the intent of Yahweh's law.

Within the parenetic units of chs. 6–11 there are, however, several which have nothing to do with the proclamation of the law. Thus, e.g., 7:16-25 revolves around the military subjugation of the peoples of Canaan, around the admonition to be fearless, and around the warning against appropriating the things which were accursed (חרם). The situation is very similar in the case of 9:1-6 and also of 31:3-8. Here it is a question of speeches which were made to the army before a war. That it is a matter not merely of a literary fiction but of an actual form of literature—namely, the war sermon—can be gathered from the law of war (20:1 ff), which in its most recent stratum also provides for an address to the troops by a priest (vss. 2-4). These war sermons are important in the determination of the origin and composition of Deuteronomy. *See* § 6 *below*.

6. Origin. After what has been said so far, the question of the authorship of Deuteronomy can, to begin with, only be expressed thus: The representatives of this practice of sermonizing gave Deuteronomy —from the first to the last sentence—this characteristic stamp, peculiar to it, with respect to phraseology. They were concerned with actualizing the old religious and legal traditions for their own time. We sense, in the urgency of their sermons, that those to whom they addressed themselves had already nearly outgrown the old Israelitic regulations. This explains the importunate, occasionally imploring, manner of speech and the attempt to grip the listeners very personally in order to impress the divine commandments on their consciences. If, in this respect, a certain monotony in Deuteronomy—at least with regard to its phraseology—has justifiably been mentioned, in any case, one may not overlook the very broad nature

of the content, the diversity of the subjects preached about. Alongside homiletic presentations of old apodictic legal maxims one finds those which represent the conditional legal regulations. Those preachers are concerned with the arrangement of festivals, with the institution of kingship, as well as with the support of the priests, the stipulations of the holy war, and the laws concerning marriage and the family. Who were the men to whom the entire sacred and legal material of their tradition was equally available and who could claim for themselves the authority for such an arbitrary interpretation of these old materials? They cannot have been laymen, but must have been men who held a religious office. The ease with which they go back and forth between materials of the most varied origin at once points to a relatively advanced period in the history of Israelitic traditions. The only passage within the historical tradition of the OT which can be of assistance here is the description of the reading of the law of the God of heaven, which Ezra arranged (Neh. 8:1 ff; *see* EZRA AND NEHEMIAH, BOOKS OF); for the chronicler reports that at the same time the Levites instructed the people in the law, in that they interpreted what was read. In point of time, the evidence probably lies well before the period of time which can seriously come into consideration for the dating of Deuteronomy, but if such interpretive activity—exactly what we are looking for, from the point of view of Deuteronomy—is known in the fifth century, then there is certainly a possibility that the Levites also engaged in this activity even earlier (*see* PRIESTS AND LEVITES). There is, however, still another indication that the preachers of Deuteronomy should be sought in the priestly-Levite circles: according to the law of war (Deut. 20: 1 ff) a priest was to make a speech before the beginning of the battle. The outline of the address which is attributed to him (vss. 3-4) corresponds exactly to the sermons of war which are also found elsewhere in Deuteronomy. However, the texts which refer to war are not merely one part of Deuteronomy among others; on the contrary, all of Deuteronomy is influenced by a decidedly warlike spirit, which pervades the parenetic (chs. 6–11) and the legal portions (chs. 12–26) equally (cf. 6:18; 7:1-2; 11:23 ff; 12:29; 19:1; 20:16; etc.). In this very respect Deuteronomy differs markedly from the Book of the Covenant, the Holiness Code, or the Priestly Code. Therefore, the question as to the origin and the authors of Deuteronomy is tantamount to the other question as to who the representatives of this militant piety were. To be sure, it is also possible to consider Deuteronomy the exponent of a more intellectual-literary current, hence as the theoretical-theological project of a literary group. But one should raise the question first, however, as to whether Deuteronomy cannot be explained precisely on the basis of its characteristically warlike impression by a specific situation in the history of Israel.

Whereas Israel in the period before its statehood waged its wars by a general levy, the conscription of free peasants, the kings changed over more and more to carrying on their wars with mercenaries or professional soldiers. *Ca.* 701, to be sure, the political existence of Judah was destroyed by Sennacherib. Not only were extensive territories of the old kingdom of Judah assigned to the Philistines; but the Assyrian probably also, as was generally his custom in dealing with subjugated peoples, took the mercenaries and the specialized warriors who fought from chariots over into his own military force. If JOSIAH, after this catastrophe, wished to make himself politically independent, he had to fall back upon the old method of procedure, conscription of the free peasants; for the building of an effective mercenary force was much too expensive for the empty coffers of the state. Actually it can be proved by a series of statements from the historical work of Deuteronomy and Chronicles that Josiah in his striving for political expansion did go back to this ancient form of military organization (*see* the work of E. Junge in the *bibliography*). Since Deuteronomy must be connected anyway with the events under Josiah, it is natural to connect the warlike spirit of Deuteronomy, which emerged so abruptly, with this reorganization. Up until that time politics and waging war had been a concern of the king and his officials, officers, and mercenaries. With the calling out of the militia, forces suddenly came into a central position which had been excluded for centuries: old traditions from the holy wars, as they were waged in the days before statehood, came alive again and were adapted in a makeshift fashion to the demands of the new age. It is to be assumed that the Levites, in particular, were the representatives of this warlike revival. Prophetic circles may also have had a part in it, for Deuteronomy shows prophetic influences here and there. However, the prophetic coefficient in Deuteronomy should probably be credited to a greater degree to the general ideas and conceptions which were characteristic of the religious life and thought of this whole period. The supporters, spokesmen, and expositors of the old traditions which are gathered together in Deuteronomy were hardly prophets, but Levites.

If, then, Deuteronomy had gone into effect in the kingdom of Judah under Josiah, this does not mean that it must therefore be considered a specifically Judaic tradition. On the contrary, there are indications which point to an origin in the N kingdom. The demarcation with respect to the Canaanitic worship of Baal and the struggle against religious syncretism which runs through all parts of Deuteronomy fits, according to everything we know, much better into the situation in the kingdom of Israel than into that of Judah. Moreover, there is the fact that Deuteronomy also addresses itself to "all of Israel" and that this Israel tradition had its home in the N kingdom, while in Jerusalem and Judah, as can be seen, e.g., from Isaiah, a tradition built around Zion and David was cherished. Also the Deuteronomic law of the king points much more to the kingdom of Israel with respect to constitutionality, because it speaks of a free choice of the kings and even considers the election of a foreigner possible. Especially significant are the points of agreement between Deuteronomy and the prophet Hosea, whose polemic against kingship (3:4; 8:4, 10; 13:11) coincides with the negative point of view of Deuteronomy (Deut. 17:14 ff). Likewise, the demand that they love Yahweh (Deut. 6:5 and repeatedly) probably is more or less closely connected with the message of Hosea, although one may not imagine a direct, possibly literary, dependence. The

Shechem chapter (Deut. 27), the position of which in Deuteronomy is problematic in any case, would also not appear to be an incomprehensible foreign element in Deuteronomy if Deuteronomy is interpreted from the point of view of the N Israelitic tradition. If these considerations prove valid, one must think of N Israelitic sanctuary (Shechem or Bethel?) as the place of origin of Deuteronomy and must fix its date in the century before 621. There are no legitimate reasons for going back still further. The question as to whether the sacred and legal regulations which are basic for Deuteronomy are N Israelitic, and whether their homiletic treatment first took place under Josiah, suggests itself, naturally; but it is hard to decide.

7. Theology. If Deuteronomy were a code of law, it would scarcely be possible to speak of a "theology" of Deuteronomy. However, since it must be understood to be the result of a far-reaching homiletic activity, the attempt can also be made to establish the basic thought of this Levitic sermon and the theological accomplishment which is behind it. The fact that Deuteronomy does not represent a unit, either from a literary point of view or from the point of view of the history of tradition, is only a minor obstacle in this attempt, because even the more recent portions do not differ appreciably from the older with regard to their theology. Above all, the fact that Deuteronomy considers itself a great authentic compilation of the belief and statutes of Israel demands such a breakdown of its contents. Nothing is to be added and nothing taken away from it (12:32—H 13:1; cf. 4:2): this means that Deuteronomy was already claiming something like canonical validity. As a matter of fact, almost all the sacred traditions alive at that time were brought together in one big whole in Deuteronomy. But one may not assume that Deuteronomy seeks to fix the doctrine of Israel in a form valid for all time—there never was such a thing in Israel. Deuteronomy does claim to be the word of Moses to Israel for a specific hour of its history, and therefore presents its message aggressively, in that it never for a moment loses sight of its religious opponent, the Canaanitic natural religion.

The most varied traditions, the belief in election (of a chosen people), the tradition of the patriarchs, the traditions of Moses and the revelation of God on Mount Sinai, and many other things have been fused in Deuteronomy into a unit of such encyclopedic scope and of such a rigid theological uniformity as was never again possible for the faith of Israel. One does justice to the significance of this theological accomplishment only if one understands that there had never been such a compilation of the traditions of all Israel at all before Deuteronomy. Formerly the individual Israelite lived in obligation to one of the holy places and to the regulations and traditions practiced there. Deuteronomy, however, is in earnest with its belief in the indivisible Yahweh (6:4), who can be worshiped in only one sacred place by one Israel. Deuteronomy injected this understanding into a period in which everything, the political as well as the religious existence of Israel, was in complete dissolution. The demand for a centralization of worship is surely much less a religio-political measure than a theological consequence which resulted from the conception of one Israel before the one Yahweh. To this Israel, Yahweh granted the Torah through Moses. Before Deuteronomy, "Torah" in Israel meant the individual priestly decision, a short statement with which the priests perhaps answered the question of a layman—usually concerning "clean or unclean" (Deut. 33:10; Hos. 4:1-2, 6; Hag. 2:11 ff). Deuteronomy uses the word "Torah" in a new sense—namely, as the sum of all the revelations of the will of Yahweh, which finally constitute an indivisible unit (Deut. 4:3; 17:19; 30:10). The knowledge that the whole direction of history and the many religious and legal traditions of Israel represent only parts of one unique self-revelation of Yahweh was of greatest significance for the faith of those who came later. To this Israel, Yahweh had promised the land of Canaan as a hereditary possession (נחלה). Again there is a new linguistic usage: until now one spoke of the inheritance of kinsfolk (Gen. 31:14; Num. 16:14; Josh. 24:28 ff) or of that of a tribe (Josh. 13:7, 14; 14:9, 13-14), and in this sense it is a question of a religious concept of genuine legal significance. When Deuteronomy spoke of the נחלה of Israel, the term no longer had a legal, but only a religious, significance. In this inheritance Yahweh will bestow upon his people all conceivable blessings (Deut. 12:7; 15:6, 14; 16:10; 28:2), and they will enjoy rest from all enemies round about (12:9; 25:19). The blessings of salvation, toward which the people of whom Moses took leave are moving, are completely of this world and to a large extent of a material nature. With this derivation of all natural blessings which serve to support a people, however, Deuteronomy victoriously concluded a long and fluctuating battle between the natural religion of the Canaanites and the belief in Yahweh. Yahweh, sovereign not only in the shaping of history, is also the unique dispenser of every blessing of the earth, which hitherto had been the domain of Baal. The constitution according to which Israel is to live in the Promised Land is more nearly one of an ideal amphictyony than that of a state with a king. The Israel of Deuteronomy is no state, but a great religious community; and the Deuteronomic law of the king makes it clear enough that Israel, in the opinion of Deuteronomy, will not have lost anything if it is not ruled by a king "like all the nations that are round about" (17:14).

Thus Deuteronomy is the word of Moses to an Israel which is in a very advanced hour of its history. This Israel, which outwardly no longer resembles in any respect the one which was once on Horeb—it has kings, prophets, and is even acquainted with false prophets!—comes once more under the sovereignty of Yahweh, in order to be claimed by him as his people—as a "holy people" (7:6; 14:2, 21; 26:19; 28:9). It would be wrong, however, to regard "this Torah" as law in the theological sense of the word (*see* LAW IN THE OT); Deuteronomy does not demand that Israel earn its salvation by obedience. On the contrary, the election, the laying claim to Israel, has taken place before Israel had a chance to prove itself before God; only then does the demand that the commandments be kept follow. It is also significant that Deuteronomy derives the obedience of Israel from gratitude (ch. 8). Especially characteristic for the sequence election-obedience is 27:9-10: "Keep

silence and hear, O Israel: this day you have become the people of the LORD your God. You shall therefore obey the voice of the LORD your God, keeping his commandments and his statutes, which I command you this day." The historical point in which Deuteronomy sets this great speech by Moses, which must be interpreted as an explanation of the Decalogue (5:26 ff), is "on the other side of the Jordan," in the land of Moab, thus between the election of Israel to be the people of Yahweh and the receiving of the gifts of the promise. However, great concern extends all through Deuteronomy lest Israel, even after it was chosen by Yahweh, might forfeit its salvation. With this theological claim Deuteronomy also passed over into the late period of the kings, not as a historical document from a time long past, but as Yahweh's claim on and promise to Israel. Then, however, one cannot avoid the assumption that this period also must have regarded itself as still being between the election and the fulfilment of the great promises—i.e., as a generation which, although it had already lived in Canaan for centuries, was nevertheless still waiting for the final fulfilment of Yahweh's promise.

8. King Josiah and Deuteronomy. Investigation of Deuteronomy began when the close connection between Deuteronomy and the reforms of King Josiah was pointed out, and for a long time the road to Deuteronomy led through II Kings 22–23. In the process the mutual relationships were undoubtedly overestimated, and it would be jumping to conclusions to seek simply to interpret Deuteronomy from the point of view of Josiah and Josiah on the basis of Deuteronomy. Deuteronomy is a product of the theology of this period; accordingly, in spite of all its propensity for the practical, it also undeniably has a theoretical spirit. Not without some justification, it has actually been called Utopian. King Josiah, on the other hand, certainly did not get all his impulses for action from Deuteronomy. The rapid collapse of the Assyrian Empire must have encouraged him to throw off feudal service and, accordingly, to free himself also from the worship of the Assyrian national gods. It is improbable that all measures along this line were inspired by Deuteronomy. And if Josiah should have thought of restoring the kingdom of David, then, indeed, there is no connection with Deuteronomy, which is so far removed from the sacred traditions of Jerusalem. On the other hand, Josiah's action against the places of worship of Yahweh in the country and against the places of worship of Canaanitic deities is not to be understood on the basis of the political demands of this period (II Kings 23:8, 10, 13-15), nor can the special celebration of the Passover (vss. 21-23). However, it is understandable that a document such as Deuteronomy could not be used as the program for the religious reform of a Judaic king without being affected to some extent. It was inevitable that the king in his actions would go beyond Deuteronomy to some extent and, also to some extent, lag behind it. One case in which a regulation provided for in Deuteronomy (18:6 ff) could not be carried out in practice is noted in the account of the reform itself (II Kings 23:9).

G. VON RAD

DEVIL [διάβολος, slanderer, calumniator]. A word which relates to several terms in the OT, the later Jewish writings, and the NT. The LXX translates שטן with διάβολος. The NT uses both διάβολος and the transliterated σατανᾶς without any basic differentiation. Interesting to note is the use only of σατανᾶς in the undisputed letters of Paul and only of διάβολος in the disputed letters and in the Johannine Gospel and letters.

The OT term has its origin in Hebrew judicial terminology as the "adversary," especially in the sense of the accuser at court (Zech 3:1). Israel's enemies have from God a special function as her accusers (I Kings 11:14). In Job 1:6-12, SATAN is Job's accuser before God, working in behalf of God and in no sense as a demonic power. However, the original judicial content is transcended as Satan becomes the worker of Job's misfortunes and in I Chr. 21:1 the inciter to evil. These later developments may be due to Persian or Babylonian influence, but a metaphysical dualism does not appear in the OT.

In some of the later Jewish writings the term is associated with evil desire (*see* DEMON), fallen angels (*see* ANGEL), and the angel of DEATH, but these are secondary. The central understanding of the term is of one who destroys the relationship between God and men, especially Israel, by leading men to sin, accusing them before God, and seeking to thwart God's plans. It is to be emphasized, however, that the term is not identified with the ruler of this world.

In the NT the term (only "διάβολος" passages cited) is understood as the singular and supernatural adversary of God, the tempter and seducer of men (Matt. 4:1 ff; 13:39; Luke 4:1 ff; 8:12; John 13:2; Acts 10:38; Eph. 4:27; 6:11; I Tim. 3:6-7; II Tim. 2:26; Jas. 4:7; I Pet. 5:8). One under his power can be called a devil or the devil's child (John 6:70; 8:44; I John 3:8, 10). In his hands is the power of death (Heb. 2:14). Although he is the ruler of this world, Christ brings his defeat (Matt. 25:31; Jude 9; Rev. 2:10; 12:9, 12; 20:2, 10; cf. John 12:31; 14:30; 16:11; II Cor. 4:4). Without the use of διάβολος, the original OT emphasis as "accuser" appears overtly in Rev. 12:10 (κατήγωρ) and as a presupposition in Rom. 8:33-34. As an adjective διάβολος appears in II Tim. 3:3, 11; Tit. 2:3; and the verb διαβαλλεῖν appears in Luke 16:1. *See also* ABADDON; APOLLYON; BEELZEBUL; BELIAL; DRAGON; EVIL ONE; LION; LUCIFER; SERPENT.

P. L. HAMMER

DEVOTED. The basic meaning of the noun חרם (*ḥērem*) and the verb החרים, commonly rendered "devoted thing(s)" and "devote" respectively, is connected with the idea of holiness, exclusion, separation, taboo. The root is used in all the Semitic languages to denote things forbidden to common use: cf. Arabic

ḥarām, used of the sacred precincts of Mecca, Medina, and Jerusalem; *ḥarīm,* the area forbidden to all except the husband and eunuchs; and Akkadian *ḥarimtu,* "sacred prostitute." Clothing worn at the circuit of the Qa'aba are *ḥarīm* and may not be worn or sold. In Lev. 27:28 a person or thing devoted to the deity is excluded from private use, for "every devoted thing is most holy to the LORD." The *ḥērem* is especially connected with warfare. In hope of victory a vow was made devoting all spoils, animate and inanimate, to the deity (Num. 21:2-4). The unmitigated *ḥērem* required the slaughter of everything that breathes (Deut. 20:16) and the destruction of everything destructible. Things inflammable were burned (Deut. 7:25-26), but noncombustible precious metals might be taken into the sanctuary treasury (Josh. 6:24). None of the devoted things could be appropriated for private use (Deut. 13:17). By the extension of this principle, every devoted thing became the property of the priests (Lev. 27:21; Num. 18:14; Ezek. 44:29). Achan's sin in this regard brought upon all Israel the curse of the devoted thing, which could be removed only by the extermination of the sinner and his household (Josh. 7:11-15, 25). No person devoted might be spared or ransomed (Lev. 27:29). The destruction of Jericho is a vivid example of complete devotion of a city (Josh. 6:18 ff). The barbarity of the *ḥērem* was mitigated by exempting women and children (Num. 31:7-12, 17-18; Deut. 21:10-14), and particularly young virgins (Judg. 21:11-12). Cattle and sheep also might be saved (Deut. 2:34); but this was not condoned by the purist, even when the pretext was that they were to be sacrificed to the Lord (I Sam. 15:9, 21). The enemy king especially was regarded as a prime candidate for devotion, and failure to execute him brought divine disfavor (I Sam. 15:24-33; I Kings 20:42).

The Canaanites were devoted to destruction (Deut. 7:1-3; 20:16-18; Josh. 2:10; 6:17), in order that Israel might not be seduced into idolatry. Joshua is credited with accomplishing their wholesale extermination (Josh. 10:1, 28-40; 11:11-21). Actually this was only wishful thinking of a later time, and it is admitted that the Israelites were unable to carry out the destruction (I Kings 9:21). An idolatrous Israelite city was to be treated the same as the Canaanites (Deut. 13:12-18). Anyone who sacrificed to a god other than the Lord merited destruction (Exod. 22:20), though it is doubtful that such a penalty was often exacted.

In the postexilic period the *ḥērem* was no longer applied as a military measure, but certain aspects of it were adapted as a means of eliminating undesirable elements from the community. When Ezra attempted to close the ranks of the returned exiles against the heathen influence of the people of the land (*see* AM HA'AREZ), those who refused to cooperate had their property devoted—i.e., confiscated—and they themselves were expelled from the community (Ezra 10:8). Thus the *ḥērem* became a means of ecclesiastical discipline, by expropriation and EXCOMMUNICATION.

The idea of the *ḥērem* persisted in apocalyptic thought. The enemies of Israel, the heathen nations, collectively symbolized by Edom, are doomed (devoted) to slaughter (Isa. 34:2, 5). The heathen will be threshed by Zion and their wealth devoted to the Lord (Mic. 4:13; cf. Hag. 2:6-7). Horror and revulsion against the *ḥērem,* and fear of it, also persisted (Mal. 4:6); in the new Jerusalem (Zech. 14:11) and the heavenly Jerusalem (Rev. 22:3) there will be no more *ḥērem,* or curse.

M. H. POPE

DEVOUT [צדיק (Isa. 57:1; KJV MERCIFUL); εὐλαβής; εὐσεβής (GODLY *in* II Pet. 2:9); σεβόμενος, *participial form of* σέβω, to worship]. In the OT passage, a synonym for "righteous"; in the NT, "reverent, pious, devoted to the cult or to worship." In Acts, σέβω is used only in reference to the worship of pagans, some of whom may have had a loose connection with the synagogue.

See also WORSHIP IN NT TIMES, CHRISTIAN.

B. H. THROCKMORTON, JR.

DEW [טל; LXX *and* Apoc. δρόσος]. Condensation of water vapor from air cooled by contact with ground or objects which have lost sufficient heat by radiation during the night. This occurs chiefly during clear, calm nights when temperature drops markedly and the air is moist. Dew is important for vegetation in Palestine because it is at its maximum during the almost rainless four months of summer. It is heaviest on the coast W of Beersheba, in the Plain of Esdraelon, and at the sources of the Jordan beneath the slopes of Hermon (Ps. 133:3). It soon evaporates (Exod. 16:14) as the heat of the sun increases (Hos. 6:4). Dew was believed to fall imperceptibly (II Sam. 17:12) from the sky (Zech. 8:12) or the highest clouds (Prov. 3:20).

As a figure of speech "dew" represents abundant fruitfulness (Gen. 27:28), refreshment and renewing (Ps. 110:3; Hos. 14:5—H 14:6), what is beyond man's powers (Mic. 5:7—H 5:6), a silent coming (II Sam. 17:12), impermanence (Hos. 13:3), and exposure (Song of S. 5:2).

R. B. Y. SCOTT

DIADEM [צניף (Isa. 62:3; TURBAN *in* Job 29:14), *from verb* to wrap, wind; צפירה (Isa. 28:5); KJV מצנפת (RSV TURBAN; Ezek. 21:6); διάδημα (KJV CROWN)]. A wreathlike crown. A turban bound to the head by a cloth or metal band was a characteristic type of CROWN in the ancient world; hence "turban" or "miter" is more accurately descriptive of the royal headdress of the OT period. The Greeks called the blue band of the Persian crown a diadem; and when the Hellenistic kings adopted a wreathlike crown as their royal emblem, the name "diadem" was applied to it. A diadem, therefore, is properly a royal crown in distinction from the garland given for special merit or attainment (στέφανος; cf. I Cor. 9:25; II Tim. 4:8; Jas. 1:12; etc.), although the distinction is not always rigidly maintained.

"Diadem" is used metaphorically in two ways. In

the new age the Lord will be a crown of glory and a diadem of beauty to the remnant of his people (Isa. 28:5), and Zion will be a crown of beauty and a royal diadem in the hand of the Lord (Isa. 62:3). In John's visions the great red dragon bore a diadem on each of its seven heads (Rev. 12:3) and the beast from the sea a diadem on each of its ten horns (Rev. 13:1), and the figure on the white horse (the conquering Christ) had many diadems on his head (Rev. 19:12).

L. E. Toombs

DIAL [מעלות] (II Kings 20:11; Isa. 38:8); KJV SUN DIAL (Isa. 38:8). A device for measuring time, ascribed to Ahaz and employed by Isaiah for giving Hezekiah the sign of the sun's shadow returning.

Sun dials of several types were employed by the peoples of the ancient Near East. Herodotus (II.109) mentioned that the Babylonians had been using an instrument with twelve hour-gradations. It is not certain which type Ahaz used. The word מעלות may have a variety of meanings, and is used in the above passages for both the "dial" itself and the "steps" (KJV "degrees") which marked the passing hours.

Many exegetes have followed the Targ. and the Vulg. in the view that Ahaz' dial was a special instrument of the Babylonian type with an indicator and hour-gradations. The LXX, Jos. Antiq. X.ii.1, the Syr., and most recent scholarship have agreed, however, that it consisted of a stairway whose steps marked the time of day as the shadow of a nearby object passed over them. It is now known that the Egyptians used a device of this type. Readings in the Qumran texts tend to confirm this view.

S. J. De Vries

DIAMOND [יהלום, *from* הלם, to smite, LXX *and* Vulg. jasper; שמיר (Jer. 17:1), *see* Adamant]. A crystallized native carbon. For יהלום (Exod. 28:18; 39:11) the versions seem to indicate a colored stone. *See* Jasper.

DIANA dī ăn'ə. *See* Artemis.

DIASPORA dī ăs'pə rə [διασπορά]. A general term to indicate the widespread settlement of Jews outside Palestine. *See* Dispersion; Exile.

DIATESSARON dī'ə tĕs'ə rŏn. A harmony of the four gospels prepared *ca.* A.D. 170 by Tatian. *See* Versions, Ancient, § 4*a*.

DIBLAIM dĭb'lĭ əm [דבלים, lump of figs, raisin cakes] (Hos. 1:3). The father of Hosea's wife Gomer. It has sometimes been suggested that the name is figurative—i.e., "Gomer the daughter of raisin cakes" —as an allusion to her harlotry, since raisin cakes were employed in fertility-cult rites in the ancient world.

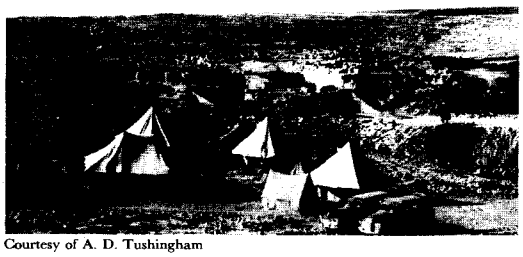
J. M. Ward

DIBLATH. KJV form of Riblah in Ezek. 6:14.

DIBLATHAIM. *See* Beth-diblathaim.

DIBON dī'bŏn [דיבן, דיבון, דימון (Isa. 15:9; KJV Dimon)]. Alternately: DIBON-GAD dī'bŏn găd' (Num. 33:45-46). **1.** A city of Moab; modern Dhiban, thirteen miles E of the Dead Sea and three miles N of the Arnon River. Eusebius (Onom. 76.17 ff) knew the site but placed the name in the desert.

The city of Dibon was taken by Sihon king of the Amorites. It was taken from him by Israel and allotted to Gad (Num. 21:23-30; 32:3, 34; apparently counted as belonging to Gilead in 32:29 [but to Reuben in Josh. 13:17]; named Dibon-gad in 33:45 [cf. Josh. 13:9]). It was probably subjugated by Eglon king of Moab (Judg. 3:12-14) and possibly freed by Ehud (vss. 15-30), but almost certainly by David (II Sam. 8:2).



"Dibon" occurs in the oracles of Isaiah and Jeremiah against Moab (Isa. 15:1-9; Jer. 48:18, 22). In Isa. 15:2 "the house and Dibon" (הבית ודיבן; KJV "Bajith, and . . . Dibon") is perhaps a corruption of "daughter of Dibon" (so RSV; בת דיבן; cf. Targ. and Syr.). In Isa. 15:9 the phrase "waters of Dimon" may perhaps, with the Dead Sea Scroll of Isaiah (1QIs^a) and the Vulg., be read "waters of Dibon" (so RSV).

The famous Moabite Stone, discovered at Dibon in 1868, supplements and corrects the record. Doubtless when the Israelite kingdom was divided, the Moabites regained their independence.* But, according to the inscription, Omri of N Israel recovered control of Moab and retained it for "forty years," collecting a tribute of "a hundred thousand lambs, and the wool of a hundred thousand rams" (II Kings 3:4). But Mesha restored Moab's independence and carried his conquests farther N (cf. II Kings 3:4-27). In the Moabite Stone, Mesha refers to making "this high place to Chemosh in Qarhah" and describes at length his buildings at Qarhah. He calls himself a Dibonite and praises the obedience of Dibon and its fifty chiefs. Was Qarhah a new capital at some unidentified site (later abandoned), or was it a new and temporary name for one of the two mounds at Dhiban? The question cannot now be answered. The imposing buildings on the mound suggest the latter alternative. Fig. MOA 66.

Of two mounds at Dibon, the S one is occupied by the present village. The one on the N, which is the more easily defensible because of wadies about it, and which, therefore, probably preserves the remains of Mesha's buildings, is fortunately unoccupied. The American School of Oriental Research at Jerusalem, through its directors, has undertaken the excavation of the promising site.* Preliminary reports from 1950-56 indicate the general outline of the city's history. Evidence of an Early Bronze Age level of occupation has been found, but none of the Middle or Late Bronze Age—quite in keeping with the results of Nelson Glueck's surface surveys. In other words there was only a nomad population in this area from 2100 to 1300. Fig. DIB 28.

Soundings have discovered some ten feet of Iron Age occupation, including from five to ten feet of rich Moabite remains; and the Nabatean levels are especially productive.

The earliest excavation discovered five (or four) city walls. One was built over by some of the others, but never bonded into any, and its crude construction suggested the Early Bronze Age. A tower, simi-

Courtesy of A. D. Tushingham

28. Ancient Dibon in Moab during the 1953 excavations

larly free-standing, was judged to be even earlier. A second wall, battered (not perpendicular), may be only a facing for wall no. 1. The heaviest wall (no. 3), 7.5-10.8 feet thick and built of large, well-squared blocks, is thought to belong to Mesha's time. A fourth wall, also battered, was built over wall no. 1. A fifth (upright) wall, of roughly cut stone, must have been built in Arab time, since the fill in the early tower, which was crossed by this last wall, included potsherds from Early Bronze to Arab times. Figs. BUR 56; 59.

In the SE sections of the mound a complex of buildings centered on a structure which was marked as Nabatean by the diagonal dressing of the outer surface of the walls. Little above the foundations remains, but these were deeply laid and solidly built. This structure was incorporated into a Roman building that was longer and had a higher floor level than the Nabatean structure, and heavier walls that were faced with well-dressed blocks. It was probably a Roman temple built over a Nabatean sanctuary. Later a Byzantine church was built beside it, using one of its walls, and domed Christian tombs were constructed in the Roman building.

A date for a Roman tower (not yet located) is given by an inscription "at the order of Claudius Capitolinus" and dated in the year 557, which, assuming the Seleucid era, sets the erection of the building in A.D. 245-46. If the word πύργος, "tower," is correctly read in the inscription, as appears probable, the structure intended is a Roman defense, presumably erected against Arab inroads. To the Roman period also belongs a typical Roman bath.

A Carbon^{14} test of carbonized grain found in the Iron Age levels has given a date of 2815 B.P., or 858 B.C., ± 165 years (1023-693). The median date falls with remarkable agreement into the period determined by the pottery finds, which had previously been set by W. F. Albright and Roland de Vaux at 850 B.C. The grain in question was probably wheat, but too highly carbonized for the species to be determined. Presumably it was חִטָּה, "WHEAT," frequently mentioned in the OT.

The discovery of such grain recalls the well-known fact that Moab was not only famous for sheep and goats (cf. II Kings 3:4), but also as a land of wheat and barley, the "breadbasket" of W Palestine. It was traditionally a land to which Palestinians resorted in time of famine (Ruth 1:1). Further comparison of its culture with that of the Hebrews in the Iron Age and the Nabatean period, the Hellenistic Roman Age, should contribute to the Hebrew-Jewish history.

***DIDACHE** dĭd'ə kĭ [διδαχή, teaching]. The oldest known document of a class denoted as "Church Orders," containing directives for catechetical instruction, worship, and ministry. In the single extant MS of the work, which was transcribed in 1056, it bears the title "Teaching of the Twelve Apostles," with a subtitle: "The Lord's Teaching to the Heathen by the Twelve Apostles." This text was discovered in 1873, and published ten years later, by Philotheus Bryennius in the library of the Jerusalem Patriarchate at Constantinople. The MS also contained texts of the Pseudo Epistle of Barnabas and the two epistles attributed to Clement of Rome. The Didache is undoubtedly the "Teachings of the Apostles" recorded by Eusebius (Hist. III.25.4) among the NT apocrypha. The earliest citation of the Didache (or possibly of one of its sources) is in Clement of Alexandria (Misc. I.20,100), who quotes 3:5 as scripture. The relative date of the Didache, its provenance, textual history, and significance, have to date been occasion of considerable disagreement among scholars; and no solution of these problems has yet received a widely accepted consensus.

The Didache, like all Church Orders, is a compilation from various sources. The contribution of its editor, apart from his selection and arrangement of his materials, consisted only of a few retouches and connecting links. Thus the date and provenance of the compiler are not the same necessarily as those of his sources; and it may well be that some of the materials of the Didache, as many critics maintain, derive from the apostolic age. The problem is particularly illuminated by the first section of the Didache (chs. 1–6), a collection of moral precepts and commandments illustrative of "two ways, one of life, and one of death."

The pattern of ethical instruction according to "two ways" was a basic method of Jewish catechesis (e.g., Ps. 1:6; Prov. 4:18-19; Jer. 21:8; Test. Asher 1:3; 1QS IV; Philo *On the Special Laws* IV.108; cf. Matt. 7:13-14). This Jewish pattern of teaching—whether in an oral or a written source—must have been adapted by an early Christian teacher for instruction of Gentile converts; for it is utilized as an exposition of the two chief commandments (cf. Matt. 22:37-39; Mark 12:30-31) and the "Golden Rule" (in negative form; cf. Western text of Acts 15:20).

In addition to Did. 1–6, two other recensions of this Christian formulation of the "two ways" are extant: (*a*) chs. 18–20 of the Pseudo Epistle of Barnabas (*see* BARNABAS, EPISTLE OF), in which the arrangement of the material is quite different from that of the Didache; and (*b*) a Latin version of the late second or third centuries, extant in two MSS, that is very close to the Greek Didache in both order of contents and text.

Despite the efforts of many critics to relate these three recensions in some scheme of interdependence, the simplest explanation is that all three stem from a common original. A revealing indication of the Jewish or Jewish Christian source of the "two ways" is the citation of Ps. 37:11 (cf. Matt. 5:5) in Did. 3:7: "The meek shall inherit the land," where the reading of the Latin version is: "The meek shall inherit the *holy* land." (The phrase is absent from Pseudo-Barnabas.) There is nothing in the "two ways" material that would be unacceptable to a Jew. But the compiler of the Greek Didache has enlarged the teaching by an interpolation (1:3-6) of precepts drawn from distinctly Christian sources: Synoptic sayings similar to Matt. 5:39-44; Luke 6:30-33; I Pet. 2:11; Hermas *Mandates* 2:4-6; and an unknown apocryphon. And he has rounded off the instruction by the accommodating advice (6:2): "If you can bear the whole yoke of the Lord, you will be perfect; but if you cannot, do what you can."

The Didachist connects his "two ways" source to his Church Order material by making it a catechesis prior to baptism. In ch. 7 he directs that baptism be administered in the triune name, and, if possible, in running, cold water. Affusion is allowed if the supply of water is limited. A fast of one or two days before baptism is enjoined. The mention of fasting leads him, in ch. 8, to recommend that Christians fast on Wednesdays and Fridays, in distinction to the fasts of the "hypocrites" (i.e., the Pharisees) on Mondays and Thursdays. The Lord's Prayer (in a form very similar to that in Matthew—and with a concluding doxology) is to be recited three times a day.

Chs. 9–10 provide forms of thanksgiving before and after the common meals of the church. These forms are Christian versions of Jewish Benedictions (*berakoth*). The unbaptized are to be excluded from this "Eucharist," as it is called. But many critics believe that the prayers are designed for AGAPE meals, not the Lord's Supper, since they contain no reference to the Last Supper nor any identification of the bread and the cup with the body and blood of the Lord.

The notice that "prophets are to give thanks as they wish," rather than use the prescribed forms, leads the Didachist in chs. 11–13 to a discussion of how the churches are to receive, test, and provide for inspired ministers ("apostles and prophets") that may happen to visit their communities. The tests are not theological—which suggests that the problem of false prophets was not due to heresy—but ethical. Presumably the churches addressed had been afflicted with charlatans, who exploited their supposedly spiritual gifts for selfish, material subsistence.

Chs. 14–15 direct the regular celebration of the Eucharist on the Lord's Day, and the appointment of "bishops and deacons worthy of the Lord" to provide this ministry in case "prophets and teachers" are lacking. The Eucharist is denoted as a "sacrifice," a fulfilment of the prophecy of Mal. 1:11, 14. Mutual confession of sins is enjoined before participation in the Eucharist.

A final chapter (16) is an apocalyptic admonition with respect to the signs of the coming of the Lord. The Didachist has made up his materials for this conclusion from Matt. 24; I Thess. 4:16; II Thess. 2:9; and the Pseudo Epistle of Barnabas 4:9. This chapter is probably not derived from a Church Order source, but is a compilation of the editor after the manner of his interpolation in 1:3-6.

In five instances, the Church Order material of the Didache refers as its authority to what the Lord commanded (8:2) or said (9:2) in the gospel, or to an ordinance of the gospel (11:3), or "as you have in the gospel" (15:3-4). In each case, the closest gospel parallel is to be found in Matthew. This circumstance, added to the close similarity of the ministries described in the Didache with those denoted at Antioch in Acts 13:1 ff, has persuaded most critics that the Church Order source is of Syrian provenance. This hypothesis seems supported also by internal evidence: the recognition of possible scarcity of running water, the reference to grain sown upon the mountains in the prayers, and the economic conditions presupposed by the directives concerning the offering of first fruits to the prophets (bread, wine, oil, money, clothes). The date of this Syrian Church Order would thus be later than Matthew, but prior to the acceptance of the fourfold gospel canon—i.e., the latter part of the first or the early years of the second century.

The editor who combined the "two ways" and the Church Order to form the Greek Didache probably worked toward the middle of the second century. He was probably not a Montanist, as some critics maintain; for though he admired prophets, he was no less wary of them. His use of Pseudo Barnabas and Hermas in free combination with his NT sources suggests that he flourished in Egypt, the only area where these two documents enjoyed anything like canonical authority. We have noted that Clement of Alexandria possibly cited the Didache as scripture, and the document was much used by Egyptian authors and compilers of the fourth and fifth centuries. Outside Egypt, the only notable use of the Didache was by the fourth-century Syrian compiler of the Apostolic Constitutions (VII.1-32).

Since Bryennius' discovery of the eleventh-century MS of the Didache, two papyri fragments of the text have come to light: a fourth-century Greek papyrus from Oxyrhynchus, containing 1:3-4; 2:7–3:2; and a fifth-century Coptic papyrus in the British Museum, of 10:3*b*–12:2*a*. The latter includes, following the thanksgivings at meals, a prayer for the blessing of the oil of unction (cf. Jas. 5:14).

Bibliography. The literature on the Didache is very extensive. For texts, translations, commentaries, *see* the bibliography under APOSTOLIC FATHERS. The most recent commentary, with exhaustive bibliography, is J.-P. Audet, *La Didachè, Instructions des Apôtres* (1958).

M. H. SHEPHERD, JR.

DIDRACHMA dī drăk'mə [δίδραχμον, double drachma]. A Greek silver coin of the value of two drachmas, but no longer issued at the time of the NT. A didrachma was the sum of the sacred tribute which had to be paid to the temple annually by each Jew. Therefore this tribute was called simply δίδραχμον (Matt. 17:24), which the RSV translates "half-shekel tax" because its value corresponded to a half shekel (KJV "tribute money").

See also PIECE OF MONEY. H. HAMBURGER

DIDYMUS dĭd'ə məs [Δίδυμος, twofold, twin]; RSV THE TWIN. An alternative designation for the apostle Thomas (John 11:16; 20:24; 21:2); probably his name among Greek-speaking Christians.

In the papyri it appears in the plural as a common noun (meaning "twins") and as a proper name. *See* THOMAS.

Bibliography. J. R. Harris, *The Twelve Apostles* (1927), pp. 23-27; J. H. Moulton and G. Milligan, *The Vocabulary of the Greek NT* (1914-29), p. 159. E. P. BLAIR

DIKLAH dīk'lə [דקלה, palm grove]. A son of Joktan, and hence the name of an Arabian locality (Gen. 10:27; I Chr. 1:21). It was probably an oasis, and has been plausibly, though not definitely, identified with the Phoinikon of Procopius and located at the S end of the Wadi Sirhan. S. COHEN

DILEAN dĭl'ĭ ən [דלען, promontory(?)] (Josh. 15:38). A village of Judah in the Shephelah district of Lachish. There is no agreement on the location.

DILL [קצח, *qeṣaḥ* (Isa. 28:25, 27; KJV FITCHES), *cf.* Ugar. *qṣḥ*(?), Arab. *qaẓḥa;* ἄνηθον (Matt. 23:23; KJV ANISE)]. The occurrence of this word with CUMMIN clearly indicates a kind of seed used as a condiment or seasoning. Botanists agree with this identification for ἄνηθον in Matt. 23:23, the true dill being *Anethum graveolens* L., which resembles parsley and is cultivated for its aromatic, brownish, oval-shaped seed, not unlike caraway. Much used for flavoring foods, it is also valued for its carminative medicinal values. In rabbinic sources (Ma'as. IV.5) "dill" (שבת, *shebheth*)—stem, leaves, and seeds—is mentioned as subject to the tithe, as indicated by Matt. 23:23 (cf. Deut. 14:23; Luke 11:42).

Identification of the Hebrew קצח with dill in Isa. 28:25, 27, is opposed by botanists, who claim it refers to *Nigella sativa* L., commonly called "nutmeg flower" (no relation to the nutmeg tree) or "black cummin." Support for this latter identification is found in the LXX use of μελάνθιον, identified with this herb, as well as the Arabic use of *qaẓḥa* for it, and the fact that the treatment of its seeds during the harvest is exactly as described in Isa. 28:27. *Qeṣaḥ*, "black cummin," in rabbinic literature (e.g., Ber. 40*a*) is distinguished from *shebheth*, "dill" (*see above*).

DIMNAH dĭm'nə [דמנה] (Josh. 21:35). A Levitical town in the territory of Zebulun; same as RIMMON 3.

DIMON dī'mən [דימון] (Isa. 15:9 KJV). The RSV follows the Dead Sea Scrolls in reading "Dibon" (*see* DIBON 1). Some suggest that "Dibon" was deliberately altered to "Dimon" to furnish a play on the sound of the word "blood" (Hebrew *dam*). In this case, the "waters of Dibon" would probably be the Arnon. Those who disagree with this reading point out that (*a*) Dibon has already been mentioned in vs. 2, and no other location is mentioned twice in this chapter; (*b*) Dibon does not stand on a large stream (it is removed from the Arnon both by distance and by elevation), and Isa. 15:9 speaks of the "waters of Dibon."

A possible identification is with MADMEN, whose initial *mem* could be a dittography. In this case, the location may be Khirbet Dimneh, 2½ miles NW of Rabbah. E. D. GROHMAN

DIMONAH dĭ mō'nə [דימונה] (Josh. 15:22). A town in the Negeb, near Edom; a part of the territory allotted to the tribe of Judah. Dimonah is mentioned in a list of cities in the far S, centered in Beer-sheba (Josh. 15:21-32). It may be the same city as DIBON, occupied after the return from exile (Neh. 11:25).

E. D. GROHMAN

DINAH dī'nə [דינה, *perhaps* rights controversy]. Daughter of Leah and Jacob (Gen. 30:21; 46:15).

Only in Gen. 34 (a composite narrative with traditions preserved by J, E, and P) does Dinah play any role in the OT. In the vicinity of the city of Shechem, Dinah was raped by one of its residents, who was also named Shechem and whose father was Hamor the Hivite. Shechem wanted to marry Dinah, so Hamor, speaking for his son and the whole city, proposed to Jacob and his sons that the marriage be permitted and that a social and commercial covenant be made between the two peoples. The outrage against Dinah was bitterly resented by Jacob's sons, and especially by Simeon and Levi, two of her full brothers. The sons slyly agreed to the covenant, provided that the Shechemites consent to circumcision. Taking advantage of its inhabitants' postoperative weakness, Simeon and Levi attacked the city and slew Hamor and Shechem. After their brothers had joined in the plunder of Shechem, Jacob reproved them, since their action had imperiled his safety (cf. Gen. 49:5-7).

That this story reflects an incident in the premonarchical relations between the city of SHECHEM and the Hebrews, particularly SIMEON and LEVI, is generally agreed; but its exact nature is disputed. The part that Dinah, either as an individual or as a clan, might have had in it is also quite uncertain.

M. NEWMAN

DINAITES dī'nə īts. KJV translation of דיניא (RSV JUDGES), one of the groups associated with REHUM (Ezra 4:9) in the complaint to Artaxerxes regarding the rebuilding of Jerusalem by the returned exiles (vss. 8-23). The word is not a gentilic but an official title, as in the LXX (Lucianic recensions). These judges are frequently mentioned in the Aramaic papyri, and both Herodotus and Josephus describe them briefly.

Bibliography. Herodotus *History* III.31; Jos. Antiq. XI.ii.1; A. Cowley, *Aramaic Papyri of the Fifth Century B.C.* (1923), pp. 16, 18, 22-23, 99-100. R. F. SCHNELL

DINHABAH dĭn'hə bə [דנהבה]. The city of the Edomite king Bela son of Beor (Gen. 36:32; I Chr. 1:43). Various conjectures have been made as to its location, but none seems demonstrable.

DINNER. The noon meal in biblical times. *See* MEALS § 1.

DIOGNETUS, LETTER TO dī'əg nē'təs [Ἐπιστολὴ πρὸς Διόγνητον]. An apologetic Christian writing in a highly rhetorical and somewhat artificial style, of uncertain date but probably not earlier than the third century A.D. It is usually included among the APOSTOLIC FATHERS, although its purpose and literary character would place it more naturally among the early apologists. Both the writer and the person addressed are unknown. There is no indication of any important influence of the writing in the ancient church. It is best known perhaps for its simile of the Christians as being to the world what the soul is to the body, and for its statement that the Christians are a third "race"—the others being, of course, the pagans and the Jews. The last two of the twelve chapters of the work are obviously by another hand, also unknown.

Bibliography. The best text and modern discussion, with translation, is in H. G. Meecham, *The Epistle to Diognetus* (1949). J. KNOX

DIONYSIA dī'ə nĭsh'ĭ ə, —nĭzh'ə [Διονύσια, festival of Dionysus]. A festival in honor of the god Dionysus (later Bacchus), a vegetation-deity. It celebrated the return of life in spring, after the long sleep of winter, and by means of sympathetic magic attempted to secure fertility. Therefore, it was often accompanied by drunken excesses, sexual license, and the tearing to pieces of a human or animal victim, symbolizing the god, and the burying of the flesh. In Attica the lesser Dionysia was held in the villages in December; the greater Dionysia was held in the city and was accompanied by the comedies and tragedies of the great dramatists, and by long processions of the people wearing ivy. Antiochus Epiphanes (*see* ANTIOCHUS 4) compelled the Jews to join these processions when he introduced the Dionysia into Coele-Syria (II Macc. 6:7). N. TURNER

DIONYSIUS dī'ə nĭsh'əs, —ĭ əs [Διονύσιος]. A frequent Greek name related to Dionysus (Roman Bacchus), a Greek god of vegetation, later of wine and of drama. In the NT, an Athenian, a member of the AREOPAGUS, who was converted with Damaris and others by Paul's preaching (Acts 17:34). Belief by this prominent official illustrates Luke's interest in the conversion of men of position (13:12; 19:31; 26:32; 28:7), since an Areopagite belonged to a small, aristocratic, powerful governmental group. Paul's speech in the Areopagus at Athens met various responses, but some men such as Dionysius joined him and accepted the faith.

Little is known of Dionysius. Codex D adds "prominent" (εὐσχήμον) to his name. Eusebius (Hist. III.4.11; IV.23.3) repeats information now both accepted and questioned, from another Dionysius, bishop of Corinth (*ca.* A.D. 175), that the Areopagite became the first bishop of Athens.

Vast but pseudonymous influence from Dionysius began in the fifth century, when an anonymous Syrian churchman attached the name of Dionysius to his own influential writings. This mystical theology, uniting Christian and Neoplatonic thought, is known in part from four treatises and some letters, purportedly from the first century. Many medieval theologians from the ninth century onward wrote commentaries and expounded the thought of this Pseudo-Dionysius. Dionysius' fame led to his mistaken identification (ninth century) with the first bishop of France (third century) or Saint Denys, martyr and patron of France. D. M. BECK

DIONYSUS dī'ə nī'səs [Διόνυσος]. A vegetation-deity of Thraco-Phrygian origin, worshiped by orgiastic rites of singular crudeness and brutality. He won a growing place in the religious life of Greece, and later of Italy, in the teeth of strong opposition. He was generally known to the Romans by his Greek cult title of Bacchus; they also called his great festival Bacchanalia, for the Greek Dionysia. Among the Greeks and Romans he was known chiefly as the god of the vine; like other vegetation gods, he was also the center of a mystery cult and admitted his initiates to participation in the divine nature. The orgies of the primitive cult were conventionalized in the Greek world, and at the Attic festival of the Greater Dionysia. The Attic drama was evolved out of the dances and music of the religious rites. In the Hellenistic age, his worship was widely extended through the kingdoms ruled by the successors of Alexander, and was actively promoted by the kings themselves; artists, musicians, and craftsmen were often organized in private religious societies devoted to Dionysus.

The god is mentioned in the Bible only in II and III Maccabees: Antiochus Epiphanes forces the Jews to walk in the procession of Dionysus, carrying his sacred ivy, at the festival of the Dionysia (II Macc. 6:7); Nicanor threatens to destroy the temple and erect a sanctuary to Dionysus on its site (II Macc. 14:33); and Ptolemy Philopator orders Jews to be branded with the ivy leaf of Dionysus, who was the patron of the Macedonian dynasty (III Macc. 2:29). F. W. BEARE

DIOSCORINTHIUS dī'əs kə rĭn'thĭ əs [Διοσκορίνθιος]. The name of a month in the dating of Lysias' letter to the Jews in 165-164 B.C., according to II Macc. 11:21. Perhaps the reference is to the first month of the Macedonian calendar, *Dios,* which Josephus identifies with the Jewish month

Marcheshvan (Antiq. I.iii.3)—late November–early December—but the additional κορίνθιος is inexplicable. The reading *Dioscoridos* is also found in some Latin MSS, but this is not known to be the name of a month. Many editors prefer a variant Latin reading *Dioscurus,* which is known to be the third month of the Cretan year. This may have been the name of an intercalary month in the Macedonian calendar, corresponding to a position just before Nisan (April) in the Jewish calendar. Others conjecture that the name is a corruption of *Dystros,* corresponding to the Jewish month Adar (March). On the whole, the reading *Dioscurus* appears preferable.

DIOTREPHES dī ŏt′rə fēz [Διοτρέφης]. An early Christian known only from the unfavorable comment in III John 9 that he "likes to put himself first, does not acknowledge" the authority of "the elder," who writes that letter. *See* JOHN, LETTERS OF.

DIPHATH dī′făth [דיפת] (I Chr. 1:6). Same as RIPHATH.

DIRECTIONS. *See* ORIENTATION.

DIRGE. *See* MUSIC.

DISCERNING OF SPIRITS. *See* SPIRITS, DISTINGUISHING.

DISCHARGE [זוב]; KJV ISSUE. The normal Pentateuchal designation of gonorrhea. The Levitical regulations for controlling this ancient scourge of humanity are among the earliest on record. Caused by the *Neisserian gonorrheae* (gonococcus), the disease is a highly infectious, acute inflammation of the mucous membrane of the genital tract. The discharge of Lev. 15:19 ff includes menstruation.

R. K. HARRISON

DISCIPLE [μαθητής, *from* μανθάνω, learn; תלמיד, *from* למד, and Latin *discipulus, from discere, are close equivalents;* μαθήτρια (*feminine;* Acts 9:36)]. A learner or pupil; one who accepts and follows a given doctrine or teacher.

1. OT use. At I Chr. 25:8, תלמיד becomes "scholar" in the KJV, "pupil" in the RSV. At Isa. 8:16, however, the closely related למד is rendered "disciple" in both versions. Like Jesus, Isaiah saw that his message had been rejected by his people. He therefore determined to entrust it to selected disciples who should keep and proclaim it.

2. NT use. In later times *talmidim* meant disciples of the rabbis, whose studies resulted in the TALMUD. Yet the Talmud itself speaks of five *talmidim* of Jesus (Sanh. 43*a*).

Contrary to popular belief, "disciple" is not, in the NT, a specific designation for one of the Twelve. The word occurs about 260 times in the gospels and Acts, but nowhere else in the NT. It is employed in various ways:

a) To designate an adherent of almost any great leader or movement. Thus we read of disciples of Moses (John 9:28); of the Pharisees (Matt. 22:16; Mark 2:18); and perhaps of Paul (Acts 9:25), though here the MS evidence is conflicting. Disciples of John the Baptist are mentioned a dozen times, and in all four gospels. At John 1:35 ff, two of these leave John for Jesus when they hear John call Jesus the Lamb of God. John's disciples remain active, however (Mark 2:18 ff; Luke 11:1), even after their leader is jailed (Matt. 11:2; Mark 6:29). Jesus' own followers are usually called, not "the," but "his" disciples, as though to distinguish them from other like groups.

b) As the most frequent and general term for believers in Christ. The word is so used twenty-two times in Acts, as compared with four instances of "saint," two of "Christian," and one of "Nazarene" used in this sense (Acts 24:5; see Acts 6:1-2, 7; 9:10, 26; 11:26; 15:10; 16:1).

Of over 230 instances of the term in the gospels, about 90 per cent either are not limited to the Twelve at all, or else do not make clear whether these or some larger group is indicated (e.g., Matt. 8:21; Mark 3:7; Luke 6:13; 19:37). At Luke 6:17, the RSV follows the best MSS in reading "great crowd of his disciples," whereas the KJV, based on a later and inferior text, omits "great" and changes "crowd" to "company." This illustrates the tendency, in later times, to limit "disciple" to one of the inner group.

John is especially concerned to stress the inclusiveness of the term. From the beginning, we are told, Jesus had numerous disciples in Judea (John 1:35-50; 7:3; 8:30-31; 9:27-28; 11:54). These included some of his chief followers, and were to be found particularly among Jewish leaders (John 12:42; 19:38-39). The differentiation of disciples from the Twelve is very clear at John 6:66-67. This has undoubted bearing upon the identity of the "other disciple" or the "disciple whom Jesus loved." *See* JOHN, GOSPEL OF.

c) Referring specifically to one or more of the Twelve. This occurs some two dozen times (e.g., Luke 9:54; John 6:8; 12:4), more than half of which are in Matthew; and Matthew is the only NT book to speak of "twelve disciples" (Matt. 10:1; 11:1; 20:17). While Mark never limits the term in this way, its author does occasionally seem to think of a small group, who appear in a boat (Mark 6:45; 8:10), or "in the house" (Mark 7:17; 10:10), or talking with Jesus "privately" (Mark 4:34; 9:28). At the most, such restrictions upon the word are exceptional. Its common meaning for the early Christians was that of *b above.* This continued to be true in the second century. Even Irenaeus, who called the author of the Fourth Gospel "*the* disciple," never applied this phrase to any other; he, too, used "disciple" as equivalent to "Christian."

3. In the singular. The singular form of the word never occurs in Mark. It is frequent in John, always in reference to a particular person. In Matthew and Luke, it appears only on Jesus' lips. There it is in teachings about the nature of discipleship. The disciple cannot escape the calumny that has befallen his Master (Matt. 10:24-25). He must be prepared to forego home, kindred, and possessions for Christ's sake (Luke 14:26, 33), and to carry his cross (Luke 14:27). If he lives in Christlike selflessness, he will be recompensed (Matt. 10:42). Indeed, full discipleship and full Christlikeness are the same thing (Luke 6:40). *See also* MASTER; RABBI. PIERSON PARKER

DISCIPLE WHOM JESUS LOVED. *See* BELOVED DISCIPLE.

DISCIPLINE. In the Bible discipline is closely associated with training, instruction, and knowledge on the one hand, and with reproof, correction, and punishment on the other hand. Its natural application is in the sphere of child training, but in the religious context it has been expanded in its range of meaning to include God's corrective measures in the life of men and nations. Its theological bearing is seen in the interpretation of dire happenings as God's disciplinary measures in love.

1. In the OT. In the OT the usual terms are יסר, "to chasten, correct, punish," and מוסר, "chastisement, discipline, instruction." A term of similar meaning is תוכחת, "correction, chastisement, reproof." The Greek equivalent in the LXX for יסר is παιδεύω; and for מוסר, παιδεία. The changes in the history of English translation for παιδεία may be illustrated in Eph. 6:4: KJV "nurture," ERV-ASV "chastening," and RSV "discipline."

The OT context for this "discipline" is the family and the process of education in the family. The Israelites did not believe in "education without tears"; at least, they professed not to spare the rod. To the words of father and mother chastisement was added (Deut. 21:18); children were trained on the theory that "the rod of discipline drives [folly] far from [a child]" (Prov. 22:15).

Out of the family context this discipline sometimes meant pure punishment: "My father chastised you with whips, but I will chastise you with scorpions" (I Kings 12:11, 14; cf. Deut. 22:18).

On the other hand, some uses of this discipline implied simple instruction and correction. The father carried responsibility for the education of his son in the traditions of the chosen people (cf. Deut. 6:20 ff) and in the commandments of the law.

There was an easy transference from this discipline of the family to the discipline of God: "As a man disciplines his son, the Lord your God disciplines you" (Deut. 8:5*b*). Happy, then, is the man whom God chastens and teaches by dire adversity, for God deals with him as with a son (cf. Job 5:17; Ps. 94:12). Such chastisement was a proof of fatherly love (Prov. 13:24). This severe discipline was meted out to the nation or the nations, and it was for punishment of sin, for correction, or for instruction. Here, too, this chastisement, no matter how severe, was to be accepted as evidence of God's enduring love. However, the psalmist did pray:

> O Lord, rebuke me not in thy anger,
> nor chasten me in thy wrath
> (Ps. 6:1).

2. In the Apoc. In the Apoc. this discipline is still heavy-handed; whips and scourges appear as synonymous with discipline (Ecclus. 22:6; 23:2; Sirach counsels masters not to hesitate to make the side of a slave to bleed). Wisdom as personified in Ecclesiasticus is the author of this discipline (4:17), though at times she torments a man.

The religious point of view can make the difference between disastrous calamity and remedial, saving discipline. To the world the souls of the righteous appear to be undergoing punishment, but they should know that God is testing them and disciplining them (Wisd. Sol. 3:4-7), and in the end they will be found worthy (cf. Wisd. Sol. 11:10). The author of II Maccabees personally urges his readers not to take the apparent disasters as calamities; the punishments are designed to discipline the people (6:12).

3. In the NT. In the NT use of παιδεία, "discipline," and παιδεύω, "to instruct, educate, discipline," the Jewish tradition comes in contact with the broader educational ideal of Greece. In the world of the Greeks these terms were applied to the household training of children and also to man's training to take his place in the culture of the world—with little emphasis on chastisement. In the NT the education of Moses is described in such terms in Acts 7:22, an education in all the wisdom of the Egyptians. Paul's education at the feet of Gamaliel is put in the same terms.

The old idea of pure punishment crops up in Jesus' scourging at the hand of Pilate (Luke 23:16: παιδεύσας) or in the apostles' chastisement (II Cor. 6:9). By contrast, the absence of painful discipline is reflected in II Tim. 2:25: the Lord's servant corrects his opponents with gentleness.

The author of the Letter to the Hebrews in ch. 12 returns to the OT analogy of the father's disciplining his son as applying to God's use of trial and hardship for man's own good, and he cites the familiar passage in Prov. 3:11-12. The troubles that befall God's people are therefore to be understood as signs and instruments of his fatherly training. Even Satan could exercise a wholesome, disciplinary role in the case of certain blasphemers, Hymenaeus and Alexander (I Tim. 1:20; cf. I Cor. 5:5).

The milder sense of "reproof" appears in some phases of this Christian discipline, and its purpose is sometimes to bring to repentance (Rev. 3:19).

Christian education in the home is the picture in Eph. 6:4: "Fathers, do not provoke your children to anger, but bring them up in the discipline and instruction of the Lord" (cf. Col. 3:21). Education here is not just painful discipline; it is training by act, example, and word.

The content of this Christian education in the church was to be found in the Didache. So Apollos was trained in the way of the Lord (Acts 18:25). But the church and its leaders at the same time exercised a discipline to reprove and correct improper conduct or abuses in its fellowship—e.g., at Corinth or at Antioch.

Paul is an example of one who could take hardships and adversities and transmute them into godly discipline. So he accepted the "thorn in the flesh" (II Cor. 12:7). He considered his dire experiences, described in II Cor. 4:7-15, as "slight momentary affliction" which works an "eternal weight of glory."

DISCRETION AND PRUDENCE. The capacity to determine what is appropriate on a given occasion, or what will gain a desired end. The words appear together only three times (Prov. 1:4; 8:12; Dan. 2:14) and appear individually chiefly in the wisdom literature. They are intimately related to the idea of the knowledge of God, representing the fruit of instruction, as tact, discrimination, good taste, shrewdness, and are seen as necessary for leading a good life and avoiding evil.

"Discretion" is used variously to translate טעם (lit., "to examine by tasting"; figuratively, "to discern what is appropriate or in good taste"; cf. I Sam. 25:33; Prov. 11:22; Dan. 2:14); השכיל ("to act circumspectly"; I Chr. 22:12; II Chr. 2:12; Ezra 8:18; Prov. 19:11); and מזמה ("to devise"), the power to decide one's course, in a good sense (Prov. 1:4; 2:11; 3:21; 5:2; plural in 8:12; 14:17).

"Discretion" is often found in combination with "wisdom" (Prov. 3:21; 5:2), "understanding" (I Chr. 22:12; II Chr. 2:12; Prov. 2:11), and "knowledge" (Prov. 1:4; 5:2; 8:12). It may represent "tact" (as in the case of Abigail's soothing the ire of David; I Sam. 25:33). It enables one to keep the law of Yahweh (I Chr. 22:12), to avoid the way of evil (Prov. 2:11), and to walk securely (Prov. 3:21). Where the plural is used, it may represent "witty inventions" (Prov. 8:12) or "wicked devices" (Prov. 14:17), as in the KJV (cf. Job 21:27; Ps. 10:2, 4; Prov. 12:2; 24:8).

"Prudence" (ערמה) is derived from ערם, "to be crafty," and is used in the wisdom literature only in a good sense, signifying "shrewdness," the ability to keep oneself from being misled. The word is predicated of the serpent in Gen. 3:1, and appears in a bad sense in Exod. 21:14; Josh. 9:4. In the NT "prudence" is used to translate φρόνησις ("understanding," especially knowledge and love of the will of God; Eph. 1:8 KJV) and φρονίμως ("wisely"; Luke 16:8). In the etymological sense of "foresight," φρόνησις does not appear in the NT, although there is some reflection of this significance in Luke 16:8.

Prudence is taught to the simple, the unlearned, whose minds are open, but who are without a guide and easily led astray. Prudence (as "shrewdness") would seem to combine the "wisdom of the serpent with the innocence of the dove" (cf. Matt. 10:16).

DISCUS [δίσκος, quoit]. A Greek game, introduced among the Jews by the high priest JASON in the Maccabean period, as part of his general process of Hellenization. According to II Macc. 4:7-17, the "ungodly" Jason received authority from the Syrian king Antiochus Epiphanes (*see* ANTIOCHUS 4), to set up a Greek gymnasium and to form youth clubs for exercising therein. The high priest and his colleagues are said to have been more zealous to attend the displays in the palaestra, including especially the throwing of the discus, than to attend to their duties at the altar.

The discus itself, the object from which the game was named, was a flat circular plate of wood, stone, or metal, quite heavy. The game consisted in each player's attempting to throw this farther than his competitors. It was often hurled a hundred feet or more. The method is well illustrated by the famous statue of the Discus Thrower by the Greek sculptor Myron.

DISEASE. Physiological and psychological diseases may involve a degeneration of, or morbid change in, any of the bodily tissues; the perversion of physical or mental functions; or an abnormal condition of the body or mind which may be lengthy or of short duration. Because pathogenic organisms are parasitic in nature, disease may be defined as the product of a relationship between associating organisms in which one exhibits structural or functional degeneration from the norm because of the activity of the other. Diseases due to imbalance of bodily chemistry are not strictly parasitic in nature, however.

Bibliography

1. Ancient pathological concepts. Among primitive races, disease was either regarded as the result of hostile magic gaining a hold upon a person, or else its incidence was ascribed to the violation of a taboo. In either event a background of magic, sorcery, and witchcraft was presupposed where cases of intractable sickness were encountered, and such remedial measures as were undertaken inevitably involved the shaman, or medicine man. It was his function to divine the supernatural cause of the disease, and attempt to banish it by the use of spells, charms, drugs, and incantations. In Neolithic times it was widely believed that epilepsy, insanity, and certain neurotic manifestations were caused by the presence of a demonic force in the head of the sufferer. In order to release the imprisoned demon, an operation known as trephining or trepanning was performed by the priest-magician. A circular groove was scraped in the skull by means of a flint, and this procedure was continued until the disc of bone thus isolated could be lifted out. One skull exhibited no fewer than five such holes, probably indicating that the victim, a woman, was an epileptic. This formidable surgical procedure was apparently confined to Western Europe, although three trephined skulls were uncovered in a cistern when Lachish was excavated in 1936. Fig. DIS 29.

The pathological concepts of the ancient Babylonians were governed to a large extent by the profoundly superstitious nature of these ancient peoples. While certain simple diseased conditions were attributed to natural causes, the majority, including some

Courtesy of *Man* magazine

29. Three trephined skulls, uncovered in a cistern at Lachish (late eighth century B.C.)

accidents, were taken to be visitations from the demonic forces which inhabited the underworld. It was commonly believed that these evil spirits gained access to the inside of the body through the apertures of the head, and as a countermeasure, charms, amulets, necklaces, and nose ornaments were employed to restrict their depredations. It was from this form of prophylaxis that subsequent decorative articles of feminine adornment took their rise. Certain of the medical tablets recovered from Babylonia attributed the occurrence of specific diseases to the "hand of Ishtar," or some other member of the Babylonian pantheon. The "hand of a ghost" was also recognized as an etiological factor in sickness.

Although the ancient Egyptians were far less superstitious and considerably healthier than their Mesopotamian counterparts, they too subscribed to a demonic theory of the origin of disease. Once an evil spirit had possessed a man and brought about a characteristic form of pathology, the aid of magic was needed to effect a cure. It was therefore the function of the priest-physician to determine the real nature of the possessing spirit, to expel it by means of incantations, magical formulas, charms, and the like, and to repair the damage sustained by the individual by means of a medical prescription.

Not all diseases were regarded as the product of demonic activity, however, as the Edwin Smith surgical papyrus, published by J. H. Breasted in 1930, clearly indicates. Such contingencies as injuries, surgical accidents, or wounds sustained in battle were held to be rational in origin, and were treated accordingly by a variety of sensible empirical surgical procedures.

2. Biblical concepts of the etiology of disease. The general view of the OT writers is that disease is sent by God as a punishment for transgression or as an expression of his wrath (cf. Exod. 4:11; Deut. 32:39). Other views ascribed the origin of disease to the work of the adversary (Job 2:7), or to what were called spirits of dumbness (Mark 9:17) or uncleanness (Mark 9:25). Jealousy on the part of others (Job 5:2) and self-indulgence (Ecclus. 37:30-31) were also held to be causes of disease. The penal concept of sickness survived into NT times, as illustrated by the case of the congenitally blind man (John 9:2). In the light of these observations it is scarcely surprising that the Bible does not encourage a purely naturalistic theory of the incidence of disease. On the contrary, holy scripture consistently implies that there is a persistent psychic element which must be taken into account in any consideration of the factors which have contributed to the rise of characteristic forms of pathology.

Estimations of the etiology of disease, particularly in the writings of the OT, have not infrequently been related by medical historians and biblical scholars alike to the ancient system of humoral interaction. According to this theory, bodily health was governed by the quantitative balance and functional interaction of four fluids or humors, consisting of blood, phlegm, yellow bile (choler), and black bile (melancholer). A preponderance of one or more of these substances in the body was held to produce characteristic diseases, which were accompanied by certain changes in the personality. Thus an individual in whom phlegm, the heavy humor, was most prominent was considered to be calm, apathetic, or self-restrained. If these qualities of character were evident in a person, they were held to be caused by this specific imbalance of humoral secretions.

In the OT, however, a rather different principle is in view. The Hebrews never subscribed to the Egyptian concept of substances being channeled to various parts of the body by a series of internal canals or conduits. Instead, they tended to concur in the traditional practice of assigning emotional functions and attributes to specific organs of the body as distinct from, but operating in conjunction with, their normal physiological activity.

Thus the heart, while functioning in its characteristic physical manner, was also regarded as the locale of intelligence, mind, and will. Deficiencies of motive or deranged states of the mind were often expressed in terms of cardiac dysfunction or pathology, so that, e.g., the divine challenge to Israel to obtain a "new heart" (Ezek. 18:31) was in effect an appeal for the operation of more lofty motives and spiritual values (*see* HEART). This tacit recognition of the relationship between emotional states and the functioning of bodily organs to produce abnormal physical or mental conditions is characteristic of the biblical writers generally.

The expression "bowels of mercies" (cf. Col. 3:12 KJV) has preserved in a forceful manner the conviction that a connection existed between a specific emotional state and the operation of particular physical organs. It has remained for modern psychosomatic medical research to demonstrate clinically the empirical truths appreciated for so many centuries,

and to show beyond reasonable doubt the intimate connection between emotional states and pathological changes in bodily tissues. With this in view, it is legitimate to disavow any but the most casual connection between the ancient system of humoral pathology and the thought of the biblical writers regarding the relationship of the emotions to bodily functioning. Instead, the scriptural authors may be regarded as antedating by their empirical insights the more systematized observations of modern psychosomatic medicine.

When Jesus interrogated those who came to him for healing, he did so in order to obtain a picture of the disease situation from the standpoint of the sufferer or his relatives. When a degree of faith had been elicited, Jesus proceeded, not merely to treat the physical or mental affliction, but to direct his therapy at the deepest levels of the human spirit. He envisaged much of disease as the result of evil operative within the recesses of the mind, though he was by no means unaware of the place which the conflict between individual and environment occupies in the causation of illness. There can be no doubt that Jesus regarded disease as one manifestation of evil within human experience, and as such it came under the judgment which was to be meted out to all the "works of the devil" (cf. I John 3:8; *see* HEALING).

3. Diseases of the OT. Difficulties of diagnosis loom large when the nature of most OT pathological conditions is under consideration. It is seldom that diseases are described with such care as those contained in Lev. 13, and where symptoms are encountered, the oriental manner of recording them presents many difficulties for the Western scientific mind. The problem is not made any easier by the uncertainty which exists concerning the nature of those diseases which flourished in the ancient Near East. Without doubt, afflictions such as dysentery, malaria, the enteric fevers, leprosy, tuberculosis, and the like were present then as now, probably in greater proportions. Smallpox, bubonic plague, and other epidemic diseases were undoubtedly commoner in antiquity than at the present time. Quite obviously it would be unreasonable to expect the Bible to mention more than a few of the diseases which were prevalent at the time, since in any event the references to diseased conditions were nearly always incidental to some other, more important aim of the particular narrative in which the pathology is mentioned.

In the OT, the words "disease," "sickness," and sometimes "illness," together with their cognates "diseased," "sick," and "ill," are employed chiefly to translate the noun חלי, "sickness," and its cognates, which derive from the verb חלה, "to be weak" (cf. Akkadian *halu*, "sickness," "grief"; Aramaic חלא, "to suffer"). In the NT the word "sickness" is generally used for the rendering of νόσος, μαλακία, and ἀσθένεια. Often the simple concept of "sickness" is modified by the addition of another phrase—e.g., "sick and . . . at the point of death" (II Chr. 32:24) or "sick and had recovered" (Isa. 39:1). The term "plague" either may imply some particular epidemic, or, if used in a general sense, is to be taken as equivalent to "sickness." Figurative references to disease were common among OT writers (e.g., Job 6:4; Ps. 91:6).

Of the more commonly found specific diseases, ophthalmic afflictions (*see* BLINDNESS) were prominent in antiquity. They were the result of a variety of causes including climatic factors, infection by flies, considerations of heredity, senility, and other factors. Blindness itself was regarded as a divine visitation (Exod. 4:11), and able to be cured only by God. *Ophthalmia neonatorum*, a severe purulent conjunctivitis found in newborn infants as a result of venereal infection, frequently causes a permanent opacity of the cornea if left untreated, and was probably the cause of much of the congenital blindness which occurred in ancient Palestine.

The most careful account of ophthalmic disease which has survived from Jewish sources was that which described the afflictions of TOBIT. The ailment in question was apparently albugo, a dense white opacity of the cornea which was distinguished among the ancients from nubecula (a faint corneal cloudiness) and macula (a moderately dense corneal opacity). At the present day ophthalmia is the general cause of such a condition. Tobit was healed subsequent to an application of fish gall to the white tissue (Tob. 11:4 ff), which appears to indicate an attempt at pigmentation of the opacity.

A temporary form of blindness without any apparent lesions of the eyes (amaurosis) overtook the Syrian soldiers at the behest of Elisha (II Kings 6:18). In this instance the affliction served as a punishment, and was removed after a short time. In the light of the variety of collyria (eyewashes) contained in the Ebers papyrus from Egypt (*ca.* 1500 B.C.), it is interesting to note that the Pentateuchal hygienic enactments nowhere are concerned with ocular care.

Deficiencies of hearing were apparently fairly common in antiquity, though whether they were due to lesions of the cerebral cortex, disease of the internal ear, or to other causes is unknown. Deaf-mutes—i.e., those unable either to hear or to speak—were not unknown in Bible times also. Persons deprived of the use of a limb, or crippled in other respects, formed a permanent part of the Hebrew population in antiquity. Sometimes this affliction was congenital, where an individual was born with one leg shorter than the other. Not infrequently, however, it was the result of surgical accident, or of diseases such as poliomyelitis. The left-handed were also considered as cripples, being spoken of as "impeded on the right side" (Judg. 3:15; 20:16; LXX ἀμφοτεροδέξιος). *See* LAME.

The incidence of carious spinal vertebrae disqualified a man from the priesthood (Lev. 21:20), as did supernumerary fingers or toes. The latter were mentioned (II Sam. 21:20; I Chr. 20:6) in connection with a giant who possessed six fingers and six toes on each side. The unusual stature of this individual was probably the result of an anterior pituitary tumor, which may also have been the case with Goliath of Gath.

The affliction which Jacob suffered after his encounter with the divine messenger (Gen. 32:22-32) may perhaps be capable of interpretation in modern terms. The narrative seems to imply that as a result of the contortions of wrestling, he was suddenly struck with severe sciatica, which caused him to limp painfully thereafter. Subluxation of the head of the

femur (cf. Gen. 32:25) is probably an incorrect interpretation of the symptoms presented. Perhaps a prolapsed intervertebral disc was the cause of the disability.

The widespread nature of infantile disease received but scant notice in the OT. The infant son of Bathsheba (II Sam. 12:15) became ill shortly after birth, and died of an unspecified disease seven days later. The child born to the Shunammite woman (II Kings 4:18-37) became suddenly ill one summer when he was perhaps about seven years of age, and died within five hours. Cerebral symptoms alone are mentioned in the narrative, which might indicate an attack of heatstroke, cerebral malaria, or meningitis, among other possibilities. The son of the widow at Zarephath (I Kings 17:17) succumbed to an unspecified fatal affliction of short duration, which may have been of a similar nature.

The narrative describing the death of Nabal (I Sam. 25:36-38) indicates that he was probably a chronic alcoholic whose state of cerebral arteriosclerosis was such that he suffered an apoplectic seizure on learning what David had purposed to do to him. After being in a comatose condition for about nine days, he died without regaining consciousness.

The disease from which Job suffered has been a matter of considerable speculation for many centuries. Beginning suddenly, it assumed a chronic nature and was irritating without actually immobilizing the sufferer. His body was affected by an eruption described as "boils," which attacked the soles of his feet and the crown of his head. His facial appearance was altered, and his sores became infested with maggots (myiasis). Neurasthenia, lassitude, and myasthenia also characterized his affliction. The plantar "boils" may perhaps have been the pustules of smallpox, while the facial disfiguration could have resulted from the more acute confluent smallpox. However, it is improbable that a patient suffering from the confluent variety of variola would want to engage in ordinary conversation, much less in closely reasoned theological discussion. Other suggestions are that the "boils" constituted a secondary manifestation of treponematosis, that they were a chronic form of Delhi boil, or that they characterized herpetiform dermatitis, impetigo, or frambesia. The most that can be said is that, on the basis of the evidence presented, smallpox as the disease in question is unlikely. Job's psychological picture may well indicate that his affliction was psychogenic in nature and had nothing to do with Hansen's disease. *See* BOIL.

Cutaneous diseases have always been common in oriental countries, and accordingly they receive some notice in the OT. The "itch" of the head and neck (Lev. 13:30) was a form of ringworm, while the TETTER of Lev. 13:39 was probably vitiligo. The "scabs" of Lev. 21:20 constituted the symptoms of some itching disease such as ringworm, while the "scurvy" (Lev. 21:20 KJV; Deut. 28:27) was possibly a variant form of favus or some other fungus disease. The instructions for the diagnosis of LEPROSY as contained in Lev. 13 also take cognizance of skin afflictions other than the result of infection by Hansen's bacillus.

The dread scourge of bubonic plague (*see* PLAGUE) is described most fully in I Sam. 5–6, which records the sudden incidence of the epidemic, its transmission along lines of human communication, the principal symptom of inguinal buboes, the presence of dead rodents, and the heavy mortality which accompanied the disease. Although bubonic plague was not endemic in Palestine, it may have been the means by which the forces of Sennacherib were decimated (II Kings 19:35).

Some of the pathological conditions which terminated the lives of certain kings can probably be recognized. David succumbed to old age, and there is no ground for assuming that he was afflicted with general paralysis of the insane, as some authors have maintained. King Asa suffered from diseased feet, which some scholars have interpreted as gout. (It will also be observed that the Hebrews used the word "feet" as a euphemism for the sexual organs.) According to II Chr. 16:12-13, his ailment lasted for two years and then terminated fatally, which might indicate that it was a case of senile gangrene. This seems to be confirmed by the use of scents and fumigants during the interment, though this practice also obtained for other funerary circumstances. King Uzziah died of leprosy (II Chr. 26:21), which seems to have been the true Hansen's disease, while Jehoram suffered from a painful intestinal ailment for the last two years of his life (II Chr. 21:18-19). From all indications it would appear that he had been suffering from some form of diarrhea, which may have been that of amoebic dysentery with concomitant sloughing of the intestines. The terminal event was evidently marked by a massive prolapse of the rectum.

The occurrence of paralysis is seldom mentioned in the OT, but there are two cases which merit comment. The sudden paralysis which Jeroboam sustained (I Kings 13:4) was an instance of brachial monoplegia, in which there is paralysis of one side of the face or of one limb only, in this case the arm. Where the condition occurs at the present, it is usually caused by cerebral embolism or hemorrhage. The temporary or permanent nature of the paralysis is generally determined by the precise location and extent of the hemorrhage.

In Zech. 11:17, a curse was invoked upon the worthless shepherd, one result of which would be that his arm would shrivel up completely. This is apparently a reference to locomotor ataxia, a disease of the spinal cord resulting in chronic progressive sclerosis of the posterior spinal nerve roots and accompanying structures. It is generally the result of syphilitic infection, and the disease normally commences in middle age. An ataxic condition in which there is marked diminution of muscular co-ordinating power is followed by paralysis. Atrophy of the optic nerve (cf. Zech. 11:17*b*) may take place at an early stage of the disease. Locomotor ataxia may pursue a chronic course, or it may have a rapid fatal termination.

The OT contains very few references to actual insanity or mental disease as such, despite its prevalence in the ancient Near East. The manner in which David feigned madness (I Sam. 21:12-15) appears to have been convincing, since it secured his dismissal from the presence of Achish king of Gath. Throughout the East, madmen were regarded as having a peculiar relationship with a possessing deity or demon,

and in consequence were left strictly alone by the rest of the populace. The mental pathology of SAUL is that of the paranoid schizophrenic (*see* MADNESS), with all the marks of characteristic personality deterioration. The insanity which overtook Nebuchadnezzar and which was tactfully described in the book of Daniel (4:19 ff) is of particular interest because of its genuine nature and its comparative rarity. In general psychiatric terms he would be regarded as suffering from paranoia, a mental disorder characterized by systematized delusions and normally independent of other symptoms of mental imbalance. More specifically, his delusions took the form of boanthropy, a rare condition in which Nebuchadnezzar imagined himself to be an animal and acted accordingly. Lycanthropy (cf. "werewolf") is another form of this monomania. (In recent years one patient who was afflicted with boanthropy, a physically healthy young man, was known to live entirely on grass, winter and summer, and to crouch on all fours while plucking and eating it.)

As might well be expected, contemporary accounts of this dramatic reverse in the personal fortunes of the mighty empire builder are almost nonexistent, and it was only some centuries later that garbled versions of the account in Daniel, which is probably contemporary, began to emerge. Berossus (third century B.C.), a Babylonian priest, has preserved one such account. Of the inscriptions which emerged from the reign of Nebuchadnezzar, one was translated by Sir Henry Rawlinson as follows: "For four years the seat of my kingdom in my city . . . did not rejoice my heart. In all my dominions I did not build a high place of power, the precious treasures of my kingdom I did not lay out. In the worship of Merodach my lord, the joy of my heart in Babylon, the city of my sovereignty, I did not sing his praises and I did not furnish his altars; nor did I clear out the canals." Possibly this inscription refers to the period of his insanity, when he was shunned by friend and enemy alike (*see* MADNESS). Syncope or fainting resulting from shock or other emotional factors was recorded in the case of several OT personages, including Jacob (Gen. 45:26), Eli (I Sam. 4:18), Saul (I Sam. 28:20), and Daniel (Dan. 8:27). A state of trance overtook Abraham (Gen. 15:12), while the stupor of fatigue was present in the case of Sisera (Judg. 4:21), Saul (I Sam. 26:12), and Jonah (Jonah 1:5).

The OT has recorded a number of diseases, some of them fatal, whose precise nature is obscure. Abijah, son of Jeroboam, died in infancy of an unspecified ailment (I Kings 14:17), while Elisha became ill in his ninetieth year and died shortly afterward (II Kings 13:14). Ben-hadad, king of Syria, fell ill shortly before his death at the hands of Hazael (II Kings 8:14-15), and the wife of Ezekiel succumbed quite suddenly to an unnamed disease (Ezek. 24:16).

Some instances of parturition having a fatal termination are found in the OT. The dystocia of Rachel (Gen. 35:16-18) may have been occasioned in part by constitutional weakness, whereas the death of the wife of Phinehas (I Sam. 4:19) resulted from the shock which initiated premature labor. *See* MEDICINE.

Febrile diseases (*see* FEVER) were common in Palestine in Bible days. The most familiar were malaria, typhoid, paratyphoid, and diseases conveyed by milk. Malaria was endemic in a number of areas of ancient Canaan, including the Lebanon, the Jordan Valley, Jerusalem, and the environs of the Sea of Galilee. Bubonic plague, universally dreaded in the ancient world, was marked by a high fever, as were pneumonic plague, smallpox, sunstroke, typhus, erysipelas, and eruptive fevers, all of which doubtless occurred to some extent in ancient Palestine.

Records of the latter days of Antiochus Epiphanes (II Macc. 9:5-27) indicate the presence of a number of symptoms, the chief of which were severe abdominal pain, loss of weight, the presence of parasitic worms, and putrefacience. These, combined with the fatal nature of the disease, seem to indicate that the affliction was intestinal cancer. *See* ANTIOCHUS 4.

4. Diseases of the NT. As part of the healing ministry of Jesus, a considerable number of widely differing diseases were encountered and cured. Blindness, leprosy, paralysis, physical infirmity, and mental affliction all came within the scope of his beneficent activity. The incidence of BLINDNESS was dealt with as befitted the condition or circumstances of the patient. The blind man at Beth-saida was healed by stages (Mark 8:22-26) after being anointed with saliva. He appears to have been congenitally blind, unlike the beggar Bartimaeus (Mark 10:46-52; cf. Matt. 20:29-34), who asked to regain his sight. The latter may have been influenced psychologically by the presence of an expectant crowd. What occasioned the blindness of those who were healed is never stated, but in cases of acquired blindness, climatic, environmental, hygienic, and psychosomatic considerations must be taken into account as etiological factors.

The nature of the LEPROSY which Jesus healed is again obscure, but it may have been vitiligo rather than the true Hansen's disease. The mechanism of suggestion which Jesus employed (cf. Mark 1:40-44 and parallels; Luke 17:11-19) as part of the cure suggests that the skin affliction was actually psychogenic in nature, resulting from emotional conflict in the subconscious mind. If this was actually the case, resentment would most probably be one of the reactions involved. Luke furnishes a more detailed clinical description of one of the lepers healed by Jesus (5:12) when he speaks of him as πλήρης λέπρας, thereby indicating an advanced stage of the disease. On the other hand, the ten lepers are simply described as λεπροί without any further portrayal of their condition.

The gospels record several instances of paralysis which, from the rather general descriptions furnished by the evangelists, give every indication of resulting from organic disease of the central nervous system. The Capernaum paralytic (Matt. 9:2; Mark 2:3) is described by the more technical word παραλελυμένος in the Third Gospel (Luke 5:18 ff), and was evidently paraplegic. His condition may have resulted from compression myelitis occasioned either by an accident earlier in life or by a bony lesion. In any event, organic changes would have taken place in the spinal cord, and it is improbable that they would have been initiated by factors of a psychic nature such as conversion hysteria, which would transmute an emotional state of guilt or conflict into physical symptoms of paralysis or blindness.

The servant of the centurion (Matt. 8:5-13; Luke 7:1-10) was acutely ill with a serious form of paralysis. Luke, who invariably employs medical terminology as a regular part of his clinical descriptions, points out the moribund condition of the patient (7:2). The disease has been described in terms of tetanus, progressive paralysis, and acute spinal meningitis, but probably the best diagnosis is that of acute ascending paralysis, with concomitant myelitis.

The man with the withered hand (Matt. 12:9-13; Mark 3:1-5; Luke 6:6-10) may have suffered from anterior poliomyelitis as a youth. If, however, the term ξηρός indicates a degeneration of the small muscles of the hand only, the man may have been afflicted with amyotrophic lateral sclerosis. The suggestion content of Jesus' treatment indicated the patient's need for deep psychotherapy. The absence of detailed description precludes an estimate of the place which emotional factors had in the progress of the disease. The ailment which had afflicted Aeneas for eight years (Acts 9:33) is of uncertain character, although paraplegia is the most probable diagnosis.

The impotent man at Beth-zatha (John 5:2) has been regarded as the victim of locomotor ataxia, paraplegia, or disseminated sclerosis. However, the narrative seems to indicate that he had suffered from anterior poliomyelitis as a child.

Peter's mother-in-law (Matt. 8:14-16; Mark 1:29-31; Luke 4:38-39) had probably succumbed to some form of malaria (*see* FEVER). Perhaps Jesus employed suggestive mechanisms in therapy to lower the temperature (Luke 4:39).

The psychogenic nature of certain other NT diseases seems evident from the circumstances under which they arose. Zechariah (Luke 1:11-64) sustained a severe emotional shock which resulted in hysterical aphonia and deafness. This combination is unusual, though by no means impossible, for recent psychosomatic investigation has brought to light accredited instances of individuals becoming aphonic and deaf periodically because of the interaction of emotional conflict within the personality. In such cases the onset of the syndrome is precipitated by shock or severe strain. The same may be said of the amaurosis sustained by Paul (Acts 9:8), which was clearly the result of severe emotional conflict. Indeed, the dramatic nature of Paul's conversion, requiring as it did a complete reversal of his earlier outlook on life, was characterized by profound emotional overtones. With a change in his "point of view," to express the psychic situation in the organ language of the eyes, it would not be unreasonable to expect some temporary disturbance in ocular function. Thus his amaurosis was the psychosomatic expression of his mental and spiritual inability to see his way clearly. Medical literature contains many accounts of psychogenic amblyopia and amaurosis, and of cures by means of suggestion (cf. Acts 9:17). A temporary amaurosis also overtook Elymas (Acts 13:10-11), where profound emotional factors of guilt, fear, and resentment combined to produce the condition of amblyopia and amaurosis. Luke describes this syndrome by means of the term ἀχλύς καὶ σκότος (vs. 10). *See* BLINDNESS.

The woman with hemorrhage (Matt. 9:20-22; Mark 5:25-34; Luke 8:43-48) may have been suffering from menorrhagia, dysmenorrhea, or more probably from a uterine fibroid. The ceremonial uncleanness occasioned by the discharge prevented her from participating in her religious duties, and she had gone to considerable lengths to be healed before she met Jesus.

The restoration of the daughter of Jairus, which followed the healing of the woman with hemorrhage, is described by Luke in contemporary clinical style which takes account of the stages of recovery, whereas Matthew and Mark write from a different standpoint. The exact nature of the illness which had overtaken the girl is unknown, but she appears to have been comatose when Jesus and the disciples arrived.

Medical language common to Galen and Hippocrates is employed by Luke (13:11-13) to describe the healing of spondylitis deformans in a woman. This condition is characterized by nodular deposits at the edges of the intervertebral discs of the spinal column and subsequent ossification of the ligaments. When bony ankylosis of the joint spaces occurs, the spine becomes kyphosed and rigid, assuming a characteristic appearance. Some writers think that the woman was afflicted with psychogenic paraplegia, but this diagnosis is highly questionable. *See* MEDICINE.

The illness which afflicted the nobleman's son (John 4:46-53) is difficult to assess, except that it was a febrile condition, possibly cerebral malaria. Death from diseases of an unspecified nature was recorded in the case of Lazarus (John 11:11-44) and the son of the widow at Nain (Luke 7:11-15). The suggestion that the latter was in a cataleptic or comatose condition, and not actually dead, does not accord with the opinions of eyewitnesses, and appears unlikely.

The healing of the deaf-mute, recorded only by Mark (7:32-35), followed the symbolic use of saliva and digital contact to stimulate the confidence of the sufferer. This appeal to senses other than the auditory was an attempt to communicate the purpose of the general activity, and thus provoke expectancy and faith. To what extent deep emotional conflicts were responsible for the condition of the deaf-mute is uncertain. Psychosomatic deafness and aphonia occurring simultaneously have been reported in medical literature.

The only instance of ὑδρωπικός in the NT occurs in the Lukan (14:2) account of the dropsical man healed by Christ. Dropsy (hydrops) constitutes an abnormal effusion of watery fluid into bodily cavities or tissues (especially in the feet and legs), and is symptomatic of disease elsewhere. It is generally described in relationship to its location—e.g., ascites (abdomen) and hydrothorax (chest). Whether the man concerned was suffering from some physical disease which was marked by terminal dropsy (e.g., cancer, heart or kidney disease) or not is difficult to determine. Some writers have suggested that he was afflicted with angioneurotic edema, in which edematous swellings occur at intervals in the skin and subcutaneous tissues. This ailment is generally neurotic in origin, and is probably an allergic reaction. Whether the term ὑδρωπικός would cover such an affliction adequately is uncertain.

The dramatic death of Ananias and Sapphira (Acts 5:1-11) obviously involved powerful emotional reactions, guilt being prominent. Probably both succumbed primarily to shock, the terminal event constituting some such form of cardiac involvement as coronary thrombosis.

The congenitally lame man at the Beautiful Gate (Acts 3:10) may have been afflicted with cyllosis or a malformation akin to *spina bifida*. A crippled person healed by Paul at Lystra (Acts 14:8-10) may have been afflicted similarly. The evidence for both these cases is scanty, although the former was spoken of as manifesting structural weakness of the ankles and feet. *See* LAME.

Luke traces the appropriate stages of recovery in the restoration to life of Tabitha (Acts 9:40-41) according to the best Greek medical traditions. His account of the last days of Herod Agrippa (Acts 12:21-23) involves the use of an unusual compound term, σκωληκόβρωτος. The Greek roots of this designation were used of intestinal worms and human myiasis (σκώληξ), and of the consuming of bodily tissue by disease (βιβρώσκειν). Agrippa had probably suffered intestinal obstruction, perhaps because of the presence and activity of parasitic worms, and may have died from perforation of the bowel, with resultant peritonitis. Parasitic worms sometimes leave the body after the individual has died, and this may have been the reason for their mention in the Lukan account. On the other hand, they could have been voided while Agrippa was still alive. *See* AGRIPPA.

When Paul lodged with Publius on Malta (Acts 28:7-9), he laid his hands on his host's sick father and healed him. The ailing man was apparently suffering from dysentery and an accompanying febrile condition which may have been of a malarial nature (*see* FEVER). However, the fever itself may have constituted one symptom of the dysentery, especially if it was a fulminating case of bacillary dysentery. This condition is caused by the presence of a species of Shigella bacilli, and is marked by considerable pain, tenesmus, evacuation of blood and mucous, and membranous, catarrhal, or necrotic inflammation of the colon. Death ensues quickly in fulminating cases. The severity of the fever was indicated by the plural form of the word (πυρετοῖς) in a manner typical of the Greek medical writers. In Hippocrates, Galen, Areteus, and others, πυρετός was often found in association with δυσεντερία to describe a specific pathological condition, and Luke may have followed the same general procedure.

5. Demon-possession. Allusions to mental pathology in the NT appear to exhibit little in the way of recognizable internal subdivision. Some differentiation seems to have been attempted between the diseases which were thought of in terms of epilepsy and lunacy on the one hand, while on the other there existed a group which included neurasthenic conditions and that variety of pathology known as demon-possession. Some centuries before the birth of Christ, the Jews forsook the etiological pronouncements of the OT and encouraged the belief, long held in Babylonia, Egypt, and elsewhere, that possession by disease demons was the cause of sickness in general, and of insanity in particular. Even though the epileptic and the moon-struck were sometimes distinguished from the demon-possessed, the underlying thought tended to attribute the same etiological factors to both varieties of mental affliction. Questions of terminology are important considerations in this matter, since the point at issue is the interpretation of NT terms rather than their rejection in favor of more modern designations, many of which are equally meaningless to the user.

The epileptic boy (Matt. 17:14-18; Mark 9:14-27; Luke 9:37-42), whose healing was closely linked with his father's faith, is described by Matthew as "moon-struck" (σεληνιάζεται). The RSV translation, "epileptic," apart from describing one of the symptoms, affords no greater understanding of the pathology than Matthew's term. There are numerous forms of epilepsy; the disease may be of a hereditary type, or may result from a cerebral tumor, an apoplectic stroke, or some injury to the brain. Single attacks of epilepsy can also be precipitated by emotional conflicts, and if a sudden shock were to produce cerebral vasoconstriction with a rapid diminution of oxygen in the brain, an epileptiform seizure would follow. Very little is known of the etiology of genuine epilepsy, and in consequence it is difficult to distinguish between the classical convulsive disease and emotional or glandular disturbances which may simulate it. In the case of the epileptic boy, therefore, it is virtually impossible to say whether he was suffering from true congenital epilepsy, or from emotional disturbance in the subconscious mind resulting in epileptiform attacks. Because of this it would be quite arbitrary to assume that "demon-possession" was nothing more than a folk designation for epilepsy. While Mark appears to describe a case of idiopathic epilepsy, he and the other evangelists also imply that something besides ordinary epilepsy was involved. *See* EPILEPSY.

Although more is said elsewhere regarding demon-possession (*see* DEMON), some comment appears desirable here also. Among other cases, those of the Syrophoenician's daughter (Matt. 15:22; Mark 7:25), the Gerasene (Matt. 8:28; Mark 5:2; Luke 8:27) and Capernaum (Mark 1:23; Luke 4:33) demoniacs, the blind and dumb demoniac (Matt. 12:22; Luke 11:14), and the maiden with divinatory insight (Acts 16:16) were held to be the result of spirit-possession. Evidences of a survival into modern times of biblical demon-possession have been described by some medical and other missionaries. Frequently found in the Far East, the phenomenon assumed the form of characteristic personality-possession, and when the individuals were exorcised, they led normal, healthy lives thereafter. Among such races, demon-possession was placed in a category *sui generis*, and was thereby distinguished from other diseases. Similarly, in Bible times there was evidently some particular symptom which enabled demon-possession to be recognized and differentiated from other afflictions such as fever, blindness, and lameness. The determining factor was probably evidence of suicidal impulses.

Many cases of demon-possession would undoubtedly be designated by other, scarcely more meaningful terms in modern psychiatry. On the other hand, it is extremely doubtful if the language used by the Gadarene demoniac, e.g., which implies the functioning of a separate personality speaking through the

mouth of the sufferer, is ever heard in a modern mental hospital.

Whether demon-possession can be explained in terms of the "id" gaining control over the entire personality as the result of mental disease or imbalance is difficult to say. At all events, the solution evidently seems to transcend the purely physical realm of existence. Jesus saw sin lurking in the background of every possessed person who confronted him, indicating that there was a profound spiritual involvement to be reckoned with and remedied. The nature and function of the forces of good and evil which are rooted in the human personality are obscure, making the solution to the problem of demon-possession one of great difficulty.

6. The death of Jesus. The physical causes underlying the death of Jesus on Calvary (*see* CRUCIFIXION) have been the subject of medical comment. Speculation commenced with the opinions of Stroud in 1874, that the terminal event in the Crucifixion was cardiac rupture. According to this view, Jesus died of a broken heart both literally and figuratively, and this theory has gained widespread currency. Others, however, have held that the exudation from the spear thrust indicated that Jesus was only in a fainting condition, from which he speedily recovered when taken down from the cross. Still further explanations of the terminal event have included asphyxia, thirst, exhaustion, and loss of blood.

The passion narratives are unequivocal in showing that the experience of the agony, trial, and crucifixion was one of intense emotional strain, involving as it did a crisis in the spiritual destiny of humanity. Compared with this consideration, the physical aspect of the Crucifixion is almost trivial, but it is important insofar as it confirms the intensity of the spiritual experience. The "bloody sweat"—i.e., perspiration tinged with blood—is a rare phenomenon noted occasionally from the time of Aristotle, and appearing under conditions of extreme mental strain.

The actual cause of death does not seem to have been either thirst, hunger, loss of blood, or exhaustion. Cardiac rupture is rare, and generally affects the seriously ill only. Coronary thrombosis is also unlikely, in view of the generally accepted age of Jesus at his death. Asphyxia caused by respiratory impairment due to muscular cramp, is less probable than cardiac failure resulting from the blood sinking into the lower part of the body. The most probable cause of Jesus' death seems to be the incidence of acute dilation of the stomach. The spear thrust would doubtless release accumulated watery fluid under such circumstances, and perhaps some venous blood.

DISH. *See* POTTERY; VESSELS.

DISHAN dī'shăn [דישן; LXX Ρεισων, Δαισων]. The seventh son of Seir (Gen. 36:21; I Chr. 1:38); a native Horite clan chief in Edom (Gen. 36:30). Confusion exists with Dishon.

DISHON dī'shŏn [דישון, דישן, דשן, mountain goat(?); *cf.* Deut. 14:5]. **1.** The fifth son of Seir (Gen. 36:21 [LXX Δησων]; I Chr. 1:38); a native Horite clan chief (אלוף דשן, or "the clan chief *of* Dishon") in Edom (Gen. 36:26, 30; I Chr. 1:41*b*). For "Dishon" in I Chr. 1:42 read, with Gen. 36:28, "Dishan" (so RSV).

2. Son of the Horite clan chief Anah, and grandson of Seir (Gen. 36:25; I Chr. 1:41*a* [LXX Δαισων]).

DISPERSION [διασπορά, *see* § 1*b below*]. A general term to indicate the widespread settlement of Jews outside Palestine from the time of the EXILE through the Greek and Roman periods. Many Jews themselves, especially Zionists, use the terms "Dispersion," "Diaspora," and "Galuth" (Yiddish—Goless), to apply to the settled residence of Jews outside the state of Israel today.

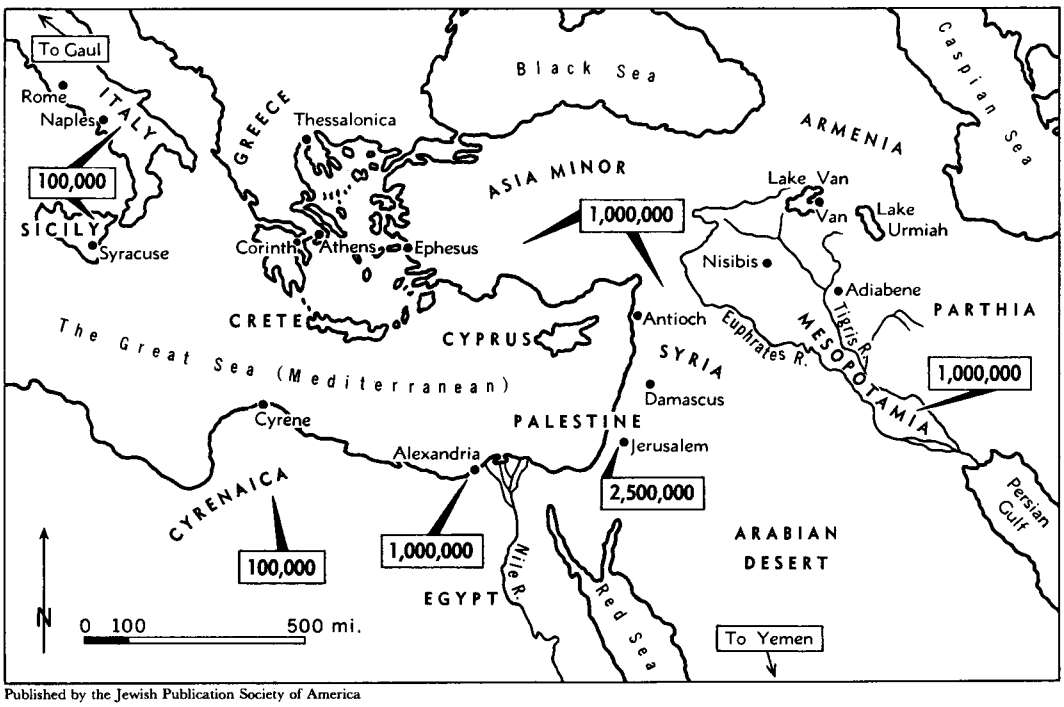
Bibliography

1. Terminology. ***a. In Hebrew.*** The Hebrew nouns גולה and גלות and the Aramaic גלותא may mean "dispersion" as well as "EXILE." The noun גולה in rabbinical literature frequently means "dispersion" ('A.Z. 30*b;* Sanh. 38*a*), as well as גלות (Ab. 1:11; Ber. 56*a*) and גלותא (Suk. 31*a*). Other Hebrew words such as נדח (Neh. 1:9; Isa. 11:12), זרה (Ezek. 36:19), נפץ (Isa. 11:12), פוץ (Jer. 25:34; Ezek. 36:19; Zeph. 3:10), פזר and פרד (Esth. 3:8) are also translated "dispersed" or "dispersion."

b. In Greek. The word διασπορά frequently translates the above Hebrew words in the LXX (Neh. 1:9; Ps. 147:2—G 146:2). The cognate Greek verb is διασπείρειν, "to disperse" (Esth. 3:8). It is used for נצר, "the preserved of Israel," in Isa. 49:6. In Deut. 28:25; Jer. 34:17—G 41:17 it translates זעוה (זועה ?). In Jer. 13:14 the reading should probably be διαφθορά. Διασπορά may mean "the dispersed" (II Macc. 1:27; Pss. Sol. 8:28; John 7:35) or the place where they are dispersed (Jth. 5:19; Test. Asher 7:2; Jas. 1:1; I Pet. 1:1). Παροικία (*see* EXILE) may mean the place of dispersion (Ezra 8:35; III Macc. 7:19; Wisd. Sol. 19:10; Acts 13:17) or more figuratively consignment to earthly life as a pilgrimage or sojourn (Ps. 119:54—G 118:54; I Pet. 1:17; II Clem. 5:1; cf. Rom. 7:23; Heb. 11:13).

2. Origins and causes. There is no period in Israelite or Jewish history when it may be said with absolute certainty, except by *a priori* argument, that all the Jews or their predecessors (*see* JEW) were at home in Palestine. There were two principal causes



of resettlement in antiquity: commerce and war. The great expansion of the United Monarchy under David and Solomon sent Jews into varied parts of Asia and Africa, both as government colonists and administrators and as private tradesmen (II Sam. 8; I Kings 4; cf. Deut. 17:16; I Kings 20:34), many of whom undoubtedly settled permanently. Trade itself undoubtedly dates from the beginnings of Israelite history and alone would have been enough to initiate a sizable dispersion. An early possible deportation of prisoners of war occurs in the reigns of Rehoboam and Jeroboam I (*ca.* 918 B.C.) when SHISHAK of Egypt invaded Judah (I Kings 14:25-28; II Chr. 12:1-12). However, the greatest cause of dispersion and the historical turning point for speaking of the Dispersion were the Assyrian and Babylonian exiles. *See* EXILE.

3. Areas and extent.* Outside Palestine, Babylonia was the area most densely settled by Jews in the Greco-Roman period. Testimony to the extent of Jewish settlement in Babylonia is in the fact that the authoritative successors to the great Tannaim or Palestinian sages were the Babylonian Amoraim (interpreters), and that the Babylonian Talmud is considered the official interpretation of the Mishna. *See* TALMUD. Fig. DIS 30.

The Dispersion in Egypt was next in importance. The fact that within the aging Jeremiah's own lifetime he ministered in Egypt to the Jews at Migdol, Tahpanhes, Memphis, and in the land of Pathros (Jer. 44:1) is sufficient indication that there had been a sizable Jewish population before he arrived. The ELEPHANTINE PAPYRI of the fifth century B.C. and other archaeological materials give ample evidence of comparatively early and well-settled Jewish settlements in Egypt. Philo Judeus (20 B.C.–A.D. 40) reports that the Jews in Alexandria numbered one million, constituting one eighth the population and two of the five quarters of the city (*In Flaccum* 6, 8).

The full extent of the Dispersion can be envisaged from Philo's listing (*Legatio Ad Caium* 36) of such far-flung places as Egypt, Phoenicia, Syria, Coele-Syria, Pamphylia, Cilicia, Asia Minor as far as Bithynia and the remotest corners of the Pontus; in Europe, Thessaly, Boeotia, Macedonia, Aetolia, Attica, Argos, Corinth and the "fairest parts" of the Peloponnesus; the islands of Euboea, Cyprus, and Crete; and almost all the countries beyond the Euphrates, in "all the satrapies which contain fruitful land" (cf. Esth. 3:8). But many Jews continued to pay the half-shekel tax for maintenance of the Jerusalem temple and, indeed, traveled at great distances to participate in the great festivals there. At the Feast of Weeks or Pentecost, recorded in Acts 2:9-11, Jews came from Parthia, Media, Persia, Mesopotamia, Judea, Cappadocia, the Pontus, Asia, Phrygia, Pamphylia, Egypt, parts of Libya, Cyrene, Rome, Crete, and Arabia. The Letter of James is addressed to the twelve tribes in the Dispersion (cf. John 7:35), and I Peter to the exiles in Pontus, Galatia, Cappadocia, Asia, and Bithynia. Strabo (first century B.C.) said there was no city to which Jews had not come (Jos. Antiq. XIV.vii.2). The Jewish author of the third book of the Sybilline Oracles (3.271) says: "Every land is full of thee and every sea" (cf. I Macc. 15:15).

4. Importance and significance. It seems reasonable to assume that the Dispersion gave birth to the SYNAGOGUE. Jeremiah's advice to the Babylonian exiles to pray to Yahweh in captivity (Jer. 29:7) was ample enough incentive to instigate houses of prayer and study outside Palestine. Neither Yahwism nor

30. Map showing the dispersion of the Jews in the first century of the Christian era

Judaism has ever held belief in a located deity. Moses' own faith is evident in the question: "Is it not in thy going with us, so that we are distinct, I and thy people, from all other people that are upon the face of the earth?" (Exod. 33:16). Nor was this faith limited to expression in one language. By the second century B.C. the Jews in Alexandria were able to read the Scriptures in Greek (*see* SEPTUAGINT). Throughout the Roman Empire until the fourth century A.D., Judaism was a *religio licita,* recognized and tolerated wherever practiced. It was respected and its adherents for the most part admired. The Dispersion was, indeed, the vehicle for God's light to the nations (Isa. 49:6). The early rapid spread of Christianity must ultimately be explained by the remarkable historical faith of Judaism, which knew not time or space.

DISTAFF [כישור]; KJV SPINDLE. A stick used to hold prepared fibers from which thread is spun. Thread could also be spun from fibers held in the hand or pocket, and, as represented in Egyptian tomb paintings, from prepared fibers wound up in the form of a ball or placed in a round container. The term כישור is found only in Prov. 31:19, and its meaning is plausibly derived from the context: "She stretches forth her hand to the כישור in order to pull fibers for spinning" is doubtless the sense of the first line. The second line informs that "her hands hold the spindle" (פלך; Akkadian *pilakku,* "spindle"; cf. Arabic *pallaka,* "be round"). The spindle was properly held in the hands. The KJV translates the first term "spindle" and the second "distaff," but the reversal of the two in the RSV is more accurate. *See* CLOTH.

The spindle is a round stick made of wood, bone, ivory, or metal, tapering at one or both ends, with a whorl or round disk (also made of various materials) mounted closer to one end, on which spun thread is wound; with the invention of the suspended-spindle method of spinning, a hook or notch was provided at the whorl end as a means of holding the thread while the spindle was not in the hands. The spindle probably takes its name from the round whorl. Fig. DIS 31.

In addition to Prov. 31:19, "spindle" occurs in II Sam. 3:29, where the LXX interprets פלך as "staff" (KJV). The notion that spinning is effeminate (for women and old men) is widespread in the Near East, however, so that "spindle" is appropriate in the context (Aq. and Symm. ἄτρακτον, "spindle").

DISTRIBUTION OF GOODS. *See* COMMUNITY OF GOODS.

DISTRICT. A geographical area either general in designation or specific in reference. In Neh. 3:9, 12-18 (פלך), the reference is to specific areas of the city of Jerusalem; and in Matt. 2:22; 15:21; 16:13; Mark 8:10; Acts 16:12 (μερίς, μέρος) the reference is to specific, though larger, areas: the districts of Galilee, Tyre and Sidon, Caesarea Philippi, Dalmanutha, and Macedonia. However, where the designation is general, as in the expression "in all that region," other terms are used: גליל, גלילה, γῆ, ὅριον (cf. תרומה in Ezek. 45:1). J. A. SANDERS

DIVES dī'vēz [Lat., rich]. The name traditionally given to the rich man in Jesus' parable (Luke 16:19-31) of the rich man and Lazarus (*see* LAZARUS AND DIVES). From the Vulg. translation, *homo quidam erat dives,* "there was a certain rich man," there resulted in medieval times the idea that *dives* was the name of the nameless man. In the third century such names as Nineve and Finaeus were given to him.

***DIVINATION.** A form of communication with the higher powers. Divination to elicit answers to definite inquiries was widely practiced in antiquity. The Babylonians, who traced back the system of foretelling future events by signs to the antediluvian king Enmeduranki of Sippar, were the first to develop the

art of soothsaying to an almost semiscientific discipline.

The objects from which omens were derived may be classified as (*a*) natural phenomena and (*b*) man-made phenomena. To the first category belong primarily the observation of the heavenly bodies (astrology); the inspection of the liver of a sacrificial animal (hepatoscopy); and, to a lesser degree, sudden and unexpected storms, peculiar formations of clouds, birth monstrosities among men and animals, appearances and disappearances of snakes, the disconsolate howlings or unnatural actions of dogs, nightmarish dreams, etc. To the second category, called "voluntary divination," because deliberately produced for the purpose of soothsaying, belong such actions as the pouring of oil into a basin of water and then observing the bubbles and rings formed in the receptacle, the shooting of arrows, the casting of lots, necromancy, etc.

The main field of divination in which the Babylonians excelled and for which they were famous in classical antiquity (cf. Dan. 1:4; 2:4, 10; 5:7, 11, where the name Chaldeans [כשדים] is synonymous with "magicians") was hepatoscopy. A highly trained and carefully selected group of priests, called *bārû*, "diviners" (lit., "seers, inspectors"), were in charge of this vital function. The liver was considered the seat

Courtesy of the Palestine Archaeological Museum, Jerusalem, Jordan

33. A model liver, without inscriptions; from Megiddo (1350-1150 B.C.)

of the blood and hence of life itself. On the basis of this belief the Mesopotamians, by some inscrutable process of reasoning, identified the liver of the sacrificial sheep with the gods and therefore deemed it a proper vehicle by which to divine the will and the intentions of the higher powers. (For similar views that the liver was the seat of life and thus often used in the sense of "heart, mind," cf. the Ugaritic Epic of Baal, where it is stated of the goddess Anath that "her liver [*kbd*] swells with laughter, her heart fills up with joy, Anath's liver exults" [*ANET* 136*a*]; Lam. 2:11, where Jerusalem is portrayed as a mother whose "heart [כבד; lit., 'liver'] is poured out in grief"; Prov. 7:23, where נפש, "life, soul," is used as a parallel to כבד, "liver.") For the purpose of divination the liver was carefully mapped out and divided into numerous sections, and each one given a name such as "front surface," "finger," "mouth," etc. The officiating *bārû*-priest had to undergo an elaborate ceremonial process consisting of washing and anointing himself and donning clean garments in order to be ritually pure. Great care was also taken regarding the place and time of the sacrifice. Figs. DIV 32-34.

The large collections of liver omens, prepared in the *bārû*-academies attached to the temples, from practically all periods of Babylonian and Assyrian history prove the great importance that was assigned to this branch of divination. (According to several texts from Mari, a *bārû*-priest was attached to each army contingent [cf. *Archives royales de Mari*, II, no. 22; III, no. 80]; the texts from Chagar-Bazar mention the existence of a *bīt bārî*, "diviners' college.") Before any decisive action was undertaken, such as a declaration of war, the conclusion of a peace treaty, the erection of a temple, a *bārû*-priest was called upon to sacrifice a sheep and to inspect its liver in order to determine whether the gods were favorably or unfavorably disposed toward the impending procedure.

Unlike astrology, which was the exclusive prerogative of the state, hepatoscopy was also made use of by the common people for their individual needs (cf. the composition "I Will Praise the Lord of Wisdom," *ANET* 434*b*, in which the patient complains that the diviner through divination did not discern the nature of his sickness). Divination based on the flight of birds was unknown in Babylonia. The only reference to augury is found in an inscription from Alalakh, Syria. King Idrimi (middle of the second millennium B.C.) reports that he had released a number of birds with the aim of obtaining an omen.

The OT terms קסם, נחש, and מעונן are commonly translated by "divination," "augury," or "soothsayer." (With the exception of Josh. 13:22; Prov. 16:10; Ezek. 21:22, קסם is uniformly rendered "divination"; נחש is translated "divination," "enchantment," "augury," "omens"; and מעונן, "soothsaying," but also "sorcerer" and "diviner.") The primary meanings of these words are uncertain (קסם is derived from Arabic *qasama*, "to cut, divide," and hence "to distribute by casting lots"; נחש has the meaning "to observe signs," and hence "to interpret omens"; מעונן has its cognates in Ugaritic *'nn* and Arabic *'anna*, "to appear, to present oneself," and hence "to cause to appear, to raise"). But whatever the original meanings of these words were, they have acquired a wider connotation in the OT, and they stand for the various practices of foretelling the future by the aid of artificial means—in sharp contrast to inspired prophecy. Deut. 18:14-15 succinctly expresses the difference between these two types: "For these nations, which you are about to dispossess, give heed to soothsayers [מעוננים] and to diviners [קסמים]; but as for you, the LORD your God has not allowed you so to do. The Lord your God will raise up for you a prophet [נביא] like me from among you, from your brethren—him you shall heed." The diviners and soothsayers are like false prophets (Ezek. 13:19; 22:28; Mic. 3:7, 11); their pronouncements are "lying divinations" (Isa. 44:25; Jer. 14:14; 27:9-10; Ezek. 12:24; Zech. 10:2; etc.); and, according to Isa. 44:25; Jer. 50:36, they themselves are "liars" (בדים). It is the Canaanites, the Philistines, and, among the nations outside the borders of Palestine, the Egyptians and the Babylonians who resort to this practice (cf.

Gen. 30:27; Num. 22:7; 24:1; Josh. 13:22; I Sam. 6:2; Isa. 2:6; Ezek. 21:21—H 21:26; etc.). Divination is, as all other magical activities, forbidden to Israel (Lev. 19:26; Deut. 18:11—H 18:10), and the prophets are tireless in their uphill struggle to uproot this evil among the people.

Courtesy of the Trustees of the British Museum

34. Clay model of a sheep's liver with a cuneiform inscription, containing omens and magical texts used by diviners; from First Dynasty of Babylon (*ca.* 1830-1530 B.C.)

The objects used and the technique employed by the Canaanite and Israelite diviners are nowhere described in detail. Isa. 44:25 uses the term "liars" (ברים) who employ "omens" (אתות) as a parallel to "diviners" (קסמים), thus showing that the soothsayers made use of omens in their manipulations (cf. Gen. 30:27; Num. 24:1; I Kings 20:33, where the word נחש has the connotation of "omen"). Balaam "the diviner," who was hired to curse Israel, asked Balak to build for him seven altars, on which he sacrificed bulls and rams. After having repeated the same performance several times and failed to achieve his purpose, Balaam exclaimed:

> There is no enchantment against Jacob,
> no divination against Israel
> (Num. 23:23).

He finally gave up the whole affair and refused to do what he had done before—namely, "to meet with omens" (24:1). Though it is not explicitly stated in the text, the use of the terms נחש, נחשים, and קסם in conjunction with sacrifices might suggest that Balaam attempted by means of hepatoscopy to ascertain whether the Moabite army would be successful in the battle against Israel (cf. the role played by the *bārû* in the military expeditions at Mari, mentioned above). Joseph, in Egypt, divined by means of pouring a liquid into a cup (Gen. 44:5). I Sam. 15:23 clearly proves that the shades of the dead served as mediums for divination. Ezekiel (21:21-22—H 21:26-27) informs us that the king of Babylonia stood at the parting of two ways and used a threefold rite of divination: he shook the arrows, he consulted the TERAPHIM, and he looked at the liver. It is quite likely that some of the objects ascribed by Ezekiel as having been used by Nebuchadnezzar were actually part of the paraphernalia of the Palestinian diviners. The use of the teraphim for divination purposes seems to be alluded to in Hos. 3:4 (where it is preceded by אפוד, an oracle-giving object); Zech. 10:2. For a possible reference to belomancy in Israel, Hos. 4:12 may be quoted:

> My people inquire of a thing of wood,
> and their staff gives them oracles.

The shooting of arrows by Jonathan to indicate to David the disposition of Saul shows that this practice was known, although the incident as told in I Sam. 20 lacks any allusion to its original divinatory character. From the reference in Isa. 57:3 to the "sons of the sorceress" (בני עננה; taking the word בני in the sense of "members" of a guild), it would seem that the Palestinian soothsayers were, like the Babylonian *bārû*-priests, organized as a professional group. The place name "the Diviners' Oak" (אלון מעוננים) in Judg. 9:37 would indicate that these practitioners tended to concentrate in certain localities.

The only direct reference to divination in the NT is found in Acts 16:16-19. The passage tells of the appearance of a slave girl at Philippi "who had a spirit of divination and brought her owners much gain by soothsaying." Paul considered her possessed, and after he had driven the spirit out of her body, the girl ceased to divine, and her master lost a source of income.

***DIVINERS' OAK** [אלון מעוננים]; KJV PLAIN OF MEONENIM mē ŏn'ə nĭm. A tree near Shechem, by way of which men were coming toward the city (Judg. 9:37). The KJV translation "plain" is incorrect. *Me'ônenîm* is a participle meaning "diviners" or "soothsayers." There is a possible connection with the oak of MOREH, near Shechem (Gen. 12:6; cf. 35:4). It is probable that the place was one where a sacred tree was located and divination practiced.

W. L. REED

DIVINITY OF CHRIST. The idea or doctrine that Jesus Christ is divine or belongs to the divine order. A distinction is sometimes drawn between the deity of Christ—i.e., the idea that he is fully God—and an idea which would ascribe to him a place in the divine order and a unique relationship to God while failing to affirm his full deity. The theology which became "orthodox" and was accepted by the Catholic church in the fifth century insisted that Christ was God. The Gospel of John makes such an assertion in 1:1, unless θεός is taken as an adjective; in 10:34-36 it defends the idea that Christ can be called God, and in 20:28 Thomas addresses him as "my Lord and my God!" When Paul, in Col. 2:9, says that in Christ "the whole fulness of deity dwells bodily," he comes close to the doctrine. It is not quite certain whether the phrase in Tit. 2:13 should be translated the "glory

of our great God and Savior Jesus Christ" (RSV) or the "glory of the great God and our Savior Jesus Christ" (RSV mg.).

Whenever the NT refers to Jesus as Son of God, it asserts his divinity in some sense (*see* SON OF GOD; CHRIST), for the term regularly refers to some characteristics in which Christ is like God and unlike other men. Nearly every part of the NT speaks of Jesus as Son of God. Since the term "Christ," as used by early Christians, included the ideas of Son of God; SON OF MAN; and LORD, the divinity of Christ can be regarded as a universal doctrine of the NT. It can be argued that most NT writers in speaking of Christ as Son of God mean substantially what the later church meant when it spoke of Jesus as God, but avoided the language used by John, because they held firmly to the HUMANITY OF CHRIST as well as his divinity, and wished to avoid any charge that they believed in more than one God. It should also be remembered that the issues raised in the second and later centuries were not dreamed of by the early Christians.

The two writers with the highest Christology, Paul and the author of the Fourth Gospel, take pains to assert that in some sense the Son is subordinate to the Father. Thus John says that the Son can do nothing of himself but only what he sees the Father doing (John 5:19), and that he seeks the will of him who sent him (5:30). Paul holds that at the end Christ will relinquish the kingdom to God the Father (I Cor. 15:24) and will be subject to him (15:28). Similarly in the book of Revelation the messianic reign comes to an end (20:6-7).

The divinity of Christ, however, continues without end. Is it also without beginning? According to the Fourth Gospel, the Logos was in the beginning with God (John 1:2). In Hebrews also it is said that the *aeons* (ages or worlds) were made through the Son (1:2), and other language of this passage suggests the eternality of the Son. A similar idea must lie behind the statements of Paul that through Christ all things in the heavens and on earth were created (Col. 1:16) and that he originally existed in the form of God (ἐν μορφῇ θεοῦ ὑπάρχων; Phil. 2:6). A problem is, however, raised by Col. 1:15, which calls him πρωτότοκος πάσης κτίσεως. Does this mean that he is the first to have been created?

A further question arising from the Pauline letters is whether Paul thought of Christ as possessing or exercising the attributes of divinity during his earthly ministry. The christological passage in Philippians asserts that Christ "emptied himself," taking upon himself the form of a slave (Phil. 2:7; *see* KENOSIS), and elsewhere Paul emphasizes Jesus' submission to human conditions (e.g., II Cor. 13:4; Gal. 4:4).

Most of the NT books do not reflect such speculations at all. In the case of the Gospel of Mark, it can be asked whether the evangelist believed that Jesus became Son of God at his baptism, or that he had always been Son of God and was at this time marked out for his public ministry. In the gospels of Matthew and Luke, Jesus is presumably Son of God from the moment of his conception, but there is no way to discover whether any of the Synoptists had the idea of the pre-existence of the Son of God. S. E. JOHNSON

***DIVORCE** [כריתות (KJV *alternately* DIVORCEMENT); ἀποστάσιον (KJV DIVORCEMENT)]. Divorce was generally permitted, largely on the initiative of the husband. However, there is recognition that a concubine could desert her husband under certain conditions (Exod. 21:11). In an Egyptian Jewish colony a Jewish bride had the right to obtain a divorce. *See bibliography.*

When a man divorced his wife, he wrote her a "bill of divorce," a certificate of divorce, and then sent her away (Deut. 24:1-4; cf. Isa. 50:1; Jer. 3:8; Matt. 19:7; Mark 10:4). This procedure was enacted by Moses because of the hardness of man's heart (Matt. 19:8). A simple form of such a decree may be found:

> She is not my wife,
> and I am not her husband
> (Hos. 2:2).

A loosely defined reason for divorce is that a man finds "some indecency" in his wife (Deut. 24:1); the Hillel school viewed this as a general term, and the Shammai school took it to mean adultery only. Joseph decided to divorce Mary when he thought her guilty of adultery (Matt. 1:19; cf. Matt. 19:9; Mark 10:2-9, 11-12). Divorce could be effected for religious reasons (Ezra 10:3, 44; cf. Deut. 7:3; but see I Cor. 7:12-13, 15). Childlessness was a common reason for both divorce and multiple marriages (Mal. 2:15; Code of Hammurabi; *see bibliography*).

A divorced wife might be reinstated (Isa. 54:6); but if she married another, the husband would not take her back (Deut. 24:1-4; Jer. 3:1). To marry a divorced woman is adultery (Matt. 5:32; Mark 10:11-12; Luke 16:18). If a man puts away his wife, having falsely charged her with unchastity, he must take her back (Deut. 22:19); and when a man is required to marry a girl he has seduced, he may not divorce her (vs. 29). If a man has taken a slave as a wife, by taking another wife he may not divorce the first.

BAAB

DIZAHAB dĭz'ə hăb [דיזהב, that which has gold]. A place E of the Arabah, listed among others to fix the locality in which Moses delivered his farewell address (Deut. 1:1; cf. Mezahab in Gen. 36:39).

The present location is unknown. The suggestion of Minet edh-Dhahab, due E of Sinai, is out of the question, since it is not in the area of the other known places in the list, nor is it a suitable camping site. Since geologists suggest the only likely place to find gold in this region is in the crystalline rocks E of the Arabah, the other suggestion of edh-Dheibeh, E of Heshbon, near Qasr el-Mwaqqar, is better from the point of view of location; but again, it is not a good camp site.

DO NOT DESTROY. *See* MUSIC.

DOCETISM dŏs'ə tĭz'əm, dō'sə— [*from* δοκέω, to seem]. A type of doctrine, prevalent in certain sections of the church in NT times and later, to the effect that Christ had not come in the flesh. The doctrine might take the form of a denial that the humanity of Jesus was more than an appearance—he only seemed to have a physical body—or it might consist in the teaching that the divine Christ came into, or upon, the human Jesus, perhaps at his baptism, and withdrew from him before the Crucifixion, at no time being really identified with him. This kind of teaching presupposed a dualistic view of the world according to which it would have been impossible for a divine being to assume human flesh. Since there was no doubt of Jesus' divinity, the reality of his humanity was questioned or denied. Docetism was characteristic of gnostic systems generally (*see* GNOSTICISM) and is being combatted in the Prologue of the Fourth Gospel and in the Johannine letters (*see* JOHN, GOSPEL OF; JOHN, LETTERS OF). A good example of docetic teaching is the Acts of John (*see* JOHN, ACTS OF). This kind of doctrine came very early to be regarded as heretical. J. KNOX

DOCTOR [νομοδιδάσκαλος; *also* διδάσκαλος (Luke 2:46 KJV; RSV TEACHER)]. Alternately: TEACHER OF THE LAW; KJV DOCTOR OF THE LAW (Luke 5:17; Acts 5:34). The term νομοδιδάσκαλος occurs only in Christian writings, though Plutarch (*Cato Major* XX) has νομοδιδάκτης. In Acts 5:34 the former word is applied to GAMALIEL (1), who belonged to the liberal school of Hillel and is said to have been teacher to Saul of Tarsus (Acts 22:3). Luke 5:17 states that, in the house where Jesus healed the paralytic, many doctors of the law were seated, having "come from every village of Galilee and Judea and from Jerusalem." This is hyperbole, though based on Mark 2:2, 6. From vs. 21, it is clear that Luke's "doctors" were scribes (*see* SCRIBE). In both Luke and Acts, therefore, the term clearly signifies those who were expert in the Mosaic law; and the same is true of the later patristic writings.

In I Tim. 1:7, on the other hand, the expression means *false* teachers, or would-be teachers, of the law. These are grouped with those who "occupy themselves with myths and endless genealogies [=emanations?] . . . , speculations . . . , vain discussion." The passage (I Tim. 1:3 ff) reads like a description of the Gnostic heresy that plagued the church in the second century and possibly in the first (*see* GNOSTICISM). This coupling of Gnosticism with a false Judaism is made also by Irenaeus (*ca.* A.D. 180). Gnostics, he says, equate the Genesis stories with their own doctrines of the Tetrad, the Ogdoad, Sophia, and Ialdabaoth (Her. I.18.30). Likewise Ignatius of Antioch (*ca.* A.D. 115), in writing to the Magnesians and to the Philadelphians, lumps Gnostic and Jewish opponents of the faith together, and refutes both with arguments from the life and passion of Christ. Even Paul, in Galatians, is fighting two errors which, he seems to say, come from the same group: a false imposition of Mosaic law on Christian converts, and a false enlightenment that has led to moral laxity (Gal. 1:7 ff; 3:1; 4:3-9; 5:13). The latter came to be a frequent Christian complaint against Gnosticism. Thus the false doctors of I Timothy may provide one more connecting link between these two early enemies of Christian orthodoxy.

PIERSON PARKER

DOCTRINA ADDAEI dŏk trē'nə ă dē'ī [of Addaeus, *the Latinized form of the* Syr. *Addai, commonly equated with* Thaddaeus]. *See* ABGARUS, EPISTLES OF CHRIST AND.

DOCTRINE. *See* TEACHING.

DOCUMENTS. In its classic form the Documentary Hypothesis reckoned with four literary sources as the primary constituents of the PENTATEUCH or HEXATEUCH. Arranged in chronological sequence, these are J (for Jehovist or Yahwist), E (for Elohist), D (for Deuteronomist), and P (for Priest or Priestly Document).

J, the oldest of the Pentateuchal sources, has been commonly assigned to the tenth-ninth centuries B.C., and regarded as a product of the Jerusalem court during the age of David or Solomon, or the early decades of the S kingdom (*J*udah), in contrast with the E Document, which has been associated with the N kingdom (*E*phraim). As the principal narrative source, J carries the story from the Garden of Eden (beginning at Gen. 2:4*b*, after the P account of Creation in Gen. 1:1–2:4*a*) through the patriarchal history in GENESIS. It continues in EXODUS and NUMBERS (Leviticus is all P), recounting the story of the deliverance from Egypt, the wanderings in the wilderness, and the conquest of Transjordan. Whether J carries beyond the book of Numbers is a matter of dispute. The usual view is that the death of Moses (Deut. 34) belongs to this source, and it may also include parts of Joshua, thus completing the account of the Conquest. Some scholars even trace J into the books of Samuel, finding its climax and conclusion in the triumphs of David (which fulfil the promises made to the fathers; cf. Gen. 15:18-21, etc.).

E is the second narrative source, in general paralleling and supplementing J. It is in more fragmentary condition than J, and its limits are even more difficult to determine. E has been dated in the ninth-eighth centuries. JE, the combination of J and E, was the work of an editor or redactor, R_{JE}. His activity has been plausibly assigned to the period after the fall of Samaria (722/21 B.C.)—i.e., eighth-seventh centuries.

D is to be found chiefly in the book of DEUTERONOMY, though the occurrence of "Deuteronomic" expressions has been noted in other books of the Pentateuch. The Book of the Law, discovered in the temple in the eighteenth year of Josiah (622 B.C.), has been identified with the legal code in Deut. 12–26; 28 (possibly also chs. 5–11). The framing of this code has been dated in the seventh century, while the compilation of the present book of Deuteronomy has been placed somewhat later. An editor combined JE and D not earlier than the sixth century, according to this view.

The final document, P, was compiled by a priestly editor from surviving temple records during the Exile (sixth-fifth centuries). P is the principal technical source of the Pentateuch, consisting of little more than a series of lists and tables containing genealogi-

cal and liturgical data, and running from Gen. 1:1 through the book of Numbers. There is little, if any, sign of P in Deuteronomy. Whether P occurs in Joshua is a matter of dispute, though there is considerable P-type material—e.g., the lists of tribal boundaries (chs. 13 ff). A priestly redactor (R_{JEDP}) combined P with JED, using P as the framework and distributing the other sources through it. This compilation of the Pentateuch substantially as it has come down to us occurred during the Exile, and was complete by the end of the fifth century at the latest. Ezra has been thought to have brought the Pentateuch (or at least P) with him from Babylon to Jerusalem.

Modern study of the documents has resulted in some important shifts in perspective and conclusions, though the general pattern remains the same. There is no longer the same certainty about the documents themselves. The neat four-source theory has disintegrated into a variety of multiple-source theories, or some form of the Fragmentary Hypothesis, while behind the literary process stands oral tradition and its transmission. Scholars have demonstrated the composite nature of the sources (J_1, J_2, E_1, E_2, etc.), and it is now customary to speak of literary strata rather than documents. The very existence of E as a separate source has been questioned, and efforts have been made to dissolve it into a series of addenda.

Working in the other direction, a ground-source (G) has been identified behind the narratives of the Tetrateuch (Genesis–Numbers). Originally oral and poetic in character, G may actually have been reduced to writing; it probably dates to the period of the judges or the United Monarchy at the latest (i.e., eleventh-tenth centuries), and may represent the official tradition of Israel, preserved at the central sanctuary and recited at the amphictyonic festivals. J and E would then be regarded as independent prose abstracts derived from G, while JE is a compendium preserving only parts of J and E, which must have been much more alike than now appears.

D has been disconnected from the other books of the Pentateuch, and regarded rather as the first part of the Deuteronomic history (extending through Joshua, Judges, Samuel, and Kings). The legal code in Deuteronomy has been traced back to a northern provenience, and a ninth-eighth-century date. The other legal codes likewise have been recognized as separate sources, later incorporated into the Pentateuchal documents.

The status of P as an independent document has also been questioned. Reviving an older view, some scholars regard the Priestly writer as the redactor (R_{JEDP}) of the Pentateuch. He wove together the older narratives with archival material at his disposal, and attached the book of Deuteronomy as a conclusion to the story of Moses and Israel, the revelation at Sinai, and the tabernacle in the wilderness.

Bibliography. Standard treatments of the subject are to be found in S. R. Driver, *Introduction to the Literature of the OT* (9th ed., rev., 1913); R. H. Pfeiffer, *Introduction to the OT* (2nd ed., 1949). For a survey of recent developments, see C. R. North, "Pentateuchal Criticism," *The OT and Modern Study* (1951), pp. 48-83. O. Eissfeldt, *Einleitung in das AT* (2nd ed., 1956), is best of all. D. N. FREEDMAN

DOCUS. KJV form of DOK.

DODAI. Alternate form of DODO 2.

DODANIM dō′də nĭm [דדנים]. A people mentioned in Gen. 10:4 and in some Hebrew MSS of I Chr. 1:7. This name is often emended to RODANIM, "Rhodians." Connections have been proposed with "Dedan" (Gen. 10:7) and cuneiform "Danunites," but they are phonetically improbable.

C. H. GORDON

DODAVAHU dō′də vā′hū [דודוהו, beloved of Yahu] (II Chr. 20:37); KJV DODAVAH dō′də və. The father of an obscure prophet, Eliezer. The name, of which DODO is probably an abbreviation, may have been suggested to the Chronicler by "Eleazar the son of Dodo" in II Sam. 23:9. J. M. WARD

DODO dō′dō [דדו, דודו]. Alternately: DODAI dō′dī [דודי, דדי] (II Sam. 23:9 *Kethibh;* I Chr. 27:4). **1.** Grandfather of Tola, one of the minor judges in early Israelite history from the tribe of Issachar (Judg. 10:1).

2. An Ahohite; the father of Eleazar, who was among the Mighty Men in the high command of David known as the "Three" (II Sam. 23:9; I Chr. 11:12). According to I Chr. 27:4, Dodai or, more probably, his son Eleazar—since the words "Eleazar the son of" appear to have fallen out of the text—was the officer in charge of the division of the Davidic militia for the second month.

3. A Bethlehemite, the father of Elhanan, one of the Mighty Men of David known as the "Thirty" (II Sam. 23:24; I Chr. 11:26). E. R. DALGLISH

DOE [יעלה, *feminine of* יעל, *see* WILD GOAT] (Prov. 5:19); KJV ROE. The female of the deer and of allied animals, and sometimes of the hare, but not of the Red Deer. *See* HIND.

Both "doe" and "roe" in Prov. 5:19 appear to be mistranslations. The text is "a (female) wild goat of grace," which means "a graceful wild goat"; this seems an unusual epithet for a wife, but it may have been an acceptable term of endearment.

W. S. MCCULLOUGH

DOEG dō′ĭg [דואג; דואג; דויג]. An Edomite, the chief of Saul's herdsmen (runners?), who at the instance of Saul executed the priests of Nob. Doeg was at the sanctuary at Nob, "detained before Yahweh" for some ceremonial obligation, when David arrived there in his flight from Saul (I Sam. 21:7—H 21:8). Misrepresenting the true nature of his visit, David obtained from the priest Ahimelech provisions, the sword of Goliath, and an oracle of Yahweh. When Doeg rejoined his master at Gibeah, he informed the king what he had witnessed. Summoning all the priestly house of Ahimelech to his court at Gibeah, Saul accused them of treason in providing aid to the king's enemy. Ahimelech did not deny that he had given to the king's son-in-law his wonted assistance but asseverated that he knew nothing of the present rupture between the king and David. Notwithstanding the solemn protests of innocence, Saul commanded his bodyguard to slay the priests as conspirators against the crown. When the bodyguard

refused to execute the king's order, Doeg assumed the invidious command and slew eighty-five defenseless priests (I Sam. 22:11-18).

The historical notice in the superscription of Ps. 52, which reads: "A Maskil of David, when Doeg, the Edomite, came and told Saul, 'David has come to the house of Ahimelech,' " merely indicates that this incident in the life of David was considered by the later liturgists, who attached the superscription to the psalm, to form the setting of the composition.

E. R. DALGLISH

DOG [כֶּלֶב, *cf.* Ugar. *klb*, Phoen. כלב, Akkad. *kalbu*, Arab. *kalb*; κυνάριον (Matt. 15:26-27; Mark 7:27-28), *diminutive of* κύων (Matt. 7:6; *etc.*] A domesticated carnivorous digitigrade mammal (*canis familiaris*) of the family Canidae (which includes dogs, wolves, jackals, and foxes).

1. Literal usage. The dog was domesticated some millenniums before Israel's history began. A canine skull of the Middle Stone (Mesolithic) Age was found at Wadi el-Mugharah apparently indicating domestication, as also remains of a dog found in both pottery and prepottery Neolithic levels at Jericho. The dog is a common animal in the Bible. The biblical writers, however, seem unfamiliar with any kind of warm personal relationship between a dog and its master such as Pliny describes (Nat. Hist. VIII. 61(40); cf. Tob. 5:16; 11:4), although the references in Matt. 15:26-27; Mark 7:27-28 (where not much importance should be attached to the use of the diminutive, κυνάριον) imply that some dogs had access to the eating quarters of a home. The dogs of the Bible, except for those just mentioned and the sheep dogs of Job 30:1, appear to have been the scavenger sort, which haunted the streets and refuse dumps of the towns and which were generally considered to be unclean and vicious. The biblical data do not permit any conclusions about the breeds of dog which were known, although a study of the representation of dogs in Egyptian and Mesopotamian art would presumably shed light on this question.

We read of dogs' drinking with the tongue (Judg. 7:5); of their growling (Exod. 11:7; cf. Jth. 11:19); of their unwelcome attention at times (Luke 16:21); of their reaction to a playful gesture (Prov. 26:17); of their returning to their own vomit (Prov. 26:11; II Pet. 2:22); of their eating of animal flesh, including what is unclean (Exod. 22:31; cf. M. Bek. 5.6), and even of human flesh (I Kings 14:11; 16:4; 21: 19, 23-24; 22:38; II Kings 9:10, 36; Ps. 68:23—H 68:24; Jer. 15:3). Despite such habits, a live dog (over against a dead lion) is used in Eccl. 9:4 to emphasize the advantage of life over death. In the Mishna there are references to a house dog's bite (B.K. 5.3), the chaining of a dog reared in a house (7.7), a mad dog (Yom. 8.6), and feeding dogs with meat (Ned. 4.3; Hullin 4.2).

2. Dogs as sacrificial offerings. Isa. 66:3 ("he who breaks a dog's neck") seems to point to a non-Yahwistic cultic act in which a dog was sacrificed. The references, however, to illustrate such an act in the ancient world are rather meager (*see bibliography*); there is, in fact, no decisive evidence for dog sacrifice either in ancient Mesopotamia or in Egypt, although dogs were honored in the latter region, as is illustrated by the hundreds of mummified dogs which have been uncovered. The great Egyptian mortuary god, Anubis, was usually represented either by a human figure with a jackal's (or possibly dog's) head, or by a jackal (or dog) couchant; and some misunderstood echo of this practice may lie behind the references in Isaiah. More probably, the author is citing the dog, as he does the swine in the next line, as an unclean animal, illustrative of the generally unclean sacrifices of the non-Hebrew world.

3. Figurative usage. "Dog" is a term of contempt applied to a man (I Sam. 17:43; in excessive humility, II Kings 8:13); cf. the same usage in the Lachish Ostraca (*see bibliography*). Presumably "dog's head" (II Sam. 3:8) has a similar meaning. "Dogs" in Matt. 15:26; Mark 7:27 would appear to designate non-Jews. The isolated saying in Matt. 7:6 (which may be an old proverb) is without an appropriate context, and its significance is therefore obscure, but the "dogs" to which it alludes seem to be unworthy or unappreciative persons, whether Jew or Gentile; Did. 9:5 interprets the term as the unbaptized.

A "dead dog" represents a worthless object (I Sam. 24:14—H 24:15; II Sam. 9:8; 16:9).

An enemy may be called a "dog"; the term is applied by the psalmists to their own opponents (Pss. 22:16, 20—H 22:17, 21; 59:6, 14—H 59:7, 15), in Enoch 89:41-50 to Israel's enemies.

"Dog" also designates the wicked: in Isa. 56:10-11 the reference is to Israel's religious leaders, possibly the prophets of the day, who are not performing their duty aright and are withal excessively greedy; in Phil. 3:2; Rev. 22:15 the allusion is to workers of evil, possibly in the former case to a Judaistic party within the church.

In Deut. 23:18—H 23:19 "dog" means a male temple prostitute; the Mishna, however, takes the word literally (Tem. 6.3).

Bibliography. W. R. Smith, *The Religion of the Semites* (3rd ed., 1927), pp. 291-92, 596, on dog sacrifice; H. Torczyner, *The Lachish Letters* (1938), letters 2:4, 5:4, etc.; F. E. Zeuner, "Dog and Cat in the Neolithic of Jericho," *PEQ* (1958), pp. 44 ff.

W. S. MCCULLOUGH

DOK dŏk [Δώκ]; KJV DOCUS dŏ'kəs. Dagon, in Jos. Antiq. XIII.viii.1. The small fortress in which SIMON MACCABEUS met his death in 135 B.C. Simon and two of his sons, while under the influence of wine, were murdered here by Simon's son-in-law Ptolemy. The fort is said to have been built by Ptolemy (I Macc. 16:15). It is probably the modern 'Ain Duq, a fountain a mile or two NW of Jericho.

N. TURNER

***DOLMENS** dŏl'mĕnz. Ancient monuments consisting of several large stones in the form of one or more chambers, surmounted by a larger stone, called the capstone. They are found in many parts of the world, including Southern Asia, Southern Russia, and a long crescent extending through North Africa, Malta, Portugal, Spain, France, Britain, and the W part of Scandinavia. Archaeologists are of the opinion that they were erected as burial chambers and that in many cases they must have originally been heaped about with earth, which has disappeared in the course of the centuries.

Courtesy of Nelson Glueck

35. Double-chambered dolmen in Transjordan in the foothills eastward of Tell ed-Damiyeh (Adam)

Such dolmens have been found by the thousands in the W part of the Transjordan region, especially on the slopes leading down to the Jordan Valley and the Dead Sea. There are only a few in W Palestine. They are both single and double-chambered (Fig. DOL 35). No contemporary pottery of any sort has been found in them, and they are evidently the work of people of the Neolithic period, perhaps as early as the sixth millennium B.C. and certainly not later than the fourth. The amount of labor involved in the erection of these tombs points to a large and well-organized agricultural civilization in the Jordan Valley and the areas to the E in the Neolithic period. It is probable that the presence of dolmens in Palestine gave rise to the legends of the "mighty men that were of old" (Gen. 6:4) and of the ANAKIM and the REPHAIM.

S. COHEN

***DOMINION. 1.** The translation of several words implying "mastery": (*a*) רדה ("trample"); (*b*) משל, ממשל, ממשלה ("rule"); (*c*) שלט, שלטן ("to have power over"); (*d*) κυριεύω ("to be master"); (*e*) κράτος ("power"; used only in doxologies); (*f*) ἐξουσία ("authority"); (*g*) βασιλείαν ("kingship"). The word expresses the sovereign rule of God, political power (either the rule, the power of governing, or the realm governed), man's mastery over nature, and sin's grip on man. For the Hebrews, ultimate dominion belonged to God (Job 25:2; Ps. 22:28). At times it was shared by man over nature (Gen. 1:26; Ps. 8:6); by the king, as the Lord's Anointed (cf. Ps. 2:7), over the nation or nations; and by the saints of the Most High in the eschaton (cf. Dan. 7:14, 27). The term often implies authority or power gained by conquest (Num. 24:19; Judg. 14:4; I Kings 4:24; Neh. 9:28; Pss. 19:13; 119:133). Authors of both the OT and the NT speak in glowing terms of the eternal dominion of God (Ps. 72:8; Dan. 4:3; Zech. 9:10; and the doxologies I Tim. 6:16; I Pet. 4:11; 5:11; Jude 25; Rev. 1:6).

2. The translation of κυριότης (Eph. 1:21; Col. 1:16; Jude 8[?]), meaning an order of angels(?). Dominion appears to be one of the highest ranks of angels, along with θρόνοι (cf. Test. Levi 3:8). These were probably originally pagan deities, considered by the Hebrews as part of the divine council (Ps. 89:6) and regarded as superintending the affairs of the nations (Deut. 32:8; Isa. 24:21; Dan. 10:13; Ecclus. 17:17). In Col. 1:16 Paul uses the term in a good sense, but such beings are usually referred to as requiring to be overcome (cf. Rom. 8:38; I Cor. 15:24; Eph. 6:12; Col. 2:15). *See also* ANGEL; POWER; PRINCIPALITY.

Bibliography. J. B. Lightfoot, *St. Paul's Epistles to the Colossians and to Philemon* (1912), pp. 150-53; O. Cullmann, *The State in the NT* (1956), pp. 95-114.

V. H. KOOY

DOMITIAN dō mĭsh'ən. Titus Flavius Domitianus, son of VESPASIAN and successor of his older brother TITUS as Roman emperor (A.D. 81-96). Born in 51, he was in Rome at the time of Vitellius' murder in 69 and escaped from the Capitol only by wearing Isiac vestments. As emperor he rebuilt the temple of Isis.

When his father became emperor, it was planned that the throne should go first to Titus and then to Domitian, but because of Titus' distrust of Domitian he was given no real authority until he came to rule in the year 81.

His reign became increasingly autocratic, especially during and after the year 89, when a dangerous revolt in Germany was put down and astrologers and philosophers critical of the regime were expelled from Rome. Trials for sedition became frequent. At some point between 85 and 89, courtiers and court poets had begun to address the emperor as "Master and God," and ultimately, as Dio Chrysostom (Or. XLV.1) says: "All Greeks and barbarians called him a god." In the year 95 the emperor became suspicious of his niece's husband, Flavius Clemens, whose two young sons were to have inherited the throne. Clemens was accused of "godlessness" and put to death; his wife, Flavia Domitilla, was exiled. Many others were indicted on the same charge and on that of following Jewish customs. At least in part, the latter charge was initiated because of Domitian's need for money. Since 70 the Jewish temple tax had been paid to Rome. The Emperor was anxious to enforce payment by proselytes as well as by those born Jews. In this connection he may well have investigated the Christians, since at least some of them were close to Judaism. Flavia Domitilla may have been a Christian, since a woman of that name later gave a cemetery to the Roman Christian community. But whatever persecution of Christians may have taken place (probably reflected or largely anticipated in the book of REVELATION), it was incidental to the whole "reign of terror" characteristic of Domitian's last years. In 96 his wife took part in the last of a series of plots against him, and he was murdered.

To portray Domitian simply as an autocrat is to neglect his achievements for the Empire, even though most of these came early in his reign. He was aware of the difficulty of defending the N frontier, especially between the Rhine and the Danube, and advanced a line of forts roughly fifty miles beyond the line established by Vespasian; the new defenses were completed by his successors. He also fought along the Danube, in Dacia (85-89), and in Pannonia (92). At

Rome he tried to enforce an Augustan standard of public morality and refused to accept bequests from testators who had children. In 92 he published an economic edict intended to increase wheat production at the expense of wine; to this measure (later rescinded) there may be an allusion in Rev. 6:6. Yet all his merits were obliterated by his encouragement of informers after 89 and by his self-deification (cf. Suetonius *Domitian* XIII).

DOOR. דל (Ps. 141:3), דלה (Isa. 26:20), and דלת (*deleth*) are the swinging door set in sockets; the pictorial representation is the letter *daleth* in the early Semitic alphabet. Doors plated with metal (II Chr. 4:9, 22) were fastened with metal hinge pivots. סף, "door" in the KJV, is better "threshold" in the RSV, except in II Chr. 23:4, where it is "gate." The *hithpolel* participle, המתופף, of the denominative verb in Ps. 84:10—H 84:11 is "doorkeeper." פתח is the opening in the wall, in which might be a single or double דלת. The lintel was a horizontal beam above; jambs were at the side. שער in Exod. 35:17; Job 38:17 is "door" in the KJV, but properly "gate" in the RSV. So the participle of the denominative verb, שוער, is "doorkeeper" in the KJV (I Chr. 15:23) and "gatekeeper" in the RSV. בית in I Kings 14:17 KJV is given its regular meaning, "house," in the RSV.

In the NT and the LXX, θύρα is used for the swinging door, as in Matt. 6:6, and for the opening, as in Matt. 27:60. It is also used metaphorically, as in John 10:7: "I am the door"; Acts 14:27: "door of faith." Θυρωρός is a doorkeeper (John 18:16).

See also ARCHITECTURE; HOUSE; SOCKET.

O. R. SELLERS

DOORKEEPER [שוער, תרע; θυρωρός]; KJV often PORTER. One who guards a door. There were special gatekeepers for the ark (I Chr. 15:23-24). They also watched the threshold of the temple (II Kings 22:4) and collected money from the people (*see* PRIESTS AND LEVITES § C3). Eunuchs acted as doorkeepers in the palace of Persian kings (Esth. 2:21; *see* EUNUCH). Sometimes women kept the door (II Sam. 4:6; John 18:16-17). This relatively humble task would be a joy for any servant in the house of the Lord (המתופף, "to stand at the threshold, to be a doorkeeper"; Ps. 84:10). C. U. WOLF

DOPHKAH dŏf'kə [דפקה] (Num. 33:12). The first stopping place of the Israelites after they left the wilderness of Sin. It is usually identified with the Egyptian mining center at Serabit el-Khadim in Sinai.

Bibliography. G. E. Wright, *Biblical Archaeology* (1957), p. 64. For Serabit el-Khadim, see W. M. F. Petrie, *Researches in Sinai* (1906); R. F. Starr and R. F. Butin, *Excavations and Protosinaitic Inscriptions at Serabit el-Khadem* (1936).

J. L. MIHELIC

***DOR** dôr [דאר, דור]; KJV Apoc. DORA dôr'ə [Δωρα]. A city on the Mediterranean seacoast S of Mount Carmel. NAPHATH-DOR (Josh. 12:23; I Kings 4:11) and NAPHOTH-DOR (Josh. 11:2) are probably the same city.

The city is located at the small harbor town of et-Tanturah, near which excavations were conducted by the British School of Archaeology in 1923-24, when it was found that the site was occupied for many centuries beginning in the Late Bronze Age (1500-1200 B.C.). The remains of what was once a strong building, now called el-Burj, have been described as a possible tower which guarded the small bay just to the S in Canaanite and later times.

The king of Dor was a member of the coalition of Canaanite kings defeated by Joshua (Josh. 11:2; 12:23; cf. I Chr. 7:29). Joshua's victory was apparently a temporary one (Judg. 1:27). The city was probably in Solomon's fourth administrative district, and its chief officer, Ben-abinadab, was married to one of Solomon's daughters (I Kings 4:11).

Extrabiblical references (*see below*) to Dor indicate that it was an important coastal town for many centuries. It appears in the Egyptian story of Wen-Amon as a place visited by him during his journey to Phoenicia. The city was probably occupied by the Tjeker, who migrated with the Philistines in the twelfth century B.C. Dor was being besieged by Antiochus Sidetes (139/138-129), who employed infantry, cavalry, and ships for the siege; he finally forced Trypho, who had rejected Simon's offer of assistance, to flee by ship (I Macc. 15:12-13, 25). According to Josephus, Apollo was worshiped at Dor by the Gentiles who inhabited the city (Apion II.x). Dor was granted autonomy by Pompey in 64 B.C.

Bibliography. G. Dahl, *Materials for the History of Dor,* Transactions of the Connecticut Academy of Arts and Sciences, XX (1915), 1-131; W. F. Albright, "The Administrative Divisions of Israel and Judah," *JPOS,* V (1925), 31-32.

W. L. REED

DORCAS dôr'kəs [Δορκάς; Aram. טביה, Tabitha, gazelle, *a feminine name favored by both Greeks and Jews*]. A woman disciple at JOPPA who was full of charitable works; she fell sick, died, and was raised from the dead by PETER after he was urgently summoned from Lydda, nine miles distant (Acts 9:36-42). Dorcas is named "disciple" (μαθήτρια—the feminine is used only here in the NT, but the second-century Gospel of Peter applies it to Mary Magdalene), which could mean an actual adherent of Jesus (cf. Mark 15:40; Luke 8:2) or a Christian, probably the latter. Her death left widows weeping as they showed garments which she had made. Her influence continues in later Dorcas Societies of church women devoted to good works.

The raising of Dorcas is notable because it is the first of such miracles by an apostle (Matt. 10:8; Acts 20:9-10), and because it resulted in winning many believers. Luke probably found this narrative in the early traditions of the Palestinian church and reported it, believing such an event was both possible and probable—a confidence accepted and wondered at today. *See* MIRACLE.

D. M. BECK

DORYMENES dôr ĭm′ə nēz [Δορυμένης; Vulg. Dorymini]. The father of Ptolemy Macron, who, with Nicanor and Gorgias, "mighty men among the friends of the king," were chosen by Lysias to lead an army "into the land of Judah and destroy it" (I Macc. 3:38). Menelaus, though facing defeat, promised a large sum of money to Ptolemy son of Dorymenes (II Macc. 4:45). II Macc. 10:12 may refer to another Ptolemy.

J. C. SWAIM

DOSITHEUS dō sĭth′ĭ əs [Δοσίθεος]. **1.** A captain under Judas Maccabeus; troops commanded by him and Sosipater captured Timothy and the stronghold he held; they did not, however, keep Timothy a prisoner (II Macc. 12:19, 24-25).

2. A cavalryman of great strength; one of Bacenor's men. He sought to take Gorgias alive, but was thwarted by a wound inflicted on him by a Thracian horseman (II Macc. 12:35).

3. A Jew given high military post by Ptolemy Philopator and Cleopatra; Josephus (Apion II.v) relates that "Onias and Dositheus, both Jews whose names are laughed at by Apion, were the generals of their whole army" (cf. III Macc. 1:3).

4. A man claiming to be a priest and Levite who, with his son Ptolemy, carried down to Egypt Mordecai's letter regarding the Feast of Purim (Add. Esth. 11:1).

J. C. SWAIM

DOSITHEUS, APOCALYPSE OF. A Gnostic work in Coptic discovered at Chenoboskion (*see* APOCRYPHA, NT), but not yet published or adequately studied. It appears to be one of a group of apocalypses attributed in some remove to the Great Seth. Since this writing bears the subtitle "The Three Great Steles of Seth," a provisional query has been raised as to whether this material was not earlier engraved on stone and hidden against the time of discovery, and whether Dositheus, scarcely the famous Samaritan teacher, was not the "discoverer"—i.e., interpreter.

M. S. ENSLIN

DOT [κεραία, *see below*] (Matt. 5:18; Luke 16:17); KJV TITTLE. The most minute detail. The NT passages lay stress upon the eternal and immutable character of every detail of the Torah. This emphasis is frequent in late Judaism, especially in the rabbinic writings. *See also* IOTA.

The traditional rendering, "tittle," goes back to Wyclif and Tyndale's "title" (Latin *titulus*), of which it is a variant spelling. Originally used of a sign of abbreviation, it came to designate any distinguishing mark. The Greek word means "horn," "projection," "antenna," "apex of a letter," etc., and is found in Greek writers, sometimes associated with the word "syllables," with reference to something small or trivial. In the gospels κεραία is usually taken to represent a Hebrew expression used of "hornlike" marks, made perhaps to distinguish letters, or of ornamental strokes on letters. In Hebrew these are called "crowns," "thorns," or "points." Differences of opinion exist, however, regarding these explanations. *See* WRITING AND WRITING MATERIALS.

A. WIKGREN

DOTHAN dō′thən [דתן, דתין, *cf. locative* דתנה (Gen. 37:17), Egyp. *Tutayana;* Δωθαΐμ, Δωταια, Δωτεα]; KJV Apoc. DOTHAIM dō′thĭ əm. A city which Eusebius (Onom. 76.13) locates twelve Roman miles N of Sebastia. It was rediscovered by Van de Velde in 1851, and its modern name is Tell Dotha.

Here Joseph, after passing through Shechem, found his brothers who threw him into a well and later sold him to Ishmaelites following the ancient caravan route over the Plain of Dothan toward Egypt (Gen. 37:17). The king of Syria laid siege to the city in an attempt to seize Elisha, according to II Kings 6:13 ff. In Jth. 4:6 (also 3:9 in some MSS; cf. RSV) Dothan serves to identify an area, "Esdraelon opposite the plain near Dothan." In Jth. 7:3 the army of Holofernes spread out over Dothan as far as BALBAIM.

Tell Dotha had long been regarded as a tempting archaeological site. Excavations were begun in 1953 under the sponsorship of Wheaton College (Illinois) and directed by Joseph E. Free. The excavations fully confirm occupation during all the periods documented by written data, and more.

The attractive and commodious site was occupied from the end of the Chalcolithic Age (*ca.* 3000 B.C.) down through the Hellenistic Roman period. Byzantine-Christian remains are barely mentioned in the preliminary accounts thus far published. On the surface was Arabic material. But early remains are abundant.

The isolated mound, which rises to nearly 1,000 feet above sea level, stands *ca.* 175 feet above the Dothan Plain. Its top covers *ca.* 10 acres, the occupied slopes 15 more. Intact Middle Bronze Age (*ca.* 2000-1500 B.C.) jars were found on the lower slope within 16 inches of the surface. A heavy Early Bronze Age (*ca.* 3000-2000 B.C.) wall appeared *ca.* 50 feet from the top. As found, it rose to a height of 16 feet. The outside face was perpendicular, but inside it flaired from *ca.* 9-foot thickness at the top to *ca.* 11 feet at the bottom. Its stones were small and flat, apparently not differing greatly from those of Jericho four thousand years earlier. Steps of the same material 13 feet wide led from low on the mound to a gate area at the base of the wall. Seven different levels were found in the Early Bronze millennium.

Farther up the slope at the crest of the tell, the great Middle Bronze Age wall of the city was found. In the 30 feet of debris within it, the first four levels of occupation were the Iron Age I and II (*ca.* 1200-700), Late Bronze (*ca.* 1500-1200)—an important period—and two in the Middle Bronze Age. Occupation was more or less continuous, with periodic destructions and rebuildings. To the earliest Middle Bronze stratum belongs an infant burial in a jar found under a heavy wall. It is dated by a Tell el-Yehudiyeh juglet and other items in the pottery deposit.

An extremely ugly, many-handled bowl, of which four handles end in stylized animal heads, distinguished Iron I (*ca.* 1200-900). An orange Cypriot juglet decorated with concentric circles, portions of two Astarte plaques, and other objects linked ancient Dothan with other cities of the era. A street averaging 4 feet in width and continuing into Iron II was uncovered to a length of 111 feet.

Courtesy of Herbert G. May

37. Dothan (Tell Dotha), from the W

In Iron Age deposits was another jar burial of an infant, a human skeleton of a man evidently killed on the spot, and a bowl of thin, hard Assyrian "palace ware." On the center of the tell was a considerable area of Hellenistic and Roman remains culminating in an acropolis in which was a domestic building of twenty-five rooms opening on a large court.

Thus the mound offers a fairly complete conspectus of Palestinian culture from 3000 B.C. to A.D. 300 or 400.

DOUAY VERSION dōō'ā, dōō ā'. The official Roman Catholic English Bible (1609-10). By 1540 Roman Catholic leaders complained of the lack of a Catholic translation of the Bible in English. William Allen, Oxford scholar and cardinal, in 1578 urged the English Catholic University at Douay, France, to translate the official Latin Bible into English. Gregory Martin, also an Oxford graduate, completed the NT translation in 1582. The school had fled to Rheims, hence "Rheims NT." In 1593 the school returned to Douay, where the OT was completed, but publication was delayed till 1609-10 because of lack of funds. The Douay Version is a translation of the Vulg., although the translators seem to have used the Geneva Bible and to have made occasional reference to Greek and Hebrew originals. The Preface clearly states the reasons for the translation, chief among which is the existence of heretical versions. The Rheims NT influenced the translators of the KJV, especially in the use of Latin terms.

J. R. Branton

DOUBLE-MINDED [סעפים (KJV VAIN THOUGHTS); δίψυχος]. A term denoting an uncertain and wavering state of mind. It implies skepticism and doubt, instability, unsettledness, perhaps even deceitfulness.

The word סעפים (Ps. 119:113) means more particularly "divided" (cf. I Kings 18:21), and probably implies half-Israelite and half-heathen.

In the NT and some of the Fathers (Jas. 1:7-8; 4:8; Herm. Mand. 9:6; Apostolic Constitutions 7:11; cf. Ign. *Hero* 7) δίψυχος (lit., "double-souled"), a term first appearing in Christian writings, is related to doubt and wavering in prayer. It indicates a vacillating between faith and the world (Jas. 1:7-8; 4:8); or a doubt, springing from lack of faith (Apostolic Constitutions 7:11) or a feeling of unworthiness (Herm. Mand. 9:6), as to whether God will answer prayer. Such an attitude results in prayers' going unanswered. In I Clement the term denotes those who, as Lot's wife, distrust the power of God (11:2), or those who have lost faith that God's purpose will be accomplished and Jesus will soon appear (23:3). It is a similar lack of faith and dedication which Jesus decries in those who try to serve two masters (Matt. 6:24; cf. Luke 16:13).

V. H. Kooy

DOUBLE-TONGUED [δίλογος]. A word of uncertain meaning, occurring only in I Tim. 3:8. The Greek root suggests "repetition" or "to repeat." One suggested translation is "not untruthful"—i.e. (in the I Timothy passage), deacons are always to tell the truth. The meaning "double-tongued" suggests insincerity and lack of integrity. It is doubtful that the writer exhorted deacons simply not to repeat themselves. The Greek word was perhaps coined from the Latin *bilinguis*, which means, not only speaking two languages, but also "hypocritical," "deceitful."

Bibliography. B. S. Easton, *The Pastoral Epistles* (1947), p. 130. B. H. Throckmorton, Jr.

DOUGH [בצק; KJV ערסה, *see below;* φύραμα]. A mixture of flour (or meal) with water (or olive oil), kneaded in a wooden basin, or kneading trough (Exod. 12:34, 39; II Sam. 13:8; Jer. 7:18; Hos. 7:4; Rom. 11:16; I Cor. 5:6-7). The usual cereals for dough were barley and wheat, although at times spelt, oats, and rye were also used (cf. Sifre Num. 15:21). Into the kneaded dough a bit of leaven (dough left to sour from the previous baking) was placed in the making of leavened Bread.

In the NT "dough" is used figuratively to represent the converted state (I Cor. 5:6-7), and the nation Israel (Rom. 11:16).

The obscure word ערסה, translated "dough" in the KJV (Num. 15:20-21; Neh. 10:37; Ezek. 44:30), has been supposed to denote either Coarse Meal (so RSV) or a porridge made of coarse meal. But it may well mean simply "dough," implying the offering of first fruit was required of the kneading trough as well as of the threshing floor. Paul seems to have understood it in this sense (Rom. 11:16), as also the rabbis (Challah 1.1, 5, 7; 2.1).

Bibliography. J. Wellhausen, *Prolegomena to the History of Israel* (trans. J. S. Black and A. Menzies; 1885), p. 158; P. Haupt, *Numbers* (1900), p. 50; E. W. Heaton, *Everyday Life in OT Times* (1956), p. 82. V. H. Kooy

DOVE [יונה, *see* Pigeon; חרייונים (II Kings 6:25), *presumably* dung, חרי, *or* חרא, of doves; יונים, *see below;* περιστερά, *see* Pigeon]. A term rather loosely applied to many of the smaller species of pigeon; usually used in a figure of speech. The moaning of the dove supplies a metaphor in Isa. 38:14; 59:11; Ezek. 7:

16; Nah. 2:7—H 2:8. Its powers of flight are referred to in Ps. 55:6—H 55:7 (and possibly Hos. 11:11), its nesting in rocks in Jer. 48:28, its colors in Ps. 68:13—H 68:14, and its eyes in Song of S. 1:15; 4:1; 5:12. Its loyalty to its mate and its gentleness make it a fitting epithet for a loved one (Song of S. 2:14; 5:2; 6:9), and it serves as a symbol of innocence in Matt. 10:16; a less favorable view of this bird is expressed in Hos. 7:11. In Ps. 74:19 the psalmist uses "dove" to designate Israel. The appearance of "dove" in the title of Ps. 56 ("The Dove on Far-off Terebinths") has not been satisfactorily explained. The reference in Isa. 60:8 has been taken to be to a dovecot.

The meaning of "dove's dung" (II Kings 6:25) is uncertain. While such dung may have been used for fuel or fertilizer, it is improbable that it served as food (Josephus claims that it was used as salt; Antiq. IX.iv). In Syriac *ḥrûthâ* means both "excrement" and "buttocks," which suggests that the OT reference may be to some hind part of the dove not usually considered palatable. *See* DOVE'S DUNG.

In the gospels the Spirit of God, which came upon Jesus after his baptism, is said to have descended "like a dove" (Matt. 3:16; Mark 1:10; Luke 3:22; John 1:32). The source of this symbolism can only be surmised, but probably it lies in Jewish thought, scriptural and otherwise. Thus we have the "hovering" of the Spirit of God in Gen. 1:2; the role which the dove played in the flood tradition (Gen. 8:8-12); the acceptability of pigeons and doves as bird offerings; the proverbial gentleness of these birds (Matt. 10:16); Philo's interpretation of the dove as a symbol of virtue and reason (*Questions and Answers on Genesis* II.39-44; III.3); the Targum's interpretation of the "voice of the turtledove" in Song of S. 2:12 as the "voice of the Holy Spirit of redemption"; Rabbi Jose's statement in the Talmud (Ber. 3*a*): "I heard a divine voice [*bath qôl*] cooing like a dove."

See also FAUNA § B6*a*. W. S. MCCULLOUGH

DOVE ON FAR-OFF TEREBINTHS. *See* MUSIC.

DOVE'S DUNG [*Kèthibh* חרייונים, *perhaps* חרי יונים, *from* חרא *or* חרי, dung; *Qere* דביונים; *cf.* Aram. דיבא, flux]. During the siege of Samaria, this material was sold at exorbitant prices, one fourth kab (approximately one half pint) for five shekels of silver (II Kings 6:25; *see* WEIGHTS AND MEASURES). Jos. War V.xiii.7 mentions cattle dung as food during the siege of Jerusalem (A.D. 66-70), and Vergil and other classical authors also note the use of such material as food under dire circumstances. That it was used as salt seems insufficient explanation. Some commentators, following the lead of Bochart (*Hierozoicon* I, 42), suggest the comparison of an Arabic herb named sparrow dung, but a parallel Hebrew plant has not been found. E. M. GOOD

DOWRY [זבד; שלוח (KJV PRESENT); KJV מהר (RSV MARRIAGE PRESENT)]. Ordinarily, the property a wife brought to her husband in marriage. This might take the form of a gift of the father to his daughter when she was about to be married. But in bargaining with Jacob for his daughter Dinah, Shechem said he would give whatever was requested as "marriage present" (KJV "dowry") and gift (Gen. 34:12). The meaning of the crucial word here, מהר, is uncertain, although it probably derives from the verb נתן, "to give."

In the early period it is probable that the father gave the bride a maidservant as a dowry (Gen. 16:1; 24:61; 29:24, 29). Over the maidservants referred to in these passages the husbands appeared to have had no control. When Laban's daughters complained that their father had been using up the money given for them, they may have had their dowry in mind (Gen. 31:15). Examples of dowries to daughters include a gift of springs of water (Josh. 15:18-19; Judg. 1:14-15), and of a city by the pharaoh when his daughter married Solomon (I Kings 9:16). The idea of a gift shows that MARRIAGE was not simply by purchase, for the wife could hold property in her own right. O. J. BAAB

DOXOLOGY dŏks ŏl′ə jĭ [δοξολογία, *from* δόξα, glory, *and* λόγος, utterance]. A formula for expressing praise to God. As early as in the J document of the Pentateuch, God's deeds are "blessed" (ברוך; εὐλογητός; Gen. 24:27; Exod. 18:10; *see* BLESSINGS AND CURSES). In the Jewish service these blessings were recited at the end of hymns (I Chr. 16:36; Pss. 41:13; 72:18; 89:52; 106:48; cf. 150:1-6), at the end of the single benedictions of a longer prayer—e.g., the Amida—or even after every mention of God's name. They are connected with the cups of wine in the Pesach ritual (Ber. 49*a*) and with the building of the booths in the Feast of Tabernacles (Suk. 46*a*). Sometimes they are found too at the beginning of a prayer (I Chr. 29:10; Dan. 2:20; Luke 1:68; cf. II Cor. 1:3; Eph. 1:3; I Pet. 1:3). They protect the speaker from God's punishments of men's sin (Rom. 1:25; II Cor. 11:31).

Another form of the doxology starts Ps. 29: the exhortation to "ascribe the LORD glory [כבוד; δόξα] and strength" and "the glory of his name" (vss. 1*b*, 2*a*; cf. Bar. 2:18; *see* GLORY), later enlarged by "for ever and ever" at the end of prayers (e.g., Prayer Man. 15) or books (IV Macc. 18:24).

The object of the doxology in the Christian (even the pre-Pauline) congregations was God, seldom Christ (cf. Rom. 9:5; Rev. 5:12), but it was sometimes "through the Son" (e.g., Rom. 16:27; I Pet. 4:11), "in the Holy Spirit" (Prayers of Serapion). This formula was changed, in opposition to Arianism, into "and to the Son and to the Holy Spirit." The doxologies at the end of the Christian prayers (I Clem. 61), especially in the Eucharistic service, are deeply influenced by Luke 2:14.

HEMPEL

DRACHMA drăk′mə [δραχμή]. The unit of silver coinage of Greece; weight 4.3 grams. At the time of the NT it was equated with the Roman denarius,

which was therefore called "drachma" by the Greek world; and the word is translated "silver coin" (Luke 15:8-9; KJV "piece of silver"). H. HAMBURGER

DRAGNET [חרם] (Ezek. 32:3); KJV NET. A NET to be dragged along the bottom of a river or on the ground. Pharaoh of Egypt, under the figure of a sea or river dragon, would be caught in a dragnet.

DRAGON. In several poetic passages of the OT reference is made to a primordial combat between Yahweh and a draconic monster, variously styled LEVIATHAN (Job 3:8; Ps. 74:14; Isa. 27:1); RAHAB (Job 9:13; 26:12; Ps. 89:10—H 89:11); *Yam*—i.e., "sea" (Job 7:12; Hab. 3:8); *Nahar*—i.e., "stream" (Ps. 93:3 [plural נהרות]; Hab. 3:8 [plural נהרים]); *Tānnîn*—i.e., "sea monster" (Job 7:12; Ps. 74:13; Isa. 51:9); and *Bashan*—i.e., "sea serpent" (Ps. 68:22—H 68:23; cf. Ugaritic *btn,* Akkadian *bašmu*). Moreover, in accordance with the idea that all primordial conditions will be repeated before the "new creation" which is to follow the collapse of the present world order, the renewed fight against the Dragon (temporarily loosed from his bonds) also plays a role in Jewish eschatological speculation (cf. Isa. 27:1; Rev. 20:2; II Esd. 6:52; II Bar. 29:3-8; Palestinian Targ. Num. 9:26-27; B.B. 74*a*-75*a;* Shab. 30*b;* Keth. 111*b*).

On the significance of the myth, and on its numerous parallels in ancient Near Eastern and other literatures, *see* COSMOGONY §§ A2*d*, D2*b*.

"Dragon" is also used in the KJV as the translation of תנין, even in nonmythological contexts (e.g., Gen. 1:21; Ps. 148:7), but the RSV correctly substitutes "sea monster." T. H. GASTER

DRAGON WELL. KJV translation of עין התנין (RSV JACKAL'S WELL).

DRAM. KJV form of DARIC.

DRAMA. *See* MYTH; JOB; SONG OF SONGS.

DRAWERS OF WATER [שאבי־מים]. One of the lowest classes of SERVANT. But such servitude was to be preferred to death. Voluntary SLAVERY, as well as the defeat of enemies like the Gibeonites, might produce drawers of water (Josh. 9:21, 23, 27). Women drew water from the well as part of their domestic chores (Gen. 24:11, etc.). Young men also might draw water in connection with their other duties (Ruth 2:9). But the lowliness is clearly indicated in Deut. 29:11, where these drawers of water are least in the listing of the covenanting people (vs. 10).

DREAD, DREADFUL. *See* FEAR.

DREAM [חלום, חלם; ἐνύπνιον, ὄναρ]; **DREAMER** [חלום, חלם; ἐνυπνιάζομαι]. Dreams, or "visions of the night," were considered in the ancient Near East as messages emanating from supernatural powers, and great importance was attached to their contents and interpretation (as evidenced by the compilation of "dream books" in Mesopotamia and Egypt). On a lower level, frightful and nightmarish dreams experienced by ordinary people were ascribed to the machinations of sorcerers and evil spirits. On a higher level, dreams experienced by kings or priests were conceived to be a vehicle by which the gods made known their intentions.

As a means of communication between gods and men, kings sometimes tried to induce dreams by passing the night in a temple in the hope of receiving a revelation in a night vision. This method is known as incubation-dreams. Typical examples of such sought-for visions are reported from Babylonia (e.g., the dreams of Gudea and Tammuz), and from Ugarit (e.g., the dream of King Keret). Solomon's dream at Gibeon (I Kings 3:4-15; II Chr. 1:3-12) belongs to the same pattern. For examples of unintentional incubation-dreams—i.e., when an individual chances to sleep in a holy place and becomes the recipient of a message dream without having consciously sought one—see Jacob's dream at Bethel (Gen. 28:11 ff), his "vision of the night" at Beersheba (Gen. 46:1-4), and Samuel's experience while asleep in the sanctuary at Shiloh (I Sam. 3).

The dreams reported in the Bible may be classified typologically as (*a*) simple dreams, in which announcements are delivered in plain language (cf. Gen. 20:3, 6-7; 31:10-13, 24; I Kings 3:5 ff; Matt. 1:20; 2:12; Acts 9:10); and (*b*) symbolic dreams, which, in many cases, could be resolved by professional interpreters only (cf. Gen. 37:5-10; 40:5 ff; 41:1 ff; Dan. 2). The OT recognizes one source of dreams: all night visions proceed from God, and his assistance is sought in interpreting them (cf. Gen. 40:8; 41:16; Dan. 2:19-23). Dreams are one of the legitimate channels by which God reveals his will to chosen individuals (cf. Job 33:15-16), to kings (cf. I Sam. 28:6), and to prophets (cf. Num. 12:6). Joel (2:28—H 3:1) looked forward to the day when

> your sons and your daughters shall prophesy,
> your old men shall dream dreams,
> and your young men shall see visions.

The false prophets based the veracity of their pronouncements on the claim that they were the recipients of divine dreams (cf. Jer. 23:32; 27:9), but to the true prophets these were "lying dreams" giving "empty consolation" (cf. Zech. 10:2), and Deut. 13:1-5—H 13:2-6 prescribes the death penalty for any spurious "dreamer of dreams." While great weight was generally attached to dreams, it was at the same time assumed that some night visions were of no consequence (cf. Job 20:8; Ps. 73:20; Eccl. 5:7—H 5:6; Isa. 29:8), and a person prone to dreaming was mockingly referred to as a "master of dreams" (cf. Gen. 37:19).

The words חלום, "dream," and חזון or חזיון, "vision," are sometimes mentioned together (cf. Job 20:8; 33:15; Isa. 29:7); the roots of both mean "to see" (for the former see C. H. Gordon, *Ugaritic Handbook* (2nd ed., 1947), p. 228, no. 674). The terms used for "interpreting dreams" are Hebrew פתר, Aramaic פשר, and once Hebrew שבר (Judg. 7:15). The first two words (cf. Akkadian *paṭāru* and *pašāru*) mean "to dissolve, to analyze," and the root of the latter denotes, literally, "to break up."

A. *MEN.* 1. Terms for garments in general. One of the general terms for "garment" or "clothes" is מד, מדו. In Lev. 6:10—H 6:3 ("garment") it refers to the linen garment of the high priest (cf. Ps. 133:2). Its general character may be seen from Judg. 3:16; I Sam. 4:12 ("clothes"), while in I Sam. 17:38-39; 18:4 ("armor") it appears to be used in the narrow sense of "soldiers' dress." That it was a long, robe-like garment is indicated in II Sam. 10:4 = I Chr. 19:4 ("garment").

The most widely used term (some two hundred times) is בגד, whose meaning appears in Lev. 6:27—H 6:20; 14:55, which refer to any whole garment. Its general character may be determined by the fact that it was used also to describe a cover-cloth (for the ark [Num. 4:6-9]; for a bed [I Sam. 19:13; I Kings 1:1]). It is also used of robes of kings (Judg. 8:26; II Sam. 13:31; I Kings 22:10, 30; etc.) and of the high priest (Exod. 28:2 ff), and also of the garments of prisoners of war (II Kings 25:29; Jer. 52:33). There were both outer garments (II Kings 7:15) and inner garments (Ezra 9:3, 5; Ezek. 26:16). There were cultic garments (Exod. 28:2), mourning garments (II Sam. 14:2), and royal garments. Garments might be made either of linen or of wool, but not of a mixture of the two (Lev. 19:19; Deut. 22:11).

Another general term for "garment" is שמלה, "something wrapped around," "mantle." With such a cloth the sons of Noah covered his nakedness (Gen. 9:23); the people cast in it their offerings for Gideon's ephod (Judg. 8:25); and the sword of Goliath was wrapped in it (I Sam. 21:9—H 21:10). It designates the clothing of the wanderers (Deut. 8:4), of the sojourner (Deut. 10:18), and of the ordinary person (Deut. 22:3), as well as the best clothes of Ruth (Ruth 3:3). It was the dress of the poor (of burlap [Ecclus. 40:4]) by day and his cover by night (Exod. 22:26). As such it was simply a large sheet or cloth wrapped around the body. That it was probably all of one piece is demonstrated from the שלמה (a cognate or related word), torn in pieces by the prophet (I Kings 11:29-30; "garment"). The שמלה was first a wrapper and then came to mean "clothes" in a more general sense.

Another general term is כסות, whose broadest meaning is "covering," particularly of the poor (Exod. 21:10; 22:26; Deut. 22:12; Job 24:7; 26:6; 31:19; rendered variously "clothing," "cloak," "garment," "covering").

Of גלום, "clothes," we know nothing more than that they were a valuable article of trade (Ezek. 27:24).

The ἱμάτιον of the NT (Matt. 17:2; 27:31, 35; etc.; "garment," "robe") was probably an oblong piece of cloth worn as an outer garment ("cloak") over the χιτών ("coat"), with which it formed the main items of clothing at the time (Matt. 5:40; Luke 6:29). For a more general meaning of the word, see Matt. 9:16; Mark 2:21; Luke 5:36 ("garment"). Of similar nature was the περιβόλαιον (Heb. 1:12; "mantle"), though in I Cor. 11:15 ("covering") it doubtless means "veil." Ἐπενδύτης in John 21:7 is a general word for wearing apparel ("clothes"; KJV "coat").

2. Undergarments. All the terms above apply to clothes generally or, usually, to the outer garment in particular. Along with them there were undergarments, for which there are some more or less general terms that do not detail either specific forms or usages beyond the fact that they were undergarments.

The most widely used word for such garments is כתנת ("coat," "robe," "tunic," "garment"), which was a long- or half-sleeved shirtlike garb reaching to the ankles (Gen. 37:3, 23, 31-35). The famous Beni-hasan painting is a good illustration of such garments (Fig. JOS 29) which were worn by both men and women. They are of varied colors, though two of them are white. They are draped over one shoulder, leaving the other shoulder bare, and they reach to a point slightly below the knees. Those of the women are apparently of the same general style but are somewhat longer. The first biblical mention of the כתנת is in Gen. 3:21, where Yahweh is said to have made for Adam and Eve such "garments" (KJV "coats") of skins. Hushai (II Sam. 15:32) had such a garment, as did Shebna (Isa. 22:21). The mention of a collared tunic in Job 30:18 points to a baglike garment with apertures for head and arms. Women wore it as well as men (II Sam. 13:18-19; Song of S. 5:3). It was an important item in the wardrobe of the priests (Exod. 28:4, 39-40; 29:5, 8; 39:27; 40:14; Lev. 8:7, 13; 10:5; 16:4; Ezra 2:69; Neh. 7:70, 72—H 7:69, 71; the RSV uses "coat" for some of the references to priests, except in II Sam. 15:32, but the KJV uses "coat" more frequently). Generally wool was the material from which the tunic was made, especially for the poor, though linen was used for that of priests and some others.

The χιτών of Matt. 5:40; Luke 6:29 ("coat") was also an undergarment (cf. Matt. 10:10; Mark 6:9; Luke 9:3; "tunic"). This was the seamless tunic of Jesus (John 19:23) for which the soldiers cast lots. The garment rent by the high priest (Mark 14:63; "mantle"; KJV "clothes") was such a tunic, though in Matt. 26:65 it is referred to as ἱμάτια ("robes"; KJV "clothes"). Josephus describes the official gar-

ment of the high priest as a tunic, χιτών (Antiq. III.vii.2, 4).

Another undergarment was the סדין, "linen garment" (Judg. 14:12-13; Prov. 31:24; Isa. 3:23). The midrash catalogues it among the men's clothing. In the NT, σινδών appears as a piece of cloth used as a sheet or shroud for the dead (Matt. 27:59; Mark 15:46; Luke 23:53). The "young man" who followed Jesus (Mark 14:51-52) was clothed only with a σινδών, obviously only a cloth wrapped around his body.

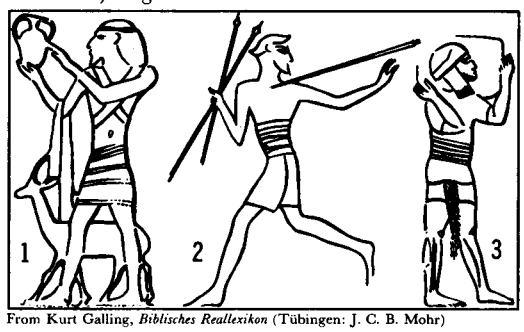
The waistcloth or loincloth (אזור) was still another undergarment. Elijah had one of leather (II Kings 1:8; "girdle"). It was worn next to the skin (Jer. 13; "waistcloth"; KJV "girdle") and loosened at night (Isa. 5:27), though apparently not removed entirely (cf. Isa. 11:5). This was the forerunner of the כתנת, as may be seen from the angular wrapper worn by the Syrian tribute-bearers depicted on Egyptian monuments.

Breeches or drawers (מכנסי בד) are mentioned only in connection with priestly vestments and were designed to cover the naked body "from the loins to the thighs" (Exod. 28:42; "linen breeches"). They were made of linen (Exod. 39:28; cf. Ecclus. 45:8) and were used in connection with the removal of the ashes of the burnt offering from the altar (Lev. 6:10—H 6:3) and by the high priest on the Day of Atonement (Lev. 16:4). According to the Ezekielian order (44:18), the Levitical priests were to wear them when on duty. Josephus calls these breeches ἀναξυρίδες (Antiq. III.vii.1), a term used by Herodotus (1.71; 3.87; 7.61) to describe the customary drawers of the Persians. See *Syria*, XVII (1936), 249 and pl. 46, 1, fig. 10; XVIII (1937), 4-31.

The term סרבל (Dan. 3:21, 27; "mantle," "tunic"; KJV "coat," "hose") is of uncertain meaning.

3. Types of outer garments. ***a. Coat, robe, mantle.*** "Coat," "robe," and "mantle" are all used to translate מעיל, which was obviously an outer garment and part of the dress wardrobe of men. Samuel's mother made one each year for her son (I Sam. 2:19), and he is on significant occasions described as wearing one (I Sam. 15:27; 28:14). Saul (I Sam. 24:4, 11—H 24:6, 12) and Jonathan (I Sam. 18:4) wore one, as did David on the occasion of the transfer of the ark to Jerusalem (I Chr. 15:27). Ezekiel (26:16) refers to the robes and embroidered garments of the princes of the sea. (For figurative use, see Job 29:14; Ps. 109:29; Isa. 59:17; 61:10.) This was the garment rent in times of distress (Ezra 9:3, 5; Job 1:20; 2:12). The word is used to designate the garment which was worn with the priestly ephod (Exod. 28:31 ff; 29:5; 39:22 ff). The ephod was put on over the מעיל (Lev. 8:7). Women also had such garments, as we know from II Sam. 13:18, where the כתנת פסים ("long robe with sleeves"; KJV "coat of many colors") is described as the מעילים ("robes") of the virgin daughters of the king (*see* CLOTH § 6). In a general way the מעיל corresponds to the *qumbaz* of modern Palestine (see Dalman, *Arbeit und Sitte*, V, fig. 58), a long, loosely fitting robe worn over all other garments. In ancient times it was probably sleeveless.

The linen ephod (בד אפוד) of Samuel (I Sam. 2:19), of the priests (I Sam. 22:18; Hos. 3:4), and of David (II Sam. 6:14) was not the high-priestly vestment, but a simple white linen priestly robe.



For soldiers' dress, *see* COAT OF MAIL.

b. Mantle of distinction. Kings and prophets wore, in addition to other garments, a mantle (אדרת). The king of Nineveh (Jonah 3:6) wore his as a robe of state. Such a mantle was one of the objects coveted and stolen by Achan (Josh. 7:21, 24). Elijah also had one of them, and it played a very important role in his activities (I Kings 19:13, 19; II Kings 2:8, 13-14). According to Zechariah (13:4), it was the sign of the prophetic office. It was made of animal hair; goat's hair is implied in Gen. 25:25, and the mantle of John the Baptist was of camel's hair (Matt. 3:4; Mark 1:6). The robe put on Jesus as a mockery was the Roman soldier's mantle, simulating that of royalty (Matt. 27:28, 31; Mark 15:17, 20; John 19:2, 5).

Cf. also Herod's robe (Acts 12:21) and the στολή of Philip (I Macc. 6:15)—this is the term used to render אדרת in Jonah 3:6. According to the NT, the στολή was worn by men of rank, as, e.g., the scribes (Mark 12:38; Luke 20:46); by the young man who sat at the head of the empty tomb (Mark 16:5); by the returned prodigal (Luke 15:22); and by the martyrs (Rev. 6:11) and the redeemed (Rev. 7:9, 13).

See MANTLE; ROBE for other words so translated.

c. Girdle, belt, sash. For warmth and maneuverability the flowing garments required a girdle (חגור, חגורה).* This was especially true of the soldier, whose BELT was worn over his regular garb and was used to carry his sword (II Sam. 20:8). It was apparently a long folded cloth of wool, which had other uses—e.g., to hold money or other valuables (Matt. 10:9; Mark 6:8). Fig. DRE 38.

From Kurt Galling, *Biblisches Reallexikon* (Tübingen: J. C. B. Mohr)

38. Girdles worn in biblical times: (1-2) from Egypt; (3) from Lachish

There was also the linen sash (אבנט, "girdle") of the priest (Exod. 28:4, 39; 29:9; 39:29; Lev. 8:7, 13; 16:4) or of officials (Isa. 22:21). It was of special significance as an insigne of office.

The מזח, "belt" (Ps. 109:19), and מזיח, "belt" (Job 12:21), were girdles of a peculiar type. The ζώνη, "girdle," of the NT (especially Acts 21:11; Rev. 1:13; 15:6) was a long folded sash used to hold in the flowing robes and as a money belt.

4. Headgear. Mention of headgear, except for special occasions, is relatively rare in the Bible. There was the פאר, which applied to a headdress for women, a turban of priests, and headgear for others, especially a bridegroom. It was put aside in times of mourning.

The מצנפת, "turban," was worn by the high priest and was made of linen. A different kind of turban, מגבעה (*see* CAP), was worn by the ordinary priests. *See* TURBAN.

The hats of Dan. 3:21 are too uncertain for comment.

Soldiers wore protective helmets (כובע; κόρυς; περικεφαλαία).

The prayer covering of I Cor. 11 is nondescript.

The monuments show mostly Syrians and Palestinians with simple headbands or conical-shaped strip caps (*ANEP* 46-47, 52, 61, 355).

Closely related to headgear is the styling of HAIR and BEARD. *See also* VEIL.

5. Footwear. An essential item of normal dress was shoes or sandals (II Chr. 28:15; Ezek. 24:17, 23; Luke 15:22; Acts 12:8). In times of mourning or on holy ground they were removed (Exod. 3:5; Josh. 5:15; Ezek. 24:17, 23; Acts 7:33). The fact that they could be mended (Josh. 9:5, 13) and that the shoes of the Israelites are said not to have worn out during the wilderness wanderings (Deut. 29:5) indicates the almost universal practice of wearing shoes. The monuments depict different types of footwear made of leather and fastened to the foot around the ankle with leather straps. Shoes are not mentioned in the catalogue of priestly vestments.

For further discussion, *see* SANDALS AND SHOES.

6. Ornaments. One of the special ornaments for men was the finger ring (טבעת) which signified rank (Gen. 41:42; Esth. 3:10, 12; 8:2, 8, 10, 12; I Macc. 6:15).

Related to it was the seal ring (חותם) which bore the name of the wearer and was carried on a cord around the neck (Gen. 38:18). It could also be worn on the hand (Jer. 22:24). This was the σφραγίς of the NT (Rom. 4:11; I Cor. 9:2; II Tim. 2:19; Rev. 5:1 ff; 6:1 ff; 7:2; 8:1; 9:4), where, however, the term is used figuratively. It was used to seal documents, hence the figure. The δακτύλιος of Esth. 8:8, 10 LXX; Dan. 6:17 Theod.; Luke 15:22 has the same general meaning but was also used as an article of luxury. *See* SEALS AND SCARABS.

The נזם, "ring," was also worn by men (Job 42:11) but was a characteristic ornament of Ishmaelites (Judg. 8:24-26; "earring"). Their kings were adorned with crescent-shaped amulets (שהרנים; Judg. 8:21, 26) and eardrops (נטפה; Judg. 8:26).

Saul wore an armlet (אצעדה; II Sam. 1:10), and excavations of tombs in Palestine indicate that both armlets and bracelets (צמיד) were common.

Apart from the personal items just named, there were doubtless others of a more general character which belong in the category of the jewel chest—e.g., מגדנות, "choice gifts" (cf. Gen. 24:53; II Chr. 21:3; 32:23; Ezra 1:6), and פנינים, CORAL. *See* JEWELS AND JEWELRY. For special insignia, *see* CROWN; DIADEM.

B. *WOMEN*. 1. Terms for garments in general. The same general terms are used for women's clothing as for men's: לבוש, "what is put on" (Ps. 45:14; Prov. 31:22); מלבוש, "what is put on" (Ezek. 16:13); בגד, "garment" (Gen. 38:14, 19; Deut. 24:17; II Sam. 14:2; II Kings 11:14; etc.); שמלה, "clothes" (Deut. 21:13; Ruth 3:3; etc.); ἱμάτιον, "garment" (Jth. 8:5; Acts 9:39; I Tim. 2:9; I Pet. 3:3). "Widow's garments" (Gen. 38:14) are specifically mentioned; cf. Jth. 8:5; 10:3, where the "garments of widowhood" were probably sackcloth.

2. Undergarments. Women also wore the long undergarment called כתנת, as may be seen from II Sam. 13:18 ff; Song of S. 5:3. It was probably made of wool or linen. The Beni-hasan painting shows women wearing such garments slung over the right shoulder and extending farther up around the neck than the men's garment.* They were longer than those worn by men and more varied in color. Fig. JOS 29.

3. Types of outer garments. The woman depicted on a Megiddo ivory is dressed in a long robe decorated with fringes (*ANEP* 125). Naturally a girdle was part of women's clothing, though it is mentioned only in Isa. 3:24. Ruth 3:15; Isa. 3:22 speak of a mantle or cloak which could be used as a carrier—e.g., of grain.

4. Headgear. For headgear women wore a פאר, "headdress" (Isa. 3:20); צניפה, "turban" (Isa. 3:23); צעיף, veil for covering the face (Gen. 24:65; 38:14, 19); and רדיד, veil for the upper part of the body (Song of S. 5:7; Isa. 3:23). An especially elegant headdress was the μίτρα, "tiara" or "diadem" (Jth. 10:3; 16:8; Bar. 5:2). *See also* HAIR.

5. Footwear. The Bible has little to say about women's footwear. The sandaled feet of the maiden are graceful (Song of S. 7:1—H 7:2), and Judith put on sandals to attract the eyes (10:4; 16:9). The bride, according to Ezek. 16:10, was shod with fine leather sandals. The Beni-hasan painting shows Palestinian women wearing brown shoes with a white border around the top.

Fig. SAN 22.

6. Ornaments. One of the most complicated subjects dealing with the dress of women is that of ornaments. Brides and other ladies on festival occasions wore ornaments (עדי; lit., "shining, glittering objects"; II Sam. 1:24; Isa. 49:18; 61:10; Jer. 2:32; Ezek. 16:11, 13; 23:40). כלי, "jewels," were of silver or gold (Gen. 24:53; Num. 31:50; cf. also I Tim. 2:9; I Pet. 3:3). The best description of bridal attire is in Ezek. 16:10-13.

The NECKLACE was much desired, and sometimes, as we know from tombs of Egypt and Mesopotamia, was quite elaborate and complex. For other items of women's ornaments, *see* ANKLET; BRACELET; EARRING; FRONTLETS; NOSE RING; RING 1, 5.

The identity of the קשרים ("sash" [Isa. 3:20; KJV "headband"]; "attire" [Jer. 2:32]) is not certain.

The text of the myth, "The Descent of Ishtar into the Underworld" (*ANET* 107-9), provides a good idea of women's clothing in Mesopotamia.

J. M. MYERS

DRESSER OF SYCAMORE TREES [בולס] (Amos 7:14). This term seems to refer to one engaged in the process of pruning or nipping back the trees for better yields of fruit. AMOS apparently claims that he is not of prophetic line, but is a layman called by God to testify. C. U. WOLF

DRIED GRAPES [ענבים יבשים]. Grapes dried in the sun, listed as food forbidden to a Nazirite (Num. 6:3). *See also* RAISIN; RAISIN-CAKES.

DRINK. In biblical times the chief liquids consumed by man were WINE; MILK; WATER (cf. Ecclus. 39:26, where all three are mentioned as elements necessary for life). In addition to these, VINEGAR was used as a

thirst-quenching beverage. Of course, drink as such is not condemned in either the OT or the NT (*see* DRUNKENNESS); Moses and the elders eat and drink before God on Mount Sinai (Exod. 24:9-11), and only the ungodly withhold drink from the thirsty (Isa. 32:6). Furthermore, Jesus refers to his gospel as "water welling up to eternal life" (John 4:14) and to his blood as "drink indeed" (John 6:55). Nevertheless, although Koheleth claims that there is nothing better for a man than to eat, drink, and take pleasure in his work (Eccl. 2:24; 3:13; 5:18—H 5:17; cf. 8:15), Paul says that "the kingdom of God does not mean food and drink but righteousness and peace and joy in the Holy Spirit" (Rom. 14:17).

See also FOOD; STRONG DRINK. J. F. Ross

DRINK OFFERING. *See* SACRIFICE AND OFFERINGS § A2*b*i-ii.

DROMEDARY [כרכרות (Isa. 66:20; KJV SWIFT BEAST), *meaning uncertain;* KJV בכרה (Isa. 60:6; Jer. 2:23; RSV YOUNG CAMEL), *cf.* Arab. *bakr,* young camel; רכש (I Kings 4:28—H 5:8; RSV SWIFT STEED), *cf.* Syr. *rakšā,* horse; רמך (Esth. 8:10; RSV BRED FROM THE ROYAL STUD), *cf.* Arab. *ramakah,* mare]. A swift riding CAMEL belonging to the Arabian (one-humped) species (*Camelus Dromedarius*).

Since the time of Aristotle the distinction has been made between the two-humped Bactrian camel and the one-humped Arabian camel (*Historia Animalium* 499*a* [II.1]). Within the latter group there is a further division between the burden-bearing camel and the riding camel, the latter being commonly known as the dromedary.

In I Sam. 30:17 the Amalekites who escaped on camels from David's attack presumably did so on fast riding animals; the same type of camel may be referred to in Isa. 66:20, where "dromedary" is the translation.

Bibliography. For swift camels ridden by Arabians, see Herodotus VII.86. For the view that all Arabian camels ought to be designated dromedaries, see R. J. Forbes, *Studies in Ancient Technology,* II (1955), 187-208. W. S. McCULLOUGH

DROPSY. The translation of ὑδρωπικός (Luke 14:2), a term which was widely used by medical practitioners from Hippocrates onward. This condition is a symptom rather than a disease, but its relationship to the progress of specific pathology is such that it is always indicative of advanced organic disease. Dropsy constitutes a disproportionate effusion of watery fluid into the tissues or cavities of the body, and is described technically according to its location, as *ascites* (abdominal dropsy), *hydrothorax* (pleural cavity) *hydropericardium* (cardiac dropsy), *edema* (feet and legs), etc. In Luke 14:2 the condition probably accompanied either cardiac, renal, or hepatic disease.

R. K. HARRISON

DROSS [סוג (*Kethibh* סוג; Ezek. 22:18); *otherwise plural,* סוגים]. The impurities of metals, particularly of silver, which accumulate in the smelting furnace (Prov. 25:4). Silver "turned to dross" is an outcome of debased morals, as dross is generally in the OT a symbol of moral decay (Isa. 1:22; Ezek. 22:18-19; cf. Ps. 119:119).

Prov. 26:23, translated literally "silver of dross covering an earthen vessel," makes little sense, and it is suggested that כסף סיגים, "silver dross," be read כספסיגים, "as glaze," with Ugaritic *spsg,* "glaze" (so RSV).

I. BEN-DOR

DROUGHT [חרב, בצרת (KJV SWORD *in* Deut. 28:22 *with* MT), חרבון, ציה (KJV DRY), תלאבות (KJV GREAT DROUGHT); ἀβροχία]. Disastrous consequences of shortage of rain, which in a dry year (Jer. 17:8) may fall to half the barely sufficient normal. Since surface water is relatively scarce, a prolonged complete drought (I Kings 17:1; Jas. 5:17) would have made Palestine almost uninhabitable. In addition to partial failure of the winter rains, the Bible refers to the regular summer drought, which lasts four months (Ps. 32:4); to the dessicating effect of the EAST WIND (Hos. 13:15); and to the desert areas, where rainfall is minimal (Luke 11:24).

See also PALESTINE, CLIMATE OF.

R. B. Y. SCOTT

DRUNKENNESS. Wine was not banned in Israel. It was not only valued for giving pleasure and banishing sorrow (Judg. 9:13; Ps. 104:15; Prov. 31:6-7); it had a place in the sacrificial meal (Deut. 14:26; cf. I Sam. 1:9, 12-16; Amos 2:8). Drinking to intoxication (שכרון [only figuratively]; Jer. 13:13; Ezek. 23:33), however, was a disgrace, and the exemplary stories of the drunkenness of Noah (Gen. 9:20-27) and Lot (19:31-38) serve to show to what immoral uses the drunkard (שכור) exposes himself. Drunkenness is associated with licentiousness in Hos. 4:11, 18 (cf. II Sam. 11:13). Drunkenness is related of wealthy Nabal (I Sam. 25:36), and of the kings Elah (I Kings 16:9), Ben-hadad (20:16), and Ahasuerus (Esth. 1:10). The wisdom writers disapprove of it on utilitarian grounds (Prov. 20:1; 21:17; 23:20-21, 29-35); the prophets condemn it in the leaders of the people for causing moral blindness (Isa. 5:11-12; 28:7 ff; 56:11-12; Amos 6:6; cf. Prov. 31:4-5).

The charge brought against the insubordinate son by his parents epitomizes his corruption in the phrase: "He is a glutton and a drunkard [סובא]" (Deut. 21:20). Priests must not take any strong drink while on duty in the sanctuary (Lev. 10:8-9).

In the NT, too, drunkenness (μέθη [Rom. 13:13]; οἰνοφλυγία [I Pet. 4:3]) is associated with debauchery and Gentile depravity. A bishop may not be intemperate (πάροινος; I Tim. 3:3; Tit. 1:7). Drunkards (μέθυσος) will not inherit the kingdom of God (I Cor. 6:10; Gal. 5:21), nor are they to be tolerated within the Christian community (I Cor. 5:11-13).

See also WINE AND STRONG DRINK.

M. GREENBERG

DRUSILLA drōō sĭl′ə [Δρούσιλλα]. The third and youngest daughter of Agrippa I, king of Judea (Antiq. XVIII.v.4). She was probably born in A.D. 38 (XIX.ix.1). She had been engaged to marry an Epiphanes, prince of Commogene; but the marriage did not take place because Epiphanes, though he had promised Agrippa I to embrace Judaism, changed his mind and refused to become converted.

Later on, her brother Agrippa II arranged for her marriage to Azizus, king of Emesa, who consented to be circumcised (*ca.* A.D. 53).

When FELIX was procurator of Judea (A.D. 52-60), he saw Drusilla and fell in love with her. Josephus relates that Felix sent to her a friend, Simon of Cyprus, a Jew, who prevailed upon Drusilla to transgress the Jewish law and marry Felix. She bore him a son named Agrippa, who perished in the eruption of Vesuvius in 79.

The account of Acts 23:24–24:27 includes a mention of Drusilla.

S. SANDMEL

DUALISM. A term used since the beginning of the eighteenth century for two different systems of thought. One, which may be called cosmic dualism, is apparently derived from the Zoroastrian belief in two essentially equal and opposing gods, in conflict with each other: Ahriman, the god and cause of all evil and wickedness; and Ormazd, the god of all good and righteousness. The present evil age is under Ahriman; the future age of righteousness will be under Ormazd. The righteous, who resist the god of evil, will be recompensed in the age to come. This type of dualism provides a satisfactory solution of the problem of evil.

A second type of dualism, the metaphysical, is concerned with the quite incompatible natures of body and soul, as the Pythagorean and Orphic religions taught and Plato and other philosophers believed. According to this teaching, not only was the body much inferior to the soul, which was pre-existent in heaven, but it was the prison house and sepulchre of the soul, imprisoning it and defiling it as well. Salvation consisted of effecting the permanent release of the soul from the body. This was accomplished in part by mortifying the body and depriving it through ascetic practices and disciplines, and in part by mystic religious rites. Numerous reincarnations, with repetitions of the disciplines and rites, were necessary before the soul would be permanently freed from the body so that it might dwell forever in the heavenly realms. Associated with this view was the belief that the world of matter was itself imperfect, if not evil, and the world of spirit perfect and good.

There are few, if any, traces of the cosmic dualism of two opposing forces—one good, the other evil—in pre-exilic Judaism. Instead, the monotheistic doctrine was strongly maintained; Yahweh, the creator and governor of the world and of mankind, was directly or indirectly responsible for all evil, as well as for all good. To be sure, there were evidences of popular beliefs in evil spirits, but these were kept in the background. SATAN, if mentioned at all, was an agent of God, not his equal, not his opponent.

However, in the exilic and postexilic periods Satan (or his equivalent) became the opponent of both God and man. He was not merely the tempter of man, but was also his oppressor and the cause of sin and wickedness. Accompanying this dualism, with its source in Persian religion, was a growing acceptance of the eschatological pattern of two ages: the present one evil, since it was ruled by Satan, and the future to be good, for it would be governed by God (*see* ESCHATOLOGY OF THE OT; APOCALYPTICISM). However, in no case was the dualism as marked as in Zoroastrianism; Yahweh is actually in control; Satan and evil exist only because God for his own purposes is permitting them to do so for a while.

Save in Hellenistic Judaism (Philo, e.g.), the metaphysical dualism of spirit and flesh hardly appears in Judaism. Since Yahweh was all-powerful and wise, as well as good, the world which he had created, with its contents (including the human body), was also good and designed for man's use and enjoyment. Asceticism was the exception, not the rule. As belief in a meaningful existence beyond the grave developed, there came an acceptance of the doctrine of the physical RESURRECTION of the body from Sheol so that it might be reunited with the soul. To be sure, man was created with two impulses—one good, the other evil—but this was as far as dualistic thinking went in Jewish anthropology.

Christianity inherited its cosmic dualism from Judaism. There was a general, though not complete, acceptance of a belief in Satan as an independent personification of evil; in two ages, the first evil, the second to be good; and in the physical resurrection of the FLESH. This dualism reaches its height in Revelation. Moreover, through its Hellenistic heritage Christianity also acquired a belief in a metaphysical dualism, which Paul, e.g., combined with cosmic dualism. For him the body of flesh, with its desires, was evil, and the cause of both sin and death. He accepted the belief in the resurrection; however, the resurrected body was not of flesh and blood, but had been transformed into a spiritual body, for flesh and blood could not inherit the kingdom of God.

Christian GNOSTICISM apparently inherited its metaphysical dualism from Hellenistic sources. The world of matter, created by an inferior or evil creator god, was inherently evil, but the realm of spirit was good. Man was a pre-existent good soul that was imprisoned and defiled by a material body. Redemption consisted—as in certain Hellenistic religions—in the release of the soul from its prison house through ascetic practices and mystic rites, which in Gnosticism involved the reception of a secret, saving Gnosis. Gnosticism, however, seems to have allowed for but one incarnation. This metaphysical dualism as accepted by Christianity prepared the way for Christian asceticism and monasticism.

M. RIST

DUKE. The KJV translation of אלוף, נשיא (RSV CHIEF), and στρατηγός (I Macc. 10:65; RSV GENERAL). "Duke" was not a title in KJV times but was used to refer to a PRINCE or ruler of a family or TRIBE.

DULCIMER (SHAWM). *See* MUSICAL INSTRUMENTS.

DUMAH dōō'mə [דומה]. 1. A son of Ishmael, and the presumed ancestor of an Arabian tribe (Gen. 25:14; I Chr. 1:30). There are a number of places in Arabia which bear this name, but the one that seems to fit the biblical reference is Dumat al-Ghandal (now called el-Jof), an oasis located halfway between

the head of the Gulf of Aqaba and the head of the Persian Gulf. It seems to be the same as the *Adummatu* which was destroyed by Sennacherib and Esarhaddon of Assyria, and the *Adummu* which was conquered by Nabonidus of Babylonia in his expedition against Tema.

* **2.** A city in the mountains of Judah (Josh. 15:52). According to the *Onomasticon*, there was a village of this name seventeen miles from Eleutheropolis (Beit Jibrin); this is the same as the modern el-Dome, six miles SW of Hebron.

3. A name which occurs only in Isa. 21:11: "The oracle concerning Dumah" (משא דומה). Since the next words refer to Seir, it is evident that the reference is to Edom, and the LXX actually renders the word as "Edom." It is possible that "Edom" (אדום) was the original reading and that one א was lost by a scribal error; or else, as "Dumah" can also mean "silence," the word refers to the enigmatic nature of this oracle, which really gives no answer at all to the proposed query. S. COHEN

DUMBNESS. An inability to speak or vocalize, whether because of functional or organic causes. *See* DISEASE.

DUNG [גלל, גל, צאה, דמן, פרש, *see below*]. Animal, bird, or human excrement, often used for manure or for FUEL. גלל, גל, is translated as both human and animal excrement. צאה is used generally for filth but for human excrement as well (II Kings 18:27; Ezek. 4:12). דמן refers to corpses lying on the ground as offal (II Kings 9:37; Jer. 8:2). פרש is used in the priestly legislation for the fecal matter in the intestines of recently slaughtered animals.

In ancient times, as today in Palestine, dung was gathered dried and used for fuel (Ezek. 4:12, 15) when wood and charcoal were scarce. Collected in a dunghill or dung pit, it was mixed with straw and used to fertilize plants (Isa. 25:10). The priestly legislation specifically required the burning of the dung in the intestines of a sacrificial animal at a point outside the camp (Exod. 29:14; Lev. 4:11; Num. 19:5).

The term "dung" was also used symbolically to indicate the degraded end to which a person or nation might come (II Kings 9:37; Ps. 83:10—H 83:11; Jer. 8:2; 9:22—H 9:21; Zeph. 1:17). It might also be put on the face as a sign of extreme humiliation (Mal. 2:3).

In Nehemiah's account of the inspection, reconstruction, and dedication of the walls of Jerusalem, reference is made to the DUNG GATE (שער השפת, שער האשפת; Neh. 2:13; 3:13-14; 12:31). Most scholars locate this gate in the S wall near or at the SW corner. It probably marks the place where refuse in general was thrown.

A reference to the high cost of pigeon dung during Ben-hadad's siege of Samaria is found in II Kings 6:25, but the lack of knowledge as to the use of pigeon dung complicates the interpretation.

H. N. RICHARDSON

DUNG GATE [שער האשפת, שער השפת (Neh. 3:13)]; KJV DUNG PORT in Neh. 2:13. A gate of Jerusalem, leading into the Valley of Hinnom (*see* HINNOM, VALLEY OF THE SON OF); restored by Nehemiah (Neh. 3:14; 12:31). Josephus calls it "Gate of the Essenes" (War V.iv.2).

See map under NEHEMIAH; *see also* JERUSALEM § 7*b*.

G. A. BARROIS

DUNGEON [בור, pit; בית הבור (Exod. 12:29; Jer. 37:16; *cf.* Zech. 9:11), house of the pit; מסגר (Isa. 42:7; PRISON *in* Ps. 142:7—H 142:8; Isa. 24:22), *from* סגר, to shut up, close]. The primary meaning "pit" for בור suggests that it was a sunken room, perhaps a dry well (cf. Jer. 38:6 [a pit or cistern which had no water], and vss. 7, 9-11, 13). This is also the figure which is used in Isa. 42:7, where the verb הוציא intimates "bringing up out of the dungeon" (מסגר).

See also PRISON; PIT; CRIMES AND PUNISHMENTS.

E. M. GOOD

DURA dŏŏr'ə [דורא] (Dan. 3:1). A valley in the province of Babylon. Since proximity to the city of Babylon is implied, earlier identifications (based on Polybius V.48 and Ammianus Marcellinus XXV.6) as N of Babylon and E of the Tigris, or as the well-known Dura of the Euphrates 270 miles NW of Babylon, are unlikely. More probable is Oppert's suggestion of Tulul Dura, a few miles S of Babylon. But Dura (Akkadian *dûru*, "circuit," "wall," "walled place") is a common place name in ancient Mesopotamia, and the identification, if indeed at all precise in the mind of the author of DANIEL, must remain uncertain.

Bibliography. J. Oppert, *Expédition scientifique en Mésopotamie*, I (1863), 238 ff.

S. B. FROST

DUST [אבק, דקק, עפר, שחק; κονιορτός, χόος]. Generally "dust," "dirt," "clay"; but the significant use of עפר occurs in the dominant OT view that man is an earthy creature animated by the breath of God. Of dust man was made (Gen. 2:7*a;* 18:27*b;* Job 4:19; Ps. 103:14; cf. I Cor. 15:47-49), and to dust he returns (Gen. 3:19*b;* Job 10:9; 34:14-15; Ps. 104:29*b*).

See ADAM (MAN) § 1*b;* DEATH; MAN, NATURE OF, IN THE OT, § 3.

L. HICKS

DWARF [דק, *from* דקק, crush, be fine] (Lev. 21:20). One category of those physically disqualified from the ministry of sacrifice; either one with defective eyesight (so LXX, Vulg., and context) or preferably one who is withered (paralyzed, consumptive?). The word is elsewhere translated "gaunt," "thin," "small."

G. HENTON DAVIES

DWELLING PLACE. The translation of a number of words, with little consistency in the KJV, the RSV, and other versions. The dwelling place may be occupied by human beings (Hab. 1:6), animals (Jer. 9:11), or God (II Chr. 30:27). Figuratively God is called a dwelling place (Ps. 90:1). "Dwelling place" has been used to translate the following:

a) מושב (Num. 24:21; I Chr. 6:54; KJV "habitation" in Gen. 36:43), related to the verb ישב, "sit," "dwell."

b) מקום שבת (I Kings 8:30; II Chr. 6:21).

c) מכון שבת (I Kings 8:39-49; II Chr. 6:30-39).

d) מעון (II Chr. 36:15; Ps. 90:1; "habitation" in II Chr. 30:27; "haunt" in Jer. 51:37), from the root עון, "dwell."

e) The feminine מעונה (Ps. 76:2—H 76:3; KJV "refuge" in Deut. 33:27).

f) משכן (from שכן, "dwell"), the common word for "TABERNACLE," applied to the structure built during the Exodus. In some passages where reference is not to this structure (Pss. 49:11—H 49:12; 74:7) both the RSV and the KJV use "dwelling place," but elsewhere there are variations. In Jer. 30:18; 51:30 the KJV has "dwelling place" and the RSV "dwelling," while in Job 39:6; Ps. 87:2 the RSV has "dwelling place" and the KJV "dwelling." In Hab. 1:6 the KJV has "dwelling place" and the RSV "habitation," while in Ps. 132:5 the RSV has "dwelling place" and the KJV "habitation."

g) אהל (Job. 8:22; Ps. 52:5—H 52:7; RSV TENT).

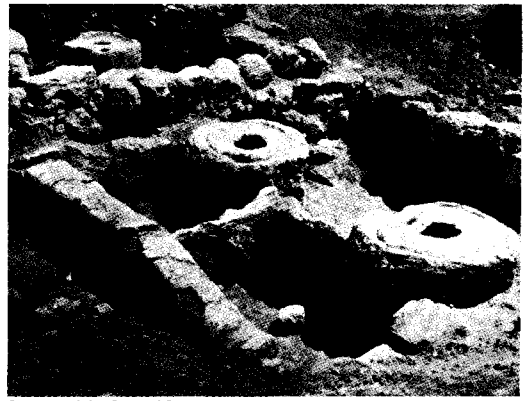
h) בכל מושבותיכם (Ezek. 6:6; KJV "in all your dwelling places"; RSV "wherever you dwell").

i) מכון (Isa. 18:4; RSV "dwelling"), from the root כון, "be firm, established." כל מכון (Isa. 4:5) is "every dwelling place" in the KJV and "the whole site" in the RSV.

j) נוה (Ps. 79:7; RSV HABITATION), which generally refers to a pasture.

k) Κατουκητήριον (Eph. 2:22; Rev. 18:2; KJV "habitation").

l) 'Αστατοῦμεν (I Cor. 4:11; KJV "have no certain dwelling place"; RSV "are homeless"), from αστατέω, "wander about."



See also HOME.

O. R. SELLERS

DYEING. Dyeing is an ancient art and played a necessary and important role in the lives of Palestinians throughout the biblical period. Although the process is not mentioned in the Bible, dyed stuffs often are (Exod. 35:6, 23, 25, 35; Judg. 5:30; Mark 15:17; Acts 16:14; etc.). What specifically the Israelites learned of the process from neighbors to the S and the N is unknown, but Solomon is reported to have requested of Hiram of Tyre a man skilled "in purple, crimson, and blue fabrics" (II Chr. 2:7; cf. 3:14); the Phoenicians apparently guarded the secret of making purple from mollusks so that the rest of the ancient world had to purchase from them.

Dyeing was carried on in centers which presumably represented the concentration of a guild (cf. I Chr. 2:55; 4:21). The juxtaposition of physical factors such as grazing land for herds of sheep and goats and an abundant supply of water helped determine the location of these centers. It has been learned from excavations that the major industry at Tell Beit Mirsim (*see* DEBIR) was dyeing and weaving. Dye plants on a smaller scale were also found at GEZER; BETH-SHEMESH; Tell en-Nasbeh (ancient MIZPAH?); and BETH-ZUR. According to rabbinic traditions a Magadala on the Jarmuk was a dyeing center, and Luz near Shechem produced "blue stuffs." *See* CLOTH § 3*b*.

The dyeing operation itself is not well known from antiquity, but significant data regarding equipment and organization have been collected at various sites. At Tell Beit Mirsim* an estimated thirty homes devoted rooms roughly ten by twenty feet to dyeing, showing that it was a domestic, but well-organized, industry. The installations excavated (six or seven in number) share a basic plan: each room was arranged with two round stone vats with small openings on top and retrieving drains around the rims; masonry basins and benches were constructed between or in front of the vats. Occasionally an additional jar-vat was set into the bench. Additional storage jars containing lime or potash—for fixing the dyes—stood close by. As the size of the mouth of the vats indicates, thread rather than the woven fabric was dyed, from which multicolored cloth could be woven. The normal process required two baths, after which the dye was carefully squeezed out and saved. The dyed thread was then laid out to dry. The cold-bath process seems to have been employed in Palestine, but the Egyptians may have used the hot-bath method. Fig. DYE 39.

Courtesy of the Oriental Institute, the University of Chicago

39. Dye plant at Tell Beit Mirsim

Similar Iron Age installations were found at Beth-shemesh and Tell en-Nasbeh, although, in the latter case, a single vat with the small opening in the top and no benches seem to have been characteristic. A Hellenistic dye plant of considerable proportions found at Gezer indicates that the fundamental arrangement had been altered little in the intervening centuries; an illuminating difference is the concentration of three dyeing rooms in a single building, indicating consolidation of the physical plant. Stone vats have given way to large masonry tanks in the shape of bathtubs; the pair in each room is accompanied by the same open vats and benches nearby. A furnace in the cellar of this establishment points to the use of hot dyes. A comparable, though less elaborate, dye plant appeared in the Hellenistic level at Beth-zur. Scattered throughout the city, moreover, were smaller, single stepped-baths which may have been connected with dyeing or may have been used for laundry or bathing. The rooms with two tanks, open vats, and benches at both Gezer and Beth-zur, however, are best understood in connection with dyeing.

R. W. FUNK

DYSENTERY [δυσεντερία] (Acts 28:8); KJV BLOODY FLUX. A painful, inflamed condition of the colon, with tenesmus and evacuations of blood and mucus. Bacillary and amoebic dysentery are the most common varieties. Dysentery may be acute, chronic, epidemic, or sporadic.

See also DISEASE; FEVER. R. K. HARRISON

DYSMAS dĭz′məs. Alternately: DISMAS; DEMAS dē′məs; TITUS tī′təs. A name given to the penitent thief in the apocryphal stories prompted by Luke 23: 39-43, his unrepentant companion being usually called GESTAS. Garish stories of Dysmas' kindness to the infant Jesus, the infant's prediction of his crucifixion and instant admittance to paradise, and the fulfilment of this promise are found in such apocrypha as the Arabic Gospel of the Infancy (*see* INFANCY GOSPELS) and the Acts of Pilate (*see* PILATE, ACTS OF). As the *bonus* or *evangelicus latro* ("thief"), he received much attention from the Greek and Latin fathers, and eventual sainthood (Saint Latro). He is commemorated in the Roman church on March 25, in the Greek church on March 23, and in the Syrian and Mesopotamian church on the ninth day after Good Friday.

Bibliography. M. S. Enslin, "Hagiographic Mistletoe," *JR*, vol. XXV, no. 1 (Jan., 1945), pp. 10-24. M. S. ENSLIN
